sobre todo en el Este del continente Europeo y en algunas economías de Asia, como lo fue el caso de Vietnam. Con el paso del tiempo, y rompiendo con las reglas del socialismo puro, este país se propuso la conformación de una economía de mercado orientada al socialismo. Tras la crisis socioeconómica en la década de 1980, y ante la necesidad de brindar atención a los retos poblacionales, Vietnam inició un proceso de reforma para fomentar su modernización sin trastocar el socialismo y, al mismo tiempo, responder a la creciente competencia internacional. Al igual que China, la nación vietnamita práctica un sistema económico de modalidad mercantil, cuyo origen radica en el programa de reforma económica de renovación iniciado en 1986, conocido como *Doi Moi*. Actualmente, Vietnam cuenta con una población de 89.71 millones de habitantes y un producto interno bruto (PIB) de 171,390 millones de dólares, siendo catalogado como un país de ingreso mediano bajo (Banco Mundial, 2015). Hipotéticamente, con el incremento exponencial de su comercio exterior, la estrategia de crecimiento vietnamita ha propiciado también el desarrollo económico, permitiendo mejores niveles de vida para sus habitantes, el acceso a empleos y el progresivo abandono de la pobreza, pese a las variaciones en las condiciones económicas y financieras en el contexto internacional. De esta manera, tomando como referencia los resultados alcanzados por Vietnam, el presente trabajo discierne sobre los efectos de las reformas *Doi Moi* en el comercio exterior, estableciendo patrones de participación, dinamismo y especialización mediante la aplicación de indicadores durante el periodo 1985 a 2013. Así las cosas, la presente investigación se organiza en cuatro apartados. En el apartado de revisión literaria, se presentan el sustento teórico y trabajos empíricos sobre el estudio de las ventajas comparativas reveladas y su aplicación en Vietnam. En un segundo apartado, se exponen las ecuaciones para la obtención de indicadores comerciales utilizados para medir patrones de especialización y dinamismo en el comercio exterior de dicha economía. En la sección de resultados, se presentan los principales hallazgos derivados del análisis empírico aplicado. Finalmente, se expondrán las conclusiones pertinentes y una serie de líneas de acción para consolidar el desarrollo económico de Vietnam.

REVISIÓN LITERARIA

Con un comienzo titubeante hacia finales de la década de 1980, y una marcada consolidación en el último lustro del siglo XX, la trayectoria económica de Vietnam ha mostrado una tendencia al alza de manera inequívoca, equilibrando la liberalización y el aumento de la participación internacional con el mantenimiento de la planificación central y los controles de capital, en lo que el Partido Comunista de Vietnam (PCV) llama una *economía socialista de mercado* (Klingler-Vidra, 2014). Si bien la noción de socialismo de mercado se planteó oficialmente en la Conferencia Nacional Intermedia del PVC, en febrero de 1994 (González, 2005), su origen radica en el programa de reforma económica *Doi Moi* (1986). Este programa de cambio o renovación fue configurado sobre tres pilares fundamentales caracterizados por: el cambio de una economía centralizada burocráticamente planificada a una multisectorial; la implementación de una política exterior abierta, la democratización de la vida social y la construcción de un Estado de Derecho (Meza y Saénz, 2008). Básicamente, el programa de reformas implicó la libre explotación de la tierra, la eliminación de restricciones a la propiedad y la iniciativa privada, la apertura a la inversión extranjera directa y el estímulo al comercio exterior (Alfaro, 2014), introduciendo también un sistema bancario de dos niveles, donde el Banco del Estado dejó de desempeñar las funciones propias de un banco comercial (OMC, 2013).

Con la adopción de las políticas *Doi Moi* Vietnam se embarcó en la transición hacia una economía de mercado, donde la apertura comercial ha sido un componente esencial (Coxhead y Phan, 2007). Los primeros cambios significativos se manifestaron en la introducción de los aranceles de importación en 1988, la eliminación del monopolio estatal sobre el comercio internacional en 1989 y el establecimiento de zonas francas de exportación en 1990 (Abbott, Bentzen y Tarp, 2009). Así las cosas, en la década de 1990, y de forma paralela a las reformas internas en los sectores de agricultura, industria y servicios, Vietnam emprendió un proceso de apertura económica regional y global (Tarp *et al.*, 2003), tanto para mejorar su clima de inversión como para promover la entrada de inversión extranjera sin desconocer su calidad de

economía planificada (Guerra, 2014). Hoy en día, esta economía del sudeste asiático ha ampliado sus mercados de exportación de los socios comerciales tradicionales (Rusia, Japón y otros países de Asia), donde Australia, Estados Unidos, Canadá, Francia, Alemania y los Países Bajos figuran como importantes destinos, además de ubicarse entre los principales exportadores de arroz, café, nueces de anacardo y pimienta (Anwar y Nguyen, 2011), sabiendo llevar a cabo un proceso de cambio estructural conducido por una industria de bienes de consumo no duradero e intensiva en mano de obra (Olivié, 2010). En parte, este progreso significativo puede atribuirse al hecho de que esta economía ha sido capaz de utilizar su ventaja comparativa en el proceso de integración económica (Le, 2010).

La ventaja comparativa es el término utilizado para describir la tendencia de los países a exportar aquellos productos que son relativamente adeptos a producir, vis-à-vis el resto del mundo (Serin y Ciban, 2008). Según la teoría de la ventaja comparativa, cada país debe producir aquellos bienes en los que es relativamente más eficiente, en virtud de las circunstancias naturales o históricas, e intercambiarlos por aquellos bienes que produce con menos eficiencia (González, 2006). Los argumentos de esta teoría han permitido explicar con efectividad las razones del comercio internacional, siendo sometida a numerosas contrastaciones empíricas, dentro de las cuales destaca el trabajo de Bela Balassa (1965). Balassa acuñó el término de ventajas comparativas reveladas (VCR), sugiriendo que éstas son definidas por los patrones del comercio en los que se observan las diferencias en la dotación de factores entre naciones (Doanh, 2011). De tal suerte, la ventaja comparativa de un país se refleja en sus dotaciones de factores (trabajo, capital, recursos naturales) y el nivel de tecnología (Le, 2010). Precisamente, la determinación empírica de si un país tiene o no ventajas comparativas ayuda a orientar la inversión y el comercio y, por consiguiente, permite tomar mayor ventaja de las diferencias que existen del lado de la demanda y de la oferta internacional de productos y factores de producción (Arias y Segura, 2004). Actualmente, el indicador de la VCR ha sido enriquecido con diversos estudios aplicados; es fácil de calcular, subraya la eficiencia económica de la industria, revela sectores exportadores débiles y fuertes del país y, además, proporciona argumentos necesarios para la creación de políticas públicas (Wu y Lin, 2008; Nicolici et al., 2011; Kuldilok et al., 2013; Startiene y Remeikiene, 2014). Consecuentemente, el índice de la VCR permite cuantificar la competitividad de un producto o de una industria sobre una base de comparación mundial o continental (García y Maldonado, 2013).

Le (2010) analizó la VCR para Vietnam en tres años representativos (1991, 1996 y 2005), encontrando que las exportaciones vietnamitas se basaron en gran medida en la agricultura y los recursos naturales. Estos argumentos fueron reforzados por Doanh (2011), quien determinó que las exportaciones de Vietnam están fuertemente dominadas por el trabajo no calificado y productos intensivos en recursos agrícolas; así como Van Sanh y Van Binh (2011), cuyo trabajo concluye que Vietnam ha prestado mucha atención a la reorganización de las zonas rurales durante la aplicación de su política de transición económica, apreciando cada vez más el potencial y el valor de los productos pesqueros. En buena medida, los resultados obtenidos pueden justificarse a partir de las políticas emprendidas por el *Doi Moi*, en el cual se reconoció la necesidad de conformar varios sectores productivos eficientes y especializados en determinados bienes, dependiendo de sus características y ventajas comparativas (Meza y Sáenz, 2008). Partiendo del progreso económico de Vietnam, en cuanto a la participación y dinamismo en los intercambios comerciales, a continuación se discernirá sobre los patrones de especialización exhibidos por dicha economía en el contexto internacional, tratando de identificar líneas de acción para su consolidación a partir de la identificación de la VCR.

METODOLOGÍA

En primera instancia, se expondrá el comportamiento del comercio exterior de Vietnam de 1985 a 2013, estableciendo a 1985 como el año previo a las reformas y 2013 con la situación actual de dicha economía. Como variables se utilizarán las exportaciones, las importaciones, el PIB y la población, con el objetivo de establecer parámetros sobre su participación y dinamismo en los intercambios mundiales. Posteriormente, se analizará la VCR de Vietnam a través de un estudio diacrónico de los flujos comerciales del año 2000 al

2013, teniendo como base las XXI secciones del Sistema Armonizado (SA) reconocido por la OMC. Aun cuando la definición y la adaptación empírica de la VCR están sujetas a controversias (Utkulu y Seymen, 2004), el índice ha demostrado ser una herramienta analítica simple pero útil al examinar las ventajas comparativas (Le, 2010). En la presente investigación se utilizará la ecuación más sencilla para su obtención:

$$VCR_i^k = \frac{X_i^k / XT_i}{X_w^k / XT_w} \quad (1)$$

Donde:

VCR_i^k = Mide el grado de importancia de un producto dentro de las exportaciones de un mercado, frente a la importancia de las exportaciones del mismo producto en las exportaciones totales del mundo.

X_i^k = Exportaciones del bien k realizadas por el país i

XT_i = Exportaciones totales del país i

X_w^k = Exportaciones del bien k realizadas por el mundo (w)

XT_w = Exportaciones totales del mundo (w)

Para su interpretación, un índice de VCR > 0 identifica productos con ventaja comparativa revelada, de manera que cuanto más alto sea el VCR de un producto, más favorable es su posición competitiva en el mercado internacional (Arias y Segura, 2004).

RESULTADOS.

Para 1985, el valor del comercio total de Vietnam ascendía a 2,555 millones de dólares, mostrando un saldo deficitario en la balanza comercial por \$1,159 millones de dólares (ver tabla 1). Indudablemente, esta situación era resultado de una economía precaria, con limitaciones productivas, con grandes problemas sociales generalizados por la pobreza y la marcada influencia burocrática que dificultaba los procesos institucionales para la promoción del sector privado (Nguyen, 2014). En 1986, el déficit comercial de Vietnam era de 1,366 millones de dólares, con exportaciones por el orden de los 789 millones de dólares, lo cual representaba apenas el 0.04% de las exportaciones mundiales. Hacia 1990, las exportaciones mostraron un crecimiento superior al 200%, delineando una fase de ascenso en el comercio exterior vietnamita. Mientras que en 1986 las exportaciones por habitante eran en promedio de 11.86 dólares, para 1990 éstas ya se habían triplicado (36.41 dólares) y en 2013 alcanzaron los 1,471.78 dólares.

En esos mismos años, la apertura medida por exportaciones fue de 0.05%, 0.37% y 0.77%, respectivamente. Según cifras del Banco Mundial (2015), las tasas de crecimiento promedio del PIB han mantenido un crecimiento regular, pasando de 7.4% en 1989 a 8.8% en 1994, 9.3% en 1996, 7.5% en 2004, 7.1% en 2007 y 5.4% en 2013. Este crecimiento económico ha ido acompañado de un aumento en las importaciones y exportaciones como porcentaje del PIB, pasando de 71.7% en 1989 a 154.1% en 2013 (APEC, 2015). Actualmente, Vietnam es miembro de la Organización Mundial del Comercio desde el 11 de enero de 2007. Para 2013, esta economía se ubica como el trigésimo cuarto exportador y el trigésimo segundo importador de mercancías a nivel mundial; el valor total de su comercio exterior fue de 264,066 millones de dólares, distribuyéndose en cantidades semejantes las exportaciones e importaciones. Según cifras de la OMC (2015), las manufacturas componen mayoritariamente la estructura de las exportaciones vietnamitas (70.4%), seguidas de productos agrícolas (21.6%) y de combustibles y productos de la minería (8.0%), las cuales tienen como principales mercados de destino a la Unión Europea, Estados Unidos, Japón, China y Corea del Sur. Por su parte, las importaciones también muestran una concentración en la composición de productos manufacturados (76.8%), productos de la agricultura (12.0%) y combustibles y productos de la minería (11.2%), provenientes principalmente de China, Corea del Sur, Japón, la Unión Europea y Taiwán.

Por todo lo anterior, el impacto de la liberalización del comercio y la integración económica regional sobre la economía de Vietnam es básicamente positivo (Dung y Ezaki, 2005). El comportamiento de las exportaciones, importaciones, PIB y población de Vietnam en el período analizado, se observan en la siguiente tabla:

Tabla #1: Comercio Exterior, PIB Y Población de Vietnam En el Período 1985-2013

Año	Importaciones (millones dólares)	Exportaciones (millones dólares)	Saldo de la Balanza Comercial (millones dólares)	Valor Total del Comercio Exterior (millones dólares)	PIB (millones dólares)	Población (millones de habitantes)
1985	1,857	698	-1,159	2,555	14,095	58.87
1986	2,155	789	-1,366	2,944	26,337	60.25
1987	2,455	854	-1,601	3,309	36,658	61.75
1988	2,756	1,038	-1,718	3,794	25,424	63.26
1989	2,565	1,946	-619	4,511	6,293	64.77
1990	2,752	2,404	-348	5,156	6,472	66.02
1991	2,338	2,087	-251	4,425	9,613	67.24
1992	2,541	2,581	40	5,122	9,867	68.45
1993	3,532	2,985	-547	6,517	13,181	69.64
1994	5,826	4,054	-1,772	9,880	16,286	70.82
1995	8,155	5,449	-2,706	13,604	20,736	72.00
1996	11,144	7,255	-3,889	18,399	24,657	73.16
1997	11,592	9,185	-2,407	20,777	26,844	74.31
1998	11,500	9,361	-2,139	20,861	27,210	75.46

2000	15,638	14,483	-1,155	30,121	33,640	77.63
2001	16,218	15,029	-1,189	31,247	35,291	78.62
2002	19,746	16,706	-3,040	36,452	37,948	79.54
2003	25,256	20,149	-5,107	45,405	42,717	80.47
2004	31,969	26,485	-5,484	58,454	49,424	81.44
2005	36,761	32,442	-4,319	69,203	57,633	82.39
2006	45,015	39,826	-5,189	84,841	66,372	83.31
2007	62,682	48,561	-14,121	111,243	77,414	84.22
2008	80,714	62,685	-18,029	143,399	99,130	85.12
2009	69,949	57,096	-12,853	127,045	106,015	86.03
2010	84,839	72,237	-12,602	157,076	115,932	86.93
2011	106,750	96,906	-9,844	203,656	135,539	87.84
2012	113,780	114,529	749	228,309	155,820	88.77
2013	132,033	132,033	0	264,066	171,390	89.71

La Tabla 1 muestra el desempeño comercial de Vietnam en el periodo 1985 a 2013, para el análisis de las importaciones, exportaciones, saldo de la balanza comercial y valor total del comercio exterior. Adicionalmente, para su correlación, se agregan columnas para indicar el PIB y la Población para cada año. Fuente: Elaboración con base a Organización Mundial del Comercio (2015) y Banco Mundial (2015).

Ahora bien, aplicando el indicador de la VCR al comercio exterior de Vietnam durante el período 2000 a 2013, tomando como referencia las XXI secciones del SA, se obtiene lo siguiente:

Tabla 2: VCR En el Comercio Exterior de Vietnam En El Período 2000-2013, Por Sección del SA

Secciones del SA Reconocido Por la OMC	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Sección I (animales vivos y productos del reino animal)	5.79	6.54	6.34	5.61	4.70	4.43	4.72	3.95	3.63	3.34	3.23	2.92	2.44	2.08

Fuente: Elaboración propia con datos de Naciones Unidas (2015). La Tabla 2 muestra las VCR del comercio exterior de Vietnam, dando cuenta de los sectores en los que existe un patrón de especialización y ventajas comparativas.

Tal como se observa en la figura 1, los bienes de las secciones I y II, compuestas por animales vivos y productos de los reinos animal y vegetal, muestran una VCR considerable, pero con un descenso hacia el final del período analizado. Los bienes de las secciones XI y XX, representadas por materias textiles y sus manufacturas, así como muebles, juguetes y manufacturas diversas, evidencian un ascenso moderado en su VCR. Destaca la VCR de los productos contenidos en la sección XII, particularmente el calzado. No obstante lo anterior, en atención a la limitante que puede significar determinar la VCR a partir de secciones

de productos, por la conglomeración de desempeños heterogéneos, en la siguiente figura 2 se ha seleccionado los capítulos del SA donde Vietnam muestra resultados importantes en la VCR.

Figura 1: VCR En El Comercio Exterior de Vietnam En el Período 2000-2013, Por Sección del SA

En esta figura se muestra la representación gráfica de la aplicación del indicador VCR sobre las exportaciones de Vietnam, por sección del SA. En general, veinte secciones muestra una VCR >0 durante el período analizado, salvo los bienes de la sección XIX. Esta situación indica la existencia de VCR en dichas los productos de dichas secciones porque se exportan más que en el mundo, en relación al total exportado por el país. Destaca el elevado índice de VCR para los productos contenidos en la Sección XII del SA, correspondiente calzado, paraguas, flores artificiales. No obstante, se observa una desaceleración a partir de 2008. Fuente: Elaboración propia con datos de Naciones Unidas (2015).

Figura 2: VCR En el Comercio Exterior de Vietnam En el Período 2000-2013, Por Capítulo Seleccionado del SA

En la figura 2 se muestra la representación gráfica de la aplicación del indicador VCR sobre las exportaciones de Vietnam, por capítulo seleccionado del SA: 9 (Café, té yerba mate y especias); 3 (Pescados y crustáceos y moluscos y otros invertebrados acuáticos); 11 (Productos de la molinería); 46 (Manufacturas de espartería o de cestería); 62 (Prendas y complementos de vestir excepto los de punto) y 64 (Calzado, polainas, botines y artículos análogos; partes de estos artículos). En general, los productos contenidos en dichos capítulos muestran una VCR >0 durante el período analizado. Destaca el elevado índice de VCR para los productos contenidos en el capítulo 46, los cuales inician el periodo con una VCR de 25.29 y descienden a 10.07, ocupando el segundo lugar de importancia, tras el ascenso en la VCR de los productos del capítulo 9. Fuente: Elaboración propia con datos de Naciones Unidas (2015).

La figura 2 ilustra que las manufacturas vietnamitas de espartería o de cestería contenidas en el capítulo 46 del SA han perdido competitividad, pasando de una VCR de 25.29 en el año 2000, a 10.07 en el 2013. Los productos vietnamitas contenidos en el capítulo 9 (café, té yerba mate y especias) evidencian un comportamiento volátil, aunque cierra el período de análisis con la mayor VCR (11.98), coincidiendo con los argumentos de Anwar y Nguyen (2011), que ubican a Vietnam como uno de los principales exportadores de café. Los productos del sector pesquero, destacados en las conclusiones de Van Sanh y Van Binh (2011),

inician el período de análisis como el tercer grupo de productos con mayor VCR (15.95) y cierran en la cuarta posición en 2013 con una VCR de (6.86). Los productos clasificados como calzado, polainas, botines y artículos análogos y sus partes (capítulo 64) se ubican en la tercera posición hacia el final del período de análisis, con una VCR de 9.40 en 2013. Estos resultados hacen necesario una reflexión sobre la composición de las exportaciones vietnamitas, la cual se puede realizar en estudios posteriores.

CONCLUSIONES Y LIMITACIONES.

Al realizar un estudio empírico sobre el comercio exterior de Vietnam, se pudo observar que esta economía emergente muestra un mayor grado de internacionalización a raíz de la reformas Doi Moi emprendidas hacia finales de la década de 1980. La dinámica comercial le ha permitido aumentar de manera interna la eficiencia productiva, el empleo y la inversión, así como erradicar paulatinamente la pobreza y la marginación. La apertura de esta economía del sudeste asiático se revela en el enriquecimiento de sus relaciones hacia el exterior. Su exitosa participación en el proceso de globalización se hace manifiesta por las contribuciones del comercio exterior al PIB. Significativamente, su producción ha ido transitando hacia bienes con valor agregado, mostrando una fuerte concentración de manufacturas dentro de sus exportaciones en el último año (70.4%). Tomando como referencia estudios anteriores, en la presente investigación se analizó la evolución del comercio exterior vietnamita, encontrando hallazgos importantes sobre su distinguido comportamiento. Sin embargo, al aplicar una estimación del índice de la VCR, se observa la pérdida de competitividad en sus bienes más representativos (calzado, café, productos pesqueros y manufacturas de espartería y cestería). Con base a los resultados, la VCR es una herramienta útil para detectar las ventajas comparativas y los patrones de especialización, situación que puede complementarse con otros indicadores al tiempo que coadyuva en la toma de decisiones para el aprovechamiento de las ventajas comparativas. En el caso de Vietnam, se considera imperioso adoptar líneas de acción que permitan transitar hacia bienes con mayor contenido tecnológico, fortalecer la investigación y el desarrollo, disponer de mano de obra calificada y consolidarse como exportadores de productos con alto valor agregado.

EL SISTEMA DE COMPENSACIONES Y SU RELACIÓN CON EL COMPROMISO Y PERMANENCIA DE TRABAJADORES DE UNA EMPRESA MANUFACTURERA MEXICANA

Giselle Orchak Pérez, Universidad Autónoma de Baja California
Ma. Enselmina Marín Vargas, Universidad Autónoma de Baja California

RESUMEN

En este trabajo se presentan datos relacionados con el diseño, construcción y validación de un instrumento que mide la influencia del sistema de compensaciones en la permanencia y compromiso de los trabajadores en una empresa manufacturera mexicana. El instrumento se diseñó con base a Allen y Meyer (1990), Richards (2006), y Luhmann & De Georgi (1993). Lo conforman 41 Items que evalúan las variables a través de diez dimensiones. Para su validación se realizaron dos procesos; primeramente fue sometido a un proceso de validación de contenido, el cual se realizó mediante consulta con expertos. Posteriormente, para obtener la confiabilidad del instrumento, se aplicó un estudio piloto, de cuyos resultados se obtuvo el coeficiente Alpha de Cronbach con un valor de 0.864. Se puede concluir que el instrumento logró la validez y confiabilidad necesaria para medir a la población estudiada.

PALABRAS CLAVE: Instrumento de Medición; Sistema de Compensaciones, Compromiso Organizacional, Permanencia; Empresa Manufacturera

COMPENSATION SYSTEM AND ITS RELATIONSHIP WITH COMMITMENT AND PERMANENCE OF WORKERS OF A MEXICAN MANUFACTURING COMPANY.

ABSTRACT

The study discusses data related to the design, construction and validation of an instrument to measure the influence of the compensation system, in the permanence and commitment of workers in a Mexican manufacturing company. The instrument was designed based on Allen and Meyer (1990), Richards (2006) and Luhmann & De Georgi (1993). It is composed by 41 Items that assess the variables through ten dimensions. Two processes for validation were performed; first a content validation process was performed, this process was conducted in consultation with experts. Subsequently, to obtain the reliability of the instrument, a pilot study was performed, which results gave an Alpha Cronbach's coefficient with a value of 0.864. It can be concluded that the instrument achieved the validity and reliability needed to measure the population studied.

INTRODUCCIÓN

Las competencias para retener al personal dentro de las organizaciones son cada vez más difíciles y complejas, si bien en la actualidad los recursos humanos dentro de las organizaciones se vuelven más importantes, los medios para retenerlos e integrarlos al entorno de la organización son cada día más profundos y con procesos más precisos, es por ello que en la presente investigación se crea un instrumento

que facilite a las organizaciones, la labor de identificar los elementos necesarios para promover el desarrollo de los recursos humanos ya que éste es un factor ha cobrado una vitalidad muy importante y permanente. El instrumento propuesto plantea medir las variables de: sistema de compensaciones, permanencia y compromiso organizacional, para una población específica dentro de una empresa manufacturera mexicana. Dichos temas se consideran de alta importancia para el área de recursos humanos dentro de algunas organizaciones. En la actualidad, el sistema de compensaciones es utilizado como una ventaja competitiva, así como una estrategia de retención de personal dentro de las organizaciones, principalmente si este sistema está integrado, tanto por prestaciones en efectivo como con beneficios en especie (Juárez, 2001).

La selección de la empresa del sector manufacturero, se tomó como opción dada la importancia de dicho sector dentro de la economía del país. Éste sector representa una de las primeras fuentes de empleo en el país, de acuerdo a los sectores económicos reportados por el Instituto Nacional de Estadística y Geografía (INEGI); dicho sector ha presentado importante crecimiento en materia de innovación y adopción de tecnologías, sin embargo, en relación a políticas de desarrollo de personal no ha presentado importantes hallazgos.

REVISIÓN DE LITERATURA

La decisión de integrar las 3 variables propuestas, se tomó después de una extensa revisión de los estudios previos para cada una de ellas, sus definiciones más importantes, y determinar con ello, la selección de las definiciones que resultaron base para nuestro instrumento. El compromiso organizacional de los trabajadores es uno de los indicadores más comúnmente utilizado para describir las actitudes laborales que el trabajador expresa y como se pueden medir más comúnmente; este concepto ha sido vinculado empíricamente con un mayor rendimiento laboral, un menor ausentismo, una menor rotación y una mayor participación e implicación laboral (Brooke, Russell y Price, 1988; Blau, 1985); (citado en Álvarez, 2008).

Para efectos de la esta investigación, nos basamos en el modelo de Allen y Meyer establecido en 1990, quienes definen que el compromiso está conformado por tres componentes: afectivo, el cual refiere un apego emocional por parte del empleado a la organización, se siente orgulloso de ser parte de la organización; el compromiso de permanencia refiere un apego material por parte del empleado a la organización, el empleado sigue en la organización porque espera ser premiado por las inversiones hechas y el último componente es el compromiso normativo, el cual es un sentimiento de obligación, por parte del empleado, de permanecer en la organización por todos los beneficios obtenidos.

Para definir la variable sistema de compensaciones, Cascio (2003) mencionan que la compensación incluye pagos directos en efectivo, e indirectos en forma de beneficios para el empleado y se conviertan en incentivos para motivar a los trabajadores a esforzarse para obtener niveles altos de productividad, Fernández (2002) identifica 4 funciones de las compensaciones: alineamiento estratégico, equidad interna, competitividad externa y dirección del desempeño. Villanueva y Gonzales 2005; (Citados en Bedodo y Giglio 2006), determinan que los sistemas de compensaciones están integradas por 3 grandes componentes los cuales son remuneraciones base, incentivos y beneficios.

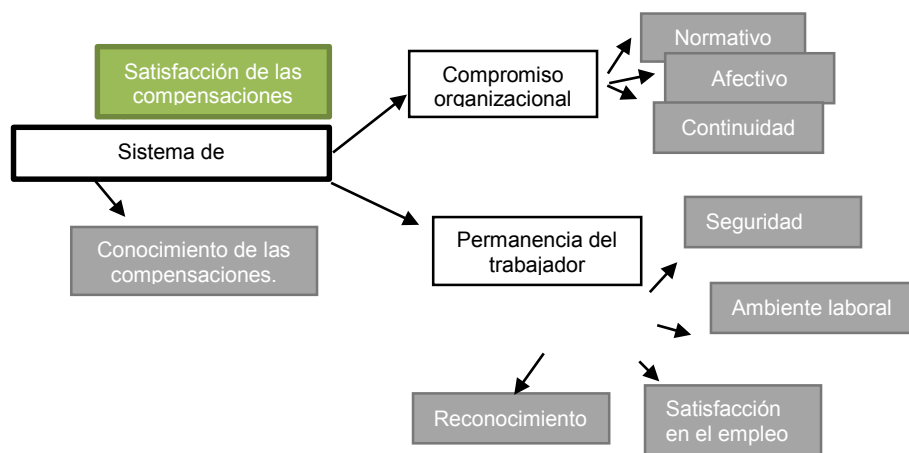

La variable Permanencia, se define como la intención de un trabajador de permanecer en su puesto de trabajo, por el sentir que éste le genera, considerando los factores externos e internos a la organización a la que él pertenezca (Arias, 2001). De acuerdo a Flores y Madero (2012), dentro de la permanencia debemos identificar los factores que el empleado detecta, como son: Equidad salarial interna, satisfacción con el trabajo, la influencia de la familia y el ambiente de trabajo, son algunos de los factores más determinantes para tener intención de permanecer en el trabajo, así mismo. En un estudio de predictivas de intención de permanencia del trabajador universitario (Flores y Madero, 2012) se obtuvo que es la permanencia el principal factor determinante de la calidad de vida y el ambiente en el que se desarrolla. En dicho estudio

se midió, a través de un análisis correlacional para ver la participación de las variables. Con las 3 variables definidas anteriormente, se creó un modelo para poder describir si existe relación entre sistema de compensaciones en el compromiso y permanencia del trabajador, de qué manera participa, esto nos apoyará a definir de qué manera puede actuar la dirección de la organización para apoyar las áreas de oportunidad de los elementos previamente expuestos.

METODOLOGÍA

El diseño del instrumento fue propuesto basados en los autores Richards (2006), Allen y Meyer (1990) y Luhmann & De Georgi, (1993), se propone un modelo de interacción de las variables, mostrado en la Figura 1, en el cual se presenta con las dimensiones de éstas integradas. Con el modelo se busca ejemplificar la relación esperada de las variables de estudio, que permita identificar la más representativa dentro de la empresa; una vez detectada se realizará un análisis correlacional para determinar los resultados de la investigación.

Figura 1: Modelo de la Investigación

En la figura 1, podemos observar el ejemplo gráfico de la participación de las variables en el modelo propuesto, tomando la variable de sistema de compensaciones como variable dependiente, las variables compromiso organizacional y permanencia como variables independientes. Fuente de elaboración propia.

El objetivo del instrumento es describir si existe o no influencia del sistema de compensaciones en el compromiso y permanencia del trabajador, para ello la investigación será de tipo cuantitativa con alcance correlacional ya que de acuerdo a Rivas (2006) la investigación cuantitativa correlacional busca medir el grado en que están asociadas una o más variables, y eso mismo es lo que se busca medir en la presente investigación.

Paradigma de la Investigación

La investigación es positivista de acuerdo a Machado y Montes (2008) ya que la investigación es cuantitativa, se busca describir, explicar el fenómeno en la empresa, que tipo de compromiso y permanencia se tiene al igual que identificar si entre estos existe relación y se ven influenciados por el sistema de compensaciones, el alcance de esta es correlacional el método de misma será objetivo ya que a través de la teoría categorizada se busca encontrar relaciones entre las variables sujetas de estudio (Hernández, et al. 2010).

Diseño del Instrumento

El instrumento está conformado por 3 apartados en los cuales cada uno va midiendo cada una de las variables sujetas de estudio, como primer apartado están 12 preguntas que representan la variable de compromiso organizacional, dentro del segundo apartado se tiene la variable de permanencia el cual está integrado por 21 preguntas en sus diferentes dimensiones, por último, con 8 ítems, está el apartado que miden conocimiento y satisfacción con las compensaciones. El instrumento está diseñado con escala tipo Likert de 5 opciones en las cuales el encuestado tiene las opciones de respuesta que van desde 5 totalmente de acuerdo a 1 totalmente en desacuerdo. Para la presente investigación se tomaron las definiciones conceptuales de las variables sujetas de estudio. Sistema de compensaciones: las compensaciones como lo beneficios económicos y no económicos que el trabajador percibe en relación a la función que desempeña dentro de la organización (Madero, 2009.), Richards (2006) afirma que “Los sistemas de compensaciones son una de las estructuras organizacionales que están influenciadas y son un reflejo de los valores de la organización. Una manera de en qué la estrategia de salario reflejan los valores es el grado que la organización realmente considera la contribución de los empleados. (2009).

Tabla 1: Operacionalización de las Variables

Variable	Dimensión	Indicador	Ítems
Compromiso organizacional	Afectivo	Promedio y frecuencia.	1-5
	Normativo		6-8
Permanencia.	Continuidad		9-12
	Intensión de permanecer		13-17
	Reconocimiento		22-25
	Satisfacción en el trabajo.	Promedio y frecuencia.	30-33
Sistema de compensaciones.	Seguridad		26-29
	Trabajo en equipo		18-21
	Satisfacción con las compensaciones	Promedio y frecuencia.	37-41
	Conocimiento de las compensaciones.		34-36

En la tabla se muestra la operacionalización de las variables, en ellas se muestra como indicador más recurrente promedios y frecuencias, ya que se busca detectar dentro de cada dimensión el indicador más representativo, evaluar bajo cuales dimensiones existe mayor recurrencia en cada variable para posteriormente poder realizar un análisis correlacional entre las mismas. Fuente: Elaboración propia.

Las recompensas y los programas de reconocimiento pueden mandar un mensaje fuerte a los empleados sobre su importancia para la organización. Entender los factores detrás de la implementación exitosa de estrategias de compensaciones puede ayudar a las organizaciones en el uso óptimo de recompensas para alcanzar sus objetivos organizacionales.” Compromiso organizacional: El compromiso organizacional es el grado con el cual el trabajador se encuentra unido a la organización Allen y Meyer (1990) establecen un modelo que propone 3 tipos de compromiso organizacional los cuales son compromiso afectivo, compromiso de continuidad y compromiso normativo. Allen y Meyer (1990) definen compromiso afectivo como al lazo emocional que el empleado tiene hacia la organización la identificación con sus valores y el gusto que le genera permanecer en ella. Compromiso de continuidad el hecho del empleado esta consiente del costo de abandono de la empresa, la inestabilidad que esta representaría y que tanto se siente obligado a permanecer en ella, por último el compromiso normativo un sentimiento de obligación a pertenecer a la organización por todo lo que ésta le ha brindado. Permanencia: La decisión de permanecer constituye la primera y fundamental decisión de la persona en su lugar de trabajo. Esta decisión hace posible y configura, a modo de premisa, otras múltiples decisiones personales y organizacionales como son el reconocimiento

que se recibe, el trabajo en equipo, la satisfacción y seguridad que se tienen para con el trabajo y por el apego afectivo hacia la organización, por la lealtad que se siente hacia ella (Luhmann & De Georgi, 1993, citado por Zamora, G.

RESULTADOS

El cuestionario fue diseñado originalmente con 46 preguntas se realizó la validez de expertos en el cual 5 especialistas, 3 en el tema y 2 en metodología revisaron el cuestionario para dar validez al mismo, con ello se descartaron 5 preguntas que no cumplían con más del 50% juzgada por los expertos como no fundamentales, basado en el modelo propuesto por Lawshe (1975), posteriormente se realizó un pilotaje con una población de 10 trabajadores de una empresa similar a la sujeta de estudio que es equivalente al 28.57% de la población para trabajar en las observaciones que se tuvieron al momento de la aplicación del mismo. Para la obtención de la fiabilidad del instrumento se obtuvo utilizando el programa estadístico SPSS y los ITEMS de la prueba piloto. Se aplicó Alpha de Cronbach a todo el instrumento obtenido como resultado 0.864 con los datos, para obtener la validez de contenido posteriormente a cada apartado de preguntas por cada variable de esta forma se conoció el coeficiente de cada variable, el resultado se muestra en la Tabla 2.

Tabla 2: Validez de Contenido

Variable	Ítems	Alpha de Cronbach
Sistema de compensaciones	34-41	0.522
Compromiso organizacional	1-12	0.703
Permanencia	13-33	0.687

En la tabla podemos observar que el instrumento cuenta con una validez aceptable para poder medir a la población descrita que es confiable y que aporta una manera sencilla de por describir a las variables sujetas de estudio. Fuente: Elaboración propia con datos de pilotaje y apoyo de SPSS.

CONCLUSIONES

Se puede concluir que, en materia de recursos humanos, se tiene aún un largo camino por recorrer, que si bien en esta investigación se presenta una herramienta para poder medir factores organizacionales, existen más opciones para poder medir la satisfacción y bienestar de los trabajadores dentro de las organizaciones, es importante considerar el talento humano en todos los sectores productivos, así como conocer las ventajas de desarrollarlos. Al realizar el cuestionario para poder describir la influencia del sistema de compensaciones en el compromiso organizacional y permanencia del trabajador, se obtuvo un índice de confiabilidad aceptable de acuerdo a la literatura revisada. Se observó que, aún utilizando el modelo propuesto por Allen y Meyer (1990), con poblaciones diferentes a la muestra, se adapta y logra tener una efectiva validez para la muestra así mismo, se puede observar que las dimensiones de permanencia y compensaciones tienen a su vez, una confiabilidad aceptable para poder decir que el instrumento cuenta con la validez necesaria para poder proceder con el estudio.

Limitaciones

Como limitaciones para el estudio tenemos que el instrumento fue validado y desarrollado para una empresa en particular con características particulares, por ello al momento de replicarse será necesario adaptar el cuestionario al contexto, es importante mencionar que para cada dimensión de las variables estudiadas se seleccionaron las dimensiones más oportunas de acuerdo a la población que sería sujeta de estudio, por ello es importante evaluar si dichas dimensiones serán las apropiadas en futuras investigaciones.

EL USO DE LOS SISTEMAS FORMALES DE EVALUACIÓN Y EL FEEDBACK EN LAS MAQUILADORAS DE BAJA CALIFORNIA

Mónica Fernanda Aranibar Gutiérrez, Universidad Autónoma de Baja California

Blanca Rosa García Rivera, Universidad Autónoma de Baja California

María Concepción Ramírez Barón, Universidad Autónoma de Baja California

RESUMEN

La industria maquiladora en la frontera norte entre Estados Unidos y México, específicamente en Baja California ha sido abordada desde diferentes perspectivas, ya sea desde el punto de vista de la generación de empleo, de las exportaciones, de la competitividad o desde el aspecto tecnológico, sociodemográfico o de la participación de las mujeres. En esta ponencia, las maquiladoras se abordarán desde la evaluación del desempeño del personal operativo, de modo particular el feedback que permite potenciar y valorar mejor a sus trabajadores, en su desempeño. Podría parecer que la evaluación del desempeño tendría una función muy limitada, sin embargo, aporta beneficios tanto al individuo como a la organización. En este tenor el propósito de esta ponencia consiste en analizar el grado de formalidad de los sistemas de evaluación del desempeño en las maquiladoras y la retroalimentación que se deriva de ella tanto para el trabajador como para la empresa. La parte metodológica en este trabajo es de carácter teórico y empírico. En lo teórico, se desarrolla como marco conceptual lo referente a la evaluación del desempeño enfatizando los beneficios del Feedback. En lo empírico, predominantemente cuantitativo, se sustentó en la aplicación de un cuestionario a los gerentes de RR. HH. de 67 maquiladoras de Mexicali, B.C.

PALABRAS CLAVES: sistemas de evaluación, maquiladoras, Feedback, desempeño del personal

USE OF THE FORMAL SYSTEMS EVALUATION AND FEEDBACK IN BAJA CALIFORNIA MAQUILA

ABSTRACT

The maquiladora industry in the northern border between the US and Mexico, specifically in Baja California has been approached from different perspectives, already be from the point of view of employment generation, exports, competitiveness or the technological aspect, sociodemographic or participation of women. In this paper, maquiladoras were addressed from the performance evaluation of the operating personnel, particularly the feedback that allows better promote and evaluate its workers, in their performance. It might seem that the performance evaluation would have a very limited role, however, benefits both the individual and the organization. In this vein the purpose of this paper is to analyze the degree of formality of the systems performance evaluation on maquiladoras and feedback derived from it to both the employee and the company. The methodological part of this work is theoretical and empirical. In theory, is developed as a conceptual framework regarding performance evaluation emphasizing the benefits of Feedback. In the empirical, predominantly quantitative, it was based on a questionnaire to the managers of RR. HH. of 67 maquiladoras in Mexicali, B.C.

INTRODUCCIÓN

La industria maquiladora ha jugado un papel estratégico para el desarrollo de México, ya que se constituyó en un gran generador de exportaciones y de divisas; ha contribuido a elevar la competitividad de la industria nacional; ha sido una importante fuente generadora de empleo sobre todo en los años noventa; de capacitación y adiestramiento de la mano de obra, así como un sector importante para transmitir y generar tecnología.

Por su parte, la evaluación del desempeño se ha convertido en una herramienta eficaz para los responsables de los Recursos Humanos de las empresas y permite establecer criterios de capacitación y profesionalización del personal. Asimismo, puede contribuir a establecer políticas de retribución y rotación para el buen funcionamiento de la organización. Podría parecer que la evaluación del desempeño tendría una función muy limitada, sin embargo, aporta beneficios tanto al individuo como a la organización. Al individuo porque, entre otras cosas, genera la retroalimentación (feedback) básica para mejorar su desempeño, y para la organización, los especialistas toman en cuenta su contribución total a la misma organización.

En esta ponencia, las maquiladoras se abordaran desde la evaluación del desempeño del personal operativo, de modo particular el feedback que permite potenciar y valorar mejor a sus trabajadores, en su desempeño. Su propósito consiste en analizar el grado de formalidad de los sistemas de evaluación del desempeño en las maquiladoras y la retroalimentación que se deriva de ella tanto para el trabajador como para la empresa. La parte metodológica en este trabajo es de carácter teórico y empírico. En lo teórico, se desarrolla como marco conceptual lo referente a la evaluación del desempeño enfatizando los beneficios del Feedback. En lo empírico, predominantemente cuantitativo, se sustentó en la aplicación de un cuestionario a los gerentes de RR. HH. de 67 maquiladoras de Mexicali, B.C. para determinar el grado de retroalimentación de la evaluación del desempeño.

REVISIÓN DE LA LITERATURA

En esta revisión de la literatura, abordaremos las diversas perspectivas conceptuales de la evaluación del desempeño, los principales sistemas de evaluación y los usos y la retroalimentación de la evaluación. La evaluación del desempeño, en general puede ser definida como un proceso por el cual se evalúan las capacidades y el potencial de un individuo o de un equipo tomando en cuenta su comportamiento y rendimiento laboral en un tiempo determinado. La medición se realiza en base a criterios que están destinados a comparar los logros obtenidos con los logros esperados. En este sentido, la evaluación del desempeño consiste en una revisión y verificación, constante y periódica de las tareas asignadas a los empleados para ver si las están llevando a cabo de manera adecuada y para ver el grado de desarrollo del potencial de los trabajadores.

Asimismo, suele ser definida como una apreciación del desempeño de los empleados, así para Chiavenato, (2011) la evaluación del desempeño es una apreciación sistemática del desempeño de cada persona en el cargo o del potencial de desarrollo futuro. Lo que indica que la evaluación del desempeño, tiene que ver con el futuro y el potencial del trabajador. Desde esta perspectiva, básicamente, la evaluación del desempeño consiste en una revisión sistemática, periódica y formal de los resultados de trabajos efectuados ordinariamente de manera conjunta entre jefe y colaborador dependiendo del tipo de evaluación que se elija. Esto implica la implementación de un método formal que mide el rendimiento de un empleado por el director o superior inmediato de la compañía a la que pertenece. La medición se da en términos, cualitativos,

cuantitativos, de tiempo, de costo y de comportamiento.

Por su parte, para Rodríguez, (2004) la evaluación del desempeño consiste en valorar la eficacia con la que el ocupante de un puesto lo ejecuta en un periodo determinado de tiempo. La mayor parte de las evaluaciones tienen que ver con un periodo bien delimitado de tiempo en el cual el trabajador debe cumplir ciertas metas establecidas.

En cuanto a los *sistemas de evaluación del desempeño*, aunque, en la mayoría de las empresas se han desarrollado sistemas formales, los sistemas de evaluación que se han generado pueden ser clasificados en formales e informales (Ivancevich, 2004, Schiel & Orozco, 2011). Aunque, en algunas ocasiones coexisten ambos sistemas.

Las características del sistema informal es que se basa más en la apreciación no estructurada en una especie de meditación sobre el trabajo de los empleados, es más subjetivo y tiende a ser más parcial, la puede realizar cada persona sobre sus subordinados, compañeros, pares, o superiores; mientras que, el sistema formal es establecido de manera institucional por la organización, su característica es que se realiza de manera sistemática y periódica mediante un procedimiento preestablecido. Tiende a ser más objetiva e imparcial en sus evaluaciones (Orozco, 2011).

Por otra parte, Kerr (1985) destaca el sistema de evaluación basado en la jerarquía y el sistema basado en el desempeño. El sistema es denominado jerárquico porque las evaluaciones dependen de la percepción y el juicio de los superiores y la distribución de las recompensas se basan sobre la posición en la jerarquía. Y el sistema basado en el desempeño, lo denomina así porque hay una precisa definición y una medida del rendimiento así como una estrecha relación entre desempeño y recompensa. En estos dos modelos se pueden considerar tres dimensiones: la definición del desempeño, su medida y variables relacionadas con el feedback, tales como su frecuencia. Estos dos sistemas de evaluación presentan características similares a los sistemas de control basados en comportamientos o en resultados (Vázquez, 2009). Estas tres dimensiones cobran diferentes características en cada uno de los dos sistemas (Ver Tabla 1). Por ejemplo, la definición del desempeño en el sistema jerárquico es Cualitativa, con ponderación subjetiva, sus recompensas no están ligadas a la misión estratégica o a criterios de desempeño específicos; por el contrario, el sistema basado en el desempeño es cuantitativo, su ponderación es objetiva, sus recompensas están ligadas a la misión estratégica y a criterios de desempeño específicos.

Tabla 1: Sistemas de evaluación basados en la jerarquía vs. basados en el desempeño

		Sistema basado en la jerarquía	Sistema basado en el desempeño
Definición del desempeño	del	Cualitativa, ponderación subjetiva, recompensas no ligadas a la misión estratégica o a criterios de desempeño específicos	Cuantitativa, ponderación objetiva, recompensas ligadas a la misión estratégica y a criterios de desempeño específicos
Medida del desempeño	del	Subjetiva, por uno o dos superiores, con un marco temporal básicamente actual con orientación informal hacia el futuro	Objetiva, frecuentemente basada en fórmulas (financieras), a menudo con un componente histórico
Feed-back		Una sesión formal, elevada dependencia del superior para información, interacción superior-subordinado frecuente, énfasis en el desarrollo.	Sin sesiones formales o no más de una, baja dependencia del superior, interacción poco frecuente entre superior y subordinado, énfasis en la evaluación.

Fuente: Kerr (1985). (Citado por Vázquez, 2007, p. 20)

Cabe destacar que en este trabajo de investigación se centró en el análisis de los sistemas de evaluación basados en el desempeño. Finalmente, en cuanto a los usos de la evaluación del desempeño, parecieran ser muy limitados y restringidos, pero las herramientas que se utilizan son valiosas para los gerentes de las empresas, en particular para el área de recursos humanos.

Según Bratton & Gold (2003) los principales propósitos del uso de la evaluación del desempeño serían para: mejorar el rendimiento individual; mejorar la motivación y la moral; clarificar las expectativas y reducir la ambigüedad acerca de los logros de rendimiento; determinar el tamaño de la recompensa; identificar necesidades y oportunidades de capacitación y desarrollo; mejorar la comunicación entre jefe y subordinado; seleccionar a las personas para la promoción y desarrollo de la carrera; ayudar en la gestión de la carrera; identificar cualquier necesidad de asesoramiento; identificar una necesidad de una acción disciplinaria; establecer metas y objetivos.

En general estos propósitos de la evaluación se vinculan con el área *administrativa* y de *desarrollo*: desde el punto de vista de la administración al establecer metas y objetivos, así como servir de base para tomar decisiones en lo que se refiere al tamaño de la recompensa; en cuanto a los propósitos de desarrollo en lo individual, la evaluación proporciona la retroalimentación primordial para mejorar el desempeño individual, la motivación y la moral. Sin importar el nivel de desempeño del empleado, el proceso de evaluación proporciona una oportunidad para eliminar problemas potenciales y establecer nuevas metas para lograr un alto grado de desempeño.

Coincidente con estos propósitos hay otros, como sugiere, Porret, (2010, pp. 248-250), que se consiguen una vez que se analizan los resultados y se toma la opinión del evaluado: a) Conocer los intereses profesionales del personal; b) Involucrar a las personas en los objetivos de las empresas; c) Evaluar los resultados y efectuar las correcciones oportunas; d) Proponer los premios, promociones y sanciones tanto económicas como profesionales; e) Descubrir las carencias de formación necesaria para el mejor desempeño del puesto actual y para la carrera futura; f) Evaluar el desarrollo y la motivación del personal.

Es importante mencionar que “el objetivo último de la evaluación del desempeño es mejorar el rendimiento de los trabajadores mediante el fomento de la motivación de los empleados, lo que dependerá de la situación en el lugar de trabajo, como el sistema de recompensa, normas y reglamentos” (Shiferaw, 2010).

Podría parecer que la evaluación del desempeño tendría una función muy limitada, sin embargo, aporta beneficios tanto al individuo como a la organización. Al individuo porque, entre otras cosas, genera la retroalimentación básica para mejorar su desempeño, y para la organización, los especialistas toman en cuenta su contribución total a la misma organización (Werther & Davis, 2008). De este modo, la evaluación del desempeño representa uno de los criterios que constituyen las bases del sistema de compensaciones, como sería el “pago por desempeño”, permite orientar la capacitación, diseñar los planes de desarrollo y el crecimiento de los empleados.

El feedback tiene como propósito actuar sobre el comportamiento de la persona y en sus resultados. Tiene la función de reforzar un comportamiento que queremos que se repita (feedback positivo o de apoyo) o señalar un comportamiento o conducta que la persona necesita modificar (feedback negativo o correctivo). Por eso una vez que se ha realizado la evaluación formal se procede a realizar la entrevista y/o cuestionario de evaluación y retroalimentación que tiene como objetivo proporcionar información al empleado sobre los resultados obtenidos en el último periodo de evaluación.

Los beneficios de la retroalimentación (feedback) en los procesos de la evaluación del desempeño son múltiples y se pueden distinguir según Diane, (2008) entre beneficios para los empleados, el gerente y para la organización.

Los sujetos de estudio de la presente investigación son los Gerentes de Recursos Humanos de las maquiladoras de Mexicali, B.C. de los distintos sectores industriales, puesto que interesaba recibir información importante proporcionada por los mismos acerca del Sistema de Evaluación del Desempeño aplicado al personal operativo de las maquiladoras de Mexicali, B.C.

Por tal motivo, se decidió restringir la población a los Gerentes de Recursos Humanos de las maquiladoras de Mexicali, B.C. de los distintos sectores industriales, obteniendo de esta manera, el universo de 142 maquiladoras que cuentan con departamento de Recursos Humanos (Ver Tabla 2).

Tabla 2: Determinación de la muestra

Población	Tipo de Muestreo	Universo	Muestra Mínima	Muestra Máxima	Medio De Recopilación de la Información
Gerentes de RR. HH.	Probabilístico Aleatorio	Base de Muestra 142	64	104	Cuestionario

Fuente: Elaboración propia

La base de muestra se tomó partiendo de la información proporcionada por la Secretaría de Desarrollo Económico (SEDECO) y la Asociación de Maquiladoras de Mexicali (AMMAC), así como también, de la revisión de la página del Instituto Nacional de Estadística y Geografía (INEGI) y del portal del Directorio de la Industria Maquiladora de Baja California. Siendo esta última fuente la que proporcionó una lista más completa y actualizada de las maquiladoras establecidas en Mexicali, B.C. Con base en dicha información se determinó que se encuentran establecidas en Mexicali, B.C. 207 maquiladoras de las cuales solo 142 maquiladoras cuentan con departamento de Recursos Humanos. Asimismo, cabe mencionar, que se realizó un muestreo probabilístico de tipo aleatorio simple con remplazo.

Para la determinación de la muestra máxima se aplicó la siguiente fórmula para una población finita, es decir conocemos el total de la población y deseamos saber cuántos del total tendremos que estudiar:

$$n = \frac{z^2 N P Q}{e^2 (N - 1) + z^2 P Q}$$

Dónde:

N = tamaño de la población

Z = 95% Coeficiente de confianza

P = proporción poblacional ajustada (Q = 1-P)

e = 5% error máximo admisible

n = tamaño de la muestra

Sustituyendo la fórmula se tiene:

$$n = \frac{1.96^2 (142) (0.50) (0.50)}{0.05^2 (142 - 1) + 1.96^2 (0.50) (0.50)} = 104$$

Dando como resultado una muestra máxima de 104 maquiladoras.

Determinación de la muestra mínima

Se realizó el ejercicio donde se tomó en cuenta del cuestionario aplicado como prueba piloto, el ítem Formal (1), Informal (2) perteneciente a la variable independiente: *Sistema de Evaluación del Desempeño* donde de 13 cuestionarios aplicados 12 contestaron Formal y 1 Informal representando un porcentaje de 0.92 y 0.08 respectivamente.

Se aplicó la misma fórmula anterior donde $p=0.92$ y $q=0.08$ dando como resultado una muestra mínima de 64 maquiladoras.

Sustituyendo la fórmula tenemos:

$$n = \frac{1.96^2 (142) (0.92) (0.08)}{0.05^2 (142 - 1) + 1.96^2 (0.92) (0.08)} = 64$$

En total se llevaron a cabo 67 encuestas con los Gerentes de Recursos Humanos de las distintas maquiladoras de Mexicali, B.C. seleccionadas aleatoriamente de la base de muestra con reemplazo. Se enfatizó en la confidencialidad de la encuesta durante la aplicación y una vez terminado el cuestionario se les informó sobre el procesamiento posterior del mismo. El trabajo de campo se extendió desde octubre de 2012 a enero de 2014.

RESULTADOS

La muestra a la que se aplicó la encuesta mostró que el 70.1% respondió que utiliza al sistema de evaluación del desempeño para identificar y medir el rendimiento de las personas; seguido de un 61.2% que tiene como propósito de evaluar las decisiones sobre la retribución y distribución de recompensas. A menor proporción no significativa, se ubicó en un 49.3% en reforzar el desempeño de los empleados; 38.8% desarrollar las competencias de los empleados; 22.4% valorar a los empleados y; 16.4% disminuir el índice de rotación del personal. Los resultados muestran que primeramente se mide la capacidad del trabajador y se decide la forma de cómo retribuir su actividad como se puede apreciar en la siguiente Figura 1.

Figura 1: Propósito de la Evaluación

Fuente: Elaboración propia

Una vez aplicada la evaluación del desempeño, es necesario de una retroalimentación (feedback), que impacte de forma positiva a corto plazo hacia la empresa y a los trabajadores. En la Figura 2, se aprecia que el 52.2% de las empresas encuestadas, realizan solo una retroalimentación anual, mientras que el 32.8% realizan dos veces al año, el 15%, consideraron que es necesario exista una retroalimentación constante, por lo que dentro de este último porcentaje, un 9% mencionó que la realiza 3 veces al año y un 6% más de 3 veces.

Figura 2: Frecuencia de las reuniones de retroalimentación con el personal evaluado

Fuente: Elaboración propia

Por último, en la Figura 3, se percibió que la empresa proporciona en un 89.6% los medios suficientes para que los trabajadores se sientan motivados con lo que realizan en la empresa, un 6%, requieren de una mayor atención, y un 4.5%, están desacuerdo, consideran que debe existir mejores medios para motivarse.

Figura 3: ¿La empresa proporciona a sus empleados los medios suficientes para que estos se sientan motivados con lo que hacen?

Fuente: Elaboración propia

El 83.6% de las empresas consideran que su sistema de evaluación es formal, tiene diferentes fines tanto mejorar las condiciones de la empresa y de los trabajadores, el documento que se aplica para evaluar a los trabajadores es realizado por el gerente y supervisor principalmente, el cual tiene una actualización periódica así como su aplicación y retroalimentación al personal. La mayoría de las personas considera que el tiempo es adecuado, no es muy extenso por lo que puede realizarse en menos de una hora, siempre y cuando tanto el evaluador y el evaluado estén capacitados y predispuestos a desarrollarla.

CONCLUSIONES

Como se ha afirmado en el marco teórico, la retroalimentación tiene múltiples beneficios, se pueden distinguir, según Diane, (2008) entre beneficios para los empleados, el gerente y para la organización. Para el individuo entre otras cosas, genera la retroalimentación básica para mejorar su desempeño, y para la organización, los especialistas toman en cuenta su contribución total a la misma organización (Werther &

Davis, 2008), al gerente le da información importante para la toma de decisiones. Puede concluir que en las maquiladoras de Mexicali, se demostró que más de un 70% utiliza sistemas formales de evaluación del desempeño, para identificar y medir el rendimiento de las personas; y que una vez evaluados más de un 50% por lo menos tiene un feedback con los trabajadores al año y que un poco más de un 30% realiza el feedback dos veces al año. Como parte del proceso de retroalimentación está la motivación, en las maquiladoras involucradas más de un 65% considera que la empresa proporcionar los medios suficientes para que el trabajador se siente motivado con lo que hace. Con lo cual la retroalimentación como resultado de la evaluación del desempeño es positiva en las maquiladoras de Mexicali por sus múltiples beneficios, pero a pesar de ello, tendrá que fortalecerse aún más.

ANÁLISIS COMPARATIVO DE LOS PRINCIPALES FACTORES QUE INCIDEN EN LA PROFESIONALIZACIÓN DE LAS EMPRESAS FAMILIARES DEL SECTOR INDUSTRIAL, COMERCIAL Y DE SERVICIOS DE TIJUANA, B.C., MÉXICO

María Virginia Flores-Ortiz, Universidad Autónoma de Baja California

Alfonso Vega-López, Universidad Autónoma de Baja California

Edgar Armando Chávez Moreno, Universidad Autónoma de Baja California

RESUMEN

La presente investigación tiene como objetivo realizar el análisis comparativo de los factores de contingencias, tales como proceso de profesionalización, capacitación, cultura organización, liderazgo y selección, para determinar cuáles inciden en la profesionalización de las empresas familiares del Sector Industrial, Servicios y de Comercio de Tijuana, B.C., México. Debido a la importancia que tiene la gestión de toda organización para que esta logre profesionalizarse, tomando en cuenta que prácticamente es a través de la contratación de directivos ajenos a la familia. Para medir los niveles de profesionalización se tomaron aquellos estados o condiciones organizativas como factores de contingencia, proponiéndose una serie de variables. Se realizó el análisis estadístico de los datos, logrando como resultado presentar un esquema en el que se muestran los factores de contingencia que inciden directamente en la profesionalización.

PALABRAS CLAVES: Factores de Contingencia, Profesionalización, Sector Industrial, Comercio y Servicios

COMPARATIVE ANALYSIS OF THE MAIN FACTORS THAT AFFECT THE PROFESSIONALIZATION OF FAMILY ENTERPRISES OF INDUSTRIAL, COMMERCIAL AND SERVICES IN TIJUANA, B.C., MEXICO

ABSTRACT

This research aims to carry out the comparative analysis of the factors of contingencies, such as process of professionalization, training, organization culture, leadership and selection, to determine what affect the professionalization of family enterprises in industry, services and trade in Tijuana, B.C., Mexico. Due to the importance that has the management of any organization is to professionalize, taking into account that practically is through the hiring non-family managers. o measure the levels of professionalism were those States or organisational conditions as factors of contingency, proposing a series of variables. The statistical analysis of the data, is carried out and as a result present a diagram which shows the factors of contingency that directly affect the professionalization.

KEYWORDS: factors of contingency, professionalization, industry, trade and services

JEL: L21, L22

INTRODUCCIÓN

Algunos datos que reflejan la importancia que representan las empresas familiares en México se hacen mención en un estudio que realiza (García, 2011), en el que hace referencia de que en el país el 99% del total de las empresas que equivalen a unos cuatro millones, son catalogadas como micro, pequeñas y medianas empresas (OCDE, 2007; INEGI 2006). Asimismo, en el año 2006, estas empresas generaron más de la mitad del Producto Interno Bruto (PIB) nacional y emplearon a casi tres cuartas partes de la población económicamente activa. La profesionalización en las empresas familiares, es el lograr que las actividades se lleven a cabo con criterios organizacionales de eficiencia para evaluar sus resultados, para que la toma de decisiones no esté influenciada por criterios familiares, que no siempre están relacionadas con los de la empresa. Por lo tanto, es importante contarse con un equipo directivo con experiencia y conocimientos en el manejo de la administración de las empresas.

Tanto para el Sector, Industrial, Servicios y de Comercio es importante la profesionalización en las empresas familiares por lo mencionado anteriormente, el profesionalizar implica lograr que las actividades se lleven a cabo con criterios organizacionales de eficiencia para evaluar sus resultados, para que la toma de decisiones no esté influenciada por juicios familiares, que no siempre están relacionadas con los de la empresa. Por lo tanto, es importante contar con un equipo directivo con experiencia y conocimientos en el manejo de la administración de las empresas.

Por lo tanto es imprescindible fijar como objetivo la profesionalización como hace mención Meroño (2009). Sin embargo, con frecuencia se entiende erróneamente profesionalizar como la incorporación a las responsabilidades directivas de personas ajenas a la familia (Hall y Nordqvist, 2008). Son varios autores los que han tocado el tema de la profesionalización entre los que cabe citar los trabajos de Rueda (2011), Debicki (2009), Lozano (2008). Cabe destacar el trabajo de Rueda (2011), debido a que desde su punto de vista la labor de profesionalizar la empresa familiar no resulta una tarea fácil, ya que por las condiciones propias de este tipo de organizaciones, su estructura corporativa tiene sus cimientos en tres elementos básicos que son familia, propiedad y empresa. Por lo tanto la profesionalización de las empresas familiares en México, así como en Tijuana, B.C. es significativa, ya que su existencia puede depender de dichos factores de contingencia. Las empresas al iniciar la producción de bienes o servicios, deben vislumbrar y tomar en cuenta los distintos elementos que inciden en su estructura organizativa. De aquí la importancia de determinar cuáles son los factores de contingencia que inciden en la profesionalización, de las empresas familiares del Sector Industrial, Sector servicios y del Sector Comercio en Tijuana, B.C., México.

REVISIÓN LITERARIA

La Profesionalización de la Empresa Familiar

Existe un creciente interés de parte de las empresas familiares de cómo llevar a cabo la profesionalización, ya que la gran mayoría no sobrevive a una segunda generación. (Raposo, 2010). Es un hecho que una de las fallas de la empresa familiar se encuentra en dos aspectos que resultan fundamentales: la falta de una apropiada gestión de los recursos y su limitada capacidad para desarrollar estrategias competitivas. (Rueda, 2011), hace mención que se debe reconocer que los fundadores y empleados vinculados al entorno de la empresa familiar son en su gran mayoría trabajadores expertos en procesos operativos, la fuerte carencia en el aspecto administrativo empresarial se ha convertido en debilidad. Urzúa (2012), hace referencia a la empresa familiar como el ente económico donde la dirección general, así como los puestos claves para la toma de decisiones, son ocupados por personas con lazos consanguíneos que se pueden considerar dueños, parciales o totales de la empresa.

La familia. Este círculo representa esencialmente a las personas que pertenecen al mismo grupo sanguíneo que controla la empresa, a los cónyuges e hijos, incluidas sus necesidades, aspiraciones e inquietudes. La familia, como sistema aspira a respaldar a cada uno de sus miembros y les brinda protección, cariño, seguridad, educación y recursos para su desarrollo. Empresa. Una de las fuentes de apoyo que tiene la familia es la empresa, pues, pues de ellas se obtienen recursos para financiar los gastos familiares. La empresa está constituida por las personas que trabajan en la organización (incluidos los miembros de la familia), sus instalaciones, productos y servicios. Por su parte, a empresa recibe el apoyo de la familia, pues algunos de sus miembros, en ella, ocupan puestos, invierten recursos y capitalizan sus relaciones. Propiedad: Belauteguigoitia (2010), para este punto hacer referencia de una definición de Williams (1992), la propiedad de una organización es un tema de orden legal. La propiedad de un bien da el derecho de usarlo para obtener beneficios. En el caso de una empresa, esto implica que puede gozarse de las utilidades que ella proporcione o incluso intercambiarse.

Profesionalización En la Gestión de las Empresas Familiares

En palabras sencillas, la profesionalización de un negocio familiar implica pasar por un proceso, en el que el negocio se empieza a manejar y administrar como una empresa, en lugar de una familia; y en donde se invitan a personas a bordo de la empresa, por sus habilidades, capacidades y experiencia, y no por el simple hecho de ser un miembro familiar. (Miranda, 2013). Una organización puede ser de propiedad de una familia, estar gestionada por la familia y ser profesional. El profesionalismo nada tiene que ver con categorías, sino con actitudes y comportamientos personales. Y, de hecho, es posible que los miembros de la familia que posean la combinación apropiada de cualidades tengan ciertas ventajas al gestionar el negocio, en especial para asegurar a los principales interesados, familiares accionistas, empleados, clientes y proveedores, que la empresa es estable y pueden confiar en ella.

Por lo tanto, no hay que caer en la trampa de suponer que para hacer más profesional una empresa hay que deshacerse de los empleados-familiares. (Valda, 2011) En un estudio realizado por (Flores, Vega, Solís, 2013), hacen referencia que de acuerdo con Belausteguigoitia (2010), la profesionalización es un proceso de transformación gradual que implica un cambio de mentalidad en cada uno de los elementos de la organización. Para que esto sea eficaz, deben comprometerse aquellos que se encuentran en las máximas posiciones jerárquicas. Para cualquier empresa la profesionalización significa un gran reto, pero para las empresas familiares, que suelen dejarse llevar por la inercia y les cuesta más trabajo transformarse este proceso es más complejo. La profesionalización es un proceso de cambio gradual que se va conociendo y entendiendo mejor a través de las diferentes etapas por las cuales suele atravesar una empresa familiar y tomar en cuenta los factores de contingencia que inciden en su profesionalización. De tal modo que los factores de contingencia, son aquellos estados o condiciones organizativas que están asociados al uso de ciertos parámetros de diseño. Los factores a los que vamos a referirnos pueden clasificarse de la siguiente manera:

Proceso de profesionalización. El diseño organizativo en las empresas familiares debe preocuparse por contemplar una estructura que le permita el control y la toma de decisiones tanto desde una perspectiva de negocio como familiar. (Meroño, 2009). El perfil del gerente/propietario, la edad y el tamaño, tomando en cuenta la dimensión, ubicación geográfica de la organización; entre mayor antigüedad tenga la organización, más formalizado estará su comportamiento, y entre más grande sea la organización, más compleja será su estructura es decir, más especializadas estarán sus tareas, más diferenciadas sus unidades de trabajo y su componente administrativo.

De tal manera que en una estructura burocrática, existe la especialización del trabajo, se requiere la definición de la jerarquía de autoridad, reflejándose en una tecno estructura para planificar y formalizar el trabajo, así como el crecimiento, desarrollo de la empresa, procesos y mecanismos con los que cuente la empresa familiar para realizar su proceso de profesionalización, lo anteriormente mencionado fue definido

en una investigación realizada para el sector servicio, en donde se utilizaron los mismos factores de contingencia por (Flores, 2013), clasificándose de la siguiente manera:

Capacitación. El sistema técnico, que utiliza el núcleo de operaciones, es decir, cuánto más sofisticado sea el sistema técnico, más elaborada será la estructura administrativa, siendo más profesional y capacitado su personal y *staff* de apoyo. Con el control de la familia sobre la empresa, la primera garantiza que sus sueños, valores y deseos se reflejen en la segunda. Así la familia puede estar segura de que la expresión de la familia a través de la empresa sería la adecuada. Belausteguigoitia, (2010). Cultura organizacional. Distintos aspectos del entorno, especialmente la estabilidad, la complejidad, la diversidad y la hostilidad. Asimismo Belausteguigoitia (2010), también hacer referencia que con el compromiso de la empresa hacia la familia y viceversa, ambos subsistemas se mantienen cohesionados, por lo que es más difícil que se enfrenten. En este caso es mayor el grado de involucramiento de las personas relacionadas con la organización. Liderazgo. Algunas de sus relaciones de poder, que se ejerce de manera interna en la empresa, de acuerdo a las necesidades de poder de los miembros de la organización.

Belausteguigoitia (2010), menciona que con un liderazgo apropiado a las características de la propiedad y de la empresa, los propietarios, directores, y trabajadores en general se mantendrán relativamente unidos y perseguirán un mismo objetivo común: hacer una empresa fuerte que sea rentable para los accionistas y un buen lugar para trabajar. Selección. Según Zayas (2010), seleccionar no implica escoger a unos discriminando a otros, sino que la selección brinda la posibilidad de orientar y clasificar a las personas en función de sus potencialidades, y contribuir a la formación y desarrollo de los candidatos en la necesaria interrelación hombre-trabajo. El problema ético no está en seleccionar, sino en cómo se realiza la selección, ahí estriba el comportamiento ético del proceso, en las políticas, en los objetivos, en el proceder de las personas; esto enfatiza la necesidad de contar con principios que guíen el proceso de selección personal.

MÉTODO

La metodología de investigación es cuantitativa. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los propietarios según una muestra finita de la población total de las empresas familiares del sector comercio. Se procesó la información recolectada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial. La variable dependiente es la profesionalización lo que implica pasar por un proceso, en el que el negocio se empieza a manejar y administrar como una empresa, en lugar de una familia; y en donde se invitan a personas a bordo de la empresa, por sus habilidades, capacidades y experiencia, y no por el simple hecho de ser un miembro familiar. (Miranda, 2013). En cuanto a las variables independientes como los factores de contingencia se tomaron los siguientes: el proceso de profesionalización, capacitación, cultura organizacional, liderazgo y selección.

Objetivos

Objetivo General: Análisis comparativo de los factores de contingencias, tales como proceso de profesionalización, capacitación, cultura organización, liderazgo y selección, para determinar cuáles inciden en la profesionalización de las empresas familiares del Sector Industrial, Servicios y de Comercio de Tijuana, B.C., México.

Objetivo Específico: Determinar el análisis comparativo de los factores de contingencia tales como el proceso de profesionalización, capacitación, cultura organizacional, liderazgo que inciden en la profesionalización de las empresas familiares del Sector Industrial, Servicios y de Comercio de Tijuana, B.C., México.

Diseño de la Muestra

El diseño de la muestra es resultado de la identificación de una población total de 473 empresas familiares del sector industrial, comercial y de servicios, registradas en el Sistema de Información Empresarial Mexicano (SIEM) de Marzo 2010, de Tijuana, B.C. México y de la consideración del porcentaje de presencia sobre la población total, dando como resultado 357 empresas, como se muestra en la Tabla 1. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de empresas familiares es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y $p = q = 0.5$. Para la recolección de la información se realizaron entrevistas personales, para aclarar cualquier duda que tuviera el entrevistado, acerca de alguna de las preguntas del cuestionario, finalmente se obtuvieron 357 encuestas, estas fueron válidas y ninguna fue excluida al momento de analizar la información. Llevándose a cabo la presente investigación en dos años para realizar el análisis comparativo de los tres sectores.

Tabla 1: Total de Empresas de Acuerdo al SIEM, Marzo 2010

	Población	Muestra
Total de empresas	473	357

La tabla muestra que el total de empresas registradas, integran una población de 473, la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número de empresas familiares, dando como resultado que la muestra esperada es de 357 empresas.

Validación del Instrumento

A los propietarios se les aplicó un cuestionario conformado con 41 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis de los factores que inciden en el proceso de profesionalización de las empresas familiares. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable).

Tabla 2: Análisis de Fiabilidad

Alfa de Cronbach	No. de Elementos
.873	41

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). En la tabla se muestra el cuadro comparativo de los principales factores que inciden en el proceso de profesionalización del Sector Industrial, Comercial y de Servicios. Fuente elaboración propia (2015)

Figura 1: Factores de Contingencia Que Inciden En la Profesionalización del Sector Industrial, Comercial y de Servicios

La Figura 1, muestra un esquema en donde se representan los cinco factores de contingencia que inciden de manera directa en la profesionalización de las empresas familiares del Sector Servicios, de acuerdo a los resultados obtenidos en las correlaciones realizadas. Fuente elaboración propia Flores V. y Vega A. 2015.

En la figura 1, se muestran las variables que se tomaron como factores de contingencia y que inciden en el proceso de profesionalización de las empresas familiares del sector industrial, de comercio y servicios en Tijuana, B.C., obteniendo como resultado las cinco variables: la cultura organizacional, selección, capacitación, liderazgo y el proceso de profesionalización. Estas cinco variables representan un conjunto de criterios empresariales de eficiencia que las empresas familiares deben considerar para profesionalizarse, que se respaldan en la gestión de estas variables como recursos intangibles, sin olvidar que su estructura organizacional se fundamenta en los tres elementos básicos que son la familia, propiedad y empresa y por lo tanto el Modelo de los tres círculos, sirve de base para ilustrar el modelo de articulación dinámica de Belausteguigoitia (2010), en donde la empresa familiar muestra el balance y la articulación que deben existir entre la propiedad, la empresa y la familia.

RESULTADOS

Al realizar el análisis de correlación, se determina que los factores de contingencia que inciden de manera directa en la profesionalización del sector industrial, de comercio y de servicios son los siguientes: En cuanto a la cultura organizacional en el sector industrial existen buenas relaciones familiares en estas organizaciones, existe una orientación a largo plazo y es buena la comunicación interna, no existe la resistencia al cambio de parte de los propietarios y los trabajadores, las familias poseen la capacidad para adaptarse al proceso de profesionalización haciendo a un lado sus intereses personales. Asimismo en el sector comercio existen buenas relaciones familiares, una orientación a largo plazo, una buena comunicación interna y no existe tampoco la resistencia al cambio de parte de los propietarios y de los trabajadores, las familias poseen la capacidad para adaptarse a la profesionalización, haciendo a un lado sus intereses personales.

En tanto que en el sector servicios en cuanto a la cultura organizacional se refiere, existen buenas relaciones familiares en las organizaciones de este sector, la orientación es a largo plazo, es buena la comunicación interna y no existe tampoco la resistencia al cambio de parte de los propietarios y de los trabajadores, las familias poseen la capacidad para adaptarse a la profesionalización, haciendo a un lado sus intereses personales. El análisis comparativo de la selección en el sector industrial muestra que los profesionales que se incorporen a la empresa cuenten con estudios superiores relevantes para ocupar los puestos, tengan conocimientos previos del negocio, cuenten con un alto compromiso con la organización y que estos cuenten con el respaldo de la familia propietaria.

En el sector comercial en lo referente a la selección busca que exista una nueva generación de profesionales de la familia dispuestos a incorporarse a las empresas y que estos sean familiares directos y cuenten con estudios superiores relevantes para ocupar los puestos y tengan conocimientos previos del negocio y al integrarse tengan un alto compromiso con la organización y cuenten con el respaldo de la familia propietaria. Por lo tanto en el sector servicios se pretende que exista una nueva generación de profesionales de la familia dispuestos a incorporarse a las empresas de este sector, sean familiares directos y que también tengan conocimientos previos del negocio, así como que tenga un alto compromiso con la empresa y que cuenten con el respaldo de la familia propietaria.

El resultado en cuanto al liderazgo en el sector industrial los profesionales que se incorporen a la empresa cuenten con un alto grado de proactividad, posean capacidad para lograr consensos con la familia propietaria, compartan valores familiares en la administración del negocio y logren un liderazgo efectivo. En el sector comercio se busca que una nueva generación de profesionales de la familia dispuestos a incorporarse a la empresa, que sean familiares directos, cuenten con estudios superiores relevantes al puesto que van a ocupar, tengan conocimientos previos del negocio y los profesionales que se integren a la empresa tengan un alto compromiso con la organización. La capacitación en el sector industrial es con la finalidad de que los directivos no familiares que se incorporen a la empresa familiar sean competentes, exista lealtad de los directivos no familiares que se incorporen a la empresa y que existan posibilidades de crecimiento profesional para los directivos no familiares.

El sector comercio con la capacitación busca que exista incorporación de directivos no familiares en la administración de la empresa, al igual que procesos competitivos de selección de los directivos de la empresa, que los directivos no familiares, que se incorporen a la empresa sean competentes, que exista lealtad de los directivos no familiares que se incorporen a la empresa, asimismo la permanencia de los directivos no familiares, como factor importante para la profesionalización y existan posibilidades de crecimiento profesional para los directivos no familiares. En el sector servicios la capacitación pretende que los directivos no familiares, que se incorporen a la empresa sean competentes y que exista lealtad de los directivos no familiares que se incorporen a la empresa. En cuanto al proceso de profesionalización en el sector industrial busca que se planifique el proceso de profesionalización en la empresa (protocolo

familiar), el proceso de profesionalización sea liderado por la familia que el rol del encargado del proceso de profesionalización sea claramente definido, que los puestos se encuentren explícitamente definidos en la estructura organizacional, los roles de la familia en la administración de la empresa sean claramente definidos y que el proceso de profesionalización sea declarado explícitamente en el plan estratégico de la empresa familiar. Asimismo en el sector comercio el proceso de profesionalización pretende que se planifique el proceso de profesionalización en la empresa familiar (protocolo familiar), así como el proceso de profesionalización sea liderado por la familia, que el rol del encargado del proceso de profesionalización sea claramente definido, que los puestos se encuentren explícitamente definidos en la estructura organizacional, los roles de la familia en la administración de la empresa sean claramente definidos, existan asesores externos que ayuden al proceso de profesionalización y mecanismos que permitan a la familia preparar el proceso de profesionalización.

Que existan procesos de preparación de sucesores profesionales al interior de la familia y que el proceso de profesionalización sea declarado explícitamente en el plan estratégico de la empresa familiar. En tanto que en el sector servicios busca que se planifique el proceso de profesionalización en la empresa familiar (protocolo familiar), el proceso de profesionalización sea liderado por la familia, que el rol del encargado del proceso de profesionalización sea claramente definido, los puestos se encuentren explícitamente definidos en la estructura organizacional, que los roles de la familia en la administración de la empresa sean claramente definidos, existan asesores externos que ayuden al proceso de profesionalización, así como mecanismos que permitan a la familia preparar el proceso de profesionalización, existan procesos de preparación de sucesores profesionales al interior de la familia y por último que el proceso de profesionalización sea declarado explícitamente en el plan estratégico de la empresa familiar. Por último, se puede concluir que al analizar los factores de contingencia de la cultura organizacional, selección, capacitación, liderazgo y el proceso de profesionalización estos tienen una incidencia directa en la profesionalización de las empresas familiares del sector industrial, comercio y servicios.

La principal contribución de este trabajo, es la propuesta de un esquema con una serie de variables como factores de contingencia, que se deben tomar en cuenta para que la empresa familiar logre profesionalizarse, para que su estructura organizacional, procesos, manejo de personal se encuentren establecidos de manera formal, también se presenta información útil que contribuye a que los propietarios de las empresas familiares, recapaciten sobre la importancia que tiene la profesionalización, como un factor primordial para su competencia, a través del cual es posible lograr mejores condiciones para crecer y evolucionar. La principal limitación de la investigación que se presentó, fue la recolección de la información, debido básicamente al temor de los empresarios a proporcionar datos e información de sus empresas, atribuido a los niveles de inseguridad que existen en el país, y específicamente en la Ciudad de Tijuana, Baja California, México, donde se llevo a cabo el estudio, prolongando significativamente el periodo para recabar los datos y por ende de la investigación. Se recomienda para trabajos futuros, continuar en la misma línea de investigación pero a nivel regional, de tal manera que se puedan contrastar los resultados en las diferentes ciudades de la región y realizar un estudio comparativo.

Silvia Rodríguez Reyes, Universidad Autónoma de Coahuila

Leslie Betel de la Torre de León, Universidad Autónoma de Coahuila (alumna)

RESUMEN

El modelo económico que actualmente prevalece en el mundo ha abierto la brecha existente entre ricos y pobres, lo que, como consecuencia, lleva a un consumo desigual, ya que la quinta parte de la población mundial consume tres veces más que los demás y dieciséis veces más que la población más pobre. Este modelo económico propicia un consumismo masivo. Hay que considerar dos puntos sumamente importantes: Primero, el estilo de vida consumista no es sustentable porque los recursos con que cuenta la Tierra no son suficientes para que la población en su conjunto pueda vivir de la misma manera. En segundo lugar: La meta de las economías emergentes es entrar en ese modelo de consumo, pues buscan aumentar el volumen y circulación de sus productos para obtener mayores ganancias de sus inversiones. Esto significa que al existir mayor población consumista, las diferencias entre ricos y pobres se acentúan, tal y como ha pasado en los últimos años. Las personas de bajos ingresos dedican la mayor parte de sus ingresos a conseguir alimento, entrando en la espiral de pobreza. Esta situación se agrava porque el individuo carece de una educación que no le permite ampliar sus posibilidades. Su precariedad le conduce a ser susceptible de enfermedades, que se traducen en un bajo rendimiento laboral y a nivel masivo, un mayor gasto en salud pública para los gobiernos. El resultado es que, quien cae en esta espiral de pobreza, no encuentra un mejor trabajo y sigue teniendo bajos ingresos, por lo que el ciclo se repite. Si a ello se le aumenta el factor de la degradación de los ecosistemas, y que esa persona es más vulnerable a catástrofes ambientales, el problema toma mayor fuerza.

PALABRAS CLAVE: Modelo Económico, Consumismo, Economía Emergente

ABSTRACT

The economic model that prevails in the world has opened the gap between rich and poor, which, consequently, leads to unequal consumption since fifth of the world population consumes three times more than others and sixteen times more than the poorest. This economic model promotes a mass consumerism. Consider two very important points: First, the style of consumerist view is unsustainable because the resources of the Earth are not sufficient for the population as a whole can live in the same way. Second: The goal of emerging economies is entering that consumer model, they seek to increase the volume and movement of their products to obtain higher returns on their investments. This means that to be more consumer population, the gap between rich and poor is increasing, as has happened in recent years. The low-income people spend most of their income to obtain food, entering the spiral of poverty. This situation is aggravated because the individual lacks an education that does not allow you to expand your possibilities. His insecurity leads him to be susceptible to diseases, which result in poor work performance and massive scale, increased spending on public health for governments. The result is that, who fall into this spiral of poverty, can not find a better job and still have low income, so the cycle repeats. If this is factor increases the degradation of ecosystems, and that person is more vulnerable to environmental catastrophes, the problem becomes stronger.

KEYWORDS: Economic Model, Consumerism, Emerging Economy

Planteamiento del Problema

Antecedentes

El concepto de consumo y producción sustentable se define como: el uso de servicios y productos relacionados que corresponden a las necesidades básicas y ofrecen una calidad de vida mejor, a la vez que se minimiza el uso de recursos naturales y de materiales tóxicos, así como las emisiones de los residuos y contaminantes durante el ciclo de vida del servicio o del producto con el objeto de poder evitar poner en peligro las necesidades de las generaciones futuras. La contaminación, la deforestación, la desaparición de especies y el calentamiento global son efectos colaterales de las actividades que proporcionan a los consumidores comida, transporte, techo, ropa y un sin fin de bienes de consumo. Los aspectos ecológicos y sociales se vuelven cada vez más importantes y se plantea un modelo alternativo de producción y consumo. Es el uso de productos y servicios que responden a necesidades básicas y que conllevan a una mejor calidad de vida y que además minimizan el uso de recursos naturales, materias tóxicas, emisiones de desechos y contaminantes durante todo su ciclo de vida y que no comprometen las necesidades de las futuras generaciones. Es claro que el consumidor individualmente no puede lograr los objetivos de un consumo sustentable. Es una responsabilidad de todos, Gobiernos, industria, ONG's, consumidores etc. Los consumidores tienen que promover cambios en sus estilos de vida y recibir información adecuada, facilidades, infraestructura, incentivos fiscales además de productos y servicios mejores.

Objetivos

El consumo sustentable adopta un enfoque diferente en los países en desarrollo y en los países desarrollados. En los países en desarrollo, donde generalmente los recursos accesibles para satisfacer las necesidades básicas son insuficientes, el consumo sustentable se orienta a un uso más eficaz de los recursos, ampliando así eficazmente la base de recursos para satisfacer las necesidades humanas. Los ejemplos incluyen aumentar el acceso a la energía renovable o limpia y el uso más sustentable de los bosques para obtener energía, alimentos y materias primas para la construcción, de manera que no sean dañados de forma irreversible y puedan regenerarse. En los países desarrollados, donde el uso de recursos es más excesivo, poco económico e ineficiente, se hace hincapié en la modificación de los patrones de consumo para lograr reducir el uso de energía y materiales en general, así como disminuir la intensidad por unidad de utilidad funcional. En ese caso, un ejemplo puede ser modificar las preferencias de los consumidores para orientarlas hacia productos orgánicos, que tienen menos aportes de recursos e impactos ambientales que los productos obtenidos por métodos agrícolas convencionales.

La producción sustentable se orienta a mejorar productos y/o procesos de producción para reducir el consumo de recursos, el uso de materiales peligrosos y la generación de residuos y contaminantes en el abastecimiento de productos. Esas mejoras se realizan con la debida atención del ciclo de vida completo de los productos o procesos, en lugar de restringir el análisis a los estrechos límites geográficos o de la cadena de abastecimiento. Los ejemplos incluyen buscar materias primas alternativas para los procesos de producción, reciclar las corrientes de residuos y de aguas residuales, y reducir el uso de energía por unidad de producto. Por consiguiente, implica lograr el crecimiento económico a la vez que se respetan los límites ambientales, encontrar métodos para minimizar el daño al medio ambiente natural y hacer uso de los recursos de la tierra de una manera sustentable. Contribuir con reducción de los riesgos ambientales mediante la protección de los servicios de los ecosistemas. Reconocer la necesidad de consumir menos recursos y generar menos residuos, a la vez que se dan los mismos servicios y productos finales, o incluso más o mejores.

Justificación

En el mes de octubre de 2011, de acuerdo a la Organización de las Naciones Unidas, la población mundial alcanza los siete millones, previéndose una tendencia de crecimiento continuo para los próximos años; este crecimiento y el aumento de la productividad han detonado una sociedad global consumista generadora de diversos costos de índole ambiental, social y económica. Este elevado consumo se ha traducido, de forma directa, en una gran demanda de recursos naturales, algunos de ellos esenciales para la supervivencia y la producción de fuentes de energía derivadas de consumibles fósiles, lo cual da como resultado, la generación de altos volúmenes de emisiones y residuos. Además de los costos ambientales, los actuales patrones globales de producción y consumo se han caracterizado por la explotación de derechos sociales y humanos, siendo catalogados como sinónimos de desigualdad, pobreza, además de un bajo índice de bienestar y de satisfacción personal.

Limitaciones de la Investigación

Los hábitos de consumo de nuestra sociedad actual están caracterizados por una compra desmedida de bienes y servicios, la cual en la mayoría de las ocasiones se realiza sin tomar en cuenta si existe una necesidad para ella, ni la durabilidad, el origen de los productos, los recursos utilizados para su fabricación y el impacto en el ambiente como en la sociedad, de estos al terminar de su vida útil. Es decir, nuestra sociedad está inmersa en un materialismo, resultado del crecimiento y expansión de una clase social consumista que no solo busca cumplir con sus necesidades básicas, sino también alcanzar un bienestar basado en otro tipo de satisfactores personales. Los patrones de producción y consumo que rigen las economías mundiales han promovido el consumismo, desincentivando la demanda, diseño y fabricación de productos duraderos sustentables, asimismo el interés de los productores y consumidores por conocer sobre los impactos sociales, económicos, ambientales relacionados con sus decisiones de producción, compra y consumo. Al mismo tiempo, estos patrones generalizados de producción y consumo causan un uso desmedido de recursos naturales, materias primas y energía por encima de lo requerido para satisfacer las necesidades básicas de la población, rebasando la capacidad regenerativa del planeta.

Alcance de la Investigación

Esta problemática, aunada al crecimiento poblacional a nivel mundial, ha provocado la necesidad urgente de modificar estos patrones, hacia aquellos que aseguren que esta y las generaciones futuras cuenten con los recursos suficientes para satisfacer sus necesidades básicas, manteniéndolos dentro de las capacidades ecológicas, ambientales propias del planeta, y al mismo tiempo, buscando mejorar la calidad de vida y el desarrollo como seres humanos. Es por ello que la producción y el consumo sustentable, como importante herramienta para implementar una política enfocada en la economía verde, es la solución para encontrar un balance adecuado entre la interacción de hombre y el medio ambiente. El ciclo de vida de los materiales es la base para la toma de decisiones, relacionadas con la producción y consumo de bienes y servicios de manera sustentable. Valorar los procesos productivos y los hábitos de consumo permite identificar las causas de los impactos y establecer los mecanismos para solucionarlos o en su caso revertirlos.

Modo de Producción Capitalista

El Modo de producción Capitalista es un sistema económico y social basado en la propiedad privada de los medios de producción. El capitalismo es un sistema económico y social donde la acumulación de capital es el eje fundamental de la sociedad sustentado en la propiedad privada de medios de producción para producir productos para el mercado. En estas acepciones se desprenden tres elementos fundamentales que son necesarios exponer. En primer lugar se hace referencia a un modelo económico que establece que el uso y la utilidad que se desprende el uso son de carácter privado, a pesar del carácter social de trabajo. El trabajo social es el resultado de la confluencia del capital y la fuerza de trabajo aplicadas a la materia prima para

su transformación en productos (bienes y servicios) necesarios para el desarrollo de la sociedad. Un segundo aspecto es la noción de Ganancia en función de la inversión de capital que el capitalista hace para producción. Esta inversión se hace en medios que son de su propiedad y el salario para pagar el trabajo de la fuerza de trabajo. De allí el tercer aspecto que sustenta el orden económico y el espíritu del capitalismo en cuanto que el Capital es dominante por cuanto ejerce la propiedad de medios socialmente de producción necesarios para la vida. Es el orden económico donde la propiedad y su usufructo del Capitalista, se obtiene mediante el trabajo colectivo aplicado a la materia prima para su transformación en productos para el mercado.

El Origen del Consumismo

A lo largo de toda la historia de la civilización, la mayoría de las personas han comprado únicamente los productos que han necesitado. Si alguien necesitaba comprar pergaminos para redactar un texto, los compraba. Si alguien necesitaba unos nuevos zapatos porque los suyos estaban ya muy desgastados, iban a una zapatería y se hacían con ellos. Si alguien necesitaba un paraguas para guarecerse de la lluvia, reunía el dinero necesario y solucionaba su problema en una tienda. Pero no todo se compraba respondiendo a necesidades más o menos acuciantes. Muchas personas utilizaban su dinero (el sobrante después de las compras más importantes) para comprar productos que satisfacían sus necesidades de ocio y disfrute. Estos productos no eran vitales para subsistir, ni siquiera para vivir con un mínimo de dignidad, pero se requerían para entretenerse uno en el tiempo libre.

A principios del siglo XX, los avances en la organización del trabajo en los medios productivos junto con el progreso tecnológico dieron un fuerte impulso a las fábricas productoras gracias al aumento de la productividad. Se consiguió producir los mismos productos a una velocidad mayor. Sin embargo ese fenómeno se topó con un problema importante: cualquier ciclo comercial necesita que el artículo que se fabrique deba ser vendido, porque de no ser así, el artículo se queda en el almacén y no se obtienen beneficios por su venta. Como la velocidad a la que se producían las manufacturas había aumentado, pero no la velocidad a la que se vendían, los ingresos seguían entrando a la misma velocidad de siempre y no se obtenían ventajas por la mayor velocidad de fabricación (incluso surgían desventajas, debido al aumento de los costes al producir mayores cantidades).

La solución a este problema vino de la mano del sobrino de Sigmund Freud: Edward Bernays. Este ciudadano estadounidense empleó los descubrimientos de su tío sobre la mente de las personas para hacer negocio. Freud había puesto de manifiesto que las personas tienen en lo más profundo de su ser un estado animal que se caracteriza por sentimientos irracionales. Para el creador del psicoanálisis, la cultura y la civilización son muros que el ser humano levanta para mantener controlado a su estado mental más primigenio; pero el comportamiento de las personas a veces se nutre de esos impulsos irracionales que emergen de lo más hondo de sus mentes. A Bernays se le ocurrió relacionar estos impulsos irracionales con el mundo de la publicidad comercial; y obtuvo excelentes resultados.

La idea era muy simple: bastaba con vincular (a través de mensajes publicitarios, o de algún otro tipo de mensaje orientado a las masas) un producto cualquiera a una idea cualquiera que consiguiese motivar o emocionar a las personas. El primer experimento consistió en relacionar el consumo de cigarrillos de tabaco con la idea de emancipación de la mujer (en un contexto en el que se consideraba inapropiado que las mujeres fumasen por considerarse relegadas a un segundo plano). Los productores de cigarrillos se habían percatado de que al no fumar las mujeres, estaban perdiendo a la mitad del mercado; y confiaron a Bernays la labor de convertir a las mujeres en fumadoras. De este modo, Bernays contrató a un grupo de jóvenes damas para que realizasen un acto de protesta a favor de la independencia de la mujer mientras fumaban cigarrillos en un acto público ajeno (el cual iba a ser bien cubierto por los medios de comunicación de la época). Tras el acontecimiento de los hechos, el eco mediático no tardó en recorrer medio país. El símbolo del cigarrillo apareció entonces unido al conocido como sexo débil por primera vez en la historia. Todas

las señoritas que compartían los mismos principios no tardaron en unirse a la moda de fumar cigarrillos como distintivo de autodeterminación. Fue cuestión de tiempo que el consumo de cigarrillos se convirtiese en un reflejo imaginario de madurez, independencia y de autosuficiencia. De hecho, y si uno se para a pensar un poco, estos valores se han seguido enlazando con el tabaco hasta no hace muchos años. Este acontecimiento fue la prueba que necesitó Bernays para convencerse a sí mismo y convencer a los vendedores estadounidenses de que los hábitos consumistas podían ser manipulados a través de mensajes que debían ir directos al subconsciente más irracional de las personas.

Desde entonces los empresarios acudieron a los mecanismos de publicidad para lanzar este tipo de mensajes a los consumidores. De esta forma los coches empezaron a anunciarse como símbolo de poder, de opulencia, de libertad; en vez de anunciarse por sus cualidades más palpables y visibles. La ropa empezó a publicitarse como insignia de distinción entre las personas, como señal caracterizadora. Comprar una determinada marca de ropa sugería pertenecer a unas determinadas esferas de la sociedad, en vez de ser un acto que buscase protección frente a las inclemencias del tiempo. Los perfumes se ofrecían como elementos emblemáticos de una determinada personalidad o carácter; en vez de ofrecerse en función de su fragancia. En definitiva, estos altos empresarios crearon nuevas necesidades a las masas para que no tuviesen más remedio que comprar los productos que ellos vendían y así poder cubrir esas carencias recién establecidas. Alimentaron la demanda con estratagemas publicitarias que atacaban a las raíces más emocionales y sensibles de la mente humana para dar solución al problema de la sobreproducción. Se percataron de que disponían del poder necesario (dinero y medios en cantidades suficientes) para manipular las decisiones de compra de las masas. El fenómeno del consumismo fue originado por las élites dominantes en aras de su propio interés y no es más que una pieza clave en el rígido y agarrotado funcionamiento de la actividad económica capitalista.

Causas y Consecuencias

El consumismo se ve incentivado principalmente por:

La publicidad, que en algunas ocasiones consigue convencer al público de que un gasto es necesario cuando antes se consideraba un lujo.

La predisposición de usar y tirar de muchos productos.

La baja calidad de algunos productos, que conllevan un período de vida relativamente bajo, los cuales son atractivos por su bajo costo, pero a largo plazo salen más caros y son más dañinos para el medio ambiente.

Algunas patologías como obesidad o depresión que nos hacen creer más fácilmente en la publicidad engañosa, creyendo con esto que podemos resolver nuestro problema consumiendo indiscriminadamente alimentos, bebidas, artículos milagrosos u otro tipo de productos.

El desecho inadecuado de objetos que pueden ser reutilizados o reciclados, ya sea por nosotros o por otros.

La Cultura y la Presión Social

Causa: La falta de identidad de cada una de las personas, al no conocer sus necesidades esenciales y por no estar claro en relación a las necesidades de los más cercanos a cada uno; factores influyentes como la imitación de personajes de televisión, que generan un ídolo que se sigue. Dichos ídolos inducen a los faltos de identidad a consumir ciertos productos innecesarios.

Consecuencia: generación de necesidades infinitas que no pueden suplirse, la no felicidad.

El Papel de la Publicidad En la Sociedad de Consumo

La publicidad supone un proceso de comunicación de carácter masivo, a partir del cual se pretende informar al mercado sobre los productos y servicios de la empresa, con la finalidad de influir en el comportamiento y/o actitud de los consumidores potenciales. Es un medio de comunicación de masas, una actividad a través de la cual llegan los mensajes al público con el fin de influirlo, instruirlo y orientarlo en la compra de bienes y servicios o en la preferencia de pensamientos, instituciones o, incluso, personas. Es uno de los mecanismos que “ejerce su poder” con más fuerza, a través de un conjunto de acciones, logra modificar ideas, imponer modas, convencer, e influir hasta en las decisiones más triviales.

Se trata, en definitiva, de un fenómeno a través del cual alguien intenta comunicar algo a un conjunto de personas, con objeto de persuadirlo a actuar en un sentido definido. Es, por tanto, un proceso de comunicación que permite a la empresa contactar con un público determinado. Para ello, la empresa debe poner en marcha un proceso de planificación de la actividad publicitaria con el objetivo de conseguir una comunicación eficaz y eficiente; es decir, deberá identificar al público con el que quiere contactar, construir los mensajes que quiere transmitir, elegir los medios más adecuados para la transmisión, etc.

Asimismo, la publicidad no es sólo promoción de ventas, sugerencias con fines económicos, es una oferta gratuita y permanente a todos y para todos. Es, en definitiva, la imagen prestigiosa de la abundancia. Además, parece que nos encontramos en la *sociedad de la solicitud*, donde se lanzan mensajes como los siguientes, “todo lo hacemos por usted”, “sólo nos importa su felicidad”, “su felicidad es la nuestra” “nada es más importante que usted”, “usted sólo tiene que levantar un dedo y nos pondremos a su disposición”, etc. Por otro lado el consumo, gracias a la publicidad, se ha convertido en toda una institución, se trata de un consumo donde se le da más importancia a la apariencia, al envoltorio, más que al producto en sí. También, destaca el hecho de que se dé a consumir mujer a las mujeres, hombres a los hombres, jóvenes a los jóvenes, etc.; y es que, de alguna manera, las distintas modas van definiendo prototipos que hay que imitar lo mejor posible, estableciéndose, de esta forma, prototipos de mujeres, de hombres, de jóvenes, etc. Los sujetos buscan diferenciarse de sus semejantes, y esto se logra, fundamentalmente, a través de las marcas, unas marcas que no marcan al producto sino al consumidor.

En la actualidad, para conseguir cierta notoriedad en una determinada marca o lograr una buena imagen comercial se acude normalmente a la publicidad, a la comunicación. Las empresas de los países desarrollados incrementan todos los años sus gastos publicitarios, y lo mismo hacen las instituciones públicas y los partidos políticos. Es indudable que la actividad publicitaria ejerce una notable influencia sobre el entorno y sobre las personas a las que van dirigidas sus comunicaciones. El fin último que se persigue con la publicidad es desencadenar en el público un determinado comportamiento y, para ello, se debe determinar de manera adecuada cuál es el público objetivo.

Consumo Sustentable

El Capítulo 4 de la Agenda 21 señala que: La causa más importante del deterioro continuo del medio ambiente global son los patrones insostenibles de consumo y producción, particularmente en los países industrializados y menciona que lograr un desarrollo sustentable requerirá tanto de la eficiencia en los procesos de producción como de los cambios en los patrones de consumo en muchas instancias, esto requerirá de una reorientación en los procesos de producción actuales y los patrones de consumo, los cuales han surgido predominantemente de los países desarrollados y están siendo imitados cada vez con mayor frecuencia en la mayor parte del mundo, incluyendo a los países en vías de desarrollo. El uso de bienes y servicios que responden a necesidades básicas y proporcionan una mejor calidad de vida, al mismo tiempo minimizan el uso de recursos naturales, materiales tóxicos y emisiones de desperdicios y contaminantes durante todo el ciclo de vida, de tal manera que no se ponen en riesgo las necesidades de futuras generaciones. El incremento en la población trae consigo un aumento en el consumo, ya que las necesidades de consumo de los nuevos pobladores deben ser atendidas. Las poblaciones urbanas en todo el mundo consumen más recursos que sus contrapartes rurales.

Sin embargo, el nivel de consumo no depende solamente de la población total. La intensidad en la utilización de los recursos resulta más significativa para el nivel de consumo. La población y el consumo son dos elementos interactivos en el impacto del hombre sobre el ambiente. De hecho, la sobrepoblación es el sobreconsumo de bienes ambientales, y ese sobreconsumo puede ser el resultado de un número excesivo de personas coexistiendo en una base limitada de recursos o una elite económica utilizando esa base de recursos de manera excesiva o abusiva en detrimento de las generaciones futuras pobres y no a favor de la humanidad.

Producción Sustentable

La producción sustentable es aquella donde se utiliza un sistema de producción que permite producir por muchos años, todo el tiempo y obtener buena rentabilidad sin dañar el medio ambiente ni los recursos de producción. Es un término muy usado en agricultura, ya que una producción no sustentable destruye el suelo, la biodiversidad, y daña el medio ambiente, como consecuencia no se podrá producir en el mismo lugar en poco tiempo cada vez hay más personas en el mundo, la agricultura debe alimentar a esas personas y a las futuras generaciones, por lo tanto una producción sostenible o sustentable. El funcionamiento de las economías debe ser reorientado mediante el cuestionamiento y la adaptación de los modos de producción vigentes, a la luz de sus efectos sobre el medio ambiente.

Con este fin es necesario analizar los métodos de utilización de los recursos, su eficacia, la producción de desechos, los perjuicios que se causan a la naturaleza y la integración de las preocupaciones estéticas en la producción. Lo que se gana en eficacia disminuirá el volumen de productos minerales, de combustibles fósiles y de otros recursos que se tengan que utilizar. Hay que señalar que a menudo los precios no traducen la escasez real de los productos, lo que implica una utilización inadecuada de materias primas y de productos semi-terminados. Muchos gobiernos, por ejemplo, subvencionan el empleo de combustibles fósiles, de pesticidas, abonos químicos y otros productos que se emplean en la agricultura. Puede ocurrir que a menudo los recursos naturales que se encuentran bajo la tutela de los poderes públicos (el agua, los bosques, las zonas de pastos, las minas del subsuelo) se utilicen mediante un canon tan bajo que en realidad estén subvencionando el excesivo consumo y la degradación del medio ambiente. Al revés, sería necesario estimular prácticas que favorezcan un uso sostenible de esos recursos. A este respecto, es esencial la revolución tecnológica: hay que descubrir nuevos modos de producción que reduzcan de manera significativa los volúmenes de recursos naturales empleados, lo que disminuirá las emisiones y los diversos desechos que se producen; así se respetarán los actuales criterios de evaluación de riesgos. Una política industrial dinámica que sepa equilibrar incentivos y prohibiciones, podría facilitar la concepción y aplicación de técnicas respetuosas con el medio ambiente. El interés de la industria es colaborar en ello.

Obligaciones de la Industria

El incremento en la visibilidad de los problemas ambientales, el aumento en la conciencia y compromiso ambiental de los industriales, el creciente interés de inversionistas por realizar inversiones responsables, las solicitudes del público de productos de menor impacto ambiental, los incentivos gubernamentales y el mejor liderazgo han sido factores que han favorecido a que muchas compañías incorporen consideraciones de desarrollo sustentable en su trabajo. Debido a que la economía mundial depende de una base de medios naturales que está dañada de manera dramática, la reducción del consumo y del desperdicio crea nuevas oportunidades para que las empresas crezcan a través de la introducción de procesos eficientes y bienes y servicios de bajo impacto ambiental. Existen cada vez más pruebas de que en años recientes las compañías de todo tamaño y sectores se han dado cuenta de una amplia gama de beneficios tangibles e intangibles que resultan de tomar en cuenta al ambiente como una variable importante dentro de los procesos de producción. Tales beneficios incluyen:

Mejor desempeño financiero: Los estudios han mostrado en repetidas ocasiones una relación positiva entre el mejor desempeño ambiental dentro de diversos sectores de la industria y un mejor desempeño financiero. El mejor desempeño ambiental y la preocupación por el medio ambiente han arrojado beneficios como

nuevos contratos e inversiones, la aprobación de nuevos mercados y la reducción de los costos por seguros y fianzas.

Reducción en los costos: La reducción de costos por medio de la reducción de desperdicios, el uso eficiente de la energía, la prevención de la contaminación y la productividad de los recursos.

Innovación: Dentro de las compañías y en el trato con sus proveedores, éstas se han innovado aplicando principios ambientales al diseño y producción de productos. En algunos casos, esto ha llevado a prácticas más eficientes o productos completamente nuevos.

Retención de bienes: las compañías retienen o conservan el valor de los productos si los rentan en lugar de venderlos, por lo que se incrementan las ganancias vendiendo menos productos o diseñando partes que puedan removerse y utilizarse en otros equipos, reconstruyéndolos y utilizándolos en modelos más recientes.

Mejor productividad de los trabajadores y menores errores y defectos: se logra incorporando elementos de gestión ambiental y de responsabilidad común en el lugar de trabajo.

De cualquier manera, se necesita generar reportes más precisos y completos de las industrias en ALC en términos del desempeño ambiental y social. Tal información revelará no solamente la respuesta actual sino que ayudará a las corporaciones en la región a mejorar sus registros.

Obligaciones de los Consumidores

Existen signos de un cambio en la conciencia de los consumidores que se hicieron evidentes como resultado del movimiento por un consumo verde sobre todo en Europa. El poder colectivo de las decisiones de compra de los consumidores puede ser una fuerza importante en las economías de mercado y el movimiento por un consumo verde utiliza ese poder. Los fabricantes en muchos países desarrollados han respondido introduciendo muchos nuevos productos “más verdes”. Las compañías han utilizado la responsabilidad ambiental como una forma de mejorar su reputación e imagen de marca, lo cual a su vez ha originado un incremento en sus ventas y la atracción de capital de inversión y socios comerciales. El consumo verde se percibe como la respuesta del movimiento de consumidores del Norte ante el debate sobre el consumo sustentable. No ha existido el mismo entusiasmo por parte de las organizaciones de consumidores del Sur y existe poca información sobre modificación de actitudes y una voluntad por cambiar el comportamiento de los consumidores.

Los grupos de consumidores deben hacer un compromiso mayor con el consumo sustentable. Sin embargo, deben analizar de manera crítica el éxito del consumo verde y su impulso en el Norte y desarrollar estrategias que resuelvan el problema fundamental del consumo sustentable en la región. El interés del público por el ambiente no necesariamente se refleja en cambios sostenidos en el comportamiento de los consumidores, los cuales podrían tener interés en tomar medidas sencillas que benefician al medio ambiente, pero difícilmente realizarán cambios importantes en los hábitos de consumo, pagarán por productos más costosos o cambiarán su estilo de vida. La conciencia de los consumidores debe modificarse lo suficiente para lograr cambios de comportamiento, el cual representa el reto más grande para el movimiento de los consumidores. Los compradores deben estar convencidos de que al votar con sus bolsillos están de hecho ejerciendo una responsabilidad social, moral y política que va más allá de sus propios intereses como sucedía con generaciones anteriores. Un conflicto particularmente difícil de resolver para los consumidores y las organizaciones de consumidores en los países en desarrollo es la cuestión de los precios. Las organizaciones de consumidores tradicionalmente han luchado siempre por asegurar que los clientes obtengan siempre el mejor valor por su dinero. Quizá encuentren contradictorio señalar que la mejor política para la conservación de energía es dejar que la gasolina suba de precio. Para los consumidores con bajos ingresos, incluso un pequeño incremento en los precios impactaría negativamente su forma de vida.

Es necesario encontrar el equilibrio adecuado entre los deseos y las necesidades de los consumidores individuales, entre los consumidores pobres y los ricos y entre el bien colectivo de la humanidad y el bien del planeta. Sin duda éste es un problema complicado para las organizaciones de consumidores. En términos de precio, el valor del dinero es sólo uno de los factores por considerar, un elemento más crítico en la igualdad y la justicia distributiva en la sociedad. Finalmente, más allá de la responsabilidad del consumo consciente, los consumidores y las organizaciones de consumidores deben insistir en una distribución justa de los costos que inevitablemente deben ocurrir en una sociedad sustentable. No es necesario que el consumidor pague por todos los costos. Es necesario encontrar un equilibrio entre la necesidad de cambiar el comportamiento de los consumidores con ayudas en precios y el principio de que “el que contamina paga”, lo cual fomentará la innovación y la eficiencia en la búsqueda de tecnologías limpias.

Nuevas Metodologías

En el área de Eficiencia de los Productos resaltan cuatro metodologías que parecen ser especialmente prometedoras:

Desarrollo Sustentable de Productos (DSP).
Análisis de Ciclos de Vida (ACV).
Responsabilidad Ampliada de los Productores (RAP).
Políticas Integradas de Productos (PIP).

Cada una de estas cuatro metodologías se enfoca a los aspectos corporativo, social e individual de las partes involucradas en la cadena de producción y lleva las políticas de productos más allá de la eficiencia material a la esfera de la protección y el desarrollo social. Cada una de estas metodologías se concentra en el aspecto económico de la oferta y en particular en las acciones de la industria. Asimismo, en las cuatro el papel del gobierno es quizá menos central y el papel de los consumidores (quienes aceptan los nuevos productos y servicios) está hasta cierto punto dado por hecho (PNUMA 2001). En cuanto a la Eficiencia de los procesos dentro de todo el ciclo de producción industrial, las dos metodologías más importantes son la producción más limpia y la eco-eficiencia.

Un elemento crítico para alcanzar niveles de consumo sustentable es la disponibilidad de los productos y servicios diseñados tomando en cuenta un enfoque sustentable. Esto resulta particularmente importante, donde la mayoría de los consumidores tienen opciones limitadas. El desarrollo y la sustentabilidad de productos es una reciente combinación de términos que surge a partir de que se reconoce la importancia que tienen sobre el ambiente y el futuro elementos como el diseño, la fabricación, la selección de materiales, el tipo de productos, su uso y deshecho final. Reconocer un solo ambiente global en el cual todas las actividades se relacionan y se afectan una a la otra ha llevado a los investigadores a un profundo análisis de la importancia del proceso de diseño y su relación con el impacto ambiental de los productos. Este análisis ha llevado a buscar nuevos modelos para el diseño, producción y uso que lleve a un desarrollo sustentable. El desarrollo sustentable de productos (DSP) es el proceso que crea diseños de productos que son sostenibles en términos del ambiente y el uso de recursos tomando en cuenta la necesidad del producto. Es el proceso de planeación y diseño que integra los siguientes elementos en un producto:

Eficiencia en el uso de los recursos: Considera la energía y los materiales utilizados en la fabricación, la producción de los componentes y la fase de uso. También incluye la selección de materiales que favorezcan el uso de materiales locales, renovables, reciclados y que utilicen poca energía, y evita aquéllos que sean escasos o contengan materiales tóxicos.

Calidad de los productos: Incluye el uso, necesidad y función del producto, la durabilidad, el óptimo tiempo de vida, la eficiencia de energía, el uso adecuado de los materiales y el terminado.

Organización y eficiencia en la producción: Incluye procesos mejorados de manufactura en términos de recursos, trabajo manual y maquinaria, además del uso y el desarrollo de las tecnologías apropiadas y la energía renovable.

Cultura y capacidades locales: Incluye la comprensión y aplicación de la cultura y el conocimiento local, las necesidades de los pueblos locales, las tradiciones y las capacidades (técnicas y económicas) a lo largo de todo el proceso productivo.

Mercado: Incluye el análisis e investigación de las oportunidades del mercado que consigan procesos económicos sostenibles.

Fin de la vida: Incluye consideraciones relacionadas con la posible reutilización, desensamblado, reciclaje y deshecho final de los productos. En resumen, el DSP considera la intensidad y optimización del uso de recursos para el diseño de productos, al mismo tiempo que involucra las culturas locales, la eficiencia general en la producción y mejora simultáneamente la calidad de los productos para incrementar sus oportunidades en el mercado. La incorporación de las implicaciones económicas, sociales y ambientales a largo plazo en cada paso del proceso le da una nueva dimensión en términos de sustentabilidad.

CONCLUSIONES

El desarrollo sustentable busca que luchemos con la conservación y buen cuidado de nuestra naturaleza, de nuestro mundo verde teniendo en cuenta aspectos principales como, la disponibilidad limitada de los recursos energéticos, la contaminación y sus secuelas como la lluvia ácida, el efecto invernadero, el cambio climático y la disminución de la capa de ozono, la reducción de la bio-diversidad y la extinción de más de una especie y el posible cambio de la calidad de vida de los habitantes de nuestro planeta. Por otro lado, el desarrollo sostenible busca cumplir con las necesidades del futuro y del presente, del presente al fomentar una actividad económica que brinde los bienes necesarios para toda la población y del futuro al reducir lo más que se pueda los efectos contraproducentes de dicha actividad económica teniendo en cuenta pautas como que: ningún contaminante deberá producirse a un ritmo superior al que pueda ser reciclado, neutralizado o absorbido por el medio ambiente y ningún recurso renovable deberá utilizarse a un ritmo superior al de su generación. Está claro que la sociedad mundial necesita un importante cambio para enfrentar el futuro que se avecina. De seguir actuando de igual manera las futuras generaciones tendrán que vivir en un mundo un tanto desequilibrado, contaminado y con menos recursos naturales. Para no seguir enfermando al medio ambiente, todos deberíamos ejercer un consumo sustentable. Al reducir la productividad (que no es otra cosa que la transformación de recursos naturales en productos manufacturados) reduciremos el uso de recursos naturales. Al reducir el uso de recursos naturales, reducimos la degradación ecológica. De esta forma podremos ralentizar primero y estabilizar después el crecimiento económico hasta convertirlo en un crecimiento sostenible y solidario con los demás seres humanos y con la naturaleza. Hoy día, todas las políticas económicas de casi todos los países están basadas en el crecimiento continuo e ilimitado. De todos nosotros depende sanear al medio ambiente y no perjudicarlo más. También depende de nosotros dejar un mundo sano para la continuidad de la vida, es por ello que debemos ejercer un consumo sustentable e invitar a todos a seguir este camino.

ASPECTOS ECONÓMICOS Y CULTURALES DEL FINANCIAMIENTO DE EMPRENDIMIENTOS LOCALES: UN ESTUDIO DE CASO

Adolfo Maceda Méndez, Universidad Tecnológica de La Mixteca
Mónica Teresa Espinosa Espíndola, Universidad Tecnológica de La Mixteca
Francisca Adriana Sánchez Meza, Universidad Tecnológica de La Mixteca

RESUMEN

En la presente investigación se analizaron las fuentes de financiamiento utilizadas por los microempresarios locales para emprender un negocio. Se contemplan no solo los aspectos económicos que racionalmente pudieron haber guiado las decisiones de los empresarios al buscar fuentes de financiamiento, sino también los aspectos culturales, es decir, los valores, las tradiciones, la religión y demás aspectos ligados a la cultura local, que pueden haber determinado al empresario para utilizar ciertas fuentes de financiamiento. La investigación se realizó en la Ciudad de Huajuapán de León, ubicada en el estado de Oaxaca, México. Este estado se caracteriza por la defensa y respeto de los usos y costumbres étnicos que al paso del tiempo han sufrido mínimas transformaciones, a pesar del arribo de organizaciones nacionales y transnacionales a su entorno. La investigación se realizó utilizando una metodología mixta; se analizan, por una parte, aspectos económicos como la tasa de interés, las condiciones para otorgar el préstamo y los plazos de pago, así como los significados que cada opción de financiamiento representa para los empresarios. El objetivo fue comprender cómo su cosmovisión determinó sus decisiones de financiamiento. Se trata de una investigación transeccional, ya que se realizó en un solo momento del tiempo.

ECONOMIC AND CULTURAL ASPECTS OF THE FINANCING OF LOCAL ENTREPRENEURSHIPS: A STUDY CASE

ABSTRACT

In the present research, the sources of financing used by the local microentrepreneurs in order to start a business were analyzed. Not only the economic aspects that rationally could have guided the decisions of the entrepreneurs in searching financing are covered, but also the cultural aspects, such as the values, traditions, religion and other issues linked to the local culture, that could have determined the entrepreneur to use certain sources of financing. The research was conducted in the city of Huajuapán de León, located in the state of Oaxaca, México. This state is characterized by the defense and respect of ethnic traditions and customs that with the time have suffered minimal transformations, despite the arrival of national and transnational organizations to its environment. The research was carried out using a mixed methodology; on one side are analyzed aspects such as the rate of interest, conditions for granting the loan and the terms of payment, as well as the meanings that each financing option represents for the entrepreneur. The objective was to understand how their worldview determined their financing decisions. It's a transectional research, since it was made in a moment of time.

INTRODUCCIÓN

Un factor importante en la economía de las pequeñas ciudades son las microempresas, debido, entre otras razones, a la cantidad de empleos que generan. A fin de que estas empresas puedan desarrollarse adecuadamente, requieren utilizar algún tipo de financiamiento. Los dueños de estas microempresas toman en cuenta diversos aspectos al decidirse por una forma particular de financiamiento. En el presente documento se analizan algunos aspectos económicos que consideran los empresarios de la ciudad de Huajuapán de León, Oaxaca, al inclinarse por un tipo de financiamiento. Además, debido a que la ciudad se encuentra en una región en la que predominan algunas costumbres y tradiciones propias de algunos grupos étnicos locales, también se realizó un análisis de los principales valores subyacentes a la cultura de estos empresarios y que pudieron haber influido en la elección de cierta forma de financiamiento.

REVISIÓN DE LITERATURA

Financiamiento

El financiamiento es “la obtención de recursos de fuentes internas o externas, a corto, mediano o largo plazo, que requiere para su operación normal y eficiente una empresa pública, privada, social o mixta.” (Perdomo, 1998, p. 207) y puede clasificarse en público o privado. El primero se refiere a recursos que provienen del Gobierno, ya sea en sus instancias nacionales, estatales o municipales (Van Horne y Wachowicz, 1994), mientras que el privado son los recursos monetarios que provienen de particulares, por lo que los prestamistas pueden ser individuos, sociedades, corporaciones o instituciones financieras. El microfinanciamiento se define como una herramienta que pueden utilizar las personas que operan empresas pequeñas o microempresas dedicadas a actividades comerciales, para adquirir servicios financieros, en especial de crédito y ahorro (Virreira, 2010). Los microfinanciamientos son otorgados por microfinancieras “entidades que ofrecen servicios financieros dirigidos a personas con un bajo nivel de ingresos que realizan actividades socioeconómicas en pequeña escala, generalmente en autoempleo” (Muñoz, 2006, p.10). Algunos factores que son señalados por Boscán, Romero y Sandra (2007) como determinantes al elegir algún tipo de financiamiento son el nivel de accesibilidad, los requisitos exigidos, el tiempo de respuesta y las condiciones del financiamiento.

Empresas

Una empresa es una “unidad económica de producción de bienes y servicios para satisfacer un mercado” (Reyes, 1996, p. 90). Dichas empresas pueden clasificarse de acuerdo al giro al que pertenecen (comercial, industrial y de servicios) y al número de trabajadores (micro, pequeña, mediana y grande empresa). Las empresas comerciales son las intermediarias entre el productor y el consumidor final, su función principal es la compra-venta de productos terminados (Ortiz, 2003). Pueden ser mayoristas, minoristas o detallistas y comisionistas. Las microempresas tienen un papel de gran importancia para la economía mexicana pues son estas las que generan una mayor cantidad de empleo y contribuyen al PIB de una manera significativa. De acuerdo con los datos del Instituto Nacional de Estadística y Geografía (2011 a), el 95.2% de las empresas en México corresponde a microempresas, las cuales contribuyen con el 45.6% del empleo. Por otra parte, el sector económico comercial, durante ese mismo año, tuvo una participación del 18.5% en el PIB nacional. En el estado de Oaxaca, el 99% de las microempresas son comerciales y su contribución económica es de 86.9%. En la ciudad de Huajuapán de León, el 94.5% de las empresas son microempresas y sólo el 4.6% son pequeñas empresas (Ortiz, 2003, p.1). Conforme a los datos del Instituto Nacional de Estadística y Geografía (2011b), en la ciudad de Huajuapán de León hay 2529 microempresas comerciales.

Cultura

Espinosa y Pérez (1996) consideran que la cultura es un conjunto de formas de comportamiento adquiridas, que ponen de manifiesto juicios de valor sobre las condiciones de vida y que un grupo humano transmite mediante procedimientos simbólicos (lenguaje, mito, saber) de una generación a otra. De acuerdo con estas autoras, los actos realizados por cada hombre y por la humanidad están permeados por la dimensión cultural, lo que explica que, por ejemplo, algunos pueblos puedan aprovechar ciertas técnicas productivas, mientras que otros no. Los valores que están integrados en la cultura del mexicano tienen básicamente dos componentes: el indígena (en el que lo religioso y lo cotidiano se confunden en su espacio y tiempo) y el hispano (en el que se manifiestan los deseos de conquista junto con los de evangelización, siendo estos últimos los que terminaron por destruir las creencias de los indígenas). En el estado de Oaxaca, el 34.2% de la población oaxaqueña habla alguna lengua indígena. Los mixtecos, ubicados en la región donde se localiza la ciudad de Huajuapán de León, constituyen la segunda etnia más grande de Oaxaca (Instituto Nacional de Estadística y Geografía, 2011 c). El término “usos y costumbres” hace referencia, según Canedo (2008), no sólo a una forma de organización política empleada en 418 de los 570 municipios que constituyen el estado de Oaxaca, sino que también se relaciona con formas culturales propias de las comunidades indígenas de este estado. Políticamente implica la elección de autoridades de manera directa, unánime y pública, por medio de una asamblea, en la que el elegido debe satisfacer una serie de requisitos, como prestigio y capacidad de servicio. Culturalmente, los usos y costumbres se refieren a normas comunitarias que tienen como uno de sus valores principales el trabajo en equipo.

METODOLOGÍA

Se realizó investigación documental y de campo para determinar cuáles son las principales fuentes de financiamiento que están disponibles en la Ciudad de Huajuapán de León, Oaxaca, para aquellas personas que desean establecer una nueva microempresa o impulsar una ya establecida. Además, se seleccionó una muestra, a juicio del investigador, de 50 microempresarios, a los cuales se les aplicó una entrevista semiestructurada para determinar cuáles fueron los factores económicos que los llevaron a elegir cierto tipo de financiamiento para desarrollar su emprendimiento productivo. También se incluyeron preguntas con el fin de determinar algunos de los valores culturales que pueden estar subyacentes en la mencionada elección del tipo de financiamiento.

RESULTADOS

Fuentes de Financiamiento

En México, Nacional Financiera (Nafin) es el banco gubernamental integrado a la Red de Apoyo al Emprendedor, encargado de ofrecer financiamiento, capacitación y asistencia técnica a las micro, pequeñas y medianas empresas a través de intermediarios financieros. En el caso de la Ciudad de Huajuapán de León, estos intermediarios son diversos bancos como Bancomer, Banamex, Banorte, Banco Azteca, Santander, HSBC y Compartamos Banco. Por otra parte, en la Ciudad de Huajuapán de León hay diversas microfinancieras, entre las que destacan Caja Popular Mexicana, Centro Mixteco de Promoción Educativa “2 de Agosto” S.C. de R.L., Cooperativa Yolomécatl S.C. de A.P. de R.L. de C.V., Desarrollo Empresarial y Familiar sin Límites y Caja Universal. De los empresarios entrevistados, el 73.3% señaló que ha recurrido a financiamiento privado para impulsar a su microempresa, mientras que el 26.7% indicó haber utilizado algún tipo de financiamiento público. Algunos de los microempresarios entrevistados (13.3%) manifestaron que como fuente de financiamiento parcial utilizan tarjetas de crédito otorgadas por los bancos locales.

Evaluación del financiamiento público: El 63.6% de los empresarios entrevistados que han utilizado algún tipo de financiamiento público consideró que era complicado acceder a los créditos, mientras que el resto señaló que era adecuado este acceso. En relación con los requisitos, el 63.6% indicó que los consideraban exagerados. El requisito más difícil de cumplir fue el perfil económico apropiado (80%). El tiempo de respuesta fue considerado como muy lento por el 75% de los entrevistados y el resto consideró que era adecuado. Sobre las condiciones de financiamiento, el 40% señaló que eran adecuadas. Entre las condiciones del financiamiento más importantes para los empresarios están el monto financiado (60%), el plazo de financiamiento (25%) y la tasa de interés (10%).

Evaluación del financiamiento privado: En lo que corresponde al financiamiento privado, el 50% de los empresarios que declararon haber hecho uso de este, indicaron que el acceso a él había sido complicado, el 25% que había sido adecuado y el restante 25% que había sido fácil. Sobre los requisitos para que se les otorgara el financiamiento, 75% señalaron que habían sido exagerados y 25% dijo que eran suficientes. El 50% mencionó que el tiempo de respuesta fue adecuado, el 25% dijo que este había sido lento y el resto indicó que había sido corto. Las condiciones del financiamiento más importantes para solicitar este tipo de crédito fueron el monto (60%), el plazo (20%) y la tasa de interés (15%).

Rasgos culturales de los microempresarios: El 55% de los microempresarios entrevistados señaló que proceden de comunidades en las que se practican los usos y costumbres. Manifestaron que para ellos es muy importante el apoyo mutuo para el logro de objetivos personales. También indicaron que con frecuencia colaboran en actividades que fomentan la preservación de las costumbres y tradiciones de sus comunidades de origen.

CONCLUSIONES

La Ciudad de Huajuapán de León, Oaxaca, cuenta con fuentes de financiamiento tanto públicas como privadas, disponibles para la creación e impulso de emprendimientos locales. Sin embargo, un porcentaje importante de microempresarios decidió utilizar las fuentes privadas, correspondientes a sociedades cooperativas, debido a que estas incorporan en sus valores la colaboración en equipo para el logro de objetivos tanto grupales como individuales. Esto puede explicarse precisamente porque la cultura predominante en el sector de microempresarios está fuertemente influida por sus vínculos con las comunidades indígenas de las cuales proceden, en las cuáles el sistema de usos y costumbres tiene como base justamente estos valores.

RESUMEN

La presente investigación analizó la posibilidad de formar alianzas entre los empresarios de la Ciudad de Huajuapán de León, Oaxaca, que podría dar como resultado la creación de grupos de empresas del mismo giro o de giros complementarios que trabajen juntos hacia un mismo objetivo. Se plantea que el integrar alianzas empresariales puede generar una mayor competitividad que permita la permanencia de las empresas que enfrentan la llegada de grandes organizaciones, contribuyendo al fomento de un desarrollo económico local sin perder la identidad de las empresas participantes. La factibilidad de la implementación eficiente de dichas alianzas está determinada en gran medida por la cultura y las relaciones sociales del empresario huajuapeño. Esta cultura empresarial se manifiesta en muchos sentidos, como por ejemplo, en las formas de actuación ante los problemas y oportunidades, las reacciones al cambio, los valores, costumbres y las creencias o actividades colectivas que se van manifestando día a día y que son transmitidas a los nuevos miembros conforme se van incorporando. La investigación fue de tipo transeccional correlacional, ya que se analizó la cultura empresarial en un momento único; la variable independiente es la cultura empresarial, mientras que la dependiente corresponde a la posibilidad de realizar alianzas estratégicas.

PALABRAS CLAVE: Alianzas Empresariales, Permanencia Empresarial, Competitividad

POSSIBILITY TO CREATE BUSINESS ALLIANCES IN HUAJUAPAN DE LEÓN, OAXACA, TO ALLOW THEIR CONTINUITY AND INCREASE THEIR COMPETITIVENESS

ABSTRACT

This research analyses the possibility to create business alliances between entrepreneurs from the Huajuapán de León, city that could give as a result the creation of small groups of business from the same activity or from complementary activities. The main argument is that the creation of strategic alliances could produce competitiveness that allows the continuity of the business that have to face the arrival of participant enterprises. The feasibility of the efficient implementation of those strategic alliances is determined by culture and by the public relations of the businessmen in this city. This enterprise culture can be notice in many ways for example in the way the members of the organization solve their problems and face the opportunities, reactions to chance, values, their customs and the system of beliefs that are transferred to the new members that are integrated to the organization. This design of the research was correlational, because the enterprise culture was analyzed in a specific point of the time, the independent variable was enterprise culture and the dependent variable was the possibility to make strategic alliances.

INTRODUCCIÓN

En la actualidad las pymes juegan un papel fundamental en la economía de cualquier país, pero en mayor medida en los países en desarrollo, como lo es el caso de México, donde el 97% de las empresas está constituido por Mipymes, que generan el 79% de los empleos del país (INEGI, 2010), lo cual hace que la estabilidad de su actividad empresarial sea de suma importancia para la economía. Estas empresas son susceptibles de cerrar a los pocos años o incluso a meses de su inicio de operaciones, debido a múltiples causas, entre otras debido a que no cuentan con los recursos para poder darle sostenibilidad a su dinámica empresarial, por la falta de apoyos financieros que los protejan en situaciones críticas; también se ha identificado como causa de cierre la falta de previsión o de planes estratégicos que encaminen a la empresa hacia objetivos bien definidos. Actualmente las empresas, independientemente de su tamaño, enfrentan la competencia de otras organizaciones de su mismo tamaño ubicadas en su entorno, pero también están enfrentando un entorno empresarial cada vez más globalizado. Esto crea una situación difícil para las Mipymes, ya que no siempre cuentan con suficientes recursos para satisfacer las necesidades de los consumidores, generando poca competencia. Para hacer frente a esta situación, se ha considerado la posibilidad de conformar alianzas estratégicas entre un determinado grupo de empresas, con la finalidad de lograr un desarrollo y crecimiento empresarial. Sin embargo, para que estas alianzas se integren, sean eficientes y den resultados que permitan a las empresas desarrollar ventajas competitivas, es necesario que haya una cultura empresarial sólida y relaciones sociales que las refuercen e integren.

Las Mipymes están presentes en todo el país, sin embargo, el alcance de este estudio se enfocará en la Ciudad de Huajuapán de León, Oaxaca, con la finalidad de determinar si es factible o no la implementación de alianzas empresariales a partir de la cultura empresarial y las relaciones sociales existentes entre los empresarios. La Ciudad de Huajuapán de León pertenece al estado de Oaxaca; está ubicada aproximadamente a 192 km de la ciudad de Oaxaca de Juárez, capital del estado. Se encuentra en la intersección de las carreteras federales 125 y 190. En esta ciudad las principales actividades económicas son el comercio y la oferta de servicios diversos que no se encuentran en los poblados cercanos por ser un tanto más pequeños. Una característica de esta ciudad es que la mayor parte de la actividad económica se encuentra concentrada en su centro, donde los productos y servicios que se ofrecen son muy similares, provocando una gran competencia entre los empresarios. Sin embargo, hace siete años, cuando llegó una empresa de mayores dimensiones económicas, por pertenecer a una cadena transnacional, a los empresarios locales no les fue posible competir con ésta. Es importante señalar que varias microempresas, dedicadas al ramo abarrotero principalmente, se vieron afectadas, ya que no contaban con los recursos para poder competir otorgando bajos precios, variedad en sus productos y otros beneficios que ofrecen este tipo de empresas que manejan economías de escala, con los cuales la empresa transnacional pudo superar fácilmente a las microempresas regionales.

Es por esto que en el presente estudio se aborda la posibilidad de formar alianzas con la finalidad de crear grupos de empresas del mismo giro o de giros complementarios que trabajen juntos hacia un mismo objetivo, sin perder la identidad de cada empresa y de esta forma generar una mayor competitividad que resultará no solo en la no desaparición de estas microempresas que enfrentan a grandes organizaciones, sino que además se pretende alcanzar un desarrollo y crecimiento económico. La factibilidad de la implementación eficiente de dichas alternativas para esta investigación estará determinada por la cultura y las relaciones sociales del empresario huajuapeño, debido a que si no existen relaciones sociales buenas entre los dirigentes de las empresas, o rasgos culturales similares que cohesionen una empresa con otra, resultará difícil que dichas empresas puedan trabajar juntas en un ambiente armónico, lo cual conllevará al fracaso del buen funcionamiento de las alianzas empresariales.

REVISIÓN LITERARIA

Debido a que a las Mipymes se inician con el interés de generar autoempleo y muchas veces no se encuentran debidamente establecidas ni han formalizado sus actividades, se encuentran propensas a finalizar sus actividades empresariales al poco tiempo de haber iniciado. Una de las causas para terminar con el funcionamiento de este tipo de empresas, tiene que ver con su frágil soporte económico y administrativo. Para subsanar esta debilidad, los investigadores han venido contemplando las alianzas estratégicas, reconociéndolas como una herramienta de apoyo al marketing de las empresas a fin de evitar la competencia desleal que viven dichas organizaciones y mejorar su competitividad en los mercados cada vez más cambiantes y exigentes.

La realización de alianzas fue una propuesta que se gestó en la década de los 70's, posteriormente en la siguiente década se fue consolidando y finalmente la presencia y crecimiento de las alianzas empresariales obtuvo su desarrollo en la década de los 90's (ProMexico, 2010). Estas alianzas se han ido consolidando entre grupos de varias empresas, gracias a las ventajas que brindan, ya que son alternativas muy sólidas de negocios, que no tienen aspectos tan complicados como los que se presentan en las fusiones o en las adquisiciones, como afirma Mejía (1998). Por esta razón, Suárez (2009) afirma que las condiciones del mundo hacen a las alianzas absolutamente esenciales en el funcionamiento de las empresas. Rodríguez (2005, p.3) considera que una alianza estratégica es *un acuerdo entre dos o más empresas independientes, que se comprometen a colaborar en determinadas actividades persiguiendo intereses comunes a ambas. Los miembros unen o comparten parte de sus capacidades y/o recursos, sin llegar a fusionarse*. Por ello se considera que las alianzas representan una extensión de una organización, lo cual mantiene a las empresas en cuestión, totalmente relacionadas (ProMexico, 2010).

Por otra parte, Paz (2001) afirma que *las alianzas entre empresas comprenden el desarrollo de negocios empresariales productivos, comerciales, tecnológicos o financieros entre empresas económica y jurídicamente independientes; con el fin, de buscar ventajas y sinergias, reduciendo los riesgos y compartiendo los costos y beneficios*. En esta investigación se consideran las alianzas estratégicas comerciales, ya que la principal actividad económica en Huajuapán es el comercio de bienes y servicios y no se enfoca a la actividad industrial. Por otra parte, Abati e Imas (2006) consideran cuatro tipos de alianzas, el primero consiste en desarrollar nuevos productos y servicios resultantes de la investigación y desarrollo conjuntos que aprovechan el *know-how* de cada uno; el segundo se enfoca en la entrada de nuevos mercados y segmentos de clientes aprovechando las fortalezas comerciales respectivas en cada mercado o segmento; el tercero aborda el incremento del valor del cliente: expandir, profundizar o redefinir las relaciones con los clientes actuales al complementar la oferta de productos y servicios con la del socio estratégico hasta alcanzar la excelencia operativa mediante la gestión de la productividad interna y la gestión de la cadena de aprovisionamiento. En esta investigación se analiza la viabilidad de llevar a cabo alianzas entre empresas del mismo giro con sectores de mercado específicos o bien entre empresas de servicios complementarios.

A este respecto, Medina y Bruque (2004) señalan que es importante que las empresas mantengan su autonomía y flexibilidad a pesar de que las empresas se alíen o se fusionen. Para lograrlo, las empresas participantes deben establecer metas comunes a largo plazo, para lo cual debe haber un equilibrio en las fuerzas de ambas empresas. Por esta razón, Abati e Imas (2006) señalan que al no tener una cultura empresarial sólida que pueda unir en cierta forma a la alianza y genere choques de comportamiento y actitudes, se pueden crear conflictos en la puesta en marcha de una alianza. En esta investigación se pretende analizar en qué medida existe la posibilidad de crear alianzas, partiendo del estudio de la cultura empresarial predominante entre los empresarios de la ciudad de Huajuapán de León, Oaxaca. Por lo tanto, para esta

investigación es importante recuperar los antecedentes de este tema y algunos elementos centrales que deben considerarse cuando se le analiza.

Existen muchas definiciones de cultura empresarial; para esta investigación se recuperó el concepto de Schein (1985) quien señala que la cultura organizacional es *un conjunto de supuestos básicos inventados, descubiertos o desarrollados por un grupo a medida que aprende a tratar sus problemas de adaptación externa y de integración interna, modelo que ha funcionado lo suficientemente bien como para ser considerado válido y para ser enseñado a los nuevos miembros como la forma correcta de hacer, pensar y sentir con relación a estos problemas*. Es de gran importancia estudiar la cultura empresarial, ya que para que una empresa logre ser competitiva, sus empleados deben tener buenas actitudes y conductas, lo que provocará que se dirijan hacia el logro de los objetivos conjuntos. La meta es que todos los miembros de las organizaciones tengan objetivos afines a los que persigue la organización para que de esta forma se logre tener conductas autorregulables en las empresas.

Como puede observarse, la cultura organizacional es un elemento central al considerar la realización de alianzas empresariales estratégicas, ya que si las personas que laboran en la empresa tienen una cultura individualista muy marcada, será sumamente complejo lograr que adopten los valores y actitudes organizacionales que se necesitan para lograr los objetivos que se establezcan como alianza. Es estas circunstancias la realización eficiente de alianzas podría tornarse difícil de implementar, debido a que a la complejidad de crear alianzas entre empresas que poseen culturas que, en el mejor de los casos son mínimas, se le agrega el lograr una de múltiples culturas individuales apáticas a los logros y metas de la organización en que laboran. Por lo tanto, la creación de alianzas empresariales depende de que la cultura empresarial esté a favor del trabajo conjunto y la cooperación para realizar actividades de manera colectiva.

METODOLOGÍA

La investigación fue de tipo transeccional, ya que se analizó la cultura empresarial en el momento presente. También es una investigación que aunque se realizó con un enfoque cualitativo por la riqueza del análisis e interpretación de los datos, mantiene implícita una correlación entre las características de la cultura empresarial y la posibilidad de realizar alianzas estratégicas. Para analizar la viabilidad de formar alianzas entre los empresarios de la Ciudad de Huajuapán de León, Oaxaca, que podría dar como resultado la creación de grupos de empresas del mismo giro o de giros complementarios que trabajen juntos hacia un mismo objetivo se realizaron entrevistas semiestructuradas a los propietarios de 25 microempresas, 25 empresas pequeñas y 10 empresas medianas. La información recabada durante las entrevistas se complementó con los ejercicios de observación realizados durante las diversas visitas a cada empresa, así como con la información recabada durante la investigación documental respecto a la cultura empresarial y las alianzas empresariales.

RESULTADOS

Después de realizar las entrevistas con los 50 empresarios, y de realizar ejercicios de observación e investigación documental respecto a las tradiciones y costumbres locales, fue posible caracterizar la cultura empresarial y evaluar la posibilidad de conformar alianzas empresariales como medio para lograr la permanencia de más pymes e incluso impulsar su competitividad. Al analizar la cultura empresarial se puede ver que los principales valores presentes en las empresas analizadas son: solidaridad, responsabilidad, trabajo en equipo, confianza y lealtad. En la mayor parte de las empresas hay al menos 2 empleados que ya tienen más de 10 años trabajando en la misma empresa. No realizan muchas actividades conjuntas, pero cuando los empleados tienen un problema familiar o de salud, el propietario suele apoyarles con permisos y si es necesario con alguna contribución económica. Un resultado que vale la pena destacar es que en la Ciudad de Huajuapán de León, en donde se desarrolló esta investigación, no se han concretado alianzas empresariales de un sector de empresas o de un giro de actividad en particular. Sin embargo, sí fue posible

identificar la voluntad y el deseo de realizar más actividades conjuntas, ya que se han organizado Expo Ferias comerciales y Expo Ferias Agropecuarias. En esas ocasiones se ha logrado reunir a diversos empresarios interesados en mostrar y comercializar de manera temporal los productos que ofrecen a través de sus empresas, ya sean comerciales y/o de servicios, en determinados lugares en donde se realiza alguna celebración como la Feria de una determinada población o bien un evento que se desarrolla con el fin de dar a conocer tales productos.

Como puede verse, existe el ingrediente esencial para realizar trabajo conjunto y esto probablemente tiene que ver con que esta ciudad se encuentra ubicada en el estado de Oaxaca, México, un estado en el que se tienen ciertas tradiciones y costumbres, entre ellas lo que se conoce como *usos y costumbres* que se refiere a un conjunto de prácticas que se han llevado a cabo desde la época de la colonia. El mejor ejemplo de este tipo de prácticas lo constituyen las celebraciones y festividades ligadas a una tradición religiosa, siendo la festividad más importante la *Fiesta Patronal*. Para esta celebración, las personas mayores de cada familia suelen reunirse para tratar los problemas de la comunidad o ciudad en la que se encuentran. En esas reuniones se plantean ideas para resolver problemas comunes y también se proponen soluciones, sabiendo que siempre se seguirán las recomendaciones de la asamblea. Si la asamblea determina que se debe cooperar económicamente o con trabajo, las personas a las que se elige para realizar ciertas actividades deben acatar tales resoluciones. Ligado también a las tradiciones y costumbres de los habitantes del estado de Oaxaca se encuentra la práctica del *tequio*, nombre que se le da al trabajo comunitario que realizan los habitantes de cada comunidad o ciudad para limpiar, pintar, remodelar o construir algún espacio de uso común.

Por otra parte, el principal problema de las empresas nuevas, es lograr sobrevivir en un mercado en el que hay muchas empresas ofreciendo el mismo tipo de productos, mientras que los consumidores y su ingreso, permanecen constantes. Una de las desventajas de las Mipymes de esta ciudad es que en muchas ocasiones no les es posible competir en precio con las empresas de alcance nacional o transnacional. Julien y Molina (2012), señalan que la mortalidad de las PyME en México es tan grave que de cada 100 empresas constituidas, 90 no alcanza a llegar a los 2 años de existencia, mientras que en países industrializados esta cifra es de 40%. Para el caso de la Ciudad de Huajuapán de León, Oaxaca, las autoridades municipales señalan que más del 50% de empresas no sobrevive al primer año. Durante la investigación también se pudo notar que los empresarios tienen la costumbre de unirse para dar respuesta a problemas comunes, ya que ellos comentaron que cuando hay problemas en sus negocios o en la colonia donde viven, siempre se unen para solicitar el apoyo o la asesoría por parte de las autoridades municipales, esto debido a que indicaron claramente que no es lo mismo manifestar sus demandas de manera individual que hacerlo de forma grupal, ya que unidos tienen mayores posibilidades de obtener respuestas a la problemática que se les vaya presentando. Otro aspecto que puede considerarse a favor de la posibilidad de conformar alianzas empresariales, es que también existen algunos esfuerzos de trabajo conjunto para realizar diversas actividades, ejemplo de ello son las actividades que realizan actualmente algunos empresarios que colaboran con asociaciones de beneficencia pública o en asociaciones civiles de alcance nacional o internacional a través de las cuales llevan a cabo labores de asistencia social.

CONCLUSIONES

Luego de haber realizado la investigación documental y la investigación de campo, se puede concluir que, por la tradición que existe de trabajo conjunto en el estado de Oaxaca desde la época colonial en la que ya se realizaban *tequios*, aunado a valores tales como el trabajo conjunto, o la solidaridad, que predominan entre los empresarios, y considerando que estos tienen buenas relaciones entre ellos y realizan algunas actividades conjuntas, sí sería posible integrar alianzas empresariales. Además, se considera que la creación de alianzas es viable porque se identificaron prácticas conjuntas con objetivos altruistas, y existe el interés para que un grupo de empresarios pueda solicitar beneficios conjuntos, con lo cual todos los empresarios que integraran una alianza, podrían gozar de diferentes beneficios tales como disminuir costos,

obtener tratos preferenciales, recibir capacitación y asesoría de autoridades municipales, estatales o federales e incluso obtener apoyos financieros como grupo.

RESUMEN

En México, 95% de las Micro, Pequeñas y Medianas Empresas (Mipymes), son empresas familiares (Belausteguigoitia, 2004). Las Mipymes generaron un 79.6% de empleo y participaron con el 51.6% del PIB. Sin embargo, una gran cantidad de empresas solamente permanecen en funcionamiento unos meses, por lo que de cada 100 Mipymes que se crean, 90 no alcanzan a llegar a los 2 años de funcionamiento (INEGI, 2009). Se ha discutido respecto a la importancia del contexto y a la necesidad de apoyos gubernamentales para este tipo de empresas, pero también se ha identificado como elemento causante de la mortandad, la mala administración de sus dirigentes. En la presente investigación se presenta la importancia de la planeación estratégica en las Mipymes familiares. Se analiza una muestra de Mipymes de los sectores comercial y de servicios en la Ciudad de Huajuapán de León, Oaxaca, México. El objetivo de esta investigación es conocer el perfil de sus dirigentes y los principales problemas que enfrentan para posteriormente determinar en qué medida utilizan la planeación estratégica para buscar soluciones. Finalmente se plantean los primeros pasos para incorporar la planeación estratégica en su administración. La investigación es cualitativa y su alcance es exploratorio y descriptivo.

ANÁLISIS DEL USO DE LA PLANEACIÓN ESTRATÉGICA EN LAS MIPYMES FAMILIARES, A PARTIR DE UN GRUPO DE EMPRESAS COMERCIALES Y DE SERVICIOS

ABSTRACT

In México, 95% of the SMEs (Small and Medium-size Enterprises), are family business (Belausteguigoitia, 2004). The SMEs generated 79.6% of the employment opportunities and participated with 51.6% of the gross domestic product (GDP). However, a great amount of enterprises are open just for a few months. From each 100 SMEs that are created, 90 can't keep working for more than 2 years (INEGI, 2009). Many authors have argue about the importance of the context and the need of governmental support for this kind of enterprises, but it has been identified another cause of the enterprise closing: bad administration of their managers. In this research it is possible to see the importance of the strategic planning in the family SMEs. A sample of SMEs from the commercial and service sector are analyzed. In this research the importance of the strategic planning in the family SMEs is presented. The objective of this research is to know the managers profile and the main problems they usually face, as well as to determine to what extend the strategic planning has been used to find solutions to those problems. In the last part of this document the first steps to integrate the strategic planning in the family SMEs are presented. This research is qualitative, exploratory and descriptive.

INTRODUCCIÓN

Las micro, pequeñas y medianas empresas siempre han tenido un desarrollo complicado debido a los cambios bruscos que presenta la economía y que se traduce en fluctuaciones en el desempeño empresarial. La falta de estabilidad en el desempeño empresarial plantea ciertas interrogantes tales como: ¿Qué actividades debe realizar cada uno de los miembros de la empresa?, ¿cómo conseguir dinero para pagar la nómina del mes cuando la economía se encuentra deprimida? y algunas otras interrogantes más de largo plazo como: si las ventas siguen así ¿qué hacer para que sobreviva el negocio? En México existen más de tres millones de empresas, de las cuales el 95% son microempresas y Oaxaca es uno de los cinco estados con un alto grado de marginación, donde 356 de los 400 municipios del país ubicados en el límite de la pobreza extrema pertenecen a este estado (Chavela, 2005). Kuhlman (1997) afirma que en México el 90% de las empresas son de carácter familiar y por eso inician sus actividades con muy pocos recursos y escasos apoyos. El principal motor para su creación es la necesidad de supervivencia, lo que ayuda a superar los obstáculos que se van presentando.

Esta investigación se refiere a la importancia de la planeación estratégica en las Mipymes familiares en los sectores comercial y de servicios de la Ciudad de Huajuapán de León, Oaxaca. Esto debido a que en múltiples investigaciones se ha llegado a la conclusión de que dichas empresas enfrentan graves problemas, muchos de ellos derivados de su falta de planeación, sin una visión de a dónde quieren llegar. En esta ciudad la mayor parte de la población se dedica al comercio y al sector de servicios, según los datos que arrojó el Censo de Población y Vivienda realizado por el Instituto Nacional de Estadística y Geografía (INEGI) en julio de 2010. Cuando se habla de empresas familiares no se tiene una definición universalmente aceptada, esto debido a que las empresas familiares no son iguales, ya que cada una de ellas poseen características incomparables que provienen de singulares dinámicas familiares, pero para fines de esta investigación se utiliza la definición de Belausteguigoitia (2004) que define a este tipo de empresas como una organización en la que la cultura es trascendente y compleja, pues combina atributos de la familia propietaria y de la propia empresa. En México, el estudio de la empresa familiar es de gran importancia, pues la mayoría de sus empresas son de carácter familiar y por ello es necesario incrementar los esfuerzos para conocer los factores que pueden contribuir a su subsistencia y la influencia de los valores familiares.

En la formación de las empresas familiares intervienen dos factores principalmente: la participación de las familias y la dedicación o el tiempo que le asignan a la empresa. La principal problemática que enfrentan las empresas familiares es que en la mayoría de los casos la influencia que tiene el fundador es decisiva en la toma de decisiones de la misma, sin embargo, en un porcentaje elevado de estas empresas el propietario no tiene los elementos básicos para llevarla por el mejor camino. La ejecución eficiente de un plan estratégico es lo que permite a las empresas incrementar su rentabilidad y mejorar su desempeño, el objetivo de la planeación estratégica no es planear sino realizar en forma ordenada un amplio número de actividades que, a su vez, involucra el uso de recursos tanto humanos como materiales.

Para fines de esta investigación se retoma la definición de Acle (1989), según la cual la planeación estratégica es un conjunto de acciones que deben ser desarrolladas para lograr los objetivos estratégicos; lo que implica definir y priorizar los problemas a resolver, plantear soluciones, determinar los responsables para realizarlos, asignar recursos para llevarlos a cabo y establecer la forma y periodos para medir los avances. Esta investigación se desarrolló en la Ciudad de Huajuapán de León, Oaxaca, que pertenece a la región mixteca del estado de Oaxaca. La metodología de esta investigación es cualitativa y se realizó

tomando como base una muestra de 50 microempresarios propietarios de empresas familiares comerciales y de servicios con más de cinco años de funcionamiento, teniendo como base entrevistas semiestructuradas.

REVISIÓN LITERARIA

En la actualidad no se cuenta con una definición que haya sido universalmente aceptada respecto al concepto de empresa familiar. Por ello, el tratar de integrar una definición de este tipo de empresas es uno de los primeros desafíos que enfrentan quienes deciden realizar investigación sobre este tema. Esto se debe a que el estudio de este tipo de empresas puede considerarse como una disciplina muy joven y la información que se relaciona con el tema generalmente se encuentra circunscrita por una serie de circunstancias que le definen y determinan, por ello, los conocimientos que se generan en relación con este tema no siempre pueden ser utilizados de manera universal y tampoco se pueden establecer comparaciones sencillas entre los diferentes estudios que existen. Sin embargo, a fin de poder conducir esta investigación, a continuación se presenta una definición de empresa familiar para poder recuperar sus principales características. Gallo (2008) define la empresa familiar como aquella empresa en la que a) el poder de la decisión, habitualmente se encuentra unida a la propiedad de capital que pertenece a una familia, b) algunos miembros de la familia desempeñan responsabilidades de gobierno y dirección en los órganos que ejercen el poder, c) como mínimo algunos miembros de la segunda generación están incorporados a la empresa.

Leach (2009) señala que un aspecto clave que distingue a la empresa familiar de la no familiar es la relación de parentesco entre algunos de sus miembros, que en su lugar de trabajo comparten valores, creencias y normas de conducta provenientes del ambiente familiar. Gallo (1989) también señala que con frecuencia suele confundirse el hecho de ser propietario con tener capacidad para dirigir, ya que con frecuencia algunas personas cuentan con algunas habilidades, mientras que otras las tienen menos desarrolladas. En este tipo de empresas es frecuente encontrar que, debido a su rápido inicio por la necesidad de generar autoempleo, en muchos casos sus integrantes no cuentan con los conocimientos necesarios para estructurarlas de manera formal, por ello adolecen de algunos elementos administrativos que aunque parecen básicos, algunas veces se omiten, dificultando de cierta manera el funcionamiento de estas. Uno de los aspectos que suelen omitirse es el realizar un plan que contemple los objetivos de la empresa, las acciones más importantes que deben realizarse para lograrlos así como los principales responsables de su realización, a fin de que se pueda asegurar su cumplimiento.

La planeación estratégica implica considerar tanto las capacidades como las habilidades de los integrantes de los familiares, así como también las de las personas externas a la familia que formen parte de la empresa. Acle (1989) define la planeación estratégica como el conjunto de acciones que deben ser desarrolladas para lograr los objetivos estratégicos, lo que implica definir y priorizar los problemas a resolver, plantear soluciones, determinar a los responsables para realizarlos, asignar recursos para llevarlos a cabo y establecer la forma y periodos para medir los avances.

METODOLOGÍA

El objetivo de esta investigación fue conocer el perfil de los dirigentes o propietarios de las 50 empresas familiares consideradas, identificando los principales problemas que enfrentaron estas para contar con los elementos que permitan determinar en qué medida utilizan la planeación estratégica para buscar soluciones a los problemas de la empresa. Esta investigación es de tipo cualitativo, ya que tiene el objetivo de conocer la importancia y los efectos de implementar la planeación estratégica en las microempresas familiares del sector comercial y de servicios de la Ciudad de Huajuapán de León, Oaxaca.

Esta investigación se llevó a cabo a partir de una muestra de microempresarios propietarios de empresas familiares comerciales y de servicios con más de 5 años de funcionamiento, teniendo como base entrevistas semi-estructuradas. El alcance de la investigación es exploratorio y descriptivo de acuerdo a lo establecido

por Hernández, Fernández y Baptista (2010), ya que no se conoce ninguna investigación previa sobre este tema y se pretende caracterizar el comportamiento de las microempresas familiares y la problemática que enfrentan en su desarrollo, así como la importancia que puede tener la planeación estratégica para mejorar su desempeño.

RESULTADOS

Los principales problemas a los que se enfrentan las microempresas familiares de la Ciudad de Huajuapán de León, Oaxaca, dedicadas al comercio y a los servicios son: una alta rotación de personal, falta de financiamientos para mejorar su empresa, problemas para calcular la mercancía que deben tener en cada época del año, dificultades para calcular el personal que requerirán en ciertas épocas del año. También mencionaron que suelen tener dificultades con algunos clientes, pues algunos solicitan pedidos especiales, pero sí les ha llegado a pasar que lo que se debía tener listo, no se completa o se hace con especificaciones diferentes a las solicitadas por los clientes.

El perfil de los dirigentes entrevistados es el siguiente: el 60% son personas que tienen estudios a nivel medio superior, el 24% tienen estudios a nivel superior, pero ninguno de ellos estudió una licenciatura relacionada con la administración de una empresa o el control de sus finanzas. El 16 % restante tiene estudios a nivel primaria, secundaria o preparatoria trunca. También se puede señalar que solamente las empresas medianas cuentan con organigrama de la empresa y tienen establecida por escrito la misión y la visión. La información que suelen tomar en cuenta los propietarios de microempresas familiares comerciales y de servicios de la Ciudad de Huajuapán de León, para la toma de decisiones es básicamente de dos tipos: la información previa respecto a cuánto y cómo se han hecho las cosas en momentos previos y lo que ellos como propietarios consideran que es lo más conveniente.

A partir de las entrevistas realizadas a los propietarios de empresas familiares dedicados a las actividades comerciales y de servicios de la Ciudad de Huajuapán de León, Oaxaca, se pudo confirmar que no han llevado a cabo actividades de planeación estratégica anteriormente. El 90% de los empresarios entrevistados de la muestra de empresas comerciales y de servicios de la Ciudad de Huajuapán de León, Oaxaca que aún no utilizan la planeación estratégica, luego de que se les explicó a grandes rasgos en qué consiste, consideraron que sí podría ser útil emplearla en el funcionamiento de sus empresas.

Los empresarios entrevistados no han llevado a cabo antes una planeación estratégica de las actividades de su empresa, pero los que tienen una mayor estructura señalaron que únicamente planean las cosas que van a hacer de manera mental o hacen anotaciones en su agenda personal, sobre todo cuando se trata de viajes o citas con proveedores o clientes importantes. Las principales causas por las cuales los propietarios de microempresas familiares comerciales y de servicios de la Ciudad de Huajuapán de León, Oaxaca, no han utilizado la planeación estratégica en sus empresas son las siguientes: 38% dijo desconocer en qué consiste la planeación estratégica, 32% indicó que no tiene tiempo para llevar a cabo actividades administrativas, 16% señaló que no le ha hecho falta hasta ahora el llevar las cosas por escrito o hacer planes a largo plazo, es decir, que no cree que la planeación tenga utilidad y 14% dijo que preferiría que alguien con una formación universitaria le ayude con esos aspectos, pues no cree contar con los elementos suficientes para hacerlo por sí mismo aunque se le diera capacitación.

CONCLUSIONES

Luego de haber analizado las entrevistas realizadas a la muestra de empresarios seleccionados, se puede concluir en primer lugar que más del 80% no conoce la importancia que tiene la implementación formal de la planeación estratégica para la toma de decisiones y para lograr la permanencia de las empresas en el mercado. También se pudo notar que a pesar de que actualmente realizan algunos esfuerzos por estructurar las actividades, no existe una vinculación de las actividades de los empresarios en el corto, mediano y largo

plazo. Tampoco se tiene por escrito la misión y visión de la empresa, lo que impide que se ligen las actividades a realizarse con la meta que se tiene establecida para cada empresa en un futuro.

Al analizar la relación entre la planeación estratégica y la permanencia de las empresas familiares, lo más importante fue que se detectó la disposición y el interés por parte de los empresarios para aprender sobre este tema y ponerlo en práctica. Además, se considera que puede ser de gran utilidad porque algunos de los problemas que los empresarios mencionaron son aspectos que se pueden mejorar si se prevén las actividades a realizar, los pedidos y las especificaciones de estos. Si bien resulta complicado establecer una relación directa entre la implementación de la planeación estratégica y la permanencia de las empresas familiares, lo que sí se puede asegurar es que el planear las actividades que se van a realizar, estableciendo objetivos, metas, actividades y responsables, resulta muy conveniente y puede mejorar el funcionamiento de la empresa.

LA ACREDITACIÓN EN UNIVERSIDADES: CASO PROGRAMAS EDUCATIVOS DE CIENCIAS ADMINISTRATIVAS

Oscar Ricardo Osorio Cayetano, Universidad Autónoma de Baja California
Clementina Enriqueta García Martínez, Universidad Autónoma de Baja California
José Manuel Valencia-Moreno, Universidad Autónoma de Baja California

RESUMEN

El asegurar la calidad en todos los niveles educativos, es una tarea tanto en el plano internacional como nacional. En el caso particular de la Educación Superior en México, uno de los mecanismos implementados con este fin es la acreditación. La continuidad y permanencia de este proceso de evaluación son acciones que la Universidad Autónoma de Baja California ha tomado como elemento esencial de su plan estratégico para asegurar la calidad de sus programas educativos, alineada con sus políticas institucionales. Una vez que el dictamen emitido por el Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C. es favorable, lo acertado es dar estricto seguimiento a las recomendaciones recibidas, mismas que, por acciones realizadas de manera parcial o de forma diferente a lo solicitado por el organismo acreditador, se han señalado. A partir de lo anterior, se realiza un análisis del dictamen con la finalidad de cumplir las recomendaciones y conservar la acreditación. Se espera que la experiencia reportada sirva como referencia a otras instituciones en su búsqueda de la calidad educativa certificada.

PALABRAS CLAVE: Calidad Educativa, Acreditación, Plan Estratégico

ACCREDITATION IN UNIVERSITIES: THE CASE OF EDUCATIONAL PROGRAMS OF ADMINISTRATIVE SCIENCES

ABSTRACT

Quality assurance among every educational level is now both national and international task. In the particular case of Mexican Superior Education, one of the main established tools is Certification. The Universidad Autónoma de Baja California has taken continuous improvement as an essential element of its strategic plan to assure the quality and the permanence of their educational programs as well as their institutional policies. This is the result of recommendations listed in the opinion issued by the Accounting and Administration Teaching Certification Council, A.C. which every educational institution has to analyze and strictly take in consideration and complete action in order to accomplish every opinion and conserve the Certification. Starting with this case study, it is an expectation that the reported experience will help other educational institutions in their path of certificated educational quality.

KEYWORDS: Quality Education, Certification, Strategic Plan

INTRODUCCIÓN

El compromiso por una educación de calidad, al interior de la Universidad Autónoma de Baja California (UABC), se encuentra plasmado en su Plan de Desarrollo Institucional 2011-2015, mismo que en su política número uno, denominada Impulso a la Formación de los alumnos, establece: "... la necesidad de responder adecuadamente a las demandas sociales de educación superior de buena calidad, lo cual implica, además

de actualizar los programas educativos y asegurar la calidad, ofrecer a los estudiantes oportunidades de formación integral en condiciones de equidad” (PDI, 2011-2015). De acuerdo a La Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) las instituciones pueden entender la acreditación como “una valoración que indica si una institución alcanza un nivel o estatus determinado” (ANUIES, 2001). Resulta importante, porque a partir de ella, se determina si la institución educativa resulta apropiada en diversos sentidos y por ende, debe recibir aprobación; es decir, debe ser aceptada en una determinada categoría.

En este contexto, la acreditación implica, tanto para las instituciones como de forma individual, una búsqueda de reconocimiento social y de prestigio para los miembros de estas instituciones. En ese sentido, los procesos de acreditación representan un requerimiento en nuestros días al constituirse en garantes de calidad, proporcionando credibilidad a las funciones sustantivas ya que están consignados a avalar la calidad y proporcionar credibilidad respecto a un proceso educativo y sus productos. En el PDI 2011-2015 de la UABC se señala, como uno de sus objetivos estratégicos, fomentar la calidad educativa, por lo que se asienta y reconoce que los procesos de acreditación resultan en un mecanismo para lograrla, fortaleciendo los programas de licenciatura, a través de ellos. Este objetivo queda asentado en la iniciativa mencionada en la que se expresa “... por una parte, confirmar el compromiso de la UABC por mantener la buena calidad de los programas educativos que ofrece y, por la otra, asegurar la pertinencia de los mismos”, lo anterior con el apoyo de organismos acreditadores reconocidos por el Consejo para la Acreditación de la Educación Superior, A.C. (COPAES), instancias gubernamentales y organismos internacionales de prestigio y reconocimiento social.

El Consejo de Acreditación en Ciencias Administrativas, Contables y Afines (CACECA) establece como su misión el “mantener una cultura de la evaluación que permita promover la mejora continua en los programas académicos impartidos en las instituciones de educación superior en las ciencias contables, administrativas y afines, con calidad y pertinencia local y global”, al ser una misión compartida con la UABC, al interior de la Facultad de Ciencias Administrativas y Sociales (FCAyS) también se ha asumido este reto, tarea emprendida desde hace 13 años y que se ha convertido en una constante en sus políticas institucionales. En este tenor, la *continuidad y permanencia* son acciones que se ha tomado como bandera, en relación al aseguramiento de la calidad y el plan establecido para mantenerla. Una vez que el dictamen emitido por CACECA es favorable, lo procedente es dar puntual seguimiento a los indicadores que, por acciones realizadas de manera parcial o de forma distinta a lo solicitado por el organismo acreditador, sigan pendientes de cumplir en los procesos de seguimiento.

Estas recomendaciones pueden cumplirse de manera parcial en la primera visita y de manera total en una segunda, con fechas previamente programadas. Una vez que se cumplen los puntos anteriores, se realiza un análisis del documento emitido por el órgano acreditador con la finalidad de tener una idea clara de los indicadores que será posible cumplir en el corto, mediano y largo plazo, dependiendo del carácter institucional de los mismos; es decir, que su cumplimiento no depende de la Facultad, sino de acciones que se deberán realizar a nivel UABC. En congruencia con estos retos, la FCAyS se ha dado a la tarea de obtener y mantener acreditados los programas educativos de Licenciado en Informática (LI), Licenciado en Administración de Empresas (LAE) y Licenciado en Contaduría (LC) pertenecientes al área de Ciencias Administrativas. Dicha acreditación corresponde al órgano acreditador CACECA, que lo ha otorgado en una primera evaluación, el 23 de octubre de 2002. La última re acreditación se obtuvo el 28 de septiembre de 2012 y tendrá vigencia por un periodo de 5 años.

Objetivo

Con base en lo anteriormente desarrollado, el objetivo del presente trabajo es realizar un análisis de las observaciones que el Órgano Acreditador ha planteado como requisitos a cubrir para su próxima visita,

identificando la instancia encargada de darles cumplimiento, además, plantear propuestas de los mecanismos a desarrollar para el acatamiento de los mismos.

METODOLOGÍA

Para el logro del anterior objetivo, en este estudio se desarrolla una investigación de tipo observación participante, cuantitativa y de carácter exploratorio. (Hernández, Fernández y Baptista, 2010).

Población: Para efecto de este análisis se ha considerado la información de las tres carreras antes mencionadas, que son: LI, LAE y LC.

Instrumento: Concentrados de Resultados emitidos por el órgano acreditador, a las tres carreras.

RESULTADOS

Con la finalidad de mostrar la puntuación global que debe reunir un programa a evaluar, en la Tabla 1 se muestran las diez categorías y el puntaje que se debe alcanzar para cada una de ellas, mismas que son determinadas por el Consejo acreditador. Cabe mencionar que en una escala de valores, para que un programa sea acreditado debe obtener de 701 a 1000 puntos, si el número es menor de 701 puntos no se acredita.

Tabla 1: Categorías y Puntos Determinadas Por el Consejo Acreditador

Categorías	Puntos
Personal académico	185
Estudiantes	117
Evaluación del aprendizaje	52
Curriculum	133
Formación integral	70
Servicios institucionales de apoyo para el aprendizaje	68
Vinculación - extensión	118
Investigación	95
Infraestructura y equipamiento	41
Gestión administrativa y financiamiento	121
TOTAL	1000

Como se menciona anteriormente, para este trabajo se toma como referencia a los programas académicos de las tres licenciaturas del Área de Ciencias Administrativas, a saber: Licenciatura en Informática, Licenciatura en Administración de Empresas y Licenciatura en Contaduría. En una primera etapa, los programas educativos de LI, LAE y LC fueron sometidos al proceso de acreditación a partir de la solicitud hecha por la Institución a CACECA, a partir de esto se estableció la fecha de envío/recepción del documento de autoevaluación en el que se incluye de manera escrita la documentación, evidencias documentales y el cálculo del porcentaje alcanzado para cada indicador.

En una segunda etapa, se realizaron diversas acciones con la finalidad de revisar in situ lo incluido en el documento enviado previamente, entre las que se encuentran: visita de campo, entrevistas a estudiantes y egresados, sondeos de opinión al resto de la comunidad académica y de apoyo administrativo e intendencia, además de la revisión de evidencias documentales debidamente ordenadas en carpetas, incluyendo también la normatividad vigente de la UABC para su consulta, en caso de ser necesario. Con fecha del 28 de septiembre de 2012 el Comité Dictaminador consideró en sus dictámenes, que los programas académicos, de acuerdo al puntaje obtenido, quedaban acreditados por los próximos 5 años. En la Tabla 3 se muestra el desglose, por categoría, de los puntos obtenidos. Como puede apreciarse, los tres programas educativos rebasan el puntaje mínimo requerido (701 puntos), si bien es un logro importante, a partir de esto es

necesario un esfuerzo adicional para cumplir en la medida de lo posible con la totalidad de los puntos que avalaran la calidad académica ofrecida a nuestros estudiantes.

Tabla 3: Desglose de Resultados del Proceso de Re Acreditación 2012

Categorías	Puntuación Global			
	CACECA	Puntos Comité Dictaminador		
		LI	LAE	LC
1. Personal Académico	185	119.8	154.1	151.5
2. Estudiantes	117	93.0	72.0	92.6
3. Evaluación del aprendizaje	52	52.0	52.0	52.0
4. Currículum	133	133.0	133.0	133.0
5. Formación integral	70	57.0	64.25	70.0
6. Servicios institucionales de apoyo para el aprendizaje	68	51.5	51.5	51.5
7. Vinculación – extensión	118	88.1	101.91	106.5
8. Investigación	95	62.7	95.0	95.0
9. Infraestructura y equipamiento	41	41.0	41.0	41.0
10. Gestión Administrativa y financiamiento	121	11.5	111.5	11.5
TOTAL	1000	809.6	876.26	904.65

Programando el proceso de seguimiento y tomando en consideración el número de recomendaciones emitidas por el Consejo, se establece que la primera visita de seguimiento se llevará a cabo el 28 de marzo de 2014 en donde el requisito a cubrir será cumplir con el 40% de las recomendaciones, *para poder conservar la acreditación*. La segunda visita se programó para el 28 de septiembre de 2015, en donde se deberá dar cumplimiento en un 100%. Conforme a la fecha señalada, la primera visita se llevó a cabo el 27 y 28 de marzo de 2014 y consistió en comprobar el grado de cumplimiento de las recomendaciones pendientes de solventar de cada programa académico.

Una vez concluido el análisis, por parte del Consejo, con fecha 13 de mayo de 2014, se determinó que el avance a las recomendaciones para la re acreditación de los 3 programas académicos corresponde: para la Licenciatura en Informática fue del 50%, es decir, con 16 de las recomendaciones anteriormente señaladas, cumplidas. Para la Licenciatura en Administración de Empresas, fue del 52%, con 13 cumplidas y en el caso de Contador Público fue del 48%, que corresponden a 12 recomendaciones efectuadas de forma satisfactoria. Estos resultados se presentan en la Tabla 4, quedando pendientes para la segunda visita 16, 12 y 13 de ellas para LI, LAE y LC, respectivamente. En la fecha ya establecida se verificará su cumplimiento, en primera instancia con el envío de la respectiva auto evaluación y posteriormente con la visita de campo.

Tabla 4: Recomendaciones Atendidas y Pendientes En la Primera Visita de Seguimiento

Recomendaciones	Avance					
	LI		LAE		LC	
	Núm.	%	Núm.	%	Núm.	%
Recomendaciones emitidas por el consejo	32	100	25	100	25	100
Recomendaciones cumplidas por la Institución en la primera visita	16	50	13	52	12	48
Recomendaciones pendientes para la segunda visita	16	50	12	48	13	52
TOTALES	32	100	25	100	25	100

Recomendaciones Que Se Comparten En los Tres Programas Evaluados

En la categoría de *personal académico*, recomiendan incrementar el número de profesores que participa en los programas de formación y actualización docente pedagógica-didáctica. En este sentido, la Universidad cuenta con un programa institucional de formación docente por lo que será necesario redoblar esfuerzos para exhortar a los profesores a cumplir con ellos, basados en los resultados arrojados por la evaluación del desempeño en el aula que, realizan los alumnos al término de cada semestre.

En la *categoría estudiantes* se solicita que el 90% de los estudiantes egresados debe estar titulado, requisito que no se cumple. Acciones como talleres de titulación en donde se den a conocer las múltiples opciones que el Reglamento de Titulación contempla, sirvieran como medio para promover, entre los pasantes de pregrado, un interés prioritario por obtener su título profesional. La acción de asesorías académicas también fue observada en la categoría de *servicios de apoyo para el aprendizaje* y aun cuando no se contempla en las actividades de descarga académica, se realizan y se registra esta actividad en formatos autorizados por la subdirección académica de la Facultad. Una cuestión que debe tratarse de manera urgente es el que se refiere a la categoría de *vinculación-extensión* y tiene que ver con el intercambio de profesores con otras instituciones nacionales y extranjeras. Para atender a esta observación, será necesario la formación y registro correspondiente de cuerpos académicos que permitan establecer redes de colaboración y obtener recursos para llevar a cabo esta acción.

Recomendaciones Institucionales

Una recomendación que corresponde a la categoría de *personal académico* y que por su naturaleza queda fuera de los alcances de la Facultad, tiene que ver con el tiempo que un profesor de tiempo completo (PTC) debe dedicar a la investigación, siendo este del 30%. La realidad es que, debido a que la actividad predominante para un PTC es la docencia, esta situación es compleja, pues solo es posible asignar el 10% de su carga horaria a labores de investigación, solo si tiene un proyecto de investigación registrado en las instancias correspondientes. En la *categoría estudiantes* se establece que los egresados deben obtener 550 puntos del TOEFL como requisito de titulación asegurando así el dominio del idioma inglés. En la institución se ha establecido bajo acuerdo de las Dependencias de Educación Superior (DES), que solo se requieren 300 puntos (Oficio Número 438/2012-1, UABC) para cumplir con este requisito. Será necesario entonces, revisar los términos y las condiciones en la que se tomó esa determinación y realizar las gestiones pertinentes para recomendar un posible ajuste.

Otras Recomendaciones Relevantes

Una recomendación más, corresponde a la *categoría de personal académico* y se refiere a los perfiles académicos del profesor seleccionado para la materia a impartir. En este caso, la guía metodológica de reestructuración de planes de estudio de la UABC, no contempla esta acción, por lo que se deberá elaborar un documento adicional con los perfiles solicitados, que se hagan evidentes en el proceso de selección de personal y contribuya a mejorar la formación de los estudiantes. Será necesario, como una recomendación más de esta categoría, instrumentar y operar estrategias para incrementar el número de profesores con el grado de doctor. La acción inmediata es la concientización, y a partir de esto encontrar las condiciones adecuadas para que logren el grado y con ello impulsar su enfoque a la investigación con el desarrollo de proyectos derivados del programa académico.

Además, Es necesario también contar con profesores con experiencia laboral en el área de conocimiento que compartan ese conocimiento y experiencia dentro y fuera del aula. Este apartado se podrá lograr con la contratación de profesores de asignatura que se dediquen a la prestación de servicios profesionales. En lo referente a la carga académica orientada a la investigación de los profesores de tiempo completo, que también fue observada, recomiendan que sea igual o mayor al 30% de la carga de actividades. El acatamiento a esta observación, está fuera del alcance de toma de decisiones de la FCAyS, ya que no está

incluida en el Estatuto de Personal Académico. El mismo contempla la asignación de hasta 10 horas a la investigación, siempre y cuando el profesor sea responsable de un proyecto de investigación.

La actividad laboral profesional también es un asunto pendiente pues no se contempla en los procesos internos de evaluación de desempeño docente y se considera que atendiendo las recomendaciones de los perfiles académicos y el que se refiere a la experiencia laboral se estaría cubriendo a este indicador. En la categoría de *estudiantes* se debe atender, en primera instancia, el tema de la deserción que, de acuerdo a los lineamientos, debe ser menor al 20% del total de inscritos en la carrera y la realidad lo supera. En este renglón, la oficina del Departamento Psicopedagógico tiene registro de que la deserción se presenta por cuestiones personales y no académicas; aun así, se instrumentarán acciones de seguimiento para que en lo posible, evitar que los estudiantes abandonen la carrera. La reprobación también es un foco rojo, para ello dentro de la actividad de tutoría se trabajará con los docentes-tutores para que en este proceso, detecten a los alumnos en situación de riesgo y se implementen acciones de tutoría más directa y cursos remediales para abatir las deficiencias académicas. Otro de los aspectos a revisar es el relativo a la eficiencia terminal, misma que se señala debe ser por lo menos del 70% por cohorte generacional. En este rubro, la tutoría académica y psicopedagógica es clave; muchos de los casos tienen que ver con la falta de recursos económicos para continuar en sus estudios y concluirlos, por lo que la promoción y difusión de becas es determinante en este asunto.

En relación con La *formación integral* de los estudiantes, lo concerniente a actividades culturales resulta también una prioridad. En la Facultad se ha implementado un programa semestral llamado Jornadas FCAYS que incluye actividades relacionadas con el cine, danza, música, entre otras, que ayudará a cumplir con esta observación, siempre y cuando se acompañe con la debida promoción y difusión. La posibilidad de tener en biblioteca toda la bibliografía básica de las unidades de aprendizaje es un reto interesante, pues aunque se destinan recursos para esta acción, en esta disciplina existen acciones de consulta más eficientes que los libros de texto, por la rápida obsolescencia de sus contenidos, por lo que de manera natural, se recomienda recurrir a mecanismos de consulta como páginas de internet y revistas especializadas. La categoría de *gestión administrativa y financiamiento* debe atender lo relacionado con los donativos del presupuesto anual y este debe ser de al menos el 5%, bien sea en especie, servicio o efectivo, por lo que se insistirá a la administración de la Facultad se generen acciones orientadas a su cumplimiento.

CONCLUSIONES

En este momento se están atendiendo cada una de las recomendaciones pendientes de resolver para la segunda visita de seguimiento por parte del Consejo acreditador: Para ello, es necesario implementar una serie de acciones que evidencien el gran interés que tiene la Facultad y la Institución, de atenderlas. Cabe señalar, que algunas de las recomendaciones están sujetas a la normatividad vigente en la UABC. Es claro que por la razón anteriormente expuesta, que es muy probable que sólo se logre una aproximación a lo deseable en cada observación y que existen otras recomendaciones en las que habrá que sensibilizar a las autoridades de la necesidad de implementar cambios en lo general. Se considera que debe ser a través de los mandos superiores, tanto de la Institución como de CACECA, en donde se ubica la toma de decisiones, en donde se implementen las condiciones adecuadas, con la intención de abonar a la mejora continua y la buena calidad de los programas académicos, además de ofrecer a los estudiantes oportunidades de formación integral en condiciones de equidad.

RESUMEN

La construcción de instrumentos de medición en el área de las Ciencias Sociales es claramente susceptible a la evolución de las demandas económicas de la sociedad, lo que unido a que, en numerosos casos se trata de constructos latentes y susceptibles de observación de manera indirecta a través de las respuestas manifiestas de un sujeto a un conjunto de ítems, obliga al investigador a elaborar instrumentos cada vez más sensibles y refinados para medir los factores objeto de estudio. La construcción de un instrumento de estas características para medir la RSE en las PYMES mexicanas y su posterior aplicación a las mismas permitirá medir la evolución del concepto en el sector, concienciándolas de que su expansión depende de su conducta y de su aceptación en un entorno cuyos problemas y necesidades apenas comienzan a identificar y paliar con parte de los beneficios generados, dando lugar al concepto de RSE. De este modo, las empresas irán avanzando hacia la RSE al adoptar las demandas de la sociedad y, la sociedad adoptará a dichas organizaciones mejorando su imagen y prestigio; convirtiendo a la RSE en un valor agregado y una ventaja competitiva para las PYMES.

PALABRAS CLAVE: RSE, PYMES, Instrumentos De Medición

IMPLEMENTATION OF INITIATIVES SOCIAL RESPONSIBILITY IN SMALL AND MEDIUM ENTERPRISES CONSTRUCTION OF A MEASURING INSTRUMENT CSR MEXICAN SMES

ABSTRACT

The construction of measuring instruments in the area of social sciences is clearly susceptible to changing economic demands of society, which together with that in many cases is dormant and susceptible observation constructs indirectly through of gross responses of a subject to a set of items, forces the researcher to develop increasingly sensitive and sophisticated instruments to measure the factors under study. The construction of an instrument of its kind to measure CSR in Mexican SMEs and their subsequent application to allow them to measure the evolution of the concept in the field raise their awareness of their expansion depends on their conduct and their acceptance in an environment whose problems and needs just beginning to identify and mitigate some of the profits generated, leading to the concept of CSR. Thus,

companies will progress in adopting CSR demands of society and society adopt these organizations improve their image and prestige; CSR becoming an added value and competitive advantage for SMEs.

KEYWORDS: CSR, SMEs, Measuring Instruments

INTRODUCCIÓN

La RSE se describe como una herramienta de gran utilidad para diferenciar a las organizaciones de otras de su tipo, fortaleciendo su imagen corporativa y sus indicadores de competitividad sin afectar ni sus costos ni a su productividad distinción que se refleja en: a) el fortalecimiento de la competitividad; b) la mejora de la imagen de la empresa en relación con los clientes con el fin de incrementar su grado de lealtad; c) mayor y mejor retención de empleados; d) mayor y mejor contratación de nuevos empleados con la consiguiente reducción de costos y, e) mejora de la eficiencia, lo que ha llevado a nuevas y más contemporáneas definiciones del concepto [1]. De este modo, la aplicación de la RSE incita a la empresa a incrementar sus niveles de competitividad a través del respeto y el desarrollo pleno de las personas, el entorno y las comunidades en donde opera, sin descuidar las expectativas de todos los involucrados: inversionistas, colaboradores, directivos, proveedores, clientes, gobierno, organizaciones sociales, comunidad y sociedad en general bajo un esquema de compromiso económica y ambientalmente sostenible que permita salvaguardar tanto las metas empresariales como el entorno.

El surgimiento de un nuevo modelo de empresa que expande su preocupación por el trato igualitario a los aspectos económicos, sociales y ambientales deriva de las sociedades cooperativas, que obtienen ventajas competitivas siempre y cuando sean conducidas por una estrategia que conduzca a una gestión integrada. La singular estructura y la composición de la estructura de gestión democrática de la cooperativa puede garantizar la integración total de las partes interesadas en el proceso de toma de decisiones de propietarios, clientes, proveedores y empleados [3]. Se trata de un compromiso consciente y congruente que asumen el empresario y la empresa, de cumplir integralmente con la finalidad de la empresa tanto en lo interno como en lo externo, considerando las expectativas de todos sus participantes en lo económico, social o humano y ambiental, demostrando el respeto por los valores éticos, las personas, las comunidades y la construcción del bien común con justicia social [4].

Por todo ello, y en cumplimiento al Plan de Desarrollo de la Facultad de Contaduría y Administración 2013-2017 [PDFCA-2013-2017], en el marco del Plan de Desarrollo de la Universidad Nacional Autónoma de México, que en su sección 5, Vinculación y Proyección, remite directamente a la necesidad de estrechar lazos entre la FCA y las organizaciones empresariales del país para Impulsar la creación de empresas sociales a través de la promoción y el desarrollo de proyectos de emprendimientos sociales con alumnos de la FCA y otros conjuntos en forma interdisciplinaria con el propósito de impulsar la creación de micros y pequeñas empresas sociales, incubar y asesorar empresas sociales que nazcan en México y en la UNAM [5], se está realizando un estudio sobre RSE en los Estados de México, Morelos, Michoacán, Guerrero, Querétaro y Puebla, tomando en consideración los datos sociodemográficos pertinentes aportados por determinadas unidades de análisis —una por Estado— seleccionadas debido a que los ingentes problemas socio-económicos de la entidad federativa requieren que sus organizaciones implementen acciones y estrategias de RSE.

Dicho estudio se define como un análisis exploratorio, de diseño no experimental, transversal y descriptivo con enfoque prospectivo. La extracción de la muestra será de tipo probabilístico y, la recolección de datos, se realizará mediante observación directa —sistemática y controlada— además de a través de entrevistas —formales, estructuradas y focalizadas—. El análisis correspondiente será de tipo nominal y ordinal simple —a través del uso de razones, proporciones, porcentajes y tasas— intervalar —medidas de tendencia central

y de dispersión—, de correlación —coeficientes de Pearson, Spearman y contingencia mediante ji-cuadrada— y mediante regresión.

Los resultados esperados permitirán la eficiencia de los mecanismos de implementación de iniciativas de RSE en las PyMES —en los rubros de rentabilidad, competitividad y sostenibilidad— que puedan ser incorporados a través de modelos gubernamentales de apoyo al sector. Debe considerarse que las prácticas de RSE han evolucionado en los países desarrollados, de compromisos privados a reglas jurídicas de cumplimiento obligatorio referidas a normas ambientales, derechos laborales, leyes de no discriminación en el empleo, etc. En cuanto a los países en desarrollo, como es el caso de México, las prácticas de RSE permanecen limitadas por los intereses de las compañías nacionales aun cuando avanzan lentamente en virtud de las presiones externas de diversos centros de poder —ETN, sociedad civil, ONG's, etc. — [2].

Todo lo cual impactará directamente sobre las PYMES, concienciándolas de que su expansión depende de su conducta y de su aceptación en un entorno cuyos problemas y necesidades apenas comienzan a identificar y paliar con parte de los beneficios generados, dando lugar al concepto de RSE. De este modo, las empresas irán avanzando hacia la RSE al adoptar las demandas de la sociedad y, la sociedad adoptará a dichas organizaciones mejorando su imagen y prestigio; la imagen y el prestigio empresarial impactarán directamente en la riqueza de los accionistas que refleja la fuerza del gobierno corporativo y, por último, el gobierno corporativo alentará las mejores prácticas mediante la protección de los intereses de los accionistas y la creación de ambiente de mayores retornos sobre la inversión de los accionistas, convirtiendo a la RSE en un valor agregado y una ventaja competitiva para las PYMES [6].

REVISIÓN LITERARIA

El concepto de RSE surge en los años 30, con el establecimiento de los primeros mecanismos de RSE en *The Function of the Executive* (Barnard's, 1938); *Social Control of Business* (Clark's, 1939) y *Measurement of Social Performance of Business* (Kreps, 1940), además de numerosos artículos en la *Harvard Law Review*, sobre las empresas como instituciones económicas que deben actuar socialmente sin ánimo de lucro. A fines de los 50, Rothmann Bowen señala la obligación de empresa de perseguir políticas, tomar decisiones y seguir líneas de acción deseables para los objetivos y los valores de la sociedad [7]. La RSE comienza a aproximarse al concepto de estrategia empresarial [8], al considerar a las empresas centros vitales de poder. Para los años 60, Davis afirmaba que la RSE debía aplicarse a acciones referidas al bienestar social y, Frederick, anotaba que los recursos de las empresas debían manejarse con objetivos sociales amplios. El concepto continúa reforzándose a partir de: a) la definición de los niveles de RSE; b) la diferencia entre obligaciones y reacción y, c) la integración de la responsabilidad como parte fundamental de las actividades empresariales. Niveles que apuntan a: a) las iniciativas de beneficencia de una empresa; b) la inversión social corporativa y, c) la integración de la responsabilidad como parte fundamental de las actividades empresariales [8].

Inicia entonces el debate sobre la diferencia existente entre obligación —comportamiento empresarial acorde al marco legal existente— y RSE —compromiso empresarial hacia la sociedad, independiente de las obligaciones económicas y legales—, con el fin de deslindar las acciones derivadas de la normatividad de las filantrópicas y de las adscritas a la RSE. Carroll, define la RSE mediante una pirámide que integra elementos económicos, legales, éticos y filantrópicos interactuando conjuntamente [9]. Durante los 70, el componente económico se contraponía con el compromiso moral de las empresas para actuar responsablemente hacia la sociedad y el medioambiente, tal como expuso Friedman al afirmar que el objetivo principal de las empresas radica en la obtención de utilidades, contando como su única responsabilidad la utilización de sus recursos para obtener las mayores ganancias posibles dentro de la competencia libre y abierta sin engaño [10]. Así, la RSE avanzó bajo la premisa de que dado que es la misma sociedad la que le permite operar a la empresa, la empresa tiene la obligación de satisfacer las

necesidades de la sociedad [11], por lo que la empresa comienza a considerarse como un ente social que debe actuar a favor del desarrollo de la sociedad.

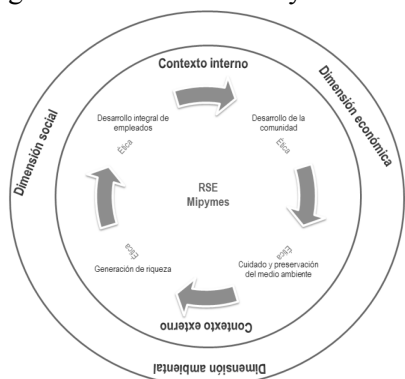

Para los años 80, la RSE se consolida bajo un doble carácter: a) protección para las propias empresas bajo las presiones políticas que parecían disputar la legitimación de las organizaciones y, b) foco de investigaciones y análisis científico [12] de temas afines, tales como la sustentabilidad. Por la misma época, se asumió —a partir del 3° principio de la Declaración de Río (1992)— el concepto de desarrollo sustentable, formalizado en el Informe Brundtland. Surge, también, el primer reporte de RSE publicado por Ben and Jerry's (1989). Carroll (1999), revela que el principal desafío del concepto consistió en responder adecuadamente el interrogante siguiente: ¿Cómo se pueden medir las actividades de RSE?, señalando como referentes teóricos a Dalton y Cosier (1982); Cochran y Wood (1984) y Clarkson (1995). Por otra parte, los esfuerzos por resolver el problema de la medición de impactos se ven reflejados en los indicadores ETHOS, DJSI y el de la Unión Europea, recogido en el Opinion on the European Economic and Social Committee on Information and Measurement Instruments for Corporate Social Responsibility. Investigaciones más recientes de la University of Illinois Chicago (McWilliams, Siegel y Wright, 2006) sugieren a las empresas utilizar indicadores como los propuestos por KLD o el Global Reporting Initiative (GRI) mencionado anteriormente. Porter (2007), plantea que la medición de la RSE es una herramienta eficaz para influir en la conducta corporativa, siempre y cuando los índices se midan en forma consistente, los indicadores reflejen el impacto social, los datos sean confiables y exista verificación externa. Burnard y Drucker, añaden al concepto de RSE elementos proactivos, al afirmar que el fin último de las empresas se maneja desde una perspectiva de dualidad: a) obtener ganancias y, b) efectuar acciones repercutan al progreso de las comunidades, desde la estructura de un conjunto de valores éticos que no solo se basen en el campo económico [13]. Freeman asume la necesidad de las empresas de tomar en cuenta los intereses de todos los grupos participantes en sus actividades. A partir de entonces la RSE se integra al debate internacional de la ONU o la OCDE.

La RSE ha sido objeto de numerosas interpretaciones, siendo uno de los actuales desafíos de las ciencias administrativas (Bir, Süher y Altinbsak, 2009), por lo que cabría preguntarse cuáles son sus variables principales y, posteriormente, definir los elementos que configuran sus actividades. Al respecto, se han desarrollado iniciativas legales que permiten normar las obligaciones sociales de las empresas. Así, el COM/2006/0136 (UE) la RSE es un modelo social, una forma de defensa por la solidaridad, la cohesión y la igualdad de oportunidades; reconoce que el concepto presenta carencias debido a: a) la falta de información en la evaluación de resultados; b) el conocimiento insuficiente de los consumidores; c) la ausencia de consenso sobre una definición general y, e) escasa presencia legal. Para mitigar dichas carencias deben respetarse los instrumentos internacionales, tales como las Normas de Trabajo de la Organización Internacional de Trabajo y el Promoting a European framework for corporate social responsibility green paper (2001) incluido en el Libro Verde (2001) [14].

Por lo que respecta a México, en la actualidad, la RSE es un aspecto de la gestión empresarial que ha dejado de concernir únicamente a las macroempresas para integrarse —especialmente en los países de gran desarrollo— en las organizaciones empresariales de menor tamaño. Sin embargo, aun cuando existe un amplio consenso sobre la importancia de la RSE como factor prioritario para la generación de un desarrollo sostenible en México, buena parte de las Pymes mexicanas —asociadas a una imagen de tradición, apego al pasado y resistencia a los cambios [15] [16]— aún carecen de estrategias claras para su adopción e implementación. Por ello, requieren de instrumentos que posibiliten la incorporación de la RSE a sus procesos de gestión de manera gradual y ajustada a las particularidades individuales de cada empresa, de modo que puedan comenzar la adopción de estrategias de RSE tendentes a mejorar su gestión con vistas a la implantación de procesos de desarrollo ambiental y socio-económico tendentes a generar parámetros de sostenibilidad. El proyecto que aquí se presenta pretende contribuir eficazmente a mejorar la competitividad de las Pymes mexicanas con el fin de potenciar, posteriormente, la búsqueda activa de estrategias, metodologías y procesos que permitan a dichas empresas responder de modo contundente, eficiente y eficaz

a las necesidades socio-ambientales de la sociedad y del mercado [15], lo que requiere, en primer término, la construcción de instrumentos de medición para el diagnóstico de la RSE en las micro, pequeñas y medianas empresas, acordes a las recomendaciones nacionales e internacionales sobre la materia; ello con el propósito de definir con la prolijidad debida la situación de partida para, posteriormente, abordar el diseño e implementación de un Plan de Actuación en materia de RSE en las Pymes del país.

Figura 1. La RSE en las Pymes Mexicanas

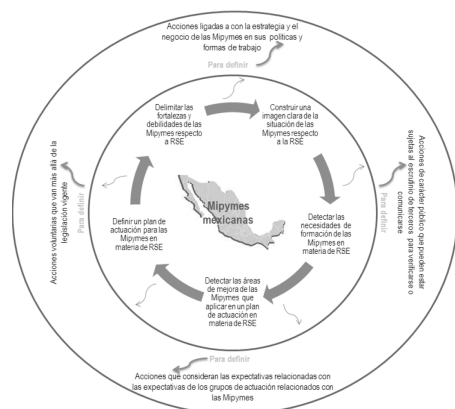

METODOLOGÍA DEL DISEÑO DEL INSTRUMENTO DE MEDICIÓN

La construcción de instrumentos de medición en el área de las Ciencias Sociales es claramente susceptible a la evolución de las demandas económicas de la sociedad, lo que unido a que, en numerosos casos se trata de constructos latentes y susceptibles de observación de manera indirecta a través de las respuestas manifiestas de un sujeto a un conjunto de ítems, obliga al investigador a elaborar instrumentos cada vez más sensibles y refinados para medir los factores objeto de estudio [19] aun cuando no sea sensible la evolución de escalas y cuestionarios de medición desde el inicio del siglo XX, ya que el criterio más obvio de diferenciación de estos instrumentos es la estructura de su construcción y el tipo de respuestas que requieren del sujeto [21]. La construcción de un instrumento de medición obliga al investigador a considerar la predictividad —proyección del rendimiento del factor objeto de estudio en un dominio particular—; la consistencia —con instrumentos alternos o con aplicaciones consecutivas—; y la estandarización —la adecuación empírica de una prueba desarrollada en un contexto distinto de aquel en que se aplica—; por último, es preciso considerar también, la correlación con otras pruebas que midan un constructo similar, así como la facilidad de administración e interpretación y la objetividad de las puntuaciones [20]. Dado que, en general, se trata de herramientas de uso masivo que cumplen con los estándares aceptados y aceptables para la literatura [21] la construcción de un nuevo instrumento de medición busca: a) actualizar los contenidos hasta ahora medidos del objeto de estudio; b) reflejar los avances teóricos del campo de conocimiento en el que se inscribe el factor a medir y, c) determinar cómo medir de forma apropiada un constructo —validez— [19].

Lo anterior, contextualizado en el marco de la sociedad de la información y el conocimiento, en el que la complejidad de la vida cotidiana imposibilita la comprensión de actitudes y comportamientos sin el auxilio de procesos o sistemas de medición ajustados a la problemática objeto de estudio. Ello implica, para el investigador: en primer lugar un alto nivel de profesionalización que le permita seleccionar/diseñar, aplicar e interpretar pruebas válidas y confiables que minimicen posibles errores de inferencia y predicción y, en segundo término, amplio dominio en el manejo de las destrezas requeridas para evaluar problemas emergentes propios de los ámbitos en que desempeña su labor [19], con el fin de optimizar su quehacer profesional. De acuerdo a lo anterior, la elaboración de un instrumento de diagnóstico de RSE (ID-RSE) puede definirse como una herramienta metodológica cuyos objetivos [v. figura 2] se sintetizan en la

obtención de un perfil empresarial de las Pymes en materia de RSE —acciones de RSE definidas— [v. figura 2] que, posteriormente, se plasmará de manera documental en el correspondiente informe de diagnóstico, que permita a la comunidad empresarial objeto del estudio evolucionar de la voluntad y el interés a la acción [15] e incorporar de modo gradual y sistemático estrategias de RSE.

Figura 2. Objetivos y acciones a definir a partir del ID-RSE para las Pymes mexicanas.

El instrumento que aquí se presenta, fue diseñado como una herramienta útil, práctica, comprensible y sencilla, cuyo tiempo de respuesta sea, a la par que breve, provechoso, interesante y beneficioso para el sujeto que lo cumplimenta. Está dirigido a cuadros medios y altos de las Pymes —directivos, gerentes, propietarios, jefes de área— interesados en iniciar o sistematizar propuestas de RSE en el marco de su empresa de forma fácil y coherente, con el fin de definir puntos de impacto en los que la RSE pueda iniciar o mejorar la sostenibilidad socioeconómica y ambiental de su organización sin afectar a la generación de riqueza de la misma [15]. Su construcción fue el resultado de un exhaustivo análisis de diferentes modelos instrumentales y recomendaciones nacionales e internacionales, aplicadas tanto dentro como fuera de México, con el fin de configurar una herramienta que aun cumpliendo los estándares internacionales responda a la realidad actual de las Pymes mexicanas [v. Tabla 1]. Cabe señalar que, de entre el gran número de instrumentos analizados, el cuestionario elaborado por la Comisión Europea, a través de la Dirección General de Empresas, que dio lugar al documento denominado Empresas Responsables, Cuestionario de Concienciación [15] constituyó el modelo de mayor trascendencia de entre los analizados. Una vez aplicado, analizado e interpretado, el instrumento deberá ofrecer respuestas a algunas preguntas planteadas en el protocolo del proyecto [v. Tabla 2].

Tabla 2. Extracto de cuestiones a las que debe responder el ID-RSE.

¿No existe RSE en las Pymes mexicanas o, por el contrario, existe pero carece de estructura y sistematización?
¿El hecho de que gran parte de las Pymes mexicanas sean empresas familiares, dirigidas por sus propietarios, influye de alguna manera en la falta de estructuración y sistematización de la RSE cuando ésta existe?
Si no existe RSE en las Pymes mexicanas, ¿qué barreras lo impiden?
¿Están dispuestas las Pymes mexicanas a situar a la RSE como un instrumento necesario de la gestión empresarial?
¿Son conscientes las Pymes mexicanas de que el modelo económico en el que están insertas requiere implementar modificaciones en la gestión empresarial para garantizar tanto la supervivencia de las propias Pymes como la sustentabilidad del planeta?
¿Consideran las Pymes mexicanas la necesidad de incluir entre las variables que afectan a su toma de decisiones los principios de la RSE?
¿Qué tipo de estrategia de actuación en RSE sería más adecuada a cada modelo de Mipyme?
¿Están dispuestas las Pymes a realizar esfuerzos posteriores en materia de RSE tras el diagnóstico inicial?
¿Qué esfuerzo están dispuestas a realizar las Pymes para implementar y/o sistematizar estrategias de actuación en materia de RSE?
¿La falta de estrategias de acción en materia de RSE es un elemento común a todas las empresas del sector?
¿Es posible llevar a cabo propuestas individuales para micros, pequeñas y medianas empresas o sería más adecuado elaborar un plan de actuación para el conjunto de las Pymes?
¿Las Pymes mexicanas están dispuestas a interactuar entre sí en materia de RSE estableciendo un frente común?

Adicionalmente, se ha tomado como base a la hora de construir el instrumento la propuesta de estructura de RSE implementada por Forética en su informe 2015 [24], elaborando ítems que respondan tanto a sus principios, sus objetivos estratégicos y sus líneas de actuación [v. Tabla 3].

Tabla 3. Propuesta de estructura del ID-RSE. Forética (2015).

PRINCIPIOS					
Competitividad	Cohesión social	Creación de valor compartido	Sostenibilidad	Transparencia	Voluntariedad
OBJETIVOS ESTRATÉGICOS					
Impulsar y promover la RSE en las Mipymes mexicanas	Impulsar y promover la RSE como atributo de competitividad, sostenibilidad y cohesión social		Difundir los valores de la RSE en el contexto de las pymes mexicanas	Crear un marco de referencia común para todo el territorio mexicano en materia de RSE	
LÍNEAS DE ACTUACIÓN					
[1] Promoción de la RSE como elemento impulso de Mipymes más sostenibles					
[2] Integración de la RSE en la formación y capacitación de los trabajadores de las Mipymes mexicanas			[3] Buen gobierno y transparencia como instrumentos de incremento de confianza de los actores involucrados en las Mipymes mexicanas		
[4] Gestión responsable de los RRHH en las Mipymes		[5] Inversión socialmente responsable de I+D+i		[6] Relación con los proveedores	
[7] Consumo responsable	[8] Respeto al medioambiente		[9] Cooperación al desarrollo	[10] Coordinación y participación	

Así mismo, a partir de los resultados obtenidos, se espera poder clasificar a las PyMES objeto de estudio de acuerdo a lo establecido en el Programa Latinoamericano de Responsabilidad Social Empresarial (Plarse), perteneciente al Instituto Ethos, cuyos indicadores se describen como una herramienta de aprendizaje y evaluación de la gestión en lo que se refiere a la incorporación de prácticas de RSE, la planificación estratégica y el monitoreo y desempeño general de la empresa. El citado programa ha elaborado una estructura de evaluación que permite delimitar la etapa actual de gestión de RSE en cuatro etapas correspondientes a determinados estadios de práctica, cada una de las cuales presupone el cumplimiento de la anterior y, en el caso de aquellas empresas que no puedan integrarse en ninguna etapa, a delimitar los motivos de dicha desincorporación [25]. Ello debido a que si bien México no forma parte de Plarse, se considera que el instrumento generado por el programa otorga a la gestión empresarial un elevado

grado de coherencia ya que, ofrece un sólido estado situacional —a dónde estamos, a dónde queremos ir— de las empresas ^[22] [Ver Tabla 4].

Tabla 4: Etapas de evaluación de estado de la gestión de RSE en las Pymes mexicanas. Plarse (2011).

ETAPAS			
Etapa básica	Etapa intermedia	Etapa avanzada	Etapa proactiva
La Mipyme se ubica en el nivel reactivo de las exigencias legales	La Mipyme mantiene una postura defensiva sobre el tema de la RSE, aunque comienza a implementar cambios y avances respecto a la conformidad de las prácticas	La Mipyme reconoce los beneficios de ir más allá de la conformidad legal, con el fin de prepararse para las presiones reguladoras que resultan en cambios de expectativas para la empresa. Considera a la RSE y al desarrollo sustentable como estratégicos para el negocio.	La Mipyme alcanza estándares de excelencia en sus prácticas de RSE, involucra a proveedores, clientes, y comunidad. Comienza a interesarse por influenciar políticas públicas benéficas para la sociedad
ETAPA 1	ETAPA 2	ETAPA 3	ETAPA 4
Nunca hemos tratado este asunto antes		No consideramos su aplicación en nuestra empresa	

El instrumento profundiza en acciones específicas llevadas a cabo por las Pymes para cada uno de los grupos de actores involucrados con ellas, intentando desarrollar el grado de implicación con el fin de evaluar aspectos tales como: a) transferencia de información entre la Mipyme y los grupos de interés; b) consideración de los grupos de interés a la hora de tomar decisiones de RSE; c) grado de transparencia de la información en materia de RSE; d) posicionamiento de la Mipyme en materia de RSE; e) acciones concretas llevadas a cabo por la Mipyme en materia medioambiental; f) acciones concretas llevadas a cabo por la Mipyme en materia social; g) efectos y beneficios de las acciones sociales que, en materia social y medioambiental lleva a cabo la Mipyme; h) prácticas concretas que la Mipyme desarrolla para fomentar la participación de sus empleados en materia de RSE; i) prácticas de respuesta de la Mipyme en materia de RSE para atender las necesidades de sus clientes y proveedores; j) acciones de política empresarial en materia de ética de honradez, calidad y consideración del impacto social y ambiental en sus actividades; k) compromiso ético de la Mipyme para valorar las buenas prácticas en materia de justicia social, entre otras.

En síntesis, la conjunción de instrumentos y metodologías permitirá analizar la implicación social, económica y medioambiental de las Pymes mexicanas y, por ende, obtener el estado actual de conocimiento, información y sensibilización que dichas empresas poseen en materia de RSE. Adicionalmente, se espera que el instrumento ayude a los cuadros gerenciales de las Pymes a reflexionar sobre la necesidad de fomentar el espíritu empresarial responsable, considerándolo como un factor de impacto que afecta beneficiosamente a la mejora continua, sensata y responsable del negocio, así como a la reputación del mismo y a su rendimiento ^[23].

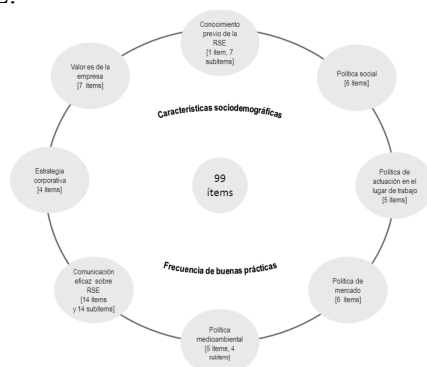

Análisis del ID-RSE

Los cuestionarios y escalas pueden definirse auto-informes estructurados presentados de modo integrado o en forma de lista —formulación secuenciada—, a manera de formulario de preguntas o aseveraciones a las que el sujeto debe responder mediante respuestas dicotómicas, ordinales —formato tipo Likert— o de diferencial semántico —adjetivos extremos— [21]. En el caso que nos ocupa, se han seleccionado las dos primeras opciones: respuestas dicotómicas —sí, no— y ordinales —siempre, casi siempre, algunas veces, casi nunca, nunca—.

El instrumento consta de 74 ítems expresados en forma de pregunta. Los ítems 1, 11, 37, 41 y 43, se subdividen a su vez en [7, 4, 5, 7 y 2 sub-ítems respectivamente], lo que da un total de 99 ítems, distribuidos

en 8 dimensiones: 1) conocimiento previo de la RSE; 2) estrategia corporativa; 3) política de actuación en el trabajo; 4) política medioambiental; 5) política de mercado; 6) política social; 7) valores de la empresa; 8) comunicación eficaz sobre RSE. Incluye, además, una sección dedicada a los aspectos sociodemográficos y otra enfocada a medir la frecuencia de buenas prácticas, a partir de la cual se evaluará el estado de la gestión en materia de RSE [v. figura 3]. Los ítems, tal como ya se ha expuesto, están conformados tanto por preguntas de respuesta dicotómica como por cuestionamientos de carácter ordinal. El instrumento, está dirigido a cuadros altos —gerentes, directores, propietarios y jefes de área— considera se diseñó considerando tanto las características estructurales de las Pymes mexicanas como la falta información sobre las mismas, dado que en virtud de la legislación vigente, su información financiera no es pública [14].

Figura 3. Dimensiones del ID-RSE.

La última sección del cuestionario, enfocada en la frecuencia de buenas prácticas, toca los tres ámbitos de actuación considerados regularmente en este tipo de estudios: a) económico, o funcionamiento financiero capaz de contribuir al desarrollo económico; b) social, entendido como las consecuencias sociales de la actividad de la empresa en todos los niveles —trabajadores, proveedores, clientes, comunidad y sociedad en general— y, c) ambiental o compatibilidad entre la actividad social de la empresa y la preservación de la biodiversidad y de los ecosistemas, incluyendo el análisis de los impactos del desarrollo [26].

Una vez construido el instrumento se procedió a validar su contenido, tanto en lo que se refiere a la representatividad de sus ítems como a la totalidad del campo o rasgo objeto de la evaluación. En otros términos, se comprobó que los ítems incluidos fueran una muestra representativa y amplia de los factores sujetos a medición, para lo cual se sometió al juicio de expertos, con el fin de elaborar un índice CAI que demostrase que cada uno de los reactivos de la prueba midiese el constructo en cuestión, lo que se traduce en una evaluación del grado de acuerdo o consistencia existente entre dos o más evaluadores acerca de la validez de contenido de los reactivos presentados [19]. Por lo que se refiere a criterios externos, es decir, al grado de correlación entre el instrumento construido y otra prueba similar que evalúa rasgos idénticos, se aplicó el coeficiente de correlación de Pearson y un análisis de regresión lineal simple. Por último, en lo que refiere a la validez del constructo, es decir, al grado de concordancia entre los resultados obtenidos al aplicar una prueba y los planteamientos o hipótesis teóricas existentes sobre el campo o rasgo evaluado [19] se efectuará a través de una prueba piloto con 20 Pymes del Estado de Michoacán, con el fin de evaluar el nivel de comprensión de los ítems, las instrucciones de la prueba y el tiempo de respuesta. Posteriormente, en función de esta muestra, se realizará un análisis preliminar de la confiabilidad del instrumento a fin de evaluar la consistencia interna del mismo y eliminar ítems con varianza cero.

La construcción del instrumento, consideró prolijamente la triple estrategia de Miguel-Tobal [23] para el diseño de este tipo de estructuras, seleccionando la estrategia racional que sustenta la elaboración de los reactivos en el contenido de la teoría en la que se basa el constructo a evaluar, lo que permitió identificar y generar las dimensiones a evaluar por el instrumento tras efectuar una prolija revisión teórica que permitió

redactar adecuadamente los reactivos correspondientes a cada dimensión. Por último, se obtendrá un índice de confiabilidad y validez mediante la aplicación Alfa de Cronbach.

RESULTADOS, CONCLUSIONES Y RECOMENDACIONES

En el momento de enviar esta ponencia no existen aún resultados preliminares del estudio, mismos que estarán disponibles durante el Congreso. La aplicación de un estudio de diagnóstico de RSE implica, para muchas de las Pymes el primer acercamiento a un concepto desconocido que, en primer lugar debe ser asimilado por la estructura global de la organización para, posteriormente, a través de un aprendizaje progresivo y dinámico, comenzar a integrarse en su quehacer cotidiano. Se trata, ciertamente, de un desafío complejo que, a corto y medio plazo, involucrará cambios sustanciales en la totalidad de los ámbitos de la organización además de un elevado nivel de compromiso tanto de la gerencia como de los trabajadores de la misma [17], [18], esto es, requiere de la implicación de la empresa en su conjunto. Para otro grupo de Pymes, sin embargo, la aplicación de prácticas de RSE es un proceso natural —a veces inconsciente— dada su estrecha interacción con el entorno en que se desarrollan —cercanía a clientes y/o colectivos comunitarios—, es decir, aplican tradicionalmente prácticas de RSE como parte de su quehacer cotidiano sin definir las ni nombrarlas como tales [15].

Ello en un contexto de globalidad que exige una mirada más integral de la empresa pero también, desde la consideración de las Pymes como parte de la cadena productiva de las grandes empresas que, a su vez, demandarán a sus pequeñas organizaciones proveedoras prácticas y políticas de RSE. Desde esta perspectiva, la inclusión de dichas prácticas y políticas en el desarrollo de las Pymes deberá convertirse, a medio plazo, en una forma de gestionar el mercado en toda su cadena productiva y, en consecuencia, en un elemento vertebral para incrementar la competitividad y rentabilidad de las empresas al generar beneficios financieros, socio-económicos y ambientales. En otros términos, la incorporación de la RSE a las Pymes optimiza su desempeño financiero, reduce sus costos operativos, mejora su imagen y reputación y, por ende, genera confianza en el interior de la empresa a través de la estructuración de una cultura organizacional sólida y estable en el tiempo que impactará positivamente tanto en la eficiencia y productividad de la organización como en la calidad de vida de sus integrantes [17], [18]. Ello desde la consideración de la empresa como una célula social compuesta por individuos y, por ello, sus fines económicos deben estar alineados con su función social [18].

Lo que, en un país con las condiciones socioeconómicas de México, demanda la actuación activa y propositiva de los empresarios, vinculándose a causas sociales a fin de contribuir, desde su especificidad, a la solución de los graves problemas nacionales y mundiales, asumiéndose no sólo como generadores de riqueza sino como constructores de sentidos y realidades [18], al satisfacer, a través de una actitud ética, las expectativas socioeconómicas, éticas y ambientales del colectivo de actores involucrados en la gestión empresarial —empleados, directivos, inversionistas, proveedores, clientes, gobierno, organizaciones sociales y comunidad—.

IMAGEN CORPORATIVA RETO DE LAS PYMES DEL VALLE DE SAN QUINTIN, B.C. PARA PARTICIPAR Y COMPETIR EN EL COMERCIO ELECTRÓNICO

Lorena Álvarez Flores, Universidad Autónoma De Baja California

Lizzette Velasco Aulcy, Universidad Autónoma De Baja California

Karina Gámez Gámez, Universidad Autónoma De Baja California

Alma Lourdes Camacho García, Universidad Autónoma De Baja California

RESUMEN

La imagen corporativa es la esencia de la entidad comprende los diversos elementos con los cuales el cliente identifica a la empresa, debe tener relación y coherencia con la misión, visión, filosofía y las políticas del propio ente, normalmente se representa por un icono, marca, canción, eslogan, un emblema, color específico, pictograma, etc. El intercambio de bienes y servicios a través de la web se ha incrementado en los últimos años, el primer paso para incursionar al E-commerce es definir claramente lo que se quiere proyectar, se prevé que para el 2016 las operaciones en línea tenga un incremento del 50%. El presente estudio se lleva a cabo con el objetivo de investigar si las Pymes del Valle de San Quintín cuentan con una imagen corporativa que les va a ayudar a incursionar al comercio electrónico. Ofertar bienes o servicios en línea les permite participar y tener presencia en mercados globales, los resultados obtenidos muestran que el 67% de las Pymes de la región invirtieron tiempo en trabajar y tener una imagen corporativa, sin embargo solo el 8% participa en el comercio electrónico.

PALABRAS CLAVES: Comercio electrónico, imagen corporativa

CORPORATE CHALLENGE OF SMEs VALLEY SAN QUINTIN, BC TO PARTICIPATE AND COMPETE IN ELECTRONIC COMMERCE

ABSTRACT

The corporate image is the essence of the entity comprising the various elements with which the client identifies the company, must be related and consistent with the mission, vision, philosophy and policies of the agency itself, typically represented by an icon, mark, song, slogan, emblem, specific color, pictogram, etc. The exchange of goods and services through the web has increased in recent years, the first step to penetrate the E-commerce is to clearly define what you want to project, it is expected that by 2016 online transactions has increased 50% The present study was performed in order to investigate whether SMEs Valley San Quintin have a corporate image that will help them make inroads to electronic commerce. To offer goods or services online allows them to participate and presence in markets overall, the results show that 67% of SMEs in the region spent time working and have a corporate image, but only 8% participate in electronic commerce.

INTRODUCCIÓN

El comercio ha existido y evolucionado conjuntamente con el hombre, el creciente uso de las tecnologías de información y comunicación (TIC's) ha transformado el canal de ventas. La Organización para la

Cooperación y el Desarrollo Económico (OCDE) precisa que el comercio electrónico comprende el proceso de compra, venta o intercambios de bienes, servicios e información mediante redes de comunicación (PROFECO, 2015). Para la Asociación Mexicana de Internet (AMIPCI) se practica el comercio electrónico cuando se celebra cualquier transacción económica que implique la contratación de productos y o servicios a través de un medio electrónico de comunicación a distancia. (AMIPCI, 2005). Estudios realizados por esta organización señalan que para octubre 2013 había 45.1 millones de usuarios de internet de los cuales el 37% realizó al menos una compra a través de la web, en esta investigación también se resalta que 6 de cada 10 internautas tienen intención de adquirir un producto o servicio en una tienda digital. (Ferrer, 2015) El comercio en línea durante el ejercicio 2013 generó cerca de 121.6 millones de pesos según estimaciones realizadas por la consultora eMarketer, se proyecta que para 2016 dicho monto se duplicara, previéndose que el 50% del incremento se dará a través de las redes sociales.

Las Pymes representan la columna vertebral de la economía del país debido a que generan el 52% del Producto Interno Bruto, si tienen la intención mantener su competitividad, de expandirse y sobrevivir a la globalización deben embarcarse al comercio electrónico, esto implica ofertar sus productos o servicios en el cibermercado. (Universal, 2014) El objetivo del presente estudio es investigar si las Pymes del Valle de San Quintín cuentan con una imagen corporativa que les va a ayudar a incursionar al comercio electrónico.

REVISIÓN DE LITERATURA

Pueden recurrir al comercio digital todas las entidades sin que sea un limitante la actividad a la que se dediquen, a través de la red pueden establecer el canal de venta, accediendo a un nuevo mercado, también les permite proporcionar y promover acceso interactivo a catálogos de productos y servicios, listas de precios, publicidad, soporte técnico y contacto ininterrumpido con los clientes. Entre las ventajas indiscutibles del cibermercado están la comodidad y la rapidez con la que el cliente puede satisfacer sus necesidades. La confianza de los ciberconsumidores cada día se incrementa tanto por las experiencias favorables en sus transacciones, así como por la protección de los ordenamientos jurídicos, ya que el comercio electrónico está regulado por el Código de Comercio y vigilado por la Procuraduría Federal del Consumidor con apego a las recomendaciones hechas por parte de la OCDE.

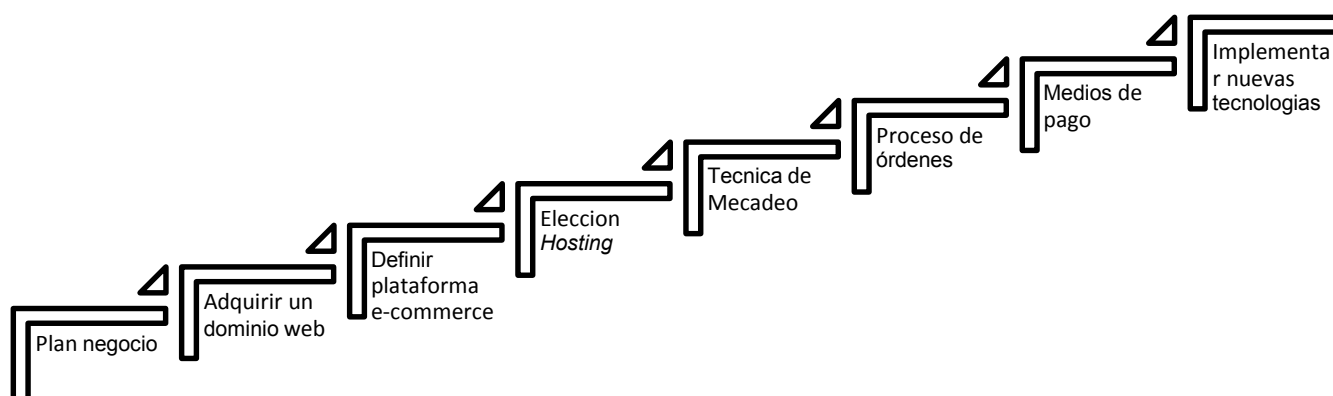

Los proveedores tienen prohibido proporcionar información falsa, engañosa, fraudulenta o abusiva que puedan generar riesgo o algún daño a los consumidores, deberán dar a conocer las políticas de ventas, en la publicidad utilizada deberán identificar plenamente las características y propiedades del bien o servicio, permitiendo elegir al consumidor si desea o no recibir avisos comerciales a través de correo electrónico, resguardando y protegiendo los datos personales del usuario. En dicha publicidad a implementar deberá considerar las restricciones para público menor de edad, enfermos graves, de la tercera edad y cualquier otro que no pueda entender la información presentada, cuidando que se proporcione la información clara, correcta y oportuna para decidir informada mente si el producto o servicio ofertado es lo deseado.

El consumidor siempre tendrá que ser informado de los costos totales, los impuestos aplicables, los plazos de entrega o cumplimiento del servicio, términos, condiciones y métodos de pago, así como las restricciones, limitaciones o cláusulas de compra, además de las instrucciones de uso incluyendo las de seguridad, cuidado de la salud, detalles o políticas de cancelación, cambio o reembolso, garantías disponibles y la moneda aplicable a la transacción. (PROFECO, 2012) Las Pymes para posicionarse en el mercado electrónico deben desarrollar, implementar, proteger, fortalecer y preservar la imagen corporativa de la entidad, se requiere para transmitir quien es y que hace. La identidad corporativa es el conjunto de símbolos, comunicación y comportamiento de una entidad, acorde con la misión, visión y valores que conforman su cultura y filosofía. (Ramírez, 2005) La imagen corporativa es indispensable para la continuidad y el éxito estratégico, si es sólida propicia el aumento en las ventas, el posicionamiento en la mente de los consumidores, atrae inversión directa, genera confianza entre los usuarios internos y externos, proporciona un valor agregado, representado por el crédito mercantil.

Para formar una efectiva imagen corporativa se debe analizar la situación interna de la empresa, su entorno así como la de los consumidores, definiendo los rasgos de identificación y diferenciación, aplicar las políticas corporativas en las situaciones cotidianas generando evidencias palpables y reconocibles del apego a los valores y principios difundidos, por ultimo pero no menos importante promover y divulgar la diferencia corporativa de manera constante y coherente. (Capriotti, 2009) Para divulgar y dar a conocer la imagen corporativa una de las estrategias más recurridas en la actualidad, es la publicidad a través de las redes sociales, también favorece la comunicación con los clientes los clientes actuales y con los prospectos, ayuda a recabar datos de preferencias y necesidades del mercado y favorece el servicio y calidad de la venta. El primer contacto de una Pyme con el comercio electrónico es a través de una página web, la cual tendrá la función de una sucursal virtual en la cual se promoverán los productos o servicios, se darán a conocer las garantías, las descuentos o promociones, medios de pago y tiempos de entrega. El IMIPCI considera al sitio web como la puerta al comercio electrónico (IMIPCI, 2012).

Para que una Pyme ofrezca sus productos o servicios en línea deberá seguir los pasos ilustrados en la imagen 1; lo primero que tendrá que tener claro la empresa es el plan de negocio es decir deberá determinar que productos o servicios que estará ofreciendo, la forma en que la empresa se proyectara, es decir deberá definir la imagen corporativa que mostrara a los clientes y los internautas, en esta fase inicial se definiera el logo de la empresa, el eslogan, la misión y visión, también se precisará la estructura organizacional, las políticas de operación, el mercadeo, la plataforma tecnológica, los medios de pago, la distribución y entrega de los productos. Una vez definido como operara la empresa deberá contratarse el sitio web, y el *hosting*, esta fase comprende el diseño de la página y seleccionar al proveedor del servicio de alojamiento, considerando la seguridad, el soporte en línea, la base de datos compatible con la plataforma y el espacio de almacenamiento. (Visa, 2014) Las fases a etapas de mercadeo, el proceso de órdenes y los medios de pagos deben estar definidas desde el plan de negocio, y deben estarse evaluando y adaptando continuamente desde que inicia la operación de la página web, siempre abiertas a la implementación de las nuevas tendencias de tecnologías, como pudiese ser el desarrollo de nuevas aplicaciones para teléfonos móviles, tabletas.

Imagen 1: Modelo Simplificado Para la Incursión En el Comercio Electrónica

Fuente: Elaboración propia

METODOLOGÍA

El presente estudio de tipo descriptivo realizado para medir si las micro y pequeñas empresas están preparadas para el comercio electrónico, se llevó a cabo aplicando una encuesta en forma aleatoria a una

muestra representativa de 60 pequeñas y medianas empresas del Valle de San Quintín, B.C., se les cuestiona si tienen registrada su marca o logotipo distintivo, ante el Instituto Mexicano de la Propiedad Intelectual. También se interroga si a la fecha participan en el comercio electrónico o si están interesados en integrarse al comercio digital como proveedor, además de si han participado en alguna ocasión como ciber-consumidor, indagando en si conocen las ventajas vender en línea. (Sampieri, 2010)

RESULTADOS

El presente estudio se realizó encuestando aleatoriamente a 60 Pymes del Valle de San Quintín Baja California, de las Pymes seleccionadas como muestra aleatoria el 18% de ellas poseen entre 1 y 2 años de estar en funciones, el 9% tienen operando en promedio de 3 a 4 años, el 27% lleva operando de forma ininterrumpida entre 5 y 6 años, el restante 46% ha logrado mantenerse activa entre 7 y 8 años. Como lo muestra la gráfica 1 el 67% de las Pymes operando cuentan con una imagen corporativa, el 33% no tienen una imagen o marca distintiva. Considerando únicamente el 67% de las empresas que cuentan con una marca o imagen, se observa que el 25% de ellas empresas son vulnerables ya que no cuentan con el registro de la propiedad de la marca o imagen que utilizan, en tanto el 75% ha tomado la debida acción de registrar su marca y/o imagen para gozar del derecho exclusivo de uso. De las Pymes tan solo el 8% participa activamente en el mercado electrónico, existe un 92% de la población de Pymes que tienen el reto a corto plazo de incorporarse al mercado electrónico, como proveedor de servicios y/o bienes.

La baja participación en el mercado electrónico se debe a que las Pymes desconocen las ventajas de incorporarse al comercio electrónico, el 70% afirmó desconocer los beneficios que representan para la entidad incorporarse al mercado en línea. El 54% de las Pymes participan en el mercado electrónico pero como cliente señalando que las razones principales para recurrir a la compra en línea fue la rapidez y comodidad, en tanto el 46% no ha tenido contacto con la adquisición o venta de bienes y servicios a través del portal electrónico, respecto a la compra la causal para no adquirir bienes utilizando la web es que no cuentan con la certeza de la calidad de los bienes y la seguridad de los datos que proporcionarían como medio de pago.

Gráfica 1: Participación En el Comercio Electrónico

Fuente: Elaboración Propia

El 64% de las Pymes utilizan como medio de comunicación entre la empresa y sus clientes simultáneamente el correo electrónico y el teléfono, el restante 36% conservan la comunicación personal de manera tradicional, realizando visita personalizadas a sus clientes o quedando en espera de la asistencia del cliente a sus instalaciones. Con los resultados obtenidos se puede observar que las Pymes del Valle de San Quintín no han contemplado incorporarse al comercio electrónico, la visión de los dirigentes no ha considerado hasta el momento participar en el mercado a nivel internacional, su objetivo es ofertar y cubrir la demanda en el mercado local y lograr permanencia a largo plazo en el mismo.

CONCLUSIÓN

Contar con una imagen corporativa sólida permite a una empresa vivir en la memoria del cliente y ser identificada y diferenciada en cualquier momento. Si la imagen que está proyectando la entidad es coherente con la calidad y buen servicio se ganará la fidelidad y confianza de los clientes, favoreciendo e incrementando la demanda de los productos que ofrece. Participar en el comercio electrónico brinda a la empresa la oportunidad de estar en contacto y a disposición continua del cliente, la sumerge en el mercado global. Lograr desarrollar una imagen corporativa de prestigio es un reto para todas las empresas, dentro de la entidad puede cambiar la estructura o el personal del departamento administrativo, puede ofrecerse nuevos productos, pueden cambiar los socios, los empleados, los proveedores e incluso los clientes, pero si se mantiene la imagen corporativa la empresa seguirá teniendo capacidad competitiva.

Es muy importante evaluar el significado de los símbolos, colores e imágenes que se utilizaran como insignia de la Pyme y cuidar sigilosamente el prestigio, porque es sumamente difícil restaurar una imagen dañada. Se recomienda a las empresas participar en el comercio electrónico, deben actualizarse y estar al nivel de la globalización, para minimizar los riesgos las Pymes pueden iniciar creando una página web en la que se hagan presentes en el comercio electrónico únicamente dando a conocer el tipo de empresa que son, que productos y servicios ofrecen, así como cuáles son sus valores. Simultáneo a la página web debe crearse presencia en las redes sociales. Al tener presencia en el mercado electrónico los mismos clientes cibernautas van a demandar o solicitar que se inicie el servicio de venta en línea.

DISEÑO DE UN MODELO DE GESTIÓN ESTRATÉGICA DE TECNOLOGÍAS DE LA INFORMACIÓN PARA LA FUNDACIÓN UNIVERSITARIA TECNOLÓGICO DE COMFENALCO – CARTAGENA

Ivan Javier Monterrosa Castro, Fundación Universitaria Tecnológico Comfenalco

RESUMEN

La Fundación Universitaria Tecnológico Comfenalco – Cartagena, es una Institución de Educación Superior que concibe la educación como un proceso permanente que posibilita el desarrollo de las potencialidades del ser humano de manera integral en los campos de la ciencia, la técnica, la tecnología, las humanidades, el arte y la filosofía. Para mantenerse competitiva una organización como la Fundación Universitaria Tecnológico Comfenalco – Cartagena, necesita una buena gestión de datos, que minimice las duplicidades en su tratamiento y que asegure la calidad de los mismos, de manera que pueda servir como fuente para la toma de decisiones estratégicas y tácticas. Con el presente trabajo de investigación, se pretende diseñar un modelo de gestión estratégica de las tecnologías de la información en la Fundación Universitaria Tecnológico Comfenalco (FITCO), en Cartagena, Colombia. Por lo tanto, en el presente documento se identifican estrategias para la aplicación de las metodologías de gestión de proyectos TIC en el FITCO y se recomienda la mejor resolución.

PALABRAS CLAVES: Validación, Mejoras, Metodología, Gestión de Proyectos

PROJECT MANAGEMENT DESIGN FOR A UNIVERSITY IN COLOMBIA

ABSTRACT

The Fundación Universitaria Tecnológico Comfenalco – Cartagena, is an institution of higher education that sees education as a constant process that enables the development of human potential in an integral way in the areas of science, technology, humanities, art and philosophy. To stay competitive, an organization like the Fundación Universitaria Tecnológico Comfenalco - Cartagena, needs a proper process of data management, to minimize duplication in their treatment and to ensure their quality, so that can serve as a source for strategic and tactical decision making. With the present research is to design a model of strategic management of information technology at the Fundación Universitaria Tecnológico Comfenalco (FITCO) in Cartagena, Colombia. Therefore, this paper identifies strategies to implement ICT project management methodologies in the FITCO as well as it recommend the best way of resolution.

INTRODUCCIÓN

En la última década los sistemas de medios de comunicación masivos y de educación han sufrido cambios debido al desarrollo y la difusión de nuevas tecnologías de información y las comunicaciones (TIC) lideradas por la Internet. Los desarrolladores de Sistemas de Información y de Proyectos TIC se enfrentan a retos cada vez mayores, debiendo superar la “crisis del software” y los graves problemas de

mantenimiento. Tanto el entorno empresarial como el tecnológico están experimentando grandes cambios a los que la tecnología de Bases de Datos, y la Ingeniería de Software orientada a la Web deben responder de forma adecuada, esto es, mejorando la productividad y la calidad de los Sistemas de Información. Según Peter Keen de la Harvard Business School (en su obra *Shaping the Future*), una empresa capaz de cumplir sus objetivos en la sociedad actual debe ser “abierta” en el más amplio sentido de la palabra, para lo que debe tener una serie de características generales como son: Flexibilidad organizativa, adaptación al cambio, cobertura, extensiones interempresa, cooperaciones y alianzas estratégicas, procesos integrados y una gestión de alta calidad. Actualmente las empresas compiten por satisfacer las necesidades de los clientes con la mayor calidad y agilidad, ofreciendo servicios y productos diferenciados y competitivos en calidad – precio. Para ello, resulta fundamental el alineamiento de las arquitecturas de los Sistemas de Información con las estrategias corporativas y los factores críticos de éxito, por lo que los Sistemas de Información deben constituir una herramienta eficaz para tener organizaciones flexibles, contribuyendo a la re-ingeniería de procesos en los negocios.

Con el presente trabajo de investigación se pretende diseñar un modelo de gestión estratégica de las tecnologías de la información en la Fundación Universitaria Tecnológico de Comfenalco (FITCO), en Cartagena, Colombia. Por lo tanto, en el presente documento se identifican estrategias para la aplicación de las metodologías de gestión de proyectos TIC en el FITCO y se recomienda la mejor forma de resolución. Para mantenerse competitiva una organización como la fundación Universitaria Tecnológico de Comfenalco – Cartagena, necesita una buena gestión de datos, que minimice las duplicidades en su tratamiento y que asegure la calidad de los mismos, de manera que pueda servir como fuente para la toma de decisiones estratégicas y tácticas. La enorme avalancha de recursos informativos que dan vida a Internet sentaron las bases sobre las que muchas investigaciones coincidieron al pronosticar cambios radicales en las instituciones (Hasta se ha llegado a predecir la desaparición de las aulas y los maestros tradicionales). Ahora, con cierta visión hacia el futuro, se puede afirmar que falta un largo trecho por recorrer para lograr una conexión conveniente entre el sistema educativo y las tecnologías de información y comunicación.

Planteamiento del Problema

Los sistemas educativos de todo el mundo se enfrentan actualmente al desafío de utilizar las nuevas tecnologías de la información y la comunicación (TIC) para proveer a sus alumnos con las herramientas y conocimientos necesarios para el siglo XXI. En 1998, el Informe Mundial sobre la Educación de la UNESCO, *Los docentes y la enseñanza en un mundo en mutación*, describió el profundo impacto de las TIC en los métodos convencionales de enseñanza y aprendizaje, augurando también la transformación del proceso de enseñanza-aprendizaje y la forma en que docentes y alumnos acceden al conocimiento y la información. Allí se señala: “Las nuevas posibilidades que hoy surgen ejercen un poderoso influjo en la satisfacción de las necesidades básicas de aprendizaje, y es evidente que ese potencial educativo apenas ha sido aprovechado. Estas nuevas posibilidades aparecen como resultado de dos fuerzas convergentes, ambas subproductos recientes del proceso de desarrollo general. En primer lugar, la cantidad de información utilizable en el mundo –a menudo importante para la supervivencia y el bienestar básico– es inmensamente mayor que la que existía hace sólo pocos años y su ritmo de crecimiento continúa acelerándose. Por otro lado, cuando una información importante va asociada a otro gran adelanto moderno –la nueva capacidad de comunicarse que tienen las personas en el mundo de hoy– se produce un efecto de sinergia. Existe la posibilidad de dominar esta fuerza y utilizarla positiva y metódicamente para contribuir a la satisfacción de necesidades de aprendizaje bien definidas”. Para lograr lo expuesto anteriormente es necesario llevar a cabo una integración de las TIC y la administración dentro de las organizaciones. La Fundación Universitaria Tecnológico Comfenalco – por ser una institución de Educación Superior, presenta esta necesidad. Por lo cual es de vital importancia el diseño de un modelo que le permita gestionar estratégicamente las tecnologías de la información para que pueda ser una institución competitiva en el mundo de hoy, que día tras día, demanda mayor uso de las TIC en todos los procesos que se desarrollan desde todas las instancias posibles. Poner en práctica el plan de integración de tecnología y administrar

los cambios que ello trae consigo, son tareas de suma complejidad, tal vez el mayor desafío que debe enfrentar cualquier dirección. Por cuanto se requiere diseñar e implementar un proceso de planificación tecnológica que proporcionen las estrategias y recursos necesarios para desarrollar los distintos componentes que forman parte de los planes de integración de las TIC a todos los procesos que se desarrollan en la institución.

Objetivos (General y Específicos)

Objetivo General: Diseñar un modelo de gestión estratégica de tecnologías de la información para la Fundación Universitaria Tecnológico de Comfenalco – Cartagena.

Objetivos Específicos: (1) Realizar un estado del arte de la gestión estratégica de TI en la Fundación Universitaria Tecnológica Comfenalco - Cartagena. (2) Describir las necesidades y problemática a la que se enfrenta la Fundación Universitaria Tecnológico Comfenalco – Cartagena en la gestión estratégica de TI. (3) Implementar estrategias para cubrir las debilidades y mantener las fortalezas, combatir las amenazas y aprovechar las oportunidades. (4) Diseñar un modelo de gestión estratégica de TIC para la Fundación Universitaria Tecnológico de Comfenalco – Cartagena.

REVISIÓN DE BIBLIOGRAFÍA

En la actualidad, la administración de las TIC en las organizaciones pasa por un adecuado Gobierno y Gestión de las mismas, si bien, en la mayoría de las organizaciones se está abordando exclusivamente la Gestión con marcos como ITIL. Las instituciones de educación superior, como es el caso de la Fundación Universitaria Tecnológico Comfenalco – Cartagena (FITCO) no es una excepción, por lo que a través de este trabajo se busca realizar un estudio de la forma en que actualmente se están gestionando los proyectos TIC en la FITCO y a la luz de los diferentes modelos existentes en la actualidad, tales como: PMBOK, CMM, CMMI y Modelos de Referencia de Mejores Prácticas de Gestión. Para posteriormente proceder al diseño del Modelo de Gestión para la institución.

Metodología PMBOK: El Project Management Body of Knowledge (Libro de estándares para la Gestión de Proyectos) (PMBOK) (®) es un estándar reconocido internacionalmente (IEEE, ANSI) este trabaja con el uso del conocimiento, de las habilidades, de las herramientas, y de las técnicas para resolver requisitos del proyecto. La guía del PMBOK define un ciclo vital del proyecto, 5 grupos de proceso y 9 áreas de conocimiento de la tarea de administración de proyectos.

Modelos de Madurez de Gestión de Proyectos: Desde el área de proyectos, se ha planteado que las prácticas de gestión han de usarse según las competencias que requiera un proyectista conforme madura de su experiencia en gestión de proyectos. En este sentido se han presentado varios niveles de madurez en la forma de modelos de madurez que toman como punto de partida el Capability Maturity Model del Software Engineer Institute en Estados Unidos (SEI, CMM-SEI, 2000, Paulk et al, 1985).

CMMI: El modelo de buenas prácticas de Capacidad y Madurez Integrado (CMMI) es el sucesor de CMM. Fue desarrollado desde 1987 hasta 1997, con el objetivo de realizar algunas mejoras respecto al SW-CMM e integrarlo con el SE-CMM y el IPD-CMM, que pasaban a ser considerados como "obsoletos". Fue creado por miembros de la industria, el gobierno y el Instituto de Ingeniería de Software (Software Engineering Institute - SEI). Se lanzó la primera versión al mercado en 2002.

Marcos de Referencia de Mejores Prácticas de Gestión: En años recientes, se ha reconocido cada vez más, que la información es el recurso estratégico más importante que cualquier organización debe administrar. El elemento clave para la recolección, análisis, producción y distribución de información dentro de una organización, es la calidad de los sistemas de tecnología, comunicación, información y los servicios de TI

(Tecnología de la Información) que se proveen a la organización. Es esencial reconocer que los sistemas de tecnología, comunicación e información son activos organizacionales, cruciales y estratégicos, razón por la que las organizaciones deben invertir los recursos apropiados para el soporte, entrega y administración de estos servicios críticos de TI y de los sistemas de TI que los sostienen. Sin embargo, estos aspectos de TI casi siempre se pasan por alto o solamente son atendidos de manera superficial en la mayoría de las organizaciones.

METODOLOGÍA

El desarrollo del presente trabajo, seguirá la siguiente estructura:

Se realiza un análisis exhaustivo de la bibliografía, y marco teórico relacionado con los diferentes modelos de gestión de proyectos de tecnologías de la información, marcos de referencia de mejores prácticas de gestión y metodologías de desarrollo de software. Se desarrolla el marco referencial, haciendo un estado del arte de la gestión de las tecnologías de la información en la Fundación Universitaria Tecnológico Comfenalco - Cartagena. Se centra en realizar el análisis estratégico de la Fundación Universitaria Tecnológico Comfenalco - Cartagena, al igual que se desarrolla un análisis de las metodologías ITIL y COBIT. Se describe el modelo que se pretende crear e implementar en la Fundación Universitaria Tecnológico Comfenalco - Cartagena, junto con sus diferentes etapas. Se presentan las conclusiones obtenidas del desarrollo de este trabajo y se presentan algunas recomendaciones.

RESULTADOS

A continuación se describe el análisis estratégico de la Fundación Universitaria Tecnológico Comfenalco (FITCO):

Tabla 1: Análisis DOFA de FITCO

Debilidades	Oportunidades
Poco acceso a herramientas de tecnología de información y comunicación.	Amplias oportunidades de desarrollo de la investigación científica – tecnológica.
Falta de sistemas de información interconectados y en línea.	Desarrollo de nuevas tecnologías.
	Tendencia mundial a la creación de bibliotecas digitales
	Existencia y aplicación de las NTIC al proceso
	Enseñanza-Aprendizaje.
Fortalezas	Amenazas
Los procesos y la TI se pueden adaptar	Crecimiento de universidades privadas de prestigio, que emplean las NTIC, brindan buen servicio y compiten agresivamente.
Equipamiento de Tecnología de Información.	
Inclusión de estrategias tecnológicas en el Plan de Desarrollo.	Producción acelerada de conocimientos científicos y tecnológicos,
Infraestructura, laboratorios, equipos, estructura informática propia.	

Análisis De ITIL

A continuación se describe el análisis DOFA de ITIL

Debilidades	Oportunidades
<p>Tiempo y esfuerzo necesario para su implementación.</p> <p>La mejora del servicio y la reducción de costos puede no ser visible.</p> <p>Desconocimiento de la metodología.</p> <p>Poca implicación por parte de la dirección.</p> <p>Resultados medio/largo plazo</p>	<p>Certificación ISO 20000/27001.</p> <p>Alinear la TI con el negocio.</p>
Fortalezas	Amenazas
<p>La organización TI desarrolla una estructura más clara, se vuelve más eficaz, y se centra más en los objetivos de la organización.</p> <p>La administración tiene un mayor control, se estandarizan e identifican los procedimientos, y los cambios resultan más fáciles de manejar.</p> <p>La estructura de procesos en IT proporciona un marco para concretar de manera más adecuada los servicios de outsourcing.</p> <p>A través de las mejores prácticas de ITIL se apoya al cambio en la cultura de TI y su orientación hacia el servicio, y se facilita la introducción de un sistema de administración de calidad.</p> <p>ITIL proporciona un marco de referencia uniforme para la comunicación interna y con proveedores.</p>	<p>Que no se dé el cambio en la cultura de las áreas involucradas.</p> <p>Que no se vea reflejada una mejora, por falta de entendimiento sobre procesos, indicadores y como pueden ser controlados.</p> <p>Que el personal no se involucre y se comprometa.</p> <p>Que la inversión en herramientas de soporte sea escasa. Los procesos podrán parecer inútiles y no se alcancen las mejoras en los servicios.</p>

Análisis De COBIT A continuación se describe el análisis DOFA de COBIT

Tabla 2: Análisis DOFA de COBIT

Debilidades	Oportunidades
<p>Es un marco de trabajo extenso diseñado para grandes organizaciones.</p> <p>La implementación es compleja.</p> <p>La implementación es muy costosa y solo se justifica para organizaciones medianas y grandes.</p> <p>Esta más enfocado en el área de auditoria de TI.</p>	<p>La implementación de COBIT se traduce en beneficios para la comunidad donde se implementa porque facilita la comprensión y control de las acciones de la organización.</p> <p>Los servicios básicos que deben ser proporcionados por organización a la comunidad son mejorados cuando se administra eficientemente un portafolio de sistemas de información, minimizando el desarrollo desbalanceado y aislado y la duplicidad de esfuerzos.</p> <p>COBIT permite un mejor control de las inversiones de TI y su uso adecuado, individualizando los riesgos y controles asociados que son implementados.</p> <p>COBIT permite el uso de otros marcos de trabajo más específicos (p.ej. CMMI, ITIL, etc.) sin perder la compatibilidad gracias a su carácter generalista.</p>
Fortalezas	Amenazas
<p>COBIT es un marco reconocido internacionalmente, que permite la estandarización de criterio relacionado con controles sobre TI.</p> <p>El marco de referencia de COBIT fundamenta la opinión de los auditores de sistemas de información, en la revisión de los procesos de TI. Proporciona a la alta gerencia:</p> <p>Un aseguramiento razonable de que los objetivos de control correspondientes están siendo alcanzados.</p> <p>Identificación de dónde se localizan las debilidades en dichos controles.</p> <p>Justificación de los riesgos que pueden ser asociados con tales debilidades.</p> <p>Una guía ejecutiva sobre las medidas correctivas que deben ser adoptadas.</p> <p>COBIT es un marco de preparación de planes y programas de auditoría específicos.</p>	<p>El desconocimiento de la metodología.</p> <p>Existe poco involucramiento de las secciones imprescindibles como la Gerencia y Auditoria.</p> <p>El personal de la sección de TI no está capacitado en esta metodología</p> <p>Dificultad a la hora de poner en práctica esos conocimientos</p>

Modelo de Gestión Estratégica de Tecnologías de la Información para la Fundación Universitaria Tecnológico de Comfenalco – Cartagena

Teniendo como referencia el modelo PMBOK, ITIL y las mejores prácticas en la gestión de proyectos de TI, se propone a continuación un modelo de gestión estratégica de TI en la Fundación Universitaria Tecnológica Comfenalco. El cual está compuesto por un número de 5 fases, como se detalla a continuación.

Fase 1 – Diagnóstico de la situación Actual: El diagnóstico, puede ser considerado como un proceso de consulta y análisis mediante el cual, el Departamento de Sistemas de la Fundación Universitaria Tecnológica de Comfenalco, identifica y analiza factores internos desde una perspectiva eminentemente tecnológica y otra perspectiva de gestión y factores del entorno relativos al ámbito de la educación superior que ofrece la institución, que afectan positiva o negativamente al desarrollo de la institución, para luego decidir en qué concentrarse.

Fase 2 – Gestión de Recursos TIC: En esta segunda fase del modelo se busca tener una perspectiva de los recursos TIC con qué cuenta la institución, definir procesos de control y manejo de estos recursos.

Fase 3 – Gestión de la Comunicación: Gestionar la comunicación es una fase sumamente importante dentro de esta metodología, puesto que implica definir un conjunto de acciones y procedimientos mediante los cuales se despliegan una variedad de recursos de comunicación para apoyar la labor de la institución.

Fase 4 –Control de Cambios: Lo único constante en las organizaciones es el cambio. Partiendo de esta realidad, es necesario establecer parámetros que permitan orientar e integrar los cambios en los procesos y proyectos de TI. La Fase de Control de Cambios en este modelo, se entenderá entonces, como todas aquellas actividades encaminadas a implementar acciones que estructuren y brinden acompañamiento a las transformaciones organizacionales producidas por el desarrollo de iniciativas o proyectos con el fin de minimizar el impacto en los involucrados y asegurar los resultados.

Fase 5 – Gestión de Auto-evaluación y Mejoramiento Continuo: Partiendo de la base que las Tecnologías de Información son un campo relativamente nuevo que se encuentra en permanente evolución y cambio, se puede decir que la gestión estratégica de éstas es un proceso que no termina dentro de la institución. Este hecho plantea un desafío a los encargados de realizar esta gestión: saber si se está haciendo el mejor uso posible de los recursos de la institución al tiempo que se cumple con los objetivos de la organización.

Para poder decir si esta gestión se está realizando de la mejor manera posible, es necesario involucrar el concepto de calidad en los procesos que se realizan. Siendo la calidad un atributo de algo, que muchas veces se expresa de manera cualitativa, lo cual puede dejarse a la subjetividad, es necesario definir un conjunto de métricas que permitan medirla para obtener de esta manera un concepto de calidad que sea cuantitativo y objetivo, a la vez.

CONCLUSIONES Y RECOMENDACIONES

La implantación de modelos ITIL es una herramienta clave para la optimización de gestión de tecnología. Se debe impulsar el Departamento de Sistemas de la institución para que juegue un papel más importante dentro de ésta, por lo tanto debe ser más proactivo en lugar de reactivo. Es muy importante para que esta institución pueda posicionarse competitivamente en el mercado y no quede rezagada en su entorno, lograr ser más eficiente en la gestión de TI a un costo más bajo. Para lograr estas metas la gerencia debe participar activamente del proceso de cambio, no sólo acompañando el cambio sino promoviéndolo.

De acuerdo con el análisis estratégico desarrollado del marco de referencia ITIL se puede ver que este marco de trabajo de las mejores prácticas de TI es sumamente extenso, puesto que fue diseñado para grandes organizaciones y para gobiernos, por lo que se propone la implementación parcial siendo el módulo de “Provisión de Servicios” el que más se ajusta a las necesidades de la Fundación Universitaria Tecnológico Comfenalco.

CREACIÓN DEL PADRÓN DE ENTIDADES COOPERATIVAS DEL ESTADO DE QUINTANA ROO, MÉXICO

Miguel Ángel Olivares Urbina, Universidad del Caribe
Rosiluz Ceballos Povedano, Universidad del Caribe
Abelardo Castillo Galeana, Universidad del Caribe

RESUMEN

La organización de la economía actual está representada por el modelo de empresa moderna que permite grandes volúmenes de producción y ganancias para los dueños, pero deteriora las condiciones laborales para quienes sólo aportan su trabajo. Para contender este modelo, surgen otras formas de organización que intentan alternar y competir dentro del mismo sistema de mercado, a través de la asociación libre de trabajadores. La forma más reconocida en México y en Quintana Roo son las cooperativas, objeto de estudio de esta investigación. A pesar de estar respaldadas por un movimiento internacional, se ha dejado de incentivar su formación a nivel nacional y estatal, reflejándose en aspectos como falta de información y registro de actividades. Así que, el propósito es presentar la creación de una base de datos de unidades cooperativas a partir del análisis de información básica del Directorio Estadístico Nacional de Unidades Económicas y la Secretaría de Economía, apoyados en investigación documental y entrevistas a actores clave. Esta creación sirve para fomentar, facilitar y posibilitar a futuro el estudio de estas entidades que pudiesen tener impacto en el desarrollo estatal. La aportación principal es un padrón de entidades cuya constitución legal y funcional las define como cooperativas.

PALABRAS CLAVE: cooperativas, economía social, desarrollo local, padrón estadístico

CATALOG OF COOPERATIVES UNITS ITS FORMATION IN QUINTANA ROO, MEXICO

ABSTRACT

The organization of the current economy is represented by the model of modern enterprise that allows large volumes of production and profits for the owners, but deteriorating working conditions for people who only contribute their work. To contend this model, there are other forms of organization are trying to alternate and compete within the same market system, through free workers Association. The most recognized practice in Mexico and Quintana Roo, are The Cooperatives, research object in this study. Despite being backed by an international movement, he left encourage their training at national and State levels, reflected in aspects such as lack of information and activity log. So, the purpose is to present the creation of a database of cooperative units from the analysis of basic Information on National Statistical Directory of economic units and the Ministry of the Economy, supported by documentary research and interviews with key players. This creation served to encourage, facilitate and enable future study of these entities that could have impact on the development of the State. The main contribution is a register of entities that's functional and legal Constitution defines them as cooperatives.

INTRODUCCIÓN

En este documento se trata de establecer pautas de continuidad del movimiento cooperativista a través de la creación y difusión del padrón de cooperativas que ubique las unidades formales para en un futuro dar seguimiento a sus acciones de congregación y a su forma organizacional. Las cooperativas se clasifican dentro del sector social de la economía y se definen por sustentos teóricos, basados en principios doctrinarios que se diseminan a través de movimientos sociales, por esta razón tener un padrón de unidades cooperativas es de relevancia, siendo la manera de verificar si el movimiento continúa con la tarea de adoctrinamiento y agrupación.

En la revisión literaria se desarrolla y conceptualiza el movimiento cooperativista resaltando sus características de manera general y en Quintana Roo, se explica la relación con un padrón que las agrupe y las consecuencias de no tenerlo. En metodología se describe la sistematización de la creación del padrón a partir de una base general de datos del Instituto Nacional de Estadística Geografía e Informática (INEGI). El trabajo involucró manejo de bases de datos, así como investigación de campo en la que se realizaron entrevistas a actores clave. Como resultado se tienen 105 cooperativas registradas de manera formal en el estado, divididas en tres actividades principales. Las de comercio y servicios son las que agrupan más unidades y las más organizadas de manera formal son las de crédito.

REVISIÓN LITERARIA

Las bases del movimiento cooperativista fueron escritas por los socialistas utópicos, de ahí emanan los principios doctrinarios que son usados como guía por las cooperativas. A través de la participación democrática es como se alcanza el objeto social de la cooperativa y satisfaciendo la necesidad de trabajo y manejo de su propia empresa que es lo que buscan los socios y lo que justifica su existencia, (Prieto, 2001). Se rigen por una serie de principios que las hacen diferentes de las otras sociedades, la asignación obligatoria de parte de este resultado a la educación, formación y promoción de sus socios y trabajadores, que es lo que hace consolidar el modelo, (Pozuelo, Carmona y Martínez, 2012). Actualmente, la Ley General de Sociedades Cooperativas en su artículo tres establece quienes pueden considerarse como una sociedad cooperativa en México y estos son: “organismos cooperativos, a las uniones, federaciones y confederaciones que integren las sociedades cooperativas, y” al “Sistema Cooperativo, a la estructura económica y social que integran las sociedades cooperativas y sus organismos.” (Ley General De Sociedades Cooperativas, 2009)

El movimiento llega a Quintana Roo y se ubica en etapa de formación, desarrollo y decadencia de 1934 a 1974, cuando todavía era Territorio Federal. Por lo que estuvo sujeto a ciclos o etapas de nacimiento, crecimiento, consolidación y desaparición. Desde 1934, las cooperativas, se convirtieron en la base sustancial de la economía de la región, (Reyes, 2009). Aunque el fomento a la creación de las cooperativas terminara a mediados de los años setenta, las ya fundadas siguieron operando. Algunas conservaron esta estructura emanada del movimiento porque la ley general de pesca las favorecía para la extracción de especies de alto valor y porque ante la entrada de grandes capitales permite a los trabajadores organizarse para llevar a cabo el proceso productivo, eliminando la figura del capitalista.

METODOLOGÍA

Con el propósito de presentar la creación de una base de datos de unidades cooperativas se diseñó una estrategia metodológica que contempla, el análisis de información básica del Directorio Estadístico Nacional de Unidades Económicas (DENUE), de información de la Secretaría de Economía, investigación documental y de campo, así como entrevistas a actores clave. También se incluye un análisis estadístico del padrón creado para conocer la situación del movimiento cooperativista en Quintana Roo. Se describe el

proceso seguido para el análisis de la base de datos DENUE, ésta contempla información de todas las empresas establecidas de manera formal y que operan de manera comercial y productiva en todo el país. La sistematización de búsqueda de la base de datos sigue los siguientes pasos:

Figura 1: Proceso DENUE, Análisis de la Base de Datos

En esta Figura se describe el proceso que se sigue para filtrar las cooperativas registradas que son incluidas en el padrón de cooperativas del estado. Se compone de cinco pasos como se muestra, el primero es entrar a la página el segundo seleccionar la actividad económica, el tercero consiste en seleccionar todas las actividades junto con el cuarto que elige la ubicación, para este caso el estado de Quintana Roo y por último el tipo de empresa, desde el menú para que se despliegue el listado existente. Con estos pasos se lleva a cabo el análisis DENUE. Fuente: elaboración propia desde página INEGI, 2015

Al entrar a la página, según Figura 1, en el primer despliegue, puede observarse el listado de todas las empresas que están registradas en el Sistema de Atención Tributaria (SAT) como cooperativas, en ese momento ya se puede tener acceso a la información de cada una consultándola de forma individual (todas menos las cooperativas escolares, por considerar que su giro es muy específico y no atiende al objetivo del movimiento). De los resultados que aparecen, se selecciona cada una de ellas y se revisan completando la base en un archivo diferente. Para llevar a cabo el análisis estadístico de la base de datos DENUE, se seleccionaron tres variables que son sustanciales para dar continuidad al movimiento: actividad económica, número de personas (agremiados) y municipio. Las medidas a obtener son descriptivas centrales: Moda, se eligió valor unimodal. Después se calcularon las frecuencias relativas:

$$n_i = \frac{f_i}{N} \quad (1)$$

Variables:

n_i = porcentaje respecto al total

N = el total de observaciones para cada una de las variables y

f_i = las veces que se repite una característica de cada variable

La selección de actores se realizó cumpliendo con las características del movimiento cooperativista que contempla organizaciones que agrupan cooperativas, políticas públicas puestas en marcha y encargados de creación y asiento de información, o bien que la ley general de cooperativas menciona como tal. A continuación se describe la forma en la que se llevó a cabo el análisis estadístico de la base de datos, que se encontró con información de la DENUE.

RESULTADOS

Las variables analizadas fueron: actividad económica y número de personas. De cada una se obtuvo la frecuencia y se representó en forma de barras o pastel. En la Figura 2, se muestran cuatro categorías, tres corresponden a las actividades que agrupan más cooperativas y una más que muestra el número de unidades no especificadas N/E, es la razón por la que sólo es el inicio de la base de datos y que será completada de manera permanente. Las de comercio y servicio agrupan más unidades con una frecuencia de 28. Esto no significa que no existan otras pero no están dadas de alta de manera formal.

Figura 2: Actividad Económica

La Figura 2. Se compone de tres actividades y un rubro sin información al que se le da seguimiento para enriquecer la base de datos. Se observa que la actividad económica con mayor frecuencia es la de comercio y servicios con 28 de 105 unidades. Se muestran las cuatro categorías, tres corresponden a las actividades que agrupan más cooperativas y una más que muestra el número de unidades no especificadas N/E, es la razón por la que sólo es el inicio de la base de datos y que será completada de manera permanente. Las de caja de ahorro popular son sólo 9 y las agropecuarias son 8, que según registros de entrevistas suman más pero no están en el sistema DENE.

La segunda variable seleccionada es el tamaño del establecimiento, que se representa en la Figura 3. En esta Figura se presentan cinco estratos conformados para agrupar al número de personas, la frecuencia mayor se encuentra en las que tienen 25 agremiados o menos, con el 65%. El uno por ciento de las observaciones de la base de datos aparece sin información. Los otros estratos están conformados cada 25 personas y tienen un porcentaje menor al 10%.

En esta Figura se presentan cinco estratos conformados para agrupar al número de personas, la frecuencia mayor se encuentra en las que tienen 25 agremiados o menos, con el 65%. El uno por ciento de las observaciones de la base de datos aparece sin información. Los otros estratos están conformados cada 25 personas y tienen un porcentaje menor al 10%. El estado de Quintana Roo, no presenta grandes cooperativas casi todas son menores 25 socios. El valor mayor que se presenta es de una cooperativa de casi 800 socios y es de transporte aunque sólo se visualiza en la base de datos.

CONCLUSIONES

Se concluye sobre la actividad económica predominante que aunque el movimiento cooperativista inicia y fomenta las actividades productivas, el auge en el turismo ha hecho proliferar unidades dedicadas al comercio y los servicios que para operar necesitan estar formalizadas y registradas, razón por la que están en la base original. Para reforzar esta estadística en futuras investigaciones se contempla la visita a gremios por sector productivo. Durante esta investigación sólo se revisó la base de datos de la Secretaría de Agricultura, Ganadería y Pesca pero no especifica el tipo de unidad comercial, dando pauta para continuar con visitas y aplicar entrevistas. Se observa en el número de personas por cooperativas que son en mayoría pequeñas organizaciones con menos de 25 socios o agremiados. Sólo el 8 % es mayor a 100 personas. Se ubican en la parte sur del estado, esto por corresponder al tipo de actividad que ahí se realiza ya que en el norte donde se concentra la actividad turística, son más las empresas con gran capital internacional que operan y aun no hay cabida para el incremento de cooperativas. El movimiento como tal no existe en el estado, la doctrina y la agrupación se ha abandonado, así que este primer intento por reagrupar idas,

organizaciones e información se suma al avance de otras instituciones como la UNAM y otras instituciones nacionales e internacionales.

PROPUESTA DE MODELO DE NEGOCIO BASE PARA LAS EMPRESAS DE BIOTECNOLOGÍA EN MÉXICO

Sergio Castro Aranda, Universidad Autónoma de Baja California
Virginia Guadalupe López Torres, Universidad Autónoma de Baja California
Graciela Guerra Rivas, Universidad Autónoma de Baja California

RESUMEN

La industria de la biotecnología en México es emergente. Mientras que países como Singapur y Corea del Sur comienzan a desarrollar sus industrias de manera acelerada, México sigue sin contar con programas específicos para el desarrollo de la biotecnología. Desde hace dos décadas, el país ha intentado aprovechar todo lo que la industria de la biotecnología le puede ofrecer; sin embargo, los resultados no han sido del todo impactantes, por lo que México requiere realizar cambios en cuanto a los mecanismos de desarrollo de esta industria. Uno de los pilares clave para el cambio que se requiere son los modelos de negocio utilizados, por lo que el objetivo de este trabajo fue generar un modelo de negocio base para las empresas de biotecnología en México. Para elaborar esta propuesta se realizó investigación utilizando un enfoque mixto, así como, las variables de la metodología canvas para analizar las empresas que fueron seleccionadas. Los resultados mostraron que las empresas de biotecnología exitosas presentan ciertos patrones en sus modelos de negocio; a su vez, estos patrones permitieron comprender la manera en que las empresas interactúan con su entorno y realizar una propuesta de modelo de negocio con mayores probabilidades de desarrollo futuro.

PROPOSAL OF BASE BUSINESS MODEL FOR BIOTECHNOLOGY COMPANIES IN MEXICO

ABSTRACT

The industry of biotechnology in Mexico is emergent. While countries like Singapore and South Korea have established their industries rapidly, Mexico still does not have specific programs for the biotechnology development. For over two decades, this country has tried to exploit everything that the biotechnology industry has to offer. However, the results have not been very impressive. Therefore, Mexico requires changes in terms of the development mechanism of the biotechnology industry. One of the key pillars of changes required in Mexico is the business model used by the industry. Based on the above, the target of this work was to develop a base business model for the biotechnology companies. To make this proposal, a mixed method was applied to lead the research and the variables of canvas methodology, were uses to analyze the companies that were selected. The results showed that successful biotech companies have certain patterns in their business models. Also, they allowed us to understand how companies interact with their environment and carry out a proposal of business model most likely to have a future development.

INTRODUCCIÓN

Durante la última década las aplicaciones de la biotecnología en áreas como la salud humana, el medio ambiente, la agricultura, la química, la alimentación y la farmacéutica han impulsado cambios drásticos en las industrias. En este contexto, no es sorprendente cómo la industria rápidamente ha ganado prioridad en muchas agendas políticas, económicas e industriales de cada vez más y más países. Sin embargo, la industria de la biotecnología tiene por cumplir amplias expectativas generadas desde sus inicios en 1976, y por alcanzar muchas regiones y países en desarrollo (European-Commission, 2011).

Por otro lado, en México la industria de la biotecnología es emergente y en la actualidad tan sólo existen alrededor de 406 empresas que utilizan biotecnología moderna y menos del 20% desarrollan sus actividades principales mediante biotecnología. En cambio en Estados Unidos existen alrededor de 7,970 empresas que utilizan biotecnología moderna y alrededor de 2,954 empresas que desarrollan sus actividades principales mediante biotecnología (al menos el 75% de todas sus actividades) (Centro de Investigación en Biotecnología Aplicada del Instituto Politécnico Nacional, 2010; OECD, 2013).

Las últimas dos administraciones gubernamentales de México han expresado su intención de plasmar estrategias para generar empleos mejor remunerados. Tanto el plan nacional de desarrollo 2007 - 2012, como el de 2013 - 2018 proponen el diseño de agendas para la competitividad de sectores económicos de alto valor agregado y contenido tecnológico, como la biotecnología, dado que este sector es clave por su fuerte incidencia sobre diversas actividades productivas y porque su aplicaciones serían determinantes para el desarrollo competitivo del país (Gobierno de los Estados Unidos Mexicanos, 2007, 2013). La realidad de México es que es el país que tiene la menor ganancia promedio anual, es el país que trabaja más en promedio en horas y es el país donde la hora de trabajo es la peor pagada en comparación con todos los países pertenecientes a la *Organisation for Economic Co-operation and Development* (OECD) (Asociación Nacional de Empresarios Independientes, 2014).

Hoy en día, el mercado mundial de la biotecnología tiene un valor de más de \$281.7 mil millones de dólares (valor en 2011) y se estima que en el 2016 el mercado mundial de la biotecnología tendrá un valor de \$453.3 mil millones de dólares, un aumento del 60.9% desde 2011 (Research and Markets, 2012). En México el mercado de la biotecnología tiene un crecimiento muy dinámico. La demanda del sector salud, que representa alrededor del 90% de la demanda total, es actualmente de más de \$1,000 millones de dólares. Sin embargo, el mercado actual de la biotecnología en México es cubierto en su mayoría por productos y servicios de importación (Centro de Investigación en Biotecnología Aplicada del Instituto Politécnico Nacional, 2010). -En lo que respecta a las vinculaciones estratégicas de las empresas de biotecnología, las instituciones de educación y las instituciones de gobierno en México son incipientes; los argumentos de las empresas de biotecnología indican que existe una incapacidad por parte de las instituciones de educación superior y de las instituciones de gobierno para trabajar a la par considerando beneficios mutuos. En consecuencia, la industria tiene poco interés en trabajar con las instituciones de educación superior, ya que no cuentan con la habilidad de dar respuestas a los problemas de las empresas de biotecnología dado que no existe un sistema que recompense a los investigadores por trabajar en el desarrollo tecnológico del país. Asimismo, las empresas de la industria tienen claro que los investigadores no basan sus proyectos en las problemáticas reales del país y en la industria que en México se desarrolla (Castro, Soria, & Plascencia, 2013).

Por su parte, en las instituciones de gobierno existe una falta de gestión y una incertidumbre jurídica, debido a la falta de legislación sobre la materia, así como a la falta de solidez en las legislaciones actuales que frenan el desarrollo económico y que en otros países como Estados Unidos y Canadá han sido las bases para el desarrollo de la industria de la biotecnología (Castro et al., 2013). La legislación en México relacionada directamente con biotecnología es relativamente nueva, se a establecido de manera tardía, presenta resultados dispares con respecto a su aplicación y sometida a las presiones del contexto

internacional (Álvarez, 2009). México requiere realizar cambios drásticos en la forma en que se desarrolla la industria de la biotecnología en el país, si es que quiere sumarse a los países que están basando sus economías en la industria y que están empezando a tener empleos de alto valor agregado, mejor calidad de vida, amplias tendencias para formar sociedades sostenibles y claro está, ha solucionar una infinidad de retos y problemas que enfrenta la humanidad mediante lo que la biotecnología moderna les puede ofrecer (2010; OECD, 2014). Por lo anterior, uno de los pilares clave para el cambio drástico que se requiere en México son los modelos de negocio utilizados en estas industrias.

Con base en lo anterior, y con la finalidad de promover el desarrollo y establecer las bases de la industria, el objetivo de este trabajo fue generar un modelo de negocio base como una propuesta para las empresas de biotecnología, dadas las condiciones de México. Para ello el documento se estructura en cinco apartados incluido este destinado a introducir al lector en el tema. Posteriormente, se analiza la teoría base del estudio sobre los modelos de negocio y como focalizarlos hacia la biotecnología. El tercer apartado describe la metodología utilizada, el cuarto apartado ilustra los resultados y principales hallazgos obtenidos, para terminar se presentan las conclusiones, mismas que se infieren del modelo propuesto.

REVISIÓN DE LA LITERATURA

Una empresa de biotecnología es aquella que utiliza organismos vivos o parte de ellos de manera directa o indirecta, en sus formas naturales o modificadas, de manera innovadora para la producción de bienes y servicios o para la mejora de los procesos existentes (OECD, 2005). Las empresas de biotecnología se caracterizan por una etapa inicial con fuertes requerimientos de capital, un período de generación de ingresos que crece rápidamente hasta la saturación y un decrecimiento debido a la aparición de nuevos productos y la expiración de protección de la propiedad industrial, donde los costos finales del producto no vienen dados por los costos de fabricación, sino por la inversión en investigación y desarrollo necesaria para su obtención (BioSerentia Biotech Accelerator, 2011, p. 24). Por lo tanto, contar con un modelo de negocio adecuado es vital para la sobrevivencia y el desarrollo futuro de cualquier empresa en la industria. En la actualidad, existe una infinidad de definiciones similares desde diferentes perspectivas de lo que es un modelo de negocio y como es que éste se conforma (Greiner & Ang, 2010; Zott, Amit, & Massa, 2011). Cabe aclarar que si bien hay muchas definiciones diferentes de modelo de negocio, hay un emergente consenso en que el concepto ofrece una descripción integral de cómo las empresas crean, proporcionan y captan valor a través de la interacción con su entorno (Berglund & Sandström, 2013; Greiner & Ang, 2010; Osterwalder & Pigneur, 2010; Zott et al., 2011).

Los modelos de negocio son multidisciplinarios, por lo que no existe definición operacional generalmente aceptada de lo que es un modelo de negocio (Berglund & Sandström, 2013; Zott et al., 2011). Lo que sí existe, es una serie de cuestiones en las que tanto los investigadores como los empresarios concuerdan respecto a los modelos de negocio: un modelo de negocio describe cómo una empresa o unidad de negocio crea, entrega y capta valor (Afuah, 2014; Berglund & Sandström, 2013). Es común definir un modelo de negocio en términos de su conjunto de componentes y sus interrelaciones; por ejemplo: propuesta de valor, segmento de mercado, socios clave, modelo de ingresos, etc. (Berglund & Sandström, 2013; Johnson et al., 2008). -El estudio realizado por Zott, Amit y Massa (2011), quienes hicieron una amplia revisión sobre modelos de negocios, reveló que estos se han empleado principalmente tratando de abordar o explicar tres fenómenos: a) los negocios por vía electrónica (e - business) y el uso de tecnologías de la información en las empresas; b) cuestiones estratégicas, como creación de valor, ventaja competitiva y desempeño de la empresa; y c) innovación y gestión tecnológica.

Es importante tomar en cuenta que cada modelo de negocio es único para una empresa que se desarrolla, por lo que el éxito en la aplicación de un modelo de negocio en alguna empresa, no asegura el éxito de otra empresa si el modelo es replicado. Pero si permite entender la manera en que la empresa interactúa con su entorno para crear y capturar valor, basados en ese entendimiento se puede generar un modelo de negocio

propio con mayores probabilidades de éxito teniendo como base el modelo de alguna empresa de interés (Afuah, 2014). Un ejemplo de la generación de modelos de negocio que permite tener una perspectiva donde se contempla el entorno es el modelo de negocio *canvas* de Alexander Osterwalder e Yves Pigneur (Berglund & Sandström, 2013). Es por eso y por el éxito que ha tenido la generación de modelos de negocio *canvas*, que las variables utilizadas para esta investigación fueron las descritas en el libro *Business Model Generation* de Osterwalder y Pigneur (2010).

Cada modelo de negocio se diseña y aplica a un entorno específico, por lo que un conocimiento amplio del entorno en el que se desarrollará o desarrolla la empresa permite generar un modelo de negocio más fuerte y competitivo (Osterwalder & Pigneur, 2010). Con base en lo anterior, además de las nueve variables del *canvas* para esta investigación se consideraron la variable entorno y la variable desarrollo futuro (éxito). La variable entorno se puede definir como las condiciones externas tanto del ecosistema de la industria como del macro entorno general donde una empresa interactúa bajo condiciones de interdependencia y libertad limitada (Berglund & Sandström, 2013). Asimismo, dado que una empresa se crea con la finalidad de cumplir con ciertos objetivos, la variable éxito empresarial se puede definir como el cumplimiento continuo de los objetivos o las metas establecidas por los emprendedores, en otras palabras el desarrollo futuro de la empresa (Ayala & Manzano, 2014). Respecto a la industria de la biotecnología, la innovación de los modelos de negocio se ha vuelto clave. Una razón muy importante es que la biotecnología tiene requerimientos de capitales muy elevados para la investigación, el desarrollo y la generación de productos. Otra causa de importancia es que la industria presenta altos riesgos de inversión, altos riesgos tecnológicos y una fuerte competencia global entre las empresas por lo que éstas han tenido que considerar otras alternativas para obtener ganancias (PwC, 2011).

METODOLOGÍA

La estrategia para llevar a cabo la investigación se dividió en dos fases. La primera fase se enfocó en probar las herramientas de la metodología *canvas* para analizar los modelos de negocio y el entorno de las empresas de biotecnología verde (ampliamente aplicada en la agricultura) en diversos estados de México. La segunda fase consistió en un nuevo instrumento utilizando las nueve variables de la metodología *canvas* (las variables cubren las cuatro áreas principales de un negocio) como marco de referencia para analizar los modelos de negocio de las empresas de biotecnología más importantes del estado de Baja California. La investigación se realizó en dos contextos: en el de la primera fase fueron los estados de Veracruz, Chiapas, Quintana Roo, Morelos, Jalisco en México y Quito en Ecuador; y el contexto de la segunda fue el estado de Baja California. El diseño de la investigación fue no experimental transversal de tipo exploratorio - descriptivo, dado que el estudio se desarrolló sin la manipulación deliberada de las variables y se observaron los modelos de negocio en su contexto natural en un sólo momento determinado; posteriormente los resultados fueron analizados. La selección de la muestra se llevó a cabo de manera dirigida (no probabilística): muestra de expertos y muestra confirmativa.

Los criterios de selección de la segunda fase se realizaron mediante un muestreo estratificado guiado por propósitos, donde las empresas se fueron segmentando hasta obtener una muestra que cumpliera con los criterios establecidos, con base en las 142 empresas mencionadas en el estudio de Castro et al, (2013). Se establecieron siete criterios de selección. La tasa de respuesta de la muestra seleccionada fue del 57.1%. Asimismo, se incluyó una empresa de reciente creación. Los datos se recolectaron mediante una entrevista estructurada con preguntas abiertas y preguntas cerradas con escala Likert. Las preguntas se enfocaron en responder a las nueve variables de *canvas*, la variable entorno, y la variable éxito. Los datos cuantitativos fueron examinados e interpretados mediante estadística descriptiva. Además, se le asignaron valores a cada ítem y se recodificaron utilizando el programa SPSS Statistics para aquellos ítems donde fuera necesario, es decir, aquellos que no utilizaran una escala de Likert. Posteriormente, se establecieron baremos para cada una de las once variables utilizadas. Los datos cualitativos fueron codificados, se les asignaron números a los códigos y se registró su incidencia, Asimismo, se les aplicó un análisis de contenido.

RESULTADOS

Las empresas seleccionadas como muestra son líderes en el estado de Baja California y son reconocidas a nivel nacional, por lo que diversas empresas del estado siguen sus desarrollos. Las empresas tienen un impacto directo en los sectores de acuicultura en un 60% y agricultura en un 40%, es importante aclarar que algunos de los productos de las empresas impactan secundariamente en ambos sectores u otros como el farmacéutico y alimentos pero en productos muy específicos. Los principales clientes de éstas pertenecen al mercado nacional en un 40% e internacional en un 60%. La antigüedad promedio de las empresas de 8.6 años, tienen 13.8 empleados en promedio y el volumen de ventas anuales de \$8,060,000 pesos en promedio por lo que se clasifican como pequeñas empresas (Secretaría de economía, 2009). Asimismo, el 80% de las empresas cuentan con marcas en sus productos (ver tabla 1).

Tabla 1: Información General de las Empresas

Empresas	Impacto		Clientes		Antigüedad	Empleados	Ventas	Marca En
	Acuicultura	Agricultura	Nacionales	Internacionales	media	media	anuales media	sus productos
	60%	40%	40%	60%	8.6 años	13.8	\$8,060,000	80%

Esta tabla ilustra las características generales de la muestra seleccionada: impactos de sus productos en los sectores de acuicultura y agricultura, mercados que atienden nacionales e internacionales, antigüedad promedio, número de empleados promedio, volumen de ventas anuales promedio y porcentaje de las empresas que tienen marcas en sus productos. Fuente: Elaboración propia.

Respecto a las probabilidades de desarrollo futuro (éxito) de las empresas el 20% tiene una probabilidad regular, el 40% una buena probabilidad y el otro 40% restante tiene una muy buena probabilidad (figura 1).

Figura 1: Probabilidades de Desarrollo Futuro (Éxito) de las Empresas

La figura ilustra las probabilidades de desarrollo futuro de las empresas de biotecnología entrevistadas, el 20% tiene una probabilidad regular, el 40% una buena probabilidad y el otro 40% una muy buena probabilidad de desarrollo futuro. Fuente: Elaboración propia con base en los baremos establecidos.

Los resultados de la percepción del entorno por las empresas entrevistadas y evidencia lo mencionado anteriormente, como se puede observar el 40% considera que las entorno condiciones del entorno son malas, el otro 40% considera que las condiciones son regulares y sólo el 20% considera que las condiciones del entorno son muy buenas.

El modelo de negocio: Con el fin de crear e innovar los modelos de negocio utilizados por las empresas de la industria de la biotecnología en México, a continuación se presenta una propuesta de modelo base para empresas de biotecnología bajo un contexto nacional empleando los hallazgos encontrados durante el trabajo de campo con relación a las nueve variables de la metodología *canvas*. Del trabajo de campo, sólo se obtuvo respuesta de empresas de biotecnología que impactan directamente en los sectores de acuicultura y agricultura.

Segmentos de mercado: Las empresas de biotecnología del estado atienden diversos segmentos de mercado, el 40% de las empresas atienden más de un segmento (mercado diversificado). Pero en particular en un 60% atienden nichos de mercado y en un 40% segmentos de mercado específico, dado que lo anterior les permite desarrollar soluciones basados en un amplio conocimiento de las necesidades de sus clientes. Los clientes más importantes son distribuidores y empresas de diversos sectores (nacionales e internacionales). Por lo que, es importante atender clientes de nichos de mercado o segmentos de mercado específicos con la finalidad de diferenciar los productos de una empresa de biotecnología.

Propuesta de valor: Las propuesta de valor de las empresas se caracteriza por ser productos innovadores creados a partir de la riqueza en recursos naturales del estado de Baja California utilizando la biotecnología, combinada con un amplio conocimiento de la empresa en las cuestiones de la utilidad de la materia prima y del desarrollo de su productos. Asimismo, una buena capacidad de respuesta en cuestiones de demanda de producto para los clientes y la atención personalizada que les brindan para satisfacer los requisitos de cada cliente del nicho o segmento atendido.

El 80% de las empresas ha desarrollado productos innovadores que han sustituido a otros productos en el mercado y esa empresa que equivale al 20% es una de las empresas que cuenta con una de las tecnologías más complejas para la producción de una especie de consumo común. Igualmente, el 80% de las empresas pueden generar nuevas propuestas de valor para los segmentos de mercado atendidos. El 100% de las empresas le ha ayudado a mejorar procesos a sus clientes y el 80% le ha generado productos específicos a sus clientes. Además, el 60% de las propuestas de valor de las empresas han ayudado a reducir costos a sus clientes. Con base en lo anterior, es claro que no es necesario buscar atender un segmento mercado con una propuesta que utilice una tecnología de punta; lo adecuado es aprovechar los recursos que el entorno buscando satisfacer las demandas de un segmento de mercado determinado, los procesos pueden ser relativamente simples lo importante es conocer el recurso, la utilidad que puede tener y a partir de este generar un producto de valor agregado para un segmento específico.

Canales

La manera de dar a conocer y hacer llegar la propuesta de valor a los clientes es muy importante. Las empresas utilizan diversos canales para comercializar sus productos pero en un 80% lo hacen a través de intermediarios y ventas directas realizadas por el gerente o propietario de la empresa. El 60% de las empresas ofrecen un servicio postventa. La manera de dar a conocer los productos se realiza mediante una combinación de un 60% acercándose directamente con diversos clientes potenciales y ofreciendo los productos, de un 60% mediante su página web y en un 80% mediante la participación en ferias y eventos nacionales e internacionales. Por lo que, la participación en eventos es importante para empezar a establecer un primer contacto con clientes potenciales. De igual manera, es significativo contar con el capital social en relación de intermediarios que puedan posicionar el producto en diversos segmentos de mercado, más haya de las capacidades de la empresa.

Relaciones con los clientes: Las relaciones con los clientes se basan en un conjunto de actividades con el fin de brindarles la experiencia adecuada al adquirir la propuesta de valor. En un 80% de las empresas brinda una asesoría personalizada, 60% proporcionan servicios posventa, 40% garantizan su producto, brinda crédito y asigna personal de tiempo completo al cliente, y un 40% realiza retroalimentaciones con

la finalidad de saber que sus necesidades son atendidas correctamente. Por lo que, es importante que una empresa de biotecnología brinde una asesoría personalizada a su cliente, busque tener una estrecha relación con los mismos, así como una retroalimentación de la satisfacción del cliente con la propuesta de valor proporcionada, con la finalidad de crear confianza en los clientes respecto a la empresa y el equipo que forma parte de ésta.

Fuentes de ingresos: Los clientes de las empresas pagan en un 100% el producto en si mismo. Además pagan en un 20% por una paquete de acompañamiento, 20% por un producto personalizado y un 20% por parte de propiedad de la empresa. Sin embargo, el 100% depende de una solo fuente de ingresos relacionada con su propuesta de valor. Por lo que, es importante no depender de una sola fuente de ingresos e igual de importante buscar que los clientes paguen por el producto y servicios o subproductos relacionados.

Recursos clave: Los recursos clave más importantes para las empresas de biotecnología en Baja California son en un 100% la propiedad industrial de la empresa y el equipo de trabajo con el que cuentan para crear y ofrecer la propuesta de valor. En un 40% de importancia los bienes materiales como equipo, infraestructura y tecnologías, y en un 80% los recursos financieros como la liquidez y las líneas de crédito. Asimismo, de acuerdo con los hallazgos de campo las principales razones por las que es difícil constituir una empresa exitosa que se dedique al mismo giro que las empresas entrevistadas fueron: en un 80% de las empresas por los fuertes requerimientos de capital, así como en un 80% las dificultades legales y del entorno, el alto riesgo y un 60% la incertidumbre. Esto sin importar si la tecnología fuera compleja o relativamente sencilla.

Actividades clave: Las actividades clave varían dependiendo la empresa y el sector en el que impactan, las empresas coincidieron en dos actividades clave para que su modelo de negocio funcione la primera es la producción en un 100% y la segunda la capacidad de resolver problemas de sus clientes en un 80%. Por lo que como base esas son las dos actividades clave que toda empresa de biotecnología debe tomar en cuenta. Asimismo, se considera el uso de las tecnologías de la información como una actividad clave que se tiene que construir alrededor de la propuesta de valor, los entrevistados consideraron medianamente importante en un 60% e importante en un 40%.

Asociaciones clave: Las empresas tienen alianzas estratégicas con diferentes organismos, un 100% con clientes y ciertos actores de las instituciones de educación superior, un 60% con proveedores y solo un 20% de las empresas tienen alianzas con otros organismos (asociaciones de productores). Es importante recalcar que las empresas mencionan que las alianzas estratégicas que se tienen con las dos únicas instituciones de educación superior con las que cuenta el estado en relación a la biotecnología no han sido del todo satisfactorias y en lugar de tener una alianza sólida con los organismos como tal, han tenido que establecer alianzas con ciertos investigadores, dejando fuera a las instituciones.

Estructura de costos: Dentro de la estructura de costos de las empresas en grado de importancia se encuentran: en primer lugar los recursos humanos y los costos variables, en segundo lugar los costos fijos, en tercer lugar la capacitación y el equipo, en cuarto la infraestructura y en quinto la protección de la propiedad intelectual. La volatilidad es poca para 60% de las empresas y medianamente en un 40% para el resto. La predictibilidad de los costos de las empresas es de un 100%. Sin embargo, el 80% de las empresas no puede elevar sus precios con facilidad en el mercado.

CONCLUSIONES

Es claro que la industria de la biotecnología en Baja California es incipiente, una muestra de ello son las pocas empresas que se les puede considerar de biotecnología aplicando los criterios de selección establecidos. Así como la falta instituciones de educación superior que en verdad se relacionen con la

industria para el desarrollo de proyectos productivos. Además de que sólo se cuenta con dos instituciones en áreas de ciencias de la vida en el estado. Por lo que, en la actualidad el entorno se esta volviendo un inhibidor más que un impulsor para la industria de la biotecnología.

Respecto al éxito en los negocios que han tenido las empresas de biotecnología en Baja California ha sido en mayor parte por los modelos de negocio y las capacidades de los actores que por la tecnología utilizada para el desarrollo de sus productos. Una tecnología sencilla con el modelo de negocio adecuado, puede hacer la diferencia entre el éxito y el fracaso de una empresa de biotecnología en México. Asimismo, tener una tecnología de punta con un modelo de negocio incorrecto puede llevar a la empresa al fracaso tal como mencionaron los entrevistados al hablar de sus principales competencias y los intentos fallidos que había existido por imitarlos. La innovación es los modelos de negocio en las empresas de biotecnología de Baja California es vital, pero presenta amplias barreras relacionadas con el entorno. Tener un entendimiento adecuado del entorno, de cómo se ha desarrollado la industria y de los bloques básicos de construcción que otras empresas han tomado en cuenta permitirá generar modelos de negocio con mayores probabilidades de desarrollo futuro.

POTENCIAL DE LA REGION DE OCAÑA PARA LA CREACIÓN DE UN CLÚSTER TURÍSTICO

Marilce Pacheco Carrascal, Universidad Francisco de Paula Santander Ocaña
Genny Torcoroma Navarro Claro, Universidad Francisco de Paula Santander Ocaña

RESUMEN

La ciudad de Ocaña, junto con los municipios de La Playa, Ábrego y El Carmen, ubicados en el departamento Norte de Santander, Colombia, poseen gran riqueza cultural, histórica y natural, junto con otras características que permiten proyectar esta región como destino turístico; pero en la actualidad la cultura que prevalece en torno a las actividades económicas se centra en el comercio básicamente; el turismo es una actividad que en los empresarios no se ve con claridad y pocos le han apostado a desarrollar proyectos en este sentido. Luego de haber realizado un inventario, se encontró que hay suficientes atractivos, pero se debe organizar el sistema empresarial para que el sector del turismo pueda potencializarse y desarrollar actividades de manera sostenible y responsable; es por ello que entidades como la Cámara de Comercio de Ocaña, la Universidad Francisco de Paula Santander Ocaña, el Sena, la Alcaldía municipal, la empresa privada y otras instituciones del orden local y nacional, deben diseñar proyectos que propendan por el mejoramiento del tejido empresarial y el fortalecimiento de las organizaciones para que de manera eficiente y competitiva le apunten al desarrollo de este sector. Se pretende proponer estrategias de asociatividad y complementariedad para que el turismo se pueda ofrecer con calidad de manera sostenible, responsable y participativa, que genere un verdadero desarrollo económico. Se aplicó la investigación descriptiva de carácter cuanti- cualitativo y se indagó mediante un cuestionario aplicado a las agencias de viajes, hoteles, restaurantes, sitios recreacionales, atractivos turísticos, parqueaderos y transporte, como actores conexos al turismo; de igual manera se visitaron los sitios para recolectar información de cada uno de ellos en Ocaña y su región (Ábrego, La Playa y El Carmen); se elabora la caracterización de cada una de las empresas que cumplen las condiciones para conformar el clúster y por último se sistematiza la información, mediante el diseño y montaje de un sistema generador de contenidos, material informativo y un mapa de georeferenciación, utilizando software de información geográfica.

PALABRAS CLAVES: Clúster, estructura turística, recursos turísticos y turismo.

POTENTIAL OF THE REGION OF CREATION OCAÑA A TOURIST CLUSTER

ABSTRACT

The town of Ocaña, along with the municipalities of La Playa, Abrego and El Carmen, located in the North Santander department, Colombia, have great cultural, historical and natural wealth, along with other features that allow project this region as a tourist destination; but now the prevailing culture around economic activities mainly focused on trade; Tourism is an activity that entrepreneurs do not see clearly and few have chosen you to develop projects in this regard. After completing an inventory, it was found that there are enough attractive, but you should arrange the business system so that the tourism sector can be potentiated and develop activities in a sustainable and responsible manner; which is why organizations like the Chamber of Commerce of Ocaña, the Francisco de Paula Santander University Ocaña, the Seine, the municipal government, private enterprise and other institutions of local and national, should be designing projects which foster improved tissue and strengthening business organizations to effectively and competitively will point to the development of this sector. It is intended to propose strategies of partnership

and complementarity so that tourism can provide quality sustainable, accountable and participatory way to generate real economic development. descriptive quantitative research qualitative character was applied and were investigated by questionnaire applied to travel agencies, hotels, restaurants, recreational sites, attractions, parking and transportation, as related to tourism stakeholders; just as the sites were visited to collect information from each Ocaña and its region (Abrego, La Playa and El Carmen); the characterization of each of the companies that meet the conditions for forming the cluster is made and finally the information is systematized through the design and installation of a generator of content, information material and a map of georeferencing system using software information Geographic.

KEYWORDS: Cluster, Tourist Structure, Potential, Tourism Resources and Tourism.

INTRODUCCIÓN

Ocaña es un municipio colombiano ubicado en la zona noroccidental del departamento de Norte de Santander, conectado por carreteras nacionales con Cúcuta, Bucaramanga y Santa Marta; es la segunda población del departamento después de Cúcuta. Su extensión es de 460 kilómetros cuadrados, ubicada sobre la cordillera oriental; con un clima promedio de 22 °C (Alcaldía de Ocaña Norte de Santander, 2014); ejerce gran influencia como máximo centro de comercio, educación, cultura y tecnología, en la región y su economía gira en torno al comercio con un 64%, seguido del sector servicios que representa el 23% aproximadamente.

Ocaña y su región, podría ofertarse como destino turístico, dado a los grandes hechos ocurridos desde su fundación que marcaron un hito en la consolidación del territorio colombiano, además de poseer gran variedad de bienes muebles e inmuebles, sitios naturales y patrimonio inmaterial, entre los que se pueden mencionar: Santuario del Agua de la Virgen, Complejo Histórico de la Gran Convención, Área Natural Única Los Estoraques, Columna de la Libertad de los esclavos, monumento a Cristo Rey, el Museo de la ciudad de Ocaña Antón García de Bonilla y los diferentes templos religiosos e históricos; igualmente grandes aspectos culturales como el Desfile de los Genitores.

A pesar del gran potencial turístico en Ocaña y su región, no existe la cultura, la infraestructura, la organización ni los proyectos específicos que garanticen su oferta turística; razón por la cual se plantea la creación del clúster turístico, con el apoyo interinstitucional para el diseño de proyectos que propendan por el mejoramiento del tejido empresarial y el fortalecimiento de las organizaciones para que de manera eficiente, sostenible, responsable y competitiva le apunten al desarrollo del sector turístico de la región y se genere a través de él un verdadero desarrollo económico donde toda la población participe y se beneficie.

Esta investigación incluye una revisión de literatura sobre el potencial turístico y el clúster como alternativa de desarrollo, la metodología utilizada, los resultados obtenidos, el diseño del sitio Web y unas conclusiones relacionadas con los objetivos de la investigación.

REVISIÓN LITERARIA

El turismo comprende las actividades que realizan las personas durante sus viajes y estancias en lugares distintos al de su entorno habitual, por un período de tiempo consecutivo inferior a un año con fines de ocio, por negocios u otros motivos. El turismo local corresponde entonces, al hecho de que los ciudadanos o residentes parten de la localidad donde habitan hacia otra localidad u otro sitio de destino dentro de la misma ciudad, donde realizan además actos de consumo, interactúan con otros ciudadanos o con visitantes y regresan a su lugar de origen, que es su residencia habitual. (Organización Mundial del Turismo OMT, 1994)

La estructura turística es el conjunto de recursos que se desarrollan sobre la infraestructura concurriendo en la prestación de los servicios turísticos y comprende: Alojamiento, restaurante, instalaciones recreativas, agencias de turismo, oficinas de información, empresas de transportes y otras.

El turismo como actividad económica, tiene un gran efecto en la economía, debido a la amplia gama y variedad de factores de producción requeridos para ofrecer los bienes y servicios solicitados por los visitantes y al amplio espectro de agentes involucrados o afectados por el turismo; razón por la cual se propone la asociatividad mediante la creación de un clúster que convierta el sector, en un sector competitivo que genere un verdadero desarrollo económico regional.

En el artículo titulado iniciativas de desarrollo local y fomento del clúster turístico (Varisco, 2007) , el concepto de clúster se ha generalizado en la actividad turística y entre los múltiples antecedentes que contemplan su uso, pueden distinguirse tres enfoques que inciden en las propuestas para su fomento: el clúster como producto turístico; el modelo del diamante de la competitividad; y el clúster como interrelación de actores sociales.

El primer enfoque, se basa en el uso del concepto de clúster turístico sin relación directa con la teoría que lo sustenta y sin más conceptualización que la referida a la definición del término. Dada la generalidad de este concepto, que se aplica perfectamente a la actividad turística en destinos consolidados, es frecuente encontrar antecedentes donde se menciona como equivalente a destino turístico o producto.

El segundo enfoque se observa en los estudios de clúster que aplican la teoría de Porter, y su modelo de competitividad. El análisis se centra en la adaptación del famoso diamante: las condiciones de la demanda turística; el análisis de los factores, donde se incluye el estudio de los recursos culturales y naturales y la infraestructura; la estrategia, estructura y rivalidad de las empresas que prestan servicios; y los sectores de soporte y apoyo donde se analizan las instituciones del sector privado además de asignar un rol complementario al gobierno, específicamente a las funciones que cumple el organismo público de turismo.

El tercer enfoque contempla el clúster turístico como categoría de análisis dentro de la teoría del desarrollo local, y esto supone considerar la competitividad del destino turístico una condición necesaria pero no suficiente para generar desarrollo. También implica analizar el clúster en relación a un conjunto amplio de interrelaciones, que en algunos casos excede el ámbito estrictamente económico por reconocer la influencia de factores sociales y culturales en la dinámica productiva.

METODOLOGÍA

La presente investigación se tipifica dentro de la investigación descriptiva de carácter cuanti - cualitativo, donde la información se toma de las fuentes primarias, es decir, de cada una de las empresas que prestan servicios y ofrecen productos a los turistas y desde los sitios y atractivos turísticos que se encuentran ubicados en los municipios de Ocaña, Abrego, El Carmen y La Playa; además mediante la observación directa, las entrevistas en profundidad y el análisis de documentos; con el ánimo de evaluar el potencial de la región de Ocaña para la creación de un clúster turístico.

La población que se tomó en cuenta para realizar el análisis respectivo, fueron los establecimientos de comercio como agencias de viajes, hoteles, restaurantes, sitios recreacionales y atractivos turísticos, parqueaderos y transporte de los municipios de Ocaña, Abrego, El Carmen y La Playa, que se encuentran inscritos ante la cámara de comercio de Ocaña, según información suministrada por esta entidad en el año 2014.

Para cumplir los objetivos la información se tomó directamente mediante la observación, encuestas y entrevistas realizadas a los propietarios y/o administradores de las empresas conexas al turismo en cada una de las localidades definidas.

RESULTADOS

Entre el inventario de atractivos turísticos de la región de Ocaña, se encuentran bienes declarados de Interés Cultural de Carácter Nacional, Departamental y Municipal y se clasifican en: Monumentos, templos de culto, museos, predios civiles de interés histórico y arquitectónico, plazas y parques de interés histórico, medios naturales, festividades y gastronomía.

La ciudad de Ocaña posee 61 atractivos turísticos, destacándose los atractivos de carácter religioso como son: La ermita de la Virgen de las Gracias de la Torcoroma, iglesia de Jesús Cautivo, Templo de San Francisco, Capilla de Santa Rita, iglesia de San Agustín y la Catedral de Santa Ana; igualmente atractivos culturales e históricos, como el complejo Histórico de La Gran Convención, la Semana Santa y el Desfile de los Genitores.

El municipio de Ábrego posee 13 atractivos turísticos, destacándose los medios naturales como Piedras Negras, el Pozo de las Pailas, el Pozo del Burro y La Represa del Río Oroque.

La Playa de Belén cuenta con 20 atractivos, sobresaliendo los de tipo natural como es el Área Natural única Los Estoraques y los aposentos y el arquitectónico por su estructura colonial y uniforme, declarado como el Pueblo más bonito del Departamento. Hace parte de la Red de Pueblos Patrimonio de Colombia.

El municipio de Carmen es declarado Bien de Interés Cultural de Carácter Nacional por su belleza arquitectónica de la época colonial con sus calles empedradas, cuenta con 16 atractivos turísticos, e incluye el Parque Natural Catatumbo Bari donde habitan los Indios Bari y donde se presenta el fenómeno del Faro del Catatumbo (Descargas eléctricas permanentes y continuas que ayudan a mantener la capa de ozono).

Dentro de los actores del turismo que permitirán desarrollar el sector, se encuentran: Las agencias de viajes, solamente hay cuatro en Ocaña que atienden toda la región; Los hoteles, en Ocaña hay 25 registrados ante la Cámara de Comercio, cuya capacidad es de 656 habitaciones dispuestas con 514 camas sencillas, 459 dobles y 33 semidobles, lo que representa el 87% de la capacidad hotelera de la región; en La Playa hay dos hoteles y una posada, dispuestos con 22 habitaciones dotadas con 42 camas sencillas y 20 dobles, lo que representa el 3% de la capacidad de la región y en Ábrego hay tres hoteles con 74 habitaciones que incluyen 34 camas sencillas, 61 camas dobles y una semidoble, para un 10% de la capacidad hotelera regional; el municipio de El Carmen carece de este servicio.

Con respecto a los parqueaderos, Ocaña cuenta con 35 debidamente registrados ante la Cámara de Comercio; con una capacidad operativa para estacionar 1337 carros y 1538 motos, en las otras poblaciones no hay este servicio. En cuanto al transporte de pasajeros, existen ocho empresas, de las cuales 2 son de carácter nacional y el resto son de carácter intermunicipal; pero solamente 2 son de Ocaña, las seis empresas regionales tienen sus oficinas principales en Ocaña y puntos de atención en las localidades objeto de estudio. Con respecto a los restaurantes, en Ocaña hay 54 debidamente registrados, ubicados a lo largo y ancho de la ciudad, en La Playa hay cuatro, en Ábrego cuatro y en El Carmen tres.

En cuanto a sitios recreacionales, vale la pena mencionar que Ocaña tiene escenarios deportivos y clubes privados, más no cuenta con sitios que permitan programar actividades, como parte de un paquete turístico; solamente en La Playa, en Ábrego y en El Carmen existe este tipo de atractivo, para un total de tres en la región.

Para efectos de cumplir con el objetivo de caracterizar las empresas que harían parte del clúster, sólo se tienen en cuenta aquellas que manifestaron expresamente su voluntad de asociarse, que cumplan o estén dispuestos a cumplir con los requisitos que se establecen para el ejercicio de su actividad económica y para el ofrecimiento de servicios turísticos de calidad y que se encuentren ubicadas en lugares que no representen ningún riesgo para los visitantes.

Entre los hoteles que se seleccionaron se encuentran: Hotel El Zaguán de Las Aguas. Empresa de tradición familiar con más de 30 años de servicio y experiencia en el ramo hotelero, ubicado en pleno centro de la ciudad de Ocaña, carrera 11 N° 12-66, barrio El Tamaco. Cuenta con 13 habitaciones dotadas de cuatro camas dobles y veinte sencillas; atendidos por cuatro empleados, con estudios de primaria, secundaria y universitario. Sus instalaciones son amplias y acogedoras; sin embargo los baños requieren de adecuación para que sea más agradable a la vista y exigencias de sus visitantes; cuenta con un amplio espacio como salón de eventos, Televisión por cable, agua caliente, restaurante y WiFi. El tipo de huésped que con mayor frecuencia solicitan sus servicios son empresarios, agentes viajeros, contratistas, deportistas y personajes religiosos.

Hotel Real. Fundado en el año de 1949, con 66 años de trayectoria hotelera, mantiene su estructura colonial de arquitectura española, cuenta con bellos jardines y amplios corredores, ubicado en el centro de la ciudad, en la calle 12 N° 12-39. Su capacidad operativa es de 27 habitaciones, dispuestas con 17 camas sencillas, 13 dobles y cinco semidobles; cuenta con siete empleados; cuatro solo con estudios primarios y tres bachilleres. Ofrece salón para eventos, Tv cable, agua caliente, WiFi, restaurante y parqueadero; recibe tarjetas débito y crédito como opciones de pago para sus clientes. No tiene registro de la clase de huéspedes que recibe y actualmente maneja convenios con un parqueadero, el hotel Colonial y la agencia Pitta Galván.

Hotel Plaza Real de Ocaña. Ubicado en la carrera 13 N° 11- 25, se constituyó en el año 2006. Ofrece sus servicios en 20 habitaciones con 23 camas sencillas y 18 dobles; opera con cuatro mujeres y un hombre, de los cuales tienen estudios de primaria, dos de secundaria y uno es profesional. Ofrece los servicios de restaurante, agua caliente, Wi Fi, Tv cable, parqueadero en convenio con el parqueadero Lava Park Azul y recibe tarjetas de crédito y débito. El tipo de huésped que más recibe son empresarios, turistas, contratistas, visitantes médicos, personalidades religiosas y músicos. Manejan convenios con agencias de viajes de Cúcuta y Bogotá.

Hotel Tarigua. Es el hotel más moderno que existe en la ciudad, ubicado en la Carrera 12 N° 8-47 en el Centro. Su misión se enfoca en ofrecer excelentes servicios hoteleros a la altura de los más exigentes huéspedes; por esta razón pone a disposición un equipo humano altamente calificado y la infraestructura necesaria para brindarle siempre satisfacción y comodidad durante su estancia. Su prioridad es trabajar cada día en pro de su bienestar y dejar en alto el nombre del Hotel Tarigua y el de la ciudad de Ocaña. Para ofrecer sus servicios cuenta con 52 modernas y confortables habitaciones, una Suite Principal con jacuzzi y cabina spa y nueve Suites Junior. Tiene un grupo de 13 empleados, de los cuales hay tres hombres y diez mujeres; siete bachilleres, dos Tecnólogos y cuatro Profesionales. Ofrece los servicios de seguro hotelero, cajilla de seguridad en la habitación, salón de eventos para 200 personas, restaurante-bar, room service, parqueadero, ascensor, llamadas locales y nacionales, internet wi-fi y desayuno; ofrece además el plan noche de bodas y el plan aniversario, presenta como opciones de pago el cheque, efectivo y tarjetas débito y crédito. Normalmente se hospedan empresarios, turistas, agentes viajeros y conferencistas. Maneja convenios con agencias de viajes de Medellín y con la Universidad Francisco de Paula Santander Ocaña.

Hotel Hacaritama. El 28 de marzo de 1983, se bendice e inaugura el hotel conocido en sus inicios como Hotel de Turismo "Hacaritama", en la calle 10 N° 12-57. Los servicios de hospedaje son ofrecidos en 48 habitaciones con 55 camas sencillas, 12 dobles y 24 semidobles; su planta de personal está conformada por nueve hombres y cuatro mujeres, de los cuales hay tres con primaria, seis bachilleres, un tecnólogo y tres profesionales, además cuenta con una sala para eventos, parqueadero, Tv cable, Wi Fi, agua caliente y

ascensor; recibe tarjetas débito y crédito. Está afiliado a la Asociación Hotelera y Turística de Colombia COTELCO. La mayor afluencia de huéspedes es de agentes viajeros y turistas. Trabaja en convenio con agencias de viajes de Cúcuta y Bogotá.

Hotel El Príncipe Sede Campestre. Comienza su actividad hotelera en el año 2009, actualmente se encuentra ampliando y modernizando sus instalaciones, está ubicado en la carrera 10 N° 9-14 barrio La Costa. Cuenta con 22 habitaciones, dotadas de 21 camas sencillas y 21 dobles; tiene vinculados cuatro trabajadores, dos hombres y dos mujeres con niveles de educación primaria (un funcionario) y técnico (tres funcionarios). Ofrece servicios de salón de eventos, jacuzzi, parqueadero, Tv cable, página Web, Wi Fi, agua caliente y ventilador, los cuales pueden ser cancelados en efectivo, tarjeta débito o crédito. Se encuentra debidamente registrado ante la Cámara de Comercio, Registro Nacional de Turismo y en COTELCO.

Recibe especialmente agentes viajeros, visitantes médicos, turistas, personalidades religiosas y deportistas y trabaja en conjunto con el hotel El Príncipe Centro.

Hotel El Príncipe Centro. Inició operaciones en el año 2003, ubicado en la calle 10 N° 10-49 en el centro de la ciudad. Su capacidad operativa está dada por sus 48 habitaciones, dotadas con 26 camas sencillas y 41 dobles, las cuales son atendidas por siete empleados entre los que se encuentran seis mujeres y un hombre, seis con estudios a nivel secundaria y solamente un profesional. Sus instalaciones están dispuestas con servicios adicionales como sala de eventos, parqueadero, Tv cable, página Web, Wi Fi, agua caliente, restaurante, sauna y una mini tienda, donde se pueden encontrar algunos productos de comida y de aseo. Recibe tarjeta crédito y débito, además maneja crédito directo con algunas empresas. Cumple con el registro mercantil y Registro Nacional de Turismo y COTELCO; además realiza los registros correspondientes de sus huéspedes y de sus operaciones mercantiles. Sus visitantes en su mayoría son agentes viajeros, visitantes médicos, músicos y académicos.

Con respecto a las temporadas de mayor demanda, se pudo observar que en Ocaña existe una tendencia de mayor flujo de visitantes en vacaciones de diciembre, enero y junio, semana de octubre, semana santa y puentes festivos: se presenta entre semana gran ocupación, porque Ocaña es una ciudad comercial y acuden muchos agentes vendedores y visitantes médicos.

En el municipio de Ábrego se toman en cuenta el Hotel Catatumbo. Ubicado en la zona céntrica, en la carrera 6 N° 13-39, funciona desde hace 23 años con 20 habitaciones dispuestas con 15 camas sencillas, 18 camas dobles y una cama semidoble; atendido por su propietaria y su hija; brinda los servicios de restaurante, agua caliente, WiFi, Tv cable y lavandería; solo cuenta con el registro mercantil; lleva registro de sus operaciones y entrada de huéspedes. En este hotel se hospedan cotidianamente empresarios, visitantes médicos y turistas, recibiendo su mayor número de visitantes en las vacaciones de enero, de fin de año y en Semana Santa.

Hotel San Miguel Plaza. Ubicado en el centro de la población en la carrera 6 N° 13- 66 Ábrego Norte de Santander, ofrece los servicios de hospedaje con Tv cable y WiFi, en doce 12 confortables habitaciones, dispuestas con siete camas sencillas y 11 camas dobles. Las instalaciones del restaurante las tiene arrendadas a un tercero, quien ofrece el servicio a los huéspedes del hotel que lo requieran y el servicio de parqueadero lo presta en convenio. Dentro de su planta de personal, cuenta con tres mujeres, dos con primaria y una profesional. Posee únicamente el registrado ante la Cámara de Comercio. Los visitantes, en su gran mayoría son empresarios, agentes viajeros y contratistas; la temporada de mayor demanda son los fines de semana y las vacaciones fin de año.

Hotel y Restaurante El Laguito. Se encuentra en el Kilómetro 31 Vía Ocaña-Cúcuta, cuenta con 42 habitaciones dotadas de 12 camas sencillas y 32 camas dobles, atendido por tres empleados hombres y ocho mujeres; cuatro con estudios de primaria, cinco secundaria, un tecnólogo y un profesional. Ofrece a sus

huéspedes los servicios de parqueadero, restaurante, Tv cable, WiFi y estación de servicios. Dentro de los requisitos para ejercer su actividad legalmente sólo cumple con el registro mercantil, está pendiente de realizar el trámite ante el Registro Nacional de Turismo; lleva registros de huéspedes y de sus operaciones económicas; la clase de huéspedes que recibe con mayor frecuencia son agentes viajeros y transportadores de carga pesada; en las vacaciones de enero y vacaciones de junio son las temporadas en que recibe más visitantes.

El municipio de La Playa de Belén por ser de la Red de Pueblos Patrimonio de Colombia, la clase de clientes que normalmente recibe son turistas y pueden hospedarse en:

El hotel Orquídeas Plaza, fue el primer hotel construido en este paraje y presta sus servicios desde el año 2008, ubicado en la Avenida Los Fundadores N° 0-71. Ofrece 11 habitaciones con 26 camas sencillas y nueve dobles; ofrece el servicio de piscina, salón de eventos, Tv Cable, agua caliente, restaurante, parqueadero y WiFi. Atendido por dos hombres y dos mujeres, con estudios de primaria, secundaria, técnico y tecnólogo. Cuenta con el registro ante la Cámara Comercio y Registro Nacional de Turismo, además lleva registros de sus huéspedes y de las operaciones económicas. La mayor demanda se presenta en los puentes festivos, semana santa, vacaciones de junio y fin de año.

Finca Hotel Casa Real. Nace en el año 2013, bajo la idea de granja integral, tiene como objetivo ofrecer una alternativa Turístico-Agronómica, donde se experimente una relación armónica directa entre la tierra, paisajes naturales y coloniales. Se encuentra ubicado en la Vereda Rosa Blanca, cuenta con seis habitaciones que ofrece siete camas dobles y 12 sencillas; atiende los servicios con cuatro trabajadores un hombre y tres mujeres con estudios de primaria y un profesional. Brinda los servicios de restaurante, agua caliente, salón de eventos, parqueadero, Tv Cable. Como requisito indispensable se encuentra inscrito ante la Cámara de Comercio y Registro Nacional de Turismo, además registra la procedencia de sus clientes y lleva control de sus operaciones. Su mayor actividad la presenta en la Semana mayor, vacaciones de junio y fin de año.

Posada Marmacrisli. Inicia a prestar los servicios en el año 2013, se encuentra ubicada en la calle 2 N° 5-65. Es una posada que ofrece un ambiente muy familiar y comodidades locativas en sus cinco habitaciones, dotadas con cuatro camas sencillas y cuatro dobles, atendido por la administradora, con estudios secundarios y una camarera, con estudios de primaria. Ofrece los servicios de hospedaje con Tv cable, Wi Fi, agua caliente y restaurante. Realiza los registros correspondientes de sus huéspedes y de sus operaciones económicas, se encuentra debidamente registrada ante la Cámara de Comercio y manifiesta que el Registro Nacional de Turismo se encuentra en trámite. Las temporadas de mayor demanda son Semana Santa y vacaciones de fin de año.

Con respecto a los parqueaderos, inicialmente se decide no incluir ninguno en la propuesta, por cuanto los hoteles con quienes se va a trabajar ofrecen este servicio en sus propias instalaciones o en convenio.

Con relación a los restaurantes en Ocaña, solamente se toman siete, por ser los que cumplen características de registro, calidad de sus servicios, instalaciones y de ubicación como son: El Corralito Ocañero, Calabongas Plaza, Plaza Gourmet, Río Restaurante Pub, El Huerto; Uq Uku y Colombia 76.

En Ábrego se incluyen solamente dos restaurantes, quienes manifestaron su interés en hacer los trámites necesarios para tal fin que son Hotel y Restaurante el Laguito y Rancho Rey que están ubicados hacia la salida a la ciudad de Cúcuta.

En La Playa se incluyen tres restaurantes que han venido trabajando para conformar un paquete turístico como son: El establo de tipo campestre, Asadero Donde Edgar y restaurante los Arrayanes.

Dentro de los atractivos turísticos, en la Tabla 1 se presenta la relación por categorías de los que se incluyen en cada uno de los pueblos objeto de estudio.

La clasificación corresponde al tipo de atractivo, y se relaciona el atractivo con su respectivo nombre y el municipio donde está localizado y que hace parte de la población objeto de estudio como es la ciudad de Ocaña, La Playa de Belén, El Carmen y Ábrego, municipios ubicados en el departamento Norte de Santander en Colombia.

En lo referente a los sitios recreacionales, solamente se incluyen El Tun Tun ubicado en Ábrego y el Parque Natural Yraguá de La Playa, quien ofrece la aventura del cable vuelo.

Para dar a conocer el potencial y las riquezas históricas, culturales, arquitectónicas y naturales con que cuenta cada uno de los municipios que integran la región objeto de este trabajo, se crea el sitio web donde se visualizan los actores protagónicos como son las agencias de viajes, hoteles, parqueaderos, atractivos turísticos, restaurantes, sitios recreacionales y empresas de transporte terrestre, que permitan en un momento determinado desarrollar la actividad turística de manera sostenible y responsable.

El sitio Web corresponde a: www.ocanaturistica.com; en él se podrá observar cada uno de los aspectos enunciados en los párrafos anteriores.

CONCLUSIONES

Luego de realizada la revisión de las fuentes secundarias y las visitas de campo para determinar el inventario turístico de Ocaña y su región, se puede decir que existe un gran potencial que permite proyectarla como destino turístico, sin embargo para que este sector se convierta en polo de desarrollo económico y social, se requiere el trabajo decidido de cada uno de los actores conexos al turismo y del apoyo de instituciones públicas y privadas para la formación del recurso humano, mejoramiento de las estructuras organizacionales, la infraestructura regional y el establecimiento de políticas y estrategias que motiven y promuevan esta región como destino turístico, por su riqueza histórica, arquitectónica, cultural y natural.

Tanto las instituciones de educación para el trabajo, como las de educación superior, deben iniciar el ofrecimiento de programas técnicos y profesionales en el área del turismo, ya que el recurso humano que labora en las empresas investigadas, no tienen la formación apropiada para desempeñar las diferentes funciones que se deben cumplir en las empresas actoras del turismo; así mismo se debe crear la cultura del bilingüismo en toda la población.

Se evidenció el deseo de los propietarios y gerentes de las diferentes empresas estudiadas para la posible creación del clúster, razón por la cual se puede iniciar el proceso de diagnósticos para cada uno de los interesados y el diseño de paquetes turísticos para su comercialización.

RESUMEN

En esta investigación, se presenta un análisis de las dimensiones del aprendizaje organizacional en ocho grandes empresas de la industria metalmeccánica de la región centro del estado de Coahuila. Lo anterior, con el propósito de identificar si estas dimensiones tienen efecto en el desarrollo del aprendizaje organizacional en las empresas. Para cumplir con el objetivo planteado, se utilizó el instrumento adaptado de Mayorca, Ramírez, Vilorio y Campos (2007), el cual consta de 43 ítems que agrupan siete dimensiones del aprendizaje organizacional: 1). Aprendizaje Continuo, 2). Investigación y Diálogo, 3). Aprendizaje en Equipo, 4). Sistema Integrado, 5). Conexión del Sistema, 6). Empowerment y 7). Dirección Estratégica. El estudio empírico fue de tipo descriptivo, transversal y correlacional en una muestra de 415 trabajadores a finales de 2014. Los hallazgos del estudio revelan correlaciones estadísticamente significativas en las siete dimensiones, así mismo, se encontró que las dimensiones de mayor influencia en las empresas de la región centro de Coahuila, fueron Dirección Estratégica, Sistema Integrado, Aprendizaje en Equipo y Conexión del Sistema.

PALABRAS CLAVE: Aprendizaje Organizacional, Dimensiones del Aprendizaje Organizacional, Organizaciones

ANALYSIS OF THE DIMENSIONS OF THE ORGANIZATIONAL LEARNING IN ENTERPRISES AT CENTRAL REGION OF COAHUILA

ABSTRACT

In this paper, an analysis is presented of the dimensions of the organizational learning in eight large enterprise metalworking industry in the central region of the state of Coahuila. The above, with the purpose to identify if these dimensions have effect on the development of organizational learning in enterprises. To meet the stated objective, used the instrument adapted a Mayorca, Ramírez, Vilorio and Campos (2007), which consists of 43 items that grouped seven dimensions of organizational learning: 1). Continuous learning, 2). Research and Dialog, 3). Team Learning, 4). Integrated System, 5). Connection of the system, 6). Empowerment and 7). Strategic Direction. The empirical study was descriptive, correlational and cross in a sample of 415 workers at the end of 2014. The study findings reveal statistically significant correlations in the seven dimensions, as well, it was found that the dimensions of greatest influence in the enterprises central region of Coahuila, were Strategic Direction, Embedded System, Team Learning and Connection of the System.

INTRODUCCIÓN

La crisis actual y la necesidad de ser competitivas afectan cada vez más a las organizaciones, obligándolas a la búsqueda de nuevas estrategias. Estos nuevos paradigmas requieren de ventajas basadas en el conocimiento, impulsando a las empresas a desarrollar su aprendizaje organizacional, el cual se considera un componente de gran relevancia en los procesos gerenciales modernos, permitiéndoles mantener su ventaja competitiva a través del tiempo (Ahumada, 2002). Por su parte, Vargas (2001) señala que en las organizaciones se practican dinámicas orientadas a fomentar un aprendizaje continuo que vaya al unísono con las situaciones que enfrentan día con día, así mismo, menciona que una organización se establece en aprendiente, cuando usa y comparte el conocimiento de tal manera que sus miembros se unan en un esfuerzo para cambiar el modo en que esa organización responde a los desafíos y a los cambios que actualmente vivimos, que involucran factores culturales, políticos, sociales, económicos y tecnológicos, que las obligan a generar una cultura dirigida a desarrollar su capacidad de aprendizaje.

Por lo anterior, el presente estudio pretende dar un aporte que contribuya a este fin, planteándose como objetivo analizar las dimensiones del aprendizaje organizacional basado en la propuesta de Watkins y Marsick (1993, 1996), que permita identificar cuáles son las dimensiones predominantes del aprendizaje organizacional en las empresas de la región centro del estado de Coahuila, y así determinar qué tan cerca están las empresas de ser unas organizaciones aprendientes. El resto del documento está estructurado de la siguiente manera: primero, en la sección de revisión literaria se muestra información sobre el aprendizaje organizacional y sus dimensiones, en seguida se presenta la metodología que ilustra la forma de analizar las principales variables de estudio, en tercer lugar se presentan los resultados derivados del análisis y finalmente se presentan las conclusiones desprendidas del trabajo de investigación, así como las limitaciones y futuras líneas de investigación.

REVISIÓN LITERARIA

Palacios (2000), señala que “las organizaciones deben ser capaces de crear, desarrollar, difundir y explotar el conocimiento para incrementar su capacidad innovadora y competitiva”, lo cual les permitirá interactuar con su entorno y sobrevivirán si se adaptan y dan respuestas efectivas a las situaciones que enfrentan, todo lo anterior podrá lograrse si se convierten en organizaciones que desarrollen su capacidad de aprender. De este modo, Chiavenato (2006) define el aprendizaje organizacional como “el proceso que busca desarrollar el conocimiento y las habilidades que capaciten a las personas para que comprendan y actúen eficazmente dentro de las organizaciones”, lo cual favorece positivamente la satisfacción de los empleados, clientes y los resultados económico-financieros. El aprendizaje organizacional es la interacción entre los individuos y los grupos, lográndose como resultado la formación conocimientos, habilidades, capacidades e inteligencia (Núñez, 2004).

Por otro lado, Watkins y Marsick (1993) definen el aprendizaje organizacional como un proceso en el cual se captura, se comparte y se usa el conocimiento para cambiar la manera en que la organización responde a los cambios tanto internos como externos. En ese sentido, Watkins y Marsick (1993, 1996) incluyen una perspectiva integradora al identificar siete dimensiones distintas pero complementarias y que son necesarias para que el aprendizaje organizacional se desarrolle en una organización: 1) dimensión, aprendizaje continuo, se refiere al esfuerzo de una organización para crear las oportunidades para el aprendizaje continuo de todos sus miembros; 2) dimensión, investigación y dialogo, representa el esfuerzo de una organización en crear una cultura de cuestionamiento, de realimentación y de la experimentación; 3) dimensión, aprendizaje en equipo, refleja el espíritu de colaboración y de las habilidades colaborativas que hay bajo la preparación en el uso eficaz de los equipos; 4) dimensión, empowerment, es el proceso de una organización para crear y compartir una visión colectiva, así como conseguir la realimentación de sus miembros sobre la diferencia entre el estado actual y la nueva visión; 5) dimensión, sistema integrado,

indica los esfuerzos por establecer sistemas para captar y compartir el aprendizaje; 6) dimensión, conexión del sistema, refleja el pensamiento y acciones globales para conectar a la organización con su ambiente interno y externo; 7) dimensión, dirección estratégica, demuestra el grado en el cual los líderes piensan estratégicamente el cómo utilizar el aprendizaje para crear el cambio y dirigir a la organización hacia nuevas direcciones y nuevos mercados.

Por otro lado, en el presente trabajo, se revisaron estudios empíricos que soportan lo anterior, resaltando entre otros, la investigación realizada por Salehi (2005), en la cual se examinó la relación entre el aprendizaje organizacional y la satisfacción laboral en un contexto Iraní. Los resultados reportados indicaron que las dimensiones del aprendizaje organizacional estuvieron positivamente correlacionadas con la satisfacción laboral y con el compromiso organizacional. En este mismo orden de ideas, Zhang, Zhang y Yang (2004), identificaron diferencias en las dimensiones del aprendizaje organizacional entre empresas privadas y públicas, así como en industrias manufactureras versus empresas de servicios en China.

También se obtuvo que las empresas de servicios mostraron mejores prácticas del aprendizaje que la industria manufacturera. En otro estudio elaborado por Fernández (2007), en el cual se planteó como objetivo describir las características del aprendizaje organizacional en universidades públicas y privadas, encontrándose como resultado que las universidades públicas presentan características de aprendizaje organizacional inferior al de las universidades privadas, todo lo anterior, basado en el marco teórico propuesto por Watkins y Marsick (1993, 1996).

METODOLOGÍA

El trabajo de investigación que se llevó a cabo fue del tipo cuantitativo, descriptivo y correlacional, debido a que se buscó especificar rasgos y características importantes de las dimensiones del aprendizaje organizacional, para verificar el grado de relación entre cada una de las dimensiones, se utilizó el análisis de correlación de Spearman. Así mismo el diseño de la investigación fue no experimental y transversal, porque se consideró el más adecuado de acuerdo a los objetivos planteados, ya que se presenta un panorama del estado de las dimensiones del aprendizaje organizacional para un determinado tiempo, donde se entrevistó a finales de 2014, a una muestra de 415 trabajadores de ocho grandes empresas de la industria metalmecánica de la región centro del estado de Coahuila.

El instrumento utilizado para la medición de las dimensiones del aprendizaje organizacional fue el cuestionario adaptado por Mayorca et al. (2007), basado en el instrumento original de Watkins y Marsick (1997), el cual considera una escala valorativa de Likert con valores numéricos discretos que van desde el 1 al 6, que a su vez está asociado a una escala cualitativa que va desde nunca hasta siempre. Para el análisis de los datos se utilizó el SPSS versión 17.0 Para la presente investigación la variable de estudio es el aprendizaje organizacional, el cual se compone de siete dimensiones. En la Tabla 1 se presenta la definición conceptual, definición operacional y los indicadores.

Tabla 1: Operacionalización de Variables de Estudio

Variable	Definición Conceptual	Definición Operacional	Indicadores
Aprendizaje organizacional	Chiavenato (2006) lo define como “el proceso que busca desarrollar el conocimiento y las habilidades que capaciten a las personas para que comprendan y actúen eficazmente dentro de las organizaciones”	El promedio de las respuestas dadas por los entrevistados.	Las siete dimensiones: 1.- Aprendizaje continuo 2.- Investigación y diálogo 3.- Aprendizaje en equipo 4.- Sistema integrado 5.- Empowerment 6.- Conexión del sistema 7.- Dirección estratégica
Aprendizaje continuo	Yang et al. (2004) mencionan que son las oportunidades que se crean para el aprendizaje continuo de todos los miembros.	El promedio de las respuestas dadas por los entrevistados.	1.-Reflexión sobre los errores cometidos 2.-Facilidades en obtener los recursos para el aprendizaje 3.- Programas de incentivación para el aprendizaje 4.- Concepción de los problemas como oportunidades de aprendizaje.
Investigación y diálogo	Yang et al. (2004) mencionan que es la cultura que se crea para el cuestionamiento, retroalimentación y de experimentación.	El promedio de las respuestas dadas por los entrevistados.	1.- Retroalimentación entre las personas 2.- Disposición a escuchar puntos de vista diferentes 3.- Interés por la opinión de los demás 4.- Clima de respeto mutuo.
Aprendizaje en equipo	Yang et al. (2004) señalan que son las habilidades de colaboración que permitan el uso eficaz de quipos	El promedio de las respuestas dadas por los entrevistados.	1.- Los equipos tienen libertades para adaptar sus metas 2.- Los miembros de los equipos se tratan como iguales 3.- Ambiente de colaboración en el equipo 4.- Programas de incentivación por logros del equipo.
Sistema integrado	Yang et al. (2004) indican que son los esfuerzos por establecer sistemas para captar y compartir aprendizaje	El promedio de las respuestas dadas por los entrevistados.	1.- Presencia de sistemas para una comunicación fluida 2.-Establecimiento de sistemas para generar información 3.- Presencia de base de datos actualizada.
Empowerment	Según Yang et al. (2004) es el proceso para crear y para compartir una visión colectiva y conseguir la realimentación de sus miembros sobre la diferencia entre el estado actual y la nueva visión	El promedio de las respuestas dadas por los entrevistados.	1.-Posibilidad de tener opciones para elegir 2.-Participación en la construcción de visión colectiva 3.- Recompensa a la proactividad 4.- Apoyo a empleados 5.- Cede el poder al empleado sobre algunos recursos.
Conexión del sistema	Según Yang et al. (2004) refleja el pensamiento y acciones globales para conectar a la organización con su ambiente interno y externo	El promedio de las respuestas dadas por los entrevistados.	1.- Incentivación para un pensamiento sistémico 2.-Involucrar el entorno 3.- Promueve considerar la opinión del cliente 4.- Apoyo a los empleados en su balance laboral-familiar.
Dirección estratégica	Según Yang et al. (2004) es el grado en el cual los líderes piensan estratégicamente en cómo utilizar el aprendizaje para crear cambio y dirigir la organización hacia nuevos mercados.	El promedio de las respuestas dadas por los entrevistados.	1.-Fomentación de actividades de aprendizaje 2.-Realimentación entre los líderes y los empleados 3.-Promoción del entrenamiento y la actualización 4.-Consistencia entre las acciones de la organización y sus valores

La tabla muestra la definición conceptual, operacional y los indicadores para cada una de las dimensiones del aprendizaje organizacional.

RESULTADOS

Se realizó un estudio descriptivo y se determinó la correlación entre las dimensiones (ver Tabla 2). Con respecto a la media, en una escala de Likert, todos los valores resultaron ser superiores a cuatro, donde el valor mayor es de seis. De acuerdo al objetivo planteado, se encontró que las dimensiones del aprendizaje organizacional que mayormente predominan en las empresas de la región centro de Coahuila, son: Dirección Estratégica (4.23), Sistema Integrado (4.21), Aprendizaje en Equipo (4.20) y Conexión del Sistema (4.18), y la de valor más bajo se presentó para la dimensión Investigación y Diálogo (4.07).

Tabla 2: Medias y Correlaciones (N=415)

Dimensiones	Media	1 AC	2 AE	3 SI	4 EM	5 ID	6 DE	7 CS
1. AC	4.13	1						
2. AE	4.20	0.73(**)	1					
3. SI	4.21	0.66(**)	0.64(**)	1				
4. EM	4.14	0.74(**)	0.80(**)	0.77(**)	1			
5. ID	4.07	0.59(**)	0.62(**)	0.45(**)	0.61(**)	1		
6. DE	4.23	0.50(**)	0.65(**)	0.51(**)	0.66(**)	0.50(**)	1	
7. CS	4.18	0.59(**)	0.68(**)	0.67(**)	0.79(**)	0.50(**)	0.71(**)	1

***p<0.01. La correlación es significativa al nivel 0.01 (bilateral). La tabla presenta las medias y los valores de correlación Rho de Spearman entre las dimensiones del aprendizaje organizacional. Se aprecia que la media más alta es la dimensión Dirección Estratégica y que la correlación más fuerte se da entre aprendizaje en equipo y empowerment. AC: Aprendizaje Continuo, AE: Aprendizaje en Equipo, SI: Sistema Integrado, EM: Empowerment, ID: Investigación y Diálogo, DE: Dirección Estratégica, CS: Conexión del Sistema.*

Todas las correlaciones resultaron ser significativas al 0.01 y en su mayoría, con valores *rho* de Spearman superiores a 0.50 lo que sugiere validez convergente entre las subescalas. Con respecto a los valores reportados en otras investigaciones, los resultados del presente estudio resultaron tener índices parecidos a los indicados por Zhang et al. (2004), con valores entre 0.38 y 0.75; los de Yang et al. (2004), con valores entre 0.58 y 0.77; y los de Mayorca et al. (2007), con valores entre 0.48 y 0.84.

De manera particular las dimensiones que presentaron correlaciones fuertes con valores superiores a 0.70 fueron Aprendizaje en Equipo con Aprendizaje Continuo ($\rho=0.73$; $p<0.01$); Empowerment con Aprendizaje Continuo ($\rho=0.74$; $p<0.01$); Empowerment con Aprendizaje en Equipo ($\rho=0.80$; $p<0.01$); Empowerment con Sistema Integrado ($\rho=0.77$; $p<0.01$); Conexión del Sistema con Empowerment ($\rho=0.79$; $p<0.01$) y Conexión del Sistema con Dirección Estratégica ($\rho=0.71$; $p<0.01$), mientras que las dimensiones que presentaron valores inferiores a 0.50 fueron Investigación y Diálogo con Sistema Integrado ($\rho=0.45$; $p<0.01$). De acuerdo a la percepción de los trabajadores, los resultados sugieren de manera general, que las empresas de estudio presentan desarrollo de aprendizaje organizacional.

Así mismo se observa que la asociación más alta se da entre la dimensión empowerment y aprendizaje en equipo, lo que puede sugerir que a mayor aprendizaje en equipo mayor empowerment. La importancia del estudio radica en que constituye un aporte en el ámbito del aprendizaje organizacional en empresas de la industria metalmecánica de la región centro de Coahuila, en donde se intenta ofrecer conocimientos que permitan mejorar su efectividad como equipos de trabajo.

CONCLUSIONES

Con respecto las dimensiones predominantes del aprendizaje organizacional en las empresas, el criterio de selección se hizo a partir de los promedios de las dimensiones. Las dimensiones con mayor influencia de las empresas fueron Dirección Estratégica, Sistema Integrado, Aprendizaje en Equipo y Conexión del Sistema; estas dimensiones sugieren que las empresas de la región centro de Coahuila, crean, captan y comparten un cambio a través del aprendizaje tanto interno como externo, basado en habilidades

colaborativas. Por otro lado la dimensión de menor impacto fue la dimensión Investigación y Diálogo, este resultado indica de acuerdo Watkins y Marsick (1993, 1996) que existe debilidad en cuanto a la disposición a escuchar diferentes puntos de vista de los demás y a una falta de respeto mutuo. Del mismo modo se evaluó la correlación entre las dimensiones del aprendizaje organizacional a través del coeficiente *rho* de *Spearman*, encontrándose que todas las correlaciones fueron significativas para un nivel de 0.01, estos índices coinciden con los resultados obtenidos por Zhang et al. (2004) y por Yang et al. (2004). lo que sugiere que existe una asociación positiva entre las dimensiones del aprendizaje organizacional en las empresas de la región centro de Coahuila, sobresaliendo Empowerment con Aprendizaje en Equipo, es decir, el que exista una visión compartida en la empresa existirá mayor colaboración entre los miembros de los equipos. Cabe destacar que los promedios obtenidos en las ocho empresas de la región centro de Coahuila, indican un grado alto en cuanto al desarrollo de comportamientos que facilitan el aprendizaje organizacional, estos datos coinciden con los resultados de Zhang et al. (2004) y Yang et al. (2004). Esta investigación contribuye al desarrollo del aprendizaje organizacional en las empresas de la región centro del estado de Coahuila.

Limitaciones: Entre las limitaciones del estudio se puede mencionar que, la investigación sólo se realizó a nivel diagnóstico en empresas del sector metalmecánico de la región. En futuras investigaciones es importante valorar el aprendizaje organizacional en diversos sectores, así como hacer una investigación más amplia con métodos mixtos, a fin de tener resultados que les permita poder transformarse en organizaciones capaces de adaptarse a los nuevos cambios para dar respuesta a las demandas del entorno.

RESUMEN

El desarrollo industrial y el crecimiento urbano han provocado un notable deterioro medioambiental en México, sobre todo por la extensión de actividades productivas altamente contaminantes. Tal escenario ha degradado los recursos naturales del país y pone en riesgo a la población. El Estado mexicano usa de forma limitada las herramientas tributarias que pueden contribuir al control de la contaminación ambiental o incluso a su disminución ya que sólo se aplican gravámenes ambientales a actividades muy delimitadas. Debido a que en México no hay evidencias contundentes que las medidas tributarias encaminadas a reducir los daños ambientales tengan ese efecto, además del recaudatorio, el objetivo de este trabajo es analizar el número de actividades altamente contaminantes que están gravadas en México y algunas de las consecuencias más visibles de las que no lo están. Este es un estudio de corte cualitativo, de tipo documental. El resultado de esta investigación es una reflexión sobre el alcance del daño ambiental en México y sobre la necesidad de impulsar una cultura de responsabilidad social en las empresas para amortiguar el impacto en aquellas actividades en que el Estado es omiso y su papel insuficiente.

SCOPES OF TAX MEASURES IN THE STRUGGLE AGAINST POLLUTION IN MEXICO

ABSTRACT

The industrial development and urban growth have caused considerable environmental deterioration in Mexico, especially due to the extension of highly polluting production activities. Such scenario has degraded natural resources of the country and also threatens the population. The Mexican State uses in a limited way tax tools that can help to control environmental pollution or even to their decline, since environmental charges are only applied to narrowly defined activities. Because in Mexico there is no conclusive evidence that tax measures aimed at reducing environmental damage have that effect, other than tax collection, the goal of this paper is to analyze the number of highly polluting activities which are taxed in Mexico and some of the most visible consequences of which are not taxed. This is a qualitative study, of documentary type. The result of this research is a reflection on the extent of environmental damage in Mexico and the need to promote a culture of social responsibility in business to diminish the impact on those activities in which the state is ignored and its role is insufficient.

INTRODUCCIÓN

El aumento de los problemas ambientales en el mundo ha obligado a varios países a diseñar políticas públicas que coadyuven a reducir la contaminación ambiental sin afectar el crecimiento económico. En los últimos años, diversas organizaciones y gobiernos han puesto en marcha algunos ordenamientos jurídicos para regular la emisión de gases contaminantes, así como acciones de carácter fiscal que penalicen el mal uso de recursos naturales y la contaminación del medio ambiente. Los gobiernos disponen de una gran variedad de herramientas, como la aplicación de leyes para el cobro de impuestos ambientales, subsidios y regulaciones ambientales. Dentro de estas herramientas, los impuestos ambientales son los más flexibles para los entes económicos de un país a la hora de determinar la manera menos costosa de reducir el impacto ambiental por medio de la determinación de precios. En este sentido, se establece que la aplicación de normas tributarias de carácter ambiental podrían favorecer la concientización de los entes económicos para producir o realizar una actividad económica sin afectar el medio ambiente y los recursos naturales. La creciente importancia de los problemas medioambientales en los que se ve inmerso nuestro planeta, así como el papel fundamental que pueden desempeñar las empresas en ellos, ha dado lugar a que los aspectos ambientales adquieran una importancia mayor para las mismas.

METODOLOGÍA

El diseño de la investigación fue no experimental, de corte cualitativo, del tipo descriptiva que aplica métodos de investigación documental, tomando referencias de libros, revistas y consultas en la red internet, para afianzar datos e información sobre el tema investigado; así como también, sitios y/o bases de datos oficiales.

RESULTADOS

Medio Ambiente

El desarrollo de nuestra civilización ha modificado, y en muchos casos de manera substancial, el paisaje terrestre. Las ciudades y poblados en los que vivimos, así como los campos de los que obtenemos nuestros alimentos han removido a los ecosistemas originales, secado lagos y ríos. También hemos llevado a la extinción a numerosas especies y sobrecargado la atmósfera con gases y contaminantes que causan cambios en el clima, todo ello para establecernos y permitir que nuestras ciudades y pequeños poblados sigan creciendo. Nuestro impacto no ha terminado ahí. Los productos que empleamos en nuestra vida diaria provienen de la explotación de los recursos naturales de muchos de los ecosistemas del planeta. Los alimentos que consumimos, la madera que empleamos para la construcción, los muebles o el papel, los plásticos que envuelven los artículos de la vida moderna, o los químicos que se emplean en la industria, agricultura o el hogar, todos de alguna manera están relacionados con perturbaciones y severos daños al ambiente. No es exagerado decir que nuestro planeta ha cambiado, y en muchos casos de manera irreversible, con la expansión y el desarrollo de nuestra civilización. Contra la creencia de épocas recientes, esos recursos se han demostrado como finitos, por más que algunos de ellos sean renovables. El entorno ambiental ha sido modificado antropogénicamente para potenciar a aquello que produce más riqueza económica o bienestar presente, muchas veces a costa de las próximas generaciones.

El territorio mexicano presenta una diversidad ambiental extraordinaria en sus casi dos millones de kilómetros cuadrados. Sus caudalosos ríos y sus amplios litorales, sus extensas zonas boscosas, sus sistemas lacustres y la abundancia de minerales no garantizan sin embargo, que su población tenga acceso a suficiente agua potable, por ejemplo. Las actividades humanas de tipo económico, principalmente, han afectado la disponibilidad de agua de calidad, así como las tierras disponibles para cultivo o generan subproductos que afectan la salud, como en las comunidades donde se practica la minería a cielo abierto.

La población se ha acostumbrado a vivir con los escenarios antes descritos, pero con reclamos permanentes al Estado, para que invierta en la reparación de los daños o en la búsqueda o activación de medidas alternas de abasto de los recursos contaminados. La autoridad tradicionalmente ha atendido de manera reactiva el problema, lo que ha incrementado los costos para reparar los daños a la naturaleza, por lo que en esta investigación se analizan los mecanismos de tributación para “subsana” la pérdida, cambio, deterioro, menoscabo, afectación o modificación adversos y mensurables de los ecosistemas, elementos y recursos naturales, de sus condiciones químicas, físicas o biológicas.

Impuestos

Tributo viene del latín *tributum* que significa dar, repartir (Mateos, 2004: 100). También definido como carga continua en dinero o en especie que debe entregar el vasallo al señor en reconocimiento del señorío, o el súbdito al Estado para la atención de las llamadas cargas públicas. Diferentes tratadistas definen al impuesto en los siguientes términos: Vitti de Marco dice: “El impuesto es una parte de la renta del ciudadano, que el Estado percibe con el fin de proporcionarse los medios necesarios para la producción de los servicios públicos generales” (Flores, 2004: 417). Gastón Jeze afirma: “El impuesto es aquella prestación pecuniaria requerida a los particulares por vía de autoridad, a título definitivo y sin contrapartida, con el fin de cubrir las obligaciones públicas” (Faya, 2003: 125). El actual Código Fiscal de la Federación en su artículo 2 nos dice que “Impuestos son las contribuciones establecidas en Ley que deben pagar las personas físicas y morales que se encuentren en la situación jurídica o de hecho prevista por la misma y que sean distintas de las señaladas en las fracciones II, III y IV de este artículo”. Por lo que podemos decir que el impuesto es una contribución pecuniaria establecida en ley que el Estado percibe para cubrir el gasto público. Además del propósito recaudatorio para sufragar el gasto público de la federación, estados y municipios, los impuestos pueden servir implícitamente como instrumentos eficaces de la política financiera, económica y social que el Estado tenga interés en impulsar, orientando, encauzando, alentando o desalentando ciertas actividades o usos sociales, según sean considerados útiles para el desarrollo armónico del país, mientras no se violen los principios constitucionales rectores de los tributos, estos impuestos son conocidos comúnmente como con fines extrafiscales.

El Impuesto Como herramienta de Reducción al Daño Ambiental

El tributo como instituto jurídico constituye actualmente uno de los instrumentos de regulación más eficientes para obtener modificaciones en los patrones de conducta de las personas. La tributación, en principio, no tuvo como finalidad la protección del medio ambiente, es decir los impuestos fueron creados con la única finalidad de recaudar dinero para cumplir los fines del Estado, a pesar de ello, el uso de mecanismos tributarios como instrumentos de política ambiental es cada vez más aceptado y se mantiene constante. Citando a Marco César García Bueno tenemos que el principio “el que contamina paga” es el que justifica la presencia del tributo ambiental, por lo que la distribución de los mismos deviene de los índices de contaminación generados por el sujeto. El principio de quien contamina paga lo define claramente Aimée Figueroa Neri la cual nos dice “se entiende por responsable de la contaminación, es decir, por agente contaminador, a la persona física o moral sometida a derecho público o privado que directa o indirectamente deteriora el medio ambiente, o crea las condiciones para que se produzca dicho deterioro. Hay suficiente evidencia para demostrar que los índices de contaminación registrados en la actualidad no sólo repercuten en la calidad de vida de los individuos y de su ecosistema inmediato, sino que amenazan la subsistencia de las generaciones futuras. El reconocimiento del derecho a vivir en un ambiente libre de contaminación a pesar de no estar explícito en la constitución mexicana, es prioritario.

El principio “quien contamina, paga” –“polluter pays”, “chi inquina paga”, “pollueur-payeur”– nace en las ciencias económicas, con ello pretende, en su origen, reflejar en el precio de las actividades y productos las externalidades causadas por el daño ambiental. Por lo demás, el uso de instrumentos económicos y tributarios en este contexto es recomendado por la Organización para la Cooperación y el desarrollo

Económico (OCDE), no cabe duda que la protección del ambiente, constituye un objetivo fundamental, ya que ello se encuentra reconocido por convenciones internacionales. Ahora, en el caso de que el legislador use figuras tributarias para perseguir protección del ambiente, es posible afirmar que esos tributos presentan fines extrafiscales. Las principales razones para el uso de medidas tributarias a través de impuestos ambientales son:

Son instrumentos especialmente eficaces para la incorporación directa de los costos de los servicios y perjuicios ambientales (y su reparación) al precio de los bienes, servicios y actividades que los producen; y para contribuir a la aplicación del principio de pago por el contaminante. Pueden proporcionar incentivos para que tanto consumidores como productores cambien de comportamiento en la dirección de un uso de recursos que no dañen el medio ambiente; para estimular la innovación y los cambios estructurales; y para reforzar el cumplimiento de las disposiciones normativas. Pueden aumentar la renta o ingreso fiscal que percibe el Estado, que puede utilizarse para mejorar el gasto en medio ambiente; y/o para reducir los impuestos sobre el trabajo y el capital. Pueden ser instrumentos de política, especialmente eficaces para abordar las prioridades ambientales actuales.

La OCDE afirma que los impuestos ecológicos también llamados verdes, tienen la capacidad de resarcir ciertas fallas del mercado, con la incorporación del impacto que sufre el medio ambiente a través de los precios de los bienes contaminantes. Asimismo, las tasas impositivas llevan a los productores y consumidores a tener un comportamiento más amigable o consciente de su entorno; también supone incentivos para el desarrollo de tecnologías menos contaminantes. En México poco se ha hecho uso de la imposición de impuestos al cuidado del medio ambiente, de tal manera que sólo existe la Ley del Impuesto Especial Sobre Producción y Servicios (IEPS), la que actualmente funge como un instrumento para desalentar actividades que dañan el medio ambiente. El Centro de Estudios de las Finanzas Públicas (CEFP) de la Cámara de Diputados informó que la recaudación de los impuestos ambientales prevista para el 2015, representa el 0.3 por ciento del Producto Interno Bruto (PIB) y el 2.1 por ciento de los ingresos tributarios estimados para el presente año. La nación mexicana es el único integrante de la OCDE, con la menor recaudación de impuestos ambientales, situación que ha mantenido en los últimos años.

Ley del Impuesto Especial Sobre Producción y Servicios En México

Ley del Impuesto Especial sobre Producción y Servicios en materia ambiental tiene como objetivo desincentivar conductas que afectan negativamente al medio ambiente, por lo que entre su varias actividades que regula, se encuentran dos que son objeto de este estudio: Impuesto a los combustibles fósiles e impuesto a los plaguicidas. Durante la combustión o quema de combustibles fósiles se libera a la atmósfera bióxido de carbono, que es uno de los principales gases de efecto invernadero. Por lo que para incentivar un menor uso y mayor eficiencia en su combustión se grava el contenido de carbono de estos combustibles con un precio que refleje las condiciones de los mercados internacionales de los bonos de carbono, de tal forma que se internaliza el costo social de producir emisiones contaminantes para la atmósfera y en consecuencia, induce la adopción de tecnologías más limpias en la producción de bienes y servicios. Un impuesto al carbono es la forma menos costosa de desincentivar las emisiones de gases de efecto invernadero que están ocasionando el cambio climático, además de fomentar una mayor viabilidad al desarrollo de tecnologías para la eficiencia energética y promover el uso de fuentes alternativas de energía. Adicional encontramos en la ley del IEPS que se establece un impuesto a los plaguicidas, principalmente para desincentivar el uso de aquellos con fuertes riesgos al medio ambiente, a los recursos acuíferos y a los alimentos, de acuerdo a las siguientes tasas según peligro de toxicidad aguda:

Plaguicidas categoría 1 y 2, con 4.5%.

Plaguicidas categoría 3, con 3.5%.

Plaguicidas categoría 4, con 3%.

La Secretaría de Hacienda y Crédito Público (SHCP) dice buscar con el impuesto a los combustibles fósiles una reducción en las emisiones de bióxido de carbono, principal gas de efecto invernadero; mientras que con un impuesto a los plaguicidas pretende una disminución en su uso, a fin de reducir las afecciones al medio ambiente y a la salud de la población. En la iniciativa de Ley de Ingresos de la Federación, el Ejecutivo Federal, apunta que los recursos adicionales que se generen se destinarán a eficiencia energética, tecnología y transporte público.

Impuestos Ambientales En el Resto del Mundo

Al comparar los impuestos ambientales de México con los de otros países innovadores en políticas tributarias de carácter ambiental, observamos diversos modelos que eventualmente podrían aplicarse. En Brasil, por ejemplo, el Impuesto ambiental sobre la Circulación de Mercaderías y Servicios (ICMS) es inter-estatal y aplica una tasa de entre 7% y 12% dependiendo del estado. Asimismo, el Impuesto estatal sobre la Propiedad de Vehículos Automotores (IPVA), se calcula con base en el valor del auto y el municipio percibe ingresos derivados del mismo impuesto. Por otro lado, en Chile el Impuesto Verde a Fuentes Móviles, se aplica a automóviles nuevos, dependiendo de su rendimiento urbano y tiene como fin promover el uso de vehículos que contaminen menos. En Octubre del 2014, Chile se convirtió en el primer país de Sudamérica en establecer un impuesto a la contaminación, dicho impuesto cobrará por \$5 dólares americanos por tonelada métrica de Dióxido de Carbono (CO₂), sin embargo, no entrará en vigor sino hasta el año 2018. En Ecuador existe conforme la Ley de Fomento Ambiental y Optimización de los Ingresos del Estado, un impuesto que grava la contaminación del ambiente producida por el uso de vehículos motorizados de transporte terrestre.

Finlandia creó por primera vez un impuesto al carbón, disminuyó además el impuesto sobre la renta y las contribuciones al seguro social. Noruega instituyó un impuesto al CO₂, que se amplía progresivamente hasta cubrir el 64% de las emisiones de este gas. Como medida complementaria, se aplicó una disminución al impuesto sobre la renta. Suecia realizó una reforma fiscal ambiental, los impuestos al CO₂, al azufre y a los óxidos de nitrógeno (NO_x), se traducen en una reducción significativa del impuesto sobre la renta. Alemania incrementó los impuestos a combustibles minerales, fósiles y electricidad y redujo las contribuciones al seguro social. Italia, por su parte, reestructuro los impuestos a los minerales y combustibles fósiles. Se incrementaron los impuestos a la gasolina, diesel, carbón, aceites, gas y actualmente está en proceso una reducción a los impuestos al trabajo (Salas, 2007).

Cultura de Responsabilidad Social En las Empresas

El término responsabilidad social, implica la asunción de compromisos del individuo o la organización hacia el entorno que le rodea, a fin de lograr fines conjuntos. Sin embargo, tal actitud no se da *per se*, excepto en casos muy específicos y sobresalientes. Se conoce como empresa socialmente responsable a la entidad que cumple con un conjunto de normas y principios referentes a la realidad social, económica y ambiental que se basa en valores que le ayudan a ser más productiva, sus directrices se basan en la dignidad humana, el bien común, participación social, y sobre todo el cuidado del medio ambiente. Sin embargo, tal esquema- el de “empresa de responsabilidad social” - no debe utilizarse como el único mecanismo de luchar contra la contaminación producida por la producción industrial ya que el esquema implícito en esa denominación es subsidiar conductas, lo que va en contra del espíritu de las políticas implementadas por la OCDE, que se basan en el ya señalado concepto de que “el que contamina paga”.

La promoción de la responsabilidad social de las empresas en materia de cuidado del medio ambiente debe incluir, por lo tanto la difusión de que dejar de contaminar no es causa para obtener beneficios económicos, pero dañar el medio ambiente sí lleva implícito un costo equivalente al daño causado.

CONCLUSIONES

En los últimos lustros, el crecimiento de la población en México y su concentración en grandes centros urbanos puso de manifiesto la escasez de recursos naturales y la dificultad para usar los existentes, principalmente el agua, debido a la contaminación que padecen. Este punto había sido soslayado por la sociedad a pesar de que en la mayoría de los casos es producto de una actividad económica persistente y permitida, debido a que no existe una cultura de responsabilidad con el medio ambiente. En el año 2013 la OCDE, comparó el desempeño ambiental de los países miembros y muestra que México resultó ser quien menos recauda en términos de impuestos ambientales de los treinta y cuatro países que pertenecen a este organismo, así como también es el que más subsidia acciones que alteran el equilibrio ecológico, como el consumo de gasolina o la agricultura extensiva, acabando con ecosistemas que albergan el 12% de la biodiversidad mundial. La OCDE estima que México perdió en 2010 cerca del 7% del PIB por degradación ambiental, por lo que ha exhortado a México a implementar medidas tributarias para solucionar esta problemática. El Estado mexicano solo combate por la vía impositiva el daño ambiental generado por la combustión del carbono y los plaguicidas, cuando las actividades humanas que dañan el medio ambiente son más que ese número y podrían llegar a ser más dañinas. Basta citar el ejemplo del uso generalizado de plásticos no biodegradables, que al ser desechados se depositan sin ningún tratamiento, a pesar de que su vida útil antes de degradarse es de cientos e incluso miles de años.

Otro ejemplo mexicano puede ser el de la extracción intensiva de metales como el oro, que se hace al aire libre mediante la utilización de elementos químicos venenosos, como el cianuro. Incluso se puede señalar la extracción de piedra caliza para la fabricación de cemento, que llena de partículas en suspensión el entorno de las comunidades donde operan, o la producción de porcinos, que contamina los cuerpos de agua cercanos. La práctica de otros países pone de manifiesto que es necesario incidir en la aplicación de impuestos a actividades que dañan los recursos naturales, a fin de que la autoridad recupere los recursos que de por sí debe invertir en la remediación de los daños, al tiempo que esa fiscalidad disuade de utilizar métodos dañinos con el entorno, al dar viabilidad a técnicas que hoy no resultan rentables pero que lo pueden ser con una alta fiscalidad a las prácticas actuales. Por lo que se refiere a la participación social de las empresas, no existe una motivación intrínseca en las organizaciones privadas para contribuir al desarrollo de la comunidad o el cuidado del medio ambiente, entre otros aspectos, por lo que se requieren políticas públicas concretas enfocadas a crear una cultura de responsabilidad ambiental, que incluya un uso racional de los recursos naturales y un compromiso para disminuir y erradicar el daño que ya ha provocado la explotación económica de los recursos con métodos cuya rentabilidad se ha basado en la destrucción del entorno.

¿ES CONSTITUCIONAL EN MÉXICO EL ENVIÓ DE LA CONTABILIDAD ELECTRÓNICA AL PORTAL DEL SERVICIO DE ADMINISTRACIÓN TRIBUTARIA?

Miguel Ángel Díaz Marín, Instituto Tecnológico de Ciudad Juárez, México
Sergio Enrique Blanco Pegueros, Universidad Autónoma de Ciudad Juárez, México

RESUMEN

A partir del 1º. de enero del 2014, entraron en vigor en México modificaciones al Código Fiscal de la Federación, que establecen la obligación de mandar información contable al Servicio de Administración Tributaria. Esta obligación originalmente tenía que ser enviada por las personas morales a partir de julio de 2014, sin embargo se ha estado difiriendo, para que sea a partir de enero del 2015. Más de 11,000 de las principales empresas de México se han amparado en contra de esta medida al considerarla inconstitucional, toda vez que no respeta la garantía de legalidad establecida en nuestra Constitución. La Suprema Corte de Justicia de la Nación emitió una jurisprudencia señalando que se deben de otorgar las suspensiones provisionales solicitadas en los amparos, sobre la base de que la autoridad fiscal, continúa teniendo sus facultades de fiscalización.

PALABRAS CLAVE: Contabilidad Electrónica, Ingreso al Portal del Servicio de Administración Tributaria, Código Fiscal de la Federación, Amparo, Suspensión Provisional.

SENDING ELECTRONICA ACCOUNTING TO THE TAX ADMINISTRATION SERVICE WEBSITE IS CONSTITUTIONAL

ABSTRACT

As of January 1st 2014, It was effective in Mexico amendments to the Federal Tax Code, which establish the obligation to send accounting information to the Tax Administration Service. This obligation had originally needed to be sent by Companies taxpayer contributors from July 2014. However, it has been deferring, to be effective in January 2015. More than 11,000 of the most important enterprises in Mexico filed injunctions against this measure as they found unconstitutional, since it does not respect the legal guarantees in our Constitution. The Nation's Supreme Court of Justice issued a precedent ruling stating that it should grant provisional suspensions applied in legal protection, on the basis that the tax authority still continues with its powers of auditing.

INTRODUCCIÓN

A partir del 1o. de enero de 2014, se modifica el Código Fiscal de la Federación para establecer en sus artículos 28 fracción IV (Themis, 2015), que los contribuyentes deberán ingresar de forma mensual su información contable a través de la página de Internet del Servicio de Administración Tributaria, de conformidad con reglas de carácter general que se emitan para tal efecto. Originalmente se estableció en el artículo Cuadragésimo Tercero Transitorio, de la Resolución Miscelánea Fiscal 2014 (Sisthemis 2105), que dicha obligación tenía que ser cumplida a partir del 1º. de julio del 2014 por las personas morales. En virtud

de que la disposiciones señaladas fueron consideradas como inconstitucionales, toda vez que violan el artículo 16 de la Constitución Mexicana, que establece que nadie puede ser molestado en su persona, bienes o propiedades, sino mediante mandamiento escrito que funde y motive la causa legal, más de 11,000 empresas presentaron amparos ante los Juzgados de Distrito en contra de estas disposiciones, solicitando la suspensión de la obligación de ingresar la contabilidad electrónica, al portal de la autoridad fiscal. La Segunda Sala de la Suprema Corte de Justicia de la Nación después de muchas deliberaciones considero que era procedente conceder la suspensión provisional para que los contribuyentes amparados no ingresarán su contabilidad electrónica al portal del Servicio de Administración Tributaria. Ante la presión ejercida se prorrogó la obligación de ingresar la contabilidad electrónica, ya señalada a partir de enero de 2015, debiéndose ingresar a más tardar el 3 de marzo de 2015 y posteriormente se decretó otra prórroga para ingresar enero de 2015 antes del 3 de abril del 2015. Con la nueva prórroga cientos de empresas que no se habían amparado lo hicieron, y continuaran presentando amparos en los sucesivos plazos que se generen, como ejemplo a partir de que ingresen su contabilidad al portal del Servicio de Administración o Tributaria o bien que reciban un requerimiento de la autoridad fiscal.

REVISIÓN LITERARIA

La relación histórica de este tema, comienza con la obligación de enviar para las personas morales la balanza de comprobación de los meses de julio 2014, agosto 2014, septiembre 2014 y octubre 2014, los cuales de acuerdo al Artículo Décimo Tercer Transitorio de la Segunda Modificación a la Resolución Miscelánea Fiscal 2014, debían ingresarse al portal del Servicio de Administración Tributaria en el mes de enero de 2015 (Sisthemis 2015), y de conformidad con la Regla 2.8.7 de la citada Resolución Fiscal Miscelánea del 2014, cada vez que se modifique dicha balanza de comprobación se debe de ingresar la modificación al portal de la autoridad fiscal dentro de los 3 días hábiles posteriores a cuando tenga lugar la modificación. De acuerdo a lo mencionado, las balanzas de comprobación de los meses de julio a diciembre de 2014, tenían que enviarse durante el mes de enero de 2015. (Victor Regalado, 2014).

Más de 11,000 de las principales empresas de México, decidieron interponer demandas de amparo en contra de estas disposiciones legales, mismas que se presentaron en el mes de agosto de 2014, entre los principales argumentos jurídicos que se señalaron, está la violación al artículo 16 Constitucional, que establece que nadie puede ser molestado en su persona, sino mediante mandamiento escrito que funde y motive la causa legal, y evidentemente en el caso del ingreso de la contabilidad electrónica al portal del Servicio de Administración Tributaria no hay un mandamiento escrito, ni fundado y firmado, ni motivado que justifique por qué los contribuyentes tienen que enviar la contabilidad electrónica al portal de la autoridad fiscal. A la mayoría de estas empresas que solicitaron la suspensión provisional o definitiva, ya se les otorgó dicha suspensión por parte de los Juzgados de Distrito auxiliares, basados en la jurisprudencia emitida por la Segunda Sala de la Suprema Corte de Justicia de la Nación, que establece que se debe de conceder la suspensión para el efecto de que los contribuyentes amparados no tengan que enviar su contabilidad electrónica al portal del Servicio de Administración Tributaria, sobre la base de que no se causa perjuicio al Fisco Federal, en sus facultades de fiscalización, ya que ellos conservan su facultad de hacer auditorías directas o de gabinete a los contribuyentes de impuestos.

Hubo otros argumentos jurídicos que se hicieron valer, en los amparos presentados, entre otros violaciones a los derechos humanos, el que la autoridad fiscal ya contaba con suficientes facultades para realizar la fiscalización, como es el caso de las auditorías directas y las de gabinete, violación al principio de seguridad jurídica, violaciones a la garantía de audiencia consagrada en el artículo 14 Constitucional, violaciones en materia de derechos humanos, al tener que subir información confidencial, con el riesgo de que cualquier persona tenga acceso a la misma, entre otros argumentos. A la fecha aún no se ha emitido sentencia en la primera instancia, por lo que habrá que esperar el resultado de las sentencias y posteriormente en un segundo nivel el criterio que al respecto emita la Suprema Corte de Justicia de la Nación. No obstante lo anterior, el día 13 de noviembre de 2014, se publica la Ley de Ingresos de la Federación para el ejercicio fiscal de 2015

(Themis 2015), el cual en su artículo 22 fracción IV, establece que el ingreso de la información contable a través de la página de Internet del Servicio de Administración Tributaria deberá realizarse a partir del año 2015, de conformidad con el calendario que tal efecto establezca dicho órgano desconcentrado mediante reglas de carácter general. Lo anterior significa que por el año de 2014, no se tuvo la obligación de enviar la contabilidad electrónica al portal del Servicio de Administración Tributaria, también el 18 de diciembre de 2014, se publicó la 7ª Modificación a la Resolución Miscelánea Fiscal 2014 (Sisthemis 2015), que en cumplimiento de la Ley de Ingresos de la Federación para el ejercicio fiscal de 2015, da a conocer un nuevo calendario de fechas para cumplir con la obligación de enviar la información contable al portal del Servicio de Administración Tributaria. En este nuevo calendario, se ratifica que será a partir de enero del 2015, que se tendrá la obligación de enviar la información contable al portal del Servicio de Administración Tributaria, consistente en el catálogo de cuentas y la balanza de comprobación mensual, únicamente los siguientes contribuyentes:

Instituciones que componen el sistema financiero

Contribuyentes cuyos ingresos acumulables declarados o que se debieron declarar correspondientes al ejercicio 2013 sean iguales o superiores a 4 millones de pesos.

Los contribuyentes que tendrán la obligación de enviar su contabilidad electrónica al Servicio de Administración Tributaria a partir del 1º. de enero del 2016, serán los siguientes contribuyentes:

Contribuyentes cuyos ingresos acumulables declarados o que se debieron declarar correspondientes al ejercicio 2013 sean inferiores a 4 millones de pesos. Contribuyentes dedicados a las actividades agrícolas, silvícolas, ganaderas o de pesca que cumplan con sus obligaciones fiscales en los términos de la Ley del Impuesto Sobre la Renta Las personas morales con fines no lucrativos Contribuyentes que se inscriban en el Registro Federal de Contribuyentes durante el ejercicio 2014 o 2015. Los contribuyentes que se inscriban al Registro Federal de Contribuyentes a partir del 1º. de enero del 2016, tendrán la obligación de enviar su información a partir del primer día del mes siguiente a aquel en que se inscribieron.

Nuevamente el 3 de marzo del 2015, se publica la primera modificación a la Resolución Miscelánea Fiscal, que señala que la información del mes de enero de 2015, deberá enviarse al portal del Servicio de Administración Tributaria, en la fecha en que se debe enviar la información del mes de febrero del 2014, por lo que a la fecha en que se escribe este artículo debe quedar como sigue:

Tabla 1: Fechas En Que las Personas Morales y Personas Físicas Deben Ingresar Su Contabilidad Electrónica al Portal del Servicio de Administración Tributaria.

Més Ejercicio 2015	Personas Morales	Personas Físicas
Enero	3 De Abril De 2015	5 De Abril De 2015
Febrero	3 De Abril De 2015	5 De Abril De 2015
Marzo	3 De Mayo De 2015	5 De Mayo De 2015
Abril	3 De Junio De 2015	5 De Junio De 2015
Mayo	3 De Julio De 2015	5 De Julio De 2015
Junio	3 De Agosto De 2015	5 De Agosto De 2015
Julio	3 De Septiembre De 2015	5 De Septiembre De 2015
Agosto	3 De Octubre De 2015	5 De Octubre De 2015
Septiembre	3 De Noviembre De 2015	5 De Noviembre De 2015
Octubre	3 De Diciembre De 2015	5 De Diciembre De 2015
Noviembre	3 De Enero De 2016	5 De Enero De 2016
Diciembre	3 De Febrero De 2016	5 De Febrero De 2016
Cierre De Ejercicio	20 De Abril De 2016	22 De Mayo De 2016

Esta tabla detalla las fechas de ingreso de la contabilidad electrónica al portal de la autoridad fiscal, incluyendo el cierre del ejercicio para personas físicas y morales

Según un comunicado del Servicio de Administración Tributaria (Servicio de Administración Tributaria , 2014), solo 203,807 contribuyentes tendrán la obligación de enviar su catálogo de cuentas y balanza de

comprobación mensual a partir del 1° de enero de 2015, difiriendo la obligación para la mayoría de contribuyentes hasta el 1° de enero de 2016. Nuevamente cientos de empresas se ampararon en contra de las nuevas disposiciones que establecen que se debe de ingresar la contabilidad electrónica al portal del Servicio de Administración Tributaria a partir del mes de enero de 2015. Para aquellas empresas que aún no han presentado sus amparos, todavía existen dos plazos para hacerlo, que son 15 días hábiles siguientes a la fecha en que ingresen su contabilidad electrónica al portal citado, lo que se conoce como amparo heteroaplicativo o bien a más tardar 15 días hábiles de haber recibido el primer requerimiento de la autoridad fiscal federal.

METODOLOGÍA

Se siguió el método cualitativo, la muestra consistió en encuestar a 64 estudiantes universitarios de diversas universidades de Ciudad Juárez, Chihuahua, México, preguntándoles si consideraban que el ingresar la contabilidad electrónica al portal del Servicio de Administración Tributaria es constitucional o no y también se les preguntó si consideraban que a los contribuyentes amparados se les debe de otorgar o no la suspensión provisional, por parte de los Juzgados de Distrito. También se determina el número de estudiantes universitarios de acuerdo a su sexo. Lo anterior fue buscando que la muestra encuestada fuera representativa de los dos géneros, así como de diferentes edades buscando de acuerdo con (Hernández Sampieri, Roberto, 2006), para consolidar la credibilidad desde el trabajo de campo, ambiente o escenario, es conveniente escuchar todas las “voces” en la comunidad bajo estudio, en entrevistas estar pendientes de la comunicación verbal, pero también de la no verbal. Como consideraciones de la muestra, el presente estudio es un estudio no probabilístico, de acuerdo con Hernández (2006), “la elección entre la muestra probabilística y la no probabilística se determina con base en el planteamiento del problema, las hipótesis, el diseño de investigación y el alcance de sus contribuciones. Se llevó a cabo un estudio de conveniencia debido a que solamente un grupo de 64 estudiantes universitarios de Ciudad Juárez, Chih. fueron encuestados, aunque este tema es del conocimiento público, razón por la cual todos los encuestados conocen del mismo.

RESULTADOS

De los 64 universitarios encuestados fueron 23 hombres y 41 mujeres de diversas universidades de Ciudad Juárez, Chihuahua, México. A la pregunta ¿Usted opina que las disposiciones legales que obligan a los contribuyentes a ingresar su contabilidad electrónica al portal SAT son Constitucionales?, contestaron que no es inconstitucional la obligación de ingresar la contabilidad electrónica al portal del Servicio de Administración Tributaria el 56% y el 44% que sí lo es. Obviamente habrá que esperar al respecto como ya se manifestó la opinión final de la Suprema Corte de Justicia de la Nación quien será la que tome la decisión final que afectará prácticamente a todas las empresas contribuyentes del fisco federal en México, así como también a algunas personas físicas.

A la pregunta ¿Usted opina que a las empresas que han presentado amparo en contra de ingresar la contabilidad electrónica al SAT, se les debe de conceder o no la suspensión provisional, mientras se dicta la sentencia correspondiente? 62% opinó que sí se les debe conceder la suspensión provisional a las empresas que han presentado el amparo en contra de la contabilidad electrónica para el efecto de que no tengan obligación de ingresarla mientras se decide respecto al fondo de los amparos presentados en primera instancia, y un 38% consideró que no se les debe conceder el beneficio de la suspensión provisional o definitiva, por lo que se entiende que estas empresas sí deben ingresar su contabilidad electrónica al portal del Servicio de Administración Tributaria, mientras se decide el fondo del juicio de amparo.

Tabla 2: Personas Encuestadas, Según Su Género

	Cantidad	Porcentaje
Hombres	23	36 %
Mujeres	41	64 %

Figura 1 (Género)

Esta tabla 2 señala cuantos hombres y cuantas mujeres estudiantes universitarios fueron encuestados.

Tabla 3: Respuesta a la Pregunta ¿Usted Opina Que las Disposiciones Legales Que Obligan A Los Contribuyentes a Ingresar Su Contabilidad Electrónica al Portal SAT Son Constitucionales?

	Cantidad	Porcentaje
Si	28	44%
No	36	56%

FIGURA 2

Esta tabla 3 nos señala el porcentaje de entrevistados que consideran que la obligación de ingresar la contabilidad electrónica al portal del Servicio de Administración Tributaria es constitucional y los que consideran que viola la Constitución Federal Mexicana.

Tabla 4: Respuesta a la Pregunta ¿Usted Opina Que las Empresas Que Han Presentado Amparo En Contra de Ingresar la Contabilidad Electrónica al SAT, Se les Debe de Conceder O no la Suspensión Provisional, Mientras Se Dicta la Sentencia Correspondiente?

	Cantidad	Porcentaje
Si	40	62%
No	24	38%

Figura 3

Esta tabla nos señala el porcentaje de entrevistados que consideran que a las empresas amparadas se les debe conceder la suspensión provisional o definitiva

Podemos concluir que de las 64 personas que contestaron las encuestas, la mayoría concluyo que la obligación de ingresar la contabilidad electrónica al portal del Servicio de Administración Tributaria es constitucional, con un 56% y solamente un 44% opinó que es inconstitucional. Respecto a que si se debe o no otorgar la suspensión provisional a los contribuyentes amparados, la mayoría opinio que sí con un 62% y solamente un 38% opino que no debe de otorgarse tal suspensión provisional.

Limitaciones

Respecto al sexo de los entrevistados fueron 41 mujeres y 23 hombres, por lo que estas cifras constituyen una limitación a la investigación. Por supuesto habrá que esperar como se desarrolla la sentencia final que dicta la Suprema Corte de Justicia de la Nación sobre este tema, la cual podrá tardar algunos meses y en su caso esto se convertira en la verdad jurídica.

PROPUESTA PARA RECUPERAR LA PERSPECTIVA DE DESTINO TURÍSTICO SUSTENTABLE CON BASE EN EL ANÁLISIS DE SU DESEMPEÑO Y EVOLUCIÓN: CASO CANCÚN

Christine Elizabeth Mc Coy, Universidad del Caribe

RESUMEN

Cancún es un destino que nació hace 45 años y que ha llegado a convertirse en el principal polo turístico de sol y playa de México, con una captación de 4, 013,032 turistas y una derrama económica de 4,315 millones de dólares a noviembre 2014. El modelo de desarrollo con el que se conceptualizó Cancún estuvo basado en un amplio estudio de capacidad de carga que evaluó la infraestructura necesaria basado en una determinada cantidad de cuartos y tamaño de población fija en el centro de población, todo a un horizonte de 30 años. Fue la primera zona turística en contar con un plan maestro de desarrollo que daría vida a los Centros Integralmente Planeados en México, con una visión innovadora para el momento porque contempló un polo turístico sustentable y equilibrado con interesantes oportunidades de empleo e inversión, siempre en armonía con el entorno natural. En este trabajo se realiza un diagnóstico de la situación que ha llevado a Cancún a perder la sustentabilidad. Para lo anterior se realizó una evaluación del manejo de usos de suelo de la Zona turística para con ello realizar un análisis de la capacidad de carga turística actual con base dos aspectos: 1) El perfil del turista mediante el análisis de la tasa de crecimiento turística y la tasa de crecimiento de la derrama y 2) los impactos generados por la actividad turística en la capacidad de carga biótica, ambiental, económica, cultural y social. De tal forma que se logró encontrar que el perfil del turista se ha visto afectado con lo que se ha impactado la sustentabilidad turística; por otra parte la capacidad de carga biótica y ambiental se encuentra rebasada lo que representa una afectación en la sustentabilidad ambiental y la capacidad de carga económica y cultural están igualmente deterioradas por lo que tampoco se cumple la sustentabilidad social a pesar de ser aceptable la capacidad de carga social. Con lo anterior se muestra que el crecimiento acelerado y desordenado de Cancún lo ha llevado a enfrentar una situación que lo aleja de ser un destino turístico sustentable.

PALABRAS CLAVE: Capacidad de Carga Turística, Destino Turístico Sustentable, Desarrollo Sustentable Cancún

ABSTRACT

Cancun was born 45 years ago and has become the main Sun and beach tourist destination in Mexico with 4,013,032 tourists and an economic impact of \$ 4,315 million up to November 2014. The model of development that conceptualized Cancun was based on a comprehensive study of carrying capacity that evaluated the infrastructure needed based on a certain amount of rooms and the population size that would live in down town in 30 years. It was the first tourist destination to have a development master plan that gave life to the concept of integrally planned centers in Mexico. At the time this was an innovative vision because it contemplated a balanced and sustainable tourist destination with interesting opportunities of employment and investment, always in harmony with the natural environment. In this work a diagnosis of the situation that led Cancun to lose its sustainability is performed. For this a assessment of the management of land-use of the touristic zone was evaluated to be able to make an analysis of the tourist current capacity based on two aspects: 1) The profile of tourists through the analysis of tourist growth rate and the growth rate of the income and 2) the impacts generated by tourism activity in the biotic load, environmental, economic, cultural and social capacity. In such a way that it was found that the profile of tourists has been affected so it has impacted tourism sustainability; on the other hand the biotic and

environmental carrying capacity is exceeded what represents an impact on the environmental sustainability, the economic and cultural carrying capacity are equally damaged, so the social sustainability despite being acceptable is not met. The foregoing demonstrates that accelerated and disordered growth has led Cancun to confront a situation that keeps it from being a sustainable tourist destination.

KEY WORDS: Touristic Carrying Capacity, Sustainable Tourist Destination, Sustainable Development Cancun

INTRODUCCIÓN

El turismo se ha convertido en uno de los sectores socioeconómicos de mayor impacto en el mundo y uno de los principales componentes del comercio internacional, donde el 6% de las exportaciones mundiales se generan gracias a este sector. De acuerdo a la Organización Mundial del Turismo (OMT), se espera que para el año 2030, existan cerca de 1.800 millones de turistas internacionales, mientras que los ingresos se contempla sean del orden de los \$ 2 trillones de dólares (OMT, 2014). Tanto el turismo internacional como doméstico están creciendo rápidamente en países en desarrollo a la par que impulsan su sector turístico (OMT, 1998). De acuerdo al último reporte de la OMT el turismo representa 9% del PIB mundial y genera 1 de cada 11 empleos (OMT, 2014).

En 2012 México recibió 23,4 millones de turistas que generaron un ingreso de 12,739 millones de dólares. En esta sintonía, el turismo representó el 80.1% del ingreso de divisas al país, contribuyó con el 8.4% del PIB y generó 2 millones de empleos directos de acuerdo a los datos presentados por el Consejo de Promoción Turística de México citados por (sistema integral de información de mercados turísticos (SIIMT) , 2014). Quintana Roo, México no es la excepción, con un crecimiento del PIB estatal del 6.8 y de 6.6 en el PIB del sector terciario (Secretaría de Economía, 2014). Tiene una contribución del 11.3% al PIB turístico Nacional (Enciclopedia de los municipios y delegaciones de México, 2014). La actividad turística, en los últimos años se ha convertido en un eje toral para muchas economías a nivel mundial y en particular para Cancún, Quintana Roo, que destaca por su turismo costero de Sol y Playa y que recibió en 2013 un total de 3 millones 728 mil 247 turistas de acuerdo a cifras oficiales de gobierno del estado (SEDETUR, 2013) donde ha sido evidente el fuerte desarrollo que ha mostrado el destino a lo largo de su vida.

La competitividad turística implica tres conceptos básicos: 1) Rentabilidad.- que significa generar riqueza a través del uso eficiente y eficaz de los recursos; 2) Sustentabilidad para asegurar que el desarrollo se logre en equilibrio con los recursos ecológicos, sociales y económicos de la región y 3) Comparabilidad que es definir conceptos medibles y consistentes que sean comparables a través del tiempo y el espacio (Tecnológico de Monterrey , 2012). Para Coccossis (2001) las áreas costeras, como es el caso de Cancún, están normalmente asociadas al turismo masivo, a las construcciones de gran escala e infraestructura, al desarrollo intensivo del uso de suelo y a una urbanización extensiva lo que podría repercutir en la sustentabilidad del destino. Es innegable admitir que esta actividad turística genera presión sobre el ambiente natural y cultural de las entidades donde se desarrolla con lo que afecta las estructuras sociales, el medioambiente, el patrón de las actividades económicas y el uso de suelo (Coccossis, 2001).

Como medida de control es importante reconocer que existe una capacidad de carga de acogida o capacidad de carga turística que busca determinar el uso máximo que puede hacerse de un lugar sin deteriorar sus recursos, reducir los niveles de satisfacción de los turistas o de impactos negativos sobre la sociedad, la economía o la cultura local como lo menciona Díaz (Flores & Parra 2007). Sin embargo, esta capacidad de carga no es un concepto científico o una fórmula que pretenda encontrar un número fijo, los límites que se establezcan deben de ser considerados como una guía y deberán de ser constantemente monitoreados y

complementados por otros estándares de acuerdo a Saveriades (Coccossis, 2001, 2004) El incremento de flujo turístico, ya sea nacional o internacional, por arriba de la capacidad de carga debido al incremento de hoteles y centros comerciales deteriora el área de acuerdo a Lindberg (Brilliant, Vince, & Pradeepkumar, 2013) y está inversamente relacionado con la calidad de vida de quienes habitan dichos destinos (Hardin, 2003).

Marco Teórico

La sustentabilidad y el desarrollo sustentable de acuerdo a Bell y Morse (2003) son enfoques multidisciplinarios, multi-escala y multi-perspectiva porque abarcan la economía, la cultura, las estructuras sociales, el uso de recursos entre otros elementos (Díaz, 2011). La Comisión Mundial de Desarrollo Ambiental (WCED) fue creada bajo la dirección de Gro Harlem Brundtland, quien junto con un grupo de expertos publicó en 1987 un reporte llamado Nuestro Futuro Común, mejor conocido como reporte Brundtland. Según Jamienson, (1998) el propósito de la Comisión Brundtland de articular la palabra sustentable con el término desarrollo fue reconciliar las demandas del medio ambiente y las implicaciones de la pobreza global (Díaz, 2011). El reporte hace énfasis en que para que el desarrollo sustentable alcance los objetivos comunes debe de existir voluntad política (López, 2009). Todos los trabajos realizados en estas cumbres han ayudado a que el término desarrollo sustentable evolucione y en la actualidad se reconozca que éste tiene tres dimensiones (la sustentabilidad económica, social y la medioambiental) y que cada una de ellas es igualmente importante y que necesariamente tienen que estar en equilibrio si se va a hablar de sustentabilidad.

En resumen, el desarrollo sustentable se basa en el concepto de satisfacer necesidades y además se refiere a la suma de sustentabilidades, mientras que un desarrollo sostenible es la capacidad de mantener una situación en el tiempo y se encuentra más relacionado con el crecimiento (Hernández & Ginés, 2008). En el ámbito turístico este desarrollo sustentable es trascendente porque es precisamente la belleza de los lugares lo que le da razón de ser. Además los ecosistemas en esos ambientes suelen ser sumamente vulnerables, de ahí la importancia de la planeación a largo plazo que busque mantener la eficiencia económica, la conservación ambiental y la equidad social. De acuerdo a Acerenza (2009) el deterioro de los recursos naturales puede ser consecuencia de la sobreexplotación de los recursos ocasionada por el uso turístico de los mismos más allá de su capacidad de soporte. Hay que recalcar que el desarrollo sustentable para el turismo es de gran trascendencia porque es precisamente la belleza de los lugares, máxime en el Caribe Mexicano, donde se localiza Cancún, lo que le da razón de ser a esos destinos. Por lo anterior, y para frenar los aspectos negativos, la planificación de los centros turísticos integrales brinda especial interés a los estudios de preservación ecológica, poniendo en práctica acciones que mantengan en equilibrado el ecosistema del sitio concreto del desarrollo y su área de influencia (García, 1992).

Los estudios de capacidad de carga turística deberían constituir un elemento poderoso en el diseño de la política pública del sector ya que están llamados a demarcar los límites del crecimiento de la actividad, convirtiéndose en un sistema de alarma rápida según la Organización Mundial del Turismo (Rivas, 1997). Algo en lo que si concuerdan varios de los autores (Rivas, 1997), (Reily, 1991). (Getz, 1963) (Coccossis, 2001) es que si la capacidad de carga turística se ve excedida el desarrollo turístico se verá obstruido y que además sólo los turistas mismos pueden determinar si se ha logrado una satisfacción personal porque ésta es estrictamente experiencial. (Watson y Kopachevsky, 1996). En países desarrollados con vocación turística, la capacidad de carga turística es importante ya que mediante su aplicación se logrará una adecuada conservación y preservación de los atractivos mientras que cuando no existen estas técnicas, ni medidas de amortiguamiento y niveles de tolerancia de suelo, flora y fauna, a lo que se enfrenta un destino es a la llegada masiva de personas, congestionamientos, ruido, basura, ruptura de ciclos de vida animal, extinción de flora y fauna, contaminación humana de ríos y playas (Castellanos, 2012).

METODOLOGIA

En este trabajo se reportan los resultados de una investigación más amplia donde se realizó un diagnóstico para conocer si Cancún ha perdido la sustentabilidad turística con la que originalmente fue planeado. Para lo anterior se efectuó una evaluación del manejo de usos de suelo de la zona turística y con ello ejecutar un análisis de la capacidad de carga turística actual con base dos aspectos: 1) El perfil del turista mediante el análisis de la tasa de crecimiento turística y la tasa de crecimiento de la derrama y 2) los impactos generados por la actividad turística en la capacidad de carga biótica, ambiental, económica, cultural y social.

Lo anterior se efectuó considerando una investigación transversal de carácter mixto ya que se utilizarán herramientas cuantitativas y cualitativas para determinar la capacidad de carga turística, realizando primero una revisión bibliográfica y documental del tema para proceder posteriormente a la evaluación del destino. La primera parte de la evaluación del destino consistió en realizar un estudio comparativo de los distintos planes de desarrollo urbano que la entidad ha tenido a lo largo de su vida, entre los que se estudió el Plan Maestro de 1982, el plan de desarrollo urbano de 1993, el plan de desarrollo de 2005 y las dos versiones del programa urbano actual 2013-2030, que fue derogado y el 2014 -2030 autorizado. Lo anterior sirvió para conocer el manejo del espacio en el tiempo de vida del polo turístico.

Mediante la aplicación de diversos instrumentos como fichas de recursos turísticos para establecer el estado de las playas, cuestionarios administrados a turistas, grupos focales donde se entrevistó a población local, evaluación de material estadístico, recopilación de datos y seguimiento de diversos estudios aplicados en la zona de estudio para conocer el manejo de recursos en los hoteles como agua, desechos sólidos, energía y aguas residuales así como la evaluación del estado que guarda la flora, fauna y recursos naturales como el Sistema Lagunar Nichupte, entrevista con expertos, valoración de los vestigios arqueológicos y levantamientos fotográficos durante 2012, 2013, 2014 se realizó el diagnóstico de la Zona Hotelera de Cancún. Con ello fue posible establecer la Capacidad de Carga Turística integrada por el perfil del turista y por los impactos generados por la actividad turística mediante la determinación de la Capacidad de Carga Biótica, Ambiental, Económica, Social y Cultural para saber si la Zona Hotelera cumple con las características de un destino con sustentabilidad turística.

Marco Referencial

Cancún fue concebido y planificado por técnicos mexicanos en los setenta, que buscaron aprovechar los recursos turísticos de la zona, sin olvidar valorar la naturaleza. Lo anterior, contribuyó a los trabajos del Plan de Desarrollo Urbano del Centro de Población de Cancún, que quedó inscrito en el Plan Maestro del proyecto turístico, donde quedan plasmados los lineamientos que le dieron orden al nuevo destino (FONATUR, 1982). Esa planeación siguió, sin nombrarlo de esta forma, una idea de sustentabilidad donde se procuraba equilibrar los distintos actores: la sociedad, la economía, que en este nuevo lugar estaría enfocada al turismo, y la naturaleza, misma que se reconocía como el principal atractivo del lugar. Es importante recordar que Cancún es un Centro Integralmente Planeado (CIP) y que estos polos turísticos buscan contribuir al desarrollo regional sustentable, a la generación de empleo y a la captación de divisas. Cancún, en un primer momento, si fue planeado así. El plan 1982 muestra un intenso trabajo de evaluación de la zona, donde se proyectaron capacidades de inmuebles, usos de suelo específicos y diversidad de actividades todo en equilibrio con el medio ambiente en general.

Dicho plan contemplaba para el 2000 la Zona Hotelera contaría con una planta y equipamiento turístico para aproximadamente 22 mil cuartos hoteleros de todas las categorías (Fonatur, 1982). Sin embargo, para ese año la meta era más cercana de lo esperado ya que Cancún contaba con 24,702 cuartos entre la zona hotelera y el centro, de los que 18,000 aproximadamente eran sólo de la Zona Hotelera. De acuerdo al último Plan de Desarrollo Urbano 2013-2030 (IMPLAN, 2013) se planeaba autorizar hasta 65,000 cuartos

en la Zona Hotelera, lo que representaba casi triplicar la capacidad de carga. Sin embargo, fue derogado porque se cuestionó el incremento de capacidad hotelera que se proponía en la zona turística. Aún así el Programa de Desarrollo Urbano que finalmente fue aceptado (2014-2030) autoriza un crecimiento de 46,098 plazas hoteleras.

RESULTADOS

Resultados de Manejo de Usos de Suelos en La Zona Turística – Hotelera

Después de realizar un diagnóstico del manejo del uso de suelo, principalmente turístico- hotelero (TH), en la Zona Hotelera de Cancún fue posible encontrar que:

La cantidad de cuartos autorizados en el PDU 2014 – 2030, de acuerdo a los metros de terreno que tienen, un 20% de los establecimientos han construido más cuartos de los permitidos.

El tope fue rebasado en 4,521 habitaciones, lo que equivale a un incremento del 20%.

El PDU 2014-2030, vigente desde octubre de 2014, cambió las densidades de los usos de suelo y con ello 70% de los lotes hoteleros pueden incrementar la cantidad de cuartos que tienen con lo que incrementa la densidad de las construcciones.

El nuevo PDU también autorizó al 80% de los hoteles de la Zona Hotelera incrementar la cantidad de pisos permitiendo a más hoteles tener una altura de 20 pisos en una zona que no es tierra firme, sino una isla, propensa a huracanes.

Sólo el 40% de los predios con uso de suelo Turístico Hotelero (TH) se desarrollaran como hotelero, con lo que se amenaza la vocación del área.

Un total de 18 proyectos recreativos en la Zona Hotelera, originalmente planteados en el plan maestro, fueron abandonados.

El cambio de usos de suelo ha sido una constante en el destino.

Resultados de la Capacidad de Carga Turística

Capacidad de Carga Biótica: Definida para este trabajo como: El nivel que mantiene la capacidad natural de amortiguamiento del ecosistema para auto-depurarse y hacer frente a los fenómenos naturales como tormentas o huracanes. Al analizar los resultados fue posible concluir que la Capacidad de Carga Biótica ha sido rebasada porque el nivel de amortiguamiento del ecosistema para auto-depurarse se ha visto afectada.

Capacidad de Carga Ambiental: Definida para este trabajo como: Presencia que no afecta al medio ambiente. Los hallazgos fueron los siguientes: Con los resultados fue posible concluir que la Capacidad de Carga Ambiental se ha visto rebasada porque la presencia turística está afectando el medio ambiente.

Capacidad de Carga Económica: Definida para este trabajo como: El nivel para garantizar bienestar para la región. Los hallazgos fueron que la Capacidad de Carga Económica se ha visto afectada porque la presencia turística dado que el modelo predominante no está generando el bienestar esperado para toda la población como debería y no solamente para unos cuantos como si lo hace. Lo anterior es muestra de que este modelo turístico que actualmente se maneja no genera desarrollo para la comunidad en general.

Capacidad de Carga Social: Definida para este trabajo como: La presencia que no afecta la satisfacción del turista o la comunidad. Al estar la Capacidad de Carga Social basada en la percepción de los individuos ésta es subjetiva por lo que a pesar de las problemáticas antes mencionadas es posible concluir que la Capacidad de Carga Social es aceptable.

Lo anterior se presenta del lado de la población porque ésta suele comprar con lo que sería su situación en su lugar de origen, como se percibió al momento del levantamiento. Esta situación complica poder dar solución a las demás problemáticas porque existe una especie de rechazo a admitir que hay alguna problemática real en el destino que necesita atención. Por otra parte, los turistas al viajar la mayoría en paquete Todo Incluido están más tiempo en el hotel, salen a restaurantes y bares alrededor de su hotel y toman tours organizados por gente que se encuentra en el establecimiento entonces se encuentran en un ambiente se podría decir controlado donde tienen poco contacto con la realidad que vive el destino.

El hecho de que el turista no se percate de las problemáticas del destino, es decir que éstas no lo hayan alcanzado es bueno dado que Cancún es una entidad que vive del turismo y es mejor arreglar cualquier situación antes de que afecte al turismo que cuando ya le afecta y éste busca otro destino, porque entonces es más difícil recuperarlo.

Capacidad de Carga Cultural Definida para este trabajo como: La presencia que no amenaza la cultura local, valores o tradiciones. Los resultados fue posible concluir que la Capacidad de Carga Cultural se encuentra afectada dado que la presencia turística si ha amenazado la cultura local, valores y tradiciones dado que esta zona estaba íntimamente ligada a la Cultura Maya.

Los elementos mostrados en este apartado de análisis de Capacidad de Carga Turística con sus cinco vertientes que evalúan los impactos y el perfil del turista están relacionados con la sustentabilidad económica al ser el turista el eje generador de recursos y desarrollo en el destino; la sustentabilidad ambiental a través de la capacidad de carga biótica y la ambiental y la sustentabilidad social mediante la capacidad de carga económica, la capacidad de carga social y la capacidad de carga cultural generadoras de bienestar y desarrollo social y cultural del destino todos elementos de la sustentabilidad turística. De tal forma que es posible observar que el destino turístico perdió el objetivo original de generar desarrollo regional así como de mantener un equilibrio entre la economía del polo, la naturaleza existente y la población que se formaba con lo que se alejó de la sustentabilidad turística.

CONCLUSIONES

Cuando nace Cancún faltarían aún unos años para que el concepto de “sustentabilidad” fuera creado, ya que este surge formalmente hacia 1986 con el informe Brundtland. Sin embargo, en ese plan maestro es posible ver las tres esferas iniciales de la sustentabilidad y esa búsqueda por contar con un balance entre la belleza natural que capturaba a quienes impulsaban el proyecto que querían compartir con el mundo a través del turismo y aquellos pioneros que seleccionaban ese nuevo paraíso como su hogar. Con el paso del tiempo entre los intereses personales de los gobernantes, la cúpula empresarial y el poder económico de las cadenas hoteleras, nacionales, en un inicio, e internacionales después, que llegaban a la zona, se rompieron las condiciones indispensables para conseguir en Cancún el desarrollo urbano armónico y sustentable.

La ingenuidad del plan maestro y las fuerzas externas, como el poder de la ambición de quienes llegaban, generaron que este plan hoy sea uno más de los que se escribe en un escritorio que se alejó mucho de la realidad. Los planes subsecuentes de 1993 e incluso el programa de desarrollo urbano de 2005 son planes que buscan controlar el desorden del destino, pero que nuevamente han sido poco eficaces y hasta ahora el nuevo plan 2014- 2030 parece que también va a correr con la misma suerte si no se toman medidas ya que a seis meses de vida ya hay inversionistas solicitando permisos para alterarlo y poder así construir sus proyectos. En un inicio lo que imperaba era una visión de búsqueda de armonía con el entorno, pero conforme creció la demanda turística, en lugar de pensar en la exclusividad se decidió modificar sin razón

y en áreas de “lo espectacular” como dice Savignac, de esa forma se construyó más y más y se masificó, perdiendo con ello todo estilo con lo que cayó en un consumismo galopante que alejó a ese turista de alto poder adquisitivo que un día gustó de Cancún. El modelo turístico en Cancún en lugar de incluir a su población como parte del proyecto, la excluye y le limita el acceso a las playas. De acuerdo a estudios realizados solo el 8% de los habitantes ve en la playa una fuente de entretenimiento pero mucho está relacionado con esa “exclusividad” que se le ha dado donde playas se concesionan a hoteles y la población es amedrentada por guardias de seguridad para evitar que “incomoden a sus huéspedes”.

La definición de calidad de vida es aquel que se utiliza para determinar el nivel de ingresos y comodidades que una persona, un grupo familiar o una comunidad poseen en un momento específico. Otro elemento de la definición es una cuestión espiritual o emotiva que se establece a partir de la actitud que cada persona o comunidad tiene para enfrentar el fenómeno de la vida. Quizás en materia trabajo los cancenenses si están mejor que en sus lugares de origen. ¿Pero es eso realmente Calidad de Vida? Si se analizan los ingresos que se perciben y las horas trabajadas eso no sonaría tan bueno cuando es poco el tiempo para uno mismo. De acuerdo a estadísticas nacionales en 2011 el 64.22% de la población sufría problemas de alcoholismo, 58.25 % presentó problemas de drogadicción, existe una tasa de homicidios del 12.85%, 95.64% de la población consideraba elevado el grado de violencia, la percepción del 72.97% de la población era que se incrementó la violencia y la tasa de suicidios volvió a incrementarse y está en 2013 en 8.52%. Datos como estos muestran que quizás el destino turístico se posiciona y genera muchas ganancias económicas para algunos, pero en la entidad no hay desarrollo económico y menos sustentable.

Un destino que es bien evaluado por sus turistas y atiende las problemáticas que se le presentan, en este caso de pérdida de sustentabilidad, tiene mayor oportunidad de seguir bien posicionado entre sus visitantes. Por otra parte es más fácil atender los problemas cuando se encuentra uno bien posicionado que cuando ya se ha perdido posicionamiento. Pero para lo anterior es importante el compromiso de las autoridades y la participación real de la ciudadanía, esta debe de estar informada y ser proactiva dado que la sustentabilidad turística no se recupera como magia sino que requiere de la capacidad de organización de la gente para usar de manera eficiente los recursos y respetar el ordenamiento territorial establecidos en los planes y programas de desarrollo. Esos planes y ordenamientos son necesarios porque los mecanismos de mercados presentan una fuerte incapacidad para regularse y para reparar los desequilibrios y externalidades que plantea el crecimiento. Esta situación queda evidenciada en la poca voluntad de los hoteleros de comprometerse a arreglar la erosión que las playas sufrieron a principios de 2015, exigiendo que sea el gobierno, a través de los impuestos ciudadanos que las arregle, cuando son ellos los que colaboraron a la afectación de las mismas debido a que se construyeron a pie de playa, y olvidando que son ellos los más beneficiados con los ingresos que los turistas dado el esquema turístico actual donde predomina el paquete todo incluido. Uno de los objetivos iniciales que el proyecto Cancún tenía era que el turismo sirviera de impulso para el desarrollo regional para la zona. Esta meta no ha sido alcanzada ya que para que existiera un desarrollo regional, si es una entidad principalmente turística, entonces se deberían de estar produciendo los insumos que la industria requiere, desde alimentos hasta insumos materiales como blancos, mantelería, materiales de construcción entre otros en el estado.

El éxito económico de Cancún es claro, pero es momento de reflexionar, como lo dice Enríquez Savignac, acerca de si ese éxito económico aún persiste y más importante si se ha reflejado en un desarrollo sustentable de equilibrio y equidad social y dejar de pensar en la fórmula de más hoteles con más cuartos van a traer más turistas. Si se quiere un destino sustentable se debe de hacer y seguir una planeación sustentable. Este es un trabajo que se centra en el análisis de Zona Hotelera del principal destino turístico de México, un destino que impulsó un nuevo modelo de cómo hacer turismo en el país, bajo el esquema de Centro Integralmente Planeado” que en su momento se pensó exitoso y por lo mismo fue replicado. A la vuelta de los años se observan las debilidades del mismo, pero las condiciones de este ya se reproducen en otros lugares y continúa sin aceptarse que debe de ser repensada es forma de turismo.

RESUMEN

El presente trabajo es un estudio exploratorio que busca determinar los factores que motivan a estudiantes universitarios para optar por un intercambio, y los factores que influyen al momento de elegir un destino. Para esto se aplicó un cuestionario a 630 estudiantes universitarios, de los cuales el 91% estaba interesado en participar en un intercambio pero solo un 9% había postulado. Se encontraron 7 factores que explican el deseo de estudiar en el extranjero: vivir nuevas experiencias, ampliar la red de contactos, influencia de terceros, motivos laborales, autorrealización, turismo y motivos académicos. Para el caso de la elección de un destino se encontraron 8 factores: el acceso y la oferta académica de destino, calidad de vida, costos, conectividad de la ciudad, turismo, cercanía y contactos, motivaciones sociales, y el idioma. Por último se evidenciaron tres segmentos de estudiantes: Conservadores, más interesado en motivos académicos; Viajeros, abiertos a conocer nuevas realidades, ampliar su red de contactos y vivir experiencias nuevas; y Exploradores motivados por el turismo y viajes en el lugar de destino. Futuros estudios deberían enfocarse en encontrar un modelo causal entre los factores que motivan el intercambio en estudiantes universitarios.

PALABRAS CLAVE: Estudiantes, Intercambio, Motivaciones

EXCHANGE MOTIVATIONS IN UNIVERSITY STUDENTS

ABSTRACT

This paper is an exploratory study that seeks to determine the factors that motivate college students to opt for an exchange program, and factors that influence when choosing a destination. For this a questionnaire were applied to 630 college students, of which 91% were interested in participating in an exchange but only 9% had postulated. 7 factors that explain the desire to study abroad were found: new experiences, expanding the social network, influence of others, work reasons, self realization, tourism and academic reasons. When choosing a destination eight factors were found: Access and academic offerings, quality of life, costs, connectivity of the city, tourism, closeness and contacts, social motivations, and language. Finally, three cluster were showed: Conservatives, more interested in academic reasons; Travelers, open to meeting new realities, expand their social network and have new experiences; and Explorers motivated by tourism and travel at the place of destination. Future studies should focus on finding a causal model among the factors that motivate the exchange of university students.

INTRODUCCIÓN

Durante las últimas tres décadas, el número de alumnos matriculados fuera de su país de ciudadanía ha aumentado drásticamente, de 0,8 millones a nivel mundial en 1975 a 4,5 millones en 2012, un aumento de más de cinco veces (OCDE, 2014. Education at a Glance 2014). Australia, Austria, Luxemburgo, Nueva Zelanda, Suiza y el Reino Unido, son quienes registran un mayor porcentaje de estudiantes internacionales entre sus matriculados. En cuanto a los destinos preferidos por los estudiantes de intercambio, lidera el ranking Estados Unidos (16%) seguido de Reino Unido (13%), y de Alemania, Francia y Australia con un 6%. En cuanto al origen de los estudiantes, los asiáticos representan el 53% de los estudiantes extranjeros matriculados en todo el mundo, un 23% son europeos, un 12% africanos, un 6% de Latinoamérica y el Caribe, 3% de Norte América, 1% de Oceanía. En Chile la mayor parte de estudiantes extranjeros proviene de Latinoamérica y el Caribe (88%). Mientras que de los estudiantes chilenos en intercambio un 21,4% estudia en España, seguido de Estados Unidos (18,9%) y Francia (7,9%) (OCDE, 2014. Education at a Glance 2014).

De acuerdo a la OCDE, esta expansión se debe a un interés en la promoción de las relaciones académicas, culturales, sociales y políticas entre los países, un aumento en el acceso global a la educación terciaria, y a la reducción de costos de transporte. Además, están las condiciones de atracción de los países industrializados, relacionadas con la demanda de profesionales, científicos y tecnólogos en los sectores competitivos; y por otro lado las condiciones de expulsión de los países de origen de los estudiantes, como bajas expectativas laborales, escasez de carreras de postgrado o determinadas especialidades. En consecuencia el objetivo de esta investigación es determinar los factores que motivan a estudiantes universitarios para optar por programas de intercambio, y los factores que influyen al momento de elegir un destino.

REVISIÓN LITERARIA

La internacionalización de la educación superior es un proceso de cambio desde una institución nacional hacia la inclusión de la dimensión internacional en todos los aspectos de su gestión para impulsar la calidad de los procesos de enseñanza-aprendizaje y alcanzar los niveles de competencias deseados (Soderqvist, 2002). Abarca aquellos aspectos de los sistemas o de las instituciones que van más allá de las fronteras de un país o que están influidos por las relaciones con estudiantes, profesores, gestores, instituciones educativas, sistemas, administraciones públicas y demás agentes en otros países (Throsby, 1998; López & Sanmartín, 2004), y es el proceso de integrar una dimensión internacional, intercultural o global en el objetivo, funciones o prestación de los servicios de la educación postsecundaria (Knight, 2003). Al respecto, López & Sanmartín (2004) distinguen tres niveles de internacionalización siendo estos: Movilidad Física que implica el desplazamiento del estudiante hasta el país donde van a recibir la educación; Movilidad Ficticia donde el estudiante se matricula en una institución ubicada en su propio país que les permite obtener un título reconocido por una universidad extranjera mediante acuerdos o vínculos previamente establecidos entre estas instituciones; Ausencia de Movilidad que consiste en educación a distancia utilizando medios de comunicación como Internet.

Los programas de movilidad estudiantil son vistos como un medio eficaz para que el estudiante desarrolle habilidades internacionales (Daly & Barker, 2005), en efecto, estudiantes de los países industrializados que estudian en el extranjero desean ampliar sus horizontes, aprender un idioma, o adquirir conocimientos que no podían adquirir en el hogar (Altbach, 2003). La motivación es un término que se utiliza cuando se quiere describir las fuerzas que actúan sobre, o dentro de, un organismo, para iniciar y dirigir la conducta de éste (Palmero et al., 2008) que explica las diferencias en la intensidad de la conducta (Petri, 1991). La motivación para viajar se puede categorizar en dos factores: "push" y "pull" (Dann, 1977; Lee et al, 2002;

Yoon & Uysal, 2005). De este modo, las fuerzas de empuje (push) socio-psicológicas, intrínsecas e intangibles motivan a la gente a viajar; mientras que, mientras que las fuerzas de atracción (pull) permiten seleccionar un destino (Baloglu y Uysal, 1996; Crompton, 1979; Lee et al, 2002; Yoon y Uysal, 2005). De acuerdo a Mazzarol & Soutar (2002) las fuerzas económicas y sociales en el país de origen sirven para empujar a los estudiantes al intercambio, sin embargo, la decisión de qué país anfitrión van a seleccionar depende de una variedad de factores de atracción, de este modo, un estudiante debe ser empujado a emprender un programa de intercambio y atraído por un lugar de destino (Llewellyn-Smith & McCabe, 2008). Además de las motivaciones de empuje y atracción, la red de amigos y familiares en los países de acogida se ha identificado como un importante factor en la motivación para emigrar (Chirkov et al., 2007; Beech, 2014; Beine et al., 2014; Wells, 2014). Del mismo modo, la red de contactos en el país de origen tiene una gran importancia (Brooks & Waters, 2010; Cairns & Smyth, 2011) pudiendo ayudar a construir la geografía imaginativa y esta a su vez resulta un factor importante en la motivación de intercambio (Beech, 2014). Vásquez et al. (2014) destacan la importancia de los motivos personales en los estudiantes chilenos. Para la presente investigación se distinguen los siguientes factores que promueven el intercambio: influencias personales (incluye aquellos aspectos vinculados al propio contexto y a las relaciones personales); motivos académico profesionales (recoge aquellos aspectos vinculados a la carrera académica y a las perspectivas laborales); motivos personales (incluye los aspectos vinculados al desarrollo personal); otros motivos: incluye aspectos vinculados a los propios programas y vivencias que impliquen movilidad (Pons, Herrero & Andrés, 2007).

METODOLOGÍA

La investigación se inició con un estudio de los antecedentes de intercambio tanto a nivel nacional como internacional, y con revisión bibliográfica respecto a los factores que motivan la intención de participar en un programa de intercambio universitario; posteriormente se realizó un estudio cualitativo mediante entrevistas a actores encargados de programas de intercambio y alumnos participantes para formular un instrumento de medición. Luego se realizó un estudio cuantitativo concluyente mediante un cuestionario a 630 estudiantes universitarios con el fin de conocer cuales son sus motivaciones al momento tanto de optar por unirse de intercambio como de elegir un destino, utilizando análisis descriptivos y factorial exploratorio; y determinar perfiles de estudiantes según sus intereses en torno al intercambio universitario mediante un análisis de conglomerados.

RESULTADOS

Los resultados muestran que si bien los alumnos están interesados en realizar un intercambio durante sus estudios universitarios (91%) son muy pocos los que llegan postular a algún programa de intercambio (9%). Por otra parte la mayor parte de los estudiantes (62%) ha viajado al extranjero y un 63% tiene amigos de otros países, esto refleja el nivel de apertura al mundo e internacionalización de los estudiantes universitarios. En cuanto a la modalidad de intercambio preferida se destaca en primer lugar el intercambio regular (63%) tal como muestra la Figura 1.

Figura 1: Preferencia Por Modalidad de Intercambio

En esta figura se puede apreciar las preferencias de los estudiantes encuestados por modalidades de intercambio, al respecto se destaca en primer lugar el Intercambio regular con 63%, seguido del Doble título con 18% y de Práctica en el extranjero con 15%, finalmente aparece Tesis en el extranjero solo con un 4%.

Cabe destacar que las preferencias varían levemente conforme aumenta el año que cursa el estudiante, en efecto, disminuye gradualmente la preferencia por Intercambio regular conforme aumenta la opción de realizar prácticas y trabajos de título o tesis en el extranjero. En cuanto al incentivo que perciben los estudiantes de parte de su entorno social, se destaca a los amigos o compañeros (46%) y el entorno familiar (39%). Respecto a las motivaciones, estas fueron medidas mediante una escala Likert de 5 puntos, y están ligadas principalmente al aprendizaje de una segunda lengua (media 4,7); vivir nuevas experiencias (media 4.7) conociendo otras culturas, lugares y personas (media 4.5); y adquirir una diferenciación y mayor valor en el expediente académico para aumentar así las posibilidades de inserción laboral (media 4.5), gracias a la oportunidad de alcanzar mayores conocimientos a través de programas específicos o de especialidades en otras instituciones. Las distintas motivaciones planteadas se pueden definir en 7 factores motivadores de movilidad proporcionados por un análisis factorial exploratorio mediante el método de extracción de componentes principales y método de rotación varimax, diferenciado para alumnos con interés en realizar un intercambio tal como se muestra la Tabla 1.

Tabla 1: Factores Motivadores del Intercambio Universitario

	Nuevas experiencias	Ampliar red de contactos	Influencias y entorno	Laborales	Autorealización	Turismo	Académicos
Conocer entorno universitario	0.776						
Conocer perspectivas laborales	0.735						
Nuevas experiencias	0.591						
Oportunidad de postgrado	0.543						
Aprender idioma	0.523						
Romper con la rutina		0.790					
Conocer gente		0.721					
El desafío de vivir sólo		0.695					
Generar contactos extranjeros		0.583					
Descubrir otra cultura		0.498					
Amigos de intercambio			0.771				
Presión familiar			0.714				
Influencias			0.689				
Participación en programas anteriores			0.560				
Inserción laboral				0.840			
Mejorar currículum				0.827			
Búsqueda de seguridad en uno mismo					0.871		
Búsqueda de autonomía					0.856		
Experiencia turística						0.752	
Deseo de viajar						0.649	
Ayuda económica prevista						0.517	
Lo requiere mis estudios							0.793
Programa específico							0.674

En esta tabla se muestra un extracto de la Matriz de componentes rotados que entrega el software estadístico SPSS 22 al realizar un análisis de factores de las motivaciones para optar por un programa de intercambio. Se evidencian claramente 7 factores cuyos nombres se muestran en el título de cada columna compuestos por las variables que se muestran en las filas.

En la Tabla 1 se observa la composición de cada factor, al respecto se destaca que los dos primeros factores aluden a conocer nuevas realidades, tener nuevas experiencias y ampliar la red de contactos. Del mismo modo el tercer factor también guarda relación con la red de contactos y en este caso la influencia al momento de optar por un programa de intercambio. Luego vienen motivos laborales, esto es la percepción de que el intercambio enriquece el currículum del estudiante y con ello mejorara sus oportunidades en el mercado laboral. Posteriormente la satisfacción de necesidades personales, los motivos netamente turísticos y por último los académicos. La Tabla 2 muestra la varianza total explicada, al respecto se puede observar que con 7 factores se logra explicar 63.5% de la varianza.

Tabla 2: Análisis factorial motivadores de intercambio

Componente	Suma de las Saturaciones al Cuadrado de la Rotación		
	Total	% de la varianza	% acumulado
1	2.604	11.321	11.321
2	2.577	11.206	22.527
3	2.395	10.415	32.942
4	2.006	8.721	41.663
5	1.787	7.769	49.432
6	1.671	7.267	56.699
7	1.560	6.781	63.480

En esta tabla se muestra un extracto de tabla Varianza total explicada que entrega el software estadístico SPSS 22 al realizar un análisis de factores de las motivaciones para optar por un programa de intercambio. Se aprecia que con 7 factores se logra explicar un 63.480% de la varianza.

Así como existen deseos y estímulos por hacer un intercambio, existen también variables que afectan de forma negativa. Se observó que la principal barrera es la percepción de un gran esfuerzo monetario que requiere realizar un intercambio (media 3.97). En cuanto a la motivación al momento de seleccionar un destino de intercambio, lo más importante a considerar son los costos de vida en el lugar de destino (media 4.2), la calidad de vida y el idioma del destino (media 4.2), además del prestigio de la universidad receptora. Por medio de un análisis factorial exploratorio se definieron 8 factores de elección de destino que agrupan las variables del cuestionario asociadas a elección de destino de intercambio tal como muestra la Tabla 3 basada en la matriz de componentes rotados del análisis de factores.

Tabla 3: Factores de Elección de Destino

	Acceso y Oferta académica	Calidad de Vida	Costos y financiamiento	Ciudad conectada	Turismo	Cercanía y contactos	Socializar	Idioma
Oferta de especialidades	0.754							
Nivel de dificultad académica	0.712							
Requisitos de acceso	0.671							
Programas exclusivos para extranjeros	0.659							
Enfoque del programa de estudio	0.655							
Prestigio	0.648							
Estabilidad política y social		0.775						
Calidad de vida		0.746						
Seguridad personal		0.726						
Disponibilidad de transporte en el destino		0.668						
Costo de vida y costo de viaje			0.841					
Ayudas económicas complementarias			0.814					
Facilidades de alojamiento			0.747					
Tamaño de la ciudad: ciudad grande				0.714				
Ciudad cosmopolita				0.602				
Alta conexión con otros destinos				0.513				
Nivel socioeconómico del país				0.506				
Interés cultural de la ciudad					0.714			
Posibilidades de ocio					0.691			
Turismo, paisaje y entorno natural					0.645			
Conocidos en el destino						0.752		
Influencia de algún profesor						0.637		
Proximidad geográfica con Chile						0.628		
Ampliar mi círculo de relaciones en el destino							0.721	
Actividades sociales o deportivas							0.675	
Idioma								0.770
Idioma de instrucción								0.663

En esta tabla se muestra un extracto de la Matriz de componentes rotados que entrega el software estadístico SPSS 22 al realizar un análisis de factores de las motivaciones para la elección de un destino de intercambio. Se evidencian claramente 8 factores cuyos nombres se muestran en el título de cada columna compuestos por las variables que se muestran en las filas.

En la Tabla 3 se observan los factores que motivan la elección del destino de intercambio, al respecto se destaca en primer lugar la oferta académica de destino junto a los requisitos de acceso de los programas, luego la calidad de vida representado por acceso a transporte, seguridad y estabilidad política. Posteriormente los motivos asociados al costo y financiamiento del intercambio seguido de características de ciudad cosmopolita y conectada lo que ayudaría a conocer otros destinos, esto se relaciona con el siguiente factor asociado a motivos turísticos. Luego aparecen los motivos que aluden a la red de contacto, tanto en función de tener conocidos en el destino y proximidad con el país de

origen como por la oportunidad de ampliar la red de contactos. Finalmente se encuentran los motivos de idioma. La Tabla 4 muestra la varianza total explicada, al respecto se puede observar que con 8 factores se logra explicar 59.9% de la varianza.

Tabla 4: Factores de Elección de Destino

Componente	Suma de las Saturaciones al Cuadrado de la Rotación		
	Total	% de la varianza	% acumulado
1	3.419	12.663	12.663
2	2.604	9.646	22.309
3	2.253	8.343	30.653
4	1.823	6.751	37.404
5	1.610	5.964	43.369
6	1.603	5.938	49.307
7	1.475	5.464	54.771
8	1.401	5.188	59.959

En esta tabla se muestra un extracto de tabla Varianza total explicada que entrega el software estadístico SPSS 22 al realizar un análisis de factores de las motivaciones para la elección de un destino de intercambio. Se aprecia que con 8 factores se logra explicar un 59.959% de la varianza.

También se determinó que el inglés es el idioma preferido para un intercambio (71%), seguido por el idioma alemán (11%). Así mismo respecto a los países destinos, se prefiere: Alemania (23%), Estados Unidos (17%), Inglaterra (12%) y Australia (10%). Posteriormente, se determinaron 3 perfiles de estudiantes, en base a las variables de selección de destino:

Conservadores: Prefieren ir a lugares tranquilos, ciudades pequeñas o de tamaño medio, prefieren como destino principalmente a Alemania. Perciben barreras en torno a su rendimiento académico para postular a un intercambio. Le asignan mayor importancia a los factores académicos y en comparación a los otros dos conglomerados, los Conservadores son los menos motivados por conocer otros entornos universitarios y laborales, conocer otras personas y generar contactos, por tener nuevas experiencias, y hacer turismo.

Exploradores: Desean alejarse de Chile y de su entorno cercano, les gusta viajar y conocer, les motiva la idea de realizar una doble titulación en el extranjero, y no optaría por países de habla hispana. Comparado a otros conglomerados, para los Exploradores el conocer otros entornos universitarios, conocer mucha gente y generar contactos es altamente motivante.

Viajeros: Estudiantes que buscan destinos con atractivos turísticos y culturales, con la posibilidad de viajar y conocer. Son quienes menos rechazan tener conocidos en el destino. No les interesan los países latinoamericanos ya que en su mayoría han viajado por el continente, y prefieren Alemana o Estados Unidos como país de intercambio. En comparación a los otros grupos, los Viajeros son altamente motivados por tener experiencias turísticas, romper la rutina, hacer contactos y conocer nuevas personas.

CONCLUSIONES

La presente investigación muestra un estudio exploratorio que logra alcanzar el objetivo inicialmente planteado de encontrar cuales son los factores que influyen en un estudiante al momento de optar por un programa de intercambio, destacándose 7 factores que alcanzan a explicar sobre el 60% de la varianza. Estos son: vivir nuevas experiencias, ampliar la red de contactos, influencia de terceros, motivos laborales, autorrealización, turismo y motivos académicos (ver Tabla N°1). Así mismo se destaca el enorme interés por realizar un programa de intercambio mostrado por los estudiantes que se contrasta con el escaso número de estudiantes que postulan a estudiar afuera. Al respecto, la principal barrera percibida por los encuestados responde a un enorme esfuerzo monetario para participar de un intercambio, situación que dista de la realidad ya que existen mecanismos de apoyo

a estas iniciativas. Esto sugiere que la real barrera para los estudiantes es tan solo el desconocimiento y falta de acceso a la información, la recomendación en este caso es comunicar y entregar información de manera oportuna a los estudiantes para que el 9% de los estudiantes que postulan se acerque al 91% de los estudiantes interesados en realizar un intercambio durante su etapa universitaria. En cuanto a la segunda parte del objetivo, se lograron determinar 8 factores que influyen en la elección del lugar de destino explicando un 60% de la varianza. Estos son el acceso y la oferta académica de destino, calidad de vida, costos, conectividad de la ciudad, que va de la mano con las motivaciones turísticas, cercanía y contactos, que guarda relación con las motivaciones sociales, y por último el idioma (ver Tabla N°3).

Finalmente se encontraron tres segmentos apodados Conservadores, Viajeros, y Exploradores, que difieren en sus motivaciones, siendo el primer grupo más interesado en motivos académicos; el segundo grupo abierto a conocer nuevas realidades, ampliar su red de contactos y vivir experiencias nuevas; y el tercero influenciados principalmente por el turismo y viajes en el lugar de destino. Si bien la presente investigación logra explorar los distintos factores que motivan tanto la decisión de optar por un programa de intercambio como la decisión de elegir un lugar de destino; no se logra evidenciar cómo se articulan estos factores por lo que las recomendaciones a futuros estudios apuntan a estudiar este fenómeno bajo una óptica de causalidad.

RESUMEN

El objetivo del presente estudio consistió en analizar el desempeño productivo y la creación de capacidades tecnológicas de las empresas multinacionales del sector industrial instaladas en Tijuana Baja California, México. Se aplicó la metodología de estudio de casos múltiples, el diseño de la investigación fue no experimental; las fuentes primarias de información fueron el diseño y aplicación de una encuesta a los gerentes de las empresas, entrevistas con expertos y visitas a algunas plantas multinacionales. El criterio utilizado en este trabajo para determinar el nivel de capacidades tecnológicas fue identificar las habilidades que se han desarrollado en la empresa objeto de estudio, mediante las actividades que se realizan para mejorar los procesos y productos, para adaptar la tecnología generar y administrar el cambio técnico. Los resultados arrojados en los casos de estudio múltiples no son generalizados, si no que muestran una perspectiva de análisis que nos permite formar un juicio fundamentado en las evidencias empíricas derivados de este estudio respecto a las variables analizadas y la posición de las empresas multinacionales estudiadas.

PALABRAS CLAVE: Capacidades Tecnológicas, Aprendizaje Tecnológico, Industria Electrónica

MULTIPLE CASE STUDY: MULTINATIONAL COMPANIES IN MEXICO

ABSTRACT

The aim of the present study was to analyze the productive performance and the creation of technological capabilities of multinational companies in the sector in Tijuana Baja California, Mexico. The multiple case studies methodology was applied, the research design was not experimental; the primary sources of information were the design and implementation of a survey of corporate managers, interviews with experts and visits to some multinational plants. The criteria used in this study to determine the level of technological capabilities was to identify the skills that have been developed on the target group company under study, by the activities undertaken to improve processes and products, to adapt technology and to generate and manage technical change. The results obtained in cases of multiple studies are not widespread, but it shows an analytical perspective that allows us to form based on empirical evidence derived from this study regarding the variables analyzed and the position of multinational companies studied trial.

INTRODUCCIÓN

La técnica utilizada en esta investigación es un estudio de caso, este tipo de investigación permite el estudio de un objeto o caso, cuyos resultados permiten obtener una percepción más completa del tema de estudio. De acuerdo con Yin (1994) un estudio de caso se define como: “Una investigación empírica que estudia un fenómeno contemporáneo dentro de su contexto de la vida real, especialmente cuando los límites entre el fenómeno y su contexto no son claramente evidentes... Una investigación de estudio de caso trata exitosamente con una situación técnicamente distintiva en la cual hay muchas más variables de interés que datos observacionales; y, como resultado, se basa en múltiples fuentes de evidencia, con datos que deben converger en un estilo de triangulación; y, también como resultado, se beneficia del desarrollo previo de proposiciones teóricas que guían la recolección y el análisis de datos.”

El método de estudio de caso es una metodología rigurosa que es adecuada para investigar fenómenos sobre los cuales el investigador no tiene control y en los que se busca dar respuesta a cómo y por qué ocurren, además permite estudiar un tema determinado ideal para el estudio de temas de investigación en los que las teorías existentes son inadecuadas, permite estudiar los fenómenos desde múltiples perspectivas y no desde la influencia de una sola variable, también permite explorar en forma más profunda y obtener un conocimiento más amplio sobre cada fenómeno lo cual permite la aparición de nuevas señales sobre los temas que emergen, y por último, juega un papel importante en la investigación, por lo que no debería ser utilizado meramente como la exploración inicial de un fenómeno determinado (Martínez, 2006). Yin (1994), sostiene que la investigación no está definida por las características del estudio sino por el tipo de información, en los estudios de casos es eminentemente cualitativa y esta información se caracteriza porque se representa en categorías que incluyen dimensiones perceptuales, actitudinales y eventos reales. Para recolectar la evidencia de los casos de estudio Yin (1994), menciona que puede ser mediante documentos, archivos, entrevistas, observación directa y observación participativa. Por otra parte Martínez (2006) sostiene que el método de estudio de caso los datos pueden ser obtenidos desde una variedad de fuentes, tanto cualitativas como cuantitativas; esto es, documentos, registros de archivos, entrevistas directas, observación directa, observación de los participantes e instalaciones u objetos físicos.

El artículo está dividido en tres secciones: en la primera se expone una revisión de la literatura como guía teórica de la investigación realizada que incluye los temas Empresas Multinacionales, Capacidades Tecnológicas y Estudios de Casos; en la segunda parte se presenta la metodología aplicada para evaluar la situación presente de la industria de televisores en Tijuana utilizando los instrumentos de entrevistas y encuestas; y en la tercera parte se explican los resultados encontrados de forma descriptiva, al identificar y describir los distintos factores que ejercen influencia en el fenómeno estudiado y por último se presentan las conclusiones obtenidas.

REVISIÓN DE LA LITERATURA

El siguiente apartado se convierte en la guía teórica del presente trabajo y está estructurada en tres temas: 1) Empresas Multinacionales: presentando algunos conceptos centrales y una síntesis sobre la evolución de la misma, con el propósito de generar un marco conceptual que permita entender cómo las CMN transforman las economías nacionales, en particular, la economía mexicana. 2) Capacidades tecnológicas: se presenta una discusión del tema en la que diversos autores han tratado de explicar cómo las empresas han evolucionado de tener habilidades mínimas para operar las plantas a ser capaces de emprender actividades innovadoras. 3) Estudio de caso: características claves y la utilidad práctica que el método de estudio de caso ofrece a los investigadores, como estrategia metodológica de la investigación científica en cualquier área del conocimiento.

Empresas Multinacionales

Existe una extensa literatura sobre las CMN que revela controvertidas opiniones científicas sobre su impacto, mientras unos se oponen y encuentran un impacto negativo, otros hablan de las bondades derivadas de la creación de fuentes de empleo, transferencia y aprendizaje tecnológico, entre otros. Dunning y Lundan (2008) consideran a la CMN como “una empresa que participa con Inversión Extranjera Directa (IED) y es propietaria, o de alguna manera, controla las actividades de valor agregado en más de un país”. Esta definición ha sido ampliamente aceptada en los círculos académicos y empresariales, agencias de recolección de datos y por la mayoría de los gobiernos y entidades nacionales.

Gran parte de la literatura sobre las CMN revela una interrelación compleja y dinámica con el desarrollo económico, político y social del país anfitrión y que aún sin existir consenso sobre la conceptualización de la CMN, en la revisión se encontraron rasgos comunes como la internacionalización, el control centralizado, la autorregulación, la fuerte presencia del país de origen entre otras. Cypher y Dietz (2009) afirman que hoy en día, las multinacionales se encuentran en la mayoría de las naciones menos desarrolladas. Para el desarrollo nacional, el indicador más revelador de la incorporación exitosa de las transferencias de conocimientos y la tecnología se relaciona con la magnitud de los vínculos nacionales entre las CMN y la economía receptora. Dado que México ha sido regularmente uno de los diez primeros países en términos de flujos de Inversión Extranjera Directa (IED) en los últimos años

Capacidades Tecnológicas

Durante las últimas décadas el estudio sobre las capacidades tecnológicas ha aumentado, principalmente por la importancia que adquieren sobre todo en la innovación, el aprendizaje y el cambio tecnológico que constituyen las bases para el crecimiento y el desempeño en la adquisición de nuevas funciones lo que conlleva a la empresa al escalamiento industrial. El desarrollo de capacidades son el medio para desarrollar productos y servicios de mayor valor, además es posible crear puestos de trabajo calificado y mejores salarios que a su vez estimulan a los trabajadores, logrando ser más competitivos en forma individual y colectiva. A continuación se analiza la forma en que se construyen y acumulan las capacidades tecnológicas y el aprendizaje tecnológico. De acuerdo con Melgoza y Álvarez (2012) las organizaciones son un conjunto de recursos, competencias y capacidades; su ventaja competitiva está basada en diferentes combinaciones de estos elementos. Las capacidades de las organizaciones se comportan de manera dinámica, siguiendo un modelo de ciclo de vida que puede explicar su surgimiento, desarrollo y cambio basado en el aprendizaje. La capacidad tecnológica de una organización dependerá de la adaptación tecnológica. Las capacidades tecnológicas tienen la característica de no distribuirse de manera uniforme entre los países, las regiones y las empresas. La mayoría de las empresas permanecen rezagadas a las capacidades tecnológicas e incluso tienen muchas dificultades para adquirirlas, son pocos los países que mejoran continuamente su base de conocimientos (Lugones, Gutti y Le Clech, 2007).

Estudios de Casos

El Estudio de Casos es uno de los instrumentos más útiles para la obtención de Información, ya que consiste básicamente en recabar datos mediante el estudio de situaciones particulares que puede comprender el análisis general de una empresa, el de un proceso de producción o bien de un área en específico; de acuerdo con Chetty (1996), en el método de estudio de caso los datos pueden ser obtenidos desde una variedad de fuentes, tanto cualitativas como cuantitativas; esto es, documentos, registros de archivos, entrevistas directas, observación directa, observación de los participantes e instalaciones u objetos físicos. La definición de Yin (1994) es consistente con diversos tipos de casos existentes en la literatura organizativa, tales como los "descriptivos", que analizan "cómo" ocurre un fenómeno organizativo dentro de su contexto real; los "exploratorios", cuyo objetivo es familiarizarse con una situación sobre la que no existe un marco teórico bien definido; los "ilustrativos", que ponen de manifiesto las prácticas de gestión de las empresas

más competitivas; o los "explicatorios", que pretenden revelar las causas o el porqué de un determinado fenómeno organizativo. Yin (1994) considera el método de estudio de caso apropiado para temas que se consideran prácticamente nuevos, pues en su opinión, la investigación empírica tiene los siguientes rasgos distintivos: Examina o indaga sobre un fenómeno contemporáneo en su entorno real. Las fronteras entre el fenómeno y su contexto no son claramente evidentes. Se utilizan múltiples fuentes de datos, y Puede estudiarse tanto un caso único como múltiples casos.

Casos de Estudio Múltiples

Si un estudio contiene más de un caso, un estudio de casos múltiples es requerido. La principal diferencia entre un caso de estudio único con unidades de estudio y un caso múltiple es que para los casos múltiples el contexto de cada uno de los casos es diferente. Mientras que en un estudio de caso único con unidades de estudio añadidas solo permite al investigador entender un caso único, un estudio de casos múltiples permitirá al investigador analizar dentro de cada organizan y cada entorno analizar y entender las similitudes y diferencias entre los casos (Baxter & Jack, 2008). La elección del número de casos queda a la elección del investigador, siempre partiendo de la base de que la generalización de los resultados será de mayor calidad cuando mayor sea el número de casos investigados (Arias, 2003). La razón principal para elegir un estudio formado por más de un caso, además de para poder reforzar su validez interna, se encuentra en la llamada replicación teórica, aspecto fundamental como mecanismo de validez externa. Esto significa que se reproduce la experiencia de cada caso en los otros con el fin de verificar los resultados y clarificar sus determinantes, de tal manera que puedan ser precisadas las relaciones causales del fenómeno y eliminadas las erróneas o insuficientemente generales (Villareal & Landeta, 2010).

METODOLOGÍA

El objeto de análisis en la presente investigación fue el agrupamiento de empresas líderes dedicadas al giro de fabricación y ensamble de televisores ubicadas en Tijuana. Con la finalidad de evaluar la situación presente de la industria de televisores en Tijuana, se diseñó una investigación de tipo descriptiva, ya que el propósito es recolectar información sobre diversos aspectos del fenómeno a investigar. El diseño del trabajo es no experimental, ya que se encuentra en una situación real en la que se observan las variables en su ambiente natural. Debido a que se recolectan los datos y se describen las variables y se comparan con otro periodo la investigación es un modelo longitudinal (Hernández Sampieri, Fernández Collado y Baptista Lucio, 2010). También se realizaron entrevistas con expertos del tema con la finalidad de explorar la historia y trayectoria de la industria de televisores en Tijuana. Se entrevistaron a ex- empleados de empresas, directivos de asociaciones e investigadores expertos en el sector. El método utilizado para la recolección de datos primarios fue la encuesta, la cual consiste en un conjunto de preguntas respecto a una o más variables a medir (Sampieri et. al., 2010). Se obtuvo la información por medio de preguntas organizadas en un cuestionario presentadas en dos versiones: impresa y *on line*. Con el objetivo de obtener información cualitativa del tema de estudio se consiguió entrevistar a personal de puestos claves en las empresas líderes de la región que por cuestiones de confidencialidad se omiten los nombres de los entrevistados y de sus respectivas empresas.

RESULTADOS Y CONCLUSIONES

Esta investigación fue realizada mediante el método de estudio de caso con el propósito de presentar los resultados de forma descriptiva, al identificar y describir los distintos factores que ejercen influencia en el fenómeno estudiado. Los datos arrojados de la encuesta aplicada se capturaron en una base de datos y se obtuvo información la cual se presentan de forma descriptiva analizando las variables de estudio de las empresas encuestadas. Entre los beneficios de los estudios de caso se encuentra analizar el fenómeno objeto de estudio en su contexto real lo que permitió identificar algunos aspecto importantes de las empresas de la industria de televisores en Tijuana se encontró que existen una polarización en el tipo de empresas

participantes, por un lado están las empresas de equipo original (OEM por sus siglas en inglés), que se encargan de fabricar el producto final, pero las actividades que generan mayor valor agregado se realizan directamente en la casa matriz, por otra parte los *contract manufacturer* que tampoco realizan funciones de alto valor agregado en las plantas de la región, enfocándose únicamente a la manufactura por contrato y, finalmente en el lado opuesto, se observó una empresa que representa 51 por ciento de la producción que fabrica el componente principal de los televisores y están migrando su organización productiva de *outsourcing* a procesos internos estructurados verticalmente.

En esta perspectiva concluimos que existen dos polos en la posición de las empresas: una que considera a la región como una fuente de aprendizaje e incursión de conocimiento y, por otro lado, el grupo de empresas que consideran a México como una plataforma de mano de obra a bajo costo. En la mayoría de las plantas estudiadas tienen un bajo valor agregado en el proceso de producción, debido a que no se fabrican los insumos y componentes principales en la región lo que origina que se realice fundamentalmente el ensamble final del producto. En esta industria, el componente de mayor valor agregado son los paneles de los televisores los cuales provienen de Asia, únicamente una empresa ha incursionado en la fabricación de este componente en México. La mano de obra ocupa puestos operativos por lo que la derrama económica por concepto de nómina es limitada y por su nivel restringe la capacidad de asimilación y desarrollo tecnológico regional.

Se ha argumentado que la formación de capacidades tecnológicas en países en desarrollo se está dando a partir de multinacionales que trasladan procesos de manufactura buscando mano de obra barata y que después van escalando procesos y productos. Sin embargo este estudio no se basa en creencias o únicamente en los resultados de investigaciones pasadas, -quizás algunas de ellas con propósitos interesados-, sino en el juicio fundamentado proveniente de nuevas evidencias empíricas provenientes de investigaciones como la presente. En este sentido el criterio utilizado en este trabajo para determinar el nivel de capacidades tecnológicas fue identificar las habilidades que se han desarrollado en la empresa objeto de estudio, a través de las actividades que se realizan para mejorar los procesos y productos, para adaptar la tecnología y para generar y administrar el cambio técnico.

Es por eso que se concluye que la industria de televisores en la región tiene enormes desafíos; las operaciones locales cubren primordialmente el ensamble y empaque de producto, así como la fabricación de algunos insumos genéricos; por lo que resulta conveniente fomentar la participación de estas empresas con otras áreas de la cadena de valor con mejores niveles de empleo y tecnología, tales como ingeniería, investigación y desarrollo, diseño de nuevos procesos y productos, operaciones de logística y distribución, así como servicios post-venta con la finalidad de lograr una mejora en la posición competitiva de la industria. Esto representa área de oportunidad de desarrollo mediante la integración regional en la cadena de valor, ya que aun tratándose de operaciones de corporaciones multinacionales implica una mayor derrama en sueldos, así como la asimilación de tecnología. En este sentido, la credibilidad de las conclusiones obtenidas se basa, en la calidad misma de la investigación desarrollada. De aquí la importancia de diseñar el estudio de caso de una forma apropiada e introducir una serie de tácticas a lo largo del proceso en que éste se desarrolla. El método de estudio de caso es una estrategia metodológica de investigación científica, útil en la generación de resultados que posibilitan el fortalecimiento, crecimiento y desarrollo de las teorías existentes o el surgimiento de nuevos paradigmas científicos; por lo tanto contribuye al desarrollo de un campo científico determinado. Razón por la cual el método de estudio de caso se torna apto para el desarrollo de investigaciones a cualquier nivel y área de conocimiento.

EL CONTROL INTERNO DE LAS FUNCIONES DE COMPRAR Y VENDER EN LAS PEQUEÑAS EMPRESAS DEL SECTOR COMERCIAL DE MEXICALI, BAJA CALIFORNIA

Esther Eduvigis Corral Quintero, Universidad Autónoma de Baja California

Socorro Ureña Valenzuela, Universidad Autónoma de Baja California

Margarita Salcedo Rus, Universidad Autónoma de Baja California

Plácido Valenciana Moreno, Universidad Autónoma de Baja California

RESUMEN

Investigación referida a las pequeñas empresas y el control interno que tienen sobre sus funciones principales de comprar y vender. Este tipo de empresas junto con las micro y medianas empresas, conformen el 99% de las empresas, identificando su importancia en el desarrollo económico de México. El objetivo de esta investigación es describir el sistema de control interno que tienen las Pequeñas del sector comercio, que se ubican en Mexicali, Baja California. Se estudió en específico las funciones de comprar y vender al ser las que permiten cumplir con las expectativas de obtener un lucro por la actividad empresarial realizada. El método exploratorio se utilizó para identificar el control interno sobre los ciclos operacionales de compras y ventas; y el método que se utilizó para identificar la importancia que las pequeñas empresas le dan a estas áreas fue el descriptivo no experimental. Los principales resultados son que el 58% de las pequeñas empresas no tienen por escrito los procedimientos que deben seguir para las operaciones de comprar vender lo que puede provocar problemas para lograr la eficiencia y eficacia en el logro de sus objetivos y metas.

PALABRAS CLAVE: Control Interno, Pequeñas Empresas del Sector Comercial, Comprar-Vender

INTERNAL CONTROL FUNCTIONS TO BUY AND SELL IN SMALL COMPANIES COMMERCIAL OF MEXICALI, BAJA CALIFORNIA.

ABSTRACT

Research relating to Small businesses and internal control they have over their main functions of buying and selling. Such companies with micro and medium enterprises make up the 99% of companies, identifying its importance in the economic development of Mexico. The objective of this research is to describe the system of internal control that have the small companies, which are located in Mexicali, Baja California. Functions of buying and selling to be capable of meeting the expectations of making a profit from the business carried studied specifically. The screening method was used to identify internal control over operational purchases and sales cycles; and the method used to identify the importance that small businesses give these areas was non-experimental descriptive. The main results are that 58% small businesses do not have written procedures to be followed for buying selling operations which can cause problems for efficiency and effectiveness in achieving its objectives and targets.

INTRODUCCIÓN

En los últimos años se han desarrollado diversas investigaciones sobre las micro, pequeñas y medianas empresas (Mipyme's) debido al gran impacto que tienen en la economía de los países. De acuerdo con datos del Instituto Nacional de Estadística y Geografía (INEGI, 2009), en México existen alrededor de 4 millones de Mipymes lo que representa el 99.8 % de empresas establecidas y generando estas el 52% del Producto Interno Bruto (PIB) siendo su contribución al empleo del 72% en el país. La potencialidad de las Mipymes se ve afectada debido a que su gestión administrativa y financiera no funciona dentro de los paradigmas de eficiencia empresarial ya que cuentan con sistemas administrativos obsoletos, así como la falta de controles en su operación, falta de preparación gerencial y una contabilidad orientada sólo al cumplimiento de la norma tributaria, siendo estos algunos de los factores que las afectan.

(Mosqueda, 2008). Las Mipymes presentan algunos problemas como lo son: la falta de control de inventarios, control inadecuado de créditos, liquidez y bajo volumen de ventas, los cuales si no son tratados con cuidado ponen en riesgo a la operación de la empresa al no contar con el efectivo suficiente y por tanto no cumplir en tiempo con los compromisos adquiridos o bien un inadecuado financiamiento, una sobre inversión en activo fijo, existencias de inventarios inmovilizadas y obsoletas, irregularidades en los cobros, pagos imprevistos, cálculos equivocados de los ingresos, costos o utilidades así como los gastos excesivos en que incurrir los propietarios de estas empresas por un mal manejo y control de sus recursos (Anzola, 2010) Por otra parte, las mipymes tienen grandes ventajas competitivas dado el conocimiento de su entorno económico así como su facilidad para ser administradas dado que sus actividades y operaciones no son complejas. Sin embargo, también tiene grandes desventajas ya que al no contar con recursos económicos suficientes, no pueden en ocasiones planear para crecer, poniendo en riesgo su existencia. En la generalidad, este tipo de empresa es administrada por el dueño el cual no cuenta con conocimientos formales sobre administración, por lo que ésta la desarrolla de acuerdo a su experiencia y de manera empírica. (Treviño, 2004)

En la actualidad, las mipymes requieren de mayores conocimientos y sobre todo de información que les permitan identificar ventajas competitivas sobre las demás. Esto es generado por el entorno cada vez más globalizado y con cambios constantes, que deben provocar una nueva cultura empresarial sobre todo en lo que se refiere a la asertividad en la toma de decisiones, para lo que requiere de información confiable y oportuna que coadyuven en esa toma de decisiones y que le permitan controlar sus actividades para el logro del cumplimiento de sus objetivos. (Zorrilla, 2007) Dentro de la administración se debe dar lo que se conoce como proceso administrativo el cual contempla las fases de planeación, organización, dirección y control. En las empresas, no importando su estructura, tamaño o complejidad de sus operaciones, requieren de un sistema de control que le permita administrar de forma adecuada sus bienes y servicios y que para este fin genere información tanto administrativa como financiera con las características de veracidad, confiabilidad y oportunidad, con miras a una buena y efectiva toma de decisiones. El objetivo de esta investigación es determinar el sistema de control interno establecido en las pequeñas empresas del sector comercial y si este es acorde a sus características particulares; considerando para tal efecto el control interno que se tiene sobre las principales actividades que realiza como son el comprar y vender.

REVISIÓN LITERARIA

Entidad: Una empresa o entidad es una organización o institución dedicada a actividades que tienen como fin principal el económico. Existen diversas definiciones del término entidad o empresa, una de ellas es la emitida por la Comisión de la unión europea: “Se considerará empresa toda entidad, independientemente de su forma jurídica, que ejerza una actividad económica. Se considerarán empresas las entidades que ejerzan una actividad artesanal u otras actividades a título individual o familiar, las sociedades de personas y las asociaciones que ejerzan una actividad económica”.

El Diccionario de la Real Academia Española (RAE) señala que entidad es “cualquier corporación, compañía, institución etc., que es tomada como persona jurídica”, y del término empresa menciona que es “unidad de organización dedicada a actividades industriales, mercantiles o de prestación de servicios con fines lucrativos”. Por otra parte, las empresas se pueden clasificar de acuerdo al sector al que pertenezcan, al giro que desarrollen y a su tamaño y estructura. Así se tienen los sectores comerciales, industriales y de servicios, dentro de esta clasificación por sector, se tienen diversos giros, principalmente en las empresas dedicadas al comercio. En el año 2002, se da a conocer la Ley para el desarrollo y competitividad de la micro, pequeña y mediana Empresa, a través de su publicación en el Diario oficial de la federación (DOF), teniendo como objetivo principal el promover el desarrollo económico nacional a través del fomento a la creación de micro, pequeñas y medianas empresas y el apoyo para su viabilidad, productividad, competitividad y sustentabilidad, así como incrementar su participación en los mercados, en un marco de crecientes encadenamientos productivos que generen mayor valor agregado nacional.

Dentro de este marco legal, se consideró importante señalar los factores que permitieran identificar o clasificar los distintos estratos en que se encuentran las empresas mexicanas, por lo que en la mencionada ley determina dicha clasificación partiendo de la base del número de empleados que contratan las empresas; sin embargo no siendo suficiente estos datos, en junio del 2009 se publicó modificación a la ley en el DOF, ampliando las características que las identificaban añadiendo el elemento de las ventas que generaban, quedando entonces de la siguiente forma:

Microempresa: Sectores comercial, industrial y de servicios, las que cuenten con hasta 10 trabajadores y ventas anuales de hasta \$ 4 millones de pesos (mdp) y un tope máximo combinado de 4.6.

Pequeña empresa: Sector comercio, que tengan de 11 hasta 30 trabajadores y ventas anuales de \$ 4.01 hasta \$100 mdp, tope máximo combinado de 94.

Sectores industrial y de servicios, que tengan de 11 hasta 50 trabajadores y ventas anuales de \$ 4.01 hasta 100 mdp, tope máximo combinado de 95.

Mediana empresa: Sector comercio, que tengan de 31 hasta 100 trabajadores y ventas anuales desde \$ 100.01 hasta \$ 250 mdp, tope máximo combinado de 235. Sector servicios, que tengan desde 51 hasta 100 trabajadores, con el mismo rango de ventas tope máximo combinado que el anterior. Sector industrial, que tengan de 51 hasta 250 trabajadores y ventas anuales desde \$ 100.01 hasta \$ 250 mdp y tope máximo combinado de 250. Considerando lo anterior, las empresas que tienen más de 250 empleados en el caso de las industriales y más de 100 empleados en los casos del comercio y de servicio, y los ingresos que obtienen, se deben identificar como grandes empresas.

La administración de las empresas debe considerar lo que se conoce como proceso administrativo, dentro de éste se tiene que debe existir una planeación tanto estratégica como táctica, una organización que permita determinar la forma en que deben conducirse las actividades, una dirección que está representada por la alta gerencia y es quién se responsabiliza de la forma en que se conduce a la organización y los resultados que se obtienen y, por último se tiene la etapa de control que es a través del cual interactúan todos los elementos y coadyuva en la integración de todas las etapas del proceso administrativo. Control Interno: El Instituto Mexicano de Contadores Públicos (IMCP) (1995) define que “La estructura de control interno de una entidad consiste en las políticas y procedimientos establecidos para proporcionar una seguridad razonable de poder lograr los objetivos específicos de la entidad”.

Perdomo (2008) señala como concepto que control interno es el “Plan de organización entre la contabilidad, funciones de empleados y procedimientos coordinador que adopta una empresa pública, privada o mixta, para obtener información confiable, salvaguardar sus bienes, promover la eficiencia de sus operaciones y adhesión a sus políticas administrativa”. De acuerdo con Perdomo, los elementos del control interno son

siete, a saber:

Organización

Catálogo de cuentas

Sistema de contabilidad

Estados financieros

Presupuestos y pronósticos

Entrenamiento, eficiencia y moralidad del personal y,

g) Supervisión.

Es conveniente también mencionar que Perdomo establece que los objetivos del control interno son:

Prevenir fraudes, descubrir robos y malversaciones,

Obtener información administrativa, contable y financiera confiable y oportuna.

Localizar errores administrativos, contables y financieros.

Proteger y salvaguardar los bienes, valores, propiedades y demás activos de la empresa.

Promover la eficiencia del personal, y

Detectar desperdicios innecesarios de material y tiempo, entre otros.

También, se debe mencionar que para que el sistema de control interno genere la utilidad que de él se espera, deben tomarse en cuánto los siguientes aspectos (IMCP, 2009):

Tamaño de la entidad.

Características de la actividad económica en la que opera.

Organización de la entidad.

Naturaleza del sistema de contabilidad y de las técnicas de control establecidas.

Problemas específicos del negocio.

Requisitos legales aplicable.

Al control interno, se le asigna la actividad de generar información que sea útil para la toma de decisiones. Uno de los elementos informativos más importantes que permiten la retroalimentación y la toma de decisiones es el constituido por el sistema contable. El sistema contable, entre otros, establece la clase de información financiera y administrativa que se requiere para una adecuada toma de decisiones dentro de un determinado enfoque o entorno en la que se encuentra la empresa.

METODOLOGÍA

El método utilizado es el exploratorio, ya que al investigar acerca de los sistemas de control interno sugeridos para las empresas, se encontró que la información acerca del tema, se refiere a medianas o gran empresa y en menor proporción se refieren a pequeñas y micro empresas. Posteriormente se utilizó el método descriptivo, al identificar el control con que las micro y pequeñas empresas operan en sus actividades. Para este fin, se diseñó un cuestionario y en su aplicación se aplicó el muestreo por conveniencia (Anderson, 2003). Las empresas muestreadas pertenecen al sector comercial y se ubican en Mexicali, Baja California, México. Los pasos que se siguieron son:

Primero: Análisis bibliográfico y documental, para referenciar e identificar los elementos y características que conforman un sistema de control interno en general para las pequeñas empresas.

Se obtuvo información de las siguientes fuentes:

Estructura y disposiciones del gobierno en México, referentes a la conformación de las Mipymes y los

diversos sistemas de ayuda con los que cuentan.

Revisión bibliográfica, sobre el sistema de control interno y de las Mipymes.

Segundo.- Se diseñó el instrumento que permitió obtener información de los controles establecidos por las pequeñas empresas en relación con sus principales actividades de comprar y vender.

Las interrogantes formuladas para identificar el control de dividieron en 23 ítems para ventas y en 19 ítems para compras.

Tercero.- El instrumento diseñado se aplicó a 61 pequeñas empresas del sector comercio ubicadas en Mexicali, Baja California.

Cuarto.- Análisis de la información obtenida de la aplicación de los cuestionarios implementados.

Quinto.- Descripción de los resultados obtenidos.

RESULTADOS

De la revisión documental y bibliográfica sobre el tema de sistemas de control interno de las funciones de comprar y vender de las pequeñas empresas, se obtuvieron los siguientes resultados:

Primero: Existe una amplia gama de autores que tratan el tema de sistemas de control interno tanto para identificarlos como para establecerlos en las organizaciones, así como la importancia que tiene en materia de auditoría. Sin embargo, para micro empresas este tema no es tratado y solo se encuentran pocas referencias bibliográficas sobre el control interno de las pequeñas empresas.

Segundo: El gobierno federal, emitió la Ley para el desarrollo y competitividad de las micro, pequeñas y medianas empresas y, la Secretaría de Economía a nivel federal y la Secretaría de Desarrollo Económico del estado de Baja California tienen establecidos mecanismos de ayuda para las Mipymes.

Tercero: De las investigaciones revisadas, se determinó que no existe cultura entre los micro y pequeños empresarios para diseñar un control interno sino que esta actividad se lleva a cabo de manera empírica y de acuerdo con su experiencia.

Cuarto: En cuanto a los cuestionarios aplicados a pequeñas empresas, en el ciclo operacional de ventas, se obtuvieron los siguientes resultados:

El 59 % no tiene establecidos por escrito políticas ni procedimientos.

El 58 % dan a conocer a los empleados del área los procedimientos establecidos de manera empírica.

El 53 % tienen separada el área de ventas de las demás áreas de la empresa.

El 77 % tiene bien identificada y ordenados los productos que vende.

El 72 % tiene medidas de seguridad como acceso de entradas y salidas, extintores, entre otros.

El 63 % tiene registros para controlar la mercancía localizada en el área de ventas.

El 51% tiene procedimientos establecidos para la mercancía caducada o en mal estado.

El 78 % tiene registro diario de las ventas realizadas.

El 53 % maneja una cuenta bancaria para depositar las ventas.

El 33 % deposita diariamente las ventas realizadas.

QUINTO: Los cuestionarios aplicados a micro y pequeñas empresas en el ciclo operacional de compras,

obtuvieron los siguientes resultados:

El 26 % tiene un área destinada para realizar las compras.

El 64 % inicia la actividad de compras con la identificación de las necesidades a cubrir.

El 65 % es autorizada la compra por el gerente o encargado.

El 73 % tiene identificado a los proveedores que pueden cubrir sus necesidades de compra.

El 38 % no tiene control de las solicitudes de compra elaborados, lo que les podría permitir garantizar que se le dé seguimiento a las necesidades a cubrir.

Solo el 28 % tiene la política de solicitar al menos 3 cotizaciones por cada necesidad a cubrir.

Solo el 37 % turna una copia de las solicitudes de compra al almacén que le permita identificar que lo solicitado concuerde con lo que el proveedor surta.

CONCLUSIONES

A pesar de que existe suficiente información del control interno, esta no es aplicable para las pequeñas empresas aun cuando cuentan con un poco más de información bibliográfica y de publicaciones en materia de control interno. Los controles, si bien son necesarios, pudieran representar un alto costo para las pequeñas empresas y pueden no estar preparadas para solventar. Las pequeñas empresas tienen controles más definidos que las microempresas para las funciones de comprar y vender al tener establecido una estructura más organizada dada sus características y necesidades de información.

FORMACIÓN PEDAGÓGICA DE LOS DOCENTES DE LA FACULTAD DE CIENCIAS ADMINISTRATIVAS DE LA UNIVERSIDAD AUTÓNOMA DE BAJA CALIFORNIA, MÉXICO.

Socorro Ureña Valenzuela, Universidad Autónoma de Baja California
Esther Eduvigis Corral Quintero, Universidad Autónoma de Baja California

RESUMEN

La Educación Superior en México se enfrenta a una serie de desafíos en un mundo que se transforma constantemente; por ello debe revisar su misión y redefinir muchas de sus tareas sustantivas, en especial aquellas que se relacionen con las necesidades de la sociedad en materia de aprendizaje y superación continua. La formación pedagógica le brinda al docente las herramientas conceptuales y operativas que hacen de su práctica un ejercicio mediado por el saber y la teoría, alejándose de prácticas mecánicas que son producto de una experiencia no reflexionada y repetitiva. En la presente investigación se aborda el tema de la influencia que tiene la formación pedagógica de los profesores de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California de México, en su desempeño como académicos. La investigación proporcionó datos relevantes a tomar en cuenta dentro del programa de formación docente. Para llevar a cabo la investigación se diseñó un instrumento en la modalidad de cuestionario para la recolección de la información la cual se analizó e interpretó.

EDUCATIONAL TRAINING OF TEACHERS OF THE FACULTY OF ADMINISTRATIVE OF THE AUTONOMOUS UNIVERSITY OF BAJA CALIFORNIA, MEXICO

ABSTRACT

Higher Education in Mexico faces a number of challenges in a world that is constantly changing; why should review its mission and redefine many of its substantive tasks, especially those that relate to the needs of society in terms of learning and continuous improvement. The pedagogical training of teachers, the conceptual and operational tools that make your practice a mediated by knowledge and theory exercise away from mechanical practices that are the product of a non-reflected and repeated experience. In this research the issue of the influence of pedagogical training of teachers of the Faculty of Administrative Sciences, Autonomous University of Baja California in Mexico, in their roles as scholars addressed. The research provided relevant data to take into account in the teacher education program. To carry out the research will design an instrument in the form of questionnaire for the collection of information which is analyzed and interpreted.

INTRUDUCCION

La Educación superior se enfrenta a una serie de desafíos en un mundo que se transforma, por ello debe revidar su misión y redefinir muchas tareas sustantivas, en especial aquellas que se relacionen con las necesidades de la sociedad en materia d aprendizaje y superación continua. Un punto clave en su misión esta dirigido a destacar las tareas de las universidades, se requiere llevar a cabo esfuerzos para elevar la formación pedagógica de los profesores, lo cual tributará en una mejor preparación de los egresados universitarios. La actividad del profesor ha sido y seguirá siendo un aspecto de estudio de la Didáctica cada vez más evidente su papel de facilitador en la calidad del proceso de enseñanza aprendizaje y en la educación en general. La mejora de la calidad del proceso de enseñanza aprendizaje pasa necesariamente por la transformación del pensamiento y de los sentimientos de los profesores, para ello la Educación Superior necesita de la calidad del personal docente, de los programas y de los estudiantes, de las infraestructuras y del ambiente universitario.

La formación pedagógica, no solo le da identidad al maestro, sino que le brinda las herramientas conceptuales y operativas que hacen de su practica un ejercicio mediado por el saber y la teoría, alejándose de prácticas mecánicas que son producto de una experiencia no reflexionada y repetitiva, una práctica ciega. En la presente investigación se abordara el tema la influencia que tiene la Formación Pedagógica de los profesores de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California en el desempeño como académicos. Teniendo como objetivo general el proponer un programa de Formación Pedagógica que ayude al desempeño eficiente. Además tiene como objetivos específicos, conocer las características generales del docente de la facultad de Ciencias Administrativas e identificar el tipo de Formación pedagógica del docente.

La formación práctica de los profesionales de la educación y de los profesores en particular es un proceso complejo que implica y atañe a las instituciones responsables de la capacitación de los futuros docentes. Aprender a ser docente requiere de un largo proceso que se concreta en nuevas formas de vivenciar, entender y compartir las prácticas formativas. Los procesos educativos requieren de auténticos profesionales que conozcan los múltiples retos a los que han de enfrentarse y que se preparen para integrar las formas más variadas de compartir el conocimiento, experimentar las prácticas innovadoras y vivenciar los procesos de cambio y de mejora en la sociedad del conocimiento. La comprensión de la amplitud de las formas, los planes y las complejas situaciones educativas tienen un aspecto común que se concreta en la inmersión de las tareas prácticas tal como atañen a los más diversos estilos y momentos formativos para futuros profesionales. El aprendizaje del saber profesional y la preparación para responder a los continuos retos de la sociedad del conocimiento requiere de nuevos modelos que presenten el saber práctico como el estilo de innovación y búsqueda de soluciones a los problemas de la práctica y a los cambiantes escenarios de las culturas en interacción. La formación práctica es el complemento esencial para el profesional de la educación. En ella hemos de prestar un interés esencial a la adquisición de los modelos, métodos y técnicas apropiadas al saber y al desafío de la profesión de la docencia.

Planteamiento de Problema

Para realizar el planteamiento del problema se parte de la pregunta: ¿Cuáles son las necesidades de formación de los docentes de la facultad de Ciencias Administrativas? de la Universidad Autónoma de Baja California (Mexicali). Es importante mencionar que dentro de la Facultad de Ciencias Administrativas se cuenta con programa de capacitación que se va adecuando a las necesidades de la propia institución, en dicho programa podemos observar que se llevan a cabo una serie de cursos dirigidos a los docentes teniendo una alta incidencia los cursos disciplinarios a los cuales se les ha dado mayor importancia por parte de los propios docentes y el área pedagógica ha quedado un tanto desprotegida, es por eso que se inicia con esta investigación. Considerando el papel del docente como algo relevante dentro de nuestra sociedad. La tarea

del docente es enseñar a los alumnos a aprender. Para dar respuesta a esta pregunta se elaboró un diagnóstico de necesidades de formación donde se pudieran identificar en realidad cuáles serían las necesidades de formación que tienen los docentes de la Facultad de Ciencias Administrativas.

Objetivo General

Analizar las necesidades de Formación Docente en la Facultad de Ciencias Administrativas

Objetivos específicos

Identificar las necesidades de formación pedagógicas del docente de FCA

Identificar las necesidades de Formación Disciplinaria del docente de FCA

Conocer las características generales del docente de FCA

Identificar cursos que se han impartido en los últimos 10 años en FCA

Identificar qué tipo de Formación Pedagógica requiere el docente de la Facultad de Ciencias Administrativas.

Identificar qué tipo de Formación Disciplinarios requiere el docente de la Facultad de Ciencias Administrativas.

Importancia del Estudio

La formación docente se define como un proceso de la práctica social, mediante el cual los sujetos asimilan, transmiten, ensayan teorías y experiencias educativas con el propósito de transformarlas y compartirlas. Esta definición se considera como un primer acercamiento al tema, ya que al avanzar en la construcción de un cuerpo teórico es necesario dar cabida a otras posibles interpretaciones e incluso a discrepancias. Es evidente y lógico que los profesores de nivel superior no se atreverían a presentarse en un salón de clases sin saber un poco más, cuando menos, que los alumnos pero ¿Saben en realidad como enseñarlo? Saben el “qué”, pero no saben el “cómo”. Para que la universidad pueda cumplir con sus fines para que forme hombres y profesionales, eduque y enseñe, requiere del suficiente número de maestros, pero sobre todo necesita que esos maestros estén capacitados, que no sólo sepan, sino que sepan enseñar lo que saben. Si los alumnos acuden a clases para aprender, los maestros deben enseñar, entendiendo que la labor es simultánea, que no puede existir aislado un acto sin el otro.

Es importante señalar que la formación pedagógica que se le brinda al personal docente determinará su actuación como tal. También es necesario resaltar que los docentes están capacitados específicamente en su profesión, pero en realidad no hay una preparación pedagógica, de ahí nace la inquietud de encaminar la investigación sobre la necesidad de que el personal docente se interese por recibir este tipo de formación. La docencia va más allá de la simple transmisión de conocimientos. Es una profesión, es una actividad compleja que requiere para su ejercicio de la comprensión del fenómeno educativo. Por lo tanto es importante que el docente esté consciente de la responsabilidad de las decisiones que tome, en función de su propia formación, y esto le permite tener la oportunidad de realizar cambios trascendentes y necesarios, de acuerdo con la problemática que vive. El docente es el actor principal en el proceso de mejoramiento de la calidad educativa, pues es el nexo en los procesos de aprendizaje de los alumnos y las modificaciones en la organización institucional. Las reformas educativas se traducen en las escuelas y llegan al aula por medio del docente. Es importante que la sociedad cuente con maestros y profesores eficaces y eficientes para poner en práctica distintos y adecuados recursos y en las ocasiones oportunas, con el fin de acceder a mejores logros educativos.

Limitaciones

En la presente investigación se realizó un diagnóstico de necesidades de formación de los docentes de la Facultad de Ciencias Administrativas perteneciente a la Universidad Autónoma de Baja California, los datos obtenidos pertenecen específicamente a esta facultad por lo que el resultado que se obtiene de esta

investigación es aplicable solo para la Facultad de Ciencias Administrativas. Se aplicó un instrumento para detectar las necesidades de formación del cual se obtuvieron algunos datos para formulación de los programas de Formación dentro de la propia facultad.

CONCLUSIONES

La investigación proporcionó datos relevantes que servirán para el establecimiento de un plan de formación que sea de interés para los académicos de la FCA, ya que se obtuvieron las opiniones de los profesores encuestados las cuales resultaron muy valiosas. En términos generales los profesores desean en gran porcentaje que se ofrezcan cursos en el área pedagógica – disciplinaria, una gran mayoría comenta que la pedagógica es un área que les gustaría conocer más. Información que sirve para programar cursos en ambas áreas las cuales serían aceptadas por los profesores. Se determinó que el profesor está interesado en capacitarse, los resultados fueron positivos ya que en gran porcentaje los profesores encuestados contestaron que sí están interesados en su actualización como docentes, lo cual se interpreta como un área de oportunidad ya que si se ofertan cursos el profesor considerará asistir y así continuar con su desarrollo como académico en la FCA.

En relación a los cursos que a los profesores les gustaría asistir, encontramos que desearían asistir a Diplomados, mostrando además un gran interés por cursos tanto de competencias, su evaluación, su planificación así como de plan de clases. Los demás cursos tienen el interés de los profesores pero en menor escala, esto representa el interés en una formación profunda tanto en investigación como en el modelo educativo con base en competencias. En gran mayoría los profesores han notado cambios en su desempeño después de asistir a cursos, por lo que se considera positivo la formación dado el impacto que tiene en su desarrollo académico a sabiendas que la capacitación ofrece un cambio de conducta en sus competencias, lo que implica que el profesor estará dispuesto a tomar capacitación pues es un incentivo para obtener motivación en su quehacer académico.

En cuanto a la disponibilidad de horario para tomar cursos, los respondientes mencionan que entre semana les sería posible asistir, en turno matutino y en el turno vespertino en igual medida, aunque respecto a los horarios para tomar cursos prevalece la opinión de que los días sábados es buena opción para tomar cursos si se ofertan. Esta información se puede interpretar que la programación deberá considerar cursos entre semana y en día sábado. Al realizar esta investigación se tiene como principal objetivo analizar las necesidades de formación docente en la Facultad de Ciencias Administrativas, primeramente se aplica un cuestionario donde se conocen los antecedentes de formación de los docentes y cuál ha sido su participación dentro de los programas de formación que se han tenido en la Facultad de Ciencias Administrativas. Se identificaron las necesidades de formaciones tanto pedagógicas como disciplinarias las cuales son importantes para el desarrollo del docente en el aula. Los docentes han asistido a una serie de cursos ofertados en FCA, que han ayudado en su labor como docentes.

Actualmente la Facultad de Ciencias Administrativas cuenta con una planta 276 de maestros, de los cuales son 50 de tiempo completo, 1 de medio tiempo y 225 de asignatura. La formación de los docentes de la FCA, ha sido en el área disciplinaria dejando un poco de lado el área pedagógica, de ahí la importancia de esta investigación donde se pretende fundamentar que los docentes requieren mayor formación en esta área. En una institución de educación superior los alumnos concurren a aprender, los maestros deben enseñar, entendiendo que la labor es simultánea, que no puede existir aislado un acto sin el otro. Si los alumnos deben aprender el maestro debe enseñar, para poderlo hacer deben aprender a enseñar y por tan es necesario que en la universidad se enseñe a enseñar a los docentes. La formación docente es un proceso permanente en los que convergen la disciplina y sus aspectos teóricos, metodológicos, didácticos, psicológicos para lograr la profesionalización de la docencia.

NACIMIENTO DE LA OBLIGACIÓN TRIBUTARIA EN LOS IMPUESTOS DEVENGADOS Y EN EL FLUJO DE EFECTIVO

Cesar Corona Pacheco, Universidad de Guadalajara

Irving Llamosas Rosas, Universidad de Guadalajara

Rigoberto Reyes Altamirano, Universidad de Guadalajara

Oscar Bernardo Reyes Real, Universidad de Colima y Universidad de Guadalajara

RESUMEN

El presente documento, realiza un análisis del origen de la obligación tributaria, de la forma en que se genera y las características que debe tener para poder hacerse efectiva. Nuestro estudio inicia con la revisión de la literatura, considerando la constitución mexicana y la de otros dos países, la legislación fiscal mexicana actual, marco de referencia con el propósito ir al origen de la obligación tributaria. Se han considerado algunos aspectos legales que son importantes para contrastarlos con las teorías existentes en la materia. También se ha tomado en cuenta la opinión de algunos autores para que sean las mismas contrastaciones las que nos permitan comprender la evolución y desarrollo de nuestro sistema fiscal, ya que en la actualidad hemos podido observar que los cambios a dicha reforma no han surtido los efectos esperados. Por último se esbozan algunas conclusiones.

PALABRAS CLAVE: Obligación Tributaria, Sistema Fiscal, Impuestos Devengados, Flujo de Efectivo

ABSTRACT

This document makes a analysis of the birth of the tax liability, the way it is generated and the characteristics required to be effective. Our study begins with a review of the literature, considering the Mexican constitution and two other countries, the current Mexican tax law, as a framework in order to go to the origin of the tax liability. We have considered some legal issues that are important to contrast with existing theories on the subject. It also took into account the opinion of some authors to be the same contrasting which allow us to understand the evolution and development of our tax system, which currently have observed that changes to the reform have not had the effects expected. Finally some conclusions are drawn.

KEYWORDS: Tax Duty, Tax System, Accrued Taxes, Cash Flow

INTRODUCCIÓN

México tiene el problema de una baja recaudación fiscal respecto al PIB, en comparación con otros países miembros de la OCDE, incluyendo a naciones latinoamericanas con economías más pequeñas. Una de las principales actividades administrativas que actualmente desarrollan las empresas, es la preparación de los flujos de efectivo y la conciliación entre los diferentes escenarios de presentación, ya sea para fines administrativos, para la formulación del estado financiero básico y para la determinación de bases fiscales. Otra característica importante de nuestro sistema tributario es el hecho de que las reformas en materia fiscal no han podido cumplir con su objetivo de lograr una recaudación adecuada, para poder alcanzar sus metas presupuestarias que impulsen adecuadamente el desarrollo del país.

REVISIÓN DE LITERATURA

Para la realización de este análisis se han consultado diversas fuentes entre las que se incluyen principalmente las leyes fiscales mexicanas como son: la Ley del Impuesto al Valor Agregado, la Ley del Impuesto Sobre la Renta y Código Fiscal de la Federación, así como información de artículos que muestran la opinión de profesionales que se dedican a la práctica fiscal, documentos oficiales, publicaciones en sitios web y algunos autores que hablan sobre lo que en nuestro país es la aplicación de la ley de impuestos, en específico se hablará del *nacimiento de una obligación tributaria* y cómo afecta ésta de forma directa al pago de impuestos y obliga a las empresas nacionales a generar estrategias, en especial sobre los impuestos devengados y el flujo de efectivo, para ello se hace necesario una definición que ayude a visualizar esta figura.

Las obligaciones surgen bien de la voluntad o de la ley, en este caso mediante la técnica de asociar la actualización de un supuesto legal el surgimiento de la obligación. En el primer caso, se está ante las obligaciones denominadas voluntarias o consensuales y en el segundo frente a las legales o *ex lege*. (Jiménez González, 2014) El autor antes mencionado aclara que: “se habla de obligaciones consensuales simple y sencillamente por la preeminencia del consentimiento, el ejemplo más acabado de tales obligaciones son las contractuales, la celebración de un contrato de compra-venta por ejemplo. Para el caso de las obligaciones legales o *ex lege* se cita como ejemplo el de dar alimentos o la de pagar daños y perjuicios como obligación extracontractual. También menciona (Jiménez González, 2014) que la doctrina tiene otro criterio de clasificación como lo es el de la fuente, como lo son las denominadas legales y las *ex lege*; en las primeras la obligación encuentra tanto su fuente mediata como inmediata en la ley, es decir, es ella misma. Las obligaciones *ex lege* son aquellas que surgen como consecuencia de la actualización del supuesto previsto por la ley con tal fin, por ende tales obligaciones exigen existencia de norma y realización del supuesto legal, es de tal categoría la que recae sobre los padres de dar alimentos a sus hijos.

Y para reforzar el autor también deja claro que; la doctrina hace una diferencia entre las obligaciones legales y las *ex lege*, afirmando que pertenecen a la primera categoría aquellas para cuyo surgimiento basta la previsión legal, sin que sea menester la realización de hecho alguno, y cita como ejemplo el pago de los denominados impuestos de capitación que son aquellos en los que ha de pagarse una cuota determinada por cada persona, “por cabeza”.

Ahora para ejemplificar lo mencionado anteriormente citaremos el Art. 6to. del Código Fiscal de la Federación, que nos da elementos para calificar la obligación tributaria por excelencia, como lo es la de pago del tributo, como obligación *ex lege*. “las contribuciones se causan conforme se realizan las situaciones jurídicas o de hecho, previstas en las leyes fiscales vigentes durante el lapso en que ocurran”.

Para hacer una reflexión más acertada se mencionan a continuación algunos ejemplos de otras leyes. Art. 20 de la Ley General Tributaria de España. “El hecho imponible es el presupuesto fijado por la ley para configurar cada tributo y cuya realización origina el nacimiento de la obligación tributaria principal”. La Ordenanza Tributaria Alemana en su artículo 38 establece:

“Los créditos derivados de la obligación tributaria nacen cuando se realiza el supuesto de hecho al que la ley vincule el deber de prestación”.

El artículo 18 del modelo del Código Tributario para América Latina establece:

“La Obligación tributaria surge entre el estado otros entes públicos y los sujetos pasivos en cuanto ocurre el presupuesto de hecho previsto en la ley”.

Por otro lado la obligación tributaria plantea una serie de cuestiones relevantes vinculadas a su proceso de nacimiento que requieren ser abordadas:

Primero: el ente público establece normativamente, por vía legislativa, la situación de hecho a las que desea asociar el nacimiento de las obligaciones tributarias.

Segundo: el ente público se ocupa de definir y ejercitar pretensiones tributarias individualizadas, dirigidas a la obtención de las cuotas tributarias debidas por los sujetos respecto a los cuales se hayan producido, de modo concreto y efectivo, los presupuestos legales de la imposición.

Para dicho análisis (Jiménez González, 2014) nos dice que: “la vinculación entre el derecho y el tributo atraviesa ordinariamente por las diversas experiencias nacionales, en el caso de México, por tres fases fundamentales:

La fase constitucional del tributo, ésta se caracteriza por la existencia de un conjunto de previsiones constitucionales, mandatos en muchos casos, que implican acciones afirmativas, establecer los tributos artículo 73, fracción VIII y 31. Fracción IV, y en otras auténticas prohibiciones explícitas o implícitas, modalidad que asumen algunos derechos fundamentales o garantías sin referir expresamente el tributo. Sin embargo sus exigencias impactan su ámbito al erigirse en auténticas restricciones el poder legislativo creador de los tributos (artículos 14, 15, 5to., etcétera).

Constitución Mexicana. (Artículo 31) Son obligaciones de los mexicanos: “IV. Contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado o Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes. Constitución Española. (Artículo 31) Todos contribuirán al sostenimiento de los gastos públicos de acuerdo con su capacidad económica mediante un sistema tributario justo inspirado en el principio de igualdad y progresividad que, en ningún caso, tendrá alcance confiscatorio. Sólo podrán establecerse prestaciones personales o patrimoniales de carácter público con arreglo a la ley. Constitución Italiana. (Artículo 23) A nadie puede imponerse prestaciones personales o patrimoniales sino mediante la ley.

Artículo 53. Toda persona debe concurrir a los gastos públicos de acuerdo con su capacidad contributiva. El sistema fiscal se inspira en el principio de progresividad. La Fase legislativa. Esta etapa se agota con el acotamiento por parte del legislador del mandato constitucional de establecer tributos y hacerlo a la manera como lo ordena la constitución. La ley conforma cada una de la figuras tributarias, es decir, establece los diversos tributos de la constitución, por tanto será mediante ley como haya de establecerse cada tributo, deberá además la propia ley definir, entre otras cuestiones, quienes deban pagarlos, en qué casos, cómo cuantificar la deuda tributaria en cada caso, cuál será la época de pago, etcétera, todo ello en acatamiento del principio constitucional de reserva de ley. Nacimiento de la obligación tributaria.

El vínculo jurídico surge entre la administración tributaria, sujeto activo y el titular del derecho de crédito y el sujeto administrado que por haber realizado el hecho asume la condición de pasivo contribuyente. El carácter ex lege de la obligación tributaria principal o nuclear entraña el que su surgimiento se dé con total prescindencia de la voluntad de quien a la postre resulte ser el sujeto obligado. El artículo 6to. Del Código Fiscal de la Federación Establece: “Las contribuciones se causan conforme se realizan las situaciones jurídicas o de hecho previstas en las leyes fiscales vigentes durante el lapso en que ocurran”. El hecho generador. El hecho previsto por la ley en el artículo 6to. Del CFF, tiene como función el de producir el surgimiento de la obligación tributaria y determinar el momento de su nacimiento. De ahí su nombre hecho generador o hecho imponible.

Momento del nacimiento de la obligación tributaria. Por lo descrito en el artículo 6to. Del CFF, podemos deducir que el nacimiento de la obligación tributaria surge del vínculo jurídico entre un sujeto, a partir de ese momento, llamado sujeto acreedor, la administración tributaria y otro sujeto llamado contribuyente esto se da cuando ocurre en la realidad el supuesto previsto por la ley denominado hecho imponible o hecho generador, mismo que tiene un papel importante al resolver cuestiones tales como: Determinar el momento

del nacimiento de la obligación tributaria, identificar al sujeto contribuyente, identificar fenómenos de incidencia o causación, no incidencia y exención, definir la competencia impositiva, casos de múltiple imposición. En lo que respecta a los flujos de efectivo el impuesto aplicable es el IVA. Sus características primordiales son las siguientes: Para la determinación del IVA en base al flujo de efectivo, deben considerarse los siguientes conceptos: lo efectivamente cobrado (ventas) y lo efectivamente pagado (compras y gastos), identificados con la actividad económica en un periodo determinado, efectuando una comparación para determinar los montos por pagar o a favor.

Sujetos obligados. Los sujetos obligados por el pago de IVA son las personas físicas y morales que realicen actos o actividades en territorio nacional como lo señala el artículo primero de la LIVA, dichos actos o actividades son: enajenación de bienes, presten servicios independientes, otorguen el uso goce temporal de bienes, importen bienes o servicios. De acuerdo con la LIVA los sujetos también están clasificados como sujeto activo y pasivo. El sujeto activo es aquel que en cuyo favor se establece el crédito, es decir el deber de dar, hacer o prestar, la entrega de las aportaciones económicas se efectúa a su favor. En este caso el sujeto activo es el fisco a través del SAT. El pasivo es aquel a cuyo cargo se encuentra el cumplimiento de la obligación, o el deber de dar, hacer o prestar, mismos que deben contribuir al sostenimiento de los gastos públicos. Momentos de causación:

Se considera efectuada la actividad cuando es efectivamente cobrada la contraprestación, y el monto de cada una de ellas. (Artículos 11, 17 y 22 de LIVA). Se considera causado el impuesto al momento de ser devengado. (Artículo 26 de LIVA). En el momento en que efectivamente se pague la contraprestación. (Artículo 18-a de LIVA). Es el momento en que se entiende realizado el hecho imponible y nace la obligación tributaria. De suyo tiene carácter instantáneo, pero mientras que en los impuestos de devengo instantáneo el devengo coincide con la realización del hecho imponible, que se agota en esa misma realización, en los impuestos de devengo periódico representa el momento final o conclusivo del periodo impositivo (por ejemplo el IRPF o el Impuesto sobre Sociedades). No suele coincidir con el momento en que se ha de efectuar el pago, que generalmente es posterior.

Por otro lado (Luchena Mozo, 2012), nos menciona que; “El poder financiero es una realidad compleja y heterogénea que se manifiesta no sólo a través del poder tributario, entendido como especificación del poder normativo cuando se refiere a la esfera tributaria, sino también mediante potestades Administrativas de aplicación de la norma jurídica, cuya tarea se encomienda a la Administración financiera que la hace convertirse en titular de derechos y obligaciones frente a los ciudadanos. Ahora bien, no podemos olvidar que existen varias teorías sobre este tema, algunas de ellas se mencionan a continuación: Teoría del tributo como manifestación de la potestad de “imperium”. Como reminiscencia de aquellas primeras posiciones que concebían el Derecho Financiero como parte del Derecho Administrativo, entendido éste como el Derecho de las Administraciones Públicas, se considera la relación tributaria como una relación de poder, ligada, por tanto, al Estado-Policía. Destaca la supremacía del Estado sobre el súbdito; el Soberano dotado de potestad de imperium, no conoce límites jurídicos a sus mandatos. Estamos ante una relación de poder. Teoría de la relación jurídico-obligacional.

Con la instauración del Estado de Derecho, el tributo como relación de poder carece de sentido. El sometimiento del Estado al imperio de la ley afectará también al poder tributario. De esta forma, y en base a esa obligación, el acreedor tiene la facultad de exigir de otra, el deudor, una determinada prestación. La peculiaridad de esta relación obligacional es que el contenido y la medida de la prestación debida son fijadas exclusivamente por la ley. Teoría de la relación jurídico-tributaria de contenido complejo Esa construcción cerrada era insuficiente para dar cabida a todas aquellas relaciones con la Administración tributaria que no podían incardinarse en el concepto propio de obligación. Surge así la relación jurídica-tributaria de contenido complejo, cuyo núcleo esencial, está constituida por la obligación tributaria, a la que se le unen otras obligaciones accesorias, deberes o derechos distintos de aquélla.

METODOLOGÍA

La investigación que en este documento se presenta es meramente documental ya está nos permite realizar comparaciones entre las distintas leyes en distintos países del mundo y observar sus características importantes al momento de realizar la generación de leyes y el momento de recaudación fiscal.

Hipótesis

El nacimiento de la obligación tributaria depende del contexto económico y social en que se desarrolla un estado. Los momentos que nacen las obligaciones tributarias dependen en gran parte de las necesidades de los estados de solventar diversas áreas que ellos creen prioritarias. El hecho imponible. Vistas las diferentes orientaciones doctrinales en torno a la obligación tributaria, nos corresponde estudiar ahora el elemento imprescindible para que aquélla surja. Independientemente de cuál sea la postura que se adopte en torno a ella, lo que resulta absolutamente necesario para que el contribuyente soporte una detracción económica de carácter coactivo es la realización de un presupuesto de hecho al que la norma une como consecuencia jurídica el pago de un tributo. Ese presupuesto normativo es el hecho imponible.

El hecho imponible o presupuesto de hecho del tributo, es definido en el artículo 28 de la Ley General Tributaria. Dicho precepto lo conceptúa como sigue: “El hecho imponible es el presupuesto de hecho de naturaleza jurídica o económica fijado por la Ley para configurar cada tributo y cuya realización origina el nacimiento de la obligación tributario”. Impuestos devengados. Los contribuyentes tienen que cumplir con las obligaciones derivadas de diversos impuestos: el Impuesto Sobre la Renta (ISR), el Impuesto al Valor Agregado (IVA), y anteriormente el Impuesto a los Depósitos en Efectivo (IDE), el Impuesto Empresarial a Tasa Única (IETU) entre otros, cuyos mecanismos de determinación son distintos, ocasionando un esfuerzo administrativo adicional.

Un reciente estudio económico de la Organización para la Cooperación y el Desarrollo Económico (OCDE, 2011), muestra que la recaudación tributaria de nuestro país en el año de 2008 fue de 16.91% del producto interno bruto (PIB), lo cual representa una tasa por debajo del promedio de 34.82% de los países que integran dicha Organización. (Bernal Ladrón de Guevara, Padilla Figueroa, & Pérez Romo, 2014) Uno de los temas más debatidos en México durante los últimos cuatro años ha sido el de la reforma fiscal. Las finanzas públicas en México muestran debilidades estructurales que subsisten a pesar de los avances que se han alcanzado en los últimos años. Por ejemplo, a pesar de que entre los años 2001 y 2004 se han registrado incrementos importantes en los ingresos tributarios, la carga fiscal de México todavía es muy baja en relación a estándares internacionales. (M. Werner & F. Ursúa, 2014) Tasa de recargos mensuales.

Tratándose de recargos por prórroga para el pago de créditos fiscales, para el ejercicio fiscal de 2014 se mantiene la tasa del 0.75 % mensual sobre saldos insolutos. En el caso de la tasa de recargos por prórroga que incluya actualización, se deberán aplicar sobre los saldos insolutos las siguientes tasas:

Tratándose de pagos a plazos en parcialidades hasta 12 meses, la tasa será del 1 % mensual. Tratándose de pagos a plazos en parcialidades de más 12 meses y hasta de 24 meses, la tasa será del 1.25 % mensual. Tratándose de pagos a plazos en parcialidades superiores a 24 meses, y en pagos a plazo diferido, la tasa de recargos será del 1.5 % mensual. A partir del 1° de enero de 2014 entra en vigor una nueva LISR, por lo que mediante disposiciones transitorias se abroga la LISR vigente desde el ejercicio fiscal de 2002, por lo que dejan de tener efecto las resoluciones judiciales y administrativas relacionadas con la LISR vigente hasta el ejercicio fiscal de 2013. Por otro lado, mediante disposiciones transitorias se señala que el Reglamento de la LISR continuará aplicándose en lo que no se oponga a la nueva Ley y hasta en tanto no se expida un nuevo Reglamento. Es importante mencionar que, aún y cuando se abroga la LISR vigente al 31 de diciembre de 2013, subsisten en la nueva Ley la mayoría de las disposiciones contenidas en la Ley que se abroga. Beneficio de los tratados para evitar la doble tributación. Tratándose de operaciones entre partes relacionadas, las autoridades fiscales podrán solicitar al contribuyente residente en el extranjero que acredite la existencia de una doble tributación jurídica, a través de una manifestación bajo protesta de decir

verdad firmada por su representante legal, en la que expresamente señale que los ingresos sujetos a imposición en México y respecto de los cuales se pretendan aplicar los beneficios del tratado para evitar la doble tributación, también se encuentran gravados en su país de residencia; para lo que, deberá indicar las disposiciones jurídicas aplicables; así como, aquella documentación que el contribuyente considere necesaria para tales efectos.

Acreditamiento del ISR pagado en el extranjero. Se establece un nuevo mecanismo; así como, nuevas reglas para determinar el acreditamiento del ISR pagado en el extranjero. **Tasa del ISR.** Durante el ejercicio fiscal de 2014 la tasa impositiva del Impuesto Sobre la Renta (ISR) para personas morales continuará siendo del 30 %. **Obligaciones fiscales.** Para las personas morales que paguen dividendos o utilidades, se establece la obligación de efectuar los pagos con cheque nominativo o a través de transferencia de fondos a la cuenta de dichos accionistas; así como, la de proporcionar a las personas físicas o morales la constancia de retención correspondiente. Cabe señalar que a partir del 1° de enero de 2014 las personas morales residentes en México que distribuyan dividendos o utilidades deberán retener un 10 % del ISR sobre el pago de dichos dividendos, cuando se distribuyan a personas físicas y a residentes en el extranjero.

Ingresos Por Dividendos

Las personas físicas deberán de pagar un impuesto del 10 % sobre el monto de dividendos que hayan recibido de personas morales. En caso de que el pago del dividendo lo haga una persona moral residente en México, ésta deberá de hacer la retención y enterar de dicho impuesto. En caso que el dividendo se haya pagado por una persona moral residente en el extranjero, el impuesto deberá de ser enterado directamente por la persona física que recibe el dividendo. **Ley del Impuesto al Valor Agregado.** Eliminación tasa preferencial en región fronteriza Se elimina la tasa de los 11 % para actos y actividades desarrollados en región fronteriza, para homologarlo al 16 % en todo el país, eliminación de tasa 0 % para ciertos productos y servicios. Se gravan a la tasa del 16 % la enajenación de los siguientes productos: Mascotas y alimentos para mascotas. Los chicles o gomas de mascar. Servicios de hotelería y conexos para participar en congresos. En el caso de Impuestos, los flujos de efectivo toman un papel importante en la determinación de los mismos, como sigue:

El 14 de septiembre de 2007 el Congreso de la Unión aprobó la Ley del Impuesto a Tasa Única (IETU). Esta Ley fue publicada el 1° de octubre de ese mismo año en el Diario Oficial de la Federación, y está vigente a partir del 1° de enero de 2008 hasta diciembre del 2013. El IETU sustituye al Impuesto al Activo (IA), el cual estuvo vigente de 1989 – hasta 2007.

La base del impuesto es el diferencial que existe entre los ingresos, costos y gastos autorizados por la Ley del IETU y son similares a los que se consideran para la determinación del Impuesto al Valor Agregado (IVA). Es importante señalar que los ingresos, costos y gastos se determinan sobre la base de flujo de efectivo. También no debemos olvidar que en muchas ocasiones las decisiones de reformas fiscales de nuestro país no necesariamente han sido una parte fundamental de lo que mueve o motiva a los políticos en turno, sino más bien son una forma de hacer frente a problemas inevitables como lo explica (Sobarzo Fimbres, 2012) “De las reformas parciales de las últimas décadas destacan dos características importantes. En su mayoría se han realizado en etapas inmediatamente posteriores a una crisis económica con el propósito de resarcir la caída de los ingresos públicos y, quizá como consecuencia de esto, se han diseñado no como una estrategia de política pública de largo plazo sino como respuesta a las exigencias de los cambios y ajustes tan fuertes que se han provocado con posteridad a los periodos de crisis”.

RESULTADOS

En las últimas 3 décadas se han realizado diversas reformas fiscales en nuestro país en busca de una mejor y mayor recaudación de impuestos, donde se incluya a todo tipo de contribuyentes, procurando una equidad en el pago de los impuestos. Aunque se han tenido mejoras en las diversas leyes impositivas, distan mucho ser a una verdadera reforma fiscal basada en un sistema que otorgue seguridad jurídica, mediante el respeto de los principios constitucionales de los impuestos, acompañado de un marco normativo sencillo y comprensible que coadyuve al fortalecimiento de las haciendas de los Estados y de los Municipios, mediante innovaciones en controles sectoriales, paquetes de reducción de déficit público, con una mayor aplicación de tecnologías de información que faciliten los procedimientos de recaudación y asignación. Otro factor importante que mucho se ha descuidado es retribuir al contribuyente, es decir que aparte de realizar obras de beneficio social, de servicios e infraestructura, la hacienda pública ha descuidado su labor de ser un medio de redistribución de la riqueza generada en el país.

CONCLUSIONES

El nacimiento de la obligación tributaria es muy similar en varios países, su origen es la constitución de cada país, y en base a ella, se elaboran y promulgan las diversas leyes tributarias como son: LISR, LIVA, etc., en las cuales se consigna específicamente la obligación tributaria de acuerdo a su naturaleza. Para el estudio se revisó la Constitución Mexicana que en su artículo 31, la Constitución Española, en su numeral 31 y la Constitución Italiana en el diverso 53, todos los artículos contienen en su texto la obligación de aportar al gasto público a través de las contribuciones. En México no se ha resuelto el problema de la tributación y fiscalidad, a pesar de que cada año el preparar y revisar el presupuesto de ingresos se reforman y adicionan diversos ordenamientos de leyes tributarias no se ha logrado una verdadera reforma que sea recaudatoria para alcanzar a cubrir el gasto público sin depender de los ingresos petroleros. La reforma fiscal estructural, continúa permanentemente aplazada porque no se han alcanzado los acuerdos políticos necesarios, pese a que todos los interlocutores coinciden en su necesidad.

El problema destaca que, en materia tributaria, el país prácticamente ha permanecido estancado en las últimas tres décadas, toda vez que, como proporción de su producto interno bruto (PIB), la recaudación tributaria no petrolera ha oscilado alrededor de los diez puntos porcentuales. Aproximadamente un tercio de la recaudación total ha provenido de los excedentes de la exportación petrolera. En consecuencia, se plantea que una reforma tributaria exitosa debería entonces generar entre cinco y seis puntos porcentuales adicionales, a fin de eliminar la fuerte dependencia de ingresos del petróleo, que en materia tributaria tiene el país. Entre estos retos destacan los siguientes: reducir su dependencia de los ingresos petroleros; elevar su tasa de crecimiento; mejorar la sostenibilidad fiscal mediante la eficiencia y eficacia del gasto público; y mejorar la rendición de cuentas del gasto a nivel subnacional. La reforma fiscal mermará o disminuirá el flujo de efectivo de las empresas por el efecto de los impuestos.

MPYMES CON PERMANENCIA EN LA REGIÓN CENTRO DEL ESTADO DE COAHUILA Y SU VISION CON LIDERAZGO: TRES CASOS

Silvia Rodríguez Reyes, Universidad Autónoma de Coahuila
 Fernando Agüeros Sánchez, Universidad Autónoma de Coahuila
 David Moreno Sánchez, Universidad Autónoma de Coahuila

RESUMEN

El presente trabajo describe el desarrollo que han tenido las MPYMES ubicadas en la región centro del Estado de Coahuila. Las buenas prácticas empresariales han permitido un desarrollo sostenible y respetuoso con los aspectos económicos, sociales y medioambientales el cual se refleja en el crecimiento de las MPYMES en los tres sectores: industria, comercio y servicios. A pesar de las dificultades que se presentan como son la situación económica de la región y de la misma empresa, la competencia, entre otros, se busca la manera adecuada para sobrellevarlas y permanecer vigente en el mercado y seguir proporcionando los empleos que tanto se necesita. No es fácil para las empresas tener permanencia, ya que al principio se batalla, sobre todo por el aspecto económico y la administración adecuada, el conseguir y mantener cautivos a los clientes y un aspecto muy importante: el personal que se debe de capacitar, adiestrar y motivar evitando la rotación ya que esto tiene un alto costo para la empresa. En la estructura del trabajo se presenta una revisión de conceptos teóricos, el entorno geográfico y económico de las MPYMES, la evolución histórica de las MPYMES participantes y la recolección de la información en las tres MPYMES de distinto giro. Los resultados preliminares de estas empresas muestran las contribuciones que las MPYMES tienen en la región centro del estado de Coahuila.

PALABRAS CLAVE: Visión, Empresa, Liderazgo, Desarrollo Regional

MSMEs TO STAY IN THE CENTER OF THE STATE OF COAHUILA REGION AND THEIR VISION WITH LEADERSHIP: THREE CASES

ABSTRACT

This paper describes the development that have MSMEs located in the central region of the state of Coahuila. Good business practices have enabled sustainable and respectful of economic, social and environmental aspects which is reflected in the growth of MSMEs development in the three sectors: industry, trade and services. Despite the difficulties encountered such as the economic situation of the region and of the same company, competition, among others, seeks the proper way to overcome them and stay current market and continue to provide the jobs that much needed. It is not easy for companies to have permanence, since at first battle, especially the economic aspect and the proper administration, getting and keeping captive customers and a very important aspect: personnel must train, train and motivate preventing rotation as this that this is costly for the company. In the structure of work review of theoretical concepts, geographic and economic environment of MSMEs, the historical evolution of the participating MSMEs and gathering of information presentauna in three different turn MSMEs Preliminary results of these companies show the contributions MSMEs are in the central region of the state of Coahuila.

KEYWORDS: Vision, Business, Leadership, Regional Development

INTRODUCCIÓN

Está íntimamente relacionado el desarrollo regional con la forma de enfrentar los mercados globalizados, el cual aparentemente muestra un crecimiento desequilibrado no acorde con el desarrollo sostenible de la propia región, sin embargo, la evolución histórica de las MPYMES en el entorno geográfico y económico de Monclova y la región, hace evidente que el desarrollo sostenible ha provocando cambios importantes en la composición de la economía. La región conocida como centro-desierto donde se localiza la ciudad de Monclova, sustenta su economía principalmente en la explotación minero-siderúrgica, en particular la industria metalmecánica, la cual, a últimas fechas, ha generado el desarrollo de un gran mercado de servicios que atienden a las propias industrias así como a los habitantes que directa o indirectamente dependen de ella. Zadek (2001) (Martínez Cerna, Luis, Universidad de Deusto, San Sebastian, España.), afirma que el papel que desempeña el sector empresarial en la sociedad es la política pública más importante del siglo, toda vez que muestra la magnitud que este sector puede tener en la solución de los problemas que afectan a la sociedad en su conjunto. La capacidad que tienen los emprendedores visionarios para fomentar el desarrollo económico y la voluntad para enfrentar y asumir cuestiones sociales constituyen una poderosa razón para centrar la atención en el desarrollo de las MPYMES.

REVISIÓN DE LITERATURA

Empresario y empresa En el ámbito de los negocios, el emprendedor es un empresario; es el propietario de una empresa comercial con fines de lucro. Para el académico emprender es un vocablo que denota un perfil, un conjunto de características que hacen actuar a una persona de una manera determinada y le permiten mostrar ciertas competencias para visualizar, definir y alcanzar objetivos. (Alcazar, Rafael, 2000) Los emprendedores visionarios se caracterizan porque en un momento de su existencia se levantan por la madrugada, contemplan el firmamento y se inspiran al contemplar la estrella del oriente, imaginando un mundo diferente a su realidad, iniciando así la materialización de sus sueños, la gran empresa de su vida ¿Qué es la Empresa?, se entiende como la acción de emprender y cosa que se emprende; esfuerzo grande realizado por alguien para emprender un negocio; asimismo como unidad económica independiente de quienes la constituyen, donde convergen dos tipos de intereses, uno al interior y el otro al exterior de sus dueños.

Ambos intereses tienden a satisfacer una necesidad, investida de derechos y obligaciones, con o sin personalidad jurídica propia y con o sin un fin preponderantemente lucrativo. Es una organización con fines de lucro dedicada a la producción y/o comercialización de bienes y servicios (Chiavenato, 2009) Para los efectos legales la persona moral o empresa se considera como cualquier individuo y se le conceden todos los privilegios de la persona física, su personalidad jurídica se inicia con la inscripción de su acta constitutiva, en el Registro Público de la Propiedad y Comercio, extinguiéndose sus derechos por voluntad de sus dueños, por prescripción de la propia ley o por término de su objetivo social. Los fines inmediatos de la empresa, al interior de sus dueños es la obtención de un beneficio económico, compartido con sus colaboradores y el gobierno, al exterior, a satisfacer necesidades mediante la producción de un bien o servicio dirigido a un mercado demandante, igualmente como si se tratara de una persona física.

Clasificación de las Empresas

Las empresas se clasifican en razón de su tamaño, esto no responde a un tecnicismo administrativo, la realidad se deriva de su propia problemática, existen empresas: micro, pequeñas, medianas y grandes. Hay distintos criterios para definir la magnitud de la empresa, siendo éstos: el importe del capital invertido, el mercado que satisface, el volumen de producción, la capacidad financiera, el número de colaboradores, operarios, técnicos o ejecutivos ocupados, la complejidad de la organización o el uso de tecnología. Las empresas del país giran alrededor de la economía nacional, bajo un orden y equilibrio, susceptibles a las fuerzas económicas de las grandes potencias, conocido actualmente este fenómeno como comercio global.

Liderazgo

Esquivel Ortiz (2000) (Rodríguez, *Mentefactura una nueva visión empresarial*, Cap. 1. Pág. 17) dice que “El líder emprendedor es un ser que inspira confianza e influye en sus seguidores, capaz de coordinar los esfuerzos convergentes en la empresa, que conjuga la voluntad de todos sus miembros, la transforma en un solo pensamiento, que añade valor a cada elemento y su visión la enfoca al logro del deleite de los participantes que integran el conjunto social.” Los colaboradores esperan que su Líder los conduzca por el camino para alcanzar el éxito de la empresa y de ellos. Para que esto suceda, el Líder que dirige ejercerá poder y autoridad sobre sus colaboradores y los demás actores social, exigiendo resultados y esto generalmente no les gusta y por otro lado si no exige no hay éxito y esto tampoco gusta a nadie, he aquí la paradoja, el gran reto del Líder que dirige. A las personas no les gusta que nadie los mande, por lo tanto dirigir efectivamente y con visión del futuro requiere de una habilidad indispensable para el logro del éxito de las MPYMES. Por lo tanto liderazgo es el proceso de dirigir e influir en las actividades laborales de los demás miembros de un grupo (Altra, 2005) La MPYME necesita ser tan resistente como su Líder en función de Director, en el escenario de los negocios los colaboradores están dispuestos a seguir e interpretar armónicamente lo contenido en la declaración de la visión, misión, valores, metas y estrategias, acorde con el mensaje recibido de los clientes. El Director, es la única persona que se ocupa de coordinar los esfuerzos, “No puede permitirse el lujo de prestar atención excesiva a cualesquier aspecto particular de las operaciones, debe estar alerta de que todo el sistema funcione”. Su principal tarea consiste en integrar las diferentes partes que conforman el sistema en un todo, capaz de funcionar sin interrupción.

Visión: Cuando empresa adopta la visión de su Líder sufre una transformación buena o mala, los colaboradores a partir de ese momento suscriben el compromiso más importante de su existencia, por lo tanto el cuerpo directivo velará para que dicha visión se cumpla fielmente como se formuló, ya que su establecimiento se hace a partir de un planteamiento y análisis de sus fuerzas y debilidades, incluyendo en ello una serie de supuestos alcanzables. La visión del futuro acorde a la misión debe definirse desde que surge el deseo de iniciar la empresa y mantenerla viva como lámpara encendida entre sus colaboradores a través de una comunicación constante, como si se tratara de un ritual de culto, recordando a diario que la misión de la empresa está orientada al logro de la satisfacción total de todos los actores sociales. La visión es la habilidad de soñar e imaginar el mundo como pudiera ser y no como se ve, intuir el futuro, es transformar los pensamientos abstractos en cosas útiles, viajar a través de lo desconocido y hacer realidad lo soñado, crear el futuro hoy es aceptar que todas las cosas pueden cambiar, es anticiparse a la realidad del tiempo, ver las cosas factibles a partir de imágenes abstractas o difusas, es la capacidad de hacer primero las cosas en la mente y después transformarlas con las manos.

La herramienta más efectiva e imponente para comunicar la visión, es exaltar el valor de pertinencia a la organización, divulgando dicha visión con claridad y manifestando el propósito entre los colaboradores, inculcando y promoviendo el sentido de “propiedad” ya que esto provoca por consecuencia, una gran satisfacción, responsabilidad y compromiso para quienes la practican. Cuando los colaboradores entienden exacta y completamente el que hacer y el porqué, entonces estarán dispuestos para aceptar la responsabilidad. La creación del futuro empieza hoy con una gran visión, es lo que el Líder empresarial quiere que suceda, a donde quiere llegar, es la razón de su existencia. ¿Cual es el punto de partida para lograr la visión? La inspiración empieza cuando se conoce a los clientes, entonces serán los clientes quienes marcarán el rumbo que hará de seguir la empresa. Misión: Una buena misión se estructurará considerando tres vertientes: Definir a que tipo de clientes se desea servir, identificar los productos o servicios a ofrecer y las aptitudes que se propone entregar a dichos clientes y describir la posición en el mercado a lograr. “La misión de la empresa no está en la rentabilidad, es una condición necesaria para la existencia, sólo es un medio de alcanzar los fines más importantes, no es un fin en sí misma, para muchas empresas visionarias las utilidades son como el aire que se respira, el alimento, el agua y la sangre para el organismo, no son el objeto de la vida, pero sin ellos no hay vida” “El fin, en realidad es triunfar y el triunfo solo se juzga por el criterio del cliente y desde adentro por hacer algo del cual podamos enorgullecernos, en esto consiste

nuestra misión, si logramos proporcionar la satisfacción y el deleite a todos los actores sociales, entonces seremos rentables”.

Metas: La fijación de las metas no es cosa sencilla, el Líder Empresarial paradójicamente está relacionado con los demás y al mismo tiempo lejos del conjunto social. El trabajo a realizar se convierte en una extensión de sí mismo y expresa algo de él, su estilo, su capacidad de respuesta, el modo de enfrentarse y resolver los problemas propios de la actividad, cuanto más asertivo sea con relación a la planeación de los trabajos que se incluyen en el plan de negocios y más dispuesto se halle de demostrar “Ese soy yo” más satisfacción obtendrá al momento de la realidad. En la medida que las estructuras lo impidan, surgirán las insatisfacciones, el resentimiento y la alineación e incluso la desesperación del no poder cumplir. La planeación de las metas alcanzables tiene como punto de partida cinco grandes vertientes: Orientación activa, Capacidad para la división del trabajo, Control de ansiedades y temores, Buenas relaciones interpersonales con los colaboradores, Negociación de conflictos.

Estrategias: El diseño de estrategias orientadas al deleite del conjunto social es tarea del Líder empresarial. La estructuración, formulación e implementación de las estrategias estarán encomendadas a distintos colaboradores profesionales expertos, responsables y comprometidos con la empresa y su Líder empresarial: como el Director General, Directores de área o gerentes de operación, quienes en primera instancia deben cumplir y hacer cumplir la visión y misión, quienes serán capaces de articular Planes de Negocios que cumplan con los más altos intereses y al logro de sus metas. Las estrategias antes de ponerse en práctica es recomendable someterlas a la aprobación del consejo de administración.

Las estrategias se integran por diferentes planes de acción a ejecutar diariamente en forma consistente, por lo tanto cada integrante actuará en armonía con la visión y de acuerdo al puesto que desempeña, para eso es necesario definir algunas tácticas operativas que los colaboradores sean capaces de interpretar y aplicar en forma sistemática, para ello se requiere: Formular metas de trabajo, Enfocar las tareas a realizar, Promover habilidades, desarrollar actitudes positivas, delegar autoridad, fomentar las buenas relaciones, estimular la comunicación y reconocer el mérito a tiempo.

El Desarrollo de las MPYMES En Monclova y la Región

El estado de Coahuila de Zaragoza ocupa una extensión territorial de 151,571 km², es el tercer estado con mayor superficie en el país, se integra por 38 Municipios, con una población total de 2.748,36 (INEGI, 2010) distribuida en 1.364,470 Hombres y 1.383,896 Mujeres, con una tasa de crecimiento promedio anual de 1.5% y una edad mediana de 25 años. Los municipios de Saltillo, Torreón, Monclova, Piedras Negras y Acuña, concentran el 68% de la población total de la entidad, con una esperanza de vida al nacer de 74.8 años. La población escolar es de 916,027, localizados en 5,860 escuelas y con 47,966 docentes, solo el 3.3% es población analfabeta Aspectos Económicos: La entidad cuenta con una población ocupada de 1'040,436 personas. El 5.5% participa en sector primario, el 33.7% en la actividad industrial y el 60.6% en el sector servicios. Ocupa el 11° lugar en aportación al PIB Nacional el 3.1% del mismo. En Coahuila se produce 1 de cada 4 vehículos de México. Es un estado con potencial para desarrollar actividades vinculadas a la industria de las Tecnologías de Información. Monclova y la región: Se eligió el Municipio de Monclova por sus condiciones geográficas y económicas, ya que es la columna vertebral del Estado, se comunica por carretera al norte con Piedras Negras (frontera) al sur con Torreón y Saltillo y con ciudades vecinas como Monterrey, N. L y Nuevo Laredo, Tamps. Es el mercado acerero más importante del país y una de las zonas industriales de mayor relevancia que, sumado a su infraestructura moderna, la convierte en un lugar potencial para el establecimiento de cualquier tipo de industria. En la Tabla .1 se muestra el crecimiento alcanzado por las empresas en el Estado, de acuerdo a los datos del Sistema de Información Empresarial. Esta información parte de los años 90s a la fecha, para tener un mejor panorama del desarrollo de las MPYMES en esta década.

Tabla 1: Composición Por Tamaño y Por Empresas Establecidas Anualmente (Participación Porcentual)

Tipo De Empresa	1994/1997	1998/ 2001	2002/ 2005	2006/ 2008
Micros	94.9	94.4	97.5	93.8
Pequeñas	4.0	3.7	1.6	4.2
Medianas	0.9	1.5	0.5	1.8
Grandes	0.2	0.4	0.4	0.2
TOTAL	100	100	100	100

Importancia de las MPYMES Es importante resaltar algunos de los factores que determinan la importancia de las MPYMES en México:

Generan más empleos que los negocios grandes.

Innovan y producen más avances tecnológicos que los grandes.

Son más resistentes a cambios sociales y ambientales.

Son interesantes para los profesionales y en muchos casos, el reto intelectual en un negocio pequeño es mayor que el de una empresa grande.

Lo que es una innovación con riesgos para la gran empresa, es una oportunidad para las MPYMES.

Tienden a innovar, las grandes tienden a adquirir.

En México el 91.6% del total de las empresas mexicanas son MPYMES, 6.3% pequeñas, 1.2% medianas, 0.9 grandes, demuestra la relevante importancia que han adquirido, tanto como elemento impulsor de la economía nacional, como espacio de acción para los empresarios, donde su capacidad de creatividad e innovación se ponen a prueba a cada momento. Para clasificar a las empresas se consideran los siguientes elementos, estos son: Activos, Ventas o el Personal empleado. A manera de ejemplo se compara esta clasificación con otros países.

Empresas En Monclova y la Región, Evolución Histórica

En julio de 1942 se inicia la transformación de la ciudad de Monclova y arranca el desarrollo industrial de la región, con el establecimiento de Altos Hornos de México, S A., (AHMSA) quien tenía la misión de producir acero para sustituir las importaciones que México hacía del extranjero y que con motivo de la II guerra mundial cada vez más se encarecía. Antes de esta fecha la economía de la región giraba alrededor de la agricultura y el Ferrocarril. El director General de aquellos días tuvo la visión de crear un grupo industrial denominado Monclova, emprendiendo una serie de empresas que coadyuvaran con el objetivo de AHMSA, así la región pasó de agrícola a industrial, a la muerte de este gran hombre acaecida en 1973 misma que coincide con un cambio de la administración de la empresa la que pasa a ser totalmente de

participación estatal, con la nueva visión gubernamental vendría a influir en el desarrollo de la ciudad; al mismo tiempo se inicia la operación de una segunda planta siderúrgica, con esta inversión se provocaría una explosión demográfica de la región la que demandaba nuevos satisfactores a sus necesidades elementales, tales como: vivienda, educación, salud, comercio, etc.

Tabla 3: Clasificación de las Empresas

Tamaño de la Empresa	México	Francia	Gran Bretaña	Unión Europea
Micro	Hasta 15	Hasta 10	200	Hasta 10
Pequeña	16 /100	11 /500	201/500	11 /99
Mediana	101/ 250	501 /2000	501/1000	100 / 499
Grande	mas de 251	mas de2001	1001/10,000	mas de 500
Muy grande			mas de 10,001	

Fuente: Censo 1999. Revista Comercio Exterior, 1999

Consecuente con este desarrollo, se agiliza el ferrocarril, el transporte de carga, el sistema financiero, y todo ello se refleja en el comercio e insipientemente en otros servicios relacionados con el turismo, salud y educación. En 1988 con la desincorporación de las empresas que formaban el grupo AHMSA, y que recayeron en nuevos inversionistas se produce un cambio total de rumbo, se inicia una nueva etapa de desarrollo, es el caso de: Trinity Industries, PROTUMSA, Equipos Mineros, INMAGUSA, etc., y simultáneamente otros extranjeros ponen sus ojos en la industria de Monclova, se crean varias maquiladoras textiles que mas tarde desaparecieron, como la vocación de la ciudad y la región continúa siendo siderúrgica y metalúrgica surgen empresas de fundición tales como: Teksid hierro, Nemas, Alloys, y otras al servicio de la industria automotriz. Este desarrollo conlleva un crecimiento poblacional y con ella aparecen un sin fin de MPYMES dedicadas a abastecer a las propias industrias, o bien a satisfacer los requerimientos de la población en general. Hacia el año 2000, surge una oferta grande de diversos productos y servicios a través de una serie de franquicias comerciales, tales como Mac Donald, KFC, comidas rápidas con servicio a domicilio, de hotelería, tiendas de autoservicio y distribuidoras de automóviles, maquinaria, herramientas, refacciones, materiales de construcción de toda índole, en la educación, colegios y universidades y en salud, hospitales privados con servicios de especialidad, en fin se multiplica la oferta y la demanda de la economía local. En el mes de marzo empezarán a operar el EHB y Sams, Club.

Descripción de Casos

Como sería interminable la lista de las nuevas empresas instaladas en Monclova y la región, y la diversidad de empresarios y estilos de administrar, solo nos avocamos a describir como muestra tres MPYMES, una del sector Servicios, otra del sector Metalmecánica y otra del sector Textil. Sector Servicios: Aluminios, tiene como misión la fabricación de puertas y ventanas de vidrio y aluminio, y su visión ser la primera opción de la industria de la construcción y el público en general en materia de decoración de interiores y exteriores, la iniciaron hace 15 años un matrimonio, quienes atienden los aspectos de administración y ventas.

En los últimos tres años el ingeniero definió su visión y por consecuencia efectuó un cambio total en la administración de la empresa y un cambio de imagen, realizó un estudio de mercado y lo puso en práctica, hizo innovaciones al edificio, espacio y fachada, adquirió nueva maquinaria e invirtió en capacitación de su personal, con objeto de hacer más eficiente y expedito el servicio de fabricación y colocación de vidrios de acuerdo a la demanda de sus clientes, actualmente cuenta con 10 colaboradores, como parte de la mejora continua se logró la introducción de puertas y ventanas de aluminio imitación madera, de importación, utilizando vidrios de diversos calibres, figuras y colores de origen nacional producidos con la calidad de Vitromex de México, el éxito de la empresa radica en primer término el haber sobrevivido a las crisis económicas del pasado que tuvo que sortear, a partir de la nueva visión, se produjo un cambio sustancial,

al centrar la atención en sus clientes, en lograr que los colaboradores aprendieran a hacer los trabajos con excelente calidad a tiempo y con mínimos desperdicios, y sobretodo hacer las cosas bien para ofrecer precios competitivos de acuerdo con el requerimiento del cliente; en cuanto a la competencia han surgido algunos otros establecimientos con productos similares, sin embargo, no han afectado sus ventas, la empresa sigue disfrutando de gran prestigio lo que le ha permitido mantener el mercado meta del ramo. Su meta es mantener la oferta centrada en la atención de los clientes ofreciendo productos innovadores de excelente calidad a precios competitivos.

Sector Metalmecánica: La empresa tiene como misión la administración de procesos de transformación metálica, diseño fabricación y maquila de productos especiales requeridos por los clientes, cuenta con maquinaria para el maquinado de piezas y refacciones para la industria en general, utilizando diversas materias primas, tales como: aceros comerciales, especiales e inoxidables, aluminio, cobre, bronce y melamina, además cuenta con servicio de forja y pailería, fue establecida en julio de 1984, iniciando como una comercializadora de metales, posteriormente se fue integrando y orientando a la prestación de servicios especializados, en los últimos dos años se tuvo una nueva visión de la empresa realizando cambios en su imagen y capacitación del personal, de tal suerte que se lograra una mayor eficiencia con la consabida reducción de costos. No solo cuenta con maquinaria especializada para cada tipo de maquinados, su éxito lo ha alcanzado a través de la atención personalizada del cliente, siempre buscando satisfacer sus requerimientos.

En la región hablar de maquinados es un tema común, dado que hay muchos talleres que ofrecen estos servicios, la diferencia entre unos y otros radica en la calidad, tiempo de entrega y precio. A partir de la nueva visión, se produjo un cambio sustancial, al centrar la atención en sus clientes, diversificar sus productos, en lograr que los colaboradores aprendieran a identificarse con la misión de la empresa y la visión de largo plazo, procurando los mínimos desperdicios, otra parte del éxito de la empresa fue salir bien librada de las crisis económica del pasado, atender nuevos clientes fuera de la región, ofrecer precios competitivos cumpliendo escrupulosamente con las especificaciones técnicas exigidas por las normas nacionales e internacionales, en una palabra hacer realidad en tiempo y forma lo que el cliente requiere.

Sector Textil: Uniformes esta empresa tiene como misión la fabricación, distribución y venta de toda clase de prendas de vestir para personal de la industria, comercio y servicios, ofreciendo el servicio de bordado y personalizado. Su visión ser una empresa especializada en prendas para hombre, de excelente calidad en telas y manufactura, inició en 1991, con la adquisición de la maquinaria de una empresa maquiladora de productos de piel que operaba en una ciudad cercana a Monclova, las máquinas se adecuaron para costurar prendas de vestir, especializándose en ropa industrial para hombre, pantalón, overol, camisa y chamarras; en 1997 se adquiere una máquina bordadora siendo la primera en su tipo en la región, esto le permitió un mayor desarrollo a la actividad, sus dos hijos se especializaron en ingeniería textil, en el 2003 uno de los hijos se hace cargo del negocio, se ha podido conservar las instalaciones y maquinaria intacta dado que la empresa nunca contrajo pasivos, lo que le ha permitido mantenerse en el mercado. La competencia en el ramo textil es muy fuerte, dado que existen muchos talleres que producen uniformes, principalmente de tipo escolar, los cuales no requieren facturar al cliente, por lo tanto se convierte en una competencia desleal contra las empresas que fabrican prendas para el servicio de la industria y que deben extender comprobante fiscal, esta situación es el que marca la diferencia entre unos y otros. Cuenta con 8 colaboradores. El éxito de esta empresa radica en el dominio del diseño, manejo de telas, la diversificación de productos, al interior, y a la atención personalizada del cliente, calidad a precios competitivos y oportunidad al exterior.

METODOLOGIA

Recolección de la información de las MPYMES La investigación es de tipo bibliográfica descriptiva principalmente, sin embargo, se consideró pertinente utilizar algunos instrumentos de recolección y análisis de datos, tales como:

Análisis documental: Para conformar el marco teórico del trabajo final se realizó una revisión de fuentes documentales bibliográficas, a efecto de estructurar el cuerpo teórico conceptual del trabajo (actualmente en curso). Todo lo anterior servirá de base para sustentarlo metodológicamente.

Entrevista (cuestionario estructurado): Este documento como forma de recolección de datos, permitirá recopilar y conocer desde fuentes primarias de las MPYMES toda aquella información relacionada con su evolución lo que permite aproximarse al conocimiento del estado del arte, atendiendo las opiniones de los empresarios sobre las acciones adoptadas, mismas que se detallan en los resultados.

RESULTADOS

Las MPYMES a pesar de la falta de recursos económicos disponibles están realizando un esfuerzo grande para capacitar el Talento Humano, las empresas entrevistadas efectúan la selección y reclutamiento de sus colaboradores de una manera formal, recompensan la promoción de individuos destacados, promueven y recompensan el desarrollo de talentos, delegan autoridad y evalúan el desempeño del personal de mandos medios, en ninguna de las empresas entrevistadas trabajan menores de edad y no cuentan con un reglamento interior de trabajo, promueven la salud y el bienestar de sus colaboradores. Para las MPYMES ha representado un verdadero reto adoptar los principios que rigen la calidad, que el personal conozcan la misión y visión y ejerciten valores distintivos que les permite competir e innovar sus procesos y productos, En materia de producción todas coincidieron en que sus insumos cumplen con las normas más relevantes y sus proveedores conocen sus expectativas. Por lo que corresponde a la Comercialización, todas coincidieron en que tienen conocimiento pleno de sus clientes, que cuentan con una política centrada en la atención y servicio al cliente, Por último los avances logrados pueden generalizarse a otras empresas, las personas entrevistadas comentaron que no es fácil implementar nuevos métodos de trabajo que cumplan con las exigencias del cliente, pero que las MPYMES pueden lograrlo si aprenden a centrar la atención en los requerimientos del cliente. Los entrevistados solicitaron que posteriormente se les retroalimentara de los resultados obtenidos en este trabajo para conocer una opinión externa y sobre todo que pueden hacer para mejorar.

CONCLUSIONES

Las MPYMES como organizaciones sociales regionales están enfrentando un nuevo reto, por un lado, generar riqueza y lograr una expansión y al mismo tiempo lograr una eficiente integración económica-financiera que les permita mantener sus operaciones en niveles competitivos aprovechando el crecimiento sostenido de la región. Las tres MPYMES están trabajando como toda organización mexicana siempre atentas a las presiones del mercado globalizado, sin embargo, a pesar de la situación económica cambiante por la que atraviesa la región, los empresarios líderes están ocupadas en subsanar su propias omisiones, en la mayoría de ellas, están reinvertiendo parte de sus utilidades en proyectos medioambientales y sociales, empeñados a orientar su visión al logro de un futuro cierto que les asegure un entorno sostenible, una permanencia en el mercado, además cumplir con la misión que cada empresa se ha propuesto buscando siempre el fiel cumplimiento de sus actividades, atendiendo las exigencias de su clientes, capacitando a su personal, innovando sus productos y servicios, luchando con la competencia para que no los saquen del mercado, en síntesis la evolución de las MPYMES aunque son pequeños negocios son invencibles líderes de la economía local.

LOS FACTORES AMBIENTE FÍSICO Y TECNOLOGÍA COMO PARTE DEL CLIMA ORGANIZACIONAL EN LA UACA UAZ

Eduardo Alejandro Carmona, Universidad Autónoma De Zacatecas

Rubén Chávez Chairez, Universidad Autónoma De Zacatecas

Sergio Humberto Palomo Juárez, Universidad Autónoma De Zacatecas

RESUMEN

El presente trabajo realiza un análisis de los Factores Ambiente Físico y Tecnología como parte del clima organizacional. El objetivo que se pretende es determinar las principales diferencias que se generan en los subgrupos de los diferentes actores de la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas (UACA UAZ). El método aplicado es un análisis de frecuencias para determinar las condiciones en las que se encuentran los actores con respecto a sus características. Se continúa con un análisis de correlaciones de Spearman por ser datos no paramétricos y se realiza una comparación de las características de los diferentes factores presentados para su análisis. Se aplicó un cuestionario de 142 reactivos a los diversos integrantes de la Organización, pero para el presente estudio se toman solamente las preguntas correspondientes a los factores que ya se mencionaron. Se identificó que la diferencia de percepción del Factor Ambiente Físico está más diferenciado en los integrantes de la Maestría en Administración de la Facultad, a pesar de que las observaciones realizadas por los investigadores es el que posee más condiciones positivas que lo diferencian del resto. La tecnología resulta un factor diferenciante principalmente para los integrantes de la Licenciatura en Contaduría, pues perciben que esta característica ha desarrollado procesos que impactan más en los diferentes procesos en los que está involucrada la UACA. Como era de esperarse se comprueba que la diferencia de percepción del clima organizacional existe entre los estudiantes y los docentes, pero se toma en cuenta a los trabajadores no docentes que tienen un planteamiento ligeramente diferente de los otros dos, destacando su diferencia en la percepción de los espacios físicos en los que está inmersa la Escuela. Se rechaza la hipótesis planteada acerca de la igualdad de percepción de estos factores influyentes del clima organizacional en esta organización por parte de los diferentes grupos en los que se puede subdividir a los actores.

PALABRAS CLAVE: Clima organizacional, Universidad, Ambiente físico, Tecnología institucional.

PHYSICAL ENVIRONMENT AND TECHNOLOGY FACTORS AS PART OF THE ORGANIZATIONAL CLIMATE IN UACA UAZ

ABSTRACT

This paper analyzes the factors “Physical Environment” and “Technology” as a part of the organizational climate. The objective is to identify the main differences generated in the subgroups of the different actors of the Academic Unit of Accounting and Administration at the Autonomous University of Zacatecas (UACA UAZ). The method used is a frequency analysis to determine the conditions in which the actors are about to their characteristics. It continues with Spearman correlation analysis, due to the data are nonparametric, and a comparison of the characteristics of the different factors submitted for analysis is performed. A questionnaire of 142 questions to the various members of the Organization was implemented, for these studies are taken only the questions related to the factors already mentioned. It was identified that the difference in perception of the Physical Environment Factor is more differentiated members of the MBA Faculty, although the observations made by the researchers is the one with more positive conditions that differentiate it from the rest. The technology is a differentiating factor, mainly for members of the Bachelor of Accounting, as they perceive that this feature has developed processes that impact more on the different

processes that are involved in UACA. As expected it is found that the difference in perception of the organizational climate between students and teachers, but takes into account the non-teaching staff who have a slightly different approach from the other two, highlighting the difference in her perception the physical spaces in which the school is involved. The hypothesis about equality of perception of these influential factors of organizational climate in this organization by the different groups that can be subdivided actors rejected.

KEYWORDS: Organizational climate, University, Physical environment, institutional Technology

INTRODUCCIÓN

En una organización es importante medir el clima organizacional para poder tomar decisiones acerca de las características que la hacen más funcional, de esta manera, hemos dividido el trabajo en varias situaciones que hacen que la percepción de esta situación sea lo más fácil de tomar en cuenta. De diversas maneras en las que autores que hoy son considerados clásicos han definido este tema los investigadores del presente trabajo tomamos en cuenta los aspectos denominados Ambiente Físico por un lado y Tecnología por otro, situaciones que hacen que en un equipo de trabajo se impacte de manera directa en la forma en que se realizan las tareas o se lleven a cabo las acciones para las que fue diseñada desde el inicio. Hemos tomado en cuenta a estas dos características (o también llamados factores) debido a que el trabajo ampliado en el que se toman en cuenta las diversas partes en que se divide el clima organizacional, está diseñado para un trabajo muy extenso que no es posible describirlo en un espacio como el presente (Carmona et al, 2015). Se toman en cuenta estas dos características debido a que se pretende medir cuáles son las características que expresan los diversos integrantes de la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas (UACA UAZ) por ser el espacio organizacional que nos ha permitido realizar este tipo de análisis administrativos y que a lo largo de la situación de investigación ha permitido desarrollar modelos de análisis efectivos en el campo del estudio administrativo.

Planteamiento del problema

Se pueden plantear muchas interrogantes al respecto pero se ha decidido que en el momento en que una organización ha asignado una cantidad de recursos económicos importante en el desarrollo de espacios que las diversas administraciones consideran como factor fundamental para el desarrollo de situaciones de vanguardia y les permitan a los estudiantes y docentes realizar las tareas más importantes dedicadas al proceso de la enseñanza – aprendizaje resulta de un gran impacto en la vida organizacional. Como ejemplo, visitantes a la UACA expresan que es una de las Escuelas de la UAZ que cuenta con aulas modernas y que cuentan con todos los requerimientos para estudiar de manera digna, algunos docentes de otras facultades la identifican como una escuela donde se tienen todas las herramientas para facilitar el proceso de enseñanza así como de espacios que facilitan la estancia en las instalaciones. Esta idea en pasillos se identifica como una de las “Escuelas donde sí hay dinero” pues hay apoyos propios para realizar actividades académicas y sociales que en otros espacios solo se obtienen por apoyos extraordinarios. Bajo estas premisas nos permitimos plantear la siguiente cuestión:

¿La percepción que tienen los integrantes acerca de los factores ambiente físico y tecnología instalada en la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas es similar en los diferentes subgrupos que la integran?

Objetivo

Identificar la similitud de percepción que tienen los integrantes de la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas acerca de los factores ambiente físico y tecnología instalada como parte del clima organizacional.

Hipótesis

Los diferentes subgrupos existentes en la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas perciben de manera similar los factores ambiente físico y tecnología instalada como parte del clima organizacional.

REVISIÓN LITERARIA

Tecnología

La sociedad postmoderna se ha considerado la era del conocimiento debido a la llegada y el uso de las tecnologías de la información y de comunicación (TIC's), la tecnología ha venido a beneficiar y facilitar la operación, el crecimiento y la productividad de las organizaciones pero su contraparte es la dificultad o incluso la resistencia que pueda presentar el personal para adaptarse a la misma lo que les genera frustración y les limita para explotar al máximo su capacidad y por ende su productividad ya que muchas veces no existe una sensibilización adecuada por parte de la dirección o gerencia y estos pueden llegar a sentirse desplazados e incluso agredidos. Restrepo-Rivas (1999) menciona que es común que los frentes de trabajo en los que se requiere un rediseño radical sean precisamente aquellos en los que los empleados se han ido asentando en operaciones ineficientes y por lo tanto el choque del cambio es mayor, también considera que la estructura organizacional se ve impactada por las TIC's. De manera creciente el enfoque tiende a dar trascendencia a los procesos del negocio, y a considerar como menos importantes la jerarquía de administradores y supervisores. La tendencia al implementar estas tecnologías es que las organizaciones empiezan a prescindir de los trabajadores lo que les permite recortar plantilla y reducir costos, aunque por otro lado estas tecnologías han obligado a contratar un personal más costoso capacitado en dicha tecnología, también ha llegado a afectar el Clima organizacional ya que las relaciones entre los trabajadores muchas veces se vuelven impersonales.

En definitiva, asistimos al nacimiento de una nueva sociedad de la información donde la gestión, la calidad y la velocidad de información se convierten en factor clave de la competitividad: como insumo para el conjunto de la industria y como servicio prestado a los consumidores finales, las tecnologías de la información y la comunicación condicionan la economía en todas sus etapas. Durante miles de años, la humanidad ha participado en una forma u otra de desarrollo tecnológico. Sus efectos abarcan todas las regiones y todos los aspectos de la vida humana, excepto quizá en los lugares más remotos del planeta, es probable que nadie sea capaz de afirmar que no ha recibido la influencia de la investigación moderna, la ciencia y la tecnología.

Para entender mejor el concepto, tomamos en cuenta las siguientes definiciones:

La técnica al aplicar el término en el sentido de procedimiento, se refiere "al conocimiento y dominio de las reglas y prácticas de una actividad". Como tal, no está limitado a actividades de naturaleza científica. Sin embargo, si se aplica en el contexto de una actividad o campo, "Técnica" se refiere también a las medidas, procesos e instalaciones que se utilizan en el control y explotación de las leyes naturales, la energía y los recursos.

Como consecuencia de la intromisión de las TICs (Tecnologías de información y comunicación), el ámbito laboral ha sufrido el mismo impacto que han sufrido otros ámbitos tanto de la vida como del derecho, modificándose así, de modo paulatino y sostenido, la forma de concepción del trabajo; ello sin que empresarios ni trabajadores se percataran. Y del mismo modo continuó, hasta que los conflictos producidos por el cambio comenzaron a hacerse notar.

La computadora, específicamente hablando, es en el mundo del trabajo tan sólo otro tipo de máquina, que, en su novedad, permite el procesamiento de toda la información que utiliza la empresa, con mayor precisión, velocidad y seguridad. Los cambios que generó el ingreso a la sociedad de la información produjeron esta nueva revolución. Basta pensar en un sólo aspecto de la relación laboral, tal como lo es la seguridad, para comenzar a comprender estos cambios.

Ambiente Físico

Kupritz y Hillsman encontraron en un estudio etnográfico el impacto de las características de diseño del lugar de trabajo en las habilidades de comunicación de nueva adquisición de vuelta en el trabajo. El estudio examinó las percepciones del supervisor acerca de la importancia relativa de los factores organizativos que afectan a la transferencia, las relaciones entre las habilidades aprendidas y las características de diseño del lugar de trabajo medidas, y dio prioridad a la importancia de las características de diseño para apoyar las habilidades de comunicación aprendidas. Los participantes en este estudio de caso ocupaban puestos de supervisión no académicos en una importante universidad. Los hallazgos indican que el diseño del lugar de trabajo parece jugar un papel fundamental en la facilitación, así como impedir la transferencia de habilidades de comunicación en la interacción cara a cara con los empleados. Como estudio de caso, las organizaciones no deben inferir que estos hallazgos se aplican a todos los lugares de trabajo, ya que puede depender de la relevancia de la situación de trabajo en particular y las circunstancias (Kupritz; Hillsman, 2011).

Trede y sus colaboradores estudiaron sobre el impacto de las dimensiones físicas y materiales de los ambientes de aprendizaje del lugar de trabajo tienen en la mejora del aprendizaje de los estudiantes. La experiencia de aprendizaje en el trabajo en escenarios reales de trabajo se percibe como un valor incalculable para los estudiantes como una preparación para el ejercicio profesional. Con el aumento de las tasas de participación, hay una mayor demanda de las universidades para ofrecer prácticas profesionales. Aunque las universidades no tienen control directo sobre los ambientes de trabajo, pueden ser asunto en la selección de los lugares de trabajo que ofrecen los entornos de aprendizaje en el trabajo eficaces para los estudiantes. Para llevar a cabo esta selección es importante entender qué características clave de los ambientes de aprendizaje del lugar de trabajo permiten a los estudiantes a aprender de forma efectiva. (Trede et al 2013).

Prodaniuk y sus colaboradores sostienen que los enfoques ecológicos pueden ser particularmente útiles para la comprensión y la promoción de la participación de la actividad física en diversos escenarios, incluyendo el lugar de trabajo. Sin embargo, dentro del dominio de la actividad física hay una falta de comprensión de cómo los factores ambientales influyen en el comportamiento ecológico (Prodaniuk et al 2014).

METODOLOGÍA

El tipo de investigación que se presenta es exploratoria. Para esta investigación se toma la línea de administración de la Educación y es de tipo cuantitativa. Se diseñó y aplicó un instrumento para obtener datos que permitieran cumplir con los objetivos planteados. Se buscó determinar una muestra representativa del total de los integrantes de la UACA, para comprobar la hipótesis planteada para esta investigación y hacer extensos los resultados a toda la población involucrada.

Se utilizará un análisis de correlaciones de las variables que integran el clima organizacional llamadas factores con tres variables más representativas de los datos generales que son Programa (El programa al que están adscritos), Semestre y Sexo. Para el análisis se utilizó la correlación de Spearman ya que tenemos datos no paramétricos, no se muestran todos los coeficientes para obviar análisis. Se presentan las tres principales correlaciones de cada variable y se indicará si hay alguna variable que esté mayormente relacionada con las demás. Se indicará cuántas subvariables integran a la variable, de manera que se pueda explicar cómo es que una variable está correlacionada con las demás. Se utilizará una correlación alta si son significativas al cinco por ciento y una alta correlación si hay una significación del uno por ciento.

La fórmula utilizada para el cálculo de la muestra es la que sugieren Berenson y Levine. Por el tipo de estudio que se realizó, con base en el valor que otros trabajos han hecho en estudios similares el nivel de confianza lo suponemos de 95 por ciento y el error que se está dispuesto a cometer es del 5 por ciento. Con esta información la fórmula utilizada será:

$$n = \frac{z^2 pq}{e^2}$$

Donde: n: tamaño de la muestra; Z: nivel de confianza deseado de 95% con valor de 1.965; e: error de estimación, y p: representa la porción real estimada de éxito.

Como se tiene una población finita se aplicará la fórmula que nos permita reducir en algunas encuestas el monto total que aplicaremos. Los elementos de esta fórmula se especifiquen de acuerdo a lo siguiente: n_0 será el resultado que recién se acaba de obtener por considerar una población infinita, N es la población total, y n será el total de encuestas. Aplicando el factor de corrección para población finita resulta:

$$n = \frac{n_0 N}{N + n_0 - 1}$$

Los datos recolectados se obtuvieron de forma directa, a través de la aplicación de una encuesta a 372 integrantes de la UACA de la UAZ, mediante un cuestionario de 21 reactivos de opción múltiple y utilizando la escala de Likert.

RESULTADOS

Ambiente físico

Este factor cuenta con nueve preguntas las que se han desarrollado para que el lector tenga una idea de cómo es que se incidió en la posterior contrastación de la hipótesis planteada en el inicio del presente trabajo.

La primer pregunta es “Las instalaciones de la Escuela cubren tus necesidades” y los resultados obtenidos son que de manera general la UACA ha respondido como siempre con un 35.8%, la Licenciatura en contaduría (LC) siempre con un 37.6%, la Licenciatura en contaduría en Sistema de Universidad Abierta (LC SUA) 38.6%, la Maestría en administración (MA) casi siempre con una 35.2% y la Maestría en Impuestos (MI) en situaciones divididas de casi siempre y siempre con 35.3% para cada uno de los resultados.

La siguiente pregunta está relacionada con el hecho de saber si el mobiliario con que cuenta la escuela es el adecuado para la realización de sus funciones: “El mobiliario y equipo que tiene la Escuela es” y las respuestas son UACA Agradable con 34.1%, LC Agradable con 39.1%, SUA agradable con 32.3% MA repartida la respuesta en tres opciones idénticas regular, casi agradable y agradable con 25.9% cada una y MI casi agradable con 41.2%.

La siguiente pregunta tiene como fin el saber si las condiciones en las que la escuela permiten tener un espacio en el que exista contaminación: “El nivel de contaminación en la Escuela es” y las respuestas son UACA, LC y SUA contestaron que es mínimo en 39.5%, 39.6% y 42.4% respectivamente, MA menciona que es poco con 40.7% y MI Con respuestas divididas en poco y mínimo con 35.3% cada una de las opciones.

La Tabla 1 Muestra la situación y se resaltan con sombreado los resultados con mayoría

	Máximo	Grande	Regular	Poco	Mínimo	Total	
Gral		5.1	8.3	19.1	28.0	39.5	100.0
LC		5.4	9.4	18.3	27.2	39.6	100.0
LC SUA		6.1	10.1	20.2	21.2	42.4	100.0
MA		3.7	3.7	16.7	40.7	35.2	100.0
MI				29.4	35.3	35.3	100.0

Es posible observar que los primeros subgrupos observan poco nivel de contaminación, pero los posgrados tienen una visión diferente.

Se les preguntó a los integrantes de la UACA acerca del confort que genera permanecer en las instalaciones de la facultad y la pregunta aplicada fue “Son confortables las instalaciones de la Escuela”, las respuestas obtenidas son UACA casi siempre con 35.2%, LC siempre 38.1%, SUA siempre 35.4%, MA casi siempre 40.7% y MI casi siempre con 47.1%.

El realizar tareas con la iluminación adecuada fue una propuesta del grupo de Elton Mayo por lo que la pregunta que se plantea “Los espacios cuentan con una iluminación adecuada” tiene las respuestas UACA 43.5%, LC 47.5%, SUA 46.5% en la opción descrita como “todas”; y MA y MI expresan casi todas con porcentajes de 46.3 y 52.9% respectivamente.

A pesar de que las instalaciones con que cuenta la UACA se realizan con el modelo de escuela diseñado por el departamento federal de construcción de edificios escolares (Comité Administrador de Programas Federales de Construcción de Escuelas CAPFCE) se les cuestionó si existía algún riesgo en la permanencia mediante la pregunta “Las instalaciones generan riesgo para sus usuarios” y las respuestas aparecen muy dispersas, de aquí resaltamos el hecho que los integrantes de la MA se expresaron de manera muy negativa ante esta situación con un casi siempre con 27.8%, la MI regularmente con 29.4% y las otras tres observaciones expresaron que nunca existe ese riesgo UACA 27.7%, LC 25.7% y SUA 37.4%.

La Tabla 2 nos muestra la dispersión de los resultados

	Nunca	Casi nunca	Regularmente	Casi siempre	Siempre	Total	
Gral		27.7	19.1	23.4	19.1	10.8	100.0
LC		25.7	20.3	23.8	18.8	11.4	100.0
LC SUA		37.4	15.2	22.2	15.2	10.1	100.0
MA		20.4	22.2	22.2	27.8	7.4	100.0
MI		17.6	17.6	29.4	17.6	17.6	100.0

Es posible observar que los primeros subgrupos observan que casi nunca hay riesgo para los usuarios, pero los posgrados tienen una visión diferente al expresar visiones de casi siempre y regularmente MA y MI.

El hecho de contar con instalaciones que cumplan o no los deseos de los integrantes es una situación que merece que se les dé el trato adecuado y por ello la pregunta “Son utilizadas las instalaciones de una manera adecuada” genera las siguientes respuestas UACA, LC, SUA y MI la opción mayoritaria fue siempre con

resultados de 39.0%, 37.6%, 44.4% y 41.2% respectivamente, MA con opción de casi siempre obtuvo un 38.9%.

Correlaciones Tecnología

Los datos obtenidos correspondientes al factor Tecnología nos dan cuenta de los resultados que genera cada variable y que van enfocados a la percepción de cómo es que este valor influye de manera principal en la identificación del clima organizacional de los integrantes de la UACA.

En la primer variable se mide si las instalaciones que tiene la UACA permite que sean utilizadas de la mejor manera posible, y se hace mediante la pregunta “Son utilizadas las instalaciones de una manera adecuada” los resultados mencionan que todos los subgrupos excepto MA escogen como opción mayoritaria a siempre y lo hacen de acuerdo a los siguientes resultados UACA 39.0%, LC 37.6%, SUA 44.4% y MI 41.2%; por su lado MA tiene como opción mayoritaria a casi siempre con valor de 38.9%.

Deseamos saber si los procesos educativos cuentan con el apoyo tecnológico que les permita realizar de buena manera los procesos y observamos que para la pregunta “En la Escuela se utilizan cosas novedosas en cuanto a la atención y procesos educativos” las respuestas caen en el medio de las opciones posibles pues cuatro opciones seleccionan la opción regularmente como mayoritaria y sólo SUA como casi siempre, las respuestas obtenidas son UACA 30.9%, LC 34.7%, MA 29.6% y MI 35.3%, mientras que SUA con su opción diferente expresa 24.2%.

Tabla 3. La tecnología que utiliza la Escuela es importante para el desarrollo de la organización

	Nunca	Casi nunca	Regularmente	Casi siempre	Siempre	Total	
Gral	5.6	8.3	19.6	25.5	40.9	100.0	
LC	4.0	7.4	16.8	26.7	45.0	100.0	
LC SUA	5.1	8.1	25.3	23.2	38.4	100.0	
MA	13.0	13.0	20.4	22.2	31.5	100.0	
MI	5.9	5.9	17.6	35.3	35.3	100.0	

Es posible observar que todos los subgrupos observan como siempre la importancia de la tecnología para el desarrollo de la organización y el posgrado MI divide sus respuestas.

Sabemos que toda organización cuenta con algún grado de tecnología y para ello se cuestionó “La tecnología que utiliza la Escuela es eficiente para el desarrollo de la organización” y las respuestas generan una dispersión de opciones de acuerdo al programa involucrado UACA expresa como opción mayoritaria siempre con 27.4%, LC expresa casi siempre con 32.7%, SUA con siempre en 33.3%, MA casi nunca con 27.8% y MI siempre con 35.3%

Tabla 4. La tecnología que utiliza la Escuela es eficiente para el desarrollo de la organización

	Nunca	Casi nunca	Regularmente	Casi siempre	Siempre	Total	
Gral	7.0	12.4	26.9	26.3	27.4	100.0	
LC	5.9	8.4	26.7	32.7	26.2	100.0	
LC SUA	9.1	12.1	27.3	18.2	33.3	100.0	
MA	7.4	27.8	25.9	20.4	18.5	100.0	
MI	5.9	11.8	29.4	17.6	35.3	100.0	

Es posible observar que todos los subgrupos observan de manera diferente la tecnología como una situación eficiente para el desarrollo de la organización y el posgrado MA es el que expresa que casi nunca se da esta situación.

La tecnología permite que la organización se acerque al exterior para contar con información del entorno que no sea muy diferente de lo que se está trabajando, para ello se cuestionó “La tecnología de información y comunicación de la Escuela permite a los usuarios tener acceso a información pública” y las respuestas que se obtuvieron están expresadas de la siguiente manera UACA casi siempre con 29.0%, LC casi siempre

con 34.2%, SUA siempre con 33.3%, MA con regularmente con 31.5% y MI con respuestas en dos opciones no continuas 35.3% en regularmente y siempre.

Se cuestiona si las personas que utilizan la tecnología son aptas para el desarrollo adecuado de los procesos, por esto se ha planteado la pregunta “La tecnología de Información y comunicación con que cuenta la Escuela es utilizada por personal apto para su manejo” y las respuestas obtenidas por los integrantes son como se muestra: UACA siempre 28.8%, LC casi siempre 32.2%, SUA 33.3%, MA división entre regularmente y casi siempre con 25.9% y MI dividido entre regularmente y siempre con 35.3%. Esta información se muestra de una manera más completa en la Tabla 5.

Tabla 5. La tecnología de Información y comunicación con que cuenta la Escuela es utilizada por personal apto para su manejo

	Nunca	Casi nunca	Regularmente	Casi siempre	Siempre	Total	
General	7.0	11.6	24.2	28.5	28.8	28.8	100.0
LC	6.4	10.9	21.8	32.2	28.7	32.2	100.0
LC SUA	6.1	12.1	26.3	22.2	33.3	33.3	100.0
MA	13.0	16.7	25.9	25.9	18.5	25.9	100.0
MI			35.3	29.4	35.3	35.3	100.0

Es posible observar que todos los subgrupos observan de manera diferente la tecnología de información y comunicación como una situación adecuada por el personal, MA y MI expresan como muy bajos estos valores.

Como todo lo nuevo, el utilizar tecnología de vanguardia requiere de la capacitación del personal para una adecuada realización de funciones, para ello se ha planteado la pregunta: “Es necesaria la capacitación para el correcto uso de la tecnología que existe en la Escuela” Coincidentemente todos los subgrupos han escogido mayoritariamente la opción siempre para esta pregunta y los porcentajes son UACA 43.3%, LC 41.6%, 44.4%, MA 44.4% y MI 52.9%.

Correlaciones: Las correlaciones encontradas para este factor nos permiten observar que las variables tienen grados de afectación entre cada una de ellas y que no aparecen aisladas entre sí, que el factor de manera de conjunto es parte del clima organizacional. De manera similar al anterior factor en este encontramos que las variables sector programa y género no tienen correlaciones importantes con el resto, pero sector tiene dos correlaciones con las variables uso novedoso de los equipos, la información al exterior y con la capacitación para el correcto uso de la tecnología.

La variable con promedio más alto de correlaciones es La tecnología de información y comunicación de la Escuela permite a los usuarios tener acceso a información pública pues en promedio tiene 0.528. Se correlaciona con las variables La tecnología que utiliza la Escuela es eficiente para el desarrollo de la organización con 0.755, con La tecnología de Información y comunicación con que cuenta la Escuela es utilizada por personal apto para su manejo con 0.641 y con la variable La Escuela utiliza tecnología que permite el bienestar

Confiabilidad

El índice resultante de confiabilidad para el factor ambiente físico es:

Tabla 6. Estadísticos de fiabilidad para Ambiente Físico

Alfa de Cronbach	N de elementos
.795	9

Es posible observar que el nivel de fiabilidad para los datos de ambiente físico es muy aceptable al estar muy cerca del 80%.

Y el propio para el factor Tecnología resulta

Tabla 7. Estadísticos de fiabilidad para Tecnología

Alfa de Cronbach	N de elementos
.889	9

Es posible observar que el nivel de fiabilidad para los datos de tecnología es muy aceptable al estar muy cerca del 90%.

Con lo que podemos mencionar que el cuestionario es confiable para el segundo factor y un poco menos para el primero.

CONCLUSIONES

Después de analizar los datos que se han expuesto en líneas anteriores podemos rescatar las siguientes conclusiones previas a la decisión de la hipótesis. Primero, al segmentar el archivo en sector (estudiante, docente y administrativo) y género de los entrevistados, no encontramos diferencias significativas con respecto al nivel de percepción del clima organizacional para estos dos factores expuestos. Segundo, La variable programa de estudios cuenta con un mínimo de correlaciones con las variables que comprenden los factores de estudio. Tercero, cuando se analiza el archivo segmentado en los subgrupos de estudio el dato general de la UACA aparece donde lo hace el dato de LC por contar con un tamaño de muestra mayor (así se definió ese segmento) en pocas ocasiones no es así. Cuarto para el primer factor en la mayoría de las variables hay coincidencia de los grupos LC y SUA con el general de la UACA, en menor medida coincide MI y muy esporádicamente aparece en este grupo MA. Quinto, el dato más disperso es el de MA y está más alejado de la idea de un clima organizacional muy bueno, los resultados mayoritarios aparecen en el cuarto dato o en el tercero y solo en una ocasión en el quinto a diferencia de las demás. Sexto, para el segundo factor de análisis el que tiene que ver con la tecnología los datos son más dispersos en los diferentes grupos, sin embargo a la hora de las correlaciones los datos están más correlacionados entre sí. Séptimo, los datos obtenidos para cada factor generan un buen grado de confiabilidad al menos con un dato de 0.795 y mejor para 0.885 con el segundo factor. Octavo, las correlaciones encontradas en el factor tecnología son tan altas que se tuvo que buscar otra manera de explicar los grados de relación existente entre las variables.

Con base en lo anteriormente expuesto podemos rechazar la hipótesis expresada al inicio del presente y mencionar que no hay evidencia estadística que sustente que “los diferentes subgrupos existentes en la Unidad Académica de Contaduría y Administración de la Universidad Autónoma de Zacatecas perciben de manera similar los factores ambiente físico y tecnología instalada como parte del clima organizacional” pues aunque hay dos grupos que perciben de manera similar las cuestiones otros dos no están estadísticamente en los niveles de significación requeridos.

RESUMEN

El presente trabajo introduce una vía hacia la convergencia de la rentabilidad y la responsabilidad social empresarial (RSE), relación generalmente identificada como antagónica y aspecto este último por ende que a pesar de su reconocida importancia y de su creciente presencia global se encuentra permanentemente desde su origen en constante amenaza. Contrario a su esencia el amplio, sensible y desafiante tema de la RSE está siendo secuestrado para legitimar la explotación social y medioambiental. Es necesario y urgente un cambio de paradigma en la investigación y en la práctica administrativa que ponga en el centro del análisis los intereses de la sociedad en su conjunto y no exclusivamente los objetivos económicos de la empresa, pues es ésta la que debe ser un instrumento de la sociedad para su desarrollo. Como punto de partida de este cambio, el estudio propone evidenciar a través de un análisis objetivo la forma en que las empresas incrementan su utilidad al no asumir la totalidad de sus costos transfiriéndolos a la sociedad, de modo que el reconocimiento de sus issues sociales y su medición sirvan como base para transformar las prácticas empresariales y orientarlas hacia el cumplimiento de su verdadera responsabilidad social.

Corporate social responsibility objective measurment

ABSTRACT

This paper introduces a path towards convergence between profitability and corporate social responsibility (CSR), relationship usually identified as antagonistic and aspect the latter that despite its acknowledged importance and its growing global presence is constantly threatened since its inception. Contrary to its essence the broad, sensitive and challenging issue of CSR is being hijacked to legitimize the social and environmental exploitation. A paradigm shift in research and administrative practice is necessary and urgent to put the interests of society as a whole at the center of analysis and not just the economic goals of the company, since it is precisely the company that should be an instrument of society for its development. As a starting point of this change, the study proposes to demonstrate through objective analysis how companies increase their income by not taking all of their costs transferring them to society, so that the recognition of social issues and their measurement would become a basis for transforming business practices and leading companies to fulfill its true social responsibility.

INTRODUCCIÓN

El tema de la responsabilidad social y ambiental se encuentra hoy literalmente en todas partes alrededor del mundo: Desde las etiquetas de los productos y la publicidad hasta en los informes de las empresas y en las discusiones de las políticas públicas de gobiernos nacionales y de organismos internacionales, en la razón de ser de múltiples organizaciones no gubernamentales (ONG) y como objeto de innumerables proyectos de investigación académica desde un número igualmente creciente de perspectivas en diversas áreas del conocimiento. Quizás acentuado el énfasis en la materia por la crisis estructural del sistema económico global, experimentada de manera particularmente dolorosa por algunas de las naciones o regiones en función de sus debilidades propias y sorteada de mejor forma por otras con base en sus fortalezas, pareciera que de manera ineludible la responsabilidad, respuesta o desempeño social de la empresa - bajo éstas o alguna otra denominación o vinculada con constructos social y ambientalmente inclusivos como desarrollo sustentable, ciudadanía corporativa o ética de negocios - ha probado ser un elemento indispensable a ser tratado como parte integral de la problemática y primordialmente como pilar central de la solución.

No obstante la verdaderamente amplia diversidad de concepciones inclusive antagónicas con frecuencia, la creciente investigación en RSE en su conjunto logra hacer patente que al margen de los esfuerzos genuinos y valiosos de algunos, en este ámbito se siguen subordinando los legítimos derechos de la sociedad a los intereses económicos a pesar de la grave problemática global reflejada no en los informes periódicos de datos macroeconómicos nacionales y globales o en el desempeño de los mercados de valores, sino en la desigualdad y la pobreza cotidiana que sufre gran parte de la población mundial y que evidencia la necesidad urgente de un cambio de paradigma económico y administrativo.

A partir de lo anterior es no sólo pertinente sino indispensable para estudiosos y profesionales reflexionar si en el fondo no nos estamos alejando de la oportunidad que ofrece la responsabilidad social en ese sentido, como consecuencia de no estar haciendo las preguntas correctas cuando abordamos, debatimos o investigamos sobre el impacto en el corto y largo plazos de la actividad económica en nuestro medio ambiente natural y social, así como acerca de los obstáculos que enfrenta su materialización y la forma de superarlos. Implícito en esta idea yace la exigencia de liberarse de la perspectiva dominante de la empresa como centro del análisis y guía en la configuración y desarrollo del concepto y materialización de la responsabilidad social (Burchell y Cook, 2010), reinstalando como punto central del enfoque la perspectiva de la sociedad y el impacto de la actividad económica sobre ésta, bien hacia alguno de los grupos que la conforman o en su conjunto, sea en forma directa o indirectamente a través de daño a la naturaleza. Debeljak, Krkac y Banks (2011) plantean que un elemento básico para que las corporaciones puedan ser motivadas para transitar de la falta de sinceridad en la responsabilidad social corporativa a una postura auténtica es emplear todo el conocimiento teórico y práctico disponible de las empresas y de los grupos implicados para crear políticas y prácticas de responsabilidad social empresarial transparentes para todos. Como un paso paralelo al cambio de paradigma y como recurso de éste para tener la posibilidad de abandonar esta etapa de irresponsabilidad social empresarial resulta fundamental entonces garantizar que la información exista, sea pertinente y se emplee para la toma de decisiones inherentes a la responsabilidad social. La medición objetiva de los componentes del desempeño de la empresa en la responsabilidad social es, como consecuencia, una necesidad imperiosa para avanzar y contribuir a realizar el potencial transformador que de Bakker, Groenewegen y den Hon (2005) visualizaron en la RSE como campo de estudio firmemente instalado en las Ciencias de la Administración.

REVISIÓN DE LA LITERATURA

Inmersa en esta dinámica económica incierta la investigación sobre la responsabilidad social empresarial (RSE) ha sido prolífica y marcadamente influenciada por la misma dispersión del medio en que se desarrolla. Encontramos así una verdadera amplia gama de acercamientos que intentan ya bien unificar definiciones, aquéllos encaminados a fortalecer una postura en favor o en contra de la responsabilidad social y también habiéndolos críticos hacia el rumbo que ésta podría tomar en un futuro o ya ha tomado.

Desde la que se señala como obra seminal del movimiento contemporáneo de RSE presentada por Bowen (1953) en que plantea como obligaciones de los hombres de negocios adoptar políticas, tomar decisiones y seguir líneas de acción en favor de los objetivos y valores de la sociedad. En total contraste esta postura con la de Friedman (1970) que impone como única responsabilidad de la empresa el incremento de sus utilidades. Pasando por enfoques que buscan dar forma práctica a la RSE como el de Carroll (1991) en el que la responsabilidad abarca expectativas económicas, legales, éticas y discrecionales de la sociedad hacia la empresa; el de Wood (1991) que sienta las bases del desempeño social empresarial (DSE) fundamentándolo en los principios, procesos de respuesta, políticas y resultados observables vinculados con los aspectos sociales de la empresa; el de Freeman (1984) que considera deberes fiduciarios de la empresa hacia los grupos implicados. Vertebrándose en adelante hacia muy diversas líneas de investigación ejemplificadas por la noción de ciudadanía corporativa impulsada por Andriof y McIntosh (2001); Zadek (2001) y Matten y Crane (2005); la búsqueda de correlación entre la RSE y el éxito empresarial emprendida por Waddock y Graves (1997); Swanson (1999); Griffin (2000) y Vogel (2005); o la crítica a la RSE como excusa para hacer negocios como siempre lanzada por Henderson (2001); Palazzo y Richter (2005); Benerjee (2007) y Hanlon (2008).

Johnston (2011) argumenta que el término “responsabilidad social empresarial” debe estar reservado exclusivamente para el proceso de internalización de las externalidades negativas por parte de las empresas, consistente en la identificación y neutralización de los efectos perjudiciales que sus actividades tienen en la sociedad. En este mismo sentido, Carroll y Shabana (2010) aluden al surgimiento de la RSE en sus orígenes como una respuesta a los impactos nocivos de la actividad empresarial hacia la sociedad, siendo el fin de los teóricos y prácticos pioneros contrarrestar a través de la responsabilidad dichos efectos negativos de los negocios y potenciar los positivos. Se desprende por tanto como condición ineludible la identificación efectiva y el conocimiento profundo a través de su medición de los issues sociales-empresariales como vía para reconocer la brecha en el DSE y de esta forma acceder a la oportunidad de corregirlo o mejorarlo a través de acciones empresariales específicas. Wartick y Mahon (1994) precisan que un issue social sólo es relevante para la empresa cuando se torna issue corporativo, definiéndolo como sigue: (a) Una inconsistencia controvertida basada en una o más diferencias en las expectativas (b) que involucra la percepción de los directivos de un cambio en la legitimidad o las percepciones de los implicados en las posiciones de costo/beneficio (c) que ocurren dentro o entre puntos de vista sobre cuál es y/o cuál debe ser el desempeño empresarial o la percepción de los implicados del desempeño empresarial, e (d) implica una resolución real o anticipada que crea impactos presentes o futuros en la organización identificables y significativos. (p. 306).

La medición de la RSE se ha desarrollado primordialmente bajo el concepto de desempeño social empresarial (DSE). Carroll (1979) introdujo este concepto argumentando que la “responsabilidad” implicaba motivación y no era medible y optó por “desempeño” como término operativo. El concepto así creado evolucionó de manera importante a partir del marco de referencia que sobre éste construyó Wood (1991). En un artículo más reciente, después de realizar una amplia y profunda revisión sobre la medición del DSE, la misma autora refiere que no obstante su longevidad el DSE sigue siendo controversial, ambiguo y difícil de investigar; que en buena medida el concepto ha sido equiparado con “hacer el bien” y la búsqueda se ha centrado en la relación estadística entre el desempeño social y el desempeño financiero de

la empresa como una salida para deslegitimar el llamado a la normatividad para los gerentes, siendo estas dos las razones del progreso marginal en la teoría y la medición del desempeño social (Wood, 2010).

METODOLOGÍA

El objetivo del presente estudio es la evaluación del desempeño social de la empresa en términos monetarios/financieros. En virtud de que la investigación involucra la identificación de situaciones o prácticas empresariales factibles de ser calificadas como socialmente responsables/irresponsables con el fin de ser evaluadas en la unidad de estudio mediante el uso de indicadores, la investigación se realizará bajo un enfoque cualitativo. Para alcanzar satisfactoriamente el objetivo planteado en la investigación se considera apropiado un diseño de estudio de casos múltiples, siendo éste transversal en virtud de que los datos son recolectados en un momento específico y su alcance exploratorio con el propósito de abordar la medición de la responsabilidad social empresarial (RSE) desde una nueva perspectiva. La técnica empleada en la recolección de información descriptiva de las situaciones y prácticas empresariales relativas a la responsabilidad es la entrevista semi-estructurada acompañada de la revisión documental de los datos contables y financieros proporcionados a lo largo del proceso. Las preguntas centrales en la entrevista son las siguientes:

Si definimos la RSE en términos del cumplimiento de los ítems específicos del desempeño que se enlistan en la tabla (anexo 1) ¿De cuáles prácticas violatorias de los mismos encuentra puntalmente usted que su organización se vale deliberadamente o no para incrementar su utilidad? Sea tan amable de explicar de la manera más amplia y detallada posible la forma en que la prácticas identificadas por usted tienen lugar en su organización. Sea tan amable de proporcionar información específica sobre las prácticas señaladas que permita cuantificar el beneficio económico que éstas traen a su organización.

RESULTADOS

El reporte de caso elaborado conjuntamente por los participantes y el investigador con base en el protocolo de inmersión en el campo muestra la identificación y la medición de los issues de responsabilidad social empresarial (RSE) particulares de la empresa “A”, así como la evaluación de su desempeño social bajo el enfoque de la presente investigación. La valoración de cada issue identificado se refiere finalmente como porcentaje de la utilidad antes de financiamiento, impuestos, depreciaciones y amortizaciones (EBITDA, por su siglas en inglés) o de la utilidad neta (UN), según sea su efecto.

Reporte de Caso de Estudio de la Empresa “a”

Autopartera multinacional de origen estadounidense que cotiza en la Bolsa de Nueva York (NYSE) con operaciones en los cinco continentes. La planta objeto de estudio genera ingresos anuales superiores a los de 650 millones de dólares con más de 2000 empleados, está ubicada en la región central del país y es una de las 7 plantas del grupo en territorio mexicano. *Comunicación con el empleado/comunicación abierta* La comunicación es una herramienta utilizada por la organización para transmitir metas y estrategias, pero es manipuladora, en el sentido de informar a los trabajadores que las metas no son alcanzadas totalmente. Se comunica que por razones de permanencia en el mercado no es posible sostener económicamente un incremento superior al de la inflación. Basado en esto se hace la revisión de contrato con el sindicato, el cual siente presión de conservar el trabajo para sus agremiados.

Tabla 1: Costo No Incurrido Por Negación de Aumento Real de Salario a Personal Directo

	Con Acumulada	Inflación Con Inflación + 5%
Incremento porcentual	3.947%	8.947%
Salario directo	\$ 3,637,800	\$ 3,812,783
Prestaciones directas	\$ 3,190,600	\$ 3,812,783
Total	\$ 6,828,400	\$ 7,625,567
Incremento a la nómina	\$ 269,517	\$ 797,167
Costo mensual no incurrido		\$ 527,650
Costo anualizado		\$ 6,331,798
		0.37% del EBITDA

Cumplimiento de promesas y reglas acordadas

Los mecanismos de evaluación del desempeño prometen en su mayoría la recompensa al esfuerzo, en la mayoría de los casos para cumplir las expectativas el trabajador, específicamente el personal indirecto y administrativo, incurre en jornadas más largas sin compensación extraordinaria.

Tabla 2: Costo No Incurrido Por Omisión de Pago de Horas Extraordinarias Laboradas Por el Personal

	Pago jornada normal	Exceso	No pagado
Salarios mano de obra directa	\$ 3,637,800	-	-
Salarios mano de obra indirecta	\$ 903,000	18.8%	\$ 169,313
Salarios administrativos	\$ 2,193,000	18.8%	\$ 411,188
Total mensual	\$ 6,733,800		\$ 580,500
Costo no incurrido anualizado			\$ 6,966,000
			0.41% del EBITDA
Análisis de la jornada laboral			
Horas de la jornada normal	8.0		
Horas de la jornada real	9.5		
Horas extraordinarias promedio	1.5		
Porcentaje	18.8%		

Prestaciones

Se define un nuevo contrato donde se establecen prestaciones menos a las del contrato original y se deciden acciones poco éticas como presionar y liquidar a los regidos por el contrato anterior de esa forma el rubro de prestaciones es menos costoso para la organización, aunque cumple con prestaciones de ley.

Tabla 3: Costo No Incurrido Por Disminución Contractual de las Prestaciones Directas al Salario

	Mano De Directa	Obra Mano de Indirecta	Obra Personal Administrativo	Total
Contrato Anterior	\$ 742,000	\$ 173,000	\$ 393,000	\$ 308,000
Contrato Actual	\$ 519,400	\$ 138,400	\$ 334,050	\$ 991,850
Diferencia mensual	\$ 222,600	\$ 34,600	\$ 58,950	\$ 316,150
Costo anualizado	\$2,671,200	\$ 415,200	\$ 707,400	\$3,793,800
				0.22% del EBITDA

capacitación y desarrollo

La capacitación otorgada es únicamente la necesaria para la obtención de certificación de normas por parte de los clientes, dejando de lado la esencia del desarrollo del capital humano.

Tabla 4: Costo No Incurrido Por Déficit En Capacitación de Personal

Inversión empresa “a”	\$ 15,000
Inversión organización promedio en USA*	\$ 468,000
Costo mensual no incurrido	\$ 453,000
Costo anualizado	\$ 5,436,000
*America Learning & Media	0.32% del EBITDA

Seguridad y salud ocupacional

Enfocada totalmente a la administración del índice de riesgo para efecto del IMSS y no a la conciencia social, la organización crea procedimientos para que los trabajadores que tengan algún accidente de trabajo sean referidos a clínicas particulares con la finalidad de evitar la hoja ST7 del IMSS que incrementaría la prima de riesgo.

Tabla 5: Costo No Incurrido Por Manipulación de Prima de Riesgo

	Actual	Actual + 3 puntos
Prima de riesgo	1.0497%	1.3497%
Guarderías	\$ 281,257	\$281,257
Base anual	\$ 337,507,872	\$ 337,507,872
Costo cuotas	\$ 3,542,921	\$ 4,555,445
Costo no incurrido		\$ 1,012,524
		0.06% del EBITDA

Retiro y asesoría por terminación de la relación laboral

Prácticas indecentes de negociación en el cálculo de la liquidación cuando se propone bajo amenazas la aceptación parcial de la indemnización y prima de antigüedad. Con la asesoría legal de bufetes de abogados para disminuir los riesgos de demandas, la organización decide calcular las liquidaciones con el salario nominal en lugar del salario diario integrado como lo marca el art. 84 de la LFT.

Tabla 6: Costo No Incurrido Por Pago de Liquidaciones de Empleados Con Base En Salario Nominal

Antigüedad promedio	5 años
Salario diario nominal promedio	\$600
<i>Vacaciones:</i>	
Días	14
Monto	\$ 8,400
% Prima Vacacional	120%

Impacto	Monto	% de utilidad neta
Utilidad incremental por planeación fiscal agresiva	\$ 49,273,640.00	4.82%

CONCLUSIONES

La identificación de issues de responsabilidad social empresarial (RSE) medibles en términos monetarios/financieros y su evaluación mediante un indicador constituyen el objetivo planteado para la investigación. Si bien el alcance puede verse limitado en virtud de la dependencia de los participantes y de la accesibilidad a datos duros, el estudio de caso presentado ha demostrado que en cada práctica de las ahí identificadas la empresa busca en mayor o menor medida incrementar su utilidad al no internalizar la totalidad de sus costos. En ese sentido, Young aduce que “el monto neto de utilidades depende de la habilidad de externalizar los costos” (2010, p. 1121), consecuente con la idea de Monks y Minow (2008, p. 15) de que “la estructura corporativa fue diseñada para ser tan vital y robusta que se asemeja a una ‘máquina externalizante’ montada para hacer todo lo pueda para aferrarse a sus ganancias y empujar los costos fuera de su estado de resultados”, además de que “los inversionistas y los directivos se apropian de las utilidades y, hasta el límite de lo posible, imponen los costos a la sociedad en su conjunto” (p. 107).

De este modo, el estudio aporta una vía directamente vinculada a la utilidad para mejorar la responsabilidad social de una empresa al proporcionar un mecanismo de evaluación objetiva del desempeño social puntual en cada issue particular que los integrantes de la organización y grupos de implicados sean capaces de identificar y abordar para corregir la forma en que se genera el beneficio económico e incrementarlo responsablemente. En ello se resume la esencia teórica y práctica de la RSE y su enorme valor. Crouch (2006, p. 2) afirma categóricamente que “la RSE es esencialmente *reconocimiento de las externalidades de la empresa*”, al describir la idea básica de la RSE que la reconcilia con la teoría de las ciencias sociales como aquel comportamiento de la empresa que voluntariamente asume las externalidades producidas por su actividad en el mercado. La identificación de externalidades no tiene un carácter normativo sino una vez que interviene el criterio para señalarlas como negativas o positivas. Bajo cierta perspectiva la particularidad del análisis y la cuestión de fondo se presentan como una contradicción entre la RSE y el objetivo de maximización de las utilidades por parte de la empresa en el sentido de que para reducir la generación de externalidades negativas o incrementar las positivas, la empresa habrá de emprender acciones que la harán incurrir en costos. Las externalidades pueden ser correctamente gestionadas sólo cuando la

organización cuenta con capacidad institucional y mecanismos de gobierno apropiados. El ámbito interno de la organización estará influido favorable o desfavorablemente por el contexto económico, social y político en que esté inmersa y por ende la internalización de externalidades específicas en un momento dado será dependiente del balance de intereses en juego dentro y fuera de la empresa en su conjunto.

INFLUENCIA DEL LIDERAZGO EN EL LOGRO DE OBJETIVOS DE LA INDUSTRIA RESTAURANtera DEL VALLE DE SAN QUINTÍN

Karina Gámez Gámez, Universidad Autónoma de Baja California, México

Lorena Álvarez Flores, Universidad Autónoma de Baja California, México

Alma Lourdes Camacho García, Universidad Autónoma de Baja California, México

RESUMEN

Esta investigación surge con la intención de conocer cómo se encuentran los negocios en el Valle de San Quintín, Baja California, México en relación a la forma de ejercer la autoridad por parte de los líderes formales y como ésta se relaciona con el logro de objetivos, considerando que estas variables tienen una influencia significativa en la competitividad de la industria restaurantera de la localidad; para lograrlo se realizó un inventario de los restaurantes de localidad que cumplían con los criterios establecidos y se seleccionó una muestra de ellos para ser investigados. Se diseñaron 2 cuestionarios dado que la perspectiva del trabajador es diferente a la postura gerencial. Dichos cuestionarios se validaron con alfa de cronbach en el programa estadístico SPSS versión 15.0 y se aplicaron 30 cuestionarios a cada nivel de empleados. Los datos fueron tratados en el mismo programa por medio de Anova One Way para determinar la influencia de una variable sobre la otra. Los resultados muestran que las empresas participantes mantienen un liderazgo participativo para mantener a los empleados comprometidos en el avance de las metas fijadas, lo anterior es un punto de partida para encaminar a la microempresa hacia la competitividad frente a la situación que presenta el Valle de San Quintín con el resto del Estado de Baja California, México.

PALABRAS CLAVE: Liderazgo, Objetivos, Competitividad

INFLUENCE OF LEADERSHIP IN ACHIEVING GOALS RESTAURANT INDUSTRY VALLEY SAN QUINTIN

ABSTRACT

This research began with the intention of knowing how are businesses in the Valley of San Quintin, Baja California, Mexico in relation to the manner of exercising authority by the formal leaders and how it relates to the achievement of objectives, whereas these variables have a significant influence on the competitiveness of the restaurant industry of the town; to do an inventory of the restaurants in town that met the established criteria and a sample of them was selected for investigation was conducted. Two questionnaires given to the worker's perspective is different managerial position is designed. These questionnaires were validated with Cronbach alpha in SPSS version 15.0 and 30 questionnaires were applied to each level of employees. The data were treated in the same program using One Way ANOVA to determine the influence of one variable on another. The results show that the participating companies maintain a participatory leadership to keep employees engaged in advancing the goals, the above is a starting point for route microenterprise to competitiveness compared to the situation that presents the Valley of San Quintin with the rest of Baja California, Mexico.

INTRODUCCIÓN

La economía en México es ampliamente sustentada por los microempresarios, es así que el estudio de este sector económico ha tomado un alto relieve. Generalmente los microempresarios suelen iniciar el proyecto por necesidades o gustos personales y a su vez encontrando una fuente de ingresos para su vida personal. Estos empresarios se vuelven líderes en su negocio que conforme va creciendo va aumentando el número de personas empleadas. En México, según datos de la Secretaría de Economía (SE) proporcionados por PROMEXICO, la micro, pequeñas y medianas empresas (PYMES) constituyen un eje primordial en la economía del país y en la creación de empleos. Así mismo se afirma que de acuerdo al Instituto Nacional de Estadística y Geografía (INEGI) existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son entidades micro y pequeñas que a su vez generan más de la mitad del Producto Interno Bruto y del 72% del empleo en el país.

Lo anterior es una razón fundamental para que todo empresario o líder monitoree constantemente su negocio y se mantenga alerta ante cualquier síntoma de deficiencia ya que es el la persona en la que recae la obligación de velar por el funcionamiento del mismo. En ocasiones un empresario da mayor importancia a las actividades que directamente reditúan dinero dejando a un lado el recurso humano. Sin embargo una empresa se constituye como un sistema, en donde cada uno de sus eslabones puede influenciar en el desarrollo total de la misma. Cada uno de los recursos con los que cuenta una empresa es un eslabón importante para el desempeño de sus actividades, de hecho, sin el talento humano ninguna actividad económica podría ser desarrollada, es ahí donde recae la importancia del líder para guiar a sus empleados en el cumplimiento de las metas de la empresa.

El valle de San Quintín ofrece para los comerciantes o empresarios áreas de oportunidad para desarrollar nuevos negocios, impulsar el crecimiento de los ya existentes. En este poblado apenas se vislumbra la llegada de cadenas comerciales en otros ámbitos, sin embargo, se ha observado que no existen restaurantes sofisticados u organizados profesionalmente, los pocos que existen son producto de la experiencia de los emprendedores del valle, razón por la cual el papel del líder es de suma importancia en el futuro de los mismos. Uno de los recursos que pueden en determinado momento coadyuvar a sus actividades económicas es el recurso humano, la manera en como los dueños de los negocios en San Quintín han aprendido a manejar los restaurantes del valle es tradicional, es decir, el trabajador es solo un empleado con la única obligación de trabajar bajo las ordenes de su patrón, esto llega en ocasiones a crear un ambiente tenso de trabajo y de poca o nula comunicación o empatía, lo cual pudiera afectar el desempeño de los trabajadores ante los clientes de los restaurantes de la zona. Es por eso que este proyecto de investigación tiene como interrogante conocer ¿Cómo influye el liderazgo de los gerentes en el logro de los objetivos de la organización? considerando este punto como inicial para acercarse a un proyecto de competitividad.

REVISIÓN DE LITERATURA

En ocasiones el nivel gerencial no percibe la importancia que tiene la motivación en el elemento humano y por lo tanto, en la consecución de los objetivos organizacionales, y han seguido implementando un liderazgo autocrático como única forma de gobernar a su empresa. Una forma de conocer porque las personas se comportan de cierta manera dentro de la organización es determinando que situación es lo que motiva en ellos una conducta que puede ser deseable o indeseable en su comportamiento organizacional. La motivación en el recurso humano es la fuerza o combinación de fuerzas intelectuales o emocionales que hacen que este se comporte bajo ciertos rasgos. Koontz (1999) afirma es “un término genérico que se aplica a una serie de impulsos, deseos, necesidades, anhelos y fuerzas similares, que los administradores deberán utilizar para que los trabajadores realicen su trabajo encontrando en esa actividad la satisfacción de esos impulsos”.

METODOLOGIA

El valle de San Quintín está situado al sur del municipio de Ensenada, sus principales actividades económicas son la agricultura, pesca, acuicultura, pesca deportiva y actividades comerciales en general. De acuerdo a la Encuesta sociodemográfica y de migración en el valle de San Quintín publicada por El Colegio de la Frontera Norte (COLEF) y el Consejo Estatal de Población de Baja California (CONEPO) en 2003, se registró una población total de 37,793 habitantes. Esta región según este estudio presenta un crecimiento poblacional más acelerado que el promedio estatal, ya que la tasa de crecimiento promedio anual de esta región es de 5.01%, mientras que a nivel estatal es de 4.1%.

Las actividades económicas que se realizan traen como consecuencia que el valle de San Quintín sea visitado por agentes empresariales, comerciales o turistas aumentando así la necesidad de servicios de alimentación. Por lo tanto se considera que a consecuencia de estas actividades económicas surge la demanda de este servicio para los restaurantes ubicados en el valle de San Quintín. Todo comensal espera recibir un servicio y producto de calidad. Debido a lo anterior se identificó una problemática que consiste en responder la siguiente pregunta que guiará el desarrollo de este proyecto de investigación ¿Cómo influye el liderazgo de los gerentes en el cumplimiento de los objetivos de la empresa?, haciendo la previa aclaración que estas dimensiones son punto de partida para evaluar la competitividad de los restaurantes de la zona. La presente investigación científica es tipo descriptivo correlacional estará enfocada en conocer el impacto que tiene el liderazgo en el logro de objetivos de las empresas restauranteras situadas entre Camalú y El Rosario. Para esta investigación se identificó al liderazgo como variable independiente y a logro de objetivos como variable dependiente. El diseño de este trabajo es no experimental, de tipo transversal debido a que se recolectaron datos en un solo momento, es decir, en un tiempo único. (Hernández, Fernández & Baptista, 2005). El propósito fue describir las variables y analizar su incidencia o interrelación en un momento dado.

Debido a que se realizó un sondeo físico de las empresas que se pueden considerar aptas para ser sondeadas se determinó que existen 115 elementos, de los cuales se evaluó a 30 ya que el número de participante de esta investigación se rigió por medio del teorema de límite central. Se agrupó la población por regiones geográficas y posteriormente de cada grupo se seleccionó al azar un 30 por ciento de cada subgrupo dando una muestra aproximada de 30 elementos. Se diseñaron los instrumentos de evaluación para ambos sectores, dado que para medir el liderazgo se investigó al personal del restaurante, desde meseros, cocineros y ayudantes, para medir el logro de objetivos se aplicó un cuestionario a los gerentes o encargados del funcionamiento del mismo.

RESULTADOS Y CONCLUSIONES

Para la realización de esta investigación fue necesario obtener información de los restaurantes que operan en el valle de San Quintín y que cumplen con las condiciones especificadas. Para lo cual se acudió en primera instancia a la Cámara Nacional de la Industria de Restaurantes y Alimentos Condimentados en su sección San Quintín, se encontró que debido a su recién apertura en la localidad aún no cuenta con una base de datos, razón por la cual fue necesario realizar el inventario físico de los restaurantes de la zona que se asemejan a los criterios de muestra. Esta investigación se realizó con la finalidad de conocer cómo influye el liderazgo en el desempeño de los trabajadores y como esto a su vez favorece el logro de objetivos de los restaurantes del valle de San Quintín como punto de partida para que se orienten a la competitividad. Para lo cual se aplicaron dos tipos de cuestionarios, uno para los empleados con la finalidad de conocer cuál es su apreciación en cuanto al liderazgo de sus jefes y otro para conocer que el lado gerencial y el logro de objetivos. Los participantes de esta investigación fueron los 30 gerentes o dueños, así como 30 empleados que pueden incluir meseros, cocineros, lavaplatos, cajeros, etc. Los empleados que desarrollan actividades diversas en los establecimientos participantes son mujeres en su mayoría debido a que solo se encontró un

17% de hombres laborando en este sector. En La Variable de Liderazgo y Motivación Se Incluyeron las Siguientes Preguntas:

- ¿Considera usted que su jefe es competente?
- ¿Recibe explicaciones por parte de sus superiores sobre la forma en que debe usted hacer su trabajo?
- ¿Con que frecuencia es informado sobre los cambios que se harán en la empresa?
- ¿Qué tanto confía en que su jefe le informará sobre los logros de la empresa?
- ¿Su jefe alguna promueve actitudes positivas entre los trabajadores del restaurante?
- ¿Ha recibido algún premio o reconocimiento por realizar su trabajo de manera exitosa?
- ¿Existe en su empresa la confianza para expresar sus ideas u opiniones?

De los cuestionamientos anteriores y de manera descriptiva se encontró que el 63% de las personas creen en la competencia de su jefe, mientras que solo un 53% personas afirman recibir explicaciones de su jefe al momento en el que se le delegan actividades, las personas que representan menos del 50 % afirman a veces recibir informes de los cambios que ésta planeando la empresa. En cuanto a la comunicación vertical el 63% afirma que si la empresa logra sus objetivos ellos serán informados y un 57% informa que su jefe frecuentemente promueve actitudes positivas en sus trabajadores. Casi un 55% afirma que nunca recibe ningún tipo de premio no económico por realizar su trabajo de manera exitosa así como tampoco se tiene la confianza para expresar libremente sus ideas u opiniones.

De acuerdo a esta información se puede apreciar que los empleados desarrollan sus actividades con un nivel bajo de motivación y un nivel medio de liderazgo puesto que ellos si confían en sus superiores, sin embargo, las empresas no se ha tomado en cuenta lo que afirmó Fiedler (1967, citado por Koontz, 2004) en cuanto a que el desempeño de la organización depende del liderazgo y de los atributos de líder. Por lo que sería importante que considere modificar la percepción de los trabajadores en cuanto al liderazgo de sus gerentes ya que de ahí es un punto de partida para que se fortalezca este nivel y puedan apreciarse mayores índices de motivación, ya que según los empleado no hay ningún tipo de motivación por parte de la gerencia con lo que se puede afirmar que tampoco se ha tomado en cuenta lo que Stoner & Freeman (1996) afirman en el sentido de que motivación puede llegar a canalizar y orientar la conducta del empleado en un sentido específico y comprometido con la organización. En La Dimensión De Logro De Objetivos Se Incluyeron Las Siguientes Preguntas:

- ¿Los empleados están informados de las metas de la empresa?
- ¿En este restaurante se suele poner metas?
- ¿Se hace todo lo posible por cumplir las metas propuestas?
- ¿Se informa al empleado sobre el avance de trabajo en el cumplimiento de la meta?
- ¿En este restaurante generalmente siempre se cumple lo que se planea?
- ¿Si alguna vez no ha cumplido su meta, ha analizado por qué no se logró?

Un 60% de los restaurantes afirman trabajar por metas y un 75% de los gerentes afirma que los empleados siempre están enterados de los planes y objetivos de la empresa lo cual beneficia la comunicación vertical en los establecimientos. Más de la mitad de la gerencia afirma hacer todo lo posible por el cumplimiento de los objetivos propuestos incluso mantener informados paso a paso a los empleados sobre el avance que se está teniendo pues los empleados son parte de la empresa y deben estar informados tal y como lo afirma Ortega & Cabrera (2001) cuando el empleado recibe mayores responsabilidades y se le mantiene informado puede tomar decisiones que aumentan la rentabilidad de la empresa así como obtener beneficios personales a través del cumplimiento de las mismas. Además se afirmó que en un 90 % de los casos las metas llegan a ser alcanzadas. Las variables ya indicadas se investigaron en los restaurantes y fueron analizadas con el programa estadístico para las ciencias sociales versión 15.0 para Windows y se realizó un análisis de varianza (ANOVA) de un factor que consiste en determinar el efecto que sobre alguna variable dependiente tiene una variable independiente y discreta.

Tabla 1: Descriptivos Logro_Objetivos_Competitividad

	N	Media	Desviación Típica	Error Típico	Intervalo de Confianza Para la Media Al 95%	Mínimo	Máximo
	Límite inferior	Límite superior	Límite inferior	Límite superior	Límite inferior	Límite superior	Límite superior
Bajo	10	3.7500	.22567	.07136	3.5886	3.9114	4.00
Medio	11	4.0758	.20226	.06098	3.9399	4.2116	4.33
Alto	9	4.2222	.35355	.11785	3.9505	4.4940	4.67
Total	30	4.0111	.32144	.05869	3.8911	4.1311	4.67

El análisis de los promedios o medias muestra que las empresas que cuentan con un alto liderazgo tienen el mayor logro de objetivos en su empresas ($M=4.22$, $D.E.=0.35$), seguidos de aquellas que tienen un liderazgo promedio ($M=4.07$, $D.E.=.20$) mientras que el más bajo logro de objetivos fue manifestado por las empresas que tienen un bajo liderazgo ($M=3.75$, $D.E.=0.22$). Estos datos permiten aceptar la hipótesis que indica que el liderazgo de los gerentes y el apoyo a los empleados influye en el logro de los objetivos.

Tabla 2: Anova Logro_Objetivos_Competitividad

	Suma de Cuadrados	Gl	Media Cuadrática	F	Sig.
Inter-grupos	1.129	2	.564	8.161	.002
Intra-grupos	1.867	27	.069		
Total	2.996	29			

Tabla 3: Comparaciones Múltiples Variable Dependiente: Logro_Objetivos_Competitividad Bonferroni

(I) Liderazgo_Motivacion3g	(J) Liderazgo_Motivacion3g	Diferencia de Medias (I-J)	Error Típico	Sig.	Intervalo de Confianza al 95%	
		Límite inferior	Límite superior	Límite inferior	Límite superior	Límite inferior
Bajo	Medio	-.32576(*)	.11491	.026	-.6191	-.0325
	Alto	-.47222(*)	.12084	.002	-.7807	-.1638
Medio	Bajo	.32576(*)	.11491	.026	.0325	.6191
	Alto	-.14646	.11821	.678	-.4482	.1552
Alto	Bajo	.47222(*)	.12084	.002	.1638	.7807
	Medio	.14646	.11821	.678	-.1552	.4482

* La diferencia de medias es significativa al nivel .05. Para conocer si el liderazgo influye en el logro de objetivos de la empresa se encontró que existen diferencias estadísticamente significativas en el logro de objetivos dependiendo del tipo de liderazgo que ejercen los gerentes de la empresa (alto-medio-bajo) ($F(27)=8.161$, $P=.002$, consultar Tabla 2). La prueba post hoc "que indica que entre que grupos existen diferencias" muestra diferencias entre el nivel bajo de liderazgo de la empresas y aquellos que reportaron medio y alto liderazgo (ver Tabla 3). Se encontró que los empleados se esforzarán más en la realización de las actividades que contribuyen al logro de los objetivos de la empresa dependiendo del tipo de liderazgo que ejerzan sus superiores. En el caso de los restaurantes en San Quintín se encontró que el nivel de liderazgo es aceptable por los empleados por lo tanto la mayoría de los restaurantes cumple con las metas que se establecen, y que a su vez es favorable para el futuro crecimiento de la empresa.

RESUMEN

El objetivo general del trabajo quedó definido en los siguientes términos: "Identificar las principales causas que impulsan a las personas a la creación de microempresas en México". La estrategia metodológica consistió fue a través de un estudio estadístico descriptivo, buscando especificar las características necesarias para el desarrollo del tema. Entre los principales hallazgos del estudio se encuentra que el 58% de los encuestados manifestaron que fue por razones económicas principalmente que iniciaron sus negocios además de la población encuestada resaltan las mujeres emprendedoras, quienes resultaron ser el 80%, también se encuentra que un 93% del total respondió de manera afirmativa acerca de si su negocio tuvo su origen en algún cambio de importancia en sus vidas. El mayor número de emprendedores se encontró entre los 25 a 55 años de edad siendo el 77%. Una mayoría considerable con el 63% son negocios que están entre 1 a 10 años desde su creación.

PALABRAS CLAVE: Creación de Empresas, Emprendedor, Actividad Empresarial

IDENTIFICATION OF THE PRINCIPAL REASONS THAT STIMULATE TO THE PERSONS AT CREATION OF SMALL BUSINESS IN MÉXICO

ABSTRACT

The general objective of the work was defined in the following terms "Identify the main causes that encourage people to business creation in Tecoman Colima". The methodological strategy consisted of exploratory research technique, descriptive study looking specifically with the properties, characteristics necessary for the development of the subject. The main findings of the study is that 58% of those surveyed said they were primarily for economic reasons who started their business in addition to the population surveyed highlight women entrepreneurs, who turned out to be 80%, also found that 93 % of total responded in the affirmative to whether their business had its origin in a major change in their lives. The largest numbers of entrepreneurs are found between 25 and 55 years of age being 77%. A considerable majority with 63% are businesses that are between 1 and 10 years since its creation.

INTRODUCCIÓN

A las personas que inician un negocio o tienen una idea se les llama emprendedores, quienes toman la iniciativa asumiendo la responsabilidad que esto le representa. Son personas en apariencia son igual a todas las demás; pero tienen la convicción de que pueden hacer la diferencia. Es decir, tienen una idea y la

desarrollan hasta que ésta se ve materializada, sin duda buscan un cambio social ya sea para su beneficio el de su comunidad. En cualquier caso la población cercana obtiene fuentes de empleo, que aumentan la economía de la región y por consecuencia una mejora en la calidad de vida (Covarrubias, 2003). Aunque todas estas personas, se forjan su idea, las causas que las llevan a realizarlas son muy diferentes, pues varían según el entorno donde se han desarrollado, la educación que se recibe, los principios de quien emprende, incluso de quienes lo rodean, con todo esto a su alrededor toma la decisión de iniciar su proyecto e innovar (Silva, 2010). En algunos casos obtienen apoyos gubernamentales o de grupos que se dedican a dar préstamos a pymes, quienes también pueden darles asesorías que les ayuden a desarrollarse y permanecer en el mercado.

Otros creativos asumen su capital de riesgo, desarrollando su idea, con el mismo entusiasmo que los demás, en ambos casos algunos proyectos no se podrán mantener por si mismos mucho tiempo (Góngora Biachil y Madrid Guijarro, 2010). Entender cuál es el impulso que les hace dar ese paso, es el tema al que se atenderá, pues para los que están decidiendo formar un negocio se sentirán motivados para empezar a trabajar en sus proyectos ya que estarán identificados al conocer que hay quien piensa de manera similar y tiene éxito. Es importante evaluar el impacto real de programas de apoyo al emprendimiento en la creación de nuevas empresas, en la generación de empleo y riqueza para las regiones donde se instalan, de manera que se pueda hacer un balance entre los esfuerzos, recursos invertidos, los resultados y beneficios alcanzados (Gómez y Serna, 2010). Por otro lado existe la creación de pequeños negocios informales que les permiten obtener ingresos a muchas personas, si bien no pagan impuestos su presencia da movimiento a la economía nacional (Cerón, Pimentel y Barranco Bravo, 2007).

El presente problema de investigación surge de la necesidad de conocer cuáles son los principales problemas a los que se enfrentan las personas que quieren crear una empresa y conocer cuáles son las causas que las impulsan. De esta forma se aplicó una encuesta para obtener información más fehaciente. De acuerdo a la obra de Bernal (2010), “el planteamiento del problema constituye la construcción de un marco teórico que incluya la definición de la naturaleza del problema, los elementos que lo conforman y su circunscripción”. Por consiguiente, se define el problema a investigar de la siguiente forma: Determinar qué lleva a las personas emprendedoras a tomar la decisión de iniciar su propia empresa, es decir conocer si sus motivaciones son de origen interno o se trata de un ambiente externo que influye en ellas al tomar esta decisión, o si es por cuestión familiar que dan inicio a sus deseos de iniciar un negocio.

En la vida de las empresas los resultados se ven determinados por la utilidad de ahí que siempre se confunda de motivación al logro a motivación de la utilidad. La segunda es simplemente la medida que se tiene de la motivación al logro, pues en el capitalismo esta es la mejor forma de medir el éxito. Existe semejanza entre el interés por la motivación al logro que manifieste una cultura proporciona a preparar a sus niños y el resultado que se obtiene en cincuenta años en lo económico. Esto quiere decir, que en aquellos que inculcaron valores a sus descendientes, encaminados a la motivación al logro como principal estimulante, en alrededor de 40 o 50 años pueden ver los resultados en su economía de manera especial. Debido a las anteriores consideraciones nos surgen las siguientes preguntas de investigación: ¿Cuáles fueron los motivos que los hacen ser un emprendedor?. ¿Cuáles son los principales componentes básicos que se requieren para iniciar un negocio propio?. ¿Quién los apoyó para iniciar su negocio? En el presente estudio los objetivos se generaron en dos apartados. El primer apartado comprende el objetivo general, el cual da origen a todo el trabajo. En el siguiente apartado se muestran los objetivos específicos, en los cuales se desglosan el objetivo general seguido por en el segundo apartado por los objetivos particulares, los cuales intentan acercarnos a lo que es nuestro objetivo general al centrarse en algunas partes de este. El objetivo general de esta investigación fue, Identificar las principales causas que impulsan a las personas a la creación de empresas en México.

Para poder analizar de una manera más a detalle la actividad de los empresarios, los fines de este estudio fueron los siguientes: a). Conocer qué los hace tomar la iniciativa. b). Determinar si actúan por cuenta

propia y por vocación o por necesidad. c). Saber en qué forma influye la sociedad al crear la empresa. d). Qué factores influyen en la necesidad de la creación de empresas. e). De qué manera se financian estos pioneros. Es de suma importancia la indagación de este tema, debido a que se desea dar a conocer detalladamente cuales son las principales causas, ya que en la región no se cuenta con un estudio referente al tema que nos permita identificar a un emprendedor y dotarlo de las herramientas que le permitan mantenerse vigente. Aun cuando el fenómeno de los emprendedores no es reciente, no se cuenta con un estudio de la región que nos sirva de base para poder estimar en qué medida interfieren los diversos factores del entorno social y económico y político, por lo cual es necesario realizar un estudio que determine las causas que llevan a ser emprendedores, y con base a esto poder estimular una cultura de emprendedores que apoye a la comunidad favoreciendo el crecimiento y mejora de la calidad de vida de quienes habitan en esta ciudad.

REVISIÓN DE LA LITERATURA

La primera forma que se utilizó para identificar al empresario fue su condición como propietario de la empresa, sin embargo, a medida que se produjo el desarrollo de las sociedades y la brecha entre propiedad y gestión comenzó a ensancharse y se pusieron más de manifiesto las graves manifestaciones de dicha concepción. Say (1971), considera que para que un empresario tenga éxito debe contar con una rara combinación de cualidades, conocimientos y experiencias, entre las que destacan el buen conocimiento y el entorno, la capacidad de gestión, la experiencia y la disponibilidad de financiación, debido a que la posesión de atributos es difícil. Para Schumpeter (1978), el empresario no es necesariamente el propietario o el gestor, sino la persona – de características y conductas inusuales- que, no acomodándose a la situación establecida, introduce las innovaciones. Entre las habilidades que según Knight (1971), son necesarias para tener éxito como empresario destacan, además de la habilidad en la gestión de la incertidumbre, la confianza en uno mismo, la capacidad para manejar a los hombres, así como la capacidad de decisión. Para Kirzner (1973), los empresarios son así las personas que tienen un gran talento para detectar las oportunidades de negocio y aprender de sus propios errores en este ámbito, además. Contar ciertas cualidades como el liderazgo o la creatividad.

Dependiendo del aspecto del empresario que los diferentes autores consideran como más representativo de actividad, centraran su atención en distintas cualidades para explicar el éxito. De acuerdo a Saco y Mazza (2004), el momento que alguien se plantea la posibilidad de crear un negocio por cuenta propia, lo primero que le hace titubear es si tiene la capacidad para poder asumir los retos que esto genera. Estimulo emprendido Según Saco y Mazza (2004), la falta de recursos, el deseo de valerse por sí mismo, de ser alguien, no encontrar empleo, son razones comunes para colocar las primeras piedras. Saber dónde se está en lo personal y profesionalmente, da el punto inicial para desafiar. Con estas referencias se puede dar una idea general a que enfrentarse y las posibles complicaciones, con lo que se puede tener una idea más clara de lo que se quiere iniciar. Además, según Varela (2001), se deben cuidar los siguientes aspectos: Reunir toda la información posible sobre el área o sector en el cual estará el nuevo negocio, la competencia, lo legal, ubicación y demás. Generar un plan de formación personal para ayudar el espíritu, y obtener así aptitudes pertinentes. La idea es tener un horario propio a ritmo personal, con cursos que permitan la formación dentro del sector al que se busca pertenecer.

Adentrarse, aun mas en el sector, ya sea con lectura de informes, estudios o tratados, o conocer negocios similares al que se busca crear. Madurar la idea, no limitarse las posibilidades. Cuando aún no esté claro, se debe de buscar más información, sobre las áreas de oportunidad que existen de manera minuciosa, hasta que la idea este más clara, actualizada y perfilada a donde se planea realizar. La decisión de crear una empresa y de convertirse en empresario, ha sido explicada por el juego de tres clases de factores. Representa a las características personales de los empresarios, en cuanto afectan a sus aspiraciones, motivaciones, percepciones, habilidades y conocimientos. Hace mención a los rasgos de la organización donde el individuo ha desarrollado previamente su actividad laboral.

Concierne a factores ambientales de orden externo que hacen que el clima social sea más o menos favorable respecto a la decisión en cuestión. Collins y Moore (1964), señalan que los futuros empresarios se caracterizan por sus deseos de independencia y por la dificultad de mantener relaciones de subordinación. Sin embargo, estudios realizados por Boswell (1972), muestran evidencias prácticas inversas. Los individuos con su mayor nivel de educación formal y social, son más expuestos a crear firmas con una probabilidad alta de supervivencia. La explicación de esta evidencia se fija en la educación como activo imprescindible para la formación de una empresa y, sobre todo, presta atención a la relación comprobada entre resultados empresariales y educación del fundador. Tipos de empresario y de empresa Cooper (1978), señala que las principales cuestiones deben ser claras en cuanto al origen, estrategias y resultados de las empresas pequeñas que se encuentran en las primeras fases de su ciclo de vida. Shapero (1975), en diversas obras, sienta los más estables y funcionales conceptos que aplican al momento de desarrollar todo el proceso que implica ser un empresario, de acuerdo con él, “el proceso de creación de empresas” es algo que ocurre en todos los países. Más cada asunto resulta como consecuencia de la actividad de las personas en específico.

Ronstadt (1984), creador de la obra *Entrepreneurship*, hace una recopilación de variados autores, generando el concepto de *perspectiva empresarial*, planteando que se da por entendido que el proceso empresarial es un proceso dinámico, que va más allá de un periodo, que se ve afectado por varias circunstancias y no solo el azar. La sección analizar, no es tan solo el negocio, o el empresario, menos el entorno en el que esta, la parte a analizar es lo que se denomina carrera empresarial, donde intervienen muchos negocios. Las determinantes de la actividad empresarial Según Veciana, (1999), el aumento en la actividad empresarial se ha ligado a los cambios y en la forma en que se desarrolla la actividad de las empresas. El nivel que goce un país en su actividad empresarial, no se explica de manera exclusiva a través de una sola disciplina del conocimiento, ya que existen diversos factores interactuando de forma compleja y relacionándose entre sí. De este modo los estudios económicos se han dedicado como su nombre lo dice a evaluar la influencia de la economía, sus mercados, en cuanto a la psicología y sociología se encargan de temas relacionados con la motivación personalidad, punto de vista colectivo e individual. Storey (1994) y Blanchflower (2000), proponen estudiar la actividad de emprendedores que se da en un país a través del punto de vista de la oferta y la demanda, del mismo modo que se hace con los factores productivos. Desde el punto de vista macro, la oferta está condicionada por las características ya sean demográficas o las que están ligadas a lo que es capital humano. Por cual se puede decir que se trata de un punto de vista laboral, en la que podemos definir la oferta como la actividad emprendedora. En el lado de la demanda de manera contraria, la determinan las oportunidades que su economía ofrece a empresarios para que puedan realizar su actividad.

Los aspectos individuales Los motivos para favorecer a las personas a ser empresarios son muy diversas, por encima de buscar un máximo beneficio. Además la evidencia empírica es poca e incompleta. Existen varios estudios como los de Cross (1981) y Hayter (1997), los cuales dan fe de lo complicado que es explicar las causas que motivan la entrada. Los factores se relacionan, con el grado de satisfacción laboral, el cual es considerado por múltiples empresarios, como uno de los principales motivos por el cual decidieron ser empresarios, pues deseaban mostrar sus habilidades, aceptar el reto de ser su propio jefe. En gran número, los empresarios consideran la rentabilidad con factor muy importante, pero están más preocupados por conseguir grandes beneficios, es decir la probabilidad de conseguir riqueza como resultado de su esfuerzo. Si bien la teoría marca que, tener recursos personales, que de otro modo no serían recompensados de la manera esperada, está entre las principales causas, para echar a andar una empresa (Hayter, 1997). Un empresario en potencia solo se decidirá a crear la empresa para entrar al mercado en caso que detecte una oportunidad para negocio, en la que la recompensa esperada este por encima de otras opciones de inversión, tanto en capital físico como en el humano. Si bien las determina el mercado, en gran medida dependen del perfil propio del individuo (Van Praag, 1995). En realidad depende de dos cosas trascendentales: de un lado que tan rentable se espera que sea; del otro lado, el grado de rechazo al correr riesgos por parte de un posible empresario. La rentabilidad es la que percibe de manera subjetiva el empresario, si bien es afectada por diversas condiciones, la capacidad propia empresarial y contar con activos resultan de especial importancia.

(Bala y Goyal, 1994). En otro caso, no les quedo opción y son empresarios a fuerza, y si las condiciones se lo permiten regresaran a realizar sus actividades para terceros, abandonando lo empresarial por no sentirse atraídos. Esto se da en países sub desarrollados, con economías no tan integradas, sistema de seguridad social por consolidar y baja participación de la mujer aun en su sociedad (Reynolds, Camp, Bygrave, Autio y Hay, 2002).

METODOLOGÍA

La estrategia metodológica consistió fue a través de un estudio estadístico descriptivo, buscando especificar las características necesarias para el desarrollo del tema (Hernández Sampieri, Fernández Collado y Baptista Lucio, 2010). Se aplicaran cuestionarios a los empresarios de un municipio de colima México que fundaron su negocio para poder obtener los resultados para esta investigación. Se determinó el sector de comerciantes al por menor de ropa, calzado y bisutería siendo un total de 190 empresas. La muestra se obtuvo a través de la siguiente fórmula:

$$n = \frac{\lambda^2 PQN}{\varepsilon^2 (N-1) + PQ\lambda^2}$$

Fórmula para determinar la muestra de una población objeto de estudio:

En donde: N: Es el tamaño de la población.

n: Tamaño de la muestra a estudiar.

P y Q=1-P son desconocidos. Se consideró el caso de máxima indefinición: P=Q=0.5.

Es el valor de la distribución normal para un nivel de significación (α) prefijado:

para $\alpha = 0,05$ $\alpha = 0,01$ que supone un nivel de confianza del 95%

Para un $\alpha = 0,1$ que supone un nivel de confianza del 90% $\lambda = 1,64$ $\lambda = 1,96$

ε es el error permitido, suelen manejarse valores 2% o 5%.

De acuerdo con lo anteriormente expresado, al aplicar la formula a los 190 resultados de la población a encuestar, se obtiene que sean 133 los cuestionarios que deben de ser aplicados. De acuerdo con el resultado de la formula se determinó un margen de error del 5%. Esta lista se obtuvo a través del Directorio Estadístico Nacional de Unidades Económicas de México, en la cual se seleccionó como actividad económica el comercio al por menor de productos textiles, bisutería, accesorios de vestir y calzado. El tamaño del establecimiento fue de 0 a 50 trabajadores, el área geográfica fue Colima México.

RESULTADOS

Habiendo concluido con el levantamiento de encuestas, se obtienen los siguientes resultados: Las personas que actualmente poseen pequeñas empresas comerciales, tienen una edad de 25 años en adelante, siendo personas en edad laboral, las edades comprendidas son entre 25 a 35. Las edades dominantes seguidas comprenden entre los 36 a 45 con un 27% y 26% respectivamente. Además resalta el hecho que las mujeres resultan ser quienes deciden iniciar sus propios negocios con un 80% de las personas encuestadas. La mayoría de los encuestados aún están en los primeros años con un 63% entre 1 a 10. El principal motivador tiene que ver con lo económico con un 58% del total de los encuestados. Principalmente consideran que es la atención al cliente como lo básico para tener éxito en lo que al comercio se refiere. El 72% de los encuestados considera contar con un plan de negocio como algo importante antes de emprender; el 35% lo recomienda a quienes quieran iniciar un negocio propio.

En cuanto a estar motivados es básico, pues el 55% de los resultados obtenido así lo ha considerado, aunque el 27% dice que es necesario contar con recursos económicos. Sobre las ocupaciones que desempeñaban antes, 38% eran empleados de pequeñas empresas, 35% estaban en otras actividades como estudiantes o amas de casa. Quienes dejaron sus trabajos por crear un negocio lo hicieron con la intención de obtener un mejor ingreso con un 48% del total de los encuestados, seguido de quienes tenían la intención de ser su propio jefe con el 25% del total. La escolaridad predominante en esta zona fue la de preparatoria con el 39% de la población encuestada, seguida del 23% con estudios de secundaria, quedando en tercer lugar aquellos quienes tienen una licenciatura con el 20%. En si el nivel de estudios de los emprendedores supera la educación básica. Destaca la atención al cliente con el 50% de la preferencia de los encuestados, aunque considera que los demás son de importancia, sin embargo consideran que para permanecer en el negocio se debe cuidar el cómo se trata a los clientes.

En cuanto a contar con un plan de negocios, el 72% afirma que es importante tenerlo, para poder atreverse a iniciar algo por su cuenta. Una minoría con el 28% considera que no es necesario. De quienes dejaron su empleo para iniciar por su cuenta el 48% mencionaron que lo hicieron por tener más ingresos de los que generaba el empleo, 25% dijeron que decidieron ser su propio patrón. Sobre si conocían si obtendrían utilidades el 82% dijeron que se informaron acerca de esto, sus comentarios en este punto son que al ser la venta de ropa un artículo de alta demanda, y que está cambiando de manera constante hay más espacio para que ellos entraran. Argumentaron que habían trabajado en el sector por lo que ya sabían del volumen de ventas. El 97% respondió de manera afirmativa al momento de preguntarles si en sus inicios se sentían capaces de dirigirlo y organizarse, solo 3% manifestó dudas. El 85% de quienes fueron encuestados veía como opción para cambiar su vida en algún aspecto, principalmente en lo económico. El resto 15% manifestó no sentirse atraído por un cambio.

CONCLUSIONES

Una vez interpretados los resultados, se da a conocer si se cumplieron los objetivos del presente estudio. Objetivo general: Identificar las principales causas que impulsan a las personas a la creación de empresas en el municipio de Tecomán Colima. Con base a esta investigación y resultados obtenidos se logró obtener resultados satisfactorios. Esto es, se lograron identificar las causas que impulsan a las personas a la creación de empresas, y la más importante es por razones económicas, seguida del reconocimiento social.

Objetivos Específicos

Conocer que los hace tomar la iniciativa: la principal causa por la que toman la iniciativa de iniciar un emprendimiento según los resultados arrojados fue por obtener más ingresos. Determinar si actúan por cuenta propia o por necesidad: este objetivo resulto ser verdadero, ya que la mayoría de los empresarios encuestados con un 58% contesto que lo hace por necesidad económica. Saber en qué forma influye la sociedad al crear la empresa: de acuerdo con los resultados arrojados en este objetivo, el 35% de los empresarios contestaron que es importante contar con un plan de negocios antes de dar inicio a su proyecto. Qué factores influyen en la necesidad de la creación de empresas: de acuerdo a los resultados arrojados este objetivo es verdadero ya que el motivo que influyen en los empresarios es de carácter económico. De qué manera se financian estos pioneros: Respecto al último objetivo se encontró que usan el capital propio para llevar a cabo el comienzo de su proyecto.

Respecto a la Pregunta de Investigación

¿Cuáles fueron los motivos que los hace ser un emprendedor? La principal causa que los hace emprender es por razones económicas, dejando completamente de lado el reconocimiento social y su autorrealización. ¿Cuáles son los principales componentes básicos que se requieren para iniciar un negocio propio? De acuerdo a los resultados obtenidos, los emprendedores consideran que lo básico para iniciar principalmente

es estar motivado, es decir tener un motivo por el cual quiero formar un negocio, además de tener la determinación para realizar todos los trámites correspondientes. ¿Quién los apoyo para iniciar su negocio? En esta pregunta podemos afirmar que se apoyan en la experiencia propia, y los recursos son provistos por ellos mismos principalmente como se puede observar en la gráfica 9. Por tanto se concluye que este trabajo resulta de interés en virtud que se puede tomar como base para que las autoridades tomen en cuenta que las persona que inician un negocio en Tecomán, consideran que les falta tener información sobre los apoyos que otorga el gobierno, y sobre todo, que inician sus proyectos con recursos propios.

RESUMEN

La Responsabilidad Social Empresarial (RSE) se aprecia desde diferentes posturas como lo es la gubernamental, la académica y la empresarial, y considerando que la RSE está relacionada con la responsabilidad de cada uno de los colaboradores que integran la empresa, para formar una responsabilidad colectiva que represente a la misma; se convierte en un reto para los profesionales de las ciencias económico administrativas que prestan sus servicios en las MIPYME, el estar familiarizados con acciones recomendadas por diferentes dependencias y organismos a favor de la RSE. En el presente trabajo se desarrolla un análisis de los profesionales referidos respecto a su conocimiento e involucramiento con la RSE. La muestra se integra por un grupo de 383 profesionales de las ciencias económico administrativas con actividad profesional vigente, a quienes se les aplicó un cuestionario de 13 preguntas; es importante señalar que la investigación de campo se realizó en una sola etapa, con duración de cuatro semanas; en la primera semana se aplicaron 183 cuestionarios, en la segunda semana se aplicaron 200 cuestionarios. Los resultados muestran cómo las MIPYME donde se encuentran los profesionales referidos, pueden apoyar la realización de prácticas de RSE para apuntalar el cuidado de los recursos naturales y en general el medio ambiente, así como responder a las exigencias de responsabilidad con su entorno. Comprobando el compromiso que los profesionales tienen como integrantes de las empresas con la RSE, e identificando que existen áreas de oportunidad por abordar en esta materia. Señalando también el cumplimiento de "Producción más Limpia" como parte del principio de sustentabilidad de las actividades humanas, en las cuales la economía, el bienestar y el ambiente forman un todo, y están íntimamente vinculados con la RSE.

PALABRAS CLAVE: Responsabilidad Social Empresarial, Profesionales de las Ciencias Económico-Administrativas, Desarrollo Sustentable

ABSTRACT

Corporate Social Responsibility (CSR) is seen from different perspectives such as the government, academia and business, and considering that CSR is related to the responsibility of each of the partners who make up the company, to form a collective responsibility representing the same; it becomes a challenge for professionals administrative economic sciences who serve in MSMEs, being familiar with recommended by different agencies and organizations in favor of CSR actions. In this paper an analysis of professional referrals regarding their knowledge and involvement with CSR develops. The sample was comprised of a group of 383 professionals with current economic administrative sciences profession, who answered a questionnaire of 13 questions; is important to note that the field research was conducted in a single stage, lasting four weeks; in the first week 183 questionnaires, in the second week 200 questionnaires were applied. The results show how MSMEs where the referring professionals, can support the implementation of CSR practices to bolster the protection of natural resources and the environment in general and to respond to the demands of responsibility to the environment. Noting the commitment that professionals have as members of companies with CSR, and identifying areas of opportunity exist to address this matter. Noting also the fulfillment of "Cleaner Production" as part of the principle of sustainability of human activities, in which the economy, welfare and the environment form a whole, and are closely linked to CSR

KEYWORDS: Social Responsibility, Science Professionals Economic-Administrative, Sustainable Development

INTRODUCCIÓN

La responsabilidad de la empresa con su entorno es de suma importancia para el desarrollo de su operación y los integrantes de la empresa forman parte de esa responsabilidad empresarial, conocida actualmente como Responsabilidad Social Empresarial (RSE). Los profesionales de las ciencias económico-administrativas forman parte de la responsabilidad referida y por lo tanto deben responder a la exigencia de estar informados y conocer el tema de RSE; obedeciendo a que los mencionados profesionales en la mayoría de los casos tienen gran injerencia en las decisiones empresariales. Por lo en el presente trabajo se busca conocer el grado de involucramiento que tienen los profesionales ya mencionados con el tema de la RSE y que se está haciendo al respecto de la misma en las empresas donde prestan sus servicios. La investigación se estructura de la siguiente forma: Revisión de la literatura, donde se integra el punto de vista de respecto a al desarrollo sustentable, la RSE y la relación de los profesionales de las ciencias económico-administrativas con los temas mencionados, además de referir las practicas recomendadas por el gobierno mexicano a las empresas, en apoyo al Desarrollo Sustentable y por ende a la RSE. Posteriormente se presenta la metodología utilizada en la revisión de la literatura y para la investigación de campo, posteriormente se presentan los resultados de la investigación de campo, las conclusiones y las referencias bibliográficas.

REVISIÓN DE LA LITERATURA

Desarrollo Sustentable

Las últimas décadas, se han caracterizado por el uso excesivo de los recursos naturales, propiciando la destrucción del medio ambiente, situación que es visible con la contaminación del agua, aire, suelo y el peligro de extinción o la desaparición de especies vegetales y animales y el calentamiento global (Vera, Vera y Méndez, 2014). A principios de los años 70 las preocupaciones por el tema del medio ambiente comienzan a tomar fuerza, la Cumbre de Estocolmo de Medioambiente Humano realizada en 1972 y la publicación del libro «Los Límites del Crecimiento» por parte del Club de Roma, también en 1972; constituyen un parte aguas para los temas relacionados con el medio ambiente. En los dos eventos referidos se precisan dos situaciones claras, la primera el deterioro del planeta y la segunda se identifica como causante del deterioro al hombre en lo concerniente a su sistema económico- social (Meadows y Behrens, 1972; Naciones Unidas, 1992).

El problema medioambiental del planeta no es sólo un tema de producción y consumo, es un problema, que pertenece a un conjunto de grandes problemas: como la salud y la pobreza mundial, compuestos por varios factores y elementos comunes interconectados entre sí. Por lo tanto para proponer una solución se debe considerar el conjunto de grandes problemas, con sus factores y elementos para poder lograr alguna mejora (Roome, 2001; Roome y Bergin, 2006). Hay que tener presente que el Desarrollo Sustentable (DS), es más que un problema medio ambiental: es un modelo social que, basándose en el respeto por el ecosistema, busca un nivel de crecimiento y progreso tal para la humanidad que se pueda sostener en el tiempo.

La definición más ampliamente reconocida es la de 1987 por la Comisión Brundtland, donde se establece que es aquel desarrollo que *“busca la satisfacción de las necesidades de la presente generación, sin comprometer la capacidad de las futuras generaciones de satisfacer sus necesidades”* (Brundtland, 1987, p. 8). Esta definición le apuesta a un equilibrio justo entre el actuar de generaciones presentes y futuras. El término de DS se ha mantenido en constante evolución, han surgido diferentes modelos como: Modelo de Stock de Capital del Banco Mundial (Serageldin y Steer 1994), el Modelo de Prisma del DS (Spangenberg

y Boniot, 1998; Valentin y Spangenberg, 2000), el Modelo del Prisma MAIN (Kain, 2003) o el Modelo de Huevo del DS (Guijt y Mosiseev, 2001), el propósito de los modelos referidos es disponer de elementos que permitan un referente para evaluar al DS (Ramírez y Arenas, 2008). Para Ramírez y Arenas (2008), son tres los pilares básicos que entran en combinación para dar vida al concepto de DS: la perspectiva económica, que busca principalmente mantener un crecimiento sostenido de la economía que permita la producción de bienes y servicios para satisfacer las necesidades humanas y den bienestar material a la población; la perspectiva social, que pretende que todos los miembros de la sociedad tengan igualdad de oportunidades de acceso a los recursos y a las oportunidades; y, la perspectiva medioambiental, que reclama que la actividad económica y humana no destruyan el medioambiente, permitiéndole mantener una capacidad regenerativa natural, para apoyar el crecimiento y desarrollo futuro. Lo anterior ha derivado en dos posturas la Sostenibilidad Fuerte y la Sostenibilidad Débil, Figura 1 y 2.

Figura 1: Sostenibilidad Fuerte

Se aprecia en la figura un equilibrio entre las tres perspectivas para lograr una Sustentabilidad Fuerte.

Figura 2: Sostenibilidad Débil

Se aprecia en la figura un desequilibrio entre las tres perspectivas lo que genera una Sustentabilidad Débil.

Continuando con el cuidado del medio ambiente, considerado como una tarea de todos, las MIPYME no pueden permanecer al margen de esa tarea, y parte de sus integrantes son los profesionales de las ciencias

económico-administrativas. Consideramos que el término DS está relacionado con la Responsabilidad Social Empresarial (RSE), que se desarrolla a nivel micro en el quehacer de las empresas (Lozano, 2006).

Responsabilidad Social Empresarial

Bowen, (1953) definió a la RSE la obligación que tienen los directivos empresariales de establecer políticas, tomar decisiones o seguir líneas de acción que sean deseables de acuerdo con los objetivos y valores de la sociedad. La responsabilidad social empresarial (RSE), se utiliza para referirse a la Responsabilidad Social (RS), la cual se debe entender como la existencia de un compromiso con carácter voluntario asumido por las empresas para su desarrollo sostenible (Porto y Castromán, 2006). Por lo que la responsabilidad social se puede entender como un conjunto de mecanismos para el desarrollo limpio que aplican las empresas para minimizar el impacto del desarrollo de su actividad al medioambiente (Lacruz, 2007). El libro verde la Unión Europea (UE, 2001; citado por Porto y Castromán, 2006) define a la RS:

“[...] la integración voluntaria, por parte de las empresas, de las preocupaciones sociales y medioambientales en sus operaciones comerciales y las relaciones con sus interlocutores. Ser socialmente responsable no significa solamente cumplir plenamente las obligaciones jurídicas, sino también ir más allá de su cumplimiento invirtiendo más en el capital humano, el entorno y las relaciones con los interlocutores”.

En México el Centro Mexicano para la Filantropía (CEMEFI), define a la empresa socialmente responsable:

“[...] aquella que tiene el compromiso consciente y congruente de cumplir íntegramente con la finalidad de la empresa tanto en lo interno y lo externo, considerando las expectativas de todos sus participantes en lo económico, social o humano y ambiental, demostrando el respeto por los valores éticos, la gente, las comunidades, el medioambiente y para la construcción del bien común.

Y entiende por Responsabilidad Social (RS): “[...] la conciencia del compromiso y la acción de mejora continua medida y consistente, que hace posible a la empresa ser más competitiva, cumpliendo con las expectativas de todos sus participantes en particular y de la sociedad en lo general, respetando la dignidad de la persona, las comunidades en las que opera y su entorno. (Centro Mexicano para la Filantropía; citado por Porto y Castromán, 2006).

La RSE se apoya de inicio, en la responsabilidad personal, debido a que son las personas quienes deciden respecto a la actuación de la empresa y las relaciones que establezca con clientes, proveedores, acreedores, el gobierno, las autoridades y la comunidad local. Lo «social» en la RSE se deriva del compromiso asumido ante la sociedad por la empresa y por todos los que colaboran con ella, y del deber de dar cuenta del cumplimiento de esas responsabilidades ante los grupos, considerados como las porciones de la sociedad más directamente afectadas por la responsabilidad de la empresa (Argandoña, 2006).

La RSE es entendida de diferentes formas: el modelo antropológico, señala que es una responsabilidad ética, la RSE, entendida como filantropía o acción social, suele responder a las expectativas o demandas sociales, el modelo psicosociológico considera las teorías que Garriga y Melé (2004: 55-57) llaman “políticas”, como el constitucionalismo empresarial, las teorías del contrato social o las que ven la empresa como un “buen ciudadano” en la sociedad. Y las teorías “integrativas” (Gariga y Melé, 2004: 57-60), que pretenden dar orientaciones para dirigir la empresa de una manera responsable ante lo que la sociedad demanda. Ampliando lo anterior en la Tabla 1.

Tabla 1: Teorías de la RSE

Teorías de la RSE	Comentarios
Teoría de la actuación social de la empresa	Hace una compilación de la RSE de 1950 a 1991. Señala la preocupación y sensibilidad acerca del impacto social de la actividad empresarial. Relaciona la conducta responsable con los riesgos y reputación corporativa. Está inspirada en la teoría social.
Teoría del valor para el accionista o Capitalismo fiduciario.	Señala que los aspectos sociales quedan cubiertos, con las restricciones legales y una adecuada política fiscal y social. La prioridad de esta teoría es crear riqueza para los accionistas
Teoría de los grupos implicados	Se inspira en la teoría económica neoclásica. Permite determinar la responsabilidad de la empresa con cada grupo implicado. Considera los derechos y legítimos intereses de los grupos.
Teoría de la ciudadanía empresarial	Se apoya en principios éticos universales. Identifica claramente la relación empresa-sociedad, la empresa es vista como un actor social dentro de la sociedad. Se apoya en la filosofía política.

La Tabla 1 muestra las particularidades que identifican a las actuales teorías de la RSE según.

La información de sostenibilidad o de responsabilidad social se ha abierto camino en las últimas dos décadas como un dispositivo de rendición de cuentas por parte de las empresas con propósito de mejorar su legitimidad ante la sociedad. A partir de la emisión de la Guía para la elaboración de memorias de sostenibilidad, hecha por la Global Reporting Initiative (GRI) en sus tres versiones (1999, 2002 y 2006), este tipo de memorias se ha hecho cada vez más común (Fernández-Chulián y Larrinaga-González, 2007). Al mismo tiempo, los mercados de bienes y de capital han empezado a demandar y a responder a la información de sostenibilidad generada por las empresas. El profesional de las ciencias económico-administrativas como parte integrante de la empresa juega un rol importante en las tareas de RSE y de DS.

Profesional de las Ciencias Económico-Administrativas

Personas o despachos que prestan sus servicios en las empresas como: Abogados, Administradores, Contadores asesores o Consultores; deben estar informados y conocer los temas de DS y RSE para tener una participación de ciudadanos organizados y conscientes de temas como el calentamiento global, la disposición de agua, la deforestación, los patrones de producción y consumo, así como los principios y valores que sustentan a esta sociedad. Reflexionar en nuestros hábitos de consumo y actitudes hacia el cuidado y protección del ambiente en el desarrollo de actividades cotidianas como transportarnos, asearnos, viajar, cocinar o comprar productos, y los impactos de éstas en el ambiente.

En nuestra casa, trabajo, comunidad o escuela podemos iniciar actividades concretas para mejorar el entorno. Para lograrlo necesitamos observar nuestro alrededor e identificar alternativas menos dañinas al ambiente, cambiar conductas y tomar decisiones basadas en el mejoramiento de la calidad de vida. En México la dependencia gubernamental tiene como parte de la Secretaría de Medio Ambiente y Recursos Naturales (SEMARNAT) el Consejo Nacional de Educación Ambiental para la Sustentabilidad cuyas funciones son: Emitir recomendaciones a la Secretaría de la que forma parte sobre: La formulación, aplicación y evaluación de estrategias, políticas, programas, proyectos, estudios y acciones específicas en materia de educación ambiental para la sustentabilidad, las disposiciones jurídicas y procedimientos en

materia de educación ambiental para la sustentabilidad; Vincularse y, en su caso, coordinarse con otros órganos de consulta o espacios de participación ciudadana a fin de propiciar el intercambio de experiencias. Colaborar, con la Secretaría de Educación Pública, para el fortalecimiento de la educación ambiental para la sustentabilidad en el sistema educativo nacional, particularmente en los planes y programas de estudio, los materiales didácticos y la formación docente, y Promover la investigación en materia de educación ambiental para la sustentabilidad. Las actividades de Fomento ambiental propuesta por la SEMARNAT las resumimos en la Tabla 2.

Tabla 2: Propuesta de Actividades Empresariales Para el Fomento Ambiental

Fomento Ambiental					
Fundamento	Conceptos	Actividades			
Leyes Federales y Estatales, Reglamentos del Sector, Diario Oficial, Normas Oficiales Mexicanas, Normas Mexicanas.	Turismo Sustentable	México natural	Especial de turismo sustentable	Mejores prácticas ambientales. Marinas y de campos de Golf	
	Producción y Consumo Sustentable				
	Residuos				
	Energías Renovables	Sistema de Información Energética	Guía de Programas de Fomento de Energías Renovables	Uso eficiente de Energía	Desarrollo de proyectos comunitarios
	Playas Edificación Sustentable Manejo Sustentable de Tierras Calidad del aire				

En la Tabla se observan la fundamentación y los diferentes conceptos considerados para el fomento ambiental; únicamente se presentan las actividades de dos conceptos que son los que se relacionan con las empresas caso de estudio.

Retomando lo anterior es eminentemente necesario que las personas integrantes de las empresas participen en aspectos de DS y RSE por lo que en presente documento nos permitimos trabajar con los profesionales de la ciencias económico-administrativas, para tener información respecto a su conocimiento y familiaridad con los temas referidos, ya que en muchas ocasiones son ellos los que forman parte de la toma de decisiones para el funcionamiento de la empresa.

METODOLOGÍA

El estudio se enfoca a identificar la familiaridad que tienen los profesionales de la ciencias económico-administrativas con la RSE y que desarrollan su actividad laboral en Puebla, México. Considerando como variable de investigación: la Responsabilidad Social Empresarial. El marco muestral se construyó con las unidades y marcos siguientes ver Tabla 3:

Tabla 3: Determinación de la Muestra

Unidad de Análisis	Profesionales de las Ciencias Económico-Administrativas de Puebla, Puebla, México
Tamaño del universo	22000
Tamaño de la muestra	383
Integración de la muestra	Administradores 133, Abogados 30, Contadores 220 total 383
Instrumento	Cuestionario
Integración	
Periodo de aplicación	Enero 2014
Cuestionarios aplicados	383
Cuestionarios respondidos	383

La Tabla muestra la población estudiada y el tamaño de la muestra, los profesionales a quienes se les aplicó el cuestionario fueron contactados por personas conocidas por los investigadores y que son miembros de la comunidad.

Cabe mencionar que la tasa de respuesta obtenida en la aplicación de los cuestionarios fue del 100% de los integrantes de la muestra, contactados en cadena, es decir por personas que tienen conocidos o familiares profesionales de las ciencias económico-administrativas en ejercicio, por lo que los 383 cuestionarios resultantes al obtener la muestra fueron respondidos; como se muestra en la Tabla 2.

Operacionalización de Variables

La Operacionalización de variables se realiza en la Tabla 4, considerando que la RSE comprende un compromiso consciente y congruente de cumplir íntegramente con la finalidad de la empresa tanto en lo interno y lo externo, considerando las expectativas de todos sus participantes en lo económico, social o humano y ambiental, demostrando el respeto por los valores éticos, la gente, las comunidades, el medioambiente; para la construcción del bien común.

Tabla 4: Operacionalización de Variables

Variable	Subvariable	Indicadores	Parámetros	Instrumento
Responsabilidad Social Empresarial	Conocimiento de la RSE	Conocimiento	Si - No	Cuestionario (Pregunta 1)
	Relación de la profesión con la RSE	Información	Si - No	Cuestionario (Pregunta 2)
	Actividades de la empresa a favor de la RSE	Información	Si - No	Cuestionario (Pregunta 3)
	Relación con proveedores	Compra de insumos-pagos	Si - No	Cuestionario (Pregunta 4)
	Relación con trabajadores	Pago de remuneraciones	Si - No	Cuestionario (Pregunta 5)
	Utilidades	Obtención de utilidades	Si - No	Cuestionario (Pregunta 6)
	Contribución al gasto público	Pago de impuestos	Si - No	Cuestionario (Pregunta 7)
	Seguridad Social	Pago de cuotas al Instituto Mexicano del Seguro Social (IMSS)	Si - No	Cuestionario (Pregunta 8)
	Vivienda	Pago de aportaciones al Instituto Nacional de la Vivienda para los Trabajadores (INFONAVIT)	Si - No	Cuestionario (Pregunta 9)

	Otros beneficios Respeto por derechos laborales a los trabajadores	Si - No	Cuestionario (Pregunta 10)
	Dueños de la empresa Pagos de utilidades	Si - No	Cuestionario (Pregunta 11)
	Intereses a cargo Pago de la empresa	Si - No	Cuestionario (Pregunta 12)
	Medio ambiente Prácticas empresariales	Si - No	Cuestionario (Pregunta 13)

Esta tabla muestra la operacionalización de las variables, como se midieron y el instrumento utilizado.

La aplicación de los cuestionarios es el instrumento utilizado para la obtención de información la recolección de datos fue por cuota; asignándole a cada encuestador que aplicará un determinado número de cuestionarios. Así como la observación in situ. Todo el levantamiento de campo se realizó durante el mes de enero 2015. Para determinar el tamaño de la muestra se utilizó la siguiente fórmula:

$$n = \frac{Z^2 p q N}{N e^2 + Z^2 p q} \quad (1)$$

Donde:

n=?

e= 5%

N = la población = 22000 profesionales

Z = nivel de confianza 95%=1.96

p = 0.50

q = 1-.50

Sustituyendo los valores en la fórmula tenemos:

$$n = \frac{(1.96)^2 (0.50)(1-0.50)(22000)}{(22000)(0.05)^2 + (1.96)^2 (0.50)(1-.50)} = 383 \quad (3)$$

La aplicación de cuestionarios fue en una sola etapa en el mes de enero 2015, con duración de cuatro semanas.

RESULTADOS

Previo a la aplicación del cuestionario se utilizó una pregunta filtro para tener la certeza de que la persona era profesional de las ciencias economico-administrativas. De la aplicación del cuestionario, se obtuvieron los resultados que a continuación se presentan por medio de la Tabla 5.

Tabla 5: Resultados del Levantamiento de Campo

Variable	Subvariable	Indicadores	Parametros	Resultados En %	Total
	Conocimiento de la RSE	Conocimiento	Si	84	100%
			No	16	
	Relación de la profesión con la RSE	Información	Si	97	100%

Esta tabla muestra la familiaridad de los profesionales de las ciencias economico administrativas con la RSE y la actividad de la empresa a favor de esta.

Como se aprecia en la Tabla de resultados los profesionales de las ciencias economico administrativas, tienen conocimiento de la RSE. También se observa, que los profesionales referidos consideran que su profesión esta relacionada con la RSE. Notamos además que las empresas donde se desempeñan los encuestados si realizan prácticas de RSE. Es notoria la relacion con proveedores y trabajadores a quienes se les considera como grupos de atención en materia de RSE. De acuerdo con una de las posturas de la RSE la empresa obtiene utilidades que de hecho es uno de los objetivos de toda persona que emprende con una empresa. Responsablemente se observa la contribucion al gasto público con el pago de impuestos, misma responsabilidad que se nota en materia de seguridad social en el aspecto salud , así como en la vivienda. En las entidades donde laboran los profesionales es evidente el cumplimiento con las obligaciones laborales a favor de los trabajadores. Así mismo los dueños de las empresas participan de las utilidades de la misma, viendo una retribucion a su inversion. Las empresas también consideran el retribuir a otros grupos que les apoyan como pueden ser acreedores con el pago de intereses. Finalmente es importante el resultado que se presenta en la parte final de la Tabla, donde con poca presencia en el resultado pero ya se aprecia la disposicion de las empresas a favor del medio ambiente que es responsabilidad de todos.

CONCLUSIONES

Las prácticas empresariales tradicionales, tienen una exigencia al cambio, las empresas deben incluir en su actuar cotidiano sus acciones a favor de la RSE y con ello contribuir al DS, las acciones de RSE, no son algo aislado, nacen de diferentes entes privados y también de gobierno. México al igual que otros países realiza esfuerzos por concientizar y hacer participar a los ciudadanos y a las empresas en actividades a favor

del medio ambiente. Y los profesionales de las ciencias económico – administrativas no pueden permanecer aislados y no participar en esa nueva práctica empresarial. La SEMARNAT y otras entidades de gobierno tienen bien clara su tarea de cuidar y preservar el medioambiente y apoyar a las empresas y a sus integrantes a realizar un cambio a favor de la comunidad en todos aspectos. La validación del trabajo se efectuó mediante los resultados obtenidos en la investigación de campo al tener un acercamiento con los profesionales referidos y percatarnos que están familiarizados con la RSE, pero sobre todo quedar en el entendido que las profesiones involucradas en el trabajo, las cuales en apariencia no se relación con la RSE, juegan un papel importante en las decisiones de las empresas debido a que ellos participan de alguna forma y la RSE es una tarea de todos los integrantes de la empresa para con la comunidad e inicia por la responsabilidad personal. También es importante resaltar que independientemente del enfoque de la RSE los integrantes de la empresa y la empresa misma siempre tendrán un compromiso con la comunidad en la que se encuentren. Podemos decir que no es necesario ser una empresa considerad como peligrosa o contaminante para trabajar con procesos limpios y/o energías renovables. La responsabilidad social de la emprsas va más allá de considerar únicamente aspectos de contaminación, entraña un compromiso moral con la sociedad. Finalmente concluimos que no importa el tamaño, el giro o la localización geográfica únicamente se necesita disposición para contribuir RSE.

RESUMEN

El trabajo desarrolla un análisis de las particularidades existentes en la transferencia de conocimientos tácitos en el trabajo desarrollado por las personas (Trabajadores directos) que prestan sus servicios en la industria maquiladora en las MIPYME localizadas en Tehuacán y los que trabajan en los talleres de esferas en Chignahuapan, ambos municipios del estado de Puebla, México y las redes de conocimiento interorganizacionales-sectoriales como facilitadoras de la referida transmisión. Para apreciar de forma precisa coincidencias y desigualdades en las dos zonas de estudio con vivencias similares en lo que respecta al trabajo manual. Con la metodología de un muestreo a conveniencia de los investigadores y por cuota, se aplicaron cuestionarios a 383 trabajadores de la maquila y 100 trabajadores de los talleres de esfera para obtener información de fuentes primarias. Además de la observación in situ. Los resultados del trabajo de campo proporcionan información, respecto de la forma de transmisión de conocimiento entre los dos grupos lo que permite apreciar que mientras en el primer grupo son los compañeros quienes juegan el rol principal en la referida transmisión en el segundo grupo es la familia y precisar qué tipo de conocimiento se transmite entre ellos además de: datos generales, condiciones laborales como: salario, prestaciones y trato apropiado, así como beneficios económicos. Y como adicional a lo que se maneja por los expertos en el tema se considera en la transmisión del conocimiento la voluntad o interés por parte del receptor.

PALABRAS CLAVE: Trasmisión de Conocimientos, Redes de Conocimiento

ABSTRACT

The paper develops an analysis of the specific situation in the transfer of tacit knowledge in the work done by people (Direct workers) who serve in the maquiladora industry in MSMEs located in Tehuacan and those working in areas workshops Chignahuapan, both municipalities in Puebla, Mexico and interorganizational networks-sectoral knowledge as facilitators of that transmission. To appreciate precisely matches and inequalities in the two areas experiences with similar study with respect to manual labor. With the methodology of a convenience sample of researchers and fee, questionnaires were applied to 383 workers maquila and 100 workers sphere workshops for information from primary sources. In addition to in situ. Los result of fieldwork observation provide information regarding the mode of transmission of knowledge between the two groups allowing appreciate that while in the first group are the companions who play the main role in the aforementioned transmission in the second group is the family and specify what kind of knowledge is transmitted between them besides: general data, working conditions and salary, benefits and appropriate treatment and economic benefits. And in addition to what is handled by experts in the field is considered in the transmission of knowledge will or interest by the receiver.

KEYWORDS: Transmission of Knowledge, Knowledge Networks

INTRODUCCIÓN

El conocimiento es muy difícil de definir al igual que la transmisión del mismo. Existen diferentes posturas referentes al tema de conocimiento y a su transmisión, en este trabajo nos enfocamos al conocimiento tácito que predomina en el trabajo manual y referimos quien juega el papel de transmisor principal en los grupos estudiados, el de trabajadores de la maquila y el de trabajadores de los talleres de esfera. Se consultó información de varios autores para integrar el marco conceptual del tema para finalmente inclinarnos por las aportaciones de Nonaka y Takeuchi, (1994) para apoyar los resultados del trabajo de campo y aportando un elemento a la transmisión; la voluntad o interés del receptor para la obtención de resultados exitosos producidos por la transmisión. Y así poder identificar las diferencias en la transmisión de conocimientos existentes en los dos grupos estudiados. Y la intervención de las redes de conocimiento.

La investigación se estructura de la siguiente forma: Revisión de la literatura, donde se conceptualiza el término conocimiento y se integran algunos puntos de vista respecto a la transmisión de conocimientos, se aborda a las redes sociales o de conocimiento como apoyo en la transmisión del mismo. Posteriormente se presenta la metodología utilizada en la revisión de la literatura y para la investigación de campo, dando paso a presentar los resultados de la investigación de campo, las conclusiones y las referencias bibliográficas.

REVISIÓN LITERARIA

Transmisión de Conocimientos

Es muy común escuchar hablar de conocimiento, esa situación común se complica al tratar de definirlo. Para (Nooteboom, 2001) el conocimiento es un bien intangible mucho más complejo que la simple información o la tecnología, el conocimiento requiere de portadores sociales y se expresa no solamente en medios explícitos, principalmente se expresa en agentes humanos, estructuras organizacionales, rutinas y culturas locales, por lo que se puede decir que una parte importante del conocimiento se transmite en forma tácita. El conocimiento no se refleja por medio de un manual o instructivo de forma inmediata, se va adquiriendo por medio de la observación de rutinas de trabajo y posteriormente por la imitación hasta llegar al dominio. El conocimiento tácito está estrechamente ligado al capital humano.

Algunos autores lo describen utilizando el concepto de *know how* (saber hacer), que implica un conjunto de técnicas y conocimiento que están incluidos en la naturaleza humana y que por lo tanto están dispersos y divididos (Nelson, 2000). Otros autores coinciden en que el *know how* reside en grupos, redes o regiones y localidades. En los años cincuenta (Polanyi 1958; citado por Nelson, 2000) sostenía que una parte del conocimiento humano era articulado, es decir que podía ser descrito y comunicado en forma de lenguaje, mientras que otros aspectos de este conocimiento son tácitos, no fácilmente explicables en palabras o en símbolos. (Macdonald, 1992; Imai, 1991), Señalan que el conocimiento implica intercambio de información. No existe una definición unificada de transmisión de conocimiento, algunos autores asocian la transmisión con la con la aplicación del conocimiento adquirido previamente a situaciones diferentes o nuevas (McKeough, 1995) o bien a la guía con la que se apoya a otra persona para que pueda resolver su problema de la mejor manera (McKeough, 1999), aprendizaje individual que depende de las características de cada individuo y de su interacción con su ambiente (Strach y Everett, 2006).

Hace casi 20 años, Nonaka identificó el conocimiento tácito y modeló junto a su colega Takeuchi su transformación en conocimiento explícito como parte del proceso SECI (Socialización, Externalización, Combinación, Internalización; Nonaka y Takeuchi, 1994), el que define como clave en la búsqueda de un desempeño superior. De acuerdo a Nonaka y Takeuchi, se caracteriza el conocimiento tácito como: Altamente personal, difícil de formalizar y comunicar, parcialmente formado por habilidades técnicas (lo

que se ha dado en llamar *know-how*) y por dimensiones cognitivas: modelos mentales, creencias y perspectivas tan arraigadas que a la persona no le resulta fácil expresarlas.

<http://www.innmentor.com/2013/02/25/el-conocimiento-tacito-introduccion/> Se distinguen dos tipos conocimientos en la transmisión y utilización: el codificado o formal y el tácito. El codificado no necesita ser exclusivamente teórico, pero requiere ser suficientemente sistemático para ser escrito o guardado (Gibbons *et al*, 1994; citado por Vera, Martínez, Vera y Anzaldo, 2015). Se expresa en publicaciones, patentes y manuales, entre otros. Se puede decir que el conocimiento codificado, es el resultado del conocimiento tácito que se cataloga y agrupa bajo esas formas. El conocimiento para su transmisión se hace a través de redes de comunicación (Quandt, 2000).y se marcan diferencias entre el conocimiento tácito y el explícito.

Conocimiento Tácito: es un conocimiento muy personal y difícil de plantear a través del lenguaje formal y, por lo tanto, difícil de transmitir y compartir con otros. Tiene sus raíces en lo más profundo de la experiencia individual, así como en los ideales, valores y emociones de cada persona.

Conocimiento Explícito: aquel que puede expresarse a través del lenguaje formal; con palabras y números, y puede transmitirse y compartirse fácilmente, en forma de datos, fórmulas científicas, procedimientos codificados o principios universales. Se expresa normalmente en algún soporte físico (libros, CD ROMS, imágenes). Nonaka y Takeuchi (1994) señalan que en el proceso de comunicación del conocimiento se presentan modos de conversión entre el conocimiento tácito y el explícito, donde: Existen cuatro formas de conversión de conocimiento cuya interacción constituye el motor del proceso de creación de conocimiento (Nonaka y Takeuchi, 1994) Tabla 1.

Tabla 1: Formas de Conversión del Conocimiento

La Socialización	La Exteriorización	La Combinación	La Interiorización
Proceso de adquirir conocimiento tácito a través de compartir experiencias por medio de exposiciones orales, documentos, manuales, entre otros. Este conocimiento se adquiere principalmente a través de la imitación y la práctica. La socialización se inicia con la creación de un campo de interacción, el cual permite que los miembros de un equipo compartan sus experiencias y modelos mentales. Produce lo que los autores llaman conocimiento armonizado.	Proceso de convertir conocimiento tácito en conceptos explícitos, haciéndolo comprensible para otros miembros de la empresa. Supone la interacción del individuo y del grupo, requiere de técnicas que ayuden a expresar este conocimiento tácito a través de lenguaje figurativo, en forma de analogías, metáforas y lenguaje visual.	Es de sistematizar conceptos en un sistema de conocimiento. El conocimiento explícito se sintetiza y formaliza de manera que cualquier miembro de la empresa pueda acceder a él. Para que esta etapa se complete es preciso capturar e integrar nuevo conocimiento explícito, difundir el conocimiento explícito con presentaciones y conferencias por ejemplo. Y procesarlo para hacerlo más accesible.	Proceso de incorporación de conocimiento explícito en conocimiento tácito a través de aprender haciendo, que analiza las experiencias adquiridas en la puesta en práctica de los nuevos conocimientos y se incorpora en las bases de conocimiento tácito de los miembros de la organización en forma de modelos mentales compartidos o prácticas de trabajo.

La tabla muestra las diferencias entre las cuatro formas de conversión del conocimiento propuestas por (Nonaka y Takeuchi, 1994)

El contenido del conocimiento creado por cada forma de conversión es, naturalmente distinto (Nonaka y Takeuchi, 1994) El conocimiento tácito no está disponible en forma de texto se alberga en las cabezas de quienes trabajan en procesos particulares de transformación o el que está incluido o personificado en un contexto organizativo particular (Gibbons *et al*, 1994; citado por Casas, 2003); está contenido en habilidades y que por tanto puede ser copiado, está contenido en las personas y es difícil de ser transferido. Implica un proceso de aprendizaje continuo por los individuos (Quandt, 2000). Senker y Faulkner (1996) señalan que el conocimiento tácito se pronuncia en el conocimiento personal que ha sido adquirido a través de la educación formal o de la experiencia. Por sus características el conocimiento tácito no puede expresarse en forma impresa y se adquiere por la experiencia siendo incorporado en las personas por medio del contacto entre las mismas, la observación y la imitación de tareas o rutinas. El conocimiento tácito, es aquel que aun poseyéndolo difícilmente se puede explicitar. Es subjetivo y está basado en la experiencia

personal y fuertemente ligado a la acción de los individuos en un contexto determinado. Sabemos más de lo que podemos contar, y todo lo que sabemos es difícil expresarlo en palabras o datos (Arbonies y Calzada, 2004). Diversos autores como Bartlett y Ghoshal (1989), Teece (1998), Argote (1999), Gupta y Govindaranjan (2000) y Minbaeva (2005); concuerdan en que la transmisión del conocimiento es la aplicación de conocimiento previamente adquirido a nuevas situaciones de aprendizaje. La transmisión de conocimiento involucra el movimiento del conocimiento desde su punto de generación a su punto de aplicación. Figura 1.

Figura 1: Transmisión del Conocimiento

Como se aprecia en la figura el conocimiento se mueve de su origen a su aplicación.

Perez, (2008) señala que la transferencia puede verse aquejada por problemas sintácticos, el conocimiento que recibe la persona no es igual al de la persona que lo posee y transmite, semánticos cuando la persona receptora del conocimiento no entiende adecuadamente y pragmáticos cuando el conocimiento transmitido no funciona con el resultado esperado. La efectividad de la transmisión se relaciona a la fuente con la unidad receptora (Galbraith, 1990). A las consideraciones anteriores adicionamos la voluntad o interés de las personas por aceptar la transmisión del conocimiento tácito. La transferencia de conocimientos se hace más dinámica y factible con las redes sociales interorganizaciones-sectoriales, factor indispensable de la actividad empresarial, y que es a través de éstas como se puede tener acceso a diferentes recursos, entre otros a diferentes conocimientos. Considerando la transmisión del conocimiento desde dos escenarios: el primero de ellos en el trabajo desarrollado en las fábricas maquiladoras; el segundo el trabajo desarrollado en los talleres de esfera navideña. El conocimiento es un factor clave en la actividad empresarial y la dificultad está en transmitirlo en lo que respecta a quienes se transmite la información y habilidades para lograr resultados positivos.

Redes de Conocimiento

Actualmente las redes de conocimiento se constituyen como las máximas expresiones del individuo en su rol de productor de conocimientos y por la necesidad de intercambiar y socializar lo que aprende y lo que crea, a partir de la interacción social como parte de un contexto muy particular (Prada, 2005). Las redes de conocimiento tienen diferentes definiciones. Casas (2001) define que las redes implican tanto la formación de redes profesionales y de entrenamiento, como de redes de difusión y transmisión de conocimientos o de innovaciones, que estarían dando lugar a la formación de espacios regionales de conocimiento. Para Seufert (2003; citado por Prada, 2005), las redes de conocimiento son redes que fundamentalmente se establecen entre los individuos, los grupos y las organizaciones donde no solamente son importantes las relaciones bilaterales, sino la integridad de las actividades desempeñadas por la propia red de conocimientos. Castellanos (2004; citado por Prada, 2005) define a una red de conocimiento como una comunidad de

personas que, de modo formal o informal, ocasionalmente, a tiempo parcial o de forma dedicada, trabajan con un interés común y basan sus acciones en la construcción, el desarrollo y la socialización de conocimientos. Royero (2005), en un contexto social y dinámico, las redes de conocimiento son interacciones humanas en la producción, almacenamiento, distribución, transferencia, acceso y análisis de los conocimientos producidos por la investigación o por el propio interés individual o colectivo por compartir información y conocimiento a través de cualquier medio. Prada (2005) define a la red como un conjunto de elementos tecnológicos, normativos, culturales y sociales dirigidos a facilitar la interacción de individuos interesados en ciertas áreas temáticas con el fin de socializar e incrementar el conocimiento tácito de cada partícipe y por ende el de las organizaciones. Con base en lo anterior proponemos como definición de red de conocimiento la integración de grupos con un interés común, para facilitar la interacción y transmitir y compartir conocimientos. Retomando las definiciones de redes se puede identificar diferentes acciones grupales tendientes a un propósito, primero se forman e interrelaciona para compartir, posteriormente socializar y transmitir de forma más fácil información y conocimientos Figura 2.

Figura 2:

En la figura se aprecia que las redes se forman con la intención de facilitar el acceso a la información y conocimientos

Con la anterior figura podemos apreciar la relación entre las redes y la transmisión de conocimiento así como la importancia de ellas para que se facilite la transmisión.

METODOLOGÍA

El estudio se enfoca a identificar las diferencias y particularidades existentes en la transferencia de conocimientos en los trabajadores de la maquila y los trabajadores de los talleres de esfera navideña en las MIPYME localizadas en Tehuacán y Chignahuapan Puebla, México. Considerando como variable de investigación: la transmisión de conocimientos y la intervención de las redes de conocimiento en la transmisión. La determinación de la muestra se construyó con las unidades y marcos siguientes ver Tabla 2:

Tabla 3: Determinación de la Muestra

Unidad de Análisis	Trabajadores de la Industria Maquiladora En Tehuacán Puebla, México	Trabajadores de los Talleres de Esfera En Chignahuapan Puebla, México
Tamaño del universo	6000	15000
Tamaño de la muestra	383	100
Instrumento	Cuestionario	Cuestionario
Periodo de aplicación	Enero 2014	Marzo 2014
Cuestionarios aplicados	383	100
Cuestionarios respondidos	383	100

La Tabla muestra la población estudiada y el tamaño de la muestra, de los trabajadores de maquila y de los talleres de esfera.

Cabe mencionar que la tasa de respuesta obtenida en la aplicación de los cuestionarios fue del 100% de los integrantes de la muestra, contactados en cadena, es decir por personas que tienen conocidos o familiares profesionales, lo anterior acompañado de un recolección de información por cuota.

Operacionalización de Variables

La Operacionalización de variables se realiza en la Tabla 4 y 5 considerando por separado a los trabajadores de la maquila, respecto de los trabajadores de talleres de esfera. Debido a que los indicadores que utilizamos son característicos de cada actividad, sin embargo los parámetros son iguales, y el instrumento utilizado fue el mismo.

Tabla 4: Operacionalización de Variables Trabajadores de la Maquila

Variable	Subvariable	Indicadores	Parámetros	Instrumento
Transferencia de conocimientos	Tipo de conocimiento	Ensamblado Costura Deshebrado Planchado Empacado	Se adquirió No se adquirió	Cuestionario (Pregunta 10)
	Forma en que se adquirió el conocimiento	Observación Capacitación en casa Capacitación en el taller Iniciativa personal	Se adquirió No se adquirió	Cuestionario (Pregunta 6)
	Tiempo en que se adquirió el conocimiento	Tiempo	Menos de 1 año 1-2 años 2-5 años Más de 5 años	Cuestionario (Pregunta 9)
	Personas que apoyaron para adquirir conocimientos	Familiares Amigos Compañeros de trabajo Instructor	Si apoyaron No apoyaron	Cuestionario (Pregunta 8)
	Facilidad y agilidad en el conocimiento adquirido	Relación con el facilitador del conocimiento	Si facilitó y agilizó No facilitó y agilizó	Cuestionario (Pregunta 13)

La tabla muestra la operacionalización de la variable transmisión de conocimientos para los trabajadores de la maquila

Tabla 5: Operacionalización de Variables Trabajadores de Talleres de Esfera

Variable	Subvariable	Indicadores	Parámetros	Instrumento
Transferencia de conocimientos	Tipo de conocimiento	Globo	Se adquirió	Cuestionario (Pregunta 10)
		Metalizado	No se adquirió	
		Decorado		
		Empacado		
	Forma en que se adquirió el conocimiento	Observación	Se adquirió	Cuestionario (Pregunta 6)
		Capacitación en casa	No se adquirió	
		Capacitación en el taller		
	Tiempo en que se adquirió el conocimiento	Iniciativa personal		Cuestionario (Pregunta 9)
		Tiempo	Menos de 1 año	
			1-2 años	
			2-5 años	
	Personas que apoyaron para adquirir conocimientos	Familiares	Más de 5 años	Cuestionario (Pregunta 8)
		Amigos	Si apoyaron	
		Compañeros de trabajo	No apoyaron	
	Facilidad y agilidad en el conocimiento adquirido	Instructor		Cuestionario (Pregunta 13)
		Relación con el facilitador del conocimiento	Si facilitó y agilizó No facilitó y agilizó	

La tabla muestra la operacionalización de la variable transmisión de conocimientos para los trabajadores de los talleres de esfera.

La aplicación de los cuestionarios es el instrumento utilizado para la obtención de información la recolección de datos fue por cuota; asignándole a cada encuestador que aplicará un determinado número de cuestionarios. Así como la observación in situ. Todo el levantamiento de campo se realizó durante el mes de enero 2014. Para determinar el tamaño de la muestra se utilizó la siguiente fórmula para los trabajadores de la maquila:

$$n = \frac{Z^2 p q N}{N e^2 + Z^2 p q} \quad (1)$$

Donde:

n=?

e= 5%

N = la población = 6000 trabajadores

Z = nivel de confianza 95%=1.96

p = 0.50

q = 1-.50

Sustituyendo los valores en la fórmula tenemos:

$$n = \frac{(1.96)^2(0.50)(1-0.50)(6000)}{(6000)(0.05)^2 + (1.96)^2(0.50)(1-.50)} = 383 \quad (3)$$

La aplicación de cuestionarios fue en una sola etapa en el mes de enero 2014, con duración de cuatro semanas para los trabajadores de la maquila. La determinación de la muestra para los trabajadores de los talleres de esfera fue a conveniencia debido a que en el mes de marzo hay poca actividad en los talleres. La aplicación de cuestionarios fue en una sola etapa en el mes de marzo 2014, con duración de cuatro semanas para los trabajadores de los talleres de esfera.

RESULTADOS

Los resultados obtenidos de los trabajadores de la maquila y de los talleres de esfera navideña se presentan en forma comparativa tomando como base para la comparación a los trabajadores de la maquila. El perfil

del trabajador se puede definir con base en los resultados que muestra la Tabla 4 como: sexo, edad, escolaridad y tamaño de familia, relacionados con las preguntas 1, 2,3 y 4.

Tabla 4: Perfil del Trabajador

Concepto	Indicador	(%) Trabajadores de Maquila Tomados Como Base Para la Comparación	(%) Trabajadores de Talleres	Diferencias En %
Género (1)	Femenino	52	62	10
	Masculino	48	38	- 10
Edad (2)	Menos de 18	1	8	7
	18-29	63	34	-29
	30-35	19	30	11
	36-40	15	15	-
	Más de 40	2	13	11
Escolaridad (3)	Primaria	31	52	21
	Secundaria	51	11	-40
	Técnico	2	15	13
	Otros	3	6	3
	No estudio	13	16	3
Tamaño de familia (4)	1 a 2	21	16	-5
	3 a 4	41	46	5
	5 a 6	26	19	-7
	7 a 8	12	19	7

Esta tabla muestra el perfil del trabajador comparando a los trabajadores de los talleres de esfera navideña con los de la maquila y sus diferencias.

Como se observa en el perfil del trabajador predomina en los talleres el trabajo femenino, respecto a la maquila; en edad la presencia más fuerte en ambos casos es de trabajadores entre 18 y 29 años, la escolaridad en los trabajadores de la maquila es secundaria y en los talleres de esfera es de primaria y respecto al tamaño de la familia es mayor el número de integrantes de la misma en los talleres que en la maquila.

Tabla 5: Antigüedad de los Trabajadores En la Actividad

Antigüedad en el	Menos de 1 Año	1-2 Años	2-5 Años	6 A 10 Años	Más de 10 Años	Total
Oficio (5)						
Maquila	27%	36%	19%	6%	12%	100%
Talleres de esfera	11%	18%	35%	23%	13%	100%
Diferencias	16%	18%	16%	17%	1%	

La Tabla refleja respecto a la pregunta 5 los mas altos porcentajes en el rango de 1 a 2 años para los trabajadores de la maquila y 2 a 5 años para los trabajadores de los talleres.

Se nota mayor permanencia en el trabajo por los trabajadores de los talleres que por los trabajadores de la maquila. Los resultados de las preguntas 6, 7, 8, 9, 12, 13 y 14 se presentan en la Tabla 6. Los resultados predominantes que se aprecian en la Tabla 6, nos permite ver que al trabajador de la maquilas le es transferido el conocimiento por los compañeros de trabajo y a los trabajadores de los talleres por familiares, el lugar de trabajo en ambos es la maquila o el taller, el incremento de la transmisión de conocimientos se manifiesta igual que en el inicio trabajadores de la maquila por compañeros y trabajadores de talleres por familiares. Respecto al tiempo de aprendizaje es más rápido en la maquila que en los talleres, y la diversidad de conocimientos transmitidos cuenta más con la participación de los compañeros en la maquila y de familiares en los talleres.

Tabla 6: Resultados de la Transmisión de Conocimientos

Concepto	Parametro	Trabajadores de la Maquila Comparación	Trabajadores de los Talleres %	de Diferencias
Inicio del Aprendizaje del ofico (6)	Familiar en casa	35	57	22
	En el trabajo	63	34	-29
	Algun amigo	1	8	7
	Otro	1	1	-
Lugar de trabajo (7)	Maquila-taller	84	76	-8
	Domicilio	16	24	8
Incremento de la Transmisión del conocimiento (8)	Familiar en casa	30	58	28
	En el trabajo	65	34	-31
	Algun amigo	5	8	3
	Otro	0	0	-
Tiempo de aprendizaje (9)	Menos de 1 mes	40	24	-16
	1 a 2 meses	32	21	11
	2 a 5 meses	20	29	9
	6 a 12 meses	8	21	13
	Mas de 1 año	0	5	5
Diversidad de conocimientos Transmitidos (12)	Familiar	31	61	30
	Compañeros de trabajo	65	35	-30
	Forma distinta a las anteriores	4	4	-
Relación previa con la persona que le transmitió el conocimiento (13)	Si	33	69	36
	No	67	31	-36

La Tabla presenta resultados que ratifican de quienes se reciben los conocimientos como se señala en las preguntas 6,8 y 12, puntualizado que es de los compañeros para los trabajadores de la maquila y de familiares para los trabajadores de los talleres.

Finalmente se nota existencia de una relación previa con el facilitador por los trabajadores de los talleres y no por los trabajadores de la maquila. Relacionando los resultados con las variables encontramos lo que se presenta en la Tabla 8.

Tabla 8: Relación de Resultados Con las Variables de Investigación

Variable	Subvariable	Trabajadores de la Maquila Resultados	Trabajadores de los Talleres de Esfera Resultado
Transferencia de conocimientos en el Trabajo en la maquila y en los talleres de esfera navideña	Tipo de conocimiento	Costura es el conocimiento más adquirido seguido del ensamblado.	Decorado es el conocimiento más adquirido seguido del globo.
	Forma en que se adquirió el conocimiento (Quien lo transfirió)	La forma en que se inicia con la transmisión del conocimiento actividades de la maquila en las mismas maquiladoras con los compañeros de trabajo	La forma en que se inicia con la transmisión del conocimiento en la elaboración de esfera en el domicilio con los familiares.
	Tiempo en que se adquirió el conocimiento	Concluimos con base en las respuestas que el tiempo de aprendizaje va desde 1 mes hasta 1 año	Concluimos con base en las respuestas que el tiempo de aprendizaje va desde 1 mes hasta 1 año
	Personas que apoyaron para adquirir conocimientos	Las personas que participan de forma intensa en la transmisión de conocimientos son los compañeros de trabajo y en segundo lugar los familiares.	Las personas que participan de forma intensa en la transmisión de conocimientos son los familiares y en segundo lugar los compañeros de trabajo.
	Facilidad y agilidad en el conocimiento adquirido	Las respuestas indican la inexistencia de una relación previa con la persona que transmitió el conocimiento, pero aun así se llevó a cabo la transmisión.	La actividad en a que se tiene mayor dificultad de aprendizaje es el globo, seguida del decorado.

Esta tabla muestra los resultados obtenidos en la aplicación de los cuestionarios, relacionado con las variables y podemos mencionar que es notable la transmisión de conocimientos tácitos respecto a las diferentes actividades involucradas en el trabajo en la maquila y en los talleres de esfera navideña, entre compañeros de trabajo y familiares respectivamente.

CONCLUSIONES

Las actividades manuales, dentro de la diversidad de conocimientos, que exigen se transmitan está el conocimiento tácito. El conocimiento tácito, tal y como lo señalan diversos autores está íntimamente relacionado con el individuo. No es fácil de transmitir debido a la ausencia de documentos, manuales, CD u otros apoyos. Es necesario en la Transmisión una intensa participación del receptor y el transmisor, la observación y la práctica. Pero ineludiblemente lo más importante para una transmisión exitosa de conocimientos es la voluntad e interés del receptor. El trabajo, en primer lugar nos accedió a confirma la transmisión de conocimientos en las dos muestras elegidas. Y que el conocimiento del trabajo en la maquila, se inicia y madura con los compañeros de trabajo, trabajo de elaboración de esfera navideña se aprende en el seno familiar, y se perfecciona en la misma familia y en los talleres. Con lo que se logra el objetivo del trabajo: identificar la participación de las redes de conocimiento como facilitadoras en la transmisión de conocimiento en la actividad artesanal de elaboración de esfera navideña. Situación que adicionalmente es apoyada como ya se mencionó por la existencia de la red social. Comentada Que es uno de los enfoques que autores como los referidos en la revisión de la literatura abanderan como herramienta que facilita y agiliza la comentada transmisión de conocimientos.

Apoyando lo anterior con una propuesta de dimensiones de la red, en la que intervienen actores que no se han manejado de forma frecuente, en estudios de redes. Lo anterior nos permite sumar un caso diferentes a los ya realizados en materia de transmisión de conocimientos y hacer notar la importancia de las redes sociales como facilitadoras del proceso, que si bien existen otros enfoque respecto a la transmisión de conocimientos, nosotros nos enfocamos en la red social o de conocimientos, ya que es algo natural y espontaneo que surge como resultado de las relaciones de convivencia entre los seres humanos. En ambos casos el perfil del trabajador concuerda con la población que predomina en las pequeñas provincias de los distintos estados de México. Para cerrar las conclusiones marcamos que las redes de conocimiento facilitan el intercambio y la transmisión de conocimientos tácitos, no codificados por medio de experiencias y guía en el desarrollo de actividades, atendiendo a la confianza entre los actores que intervienen. Como futuras investigaciones se abren las oportunidades para explorar aspectos como hasta donde las actividades estudiadas realizan prácticas sustentables en su ejecución.

ESTRATEGIAS ADMINISTRATIVAS PARA QUE LAS PYMES AGROINDUSTRIALES DE LIMON EN EL ESTADO DE COLIMA, MEXICO EXPORTEN COMPETITIVAMENTE

Manuel Rubio Maldonado, Universidad de Colima

Ariel Gutiérrez Ortiz, Universidad de Colima

Aurelio Déniz Guizar, Universidad de Colima

Noé López Alvarado, Universidad de Colima

RESUMEN

En la actualidad, el mercado doméstico e internacional exige altos estándares de calidad, es por esto, que las PyMES que realizan actividades de exportación se ven en la necesidad de cumplir con ellos, para cubrir las necesidades de sus clientes. Así, el presente estudio ha utilizado un enfoque cualitativo para identificar las estrategias administrativas, operativas y externas que han contribuido o limitado la exportación de las PyMES agroindustriales exportadoras de limón, del estado de Colima. Se tomaron 5 casos de estudio de PyMES, a partir de la experiencia de los propios empresarios. El estudio toma como referencia el marco teórico de Ansoff (1965), utilizado y adaptado por Okpara y Wynn (2007). Okpara y Wynn (2007), proponen una clasificación de los tipos de decisiones necesarias para iniciar y mantener un negocio exitoso, y analizan los problemas comunes que enfrentan los empresarios en las pequeñas y medianas empresas, clasificándolos en: operativos, administrativos y externos, que involucran el acceso a la tecnología, la baja demanda y la infraestructura. El Estado de Colima cuenta con una posición estratégica de gran potencial en recursos naturales. Para realizar la investigación se consideran los municipios de Tecomán, Manzanillo y Colima, donde se localizaron las empresas que participan en el mercado internacional.

PALABRAS CLAVE: Empresas Pymes, Empresa Agroindustriales, Mercado Doméstico E Internacional

ADMINISTRATIVE STRATEGIES FOR THE LEMON AGROINDUSTRIALES SMEs IN THE STATE OF COLIMA, MEXICO exported COMPETITIVELY

ABSTRACT

At present, domestic and international market demands high quality standards, which is why that SMEs engaged in export activities are in the need to comply with them, to meet the needs of its customers. Thus, the present study used a qualitative approach to identify administrative, operational and external strategies that have contributed or restricted the export of agro-exporting SMEs lemon, state of Colima. Five case studies of SMEs were taken from the experience of the entrepreneurs themselves. The study draws on the theoretical framework of Ansoff (1965) used and adapted by Okpara and Wynn (2007). Okpara and Wynn (2007) propose a classification of the types of decisions required to initiate and maintain a successful business, and analyze the common problems faced by entrepreneurs in small and medium enterprises, and classified as: operational, administrative and external, involving access to technology, low demand and infrastructure. The State of Colima has a strategic position of great potential in natural resources. To conduct the research are considered the municipalities of Tecomán, Manzanillo and Colima, where companies involved in the international market were located.

KEYWORDS: SME Companies, Agro-Business, Domestic and International Market

INTRODUCCION

Hoy en día, la tarea emprendida por las Pequeñas y Mediana Empresas (PyMES) es de indiscutible relevancia, no solo por la generación y su contribución a la creación de empleo, sino porque ello deriva en la consolidación y estabilidad de la riqueza doméstica de las regiones de un país. Aunado a ello, considerando su participación en el desarrollo socioeconómico de las zonas en donde se ubican. Desde esta perspectiva Okpara y Wynn (2007) afirman que los pequeños y medianos negocios son considerados como la fuerza motriz del crecimiento económico, la creación de empleo y la disminución de la pobreza en los países emergentes. En términos económicos, cuando un empresario de la pequeña y mediana empresa crece, genera más trabajo, porque demanda mayor mano de obra. Además, sus ingresos se incrementan, y logra con esto, mayor rentabilidad, lo cual contribuye, en mayor medida, a la formación del producto interno bruto (Okpara & Wynn, 2007). Con todo ello, lo que aportan a la economía de un país, las PyMES enfrentan una serie de dificultades que limitan su estabilidad a largo plazo y progreso. Previas investigaciones indican que la tasa de mortalidad de los pequeños y medianos negocios es mayor en los países emergentes que en los países desarrollados (Arinaitwe, 2006).

En ese sentido, las pequeñas empresas deben desarrollar estrategias específicas de corto y largo plazo para protegerse de la mortalidad, dado que iniciar una pequeña o mediana empresa involucra un nivel de riesgo y, sus probabilidades de permanecer más de cinco años son bajas (Sausser, 2005). En México, las micro, pequeñas y medianas empresas (PyMES), constituyen la columna vertebral de la economía nacional por los acuerdos comerciales que ha tenido México en los últimos años y asimismo, por su alto impacto en la generación de empleos y en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística, Geografía e Informática (INEGI), en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales, 99.8% son PyMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país. Por la importancia de las PyMES, es sustancial instrumentar acciones para mejorar el entorno económico y apoyar directamente a las empresas, con el propósito de crear las condiciones que contribuyan a su establecimiento, crecimiento y consolidación, (PROMEXICO, 2015). Los beneficios sociales y económicos de las PyMES, se miden por su dinamismo y la posibilidad de crecimiento, ya que absorben una porción importante de la población económicamente activa, y su modo de operar puede adaptarse a las nuevas tecnologías. Asimismo este sector no reinvierte sus utilidades para la mejora de equipo o técnicas de producción y por su naturaleza carecen de personal especializado y capacitado, por lo que no ofrecen sueldos competitivos.

En algunos casos los controles de calidad son mínimos o inexistentes, además de que carecen de financiamiento adecuado y oportuno. En este aspecto la Secretaría de Economía a través de la Subsecretaría de la pequeña y mediana empresa ofrecen apoyos a la exportación a través del programa de oferta exportable Pyme, cuyo objetivo es impulsar y facilitar la incorporación y comercialización de éstas a la actividad exportadora para el fomento de la internacionalización de las empresas mexicanas. La consultora IQOM indicó que 33 mil pequeñas y medianas empresas contribuyen con el 5% del total de las exportaciones, con ventas anuales al extranjero por menos de 10 millones de dólares en cada caso, un porcentaje bajo si se considera que el 99.8% de las unidades económicas pertenecen al sector de las PyMES. El mayor flujo de exportación de estas empresas se dirige hacia los Estados Unidos, por tamaño las macro empresas envían a este destino el 81% de sus mercancías, las grandes 79%, las medianas 74%, y las pequeñas el 77%. (IMECE, 2014). De modo que, el desempeño competitivo tendrá impacto sobre la evolución económica, social, institucional y cultural de las sociedades que las albergan, razón para dedicar este artículo al entendimiento de las estrategias administrativas que consolidan a las PyMES agroindustriales exportadoras. Objetivo general: Identificar y proponer estrategias administrativas para que las PyMES agroindustriales de limón del estado de Colima exporten competitivamente. Hipótesis de investigación: Las estrategias

administrativas de las PyMES agroindustriales exportadoras de productos derivados del limón, utilizadas por estas firmas han consolidado su actividad exportadora en el mercado internacional.

REVISION DE LITERATURA

La estrategia es un aspecto clave para el éxito y rentabilidad de la empresa (Chandler, 1962 y Ansoff, 1965). El éxito de la implantación de la estrategia, dependerá, por una parte, de factores de tipo interno, tales como, la forma de operar del empresario en su entorno, de las propias capacidades del empresario y de los recursos humanos de la empresa, y por otra, de factores externos, como, evolución del ciclo económico, posición de la competencia y oscilaciones de la demanda (Thompson y Strickland, 1993). El reto administrativo estratégico de la empresa viene definido por una serie de factores que determinan la consecución de los objetivos fijados, unos de naturaleza exógena al estratega que se encuentra en un medio político, económico y social (entorno genérico) que no controla y en el que se enfrenta a unos rivales o competidores. Sirve a unos clientes y opera con unos proveedores (entorno específico); y otros que hacen referencia a factores endógenos de la organización y representan la escala de objetivos y los recursos y capacidades de los que se disponen (AECA, 1999).

En relación con la actitud del propietario/gerente, Kotey y Meredith (1997), evalúan en las pequeñas empresas industriales la relación entre el valor personal del propietario/gerente, las estrategias que adoptan y el rendimiento de su empresa, confirmando una asociación entre estrategia y rendimiento. Indican que las empresas con altos rendimientos son proactivas en la orientación estratégica y el propietario exhibe valores empresariales, mientras que las empresas con bajo rendimiento son reactivas y los propietarios exhiben valores más conservadores. En cuanto a la importancia de los factores externos, Kotha y Nair (1995), examinan, en empresas japonesas de industria de maquinaria, el papel que juegan las estrategias y el entorno económico con la rentabilidad y crecimiento de la empresa, encontrando un impacto positivo del cambio tecnológico en el crecimiento de la empresa. Asimismo, Miles et al. (2000), presenta un estudio que describe la relación entre la posición estratégica, la estructura organizativa y los niveles de rendimiento de pequeñas empresas en entornos estables y dinámicos.

Matsuno y Mentzer (2000), examinan el papel que juega el tipo de estrategia como alternativa para moderar la relación entre la orientación del mercado y el rendimiento de la empresa. Para ello utilizan la tipología de Miles y Snow (1978) y encuentran que las empresas que siguen estrategias defensivas consiguen una mayor rentabilidad económica al incrementar el nivel de orientación del mercado, que las empresas que siguen estrategias exploradoras o analizadoras. Sin embargo, las empresas con estrategia defensiva muestran peores resultados en cuota de mercado y crecimiento de ventas. Mientras que Kotabe y Duhan (1993), tras identificar clusters estratégicos en el mercado japonés, no encuentran una relación directa entre la posición estratégica de la empresa y su rentabilidad. Por otra parte, Olson y Bokor (1995), señalan, que el rápido crecimiento de las jóvenes y pequeñas empresas está influenciado por la interacción de la planificación formal (proceso de la estrategia “formulación e implantación”) y la innovación de producto o servicio (contenido de la estrategia “tipo de decisión”).

Existen estudios que ponen de manifiesto que la planificación estratégica no es una práctica común entre las pequeñas empresas (Robinson y Pearce, 1984; Sexton y Van Auken, 1985). La relación entre la planificación estratégica formal y el rendimiento financiero en las empresas pequeñas ha sido examinada por diversos autores. Por una parte, determinados estudios encuentran una relación positiva. Robinson (1982), encontró que las pequeñas empresas que emplearon consultores para apoyar la planificación estratégica, rindieron mejor que las empresas que no lo hicieron. Bracker, Keats y Pearson (1988), concluyeron que las pequeñas empresas electrónicas que contrataron un sofisticado plan estratégico obtuvieron un mejor rendimiento que las empresas que no planificaban. A similares conclusiones llegan Hahn y Powers (1999). Otros estudios han puesto de manifiesto una relación positiva entre la planificación estratégica formal y el rendimiento financiero en las pequeñas empresas (Shuman, 1975; Jones, 1982; y

Bracker y Pearson, 1986). Contrariamente, otros investigadores han concluido que no existe una relación significativa (Kallman y Shapiro, 1978; Orpen, 1985; Shrader et al., 1989 y Watts y Ormsby, 1990), y sugieren que el valor de la planificación se diluye por factores como el entorno de incertidumbre, la experiencia de la gerencia y la fase de desarrollo de la empresa.

En un modelo dinámico de formación de la estrategia (AECA, 1999), la planificación estratégica formal coexiste con un proceso estratégico emergente en el que las decisiones y acciones estratégicas son tomadas al margen del sistema formal de planificación (Mintzberg y Waters, 1985). Las cambiantes condiciones del reto estratégico (factores exógenos y endógenos) van a determinar en cada momento el tipo de estrategia a implantar, más planificada o por el contrario más emergente. El control de la información de naturaleza estratégica también puede resultar una importante fuente de ventaja competitiva de las PyMES. Julien et al. (1996), señala que esta ventaja competitiva se concreta en términos de estrategia (empresas proactivas), de estructura (redes de información) y culturas empresariales adoptadas. Brown y Gatian (1995), examinan como la implantación de un sistema de información estratégica en una empresa conlleva una ventaja competitiva a largo plazo, y encuentran que las empresas que invierten en sistemas de información estratégica, consiguen, por un lado, una reacción favorable en el mercado de valores al anunciar que sus empresas utilizan un sistema de información estratégica, y por otro, un mayor crecimiento y rentabilidad económica. Si se trata de relacionar factores estratégicos y éxito empresarial, nos encontramos con trabajos como los de Huck y McEwen (1991), Luck (1996) y Camisón (1997), que resaltan la importancia de la planificación estratégica, de utilizar determinadas prácticas de dirección y gestión, de la capacidad de respuesta de la empresa a los requerimientos del entorno y de la adopción por la empresa de un enfoque estratégico como elementos claves del éxito empresarial. En relación a las PyMES y el comercio exterior de México, de acuerdo a la información oficial (SE, 2010) disponible que a continuación se presenta, pone de relieve la escasa participación de estos estratos empresariales en el comercio exterior mexicano. Como se observa en el cuadro 1, es muy pequeño el número de empresas exportadoras.

Cuadro 1: Empresas de Exportación y Porcentaje de Participación

Tamaño de la Empresa	% de Contribución
Grande	51.8
Maquiladoras	41.5
Pequeña y mediana	6.7
Total	100.0

Fuente: elaboración propia a partir de datos de SE (2014).

Comparada la participación en el sector exportador de la Pyme nacional con otros países, se observa en el cuadro 2, que los esfuerzos de penetración de estos estratos empresariales en los mercados internacionales contrastan grandemente con las estadísticas encontradas en otros países.

Cuadro 2: Análisis Comparativo de la Participación de las PYMES Mexicanas Con la de Otros Países En las Exportación

País	% de las Pymes
México	6.7
Canadá	9.3
Argentina	10.0
USA	31.4
España	40.0
Italia	40.0

Fuente: elaboración propia a partir de datos de SE (2014).

En el caso de México se deduce que las pequeñas empresas, conjuntamente con las medianas son las que contribuyen con el 6.7% del total exportado; Son pocas las grandes empresas mexicanas y sin embargo contribuyen con el 51.8% de nuestras ventas al exterior; Las maquiladoras participan con un gran número

y porcentaje de exportación (41.5%), mostrando la dificultad que existe para elaborar una política uniforme de promoción para asegurar su permanencia en México, así como la vulnerabilidad de nuestro país cuando las maquiladoras salen hacia otros países; y Existe un amplio potencial de crecimiento de su contribución a las exportaciones; en el largo plazo podrían hacerlo como ahora lo hacen en los otros cinco países mencionados.(SE, 2014).

En un estudio realizado (Dussel Peters, 2000:23 y 27) se muestran las exportaciones de los principales 10 capítulos de exportación a EEUU, mismos que al ser analizados revelan que prácticamente no hay productos elaborados por las MyPES, en virtud de que se refieren a maquinaria, aparatos y material eléctrico, grabadoras, automóviles, tractores, reactores nucleares, calderas, aparatos mecánicos, combustibles, minerales, aceites minerales, prendas y complementos de vestir, muebles, legumbres y hortalizas, manufactura de fundición, entre otros. Fácilmente se detecta que son productos de alta tecnología e intensivos en capital, atributos que es difícil hallar en las micro empresas mexicanas, razón por la cual raras veces pueden producirlos y, no se diga exportarlos directamente en grandes cantidades.

Indirectamente tampoco pueden exportar, porque nuestras exportaciones se caracterizan por tener un alto contenido de insumos y partes importadas aspecto que limita la participación de las MYPES en su encadenamiento productivo al sector. De ahí que la estimación mostrada en párrafos anteriores, hecha por la Secretaría de Economía, de que participan junto con las empresas pequeñas y medianas, con un 6.7% del total, puede interpretarse que se refiere a la mediana empresa, preferentemente, (Dussel Peters, 2002).

Se concluye diciendo que las actividades de exportación, en gran medida corresponden al sector manufacturero, bujía de su crecimiento, el que se apoya en unas cuantas empresas mexicanas (312) y en las maquiladoras (3,436), las cuales enfrentan problemas de alta dirección en el diseño de estrategias de venta y de carácter técnico para generar, ampliar o consolidar sus encadenamientos con las MYPES del país, motivo por el que éstas contribuyen modestamente en nuestras ventas al exterior, (SE, 2014).

METODOLOGIA

La investigación realizada ha utilizado un enfoque cualitativo del estudio de casos múltiples, bajo un enfoque holístico, para identificar las estrategias administrativas para que las pequeñas y medianas empresas agroindustriales exporten competitivamente en el estado de Colima, México. El estudio comprendió la identificación de 18 casos; 13 de ellos fueron eliminados por no ser empresas exportadoras. Derivado de este selectivo se realizaron 5 casos de estudio de pequeñas y medianas empresas ubicadas en el estado de Colima, México, los cuales fueron suficientes para responder a las preguntas de investigación, basados en la saturación teórica de los casos. El criterio para seleccionar estas firmas: a) empresas que tengan de uno hasta 50 trabajadores para las pequeñas y para las medianas de 51 a 250 trabajadores. Además se han considerado dentro de la población de empresarios PyME a aquellos que: b) se encuentran activamente involucrados en la operación agroindustrial de exportación, dirigidas ya sea como gerentes o los mismos dueños, y c) generan empleo para sí mismos y para otras personas.

Para operacionalizar la definición de empresario PyME, se consideraron cuatro criterios: a) tener una empresa que opere formalmente al momento del estudio, con el objeto de solo considerar a los negocios formales; b) que sus negocios tengan diez años o más de funcionamiento formal, con el objetivo de distinguir oportunidades de compromisos de largo plazo con el mercado exportador; c) trabajar tiempo completo en su empresa; La recopilación de datos se efectuó mediante entrevistas semiestructuradas llevadas a cabo durante el segundo semestre de 2014. Estas se realizaron en campo, en las mismas empresas de los empresarios, y fueron grabadas y transcritas. Se utilizó una guía general de preguntas que fue previamente validada por académicos y personas expertas en el tema. Se usó la clasificación de preguntas cualitativas (seis tipos) empleada por Mertens (2005), y las recomendaciones y el orden de formulación empleados por Hernández, et al (2010). El enfoque que utiliza la recolección de datos sin medición numérica para descubrir o afinar preguntas de investigación en el proceso de interpretación es el cualitativo

(Hernández et al., 2009). Este enfoque fue utilizado, siguiendo a Grinnel (1997) y Creswell (2005), porque permitió captar las experiencias del tipo de empresarios involucrados, recolectó las experiencias de los empresarios a través de las entrevistas y permitió desarrollar una investigación cualitativa en las Firms de los empresarios. Se emplearon tres tipos de fuentes de evidencia: la observación directa, las entrevistas en profundidad y los documentos diversos, siendo las segundas las más empleadas. Se realizaron visitas de campo a los negocios de los empresarios y se observó directamente la rutina diaria a través de la cual estos gestionaban sus negocios. La información fue procesada mediante el software Atlas ti. Para el análisis individual de los casos, de acuerdo con Hernández et al. (2009), se siguieron tres fases con el objetivo de encontrar elementos comunes. La primera fase consistió en cargar las transcripciones de las entrevistas en el software Atlas, útil para el proceso de análisis.

Valor práctico: Se encara principalmente a la participación y opinión de las empresas que están exportando sus productos agroindustriales en función de los dos enfoques antes mencionados. Esto deja el antecedente para en una futura investigación proponer estrategias para su mejora continua.

RESULTADOS

En el estado de Colima, la Agroindustria es la actividad productiva con mayor participación en el total de las exportaciones registradas. Es fuente de ingresos para los más de 3200 productores que se dedican a esta actividad y, de la cual se generan 20 mil jornales cada día, aproximadamente. Esta actividad es un gran generador de otras actividades como en los sectores de servicios, transportes, comercio, etc. Es el Estado con mayor creación de empleos en el sector Agroindustrial, proporcionalmente con su número de habitantes, (SEDER, 2014). De acuerdo a la lista que nos proporcionó el Consejo Estatal de Productores de Limón (COEPLIM, 2014), de los 1,300 productores que existen aproximadamente en el estado de Colima y que están registrados ante COEPLIM, se seleccionaron 18 empresas que han realizado actividades de exportación, de las cuales se aplicó la investigación a 5 empresas que actualmente continúan exportando. Esto, como consecuencia de la plaga Huanglongbing, mejor conocida como HLB, que desde el 2012 afectó el cultivo de las plantas del limón en todo el estado de Colima, y por ende, las actividades de producción y exportación de las empresas productoras, redujo su participación en el mercado internacional. Los resultados de los casos estudiados fueron resumidos y organizados sobre la base del análisis transversal de estratos. A partir de la investigación realizada, y considerando los diversos modelos existentes para el desarrollo de las pequeñas y medianas empresas (PyMES), se han identificado tres factores: administrativos, operativos y externos, los cuales han consolidado la actividad exportadora de la Agroindustria colimense.

Factores Administrativos

Dentro de los factores administrativos que han consolidado la actividad exportadora de las PyMES colimenses, los temas identificados más importantes tienen relación con la gestión de recursos humanos, aspectos contables y financieros, la administración propia de sus negocios y la capacitación. En lo que respecta a las Pequeñas empresas, en su mayoría de tipo familiar, en relación a dirección de la misma cuando otra persona suple al dueño de esta, muchas veces no cuenta con una preparación y capacitación adecuada. Asimismo, de acuerdo con los empresarios, pareciera que estos tienen como objetivo común obtener utilidades en el menor tiempo posible sin una visión de largo plazo, la gestión de recursos humanos influye en la estabilidad de la actividad exportadora. Por otro lado la capacitación a sus trabajadores solo se realiza al inicio del vínculo laboral y los aspectos motivacionales están simplemente relacionados con los pagos extras por cumplimiento del trabajo.

Respecto a los aspectos contables y financieros, la adecuada administración financiera constituye uno de sus principales retos. La falta de preparación en estos aspectos, unida al nivel de informalidad de muchas de sus operaciones, genera que no cuenten con respaldo suficiente para sus operaciones financieras. La

contabilidad es relevante para cumplir con los compromisos tributarios; estas llevan un control de los ingresos y egresos en sistemas mecanizados.

Factores Operativos

Dentro de estos, los factores identificados que favorecen la consolidación en el mercado exportador de las PyMES tienen relación con aspectos de mercadeo, establecimiento de precios, control de la producción y control de inventarios. A partir de la investigación realizada, se aprecia que, desde el inicio de los negocios de los empresarios y en el transcurrir de los años, las PyMES perciben que la competencia los obliga a desarrollar estrategias que les permitan permanecer en el mercado. Estas están relacionadas con mejoras en la calidad del producto, estrategias de diferenciación, segmentación de mercado y políticas de precio, aspectos que constituyen los principales retos para su permanencia en el mercado internacional.

Factores Externos

Entre estos factores, los de mayor incidencia aluden a la corrupción, informalidad y tecnología. Los menos mencionados y de menor incidencia se refieren a temas relacionados con la competencia y el Estado. En relación con el tema de la corrupción, muchos de estos empresarios que operan en el mercado internacional se enfrentan a las comisiones extras que tiene que pagar para que su mercancía sea despachada sin contratiempos, generando un sobre costo en sus productos que finalmente reduce su ganancia, y muchos de ellos se ven obligados a aceptar estas prácticas desleales. Esto genera a su vez que no puedan demostrar ante las entidades financieras su movimiento real y no puedan acceder a mejores condiciones crediticias en tasas de interés y mayores montos, esto sucede principalmente en las pequeñas empresas, no así en las medianas. El Estado es definitivamente un aliado, “como un mal necesario” comentó un empresario, en la mayoría de los casos referente a los estímulos a la exportación (apoyos), estos, si se les otorga a las PyMES después de 6 a 12 meses de haberlos solicitado. Mientras, tendrán que financiarse con capital propio o ajeno, este último a tasas de interés muy elevadas, lo que reduce considerablemente sus ganancias. También, los empresarios de las PyMES perciben que el Estado ha tenido una actuación pasiva frente al crecimiento de las firmas, específicamente desde su percepción el Estado no cumple su rol de promotor, no brinda capacitación y no promueve su formalización. El acceso a la tecnología, así como la fuerte competencia del mercado, fueron factores también mencionados por los empresarios. Respecto a lo primero, tal acceso es bastante limitado en relación con su giro de negocio o con la gestión administrativa de sus empresas. Otro factor importante es la competencia, lo cual ha sido resaltado por los empresarios PyME como una categoría importante en sus retos para desarrollarse en el mercado y crecer.

CONCLUSIÓN

El objetivo principal de esta investigación fue determinar a través de las experiencias de los empresarios, las estrategias administrativas condicionantes tanto internas como externas que determinan la participación de las PYMES agroindustriales en las en el mercado internacional de los 10 municipios del Estado de Colima en el periodo 2011-2014. Desde esta perspectiva y en base a la experiencia de estos empresarios se busca la manera de proponer estrategias ya validadas desde el esquema de Ansoff, (1965) y con la asertividad de Okpara y Wynn (2007), que proponen una clasificación de los tipos de decisiones necesarias para iniciar y mantener un negocio exitoso, para que los que no exporten mejoren su competitividad en sus firmas, esto será necesario: - Comprender que no es suficiente implementar las políticas tomando en cuenta los segmentos empresariales; es decir, la fase del ciclo de vida en la que se encuentran las empresas, sino también se debe considerar que todos los sectores (industria y comercio) son diferentes y se deben especificar los apoyos de financiamiento y capacitación.

Fortalecer la vinculación con el sector educativo a fin de generar tecnología propia acorde a sus características y necesidades, así como propiciar la innovación necesaria en todos los sectores de la PYME. - Mejorar las regulaciones sobre todo en materia de competencia dado que existen monopolios que no se

han logrado erradicar y que compiten en ventaja frente a la PYME mexicanas. Capacitar a verdaderos consultores de la PYME, pues la mayoría intentan implementar en las empresas modelos que han sido creados para las empresas grandes de otros contextos culturales y económicos, mismo que al no ser adaptados antes corren el riesgo de fracasar. De acuerdo a información proporcionada por parte de la Secretaría de Economía, las Pequeñas y Medianas Empresas siempre han sido de gran importancia para el país. Cabe mencionar que a partir de los años 80's el sector agroindustrial comenzó a tener un gran auge y un crecimiento económico en el Estado de Colima; sin embargo, fue hasta los años 90's que comenzó a explotarse dicho sector, y es así como las empresas emprendieron la actividad agroindustrial, citando las exportaciones de diferentes productos colimenses como es el limón, el coco y sus derivados, el café, melón, sandía y plátano, por mencionar algunos; tratando así de sobresalir y dándole la importancia económica al Estado de Colima. Ello obligó a buscar mecanismos para identificar las estrategias administrativas que han consolidado su incursión al mercado internacional. Como se pudo observar, en esta investigación de campo se corrobora la hipótesis planteada en la que se analizó específicamente las estrategias administrativas que están utilizando y han logrado impulsar a las PYMES agroindustriales del estado de Colima a incursionar con éxito permanente en el mercado internacional.

TIPO DE CAMBIO Y DETERMINANTES DE LAS EXPORTACIONES EN PERIODOS DE VOLATILIDAD FINANCIERA EN LA ZONA DEL TRATADO DE LIBRE COMERCIO DE NORTEAMÉRICA

Mario Alberto Lagunes Pérez, Universidad Popular Autónoma del Estado de Puebla

Héctor Hugo Pérez Villarreal, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

Desde la implementación del Tratado de Libre Comercio para Norteamérica o TLCAN, las naciones que la conforman han experimentado choques económicos y financieros adversos, a partir de la crisis financiera de 2008 se incrementó la volatilidad del tipo de cambio real en varias naciones, seguida por literatura que se refiere al papel de las depreciaciones como fuente de competitividad de las exportaciones, el objetivo de esta investigación no experimental cuantitativa, y correlacional descriptiva se centra en una aproximación metodológica para evaluar si existe una relación estadísticamente significativa entre el tipo de cambio y otras variables que podrían afectar las exportaciones los países miembros del TLCAN, para lo cual se utiliza un modelo GARCH (p,q). Los resultados sugieren que el tipo de cambio real del yuan chino, el ingreso de los Estados Unidos y las importaciones chinas a la zona son las variables que mejor explican el comportamiento de las exportaciones las naciones que conforman el acuerdo comercial.

PALABRAS CLAVE: TLCAN, Tipo de Cambio Real, Exportaciones, Competitividad

EXCHANGE RATE AND DETERMINANTS OF EXPORTS IN PERIODS OF FINANCIAL VOLATILITY IN THE NORTH AMERICA FREE TRADE AGREEMENT ZONE

ABSTRACT

Since the implementation of the North America Free Trade Agreement or NAFTA, the nations that comprise it have experienced adverse economic and financial shocks, since the 2008 financial crisis, the volatility of the real exchange rate has increased in several nations and it has been followed by emerging literature about the role of depreciation as a source of export competitiveness, The objective of this non-experimental, quantitative, descriptive and correlational research focuses on a methodological approach to assess whether there is a statistically meaningful relationship between exchange rate and other variables that could affect the exports of NAFTA countries, for which a GARCH (p, q) model will be used. The results suggest that the real exchange rate of the chinese yuan , the income of the US and chinese imports made by the region are the variables that best explain the behavior of exports of NAFTA members.

INTRODUCCIÓN

La zona que abarca el Tratado de Libre Comercio para Norteamérica (TLCAN) que entró en vigor en enero de 1994, está constituida por los territorios de Canadá, Estados Unidos y México, el producto nacional bruto de esta región tuvo un valor en 2013 de 19,356 mil millones de dólares, representando la zona comercial

más grande del mundo, puesto que las variables financieras y económicas son muy diferentes entre los países miembros, los resultados que se han obtenido a partir de su integración son sujetos de un amplio debate. A diferencia de los países de la zona del Euro, los integrantes del TLCAN no tienen una política monetaria unificada, cada nación cuenta con su propia moneda y sus propias autoridades monetarias, lo que da lugar a cambios entre el tipo de cambio real de las divisas de los 3 países, La crisis financiera mundial que inició a finales de 2008 ha traído desequilibrios monetarios y comerciales que han afectado de manera diferente a las naciones de esta región, ocasionando en el caso de Canadá una contracción de su economía en el año 2009 del 1.8%, para Estados Unidos la caída fue del 2.8% mientras la economía mexicana experimentó un retroceso del 6.5%, del mismo modo el tipo de cambio de las 3 naciones experimentó altas fluctuaciones siendo para el dólar canadiense del 33.7% respecto al dólar estadounidense, el dólar estadounidense ha fluctuado en un 30% respecto al euro y en un 36% respecto al yen, por su parte el peso mexicano ha fluctuado en un 32% respecto al dólar estadounidense trayendo como consecuencia que las empresas exportadoras de la zona del TLCAN hayan tenido que cambiar sus políticas de inversión, financiamiento y metas corporativas.

Las investigaciones relacionadas al tema de la competitividad en el sector exportador, han considerado diferentes variables que impactan en la misma, no obstante a raíz de la volatilidad cambiaria mundial se han vuelto a presentar en los últimos años estudios científicos en los cuales el valor del tipo de cambio y el costo de los insumos continúa siendo una variable estadísticamente significativa para explicar el desempeño de las exportaciones, no obstante otros estudios continúan reconociendo que existen otras variables estadísticamente significativas que explican el volumen de las exportaciones como lo son: el ingreso mundial, el ingreso de los Estados Unidos, el ingreso de la zona comercial en que se encuentra la nación, los diferenciales de inflación, el tipo de cambio real de las divisas respecto al dólar u otras monedas con las que realizan importantes flujos comerciales y el tipo de cambio de los países competidores. Esta investigación no experimental, cuantitativa y correlacional descriptiva, tiene como objetivo determinar el impacto que las variables financieras y económicas han tenido sobre el desempeño de las exportaciones de las naciones miembros del TLCAN a partir de la crisis financieras del 2008 hasta septiembre de 2014, para lo cual se utilizara un modelo GARCH (p,q) el cual es recomendado para realizar estimaciones en series de tiempo que presentan alta volatilidad para determinar la significancia de cada variable independiente. El presente documento se encuentra organizado del siguiente modo: En la sección de revisión de literatura se presenta aquella que sustente el caso. En la sección marco contextual se dará información estadística relevante al estudio. En la metodología se propondrá el modelo a utilizar así como las inferencias estadísticas. Los resultados refieren los hallazgos del estudio, En las conclusiones se especifican las contribuciones y limitaciones del trabajo.

REVISIÓN DE LA LITERATURA

La implementación de elementos competitivos que favorezcan a las empresas y a las naciones juegan un papel altamente importante en la mayoría de las economías del mundo orientadas al sector exportador e integradas al comercio internacional (Organisation for Economic Co-operation and Development ([OECD], 2009).

Competitividad y Globalización

La competitividad ha sido un elemento estratégico que requieren tanto las empresas como las naciones para tener éxito en los mercados mundiales, ésta ha cobrado gran importancia desde que inició la apertura comercial que inició a finales del siglo pasado dando lugar al fenómeno denominado globalización, Ketels (2010) argumenta que la situación económica y financiera mundial que se derivó de la crisis de 2008 originó que muchos países alrededor del mundo se encuentren examinando la manera de reactivar el crecimiento económico, en países altamente integrados a la economía mundial estos esfuerzos se enfocan en crear condiciones que permitan incrementar la colocación de bienes y servicios domésticos en los mercados

globales mediante el impulso a la competitividad de las exportaciones. Desde la entrada en vigor del acuerdo comercial para norteamérica en 1994, el comercio entre las 3 naciones participantes se ha incrementado para el año 2012 en un 279% contabilizando un total de 1,2 trillones de dólares estadounidenses. La mayoría de las investigaciones de los últimos años sugieren que la competitividad es una variable que impacta directamente el desarrollo social y económico de las naciones, no obstante lo afirmación anterior Atkinson (2013) afirma que no existe entre los autores un acuerdo respecto el modo en que se pueda medir la competitividad puesto que ante la diferentes aproximaciones metodológicas el concepto se convierte muy ambiguo y objeto de debates.

La competitividad se puede analizar desde el punto de vista macroeconómico y microeconómico. donde el nivel macroeconómico tiene una relación con el desempeño de la economía respecto a otras naciones siendo las variables más comúnmente utilizadas para su medición agregados económicos y financieros como son: la balanza comercial, balanza de pagos, el tipo de cambio nominal y real, las tasas de interés, inversión en infraestructura y costo de la mano de obra, incluyendo también variables cualitativas como son el nivel de actividad científica y tecnológica del país, los resultados de las instituciones en el campo de la investigación y desarrollo y la transparencia gubernamental. (Esser, Hillebrand, Messner y Meyer-Stamer, 1994), Dentro del ámbito microeconómico la competitividad se estima en base al desempeño de variables entre las que se cuentan: la participación del mercado, indicadores de productividad, costos, márgenes de ganancia y/o beneficios netos, existiendo elementos cualitativos como la investigación y las estrategias gerenciales.

Tipo de Cambio Real y Exportaciones

El tipo de cambio real estima los precios de los bienes expresados en una moneda común y es uno de los indicadores que han sido utilizados para medir los cambios en la competitividad entre naciones (Turner y Van't Dack, 1993). Al igual que otras variables analizadas para estimar la competitividad, tampoco existe un acuerdo sobre el efecto del tipo de cambio real sobre el nivel de exportaciones de una nación. Analizando diferentes monedas, periodos de tiempo, y elasticidad de las exportaciones, autores como Serenis y Paul (2008), Huchet Bourdon y Korinek (2011) y Qiug, Yi y Yingke (2013), afirman que la depreciación del tipo de cambio no es un elemento que aporte competitividad a las exportaciones de las naciones, principalmente en periodos de volatilidad cambiaria, puesto que esta únicamente se incrementa para un pequeño número de productos y por un periodo muy corto de tiempo.

No obstante Baldwin y Krugman (1989) sostienen que únicamente una depreciación muy alta en el tipo de cambio puede tener una influencia real en el desempeño de las exportaciones, como consecuencia de los costos hundidos ya existentes, Berman y Berthou (2006) afirman que debido a las imperfecciones en los mercados financieros de las naciones emergentes la depreciación del tipo de cambio real conduciría a una respuesta muy pequeña sobre el volumen de exportaciones, por otra parte Berthou (2008) argumenta que la apreciación del tipo de cambio real reduce el valor de las exportaciones, estimando que una apreciación del 10% ocasiona una disminución en las exportaciones del 6.8% en las naciones utilizadas como muestra, En este sentido, Berger y Martin (2011) concluyen que un elemento clave para el incremento en la competitividad de las exportaciones de China ha sido el tipo de cambio subvaluado, además Sato, Shimizu, Shrestha y Zhang (2013) hacen un análisis del mercado japonés y coreano de 2005 al 2013, y encuentran que la apreciación del yen disminuyó las exportaciones de varias industrias de esa nación con excepción del sector automotriz, mientras que la apreciación del won coreano no solo ocasiono una pérdida de competitividad en varias industrias, sino que también disminuyó el valor de las exportaciones del sector automotriz, en ese orden de ideas Cheung y Sengupta (2013) llegan a la conclusión que la apreciación de la rupia ha tenido un impacto significativamente negativo sobre el nivel de exportaciones de India, sugiriendo que las autoridades monetarias deberían evitar la apreciación de la moneda,

Breve Marco Contextual

En el año 2013 el principal destino de las exportaciones canadienses fueron los Estados Unidos de América, contabilizando un 75% del total de las mismas, porcentaje que ha venido disminuyendo desde un 82% en el 2006, por otra parte las importaciones de Canadá provienen mayoritariamente de los Estados Unidos representando en 2013 un 51% de las mismas. En relación al comercio con México, las exportaciones canadienses a dicha nación han representado desde 2006 únicamente el 1% del total de las mismas, mientras que las importaciones provenientes de esa nación se han incrementado muy poco al pasar de 4% en 2006 a un 5% en 2013. Es importante señalar la importancia del mercado chino ya que del total de las importaciones canadienses el 11% provienen de dicha región, por su parte solo el 4% del total de las exportaciones de Canadá tienen como destino la economía de China.

Estados Unidos continúa siendo el mercado más grande del mundo con un sector exportador e importador más diversificado que el canadiense el cual recibe el 19% de las exportaciones estadounidenses y que muestra una tendencia descendente ya que en 2006 representaban el 22%, con respecto a su vecino del sur el 14% de las exportaciones tienen como destino México, las importaciones del mercado estadounidense provienen en un 16% de Canadá y en un 12% de México. También se puede apreciar la importancia que la economía China ha tomado en el mercado estadounidense ya que las importaciones desde esa nación representaban en 2013 el 20% del total de las mismas superando a las provenientes de Canadá y México, pero exportando solo un 8% cifra por debajo de los bienes que tienen como destino sus otros dos socios comerciales del TLCAN. Analizando la situación de México se puede observar una alta dependencia con el mercado estadounidense el cual recibió en el 2013 el 79% de las exportaciones mexicanas, cifra que ha disminuido en un 6% desde 2006, mientras que únicamente el 3% las exportaciones tienen como destino Canadá. Esta fuerte relación comercial también se puede observar analizando el valor de las importaciones ya que el 49% de las mismas provienen de Estados Unidos, mientras que solo un 1% proviene de Canadá. La importancia del mercado chino también se puede apreciar en México donde el 16% de las importaciones provienen de esa nación, pudiendo solo exportar el 2% del total (Instituto Nacional de Estadística y Geografía [INEGI], 2013).

Es importante resaltar que tanto el mercado canadiense como el mexicano tienen un fuerte factor de dependencia con la economía estadounidense principalmente como destino de sus exportaciones, no obstante en la región del TLCAN el mercado chino ha cobrado gran importancia llegando en varios casos a desplazar en el comercio a los países miembros de acuerdo comercial norteamericano. A partir del año 2007 comenzó en los Estados Unidos un incremento en la volatilidad de algunas variables financieras, situación que se agudizó en 2008 desencadenando una crisis financiera y económica a nivel global, ocasionando una importante caída de los precios de las acciones en los mercados de valores, quiebras bancarias, inestabilidad en el comportamiento de los precios de los metales, volatilidad cambiaria, desempleo y el descenso en los precios de muchas de las materias primas (León y De la Rosa, 2010). Durante el primer trimestre de 2009 el valor de las exportaciones mundiales se ubicó 34,8% por debajo del nivel más alto alcanzado durante el primer semestre de 2008 (Ocampo, 2009).

METODOLOGÍA

Este estudio tiene como finalidad analizar los efectos que la variación en el tipo de cambio real de las monedas de Canadá, Estados Unidos y México tienen sobre las exportaciones de dichos países en periodos de volatilidad cambiaria, para lograr este objetivo se realizarán pruebas econométricas para determinar si el cambio en el valor de las exportaciones de los países anteriormente mencionados es consecuencia de las variaciones en el tipo de cambio real de sus respectivas divisas, además se incluyen otras variables que podrían explicar el comportamiento de las exportaciones de la región del TLCAN como los son el ingreso de los Estados Unidos, el ingreso mundial, el ingreso de China, las exportaciones de China a los países del TLCAN y el tipo de cambio real del yuan chino durante el periodo de 2007 a 2014.

Especificación Empírica del Modelo

Las variables a utilizar en esta investigación abarcan el periodo 2007-2014, la información fue obtenida de las bases de datos de INEGI y del Banco Mundial. Para verificar la existencia de relaciones estadísticamente significativas entre las variables independientes y el valor de las exportaciones se utilizará una versión del modelo GARCH (1,1) el cual al modelar la varianza, permite determinar si la variación de una variable incluida en ese modelo tiene efectos sobre la variable dependiente. El modelo que se utilizará para validar la relación anteriormente comentada es el siguiente:

$$\begin{aligned}
 (1) \quad xcan_t &= a_b + b_{ix} xcan_{t-1} + \eta_t \\
 (2) \quad \sigma_t^2 &= \phi_t + \alpha_i \eta_{t-1}^2 + \beta_i \sigma_{t-1}^2 + \gamma_i dc_{t-1} + \delta_i yua_{t-1} + \zeta_i wor_{t-1} + \theta_i iusa_{t-1} + \iota_i imex_{t-1} + \kappa_i chn_{t-1} + \lambda_i impchn \\
 (3) \quad xusa_t &= a_b + b_{ix} xusa_{t-1} + \eta_t \\
 (4) \quad \sigma_t^2 &= \phi_t + \alpha_i \eta_{t-1}^2 + \beta_i \sigma_{t-1}^2 + \gamma_i usd_{t-1} + \delta_i yua_{t-1} + \zeta_i wor_{t-1} + \theta_i ican_{t-1} + \iota_i imex_{t-1} + \kappa_i chn_{t-1} + \lambda_i impchn \\
 (5) \quad xmex_t &= a_b + b_{ix} xmex_{t-1} + \eta_t \\
 (6) \quad \sigma_t^2 &= \phi_t + \alpha_i \eta_{t-1}^2 + \beta_i \sigma_{t-1}^2 + \gamma_i mxn_{t-1} + \delta_i yua_{t-1} + \zeta_i wor_{t-1} + \theta_i iusa_{t-1} + \iota_i ican_{t-1} + \kappa_i chn_{t-1} + \lambda_i impchn
 \end{aligned}$$

Donde:

$xcan_t$ Es el valor de las exportaciones canadiense; $xusa_t$ es el valor de las exportaciones estadounidenses y $xmex_t$ Es el valor de las exportaciones mexicanas en el periodo t . a_b Es el término constante. $xcan_{t-1}$ Es el valor de las exportaciones canadiense; $xusa_{t-1}$ es el valor de las exportaciones estadounidenses y $xmex_{t-1}$ es el valor de las exportaciones mexicanas en el periodo $t-1$.

η_t Es el término de error aleatorio.

σ_t^2 Es la varianza condicional, es decir, aquella pronosticada por la información de períodos anteriores.

ϕ_t Es el término constante del modelo de la varianza.

$\alpha_i \eta_{t-1}^2$ Es el término ARCH e indica el efecto del mismo sobre el modelo.

$\beta_i \sigma_{t-1}^2$ Es el término GARCH indica el efecto del mismo sobre el modelo.

γ_i Es el coeficiente del tipo de cambio real del dólar canadiense y del peso mexicano para las ecuaciones 2 y 6; δ_i es el coeficiente del tipo de cambio real del dólar estadounidense respecto para la ecuación 4.

dc_{t-1} Es el tipo de cambio real del dólar canadiense, usd_{t-1} es el tipo de cambio real del dólar estadounidense, mxn_{t-1} es el tipo de cambio del real del peso mexicano, todos los tipos de cambio se encuentran en el periodo $t-1$.

δ_i Es el coeficiente del tipo de cambio real del yuan chino.

yua_{t-1} Es el tipo de cambio real del yuan chino en el periodo $t-1$.

ζ_i Es el coeficiente del ingreso mundial.

wor_{t-1} Es el valor del ingreso mundial en el periodo $t-1$.

θ_i Es el coeficiente del ingreso de los Estados Unidos para las ecuaciones 2 y 6 y el del ingreso canadiense en la ecuación 4.

ι_i Es el coeficiente del ingreso de México para las ecuaciones 2 y 4 y del ingreso canadiense para la ecuación 6. $iusa_{t-1}$ Es el valor del ingreso de Estados Unidos en el periodo $t-1$. $ican_{t-1}$ Es el valor del ingreso de Canadá en el periodo $t-1$. $imex_{t-1}$ Es el valor del ingreso de México en el periodo $t-1$. κ_i Es el coeficiente del ingreso de China. chn_{t-1} Es el valor del ingreso de China en el periodo $t-1$. λ_i Es el coeficiente de la importaciones chinas realizadas por Estados Unidos y México en la ecuación 2; por Canadá y México en la ecuación 4 y por Canadá y Estados Unidos en la ecuación 6. $Impchn$ Es el valor de las importaciones chinas realizadas por Estados Unidos y México en la ecuación 2; por Canada y México en la ecuación 4 y por Canadá y Estados Unidos en la ecuación 6. El valor de cada variable se encuentra expresado como $\ln p_{t+1} - \ln p_t$. Estadísticamente existe la posibilidad de que el efecto de las variables independientes no se presente en el mismo periodo de tiempo, sino en algún momento posterior por lo que para capturar esa posibilidad las ecuaciones 1, 3 y 5 se amplía de la siguiente manera:

$$x_{t+1} = a_b + b_t r_{t-1} + \eta_t, \text{ con } i = -1, 0, 1, 2, \dots \quad (3)$$

Este estudio no pretende pronosticar el valor de las exportaciones de los países seleccionados, sino determinar que variables independientes tienen un comportamiento estadísticamente significativo sobre el valor de las exportaciones por lo que el enfoque recae en el valor y la significancia de los coeficientes γ , δ_t , ζ_t , θ_t , κ_t , ι_t y λ_t .

Hipótesis

El valor del tipo de cambio real tiene un impacto sobre el volumen de las exportaciones en tiempos de volatilidad cambiaria

$$H_{01}: |\gamma_t| \neq 0; \delta_t = \zeta_t = \theta_t = \iota_t = \kappa_t = \lambda_t = 0$$

Cuando el valor del tipo de cambio real es la única variable que tiene un impacto sobre el valor de las exportaciones, el coeficiente estimado del tipo de cambio real debe ser estadísticamente significativo y distinto a cero, mientras que el resto de las variables deben ser iguales a cero. En todas las estimaciones el coeficiente del término GARCH (β_t) debe ser significativo, lo cual indica que la estimación del modelo mediante el proceso GARCH es la adecuada.

RESULTADOS

Se procede a realizar las pruebas LM y White, con la finalidad de determinar la presencia de autocorrelación y heteroscedasticidad. Los resultados obtenidos muestran la existencia de ambos elementos, estimándose con el procedimiento GARCH (1,1).

No obstante de ya haberse cumplido poco más de 20 años de la creación de este bloque comercial, el análisis econométrico muestra resultados mixtos en cuanto a las variables que tienen un efecto sobre el valor de las exportaciones. Los resultados obtenidos muestran efectos diferenciados para cada uno de los países utilizados en la muestra, siendo el tipo de cambio real del yuan chino la única variable que tiene un efecto estadísticamente significativo sobre las exportaciones de los países miembros del TLCAN, de modo que una apreciación de esta moneda incrementa el volumen de las mismas. Al analizar el tipo de cambio real de las monedas de Canadá, Estados Unidos y México no se observa que el comportamiento de las mismas tenga una afectación sobre el volumen de las exportaciones de dichas naciones. Ha sido fuente de debates intensos el hecho de que el yuan ha sido altamente controlado por las autoridades monetarias para mantenerlo depreciado, no obstante pareciera que las fuerzas económicas tanto internas como externas han obligado al estado a apreciar la moneda pudiendo ser un elemento clave que explique la caída en las tasas de crecimiento, que aunque son superiores a la media mundial, son bajas al compararlas con las que se presentaban en periodos anteriores.

El ingreso de los Estados Unidos es una variable que explica el nivel de exportaciones tanto de Canadá como de México, esto como consecuencia de que un alto porcentaje del total de las mismas tienen como destino el mercado estadounidense, no obstante la economía mexicana se ve más afectada ante desaceleraciones o recesiones en los Estados Unidos al carecer de un mercado interno altamente desarrollado situación que no ocurre con Canadá, por su parte el ingreso de México y de Canadá no es una variable estadísticamente significativa que explique el desempeño de las exportaciones estadounidenses debido a que esta economía cuenta con una mayor diversificación de las mismas. Sin embargo el ingreso mundial sí tiene consecuencias sobre el comportamiento de las exportaciones tanto de Estados Unidos como de Canadá, aunque el primer país tiene una mejor diversificación de sus exportaciones, una afectación económica mundial impacta a la venta de sus productos en el resto del mundo, el coeficiente del ingreso mundial para México carece de significancia ya que como se comentó anteriormente su alta dependencia de los Estados Unidos tiene efectos comerciales sobre el mercado mexicano únicamente cuando hay variaciones económicas en los Estados Unidos.

Es importante señalar que a pesar de la integración económica de estas naciones, únicamente el comportamiento de la economía estadounidense tiene un efecto sobre el desempeño de las exportaciones de sus dos socios comerciales, además los resultados no presentan evidencia de que el comportamiento de Canadá o México afecten a sus otras dos contrapartes, debido al poco incremento que se ha presentado en el comercio bilateral entre esas dos naciones. Si bien la economía china se ha convertido en una potencia exportadora, el comportamiento del ingreso de ese país parece no tener un efecto importante sobre las exportaciones de los miembros de TLCAN, de hecho existe en la actualidad un déficit comercial en la que los miembros de la zona comercial importan más de lo que exportan a la República Popular China, los resultados econométricos indican que durante el periodo analizado la desaceleración de esa economía no tiene un efecto estadísticamente significativo sobre las exportaciones de las naciones que conforman el TLCAN, por el contrario las exportaciones chinas a Canadá, Estados Unidos y México ha traído consecuencias comerciales entre esas naciones las cuales han dejado de importar mercancía de sus socios comerciales debido a una mayor entrada de los productos chinos.

La República Popular China se ha convertido en un competidor muy importante dentro de la economía mundial, llegando a desplazar las exportaciones de otras naciones, mucho se ha debatido y escrito y sobre

las supuestas condiciones desleales con las que China ha logrado incrementar sus niveles de competitividad, pero puesto que muchas naciones de la economía mundial, incluida la estadounidense, siguen dependiendo de costos bajos, cabe la posibilidad de que las exportaciones chinas seguirán siendo un competidor a tomar en cuenta al momento de la toma decisiones empresariales.

CONCLUSIONES

Los beneficios o perjuicios que pudo haber traído el acuerdo comercial sobre las naciones miembros del TLCAN son sujetos de fuertes debates, sin llegar a algún acuerdo conclusivo, no obstante cabe resaltar que la economía estadounidense sigue siendo un importante motor de la economía mundial y por ende de las exportaciones de sus socios comerciales, no obstante la misma se enfrenta a un reto importante respecto a la competencia con las exportaciones chinas, ya que estas han afectado de manera negativa el comercio con sus socios comerciales en Norteamérica. El tipo de cambio real del yuan chino se presenta como un elemento fundamental que explica el comportamiento de las exportaciones estadounidenses, situación que se repite con sus socios comerciales.

El tipo de cambio real de dólar canadiense no parece ser una variable que tenga un efecto sobre las exportaciones canadienses, a pesar como se ha mencionado con anterioridad, un alto porcentaje de las mismas tienen como destino los Estados Unidos, lo cual es precisamente la razón por lo que el ingreso de ese país sea un elemento que explique el volumen de la exportaciones, al igual que en el caso de Estados Unidos el tipo de cambio del yuan chino ha impactado a las exportaciones de dicha nación hacia las naciones miembros del TLCAN, el ingreso de México no es una variable que sea determinante de la exportaciones canadienses. Similar al caso canadiense, las exportaciones mexicanas no son dependientes del tipo de cambio del peso mexicano respecto al dólar estadounidense, de hecho las principales variables que parecen impactar el volumen de las exportaciones mexicanas es el ingreso de los Estados Unidos y el valor de las importaciones chinas realizadas por sus socios comerciales, no se aprecia una política que permita aprovechar los acuerdos comerciales que tiene con otras naciones, ya que las exportaciones siguen siendo muy dependientes de los Estados Unidos, lo cual implica un riesgo muy grande cuando alguna nación como China compite en el mercado estadounidense.

Si bien esta zona comercial no ha implementado una moneda única, no queda claro los beneficios que podría traer ésta, ya que si bien se evitarían las fluctuaciones que presenta principalmente el peso mexicano tras la experiencia europea, las grandes diferencias económicas que tiene México respecto a sus otros dos socios, además la debilidad económica y financiera a la que enfrenta esta nación a partir del último semestre del 2012 no crean las condiciones para poner ese tema sobre la mesa de discusiones. Este trabajo tiene como limitante el no incluir el periodo de depreciación y volatilidad que ha presentado el peso mexicano a partir de diciembre de 2014, lo cual podría cambiar los resultados obtenidos, también carece de un análisis más profundo de la demanda de productos de las naciones estudiadas por parte de sus socios comerciales. Se recomienda en trabajos posteriores incluir el periodo de depreciación y volatilidad del peso mexicano para estimar si este ha tenido un efecto significativo ya sea de corto o largo plazo en las exportaciones de este país así como construir una función de demanda de productos de las economías analizadas dentro de la zona comercial. Cómo se comentó anteriormente éste trabajo se desarrolla durante un periodo en que los mercados financieros han sido muy volátiles, por lo que no se podría inferir que los resultados den la misma información en situaciones de estabilidad económica y financiera.

RESUMEN

El estado de Colima, en México se identifica por la producción de frutas tropicales como la papaya, tópico principal de esta investigación. La papaya es uno de los principales cultivos en la región, más sin embargo la comercialización nacional e internacional no se realiza de una manera competitiva, por ello surge el interés de realizar esta investigación que permita diagnosticar áreas de mejora para lograr exportaciones más competitivas. Para llevar a cabo esta investigación se diagnosticaron las 4 principales empresas que son productoras y exportadoras de papaya como fruta fresca en el estado de Colima, a las cuales se les aplicaron encuestas y entrevistas a una muestra representativa de su personal, se consideró además la información documental y de campo proporcionada por los organismos gubernamentales y asociaciones estatales que documentan estudios sobre diversos tópicos relacionados con la producción de papaya. Una vez diagnosticada, estructurada y analizada la información, se pretende mediante esta investigación proponer estrategias que permitan a los productores de papaya del estado de Colima exportar competitivamente, e incentivar a los productores que aún no exportan a incursionar en el ámbito exportador.

PALABRAS CLAVE: Diagnostico, Competitividad, Exportación, Productor

DIAGNOSIS FOR PRODUCERS OF PAPAYA IN THE STATE OF COLIMA GET EXPORTED COMPETITIVELY

ABSTRACT

The State of Colima, in Mexico is identified by the production of tropical fruits such as papaya, main topic of this research. Papaya is one of the main crops in the region, however the national and international marketing is not performed in a competitive way, therefore arises the interest of this research that allow diagnosis areas for improvement to make competitiveness exports. To carry out this research were diagnosed the 4 main companies that are producers and exporters of papaya as fresh fruit in the State of Colima, on this companies were applied surveys and interviews with a representative sample of its staff, and also, were considered the documentary and information field provided by government agencies and State association, documenting studies on several topics related to the production of the fruit of papaya. Once diagnosed, structured and analyzed the whole information, with the results of this research we will propose strategies that enable the producers of papaya in the State of Colima export competitively, and encourage producers who still are not exported to start in the exporting business.

JEL: F10, F13, Q17

KEYWORDS: Diagnosis, Competitiveness, Exports, Producer

INTRODUCCIÓN

En la actualidad los productores de papaya en el estado de Colima no cuentan con el suficiente activo para promover sus productos a mercados extranjeros, es por eso que necesitan de algún tipo de financiamiento o apoyo económico que los ayude a lograr su objetivo; hoy en día existen créditos que ofrece el gobierno pero los requisitos a cumplir son innecesariamente burocráticos y tediosos aparte de que muchas veces estos mismos están fuera del alcance de los productores por el simple hecho de no tener los suficientes recursos. La finalidad de haber tomado el tema de la competitividad de la producción de papaya en el estado de Colima, es porque se encuentra en un posicionamiento privilegiada geográficamente, su ubicación le permite gozar todo tipo de climas, y comercialmente limita con el mercado más grande del mundo y tiene conexiones marítimas que le permiten acceder tanto a Europa como al Oriente. Así pues, las posibilidades para el desarrollo y comercio de productos agroalimentarios parecen ilimitadas. Esta estrategia, supone la creación de una nueva organización por parte de una agrupación de empresas independientes, a menudo fabricantes o productores de un mismo tipo de productos o complementarios de la Papaya, que participan de la sociedad pero no pierden su personalidad propia como productores ni su estructura específica de administración.

No hay fusión de compañías, ya que éstas participan en la nueva organización que las agrupa a través de un acuerdo comercial mediante el cual delegan exclusivamente las actividades relacionadas con el proceso de exportación de sus productos de la Papaya. En momentos de apertura y globalización, los agrónomos del estado de Colima, deben buscar nuevas fronteras, que abran posibilidades de crecimiento y expansión, solo de esta forma se logrará la vinculación de la empresa al comercio de las naciones del mundo y constituir una fuerza económica que sirva como motor de empuje de los procesos de exportación en el estado de Colima (SAGARPA, 2013). Las empresas agroindustriales suelen ser empresas que disponen de recursos económicos limitados, aun así, ante un mundo fuertemente competitivo, esto no debe afectarlas y es preciso utilizar todas las herramientas posibles para realizar de una mejor forma su proceso de gestión; una de ellas es la correcta implementación y uso de los sistemas de información en la empresa. El análisis de la agroindustria tiene una gran importancia, no sólo por su objetivo de generar conocimiento que permita identificar la problemática que afecta a las empresas agroindustriales, sino también, porque permite articular la visión administrativa con la de los sistemas de información (SAGARPA, 2013). Al contar con el flujo de efectivo necesario los pequeños productores ya no dependerían de un comercializador y la mayoría de ellos podría incursionar en mercado extranjero exportando su producto, y de esta manera tener un incremento significativo de dinero en su empresa.

¿Cuáles son las estrategias de recursos humanos para que los productores de papaya del estado de Colima exporten competitivamente?, el estado de Colima ha ido ganando cada vez mayor terreno en el mercado internacional de la papaya con respecto a sus competidores, manteniéndose como primer exportador y segundo productor mundial. Entre otras razones, parte del éxito de éste cultivo en el estado son las condiciones atmosféricas, pluviales y de suelos ideales con las que se cuentan. El estado de Colima ocupa el primer lugar nacional en exportación de papaya, al vender al extranjero el 40% del total de su producción, principalmente a Estados Unidos y Canadá.

Es tanta la calidad de la papaya que se produce en el estado de Colima que muchos países aparte de los países vecinos se han interesado mucho en el mercado que se desarrolla aquí, tales como Rusia, Alemania y Japón. ¿Cuál es el impacto de las estrategias de producción en las actividades de exportación de los productores de papaya del estado de Colima? ya que Existen pérdidas post-cosecha que se producen a lo largo de la cadena de abastecimiento de la papaya, desde el momento de la recolección en los campos de cultivo hasta el embalaje, almacenamiento, y transporte todo esto causa grandes pérdidas económicas a los productores y en parte esto se debe a la combinación de infraestructura y medios logísticos deficientes y malas prácticas agrícolas, y falta de conocimiento post-cosecha. ¿Cómo impactan las estrategias de comercialización en las actividades de exportación de los productores de papaya del estado de Colima?, para que la papaya llegue en óptimas condiciones a su destino final, se debe de tener ciertos cuidados

durante su cadena productiva, que garanticen la calidad de la fruta al consumidor final y para ello se necesita maquinaria especial que ayuda en el proceso, hoy en día los productores colimenses llegan a tener pérdidas de miles de pesos en mermas del producto, y esto se debe a falta de infraestructura, para un buen manejo de la fruta. ¿Cómo impactan las estrategias logísticas en las actividades de exportación de los productores de papaya del estado de Colima?, en la actualidad algunos productores de papaya en el estado de Colima no cuentan con el suficiente activo para promover sus productos a mercados extranjeros, es por eso que necesitan de algún tipo de financiamiento o apoyo económico que los ayude a lograr su objetivo; hoy en día existen créditos que ofrece el gobierno pero los requisitos a cumplir son innecesariamente burocráticos y tediosos aparte de que muchas veces estos mismos están fuera del alcance de los productores por el simple hecho de no tener los suficientes recursos. Al contar con el flujo de efectivo necesario los pequeños productores ya no dependerían de un comercializador y la mayoría de ellos podría incursionar en mercado extranjero exportando su producto, y de esta manera tener un incremento significativo de dinero en su empresa. ¿Cuál es el impacto que produce el financiamiento gubernamental en las actividades de exportación de los productores de papaya en el estado de Colima?.

REVISIÓN LITERARIA

El presente trabajo tiene se basa en la teoría de Michael Porter, el cual es una autoridad global reconocida en temas de estrategia de empresa, desarrollo económico de naciones y regiones, y aplicación de la competitividad empresarial a la solución de problemas. Según Porter (2002) “La ventaja competitiva es la estrategia competitiva es la búsqueda de una posición favorable dentro de una industria, donde se lleva a cabo la competencia.” Su finalidad es establecer una posición rentable y sustentable frente a las fuerzas que rigen la competencia en la industria. La selección de la estrategia competitiva se funda en dos aspectos centrales: el primero es el atractivo de los sectores industriales desde la perspectiva de la rentabilidad y de los factores que depende. El segundo son los factores de la posición competitiva que se ocupa dentro de un sector industrial. Una excelente posición competitiva puede desempeñarse en una industria tan pobre que no sea rentable y de poco le servirán los esfuerzos tendientes a mejorar su posición. La ventaja competitiva nace fundamental del valor que una empresa lograr crear para sus clientes y que supera los costos de ello.

Porter establece teorías e innovaciones importantes en la cadena de valor, y el modelo de las cinco fuerzas; en la primera menciona que las actividades primarias están apoyadas o auxiliadas por las también denominadas actividades secundarias: Abastecimiento: almacenaje y acumulación de artículos de mercadería, insumos, materiales. Infraestructura de la organización: actividades que prestan apoyo a toda la empresa, como la planificación, contabilidad y las finanzas. Dirección de recursos humanos: búsqueda, contratación y motivación del personal. Desarrollo de tecnología, investigación y desarrollo: generadores de costes y valor. Y en la segunda de las Cinco Fuerzas Porter propone un marco de reflexión estratégica sistemática para determinar la rentabilidad de un sector en específico, normalmente con el fin de evaluar el valor y la proyección futura de empresas o unidades de negocio que operan en dicho sector. Cada modelo es estructurado bajo la eficacia y eficiencia de las cinco fuerzas.

METODOLOGÍA

En la presente investigación se utilizó el tipo de muestreo discrecional o también llamado muestreo por juicio, este es un método de muestreo no probabilístico lo cual quiere decir que es una técnica en la cual las muestras se recogen en un proceso que no brinda a todos los individuos de la población iguales formas de ser seleccionados, luego entonces, ya que nuestra población no es lo suficientemente amplia ni existen muchas variables al respecto, los sujetos a los cuales se les hizo la investigación, fueron seleccionados con base al conocimiento y criterio profesional basándose en el conocimiento sobre la población y el comportamiento así como de las características que se están estudiando. El tipo de muestreo se realizó de la siguiente manera; dentro de la asociación de "Coepapaya" se encuentran activos 39 productores de papaya que están ubicados en el estado de Colima y solo cinco de ellos son los que tienen la capacidad de

exportación y por lo tanto realizan tal actividad, de ahí se partió para iniciar las encuestas y la investigación de campo y de esta forma terminar con dicha investigación y analizar los resultados.

Diseño de instrumento de recopilación de información. El instrumento de recopilación de información será una encuesta que consta de 41 preguntas, (2 abiertas y 39 de opción múltiple) en dónde se pretenden identificar las principales problemáticas que actualmente merman la exportación de la papaya colimense. Nuestro criterio de muestreo fue seleccionar únicamente a los productores que exportaban al extranjero que fueron 5 empresas en total.

RESULTADOS

En el presente informe se podrán observar los resultados que se obtuvieron de la investigación que se realizó a los productores de papaya del estado de Colima, que han implementado estrategias de comercialización y que además han incursionado en el sector exportador. Con los resultados de esta investigación se puede dar a conocer los beneficios obtenidos a base de la actividad de exportar, así como el impacto económico que se ha obtenido los productores agroindustriales. Se realizó la investigación correspondiente, con todos los datos obtenidos y se hace la interpretación obteniendo los siguientes resultados: El 100% de las empresas que se encuestaron consideran que tienen a su personal capacitado, el 100% de las empresas considera que su personal se siente motivado al momento de realizar sus actividades laborales, el 80% de las empresas considera que el trabajo en equipo es una de las herramientas fundamentales para mejorar las habilidades del personal en la empresa mientras que el 20% restante considera que también lo es la dinámica en grupo, el 100% de las empresas encuestadas dice que si se capacita aún más al personal el proceso de exportación sería más eficaz, el 75% de las empresas considera que tener un curso de plan de negocios mejorarían la actividad exportadora como también un curso de investigación de mercado con 25% , siendo descartados los cursos de inocuidad y tramites al comercio exterior. El 100% de las empresas obtienen los recursos para la producción y exportación de manera propia, el 100% de las empresas encuestadas considera que es suficiente su producción para satisfacer la demanda del mercado exportador.

En cuanto a porcentaje de exportación la mayor parte de las producción de las empresas se exporta al extranjero un 80% de la producción total y el resto sólo exporta el 20% de su producción, hablando de mercancías no aprovechada el 90% de las empresas dice que el 15% de su producción total no es aprovechada mientras que el 10% de las empresas dice que un 25% de su producción no es aprovechada, 70% de las empresas tiene a la venta a costo dicha producción no aprovechada, 20% se da a donación y el 10% es utilizada para la pastura, el 80% de las empresas considera que sus infraestructura y equipamiento es apropiado para manejar suficiente capacidades de producción mientras que el 20% restante piensa que no es apropiado su infraestructura y equipamiento. El 100% de las empresas considera necesario industrializar su producción, el 100% de las empresas encuestadas cuentan con certificados de calidad de la producción, el 60% de las empresas cree que las plagas y enfermedades son los principales limitantes en la producción de la papaya en el estado de Colima. Actualmente los diferentes canales de distribución que más se utilizan con 80% productor- consumidor y el 20% con productor, empaque, mayorista, detallista, para el sector agroindustrial de la papaya todo el año se produce la misma cantidad de papaya lo que quiere decir es que todo el año es bueno, el 100% de las empresas ha considerado en diversificar su producto.

CONCLUSIONES

Con lo antes mencionado , se puede tener como conclusión que el sector exportador de papaya del estado de Colima es considerado un potencial para el desarrollo de este producto, y que la mayor parte de sus estrategias para colocar su producto se encuentra en sus propios recurso, ya que por parte de los productores reciben apoyo por parte del estado, pero para este sector el verdadero éxito en incursionar en el mercado exportador de su producto lo realizan con esfuerzo propio, por otro lado la planeación y el establecimiento de un programa que les permita realizar un plan de negocios exitoso para incursionar en

el mercado extranjero, es una demanda que mantienen la mayoría de los productores de papaya, por otro lado la demanda de industrialización de este producto ya que es un producto perecedero, tiene como efecto el poder aprovechar toda la producción, puesto que en este ramo el mercado es exigente en cuanto a las características de la mercancía y se desaprovecha para la comercialización mucho producto que al ser industrializado ayudaría a recibir ingresos a las empresas ya que se pierde un gran porcentaje de este producto por no cumplir con los requerimientos del mercado, aun cuando se considere que se encuentra en buen estado, con lo que se comprueba que se tiene un sector para aprovechar en el área de exportación y en el mercado nacional que se puede potencializar.

CULTURA ORGANIZACIONAL Y TIC'S EN LAS ORGANIZACIONES DE EDUCACIÓN SUPERIOR

Gerardo Vera Muñoz, Benemérita Universidad Autónoma de Puebla

Montserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

RESUMEN

Para las organizaciones se ha convertido en una necesidad la incorporación de las tecnologías de la información y la comunicación (TIC's). Las instituciones de educación no han sido la excepción. Las modalidades de educación semipresencial y a distancia, que empezaron a ser implementadas alrededor de los años 90 del siglo pasado (Garrido y Michelli, 2004), exigieron la adopción de las TIC's en sus procesos de producción de conocimiento y aprendizaje. El uso de internet, videoconferencias, tutoriales, software colaborativos, software multimedia hasta plataformas como el blackboard se convirtieron en práctica cotidiana. Sin embargo, después de más o menos 20 años de la proliferación de estas nuevas tecnologías, se desconoce si los docentes de la modalidad presencial han incorporado el uso de las TIC's en los procesos de producción de conocimiento y aprendizaje. Se parte del supuesto que la cultura organizacional es la variable clave en promover este proceso de cambio. El objetivo es indagar hasta que punto la cultura organizacional del personal académico de la Facultad de Ciencias de la Comunicación (FCC) de la Benemérita Universidad Autónoma de Puebla (BUAP) influyó en la adopción de las TIC'S en la modalidad presencial. Se aplicó una estrategia cuantitativa desarrollando un modelo de regresión lineal entre las variables comportamientos habituales y el uso de las TIC's.

PALABRAS CLAVE: Cultura Organizacional, TIC'S, Modalidad De Educación

ABSTRACT

For organizations it has become a necessity the incorporation of information and communication technologies (TIC's). Educational institutions are no exception. Modalities blended and distance education, which began to be implemented around the 90s of last century (Garrido and Michelli, 2004) demanded the adoption of TIC's in their production processes of knowledge and learning. The use of internet, video, tutorials, collaborative software, multimedia software to platforms like blackboard became everyday practice. However, after about 20 years of the proliferation of these new technologies, it is unknown whether teachers in the presential modality have incorporated the use of TIC's in the processes of knowledge production and learning. It is assumed that organizational culture is the key variable in promoting this process of change. The aim is to investigate to what extent the organizational culture of the Faculty of Communication (FCC) of the Autonomous University of Puebla (BUAP) influenced the adoption of TIC'S in the presential modality. A quantitative strategy was applied to develop a model of linear regression between the variables organizational culture and the use of TIC's.

KEYWORDS: Organizational Culture, TIC'S, Education Modality

INTRODUCCIÓN

Para muchas organizaciones, la incorporación de nuevas tecnologías, particularmente las relacionadas con la información y la comunicación, ha sido la diferencia entre mantener o mejorar su posición en el mercado o bien desaparecer. Las organizaciones dedicadas a los servicios de educación no han sido la excepción.

Las modalidades de educación semipresencial y a distancia, que empezaron a ser implementadas alrededor de los años 90 del siglo pasado (Garrido y Michelli, 2004), exigieron la incorporación de las TIC's (Tecnologías de la información y de la comunicación) en sus procesos de producción de conocimiento y aprendizaje. Asimismo, con razón o sin ella, los modelos educativos tradicionales de la modalidad presencial, fueron incorporando cada vez con mayor intensidad estas nuevas tecnologías, desde el uso de internet, videoconferencias, tutoriales, software colaborativos, software multimedia hasta plataformas como blackboard que incluye una amplia línea de productos para apoyar los procesos mencionados. Después de más o menos 20 años de la proliferación de estas nuevas tecnologías en los modelos educativos de las instituciones de enseñanza, los resultados son diversos. No existen estadísticas o valoraciones cualitativas que demuestren los beneficios de haber incluido estas nuevas herramientas tecnológicas o esta especie de "magia".

Ciertamente, los factores que han incidido en los resultados obtenidos son de naturaleza muy diversa, sin embargo, uno de los aspectos a los que con mayor frecuencia se responsabiliza de los buenos o malos resultados es a la cultura organizacional, sin tener en cuenta, como lo menciona Varela (en Santos, 2003), que más que la cultura, lo que hay que analizar son los comportamientos habituales no casuales, es decir, aquellos comportamientos que de alguna manera siguen pautas", que manifiestan desde los directivos de primer nivel hasta los mandos medios y personal operativo. En esta perspectiva, el objetivo de la presente investigación es indagar hasta que punto la cultura organizacional del personal académico de la Benemérita Universidad Autónoma de Puebla contribuyó a la adopción de las TIC'S y las nuevas formas de trabajo correspondientes en el marco del Modelo Universitario Minerva (en adelante MUM). El trabajo está dividido en tres partes. En la primera se explica la estrategia metodológica aplicada; en la segunda parte se hace una revisión de la literatura sobre cultura organizacional, las TIC's en la educación y el modelo universitario Minerva; en la tercera parte se realiza el análisis de los resultados del estudio de campo, aplicando un modelo de regresión; en la tercera parte se proponen algunas conclusiones.

METODOLOGÍA

En un primer momento se realizó una investigación documental sobre la cultura organizacional, el Modelo Universitario Minerva y las TIC's en la educación. Posteriormente se aplicó una encuesta al personal académico de la Facultad de Ciencias de la Comunicación, que consistió en administrar un cuestionario compuesto por 44 ítems, con escala de Likert y con una alpha de Cronbach de 0.85. Los ítems están distribuidos en 5 categorías: Barreras materiales para el uso de las TIC's, Barreras no materiales para el uso de las TIC's, Oportunidades para el uso de las TIC's, Elementos de diseño para el uso de las TIC's, Años de antigüedad en la institución y uso de las TIC's en el trabajo docente. Con esta información se llevó a cabo un análisis correlacional con la finalidad de determinar hasta que punto existía una relación estadísticamente significativa entre las primeras cinco categorías y el uso de las TIC's en el trabajo docente.

REVISIÓN DE LA LITERATURA

La Cultura Organizacional

La palabra cultura actualmente tiene un significado polisémico, se mueve en un contínuum, donde en un extremo se encuentra el significado restringido del concepto y en el otro el significado antropológico. El concepto restringido tiene su origen en el siglo XVI, en Inglaterra y Francia donde la cultura era entendida como una realización del espíritu humano –no como algo ligado a una particularidad nacional- y percibe una relación de mutua dependencia entre el desarrollo de las artes, las letras y las ciencias y el avance de la civilización en su aspecto tanto económico como el que se refiere al refinamiento de las costumbres (Martínez, 1997). Continuando con Martínez (Ídem), se tiene que en Alemania es donde surge el significado antropológico de cultura. La palabra cultura es utilizada en plural y contrapone una cultura del pueblo que es la auténtica, a la cultura educada (o cultura de los letrados) que es artificiosa y epidérmica. Esta nueva

propuesta buscaba principalmente reivindicar aquella cultura que estuviera más enraizada no solo en la gente común, sino en un territorio susceptible de convertirse en nación y que no representase logros individuales, de hombres capaces de dirigirse con sus obras o sus hallazgos a la humanidad entera, sino una identidad colectiva. Es entre estos dos extremos del concepto de cultura donde se ubica la cultura organizacional con una clara tendencia hacia el concepto restringido, y que matiza su relación con la tecnología¹. Sobre la relación tecnología y cultura, aunque desde dos perspectivas distintas, Leslie White, Julian Steward, y Schein entre otros (citado en Dávila y Martínez, 1999) plantean que son los cambios tecnológicos los que ocasionan las modificaciones en la cultura. Por su parte los trabajos recientes sobre ciencia, tecnología y sociedad cuestionan este planteamiento lineal y reconocen la necesidad de entender a la tecnología como una construcción social. Enfoques más recientes como el de Hughes (1996) plantean que la tecnología, ahora traducida como sistema sociotécnico puede ser motor o receptor de los cambios socioculturales que la rodean.

La cultura organizacional, entendida como un sistema históricamente enraizado de ideas compartidas, suposiciones, creencias, valores y patrones de comportamiento relacionados, que un grupo de personas aprenden a lo largo del tiempo como resultado de sus experiencias colectivas, y que enseñan a los recién llegados como la manera correcta de razonar y comportarse; se crea con la interacción de las variables y en ello inciden factores de orden político, económico, histórico y psicológico, y en consecuencia no es algo estático Baba, Falkenburg y Hill (1997). También ha analizado la relación entre tecnología y cultura. En esta línea de análisis, se esgrimió desde un principio que la cultura organizacional se podía dirigir a objetivos específicos previamente planeados, por lo que dicha cultura se convirtió en algo que las organizaciones poseían y que podía utilizarse (Dávila y Martínez, 1997).

Schein, (citado por Dávila y Martínez, Ídem), Hofstede (1999) y Baba (1997), solo por mencionar a tres de ellos, fueron partidarios de esta idea materialista determinista, donde los artefactos tecnológicos tienen la cualidad de ser los motores del cambio, en el sentido de que su modificación supone un cambio de valores y, a más largo plazo, los supuestos que integran la cultura. No obstante, Baba y sus colaboradores (1997), señalarían que la tecnología por sí misma no puede ser el impulsor principal del cambio cultural, puesto que aquella está considerablemente limitada por la cultura. En México y en otros países se han realizado algunos trabajos que han abordado la relación tecnología y cultura, sin embargo, de acuerdo a Santos y Díaz (2003 en Santos, Josefa, Ídem) uno de los problemas principales es que ha habido una confusión entre cultura y dispositivos habituales, lo que ha impedido identificar la capacidad o disponibilidad hacia la innovación tecnológica de estas unidades organizacionales.

Santos y Díaz (Ídem), manifiestan que expresiones como “por una cultura del agua”, “por una cultura del ahorro”, “por una nueva cultura laboral”, “por una nueva cultura tecnológica”, dan por supuesta una relación -esquemática y falsa-, entre cultura y comportamientos: si se modifica la cultura entonces los comportamientos cambiarán en el mismo sentido. Se propone en estas expresiones una relación de causalidad unidireccional de una a los otros. Al atenderlas con más detalle se encuentra que en realidad más que referirse a la cultura aluden, las dos primeras, al desarrollo e inculcación de hábitos y actitudes: al hábito de un uso racional del agua y al hábito de ahorrar recursos económicos. Las otras dos expresiones remiten a la implantación y operación de normas y nuevas formas organizacionales que regulen las relaciones obrero-patronales y una actitud positiva hacia las nuevas tecnologías.

Del mismo modo que la relación entre creencias y acciones, la de cultura y comportamientos no es, no puede ser siempre, simétrica. Así como no se pueden inferir creencias a partir de acciones en todos los casos, tampoco se puede concluir que quienes tienen los mismos comportamientos comparten entonces la

¹ Se entenderá por tecnología al conjunto de conocimientos, habilidades y materiales necesarios para modificar el orden de algún conjunto de formas de energía o para lograr una conversión de energía (Adams, 1983: 31, en Santos, Josefa, coordinadora, 2003).

misma cultura. Por ello Varela (1997), introduce en este punto la distinción entre cultura y dispositivos habituales como realidades diferentes. Los dispositivos habituales se refieren “a comportamientos habituales, no casuales, pues el interés del analista social no está en los actos únicos y esporádicos sino en los comportamientos que de alguna manera siguen pautas” Siguiendo este razonamiento de Díaz y Santos (op. cit.), se considerará que en una organización cuando un trabajador o directivo – dueño ingresa en ella, más que asimilar la cultura organizacional –y de manera inmediata- y comportarse en consecuencia, lo más probable es que su comportamiento esté alineado con la misión y los objetivos de la firma a partir de una decisión estratégica –que le permite desarrollar aptitudes, competencias, hábitos, técnicas-, sin que por ello se requiera como condición *sine qua non* la de incorporar la cultura de la organización.

El Modelo Universitario Minerva (MUM)

Actualmente la educación superior en México está fuertemente influida por fenómenos estructurales de carácter internacional, estos han marcado las políticas educativas que el Estado mexicano impone a las Instituciones de Educación Superior (en adelante IES). Con lo anterior nos referimos a: la globalización, el neoliberalismo y la sociedad del conocimiento. Los fenómenos anteriormente señalados han incidido en la organización y reorganización de la educación superior mexicana a través de políticas educativas instrumentadas por el Estado y que han respondido a las exigencias de organismos educativos y económicos a nivel mundial. Estas políticas han partido de la convicción de que las IES tienen la fuerza real para contribuir exitosamente en la preparación de profesionales e investigadores que demanda el nuevo orden mundial. Dentro de los organismos educativos y económicos que han tenido una mayor incidencia respecto a lo que debe ser el nuevo modelo de educación superior, se encuentra La Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO), EL Banco Mundial (BM), La Organización para la Cooperación y el Desarrollo Económico (OCDE) y el Consejo Internacional para el Desarrollo de la Educación (CIDE)².

En el caso particular de la Benemérita Universidad Autónoma de Puebla, donde la vida académica tenía como su eje rector al Proyecto Fenix, era evidente la necesidad de realizar un análisis que pusiera al descubierto sus debilidades y fortalezas, para de esta forma definir las estrategias necesarias y suficientes que permitieran enfrentar con éxito las amenazas y las oportunidades del nuevo orden mundial, nacional y local. Resultado de este análisis, en 2007 empezó a construirse con la colaboración de toda la comunidad universitaria un nuevo modelo universitario, el Modelo Minerva. El modelo resultante se estructuró a partir de los siguientes elementos: El modelo educativo, la estructura curricular, el modelo de integración social, el modelo de regionalización, la investigación y la gestión y administración. Atendiendo específicamente a la propuesta de la estructura curricular para el nivel superior, ésta en el plano tecnológico enfatiza desarrollo de habilidades en el uso de la tecnología, la información y la comunicación, así como la educación para la investigación y la adquisición de lenguas extranjeras. Lo cual se refuerza en las llamadas unidades didácticas y en los llamados ejes transversales, donde una vez más se señala la importancia del desarrollo de habilidades en el uso de la tecnología, la información y la comunicación y de la educación para la investigación.

En esta serie de aspectos mencionados, es de destacar la importancia que se otorga al desarrollo de habilidades para el uso de las TIC'S, en los estudiantes, pero que en “automático” impactaba en los profesores. Sobre todo, en el entendido y como dentro de la misma propuesta del MUM se reconocía: *“Cualquier reforma de los planes y programas solamente puede realizarse a través de las decisiones de los profesores involucrados en cada programa educativo. La responsabilidad en el aprendizaje de los estudiantes corresponde al conjunto de profesores que participa en cada programa, quienes tendrán que tomar las decisiones pertinentes para garantizar un aprendizaje de calidad. Las reformas tendrán al*

Modelo Universitario Minerva como referencia o guía, pero las decisiones prácticas que de ahí se derivan, deberán ser tomadas por los directamente involucrados en el proceso de enseñanza-aprendizaje". A lo cual habría que agregar la necesaria capacitación que el MUM exigía a los docentes, lo que desde luego también se reconocía como una prioridad. *"Será de gran importancia la creación de un nodo Institucional de Formación y Capacitación Universitaria que atienda las necesidades derivadas del modelo en los principales actores de la vida universitaria: docentes, directivos y administrativos"*. Si a esto se agrega, que además una de las estrategias que se consideraba más importante para ejecutar el modelo en el escenario académico era implantar el concepto de planeación educativa y el trabajo colegiado, el panorama para varias de las unidades académicas no era nada claro. Sobre todo, para aquellas donde el uso de las TIC's, hasta ese momento había sido promovido muy poco. A lo cual habría que sumarle, una planta académica experta pero con varios años a cuestas y por lo mismo con algunos hábitos sobre la práctica docente muy arraigados que se presumía se contraponían con las nuevas exigencias del MUM.

TIC'S En la Educación

La incorporación de las TIC's en los procesos de producción de conocimiento en las instituciones de educación superior, se puede decir, que tiene sus antecedentes en la declaración de Bologna (1999), donde se sentaron las bases para la creación del Espacio Europeo de Educación Superior (EEES) conforme a principios de calidad, movilidad, diversidad y competitividad. La implantación del EEES significó para los docentes y estudiantes modificar sus procesos de enseñanza – aprendizaje mediante el desarrollo de nuevos planes de estudio y el uso de nuevas metodologías docentes. En estas reformas jugaron un papel sumamente importante las TIC's (Bosco, 2005; De Pablos, 2007, en Ferro, Martínez y Otero, 2009) como recursos didáctico, como objeto de estudio, como elemento para la comunicación y la expresión, como instrumento para la organización, gestión y administración educativa, y/o como instrumento para la investigación. De acuerdo a Bartolomé (1997, en Ferro, et al., Ídem), las TIC's vinieron a promover una nueva visión del conocimiento y del aprendizaje afectando a los roles desempeñados por las instituciones y los participantes en el proceso de enseñanza – aprendizaje, a la dinámica de creación y disseminación del conocimiento y a muchas de las prioridades de las actuales inquietudes curriculares. Una de las aportaciones más significativas de las TIC's es la eliminación de las barreras espacio – temporales a las que se ha visto condicionada la educación presencial y a distancia (Cañellas, 2006). Desde esta perspectiva se asume que el aprendizaje se produce en un espacio físico no real (cibespacio), en el cual se tienden a desarrollar interacciones comunicativas mediáticas. Además, ha supuesto un incremento de la capacidad decisional del alumnado sobre su proceso de aprendizaje, al contar con mayores posibilidades para seleccionar y organizar su currículum formativo (Salinas, 1998, 1999). Esta alternativa de formación flexible, encarna el principio de la educación centrada en el estudiante, no basada en el docente.

Como resultado, y esto es lo más importante para el quehacer docente, el profesor acusará implicaciones en su preparación profesional, pues se le va a requerir, en su proceso de formación –inicial o de reciclaje–, ser usuario aventajado de recursos de información. Junto a ello, necesitará servicios de apoyo de guías y ayudas profesionales que le permitan participar enteramente en el ejercicio de su actividad. Continuado con Salinas (2004), subraya lo importante de tener presente que, como cualquier innovación educativa, estamos ante un proceso con múltiples facetas: en él intervienen factores políticos, económicos, ideológicos, culturales y psicológicos, y afecta a diferentes planos contextuales, desde el nivel del aula hasta el del grupo de universidades. El éxito o fracaso de las innovaciones educativas depende, en gran parte, de la forma en la que los diferentes actores educativos interpretan, redefinen, filtran y dan forma a los cambios propuestos. Las innovaciones en educación tienen ante sí como principal reto los procesos de adopción por parte de las personas, los grupos y las instituciones (las cosas materiales y la información son, desde luego, más fáciles de manejar y de introducir que los cambios en actitudes, prácticas y valores humanos). Actualmente, muchas instituciones de educación superior, aunque desde luego, con resultados distintos, han tratado de modificar sus modelos educativos e incorporar en la cotidianidad de los procesos de educación el uso de las TIC's. Muchos de estos cambios desde luego cabalmente justificados, como el uso de los simuladores,

que permiten en poco tiempo probar diferentes alternativas de solución medianamente complejas o el uso de educación a distancia que permite a mucha gente tener acceso a la educación superior, y ni se diga del uso de las poderosas bases de datos que (en muchos casos subutilizadas) que nos ponen de manera inmediata ante un universo inagotable de información. Sin embargo, también debemos de reconocer que en varios casos la incorporación de las TIC's, la promoción de nuevas propuestas pedagógicas derivadas de las TIC's (en ocasiones sin haber pasado por un proceso de validación o de reflexión sobre sus posibles beneficios) se han incorporado más por esnobismo que por su significancia en la práctica educativa. Solo a manera de un simple ejemplo, cabe preguntarse ¿qué beneficio sustancial puede aportar una serie de slides en power point, en vez de la cátedra tradicional en una charla sobre el concepto de empresa o en una cátedra sobre como plantear un problema de programación lineal o en una práctica médica donde lo que interesa es desarrollar las habilidades propias de un cirujano?

Análisis de los Resultados

El trabajo de campo se realizó en la Facultad de Ciencias de la Comunicación de la Benemérita Universidad Autónoma de Puebla. Esta unidad académica tiene una planta docente compuesta por un total de 43 profesores, de los cuales 18 son hora – clase, 9 son profesores de medio tiempo y 16 son profesores de tiempo completo. Se tomó una muestra de 15 profesores, seleccionados aleatoriamente, a quienes se les aplicó el cuestionario referido en la metodología. El tamaño de la muestra se determinó de la manera siguiente:

$$n = \frac{k^2 pqN}{e^2(N-1) + k^2 pq}$$

Donde:

Tabla 1: Determinación del Tamaño de Muestra

N	k	e	p	q
Tamaño de la población	Nivel de confianza	Error muestral	Probabilidad de éxito	Probabilidad de fracaso
43	95%	10%	50%	50%

El modelo de regresión utilizado fue el siguiente:

$$Y = B_0 + B_1X_1 + B_2X_2 + B_3X_3 + B_4X_4 + B_5X_5$$

Donde las X representan las variables independientes y la Y la variable dependiente como se indica en la tabla 2. La tabla 2 muestra las respuestas dadas por los docentes de la FCC al cuestionario aplicado. También en esta tabla se señala las variables independientes y la variable dependiente. Los resultados de los cuestionarios se capturaron en una hoja de Excel y se aplicó un análisis de regresión múltiple con la finalidad de definir cuales de las categorías mencionadas observaban una relación estadísticamente significativa con el uso de las TIC's en el trabajo docente.

Tabla 2: Respuestas de los 15 Cuestionarios Aplicados

	Barreras No Materiales	Barreras Materiales	Oportunidades	Elementos de Diseño	Años de Antigüedad En La FCC	Uso de las TIC'S En el Trabajo Docente
Docente	X1	X2	X3	X4	X5	Y

Fuente: elaboración propia con datos del trabajo de campo, junio – julio 2014

Las pruebas de significancia incluyeron las hipótesis que se muestran en la tabla 3.

Tabla 3: Hipótesis Nulas y Alternativas

Hipótesis Nulas	Hipótesis Alternativas
Ho: B1 = 0	Ha: B1 ≠ 0
Ho: B2 = 0	Ha: B2 ≠ 0
Ho: B3 = 0	Ha: B3 ≠ 0
Ho: B4 = 0	Ha: B4 ≠ 0
Ho: B5 = 0	Ha: B5 ≠ 0

Fuente: elaboración propia, verano 2014

La tabla 3, muestra las hipótesis nulas y las hipótesis alternativas que se propusieron en las pruebas de significancia. Estas pruebas, son extraordinariamente relevantes para la investigación realizada, pues es a partir de ellas que se determina si existe una relación estadísticamente significativa entre la variables independientes correspondientes y la variable dependiente.

Tabla 4: Estadísticas de la Regresión

Resumen del Análisis de Regresión	
Estadísticas de la regresión	
Coefficiente de correlación múltiple	0.878538783
Coefficiente de determinación R ²	0.771830393
R ² ajustado	0.608852103
Error típico	0.354669078
Observaciones	13

Lo más significativo de la tabla 4 son los valores del coeficiente de correlación y del coeficiente de determinación. El primero de ellos tiene un valor de 0.878538783, lo que indica una intensidad adecuada de la asociación lineal entre las variables independientes y la variables dependiente. El segundo tiene un valor de 0.771830393, lo que permite afirmar que los datos tienen un buen ajuste al modelo de regresión lineal.

Tabla 5: Prueba de Significancia Con el Estadístico “F”

	Grados de Libertad	Suma de Cuadrados	Promedio de los Cuadrados	F	Valor Crítico de F_{α}
Regresión	5	2.978576608	0.595715322	4.735786536	0.032879498
Residuos	7	0.880531084	0.125790155		

Total	12	3.859107692
-------	----	-------------

La tabla 5 muestra el valor del estadístico “F”, que al compararse con el valor crítico de “ F_{α} ” a un nivel de significancia del 5%, nos permite concluir que la regresión entre las variables es significativa. Esto es así porque $F > F_{\alpha}$, por lo cual se rechaza H_0 . En otras palabras, desde una perspectiva global, los coeficientes de las variables independientes tienen cierta influencia en el comportamiento de la variable dependiente.

Tabla 6: Prueba de Significancia Estadístico “T”, y Coeficientes de las Variables Independientes

	Coeficientes	Error Típico	Estadístico T	Probabilidad	Inferior 95%	Superior 95%	Hipótesis

La tabla 6 es complemento de la tabla 5, ella muestra los coeficientes de las variables independientes correspondientes al modelo de regresión lineal utilizado. La importancia de estos coeficientes, radica en que nos dicen cual de las variables independientes tienen una relación estadísticamente significativa con la variable dependiente. Observando la tabla 6 se tiene que la única variable independiente que tiene una relación significativa con la variable dependiente es la variable 4. Esto es así por que al comparar la probabilidad correspondiente a la variable X4, resulta ser menor al nivel de significancia del 5%. Por lo tanto, se rechaza H_0 . Este resultado final confirma que la variable X4, que en el cuestionario aplicado corresponde a lo que se denominó elementos de diseño, y que incluye la intención y comportamiento habitual de los profesores sobre aspectos como: integrar tecnologías en forma transversal en el currículo del programa; incluir asignaturas asociadas al aprendizaje instrumental de la tecnología; incluir asignaturas asociadas al uso metodológico y didáctico de las tecnologías; insertar tecnologías en las cuatro etapas de la formación docente: general, especialidad, profesional y práctica; la factibilidad de la apropiación de tecnologías mediante planes piloto para integrarlas a los planes de formación; desarrollar investigación para el diseño de modelos de observación/evaluación de las aplicaciones y los aportes a la formación inicial docente del uso de la tecnología; contar con asesoría para proyectos de instalación de tecnología para innovar en las estrategias (metodológica, didáctica, etcétera) en nuevos modelos de formación de docentes; y contar con asesoría para el desarrollo de nuevos modelos de formación inicial docente con usos de TIC's como el e-learning.

Tiene un relación estadísticamente significativa con los usos de las TIC's en el trabajo docente.

Llevado esto al plano de la cultura organizacional, se tiene que la opinión vertida por los docentes sobre los ítems mencionados, permite presumir que hay una serie de ideas y actitudes positivas, es decir se observan comportamientos habituales a favor de la incorporación de las TIC's en los planes y programas de estudio de la FCC. Esto ha conducido al uso cotidiano de estas herramientas tecnológicas en sus procesos de producción de conocimiento.

CONCLUSIONES

Retomando el objetivo que guió esta investigación, se puede decir que se encontraron algunos indicios de que algunos comportamientos habituales de los profesores de la FCC, influyeron positivamente en la incorporación de las TIC's en sus procesos cotidianos de producción de conocimiento. Sin embargo, no se encontró una evidencia significativa estadísticamente hablando, sobre aspectos de la cultura organizacional como reconocimiento a los docentes por el uso de las TIC's, el apoyo de la administración central y de la unidad académica en capacitación en TIC's o un convencimiento absoluto sobre los beneficios de incorporar las TIC's en las prácticas docentes. En este sentido, y recordando la propuesta de Santos y Díaz (op. cit.), no es posible afirmar que la cultura organizacional haya obstaculizado o facilitado el uso de las TIC's en los procesos de producción de conocimiento en la FCC. Lo que se puede decir, es como lo señala Varela (op. cit.), que hay algunos comportamientos habituales observados en algunos de los profesores de FCC que promueven y favorecen la adopción de las TIC's en la docencia. Esto se refleja en el uso de la computadora, video proyector, blogs, webs, foros, redes sociales, revistas electrónicas, bases de datos, etcétera.

Un aspecto relevante de esta investigación es que no se encontraron en México investigaciones semejantes, es decir, de tipo cuantitativo. Algo más o menos similar es un trabajo realizado por López (2007) en el periodo 2004 y 2007 en la Facultad de Medicina de la Universidad de Guadalajara, en el que se analizó el uso de las TIC's en el programa de médico cirujano y partero, aplicando un cuestionario a 72 alumnos de diversos ciclos de la carrera. En el ámbito internacional un trabajo semejante es el de Park, Ribière y Schulte (2004) quienes intentaron probar si había una correlación positiva entre la implementación exitosa de las tecnologías de gestión del conocimiento y los atributos culturales (confianza, compartir información libremente, trabajo en equipo y desarrollo de amistades en el trabajo) para esa organización. Finalmente, hay que subrayar, coincidiendo con algunos de los hallazgos de Park, Ribière y Schulte (Ídem), que con un simple cuestionario no es posible dar cuenta de la relación TIC's y cultura organizacional, es necesario agregar a todo esto una metodología cualitativa que pudiera incluir la historia de la organización, así como aplicar un cuestionario similar a directivos y estudiantes.

RESUMEN

La investigación, tiene como objeto analizar el proceso de validación electrónica del pedimento como elemento previo al despacho aduanero en el comercio exterior. Donde los importadores, exportadores, y agentes aduanales emplean un sistema electrónico aduanero; amparando las mercancías mediante una declaración denominada pedimento. Éste tiene que pasar por un proceso de verificación. La falta de infraestructura, equipo y capacitación traen consigo diversos factores que no permiten agilizar los procesos aduaneros. El puerto de Manzanillo se coloca como el puerto de mayor flujo de mercaderías en el pacífico mexicano, el uso de sistemas electrónicos de validación da certeza y hacen fluir el intercambio de información entre los importadores, exportadores, agentes aduanales y la autoridad aduanera. La presente investigación busca conocer los efectos derivados de la validación electrónica de las operaciones de comercio exterior. Para la realización de la investigación se analizó la información documental y de campo visitando a los agentes aduanales y asociaciones, así como importadores, exportadores y sus representantes. Esta investigación se realizó con el firme propósito de conocer las áreas de oportunidad y proponer mejoras a los usuarios de la validación electrónica en las operaciones de comercio exterior.

PALABRAS CLAVE: Comercio Exterior, Validación, Importador, Exportador, Pedimento

ELECTRONIC VALIDATION AND IT'S IMPACT ON FOREIGN TRADE OPERATIONS ON MANZANILLO, COLIMA, MEXICO

ABSTRACT

The research aims to analyze the process of electronic validation of goods declarations as a previous element in foreign trade operations. Where importers, exporters and customs brokers, employ an electronic system on customs authority; supporting through the goods declaration. This document has to go through a verification process. Inadequate infrastructure, computer system and training, bring different factors that prevent streamline customs processes. The port of Manzanillo is known as the best port in the Mexican Pacific on containers movement, the use of electronic systems in validation gives certainty and information exchange between importers, exporters, customs brokers and customs authority. This research seeks to understand the effects of electronic validation of foreign trade operations. For this research, we applied surveys, interviews visiting customs agents and associations as well as importers and exporters and their representatives even field information, all the information was analyzed. This research was conducted with the firm intention of knowing the opportunity areas and with the results, propose improvements to the electronic validation users on foreign trade.

INTRODUCCIÓN

El Puerto de Manzanillo, Colima es el número uno a nivel nacional en el manejo de contenedores de diversas mercancías, y realiza un significativo volumen de operación en cuanto a despachos aduaneros de mercancías que provienen de diversas partes del mundo, el cual por lo anterior se posiciona dentro de los puertos más importantes del mundo, situándose en el cuarto lugar dentro del ranking de puertos de contenedores de América Latina y el Caribe 2013 de la CEPAL, posición que ha ganado con esfuerzo y dedicación, para la mejora continua de toda la comunidad portuaria. Debido al gran movimiento de mercancías que se realizan en el Puerto de Manzanillo, Colima, y las fallas que se suscitan en los despachos aduaneros, nace la necesidad de dar a conocer los motivos por los que las operaciones de comercio exterior sufren de demoras y gastos conexos al tardar en ser despachadas para llegar a su destino final. Tomándose en cuenta que se utilizan ciertos sistemas electrónicos para el despacho aduanero de mercancías que se importan a nuestro país y que exportan desde el mismo, se pretende el estudio de los mecanismos de validación electrónica y para esto, es necesario buscar las principales causas de las interrupciones que se dan en la elaboración de un despacho electrónico exitoso. El objetivo general de esta investigación es definir los efectos que se deriven de utilizar el sistema de validación empleado por las autoridades aduaneras identificando los motivos por los cuales se generan dichos efectos para así proponer acciones de mejora que permitan agilizar el despacho aduanero.

El puerto de Manzanillo ubicado en el estado de Colima, es considerado como puerto de clase mundial y a su vez el puerto número uno en movilización de carga contenerizada a nivel nacional, este posicionamiento se ha fortalecido gracias a la participación conjunta de los distintos actores del comercio exterior, quienes contribuyen con sus operaciones de una manera más ágil dentro del despacho aduanero de las mercancías, lo cual se puede apreciar desde el inicio de una operación de comercio exterior con la participación de un Agente Aduanal, quien es aquella persona física autorizada por la Secretaría de Hacienda y Crédito Público, mediante una patente para poder llevar a cabo el despacho de mercancías de comercio exterior, el cual, es contratado por un importador o exportador para que en su nombre y representación dirija dicho proceso, éste proceso requiere tener veracidad de la información asentada en los documentos correspondientes para el despacho aduanero, esto motivo la autorización por parte del servicio de administración tributaria a las confederaciones de agentes aduanales así como a las asociaciones nacionales de empresas que utilizan los servicios de apoderados aduanales para prestar los servicios de prevalidación electrónica lo cual consiste en comprobar que los datos asentados en el pedimento, estén dentro de los criterios sintácticos, catalógicos, estructurales y normativos antes de presentar el pedimento validado definitivamente ante la aduana, para dar seguimiento con el proceso de validación el cual consiste en la verificación y aprobación de la información transferida por la empresa prestadora del servicio de prevalidación. (Trejo Vargas, 2006, pp. 219–226)

REVISIÓN LITERARIA

De conformidad con lo previsto por el artículo 16-A de la ley aduanera, la prevalidación consiste en la autorización otorgada por parte del servicio de administración tributaria, a favor de las confederaciones de agentes aduanales y a las asociaciones nacionales de empresas que utilicen los servicios de apoderados aduanales para que comprueben que los datos asentados en el pedimento estén dentro de los criterios sintácticos, catalógicos, estructurales y normativos y acrediten su solvencia moral y económica, así como estar al corriente del cumplimiento de sus obligaciones fiscales en los términos que establezca el reglamento de la propia ley aduanera. En efecto, la validación electrónica del pedimento, se refiere a la comprobación constatación de que esos datos sean correctos tanto en su aspecto formal como en su aspecto sustancial, esto es que efectivamente se ajusta en todas y cada una de sus fases a lo señalado por los diferentes ordenamientos legales aplicables, en el entendido de que si estos no se ajustan a estas exigencias, las autoridades aduaneras se encuentran en la posibilidad de sancionar e impedir en su caso las operaciones aduaneras que no cumplan con todos los requisitos arancelarios y no arancelarios.

El agente aduanal deberá realizar el pedimento de importación validándolo primeramente con un prevalidador que corre a cargo de organismos empresariales, en México existe alrededor de 20 entidades prevalidadoras quienes habrán de revisar sistemáticamente y minuciosamente los pedimento, a fin, de que estos no presenten errores; para que el mismo pueda entonces, enviar la operación aduanera hacia el validador de la aduana que está concentrando a través del sistema automatizado aduanero integral (SAAI), esto le permite al Estado, llevar un registro y a su vez autorizar que las mercancías se sometan al despacho aduanero, en concreto, una vez que se ha comprobado no solamente la existencia del cumplimiento de estos catálogos, electrónico, sino que además el importador/exportador cumpla con los requisitos legales para efectuar su operación.

El SAAI revisa la posible obligación de presentar permisos, la tasa arancelaria, la tasa del impuesto al valor agregado y demás contribuciones, a fin de asegurarse, electrónicamente, de que el agente y apoderado aduanal están presentando el despacho aduanero cumpliendo con todos los requisitos. Si el SAAI da firma, es decir si valida el pedimento, entonces el agente aduanal puede proceder al pago de los impuestos al comercio exterior y demás atribuciones como se acordó, se hace en forma electrónica y, entonces, presentar mercancías ante el modulo aduanero.

METODOLOGÍA

Tomando en cuenta que quienes importen o exporten mercancías están obligados a declarar, presentando un documento en las formas oficiales aprobadas por la secretaría de Hacienda denominado pedimento, el cual requiere de la confirmación de los sistemas de la validación y prevalidación para continuar con el proceso del despacho aduanero, dichos sistemas consisten en comprobar que los datos asentados en el pedimento se encuentren dentro de los criterios sintácticos, catalógicos, estructurales y normativos. Con la incorporación de dichos sistemas utilizados en el despacho aduanero se estima que se han presentado efectos en las operaciones de comercio exterior.

Por lo anterior, surgen las cuestiones siguientes: ¿Cuáles son los procesos a través de los cuales se prestan los servicios de la validación electrónica de datos de las operaciones de comercio exterior de los agentes aduanales?, ¿Cuáles son las afectaciones que se generan a las operaciones de comercio exterior que realizan los agentes aduanales derivadas de la validación electrónica del pedimento?, ¿Cuáles son los beneficios que se generan a las operaciones de comercio exterior que realizan los agentes aduanales derivadas de la prestación de los servicios de la validación electrónica de datos?, ¿Cuál es la percepción que sobre la prestación de los servicios de la validación electrónica del pedimento tienen los agentes aduanales? ¿Qué acciones de mejora se pueden aplicar para facilitar y agilizar los servicios de la validación y prevalidación en el despacho aduanal? Con los cuestionamientos ya planteados se pretenden, con el apoyo de la investigación, analizar los efectos de la validación y prevalidación en las operaciones de comercio exterior.

La presente investigación tendrá un enfoque mixto, lo que representan un conjunto de procesos sistemáticos, empíricos y críticos de investigación e implican la recolección y el análisis de datos cuantitativos y cualitativos, así como su integración y discusión conjunta, para realizar inferencias producto de toda la información recabada y lograr un mayor entendimiento del fenómeno bajo estudio. (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2010) Lo anterior, en virtud de que por una parte se recolectan y analizan datos para dar respuestas a las preguntas de investigación planteadas, auxiliándose para lo anterior de la estadística simple y las mediciones numéricas. Y por otro lado se obtiene información a través de análisis documentales. Así mismo, se presenta una recolección de datos sin medición numérica para descubrir o afinar preguntas de investigación en el proceso de interpretación. La población de agentes aduanales que promueven el despacho de mercancías en el puerto de Manzanillo, Colima es de 125, tomando como referencia el informe presentado en Diciembre de 2013 por la Asociación de Agentes Aduanales del Puerto de Manzanillo Colima, A.C., (AAPUMAC).

Para determinar el tamaño de la muestra se procedió conforme a la siguiente fórmula:

$n = ?$ n = Muestra o número de encuestas

$N = 12$ N = Tamaño de la población

$Z = .96 + 1 = 1.96$ Z = Coeficiente de nivel de confianza

$P = 50\%$ P = Probabilidad de éxito

$Q = 50\%$ Q = Probabilidad de fracaso

$e = 4.9\% (0.049)^2$ e = Margen de error

$$n = \frac{z^2 \cdot P \cdot Q \cdot N}{(N - 1) e^2 + Z^2 \cdot P \cdot Q}$$

$$n = \frac{(1.96)^2 \cdot (0.5) \cdot (0.5) \cdot 125}{(125 - 1)(.049)^2 + (1.96)^2(0.5)(0.5)}$$

$$n = \frac{3.8416 \cdot 0.5 \cdot 0.5 \times 125}{124 (.0024) + 3.8416 (0.25)}$$

$$n = \frac{120.05}{.2976 + .9604}$$

$$n = \frac{120.05}{1.258}$$

$$n = 95$$

RESULTADOS

De acuerdo a nuestras preguntas de investigación, en su mayoría las agencias aduanales manejan de 20 a 49 operaciones por semana aproximadamente, en mayoría conocen el proceso de los servicios de validación. Considerado los resultados obtenidos en las encuestas, se pudo observar que se generan afectaciones derivadas de la prevalidación en menos del 50% de las operaciones de comercio exterior, considerando que las principales afectaciones son principalmente las fallas en el sistema o que este se encuentre lento y no arroje las firmas, ocasionando pérdida de tiempo y demoras en el despacho. En cuanto al servicio de validación en su mayoría de las agencias se ven afectadas en un 25% de sus operaciones y solo el 58% de los encuestados conoce que las principales afectaciones originadas por: fallas en el sistema por falta de actualización, lo cual ocasiona retrasos o incidencias en el despacho lo que genera se incrementen los gastos por concepto de almacenajes y demoras.

Asi mismo, el 72% de las agencias aduanales que consideran que se obtiene beneficios por este servicio, de los cuales destacan que es una forma de sistematizar la información en relación del particular a la autoridad así como también se disminuye el número de errores generando mayor confiabilidad y más posibilidades de tener un despacho exitoso. Un 78% de las agencias aduanales encuestadas consideran que sistema de validación que se emplea para este servicio es apropiado. De lo anterior se desprende que los usuarios tienen una percepción buena del servicio. Finalmente, dentro de las mejoras propuestas por los encuestados podremos señalar: la actualización tecnológica y de base de datos.

CONCLUSIONES

El fin de esta investigación fue determinar la existencia de efectos de la validación electrónica del pedimento en las operaciones de comercio exterior y así identificarlos. Una vez considerada a una muestra significativa de las agencias aduanales del puerto de Manzanillo, México; como empresas que reciben estos servicios. A través de la información recabada de las encuestas aplicadas en las distintas agencias, se delimitaron los efectos más relevantes en las operaciones con el uso de dichos sistemas electrónicos. Una vez demostrado lo anterior, se obtuvo que el uso de los prevalidadores empleado en las agencias aduanales en el puerto de Manzanillo son una herramienta para la eficacia y rapidez de los despachos de mercancías. Además con el uso del sistema de validación se integran los beneficios al despacho ya que sirve como un

segundo filtro empleado por la autoridad aduanera. Se obtuvo como resultado que los principales beneficios otorgados con estos sistemas es la detección de errores en los datos asentados en los pedimentos, y con se disminuye los procesos realizados en el despacho ya que se tiene conocimiento de los errores y su ubicación así es más fácil corregirlos. También se disminuyen los gastos de almacenajes, demoras y rectificaciones.

Además, la presente investigación nos permitió conocer la percepción de los usuarios los cuales se encuentran satisfechos con el sistema de validación brindada por la autoridad aduanera. Las afectaciones que se generan a las operaciones de comercio exterior que realizan los agentes aduanales derivadas de la prestación de los servicios de la validación electrónica de datos son: las fallas en el sistema, lentitud o saturación del sistema, retrasos en la entrega de resultados de validación; lo que origina ocasionando pérdida de tiempo y demoras en el despacho, las cuales se traducen en afectaciones operativas y en algunos casos en económicas. De la información antes mencionada se brindaran las siguientes recomendaciones para la mejora de los sistemas analizados en nuestro proyecto de investigación las cuales son: actualización tecnológica y de la base de datos de dicho sistema, y en la capacitación de personal aduanero que emplea este servicio; así también brindar asesoría sobre este sistema a los usuarios.

RESUMEN

El presente artículo describe los obstáculos a los que se enfrentan las personas que fueron aseguradas por el Instituto Mexicano del Seguro Social mayores de sesenta años para ejercer su derecho a solicitar una pensión por cesantía en edad avanzada y vejez. Se analizan los artículos que regulan el seguro de pensión por cesantía y vejez conforme a las Leyes del Seguro Social de 1973 y 1997, logrando identificar los artículos que limitan tal derecho. Se describe la situación económica que guarda el Instituto Mexicano del Seguro Social, como limitante que se contrapone y restringe el derecho a la pensión por cesantía y vejez, como el responsable de garantizar tal derecho. También se analiza el cómo influye en los índices de pobreza, la situación de los trabajadores desempleados mayores de sesenta años que carecen del acceso a la seguridad social. Así mismo se culmina realizando un análisis de los principales hallazgos encontrados durante la investigación.

PALABRAS CLAVES: Pensión, Seguro Social, Cesantía en Edad Avanzada y Vejez

OBSTACLES TO WHICH THE INSURED, TO OBTAIN A PENSION FOR UNEMPLOYMENT IN ELDERLY AND OLD AGE, THE SOCIAL INSURANCE IN MEXICO FACE

ABSTRACT

This article describes the obstacles that people who were insured by the Mexican Social Security Institute over sixty years to exercise their right to a pension for unemployment in old age and old age face. Articles governing unemployment insurance and old age pension under the Social Security Acts 1973 and 1997, achieving identify articles that limit such rights are analyzed. The economic situation that keeps the Mexican Social Security Institute, which opposes as limiting and restricting the right to unemployment and old age pension, as responsible for ensuring that right is described. It also discusses the influences how poverty rates, the situation of over sixty unemployed workers who lack access to social security. Also culminates with an analysis of the main findings during the investigation.

KEYWORDS: Pension, Social Security, Unemployment in Aging and Old Age

INTRODUCCIÓN

La correlación que se tiene actualmente entre los diversos obstáculos que impiden a los trabajadores que no se encuentran laborando, ejercer su derecho a una pensión por cesantía en edad avanzada y vejez así como la desigualdad que existe en las leyes del Seguro Social de 1973 y 1997 entre los trabajadores que cotizan y los que no cotizan, impiden en su totalidad el acceso a la seguridad social. En México los sistemas de seguridad social sufren una deficiente actuación al no cumplir con su objetivo principal, el de garantizar una vida digna a los trabajadores y sus beneficiarios. Así mismo las condiciones económicas que vive el país, dificultan aún más a los trabajadores mayores de sesenta años a incorporarse a la población económicamente activa, pues tienen diversos factores en su contra como la edad, la incorporación de los jóvenes al campo laboral y diversas situaciones económicas y desempleo.

Actualmente de acuerdo a cifras del Consejo Nacional de Evaluación de la Política de Desarrollo Social (CONEVAL) existen en México al cierre del año 2012 la cantidad de 71.8 millones de personas que no tienen acceso a la seguridad social, de los cuales 4 millones de personas son mayores de 65 años. De acuerdo a información del Seguro Social existen 7,581,447 personas que cuentan con sesenta años de edad en condiciones de obtener una pensión por cesantía en edad avanzada y vejez, el único inconveniente es que actualmente no tienen un empleo formal y por lo tanto no figuran en los índices de empleo y pobreza del país. Éste grupo de personas no pueden ejercer su derecho a la seguridad social y por lo tanto no ejercen su derecho a obtener una pensión, teniendo como inconveniente el que sus derechos para solicitar la pensión no se encuentran vigentes de acuerdo a lo que se establece en las propias leyes de seguridad social.

Las fuentes consultadas fueron la Ley del Seguro Social de 1973, la Ley del Seguro Social de 1997, El informe de la medición de la pobreza en México del año 2012 presentado por el Consejo Nacional de Evaluación de la Política de Desarrollo Social (CONEVAL), se analizó una nota informativa emitida por el Instituto Mexicano del Seguro Social (IMSS) sobre el impacto financiero que se generaría a las finanzas del instituto de otorgar una pensión por cesantía en edad avanzada al grupo de personas en estudio y también se analizó los informes del IMSS al Ejecutivo Federal y al Congreso de la Unión sobre la situación financiera que guarda el instituto al año 2010.

METODOLOGÍA

La investigación que se realizó es de enfoque cuantitativo, el diseño del estudio es de tipo descriptivo y se realiza un análisis exploratorio sobre los artículos de la Ley del Seguro Social de 1973 y 1997 así como también de la situación económica que guarda el Instituto Mexicano del Seguro Social.

RESULTADOS

Análisis de las Leyes de Seguridad Social

La Ley del Seguro Social de 1973 contempla el seguro de cesantía en edad avanzada y vejez, y define a la cesantía como la situación que se genera en el asegurado que quede privado de trabajo remunerado después de los sesenta años de edad y a la vejez cuando la situación de desempleo se dé después de los sesenta y cinco años de edad. La situación de contingencia por cesantía en edad avanzada y vejez, amparada por la Ley del Seguro Social, obliga al Instituto Mexicano del Seguro Social (IMSS) a otorgar al asegurado las prestaciones siguientes:

Se le otorgara una pensión por cesantía en edad avanzada y vejez, consistente en una cantidad de dinero determinada con base en sus semanas cotizadas.

El asegurado recibirá asistencia médica, ésta se otorgará conforme al seguro de enfermedades y maternidad. El derecho a la asistencia médica será para el pensionado, así como para la esposa y a falta de ésta, la concubina siempre y cuando haya hecho vida marital durante los cinco años anteriores al trámite de pensión, del mismo derecho gozará el esposo de la asegurada que haya sido pensionada o a falta del esposo el concubino, siempre y cuando haya hecho vida marital durante los cinco años anteriores al trámite de la pensión y tenga una situación de invalidez. también tendrán derecho a la asistencia médica los hijos del pensionado o pensionada, siempre y cuando sean menores de dieciséis años o mayores de veinticinco años cuando realicen estudios en planteles del sistema educativo nacional o no puedan valerse o mantenerse por sí mismos, debido a una enfermedad crónica, defecto físico o psíquico, hasta en tanto persista la incapacidad que padecen. Así mismo recibirán asistencia médica el padre y la madre del pensionado siempre y cuando vivan en el hogar de éste y siempre y cuando dependan económicamente también. Las asignaciones familiares y ayudas asistenciales, consisten en ayuda por carga familiar y se concederán a los beneficiarios del pensionado, ésta ayuda consiste en un porcentaje sobre su pensión conforme a lo siguiente: Para la esposa o concubina del pensionado, el 15 por ciento de la cuantía de la pensión.

Para cada uno de los hijos menores de dieciséis años del pensionado el diez por ciento de la cuantía de la pensión Si el pensionado no tuviera esposa o concubina ni hijos menores de dieciséis años se concederá una asignación del diez por ciento para cada uno de los padres del pensionado, si dependieran económicamente de él. Si el pensionado sólo tuviera un ascendiente con derecho al disfrute de asignación familiar, se le concederá una ayuda asistencial equivalente al diez por ciento de la cuantía de la pensión.

Para la Ley del Seguro Social de 1997, existe cesantía en edad avanzada, cuando el asegurado quede privado de trabajos remunerados a partir de los sesenta años de edad y vejez a partir de los sesenta y cinco años. Dentro de los requisitos que establece ésta Ley para tener el acceso a una pensión por cesantía en edad avanzada y vejez, menciona que el asegurado debe tener reconocidas un mínimo de Mil doscientas cincuenta cotizaciones semanales. Si no tuviera las cotizaciones semanales requeridas, el asegurado podrá optar por dos situaciones:

*Seguir cotizando hasta cubrir las mil doscientas cincuenta semanas requeridas.
Retirar el saldo de su cuenta individual en una sola exhibición.*

Si el asegurado tuviera un mínimo de setecientas cincuenta semanas, solamente tendrá derecho a las prestaciones en especie del seguro de enfermedad y maternidad que consiste principalmente en la asistencia médico quirúrgica. Las contingencias que ampara la Ley del Seguro Social de 1997, son prácticamente las mismas que se establecen en la Ley de 1973. Es importante mencionar que la Ley del Seguro Social de 1997 establece el otorgamiento de asignaciones familiares y ayuda asistencial al pensionado, pero en la ley no se contempla cuanto recibirá el pensionado por estos rubros, aunado que en la Ley de 1973 si lo establece textualmente. Los asegurados que reúnan el requisito de las mil doscientas cincuenta semanas cotizadas y hayan cumplido los sesenta años de edad, podrán disponer de su cuenta individual con el objeto de disfrutar de una pensión de cesantía en edad avanzada conforme a lo siguiente:

*Contratar una renta vitalicia con la institución de seguros de su elección, siempre y cuando el monto que les sea otorgado sea mayor a la pensión garantizada que más adelante describe.
Efectuar retiros programados con cargo a su cuenta individual.*

Derecho a Pensión Mínima Garantizada Conforme a la Ley del Seguro Social De 1997

La pensión mínima garantizada, se encuentra contemplada en la Ley del Seguro Social de 1997 y es aquella que el Estado Mexicano asegura a quienes reúnan mil doscientas cincuenta semanas cotizadas y cuyos saldos en sus cuentas individuales no sean suficientes para tener una pensión, sus recursos acumulados en su cuenta individual resulten insuficientes ya sea para contratar una renta vitalicia o un retiro

programado que les asegure un disfrute de una pensión garantizada y un seguro de sobrevivencia para sus beneficiarios. El monto mensual de la pensión mínima garantizada, es equivalente a un salario mínimo del Distrito Federal cantidad que se deberá actualizar anualmente conforme al Índice Nacional de precios al consumidor para garantizar el poder adquisitivo de dicha pensión. Los beneficios de la pensión mínima garantizada también se otorgan a los beneficiarios del pensionado en el momento que fallezca, bajo los siguientes términos:

La pensión a la viuda o viudo del asegurado se otorgará en un noventa por ciento sobre la que estuviera gozando el pensionado al fallecer. La pensión del huérfano de padre o madre se le otorgará un monto equivalente al veinte por ciento de la pensión que el asegurado estuviese gozando al fallecer, si el huérfano lo fuera de padre y madre, se le otorgará en las mismas condiciones una pensión igual al treinta por ciento de la misma base. Si no existieran beneficiarios con derecho a pensión, como son la esposa o esposo e hijos, ésta se otorgará a los ascendientes que dependían económicamente del pensionado fallecido por una cantidad equivalente al veinte por ciento de la pensión que el asegurado estuviese gozando al fallecer.

El Gobierno Federal cubrirá la pensión mínima garantizada con sus propios recursos, complementarios a la cuenta individual correspondiente. Cuando se agoten los recursos de la cuenta individual del asegurado, la administradora de fondos para el retiro notificará al instituto para que éste siga otorgado la pensión mínima garantizada. Una vez agotados los recursos de la cuenta individual del asegurado, la pensión por cesantía en edad avanzada será cubierta directamente por el IMSS con recursos que para tal efecto le deba otorgar el Gobierno Federal.

Conservación y Reconocimientos de Derechos Ley de 1973

Los asegurados que dejen de pertenecer al régimen del seguro obligatorio, derivado de que ya no se encuentran en una relación laboral, conservarán los derechos que tuvieron adquiridos para el otorgamiento de pensiones, entre ellas la pensión por cesantía en edad avanzada y vejez, y por lo tanto tendrán derecho a que se les reconozcan sus semanas cotizadas, por un periodo igual a la cuarta parte del tiempo cubierto por sus semanas cotizadas, éste periodo se contará a partir de la fecha de su baja como trabajador asegurado. Así mismo el asegurado que haya dejado de estar sujeto al régimen obligatorio del seguro social y reintgrese a laborar, se le reconocerán a su reintgreso sus semanas cotizadas conforme a lo siguiente:

Si el asegurado interrumpió el pago de sus cotizaciones por un periodo no mayor de tres años, se le reconocerán inmediatamente todas sus cotizaciones semanales en el momento de su reintgreso. Si las cotizaciones se interrumpen por un periodo mayor de tres años pero no de seis, se le reconocerán sus cotizaciones cuando a partir de su ingreso haya cubierto como un mínimo de veintiséis semanas de cuevas cotizaciones. Si el asegurado reintrega después de seis años de haber interrumpido sus semanas cotizadas, éstas se reactivarán cuando reúna cincuenta y dos semanas reconocidas en su nuevo aseguramiento.

Conservación y Vigencia de Derechos Ley de 1997

En cuanto a la conservación y vigencia de derechos para efectos de solicitar una pensión por cesantía en edad avanzada y vejez, la Ley de 1997 no contempla nada al respecto, solo bastará que el asegurado reúna las mil doscientas cincuenta semanas cotizadas, tenga los recursos suficientes en su cuenta individual para el otorgamiento de una renta vitalicia y el seguro de supervivencia y además tenga cumplidos los sesenta años de edad o sesenta y cinco años respectivamente. En el caso de no tener los recursos necesarios en la cuenta individual para el otorgamiento de la pensión por cesantía o vejez, tendrá derecho a solicitar la pensión mínima garantizada.

Conforme a lo que se ha analizado, el asegurado que desee tramitar su pensión por cesantía en edad avanzada y vejez, puede hacerlo conforme a lo establecido por la Ley del Seguro Social de 1973 o 1997, así se señala en el artículo Tercero transitorio de la Ley del Seguro Social de 1997 en el cual se menciona

que los asegurados inscritos con anterioridad a la fecha de entrada en vigor de ésta Ley, así como sus beneficiarios, al momento de cumplirse, en términos de la Ley de 1973 que se deroga, los supuestos legales o el siniestro respectivo para el disfrute de cualquiera de las pensiones, podrán optar por acogerse al beneficio de dicha Ley o al esquema de pensiones establecido en la ley de 1997. Así mismo en su artículo cuarto transitorio establece que el Instituto Mexicano del Seguro Social estará obligado a calcular estimativamente el importe de la pensión que le tocaría recibir el asegurado para cada uno de los regímenes a efecto que puedan decidir lo que a sus intereses convenga.

Obstáculos Para Tramitar la Pensión Por Cesantía En Edad Avanzada y Vejez

Se han analizado las dos leyes del Seguro Social con respecto al seguro de cesantía en edad avanzada y vejez, cada una de las Leyes establece ciertos requisitos para que los asegurados puedan solicitar su pensión. De acuerdo a cifras de la Dirección de Incorporación y Recaudación del Instituto Mexicano del Seguro Social, existen actualmente 7,581,447 sujetos que cuentan con sesenta años de edad y reúnen las quinientas semanas cotizadas, requisito establecido en la Ley de 1973, los cuales podrían ser sujetos del beneficio de una pensión por cesantía establecido en dicha Ley. Conforme al artículo tercero transitorio de la Ley del Seguro Social de 1997 los asegurados inscritos con anterioridad a la fecha de entrada en vigor de la Ley de 1997 podrán optar por acogerse a los beneficios establecidos en dicha Ley o al esquema de pensiones establecidos en la Ley de 1973. De ésta situación se deriva que el asegurado puede escoger bajo qué Ley desea para que se le determine su pensión.

Como ya se ha mencionado existen personas que conforme a la Ley de 1973 cuentan con quinientas semanas cotizadas pero por alguna razón al cumplir los sesenta años de edad no se encontraban cotizando al seguro social, por lo que ello conlleva a que sus derechos no se encuentren vigentes y por lo tanto no reúnan lo contemplado por el artículo 182 referente a la conservación y reconocimientos de derechos; ya que de acuerdo a este artículo solo conservarán vigencia sus derechos por un periodo igual a la cuarta parte del tiempo cubierto por sus cotizaciones semanales contadas a partir de la fecha de su baja. En el caso de un asegurado que cotizó quinientas semanas solo conservará la vigencia de sus derechos durante aproximadamente dos años y medio, si durante este periodo no ejerce o solicita su derecho a la pensión por cesantía no podrá hacer su solicitud de pensión puesto que no se encuentran vigentes sus derechos respecto a sus semanas cotizadas. Si la interrupción de sus cotizaciones no excede de seis años, se reanudarán sus derechos a partir de las veintiséis semanas nuevas cotizadas. Si ha dejado de laborar por más de seis años tendrá que cotizar por lo menos cincuenta y dos semanas para reactivar sus derechos. Es así que necesariamente el asegurado que tiene cumplidos los sesenta años o sesenta y cinco años de edad y reúne las 500 semanas cotizadas pero no se encuentran vigentes sus derechos, no podrá tramitar su pensión por cesantía en edad avanzada y vejez, conforme a la Ley del Seguro Social de 1973.

Tendrá que ingresar a laborar, en donde lo inscriban en el Seguro Social y así empezar a cotizar para que se reactiven sus derechos de semanas cotizadas. Ésta situación se complica a un más derivado de los índices de desempleo que se tiene actualmente en México, de acuerdo a información del Instituto Nacional de Estadística y Geografía (INEGI) existen actualmente 2,746,235 personas desempleadas. Así mismo la Ley del Seguro Social de 1997, como se ha analizado anteriormente, establece que uno de los requisitos para lograr obtener una pensión por cesantía en edad avanzada y vejez es menester reunir mil doscientas semanas cotizadas y haber cumplido los 60 años de edad o sesenta y cinco años respectivamente, por lo que el grupo de asegurados que empezó a cotizar con la Ley de 1973 pudieran no reunir el requisito de mil doscientas cincuenta semanas cotizadas, y por lo tanto no tienen ningún derecho a percibir una pensión bajo la Ley de 1997, quedando con ello aún más desprotegido con ésta ley para efectos del derecho a la seguridad social.

CONCLUSIONES

Tanto la Ley del Seguro Social derogada (Ley 73) como la Ley del Seguro Social publicada el 21 de diciembre de 1995, y que entro en vigor el 1° de julio de 1997 (Ley 97), establecen supuestos y requisitos para el caso de asegurados que dejen de cotizar al régimen del seguro obligatorio y reingresen a éste, a fin de que sus derechos adquiridos a pensiones se conserven y se reconozcan. Sin embargo, cabe precisar que en la Ley de 1973, las disposiciones sobre conservación de derechos adquiridos para los sujetos que dejaron de pertenecer al régimen obligatorio y los requisitos para el reconocimiento del tiempo cubierto por sus anteriores cotizaciones, corresponden a las pensiones en los seguros de invalidez, vejez, cesantía en edad avanzada y muerte, en el caso de la Ley 97, dichas disposiciones corresponden únicamente a las pensiones en el seguro de invalidez y vida.

De los preceptos relativos al régimen de pensiones previsto en la Ley de 1997, así como del régimen de conservación y reconocimiento de derechos previsto en la Ley de 1973 como en la Ley de 1997 se deriva lo siguiente: Primero, que los asegurados inscritos con anterioridad a la Ley de 1997, tienen el derecho de optar entre el régimen de pensiones establecido en la Ley derogada de 1973 o bien optar por el nuevo sistema de pensiones con base en la Ley de 1997. Segundo, Los asegurados que cotizaron bajo el régimen contemplado en la Ley de 1973, para poder ejercer su derecho a una pensión entre uno u otro régimen, necesariamente deben estar inscritos en el régimen obligatorio o bien encontrarse dentro el periodo de conservación de derechos. Tercero, los asegurados que cotizaron bajo el régimen de la Ley de 1973 que se encuentran dados de baja en el régimen obligatorio y hubiera expirado el periodo de conservación de derechos pensionarios para que se les reconozca el tiempo cubierto por sus cotizaciones anteriores, necesariamente deben empezar a cotizar por un periodo de 26 o 52 semanas. Como se ha analizado se afecta negativamente a los asegurados en el IMSS que actualmente ya no se encuentran cotizando, encontrándose simultáneamente bajo los siguientes supuestos:

Son asegurados que estuvieron cotizando al seguro social Son asegurados que cotizaron en los términos de la Ley de 1973 la cual se encuentra derogada. Cumplen las quinientas semanas cotizadas necesarias para obtener una pensión por cesantía bajo la Ley de 1973. Dejaron de pertenecer al régimen obligatorio al quedarse sin empleo. Expiró el periodo de conservación de derechos que adquirieron conforme a la Ley de 1973. Actualmente se encuentran en situación de desempleo y sin la posibilidad de reingresar al régimen obligatorio que les posibilite el reconocimiento de sus derechos a una pensión conforme a la Ley de 1973.

Por consiguiente los asegurados que hayan cumplido los sesenta años y se encuentren bajo los supuestos antes mencionados no podrán gozar del derecho a una pensión por cualquiera de los regímenes pensionarios que establecen ambas Leyes y por consecuencia tampoco podrán gozar en su caso de una indemnización o devolución de sus aportaciones realizadas cuando cotizaban. De mantenerse el articulado de las Leyes analizadas, como lo están al día de hoy, significaría que se les estaría negando el derecho a un ingreso digno por pensión a un gran número de personas que en su momento cotizaron al seguro social, cuyo ingreso sería necesario para hacerle frente a todos los problemas económicos y de salud que se generan en la vejez tanto para ellos como para sus beneficiarios.

RESUMEN

La situación económica global enfrenta cambios, economías desaceleran su crecimiento y otras avanzan y consolidan su posicionamiento en el mundo, México como economía emergente, ha apostado parte de su crecimiento a la Industria Maquiladora de Exportación, ésta se ha convertido en uno de los bastiones generadores de Inversión extranjera Directa, generación de empleo y bienestar para las zonas en las que se van posicionando. La frontera Norte de nuestro país ha ido desarrollado sus capacidades productivas por medio de la IMMEX, por lo que es necesario realizar un análisis acerca de los ingresos obtenidos del mercado nacional y el mercado extranjero, tomando en cuenta bases de datos oficiales y análisis estadísticos que nos permiten evidenciar el posicionamiento de los estados de la frontera norte y las aportaciones de los ingresos provenientes del mercado nacional y el mercado extranjero, con el fin de conocer el impacto de la industria maquiladora en este rubro y su desarrollo en cada estado.

PALABRAS CLAVE, Industria, Frontera, Ingresos

BEHAVIOR OF INCOME OF DOMESTIC AND FOREIGN MARKET IN IMMEX OF THE BORDER NORTHERN OF MEXICO

ABSTRACT

The global economic situation facing changes , economies slow their growth and other moving in and consolidate its position in the world , Mexico as an emerging economy , has staked part of its growth to the Manufacturing Industry, it has become a pillar generators direct foreign investment , job creation and prosperity for the areas where they are positioning . The northern border of our country has developed its production through IMMEX capabilities, so it is necessary to make an analysis of the revenue from the domestic market and foreign market, taking into account official databases and statistical analysis allow us to establish a clear criterion of the positioning of the states of the northern border and the contributions of revenues from the domestic market and overseas market. Also knowing the impact of the industry in this category and its development in each state.

KEY WORDS: Industry, Border, Income

INTRODUCCION

La economía global ejerce presión al interior de los países, las economías emergentes se ven forzadas a atraer mayor inversión extranjera directa para generar beneficios económicos y sociales al interior de cada una de ellas; para México la Industria Maquiladora de Exportación y de Servicios (IMMEX) ha

representado la oportunidad de lograrlo, a partir de la década de los años 60, México se vio forzado a cambiar su economía cerrada, centrada en la sustitución de importaciones por una economía que poco a poco abriría la puerta a nuevos mercados. La crisis de mano de obra a costos bajos en el mundo provocó que las empresas transnacionales (de capital japonés y estadounidense) salieran de sus países de origen con la finalidad encontrar lugares que les permitieran reducir los costos de producción e incrementar su capacidad de distribución.

La IMMEX ha sido evaluada de distintas maneras, por el personal ocupado, los salarios que genera, las exportaciones que aporta a la balanza comercial, entre otros aspectos, sin embargo es necesario conocer que ingresos provenientes del mercado extranjero y del mercado nacional tiene cada uno de los estados de la frontera norte, para lograrlo se hizo una búsqueda de información estadística en bases de datos oficiales que nos permitieron establecer criterios para posicionar a cada estado de la frontera norte en la generación de ingresos. Este artículo comprende información general del nacimiento de la frontera norte, la importancia de la IMMEX en México, en el apartado de metodología se profundiza acerca de los datos estadísticos y bases de datos utilizadas que permiten llegar a las conclusiones generales de la investigación. Para orientar la investigación se generó la siguiente pregunta de investigación: ¿Qué estado de la República mexicana ubicado en la frontera norte genera el índice de ingresos más significativo provenientes del mercado extranjero y del mercado nacional?

REVISIÓN DE LITERATURA

Antecedentes de la Maquiladora En México

Una definición de maquila o Empresa Maquiladora de Exportación (EME) la concibe como una entidad que ensambla, manufactura, procesa o repara materiales temporalmente importados por el país receptor para su eventual reexportación o envío a su país de origen (Mendiola, 1999)

En México la Industria Maquiladora de Exportación, nace a mediados de la década de los sesenta, como una respuesta económica al encarecimiento de la mano de obra que tuvo lugar en Japón y Estados Unidos, en el año de 1965 se establece la Política de Fomento a la Industria Maquiladora de Exportación en el norte del país; con la instrumentación del Programa de Industrialización de la Frontera Norte (PIF), por parte del Gobierno Federal. (INDEX, Consejo Nacional de la Industria Maquiladora y manufactura de Exportación, 2014)

El PIF fue producto del desarrollo de las zonas de procesamiento de exportaciones (ZPE), la tendencia hacia la manufactura en el exterior durante los años sesenta fue una respuesta a la disminución de la ganancia de las plantas manufactureras en los países industrializados. La idea de ubicar algunos procesos manufactureros en el extranjero, en zonas donde los costos de mano de obra fueran menores, tenía el propósito de aumentar la rentabilidad de las operaciones. En términos generales, las ZPE realizaron actividades de ensamblaje para las corporaciones transnacionales como parte del entonces incipiente fenómeno de la producción compartida mundial o internacional. Esta práctica de dividir la producción manufacturera en distintos países surgió en respuesta a las diferencias en los salarios entre los países industrializados y los menos desarrollados. También se consolidó a partir de las innovaciones tecnológicas que dieron lugar a considerables reducciones tanto en los costos como en los tiempos del transporte y las comunicaciones. (Dowglas, 2003)

El programa permitía la importación de materias primas y componentes originales, así como también los bienes de capital, todos estarían libres de impuesto a la importación, la única actividad autorizada era el ensamble de materias primas e insumos y la posterior reexportación como productos terminados, gozarían de este beneficio siempre y cuando permaneciera en zonas francas, mientras estuvieran en México. (Dowglas, 2003)

Con este programa, las empresas maquiladoras se responsabilizan de crear fuentes de empleo, vigorizar la balanza comercial del país a través de una mayor aportación neta de divisas; contribuir a una mayor integración industrial de valor agregado, y al fortalecimiento de las cadenas productivas regionales; generar comunidades productivas y de aprendizaje mediante la capacitación de los trabajadores; así como impulsar el desarrollo y la transferencia de tecnología en la país; y por supuesto, incrementar la competitividad de la industria en el entorno nacional e internacional. (INDEX, Consejo Nacional de la Industria Maquiladora y manufactura de Exportacion, 2014)

En 1966, se formaliza el programa y se construye el primer parque industrial en Ciudad Juárez, Chihuahua, el cual atrajo una empresa maquiladora dedicada a la manufactura de televisores; en 1968 se funda el segundo parque en el municipio de Nogales, Sonora, con una empresa cuyo giro de actividad fue la manufactura de plásticos.

Para 1973, surgieron más parques industriales a lo largo de la frontera norte de México, destacando el estado de Baja California con 102 empresas distribuidas en los municipios de Ensenada, Mexicali, Tecate y Tijuana; en orden de importancia le siguió el estado de Tamaulipas con 56 industrias, distribuidas en los municipios de Nuevo Laredo, Reynosa y Matamoros. En Sonora se instalaron 40 empresas; además del municipio de Nogales se incorporaron Agua Prieta y San Luis Río Colorado, y en el estado de Coahuila se instalaron 12 industrias en los municipios de Acuña y Piedras Negras. (INDEX, Consejo Nacional de la Industria Maquiladora y manufactura de Exportacion, 2014).

La frontera Norte y la industria de Maquiladora:

La concentración de la manufactura en el centro del país y la sustitución de importaciones era una estrategia de protección en México, para hacerle frente a la competencia externa. El principal centro manufacturero se concentró en torno al Distrito Federal. Otros centros, muy localizados y de menor tamaño relativo, se ubicaron en las ciudades de Guadalajara y Monterrey. Asimismo, es necesario mencionar que en el centro del país hubo una importante diversificación de la industria manufacturera que se orientó principalmente a satisfacer las necesidades del mercado interno. (Mendoza, 1999)

Las industrias con las tasas de crecimiento promedio anual más aceleradas en la región fronteriza fueron textiles, instrumentos de precisión, confitería, enseres menores y las industrias de equipo de informática. Cabe destacar que mientras algunas industrias de la región tuvieron un considerable crecimiento, sus similares en el resto del país retrocedieron. Tal es el caso de las industrias de instrumentos de precisión, de autopartes, de muebles metálicos y la de maquinaria y equipo, entre otras. Estos indicadores demuestran una notable restructuración de las tendencias del empleo en México en el período. Más aún, aunque la región norte presentó una expansión importante en ciertas industrias orientadas al mercado interno, la gran mayoría de éstas se relaciona con las actividades de las empresas transnacionales orientadas a la exportación. (Mendoza, 1999)

México se ha ido posicionando satisfactoriamente en el mercado internacional, debido a las estrategias implementadas en la operación de las empresas maquiladoras, su nivel de competitividad ha ido evolucionando en el transcurso de los años. Las exportaciones de bienes se han diversificado logrando ubicar al sector manufacturero dentro de las actividades que generan más divisas al país por sus exportaciones y la gran variedad de productos que se producen.

De acuerdo a lo señalado por Dussel (2003, cit. En Gómez, 2004), el desarrollo de la maquila en México está sustentado en tres elementos principales: La proximidad geográfica con Estados Unidos, los bajos costes salariales Mexicanos y el favorable régimen fiscal aplicado a la actividad maquiladora, que le permitía eludir el pago de aranceles a la importación en (México y Estados Unidos) del IVA y del impuesto sobre la renta. Según los datos de la Secretaría de Economía en México (SECON, 2014), El gobierno ha

impulsado a través de los años este sector, con el fin de desarrollar una industria más competitiva y dinámica, así como también se ha propuesto fortalecer los vínculos entre el mercado interno y el externo, permitiendo con ello el desarrollo de cadenas productivas, por lo que será indispensable que la planta productiva nacional tenga acceso a los mejores insumos y maquinaria a nivel mundial, a precios competitivos.

De acuerdo a las cifras del Instituto Nacional de Estadística y Geografía INEGI (Enero Noviembre del 2014) en la balanza comercial de México las exportaciones que generó el sector manufacturero en el año 2014, ascienden a 307,115.09 millones de dólares, esto posiciona a este sector en el primer generador de exportaciones de México. A partir de la firma del Tratado de Libre Comercio de América del Norte (TLCAN), la manufactura y por ende las empresas maquiladoras de exportación son una fuente generadora de divisas para el país, sin excluir el número de empleos que ha generado sobre todo en los estados fronterizos y la capacitación constante al personal que labora en ellas. La consolidación de este tipo de actividades en el mundo, ofrece a los países en desarrollo una buena opción para que a través de las operaciones de subcontratación internacional, sus productos compitan en los mercados externos. La dinámica que ha mostrado la Industria Maquiladora de Exportación en México, obedece a la demanda creciente de los mercados externos, y a los resultados de la política económica interna, que ha impulsado la creación de enclaves industriales para la exportación; asimismo, esta dinámica se ha visto reforzada por la instrumentación de un programa fiscal, aduanero y administrativo. (SECON, 2014) La actividad maquiladora de exportación en el país ha adquirido importancia, puesto que ha permitido a México tener un desarrollo tecnológico, una participación creciente en los mercados internacionales y una capacitación constante para los trabajadores que se emplean en este tipo de industrias.

Industria Manufacturera, Maquiladora y de Servicios de Exportación (IMMEX)

A finales de 2006 la Secretaría de Economía instrumenta el Programa de la Industria Manufacturera, Maquiladora y de Servicios de Exportación (IMMEX), con el cual las unidades económicas que cumplen con los requisitos para aprovechar las prerrogativas que ofrece, obtienen autorización para elaborar, transformar o reparar bienes importados temporalmente con el propósito de realizar una exportación posterior y/o brindar un servicio de exportación. El Programa IMMEX integra a los extintos Programas para el Fomento y Operación de la Industria Maquiladora de Exportación, y el de Importación Temporal para Producir Artículos de Exportación (PITEX), que reunían a un importante grupo de unidades económicas cuya actividad generaba un monto significativo de divisas para el país.

Este programa es un instrumento de fomento a las exportaciones, mediante el cual se permite a los productores de mercancías destinadas a la exportación o empresas que prestan servicios destinados a la exportación, importar temporalmente diversos bienes (materias primas, insumos, componentes, envases y empaques, así como maquinaria y equipo) para ser utilizados en la elaboración de productos de exportación, sin cubrir el pago del impuesto general de importación, del impuesto al valor agregado y de las cuotas compensatorias, en su caso. (SECON, 2014) A fin de gozar de los beneficios de un programa IMMEX, la empresa deberá registrar ventas anuales al exterior por un valor superior a 500,000 dólares de los Estados Unidos de América, o su equivalente en otras divisas, o bien, facturar productos de exportación cuando menos por el 10% de sus ventas totales. En la tabla 1 se muestra el monto de los ingresos alcanzados por los establecimientos con Programa IMMEX, éstos se ubicaron en 325,978 millones de pesos en el décimo mes de 2014, de los cuales 59.3% correspondió a ingresos provenientes del mercado extranjero y el 40.7% restante lo aportó el mercado nacional. Del total de los ingresos, el 95.3% se generó por actividades manufactureras y el 4.7% por las no manufactureras.

Tabla 1: Ingresos de Establecimientos del Programa IMMEX

**INGRESOS DE LOS ESTABLECIMIENTOS
CON PROGRAMA IMMEX DURANTE OCTUBRE 2014^{p/}**
(Millones de pesos corrientes)

Ingresos	2013	2014	Estructura porcentual	
			2013	2014
Totales	299,239	325,978	100.0	100.0
Manufactureros	285,613	310,690	95.4	95.3
No manufactureros	13,626	15,289	4.6	4.7
Mercado nacional	122,477	132,782	40.9	40.7
Mercado extranjero	176,762	193,197	59.1	59.3

En esta tabla se muestran los resultados de los ingresos totales de manufactura, no manufactura, mercado nacional y mercado extranjero en los años 2013 y 2014. Fuente: Instituto Nacional de Estadística y Geografía INEGI, Enero del 2015

El análisis presentado por el consejo Nacional de la Industria Maquiladora (INDEX) llamado: Índice de la Industria Maquiladora y Manufacturera de Exportación BASE-INDEX, muestra que en agosto del 2014, Guanajuato fue el estado que nuevamente presentó el índice más alto, alcanzando un nivel de 171.41, con un crecimiento mensual de 1.9%. Este estado obtuvo tasas de aumento de dos dígitos en cada uno de los componentes del índice, destacando los ingresos provenientes del extranjero con un avance de un 27.2% anual. Por otra parte, el incremento mensual más grande se presentó en el estado de Sonora, entidad que registró un índice de 115.02 puntos en agosto, con un avance mensual de 2.88%, impulsado principalmente por el personal ocupado, el estado con un desempeño más bajo en el índice fue Yucatán, con 76.81 puntos en el mes de agosto, debido a que cada uno de los componentes que conforman el índice presentaron disminuciones. Cabe mencionar que Coahuila fue el estado que tuvo el mayor retroceso en agosto, con una disminución de 5.97%, afectando su posición en el ranking.

Tabla 2: Estados Con Mejor Desempeño En Ingresos Totales

Estados De Mejor Desempeño y Su Participación Como Porcentaje de Ingresos Totales		
Índice base entidad	Índice por 2014	% de ingresos totales Nacionales más Extranjero
Guanajuato	171.41	7.56%
Querétaro	164.52	4.58%
Durango	154.74	0.54%
San Luis Potosí	138	14.50%
Coahuila	138	14.50%

En esta tabla se muestran los estados de la república que obtuvieron los mejores ingresos totales (suma de los ingresos nacionales más extranjeros), se puede observar que solamente un estado de la frontera Norte tiene participación como uno de los más destacados a nivel nacional (Coahuila) Fuente: Base Index, febrero del 2015

En la tabla 3. Se muestran los estados de la república, su tasa de crecimiento en un promedio de 36 meses, así como su escala y proporción de ingresos totales, podemos observar que los estados de la frontera norte se encuentran ubicados en dos secciones, en el apartado B, el cual tiene un índice de crecimiento que varía entre 0.500% - 0.749% se encuentran los estados de Coahuila, Chihuahua, Sonora y Baja California, mientras que en la zona C, con una variación entre 0.250% y 0.499%, se ubican los estados de Tamaulipas y Nuevo León. En el último año, los estados del centro del país: Durango, Guanajuato y Querétaro, se han posicionado como entidades con un promedio de crecimiento en los ingresos totales mayor a uno por ciento, por lo cual se les colocó dentro de la escala A+, mientras que los estados de la Frontera norte como Coahuila, Chihuahua, Baja California y Sonora se posicionan en la escala B (0.500% a 0.749%), Nuevo León es el único estado que se posiciona en la zona C de la escala (0.250% a 0.499%). (INDEX, Consejo Nacional de la Industria Maquiladora y manufactura de Exportación, 2014)

Tabla 3: Tasa de Crecimiento Base Índice 2014

Estado	Tasa de Crecimiento Promedio En 36 Meses	Escala	Proporción de Ingresos Totales
Durango	1.27%	A +	0.57
Guanajuato	1.12%	A +	7.46
Queretaro	1.002%	A +	4.66
San Luis Potosi	0.72%	B	3.05
Coahuila	0.713%	B	13.27
Otras Entidades Federativas	0.708%	B	7.35
Chihuahua	0.650%	B	3.99
Sonora	0.621%	B	4.83
Baja California	0.530%	B	3.53
Estado de México	0.497%	C	10.13
Tamaulipas	0.417%	C	4.41
Veracruz	0.400%	C	2.74
Nuevo León	0.279%	C	15.46
Aguascalientes	0.269%	C	3.65
Jalisco	0.425	D	5.37%
Puebla	0.011%	D	6.84%
Yucatan	-0.121%	D -	0.28%
Distrito Federal	-0.242%	D -	2.40%

Esta tabla muestra el posicionamiento de los Estados de la República Mexicana, por tasa de crecimiento promedio en 36 meses, escala en la que se ubican y proporción de ingresos totales. Fuente: Base Índice, febrero del 2015.

Al interior de la industria mexicana, la manufactura sigue siendo el sector más dinámico que actúa como catalizador de la industria en general. En el mes de noviembre, el sector manufacturero presentó una tasa de crecimiento anual de 5.31% (la más significativa respecto a los demás sectores de la industria en México), y una variación mensual de 0.71%. Asimismo, la construcción experimentó un incremento de 5.03% en relación al mismo mes del año anterior, mientras que la minería exhibió un deterioro en su desempeño, con una disminución anual de 5.71%. Dentro de la industria manufacturera, los subsectores que presentaron un mayor dinamismo respecto al mismo mes del año 2013 fueron la fabricación de prendas de vestir, la fabricación de maquinaria y equipo y la fabricación de accesorios, aparatos eléctricos y equipo de generación de energía eléctrica. Mientras que la industria química y la industria del papel mostraron el mayor deterioro en su desempeño en comparación al mismo periodo del año anterior.

METODOLOGIA

Para desarrollar esta investigación se utilizaron bases de datos y referencias bibliográficas, a fin de sustentarla con las aportaciones de las investigaciones desarrolladas referentes al tema, por ello esta investigación se define como documental, la cual conlleva un procedimiento científico, un proceso sistemático de indagación, así como la recolección, organización, análisis e interpretación de información o datos en torno a un determinado tema. Las fuentes utilizadas fueron consultas bibliográficas, así como

también fuentes impresas en las que se incluyen: revistas, periódicos, artículos y otros documentos. También fuentes electrónicas, tales como revistas y periódicos en línea y páginas Web.

RESULTADOS

Para efectos de la investigación se tomaron en cuenta los datos generados por el INEGI, en un periodo que comprende desde el año 2007 hasta el 2014, este lapso de tiempo comienza en el 2007 ya que es la fecha en la que el instituto nacional de geografía y estadística generó estadísticas con empresas registradas ante el programa PITEX, el cual evolucionó a IMMEX como se ha comentado anteriormente. En este sentido, en el periodo del 2007 al 2014 el estado con mayores ingresos provenientes del mercado nacional es Nuevo León, este estado percibió más ingresos en los años 2007 con el 45% de la participación total de la frontera norte, así como también en el año 2010 con el 44%, el 2011 y 2012 con el 52%, 2013 con 55%, y 2014 con 42% sin embargo dentro del Ranking del consejo Nacional de la Industria Maquiladora, este estado tuvo en un periodo de 36 meses un crecimiento por debajo de los estados de Coahuila, Chihuahua, Baja California y Sonora.

Figura 1: Ingresos Provenientes del Mercado Nacional Por Suministro de Bienes y Servicios

En esta figura se observa la posición de cada uno de los estados que componen la Frontera Norte, en cuanto a los ingresos totales provenientes del mercado Nacional por suministro de bienes y servicios, en el periodo 2007-2014, de acuerdo a la información que genera por fuentes oficiales, las cantidades son Miles de pesos Mexicanos. Fuente: Elaboración propia a partir de los datos de INEGI, febrero del 2014

En un análisis por entidad federativa, se encontró que Coahuila fue el estado que percibió más ingresos anuales en los periodos 2008 y 2009 con un 45% del total de los ingresos de la frontera norte, y se ubicó en el segundo lugar en la atención de ingresos provenientes por el suministro de bienes y servicios del mercado nacional en demás años del periodo objeto de estudio. Chihuahua se posiciona en tercer lugar, mientras mantiene sus ingresos entre el 6 y el 13 % en el periodo, siendo los años 2007 y 2014 los que generaron más ganancias con el 12 y el 13% respectivamente. Mientras tanto Baja California se encuentra en tercer lugar, ya que mantuvo en los años 2010, 2011, 2012, 2013, 2014 solo el 3% de ingresos de la frontera norte, en el año 2007, el 9%, en el año 2008 6% y 2009 el 6%. Sonora ocupa el quinto lugar, sin embargo, es el estado con menores ingresos en el periodo, en los años 2007 al 2010 tuvo ingresos del 1%, en el 2011 y 2012 generó solo el 3%, mientras que en el año 2013 se observa un ligero incremento al 4%, ya para el año 2014 se incrementó al 7%. Tamaulipas se ubica en último lugar, baja sus ingresos en los años más recientes (2012, 2013 y 2014) a tan solo el 2 y el 3%, mientras que en el año 2007 eran del 9%,

2008 8%, 2009 7% y 2010 bajo a 3%. Al referirnos a los ingresos provenientes del mercado extranjero en el suministro de bienes y servicios, la distribución es completamente diferente, ya que el estado de chihuahua es el que mantiene una constante con más del 20% del total de los ingresos en la Frontera Norte.

Figura 2: Ingresos Provenientes del Mercado Extranjero En el Suministro de Bienes y Servicios

En esta figura se observa la posición de cada uno de los estados que componen la Frontera Norte, en cuanto a los ingresos totales provenientes del mercado extranjero en suministro de bienes y servicios, en el periodo 2007-2014, de acuerdo a la información que genera por fuentes oficiales, las cantidades son Miles de pesos Mexicanos. Fuente: Elaboración propia a partir de los datos de INEGI, febrero del 2014

En el caso de los ingresos provenientes del suministro de bienes y servicios del mercado extranjero, el posicionamiento de los estados es completamente diferente al resultado del mercado nacional, ya que el estado de Chihuahua es quien mantiene los ingresos más altos de la frontera norte, en los siete años del periodo en análisis ocupa el primer lugar con rangos constantes entre el 26 al 29%. Baja California se mantiene constante en el segundo lugar con una participación que oscila del 22 al 23%, en los siete años analizados. Tamaulipas se posiciona en tercer lugar, mientras que el estado de Nuevo León cae al cuarto lugar, Coahuila se ubica en el quinto y el estado de Sonora se encuentra en último lugar.

CONCLUSIONES

La actividad manufacturera en México se ha convertido en un factor de crecimiento económico y social, que desde sus inicios surgió por las necesidades externas de una economía desarrollada (Estados Unidos), tales como disminuir sus costos de producción y consolidar su expansión. La industria manufacturera en nuestro país, se ha ido convirtiendo en el principal generador de ingresos, así como también en detonante del desarrollo de las regiones en las que se ha ubicado. Para una economía emergente como México, este generador de desarrollo representa la oportunidad de crecimiento para algunas entidades, tal como es el caso de los estados de la frontera norte, en donde se ha ubicado desde sus inicios la industria maquiladora.

Respondiendo la pregunta de investigación: “¿Qué estado de la República mexicana ubicado en la frontera norte genera el índice de ingresos más significativo provenientes del mercado extranjero y del mercado nacional?” se encontró que al analizar la situación general que guarda la industria maquiladora de la frontera, en el rubro de los ingresos del mercado nacional por suministro de bienes y servicios, se observa que la concentración de estos ingresos es constante en un solo estado, Nuevo León. Si bien es cierto, esta

En el año 2014 el estado de Nuevo León recibió inversión extranjera por un monto de 5,709 millones de dólares con inversiones provenientes de Corea de Sur, Países Bajos, Estados Unidos entre otros. Este indicador es muestra del liderazgo que tiene este Estado en la producción en serie y el dinamismo industrial que genera sinergia al interior de la entidad para los proveedores locales. Los estados que marcan un estancamiento en la generación de ingresos provenientes del mercado nacional son los estados del noroeste del país (Sonora y Baja California), situación que podría ser ocasionada por la conveniencia que otorga al sector industrial, el corredor logístico que se ha generado, entre los estados ubicados geográficamente en el centro del país (como por ejemplo Guanajuato, Jalisco, Veracruz); siendo Guanajuato el estado con mayor desempeño en la generación de ingresos provenientes del mercado nacional). Estas entidades utilizan la infraestructura y la cercanía de la frontera noreste como parte de la estrategia logística en proveeduría y reexportación. Ver mapa 1.

The map shows Mexico and surrounding regions. The Yucatán population is represented by a cluster of circles in the Yucatán Peninsula, with arrows pointing to Los Angeles, San Diego, and San Jose. The Gulf of Mexico population is represented by a cluster of circles along the Gulf coast, with arrows pointing to Houston, Dallas, and San Antonio.

(ITESM, 2015) Respondiendo a la pregunta de investigación se concluye que Al hablar de los ingresos provenientes del mercado extranjero en el suministro de bienes y servicios, se concluye que el posicionamiento favorece al estado de Chihuahua, con un porcentaje constante del 20% en las operaciones del periodo. Chihuahua es uno de los pioneros en la industria maquiladora en México, su posicionamiento ha referido su especialización por la industria automotriz, aeroespacial y electrónica, su ubicación geográfica al centro de la frontera norte de México y su corredor logístico Sinaloa-Chihuahua-Texas-Nuevo México, permiten la movilización eficiente de las mercancías terminadas y de los insumos, convirtiendo este Estado en un aliado estratégico en logística para la distribución de mercancías en territorio estadounidense. De la presente investigación se podrían derivar nuevos temas de estudio, como por ejemplo la creación del corredor logístico del centro de México hacia el noreste de la frontera norte, así como también un estudio a profundidad de la caracterización de la industria en cada entidad que compone la frontera de México con Estados Unidos.

RASGOS Y ROLES DEL LÍDER CORPORATIVO EN TIEMPOS DE CRISIS ECONÓMICA

Zaida I. Berdecía-Cruz, Universidad del Este
Joyce R. González-Domínguez, Universidad de Puerto Rico

RESUMEN

El presente trabajo de investigación se realizó con el objetivo de identificar los rasgos y roles más prevalecientes de los líderes de empresas puertorriqueñas, clasificadas como Mejores Patronos de Puerto Rico, en tiempos de crisis económica. La metodología utilizada es una cualitativa descriptiva con diseño de estudio de caso múltiple para obtener una percepción más compleja y profunda del tema objeto de estudio. Los resultados del estudio muestran que la conceptualización vigente es que el líder eficiente es aquel que consigue mover al grupo a la consecución de la meta. Que la credibilidad del líder de este momento histórico, está centrada en el modelaje de los valores, entre los cuales destacaron la honestidad. El estudio muestra que los rasgos más sobresalientes entre este grupo de líderes están asociadas a la empatía, al optimismo, acceso a la información, a la proactividad y la creatividad. Estos rasgos guardan relación con un estilo de liderazgo transformacional, el cual es entendido como necesario ante las situaciones asociadas con la crisis financiera que impacta las empresas puertorriqueñas.

PALABRAS CLAVE: Liderazgo, Rasgos del Líder, Roles del Líder, Crisis Económica y Puerto Rico

CORPORATE LEADER'S TRAITS AND ROLES IN TIMES OF ECONOMIC CRISIS

ABSTRACT

This research was conducted with the aim of identifying the most prevalent traits and roles of the leaders of Puerto Rican companies, classified as Best Employers in Puerto Rico, in times of economic crisis. The methodology used is a descriptive qualitative study with multiple design for a more complex and profound perception topic under study case. The study results show that the current conceptualization is that the effective leader is one who gets to move the group to achieve the goal. Although, that the credibility of the leader of this historical moment is focused on the modeling of values, including honesty highlighted. The study shows that the most salient features among this group of leaders are associated with empathy, optimism, access to information, proactivity and creativity. These features are related to transformational leadership style which is understood as necessary in situations associated with the financial crisis impacting the Puerto Rican business.

KEYWORDS: Leadership, Leader's traits, Leader's roles, Economic crisis and Puerto Rican

INTRODUCCIÓN

El ambiente actual de negocios es cambiante y dinámico en respuesta a varios factores, entre los que se encuentran: la competencia global de los mercados, los rápidos cambios tecnológicos, la desregulación, los equipos virtuales y los movimientos en la fuerza laboral, entre otros. Estos acontecimientos, en muchos países capitalistas, ha producido crisis en el sector económico en diferentes sectores de la población (Kaufmann, Vrontis, Czinkota, y Hadiono, 2012; Pardey, 2007). Como respuesta a los cambios y las crisis,

las empresas se han visto obligadas a transformarse para ser cada vez más proactivas y competitivas. Esto implica la necesidad de que las personas que las conforman asuman rápidamente los nuevos retos, sean más eficientes y capaces de liderar para el logro de los objetivos y metas de la organización (Gandossy, Greenslade y KaoPardey, 2008; Castro, Miquilena y Peley, 2006). Aunque el logro de los objetivos organizacionales depende de una enorme cantidad de factores, la literatura señala que el liderazgo es considerado como uno de los elementos cruciales en la implementación e inicio de cualquier transformación (Chan y Drasgrow, 2001; Carss, 2010), además, de que resulta decisivo para alcanzar resultados extraordinarios (Bass, 1985). Por otro lado, el cambio hacia un nuevo paradigma, en el que refleja el paso de un planteamiento administrativo racional tradicional, que recalca la estabilidad y el control a uno que valora el mismo. La atribución de facultades y las relaciones, requieren que los administradores también sean líderes eficaces frente a los fenómenos sociales y tecnológicos que se proyectan (Gandossy, et al., 2008; Daft, 2008; Spector, 2000).

REVISION DE LITERATURA

Tradicionalmente, se define un líder como la persona a cargo de influir en las actitudes, ideas, sentimientos y conductas de otras personas (Daft, 2008; Spector, 2000). Rost y Baker (2000) definen liderazgo como una relación de influencia que ocurre entre los líderes y sus seguidores, mediante el cual las dos partes pretenden llegar a cambios y resultados reales que reflejen los propósitos que comparten (p.14). Por otro lado, Castro, et al. (2006, p. 83) lo define como “un fenómeno de interacción social que se manifiesta en todos los grupos de cualquier organización, en el cual el líder eficiente es aquél que logra resultados exitosos al dirigir a los seguidores”. Ambas definiciones señalan varios elementos básicos del liderazgo, entre los que se destacan los siguientes: a) implica *influencia*, lo que significa que la relación entre las partes no es *pasiva ni coercitiva* y; b) tienen la *intención* de realizar *cambios*, y éstos reflejan los *propósitos compartidos* entre los líderes y sus seguidores con el logro de las metas de la organización.

Esto concuerda con los resultados de varios estudios con enfoques cuantitativos en los que muestran que existe una relación positiva entre ciertos tipos de liderazgo y los resultados organizacionales (Bass, 1999; Gardner y Avolio, 1998; Howell y Costley, 2001; Sosik, Potosky y Jung, 2002; Walumbwa, Wang, Lawler y Shi, 2004; Bass y Riggio, 2006; Pedraja, Rodríguez y Rodríguez, 2008; Gandossy, et al., 2008; Kaufmann, et al., 2012; Darvish y Pour, 2013). A pesar de las contribuciones intelectuales, al momento del estudio, no encontramos estudios cualitativos ni conceptualización que analice con profundidad cómo los rasgos y roles de los líderes está asociado al éxito de la empresa en tiempos de crisis económica. La mayoría de los estudios previos sobre este tema en Puerto Rico han estado enfocados en evaluar los elementos del liderazgo de forma cuantitativa y no en analizar la posible relación de forma inductiva, descriptiva y cualitativa de los rasgos y roles de los líderes en momentos de crisis económica.

El término crisis económica hace referencia a la percepción de la situación financiera mundial que tuvo lugar, desde el 2008, en los Estados Unidos. Entre los principales factores causantes de la crisis están: los altos precios de las materias primas, amenazas a las fuentes alimentaria mundial, una elevada inflación planetaria y la amenaza de una recesión en todo el mundo; así como una crisis crediticia, hipotecaria y de confianza en los mercados. El mundo en general ha caído en una profunda recesión; esta a su vez se define como dos trimestres consecutivos de decrecimiento económico. Según algunas fuentes, se esperaba que la crisis pudiera finalizar en el 2010 pero aún sigue vigente (<http://www.buenastareas.com/ensayos/Crisis-Economica-Mundial-2008/1295979.html>; Naciones Unidas, 2014).

Puerto Rico no ha sido la excepción en afrontar crisis económica tanto en el sector gubernamental como privado. Por ejemplo, los empresarios en nuestro país han liderado con la quiebra de cuatro instituciones bancarias que resultaron en la desaparición de \$12 mil millones de activos; al incremento del déficit comercial de los Estados Unidos con China, según el Instituto de Política Económica, que ha conllevado la pérdida de sobre 20,000 mil puestos de trabajo. Desde la perspectiva de recursos humanos, la situación

financiera en Puerto Rico ha tenido consecuencias en: la disminución de la fuerza laboral, un congelamiento de los programas de recompensas y beneficios otorgados a los empleados y en muchos casos el despido de empleados. Por ejemplo, la tasa laboral en el año 2010 se redujo en un 35%, una de las tasas más bajas en veinte años, mientras la fuerza laboral en el 2014 se ha disminuido con un total de 987,000 puestos de trabajo (Negociado de Estadísticas del Trabajo, 2014).

Anzorena (s.f.) señala que “en los momentos de crisis e incertidumbre, cuando los manuales para lograr el éxito demuestran su volatilidad, cuando los caminos conocidos no necesariamente conducen al destino deseado y nuestras brújulas nos indican que no siempre hay que ir al norte, emerge con claridad y nitidez la importancia del liderazgo”. Por tal motivo, las tareas de los líderes radican en facilitar la adaptación (desarrollar nuevas prácticas, no sólo implementar las mejores), aceptar el desequilibrio (inducir cambios) y generar más liderazgo (dar oportunidades a los colaboradores de liderar proyectos)” (Montelli, 2009, citado en De Bella, 2009). “Entre otras prácticas, Hadden, (2009, citado en De Bella, 2009) recomendó llevar a cabo encuestas a los empleados para dirigir las estrategias de recursos humanos, definir claramente la misión de la compañía y asegurarse de que todos la comprendan, desarrollar la interacción y conciencia social, eliminar políticas y procedimientos innecesarios, mantener las acciones de capacitación del personal a pesar de la crisis, generar esquemas de trabajo más flexibles, comunicar con transparencia y pasar más tiempo con los empleados”.

Hoy día, para enfrentar los grandes retos globales y económicos, las empresas necesitan de ejecutivos y gerenciales con ciertos rasgos de liderazgo entre los que debe estar incluida la adaptación a los cambios y a las limitaciones que impone a sus empresas una economía en recesión. Si integramos al estudio de las empresas nacionales estadounidenses exitosas elementos básicos del liderazgo mencionado por Rost, et al. (2000) y Castro, et al. (2006) podríamos contestar las siguientes preguntas: *¿Qué rasgos de liderazgo prevalecen más en los ejecutivos y gerenciales de empresas nativas exitosas? y ¿cuáles son los roles que suelen asumir estos ejecutivos en tiempos de crisis económica?* Este artículo aborda estas preguntas mediante los hallazgos de grupos focales realizados a ejecutivos y gerenciales de tres empresas nacionales reconocidas como entre los Mejores Patronos del país, según los estudios auspiciados por la empresa Hewitt Associates.

METODOLOGÍA

El enfoque metodológico utilizado es uno cualitativo descriptivo con diseño de estudio de caso múltiple para obtener una percepción más compleja y profunda del tema de estudio. El uso de esta metodología, permitió el estudio intensivo y profundo de diversos aspectos de un mismo fenómeno (Lucca y Berrios, 2009). Los participantes del estudio son ejecutivos y gerenciales de tres empresas puertorriqueñas. La selección de estas tres empresas permitió a los investigadores diversas perspectivas para explorar y documentar una unidad de análisis manejable que describa los rasgos y roles más predominantes en empresas exitosas en tiempos de crisis económica. La composición sociodemográfica de los participantes del estudio es la siguiente: a) *Género*: cinco de los participantes son varones y cinco féminas; b) *Edad*: tres se encuentran entre el grupo de 30 a 39 años de edad, seis entre 40 a 49 años de edad, y uno entre la categoría de 50 a 59 años de edad; c) *Nivel académico*: cinco poseen Bachillerato (4-Administración de empresas; 1-Ciencias Sociales), cuatro poseen Maestría en Administración de Empresas, y uno posee Juris Doctor; d) *Puesto*: dos son Presidentes, uno es Vice-Presidente, dos son Gerentes de Operaciones, y cinco Gerentes de Recursos Humanos; e) *Años de experiencia en el puesto*: seis poseen entre 5 a 10 años de experiencia, dos poseen entre 11 a 15 años, y dos sobre 20 años de experiencia en el puesto.

Para la recopilación de datos se utilizó la técnica cualitativa de grupo focal (Lucca, et al., 2009). Se organizaron tres grupos focales constituido por ejecutivos y gerenciales de las tres empresas participantes, con el propósito de obtener una amplia gama de información y poder constatarla. El proceso se estableció de manera sistemática para poder categorizar los hallazgos y responder a las preguntas de investigación. Se

utilizaron múltiples fuentes para la recopilación de la información para triangular la misma y cumplir con el criterio de totalidad o visión holística que se contempla en un estudio de caso múltiple (Lucca et al., 2009). Las fuentes para la recopilación de los datos fueron: la revisión de literatura, el análisis de documentos y la entrevista semi-estructurada de un grupo focal influida por las experiencias y opiniones de los participantes. Los datos de las entrevistas y documentos fueron analizados mediante el modelo de análisis cualitativo de Harry F. Wolcott (1994, citado en Lucca et al., 2009). “Este modelo consta de tres componentes principales: la *descripción*, el *análisis* y la *interpretación*” (p. 484). La técnica analítica general fue leer primero los datos de los temas que surgen de inducción en relación con las áreas claves examinadas en el estudio. Las definiciones de liderazgo, los rasgos y roles de liderazgo fueron algunas de las áreas claves examinadas. Como resultado, revisamos los datos mediante códigos deductivos basado en la literatura relacionada con el liderazgo, sus rasgos y roles en tiempos de crisis económica. Ejemplos de los códigos deductivos incluyen: *eficiente logro de resultados, al dirigir seguidores, relación de influencia con propósito compartido, pretende y logra cambios y otros rasgos, al igual que rol del líder en tiempos de crisis*.

RESULTADOS

Para contestar las preguntas de investigación se desarrollaron varias categorías respecto a los hallazgos de los grupos focales, estas son: conceptualización y rasgos de un líder, rasgos presentes en los ejecutivos entrevistados, al igual que el rol del líder en tiempos de precariedad económica. A continuación presentaremos las respuestas de los ejecutivos de cada compañía en las categorías antes mencionadas desde la literatura. La Tabla 1 resume las categorías y los rasgos identificados en relación con ellas en la conceptualización que realizaron los y las participantes respecto a lo que entienden como un(a) líder. La tabla está seguida por citas representativas de uno o más rasgos de estas conceptualizaciones. Además, describe las respuestas ofrecidas por las personas entrevistadas al solicitarle expusieran su definición de un/a líder.

Tabla 1: Conceptualización de Líder Desde la Noción de Rasgos

Categorías	Eficiente Logro de Resultados, al Dirigir Seguidores	Relación de Influencia Con Propósito Compartido	Pretende y Logra Cambios	Otros Rasgos
RASGOS	Logra resultados Tiene seguidores Da dirección Desarrolla a través de la participación	Es modelo Proyecta seguridad Es confiable y honesto/a Sus metas y objetivos son comunes al grupo	Facilita Innova	Demuestra pasión en lo que hace Buenas destrezas de comunicación Posee competencia técnica y se mantiene al día en temas relacionados a su rol y funciones Disciplina para corregir Demuestra valentía, humildad y firmeza

Bajo la categoría *eficiente logro de resultados, al dirigir seguidores* destacamos las siguientes citas: “...aquella persona que hace que las cosas ocurran o ayuda a otros para que las cosas ocurran. Por lo regular, un líder tiene seguidores, este, tiene gente que lo apoya” (Compañía A). “Es una persona que lleva su equipo de trabajo a lograr las metas dándole dirección y participación en los procesos y en las decisiones que se vayan a tomar” (Compañía B). “Darle a la persona su espacio, una persona que se vaya desarrollándose en su propio rol para que sea más efectivo” (Compañía C). Estas son algunas citas que reflejan la categoría *relación de influencia con propósito compartido*:

“Yo creo que un líder es una persona que es seguido por el grupo que dirige no porque lo hayan puesto en la posición sino porque inspira esa confianza y ese respeto” (Compañía C). “Es una persona que puede lograr llevar a un grupo de personas a un fin común o a unos objetivos comunes en una organización o un grupo” (Compañía B). “O sea, si la gente entiende lo que tú estás viendo y hacia dónde tú quieres llegar, ellos entonces pueden comprarlo, estar de acuerdo y montarse en el bote y ahí empiezan todos a remar, pero si no saben ni pa’ donde vamos sino lo puedes comunicar” (Compañía B). “Un líder es una persona que irradia unos rasgos de seguridad en lo que va a ejecutar que hace que un grupo de personas le siga. Y tiene un tal alto grado de confiabilidad también para un grupo, que modela, que las cosas que realiza ese grupo las tome a bien y las siga” (Compañía A). Entre las citas categorizadas como *pretende hacer cambios* encontramos: “Líder es aquel que va a facilitar que los procesos se den” (Compañía A). La Tabla 2 resume los rasgos de liderazgo identificados en los ejecutivos entrevistados cuando respondieron: ¿Qué rasgos entiende usted que lo distingue a usted como líder? ¿Qué rasgos usted posee que usted entiende que lo distingue como un líder? y otros desprendidos de la narrativa de los participantes durante el restante de la entrevista.

Tabla 2: Rasgos de Liderazgo Presentes En Ejecutivos Entrevistados

Categorías	Hallazgos
<i>Eficiente logro de resultados, al dirigir seguidores</i>	Participativos: comunican abiertamente y escuchan Fomentan y reconocen aportaciones y talentos de otros líderes y de empleados Procuran el contacto con empleados Anticipan y planifican Accesibles Demuestran empatía y aportan a la vida de sus seguidores/as
<i>Relación de influencia con propósito compartido</i>	Sus metas y objetivos son comunes al grupo Se involucran en los proyectos Entusiastas Se adaptan a empleados Modelan valores y estilos que desean fomentar
<i>Pretende y logra cambios</i>	Facilitan y enseñan Innovadores Flexibles
<i>Otros rasgos</i>	Demuestran pasión en lo que hacen Poseen competencia técnica y se mantiene al día en temas relacionados a su rol y funciones Asertivos Optimistas Reconocen que tienen empleados que pueden saber más que ellos Casual e informal Cumplen acuerdos y promesas Conciencia del impacto de su rol

Los siguientes párrafos presentan varias citas bajo la categoría *eficiente logro de resultados, al dirigir seguidores*. De la Compañía A destacamos las siguientes citas, las cuales reflejan lo participativo: “Pero siempre se presentan los resultados. Ellos saben todo el tiempo en dónde están y por dónde van y qué les falta para llegar. O sea, la información se comparte en todos los niveles”. “Pero eso ha permitido que el empleado se sienta que es escuchado, en este caso por el dueño y presidente”. Esta cita refleja el aspecto *participativo* de la Compañía B: “Que entiendo que nosotros lo hacemos mucho, y es que con una completa transparencia y una comunicación abierta a todo el mundo, ya sea en reuniones anuales, en reuniones con grupos, de todas las políticas de todos los procedimientos y del porqué de las cosas. De la Compañía C: “Permitir la participación y generación de ideas de ese grupo de personas que se reporta a mí para poder entonces lograr ese objetivo departamental que, de alguna manera, apoyan las estrategias empresariales.” “Me gusta también, darle la participación a ellos que me brinden sus ideas para ver cómo compaginamos, como hacemos de la idea del grupo la que va hacer exitosa para realizarlo.

De la Compañía A, cómo *anticipan, planifican y aportan a la vida de sus seguidores*: “Y esa parte pues a ello, entendieron que también venía un proceso, un proceso económico, pues que ya uno lo venía venir, pero de qué manera podíamos ayudar a que esas economías personales de cada uno de los individuos que trabaja con nosotros se cayera”. La Compañía C también demostró rasgos de *anticipar y planificar*: “Es importante estar preparado, uno prepararse y demostrarle a los empleados que hay situaciones difíciles, pero juntos podemos lograrlo.” Como parte de la categoría *relación de influencia con propósito compartido* en la Compañía C, se observó el disfrute por compartir los objetivos: “Me gusta comunicar con mis compañeros de trabajo cuáles son mis objetivos, cuáles son mis ideas”.

En la Compañía A, se encontró citas con énfasis cómo se *involucran y adaptan a sus empleados*: “Entiendo que son características bien importantes porque, porque si tú te quedas obviamente en un escritorio y no sales y no conoces lo que está en el ‘field’, pues tener la capacidad de poder hacer múltiples tareas simultáneamente, pero sin perder de perspectiva a dónde quieres llegar, entiendo son cosas bien importantes en un líder”. “Entonces, para tú poder llegar a ese grupo, uno ir con una corbata e ir con manga larga, uno pone una pared, entonces, al haber esta informalidad, ellos se sienten parte del grupo. En parte, se sienten aceptados y pueden llegar a uno de una manera más directa sin tanto protocolo”.

La compañía B también compartió el asunto de *involucrarse con proyectos y empleados*: “Y características que tengo diferente, yo soy el tipo de líder que me enrolló las mangas y me meto con los muchachos a hacer el trabajo y “lead by example” en todos los aspectos.” “El mantener contacto en el “field” ir allá, si ven cosas las discutimos y tratamos de manejarlo, lo hablamos, nos reunimos yo creo que en parte eso nos ha ayudado.” La Compañía C también lo demuestra: “Me gusta enrollarme las mangas y trabajar con ellos, estar presente con ellos, envolverme en los asuntos que son críticos y me gusta compartir.” La siguiente cita de la Compañía C demuestra el rasgo de *modelar valores y estilos que desean fomentar*: “Me gusta dar el ejemplo; un ejemplo de compromiso, de que las cosas hay que hacerlas dentro del tiempo y tratar de ayudarlos para que se consigan los objetivos.”

En la Compañía A facilitan y enseñan, como parte de la categoría de *pretender/lograr cambios*: “Yo le cuento anécdotas personales, que por ejemplo, la primera vez que yo me senté frente a una PC, yo decía el poder humano y la mentalidad humana es más grande que una máquina, así que yo ya la puedo dominar a ella y no ella a mí, y ahí es cómo perderle el miedo, y entonces cómo llevarlos a que le pierdan el miedo y comiencen a usarlo”. “Claro está, pero de la mano, porque nos convertimos en sus facilitadores para que el proceso se dé”. Entre la categoría *otros rasgos* está el cumplir promesas y la conciencia del impacto de su rol: “Cumplimos con nuestras promesas, si ésto fue lo que se acordó esto es lo que se cumple” (Compañía A). “Cualquier cosa que yo diga dentro de la empresa ocasiona alegría, tristeza o preocupación puedo afectar el sueño de una persona, puedo afectar su estado de ánimo, puedo afectar hasta su matrimonio solamente con un comentario o una opinión”. “Yo no tengo opinión, ni ella ni ella tienen opinión porque lo que ellas digan es ley para mucha gente y afecta a esas personas”. “Y basado en esa responsabilidad que uno tiene, puede ser cualquiera, pero lo que uno dice afecta la vida de otra persona” (Compañía A).

“En mi caso, siempre lo hablábamos, cuando vayas a una planta dar una sonrisita siempre porque ellos están pendientes a todo tu “body language” y escuchan todo, así que eso es importante” (Compañía A) Entre los *otros rasgos* encontramos *competencia técnica y humildad*. Las siguientes citas de la Compañía B las demuestran respectivamente: “Saber mucho del tema, hace que otros quieran seguirte y te respetan porque saben que como “peers”: del contenido técnico él sabe”. “Muchas veces pueden saber mucho más, técnicamente, que tú de ese tema.” La Tabla 3 resume el rol que asumieron los ejecutivos de las tres empresas, durante tiempos de crisis económica. En la primera columna están los hallazgos y en la segunda, ejemplos de citas para elaborar cada hallazgo.

Tabla 3: Rol del Líder En Tiempos de Crisis

Hallazgos	Citas
Comunicar abierta y constantemente la situación económica de la compañía y el racional de las decisiones tomadas	<p>“Bueno, por ejemplo, ahora mismo estamos trabajando una estrategia de comunicar a las personas de que (Compañía B) está bien, está mejorando.” “Obviamente, pasando las crisis que han pasado en los últimos dos años y estamos buscando la manera de decirle a nuestros empleados de que vamos bien.” “Y si algo está mal, pues uno también lo puede decir: “mira, este cliente está cerrando pero tenemos esperanza con este otro, y que sepan lo que está ocurriendo.” “Yo creo que lo más que desespera es el desconocimiento. “Si yo te digo que el cliente principal está cerrando proyectos, pero te lo digo yo y te comunico lo que estamos haciendo van a estar mucho más tranquilo a que no sepa nada.”</p> <p>“Mira este año perdimos (X) millones, pues perdimos (X)... mira se lo decimos.” Compañía C</p> <p>“Como les digo, todos los días se sabe dónde estamos en números y todos los empleados se enteran.” Compañía A</p> <p>“Vemos que hay una crisis nos sentamos primero los directores a desarrollar esa infraestructura y la empezamos a comunicar completamente.” Compañía B</p>
Tomar decisiones administrativas considerando balance entre la necesidad económica y los intereses, necesidades y preocupaciones de empleados	
Usar anécdotas personales y analogías para comunicar mensajes que incluyan balance de la realidad y optimismo	<p>“Vamos todos juntos a remar y nosotros vamos a estar al frente diciendo si vamos bien o vamos mal.” Compañía B</p>
Acercarse a empleados	<p>“En el caso mío estar en el “field” como los recursos.” “Están las cosas difíciles tenemos que buscar otros “venues”, otros clientes, en vez de ir a otros lugares, pero yo no puedo dejar de visitar o darme la vuelta en el “field”, en el tipo de compañía que somos parte cultural somos de los que estamos ahí con ellos.” Compañía B</p>
Ofrecer dirección	<p>“Vamos todos juntos a remar y nosotros vamos a estar al frente diciendo si vamos bien o vamos mal.” (Compañía B)</p>
Identificar nuevas formas de realizar y lograr resultados / enfoque en oportunidades	<p>“Tenemos que estar en actitud positiva, reinventando, reaprendiendo nuevamente, buscando nuevas ideas, inventando, qué podemos hacer, cual es la combinación de productos más atractivos para el público para seguir adelante.” Compañía A</p> <p>“Nos hemos enfocado en las oportunidades, qué podemos ver dentro del proceso y no enfocarnos en lo que es la dificultad de la crisis económica.” Compañía A</p>
Mantener imagen de la compañía, velar por buenas relaciones con clientes y calidad de productos/servicios	<p>“Vamos para delante, esto va bien, remodelamos la tienda en la medida que se puede, se le cambia la imagen, se le envían rótulos nuevos, uniformes nuevos fue un gran impacto también.” “Esa campaña de nuevos uniformes gustó mucho.” Compañía A</p> <p>“Pagar a tiempo, el crédito.” “Eso es tu confianza, eso es tu nivel de confianza.” “Número uno, si tú no tienes un nivel de confianza con tus suplidores ni con tus empleados tú lo perdiste todo.” Compañía A</p>
Involucrarse en las tareas de empleados	<p>“Lo que pasa es que él está en todas las bases.” “El presidente es una persona que está en todas las bases.” Compañía A</p>
Reconocer ajustes que deben realizar en términos de estilos gerenciales, en lo personal y en mensajes que comunican	<p>“Obviamente, yo cogí el cantazo económicamente primero que nadie y todos tenían que saber que si yo soy el líder yo tenía que dar el ejemplo.” “Todavía tengo el mismo carro desde hace 13 años, no hay lancha no hay casa de playa, yo se los cantaba así mismo.” Compañía B</p> <p>“Nosotros enlistamos todo; plan médico era el 100%, celular.” “Básicamente listamos en el presupuesto todo lo que tú puedas eliminar antes de tocar el salario, sabiendo que reducirle el salario a todos era una versus sacar a varios de la plantilla.” Compañía B</p>

CONCLUSIÓN

Los participantes de estos grupos focales, conceptualizan un liderazgo caracterizado por los rasgos de: proveer dirección, facilitar la participación, conseguir credibilidad de sus seguidores, disciplina, asertividad y accesibilidad. Estas competencias son confirmadas a través del logro de resultados, de acuerdo a los objetivos y metas preestablecidas. Dicho de otra manera, la conceptualización vigente es que el líder eficiente es aquel que consigue mover al grupo a la consecución de la meta, al proveer dirección, disciplina, ser participativo, accesible, asertivo y tener credibilidad con sus empleados. Ahora bien, en momentos de crisis, los mejores líderes son aquellos que construyeron una base de confianza (Hayes y Perry, 2011). Estos autores sostienen que para desarrollar confianza los líderes necesitan comunicarse abierta y honestamente, con frecuencia, en adición a manejar las expectativas de manera adecuada. Nuestra muestra confirma la importancia del desarrollo de confianza a través de comunicación abierta, honesta y con un manejo adecuado de las expectativas. Los tres grupos de ejecutivos, cuyas empresas fueron impactadas por una crisis económica, destacaron la comunicación honesta y abierta, como parte de su rol en tiempos de crisis.

De hecho, los tres presidentes de las compañías, manifestaron entre sus rasgos el comunicar abierta y honestamente a sus empleados. Los tres tenían diversas formas de comunicarse directamente con su empleomanía, para compartir lo que estaba pasando y mantener expectativas claras.

Paternotte (2006) sostiene que un líder que ha ganado la confianza de su equipo demuestra los siguientes atributos: cuidado, confianza en sí mismo y seguridad. El atributo de cuidado hace alusión a un estilo de interacción consistentemente seguro para los demás, por ende, genera un ambiente positivo en el cual todas las personas pueden expresarse abiertamente y ser escuchadas. Los tres grupos de ejecutivos entrevistados mencionaron rasgos acordes con este atributo, como por ejemplo: la empatía, el optimismo y el acceso a la información. El tercer atributo expuesto por Paternotte (2006) es el de seguridad. Este implica que el líder tiene como prioridad el asegurar una dirección futura para su grupo, establece metas y sabe cómo lograrlas. Además, logra llevar la visión respecto al por qué es importante llegar a ese futuro con energía. Los ejecutivos de nuestra muestra incluyeron definiciones del liderazgo, manifestaron rasgos y ejercieron un rol en tiempos de crisis, conforme con este atributo, entre ellos: logra resultados, da dirección, proyecta seguridad, posee metas y objetivos comunes al grupo, demuestra pasión en lo que hace, son innovadores, poseen competencia técnica y se mantiene al día en temas relacionados a su rol y funciones. En adición, demostraron la proactividad asociada a realizar los ajustes necesarios para asegurar el futuro de la compañía.

Otro concepto importante es el liderazgo empresarial (Siddiqui, 2007). De acuerdo al autor, este concepto incluye comportamientos en pro de los intereses de la organización para el crecimiento de todas las personas involucradas y el logro del propósito propuesto. El autor menciona varios rasgos asociados, por ejemplo, considerar a empleados, habilidad de motivar, capacidad de ganar y mantener confianza, inteligencia orientada a la acción, necesidad de logro, flexibilidad-adaptabilidad, entusiasmo al aceptar responsabilidad e innovación. La confianza vuelve a repetirse como rasgo relevante y añade otros rasgos presentes en los tres grupos de ejecutivos de nuestro estudio. Según Siddiqui (2007) autores anteriores argumentaron que la efectividad empresarial puede ser medida por el desempeño de la organización. Las organizaciones representadas en nuestro estudio han tenido un excelente desempeño, por lo que podemos concluir que sus líderes demuestran efectividad empresarial. Además sus narrativas manifestaron rasgos consistentes con el liderazgo empresarial. El liderazgo empresarial facilitó que estos grupos de ejecutivos pudieran adaptarse a los cambios requeridos por la precariedad económica, mantener la calidad de sus productos o servicios y proteger la mayor cantidad de empleos posible. En otras palabras, lograron el mejor balance entre el capital fiscal y el humano. Demostraron ser excelentes agentes de cambio con la flexibilidad, innovación y capacidad de transmitir mensajes con visión, sin dejar de incluir a sus equipos en el proceso.

En conclusión, el reto del liderazgo ejecutivo durante tiempos de precariedad fiscal, según las personas entrevistadas, requiere construir confianza y comportamientos a favor de los intereses de la organización y todos sus miembros. El liderazgo en tiempos de crisis requiere de rasgos relacionados a estos dos elementos, desde comunicación honesta hasta acciones totalmente innovadoras. Quedan varios temas a elaborar en investigaciones futuras: liderazgo en crisis, liderazgo empresarial, desarrollo de confianza y la capacidad de las organizaciones para reinventarse y mantenerse en contextos de crisis económica.

RECOMENDACIONES

Asignar más recursos a los centros de investigación en este tema.

Fortalecer el liderazgo gerencial en las características que este estudio menciona de manera cognitiva, emocional y conductual.

Continuar identificando estrategias exitosas y divulgarlas en el mundo empresarial como una forma de responder a una economía más solidaria.

Repetir investigaciones similares con otras empresas puertorriqueñas y foráneas, sobre todo en países, que han sobrevivido crisis económicas con impacto mundial.

RESUMEN

El comportamiento organizacional va directamente relacionado con las actividades que marca el proceso administrativo, mismo que inicia con las políticas y procedimientos instituidos para tal efecto. Esta ponencia se centra en una investigación de tipo empírica cualitativa que se realizó a estudiantes de educación superior analizando a algunos de ellos con la idea de conocer que tanto influye el comportamiento organizacional en la motivación al desarrollar actividades profesionales que contribuyan al incremento de la productividad empresarial. La muestra fue delimitada en 60 estudiantes de Licenciatura en Contaduría Pública, fundamentada en una investigación realizada por Plascencia (2013), en este artículo se utiliza únicamente la categoría referente a motivación de 11 categorías que incluye la investigación total, esto con el objetivo de identificar si de alguna forma influye el comportamiento organizacional con la motivación de los integrantes de una organización y con ello propiciar un liderazgo efectivo y motivar a los involucrados en una determinada estructura organizacional a dar mejores resultados en beneficio de la permanencia de la organización y con ello conservar sus fuentes de empleo.

PALABRAS CLAVE: Educación, Comportamiento, Organización, Motivación y Liderazgo

ORGANIZATIONAL BEHAVIOR AND MOTIVATION

ABSTRACT

Organizational behavior is directly related to the activities marking the same administrative process that begins with the policies and procedures established for this purpose. This paper focuses on a qualitative empirical research type held education superior students analyzing some with the idea of meeting both organizational behavior influences the motivation to develop professional activities contributing to increased business productivity. The sample was defined in 60 students Degree in Accounting, based on research by Plascencia (2013), this article only uses the category concerning motivation of 11 categories including full investigation, this in order to identify if somehow influences organizational behavior with the motivation of the members of an organization and thereby promote effective leadership and motivate those involved in a particular organizational structure to give better results for the permanence of the organization and thus retain sources of employment.

INTRODUCCIÓN

El mundo de los negocios es impactado por los requerimientos de la globalización, que son de tipo económico, políticos, sociales y culturales, por ello, cada vez se presentan mayores exigencias tanto en el ámbito empresarial como en la administración pública en cuanto al logro de sus metas y objetivos trazados,

de tal manera que aun con estos requerimientos de origen externo, se genere una eficaz integración de sus recursos humanos, materiales, financieros y tecnológicos para con las metas trazadas por organización y los fines que persigue. La necesidad de delegar cada vez se torna en una gran responsabilidad que recae en los dirigentes empresariales que es enfocada mayormente y por lo general en la búsqueda de elegir al mejor candidato lo más eficientemente posible, lo que hace necesario dar una mayor importancia a la actividad de saber integrar un verdadero espíritu de equipo de trabajo, como un objetivo primordial de toda empresa, que oriente en todo momento al logro de una mayor productividad y con ello beneficiar a los que están invirtiendo su capital con la idea de lograr sus sueños de maximización de la riqueza si es el caso, considerando además que, de los capitales más importantes invertidos en una organización, el capital humano es el más valioso, sin embargo el más delicado y el que en un momento determinado mayores conflictos genera en forma interna y externa a nivel empresarial.

Las organizaciones empresariales son un detonador de riqueza así como en la generación de nuevas fuentes de empleo, que permiten motivar la disminución de las condiciones de pobreza y pobreza extrema de la población en general. Identificándose como un problema y área de oportunidad lo observado en algunos estudiantes de educación superior, en cuanto a su percepción acerca de que tanto influye el liderazgo en la motivación y la utilización de la información financiera con el objetivo de lograr elevar la productividad empresarial. Analizando el planteamiento del problema anterior y el entorno empresarial en general y de acuerdo a resultados planteados en investigación realizada por Plascencia (2013), nos podríamos plantear los siguientes cuestionamientos: ¿Será que debido a una baja motivación del personal esto impactara en forma negativa en la productividad empresarial? o bien ¿La falta de motivación y una baja autoestima influirá en la disminución de la productividad? De lo anterior se genera una hipótesis:

El comportamiento organizacional influye en la alta motivación en los integrantes de una empresa impactando directamente en el incremento de la productividad empresarial. Este artículo gira y se fundamenta en torno a una investigación que se realizó con estudiantes de educación superior por Plascencia (2013), y se adaptaron 6 preguntas de la encuesta aplicada a 60 estudiantes, utilizando únicamente 1 categoría de estudio que fue la referente a liderazgo y motivación de 11 totales que contenía la encuesta cuestionario de la investigación realizada por Plascencia (2013), con el objetivo general después de formulada la hipótesis de identificar que tanto influye la motivación en el comportamiento organizacional en las empresas para elevar la productividad y con ello propiciar el liderazgo efectivo motivando a los involucrados de una determinada estructura organizacional.

Al investigar las definiciones de las palabras clave y de acuerdo al diccionario de la real academia española (2013) por motivación se entiende que los individuos colectivamente comparten un objetivo que les beneficiará y de que tratan de conseguir con apoyo solidario, clima organizacional como el conjunto de circunstancias en que se vive y por liderazgo el mismo diccionario de la Real Academia Española infiere que liderazgo se entiende como el conjunto de acciones que se efectúan por una o varias personas para que otras realicen una tarea o propósito y líder es una persona que cuenta con ciertas cualidades de personalidad, magnetismo, percepción que es capaz de influir en otros para provocar que su conducta se oriente en una determinada dirección

REVISIÓN DE LITERATURA

Existe diversa literatura que habla acerca de la motivación y el impacto en el comportamiento organizacional mencionando a continuación algunos autores que comentan lo siguiente: Chiavenato (2007) define a la cultura organizacional como “El conjunto de hábitos y creencias establecidos por medio de normas. Valores, actitudes y expectativas que comparten todos los miembros de la organización” continua el autor considerando que “El nuevo imperativo es desarrollar el liderazgo en las organizaciones. Así, es fundamental identificar y desarrollar a personas excepcionales, capaces de llevar a la organización hacia el nuevo siglo. Es vital crear a líderes de líderes, y el secreto del éxito estará cada vez más en las personas”

El autor define de manera general que “motivo es todo aquello que impulsa a la persona a actuar de determinada manera o que da origen, por lo menos, a una determinada tendencia, a un determinado comportamiento”. Gareth Jones y Jennifer George (2010) Definen al liderazgo como “El proceso por el cual una persona ejerce influencia sobre los demás, inspira, motiva y dirige sus actividades para ayudarlos a alcanzar los objetivos del grupo o de la organización” asimismo clasifica a la motivación de la siguiente manera: “La motivación puede provenir de dos fuentes, intrínseca y extrínsecas. El comportamiento con motivación intrínseca es un comportamiento que alguien exhibe por el valor que tiene en sí; en este caso la motivación tiene como fuente la exhibición del comportamiento mismo, y la motivación proviene de realizar el trabajo en sí”.

El comportamiento con motivación extrínseca es aquel que se exhibe para obtener recompensas materiales o sociales, o bien para evitar un castigo; las consecuencias del comportamiento son la fuente de la motivación, no el comportamiento en sí. Christopher y Smith (1989), comentan que en el competitivo mundo de hoy, el éxito de las empresas depende en gran medida de la capacidad de sus líderes para infundir en el equipo un espíritu de triunfo, las actividades colectivas despiertan y desarrollan en las personas la capacidad de inspirar, organizar y anticipar, y de esta manera se acrecientan las habilidades personales, al tiempo que se fomenta la cohesión de grupo y motiva a las personas a responsabilizarse de sus propias acciones, con el objeto de obtener el máximo a cada miembro del grupo desde el nivel más bajo hasta los niveles más altos de la jerarquía corporativa.

Comentan los autores que la capacitación se relaciona con el liderazgo igual que con el aprendizaje, el liderazgo tiene que ver con el poder, las personas y las metas. Significa adquirir seguidores; esto es, persuadir a las personas a hacer lo que sus líderes quieren que hagan, de preferencia incluso que sientan gratitud hacia esos mismos líderes por darles la oportunidad de hacerlo, y simultáneamente animarlos a adquirir nuevas habilidades y pericia para fijar sus propias metas de logro de las tareas fijadas por sus líderes. Mencionan los mismos autores que liderazgo significa también enseñar a las personas a aceptar sus responsabilidades por sus propias acciones, para que los líderes puedan delegar más y más a sus seguidores mientras ellos avanzan, expresamente por el camino del poder. La capacitación puede formar a los líderes en potencia al demostrarles la relación causa-efecto, entre el líder y la conducta, el seguidor y la respuesta y el logro de las tareas. Sin duda algunos líderes carismáticos nacen, no se hacen y no es necesario enseñarles nada acerca de los usos del poder; pero los autores están convencidos de que la mayoría de quienes queremos o necesitamos convertirnos en líderes debemos ser capacitados en un conjunto básico de habilidades. Comentan los autores que en el campo organizacional y en una sociedad con una alta tecnología, los empleados llegan al liderazgo por rutas relativamente estrechas y especializadas. Pueden iniciar como contadores, programadores, trabajadores sociales, analistas de sistemas, maestros, vendedores, técnicos, enfermeras o en cualquier otro puesto, si tienen éxito en los campos que escogieron, más tarde o más temprano se les promoverá a un nivel gerencial; y por lo general un puesto gerencial implica la necesidad de liderazgo.

No todos los líderes son gerentes y los gerentes no necesariamente deben ser líderes (pueden administrar una serie de cuentas, por ejemplo), no obstante, los nuevos gerentes con frecuencia tienen que adquirir una variedad de habilidades interpersonales que probablemente casi no hayan necesitado antes, y las cuales pueden incluso haber evitado con anterioridad, como el uso del poder, el manejo de conflictos, la negociación en pequeños grupos, y la evaluación de la respuesta y actuación de los seguidores de acuerdo con el criterio definido por objetivos específicos. Más aun, en el mundo de hoy que se ha convertido en un mundo enorme, muchos líderes organizacionales pueden encontrar que operan en contextos multiculturales donde el inglés es un idioma internacional y la conducta del líder debe adecuarse a muchas diferencias culturales. Los líderes tienen que mantener un balance eficaz entre el poder y los sentimientos de las personas y la necesidad de resolver problemas, cumplir con las fechas límite y lograr objetivos. Puede ser que los estilos de liderazgo de algunos individuos se desequilibre a través de las exigencias de sus personalidades sus antecedentes profesionales y otros factores psicológicos o logísticos, por ejemplo los

líderes que se encienden temperamentalmente con las acciones de trabajo en un problema hacia la solución del mismo pueden elegir participar más que dirigir, incluso, cuando delegar pudiera estimular más madurez y motivación en sus seguidores. Así, algunos líderes encuentran difícil dejar libres a sus subordinados, otros líderes pueden involucrarse en forma personal con su equipo de trabajo, pasando por alto las habilidades relevantes de los miembros, otros tienen una necesidad de poder muy fuerte. El liderazgo tiene que ver con el aumento de la motivación y la madurez de los seguidores, por tanto todo lo que los líderes hagan con respecto a su equipo de trabajo debe ser dirigido a vencer la pasividad y desarrollar la responsabilidad por su propio aprendizaje.

Hersey y Blanchard (1977) una conducta de liderazgo lo llaman los autores como una “alta orientación a la tarea y baja a la relación” y esta orientación variara dependiendo de los integrantes de un equipo de trabajo, y dependiendo del rol que les este delegado en su función. Flores (1988), menciona que el liderazgo es un conjunto de acciones que se efectúan por una o varias personas para que otras realicen una tarea o propósito, un líder es una persona que tiene ciertas cualidades de personalidad, magnetismo, percepción que es capaz de influir en otros para provocar que su conducta se oriente en determinada dirección. Continúa el autor mencionando que el líder posee un fuerte sentido de la situación, una visión total del problema analizado, también es firme en sus creencias, determinante por sobre todas las cosas en sus convicciones, el líder posee un gran poder de decisión, determinación marcada, capacidad para entender la conducta de los demás e interpretar sus deseos y expectativas.

Concluye el autor con que la más notable característica del líder es la convicción que impulsa sus acciones que hace que tenga más fuerte motivación que los demás. Mendoza, García y González (2012), Hoy en día cada vez son las más las empresas que se enfrentan a retos de adaptación, cambios de ámbito mundial en las sociedades, los mercados y la tecnología les están obligando a aclarar sus valores, desarrollar nuevas estrategias y aprender nuevas formas de funcionar. Y la tarea más importante para los líderes, en vista de tales desafíos es movilizar a todos los empleados de la organización para trabajar en la adaptación. Comentan además los autores que a pesar de la importancia creciente que tiene el liderazgo para el éxito de las empresas, las experiencias laborales de la mayoría de los empleados muestran el desencanto y la frustración de estos ante sus líderes que no parecen entenderlos o tratar de mostrar interés por ellos. No obstante algunas empresas han demostrado de manera consistente su capacidad para convertir a las personas en líderes-gestores destacados, el impacto de la falta de reconocimiento, orientación y guía de su líder es más fuerte cuando el trabajador siente que no tiene autonomía a la hora de realizar sus funciones. Flores (1998), la autoestima y el auto concepto son determinantes en la vida el aceptarse a sí mismo con cualidades y defectos permite, estar en condiciones de ser empático y relacionarse con los demás en forma efectiva. Es importante el manejar un auto concepto positivo para siempre estarse esforzando en el sí y nunca en el no, y en el hacer las cosas bien desde la primera vez.

Medina (1993) comenta “estoy convencido de que no existe el nivel de incompetencia; lo que falta es capacidad de adaptación”. El mundo actual de los negocios exige hoy más que nunca adaptarnos a la realidad, a un mercado totalmente competitivo en el que cada día ingresen productos de mayor calidad a un precio menor, también comenta el autor que lo anterior es una mega tendencia de cara al siglo XXI; solamente los productos de mayor calidad aseguran su permanencia en el mercado, por lo que renunciar a ser una empresa de calidad es renunciar al futuro. De la misma manera el autor comenta que México irrumpe en los nuevos mercados de alta competencia, por esto requiere de una generación de empresarios que tengan conocimientos profundos sobre cómo organizarse y adaptarse para alcanzar el éxito; que vivan cada día el compromiso de constituir, mediante la producción de riqueza, un país más justo y equitativo; que sean emprendedores e impulsen la calidad como su principal ventaja competitiva siempre se ha deseado saber el cómo se puede ser un emprendedor exitoso y tiene que ver con el problema de la falta de competencias y habilidades para desarrollarse eficazmente como emprendedores.

METODOLOGÍA

Se pretendió dar solución a la problemática encontrada mediante un estudio desde una perspectiva cualitativa a cuantitativa siguiendo un rigor metodológico de un estudio etnográfico educativo que incluyo varios instrumentos para darle cientificidad entre los cuales se encuentran observación y encuesta cuestionario fundamentada en investigación realizada por Plascencia (2013). Esta investigación se fundamenta en resultados vertidos en esa investigación únicamente de la categoría de liderazgo y motivación, con la aplicación del instrumento encuesta cuestionario según diseño de Solomon (1949), Hernández Sampieri (2010), Con la idea de identificar la percepción de la muestra. En el diseño de estudio se consideró que la combinación de metodologías es lo más viable en un trabajo de investigación Pencing (1964), West Lecon (1988) asimismo el paradigma que orienta a la observación y confiabilidad de la aplicación del cuestionario encuesta Bisquerra (1988), siguiendo las recomendaciones de estos autores en lo relacionado a la investigación y la combinación de metodologías de cuantitativa a cualitativa. La metodología de investigación que se aplicó y que oriento en el camino crítico que se siguió durante el tratamiento de la presente investigación fue con el objeto de que se someta a comprobación lo planteado en las hipótesis, que lleven a dar solución a la problemática encontrada de que tanto influye la motivación en el comportamiento organizacional con el objetivo de lograr desarrollarse eficazmente y elevar la productividad empresarial. Se aplicó la encuesta a la muestra seleccionada que fueron los 60 estudiantes de educación superior, y consistió en un cuestionario tipo encuesta que contenía 28 preguntas abiertas y cerradas, con la interrelación e interpretación de datos dirigidos a la comprobación de hipótesis.

RESULTADOS

Al analizar los resultados, de acuerdo al objetivo general planteado que considero identificar que tanto influye la motivación en el comportamiento organizacional en las empresas para elevar la productividad y con ello propiciar un liderazgo efectivo motivando a todos los involucrados en una determinada estructura organizacional. Se observa de acuerdo a los hallazgos identificados y al interpretar el instrumento encuesta cuestionario utilizado, como los resultados más relevantes obtenidos los que se mencionan a continuación:

Hallazgos Encontrados

Fueron diversos los hallazgos encontrados e interpretados entre los cuales se encuentran los siguientes: La muestra refirió que debido a los bajos sueldos se encuentran desmotivados para desarrollar todo su potencial y con ello elevar la productividad empresarial. La muestra considera que el tener una alta autoestima te apoya para ser un buen administrador. También infieren que se favorece una falta de motivación de todos los integrantes de una empresa debido a que consideran que el liderazgo es más efectivo si como empleados tuviesen más conocimiento acerca de los planes de la empresa y ello los motivaría a dar mejores resultados. La muestra considera que el tener una alta autoestima te apoya para ser un buen administrador. No consideran La inflación, devaluación, entorno macroeconómico y otros factores externos como agentes detonadores de su baja motivación no dando una importancia representativa a estos indicadores. Para todos los encuestados sería más fácil tomar decisiones para ejercer el liderazgo, si percibieran mejores ingresos. Por otra parte la muestra considera que si los ingresos son bajos se sienten desmotivados y baja su autoestima por lo cual no sienten deseos de mejorar ni ellos mismos ni dar un valor agregado a las empresas. También infieren que el liderazgo y la motivación constante ayuda a los directivos a tomar las decisiones adecuadas para mantener a la empresa en un alto nivel de competitividad. Lo que los orienta a tener aptitudes positivas para la toma de decisiones.

Discusion

De acuerdo al objetivo general en donde se considero identificar que tanto influye la motivación en el comportamiento organizacional en las empresas para elevar la productividad y con ello propiciar un

liderazgo efectivo en una determinada estructura organizacional. Analizando los hallazgos encontrados se observa que la motivación y el liderazgo influyen en la productividad empresarial y en el comportamiento organizacional, polarizando en ambos sentidos y en forma positiva propiciando un liderazgo efectivo y en forma negativa ubicando a los integrantes de una organización con un comportamiento de pobres resultados debido en forma determinante según afirma la muestra estudiada a los pocos ingresos salariales obtenidos, propiciando con ello una desmotivación laboral y una probable baja autoestima para seguirse desarrollando y en consecuencia contribuir a que las organizaciones mejoren. Considerando que es probable que si las organizaciones involucrarán a su personal en sus planes y proyectos en general, estos se motivaría a dar mejores resultados, debido principalmente a que no se sienten afectados por los indicadores macroeconómicos, lo que lleva a que estas afirmaciones básicamente se propician por los bajos sueldos percibidos lo que provoca una falta de motivación y en consecuencia ser personas que se encuentran laborando probablemente con una baja autoestima.

LIMITACIONES ENCONTRADAS

Es probable que en las organizaciones no se estén percatando acerca de las formas en que influye el liderazgo para la toma de decisiones con el elemento humano con el que cuentan, debido a que no se estén considerando la motivación y los sueldos como un factor agente de cambio positivo y mejora que pudiese influir en el aumento de la productividad organizacional. Debido al análisis de los resultados, hallazgos y limitaciones encontradas se puede decir que: Se comprueba la Hipótesis 1 que dice:

El comportamiento organizacional influye en la alta motivación en los integrantes de una empresa impactando directamente en el incremento de la productividad empresarial. Esta hipótesis muestra una correlación importante entre la motivación el liderazgo y el comportamiento organizacional que se genera en las empresas, elevando o bien disminuyendo su productividad, asimismo los datos vertidos muestran que sí se propicia una desmotivación, motivada principalmente por los bajos ingresos que perciben los empleados en las organizaciones y ello influye en el liderazgo, en forma positiva si va acompañado de buenos salarios o aceptables elevando la motivación y autoestima del personal y en forma negativa al desmotivar y bajar la autoestima del personal si estos sueldos son bajos. Todos los datos presentados a este respecto, así como el presente análisis, llevan a concluir que: la Hipótesis 1 queda confirmada. En cuanto a los hallazgos no calculados no se efectuaron cambios significativos tanto en el planteamiento del problema como en las hipótesis.

CONCLUSIONES

Concluyendo que una vez sometida a comprobación la hipótesis a través de un análisis preliminar y descriptivo, y habiendo también analizado las implicaciones y hallazgos no calculados, se reporta como conclusión que efectivamente el liderazgo y la motivación influyen en la cultura organizacional de una empresa. Es importante que las organizaciones tomen conciencia acerca de lo que está sucediendo y el impacto de los bajos sueldos y de cómo este hecho repercute en toda una estructura organizacional y el comportamiento del personal en general. Actualmente las organizaciones en México, y en otros países del mundo se encuentran trabajando en formas de mejora continua que permitan manejar una adecuada responsabilidad social, motivado principalmente por los requerimientos de un recurso humano cada vez más preparado, los incrementos de la población y el egreso de cada vez de más profesionistas, por parte de las universidades tanto públicas como privadas, dan un resultado probable de que se esté ubicando a las organizaciones en una situación de ventaja en cuanto a la demanda y oferta laboral de candidatos a ocupar puestos vacantes. Aunado a ello la migración constante provoca una ventaja competitiva a las organizaciones sobretodo en franjas fronterizas de la república mexicana, sin embargo es importante considerar la correlación que da como resultado baja de autoestima propiciada principalmente por los bajos sueldos percibidos y escasa oportunidad de mantener la motivación adecuada para los líderes de las organizaciones para ejercer un liderazgo efectivo.

Situación que para los líderes, se debe de estar tornando complicada, debido a que el elemento humano con el que cuenta se encuentra desmotivado para dar un valor agregado a la actividad desarrollada debido principalmente a lo siguiente. Los bajos sueldos desmotivan a los empleados, impidiéndoles desarrollar todo su potencial y con ello elevar la productividad empresarial. Una alta autoestima apoya para ser un buen administrador motivando a los subordinados. Se favorece un clima de alta motivación para dar mejores resultados de todos los integrantes de una organización al conocer acerca de los planes de la empresa. El impacto de los indicadores del entorno macroeconómico tan cambiantes y otros factores externos no son agentes detonadores de una baja motivación y del personal en una organización lo perciben como un hecho normal de vida. La toma de decisiones para ejercer un liderazgo efectivo sería más sencilla si el personal percibiera mejores ingresos. Si los ingresos son bajos el personal se siente desmotivado y baja su autoestima por lo cual no mejoran ni ellos y en consecuencia tampoco dan un valor agregado a las organizaciones. El liderazgo y la motivación constante auxilian a los directivos a tomar las decisiones adecuadas para mantener a la empresa en un alto nivel de competitividad. Lo que los orienta a incrementar sus aptitudes para la toma de decisiones.

Futuras Investigaciones

Es importante dar continuidad a la presente investigación debido a que probablemente las empresas no consideran que la motivación se refleja en el comportamiento organizacional e influye en la toma de decisiones como un impacto en la buena o mala motivación de los integrantes de una organización. También es probable que no estén considerando que los bajos sueldos influyen en una baja productividad. Considerando para futuras investigaciones una nueva investigación que involucre dos nuevas palabras que son la responsabilidad social, por ejemplo:

Comportamiento organizacional, motivación y responsabilidad social en las organizaciones.

En donde se involucrará por qué? las empresas no perciben que si incrementan los salarios se les incrementara la productividad.

Probablemente sí se motiva al personal en las organizaciones sin embargo si los salarios son bajos persiste la desmotivación y la baja autoestima en una organización, lo que no favorece un buen clima organizacional.

También se podría investigar acerca de la motivación y los sueldos como un factor agente de cambio positivo y mejora que pudiese influir en el aumento de la productividad organizacional.

Con esto sería necesario involucrar al sector empresarial directamente con la finalidad de difundir también los resultados obtenidos en la presente ponencia.

Alma Lourdes Camacho Garcia, Universidad Autónoma De Baja California

RESUMEN

En ésta investigación se presenta un análisis de la dimensión de territorio como factor de la competitividad de las empresas agrícolas del valle de San Quintín, Baja California, México, la relación entre ubicación geográfica y competitividad se ha ido desarrollando de tal manera que los empresarios deben considerar sus ventajas y oportunidades territoriales que les permitan implementar estrategias para mejorar su competitividad y sumarse a las tendencias mundiales hacia la globalización. México es el principal exportador de tomate en el mundo, Baja California es el segundo productor nacional después de Sinaloa, y el valle de San Quintín es el principal productor del Estado, por lo que identificar las ventajas competitivas del territorio permitiría a los empresarios implementar acciones que potencialicen su competitividad.

PALABRAS CLAVES: Competitividad, Territorio, Actividad Económica Regional

THE TERRITORY AS A FACTOR OF COMPETITIVENESS OF AGRICULTURAL ENTERPRISES IN THE VALLEY OF SAN QUINTIN, BAJA CALIFORNIA, MEXICO

ABSTRACT

In this research an analysis of the extent of territory as a factor in the competitiveness of agricultural enterprises Valley San Quintin, Baja California, Mexico, the relationship between geographic location and competitiveness has developed so presented that employers must consider their advantages and territorial opportunities to implement strategies to improve their competitiveness and join the global trend towards globalization. Mexico is the largest exporter of tomato in the world, Baja California is the second largest domestic producer after Sinaloa, and the valley of San Quintin is the main producer of the state, which identify the competitive advantages of the territory would allow employers to implement actions potentializing competitiveness.

KEY WORDS: Competitiveness, Territory, Regional Economic Activity

INTRODUCCIÓN

El territorio en la zona agrícola del Valle de San Quintín ha jugado un papel primordial en el desarrollo de las actividades económicas, al facilitar el transporte de los productos agrícolas hacia el extranjero, principal destino de la producción agrícola, alcanzando el 90% de la producción para exportación (SAGARPA 2013).

REVISIÓN LITERARIA

Es necesario definir el territorio como, una agrupación de relaciones sociales siendo el área de encuentro de las relaciones de mercado y las formas de regulación social, que determinan formas de organización de la producción, habilidad en los procesos innovadores y pautas de cambio técnico que conducen a una diversificación de la producción y sus técnicas, no exclusivamente sobre la base de costo relativo de los factores productivos, determinando con ello diferentes senderos de desarrollo empresarial (Tkachuk, 2004). De acuerdo con Canzanelli (2009), existen dos factores para que productos y servicios de un determinado territorio pueden ser más deseables de otros para los mercados. El primero integrado por los factores de proximidad, para ciertos tipos de bienes como: producción agro-pecuaria, ciertos servicios a la población, producción típica, entre otros. El segundo integrado por los factores de diferenciación, para productos y servicios difícilmente imitables, para los cuales la venta depende de la capacidad de pago de los usuarios y de los hábitos y la filosofía en los consumos.

Tomando en consideración las definiciones anteriores se hace necesario ubicar territorialmente la investigación que se realiza actualmente, refiriéndose al territorio como factor de competitividad en las empresas agrícolas del Valle de San Quintín, Baja California, México, así como las políticas gubernamentales que consideran las acciones hacia un desarrollo sostenible. Los estudios realizados sobre la competitividad de las empresas agrícolas particularmente las hortícolas, manifiestan que el sector agrícola en el valle de San Quintín presenta grandes retos para mantener y mejorar la competitividad, atendiendo las recomendaciones de calidad, sanidad e inocuidad exigidas por el actual mercado internacional (Avendaño, 2006).

METODOLOGIA

La presente investigación se realiza en el Valle de San Quintín se encuentra localizado al sur del municipio de Ensenada, Baja California, México, tiene como límites: al norte el paralelo 31°19' 36" que pasa por el poblado de San Vicente y continua al Ejido Pai Pai; al este la Sierra de San Pedro Mártir y el Mar de Cortés; a 115°56'33" de longitud oeste. Es la localidad más poblada del extremo sur del estado. Se analizó la información existente sobre la competitividad territorial, las estrategias y políticas gubernamentales que pueden ser implantadas para mejorar la situación de las empresas agrícolas de la región. En lo que se refiere a la población de estudio que pueden ser beneficiadas con la ejecución de acciones estratégicas tendientes al desarrollo sostenible de la región, procede señalar que la unidad de estudio son las empresas agrícolas del Valle de San Quintín, Baja California, México. La población se ha determinado de acuerdo con la información proporcionada por el INEGI en Censo Económico 2009, a la información que proporcionada por el gobierno del estado de Baja California, SAGARPA, a la Secretaría de Fomento Agropecuario y a la obtenida del recorrido de la región que nos permitirá la realización de un catálogo de empresas agrícolas.

RESULTADOS

Los resultados obtenidos son como evidencia primordial que las estrategias seguidas hasta la fecha por las empresas agrícolas, se han basado en el aprovechamiento de la demanda existente de la producción agrícola en el mercado internacional y en un segundo plano el mercado nacional. Las estrategias que deben implementarse en la región son facilitar la creación de agroclusters que puedan potencializar sus ventajas competitivas, la agrupación del sector le daría la fortaleza necesaria para actuar como bloque y beneficiarse mutuamente en sus actividades. Promover los beneficios de la creación de los agroclusters fomentaría su

crecimiento y concientizaría a los empresarios en la necesidad de alianzas estratégicas beneficiosas para los involucrados.

CONCLUSIONES

Cualquier esfuerzo hacia el logro de un desarrollo sostenible, debe realizarse partiendo de las ventajas competitivas que brinda el territorio, considerando la innovación en los sistemas productivos, con el propósito de elevar el nivel de empleo y la calidad de vida de una región, esto no podría ser aprovechado en plenitud si las planeaciones estratégicas se hacen de manera centralizada a nivel nacional, sin considerar las características particulares de la zona. Debe ser un esfuerzo conjunto entre los diferentes actores que participan en el desarrollo local considerando el entorno.

Por lo anteriormente expuesto se puede concluir que al hablar de desarrollo sustentable en una región, debemos considerar que los elementos que propician su presencia, deben estar encaminados en un mismo sentido, las políticas gubernamentales, la tecnología, las empresas, el respeto al medio ambiente, una sociedad incluyente que se comprometan con la conservación y buen uso de los recursos limitados, que las actividades económicas desarrolladas propicien la eficiencia en el aprovechamiento de los recursos y se fomente el cuidado del ambiente. Implementar políticas específicas que conlleven al desarrollo sustentable, considerando estrategias que les permitan a las empresas, la inversión en tecnología que facilite ese desarrollo y que se trabaje en conjunto para la conservación del entorno.

DIAGNÓSTICO DE SATISFACCIÓN DE LOS USUARIOS DEL DEPARTAMENTO DE SERVICIOS ESCOLARES DE LA “ESCUELA SUPERIOR DE AGRICULTURA DEL VALLE DEL FUERTE”.

Diana Carolina Pérez Sierra, Universidad Autónoma de Baja California

María Concepción Ramírez Barón, Universidad Autónoma de Baja California

RESUMEN

En el presente trabajo se presentan los datos relacionados con el diseño, construcción y validación del instrumento que mide la percepción de los usuarios (alumnos) del servicio que reciben por parte del departamento de servicios escolares de dicha institución perteneciente a la Universidad Autónoma de Sinaloa en la ciudad de Juan José Ríos, Sin. El instrumento se diseñó en base a Parasuraman, A., Zeithaml, V. & Berry, L. (1992) y modificado por Cronin & Taylor (1994). Lo conforman 22 Ítems que evalúan las cinco dimensiones: elementos tangibles, confiabilidad, capacidad de respuesta, seguridad y empatía. Para su validación se realizaron dos procesos; primeramente fue sometido a un proceso de validación de constructo, donde por medio de la opinión de expertos se obtuvo la viabilidad del instrumento. Posteriormente, para obtener la confiabilidad del instrumento, se realizó un estudio piloto, cuyos resultados fueron de un coeficiente Alpha de Cronbach con un valor de 0.949. Concluyendo que el instrumento cuenta con la validez y confiabilidad necesaria para medir a la población estudiada.

PALABRAS CLAVES: Satisfacción, Instrumento de Validación, Percepción, Calidad En Los Servicios

SATISFACTION USER'S DIAGNOSTIC OF THE SCHOLAR SERVICES DEPARTMENT OF THE “ESCUELA SUPERIOR DE AGRICULTURA DEL VALLE DEL FUERTE”

ABSTRACT

In this work the data related to the design, construction and validation of an instrument that measures the perception of users (students) of service received by the student services department of that institution in the Autonomous University of Sinaloa presents City of Juan José Ríos, Sin. The instrument is designed based on Parasuraman, A., Zeithaml, V. & Berry, L. (1992) and modified by Cronin & Taylor (1994). It is made 22 items that evaluate the five dimensions: tangibles, reliability, responsiveness, assurance and empathy. Two processes for validation were performed; was first subjected to a process of construct validation, where through expert opinion viability of the instrument was obtained. Subsequently, for the reliability of the instrument, a pilot study was conducted, the results were a Cronbach Alpha coefficient with a value of 0.949. Concluding that the instrument has validity and reliability needed to measure the population studied.

KEYWORDS: Satisfaction, Instrument Validation, Perception, Quality Services

INTRODUCCIÓN

La interacción del cliente con el servicio, uno de los fenómenos más importantes en el ámbito de los servicios dada la inseparabilidad entre la producción y el consumo, ha sido raramente examinada como variable moderadora. La variable de satisfacción puede medirse a través de un solo ítem, si bien la postura más generalizada es la utilización de una escala multi-atributo para capturar su verdadera naturaleza comentan San Martín, Collado & Rodríguez (2008). La presente investigación hace uso del modelo SERVPERF Cronin & Taylor (1992) para medir la percepción de los alumnos con respecto a los servicios prestados por parte del departamento de servicios escolares. La satisfacción depende en parte de la motivación de los alumnos, cuando el alumno se encuentra inconforme acerca de un servicio solicitado su percepción al servicio será de una baja calificación en cuanto a la calidad.

Este estudio se lleva a cabo en la Escuela Superior de Agricultura del Valle del Fuerte, con el diagnóstico se encontrara información suficiente para tomar decisiones que benefician tanto al personal del departamento de servicios escolares como a los alumnos para que ellos recomienden los servicios ofrecidos por el departamento. Desafortunadamente la mayoría de estudios sobre la satisfacción del usuario se ha dirigido a medir el funcionamiento de los sistemas de búsqueda y recuperación de información y el recurso obtenido y no a los servicios. Estos autores identifican un término que aparece constantemente asociado a la satisfacción es la calidad en general y más específicamente a la calidad de los servicios. Nejati & Nejati (2008) citado por Hernández (2011). El objetivo general de la presente investigación es: analizar la satisfacción de los usuarios con el servicio brindado por el personal del departamento de servicios escolares de la Escuela Superior de Agricultura del Valle del Fuerte-Universidad Autónoma de Sinaloa. Con el propósito de lograr dicho objetivo se establecieron los siguientes objetivos específicos:

Analizar todos los elementos tangibles de atención en los que interactúa el personal del departamento con los alumnos de la institución. Conocer el nivel de confiabilidad percibida por los alumnos del personal del departamento de la institución Analizar la capacidad de respuesta percibida por los alumnos del personal del departamento de la institución Medir la percepción de seguridad de los alumnos con el servicio del departamento de servicios escolares. Identificar la empatía percibida por los alumnos hacia el personal del departamento de servicios escolares. Conocer la calidad percibida del servicio brindado a los alumnos en el departamento de servicios escolares.

Este estudio se justifica debido a que hoy en día las instituciones educativas y otras organizaciones deben prestar vital importancia a la satisfacción directa de sus usuarios o consumidores, dado a que estas existen para satisfacer las necesidades de los mismos. Son varios estudios que aplican la comparación entre las expectativas y la percepción a través de las dimensiones del trabajo de investigación: elementos tangibles, confiabilidad, capacidad de respuesta, seguridad y empatía, en ellos se muestra como la percepción supera a las expectativas del servicio. De esta manera esta investigación parte de la percepción de los usuarios. Por medio del diagnóstico se pretende analizar los resultados arrojados por la investigación de campo, las cuales permitirá conocer e identificar posibles áreas de oportunidad y a su vez, reforzar aquellas áreas que funcionan correctamente buscando la mejora continua en cada uno de sus procesos ya sea de atención del cliente o al interior del departamento. Las preguntas de investigación en el estudio son las siguientes:

¿Cuál es la percepción de los alumnos de los elementos tangibles de la institución?

¿Cuál es el grado de confiabilidad que los alumnos perciben acerca del servicio que les ofrece el departamento?

¿Cómo perciben los alumnos la capacidad de respuesta del personal del departamento de servicios escolares?

¿Cuál es la percepción de los alumnos en cuanto a la seguridad del departamento de servicios escolares?

¿Cuál es la empatía del personal del departamento de servicios escolares que perciben los alumnos?

¿Cuál es la calidad percibida en el servicio brindado por el personal del departamento de servicios escolares a los alumnos?

La sección de metodología de esta investigación describe el instrumento a utilizar así como también la metodología de muestreo. El instrumento se basó principalmente en la adaptación del modelo Servperf al objeto de estudio como antes se mencionó analizando las dimensiones del modelo de Servqual que son: elementos tangibles, confiabilidad, capacidad de respuesta, seguridad y empatía. Para finalizar se utilizaron todos los datos recabados para tener una amplia perspectiva del funcionamiento, lo cual mediante los análisis permite proyectar estrategias de mejora e identificar debilidades que permitan convertirlas en áreas de mejora. Para cerrar con la discusión final que permitirá contrastar los resultados encontrados con descubrimientos a investigaciones similares.

REVISIÓN LITERARIA

La satisfacción del usuario supone una valoración subjetiva del éxito alcanzado por el sistema de información, y puede servir como elemento sustitutivo de medidas más objetivas de eficacia que, a menudo, no están disponibles. Podemos considerar que la satisfacción es un indicador blando, con un marcado componente subjetivo, porque está enfocado más hacia las percepciones y actitudes que hacia criterios concretos y objetivos. En cierta manera, la satisfacción proporciona una valoración sobre la visión del sistema que tienen sus usuarios, más que sobre la calidad técnica de los mismos, y puede conducir a situaciones en las que, si un sistema de información es percibido por sus usuarios como malo, deficiente o insatisfactorio, constituirá para ellos un mal sistema de información. Por lo que la visión del usuario será determinante para el éxito o fracaso de un sistema de información. Rey (2000) Numerosos estudios acerca de la satisfacción demuestran que los usuarios satisfechos comunican su experiencia positiva a tres personas, mientras que los insatisfechos relatan su experiencia negativa a entre once y trece personas (Kotler et.al. 1999:297) citado en Vogt (2004). Por ello existen hasta cuatro veces más probabilidades de crear una imagen negativa que de generar una positiva.

Orientar y satisfacer al usuario es muy importante, ya que un cliente satisfecho es el mejor instrumento de promoción y la mejor campaña de imagen. Vogt (2004) Un cliente satisfecho con un servicio está más dispuesto a volver a usarlo en el futuro y recomendarlo a otros posibles clientes (Oliver, 1980). Esto sin duda alguna es aplicable a los servicios que ofrece el departamento de la ESAVF dado a que el servicio que reciben los alumnos y padres de familia por parte del personal al ser satisfactorio y de calidad permite que estos queden satisfechos y los tramites sean más rápidos y de igual manera los recomienden con otros alumnos y al estar conformes compartan buenas referencias de la institución.

La implementación de las certificaciones y el cumplimiento de requisitos de las normas que implementan acciones correctivas y preventivas en el departamento de servicios escolares contribuyen a la mejora de los servicios. Mendoza (2009) Los autores Jiménez, Terriquez & Robles (2011) citados por Abarca, et al (2013) dicen que la satisfacción del estudiante refleja la eficacia de los servicios académicos y administrativos y lo mismo con las unidades de aprendizaje, con las interacciones con su profesor y compañeros de clase, así como con las instalaciones y el equipamiento. La propuesta de la investigación de los autores Gil, et al (2005) pretende identificar y medir los elementos que contribuyen a explicar el valor del servicio y como éste incide en la satisfacción del cliente, dirigiendo la investigación hacia las experiencias que ocurren en un encuentro de servicio.

La satisfacción es el resultado de un proceso valorativo. Cuando una persona expresa estar satisfecha o no con respecto a algo, está emitiendo un juicio de valor a partir de un proceso de evaluación, que tanto en el plano objetivo como en el de su reflejo en la conciencia se sustenta en la unidad de lo cognitivo y lo afectivo: es decir, transcurre en un proceso de construcción de significados y sentidos personales. Gentó, Vivas (2003) El autor Herrera, A. (1998) citado por Espinosa, J. (2008) define a un instrumento de medida como la técnica o conjunto de técnicas que permiten la asignación numérica a las magnitudes de la propiedad o atributo ya sea por comparación con las unidades de medida o para provocar y cuantificar las manifestaciones del atributo cuando éste es medible sólo de manera indirecta. Un instrumento debe satisfacer tres exigencias básicas: a) detectar 'la señal' sin interferencia y, en especial, sin intervención del operador. La operación de medida es la interacción objeto de medida-instrumento, por tanto el interés no es ya el objeto de medida sino el complejo objeto-instrumento, b) no provocar reacción en el objeto de medida o, de ser así, tal reacción debe ser calculable, c) basarse en supuestos determinados sobre la relación entre la propiedad y el efecto observado.

Cualquier instrumento de recolección de datos debe resumir dos requisitos esenciales: validez y confiabilidad. Con la validez se determina la revisión de la presentación del contenido, el contraste de los indicadores con los ítems que miden las variables correspondientes. Se estima la validez como el hecho de que una prueba sea de tal manera concebida, elaborada y aplicada y que mida lo que se propone medir. Ruiz, M. (2011) Hernández et al (2010), indican que la confiabilidad de un instrumento de medición se refiere al grado en que su aplicación repetida al mismo sujeto u objeto, produce iguales resultados. Los autores Baechle y Earle (2007) indican que la validez es el grado en que una prueba o ítem de la prueba mide lo que pretende medir; es la característica más importante de una prueba. Al definir el término fiabilidad, los autores argumentan que es la medida del grado de consistencia o repetitividad de una prueba. Una prueba tiene que ser fiable para ser válida, porque los resultados muy variables tienen muy poco significado. Existen diferentes procedimientos técnicos para la estimación de la consistencia interna, el más general es el Alpha de Cronbach el cual se define como la intercorrelación promedio de un universo de reactivos o de todas las posibles partes en las que se puede dividir el instrumento. El procedimiento técnico para la estimación del Alpha de Cronbach se basa en una sola aplicación del instrumento a un solo grupo de examinados, lo cual se debe a que la estimación de la confiabilidad se hace sobre el contenido representado en el conjunto de elementos que constituyen el instrumento y no en variaciones del tiempo de aplicación o en los conjuntos de elementos (ítems) aplicados Espinosa, J. (2008).

Descripción del área de estudio: La población objetivo de esta investigación son los alumnos de la ESAVF de la ciudad de Juan José Ríos, Ahome, Sinaloa. Su ubicación del plantel es Calle 16 Av. Japaraquí S/N C.P. 81110. Juan José Ríos, Ahome, Sinaloa, México. Se estudiarán todos los alumnos actualmente inscritos en los nueve semestres, tomando una muestra representativa para captar la percepción que tienen estos del servicio que brinda el departamento de servicios escolares de esta unidad académica.

Tipo de estudio

El enfoque de este estudio es cuantitativo, debido a que busca especificar propiedades, características en la población de estudio. La investigación cuantitativa nos brinda una gran posibilidad de réplica y un enfoque sobre puntos específicos de los fenómenos, además de que facilita la comparación entre estudios similares. Hernández, R., Fernández, C. y Baptista, M. (2010) El alcance de estudio es descriptivo porque se pretende describir las características de la calidad en el servicio del departamento de servicios escolares y la percepción de los usuarios, en este caso los alumnos. Busca especificar las propiedades, las características y los perfiles de personas, grupos, comunidades, procesos, objetos o cualquier otro fenómeno que se someta a un análisis. Además es útil para mostrar con precisión los ángulos o dimensiones de un fenómeno, suceso, comunidad, contexto o situación. Hernández, R., Fernández, C. y Baptista, M. (2010) El tipo de diseño del estudio es no experimental ya que no se realizara manipulación sobre las variables a analizar y transversal por qué solamente se medirán en una ocasión y en un periodo determinado para la determinación del

objetivo de estudio. En un estudio no experimental no se genera ninguna situación, sino que se observan situaciones ya existentes, no provocadas intencionalmente en la investigación por quien la realiza. En la investigación no experimental las variables independientes ocurren y no es posible manipularlas, no se tiene control directo sobre dichas variables ni se puede influir sobre ellas, porque ya sucedieron, al igual que sus efectos. Hernández, R., Fernández, C. y Baptista, M. (2010) Los diseños de investigación transaccional o transversal recolectan datos en un solo momento, en un tiempo único. Su propósito es describir variables y analizar su incidencia e interrelación en un momento dado. Es como tomar una fotografía de algo que sucede. Hernández, R., Fernández, C. y Baptista, M. (2010)

Determinación del tamaño de la muestra: De acuerdo con Hernández, R., Fernández, C. y Baptista, M. (2010) en la mayoría de los estudios se utilizan muestras para obtener información de la población o universo, esto debido a una economía de tiempo y recursos y, definen la muestra como un subgrupo representativo de la población. Existen dos tipos de muestras, la probabilística y la no probabilística, la diferencia entre ambas es que en la primera todos los elementos de la población tienen la misma probabilidad de ser elegidos y para los resultados de los estudios que utilizan este tipo de muestras permite la generalización de las características de la población, mientras que en las muestras no probabilísticas. Los autores mencionan que la elección de los elementos no depende de la probabilidad, sino de causas relacionadas con las características de la población o de quién hace la muestra. Hernández, R., Fernández, C. y Baptista, M. (2010) La fórmula utilizada para determinar el tamaño de la muestra es la siguiente:

$$n = \frac{N * Z_{\alpha}^2 * p * q}{d^2 * (N - 1) + Z_{\alpha}^2 * p * q}$$

Al momento de reemplazar la formula con nuestros valores de estudio, está determinada de la siguiente manera: $n = (1,498) (1.96)^2 (0.5 (1 - 0.05)) / .03^2 (1,498 - 1) + (1.96^2 (0.05 (0.95))) =$
Por lo tanto el tamaño de la muestra es de 179

Población

Población o universo Conjunto de todos los casos que concuerdan con determinadas especificaciones. Es preferible entonces establecer con claridad las características de la población, con la finalidad de delimitar cuáles serán los parámetros muestrales. Hernández, R., Fernández, C. y Baptista, M. (2010) La población a estudiar son los 1498 alumnos que actualmente están inscritos en la Escuela Superior de Agricultura del Valle del Fuerte en el periodo 2014-2015. Nuestra población comprende a todos los alumnos pertenecientes de cada semestre desde el primer semestre hasta el noveno semestre.

Tamaño Muestra- Piloto

Como parte del proceso para el desarrollo de la encuesta del estudio, se realizó una prueba piloto de un primer instrumento, el cual consta de 26 ítems los cuales se acompañan de una escala de Likert para recoger las percepciones de los alumnos. Se tomó una muestra para el piloto del instrumento de 36 alumnos de la población, donde serán categorizados por cada semestre, en este caso 7 alumnos por semestre. Posteriormente para la continuidad del estudio se tomara una muestra representativa de la población con un promedio de 179 cuestionarios a aplicar. La elección de la muestra es probabilística. Las muestras probabilísticas son aquellos subgrupos de la población en el que todos los elementos de ésta tienen la misma posibilidad de ser elegidos. Hernández, R., Fernández, C. y Baptista, M. (2010)

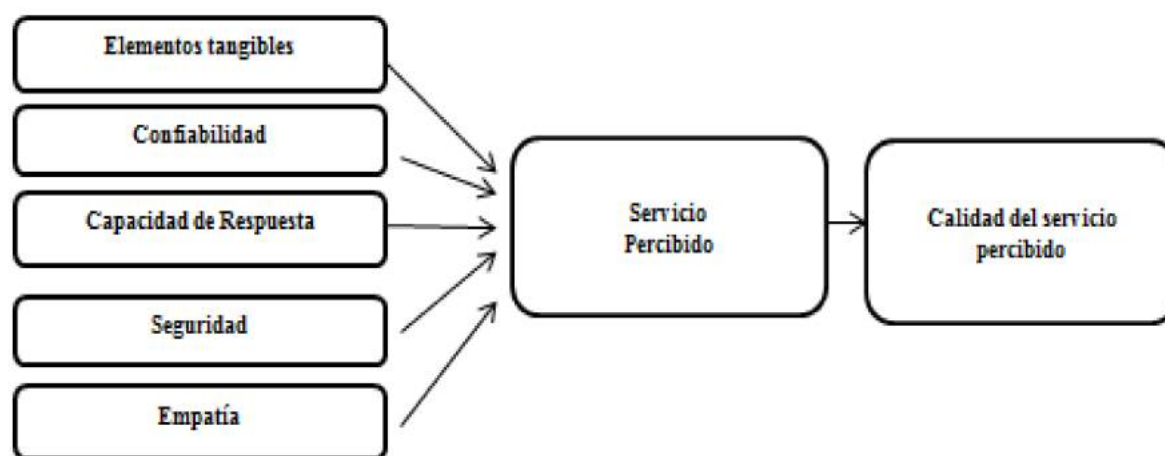

Descripción de la muestra: La presente investigación consta de una muestra piloto la cual se aplica de 36 cuestionarios que se aplicarán a los alumnos, dichos cuestionarios se categorizaran de acuerdo al semestre

de los alumnos, como anteriormente se mencionó 4 alumnos por semestre partiendo de los 9 semestres que cursan los alumnos en la licenciatura.

Instrumento de medición: El objetivo del instrumento de este estudio es obtener datos para conocer el nivel actual de satisfacción de los usuarios sobre el servicio brindado por el departamento de servicios escolares de la ESAVF. Se describirá en este apartado el diseño y estructura del instrumento de medición que se utilizará para recabar la información del estudio. De los 22 ítems de la escala SERVPERF se tomaron todos éstos para el diseño del instrumento adecuándolos a la obtención de los objetivos de la presente investigación, además se tomó en cuenta la extensión del cuestionario anexándole 4 ítems más.

Modelo SERVPERF Cronin y Taylor (1992): Este modelo Servperf, se basa únicamente en el desempeño de quien brinda el servicio y de quien lo recibe. Es considerado una de las mejores alternativas para medir la calidad del servicio. El instrumento se desarrolló a partir de los 22 ítems dedicados a evaluar la percepción en el modelo Servqual. Su fortaleza radica en que explica mejor la varianza total en la medida de la calidad del servicio; además, posee mejores propiedades psicométricas, en términos de validez de constructo y eficacia operacional. Cronin y Taylor, 1992; Parasuraman, Zeithaml, 1994 citado en Otálora, M. L., & Orejuela, A. R. (2007).

Figura 1: Modelo Servperf, Cronin Y Taylor (1992)

Esta figura muestra el modelo Servperf. Elaboración propia, a partir de Cronin y Taylor, 1992; Parasuraman, Zeithaml, 1994 citado en Otálora, M. L., & Orejuela, A. R. (2007)

Procedimiento Para la Aplicación del Instrumento

Se realizó una prueba piloto del cuestionario, la cual se aplicó a 36 alumnos. Con el pilotaje se pretendió realizar modificaciones al diseño del instrumento, ya sea eliminar o modificar ítems del cuestionario, esto con la finalidad de lograr un equilibrio a cada dimensión de la variable a analizar. La aplicación de los cuestionarios se realizó auto administrativo-individual, ya que estos fueron entregados directamente a los alumnos y ellos responderán a cada ítem individualmente. Los autores Hernández, R., Fernández, C. y Baptista, M. (2010) indican con esto que “No hay intermediarios y las respuestas las marcan ellos”. Los cuestionarios se aplicaron de manera personal a cada uno de los participantes en material físico. Se obtuvo un aproximado de 10 minutos para la contestación del instrumento.

Tabla 1: Operacionalización de las Variables

Dimensiones	Concepto	Operacionalización	Ítems	Definición
Bienes tangibles	Incluye la evidencia física del servicio como por ejemplo, las instalaciones en donde se llevan a cabo las entrevistas de selección, las herramientas con que se cuenta para facilitar la ejecución del proceso que pueden incluir alianzas con bolsas de empleo, bases de datos y publicaciones. De igual forma, incluye la presentación personal de quienes participan en la entrega del servicio de selección.	Percepciones	ET1 a ET5	La apariencia física de las instalaciones, los equipos de cómputo, el personal y materiales de comunicación.
Confiabilidad	Hace referencia a la consistencia, estabilidad y predictibilidad en el desempeño. Es decir que al momento de solicitar un proceso de selección se entrega un servicio correcto desde la primera vez.	Percepciones	C6 a C12	Habilidad para ejecutar el servicio prometido de forma amable y cuidadosa.
Capacidad de respuesta	Corresponde al deseo o la capacidad para estar listo al momento de brindar el servicio y por lo tanto, proveer un pronto servicio. Para el servicio de selección hace referencia a la capacidad para responder de manera inmediata ante una requisición, logrando que el candidato sea seleccionado dentro del tiempo acordado.	Percepciones	CR13 a CR17	Disposición y voluntad del personal del departamento para ayudar al estudiante y proporcionar el servicio.
Seguridad	Es estar libre de riesgo, peligro o duda. Involucra la seguridad física, así como la capacidad de mantener las transacciones bajo estricta confidencialidad.	Percepciones	S18 a S21	Conocimientos y atención mostrados por el personal del departamento y sus habilidades para inspirar confianza.
Empatía	Es el conocimiento del usuario y sus necesidades. Implica que las personas responsables de proveer el servicio de selección deben conocer a fondo sus tareas. Se debe brindar atención personalizada a cada cliente, que permita el reconocimiento específico de las necesidades de cada uno.	Percepciones	E22 a E26	Cuidado y atención ofrecida a los estudiantes.

Esta tabla muestra la operacionalización de las dimensiones del modelo Servperf, Elaboración propia, basado en Llanos C. y Mena J. (2012).

Proceso de Validez

La validación del instrumento de medición, se dio a partir de la aportación de la opinión de expertos en el tema, en el presente trabajo se acudió a maestros de la Universidad Autónoma de Baja California que revisan la congruencia de las preguntas y la validez de las mismas asimismo a maestros pertenecientes a dependencias de la Universidad Autónoma de Sinaloa, tras recibir sus comentarios y observaciones se realizaron ciertos cambios pertinentes a los cuestionarios para la mejoría del instrumento, y así contar con la aprobación de los expertos y recibir el consentimiento de la utilización del instrumento de medición para su aplicación en el objeto de estudio. Par asegurar que el proceso de validez fuese correcto, se analizaron los datos recabados con la validación de Lawshe, tomando como dato correcto únicamente las preguntas del instrumento que los expertos señalaron como ítems fundamentales. Para cada uno de los ítems mediante las ecuaciones Lawshe en Tristán (2008) determina que los ítems son aceptables cuando su CVR' es igual o mayor de .58.

$$CVI = \frac{\sum_{i=1}^M CRV_i}{M}$$

Donde,

CVR_i = Razón de Validez de Contenido de los ítems aceptables de acuerdo con el criterio de Lawshe.

M = Total de ítems aceptables en la prueba Los resultados de la muestra piloto fueron de: **0.80769231**

Fiabilidad del Instrumento

Se utilizó el alfa de Cronbach para analizar la confiabilidad del instrumento de medición dentro del programa SPSS 21.0, utilizado en la recolección de datos. De acuerdo con Coolican (2005) es el estadístico más utilizado para calcular la confiabilidad de una prueba. El autor nos dice que es el alfa equivalente al

promedio de todos los valores posibles de confiabilidad derivados de división por mitades que se podrían estimar a partir del conjunto de datos; por tanto, la confiabilidad se representa por medio de valores alfa alrededor de 0.75 y hasta 1. A continuación se muestran los resultados obtenidos de alfa de Cronbach para cada una de las variables que se estudian.

Tabla 2: Estadísticos de Fiabilidad Por Cada Variable

Variables	Número de Ítems	Alpha de Cronbach	Nivel de Confiabilidad
Elementos tangibles	5	0.837	Alto
Confiabilidad	7	0.833	Alto
Capacidad de respuesta	5	0.870	Alto
Seguridad	4	0.702	Bueno
Empatía	5	0.849	Alto

Esta tabla muestra los estadísticos de fiabilidad de cada una de las dimensiones del modelo Servperf de Cronin y Taylor, 1992. Fuente: Elaboración propia.

Los dominios del cuestionario obtuvieron coeficientes de confiabilidad ubicados en las categorías de buenas y altas en base a Hernández, R., Fernández, C. y Baptista, M. (2010). Al interpretar los valores obtenidos en cada variable, podemos identificar que la mayoría de los ítems de las dimensiones cuentan con lo necesario para la obtención de un índice de mayor confiabilidad en el instrumento. Cuando se tomaron en conjunto los resultados del cuestionario nos dio por resultado lo siguiente:

Tabla 3: Estadísticos de Fiabilidad

Alfa de Cronbach	N de Elementos
.949	26

Esta tabla muestra los estadísticos de fiabilidad de todas las variables en su conjunto indicando que nuestro Alpha de Cronbach cuenta con un alto grado de confiabilidad. Fuente: Elaboración propia.

De acuerdo con De Pelekais, C., et al (2007) el valor de Alpha de Cronbach de nuestro instrumento que es de .949 es de alta magnitud por lo que nos indica que el instrumento de medición cuenta con gran confiabilidad para la obtención de los objetivos del estudio, y que este a su vez es aceptable para su uso.

CONCLUSIONES

Se puede concluir que, en esta investigación se cuenta con una herramienta confiable para estudiar la percepción de los alumnos del servicio ofrecido por el departamento de servicios escolares. Se analizaron las dimensiones de: elementos tangibles, responsabilidad, confiabilidad, seguridad y empatía. Al realizar el cuestionario para poder describir la percepción de los alumnos, se obtuvo un índice de confiabilidad aceptable de acuerdo a la literatura revisada. Se observó que utilizando el modelo propuesto y modificado por Cronin y Taylor (1992), al adaptarse con el sujeto de estudio, se adapta y logra tener una efectiva validez, se pudo observar que las cinco dimensiones cuentan con un nivel de confiabilidad aceptable lo que indica que el instrumento cuenta con la validez necesaria para poder proceder con el estudio.

Limitaciones

Como limitaciones para el estudio tenemos que el instrumento fue validado y desarrollado para un departamento de servicios escolares en particular con distintas características a otros, por ello al momento de hacer uso de él, será necesario adaptar el cuestionario al contexto, es importante evaluar cada una de las dimensiones para que éstas sean las adecuadas para futuras investigaciones.

ANEXO FOLIO # CUESTIONARIO: PERCEPCIÓN DEL SERVICIO

Este cuestionario solicita información general sobre su percepción acerca de la satisfacción en los servicios que presta el departamento de servicios escolares de la Escuela Superior de Agricultura del Valle del Fuerte. La información proporcionada es totalmente anónima y se mantendrá una absoluta confidencialidad sobre la misma. Este instrumento forma parte de una investigación base para el desarrollo de sistemas de mejora continua, por lo que le agradecemos su valioso tiempo e información.

Instrucciones generales: Todos los espacios sin llenar serán considerados como nulos.

Haydeé Aguilar Romero, Universidad Autónoma de Aguascalientes
Araceli Gutiérrez Guzmán, Universidad Autónoma de Aguascalientes
Alberto Pontón Castro, Universidad Autónoma de Aguascalientes

RESUMEN

La publicidad conforma hoy por hoy, una de las herramientas de la promoción que más se ha adaptado a esta nueva realidad, dando pasos agigantados al convertirse en una publicidad ya no unidireccional sino más bien una publicidad conversada, es decir una en donde las empresas reciben retroalimentación sobre sus esfuerzos comunicacionales. El presente estudio, parte de la necesidad de saber hasta dónde han llegado los bríos de la publicidad en dispositivos móviles en nuestro contexto y como esto afecta o beneficia a los consumidores de los productos y servicios publicitados. Se entrevistaron a 375 estudiantes de la Universidad Autónoma de Aguascalientes, los resultados de la presente investigación apuntan hacia un conocimiento amplio de esta nueva forma de comunicación de marketing; por lo tanto, una estrategia de publicidad móvil en la actualidad es acertada tomando en cuenta los niveles de exposición de la marca en este medio para que no se convierta en una medida contraproducente para el crecimiento de la empresa.

PALABRAS CLAVES: Comunicación, Publicidad, Estrategias, Dispositivos Móviles, Productos

MOBIL DEVICE PUBLICITY: HOW TO MEASURE THE EFFICIENCY OF THIS MARKETING TOOL

ABSTRACT

Nowadays, publicity is made up of one of the most adapted production tools for this new reality, giving a giant step forward to change into not a one directional publicity but a conversed one, which is where the businesses receive feedback about their communication efforts. The present study is part of a need to know how far the verves of publicity on Mobil devices in our context have gotten and how this has affected or benefited publicity's product and service consumers. 375 students of the Universidad Autónoma de Aguascalientes were interviewed. The result of the present investigation points to an extensive knowledge of this new form of marketing communication: therefore, a Mobil publicity strategy is actually suitable taking into account the levels of the brand's exposure in this medium so that it doesn't turn counterproductive for the business' growth.

INTRODUCCIÓN

La comunicación empresarial en general, y la publicidad en particular, está en la necesidad de enfoques más específicos y efectivos (Feijóo-González, *et al.*, 2010). El nuevo siglo presenta grandes retos para publicidad móvil y sus características diferenciales, incluyendo el papel de la publicidad contextual y la relación personalizada con los dispositivos móviles (Feijóo-González, *et al.*, 2010). Es importante analizar el potencial futuro de esta herramienta de marketing, identificando las fuerzas económicas, tecnológicas y

sociales que dan forma a la publicidad móvil en el corto y mediano plazo (Kotler, 2008). La creciente importancia de la publicidad móvil entre los jóvenes ha sido un tema popular entre los investigadores de la industria y los académicos de todo el mundo (Castells *et al.*, 2004), por lo cual es de suma importancia que la Universidad Autónoma de Aguascalientes se mantenga a la vanguardia en sus investigaciones y ofrezca a la comunidad empresarial al igual que a los compañeros académicos productos de interés para la toma de decisiones más acertada en este ámbito.

La publicidad móvil se está preparando para ser una herramienta de gran éxito para las empresas, pero los investigadores y profesionales deben entender cómo medir la eficacia de esta forma de publicidad, especialmente los factores que impulsan a las empresas a utilizarla (Kyun *et al.*, 2008). La siguiente investigación está organizada de la siguiente forma en un primer apartado se encuentra la revisión de la literatura, seguida de la metodología, objetivos de la investigación planteamiento de las hipótesis, elaboración del cuestionario, análisis de datos para poder establecer los resultados de la investigación para finalizar con las conclusiones, limitaciones y las recomendaciones gerenciales obtenidas durante la prueba de hipótesis y la revisión de la literatura que se muestra a continuación.

REVISIÓN LITERARIA

Según Estrada *et al.* (2008) con respecto a la credibilidad de la publicidad (nivel de experiencia y confianza que los consumidores atribuyen a la fuente del mensaje), ésta aparece correlacionada positivamente con la probabilidad de aceptación del mensaje (Briñol, Petty y Tormala, 2004). Para poder aceptar un mensaje, es fundamental poseer alguna percepción previa sobre la marca que se ha de anunciar o de igual modo contar con información basta sobre la marca (Dinnie 2004). Un elevado valor visual de los estímulos publicitarios producirá, posiblemente, una transferencia de agrado del anuncio hacia la marca (Mitchell y Olson, 1981). Los anunciantes o publicistas necesitan entender las razones por las cuales a los consumidores no les gustan algunos anuncios en particular (Alwit y Prabhaker, 1994). Un anuncio simpático se asocia con actitudes favorables hacia la marca y se incrementa la capacidad de persuasión (Biel y Bridgwater, 1990; y Walker y Dubitsky, 1994).

La relación entre la cultura y el comportamiento del consumidor es bien reconocida como influyente en la formación de las actitudes de los consumidores (De Mooij, 2003). La importancia de la actitud hacia la publicidad es en relación con estímulos cognitivos y afectivos (Mitchell y Olson, 1981; MacKenzie, 1986). Las actitudes hacia la publicidad se definen como una predisposición para responder de una manera favorable o desfavorable a un estímulo de una publicidad en particular durante una determinada ocasión de exposición (MacKenzie, 1986). Una nueva tendencia de las estrategias de marketing es a través del celular (Karjaluo, 2004). El teléfono móvil se ha convertido recientemente en un canal nuevo y potencial para las comunicaciones de marketing, atrayendo un enorme interés tanto de los vendedores y los consumidores para el marketing móvil (Karjaluo, 2004). Las marcas que emplean campañas de marketing móvil son generalmente percibidas como innovadoras y de alta tecnología (Ferris, 2007).

La publicidad personalizada móvil se refiere a la adaptación de los mensajes promocionales enviados a dispositivos móviles basados en una combinación de parámetros del usuario como el perfil demográfico, la preferencia, el contexto y el contenido (Xu, 2007). La personalización en la publicidad móvil ofrece una amplia gama de beneficios para los vendedores como el mantenimiento de relaciones con los clientes (Kannan, 2001) y que influyen en las actitudes de los consumidores hacia un anuncio (Xu, 2007), incrementa la tasa de respuesta de las campañas (Barutcu, 2007) y provee un mejor desempeño a la mercadotecnia de la compañía (Vesanen, 2007). El marketing SMS es altamente aplicable para crear conciencia de marca, y las empresas ahora están utilizando un grado mayor de publicidad de mensajes de texto en lugar de otras herramientas de marketing directo (Dickinger, 2004; y Kavasslis, 2003). La lealtad de la marca se refiere a la tendencia de ser fieles a una marca focal, lo que se demuestra por la intención de compra de la marca como primera elección (Yoo y Donthu, 2001). Rettie (2005) analizó la aceptación de

26 diferentes campañas de marketing de mensajes de texto y encontró que el 89% de los encuestados lee los mensajes, 31% respondió de alguna manera y 5% transmitió el mensaje a algún amigo, por otra parte, 36% indicó que eran más propensos a comprar una marca después de recibir un mensaje promocional.

METODOLOGÍA

Objetivos

El presente proyecto busca realizar un verdadero estudio del consumidor en un área específica como lo es la publicidad, para ello se pretende: Identificar las características que influyen positivamente en la actitud hacia la publicidad móvil y el nivel de irritación que afecta negativamente. Identificar las características que influyen positivamente en la intención de compra del producto presentado a través de la publicidad móvil y el nivel de irritación que afecta negativamente. Identificar las características que afectan de manera positiva al valor de la publicidad móvil y el nivel de irritación que afecta negativamente.

Determinación de la Hipótesis

De acuerdo al marco teórico anterior, es posible establecer el siguiente compendio de hipótesis:

H1: Las características de la publicidad influyen positivamente en la actitud hacia la publicidad recibida en dispositivos móviles.

H2: La publicidad móvil afecta la intención de compra de productos y servicios presentados.

H3: Los usuarios de dispositivos móviles dan mayor valor a la publicidad móvil que a la de otros vehículos publicitarios.

Muestra

Después de concretar los objetivos del estudio, se establece la muestra poblacional y se describe el proceso de selección de las variables para obtener la información necesaria para el presente estudio; por último, se explican las técnicas estadísticas a utilizar en el proceso de análisis de la información recolectada. Los apartados siguientes muestran los análisis de datos, resultados, conclusiones y aplicaciones gerenciales. El presente estudio es de tipo descriptivo puesto que muestra la situación que guarda la publicidad móvil en un grupo importante de la sociedad como son los jóvenes universitarios quienes además son los más expuestos a la publicidad móvil dada la situación que impera en su contexto. La muestra se seleccionará por medio de un muestreo aleatorio simple con un error de estimación máximo del 5% y un nivel de confiabilidad del 95%, en un universo es finito ya que de acuerdo con el portal de transparencia de la UAA, a nivel profesional existen 13,758 alumnos inscritos para el semestre enero – junio 2013 (http://www.uaa.mx/transparencia/index_estad.php). La muestra establecida conforme a la siguiente fórmula:

$$n = \frac{\sigma^2 Npq}{[e^2(N-1)] + [\sigma^2 Npq]}$$

$$n = \frac{(1.96^2)(13,758)(0.5)(0.5)}{[(0.05^2)(13,758-1)] + [(1.96^2)(0.5)(0.5)]}$$

$$n = 374.75 = 375 \text{ encuestas a recolectar}$$

En cuanto a las variables a medir para el presente estudio, la relación de las mismas queda de la siguiente manera:

Tabla 1: Medición de Conceptos

Constructo	Dimensiones	Tipo De Medición
Perfil del entrevistado	Genero Edad Estado civil Semestre al que pertenece Empleado actual	Preguntas de clasificación
Situaciones de uso de internet en dispositivos móviles	Pasando el tiempo con la familia En eventos sociales Para comunicarme con amigos Al ir de compras	Likert (5 puntos; 1 siempre ... 5 nunca)
Intención de compra de tecnología		Ordenar de acuerdo a preferencia Likert (5 puntos; 1 siempre ... 5 nunca)
Uso de la publicidad móvil		Likert (5 puntos; 1 siempre ... 5 nunca)
Actitud hacia la publicidad móvil		Likert (5 puntos; 1 siempre ... 5 nunca)

Fuente: Elaboración de los investigadores en ella se establecen los constructos, dimensiones y tipo de medición que se llevaron a cabo en las cuales nos permitió ver el perfil del entrevistado, situaciones de uso de internet, en donde usan y para que lo utilizan.

Tabla 2: Ficha Técnica de la Investigación

Universo	Comunidad Universitaria: 13,758 Unidades Muestrales.
Ámbito geográfico	Campus de la Universidad Autónoma de Aguascalientes
Tipo de estudio	Cuantitativo.
Procedimiento de muestreo	Aleatorio Simple.
Recogida de información	Encuesta.
Tamaño de muestra inicial	500 encuestas.
Tamaño de muestra final	375 encuestas válidas.
Error muestral	5 %
Nivel de confianza	95% ($\sigma = 1.96$)
Probabilidad de éxito y fracaso	0.5
Fecha de trabajo de campo	13 de abril al 24 de mayo de 2013.

Fuente: Elaborada por los autores. La ficha técnica de la investigación nos da una información rápida y detallada de la metodología que se implemento para llevar a cabo el presente estudio.

RESULTADOS

Con la intención de dar respuesta a los objetivos e hipótesis planteados anteriormente, se procede ahora al análisis de los datos obtenidos mediante el programa estadístico SPSS v. 21 con el cual se puede establecer el perfil general de la investigación mediante los análisis descriptivos básicos: Resulta evidente observar que la proporción de informantes supera a la media puesto que la misma proporción existe hoy en día en la Universidad Autónoma de Aguascalientes, pues cerca del 55% reportaron ser mujeres mientras que el resto dictó ser de género masculino. La siguiente gráfica muestra el comportamiento antes citado: La muestra de los informantes de la Universidad Autónoma de Aguascalientes está compuesta por un 45% de varones mientras que el 55% la conforman mujeres. La mayoría de las edades de las personas encuestadas se encuentra entre 17 a 21 años dado que el 67.7% de la población entrevistada contestaron encontrarse entre estas edades, le sigue un 27.2% de informantes de entre 22 y 26 años. De igual forma la población informante de la presente investigación indicó que son solteros en un 90.1% mientras que un 7.7% de la población informó estar formalmente casados. Un 40.7% de la población evaluada estudian hoy en día del 3er. y 4to. Semestre de su licenciatura, mientras que un 1.9% se encuentran estudiando 9vo. Y 10mo. Semestre. Sin duda, la situación con porcentaje más alto de uso del dispositivo móvil para navegar en internet es para comunicarse con amigos, respondiendo que 43.3% de los encuestados siempre se conectan en esta situación. Al ir de compras 30% de la población entrevistada nunca navega por internet. El 34.2%

de las personas a veces navegan en internet cuando están pasando el tiempo con la familia, y a veces el 30.4% se conecta a internet en eventos sociales.

El 32.8% de la población encuestada informó que el primer producto que comprarían sería un celular Smartphone. La computadora de escritorio es el producto con menos porcentaje que adquirirían con un 3.8%. El 31.8% de los entrevistados opinan que casi siempre la publicidad móvil de a conocer nuevos productos. El 38.8% de la población entrevistada opina que casi siempre la publicidad móvil ofrece mayor número de alternativas de productos. El 38.1% de los entrevistados comentan que a veces La publicidad móvil ayuda a realizar compras más ágilmente. El 43.3% de los encuestados informaron que la publicidad móvil es más atractiva que la publicidad en televisión. Mientras que el 35.9 % de los que participaron en el instrumento de medición mencionan que a veces La publicidad móvil es más atractiva que la publicidad en radio. El 48.7% de la población informó que sí ha descargado alguna aplicación en una tienda virtual, sin embargo el 32.4% indicó no haber realizado ninguna descarga, lo que implica mayor énfasis en este capítulo para incentivar las descargas de aplicaciones de las empresas interesadas en el desarrollo de la publicidad móvil, resulta interesante que el 1.6% no sabe lo que es una aplicación.

Un 36.5% de la población encuestada considera que a veces la publicidad móvil es una herramienta útil para el consumidor. El 44% también cree que a veces la publicidad móvil ayuda a decidir más fácilmente sobre qué productos comprar, así como el 37.9% opina que a veces genera valor a las marcas que se publicitan en estos medios. El 31.7% de las personas informan que a veces la publicidad móvil las hace sentir feliz, le sigue el 28.2% que piensan que nunca las hace sentir feliz. 37.6 % de los entrevistados reflejan que a veces La publicidad móvil me irrita fácilmente. En el mismo instrumento el 32.9% nunca disfruto de los mensajes publicitarios que recibo en su celular. 44.4% de los encuestados mencionan que a veces Las promociones que desarrolla su compañía telefónica son atractivas.

Prueba de Hipótesis.

Se muestra a continuación la prueba de hipótesis incluyendo el grupo de ítems utilizados para validar el estudio:

H1: Las características de la publicidad influyen positivamente en la actitud hacia la publicidad recibida en dispositivos móviles. A fin de dar constancia a la hipótesis referida anteriormente, se desarrolla la siguiente gráfica que muestra los valores de las medias del presente estudio:

Tabla 3: Medias de la Actitud Hacia la Publicidad

	Disfrute de los Mensajes Publicitarios Que Recibo En Mi Celular	la Publicidad Móvil Me Irrita Fácilmente	la Publicidad Móvil Me Hace Sentir Feliz	La Publicidad Móvil Es una Herramienta Útil Para Mí Como Consumidor
Media	3.76	1.70	3.55	2.54

Media global de la dimensión: 2.88. Como se puede observar en las medias anteriores, los resultados tienden a ser positivos (siempre y casi siempre), lo que permite a la investigación aceptar esta hipótesis con los beneficios de establecer criterios específicos para que las empresas de telefonía inalámbrica e internet obtengan mayores beneficios si hacen más atractiva la forma que presentan las pautas publicitarias de sus anunciantes en este vehículo. La prueba de hipótesis entonces queda como se muestra a continuación.

H1: Las Características de la Publicidad Influyen positivamente en la Actitud Hacia la Publicidad Recibida En Dispositivos Móviles: SE ACEPTA

H2: La publicidad móvil afecta la intención de compra de productos y servicios presentados
Respecto a la segunda hipótesis se puede analizar la siguiente tabla que guarda la información referente a las medias de las preguntas utilizadas para aprobar esta hipótesis:

Tabla 4: Medias de la Intención de Compra Generada Por la Publicidad Móvil

	La Publicidad Móvil da a Conocer Nuevos Productos	La Publicidad Móvil Ofrece Mayor Número de alternativas de Productos	La Publicidad Móvil Ayuda a Realizar Compras Más Ágilmente	La Publicidad Móvil Me Ayuda a Decidir Más Fácilmente Sobre Qué Producto Comprar
Media	2.13	2.30	2.56	2.89

Media global de la dimensión: 2.47. Respecto a la intención de compra que pueda generar la publicidad móvil en el colectivo informante, se puede observar que se tiene conciencia de los beneficios que tiene este formato para conocer los productos y servicios que ofertan las empresas anunciantes y que a partir de ello se puede generar una estrategia más concentrada para finalizar la venta. De tal modo, que la hipótesis número dos quedaría como se muestra a continuación:

H2: La Publicidad Móvil Afecta la Intención de Compra de Productos y Servicios Presentados: SE ACEPTA

H3: Los usuarios de dispositivos móviles dan mayor valor a la publicidad móvil que a la de otros vehículos publicitarios.

A fin de dar constancia a la hipótesis referida anteriormente, se desarrolla la siguiente gráfica que muestra los valores de las medias del presente estudio:

Tabla 5: Medias del Valor de la Publicidad Sobre la de Otros Vehículos Publicitarios

	La Publicidad Móvil Genera Valor a las Marcas Que Se Publicitan En Estos Medios	La Publicidad Móvil Es Más Atractiva Que la Publicidad En Tv	La Publicidad Móvil Es Más Atractiva Que la Publicidad En Radio
Media	2.56	2.83	2.52

Media global de la dimensión: 1.97. De acuerdo a los ítems utilizados para esta prueba de media, es posible comprender que la publicidad móvil está ganando terreno ante otros vehículos publicitarios ya que sus respuestas son mayormente positivas cuando se refiere a la comparación sobre que vehículos son más atractivos para los colectivos que informaron en este proyecto, por lo tanto, la hipótesis quedaría como se describe a continuación:

H3: Los Usuarios de Dispositivos Móviles Dan Mayor Valor a la Publicidad Móvil Que a la de Otros Vehículos Publicitarios: SE ACEPTA

CONCLUSIONES

El estudio revela que los usuarios de tecnología móvil son cada vez más audaces y su comportamiento con el uso del internet les permite conectarse cada vez más con sus amigos desde cualquier lugar del mundo (43.3%). El 34.2% de ellos afirman que también en algunas ocasiones utilizan el internet mientras pasan el tiempo con su familia y en pocas ocasiones lo están utilizando para ir de compras aunque resulta interesante que pese al retraso tecnológico que vive México, cerca del 42% está siendo atraído a realizar compras online según los datos del presente estudio. Esto crea una oportunidad enorme para marcas y proveedores al interactuar con los consumidores durante todo el tiempo, a diferencia de lo que ocurre con la publicidad en radio, televisión o prensa. El 32% de los entrevistados han definido como su próxima compra de tecnología un *Smartphone* lo que pone de evidencia el rápido crecimiento de la población conectada al internet en los próximos años. Entendemos pues que los Smartphone se han convertido en una herramienta de compra indispensable, ganando además la popularidad como un canal de compra viable por la información accesible que se tiene al momento de acudir a los centros comerciales o bien al comprar en línea. La publicidad móvil resulto eficiente como medio de información previo a la compra al determinar qué: 62.8% de los informantes admitieron que habían sido introducidos a algo nuevo gracias al uso del internet en dispositivos móviles. 58.6% consideran que esta interacción proporciona mejores alternativas de productos. 47.1% considera que la publicidad móvil ayuda a realizar compras más ágilmente. Los informantes indican

que es mejor la publicidad móvil que la publicidad en televisión y en radio con un 34.2% y 48% respectivamente.

Las aplicaciones hoy en día juegan un papel fundamental en la vida de los Smartphone y es que sin ellas su productividad se reduciría al mínimo. En este capítulo 48.7% de los informantes indicaron que han sido influenciados para descargar una aplicación en una tienda virtual gracias a la publicidad móvil, por lo que el mercado en este renglón es atractivo y muy fructífero en los próximos meses. En el apartado de las acidules hacia la publicidad móvil se requiere de mayor esfuerzo por parte de las empresas para poder subsistir en el mercado y al ser más atractivas poder desarrollar mayor cantidad de anuncios que sean efectivos hacia el público que se dirigen. En este renglón es importante recalcar como el 48% de los informantes consideran que la publicidad móvil es una herramienta útil para ellos como consumidores, pero que solo en ocasiones (44%) les ayuda a decidir más fácilmente sobre los productos a comprar. Sin embargo, este colectivo indica en un 47.7% que este tipo de publicidad genera mayor valor a las marcas que se publicitan por este medio. Es trascendente observar como el 50.2% de los informantes no se sienten felices al recibir este tipo de publicidad al igual que 32.9% que no disfrutan el recibir este tipo de comunicación, por lo que un mejor estudio sobre el tema debería cambiar esta situación, inclusive, porque solo el 21.8% de los informantes indican que este sistema publicitario les irrita, lo que indica grandes posibilidades de crecimiento en esta herramienta de comunicación. En el último punto, las compañías de venta de telefonía e internet deberán corregir sus mensajes publicitarios ya que el 44.4% de los informantes no encuentran mayor valor a los mismos y los consideran como poco atractivos a las necesidades reales de ellos como clientes.

Limitaciones

Respecto a las limitaciones encontradas en el presente estudio, son más de carácter personal que de otro tipo; en primer lugar, la falta de los espacios adecuados para capacitar a los entrevistadores y los posibles errores generados por los niveles de confianza de la muestra son sin lugar a duda las cuestiones más demandantes para corregir en futuras investigaciones. Al respecto, es de trascendente importancia realizar una estudio más del tipo estructural que determine las causas y los efectos de la publicidad móvil ya que el presente estudio guarda estrecha relación con modelos teoricos propuestos, pero los objetivos iniciales demarcaban el interés de los investigadores en realizar solamente un estudio descriptivo por lo que se deja la posibilidad de generar mayor conocimiento científico en un futuro próximo.

Recomendaciones

La interactividad es sin lugar a duda una cuestión que hoy en día la publicidad debe incluir en sus planes de comunicación, por lo que se recomienda a los empresarios a participar más activamente en la ya denominada “publicidad conversada” para que exista la posibilidad de crear una relación perdurable entre anunciante y público. La información con la que cuenta el usuario de tecnologías con internet móvil tiene acceso a una variada gama de opiniones desde el inicio de la compra hasta el final, por lo que se debe ser más enfático en identificar posibles medios alternos a los oficiales para generar simpatía con el producto que se vende. Es decir, las empresas deberán desarrollar paralelamente estrategias en *postcats*, *blogs*, redes sociales, etc. para generar mayor simpatía entre los clientes actuales y potenciales. Las posibilidades de la publicidad móvil son extraordinarias para involucrar a la marca con el consumidor a un nivel más personal e inclusive funciona sin límites geográficos, por lo cual las empresas deberán realizar sus esfuerzos comunicacionales sin marcar ningún estereotipo y desarrollar publicidad móvil incluyente en todos los niveles. Las empresas deben ser empáticas con la creación de aplicaciones para que los usuarios creen valor al usar alguna de estas “Apps” que dan mayor sentido a los Smartphone y que personalizan a la marca a un nivel de amistad. Las compañías de telefonía e internet móvil requieren de información adecuada para la venta de sus espacios publicitarios y al igual que las páginas web, estas deberán estar al pendiente de los cambios culturales que surjan del uso del internet en diversos dispositivos móviles para que con ello se establezca una mayor relación comercial entre anunciantes y consumidores y todo ello culmine en mayor

experiencia con la marca y por ende en mayor fidelización entre clientes y anunciantes.

LA IMAGEN CORPORATIVA COMO VALOR DE MARCA

Claudia Yolanda Armendáriz Navarro, Universidad Tecnológica de Chihuahua

Doraidé Meixueiro Loera, Universidad Tecnológica de Chihuahua

Guadalupe Márquez Chaparro, Universidad Tecnológica de Chihuahua

Gloria Guadalupe Polanco Martínez, Instituto Tecnológico de Chihuahua

RESUMEN

Nos encontramos en un mundo lleno de marcas que compiten constantemente dentro de una guerra de estrategias por captar clientes, llenando nuestro espacio de anuncios con un sin número de promesas que cambiarán nuestras vidas, creando necesidades que jamás hubiéramos imaginado, donde la marca tiene más valor que el producto que se consume; es por eso que resulta de suma importancia que las empresas se preocupen por la imagen que proyectan y la percepción de los diferentes públicos que tienen, ya que estos pueden convertirse en fans leales que toman como propia la filosofía que representa la marca. Es aquí donde la imagen corporativa se ha convertido en un elemento indispensable para generar valor de marca y reforzar su identidad. A partir de esto se elabora el manual de identidad gráfica para el Instituto Tecnológico de Chihuahua contribuyendo a crear una imagen sólida y que los identifique en el entorno.

PALABRAS CLAVES: Valor de Marca, Identidad, Imagen Corporativa

ABSTRACT

We are in a world of constantly competing brands within a war of strategies to attract customers, filling our ad space with a number of promises to change our lives, creating needs than we ever imagined, where the brand has more value than the product that is consumed. This is why it is important that companies care about the image they project and the perception of the different audiences have, as for these can become loyal fans making as their own the brand's philosophy. This is where the corporate image has become indispensable to build brand value and strengthen its identity. Here is where the manual of graphic identity is made for the Instituto Tecnológico de Chihuahua helping create a strong image and identifying them in their environment.

KEYWORDS: Brand'S Value, Identity, Corporate Image

INTRODUCCIÓN

El valor de marca se define como el valor añadido que se dota a productos y servicios, se refleja en cómo piensan, sienten y actúan los consumidores respecto a la marca. Los organismos e instituciones son una marca en sí por lo que es importante tomar en cuenta la unificación de la imagen y llevarla a la práctica como parte de la comunicación interna y externa de esta manera se convierte en un valor agregado para nuestra empresa o institución. Actualmente, vivimos en un mundo tan competitivo que satura de información a los diferentes públicos que provoca pérdida de identidad no solo de quienes estamos expuestos a ella sino de la institución que se encuentra en la contienda. Se debe lograr a través de símbolos y comunicación una fuerte identidad que manifiesten asociaciones positivas y claras sobre nuestra institución. Es aquí donde la imagen corporativa se ha convertido en un elemento indispensable para generar el valor de marca de las empresas reforzando su identidad. Esta fortaleza se asocia con un alto conocimiento y nivel de familiaridad e intimidad del público con la marca.

Cuando hablamos de públicos nos referimos a todas aquellas personas o instituciones que tienen contacto con nuestra institución en cualquier momento, sean internos, externos o mixtos, los cuales deben poseer una imagen adecuada de nuestra institución ya que son los principales voceros de la marca. El Instituto Tecnológico de Chihuahua cuenta con 65 años de presencia dentro de la formación educativa del estado, a través de los cuales ha formado profesionistas de éxito que han contribuido al prestigio de la institución, sin embargo, con el paso del tiempo se ha ido descuidando la imagen y las nuevas generaciones.

REVISIÓN LITERARIA

Imagen Corporativa

La imagen corporativa es lo que una compañía quiere transmitir en un mensaje, es el conjunto de ideas que el público relaciona con nuestra empresa, siendo relacionada totalmente con la actividad de la misma, y algunos otros factores, destacando de entre ellos: la calidad en productos y servicios, atención al cliente, liquidez de la empresa, participación de mercado, distribución, rapidez y eficiencia, entre muchos otros. Esta imagen es dirigida a toda persona que guarde relación con la empresa ya sea dentro o fuera de ella, como sus empleados, inversionistas, clientes y proveedores. Siendo por esto que es de suma importancia la recepción de este mensaje, y un error muy común en el que caen las empresas es que este solo se transmite cuando la organización quiere hacerlo, y no, no es así, es por este motivo que muchas de las empresas fracasan en el control de sus comunicaciones lo que genera imágenes poco claras o erróneas de sí mismas. El público recibe continuamente mensajes transmitidos de manera intencionada y no intencionada, lo cual resta credibilidad a aquellas formas de comunicación más susceptibles de control, como las campañas de publicidad y las relaciones públicas diseñadas para crear la imagen más idónea de la organización. “La idea fundamental que subyace a cualquier programa de identidad corporativa es la que en todo lo que hace una empresa, en todo lo que tiene y en todo lo que produce debe proyectar una clara idea de lo que es y de lo que persigue”. (Wally Olins. 1984)

La percepción de los mensajes es otro punto interesante a tratar, ya que como transmitimos a clientes, proveedores, accionistas, empleados y a toda la gente relacionada de una u otra manera a la empresa, tienden a tener una perspectiva diferente por lo que se deben cuidar los detalles, y con mayor razón cuando la empresa transmite su imagen corporativa internacionalmente, ya que como es de entender las diferencias culturales crean distintas interpretaciones de la misma. Aunque se ha observado que después de la II Guerra Mundial, las culturas de los distintos países se parecen cada vez más.” El objetivo de la Imagen Corporativa es mantener la presencia de la empresa en la mente del consumidor, aumentar las ventas, crear reconocimiento y prestigio a la empresa, y que su logotipo logre respaldar campañas publicitarias, fomentar la publicidad espontánea y reducir costos de publicidad.

Componentes de la Imagen Corporativa

Dentro de la imagen corporativa existen cuatro áreas principales de actividad, producto, ambiente, comunicación, cómo se comportan las personas dentro de la empresa, entre ellas mismas y hacia los de afuera comportamiento. La imagen corporativa abarca diferentes disciplinas que pertenecen al diseño como lo son: el diseño industrial o de productos, el diseño arquitectónico y de interiores, y el diseño gráfico. Y está fuertemente relacionada con la mercadotecnia, la publicidad, las relaciones públicas y el desarrollo de los recursos humanos. Producto. Toda la compañía fabrica un producto o proporciona un servicio. Influyen factores como el desempeño y apariencia del producto, o calidad del servicio. Ambiente. Toda compañía opera en edificios, oficinas, industrias o salones de exhibición. Esto influye en la forma en que esta se percibe a sí misma. Comunicación. En algunas compañías los productos no derivan su identidad de lo que son intrínsecamente, sino el envase, la publicidad y otros aspectos promocionales que lo rodean.

Comportamiento. En las campañas que proporcionan un servicio en lugar de un producto, la imagen proviene de la forma en que la gente se comporta.

¿Qué Es un Logotipo?

Un logotipo es un grupo de letras, símbolos, abreviaturas, cifras e imágenes fundidas en solo bloque para facilitar una composición tipográfica, no es más que la firma de la compañía que se puede aplicar a todas clases de material impreso o visual. El logotipo es parte esencial de la imagen corporativa, ya que este es la representación visual, que en pocas palabras debe indicar lo que significa la empresa de manera coherente a clientes, empleados, proveedores y a toda persona que guarde relación con la empresa, ya sea dentro o fuera de ella. En mercado tan competitivo y cambiante, la imagen corporativa es parte importante para diferenciarse y posicionarse dentro de un mercado en específico, sin embargo, las empresas dejan generalmente a la imagen corporativa en un segundo plano, lo cual no debería ser así, ya que es un importante elemento para incrementar sus ventas.

Pero un logotipo, como muchos otros símbolos gráficos, tiene en sí mismo un significado muy limitado, en primer lugar la cultura del público determinara la forma en que se interprete. Un segundo factor que limita el poder del logotipo es el hecho de que un símbolo corporativo siempre debe guardar relación con un determinado contexto. Por ejemplo, el símbolo de Diana que utiliza la editorial Bloomsbury tiene un significado independiente del de la empresa. Según la mitología clásica, Diana es la diosa de la caza y de la reproducción de la Naturaleza. Bloomsbury escogió el diseño porque la idea de cazar autores y luego dar vida a sus obras parecía una imagen apropiada para una editorial. En un sentido más práctico, el arco de Diana podía transformarse en una “B” para representar el nombre de la empresa. El hecho de que los lectores conocieran o no lo que Diana representaba carecía de importancia en este caso. A través de los años, la imagen de Diana y Bloomsbury, la calidad de sus productos y los logros alcanzados por la editorial se convertirían en algo inseparable. Vemos así como la marca o logotipo de una empresa carecen de realidad propia, pero guardan relación con la experiencia y las expectativas del público.

Si una empresa quiere transmitir la imagen de que posee determinadas características o cualidades, como el ser grande y eficiente, tal imagen puede crearse mediante representaciones que sugieran tamaño y eficacia. Sin embargo, si la compañía no llega a ser grande y eficiente, se producirá una brecha entre la percepción y la realidad. La imagen corporativa no proporcionara el éxito a una mala empresa. Lo que si puede hacer es transmitir un mensaje coherente y digno de crédito sobre lo que es una empresa, o que hace y como lo hace, manteniendo un fuerte control sobre los mensajes que transmite. El uso más común de logotipos es en hojas membretadas, facturas, tarjetas de saludo, talonario de recibos y tarjetas comerciales, uniformes, embalajes, etiquetado de productos y anuncios de prensa, publicidad impresa, espectaculares, entre muchas cosas más.

METODOLOGÍA

Etapas de Diseño de la Imagen Corporativa

Etapa 1. Investigación y análisis.

Investigación, entrevistas a varias personas de la organización con el fin de determinar qué tipo de estructura y clase de estilo visual requiere la identidad de la organización.

Se realiza una recopilación de todos los elementos gráficos que utiliza la institución, la paleta de colores, papelería corporativa, entre otros.

Etapa 2. Desarrollo del concepto de diseño.

El nombre es el elemento más importante para distinguir a una organización. Los componentes de este sistema son:

Nombre principal.
Nombres secundarios, si conviene.
Símbolo principal.
Símbolos principales, si conviene.
Tipo de letra principal.
Tipos de letra secundarios.
Colores.

Se identifican los componentes con los que cuenta el Instituto Tecnológico de Chihuahua ya que estos al paso del tiempo se han ido perdiendo en las aplicaciones gráficas y la papelería de las diferentes áreas administrativas y académicas, por lo cual no existe ningún lineamiento para el uso de estos.

Etapas 3. Refinamiento del diseño: De acuerdo al logotipo patentado por el ITCH, se elaboran borradores y modificaciones las veces necesarias, finalmente se aprueban, y se realiza la vectorización del logo, se define la paleta de colores corporativos y la tipografía principal y secundaria que se utiliza en el nombre y lema de la institución, para las diferentes aplicaciones gráficas. Aprobado el diseño se hacen los ajustes necesarios hasta llegar a la ilustración final, y describir los componentes del sistema.

Etapas 4. Aplicaciones: En esta etapa se busca una flexibilidad sólida, en que el sistema visual se pueda utilizar en cualquier tipo de material, que su tamaño sea totalmente manipulable, y se pueda utilizar en diferentes aplicaciones, que sirva tanto para un informe anual para el director general, como para la promoción.

Etapas 5. El manual: Es importante que se registre, codifique y fotografíe o grabe todo material que se realice cuando se empieza con la imagen corporativa, sirviendo estas como referencias futuras. Por lo que se diseña el manual de imagen corporativa con el registro de las aplicaciones de la imagen y una guía sobre como deberá aplicarse en el futuro. Debe tratarse como un documento de trabajo diario, sujeto a cambios y modificaciones y que todas las áreas tengan acceso para evitar el mal uso de los elementos.

RESULTADOS Y CONCLUSIONES

Se presenta el manual de identidad gráfica del Instituto Tecnológico de Chihuahua (ITCH), el cual ha sido elaborado bajo los lineamientos contenidos en el manual de identidad institucional del Sistema Nacional de Educación Superior Tecnológica. El manual de identidad corporativa recoge los elementos constitutivos de la identidad visual del ITCH, tales como: las pautas de construcción, el uso de las tipografías y las aplicaciones cromáticas. Una vez elaborado el manual de Identidad Gráfica se hace la entrega del documento para su implementación y difusión a todas las áreas que utilicen dichos elementos para cualquier tipo de comunicación con el fin de proyectar una imagen visual clara y única de la institución que defina su personalidad para crear valor de marca e incrementar la identidad en los diferentes públicos. Los anexos del manual de identidad gráfica son los siguientes:

Firma Institucional. Este describe las aplicaciones de los logotipos institucionales, que cualquier aplicación gráfica debe contener, los tamaños mínimos y el orden en que deben presentarse. Tipografía. Se muestra la tipografía en sus diferentes versiones que permite unificar el sistema visual e ilustra la visión fresca del quehacer profesional. Logotipo. Describe que el significado del logotipo de la institución. Se muestra el logotipo en sus diferentes versiones. Colores corporativos. Se muestra la paleta de color con sus códigos de color para los diferentes tipos de impresión. Aplicaciones gráficas. Se muestran diferentes diseños en

donde se incluya logotipo de la institución, así como las características de cada una de las aplicaciones. La consolidación de la imagen del ITCH, necesita una atención especial a las recomendaciones expuestas en este proyecto, para garantizar una unidad de criterios en la comunicación y difusión tanto interna como externa. El manual debe ser una herramienta de que mantiene presenta la marca corporativa en todas las aplicaciones, las directrices que contiene el documento no pretende de ninguna manera, restringir la creatividad de la empresa, si no de ser una guía que abra nuevas posibilidades creativas para comunicar la esencia del ITCH. Por lo anterior es importante que, tanto en la documentación oficial como en el resto de las aplicaciones, se respeten los logotipos, colores y tipografía que establece el manual.

RESUMEN

El presente estudio tiene como objetivo valorar el aprendizaje organizacional en tres niveles: individual, grupal y organizacional y buscar la relación que existe entre ellos así como determinar si existen diferencias significativas entre los niveles y los datos sociodemográficos de los empleados. Para ello, se obtuvo información cuantitativa de 415 personas que laboran en 8 grandes empresas de la región centro del estado de Coahuila, mediante un cuestionario estructurado y posteriormente se analizaron los datos a través del software SPSS. Uno de los hallazgos, entre otros, es que en este estudio se infiere que a mayor aprendizaje individual, mayor es el aprendizaje grupal y el organizacional y se encontró que existe diferencia significativa en cuanto al género, con los factores de aprendizaje grupal.

PALABRAS CLAVE: Aprendizaje Individual, Grupal y Organizacional

RELATIONSHIP BETWEEN LEVELS OF ORGANIZATION LEARNING

ABSTRACT

The present study aims to value the organizational learning at three levels: individual, group and organizational and find the relationship between them, as well as to determine whether there are significant differences between levels and sociodemographic data of the employees. For this purpose, quantitative information was obtained from 415 people working in 8 large businesses in the Central region of the state of Coahuila by using a structured questionnaire to analyze collected data which was processed using SPSS software. One of the findings, among others, is that this study infers that, as is the greater individual learning, so it's greater the group and organization learning and it was found that there're significant differences in gender, with the factors of group learning.

KEY WORDS: Individual, Group and Organizational Learning

INTRODUCCIÓN

Debido al intenso proceso de transformación en el que se encuentran las empresas por la competencia en los mercados, éstas se ven obligadas a potencializar y rentabilizar al máximo todos sus activos, y de una forma muy especial el activo intangible que representa la capacidad de aprender de su capital humano, para enfrentar los retos que surgen en las nuevas economías “pues el aprendizaje se considera que puede mejorar la competitividad de la empresa al ayudar y mejorar la adquisición y explotación de la información que vienen del mercado a mayor velocidad que los rivales” (Jiménez y Sanz, 2007 p.32) No existe un consenso entre los teóricos sobre los niveles y/o dimensiones en que se manifiesta el aprendizaje organizacional, pero en este estudio serán considerados el aprendizaje individual (AI) el grupal (AG) y el organizacional (AO) que distinguen Crossan, Lane y White (1999) y Castañeda y Pérez (2005). Garzón menciona que “cada uno de los niveles se ve mutuamente influido por lo que sucede en los otros niveles” (2005 p.7). Resulta de interés cuestionarse en este estudio ¿Cuáles son los factores de aprendizaje individual, grupal y

organizacional más y menos preponderantes que se manifiestan en las empresas de estudio? ¿Existen diferencias significativas entre los datos demográficos de los empleados y los niveles de aprendizaje? ¿Existe relación entre los niveles de aprendizaje? En las siguientes páginas se puede apreciar una revisión de la literatura que expone lo concerniente al aprendizaje individual, grupal y organizacional; la metodología utilizada en el estudio; posteriormente se abordan los resultados; para culminar en conclusiones, mismas que pueden desencadenar el establecimiento de políticas para favorecer el aprendizaje a todos los niveles en las empresas de estudio.

REVISIÓN DE LITERATURA

Aprendizaje Organizacional

Las definiciones de aprendizaje organizacional resultan ser muy numerosas y difieren de acuerdo al contexto, la complejidad y el nivel de análisis con que se aplica el término, concordando la mayoría de los autores en que es un proceso dinámico, como la que expone Real, Roldán y Leal: “El aprendizaje organizacional se define como un proceso dinámico de creación de conocimiento generado en el corazón de la organización a través de sus individuos y grupos” (2012, p.2). Y se requiere “de al menos tres condiciones para que ocurra: una cultura que facilite el aprendizaje, un proceso de formación y capacitación, tanto técnica como institucional, y la transferencia de información que se convierta en conocimiento” (Castañeda y Fernández, 2007, p.246)

Algunos argumentos en la literatura abordan el tema de A.O. con el impacto positivo en el desempeño de las organizaciones (Fiol y Lyles, 1985; Cardona y Calderón, 2006); otros lo relacionan como factor de competitividad (Jiménez y Sanz 2006; Miró, Leal, Cepeda y Miró 2009; Salim y Sulaiman 2011); algunos otros estudios versan sobre la influencia que tienen el clima y la cultura organizacional en el A.O. (Schein, 2000; Enríquez, 2007). El A.O. es considerado un proceso de adquisición y transferencia de conocimiento que se da en tres niveles: individual, grupal y organizacional. (Crossan, Lane y White, 1999; Castañeda y Pérez, 2005), algunos otros autores agregan un nivel más, el interorganizacional, que se da en grupos de organización corporativa, requiere de un sistema de investigación y las universidades empresariales pueden facilitar su puesta en marcha (Garzón, 2005). En la tabla 1, se exponen los niveles de aprendizaje considerados por Crossan, Lane y White (1999) apreciando en ella los procesos, insumos y resultados que se presentan en cada nivel.

Tabla 1: Niveles de Aprendizaje

Nivel	Proceso	Entrada/Salida
Individual	Intuición	Experiencias Imágenes Metáforas
	Interpretación	Lenguaje Mapas cognitivos Conversación/Diálogo
Grupal	Integración	Comprensiones compartidas Ajuste mutuo Sistemas interactivos
Organizacional	Institucionalización	Rutinas Sistemas de diagnóstico Reglas y procedimientos

En esta tabla se observan los procesos y la entrada y salida, en cada uno de los niveles. Fuente: Crossan, Lane y White (1999).

Aprendizaje Grupal

Argote, Gruenfeld y Naquin (2001) definen el A.G. como el conjunto de actividades por las cuales los individuos adquieren, comparten y combinan conocimiento a través de experimentar con otros, mientras que para Edmonson, Dillon y Roloff (1999) es un proceso continuo de acción y reflexión manifiesto, en miras de obtener y procesar información con la finalidad de comprender los cambios que surgen en el entorno adaptándose a ellos, y menciona como ejemplos de conducta de aprendizaje: el buscar retroalimentación, compartir información y hablar de los errores y cómo a través de esas actividades, los equipos pueden detectar cambios en el medio ambiente, mejorar la comprensión colectiva de los miembros o descubrir consecuencias inesperadas de sus acciones anteriores, así mismo León, R., Tejada, E., y Yataco M. consideran que “el interactuar en equipo permite el contraste de los modelos mentales, de las percepciones, es decir permite la apertura a la contrastación de interpretaciones del mundo real” (2014 p.85).

Aprendizaje Individual

El A.I. es “un proceso consciente o inconsciente, por el cual los individuos obtienen nuevo conocimiento procedente de la transformación de la información, que modifica sus perspectivas internas y en ocasiones su conducta, amplía sus habilidades y capacidades cognitivas, y mejora su comportamiento y los resultados de éste. (Martínez y Ruiz 2002 p.4).

La teoría de los Recursos y Capacidades

En esta teoría, Barney (1991) establece que la organización es considerada como una cantidad de recursos y capacidades percibidas como recursos tangibles, intangibles y capacidades y la estrategia competitiva debe basarse en el control y explotación de los recursos estratégicos manifestados en activos y capacidades. La premisa de la propuesta es que los recursos están distribuidos de forma heterogénea en las empresas, que los recursos marcan una diferencia en el desempeño y que las diferencias son estables con el tiempo. Menciona cuatro indicadores de los recursos de la empresa que marcan una ventaja competitiva sustentable: valioso, raro, inimitable e insustituible.

METODOLOGÍA

El tipo de estudio que se llevó a cabo es de tipo cuantitativo, descriptivo y transversal. El muestreo utilizado fue por conveniencia, técnica no probabilística. La población objeto de estudio fueron 415 empleados que laboran en 8 grandes empresas manufactureras situadas en la región centro del estado de Coahuila y que fueron encuestados a finales de 2014, considerando que las grandes empresas se constituyen de 251 empleados en adelante (INEGI, 2009). Los datos cuantitativos se procesaron a través del paquete estadístico SPSS versión 17 con la finalidad de describir cada uno de los factores que intervienen en el A.I., AG Y AO. Con el análisis de variabilidad ANOVA se determinaron las diferencias entre el género, la edad y el grado de escolaridad con cada uno de los factores. Por último se utilizó el análisis de correlación de Spearman para buscar relación entre los factores de cada nivel de aprendizaje. El instrumento utilizado fue el cuestionario sobre las dimensiones de la organización aprendiente, adaptado del instrumento “Dimensions of Learning Organization Questionnaire” (DLOQ) por Rómulo Mayorca, Vilorio y Campos (2007), para el contexto venezolano, el cual se conforma de 43 ítems medidos a través de la escala de Likert (1 a 6 de menor a mayor).

RESULTADOS

Del cuestionario aplicado a los 415 empleados que laboran en 8 grandes empresas manufactureras de la región centro del estado de Coahuila, respecto a los factores que preponderan en cada uno de los niveles, las diferencias significativas con los datos demográficos y la relación entre los niveles de aprendizaje, se exponen a continuación los resultados. De los datos demográficos de los empleados encuestados, en donde

se consideran el género, la edad y el nivel de estudios se revela lo siguiente: el género masculino representa el 83.9% y el femenino el 16.1%; el rango de edad que predomina es el de 27 a 36 años con el 40% y el nivel de estudios que prepondera es el de preparatoria con el 39.3%. Considerando las respuestas de generalmente, casi siempre y siempre como factores favorables al aprendizaje y el de nunca, muy rara vez, y ocasionalmente como desfavorables al mismo, se aprecia que de los 13 factores de aprendizaje individual, y las respuestas que eligieron en porcentaje de empleados, los porcentaje más altos favorables son: *el de que las personas invierten tiempo creando un ambiente de confianza entre ellos* con el 81.9% y *las personas se ayudan entre sí en el proceso de aprendizaje* con el 80.0%. Los factores desfavorables que mayor porcentaje obtuvieron son: *Se incentiva a la gente a que pregunte “¿Por qué?” sin importar el puesto dentro de la organización* con un 34%, *cuando las personas dan su punto de vista o su opinión, también preguntan la opinión de los otros* un 31.8%.

Respecto al aprendizaje a nivel grupal, conformado por 6 factores, los más favorables son: *Igualdad en el trato grupal sin importar características personales* con un 78.3%, y *confianza en que la organización respeta sus ideas* con el 76.6%. Los factores menos favorables con mayor porcentaje son: *Generación de ideas como resultado de discusiones e información recopilada por ellos*, que se promedia un 32.9 %, y *el de libertad para adaptar metas según necesidades* con el 27.6%. Para concluir con la descripción de los factores, de los 23 correspondientes al nivel organizacional, los más favorables que se perciben son: *Los líderes brindan por lo general el apoyo en oportunidades de aprendizaje y entrenamiento* con el 78.5% y *la visión de la organización se construye considerando los diferentes niveles y grupos de trabajo* con el 77.6%. Los factores desfavorables son: *Dan a las personas opciones para elegir sus asignaciones en el trabajo* con el 33.9% y *las personas se incentivan a que piensen en una perspectiva global*, muestra el 30.6%. Para analizar los factores del cuestionario en relación a las variables demográficas se empleó el análisis de varianza ANOVA.

Los resultados mostraron que no existen diferencias significativas, entre cada factor del cuestionario de Aprendizaje y los estudios realizados, infiriendo que no importa el nivel de estudios del empleado para manifestar aprendizaje en cualquiera de los niveles. Asimismo, no existen diferencias significativas entre la edad de los empleados y los factores de aprendizaje en los 3 niveles, por lo tanto se infiere que no importa la edad de esta muestra para que se manifieste el aprendizaje. En la tabla 2, se perciben los factores de los 3 niveles de aprendizaje con el género de los empleados, en donde se aprecia que no existen diferencias significativas entre el género y el aprendizaje individual y el organizacional, pero si se muestra una relación significativa en cuanto al género y el aprendizaje grupal.

Tabla 2: Comparación de Las Medias Poblacionales de Cada Indicador del Cuestionario de Aprendizaje Por El Género del Empleado

Factores	Género	N	Media	Desviación Típica	F	Sig.
Aprendizaje Individual	Masculino	348	4.1247	.82712	2.472	.117
	Femenino	67	4.2997	.10636		
Aprendizaje Grupal	Masculino	348	4.1600	.05055	3.871	.050**
	Femenino	67	4.4080	.11655		
Aprendizaje Organizacional	Masculino	348	4.1493	.04369	2.795	.095
	Femenino	67	4.3340	.10899		

** $p < .05$. En esta tabla se reportan los valores de la población media y desviación típica por género de los empleados, así como los resultados del ANOVA y valor de significancia para cada uno de los niveles de aprendizaje organizacional. Se puede apreciar que existe diferencia significativa entre el género y el aprendizaje grupal.

Para encontrar la relación entre los niveles de aprendizaje se utilizó el análisis de correlación de Spearman, la cual se presenta en la tabla 3 y se revela la relación significativa entre los 3 niveles de aprendizaje, infiriendo que a mayor aprendizaje individual, mayor será el grupal y el organizacional y que a mayor aprendizaje grupal mayor el organizacional.

Tabla 3: Correlación Entre Variables

	A.I	A.G.	A.O.
A.I	1		
A.G	.725**	1	
A.O	.790**	.728**	1

** $p < .05$. En esta tabla se presentan los valores rho de la correlación de Spearman y su nivel de significancia, en la cual se puede observar la relación significativa entre los 3 niveles de aprendizaje.

CONCLUSIONES

En este estudio en particular, se pudieron evaluar 43 indicadores de aprendizaje a nivel individual, grupal y organizacional y llegar a la conclusión de que en los tres niveles, impera la percepción de los empleados de que en estas empresas se favorece el aprendizaje, pues los porcentajes de respuestas favorables oscilan del 66.0% al 81.9% superando en medida a los desfavorables que oscilan entre el 27.6% y el 34.0 %. La confianza, tanto a nivel individual como a nivel grupal se presenta como un factor preponderante, y a nivel organizacional destaca el que el líder brinda su apoyo en circunstancias de aprendizaje, sin embargo se revelan áreas de oportunidad en los indicadores desfavorables, en los que destacan entre otros, a nivel individual, que en cualquier puesto a las personas se les permita cuestionar, a nivel grupal considerar la oportunidad de que los empleados elijan asignaciones de trabajo y por último, a nivel organizacional, el dar importancia a las ideas que surgen de discusiones e información recopilada por los empleados. Se concluye que no importa la edad ni los estudios que tengan los empleados para que se presente el aprendizaje en cualquiera de los niveles, en cuanto al género se identifica una diferencia significativa entre éste y el aprendizaje grupal. Se revela la relación significativa entre los 3 niveles de aprendizaje, confirmando que a mayor aprendizaje individual, mayor será el grupal y el organizacional y a mayor aprendizaje grupal mayor es el organizacional.

El presente estudio muestra sus debilidades y limitaciones, pues el conocimiento no puede ser generalizado ya que la muestra utilizada fue no probabilística y solo se realizó en empresas grandes, pero se espera que desencadene el establecimiento de políticas para favorecer el aprendizaje a todos los niveles en las empresas de estudios; sirva de base a futuras investigaciones y que con este estudio se contribuya a ampliar y a dinamizar el conocimiento en el tema.

RESUMEN

El desarrollo del aprendizaje organizacional es en la actualidad esencial, ya que al ser éste superior al de sus competidores puede ser utilizado estratégicamente para incidir en la ventaja competitiva de las firmas. En este estudio específicamente se analiza la relación que existe entre el aprendizaje organizacional en sus tres niveles, individual, de grupo y organizacional y de éstos con la ventaja competitiva percibida en ocho grandes empresas manufactureras de la Región Centro del Estado de Coahuila en México. La metodología empleada de enfoque cuantitativo consistió en la aplicación de un cuestionario estructurado a una muestra por conveniencia de 391 trabajadores y empleados de las empresas mencionadas; la información recabada se analizó a través del software estadístico SPSS. Los resultados encontrados revelan que el aprendizaje organizacional, en sus tres niveles, se relaciona con la ventaja competitiva percibida en las empresas en estudio.

PALABRAS CLAVE: Aprendizaje Organizacional, Ventaja Competitiva, Empresas Manufactureras

ANALYSIS OF LEARNING DEVELOPMENT IN THEIR THREE LEVELS: INDIVIDUAL, GROUP AND ORGANIZATIONAL AND ITS RELATIONSHIP WITH THE COMPETITIVE ADVANTAGE PERCEIVED OF THE COMPANY

ABSTRAC

The development of organizational learning is essential in present days, because as this is superior than its competitors can be use strategically to influence the competitive advantage of firms. This study specifically analyse the relationship between organizational learning and there are three diferent levels, individual, group and organizational and them with the competitive advantage perceived in eight big manufacturing companies of the central region of the state of Coahuila, Mexico. The methology was employed in a quantitative approach and consisted applying of a structure questionnaire to a non-probabilistic sample of 391 workers and employees of the companies mentioned before, the information collected was analysed through the stadistic software SPSS. The results show that organizational learning, at the three levels, got involve with the competitive advantage perceived of the companies in this study.

INTRODUCCIÓN

El desarrollo del aprendizaje organizacional es en la actualidad esencial, ya que al ser éste superior al de sus competidores puede ser utilizado estratégicamente para incidir en la ventaja competitiva de las firmas. El estudio del aprendizaje organizacional ha sido abordado por diversos autores en tres niveles: aprendizaje individual, aprendizaje por grupo y aprendizaje organizacional. Este estudio se realizó en ocho grandes empresas manufactureras ubicadas en la región centro de Coahuila, para conocer en sus diferentes niveles, el desarrollo del aprendizaje organizacional y establecer si el mismo apunala el desarrollo de ventajas competitivas de las firmas. El presente trabajo de investigación se ha estructurado de la siguiente manera: en la siguiente sección se presenta una revisión de la literatura relacionada con el tema del aprendizaje organizacional y la ventaja competitiva percibida. En un siguiente apartado se describe el método utilizado y en otro apartado se incluyen las características de los participantes y los resultados derivados de la información recabada. Finalmente, se presentan las conclusiones de este trabajo y las líneas de investigación futuras.

REVISIÓN LITERARIA

De acuerdo a la teoría de recursos y capacidades, se asume que la ventaja competitiva sostenible se adquiere de los recursos y capacidades de la empresa los cuales son heterogéneos (Penrose, 1959; Wernerfelt, 1984; Barney, 1991; Peteraf, 1993) y que al cumplir con las propiedades de ser valiosos, escasos y difíciles de imitar o de sustituir se convierten en recursos estratégicos de la empresa (Barney, 1991; Peteraf, 1993). En este sentido Cardona (2011) indica que una de las perspectivas en el que se ha desarrollado el estudio de la estrategia como búsqueda de la fuente de rentabilidad empresarial es la que corresponde a la organización misma y a los recursos y capacidades en los que se basa el logro de ventajas competitivas, sostenibles de largo plazo, conocida como la teoría de la visión de la empresa basada en recursos ó Resource Based View-RBV. Por su parte Cardona (2006) suma a la teoría de recursos y capacidades el enfoque basado en competencias situando a los factores internos de la organización, especialmente los intangibles como determinantes del desempeño y Ndofor, Sirmon, y He (2011) indican que al actualizar, a partir de los conocimientos disponibles, las competencias y desplegarlas a través de estrategias competitiva, las empresas obtienen ventaja competitiva de sus recursos.

Aprendizaje Organizacional

El aprendizaje organizacional es abordado por Cardona (2006) desde el enfoque de recursos y capacidades, dándole un papel estratégico dentro de las organizaciones, al hacerlo responsable de la serie de transformaciones que se pueden hacer en los recursos estándar para desarrollar capacidades distintivas, y por Camisón (2002) quien lo considera fundamental para la organización ya que permite generar nuevas competencias y responder consistentemente a los cambios del entorno y por tanto, el poder mantener a través del tiempo la ventaja competitiva. En este estudio se asume dicho enfoque. Mayorca, Ramírez, Vilorio y Campos (2007), adaptaron un cuestionario de Watkins y Marsick (1997) al contexto venezolano y lo validaron y confirmaron su confiabilidad quedando conformado de seis dimensiones Aprendizaje Continuo, Aprendizaje en Equipo, Sistema Integrado, Investigación y Diálogo, *Empowerment* y Dirección Estratégica que a su vez se dividen en tres niveles: aprendizaje a nivel individual, aprendizaje a nivel de equipo o grupo y el tercero corresponde al nivel aprendizaje organizacional. En este estudio se adopta este cuestionario para medir el aprendizaje organizacional.

Ventaja Competitiva

Grant (1996) sitúa a los factores internos de la organización, especialmente los intangibles, como determinantes del desempeño para dar lugar a ventajas competitivas y rentas sostenibles a largo plazo, refiriéndose a las competencias distintivas, e indica también que las ventajas competitivas están

fundamentadas especialmente en la capacidad de transferir el conocimiento, es decir, en el aprendizaje organizacional. Por su parte Maynez, Cavazos, Torres y Escobedo (2013) y Maynez y Cavazos (2012) realizaron estudios que se desarrollaron en empresas participantes en las industrias automotriz, médica, eléctrica, computación, de telecomunicaciones y otras, ubicadas en Ciudad Juárez, Chih., y en la ciudad de Chihuahua, Chih., México, comprobando el desempeño operativo percibido influye en la ventaja competitiva percibida. Utilizaron los siguientes indicadores para medir la ventaja competitiva percibida: rentabilidad económica, crecimiento de las ventas, participación de mercado, crecimiento de la empresa, productividad laboral y satisfacción del cliente. En este trabajo se utilizarán los indicadores de Maynez *et al.* (2013) y Maynez y Cavazos (2012).

METODOLOGÍA

Derivada de la revisión bibliográfica efectuada para el presente estudio se plantean las siguientes hipótesis:

H₁: Los tres niveles de aprendizaje organizacional se relacionan directa, positiva y significativamente entre si en las grandes empresas manufactureras en la región centro del estado de Coahuila.

H₂: Los tres niveles de aprendizaje organizacional se relacionan directa, positiva y significativamente con la ventaja competitiva percibida en las grandes empresas manufactureras en la región centro del estado de Coahuila.

La estrategia metodológica para la comprobación de las hipótesis propuestas se basó en un estudio cuantitativo, transversal, descriptivo y correlacional para lo cual se utilizó el método de encuesta, aplicada mediante un cuestionario estructurado adaptado de Mayorca *et al.* (2007) y Maynez *et al.* (2013), auto administrado a 391 respondientes de las ocho grandes empresas manufactureras de la región centro del estado de Coahuila. La medición de la variable aprendizaje organizacional se realizó en tres niveles, individual, por grupos y organizacional. El primer nivel individual incluyó trece indicadores, el segundo por grupo se compuso de seis indicadores y el tercer nivel de aprendizaje organizacional incluyó 24 indicadores y la medición de la ventaja competitiva se realizó mediante ocho indicadores. Los tres niveles de aprendizaje organizacional se midieron con una escala de Likert con valores numéricos discretos de 1 a 6, que a su vez está asociado a una escala cualitativa donde 1 significa nunca, 2 rara vez, 3 pocas veces, 4 algunas veces, 5 casi siempre y 6 que significa siempre; la ventaja competitiva percibida se midió también con escala de Likert con valores numéricos discretos de 1 a 6, pero en donde 1 es muy por debajo de la competencia, 2 por debajo de la competencia, 3 parcialmente abajo, 4 parcialmente arriba, 5 mejor que la competencia y 6 muy superior a la competencia. Para medir la relación entre los tres niveles del aprendizaje organizacional y entre cada uno de ellos y la ventaja competitiva percibida de las empresas en estudio, se calculó el coeficiente de correlación *Rho de Spearman*.

RESULTADOS

Las características de los empleados y trabajadores encuestados muestran una mediana en edad de 30 años con una edad mínima de 17 y una máxima de 65 años, el 35.5% son empleados y el 64.5% son trabajadores; el 83% corresponde al género masculino y el resto al femenino. Los hallazgos relacionados con el desarrollo del aprendizaje organizacional individual en las empresas manufactureras indican como más alto el valor de cinco, en el que reconocen que casi siempre las personas identifican las habilidades requeridas para las tareas futuras, se ayudan entre sí en el proceso de aprendizaje, están dispuestas a una realimentación honesta entre unos y otros, invierten tiempo creando un ambiente de confianza entre ellos y se tratan a las personas con respeto. Los resultados encontrados sobre el aprendizaje organizacional por grupo reportan como más alto el valor de cinco, en el que en tres indicadores reconocen que casi siempre en los equipos/grupos a los miembros se les trata como iguales, sin importar el puesto, la cultura, u otras diferencias; las dinámicas de grupo se centran tanto en la tarea del grupo, así como en la relación de trabajo entre sus miembros y los

equipos/grupos perciben las ideas generales como resultado de sus discusiones grupales y por la información recogida por ellos.

Respecto al aprendizaje organizacional los resultados muestran con valores más altos ocho indicadores de los 24, en el que reconocen que en la organización casi siempre en la organización utiliza una comunicación fluida y con intercambio de ideas a través de diferentes medios como sistemas de sugerencias, permite a la gente conseguir la información que necesite en cualquier momento rápida y fácilmente, ofrece cursos de adiestramiento para todos los empleados, se evalúan los resultados del entrenamiento en función del tiempo y de los recursos invertidos en él, hace reconocimiento a las personas que son proactivas, Incentiva a las personas a que piensen con una perspectiva global y también casi siempre los líderes generalmente brindan el apoyo necesario por las oportunidades de aprendizaje y entrenamiento y buscan continuamente oportunidades de aprendizaje tanto para ellos, así como para sus empleados. El indicador más alto de la ventaja competitiva percibida por los trabajadores de la industria manufacturera es el de satisfacción al cliente evaluado con seis, mucho mejor que la competencia, en los otros indicadores resultaron en todos los casos con moda de cinco siendo calificados como mejor que la competencia. Para la correlación entre los tres niveles de aprendizaje organizacional, se encontró que todas las correlaciones son positivas y significativas a un nivel de confianza del 99%, por tanto los resultados permiten confirmar la H₁:

Los tres niveles de aprendizaje organizacional se relacionan directa, positiva y significativamente entre si en las grandes empresas manufactureras en la región centro del estado de Coahuila. Se encontró también que existe una correlación significativa a un nivel de confianza del 99% entre la ventaja competitiva percibida y los tres niveles de aprendizaje organizacional lo que permite confirmar la H₂: Los tres niveles de aprendizaje organizacional se relacionan directa, positiva y significativamente con la ventaja competitiva percibida en las grandes empresas manufactureras en la región centro del estado de Coahuila. Este resultado es congruente con lo encontrado por Cardona (2006) quien confirmó que niveles altos de aprendizaje organizacional influyen en el rendimiento percibido de la empresa; así como con Grant (1996) quien indica que las ventajas competitivas están fundamentadas especialmente en la capacidad de transferir el conocimiento, es decir, en el aprendizaje organizacional.

CONCLUSIONES

El desarrollo del aprendizaje organizacional dentro de las empresas es fundamental, por tanto resulta de vital importancia impulsarlo en los tres niveles, individual, por grupo y organizacional, de tal manera, que pueda ser utilizado para desarrollar las ventajas competitivas de la organización, lo que influye de manera positiva en los resultados de las empresas. Como línea de investigación futura se plantea el realizar un modelo con las variables estudiadas en este artículo, pero que incluya además la medición del desempeño operativo de la empresa, con el propósito de determinar la causalidad de las relaciones en su conjunto entre dichas variables; desde el desarrollo del aprendizaje organizacional en sus tres niveles, pasando por su relación con el desempeño operativo hasta su incidencia en la ventaja competitiva. Es decir, comprobar si el aprendizaje organizacional incide de manera directa en la ventaja competitiva o lo hace en mayor proporción a través del desempeño operativo.

RESUMEN

En esta investigación se aborda el tema de la legalidad de la reforma fiscal aplicable a Sociedades y Asociaciones Civiles dedicadas a la enseñanza y el efecto en su competitividad. Con base en la actividad que desarrollan las sociedades y asociaciones civiles durante muchos años fueron consideradas Personas Morales no contribuyentes del Impuesto Sobre la Renta (ISR), sin embargo a partir de la reforma fiscal aplicable a partir de enero de 2014, se condiciona por ley a estas instituciones a obtener autorización como donataria autorizada para recibir donativos por parte del Servicio de Administración Tributaria (SAT), requisito que se debe cumplir, de esta forma serán deducibles para el donante. Esta investigación tiene como objetivo conocer el punto de vista de los especialistas del área fiscal, para conocer su opinión respecto de la legalidad de los cambios establecidos en la ley, además, también se entrevistará a los administradores de las sociedades y asociaciones civiles, para conocer de su parte, el efecto financiero y en su competitividad de operación, como consecuencia de las nuevas disposiciones fiscales a este tipo de empresas. Para obtener la información se elaboró un instrumento de medición cuya confiabilidad se determina a través de análisis estadísticos, mismo que se aplicó a la muestra de población seleccionada. La información obtenida se procesó mediante estadística para obtener los resultados de la investigación.

PALABRAS CLAVES: Reforma Fiscal, Legalidad, Asociaciones de Enseñanza, Competitividad

ABSTRACT

In this research the issue of the legality of the tax reform applicable to companies and civil associations dedicated to teaching and the effect on competitiveness is addressed. Based on the activities performed by the societies and associations for many years were considered People Morales not taxpayers Income Tax (ISR), however from the tax reform applicable from January 2014, is conditioned by law these institutions to obtain authorization as authorized donee to receive donations by the Tax Administration Service (SAT), a requirement that must be met in this way are deductible for the donor. This research aims to determine the point of view of the specialists of the fiscal area, to get their opinion on the legality of the changes established by law, in addition, will also meet managers of the societies and associations, to know in turn, the financial impact and competitive operation, as a result of new tax provisions to these businesses. For information measuring instrument whose reliability is determined through statistical analysis, it was applied to selected population sample was drawn. The information obtained was processed using descriptive statistics for the results of the investigation.

INTRODUCCIÓN

Otorgar la educación adecuada, representa un reto permanente de grandes dimensiones para todos los países. La evolución constante en los conocimientos de las áreas de tecnología y comunicación, entre otras, exigen la actualización continua de los programas académicos, incluidos en un sistema educativo nacional e impartido por profesionistas de la educación. Solo de esta manera se asegura el beneficio inmediato de los millones de personas que a diario se preparan a recibir nuevos conocimientos, con la finalidad de poder hacer frente a las exigencias de un mundo que demanda personas capacitadas para realizar actividades actuales, que en el desarrollo de su actividad diaria les permita generar nuevas ideas y conocimientos, mismos que serán traducidos en mejor bienestar social al incrementar el nivel de vida de la población. En México, no obstante el esfuerzo que realiza el Gobierno Federal y las Entidades Federativas, para cubrir la demanda de educación en todos los niveles, no ha sido posible lograr que todos los habitantes del país sepan leer y escribir.

Como una respuesta en apoyo al gobierno federal para cubrir la demanda educativa, ha sido muy importante la participación de instituciones educativas particulares. De acuerdo con las cifras del Sistema Educativo Nacional (2012), la demanda educativa en México en sus diferentes niveles y grados académicos, es proporcionada en un 87% por el Estado, quien al cierre del año 2012 atendió una matrícula de 30, 285, 998 alumnos, el 13 % restante cursó sus estudios en planteles particulares, quienes al cierre del mismo año proporcionaron educación a un total de 4, 535, 328 personas. Por otra parte el Instituto Nacional de Estadística, Geografía e Informática (INEGI) en su base de datos tiene registrado al 31 de diciembre de 2014 un total de 51435 planteles de educación privada en todo el país, algunos de ellos ofertan educación técnica y profesional de todos los tipos y niveles a la sociedad mexicana. Como puede apreciarse la participación de particulares en la oferta educativa atiende a un gran número de mexicanos, quienes optan por recibir educación en planteles privados.

La educación privada en México, representa una opción para quienes puedan pagar educación particular, también representa la oportunidad de seguir preparándose a quienes no pudieron matricularse en escuelas oficiales, por consiguiente, la educación particular en México juega un papel muy importante para muchas personas que desean prepararse, situación que satisface de manera directa una necesidad que el estado no alcanza a satisfacer, de esta forma la educación privada está contribuyendo al desarrollo social, cultural, político y económico de México. En reconocimiento de la importante función que desempeñan los planteles de educación privada, y dado que de acuerdo con el artículo 75 del Código de Comercio de México, estos planteles no realizan una actividad con fines de especulación comercial; para fines tributarios, este tipo de establecimientos se encuentran registrados ante la Secretaría de Hacienda y Crédito Público, como sociedades o asociaciones civiles; siempre han sido considerados personas no contribuyentes del Impuesto Sobre la Renta, sin embargo, de acuerdo con modificaciones a la Ley del Impuesto Sobre la Renta, propuestas por el ejecutivo federal durante 2013, aprobadas por el congreso de la unión en el mismo año, a partir del primero de enero de 2014 estos contribuyentes quedan sujetos, a la obtención de un reconocimiento por parte del Servicio de Administración Tributaria, que los identifique como establecimientos autorizados para recibir donativos deducibles para sus donadores, de lo contrario serán considerados y pagarán el Impuesto Sobre la Renta como cualquier empresa mercantil que persigue especulación comercial. La justificación hecha por el Ejecutivo Federal en su propuesta de modificación a las leyes fiscales, fue que muchos planteles educativos percibían ingresos por la venta de libros y artículos escolares, por tal motivo, era necesario adecuar las leyes fiscales para estos contribuyentes, sin embargo, los cambios de ley, no solo gravaron los ingresos provenientes de la enajenación de libros y artículos escolares, sino que gravan la actividad total incluyendo las cuotas o colegiaturas, como si se tratase de ingresos provenientes de actividades mercantiles.

Las reformas fiscales aplicables a los planteles de educación privada a partir del primero de enero de 2014, ponen en riesgo la permanencia de muchos planteles de educación privada, los cuales se verán afectados de manera directa en su patrimonio, en sus finanzas y en su operatividad. Esta investigación tiene como

objetivo conocer con base en la opinión de especialistas del área fiscal, la legalidad de las reformas fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza, así como el efecto financiero causado por las disposiciones fiscales en su competitividad de operación. El resultado de esta investigación será de utilidad para que los directores de las sociedades y asociaciones civiles, conozcan la legalidad de la reforma fiscal y tengan elementos basados en ley, para tomar decisiones que les permitan hacer valer sus derechos constitucionales y proteger su patrimonio, en beneficio de la población a la cual prestan sus servicios educativos.

REVISIÓN LITERARIA

De acuerdo con la leyes mexicanas, para que un impuesto sea exigible a los habitantes de un país, éste debe estar establecido en ley y estar destinado de manera específica a cubrir un gasto público del país, de la Entidad federativa o Municipio donde reside el contribuyente, de la misma manera deberá establecerse de manera clara las disposiciones reglamentarias que dan a conocer el sujeto, objeto, base, tasa o tarifa aplicables. En México la obligación de tributar se encuentra contenida en el artículo 31 fracción cuarta de la Constitución Política de los estados unidos Mexicanos (CPEUM), en los siguientes términos. Es obligación de los mexicanos contribuir para el gasto público de manera proporcional y equitativa de la Federación, de la Entidad Federativa o del municipio donde residan, (CPEUM, DOF. 07-07-2014). Por su parte el Código Fiscal de la Federación (CFF), establece en su artículo primero la obligación a las personas físicas y morales de contribuir al gasto público de acuerdo a lo establecido en las leyes fiscales respectivas, (CFF, DOF. 14-03-2014). La Ley del Impuesto Sobre la Renta (LISR), establece en su artículo primero que están obligadas a pagar este impuesto las personas físicas y las morales, residentes en México por los ingresos que obtengan independiente de la fuente de donde procedan; los residentes que cuenten con un establecimiento permanente en el país, por los ingresos de dicho establecimiento; los residentes en el extranjero que no tengan establecimiento permanente en el país, por los ingresos que obtengan procedentes de fuentes ubicadas en territorio nacional, (LISR, DOF. 11-12-2013)

Durante muchos años el gobierno federal a través de la Secretaría de Hacienda y Crédito Público (SHCP), con base en la legislación, ha permitido que las instituciones particulares que prestan servicios de enseñanza con reconocimiento oficial, sean consideradas como Personas Morales no Contribuyentes del Impuesto Sobre la renta, toda vez que, por la naturaleza civil de su actividad, los actos que éstas realizan no pueden ser considerados mercantiles, por consiguiente, al ser una actividad regulada por las leyes civiles, los servicios educativos no constituyen fines de especulación comercial. No obstante lo anterior, en la reforma fiscal vigente a partir del primero de enero de 2014, las sociedades y asociaciones civiles que se dedican a la enseñanza, que cuenten con reconocimiento de validez oficial, para poder seguir siendo consideradas “no contribuyentes del Impuesto Sobre la Renta” (ISR), están condicionadas a ser consideradas por parte del Servicio de Administración Tributaria (SAT), como instituciones autorizadas para recibir donativos deducibles en los términos de la Ley del Impuesto Sobre la Renta (LISR).

Comentan los especialistas Hernández Francisco y Hurtado Osvaldo (2014) profesionistas del área fiscal de la firma PricewaterhouseCoopers, S.C. la posibilidad de que las nuevas disposiciones de la Ley del Impuesto Sobre la Renta, aplicables a partir de enero de 2014 transgredan el principio constitucional de legalidad tributaria para las instituciones de enseñanza que no sean consideradas donatarias autorizadas según la norma vigente, por la omisión de normas específicas que regulen situaciones específicas de estos contribuyentes, en consecuencia deberán hacer valer su derecho constitucional mediante la aplicación del juicio de amparo en defensa de su interés jurídico. De la misma manera estos especialistas consideran se violenta también de las sociedades y asociaciones civiles el derecho de seguridad jurídica, respecto de no saber a qué atenerse ante la regulación de las disposiciones de ley, así como a la actuación de la autoridad, ante la falta de disposiciones fiscales expresas para determinados casos concretos.

En el mismo sentido los especialistas Calzada, A., Cernas, E. y Suárez, M. (2014) comentan que las nuevas disposiciones fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza, violan los principios constitucionales de equidad y proporcionalidad establecidos en el artículo 31 fracción IV de la Constitución Mexicana. De acuerdo con el principio de equidad los contribuyentes de un mismo impuesto deben guardar una situación de igualdad frente a la norma jurídica que lo establece y regula, en el caso específico, el legislador estableció un trato diferenciado a los contribuyentes que sí cuentan con una autorización de hacienda para recibir donativos y a los que no reciben la mencionada autorización, como resultado de esto, la capacidad económica del contribuyente se verá disminuida severamente con el pago del tributo. En el mismo sentido se violenta el principio constitucional de proporcionalidad, pues los contribuyentes deben contribuir en función de su respectiva capacidad económica, debiendo aportar una parte justa y adecuada a su utilidad o rendimientos. El cumplimiento de este principio se logra a través de la aplicación de tarifas progresivas para determinar y pagar el monto de la contribución, de esta forma pagará mayor impuesto quien haya ganado mayores utilidades. Sin embargo, la norma vigente les establece bases y tasas diferentes en la determinación y pago del tributo.

Por otra parte los especialistas del área fiscal Ranero, C., Urías, D., Peralta, N. y Ranero, G. (2014) de la firma, Ranero Abogados, comentan que en la aplicación de las nuevas disposiciones fiscales para las sociedades y asociaciones dedicadas a la enseñanza, existe la posibilidad de inconstitucionalidad con relación al principio de no retroactividad de la ley, al obligarlas sin una razón justificada al pago de impuesto como personas contribuyentes del ISR., además también se viola el principio de equidad tributaria, al establecer obligaciones fiscales a personas que no son iguales en cuanto a su finalidad social.

Como se desprende de la opinión de los especialistas en el Área fiscal, las nuevas disposiciones fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza, que no cuenten con la autorización para recibir donativos deducibles conforme a la LISR, les violentan sus principios constitucionales. En consecuencia deberán pagar el impuesto sobre la renta como si fuera una sociedad mercantil cuya naturaleza de sus actividades es la especulación comercial. Como consecuencia de lo anterior, existe inconformidad generalizada de este sector ante las disposiciones fiscales, ya que los obligan a tributar como si realizaran actividades de especulación comercial, su inconformidad se fundamenta en que la prestación de servicios educativos es una actividad de naturaleza civil, por consiguiente debe ser considerada como tal para cumplir con sus obligaciones fiscales.

METODOLOGÍA

En el desarrollo de la presente investigación se analizaron las nuevas disposiciones fiscales aplicables a sociedades y asociaciones civiles dedicadas a la enseñanza, vigentes a partir de enero de 2014. Se consultaron Leyes, libros y revistas especializadas, además se entrevistó a especialistas del área fiscal, para conocer su opinión respecto de la legalidad del contenido de la reforma fiscal. Para recabar la información de campo se elaboró un instrumento de medición el cual fue medido en su confiabilidad a través del coeficiente Alpha de Cronbach, mismo que aplicado a 77 especialistas del área fiscal y a 80 directores o administradores de las sociedades y asociaciones civiles. La información se procesó a través de estadística descriptiva para facilitar la obtención de resultados, mismos que nos permiten conocer y alcanzar el objetivo de esta investigación.

RESULTADOS

Una vez obtenida la información de campo de la presente investigación, se procedió a procesarla a través de estadística descriptiva para contar con los primeros resultados del estudio, mismos que se presentan a continuación. La información obtenida (tabla 1) directamente de los directores de escuelas o administradores de las mismas nos revela lo siguiente: solo el 21 % de ellos manifestó conocer lo suficiente los cambios fiscales que se aplican a las sociedades o sociedades civiles dedicadas a la enseñanza, un 32 % los conoce regular y el 27% restante los desconoce; en el mismo sentido un 11% consideró que los cambios fiscales son adecuados, un 32 % considera regular la adecuación de los cambios fiscales y el 37% restante los considera inadecuados; por otra parte el 15% manifestó que los cambios fiscales si violentan sus derechos constitucionales, un 21% dijo que el grado de violación es regular y un 44% coincidió en que no se violentan; de acuerdo con el 31% los cambios fiscales si afectan su finanzas, el 30% dijo que la afectación de sus finanzas es regular y el 19% considera no verse afectado en sus finanzas; Así mismo, el 17% de los directores manifestó que las reformas fiscales si afectan su competitividad, para el 26% la afectación en su competitividad es regular y el 37% dijo que no se ven afectados en su competitividad; adicional a lo anterior un 15% de los entrevistados dijo que las reformas fiscales ponen en peligro su permanencia en el mercado, de acuerdo un 25% el peligro de permanecer en el mercado es regular, y según el 39% restante no existe peligro de perder la permanencia en el mercado; en la misma dirección un 12% manifestó que las reformas fiscales ponen en riesgo su patrimonio, para un 25% el riesgo sobre el patrimonio es regular y para el 29% restante las reformas fiscales no ponen en riesgo su patrimonio; por último, para el 12% es fácil obtener la autorización del SAT como donataria autorizada, para un 27% la facilidad es regular y para el 41% restante no es fácil obtener la autorización.

	7. Considera que los cambios fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza ponen en riesgo su patrimonio?	5	11	25	15	24
	8. Considera fácil obtener la autorización como donataria autorizada por parte del SAT	2	10	27	20	21

Elaboración propia con base en los indicadores analizados en esta investigación.

Por otra parte, al entrevistar a los profesionistas del área fiscal se encontraron los siguientes resultados, de acuerdo con la opinión manifestada por los participantes. Al preguntar a los especialistas del área fiscal (tabla 2) si conoce los cambios fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza se encontró que: el 47% manifestó si conocerlas, un 25% dijo conocerlas en forma regular y un 5% dijo no conocerlas; de la misma forma un 23% comentó que los cambios fiscales sí les afecta su esfera jurídica, un 29% coincidió en que les afecta de manera regular, el 25% restante dijo no sentir que se afecte

su esfera jurídica; en el mismo sentido un 44% manifestó que sí considera fundamentados en derecho los cambios fiscales, un 26% dijo que estaban su fundamentación es regular, para el 25% restante no están fundamentados en derecho los cambios fiscales; por otra parte un 50% de los entrevistados manifestó que considera legal que las sociedades y asociaciones civiles dedicadas a la enseñanza tributen como sociedad mercantil, un 11% estuvo regularmente de acuerdo en que es legal que tributen como sociedades mercantiles, el 16% restante no está de acuerdo en que sea legal esta forma de tributación; por último un 29% considera viable la defensa fiscal contra los cambios fiscales, para un 21% es regular la viabilidad de la defensa, un 27% no considera viable la defensa fiscal contra los cambios fiscales.

Tabla 2: Operacionalización de variables

	5. Considera viable la defensa fiscal contra los cambios fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza?	12	17	21	24	3

Elaboración propia con base en los indicadores analizados en esta investigación.

CONCLUSIONES

De acuerdo con los comentarios de los especialistas del área fiscal, Hernández y cols. Las nuevas reformas fiscales violan los principios constitucionales de legalidad tributaria a las instituciones de enseñanza que no sean consideradas donatarias autorizadas, así mismo, las nuevas reformas violentan el principio de seguridad jurídica por falta de claridad de las disposiciones y omisión de la norma aplicable en casos específicos. En el mismo sentido los especialistas Calzada y Cols., aseguran que las nuevas disposiciones aplicables violentan los principios de equidad y proporcionalidad, toda vez que dan un tratamiento fiscal distinto a contribuyentes de la misma naturaleza, además de no respetar la capacidad contributiva de los gobernados. Por otra parte los especialistas Ranero y Cols., manifiestan la posibilidad de inconstitucionalidad con relación al principio de no retroactividad de la ley, pues ésta obliga a los mencionados contribuyentes sin una razón justificada al pago de impuesto como personas contribuyentes del ISR, Además la nueva norma viola también el principio de equidad tributaria, al establecer diferentes obligaciones fiscales a personas que son iguales en cuanto a su finalidad social. En el mismo sentido, la opinión de los profesionistas del área fiscal entrevistados, el 29 % de ellos sostiene que es viable la defensa fiscal, toda vez que de acuerdo con su criterio sobre el particular, las reformas fiscales aplicables a las sociedades y asociaciones civiles dedicadas a la enseñanza, sí violan los principios constitucionales de estos contribuyentes.

Limitaciones

La principal limitación fue la falta de un padrón oficial por parte de las autoridades educativas, sobre estas instituciones de enseñanza, del tal forma que éste permitiera conocer su ubicación para levantar la información de campo. Por otra parte, se encontró la falta de participación de algunas instituciones de enseñanza, por temor a proporcionar datos reservados que les pudieran perjudicar en un futuro.

RESUMEN

El siguiente artículo describe la Responsabilidad Social Empresarial (RSE) en las empresas del clúster automotriz en la ciudad de Aguascalientes. La responsabilidad social empresarial es probablemente uno de los más complejos retos que la gestión empresarial ha de enfrentar, el éxito en este caso radica en la habilidad para prosperar, de una manera responsable, y en trabajar con otros actores sociales y económicos para lograr modificaciones en el sistema económico. Teniendo en cuenta que las organizaciones no son solamente centros económicos, productores de bienes y servicios, sino también agentes socializadores, en los cuales se crean valores, patrones morales y éticos, se construyen y desarrollan procesos sociales y culturales; resulta imprescindible, en la implementación de estrategias, experiencias e iniciativas de responsabilidad social empresarial, el desarrollo y la promoción de una cultura y valores organizacionales coherentes con el modelo de la sostenibilidad, tales como apertura, participación, trabajo en equipos, colaboración, responsabilidad y procesos democráticos, solidaridad, compromiso, justicia, contribución, consenso, persistencia, equidad, sensibilidad, y honestidad.

CONCEPTUALIZATION, PRACTICES AND COMMUNICATION STRATEGIES ON CORPORATE SOCIAL RESPONSIBILITY CORPORATE AUTOMOTIVE CLUSTER OF AGUASCALIENTE

ABSTRAC

The following article describes the Business' Social Responsibility in the cluster automobile businesses in the city of Aguascalientes. The business' social responsibility is probably one of the most complex challenges that business management has to face, the success of this case lies in the ability to prosper, in a responsible way, and in working with other social and economic actors to achieve modifications in the economic system. Taking into account that the organizations are not only economic centers, property and service producers, but also socializing agents, in which values are created, moral and ethical patterns are built, and social and cultural processes are developed: it integrally results in strategy implementation, experiences and initiatives of a business' social responsibility, the development and promoting of a culture and of organizational values that are coherent with the model of sustainability, such as opening, participation, team work, collaboration, responsibility and democratic processes, solidarity, commitment, justice, contribution, consensus, persistence, righteousness, sensibility and honesty.

INTRODUCCIÓN

La Responsabilidad Social Empresarial (RSE) se ha convertido en una nueva forma de gestión y de hacer negocios. Esta estrategia integra el respeto por las personas, los valores éticos, la comunidad y el medioambiente con la gestión misma de la empresa, independientemente de los productos o servicios que ésta ofrece, del sector al que pertenece, de su tamaño o nacionalidad (Caliga Calderon, 2013). Es decir, con la RSE, la empresa se ocupa de que sus operaciones sean sustentables en lo económico, lo social y lo ambiental. En Aguascalientes un clúster importante es el clúster automotriz. En éste clúster el Estado cuenta con 34 empresas cuyas actividades giran alrededor de las que realiza la empresa NISSAN Mexicana, ubicada en la capital. Este clúster tiene un gran impacto en la economía, ofreciendo un gran número de empleos y de oportunidades a otros.

empresarios en esta zona (<http://www.aguascalientes.gob.mx/>). Las acciones de RSE de NISSAN Mexicana han estado relacionadas con el cuidado y preservación del medio ambiente, ayuda a comunidades en situaciones de desastre y apoyo para mejorar la educación, entre otras. En éste proyecto se busco conocer y documentar las prácticas de RSE que utilizan las empresas del clúster automotriz del estado de Aguascalientes, explorar la relación que guardan con las actividades de este mismo tipo que realizan otras empresas del clúster. Una vez obtenida la información necesaria se pretende identificar el grado de conocimiento del concepto de Responsabilidad Social, prácticas e intenciones que tienen respecto a la misma. El artículo presenta primero la descripción del problema, el objetivo general y específico del proyecto; en el que por medio de la recaudación de información de las acciones de RSE de la empresas que forman parte del clúster automotriz de Aguascalientes se conocerá la percepción de la RSE y ejecución de prácticas de RSE, la metodología que se utilizo en la presente investigación es cuantitativo, transversal, descriptivo y explicativo, teniendo como fuentes de obtención de información los cuestionarios en donde dichos instrumentos seleccionados deberán cubrir los requisitos de validez y confiabilidad

REVISIÓN LITERARIA

En la actualidad las prácticas de la RSE se han estado incorporando en los objetivos, filosofía, misión de las empresas. En la publicación de Crecimiento empresarial basado en la Responsabilidad Social (Aguilera Castro, Crecimiento Empresarial basado en la Responsabilidad Social, 2012) se comenta que la Responsabilidad Social Empresarial actúa como medio acomodaticio a través del cual se construyen relaciones de beneficio recíproco entre los objetivos empresariales y los intereses colectivos de la sociedad. La organización se sirve de estas relaciones para impulsar su crecimiento y garantizar su sostenibilidad integral, además al ser una empresa socialmente responsable, se obtiene un reconocimiento ante la sociedad, con una actuación ética empresarial y un compromiso hacia los diferentes stakeholders.

Existen distintas definiciones del concepto de clúster. Son las siguientes: un grupo geográficamente denso de empresas e instituciones conexas, pertenecientes a un campo concreto, unidas por rasgos comunes y complementarios entre sí. La mayoría de ellos comprenden empresas de productos o servicios finales, proveedores de materiales, componentes, maquinaria y servicios especializados, instituciones financieras y empresas de sectores afines (Porter, 1999). El análisis de clúster puede realizarse en distintos niveles: a) macro, donde se considera como un grupo industrial que se vincula a una economía en su conjunto. b) meso: donde dicho concepto se refiere al conjunto de relaciones inter e intraindustriales y que corresponden a diferentes etapas en la cadena productiva de bienes similares. c) micro: oferentes especializados alrededor de un núcleo o más de empresas líderes. (Roelandt, Theo, & Hertog, 1999). El estado de Aguascalientes es considerado como uno de los estados más estratégicos del país para las inversiones de la industria automotriz mundial, gracias a su excelente ubicación geográfica frente a los Estados Unidos y Canadá, y

su especializada fuerza de trabajo. Asimismo, cuenta con una óptima red carretera que lo comunica a las principales ciudades, puertos y fronteras de la República Mexicana que facilitan el acceso a distintos mercados y donde circula el 60 por ciento del mercado nacional en un radio de 500 Km. La industria automotriz y de autopartes en Aguascalientes representa el 13 por ciento del Producto Interno Bruto estatal. Del año 1999 al 2004, las exportaciones realizadas por el sector automotriz y de autopartes representaron el 57 por ciento lo que constituyó un total de 9,671.8 millones de dólares para el estado. Con sólo el 1 por ciento de superficie y 1 por ciento de la población, es uno de los cinco estados que capturan el 80 por ciento de la Inversión Extranjera Directa (IED) y se encuentra en el 6to. lugar nacional en producción de vehículos. En la entidad, se encuentran establecidas 38 empresas del sector automotriz en las que se ocupa a 13 mil 008 personas y cuenta con capitales de Estados Unidos, Japón, España, Francia, Alemania, Suecia, Brasil y otros. Su IED (valor en libros, no actualizado a 2006, con algunas inversiones de hace 20 años) corresponde a 3 mil 300 millones de dólares con un total de 345 mil vehículos ensamblados en 2005 por Nissan-Renault.

METODOLOGÍA

Objetivo

En el caso de las empresas pertenecientes al clúster automotriz del estado de Aguascalientes se busca, determinar: El conocimiento de la terminología asociada a la RSE, así como el concepto que se tiene de la misma, determinando, específicamente. Como se practica en caso de hacerse, la RSE en sector empresarial, específicamente. Conocer, en caso de existir, las estrategias de comunicación interna y externa que las empresas tienen, específicamente en lo relacionado con la concepción y las prácticas de RSE. Se realizará un acercamiento cuantitativo para abordar la investigación que por su periodo de tiempo será transversal, ya que se realizará en un solo momento y no será comparativo. Por el nivel de análisis será descriptivo y explicativo de un estudio actual.

Muestra

La población sujeto de estudio en esta investigación las empresas integrantes del Clúster automotriz de Aguascalientes año muestra un total de 34 empresas. El instrumento utilizado en la presente investigación se divide en tres secciones generales con preguntas estructuradas en escala de likert. La primera sección abarca la percepción de la RSE, la segunda refiere la ética empresarial y transparencia, y la tercera percepción de la responsabilidad social empresarial

RESULTADOS

Se presentan los resultados del análisis cada una de las preguntas del cuestionario:

Percepción de la Responsabilidad Social Empresarial

Pregunta 1. Tener Responsabilidad Social Empresarial (RSE) significa trabajar para minimizar las consecuencias negativas relacionadas con las actividades del negocio, así como las decisiones de los grupos de interés (stakeholders), que incluyen a los empleados, clientes, comunidad el ecosistema, inversionistas y proveedores. De acuerdo a la información recabada se puede decir que el 31% están en muy desacuerdo con un 25% desacuerdo moderado lo cual indica baja percepción del significado de RSE como el trabajo para minimizar las consecuencias negativas relacionadas con las actividades del negocio

Pregunta 2: Tener RSE significa contribuir al bienestar social y económico mediante la inversión de recursos (dinero, gente, equipamiento, experiencia) en actividades que benefician a la sociedad. Los datos

muestran que el 56% está muy de acuerdo en que la RSE significa contribuir al bienestar social y económico mediante la inversión de recursos Y un 38% se encuentra en acuerdo moderado.

Pregunta 3: Tener RSE significa contribuir relaciones de confianza con los stakeholders o grupos de interés que existen dentro y afuera de la empresa. EL 50% de los informantes están muy de acuerdo y el 19% está acuerdo moderado en cuanto al significado de la RSE como contribuir en relaciones de confianza con los stakeholders o grupos de interés de la empresa.

Pregunta 4: Las actividades de RSE como contribución a la mejora en la competitividad y generación de resultados financieros sólidos un 31% centra su percepción en muy de acuerdo, un 19% acuerdo moderado, un 19% leve desacuerdo y un 12% y 6% se encuentra en desacuerdo moderado y muy en desacuerdo respectivamente.

Pregunta 5: Las acciones de RSE tienen como principal objetivo hacer aparecer a la empresa como justa, noble o comprometida ante los ojos de la sociedad, el 37% de los informantes está en desacuerdo moderado, un 19% leve acuerdo y acuerdo moderado, los restantes se encuentran dentro de las opciones leve desacuerdo con un 13% y un 6% para muy de acuerdo y muy en desacuerdo.

Pregunta 6: Aparecer como una empresa socialmente responsable es una manera de obtener mayores ganancias al obtener una mejor reputación y publicidad, únicamente a través de donativos y patrocinios a causas nobles. un 31% se encuentra leve acuerdo, un 25% en leve desacuerdo y otro 25% en desacuerdo moderado.

Pregunta 7: Todas las empresas están obligadas a devolver a la sociedad, en forma de apoyos o donativos, algo de lo que ella les ha dado. Un 75% está muy de acuerdo y un 13%, 6% y 6% se encuentran en acuerdo moderado, leve desacuerdo y muy en desacuerdo respectivamente.

Pregunta 8: La única responsabilidad de una empresa debe ser generar ganancias para sus dueños o accionistas. El resultado es que 31% y un 25% de los informantes están muy en desacuerdo y en desacuerdo moderado respectivamente en cuanto a la idea de que la única responsabilidad de una empresa debe ser generar ganancias para dueños o accionistas.

Pregunta 9: Tiene a la RSE como parte de la estrategia empresarial/corporativa/ organizacional, no es una actividad aislada, está implícita en la misión de la empresa y considerada en sus principios. Se puede observar que un 56% de los informantes están muy de acuerdo en cuanto a si la RSE es parte de la estrategia empresarial/ corporativa/ organizacional y está implícita en la misión y principios de la empresa; mientras que un 31% se encuentra en acuerdo moderado.

Pregunta 10: Tiene un área/comité/grupo responsable de velar por el cumplimiento y transmisión de las políticas de RSE. Un 38% se encuentra en acuerdo moderado y un 31% en leve acuerdo.

Pregunta 11: Conoce y aplica el código de Ética de la Responsabilidad Social Empresarial. Un 37% y un 19% de los informantes se encuentran muy de acuerdo y en acuerdo moderado respectivamente; de igual modo un 19% se encuentra en leve desacuerdo ante esta afirmación.

Pregunta 12: Posee un código de Ética o de Conducta propio de una empresa, formal y de manera escrita, y lo revisa periódicamente. El 44% de los entrevistados está muy de acuerdo y un 19% acuerdo moderado así como leve acuerdo.

Pregunta 13: Posee procesos de educación y difusión de los principios éticos para los colaboradores externos de la empresa. Un 44% está muy de acuerdo y un 31% acuerdo moderado.

Pregunta 14: Tiene claro el concepto de RSE, de los entrevistados 69% está muy de acuerdo, restando un 19%, 6% y 6% en acuerdo moderado, leve desacuerdo y muy en desacuerdo.

Pregunta 15: Cuenta con alguna certificación o distintivo como Empresa Socialmente Responsable. Un 25% se encuentra en acuerdo moderado al igual que muy de acuerdo, seguido de leve acuerdo con un 19%.

Pregunta 16: Ha realizado alguna vez trámites o procesos enfocados a obtener un reconocimiento como Empresa Socialmente Responsable un 25% está muy de acuerdo al igual que No aplica, seguido de Acuerdo moderado con un 19% de informantes

Pregunta 17: Registra los reclamos de sus consumidores y clientes. El 50% de los informantes se encuentra muy de acuerdo en cuanto a registrar los reclamos de sus consumidores y clientes, mientras que un 43.75% se encuentra en acuerdo moderado.

Pregunta 18: En cuanto a si invierten en proyectos específicos de organizaciones comunitarias el 44% se encuentra en acuerdo moderado y un 25% en leve acuerdo.

Pregunta 19: Realiza campañas educativas y/o de interés público en la comunidad, por ejemplo, contra las drogas. Se puede observar que en cuanto a si realiza campañas educativas y/o de interés público en la comunidad, por ejemplo, contra las drogas, un 38% está muy de acuerdo seguido de leve acuerdo con un 25% y posteriormente un 13% y 12% acuerdo moderado y leve desacuerdo respectivamente.

Pregunta 20: Hace donaciones de servicios, productos y recursos financieros, los encuestados se centran con un 31% en leve desacuerdo, mientras que un 25% están en leve acuerdo seguido de un 19% en acuerdo moderado.

Pregunta 21: Facilita recursos no financieros (espacios, equipos, tecnología, capacidades técnicas, y directivas de sus funciones y colaboradores) necesarios para el desarrollo de sus proyectos y actividades sociales. El 50% de los informantes se encuentran en acuerdo moderado en cuanto a si facilita recursos no financieros (espacios, equipos, tecnología, capacidades técnicas, y directivas de sus funciones y colaboradores) necesarios para el desarrollo de sus proyectos y actividades sociales, seguido de un 19% que está muy de acuerdo.

Pregunta 22: Cuenta con un programa social estructurado, con asignación de presupuestos estable. Un 25% está en leve acuerdo, seguido de leve desacuerdo, acuerdo moderado y muy de acuerdo con un 19% cada uno.

Pregunta 23: Hace uso de los incentivos fiscales para actividades relacionadas a la cultura y al área social. Los informantes que se encuentran en leve acuerdo en cuanto a si hace uso de los incentivos fiscales para actividades relacionadas a la cultura y al área social es un 31%, seguido de leve desacuerdo y desacuerdo moderado con un 19% cada uno.

Pregunta 24: Apoya programas/iniciativas personales de sus empleados en acciones sociales. En cuanto a si apoya programas/iniciativas personales de sus empleados en acciones sociales un 31% se encuentra muy de acuerdo, seguido de acuerdo moderado con un 25%,

Pregunta 25: Busca un continuo perfeccionamiento de los productos y servicios, sustituyendo componentes, tecnologías, y productos en la medida que surgen sustitutos eficientes, más seguros y que presenten menor riesgo al consumidor. El 63% se encuentra en la opción muy de acuerdo, seguido de acuerdo moderado con un 31%.

Pregunta 26: Conoce el impacto ambiental que tiene las actividades propias de la empresa. un 50% se encuentra en la posición de muy de acuerdo, seguido de acuerdo moderado con un 44%.

Pregunta 27: Considera dentro de la planificación estratégica del negocio temas relacionados con el ambiente. El 50% está muy de acuerdo seguido de “Acuerdo moderado con un 31%.

Pregunta 28: Realiza regularmente control y monitoreo del impacto ambiental causado por sus actividades y servicios desarrollados. El 56% de los informantes está muy de acuerdo en cuanto a si realiza regularmente control y monitoreo del impacto ambiental causado por sus actividades y servicios desarrollados, seguido de un 25% a los que se encuentran en acuerdo moderado.

Pregunta 29: Desarrolla un programa de recolección de residuos y reciclaje post-consumo. El 56% está muy de acuerdo, seguido de un 31% que se encuentra en acuerdo moderado.

Pregunta 30: Posee un plan de emergencia ambiental en relación a todas las actividades o servicios que contienen situaciones de riesgo. El 50% de los informantes se encuentra en la posición de muy de acuerdo, seguido de un 25% que está en acuerdo moderado, seguido de un 19% en leve acuerdo. A continuación se muestra una tabla con las medias por pregunta y la media promedio por área, prospectando mayor a 4.

Tabla 2: Tabla de Medias Por Pregunta, Media Por Dimensión y Desviación Típica

Pregunta	Media	Media Por Dimensión	Desv. Típ.
1	5.38		1.025
2	5.38		1.025
3	4.69		1.887
4	4.19		1.682
5	3.25		1.483
6	3.19	4.28	1.167
7	5.38		1.408
8	2.81		1.905
9	5.25		1.291
10	3.81	4.26	1.759
11	4.00		2.366
12	4.38		2.156
13	4.56		2.065
14	5.31		1.401
15	3.50		2.338
16	3.25		2.463
17	5.25		1.238
18	4.31		1.448
19	4.31		1.852
20	3.44		1.548
21	4.50		1.317
22	3.81	4.58	1.759
23	3.19		1.682
24	4.13		2.029
25	5.38		1.258
26	5.25		1.238
27	5.06		1.389
28	5.19		1.328
29	5.25		1.291
30	5.06		1.340

Se puede observar que las tres áreas del instrumento cuentan con medias por arriba de 4, siendo está la mínima proyectada. La mayor es “Vinculación y compromiso con la comunidad” con un 4.58 de media general, la siguiente es “Percepción de la responsabilidad social empresarial” con un 4.28 de media general y por último “Ética empresarial y transparencia” con un 4.26.

Se realizó una investigación en las páginas web de las empresas a 18 empresas de las prospectadas dentro de la muestra de la investigación a fin de indagar si la empresa efectúa actividades de RSE y qué tipo de actividades realizan. A continuación se muestra la gráfica de resultados: Se puede observar que un 48% de

las empresas investigadas realizan acciones ambientales (colecta de celulares usados para venderlos de reciclaje, Reutilizar la basura, Recomprar productos reciclados, Reciclaje, Prevenir los residuos, Uso de tecnología híbrida y sistemas de combustible alternativo, etc.), el 23% lleva a cabo campañas sociales (Campañas de salud, campañas de reciclaje, etc.), el 19% realiza donaciones (Donación a escuela, Donación de anteojos, Donación a damnificados, etc.) y un 10% efectúa patrocinios (Patrocinio de equipos deportivos, comunidades, etc.).

CONCLUSIÓN

Con base en el instrumento aplicado el cual arroja datos según cuatro parejas, las conclusiones obtenidas son las siguientes: En cuanto al primer enfoque, *“Percepción De La Responsabilidad Social Empresarial”*, se puede decir que los empresarios conocen lo que abarca el concepto de la RSE de una manera neutra a buena entendiéndose como RSE el minimizar consecuencias negativas para la empresa, contribuir al beneficio de la sociedad, mejoramiento de la competitividad, mayores ganancias y mejor reputación, esto abarca acciones benéficas para la organización y para la sociedad. Lo deseado es que el total de las empresas conozcan lo que es y abarca el concepto de RSE para de esta manera encaminar las acciones óptimas de RSE de una empresa.

El segundo enfoque *“Ética Empresarial Y Transparencia”* se encuentra por arriba de neutro lo cual indica tendencia a bueno sin ser excelente, esto en cuanto a si se tiene a la RSE como parte de la estrategia empresarial implícita en la misión y visión de la empresa, si se cuenta con un área específica responsable de velar por el cumplimiento de las políticas de RSE, si existe un código de ética para la RSE, si existe difusión para los principios éticos, se tiene un claro concepto de RSE y si se cuenta con alguna certificación de empresa socialmente responsable. Para lograr un resultado óptimo en cuanto a este tema es indispensable que se profesionalice o formalicen las prácticas y procesos de RSE en las empresas a manera de crear de la RSE algo inminente en las organizaciones.

El tercer enfoque de *“Vinculacion Y Compromiso Con La Comunidad Y Su Desarrollo”* se manejaron conceptos como si se registra los reclamos de los clientes, se invierte en procesos específicos de organizaciones comunitarias, se realizan campañas, se facilitan recursos no financieros, se cuenta con un programa social estructurado, se conoce el impacto ambiental de las acciones, etc., en cuanto a este enfoque los empresarios se encuentra en un lugar neutro con tendencia a bueno, por lo que es inminente que se trabaje en cuanto al reforzamiento de la vinculación y el compromiso con la comunidad y su desarrollo a través de desarrollo de campañas sociales, inversión en programas sociales, medir el impacto ambiental de las acciones de la empresa, entre otras cosas. Con base en la investigación que se realizó en la web los datos muestran acciones ambientales como la mayor aplicada en las empresas, es decir, acciones como reciclaje, ahorro de luz, ahorro de agua, etc. Esto denota que de alguna manera se piensa en efectuar procesos que aporten a la RSE. Las campañas sociales, aunque no representan la mayoría, son aplicadas en las empresas a manera de contribución a la sociedad en salud, apoyo o medio ambiente, seguido de las donaciones y patrocinios que son aplicadas pero en un menor porcentaje. En general la RSE es conocida, planificada y ejecutada por los empresarios, sin embargo existe un gran potencial de desarrollo en cuanto a la sistematización de acciones o programas formalizados de RSE, así como la ejecución de acciones que vinculen a la empresa con la sociedad, obteniendo un beneficio bilateral empresa-sociedad.

Celia del Pilar Garrido Vargas, Universidad Veracruzana

RESUMEN

En la Universidad Veracruzana región Veracruz se ha presentado una disminución de aspirantes a ingresar a la carrera de Licenciado en Contaduría en los últimos años, este fenómeno también se presenta en otras instituciones privadas de Educación Superior de la misma región, al parecer las nuevas generaciones no están interesadas en estudiar la carrera de Contaduría Pública. Los problemas que inciden en esta situación están relacionados con la reducción del prestigio social de la carrera, la baja retribución al trabajo contable y el creciente número de otros profesionistas que desplazan al contador público de su ámbito natural de trabajo. El objetivo de la presente investigación es analizar los datos disponibles relativos a la disminución de la demanda de la Licenciatura en Contaduría en la Universidad Veracruzana región Veracruz y establecer las posibles causas del fenómeno afín de contar con un insumo que permita fortalecer la profesión y redefinir el campo de acción del Licenciado en Contaduría.

CAUSES THAT INDUCE THE REDUCING DEMAND OF THE EDUCATIONAL PROGRAM IN ACCOUNTING AT THE UNIVERSITY OF VERACRUZ, VERACRUZ REGION

ABSTRACT

At the University of Veracruz, Veracruz region there has been a decline in applicants to join the Bachelor Degree in Accounting in recent years, this phenomenon also occurs in other private institutions of higher education in the same region, apparently the new generations are not interested in pursuing a career in public accounting. The problems that affect this situation are related to the reduction of social prestige of the Degree, low remuneration and the growing number of other professionals who take the place of the graduate Accountant and move them from their natural work environment. The objective of this research is to analyze the available data concerning the declining demand for the Bachelor in Accounting at the University of Veracruz, Veracruz region, and to establish possible causes of the related phenomenon to provide an input that will strengthen the profession and redefine the scope of the Bachelor in Accounting.

INTRODUCCIÓN

En el ámbito nacional se ha obtenido información sobre una disminución de aspirantes ingresar a la Licenciatura en Contaduría, este problema ha sido abordado a lo largo de los últimos años por organismos profesionales como el Instituto Mexicano de Contadores Públicos (IMCP) y la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA). En la Universidad Veracruzana se hace evidente el fenómeno por la tendencia a la baja de aspirantes a cursar la carrera. Los problemas relacionados con esta situación y que se han detectado son, la reducción del prestigio social de la carrera, la baja retribución al trabajo contable y el creciente número de otros profesionistas que desplazan al contador de su ámbito natural de trabajo.

Problema

El problema que se observado en los últimos años en la Facultad de Contaduría de la Universidad Veracruzana región Veracruz, en relación a la disminución del número de aspirantes a ingresar a la Licenciatura en Contaduría, ha propiciado un análisis que permita identificar las causas por el cuales se está presentando este problema. Una de las situaciones a considerar está relacionados con el perfil del contador y con la falta de información acerca del campo profesional. Derivado de lo anterior se lleva a cabo el siguiente planteamiento: ¿La disminución del interés por el estudio de la Licenciatura en Contaduría está relacionado con su perfil profesional?

Objetivo

El objetivo del presente trabajo es analizar los datos disponibles relativos a la disminución de la demanda de la Licenciatura en Contaduría en la Universidad Veracruzana región Veracruz y de las instituciones de Educación Superior de los municipios de Veracruz y Boca del Río que imparten esta carrera, así como establecer las posibles causas del fenómeno, afin de contar con un insumo que permita actualizar los planes de estudio, fortalecer la profesión y redefinir el campo de acción del Licenciado en Contaduría.

REVISIÓN LITERARIA

Antecedentes

En el siglo XV, el matemático italiano Luca Pacioli, había mencionado que quien se dedicara al comercio y quisiera hacerlo bien, necesitaba tres cosas básicas: el dinero, saber hacer bien las cuentas y registrar con rapidez todos los negocios de manera ordenada. Aunado a estos principios, Pacioli escribió la primera explicación detallada sobre la contabilidad por partida doble, razón por la cual mundialmente es considerado el primer Contador en la historia (<http://imcp.org.mx/quienes-somos/historia#.VSQUMPyUf-s>). Pasaron más de cuatro siglos para que en México se titulara en primer Contador y con él, se iniciara una noble profesión en el país. Del día 25 de mayo de 1907 a la fecha, se han llevado a cabo grandes avances que ha tenido la Contaduría Pública organizada en México, a través del Instituto Mexicano de Contadores Públicos (IMCP). Este Instituto ha considerado que los conocimientos, análisis, precisión, información y orientación, hacen que el Contador Público actual sea un miembro clave para todas las organizaciones, las cuales no podrían funcionar como tales sin su presencia.

Universidad Veracruzana

El 28 de agosto de 1944 se dan a conocer las bases legales para establecer la Universidad Veracruzana, el Estatuto señala los fines de la Universidad: establecer la investigación científica, impartir la educación universitaria y fomentar la cultura. El 9 de septiembre de ese mismo año, nace jurídicamente la institución.

El 11 de septiembre, se declara solemnemente inaugurada la Universidad Veracruzana (UV) (Periódico Universo; No. 45; Año 10; Septiembre 12, 2011.) De 1973 se inicia la descentralización administrativa de la Universidad Veracruzana, creándose cinco campus: Xalapa, Poza Rica-Tuxpan, Veracruz, Córdoba-Orizaba y Coatzacoalcos-Minatitlán. En el año de 1999 la Universidad inicia la implementación del Modelo Educativo Integral y Flexible (MEIF), cuyas bases se centran en la formación integral del estudiante. Las autoridades de la Universidad Veracruzana consideraban que ante los cambios de las formas de vida y de la cultura en el mundo actual, las instituciones educativas tienen un papel importante que cumplir como formadoras de profesionistas, con posibilidades de generar y aplicar conocimientos que atiendan a las necesidades de su entorno y que favorezcan el desarrollo social con equidad (<http://www.uv.mx/meif/files/2015/03/MEIF.pdf>).

La formación integral parte de la idea de desarrollar, equilibrada y armónicamente, diversas dimensiones del sujeto que lo lleven a formarse en lo intelectual, lo humano, lo social y lo profesional. Es decir, el modelo la Universidad Veracruzana propicia que los estudiantes desarrollen procesos educativos informativos y formativos. Los primeros darán cuenta de marcos culturales, académicos y disciplinarios, que en el caso de la educación superior se traducen en los elementos teórico-conceptuales y metodológicos que rodean a un objeto disciplinar. Los formativos, se refieren al desarrollo de habilidades y a la integración de valores expresados en actitudes. El modelo propone que el énfasis curricular recaiga sobre la formación de los estudiantes, y no sobre una información enciclopedista, ya que un alumno bien formado cuenta con las actitudes y herramientas para el constante auto-aprendizaje a través de las bases que ha creado al educarse de una manera integral. El Programa Educativo de Contador Público y Auditor inicia en la región Veracruz en Mayo de 1978. En 1992 cambia a Licenciatura en Contaduría, que es como actualmente se denomina. En agosto de 2003 se incorpora la Licenciatura en Contaduría al MEIF.

Demanda a Nivel Nacional de la Licenciatura En Contaduría

Analizando los datos proporcionados a nivel nacional por Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), sobre la demanda de la carrera, se observa que en México este Programa Educativo de Licenciado en Contaduría (O el nombre que reciba dependiendo de la Institución) no ha visto disminuida su demanda, por el contrario, muestra un incremento de 791 estudiantes, lo que representa un incremento de 2.13% de 2012-2013 en relación al periodo anterior (<http://www.anui.es.mx/informacion-y-servicios/informacion-estadistica-de-educacion-superior>).

Demanda Regional de Licenciatura En Contaduría En los Municipios de Veracruz y Boca del Río

A diferencia de la tendencia nacional, la situación que se ha observado en la UV permitió despertar una inquietud por conocer los indicadores de demanda del PE en las demás instituciones de la zona conurbada Veracruz-Boca del Río en que se oferta. Por tal motivo se consultó la información estadística disponible presentada por la ANUIES en el anuario 2011-2012 y 2012-2013.

Figura 1: Comportamiento de la Demanda de la Carrera de Licenciado En Contaduría En las Instituciones de Educación Superior de la Zona Conurbada Veracruz-Boca del Río

Muestra con datos de la ANUIES la proporción en que ha disminuido la demanda de la carrera de Lic. en Contaduría en los municipios de Veracruz y Boca del Río, considerando que en 2011-2012 el 100% lo integran 516 inscripciones de primer ingreso y en 2012-2013 el 91% lo componen 470 inscripciones.

Aunado a lo anterior, del análisis de los datos de ANUIES en estos dos municipios se observa que esta Licenciatura en Contaduría se ofrece en veinte Instituciones de Educación Superior, cinco de las cuales ya no tuvieron demanda de aspirantes durante estos dos periodos mencionados.

Tabla1: Análisis de Datos de Primer Ingreso En la Licenciatura En Contaduría Para Instituciones Privadas y Públicas En los Municipios de Veracruz y Boca del Río

Instituciones	2011-2012		2012-2013		Variación	
privadas	257	50%	211	45%	-46	-8.9%
públicas	259	50%	259	55%	0	0%
total	516	100%	470	100%	-46	-8.9%

Esta tabla muestra los datos absolutos y relativos por los periodos 2011-2012 y 2012-2013 para instituciones privadas y públicas en los municipios de Veracruz y Boca del Río, observando una disminución en las instituciones privadas del 8.9%.

Demanda de la Licenciatura En Contaduría En la UV Región Veracruz

Durante varias décadas la demanda del Programa Educativo se había mantenido más o menos constante, sin embargo, durante los últimos diez años se ha observado que este efecto se hace cada vez más evidente. Esta baja de demanda requirió de un análisis de los indicadores generados en la Licenciatura en Contaduría de la región Veracruz en los últimos dieciséis años, resultando que la demanda del Programa Educativo (PE) disminuyó de 2004 a 2014 en aproximadamente un 48%, no así el ingreso porque se sigue manteniendo por 200 lugares aproximadamente para el sistema escolarizado.

Figura 2: Comportamiento de la Demanda del PE de Licenciado En Contaduría de la Universidad Veracruzana Región Veracruz (Sistema Escolarizado)

Muestra la forma en que ha disminuido la demanda del PE de Licenciado en Contaduría de la Universidad Veracruzana región Veracruz del año 2004 a 2014, considerando que en 2004 demandaban la carrera 516 aspirantes y en 2014 la cifra asciende a 267. Esta disminución no representa un impacto en la tabla 1 dado que siguen ingresando 260 aspirantes (200 en el Sistema Escolarizado y 60 en el Sistema de Enseñanza Abierta).

METODOLOGÍA

Para el desarrollo de este trabajo se realizó una investigación de tipo transversal, consistente en el diseño y aplicación de una encuesta en un momento determinado. La población abarcó a estudiantes que ingresaron a la carrera en agosto de 2014. El instrumento se diseñó a través de un cuestionario autoadministrado consistente en veintiuna preguntas, de las cuales seis fueron abiertas, por lo que para la interpretación de éstas últimas se utilizó la técnica de análisis textual. La distribución del instrumento por apartados es: Datos Generales, Factores internos y Factores Externos que influyeron en la elección de la carrera de Licenciado en Contaduría. La población abarcó 205 estudiantes, por lo que después de aplicar la fórmula para la determinación de la muestra se llegó a un resultado de ciento un estudiantes que ingresaron en agosto de 2014 con un margen de error del 0.05; la forma de obtenerla fue de un tipo no probabilístico por conveniencia. Este instrumento pretende identificar los factores que incidieron en la elección de la carrera y aquellos factores que identificaron en sus compañeros que optaron por otra Licenciatura de la misma área propedéutica.

RESULTADOS

Los resultados obtenidos de las preguntas planteadas en datos generales refieren a que el 32% de los encuestados son del sexo masculino en tanto que el 68% del sexo femenino. Este resultado es similar a los observados a nivel nacional, la carrera de Licenciado en Contaduría ha sido por muchos años mayormente demanda por mujeres. En cuanto al área propedéutica que cursaron los encuestados refleja que el 73% cursó el área económico-administrativa, el 27% restante había elegido el área biológica, humanidades y exactas. Esto implica que no obstante que originalmente no habían elegido la carrera de Licenciado en Contaduría, cambiaron de opinión durante su proceso de preinscripción. En cuanto a si los encuestados recibieron orientación vocacional antes de elegir la carrera, el 50% recibió apoyo y el 50% restante no lo recibió.

Figura 3: Muestra Las Razones Por las Cuales los Estudiantes Decidieron Estudiar la Carrera de Licenciado En Contaduría

Esta Figura muestra las razones por las cuales los estudiantes se decidieron por este Programa Educativo resultando de 3 de cada diez la eligieron por gusto, esto se debe principalmente a que desde sus estudios de secundaria y/o bachillerato han llevado materias de contabilidad, de ahí su gusto por la carrera; otros 3 de cada diez aproximadamente han encontrado esta carrera interesante.

Lo anterior se complementa con que en otras ocasiones que se ha investigado la razón por la cual los estudiantes han elegido esta carrera profesional, mayoritariamente lo hacen durante su formación media superior porque cursaron esta área propedéutica, lo que implica que eligieron esta carrera porque le encontraron gusto desde el bachillerato, no necesariamente por vocación profesional.

Figura 4: Muestra de Acuerdo a la Opinión de los Encuestados las Actividades Que Realiza un Licenciado En Contaduría

Este planteamiento se realizó para conocer la opinión de los encuestados en relación a los servicios profesionales que ofrece un Licenciado en Contaduría y serán posiblemente los mismos que ellos piensan ofrecer, cuatro de cada diez considera que realizan actividades de contabilidad e impuestos; dos de cada diez que desempeñan actividades de administración y toma de decisiones, el porcentaje menor tiene expectativas de ser su propio jefe.

La pregunta anterior también juega un papel importante en la decisión que toman al elegir su profesión, dado que hace una prospectiva de cómo se visualizan en su desempeño laboral y sirve también para analizar la visión de las personas en relación al Licenciado en Contaduría.

Figura 5: Muestra los Comentarios Favorables Que los Encuestados Han Escuchado de los Licenciados En Contaduría

Muestra los comentarios favorables que los estudiantes de recién ingreso al PE han escuchado de los contadores y que también podría estar incidiendo en su decisión al elegir este Programa, aproximadamente cuatro de cada diez considera que tienen un amplio campo de trabajo, dos de cada diez consideran que obtiene un buen ingreso y que la profesión es de gran importancia.

Figura 6: Muestra los Comentarios Desfavorables Que los Encuestados Han Escuchado de los Licenciados En Contaduría

Muestra los comentarios desfavorables que los estudiantes de recién ingreso al PE han escuchado de los contadores, resultando que tres de cada diez no ha tenido ningún comentario negativo, dos de cada diez aproximadamente ha escuchado que son corruptos y que tienen exceso de trabajo. Se agregan otros comentarios que también aportan en este sentido y es que uno de cada diez ha escuchado que ganan poco o que es una carrera aburrida.

Figura 7: Muestra En Opinión de los Encuestados Las Situaciones En Que Sus Familiares Influyeron En la Elección de la Carrera

Como dato adicional y derivado de que se observó que varios estudiantes tienen familiares contadores se obtuvo que el 56% de los encuestados tienen familiares contadores, por lo que se cuestionó la forma en que éstos influyeron en su decisión obteniendo que a tres de cada diez les sirve como modelo a seguir, dos de cada diez que tienen un buen campo de trabajo.

Figura 8: Muestra las Razones Por Las Cuales Sus Compañeros de la Misma Área Propedéutica Eligieron Otra Carrera Afín

Esta Figura muestra las razones por las cuales sus compañeros de bachillerato eligieron otra opción de la misma área, como puede ser administración, en este sentido dos de cada diez no inscritos en esta carrera la consideran tediosa, aburrida, que tiene deficiencias en matemáticas y que no es de su agrado; uno de cada diez considera que es estresante y que los contadores no perciben un buen sueldo.

Esta pregunta se considera importante porque se basa en la opinión que los estudiantes escucharon de aquellos compañeros que se decidieron por una carrera afín y que en otras circunstancias podrían haber sido aspirantes a la Licenciatura en Contaduría.

CONCLUSIONES

Es un hecho que se debe analizar a profundidad que las nuevas generaciones de estudiantes en la zona conurbada Veracruz-Boca del Río ya no están interesados en estudiar la Licenciatura en Contaduría, lo que se refleja en la baja de la demanda y denota un problema, pues aun cuando en la Universidad Veracruzana región Veracruz sigue ingresando el mismo número de aspirantes tanto al sistema escolarizado como

abierto, al haber menos demanda, el promedio de aprovechamiento desde su ingreso en el examen de admisión afecta su rendimiento durante su trayectoria estudiantil, adicionalmente a que no se quiere esperar que sea demandada por un número de aspirantes inferior al ofertado. Buscando algunas propuestas para este problema, se tiene que la Licenciatura en Contaduría requiere una redefinición de su campo de acción, de tal forma que se fortalezca la disciplina y se reduzcan esas opiniones de que los contadores sólo sirven en la empresa para la determinación y pago de impuestos. El campo de trabajo se ha reducido a Contabilidad, Fiscal y Auditoría, esta última área se ha visto seriamente afectada por las Reformas Fiscales de 2014 en las cuales se elimina la obligatoriedad del dictamen fiscal, reduciendo considerablemente el mercado de trabajo para los despachos profesionales; en este sentido faltará esperar a que los empresarios vuelvan a confiar en el trabajo del auditor y no solo lo vean como un paliativo de una revisión de las autoridades fiscales.

La disminución de la demanda no necesariamente corresponde a un decremento en el mercado de trabajo, toda vez que de acuerdo a la fundación UNAM (<http://www.fundacionunam.org.mx/gibex/blog/las-carreras-mas-estudiadas-y-las-mas-demandadas/>), esta carrera ocupa el segundo lugar de las más demandadas en México, por lo que solo está afectando a las universidades públicas y privadas de la zona conurbada Veracruz-Boca del Río. Finalmente se requiere hacer una investigación sobre las áreas de trabajo y los servicios que demandan en la sociedad para los Licenciados en Contaduría, así como fortalecer las vocaciones de los aspirantes a estudiar esta carrera, reforzando otras áreas que son prioritarias en esta profesión: 1) Las Finanzas, no solo para desempeñarse en un banco o una casa de bolsa, sino en el sentido de que sirven para obtener y aplicar recursos financieros en las empresas; 2) Costos, para estar en posibilidad de apoyar al empresario en decisiones que permitan incrementar la competitividad de las empresas; 3) Control interno, para que el profesional no se olvide de su responsabilidad ante problemas dentro de la empresa relacionados con la salvaguarda de activos y verificación de la razonabilidad de la información financiera. También es necesario vigilar en nuestra Institución el impacto que el Modelo Educativo ha tenido, dado que la disminución de la demanda se ha presentado principalmente desde el año 2005, dos años después de que inició este Modelo.

LOS PROCESOS DE ACREDITACIÓN DE PREGRADO COMO MEDIDA DE COMPETITIVIDAD: RETOS Y OPORTUNIDADES DESDE UNA PERSPECTIVA SISTÉMICA

Clementina Enriqueta García Martínez, Universidad Autónoma de Baja California
Virginia Guadalupe López Torres, Universidad Autónoma de Baja California
Ma. Enselmina Marín Vargas, Universidad Autónoma de Baja California
Luis Ramón Moreno Moreno, Universidad Autónoma de Baja California

RESUMEN

El siglo XX se caracterizó por ser el escenario de la competitividad, donde entidades, personas y países estuvieron inmersos en procesos de competencia por recursos, mercados y clientes. El sector educativo también es parte de estos procesos de evaluación a través de la acreditación para lo cual deben demostrar su impacto. El presente estudio analiza sistémicamente los procesos de acreditación para los programas de licenciatura en ciencias administrativas a partir de los criterios establecidos por el Consejo de Acreditación en la Enseñanza de la Contaduría y Administración, A.C. (CACECA), discerniendo particularmente sobre el nuevo rol del académico. Para ello se diseña un estudio descriptivo con diseño no experimental preponderantemente cualitativo a través del cual se identifican sus componentes con el objeto de realizar un inventario de ellos en el contexto regional de Baja California, los cuales se modelan usando el enfoque de sistémico, en específico la metodología de sistemas blandos de Checklan. La modelación muestra un entramado de actores multifuncionales que deben entregar resultados diversos, destacando al docente que en su nuevo rol se pierde y no entiende los alcances de su trabajo, puesto que aún no asimila que es un instrumento de competitividad.

PALABRAS CLAVE: Educación Superior, Acreditación, Calidad de la Educación

ACCREDITATION PROCESS OF UNDERGRADUATE AS A MEASURE OF COMPETITIVENESS: CHALLENGES AND OPPORTUNITIES FROM A SYSTEMIC PERSPECTIVE

ABSTRACT

The twentieth century was characterized as a competitive scenario, where entities, individuals and countries were immersed in processes of competition for resources, markets and customers. Education is also part of these evaluating processes through accreditation for which they must demonstrate their impact. This study systemically analyzes the processes of accreditation for degree programs, in administrative sciences based on the criteria established by the Accreditation Council on the Teaching of Accounting and Administration, A.C. (CACECA), particularly discerning about the academic's new role. A descriptive study was designed with predominantly qualitative non experimental structure through which components are identified in order to make an inventory of them in the regional context of Baja California, which are modeled using a systematic approach, specifically the soft systems methodology Checklan. The modeling shows a multifunctional network of actors who should deliver different results, highlighting the teachers whom are lost in their new role and do not understand the extent of their work, since they have not yet assimilated, they are an instrument of competitiveness.

KEYWORDS: Higher Education, Accreditation, Quality of Education

INTRODUCCIÓN

El plan nacional de desarrollo 2013-2018 establece cinco metas nacionales: México en paz, México incluyente, México con educación de calidad, México próspero y México con responsabilidad global; el presente estudio se encuadra dentro de la tercera meta, cuyo propósito es elevar la calidad de la educación con equidad (Secretaría de Educación Pública, 2013). Al respecto el Programa Sectorial de Educación 2013-2018 señala que la educación de calidad es una necesidad imperiosa y una demanda social inaplazable. Para la Secretaría de Educación Pública (SEP, 2013, p. 23) la educación de calidad es aquella que “mejora la capacidad de la población para comunicarse, trabajar en grupos, resolver problemas, usar efectivamente las tecnologías de la información, así como para una mejor comprensión del entorno en el que vivimos y la innovación”. Por ello busca “promover políticas que acerquen lo que se enseña en las escuelas y las habilidades que el mundo de hoy demanda desarrollar para una sana convivencia y el aprendizaje a lo largo de la vida”.

Además la SEP, a través de la subsecretaría de Educación Superior, convoca a las instituciones de educación superior públicas a participar en el Programa de Expansión en la Oferta Educativa en Educación Superior (ProExOEES), como estrategia para garantizar el desarrollo integral de todos los mexicanos y contar con un capital humano preparado, que sea fuente de innovación y lleve a todos los estudiantes a su mayor potencial humano. Con base en estas reglas y otras políticas públicas la Universidad Autónoma de Baja California (UABC), viene compitiendo por los recursos, tiene 115 programas evaluados y el 80.13% de su matrícula en programas con reconocimiento de Buena Calidad/1. En el caso particular, la Facultad de Ciencias Administrativas y Sociales (FCAyS), unidad académica de la UABC, oferta ocho licenciaturas, seis de ellas acreditadas por distintos organismos, la tabla 1 ilustra datos sobre el organismo acreditador, nivel asignado y el periodo de vigencia.

Tabla 1: Organismos Acreditadores y Vigencia Para las Licenciaturas Pertenecientes a la Fcays

Licenciatura	Organismo Acreditador	Nivel	Fecha
Informática	CIEES	1	15-07-1999
	CACECA	VIGENTE	28-09-2017
Administración de Empresas	CIEES	1	20-07-2000
	CACECA	VIGENTE	28-09-2017
Contaduría	CIEES	1	20-07-2000
	CACECA	VIGENTE	28-09-2017
Sociología	ACCECISO	VIGENTE	01-04-2016
Psicología	CIEES	1	29-11-2010
Comunicación	CIEES	1	29-11-2010

La tabla ilustra las carreras que oferta la FCAyS que han sido evaluadas y obtenido un resultado positivo que las hizo meritoria de acreditación, se muestra el organismo acreditador (siglas) la fecha de obtención del reconocimiento y vigencia de la acreditación. Fuente: Elaboración propia.

Considerando este escenario y los señalamientos de Castaño (2012) sobre el rol del Estado centralizado en la evaluación –vía la acreditación– para asignar o no recursos a las universidades, asimismo que el conocimiento de los sistemas de educación superior no es fácil de generalizar, pues cada institución posee características propias, se justifica profundizar su estudio bajo el enfoque sistémico con el objetivo de modelarlo desde la perspectiva de la Soft Systems Methodology. Para ello el documento se estructura en cinco apartados incluido este destinado a introducir al lector en el tema. Posteriormente, se analiza la teoría base del estudio sobre la calidad en la educación, la acreditación y los sistemas. El tercer apartado describe la Soft Systems Methodology y los elementos de CATWOE, el cuarto apartado ilustra los resultados y principales hallazgos obtenidos, para terminar se presentan las conclusiones.

REVISIÓN DE LA LITERATURA

Antecedentes

La actualidad se caracteriza por el denominado capitalismo académico, que se refiere al sometimiento de la universidad y sus funciones a las lógicas del mercado. Según Fernández (2009, p. 4) “la teoría del capitalismo académico ha sido formulada por Slaughter y Leslie (1997) para constatar la implicación, cada vez mayor, de la comunidad científica en la mercantilización de la Educación Superior”. Este movimiento ve a la universidad como una empresa, por lo tanto busca que se administre en los mismos términos, de ahí que Díaz Barriga (citado por Guido, 2005, p. 11) argumente que la educación desde la óptica neoliberal, no responde “a un problema de justicia social, sino de eficiencia social..., lo que se requiere es preparar profesionales para la industrialización del país y gestionar la Universidad, mediante modelos administrativos gerenciales que permitan el desplazamiento de la estructura académica tradicional”. De acuerdo con Castaño (2012) derivado de la crisis institucional se sometió a la universidad a criterios de eficiencia y productividad de naturaleza empresarial, como lo son los procesos de acreditación. Tema que se aborda a continuación.

Calidad y Acreditación

Fernández, Landa y Santini (1991) citan a Bienayme (1986) para señalar que la calidad de la educación superior se determina en función de factores internos y externos -entre ellos se encuentran los estudiantes, los maestros, los métodos de gestión administrativa y de enseñanza, el acceso al empleo y los salarios- asociados a la eficiencia y eficacia, como una tendencia a que la universidad se administre como si fuese una empresa. La calidad suele asociarse a excelencia académica y, por ende, a selectividad. “Los mejores estudiantes típicamente eligen las mejores universidades y las mejores universidades escogen a los mejores estudiantes” (Fleet, Pedraja y Rodríguez, 2014, p. 454). Esto debería ser, pero se contrapone con la política de masificación impulsada por la SEP desde el programa sectorial de educación en su objetivo tres que aborda el tema de la ampliación de la cobertura.

Por otra parte, según Rama (2009) la acreditación es un nuevo paradigma de evaluación de la educación, es un proceso no lineal que está siguiendo diversos caminos con sus respectivas tensiones. Para Guido (2005) la acreditación, vista como factor de mercadeo por las universidades privadas, se presenta como un elemento que favorece la competencia, de tal forma que la acreditación de la calidad es una inversión que permite la consolidación en el mercado. En el mismo sentido López (2014) señala que la Acreditación de una institución de educación superior (IES) y de sus diversos programas se llega tras un proceso previo de autoevaluación y evaluación de la calidad por pares externos. Concepto asociado al de garantía de la calidad (quality assurance) y de rendición de cuentas (accountability).

En México, el gobierno busca “garantizar la calidad de los planes y programas de estudios que se ofrecen en cada plantel, así como establecer vínculos con el sector productivo de modo de beneficiarse de la capacidad de éste para complementar la formación de los jóvenes” (SEP, 2013, p. 12). Asimismo se condiciona la libertad de pensamiento que debe caracterizar a la educación superior con su compatibilidad respecto al aseguramiento de la calidad de los programas. Para lo cual se impulsan mecanismos como las evaluaciones que llevan a cabo los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES), las acreditaciones de programas que se efectúan al amparo del Consejo para la Acreditación de la Educación Superior (COPAES) y los Exámenes Generales de Egreso de la Licenciatura (EGEL). La investigación se circunscribe en torno a la acreditación de los programas de estudio de Contaduría, Administración e Informática, que en México evalúa con estándares e índices que engloban tres aspectos: alumado, docencia y administración el Consejo de Acreditación en la Enseñanza de la Contaduría y Administración, A.C. (CACECA).

CACECA establece que los programas educativos de las instituciones de educación superior deben cubrir una serie de requisitos contenidos en diez categorías que son valorados a través de puntos, información que se muestra en la tabla 2.

Tabla 2: Evaluación de CACECA: Categorías y Puntajes

Categoría	Puntos
1. Personal académico	185
2. Estudiantes	117
3. Evaluación del aprendizaje	52
4. Currículum	133
5. Formación integral	70
6. Servicios institucionales de apoyo para el aprendizaje	68
7. Vinculación-extensión	118
8. Investigación	95
9. Infraestructura y equipamiento	41
10. Gestión administrativa y financiamiento	121
Total	1000

CACECA realiza las evaluaciones con base en indicadores agrupados en 10 categorías, de acuerdo a su percepción de importancia otorga un puntaje a cada una, destacando la categoría de personal académico como la más relevante y pertinente. Fuente: Elaboración propia..

Para recibir la acreditación el programa debe obtener una calificación mínima de 701 puntos. La acreditación tiene una vigencia y el programa debe mejorar los resultados de los indicadores para re-acreditarse.

Sistemas

De acuerdo con Bertalanffy (1989, p.34) un sistema es el "conjunto de elementos interrelacionados de manera dinámica con el fin de conseguir un objetivo común, constituyendo un todo unitario organizado". Monroy (1997, p. 3), afirma que "ver la realidad como sistema resulta indispensable. Sólo así se integrarán lo tangible y lo intangible, lo formal y lo informal". Por lo que resulta primordial observar las variables que componen un problema, detectar sus limitaciones y reconocer las interacciones entre éstas, así como el medio ambiente en que operan, influyen en su funcionamiento y están fuera de su control. La educación superior forma parte del sistema educativo, cuyos componentes según Fernández, Landa y Santini (1991, p. 5) son "los alumnos, los materiales didácticos, los recursos humanos y las bibliotecas". Por ello para el presente estudio la educación superior se concibe como sistema. Según Herrscher (2008) desde el enfoque de sistemas se pueden identificar a los sistemas duros, blandos y críticos. El sistema de educación superior se ubica dentro del grupo de los sistemas blandos por ser un sistema abierto, compuesto por varios subsistemas, destacando que cada uno posee diversos objetivos e interactúan en un ambiente influenciado por factores internos y externos, que están fuera del control del propio sistema. Por ello se usa el enfoque de sistemas para analizar la realidad sobre los procesos de acreditación, a fin de observar tanto lo tangible como intangible, lo formal e informal.

METODOLOGÍA

El estudio se define como descriptivo con diseño no experimental cuyo ámbito de estudio corresponde a la Facultad de Ciencias Administrativas y Sociales (FCAyS), unidad académica de la UABC. Para el logro del propósito del presente se revisaron distintos documentos de información sobre las variables que forman parte de la evaluación y procesos de acreditación establecidos por el Consejo de Acreditación en la Enseñanza de la Contaduría y Administración, A.C. (CACECA). Para la realización del estudio se utiliza la metodología de sistemas blandos de Peter Checkland, que propicia una reflexión y discusión estructuradas por modelos sistémicos. Los estudiantes y académicos son actores sociales clave en los procesos de acreditación ya que sus características socio-culturales impactan en la estructura del sistema y en el contexto en el que se inserta. Ante esta particularidad, la aplicación de herramientas propias de los

sistemas blandos permite poner de manifiesto elementos e interrelaciones que surgen de la percepción de los actores intervinientes, identificando los intereses que subyacen y que generalmente no se revelan de forma explícita (Checkland y Scholes, 1990).

Para el análisis del sistema FCAyS se consideraron los elementos de CATWOE, a saber: 1) los clientes (C), elementos afectados por la actividad del sistema descrito; 2) los agentes (A), quienes realizan de forma directa las actividades; 3) los procesos de transformación (T); 4) los puntos de vista o perspectivas a través de los cuales se percibe al sistema y se le da significado (W: *Weltanschauung*; en castellano, cosmovisión); 5) los dueños (O) o actores que poseen control, interés y/o patrocinio del sistema; y 6) los requisitos ambientales (E), factores que pueden restringir o potenciar la actividad analizada (Gelabert, de Bargas, Rositano, y González, 2014).

RESULTADOS

La información recolectada fue procesada según los elementos de CATWOE, a continuación se presentan estos elementos junto con su descripción.

(C) *Clientes*: Definir quiénes son y su tipología causa gran controversia, de acuerdo al significado dado por la Real Academia Española, es la persona que utiliza con asiduidad los servicios de un profesional o empresa. Empero, la universidad no es una empresa. Desde la perspectiva de la calidad, la unidad de análisis tiene clientes internos y externos. Los primeros son instancias dentro de la misma FCAyS o de la UABC que emplean o consumen los productos y/o servicios ofertados. Los clientes externos son los destinatarios de los productos o servicios procesados.

De acuerdo con de la Fuente, Marzo y Reyes (2010) en el caso de las universidades no existe consenso en la delimitación de sus clientes debido a la diversidad de tareas asignadas, lo que dificulta la determinación de la figura del cliente. Empero, reconociendo que la FCAyS es un sistema con entradas, procesos y salidas; los estudiantes en sí son la materia prima que ingresa para ser transformada en uno de los varios productos que se generan. Por ello se definen como clientes a la sociedad en su conjunto, es decir, primariamente toda la comunidad de la región noroeste del país, que es la zona de influencia directa de la unidad de análisis. Relacionando este elemento con las categorías de CACECA el identificar a los clientes permitiría mantener actividades de vinculación-extensión acorde a una segmentación de clientes y usuarios, que permita identificar las propuestas de valor que FCAyS puede generar, asimismo determinar las asociaciones clave que se deben tener para coadyuvar en la solución de problemas y en la creación de oportunidades que requiere la región.

(A) *Agentes*: En este caso particular se refiere a los estudiantes y académicos. En el periodo 2000-2014 los estudiantes inscritos en las carreras de Contaduría (37.58%), Administración de Empresas (41.57%) e Informática (20.81%) ascendieron a 30,320; con 350 estudiantes en promedio por semestre (ver figura 1). La planta de personal académico se integra por 321 docentes, 248 maestros de asignatura, 61 maestros de tiempo completo, cuatro técnicos académicos de tiempo completo, seis maestros de medio tiempo y dos técnicos académicos de medio tiempo. Los académicos de tiempo completo de la facultad en su jornada de trabajo desempeñan tareas de docencia, tutoría, vinculación e investigación. Un reto que presenta esta unidad de análisis está indicado a través de la proporción de docentes de tiempo completo en relación al alumnado. Como se indicó la FCAyS oferta ocho programas que en total albergaron a 4822 estudiantes en el ciclo 2014-1, lo que representa una proporción de 1.26%. Y es que desde 2004 la FCAyS vive un proceso de masificación incrementándose la matrícula en un 68.71%, pero manteniéndose la misma planta académica de tiempo completo, solo se incrementó la planta por horas (o de asignatura).

Figura 1: Población Estudiantil En el Periodo 2000-2014

La figura muestra la población estudiantil inscrita en las carreras de administración, contaduría e informática en el periodo comprendido de 2000-2014 mismo periodo en que inició el proceso de evaluación para acreditación la FCAyS. Fuente: Elaboración propia.

Este fenómeno de masificación ha potenciado el trabajo de los docentes de tiempo completo en ciertos periodos, por ejemplo tienen asignados para tutoría a un promedio de 60 estudiantes. Pero también son parte de los procesos de evaluación, dado que deben obtener el reconocimiento a perfil deseable otorgado por el Programa para el Desarrollo Profesional Docente (Prodep) del tipo superior, lo que implica que alcancen las capacidades para realizar investigación-docencia, se profesionalicen, se articulen y se consoliden en cuerpos académicos. Los agentes son muy importantes para CACECA, se refiere a las categorías de personal académico y estudiantes, las cuales representan un 43% del puntaje para acceder a la acreditación. Representan además la vida del sistema, su dinamismo, pero también definen su esencia como sistema blando.

(T) Proceso de transformación: La unidad de análisis selecciona a los aspirantes a ingresar a través de un examen, aunque no es estricto, dado que se debe cumplir con la demanda del Estado en el tema de cobertura. Hechos que se contraponen a los argumentos que señalan que la “calidad suele asociarse a excelencia académica y, de esta manera, a selectividad. Los mejores estudiantes típicamente eligen las mejores universidades y las mejores universidades escogen a los mejores estudiantes” (Fleet, Pedraja y Rodríguez, 2014, p. 454). En la transformación las herramientas de apoyo al proceso enseñanza aprendizaje son importantes, coadyuvan en el desarrollo de las competencias y facilitan el tránsito de los saberes. El estudiante también es actor-constructor, dado que puede diseñar a través de la elección de créditos y/o actividades optativas aproximadamente un 25% de formación-transformación, pudiendo incorporar actividades de extensión y vinculación, incluso participar en movilidad nacional e internacional.

(W) Weltanschauung: En principio se reconoce la importancia de la glocalización y se busca que los programas de estudio y la formación de los estudiantes les permitan comprender las peculiaridades de las diversas regiones en el mundo. La FCAyS busca generar opinión, demostrar su compromiso con el progreso social y ser un ejemplo para su entorno. Siguiendo a Pulido (2009, p.59) la visión es “generar y divulgar el conocimiento necesario para resolver los problemas que tiene planteados la sociedad. Sus beneficios sociales deben cubrir los desafíos en todos los ámbitos posibles de la vida humana: el social, el cultural, el tecnológico, el económico y el político”.

La revisión sobre la misión de la Universidad en la actual sociedad del conocimiento, ha llevado a la presentación de una serie de ideas sobre una tercera misión, que vendría a unirse a las tradicionales: la enseñanza superior y la investigación. Esta tercera misión, como señala Bueno (2007) está desarrollada en el ámbito de tres ejes: emprendimiento, innovación y compromiso social; lo que genera nuevas formas de

relación entre la Universidad, la Sociedad y los sectores empresariales. La meta es tener una universidad orientada al emprendimiento, la innovación y la cooperación social.

(O) *Dueños*: Desde el enfoque sistémico es la sociedad quien juega el papel preponderante, dado que es la principal demandante tanto de los egresados como del resto de productos y servicios ofertados. El principal mercado es la región. El 99% de los egresados radica en el estado de Baja California.

(E) *Requisitos ambientales*: Este último punto plantea un escenario complejo, si se consideran todos los factores que afectan a los procesos educativos y de acreditación. Empero son las leyes y regulaciones nacionales, estatales y municipales los principales requisitos, dado que la política pública de forma explícita incide en los planes de desarrollo de la FCAYS. Los resultados confirman que lejos de la esperable “brasileirización de la educación superior (en donde las IES públicas se especializan en programas de alta calidad y tienen límites en el acceso, dejando la masificación a las IES privadas), en México, con muy ligeras variaciones, las mayoría de las IES ofrece todo tipo de programas, casi siempre centrados en las necesidades del mercado” (Silas, 2013, p. 20).

CONCLUSIONES

Derivado de la modelación y reflexión de los resultados los autores al igual que Castaño (2012, p. 130) señalan que los procesos de acreditación no debieran buscar la estandarización de profesionistas, que es imperativo volver a la tarea esencial de la universidad “formar personas capaces de juzgar y decidir razonable y rigurosamente” dado que lo que en calidad cuenta “son los seres humanos y el uso de la libertad” (Fernández, Landa y Santini, 1991). Hasta ahora las políticas públicas han privilegiado los indicadores productivistas y de crecimiento económico en detrimento de indicadores que midan valores claves para la equidad, la armonía social y la sostenibilidad del medio ambiente (López, 2014).

Para terminar, los autores reconocen la pertinencia de los procesos de evaluación vía los procesos de acreditación, empero no están de acuerdo en cómo se vienen desarrollando, creemos que es necesario desde el enfoque de sistemas analizarlos para fortalecer las bases de la elaboración de estrategias que contribuyan a su sostenibilidad y manejo adaptativo. Siguiendo a López (2014, p. 113) se plantea la necesidad de transitar de la visión cortoplacista a una visión de largo plazo donde se valore la calidad de las instituciones y sus programas teniendo en cuenta indicadores “capaces de evaluar el papel de las IES en: la construcción de equidad, sostenibilidad del medio ambiente, innovación curricular, rendición de cuentas en forma transparente, adecuación a las necesidades del entorno y estado del arte a nivel mundial de las disciplinas que se imparten en ellas”.

LAS EMPRESAS DE BIENES RAÍCES COMO NICHOS DE NEGOCIO EN ENSENADA, BAJA CALIFORNIA, MÉXICO

Guadalupe Espinoza Guerrero, Universidad Autónoma de Baja California

María de Lourdes Solís Tirado, Universidad Autónoma de Baja California

RESUMEN

La actividad inmobiliaria es uno de los mayores componentes que influyen en la economía de los países, tal es el caso de Estados Unidos de América y su crisis económica en el año 2008, a la que se le atribuyó como principal causa los créditos hipotecarios. Considerando también que la mayor inversión que realiza una persona lo es la compra de su casa, constituyendo éste su patrimonio familiar, es de suma importancia el estudio del sector de la vivienda y por consiguiente la comercialización de bienes inmuebles, el negocio de bienes raíces. Por lo que respecta a Baja California y en especial al municipio de Ensenada, se considera un nicho de negocio el sector de agencias de bienes raíces y consultoría de mercado respecto a desarrolladores de vivienda. Lo anterior, sustentado en datos económicos Nacionales y Estatales, así como diferentes planes y políticas de desarrollo económico para el Estado de Baja California así como para el municipio de Ensenada. Así pues, se propone el establecimiento de empresas de bienes raíces como un negocio atractivo y prometedor para posibles inversionistas.

PALABRAS CLAVES: Nicho de Negocio, Bienes Raíces, Inversión

REAL ESTATE AS A BUSINESS NICHE IN ENSENADA BAJA CALIFORNIA, MEXICO

ABSTRACT

Real estate activity is one of the major components in the economies of countries; such is the case with the United States in its economic crisis of the year 2008, which was considered a principal cause of mortgage credit. Considering also that the largest investment a person makes is the purchase of a house, with this constituting the family legacy, a study of the residential sector is of great importance, and as a result, the marketing of property, the real estate business. Especially in regard to Baja California, especially the city of Ensenada, the sector of real estate agencies and market consulting regarding housing developments is considered a business niche. This, based on national and state economic data, as well as on different plans and policies for economic development for the state of Baja California, as well as for the city of Ensenada. Therefore, the establishment of real estate businesses is proposed as an attractive and promising business for possible investors.

INTRODUCCION

Un negocio nicho consiste en ofrecer un producto o servicio enfocado a un aspecto o una base de clientes específicos dentro de un sector. (Koss-Feder, 2005, p.75). Lo más valioso para emprender un negocio, es entender la idea del mismo e identificar las necesidades de sus clientes. Un negocio nicho debe identificar su base de clientes potenciales y dedicarse a ellos. Los negocios de nicho tienen un 25 por ciento más de

oportunidades de sobrevivir durante los primeros años que las empresas más generales, dice Jennifer Sander, asesora de pequeños negocios en Granite Bay, California, y coautora de *Niche and Get Rich*, (Koss-Feder, 2005). Así pues, para encontrar la oportunidad de abrir un negocio nicho se debe identificar la necesidad del bien o servicio y posteriormente ofertarla, siempre dirigiéndose a los clientes potenciales. Al hablar del negocio de bienes raíces es necesario hablar de la vivienda, luego entonces, ésta, refiriéndome a la vivienda, resulta para el ser humano un producto de primera necesidad, tal como lo es la salud, comida y educación; indispensable para su desarrollo y bienestar. Constituyendo la vivienda un espacio de albergue, intimidad, comodidad, ubicación y bienestar público.

El derecho a la vivienda se encuentra dentro de los derechos humanos de segunda generación, es decir, impone el deber al Estado para mejorar las condiciones de vida, impone la obligación al Estado de proveer, dotar, crear construir y edificar vivienda. (Sánchez, 2013). El sector de la vivienda se ve relacionado con varios sectores como, el sector de la construcción, el sector público (Estado), Instituciones de financiamiento (públicas o privadas) y la figura encargada de su comercialización, que es representada por los agentes de bienes raíces llamados también “agentes inmobiliarios”. Según el Diccionario de la Real Academia de la Lengua Española un “agente” es una persona o cosa que produce un efecto y la palabra “raíz” significa bien inmueble, finca, tierra o edificio, por lo que un agente de bien raíz significa: una persona que produce un efecto sobre los bienes inmuebles. (Real Academia Española, 2001).

Por lo que respecta a México al igual que en todos los países, la economía y política tienen gran influencia sobre el sector inmobiliario. Las constantes devaluaciones en el país han traído consecuencias negativas para que éste resulte poco atractivo de la inversión extranjera, devaluaciones que provocaron intereses muy altos en los bancos de México, tal y como se vivió en nuestro país en los años 1993, donde adquirir créditos para vivienda resultaba muy complicado y la inversión extranjera se encontraba muy alejada del país (Schettino, 1995). Debiendo hacer notar que las variables como política, economía, inflación y globalización resultan ser factores que influyen en la compra-venta de bienes inmuebles. El presente trabajo tiene como finalidad mostrar el contexto económico, jurídico y comercial en el que se encuentra Ensenada y por lo que se afirma que el negocio de los Bienes raíces resulta ser un nicho de negocio prospero.

ANTECEDENTES

En México, la figura del corredor de bienes raíces o agente inmobiliario tiene presencia a partir de un grupo de personas que sintieron la necesidad por profesionalizar el servicio que estaban prestando. Dichas personas se asociaron y el 14 de Noviembre de 1956 fundaron una organización denominada “Unión Mexicana de Corredores y Administradores de Inmuebles A.C.”, siendo la primera asociación en México dedicada a regular los servicios profesionales de los corredores inmobiliarios. A través de los años esta asociación cambio su denominación por el de “Asociación Mexicana de Administradores y Agentes Inmobiliarios, A.C.” para posteriormente en el año de 1979 cambiar nuevamente su denominación y ser lo que ahora conocemos “Asociación Mexicana de Profesionales Inmobiliarios” AMPI. (Asociación Nacional de Profesionales Inmobiliarios, 2011).

Por lo que respecta a Baja California, se cuenta con un Consejo Estatal de Profesionales Inmobiliarios de Baja California, A.C., constituido desde el año de 1984, este consejo integra todas las asociaciones importantes del Estado, entre ellas AMPI Ensenada. Esta asociación surgió por la necesidad de mejorar el nivel de servicio en todo el Estado y dentro de sus logros más importantes ha sido el haber impulsado “Ley que regula el registro Estatal de agentes inmobiliarios y agencias inmobiliarios en el Estado de Baja California”, sin embargo esta ley no tienen sanción alguna o fuerza de obligatoriedad para el Registro de los Agentes Inmobiliarios, sin embargo podemos observar que la intención de este sector está encaminada hacia una regulación de su profesión. (Consejo Estatal de Profesionales Inmobiliarios de Baja California, s.f.)

REVISION LITERARIA

Análisis Contextual

La población mundial transita de ser rural a urbana, más de la mitad de la población vive en ciudades. Del total de esta población, la mayoría se concentra en costas, de las localidades costeras, las que tienen mayor crecimiento, por motivos comerciales y de movilidad, son las que cuentan con puertos. En cuanto a crecimiento las megalópolis actualmente disminuyen su tasa de crecimiento y las ciudades que crecen con mayor rapidez son aquellas que cuentan con hasta 500,000 habitantes. Ensenada cuenta con todas estas características. (Programa de Desarrollo Urbano de Centro Población de Ensenada 2030, p.7) El municipio de Ensenada se encuentra dentro de la región fronteriza que se comparte con el Estado de California, el más rico y dinámico de los Estados Unidos. A su vez, este municipio se encuentra dentro del Estado de Baja California, caracterizado por un rápido desarrollo, debido a su crecimiento poblacional, estimado por la media nacional. En solo 50 años la población ha aumentado 17.4 veces. (Programa de Desarrollo Urbano de Centro Población de Ensenada 2030) Ensenada, es el municipio más extenso de México, con una superficie de 52,510 Km², lo que representa 74.1% del área total del Estado de Baja California y 2.6% del territorio nacional. Posee 1,646 localidades y más de 441,000 habitantes. (Programa de Desarrollo Urbano de Centro Población de Ensenada 2030, p.7)

Por otra parte, en cuanto al análisis legal se encontró lo siguiente: En México, refiriéndome al país no existe ordenamiento legal por parte de la Secretaría de Educación Pública que regule como profesión al agente inmobiliario, sin embargo esa es la tendencia. En el Distrito Federal, existe una ley llamada “Ley de Prestación de Servicios Inmobiliarios” donde establece que para ejercer la profesión de agente inmobiliario en el Distrito Federal, se deberá contar con un registro y certificación expedida por la secretaría de Desarrollo Económico del Distrito Federal. (Ley de Prestación de Servicios Inmobiliarios del Distrito Federal, 2014). Sin embargo, esta ley es de reciente creación.

En el Estado de Baja California, el día jueves 21 de Agosto del 2014, fue presentada ante el Congreso del Estado, por el Grupo Parlamentario del Partido Revolucionario Institucional, un proyecto de iniciativa para la creación de la Ley que regula las actividades de los Agentes Profesionales Inmobiliarios en el Estado de Baja California. (Congreso del Estado de Baja California, 2014). Iniciativa de ley que fue aprobada por unanimidad el día 16 de Octubre del 2014. (Congreso del Estado de Baja California, 2014). Por medio de esta ley se regula el ejercicio de todas personas que ejerzan actos de intermediación inmobiliaria y se ordena su registro y licencia ante la Secretaría de Desarrollo Económico del Gobierno del Estado de Baja California. En los últimos años, han ocurrido grandes cambios legales de gran relevancia, el más importante, por la ubicación geográfica del Estado de Baja California, es el siguiente: El 23 de Abril del 2013, se aprobó la reforma al artículo 27 Constitucional, que contiene la posibilidad que los extranjeros adquieran propiedad para vivir en zonas fronterizas. Siendo este un cambio gigantesco en la forma de adquirir propiedades para los extranjeros en nuestro país. (Gaceta Parlamentaria, 2013).

Justificación

Por lo que respecta a Baja California y en especial al municipio de Ensenada, se considera un nicho de negocio el sector de agencias de bienes raíces y consultoría de mercado respecto a desarrolladores de vivienda. Lo anterior sustentado ya que el PIB de Baja California en el año 2012 (Secretaría de economía, s.f., cita a INEGI) en su 60% está conformado en su mayoría por el comercio y servicios inmobiliarios y de alquiler. Así también el artículo “Política de desarrollo empresarial de Baja California 2012-2020” que elaboró el Consejo Estatal de Desarrollo Empresarial de Baja California, manifestó que una vocación de innovación con gran peso económico y alto crecimiento para Ensenada es el sector Inmobiliario y corredores de bienes raíces. (Fuentes, et al, 2012, p.31). Resultando congruente lo antes mencionado con

los resultados publicados por el Consejo de Desarrollo Económico de Ensenada (CODEEN) y el Instituto Municipal de Investigación y Planeación de Ensenada, Baja California (IMIP) en el “Plan estratégico de desarrollo económico del Municipio de Ensenada PEDEME”, quien indica de nueva cuenta a las inmobiliarias y corredores de bienes raíces como una rama económica prometedora. (Consejo de Desarrollo Económico de Ensenada, 2011)

Los diferentes tipos de crédito por medio de los cuales una persona puede adquirir una vivienda en México son: Infonavit, Fovissste, Banca (engloba la banca múltiple, SOFOMES, Micro financieras, y demás figuras que promueven productos para vivienda) y otras entidades (Orevis, Banjercito, Issfam, Pemex, Hábitat A,C. y otras agencias productoras de vivienda). (Sociedad Hipotecaria, Federal, 2015, p. 2).

Crédito Infonavit

En el año de 1972 se fundó el Instituto del Fondo Nacional de la Vivienda para los Trabajadores (Infonavit). El 12 de Abril de 1972, se promulgó la Ley de Infonavit con la que se dio cumplimiento a la vivienda de los trabajadores establecido en la Constitución Política de los Estados Unidos Mexicanos el 5 de Febrero de 1917. La forma consistió en reunir en un fondo nacional las aportaciones del 5% del salario de cada uno de los trabajadores que tuvieran contratados para darles la oportunidad de obtener un crédito de vivienda o el derecho a que sus ahorros sean devueltos. (Gerencia de Información Institucional, Infonavit, 2014).

El Infonavit ofrece créditos para adquirir vivienda nueva o usada, para construir vivienda en tu propio terreno, ampliar o remodelar vivienda, pagar hipoteca y recientemente arrendar. Sera objeto de estudio, únicamente el crédito que ofrece Infonavit para comprar vivienda nueva o usada y la modalidad de renta. (Infonavit, 2014).

Estimación de Demanda

Considerando que para el año 2015, se espera que la población en México demande 380,000 créditos de tipo Infonavit, 50,000 Fovissste, 130,000 de la banca, y 55,109 de otras entidades, teniendo un total de demanda de créditos para vivienda para adquisición de 615,109 (Sociedad Hipotecaria Federal, 2015, p. 2). Se enfocara el presente estudio en las personas que viven en el centro de la Ciudad de Ensenada y que tienen acceso al Crédito Infonavit, por ser este último el crédito más representativo.

Tabla 1: Número de Créditos Por Tipo de Solución, 2015

	Adquisición	Mejoramiento	Autoproducción	Total	Composición %
Infonavit	380,000	280,000	0	660,000	56.1
Fovissste	45,000	20,000	0	70,000	6.1
Banca	130,000	80,000	40,748	250,748	21.6
Otras entidades	55,109	63,623	60,000	178,732	15.4
Total	615,109	443,623	108,357	1,159,480	100.00

(Sociedad Hipotecaria Federal, 2015, p. 2)

Por lo que respecta a Baja California, la demanda de adquisición de vivienda se estima en 40,134 créditos. (Sociedad Hipotecaria Federal, 2015, p. 3) y considerando que el Municipio de Ensenada representa en cuanto a su volumen población con respecto a los demás municipios pertenecientes al Estado, el 14.90%, de habitantes, correspondiendo a 511,772 (Coplade, 2014), se podría decir que la demanda aproximada para el municipio será de 6,000 créditos. Aunado al dato anterior, en el año anterior y durante este año 2015, el Gobierno Federal a través de la Comisión Nacional de Vivienda, ha otorgado y otorgara subsidios en préstamos hipotecarios de Infonavit. A través de este subsidio, el Gobierno pretende impulsar a las personas a adquirir su primera vivienda. (Subdirección General de Crédito, Infonavit, 2015). Este programa consiste en apoyar a los trabajadores que tengan un ingreso de hasta 2.6 VSM y otros que ganen hasta 5 VSM, (VSMD \$70.10), otorgándoles este subsidio para apoyarlos a comprar su primer casa.

Razón por la cual y considerando que la demanda de vivienda a nivel Nacional se encuentra representada en un 56.1% por créditos de tipo Infonavit, se estima que el nicho de negocio se encuentra en la compra-venta de vivienda para trabajadores que sean derechohabientes a crédito INFONAVIT, por ser éstos los que representan la mayoría. (Subdirección General de Crédito, Infonavit, 2015).

METODOLOGIA

Para corroborar los datos económicos, políticos y jurídicos que se proporcionaron anteriormente y que indican que las agencias de bienes raíces constituyen un nicho de negocio para Ensenada, Baja California. Se realizó un estudio de mercado para identificar la viabilidad para la implementación de una agencia de bienes raíces exclusivamente en cuanto se refiere a créditos Infonavit. Para analizar la demanda del servicio que ofertará una agencia de bienes raíces se utilizó el método Cuantitativo de tipo descriptivo, mediante la técnica de la encuesta, a través de la aplicación de un cuestionario compuesto por preguntas cerradas de opción múltiple. El cuestionario aplicado midió la demanda por medio de seis dimensiones, perfil de los compradores, expectativas y deseos, poder de compra, preferencias de los consumidores, precio de servicio y eficacia publicitaria, constando en total de 27 preguntas.

Delimitación de Estudio

El periodo de aplicación del cuestionario, fue en el mes de Febrero a Marzo del año 2015. Se aplicó como antes se indicó a los trabajadores que tuvieran acceso al crédito Infonavit en el Centro de la Ciudad de Ensenada, trabajadores que fueron ubicados en la Clínica del Instituto Mexicano del Seguro Social número 32, ubicada en Calle Segunda, entre Alvarado y Blancarte número 129 de la Zona Centro de la Ciudad de Ensenada, Baja California.

Población

Por Ciudad de Ensenada, entenderemos lo que se denomina el Centro de la Ciudad de Ensenada, según la carta Urbana de este municipio. El Centro de Ensenada se divide en cinco sectores, Sauzal, Centro, Noreste, Chapultepec y Maneadero. (Carta Urbana de la Ciudad de Ensenada, 2014). El área de estudio comprende una superficie de 45,652.35 ha, donde se considera que el desarrollo urbano ejerce una influencia directa. Esta extensión incluye las poblaciones de El Sauzal, Ex – ejido Chapultepec, Maneadero, los poblados del Zorrillo y Esteban Cantú, así como las áreas urbanas del Estero de Punta Banda y la Joya. Del total de la superficie del centro de población, la mancha urbana ocupa 8,966.27 Ha. (Programa de Desarrollo Urbano de Centro de Población de Ensenada 2030, p.6). Por lo que a las personas que se les aplicó el estudio de mercado, fueron los trabajadores afiliados al Instituto Mexicano del Seguro Social que radican en el centro de Ensenada en el año 2015, ya que los trabajadores afiliados a esta institución por consecuencia son derechohabientes del crédito Infonavit, de acuerdo al artículo 5 del Reglamento de inscripción, pago de aportaciones y entero de descuentos al Instituto del Fondo Nacional de la Vivienda para los Trabajadores.

De acuerdo con la población existente y la superficie de la mancha urbana actual, la densidad bruta para el centro de población es de 34 hab/ha. (Programa de Desarrollo Urbano de Centro de Población de Ensenada 2030, p.15). Así pues, la población total del centro de Ensenada, corresponde a 304,853.18 habitantes. El municipio posee más de 441,000 habitantes y el centro de población de Ensenada concreta a poco más de 60% de la población del municipio. (Programa de Desarrollo Urbano de Centro de Población de Ensenada 2030, p.7). Ahora bien, los trabajadores afiliados al Instituto Mexicano del Seguro Social al mes de Abril del año 2013 de la población del Centro de Ensenada, sumaban la cantidad de 77,300 personas. (Plan Municipal de Desarrollo, 2014-2016 XXI Ayuntamiento, Ensenada, Piensa en Grande, 2014). Siendo este dato el más reciente, toda vez que Inegi contemplaba para el año 2010, un total de trabajadores afiliados al IMSS de 69,348 para todo el Municipio de Ensenada. (Inegi, 2010) Por lo que se tomara como el total de nuestra población la cantidad de **77,300 personas**.

Muestra

El tipo de muestra que se usó fue de tipo probabilística, ya que todos los individuos de la muestra tuvieron la posibilidad de ser estudiados. Dentro del método del estudio probabilístico, fue usado el denominado muestreo por conglomerados unietápico, ya que como antes se mencionó la población se encuentra agrupada en diferentes sectores, es decir, se divide en cuatro grandes grupos de acuerdo a la forma en que pueden adquirir un bien inmueble. Seleccionando para este estudio los trabajadores afiliados al Instituto Mexicano del Seguro Social en el Centro de la Ciudad de Ensenada. Donde a unidad muestral fue el conglomerado de Trabajadores afiliados al IMSS y la unidad de análisis, cada trabajador. Para conocer el número de personas a las que se les aplicó la encuesta, aplicara la siguiente formula donde:

$N = 77,300$

$Z_{\alpha/2} = 1.962$ (si la seguridad es del 95%)

$P =$ proporción esperada en caso de 5%=0.05)

$q = 1 - P$ (en este caso $1 - 0.05 = 0.95$)

$d =$ precisión (en este caso deseamos un 3 %)

$$n = \frac{N * Z_{\alpha/2}^2 * p * q}{D^2 * (N-1) + Z_{\alpha/2}^2 * p * q}$$

$$n = \frac{73000 * (1.962)^2 * 0.05 * 0.95}{0.03^2 * (73000-1) + (1.962)^2 * 0.05 * 0.95}$$

$n = 191.35$ personas

RESULTADOS

Después de la aplicación de los cuestionarios a 192 personas que poseen crédito Infonavit y que viven en el Centro de la Ciudad de Ensenada, Baja California, los resultados más relevantes fueron los siguientes:

El 27.1% del total de los encuestados, se encuentran regularmente interesados en adquirir una propiedad en Ensenada, Baja California. Seguido con el 26.6% le interesa mucho adquirir algún tipo de propiedad en la zona. Al 15.1% del total de los encuestados les interesa bastante adquirir una propiedad igualmente en la zona. Al 17.7% de los encuestados les interesa poco adquirir una propiedad, sin embargo solo por lo que respecta al 13.5% no le interesa adquirir ninguna propiedad en la Ciudad.

Figura 1: Interés del Cliente Potencial

Fuente: Elaboración propia

Luego entonces, es dable concluir que a la mayoría de las personas encuestadas (86.5%) les interesa en mayor o menor grado adquirir una propiedad en esta Ciudad de Ensenada, Baja California. Por otra parte, se encontró que el 74 % de los encuestados no han tenido anteriormente alguna experiencia con agencias de bienes raíces y solo el 26% si ha tenido alguna experiencia con agencias de bienes raíces. Lo que

significa que la mayoría de las personas encuestadas no están acostumbradas a contratar los servicios de agencias de bienes raíces. Sin embargo, del dato que posteriormente se proporcionara se puede afirmar que a pesar que la mayoría de los encuestados no han tenido algún tipo de trato con agencias de bienes raíces, están dispuestos a contratarlas.

Figura 2: Experiencias de Clientes Potenciales

Experiencia con agencias de bienes raíces

Fuente: Elaboración propia

Ahora bien, por lo que respecta a la disposición por contratar los servicios de una agencia de bienes raíces, el 43.8% de los encuestados está de acuerdo. El 18.2% está de acuerdo y el 26.6% es indiferente. Por lo contrario, el 6.3% está en desacuerdo al contratar los servicios de las agencias de bienes raíces y solo el 4.2% está muy en desacuerdo. Así pues, la mayoría de los encuestados está de acuerdo en contratar los servicios de una agencia de bienes raíces, lo que significa que existe la posibilidad de mercado para el negocio que en futuro se podría implementar como nicho. Haciendo notar, que solo el 2% de los encuestados no contesto.

Figura 3: Disposición de Contratación

Fuente: Elaboración propia

Se encontró también, que del total de las personas encuestadas representadas por el 28.1% conocen poco del procedimiento necesario para vender, comprar o rentar un bien inmueble, seguido por el 26.6% que no conoce nada acerca de dicho procedimiento. El 25% manifestó que conoce en parte este procedimiento. Y solo el 10.9% manifestó conocer mucho este procedimiento mientras que el 9.4% manifestó conocer bastante. Por lo que se puede concluir, que son mayoría las personas que desconocen o saben poco acerca de los procedimientos o procesos necesarios para la compra-venta o arrendamiento de bienes inmuebles. Situación que es conveniente, ya que ante la necesidad que presenta la mayoría de las personas encuestadas de conocer el procedimiento para realizar operaciones de compraventa de inmuebles, se observa la

posibilidad de nicho de negocio para la implementación de una empresa de bienes raíces que ofrezca asesoría al respecto.

Figura 4: Conocimiento de los Clientes Potenciales

CONCLUSIONES

Los resultados obtenidos en la presente investigación permiten concluir lo siguiente: Por medio de los datos económicos y tendencias políticas proporcionados por los diferentes planes estratégicos Estatales y Municipales, se puede concluir que las agencias de bienes raíces conforman un negocio nicho para los próximos años en la Ciudad de Ensenada, Baja California. Así también con los datos proporcionados y analizados por la Sociedad Hipotecaria Federal, se concluye que la demanda de vivienda para el Estado grande y por tanto se confirma que las agencias de bienes raíces constituyen un negocio nicho. Aunado a lo anterior, y con el análisis de la demanda, resultado de la aplicación de un cuestionario a los trabajadores afiliados al Instituto Mexicano del Seguro Social y por consecuencia derechohabientes de INFONAVIT en el centro de Ensenada, se concluye que los mismos tienen interés, necesidad y disposición para contratar los servicios ofertados por una agencia de bienes raíces. Comprobando por tanto, que las agencias de bienes raíces enfocadas a créditos INFONAVIT, conforman un negocio nicho en la Ciudad de Ensenada, Baja California.

PERCEPCIÓN DE LA IMAGEN DE LAS UNIVERSIDADES ANTE SUS USUARIOS/CLIENTES UNIVERSIDADES PRIVADAS DE PUEBLA, MÉXICO

Montserrat Sánchez Espinosa, Universidad Popular Autónoma del Estado de Puebla
Laura Mayela Ramírez Murillo, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

Cada vez es más importante en la planeación estratégica de las empresas generar una imagen de la organización hacia el exterior. La imagen por lo tanto debe ser un conjunto de características que le permitan a la organización diferenciarse y consolidarse ante su usuario/cliente. Las universidades como centros educativos también consideran importante establecer un mayor contacto con su usuario/cliente, y profundizar el nivel de satisfacción, afecto, lealtad y sentido de pertenencia para crear una imagen adecuada de la organización. El objetivo de esta investigación cuantitativa, descriptiva y transversal es determinar cuáles son los factores que más inciden en la formación de la identidad de los centros educativos ante sus usuarios/cliente. Los resultados demuestran que los factores que más generan una mejor imagen de un centro educativo son por orden de importancia 1) los afectos; 2) el sentido de pertenencia; 3) la satisfacción y por último 4) la lealtad. En este sentido resaltar aspectos como el cariño, el orgullo y la admiración a la institución repercutirá en las relaciones de largo plazo con sus usuarios/clientes.

PALABRAS CLAVES: Identidad, Satisfacción, Afectos, Lealtad a la Marca y Sentido de Pertenencia

IMAGE AND CUSTOMER LOYALTY AND CUSTOMER PERCEPTION: CASE OF PRIVATE UNIVERSITIES IN MEXICO

ABSTRACT

It is increasingly important in strategic planning of businesses generate an image of the organization to the outside. The image must be a set of features that enable the organization to differentiate and consolidate their user / client. Universities and schools also considered important to establish closer contact with their user / client, and deepen the level of satisfaction, affection, loyalty and sense of belonging to create an accurate picture of the organization. The purpose of this quantitative, descriptive and cross-sectional research is to identify the factors that affect the formation of the identity of schools to their users / customers are. The results show that the factors that generate a better picture of a school are in order of importance 1) affections; 2) a sense of belonging; 3) satisfaction and finally 4) loyalty. In this respect highlight aspects

such as affection, pride and admiration to the institution impact on long-term relationships with their users / customers.

INTRODUCCIÓN

Cuando hablamos de la imagen de un producto o servicio hablamos de los elementos que han logrado generar una percepción entre la marca y los consumidores. La imagen adquiere una personalidad en la cual están centrados una serie de significados que logran que los consumidores describan, recuerden o relacionen. En los servicios educativos, en el ámbito universitario, son las experiencias las que van estimando la percepción que tiene el usuario con su casa de estudios. La imagen de la institución universitaria debe considerarse más allá del paso de los estudiantes durante cierto periodo, es decir, debe generar un valor de trascendencia, ya que los mismos universitarios serán los que se conviertan en promotores de la marca-institución. Una relación duradera entre las universidades y los usuarios debe identificar la naturaleza de la propia imagen y concentrarse en construir una percepción, es decir, lo que se ve y lo que se creó de una organización y si esta aumenta o decae en el ánimo de los usuarios (Longinos, 2007; Perozo y Alcalá, 2008; Capriotti, 2013).

Esta investigación tiene como objetivo reconocer y analizar los factores que están inmersos en la identidad de la casa de estudios sobre los universitarios. Elegir una carrera profesional y dónde estudiarla son decisiones importantes que marcan la vida del individuo. Durante el proceso de búsqueda de información y en el proceso de admisión, se van generando elementos que forman una expectativa en el estudiante. Dichas expectativas se relacionan con la proyección de la carrera, los valores de la institución, las vinculaciones empresariales y la satisfacción que en general la vida universitaria. Es semestre a semestre cuando el alumno va evaluando lo que esperaba y lo que realmente está recibiendo de la universidad, aunado a una serie de hechos que van fortaleciendo los lazos emocionales que tenga con su alma mater. El sistema educativo universitario mexicano está conformado por universidades públicas como privadas, siendo las primeras las que obtienen mayores recursos financieros por parte del gobierno. Las universidades privadas, son instituciones que por sí mismas tienen que determinar la obtención de sus ingresos, lo que conlleva a convertir al estudiante en usuario/cliente del servicio educativo. Así mismo y ante la creciente oferta educativa privada, las universidades tienen la necesidad de diseñar y ejecutar estrategias de relaciones duraderas con los usuarios que fortalezcan los vínculos de confianza, compromiso y lealtad (Schlesinger, Cervera, Bonillo, Sánchez, 2014).

Cuando se habla *de satisfacción*, en mercadotecnia, es común referirse al resultado de una comparación entre una o varias experiencias y tener el referente de lo que realmente recibió y percibió el usuario (Elliot y Shin, 2002; Shiffman y Lazar, 2010; Ourique, Do Lago, Giuliani, y Marques, 2011; Schlensinger, Cervera, Iniasta y Sánchez, 2014). Por otra parte, se ha convertido en el eje rector de las estrategias de posicionamiento en los servicios educativos universitarios la parte emocional. De esta forma se reconoce que *los afectos* deben cobrar fuerza en la percepción del usuario para la construcción de la imagen con la casa de estudios. En cuanto a los trabajos que hablan del origen de las emociones (Vecina, 2006; De la Torre y Fernández, 2006; Mora-Torres, Laureano-Cruces, Velasco-Santos, 2011) se enfocan en la parte biológica, mientras que Ortony, Clore y Collins, 1996; LeUnes, 2000; Nussbaum, 2001; Andrade, Arce, De Francisco, Torrado y Garrido, 2013, encaminan sus estudios hacia la comprensión de las emociones y el impacto en los estados de ánimo.).

En cuanto al concepto de *lealtad* a la marca, hay estudios que explican las características del consumidor, el nivel de participación, el aumento de las ventas y las preferencias de la marca. La lealtad está relacionada con las experiencias, emociones, personalidad y expectativas del usuario (Martín y Rodríguez, 2001; Lambin, 2004; Keller y Lehmann, 2006; Jensen y Hansen 2006; Colmenares y Saavedra, 2007; Fandos, Sánchez, Moliner y Estrada, 2011). Por otra parte, investigadores del tema de *sentido de pertenencia* (Bhattacharya y Sen 2003; Rodas, Ospina y Lanzas, 2010) consideran que éste se genera por vínculos psicológicos entre el individuo y las organizaciones, al igual que por medio de éste se logra la valoración y aceptación a una persona, grupo o ambiente.

El propósito de este estudio es contribuir a reconocer la importancia de la Mercadotecnia Relacional y el impacto con los elementos endógenos que forman parte de la imagen de las instituciones educativas a nivel universitario. Es fundamental que las universidades reconozcan los aspectos del comportamiento del consumidor y la relación que debe existir entre la satisfacción, los afectos, la lealtad y el sentido de pertenencia en la construcción de una percepción que derivará en la imagen de la casa de estudios. El estudio se divide en siete secciones: la introducción, el objetivo general, el marco teórico, el modelo de estudio, la metodología utilizada, la discusión y análisis de resultados y por último las conclusiones.

REVISIÓN DE LA LITERATURA

La imagen, según Schiffman y Lazar (2010, p. 145) está relacionada con la personalidad de los individuos, por lo que las personas “suelen comprar producto o servicios cuyas imágenes y personalidades coincidan de manera importante con la imagen que tienen ellos de sí mismo”. Esto nos lleva a afirmar que los productos o servicios que las personas adquieren deben reforzar su propia imagen y al mismo tiempo rechazan los productos y servicios que le son ajenos. En este sentido los productos y servicios tienen un significado y valor simbólico para las personas, quienes los evaluarán para determinar si la imagen que presentan se ajusta de alguna manera con la imagen que tienen de ellos mismos. Capriotti (2013) menciona que los elementos indispensables para generar una buena imagen son: que el producto o servicio ocupe un espacio en la mente del consumidor, crear un valor diferencial para el público y disminuir la influencia de los factores situaciones socioeconómicas. Según Peroza y Alcalá (2006) la imagen es sumamente importante para la fuente de la imagen (objeto) y para quien la recibe (el sujeto), ya que una imagen positiva de la organización, es un requisito esencial para establecer relaciones comerciales con el público objetivo.

Reconocer y medir la satisfacción del cliente resulta ya un mínimo requerido en todo proceso de transacción. Saber si se han cumplido con lo esperado por los consumidores y que tan lejos se ha llegado, en la actualidad se convierte en un reto dado que ahora los clientes son más exigentes, sobre todo con la gran competencia que aqueja el día de hoy a productos y servicios, lo que obliga a las organizaciones a prestar mucha atención sobre las necesidades, lo que esperan y desean y lo que realmente están percibiendo. La satisfacción es el resultado de una comparación entre una o varias experiencias, en mercadotecnia es común el estudio de la satisfacción para tener referente de la expectativa del cliente y lo que realmente recibió. Elliot y Shin (2002), definen a la satisfacción como el resultado de evaluar la experiencia en relación a lo recibido. Las experiencias se vuelven las protagonistas a la hora de evaluar la satisfacción, un conjunto de intangibles que están ligados entre sí como el personal, la respuesta inmediata, la confiabilidad de un producto o servicio y la credibilidad de la empresa, será lo que ponga en una balanza el consumidor para saber si realmente está satisfecho. En este sentido, Schiffman y Lazar (2010), sostienen que los clientes tienen necesidades y expectativas que deben tenerse en cuenta por la organización. No será suficiente saciar la carencia, hay que escuchar al cliente para entender cómo quiere elevar esa necesidad en deseo y así satisfacción se convertirá un valor agregado para la organización.

Evaluar la satisfacción de los clientes, sobre todo en los servicios, contribuye de forma efectiva al diseño y ejecución de estrategias relacionadas a la creación de la lealtad de los consumidores ya que será un factor preponderante en la intención de compra (Ourique, Do Lago, Giuliani, y Marques, 2011; Schlensinger,

Cervera, Iniesta y Sánchez, 2014). Es entonces que las empresas tienen el reto de encontrar los elementos diferenciadores que contribuyan a generar una percepción del valor, reiterando el compromiso entre la empresa y el cliente a fin de lograr una mayor retención del mismo.

La parte emotiva muchas veces motiva a la acción, son los afectos los que expresan y están presentes en las acciones que llevan a cabo los individuos, por lo tanto, se convierte en el reto para las organizaciones diseñar estrategias de marketing donde la parte afectiva tenga un rol protagonista (De la Torre y Fernández, 2006). Los estímulos efectivos, en este sentido, son los que logran que el individuo se deleite, se implique y se comprometa con algo. En cualquier situación humana, en cuanto mayor reciprocidad exista, el individuo se involucra más y se va tejiendo una relación de lealtad. Los estudios que se enfocan en los aspectos biológico de los afectos (Vecina, 2006; De la Torre y Fernández, 2006; Mora-Torres, Laureano-Cruces, Velasco-Santos, 2011) sostienen que las emociones son un conjunto de estructuras nerviosas, localizadas en el sistema límbico, la amígdala quien se encarga de desempeñar entre otras funciones, la capacidad emocional. Mencionan también que las conexiones neuronales se encuentran ubicadas en el cerebro reptiliano y la parte moderna del cerebro, el neocórtex, lo que permite la comunicación de vértigo y facilita que se hable de pensamientos, emociones y conductas como entidades separadas. Sobre los estudios que relacionan a las emociones con los estados de ánimo (Ortony, Clore y Collins, 1996; LeUnes, 2000; Nussbaum, 2001; Andrade, Arce, De Francisco, Torrado y Garrido, 2013) sostienen que éstas afectan el comportamiento de las personas a corto y mediano plazo. Dentro de los estados de ánimo estudiados se encuentran: tensión, depresión, cólera, vigor, fatiga, confusión, y amistad. En el caso de los estudiantes la depresión es el que más se observa. La principal causa de la depresión es el estrés y se desencadena a partir de cualquier cambio drástico de la vida habitual, también se asocia al sentimiento del fracaso escolar. Según Coffin, Álvarez y Marín (2011, p.343) durante su etapa escolar los alumnos tienen que “enfrentarse a gran cantidad de estresores psicosociales, como el desarraigo, vivir solo, carecer de apoyo económico, y el reto de tener calificaciones satisfactorias y la incertidumbre del futuro”. La depresión puede causar que los alumnos se alejen de sus familias, pasar muchas horas estudiando, establecer sus propios horarios (nocturnos) y hacer nuevos amigos continuamente.

El concepto de lealtad de marca es utilizado en mercadotecnia y se asocia al estudio del comportamiento del consumidor. La literatura hace énfasis en los diferentes enfoques sobre los cuáles se ha estudiado la lealtad de marca. Algunos autores consideran que la lealtad está relacionada con la alta participación del cliente y las elevadas tasas de rendimiento de la inversión (Odin, Odin y Valette, 2001; Lambin, 2004; Jensen y Hansen, 2006). También la lealtad se puede definir como un proceso donde el consumidor manifiesta sus preferencias hacia una determinada marca, de forma secuencial (Martín y Rodríguez, 2001; Colmenares y Saavedra, 2007). Entonces se puede observar que la lealtad no sólo es porcentaje de ingresos, frecuencia de compra sino que existen otros elementos a considerar a la hora de determinar la lealtad de marca. Según Keller y Lehmann (2006) la lealtad de marca está relacionada con las experiencias, las emociones, la personalidad de marca, lo que genera nuevas perspectivas en torno a la investigación de dicho constructo, es así como la naturaleza de la lealtad de marca se orienta a tres enfoques: como un comportamiento efectivo, como una actitud y a un compromiso psicológico que comprende la actitud positiva y la intención de recompra efectiva (Colmenares y Saavedra, 2007).

Para Maslow (1954) el sentido de pertenencia a un grupo es una necesidad básica humana, indispensable que la persona sienta parte de un sistema. El sentido de pertenencia identifica elementos como la valoración y aceptación por otras personas, grupos o ambientes, en el caso de los servicios, donde la experiencia es la que cobra valor. Los vínculos interpersonales (Bhattacharya y Sen, 2003; Cameron, 2004), son los que determinan el sentido de pertenecer, logrando una identidad social lo que permite indentificarse con la institución es una relación voluntaria, activa y selectiva en donde se comparten principios y valores. Las relaciones de identificación generan que los clientes sean más entusiastas y se conviertan en promotores de las empresas. Algunas investigaciones (Johnson, Alvarez, Longerbeam, Soldner, Kurotsuchi, Brown, & Rowan-Kenyon, 2007; Rodas, Ospina y Lanzas, 2010) se han centrado en la relación de estudiantes con

su centro educativo, el sentido de pertenecer se manifiesta en aspectos clave como la motivación y el rendimiento académico. Existen elementos que influyen directamente en el sentido de pertenencia hacia las instituciones, tales como el grado de compromiso, el afecto y la motivación lo que incide en el fortalecimiento de la imagen institucional. Conocer las acciones de la institución, identificar los objetivos y comprender la importancia de los roles en las instituciones son atributos que dan valor al sentido de pertenencia.

METODOLOGÍA

Para realizar el análisis de la imagen de un centro educativo ante sus usuarios/clientes se revisaron varios modelos, específicamente se retomó el modelo general de Schlesinger, Cervera, Inieta y Sánchez (2014); la propuesta de análisis de la OCC de las emociones (Ortony, Clore y Collins, 1996), donde se revisan los afectos; en el caso de la lealtad, medida por actitudes se retomó del modelo de Stahlberg y Frey (1993), Morales (2000), y Fernández, Hueto, Rodríguez y Marcén, 2003; En el caso del sentido de pertenencia se utilizó el análisis Rodas, Ospinas y Lanzas (2010) y, por último, para la satisfacción se consideró lo propuesto Ourique, Do Lago, Giuliani y Marques (2011) (Tabla 1). Se diseñó una investigación no experimental, cuantitativa, descriptiva y transversal simple, para analizar la imagen de las universidades públicas y privadas de la ciudad de Puebla, México. El instrumento de recolección de datos se estructuró con 35 ítems medidos en una escala Likert 5, donde la posición 1 corresponde a *muy en desacuerdo* mientras que la posición 5 corresponde a *muy de acuerdo*, mismos que se distribuyeron en las cuatro dimensiones, que incluye, (1) satisfacción; (2) afectos; (3) lealtad y; (4) pertenencia a un grupo.

Tabla 1: Características de la Creación de una Imagen

Factores	Clave	Características
Satisfacción	S1	¿Tu decisión de estudiar en esta universidad fue acertada?
	S2	¿Se han cumplido las expectativas que tenías de ella?
	S3	¿Las instalaciones son como las esperabas?
	S4	¿Si tienes alguna dificultad, el personal te ayuda a resolverlo?
	S5	¿Estás contento con tu vida universitaria?
	S6	¿Tu percepción de la universidad ha sido superada?
	S7	¿Consideras eficientes los procesos administrativos?
	S8	¿Consideras eficientes los procesos de evaluación?
	S9	¿Se retroalimenta la universidad de las evaluaciones docentes?
Afectos	A1	¿Te agrada el ambiente de tu universidad?
	A2	¿Sientes cariño por la Universidad?
	A3	¿Te sientes orgulloso de la institución donde estudias?
	A4	¿Sientes admiración por tus profesores?
	A5	¿Te identificas con los valores de tu casa de estudio?
	A6	¿Sientes alivio cuando terminas un semestre?
	A7	¿Te da seguridad estudiar en tu universidad?
	A8	¿La institución te da esperanza de un desarrollo personal y profesional?
Lealtad	L1	¿Conoces la filosofía de tu universidad?
	L2	¿Te sientes identificado con la institución?
	L3	¿Haces propios los valores de la universidad en tu vida diaria?
	L4	¿Participas en actividades institucionales?
	L5	¿Si decides estudiar un posgrado, lo harías en la misma universidad?
	L6	¿Recomendarías a alguien estudiar en esta institución?
	L7	Una vez egresando, ¿te gustaría regresar y compartir tus experiencias?
Sentido De Pertenencia	SP1	¿Conoces los objetivos a corto plazo que tiene la institución?
	SP2	¿Conoces los objetivos a mediano plazo que tiene la institución?
	SP3	¿Conoces los objetivos a largo plazo que tiene la institución?
	SP4	¿Conoces las acciones de vinculación con otros sectores?
	SP5	¿Tienes conocimiento de la investigación que se realizan en la universidad?
	SP6	¿Conoces los logros obtenidos por tu universidad en ámbitos académicos?
	SP7	¿Conoces los logros obtenidos en ámbitos extra académicos?
	SP8	¿Sabes si la universidad tiene convenios con otras universidades?
	SP9	¿Identificas las empresas para realizar prácticas profesionales?

SP10	¿Haces tuyas algunas críticas hacia la universidad?
SP11	¿Cuándo hablas de la universidad normalmente dices “nosotros”?
SP12	¿Cuándo la universidad obtiene algún logro, lo sientes propio?

Fuente: Elaboración propia. Las cuatro dimensiones propuestas son la satisfacción, los afectos, la lealtad y el sentido de pertenencia.

En el estudio se utilizó una muestra 634 alumnos de las cuatro universidades privadas de mayor prestigio en el estado de Puebla (Universidad Popular Autónoma del Estado de Puebla (UPAEP), Universidad Iberoamericana (IBERO), Universidad Anáhuac (UA) y Universidad Madero (UM)). En la tabla 2 se presentan la ficha técnica del estudio. El Alfa de Cronbach global y de cada una de las dimensiones fue mayor a 0.65 lo que permite afirmar que el instrumento de recolección de datos es confiable (Tabla 3).

Tabla 2: Ficha Técnica del Estudio

Universo	UPAEP	IBERO	UA	UM
Ámbito	Municipal	Municipal	Municipal	Municipal
Método de recolección de la información	Encuesta Personal	Encuesta Personal	Encuesta Personal	Encuesta Personal
Unidad de Muestreo	Alumnos entre 18 a 25 años de edad	Alumno entre 18 a 25 años de edad	Alumnos entre 18 a 25 años de edad	Alumnos entre 18 a 25 años de edad
Censo Muestral	1500 alumnos en la Escuela de Negocios	805 alumnos de la Escuela de Negocios	313 alumnos de la Escuela de Negocios	510 alumnos de la Escuela de Negocios
Tamaño de la muestra	187 válidas sobre 190 recibidas	169 válidas sobre 170 recibidas	127 válidas sobre 135 recibidas	151 válidas sobre 160 recibidas
Error muestral	6 %	6 %	6 %	6 %

Fecha del trabajo de campo	Noviembre 2014 a Febrero 2015	Noviembre 2014 a Febrero 2015	Noviembre 2014 a Febrero 2015	Noviembre 2014 a Febrero 2015

Se utilizó una muestra personal discrecional de 634 alumnos de universidades de cuatro universidades privadas de mayor prestigio. 92 % de confianza, con un error del 6%. Fuente: Elaboración propia.

Tabla 3: Confiabilidad Del Instrumento De Recolección De Datos

CATEGORÍAS	ALFA DE CRONBACH
Global	0.954
Satisfacción	0.922
Afectos	0.912
Lealtad	0.765
Sentido de Pertenencia	0.945

El alfa de Cronbach global es de 0.954. El Alfa de Cronbach global y de cada una de las dimensiones fueron mayor a 0.65 lo que permite afirmar que el instrumento de recolección de datos es confiable. Fuente: Elaboración propia.

En la Tabla 4 se comprueba que el instrumento es válido porque de acuerdo a Vila, Küster y Aldás (2002) todas las correlaciones son significativas y menores que el Alfa de Cronbach de la dimensión (Tabla 4).

Tabla 4: Validación del Instrumento de Recolección de Datos

	Satisfacción	Afectos	Lealtad	Sentido de Pertenencia
Satisfacción	0.922			
Afectos	0.746**	0.912		

Lealtad	0.710**	0.758**	0.765	
Sentido de Pertenencia	0.632**	0.518**	0.576**	0.945

** La correlación es significativa al nivel 0,01 (bilateral). La correlación afectos y satisfacción es de 0.746 es menor al alfa de Cronbach de 0.912; la correlación entre lealtad y satisfacción y lealtad y afectos tiene un valor de 0.710 y 0.758 menores al alfa de Cronbach de 0.765; la correlación entre sentido de pertenencia-satisfacción, sentido de pertenencia-afectos y sentido de pertenencia-lealtad 0.632, 0.518 y 0.576 son menores al alfa de Cronbach 0.945. Fuente: Elaboración propia.

Por lo indicado anteriormente, se plantean las siguientes hipótesis

H1: Los alumnos de Universidad Popular Autónoma del Estado de Puebla (UPAEP) tienen una mejor imagen de su centro educativo que los alumnos de otras universidades privadas.

H2: Los alumnos de Universidad Iberoamericana (UI) tienen una mejor imagen de su centro educativo que los alumnos de otras universidades privadas.

H3: Los alumnos de Universidad Anáhuac (UA) tienen una mejor imagen de su centro educativo que los alumnos de otras universidades privadas.

H4: Los alumnos de Universidad Madero (UM) tienen una mejor imagen de su centro educativo que los alumnos de otras universidades privadas.

H5: Las universitarias mujeres tienen una mejor imagen de su centro educativo que los universitarios hombres.

RESULTADOS

Con el fin de analizar las hipótesis propuestas se desarrolló un análisis estadístico en dos etapas. En la primera se realizó un análisis de tablas de contingencia. En la segunda etapa se realizó el análisis descriptivo usual y el análisis factorial del modelo de la percepción de la imagen de la universidad. El programa empleado fue el SPSS versión 21.

Análisis de Tablas de Contingencia: Las tabulaciones cruzadas elaboradas fueron las siguientes: entre sexo y satisfacción; sexo y afecto; sexo y lealtad y por último, entre sexo y sentido de pertenencia de las universidades privadas (Tabla 5).

Tabla 5: Tabla de Contingencia Entre el Sexo y las Cuatro Dimensiones

Universidad	Sexo	Satisfacción	Afecto	Lealtad	Sentido de Pertenencia
UPAEP	Hombres %	33.12	31.47	30.80	38.65
	Mujeres %	31.71	38.03	33.90	42.28
	Chi-cuadrada	18.34	35.23	23.13	11.46
UI	Hombres %	42.42	38.16	28.04	32.93
	Mujeres %	39.35	36.25	32.46	36.38

Universidad Popular Autónoma del Estado de Puebla (UPAEP); Universidad Iberoamericana (UI); Universidad Anáhuac (UA) y Universidad Madero (UM). Fuente: Elaboración propia.

La anterior tabla nos muestra que en la mayoría de las dimensiones las mujeres tienen una mejor imagen de la universidad que los hombres, solamente en la universidad IBERO los hombres tienen una mejor imagen que las mujeres de su centro educativo. En el caso de la UPAEP la dimensión más significativa es el sentido de pertenencia con un 42.28 % ; en la IBERO la dimensión más significativa es la satisfacción con un 42.42 %; para la Universidad Anáhuac es el afecto con un 38.90 %; por último, también para la universidad Madero es el afecto con un 38.75 % .

Análisis Descriptivo y Factorial: En el siguiente análisis se pueden observar las medias, la desviaciones estándar y el factor de cada una de las dimensiones de la UPAEP y la IBERO. En el caso de la UPAEP se puede observar que la dimensión que tiene el promedio más alto es el *afecto* (A) con un (4.13) en donde la variable (A7) “Te da seguridad estudiar en tu universidad” es la que tiene más significado. La siguiente dimensión es la satisfacción (S) con un promedio de (3.58), con la variable más significativa (S1) “Tu decisión de estudiar en esta universidad fue acertada”; la dimensión lealtad (L) con un (3.47) con la variable (L6) “Una vez egresando, ¿te gustaría regresar y compartir tus experiencias?”; mientras que la dimensión más baja es el sentido (SP) de pertenencia con un (2.29), con la variable más significativa (SP8) “Sabes si la universidad tiene convenios con otras universidades”. En el caso de la universidad Iberoamericana se puede detectar que la dimensión que tuvo el promedio más alto fue la satisfacción (S) con un promedio de (4.68), con la variable (S1) “Tu decisión de estudiar en esta universidad fue acertada”; le sigue la dimensión afecto (A) con un (4.09), con la variable “Te sientes orgulloso de la institución donde estudias”; la siguiente dimensión es (4.04) con la variable (A3) “Te sientes identificado con la institución” y; por último la dimensión sentido de pertenencia (SP) fue la más baja con (3.28). Por lo que se refiere al análisis factorial de acuerdo a la medida de Kaiser-Meyer-Olkin (KMO) puede decirse que el modelo factorial utilizado es apropiado, ya que el índice KMO de los dos primeros análisis fue de $0.876 \geq 0.50$ y $0.917 \geq 0.50$. En la UPAEP destacan las dimensiones satisfacción y lealtad, pasando a un segundo plano los indicadores de afecto y sentido de pertenencia; mientras que para la universidad IBERO las dimensiones que destaca es el sentido de pertenencia, por lo que pasan a un segundo plano las dimensiones satisfacción, afecto y lealtad (Tabla 6).

Fuente: Elaboración propia. Las dimensiones más importantes para la universidad UPAEP según el análisis descriptivo son los afectos y la lealtad; mientras que para la universidad IBERO son la satisfacción y la lealtad.

En la tabla 7 se analiza a las universidades Anáhuac y Madero. En la primera se puede detectar que la dimensión más significativa es la satisfacción (S) con un (4.18) en donde la variable (S7) “Consideras eficientes los procesos administrativos” es la que tiene más significado. La siguiente dimensión es el afecto (A) con un promedio de (4.21), con la variable más significativa (A1) “Te agrada el ambiente de tu universidad”; la dimensión lealtad (L) con un (4.08) con la variable (L6) “Recomendarías a alguien estudiar en esta institución”; mientras que la dimensión más baja es el sentido (SP) de pertenencia con un (3.27), con la variable más alta (SP8) “Sabes si la universidad tiene convenios con otras universidades”. En el caso de la universidad Madero se puede detectar que la dimensión que tuvo el promedio más alto fue el afecto (A) con un promedio de (4.26), con la variable (A1) “Te agrada el ambiente de tu universidad”; la siguiente dimensión fue la satisfacción (S) con un (4.09), con la variable (S1) “Tu decisión de estudiar en esta universidad fue acertada”; la siguiente dimensión es la lealtad (L) con (3.82) con la variable (A3) “Haces propios los valores de la universidad en tu vida diaria” y; por último la dimensión sentido de pertenencia (SP) fue la más baja con (3.19). Por lo que se refiere al análisis factorial de acuerdo a la medida de Kaiser-Meyer-Olkin (KMO) el índice KMO de los dos últimos análisis fueron de $0.785 \geq 0.50$ y $0.836 \geq 0.50$. Tanto en las universidades Anáhuac y Madero la dimensión que destacó fue la de sentido de pertenencia, pasando a un segundo plano los indicadores de satisfacción, afecto y sentido de pertenencia (Tabla 7).

Fuente: Elaboración propia. Las dimensiones más importantes para la universidad Anáhuac según el análisis descriptivo son satisfacción y afecto; mientras que para la universidad Madero son el afecto y la satisfacción.

CONCLUSIONES

En la actualidad existe una gran cantidad de universidades privadas, por lo que es imperante que se considere la construcción de una imagen con elementos que proporcionen a los estudiantes una identidad con la institución. La naturaleza de dichos elementos refleja la satisfacción como usuarios de un sistema educativo, los lazos afectivos que generan durante la estadía universitaria y la lealtad y el sentido de pertenecer a una organización donde se comulgue con los ideales. Esta identidad será el reflejo de la percepción que el alumno lleve no sólo en su vida universitaria, sino que debe trascender una vez que ejerza su profesión. La revisión teórica de varios modelos permitió analizar la imagen que los alumnos de cuatro universidades privadas tienen sobre su casa de estudio. En relación a las hipótesis planteadas se puede concluir lo siguiente: La hipótesis de investigación, H2, los alumnos de la IBERO tienen una mejor imagen de su centro educativo que otras universidades privadas, se acepta. Mientras que las hipótesis H1, H3 y H4 se rechazan, debido que los alumnos de las universidades UPAEP, la Universidad Anáhuac y la Universidad Madero no tienen una mejor imagen de universidad que otros alumnos universitarios. Por lo que respecta a la H5, las universitarias mujeres tienen una mejor imagen de su centro educativo que los universitarios hombres se acepta, ya que solamente los alumnos hombres de la universidad IBERO tuvieron una mejor imagen de su universidad que sus pares del sexo femenino.

En el caso de la universidad UPAEP la dimensión más significativa en la generación de la imagen de este centro educativo es el Afecto en donde se observa que los alumnos de esta universidad tienen confianza en encontrar un empleo al terminar sus estudios y les agrada el ambiente universitario. En el caso de los alumnos de la universidad IBERO la dimensión que afecta en mayor medida la imagen de la universidad es la satisfacción, ya que ellos consideran que acertaron en la decisión de estudiar en esta universidad y que las instalaciones son adecuadas a las expectativas que tenían sobre ellas. En el caso de la universidad Anáhuac, la dimensión más significativa fue la satisfacción en aspectos como los servicios administrativos y los procesos de evaluación. Por lo que respecta a la universidad Madero, la dimensión más significativa en la generación de la imagen fue el afecto, ya que les agrada el ambiente universitario y les da seguridad estudiar en esta casa de estudio.

En cuanto a los resultados del análisis factorial se pueden detectar varias cuestiones. En primer lugar se detecta que en una de las universidades el factor más importante en la imagen es la generación de los afectos (cariño, orgullo, admiración y seguimiento de sus valores) y en las tres restantes la dimensión más importante en la imagen fue el sentido de pertenencia (conocimiento sobre los objetivos de la institución, logros e identificación). Con lo analizado anteriormente se determina la importancia de tipificar los

elementos que conforman una imagen universitaria, pero también la necesidad de gestionarlos para obtener una identidad que propicie en los estudiantes el sello de la casa de estudios y que ellos lo sientan propio a lo largo de toda su vida.

Limitaciones y Futuras Investigaciones: Esta investigación sólo toma en cuenta a los alumnos de las universidades privadas de la Ciudad de Puebla, México. Futuras investigaciones tendrán como objetivo analizar el comportamiento de los alumnos en universidades públicas y detectar el grado de imagen que ellos tienen de sus centros educativos.

RESUMEN

La vida de las mujeres mexicanas se ha transformado en las últimas décadas en su condición individual, familiar y social; aunque todavía queda mucho por hacer para que las mujeres y hombres encuentren oportunidades de desarrollo en condiciones de equidad y justicia. La ampliación del sistema educativo y del mercado laboral en los últimos años, suscitó que un amplio sector de mujeres “saliera” del ámbito doméstico para incorporarse a las universidades y al campo laboral. Esta incorporación generó cambios en la sociedad. Es por esta razón y con el afán de conocer realmente el punto de vista de los egresados de la Licenciatura en Contaduría de la Universidad Veracruzana, región Veracruz, que se procedió a la aplicación de encuestas relacionadas con su ámbito laboral para conocer su opinión vista acerca de la equidad de género en el mercado de trabajo de esta importante profesión.

GENDER EQUITY IN PROFESSIONAL PERFORMANCE OF BACHELOR DEGREE GRADUATES IN ACCOUNTING OF THE UNIVERSITY OF VERACRUZ, VERACRUZ REGION.

ABSTRACT

The life of Mexican women has been transformed in recent decades in their individual, family and social status; although much remains to be done for women and men find development opportunities in terms of equity and justice. The expansion of the education system and the labor market in recent years, attracted a large segment of women "out" the domestic sphere onto college and the workforce. This addition resulted in changes in society. It is for this reason, and the desire to really know the point of view of the graduates of the Bachelor in Accounting from the University of Veracruz, Veracruz region, we proceeded to the implementation of surveys related to their workplace to get their opinion about gender equality in the labor market of this important profession.

INTRODUCCIÓN

La incorporación de la mujer al campo de los negocios y la globalización son nuevos retos para las empresas, la presencia de la mujer en las actividades empresariales ha cobrado una creciente importancia

en el ámbito mundial. Por ello la importancia de conocer cuál es la situación que actualmente se vive en el campo laboral de los egresados de la Licenciatura en Contaduría de la Universidad Veracruzana, región Veracruz, ya que todas las áreas de desempeño profesional tienen sus particularidades y características.

Problema

La desigualdad de oportunidades en la contratación de hombres y mujeres para un trabajo profesional afecta a los egresados de la Licenciatura en Contaduría.

Objetivo

El objetivo de este trabajo es conocer el punto de vista de los egresados de la Licenciatura en Contaduría de la Universidad Veracruzana, región Veracruz, acerca de la igualdad de oportunidades que existe en su área de desempeño profesional.

REVISIÓN LITERARIA

Generalidades de Equidad de Género

Equidad en relación al género significa el reconocimiento de la diversidad del/la otro/a para propiciar condiciones de mayor justicia e igualdad de oportunidades, tomando en cuenta la especificidad de cada persona. Significa justicia; es dar a cada cual lo que le pertenece, reconociendo las condiciones o características específicas de cada persona o grupo humano (sexo, género, clase, religión, edad). Es el reconocimiento de la diversidad, sin que ésta signifique razón para la discriminación. (<http://www.economia.gob.mx/conoce-la-se/equidad-de-genero>) Género significa el conjunto de ideas, representaciones, creencias y atribuciones sociales que cada cultura construye, tomando como base la diferencia sexual. Al emplear el concepto género, se designan las relaciones sociales entre los sexos. En otras palabras, es el modo de ser hombre o de ser mujer en una cultura determinada y, por lo tanto, construida socialmente.

Equidad de Género, es un conjunto de reglas que permiten la igualdad de participación de hombres y mujeres en su medio organizacional y social con un valor superior a las establecidas tradicionalmente, evitando con ello la implantación de estereotipos o discriminación. Situación en la que todos los seres humanos son libres de desarrollar sus capacidades personales y tomar decisiones sin las limitaciones impuestas por los roles tradicionales, y en la que se tienen en cuenta, valoran y potencian por igual las distintas conductas, aspiraciones y necesidades de mujeres y hombres.

La Equidad de Género es un concepto que defiende la igualdad entre el hombre y la mujer en el uso y control de los bienes y servicios de una sociedad. Propone que las mujeres y los hombres gocen de condiciones iguales en el ejercicio pleno de sus derechos humanos, en su posibilidad de contribuir al desarrollo nacional político, económico social y cultural y de beneficiarse de sus resultados. El Colegio de Académicas Universitarias (CAU) de la UNAM, establece que la equidad de género o la equidad entre los géneros “consiste en tomar en cuenta las especificidades, condiciones, relaciones de poder y problemáticas de mujeres y hombres, como producto de una construcción sociocultural tanto en el trabajo, como en el desarrollo y la producción académica”. Tratar de partir de la igualdad sin tomar en cuenta las condiciones específicas de mujeres y hombres sólo hace que se aumente la brecha de la desigualdad existente, es, por ello, necesaria la equidad entre los géneros.

Esta consideración lo que propone es que las mujeres deben recibir la misma remuneración que recibe un hombre en caso de desempeñar la misma tarea que él, asimismo de suponer que ambos géneros deben tener el mismo poder a la hora de la toma de las decisiones.

Según la Equidad de Género, si un hombre y una mujer se desempeñan en cargos ejecutivos dentro de una misma empresa realizando las mismas tareas y con exactas responsabilidades, entonces, ambos deberán ganar el mismo sueldo y tener las mismas posibilidades de crecimiento profesional para que se cumplan los preceptos de la Equidad de Género, lo cual es vital para mejorar las condiciones económicas, sociales, políticas y culturales de la sociedad en su conjunto, también contribuye a lograr una sociedad más integral y a fortalecer la gobernabilidad democrática.

Proyecto de Desarrollo de Equidad de Género de la ONU

Lograr la equidad de géneros es un reto para todas las sociedades y sus gobiernos, tan es así que dentro de los Objetivos de Desarrollo del Milenio, un Proyecto de desarrollo de las Naciones Unidas (órgano asesor independiente que elaboró un plan de acción concreto para que el mundo revertiera la pobreza absoluta, el hambre y la enfermedad que afectan a miles de millones de personas), se encuentra el objetivo de promover la Equidad de Género y la Autonomía de la Mujer. Promoviendo que la equidad entre hombres y mujeres es un objetivo fundamental para el progreso del desarrollo humano y que la ONU está comprometida con hacer que la equidad de género sea una realidad, no sólo por ser un imperativo moral, sino también como un comprobado potenciador de la prosperidad y el bienestar de todos (<http://www.onu.org.mx/objetivo3.html>).

Las agencias del Sistema de Naciones Unidas trabajan en asesoramiento de políticas pro-mujer, en desarrollo de capacidades y apoyando proyectos a favor de la equidad de género, liderados por ONU-Mujeres. Para lograr estos objetivos es necesario que problemas como la pobreza, la falta de accesos a la educación, servicios de salud y la falta de oportunidades de empleo y trabajo productivo dejen de recaer principalmente en las mujeres. Es también ineludible que se formulen y estructuren los medios pertinentes para desarrollar las mismas capacidades, oportunidades y seguridad reduciendo su vulnerabilidad a la violencia y al conflicto, esto con el fin de que tanto los hombres como las mujeres tengan la libertad y la capacidad de elegir y decidir de manera estratégica y positiva sobre sus condiciones de vida.

Al abordar el tema de la mujer es muy difícil no hablar de años y años de marcadas diferencias de género, cada vez menos notorias, pero innegablemente existentes. Sin embargo, las mujeres han logrado destacarse en diversos escenarios de tradición masculina como la política, el liderazgo social, profesional y empresarial, siendo hacedoras del desarrollo de sus comunidades, en especial en las naciones latinoamericanas con economías emergentes. La mujer latinoamericana poco a poco se destaca ya en ámbitos políticos, económicos y sociales. No hay duda, que el presente comparado con 50 o 60 años atrás en la historia de las mujeres latinoamericanas ha evolucionado. En la mayoría de los países se reconocen su derecho a la salud, el trabajo, la ocupación en cargos superiores, políticos e, incluso, la violencia contra ellas se castiga con sanciones severas, eso sí en medio de gran impunidad.

Políticas y Acciones Para la Equidad de Género

Uno de los niveles estratégicos prioritarios de intervención para producir una real y progresiva igualdad de oportunidades en la formación y en el empleo es la elaboración e implementación de políticas sobre el tema, que pueden intervenir en todos los niveles donde la discriminación opera, políticas capaces de activar sinergias entre varios actores sociales, públicos y privados, gubernamentales y no, enmarcando líneas guías en las cuales cada organismo, según sus características y mandatos puedan insertar su propia iniciativa o programa, multiplicando así su efecto.

Algunas acciones para gestionar la igualdad de género en el trabajo y la formación, desde el accionar gubernamental, sindical, empresarial o comunitario o desde los organismos internacionales y de cooperación técnica, son:

Suprimir o contrarrestar los efectos perjudiciales de los estereotipos en la inserción o búsqueda laboral femenina; Alentar la participación de las mujeres en las ocupaciones con mejores posibilidades de desarrollo económico y profesional y en los sectores o puestos en los que está poco representada y a los/as empleadores/as para que las reciban favorablemente; Diversificar las opciones profesionales femeninas y ayudarlas a adquirir la capacitación más pertinente. Asegurar que los servicios de colocación, orientación y asesoramiento cuenten con el número suficiente de personal calificado que conozca los problemas de las trabajadoras y desempleadas; Velar por que los hombres y mujeres compartan más las responsabilidades laborales, familiares y sociales; Favorecer la participación activa de las mujeres en todos los organismos públicos, empresariales y sindicales que adoptan decisiones respecto al mercado de empleo y a la formación profesional; Divulgar ampliamente las disposiciones que regulan el trabajo femenino y asegurar su pleno conocimiento por parte de las beneficiarias; Instruir a las organizaciones empresariales y sindicales para diseñar políticas y realizar acciones destinadas al logro de estos objetivos de equidad y alentar a los interlocutores sociales a que promuevan la acción positiva en sus propias organizaciones y sitios de trabajo; Impulsar el desarrollo de políticas de recursos humanos en las empresas privadas y públicas que tengan como meta la igualdad de oportunidades y trato y asistirlas en su aplicación y seguimiento; Impulsar la incorporación sistemática en la negociación colectiva de la perspectiva de género. En el entendido que para que estos esfuerzos tengan éxito han de tener en cuenta los valores sociales y culturales de los grupos destinatarios y de la sociedad en que están inmersos y las características y singularidades de las relaciones del trabajo en el país.

Programa de las Naciones Unidas Para el Desarrollo En México

Para el Programa de las Naciones Unidas para el Desarrollo (PNUD), la igualdad entre los géneros es un pre requisito del desarrollo y un asunto fundamental de derechos humanos y de justicia social. El PNUD considera que la inversión en la promoción de la igualdad de género y el empoderamiento de las mujeres son vitales no sólo para mejorar las condiciones económicas, sociales y políticas de la sociedad en su conjunto sino para lograr una ciudadanía integral y una democracia más sólida. En virtud de su mandato de ayudar a las sociedades a forjar un mundo mejor, la oficina del PNUD en México está realizando la actualización de la Estrategia de Igualdad de Género. Este documento es su carta de navegación, tanto en la implementación de los mandatos y políticas sobre género del PNUD, como en la definición de Acciones concretas para avanzar en la promoción de la equidad entre mujeres y hombres. Ambos compromisos provienen de su misión de contribuir a la erradicación de la pobreza y al logro del desarrollo en México. La superación de estos retos debe ser un esfuerzo de la sociedad en su conjunto, en el que resulta indispensable la participación corresponsable de mujeres y hombres para alcanzar un desarrollo pleno como país. Afortunadamente, hoy en día existe una mayor coincidencia entre la sociedad, las instituciones y los individuos es el reconocimiento de que los temas de género son parte fundamental del desarrollo nacional.

METODOLOGÍA

Para conocer la opinión de los egresados de la Licenciatura en Contaduría de la Universidad Veracruzana, región Veracruz, con respecto a la Equidad de Género en su área de desempeño profesional, se aplicó una encuesta a 200 egresados de diferentes generaciones desde 1995 a la fecha. Para el desarrollo de este trabajo se realizó una investigación de tipo transversal, consistente en el diseño y aplicación de la encuesta en un momento determinado. El instrumento se diseñó a través de un cuestionario autoadministrado consistente en 27 preguntas de las cuales 9 fueron abiertas por lo que para la interpretación de estas últimas se utilizó la técnica de análisis textual. La distribución del instrumento fue en 3 apartados. El apartado A acerca de datos generales con las preguntas siguientes: Sexo, edad, año de ingreso a la Facultad, ¿actualmente estás trabajando o has trabajado?, lugar de trabajo, antigüedad, puesto, giro (empresa comercial, despacho contable, gobierno u otro) y municipio. El apartado B acerca de la contratación con las preguntas siguientes: ¿Su ingreso a la empresa fué por: Convocatoria, Relación Personal o Familiar, Recomendación u Otro?,

¿Al ingresar a su puesto de trabajo se solicitaba específicamente ser de un sexo determinado?, ¿En tu empresa se solicita que las mujeres no se embaracen durante un determinado tiempo cuando se contratan?, ¿Durante la entrevista, afecta en la contratación el hecho de tener hijos? y ¿Para la contratación se toma en cuenta la edad?

El apartado C acerca del desempeño laboral con las preguntas siguientes: ¿En su lugar de trabajo existe mayoría de Hombres, Mujeres o Equilibrado?, ¿Los horarios son iguales para ambos sexos, cuando se realiza el mismo trabajo?, ¿Si fuese necesario cubrir horas extras se solicita de manera indistinta o toman en cuenta el género?, ¿Los salarios son iguales para ambos sexos cuando se realiza el mismo trabajo?, ¿Las prestaciones son iguales para ambos sexos cuando se realiza el mismo trabajo?, ¿La seguridad social se otorga por igual independientemente del género?, ¿Existe alguna diferencia en el trato que reciben como trabajadores los hombre y/o mujeres?, Al seleccionar un trabajador para ascender a un mejor nivel ¿se toma en cuenta el género o ambos cuentan con la misma oportunidad?, ¿Los niveles superiores de la empresa lo ocupan preferentemente hombres, mujeres o es indistinto?, ¿Al estar en un mismo nivel, el trabajo se reparte de manera equitativa entre hombres y mujeres?, ¿Considera que una mujer tiene que esforzarse más que un hombre por demostrar su capacidad profesional en el trabajo?, ¿En su lugar de trabajo existe discriminación por preferencias sexuales diferentes? y ¿En general considera que en el campo laboral de los Licenciados en Contaduría existe equidad de género?

RESULTADOS

Las encuestas fueron contestadas por un 70% de mujeres y 30% de hombres todos trabajando actualmente. El giro de la empresa en la que trabajan los encuestados es un 30% en empresas comerciales, 67% en despachos contables y 3% en el gobierno. El ingreso a su trabajo profesional fue en un 30% por convocatorias, un 53% por recomendación y 17% por relación personal o familiar.

Figura 1: ¿Al Ingresar a Su Puesto de Trabajo Se Solicitaba Ser de Un Sexo Determinado?

Al ingresar al puesto de trabajo al 87% no se le solicitó ser de un sexo en particular y en un 13% si fue solicitado un sexo específico.

En el 90% de los lugares de trabajo de los encuestados al momento de la contratación no se les solicita a las mujeres que no se embaracen en un determinado tiempo, solo en un 10% ponen esta condición. Y las mujeres y hombres que tienen hijos consideran que durante la entrevista de trabajo no afecta en la contratación el hecho de ser padres. En 41% de los lugares de trabajo de los encuestados hay equilibrio entre hombres y mujeres, en el 42% hay mayoría de mujeres y en el 17% existe mayoría de hombres.

Figura 2: ¿Los Horarios Son Iguales Para Ambos Sexos, Cuando Se Realiza El Mismo Trabajo?

Los horarios en el 95% de los casos son iguales para ambos sexos cuando se realiza el mismo trabajo, solo en un 5% hay diferencia de horarios por acuerdos en la contratación.

Figura 3: ¿Al Cubrir Horas Extras Es Indistinto el Sexo?

Al ser necesario cubrir horas extras en el 86% de los casos se les solicita indistintamente sin tomar en cuenta el sexo. Solo en un 13% eligen preferentemente a los hombres y un 1% preferentemente a las mujeres.

Figura 4: ¿Los Salarios Son Iguales Para Ambos Sexos Cuando Se Realiza el Mismo Trabajo?

Los salarios en un 93% son iguales para ambos sexos cuando se realiza el mismo trabajo y en un 7% hay diferencia, esta misma proporción se presenta con respecto a las prestaciones. Sin que en ningún de los dos casos se dé una razón específica para esta diferencia.

En cuanto a si existe alguna diferencia en el trato que reciben como trabajadores los hombres y las mujeres el 80% considera que no y sólo un 20% opina que sí.

Figura 5: ¿Al Seleccionar un Trabajador Para Ascender Es Indistinto el Sexo?

En el 89% de los casos al seleccionar un trabajador para ascender es indistinto el sexo, ambos cuentan con la misma oportunidad, un 6% consideran que eligen preferentemente hombres y un 5% que preferentemente mujeres.

Los niveles superiores lo ocupan en un 57% de manera indistinta hombres y mujeres; en un 28% lo ocupan preferentemente hombres y en un 15% preferentemente mujeres. Un 84% de los encuestados considera que la mujer no tiene que esforzarse más que un hombre por demostrar su capacidad profesional en el trabajo y un 16% considera que sí. En general un 82% de los encuestados considera que en el campo laboral de los Licenciados en Contaduría existe equidad de género y sólo un 18% considera que no lo hay.

RESULTADOS

Actualmente la desigualdad de géneros es una problemática que los gobiernos y organismos nacionales e internacionales tratan de erradicar, pero si bien es cierto que se han tenido grandes avances en el tema, también es cierto que cada día surgen nuevos sectores donde la desigualdad de género, de etnia y de clase social obstaculizan el crecimiento económico y el desarrollo social y humano. Estudios indican que las empresas con mayor diversidad de género alcanzan más altos niveles de rentabilidad. La igualdad de oportunidades entre hombres y mujeres es imperativa por razones de justicia y equidad, ya que además de haberse convertido en una condición de progreso económico, es una necesidad para las empresas que quieran competir eficazmente por atraer y retener talento en sus filas.

La matrícula en licenciatura del país actualmente se distribuye en 54% para los hombres y 46% para las mujeres, mostrando en el sector femenino un incremento significativo respecto a los últimos diez años. La información revela que las mujeres optan por las áreas enfocadas en impartir educación, así como en ciencias sociales y administrativas. Y es precisamente en esta Área de Ciencias Administrativas en donde de acuerdo a los resultados de este trabajo se observa que hay mayor igualdad en el desempeño profesional de hombres y mujeres, lo cual no ocurre en otras áreas profesionales. En la actualidad, organismos gubernamentales han diseñado programas para una mayor integración de la mujer, reconociendo que no solo tiene necesidades económicas, sino que también aspira a su realización profesional y personal y puesto que las mujeres juegan un rol muy importante en el desarrollo de las familias y la sociedad, y desde siempre se han entregado al bienestar de los suyos, es momento de impulsar su fuerza, su espíritu y su entusiasmo para el logro de sus metas.

RESUMEN

Considerando que el municipio es el órgano de gobierno que por estar en contacto directo con las necesidades sociales, puede enfrentar de forma más rápida las carencias de la misma, y por ende, contribuir de forma más rápida a mejorar la calidad de vida de su comunidades es que considero muy importante fortalecer las capacidades institucionales de los municipios, con el propósito de que estos se consoliden como actores estratégicos del pacto federal, puesto que es el orden de gobierno con mayor proximidad a la sociedad, en el que se toman las decisiones más trascendentales para la convivencia y el desarrollo humano, y en donde se afirma la representatividad directa entre ciudadanos e instituciones. De acuerdo a lo mencionado con anterioridad, resulta de gran importancia la realización de este trabajo de investigación en el que después de hacer un análisis financiero de algunos municipios y considerando determinados factores como los recursos públicos que reciben, se puede determinar porque algunos son más eficientes que otros así como que les permite prestar servicios públicos de calidad, además de procurar un mejor nivel de vida a la comunidad, y teniendo esta información hacer una propuesta de modelo del municipio eficiente.

PALABRAS CLAVE: Municipio, Eficiencia, Gobierno, Recursos, Ciudadanía

OPTIMIZATION OF PUBLIC RESOURCES AS A MEASURE OF EFFICIENCY IN MUNICIPAL GOVERNMENT

ABSTRAC

Considering that the municipality is the governing body that by being in direct contact with the social needs may face more quickly shortcomings of it, and therefore contribute more quickly to improve the quality of life in their communities. I consider it very important to strengthen the institutional capacities of municipalities, in order that these are consolidated as strategic actors of the federal pact, because it is the order of government closest approach to society, in which the most significant for coexistence and human development decisions are made, and where direct representation between citizens and institutions stated. According to the aforementioned is of great importance to carry out this research in which, after making a financial analysis of some municipalities and considering certain factors such as public resources they receive, it can determine why some are more efficient than others and allowing them to provide quality public services, in addition to seek a better standard of living for the community, and taking this information to do a proposed model of efficient municipality.

INTRODUCCIÓN

El progreso y desarrollo de una población depende de forma determinante de los proyectos y obras que se seleccionen para realizar en los programas anuales de inversión, en la administración pública, la primera actividad a realizar para contribuir al progreso de una comunidad, es la detección de necesidades para poder hacer una selección de las obras y acciones básicas y prioritarias que más se requieran y que puedan servir de detonante del desarrollo social. Esta detección es determinante en la previsión y programación de las obras y acciones en un periodo determinado, específicas para hacer frente a las necesidades concretas y objetivas para detonar el proceso de superación de las debilidades estructurales en que se fincan las carencias detectadas.

A partir del año 1997, con el propósito de contribuir el gobierno federal de contribuir a la autonomía y la descentralización, la Secretaría de Hacienda tomó la decisión de crear el ramo 33 y enviar directamente a los estados y los municipios recursos para aplicar en el desarrollo de estos. Por lo que se refiere a los municipios, a partir de esta fecha, ellos pueden de forma directa disponer de recursos federales, respetando la normatividad correspondiente, pero sin tener la dependencia del gobierno estatal.

Desde entonces y por primera vez desde que fueron creados los municipios, tienen acceso a recursos públicos y pueden disponer de ellos para mejorar la infraestructura social de su comunidad, conforme a los lineamientos que el propio ramo establece.

A partir de esta fecha, de acuerdo a la información estadística existente, se puede observar como en los municipios de todo el país se ha incrementado de forma importante el número de calles pavimentadas, de alumbrado público, de servicios de educación y salud, de equipamiento público, lo cual significa mejorar las condiciones de vida de la colectividad, ya que es el municipio el orden de gobierno que de una forma más rápida puede influir en el desarrollo de su ciudad. El porcentaje destinado al ramo 33 es aproximadamente un 13% del presupuesto público federal. Hasta antes de esta decisión, las obras que se realizaban en un municipio dependían de las relaciones del presidente municipal con el gobernador, o del interés que pudiera tener éste en el poblado de la ciudad correspondiente.

Lamentablemente son los gobiernos municipales quienes tienen más limitaciones en el desempeño de sus funciones públicas, en virtud de la misma situación económica presupuestal que hasta hace una década tenían, sumado al bajo grado de desarrollo intelectual y profesional que existe en las poblaciones pequeñas. Según el Centro de Desarrollo Municipal de la Secretaría de Gobernación existen 2438 municipios, de los cuales más del 80% tienen una población de menos de 50,000 habitantes. Estos municipios a partir de la alternativa que el ramo 33 les dio a partir de 1997, apenas se encuentran iniciando su modernización. Por todo lo anteriores es muy importante que los municipios optimicen la utilización de los recursos públicos que recibe, tanto de la Federación, de los Estados, así como los recursos propios que obtiene.

REVISIÓN DE LITERATURA

El Municipio

Un municipio es una entidad administrativa que puede agrupar una sola localidad o varias, que puede hacer referencia a una ciudad, pueblo o aldea. El municipio está compuesto por un territorio claramente definido por un término municipal de límites fijados (aunque a veces no es continuo territorialmente, pudiendo extenderse fuera de sus límites y presentando enclaves de otros municipios) y la población que lo habita regulada jurídicamente por instrumentos estadísticos como el padrón municipal y mecanismos que otorgan derechos, como el vecindamiento o vecindad legal, que sólo considera vecino al habitante que cumple determinadas características origen o antigüedad y no al mero residente (Guillén López, Tonatiuh / Roja Calzada, Pablo, Coordinadores. Gobernar con calidad y para el desarrollo. Experiencias de innovación en los municipios mexicanos. México. Editorial CIDE. 2005).

En México, el municipio es una de las dos formas de división territorial de segundo nivel, siendo la otra forma las delegaciones, exclusiva del Distrito Federal. Cada uno de los 31 estados de México está dividido en municipios, mientras que el Distrito Federal en delegaciones. El número de municipios en cada estado varía, de 5 en los estados tanto de Baja California como de Baja California Sur, hasta de 570 en Oaxaca. En total, México se divide en 2,4571 municipios y 16 delegaciones del Distrito Federal.

Antecedentes Históricos del Municipio

En la Antigua Roma, un municipium (palabra latina que origina la castellana “municipio”) era una ciudad libre que se gobernaba por sus propias leyes, aunque sus habitantes disfrutaban de muy distintas situaciones jurídicas, pues obtenían sus derechos no por su residencia en ella, sino por la posesión de la ciudadanía romana, la condición de libertad o esclavitud, etc. En Francia el municipio equivale a la “Comuna” (división administrativa y territorial, dotada de sus propias autoridades administrativas o ejecutivas encabezadas por el alcalde “Maire” y por el órgano deliberativo denominado “Consejo Municipal”). En México entre los aztecas “Los Capullis” eran parte de una tribu a su vez organizada políticamente por el derecho Consuetudinario mismos que los estructuró sobre la base del respeto a su autonomía interior y a su actividad económica; el gobierno municipal de los Calpullis demás designaba a sus propios funcionarios ejecutivos que tenían diferentes atribuciones públicas de carácter administrativo y judicial. La Constitución de 1824 estableció las bases de la libertad de los estados para que organizaran su régimen interior. Durante el Segundo Imperio Mexicano, se utilizó el Departamento como división territorial, sustituyéndose al estado. Finalmente en la Constitución de 1917, Venustiano Carranza reforma el artículo 115 estableciendo que la base de la división territorial y de la organización política administrativa de los estados de la federación es el municipio libre. En 1983, se modificó el artículo 115 para otorgar al municipio la capacidad jurídica de formular el presupuesto y recaudar ciertos impuestos. La Constitución de 1857 no hizo ninguna referencia al Régimen Municipal, y no se hizo ninguna reforma con respecto a este (Instituto Nacional para el Federalismo y el Desarrollo Municipal, INAFED. www.inafed.gob.mx)

Elementos del Municipio

Los elementos del municipio son: Territorio. Es un espacio físico donde está establecida la población del municipio, y es donde el mismo municipio ejerce su Imperium y tiene su Dominium. El Imperium, poder público traducido en actos de autoridad de carácter jurisdiccional, administrativo y legislativo. Población. Es la colectividad humana, que permanentemente se asienta en el territorio del municipio, hallándose vinculados al Estado y a la Federación como nacionales o extranjeros. Orden Jurídico. La estructura normativa interna de un municipio, esta basada en el bando municipal de policía y Buen Gobierno y reglamentos, que tienen su fundamento el orden ascendente en la Ley Orgánica Municipal, La Constitución local y, en la Cúspide, La Constitución Política de los Estados Unidos Mexicanos. Poder Público. Es la actividad que se desarrolla dentro del territorio municipal, es el poder de imperio que se traduce en actos de autoridad legislativos, administrativos, jurisdiccionales, cuyo conjunto integra las diferentes funciones públicas, debiendo observar en estos actos los principios de legalidad y constitucionalidad del artículo 16 de la Constitución federal.

Base Jurídica fundamental del Municipio

La base jurídica sobre la que se sustenta la existencia del municipio está contemplada en el artículo 115 de la Constitución Política de los Estados Unidos Mexicanos, que a la letra dice: “Los Estados adoptaran, para su régimen interior la forma de gobierno republicano, representativo, popular, teniendo como base de su división territorial y de su organización política y administrativa el municipio libre conforme a las bases siguientes Cada Municipio será administrado por un ayuntamiento de de elección popular directa y no habrá ninguna autoridad intermedia entre este y el gobierno del Estado. Los municipios estarán investidos de

personalidad jurídica y manejaran su patrimonio conforme a la ley. Los municipios con el concurso de los Estados, cuando así fuese necesario y lo determinen las Leyes tendrán a su cargo los siguientes servicios públicos:

Agua potable y alcantarillado
Alumbrado público
Limpieza
Mercados y Centrales de Abasto
Panteones
Rastro
Calles, parques y jardines
Seguridad pública y tránsito

Las demás que las legislaturas locales determinen según las condiciones territoriales y socioeconómicas de los municipios, así como su capacidad administrativa y financiera. IV.- Los municipios administraran libremente su hacienda, la cual se formará de los rendimientos de los bienes que le pertenezcan, así como de las contribuciones y otros ingresos que las legislaturas establezcan a su favor (Constitución Política de los Estados Unidos Mexicanos Montaña García, Agustín, Administración Municipal y Delegacional. México. Publicaciones Administrativas y Contables S.A. de C.V. 2005.)

Administración Municipal

Cada municipio es administrado por un Ayuntamiento de elección popular y no hay autoridad entre este y el Gobierno del estado. Su razón de ser es la necesidad revolucionaria de acabar con los cacicazgos, pues antes de la Revolución, Díaz reformó la Constitución de 1857 para encuadrar a los caciques bajo la figura del 'Jefe Político'. El municipio es la célula del territorio, organización política y administrativa de las Entidades Federativas; el Municipio es libre para administrar su hacienda pública, para gobernarse, elegir sus autoridades, así como para dictar su normatividad observando respeto y congruencia con las esferas jurídicas tanto federal como estatal, con fundamento en el artículo 115 de la Constitución Política de los Estados Unidos Mexicanos, el cual establece los siguientes lineamientos de su organización y funcionamiento: El municipio es una entidad descentralizada, que cuenta con una personalidad jurídica y patrimonio propio. Son parte del municipio las congregaciones, pueblos, aldeas, ejidos y ranchos que se encuentran dentro del territorio municipal. Uno de estos pueblos o ciudades funcionan como "Cabecera Municipal", desde donde el presidente gobierna. El ayuntamiento está integrado por: Presidente Municipal, Síndicos Municipales, Regidores (Montaña García, Agustín, Administración Municipal y Delegacional. México. Publicaciones Administrativas y Contables S.A. de C.V. 2005.)

Los cuales son electos y según prevea la Ley Orgánica Municipal, su función puede variar de un estado o de un municipio a otro. Además por designación y aprobados por el cabildo municipal: Secretario General Tesorero Municipal Oficial Mayor

Fuentes de Ingreso de los Municipios

Las fuentes de ingreso de los municipios son:

Las contribuciones que las leyes de los Estados establecen en materia de propiedad inmobiliaria.
Las participaciones Federales, que se componen de:

Ramo 33. Recursos que envía la Federación al Municipio con el fin de que se destinen a un municipio específico, y a un rubro o proyecto concreto del gasto municipal.

Participaciones Federales destinadas a los Estados, en la proporción que determinen las leyes locales.
Ingresos de Servicios Públicos.

Además, los municipios pueden contraer préstamos con la banca de desarrollo, y con la banca comercial, pero en éste último caso, sólo cuando exista fuente de repago (no se puede utilizar para gasto corriente.)

METODOLOGÍA

La metodología que se seguirá en este trabajo de investigación será la siguiente:

Se elaborará el apartado metodológico del trabajo.

Se hará una investigación documental, haciendo una selección de la literatura que se tenga disponible sobre el tema, con la cual se elaborará un marco teórico donde se estudiarán a diferentes autores, así como a las diferentes teorías relacionadas con cada tema.

Se establecerá el marco referencial situando el problema de investigación en la región correspondiente.

Se hace un análisis financiero de la muestra de 10 Ayuntamientos

Se realizará una interpretación del análisis realizado

Se obtendrán resultados del análisis e interpretación realizados

Se comprobará o no la hipótesis planteada

Se propondrá un modelo de ayuntamiento eficiente

Tipo de Investigación

Descriptiva.- Se describen determinadas situaciones y eventos, así como el comportamiento de ciertos fenómenos.

Explicativa.- Está dirigida a responder las causas de los eventos físicos o sociales, explica por qué ocurre un fenómeno y en qué condiciones se da este.

Transversal.- Las variables se medirán una sola vez.

Hipótesis Central: La modernización de la Administración Pública es determinante para que un Ayuntamiento sea eficiente en la utilización de los recursos públicos.

Hipótesis Complementarias: La profesionalización de los servidores públicos contribuye a que un Ayuntamiento sea eficiente La rendición de cuentas es un mecanismo que favorece la eficiencia en la Administración Pública municipal El servicio profesional de carrera es un elemento importante en lograr que un municipio sea eficiente La implementación de Sistemas de Calidad

Variable Dependiente

La Eficiencia de la Administración pública municipal

Variables Independientes

Profesionalización de los servidores públicos

La rendición de cuentas

Servicio profesional de carrera

Implementación de Sistemas de calidad

Definición del Problema de Investigación: Las características de funcionamiento de las administraciones municipales de México son muy diversas, pudiendo mencionarse, sin embargo, que una gran mayoría de las 2,445 (Instituto Nacional para el Federalismo y el Desarrollo Municipal, INAFED. www.inafed.gob.mx) que existen a nivel nacional, funcionan de manera empírica y con niveles bajísimos de eficiencia y productividad, en ambientes en los que prevalece la corrupción, el nepotismo, la complicidad, la ineptitud, negligencia y los intereses partidistas y personales sobre los intereses de la colectividad. Hasta el año 1997, las administraciones municipales eran consideradas “el plato de segunda mesa” en los ámbitos de la política nacional; pero a partir del año 1998, fecha en que los municipios empiezan a recibir de manera directa recursos federales para aplicarlos en obras y acciones que ellos mismos determinan, el atractivo por las mismas cambió por completo. La aplicación de esta medida federal para promover el beneficio y desarrollo municipal, de 17 años a la fecha, ha generado que gobiernos municipales que no contaban con los bienes materiales, recursos humanos y tecnológicos adecuados, de improviso se reciban recursos federales y que en el proceso de aplicación de los mismos, no logren la optimización esperada debido a múltiples razones, que pueden ser desde la falta de capacidad de gestión, hasta la desviación de los mismos por razones personales

RESULTADOS

En el análisis que se hizo de 10 municipios del país, nueve de ellos capitales de estado, y otro que por su tamaño se consideró conveniente incorporar a la muestra para conocer alguna posible coincidencia en los montos de los recursos municipales y federales que captan, se obtuvieron los siguientes resultados: Considerando los municipios que obtienen el mayor y menor % de ingresos se obtuvieron los siguientes resultados: Ingresos municipales (IM), Participaciones (P) y Aportaciones federales y otros ingresos (A): IM 18%-47% (promedio 32.5%); P 24%-64% (Promedio 44%); A 14%-56% (promedio 35%). El monto de las participaciones es el más elevado en la muestra elegida, mostrándose mayor consistencia y siendo el promedio resultado de un rango de mínimos y máximos, León es el municipio con más participaciones (64%) y San Luis Potosí con el menor (24%). Posteriormente son los ingresos municipales los que muestran un promedio más elevado, siendo Querétaro quien tiene más ingresos municipales (47%) y San Luis Potosí menos (18%). Por último los ingresos provenientes de las aportaciones y otros ingresos, son los que muestran menor consistencia entre los municipios elegidos, lo cual es entendible ya que depende de lo que reciben del ramo 033, más los convenios y proyectos que presenten a la Federación para obtener recursos, así como de los ingresos financieros producto de pasivos. San Luis Potosí es quien tiene el monto mayor (56%) y León el menor (14%).

De los ingresos municipales que reciben los 10 municipios, el porcentaje que representan los impuestos, dado que es el principal ingreso de las haciendas municipales: 35%-70% (promedio 52.5%). Los impuestos representan en promedio un 52.5% de los ingresos municipales de las municipios elegidos, destacándose el caso de León que es el 70%, y de Querétaro y Aguascalientes que es el 35%. De los ingresos por impuestos, que porcentaje representa el impuesto predial, ya que es el principal impuesto municipal: 37%-98% (promedio 67.5%). Los ingresos por el impuesto predial significan el 67.5% de los impuestos municipales, destacándose Guadalajara en donde representa el 98%, y en Puebla solo el 37%.

Con respecto a la mezcla de ingresos municipales y participaciones para cubrir los gastos de operación municipales : IM 26%-57% (promedio 41.5%), P 43%-74% (promedio 58.5%). De los municipios elegidos, sus ingresos municipales, en promedio cubren el 41.5% de sus gastos de operación, destacándose Monterrey que cubre con ellos el 57% y León que es quién cubre el monto menor, solo el 26%. Por lo que se refiere a las participaciones, los municipios destinan sus participaciones para cubrir en promedio el 58.5%, destacándose León que utiliza el 74% y Monterrey que solo destina 43%.

Esta información es determinante para conocer la capacidad económica de los municipios para poder atender sus compromisos derivados de los servicios públicos que están obligados a prestar a la sociedad, los cuales deberían de atenderse con los ingresos municipales en primera instancia, teniendo a los ingresos federales como apoyo solamente, situación que como se aprecia, no es así, ya que si no contaran con el apoyo federal, la mayoría de los municipios de la muestra, no estarían en posibilidad de cumplir, destacándose Monterrey como el que tiene más capacidad económica y eficiencia, y León como el que tiene más dependencia de los ingresos federales para poder cumplir con sus obligaciones municipales.

Los ingresos municipales y las participaciones se aplican en la siguiente proporción a los gastos de operación: servicios personales 26%-69%(promedio 47.5%); materiales y suministros 2.5%-11%(promedio 6.75%); servicios generales 10%-28%(promedio 19%). En promedio, en un 47.5% se aplican para cubrir los servicios personales, en un 6.5% para cubrir materiales y suministros y en 19% para servicios generales. Los gastos de operación están integrados de la siguiente forma: sueldos y salarios 54%-72%(promedio 63%); materiales y suministros 5%-10%(promedio 7.5%); servicios generales 20%-39%(promedio 29.5%). El mayor monto de los gastos de operación corresponde a los sueldos y salarios, siendo el promedio de un 63% del total de gastos, siendo Puebla el que tiene el porcentaje menor, un 54%, y Aguascalientes y Xalapa el mayor, un 72%.

Para los materiales y suministros representan en promedio un 7.5%, siendo Xalapa el que tiene el menor porcentaje, un 5%, y Monterrey en que tiene el mayor, un 10%. Los servicios generales ocupan en promedio 29.5% del total de gastos, siendo León el que destina menos a este rubro, un 20%, y Puebla el que destina el mayor porcentaje, un 39%. Los activos de los Ayuntamientos se encuentran compuestos de la siguiente forma: Activo Circulante 4%-16%(promedio 10%); Activo Fijo 84%-96% (promedio 90%). Los activos circulantes en promedio representan el 10% de los activos, siendo el caso menor el de Guadalajara, con un 4%, y el mayor el de Hermosillo con un 16%. El caso de San Luis Potosí al parecer es muy especial ya que aparece con un 33% del total de los activos, lo cual no es lo normal. Los activos fijos en promedio son el 90% de los activos, correspondiendo a Hermosillo el menor con el 84%, y el mayor a Monterrey y Aguascalientes con el 94%. Es muy conveniente señalar que los activos fijos representan toda la infraestructura municipal del Ayuntamiento, misma que se va construyendo anualmente con los recursos públicos de los contribuyentes, por lo tanto cuanto mayor sean estos, significa que los gobiernos municipales han ido creando y manteniendo una infraestructura pública, como calles y drenajes, escuelas, parque y jardines, unidades deportivas, puentes y camellones, que deben de redundar en mejores servicios para la ciudadanía y por consecuencia deberán de tener una mejor calidad de vida. Por lo que anualmente, el porcentaje del activo fijo debería de ir aumentando.

El caso de San Luis Potosí con un 67% del total de los activos, también significa una situación especial, poco normal en los municipios. Composición del pasivo total: pasivo circulante 3%- 71% (promedio 35%). pasivo fijo 29%- 97%(promedio 63%) . El promedio de los municipios mantienen un 35% de pasivos circulantes, siendo Mérida el que maneja menos con 3% y Xalapa el que más con un 71%. Los pasivos fijos en promedio representan un 63% del total, siendo Xalapa el que maneja menos con un 29% y Mérida el más con un 97%. Esta mezcla de pasivos circulantes y fijos siempre estará condicionada por mezcla de los activos circulantes y fijos del municipio. Composición de los pasivos y patrimonio para el financiamiento de los activos: pasivos 3%-47%(promedio 25%). Patrimonio 53%-97%(promedio 75%). El promedio de pasivos para financiar activos es del 25%, siendo Xalapa el que menos pasivo utiliza con un 3% y Hermosillo el que más con un 47%. Fuera de este rango se encuentra Guadalajara con un 63% y Mérida con un 83%, que se salen de lo tradicionalmente aceptado en este concepto. Por lo que se refiere al financiamiento de los activos con recursos propios, el promedio es del 75%, siendo Hermosillo el que menos tiene, un 53% y Xalapa el que más con un 97%. Se salen de este rango Guadalajara con un 38% y Mérida con solo un 17%. El monto de recursos municipales que recaudan por habitante es el siguiente:

Querétaro \$ 1,900.-; Monterrey \$ 1,415.-; Guadalajara \$ 1,365.-; Hermosillo \$ 1,218.-; Aguascalientes \$ 1,120.-; Puebla \$ 1,002.-; San Luis Potosí \$ 904.-; Mérida \$ 777.-; León \$ 719.-; Xalapa \$ 474.-

El monto de recursos federales que reciben por habitante es el siguiente: San Luis Potosí \$ 3,988.-; Aguascalientes \$ 2,728.-; Guadalajara \$ 2,706.-; Monterrey \$ 2,353.-; Querétaro \$ 2,144.-; León \$ 2,072.-; Mérida \$ 2,068.-; Xalapa \$ 1,974.-; Hermosillo \$ 1,816.-; Puebla \$ 1,659.- El monto total de recursos que recaudan y reciben por habitante es el siguiente: San Luis Potosí \$ 4,892.-; Guadalajara \$ 4,071.-; Querétaro \$ 4,044.-; Aguascalientes \$ 3,848.-; Monterrey \$ 3,768.-; Hermosillo \$ 3,034.-; Mérida \$ 2,845.-; León \$ 2,791.-; Puebla \$ 2,661.-; Xalapa \$ 2,451.- Los municipios más eficientes en relación a lo que gastan en prestar sus servicios municipales por habitante, sin considerar la calidad de estos, son: Aguascalientes \$1,118.-; Xalapa \$ 1,420.-; Puebla \$ 1,463.-; León \$ 1,477.-; Mérida \$ 1,555.-; San Luis Potosí \$ 1,571.-; Hermosillo \$ 2,164.-; Guadalajara \$ 2,615.-; Monterrey \$ 2,719.-; Querétaro \$ 2,726.- Los municipios que más recursos destinan a la obra pública por habitante son: San Luis Potosí \$ 2,521.-; León \$ 1,423.- Xalapa \$ 861.-; Querétaro \$ 542.-; Hermosillo \$ 540.-; Aguascalientes \$ 491.-; Mérida \$ 457.-. La información de los estados de resultados de Guadalajara, Monterrey y Puebla no muestran la cantidad destinada a obra pública.

CONCLUSIONES

Los Ayuntamientos tienen la facultad de administrar libremente su hacienda, en base a la potestad consagrada en el artículo 115 fracción IV de la Constitución Política de los Estados Unidos Mexicanos, mismo que establece que recaudarán y administrarán de forma directa y libre los recursos públicos provenientes de los impuestos, derechos, productos, aprovechamientos y otros ingresos municipales. Por lo que se refiere a las participaciones y aportaciones federales, su aplicación estará sujeta a las diversas disposiciones legales federales correspondientes. Con los recursos que los Ayuntamientos obtienen de estas dos grandes fuentes, los ingresos municipales y los recursos federales, tienen la obligación de destinarlos a proporcionar a la ciudadanía de su municipio los diversos servicios municipales que la Ley Orgánica del Municipio Libre le faculta y obliga, y a la ejecución de las diversas obras que se consideren prioritarias para proporcionarles una mejor calidad de vida en los diversos rubros, como drenaje, pavimentación de calles y banquetas, alumbrado, seguridad, tránsito y protección civil, entre otros. La legislación que regula la actividad de los Ayuntamientos, establece que la hacienda municipal debe de llevar a cabo la aplicación de los recursos públicos cumpliendo los objetivos de transparencia, rendición de cuentas, honestidad, equidad y eficiencia.

En un intento de poder hacer una clasificación general de la tarea a realizar por los Gobiernos Municipales en su función como ente público, se podría hacer una gran división en dos rubros básicos: los servicios públicos y la obra pública. Los servicios públicos son todos aquellos servicios que el Gobierno Municipal tiene que proporcionar a sus gobernados como limpia pública, alumbrado, agua potable, seguridad, tránsito, registro civil. La obra pública consiste en toda la obra que el Gobierno Municipal tiene que realizar para ir mejorando la calidad de vida de la ciudadanía en materia de pavimentación de calles y banquetas, construcción de drenajes y alcantarillado, alumbrado, edificios públicos como escuelas, parques y unidades deportivas, y en general de toda la infraestructura pública de la comunidad.

La asignación de los recursos financieros a estos dos grandes rubros de necesidades, los servicios públicos y la obra pública, se realiza generalmente de la siguiente forma: los ingresos municipales y los recursos federales del ramo 28 se utilizan para cubrir todo el gasto en que incurre el aparato burocrático para prestar los diversos servicios municipales mencionados. Este gasto se clasifica en servicios personales, materiales y suministros, y servicios generales. La obra pública se realiza con el excedente que existiera de los ingresos municipales y participaciones federales, y con las aportaciones federales, siendo la principal la proveniente del ramo 033, recurso que entró en vigor para apoyo de los municipios en el año 1998, y que le vino a ser de gran ayuda a los Ayuntamientos para poder ir mejorando la infraestructura pública

municipal. Por lo general, los municipios pequeños no tienen excedentes de los ingresos municipales y participaciones federales para destinar a obras, utilizando únicamente lo proveniente del ramo 033 para este fin. También existen recursos federales de otros fondos, a los que los municipios pueden acceder, para obras de pavimentación, comunicación, hidráulicas, de cultura, deportivas pero que requieren de la presentación completa de los proyectos correspondientes de las obras a realizar que requieren haber cumplido con una formalidad reglamentaria, misma que en muchas ocasiones es inaccesible para los municipios pequeños.

RESUMEN

El Servicio de Administración Tributaria (SAT) tratando constantemente de estar a la vanguardia en la automatización de sus operaciones, así como el cumplimiento de las obligaciones fiscales de los contribuyentes; a partir del 2004 y por medio de reformas fiscales al Código Fiscal de la Federación (CFF), introdujo la adición del capítulo II denominado “de los medios electrónicos”, por medio del cual en primera instancia, reconoció el poder autenticar con una firma electrónica avanzada (FIEL) de los contribuyentes y representantes legales, como si fuera firma autógrafa, dándole de esa manera toda la validez. Debido a todos estos cambios tecnológicos y a las nuevas disposiciones contenidas en las leyes que buscan aprovechar las Tecnologías de Información y la Comunicación (TIC) para modernizar la administración tributaria en México, el contador público necesita adquirir nuevas capacidades tecnológicas para desarrollar su trabajo. Este acercamiento al análisis de la temática se realizó a través de una investigación exploratoria y documental de la Contabilidad Electrónica en México y del uso de las Tecnologías de Información para el sistema tributario nacional, identificando las capacidades tecnológicas que deben poseer los contadores públicos para cumplir con las obligaciones fiscales.

PALABRAS CLAVE: Contabilidad Electrónica, Tecnologías de Información, Capacidades Tecnológicas

NEW TECHNOLOGICAL CAPABILITIES OF PUBLIC ACCOUNTANTS IN MEXICO

ABSTRACT

The Tax Administration Service (SAT) on continuously trying to stay ahead in automating their operations and seeking also the fulfillment of tax obligations of taxpayers; introduced from the year 2004 through fiscal reforms to the Tax Code of the Federation (CFF), the addition of Chapter II called "electronic media", whereby in the first instance, recognized the power authenticate a signature electronics (FIEL) of taxpayers and legal representatives, thereby giving any validity, as if handwritten signature. Because of all these technological changes and new provisions in the laws that want to leverage ICT to modernize tax administration in Mexico, the public accountant needs to acquire new technological capabilities to develop their work. This paper, through an exploratory research and documentary Accounting Electronics in Mexico and the use of Information Technology for the national tax system, technological capabilities that should be in public accountants to comply with tax obligations is determined.

INTRODUCCIÓN

La recaudación tributaria de México, se encuentra a cargo de la Secretaría de Hacienda y Crédito Público (SHCP), una secretaría de estado de la administración pública federal. La SHCP también tiene a su cargo la regulación y vigilancia de las instituciones bancarias y de valores, así como la administración financiera del gasto público del país. El día primero de julio de 1997 entró en vigor la Ley del Servicio de Administración Tributaria en México (Secretaría de Hacienda y Crédito Público, 2012, pág. 79). Con esta ley se crea el SAT como un órgano descentralizado de la SHCP. *“Tiene la responsabilidad de aplicar la legislación fiscal y aduanera, con el fin de que las personas físicas y morales contribuyan proporcional y equitativamente al gasto público; ... y de generar y proporcionar la información necesaria para el diseño y la evaluación de la política tributaria”* (Servicio de Administración Tributaria, 2014).

En los últimos años se han utilizado las TIC para apoyar la administración y servicios del gobierno federal, incluida la SHCP y el SAT. El SAT tiene oficinas en todo México, así como una oficina virtual que es su portal en internet en donde, aparte de contener información, brinda servicios en línea, con una tendencia a digitalizar varios de sus procesos de tributación. Tal modernización ha sido avalada por leyes que exigen a los contribuyentes a cumplir con sus obligaciones en los tiempos y formas requeridas por el SAT mismo. Entre las más importantes se encuentran las relativas a la Resolución Miscelánea Fiscal para 2015, publicadas en el Diario Oficial de la Federación (DOF).

METODOLOGÍA

La metodología de este trabajo es de tipo exploratorio ya que tiene el objetivo de profundizar en un tópico poco estudiado y novedoso, como es el caso de las nuevas capacidades tecnológicas que deben poseer los contadores públicos en México, impuestas por la modernización y nuevos servicios en línea del SAT, para cumplir con las obligaciones fiscales. Se desarrolló un análisis documental de la contabilidad electrónica y los servicios en línea implementados por el SAT. De ahí se determinaron las actividades que ahora deben realizar los contadores públicos, que involucran el uso de las TIC. Como último paso, a partir de dichas actividades se identifican las capacidades técnicas necesarias.

RESULTADOS

Como resultado del primer paso de la metodología, se encontró lo siguiente. El SAT reporta en su portal de internet, un total de 46,294,961 contribuyentes activos (Servicio de Administración Tributaria, 2015a), distribuidos de la siguiente forma: 16,816,102 personas físicas; 27,787,244 asalariados; 1,675,027 personas morales; y 17,180 grandes contribuyentes (Servicio de Administración Tributaria, 2015b). Los medios de envío utilizados por los contribuyentes en el mes de enero del 2015, para cumplir con sus obligaciones fiscales (Servicio de Administración Tributaria, 2015c), fueron los siguientes: de un total de 1,860, 922 declaraciones anuales recibidas: 1,195,701 se recibieron por ventanilla; 665,081 por internet; y 140 a través de documentos en papel.

La Tabla 1 sintetiza los conceptos y servicios implementados por el SAT utilizando las tecnologías de información, especialmente la internet como medio de interacción con los contribuyentes. Cada uno de los servicios anteriores, involucra algún tipo de conocimientos tecnológicos para llevarse a cabo. De acuerdo con el Diccionario de la Lengua Española, de la Real Academia Española (RAE, 2015), una capacidad es la *“aptitud, talento, cualidad que dispone a alguien para el buen ejercicio de algo”*.

Figura 1: Tendencias de los Medios Utilizados Por los Contribuyentes En Sus Declaraciones

Se consideraron cortes en el mes de enero desde el año 2010 hasta el 2015. La tendencia del uso de la ventanilla como medio para que los contribuyentes mexicanos cumplan con sus obligaciones fiscales, es positiva. Contrario a lo que se pensaría, el uso de Internet tiene una tendencia negativa. El uso de papel como medio para cumplir con obligaciones está desapareciendo. Fuente: Elaboración propia con datos obtenidos en el portal del SAT.

Tabla 1: Capacidades Tecnológicas Identificadas

Conceptos	Actividades	Capacidades
Contabilidad Electrónica	Registrar los movimientos contables	<ul style="list-style-type: none"> - Prender y apagar el equipo necesario (computadora, impresora, digitalizador, etc.) - Imprimir documentos - Acceder a internet - Utilizar un software de contabilidad - Instalar actualizaciones de software
	Enviar al SAT mensualmente el estado de la contabilidad	<ul style="list-style-type: none"> - Generación de archivos XML - Compresión de archivos ZIP - Añadir Firma Electrónica - Acceder a internet, al portal del SAT - Copiar archivos a una unidad de memoria USB - Instalar o actualizar la Máquina Virtual de Java

Dictámenes fiscales	Crear y entregar dictamen fiscal	<ul style="list-style-type: none"> - Acceder a internet - Bajar e instalar el software provisto por el SAT en su portal web - Revisar las características de la computadora para que funcione el programa - Utilizar la firma electrónica
Solicitudes de Devoluciones y Compensaciones	Tramitar solicitud de devaluación	<ul style="list-style-type: none"> - Acceder a internet - Usar la Firma Electrónica Avanzada - Subir documentos a internet - Llenar formulario electrónico - Digitalizar documentos - Imprimir desde internet - Guardar archivos en formato PDF
Timbrado de nómina	Generar CFDI y realizar timbrado	<ul style="list-style-type: none"> - Manejar software de contabilidad - Generar CFDI - Enviar correos electrónicos con archivos adjuntos - Copiar y recuperar archivos en diversas carpetas dentro de una computadora o red - Usar la Firma Electrónica Avanzada - Usar el sello digital proporcionado por el SAT

Las capacidades son las necesarias para poder llevar a cabo las actividades, las cuales a su vez son parte del trabajo implicado en el concepto o servicio. Así por ejemplo para el servicio de Firma Electrónica Avanzada, una actividad es utilizarla, para ello es necesario saber cómo copiar los archivos .key y .req asociados a la Firma.

Tabla 2: Clasificación de las Capacidades de Acuerdo a Su Nivel de Conocimiento Técnico En el Uso de la Computadora

Básicas	Intermedias	Avanzadas
<ul style="list-style-type: none"> - Prender y apagar el equipo necesario (computadora, impresora, digitalizador, etc.) - Imprimir documentos - Transferir archivos entre diferentes medios de almacenamiento digital - Copiar archivos con formato key y req a USB - Copiar archivos desde y hacia una unidad de memoria USB 	<ul style="list-style-type: none"> - Acceder a internet - Enviar correo electrónico con archivos adjuntos - Descargar archivos adjuntos de correos electrónicos - Subir archivos a servidores web - Buscar archivos en diferentes medios de almacenamiento digital - Imprimir archivos desde el navegador - Autenticarse en el sistema SAT - Llenar formularios web - Digitalizar documentos - Utilizar la firma electrónica avanzada provista por el SAT - Instalar o actualizar Silverlight - Instalar o actualizar Acrobat Reader - Realizar transferencias bancarias por internet - Desbloquear pantallas emergente en el navegador - Usar el sello digital del SAT 	<ul style="list-style-type: none"> - Utilizar un software de contabilidad - Instalar actualizaciones de software - Generar archivos PDF y XML - Compresión de archivos ZIP - Añadir Firma Electrónica - Actualizar Java - Incorporar el sello digital - Conectar a internet una computadora ya sea en forma alámbrica o inalámbrica - Imprimir archivos en formato PDF - Bajar e instalar programas del portal del SAT en internet - Encriptar información - Revisar las características técnicas de la computadora (hardware, software) - Manejar software de contabilidad - Generar CFDI

Una capacidad clasificada como Básica requiere pocos conocimientos en el manejo de la computadora, por ejemplo, prender y apagar una computadora o impresora es relativamente fácil. Las capacidades Intermedias requieren de conocimientos más técnicos de computación y las capacidades Avanzadas requieren de un amplio conocimiento en el manejo de la computadora y conocimientos de computación.

CONCLUSIONES

De acuerdo a la Figura 1, la tendencia en el uso de internet como el medio para que los contribuyentes cumplan sus obligaciones, es negativa. Esto se debe entre otras cosas, a que los contribuyentes o inclusive los propios contadores públicos no poseen las capacidades tecnológicas para interactuar con el sitio web del SAT. Otra causa es que la plataforma tecnológica aún no es capaz de soportar tantos usuarios al mismo tiempo. Entonces los contribuyentes se desilusionan y prefieren ir a ventanilla para hacer llegar su información fiscal al SAT. Los contribuyentes pueden cumplir sus obligaciones por sí mismos o contratando a un Contador Público. Los Contadores son los usuarios principales de estas nuevas formas de cumplir con el SAT. Sin embargo, no todos los Contadores Públicos pueden realizar todas las actividades por no poseer las capacidades tecnológicas suficientes. La Tabla 2 muestra un conjunto de capacidades tecnológicas que deberían poseer los Contadores Públicos. Dichas capacidades y actividades sirven para programar una capacitación tecnológica focalizada a las necesidades específicas de cada uno. Así mismo, dan un panorama de lo que los estudiantes de esa carrera deben dominar al concluir sus estudios e insertarse al medio laboral, desde el punto de vista de computación en el manejo de las computadoras.

LA ADMINISTRACIÓN PÚBLICA HACIA UN NUEVO MODELO DE ADMINISTRAR

Sergio Humberto Palomo Juárez, Universidad Autónoma de Zacatecas

Eduardo Alejandro Carmona, Universidad Autónoma de Zacatecas

Rubén Chávez Chairez, Universidad Autónoma de Zacatecas

RESUMEN

La administración pública como una derivación de la administración en general, y que refiere al conjunto de organizaciones que realizan función pública administrativa del Estado, donde el gobierno a través del cumplimiento de la norma y las mezclas de la aplicación de las leyes, que refieren al buen comportamiento de las acciones del gobierno, para la conservación y fomento de los intereses públicos y el beneficio de los ciudadanos de una comunidad en particular de un estado o nación.

PALABRAS CLAVE: Administración; Humanidad; Instituciones; Sociedad; Orden Social; Justicia Valores; Problemas Universales; Modelo Científico; Aplicación de Modelo

INTRODUCCIÓN

La administración entonces para la presente investigación, juega un papel determinante, ya que de la aplicación de una adecuada planeación, estaremos en condiciones de una cabal evaluación que permita reflejar el cumplimiento de metas y objetivos de una administración pública. Es así que el presente trabajo muestra un análisis, desde la perspectiva, de cómo hoy en día las organizaciones como entidades de administración, han sido superadas en concordancia con las necesidades que demandan sus habitantes. Es por ello que las naciones en general, requieren de un nuevo modelo de gobernanza, basado en la administración, donde existan la participación de mayores número de actores en la definición, para la construcción de una nueva sociedad mejor administrada, ordenada, productiva, y de un mejor entorno social, de valores, de principios, y de una mejor convivencia en general.

MÉTODO

La administración y sus derivaciones de la misma, tal el caso que orientamos hacia la administración pública, la hemos desarrollado bajo procedimiento metodológico que muestra un orden para su entendimiento. Es así que a partir de la investigación cuali—cuantitativa descriptiva; de lo general a lo particular, hemos abordado dicho documento, donde se estableció una estructura, que sitúa el trabajo con una introducción; un planteamiento, motivado en una necesidad; un objetivo alcanzable; su análisis de la problemática con opciones de solución; y sus conclusiones respectivas. Este análisis se realiza tomando los principios básicos de entendimiento de la administración, hasta depurar y sustentar la derivación de la administración de manera técnica y detallada para el mayor y mejor entendimiento de la problemática.

DESARROLLO

La Administración Pública, como una derivación de la Administración en general, se ha analizado desde la perspectiva de la administración—gobierno; desde la administración—universidad, como dos organismos públicos, éste último como una derivación del servicio público en el caso particular de Zacatecas, México, sin que ello pierda el contexto para su aplicación en modelos de gobierno y de universidades, tanto de México como de otros países.

RESULTADOS

Las sociedades son dinámicas y en consecuencia cambiantes, es así que la administración en general, a través de especializaciones con que cuentan, deben contar con modelos *ad-hoc* a los sistemas de administración, como el caso particular de la Administración Pública. Por ello se requiere hacer un viraje que permita llegar al mismo destino, logrando metas y objetivos más claros de mayor impacto. *El proceso de formulación de políticas puede entenderse como una sucesión de intercambios entre actores políticos que interactúan en escenarios formales e informales.* En consecuencia debe de ponerse en marcha la maquinaria que ha sido creada para ello, es decir, dentro de la estructura del poder a que corresponda (Legislativo, Ejecutivo o Judicial), en los tres poderes de la esfera de gobierno de nuestro país, donde no se cuenta, o no se ejerce con una política pública que aplique de manera sectorial o transversal, orientada a la solución de un problema de los gobernados; sino que más bien es a partir de un diagnóstico que carece de una metodología sólida, de un parámetro claro, o de una necesidad real general, que conlleve a la solución de un problema social.

México en nuestra opinión, cuenta con una estructura normativa, que permite el ejercicio de los gobiernos en la esfera y del nivel al que corresponda, sin embargo, existe una serie de variables inconsistentes donde la generación y formulación de presupuestos por programas, llevan una connotación de maquillaje que desvirtúa un empate o seguimiento entre plan—presupuesto—programa—producto. Por lo tanto, los recursos y la aplicación de los mismos, pareciera que sólo orientan, a una aplicación que la inercia de los grupos en el poder, de partidos, o de beneficiados indican con una justificación sin sustento, que carece de un diagnóstico y un fundamento legal. Para el caso de México *versus* países asiáticos por tener un referente, sus políticas públicas han ido obedeciendo a una planeación objetiva, medible fundamentada y con resultados, lo que ha permitido que entre dos y tres décadas han incrementado sustancialmente su Producto Interno Bruto (PIB), y demás indicadores macroeconómicos, que han permitido posicionarse como las economías más sólidas, ello sin perder de vista que les falta desarrollar otro tipo de políticas sociales para ser países desarrollados de manera integral.

Un nuevo modelo científico para la organización Política del Estado, como lo propone y menciona (Ponce de León: 2010), que surgió de la observación de los fenómenos socio—jurídicos; socio—políticos; político—administrativos; entre otros, que son y forman parte de acontecimientos presentes y pasados que han dado como resultado el modo actual de la convivencia humana, que necesita un cambio urgente en la organización política y una nueva explicación de lo que requieren las sociedades actuales del mundo. Por tanto, el actual sistema de organización no solo en México, sino en todo el mundo ya es obsoleto, pues en vez de lograr una tendencia hacia la armonía social y el bienestar de toda la sociedad en su conjunto, solo ha generado una serie de problemas político—sociales que están afectando y seguirán afectando a la humanidad mientras se siga en el rezago y no se modifique nuestro sistema político de organización del estado y también las Leyes; es por ello que (Ponce de León: 2010), utilizó principalmente el método científico; el método histórico sociológico; el método sistemático; el método dialéctico; principalmente.

Este nuevo modelo se apoya en los valores humanos, para la convivencia en sociedad, como: la justicia; la seguridad jurídica; el bien; la verdad; el amor; el orden; la paz; la moral, *versus* antivalores sociales con abundancia de valores, la injusticia con abundancia de justicia, el mal con la abundancia del bien, la guerra con abundancia de paz de igual manera nos explica el autor que los conceptos que se manejan del derecho así como su clasificación ya no son de utilidad, pues no engloban la totalidad de todo lo que comprende el Derecho. En el mismo autor propone como consecuencia, que se requiere de una nueva Organización Mundial de la Humanidad (OMH), que atienda el problema fundamental de las sociedades modernas. En el mismo contexto se maneja una serie de tendencias de cómo mejorar nuestra convivencia en sociedad, en función de las necesidades básicas, pero sobre todo con la forma de gobierno que rige a cada uno de los diferentes sistemas de gobierno en el mundo. Se maneja un concepto, que incluso lo tomamos de referenciar de la Organización de las Naciones Unidas (ONU), a través del Programa de las Naciones Unidas para el

Desarrollo (PNUD), me refiero al concepto de *Gobernanza*, que tiene que ver con lo antes planteado sobre el nuevo modelo científico, donde la gobernanza, se puede definir como la gobernabilidad democrática que se entiende como la capacidad de una sociedad de definir y establecer políticas y resolver sus conflictos de manera pacífica dentro de un orden jurídico vigente.

Esta es una condición necesaria de un Estado de Derecho junto con la independencia de los poderes y un sistema legal que garantice el goce de las libertades y derechos—civiles, sociales, políticos y culturales—de las personas. Para ello se requiere de instituciones basadas en los principios de equidad, libertad, participación en la toma de decisiones, rendición de cuentas y, promoviendo la inclusión de los sectores más vulnerables. Siendo entonces una variable fundamental, la participación de los ciudadanos, con un peso trascendente en la toma de decisiones para el ejercicio de la administración pública de un estado de gobierno, del país de que se trate. Desde el PNUD diferentes áreas de trabajo temáticas –gobernabilidad local, descentralización y reforma institucional y reformas del sector de justicia y seguridad– trabajan en la gestión de conocimiento promoviendo la participación con inclusión (en especial de mujeres, jóvenes, personas con discapacidades, personas de ascendencia africana y grupos indígenas) y el fortalecimiento de las instituciones de los gobiernos.

En la medida en que las condiciones de convivencia de las sociedades crecen, estas requieren de adecuar, actualizar reformar o adaptar sus normas o condiciones de convivencia, siendo entonces la normatividad una de ellas, ya que a partir de ello, el cumplimiento debe de ir más allá de un mero cumplimiento jurídico, sino que debe tener un impacto en los diferentes ámbitos del entorno donde se aplica. La gobernanza desde la visión de Aguilar Villanueva (2013), a manera que avanza el tiempo, el nivel de gobernar va rebasando a las situaciones, por lo que las necesidades crecen en todos sus ámbitos, es donde el gobierno debe sumar actores sociales comprometidos para lograr una verdadera gobernanza. Por lo tanto la Gobernanza, desde la visión de la administración pública, siendo entonces mayormente enfocada a México, sin que ello pierda de vista el contexto internacional, donde las sociedades tienen un comportamiento semejante o parecido al de nuestro país.

Por otra parte el enfoque metodológico ecléctico (Ecléctico, 2014), se orienta como lo señalan Spiller y Tommasi (2003), al mostrar un proceso, un análisis y seguimiento, es decir, una contrastación de la política pública de su origen a su aplicación y evaluación. Por consiguiente las políticas públicas conllevan a una interacción de diferentes agentes tanto políticos, sociales, y económicos, principalmente que permitan permear la necesidad de la población. Lo anterior, puede cambiar a partir del aglutinamiento de ideas basadas en datos duros que permitan consolidar la propuesta de políticas públicas, dentro de las estructuras de gobierno. Esto se puede llevar a cabo de generar confianza y seguridad, estos dos valores pueden darle *validez* y estabilidad al buen ejercicio de los gobiernos, donde se perciba se mida y emita resultados hacia el beneficio del interés público. Caso contrario, es necesario la revisión de las instituciones, de quién y cómo se ejerce el poder en dichas instituciones, de cómo se eligen, si realmente funciona el sistema electoral y de gobierno. Con todo ello, también podemos comenzar a enmendar tramos de la estructura, a partir de la depuración del propio gobierno. Pero también el involucramiento del sector social, así como del nivel de participación que lleve a una verdadera construcción, sin que vaya hacia un populismo de efecto multiplicador poco controlable.

Lo anteriormente expuesto, derivado de los principios de la administración universal, tal como el concepto de la administración en la sociedad moderna, de acuerdo como lo establece (Chiavenato; 2006), dice que: *La administración es un fenómeno universal en el mundo moderno. Cada organización debe alcanzar objetivos en un ambiente de competencia... debe tomar decisiones, coordinar múltiples actividades, dirigir personas, evaluar el desempeño con base en objetivos determinados, conseguir y asignar recursos...*(Chiavenato, Idalberto. (2006).

Por otra parte, tenemos que a poco más de una centuria de la publicación de *Principios de la administración científica* de Frederick Winslow Taylor (1915) que ha marcado el rumbo de la organización del trabajo en las organizaciones modernas por más de un siglo, su aportación sigue siendo base fundamental para la administración en general. En el mismo contexto y como una de las derivaciones de la administración universal, tenemos que la administración pública en México, la podemos remontar hasta la época Virreinal, ya que de esos años existen escritos que encaminan hacia lo que hoy es el ejercicio de ésta rama de la administración, sin considerarla para ese tiempo como la disciplina de la administración pública. Para el siglo XIX, de acuerdo con (Sánchez González; 2009), podemos decir que la administración pública en México, abarca tres periodos: independiente (1820-1857) donde a sus actores se les considera como la época de oro del estudio de la administración pública mexicana; reformista (1858-1875); y porfirista (1877-1910). Por otra parte encontramos a Lorenzo Zavala que en 1828 con sus ideas del aspirantismo y la empleomanía, que en 1837 cuestionaría José María Luis Mora; así como también Mariano Otero en 1847, en la búsqueda del funcionario idóneo, entre otras aportaciones de la época. La filosofía, es también considerada como una aportación a la administración, ya que desde la Antigüedad, la administración ha recibido gran influencia de la filosofía. El filósofo griego Sócrates (470 a.C.-399 a.C.) quien, en su discusión con Nicómaco, expone su punto de vista acerca de la administración como una habilidad personal separada del conocimiento técnico y de la experiencia: Platón (429 a.C.-347 a.C.), filósofo griego, discípulo de Sócrates, se preocupó profundamente por los problemas políticos y sociales inherentes al desarrollo social y cultural del pueblo griego. En *La República* expone su punto de vista sobre el estilo democrático de gobierno y sobre la administración de los negocios públicos. Aristóteles (384 a.C.-322 a.C.), otro filósofo griego, discípulo de Platón, del cual discrepó bastante, dio enorme impulso a la filosofía, así como a la cosmología, a la gnoseología, a la metafísica, a las ciencias naturales, abriendo las perspectivas del conocimiento humano de su época. Fue el creador de la lógica. En su libro *Política*, estudia la organización del Estado y distingue tres formas de administración pública: Monarquía; Aristocracia; y Democracia.

Pareciera entonces que las sociedades hoy en día se evalúan por nivel económico con que se cuenta respecta de sus iguales, e inclusive del resto del mundo. Vaya pues a implementar nuevas condiciones de convivencia, un nuevo modelo, cambiar de paradigma, donde los elementos implícitamente deben ser los mismos pero quizá con un orden y un papel diferente en las condiciones de su conformación. Para buscar un equilibrio entre las sociedades, estado—gobernados: gobernados—estado, es importante considerar los esfuerzos que se vienen implementando, por ejemplo dentro de indicadores macroeconómicos tenemos el PIB; sin embargo, no me muestra calidad de vida ni bienestar de los habitantes, pero tenemos el Índice de Desarrollo Humano (IDH), que emana de la ONU, el cual en su trilogía tiene como esencia el *nivel de educación; salud—esperanza de vida al nacer; riqueza—*. Lo que consideramos puntos de partida para un mejor equilibrio social. Así como el ejemplo anterior, existen puntos medulares que debemos ir atacando como la educación; la salud; la seguridad pública; entre otras necesidades básicas, por lo que en la administración pública requiere de una identificación de la problemática—programación—presupuesto, que ofrezca cobertura suficiente, mostrando además un crecimiento en cada una de las vertientes que se atiende, que refleje el bienestar y el buen gobierno de crecimiento productivo en todas las áreas y de manera equilibrada. Finalmente, la propuesta de cambio en la administración pública, no puede ser de ni radical, ni tampoco debe ser una utopía, sino debe ser de manera ordenada y programada. Las sociedades han sido rebasadas en su forma de gobernar, la dinámica del crecimiento en general tanto demográfico, económico de servicios, educativo, salud, entre otros más, requieren replantear sus esquemas de gobierno, para que conlleve a un interés común entre pueblo y gobierno, rescatando valores como la confianza entre los ciudadanos en pro del bien común. Todo ello con metodologías fundamentadas y acordadas, basadas en principios de administración pública y áreas relacionadas.

El enfoque de la gobernanza ha prestado mayor atención al gobierno de la sociedad mediante asociaciones y redes que a las implicaciones que la nueva o moderna gobernanza tiene para el gobierno interno de la administración pública. El problema de la crisis social, es a partir de la ineficiencia de la política económica de gobernanza, más allá del crecimiento económico, la gobernanza se centra en la eficiencia económica, el

proceso de gobernanza en gobernar seguirá desarrollándose con mayor fuerza, el gobierno y la administración viven un momento de inseguridad. La gobernanza debe tener un bajo costo social, y una rentabilidad de beneficio para los individuos en sus sociedades. Recordemos que los esquemas de gobierno en el mundo, se desprenden y aparecen después de la Revolución industrial en Europa, y de la Independencia de los Estados Unidos en América, por tanto, los sistemas de gobernanza en el mundo, requieren de refrescarse y actualizarse, con modelos de gobiernos participativos, eficaces y con gran sentido social, que permita construir sociedades integradas reales.

ASPECTOS CULTURALES, SOCIALES Y PROFESIONALES COMO DEDUCCIONES FISCALES EN MÉXICO

Orlando López Campos, Universidad Autónoma del Estado de Baja California
Cruz Elda Macías Terán, Universidad Autónoma del Estado de Baja California
Leonel Rosiles López, Universidad Autónoma del Estado de Baja California
Santiago Pérez Alcalá, Universidad Autónoma del Estado de Baja California

RESUMEN

En esta investigación se aborda el tema de las deducciones fiscales en México. Específicamente se estudian los aspectos culturales, sociales y profesionales, como deducciones fiscales. Los sujetos de estudio de la presente investigación, son las personas físicas con actividad empresarial y profesional. El propósito del estudio es dar a conocer opciones en cuanto a deducciones fiscales relacionadas con aspectos culturales, sociales y profesionales. La investigación es de corte cualitativo de tipo documental. Se consultaron leyes fiscales y literatura relacionada, además se realizaron entrevistas a contadores y fiscalistas. Para realizar esta investigación, se estudió una muestra no probabilística por conveniencia, seleccionando a dos directores de despachos contables y un gerente de departamento fiscal. Un hallazgo de la presente investigación es el hecho que existe consenso entre los entrevistados en cuanto a la importancia de estar actualizado, acudir a eventos sociales para conocer clientes potenciales, realizar actividades encaminadas al desarrollo profesional, estar física y mentalmente saludable para poder hacer el trabajo. Una conclusión del estudio fue que la erogación debe estar relacionada con la actividad generadora de ingreso; los contribuyentes deben realizar las erogaciones necesarias relacionadas con aspectos sociales, culturales y profesionales, y que deben reunirse los requisitos fiscales generales y particulares.

CULTURAL, SOCIAL, AND PROFESSIONAL EVENTS CONSIDERED AS TAX DEDUCTIONS IN MÉXICO

ABSTRACT

This research is about tax deductions in México. Specifically it focuses on how Cultural, Social and Professional Issues may be considered as tax deductions. The subjects of study in this research are Individuals with business and professional activities. This study aims to provide options for tax deductions related to Cultural, Social and Professional Issues. The study is qualitative in nature, it is a documentary research. Tax laws and related literature was consulted, in addition some interviews to accountants and tax specialists were conducted. To carry out this study, we studied a non-probability simple, selecting two directors of accounting firms and a tax department manager. A finding of this research is the fact that there is consensus among the interviewees in terms of the importance of being updated, attend social events to meet potential clients, activities aimed at professional development, and to be physically and mentally healthy to be able to do the job. A conclusion of the study was that the expenditure should be related to the income-generating activity; taxpayers must perform the necessary expenditures related to social, cultural and professional aspects, and that general and specific fiscal requirements should be met.

INTRODUCCIÓN

Es importante para conocer la historia de los impuestos, hablar de sus inicios y dar una breve reseña de cómo se originaron. Para ello es menester visualizar a la organización humana, donde se presentaron las primeras manifestaciones de agrupación de individuos, las cuales tenían como finalidad la supervivencia de los integrantes contra bestias u otras agrupaciones. De acuerdo con Ortega (2009) así es como aparecen las primeras manifestaciones de los tributos, antecedentes de las ahora llamadas contribuciones, en una relación de un hombre más fuerte que otro; el débil rendía tributo, pues de lo contrario su existencia se vería amenazada. El mismo autor comenta que en México antes de la conquista los pueblos sometidos y conquistados eran quienes pagaban cargas tributarias, las cuales consistían en entregar materiales como mantas de algodón, plumas de aves, entre otros. Los encargados de realizar esta recolección tributaria eran los *calpixquis* o primeros recaudadores.

Ortega (2009) señala que fue durante el gobierno de Benito Juárez cuando las oficinas de Hacienda llevaron con regularidad las cuentas y disposiciones del Ejecutivo y entró en funciones una maquinaria administrativa que tenía una dirección específica de contabilidad. Relata el mismo autor que Porfirio Díaz realizó cambios fiscales importantes, como el haber duplicado el Impuesto del Timbre, que se adhería a documentos oficiales, también gravó las medicinas y otros cien artículos más, inclusive realizó cobros de impuestos por anticipado. Otros impuestos vendrían más tarde, como el del uso de los ferrocarriles, por consumo de luz, exportación de petróleo, el especial sobre teléfono, timbre, botellas cerradas, así como el de avisos y anuncios, fueron implementados entre 1917 y 1935. En la actualidad se han modificado las leyes fiscales conforme a los principios de la Constitución y fue el 1ro de enero de 2014, cuando entró en vigor la Ley del Impuesto Sobre la Renta que rige a la fecha actual. Viendo toda esta retrospectiva, se hace conciencia que muchos años fueron necesarios para la estabilización económica y las finanzas públicas en México. El sistema tributario mexicano es mucho más que un conjunto de disposiciones fiscales; es parte de la historia de México, de sus costumbres, y permite avizorar una mejor calidad de vida a los mexicanos.

Tras años de trabajo en el ámbito fiscal, los autores de esta investigación pueden afirmar que los contribuyentes están desinformados sobre los impuestos y aún más a la hora de realizar los cálculos de impuestos, por lo cual terminan declarando incorrectamente y por ende pagando de más o de menos los impuestos correspondientes por la realización de sus actividades. Pero en este actuar de la vida están involucrados tanto el contribuyente como la autoridad fiscal, debido a la complejidad del Sistema Tributario Mexicano, por lo anterior, es necesario darle a conocer a las personas físicas, opciones en cuanto a deducciones fiscales con el objetivo de disminuir sus cargas tributarias y con la meta que de alguna manera le permitan disfrutar en su vida personal y lograr su desarrollo profesional. Sin estar fuera del marco legal de las leyes fiscales.

En la vida diaria cualquier contribuyente duda a la hora de realizar una erogación, que sea para cubrir gastos relacionados con su persona, porque no podrá considerarla como deducción. O realiza la erogación porque ni siquiera tiene en mente sus cargas tributarias, esto sucede en la mayoría de los casos, así cuando se trata de llevarle la documentación al contador o asesor fiscalista, éste la procesa y analiza, luego que obtiene los reportes necesarios, prepara los impuestos correspondientes y luego le comunica al contribuyente que esa erogación que realizó, no podrá considerarla como deducción, por lo tanto deberá desembolsar una cantidad mayor para cubrir sus cargas tributarias. Pero qué mejor que tener elementos concretos que le permitan realizar la erogación porque así lo necesita y le sirva para disminuir sus impuestos. En este análisis se pretende darle a conocer a las personas físicas opciones en cuanto a deducciones fiscales relacionadas con su actividad empresarial y profesional, pero enfocado en temas que van de la mano para poder realizar las actividades diarias, que le permitan generar ingreso y por ende cumplir con el tributo que establecen las

leyes. Por qué para poder llevar a cabo las actividades diarias generadoras de ingreso, debe estar física y mentalmente saludable, sentirse bien emocionalmente, lo que le permitirá estar concentrado en el hecho de generar ingreso y con ello cumplir con sus cargas tributarias.

El presente trabajo es de corte cualitativo mediante la revisión documental de las leyes fiscales, para encontrar las opciones posibles relacionadas con aspectos culturales, sociales y profesionales, que puedan tomarse como deducciones fiscales. Todo hecho dentro del marco legal que permitan las leyes, puesto que no se debe dejar en estado de incertidumbre el hecho de hacerlo o no. El propósito de este estudio es dar a conocer a las personas físicas, opciones en cuanto a deducciones fiscales relacionadas con aspectos culturales, sociales y profesionales. Una vez que las personas físicas se involucren en este tema, en palabras más claras, que se den cuenta de que, pueden deducir erogaciones relacionadas con diversión, salud, mejoramiento físico y profesional, no dudarán en llevar a cabo esas erogaciones, lo cual permitirá su desarrollo personal y profesional. Lo que generará una derrama económica en todos los aspectos, puesto que obtendrá ingreso, creará fuentes de empleo y cumplirá con sus cargas tributarias sin ver mermada su capacidad para generar ingreso.

Por lo anterior plasmado, es necesario realizar un trabajo donde se pueda analizar algunas erogaciones posibles que permite el marco legal de las leyes fiscales, que puedan ser tomadas como deducciones fiscales a la hora de calcular las cargas tributarias y de forma paralela darle un valor agregado a esas erogaciones, puesto que el contribuyente las disfrutará de alguna manera al realizarlas.

Alarcón Olvera, Bernal Tovar, Herrera Baños, Peralta Landa y Villa Méndez (2010) explican que.

..

Las deducciones que podrán efectuar las personas físicas que obtengan ingresos del capítulo II del título IV de la Ley del Impuesto Sobre la Renta. Las devoluciones que se obtengan siempre, las adquisiciones de mercancías, los gastos se entiende que son todos aquellos que sean necesarios e indispensables para desarrollar la actividad primordial del contribuyente, entre otras deducciones (p. 75).

Se deja evidenciado que mencionan las deducciones autorizadas que marca el artículo 103 de la ley, sin abundar más de lo que menciona la propia ley. Pero lo que si dejan en claro que el contribuyente puede deducir todas las erogaciones necesarias e indispensables para la obtención del ingreso.

REVISIÓN LITERARIA

Dentro de la revisión literaria realizada para sentar las bases del presente trabajo, se encontró que se abordan los temas de manera muy general, dejando a la interpretación lo que las leyes fiscales permiten, por lo que se está en la necesidad de realizar un análisis de la literatura encontrada y con ello darle una serie de opciones a los contribuyentes. Para que puedan ejercer la deducción de las erogaciones realizadas referentes a la investigación que se está realizando. En este punto se presenta a continuación la revisión literaria del tema a desarrollar. En esta revisión literaria se abordan temas sobre eventos culturales, sociales y profesionales, que pueden ser deducciones autorizadas para disminuir la carga fiscal de los contribuyentes personas físicas que la ley les permita realizar deducciones por la actividad que llevan a cabo, que de alguna manera le permitan desarrollarse en diversos ámbitos de su vida. La Constitución Política de los Estados Unidos Mexicanos, es el primer ordenamiento que obliga a los ciudadanos a pagar impuestos en su artículo 31 fracción IV, menciona al respecto que los mexicanos deben contribuir al gasto público.

Después viene el código fiscal de la federación a regular el actuar de los contribuyentes y la autoridad fiscal, como lo menciona su artículo 1ro. De la Ley del Impuesto Sobre la Renta (2014) se plasman las actividades realizadas por personas físicas, que pueden hacer deducciones a sus ingresos para disminuir sus cargas tributarias, porque no es caso de estudio las actividades que no permiten ejercer deducciones, puesto que tienen un tratamiento fiscal diferente. Se mencionan, porque forman parte de las actividades, que puede realizar las personas físicas. En primer término está el capítulo I del título IV correspondiente a las personas

físicas de la ley del Impuesto Sobre la Renta, el cual habla sobre los ingresos por salarios y en general por la prestación de un servicio personal subordinado, el régimen de salarios no permite realizar deducciones a la percepción semanal, quincenal o mensual, para presentar la declaración mensual, el patrón realiza la retención correspondiente por el pago del salario y la entera a la autoridad, puede hacer deducciones personales en su declaración anual, las cuales están limitadas a lo que marca el artículo 151 de la ley del Impuesto Sobre la Renta, por lo que este capítulo no será desarrollado en la presente investigación.

El capítulo II de la misma ley, habla de los ingresos por actividades empresariales y profesionales, el cual está dividido en tres secciones. La primera sección de las personas físicas con actividades empresariales y profesionales. La segunda sección nos habla del régimen de incorporación fiscal de las personas físicas. Haciendo un breve resumen la sección segunda tiene un tratamiento fiscal especial, por lo que las deducciones autorizadas en la segunda sección no es tema de estudio de la presente investigación. La cual se centra en la sección primera, ya que es el régimen fiscal que permite realizar deducciones autorizadas siempre tomando en cuenta la actividad que llevan a cabo. Es decir, no están tan limitadas las deducciones como en las otras secciones o capítulos.

En el capítulo III de los ingresos por arrendamiento y en general por el otorgamiento de uso o goce de bienes inmuebles, capítulo IV de los ingresos por enajenación de bienes y capítulo VI de los ingresos por intereses, las deducciones están limitadas en los artículos 147, 148 y 149 de la Ley del Impuesto Sobre la Renta. Por lo que no son tema de estudio de la presente investigación por el tratamiento especial que tienen. De los demás ingresos que trata el capítulo VII de los ingresos por obtención de premios, capítulo VIII de los ingresos por dividendos y ganancias distribuidas por las personas morales y capítulo IX de los demás ingresos que obtengan las personas físicas, también tienen un tratamiento especial, por lo que sus deducciones están muy limitadas. Derivado de lo anterior, no serán desarrollados en la presente investigación. La investigación se desarrolla del título IV de la sección primera del capítulo II de las personas físicas con actividades empresariales y profesionales, la Ley del Impuesto Sobre la Renta en sus artículos 103 y 105 establecen las deducciones autorizadas y los requisitos que deben reunir estas respectivamente, para poder considerarlas como deducciones. El artículo 105 en su último párrafo remite al artículo 27 donde da otra serie de requisitos que deberán cumplirse, lo cual abre más la puerta para considerar más opciones de erogaciones que pueden convertirse en deducciones autorizadas.

Algunos estudiosos del tema de deducciones autorizadas para personas físicas, han sido Martínez (2005) y Sánchez (2011), quienes realizaron investigación para apoyar a las personas físicas explicando las diferentes formas de tributar de las mismas. En cuanto al capítulo de deducciones llegaron a la conclusión de que las deducciones que lleven a cabo, deben ser necesarias e indispensables para que el contribuyente lleve a cabo la actividad generadora de ingreso. En referencia a temas culturales se encuentran opciones como muestras de los diferentes productos, servicios y actividades relacionadas con las operaciones diarias que desarrollan y exposiciones sobre materiales, productos, servicios, actividades, entre otras, que de alguna manera se relacionen con su ámbito profesional. De la misma manera hay aspectos sociales como eventos culturales, deportivos, salud personal, muestras gastronómicas, presentaciones realizadas por alguna dependencia del gobierno, particulares o las diversas cámaras de comercio de productos, servicios, actividades, ayuda para realizar algún estudio en el interior de la república o extranjero como patrocinador. En los eventos anteriores sin duda podrán convivir con clientes potenciales para su negocio y al mismo tiempo ofrecer los servicios, productos o actividades que la empresa lleva a cabo.

Es indispensable como ser humano el estar física y mentalmente saludable. No se puede dejar a un lado ese aspecto vital, que le permite al contribuyente generar ingreso. Es muy común el estar en la empresa o prestando un servicio, el convivir con clientes, el ofrecerles un servicio integral, es decir, realizar el trabajo de manera profesional correctamente y a la vez darle un trato agradable, cuidarlo, porque el cliente es el que permite obtener las ganancias. En lo referente a aspectos profesionales se tienen cursos, capacitación, congresos, simposium, coloquios, cátedras, presentaciones de profesionales referentes a la actividad que

realizan, todos los aspectos que sean necesarios para llevar a cabo su actividad generadora de ingreso, con el fin de que pueda desarrollarse profesionalmente y por ende ese crecimiento personal que todos los días se busca para tener un mejor patrimonio y una mejor vida. Martínez (2005), en su libro *Análisis de las deducciones autorizadas para efectos de la Ley del Impuesto Sobre la Renta*, explica que la regla general para las deducciones es que éstas sean estrictamente indispensables, pues de no cumplirse este requisito no se puede llevar a cabo la deducción, aun cuando si se cumpliera con otros requisitos. “Estrictamente indispensable, se refiere a un gasto que se tiene que realizar, prácticamente no se tiene opción; de no llevarse a cabo, el curso normal de las operaciones del contribuyente se vería alterado negativamente” (p. 37). El autor ejemplifica lo anterior de la siguiente manera:

La deducción de gastos por concepto de viaje a Cancún, no podrían deducirse si el viaje no es para los fines de la actividad del contribuyente, aunque el comprobante cumpliera con todos los requisitos fiscales no podría llevarse a cabo la deducción. Por contrario, si el mismo viaje tiene por objeto la compra o venta de bienes relacionados con la actividad del contribuyente, este sería deducible; adicionalmente, tiene que cumplir con los requisitos de deducción específicos para gastos de viaje, en esta situación se tiene que cumplir con ambos requisitos, regla general que es estrictamente indispensable y la regla específica que aplica a los gastos de viaje, si existiera el caso de que no hubiera una regla específica para el gasto que se esté llevando a cabo, únicamente aplicaría la regla general, que sea estrictamente indispensable. Esto nos lleva a que las deducciones, no es que exista una lista específica de ellas, dependen directamente de la actividad del contribuyente (p. 37).

Por su parte Sánchez (2011), en su libro *aplicación práctica del ISR y el IETU para personas físicas*, enuncia, con base en el artículo 123 del ISR, un listado de los conceptos que son deducibles:

las personas físicas que obtengan ingresos por actividades empresariales o servicios profesionales, podrán efectuar las deducciones siguientes: Devoluciones, compras, gastos, inversiones, intereses nominales, cuotas pagadas al IMSS, impuesto cedular (p. 85). Diríamos que uno de los requisitos fundamentales para que los conceptos sean deducibles efectivamente, se requiere haberse pagado o erogado, en primer momento por la vía del flujo de efectivo, pudiendo también ser pagado por la prestación de servicios o en especie. También otro de los requisitos importantes es que las erogaciones sean estrictamente indispensables (p. 88).

Se puede constatar que Sánchez (2011), indica que las erogaciones realizadas por las personas físicas para llevar a cabo su actividad generadora de ingreso, deben ser las que sean necesarias e indispensables. Dejando en claro que deben de reunir todos los requisitos que marca la propia ley. Durante la revisión literaria elaborada se puede afirmar en el presente trabajo que los autores citados coinciden al decir que las deducciones que lleven a cabo las personas físicas, deben de reunir como requisito general ser necesarias e indispensables para la actividad generadora del ingreso. De lo contrario, aunque esa deducción reúna todos los requisitos particulares que marca la ley, no podrá restarse del ingreso obtenido para disminuir sus cargas tributarias. Se debe dejar en claro al contribuyente que toda erogación llevada a cabo para obtener el ingreso, deberá documentarla para en caso de alguna revisión por parte de la autoridad este en posibilidades de desvirtuar cualquier observación y no caiga en la desventaja de que no se la tomen como deducción. También es importante aclarar que por el simple hecho de realizar una erogación relacionada con aspectos culturales, sociales o profesionales, ya podrá restarse de su ingreso, deberá cumplir con lo anterior mencionado y siempre deberá influir en la obtención del ingreso.

METODOLOGÍA

El tema que se aborda en este trabajo es el de deducciones fiscales de personas físicas. Por la necesidad que tienen estos contribuyentes, de tener opciones de deducciones fiscales diferentes de las tradicionales que ejercen mes a mes durante el ejercicio fiscal. No es que se vaya a dar una serie de opciones fuera de lo que

marca la ley en su marco legal, puesto que no es intención estar fuera de la ley y dejar en una situación de incertidumbre a las personas físicas ante la autoridad fiscal. Para la realización de esta investigación se aplicó el método cualitativo con una muestra no probabilística por conveniencia, seleccionado a dos directores de despacho contables y a un gerente del departamento fiscal. La presente investigación es descriptiva, se plasma lo que las leyes fiscales dentro de su marco legal, permiten tomar como deducciones fiscales. Los sujetos de estudio de la presente investigación son las personas físicas con actividad empresarial y profesional, ya que las leyes fiscales no limitan tanto las deducciones autorizadas respecto de los demás capítulos, como se mencionó anteriormente. Las personas físicas que lleven a cabo actividades de comercio, servicios, industriales, agrícolas, ganaderas, silvícolas y de pesca. También las que presten servicios profesionales como lo son: abogados, contadores, arquitectos, doctores, dentistas, entre otros tantos, sin limitar la lista anterior, les aplica el presente trabajo. Se buscó en literatura relacionada con las deducciones autorizadas información, que permitiera sentar las bases sólidas de la investigación, para afianzar el contenido y darle más peso a la información asentada. También para la obtención de la información se realizaron consultas a diversos especialistas en el tema: contadores, abogados y fiscalistas con una vasta experiencia y larga trayectoria en la materia contable-fiscal, a través de entrevistas, para abordar el tema en concreto y con ello dejar plasmada su opinión y experiencia en el tema tratado. Lo que permitió sentar las bases sólidas, en cuanto a las deducciones fiscales relacionadas con aspectos sociales, culturales y profesionales.

Se procesaron los datos a través de la revisión literaria, mediante el uso del formato de fichas de trabajo, asimismo se obtuvieron los datos a través de la realización de entrevistas mediante el uso de block de notas y guía de entrevista, los días 13 de septiembre de 2013 y 20 de septiembre de 2013, las entrevistas se aplicaron a directores de despachos contables y gerentes del área de fiscal, se elaboró un informe simple y posteriormente un informe detallado de la información obtenida. Para establecer las conclusiones de la investigación se consideró la tradición de teoría fundamentada, por lo que se triangulaban los datos obtenidos a través de la revisión documental con las entrevistas a especialistas en el tema.

RESULTADOS

A continuación se presentan los resultados obtenidos mediante la realización de la presente investigación, la cual se hizo con base a los indicadores de la dimensión fiscal, los cuales son: Marco legal en materia de deducciones, opinión de los autores sobre el tema de investigación y opinión de los especialistas. Dentro del marco legal referente al tema de impuestos y deducciones está la Constitución Política de los Estados Unidos Mexicanos, como el primer ordenamiento que nos obliga a contribuir para los gastos públicos en su artículo 31 fracción IV. Aquí nace la obligación como mexicano, de que al momento de realizar cualquier actividad generadora de ingreso, debes pagar impuestos para que el estado mexicano obtenga los recursos necesarios, para satisfacer las necesidades de infraestructura, servicios públicos, entre otros, para los ciudadanos.

Por medio del código fiscal de la federación en su artículo 1ro: el cual es, el ordenamiento jurídico que define los conceptos y reglas fiscales para la obtención de los ingresos fiscales. Esta ley da la pauta a los contribuyentes de cuáles son las facultades de la autoridad fiscal para el cobro de los impuestos, revisiones, multas, entre otras. Al contribuyente también le dice como debe actuar para el cumplimiento de sus obligaciones y cuáles son sus derechos. En ley del impuesto sobre la renta, están algunos de los requisitos de las deducciones de las personas físicas en el artículo 27 y en el artículo 103 del mismo ordenamiento jurídico, menciona cuales son las deducciones. Las cuales aplican al título IV capítulo II sección primera de las personas físicas que realizan actividad empresarial o profesional. Esta ley es la que rige el actuar de los contribuyentes en cuanto a la obtención de sus ingresos y de cómo debe efectuar sus cálculos y pago de los impuestos. Básicamente es la ley fundamental que tiene que ver con todo lo relacionado en impuestos como lo marca en su artículo 1ro.

Durante la realización de la presente investigación, se encontró material en la literatura consultada que desarrolla el tema, fue en los libros mencionados anteriormente, donde se aborda lo que disponen las leyes en cuanto a deducciones. Por lo que fue posible transcribir una opinión, los autores Martínez, (2005) y Sánchez, (2011), coinciden en que debe prevalecer la regla general. Se apegan a lo que dice la ley del impuesto sobre la renta en materia de deducciones. Y remarcan que todo lo necesario para realizar la actividad generadora de ingreso, debe considerarse como deducción. De la misma forma aclaran que debe estar relacionada siempre con la actividad que se desarrolla y reunir los requisitos particulares para cada deducción. Debe prevalecer que cualquier erogación que se realice, debe estar vinculada con la obtención del ingreso. Por lo que los aspectos culturales, sociales y profesionales deben estar relacionados con la obtención del ingreso para que sean considerados como deducción fiscal. Sin duda, la información obtenida de los especialistas, es la más importante para determinar el actuar que siguen en la práctica cuando se trata el tema de deducciones fiscales, porque es el área donde todos los días se encuentran circunstancias relacionadas con aspectos sociales, culturales y profesionales, los directores de despacho, gerentes del departamento de fiscal, manifiestan que están de acuerdo en partir de la regla general de que todo lo necesario para obtener el ingreso generador del tributo, debe considerarse como deducción fiscal, sobre todo en la persona física como contribuyente, ya que, al no haber condiciones buenas de salud, convivencia con clientes, muestras de productos y servicios, no se puede obtener el ingreso. Mencionan que sus clientes son pocos los que deducen aspectos sociales y culturales, a los que hace referencia la presente investigación, en aspectos profesionales sí tienen esas deducciones.

Sus clientes están constantemente trayendo comprobantes por esos conceptos profesionales, pero que de manera implícita tienen que ver con aspectos sociales y culturales. Aportan también, que van a reconsiderar el mencionar a sus clientes, que al momento de llevar a cabo alguna erogación relacionada con su actividad y esta tenga que ver con aspectos sociales y culturales, cumpla con los requisitos particulares para que sea considerada como deducción fiscal. Además que en caso de ser necesario se debe contar con un documento, que le dé certeza, para este caso un contrato privado por prestación de servicios o la modalidad que abarque, el trabajo que se realiza. Para terminar, reafirman que siempre consideran mencionar a sus clientes, que antes de realizar cualquier erogación que tenga que ver con la obtención del ingreso, les hagan una consulta para relacionar desde un inicio la posible deducción y evitar con ello estar fuera de lo que emanan las leyes fiscales. Tomando como base lo establecido en las leyes, coincido con los autores Martínez, (2005) y Sánchez, (2011), directores de despacho y el gerente de fiscal, en su opinión referente a las deducciones de las personas físicas, deben estar siempre relacionada con la obtención del ingreso como regla general, también en lo que respecta, a los requisitos particulares que cada erogación debe reunir, para que sea una deducción fiscal.

CONCLUSIONES

Dentro del marco legal referente al tema de impuestos y deducciones está la Constitución Política de los Estados Unidos Mexicanos, como el primer ordenamiento que nos obliga a contribuir para los gastos públicos en su artículo 31 fracción IV. Por medio del código fiscal de la federación en su artículo 1ro: el cual es, el ordenamiento jurídico que define los conceptos y reglas para la obtención de los ingresos fiscales. En ley del impuesto sobre la renta, están algunos de los requisitos de las deducciones de las personas físicas en el artículo 27 y en el artículo 103 menciona cuales son las deducciones. Las cuales aplican al título IV capítulo II sección primera de las personas físicas que realizan actividad empresarial o profesional. La opinión de los autores Martínez, (2005) y Sánchez, (2011), coinciden en que debe prevalecer la regla general. Se apegan a lo que dice la ley del impuesto sobre la renta en materia de deducciones. Y remarcan que todo lo necesario para realizar la actividad generadora de ingreso, debe considerarse como deducción.

La información obtenida de los especialistas, es la más importante para determinar el actuar, que siguen en la práctica cuando se trata el tema de deducciones fiscales, porque es el área donde todos los días se encuentran circunstancias relacionadas con aspectos sociales, culturales y profesionales. Los directores de

despacho, gerentes del departamento de fiscal, manifiestan que están de acuerdo en partir de la regla general de que todo lo necesario para obtener el ingreso generador del tributo, debe considerarse como deducción fiscal, sobre todo en la persona física como contribuyente. Lo anterior, dado que, al no haber condiciones buenas de salud, convivencia con clientes, muestras de productos y servicios, no se puede obtener el ingreso. En consecuencia consideran que por aspectos sociales se puede considerar como deducciones fiscales, eventos culturales, obras de teatro, muestras de cine, muestras de obras de arte, pinturas. Eventos deportivos, salud personal, muestras gastronómicas. Presentaciones realizadas por alguna dependencia del gobierno, particulares o las diversas cámaras de comercio de productos, servicios, actividades, ayuda para realizar algún estudio en el interior de la república o extranjero como patrocinador. En referencia a temas culturales se encuentran opciones como muestras de los diferentes productos, servicios y actividades relacionadas con las operaciones diarias que desarrollan y exposiciones sobre materiales, productos, servicios, actividades. También existen cursos relacionados con pintura, cine, actuación, baile, danza y canto. En lo referente a aspectos profesionales se tienen cursos, capacitación, congresos, simposium, coloquios, cátedras, presentaciones de profesionales referentes a la actividad que realizan, todos los aspectos que sean necesarios para llevar a cabo su actividad generadora de ingreso, con el fin de que pueda desarrollarse profesionalmente y por ende ese crecimiento personal que todos los días se busca para tener un mejor patrimonio y una mejor vida. Los contribuyentes al momento de obtener el ingreso generador de los impuestos. Debe realizar erogaciones por doquier, es decir, no percibe lo que es deducción fiscal y lo que no es. Es importante que se acerquen antes de llevar a cabo alguna erogación, que pueda ser deducción. A su contador o asesor fiscal, para que este le proporcione los requisitos generales y particulares para las deducciones relacionadas con su actividad empresarial o profesional.

RESUMEN

El pasado 11 de diciembre de 2013, el ejecutivo federal promulgó el decreto que dio origen a la nueva ley del impuesto sobre la renta vigente a partir del primero de enero de 2014. Con esta nueva ley se contempló un cambio muy importante desapareciendo de esa manera los regímenes intermedio y pequeños contribuyentes, dando nacimiento al nuevo Régimen de Incorporación Fiscal. Este cambio de régimen lo sufrieron miles de contribuyentes en todo el país ya que como pequeños contribuyentes (Repecos), tenían facilidades administrativas en el cumplimiento de sus obligaciones fiscales, con el cambio adquirieron nuevas; deberán llevar contabilidad, presentar declaraciones, facturar y otras obligaciones formales que anteriormente no tenían. El objetivo de esta investigación: tener información confiable directamente de las empresas de nuestro estado sobre el efecto Fiscal con relación a la entrada en vigor del Régimen de Incorporación Fiscal. Poder medir los efectos fiscales que están sufriendo los microempresarios, por el cambio fiscal derivado de las reformas fiscales 2014, de los impuestos: sobre la renta, al valor agregado y especial sobre producción y servicios, y en relación a su estatus anterior que tuvieron hasta el año 2013 tributando como régimen de pequeños contribuyentes.

PALABRAS CLAVES: Efecto Fiscal, Régimen de Incorporación Fiscal

FISCAL EFFECT OF ENTRY INTO FORCE OF INCORPORATION TAX REGIME IN SMALL BUSINESSES OF BAJA CALIFORNIA

ABSTRAC

On December 11, 2013, the federal government issued a decree that gave rise to the new law on income tax effective from the first of January 2014. this new law a major change disappearing that way I will contemplate intermediate regimes and small taxpayers, giving birth to the new tax regime Incorporation. This change of regime it suffered thousands of taxpayers across the country since as small taxpayers (REPECOS) had administrative facilities in meeting their tax obligations, with the change acquired new; must keep accounting, filing, billing and other formal obligations previously had. The objective of this research: to have reliable information directly from the companies in our state on Fiscal effect in relation to the entry into force of Incorporation Fiscal Regime. To measure the tax effects microentrepreneurs who are suffering, for the fiscal change resulting from the tax reform 2014 tax: income, value added and especially on production and services, and in relation to its former status that had to 2013 taxed as a regime of small taxpayers.

INTRODUCCIÓN

Antecedentes

Actualmente no se cuenta con un diagnóstico formal de la situación que guardan las micro, pequeñas y medianas empresas del estado de Baja California ante los cambios en nuestro sistema tributario ni mucho menos el efecto que esta ha tenido. La presente investigación está organizada de la siguiente manera se presenta una sección 2 en donde se muestra la necesidad de llevar a cabo esta investigación de la cual se derivó la presente investigación, seguido por la sección 3 donde se lleva a cabo el planteamiento del problema en el cual se hace un diagnóstico de la situación actual que guardan las micro pequeñas y medianas empresas y se establece la pregunta de investigación. En la sección 4 se muestra la revisión literaria que se llevó a cabo para la investigación del tema, seguido por la sección 5 en donde se muestra la metodología aplicada en el presente trabajo. Por último se muestra las secciones de resultados en donde se analiza los datos obtenidos por los instrumentos aplicados y las recomendaciones y conclusiones de los autores.

JUSTIFICACION

Un porcentaje significativo de las empresas del país son microempresas que no rebasan en el año dos millones de pesos en sus ingresos, organizaciones que a su vez son generadoras de una cantidad considerable de empleos tanto formales como informales, dando sustento de esa manera a muchas familias mexicanas. En Baja California, se observa el mismo comportamiento que a nivel nacional. Estas empresas han sido tradicionalmente evasoras de impuestos por la característica de realizar operaciones casi exclusivamente con público en general, o sea clientes que no les exigen comprobantes fiscales para efectos de deducción y acredita miento. por ello, y en respuesta al reclamo de los contribuyentes tradicionalmente cautivos, el ejecutivo federal publico un decreto para la creación de la nueva ley del impuesto sobre la renta, misma que obliga a los contribuyentes microempresarios a registrarse en el régimen de incorporación fiscal y entrar por ende a una mayor formalidad fiscal, con el objetivo además de lograr incrementar su recaudación fiscal a mediano plazo. A nivel internacional las micros, pequeñas y medianas empresas (MIPYMES), tienen una amplia participación en la economía mundial porque representan el 95% del total de las empresas de conformidad con datos proporcionados por la Organización para la Cooperación y Desarrollo Económico (OCDE 2010). Las MIPYMES son importantes asimismo para la economía nacional, en virtud de la generación de empleo y producción, ya que según datos del Instituto Nacional de Estadística y Geografía, en el país existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES, mismas que generan el 52% del Producto Interno Bruto (PIB) y el 72% del empleo del país.(INEGI 2010) Por lo anterior, y debido a la importancia de las MIPYMES en la economía de Baja California, consideramos los maestros que integramos este grupo de investigación, que a través de nuestro estudio, sea posible evaluar el efecto fiscal en las empresas por la implementación de este nuevo régimen.

Planteamiento del Problema

La baja recaudación en México se puede explicar en parte por los problemas para cobrar los impuestos existentes, las causas de esta baja eficacia obedecen a múltiples razones, una de ellas es la evasión producto de la complejidad técnica del marco jurídico y la falta de una cultura tributaria, lo que en consecuencia dificulta la inversión en la infraestructura necesaria para el crecimiento económico y financiamiento de programas destinados a mejorar el bienestar social de la población. En ese sentido, es preciso señalar que en 2013 poco más del 80% de los trabajadores independientes se clasifican dentro del Régimen de Pequeños Contribuyentes (REPECOS), sin embargo durante el año 2000 dicho porcentaje fue de casi 90%, lo cual se justifica señalando que en ese año no existían restricciones sobre el giro de actividad de las microempresas y también el límite máximo para poder clasificarse como REPECO era mayor. Es interesante observar que

tanto el número de trabajadores independientes así como el número de potenciales REPECOS se incrementó sustancialmente en el año 2009, año de una severa crisis económica en el país. Según datos estadísticos del Servicio de Administración Tributaria (SAT), el referido régimen en México registró entre 2000 y 2010 una evasión superior a 96%. El potencial recaudatorio de este régimen es relativamente bajo, alrededor de 0.6 puntos del PIB en 2010, al comparar con el número de contribuyentes que conforman el régimen. Sin embargo, un incremento en su recaudación significaría importantes recursos a las entidades federativas.¹

El régimen de pequeños contribuyentes registró entre 2000 y 2010 un alto nivel de evasión superior a 96%,² no obstante las facilidades administrativas y de pago que ofrece el régimen fiscal en estudio. Así, el potencial recaudatorio de este régimen es relativamente bajo, alrededor de 0.63 puntos del PIB en 2010, al comparar con el número de contribuyentes que conforman el régimen.³ Sin embargo, un incremento en su recaudación significaría importantes recursos a las entidades federativas. Por otra parte, según datos del Instituto Nacional de Estadística y Geografía, en el tercer trimestre de 2012, la tasa de empleo informal, respecto de la población económicamente activa, fue de 29.2%.⁴ Cabe señalar que los contribuyentes que tributan en el REPECOS son alrededor de 2'363,000, que representan un 6.4% de los contribuyentes con registro activo según información del SAT.

REVISIÓN LITERARIA

El 8 de septiembre de 2013, el Titular del Ejecutivo Federal presentó la iniciativa de Reforma Hacendaria, en la cual se propone la expedición de una nueva LISR para el 2014. En el mensaje que dio el Titular del Ejecutivo Federal, entre otros temas, resaltó la importancia para el desarrollo del país la propuesta del nuevo Régimen de Incorporación Fiscal (RIF), para personas físicas que tienen ingresos por actividades empresariales y profesionales, el cual se reproduce en su parte conducente: "... Otro aspecto relevante de la Reforma Hacendaria es que promueve la formalidad de la economía. Como ya lo sabemos y lo he citado en distintas ocasiones, sabemos que hoy seis de cada diez empleos son informales; es decir, dos de cada tres mexicanos trabajan en la informalidad. Se trata de un verdadero cambio de paradigma. Al crearse nuevas reglas se inducirá a las empresas y a los trabajadores a incorporarse al sector formal. Para ello se establece un régimen de incorporación fiscal para nuevos emprendedores, o para los negocios informales que decidan regularizarse, en el que inicialmente no pagarán impuestos en su incorporación al sistema, y sus obligaciones sólo habrán de incrementarse de manera gradual.

Mientras tanto, sus trabajadores, y ésta es la prestación que tendrán en este incentivo para incorporarse a la formalidad, sus trabajadores contarán con los beneficios del IMSS, con un subsidio en el pago de sus cuotas, gozarán de la protección del nuevo Seguro de Desempleo y, además, tendrán acceso al crédito para la vivienda. Por su parte, las micro, pequeñas y medianas empresas, que son las que generan el mayor empleo en nuestro país, que decidan adoptar este régimen de incorporación, podrán acceder a créditos de la Banca de Desarrollo, así como a apoyos y financiamientos del nuevo Instituto Nacional del Emprendedor. Otra medida para impulsar la formalidad es disminuir, las cuotas de seguridad social para los trabajadores de bajos ingresos, ya que actualmente llegan a pagar hasta casi 30 por ciento de su sueldo, lo cual resulta verdaderamente insostenible e injusto para los trabajadores que menos ganan. En síntesis. El régimen de

incorporación es una propuesta para cambiar los incentivos en favor de la formalidad. Por los beneficios que ofrece, convendrá más a los negocios ser formales que mantenerse en la informalidad.”⁵ La creación del RIF establece un punto de entrada a la formalidad, en el aspecto tributario y se pretende que también lo haga en el de seguridad social.⁶ Ello coadyuvará a combatir la informalidad, promoviendo un crecimiento más acelerado de la productividad. Adicionalmente, el RIF permitirá a la autoridad fiscal completar la cadena de comprobación e información fiscal, al contar con registros sobre las operaciones de los participantes con sus proveedores y clientes. El RIF preparará a los contribuyentes para una eventual inserción en el régimen general para fines tributarios y de seguridad social. Con ese fin, los contribuyentes que tributen en este régimen recibirán descuentos en el pago de sus impuestos y de sus aportaciones de seguridad social durante los primeros años, a cambio del cumplimiento de obligaciones de información fiscal. La facilidad en el cumplimiento del pago de impuestos representa un factor esencial para que los negocios que se van creando en una economía, particularmente los de menor escala, se incorporen de inmediato a la formalidad en la esfera tributaria. Con la entrada en vigor de la nueva Ley del Impuesto Sobre la Renta, se eliminó el régimen de pequeños contribuyentes y el régimen intermedio. En esta nueva Ley se crea un nuevo régimen denominado “régimen de incorporación” mismo que trata de otorgar opciones a contribuyentes de baja capacidad contributiva y administrativa, “simplificando” algunos aspectos fiscales y cuestiones administrativas.

6 La iniciativa de Decreto por el cual se reforman, derogan y adicionan diversas leyes para establecer los mecanismos de seguridad social universal, a la fecha no ha sido aprobada por el Congreso de la Unión.

A partir de 2014, todas las personas que tengan un pequeño negocio y que no estén dadas de alta en el SAT podrán incorporarse y, poco a poco, aprender a declarar sus impuestos. A través de este régimen, podrán incorporarse durante unos 10 años las personas físicas con poca capacidad económica y administrativa. Para los ex Repecos será algo nuevo ya antes pagaban una cuota fija de forma bimestral sin hacer ningún cálculo ni determinación de impuestos, antes su mayor complicación era ingresar a la página del portal de su estado donde realizan sus actividades, emitir el recibo de pago y pagar a su administración de rentas estatal, banco de su preferencia o en algún otro lugar autorizado, tienen la obligación de emitir notas de venta cuando tienen alguna operación mayor a \$100.00, no se preocupan por recibir facturas de sus proveedores para efectos fiscales, únicamente el comprobante que ampare la mercancía que recibe. Abordando este nuevo régimen de incorporación la intención primaria es que las personas físicas de baja capacidad económica se incorporen paulatinamente al régimen de las actividades empresariales y profesionales, en un lapso de 10 años. En este régimen podrán tributar las personas físicas que realicen únicamente: Actividades empresariales, Enajenación de bienes y presten servicios por los que no se requiera para su realización título profesional.

A través del Régimen de Incorporación se pretende que las personas físicas con actividades empresariales realicen su actividad en un esquema que les permita cumplir fácilmente con sus obligaciones tributarias. La participación en el Régimen de Incorporación traerá aparejado el acceso a servicios de seguridad social. De esta forma, se creará un punto de entrada para los negocios a la formalidad, tanto en el ámbito fiscal como en el de la seguridad social.⁷

Objetivo

La presente investigación tuvo como objetivo general: identificar los efectos fiscales, que ocasionó a los microempresarios la transición del régimen fiscal anterior al régimen de incorporación fiscal (RIF) en el estado de Baja California. Analizar si el cambio de régimen trajo consigo mayor carga tributaria y de obligaciones para estos contribuyentes del RIF.

Tabla 1: “Comparación Entre Régimen Anterior y Nuevo Régimen de Incorporación”

Accion	Repecos	Regimen de Incorporacion
Pago de impuestos	Acudían a la Recaudación de Rentas por su recibo de pago	Deben de declarar los ingresos y egresos a través de un portal denominado "mis cuentas" y presentar vía electrónica su declaración y obtener el recibo de pago por esa vía, ya sea para hacerlo por transferencia electrónica o en ventanilla bancaria
Contabilidad	Solo debían llevar control de ingresos de manera simple	Se debe de registrar a través del portal de "Mis Cuentas" los ingresos y egresos obtenidos.
Límite de Ingresos	Hasta \$ 2'000,000	Hasta \$ 2'000,000
Periodo de pago	Bimestral ISR, IVA Mensual Retenciones salarios	Bimestral ISR, IVA y Retenciones de salarios
Carácter del Impuesto	Definitivo	Definitivo
Utilidad Fiscal	No se determinaba	Ingresos menos deducciones autorizadas y adquisición de activos
Facturación	No estaban obligados	Obligados a facturar sus ingresos
Requisitos de deducciones	No aplicaba	Deben observar las reglas señaladas dentro de la normatividad

METODOLOGÍA

El método utilizado para llevar a cabo la investigación fue descriptivo longitudinal, en virtud de que se recabo información de las microempresas domiciliadas en el estado de baja california, sobre los cambio e impactos que enfrentaron por los al dejar su régimen original para integrarse al Nuevo régimen de Incorporación fiscal. La población de estudio se conformo por las microempresas establecidas en el estado de baja california, seleccionadas por medio de muestreo probabilístico estratificado, integrando a la muestra los diferentes sectores y estratos y logrando además resultados con un nivel de confianza del 95%. El proyecto de investigación se llevo a cabo con los siguientes pasos: A) Se llevó a cabo la lectura y análisis de la información generada en relación al tema. b) Se identificar la base de datos de las microempresas localizadas en Tijuana, Mexicali y Ensenada, para efectos de seleccionar la más confiable y completa. C) El diseño y aplicación de un cuestionario a la muestra seleccionada, con la finalidad de obtener información de los efectos fiscales por el cambio de régimen. D) La captura de la información obtenida al programa estadístico SPSS y E) El análisis estadístico de la información obtenida y el Reporte de investigación.

ANÁLISIS DE RESULTADOS

Figura 1: Sectores Que Intervinieron En la Investigación

Fuente: elaboración propia

Se recabó información de pequeñas empresas establecidas en el estado de Baja California, en donde 52.1% de ellas se dedican al comercio, 46.1% de servicios y 1.8% a otro sector distinto a los dos mencionados en primer término, Como se muestra en la Figura 1 de los sectores encuestados la mayoría se dedican al comercio. En lo referente al crecimiento que las empresas encuestadas de los últimos tres años que han transcurrido se observó que la mayoría manifiesta esta igual con un 46% seguida por las que opinan que empeoró representadas por el 34% y el resto manifestó que mejoro.

Figura 2: Factor Que Influyó En el Crecimiento de la Empresa

De las principales razones que identifican con el no crecimiento de las empresas se encuentran como lo muestra la figura 2 en los tres primeros lugares: Crisis Económica, Competencia y Cambios fiscales.

Figura 3: Como Afecto a la Empresas los Cambios En el Sistema Fiscal

Fuente: elaboración propia

Como se muestra en el Figura 3, las pequeñas empresas que se afectaron seriamente por los cambios que se presentaron dentro del sistema fiscal que entro en vigor el 1° de enero de 2014 en el régimen que tributaban; 28% de ellas manifestaron que demasiado, 15% bastante, 18% regular, 11% escaso, y 26% no se consideran afectadas.

Tabla 2: Quien les Genera la Información Fiscal del Negocio

	Porcentaje
Contador interno	30.4%
Despacho contable	68.2%
Sin respuesta	1.4%
Total	100%

Fuente: elaboración propia

Como era de esperarse por ser pequeños negocios no tienen un departamento interno de contabilidad para generar sus declaraciones, facturas y registro de contabilidad, así lo muestra la tabla en donde el 68 % de los encuestados contratan los servicios de un despacho contable externo para que le proporcione el servicio como se observa en la tabla 2.

Figura 4: Importancia ISR En la Empresa" Figura 5: Importancia Del IVA

Fuente: elaboración propia

Fuente: elaboración propia

Figura 6: " Importancia del IEPS"

Fuente: elaboración propia

De la observación de los resultados mostrados en las Figuras 4, 5 y 6 se observa que la contribución que las empresas consideran más importante es la del Impuesto al Valor Agregado seguida por la del Impuesto sobre la Renta a comparación de la de IEPS la cual la mayoría considera no relevante. en cuanto a las aportaciones de seguridad social como IMSS, Infonavit, no se comparan en esta relación ya que de los encuestados señalaron el 49% que no consideraban a estas importantes dado que por el tamaño y tipo de empresas no tienen en su mayoría empleados, o no los tienen con el beneficio de la seguridad social.

Figura7: Régimen de Adscripción En Año Anterior

Fuente: elaboración propia

De los resultados mostrados en la grafica 8 se muestra que la mayoría estaban dentro del régimen de pequeños contribuyentes en el 2013 antes de la entrada de la nueva Ley del Impuesto sobre la renta,

seguidos por los de régimen intermedio y con poca representatividad los que migraron del régimen general y solamente el 35 % se siente satisfecho del cambio de régimen entre los cuales se encuentran los que antes tributaban dentro del régimen general en su mayoría.

Figura 8: Utilización de Portal Mis Cuentas

Fuente: elaboración propia

En lo que se refiere al uso del portal del Sistema de Administración Tributaria (SAT), se aprecia en la Figura 8, que la mayoría de las pequeñas empresas no han podido utilizar el acceso de “mis cuentas”, para el manejo de la factura fácil, la contabilidad, declaraciones e información. En cuanto a las obligaciones y beneficios que les general el régimen de incorporación fiscal se aplicaron varias preguntas al respecto de las cuales se observa lo siguiente:

En Cuanto a Sus Obligaciones: Tabla 3: "Que Tanto Conocen Sus Obligaciones Por Estar Tributando En El RIF"

Obligación	Conoce Sus Obligaciones	No Conocen Sus Obligaciones
Facturación de Ingresos	77	23
Contabilidad electrónica	73	27
Timbrado de nominas	34	66
Declaraciones bimestrales	63	37
Declaración anual	53	47
Declaraciones informativas	72	28
Reparto de Utilidades	79	21
Calculo de impuestos 2015	23	77

Fuente: elaboración propia

Es importante recalcar que conocen como determinar el reparto de utilidades, como timbrar facturas, el uso de la contabilidad electrónica, que sus declaraciones son bimestrales y que tienen que presentar declaraciones informativas, entre otras obligaciones, pero una cosa es que conozcan y otra que lo puedan realizar de manera personal.

De Los Requisitos de Permanencia: Tabla 4: " Que Tanto Conocen los Requisitos Para Estar Tributando En el RIF"

Requisito	Conocen los requisitos	No conocen los requisitos
Límite de Ingresos	65	35
Requisitos de deducibilidad	47	53
Tiempo de duración régimen	31	69
Causas de abandono del régimen	31	69

fuentes: elaboración propia

De la tabla 4 se desprende que hay desconocimiento de los requisitos para estar y mantenerse dentro del régimen de incorporación fiscal así como el tiempo por el cual fue otorgado los beneficios de este régimen y los requisitos de deducibilidad, se observa que en su mayoría conocen las obligaciones que tienen dentro

del régimen solo en cuanto a la forma de calcular sus impuestos y del carácter de definitivo de los pagos efectuados en este régimen.

Figura 9: Como Afecta a Su Negocio los Costos de la Carga Fiscal

Como se observa en la Figura 10 los encuestados consideraron que la carga fiscal actual a afectado a sus negocios ya que el costo de cumplir es más alto a comparación del régimen anterior.

RESULTADOS Y CONCLUSIONES

Del análisis de los datos recabados en las encuestas aplicadas podemos concluir que existe un gran desconocimiento por parte de los contribuyentes de las obligaciones que han adquirido al ingresar al Régimen de Incorporación Fiscal. Dado que este régimen presente condiciones para permanecer y poder gozar de sus beneficios se considera grave esta situación ya que al desconocer sus obligaciones estarían incumpliendo y quedarían fuera del régimen si saberlo. Aunque la escolaridad promedio de los dueños es preparatoria, el manejo de las tecnologías de información no les son muy amigables y esto es causa de no cumplimiento de las obligaciones. Para poder dar cumplimiento con todos los requisitos y obligaciones han tenido que contratar despachos externos y estos despachos a su vez han tenido que subir las cuotas que les tenían designadas dada la carga de trabajo que significa el llevar la contabilidad y calculo de impuestos de este tipo de régimen.

El cambio de una cuota fija a tener que llevar registros de contabilidad, facturación de ingresos, declaración sobre ingresos, timbrado de nomina en caso de tener trabajadores, cubrir con requisitos de deducciones ha sido muy impactante para los empresarios, los cuales a pesar de haber ya transcurrido un año todavía no han podido dar cumplimiento ni comprender el alcance que este tiene. En el mes de Enero el padrón de contribuyentes disminuyó ya que ante el desconocimiento de lo que deberían de hacer muchos contribuyentes optaron por darse de baja y continuar dentro de la informalidad. Como se puede ver el impacto fiscal de la entrada del nuevo Régimen de Incorporación Fiscal fue muy alto e incluso provoco la salida de la economía formal de algunos negocios. el presente régimen no es más que el reflejo de una clara tendencia a incrementar la carga fiscal de los contribuyentes disfrazada de una Simplificación administrativa.

RESUMEN

A un año de la entrada en vigor de la nueva Ley del Impuesto Sobre la Renta en México, las microempresas que tributan en el Régimen de Incorporación Fiscal iniciaron el ejercicio 2015 con la obligación de pago de impuestos según las disposiciones de la ley, después del 100% de exención del ejercicio anterior; a días de vencerse el plazo para la primera declaración bimestral de éste ejercicio, la Secretaría de Hacienda y Crédito Público emite un decreto por el que se amplían los beneficios para estos contribuyentes. El ejercicio fiscal 2014 fue de incertidumbre respecto a los cambios importantes que significaba la reforma fiscal, en el transcurso de ese año se emitieron reglas que complementaban las disposiciones de Ley, así como de prórrogas para el cumplimiento de obligaciones, que incluso no incluían pago alguno de impuestos con motivo de las exenciones otorgadas. La investigación se centra en la realización de un análisis comparativo del impacto de la reforma fiscal en las microempresas entre el ejercicio 2014 y 2015, del cual se puede apreciar que son varios los factores que determinan las diferencias entre ambos ejercicios una vez transcurrido su primer ejercicio de tributación en el nuevo régimen. Se aplicó instrumento de medición de creación propia a microempresas previamente encuestadas ubicadas en la región centro de Coahuila en México, con los resultados obtenidos fue posible la realización del análisis comparativo en cuestión, así como nuestras conclusiones.

PALABRAS CLAVE: Análisis, Reforma Fiscal, Microempresas

COMPARATIVE ANALYSIS OF THE IMPACT OF FISCAL REFORM IN SMALL BUSINESS

ABSTRACT

A year after the entry into force of the new Law on Income Tax in Mexico, small business taxed in the tax regime incorporation, started the year 2015 with the obligation to pay tax under the provisions of the law, after 100% exemption from the previous year; within days of the expiration of the deadline for the first bimonthly declaration of this exercise, the Secretariat of Finance and Public Credit issued a decree that the benefits are extended to these taxpayers. The fiscal year 2014 was uncertainty about important changes meant tax reform, in the course of that year rules supplementing the provisions of Law were issued, as well as extensions to fulfill obligations, even not include any payment tax on the occasion of waivers. The research focuses on a comparative analysis of the impact of tax reform in small business between the year 2014 and 2015, which can be seen that there are several factors that determine the differences between the two years after expiry of his first year taxation in the new regime. Measuring instrument own creation was applied to previously surveyed microenterprises located in the center of Coahuila in Mexico, with the results made possible the realization of comparative analysis and our conclusions.

KEYWORDS: Analysis, Tax Reform, Small Business

INTRODUCCION

El Régimen de Incorporación Fiscal vigente en la Ley del Impuesto Sobre la Renta a partir del 1 de enero de 2014, fue creado para las personas físicas con actividades empresariales en sustitución del Régimen de Pequeños Contribuyentes y el Régimen Intermedio, a su vez se expuso por parte de las autoridades fiscales como una estrategia para disminuir el comercio informal y con esta nueva forma de tributación hacer atractivo el cumplimiento de las obligaciones fiscales. La presente investigación se centra en la realización de un análisis comparativo del impacto de la reforma fiscal en las microempresas de la región centro del Estado de Coahuila entre los ejercicios 2014 y 2015, con el objetivo de identificar los factores que determinan las diferencias entre ambos, una vez que la primera encuesta fue aplicada a las microempresas a principios del ejercicio 2014 y no habían iniciado el cumplimiento de las obligaciones fiscales y la segunda se aplicó a principios del ejercicio 2015 una vez que transcurrió un ejercicio completo tributando en el Régimen de Incorporación Fiscal.

REVISION LITERARIA

Nuestra Constitución en su artículo 31 fracción IV, contempla la obligación de los mexicanos de contribuir para los gastos públicos, los impuestos representan la principal fuente de ingresos para nuestro país, por lo que en el transcurso del tiempo se han implementado estrategias tendientes a mejorar la recaudación y enfocando en gran parte hacia aquellas actividades ubicadas dentro de la informalidad de ahí surgen los regímenes de tributación para las personas físicas con microempresas que a continuación se detallan:

Régimen de Pequeños Contribuyentes

La Ley del Impuesto sobre la Renta vigente hasta el 31 de diciembre de 2013, contemplaba el Régimen de Pequeños Contribuyentes para las personas físicas con actividades empresariales, cuyos ingresos del ejercicio por estas actividades no rebasaran los 2 millones de pesos. Los pequeños contribuyentes debían pagar sus impuestos a más tardar el día 17 del mes posterior al bimestre al que corresponde el pago. A partir de abril del 2004, el Gobierno Federal emite un Decreto por el cual se otorgan beneficios al Régimen de Pequeños Contribuyentes, entre los cuales destaca el pago de una cuota fija de Impuesto sobre la Renta e Impuesto al Valor Agregado la cual sería pagada a cada entidad federativa hasta diciembre del 2013. La evasión fiscal en las microempresas del régimen de pequeños contribuyentes llegó a ser de hasta el 98% en algunos Estados de la República. (ITESM, 2011) Lo anterior motivó a las autoridades a implementar estrategias que eviten que el comercio informal siga en aumento, entre ellas la creación del Régimen de Incorporación Fiscal en la Ley del Impuesto Sobre la Renta publicada en el Diario Oficial de la Federación el día 11 de diciembre de 2013 para entrar en vigor a partir del 1 de enero de 2014, pretendiendo con ello aumentar el padrón de contribuyentes con un régimen que, como su nombre lo indica, incorporará nuevos contribuyentes otorgándoles beneficios que estimulen su inscripción y permanencia. (González, 2015)

Régimen de Incorporación Fiscal

A partir del 1 de enero de 2014 entra en vigor la nueva Ley del Impuesto Sobre la Renta, la cual contiene en su Título IV Capítulo I Sección II el Régimen de Incorporación Fiscal, con el cual se pretende que los contribuyentes que hasta diciembre de 2013 tributaban en el Régimen de Pequeños Contribuyentes, continúen tributando de manera similar, y para aquellas microempresas que no se encuentren inscritos, lo hagan y poco a poco aprender a pagar sus impuestos y a su vez, accedan a todos los beneficios que ofrece, en el cual solo podrán permanecer hasta por 10 años, y al término de este plazo, iniciarán el cumplimiento de sus obligaciones en el Régimen de Actividad Empresarial y Profesional, como el resto de los contribuyentes, incluye entre otras las reglas: a) Podrán tributar contribuyentes personas físicas con actividades empresariales, siempre que sus ingresos propios obtenidos en el ejercicio inmediato anterior, no

hubieran excedido de \$ 2,000,000. b) Se calcularán y enterarán el impuesto en forma bimestral, el cual será un pago definitivo, a más tardar el día 17 de los meses de marzo, mayo, julio, septiembre, noviembre y enero del año siguiente, mediante declaración que presentarán a través de los sistemas que disponga el Servicio de Administración Tributaria en su página de Internet. c) Determinarán una utilidad fiscal restando de la totalidad de sus ingresos las erogaciones realizadas en el mismo periodo, así como la participación de los trabajadores en las utilidades de las empresas. d) Para determinar el impuesto, los contribuyentes de esta Sección considerarán los ingresos cuando se cobren efectivamente y deducirán las erogaciones efectivamente realizadas en el ejercicio para la adquisición de activos fijos, gastos o cargos diferidos. e) A la utilidad fiscal que se obtenga conforme al quinto párrafo de este artículo, se le aplicará la tarifa bimestral contenida en la ley del Impuesto Sobre la Renta.

f) El impuesto que se determine se podrá disminuir conforme a los porcentajes y de acuerdo al número de años que tengan tributando en el régimen previsto en esta Sección, conforme a la Tabla 1:

Tabla 1: Porcientos de reducción aplicables al impuesto sobre la renta obtenido bimestralmente los cuales inician con un 100% de reducción para el primer año de tributación en el Régimen de Incorporación, reduciendo en 10% cada año, una vez que transcurran los 10 años el por ciento de reducción es eliminado.

TABLA

Reducción del Impuesto Sobre la Renta a Pagar En el Régimen de Incorporación										
Años	1	2	3	4	5	6	7	8	9	10
Por la presentación de Información de ingresos, Erogaciones y proveedores:	100%	90%	80%	70%	60%	50%	40%	30%	20%	10%

Por ciento de reducción aplicable al Impuesto Sobre la Renta obtenido bimestralmente, el cual incia con la Reducción del 100% para el primer año de tributación, es decir a partir de 2014, va disminuyendo 10% cada año, transcurriendo los 10 ejercicios la reducción es eliminada.

Contra el impuesto reducido, no podrá deducirse crédito o rebaja alguno por concepto de exenciones o subsidios.

Beneficios Fiscales 2014 y 2015

Los contribuyentes personas físicas que únicamente realicen actos o actividades con el público en general, que opten por tributar en el Régimen de Incorporación Fiscal, previsto en la Sección II del Capítulo II del Título IV, de la Ley del Impuesto sobre la Renta y cumplan con las obligaciones que se establecen en dicho régimen, podrán optar por aplicar lo siguiente: (Decreto que compila diversos beneficios fiscales y establece medidas de simplificación administrativa, 2013) Una cantidad equivalente al 100% del impuesto al valor agregado y del impuesto especial sobre producción y servicios. A sólo unos días del vencimiento del plazo para la presentación de la primera declaración bimestral del ejercicio 2015, se publica en el Diario Oficial de la Federación el Decreto por el que se amplían los beneficios fiscales a los contribuyentes del Régimen de Incorporación Fiscal, el cual considera la continuación con la exención del 100% de los impuestos para aquellas microempresas con operaciones únicamente con el público en general.

METODOLOGIA

El método que se utilizó en esta investigación fue transversal, descriptivo y cuantitativo, para lo cual se aplicó un cuestionario que consta de 23 preguntas, relativas a 4 variables: uso de tecnología, cumplimiento

de obligaciones fiscales, conocimiento de la reforma fiscal y proyección de la microempresa. La muestra fue seleccionada a principios del ejercicio 2014 por conveniencia y a las que se les aplicó en esa fecha por primera vez el cuestionario, el cual consta de 94 microempresas, las mismas a las que les fue aplicado de nueva cuenta el instrumento a principios del ejercicio 2015, para poder determinar las comparaciones en las variables. La presente investigación se dirigió al análisis comparativo de las microempresas de la región centro del Estado de Coahuila, en el impacto que han sufrido con motivo de las disposiciones referentes a su nuevo régimen de tributación a un año de la entrada en vigor de la reforma fiscal, en lo referente a su forma de operar y el costo financiero que ha implicado el cumplimiento de dichas disposiciones hasta la fecha.

RESULTADOS

Como parte de la metodología seguida para determinar el impacto que la reforma fiscal 2014 tiene sobre las Microempresas de la región centro del Estado de Coahuila; se aplicó un cuestionario en dos ocasiones a 94 microempresas seleccionadas por conveniencia una a principios del ejercicio 2014 y otra a principios del 2015, de las cuales se obtuvo la siguiente información:

La Reforma Fiscal: Resulta interesante el resultado obtenido en la pregunta específica respecto a si conoce la nueva forma de tributación aplicable a su actividad económica, en 2014 el 45 % de las microempresas encuestadas respondió que conoce la reforma fiscal y un 55 % no tienen conocimiento al respecto, a un año de estar vigente dicha reforma la respuesta a la misma pregunta fue el 59% del total encuestado dijo conocer la reforma y un 41% no tiene conocimiento, respecto a la realización de la factura electrónica de manera general o envío de la información a las autoridades, en 2014 el 55% dijo no estar preparado para entrar en ese esquema de comprobación, originado por falta de personal que se dedique a esa actividad, necesidad de adquirir o rentar el equipo necesario o la contratación de un tercero para que apoye con esas actividades, en 2015 el porcentaje disminuyó al 48% con las mismas características, las empresas que originaron la disminución del porcentaje hacen referencia que han hecho uso de la plataforma que ofrece el Servicio de Administración Tributaria para lo cual utilizan equipo de cómputo de familiares o se contrataron los servicios de un tercero que los apoye a cumplir correctamente.

CONCLUSIONES

Podemos concluir, en nuestra opinión que conjuntamente con lo mencionado anteriormente y el análisis comparativo realizado entre los ejercicios 2014 y 2015, que las microempresas continúan con la percepción negativa de la reforma fiscal, particularmente por el incremento de obligaciones, así como en el impacto financiero, el cual no ha representado una afectación en el pago de impuestos, debido a que el ejercicio anterior, así como el actual, como se ha publicado oficialmente, continuarán con la exención del 100% del pago.

RESUMEN

En 1992 el Banco de Desarrollo de Asia le prestó dinero a China (sólo la región Yunnan), Birmania, Laos, Tailandia, Camboya y Vietnam para realizar el proyecto de la Gran Subregión del Mekong corredores económicos (GMS en su sigla en inglés) que es un proyecto de cooperación económica subregional para fortalecer las relaciones económicas entre los gobiernos de estos países. El proyecto tiene por objetivo desarrollar los medios de transporte, las telecomunicaciones, el ambiente y el turismo con el fin de mejorar la calidad de vida de la población de esta región. Los países de la región del Río Mekong cuentan con una riqueza natural y cultural que permiten realizar la actividad turística. El turismo está jugando un papel muy importante para disminuir la pobreza y evitar la migración a otros países. Éste proyecto turístico representa gran parte del mercado europeo y norasiático, ya que en estos lugares se prefiere el turismo eco-cultural. Ésta investigación tiene el objetivo para dar a conocer el sistema cooperativa entre los seis países como una lección para México. Resultados. Este trabajo está en proceso de investigación. Hemos detectado que el proyecto de desarrollo turístico del Mekong ha tenido efectos tanto positivos como negativos. Unos de los efectos positivos que se ha encontrado es que la calidad de vida de la población en los países participantes está mejorando en el aspecto económico por la llegada de los turistas. Pero tiene el efecto negativo de que las tres presas, que existen en la región, provocan la sequedad del río que tendrá como consecuencia la dificultad para el tránsito.

PALABRA CLAVE: Río Mekong, GMS, Cooperación, Sustentabilidad, Competitividad, Sureste Asiático

BETWEEN THE COMPETITIVENESS AND TOURISM COOPERATION OF GREAT MEKONG RIVER SUBREGIONAL PROJECT IN SOUTHEAST ASIA

ABSTRACT

In 1992, the Asian Development Bank lent money to China (Yunnan region only), Burma, Laos, Thailand, Cambodia and Vietnam to realize the project of Greater Mekong Subregionl Economic Corridors (GMS in its acronym in English) that is a project of subregional economic cooperation to strengthen economic relations between the governments of these countries. The project aims to develop transportation, telecommunications, environment and tourism in order to improve the quality of life of the population of this region. The countries of the Mekong River region have natural and cultural wealth that allow tourism. Tourism is playing a very important way to reduce poverty and prevent migration to other countries paper. This tourism project represents much of Europe and norasiático market, because in these places the eco-cultural tourism is preferred. This research aims to publicize the cooperative system among the six countries as a lesson for Mexico. Results. This work is under investigation. We have detected that the draft Mekong tourism development has had both positive and negative. One of the positive effects that has been found is that the quality of life of people in the participating countries is improving in economic terms by

the arrival of tourists. But has the negative effect that the three dams that exist in the region, causing dryness of the river that will result in difficulties for transit.

INTRODUCCIÓN

El Río Mekong

Ubicación Geográfica: El río Mekong tiene características especiales, las cuales son el soporte físico y cultural de un gran proyecto de Desarrollo Regional, siendo uno de sus pilares el Sector Turismo: La longitud del río Mekong es enorme: 4880 km en total (Oficina de desarrollo turístico (2005). Reporte final, Vol. 1. Proyecto de estudio del desarrollo turístico de cruceros sobre el río Mekong en los países participantes en el proyecto Greater Mekong Subregional, Facultad de Economía, Universidad de Chulalongkorn, Bangkok, Tailandia. Página 2-2). Es uno de los doce ríos más grandes del mundo. Inicia en la región Qing fu ubicado en Chong Hai Plateau en los candados tibetanos en China atraviesa seis países: la República Popular China (sólo región Yunan), Myanmar, Camboya, Laos, Tailandia y Vietnam, desembocando finalmente en la Delta de Mekong en la ciudad de Ho Chi Minh, Vietnam en el Mar del Sur de China. Su extensión es tal que cambia de nombre: en China lo conocen como el río Lan Chang, para Myanmar es el río Irawadee, en los demás países se le conoce como el río Mekong (véase Anexo No.1). Se divide por dos partes por Khone Falls los cuales son la Cuenca superior del Mekong (Upper Mekong Basin) ó el Río Lancang cual es la parte desde la región Qing Fu, Tibet hasta Chiang Rai, Tailandia y la Cuenca baja de Mekong cual es la parte desde Chiang Rai, Tailandia hasta el boca del río en la ciudad de Hochi Minh, Vietnam.

Además de cubrir una extensa geografía es referente de diferentes culturas, lenguas, religiones, estilos de vida y proveedor de alimento, agua, transporte y sustento a gran parte de la población de los países involucrados. El río se caracteriza por la variedad de especies biológicas: alrededor de 1200 especies acuáticas de las cuales algunas están en peligro de extinción como el delfín del río Irawadee o el pez gato gigante. Es fuente de hidroenergía, hasta zona boscosa, aves migratorias y fuerza laboral diestra en actividades agrícolas y acuicultura

(Sector Perspectives on Resource Management”, en Natural Resource management in the Mekong River Basin. <http://www.usyd.edu.au/geography/hirsch/6/6.htm>).

REVISIÓN LITERATURA

Antecedente del Proyecto Gran Subregional Mekong (GMS): El proyecto GMS surgió por el gobierno de Tailandia pidió el apoyo del Banco Asiático del Desarrollo (Asian Development Bank: ADB) en 1992 promover la cooperación de los seis países ribereños los cuales son Tailandia, Myanmar, Laos, China (sólo la región Yunan), Cambodia y Vietnam en la cuenca del río Mekong la cual es una parte del proyecto desarrollo económico de la ANSEA o Asociación Naciones de Sureste Asiático (Association of South East -Asian Nations, ASEAN). Vínculo entre pueblos, límite o frontera, objeto de enfrentamientos militares el río es objeto hoy en día de un gran proyecto de cooperación y desarrollo conocido como el GMS (por su sigla en inglés) “Greater Mekong Subregional o GMS” el cual involucra a seis países con desiguales grados de desarrollo, a la vez que contempla de manera articulada el comercio, las inversiones, la industria y también, como parte importante dentro de ellas, el turismo. Desde la perspectiva de la teoría de la competitividad en el GMS se “comparte la noción de que las regiones, ciudades o cualquier otra unidad territorial pueden visualizarse como un conjunto de activos o atributos que reflejan un nivel determinado de competitividad. Dichos activos se refieren esencialmente a factores que promueven el crecimiento de la

productividad, notablemente tecnología y recursos humanos, pero también la estructura de la economía regional y la forma en que ésta se intenta moldear a través de políticas públicas” (ITESM: “Estudio sobre la competitividad de la región Sur Sureste de México” México, mayo de 2005, página 7.). La organización en clusters, establecimiento de cadenas productivas y cadenas de valor son manifestaciones concretas de cómo en el GMS se está entendiendo y aplicando la competitividad para lograr un posicionamiento dentro de las regiones mundiales (el mediterráneo, el MERCOSUR entre otros). En general el proyecto en estudio se encuentra en el entramado mundial de la competitividad: “Cinco factores fundamentales han aumentado la competencia entre centros turísticos internacionales por una mayor participación de mercado los factores internacionales de cambio son:

Mayor demanda de servicios de calidad, especialización y precios accesibles. JES DE LARGO
Menores costos de transporte aumentarán el turismo de largo recorrido, incrementando la necesidad de diversificar los productos turísticos
Mayor interés por el turismo cultural y de descanso con menores fluctuaciones estacionales y una mayor estadia vacacional. PAISES
Integración de los mercados con una mayor y creciente competencia con los destinos turísticos internacionales
Mayor orientación hacia la conservación de la naturaleza

En este trabajo presentamos los programas turísticos mediante los cuales el GMS pretende lograr un posicionamiento competitivo dentro de las regiones mundiales. Conviene aclarar, sin embargo, que pese a que el sector turismo es considerado estratégico, forma parte de otros programas de orden meta, macro, meso y micro como lo entiende la teoría de la competitividad sistémica. En el siguiente cuadro se presenta al sector turismo en cuanto parte importante del GMS. Los programas dentro del proyecto Gran Sub-regional Mekong

Transportación y telecomunicación
Inversión nacional e internacional
Turismo
Gestión ambiental y recurso natural
Energía renovable
Desarrollo de recursos humanos
Agricultura

Objetivo del Proyecto GMS: Promover el crecimiento de la comercialización, la inversión, la industrial y el servicio para generar el empleo y mejore estado económico de los pobladores en el área correspondiente. Fomentar la cooperación para el desarrollo tecnológico y educativo.
Impulsar el manejo de los recursos naturales basándose en el desarrollo sustentable.
Capacitar al recurso humano para la competitividad a nivel mundial.

Los Programas Turísticos

Prima Facie observaremos los programas en su conjunto y a continuación analizaremos en detalle cada uno de ellos. En el cuadro 1 se mencionan los siete programas estratégicos. Los dos primeros se refieren a cómo atraer la demanda (comercialización o marketing del Mekong como un producto único) y a cómo mejorar la oferta mediante fuertes inversiones en materia de infraestructura. Los otros aspectos se enfocan hacia las comunidades ribereñas, conservación del patrimonio natural y cultural y prevención del conflicto social. Asimismo, se prevé la inclusión de las comunidades más pobres en los beneficios derivados del turismo. Los últimos tres programas buscan la participación de empresarios privados, considerando como tales a las grandes, medianas y pequeñas empresas. El estado nacional debe “destrabar” algunas normas migratorias y aduaneras para permitir que los visitantes realicen su travesía en flujos rápidos y confortables.

Programas Estratégicos para fomentar el turismo en GMS (Actas del 16, 17 y 18 Meetings of the Working Group on the Greater Mekong Subregion, 2005, 2006, 2007) (Oficina de desarrollo turístico (2005). Reporte final, Vol. 2. Proyecto de estudio del desarrollo turístico de cruceros sobre el río Mekong en los países participantes en el proyecto Greater Mekong Subregional, Facultad de Economía, Universidad de Chulalongkorn, Bangkok, Tailandia. Página9-2)

1. Planeación turística general entre los seis países y específica de cada uno.
 2. Capacitar los recursos humanos de ésta área.
 3. Gestionar el uso de los recursos naturales y culturales de manera sustentable y gerencia de impactos sociales.
 4. Impulsar la participación de los sectores privados y gubernamental.
 5. Buscar la manera de cumplir la necesidad de los turistas, comercializar y desarrollar los productos e infraestructuras para su repetición.
 6. Actualizar la política turística a nivel nacional e internacional.
 7. Programa Pro Poor (Combate a la pobreza).
 8. Facilitación del movimiento de turistas al interior de la Greater Mekong Subregion (GMS).
- Sobre el contenido de los programas.

Posicionar un producto turístico en condiciones de alta competitividad internacional requiere de actividades tales como, construir una imagen, determinar el sector de mercado al que se dirige, asistir a foros mundiales con objetivos de promoción, establecer una marca o “brand”, crear un sitio web apto para e-commerce, emitir mensajes de publicidad. El asunto se complica cuando los recursos aprobados no son cuantiosos y es obligatorio decidir; en el caso que nos ocupa, fue el mercado Japonés el escogido, al mismo tiempo que en marzo de 2007 se abrió una oficina en los Estados Unidos de América.

La infraestructura forma parte de la oferta turística y cumple un doble papel: soporte para otras inversiones, es decir facilitador de las mismas y la de uso directo por la población local y los visitantes, en el proyecto se mencionan marinas, muelles, carreteras, aeropuertos, parques como el “de las tres civilizaciones”, museos temáticos, acuario, etc. En materia de infraestructura ocurre que hay proyectos individuales (o por países) y colectivos gerenciados y financiados por varios países y organismos internacionales.

Se estima que el Tourism Sector Strategy del GMS tendrá un costo estimado entre 2006 y 2010 de 440.8 millones de dólares de los Estados Unidos de los cuales 372.7 millones se destinarán a la infraestructura turística.

La anticipación de los Recursos Humanos, (HRD, Human Resources Development), que serán requeridos es el objeto de este programa, a continuación presentamos un cuadro con los cursos programados para luego realizar un comentario sobre la intencionalidad de los mismos:
Formación de Recursos Humanos. (Ibid).

Capacitando los ciudadanos mediante intercambio de profesores y estudiantes para poder realizar e turismo comunitaria. Capacitando especialistas de aduanas, oficinas de migración, personal de seguridad y hospitalidad. Cultural Heritage Management Training. Vínculos Tailandia Países Vecinos en materia de Turismo y Transporte.

La intencionalidad de la formación tiene que ver con el contenido especializado de los temas, pero también aprenden a colaborar entre sí, puesto que se trata de países separados por guerras y desconfianzas, el otro nivel del aprendizaje corresponde a la cooperación que proporcionan terceros países con intereses en la región (como el caso de Francia colonizador de la antigua Indochina y patrocinador de la formación en materia de herencia cultural). Begg, señaló que: “Por lo tanto, la inversión en capital humano y físico es

considerada importante, así como también las mejoras organizacionales e institucionales. El objetivo primordial es crear capacidad productiva a través de incrementos en productividad, pero es también importante utilizar la capacidad existente mediante la activación de recursos que se encuentren ociosos” (Begg Ian: “Cities and competitiveness, Urban Studies, 1999, 36;5-6.)

En términos cuantitativos la meta consiste en capacitar a 2.5 millones de personas entre 2006 y 2015, provenientes en su mayoría de las comunidades vulnerables y con habilidades para desempeñarse en los sectores público y privado. Conservación del Patrimonio natural y cultural y gerencia de impactos sociales. La idea fundamental consiste en llegar a estándares mundiales para administrar los recursos naturales y las herencias culturales tanto de las mayorías poblacionales como de las minorías, ello considerando el crecimiento de la actividad pero también los posibles impactos sociales de tipo negativo. Nuevamente la atención se pone en la capacitación “ex ante” de los recursos humanos y la cooperación internacional, en este caso la Universidad de Hawai, con sede en Bangkok, Tailandia. Debe señalarse la importancia del turismo de “peregrinaje” para lo cual se prevé imitar los recorridos históricos de Shiva y Buda, deidades veneradas en la región.

Participación del Sector Privado

Una medida aceptada de competitividad regional es la existencia y calidad de los conglomerados o clusters, entendiendo por tales, “concentraciones de pequeñas empresas ubicadas en una misma región u organizadas en torno a una misma actividad, que actúan coordinadamente y que participan en cadenas exportadoras” Sin embargo es difícil lograr la participación del sector privado en buena medida por la ausencia de una cultura de colaboración público-privado y mecanismos e interfases de comunicación entre ambos sectores. Facilitación del movimiento de turistas al interior de la Greater Mekong Subregion (GMS). El objetivo consiste en una visa única que permita a los viajeros transitar fluidamente por los seis países ribereños. No es un objetivo sencillo si se piensa que el acuerdo sobre visas conlleva acuerdos aduaneros y en materia de seguridad. Se trata además de países con sistemas económicos diferentes: los hay socialistas como China, Laos, Vietnam y Camboya. Reinos como Tailandia, dictaduras como Myanmar (Birmania). Para algunos de ellos las divisas resultantes de las visas son de gran trascendencia económica, mientras otros pueden prescindir de ellas. No debe soslayarse el peso económico, político e incluso en el financiamiento del GMS que tiene la República Popular China. La distinción entre países en vías de desarrollo y desarrollados llevó programar que los primeros obtengan el 33% de los beneficios en 2010 y el 41% en 2015 Ver Anexo 2, “Objetivos indicativos del Sector Turismo del GMS”.

METODOLOGÍA

En el trabajo se hizo uso del método comparativo en diversos momentos, primero en términos de la Teoría del Desarrollo la cual desde hace muchos años ha venido comparando el desarrollo asiático con el latinoamericano. En ese sentido pensamos que: “el desarrollo es un cambio multidimensional que acompaña todos los aspectos de la vida social. Estos incluyen: desarrollo económico, el cual genera crecimiento y su distribución equitativa; desarrollo social, que genera bienestar en términos de salud, educación, vivienda y empleo; desarrollo político, el cual crea un sistema de gobierno basado en la protección a los derechos humanos, libertad política y democracia; y desarrollo cultural que orienta la emergencia de una vibrante sociedad civil en donde los ciudadanos expresan libremente su identidad y pertenencia colectiva” (Zhang, Yumei. Pacific Asia. The Politics of Development. Routledge. 2003. pp. 18.) La teoría de la competitividad sistémica se subsume en la teoría del desarrollo.

El Método Comparativo en materia de relaciones turísticas internacionales constituye la metodología del trabajo. En el plano de las técnicas se instrumentaron la Observación Participante por parte de los autores (la MCA. Chaisatit en Tailandia, desde el diciembre de 2012 hasta la fecha), se siguió además técnicas de

Investigación Documental analógica en Tailandia y Virtual desde el Centro Universitario de Estudios e Investigaciones sobre la Cuenca del Pacífico en la Universidad de Colima.

Hoy el día ésta investigación forma parte del proyecto en conjunto “Evaluación de la competitividad turística, caso comparativo México y Tailandia financiado por la Universidad de Colima entre la Escuela de turismo y Gastronomía con el Centro Universitario de Estudio sobre a Cuenca de Pacifico. Estructura y actores o de cómo coordinarse para lograr objetivos tan ambiciosos. Recordemos que existe un organismo denominado GMS, director de varios proyectos de desarrollo uno de los cuales es “The GMS Tourism Sector Strategy from 2006-2015”. Este es el organismo rector el cual ha delegado el rol ejecutivo en el MTO (Mekong Tourism Office). En las reuniones del GMS TWG, participan Organismos Internacionales actuantes en la región como son el ADB (Asia Development Bank), WB (World Bank), ESCAP (United Nations Economic and Social Comisión for Asia and the Pacific), equivalente a la CEPAL, en América Latina, la UNWTO (World Tourism Organization), las NTO (Nacional Tourism Organizations) y también asociaciones empresariales internacionales como la Pacific Asia Travel Association PATA.

RESULTADO

Si bien el mercado es competitivo por naturaleza, la demanda escasa, y la oferta prácticamente ilimitada, no cabe duda que ciertos aspectos como el posicionamiento, los precios, la calidad de los servicios, la participación de todos los involucrados y en todos los niveles constituyen enfoques adecuados para alcanzar la competitividad. La competitividad es un fenómeno de la globalización y la actividad turística no escapa a este, sino más bien es parte muy representativa del aceleramiento del flujo comercial, del uso intensivo de tecnologías de información y comunicación TIC’S, indispensables en la organización de redes y eficientes clústeres turísticos, y de la gran diferenciación de ofertas que responden a diversas preferencias culturales La sociología del conflicto, por su parte, ha demostrado como el binomio conflicto y cooperación es consustancial a la sociedad humana y que sólo mediante procesos de negociación es posible obtener acuerdos turísticos mundiales, regionales (Región del Gran Mekong) y bilaterales.

La Cooperación es la forma de sociedad en la que los asociados participan por partes iguales en el trabajo, la gestión y el beneficio. Su objeto es realizar operaciones de interés común (Mémard: 1997) en el caso del proyecto GMS los seis países han cooperado tanto para obtener beneficios, como para mejorar la calidad de vida de los pobladores. No sólo los países cooperan sino también las comunidades y los sectores público y privado. La organización Mundial del Turismo (OMT) ha adoptado el enfoque sustentable para el turismo y ha definido el desarrollo sustentable como “el desarrollo sustentable atiende a las necesidades de los turistas actuales y de las regiones receptoras y al mismo tiempo protege y fomenta la oportunidades para el futuro. Se concibe como una vía hacia la gestión de todos los recursos de forma que puedan satisfacer las necesidades económicas, sociales y estéticas, respetando al mismo tiempo la integridad cultural, los procesos ecológicos esenciales, la diversidad biológica y los sistema que sostienen la vida” (OMT:1999).

No está de más recordar que en los Objetivos del Milenio, ya mencionados se trata de garantizar la sostenibilidad del medio ambiente (objetivo 7). “Aunque la mayoría de los países se ha comprometido a cumplir los principios del desarrollo sostenible, ello no se ha traducido en un avance suficiente para dar marcha atrás a la pérdida de los recursos ambientales del planeta. Para alcanzar este objetivo se necesitará prestar más atención a la difícil situación de los pobres (cuya subsistencia cotidiana suele depender directamente de los recursos naturales que los rodean) y un nivel de cooperación mundial sin precedentes. Las medidas adoptadas para impedir que siga deteriorándose la capa de ozono demuestran que es posible progresar. Ha aumentado el acceso al agua potable, pero la mitad del mundo en desarrollo sigue sin disponer de retretes u otras formas básicas de saneamiento. Casi 1.000 millones de personas viven en barrios urbanos de tugurios porque la población urbana aumenta a un ritmo muy superior al de las mejoras de viviendas y al de la disponibilidad de puestos de trabajo productivos” (Annan opus cit página 5.)

CONCLUSIÓN

¿Lección Para México?

México no es ajeno a proyectos regionales de alta competitividad, en marcha se encuentra el Mundo Maya, en el cual participan Belice, Guatemala, Honduras y El Salvador. Asimismo, en el PPP (Plan Puebla Panamá), relanzado en abril de 2007, adquieren relevancia los temas de aduanas, transporte y turismo. Por otro lado el GMS constituye un “competidor potencial” para el turismo mexicano. Tomemos para el caso, los Estados Unidos de América: “The Mekong Tourism Office (MTO) is pleased to announce the establishment of an office in North America with the appointment of John A. Semone as Regional Director North America. For the first time since the establishment of the MTO in Bangkok, the office will have a local contact point in North America for the travel industry at large interested in the six countries of the Greater Mekong Subregion (GMS)” (Mekong Tourism Update Newsletter, Marzo 2007.) Un segmento del turismo estadounidense pudiera encontrar en el GMS destinos de ecoturismo, turismo de aventura y religioso de mayor atracción que los mexicanos. En términos cuantitativos se espera incrementar el número de visitantes de 14.6 millones en 2004 a 46 y tal vez 52 millones en 2015. Con lo cual la GMS superaría el promedio de 20 a 22 millones de visitantes que recibe México. México ha intentado combinar los beneficios derivados del turismo con la educación y el combate a la pobreza extrema sin haberlo logrado plenamente, por eso consideramos que en estos puntos la experiencia del Mekong resulta trascendente.

LOS CAMBIOS EN LA ALTERNANCIA: ANÁLISIS DEL GASTO PÚBLICO EN TABASCO (2007-2012 VS 2013-2015)

Armando Mayo Castro, Universidad Juárez Autónoma de Tabasco

Beatriz Pérez Sánchez, Universidad Juárez Autónoma de Tabasco

Andrés Guzmán Sala, Universidad Juárez Autónoma de Tabasco

Jesús Alberto Morales Méndez, Universidad Juárez Autónoma de Tabasco

RESUMEN

Después de 83 años en el poder, el PRI pierde las elecciones a la gubernatura del Estado de Tabasco, asumiendo en el 2013, el PRD. Desde el primer año de ejercicio constitucional, se dieron a conocer diversas anomalías suscitadas en el sexenio priista, los cuales tuvieron un impacto en los servicios públicos, primordialmente en Salud. Un año después, en el 2014, el gobierno planteó un saneamiento en las Finanzas Públicas con una mejor utilización del gasto. Se analizaron los cambios, comparando el gasto en servicios de salud y educación. La gestión pública actual ha usado herramientas tales como la transparencia y la rendición de cuentas, para crear confianza, pero se requiere de una evaluación de los resultados para la eficiencia del gasto. Es una investigación mixta (cuantitativa y cualitativa), al igual que descriptiva y explicativa, pero sobretodo, analítica.

PALABRAS CLAVE: Alternancia Política, Gasto Público, Tabasco

CHANGES IN ALTERNATE ANALYSIS OF PUBLIC EXPENDITURE IN TABASCO (2007-2012 VS 2013-2015)

ABSTRACT

After several years in the power (83 years), PRI lost the elections for governor of Tabasco, that take in 2013, the PRD. Since the first year of constitutional exercise, they were released several anomalies raised in the PRI administration, which had an impact on public services, leaving in first place the health services. One year later, in 2014, the government proposes a reorganization in Public Finances with better use of spending. The changes analyzed was comparing spending on health and education. Current governance has used tools such as transparency and accountability, to build confidence, but requires an evaluation of the results for the efficiency of spending. It's a (quantitative and qualitative) research mixed investigation, as descriptive and explanatory, but in all cases, is analytic research.

INTRODUCCIÓN

La alternancia política en Tabasco se hizo efectiva el 31 de diciembre del 2012 cuando Arturo Núñez Jiménez rindió protesta como gobernador, surgido del Partido de la Revolución Democrática (PRD), desplazando así 83 años de gobiernos priistas. Una semana antes de este acontecimiento Núñez Jiménez señaló, que no dimensionaba el tamaño “del desastre” administrativo y financiero gubernamental, el cual era mucho mayor de lo que suponía. En este mes, se habían dado dos acontecimientos importantes, la

autorización de un empréstito por el Congreso del Estado que ascendió a 4 mil 100 millones de pesos, y una crisis en el sector salud por la falta de pagos a proveedores y al personal médico. Fue con la ayuda del Titular del Poder Ejecutivo Federal que se pudo salir del problema en el sector salud, ya que envió recursos a la entidad (El Universal, 2012). Con lo anterior, se dieron una gran cantidad de cambios políticos, económicos y sociales para Tabasco. El Gobernador del Estado, presentó un Plan en el que los primeros dos años se ocuparían para salir del boquete financiero, los dos siguientes para poner los cimientos del desarrollo, y los últimos dos para potencializar al Estado. Al mismo tiempo, se dieron cambios en la planeación y ejecución del gasto público, priorizando el saneamiento de las finanzas públicas.

MÉTODO

Para la realización del presente documento se analizó el presupuesto de egresos para el último año del período 2012 y el del 2013, con el fin de poder realizar un análisis comparativo de los datos presentados. Al mismo tiempo se estudiaron artículos científicos y reportes tanto académicos como de organizaciones encargadas de evaluar las finanzas públicas, para poder conocer las diversas posturas sobre el tema. Se propone con lógica lo obvio.

CONCLUSIONES

El Gasto público en el Estado de Tabasco ha sufrido diversos cambios en lo que va de la actual administración 2013-2018, a dos años de su gestión el Lic. Arturo Núñez Jiménez, Gobernador Constitucional del Estado de Tabasco, ha ejercido mayor gasto público en el desarrollo social; prueba de ello es el programa “Corazón amigo”, el cual busca elevar la calidad de vida de los tabasqueños discapacitados. En lo que respecta al Sector Salud se ha buscado la reducción de los gastos personales, además que paulatinamente se han reestablecido los servicios médicos y asistenciales en el estado después de la crisis que vivió este sector a finales de 2012. En desarrollo económico ha aumentado el gasto que se destina a la promoción turística del estado, aunado a que la actual administración busca apuntalar el estado como un punto logístico de la Región Sur-Sureste.

El gasto público que destina el gobierno del estado al pago de la deuda continúa en los mismos niveles que la administración granierista, debido a que en 2013 se encontraron nuevos pasivos, la mayoría de proveedores y pagos de impuestos. Algo a destacar en este tema es que en 2014 se reestructuró la deuda con el Banco Interacciones y actualmente con el Bank of New York Mellon, disminuyendo el pago de intereses. El reto que tiene no sólo el Estado de Tabasco, sino todas las entidades de la República Mexicana; es implementar medidas que erradiquen a fondo los actos de corrupción, generando un ambiente donde converjan la transparencia y la rendición de cuentas, al igual que ejercer un gasto público que dé resultados a la población, que disminuya el aparato burocrático y que satisfaga las necesidades de todas y todos.

Minerva Parra Uscanga, Universidad veracruzana

RESUMEN

El propósito de este trabajo es dar a conocer la importancia que tiene implementar la educación y la cultura sustentable en la población. En México, así como en el mundo, el tema de los aspectos ecológicos y ambientales es ampliamente estudiado, sin embargo y pese a ser un tema de actualidad, éste no ha tenido un impacto en los habitantes del país y particularmente en la zona metropolitana Veracruz-Boca del Río, México. La sustentabilidad tiene que ver con muchos aspectos, de los cuales distingo tres, económicos, ambientales y culturales, en este último, promover un cambio en la cultura de consumo es importante, (Ayuntamiento de Madrid, 2012) "... los patrones de consumo de las sociedades se han visto profundamente modificados a lo largo de las últimas décadas, en paralelo a la globalización de las relaciones económicas y a la generalización de la producción industrial a gran escala. Como consecuencia, el pequeño comercio o comercio de proximidad, que se abastecía principalmente de productos locales y elaborados de manera tradicional, se ha visto desbancado por las grandes superficies y día a día continúa perdiendo terreno", Una propuesta para contrarrestar este problema, es la fomentar un consumo ecológico y sustentable, sobre todo en alimentos, en donde los ciudadanos pueden producir parte de los satisfactores alimenticios que consumen diariamente.

PALABRAS CLAVE: Educación y Cultura Sustentable; Consumo Ecológico y Sustentable

PROMOTING A CULTURE OF ECOLOGICAL AND SUSTAINABLE CONSUMPTION IN THE METROPOLITAN AREA VERACRUZ-BOCA DEL RIO, MÉXICO

ABSTRACT

The purpose of this paper is to show the importance of implementing sustainable education and culture in the population. In Mexico and in the world, the issue of ecological and environmental aspects is widely studied, however, and despite being a topical issue, this has not had an impact on the inhabitants of the country, particularly in metropolitan Veracruz -Boca del Río, Mexico. Sustainability has to do with many aspects which distinguish three, economic, environmental and cultural, in the latter, promote a change in consumer culture is important, (Ayuntamiento de Madrid, 2012) "... the patterns of consumption societies have been profoundly changed over the past decades, parallel to the globalization of economic relations and the spread of industrial-scale production. As a result, small businesses or local shops, mainly supplying local and processed products traditionally, has been superseded by supermarkets and daily continues to lose ground, "A proposal to counteract this problem, it is the encourage green and sustainable consumption, especially in food, where citizens can produce some of the food they consume

INTRODUCCIÓN

La zona metropolitana de Veracruz- Boca del Río (Oficialmente llamada Zona Conurbada Veracruz-Boca del Río-Medellín-Alvarado, de conformidad con el plan de ordenamiento que para estos municipios generó la Dirección General de Ordenamiento Urbano y Regional del Gobierno del Estado de Veracruz. Bajo el criterio del Instituto Nacional de Estadística y Geografía (INEGI), el nombre oficial es Zona Metropolitana de Veracruz, ya que es una de las 14 zonas metropolitanas de México que cuentan con una población de entre 500,000 y 1,000,000 de habitantes.), tiene una extensión territorial de 1,943 km cuadrados con una población aproximada de 920,177 habitantes y una densidad de población de 616.3 habitantes por km. Cuadrado. Sin embargo es en la conurbación de los municipios de Veracruz y Boca del Río se concentra el 90% de la población en una extensión de 283 km cuadrados que representa aproximadamente el 18.95% de la zona metropolitana y cuenta con una densidad de 2,895.7 habitantes por km. Cuadrado. Como se observa, es en 2 municipios donde se concentra la mayor parte de la población, municipios que principalmente son urbanos y que no cuentan con una importante extensión de suelos rurales, en consecuencia, los alimentos son generalmente adquiridos en pequeñas tiendas de la localidad o en grandes tiendas de autoservicio. A diferencia de este comportamiento de consumo, en las áreas rurales es posible encontrar en los patios traseros de las viviendas algún tipo de cultivo de hortaliza o de cría de pollo principalmente. El objetivo, es por consecuencia, fomentar a través del fomento de una cultura de consumo ecológico y sustentable entre la población urbana y regional de la zona metropolitana mencionada.

REVISIÓN DE LA LITERATURA

El consumo sustentable y ecológico es de reciente creación en México, a diferencia de Europa en donde desde la década de los 90, la Comunidad Económica Europea se ha preocupado por mejorar la calidad de los alimentos que consumen la población del continente, en este sentido se puede observar que desde la definición de consumo sustentable propuesta en el Simposio de Oslo en 1994 y adoptada por la tercera sesión de la Comisión para el Desarrollo Sostenible (CSD III) en 1995. El consumo sostenible o sustentable se definió como: "El uso de bienes y servicios que responden a necesidades básicas y proporcionan una mejor calidad de vida, al mismo tiempo que minimizan el uso de recursos naturales, materiales tóxicos y emisiones de desperdicios y contaminantes sobre el ciclo de vida, de tal manera que no se ponen en riesgo las necesidades de futuras generaciones".

En España, por mencionar un ejemplo importante con la guía de consumo ecológico de Madrid, la cual establece como hacer una compra más ecológica en la alimentación, ya que ésta es una de las áreas que presenta más opciones para mejorar nuestro consumo ecológico. La información es amplia respecto a estos cambios en la conducta del consumidor, sin embargo y pese a mucha voluntad, lograrlo no es tarea fácil si pensamos en toda la propaganda que las grandes cadenas de producción de alimentos que existen en México, la gran mayoría de ellas de inversión extranjera.

METODOLOGÍA

El Centro de Estudios para el Desarrollo de Negocios CEDEN de la Facultad de Contaduría de la Universidad Veracruzana en su Campus Veracruz impartirá cursos-taller a estudiantes en un inicio y posteriormente a ciudadanos de la zona metropolitana, sobre la creación de huertos ecológicos, para de esta forma iniciar una cultura que permita ir replicándose a un mayor número de participantes.

La práctica cotidiana tanto en traspatios como en azoteas se va fomentando el aprendizaje de la elaboración de un huerto ecológico, el proceso no es sencillo, pero a través de pruebas y con el apoyo de biólogos se generará el conocimiento que conlleve a aciertos gratificantes para los ciudadanos con la obtención de alimentos frescos y saludables, que se puedan cosechar y utilizar en la elaboración de platillos diarios.

RESULTADOS ESPERADOS

Que se los estudiantes y ciudadanos de la zona metropolitana conozcan que es el consumo sustentable y se modifique la conducta de consumo de alimentos, así como la compra en tiendas por la elaboración propia. Que conozcan la importancia de producir sus propios alimentos en un huerto ecológico. Que se realicen prácticas de producción de alimentos en el hogar. En general que se cree una cultura de consumo responsable entre los ciudadanos de la zona metropolitana

RESUMEN

La culminación de un programa de educación superior es la obtención del título de grado y su respectiva cédula profesional. Las instituciones de educación superior buscan una mayor tasa de eficiencia terminal, es por ello que se ofrece una gama muy variada de alternativas para la titulación. El presente trabajo de investigación tiene como objetivo indagar la opinión de los estudiantes de la Licenciatura en Contaduría de la Facultad de Contaduría y Administración Unidad Norte del décimo semestre turno vespertino, de la Universidad Autónoma de Coahuila, con respecto a la tesis como requisito para obtener su título profesional.

PALABRAS CLAVE: Titulación, tesis

CHALLENGES FACED BY STUDENTS FROM THE SCHOOL OF ACCOUNTING AND ADMINISTRATION OF THE AUTONOMOUS UNIVERSITY OF COAHUILA, MEXICO, TO OBTAIN THEIR DEGREE THROUGH THE ELABORATION OF A PROFESSIONAL THESIS

Case: College students from the 10th semester, afternoon session, group two (Xv2) from the School of Accounting and Administration, North Unit of the Autonomous University of Coahuila.

ABSTRACT

The culmination of a program of professional education is obtaining the professional degree and its respective professional license. The institutions of professional education look for a greater terminal efficiency rate, and for that reason they offer various alternatives to obtain a professional degree. This research document has the objective of investigating the opinion of the students from the School of Accounting and Administration, North Unit, from the 10th semester, afternoon session, of the Autonomous University of Coahuila, regarding the thesis as a requirement to obtain their professional degree.

KEYWORDS: Professional degree, thesis

INTRODUCCIÓN

Para que una economía sea próspera necesita que sus ciudadanos estén más y mejor educados. La educación superior conlleva muchos beneficios reflejados en ámbitos sociales, económicos y culturales para sus egresados y para la sociedad en general. Actualmente, las instituciones de educación superior están abriendo más espacios para expandir la matrícula escolar. De acuerdo con datos de la Asociación Nacional de Universidades e Instituciones de Educación Superior, ANUIES, en el ciclo escolar 2006-2007 la cobertura fue de casi 2,525,000 estudiantes, y ascendió a casi 3,274,000 estudiantes en el ciclo escolar 2012-2013. Las instituciones de educación superior además de preocuparse por abrir más espacios escolares para universalizar la educación, deben ocuparse por brindar una educación de calidad que se traduzca en que todos sus egresados logren obtener su título profesional en un lapso de tiempo considerable. Para tales logros, un eje estratégico de la ANUIES es el apoyo a estudiantes en el cual se le acompañe integralmente en su proceso formativo de tal forma que se refleje en una terminación oportuna de sus estudios profesionales. Preocupados por el índice de titulación, algunas instituciones de educación superior han diversificado las modalidades de titulación para incrementar la cantidad de alumnos titulados con respecto a los alumnos egresados. Tal es el caso de la Facultad de Contaduría y Administración, Unidad Norte, perteneciente a la Universidad Autónoma de Coahuila.

REVISIÓN LITERARIA

La tesis es un trabajo escrito con una propuesta que puede ser sostenida o demostrada mediante pruebas y razonamientos apropiados para optar por un doctorado (Landeau, 2007). En las universidades, la tesis constituye un trabajo original de investigación en el cual el aspirante ha de demostrar que es un estudio capaz de hacer avanzar la disciplina a la que se dedica (Eco, 2004). Para efectos de este trabajo, se estará refiriendo a la tesis sí como un trabajo metodológico escrito que deberá ser sustentado, pero con la finalidad de obtener el grado de licenciatura. El artículo séptimo del Reglamento General de Opciones para Titulación de la Universidad Autónoma de Coahuila señala que las alternativas para que sus educandos puedan titularse son: el examen profesional sobre: tesis profesional, monografía, memoria del servicio social o práctica social, cursos especiales de titulación, examen general de egreso de licenciatura (CENEVAL), por promedio escolar sobresaliente, por experiencia profesional, y por trámite administrativo.

Siguiendo con el mismo reglamento, el artículo noveno indica que se denomina tesis profesional al trabajo escrito que presenta los resultados obtenidos en una investigación realizada con rigor metodológico y que contiene una posición razonada y fundamentada en información documental o de campo sobre un tema científico o tecnológico. El egresado de la Licenciatura en Contaduría de la Universidad Autónoma de Coahuila, es un profesional líder con actitud visionaria; reflexivo, creativo y analítico, capaz de resolver problemas y aplicar técnicas y modelos que le permitan mejorar la eficiencia de las áreas contables utilizando tecnologías de información, con gran sentido práctico, con capacidad de auto aprendizaje y generación de conocimiento, comprometido con la sociedad y el medio ambiente en contextos laborales nacionales e internacionales. Si una de las funciones de la Universidad Autónoma de Coahuila es la investigación que realiza tanto el claustro docente como el alumnado, se pretendería que sus egresados se titularan por esta modalidad. Los registros públicos de la Facultad de Contaduría y Administración Unidad Norte, de la Universidad Autónoma de Coahuila, indican que los alumnos de la Licenciatura de Contaduría que se han titulado por la modalidad de examen profesional han ido en ascenso, como se muestra en la Tabla No.1. Si el egresado es una persona generadora de conocimiento, ¿qué es lo que detiene al alumno a escribir una tesis de grado?

Tabla No. 1: Alumnos Titulados de la Licenciatura En Contaduría de la Facultad de Contaduría y Administración de la Universidad Autónoma de Coahuila

Año	Alumnos Titulados	Con Examen Profesional	Sin Examen Profesional
2002	0	0	0
2003	26	0	26
2004	41	0	41
2005	30	5	25
2006	31	15	16
2007	30	15	15

METODOLOGÍA

Para conocer la opinión con respecto a la titulación por medio de la modalidad de examen profesional por tesis, de los estudiantes de la Licenciatura en Contaduría de la Facultad de Contaduría y Administración Unidad Norte del décimo semestre turno vespertino grupo dos, de la Universidad Autónoma de Coahuila, se censó a todo el grupo de 33 estudiantes. A dicho grupo se le aplicó un encuesta auto dirigida de opciones múltiples, así mismo, se le realizó una entrevista no estructurada en la cual se pretendía profundizar sus opiniones.

El instrumento de investigación empleado es el siguiente:

Folio: _____

Género masculino femenino

Edad: _____

Fecha: _____

A continuación se muestra una serie de preguntas, favor de ENCERRAR en un círculo la respuesta correcta. La información aquí recabada se utilizará únicamente con fines de investigación particular y será confidencial. Muchas gracias.

¿Conoces todas las modalidades de titulación que ofrece tu Universidad?

- a. Si
- b. No

Menciona las tres alternativas de titulación que más te favorezcan:

- c. _____
- d. _____
- e. _____

¿Tu promedio general de la carrera es superior a 90?

- f. Si
- g. No

¿Has concluido tu servicio social?

- h. Si
- i. No

¿Actualmente desempeñas alguna actividad relacionada con tus estudios profesionales?

- j. Si
- k. No

¿Qué significa para ti elaborar una tesis?

- l. Investigar un tema relacionado con mi área de estudios.
- m. Manera de demostrar los conocimientos obtenidos a lo largo de la formación profesional.
- n. Acrecentar mi currículum vitae
- o. Oportunidad para redactar un libro
- p. Requisito para titularme.
- q. Otro. ¿Cuál? _____

A continuación se presentan algunos beneficios de titularte por Examen Profesional de Tesis, por favor enuméralas del 1 al 7, donde 1 es lo más importante para ti, y 7 lo menos significativo.

- _____ Obtener reconocimiento personal.
- _____ Obtener reconocimiento profesional.
- _____ Demostrar los conocimientos adquiridos en la universidad.
- _____ Aplicar para una beca de estudios de posgrado.
- _____ Poder pertenecer al Colegio de Contadores.
- _____ Oportunidad para escribir “un libro”.
- _____ Participar en algún concurso de tesis de grado.

¿Qué es lo más complicado para hacer una tesis?

- r. Elección del tema
- s. Elección del área en donde se realizará la investigación
- t. Obtención de la información
- u. Redacción de los resultados de la investigación
- v. Contar con un asesor

¿Qué te puede impedir elaborar una tesis?

- w. Falta de tiempo
- x. Falta de recursos económicos
- y. Falta de recursos bibliográficos
- z. Poca auto motivación
- aa. Temor a validar conocimientos adquiridos
- bb. Temor a presentar el examen profesional
- cc. Temor a defender la tesis en el examen profesional
- dd. Pereza

¿Sabes que existen entidades que te pueden ayudar a conseguir una beca o financiar tu tesis de grado?

- ee. Si
- ff. No

¿Qué tan importante es para ti obtener tu título profesional?

- gg. Muy importante
- hh. Poco importante
- ii. Nada importante

¿Te vas a titular inmediatamente al concluir tus estudios profesionales?

- jj. Si
- kk. No
- ll. No lo he pensado

¿Cuál es la opción por la que te vas a titular?

- mm. Tesis
- nn. Monografía
- oo. Memoria del servicio social
- pp. Cursos especiales de titulación.
- qq. Examen general de egreso de licenciatura (CENEVAL).
- rr. Por promedio escolar sobresaliente.
- ss. Experiencia profesional.
- tt. Por trámite administrativo.

¡Muchas gracias por tu tiempo!

RESULTADOS

Las encuestas aplicadas al décimo semestre de la Licenciatura en Contaduría, grupo dos, turno vespertino de la Facultad de Contaduría y Administración de la Universidad Autónoma de Coahuila arrojaron los siguientes resultados.

Al preguntarle a los alumnos si conocen todas las modalidades de titulación que ofrece su universidad, el 58% contestó afirmativamente, mientras que el restante 42% respondió negativamente.

Cuando se les pidió a los alumnos que mencionaran las tres alternativas de titulación que más les favorecen, 50% de ellos indicaron como primera opción la titulación por promedio, el 54.2% consideró al examen general de egreso (CENEVAL) como segunda alternativa, y finalmente el 33.3% consideró como tercer alternativa el examen profesional de tesis

Para saber cuántos alumnos podrían titularse por promedio escolar sobresaliente, se les preguntó si su promedio actual es superior a 90, a lo que el 58% confirmó así ser, mientras que el restante 42% dijo no ser así.

Únicamente el 58% de los estudiantes han concluido el Servicio Social, requerimiento necesario para titularse.

El 79% de la población desempeña alguna actividad relacionada con sus estudios profesionales y de ese porcentaje, solamente el 16% podría titularse por experiencia profesional, al poder comprobar 5 años realizando funciones contables en su unidad de trabajo.

Al preguntar a la población estudiada, qué significa para ellos elaborar una tesis, el 45% indicó que elaborar una tesis es investigar un tema relacionado con su área de estudios; el 30% mencionó que hacer una tesis es un requisito para titularse y el 24% restante contestó que una tesis es una manera de demostrar los conocimientos obtenidos a los largo de su formación profesional. Las respuestas quedaron asentadas en la figura No. 1.

Figura No. 1: Significado de Escribir Una Tesis Para los Alumnos

A los alumnos se les presentó una serie de beneficios para titularse por Examen Profesional de Tesis y se les pidió que las enumeraran de acuerdo con el orden de importancia para ellos. Los resultados que más valoran los estudiantes es en primer lugar demostrar los conocimientos adquiridos en la universidad, el segundo lugar lo ocupa obtener reconocimiento profesional, el tercer peldaño es obtener reconocimiento personal, en cuarto lugar se encuentra el poder pertenecer al Colegio de Contadores, el quinto beneficio es la oportunidad para escribir un libro, el sexto lugar es aplicar para una beca de estudios de posgrado y finalmente, en séptimo lugar está participar en algún concurso de tesis de grado, tal como se observa en la tabla número 2.

Tabla No. 2: Beneficios Obtenidos al Titularse Por Examen Profesional de Tesis

Lugar	Beneficio
Primero	Demostrar los conocimientos adquiridos en la universidad
Segundo	Obtener reconocimiento profesional.
Tercero	Obtener reconocimiento personal.
Cuarto	Poder pertenecer al Colegio de Contadores.
Quinto	Oportunidad para escribir "un libro".
Sexto	Aplicar para una beca de estudios de posgrado.
Séptimo	Participar en algún concurso de tesis de grado.

Al pedir a los alumnos que indicaran qué es lo más complicado para hacer una tesis, el 48.5% indicó que lo más difícil es la elección del tema, el 24.2% dijo que lo más complejo es la elección del área donde se realizará la investigación. El 18.2% asintió decir que la obtención de la información le resulta difícil. Un 6.1% piensa que la redacción de la investigación es laboriosa. Para el 3.0% contar con un asesor dificulta la elaboración de la tesis. La figura número 2 plasma las respuestas que dieron los alumnos con respecto a lo más complicado para elaborar una tesis.

Figura No. 2: Complicaciones Para Hacer Una Tesis

A los pupilos se les preguntó qué es lo que les puede impedir elaborar una tesis y se les ofrecieron diversas alternativas. El 54.2% dijo la falta de tiempo, el 16.7% mencionó el temor a defender la tesis en el examen profesional, el 12.5% señaló el temor a presentar el examen profesional, el 8.3% indicó la falta de recursos bibliográficos, el 4.2% lo atribuyó a la poca auto motivación, otro 4.2% dijo la pereza, en cambio, nadie argumentó temor a validar conocimientos. Las respuestas a esta pregunta se puede apreciar en la figura número 3.

Figura No. 3: Impedimentos Para Elaborar Una Tesis

Cuando se interrogó a los alumnos sobre si saben que existen entidades que pueden becar o financiar su tesis de grado, el 21% dijo si saber de ellas, mientras que la mayoría, representado por un 79% contestó no saber de la existencia de instancias que puedan becar o financiar sus tesis.

Al a los estudiantes que les solicitó que señalaran qué tan importante es obtener su título profesional, las posibles respuestas eran a) muy importante, b) poco importante, y c) nada importante. Favorablemente, el 100% dijo la opción a, muy importante.

Al cuestionar si los alumnos se van a titular inmediatamente al concluir su estudios profesionales, una vez más, el 100% fue contundente al afirmar que si se titularán justo terminen su educación profesional.

Finalmente, se les preguntó por la opción que se inclinarán para titularse, las opciones fueron las siguientes: a) tesis, b) Monografía, c) memoria del servicio social, d) cursos especiales de titulación, e) examen general de egreso de licenciatura (CENEVAL), f) por promedio escolar sobresaliente, g) experiencia profesional, y h) por trámite administrativo. La opción con más adeptos fue la tesis con un 41.7%, seguida por el examen general de egreso de licenciatura, CENEVAL. La tercera opción con más menciones fue por promedio escolar sobresaliente, representado por el 12.5%. Un 8.3% de la población tienen pensado titularse por medio de memoria del servicio social, otro porcentaje igual está representado por quienes se titularán por trámite administrativo. Las respuestas de esta última pregunta se pueden observar en la figura número 4.

Figura No. 4: Elección de la Modalidad de Titulación

CONCLUSIONES

Escribir una tesis de grado con la finalidad de obtener el título profesional implica poner orden a un ejército de ideas y datos, es un trabajo académico científico metodológico que es de gran interés para el estudiante o egresado y que desea hacer público. El 58% de los alumnos encuestados conocen las modalidades de titulación, un 45% del alumnado considera a la tesis como una forma de investigar algún tema relacionado con su área de estudios, con la cual van a demostrar sus conocimientos aprendidos. Sin embargo, el 48.5% de los estudiantes sostiene que la elección del tema a investigar les resulta un obstáculo, así mismo, otro 54.2% asegura no contar con el tiempo suficiente. El total del grupo de estudiantes censado de la Licenciatura en Contabilidad de la Facultad de Contaduría y Administración de la Universidad Autónoma de Coahuila, quiere titularse por la vía que implique el menor tiempo posible una vez que hayan culminado sus estudios profesionales.

RECOMENDACIONES

La Universidad Autónoma de Coahuila podría modificar los costos de las modalidades de titulación, que actualmente son iguales, de tal forma que el examen profesional sea el que genere una menor erogación al

alumno y por ende, opte por esta alternativa para obtener el título profesional. Para privilegiar entre los estudiantes y egresados, la obtención del título profesional mediante la elaboración de una tesis, la Facultad de Contabilidad y Administración Unidad Norte debería redactar un manual de elaboración de tesis para que sus estudiantes puedan consultar los requisitos de forma y de fondo que facilite la generación de la investigación. Sería conveniente que la Facultad de Contabilidad y Administración Unidad Norte brindara a los alumnos de los últimos semestres una sesión informativa en la cual se explicara detenidamente cada una de las modalidades de titulación y se concientizara sobre los beneficios que conllevan cada una. Se recomienda a la facultad trabajar en proyectos inter e intra disciplinarios para que los alumnos tengan la oportunidad de conocer más opciones de temas para tesis, y que de manera paralela conozcan qué catedrático puede contribuir asesorando su proyecto. Si la universidad fomenta la investigación, la Facultad de Contabilidad y Administración Unidad Norte podría implementar la creación de un seminario de investigación extracurricular para apoyar a sus alumnos y egresados en la obtención del título mediante examen profesional por tesis.

MODELO DE PENSAMIENTO ESTRATÉGICO: EL CASO DE UNA EMPRESA FAMILIAR DE SEGUROS EN MEXICALI, B.C.

Zulema Cordova Ruiz, Universidad Autónoma de Baja California
Sofia Lizzett Reyes Ayala, Universidad Autónoma de Baja California

RESUMEN

El tema central de la presente investigación es el proceso de pensamiento estratégico en la organización. El objetivo de la misma es lograr diseñar un modelo de pensamiento estratégico que sirva como base para formular y aplicar un plan estratégico de negocios en la empresa familiar Sandoval y Asociados, S.C., una empresa del ramo de seguros y en particular con un enfoque líneas personales, de tal forma que pueda contribuir directamente al incremento de su productividad, competitividad y rentabilidad. El alcance comprende, desde el diagnóstico de la situación actual de la empresa, hasta la propuesta de objetivos y estrategias a seguir. La implementación de la estrategia y la correspondiente medición y mejora, formaran parte de futuros trabajos de investigación.

PALABRAS CLAVES: Pensamiento Estratégico, Empresa Familiar, Estrategia

MODEL OF STRATEGIC THINKING : THE CASE OF A FAMILY BUSINESS INSURANCE IN MEXICALI, B.C.

ABSTRAC

The focus of this research is the process of strategic thinking in the organization. The purpose of it is to design a model of strategic thinking to serve as a basis for formulating and implementing a strategic business plan in the family business Sandoval y Asociados , SC, a company in the insurance industry , particularly with a focus personal lines , so that you can contribute directly to increased productivity , competitiveness and profitability . The scope includes, from diagnosis of the current situation of the company, to the proposed objectives and strategies. The implementation of the strategy and the corresponding measurement and improvement , will be part of future research .

KEYWORDS : Strategic Thinking , Family Business Strategy

INTRODUCCIÓN

Para cualquier negocio, independientemente cual sea su tamaño, el propósito principal sería obtener utilidades que representen ganancias para todos los involucrados, sean familiares, trabajadores, proveedores, clientes, etc. Tal situación se presenta en este trabajo de investigación que se basa en el caso de estudio de una empresa familiar que desea y pretende ser bien administrada y generar las utilidades en mayor cantidad generando un futuro más prometedor y minimizar la incertidumbre sobre la consolidación y permanencia del negocio. El estudio pretende generar un acercamiento a la cultura, la identidad y autonomía organizacional, respetando los patrones de las culturas de empresas familiares solamente enfocando el pensamiento estratégico como un medio para el éxito deseado de la organización.

Planteamiento del Problema

Este trabajo constituye el primer acercamiento al estudio de las empresas familiares enfocadas al giro de los seguros en Mexicali, B.C., con un estudio de caso particular en una oficina tipo promotoria con exclusividad en la venta de una marca en particular. Para Casillas y Acedo (2007) la empresa familiar ya no es tan sencilla de definir pues existen algunos límites difusos. En general es aquella donde más de un individuo, de una misma familia, tiene a la empresa como un medio de vida. Podemos decir, continúan, en sentido amplio que se trata de una empresa conducida y controlada por uno o más miembros de una familia. Las empresas familiares son la conjunción de tres subsistemas: familia, propiedad y control. Las empresas familiares, son el sector dominante en cualquier economía. Estudios revelan que las empresas familiares duran el doble de aquellas que no lo son.

Objetivo

El objetivo de la presente investigación está enfocado en lograr diseñar un modelo de pensamiento estratégico que sirva como base para formular y aplicar un plan estratégico de negocios en la empresa Sandoval y Asociados, S.C., una empresa del ramo de seguros y en particular con un enfoque líneas personales, de tal forma que pueda contribuir directamente al incremento de su productividad, competitividad y rentabilidad.

Pregunta de Investigación

¿Qué tan favorable es el hecho de que una empresa familiar del ramo de seguros pueda mejorar en su productividad, competitividad y rentabilidad apegándose a un plan estratégico de negocios?
¿La identidad organizacional juega un papel importante en las formas de organización de la empresa familiar?

Marco Teórico

La referencia teórica que dará sustento a la presente investigación estará conformada de una revisión de la situación actual de la empresa familiar, un apartado para el desarrollo de la metodología del pensamiento estratégico y la referencia de la empresa familiar en la que se aplicara el mismo, para dar un sustento efectivo para su funcionalidad.

La Empresa Familiar

La empresa familiar es aquella cuya propiedad, dirección y control de las operaciones está en manos de una familia. Sus miembros toman las decisiones básicas (estratégicas y operativas) asumiendo por completo la responsabilidad de sus acciones (Soto, 2007). Y como no serlo si como comenta Davis (2006) este tipo de empresas representan cerca de dos tercios de todas las empresas en todas las economías. Aunque cada organización tiene sus propios miembros, metas y valores, se ha encontrado que es posible establecer diferencias entre las empresas familiares y las que no lo son. Estas son algunas características de las empresas familiares:

Las pequeñas empresas tienden a sobre capitalizarse y a contraer pocas o ninguna deuda y suelen tener alta liquidez ya que con frecuencia sus márgenes de operación y su retorno sobre activos exceden a los de sus competidores. Los negocios familiares suelen estar económicamente subdesarrollados, en el sentido de que no son tan grandes como podrían ser. Frecuentemente ocurre que en cuanto el dueño de estas organizaciones alcanza un bienestar económico no le interesa optimizar el tamaño de su empresa o sus ingresos. Se

considera que los negocios familiares tienen una gran ventaja estratégica, ya que no es necesario que produzcan utilidades en el corto plazo para mantener contentos a sus accionistas, por lo que se pueden orientar al largo plazo. Dado que en estas empresas, los subsistemas de empresa y la familia interactúan, no se suelen tomar decisiones puramente racionales que afecten a la empresa, sino que los intereses de la familia también juegan un papel importante. Evidentemente, la función del propietario radica en los problemas reales sobre los que tiene que pensar y como tiene que resolverlos, por lo que la función es de síntesis y de interrelación. Se puede describir como función de síntesis en los procesos de toma de decisiones y el mano de hombres como la función de interrelación (Cifuentes, 1996).

Planificación Estratégica y Ventaja Competitiva

La palabra estrategia viene del griego *strategos* que significa “líder o armada”. El verbo *estratego* significa plan para destruir enemigos a través del uso efectivo de los recursos (Bracker, 1980). Derivado del origen del vocablo es que los numerosos conceptos de estrategia desarrollados por los escritores de la historia han sido utilizados por numerosos militares y políticos como Napoleón, Hitler y Maquiavelo, por mencionar algunos. Frecuentemente se habla de estrategia por un lado y de ejecución por otro lado. Quizás aquí es donde comienza el problema, pues se contribuye a cimentar ese “muro” entre ambos procesos. En realidad, la estrategia sin ejecución no sirve, y la ejecución sin estrategia carece de dirección. Yendo más allá, en último extremo “la ejecución ES la estrategia” como dice Espinosa y Larrabeiti (2012).

Si lo que se desea es que una estrategia se ejecute hay que empezar a pensar en la ejecución desde el momento en que se diseña la estrategia. Como explican Ram Charan y Larry Bossidy (2002), hay que preguntarse si la organización está preparada para la ejecución o no, y dejar claros los vínculos de la estrategia con las personas y las operaciones. Una forma de asegurar que la organización puede ejecutar la estrategia es precisamente involucrar en la definición a los responsables de la ejecución. “Los mejores resultados se obtienen cuando los responsables de la ejecución participan también en el proceso de planificación estratégica” como manifiesta Lawrence G. Hrebiniak en su obra “Making Strategy Work”. Los CEO autores del libro “Ejecución Estratégica. La experiencia e innovación de 12 CEO ante un nuevo escenario” nos aportan varias mejores prácticas:

Llevar a cabo la definición de la estrategia con un doble proceso “top-down” (de arriba a abajo) y “bottom-up” (de abajo hacia arriba). Top-down porque la estrategia requiere de cierta visión global que normalmente sólo se tiene en los niveles directivos, y bottom-up (es decir, involucrando a la base) para darle un toque de realidad a la estrategia y garantizar que podrá ser ejecutada. Ya no valen los planes estratégicos concebidos por unos pocos “iluminados”.

Mezcla entre juventud y experiencia. Hacer participar en el proceso a personas jóvenes y/o de otros sectores, que aporten una nueva visión sobre cómo hacer las cosas y conjugarla con la experiencia del equipo, para garantizar en el tiempo los valores de la empresa. De hecho, el proceso de elaboración de la estrategia puede ser un momento excelente para detectar talento entre el personal más joven. Así mismo, y siempre intentando evitar que el plan estratégico se convierta en “un documento bien encuadernado en el anaquele del CEO”, se debe concebir el plan como una priorización de ideas que la organización debe desarrollar.

Es decir, la estrategia no debe contener los detalles (éstos deben ir en los planes operativos), sino que debe marcar las líneas maestras a seguir. Es la idea que recogieron James Collins y Jerry Porras en 1997 en su libro “Built to Last: Successful Habits of Visionary Companies” con el concepto de BHAG: “Big Hairy Audacious Goal”: la estrategia expresada como un gran objetivo audaz y algo descabellado, que hace de punto focal unificador de los esfuerzos de toda la empresa. Algo que todo el mundo entienda y que genere espíritu de equipo y ganas de alcanzarlo. Así, se garantiza que todo el mundo entiende la estrategia. Finalmente, existen métodos de visualización de la estrategia que ayudan a sintetizar y, sobre todo, a

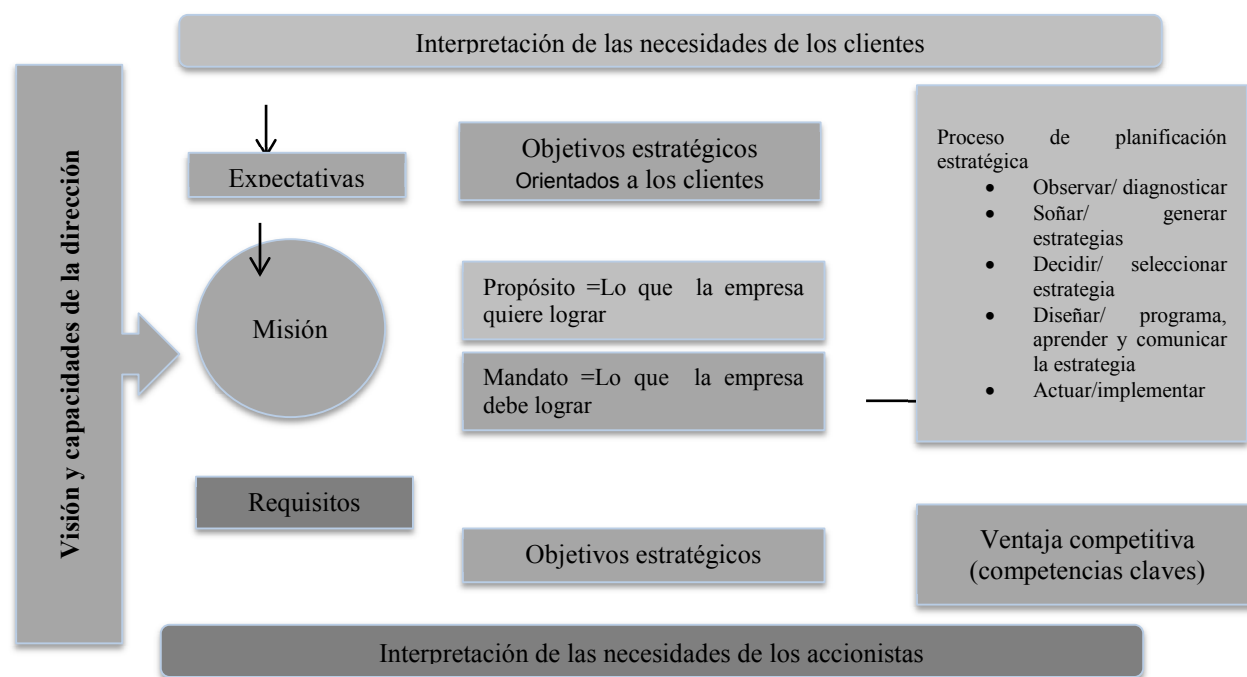

entender la estrategia (está demostrado que recordamos y entendemos mejor cualquier concepto si viene acompañado de imágenes o esquemas).

Ahora bien, que es lo que hace estratégicamente a la planeación. Según Ackoff (1993), la planeación es estratégica, cuando: Es a largo plazo, cuando más funciones de una organización se ven afectadas por un plan más estratégica será; cuando se refiere tanto a la formulación de los objetivos, como a la selección de los medios para lograrlos. Es así como, planificación estratégica o planteamiento estratégico, es un sistema que da soporte y estructura al proceso de pensamiento estratégico (visión), al combinar el método científico con el arte de dirigir operaciones militares. La finalidad del sistema es la de generar, elegir e implementar las mejores estrategias de negocio y organización. Es sistema es diseñado y operado por el estratega de la organización. Para Charan y Bossidy (2002) la ejecución es “un conjunto específico de comportamientos y técnicas que las empresas necesitan dominar para obtener una ventaja competitiva. Es una disciplina en sí misma “.

Propuesta Metodológica de Pensamiento Estratégico

Hablar de pensamiento estratégico nos debe llevar a romper el limitado campo visual, debe estar respaldado por el uso diario de la imaginación y por el constante entrenamiento en los procesos lógicos del pensamiento. Aun teniendo un plan operativo bien definido, con las personas adecuadas y los procesos adecuados y toda la organización alineada hacia los mismos objetivos, el éxito en la ejecución se debe gestionar en el día a día. Los elementos que conforman el modelo se pueden visualizar en la siguiente figura:

Figura 1: El Proceso del Pensamiento Estratégico

elaboración propia

El modelo inicia a partir de la visión y las capacidades del director de la empresa. Se debe considerar que la base para lograr una planificación estratégica así como la formulación de estrategia, es el generar pensamiento estratégico. La estrategia se origina con la visión así como de las capacidades del director de

la organización, esto lo deberá determinar conociendo las necesidades del cliente que no es más que lo que se quiere lograr y de igual manera considerando las necesidades e intereses de los accionistas, que es lo que se debe lograr. Implementar la misión, tomando como base las expectativas de clientes e intereses de los accionistas. La declaración de la misión es el elemento que traduce las responsabilidades y pretensiones de la organización en su entorno, por medio de la definición del negocio y la delimitación de su ámbito de actuación. Es claramente, una definición que antecede al diagnóstico estratégico (Markides, 2004). Dado el hecho de que existen infinidad de definiciones de lo que es una misión empresarial en todas es posible que se logren distinguir, de forma implícita o explícita un doble fin: satisfacer las expectativas de sus clientes (propósito) y de sus accionistas (mandato). Estipular los objetivos estratégicos orientados tanto a clientes o accionistas En cuanto a esta labor es indispensable diferenciar un objetivo general de un objetivo estratégico. Steiner menciona que un objetivo se refiere al un resultado que se desea o se necesita lograr dentro de un periodo de tiempo específico (Steiner, 2001). Y por su parte un objetivo estratégico son resultados a largo plazo que una organización aspira lograr a través de su misión (David, 1993). De este modo se logran convertir como aquellos que definirán la estrategia, se basan en la misión y a su vez da origen a las estrategias a implementar.

Se evalúa, seleccionar y aplica el proceso de la planificación estratégica Es indispensable conocer metodologías o procesos que pueden servir de apoyo para formular, implementar y controlar las estrategias. Metodología de Steiner (2001). Aporta un modelo conceptual de la estructura y el proceso de planeación corporativa sistemática. Elabora el significado de la planeación estratégica y explica cómo se puede realizar el proceso, dividiéndolo en tres secciones: premisas, formulación de planes, implementación y revisión. Por su parte Arnold C. Hax y Dean L. Wilde (2003), es el modelo Delta que abarca un conjunto de marcos conceptuales y metodologías que han ido desarrollándose en el transcurso de los años para apoyar directivos en la articulación e implementación de estrategias corporativas eficientes. Este modelo hace cuatro contribuciones: el triángulo, los procesos adaptativos, la medición y experimentación y por último la retroalimentación. La propuesta de R. Kaplan y D. Norton (1996). El conocido Cuadro de Mando Integral y los mapas estratégicos. Los objetivos e indicadores del CMI se derivan de la visión y estrategia de la organización y contemplan la actuación de la organización desde cuatro perspectivas: la financiera, la del cliente, la de los procesos internos y la innovación así como el aprendizaje.

La Ventaja Competitiva

La ventaja competitiva nace del valor que la empresa es capaz de crear para sus compradores, que exceda el costo de una empresa para crearlo. La base fundamental del desempeño promedio sobre el promedio a largo plazo es una ventaja competitiva sostenida. Existen dos tipos de ventajas competitivas que según Porter (1987) siendo estas la de costos bajos o diferenciación. Esto lleva a que se presenten tres estrategias genéricas para lograr el desempeño sobre el promedio de un sector industrial.

Figura 2: la Ventaja Competitiva

elaboración propia

Sandoval y Asociados

La empresa Sandoval y Asociados, S.C., inicia sus operaciones en el año del 2007, como una oficina con funciones de promotoria de seguros, pertenecientes a la compañía ING Seguros S.A. de C.V., teniendo la exclusividad de comercialización de productos pertenecientes a esta compañía. Su fundador el Sr. Víctor Sandoval Ruiz es quien por sus características personales y sus habilidades en el ramo de las ventas tiene la oportunidad de conformar la oficina, junto a sus hijos y con el respaldo económico de su familia. Su pronta colocación en el mercado de seguros de la localidad en el manejo de productos en particular del ramo de daños fue lo que le dio la posibilidad de buscar una instalación que fuera acorde a la imagen que el negocio debe proyectar, constituyéndose en el año de 2008 la razón social que conserva a la fecha con una oficina propia que denota el profesionalismo del mismo. A partir de entonces, Sandoval y Asociados conformaron el equipo de trabajo que lo respaldaría para ofrecer el servicio de la calidad exigida así como el consolidar el patrimonio de la familia. Situación actual de Sandoval y Asociados, S.C. Con las fusiones acontecidas por la compañía con la cual trabajan, su exclusividad cambio a la empresa AXA Seguros S.A de C.V., ya que su anterior marca fue vendida a esta, teniendo como productos para promocionar los del giro de vida, gastos médicos, daños y autos, tanto en líneas personales como en descuento por nomina, modalidad que se convirtió en su especialidad por muchos años. Actualmente en la localidad de Mexicali existen 4 promotorias que al igual que Sandoval y Asoc. , compiten en el mercado de seguros con exclusividad de AXA Seguros, S.A. de C.V.

La participación de dichas promotorias en la plaza es la siguiente, como se indica en la siguiente tabla:

Tabla 1: Participación de Promotorias de AXA Seguros, S. A. de C.V. En Mexicali, B.C.

Oficina Promotoria	Porcentaje de Participación
Hante y Asociados	30%
Solorzano Jaquez y Asoc.	28%
Sandoval y Asociados	25%
Grese Seguros	17%

Elaboración Propia

Considerando lo antes planteado, cabe resaltar que actualmente tiene una participación en ascenso derivado al cierre de nuevos negocios que representarían un crecimiento del 2% sobre el año anterior aproximadamente. A continuación se exponen algunos aspectos relacionados con la problemática actual de la empresa:

Se tuvo una caída paulatina de participación en el mercado de aproximadamente un 3% del año 2009 al cierre del 2014.

Pérdida de imagen ante sus asegurados por causa de problemas de servicio, en particular por actuaciones de agentes que no son apropiadas.

Carencia de ventajas competitivas o competencia claves.

Los planes u objetivos al inicio de cada año se ven como buenos propósitos, mas no como compromisos, por lo que no hay certeza de logro. Esto se debe a una baja o nula planeación, no hay plan de acción ante las iniciativas.

A los empleados no se les evalúa, solo se les juzga, y no hay lealtad al jefe ni cultura organizacional, se carece de liderazgo.

Nulo desarrollo de la función de planeación estratégica,
 Actitudes poco favorables tanto de promotor como trabajadores hacia la capacitación.
 Las líneas de comunicación entre empleados y clientes son largas.

METODOLOGÍA DE LA INVESTIGACIÓN

La presente investigación tendrá un carácter cualitativo, dentro del estudio de caso, se utilizaron las herramientas metodológicas de la entrevista y el análisis documental, como las principales fuentes de información para su debido análisis, esto permite conocer la complejidad de la organización. El estudio de caso es una investigación empírica que estudia un fenómeno contemporáneo dentro de un contexto de la vida real, especialmente cuando los límites entre el fenómeno y su contexto no son claramente evidentes. Es importante resaltar la importancia del estudio de caso en la investigación. Al respecto Stake (1994) comenta que el estudio de caso se destaca porque llama la atención a la pregunta: ¿qué específicamente puede aprenderse de un solo estudio de caso? El estudio de caso se puede considerar como una forma de análisis multiperspectiva, es decir el investigador considera no solo a los actores sino a los grupos importantes de actores y la interacción entre todos ellos, siendo este uno de los aspectos sobresalientes que el estudio de caso posee (Barba, 2009).

Técnica De Investigación	Concepto	
Entrevista no estructurada	Entrevista	Explicación más que comprensión. Minimización de errores Estímulo-respuesta Respuestas racionales, pasa por alto la dimensión emocional.
	Entrevistador	Serie de preguntas con una serie de respuestas prefijas entre las que elegir. Control del ritmo de la entrevista con un patrón estandarizado y directo. No da explicaciones largas de trabajo y no altera el orden ni la formulación de las preguntas. No permite interrupciones ni intervenciones de terceros en las respuestas. Nunca improvisa el contenido o forma de las preguntas. Establece una relación equilibrada que implica familiaridad al mismo tiempo que impersonalidad. Adopta el estilo oyente interesado pero no evalúa las respuestas oídas.
	Entrevistado	Todos los entrevistados reciben el mismo paquete de preguntas. Las escuchan en el mismo orden y formato.
	Respuestas	Son cerradas al cuadro de categorías. Grabadas conforme al sistema de codificación previamente establecido.
Observación	Observación interna o participante activa, en permanente proceso lanzadera, la cual funciona como observación sistematizada natural de grupos reales o comunidades en su vida cotidiana, empleando fundamentalmente la estrategia empírica y las técnicas de registro cualitativas. La metodología de observación participante posee condiciones que la posibilitan, que seleccionan las entradas de información.	
Etnografías experimentales	Se les denomina etnografías experimentales a las distintas estrategias textuales propuestas como alternativas del realismo etnográfico, buscando una explicación explícita para los problemas concernientes a la descripción de una observación participante. La antropología dialógica, cuyo centro de atención es el nativo, es una de las más importantes etnografías experimentales, la cual aspira a un isomorfismo estructural.	
Biográfica-narrativa (Historia de vida)	Relato autobiográfico, obtenido mediante entrevistas sucesivas, el objetivo es mostrar el testimonio subjetivo de una persona, en el que recojan tanto los acontecimientos como las valoraciones que hace dicha persona de su existencia.	

Fuente: elaborado con base en datos de Ruiz (1999) y Pujadas (1992)

Una investigación de estudio de caso trata exitosamente con una situación técnicamente distintiva en la cual hay mucha más variables de interés que daros observacionales, y, como resultado, se basa en múltiples

fuentes de evidencia, con datos que deben corregir en un estilo de triangulación, y también como resultado, se beneficia del desarrollo previo de proposiciones teóricas que guían la recolección y el análisis de datos (Yin, 2003). En el siguiente cuadro se presenta una aproximación a las principales técnicas de investigación cualitativa, las cuales se consideraron útiles para aplicarlas en este análisis. A partir de ellas, fue posible recabar información para el análisis de construcción del plan estratégico para la organización Sandoval y Asociados.

Herramientas Metodológicas Utilizadas En la Investigación

Las herramientas metodológicas utilizadas en el estudio de caso son las siguientes: Análisis documental. Se realizó una revisión sobre documentos de la empresa, alguna parte se obtuvo de relatorías de los miembros de la organización, con esto se integra la historia de Sandoval y Asociados, desde que se toma la decisión de planear su formación hasta los resultados del último año. Con esto se logró determinar las etapas en la historia de la organización. Entrevistas de profundidad. Para lograr obtener la información fue necesario crear un ambiente relajado y de confianza, no pudiéndose realizar algunas entrevistas hasta después de dos o tres sesiones. La participación del entrevistador fue mínima, se realizó como plática donde los entrevistados relatan su sentir ante la posición de la empresa y su papel en ella. Se realizó entrevista a los miembros de la empresa, tanto empleados, agentes así como socios del negocio.

Participantes

C.P. Víctor Sandoval Ruiz
C.P. Elizabeth Sandoval Mejía
C. Alejandro Sandoval Mejía
Lic. Rodolfo Ochoa Fierro
C. Alejandra Zepeda
C. Rosalba Sandoval
5 agentes noveles
5 agentes consolidados

3 miembros de AXA Seguros, S. A. de C.V. Observación directa. Las entrevistas se realizaron en la misma organización a estudiar. Con lo que tuvo la posibilidad de observar directamente el desenvolvimiento dentro de la empresa y su forma de organizar el trabajo cotidiano, la toma de decisiones en situaciones imprevistas, la interacción de los empleados, así como la forma en que desarrollan estrategias, se tomó nota en cada sesión. Observación participante. El análisis de la construcción del pensamiento estratégico se realizó a través de un taller sobre identidad en el cual se consideraron dos aspectos: La construcción de la identidad son base a valores compartidos en sus tres niveles, individuales, grupales y organizacionales. La construcción de su estrategia organizacional, ubicando sus objetivos, sucesos, logros o resultados, principios, perspectivas y participantes.

Resultado de la Aplicación de la Propuesta Metodológica de Pensamiento Estratégico

En esta fase se trabaja para desarrollar una misión y visión de empresa, teniendo como resultado, lo siguiente:

Misión: Buscamos satisfacer plenamente las necesidades de aseguramiento y previsión financiera de nuestros clientes, a través de la expedición de pólizas que fundamentan un total conocimiento de nuestros productos.

Visión: Deseamos ser siempre captados por el mercado como supremos profesionales que dan respaldo con su verdadera misión de servicio y entrega total siendo líderes en nuestro ramo.

Valores: Somos profesionales altamente responsables, con una disciplina excepcional. Confiamos en el ímpetu de luchar por lo que se quiere logrando así un éxito personal y común. Creemos en la responsabilidad social y en el trabajo en equipo. Algo fundamental en esta metodología aplicada es la declaración de objetivos estratégicos, relacionados con el desempeño esperado de la empresa.

Objetivos Propuestos

Para cumplir con este punto se dividieron los objetivos en dos grandes enfoques, los objetivos estratégicos para los clientes y los objetivos estratégicos para los socios. En la siguiente tabla se reflejan los que se consideran tienen repercusión en la percepción del valor para los clientes a través de una mayor expansión, con ello se pretende agrandar la proporción en el mercado, teniendo mayor penetración, así enfocar los esfuerzos en la competitividad.

Tabla 2: Objetivos Estratégicos Enfocados a Clientes

Indicador de Desempeño	Objetivo 2015
Competitividad:	Incrementar el valor de las ventas anuales del año 2014 en un 6% para el siguiente año.
Ventas netas	Obtener el 32% de participación en el mercado de seguros de la localidad para el 2015.
Participación en el mercado	Lograr incremento de un 2% en las utilidades.
Utilidades netas	Incrementar la productividad de un 65% a un 70% para el 2015.
Productividad:	Aumentar el porcentaje de conservación en un 85% para el 2015 de la cartera de los agentes.
Productividad	Acrecentar la efectividad en un 5% por trimestre.
Garantía de renovaciones-conservación de cartera	Aumentar la eficiencia en un 15% en líneas personales, en particular con vida individual.
Efectividad	
Eficacia en líneas personales	

Elaboración propia.

En cuanto a los objetivos estratégicos para el rubro de los socios, es el lograr obtener el apoyo suficiente para financiar la operación de la oficina, logrando rentabilidad y minimizando el riesgo posible en ámbito financiero, operativo y comercial. (Ver tabla 3). Una labor prioritaria será la del allegarse del personal que refuerce su cartera de agentes por lo que es indispensable generar objetivos estratégicos enfocados al tema del recurso humano, e la tabla 4 se muestran las acciones que se deberán considerar.

Tabla 3: Objetivos Estratégicos Enfocados a Socios

Indicador de Desempeño	Objetivo 2015
Rentabilidad:	Aumentar el nivel de liquidez en un 10% respecto al año inmediato anterior.
Liquidez	Mantener la solvencia conseguida de 3.15 para el siguiente año.
Solvencia	Conseguir el 100% de los bonos de productividad para ayuda de oficina, así como reclutamiento.
Bonos de productividad	

Elaboración propia.

Indicador De Desempeño	Objetivo 2015	Acción
Reclutamiento, selección y asignación de clave	Incrementar el nivel de recluta mensual logrando un incremento del 50% de la cartera de agentes noveles-	<ul style="list-style-type: none"> - Generar difusión al reclutamiento. - Analizar más profundamente los perfiles de los prospectos. - Aplicar exámenes de perfil de ventas más apropiados. - Apoyar a la preparación y obtención de clave para trabajar en menor tiempo.

Elaboración propia

La estrategia de operaciones es uno de los componentes más significativos y complejos para manejar. El desempeño estratégico de operaciones se planea en dos dimensiones, el que refleja el costo y el que se encamina a la satisfacción, por lo que la productividad en la oficina así como en la matriz de AXA Seguros, tienen una razón a considerar, en la siguiente tabla se hace un planteamiento sobre lo mismo.

Tabla 5: Estrategia de Operaciones

Categoría	Objetivo	Acción
Instalaciones	Lograr mayor eficiencia en el centro de trabajo, reubicar áreas para mayor accesibilidad.	Desarrollar una distribución de la planta baja del centro de trabajo para tener mayor impacto visual de oficina.
Capacidad	Optimizar el uso de las instalaciones, de acuerdo a la demanda.	Aplicar técnicas de simulación de sistemas más eficientes.
Alcance del servicio	Desarrollar la habilidad para la innovación	Análisis de futuros requerimientos, mediante el uso de técnicas de prospección. Enfoque a productos estrella en líneas personales.
Relación con agentes	Establecer relación más directa con los agentes, en cuanto horarios de entrega de producción, calidad en solicitudes, servicio en general.	Formar una cadena de suministros en cuanto a la solicitud de póliza, entrega de producción y requerimientos de información adicional.
Gestión de la calidad	Mejorar la calidad del servicio en todas las dimensiones, principalmente en la entrega de pólizas para evitar reproceso.	Implantación de modelos de mejora para disminuir la variabilidad del servicio y así lograr aumentar la satisfacción del cliente.

Elaboración propia

De esta manera, se logra finalizar la aplicación de la metodología de pensamiento estratégico para Sandoval y Asociados.

CONCLUSIONES

Apegados a lo antes expuesto, el pensamiento estratégico se convierte en una filosofía de negocios indispensable para lograr cumplir con la correcta función de la dirección, que no es más que un ensamble de todos los aspectos que integran a la empresa, permitiendo que se genere coherencia y una orientación hacia el logro de un objetivo en común. Dado a que el objetivo de la investigación era diseñar un modelo de pensamiento estratégico, que sirva como base para formular y aplicar un plan estratégico de negocios en la empresa familiar de Sandoval y Asociados, S.C., de tal forma que pueda contribuir directamente en el incremento de su productividad, competitividad y rentabilidad, se considera que se ha cumplido de una manera satisfactoria, ya que primeramente se formuló un marco teórico que ayudo a sustentar las bases metodológicas, posteriormente, con el análisis situacional se conoció el contexto que rodea a la empresa de venta de seguros, lo ayudo a que se pudiera aplicar de una manera más efectiva como este lo exigía. Los beneficios y aportaciones que este trabajo proporcionará son principalmente al lograr un beneficio en la generación de estrategias que impulsaran la rentabilidad, la competitividad y sin dudarla la productividad. Para cumplir con lo planteado se desarrolló desde un análisis de competencias clave, el establecimiento de indicadores de desempeño enfocado a todos los elementos de la organización, la definición de la nueva filosofía empresarial, así como objetivos estratégicos.

Una vez aplicado el proceso de pensamiento estratégico, se denota una actitud diferente hacia la responsabilidad, se generan aptitudes destacables valorando las acciones y aumentando la sensibilidad hacia los intereses tanto de los empleados como de los objetivos de la empresa. Y sobre todo con la aplicación del pensamiento estratégico se reordenan las ideas logrando una adecuada planificación estratégica. El pensamiento estratégico llega a representar los retos y ambiciones que se tienen al mismo tiempo en una empresa y para todos los sectores de interés. De esta manera, se puede llegar a decir que el proceso de pensamiento estratégico ayuda a las organizaciones a identificar lo que se desea lograr y ante todo como alcanzar esos valiosos resultados.

CONSTRUCCIÓN DE UN MARCO CONCEPTUAL DE “PLATAFORMAS LOGÍSTICAS MULTIMODALES”

Adriana Rodríguez-Rojas, UPAEP

José Luis Martínez-Flores, UPAEP

RESUMEN

Existe una amplia literatura sobre la historia, tipologías y características de las Plataformas Logísticas [PL], sin embargo, es poco lo que se conoce sobre uno de sus tipos: las Plataformas Logísticas Multimodales [PLM] o también conocidas como Plurimodales. El presente artículo inicia con un análisis teórico integral y base conceptual de las PL en general y a través de revisión literaria, se hace un exhaustivo análisis de las características, beneficios e impacto que trae el construir este tipo de infraestructura en un país o región, cuáles son las más conocidas en el mundo, hasta llegar a la construcción del marco conceptual de las PLM.

PALABRAS CLAVES: Plataformas Logísticas, Tipologías, Características, Infraestructura Logística

BUILDING A CONCEPTUAL FRAMEWORK OF "MULTIMODAL LOGISTICS PLATFORMS"

ABSTRACT

There is an extensive literature about history, types and characteristics of Logistics Platforms [LP], however, little is known about one of their types: Multimodal Logistics Platforms [MLP] also known as Plurimodals. The present article begins with a comprehensive theoretical analysis and conceptual basis of LP in general, through literature review, becomes a deep analysis of the features, benefits and impact bringing build this kind of infrastructure in a country or region, which best known in the world, until the construction of the conceptual framework of PLM.

JEL: H54, R420

KEYWORDS: Logistics Platforms, Typology, Characteristics, Logistics Infrastructure

INTRODUCCIÓN

En las economías desarrolladas, el impulso de PL ha sido un elemento crucial para enfrentar el reto de la integración de los modos de transporte marítimos, terrestre y aéreo (Leal y Pérez, 2009). Existen diferentes tipos de PL, clasificados según el número de modos de transporte usados. De las tipologías más conocidas se encuentran las Zonas de Actividades Logísticas (ZAL) definidas por Antún, Lozano, Hernández y Hernández (2005) como una plataforma localizada en un nodo de transporte con infraestructura intermodal, con características de entrada-salida y de conexión y los “HUBS” (Hoffman, 2000) que son puertos marítimos que concentran carga de diferentes procedencias y destinos, nacionales y extranjeros, para su posterior redistribución. Al revisar la literatura, no se encuentra una amplia definición de las PLM, tampoco se conoce su historia, cuáles son sus características, impactos y beneficios para la región donde se instalan.

El objetivo del presente artículo es doble. En primer lugar, describe el marco conceptual de las PLM, destacando sus principales características y analizando las más importantes que existen actualmente en el mundo. En segundo lugar, recopila información teórica e histórica que justifican la importancia de instalar

PLM en el mundo. A través de la recopilación literaria sobre PL se construirá el marco conceptual de las PLM y se describirá el beneficio e impacto de mejora para el lugar donde se localicen.

REVISIÓN LITERARIA

Contrario a lo que se piensa sobre el inicio de las PL en el mundo, que ubican su aparición en los años 80, el uso de este tipo de infraestructura data del año 1565 cuando el rey Carlos V ya tenía en Acapulco (México) su PL de la ruta denominada “Galeón de Manila”, donde se concentraba toda la mercancía traída de la Isla de Lucon en Filipinas (que constaba de especias, telas, porcelana, espadas, etc.) y de allí pasaba al puerto de Veracruz por tierra para salir en las velas hacia España (Cuevas, 1943). Posteriormente las primeras PL contemporáneas datan de la época de los ochenta y comienzan en el continente europeo como centros locales de distribución de mercancías. Después va evolucionando el concepto y se conocen como Centros de Transporte, cuyo objetivo era instalar naves de consolidación y desconsolidación de mercancías, naves de almacenamiento y distribución, cercanas a las industrias locales usando un solo modo de transporte (Carranza & Sabria, S/D). El país pionero en este tipo de infraestructura fue Francia, creando las primeras áreas especializadas para las actividades del transporte (Orjuela-Castro, Castro-Ocampo & Suspes-Bulla; 2005). Sin embargo, fue hasta los años 90 cuando se le da un grado de mayor complejidad al concepto de PL integrando más de dos modos de transporte y dando paso al nacimiento de los *Interporti* en Italia, cuyo objetivo principal es consolidar la fragmentada industria de transporte del país y reforzar el negocio de mercancías de los ferrocarriles italianos, combinando el transporte marítimo con el férreo y carretero (Orjuela-Ocampo *et al.*, 2005).

El Reino Unido por su parte, empezó una especialización en el transporte aéreo y actualmente ha concebido propuestas de distribución urbana (Ferreira, 2007). Para el caso español actualmente existen grandes infraestructuras logísticas cuyo mayor proyecto es PLAZA, una PLM ubicada en la comunidad de Zaragoza y que conecta la industria española con el resto del continente europeo y el mundo a través de vías férreas y carreteras (Orjuela-Ocampo *et al.*, 2005; Ferreira, 2007). En Latinoamérica, el tema es relativamente nuevo y los países con un amplio desarrollo de este tipo de infraestructura son Brasil, Colombia, México, Argentina, Panamá, Perú, Chile, Bolivia, Paraguay y Santo Domingo (Orjuela-Ocampo *et al.*, 2005; Ferreira, 2007). Para los casos de Estados Unidos, China y Japón, este tipo de infraestructura logística nació bajo el nombre de Centros Logísticos. La PL más grande de Estados Unidos es el Dallas Logistics Hubs, cuyo inicio de operaciones fue el 2009 (Marques de Souza, da Silva-Costa, Gobbo-Junior; 2007). El futuro de estas infraestructuras serán las llamadas Ciudades Logísticas que son un conjunto de viviendas, centros de convenciones, centros comerciales, centros de salud e instituciones educativas que ayudarán a las personas que laboren dentro del recinto logístico. El ejemplo más conocido es la Ciudad Logística de Dubái cuya construcción iniciará en el 2015 y se espera terminar para el 2020, siendo la primera en el mundo con dichas características (DLC, 2013).

METODOLOGÍA

El trabajo se estructura de la siguiente manera: el primer paso es una exhaustiva revisión literaria sobre PL, conceptos, clasificación de ellas y características en general. El segundo paso consiste en hacer la revisión literaria sobre uno de los tipos de PL que existen: las PLM. Se conocerán los conceptos dado por los diferentes autores para llegar a la construcción del marco conceptual, las características serán definidas considerando las PLM actuales alrededor del mundo, se analizará su localización, a qué tipo de mercado van dirigidas y cuál es su infraestructura básica; también se considerarán las características dadas por los diferentes autores para llegar a la construcción en general de este tipo de infraestructura logística.

Concepto de Plataformas Logísticas

Existen diferentes conceptos sobre PL. En la Tabla 1 se muestra la evolución del concepto y clasificación de ellas partiendo de la primera definición dada por Manchón en 1999 hasta llegar a la más actual dada por Hernández y Villareal en el 2013.

Tabla 1: Evolución y Clasificación de las PL

Autor	Concepto	Clasificación
Manchón (1999)	Son aquellos puntos o áreas de ruptura de las cadenas de transporte y logística, en los que se concentran actividades y funciones técnicas y de valor añadido	Clasificación según el uso de modos de transporte. -Un solo modo de transporte: Centros de Carretera [CC], Centros Urbanos de Distribución [CUD], Parques de Distribución [PD] y Centros de Transporte [CT] -Más de un modo de transporte: ZAL, Centros de Carga Aérea [CCA], Puertos Secos [PS] y PLM.
Maeso-González (2003)	Hace la definición desde el concepto de Áreas de Transporte de Mercancías (ATM) que son infraestructuras complementarias para el transporte de mercancías por carretera. Pueden estar ubicadas dentro de puertos, terminales de carga aérea o férrea, nudos u otros puntos estratégicos, en zonas de concentración industrial y comercial.	Usa la misma clasificación de Manchón (1999), añadiendo una división de las ATM: Centros de Transporte de Mercancías [CTM]: se encuentran los Interpuertos, Centros o Ciudades de Transporte y las PL. Estaciones de Transporte de Mercancías [ETM]. Dentro de la clasificación de las CTM.
Abrahamsson, Aldin y Stahre (2003)	Forma de integrar actividades logísticas en el sistema logístico, donde una organización logística central maneja y controla los servicios que se presten dentro de ella, teniendo en cuenta los nuevos mercados mundiales. Incluye operaciones logísticas, una estructura física, sistemas de información, necesarios para su funcionamiento	No hace una clasificación general.
Soret los Santos (2004)	Son ZAL debidamente preparadas y estructuradas para realizar el conjunto de estas funciones. También se les conoce por Central Integrada de Mercancías [CIM]	No hace una clasificación general.
Meduité (2005)	Muestra en su trabajo que el concepto de PL depende del punto de vista del especialista. Para un especialista es parte de la infraestructura del transporte y para otros especialistas son grandes centros generadores de negocios	No hace una clasificación general.
Bòria-Reverter & García-González (2005)	No tienen un concepto en particular.	Incluyen CIM y ZAL pero agregándole los Interpuertos, PS y las Zonas Francas.
Miquel, Parra, Lhermie y Miquel Romero (2008)	Áreas delimitadas en las que se llevan a cabo actividades logísticas, principalmente las relacionadas con el transporte y la distribución. Éstas controlan, reciben, almacenan y distribuyen las mercancías, regulando los flujos de materiales procedentes de diferentes puntos geográficos. Pueden ser utilizadas por uno o varios operadores y las funciones dependerán de la actividad y tipo de operador que la utilice.	CIM y ZAL Mercas (que son especializadas en distribución de mercancías perecederas) Centros Logísticos RENFE (enlace de la línea férrea con los principales puertos de la península ibérica).
European Association of Freight Villages- EUROPLATFORMS (2008)	Área dentro de la cual todas las actividades relativas al transporte, logística y distribución de bienes, tanto para el tránsito nacional o internacional, son llevadas a cabo por varios operadores. Su gestión puede ser pública o privada y en ambos casos se podrá contar con los servicios públicos requeridos.	Centros Logísticos con múltiples modos de transporte.

Pérez (2009)	Puntos o áreas de rupturas de las cadenas de transporte y logística en los que se concentran actividades y funciones técnicas de valor añadido.	-Plataformas mono-modales: nodos de abastecimiento/mayoristas, Centros de transporte terrestre y Áreas logísticas de distribución. -Plataformas de intercambio modal: ZAL, CCA y PS. -PLM.
Leal y Pérez (2009)	Zona especializada que cuenta con la infraestructura y los servicios necesarios para facilitar la complementariedad modal y servicios de valor agregado a la carga, donde distintos agentes coordinan sus acciones en beneficio de la competitividad de los productos que hacen uso de la infraestructura.	Según complejidad operativa e integración operacional en tres: Centros de Distribución unimodal, Zonas Logísticas y PLM.
Cano <i>et al</i> (2010)	Área especialmente concebida para el desarrollo de actividades relacionadas con la logística, el transporte y la distribución de mercancías en el tráfico nacional e internacional. Este concepto es extensivo a todos los medios de transporte ya que puertos, aeropuertos, terminales ferroviarias o centros de transporte por carretera son ante todo plataformas logísticas, como también lo puede ser una plataforma de distribución privada diseñada con los objetivos descritos	ZAL, CT y HUB's.
Hernández y Villarreal (2013)	Utilizan el concepto dado por EUROPLATFORMS (2008).	Para el modo de transporte presente se sub-clasifican en: Monomodal: Centro Logístico Alimentario (CLA) y Agrocentro Logístico (AGROLOG). Más de un modo de transporte: CCA, ZAL, terminales férreas, PS, Plataforma Logística de Apoyo en Clúster (PLC) y Plataformas Logísticas de Apoyo en Frontera (PLF).

Esta tabla muestra la evolución y clasificación de las PL por autor. Fuente: Elaboración propia

Adicional a esto, Pérez (2009) y Cano *et al.* (2010) plantean los objetivos que debe cumplir toda PL:

Convertirse en polo de atracción de un área industrial y de consumo (“hinterland”), para lo cual deben contar con una buena comunicación con el sistema de transporte en general (puertos, aeropuertos, estaciones ferroviarias y terminales multimodales).

Ofertar suelo competitivo que permita desarrollar las actividades logísticas Concentrar en ellas el transporte pesado para, mediante la llamada “ruptura de carga”, colaborar en la descongestión de los circuitos de distribución urbanos, obteniendo para la colectividad ventajas de calidad de vida.

Concentrar las operaciones logísticas para maximizar la eficiencia de actividad (stock, número de actividades, reducir transporte).

Racionalizar la utilización de los vehículos de transporte, aprovechando al máximo sus características técnicas y comerciales.

Ofrecer operaciones auxiliares del transporte tales como embalaje, etiquetado, recogida y distribución, almacenaje, seguimiento informático, etc.

Masificar los flujos difusos, mediante el uso de unidades de carga y transporte normalizados, para su posterior encaminamiento, con un menor coste, a través de los grandes nudos de transporte y captar nuevos flujos.

Agrupar las mercancías por “familias logísticas” de productos afines, como perecederos, peligrosos, valiosos, etc., haciendo así rentables las inversiones en medios de almacenaje, manipulación y transporte.

Servir de nudo de enlace con las restantes plataformas logísticas de la zona geográfica en que estén situadas, a través de corredores logísticos para descongestionar el tráfico en zonas urbanas y suburbanas y así facilitar los cambios modales de transporte.

Prestar servicios de valor añadido como talleres, formación y capacitación en el sector logístico y de transporte.

Promocionar socio-económicamente la zona a través de la generación de empleo, mejora de la competitividad y protección del medio ambiente.

Características de las Plataformas Logísticas

Para la instalación de PL, se hace necesario cumplir con una serie de requisitos, definidos dentro de modelos conceptuales. Una PL se reconoce así por su estratégica ubicación, una integrada infraestructura y por su extensa disponibilidad de espacio físico, lo cual, unido a las actividades de movimiento de carga, servicios y de valor agregado, han permitido lograr constantes disminuciones en los costos logísticos, consolidación de polos de desarrollo y aumentos sostenidos de la competitividad, poniendo este concepto a la vanguardia del intercambio mundial (Baeriswyl, 2003). Para conocer las características de las PL se hace la división según los servicios que deben prestar y la localización (tabla 2).

Tabla 2: Compendio de Características Por Autor

Autor	Servicios	Localización
Duarte (1996); Bourdain (1999)	Servicios generales: administrativos, bancarios, de estacionamiento. Servicios de transporte: terminales multimodales. Servicios de operadores logísticos: aduanas, de fletes, almacenaje, etc.	Cerca de centros de distribución, con terminales intermodales.
Maeso-González (2003)	Área de servicios Área de logística Área intermodal	Cerca de las grandes urbes y centros de producción.
Soret los Santos (2004)	Intercambio modal Servicios Telemáticos Zona de <i>Picking</i> Área administrativa Área aduanal Área empresarial Servicio a vehículos Servicio de alquiler	Cerca de lugares donde se genere actividad logística, a centros de distribución, considerando el tamaño del mercado y la localización de la competencia.
Perez & Leal (2009)	Puntos de control de tráfico y de ruptura de carga; área de intercambio intermodal y servicios de valor agregado	Depende del tipo de PL; puede estar cerca de la periferia de las grandes urbes, en torno a centros portuarios, usualmente se conectan a través del modo carretero o ferroviario.

La anterior tabla muestra el compendio de las características de las PL teniendo en cuenta los autores estudiados. Fuente: Elaboración propia basada en los autores

Como se puede observar, los autores tienen diferentes formas de identificar las características generales que debe tener una PL, sin embargo, el común denominador de los autores es la Intermodalidad y la cercanía a las grandes urbes y centros de distribución; son muy pocos los que consideran las zonas portuarias o aeroportuarias. Ahora se continúa con el análisis de las PLM hasta llegar a la construcción del marco conceptual, características y beneficios de dicha infraestructura.

Plataformas Logísticas Multimodales

Son pocos los autores que definen conceptualmente a las PLM; es el caso de Maeso-González (2003) y Mique *et al.* (2004), que aunque mencionan a este tipo de PL, no hace una explicación de qué son y cuáles

deben ser sus características. Manchón (1999) fue uno de los primeros en definir conceptualmente este tipo de infraestructura y las define como “espacio físico equipado para el transbordo y almacenamiento de unidades de transporte intermodal”. Para Pérez (2009), son plataformas con una mayor complejidad funcional que suele constar de diversas áreas funcionales, entre ellas, áreas intermodales ferrocarril-carretera y avión-carretera. Poseen áreas logísticas generales especializadas conjuntamente. Su ámbito suele ser nacional e internacional. Por su parte, Leal & Pérez (2009), definen las PLM como nodos logísticos que conectan diferentes modos de transporte con servicios de valor agregado a la carga y no en el modo de transporte utilizado. También se les conoce como infraestructura tipo *hub*, usualmente ligada a la existencia de un puerto para aprovechar economías de escala en las rutas internacionales. Su función nodal agrega actividades logísticas y de distribución de cobertura nacional e internacional, con una base comercial más que operacional y por lo general es llevada a cabo por varios operadores. Por los grandes volúmenes y por su excelente ubicación es posible implementar en ellas casi la totalidad de las estrategias de *postponement* (geográfico, manufactura y ensamblaje). Por último, Hernández & Villarreal (2013), lo definen como plataformas donde conviven dos o más modos de transporte (carretera, ferrocarril, entre otros). Pueden ser nacionales o internacionales, compuesta de varios centros muy próximos o adyacentes, con especialización. Sin embargo Ruibal (2014) hace la aclaración que las PLM se deben redefinir como Plataforma Logística Plurimodal dado que, es un término que refleja el uso de más de un modo de transporte, puede ser bi, tri, tetra o pentamodal, según se usen los vehículos de los 5 modos de transporte existentes: ferro(vagones)-auto (camiones)-fluvio (barcazas)-océano (navíos)-aeroviario (aeronaves).

RESULTADOS

Después de conocer los diferentes conceptos y características dados por los diferentes autores tanto de PL como de PLM, a continuación se crea la definición general de las PLM o Plurimodales:

“Conjunto de espacios logísticos interconectados por más de dos modos de transporte, permitiendo así la plurimodalidad, que incluye actividades logísticas y de valor añadido (servicios administrativos, de salud, entretenimiento, etc.), para el funcionamiento a nivel nacional e internacional, con áreas especializadas en cierto tipo de carga y donde se puedan implementar estrategias de postponement”.

Lo siguiente es identificar las características globales que deben tener para ser consideradas como PLM.

Características de las Plataformas Logísticas Multimodales actuales

Dentro de la definición de las características de las PLM, los autores hacen la división en tres grupos: según el tipo de mercado al que van dirigidos, dónde se encuentran localizados y qué tipo de infraestructura deben tener. Para el Mercado, se refiere al tipo y tamaño de empresa al que está dirigido la PLM. Con respecto a la Localización, los expertos sugieren que debe estar en cercanías a zonas urbanas densamente pobladas y entre los puntos de producción y consumo, con acceso a todos los posibles modos de transporte de mercancía, ofreciendo así la Multimodalidad. Por último, la Infraestructura sugiere que cuente con una extensión de más de 1000 hectáreas, dotadas de instalaciones especializadas en logística (áreas in-bond, aduanas, bodegas de almacenamiento, patios de cargue y descargue y servicios adicionales) [Ferreira, 2010; Antón, 2013]. La localización se efectúa entre los puntos de producción y consumo de la cadena de suministro global, es decir, debe estar estratégicamente localizado en lía con los grandes mercados internacionales que manejan economías de escalas. A este respecto, es importante que la infraestructura del transporte (puertos y aeropuertos cercanos) que está ligada a la PLM, debe tener la capacidad de recibir por ejemplo, buques de gran calado o aviones de gran tamaño.

Con respecto al ámbito geográfico, se recomienda que esta mega-infraestructura logística se encuentre cerca de puertos o aeropuertos para evitar problemas de tráfico terrestre. Pérez y Leal (2009) añaden que debe existir una conectividad con los operadores globales a través de una integración vertical. Teniendo en cuenta

las características anteriormente mencionadas, a continuación se muestra en la Tabla 3 un resumen de las principales PLM en el mundo.

Tabla 3: Plataformas Logísticas Multimodales Actuales y Sus Características

Nombre	Ubicación	Mercado	Localización	Infraestructura
Rotterdam	Países Bajos	Todo tipo y tamaño de empresa asociada a la logística y el transporte, especializada en almacenamiento y tratamiento de petroquímicos	Conectividad con vías fluviales (a través de canales), marítimo, férreo y carretero.	77 km de muelles, 3 parques industriales (Eemhaven, Botlek y Maasvlakte), aduana, área logística intermodal, almacenes de depósito.
PLAZA, CCA Barajas, PARC LOGISTIC & CIM Vallès	España	Todo tipo y tamaño de empresa asociada a la logística y el transporte. Espacios diseñados para PYMES	Red arterial de carreteras (CIMALSA en Cataluña), puntos de cruce carretero, férreo y aéreo (PLAZA) y en zonas portuarias (Parc Logistic y CIM Vallès)	Las diferentes PL españolas cuentan con áreas de logística industrial, aérea, férrea, parques empresariales, aduanas, bodegas, área logística intermodal.
PLM Goiás	Brasil	Orientado a grandes empresas, especialmente en entorno portuario	Cerca de la aglomeración urbana entre la DAIA (Distrito Agro-Industrial de Anápolis), el aeropuerto de Anápolis, línea férrea. Cerca de cruce de interconexión carretero-férrea del noreste del país.	Terminal de flete aéreo, centro de carga carretero, terminal de carga ferroviaria, almacenes generales, especializados en refrigerados, graneles, domésticos
Danmarks Transport Center	Dinamarca	Especialidad industrial con espacio para empresas transformadora de productos	Próxima a principales puertos del país, localizados en nodos de interconexión carretera y férrea.	No datos
Eiuiwang Ha	Corea del Sur	Todo tipo y tamaño de empresa asociada a la logística y el transporte, incluyendo industriales y manufactureras.	Áreas no muy cerca de puertos pero con conexión directa a través de carreteras y vías férreas.	No datos
Interporto Verona, Interporto Bologna, Interporto di Torino	Italia	Todo tipo y tamaño de empresa, especializados en transporte de mercancías modo férreo, algunos especializados en sector automovilístico.	Conexión férreo-carretera hacia los puertos.	Áreas industriales, especializadas en bodegas refrigeradas, de bienes peligrosos, terminales de carga, aduana.
Hamburgo	Alemania	Todo tipo y tamaño de empresa asociada a la logística y el transporte, incluye las manufactureras.	Conectividad vía férrea y carretera	24 puertos secos, 21 terminales marítimas, aduana, bodegas y almacenes en cada terminal.
Dubai Logistic City	Emiratos Árabes Unidos	Todo tipo y tamaño de empresa asociada a la logística y el transporte, industriales y manufactureras.	Conexión directa con puerto de Jebel Ali y la Zona libre, principales carreteras del país, aeropuerto internacional de Maktoum y línea férrea Etihad.	Parque empresarial, Aduana, área logística intermodal férrea, aérea y marítima, Almacenes de Depósito y bodegas.

Esta tabla muestra las PLM actuales del mundo y sus características. Fuente: Elaboración propia basada en información de las diferentes PLM del mundo. . Fuente: Elaboración propia.

La conectividad con todos los modos de transporte, es uno de los factores más relevantes en las PLM del mundo, adicional a eso, la ubicación geográfica de dichas PLM juega un papel importante para que las empresas nacionales y extranjeras empiecen a instalarse cerca o dentro de ellas. Un ejemplo claro es la PLM de Rotterdam, que por su posición geográfica estratégica para el comercio a Europa se le considera la puerta de entrada al continente (Salomone, 2009). También es importante contar con infraestructura logística bien dotada como amplias bodegas, especializadas para recibir diferentes tipos de mercancías, áreas industriales para el procesamiento de carga y parques empresariales que permitan hacer negocios del ámbito logístico y del transporte. Por lo tanto teniendo en cuenta lo anterior, se construyen las características que deben tener las PLM (Tabla 4).

Tabla 4: Características Que Deben Tener las PLM

Mercado	Localización	Infraestructura
Debe estar dirigido a todo tipo y tamaño de empresa que tenga una actividad logística, puede ser de transformación industrial como de transporte.	Cercano a las grandes urbes y centros de producción de mercancía y con conexión a los principales ramales del transporte.	Gran espacio físico (más de 2km ² de extensión), dotado de terminales de carga de todos los modos de transporte, bodegas, muelles, almacenes y aduanas, adicional a parques y áreas de negocios y de capacitación para el personal.

En la anterior tabla se muestran las características básicas que debe tener una PLM para considerársele como tal. Fuente: Elaboración propia.

Beneficios e Impactos de las Plataformas Logísticas Multimodales En una Nación

Existen una serie de beneficios e impactos positivos para que los gobiernos decidan localizar PLM alrededor de la nación como: ubicación estratégica privilegiada, conexión intermodal, reducción de costos logísticos y otros (Tabla 5).

Tabla 5: Beneficios e Impactos de las Plataformas Logísticas Multimodales En una Nación

Socioeconómico	Territorial	Movilidad	Medio Ambiente
* Mejora la competitividad del sector productivo, de la logística y el transporte.	*Gestión racional del territorio.	*Canalización del tráfico.	*Reducción de efectos nocivos del transporte (contaminación por congestión, ruido, emisión de gases, etc).
*Desarrollo tecnológico en inversión de equipos y sistemas de última generación para su funcionamiento.	*Mejora redes de comunicación local.	*Consolidación de la carga, optimizando de rutas con adecuados vehículos	*Reducción de consumo de recursos (agua y energía eléctrica).
*Generación de empleo para habitantes de la zona donde se instale.	*Evitar dispersión de actividad logística por territorio.	*potencial de transferencia modal a modos más eficientes.	*Segregación y reciclaje de residuos generados de la actividad.
*Capacitación del personal en temas especializados para el desarrollo de la PL.	*Mejora competitividad de centros urbanos influenciados.	*Acceso interno a todos los modos de transporte	*Paisajismo.

Esta tabla muestra los beneficios e impactos que traen las PLM en una nación. Fuente: Elaboración propia.

CONCLUSIONES

Después de conocer los diferentes conceptos de PL, clasificación, la historia y características que deben tener, se puede identificar que todavía no abordan con suficiente profundidad el tipo PLM. Dentro de los trabajos donde se define la PLM, se estudiaron los conceptos y se pudo construir el marco conceptual. Los trabajos abordados no consideran las características y esto puede confundirlas pues algunos especialistas aún creen que son lo mismo que una ZAL; para definir las características, primero se conocieron las PLM que hay actualmente en el mundo, qué tipo de infraestructura tienen, cuál es su localización y a qué tipo de mercado van dirigidas; con dicha descripción se pudo finalmente definir las características generales mínimas que debe tener toda PLM para ser considerada como tal. Se realizó también el listado de beneficios e impactos que traen este tipo de infraestructura logística para la región donde se instalen. Como futuras investigaciones, se propone conocer el método de investigación para este tipo de PL. Partiendo de la base del trabajo que hicieron Boudouin (1996) y Duarte (2004^a), donde identifican que la primera fase de implementación de una PLM es el análisis geográfico que incluye un estudio de la situación de ubicación de la PLM, identificación de la infraestructura intermodal y sus conexiones y la identificación de las necesidades en dicho aspecto geográfico.

RESUMEN

La Ley tiene por objeto proteger al sistema financiero y la economía nacional, estableciendo medidas y procedimientos para prevenir y detectar actos u operaciones que involucren recursos de procedencia ilícita, de acuerdo con la Ley, diversas actividades no financieras son consideradas vulnerables, entre otras, los juegos, concursos y sorteos, la compra venta de inmuebles, vehículos (aéreos, marítimos y terrestres), joyas, obras de arte, tarjetas de prepago; así como ciertas operaciones realizadas por agentes intermediarios, en virtud de lo anterior, quienes realicen las citadas actividades deberán presentar Avisos a la Secretaría de Hacienda y Crédito Público con el objeto de identificar las operaciones riesgosas. Al respecto, la Ley y su Reglamento faculta a la Unidad de Inteligencia Financiera para recabar elementos útiles con el objeto de prevenir e identificar actos u operaciones presuntamente vinculados con los delitos de operaciones con recursos de procedencia ilícita, los relacionados con éstos, las estructuras financieras de las organizaciones delictivas y evitar el uso de esos recursos para su financiamiento.

PALABRAS CLAVES: Recursos de Procedencia Ilícita, Vulnerables, Operaciones Riesgosas, Unidad de Inteligencia Financiera

BRIEF STUDY OF VULNERABLE OPERATIONS

ABSTRACT

The Law aims to protect the financial system and the national economy, establishing measures and procedures to prevent and detect acts or transactions involving illegal proceeds. According to the law, various non-financial activities are considered vulnerable, like games, contests and sweepstakes, the sale of properties, vehicles (air, sea and land), jewelry, artwork, prepaid cards; as well as certain transactions performed by brokers. Therefore, those conducting such activities must submit notices to the Secretaria de Hacienda y Credito Público in order to identify risky operations. In this regard, the Law and its Regulations empowers the FIU (FINANCIAL INTELLIGENCE UNIT) to gather useful items in order to prevent and identify actions or operations allegedly linked to the crimes of operations with illegal proceeds, other associated services, financial structures of the criminal organizations and to avoid the use of these resources for funding.

KEYWORDS: Illicit Resources, Vulnerable, Hazardous Operations, Financial Intelligence Unit

INTRODUCCION

La gigantesca situación de delincuencia que ha afectado a nuestro sistema económico y financiero, ha originado una serie de situaciones ilícitas o anómalas, las cuales son necesarias combatir de forma legal. Es por ello, que fue publicado en el Diario Oficial de la Federación la “Ley federal para la prevención e identificación de operaciones con recursos de procedencia ilícita” (LFPIORPI), mejor conocida como “Ley

contra el lavado de dinero”, (LCLD), el 17 de octubre de 2012 y entró en vigor el 17 de julio de 2013 (nueve meses después de su publicación). Además de sus disposiciones complementarias, en específico su Reglamento, también entraron en práctica diversas obligaciones para aquellas personas físicas o morales que, de conformidad con la citada ley, realizan las llamadas “Actividades Vulnerables”.

La Ley tiene por objeto proteger al sistema financiero y la economía nacional, estableciendo medidas y procedimientos para prevenir y detectar actos u operaciones que involucren recursos de procedencia ilícita, de acuerdo con la Ley, diversas actividades no financieras son consideradas vulnerables, entre otras, los juegos, concursos y sorteos, la compra venta de inmuebles, vehículos (aéreos, marítimos y terrestres), joyas, obras de arte, tarjetas de prepago; así como ciertas operaciones realizadas por agentes intermediarios, en virtud de lo anterior, quienes realicen las citadas actividades deberán presentar Avisos a la Secretaría de Hacienda y Crédito Público con el objeto de identificar las operaciones riesgosas. Al respecto, la Ley y su Reglamento faculta a la Unidad de Inteligencia Financiera para recabar elementos útiles con el objeto de prevenir e identificar actos u operaciones presuntamente vinculados con los delitos de operaciones con recursos de procedencia ilícita, los relacionados con éstos, las estructuras financieras de las organizaciones delictivas y evitar el uso de esos recursos para su financiamiento.

Problema

Cabe mencionar que, entre los elementos o factores que influyen en la comisión del delito de lavado de dinero se encuentra lo que se ha denominado delitos precedentes al lavado de dinero que son las actividades ilegales primarias generadoras de ingresos y que se procuran insertar en el ámbito legal. En las economías denominadas sumergidas del mundo, existen dos tipos principales de dinero: dinero “negro” y dinero “sucio”, el primero no se obtiene a través de actividades ilícitas; simplemente es dinero que se obtiene o se conserva en secreto, para evitar pagar impuestos o para burlar restricciones o limitaciones que pudieran estar en vigor en un país determinado. A su vez el segundo corresponde al dinero obtenido por medios totalmente ilegales. Puede ocultarse, pero no ponerse en circulación hasta que se transforme en dinero limpio, de manera tal que su origen quede oculto (Marcos Kaplan, El narcotráfico latinoamericano y los derechos humanos, CNDH, México, 1993). El lavado de dinero incluye una serie de operaciones de transformación, algunas veces usadas en combinación, que reflejan una o más técnicas de lavado, entre las que encontramos:

Operación de organizaciones de tráfico por nacionales o extranjeros.

Uso de instituciones extranjeras o nacionales.

Transportación física de la moneda y otros instrumentos monetarios.

Uso de facilidades bancarias electrónicas para transferir fondos entre países.

El aspecto más difícil del lavado de dinero para un traficante es el convertir grandes cantidades de dinero en efectivo en un medio de cambio que su propietario pueda usar y manejar con mayor facilidad. Las características principales de esta conversión son las siguientes: Secreto de la operación. Cubre todos los aspectos de las transacciones financieras, y se mantienen funcionando en localidades seguras y reclutando empleados que tengan posibilidades de mantenerse fieles. Anonimato de los empleados y terceras personas. Esto se logra haciendo los arreglos necesarios para efectuar transacciones pequeñas, y usando identificaciones falsas o, el sistema más costoso y peligroso. Sencillez de la operación. Se logra limitando el número de empleados, manteniendo al mínimo la división del trabajo y restringiendo la variedad de sistemas de lavado ofrecidas por cualquier organización en particular. Las características mencionadas demuestran que los lavadores pueden procesar un gran volumen de moneda, alcanzando millones de dólares diarios, a unos niveles de complejidad, organización y procedimientos increíblemente bajo.

Objetivo

Objetivo de la Ley Federal para la Prevención e Identificación de Operaciones con Recursos de Procedencia Ilícita (LFPIORPI) principalmente es proteger el sistema financiero y la economía nacional, estableciendo medidas y procedimientos para detectar actos u operaciones que involucren recursos de procedencia ilícita, a través de una coordinación interinstitucional, que tenga como fines recabar elementos útiles para investigar y perseguir los delitos de operaciones con recursos de procedencia ilícita, los relacionados con estos últimos, las estructuras financieras de las organizaciones delictivas y evitar el uso de los recursos para su financiamiento. Quienes están obligados al cumplimiento de la LEY:

Entidades financieras.

Personas físicas y personas morales quienes realicen actividades vulnerables.

Clientes y usuarios de servicios financieros.

Clientes y usuarios en transacciones sobre bienes y servicios identificados como actividades vulnerables.

REVISION LITERARIA

Antecedentes

El inicio del fenómeno del lavado de dinero, generalmente se ubica en los años sesentas, a la par del desarrollo e incremento lucrativo de los mercados masivos de droga; sin embargo, algunos autores señalan que la comisión de este delito data de los años veinte, al respecto señalan que: “Así, el origen del término “lavado de dinero”, que es relativamente reciente, se remonta a la época del mafioso norteamericano Meyer Lanski, bien conocido en el tiempo de la prohibición. Este delincuente, por aquel entonces creó en Nueva York una cadena de “lavaderos” que servían para blanquear los fondos provenientes de la explotación de casinos ilegales. Bastaba con poner cantidades importantes de efectivo, que recogía de los casinos, dentro de las cajas de su cadena de lavanderías; para que esos fondos ingresaran al círculo bancario. Sin embargo, señala este autor, se han practicado ciertas formas de lavado de dinero desde que surgió la necesidad de ocultar la índole o la existencia de ciertas transferencias financieras por razones ya sean políticas, comerciales o jurídicas.

Ahora bien desde el punto de vista etimológico el concepto de lavado de dinero es el de “ajustar a la legalidad fiscal el dinero procedente de negocios delictivos o injustificables” El lavado de dinero consiste en la actividad por la cual una persona o una organización criminal, procesa las ganancias financieras, resultado de actividades ilegales, para tratar de darles la apariencia de recursos obtenidos de actividades lícitas. El lavado de dinero es un proceso mediante el cual los recursos económicos obtenidos a partir de un delito, son introducidos a la economía formal por medio de distintas estrategias con la intención de ocultar el origen ilícito y poder utilizarlos dando la apariencia de ser producto de un trabajo legal. Por su parte, el órgano intergubernamental denominado Grupo de Acción Financiera sobre Blanqueo de Capitales y Financiamiento al Terrorismo (GAFI)⁹ define el lavado de dinero en términos generales como el procesamiento de las ganancias derivadas de la actividad criminal para disfrazar su procedencia **Ilícita**, permitiendo a los criminales gozar de ellas sin arriesgar su fuente de ingreso.

Jurídicos

Ahora bien, el primer antecedente jurídico, lo encontramos en la Ley del Secreto Bancario (*The Bank Secrecy Act*) de Estados Unidos de 1970, que impuso a las instituciones financieras obligaciones de mantener constancia de determinadas operaciones y de reportarlas a las autoridades, sin embargo, de acuerdo con Rodríguez González, esta Ley resultó un instrumento ineficaz, toda vez que precisamente sólo estableció esa obligación de reportar las posibles operaciones ilícitas, de forma tal que los lavadores de dinero podían seguir

ejerciendo sus actividades sin el riesgo de hacerse acreedores a una sanción. Ante tal escenario, el 1986, el Congreso de los Estados Unidos, expidió la denominada “Ley de Control de Lavado de Dinero”, la cual tipificó este delito, sancionándolo con pena de prisión hasta de 20 años. A través de esta ley, se federalizó esta actividad, se autorizó la confiscación de ganancias obtenidas por los lavadores y se proporcionaron a las autoridades federales herramientas adicionales para investigar el lavado de dinero.

Es así como México, además de ser miembro parte de la Convención de Palermo, en el afán de combatir el lavado de dinero y con el fin de también llevar a cabo acciones de prevención, forma parte del Grupo de Acción Financiera (GAFI) sobre Blanqueo de Capitales. El GAFI es un organismo intergubernamental creado en 1989 por el *Grupo de los siete* (G7). Actualmente el GAFI está integrado por miembros de 34 jurisdicciones y 2 organizaciones regionales (el Consejo de Cooperación del Golfo y la Comisión Europea). México es miembro de pleno derecho desde el año 2000. El GAFI desarrolla sus tareas a través de los siguientes Grupos de Trabajo de los cuales México participa activamente:

Grupo de Trabajo sobre LD/FT: el objetivo de este grupo es interpretar y elaborar guías sobre los estándares así como en temas nuevos relacionados con el LD/FT. (Lavado de Dinero/Financiamiento al Terrorismo)

Grupo de Trabajo sobre Evaluación e Implementación: revisa los estándares y desarrolla guías sobre LD/FT. Asimismo, es el encargado del monitoreo y coordinación de los procesos y procedimientos de evaluaciones.

Grupo de Trabajo sobre Tipologías: monitorea e identifica nuevas tendencias y métodos utilizados para llevar a cabo actividades de LD/FT.

Grupo de Revisión de Cooperación Internacional (ICRG): identifica y examina a las jurisdicciones que presentan fallas en la implementación efectiva en sus regímenes anti Lavado de Dinero y contra el Financiamiento al Terrorismo (ALD/CFT) y recomienda contramedidas cuando es necesario.

Asimismo, México forma parte del Consejo Directivo del GAFI y del Grupo de Revisión de las Américas que trabaja en el análisis de los países identificados por el ICRG. Dicho organismo ha emitido 40 Recomendaciones sobre el Lavado de dinero, las cuales, conocidas como los estándares internacionales en combate al lavado de dinero, tienen como objetivo establecer patrones mínimos para la acción de los países miembros en la implementación de medidas detalladas para combatir dicho delito. A través de estas Recomendaciones, se prevé que los países incluyan en su legislación, las medidas en materia de penalización, prevención y cooperación internacional contra el lavado de dinero, las cuales deberán atenderse de acuerdo con sus circunstancias particulares. Tales recomendaciones implican atender siete grandes rubros con sus respectivos *ítems*, tal y como se muestra en el siguiente cuadro, mismas que además son tomadas en cuenta para la expedición de la nueva Ley en México Dentro de las actividades vulnerables reguladas por la LCLD, se encuentran las vinculadas a:

La práctica de juegos con apuestas, concursos o sorteos, así como la entrega y pago de premios derivados de los mismos.

La emisión o comercialización de tarjetas de servicios prepago o de crédito no bancarias, así como la comercialización de cheques de viajero por entidades no financieras.

Operaciones de mutuo, de garantía, de crédito o de préstamo que realicen entidades no financieras.
Servicios de construcción o para el desarrollo inmobiliario e intermediación en operaciones de compraventa de inmuebles y derechos reales sobre los mismos.

La comercialización e intermediación de metales o piedras preciosas, joyas o relojes y de obras de arte.
Comercialización y distribución de vehículos terrestres, aéreos y marítimos, usados y nuevos.

Prestación de servicios de blindaje de vehículos terrestres y de bienes inmuebles.
Servicios de traslado de valores y dinero.

Servicios profesionales independientes tendientes a la preparación o representación de los clientes en operaciones de: compra-venta o cesión de derechos de bienes inmuebles; administración y manejo de recursos, valores o activos; manejo de cuentas bancarias, ahorros y de valores; organización de aportaciones de capital o cualquier otro tipo de recursos para la constitución, operación y administración de sociedades mercantiles; constitución, escisión, fusión, operación y administración de personas morales o vehículos corporativos, incluido el fideicomiso, y la compra o venta de entidades mercantiles. Servicios de fe pública a cargo de notarios y corredores públicos, particularmente para transacciones con inmuebles y derechos reales sobre los mismos, operaciones con sociedades mercantiles, así como operaciones de mutuo, crédito o préstamos con entidades no financieras.

Recepción de donativos.

Servicios de comercio exterior como agentes o apoderados aduanales para despacho de vehículos terrestres, marítimos o aéreos, máquinas de juego y apuesta, joyas relojes, obras de arte, metales y piedras preciosas, así como materiales para servicios de blindaje.

Operaciones de arrendamiento y subarrendamiento de inmuebles.

METODOLOGIA

El trabajo lo realicé en un estilo Monografía, siendo del tipo Documental y la investigación académica que se realizó fue documental, en libros, revistas, tesis e internet.

RESULTADOS

El gobierno Federal emite la Ley Federal para la Prevención e Identificación de Operaciones con Recursos de Procedencia Ilícita (LFPIORPI) lo cual deben seguir tanto autoridades fiscales como los sectores privados involucrados en el tema. Por ello, estos nuevos métodos permitirán a quienes realizan las llamadas “Actividades Vulnerables” presentar a tiempo sus informes y así evitar ser sancionados por alguna omisión, otorgando además a las autoridades información esencial para la detección temprana de un posible delito. Por esta razón, las compañías obligadas deben participar en forma proactiva en adoptar las mejores prácticas para desarrollar y ejecutar programas, políticas, normas, procedimientos y controles internos idóneos, en función del riesgo establecido. Se están implementando las acciones y medidas cuando sean realizadas actividades vulnerables, ya sean personas físicas profesionales, entidades financieras, las no financieras para lograr el desarrollo de un programa integral de prevención de lavado de dinero.

FEDERALISMO FISCAL Y DESCENTRALIZACIÓN DE LA EDUCACIÓN BÁSICA EN LA REGIÓN NORTE DE MÉXICO: ¿UN PROCESO PARCIAL?

Elías Eduardo Gutiérrez Alva, Universidad Autónoma del Estado de México
Elizabeth Adriana Santamaria Mendoza, Universidad Autónoma del Estado de México

RESUMEN

La firma en 1992 del Acuerdo Nacional para la Modernización de la Educación Básica, constituye el punto de partida del proceso descentralizador de la educación básica. El trabajo tiene como objetivo, generar reflexiones sobre los posibles alcances y limitaciones de dicho proceso, tomando como referencia teórica el Principio de Eficiencia emanado de la Teoría Clásica del Federalismo Fiscal, además de específicos principios que permiten evaluar la descentralización educativa en su ámbito institucional, operativo y de participación social. El marco de análisis son los estados de la región norte de México.

PALABRAS CLAVE: Federalismo Fiscal, Descentralización, Educación Básica

FISCAL FEDERALISM AND DECENTRALIZATION OF BASIC EDUCATION IN NORTHERN MEXICO REGION: A PARTIAL PROCESS?

ABSTRACT

The signing in 1992 of the National Agreement for the Modernization of Basic Education, is the starting point of the decentralization process of basic education. The work aims, generate reflections on the possible scope and limitations of this process, taking as reference the theoretical efficiency principle emanating from the Classical Theory of Fiscal Federalism, in addition to specific principles for assessing the educational decentralization in its institutional, operational and social participation. The framework of analysis are the states of northern Mexico.

KEYWORDS: Fiscal Federalism, Decentralization, Basic Education

INTRODUCCIÓN

Partiendo de la Teoría de Federalismo Fiscal, enmarcada en el ámbito de estudio de la Economía del Sector Público, el trabajo se orienta a reflexionar sobre los posibles alcances y limitaciones del proceso de descentralización de la educación básica iniciado en 1992. Tomando en cuenta el entorno teórico marcado por la Teoría del Federalismo Fiscal, además de referir como antecedentes importantes del proceso descentralizador de la educación básica, la firma del Acuerdo Nacional para la Modernización de la Educación Básica, la Ley General de Educación y las modificaciones efectuadas al Artículo Tercero Constitucional, el trabajo procede a delimitar al Principio de Eficiencia y a principios específicos vinculados al ámbito institucional, como los principales elementos de reflexión orientados a la identificación de alcances o limitaciones presentes en el proceso de descentralización de la educación básica, concluyendo en la existencia de marcadas limitaciones aún presentes en el referido proceso.

REVISIÓN LITERARIA

La Teoría del Federalismo Fiscal se fundamenta en el principio de la distribución de responsabilidades entre el gobierno central y los demás ámbitos o niveles de gobierno. En este sentido, considera que los bienes y servicios públicos nacionales que benefician a todos los ciudadanos de una nación, deben ser suministrados por el gobierno central, mientras que los bienes públicos locales que benefician a los habitantes de una determinada región o comunidad, deben ser suministrados y administrados por la autoridad gubernamental local (Stiglitz, 2000). La anterior implica que el Federalismo Fiscal lleva implícito procesos descentralizadores de la actividad y responsabilidades gubernamentales.

El concepto de descentralización se vincula con el de un proceso que tiende a delegar a un nivel inferior de autoridad gubernamental, la administración de un bien o servicio público, así como la autonomía legal, responsabilidad y representatividad de tipo política y administrativa sobre el referido servicio o bien. La descentralización puede ser vista por una parte en su dimensión de tipo institucional, la cual se vincula con la normatividad que delimita el ámbito de las responsabilidades de cada nivel de gobierno; mientras que por la otra se vincula a la parte de administración y asignación de los recursos financieros, en particular a la magnitud o cuantía relativa de los recursos disponibles a nivel descentralizado y/o el volumen de gastos sub nacionales en relación al gasto del gobierno central (Galilea, S., Letelier, L. y Ross, K., 2011). Al respecto cabe aclarar, que el enfoque de la descentralización se enfoca a diversos ámbitos de la acción gubernamental vinculada con la prestación y administración de servicios públicos a la población, entre los que destacan los de educación y salud.

En el ámbito de la Teoría del Federalismo Fiscal, destaca la existencia de ciertos principios básicos, cuyo cumplimiento condiciona en formas específicas, el funcionamiento del federalismo fiscal en su rasgo descentralizador, vinculado principalmente a la asignación de los recursos financieros vía transferencias del gobierno central hacia los gobiernos subnacionales o locales. Los principios son el de Equidad, el de Correspondencia y el de Incentivo (Oates, 1977). Por su parte Díaz (2002), considerando la versión clásica de la teoría del federalismo fiscal creada por Wallace E. Oates, la cual se centra en la explicación de los principios básicos de dicho federalismo, retoma la descripción del Principio de Eficiencia, destacando la existencia de los llamados beneficios fiscales netos que son provocados por la diferencia en la capacidad tributaria que tiene cada jurisdicción, lo cual implica que los contribuyentes que residen en una jurisdicción con una alta capacidad tributaria recibirán servicios de mejor calidad a un menor precio. Esto es, las jurisdicciones con mayor eficiencia fiscal y generadora de recursos autónomos, tienden a recibir mayores recursos para la prestación de servicios.

La política educativa eficiente, se identifica con aquella orientada al logro de una calidad educativa que se vincule con esquemas que permiten una mayor participación social de quienes acceden al proceso educativo. En este sentido, Coll (citado en Barba, B. y Zorrilla, M., 2010), desde un enfoque descentralizado establece la existencia de ocho principios básicos que deben cumplir las nuevas políticas educativas que se identifiquen con la participación social: responder a una visión amplia y sistemática de la educación; partir de la detección, análisis y valoración de las necesidades educativas concretas y de las necesidades básicas de aprendizaje de la población; tener un carácter profundamente participativo; establecer con claridad los compromisos y responsabilidades de todas las instancias; contar con una instancia única de participación, conducción y supervisión que integre a los responsables de los diferentes niveles y sectores de la administración; gozar de un amplio margen de autonomía; incluir en su propia definición procedimientos y estrategias para la autoevaluación. Finalmente, debe tener asegurados los recursos económicos y técnicos necesarios para su implantación y desarrollo.

Como antecedentes en el ámbito de la política educativa, se establece al proceso de descentralización del sistema educativo mexicano, como una respuesta necesaria a la estructura marcadamente centralizada de la Secretaría de Educación Pública, existente desde su creación, caracterizada por un obeso aparato burocrático que obstaculiza el proceso de generación de educación de calidad orientada al incremento de la participación social (Ornelas, 2011). Al mismo tiempo, atribuye la consolidación de la descentralización educativa a factores como las tendencias federalistas marcadas por los gobiernos de los presidentes De la Madrid y Salinas de Gortari; a la necesidad de control que se ilustra con los alegatos en favor de la eficiencia en la dirección general del sistema educativo y la asignación de recursos; a la política de ambivalencia entre control y legitimación; a la existencia y administración del conflicto que emana de la disidencia magisterial y que persigue tanto legitimar la política de descentralización, como mejorar la política sindical con el fin de poner más atención a las cuestiones de sustancia en la educación; y finalmente, a las tendencias internacionales marcadas en el ámbito de la política educativa (Ornelas, 2011, p. 289). El principal punto de partida para el análisis de la descentralización educativa en México, lo constituye la firma en 1992 del llamado Acuerdo Nacional para la Modernización de la Educación Básica (ANMEB), acuerdo que contó con la participación del gobierno federal, gobiernos estatales y del Sindicato Nacional de Trabajadores de la Educación. Con dicho acuerdo se formaliza el inicio del proceso de descentralización educativa, fundamentalmente orientado a la prestación de los servicios de educación básica, proceso que se consolida a mediados de los años noventa cuando se consolida la transferencia de dichos servicios a las entidades federativas. Los postulados establecidos en el Acuerdo, son ratificados un año después en las modificaciones efectuadas al Artículo Tercero Constitucional y con la aprobación de la Ley General de Educación (LGE).

METODOLOGÍA

Una vez analizada la revisión literaria sobre la Teoría del Federalismo Fiscal y la Descentralización a partir del ANMEB, así como datos que se presentan de los indicadores por entidad federativa que integran la región Norte de México: Zacatecas, San Luis Potosí, Coahuila y Durango. Las variables consideradas están el PIB per cápita, Ingresos propios y FAEB. A partir de los datos obtenidos se proporcionan las reflexiones correspondientes. Y al final las conclusiones.

RESULTADOS ÁMBITOS DE REFLEXIÓN

El primer ámbito de reflexión, orientado a la delimitación de los alcances y características que ha asumido el proceso de descentralización educativa, se aborda tomando en cuenta la aportación de Díaz (2002) en lo referente a la interpretación que da al Principio de Eficiencia retomado de la teoría clásica del federalismo fiscal. Refiere dentro de dicho principio, la existencia de discrepancias en la capacidad de tributación de las diferentes jurisdicciones o entidades federales, lo cual repercute directamente en el grado de calidad de los servicios que reciben por parte del gobierno federal y que benefician en forma específica a su población. De esta forma, la prestación del servicio otorgado por la federación, lleva implícita la canalización de transferencias hacia las unidades federales, a fin de financiar dicha prestación.

En el sentido referido, la capacidad de tributación y de generación de ingresos por parte de las entidades federales, independientes a las transferencias otorgadas por el gobierno central, condiciona en gran medida el monto de estas últimas. De esta forma, se puede establecer que las entidades federales que presentan mayor autonomía y capacidad en la generación de ingresos propios y tributación, recibirán mayores ingresos por concepto de transferencias que serán orientadas a la prestación de un servicio específico a la población. De esta forma y para fines de este primer ámbito de reflexión sobre la descentralización educativa, se retoma el cumplimiento del Principio de Eficiencia como una forma de evidenciar indicios de un proceso descentralizador, de tal forma que si entidades federativas generadoras de mayores niveles de ingresos propios o independientes a los otorgados por la federación, reciben mayores montos de transferencias para la prestación de un servicio específico, se implica que el referido principio se cumple y

por lo tanto existe evidencia del funcionamiento de un proceso descentralizador, por lo menos en el ámbito de la eficiencia propuesta por los postulados de la teoría tradicional del federalismo fiscal. Para dar evidencia de lo anterior, se seleccionaron cinco entidades federativas de México, agrupadas en una zona geoeconómica, de tal forma que se utilizan como principales elementos de análisis los valores correspondientes a los ingresos totales e ingresos propios por cada entidad federativa para los años 2005 y 2010, además de los montos correspondientes al Fondo de Aportaciones para Educación Básica (FAEB), el cual forma parte de los recursos para transferencias contenidos en el Ramo 33. Los estados seleccionados son Chihuahua, Coahuila, Durango, Zacatecas y San Luis Potosí, los cuales constituyen la región Norte del país, de los cuales se resumen los principales indicadores de análisis en las tablas 1 y 2:

Tabla 1: Indicadores Por Entidad Federativa, 2005

Entidad Federativa	Población Total	Pib (Miles de Pesos, 2003=100)	Pib Per Cápita	Ingresos Totales (Millones de Pesos)	Ingresos Propios (Millones de Pesos)	Ip/It (*)	Faeb (Millones de Pesos)
Zacatecas	1,367,692	57,190,184	41.8	11,240	600.0	5.3	3,728.4
San Luis Potosí	2,410,414	140,179,546	58.2	18,318	1415.0	7.7	5,385.7
Coahuila	2,495,200	5,249,904,403.75	100.15	19859	7828	39.4	4523
Durango	1509117	97803341	64.81	11706	602	5.1	3663.9
Chihuahua	3241444	259542229	80.07	26563	4926	18.5	4921.4

(*) Proporción de ingresos propios respecto a los ingresos totales. Fuente: Elaboración propia en base a INEGI(2012 a, b, c) y SHCP (2012).

Para los dos años de análisis resulta evidente la existencia de contrastes económicos y de bienestar social existentes entre los estados que integran la zona de estudio, de tal forma que para el 2005 destacan valores reales del Producto Interno Bruto del estado de mayor dinámica económica de la zona, en este caso el Estado de Coahuila, respecto al menos favorecido de la zona, en este caso Zacatecas. El valor real del PIB para el Estado de Coahuila se ubicó en 5,249,904,403.75 miles de pesos, mientras que para Zacatecas alcanzó un monto de 57,190,184, manteniendo así una tendencia de contraste y desigualdad en lo que respecta al crecimiento económico. El impacto del crecimiento económico en términos de bienestar social puede ser descrito por la dinámica asumida por el Producto Interno Bruto Per Cápita, de tal forma que se observan marcados contrastes entre los estados que integran la región. De esta forma, para 2010 el valor del referido indicador para el estado de Coahuila se ubicó en 97.85 miles de pesos, el cual contrasta con los valores de 46.5 y 60.6 miles de pesos, correspondientes a los estados de Zacatecas y San Luis Potosí, respectivamente. Dicha tendencia estuvo presente también durante el año 2005.

Por otra parte, en lo que respecta al porcentaje que representan de ingresos propios independientes a las transferencias, respecto a los ingresos fiscales totales, estados como Chihuahua y Coahuila durante 2005 (ver cuadro 1), presentaron una proporción de 18.5 y 39.4 puntos porcentuales respectivamente, los cuales

contrastan con el caso de San Luis Potosí, cuyo porcentaje se ubicó en 7.7%. Al respecto, tomando en cuenta el Principio de Eficiencia, se establecería que el monto correspondiente al Fondo de Aportaciones para Educación Básica (FAEB), debería ser mayor para el caso de los dos primeros estados que para San Luis Potosí, dado que este último cuenta con menor capacidad de generación de ingresos propios, pero al observar el monto de las aportaciones del referido fondo, se detecta un valor de 4,523 y 4,921.4 millones de pesos para Coahuila y Chihuahua, respectivamente, mientras que para San Luis Potosí el monto se ubica en 5,385.7 millones, situación que se convierte en un indicador relevante del incumplimiento del Principio de Eficiencia en el proceso de asignación de aportaciones a la educación básica.

Para 2010 (cuadro 2), prevalece una tendencia semejante a la descrita para 2005, dado que Coahuila y Chihuahua representan los mayores porcentajes en cuanto a la proporción de ingresos propios respecto a los ingresos totales (20.9 y 15.8 puntos porcentuales, respectivamente), mientras que San Luis Potosí cuenta con una proporción de 5.5%, pero al mismo tiempo este último estado cuenta con un mayor monto correspondiente al FAEB (7,738 millones de pesos), que contrasta con el de los dos primeros estados, el cual se ubica en 6,784 y 7,276 millones de pesos, respectivamente. La evidencia descrita permite implicar el incumplimiento del Principio de Eficiencia en la mayoría de los casos, lo que resulta en un argumento en contra a la existencia de un proceso descentralizador en el ámbito financiero y fiscal de las entidades analizadas, lo cual genera inquietudes respecto a la parcialidad del proceso de descentralización educativa y hace que quede claro el largo camino que aún falta por recorrer para consolidar el proceso referido. En un segundo ámbito, retomando la aportación de Coll (citado en Barba, B. y Zorrilla, M., 2010), se procede a generar una serie de reflexiones específicas de la política de descentralización educativa, con el fin de destacar sus principales rasgos que nos conducen a complementar la idea sobre el avance del proceso descentralizador de la educación, así como su posible éxito en el ámbito de incentivar la participación y el mejoramiento social.

La política de descentralización educativa en México desde su instrumentación y postulados carece de una visión estructural y sistemática del entorno educativo, en particular al no generar una identificación plena de los mecanismos conductores de una educación de calidad que pueda fortalecerse y mantenerse en el largo plazo, basándose particularmente en la identificación y operación de una forma particular de canalización de recursos de la federación hacia los estados, sin tomar en cuenta aspectos cualitativos que orienten dichos recursos al fortalecimiento de la calidad educativa. En su instrumentación, la política de descentralización educativa parte de un diagnóstico inicial de las necesidades básicas de educación de la población, pero es general en cuanto a la identificación de necesidades y factores específicos que puedan estar impactando la parte estructural del funcionamiento educativo.

El hecho que desde su instrumentación la descentralización educativa cuenta con características como las antes referidas, ha conducido a que en su operación y en sus resultados sea difícil detectar una contribución específica y la generación de mecanismos claros que puedan dar claridad en lo que respecta a un exitoso proceso de participación social, en el cual puedan involucrarse los grupos poblacionales que presentan grandes necesidades de desarrollo educativo. Por el contrario, la política educativa descentralizadora parece ser que no ha hecho nada en lo que respecta al combate de las desigualdades regionales y sociales del país, fomentando los contrastes económicos y sociales entre habitantes de las distintas regiones. En su parte operativa, la política de descentralización educativa mexicana, delimita con precisión las responsabilidades de cada nivel gubernamental, lo cual define específicos ámbitos de operación, participación, conducción y compromiso, tanto de la federación, como de los estados y de los municipios. La autonomía de funcionamiento del proceso descentralizador en la educación en México, puede verse cuestionado por un “ámbito descentralizado centralizado” en el que la federación desempeña la función dominante, de tal forma que las entidades federativas han desarrollado una marcada dependencia financiera respecto a las transferencias específicas canalizadas por el gobierno federal, dado el bajo poder de recaudación y generación de ingresos propios por parte de los estados. La autonomía de la descentralización educativa, también resulta opacada por la existencia de ciertos matices y sesgos de carácter político y discrecional, los

cuales provocan heterogeneidades en la distribución de las transferencias, independientemente a la existencia de muy específicos elementos normativos y metodológicos que regulan el proceso de asignación de aportaciones a las entidades federativas.

La política de descentralización educativa en su parte operacional, carece de mecanismos específicos orientados a la autoevaluación de sus logros en los ámbitos estructurales de la educación, centrándose más bien en la evaluación de aspectos y logros meramente cuantitativos, los cuales si son importantes para la consecución de los objetivos de la política educativa, pero no reflejan los impactos necesarios en los ámbitos estructurales del sistema educativo. Finalmente, en cuanto a su desarrollo en el ámbito administrativo y operacional, uno de los grandes problemas del funcionamiento de la descentralización educativa, se centra en la convivencia de entidades federativas con marcadas heterogeneidades y contrastes en la capacidad técnica y administrativa de su estructura gubernamental, conviviendo entidades con alta capacidad técnica y de gestión, con otras que se encuentran más limitadas en dicho ámbito, lo cual repercute en forma importante en las características que asume el manejo de los recursos canalizados al ámbito educativo.

CONCLUSIONES

El análisis y la reflexión sobre algunas de las características del proceso de descentralización educativa en México, tomando en cuenta la interpretación del Principio de Eficiencia que se da a partir de la aportación de Díaz (2002), además de los principios que Coll establece para que en el ámbito de la descentralización una política educativa se oriente claramente al mejoramiento de la participación social, nos permiten implicar que el referido proceso descentralizador a casi dos décadas de su gestión, aún no ha logrado iniciar su consolidación, lo cual lo ha convertido en un proceso parcializado que particularmente asume los rasgos de una desconcentración administrativa que no ha generado procesos claros de inclusión y participación social, y si ha fortalecido la prevalencia de desigualdades regionales en las que se ven involucradas las diferentes entidades federativas, motivado principalmente por deficiencias en los criterios de asignación y distribución de los recursos. Lo anterior nos conduce a establecer que aún falta mucho por avanzar en el proceso de descentralización educativa en su ámbito fiscal, más aún en su ámbito institucional y de participación social.

LA SUBCONTRATACION EN LA REGION SURESTE DE COAHUILA, MEXICO: LA CALIDAD DE LOS EMPLEOS Y LA PRECARIZACIÓN LABORAL EN LA INDUSTRIA AUTOMOTRIZ

Yolanda Mejía de León, Universidad Autónoma de Coahuila
Rosálva D. Vásquez Mireles, Universidad Autónoma de Coahuila
Baltazar Rodríguez Villanueva, Universidad Autónoma de Coahuila
Jhonatan Omar Martínez Barragán, Universidad Autónoma de Coahuila

RESUMEN

La competitividad en los mercados globalizados, obliga a las empresas a incorporar métodos y procedimientos más eficientes, los cuales buscan aumentar su capacidad de producción, reducir el tiempo de respuesta al mercado, reducción de costos, aumentar la satisfacción de los clientes y hacer un uso más eficiente de los recursos, por medio de la externalización de todo lo que no sea la base principal del negocio. Esta investigación tiene como objetivo conocer las variables que más están influyendo en la precarización y calidad del empleo en empresas Subcontratantes del ramo automotriz, razón por la cual el trabajador no permanece mucho tiempo en ellas y estos cambios constantes son costos que afectan la competitividad en los mercados. Se aplicó un cuestionario a los trabajadores de empresas Subcontratantes de la región sureste de Coahuila, dividido en 8 secciones. La tasa de subcontratación creció 186 por ciento de 2004 a 2014. De acuerdo a estadísticas nacionales el 16% de la fuerza laboral trabaja en estas empresas, estas cifras ilustran la importancia de la actividad, que justifica seguir mejorando en la medición y conocimiento de la administración del recurso humano. Los resultados muestran que si hay precariedad del empleo sobresaliendo el indicador de trabajo sin contrato escrito. En México existen regulaciones para las empresas Subcontratantes, pero falta claridad sobre la manera como quedan resguardados y protegidos los derechos de los trabajadores y en el caso mexicano, el marco jurídico vigente muestra sus limitaciones.

PALABRAS CLAVE: Subcontratación, Precarización del Empleo, Calidad del Empleo, Industria Automotriz

THE OUTSOURCING IN THE SOUTHEAST REGION OF COAHUILA MEXICO: QUALITY OF WORK AND PRECARIOUS EMPLOYMENT IN THE AUTOMOTIVE INDUSTRY

ABSTRACT

Competitiveness in global markets, forcing companies to incorporate more efficient methods and procedures which seek to increase its production capacity, reduce time-to-market, reduce costs, increase customer satisfaction and make more efficient the use of resources, through outsourcing everything other than the main base of business. This research aims to determine the variables that are the most influencing in quality and employment precariousness and Subcontractors companies in automotive, why the worker does not stay long time in them and how these constant changes are costs that affect competitiveness in markets. A questionnaire employee of companies Subcontractors South East of Coahuila, divided into 8 sections was applied. The rate of subcontracting grew 186 percent of 2004 to 2014. According to national statistics 16% of the labor force works in these companies, these figures illustrate the importance of the activity, justifying further improvement in measurement and knowledge of human resource management.

The results showed us that there is a job insecurity indicator protruding work without a written contract. In Mexico there are regulations for companies Subcontractors, but lack clarity about how are safeguarded and protected the rights of workers and in the Mexican case, the existing legal framework shows its limitations.

INTRODUCCION

El fenómeno de la globalización, producto de procesos de apertura, ha tenido una gran influencia en la creación de, por un lado, ambientes de negocios altamente competitivos y, por otro, la sofisticación de la demanda debido a la mayor facilidad de acceso a la información. Ante tal panorama, las organizaciones intentan fusionar estrategias orientadas a la reducción de costos y el logro de niveles más altos de especialización, con el propósito de mantener su permanencia en el mercado, lo cual las está obligando a externalizar todo lo que no sea la base del negocio. Es en este momento, en el que el concepto de *organización esbelta* tiene un mayor significado, y encuentra una solución estratégica, la subcontratación, la que facilita a las firmas enfocarse en sus competencias básicas (Willcocks, Feeny y Olson, 2006).

El concepto de empresa subcontratante es: "una empresa contrata a otra para que realice la gestión o ejecución diaria de una función". La empresa contratante deberá transferir parte del control administrativo y operacional a la empresa contratada, de modo que ésta pueda realizar su trabajo apartada de la relación normal de la empresa contratante y sus clientes. La subcontratación se utiliza en áreas más propicias como informática, recursos humanos, administración de activos e inmuebles y contabilidad, y cada vez son más las empresas que subcontratan el soporte técnico al usuario, la gestión de llamadas telefónicas, manufactura, producción e ingeniería entre otros.

Los procesos de selección de las empresas subcontratantes se hacen rápidos y sin mayores formalismos, gracias a las escasas barreras de selección de personal como consecuencia de la baja especialización en la mayoría de estas empresas, lo que representa una mayor tasa de absorción de personas para el sector empresarial. Para algunas empresas es necesaria la especialización y la contratación es más rigurosa. El impulso que ha tenido la subcontratación industrial la está convirtiendo en un importante motor económico, en los ámbitos comercial, industrial y de servicios, al igual también en la generación de empleo y riqueza y como fuente de atracción de inversión, tanto en los países desarrollados como los subdesarrollados. Se trata de empresas muy especializadas, pymes en la mayoría de los casos, de capital nacional o internacional, con gran proyección internacional y que no tienen producto propio sino la capacidad de fabricar a medida los productos que la empresa industrial necesita.

La subcontratación industrial es una forma de relación entre empresas con el objetivo de producir un bien industrial intermedio a medida. Por lo tanto, no es un sector de actividad al uso, que suele ser la referencia habitual de las estadísticas económicas. La subcontratación industrial al igual que en otros países y estados de México se ha convertido en una importante fuerza laboral y en un ente de gran dinamismo en cuanto al desarrollo económico del estado de Coahuila por ser un estado en el que se tienen grandes empresas automotrices como GM y Daimler Chrysler, las cuales han optado por el sistema de subcontratación. La subcontratación de personal en el Estado de Coahuila en manufactura durante el año 2003 fue de 25182 y en el año 2008 de 45779 lo cual nos indica un aumento de 81.8%. (INEGI, 2009) En estas corporaciones los subcontratistas fueron sus propias filiales, filiales de otras corporaciones o bien empresas de menor tamaño no global y no trasnacionales. Las subcontratadas subcontrataron con otras empresas, hasta el nivel de las propias personas como consultores o pagados por honorarios (Uriarte y Tusso, 2009). El porcentaje de representación en el número total de empresas las caracteriza como una de las principales actividades

empresariales, su contribución al aumento de las tasas de empleo revela la importancia que poseen en términos sociales. Las empresas subcontratistas generalmente se encuentran poco reconocidas dado que la que aparece en el exterior es la empresa contratista, responsable final del producto. Como resultado de lo anterior surgen las siguientes preguntas: ¿Cuáles son las variables más importantes que están contribuyendo a la precarización del empleo? ¿Por qué el trabajador considera que su empleo no es de calidad?

REVISION LITERARIA

La Globalización y la Subcontratación

La globalización, junto con entornos de mercado competitivos, obliga a las empresas a incorporar métodos y procedimientos más eficientes, los cuales buscan reducir el tiempo de respuesta al mercado, aumentar la satisfacción de los clientes y hacer un uso más eficiente de los recursos. Es en los años 70 a 80, cuando la mayoría de las grandes empresas comienzan a ser conscientes de la importancia de la flexibilidad, la rapidez de respuesta y la creatividad. Para ello se empieza a desarrollar una nueva estrategia centrada en los *core business* (negocios medulares o núcleo), implicando la identificación de procesos críticos y la decisión sobre aquellos que debían ser externalizados (Handfield, 2006). A principio de los 90 las empresas comenzaron a delegar funciones en las que no tenían competencia, a enfocarse en la adopción de medidas que les permitieran reducir sus costos, por consiguiente, la ejecución de muchas funciones necesarias, pero no relacionadas con el núcleo del negocio fueron encargadas a terceros. Las primeras funciones externalizadas estaban relacionadas con servicios de contabilidad, gestión de talento humano, limpieza, mantenimiento de planta, procesamiento de datos, distribución de correo interno, seguridad (Handfield, 2006).

Definiciones de Subcontratación

Hay un conjunto de conceptos relacionados con la subcontratación que, algunas veces se utilizan como sinónimos y otras veces no: *outsourcing*, tercerización, externalización, triangulación, deslaboralización. La discusión más elemental pasó por la definición de lo que ha sido subcontratación y, las semejanzas y diferencias, con los otros conceptos. Estas definiciones difirieron dependiendo de la lengua, aunque también al interior de un mismo lenguaje. En los países sajones se usó *subcontracting* cuando una relación laboral pasó a ser vista como mercantil y *contract labour* cuando se suministró mano de obra por medio de intermediarios (agencias). En Francia se usó *sous traitance* para referirse a servicios subcontratados y *sous Enterprise* cuando se subcontrató mano de obra. En España subcontratación se utilizó en ambos sentidos, a veces como suministro de mano de obra mediante intermediarios y en otras como realización de una obra por otra empresa.

La Calidad del Empleo y la Subcontratación

A pesar de que el sector de la subcontratación ha generado controversia, ésta ha alcanzado un considerable grado de madurez y crecimiento, gracias al incremento de la competencia global que genera presión para que más negocios opten por proveedores especializados. La calidad del empleo según menciona Gallie se puede medir con: las cualificaciones profesionales y sus efectos salariales; el grado de autonomía en el trabajo; las oportunidades para el desarrollo de la formación profesional; la seguridad en el empleo; y la facilidad para conciliar el trabajo con la familia. (Gallie, 2007) La fragmentación productiva y la descentralización de los procesos permitieron el surgimiento de cadenas productivas intensificando el uso de la subcontratación, la cual ha contribuido al mejoramiento de los niveles de competitividad y productividad de las empresas y al mismo tiempo, logró reducir costos y aumentar la flexibilidad laboral. Sin embargo, estas estrategias se asocian en la literatura con el deterioro de la calidad de los empleos. La situación del mercado laboral actual se vuelve más compleja, generando bajas tasas de creación de empleos permanentes, bajas remuneraciones, reducción de prestaciones laborales, largas jornadas de trabajo,

factores que disminuyen la calidad del empleo. Con la subcontratación, no sujeta a ninguna exigencia causal, es posible fundamentar la conversión de puestos permanentes en temporales.

Precariedad del Empleo y la Subcontratación.

Los trabajos precarios según Rodgers tienen los siguientes atributos: Incertidumbre en cuanto a la continuidad del trabajo; menor control del trabajador sobre las condiciones de trabajo, los salarios o el ritmo de trabajo, mayor desprotección frente a la cobertura social, las prácticas discriminatorias, los despidos arbitrarios o las condiciones de trabajo inadecuadas, remuneraciones asociadas a la pobreza y a una inserción social insegura (Rodgers, 1992) El objetivo de este tipo de prácticas empresariales es reemplazar la mano de obra contratada directamente para disminuir costos, eludir a los sindicatos y ganar flexibilidad en el manejo de las relaciones laborales (Bronstein, 1999; Suplot, 2005; De Buen, 2005) Los derechos de los trabajadores se ven amenazados por la desigualdad de trato, respecto de los trabajadores en relaciones típicas, como son el principio de la estabilidad en el trabajo, derecho a un salario remunerador, la protección en caso de insolvencia de la empresa contratista, las normas en materia de seguridad social y de seguridad e higiene en el trabajo, contratos de corta duración de las contratistas con empresa usuarias. El trabajador temporal adquiere derechos temporales, porque trabajar en estas condiciones no da acceso a la seguridad social, a vacaciones ni a liquidaciones justas tras rescindir el contrato. Las mujeres son más proclives a padecer trabajo precario debido a que los empleadores prefieren contratar mujeres y migrantes por ser grupos que se encuentran en un mayor estado de indefensión y tienen una menor posibilidad de luchar por sus derechos y de acceder a la justicia.

La Industria Automotriz y la Subcontratación

La subcontratación tiene su origen en el sector automotriz en la década de los 70, debido a la crisis económica de esta década la industria automotriz cambia sus estrategias empresariales para adaptarse al nuevo entorno competitivo el cual demanda flexibilidad del proceso productivo, por lo que termina centrándose en sus actividades principales de diseño, marketing, montaje y componentes considerados estratégicos. La industria automotriz establecida en México emplea a más de 1 millón 40,000 personas de las cuales apenas 70,900 corresponden solo a productores de vehículos. El resto forma parte de la cadena del sector. Como ha observado Pries (1999) la importancia de esta industria no se puede valorar sólo por el volumen de empleos en la industria terminal, sino por sus efectos multiplicadores en el empleo, su participación en las exportaciones manufactureras y su liderazgo en el cambio tecnológico y organizativo. La industria automotriz utiliza la subcontratación con proveedores experimentados que se responsabilicen de una manera eficiente de determinadas fases de su cadena de producción y le permitan obtener la flexibilidad de estructura y la productividad necesarias, exigiendo de sus proveedores los máximos niveles de calidad y una entrega de productos justo a tiempo.

En el Estado de Coahuila se tienen dos 2 plantas armadoras de vehículos y 1 dedicada a la fabricación de tractocamiones, teniendo como subcontratistas a sus filiales como son , Robert Bosch, Delphi, Magna, Visteon, Johnson Controls, Lear, Faurecia, Metalsa, IACNA, Metocote, PEMSA, León Plastic, Lambeau, Stabilus, MALE, MUBEA, etc. El 37.8% del PIB del Estado de Coahuila está representado por el sector automotriz, 25 de cada 100 automóviles en el país se producen en Coahuila; 70 mil empleos dependen de la industria automotriz en la región. Más de 300 empresas y 40 mil empleos directos conforman la industria de autopartes del Estado. México es un espacio geográfico privilegiado para el desarrollo del sector automotriz, por la cercanía a uno de los principales mercados del mundo para el sector, el estadounidense, y a la existencia de mano de obra barata y calificada en el sector industrial, propiciarán que en los años próximos el sector siga creciendo de manera importante (Carbajal, del Moral, 2014)

METODOLOGÍA

Es una investigación descriptiva en la que se busca identificar formas de conducta, actitudes de las personas que se encuentran en el universo de investigación. Asimismo se realizó la recopilación de datos en un solo momento, siendo entonces una investigación transversal. Se aplicó un cuestionario a trabajadores de las empresas del área automotriz de las áreas productivas principalmente, fue diseñado en 8 apartados con 54 ítems en escala Likert 1 a 5. Para medir la fiabilidad del cuestionario se calculó el Alpha de Cronbach, con el programa estadístico SPSS. Se puede decir que la confiabilidad es la proporción de la varianza del error respecto de la varianza total producida por un instrumento de medición, restado de 1.00; donde el índice de 1.00 indica una confiabilidad perfecta. El resultado del cuestionario para determinar la precariedad y la calidad del empleo fue de 0.902 que considera muy buena fiabilidad. La población objeto de estudio fue de 600 trabajadores de diferentes empresas elegidas de forma aleatoria. Los resultados se analizaron estadísticamente usando el software SPSS.

RESULTADOS

En base a los resultados obtenidos de las encuestas aplicadas a trabajadores de empresas automotrices que no dependen de la empresa donde laboran se obtuvo lo siguiente:

Figura 1: Género de las Personas a las Que Se les Aplicó la Encuesta

En esta figura se muestra que de los trabajadores encuestados el 59% fueron hombres y el 41% son mujeres. Fuente: elaboración propia.

Figura 2: Edad de los Trabajadores

En esta figura se presenta la edad de los trabajadores en la que se puede observar que la mayoría tiene de 18 a 29 años (69.9%) y de 30 a 50 años es el 30.1%. Indicativo de que es una población joven. Fuente: elaboración propia.

Figura 3: Escolaridad de los Trabajadores

En esta figura se puede observar que la mayoría de los entrevistados tiene grado de licenciatura (42.2%), el 21.7% tiene solo secundaria, el 19.3% preparatoria, el 12% tiene carrera técnica y solo 3.6% tiene posgrado. Fuente: Elaboración propia

Las variables que se utilizaron para medir la calidad del empleo fueron: El reconocimiento al trabajo, atención al trabajador por parte del superior inmediato, puesto de trabajo, de las cuales se obtuvieron los siguientes resultados y en la que se utilizaron la media, la mediana y la moda como indicadores.

Tabla 1: Grado de Acuerdo/Desacuerdo Sobre Su Jefe o Superior Inmediato

Completamente de Acuerdo 1 2 3 4 5 No Aplicable

Afirmaciones	Media	Mediana	Moda
Se preocupa en escucharme	2.048192771	2	2
Me evalúa de forma justa	2.060240964	2	2
Me ayuda cuando lo necesito	1.987951807	2	2
Conoce bien mi trabajo	1.903614458	2	2
Está dispuesto a promocionarme	2.289156627	2	2
Me exige de forma razonable	2.024096386	2	2

En la Tabla 1 y Figura 4 se observa que las tres medidas de tendencia central tienden a ser las mismas a excepción de la disponibilidad a promocionar al trabajador en la cual la media aritmética es 2.289, lo cual indica que la promoción a otros puestos laborales no es tan fácil; el jefe o superior inmediato si conocen bien el trabajo a realizar por el trabajador obteniendo una media de 1.9036 y si lo ayudan cuando es necesario (1.9879)

Figura 4: Grado de Acuerdo/Desacuerdo Sobre Su Jefe o Superior Inmediato

En esta figura se puede observar que la opción de “de acuerdo” es la que con más frecuencia se presenta. Fuente: Elaboración propia.

Tabla 2: Reconocimiento a la Labor del Trabajador (Calidad En el Empleo)

Respuestas	% Respuestas	Completamente de acuerdo 1 2 3 4 5 no aplicable				
		Media	Mediana	Moda		
Se me reconocen si las ideas son implementadas	43.37%	1.759036145		2		1
Se reconocen las ideas independientemente de si se llevan a cabo o no	37.35%					
No se reconocen	19.28%					
La idea se reconoce al superior inmediato	42.17%	2.34939759		2		1
Se reconoce al equipo directivo	15.66%					
A un compañero del mismo nivel	7.22%					
No se reconoce a nadie la idea se pone en marcha	34.94%					

Los resultados de este ítem nos muestran que al trabajador se le reconocen sus ideas solo cuando son implementadas (43.37%), y si no son reconocidas pero si implementadas, estas se le reconocen al superior inmediato (42.17%), algunas veces no se le reconocen a nadie y solo se implementan (34.94%) o son reconocidas pero no implementadas (37.3%). Fuente elaboración propia.

Tabla 3: Satisfacción Con la Actuación de Recursos Humanos (Precariedad del Trabajo)

Completamente de Acuerdo 1 2 3 4 5 No Aplicable

	media	mediana	Moda
Mediación en disputas entre empleados y/o empleados y dirección	2.325	2	2
Descripción del puesto(s)	2.253	2	2
Evaluaciones del desempeño	2.445	2	2
Jubilaciones	2.451	2	2
Beneficios sociales (IMSS, vacaciones, Infonavit, ahorro, aguinaldo, utilidades)	2.156	2	2
Seguridad e higiene industrial	2.419	2	2
Información sobre promociones y puestos vacantes	2.329	2	2
Formación/capacitación	2.341	2	2

En la Tabla 3 se muestra que el trabajador no está muy de acuerdo con el pago de jubilación, la evaluación del desempeño y la seguridad industrial, seguida por la formación/capacitación, aunque la moda y la mediana sean iguales, al obtener el promedio se ven las diferencias que existen en cada ítem. Fuente elaboración propia.

Tabla 4: Puesto de Trabajo. (Calidad del Empleo)

	Media	Mediana	Moda
¿El puesto que ocupa en la empresa está en relación con la experiencia que usted posee?	2	2	2
¿Su puesto está en relación con su titulación académica?	2.457	2	2
¿Se considera usted valorado por el puesto de trabajo que ocupa?	2.240	2	2
¿Considera que su trabajo está suficientemente reconocido y considerado por su jefe o superiores?	2.361	2	2
¿Le gustaría permanecer en su puesto de trabajo dentro de su empresa?	2.313	2	2
¿Existen posibilidades reales de movilidad en su empresa?	2.378	2	2
Tiene un cierto nivel de seguridad en su puesto de trabajo, de cara al futuro?	2.123	2	2

En relación al puesto de trabajo Tabla 4 al analizar los datos el trabajador no está muy de acuerdo con su puesto en relación a la titulación académica que tiene, las posibilidades de movilidad son pocas, su trabajo no está suficientemente valorado por su jefe inmediato y no le gustaría permanecer en el mismo puesto. Fuente: Elaboración propia.

Tabla 5: Remuneración (Precariedad del Empleo)

	Media	Mediana	Moda
¿Considera que su trabajo está bien remunerado?	2.470	2	2
¿Cree que su sueldo o salario está en consonancia con los sueldos que hay en su empresa?	2.698	2	2
¿Considera que su remuneración está por encima de la media en su entorno social, fuera de la empresa?	2.481	2	2
¿Cree que su sueldo o salario y el de sus compañeros está en consonancia con la situación y marcha económica de la empresa?	2.554	2	2
¿Considera que existe igualdad entre hombres y mujeres en cuanto a la remuneración percibida dentro de su empresa?	2.228	2	2
El sueldo o salario que percibe es igual al de los trabajadores de la empresa para la que se esta trabajando?	2.524	2	2

Analizando la remuneración que corresponde al trabajador en la Tabla 4, se puede observar que aunque la moda y mediana coincidan, la media aritmética muestra que algunos valores están cercanos al desacuerdo en relación al sueldo o salario percibido en la empresa y en comparación a la empresa para la que se esta trabajando.

Figura 5: ¿Trabaja Por Contrato?

En la figura 4 se muestra que la mayoría de los trabajadores no trabajan por contrato ya que solo les elaboran uno por tiempo indeterminado cuando ingresan, el cual puede ser terminado cuando la empresa lo decida. Otras empresas si les realizan contrato generalmente por tres meses, el cual al terminar los liquidan y les vuelven a realizar otro.

Tabla 6: ¿Qué Tan Satisfecho o Insatisfecho, Está Usted Con Respecto a

	Muy satisfecho	Bastante satisfecho	Poco satisfecho	Nada satisfecho	Top Two Box
Grado de satisfacción en la empresa en comparación a otros lugares donde ha trabajado	16.9%	33.7%	45.8%	3.6%	50.6%
¿Está satisfecho con su trayectoria en la empresa actual?	19.3%	34.9%	41%	4.8%	54.2%

Con respecto a estos resultados se puede observar en la Tabla 6, que los trabajadores están muy satisfechos y bastantes satisfechos de su trayectoria en la empresa (54.2%), 45.8% esta poco satisfecho y la consideran mejor que en otras empresas donde han trabajado (50.6%), el 41% esta poco satisfecho. Fuente: Elaboración propia.

Los resultados muestran que aproximadamente el 50% de los trabajadores no están satisfecho totalmente en comparación a otros lugares donde han trabajado ni con su trayectoria en la empresa actual, lo cual es un indicador de que en cualquier momento el trabajador al encontrar otro empleo se retirara de la empresa.

CONCLUSIONES

La subcontratación en los países desarrollados a diferencia de la de los subdesarrollados, se le vincula con precarización y pérdida de derechos de los trabajadores subcontratados. En los países en desarrollo casi todos los estudios que se han realizado coinciden en que la atracción principal de la subcontratación fue la reducción de dichos costos por la vía de la desprotección y precarización de los trabajadores (FES, 2005). Esta es también la preocupación principal de la OIT. Los trabajadores contratados por medio de la

subcontratación reciben prestaciones diferentes que suelen ser menores y de esta manera se violenta el derecho humano a la no discriminación según el artículo 1 de la Constitución Mexicana y en distintos instrumentos internacionales ya que los trabajadores reciben trato desigual por el origen de su contratación. Si bien las empresas beneficiarias buscan evitar actividades que les distraigan de su función principal, lo que podría ser legalmente válido, lo cierto es que también buscan evitarse las molestias de la administración de personal con todo lo que ello implica: reclutamiento, selección, capacitación, registro en el IMSS, INFONAVIT, demandas por despido injustificado, entre las principales.

Los resultados obtenidos con la investigación realizada nos indican que los trabajadores son bien tratados por sus superiores inmediatos, que les son reconocidas sus ideas cuando se implementan, en algunas ocasiones son implementadas y reconocidas a su superior inmediato, lo cual sucede con frecuencia. El pago de jubilaciones, evaluación del desempeño, seguridad e higiene industrial y capacitación no son muy buenas por lo que no están completamente de acuerdo. En lo referente a los puestos de trabajo en los que están actualmente, manifiestan que no están de acuerdo a la titulación académica que tienen, lo cual en la región sureste se presenta con mucha frecuencia y es solo una minoría la que logra colocarse en áreas que corresponden a su titulación. La remuneración que pagan las empresas subcontratantes no es muy buena y esta es menor a la que tienen los trabajadores de la empresa para la que trabajan, por lo que siempre buscan colocarse en ésta cuando hay una oportunidad. En general los trabajadores entrevistados se muestran bastante satisfechos en las empresas para las que trabajan, por lo que se puede concluir que si existe precariedad y falta de calidad en los empleos, pero no es tan preocupante, ya que en el sureste de Coahuila se han estado creando nuevas fuentes de trabajo a las cuales se pueden incorporar los trabajadores en busca de una buena calidad y mejor remuneración.

Limitaciones

Se continuara con la investigación en otras áreas laborales para verificar si sucede lo mismo en otras empresas manufactureras que no sean de la automotriz, y terminar con las empresas automotrices faltantes para comparar su comportamiento con las ya encuestadas.

EL AHORRO Y CONTROL FINANCIERO EN ESTUDIANTES DEL ÁREA ECONÓMICO-ADMINISTRATIVA DE LA REGIÓN ALTOS SUR DE JALISCO, MÉXICO

Nadia Natasha Reus González, Universidad de Guadalajara

Tania Reus González, Universidad de Guadalajara

RESUMEN

Para lograr un control financiero de manera exitosa en estudiantes universitarios, es importante considerar el nivel de ahorro respecto al ingreso que se tenga mensualmente independientemente de si los ingresos son subsidiados por algún familiar o propios. El presente trabajo de investigación mostrará los resultados en los que el estudiante hace uso de sus capacidades académicas en la optimización de sus recursos financieros personales y administración financiera respecto de su economía. La planeación financiera personal permite realizar procesos administrativos, organizados y sistemáticos para que un individuo, una familia u organización realice eficiente y eficazmente la optimización de los recursos económicos en el manejo de sus finanzas. El ahorro representa una actitud inteligente no fácil de realizar pero no difícil en lograrlo, esto no significa gastar menos, el reto será como saber gastar el dinero maximizando los ingresos en el manejo de sus finanzas y que obtenga como resultado una mejoría en su economía y calidad de vida.

PALABRAS CLAVE: Ahorro, Finanzas, Planeación Financiera

SAVINGS AND FINANCIAL CONTROL STUDENTS FROM THE AREA ECONOMIC ADMINISTRATIVE OF THE REGION SOUTH HIGH JALISCO, MEXICO

ABSTRACT

To achieve financial control successfully in college students, it is important to consider the level of savings relative to income that has monthly income regardless of whether they are subsidized by a family member or themselves. This research will show the results in which the student uses his academic skills in optimizing their personal financial resources and financial management regarding its economy. Personal financial planning allows administrative, organized and systematic processes for an individual, a family or organization efficiently and effectively perform the optimization of economic resources in managing their finances. The savings is a smart move not easy to perform but not difficult to do so, does not mean spending less, the challenge will like knowing spend money maximizing revenue in managing their finances and obtain as a result an improvement in the economy and quality life.

INTRODUCCIÓN

Administrar los recursos económicos de una manera natural puede dar resultados parcialmente buenos, realizar una planeación administrativa en las finanzas personales con procesos, metas y objetivos ordenados y sistematizados permite obtener resultados óptimos ya sea que los ingresos de los estudiantes sean propios o subsidiados por sus padres o tutores, así como modificar los hábitos del ahorro. En esta investigación nos daremos cuenta de acuerdo a la planeación financiera que realizan los estudiantes del área económico administrativa de la Región de Los Altos Sur de Jalisco, México como administran sus finanzas mediante el control y registro de sus gastos y que porcentaje destinan al ahorro como base fundamental para lograr un superávit financiero y mejorar su calidad de vida.

OBJETIVO

El presente estudio permite conocer la capacidad y habilidades académicas de los alumnos del área económica-administrativa de la Región Altos Sur de Jalisco, México, en la optimización del ejercicio en sus recursos financieros personales de acuerdo al control y ahorro respecto a sus ingresos mediante un proceso administrativo.

JUSTIFICACIÓN

En la actualidad hablar del ahorro no significa gastar menos, el reto es saber cómo gastar el dinero, el ahorro es una actitud inteligente del individuo, es fácil decir que se puede hacer pero muy difícil de hacerlo. Los gastos personales o familiares que se tienen en la vida cotidiana denominados fijos, de una manera simple se realizan los pagos y no precisamente se llevan a cabo con un control o un proceso que permita hacer un análisis para tomar decisiones asertivas o correctas respecto a una planeación financiera que permita determinar las prioridades en el hogar. Establecer metas reales, llevar un control y registro de los ingresos permite obtener mayores beneficios en la economía personal mediante una planeación estratégica. La cultura de ahorrar desafortunadamente la consideramos pero no se realiza de manera cotidiana con la misma recurrencia como en la que se realizan los pagos, los gastos o en general los egresos que consideramos fijos. Ahorrar una cantidad mensual, ya sea del propio sueldo o de la forma en que se obtengan los ingresos, considerando que algunos estudiantes perciben ingresos por sus padres o tutores, fijar metas alcanzables cantidades específicas de ahorro, por poco que sea, lo importante es cambiar de hábitos al respecto que benefician la economía y en general las finanzas personales de los estudiantes y de las familias en general. (Dorpters, 2015)

En términos de planeación se deben establecer objetivos alcanzables y determinar las estrategias para lograrlos, dichas estrategias deben realizarse sistemáticamente para que el proceso de planeación sea efectivo. (Morales, 2010) . La actividad intelectual permite hacer una proyección a futuro con procesos administrativos determinados así como las estrategias para obtener una planeación financiera exitosa. (Ortega, 2008) Hablar de deudas es inevitable, difícilmente se adquiere un bien de contado, lo ideal es evitar el endeudamiento pero es casi imposible no deber, cuando es una deuda por recibir un préstamo lo recomendable es adelantar pagos para que se generen menos intereses y fijar metas de pago a corto plazo para no sobre endeudarse por otros imprevistos en el mismo lapso de tiempo, así como el mal uso de las tarjetas de crédito. En algunas fuentes de información como en las noticias, periódicos analistas financieros recomiendan que las deudas no debe representar mayor al 10% de los ingresos que se tienen, un 20% lo consideran aceptable. (Dorpters, 2015)

Hacer un presupuesto sobre los ingresos y dar seguimiento a la planeación en relación a los gastos, fijar metas específicas y objetivos alcanzables mediante un proceso administrativo en la planeación financiera personal, permite modificar los hábitos en el registro de las finanzas para destinar una cantidad para el ahorro, ahorrar es actuar con responsabilidad, tener propósitos y motivos dentro de las posibilidades y que estén al alcance en las decisiones financieras. La planeación financiera determina procesos y proyecciones que permiten hacer un análisis de las actividades que realiza un individuo, una familia o una organización

para que sea funcional y redituable en la economía. (Olmedo, 2009) Las finanzas pueden ser consideradas en el área de inversión, instituciones y mercados financieros así como la administración financiera de las empresas. (Ochoa, 2012) Para llevar de una manera efectiva un análisis de finanzas personales en esta investigación, se realizaron encuestas en el primer semestre del año de 2014 con alumnos del Centro Universitario de los Altos de la Universidad de Guadalajara, en la Región Altos Sur de Jalisco, México, para analizar la capacidad de ahorro y control en sus finanzas personales a un proceso de administración que permita hacer uso de sus capacidades académicas en la optimización de sus recursos durante un periodo de tiempo. La administración de procesos y la planeación estratégica si se realiza con datos reales permite realizar un proceso funcional con resultados eficaces en la implementación de los procesos, ya que una planeación sencilla pero eficiente permitirá que los objetivos y propósitos sean alcanzables y se orientan a la solución de problemas. (Olmedo, 2009)

Diseñar estrategias dirigidas al cumplimiento de los objetivos considerando las situaciones cambiantes en el manejo financiero al entorno del individuo o familia debe ser flexible y adaptable a las necesidades y metas establecidas en la planeación. Equilibrar el presupuesto, reducir costos, disminuir lujos y gastos innecesarios, hacer conciencia sobre el uso excesivo de los recursos energéticos, no solo es cambiar o modificar hábitos para generar ahorro financiero, también es hacer un cambio en las estrategias que usualmente tenemos sin dirección como el mal hábito en los alimentos, comprar el súper sin una lista previa, caemos en el consumismo excesivo, se pueden comprar alimentos baratos y nutritivos en lugar de consumir de manera desmesurada en restaurantes, así como el uso del transporte público que es más barato pero los tiempos o las distancias no favorecen en las ciudades grandes si las rutas no son viables o accesibles, cuando se tiene un vehículo propio que sin previo aviso o planeación genera gastos que merman la economía. Desconocer términos financieros o no realizar una planeación de la economía puede traer de manera equivocada endeudamientos excesivos, no prever situaciones futuras, no generar ahorro o inversión. (Núñez, 2013) Administrar el dinero y realizar finanzas personales con procesos administrativos de un individuo o familia beneficia su economía si las decisiones y estrategias son las adecuadas permitirá destinar un porcentaje de los ingresos al ahorro y tener con el tiempo seguridad financiera. Realizar un presupuesto mensual es más fácil cuando se tiene un ingreso fijo, de no ser así, el anticipar los gastos no podrá ser de forma regular, se deben categorizar o priorizar el presupuesto de acuerdo a la importancia de los gastos y pagos por realizar, las deudas no es una opción cuando el principal propósito es ahorrar.

Mediante la planeación estratégica se puede obtener resultados efectivos en el proceso administrativo si las estrategias y los objetivos son reales y alcanzables, se reducen riesgos económicos si se toman decisiones de forma asertiva, esto impacta en la economía familiar o personal positivamente, considerando que siempre habrá factores que afecten dicha economía como el alza en precios de la canasta básica de alimentos, gasolina, impuestos, inflación o políticas económicas que no están a la vista y afectan nuestro control de ingresos y presupuestos en el proceso de planeación de las finanzas personales cuando la finalidad es ahorrar. Realizar un historial financiero con las variables económicas, un balance inicial en la implementación de un proceso administrativo para realizar proyecciones financieras con estrategias establecidas para obtener un estado de resultados exitoso, efectivo y real, permite tomar decisiones asertivas. (Rodríguez, 2013) El reto más grande de las personas es como administrar el dinero, no gastar en cosas innecesarias y no gastar más de lo que se gana, hacer conciencia de la importancia de reservar una parte de los ingresos de una manera periódica ya que el ahorro debe ser también programado para vacacionar e imprevistos y alcanzar las metas fijadas para ahorrar financieramente.

METODOLOGÍA

El diseño de la investigación es de tipo descriptivo- transversal Se diseñó el instrumento de medición con 22 reactivos que abarcan cuestionamientos sobre ingresos, egresos, ahorro, presupuesto y control de gastos, endeudamiento, gastos imprevistos y el rendimiento escolar del estudiante. Para la determinación del tamaño de muestra, se consideraron las listas de asistencia con alumnos registrados eliminando la

duplicidad por los alumnos irregulares (que se encuentran recursando alguna materia) en el primer semestre del año de 2014, obteniendo una población estudiantil de 2932. Para determinar el tamaño de muestra se utilizó la siguiente fórmula:

$$n = \frac{N Z^2 p q}{(\pm)^2 (N-1) + Z^2 p q} \quad (1)$$

n= tamaño de muestra

N= tamaño de población

Z= 1.96 (valor estandarizado que corresponde a un nivel de confianza del 95%)

± = margen de error del 5%

p = probabilidad de éxito

q= probabilidad de fracaso

pq = multiplicación de las probabilidades en su máxima combinación $(0.5)(0.5) = 0.25$ De acuerdo a la fórmula, se determinó que el tamaño de muestra es de 340 estudiantes como mínimo representativo de la población. Mediante un muestreo estratificado se estableció que para la Licenciatura de Administración el tamaño de muestra mínimo representativo estadísticamente es de 33. Para el trabajo de campo se capacitó a los alumnos para su aplicación, y para la selección de los encuestados se aplicó un muestreo aleatorio simple, obteniendo un total de 35 encuestas cubriendo el 100% de la muestra representativa.

RESULTADOS OBTENIDOS

De los datos generales se tiene que la edad promedio de los estudiantes de la Licenciatura en Administración es de 21 años.

Figura 1: ¿de Dónde Obtienen Ingresos?

El 48% de los estudiantes perciben ingresos de sus padres y el 34% de ellos por su trabajo, lo cual representa que en su mayoría los estudiantes siguen recibiendo el apoyo económico de sus padres.

Figura 2: ¿Cuánto Obtienes de Ingreso Mensual?

El 43% de los estudiantes de la licenciatura obtienen ingresos promedio de \$1,001 a \$1,500 pesos mensuales, ya sea por fuente propia de trabajo o subsidiada por algún familiar.

Figura 3: ¿Tienes el Hábito de Ahorrar?

3- ¿Tienes el hábito del ahorro?

El 74% de los estudiantes tienen el hábito del ahorro, en tanto que 9 estudiantes que representan el 26% no ahorran.

Figura 4: si la Respuesta Anterior Fue SÍ ¿Cuánto Ahorras Por Mes?

De los alumnos que indicaron tener el hábito del ahorro, el 54% de los estudiantes ahorran menos de \$200 pesos, el 38% de ellos ahorran la cantidad de \$201 a \$300 pesos de sus ingresos mensuales, en tanto que el 4% de los estudiantes para las opciones c) y d) ahorran entre \$301 a \$500 pesos o más de \$500 pesos por mes respectivamente.

Figura 5: Aproximadamente ¿Qué Porcentaje de tu Ingreso Mensual Representa la Cantidad de tu Ahorro?

5- Aproximadamente ¿Qué Porcentaje de tu Ingreso Mensual Representa la Cantidad de Tu Ahorro?

De acuerdo al ingreso que percibe cada estudiante el 50% de ellos ahorran menos del 10% de sus ingresos mensuales, el 23 % indican que ahorran el 10% de sus ingresos, otro 23 % de los estudiantes ahorran entre el 10 y el 20% de sus ingresos, en tanto que el 4% de los estudiantes puede ahorrar más del 20% de sus ingresos.

Figura 6: ¿Llevas Registro o Control de tus Ingresos y Gastos?

6-¿Llevas registro o Control de tus ingresos y gastos?

El registro y control de gastos es realizado en un 51% de los estudiantes que afirman que si lo realizan, el 43% de los estudiantes no lo llevan a cabo, el 6% de ellos solo realizan control de egresos y ninguno de ellos solo de ingresos.

Figura 7: ¿Haces un presupuesto sobre tus ingresos y gastos?

7-¿Haces un presupuesto sobre tus ingresos y gastos?

El 51% de los estudiantes realizan un presupuesto de sus ingresos y gastos, 49% de los estudiantes no realizan presupuesto de los 35 alumnos encuestados.

Figura 8: Si la respuesta anterior fue SÍ ¿Con qué periodicidad realizas tu presupuesto?

La periodicidad con la que realizan registro de sus presupuestos de ingresos y egresos indica que el 72% de los estudiantes lo registran semanalmente, el 17 % de los estudiantes hacen su registro quincenalmente, el 11% de los estudiantes lo realizan mensual y ninguno de los estudiantes lleva algún registro de manera anual.

CONCLUSIONES

Hablar de ahorro y control es posible si se organizan las finanzas personales mediante un proceso administrativo eficaz y eficiente con estrategias que permitan el cumplimiento de los objetivos para obtener un superávit en las finanzas y ahorro. Llevar un registro y control de los gastos, deudas e ingresos con un historial real permite planear e implementar un proceso sistematizado ordenado para poder destinar un porcentaje de los ingresos al ahorro. Se debe considerar que hay factores que representen riesgo en la economía y en el proceso de planeación como los impuestos, el tiempo, las emergencias, de tal manera que si se consideran y se identifican problemas que afecten los objetivos planteados, es indispensable replantear estrategias u objetivos cuantas veces sea necesario hasta obtener resultados que beneficie la economía del individuo, la familia o una organización.

En esta investigación con estudiantes del área económico-administrativa de la Región Altos Sur de Jalisco, México, observamos que de 35 alumnos que contestaron la encuesta existe un alto porcentaje de respuestas en la que los gastos son subsidiados por sus padres, tutores o algún familiar 48%, el 74% tienen el hábito del ahorro, los porcentajes que ahorran menos de 200 pesos son el 54% y entre 200 y 300 pesos el 30% de los encuestados, el 50% de los estudiantes esas cantidades representan menos del 10 % de sus ingresos y el 23% de ellos ahorrar el 10%, solo 23% de los estudiantes ahorran entre un 10 ó 20% de sus ingresos. Lo interesante de ésta investigación es darnos cuenta que el 51% de los encuestados llevan un registro y control de sus ingresos, el 43% no lo realizan y el 6% solo hacen registro y control exclusivamente de los egresos no de ingresos, este control lo realizan de forma semanal un 72%, quincenalmente el 17% y mensual el 11% de los alumnos.

Tener conocimientos y llevar un control y registro de ingresos y egresos, permite tener una visión de la realidad para cumplir con los propósitos de la planeación financiera personal, tener conciencia y cambio de hábitos de los egresos que no son necesarios permitirá tener un superávit financiero y adquirir mejores resultados en el porcentaje de ahorro destinado, recordando que el ahorro puede cubrir imprevistos, emergencias, plan de jubilación, adquirir un bien inmueble o simplemente para vacacionar de una manera organizada y planeada para no mermar la economía personal o familiar. El reto más grande para el individuo, familia u organización es como administrar el dinero y no gastar más de lo que sea necesario o indispensable y que esto no represente gastar más de lo que se gana, cambiar de hábitos, tener cultura financiera, educación financiera permitirá con el tiempo tener una mejor calidad de vida. Para poder ahorrar se debe hacer conciencia sobre la importancia de reservar una parte de los ingresos de forma periódica y programada, fijar metas, alcanzar objetivos establecidos mediante una adecuada planeación financiera, y

realizar 5 pasos sencillos: 1) Identificar los ingresos, 2) Tomar control de los gastos y hacer un presupuesto, 3) Disminuir las deudas, 4) Crear un compromiso de ahorro y 5) Asesoría financiera, con éstos pasos sencillos, claros y alcanzables se puede lograr ahorrar para preservar el valor de los recursos que se guardan o se incrementan y esto es posible si se organizan las finanzas personales y se disminuyen deudas. DIAGNÓSTICO DE LA PYME SONORENSE PARA DETERMINAR LAS PROBLEMÁTICAS QUE ENFRENTAN ANTE LA INTEGRACIÓN ECONÓMICA

María de los Ángeles Monterde Valenzuela, Universidad Estatal de Sonora;

Rosalina Jaime Meuly, Universidad Estatal de Sonora

María Guadalupe Durazo Bringas, Univesidad Estatal de Sonora

RESUMEN

A 20 años de la firma del Tratado de Libre Comercio con América del Norte (TLCAN), la economía de la Frontera Norte de México se encuentra en una época de desaceleración económica, en donde se requiere replantear la pregunta sobre el papel del gobierno federal y los estados, en el desarrollo económico sustentable, sus funciones y la forma de intervención sobre los agentes económicos para fomentar el desarrollo y crecimiento económico de largo plazo. La presente investigación tiene por objeto analizar los factores que afectan a las pymes sonorenses y determinar cuáles son las principales problemáticas que han frenado el desarrollo económico regional. En teoría se afirma que las pymes son importantes generadoras de empleos en el país, y la sólida base económica que lo sostiene; sin embargo estadísticamente han decrecido en la última década; y la empresa de capital extranjero ha ocupado su lugar. Entonces surge la necesidad de conocer qué requiere hacer la pyme sonorense para integrarse exitosamente al desarrollo económico.

DIAGNOSIS OF SMEs SONORAN TO DETERMINE THE PROBLEMS FACED BY THE ECONOMIC INTEGRATION

ABSTRACT

20 years after the signing of the Free Trade Agreement with North America (NAFTA), the economy of the Northern Border of Mexico is in a time of economic downturn, where it requires rethinking the question about the role of the federal government and states, in sustainable economic development, its functions and how economic agents intervention to promote development and economic growth in the long term. This research aims to examine the factors that affect the Sonoran SMEs and determine what are the main issues that have slowed the regional economic development. In theory states that SMEs are important generators of jobs in the country, and solid economic base that sustains it; however they have statistically decreased in the last decade; and foreign capital company has taken its place. Then arises the need to know what needs to be done Sonoran SMEs to successfully integrate economic development.

INTRODUCCIÓN

Las micro, pequeñas, medianas y grandes empresas, constituyen la columna vertebral de la economía nacional porque son la única fuente de riqueza del país; ya que pagan impuestos, sueldos y salarios a la población económicamente activa, y son un importante factor de paz social. De acuerdo con datos del

Instituto Nacional de Estadística, Geografía e Informática (INEGI), en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son pequeñas y medianas empresas (PYMES); que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país. Según datos del Sistema de Información Empresarial Mexicano (SIEM), el padrón público más grande de México; la tabla 1 muestra el comportamiento empresarial en los seis estados de la frontera norte de México, y puede apreciarse una tendencia hacia la baja en la primera década del siglo XXI, no obstante los diferentes esfuerzos por apoyar la creación y desarrollo de empresas mediante diferentes fondos de apoyo del gobierno federal por los últimos dos sexenios.

Tabla 1. Comportamiento Empresarial en los Estados de la Frontera Norte.										
	Apertura de Empresas									
	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Baja California	11,067	11,421	10,541	9,949	10,733	11,263	11,737	11,487	11,420	11,244
Coahuila	9,013	8,860	7,823	7,893	10,800	11,622	12,555	12,895	13,816	17,318
Chihuahua	27,460	32,983	35,566	37,559	33,174	30,550	28,838	32,354	36,686	39,463
Nuevo León	25,143	22,836	17,364	14,407	15,094	14,502	15,306	16,191	16,304	16,214
Tamaulipas	15,059	17,813	21,945	25,522	24,437	22,754	20,383	19,396	17,975	21,581
Sonora	10,189	8,120	7,312	6,869	6,927	6,816	6,067	5,527	6,252	6,699
Fuente: Creación propia utilizando información del SIEM 2014										

La tendencia del comportamiento empresarial en los 6 estados de la frontera norte; señala al estado de Chihuahua como líder en volumen de empresas, mostrando alza desde 2010; en segundo lugar figura el estado de Tamaulipas, quien presenta mejores tendencias que los otros estados de la frontera. Nuevo León, que después de una caída fuerte, desde 2007 aparece como estable en su tendencia de crecimiento. También Coahuila presenta un crecimiento pequeño y sostenido desde 2007 y finalmente el estado de Sonora es el que experimenta menor crecimiento a través de los años y una tendencia desalentadora; y por ello es que surge la inquietud de realizar el presente estudio diagnóstico de la situación de las pymes en Sonora, con el fin de determinar las principales problemáticas, y abordar las posibles soluciones desde la formación académica de tipo empresarial. Es entonces significativo que siendo el estado de Sonora pionero en el establecimiento de la industria maquiladora de exportación en México, a 20 años de la firma del TLCAN, muestre rezago en su desarrollo económico, y peor aún, haya perdido empresas desde 2004 a 2013, según la estadística del SIEM.

REVISION LITERARIA

Sonora es uno de los 31 estados que, junto con el Distrito Federal, conforman las 32 entidades federativas de México. Se ubica en la región noroeste del país. Su superficie territorial representa el 9.4% del total nacional. Las principales actividades económicas en Sonora son la ganadería, minería, pesca y agricultura. Recientemente la industria maquiladora y de producción de alimentos han tenido auge en el estado (INEGI, 2011). Según los Indicadores Regionales por Actividad (Banamex 2014), las dos entidades de mayor peso relativo en la división noroeste, Baja California Norte y Sonora son los estados que contribuyen con 67% del PIB de la región; correspondiente a la producción manufacturera (3.4% en promedio durante enero-noviembre de 2013, vs. 1.4% del nacional). En tanto, la generación de empleos formales registrados en el Instituto Mexicano del Seguro Social (IMSS), creció a una tasa ligeramente por debajo de la nacional, 3.4% y 3.5%, respectivamente, con lo que el sector comercial se benefició en Mexicali, Baja California Norte. En el caso de Sonora, aun cuando la producción manufacturera alcanzó una tasa de crecimiento muy superior al promedio nacional (9.6% y 1.4%, respectivamente, durante enero-noviembre de 2013), el magro desempeño de los sectores primario y terciario limitaron el crecimiento del PIB del estado durante 2013, el cual se estimó en 1.8%. Cabe mencionar que, con un crecimiento anual del empleo de 3.9% (vs. 3.5% del

nacional), las actividades comerciales no lograron repuntar. Las ventas al por menor en la capital del estado, Hermosillo, cayeron 4.8% en promedio durante 2013 (vs. -0.3% del nacional).

Las empresas micro, pequeñas y medianas representan a nivel mundial el segmento de la economía que aporta el mayor número de unidades económicas y personal ocupado (INEGI 2011); de ahí la importancia que tiene este tipo de empresas y la necesidad de fortalecer su desempeño, al incidir éstas de manera fundamental en el comportamiento global de las economías nacionales; de hecho, en el contexto internacional se puede afirmar que un porcentaje superior al 90% de las unidades económicas totales, está conformado por las micro, pequeñas y medianas empresas. La Unión Europea (DO CE 2005) definió a las pequeñas y medianas empresas, así como a las microempresas como "toda entidad, independientemente de su forma jurídica, que ejerza una actividad económica. En particular, se considerarán empresas las entidades que ejerzan una actividad artesanal u otras actividades a título individual o familiar, las sociedades de personas y las asociaciones que ejerzan una actividad económica de forma regular. El Consejo Internacional para el Desarrollo Económico define el desarrollo económico como una "actividad que busca mejorar el bienestar económico y la calidad de vida de una comunidad creando o manteniendo los empleos". El Banco Mundial es la principal organización internacional que mide el desarrollo económico en una escala nacional y global. Integración económica es un proceso mediante el cual los países van eliminando sus características diferenciales; cuando la integración económica aumenta, las barreras al comercio entre mercados disminuyen, se facilita el flujo de bienes, servicios y factores productivos y la armonización de políticas económicas. Pero, ¿cómo se prepara una economía subdesarrollada para integrarse globalmente con éxito y asegurar el ideal desarrollo al que se aspira con esta intención económica? S. Boisier (1993) puntualiza que el desarrollo "se concentra y sustenta en la satisfacción de las necesidades humanas fundamentales, en la generación de niveles crecientes de auto dependencia y en la articulación orgánica de los seres humanos con la naturaleza y la tecnología, de los procesos globales con los comportamientos locales, de lo personal con lo social, de la planificación con la autonomía y de la sociedad civil con el Estado". El producto interno bruto (PIB), es solo una ecuación que depende sustancialmente de las micro, pequeñas, medianas y grandes empresas mexicanas que conforman su estructura y sostienen la economía de un país. Sin empresas mexicanas, es imposible hablar de desarrollo económico regional y competitividad. También Boisier (1993) sostiene que: "La endogeneidad del desarrollo regional habría que entenderla como un fenómeno que se presenta en por lo menos cuatro planos que se cortan, se cruzan entre sí".

Primero, la endogeneidad se refiere o se manifiesta en el plano político, o sea, la capacidad de diseñar y ejecutar políticas de desarrollo, y sobre todo, la capacidad de negociar. En segundo lugar, la endogeneidad se manifiesta en el plano económico, y se refiere en este caso a la apropiación y reinversión regional de parte del excedente a fin de diversificar la economía regional, dándole al mismo tiempo una base permanente de sustentación en el largo plazo. En tercer lugar, la endogeneidad es también interpretada en el plano científico y tecnológico, es decir, la capacidad interna de un sistema para generar sus propios impulsos tecnológicos de cambio, capaces de provocar modificaciones cualitativas en el sistema; y en cuarto lugar, la endogeneidad se plantea en el plano de la cultura, como una suerte de matriz generadora de la identidad socio territorial. Hernández, Soto y Vázquez (2008) afirman que el crecimiento económico con bases endógenas puede generar un dinamismo de acumulación productiva de mayor sustentabilidad que el de bases exógenas, que hace más vulnerables a las regiones. También muestran en su estudio de impacto del TLCAN sobre la economía de la frontera norte de México, que Sonora presenta rezago y aparece como una economía perdedora, equiparándose al promedio del resto de los estados de la República Mexicana, y diferenciándose sustancialmente de los estados de la Frontera Norte a los que pertenece por ubicación.

Potenciar la profesionalización de las empresas con la especialización de la fuerza de trabajo, la adición de valor, o la inserción en una cadena productiva de valor agregado, obliga a planear el crecimiento sostenido y sustentable de las regiones. En la tabla 2, se muestran datos obtenidos del Sistema de Información Empresarial Mexicano (SIEM), que muestra el número y proporción de empresas que participan en el

Comercio Exterior en la frontera norte de México, siendo el estado de Sonora, el que menor número de empresas tiene registradas, y con una pequeña proporción del 5.62% de empresas que participan en el Comercio Exterior. Chihuahua y Coahuila, son los estados que mayor número de empresas han registrado y coincidentemente, también mayor participan en el comercio exterior mexicano. Es destacable que el estado de Nuevo León, tiene un alto registro de empresas en general, lo que indica ser un estado fuertemente sostenido por sus empresas locales, y un menor registro en número de empresas participantes en el comercio exterior.

Tabla 2: Empresas de Comercio Exterior En los Estados de la Frontera Norte de México

Estados De La Frontera Norte De México	Exportan		Importan		Empresas de Comercio Exterior En la Frontera Norte		Total Empresas Por Estado FN

Fuente: Creación propia con datos oficiales de SIEM 2014.

Basurto (2005) afirma que la empresa es la única fuente de riqueza de un país, por lo tanto habrá países ricos, si hay empresas ricas. Con respecto al desarrollo regional, afirma que el problema de estancamiento empresarial tiene causas endógenas. El desarrollo económico por tanto requiere y se fundamenta en las empresas fuertes. El desarrollo empresarial es un proceso por medio del cual un equipo de personas, a través de su talento, diseña actividades y procesos para entregar una solución o satisfactor a un mercado, a cambio de un valor monetario; y además ese equipo de personas utiliza todos los recursos de que dispone para crear todos los días mayor valor. Valor que será reflejado en finanzas sanas y crecientes; así como en bienestar integral para todos sus públicos: clientes, colaboradores, proveedores, acreedores y accionistas. El desarrollo implica planear, ejecutar, medir, innovar y ejecutar, en un ciclo llamado también dinámica empresarial.

METODOLOGÍA

Para la presente investigación se utilizaron bases de datos y referencias bibliográficas, a fin de sustentarla con las aportaciones de las investigaciones desarrolladas en el pasado; siendo pertinentes y de credibilidad, para inferir y apoyar los planteamientos (Zabala, 2005). El perfil se muestra a continuación en la Tabla 3.

La Tabla 3 da a conocer el perfil completo de la muestra consistente en 25 entrevistas realizadas a gerentes de empresa y maquiladoras, en la cual el 72% corresponde directivos de más de 46 años, y un 20% a directivos entre 41 y 45 años, que a su vez en total representa el 92% de la muestra; quedando casi al margen los rangos de edad entre 36-40 y 31-35 con el 1%. Otra cualidad de la muestra es la clasificación que se hace por género, correspondiendo un 80% de los gerentes entrevistados al género masculino y el 20% al género femenino. Se aprecia un 32% de los gerentes de empresas y maquiladoras solo tiene preparación técnica, y su trayectoria empresarial se fundamenta en la práctica. Otro 32% de ellos posee conocimientos profesionales; y un 36% solamente tienen conocimientos de maestría. Resulta interesante que ningún porcentaje tienen estudios de doctorado. También se distingue que 15 gerentes de empresa y maquiladora poseen conocimientos matemáticos, correspondiéndole un 60% del total de la muestra; un 32% ostenta conocimiento en ciencias sociales, y el 8% restante tiene conocimientos de ciencias naturales u otro. Respecto al lugar de nacimiento de los gerentes de empresa y maquiladora entrevistados, un 44% provienen de otros estados de la República Mexicana, el 32% es originario del estado de Sonora, y un 24% de otros

países. En relación al giro empresarial, el 24% de los gerentes de empresa y maquiladora se dedican al comercio, un 20% a la industria de exportación, y otro 20% a la manufactura; siendo sólo un 16% que se dedica a la minería, 12% a la agricultura, y solamente un 8% a la ganadería.

Tabla 3: Perfil de la Muestra Objeto de Estudio

Edad	menos 25 años	26-30	31-35	36-40	41-45	más 46 años	Total de la Muestra

RESULTADOS

Estudios sobre competitividad nacional y local realizados por Doing Business (2013), indican que existe una problemática generalizada respecto a múltiples regulaciones que influyen en las empresas a lo largo de su ciclo de vida. (Vargas, 2012), afirma que las principales problemáticas de las pymes mexicanas son: Carencia de apoyo financiero, falta de experiencia, escases de capital, excesivas inversiones en activos fijos, pocos o nulos sistemas de información confiable, mala selección del personal, graves errores en la selección de estrategias, ausencia de planes alternativos, resistencia al cambio, excesiva centralización en la toma de decisiones, mala operación de fondos y problemas en la selección de socios, bajo grado de profesionalización y capacitación de recursos humanos y visión de corto plazo. La percepción que directivos de pymes sobre temas de integración económica regional, fue diversa, destacando que la globalización, es un fenómeno envolvente; creciente, que integra a economías y sociedades de todo el mundo; y que ha propiciado una agresiva competencia en los mercados.

Desde el punto de vista de expertos y directivos de las pymes entrevistadas, se cuestionó cómo la globalización activó la economía sonorenses, y argumentaron que la globalización en Sonora: 1.- Creó expectativas de localización privilegiada para el Estado. 2.- Puso en agenda la política-económica de trabajo institucional, 3.- Instaló la primer planta automotriz y supuso con ello iniciar el desarrollo regional con la incubación de un futuro Clúster, 4.-Nacieron universidades y tecnológicos para preparar mano y mente de obra calificada; 5.- Se promovió intensamente la inversión extranjera y se privilegió la instalación de empresas internacionales, ofreciendo mano de obra calificada; detonando con esto la demanda y apreciación

de técnicos; pero desequilibrando el mercado laboral que ofrece mayormente profesionistas; 6.- También se incrementó la competencia más abiertamente de productos extranjeros en un mercado sensible, en el que no se preparó a las empresas locales para participar exitosamente. 7.- Robusteció el sector Comercio, con productos internacionales y convierte al estado en comisionista, ya que produce muy poco por tener un sector industrial incipiente, de tal suerte que comercializa muy poco de lo que industrializa.

Respecto a la cuestión de ¿Cómo se prepara una economía subdesarrollada para integrarse globalmente con éxito y asegurar el ideal desarrollo al que se aspira con esta intención económica?, expertos y directivos coincidieron en que debe planearse y diseñarse estrategias a nivel estatal y federal, para que todo el sector productivo se alerte previamente para la embestida de la competencia; situación que no se dio como implementación de una estrategia; y sólo se manejó como comunicación en medios masivos; sin que los pequeños y medianos empresarios se percataran de su trascendencia y urgente llamado a la acción. Coincidieron en afirmar que la preparación debió consistir en innovación y creación de valor agregado, procesos de industrialización que garantizan calidad y reducción de costos, y profesionalización administrativa. En relación a la pregunta realizada en entrevistas: En general, ¿Considera usted que las pequeñas y medianas empresas sonorenses han tenido un satisfactorio proceso de integración económica?, un 67% de los directivos de pymes y especialistas, consideran que las pequeñas y medianas empresas sonorenses no han tenido un satisfactorio proceso de integración económica; y sólo el 24% considera que sí ha sido satisfactorio su proceso de integración. El resto (9%) no supo qué contestar.

Cuando se solicitó a los entrevistados comentar a cerca de qué situaciones ha vivido la pyme sonorense desde 1994 en que se firmó el Tratado de Libre Comercio con América del Norte, y que coadyuvaron a su integración económica; las respuestas fueron: 1.- La pyme sonorense tuvo un despertar abrupto a la competencia para la cual no estaba preparada; 2.- Incertidumbre de la pyme ante las demandas que la globalización exige, en tiempos de fuertes crisis económicas (1995 y 2008). 3.- Desmoralización del pequeño empresario que siente mucha presión y exigencia gubernamental por un lado, y un mercado infiel que prefiere por cultura y cercanía los productos extranjeros. 4. Migración de las vocaciones productivas del estado como posibilidad de integración económica, 5.- Poca oportunidad para las pequeñas y medianas empresas sonorenses de pertenecer a una cadena de suministro para la industria, debido a la falta de profesionalización empresarial (de procesos y gestión administrativa). Sin embargo la endeble integración económica del estado de Sonora, prevalece según los expertos (Hernández, Soto y Vázquez 2008) debido a que este Estado ha desarrollado muy lento y poco a empresas manufactureras locales, que garanticen primeramente un crecimiento endógeno.

CONCLUSIONES

La problemática que enfrentan las pymes sonorenses ante el proceso de integración económica, contempla: 1) Estancamiento empresarial endógeno, 2) la magralidad en el desempeño de los sectores primario y terciario como limitante del crecimiento del PIB estatal, 3) La falta de profesionalización de las Empresas Familiares es un problema grande, que repercute en alta mortalidad de las mismas; aunado a que las pymes familiares representan más del 90% de las empresas mexicanas, 4) Las prácticas regulatorias y trámites excesivos que desalientan la creación de empresas, 5) La presencia de agresiva competencia atraída por la inversión extranjera, 6) la falta de medición y escaso seguimiento a indicadores empresariales, 7) la falta de preparación de las empresas locales para hacer frente a la globalización y 8) La carencia de cultura y apoyo financiero, El estado de Sonora tiene una dinámica industrial que está ligada a la inversión extranjera. Maquila e industria moderna de alta tecnología, pertenecen a un campo prácticamente inexplorado por el capital regional, más bien lo que existe son asociaciones con el capital transnacional. Son cuatro sectores los que concentran la actividad altamente tecnificada e innovadora: electrónica, automotriz y de autopartes, textil y agroalimentaria. Es necesario consolidar una industria regional integrada a través de cadenas productivas. No se tiene estrictamente un sistema regional de innovación; pues si bien, sus componentes están altamente desarrollados, no se han logrado instituir mecanismos que les permitan actuar como

sistema. En la búsqueda de sinergias e interrelaciones para detonar un desarrollo cooperativo de las partes el sector industrial de Sonora, se percibe poco interés en participar en actividades de innovación dado el riesgo y la incertidumbre que ello implica.

PROPUESTA DE PROGRAMA DE ACTIVIDADES TURÍSTICAS RECREATIVAS PARA NIÑOS Y JÓVENES CON SÍNDROME DE DOWN EN MANZANILLO, COLIMA

María Adelaida Silvestre Campos, Universidad de Colima
Adriana del Carmen Bautista Hernández, Universidad de Colima
Nuchnudee Chaisatit, Universidad de Colima
Jesús Otoniel Sosa Rodríguez, Universidad de Colima

RESUMEN

Manzanillo es un destino turístico con afluencia predominante del turismo de negocios y familiar, este último, un mercado importante para los prestadores de servicios y en el cual, en los últimos años se ha detectado que algunos de ellos cuentan con un integrante con discapacidad, dificultándoles el desplazamiento a un sitio turístico. Dentro de esas discapacidades encontramos a personas con Síndrome de Down, a quienes hoy día, en el destino, no se les da la atención adecuada. El propósito de la investigación es proponer un programa de actividades turísticas recreativas para niños y jóvenes con este síndrome, generando actividades durante su visita a Manzanillo. La metodología utilizada es cualitativa, enfocada en un mercado selectivo, considerando las perspectivas de los involucrados. Los resultados de la investigación se basan en los beneficios que generan las actividades recreativas planteadas y se muestran algunas propuestas para poder llevar a cabo dicho programa.

PALABRAS CLAVES: Síndrome De Down, Programa, Actividades Recreativas, Actividades Turísticas

PROPOSED PROGRAM OF RECREATIONAL TOURISM ACTIVITIES FOR CHILDREN AND YOUTH WITH DOWN SYNDROME IN MANZANILLO, COLIMA

ABSTRACT

Manzanillo is a tourist destination with predominant business tourism and family influence, the latter being an important market for service providers and which in recent years has found that some of them have a member with disabilities, making it difficult to move to a tourist site. Within these disabilities, we find people with Down syndrome, who today, destination, are not given adequate attention. The aim of the research is to propose a program of recreational tourism activities for children and young people with this syndrome, generating activities during his visit to Manzanillo. The methodology is qualitative, focusing on a selective market, considering the perspectives of those involved. The results of the research are based on the benefits generated by recreational activities and some suggestions are submitted to carry out this program.

KEYWORDS: Down Syndrome, Program, Recreation, Tourism Activities

INTRODUCCIÓN

En la última década Manzanillo ha crecido en cuanto a su infraestructura, centros comerciales, plazas restaurantes y nuevos hoteles, extendiendo sus servicios para los locales y los turistas, incrementando así

su afluencia turística. A pesar de ello, Manzanillo tiene que ser un puerto más competitivo y empezar a prepararse para nuevos mercados, lo cual implica la participación de los prestadores de servicios como comerciantes, alojamiento, restaurantes y la población en general, pues así aumenta la afluencia de turistas al destino. Para esta investigación se optó por reforzar la afluencia de turistas con discapacidad, siendo más específicos “niños y jóvenes con Síndrome de Down”, ya que dicho segmento ha crecido en los últimos años y es de gran importancia para muchos destinos, incluyendo Manzanillo, por tanto, se consideró necesario realizar un programa turístico-recreativo enfocado a niños y jóvenes con estas características donde se incluyan actividades que ellos y sus familias pueden desarrollar y que también permita que los locales con miembros con Síndrome de Down puedan aprovechar de manera permanente. Dicho programa tiene como base una investigación de campo, en la que se observó el interés de la población en general de participar de él, debido a la carencia de espacios y actividades especializados; así como la de los prestadores de servicio e instituciones gubernamentales, pues para ellos es un mercado importante y no se le ha dado la suficiente importancia, principalmente por desconocimiento. A consecuencia de la investigación de campo que se realizó y los resultados de los espacios geográficos plasmados en la encuesta se creó un análisis foda de cada uno de los lugares donde es posible desarrollar las actividades recreativas, esto con el fin de analizar las ventajas y desventajas que cada uno conlleva.

REVISIÓN LITERARIA

La Organización Mundial de Turismo (OMT) menciona que el turismo comprende las actividades que realizan las personas durante sus viajes y estancias en lugares distintos a los de su entorno habitual, por un periodo inferior a un año, con fines de ocio, por negocio y otros motivos. Hiernaux (1999), afirma que “el turismo es, antes que todo, una práctica social colectiva que integra mecanismos distintos de relación al espacio, a la identidad y al Otro. Por ende, más que una actividad económica, el turismo es una práctica generadora de actividad económica en la misma forma que la religión, el deporte o la guerra”. La definición de este autor nos ayuda a centrarnos más en el ser humano, que puede ser tanto el poblador local como como el turista, permitiendo la identificación más cercana de sus necesidades de recreación en su tiempo libre y promoviendo que el destino receptor genere una acción planificada que permita desarrollo local.

Lo anterior nos refiere entonces que para realizar turismo y como consecuencia actividades recreativas, es necesario el tipo libre el cual según Munné (1995) está constituido por aquel aspecto del tiempo social en la que el hombre autocondiciona, con mayor a menor nitidez su conducta personal y social. Sin embargo lo que le define como tiempo libre es el tiempo ocupado por aquellas actividades en las que domina el autocondicionamiento, es decir, en las que la libertad predomina sobre la necesidad. Es tiempo de definir el término recreación, base fundamental de este proyecto, para lo cual Romero (1977) la describe como una actividad que se practica habitualmente en las horas libres, y que ofrece al hombre la oportunidad de dar salida y expresión a sus necesidades físicas, mentales o creadoras y a las que se dedica por un deseo interior y no por compulsión externa. Dentro de las necesidades humanas que la recreación permite satisfacer se encuentran: experiencias nuevas, dominio del medio, relajación, expresión de las emociones y socialización. La planta recreacional es muy variada, Quesada (2000) porque incluye todos los servicios que puede utilizar el hombre urbano en el uso de su tiempo libre: comprende servicios bajo espacio cubierto, como cines, museos, bibliotecas, bares, neverías, restaurantes, discotecas, shows en centros nocturnos, juegos mecánicos y lugares al aire libre, como plazas, juegos infantiles, centros deportivos, canchas de fútbol u otros deportes, sedes de clubes, piscinas, parques y áreas arboladas para pasear y montar a caballo o en bicicleta. Las actividades recreativas tienen diferentes tipos de clasificación que van de acuerdo a lo que se realiza en cada una de estas, y los elementos que se necesitan para llevarlas a cabo, según Incarbone & Guianguis (2006) estas actividades recreativas se clasifican en 9 tipos dependiendo del área donde se realizarán y se describen a continuación: área físico-deportiva, área al aire libre, área acuática, área lúdica, área manual, área artística, área conmemorativa, área social, área literaria, área de entretenimientos y aficiones, área comunitaria.

METODOLOGÍA

Para efectos de la presente investigación se realizó una investigación cualitativa en la que se recolectaron las perspectivas y puntos de vista de los participantes (sus emociones, experiencias, significados y otros aspectos subjetivos), así como también se realizan preguntas generales y abiertas. Se utilizaron diferentes fuentes para recolectar información tales como libros, investigación de campo y aplicación de cuestionarios y realización de entrevistas a personas especializadas. Los cuestionarios se enfocaron principalmente a los turistas que visitan el municipio, y a las familias con un integrante con Síndrome de Down. Las entrevistas se orientaron a diferentes sectores del municipio de Manzanillo, como el Gobierno (ayuntamiento, Secretaría de Turismo), empresas turísticas (alojamiento, agencias de viajes y la Oficina de Convenciones y Visitantes de Manzanillo), el sector de educación, (Facultad de Ciencias Sociales y la Escuela de Educación Especial Hellen Keller), familias con un integrante con Síndrome de Down y médicos especialistas. No se realizó un muestreo debido a que el campo de investigación está enfocado a un sector específico, que lleva a la observación de grupos de una población reducida como son las familias con niños y jóvenes con Síndrome de Down y personas relacionadas con esta cuestión.

Además actualmente no existen cifras oficiales sobre el número de personas con Síndrome de Down en México, debido a que, de acuerdo con el blog especializado Síndrome de Down en México, en los censos del 2000 y del 2010, no se muestra específicamente cuantas personas con Síndrome de Down existen en el país. Pese a que no hay cifras del gobierno, hay números no oficiales, con un estimado de una población de 250,000 personas con Síndrome de Down, pero no hay certeza de estos datos. Por otra parte, el estado de Colima no tiene un registro oficial de los niños y jóvenes con este Síndrome dentro de la población de sus diez municipios. Si nos enfocamos al sector turismo dentro del mismo estado, no existen registros de la cantidad de familias que ingresan al destino con miembros con Síndrome de Down y los hoteleros, quienes son el primer contacto del turista afirman recibir personas con estas condiciones y alguna otra discapacidad pero afirman no llevar un registro confiable del número exacto de estas.

RESULTADOS

De la información recabada en la investigación de campo a través de las entrevistas y cuestionarios aplicados se obtuvo la siguiente información: El Síndrome de Down es una consecuencia de una trisomía de una malformación genética generado por el cromosoma 21 que es el más fluorescente. Cuando se junte el par 21, la persona tendrá trisomía 21. Las personas con trisomía 21 tienen unas características físicas y mentales especiales que en conjunto se denominan Síndrome de Down. Cunningham(1990) El perfil emotivo del niño con Síndrome de Down se presenta bajo los siguientes aspectos característicos de su personalidad: son obstinados, imitativos, afectivos, adaptables, con un sentido especial en cuanto a reciprocidad de sentimientos y vivencias, presentando un carácter moldeable. Si el ambiente que los rodea es inadecuado, reaccionan con agresividad o si por el contrario es un ambiente estimulante, el niño es cariñoso. Tienen un gusto por la música y la pintura y sobre todo, poseen un sentido especial al efecto materno. El niño con Síndrome de Down, como se apuntó anteriormente, tiende a la imitación; esta es una ventaja susceptible de utilizar, ya que al desenvolverse en un ambiente sin angustias, sin rechazo, sin protección, el niño va adquiriendo patrones de sociabilidad adecuados, imitando a los seres que le rodean. El programa de adaptación al medio social ocupa un área muy importante: toda festividad se debe tomar como pauta de convivencia entre padres, hermanos y alumnos. Este tipo de reuniones contribuye a forjar hábitos y vivencias familiares, los que a su vez normarán su comportamiento social. Las actitudes marginales traerán como consecuencia, alteraciones conductuales y un fuerte desaliento emotivo, tanto para sus padres y familiares más cercanos, como para el niño mismo, al agravar su delicado sentimentalismo.

Otro de los aspectos que habrá de destacarse, es la información hacia la sociedad en general para que sepan de la existencia de estos niños y de su auténtica adaptación progresiva mediante la participación real ante su comunidad. Por lo tanto se debe aprovechar al máximo este renglón pedagógico, ya que el niño con

síndrome de Down tiene gran capacidad de adaptación a nuestro régimen de vida. Escamilla (1991) Las actividades que realizan los niños con Síndrome de Down pueden ser de cualquier tipo dependiendo de la edad del niño si es un bebé, un niño menor, un adolescente o un adulto. Algunas de las actividades que pueden realizar son basquetbol, baile libre, lotería de colores, cachiball, concursos de gateo para bebés, caminatas, entre otras. En cada actividad a realizar debe estar un médico presente para cualquier imprevisto, pues la investigación arrojó que sufren de problemas del corazón y problemas musculares por lo tanto no se deben realizar actividades extremas, por lo cual cada actividad deba estar adecuada a sus capacidades y por lo general el tiempo de duración debe ser entre los 45 minutos a una hora ya que suelen cansarse rápidamente. Cada niño con Síndrome de Down es diferente que los demás debido a que también existen 3 tipos de Síndrome de Down; los cuidados y educación por parte de los papás son algo fundamental para los niños, dado que como se educan es la personalidad que presenta cada uno de ellos y es así como se les puede motivar a realizar las actividades.

Según la investigación, mucho tiene que ver la educación que llevan los niños y jóvenes con Síndrome de Down en sus familias para que estos actúen de cierta forma. Existen jóvenes con Síndrome de Down que ni siquiera pueden hablar ni valerse por ellos mismos, pero también encontramos que existen jóvenes con Síndrome de Down que desde pequeños sus familias les han enseñado a valerse por sí mismos y les dedican tiempo necesario para educarlos, enseñarlos hablar, leer y escribir entre otras cosas, así lo menciona el Maestro de educación especial José Luis López. Tomando en cuenta las aportaciones de cada entrevistado y las opiniones de los encuestados se llegó a la conclusión de que es factible la propuesta de actividades turísticas recreativas para niños y jóvenes con Síndrome de Down ya que se debe de tomar en cuenta que es un mercado importante y que el destino debe de estar preparado para ello. En base a todo lo anterior se optó por realizar cinco propuestas, las cuales están enfocadas a los resultados obtenidos, y se muestran a continuación:

Propuesta uno: Diseño e impresión de manual con contenido apegado a las actividades turísticas recreativas para niños y jóvenes con síndrome de Down que se puedan realizar en Manzanillo. Dicho programa tendrá plasmado el tiempo de duración de cada actividad, materiales que debes de utilizar y cuidados especiales y se conformará de la siguiente manera:

Actividades manuales: En esta sección se realizarán manualidades que el niño y joven puedan realizar para mejorar la psicomotricidad fina y la coordinación ojo-mano, algunos ejemplos de manualidades son: pintar caras de diferentes personajes, crear maracas con materiales reciclados, realizar antifaces coloridos, pintar figuras de cerámica, pintar con las manos.

Actividades acuáticas: En este contenido se encuentran las actividades que se pueden realizar en el agua ya sea en albercas, ríos y playas tales son: Pesca infantil, waterpolo, aquaerobics, kayak, recorrido en lancha y paseo en moto acuática, tales actividades son benéficas en la mejora de las funciones cardíacas, sanguíneas y pulmonares, mejora de la movilidad articular, de la coordinación y fortalecimiento muscular.

Actividades alternativas: Según José Luis López maestro de Educación Especial, las actividades alternativas son benéficas a la unión de cuerpo a mente, conllevan a una mayor estabilidad mental, lo que se traduce en una disminución de la ansiedad y otras psicopatologías como la depresión, los niños y jóvenes con síndrome Down las pueden realizar sin necesidad de ser extremas, algunos ejemplos son: Paseo a caballo, paseo en cuatrimoto, liberación de tortugas, caminata en la playa.

Actividades deportivas: En este apartado se encuentran ejercicios deportivos que según José Luis López maestro de Educación Especial pueden realizar, tales como: Natación, baile, recorrido en bicicleta, atletismo, fútbol, cachiball y clases de surf, estas son benéficas para favorecer y mejorar el autoestima, elimina y reduce el estrés, disminuye el riesgo de enfermedades cardiovasculares, ayuda a mantener la fuerza y la resistencia muscular. Es importante mencionar que en cada sección del manual se indicarán los

materiales que a utilizar, el tiempo de duración de la actividad, lugar donde pueden realizarla y cuidados que se deben de tomar en cuenta.

Propuesta dos: Promocionar el programa de actividades turísticas recreativas para niños y jóvenes con síndrome de Down a los prestadores de servicio tales como alojamiento, restaurantes, empresas de viajes y tour operadoras en Manzanillo, esta promoción se hará visitando estos establecimientos de forma directa presentando el manual con las actividades recreativas que se pueden realizar. Esto se hace con el fin de dar a conocer a los prestadores de servicios turísticos en Manzanillo, la implementación de un nuevo mercado de familias con niños y jóvenes con Síndrome de Down, guiándose así con un manual especializado en actividades turísticas recreativas para niños y jóvenes con síndrome de Down en Manzanillo.

Propuesta tres: Promoción externa en diferentes destinos del país (Blitz), del el programa de actividades turísticas recreativas para niños y jóvenes con síndrome de Down en Manzanillo. Dicha promoción se realizará a través de la Oficina de Convenciones y Visitantes en Manzanillo (OCV) facilitándoles el manual donde se describen las actividades turísticas recreativas que pueden ser realizadas en Manzanillo para niños y jóvenes con síndrome de Down, con el objetivo de dar a conocer a otras ciudades que Manzanillo puede ser un destino ideal para este tipo de personas.

Propuesta cuatro: Generar programas de capacitación para los prestadores de servicios turísticos sobre el conocimiento del Síndrome de Down y los cuidados que se deben de tener para poder brindar un mejor servicio. Esta capacitación será implementada por personas especializadas en el tema y será impartida a diversos prestadores de servicios, entre ellos: Hoteles, Agencias de Viajes, OCV (oficina de convenciones y visitantes), Operadoras Turísticas, entre otros, iniciando con las empresas de alojamiento, debido a que se considera que es la más importante por el trato que tienen directo con los turistas que visitan el destino. La capacitación estará destinada a los Gerentes de Venta de los Hoteles Las Hadas, Barceló Karmina Palace, Camino Real, Tesoro, Playa de Oro y Grand Festival; dichos Hoteles se caracterizan por ser familiares. Se sugiere que dentro del contenido del programa de capacitación se presente los siguientes puntos:

Objetivos

Definición de síndrome de Down.

Cuidados especiales.

Actividades que pueden realizar los niños y jóvenes con síndrome de Down en Manzanillo.

Curso de primeros auxilios.

El contenido de la capacitación será de apoyo para que los prestadores de servicios tengan el conocimiento adecuado sobre el tema y estén preparados para poder aplicar el programa de actividades turísticas recreativas para los niños y jóvenes con síndrome de Down en los Hoteles.

Propuesta cinco: De acuerdo a las entrevistas realizadas surgió la inserción de reclutar personas con Síndrome de Down para desarrollarse en el ámbito turístico laboral ya que se imparten talleres en la escuela de Hellen Keller de cocina con actividades básicas como picar verdura, lavar trastes, entre otras y tareas del hogar (tender camas, barrer, limpiar, trapear, etc). Las posibles áreas en los que podrán desempeñarse dentro de la hotelería son auxiliares de cocina, steward y camaristas. Debido a la educación que tienen desde pequeños los ha enseñado valerse por sí solos y a desenvolverse de manera individual.

CONCLUSIONES

Manzanillo es el municipio más sobresaliente dentro del estado de Colima, debido a que posee el puerto comercial más importante de México, en donde se desarrollan las principales actividades portuarias, sin dejando atrás la actividad turística que representa el treinta por ciento de este sector turismo. En los últimos años Manzanillo ha presentado un incremento en la afluencia turística, esto ha hecho con el paso del tiempo

que la población se involucre cada día más en la actividad turística, por lo que se pretende que los habitantes de Manzanillo se capaciten para brindar servicios de mejor calidad y un excelente trato a personas que visitan el destino. Al inicio de este proyecto de investigación se plantearon varias interrogantes que denotaban la necesidad de saber si Manzanillo es un destino en el cual tanto personas residentes como visitantes estaban dispuestos a participar en programas de actividades turísticas recreativas con niños y jóvenes con Síndrome de Down, así como el compromiso de la población hacia el turismo, y el beneficio que la sociedad obtiene de ello.

Bajo la consigna anterior se haría una propuesta para un programa de actividades turísticas recreativas para niños y jóvenes con síndrome de Down en Manzanillo concluyendo lo siguiente: La ciudad de Manzanillo cuenta con varios espacios geográficos donde se pueden llevar a cabo la realización de actividades recreativas para niños y jóvenes con Síndrome de Down y que los niños y jóvenes con este Síndrome son capaces de realizar cualquier tipo de actividad recreativa siempre y cuando la actividad esté supervisada por personas adultas con conocimientos de primeros auxilios y en algunos casos por médicos o personas especializadas en el tema. Finalmente se encontró que en la actualidad la gente local y los prestadores de servicios turísticos en Manzanillo, carecen de información acerca de este tema y por lo consiguiente no están capacitados para recibir a este tipo de turistas; Sin embargo estas mismas personas están dispuestas a participar en el programa de actividades turísticas recreativas para niños y jóvenes con síndrome de Down en Manzanillo y unirse a la causa de convertir a Manzanillo en un destino incluyente marcando la pauta con este primer desafío.

RETOS Y OPORTUNIDADES EN LA EDUCACIÓN SUPERIOR AL INTEGRAR INVESTIGACIÓN, DOCENCIA Y SERVICIO

Sohely Rúa Castañeda, Fundación Universitaria María Cano

RESUMEN

El documento habla de la experiencia de investigación social de la facultad de ciencias empresariales, en la Fundación Universitaria María Cano, de Medellín-Colombia. Como resultado, la Universidad encuentra la posibilidad de avanzar hacia la responsabilidad social universitaria integrando investigación, docencia, servicio. También se ha logrado trabajo interdisciplinario, se generan nuevos trabajos de investigación acerca de la población base de la pirámide, negocios de impacto social y los pequeños negocios, se fundan nuevas áreas de desempeño profesional para los estudiantes. Así, la facultad encuentra escenarios de proyección de la formación acordes al contexto, favoreciendo la pertinencia educativa. La pregunta que guía el trabajo de investigación es sobre la generación de negocios de impacto social en la plaza de mercado minorista de la ciudad de Medellín, en este centro de micro negocios, se realizan proyectos de investigación en el área empresarial, de salud y de ingeniería, se llevan a cabo asesorías y se prestan servicios sociales de acuerdo a las facultades existentes, creando oportunidades y retos para la formación de nivel superior.

PALABRAS CLAVE: Educación Superior, Investigación Social Participativa, Negocios de Impacto Social, Responsabilidad Social Universitaria

CHALLENGES AND OPPORTUNITIES FOR HIGHER EDUCATION TO INTEGRATE RESEARCH, TEACHING AND SERVICE

ABSTRACT

The document speaks of the experience of social research of the faculty of business administration at the University Foundation Maria Cano, Medellin-Colombia. As a result, the University is the possibility of moving towards integrating social responsibility university research, teaching, and service. There has also been interdisciplinary work, new research are generated on the base of the pyramid, social impact businesses and small business population, new areas of professional performance for students melt. Thus, the faculty is projection scenarios consistent training context favorable to the educational relevance. The question guiding the research is about generating business social impact on the retail market square of the city of Medellin in the center of small businesses, research projects are conducted in the business area, health and engineering, conducted assessments and social services are provided according to existing powers, creating opportunities and challenges for higher level training. Thus, the university and the faculty are projection scenarios consistent training context, promoting educational relevance

INTRODUCCIÓN

La educación superior cumple un papel social fundamental de promoción del desarrollo y la movilidad social. La Fundación Universitaria María Cano y su facultad de ciencias empresariales, ha avanzado en la configuración de un trabajo integrador a partir del tema de negocios de impacto social. Mediante un enfoque de investigación-acción-participación, el grupo de investigación Sumar adelanta en un entorno empresarial focalizado un proyecto de generación de negocios inclusivos que le permite articular la docencia, la investigación y el servicio. Es objeto de la ponencia presentar el esquema de acción, que aunque está mediado por la realidad que aborda, ésta será subyacente al esfuerzo académico de revisar cómo este modelo permite a la facultad avanzar en trabajos interdisciplinarios, en investigación formativa e investigación de aula, por otro lado, la acción está planteando a la facultad nuevos enfoques teóricos para la formación de los profesionales que se vincula a sí mismo con la realidad del ejercicio profesional que se encontrarán los jóvenes en formación y finalmente, se enunciarán los retos que implica la proyección social para generar cambios sostenibles en el entorno.

REVISIÓN DE LITERATURA

La activa reflexión acerca del rol de formación universitaria en la sociedad actual que se ha dado en los últimos tiempos, emana de una pregunta más profunda por el rol de las instituciones sociales: el mercado, el estado y la escuela, como respuesta a los retos que hoy enfrenta la sociedad, en lo que se ha denominado crisis civilizatoria (Márquez, 2009), que va más allá de las crisis económicas. En esta perspectiva se le asigna a la educación, en general y a la educación superior en particular, una expectativa en cuanto a la resolución de los problemas sociales, no obstante, tales intereses se ven atravesados por desafíos de calidad y financiación que hacen inestables los sistemas educativos en América Latina. Subyace a las ideas que se expondrán en este documento, que la educación superior puede responder a los retos que se le plantea desarrollando integralmente dos dimensiones: la generación de nuevo conocimiento mediante la investigación y la formación de perfiles profesionales pertinentes para el contexto. En esta perspectiva, la educación superior es vista como un bien común, más allá de las formas institucionales privadas y públicas que mediatizan el acceso al conocimiento.

El Rol de la Educación Superior En el Mundo Actual

Pese a una larga discusión acerca de los enfoques del desarrollo, promovida por la teoría de Max Neef, el trabajo del nobel Amartya Sen, entre otros, la idea del desarrollo a escala humana sigue siendo un ideario, las lógicas empresariales, estatales y educativas tienden a dar prioridad al desarrollo económico. La Universidad no escapa a esta racionalidad, cuando se ve presionada por la sostenibilidad financiera. También se enfrenta a una pérdida de su talento humano cuando los centros de investigación privados tienen mayores posibilidades de contratación de investigadores cualificados, lo que finalmente redundará en una falta de nuevas ideas al interior de los claustros educativos.

Así, la demanda que se hace de ayudar al cambio social, es viable en la medida que la investigación y la innovación se aproxime a resolver los grandes problemas sociales. Hoy por fortuna, experiencias muy reconocidas dan cuenta que esto es rentable y sustentable, dicotomía que se enarboló durante varias décadas como la mejor razón para que se abandonaran los temas sociales. Lo que actualmente se denomina negocios en la base de la pirámide (Prahalad, 2006); negocios inclusivos (CECODES, 2013); empresas tipo B (Andrade, 2012) y otros conceptos afines, están demostrando que es viable conciliar rentabilidad, empresariedad exitosa, conservación del medio ambiente, promoción de comunidades y generación de calidad de vida en los entornos donde se lleva a cabo la actividad económica. En estas ideas se expresa una externalidad derivada de la educación superior, en los efectos que genera la investigación en la sociedad, pero además de esta perspectiva, de suyo muy potente, también puede cumplir un rol determinante en la transformación de la estructura social, generando movilidad social.

El Fin de la Educación Superior En América Latina

Es ampliamente reconocido el papel que juega la educación para la superación de la pobreza, no obstante, también los estudios recientes muestran como las limitaciones de acceso a la educación superior y contextos laborales cada vez más complejo restringen el logro de estos objetivos. En Colombia, como ocurre en otros países de Latinoamérica, el acceso a la educación superior es restringido y está orientado por las tendencias de formación que el mundo globalizado impone. Las trayectorias educativas regulares que se propone el sistema educativo suponen que la persona que ingresa cuenta con las condiciones subjetivas y objetivas para cerrar la formación en los niveles superiores, con la promesa del logro de competencias para la vida personal, social y laboral, generando como correlato movilidad social. Esta es la promesa de la educación, contribuir al pleno desarrollo de las personas, al ejercicio de sus derechos de ciudadanía, entendidos estos en su compleja interrelación de derechos civiles, económicos, sociales, culturales, y los de nueva generación.

La movilidad social se refiere al estatus socioeconómico de una persona en relación con la de sus padres, este estatus se vincula en las sociedades modernas con el ingreso de la persona y la riqueza que acumula a lo largo del tiempo; “y el determinante más importante del ingreso de un individuo a lo largo de su vida es su nivel educativo” (Corporación Andina de Fomento, s.f). La educación superior favorece este ascenso social al generar oportunidades de acceso a empleos de calidad y en los últimos tiempos a la generación de emprendimientos empresariales exitosos. El estudio más reciente de movilidad social en Colombia, citado por ANSPE (2013) señala que: “la movilidad es baja en comparación con otros países de la región, tanto si se mide con base en los años de educación como con base en un indicador de riqueza basado en la posesión de bienes durables y otros activos fijos del hogar”.

La movilidad social es un concepto visiblemente conexo con la distribución de riqueza y el mejoramiento de la calidad de vida de las comunidades, pero esta posibilidad depende en alto grado de los perfiles profesionales y las opciones reales que tienen los nuevos profesionales. La evidencia señala que la formación de profesionales pensando en un mundo empresarial de gran tamaño, a la que la mayoría de los profesionales no acceden, y menos los estudiantes de estratos socioeconómicos más bajos. Mientras las facultades de ciencias empresariales están tras las tendencias de la gerencia moderna, las oportunidades laborales reales son en las pequeñas y medianas industrias de la región, e incluso en el emprendimiento empresarial, allí los gerentes son retados a tamaños empresariales donde la especialización del conocimiento no es útil, pues a la vez deben cumplir múltiples roles; tampoco los recursos escasos pueden ser administrados mediante los enfoques de inversión y riesgo propios de la gran empresa.

Los nuevos profesionales que se fundamentan en teorías gerenciales sin referencia con la práctica empresarial del contexto, y que buscan de manera individual la movilidad social, terminan siendo subempleados y desempleados. En Colombia, en el año 2014, la tasa de ocupación de los profesionales jóvenes (personas menores de 28 años) fue de 8% y la desocupación del 6,4%. Llama la atención que la tasa de ocupación de personas con nivel educativo superior incompleto es del 23,2% y la desocupación del 27,6% (DANE, 2014), si a esto le agregamos que las principales fuentes de empleo para la población joven es en comercio, restaurantes, hoteles y servicios sociales, es de esperarse que los empleos no sean calificados, es decir, estos profesionales en formación y recién graduados tienen dificultades para acceder a un empleo de calidad acorde con su formación.

Por ello, la búsqueda de nuevos horizontes para el desarrollo profesional es clave. La perspectiva de la innovación social, es decir, la investigación que genera nuevos productos, servicios, prácticas o modelos de gestión, que resuelve problemas que impactan a poblaciones en situaciones de pobreza (ANSPE, 2008), puede llevar a generar campo de acción para los nuevos profesionales en América Latina como agentes de cambio, su conocimiento puede ser potenciado comunitariamente para generar empresas y

emprendimientos que resuelvan necesidades locales. Esto traduce en un cambio de perspectiva en el fin de la formación, hacia la de gestores sociales, que mediante el concepto de responsabilidad social universitaria genera, “la formación de profesionales definidos como integrales, cuyos valores se manifiesten a través del desempeño en su entorno laboral, pero también, y lo más importante, en su vida personal; de allí la necesidad de forjar una cultura de compromiso en la solución de problemas y en la satisfacción de las necesidades generadas de forma emergente (Paz, A., & Núñez, M., p.100, 2015).

METODOLOGÍA

La Fundación Universitaria María Cano, FUMC, entidad de educación superior reconocida por el Ministerio de Educación de Colombia, tiene 29 años de existencia, Actualmente cuenta con 3 facultades, ciencias de la salud, ciencias empresariales y la facultad de ingenierías, tiene ocho programas de formación y cuatro grupos de investigación articulados mediante el CIDE, Centro de Investigación y Desarrollo Empresarial. El grupo de investigación Sumar, adscrito a la facultad de ciencias empresariales, adelanta un programa de investigación denominado *Construcción de modelos empresariales de impacto social en la plaza de mercado minorista de la ciudad de Medellín*. El proyecto busca contribuir a la transformación de la plaza de mercado en un entorno empresarial competitivo en la ciudad a partir de un enfoque de modelos empresariales de impacto social.

Esta idea se traduce en tres objetivos: el primero de innovación en la transformación de los modelos de negocio que se realizan en esta plaza de mercado para promover la inclusión socio-económica; el segundo objetivo es de tipo metodológico, donde se espera aprender de la experiencia para generar procesos de réplica y el tercero de tipo disciplinar que se orienta a la reflexión acerca de los enfoques de formación que esta experiencia demanda para los estudiantes de la facultad de ciencias empresariales, así como el trabajo interdisciplinario que se genera en la acción con otras facultades. Un programa de investigación, se define dentro del estatuto de investigación de la FUMC, como una tarea investigativa de alta complejidad, porque es un conjunto de proyectos de investigación estructurado por fases dirigidos a un impacto de alcance local, regional, nacional o internacional.

De esta manera, el trabajo iniciado en la plaza de mercado parte de la premisa de programa dentro del cual se desarrollan fases de la investigación mediante proyectos específicos. El enfoque metodológico es la Investigación-acción-participación, IAP, para lo cual se desarrollaron dos instrumentos, una matriz de categorías/variables que permiten ver el aporte de cada proyecto al conjunto y el segundo instrumento es la construcción de preguntas de investigación específicas de análisis y otras de tipo transversal, que redundan en una idea de innovación, cómo el proyecto específico contribuye a generar negocios de impacto social. Los proyectos responden a metodologías muy diversas, histórico-hermenéutico para analizar cómo llegó a ser la plaza de mercado el entramado económico y empresarial del presente; estudios de caso para identificar los perfiles empresariales existentes; valoración del capital social para analizar las relaciones e interacciones que se producen en el circuito económico que genera la plaza de mercado; son ejemplos de cómo múltiples enfoques investigativos tributan al objetivo general de innovación. Desde el grupo de investigación Sumar se realiza la coordinación de las propuestas investigativas, aportando a su vez al conjunto de investigadores metodologías activas, construidas en la línea de apropiación social del conocimiento que se han diseñado y validado en estudios previos; desde la línea de negocios barriales se tributa con análisis de las famiempresas, micro y pequeñas empresas y la línea de negocios de impacto social soporta el entramado que los proyectos genera con los actores de la plaza de mercado y al interior de la Universidad.

El proyecto investigativo se desarrolla en un entorno empresarial complejo, la plaza de mercado es a la vez un centro de distribución de alimentos, el más importante de la ciudad de Medellín, por tanto hace parte de la política de seguridad alimentaria en este territorio, y un escenario de comercialización de otros bienes y servicios mediante 2.000 negocios de tipo familiar, micro y pequeño, en lógicas formales e informales de empresarialidad y empleo, con un enfoque de mercado bien específico ‘aquí todo se consigue’ y ‘aquí todo

es barato'. También es un entorno social complejo, múltiples problemáticas emergen como el trabajo infantil, el comercio ilegal, la mendicidad, el tráfico de drogas, entre otros muchos asuntos. La FUMC en la idea de encontrar en el territorio donde está ubicado el nicho natural de la proyección social y extensión, ha desarrollado trabajos alrededor de la sede y en esa búsqueda identificó que en su entorno más cercano existían dos plazas de mercado y un entramado de negocios barriales que dan sustento a la economía local. Interesados por investigar estas dinámicas empresariales de tamaño micro, empezó el trabajo de identificación de líderes locales con quienes construir la propuesta. Así nace para la facultad de ciencias empresariales y el grupo de investigación SUMAR un campo de acción prolífico que articula investigación-docencia-servicio, que aunado a una preocupación por la proyección laboral de los profesionales en formación, dan sustento a esta búsqueda en los micronegocios. Surgen entonces dos esquemas metodológicos para llevar a cabo esta experiencia investigativa: la triada investigación-docencia-servicio e investigación-acción-participación.

La Triada Investigación-Docencia-Servicio

El trabajo prolífico y multidisciplinar que significa el entorno económico de la plaza de mercado, devino para la FUMC en un campo de trabajo para los grupos de investigación de las tres facultades, ingeniería, salud y ciencias empresariales y de los campos disciplinares específicos que integran las facultades. En una posibilidad de colaboración y no de competencia, pues las dimensiones diferentes desde donde se puede estudiar este contexto socio-económico enriquece el trabajo investigativo antes que limitarlo. En cuanto a la docencia, porque permite integrar mediante la investigación en el aula, nuevos conocimientos, enfoques y herramientas disciplinares para responder a los retos que la realidad propone, finalmente el servicio, porque se encuentra en el territorio próximo a la sede el nicho natural de proyección social, entendiéndose en este sentido como un actor del territorio, comprometido con su transformación. De esta manera, la organización avanza en un ejercicio de responsabilidad social universitaria entendida ésta como “la gerencia ética e inteligente de los impactos que genera la organización en su entorno humano, social y natural” (Domínguez P., 2012). El enfoque investigativo que permite tal articulación es la investigación social participativa (Olivé, J. M., Serrano, M. M., & Prieto, T. R. V., 2002), lo que a su vez es alimentado con tipos de investigación tanto cualitativa como cuantitativa. En docencia emerge la investigación formativa como una didáctica propicia para el desarrollo de conocimiento disciplinar y en servicio, se demanda un nuevo tipo de conexión recíproca y comprometida entre la comunidad, la empresa y la universidad.

Enfoque Investigación-Acción-Participación

Galván, citado por Ander-Egg (2003) define la investigación-acción-participación (IAP) como el quehacer investigativo vinculado con la práctica transformadora, “toda vez que el objeto se transforma en el sujeto consciente que participa en el análisis de su propia realidad con el fin de promover su transformación”. Esta propuesta sinérgica se articulan debido a la necesidad de responder a un entorno complejo, que invita a la pregunta, ¿para qué conocer?, y en medio de la reflexión surge la idea del cambio, en un entorno económico y empresarial fundamental para el desarrollo de la ciudad de Medellín que necesita repensarse y articularse a las nuevas dinámicas de crecimiento y posicionamiento de servicios que busca la ciudad, permaneciendo como eje económico pero adaptándose al contexto. De suyo, el contexto demanda conocer para actuar, por ello no es suficiente con caracterizar o diagnosticar, se requiere avanzar hacia la innovación, transitando los límites de la indagación hacia la acción.

RESULTADOS

La acción que demanda el entorno investigativo contiene retos disciplinares de todo orden, por ello allí la presencia de las tres facultades es la posibilidad de una acción sinérgica, que significa actuar coordinadamente, ir más allá de sus enfoques y visiones de la ciencia para responder a preguntas complejas del entorno. El punto común de encuentro es el mundo social (Habermas, 1987), ya que el entorno de la

plaza de mercado es la vida en sí misma hibridada por lógicas económicas, o un entorno económico que está vivo, porque las interacciones y relaciones superan a la mera transacción comercial, un refugio para los excluidos, un campo empresarial para los pequeños, una posibilidad de recursos para los pobres, una economía local que tiene efecto en toda la región al ser receptora de la producción agroalimentaria. La acción traslada al equipo de investigadores y docentes de la idea de la intervención a la participación, entendida la primera como entrega-recepción de un servicio y enrolando a la segunda con una idea de ciudadanía activa o responsable, tal como lo entiende Kymlicka y Norman (1997).

Los actores del cambio realmente no son los investigadores y los docentes, sólo son mediadores de él, los actores son los sujetos de la interacción socio-económica que se produce en la plaza de mercado, los comerciantes, las autoridades locales, la cooperativa que administra la plaza, con ellos el proyecto se puede proponer generar impactos sociales positivos y sinérgicos, sin ellos la acción y la investigación se convierten en una rutina académica. Esto implica en la investigación que los actores puedan reconocer el conocimiento empírico producto de la vivencia, también debe generarse una apropiación del proceso de producción del conocimiento (Ortiz, M., & Borjas, B., 2008) porque en medio de la comprensión de la realidad se avizoran los cambios que la realidad demanda. Ahora, esta tarea de involucramiento activo es un reto, ya que en este escenario de plaza de mercado confluyen múltiples entramados de poder e intereses, historias y rivalidades construidas en el devenir de más de 30 años de existencia, cuya comprensión ha hecho que sea más claro el reto, la potenciación del capital social existente hacia una visión común de la plaza en el largo plazo.

Formación En la Facultad de Ciencias Empresariales

Esta corriente de trabajo en negocios inclusivos o negocios de impacto social deriva en un reto académico para la facultad de ciencias empresariales. En el caso del currículo de la FUMC y de otras corporaciones educativas colombianas consultadas (15 entidades en 10 ciudades de Colombia), se encuentra que no existen cursos, materias o enfoques académicos orientados hacia los negocios de la base de la pirámide y los micronegocios; la ciencia empresarial aplicable a las grandes empresas ha ocultado la importancia de las pymes en el desarrollo económico y por tanto no han sido objeto de desarrollos teóricos en las ciencias empresariales. No se trata de cuestionar la gran empresa, sino de hacer énfasis en que los micronegocios también son un campo de desarrollo teórico para los investigadores y laboral para los profesionales de estas áreas del conocimiento. Organismos multilaterales como la Cepal y el banco Mundial, señalan que en América Latina la participación de las Pymes se ha incrementado al 99 por ciento, en Europa se mantiene cerca del 92% (portafolio, 2014).

En Colombia esta tipología empresarial representa alrededor de 950 mil unidades productivas, según cálculos del Consejo Técnico de la Contaduría Pública (2013), generando el “70% del empleo y más del 50% de la producción de la industria, comercio y servicios” (Portafolio, 2014). Las cifras indican una oportunidad investigativa y empresarial en este segmento, es más, una corriente asociada a esta idea es el emprendimiento empresarial, porque en lo general estas iniciativas son de pequeño y mediano tamaño, pero los estudiantes se encuentran poco preparados para afrontar los retos empresariales de estas lógicas económicas, donde las fórmulas teóricas no responden a los retos de la realidad. Una de las implicaciones del desarrollo teórico alrededor de las pymes, es la revisión del paradigma central de la ciencia, la especialización, porque en ciertos tamaños empresariales tal especialización no es posible ni necesaria, también demanda el logro de diversas competencias, entendida esta como la capacidad de actuar integrando teoría, herramientas y valores; en una pyme el gerente no solo tendrá que tomar decisiones, también tendrá que construir la decisión: debe hacer parte del diseño, la implementación y la evaluación de los procesos. Ahora, si el 49% de las pymes se fondea con opciones distintas al crédito (Portafolio, 2014), y la cantidad de empleados va de 10 a máximo 200 trabajadores, los temas de inversión, riesgo, talento humano, demandan aproximaciones diferentes, solo por mencionar algunos ejemplos.

En cuanto a la perspectiva de los negocios en la base de la pirámide, término introducido por C.K Prahalad que se orientan al “segmento poblacional compuesto por las personas que tienen ingresos anuales inferiores a los 3 dólares por día, esto es dos terceras partes de la población mundial, que permanece al margen del sistema económico” (expoknews.com) son una nueva tendencia en el mundo, junto con los negocios inclusivos, que “son iniciativas empresariales económicamente rentables, ambiental y socialmente responsables, que en una lógica de mutuo beneficio incorporan en sus cadenas de valor a comunidades de bajos ingresos y mejoren su calidad de vida” (Consejo Empresarial Colombiano para el Desarrollo Sostenible, 2013). Este es un nuevo nicho de proyección de las escuelas de negocios.

Trabajo Interdisciplinario

Este ítem apenas en ciernes, trae aparejado una profunda discusión de las ciencias, la segmentación del conocimiento en disciplinas. Según Wallerstein “Los profesores y los estudiantes fueron virtualmente aprisionados dentro de estas fronteras disciplinarias” (Wallerstein, p. 165, 2014), en particular las ciencias sociales se encontraron en la mitad de la disputa epistemológica entre las humanidades y la ciencia, iniciada hacia finales del siglo XVIII resolviéndose en la mayoría de las escuelas económicas y empresariales por las segundas, el enfoque cuantitativo que le dio soporte y le permitió separarse de ‘lo social’ como algo en permanente redefinición y aproximarse a leyes naturales inmutables, lógica que ha distanciado el análisis de la actividad económica respecto de los efectos que genera en la sociedad ciertas prácticas económicas. Ya para mediados del siglo pasado, la mixtura de enfoques epistemológicos anunciaba la transformación de la Universidad, sin embargo, por lo menos en América Latina, ésta aún no se produce en las facultades, se mantienen los “múltiples murillos de separación entre ellas” (Wallerstein, p. 165, 2014). Pero un proyecto como el mencionado, convoca a la creatividad académica, la reflexión ha partido de encontrar el campo común de trabajo, un entramado socio-económico complejo, donde es claro que no todo se define mediante las transacciones, pero, todo está imbuido por ellas.

Una de las primeras discusiones sobre los retos disciplinares ocurrió con fonoaudiología, ¿cómo un trabajo de diagnóstico de discapacidad auditiva podría contribuir al trabajo propuesto en la plaza minorista de negocios inclusivos?, en una conversación preliminar se plantea que pensar la plaza de mercado como un lugar de transacción económica inclusiva puede llevar al diseño de dispositivos para que comerciantes y clientes puedan comunicarse a partir de lenguajes alternativos; luego con la facultad de ingeniería se encontraron dos proyectos relacionados, la automatización de la logística y la implementación de energías limpias, y ¿todo esto que tiene que ver con generar planes de negocios y planeación estratégica, análisis de mercados, la lógica de la escuela de ciencias empresariales?, la idea de negocios inclusivos que generan impactos sociales es la que permite que todo esto tenga sentido, pero se produce en un lugar intermedio, entre lo propiamente nombrado como del área, que es el desarrollo de planes de negocios, mejoramiento de contabilidad, mercadeo y otras dimensiones sociales y ambientales propias de los retos planteados por el entorno económico objeto de investigación.

Ciertamente, estos empeños interdisciplinarios no son novedosos, de hecho la interdisciplinariedad sería un medio camino de la transdisciplinariedad, lo interesante del planteamiento es su impacto en la realidad, de un lado, y de otro, la integración con una corriente de pensamiento humanista en las ciencias económicas y empresariales, que reconocen hoy el rol del mercado en la generación de bienestar y la resolución de problemas globales como la crisis alimentaria y ambiental. Para la FUMC significa entonces un camino de reflexión desde la investigación por el rol de la educación avanzada frente a un momento de transición. Siguiendo la reflexión de Wallerstein, “ella implica lo que Max Weber llamó ‘racionalidad material’, lo que significa elegir entre varios fines, no entre varios medios. Y cuando hablo de fines, no me refiero a fines definidos estrecha y técnicamente, sino más bien a la configuración total y a los valores fundamentales del nuevo sistema histórico que nosotros elegimos construir” (Wallerstein, p. 172, 2014), lo que puede conducir a una tensión interna, al ir en contravía de lo construido como institución en largos años de trabajo intelectual y la cultura académica imperante, y tal vez sea necesario recurrir a la creatividad y el riesgo para

llevar adelante la tarea.

CONCLUSIONES

La experiencia investigativa *Construcción de modelos empresariales de impacto social en la plaza de mercado minorista de la ciudad de Medellín* que lleva adelante el grupo Sumar como programa de investigación interdisciplinaria y articuladora de la docencia y el aprendizaje servicio, trasciende sus efectos en el contexto económico objeto de investigación hacia la facultad de ciencias empresariales, en varias dimensiones. En primera instancia las tareas complejas de investigación favorecen la ruptura de barreras epistemológicas y disciplinares. La pregunta metodológica se ordena por cómo responder a los retos que genera en contexto dando menos importancia a la aplicación de enfoques investigativos tradicionales, allí los investigadores ven necesario traspasar sus propias fronteras de conocimiento y experticia. El segundo aspecto de resultado de investigación, es un tránsito de la proyección social o extensión hacia una visión de responsabilidad social universitaria integrando investigación, aprendizaje, servicio. Finalmente, para la facultad de ciencias empresariales, los negocios en la base de la pirámide aportan tanto campos de investigación como espectros teóricos para enriquecer la formación de pregrado y postgrado.

IDENTIFICACIÓN DE ALTERNATIVAS PRODUCTIVAS EN ZONAS DE CONFLICTO: CASO BAJO PUTUMAYO-COLOMBIA

Alvaro Velasco Blanco, Universidad de San Buenaventura

RESUMEN

La Región del Bajo Putumayo está conformada por cinco municipios (Orito, Puerto Asís, Puerto Caicedo, San Miguel y Valle del Guamuez). Esta región, tradicionalmente asistencialista, durante décadas se ha caracterizado por la convergencia de múltiples problemas endémicos como consecuencia de la violencia que ha generado el conflicto armado en nuestro país. Al resultado maligno que provoca la presencia de grupos insurgentes, se han sumado la alta dependencia de las actividades extractivas, especialmente la relacionada con la explotación petrolera, y la producción y comercialización de cultivos ilícitos, y con ello el desplazamiento, la pobreza, y los bajos índices de calidad de vida, que coinciden con la precaria infraestructura, el desdén administrativo del Estado en materia de inversión y la ausencia de alternativas productivas que deriven en oportunidades de desarrollo. Esta investigación se concentra en la exploración de alternativas productivas con doce organizaciones sociales conformadas por pobladores de la región, e identifica algunos sectores o actividades, que dadas las características de la economía local, podrían ser susceptibles de fortalecerse o desarrollarse (Piscicultura, Frutos Amazónicos, Ganadería y Turismo ecológico).

PALABRAS CLAVES: Conflicto Armado, Cultivos Ilícitos, Colonización, Desplazamiento, Asociatividad

IDENTIFICATION OF ALTERNATIVE PRODUCTION IN CONFLICT ZONES: CASE UNDER PUTUMAYO-COLOMBIA

ABSTRACT

The lower Putumayo region consists of five municipalities (Orito, Puerto Asís, Puerto Caicedo, San Miguel and Valle del Guamez). This region traditionally welfare for decades has been characterized by the convergence of multiple endemic problems as a result of violence generated by the armed conflict in our country. The evil result caused by the presence of insurgent groups have joined the high dependence of mining activities, particularly related to oil exploration and production and marketing of illicit crops, and thus the displacement, poverty, and low levels of quality of life, coinciding with poor infrastructure, administrative disdain State on investment and lack of productive alternatives that result in development opportunities. This research focuses on the exploration of production alternatives with twelve social organizations formed by residents of the region, and identifies some sectors or activities, given the characteristics of the local economy, could be susceptible to strengthened or developed (Piscicultura, Amazonian fruits, Livestock and ecotourism).

INTRODUCCIÓN

El conflicto armado en Colombia, más específicamente una de sus regiones, la del Bajo Putumayo, durante décadas ha sido epicentro de un complejo escenario de violencia, producido por la presencia de grupos insurgentes, que ocasionan terror, muerte, desplazamiento y pobreza. Este panorama se ha visto agravado por la producción de cultivos ilícitos en su territorio, el proceso colonizador bárbaro que padeció, y que data de principios del siglo XX, el asistencialismo privativo de iniciativas productivas, la alta dependencia de actividades extractivas, especialmente la exploración y explotación de petróleo y la indiferencia y abandono por parte del gobierno nacional y local.

La información se obtuvo mediante la realización de un sondeo exhaustivo con fuentes primarias durante varios meses de trabajo en la zona, por lo que los resultados aquí consignados obedecen exclusivamente a la necesidad de proveer referentes válidos para la comunidad, y establecer directrices o líneas de acción específicas. Esta investigación explora e identifica algunas alternativas productivas posibles de desarrollar y/o fortalecer, que contribuyan a orientar el camino hacia la recuperación de esta entrañable región. Inicialmente, en la revisión de la literatura se reseñan los aportes de expertos que durante varios años han conceptualizado en torno a la temática. A continuación, en la metodología se describe a grosso modo el proceso de recolección de información y las fuentes indagadas. Luego se detallan los resultados obtenidos del trabajo de campo. Por último se presentan las conclusiones, limitaciones y futuras líneas de investigación que dan lugar a esta investigación.

REVISIÓN DE LA LITERATURA

Con el propósito de integrar los determinantes del conflicto y arribar gradualmente al foco de la investigación, inicialmente, se debe subrayar que la problemática se origina en la confluencia y encadenamiento de numerosos factores. Ahumada (2004) y Ortiz (2011), plantean la colonización territorial y la migración frente a las bonanzas productivas que han caracterizado la región –quina, caucho, madera, petróleo–, como una causa del problema. Otros profundizan la bonanza minera y petrolera, y discuten su dinámica como un modelo extractivista que explota el valor de la naturaleza (Taylor, 1994, Zárate, 2014; Mikesell (1997), y Ploeg, 2007), y que está estrechamente asociado a conflictos sociales y económicos. El impacto de la violencia en la zona, desatada por las acciones grupos insurgentes que buscan el dominio territorial, y atraídas el enorme potencial significa el control, producción y comercialización de cultivos ilícitos, han causado sistemáticamente terror, desplazamiento y muerte en la región (Castilla, 2001; Betancourt, 2004; Jansson, 2006; Jaramillo, 2012; Cancimance, 2013). De ahí que la coca haya sido considerado como un factor de rápido escalamiento del conflicto (Rocha, 2000), que ha bloqueado el desarrollo regional (Rivera, 2005).

En esa misma dirección, Tokatlian (1998, 2000, 2001); Salcedo & Melo (2005); y Varona, Henao, Díaz, S., Lancheros, A., Murcia, A., Rodríguez, N., & Álvarez, V. H. (2009), aducen que la producción de coca ha dado lugar a una muy cuestionada política antidrogas, cuyos métodos de erradicación ha generado negativas implicaciones en materia económica /Berdugo, 2004; Ortiz, 2004; Tabares & Rosales, 2005; Pérez, 2006; Moreano, 2010), por cuanto no lograron el propósito deseado (Chaves & Hoyos, 2011; Fajardo, Muzuzu, & Bautista, 2013). Como si fuera poco, la economía en las zonas rurales de los municipios se fundamenta en la producción de coca, cuya erradicación mediante fumigaciones aéreas, han afectado considerablemente la fauna y flora silvestre, animales domésticos, las fuentes de agua, la salud de los habitantes, los cultivos de pan coger, y los productos pecuarios, por lo cual Tokatlian (1998), sostiene que “en términos del cultivo (ilícito) y la erradicación del negocio (de las drogas) se tendrá muy en cuenta la necesidad de buscar alternativas económicas para el campesinado ligado a la siembra y fuentes de ingreso sustitutivas para la población relacionada con las diferentes actividades del narcotráfico” (p.61) De otro lado, Fajardo (1994), González (1994), Pérez (2001), Ramírez, (2001), Montealegre (2002), Mansilla (2004), Carvajal (2007), Serje, (2013) y Quintero (2014), enjuician el rol del aparato gubernamental central y regional, y su responsabilidad, dadas las condiciones de narcotráfico, violencia y pobreza que se vive en la región.

En lo que corresponde al papel del Estado frente al conflicto, y su obligación de afrontar las causas, actores y consecuencias del mismo a través de medidas estructurales, Fajardo (1994), González (1994), Pérez (2001), Ramírez, (2001), Montealegre (2002), Mansilla (2004), Serje, (2013) y Quintero (2014), enjuician el rol del aparato gubernamental central y regional, y su responsabilidad, dadas las condiciones de narcotráfico, violencia y pobreza que se vive en la región. Tokatlian, (1998) y Rivera (2005) por su parte, argumentan que la gravedad del problema responde a las equivocadas políticas agrarias del gobierno y a la débil presencia del Estado. Cabe añadir que a juicio de los investigadores participantes en este proyecto, y gracias a las opiniones expresadas por los actores entrevistados, estos programas no han estimulado la productividad, por el contrario, por su carácter de choque, transitoriedad y desarticulación, no han generado inversión ni desarrollo productivo y sostenible.

METODOLOGÍA

Esta investigación se realiza en tres fases. La primera recopila datos correspondientes los factores perturbadores del desarrollo de la región del Bajo Putumayo; la segunda fase explora físicamente el territorio que conforma el Bajo Putumayo, para lo cual se vale de encuentros espontáneos e informales, con pobladores y autoridades de la región para identificar los sectores y/o actividades productivas que mayor probabilidad de desarrollo y/o fortalecimiento ofrece la región, así como los obstáculos y ventajas relevantes para este fin. En la tercera fase por medio de entrevistas y talleres participativos con doce organizaciones (cinco de asociaciones de productores y siete asociaciones de desempleados) se socializan y proponen los sectores y/o actividades productivas identificadas. Estas organizaciones a su vez, aportan sus experiencias y en los sectores disponibles, para finalmente decidir su participación; de esta manera, se alinean las oportunidades productivas con las necesidades de la población, con las condiciones del territorio y con las capacidades de las organizaciones y la comunidad en general.

RESULTADOS

Los múltiples fenómenos que afectan la región permiten justificar que se trata de una combinación sumamente nociva para su desarrollo económico y social. Las cifras del desenvolvimiento del conflicto, ha perjudicado a todo el departamento, no obstante, la región del Bajo Putumayo es la que más ha padecido sus consecuencias. La Tabla 1 registra los principales indicadores que han caracterizado el conflicto en la región del Bajo Putumayo durante el 2013.

Tabla 1: Indicadores del Conflicto

Indicador	Cifra
Area cultivada de coca	6.148 Ha
Homicidios	217
Secuestros	9
Desplazamientos	2.583
Victimización (Registro de víctimas)	214.254
Restitución de tierras (solicitudes)	2.183

Esta tabla muestra las cifras más importantes de los fenómenos que afectan negativamente la región, los cuales se traducen en violencia, pobreza y narcoterrorismo. Fuente: Elaboración propia con datos de Informe Fundación Ideas para la paz, USAID, Organización Internacional para las Migraciones

Tradicionalmente, la región del bajo Putumayo se ha caracterizado por su vocación agrícola, sin embargo no ha alcanzado niveles de productividad y eficiencia. Actualmente está orientada a satisfacer necesidades exclusivamente de precario consumo interno, viéndose afectada por la deficiencia del sistema vial tanto terrestre como fluvial que no permiten el intercambio inter-regional. Se destacan los cultivos de maíz, papa, plátano, caña panelera, yuca, piña, chontaduro, caña de azúcar y en menor escala arroz, ñame, ajonjolí, chiro, hortalizas y frijol. Concurren en la región aspectos comunes que acentúan su problemática

económica y social. Los bajos niveles de productividad, el desempleo que trae consigo; las migraciones en búsqueda de mejores posibilidades, la falta de titulación de tierras, las condiciones de inseguridad por la presencia de diversos actores armados y la cultura de la coca, se convierten caldo de cultivo para prolongar esta penosa situación. A continuación se relacionan los hallazgos emanados de doce asociaciones de pobladores – campesinos, indígenas y comerciantes -, que más allá de la difícil situación, observa la luz al final del túnel y exigen la ayuda del Estado. Los sectores y actividades productivas identificadas en la región durante la investigación, que tendrían potencial de fortalecimiento y/o desarrollo, se concentran en cuatro propuestas: Piscicultura, la cual hasta ahora solo se asume como alternativa de diversificación de la seguridad alimentaria para consumo local.; el paso a seguir será el de fortalecerla como alternativa de desarrollo productivo para la región.

Ganadería: Las comunidades locales han insistido en que la ganadería es una de las pocas actividades productivas que aunque medianamente, logra satisfacer varias de las expectativas de los productores. Sus productos tienen mercado más o menos asegurado, es poco demandante de mano de obra, facilita los procesos de capitalización, es relativamente flexible en cuanto al nivel tecnológico que requiere, entre otras condiciones.

Cultivos Amazónicos: la producción y comercialización de frutos como el Copoazú, Arazá, Cocona y Sacha inchi, presentan características favorables en el plano económico, ya que a grandes rasgos se dispone de mano de obra con habilidades para el trabajo agrícola, así como de tierras aptas para el cultivo de las frutas en mención, y adicionalmente, el mercado local, regional y nacional para la comercialización de estos productos está sin explotar.

Turismo ecológico: La belleza paisajística de la que goza la región del Bajo Putumayo resulta altamente atractiva para la promoción de actividades ecoturísticas. Posibilita el empleo de la población cesante de la región, y utiliza los recursos naturales abundantes. Las restricciones identificadas podrían estar mayormente asociadas a la inseguridad en la zona, a la cultura deficiente de protección y conservación de hábitat naturales y los insuficientes planes de manejo y conservación ambiental, y a los limitados canales de acceso que tiene el país hacia la región. La Tabla 2 muestra las actividades que el investigador ha definido como objeto básico de estudio, cotejando los aspectos positivos y negativos de cada una de ellas.

Tabla 2: Alternativas Productivas Analizadas En el Bajo Putumayo

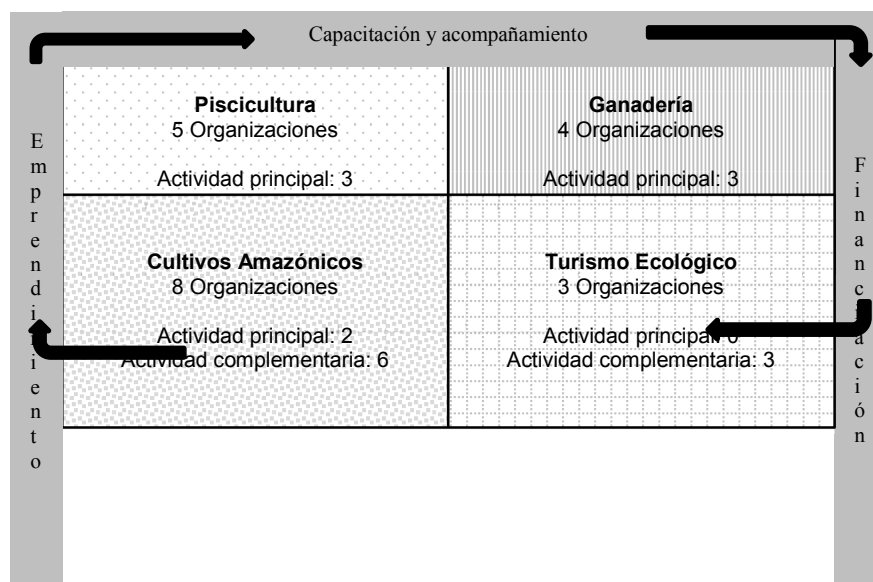

Actividad / Sector	Ventajas	Obstáculos
Piscicultura	Conocimiento del sector	Escasa asociatividad
	Participación de unidades familiares	Alto precio insumos
	Disponibilidad de cultivos	Poco acceso a crédito
Ganadería	Disponibilidad de terrenos	Presión selvática
	Tradicción productiva	Pastoreo intensivo
	Demanda alimentaria	Poco desarrollo tecnológico
Cultivos Amazónicos	Tendencias de mercado y consumo	Desconocimiento del sector
	Generación Valor agregado	Escaso apoyo institucional
	Diversidad de usos y aprovechamiento	Limitado mercadeo
Turismo Ecológico	Atractivos y variados paisajes	Ambiente de inseguridad
	Auge de prácticas de aventura	Nulos estímulos fiscales
	Tradiciones y expresiones multiétnicas	Deterioro locativo

Esta tabla relaciona los cuatro sectores o actividades productivas identificados durante el proceso investigativo. Considera además los principales aspectos favorables o desfavorables que inciden en las alternativas establecida. - Fuente: Elaboración propia

Una vez definidas las actividades y/o sectores productivos aprovechables en la región, atendiendo las condiciones económicas, sociales y ambientales, se procede a sustentar ante 12 organizaciones del Bajo Putumayo (5 de productores y 7 de desempleados), que fueron convocadas. Para tal fin se realizan con estos actores talleres participativos desde la perspectiva de lo dialógico y lo interactivo como aspectos que se materializaron en las actividades. A continuación, la Figura 1 precisa la intención que expresan las

organizaciones de incorporarse a las cuatro propuestas de actividades productivas establecidas (Piscicultura, ganadería, cultivos amazónicos y turismo ecológico).

Figura 1: Articulación de las Alternativas Productivas y las Organizaciones

Esta tabla permite determinar las alternativas productivas que, de acuerdo a su estructura y capacidad, eligen las organizaciones participantes del proyecto, bien sea como actividad principal o como actividad complementaria, es decir, la organización. Además se relacionan los ejes transversales que a manera de flujo subordinan el proyecto. Fuente: Elaboración propia

Las actividades seleccionadas además que permiten la generación de empleo e ingresos, prevalece en ellas la autonomía, independencia y autosuficiencia, y no los esfuerzos improvisados, aislados e inútiles. El rigor e insistencia manifestados en cuanto a la asociatividad como gestora de actividades productivas, tanto en la presentación de proyectos como en el acceso a financiamiento, merece subrayarse, ya que generalmente es uno de los mayores obstáculos en la construcción de consenso. Por último, tan solo tres organizaciones deciden no participar en las propuestas definidas, en razón a que se han especializado en otras actividades (producción de cacao, panela y arroz), lo cual se explica por el temor e incertidumbre en incursionar en prácticas diferentes.

CONCLUSIONES

Con base en la información obtenida de los actores involucrados y confrontados los hallazgos, se han valorado las alternativas productivas de los cinco municipios que hacen parte de la región del Bajo Putumayo, por lo cual se puede concluir que si bien los antecedentes y las condiciones sociopolíticas de la región plantean un escenario conflictivo de alta complejidad, que supone riesgos, existen reales alternativas de desarrollo y/o fortalecimiento en sectores y actividades propicias en la región. Desde luego que se evidencia subexplotación de recursos productivos o factores de producción, pero precisamente, merced a propuestas juiciosas y estructuradas podrían convertirse en opciones válidas de desarrollo regional. Las organizaciones están conformadas principalmente por campesinos, de donde se deduce que la economía imperante en ellas es una economía agraria, que más allá de las diferencias que se pueden dar en los diferentes contextos, posee unos rasgos comunes como son la pequeña propiedad agrícola, la explotación de tipo familiar resaltando el factor trabajo como el más importante factor productivo con el que cuentan las unidades campesinas y en torno al cual se organiza la actividad productiva, orientadas a la satisfacción de sus necesidades de consumo y a la reproducción de las condiciones de existencia de sus integrantes. Es indispensable aprovechar al máximo la energía social creada por los asociados de las diferentes

organizaciones, apuntando a la capacitación y acompañamiento en el emprendimiento empresarial a los asociados, principalmente en su “proyecto de vida”.

Resulta prioritario la participación y sinergia de todos los actores de orden municipal, departamental y nacional, en procura de obtener no solo el apoyo a esas iniciativas, sino el sostenimiento en el largo plazo de las mismas. La precariedad de las vías primarias que comunican los municipios entre sí y la región con otros departamentos vecinos le restan competitividad a la región, por lo cual se requiere una gestión estratégica por parte del Estado y la empresa privada, orientada a la conectividad territorial. En relación con los cuatro sectores productivos identificados con posibilidad de desarrollo y/o fortalecimiento, llama la atención el de los Frutos Amazónicos, cuya producción y comercialización presentan características favorables en el plano económico, ya que a grandes rasgos se dispone de mano de obra con habilidades para el trabajo agrícola, así como de tierras aptas. Finalmente, el estudio de las dinámicas del Bajo Putumayo puede servir de referente y de insumo para la puesta en marcha de proyectos productivos aplicados a otras regiones en condiciones de conflicto similares.

Limitaciones

Por tratarse de una problemática históricamente sensible y alojada en el sentir de la comunidad, indagar en torno al conflicto implica una serie de escollos y restricciones. En efecto, para realizar el trabajo en el terreno se debieron cancelar entrevistas, aplazar visitas, y en general tomar medidas inherentes al desplazamiento y recorrido en la zona, lo cual no afectó el resultado final de la investigación, pero obligó a excluir algunos grupos de interés que en la práctica hubiesen sido relativamente importantes. No todas las organizaciones convocadas suministraron datos precisos acerca de su conformación y domicilio, por consiguiente el seguimiento que probablemente surgirá de un proyecto de investigación complementario se dificulta. La dificultad para el acopio de información secundaria, emanada de fuentes oficiales, no está disponible ni actualizada a cabalidad, lo que ocasionó tomar referentes aportados por otro tipo de organizaciones, lo cual no desvirtúa el rigor y la calidad de la misma, y por consiguiente sus resultados.

Futuras Líneas de Investigación

Esta investigación trasciende lo meramente académico, por lo cual el interés comunitario, institucional y empresarial exige su continuación. Analizar con mayor profundidad cada uno de los sectores y/o actividades identificadas es una tarea pendiente por realizar; especialmente en lo relacionado a cultivos amazónicos y turismo ecológico, ya que son consecuentes con las tendencias de mercadeo que en la actualidad marcan el consumo en estas latitudes. Se vuelve prioritario realizar estudios de mercado para cada una de las alternativas productivas propuestas, y establecer mecanismos de financiación estatal que coadyuven a este propósito.

LA CALIDAD PERCIBIDA COMO DETERMINANTE DE LA DECISIÓN DE COMPRA DE MARCAS DEL DISTRIBUIDOR (CADENAS DE HIPERMERCADOS DE LA CIUDAD DE CALI – COLOMBIA)

Alvaro Velasco Blanco, Universidad de San Buenaventura

RESUMEN

La tendencia creciente de la comercialización y consumo de las marcas del distribuidor ha cambiado el panorama, la estructura y las condiciones del mercado, y por consiguiente, las relaciones entre fabricantes y minoristas, y el consumidor. El consumidor tiene hoy en día una amplia gama de alternativas de consumo, gracias a la proliferación de formatos comerciales representados por las grandes cadenas minoristas, que en los últimos años han aumentado la presencia de su marca en el mercado en distintas y numerosas categorías (Europa occidental 35%; Europa del Este 20%, Estados Unidos 17% y Colombia 14%). Son diversos los factores que explican la decisión de compra de marcas del distribuidor, entre ellos el precio, que a priori, podría considerarse un factor fundamental; no obstante, la imagen de la tienda, la confianza y la calidad percibida juegan un papel relevante en el presente y futuro de esta práctica comercial. Precisamente, respecto a la calidad percibida, esta investigación pretende establecer si su incidencia está determinada por los atributos o características de calidad de un producto, que para Olson (1972) y Olson y Jacoby (1973) se clasifican en atributos extrínsecos - que incluyen el precio, el nombre de marca, la publicidad, el etiquetado y el envase; y atributos intrínsecos, por ejemplo los ingredientes, el sabor, la frescura, la textura, el aroma y las propiedades nutritivas. La investigación se desarrolla a través de trabajo de campo en cuatro hipermercados representativos de la ciudad de Cali (Colombia) para la categoría de alimentos no perecederos.

PALABRAS CLAVES: Marcas del distribuidor, Hipermercados, Calidad percibida, Minorista

THE QUALITY PERCEIVED AS DETERMINING OF DECISION TO PURCHASE BRAND DISTRIBUTOR (HIPERMERCADOS CHAINS OF THE CITY OF CALI - COLOMBIA)

ABSTRACT

The growing trend of marketing and consumption of store brands has changed the landscape, structure and market conditions, and therefore the relationships between manufacturers and retailers, and consumers. The consumer is now a wide range of alternative consumption, thanks to the proliferation of commercial formats represented by large retail chains, which in recent years have increased the presence of its brand in the market in various and numerous categories (Europe Western 35%, Eastern Europe 20%, USA 17% and Colombia 14%). Several factors explaining the decision to purchase store brands, including price, which a priori, could be considered a key factor; however, the image of the store, trust and perceived quality plays an important role in the present and future of this business practice. Indeed, regarding the perceived quality, this research aims to establish whether its incidence is determined by the attributes or quality characteristics of a product that Olson (1972) and Olson and Jacoby (1973) are classified into extrinsic attributes - including price, brand name, advertising, labeling and packaging; and intrinsic attributes, such as ingredients, taste, freshness, texture, flavor and nutritional properties. The research was developed through fieldwork in four representative hypermarkets in the city of Cali (Colombia) to the category of non-perishable food

INTRODUCCIÓN

Esta ponencia corresponde a un avance - investigación en curso - del proyecto de la fase de docencia del Doctorado en Marketing del autor, denominado “Factores determinantes en la decisión de compra de marcas del distribuidor”, y se concentra en la percepción de calidad como un atributo significativo en la decisión de compra de ese tipo de marcas en el mercado. Las marcas del distribuidor, también conocidas como marcas propias (o marcas blancas hace unos años), surgen en Europa y Estados Unidos en respuesta a las tendencias del consumo y los ciclos económicos que caracterizan la dinámica de los negocios, lo cual conduce, por una parte a los distribuidores minoristas a implementar estrategias de comercialización, y por otra, a los consumidores, a buscar alternativas más económicas, por encima de otras variables, entre ellas la calidad percibida. El cambio en las transacciones comerciales, expresado en la ofensiva de las cadenas minoristas, quienes han incursionado en un sinnúmero de categorías de productos, sugiere una alteración en el panorama de la producción, la distribución y el consumo, en razón a la inmensa oferta de una amplia variedad de productos signados con la marca del distribuidor, y cuya respuesta por parte de las marcas del fabricante ha sido la de ampliar su portafolio de productos hacia marcas genéricas y exclusivas, con el propósito de conservar a sus clientes.

En Colombia, el crecimiento de las marcas del distribuidor ha sido inusitado, actualmente se encuentran en categorías de productos que van desde los bienes destinados al aseo personal y del hogar, en los que a priori su calidad no sería objeto de alta rigurosidad, hasta alimentos básicos de la canasta familiar, como enlatados, cereales, lácteos y otros de consumo habitual. De acuerdo a un estudio de la firma experta en consumo Kantar Worldpanel, denominado Viviendo las marcas, en el que se encuestó a 6,6 millones de familias en el país, de cada 100 hogares, 96 incluyen en sus compras las marcas que tienen el logo del retail, lo que convierte a Colombia como el segundo lugar en penetración en este tipo de productos (90%), solo por debajo de Chile, que tiene 97%. Las marcas del distribuidor están superando el paradigma que los identificaba como competidores solo en el precio de sus productos, al entender que los consumidores no basan sus experiencias con el producto exclusivamente en el precio, sino también contemplan su juicio de valor basados en la calidad del producto. Es por esta razón, que la presencia de marcas del distribuidor ha tomado fuerza en Colombia, ya que los minoristas conocedores de las preferencias de los consumidores están trabajando en mejorar la percepción de calidad de sus marcas gracias a mejores envases, empaques y tácticas de comunicación, ajustadas a las exigencias de los clientes. Esta investigación pretende en otra fase indagar a los consumidores en cuanto a sus preferencias de consumo y a establecer cuál es su percepción de la calidad de los productos de marca del distribuidor, esencialmente en la categoría de alimentos no perecederos - como los granos y aceites – que son artículos básicos, pero sin mayor valor agregado.

REVISIÓN DE LA LITERATURA

Las marcas propias aparecieron en el concierto internacional de la distribución como marcas blancas a mediados del siglo XX, atribuidas al comercio minorista. Pero fue solo a partir de la década de los setenta cuando los distribuidores empezaron a desarrollar y comercializar marcas propias, normalmente como productos genéricos de baja calidad, sin cualquier nombre o como imitadores que copiaban a las marcas del fabricante (Kumar y Steenkamp 2007). Hoy en día, las marcas de distribuidor han experimentado un proceso de crecimiento constante, sumando cuota de mercado en la mayoría de categorías de productos, incrementando notablemente su presencia en la cesta de la compra y ganándose la confianza de los consumidores (Martinez, 2012, p.382). En este sentido, la importancia de los distribuidores y de sus marcas propias es tanta que algunos autores afirman que con el paso de los años se ha provocado una transición de la era de las marcas a la era de los distribuidores (Thomassen, Lincoln & Aconis, 2006). Durante su

evolución, si bien en los años ochenta estas marcas eran percibidas en Europa como marcas de baja calidad y bajo precio (Méndez, Oubiña & Rubio, 2009), percibidas de peor calidad que las marcas nacionales (Bellizzi, Kruckeberg, Hamilton & Martin, 1981; Cunningham, Hardy & Imperia, 1982; Dunn, Murphy y Skelly, 1986; Montgomery y Wernerfelt, 1992; Hoch y Banerji, 1993; Dick, Jain y Richardson, 1995), y con una negativa correlación entre el uso de las marcas privadas y la conciencia por la calidad de los productos (Ailawadi, Neslin & Gedenk, 2001); actualmente se pueden encontrar análisis que señalan lo contrario (Tamayo, 1996; Hita, 2006; Martín, Gutiérrez, y Mieres, 2006; Kumar y Steenkamp, 2007).

Estudios recientes demuestran que el posicionamiento de las marcas de distribuidor ha evolucionado y ha dado lugar a una variada oferta en el continuo calidad-precio (Rubio y Yagüe, 2009; Geyskens, Gielens y Gijbrecchts, 2010). (Mendez, et al.2009), observan una evolución positiva en la calidad de las marcas de distribuidor en relación a las marcas de fabricante en el contexto español, por lo cual destacan que la calidad parece un objetivo que ha sido alcanzado por los distribuidores. Partal & Benito (2009) por su parte, sostienen que el crecimiento continuo de las marcas del distribuidor se debe a la mejora en la percepción de calidad que los consumidores atribuyen a estas marcas cuando se comparan con las marcas de fabricante. Al respecto, Salinas y Gutiérrez (2007), coinciden con tal aseveración, al concluir que uno de los factores que ha propiciado la expansión de estos productos ha sido el cambio en la mentalidad de los consumidores, que consideran que estas marcas ofrecen una buena relación calidad-precio. Y poco a poco los consumidores perciben que la calidad de las marcas del distribuidor es similar a la de la marcas líderes de la categoría, pero con un precio sensiblemente inferior (De paredes, Orta, & Benito, 2002; Fernández y Martínez, 2004).

Por último se considera importante citar la definición de Calidad Percibida de Zeithaml (1988), que ha sido un referente obligado para expertos e investigadores del tema. “La calidad percibida es el resultado de un proceso de evaluación global de un producto (abstracción de alto nivel) que integra la información proporcionada por un conjunto de atributos objetivos del producto y cuya importancia, como inputs informativos en el proceso de información viene dada por un conjunto de factores de naturaleza situacional (situación anterior a la compra o acto de consumo) y personal (motivación, experiencia, etc.) y que no son percibidos de la misma forma por todos los consumidores2. (p.2-3).

METODOLOGÍA

El proyecto que abarca esta investigación está en proceso de culminación, por lo cual, previa revisión minuciosa de la literatura, se elabora por etapas. La primera etapa, objeto de este documento, se acometió el trabajo de campo durante tres meses. A través de visitas recurrentes a los cuatro establecimientos minoristas, también conocidos como hipermercados (Makro, La 14, Alkosto y Éxito), de mayor tamaño, presencia y reconocimiento, se realiza inspección rigurosa de las marcas que cada uno de los distribuidores tiene dispuestas para sus compradores. Se auscultan las diferentes categorías que existen, sus presentaciones, tamaños y precios, comparados con las marcas del fabricante o marcas nacionales, para determinar, en suma, la evolución y representatividad de las marcas del distribuidor en su establecimiento. En la segunda etapa, que se realizará próximamente, y que será objeto de otra propuesta, se planteará un modelo de investigación inherente a la calidad percibida de las marcas del distribuidor enfocado en los atributos intrínsecos y extrínsecos planteados por Olson (1972) y Olson y Jacoby (1973). A continuación, basados en la revisión de la literatura se plantearán las hipótesis correspondientes y procederá a encuestar a 250 compradores para confirmar o negar tales hipótesis. Finalmente, se señalarán los hallazgos, conclusiones y futuras líneas de investigación.

RESULTADOS

A luz de las indagaciones de fuentes primarias y secundarias, los resultados indican que la penetración de las marcas del distribuidor en el mercado local ha logrado niveles extraordinarios. En efecto, tal como se aprecia en la tabla 1, la inclusión de las marcas del distribuidor en las compras del consumidor colombiano, segmentada por estratos socio-económicos, es bastante significativa, lo que ratifica que el común denominador es una mayor atracción por este tipo de marcas. Al respecto, los distribuidores minoristas en sus formatos comerciales han incrementado su presencia y exhibición en nuevas categorías y variedad de presentaciones y tamaños, lo que sin duda consolidará más aún su posicionamiento.

Tabla 1: Compras de Marcas del Distribuidor Por Estratos Socio-Económico

Indicador	Estrato	1 y 2	3 y 4	5 y 6
Dinero invertido por parte del comprador (año)		\$134.000	\$204.000	\$315.000
Porcentaje de penetración en los hogares		96%	97 %	99%

En esta tabla se observa que las marcas del distribuidor tienen mayor penetración en los estratos altos, alcanzando un nivel de gasto superior en un 35% a los estratos intermedios y en 57% a los estratos bajos. Igualmente, el gasto de los hogares muestra la misma tendencia, en la cual el 99% de los hogares de estrato alto consume marcas del distribuidor, mientras que el 99% y el 96% lo hacen en los estratos intermedios y bajos respectivamente. Fuente: Kantar Worldpanel - 2013

En cuanto al tipo de productos que consumen los colombianos, la tabla 2 permite advertir que algunos productos de marcas propias tienen mayor demanda, y que su dinámica es resultado de las estrategias que los minoristas están implementando para las diferentes categorías de productos

Tabla 2: Rangos de Desarrollo Por Categorías de Productos Con Marca del Distribuidor

Productos	Rango de Penetración %
Leche líquida, aceites, pan, arroz y agua embotellada	31% y 70%.
Papel higiénico, salsa de tomate, pastas, café y blanqueadores	11% y 30%
Caldos, jabón en barra y leche en polvo	5% y 10%.

Esta tabla muestra que los hipermercados han desarrollado algunos productos se en mayor proporción que otros, debido a las fuerza y cobertura de las marcas del fabricante, con lo que se aprovechan mercados desatendidos. Fuente: Kantar Worldpanel - 2013

De otra parte, la percepción de la calidad se ha convertido en un factor decisivo en la decisión de compra de marcas del distribuidor. Su importancia radica esencialmente en la necesaria e inevitable comparación con las marcas del fabricante, tradicionalmente posicionadas en el mercado gracias a fuertes campañas comunicacionales y largos años de trayectoria. La calidad percibida tiene diversos matices, condicionada especialmente por el factor precio como determinante previo en la decisión de compra de marcas del distribuidor. Y de manera objetiva, se puede afirmar que con el paso de los años, las múltiples las investigaciones que han demostrado que existe una mejoría en tal percepción, dada especialmente por los esfuerzos de los distribuidores minoristas en medio de la ardua competencia con las marcas del fabricante. En este orden de ideas, se puede afirmar que la penetración en el mercado, en diversas categorías de productos, obliga a los distribuidores a disminuir el riesgo que implica la adquisición y consumo de sus marcas, enfocando sus esfuerzos en un fuerte posicionamiento de la imagen de su establecimiento, asociada a una buena calidad de sus productos.

CONCLUSIONES

Es un hecho el papel protagónico que han alcanzado las marcas del distribuidor, lo que dicho sea de paso ha revolucionado el esquema y las condiciones de la distribución minorista. Por tal razón, este fenómeno no es ajeno de todo tipo de estrategias comerciales en procura de obtener una mejor cuota del mercado. Las marcas del distribuidor han incursionado en una gama significativa del mercado, con variadas y mejores presentaciones y empaques, afianzando la comunicación con el consumidor y convirtiéndose en una amenaza para las marcas del fabricante. El precio hoy en día no es único factor que determina la selección de la marca del distribuidor frente a la del fabricante; si así lo fuera, cómo se explica que en los hogares de estratos altos, que tienen un mayor poder adquisitivo, el nivel de gasto y el grado de penetración es mayor. Los distribuidores minoristas, con el paso de los años han mejorado la percepción de la calidad de sus marcas propias. El auge de las marcas del distribuidor exige a los minoristas contrarrestar la relación directa que existe entre un precio bajo y una mala calidad, y concentrar sus esfuerzos en posicionar sus marcas como productos de buena calidad frente a las marcas del fabricante. El estudio y análisis de la calidad percibida ha sido objeto de numerosas investigaciones, en varios contextos y categorías, así como frente a las marcas del fabricante; la temática requiere un profundo análisis que tome como referencia los atributos implícitos en la percepción de la calidad de marcas del distribuidor, tanto del consumo propiamente dicho, como de la experiencia asociada a la compra (intrínsecos como extrínsecos).

Futuras Líneas de Investigación

El alcance de la investigación permite proponer algunas líneas que se abordarían en estudios complementarios en un futuro cercano, entre ellas: Medición y evaluación de la calidad percibida de las marcas del distribuidor; Análisis de la percepción de calidad de marcas del distribuidor por categorías de productos y segmentos de mercado; Comparación de la calidad percibida de marcas del distribuidor frente a marcas del fabricante; y análisis de la calidad percibida de marcas del distribuidor para otros formatos de distribución, tiendas de barrio, por ejemplo.

ESTADO DE LA INNOVACIÓN EN LAS MICRO, PEQUEÑAS Y MEDIANAS EMPRESAS DEL SECTOR DEL CALZADO EN LA CIUDAD DE CALI - COLOMBIA

Alvaro Velasco Blanco, Universidad de San Buenaventura
Claudia Marcela Sanz Ramírez, Universidad de San Buenaventura

RESUMEN

El caso de la producción manufacturera de calzado en Colombia es extremadamente complejo. Este sensible sector de la economía, concentrado particularmente en micros, pequeñas y medianas empresas (MiPymes), con escasos recursos y bajo nivel tecnológico, se ha visto gravemente afectado por la importación y el contrabando de productos procedente de China y Panamá; y es precisamente debido a este fenómeno, que con mayor urgencia se requieren estrategias complementarias que ayuden a estimular la sostenibilidad de la industria y así generar valor agregado y un alto nivel de diferenciación. Dichas estrategias deben ir encaminadas hacia la innovación; entonces, la innovación se convierte en fuente y materia obligatoria para las medianas y pequeñas empresas, a través de su incorporación permanente en la actividad productiva a lo largo de la cadena (insumos, fabricación y comercialización). Esta investigación sintetiza algunos hallazgos obtenidos a través del trabajo de campo, en cuanto a qué tipo de innovación se está realizando en las empresas del sector, y los principales aspectos que caracterizan sus acciones innovadoras. A partir de ello, y tomando como referente teórico principal las aportaciones del Manual de Oslo (2005), el Manual de Bogotá (2001) y Malaver y Vargas (2011), se plantean los tipos de innovación y las categorías que se asignan a las empresas que la desarrollan. El estudio y su correspondiente análisis se realiza a través de entrevista a nueve empresarios de MiPymes del sector, en los tres componentes de la cadena (insumos, producción y comercialización), y doce encuestas a empresas elegidas aleatoriamente, para conocer el estado de la innovación en este tipo de organizaciones.

STATE OF INNOVATION IN MICRO, SMALL AND MEDIUM COMPANIES OF FOOTWEAR INDUSTRY IN THE CITY OF CALI - COLOMBIA

ABSTRACT

The case of manufacturing of footwear in Colombia is extremely complex. This sensitive sector of the economy, particularly concentrated in micro, small and medium companies with limited resources and low technology, has been severely affected by the importation and smuggling of products from China and Panama; and it is precisely because of this phenomenon, which most urgently complementary strategies to help stimulate the sustainability of the industry and generate added value and a high level of differentiation is required. Such strategies should be aimed towards innovation; then innovation becomes a source and a compulsory subject for medium, small and micro enterprises, through its permanent incorporation in productive activity along the chain (inputs, manufacturing and marketing). This research summarizes some findings obtained through fieldwork, as to what kind of innovation is being done in the sector companies in, and the main aspects that characterize their innovative actions. On this basis, and taking as reference the main theoretical contributions of the Oslo Manual (2005), Bogota, Manual and Malaver and Vargas (2011), innovation types and categories that are assigned to companies that develop arise. The study and its corresponding analysis is carried out through interviews with nine entrepreneurs of Mipymes in the

sector, the three components of the chain (inputs, production and marketing), and twelve randomly selected business surveys, to ascertain the state of innovation in this type of organization

KEYWORDS: Innovación, Mipymes, Tipos de innovación,

INTRODUCCIÓN

Esta ponencia corresponde a los resultados de investigación del proyecto denominado “: Innovación en las Mipymes del sector del Calzado en la ciudad de Cali”, y surge a partir del interés académico y empresarial por establecer cómo están abordando las micros, pequeñas y medianas empresas del sector los procesos y actividades de innovación en la ciudad de Cali. La situación coyuntural por la que atraviesan los sectores manufactureros en Colombia, particularmente aquellos que demandan intensivamente mano de obra no calificada, y que por su notoria participación en el aparato productivo están mayormente expuestas a las variables del mercado, como es el caso de la industria del calzado, necesariamente son las que requieren mayores niveles de innovación. No se trata de una exigencia esporádica e improvisada, es en esencia una debilidad manifiesta y generalizada que requiere especial atención. La industria del calzado es un sector fundamental de la economía nacional y local, conformado en su gran mayoría por pequeñas y micro empresas, muchas de ellas carentes de formalidad, estructura y visión estratégicas, está siendo gravemente afectado por la importación y el comercio ilegal de materia prima y producto procedente de China y Panamá; y es precisamente debido a este fenómeno, que con mayor urgencia se requieren medidas complementarias que ayuden a estimular la sostenibilidad de la industria, que genere valor agregado y un alto nivel de diferenciación.

Es aquí en donde invertir en innovación se convierte en un requisito clave para afrontar las crisis. Entonces, la innovación se convierte en materia obligatoria para las pequeñas y micros empresas, a través de su incorporación permanente en la actividad productiva a lo largo de la cadena – insumos, fabricación y comercialización-. Se espera que la investigación continúe profundizando en el tema, para, sin ánimo pretencioso, contribuir en algo al desenvolvimiento innovador en las micros, pequeñas y medianas empresas del sector del calzado en la ciudad de Cali. Cabe anotar que durante la realización de la investigación se trabajó mancomunadamente con la Asociación Colombiana de Industriales del calzado, el cuero y sus manufacturas, Seccional Valle del Cauca, en el marco del convenio con la Universidad de San Buenaventura, en Investigación de tendencias de Moda, Informes de moda, Comités de Diseño y Proyectos de innovación en el sector calzado y cuero de la región.

REVISIÓN DE LA LITERATURA

Colombia ocupa el lugar número 68 dentro del Índice Mundial de Innovación (2014), y si se tiene en cuenta que alrededor del 96% En Colombia son MiPymes (Acopi, 2011), la problemática se acentúa. Esta cuestión es analizada por Duran (1992, p.163), que expresaba en su momento, que una preocupación central de la política económica de los países en desarrollo ha sido promover las empresas pequeñas y medianas como medio para configurar un mosaico empresarial más amplio que genere empleo productivo. Perego (2003, p.13-14) da cuenta que las Mipymes se enfrentan a un gran desafío en el nuevo escenario, y repara en que el vasto universo de las micros, pequeñas y medianas empresas (PYME), posee en su gran mayoría una estructura y propiedad aún familiar y están fuertemente representadas en la producción de bienes como calzado, muebles y vestuario. En este sentido, López, Montes & Vásquez (2007), anotan que ante tales circunstancias, muchos pequeños y medianos empresarios se preguntan ¿qué es la innovación?, ¿puede innovar cualquiera, o este proceso está reservado sólo para algunas empresas?, ¿qué se necesita para gestionar el cambio?, ¿cómo puedo competir con las grandes multinacionales?, ¿dónde obtengo recursos para la investigación y el desarrollo?, ¿qué resultados se lograrán y a qué coste?.

Las Mipymes no son ajenas a las graves crisis que enfrentan la economía mundial, y su fragilidad queda de manifiesto al desaparecer miles de ellas por no haber sabido superar ni responder a la actual situación de cambio que se enfrenta (Braidot y Soto, 1999, p.15-16). Este señalamiento conduce a aseverar que hoy en día es necesario y resulta importante reconocer que la innovación es un factor estratégico clave para la permanencia y sostenibilidad empresarial. Sin embargo, el Boston Consulting Group en su informe publicado en el 2007, resalta que las empresas que quieran innovar difícilmente podrán conseguirlo si se limitan a realizar ampliaciones y mejoras incrementales dentro de su línea de producto. Al respecto, Nieto (2008) sostiene que las empresas de éxito compiten a través de la innovación desarrollando nuevos productos y servicios o modificando los ya existentes, incorporando nuevas tecnologías en sus procesos, experimentando nuevas prácticas en la dirección y organización, y creando nuevos modelos de negocio.
