existente en su hábitat. Sin embargo, las tendencias de mercado evidencian, la oportunidad de explorar no solo la biodiversidad, sino los conocimientos culturales de las diferentes etnias indígenas a nivel mundial, con un alto valor en el diseño de joyas, al usar simbologías, colores y diseños específicos a las comunidades étnicas de los diferentes países y regiones del mundo. En ese sentido, se abre una oportunidad de negocios con un gran potencial, que han identificado grandes marcas reconocidas e inversionistas que buscan emprendimientos innovadores con un alto valor agregado. Sin embargo, no solo es responsabilidad de las propias comunidades indígenas proteger sus conocimientos y asegurar la apropiación de los recursos que puedan generarse fundamentados en su cultura, sino al estado y las entidades que hacen parte de este, en la construcción de un país activo, innovador e incluyente, que disminuya las diferencias y busque la igualdad. La importancia de implementar herramientas, procesos y metodologías que giren en torno a la búsqueda y mejoramiento del bienestar de las comunidades indígenas, es una de las causas que cimienta esta investigación. Ésta se fundamenta en dos partes, de un lado, la necesidad de capacitar a las comunidades indígenas pertenecientes a la Organización Zonal Indígena del Putumayo - OZIP, para que sean ellas quienes saquen los mayores provechos en la elaboración y comercialización de sus artesanías y artículos de decoración, y de otro lado, la inclusión en el mercado del biocomercio, que pretende de manera sostenible comercializar productos derivados a partir de recursos naturales pero preservando su existencia.

Pero, ¿de qué manera se relacionan estos dos parámetros? Primero, cuando se habla sobre los productos que realizan los indígenas lo hacen utilizando recursos que ellos mismos extraen del medio, sólo que éstos deben aprender que cuando potencializan esas habilidades pueden cuidar y preservar su medio natural. Segundo, cuando ellos fabrican dichos productos lo pueden realizar bajo estamentos legales y ambientales que generen valor a sus productos y utilizando a la vez estrategias innovadoras que permitan caracterizar sus bienes bajo criterios de calidad y competitividad.

Figura 1: Mujeres elaborando productos artesanales

Fuente: Archivo de la autora. (2014)

Para alcanzar este objetivo, se partió de la capacitación de las Comunidades Indígenas pertenecientes a la Organización Zonal Indígena del Putumayo – OZIP, en estrategias competitivas que brinden valor a lo que realizan artesanalmente. De esta manera, se expone que el enfoque investigativo es importante gracias a que se puede contribuir socialmente en algo que en Colombia se está perdiendo, y es la identidad cultural que los indígenas poseen y el aprovechamiento de sus recursos y habilidades en pro de su propio beneficio.

REVISIÓN DE LA LITERATURA

Las poblaciones indígenas de Colombia, a lo largo de la historia han sido objeto de exclusión social, política y económica, lo que ha conllevado a que sean explotados por parte de entidades que se han apropiado de sus conocimientos y prácticas. Este fenómeno ha hecho que las comunidades indígenas de Colombia, se

encuentren en situación de vulnerabilidad debido a que no cuentan con las herramientas y estrategias para potenciar su desarrollo económico.

Las comunidades indígenas pertenecientes a la OZIP – (La Organización Zonal Indígena del Putumayo - OZIP, conformada por representantes de los pueblos indígenas, fue creada y funcionan desde el año 1986, representa los intereses y requerimientos de los pueblos indígenas y sus comunidades afiliadas. Los pueblos indígenas que hacen parte de la OZIP, son Awa, Camentsa, Coreguaje, Embera, Inga, Kichwa, Kofan, Murui, Nasa, Pasto, Siona, y Yanacona y se encuentran asentados en las localidades de Mocoa, Puerto Guzmán, Villa Garzón, Puerto Caicedo, Puerto Asís, Orito, Puerto Leguízamo y Sibundoy, con una población aproximada de 32.689 indígenas, organizada en 128 Cabildos y Resguardos. (Organización Zonal Indígena del Putumayo. 2012)), se ven afectadas por esta problemática, y pese a los cambios sociales, políticos, religiosos, tecnológicos, han logrado conservar su cultura. Las principales características de estas comunidades es que se dedican a la elaboración y comercialización de artesanías y artículos de decoración cuyos materiales son la madera, semillas y chaquiras (Sarta, collar, brazaletes hechos con cuentas, abalorios, conchas, etc., usado como adorno. (Real Academia Española)). Pero el desconocimiento de los factores que influyen en la demanda de productos en el mercado ha hecho que ellos tengan que depender de otras personas para comercializar sus artesanías y artículos de decoración, además que éstas enfrentan día a día el conflicto social del departamento del Putumayo, lo que los ha llevado a tener que desplazarse hacia otros lugares donde tienen que buscar una base de sostenimiento para poder sobrevivir.

Partiendo de esta problemática es necesario que las comunidades capacitadas utilicen los conocimientos de su cultura, para crear valor agregado a sus productos y sean más competitivos. Además, es importante resaltar que dentro de la ley 21 de 1991 de Nivel Nacional, artículo 23 está enmarcado lo siguiente:

1. Las artesanías, las industrias rurales y comunitarias y las actividades tradicionales y relacionadas con la economía de subsistencia de los pueblos interesados, como la caza, la pesca, la caza con trampas y la recolección, deberán reconocerse como factores importantes del mantenimiento de su cultura y de su autosuficiencia y desarrollo económicos. Con la participación de esos pueblos, y siempre que haya lugar, los gobiernos deberán velar porque se fortalezcan y fomenten dichas actividades.
2. A petición de los pueblos interesados, deberá facilitárseles, cuando sea posible, una asistencia técnica y financiera apropiada que tenga en cuenta las técnicas tradicionales y las características culturales de esos pueblos y la importancia de un desarrollo sostenido y equitativo.

Es por eso que se hace necesario que desde la academia se diseñe estrategias competitivas para la elaboración y comercialización de artesanías y artículos de decoración que les permita generar valor, aprovechando la biodiversidad y la cultura de la comunidad, y puedan ser parte del mercado del biocomercio, sin perder sus tradiciones, ya que este tiene como fin conservar la biodiversidad y comercializarla de manera sostenible, teniendo en cuenta dentro de sus principios la distribución equitativa de los beneficios que se reciban de esta actividad.

El biocomercio según la Conferencia de las Naciones Unidas sobre Comercio y Desarrollo- UNCTAD debe entenderse como el “conjunto de actividades de recolección, producción, procesamiento y comercialización de bienes y servicios derivados de la biodiversidad nativa, bajo criterios de sostenibilidad ambiental, social y económica”. A partir de lo anterior, es este conjunto de actividades el que fundamenta la importancia de definir estrategias para que las comunidades pertenecientes a la Organización Zonal Indígena del Putumayo - OZIP, adquieran herramientas y procedimientos para potenciar sus habilidades en la creación de artesanías y artículos de decoración tomando como materia prima los recursos que les ofrece la naturaleza. La idea central de este enfoque es que esta población pueda elaborar dichos productos y los comercialice con un valor agregado con el fin de que sean competitivos e innovadores en el mercado.

Dicho desarrollo de estrategias sólo se puede lograr a través de la interacción e integración de actividades que capaciten a la población identificando los potenciales que ellos mismos han adquirido gracias a su trabajo manual, artesanal y cultural. El concepto de capacitación en este caso adquiere un sentido procedimental enfocado a un estudio e identificación del mercado. Partiendo de ello, se debe establecer cuáles serían las estrategias competitivas que se pueden implementar con dicha comunidad y lograr así que su capacidad de trabajo les permita formar parte de un mercado sostenible, sin que se abuse de ellos o de su identidad cultural.

METODOLOGÍA

Para el desarrollo de esta investigación se tomó como muestra un grupo de mujeres pertenecientes a las siguientes comunidades Pastos, Inga, Siona y Camentsa. Estas comunidades hacen parte de la parte la Organización Zonal Indígena del Putumayo – OZIP. Se trabajó con estas mujeres, porque ellas venían desarrollando un proceso de capacitación en el Servicio Nacional de Aprendizaje, Colombia (SENA), con el objetivo de mejorar el proceso de elaboración de las artesanías y artículos de decoración de sus comunidades, y una vez terminado este proceso consolidar una asociación que comercialice sus productos. Debido a esto, ellas son la población objetivo para capacitar en estrategias de competición, y una vez capacitadas ellas serán las encargadas de difundir el conocimiento entre su comunidad.

RESULTADOS

Una de las estrategias competitivas que se formuló fue “Estrategia de Marketing” ya que las comunidades indígenas como se había expresado antes, son explotadas por terceros sin que se les reconozca su valor y utilidad generada por el trabajo y los productos que realizan. De ahí la importancia de formar a estas comunidades indígenas en el proceso de generación de valor de sus artesanías y de la definición de una buena estrategia de marketing. Así, utilizar estrategias de marketing enfocadas en generar valor para los consumidores de este tipo de productos radica en la necesidad de buscar tres pilares fundamentales: 1° Determinar el segmento para ofrecer las artesanías, 2° ¿qué valor comunicar? y 3° ¿cómo comunicar ese valor que los indígenas esperan ofrecer a sus consumidores?, radicado principalmente en la cultura y valores autóctonos de su región.

Figura 2. Jornada de Capacitación en Marketing

Fuente: Archivo de la autora. (2014)

De esta manera la importancia de esta estrategia mencionada radica principalmente en:

Generación de valor: utilizando la simbología de cada comunidad, imprimiendo un sello cultural y un valor autóctono, hechos por manos indígenas. Cada producto artesanal que es adquirido por una persona se lleva consigo el recuerdo y distinción de un miembro más de Colombia, donde la diversidad es reconocida y legalizada por los estamentos gubernamentales.

Definición de una marca, distinción y publicidad atractiva: Gracias a que las comunidades indígenas pueden imprimir su distinción cultural en cada uno de sus accesorios con un emblema que puede ser reconocido en el mercado.

Definir los posibles canales de distribución que les permita llegar a más personas y a mercados extranjeros, de tal manera que sus productos sean más apreciados y no sean explotados por terceros.

CONCLUSIONES

Gracias a la capacitación e insumos que las Comunidades Indígenas pueden recibir, como también del desarrollo de esas habilidades competitivas, se puede decir que estas comunidades tendrán a su favor la capacidad de aprovechar sus talentos y herramientas, lo cual les brindará a futuro un desarrollo sostenible reflejado en el bienestar de cada uno de sus integrantes, como también de gestionar una independencia de aquellas personas o entidades que siempre buscan intereses personales dejando a la comunidad indígena fuera de un margen de participación social y comercial.

El desarrollo de proyectos sociales enfocados a transmitir los conocimientos que se adquieren en la academia es de suma importancia para las comunidades que no pueden acceder a estos, por lo tanto el desconocimiento de las estrategias empresariales los sitúa en desventaja en el mercado actual, donde cada día todo es más dinámico y es necesario obtener herramientas necesarias para competir con los productos o servicios producidos y de esta manera asegurar la rentabilidad del negocio.

DISEÑO DE UN MODELO QUE UTILIZA LA INTELIGENCIA ARTIFICIAL COMO ESTRATEGIA TECNOLÓGICA PARA LA EFECTIVIDAD DOCENTE

Laura Cristina Vázquez de los Santos, Universidad Autónoma de Coahuila

Jorge Luis Vázquez Lúndez, Universidad Autónoma de Coahuila

Juan Jesús Nahuat Arreguín, Universidad Autónoma de Coahuila

RESUMEN

Mejorar la efectividad docente permite tener una calidad educativa, que se ve reflejada en el aprovechamiento de los estudiantes. En este artículo se diseñó un modelo que utiliza la inteligencia artificial mediante un algoritmo genético como estrategia tecnológica para la actividad docente; esto es, a través de la optimización que permita disminuir el tiempo posible invertido en cursos de capacitación para aumentar la efectividad. Para lograr el diseño, primeramente se identificaron las variables involucradas en la efectividad de la práctica docente, posteriormente se realizó un análisis estadístico para conocer la importancia y la relación que existe entre dichas variables. La información fue almacenada en una base de datos relacional en SQL Server 2008.

PALABRAS CLAVE: Estrategia tecnológica, Inteligencia artificial, Algoritmo genético, Efectividad docente, Optimización.

DESIGN OF A MODEL THAT USES ARTIFICIAL INTELLIGENCE AS TECHNOLOGIC STRATEGY FOR TEACHING EFFECTIVENESS

ABSTRACT

Improvement in teaching effectiveness allows to have an education quality which is reflected in the students' achievement. In this article, a model that uses Artificial Intelligence thru a genetic algorithm as technologic strategy for teaching effectiveness was designed; this is, through the optimization that allows to decrease the invested possible time in training courses to increase the effectiveness. To achieve the design, first, teaching practice effectiveness' involved variables were identified, then, an statistical analysis was made to know the importance and relation among such variables. The information was stored in MS SQL Server 2008 relational database

KEYWORDS: Technology strategy, Artificial intelligence, Genetic algorithm, Teacher effectiveness, Optimization.

INTRODUCCIÓN

Cada organización tendrá requerimientos tecnológicos particulares y por tanto, una estrategia tecnológica específica, dependiendo del tipo de servicio o bien que produzca, de su disponibilidad de mano de obra, de las calificaciones de la misma, de la abundancia de las materias primas y el tipo de ventajas competitivas que busca obtener: disminuir sus costes, diferenciar su producto o lograr mejores métodos de organización (Martínez, 2006).

La estrategia tecnológica, es decir, la utilización de la tecnología para obtener una ventaja sostenible sobre los competidores no puede quedar aparcada en los niveles inferiores de decisión, sino que debe integrarse en la estrategia global (Escorsa & Valls, 2003).

Tomando en cuenta lo anterior, es importante considerar una estrategia tecnológica que mediante el uso de la tecnología de forma consistente, permita mejorar y apoyar a los docentes en mejora del proceso educativo.

En este trabajo se consideró utilizar la inteligencia artificial mediante un algoritmo genético como estrategia tecnológica, ya que dicho algoritmo permite la optimización, y lo que se pretende es disminuir el tiempo invertido en cursos de capacitación aumentado así la efectividad del docente.

REVISIÓN LITERARIA

Carrión (2007) define a la inteligencia artificial como una tecnología utilizada para la resolución de problemas complejos, ayudando a la toma de decisiones. Aunque la gestión del conocimiento es un campo de estudio reciente, durante mucho tiempo se ha intentado utilizar la tecnología para capturar y manipular el conocimiento humano.

Los algoritmos genéticos son una rama de la Inteligencia artificial. Muñoz (2010) en su libro comenta que la evolución biológica se puede contemplar como un proceso de optimización cuyo objetivo es mejorar la capacidad de un organismo o sistema para sobrevivir en ambientes competitivos que cambian dinámicamente. Al hablar de evolución es importante identificar el área en la que se puede definir.

Es posible contemplar el proceso de la evolución natural como un algoritmo abstracto que se puede implementar en un ordenador para crear nuevos artefactos o mejorar las propiedades de los artefactos existentes. La computación evolutiva representa de varias formas los tres grandes procesos de la teoría de la evolución natural (Muñoz, 2010):

- 1) La existencia de una población de individuos que se reproducen siguiendo el proceso de la herencia.
- 2) La adaptación al ambiente cambia al variar las diferentes propiedades de los individuos.
- 3) La selección natural mediante la cual los mejores individuos, es decir, los mejor adaptados son los que sobreviven.

Además Muñoz en su libro explica cómo las soluciones de ciertos problemas reales se pueden representar mediante un vector N-dimensional, que es llamado cromosoma, formado por variables binarias, enteras o reales, una cadena, o cualquier otra estructura, que constituye un individuo de la población, es decir, un punto del espacio de soluciones. Si las variables son binarias el espacio de soluciones tiene 2^N soluciones posibles. Cada una de las características del vector de representación juega el papel de un gen. Así, un cromosoma es una secuencia ordenada de genes.

De acuerdo a lo anterior, es posible hacer uso de la inteligencia artificial mediante un algoritmo genético como estrategia tecnológica, aplicándola en el ámbito educativo, a través de la capacidad y habilidad del docente para obtener mejoras mediante su categorización a partir de una acción, es decir; de su efectividad.

La estrategia tecnológica se refiere a la manera en que las organizaciones seleccionan, asimilan, adaptan, mejoran y diseñan la tecnología. Toda estrategia tecnológica será exitosa en la medida en que sea consistente y esté vinculada con cada una de las etapas dentro del proceso productivo de una organización (Martínez, 2006).

En cuanto a la efectividad docente se consideró la referencia de diversos autores.

Dunkin (1997), afirma que la efectividad docente es una cuestión referida a la capacidad del mismo para lograr los efectos deseados sobre los estudiantes.

Patiño (2012) comenta en los hallazgos de su investigación que la construcción del concepto de docencia efectiva se hizo principalmente a través de la identificación de diversas características, entre las que sobresalen el dominio de la materia, la actualización permanente, el interés porque los alumnos aprendan, la capacidad de empatía y sensibilidad para captar sus intereses y motivaciones, la habilidad para comunicarse efectivamente, la humildad para reconocer las propias deficiencias y el trato justo, imparcial y democrático.

Además Patiño en su artículo concluye que los docentes efectivos asignan un papel central a las buenas preguntas, es decir, aquellas que son capaces de disparar procesos de pensamiento crítico.

Por su parte, Patiño en su artículo concluye que los docentes efectivos se esfuerzan por establecer vínculos personales con los alumnos para construir el espacio colectivo de “nosotros”. Se destacan por un interés muy marcado en lograr establecer una conexión emocional con sus alumnos, básicamente a través de la generación de un clima de confianza en el aula.

Es necesario abarcar, en alguna medida, las contribuciones que ofrece la tecnología en los procesos de enseñanza y aprendizaje para poder ahondar en los criterios seguidos en la revisión de la calidad educativa de dichos procesos en relación con los efectos de la tecnología (Barbera, y otros, 2008).

METODOLOGÍA

Primeramente se tomaron las referencias bibliográficas de diversos autores, además de realizar análisis de modelos estratégicos para identificar las principales características de los docentes efectivos.

Una vez hecho lo anterior, se logró identificar 10 variables o características principales involucradas en la efectividad docente, las cuales se mencionan a continuación: conocimiento de la(s) materia(s) que se imparte, estrategias de planificación y programación, cumplimiento de objetivos y metas de la institución, manejo de técnicas didácticas, aspectos de evaluación de los estudiantes, actitud personal del docente, técnicas de control y estímulo, manejo de conflictos, aplicación de Tecnologías de Información y Comunicación y relación con el entorno.

Cada una de las variables anteriores, está formada por sus propias variables dependientes, dando un total de 83 variables dependientes.

Con la finalidad de obtener un soporte coherente para la realización del modelo, para la justificación de las variables se realizaron análisis estadísticos usando el software IBM SPSS 21.0, aplicando diversos estadígrafos tales como: análisis de confiabilidad, análisis de normalidad y determinación de variables significativa, entre otros.

Como medida de consistencia interna que válida las correlaciones de los ítems que intervienen en este proceso, se ha utilizado la prueba alpha de cronbach, obteniendo el resultado siguiente: Alpha cronbach: 0.859 valor aceptable.

En la búsqueda de resultados que permitan la selección de variables significativas y de su comportamiento, para conocer cuales apoyan de manera considerable al fenómeno de estudio se lleva a cabo el análisis: cálculo del Teorema Central de Límite (media de medias), obteniendo la media general de cada una de las

83 variables, se calculó la desviación estándar de estas medias y posteriormente se determinaron los límites superior e inferior de normalidad para (\pm) una sigma, tal como se observa en la tabla 1.

Tabla 1: Medida de medias y valores

Media de medias	Valor
Media	2.593
Desviación estándar de las medias	0.45
Límite superior de normalidad	3.043
Límite inferior de normalidad	2.144

Esta tabla muestra los datos obtenidos mediante la medida de medias.

De las 83 variables dependientes con este análisis resultaron 14 variables significativas que están ubicadas por encima del límite superior de normalidad ($ls=3.043$), 38 variables se encuentran dentro de normalidad y 10 bajo el límite inferior ($li=2.144$).

De acuerdo a lo anterior, en seguida se presenta la información relacionada con las variables que fueron identificadas por encima del límite superior de normalidad.

Tabla 2: Variables por encima del límite superior de normalidad

No. variable	Media	Descripción
1	3.500	Esforzarse por dominar su materia
5	3.625	Asistir a talleres para actualización
7	3.500	Relacionar los contenidos y conocimientos adquiridos con su vida cotidiana
12	3.500	Diseñar la asignatura seleccionando los resultados de aprendizaje, las tareas y la evaluación para que funcionen de manera armoniosa
19	3.625	Formular objetivos de sus programas en términos de conocimientos, destrezas, cultura de aprendizaje
20	3.625	Actualizar contenidos de acuerdo con los acontecimientos científicos, culturales y educativos del contexto social
28	3.625	Explicar a los alumnos los objetivos que se pretenden para esa clase
34	3.375	Establecer reglas y condiciones en el proceso de evaluación
43	3.625	Mantener una interacción colaborativa con los estudiantes
53	3.500	Encargar tareas graduadas en su dificultad y profundidad a medida que los alumnos van avanzando en el curso
56	3.375	Mantener el interés de sus estudiantes
68	3.125	Controlar los comportamientos disruptivos
74	3.375	Usar de forma extendida y pertinente de las TIC como herramientas de enseñanza y aprendizaje
75	3.625	Utilizar con eficiencia las TIC en el aula

La tabla muestra la media y la descripción de las variables que fueron encontradas por encima del límite superior de normalidad.

Las variables que quedaron por debajo de límite inferior resultaron sin relación directa, se muestran a en la tabla 3.

Tabla 3: Variables por debajo del límite inferior de normalidad

No. variable	Media	Descripción
35	2.125	Fomentar el feedback para comprobar que asimilan los conocimientos
36	2.125	Realizar evaluaciones para acreditar una buena formación de sus estudiantes
37	2.125	Acumular información o datos con el fin de disponer información suficiente para una evaluación efectiva
40	2.125	Tomar decisiones oportunas para la recuperación de los estudiantes
41	2.125	Tener conocimiento individual de los estudiantes
42	2.125	Ser capaz de conseguir que los alumnos sean críticos con los contenidos que aprenden
54	2.125	Solicitar a los alumnos tareas con demandas cognitivas diferenciada
59	2.125	Construir un clima más participativo
60	2.000	Promover la creatividad del alumno
81	2.125	Informar a los alumnos de actividades programadas en la región relacionadas con los contenidos de la materia

La tabla muestra la media y la descripción de las variables que se encontraron por debajo del límite inferior de normalidad.

Por otro lado, el resto de las variables fueron normales o estandarizadas de acuerdo a este análisis, ubicadas entre los límites (\pm) una sigma.

Otro análisis estadístico utilizado para el estudio de las variables identificadas, es el discriminante.

El uso del análisis discriminante es aplicable a la búsqueda de una doble finalidad: primero la clasificatoria, a partir de variables dependientes cuantitativas, lo cual permite clasificar los argumentos ya indicados en grupos preponderantes establecidos por variables dependientes y segundo la finalidad confirmatoria del análisis discriminante ofrece para los grupos constituidos identificar lo específico para cada uno de ellos una mayor certidumbre en la asignación de argumentos. En esta finalidad también clasificatoria va implícita la parte descriptiva utilizada que identifica las variables que más y mejor discriminan y caracterizan a los grupos (Flavián, et al. 1994). Al realizar este análisis, se conocieron datos importantes de las variables o características identificadas en la efectividad docente, dichos resultados o datos se muestran detalladamente a continuación.

Tabla 4: Resultados del análisis discriminante

Dimensión	Alfa de Cronbach	Varianza contabilizada		
		Total (autovalor)	Inercia	% de varianza
1	.990	46.233	.557	55.702
2	.973	25.757	.310	31.032
3	.956	17.862	.215	21.520
Total		89.851	1.083	
Media	0.978	29.950	.361	36.085

La tabla muestra los resultados del análisis discriminante.

La dimensión 1 no aporta valores. Para la dimensión 2 que contabiliza el 31.032% de explicación se agrupan las variables como se indica en la tabla 5.

Tabla 5: Medidas discriminantes (dimensión 2)

VARIANZA TOTAL CONTABILIZADA					
31.032%					
Se considera una varianza >0.6					
Variable Dependiente			Variable Independiente		
		Varianza

34	5ERC	0.768	5	0AEE	
53	7ETG	0.609	7	0TCE	
57	7CHO	0.675	7	0TCE	
68	8CCD	0.785	8	0MCA	
74	9UFE	.675	9	0TIC	
77	10RTE	.605	10	0REC	

La tabla muestra los valores de varianza obtenidos para la dimensión 2.

Para la dimensión 3 que contabiliza el 21.52% de explicación, se agrupan las siguientes variables:

La conclusión del análisis discriminante de acuerdo a las dimensiones 2 y 3 (varianza explicada de 52.55%) indica que existe una clasificación coherente que confirma lo encontrado con el Teorema Central de Límite en cuanto a la preponderancia de las variables dependientes indicadas como significativas y la caracterización de los grupos preponderantes establecidos por las variables dependientes, así como la

identificación de las variables independientes que más y mejor discriminan y caracterizan el fenómeno estudiado.

En cuanto a la correlación de Pearson se interpretaron los valores de correlación entre las variables significativas obtenidas en las pruebas anteriores, los cuales se muestran en la tabla 5.

Tabla 6: Medidas discriminantes (dimensión 3)

La tabla muestra los valores de la correlación de Pearson.

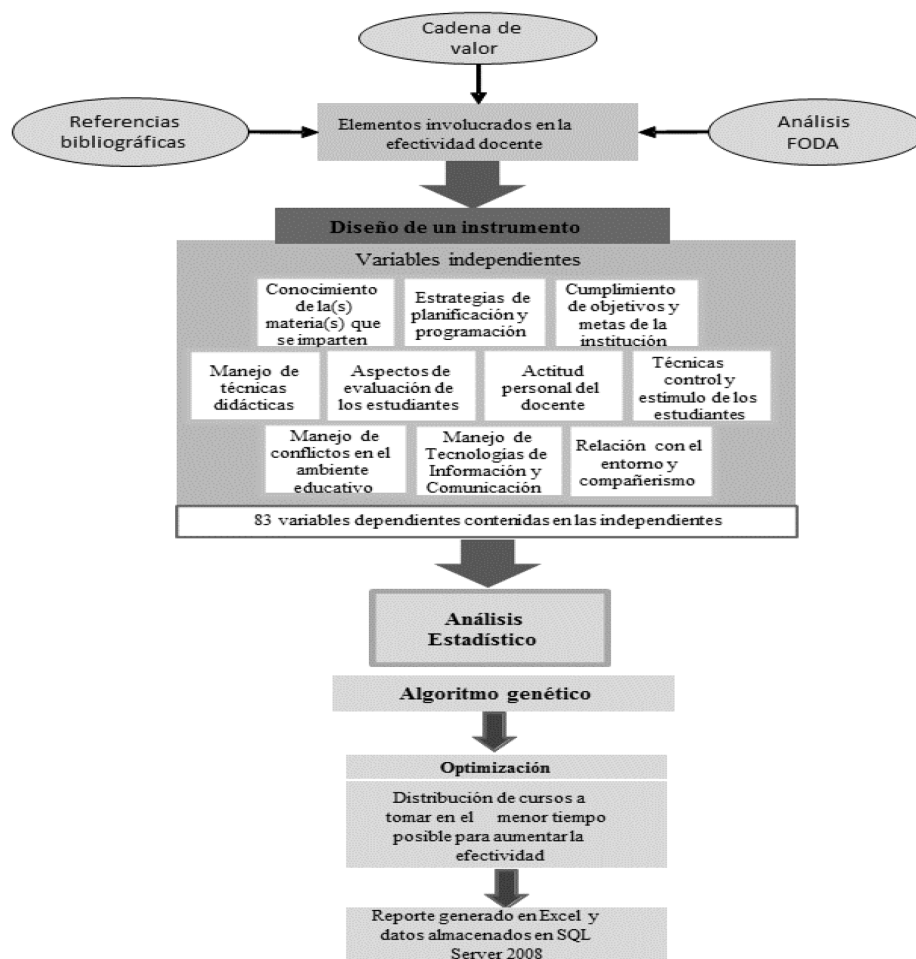

Una vez realizado el análisis de las variables identificadas mediante los análisis estadísticos anteriores, los resultados obtenidos fueron almacenados en una base de datos relacional en SQL Server 2008.

Posteriormente, se realizó la abstracción correspondiente de la situación a resolver para la creación de un algoritmo genético como parte de la Inteligencia Artificial para ser utilizado como estrategia tecnológica.

RESULTADOS

Una vez obtenidos los resultados de los análisis estadísticos antes detallados y la estructura de un algoritmo genético básico, fue posible el diseño de un modelo que utiliza la inteligencia artificial como estrategia tecnológica para la efectividad docente.

Figura 1: Modelo propuesto

Esta figura muestra el modelo propuesto, indicando las variables establecidas de la efectividad.

Como se puede observar, para encontrar los elementos o características de la efectividad docente, se utilizaron modelos estratégicos y referencias bibliográficas.

El instrumento de la efectividad docente, tal como se observa en la figura 1, comprende diez variables independientes, cada una de estas tienen a su vez variables dependientes, dando un total de ochenta y tres variables dependientes.

En este modelo se muestra la importancia que tiene el análisis estadístico realizado para conocer la importancia de las variables y la relación que existe entre las mismas. Dicha información se utilizó para realizar la abstracción de la situación a resolver al diseño del algoritmo genético. Los tipos de cursos propuestos a los docentes para lograr su efectividad, son analizados de acuerdo al comportamiento de las variables en la estadística.

Con el modelo anterior se está utilizando las herramientas tecnológicas que ofrece la inteligencia artificial mediante los algoritmos genéticos, logrando la optimización a través de la distribución de los cursos que deben tomar los docentes para aumentar su efectividad en el menor tiempo posible.

CONCLUSIONES

En este artículo se muestra cómo se obtuvieron las características o variables involucradas en la efectividad docente.

Los resultados obtenidos mediante los análisis estratégicos permitieron obtener información más detallada de las variables, conociendo su importancia y su comportamiento en el caso de estudio.

La información anterior que fue almacenada en una base de datos relacional podrá ser actualizada cuando sea necesario, considerando la situación actual de las instituciones educativas.

El modelo diseñado utiliza la inteligencia artificial mediante un algoritmo genético como estrategia tecnológica. Dicho algoritmo muestra como resultado la optimización mediante la distribución de los tipos de cursos necesarios que deben tomar los docentes para aumentar su efectividad en el menor tiempo posible.

Una vez finalizado el modelo, es posible concluir que hacer uso de la inteligencia artificial como una estrategia tecnológica ofrece resultados favorables no solamente en el ámbito educativo, sino para cualquier tipo de organización, independiente del giro principal de la misma.

En el caso de utilizar a los algoritmos genéticos como rama de la inteligencia artificial, permite solucionar problemas donde es necesaria la optimización de algún recurso.

RESUMEN

El presente estudio busca contribuir al esclarecimiento de la participación ciudadana en la transparencia y rendición de cuentas en la función pública, con la finalidad de conocer Responsabilidades y sanciones de los funcionarios públicos en México, por ello es que el estudio tiene como pregunta guía, ¿Cuáles son las responsabilidades y sanciones de los funcionarios públicos en el manejo de la transparencia y rendición de cuentas en México? y tuvo como objetivo conocer las responsabilidades y sanciones de los funcionarios públicos en el manejo de la transparencia y rendición de cuentas México. Si bien es cierto la participación ciudadana está reglamentada esta no se cumple por los motivos que sean, por eso el objetivo general de este estudio es precisamente analizar el cumplimiento de la reglamentación de las responsabilidades y las sanciones de los funcionarios públicos, en la transparencia y rendición en los municipios.

Palabras Clave: Transparencia y rendición de cuentas, funcionario público, responsabilidad y sanciones.

RESPONSIBILITIES AND SANCTIONS OF THE OFFICIALS IN MEXICO

This paper analysis citizen participation in public administration transparency compliance.

JEL: M00

KEYWORDS; Transparency, Public Administracion

INTRODUCCION

La presente investigación nos mostrara el panorama actual en el estado de Sonora, analizando las verdaderas funciones y aptitudes del actuar de los contralores como pieza fundamental en el ejercicio del derecho a la información. Calificando y comparando las legislaciones de forma global y detalladamente en tema de las sanciones en sus fracciones correspondientes de cada Ley Estatal.

Estableciendo parámetros que nos permitan no solo valorar la información pública básica con la que cumplen los sujetos obligados y la información proporcionada a través de las solicitudes de información. De la misma manera con la información proporcionada en los sitios de internet que en la actualidad violan los más elementales principios de usabilidad para los ciudadanos teniendo faltas como; no se indica cuando un archivo es en PDF, la interacción de los servicios de solicitudes son deficientes, los buscadores no funcionan, etc. Estos elementos mencionados no son tomados en cuenta para el establecimiento de sanciones a los funcionarios públicos. Por consecuencia no existe el cumplimiento necesario para que exista una sinergia coherente entre los ciudadanos y gobierno en materia de transparencia y rendición de cuentas, por lo cual en el presente estudio retomaremos todos estos elementos para tener parámetros en los

procedimientos de sanciones a los servidores públicos y de la misma manera razonar las funciones que permitan revalorar el actuar de los contralores para llegar a una buena labor en la aplicación de la Ley de Acceso a la Información Pública del Estado de Sonora.

REVISION LITERARIA

La rendición de cuentas en México sigue en un proceso largo y tedioso, ya que los cargos muchas de las veces están ocupados por personas que no cumplen el perfil adecuado para realizar las funciones que les deriven sus puestos; prueba de ello en el estado de Sonora, existen muchas dependencias que al frente se encuentran personas no aptas en sus funciones; teniendo la atribución de sancionar incumplimientos por parte de los funcionarios; que ese es el punto de partida del verdadero ejercicio al derecho de la información; ya que los funcionarios si en realidad les acataran esas sanciones no existiría la falta de transparencia en ellos y la adoptarían como un valor moral y no como una obligación más.

Los perfiles y aptitudes adecuadas en los puestos públicos, logran un crecimiento económico, social y cultural que será desde los municipios, Estados y el País en sí.

Uno de los retos que tiene México es con respecto a las responsabilidades y sanciones. En el artículo 61 de la ley que es objeto de análisis, se establece la responsabilidad de los servidores públicos por el incumplimiento de las obligaciones establecidas en esta Ley, así como por la omisión de la publicación o actualización de la información, el suministro de la información pública solicitada o en la respuesta a los solicitantes, así como la de los informes que se deban presentar ante el Instituto, de igual manera la omisión o la atención a las solicitudes de acceso a la información en contravención a las disposiciones de la Ley.

Así mismo la falsificación o el daño, sustracción, extravío, alteración, negación, ocultamiento o destrucción dolosa de datos, archivos, registros y demás información que posean los sujetos obligados. También al no proporcionar la información cuya entrega haya sido ordenada por el Instituto, no declarar la inexistencia de información cuando ésta exista total o parcialmente en los archivos del sujeto obligado, denegar intencionalmente información no clasificada como reservada o confidencial conforme a esta Ley, así como clasificarla con dolo o mala fe.

Igualmente el titular de la unidad administrativa que suministre a la unidad de enlace para su entrega, información clasificada como reservada o confidencial conforme a lo que dispone la Ley del Estado será responsable y sancionado por el incumplimiento.

Cuando el servidor público cree, modifique, destruya o transmita información confidencial en contravención a los principios establecidos en esta Ley, intimide o inhiba a los solicitantes de información a consecuencia del ejercicio del derecho de acceso a la información pública también será responsable.

De igual manera, la omisión de desclasificar la información como reservada cuando los motivos que dieron origen ya no subsistan y no cumplir con las resoluciones emitidas por el Instituto.

Algunos de los supuestos antes mencionados, serán considerados como graves para efectos de su sanción administrativa.

Posteriormente en la ley se establece que las infracciones a las que hicimos referencia anteriormente o cualquiera otra derivada del incumplimiento de las obligaciones establecidas en la Ley, será sancionada en los términos de la Ley de Responsabilidades de los Servidores Públicos del Estado y los Municipios, siendo independientes de las del orden civil o penal que procedan, así como los procedimientos para el resarcimiento del daño ocasionado por el sujeto obligado.

El marco legal que tenemos en nuestro estado en materia de acceso a la información es bueno, ya que fue reconocido a nivel nacional, por ejemplo por hacer sujetos obligados a partidos políticos, a sindicatos y a toda aquella entidad que reciba recursos públicos.

Una de las principales causas de la opacidad del país es que no se cuenta con un Sistema legal donde existan verdaderas consecuencias institucionales, la corrupción ha sido uno de los factores que socavan la competitividad del país, como lo marca IMCO el día 2 de septiembre del 2014 en la publicación del Índice de Competitividad Global (ICG).

Mientras no existan consecuencias institucionales, no será posible superar este obstáculo que impone enormes costos y que dificulta el desarrollo económico del país.

METODOLOGIA

La presente investigación, “Responsabilidades y Sanciones de los funcionarios públicos en México”, se refiere a una investigación cuantitativa y exploratoria (Hernández Sampieri Roberto, 2014) ya que utiliza la recolección y el análisis de datos para constatar preguntas de investigación y probar hipótesis establecidas previamente, y confía en la medición numérica, el conteo y frecuentemente en el uso de la estadística para establecer con exactitud patrones de comportamiento en una población. Se partió de una pregunta central, siendo esta, ¿Cuáles son las responsabilidades y sanciones de los funcionarios públicos en el manejo de la transparencia y rendición de cuentas en México? y tuvo como objetivo conocer las responsabilidades y sanciones de los funcionarios públicos en el manejo de la transparencia y rendición de cuentas México.

Todos estos elementos son de vital importancia para el buen cumplimiento de la Ley de Acceso a la Información Pública en el Estado de Sonora y los demás estados sin embargo hay que resaltar un punto muy importante y primordial que son los procedimientos de las sanciones por el no cumplimiento a la Ley de Acceso a la Información. Ante ello es necesario conocer los contenidos específicos (fracciones) que nos aluden a dichos procedimientos, para de esta manera identificar deficiencias y áreas de oportunidad en el acatamiento de las obligaciones que se derivan por consecuencia de la LAIPES.

RESULTADOS

El derecho de acceso a la información es el resultado de intercambio de documentos que nos muestran el actuar diario de los funcionarios públicos y que nos permite localizar si los recursos públicos se están utilizando correctamente, sin embargo el actuar de los funcionarios se rige a través de leyes que los obligan a cumplir con sus funciones y no solo sino también a proporcionar a los ciudadanos la información que es generada a través de esas funciones; el no cumplir genera desacuerdos, desconfianza entre sociedad y gobierno entre muchas otras cosas más, es por eso la necesidad de que sean realmente sancionados por no cumplir con las atribuciones en materia de transparencia y rendición de cuentas.

Para darnos una visión de cómo está México en cada una de sus entidades federativas, haremos un recorrido de su marco normativo con referencia a sus sanciones, identificaremos los estados del país que realmente atienden las necesidades de los ciudadanos, cuando se presenta el incumplimiento de los sujetos obligados dentro del procedimiento de las solicitudes de información, partiendo de 7 incumplimientos y/o violaciones primordiales en el ejercicio del derecho a la información:

1. Estados en los cuales está estipulado como violación o incumplimiento el no actualizar la información de oficio en los portales de internet, existen 20 estados que lo estipulan; Aguascalientes, Baja California, Chiapas, Chihuahua, Coahuila, Colima, Durango, Estado de México, Guanajuato, Guerrero, Jalisco, Michoacán de Ocampo, Morelos, Nayarit, Nuevo León, San Luis Potosí, Sinaloa, Zacatecas, Veracruz, Tlaxcala y Tamaulipas

2. En este rubro se encuentra el incumplimiento de Estados que dentro de sus leyes está estipulado como incumplimiento el no entregar la información, cuando exista un proceso de solicitud, solo 8 estados lo estipulan; Querétaro, Quintana Roo, Sonora, Tabasco, Tamaulipas, Tlaxcala, Veracruz y Zacatecas.
3. Entregar información cuando su carácter es de reservada o confidencial, solo 10 estados lo contemplan en sus leyes, Chiapas, Chihuahua, Coahuila, Quintana Roo, San Luis Potosí, Sonora, Tabasco, Tamaulipas, Veracruz y Zacatecas.
4. Los estados que contemplan como una falta la alteración de información, sustracción y ocultación de información pública son Baja California, Baja California Sur, Chihuahua, Coahuila, Oaxaca, Puebla, Quintana Roo, Sonora, Tabasco, Tamaulipas, Veracruz y Zacatecas.
5. Realizar el tratamiento de datos personales en contra de lo dispuesto por la ley lo retoman los estados de Aguascalientes, Chihuahua, Coahuila, Colima, Puebla, San Luis Potosí, Tabasco, Tamaulipas, Tlaxcala, Veracruz.
6. No proporcionar los informes que se tiene el deber de entregar al instituto solo el estado de Aguascalientes lo estipula en su Ley.
7. Negar o limitar el derecho de acceso a la información cuando no aplique como sustento de dicha negativa el carácter de reserva o confidencialidad a la información solicitada, en los estados de Aguascalientes, Baja California Sur, Coahuila, Puebla, Sonora, Tabasco, Tlaxcala, Veracruz, Zacatecas.

Uno de los obstáculos principales es que dentro de las leyes solo demarca las violaciones remitiendo las sanciones a las leyes de responsabilidades aplicables para cada Estado, siento así 14 estados que lo estipulan de esta manera dentro de sus legislaciones, considero que uno de los impedimentos para la aplicación de sanciones es delegar la facultad de sancionar directamente a el órgano de control o jefes superiores en el nivel jerárquico, ya que muchas de las veces en las que se incurre en una violación en materia de transparencia no se le da la importancia que verdaderamente se tiene, y entre tantos quehaceres de los funcionarios al frente de las dependencias desechan este tipo de casos.

CONCLUSIONES

Al analizar el panorama de las legislaciones a través de la investigación, se concluye lo siguiente: Se comprueba la hipótesis planteada en la presente investigación, ya que dentro de los resultados obtenidos planteamos 7 aspectos fundamentales; si dichos aspectos no están considerandos dentro de las leyes estatales como una verdadera violación; estamos en retroceso de un verdadero modelo de transparencia y rendición de cuentas, de la misma manera impactan en el desarrollo social.

Uno de los obstáculos principales es que dentro de las leyes solo demarca las violaciones remitiendo las sanciones a las leyes de responsabilidades aplicables para cada Estado, siento así 14 estados que lo estipulan de esta manera dentro de sus legislaciones.

Considero que uno de los impedimentos para la aplicación de sanciones es delegar la facultad de sancionar directamente a el órgano de control o jefes superiores en el nivel jerárquico, ya que muchas de las veces en las que se incurre en una violación en materia de transparencia no se le da la importancia que verdaderamente se tiene, y entre tantos quehaceres de los funcionarios al frente de las dependencias desechan este tipo de casos. Partiendo que 12 estados manejan este tipo de procesos para aplicar las sanciones.

Retomando las competencias de las autoridades para aplicar sanciones, cabe resaltar que los estados de Chihuahua, Veracruz y Tabasco dentro de sus leyes está facultado el consejo o pleno del órgano de transparencia aplique las sanciones, esto es importante y es un avance en la materia ya que el hecho de que un órgano especializado en la materia sancione da hincapié a que se tóme la verdadera importancia de la violación o incumplimiento.

Para el desarrollo social y económico así mismo para la implementación de un modelo de transparencia es necesario la publicación de la información de oficio que demarcan las leyes, por lo cual en la presente investigación se encuentra que en 21 Estados está considerada como una violación o incumplimientos de ley el no publicar la información en los portales de internet, esto nos conlleva a un gran avance para la verdadera rendición de cuentas.

Un impedimento importante dentro de la materia y que están estipulados dentro de las leyes estatales y sus lineamiento es el de proporcionar en tiempo y forma los informes a los institutos competentes, y solo Aguascalientes lo remota dentro de sus incumplimientos, cuando es un aspecto primordial y de monitoreo para los órganos de transparencia y los ciudadanos.

Ante la necesidad de generar una cultura de transparencia en nuestro país en función al cumplimiento de los diferentes Estados en función de sus legislaciones estatales, podremos enlistar las siguientes propuestas basadas en la investigación concluida, la cual el principal rubro es la aplicación de las sanciones por incumplimiento y/o violación en materia de transparencia.

Establecer como órgano facultado para aplicar las sanciones las comisiones e institutos que fungen como órganos garantes en los diferentes estados de nuestro país.

Crear un modelo único para todos los estados que regule las sanciones, de esta manera serán considerados todos los aspectos importantes en función de incumplimientos.

Si adoptamos solo estas dos recomendaciones, daremos hincapié a desarrollar un verdadero cambio y obligaríamos a los funcionarios públicos a que cumplan con sus obligaciones en materia de transparencia, así mismo a incorporarlo en las actividades diarias.

RESUMEN

Fundador de la psicología humanista, considerado uno de los psicólogos estadounidenses más sobresalientes durante la segunda mitad del siglo XX, y uno de los psicólogos con mayor citación en la literatura de la administración, es Abraham Maslow (1908-1970). Postula en su famosa obra de la teoría motivacional, conocida como “Jerarquía de necesidades de Maslow”, que existe una predisposición directa de la conducta humana hacia la procuración de la salud mental, lo cual es expresado como procesos continuos de “auto-actualización” y de “auto-realización”. En su propuesta realizada A Theory of Human Motivation, en el año de 1943, señala que conforme a la satisfacción de las necesidades más básicas, las cuales de manera gráfica se integran en la base de una pirámide, y que tienen que ver con las fisiológicas, el individuo va desarrollando necesidades y deseos cada vez más elevados de manera gradual y sucesiva. Por su parte, la administración ha centrado sus intereses en éstas postulaciones para buscar su aplicación en el campo motivacional de lo laboral. En el supuesto de concluir que un empleado motivado, será eficiente y eficaz, ya que estará libre de necesidades no satisfechas que pudieran hacerlo fracasar en las actividades que le son encomendadas.

MASLOW BUSINESS IN FACT, IF "CASA AHUED" IN XALAPA, VERACRUZ, MEXICO

ABSTRACT

Founder of humanistic psychology, considered one of the most outstanding American psychologists during the second half of the twentieth century, and one of the greatest psychologists in the literature citation management is Abraham Maslow (1908-1970). Postulates in his famous work of motivational theory, known as "Hierarchy of Needs Maslow," there is a direct disposition of human behavior towards the administration of mental health, which is expressed as a continuous process of "self-actualization" and "self-realization". In its proposal on A Theory of Human Motivation in 1943, notes that according to the satisfaction of basic needs, which graphically integrated into the base of a pyramid, and that deal with physiological The individual needs and develops progressively higher desires gradually and successively. Meanwhile, the administration has focused its interests in these applications to find their application in the field of the motivational work. In the course of concluding that motivated an employee, will be efficient and effective, as it will be free of unmet needs that might make it fail in the activities that are assigned.

KEYWORDS: Motivation. Needs. Work. Theories. Behavior.

INTRODUCCIÓN

La teoría motivacional propuesta por Abraham Maslow, y reflejada en la tabla de jerarquización de necesidades, ha dejado mucho campo para su continua investigación y búsqueda de elementos que puedan confirmar, refutar, criticar o aportar nuevos elementos a la misma, por lo cual dentro del presente trabajo de investigación se busca comprobar la manera funcional de atención de necesidades dentro de los procesos motivacionales y de dirección gerencial en la empresa Casa Ahued, en la Ciudad de Xalapa, Veracruz, presentando en primera instancia una breve pero concisa revisión de la literatura, para después describir el proceso metodológico que se siguió para la obtención de datos relacionados a la importancia de las necesidades para los empleados, y el estado motivacional de los mismos, lo cual nos lleva a obtener unos resultados que permitirán proporcionar conclusiones fundadas para conocer la correlación de lo mencionado por Maslow y la acciones que deberá de tomar la empresa para desarrollar aquellos programas motivacionales apegados a la realidad del estado en el que se encuentran los empleados.

REVISIÓN LITERARIA

Abraham Harold Maslow (1908-1970) es uno de los autores más citados en la literatura de apoyo a la administración. Se le cita, lo mismo en el área de los recursos humanos, que en los temas de la dirección y de la mercadotecnia. A Maslow se le tiene como uno de los psicólogos estadounidenses más sobresalientes de la segunda mitad del siglo XX y es uno de los fundadores de la llamada psicología humanista, corriente que postula la existencia de una predisposición directriz de la conducta humana hacia la procuración de la salud mental, expresada como procesos continuos de «auto actualización» y de «autorrealización». La postura teórica de Maslow bien podría colocarse como una suerte de tercera fuerza o tercer camino entre los paradigmas conductista y psicoanalista. Los trabajos ulteriores de Maslow —centrados en la psicología transpersonal (Lajoie y Shapiro, 1992: 91) y de la que Maslow es uno de sus pioneros— abren nuevas ventanas al estudio del comportamiento humano. Junto con Stanislav Grof (1931), Maslow propone la transformación eco-espiritual del hombre para ahondar en su conciencia y avanzar hacia una sociedad capaz de hacer evolucionar su propia cultura en el resguardo de la naturaleza. Para muchos, el desarrollo de esta psico espiritualidad bien viene a constituirse en una cuarta fuerza, la que vendría a cumplir los fines para los cuales fue creada la psicología.

Empero, para la administración tradicional, el trabajo de Maslow más citado —e incluso el más reverenciado— es su famosa teoría motivacional, inspirada en una jerarquía de necesidades reconocida como la Jerarquía de Maslow, la cual se representa por medio de una pirámide que incluye las necesidades humanas que constituyen la piedra angular del comportamiento humano. Tales necesidades transitan desde las físicas o fisiológicas —comunes a las especies del mundo animal— hasta las necesidades superiores, tales como las agrupadas en las necesidades de autorrealización integral, lo cual incluye el crecimiento espiritual. La famosa jerarquía de necesidades de Maslow fue propuesta en *A Theory of Human Motivation*, en 1943 y en ella, el autor postula que, conforme las necesidades del piso más bajo de la pirámide —las fisiológicas— se satisfacen, los individuos desarrollan necesidades y deseos más elevados en forma gradual y sucesiva.

A menudo, la escala de necesidades de Maslow se describe como una escala piramidal en cinco niveles. Los cuatro primeros suelen ser reconocidos como niveles de necesidades de déficit —«D-needs»— y al nivel último, el quinto, le denominó nivel superior de autorrealización, motivación o crecimiento, asociadas a las necesidades del ser: las being needs, o «B-needs». Para Maslow, la diferencia entre ambas radica en que mientras las «D-needs» pueden ser satisfechas, las «B-needs» constituyen una fuerza-motor continua. Esto es, las «D-needs» suelen ser cubiertas a plenitud; las últimas constituyen una suerte de resorte vivo y continuo. En este sentido, Maslow sostiene que las necesidades de autorrealización —motivación de crecimiento— o del ser, solo ocupan nuestra atención cuando se han satisfecho las necesidades inferiores

de la jerarquía. Así, las necesidades superiores son más bien fuerzas-motor que impulsan el constante crecimiento dando lugar a una dinámica siempre ascendente dentro de la jerarquía. Existen, no obstante, fuerzas regresivas que empujan las necesidades prepotentes hacia abajo en la jerarquía.

De lo anteriormente citado, como parte del trabajo y postulación de Maslow, se realizan tres críticas, bajo la perspectiva de la metodología y la ciencia. En primer lugar, para muchos críticos de Maslow, conceptos tales como autorrealización no dejan de ser vagos y poco científicos. Por esta razón, operativizar los conceptos maslowianos es complicado, sobre todo en el campo de las investigaciones cuantitativas y positivistas. En este sentido, no pueden tenerse a la vista evidencias empíricas que den cuenta, por ejemplo, de un sujeto autorrealizado. Algunos investigadores, como Wabha y Bridwell (1976), en una revisión extensa utilizando la teoría de Maslow, encontraron escasas evidencias de que este orden de necesidades de Maslow fuese así, o de que existiera jerarquía alguna. Sin embargo algunos eventos científicos demostraron el pleno interés del ser humano por auto-actualizarse y tender a un nivel más alto de satisfacción. Un segundo cuestionamiento que se le hace a la teoría de Maslow, concierne a su soporte metodológico, pues el propio autor indica que habló con un número reducido de personas, que él consideraba autorrealizadas, y que de esas conversaciones llegó a conclusiones acerca de lo que es la auto-actualización. También hizo observaciones sobre la vida, escritos y hechos de personajes históricos —desde Abraham Lincoln hasta Albert Einstein, pasando por Mahatma Gandhi— y de ellas obtuvo también conclusiones sobre las B-needs y su impacto en los procesos motivacionales del crecimiento. Estos procedimientos metodológicos son carentes de científicidad a diversos investigadores y críticos de Maslow; por lo que se encuentra como una defensa a dichas críticas al trabajo de Maslow es que él consideró siempre que su trabajo debía ser la base de futuras investigaciones y esperaba que otros investigadores fueran más rigurosos. Es en éste sentido que se considera no dar paso a la duda del carácter científico de los trabajos realizados por Maslow —el padre del humanismo en los Estados Unidos—, pues toda su vida fue un psicólogo conductista de fuertes convicciones fisiológicas. Dejando un legado a los futuros investigadores, y en su momento busco refrescar el panorama conductual de su tiempo —permeado por el frío conductismo y el estereotipado psicoanálisis— contribuyendo de ésta manera, incluir en la psicología de su tiempo “lo mejor del ser humano”. La tercera crítica más difícil de contraatacar, es que Maslow pusiera tanta limitación en la auto-actualización. Por su parte Kurt Goldstein (1934) y Carl Rogers (2000), utilizaron una frase para referirse a lo que todo ser viviente hace: tratar de crecer, a ser más, a satisfacer su destino biológico. Maslow lo redujo a solo el dos por ciento de lo que la especie humana logra. Y mientras que Rogers defendía que los bebés son el mejor ejemplo de auto-actualización humana, Maslow lo consideraba como algo que solo se alcanza en los jóvenes y eso, raramente.

Un punto de crítica hacia la teoría en cuestión, de Maslow, es, que éste se ocupa de la atención de nuestras necesidades básicas, antes de que la auto-actualización entre en escena. Y sin embargo, se pueden encontrar muchos ejemplos de personas que exhiben aspectos propios de la auto-actualización y que han estado lejos de haber tenido sus necesidades básicas llenas. Muchos de nuestros mejores artistas y autores, por ejemplo, sufrieron de pobreza, mala crianza, neurosis, psicosis y depresión. Si pensamos en Galileo, que defendía ideas de las que se retraería bajo el yugo de la Inquisición de la Iglesia Católica, o en Rembrandt, que apenas podía dejar comida en una mesa, o Toulouse Lautrec, cuyo cuerpo le atormentaba, o van Gogh quien, además de pobre, “no estaba muy bien de la cabeza”, podemos ver en ellos casos que contradicen los postulados de Maslow. Es evidente que estas personas estaban en algún estado de la auto-actualización.

Como muchas otras “evidencias empíricas”, contra las conclusiones de Maslow, se tiene el trabajo creativo —emanado de las B-needs— de los prisioneros judíos en los campos alemanes de concentración; destacando el trabajo de Víctor Frankl —El Hombre en búsqueda de sentido—, quien desarrolló su terapia en uno de esos campos.

Unas palabras finales sobre la psicología humanista, y sobre la mayoría de los desarrollos en el campo de la psicología en general, es que ésta tiene que ver con lo humano; esto es, lo que atañe a las personas, a

personas reales en vidas reales y poco o nada que ver con modelos informáticos, análisis estadísticos, comportamientos en ratas, puntuaciones de tests y laboratorios.

La factibilidad de la teoría de Abraham Maslow en la administración, se torna pertinente, al considerar el tema de la motivación —del latín «motus», movido; y «motio», movimiento— siendo central en la mercadotecnia, la dirección, el liderazgo y en los sistemas de compensaciones para estimular el desempeño del personal de una empresa. Si bien las diferentes teorías explican las formas en cómo las personas se ven impelidas a actuar, no existen, sin embargo, formas únicas de motivar a todas las personas, en un mismo lugar y en todo tiempo. El consenso entre psicólogos apunta que la motivación tiene que ver con los estímulos que mueven a las personas a realizar determinadas acciones y a persistir en ellas hasta la culminación de una tarea. En este sentido, la motivación se compagina con la voluntad, el interés, el ardor, los bríos, el carácter, el arresto y la determinación.

Las teorías emanadas desde la psicología sostienen que la motivación es un proceso y todas ellas tratan de explicar cómo se origina y cuáles son sus efectos en la conducta observable. Empero, a los administradores les interesa un tipo especial de motivación, la motivación laboral. La tesis consensada entre los tratadistas y psicólogos —clínicos y organizacionales— es que la motivación conlleva a una persona a actuar hacia de un determinado modo para satisfacer sus necesidades, creando o aumentando así el impulso o resorte necesario para ejecutar la acción, o bien para que deje de hacerla. Un sujeto motivado hacia la tarea —el trabajo o el desempeño— es un individuo apartado de la recreación, la holganza, la indiferencia, la dejadez o la desidia, o bien, simplemente apartado de otras áreas de su vida que no inciden en el lugar y momento de realización de su trabajo.

Abraham Maslow propuso una teoría general de la motivación y la personalidad que ha sido vista como ideal para su aplicación en el campo de la gerencia; la realidad es que Maslow estuvo más ocupado en formular una psicología humanista que enriqueciera las visiones tradicionales del comportamiento, visto desde el conductismo y desde el psicoanálisis, que en proponer una nueva manera de hacer que las personas fueran más productivas en la industria y en las empresas. Muchos de los enfoques de la administración —hay que admitirlo— no llegaron a ella desde la propia administración, sino desde la psicología, la sociología, la economía, la antropología y la ingeniería industrial. Por ello, no existe una ciencia administrativa, sino más bien, lo que existen son ciencias de la administración. Mucho menos puede postularse que la administración sea, ella misma, una ciencia. Sin embargo, los administradores pretender ser científicos —siempre que el trabajo ejecutivo se los permita— y ello les inclina a conocer y aplicar lo que puedan de las ciencias que apoyan el quehacer gerencial.

METODOLOGÍA

En esta investigación se propone que la Teoría de la Jerarquía de las Necesidades de Maslow, constituye una explicación exitosa del proceso de la motivación; además de lo cual, en su parte empírica, se busca demostrar que en la práctica administrativa —ya en la dirección o en el diseño de programas de compensación al personal— sus preceptos, si bien explicativos, nos permiten hacer uso de los mismos de una manera articulable para la construcción de programas de compensación.

Objetivo de la investigación

Identificar la forma en cómo la jerarquía de necesidades, según Maslow, determina correlacionalmente la motivación y el desempeño de los trabajadores de la empresa Casa Ahued, de la ciudad de Xalapa, Veracruz.

Justificación

La Teoría de Maslow no fue construida con rigor científico. El propio autor indica que, para formularla, seleccionó un grupo de personas cercanas a él, las que consideró auto actualizadas —autorrealizadas— y a las que entrevistó respecto de sus experiencias motivacionales. Incluso, comenta que revisó la vida y obra de personajes de la historia como Lincoln, Mahatma Gandhi o Albert Einstein, cuyos ejemplos de vida le permitieron apoyar los fundamentos de su jerarquía.

Esta investigación se hace para:

1. Comprobar las formas en cómo funciona la jerarquía de atención de necesidades, en los procesos motivacionales y de dirección gerencial en una empresa de la ciudad de Xalapa, Veracruz.
2. Proporcionar elementos para comprender mejor la realidad explicada por la propia teoría.
3. Enriquecer la práctica de los gerentes en su papel de directores y motivadores del personal a su cargo.

Para la recolección de los datos, se diseñó un instrumento tipo encuesta, aplicado a una muestra de la empresa casa Ahued, siendo 17 empleados los que la componen, ya que se tomo a una de las ocho sucursales que componen a la empresa ya indicada, la cual se encuentra ubicada en la avenida Clavijero, de la Ciudad de Xalapa, Veracruz. El instrumento fue construido de acuerdo a la siguiente tabla como se muestra a continuación, considerando recopilar información relacionada a cada una de las jerarquías de necesidades mencionadas por Maslow.

Tabla 1: Categorización de Ítems

Ítems	Jerarquía de atención de necesidades de Maslow	
2, 6, 7, 8, 9, 10, 13, 18, 22, 24	Moralidad, creatividad, espontaneidad, falta de prejuicios, aceptación de hechos, resolución de problemas.	autorrealización
2, 5, 10, 15, 17, 18, 19, 20, 23, 24	Auto reconocimiento, confianza, respeto, éxito.	Reconocimiento
2, 4, 9, 16, 17	Amistad, afecto, intimidad sexual.	Afiliación
2, 3, 8, 12, 14, 16, 21, 25	Seguridad física, de empleo, de recursos, moral, familiar, de salud, de propiedad privada.	Seguridad
1,2, 7, 11, 16	Respiración, alimentación, sexo, descanso, homeostasis.	Fisiológicas

La tabla número 1, describe la manera en como quedaron ubicados los ítems del instrumento de recolección de datos de acuerdo a las categorías de la jerarquía de necesidades de Maslow, comenzando con el último nivel en la primera línea y terminando con la primera de las necesidades en la quinta fila de la tabla anterior, prefigurando a la representación en el triangulo de las necesidades según la teoría que se estudia.

Se procedió a realizar una base de datos, después de lo cual se construyeron cuadros de frecuencia y graficas de barras, para su análisis de frecuencias respectivo.

El tipo de investigación que se realizó fue cuantitativa, no experimental, transversal, en el considerando de que se analizaran de manera estadística datos numéricos, no existe manipulación de los datos obtenidos de manera intencional, ni asignación al azar, y la recolección de los datos, se realizó en un solo momento (Hernández Sampieri y otros, 2008)

RESULTADOS

Los resultados se distribuyen en tres fases de análisis, en la primera se encuentran cuatro gráficas que representan el orden de importancia de las necesidades que según los empleados deben de tener satisfechas para lograr ser eficientes y eficaces al realizar su tarea encomendada; la segunda fase representa una comparación entre dos tipos de necesidades, seleccionando la mas importante entre ellas, principalmente

entre la ultima necesidad según Maswel con el resto de ellas, es decir la autorrealización con respecto a las demás; y por último, se representa gráficamente el estado motivacional en el que se encuentran los empleados de acuerdo a las necesidades satisfechas que según ellos respondieron que se sienten.

Primera fase

Figura 1: Nivel de importancia de necesidades fisiológicas, del 1ª nivel de la jerarquía de necesidades de Maslow, que deben de tener satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 5 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, 1 respiración, 1 descanso, 1 ausencia de enfermedad, 14 alimentación y 0 sexo)

En la figura número 1, se observa que según el deber ser, de los empeados con respecto a las necesidades fisiológicas, en orden de importancia, mencionaron que en primer lugar deben de tener atendida la necesidad de alimentación, con una frecuencia de 14 de ellos que seleccionaron con la opción número 1, en segundo lugar consideraron que debe de estar satisfecha la necesidad del descansos con una frecuencia de siete que fueron los que eligieron como primera necesidad en segundo orden de importancia, en tercer orden de importancia despues del descanso con mayor frecuencia, pero ya mencionada por mayoría de menciones en primer orden de importancia, se encuentra la ausencia de enfermedades, en orden numero cuatro de importancia, se la dan a la respiración y finalmente como ultimo orden de importancia que según deben de tener atendida dicha necesidad se encuentra el sexo.

Figura 2: Nivel de importancia de necesidades de seguridad, del 2ª nivel de la jerarquía de necesidades de Maslow, que deben de ser satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 7 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, se tiene con 2 de frecuencia a las necesidades físicas, con 1 de frecuencia a las necesidades familiares, 2 de empleo, 3 de salud, 3 de recursos, 0 de propiedad privada y 6 de moralidad)

Para el segundo nivel de atencion de necesidades, la cual tiene que ver con la seguridad, los encuestados respondieron, de acuerdo a la figura 2 que, en primer lugar deben de tener atendido para efectuar adecuadamente sus labores, aspectos que tienen que ver con lo moral, en segundo lugar con una frecuencia

de 8 concordaron que la seguridad de salud es un elemento que deben de tener atendida en ese orden de importancia, en tercer lugar de importancia 7 respondieron que la seguridad de lo familiar deben de tener atendida, en cuarto lugar de orden de importancia resaltaron en una misma frecuencia aspectos de seguridad físicas, de empleo y de recursos, sin embargo, como quinto elemento en orden de importancia que consideraron deben de tener atendido predominó el aspecto relacionado con los recursos, así como en sexto orden de importancia y quedando en ultimo orden de importancia aspectos de seguridad con respecto a propiedad privada.

Figura 3: Nivel de importancia de necesidades de afiliación, del 3^a nivel de la jerarquía de necesidades de Maslow, que deben de ser satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 3 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, 7 amistad, 8 afecto y 2 intimidad sexual)

Para el tercer nivel según el triangulo de necesidades de Maslow, se observa en la figura anterior que, en primer lugar de orden de importancia con 8 de frecuencia se encuentran los aspectos de afecto, que tienen que ver con la necesidad de afiliación; en segundo orden de importancia concordaron diez de los encuestados que deben de ser atendidos aspectos de amistad; y por último aspectos de intimidad sexual, los cuales contribuirán a desarrollarse eficiente y eficazmente en sus tareas respectivas.

Figura 4: Nivel de importancia de necesidades de reconocimiento del 4^a nivel de la jerarquía de necesidades de Maslow, que deben de ser satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 4 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, 0 autorreconocimiento, 1 éxito, 5 confianza y 11 respeto)

En la figura número 4, se logró observar que en primer orden de importancia, de elementos que tienen que ver con el cuarto nivel de gerarquía de necesidades de Maslow, relacionado con el reconococimiento, con mayor frecuencia en primer orden de importancia está el respeto, en segundo orden de importancia está la confianza, el tercer orden de importancia seleccionaron a el éxito y por último al autorreconocimiento con 10 de frecuencia.

Figura 5: Nivel de importancia de necesidades de autorrealización, del 5^a nivel de la jerarquía de necesidades de Maslow, que deben de ser satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 6 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, 3 moralidad, 0 falta de prejuicios, 5 creatividad, 7 aceptación de hechos, 0 espontaneidad y 2 resolución de problemas)

Para el último, nivel de la jerarquía de Maslow, en la figura 5 relacionado con la autorrealización, se encontró que en primer orden de importancia de aspecto que deben de tener atendido es la aceptación de hechos con 7 de frecuencia según los encuestados, en segundo orden de importancia se encuentra la falta de prejuicios con respecto a su persona, lo cual les permitirá trabajar adecuadamente, en tercer orden de importancia se observa que a la resolución de problemas, en cuarto orden de importancia de elemento a tener satisfecho dentro de la jerarquía que se comenta tiene que ver con la espontaneidad, en quinto orden de importancia la falta de prejuicios y por último la creatividad.

Segunda Fase

Figura 6: Nivel de importancia de jerarquía de necesidades según Maslow que deben de ser satisfechas para estar motivado en tu desempeño laboral. (Donde 1 es mas importante y 5 menos importante)

El orden de aparición de cada barra es como se identifica su referencia según la columna de etiqueta que aparece al lado derecho, (ejemplo con selección 1 de orden de importancia, 1 fisiológicas, 2 afiliación, 1 autorrealización, 8 seguridad y 5 reconocimiento)

Para la figura 6, que tiene que ver con la jerarquías propiamente propuestas por Maslow, en orden de importancia, los encuestados concluyeron de acuerdo a sus respuestas que en primer orden de importancia la necesidad que debe de ser atendida debe de ser la de seguridad, en segundo lugar la necesidades fisiológicas, en tercer lugar las de autorrealización, en cuarto lugar las necesidades de afiliación y por último las necesidades de reconocimiento, haciendo un comparativo del orden según la propuesta del autor de referencia, son las fisiológicas, las de seguridad, las de afiliación, las de reconocimiento y finalmente las de autorrealización, en ese orden de importancia, variando con relación a lo mencionado por los entrevistados

Jerarquía según encuestados	VS	Jerarquía según A. Maslow
Reconocimiento		autorrealización
Afiliación		Reconocimiento
autorrealización		Afiliación
Fisiológicas		Seguridad
Seguridad		Fisiológicas

Observando algunas diferencias, en el supuesto de las nuevas situaciones que la sociedad vive, esperando en primer lugar sentirse seguros en aspectos laborales, de salud, físicos, salud, entre otros, para después en segundo lugar satisfacer necesidades de carácter fisiológicas, resaltando que la autorrealización la esperan en tercer lugar antes del reconocimiento como ultimo grado de importancia a atender, así como los aspectos de afiliación que lo dejan como antepenúltimo grado de importancia, suponiendo que aspectos de amistad, compañerismo son dejados para que en conjunto pueda darse el reconocimiento después de haberse autorrealizado, atendido necesidades fisiológicas y de seguridad.

Figura 7: Nivel de importancia comparativo entre el quinto y el resto de los niveles de jerarquía de necesidades según Maslow, según debe de estar satisfecho para lograr una motivación adecuada en el desempeño laboral.

Cada sección de item muestra el mas importante seleccionado por los encuestados, entre cada par de necesidades básicas según se compara.

En la figura 7, se presenta un comparativo entre el último nivel de acuerdo a la jerarquie de Maslow y el resto de ellas, en donde los encuestados deberían de seleccionar cual de ellas debía ser atendida antes, para lograr un adecuado desempeño en sus labores, concluyendo de lo observado que entre la autorrealización y las fisiologicas, las fisiologicas son las que predominan en orden de importancia, en éste orden de ideas, de entre la autorrealización y las necesidades de seguridad, predomina las de autorrealización; de entre las necesidades de afiliación y autorrealización, ellos consideran mas importante las de autorrealización y por último de entre la autorrealización y el reconocimiento, consideran de mayor importancias las necesidades de reconocimiento; en éste sentido se puede observar que las necesidades de mayor importancia que sobresalen son las fisiologicas, las de autorrealización y las de reconocimiento, dejando en última instancia las de seguridad y por último las de filiación.

Tercera Fase

En la figura 8, se muestra el grado de satisfacción de las necesidades de acuerdo a los ítemes que se muestran, considerando para el ítem 11 la necesidad fisiológica, para el ítem 12 la necesidad de seguridad, para el ítem 13 la necesidad de autorrealización, para el ítem 15 la necesidad de reconocimiento y para el ítem 17 la necesidad de afiliación, abarcando de ésta manera cada una de las necesidades según Maslow, a partir de lo cual, se podrá tener una fotografía de la mitad de la atención de las mismas en los empleados encuestados, resultando que en la atención de las necesidades de tipo fisiológicas, 16 se sienten satisfechos y uno no respondió, para las necesidades de seguridad, se logró observar que es una necesidad no satisfecha y que será necesario prestar atención a ésta por parte de quienes la dirigen para eficientar en los diversos procesos que se realizan al interior de la misma; para las necesidades de autorrealización, se observa que tampoco se encuentra satisfecha en los empleados encuestados, señalando signos de alarma los cuales deben de ser atendidos de manera urgente; para las necesidades de reconocimiento, los empleados en su mayoría

no se sienten satisfechos con esta necesidad; y finalmente para las necesidades de afiliación, se observa que un poco mas del 50% de los empleados notan satisfecha ésta necesidad y un poco mas del 40% consideran menianamente satisfechos, encontrando que uno señala que no está satisfecha ésta necesidad.

Figura 8: Estado motivacional de los empleados de acuerdo a los niveles de jerarquía según Maslow.

Item 11: Nivel de satisfacción de necesidades fisiológicas, Item 12: Nivel de satisfacción de necesidades de seguridad, Item 13: Nivel de satisfacción de necesidades de autorrealización, Item 15: Nivel de satisfacción de necesidad de reconocimiento, e Item 17: Nivel de satisfacción de necesidades de afiliación.

CONCLUSIONES

Por lo tanto, puede concluirse, que de acuerdo a los resultados obtenidos, y respecto a los objetivos planteados, se comprueba que la forma en cómo funciona la jerarquía de atención de necesidades, en los procesos motivacionales y de dirección gerencial de la empresa Casa Ahued, no son los mas adecuados, ya que de acuerdo a la figura número 8, se pudo observar como en una fotografía el nivel de atención de necesidades de los empleados encuestados, los cuales a no tener satisfechas sus necesidades básicas, puede redundar en un desempeño no adecuado de sus funciones. Por otro lado, a partir de lo anterior, se pudieron encontrar nuevos elementos que pudieran servir para ampliar la investigación, en el sentido de cómo la jerarquía de Maslow según su propuesta cambia el orden de acuerdo a la sociedad en la cual se vive en México, pudiendo anteponerse la necesidad de seguridad antes de las fisiológicas, según lo observado en la figura número 6. Por lo tanto, existe una tarea urgente que atender por parte de los directivos de la empresa Casa Ahued, para atender los focos rojos que ya han quedado establecido de acuerdo al estado motivacional en que se encuentran los trabajadores encuestados, sin particularizar a algunos, lo cual se sugiere dar atención de manera general, evitando lastimar susceptibilidades y señalizando a alguno en particular, todo en beneficio tanto de los trabajadores como de los resultados de la empresa misma, encaminándola hacia el éxito continuo.

RENDRUS: EJEMPLO DE UNA RED INSTITUCIONAL

Gabriel Héctor Carmona Olmos, Tecnológico de Monterrey Campus Morelia

Yesmín Israde Juárez, Tecnológico de Monterrey Campus Morelia

RESUMEN

El objetivo de la presente investigación es evaluar la gestión del conocimiento y la colaboración que se produce en la red de productores comunitarios en México (RENDRUS), con el fin de verificar la utilidad del talento y la experiencia compartida entre ellos mediante la identificación de sus fortalezas, debilidades, oportunidades y amenazas (FODA) de sus organizaciones; así como para establecer el impacto de su participación en la red en el desarrollo económico de sus comunidades. Una muestra de 50 organizaciones se han considerado, de los cuales, 34 han estado participando en eventos nacionales RENDRUS. Adicionalmente se presenta, un FODA relacionado a la RENDRUS, teniendo en cuenta las siguientes medidas con el fin de mejorar su desempeño y resultados: 1.ª: aclarar los criterios de selección de las empresas; acción 2: establecer un plan de vigilancia que permita proporcionar formación y asesoramiento para la obtención de apoyo financiero, acción 3: desarrollar un plan de trabajo y las etapas de seguimiento y evaluación para las empresas participantes, la acción 4: generación de categorías para agrupar empresas en la misma industria al evaluarlas en los eventos y competencias, acción 5: generar una base de datos para documentar el antes y después de la implementación del plan de trabajo y mejora los resultados comparativos; y la acción 6: desarrollar un directorio de asesores en las áreas de contabilidad, administrativos y de exportación que de apoyo y orientación para la implementación de planes de trabajo y mejora.

PALABRAS CLAVE: Red empresarial, transferencia de conocimiento, mejores prácticas, análisis FODA.

RENDRUS AS AN EXAMPLE OF AN INSTITUTIONAL NETWORK

ABSTRACT

The objective of this research is to evaluate knowledge management and collaboration that occurs between RENDRUS community producers network in Mexico, in order to verify how is useful is the talent and experience shared between them by identifying their strengths, weaknesses, opportunities and threats (SWOT) and by establish the impact of their participation in RENDRUS on the economic development of their communities. A sample of 50 organizations have been considered, of which, 34 have been participating at RENDRUS national events. Adittional to the the producers SWOT, a Rendrus Network SWOT has been developed, considering the following actions in order to improve its performance and results: Action 1: clarify the selection of participating companies by criteria of public knowledge; action 2: establish a monitoring plan that allows providing training and advice for obtaining financial support, action 3: develop a work plan and monitoring and evaluation stages for participating companies, action 4: generation of categories to consider companies in the same industry to be evaluated in events and competitions, action 5: generate a database to document the before and after implementation of the work plan and improves comparative results; and action 6: develop a directory of advisers in administrative, accounting areas, and export that will support and guidance for the implementation of work plans and improvement.

JEL: M110, M140, M210

KEYWORDS: Networking, knowledge trasnfer, improvement, SWOT analysis.

INTRODUCCIÓN

La Red Nacional de Desarrollo Rural Sustentable (RENDRUS), busca generar una sinergia entre aquellos empresarios rurales que han logrado desarrollar proyectos exitosos para ser ejemplo de otros dirigentes, promoviendo así la difusión del conocimiento y el intercambio de experiencias para proyectarlos entre los diferentes grupos de interés como inversionistas, compradores, instancias de gobierno, organizaciones locales, institutos de investigación, entre otros.

Estudios realizados por el Colegio de Postgraduados en Ciencias Agrícolas (COLPOS) permitieron observar la existencia, en la práctica, de Redes Sociales con diferentes funciones como el financiamiento, la sinergia a nivel local, el intercambio y la difusión de información, las relaciones de mercado, capacitación, entre otras. Es por esto, que la SAGARPA decidió impulsar foros de intercambio, para evitar que la dispersión de las Redes Sociales, provocara un desaprovechamiento del conocimiento y las relaciones que pueden potenciarse a través de RENDRUS.

REVISIÓN DE LITERATURA

Freel (2000) afirma que las empresas exitosas son aquellas que establecen una amplia variedad de relaciones con organizaciones que les permiten obtener conocimiento y experiencia, señalando que preferentemente dichos vínculos contribuyen a una integración vertical de la cadena de valor.

Hansen (1995) establece que el ingrediente esencial para la construcción de una eficiente red empresarial son las relaciones sociales, y que los dirigentes pueden realizar mejor su trabajo al enfocarse en el proceso de obtención de recursos escasos. Este proceso inicia con el reconocimiento de los activos que la organización posee, para posteriormente establecer sus deficiencias y necesidades e identificar aquellas redes que poseen dichos recursos, y finalmente proceder a la incorporación de dichos elementos escasos en la estructura y procesos de la organización.

METODOLOGÍA

El objetivo de la presente investigación es evaluar la gestión del conocimiento y la colaboración que se presenta entre los productores participantes de la RENDRUS para verificar el aprovechamiento del talento y la experiencia compartida entre ellos mediante la determinación de sus fortalezas, oportunidades, debilidades y amenazas (FODA), así como establecer el impacto de la participación de los productores rurales en la RENDRUS, en el desarrollo económico propio y el de sus comunidades.

Para realizar el análisis mencionado, se tomó una muestra de 50 organizaciones, de las cuales 34 han sido participantes en los eventos de RENDRUS, para conocer sus opiniones respecto a los impactos que los foros han tenido en sus negocios.

RESULTADOS

Los resultados se muestran a continuación:

El análisis anterior permitió identificar aquellas afirmaciones recurrentes para determinar las fortalezas, debilidades, oportunidades y amenazas de los participantes de la red RENDRUS, y proceder a la elaboración de un análisis FODA mediante el cual puedan visualizarse alternativas estratégicas que permitan tener una mayor trascendencia en los productores rurales participantes. Freel (2000) al respecto señala que si bien es cierto, las empresas innovadoras deben estar al tanto de los cambios del entorno, es la administración eficiente de sus capacidades internas la que marca la diferencia.

Tabla 1: Análisis FODA Empresas Participantes en la Red RENDRUS

FORTALEZAS	DEBILIDADES
<ol style="list-style-type: none"> 1. Esencialmente procesos orgánicos, artesanales sin conservadores o edulcorantes. 2. Capacidad para adecuar el proceso productivo. 3. Entusiasmo y capacidad para organizar a los miembros de la comunidad. 4. Empresa familiar con roles definidos. 5. Obtención de insumos en la región. 	<ol style="list-style-type: none"> 1. Concentración de las actividades de dirección en el propietario. 2. Deficiente imagen del producto y empaque. 3. Dificultades para la presentación de garantías para la obtención de préstamos. 4. Nivel educativo de los trabajadores y de la comunidad en general. 5. Carencia de conocimientos administrativos y contables.
OPORTUNIDADES	AMENAZAS
<ol style="list-style-type: none"> 1. Propietarios con actitud innovadora y creativa. 2. Oportunidad de exportación. 3. Vinculación con instituciones educativas. 4. Diversificación concéntrica del producto. 5. Venta por volumen y/o vía internet. 	<ol style="list-style-type: none"> 1. Carente capacidad productiva instalada. 2. Deficiencia en las actividades de logística (transportación) y comercialización. 3. Desconocimiento para el cálculo de costos y precios. 4. Necesidad de asesoría para la obtención de certificaciones. 5. Carente práctica en el desarrollo de actividades de mercadeo y comunicación.

Fuente: Elaboración propia.

Considerando la evaluación de la red Rendrus a partir de las entrevistas realizadas con las 34 organizaciones participantes, se establece el siguiente cuadro que muestra sus fortalezas, debilidades, oportunidades y amenazas.

Tabla 2: Análisis FODA de las actividades de la Red RENDRUS

RENDRUS	FORTALEZAS	DEBILIDADES
	<p>Aprender de las experiencias de otros participantes.</p> <p>Permite conocer otros proyectos de inversión.</p> <p>Facilita el identificar las etapas del ciclo de vida de las organizaciones participantes.</p> <p>Los eventos sirven de vínculo entre las organizaciones y SAGARPA.</p> <p>Aprendizaje de acciones estratégicas con baja inversión.</p>	<p>La mecánica para la elección de las organizaciones participantes no está claramente definida.</p> <p>El ejercicio de evaluación no considera empresas de una misma industria.</p> <p>No existe un seguimiento con base en el desempeño de los participantes.</p> <p>El ejercicio no propicia el incremento de la participación de mercado.</p> <p>Carencia de apoyos y estímulos para las organizaciones ganadoras.</p>
OPORTUNIDADES	Acción 1: Establecer vínculos entre las organizaciones participantes para la integración de cadenas de valor y servicios de proveeduría.	Acción 1: Clarificar el proceso de selección de las empresas participantes, mediante criterios del conocimiento público.
Los participantes desean obtener capacitación.		
Gestionar apoyos en instancias gubernamentales.		
Gestionar accesos a fuentes de financiamiento.	Acción 2: Establecer un plan de seguimiento que permita brindar capacitación y asesoría para la obtención de apoyos financieros.	Acción 2: Desarrollar un plan de trabajo y etapas de evaluación y seguimiento para las empresas participantes.
Estimular la participación de productores rurales con prácticas exitosas.		
Propiciar la integración de cadenas de valor y servicios de proveeduría.		
AMENAZAS	Acción 1: Presentación de resultados comparativos una vez concluido planes de trabajo y mejora para los participantes.	Acción 1: Generación de categorías que considere empresas de una misma industria para ser evaluadas en los eventos y concursos.
Desinterés por los productores de participar nuevamente en las reuniones.		
Desprestigio de la red por participantes inconformes con el sistema de evaluación y premios.	Acción 2: Generación de una base de datos que documente los resultados comparativos previos y posteriores a la ejecución del plan de trabajo y mejora.	Acción 2: Desarrollar un directorio de asesores en las áreas administrativas, contables, y de exportación, que sirva de apoyo y orientación para la implementación de los planes de trabajo y mejora.
Desaprovechamiento de fondos de apoyo económico.		
Desmotivación al competir microempresarios con organizaciones ya consolidadas.		
Se carece de una base de datos actualizada de los participantes y memorias de los eventos.		

Cabe señalar que la SAGARPA ha detectado algunas de las deficiencias y oportunidades antes expuestas, y en el año 2013 ha redefinido a RENDRUS a partir de su visión: “Fortalecer y consolidar las micro, pequeña o medianas agro-empresas, que formen parte de la RENDRUS”. Ahora, el objetivo de RENDRUS es integrar en cadenas productivas y de valor a las agro-empresas por medio de un modelo de trabajo multidisciplinario, para lo cual ha establecido los siguientes indicadores:

Número de empresas diagnosticadas.

Número de beneficiarios de la estrategia.

Así mismo, se utilizarán indicadores de impacto que reflejen:

Número de agro-empresas fortalecidas y consolidadas.

Agro-empresas vinculadas con alianzas estratégicas.

Sin embargo, estos indicadores se vinculan con aspectos cuantitativos, más que cualitativos, que midan la eficiencia de las acciones de mejora implementadas.

ANÁLISIS COMPARATIVO: RED RENDRUS VERSUS OTRAS REDES

Una red puede tener diferentes propósitos como compartir información, interrelacionarse con otras personas, descubrir información, integrar información descubierta, acceder a ideas innovadora, integrarse creando nuevos negocios, colaborar con los integrantes de la red, entre otros. Las personas que se involucran en una red, deben definir exactamente que desean obtener de ella, que patrones y niveles de conectividad deben seguir, y evaluar si son los mejores para lograr sus metas, las redes les deben ayudar a reconocer oportunidades o desafíos y a coordinar respuestas apropiadas a los cambios del entorno. Aún en los casos de emprendimiento Ripollés y Blesa (2006) nos señalan que “los emprendedores deben estar conscientes de que su participación en las redes sociales, lejos de ser una pérdida de tiempo, constituye una fuente de recursos valiosos para el desarrollo de nuevas oportunidades de negocios, que a su vez se traducen en el crecimiento de sus empresas”.

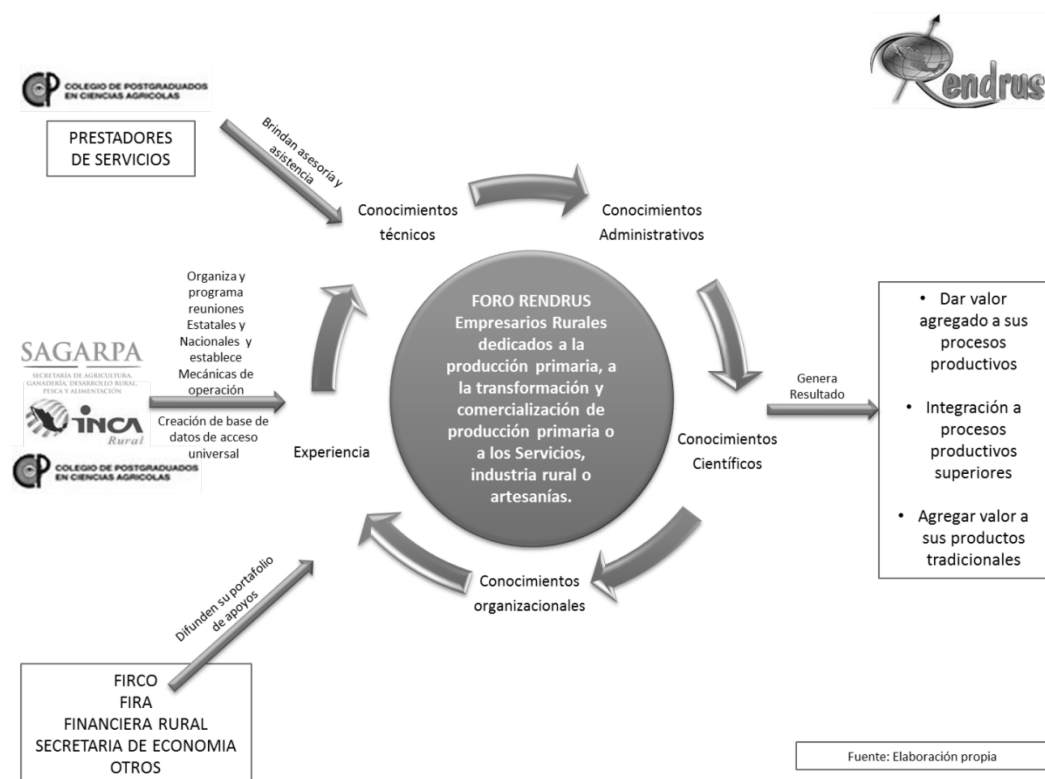

Iniciemos por describir el ciclo anual de la Red Nacional de Desarrollo Rural Sustentable (RENDRUS), el cual inicia a través de una convocatoria abierta realizada en cada entidad federativa, en donde se invita a los empresarios rurales a participar en la Reunión Estatal de Intercambio de Experiencias Exitosas. Ellos no deberán haber participado en los últimos tres años en alguna reunión nacional, y tendrán que registrar el proyecto en las ventanillas establecidas por la entidad federativa, así como entregar la Presentación del proyecto en formato power point.

Durante el evento estatal celebrado en cada entidad federativa, los propios productores participantes seleccionaran los 6 mejores proyectos para que formen parte de la Memoria Anual de la RENDRUS, de los cuales los 2 mejores representaran a su entidad en el evento nacional. Evento en donde los propios productores a través de su calificación vertida en la cédula de evaluación de cada uno de los proyectos, seleccionaran los 3 mejores a nivel nacional.

Con la finalidad de que los proyectos seleccionados como los mejores, puedan contar con la calidad requerida se recomienda que cada mesa de trabajo cuente con un experto en la materia, este experto podrá ser de alguna universidad, centro de investigación u otra instancia relacionada con el sector. Su función principal será calificar a las empresas participantes en su mesa y entregar al coordinador del evento la evaluación final de cada una de las organizaciones participantes.

La evaluación de los productores, se analizaran de manera conjunta con la emitida por el experto, buscando de esta manera que exista una mayor calidad en la selección de los proyectos ganadores.

El siguiente diagrama permite visualizar el funcionamiento de RENDRUS.

Sin embargo, la creación de redes, es una estrategia que resulta de una cooperación o coalición de empresas en función de un objetivo común, en la que cada participante mantiene independencia jurídica y gerencial, pero en la que se buscará el beneficio para todos los miembros involucrados en la red. Gulati et al (2011) señalan que los elementos de una red que explican el eficiente desempeño de una organización son tres: el alcance, que tan diversa es la red y hasta que distancia permite establecer conectividad; riqueza, esto es que tan valiosos son los recursos que una red ofrece; y receptividad, que cantidad de mecanismos o canales brinda la red para establecer comunicación.

Así los productores rurales y los propietarios y dirigentes de agro negocios en México, han generado e integrado redes alternas a RENDRUS. El objetivo del presente apartado es establecer las ventajas de las redes que presentan 7 organizaciones de los Estados de Guanajuato, Michoacán, Puebla y Veracruz, y que nunca han participado dentro de la red RENDRUS, y que corresponden a:

Puebla: Miacocina: Empresa que surge en 1997, dedicada a la venta de chipotles en vinagre gracias a una receta de la abuela de uno de los propietarios. Esta organización surge ante la necesidad de la propietaria, Licenciada en Turismo Norma, de obtener una fuente ingresos, ya que su esposo se había quedado sin trabajo.

Veracruz: Toritos La Chata: Empresa registrada como Pequeño Contribuyente, dedicada a la venta de cerveza y la bebida denominada Torito. Su propietario es Licenciado en Administración de Empresas y funge como el actual Presidente de la Asociación de Restauranteros del Estado de Veracruz. La organización surge como la primera cantina de raya en el pueblo de la ciudad de boca del río en 1925. Sus principales mecanismos de penetración y desarrollo de mercado son muestras gastronómicas en Europa en restaurantes en Francia y España, así como en los Estados Unidos de América, además de la vinculación de

la bebida “Torito” con las fiestas de la comunidad de Santa Ana. La organización cuenta con el distintivo M (Moderniza).

Michoacán: Huertas de Aguacates Loma Teñida y Ario de Rosales. Miembro de la Asociación de Productores y Empacadores Exportadores de Aguacate de Michoacán, A.C. (APEAM, A.C.)

APEAM es fundada en 1997, esta asociación de productores y exportadores de aguacate está organizada por municipios por más de 6,800 productores y 34 emparadoras exportadoras certificadas tanto por las autoridades mexicanas como de los Estados Unidos de América. Las Huertas Loma Teñida y Ario de Rosales se encuentran registradas en dicha agrupación, ya deben estar certificadas para poder vender el fruto con calidad de exportación, cumpliendo las normas mexicanas y del Departamento de Agricultura de los Estados Unidos de América (USDA), por lo que cada propietario de una Huerta contrata agrónomos para que les brinden asesoría en cuanto al manejo del fruto, como gremio celebran juntas de sanidad vegetal, y monitorean los insecticidas permitidos. APEAM exporta los aguacates a Estados Unidos, Canadá y Japón.

Guanajuato: Grupo NU3: La organización fue fundada por el señor Guadalupe García Valladolid en el año de 1951, siendo su principal giro las granjas de cerdo, para después continuar con el negocio el Sr. Enrique García Árciga en el año 1978. Ubicado en la comunidad de Santa Ana Pacueco, Municipio de Pénjamo, Guanajuato, Grupo NU3, se distingue como una organización diversificada a partir de su producto principal que es el cerdo, por lo que completa la cadena de valor con la producción de semillas, agroquímicos, alimento para vacas y cerdos; carnicerías, rastro, alimento y tiendas para mascotas, servicios financieros mediante una SOFOM. Sus productos se venden en tiendas de autoservicio del grupo Wal-Mart y en comercios al detalle en los Estados de Michoacán, Jalisco y Guanajuato.

Michoacán: Los Ángeles Plastics: Organización con 60 empleados que surge en el año 2008, dedicada a procesar el plástico a partir de polipropileno (PET). El PET llega en pacas de los diferentes Estados de la República Mexicana, para una vez convertido en plástico ser exportado a los Estados Unidos de América y China a través del Puerto de Lázaro Cárdenas.

Michoacán: Artesano de Juguete Tradicional de la comunidad de Paracho: Martín Homero Romero es Artesano de juguete tradicional de la comunidad de Paracho, quien fabrica trompos, yoyos y pirinolas, quien ha ganado concursos de la Casa de las Artesanías del Estado de Michoacán. Los artesanos se han agrupado en la Unión de Artesanos de Michoacán (UNIAMICH) que maneja el Gobierno del Estado, pero la comercialización no se ha sido grupal, sino de manera individual, por lo que son dependientes de los precios que les fija la Casa de las Artesanías o los dirigentes de las tiendas a las que venden individualmente.

CONCLUSIONES

A continuación se presenta un cuadro que muestra las ventajas de la Red RENDRUS en comparación con las redes de las 7 organizaciones antes descritas.

Cabe señalar que un elemento muy importante en las redes es la flexibilidad, ya que las empresas pueden conectarse o desconectarse a las mismas, de acuerdo a sus necesidades de aprendizaje e innovación. Por lo que un empresario permanecerá en una red, siempre y cuando ella le permita obtener un beneficio para su organización, y este es el reto a que la red RENDRUS se enfrenta, es decir, el brindar un servicio que sobrepase el de un concurso. Al respecto Huggins (2000) afirma que para que exista un intercambio y proceso de interacción valioso en una red, debe prevalecer una relación de confianza y un deseo de pertenencia, basado en elementos formales y la mecánica de los grupos informales.

RED	VENTAJAS
Red RENDRUS	<ol style="list-style-type: none"> 1. Facilita aprender de las experiencias de otros participantes. 2. Permite conocer otros proyectos de inversión. 3. Facilita el identificar las etapas del ciclo de vida de las organizaciones participantes. 4. Los eventos sirven de vínculo entre las organizaciones y SAGARPA.
Otras REDES	<ol style="list-style-type: none"> 1. Transferencia del conocimiento, habilidades y oficio de una generación a otra (herencia familiar). 2. Generación de planes de negocios e innovaciones en procesos productivos a través del vínculo con Universidades y Centros de Investigación. 3. Capacidad de incrementar el poder de negociación en los procesos de compra-venta por volumen. 4. Obtención de capacitación y asesoría tanto de instituciones privadas, como gubernamentales. 5. Vínculos con medios de comunicación: radio y televisión. 6. Participación en Cámaras de Comercio y Asociaciones Gremiales. 7. Capacidad para la obtención de financiamiento mediante la banca privada y de desarrollo. 8. Fortalecimiento en la integración de cadenas de valor y unidades de negocio concéntricas. 9. Vínculos con organismos certificadores. 10. Integración de actividades de logística y comercialización. 11. Participación y organización de ferias, exposiciones y concursos.

METODOLOGÍA PARA LA MEDICIÓN DEL POTENCIAL ECOTURÍSTICO EN LOS OASIS SUDCALIFORNIANOS DE MÉXICO

Perla Yamely González Núñez, Universidad Autónoma de Baja California Sur
Francisco Isaías Ruiz Ceseña, Universidad Autónoma de Baja California Sur

RESUMEN

Este trabajo tiene origen con estudios anteriores realizados dentro de los trabajos del Proyecto “Opciones productivas con aprovechamiento sustentable del agua para las comunidades rurales de los 5 municipios sudcalifornianos con principales puntos de oasis”; proyecto que dio inicio en el año de 2011 cuando se decide dar comienzo al Proyecto Estratégico de Desarrollo Sustentable: Oasis Sudcalifornianos, promovido por el Gobierno del Estado de Baja California Sur. El presente trabajo se enfoca en el análisis de 8 oasis de los más de 171 que se encuentran en B.C.S. (Breceda, et. al. 2010) , para el caso de estudio estos son los oasis determinados: Oasis de San Ignacio y Oasis Mulegé (Municipio Mulegé), Oasis San Javier (Municipio Loreto), Oasis La Purísima, Oasis San Isidro, Oasis de San José y San Miguel de Comondú (Municipio Comondú) y en el Municipio de Los Cabos el Oasis El Chorro. Para el análisis de las localidades asentadas en torno a estos Oasis se he dividido el trabajo en dos vertientes, la primera en relación al análisis de las variables endógenas naturales de las mismas determinando así su potencialidad, y por otro lado, un breve análisis de las variables exógenas, haciendo uso de la información a través de una herramienta similar al Modelo WEF se determinará cuáles de estos sitios cuentan con las características que los hagan competitivos en cuanto al desarrollo de negocios de ecoturismo se refiere.

PALABRAS CLAVE: Ecoturismo, Competitividad, Potencial, Negocios, Oasis.

METHODOLOGY FOR THE MEASUREMENT OF ECOTOURISM POTENTIAL IN THE BAJA CALIFORNIA SUR OASIS OF MEXICO

ABSTRACT

This work originated with previous studies in the work of the Project "productive options to sustainable use of water for rural communities of the 5 sudcalifornianos Municipalities main points oasis"; project that began in the year 2011 when it was decided to begin the Strategic Sustainable Development Project: Oasis Baja California Sur, promoted by the Government of Baja California Sur. This paper focuses on the analysis of 8 oasis of over 171 that are in BCS For the case study here are the specific oasis: Oasis of San Ignacio and Oasis Mulege (Mulege municipality) Oasis San Javier (Municipio Loreto), Oasis La Purísima, San Isidro Oasis, Oasis of San Jose and San Miguel de Comondú (Municipality Comondú) and the municipality of Los Cabos Oasis El Chorro. For analysis of settled villages around these Oasis have split the work in two ways, first in relation to the analysis of natural endogenous variables of the same thus determining its potential, and on the other hand, a brief analysis of the exogenous variables, using the information through a similar tool Model WEF will determine which of these sites have features that make them competitive in the development of ecotourism businesses are concerned.

KEYWORDS: Ecotourism, Competitiveness, Potential, Business, Oasis.

INTRODUCCIÓN

Para iniciar nuestro estudio es necesario comprender como se conforma el sector terciario en México, el cual corresponde a todas aquellas actividades que no se dedican a la producción de bienes materiales propiamente, excluye las labores de campo, la extracción de minerales y todas las ramas de la industria. Este sector terciario es conocido también como sector de servicios cuyas características fundamentales es que sus productos sean efímeros, ya que sólo duran el tiempo de la transacción, son intangibles o inmateriales y en esencia no pueden ser almacenados (Atlantida, Cordoba y Ordoñez, 2006). El tema de la competitividad visto desde la perspectiva del negocio, en la actividad turística no se ha visto desprotegida de ser incluida como una rama de la economía con un intenso dinamismo, de forma tal, que para el año 2013 generó 1,197 miles de millones de dólares a nivel global y en México dejó una derrama de 13.9 miles de millones de dólares, lo que le represento al país una variación porcentual del 9.5% con respecto al año anterior.

En el caso de México en lo que respecta a la percepción de turistas esta fue de 2,599.5 miles de personas en lo que va del 2015 contra 2,274.4 miles de personas registradas durante todo 2014; en lo que a derrama de divisas se refiere en 2014 estas fueron por \$1,389.1 Millones de dólares y en lo que va de este año estas alcanzan un \$1,583.8 Millones de dólares.

De acuerdo al Barómetro del Turismo Mundial México ocupa el Décimo Quinto puesto en lo que a llegadas de turistas se refiere, siendo superado por países como Francia, E.E.U.U., España, China, Italia, Turquía, Alemania, Reino Unido, Rusia, Tailandia, Malasya, Hong Kong, Austria y Ucrania. (Barómetro del Turismo OMT)

En cuanto al rubro de divisas por turismo internacional México ocupa el Vigésimo tercer lugar superado por casi las mismas naciones que lo superan en afluencia, en cuanto al gasto del turismo internacional decae al vigésimo noveno sitio superándolo países americanos como Brasil.

Con base a lo antes mencionado el desarrollo del turismo de naturaleza ha demostrado un notorio crecimiento a nivel mundial (Eagles et al., 2002), lo que es visto por los gobiernos como una oportunidad para conjugar la conservación de la naturaleza con el desarrollo económico de los territorios aledaños (OMT, 2010). Lo cual hace importante implementar estrategias basadas en la correcta planificación de las actividades turísticas al interior de México que permita por un lado aprovechar las ventajas naturales que presentan algunas entidades federativas con respecto a otras, y por otro lado las ventajas competitivas que como nación se han desarrollado para facilitar la vida de los residentes de las localidades y para ser cada vez más partícipes de un mundo más globalizado e interrelacionado.

REVISIÓN DE LITERATURA

El concepto de competitividad es complejo, dado que adolece de un sentido objetivo y, además, tiene un carácter multidimensional. Por otra parte, la competitividad se puede aplicar a un amplísimo rango de entidades económicas, desde una nación, hasta un producto o servicio determinado, pasando por una región, un municipio, un sector económico, una corporación empresarial o una empresa individual (Sánchez y Fajardo, 2004).

En el concepto de competitividad se generan dos puntos de vista uno es desde el punto de vista macroeconómico: “La competitividad es el grado en el que una nación puede, bajo condiciones de mercado libres y equitativas, producir bienes y servicios que superan las pruebas de los mercados internacionales, manteniendo y aumentando, simultáneamente, los ingresos reales de sus habitantes a medio y largo plazo” (World Economic Forum, 2011:18). Y por otra parte, desde un enfoque microeconómico: “La competitividad es la capacidad de una organización pública o privada, lucrativa o no, de mantener

sistemáticamente ventajas comparativas que le permitan alcanzar, sostener y mejorar una determinada posición en el entorno socioeconómico” (Porter, 1990:83).

Hablando de la competitividad turística desde el punto de vista de (Scott y Lodge, 1985) y (Murphy et al, 2000:44:50), para estos investigadores, la competitividad de los destinos turísticos parece estar relacionada únicamente con la posición relativa de los mismos en los mercados turísticos. Sin embargo, Crouch y Ritchie consideran que la cuestión esencial de la competitividad turística es la que se relaciona con la prosperidad económica de sus habitantes. Dado que los destinos compiten principalmente por motivos económicos, intentando atraer el mayor gasto turístico posible, el análisis de la competitividad turística debería centrarse en la prosperidad económica a largo plazo, siendo éste el criterio que debe emplearse para valorar la competitividad de un destino turístico (Crouch y Ritchie, 1999).

Por lo tanto, cuando se trata de analizar la competitividad de los destinos turísticos, Crouch y Ritchie (1999) introducen la teoría de la ventaja comparativa y de la ventaja competitiva. Las ventajas comparativas vienen dadas por los factores o recursos con los que cuenta el territorio y que han posibilitado que se configure como un destino turístico. Entre ellos, cabe destacar los recursos naturales (playas, montaña, clima, etc.), las condiciones socioeconómicas (actitud población local hacia la actividad, disponibilidad de mano de obra, etc.), la regulación y políticas utilizadas para fomentar la actividad turística (fiscalidad, incentivos, subvenciones, etc.). Se trata, pues, de aquellos elementos que condicionan la situación de partida y que han constituido el núcleo del paradigma de desarrollo turístico predominante hasta el momento. Sin embargo, las ventajas competitivas son aquellas estrategias implementadas por el destino para gestionar de forma eficiente sus recursos a lo largo del tiempo. Así, el hecho de que un destino cuente con importantes ventajas comparativas no implica necesariamente que sea competitivo, si, por ejemplo, no se ha preocupado de poner en valor esos recursos, de valorar el papel que podría jugar el turismo en su desarrollo socioeconómico, etc.

En contraposición, un destino turístico con escasas ventajas comparativas puede llegar a ser altamente competitivo si conoce sus fortalezas y debilidades, si diseña un plan estratégico de aprovechamiento de sus recursos, etc. Por consiguiente, la competitividad de un destino turístico no sólo está relacionada únicamente con la cantidad de recursos que posea el mismo, sino también, y sobre todo, con la gestión eficiente de esos recursos. (Cárdenas García, 2011).

Siguiendo lo anterior se hace necesario para la población sudcaliforniana, la búsqueda de alternativas para lograr este desarrollo, por lo que en este trabajo de investigación aplicado se pretende construir una herramienta que pueda ser utilizada como primer paso para la elaboración de dicha estrategia al determinar por una parte la potencialidad de los oasis en Baja California Sur basada en las variables endógenas naturales (ventajas comparativas) y por otro lado, determinando la competitividad del destino en base a las variables exógenas y/o ventajas competitivas adquiridas o desarrolladas.

Las alternativas de desarrollo de un sector económico son determinadas por la variedad de maneras en el que se desarrollan las actividades inherentes a él, en el estado de Baja California Sur los distintos niveles de gobierno (estatal, municipal y local) se enfrentan a una problemática de tipo cuello de botella, donde se encuentran enfrascados en lo concerniente a la toma de decisiones en una incapacidad total derivado de la constante indagación por las vocaciones reales que pudiesen otorgarle identidad y certidumbre a las empresas familiares locales, en su mayoría micros y pequeñas, por tanto no es exagerado decir que en esta cuestión la actividad turística no se encuentra exenta de dicho argumento, más bien lo padece de forma severa.

Lo que no debe de perderse de vista es el hecho de que las actividades y proyectos en el sector turismo, pero sobre todos aquellos relacionados con el turismo no convencional como lo es el caso que nos ocupa (Ecoturismo), se debe hacer uso de los recursos naturales cuidando en todo momento su preservación, de

forma tal que pueda hablarse de un desarrollo económico sostenible que permita a las nuevas generaciones contar con alternativas para su inserción en el mercado laboral.

Se han desarrollado algunas metodologías bajo este propósito con miras a lograr medir por un lado la cuestión del potencial de un sitio para realizar en él mismo actividades vinculadas al sector turismo y por otro el detectar los determinantes de la competitividad turística que impactan en ese sector. Para lograr dilucidar con claridad cada aspecto que se considera importante contemplar para la elaboración de una herramienta de este tipo, a continuación de forma sucinta enlistaremos algunas de las principales aportaciones teóricas en las cuales se ha basado el desarrollo del presente trabajo como son modelo de competitividad de Porter, modelo de competitividad de Crouch-Ritchie, el modelo de competitividad de Kim y el modelo de competitividad de Dwyer-Kim

El *modelo de competitividad de Porter (1990)* establece que, dado que las empresas operan en un marco institucional y en países específicos, su posición competitiva está influenciada por el entorno del sector al que pertenecen, que generalmente se encuentra condicionado por los siguientes elementos: Condiciones de los factores productivos, condiciones de la demanda, características de los sectores vinculados, estrategia empresarial. Este modelo, que tiene un contenido más genérico, por lo que es aplicable a diferentes actividades económicas, no sólo a la actividad turística, incide en los factores microeconómicos que condicionan en la competitividad de un país o región en particular.

El *modelo de competitividad de Crouch y Ritchie (1999)* no es un modelo predictivo ni causal, sino simplemente explicativo. Los elementos de este modelo son los siguientes: Entorno competitivo (microeconómico), entorno competitivo (macroeconómico), Recursos principales y atractivos, factores y recursos complementarios, gestión del destino, determinantes de calificación. De esta forma, basándose en la distinción entre ventaja comparativa y ventaja competitiva, proponen un modelo de corte eminentemente teórico, aunque aplicable de forma específica a la actividad turística.

El *modelo de competitividad de Kim (2001)* considera cuatro fuentes de competitividad. Las fuentes primarias de competitividad están formadas por los sujetos (políticos, empleados, agentes de viajes, etc.), el entorno y los recursos (históricos, culturales y naturales). Las fuentes secundarias engloban la política turística, la planificación y la gestión del destino, las inversiones en el sector, y los impuestos y precios turísticos. Por otra parte, las infraestructuras turísticas, el sistema de alojamiento de los visitantes, el atractivo de los recursos, la publicidad y la cualificación de los recursos humanos del sector configuran lo que Kim denomina fuentes terciarias de competitividad. Finalmente, las fuentes cuaternarias de competitividad (a las que Kim considera el resultado de las tres fuentes anteriores) hacen referencia a la demanda turística, al empleo generado por el sector, al “comportamiento turístico” (tasas de crecimiento, balanza de pagos del sector, participación del sector en el PNB del país o región, etc.) y a la exportación turística. Estas últimas fuentes de competitividad son el output turístico, que se obtiene a partir de diferentes inputs (productividad del sector), por lo que las mismas son, per se, un indicador directo para la evaluación y la comparación de la competitividad.

El *modelo de competitividad de Dwyer y Kim (2003)* sigue el modelo conceptual anterior, aunque introduce algunas novedades importantes: En primer lugar, los recursos heredados y los recursos creados tienen, cada uno, su propia identidad, al igual que los factores y recursos complementarios. Estos tres factores se agrupan, a su vez, en una estructura superior, debido a que los mismos proporcionan las características que hacen que un destino turístico sea atractivo para los visitantes y las bases sobre las que se asentará una industria turística próspera. Estos tres factores configuran, por tanto, la base de la competitividad del destino turístico. Por otra parte, además de la gestión del destino, que ya consideraba el modelo anteriormente expuesto, este considera un apartado especial para las condiciones de la demanda, que incluyen tres elementos esenciales de la demanda turística, a saber: la conciencia turística, la percepción y las preferencias. De esta forma, la gestión del destino y las condiciones de la demanda forman las condiciones

locales, que pueden ejercer una influencia positiva o negativa sobre la competitividad. La competitividad del destino está influenciada por los determinantes de la competitividad anteriormente comentados, pero, a su vez, influye sobre la prosperidad socioeconómica, en el sentido de que la competitividad del destino es, en sí misma, un objetivo intermedio hacia otro objetivo mucho más importante, como es el bienestar socioeconómico de los residentes.

De esta forma, el modelo de Dwyer y Kim (2003) plantea un esquema para determinar la competitividad de un país como destino turístico, pero aplicable también a regiones, provincias, ciudades, etc. Esta investigación busca ser pionera al ofrecer una alternativa para la valoración de las potencialidades en materia de ventajas comparativas y competitivas que permitan valorar si los Oasis objeto de estudio son factibles de albergar proyectos vinculados con la actividad ecoturística, al apreciar a detalle las variables que permiten abstraer la realidad de forma más concreta que lo alcanzado hasta ahora, usando como base un método desarrollado para tal.

METODOLOGÍA

El Modelo de Calgary sirve de Modelo para el desarrollo de la siguiente propuesta para determinar por un lado el valor de las Variables Naturales que otorgan las ventajas comparativas de un lugar (en este caso los oasis), para tal fin se identifican las variables que tienen que ver de forma directa con el entorno de cada uno de los oasis que se analizan en el este estudio relacionado con la actividad ecoturística. Primeramente se evaluaron como variables internas las características generales o ventajas naturales del sitio o entorno de cada Oasis bajo los siguientes rubros y ponderación (Tabla 1):

Tabla 1. Matriz de Medición de Variables Naturales del Oasis (Valor Ponderado).

VARIABLE INTERNA	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					TOTAL IVNO
	FLORA (a)	FAUNA (b)	GEOMORFOLOGÍA (c)	CLIMA (d)	AGUA (e)	VALORACIÓN
PONDERACIÓN (%)	0.20	0.30	0.20	0.10	0.20	1.0

FUENTE: Elaboración Propia.

Donde:

Flora (a). Se valoraron las especies nativas (endémicas y no endémicas) e introducidas por el hombre.

Fauna (b). Especies endémicas y aquellas que no, se tomó en cuenta si existen animales migratorios en la zona. De ser así el puntaje otorgado es mayor, esta variable esta ponderada de forma elevada ya que se considera vital para las actividades ecoturísticas vinculadas con la educación.

Geomorfología (c). Se valora mas alto si la zona cuenta con geoformas como lagos, volcanes, calderas, acantilados, cañones, escurrimientos de basalto, etc. Con menor porcentaje si el terreno es poco escarpado tendiendo a plano, esto por el tipo de actividades turísticas que se limitan de ser así.

Clima (d). La valoración más alta es enfocada a los sitios que mantienen una temperatura media entre 15° y 20° (10%), valoración media (5%) a temperaturas promedio situadas en los rangos (10°C-14°C) y (21°C-25°), y por último el valor inferior de 0 a las situadas en los rangos extremos de (9°C hacia abajo) y (26°C hacia arriba); estos segmentos se consideraron así derivado de que son las temperaturas en las que se pueden realizar las actividades de Turismo rural de forma más cómoda.

Agua (e). Se le otorga a esta variable una alta puntuación debido a que el recurso hídrico es vital para este tipo de actividades sobre todo cuando se habla de Oasis.

IVNO: Índice de las Ventajas Naturales del Oasis. Entre más cercano a 1 mayor potencial natural para el Ecoturismo.

Las distintas ponderaciones en ambas tablas e indicadores aplicados se basa en la técnica del método Delphi que se centra en el trabajo con grupos de expertos en este tipo de actividades (no solo académicos sino empresarios), así como análisis del tipo de Focus Group (con gente que práctica el ecoturismo de forma habitual), estos grupos han definido los porcentajes expresados en la Tabla 1 y los expresados en la siguiente Tabla (Tabla 2) que muestra la valoración que se otorga a cada una de las variables que representan para el presente estudio a las ventajas competitivas analizado desde lo local.

Tabla 2. Tabla de Medición de las Variables a considerar para determinar la Competitividad basada en Ventajas Competitivas de los Oasis.

INDICE	VALOR (PONDERACIÓN %)
Tecnología	0.05
Precio	0.05
Vías de Acceso	0.1
Servicios Básicos	0.1
Factor Humano	0.3
Medio Ambiente	0.2
Patrimonio Cultural	0.2
ICO	1

FUENTE: Elaboración propia.

Donde:

Tecnología. Si el poblado cuenta con CPU's, acceso a TIC's (wifi), teléfono, radio y Televisión.

Precio. Referido a los precio de Hospedaje y alimentación del poblado tomando en cuenta la Paridad del Dólar.

Vías de Acceso. Si se cuenta con vías de acceso al poblado pavimentadas, si la carretera es Federal o Estatal e importancia de la misma.

Servicios Básico. Si se cuenta con alumbrado público, luz eléctrica en casas, agua potable, Servicios Médicos.

Factor Humano. Nivel de escolaridad de la población, Cultura de la población hacia los negocios en materia de Turismo y servicios.

Medio Ambiente. Cultura de la gente respecto al cuidado del medio ambiente, si se cuenta con programas de cuidado del entorno y PET.

Patrimonio Cultural. Se refiere si cuenta con Vestigios culturales prehispánicos, de la colonia, pinturas rupestres, tradiciones propias y procesos artesanales de producción.

ICO: Índice de Competitividad del Oasis. Entre más cercano a 1 mayor ventaja competitiva presenta para el desarrollo del Ecoturismo.

Con la información que se desprende de cada Tabla se puede inferir si el Oasis cuenta con las ventajas comparativas y competitivas necesarias para desarrollar en el actividades vinculadas al Turismo Alternativo en su rubro de Ecoturismo.

El denominado índice de potencial y competitividad del oasis (IPCO) se elabora con los resultados arrojados por las tablas que miden el potencial del oasis (Ventajas Comparativas) y la competitividad (Ventajas Competitivas). La fórmula del Índice de Potencial y Competitividad del Oasis (IPCO), considera una escala de 0 a 1 considerando de forma ponderada ambos tipos de ventajas (30% y 70%) y se expresa:

$$IPCO = [(IVNO*0.30) + (ICO*0.70)]$$

Donde:

IPCO = 1 El oasis cuenta con altas posibilidades de solventar y soportar actividades de Ecoturismo.

IPCO = 0 El oasis no cuenta con altas posibilidades de solventar y soportar actividades de Ecoturismo.

Nota: La Ponderación 30% a las ventajas comparativas y 70% a las competitivas se origina del hecho de que las actividades ecoturísticas hacen uso de criterios de educación ambiental, es decir, trabaja con la comunidad, de forma que se privilegian por tanto las variables vinculadas con el sector social-comunitario en relación con lo natural.

RESULTADOS

En el presente análisis se acoge como válida la propuesta de matriz que plantea (Bote,1997) adecuándola a las condiciones que presentan los Oasis sudcalifornianos seleccionados. Misma que comprende para nuestros caso los siguientes aspectos: Flora y fauna ya que estas variables son representativas en los oasis por su cantidad de especies endémicas así como migratorias. El aspecto geomorfológico pues este determinara los circuitos que se pudieran desarrollar en dichas áreas, en cuanto a la variable clima esta es un factor importante pues determinara el potencial de las actividades para los diferentes periodos climáticos

en los Oasis por último el factor agua siendo este indispensable para la vida y por ende para la práctica de cualquier actividad. (Vease Tabla 3)

Tabla 3. Entorno Natural (Modelo Ecoturístico Ventajas Comparativas)

VARIABLE INTERNA	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					IVNO
	FLORA (a)	FAUNA(b)	GEOMORFOLOGÍA (c)	CLIMA (d)	AGUA (e)	VALORACIÓ N
PONDERACIÓN (%)	0.20	0.30	0.20	0.10	0.20	1.00
Oasis San Ignacio	0.10	0.30	0.20	0.05	0.20	0.85
Oasis Mulegé	0.10	0.30	0.20	0.05	0.20	0.85
Oasis San Isidro	0.10	0.30	0.20	0.10	0.20	0.90
Oasis La Purísima	0.10	0.30	0.20	0.10	0.13	0.83
Oasis San José de Comundú	0.10	0.15	0.20	0.05	0.20	0.70
Oasis San Miguel de Comondú	0.10	0.15	0.20	0.05	0.20	0.70
Oasis San Javier	0.10	0.15	0.20	0.10	0.10	0.65
Oasis El Chorro	0.10	0.30	0.20	0.05	0.10	0.75

FUENTE: Elaboración propia.

Por lo anterior mencionado y una vez implementada dicha matriz nos arroja los siguientes resultados: Oasis San Isidro obtiene una valoración del 0.90 siendo su variable endógena más significativa la fauna de la región, geomorfología y agua obtienen un 0.20. Compartiendo un 0.10 las variables de flora y clima. A diferencia de sus seguidores los Oasis de San Ignacio y Mulegé siendo la diferencia el clima puesto que el Oasis de San Isidro pudiera ser visitado en cualquier época del año y los anteriores se debería prevenir fechas de intenso frío o calor dependiendo la estación. Oasis la Purísima con 0.83 de valoración final muestra una baja en el factor agua ya que este oasis depende del Oasis de San Isidro para su abastecimiento. Por su parte el Oasis el Chorro muestra una valoración total del 0.75 siendo su variable de más baja ponderación el clima pues manifiesta climas de muy fríos a muy calurosos. Por otro lado los Oasis de San Miguel y San José de Comundú muestran un 0.70 de su valoración total ya que muestran una baja en sus variables fauna y clima, tomando como base en la fauna las aves, el clima al igual que los Oasis de San Ignacio y Mulegé muestra climas extremos. Por último con un 0.65 de valoración total se encuentra el Oasis de San Javier con una baja en su variable agua ya que en la estación de verano muestra una baja en sus mantos acuíferos por su parte el factor clima muestra una ponderación del 0.15 pues al igual que los otros Oasis posee climas extremos dependiendo la estación del año en que estos sean visitados.

Modelo Ecoturismo Ventajas Competitivas

En el siguiente análisis de ventajas competitivas para los Oasis sudcalifornianos basándonos en el aporte que ofrece la metodología del Medidor de Competitividad (CM) que los autores Gooroochurn y Sugiyarto complementan desarrollando “un indicador sintético de competitividad, obteniendo una media ponderada de cada uno de los ocho indicadores compuestos, donde los pesos se han obtenido utilizando técnicas de análisis factorial”. Adaptada esta metodología a las características propias del ecosistema como lo son los Oasis tomando 7 de los 8 indicadores del CM, estos indicadores son: la tecnología, precio, vías de acceso, servicios básicos, factor humano, medioambiente y patrimonio cultural. (Véase Tabla 4)

Tabla 4. Ventajas Comparativas (Modelo Ecoturismo Ventajas Competitivas)

INDICE	VALOR (%)	Oasis San Ignacio	Oasis Mulegé	Oasis Javier	San Oasis La Purísima	Oasis San Isidro	Oasis Miguel Comondú	San Oasis de San José de Comondú	Oasis de El Chorro
Tecnología	0.05	0.05	0.05	0.025	0.033	0.033	0.0165	0.0165	0.0165
Precio	0.05	0.05	0.05	0.05	0.05	0.05	0.05	0.05	0.05
Vías de Acceso	0.1	0.1	0.1	0.066	0.066	0.066	0.066	0.066	0.033
Servicios Básicos	0.1	0.1	0.1	0.066	0.1	0.1	0.066	0.066	0.066
Factor humano	0.3	0.198	0.198	0.198	0.198	0.198	0.099	0.099	0.099
Medioambiente	0.2	0.2	0.1	0.2	0.2	0.2	0.2	0.2	0.2
Patrimonio Cultural	0.2	0.2	0.2	0.2	0.132	0.132	0.132	0.2	0.066
ICO	1	0.898	0.798	0.805	0.779	0.779	0.6295	0.6975	0.5305

Una vez implementada la matriz modificada de Gooroochurn y Sugiyarto obtenemos que el Oasis con mayor ventajas competitivas es Oasis San Ignacio con un 0.898 siendo las variables con mayor ponderación el medio ambiente, patrimonio cultural seguidos del factor humano con un 0.198 las vías de acceso y servicios básicos obtienen un 0.1, por ultimo encontramos la tecnología y el precio con un 0.05. Por otro lado el Oasis de San Javier muestra una disminución en su ICO total siendo este de 0.805 siendo las variables más bajas la tecnología, vías de acceso y los servicios básicos oscilando de un 0.025 a un 0.066 precio se mantiene fijo así como los factores medioambientales y patrimonio cultural. Seguidamente se encuentra el Oasis de Mulegé con un ICO del 0.798 siendo su variable de menor ponderación el factor humano y la mayor el patrimonio cultural. A diferencia de sus dos seguidores La Purísima y San Isidro que muestran un mismo ICO del 0.779 siendo sus variables las mismas ya que son pueblos que se encuentran aledaños y sus ventajas competitivas son muy similares. Los 3 Oasis con menor ponderación total son Oasis el Chorro y San Miguel y San José de Comondú estando en un parámetro de 0.6975 a 0.5305 manifestando una baja en las variables de vías de acceso y patrimonio cultural en la actualidad las vías de acceso para San José y San Miguel se encuentran con mejoras en cuanto a pavimentación se refiere.

La Tabla 5 Muestra el Resultado general en términos de Potencial y Competitividad para Ecoturismo de los distintos Oasis, demostrando que los Oasis más proclives a sostener actividades vinculadas con este tipo específico de turismo alternativo son los Oasis de San Ignacio, San Isidro, Mulegé, La Purísima y San Javier en ese orden, situando el desarrollo de este tipo de actividad en la parte norte del Baja California Sur.

Tabla 5. Resultados del Indicador de Potencial y Competitividad de Oasis (IPCO).

OASIS	VENTAJAS COMPARATIVAS (IVNO)	VENTAJAS COMPETITIVAS (ICO)	IPCO
San Ignacio	0.85	0.90	0.88
Mulegé	0.85	0.80	0.81
San Javier	0.65	0.81	0.76
La Purísima	0.83	0.78	0.79
San Isidro	0.90	0.78	0.82
San José de Comondú	0.70	0.70	0.70
San Miguel de Comondú	0.70	0.63	0.65
El Chorro	0.75	0.53	0.60

FUENTE: Elaboración propia.

CONCLUSIONES

Haciendo referencia a Crouch y Ritchie (1999) quienes introducen la teoría de la ventaja comparativa y de la ventaja competitiva.

Podemos señalar que las ventajas comparativas en los Oasis Sudcalifornianos vienen dadas por los factores o recursos con los que cuenta el territorio y que hacen posible que se tomen en cuenta con un posible destino ecoturístico en el caso para este trabajo podemos descartar los recursos naturales (flora, fauna, geomorfología, agua, clima, etc.). Si bien algunos de los 8 Oasis muestran números mas favorables que otros, se puede entender que existen una serie de temas por atender para que estos puedan funcionar como un destino turístico tomando en cuenta los resultados de cada una de las variables.

Ahora bien las ventajas competitivas de los Oasis Sudcalifornianos como bien sabemos son aquellas estrategias implementadas por el destino para gestionar de forma eficiente sus recursos a lo largo del tiempo. Por lo tanto aunque un destino cuente con importantes ventajas comparativas esto no quiere decir que pueda ser competitivo, como el Caso de Oasis el chorro quien muestra una ventaja comparativa del 0.75 pero su ventaja competitiva es del 0.5305.

En contraposición, un destino turístico como el Oasis de San Javier con una escasa ventaja comparativa (0.65) puede llegar a ser altamente competitivo (0.805) si conoce sus fortalezas y debilidades, si diseña un plan estratégico de aprovechamiento de sus recursos, etc.

Por tal motivo la competitividad turística no solo se relaciona con la cantidad de recursos que pueda tener un oasis, sino también, con la buena gestión de esos recursos.

En conclusión, mientras las ventajas comparativas hacen referencia al patrimonio turístico con que puede contar un destino y se dirige a una puntual actividad turística en este caso como lo es el ecoturismo, las ventajas competitivas nacen cuando se ven aplicadas políticas de planificación, de gestión y de comercialización sobre las ventajas comparativas, y que permiten al destino ser más competitivo que otros con mayor número de recursos.

El nuevo paradigma de la competitividad busca la rentabilidad de la actividad turística a largo plazo, es decir, pretende no sólo aumentar, sino también mantener, la capacidad de obtener beneficios a lo largo del tiempo. Por tanto, rompe con la idea que ha predominado hasta el momento: maximizar los beneficios a corto plazo, sin tener en cuenta los impactos negativos de la actividad turística en el entorno. La ventaja comparativa ya no garantiza el mantenimiento de la diferenciación del destino (Sancho, 2006).

EVALUACIÓN DEL POTENCIAL TURÍSTICO RURAL COMO LÍNEA DE ACCIÓN PARA EL DESARROLLO REGIONAL SUSTENTABLE EN LOS OASIS DE SAN ISIDRO Y LA PURÍSIMA, BAJA CALIFORNIA SUR MÉXICO

Javier Alberto Arce Meza, Universidad Autónoma de Baja California Sur
Francisco Isaías Ruiz Ceseña, Universidad Autónoma de Baja California Sur

RESUMEN

El presente trabajo de investigación nace del trabajo realizado dentro del Taller de Investigación Comercial, Aduanera y Observatorio de Negocios (TICAO) de la Universidad Autónoma de Baja California Sur el cual proviene de estudios anteriores realizados dentro de los trabajos del Proyecto “Opciones productivas con aprovechamiento sustentable del agua para las comunidades rurales de los 5 municipios sudcalifornianos con principales puntos de oasis”; este proyecto está anclado a la labor que empezó a realizarse en el año de 2011 cuando se decide dar comienzo al Proyecto Estratégico de Desarrollo Sustentable: Oasis Sudcalifornianos, promovido por el Gobierno del Estado de Baja California Sur. El presente trabajo se enfoca en el análisis de 2 oasis de los más de 171 que se encuentran en B.C.S. (Breceda, et. Al. 2010), para el caso de estudio estos son los oasis determinados: Oasis La Purísima y Oasis San Isidro, Baja California Sur. Para el análisis de las localidades asentadas en torno a estos Oasis se he dividido el trabajo en dos vertientes, la primera en relación al análisis de las variables endógenas naturales de las mismas determinando así su potencialidad, y por otro lado, un breve análisis de las variables exógenas, haciendo uso de la información a través de una herramienta similar al Modelo WEF se determinará cuáles de estos sitios cuentan con las características que los hagan competitivos en cuantos al desarrollo de negocios de turismo rural se refiere.

PALABRAS CLAVE: Turismo Rural, Competitividad, Potencial, Negocios, Oasis.

EVALUATION OF RURAL TOURISM POTENTIAL AS A LINE OF ACTION FOR REGIONAL SUSTAINABLE DEVELOPMENT IN THE OASIS OF SAN ISIDRO AND LA PURÍSIMA, BAJA CALIFORNIA SUR MEXICO

ABSTRACT

This research arises from work done within the Research Workshop Commercial, Customs and Observatory of Business (TICAO) of the Autonomous University of Baja California Sur which comes from previous studies in the work of the Project "productive options to use sustainable water for rural communities of the 5 sudcalifornianos Municipalities main points oasis "; this project is anchored to the work began to be held in the year 2011 when it was decided to begin the Strategic Sustainable Development Project: Oasis Baja California Sur, promoted by the Government of the State of Baja California Sur. This paper focuses on the analysis of 2 oasis of over 171 that are in BCS For the case study here are the specific oasis: Oasis Oasis La Purisima and San Isidro, Baja California Sur. For analysis of settled villages around these Oasis have split the work in two ways, first in relation to the analysis of natural endogenous variables of the same thus

determining its potential, and on the other hand, a brief analysis of the exogenous variables, using the information through a tool similar to Model WEF will determine which of these sites have features that make them competitive in few business development of rural tourism is concerned.

KEYWORDS: Rural Tourism, Competitiveness, Potential, Business, Oasis.

INTRODUCCIÓN

La integración del turismo a las regiones rurales, para diversificar sus actividades productivas o hacer un uso multifuncional del espacio, se ha propuesto como estrategia para el desarrollo del sector rural en diferentes países (Fleischer y Tchetchik, 2005; Brandth y Haugen, 2011), incluido México (Sánchez y Ramírez-Valverde, 2007; SECTUR- CESTUR, 2007).

En México, el sector turismo es de gran importancia para la generación de ingresos y empleos directos e indirectos (SECTUR, 2001). Por ello, mediante el turismo rural se busca mejorar el bienestar y reducir el estado de pobreza de las familias rurales (SECTUR-CESTUR, 2007). De tal manera, que el turismo rural se convierta en una actividad importante para promover el empleo, la vitalidad y sostenibilidad de las comunidades rurales (Hall et al., 2005).

En este escenario de complejidad y continuas transformaciones se encuentran plenamente inmerso los Oasis de La Purísima y San Isidro, Baja California Sur, es por lo anteriormente mencionado de vital importancia generar una estrategia basada en una correcta planificación de las actividades turísticas al interior de México que permita por un lado aprovechar las ventajas naturales que presentan algunas entidades federativas con respecto a otras, y por otro lado las ventajas competitivas que como nación se han desarrollado para facilitar la vida de los residentes de las localidades y para ser cada vez más partícipes de un mundo más globalizado e interrelacionado.

Se realizó una revisión literaria de las metodologías y se analizaron las diversas manifestaciones del turismo en el territorio rural, se definió el término potencial turístico del territorio así como el enfoque adoptado para su análisis en este documento. Posteriormente, se presenta el análisis de los métodos y enfoques de investigación documentados para la identificación del potencial turístico en sus diferentes modalidades en el territorio rural. Se discute la generación de nuevos paradigmas y métodos de investigación acordes a la complejidad del territorio.

REVISIÓN DE LITERATURA

Potencial Turístico

La medición de la potencialidad que ofrece el territorio para la puesta en marcha, el mantenimiento o la mejora de la actividad turística, viene marcada no solo por la presencia de atractivos, sino también por la variedad y concentración territorial, su accesibilidad y otros muchos aspectos de índole geográfica.

La identificación, a través de las técnicas de tipificación y clasificación y de inventario, de los componentes del patrimonio natural, cultural o paisajístico susceptible de constituirse en atractivo turístico, constituye la primera fase en el análisis del potencial turístico de una región, necesario aunque insuficiente al momento de ponderar su valor y su potencial (Dosso y Mantero, 1997).

Asimismo, conviene considerar que el nivel de atracción turística de cualquier espacio es variable debido a la presencia de diferentes atractivos que, casi siempre, se encuentran superpuestos en el territorio, pero también evolutiva como lo demuestra el cambio experimentado por las preferencias que manifiesta la demanda.

Dicha característica implica que utilizando diferentes métodos sea difícil cuantificar qué elemento o recurso actúa como auténtico impulsor del desarrollo turístico, sobre todo cuando nos centramos en tipos de turismo alternativo, de carácter natural o cultural, donde el atractivo turístico primordial aparece más difuminado que en otras tipologías, como el turismo de sol y playa.

Desarrollo Regional

En la actualidad nadie pone en duda la necesidad de la participación de los grupos locales para la promoción del desarrollo regional sustentable (Ávila, 1998; Blauert y Zadek, 1999; Enríquez, 1996; Pretty, 1995; Primack et al., 1999). Dicha participación implica, en un sentido más amplio, la construcción y movilización de los recursos territoriales, lo cual constituye el núcleo de la orientación endógena del desarrollo. A partir de este planteamiento, es pertinente discutir diversas facetas de esta orientación y su vínculo con el diseño de políticas públicas para el Desarrollo Regional Sustentable.

El desafío que enfrentan los grupos locales para impulsar el DRS puede sintetizarse en la siguiente proposición: establecer mecanismos institucionales que propicien la articulación de sus capacidades, individuales y colectivas, en un proceso orientado por la innovación sustentable (Morales, 1998b).

Así es evidente que la necesidad de articular los ámbitos regional, nacional e internacional obedece al reconocimiento del alcance limitado de las iniciativas localizadas a nivel comunitario o microrregional. “Las iniciativas locales están de hecho recurriendo cada vez más a los actores en los niveles meso y macro para el manejo sustentable de recursos locales, para fortalecer los intentos regionales e incluso transnacionales de lograr una sustentabilidad social y ecológica” (Blauert y Zadek, 1999).

Oasis Sudcalifornianos

El agua de la lluvia se almacena en cuencas a través de una red de drenaje hidrológico, lo que permite la recarga de los acuíferos. La única manera natural que permite el afloramiento de agua, sin la necesidad de tecnología y apertura de pozos, es a través de ojos de agua y manantiales. A pesar de su característica aridez, la Península cuenta con condiciones favorables para la presencia de estas fuentes de agua, que han permitido la biodiversidad y riqueza cultural desde hace por lo menos 12 000 años. En este contexto, podemos asegurar que los manantiales y ojos de agua han sido sitios clave para el establecimiento y sustento de las poblaciones tradicionales.

Dentro del contexto de zona desértica, los habitantes de la Península son afortunados por contar con una gran cantidad de sitios, que fueron identificados por Maya, Coria y Domínguez, como oasis: un total de 184, de los cuales 171 se encuentran en el estado Sur (Maya, et. Al 1997). Algunos cuentan con agua superficial permanente y otros con agua subterránea. Aun así, por su pequeña extensión, comparada con la gran extensión de desierto que los rodea, estos espacios representan menos del 1% del total de la superficie de la Península (Maya, et. Al 1997). Sin embargo concentran una enorme diversidad de flora y fauna, además de un enorme valor histórico y cultural, siendo los únicos sitios donde la vida humana ha podido florecer.

Estos sitios tienen una enorme importancia por los servicios y funciones ecológicas, económicas y estéticas que cumplen.

En el estado de Baja California Sur existen solo cuatro oasis con extensiones mayores a 2.0 km²; La Purísima y San Isidro (2.25 km²) representan el tercero en extensión, Wurl, Martínez y Imaz, (2014).

Competitividad Turística

La competitividad es uno de los conceptos más actuales de la economía del turismo. Spence y Hazard (1998) ponen de manifiesto que la competitividad es un concepto relativo y multidimensional que puede ser asociada a cuatro visiones distintas: ventajas comparativas o competitividad vía precios, perspectiva estratégica o dirección, perspectiva histórica y socio-cultural y desarrollo de indicadores de competitividad nacional. Aplicada a los destinos turísticos, la competitividad se asocia a la capacidad de un destino para proporcionar bienes y servicios superiores en aquellos aspectos valorados por los turistas, a los ofrecidos por destinos competidores (Dwyer y Kim, 2003).

De forma más concreta el concepto de competitividad aplicado al turismo se centra en la idea expresada por Hassan de que la competitividad turística se define como la capacidad de un destino para crear e integrar productos con valor añadido que permitan sostener los recursos locales y conservar su posición de mercado respecto a sus competidores (Hassan, S.S., 2000), o bien como dirían Ritchie & Crouch es “la capacidad de un país para crear valor añadido e incrementar de esta forma el bienestar nacional mediante la gestión de ventajas y procesos, atractivos, agresividad y proximidad, integrando las relaciones entre los mismos en un modelo económico y social” (Ritchie, J. R. B., & Crouch, G. I. 2003).

Es justo en el desarrollo de ventajas competitivas donde la tendencia en cuanto a las actividades relacionadas al turismo no convencional o de masas son aún más necesarias, cito el caso de las experiencias relacionadas con actividades del así llamado turismo alternativo como es el caso del Turismo Rural, donde el crear ventajas que permitan a los habitantes de las localidades competir si bien no en igualdad de circunstancias, si por lo menos haciendo uso de los determinantes con que cuenta de manera local para atraer al turista que gusta de experiencias que el gran turismo no puede ya brindarle y que se relacionan de forma más directa con la naturaleza y el entorno social más sencillo, lejos del bullicio de las urbes, por esta razón cada vez más las experiencias en tipo de estrategias se han ido desarrollando como es el caso del Reino Unido donde el aprovechamiento de este tipo de herramientas a permitido a las localidades adaptarse y crecer, esto fortalece a la empresa familiar hace uso de los recursos de manera eficiente y sostenible pero sobre todo genera un encadenamiento productivo entre los prestadores de servicios turísticos rurales y los empresarios locales en otras ramas de la economía dispuesto a ser partícipes de la experiencia, logrando así un mejoramiento de los niveles de bienestar basados en esta vinculación de tipo productivo (Haven-Tang, C., & Jones, E. (2012).

Por lo anterior, se hace necesario para la experiencia sudcaliforniana la búsqueda de diferentes opciones para lograr este ansiado estado de las cosas, por lo que es función de este trabajo de investigación aplicado, el construir una herramienta que pueda ser utilizada como primer paso para la elaboración de dicha estrategia al determinar por una parte la potencialidad de los oasis en Baja California Sur basada en las variables endógenas naturales (ventajas comparativas) y por otro lado, determinando la competitividad del destino en base a las variables exógenas y/o ventajas competitivas adquiridas o desarrolladas.

METODOLOGÍA

La Metodología que se aplica y desarrolla a continuación utiliza conceptos de cada una de las corrientes teóricas y de aplicación citadas con antelación, emulando al Modelo de Calgary se identifican a las variables que tienen que ver de forma directa con el entorno de cada uno de los oasis que se analizan en el presente trabajo estas son las ventajas comparativas, en términos de analizar los aspectos involucrados con lo emitentemente social, cultural o variables que son desarrolladas en el entorno de forma no natural se analizaran como un segundo proceso. Primeramente se evaluaron como variables internas las características generales o ventajas naturales del sitio o entorno de cada Oasis bajo los siguientes rubros y ponderación (Tabla 1):

Tabla 1. Matriz de Medición de Variables Naturales del Oasis (Valor Ponderado).

VARIABLE INTERNA	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					TOTAL IVNO
	FLORA (a)	FAUNA (b)	GEOMORFOLO GÍA (c)	CLIMA (d)	AGUA (e)	VALORACIÓN
PONDERACIÓN (%)	0.22	0.22	0.1	0.16	0.30	1.0

FUENTE: Elaboración Propia.

Donde:

Flora (a). Se valoraron las especies nativas (endémicas y no endémicas) e introducidas por el hombre.

Fauna (b). Especies endémicas y aquellas que no, se tomó en cuenta si existen animales migratorios en la zona. De ser así el puntaje otorgado es mayor.

Geomorfología (c). Se valora más alto si la zona cuenta con geoformas como lagos, volcanes, calderas, acantilados, cañones, escurrimientos de basalto, etc. Con menor porcentaje si el terreno es poco escarpado tendiendo a plano, esto por el tipo de actividades turísticas que se limitan de ser así.

Clima (d). La valoración más alta es enfocada a los sitios que mantienen una temperatura media entre 15° y 20° (16%), valoración media (8%) a temperaturas promedio situadas en los rangos (10°C-14°C) y (21°C-25°), y por último el valor inferior de 0 a las situadas en los rangos extremos de (9°C hacia abajo) y (26°C hacia arriba); estos segmentos se consideraron así derivado de que son las temperaturas en las que se pueden realizar las actividades de Turismo rural de forma más cómoda.

Agua (e). Se le otorga a esta variable la mayor puntuación debido a que el recurso hídrico es vital para este tipo de actividades sobre todo cuando se habla de Oasis.

IVNO: Índice de las Ventajas Naturales del Oasis. Entre más cercano a 1 mayor potencial natural para el Turismo rural.

Tabla 2. Tabla de Medición de las Variables a considerar para determinar la Competitividad basada en Ventajas Competitivas de los Oasis

INDICE	VALOR (PONDERACIÓN %)
Tecnología	0.1
Precio	0.05
Vías de Acceso	0.1
Servicios Básicos	0.1
Factor Humano	0.3
Medio Ambiente	0.15
Patrimonio Cultural	0.2
ICO	1

FUENTE: Elaboración propia.

Donde:

Tecnología. Si el poblado cuenta con CPU's, acceso a TIC's (wifi), teléfono, radio y Televisión.

Precio. Referido a los precios de Hospedaje y alimentación del poblado tomando en cuenta la Paridad del Dólar.

Vías de Acceso. Si se cuenta con vías de acceso al poblado pavimentadas, si la carretera es Federal o Estatal e importancia de la misma.

Servicios Básicos. Si se cuenta con alumbrado público, luz eléctrica en casas, agua potable, Servicios Médicos.

Factor Humano. Nivel de escolaridad de la población, Cultura de la población hacia los negocios en materia de Turismo y servicios.

Medio Ambiente. Cultura de la gente respecto al cuidado del medio ambiente, si se cuenta con programas de cuidado del entorno y PET.

Patrimonio Cultural. Se refiere si cuenta con Vestigios culturales prehispánicos, de la colonia, pinturas rupestres, tradiciones propias y procesos artesanales de producción.

ICO: Índice de Competitividad del Oasis. Entre más cercano a 1 mayor ventaja competitiva presenta para el desarrollo del Turismo Rural.

Las distintas ponderaciones en ambas tablas e indicadores aplicados se basa en la técnica del método Delphi que se centra en el trabajo con grupos de expertos en este tipo de actividades (no solo académicos sino empresarios), así como análisis del tipo de Focus Group (con gente que practica el turismo rural de forma habitual), estos grupos han definido los porcentajes expresados en la Tabla 1 y los expresados en la siguiente Tabla (Tabla 2) que muestra la valoración que se otorga a cada una de las variables que representan para el presente estudio a las ventajas competitivas analizado desde lo local.

Con la información que se desprende de cada Tabla se puede inferir si el Oasis cuenta con las ventajas comparativas y competitivas necesarias para desarrollar en el actividades vinculadas al Turismo Rural.

El denominado índice de potencial y competitividad del oasis (IPCO) se elabora con los resultados arrojados por las tablas que miden el potencial del oasis (Ventajas Comparativas) y la competitividad (Ventajas Competitivas). La fórmula del Índice de Potencial y Competitividad del Oasis (IPCO), considera una escala de 0 a 1 considerando de forma ponderada ambos tipos de ventajas (35% y 65%) y se expresa:

$$IPCO = [(IVNO \cdot 0.35) + (ICO \cdot 0.65)]$$

Donde:

IPCO = 1 El oasis cuenta con altas posibilidades de solventar y soportar actividades de Turismo Rural.

IPCO = 0 El oasis no cuenta con altas posibilidades de solventar y soportar actividades de Turismo Rural.

Nota: La Ponderación 35% a las ventajas comparativas y 65% a las competitivas se origina del hecho de que las actividades de turismo rural hacen mayor hincapié a las actividades con la comunidad visto desde lo rural, por lo que se privilegia las variables vinculadas con el sector social-comunitario sobre lo natural.

RESULTADOS

Ventajas comparativas

En el presente apartado se describen los resultados obtenidos de las variables internas sobre el entorno natural, los coeficientes de ponderación para las categorías de recursos naturales elegidos suman en total 1 los cuales se muestran en la (tabla 3), se ajustaron las ponderaciones establecidas con base a las características de los oasis estudiados.

Tabla 3. Matriz de Medición de Variables Internas (Naturales) de los Oasis y su Ponderación.

VARIABLE INTERNA	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					IVNO
	FLORA (a)	FAUNA(b)	GEOMORFOLOGÍA (c)	CLIMA (d)	AGUA (e)

Oasis SAN ISIDRO	0.11	0.22	0.10	0.16	0.30	0.89
Oasis LA PURÍSIMA	0.11	0.22	0.10	0.16	0.20	0.79

FUENTE: Elaboración Propia.

El resultado obtenido al aplicar la matriz de medición de las variables internas nos dice que el oasis de San Isidro tiene mayores ventajas competitivas que el oasis de La Purísima debido a que el recurso agua se distribuye por gravedad y primero tiene que cruzar por San Isidro, lo cual hace que la disponibilidad no sea la ideal; cómo podemos observar en el resto de las variables hay una paridad y se encuentran en la media del valor máximo de cada una de ellas.

Ventajas Competitivas

Estas ponderaciones en ambos instrumentos es derivado del hecho que no todas las variables inciden de igual manera sobre el potencial y la competitividad del lugar objeto de estudio, por tanto, es basado en la opinión de pequeños grupos y a través del método Delphi y grupos de expertos en este tipo de actividades, así como análisis del tipo de Focus Group (con gente que práctica el turismo rural de forma habitual) que se han obtenido tales porcentajes y que se utilizan para la realización de este estudio, a continuación se describen en la (tabla 4); Las variables consideradas fueron 7 las cuales se describen a continuación:

1. Tecnología.- se refiere al acceso que tienen los habitantes a CPU, Internet, WI-FI, TV's, Teléfono y Radio.
2. Precio.- Se refiere al precio que tienen los servicios de alimentos y hospedaje ya que son los servicios que ofrecen los oasis al momento.
3. Vías de Acceso.- Se refiere a las vías de acceso que tienen los oasis, terrestre, aérea o la cercanía de puertos; y a su vez el estado de las mismas.
4. Servicios Básicos.- Se toma en cuenta si hay luz eléctrica, comercios, agua potable y Servicios médicos.
5. Factor Humano.- Toma en cuenta la disponibilidad de las personas hacia la cultura de los negocios y el nivel de estudios de las mismas.
6. Medio Ambiente.- Se refiere a la preparación que tienen los habitantes en cuanto a educación manejo de los recursos naturales y temas de conservación.
7. Patrimonio Cultural.- Se refiere a los vestigios prehispánicos, los procesos tradicionales que desarrolla las personas y el arte rupestre.

Tabla 4. Resultados de Ventajas Competitivas.

INDICE	VALOR (PONDERACIÓN %)	OASIS DE SAN ISIDRO	OASIS DE LA PURÍSIMA
Tecnología	0.05	0.066	0.066
Precio	0.05	0.05	0.05
Vías de Acceso	0.1	0.066	0.066
Servicios Básicos	0.1	0.1	0.1
Factor humano	0.3	0.198	0.198
Medioambiente	0.2	0.15	0.15
Patrimonio Cultural	0.2	0.132	0.132
ICO	1	0.762	0.762

FUENTE: Elaboración propia.

El resultado de la implementación de la matriz para determinar las ventajas competitivas nos arroja como resultado una paridad en ambos oasis; lo rescatable de esta paridad es que el valor que obtuvieron es de 0.762 muy cercano a 1 que es el valor ideal para cumplir con los parámetros aptos para el desarrollo de actividades de turismo rural; es importante resaltar que las variables claves para el desarrollo del turismo

rural son el factor humano y patrimonio cultural los cuales están por encima de la media, tomando en cuenta que en ambos oasis no se llevan a cabo actividades de turismo formalmente; lo cual nos dice que cumplen con los requisitos para el desarrollo de actividades turísticas.

Tabla 5. Resultados del Indicador de Potencial y Competitividad de Oasis (IPCO).

OASIS	VENTAJAS COMPARATIVAS (IVNO)	VENTAJAS COMPETITIVAS (ICO)	IPCO
La Purísima	0.79	0.76	0.77
San Isidro	0.89	0.76	0.81

FUENTE: Elaboración propia.

El resultado del Indicador de Potencial y Competitividad de Oasis (IPCO) arroja que el Oasis de San Isidro presenta mayor posibilidad para desarrollar las actividades relacionadas al turismo rural, pero el Oasis de La Purísima con un 77% de valor de indicador presenta oportunidad para el desarrollo del turismo alternativo en este rubro.

CONCLUSIONES

Tras la realización de este trabajo destacamos las siguientes conclusiones que sirven para corroborar la complementariedad entre diferentes metodologías para evaluar el potencial turístico del territorio.

Analizando los resultados de la dos matrices implementadas en este estudio nos damos cuenta que tanto el oasis de San Isidro como el de La Purísima, tiene una similitud en el potencial para el desarrollo de turismo rural; solo en las variables comparativas o internas San Isidro obtiene una mayor ponderación debido a que el recurso agua es muy abundante independientemente la época del año; y el cual es indispensable para el desarrollo de cualquier actividad en el medio rural.

El enfoque de la investigación determina la prioridad hacia la inclusión de determinadas características del territorio en el análisis de su potencial de turismo rural, para obtener los resultados fue necesario migrar a enfoques de investigación pluridisciplinarios, donde se construyan métodos mixtos para abordar las múltiples dimensiones que comprenden la complejidad del territorio rural y el fenómeno turístico. Aunado a ello, es necesario que las investigaciones partan de una conceptualización definida sobre los elementos que integran el turismo rural y el objetivo de éste, que guíen el análisis de potencial. Además, el desarrollo del turismo rural en los oasis de San Isidro y La Purísima dependerá en gran medida del paradigma, las bases teóricas, el desarrollo de políticas públicas enfocadas a las características específicas de los oasis y el desarrollo de metodologías para la creación de los mismos. Lo cual está ligado al desarrollo de espacios de reflexividad, discusión y retroalimentación en este tema, para generar proyectos turísticos lo más apegados a las necesidades reales de los diversos espacios rurales.

RESUMEN

La presente investigación es un caso práctico realizado con metodología mixta integrando tareas interdisciplinarias de análisis de contenido y discurso en dos instancias académicas de la Universidad Autónoma de Baja California, la Facultad de Ciencias Sociales y Políticas y el Instituto de Investigaciones Sociales, instituciones que registraron, en formatos de video incompatibles con reproductores multimedia actuales, actividades de índole social e histórico. Actualmente es poco común encontrar hogares u oficinas con videocintas, ya que es necesario para su reproducción un aparato especializado que en la actualidad se halla con dificultad. Resulto relevante la recuperación de información, la catalogación y la gestión de videotecas. Lo primero fue la utilización de herramientas tecnológicas y enfoques de preservación aptos para el proceso de reproducción digital: luego reconstruir un inventario con descripciones de cada material sometido a dicho proceso; después se efectuó una clasificación temática, determinando criterios de ponderación y manejo con la aprobación de las instancias. No obstante, surgieron nuevos desafíos. La pregunta era ¿y la seguridad del contenido alojado virtualmente? Encontrando respuestas, en un principio se considero que solo teniendo conocimientos en programación de software se daría solución a este problema, pero en esta investigación se demuestran alternativas útiles.

PALABRAS CLAVES: colecciones de video, contenido audiovisual, recuperación multimedia.

MANAGEMENT AND MAPPING SYSTEMATIC TWO UNITS ACADEMIC LIBRARIES OF THE UABC

ABSTRACT

This research is a case study conducted with mixed methodology integrating interdisciplinary content analysis tasks and academic discourse on two instances of the Autonomous University of Baja California, the Faculty of Social and Political Sciences and the Institute for Social Research, institutions recorded video formats incompatible with existing media players, activities of social and historical nature. Currently it is uncommon to find homes or offices with videotapes, because it is necessary to reproduce a specialized apparatus that today is hard. Resulted relevant information retrieval, cataloging and management of video libraries. The first was the use of technological tools and approaches suitable for preserving digital reproduction process: then rebuild inventory descriptions of each material subjected to this process; after a thematic classification was performed by determining weighting criteria and management with the approval of the instances. However, new challenges arose. The question was content security and stayed virtually? I found answers at first think that just having knowledge of software programming solution to this problem would, but in this research prove useful alternatives.

KEYWORDS: collections of video, audio content, multimedia retrieval

JEL: O330

INTRODUCCIÓN

En la década de los años 70s y 80s, la tecnología más usada para el almacenamiento y reproducción de material multimedia, específicamente video gráfico, eran las Cintas de video en formato VHS o Cintas Betamax (Owen, 2005), las cuales podían ser posteriormente operadas por una videocasetera para reproducir contenidos audiovisuales.

Las escuelas y/o sitios culturales contaban con una “videoteca” (Sarachaga&Stern, 2011), sección de la biblioteca donde se organizaban manualmente (por título, año, clasificación) cintas de video con recopilaciones de contenido audiovisual que podía ser consultado por uso científico o de investigación.

En referencia a la generación de material video gráfico institucional, la salida de exportación final del material era una cinta S.VHS, la cual generalmente es compatible con videocaseteras reproductoras de VHS convencional.

A finales de los años 90s y 2000, comienza a evolucionar la tecnología del quehacer multimedia. Con el surgimiento de nuevos medios para almacenar y consumir información videográfica, como discos óptimos, cintas digitales y archivos electrónicos, los medios analógicos como el VHS empiezan a ser abandonados.

Pero además de evolucionar la forma de ver los videos, también evoluciona la forma de llegar a ellos, es decir, la consulta de su información.

Hoy en día se establece una diferencia no solo entre lo digital y lo análogo, sino también entre lo físico y lo que está “en el aire”. Con la tecnología móvil cada vez más presente entre los usuarios, el estudiante de hoy en día requiere tener a la mano material video gráfico prácticamente sin tener que recurrir a medios físicos.

PLANTEAMIENTO DEL PROBLEMA

A principios del siglo XXI, se dejaron de comercializar los lectores de VHS a gran escala, siendo sustituidos totalmente por nuevos formatos de almacenamiento óptimo más avanzados como el DVD. En otras palabras, el DVD se popularizaría como medio de difusión, esto gracias a las ventajas que, supone su tecnología sobre los medios magnéticos como puede ser: el menor nivel de degradación en el almacenamiento con el paso del tiempo, y hacer copias de respaldo fácilmente.

No obstante, durante el año 2000 hasta el 2005, aun se usaba la tecnología VHS como una alternativa al DVD, pero en 2007, luego de la comercialización de otros medios de grabación, el VHS dejó de comercializarse oficialmente a nivel mundial.

En la facultad de Ciencias Sociales y Políticas y el Instituto de Investigaciones Sociales de la UABC, se encuentran guardadas cintas de video en formato VHS que contienen material de relevancia histórica para ambas unidades académicas.

Como bien se sabe, actualmente es poco común encontrar hogares u oficinas con videocaseteras. Por lo tanto resulta poco rentable de parte de los usuarios alquilar para consultar las cintas en VHS debido a que primero tendrían que conseguir una videocasetera que los reproduzca.

Formulación De Pregunta De Investigación : ¿Qué conjunto de procedimientos tecnológicos permitirá tanto revertir los efectos derivados del desuso de cintas de video como prevenir el deterioro paulatino de

las mismas de tal forma que, si bien no perpetúe, si perdure la conservación del material de las dos unidades académicas y así continúe siendo consultado por los usuarios interesados?

Justificación de la Investigación -Resultaba relevante que el usuario tuviera la posibilidad de consultar el material de acuerdo a diferentes parámetros de búsqueda, como por ejemplo, etiquetas, o rótulo de fechas. Cuando se cuenta con un volumen considerable de materiales que necesitan ser organizados para una consulta, lo primordial es contar con información de primera mano.

Lanza (2012), explica que disponiendo de un volumen suficientemente representativo de videos, procederemos a la evaluación del rendimiento de las consultas y, si es preciso, a su optimización. Posteriormente se estudiará la introducción de procesos automatizados de segmentación de videos y detección de conceptos.

También es necesario ahorrarle al usuario la necesidad de conseguir videocaseteras para consultar videocintas. Si bien este proyecto de investigación no busca reemplazar el formato VHS, lo que si busca es efficientar y abreviar tiempo al usuario final al momento de requerir información histórica. Mediante el uso de tecnologías como servidores, *video-hostings* (almacenamiento de video) y cloud-storage (almacenamiento en la nube), el material y sus descriptores quedan disponibles desde cualquier dispositivo.

Así, "la utilización de documentos multimedia en todas sus formas está cada día más presente en nuestras vidas" (Lindo, 2010).

Los diferentes dispositivos móviles que se emplean hoy en día, utilizan una cuenta de Google para descargar aplicaciones, y las cuentas de correo UABC están sincronizadas con la plataforma Google. Esto permite la posibilidad de que el contenido pueda ser en algún momento alojado en servicios proporcionados por la plataforma Google. El empleo del Social Media y los Sistemas de Gestión de Contenido hacen posible lo que antes era difícil: crear contenido para compartir. El empleo del almacenamiento en nube ahorra el tener que esclavizar un servidor dedicado, que prácticamente es un ordenador más que tiene que estar encendido las 24 horas del día, los 365 días del año. Tampoco es necesario un amplio conocimiento en programación de software para el empleo de todas estas herramientas, y es esto lo atractivo del proyecto, que se aprovechan las herramientas para resolver problemas tecnológicos que derivan de la necesidad de preservación de contenidos.

Objetivos

Crear un repositorio de contenido multimedia de fácil consulta, mediante procesos de mejora en la categorización de las videotecas, disponible para usuarios (estudiantes, investigadores, profesores) de dos entidades académicas de la UABC.

Objetivos específicos

Emplear Tecnologías de la Información y la Comunicación (TICs) y enfoques aptos para el proceso de reproducción digital de videocintas.

Registrar la descripción de videocintas que hayan pasado por proceso de reproducción digital.

Categorizar videos ponderando su privacidad según Análisis de Contenido y Discurso.

Emplear una misma plataforma para alojamiento virtual y sindicación a diferentes dispositivos.

Organizar videos y descripciones mediante Gestión de Contenido (CMS) y recursos XM

MARCO TEÓRICO

En relación a las áreas transdisciplinarias (1996) como la bibliometría y el análisis del discurso (DA), se ha encontrado que obtener registros audiovisuales de acontecimientos relevantes ha resultado fundamental en instituciones que desarrollan diversas actividades como parte de sus programas académicos. Los investigadores están cada vez más interesados en trascender los medios para encontrar información relevante para sus investigaciones.

Hoy en día no se limitan a papeles o a libros, sino también en la consulta de material multimedia como videos.

El apoyo de las nuevas tecnologías de la información, en conjunto con técnicas transdisciplinarias del análisis del contenido y del discurso, es una de las formulas propuestas para la recuperación y clasificación temática de contenidos audiovisuales registrados en las décadas de los años 80s y 90s.

Preservación de la Tecnología significa conservar no sólo el material original sin el menor cambio posible, sino también las tecnologías originales empleadas para poder reproducir del material original, sin alterarlo.

En una entrevista para el documental *Side by Side* (2012), el director de fotografía Geoff Boyle comenta que nadie toma en serio el archivo, debido que todo usualmente es guardado en un disco duro, sin tomar en cuenta cualquier imprevisto que ocurra como fallas técnicas en el disco duro con el paso del tiempo, lo cual puede resultar fatal cuando el objetivo del archivo es que sea un reemplazo de la tecnología original.

El códec de captura de video más utilizado por los *softwares* de video es MPEG, cuya segunda revisión del formato (MPEG-2) es empleada en la transmisión industrial de televisión SD con la norma NTSC, y televisión HD con la norma ATSC, que acepta rangos de transmisión de video entre 3000 y 20000 kilobytes por segundo, devolviendo una señal de audio de 192 kilobytes por segundo.

Así mismo, “MPEG utiliza un sistema de compresión con pérdida, resultando un fichero de calidad reducida en imagen y sonido, aunque con posteriores revisiones del formato (MPEG-2 y MPEG-4), esta pérdida se convierte en casi indetectable para el ojo y oído humanos” (Gomez, 2003).

Uno de los métodos de compresión de video más comunes es el códec H.264, muy usado en videos FLV y MP4 reproducibles en sitios web. Pese a que el códec h.264 es clasificado como un formato de video con pérdidas, a diferencia de otros formatos como DivX o XVID, H.264 hace menos notoria la pérdida de calidad y es compatible con reproducción online en sitios web.

El códec de captura sería la calidad original del video, mientras que el códec de compresión es la calidad del video tras haber pasado por un proceso llamado Aligeramiento de Flujos.

En la indexación de los videos, deben considerarse todos los criterios de búsqueda posibles que identifiquen el material. Características como año, título, lugar, representan elementos útiles que nutrirán la base de datos.

La primera de dos herramientas para la indexación son los CMS, o Sistemas de Gestión de Contenido. A continuación los principales CMS conocidos:

Drupal -Plataforma PHP, Base de datos MySQL o PostgreSQL, y compatible con Apache, Nginx y Azure, “(...) es (...) de código abierto (...) desarrollado por (...) 630,000 + usuarios (...) bajo los términos de la Licencia Pública General de GNU (o "GPL")” (Dries).

WordPress-Plataforma PHP, Base de datos MySQL, y compatible con servidores web Apache, Nginx y Azure. "(...) es un sistema de gestión de contenido enfocado a la creación de blogs. Se distribuye bajo los términos de la Licencia Pública General de GNU (o "GPL")".

Blogger-Plataforma Google, permite Sindicación de contenidos, es compatible con jQuery, HTML5 y CSS3, Metatags.

El acceso al contenido multimedia se basa en criterios de búsqueda establecidos previamente en el XML. Creando bitácoras inteligentes donde queden administrados los videos que estarán disponibles para el usuario y generando fichas técnicas que acompañen al material video-gráfico, siendo su función importante la descripción del contenido, los ficheros XML actuarán como base de datos en el CMS que se escoja. Existen, sin embargo, otras opciones para administrar avanzadamente los ficheros XML con conocimientos en programación:

MongoDB, gestor No SQL de código abierto compatible con los entornos de programación ADO.Net, y C#.

Y eXistdb, compatible con los archivos XML y el estándar MPEG-7.

La información se administra generando un sistema de datos que contenga descripciones numéricas y nominales que representen un valor.

METODOLOGÍA

Ámbito espacial: Facultad de Ciencias Sociales y Políticas, y el Instituto de Investigaciones Sociales de la Universidad Autónoma de Baja California.

Ámbito temporal: Del año 2013 a 2014.

Tipo de investigación: Investigación Mixta: Se trabaja bajo una investigación mixta, dado que se recogen datos de carácter cuantitativo como cualitativos.

Metodología empleada: A continuación se describe la metodología a utilizarse para el desarrollo de este proyecto, empezando con la reproducción digital y terminando con el diseño del repositorio.

A lo largo de la metodología se describe cada paso para concretar las metas definidas. El primer paso es la reproducción digital, el segundo paso es la reconstrucción de un inventario, el tercero es la clasificación y ponderación de privacidad, el cuarto es el alojamiento virtual y control de acceso, el quinto y último es la gestión de contenido e indexación.

Herramientas de Reproducción digital: El primer paso consiste en el empleo de herramientas tecnológicas de reproducción y los enfoques de preservación aptos para el proceso de reproducción digital del material análogo de cintas de video.

En cuanto a herramientas tecnológicas de reproducción, a continuación se detallan las idóneas para dicha tarea:

Se seleccionó como el hardware más efectivo para captura de video Micro-dongle Hybrid Sabrent USB-HD, debido a que la captura vía coaxial del video análogo entrega imágenes más limpias que la captura vía componentes ofrecida por otros dongles similares.

Para captura de video, se utiliza el software: Nero Vision, debido a que es un software utilizado y probado con anterioridad, demostrando eficiencia en la captura de video análogo.

Como formato de captura nativa, se generan archivos con el codificador-decodificador (códec) de video y audio Moving Pictures Expert Group 2 (MPEG II).

La duración de la videocinta puede ser segmentada según la cantidad de eventos diferentes dentro de una misma videocinta.

En caso de que la videocinta contenga un evento único, ese evento pasa a ser la duración fiel de la videocinta.

Así mismo, se pondera la calidad de la captura de acuerdo a la velocidad con que se haya registrado la grabación original en la videocinta.

Diseño del repositorio

En este paso, cuyas metas concretadas se detallan de forma más extensa en el apartado de Desarrollo, consiste en emplear una misma plataforma operable tanto para el alojamiento virtual del material tras el proceso de reproducción, como para los controles de acceso desde cualquier dispositivo (ordenadores, dispositivos móviles).

En materia del diseño o edición de una página web, dado que se trata de unidades institucionales, se consideró trabajar sobre el modelo disponible en los portales correspondientes, haciendo sólo modificaciones menores a la página de inicio para que aparezca un link que conduzca a la página del repositorio de archivos multimedia.

Los videos pueden ser alojados en el servicio de alojamiento en la nube Google Drive.

Google Drive ya tiene incorporado un reproductor de archivos multimedia.

Alojar los archivos multimedia en servidores convencionales no es rentable hoy en día, ya que implica tener encendido las 24 del día un ordenador.

Desde Google Drive es posible administrar el tipo de uso que se le da al contenido según las cuentas de correo UABC, estableciendo y administrando los permisos de visita o descarga del contenido.

ANÁLISIS DE RESULTADOS

El comportamiento del proceso de reproducción digital tuvo que ponderarse según las características de cada material.

De un total de 30 videocintas de la Facultad de Ciencias Sociales y Políticas (FCSyP), 5 estaban en formato Betamax y 25 en formato VHS. De las 25 videocintas en formato VHS, se registraron 35 eventos individuales. Por ejemplo, en la videocinta no. 18 se obtuvieron 3 eventos diferentes y la duración de la videocinta fue segmentada en 3 duraciones diferentes por cada evento, de tal suerte que se obtuvieron 3 videos digitales de esa videocinta. De los 35 eventos grabados, 17 provenían de videocintas grabadas en velocidad de EP, 4 en LP y 14 en SP. De los 17 videos grabados en EP, 4 fueron transferidos a una velocidad de 3382 kilobytes por segundo en video y 192 kilobytes por segundo en audio, 4 a una velocidad de 8000 kilobytes por segundo en video y 192 kilobytes por segundo en audio, 2 vídeos a una velocidad de 4168 kilobytes por segundo en video y 192 kilobytes por segundo, y 7 videos a una velocidad de 2537 kilobytes por segundo en video y 192 kilobytes por segundo. El video más corto dura 0h:22m:20s y el más largo 3h:08m:34s.

Tabla 1. Lista de eventos en videocintas de la FCSyP grabadas en EP

#	Duración	Formato	Velocidad	Kbps	Obs	Tipo de evento	Lugar del evento	Unidad Académica	Fecha
2	0:44:30	VHS	EP	8000		Registro de eventos		FCSyP	01/01/1989

Elaboración propia

CONCLUSIONES Y RECOMENDACIONES

De acuerdo a los resultados que arrojó esta investigación, la mayoría de los videos provenían de cintas VHS. En cuanto a los enfoques de preservación para la tarea de reproducción digital, se estableció como

primer prioridad la preservación de la tecnología (en este caso, la videocasetera), y como segunda prioridad la preservación del objeto (en este caso, las cintas VHS) dando como resultado una fiel reproducción de las cintas de video.

Diferentes elementos del análisis del discurso planteados por los hermanos Kintsch (1983) nos permitieron obtener descripciones más específicas de los objetos, entre ellas, usos y costumbres. Por ejemplo, en la década de los ochenta, se acostumbraba el consumo de tabaco en cualquier espacio público, y en algunos eventos se registra este hábito entre los participantes o moderadores de los eventos. Ello también llevó a decidir ponderar la privacidad del contenido. Finalmente se estableció que estaría disponible exclusivamente a estudiantes, docentes e investigadores de la Facultad de Ciencias Sociales y Políticas, y del Instituto de Investigaciones Sociales.

Más de la mitad de los vídeos son transmisiones por televisión de un programa del canal 29 de la UABC. El resto son conferencias y otras diversas actividades.

Los vídeos pueden ser consultados por los estudiantes, profesores e investigadores previamente accediendo a su correo de UABC. De lo contrario, los vídeos re-direccionarán al usuario al Sistema Central De Autentificación UABC donde normalmente el usuario estudiante hace log-in a su cuenta UABC

CONCLUSIONES

El objetivo de la investigación fue crear un repositorio de contenido multimedia de fácil consulta, mediante procesos de mejora en la categorización de las videotecas, disponible para usuarios (estudiantes, investigadores, profesores) de dos entidades académicas de la UABC; para alcanzar este objetivo, se emplearon las herramientas tecnológicas y los enfoques de preservación aptos para el proceso de reproducción digital del material análogo de cintas de video, se reconstruyó mediante hoja de Excel un inventario de las cintas de video describiendo cada material que haya pasado por el proceso de reproducción digital.

Así mismo, los ficheros XML alimentaron la información de contenido para que los vídeos fueran debidamente organizados según las descripciones del inventario.

Se determinaron criterios de ponderación de privacidad del material en base al proceso de Análisis del Contenido y del Discurso de cada material.

Se seleccionó una misma plataforma operable tanto para el alojamiento virtual del material tras el proceso de reproducción, como para la sindicación a diferentes dispositivos (ordenadores, dispositivos móviles).

Actualmente el repositorio de videos se encuentra en fase beta.

Recomendaciones

Resulta pertinente comentar que esta investigación representa un modelo replicable. De acuerdo con mi punto de vista, “modelo replicable” es todo caso de estudio validable, en un futuro, por nuevos investigadores que decidan retomarlo. Habiendo resultado operable el proyecto, que futuras investigaciones puedan replicar el modelo para otros usuarios.

Cuando un proyecto desde el principio proyecta la factibilidad necesaria para considerarse apto de implementarse, a mi juicio, se contempla automáticamente la posibilidad de repetir el modelo en otros contextos donde sea operable.

Sin barreras entre tecnología y la recuperación multimedia, misma cada vez más demandante entre investigadores, los modelos replicables representan continuidad y seguimiento a la investigación hecha por los antecesores del investigador que retome el caso de estudio.

Dicho esto, así como esta investigación fue aplicada en la Facultad de Ciencias Sociales y Políticas y el Instituto de Investigaciones Sociales de forma satisfactoria, es casi innecesario agregar que de igual forma puede resultar un trabajo satisfactorio para otras instituciones o unidades académicas de la Universidad donde futuramente sea aplicada esta investigación con sus respectivas mejoras añadidas por nuevos colaboradores.

A continuación, algunas recomendaciones para futuros colaboradores de ésta investigación:

Es importante asegurar la existencia de varios respaldos para todo el contenido de cualquier repositorio considerado en un proyecto como éste.

Contar con suficiente espacio de almacenamiento virtual. No utilizar servidores dedicados, pues esclavizará un ordenador que esté encendido las 24 horas del día.

En caso de requerir edición los videos, ser lo más fiel posible a lo original, y no aplicar efectos de imagen en los videos capturados, excepto balance de blancos.

Procurar publicar los videos bajo la autoría institucional.

IMPACTO DE EXPERIENCIAS TRAUMATICAS SOBRE EL DESARROLLO COGNITIVO, EMOCIONAL Y FAMILIAR EN NIÑOS Y ADOLESCENTES VICTIMAS DE VIOLENCIA EN EL MUNICIPIO DE RIOHACHA - COLOMBIA

Marlyn Dayana Martínez Manotas, Universidad de la Guajira
Marlenis Ucrós Brito, Universidad de la Guajira

RESUMEN

La investigación tiene como objetivo, Determinar el impacto de experiencias traumáticas, sobre el desarrollo cognitivo, emocional y familiar en niños y adolescentes, víctimas de violencia en el Municipio de Riohacha, La Guajira- Colombia; el estudio se sustenta en teorías de autores como: Davis (2009), Blair (2003), Pichón (2005), Philips (2003). La experiencia traumática, considerado evento que amenaza el bienestar del individuo, genera consecuencias en la estructura mental y emocional, produciendo comportamientos regresivos que vulneran la capacidad del yo. La investigación es de tipo descriptiva, correlacional, no experimental. Se compararon dos grupos de acuerdo a la condición TEPT a la vivencia o no de eventos potencialmente traumáticos en medidas de desempeño emocional, cognitivo y familiar. Se concluye: que cuando se analizan las sub-escalas del CI se presentan diferencias, en la cual, los niños aumentan su vocabulario, reconocen emociones como molestias, vergüenza, depresión, afectando su desarrollo e interacción con el medio, Se nota que en estos eventos se afecta el coeficiente intelectual de los niños, donde la familia tiene la necesidad de construir cultura de dialogo, estrategias preventivas, educativas, bajo perspectivas holísticas, comprometidas con el desarrollo psicosocial de los niños.

IMPACT OF TRAUMATIC EXPERIENCES ON COGNITIVE DEVELOPMENT, EMOTIONAL AND FAMILIAR IN CHILDREN AND TEENS VICTIMS OF VIOLENCE IN THE MUNICIPALITY OF RIOHACHA- COLOMBIA

ABSTRACT

This research aims to determine the impact of traumatic on cognitive development, emotional and familiar in children and teens, victims of violence in the municipality of Riohacha, La Guajira- Colombia. The study is based on theories of authors like: Davis (2009), Blair (2003), Pichón (2005), Philips (2003). The traumatic experience is a considered event that threatens the welfare of the individual, generates consequences in the mental and emotional structure, producing regressive behaviors that undermine the ability of self. The research is descriptive, correlational, not experimental. It was compared in two groups according to the condition PTSD, to the experience or event potentially traumatic, on measures of emotional, cognitive and familiar performance. It is concluded when C subscales are analyzed, exist differences in which, children increases their vocabulary, recognize emotions like discomfort, shame,

depression, Affecting their development and interaction with the environment. It shows that IQ is affected in these events of children, where the family has the need to build culture of dialogue, Preventive educational strategies under holistic perspectives, under holistic perspectives.

KEYWORDS: traumatic experiences, cognitive development, Emotional development, family development Riohacha-Colombia.

INTRODUCCION

El término trauma incluye tanto la noción de herida como la de sus efectos provocados en el organismo en su totalidad. Además el trauma se refiere a una situación específica en la biografía del paciente, quien no podía integrar este hecho en forma consciente a la experiencia vivida. Es así como la memoria traumática se constituye en un "cuerpo extraño" que se mantenía a lo largo del tiempo afectando al paciente.

También en la terminología psiquiátrica, la denominación de Trastorno por Estrés Postraumático (TEPT) en la tercera versión de la clasificación diagnóstica de la Asociación Psiquiátrica Americana (DSM-III). Desde esa fecha en adelante este cuadro clínico ha cobrado gran importancia hasta alcanzar su máxima divulgación con relación a las manifestaciones presentadas por algunas población víctimas de la primera y segunda guerra mundial y de los ataques terroristas del 11 de septiembre de 2001 a las Torres Gemelas del World Trade Center de Nueva York y al Pentágono en Washington, así como también los diferentes atentados existente en los últimos años en los diferente países del mundo.

En este sentido, el DSM-IV hace un esfuerzo para tratar de facilitar el diagnóstico del trastorno por estrés postraumático en niños y adolescentes, para lo que se añaden algunos descriptores específicos tratando de precisar mejor los síntomas en estas edades. Se subraya la necesidad de tener en cuenta los aspectos evolutivos y del desarrollo propios del niño, que determinan unas características específicas de los síntomas según la edad, pues es bien conocido que la expresión psicopatológica depende tanto de factores propios del psiquismo del niño como son su grado cognoscitivo y desarrollo afectivo, como del tipo de relación que establece con el entorno en cada momento.

La presente investigación tiene como propósito determinar el impacto de experiencias traumáticas sobre el desarrollo cognitivo, emocional y familiar en niños y adolescentes víctimas de violencia intrafamiliar y el abuso sexual en el Municipio de Riohacha, La Guajira; es decir, el hecho traumático demarca el rendimiento escolar, académico y relaciones sociales de los niños objeto de estudio y hacia el futuro a los jóvenes del futuro, para lo cual se comparó el grado de desempeño cognitivo, emocional y familiar en niños y adolescentes víctimas de traumas relacionados con violencia sexual en comparación con niños y adolescentes sin experiencias traumáticas previas

Este artículo está organizado como sigue: En la sección de revisión literatura se planean los argumentos que sustentan las experiencias traumáticas sobre el desarrollo cognitivo, emocional y familiar. Posteriormente, se presenta la metodología utilizada donde se utiliza en la primera fase la batería psicológica (WISC-R) para medir el coeficiente intelectual de los niños y adolescentes y en la segunda se empleó una encuesta para valorar la parte familiar relacionada con el grado de desempeño cognitivo y emocional que establece el nivel de déficit en la escala ejecutiva y verbal en el desarrollo cognitivo y emocional, ambos instrumentos utilizado como técnica para recolección de la información y seguidamente se presentan los resultados y las conclusiones.

REVISION DE LITERATURA

En la literatura relacionada con impacto de experiencias traumáticas sobre el desarrollo cognitivo y familiar en niños y adolescentes víctimas de violencia, se distinguen varios conceptos relacionados con la teoría

de Davis (2009), neurólogo que plantea que los síntomas que presentaban estos enfermos estaban producidos por cambios moleculares muy sutiles en el Sistema Nervioso Central (SNC). Por otro lado, la alta frecuencia de síntomas aparentemente relacionados con el corazón (taquicardia, palpitaciones, etc.) trajo consigo que la neurosis traumática se asociara durante mucho tiempo al grupo de las neurosis cardíacas.

También, afirma que la existencia de la relación entre la histeria y los traumas psicológicos se detectó a mediados del siglo XIX, sobre todo por los investigadores de la escuela francesa. Cuando “estudió en los síntomas de la histeria, incluyendo la somatización, y la existencia de traumas durante la infancia”. Observó que en 381 de los 501 pacientes que estudió había antecedentes de traumas infantiles. De hecho, el término de pseudología fantástica empezó a utilizarse para referirse a niños que habían acusado a sus padres de incesto. Se había interesado por el fenómeno de la histeria, y señaló que la experiencia de un trauma “choc nervioso” podía situar al paciente en un estado mental similar al que se consigue mediante la hipnosis. Este estado hipnoide era una condición fundamental de lo que denominó autosugestión histerotraumática.

Por otra parte, Phillips (2003) plantea que los “síntomas y la severidad de diferentes desordenes psiquiátricos pueden relacionarse diferencialmente con los procesos y con los sistemas neurales subyacentes asociados al procesamiento de la emoción. Este autor propone que los patrones específicos de anomalías estructurales y funcionales en los sistemas neurales paralelos importantes para las respuestas a estímulos emocionales y para la regulación de la conducta emocional puede asociarse a diferentes desordenes como la esquizofrenia, el trastorno bipolar, trastorno de ansiedad, trastorno de estrés posttraumático y depresivo mayor”.

Por otro lado Blair (2003) observó que “una vez que los grupos se establecían según la edad mental, las dificultades para reconocer la emoción desaparecían. Hallazgo similar resalta la importancia de controlar la edad mental, la cual fue encontrado por utilizando estímulos dinámicos para explorar el reconocimiento de la emoción en niños con el síndrome de Williams en comparación con los controles normales. Los resultados indicaron que los niños con el síndrome de Williams ejecutaron muy mal el test de reconocimiento de la emoción en comparación con los controles agrupados por edad”.

En consecuencia, según la edad mental entre los participantes con el síndrome de Williams y los controles agrupados, se relacionan con el uso de estrategias de procesamiento similares (los niños más jóvenes utilizaban el método de una porción de alimentos en el reconocimiento de los rostros y los mayores utilizaban una estrategia configuracional) lo más probable que el rendimiento en las tareas se deba al Coeficiente Intelectual (CI). Es decir, entre más elevado sea el Coeficiente Intelectual, refleja una mayor preservación en el procesamiento de configuraciones. A su vez, resaltan los componentes psicopáticos más que la agresión general, como un importante factor en las deficiencias del procesamiento de la emoción y entre estas deficiencias, se asocian a fallas en las estructuras corticales prefrontales que incluyan la corteza orbito frontal.

Asimismo, Pichón (2005) explica la teoría del vínculo, donde las personas se relacionan con los otros, creando una estructura que es particular para cada caso y momento, es un vínculo cuya relación es específica y constituida por una estructura que funciona de una determinada manera; es dinámica y en continuo movimiento, que funciona accionada o movida por factores instintivos, por motivaciones psicológicas que condicionan la conducta humana relacionados con rol status y comunicación.

METODOLOGIA

En la presente investigación se enmarca con diseño descriptivo, no experimental, ya que describe y no pretende modificar o manipular la realidad actual de las variables objeto de estudio. Por otra parte, se

empleó la observación documental para sustentar la revisión de la literatura. Luego, en la primera fase se aplicó la batería psicológica (WISC-R) que midió el coeficiente intelectual de los niños y adolescentes y en la segunda se empleó una encuesta para valorar la parte familiar relacionada con el grado de desempeño cognitivo y emocional que establece el nivel de déficit en la escala ejecutiva y verbal en el desarrollo cognitivo y emocional; determina el desempeño cognitivo en memoria expresiva de estos niños; y se analizan los riesgos de déficit en el desarrollo cognitivo emocional y familiar. Finalmente, se compararon los dos (2) grupos de acuerdo a la condición Trastorno de Estrés Postraumático a la vivencia o no de eventos potencialmente traumáticos en medidas de desempeño emocional, cognitivo y familiar.

RESULTADOS

Los resultados en este apartado, han sido calculados por la batería psicológica (WISC-R), cuya finalidad fue medir el coeficiente intelectual en escalas de inteligencia, en dos dimensiones facilitadores de las capacidades cognitivas y de desarrollo de la inteligencia (escala verbal y escala de ejecución), que se aplicó a niños y adolescentes con y sin trauma, tal como se muestra en la tabla 1.

Tabla 1. Escala de Ejecución Puntuación Natural

Escala	Niños Sin Traumas	Niños Con Traumas	Diferencias Entre Escalas	Diferencias Porcentual
Ejecución puntuación natural	111.6	80.3	31.3	38.97%

En esta tabla, se muestra la Escala de Ejecución Puntuación Natural que establece el número de niños con y sin traumas y las diferencias entre las escalas en el Municipio de Riohacha-Colombia. Fuente: Elaboración propia.

En la tabla 1, se evidencia a los niños sin traumas que presentan una escala de ejecución natural de 111.6, mientras que los niños con trauma presentan un 80.3 en la misma. El análisis diferencial entre los datos es de 31.3 entre escalas; es decir, que existen diferencias significativas entre los dos grupos objeto de estudio y al realizar conversión de la escala poblacional, la diferencia porcentual es de 38.97%. Donde se puede deducir que se ve afectada la escala de ejecución de un niño que ha pasado por un evento traumático. Los resultados anteriores coinciden con los planteamientos de Blair (2003), que el ser humano envía a su memoria los sucesos por los que va atravesando a lo largo de su vida. Sin embargo, el acontecimiento traumático nunca llega a adquirir la calidad de pasado. Continúa permaneciendo presente en la vida psíquica del individuo.

Tabla 2. Escala Verbal Puntuación Normalizada

Escala	Niños Sin Traumas	Niños Con Traumas	Diferencias Entre Escalas	Diferencias Porcentual
Verbal puntuación normalizada	70.7	36.6	34.1	93.16%

En esta tabla, se muestra la Escala Verbal Puntuación Normalizada que establece el número de niños con y sin traumas y las diferencias entre las escalas en el Municipio de Riohacha-Colombia. Fuente: Elaboración propia.

En la tabla 2, muestra que el 70.7 de los niños sin trauma tienen una puntuación normalizada en la escala verbal, mientras que el 36.6 de los niños con traumas tienen una escala de puntuación normalizada baja. El análisis diferencial entre los datos es del 34.1 entre escalas, es decir que existe una diferencia significativa y porcentual de 93.16% entre los dos grupos objeto de estudio.

También, se evidencia que muchos de estos niños se les dificultan tener expresiones verbales y emocionales de forma libre o normal. Y que a su vez, sigue afectando el coeficiente intelectual del niño cuando este ha presentado un evento de trauma. En relación con las implicaciones de la teoría, Lee KA Vaillant (1995) plantea: “Una característica sobresaliente en estos pacientes es su incapacidad para verbalizar y describir el

acontecimiento traumático”. No son capaces de explicar con detalle lo que ocurrió, aunque sí pueden explicar los sentimientos asociados al acontecimiento. Esto puede estar relacionado con el bloqueo de las estructuras cerebrales que se encargan de organizar la información que llega desde distintas vías sensoriales que se produce en el momento del trauma.

Tabla 3: Escala Puntuación Coeficiente Intelectual Normalizada

Escala	Niños Sin Traumas	Niños Con Traumas	Diferencias Escalas	Entre	Diferencias Porcentual
Puntuación normalizada	113.9	72.4	41.5		57.32%

En esta tabla, se muestra la Escala de Puntuación Coeficiente intelectual Normalizada que establece el número de niños con y sin traumas y las diferencias entre las escalas en el Municipio de Riohacha-Colombia. Fuente: Elaboración propia.

La tabla 3, evidencia el 113.9 de los niños sin trauma tienen una puntuación Coeficiente Intelectual normalizada y el 72.4 de los niños con trauma tienen una puntuación Coeficiente Intelectual normalizada. La diferencia de escala es de un 41.5 y la diferencia porcentual es de 57.32%, es decir, hay diferencia significativa donde se muestra que un evento traumático, si puede afectar el coeficiente intelectual de un niño. En consecuencia, Joseph (1995) plantea que “Después de una situación traumática la gran mayoría de las personas experimentan pensamientos intrusos”. En los días siguientes siguen reviviendo la experiencia en forma de imágenes que llegan a su mente. Estas intrusiones tienen una finalidad adaptativa, para mejorar la capacidad de supervivencia del individuo en su entorno. Para ayudar en el aprendizaje sobre situaciones peligrosas se repite el acontecimiento en el plano mental, pero esto sólo suele durar unos días luego desaparece. Sin embargo, en los individuos que desarrollan este trastorno estos se mantienen en el tiempo y se convierten en una situación crónica, mostrando un déficit en el procesamiento de la información y por consiguiente en su coeficiente intelectual.

Tabla 4. Impacto Experiencias Traumáticas, Dimensión Cognitivo Emocional

Ítems	Frecuencia Absoluta					Frecuencia Relativa				
	S*	C S*	R*	CN*	N*	S*	C S*	R*	C N*	N*
pánico		2	8				20%	80%		
cólera	4	6				40%	60%			
pesadilla	2		5	3		20%		50%	30%	
cambio de carácter	7	3				70%	30%			
temor	9	1				90%	10%			
tristeza	5	3	2			50%	30%	20%		
rabia		2	6	2			20%	60%	20%	

En esta tabla, se muestra el impacto experiencias traumáticas, dimensión cognitivo Emocional en el Municipio de Riohacha-Colombia. Fuente: Elaboración propia. *Siempre, Casi Siempre, Regularmente, Casi Nunca, Nunca

La tabla 4, muestra el Impacto que causa el trauma en el desempeño cognitivo, emocional y familiar en niños y adolescentes víctimas de traumas relacionados con violencia sexual en comparación con niños y adolescentes sin experiencias traumáticas previas en el municipio de Riohacha, mediante el pánico, cólera, pesadilla, cambio de carácter, temor, tristeza y rabia, donde se evidencia una alta tendencia en el temor con 90% y cambio de carácter el 70%. En relación con implicaciones de la teoría, Amir N (1998) plantea “Muchos enfermos refieren que algo terrible ocurrió, relatan la angustia o el terror que experimentaron, pero son incapaces de llevar a cabo un relato mínimamente estructurado del acontecimiento”.

Tabla 5. Impacto Experiencias Traumáticas, Dimensión Cognitivo Familiar.

Ítems	Frecuencia Absoluta					Frecuencia Relativa				
	S*	C S*	R*	CN*	N*	S*	C S*	R*	C N*	N*
afecto		2	5	3			20%	50%	30%	
comportamiento	8	2				80%	20%			
conducta	4	3	3			40%	30%	30%		
relación	10					100%				
educación	6	4				60%	40%			

En esta tabla, se muestra el impacto experiencias traumáticas, dimensión cognitivo Familiar en el Municipio de Riohacha-Colombia. Fuente: Elaboración propia. *Siempre, Casi Siempre, Regularmente, Casi Nunca, Nunca

La tabla 5, muestra el Impacto que causa el trauma en el desempeño cognitivo familiar en niños y adolescentes víctimas de traumas relacionados con violencia sexual en comparación con niños y adolescentes sin experiencias traumáticas previas en el municipio de Riohacha, mediante el afecto, comportamiento, conducta, relación y educación, donde se evidencia una alta tendencia en el relación con un 100% y comportamiento con un 70%. En relación con las implicaciones de la teoría, Pitman (1990) plantea: “estos enfermos tienen un sistema de percepción alterado, de manera que responden preferentemente a estímulos que recuerdan el trauma a expensas de ser incapaces de orientar su atención hacia otros estímulos del entorno”, tales como el afecto, comportamiento, conducta, relación y educación objeto de estudio.

CONCLUSIONES

En este apartado se exponen las siguientes conclusiones: Cuando se analizaron las sub-escalas del Coeficiente Intelectual, se evidencia diferencias significativas, en los grupos objeto de estudio, donde los niños aumentan su vocabulario, reconocen emociones como molestias, vergüenza, depresión, afectando su desarrollo e interacción con el medio. También, se observó que estos eventos afectan el coeficiente intelectual, las relaciones familiares, afecto y educación de los niños, donde la familia tiene la necesidad de construir cultura de dialogo, estrategias preventivas, educativas, bajo perspectivas holísticas, comprometidas con el desarrollo psicosocial de los niños.

Por otra parte, entre las escalas verbal y de ejecución hay diferencias porcentuales significativas, que evidencian la afectación que causa un hecho traumático en el desarrollo cognitivo, emocional y familiar de un niño.

En consecuencia, la valoración de un niño que ha pasado por hechos traumáticos no se puede valorar sus capacidades y habilidades de manera global, ya que por efectos del evento traumático sus capacidades y habilidades se encuentran fragmentadas; lo cual nos llevaría a una profunda reflexión y comprensión no solo del niño sino del medio y su familia.

Por otra parte, el grupo familiar donde pertenecen los niños y adolescentes víctimas de la violencia objeto de estudio, creen que estos niños casi nunca presentan un buen estado de ánimo; que casi siempre presentan constantemente dolores físicos, lo cual incide en su desempeño normal de su vida cotidiana; a la vez reconocen que casi siempre presentan ineficiencia para recordar cosas. También, manifiestan que siempre estos niños presentan distanciamiento permanente con el grupo familiar; y creen que los efectos de la violencia regularmente han incidido en su vida afectiva con el grupo familiar.

Limitaciones: Dentro de las limitaciones en la realización de la investigación hay que reconocer

RECONCIMIENTO

Los autores reconocen el apoyo logístico y financiero de la Universidad de la Guajira, dado a los investigadores en el desarrollo de este estudio. Así mismo, agradecen a los árbitros por sus comentarios para el enriquecimiento del mismo.

RESUMEN

La finalidad de este trabajo es el desarrollo de un instrumento que mida el clima organizacional en las Universidades Públicas en México. Este instrumento tiene como finalidad medir la relación que existe, entre académicos, estudiantes, administrativos, personal de apoyo, funcionarios y dirigentes gremiales. Con este instrumento se pretende analizar como objetivo de estudio a la Facultad de contaduría Región Veracruz de la Universidad Veracruzana, y así determinar cómo se encuentra el clima organizacional de la misma y si ha influido en los servicios que ofrece a la comunidad universitaria. Toda organización tiene características y propiedades similares a otras organizaciones, lo que las hacen afines pero al mismo tiempo cada una de ellas les da mayor importancia o énfasis a cada una de ellas por ello son diferentes. Consultando estudios anteriores sobre el clima organizacional en instituciones educativas como el de: Valenzuela (2003), citado por Salaida y Vela (2007), para validar un instrumento para medir el clima organizacional en instituciones educativas, destacando las fortalezas y debilidades que afectan la productividad del factor humano tomaron una muestra de 70 personas del personal administrativo y académico de la institución educativa Justo Sierra, con sede en Celaya, Guanajuato. Diseño un cuestionario de 80 preguntas de respuesta cerrada, tipo Likert, agrupadas en 10 categorías y como resultado obtuvo que en general la escala de clima laboral del Dr. Ricardo Valenzuela muestra confiabilidad y validez aceptables, sin embargo se recomienda por parte del autor continuar realizando estudios de validación con muestras más grandes de preferencia mayores a los 100 sujetos (Salaida & Vela, 2007).

Es por esto que se pretende desarrollar un instrumento que analice algunas variables de Valenzuela (2003) y otras que sean enfocadas al objeto de estudio, así como tomar una muestra de 100 sujetos mínimo debido a la recomendación anterior.

PALABRAS CLAVE: Clima organizacional, Universidad Pública, Servicios y Calidad

THE IMPORTANCE OF ORGANIZATIONAL CLIMATE AT PUBLIC UNIVERSITIES IN MEXICO AND THE INFLUENCE IT HAS ON THE SERVICES GIVEN TO THE UNIVERSITY COMMUNITY- PURPOSE OF STUDY: SCHOOL OF ACCOUNTING VERACRUZ REGION, UNIVERSIDAD VERACRUZANA

ABSTRACT

The purpose of this work is to develop an instrument to measure the organizational climate at public universities in Mexico. This instrument has the purpose to measure the relationship between academics, students, administrators, support staff, officials and business leaders. With this instrument one tries to analyze the Purpose of Study: School of Accounting Veracruz region, Universidad Veracruzana, and determine how the organizational climate it is and if it has influenced in the services offered to the university community. All organizations have similar characteristics and properties to other organizations, which makes them similar but at the same time each given greater importance or emphasis to each of them why they are different. Consulting previous studies on organizational climate in educational institutions such as: Valenzuela (2003), cited by Salaida and Candle (2007), to validate an instrument and measure organizational climate in educational institutions, highlighting the strengths and weaknesses that affect productivity the human factor, they took a sample of 70 persons of administrative and academic educational institution Justo Sierra, located in Celaya, Guanajuato. Design a questionnaire of 80 questions of closed answer, Likert, grouped in 10 categories which resulted obtained generally work environment scale of Dr. Ricardo Valenzuela shown acceptable reliability and validity; however it is recommended by the author continued studies validation with larger samples preferably greater than 100 subjects (Salaida & Vela, 2007).

That is why it seeks to develop a tool that analyze some variables of Valenzuela (2003) and others that are focused in purpose of study, and take a sample of at least 100 subjects due to previous recommendation.

KEYWORDS : Organizational Climate, Public Universities, Services and Quality

INTRODUCCIÓN

En las últimas décadas la calidad en los servicios que ofrecen tanto las organizaciones públicas como privadas han venido tomando mayor importancia, en las privadas por la competencia, la globalización, pero en las públicas no se han quedado atrás al contrario han seguido esta tendencia y sobretodo desarrollando indicadores de evaluación a las mismas, para venir acreditando cada uno de sus procesos y por lo tanto ganar un mayor reconocimiento y posicionamiento.

Es por esto la importancia de medir el clima organizacional, ya que como sabemos toda organización esta constituida por personas, y son esas personas las que ayudan a desarrollar y alcanzar las metas que se propone toda organización. Es por esto que consideramos que se debe de elaborar un instrumento que nos ayude a determinar como se encuentra el clima organizacional en la Facultad de Contaduría región Veracruz de la Universidad Veracruzana; y a su vez, determinar si este ha influido en los servicios que presta a los diferentes usuarios de su comunidad.

REVISIÓN LITERARIA

En la actualidad podemos encontrar mucha literatura sobre el clima organizacional, ya que desde los años 60 se ha venido desarrollando investigaciones; sobre el tema como las de Chris Argyris (1957), que implicó un clima que existió para la contratación de derecho y por Douglas Mc Gregor (1960), que presentó la idea de que la imparcialidad con que los gerentes tratan a los subordinados rindió un clima empresarial. Donde el clima organizacional se refería a la naturaleza de la relación creada entre líderes y seguidores en función de un comportamiento de los líderes.

El clima organizacional es un tema que involucra en un alto grado la psicología pues como se ha comentado de esta rama son los autores pioneros en el tema, sin dejar de mencionar que a la vez también es un tema que ayuda a solucionar problemas del ámbito administrativo dentro de las organizaciones.

El clima organizacional es un fenómeno socialmente construido, que se deriva de las interacciones individuo-grupo-condiciones de trabajo, dando como resultado un significado a las expectativas individuales y grupales (Perez de Maldonado, El clima y la satisfacción en el trabajo, como fundamentos del éxito en la empresa de principios del próximo milenio, 1997). El desarrollo de bases teóricas de la administración pública, clima organizacional, dimensiones del clima organizacional, ha permitido la comprensión y desarrollo de este tema, sin dejar de mencionar las múltiples investigaciones realizadas sobre el mismo que han sido muy útiles dentro de las organizaciones ya sean públicas o una escuela de educación superior o privadas como cualquier tipo de empresa.

Podemos mencionar un gran número de autores que se han dedicado a la investigación del clima organizacional de diferentes aspectos y cada uno de ellos resalta diferentes puntos; por lo cual nos basaremos en los autores que hayan desarrollado estudios sobre el clima organizacional aplicados en México y enfocado en instituciones educativas y sector público.

Valenzuela (2003), citado por Salaida y Vela (2007), validar un instrumento para medir el clima organizacional en instituciones educativas, destacando las fortalezas y debilidades que afectan la productividad del factor humano se tomó una muestra de 70 personas del personal administrativo y académico de la institución educativa Justo Sierra, con sede en Celaya, Guanajuato se diseñó un cuestionario de 80 preguntas de respuesta cerrada, tipo Likert, agrupadas en 10 categorías: trabajo personal, supervisión, trabajo en equipo, administración, comunicación, ambiente físico, capacitación y desarrollo, promoción y carrera, sueldos y prestaciones y orgullo de pertenencia, como resultado se obtiene que en general la escala de clima laboral del Dr. Ricardo Valenzuela muestra confiabilidad y validez aceptables, sin embargo se recomienda por parte del autor continuar realizando estudios de validación con muestras más grandes de preferencia mayores a los 100 sujetos (Salaida & Vela, 2007). Por otro lado están los estudios de clima organizacional en el sector público nacional como es el de:

Campos Farfán y Asociados, S.C. (2007), realizan un estudio para contribuir al desarrollo de las instituciones públicas, mediante la generación de un ambiente de comunicación y desarrollo organizacional en el que los servidores públicos encuentren un espacio de realización profesional y de servicio eficiente a la ciudadanía, constituida por el Instituto Nacional de Pesca, institucional adscrita a la Secretaría de Agricultura, ganadería, desarrollo rural, pesca y alimentación (SAGARPA) Se aplicaron 217 cuestionarios, los factores a medir fueron: recompensa y reconocimientos, capacitación y desarrollo, innovación y cambio, calidad y orientación al cliente, género y diversidad, comunicación, disponibilidad de recursos, calidad de vida laboral, balance trabajo-familia, colaboración y trabajo en equipo, liderazgo y participación, identidad con la dependencia, valores, enfoque a resultados y efectividad, normatividad y procesos, y la efectividad de la encuesta, la encuesta aplicada fue diseñada por Campos Farfán y asociados S.C., en base de los criterios técnicos de la Secretaría de la función pública, de acuerdo a lo que establece la Dirección General de atención a instituciones públicas en Recursos Humanos. En general consultaremos estudios que se han realizado como se mencionó anteriormente aplicados a organizaciones públicas, del sector educativo en México preferentemente, lo cual no excluye a ninguna otra investigación sobre el clima organizacional.

METODOLOGÍA

Después de haber consultado varios autores que hablan sobre el clima organizacional y como afecta la calidad en los servicios que otorgan las Universidades Públicas, se observó que era difícil medir con el mismo instrumento la relación que tiene entre académicos, estudiantes, administrativos, personal de apoyo, funcionarios y dirigentes gremiales. Ya que como sabemos los estudiantes son usuarios de esos servicios

que otorgan los demás integrantes de la facultad. Por lo cual se determinó desarrollar un instrumento que mida el clima organizacional en la facultad de contaduría región Veracruz de la Universidad Veracruzana pero desde la perspectiva de los estudiantes; ya que son los usuarios de los servicios que otorga la institución y por lo tanto pueden proporcionarnos información muy valiosa y complementaria de cómo perciben a los que laboramos en dicha institución sin importar la actividad que desempeñemos. Además en las diferentes investigaciones que se consultaron siempre se ha medido el clima organizacional desde el punto de vista de los que integran la organización (de forma interna) y no va dirigido al usuario que es el que nos puede proporcionar una mejor percepción de la calidad de los servicios que se ofertan.

INSTRUMENTO DE RECOPIACIÓN

El instrumento de recolección de datos fue un cuestionario impreso de veintiséis ítems de Clima Organizacional, el cual tiene su origen en el Plan Nacional de Desarrollo 2006-2012, donde se exhorta a las dependencias del sector público a evaluar tal concepto y proponer soluciones de mejora.

El cuestionario consta de 75 ítems, de los cuales algunos fueron tomados como ejemplo del Plan Nacional de Desarrollo mencionado anteriormente, pero la mayoría fueron creados y adaptados por los autores de la ponencia para su aplicación en la Facultad de Contaduría Región Veracruz de la Universidad Veracruzana ya que como se mencionó con anterioridad será aplicado a los estudiantes de dicha institución. La escala utilizada es tipo Likert, con cinco opciones de respuesta que son: Totalmente en desacuerdo, En desacuerdo, Neutral, De acuerdo y Totalmente de acuerdo.

Tabla 1: Dimensiones de Estudio del Cuestionario (Plan Nacional de Desarrollo 2006-2012)

Dimensiones de Estudio	Ítems
1. Calidad y orientación al estudiante	7,27,41,8,58,67,71
2. Balance estudiante-familia	40,44
3. Normatividad y procesos	12,20,16,36,35,71
4. Equidad y género	13,21,73,5
5. Austeridad y combate a la corrupción	34,30,28,57,50
6. Recompensas y reconocimiento	5,59,24,68,18,53
7. Capacitación y desarrollo	6,54,60,38,23
8. Comunicación	9,37,42
9. Disponibilidad de recursos	10,29,61,69,43,62
10. Colaboración y trabajo en equipo	11,45,46,47,63,56
11. Identidad con la institución	14,49,64,31
12. Enfoque a resultados y productividad	17,26,74,52,65
13. Innovación y cambio	25,66,70,19,39,51
14. Liderazgo y participación	48,33,32,56,22

*** En esta tabla se puede observar las 14 dimensiones que se van a desarrollar en el cuestionario y los 70 ítems que integra a cada una de ellas y como están estructuradas de manera aleatoria. Los 5 ítems restantes son los datos generales y la pregunta abierta que no se contemplan dentro de estas dimensiones.*

El instrumento es formal y estructurado, consta de tres secciones. La primera es una sección preliminar de carácter informativo, recopila datos de carácter general y descriptivo de los estudiantes tales como: Género, Lugar de procedencia, período de inscripción y Estado civil (ítems 1-4). En este apartado se describe el propósito del cuestionario y se señalan las instrucciones que deben seguir los encuestados con la finalidad de que los datos suministrados sean objetivos y veraces. La segunda parte consta de cuestionamientos sobre el clima organizacional (ítems 5-74) y la tercera es una pregunta abierta donde podrán plasmar los

estudiantes sus comentarios o sugerencias (ítem 75). Es conveniente destacar que la característica fundamental de estos ítems es que las respuestas se delimitan en la escala tipo Likert.

RESULTADOS

El resultado de esta investigación fue desarrollar el instrumento dirigido a medir el clima organizacional de la facultad de contaduría región Veracruz de la Universidad Veracruzana pero desde la perspectiva de los estudiantes.

Para recopilar la información será a través de la encuesta dirigida a una cuarta parte de la población estudiantil en nuestra facultad, de manera aleatoria, cabe mencionar que este cuestionario de 75 reactivos, presenta preguntas que describen hechos particulares de la facultad, en el cual se busca medir comportamiento, actitudes y/o características de los estudiantes adscritos a la misma y cómo perciben el clima organizacional y a su vez la calidad de su institución.

El cuestionario que es el resultado en sí de esta investigación además de la estructuración del mismo integrando en 14 dimensiones de estudio las cuales se considera son las más relevantes para medir el clima organizacional de cualquier universidad pública en México y por lo tanto a nuestro objeto de estudio (ver anexo 1).

CONCLUSIONES

Después de haber realizado una investigación documental exhaustiva podemos concluir que existen bastantes teorías que hablan sobre el clima organizacional dentro de una institución aunque el concepto en los principios toca la parte psicológica y poco a poco fue desarrollándose dentro de las organizaciones tanto públicas como privadas; de esas definiciones tuve que depurar y ver autores eran afines al objeto de estudio que se iba a desarrollar.

Cabe mencionar que debido a esta investigación se determinó elaborar un cuestionario similar en las dimensiones pero con ítems enfocadas a las personas que laboran dentro de la organización; ya que la percepción de las personas es muy diferente al estar laborando dentro de institución y también varía en la función que desarrolla dentro de la misma. Es debido a la diferencia de percepciones de las personas no pudimos conjuntar un cuestionario que abarcara a todos los que conforman la comunidad universitaria en dicha facultad.

Debido a la importancia de medir la calidad de los servicios que otorga la facultad de contaduría de la Universidad Veracruzana fue que se determinó iniciar con el cuestionario dirigido a los principales usuarios que son los estudiantes, el cual será aplicando durante este periodo y esperemos obtener buenos resultados de la muestra.

ANEXO 1

Universidad Veracruzana
Facultad de Contaduría – Región Veracruz

CUESTIONARIO

El presente cuestionario tiene la finalidad de conocer su opinión sobre el **clima organizacional** que existe en la institución donde usted estudia: **Universidad Veracruzana, Facultad de Contaduría Campus Boca del Río**. A continuación se presentan una serie de preguntas, le invito a responder con sinceridad y absoluta libertad. Sus respuestas son anónimas y se garantiza la confidencialidad de las mismas.

SECCIÓN I. DATOS GENERALES Y DESCRIPTIVOS

INSTRUCCIONES DE LLENADO: Marca con una (X) las siguientes aseveraciones:

1.- Sexo:

Masculino ()

Femenino ()

2.- Lugar de procedencia:

3.- Estado Civil

4.- ¿En qué periodo ingreso a la Universidad Veracruzana?:

Periodo (Agosto, Febrero) Año

SECCIÓN II. ENCUESTA CLIMA ORGANIZACIONAL

INSTRUCCIONES DE LLENADO: Lea cuidadosamente cada cuestionamiento califique del 1 al 5 de acuerdo a los siguientes valores:

(1)Totalmente en desacuerdo (2)En desacuerdo (3)Neutral (4)De acuerdo (5)Totalmente de acuerdo

5	En mi facultad se reconoce a los alumnos destacados.	()

RESUMEN

La presente investigación tiene como base el nuevo esquema de tributación para personas físicas con ingresos menores de dos millones de pesos que desarrollan actividades empresariales y servicios no profesionales y que actualmente fueron reubicadas al Régimen de Incorporación Fiscal (RIF). La inclusión de este régimen tiene como finalidad constituirse como punto de entrada a la formalidad a través del otorgamiento de descuentos decrecientes en el pago de impuestos durante los primeros años de participación. El objetivo de este estudio es identificar las afectaciones financieras, administrativas y fiscales que ocasiono en los microempresarios de Baja California la entrada en vigor del RIF, y conocer si los beneficios en pro de la formalidad indicados en la exposición de motivos se han cumplido. Se realizó un estudio descriptivo con información de las microempresas de Baja California. El muestreo aplicado fue el probabilístico, integrando los diferentes sectores con un nivel de confianza del 95%.

RELIABILITY OR TAX CAPTIVITY BY TAX MICROENTREPRENEURS IN MEXICO

ABSTRACT

This research is based on the new scheme of taxation for individuals earning less than two million pesos to develop business and nonprofessional services. The inclusion of this scheme aims to establish itself as an entry point to the formality through the granting of discounts decreasing taxes during the first years of participation. The aim of this study is to identify the financial, administrative and tax damages caused in Baja California by the entry the new tax for microentrepreneurs, and to know whether the benefits in favor of formality are reality or mere myth. A descriptive study with data from microentrepreneurs on Baja California. Sampling was probabilistic applied, integrating different sectors with a confidence level of 95%.

INTRODUCCIÓN

Se recauda muy poco, los impuestos son poco progresivos, la evasión tributaria es rampante y las administraciones tributarias son muy débiles: con estos cuatro rasgos suele describirse la estructura de la tributación en los países latinoamericanos, (Corbacho, 2012).

De acuerdo con el documento "Estadísticas tributarias en América Latina 1990-2012", realizado por la OCDE, la Comisión Nacional para América Latina y el Caribe (Cepal) y el Centro Interamericano de Administraciones Tributarias (CIAT), la tasa de impuestos de México se ubica apenas por arriba de Nicaragua, donde la tasa es de 19.5 por ciento; Panamá, 18.5; Perú, 18.1; Paraguay, 17.6; Honduras, 17.5, y El Salvador, con 15.7 por ciento, según informo la Revista Milenio.

Sin duda estas estadísticas llevaron a México a emprender una de las Reformas Hacendarias más trascendentes para el país, pues como dice Corbacho, citado anteriormente, no hay reforma más importante para el crecimiento sostenible e incluyente de América Latina y el Caribe que la que tiene que producirse en los Sistemas Fiscales y Tributarios de la Región. Como parte de esta Reforma Hacendaria nace un régimen fiscal cuyos sujetos del impuesto son los microempresarios, según la Revista Forbes, *la reforma fiscal ha asestado al menos tres golpes que impactarán la forma de funcionar de las tiendas de barrio, el modelo de emprendimiento por excelencia en el país, por lo que estos pequeños negocios tienen dos opciones: adaptarse o morir.*

De acuerdo con el Directorio Estadístico Nacional de Unidades Económicas, del INEGI, en el país hay 975,760 negocios de comercialización de abarrotes al menudeo y el número podría ir en aumento cada día si se considera que abrir un negocio propio es el sueño de 56% de los mexicanos, según el Reporte Global de Emprendedores Amway. Sin embargo, la reforma fiscal que entró en vigor en enero de 2014, implica cambios que impactarán el funcionamiento de estos pequeños negocios y se traducen, en algunos casos, en la elección de adaptarse o no sobrevivir.

Es interesante notar entonces, que lo que busca México es un crecimiento y una mayor recaudación tributaria, basada en buena medida en las microempresas ya que se sabe que para este tipo de empresas es muy fácil vivir en la informalidad o bien aportar una recaudación menor a la Federación por los bajos ingresos que perciben. Al respecto Corbacho declara que las Reformas tributarias deben respetar cinco principios básicos: En primer lugar, las reformas deben incluir impuestos que favorezcan a los pobres, esto implica establecer un impuesto sobre la renta con menos exenciones, que tenga capacidad redistributiva real pero que proteja los ingresos de los hogares más pobres.

En segundo lugar, las reformas deben establecer sistemas fiscales más sencillos con bases tributarias más amplias. La mayoría de los sistemas fiscales de la región son demasiado complejos, debido a una multitud de exenciones y privilegios para ciertas actividades, sectores o grupos de contribuyentes. El resultado son impuestos que a menudo distorsionan severamente la asignación de recursos y que generan bases tributarias estrechas y frágiles. En tercer lugar, las administraciones tributarias deben fortalecerse para que todos los ciudadanos y las empresas cumplan con sus obligaciones tributarias. Reducir la elevada evasión fiscal y crear instituciones que garanticen que todos los agentes económicos y ciudadanos contribuyan con su parte al esfuerzo colectivo que es un elemento esencial de la legitimación social y, como tal, un requisito para la sostenibilidad de cualquier sistema tributario diseñado para impulsar el desarrollo.

En cuarto lugar, son necesarios acuerdos y consensos institucionales para garantizar que los gobiernos locales tengan los recursos necesarios para actuar como agentes del desarrollo. Para que la descentralización del gasto público sea sostenible, deben fortalecerse las fuentes de recursos propios de los gobiernos locales y en quinto lugar, las reformas tributarias para el desarrollo deberían crear sistemas fiscales que miren hacia el futuro. Tomando como base estos cinco principios básicos de una Reforma Hacendaria, la presente investigación analiza la importancia de los microempresarios en México, los impactos, administrativos fiscales y financieros que están sufriendo con la Nueva Reforma Hacendaria, así como su transición al nuevo régimen de Tributación.

REVISIÓN DE LA LITERATURA

Un porcentaje significativo de las empresas del país son microempresas que no rebasan en el año dos millones de pesos en sus ingresos. Estas pequeñas empresas son generadoras de una cantidad considerable de empleos tanto formales como informales, dando sustento de esa manera a muchas familias mexicanas. Por otra parte, es del conocimiento general, que estas empresas han sido tradicionalmente evasoras de impuestos por la característica de realizar operaciones casi exclusivamente para el público en general, es decir con clientes que no les exigen comprobantes fiscales para efectos de producción y acreditamiento. Por ello, y en respuesta al reclamo de los contribuyentes tradicionalmente cautivos, el Ejecutivo Federal público un decreto para la creación de la nueva ley del impuesto sobre la renta, misma que obliga a los contribuyentes microempresarios a registrarse en el régimen de incorporación fiscal y enterar su recaudación fiscal a mediano plazo.

Al respecto la Iniciativa de Ley de Ingresos de la Federación para el ejercicio fiscal de 2014 presentó un paquete económico que incluía una Iniciativa de Reforma Social y Hacendaria. Acorde con lo establecido en los ejes “México Incluyente” y “México Próspero” del Plan Nacional de Desarrollo 2013-2018. Según esta Reforma, el objetivo fundamental consiste en crear los mecanismos de inclusión y protección social para garantizar a todos los mexicanos un nivel de vida digno. Con ese fin, se realizan diversas modificaciones en materia de seguridad social y al sistema tributario. Las modificaciones al sistema tributario se orientan a generar los recursos necesarios para financiar la provisión de servicios de protección social, así como a dotar al país de un sistema fiscal más justo y más simple.

En particular, en el ámbito hacendario la Reforma que se presenta está basada en seis ejes fundamentales:

1. Fomentar el crecimiento y la estabilidad, por lo que se fortalece la capacidad financiera del Estado Mexicano;
2. Mejorar la equidad del sistema tributario, al fomentar una mayor progresividad en el pago de impuestos;
3. Facilitar el cumplimiento de las obligaciones tributarias, para reducir la carga que las personas físicas y morales enfrentan al realizar estas tareas;
4. Promover la formalidad, reduciendo las barreras de acceso y ampliando los servicios de seguridad social;
5. Fortalecer el federalismo fiscal, al incentivar la recaudación de impuestos locales y mejorar la coordinación del ejercicio del gasto, y
6. Fortalecer a Petróleos Mexicanos (PEMEX) al dotarlo de un régimen fiscal más moderno y eficiente

La citada iniciativa de Ley señala la necesidad de establecer medidas para promover la formalidad, reduciendo las barreras de acceso y ampliando los servicios de seguridad social. Reconociendo que la informalidad representa una importante barrera para el crecimiento acelerado de la productividad, uno de los ejes de la Reforma Hacendaria consiste en promover la formalidad.

Con ese fin, en la nueva Ley del ISR, se propone la inclusión de un Régimen de Incorporación Fiscal, con lo que se crea un punto de entrada para los negocios de pequeña escala al ámbito de la formalidad. El Régimen de Incorporación, en el que solamente podrán participar contribuyentes con ingresos anuales de hasta 2 millones de pesos, preparará a los negocios para el cumplimiento completo de sus obligaciones fiscales, a través del otorgamiento de descuentos decrecientes en el pago de impuestos durante los primeros años de participación. Adicionalmente, el Régimen permitirá a la autoridad contar con información para

evitar que las grandes empresas utilicen operaciones con pequeños negocios para realizar prácticas de evasión fiscal.

De forma paralela, se propone crear un Régimen de Incorporación a la Seguridad Social, por el que las personas que se registren en dicho Régimen recibirán los servicios de seguridad social con descuentos sobre las obligaciones por pago de cuotas. Adicionalmente, se ampliará la oferta de servicios de seguridad social mediante la introducción de un Seguro de Desempleo para los trabajadores formales y la creación de una pensión universal para los adultos mayores.

El Régimen de Incorporación Fiscal (RIF) es el nuevo esquema de tributación para el régimen antes conocido como pequeños contribuyentes y régimen intermedio, que entro en vigor a partir de enero de 2014. Este régimen tiene como sujetos a las personas físicas que realizan actividades empresariales y servicios no profesionales con ingresos menores de dos millones de pesos. El fundamento jurídico de este régimen se encuentra en la Ley del Impuesto Sobre la Renta en el Título IV De las Personas Físicas, Capítulo II De los Ingresos por Actividades Empresariales y Profesionales, Sección II Régimen de Incorporación Fiscal, en los artículos 111 al 113.

Según informó el Servicio de Administración Tributaria (SAT) este cambio en la legislación obedece entre otras cosas a la lucha de las Autoridades por combatir la informalidad. En México entre 2000 y 2010 el régimen de pequeños contribuyentes (Repecos) registro una evasión superior a 96%, esto basado en el Estudio de Evasión Fiscal en el Régimen de Pequeños Contribuyentes, elaborado por el Instituto Tecnológico y de Estudios Superiores de Monterrey Campus Ciudad de México unidad Centro de Estudios Estratégicos, coordinado por el Investigador Hugo Javier Fuentes Castro y su equipo, de fecha 4 de Octubre del 2011.

Tenemos entonces que la finalidad del RIF es constituirse como punto de entrada a la formalidad en el aspecto tributario y de seguridad social de los contribuyentes adscritos a este régimen. Según la Procuraduría de la Defensa del Contribuyente (Prodecon) este nuevo régimen, busca además promover un crecimiento más acelerado de la productividad teniendo como finalidad preparar a los contribuyentes para una eventual inserción en el Régimen General de tributación. Además este régimen permitira a la autoridad fiscal completar la cadena de comprobación e información fiscal, al contar con registros sobre las operaciones de los participantes con sus proveedores y clientes.

Al respecto, el presidente de la Cámara de Comercio, Servicios y Turismo en Pequeño de la Ciudad de México (Canacope), Gerardo López Becerra aseguró que aunque esta reforma hacendaria invite a los comercios informales a pasar a la formalidad, ellos no van a darse de alta para tener seguridad social perdiendo las jugosas ganancias que obtienen en la informalidad.

Tenemos entonces un régimen exclusivo para personas físicas que desarrollan actividades empresariales con poca capacidad económica y administrativa, con ingresos menores a dos millones de pesos y que permitirá incorporar a la formalidad a los contribuyentes en los siguientes 10 años, ofreciendo algunos supuestos beneficios, por lo que será necesario tener precauciones antes de entrar a este régimen y no creer todo lo que la publicidad gubernamental publica sobre el RIF, pues hasta el día de hoy, las autoridades hacendarias han prestado especial interés en mostrarle a los contribuyentes los supuestos beneficios que conlleva este nuevo régimen, esto lo han hecho mediante campañas publicitarias con frases como ser formal conviene, o programas de gobierno como crezcamos juntos.

Por lo que resulta de mucha importancia tomar en cuenta aspectos como: la mecánica del cálculo, y los beneficios otorgados por pertenecer al RIF. Con relación a la determinación del impuesto tenemos que su presentación será bimestral, y la mecánica para la determinación del impuesto resulta de disminuir a los ingresos cobrados del bimestre, las deducciones autorizadas del bimestre, los activos fijos adquiridos

durante el bimestre, los cargos y gastos diferidos del bimestre, así como la Participación de los Trabajadores en las Utilidades (PTU) pagada. El resultado será la utilidad del bimestre a la cual se le aplicara una tarifa bimestral cuya tasa máxima es del 35%.

Como estrategia para la incorporación a este nuevo régimen, las autoridades hacendarias ofrecen al contribuyente una disminución de sus impuestos, que va desde el 100% en el primer año hasta el 10% en el décimo año de incorporación.

Adicionalmente se ofrecen incentivos económicos a través de financiamientos de Nacional Financiera, apoyos a través del Instituto Nacional del Emprendedor, Capacitación por el SAT para el fomento de una cultura contributiva y educación fiscal así como facilidades para el pago de las cuotas obrero patronales del Seguro Social, la pregunta entonces es ¿en el caso de los apoyos financieros, que no son ya una medida establecida para incentivar y promover el crecimiento económico de nuestro país a través de la pequeña empresa? Y en el caso de la capacitación del SAT

¿No es esta la obligación de las autoridades hacendarias?

Además, mucho se ha dicho que el primer año los contribuyentes del RIF no pagaran impuestos, sin embargo esto solo aplicaría en el caso del IVA si las ventas se realizan con el público en general, sin embargo si el negocio emite factura con requisitos legales y el giro del contribuyente son actividades sujetas al pago del IVA, forzosamente se tendrá que trasladar este impuesto y el pago será el remanente que resulte de disminuir el iva cobrado menos el iva pagado.

Otro punto importante a considerar con relación al ISR es sobre las deducciones, pues aunque en 2014 el contribuyente no pague este impuesto, deberá registrar todas sus deducciones y solicitar factura por los gastos indispensables que realice como parte de la operatividad de su negocio. Esto es importante toda vez, que resulta común que las autoridades hacendarias busquen consistencia en la información, por lo que presumen que el comportamiento del siguiente ejercicio será similar, sin embargo en caso de no guardar relación, es muy posible que la autoridad emita una posible revisión.

Objetivos

La presente investigación tiene como objetivo general, identificar las afectaciones financieras, administrativas y fiscales que ocasionó a los microempresarios de Baja California, la entrada en vigor del RIF, y conocer si los beneficios en pro de la formalidad indicados en la exposición de motivos se han cumplido. Los objetivos específicos derivados del objetivo general de la investigación son Primero, En el ámbito administrativo, medir el incremento de recursos que se requirieron para solventar las necesidades del nuevo régimen. Segundo en el ámbito financiero, conocer si los contribuyentes requirieron de mayores recursos monetarios para inversión de equipo, pago de honorarios, papelería adicional, contratación de más personal, etc. Tercero en el ámbito fiscal, analizar si el cambio de régimen trajo consigo mayor carga tributaria para estos nuevos contribuyentes del RIF.

METODOLOGÍA

En este estudio el método utilizado para llevar a cabo la investigación fue el descriptivo longitudinal, en virtud de que se recabó información de las microempresas domiciliadas en el estado de Baja California, con relación a las afectaciones sufridas en el ámbito administrativo, financiero y fiscal por el cambio de régimen. Estas afectaciones las sufrieron los REPECOS al migrar al RIF, el Régimen intermedio al convertirse en RIF y el Régimen General a RIF. La población sujeta a estudio se compone por las microempresas establecidas en el estado de Baja California, las cuales fueron seleccionadas por medio de muestreo

probabilístico, integrando a la muestra los diferentes sectores, logrando resultados con un nivel de confianza del 95%.

En la primera fase de la investigación se recopiló y analizó, información bibliográfica relativa al tema. Posteriormente se identificaron las bases de datos de las microempresas localizadas en las ciudades de Tijuana, Mexicali y Ensenada, en el Estado de Baja California, para efectos de seleccionar las más confiables y completas. En la segunda fase, se diseñó y se aplicó el cuestionario a la muestra seleccionada. Posteriormente se capturó la información obtenida en el programa estadístico SPSS. Finalmente en la fase tercera, se realizó el análisis estadístico de la información obtenida y se obtuvo el reporte de la investigación.

RESULTADOS

De acuerdo con datos del Sistema de Información Empresarial Mexicano (SIEM), en Baja California existen actualmente 7027 microempresas, las cuales se dividen como se muestra a continuación.

Tabla 1: Microempresas en Baja California

MUNICIPIO	EMPRESAS			
	INDUSTRIA	COMERCIO	SERVICIOS	TOTAL
ENSENADA	261	0	257	518
MEXICALI	139	1,334	713	2,186
TECATE	94	35	35	164
TIJUANA	415	1,995	1,718	4,128
PLAYAS DE ROSARITO	7	4	20	31
TOTAL	916	3,368	2,743	7,027

Microempresas en Baja California por Municipio, de acuerdo con datos del Sistema de Información Empresarial Mexicano (SIEM). 24 de Marzo de 2015 Última actualización. Por lo que en función de las 7027 microempresas que existen en el Estado, se aplicaron cuestionarios en Mexicali al Comercio en 56%, 40% Servicios y un 4% de otras actividades. En Tijuana la aplicación de cuestionarios fue en un 62.7% Servicios, 36% Comercios y 1.3% otros. Finalmente en Ensenada la muestra se compuso principalmente del Sector Industria en un 65.7% y del Sector Servicios en un 34.3%. Los principales resultados obtenidos de la aplicación del cuestionario son los siguientes:

En primer lugar se les pregunto a los contribuyentes el régimen en el que estaban registrados en el año 2013, encontrándose en la ciudad de Mexicali un 62.7% de los contribuyentes encuestados en el régimen de Pequeños Contribuyentes (REPECOS), un 14.7% en el Régimen Intermedio un 9.3% en el Régimen General y un 13.3% no estaba registrado.

En la ciudad de Tijuana encontramos un 64% de contribuyentes registrados en REPECOS, un 14.7% en el régimen intermedio, un 8% en el régimen general y un 13.3% no estaba registrado. Mientras que en la ciudad de Ensenada un 51.5% pertenecían al régimen de REPECOS, un 30.9% al Régimen Intermedio, un 10.3% al Régimen General y un 5.9% al Régimen General. Se les pregunto a los contribuyentes encuestados si estaban satisfechos con el cambio automático de Régimen a partir de 2014, incorporándose ahora al RIF, encontrándose que tanto Mexicali, como Tijuana y Ensenada no están de acuerdo con dicho cambio en un 65.3%, 57.3% y un 72.1% respectivamente.

Adicionalmente como parte de la investigación se decidió conocer la escolaridad que tienen los microempresarios del Estado, esto en función de la importancia de esta variable, pues a mayor preparación académica, se considera que existe una mayor facilidad para el cumplimiento de sus nuevas obligaciones fiscales, como factura electrónica, presentación de declaraciones en línea y contabilidad electrónica entre

otras, como resultados según la figura que abajo se muestra, se encontró que tanto en Mexicali como en Tijuana, la mayoría de los pequeños empresarios tienen una escolaridad media o preparatoria, mientras que Ensenada se destaca como uno de los Municipios del Estado con microempresarios con escolaridad de licenciatura.

A fin de dar cumplimiento a las nuevas obligaciones fiscales del Régimen de Incorporación Fiscal, el Servicio de Administración Tributaria (SAT) que es el organismo responsable de aplicar la legislación fiscal y aduanera en nuestro país, ha diseñado las herramientas necesarias para facilitar el cumplimiento de pago de impuestos. Esta plataforma virtual permite entre otras cosas que el pequeño empresario emita facturas, capture sus ingresos y sus gastos en una plataforma virtual llamada mis cuentas y posteriormente use esa información en sus declaraciones mensuales. Al respecto la revista Forbes citada anteriormente menciona, comparado con no llevar contabilidad, el régimen de incorporación si implica mayor carga administrativa para los microempresarios. Además la Cámara de Comercio, Servicios y Turismo en Pequeño de la Ciudad de México (Canacope), declara que entre el 40 y 42% de los pequeños comerciantes son adultos mayores de más de 60 años, quienes no están familiarizados con los nuevos programas electrónicos, por ello la resistencia de unirse al RIF.

Figura 1: Escolaridad de los microempresarios en Baja California

En esta figura se muestra la Escolaridad que tienen los microempresarios de los Municipios de Mexicali, Tijuana y Ensenada, en el Estado de Baja California. Este indicador es importante para conocer la relación que existe entre esta variable y la permanencia en el tiempo de los pequeños negocios. Además esta variable permite identificar el grado de estudios con el que cuentan los microempresarios del Estado para enfrentarse a los diversos cambios en la manera de elaborar su contabilidad mensual así como enfrentar todas sus nuevas obligaciones fiscales. Fuente: Elaboración propia.

Otro dato que resulta importante, es la visión que tienen los pequeños empresarios con relación al crecimiento de su negocio tomando como parámetro de crecimiento los 3 años anteriores. De sus respuestas obtenemos que la tendencia de estos pequeños negocios es a mantenerse igual, pues tanto en Mexicali, como en Tijuana y Ensenada, encontramos que un porcentaje entre el 40 y 50% de los empresarios encuestados dijo no haber sufrido un crecimiento en su empresa.

Este dato sin duda resulta de mucho interés pues según datos del Instituto Nacional de Estadística y Geografía (INEGI) publicado en la revista COEPES, las pequeñas empresas en México, constituyen el 97% del total de las empresas. Además, estas empresas, son generadoras de empleos del 79% de la población y generan ingresos equivalentes al 23% del Producto Interno Bruto (PIB), lo anterior es una clara señal de que debemos poner atención en este tipo de empresa, e identificar aquellos factores que están provocando que los microempresarios no crezcan, pues hay que recordar que son la base de la economía mexicana.

Figura 2: Crecimiento de la Empresa con relación a los 3 años anteriores en Baja California.

En esta figura se muestra el crecimiento de la Pequeña Empresa de los Municipios de Mexicali, Tijuana y Ensenada, en el Estado de Baja California. Este indicador es importante pues permite evaluar el desempeño de las empresas, tomando en cuenta la visión del empresario con relación a su negocio si este se mantuvo igual con el paso del tiempo, si empeoro o mejoró. Este tipo de estadísticas permiten identificar los posibles factores que influyen ya sea en el desarrollo del negocio o bien los factores negativos que evitan que los micronegocios se desarrollen. Fuente: Elaboración propia.

Con relación a las causas que en opinión de los microempresarios han llevado a que su negocio no tenga crecimiento en los últimos 3 años, encontramos como principales causas la crisis económica en primer lugar, en segundo lugar, encontramos los cambios fiscales y la competencia y en tercer lugar la situación financiera de la empresa, como se ilustra en la siguiente figura.

Figura 3: Factores que influyen en el Crecimiento de la Empresa en Baja California.

En esta figura se muestran ocho posibles factores que influyen en el crecimiento de la Pequeña Empresa de los Municipios de Mexicali, Tijuana y Ensenada, en el Estado de Baja California. Este indicador es importante, pues permite identificar aquellos factores externos que estancan el desarrollo de las organizaciones, de tal manera que el tener conocimiento de ellos, permite a los microempresarios tomar las medidas necesarias para lograr la permanencia de su negocio a través del tiempo. De la figura anterior se destacan tres factores principalmente que son: la crisis económica, los cambios fiscales y la competencia y en tercer lugar la situación financiera de la empresa. Fuente: Elaboración propia.

Es interesante destacar que en la ciudad de Mexicali los cambios fiscales han afectado el crecimiento de las empresas en un 25.3%, en Ensenada en un 12% y en Tijuana en un 4.5%. Mientras que la crisis económica ha afectado en gran manera el crecimiento de los micronegocios pues según las encuestas la afectación es del 36% en la ciudad de Mexicali, del 50.7% en la ciudad de Tijuana y del 34.3% en el municipio de Ensenada. También se les pregunto a los microempresarios como consideraban que afectaba a su empresa los cambios en el sistema fiscal, encontrando como respuestas principales un afectación en demasía en Mexicali en un 32%, en Tijuana en un 33.3% y en Ensenada en un 17.6%. Mientras que la respuesta regular ocupó en Ensenada un 25% y la respuesta nada obtuvo un 28% en la ciudad de Tijuana.

Otro dato interesante que se obtuvo como resultado de la investigación fue identificar quien genera la información contable y financiera del Negocio, si un despacho contable o un contador interno,

encontrándose que en Mexicali en un 65.3% se genera la información contable en un despacho contable, en Tijuana en un 62.7% y en Ensenada en un 76.5%. Mientras que solo el 34.7% tiene un Contador Interno en la ciudad de Mexicali, en Tijuana solo un 33.3% y en Ensenada un 22.1%. Por otro lado se identificó entre el Impuesto Sobre la Renta (ISR), Impuesto al Valor Agregado (IVA), Impuesto Especial de Producción y Servicios (IEPS) y Contribuciones de Seguridad Social como el pago de cuotas al Instituto Mexicano del Seguro Social (IMSS) y al infonavit, cuales son aquellas contribuciones que tienen mayor importancia o que reflejan un mayor desembolso por pago de impuestos, encontrándose en primer lugar el IVA como uno de los impuestos que mayor causan los pequeños negocios en las ciudades de Mexicali y Tijuana con una proporción del 57.3% y del 69.3% respectivamente, sin embargo es interesante notar que en el caso de Ensenada la causación de este impuesto se relega a un segundo lugar con un 29.4%, mientras que el ISR representa el 48.5% de la causación, en tanto que para las ciudades de Mexicali y Tijuana representa un 32% y un 22.7% respectivamente.

Por otro lado se observó que tanto el IEPS como las contribuciones de seguridad social como el pago de cuotas al IMSS y al infonavit, no generan un desembolso grande para los microempresarios pues en el caso de las cuotas del IMSS y del Infonavit, Mexicali, respondió en un 45.3% que estas contribuciones no son las de mayor importancia para su empresa, Tijuana tuvo una respuesta similar con un 52% y Ensenada un 47.1% dijo no tener afectaciones por estas contribuciones. De las respuestas obtenidas por los contribuyentes encontramos entonces en primer lugar que estos no están contentos con el cambio automático del régimen. Segundo, que la estrategia de las autoridades hacendarias de crear un nuevo régimen que permita la incorporación de los comercios que se encontraban en la informalidad y que contribuyan al gasto público mediante el pago de sus impuestos, en primera instancia si le está funcionando, pero de manera lenta pues se pudo observar que son pocos hasta el momento los negocios que han regularizado su situación fiscal. Y en tercer lugar encontramos que los contribuyentes dicen que el segundo factor que ha evitado que su negocio crezca, son los cambios fiscales, sin embargo resulta contradictorio que cuando se les pregunta si conocen a fondo algunos aspectos importante sobre sus nuevas obligaciones, ellos dicen desconocerlas.

CONCLUSIONES

De los resultados de este estudio se puede inferir que el 2015 sin duda será un año de retos, puesto que los pequeños empresarios enfrentan graves problemas macroeconómicos como la devaluación de la moneda y el establecimiento de nuevas obligaciones fiscales, lo cual trae aparejado una mayor carga administrativa, ya que según los empresarios de Baja California dicen tener una mayor carga administrativa con la entrada en vigor del RIF, en las siguientes proporciones Mexicali, 46.7%, Tijuana 66.6% y Ensenada en un 72.1%.

Al respecto la Canacope comento que se pretende reducir el número de cierre de los pequeños negocios ya que según un muestreo realizado por este organismo indico que el 17% de los pequeños negocios de la ciudad de México quebró durante 2014 y las ventas en general cayeron entre un 3 y un 5%. Como podemos notar entonces, la propuesta del Ejecutivo de sustituir el Régimen de Pequeños Contribuyentes y Régimen Intermedio por el ya existente RIF, está lejos de combatir la informalidad ya que en todo el país y también en nuestro estado Baja California, esta modificación en la legislación fiscal ha provocado cambios drásticos en las obligaciones de los contribuyentes pues como Repecos o Régimen Intermedio tenían facilidades administrativas en el cumplimiento de sus obligaciones fiscales, y actualmente dichos contribuyentes soportan una carga administrativa y financiera adicional pues entre otras cosas están obligados actualmente a llevar contabilidad, presentar declaraciones, facturar y otras obligaciones formales que anteriormente no tenían.

Por ello, tras haber realizado la presente investigación se plantean las siguientes conclusiones: Primera. Que el establecimiento del nuevo régimen RIF, si establece cargas administrativas a los contribuyentes con ingresos menores a los dos millones de pesos y que aunque la mayoría de los encuestados tienen contratado

un despacho contable para que les lleve la contabilidad, muchos contribuyentes han observado un incremento en la carga administrativa de su negocio, pues ahora tienen que facturar, llevar un registro adecuado de sus deducciones y presentar sus pagos bimestrales en las herramientas virtuales que para tal efecto a preparado la autoridad.

Segunda. Que los supuestos beneficios como los del programa Crezcamos Juntos, solo han sido una estrategia del Gobierno Federal para hacer atractiva la transición a la formalidad, beneficios como el acceso a los servicios médicos y sociales para el dueño del negocio, para sus empleados y sus familias, con descuentos en sus cuotas de seguridad social, durante 10 años, ha sido solo uno de los ganchos del programa.

Tercera. Que a pesar de que 2014 fue el año de la Reforma Fiscal y de que existió el doble de crecimiento económico con relación a 2012 según datos de la Secretaría de Hacienda y Crédito Público (SHCP), los ingresos tributarios apenas crecieron 0.8 puntos al pasar de 9.7 por ciento del Producto Interno Bruto (PIB) en 2013 a 10.5 por ciento del PIB en 2014, comenta el periódico el Financiero.

Esta misma publicación señala que el estancamiento en la recaudación de ingresos tributarios, es un factor constante observado en México y que de acuerdo con el Informe Estadísticas Tributarias en América Latina y el Caribe realizado por la Organización para la Cooperación y Desarrollo Económicos (OCDE), los ingresos fiscales totales como porcentaje del PIB de México se incrementaron en solo dos décimas de 2011 a 2013.

Por lo que finalizamos la presente investigación destacando el impacto tan grande que ha tenido en el comercio en pequeño la entrada en vigor del RIF, pues de no llevar contabilidad formal y pagar sus impuestos en base a estimativas, actualmente se les obliga a los ex pequeños contribuyentes y régimen intermedio, no solo a ser formales, sino a llevar contabilidad electrónica, a facturar, soportar una carga administrativa para cumplir con estas obligaciones aunado a una mala economía del país.

DIVERGENCIAS DE COMPETITIVIDAD EN DESTINOS TURÍSTICOS DE BAJA CALIFORNIA SUR

Plácido Roberto Cruz Chávez, Universidad Autónoma de Baja California Sur

Gustavo Rodolfo Cruz Chávez, Universidad Autónoma de Baja California Sur

Judith Juárez Mancilla, Universidad Autónoma de Baja California Sur

José Isabel Urciaga García, Universidad Autónoma de Baja California Sur

RESUMEN

La competitividad es una variable importante que nos muestra la posición que guarda una entidad o lugar respecto a la competencia. Su evaluación y seguimiento es necesaria para poder mejorar los indicadores de calidad y desarrollo económico. En el sector turístico a nivel internacional y nacional se han desarrollado diversas metodologías de competitividad que ilustran su aplicación en la empresa, en las entidades o países. En este caso, en México se ha realizado el seguimiento de competitividad aplicando las metodologías del Instituto Tecnológico de Estudios Superiores de Monterrey (ITESM)), el Instituto Mexicano de la Competitividad y la Secretaría de Turismo (SECTUR). Por ello, en este trabajo se pretende aplicar una metodología que incluye algunas dimensiones de análisis que propone la SECTUR para conocer la competitividad que tienen los destinos de Los Cabos, La Paz y Loreto para el periodo 2014. Sus resultados nos indicarán las divergencias en competitividad y productividad existentes, lo cual permitirá identificar áreas de oportunidad y de mejora en el sector turístico del Estado de BCS.

PALABRAS CLAVE: Turismo, competitividad y visitante.

DIVERGENCES IN COMPETITIVENESS IN TOURIST DESTINATIONS IN BAJA CALIFORNIA SUR

ABSTRACT

Competitiveness is an important variable that shows the position that keeps a place entity or over the competition. Evaluation and monitoring is needed to improve the quality indicators and economic development. In the tourism sector at international and national level have developed methods of competitiveness that illustrate its application in the company, entities or countries. In this case, Mexico has followed up competitiveness by applying the methodologies of the Technological Institute of Superior Studies of Monterrey (ITESM)), the Mexican Institute for Competitiveness and the Ministry of Tourism (SECTUR). Therefore, the aim was to apply a methodology that includes some dimensions of analysis proposed SECTUR to meet competitive with destinations of Los Cabos, La Paz and Loreto for the period 2014. The results will indicate divergences in competitiveness and existing productivity, which will identify areas of opportunity and improvement in the tourism sector of the State of BCS.

INTRODUCCIÓN

Es importante identificar los recursos con los que cuenta Los Cabos, La Paz y Loreto, y conocer la opinión del turista de estos lugares. Esto nos servirá para contar con un conocimiento del estatus que guarda la competitividad en dichos lugares para delinear una estrategia de mejora, práctica y viable, que ha de servir de base para la toma de decisiones.

Hay que destacar que en Los Cabos si bien el 2012 fue un año de recuperación para la industria turística en donde se revirtió la tendencia negativa que tuvo origen desde el año 2009, podemos afirmar que el 2013 fue un año de consolidación y crecimiento. Las cifras indican que en 2009 el flujo total de visitantes vía aérea a Los Cabos ascendió a 1.31 millones, cifra que para 2012 arrojó un valor de 1.51 millones de visitantes y en el 2013 el flujo total de visitantes ascendió a 1.69 millones, lo que representa una diferencia de 29.3% (o 0.20 millones de visitantes) con respecto a 2009. Posterior a la crisis inmobiliaria de 2007 en los Estados Unidos de Norteamérica, entre los años 2011 y 2012 se reactivan inversiones hoteleras que habían estado pausadas, y en 2013 se han detonado nuevas inversiones en infraestructura de hospedaje y campos de golf. La percepción de crecimiento y recuperación del sector turístico en Los Cabos por parte de las instituciones y agencias de los tres órdenes de gobierno responsables de la promoción, seguimiento y administración de esta actividad, es generalizada (Cruz, 2014).

Del total de establecimientos de hospedaje en Los Cabos, el 40% son de cinco estrellas. En infraestructura de alojamiento Los Cabos ha mostrado un aumento en el rubro de hoteles pasando de 115 a 118 hoteles lo que representa un aumento del 2.6%. En lo que respecta a cuartos entre 2010 y 2013 estos pasaron de 14,122 a 15,292, lo que es un aumento del 8.8%. Por otra parte, el municipio de Los Cabos concentra el 78% de la afluencia de turistas del estado.

De acuerdo a la Secretaria de Turismo de Baja California Sur (SECTURBCS) la afluencia turística en Los Cabos esta se puede ver desde tres perspectivas. La primera, la llegada de turistas a hoteles la cual en 2010 ascendió a 1,081,743 y en 2013 fue de 1,400,820, un aumento porcentual de 29.5. En segundo lugar, mediante la llegada de pasajeros vía aérea, en 2010 fue de 1,349,499 y para 2013 arroja una cifra de 1,688,704; lo que es un aumento del 25.13%. Y la tercera, Los pasajeros totales vía aérea, cuyas cifras para 2010 y 2013 son 2,763,789 y 3,338,096; un incremento del 40.67% (Cruz, 2014).

Elementos importantes a destacar en el desempeño turístico de Los Cabos es la ocupación hotelera que paso de 57.07% en 2010 a 66.12% en 2013, una diferencia de 15.9 puntos porcentuales. La estadía promedio por visitante no muestra variación significativa, en 2010 fue de 4.87 días y en 2013 llego a 4.65 días. En ese mismo año la tarifa promedio alcanzo los 221 dólares, ésta creció 24.9% con respecto a 2012 que era de 177 dólares, lo que la convierte en la tarifa más alta del país, por lo que se infiere que los turistas que arriban a este destino son de altos ingresos. El número de vuelos creció en un 42.8%, pasando de 13,392 vuelos en 2010 a 19,130 vuelos en 2013 (INEGI, 2013).

En el caso de Loreto es considerado un punto de desarrollo económico y turístico importante en la región. Su desarrollo turístico fue impulsado en 1974 con la creación de los Centros Integralmente Planeados y a partir del 14 de junio de 2012 fue declarado Pueblo Mágico. Actualmente se encuentra dotado de una importante red de infraestructuras y equipamientos entre las que se encuentran el aeropuerto internacional, una estación telefónica, sub-estación eléctrica, planta de tratamiento de aguas negras y un sistema de vialidades (SECTUR, 2014). La ubicación y características del municipio de Loreto resultan ideales para el desarrollo turístico, ya que presenta enormes extensiones de playas y zonas en estado natural. Así también, la localidad guarda una de las conformaciones de mayor contraste, por la belleza de sus playas y los imponentes y fantásticos acantilados de roca volcánica que configuran la sierra de La Giganta. Parte de su riqueza natural está conformada por una diversidad de plantas y especies propias de la sierra, el llano semidesértico y la costa.

En los años 1970 el gobierno federal percibió un gran potencial turístico en Loreto y, a través de Fondo Nacional de Fomento al Turismo (FONATUR) y con fondos del Banco Mundial, se inició el proyecto para transformar a Loreto en un megacomplejo turístico; sin embargo no prosperó y se mantuvo como un destino de bajo volumen turístico hasta fechas recientes. El desempeño actual de la actividad económica de Loreto

puede analizarse considerando el desempeño de variables vinculadas con las características de las unidades económicas, según rama sector o actividad (Cruz, 2014).

El turismo es una de las principales actividades de este municipio. Esto se debe en gran medida a la presencia de una variedad de atractivo natural y cultural. Sumado a ello, la fundación de un Centro Integralmente Planeado a finales de los 70's y el decreto de Pueblo Mágico en 2013, han favorecido el desarrollo de dicha actividad. Luego de una baja sostenida de la afluencia turística a raíz de la crisis de 2008, a partir de 2010 este puerto inicia una recuperación paulatina. Cifras de 2011 indican que Loreto recibió 84,139 turistas, los cuales se alojaron en establecimientos de hospedaje; de estos, el 12% se alojó en establecimiento de cinco estrellas, el 39%, 32% y el 17% en establecimientos de cuatro, tres y dos estrellas, respectivamente. Se estima que tan solo en el año 2012 se alojaron a 89 mil 863 visitantes, los cuales, en su mayoría correspondían al segmento de turismo nacional. No obstante lo anterior, el nivel de ocupación hotelera y la estadia promedio es baja, máxime si comparamos dichas cifras, con las de otros destinos del estado (INEGI, 2012).

Datos de la Secretaría de Turismo Estatal de Baja California Sur, indican que la llegada de turistas a establecimientos de hospedaje en Loreto se ha incrementado en 19.05%, durante el período 2010 al 2013. Respecto al origen de los visitantes, el turismo nacional ha disminuido 4.95% en dicho periodo, mientras que el turismo internacional se ha incrementado en 240.80%, alcanzando en el último año los 25,216 turistas extranjeros de los 7399 existentes en el 2010, existiendo las condiciones para incrementar dichas estadísticas para este destino turístico (SECTUR, 2014).

La actividad turística en Baja California Sur ha sido muy importante, sobre todo para La Paz y Los Cabos, debido a la generación de recursos económicos. Ha sido una oportunidad para la creación de fuentes de empleo y trabajo para empresas que tienen relación directa e indirecta con el sector. Lo cual hemos visto con el transcurso de los años que el número de empresas que ofrecen diversos servicios turísticos ha aumentado. Tan solo basta con revisar algunas cifras de estos negocios proporcionados por INEGI a nivel estatal.

Es decir, haciendo un comparativo desde 1994 al 2010, vemos que en el Estado se han incrementado en número de establecimientos dedicados al hospedaje de turistas, pasando de 123 a 332 lo cual apreciamos en el que la mayoría están concentrados en Los Cabos y La Paz. Los cuales son considerados los dos centros turísticos más importantes del Estado. Por ejemplo, en La Paz se han duplicado los establecimientos de hospedaje pasando de 1994 al 2010 de 45 a 90 unidades. En cambio, Los Cabos ha tenido un crecimiento más exponencial en este rubro, de 44 unidades que tenía en 1994, número inferior al de La Paz, llegó a superar la capital de Estado a 118 establecimientos en 2010. Por otro lado, el Municipio con menor número de establecimientos a lo largo de la historia ha sido Comondú, alcanzando al 2010 únicamente 24 unidades.

Es por ello, que el objetivo de este trabajo fue aplicar una metodología que incluye algunas dimensiones de análisis que propone la SECTUR para conocer la competitividad que tienen los destinos de Baja California Sur (BCS): Los Cabos, La Paz y Loreto con datos del 2014. Sus resultados nos indicarán las divergencias en competitividad y productividad existentes, lo cual permitirá identificar áreas de oportunidad y de mejora en el sector turístico del Estado de BCS. Esto mediante la metodología que propone la SECTUR. El trabajo se encuentra estructurado en cuatro secciones, la primera muestra y por último, algunas consideraciones generales.

REVISIÓN DE LITERATURA

Competitividad turística es la capacidad del destino turístico para atraer viajeros e inversión en infraestructura y equipamiento turístico. Esto puede impactar en la llegada de visitantes, incrementar la ocupación y el gasto promedio turístico: Sus resultados pueden permitir generar beneficios para los

residentes locales, los prestadores de servicios turísticos, además de favorecer la sostenibilidad del patrimonio natural (SECTUR, 2014).

La SECTUR (2014) con la finalidad de identificar la problemática que observan los destinos y contabilizar su competitividad utilizan 9 factores de competitividad que incluyen características turísticas de las localidades. Estos son: oferta turística, democratización de la productividad, sustentabilidad, formación del capital humano, seguridad, promoción, gestión del destino y tecnologías de la información.

Por otro lado, el Índice de Competitividad Urbana (2012) del IMCO, es aportar información útil para diseñar, priorizar y dar seguimiento a las políticas públicas que promuevan la competitividad de México. La idea principal es utilizar 10 factores de competitividad de IMCO. Estos se basan en aspectos generales que la teoría económica, la experiencia internacional y el sentido común asocian con el desarrollo económico y con nuestra definición de competitividad. Actualmente, se compara transversal y temporalmente la posición relativa de 77 zonas urbanas del país en torno a 10 subíndices, alimentados por 60 indicadores nombrados variables, que tienen un impacto significativo en la competitividad.

Otra metodología importante es la utilizada para conocer el nivel de competitividad turística es el del Instituto Tecnológico y de Estudios Superiores Monterrey en 2014 (ITESM, 2014). Y se obtiene a través de la suma ponderada de los índices de desempeño en diez dimensiones, las cuales son:

- Dimensión 1. Recursos y actividad cultural
- Dimensión 2. Recursos naturales y protección al medio ambiente
- Dimensión 3. Recursos humanos e indicadores educativos
- Dimensión 4. Infraestructura y profesionalización del sector hotelero
- Dimensión 5. Flujo de personas y medios de transporte
- Dimensión 6. Servicios complementarios al turismo
- Dimensión 7. Seguridad pública y protección al ciudadano
- Dimensión 8. Rentabilidad y aspectos económicos
- Dimensión 9. Promoción turística
- Dimensión 10. Participación y eficiencia gubernamental

Con estos antecedentes, se procede a explicar la metodología empleada para conocer el nivel de competitividad turística entre Los Cabos, La Paz y Loreto.

METODOLOGIA

El identificar la competitividad de los destinos turísticos es necesario proceder en tres momentos. El primero es analizar los indicadores que las mismas secretarías y dependencias han generado en torno al turismo. En este caso, la Secretaría de Turismo y el Instituto Nacional de Geografía los cuales nos muestran la evolución en términos de infraestructura y afluencia de visitantes. En segundo lugar, se procede a elaborar y aplicar una encuesta aplicada a los turistas. El universo son los mayores de 18 años de edad que hayan tenido contacto con los servicios del destino de Los Cabos, La Paz y Loreto en BCS (al menos deben haber estado 3 horas en el lugar). A los cuales se les aplica una encuesta en principales puntos de afluencia de manera personal. Utilizando el muestreo probabilístico sistemático. Y considerando variables nominales y de escala. Ello parte de la metodología similar implementada y sugerida por SECTUR (2013).

El cuestionario está elaborado para ser aplicado 10 minutos de duración, y las variables a analizar son el perfil del turista, perfil del viaje, tipos de contratación de servicios, nivel de satisfacción y gasto de viaje. Estos aspectos están comprendidos en 24 reactivos y cuyos resultados corresponden al año 2014 en el tercer trimestre. Los puntos de afluencia para realizar el levantamiento de campo son zona de malecón, marina, centro y/o en zonas de afluencia. El tamaño de muestra se estima con un margen de error: +/- 5.6% por destino turístico y de +/- 2.8% anual. Para ello se realizaron 100 entrevistas efectivas en promedio por mes

durante un trimestre, con una distribución de 25 entrevistas aproximadas por semana levantadas en un mínimo de 3 días a la semana (en promedio se realizarán de 8 a 9 entrevistas por día).

Una vez realizada la encuesta a turistas nacionales y extranjeros, se procede a codificar y establecer reacciones entre variables, ello con miras a conocer el grado de satisfacción de los turistas que visitaron a Los Cabos, La Paz y Loreto. Para ello, se aplicará una fórmula para calcular el índice establecido por la Secretaría de Turismo Federal para el desarrollo del estudio. El índice de satisfacción se elabora con las respuestas a cada uno de los reactivos de satisfacción que pueden ser: excelente, bueno, malo y pésimo. La fórmula del Índice de Satisfacción (IS), considera una escala de 0 a 10 a partir de las 4 posibles respuestas (excelente, bueno, malo y pésimo) y se expresa:

$$\alpha = [5 + \{0.05 * (\beta - \mu)\} + \{0.025 * (\pi - \theta)\}] * 10 \quad (1)$$

Se refiere:

α = Índice de satisfacción

β = % Excelente

μ = % Muy malo

π = % Bueno

θ = % Malo

Posteriormente, se procede a comparar los indicadores de competitividad en los tres destinos turísticos, reflejando la oferta, los perfiles y la evaluación de los visitantes, esto brinda los elementos para identificar las divergencias en competitividad turística.

RESULTADOS

Los resultados obtenidos demuestran que en términos de oferta turística el destino de Los Cabos supera por mucho a los destinos de La Paz y Loreto. Vemos por ejemplo, que en número de hoteles y restantes son mayores en Los Cabos y ello se ve reflejado en el número de cuartos de hotel. El líder en número de hoteles es Los Cabos con 118 según datos de SECTUR BCS (2014), le sigue La Paz con 97 y Loreto con 31 (Tabla 1). El número de cuartos de Los Cabos es de 14,753 y donde la mayoría son de la categoría de cinco estrellas, La Paz tiene 2,812 y Loreto 878.

En cuanto a la oferta complementaria, podemos apreciar en la Tabla 1 que también el destino de Los Cabos lleva ventaja, por encabezar los rubros de número de agencias de viajes con 27, arrendadoras de autos con 21 y campos de golf con 11. Por su parte el destino de La Paz compite con 15 agencias de viajes, 19 arrendadoras de autos y 2 campos de golf. En cambio Loreto, solo posee 1 agencias de viajes, 4 arrendadoras autos y 1 campo de golf.

Es importante reconocer la fuerte afluencia turística en Baja California Sur y donde la cual, Los Cabos es el destino líder, con 1,400,820 llegadas de turistas SECTUR BCS (2014). Le sigue La Paz con 299,354 turistas y Loreto con 90,190. En el caso de Los Cabos la mayor parte de turistas son de procedencia internacional, en el caso de La Paz es lo inverso, la mayoría son de procedencia nacional y Loreto son principalmente turistas internacionales (Tabla 1). Es importante mencionar lo competitivo que es Los Cabos en la afluencia de pasajeros vía aérea, pues contabiliza 3,388,096 pasajeros, La Paz 262,676 y Loreto 58,256.

En cuanto a la estadía promedio en los destinos turísticos encontramos que Los Cabos registra el mayor número de noches, con 4.65, le sigue La Paz con 1.74 y Loreto 1.84 (Tabla 1). Los porcentajes de ocupación hotelera en Los Cabos son de 66.12, La Paz 49.51 y Loreto 26.39. En cuanto a la accesibilidad e

infraestructura encontramos que Los Cabos tiene ventaja en número de aeropuertos, dos, y en arribo de cruceros con 218,132, le sigue La Paz que tiene 1 aeropuerto y alcanza los 5,631 arribo de cruceros. Loreto en cambio, se encuentra limitado a 1 aeropuerto pero con 5,749 arribos de cruceros. En cuanto a transportadoras turísticas especializadas La Paz tiene el mayor número con 27, le sigue Los Cabos con 25 y Loreto 10.

Tabla 1. Indicadores a nivel de perfil por destino turístico, 2013

Componente	Indicadores de los destinos turísticos		
	Los Cabos	La Paz	Loreto
Oferta Turística:			
Número de establecimientos de hospedaje	118	97	31
Número de establecimientos de alimentos y bebidas	116	116	28
Número de cuartos de hotel	14,753	2,812	878
Oferta Complementaria:			
Número de agencias de viajes	27	15	1
Número de arrendadoras de autos	21	19	4
Centros de convenciones	1	1	0
Campos de golf	11	2	1
Centros de enseñanza turística	1	5	1
Afluencia Turística:			
Llegadas de turistas totales	1,400,820	299,354	90,190
Llegadas de turistas internacionales	1,059,558	26,381	64,974
Llegadas de turistas nacionales	341,262	272,973	25,216
Afluencia de pasajeros vía aérea	3,388,096	262,676	58,256
Estadía promedio	4.65	1.74	1.84
Porcentaje de ocupación hotelera	66.12	49.51	26.39
Porcentaje de turistas que había visitado anteriormente el destino	40%	39%	57%
Accesibilidad e infraestructura:			
Aeropuerto	2	1	1
Espacios en marinas turísticas	743	866	10
Arribo de mega cruceros y cruceros eco turísticos	218,132	5,631	5,749
Terminal de autobuses foráneos	1	3	1
Transportadoras turísticas especializadas	25	27	10

La Tabla muestra los principales indicadores de perfil por destino turístico en Los Cabos, La Paz y Loreto. En ella podemos apreciar la oferta turística de Los Cabos que es mayor que La Paz y Loreto. En oferta complementaria también Los Cabos tiene ventaja competitiva. En la afluencia turística se aprecia que la mayoría de los turistas arriban a Los Cabos y le sigue La Paz. Fuente: Elaboración propia basado en datos de la SECTUR Estatal de BCS, 2014. INEGI, 2012. Encuesta de perfil y grado de satisfacción del visitante en Los Cabos, La Paz y Loreto, 2014.

Derivado de la aplicación de encuestas a los turistas en los tres destinos turísticos, encontramos información que nos indica el perfil de los visitantes, donde se hospedan, que transporte usan, que actividades realizan, cuántos días pernoctan, su procedencia y cuál es el motivo de su visita. Los resultados indican en principio un equilibrio en la proporción de hombres y mujeres que acuden a estos destinos. La encuesta demostró que en Los Cabos, la mayor parte de los visitantes son del extranjero con 67%, en La Paz es lo inverso, principalmente son nacionales con un 69% y en el caso de Loreto, los números son muy próximos, pero es mayor el turista de procedencia nacional con 56% (Tabla 2).

En cuanto a la composición familiar, encontramos que en Los Cabos los turistas principalmente viajan con el cónyuge (35%), familia (27%) y amigos (28%). En La Paz, la composición es cónyuge (25%), familia (31%) y amigos (18%). Y en el caso de Loreto es cónyuge (16%), familia (47%) y amigos (21%) principalmente. En los tres destinos turísticos, prevaleció que la principal razón de la visita es por descanso, en Los Cabos fue 75%, La Paz 48% y Loreto 65% (Tabla 2). Y la principal razón por la cual decidieron acudir por descanso, es para realizar actividades que tienen que ver con el sol y agua. Por ejemplo, en Los Cabos fue de 79%, La Paz 66% y Loreto 48%. Otras de las actividades importantes en estos destinos fueron, para Los Cabos, la vida nocturna; para La Paz la cultura y para Loreto la cultura y otros.

Tabla 2: Indicadores del perfil del turista en los destinos turísticos de BCS, 2014.

Perfil del turista	Indicadores de perfil del turista en los destinos turísticos de:		
	Los Cabos	La Paz	Loreto
Género:			
Masculino	49%	53%	59%
Femenino	51%	47%	41%
Procedencia			
Internacional	67%	31%	44%
Nacional	33%	69%	56%
Composición familiar:			
Cónyuge	35%	25%	16%
Familia	27%	31%	47%
Amigos	28%	18%	21%
Personal de trabajo	2%	7%	6%
Viaja solo	8%	19%	10%
Motivo principal de la visita:			
Descanso	75%	48%	65%
Visita a familiares	18%	30%	20%
Negocios	3%	9%	6%
Otros	4%	13%	9%
Razón principal que motivó la visita de descanso:			
Sol y agua	79%	66%	48%
Cultura	4%	18%	14%
Actividades deportivas	4%	1%	3%
Vida nocturna	8%	5%	3%
Otros	5%	10%	32%
Tipo de hospedaje:			
Hotel	62%	59%	65%
Casa de huéspedes	2%	26%	12%
Tiempo compartido	20%	3%	1%
Familiares	13%	1%	1%
Otros	3%	11%	21%
Medio de transporte:			
Avión	98%	75%	39%
Auto	0.4%	23%	49%
Autobús	0.5%	2%	9%
Otro	1.1%		3%

La tabla muestra el perfil del turista en los destinos de Los Cabos, La Paz y Loreto para el 2014. Y en la cual podemos apreciar que Los Cabos representa el destino líder por captar más turismo extranjero. Además la mayor parte de los turistas viaja con su cónyuge y familia a los tres destinos, el principal motivo de visita a estos destinos es por descanso y su razón principal para el descanso es hacer actividades relacionadas con el sol y agua. Desde luego los turistas recurren a hospedarse al hotel principalmente, usando el avión como principal medio de transporte. Fuente: Elaboración propia, Encuesta de perfil y grado de satisfacción del visitante en Los Cabos, La Paz y Loreto, 2014.

El tipo de hospedaje que mayor recurre el visitante en Los Cabos es el hotel con 62% y tiempo compartido con 20%. En el caso de La Paz, hotel con 59% y 26% casa de huéspedes. En Loreto el hotel con 65% y casa de huéspedes con 12%. El medio de transporte que estos turistas utilizaron para acudir a estos destinos fueron, en Los Cabos el aéreo con 98%, en La Paz avión 75% y auto 23% y en Loreto avión con 39% y auto con 49% (Tabla 2).

Por otro lado, una vez comprendido el contexto de los destinos turísticos y el perfil de los visitantes, se procedió a realizar la evaluación de la competitividad basado en los indicadores que marca la SECTUR BCS. Para ello, califican diversos atributos, entre los que destacamos que Los Cabos sale mejor calificado con un índice de satisfacción de 9.5, La Paz 8.1 y Loreto 8.0. En hospitalidad Los Cabos tiene la mayor calificación con 9.9, La Paz sale muy bajo en la relación calidad precio, y Loreto tiene la menor calificación en la diversidad de actividades recreativas con 7.3. Es de destacar que Los Cabos tiene las mejores calificaciones en todos los indicadores, arriba de 9.0, siendo los más elevados en los atributos de diversidad de actividades recreativas, limpieza de playas, servicio ofrecido por hoteles, experiencia general en el hotel y hospitalidad.

En el caso de La Paz, sus mejores calificaciones son en limpieza de playas con 8.5, diversidad de atractivos con 8.4 y experiencia en los hoteles con 8.4. En el caso de Loreto sus mejores calificaciones con experiencia en los restaurantes con 8.5, experiencia en hotel 8.4 y hospitalidad 8.4. Otro indicador, que se evalúa es la satisfacción en general del turista, y en Los Cabos un 79% especifica que fue excelente, este mismo indicador para La Paz fue de 73% y para Loreto fue de 58%. Así mismo, se les cuestiona si recomendarían el destino turístico, y en Los Cabos indicaron 90% que Definitivamente si recomendarían, para La Paz la respuesta fue de 76% y el Loreto un 86% Definitivamente si lo recomendarían.

A los turistas se les pide emitan su opinión y percepción antes de llegar y después de estar en el destino turístico. En primer lugar, antes de viajar al destino en el caso de Los Cabos, un 92% expresó tener una percepción positiva del lugar, en La Paz un 88% era positiva y en Loreto fue de 78% positiva. Después de haber conocido el destino, la percepción del turista en Los Cabos se eleva a 98%, en La Paz también se incrementa a 92% y en Loreto aumenta a 97%. El rango de gasto promedio por turista en cada destino fue: en Los Cabos es entre \$10,00 y \$15,000, excluyendo los gastos de transporte, en La Paz entre \$ 6,000 y \$10,000 y en Loreto entre \$1,000 y \$3,000. Parte importante es identificar el nivel de seguridad que tienen los destinos turísticos, para ello en el caso de Los Cabos un 93% no experimentó ningún síntoma de inseguridad, en La Paz un 91% tampoco experimentó inseguridad y en Loreto fue un 97%.

Tabla 3: Indicadores de competitividad en los destinos turísticos de BCS, 2014

Evaluación de atributos	Indicadores de competitividad en los destinos turísticos de:		
	Los Cabos	La Paz	Loreto
Hospitalidad	9.9	8	8.4
Relación calidad precio	9.2	7.9	7.6
Servicio ofrecido por restaurantes	9.2	7.8	8.2
Experiencia general en los restaurantes	9.2	8.4	8.5
Servicio ofrecido por personal de hotel	9.6	7.9	7.9
Experiencia general en el hotel	9.5	7.9	8.4
Limpieza de playas	9.7	8.5	7.9
Diversidad de actividades recreativas y atractivos	9.8	8.4	7.3
Limpieza de calles y áreas públicas	9.0	8.2	8.2
Satisfacción general:			
Excelente	79%	73%	58%
Buena	20%	23%	41%
Mala	1%	4%	1%
Recomendación del destino:			
Definitivamente sí	90%	76%	86%
Probablemente sí	9%	19%	13%
Probablemente no	0%	2%	1%
Definitivamente no	1%	3%	
Índice de satisfacción	9.5	8.1	8.0
Percepción antes de viajar al destino:			
Positiva	92%	88%	78%
Negativa	3%	0%	1%
Indistinta	5%	12%	21%
Percepción después de viajar al destino:			
Positiva	98%	92%	97%
Negativa	1%	3%	0%
Indistinta	1%	5%	3%
Experimentó problemas de inseguridad:			
No	93%	91%	97%
Sí	7%	9%	3%
Gasto por persona: Rango que excluye transporte a su llegada y salida	\$10,000 y \$15,000	\$6,000 y \$10,000	\$1,000 y \$3,000

La tabla muestra los diferentes indicadores de competitividad en BCS por evaluación de atributos para el 2014. Y en la cual podemos apreciar que de los tres destinos Los Cabos tiene una mejor calificación, al recibir 9.5 en el índice de competitividad. Le sigue en orden de importancia La Paz con 8.1 y posteriormente Loreto. Ambos destinos son catalogados como de sol y playa. Lo tres destinos tienen la característica de tener el indicador de seguridad favorable, al tener porcentajes altos (mas de 90%) de no experimentar el turista síntomas de inseguridad. Fuente: Elaboración propia, Encuesta de perfil y grado de satisfacción del visitante en Los Cabos, La Paz y Loreto, 2014.

CONCLUSIONES

El trabajo permitió identificar la capacidad competitiva del destino de Los Cabos que es superior a La Paz y Loreto, tanto en términos de su oferta turística, oferta complementaria, accesibilidad e infraestructura y sobre todo en la calificación que el turista otorga a Los Cabos. Ciertamente, se comprueba que Los Cabos es un destino Premium del Pacífico y de la cual La Paz y Loreto deberán aprender en términos de sus fortalezas, no de replicar el estilo de hacer turismo, sino de ofrecer los servicios turísticos con el estilo que guarda cada destino turístico.

DIVISIÓN SEXUAL DEL TRABAJO Y CREACIÓN DE EMPRESAS, EL CASO DEL ESTADO DE JALISCO

Carlos Alberto Santamaria Velasco, Universidad de Guadalajara

Ignasi Brunet Icart, Universidad Rovira i Virgili

María Isabel Arreola Caro, Universidad de Guadalajara

César Fernando Barba Cuarenta, Universidad de Guadalajara

RESUMEN

Como consecuencia del dominio del “modelo masculino” en el mundo de los negocios, este artículo expone parte de los resultados de un proyecto de investigación en curso que aborda los efectos de la división del trabajo sobre la creación de empleo por cuenta propia en el Centro Occidente de México (Guanajuato, Colima, Nayarit y Jalisco), para este artículo nos referiremos únicamente al Estado de Jalisco y se realiza un análisis descriptivo del tejido empresarial del Estado mencionado. Los objetivos de la investigación son: 1) Analizar la trayectoria laboral y profesional previa de hombres y mujeres a fin de observar los efectos sobre la creación de empresas; 2) Indagar acerca de las relaciones entre trabajo productivo y trabajo reproductivo y su incidencia sobre la creación de empresas; 3) Analizar los efectos de la variable género sobre la gestación del capital económico y el desarrollo del capital relacional funcional en la creación y desarrollo de la iniciativa empresarial; 4) Analizar la adecuación a la variable género de las iniciativas institucionales de apoyo a la creación de empresas.

PALABRAS CLAVE: Género, creación de empresas, división sexual del trabajo.

SEXUAL DIVISION OF LABOR AND ENTREPRENEURSHIP, THE CASE OF THE STATE OF JALISCO

ABSTRACT

Because of the dominance of "male model" in the business world, this article presents some of the results of an ongoing research project that addresses the effects of the division of labor on creating self-employment in the Center Western Mexico (Guanajuato, Colima, Nayarit and Jalisco), for this article we will refer only to the State of Jalisco and a descriptive analysis of the business of the State mentioned is performed. The objectives of the research are: 1) Analyze previous work and careers of men and women in order to observe the effects on business creation; 2) To investigate the relationship between productive and reproductive work and its impact on business creation; 3) Analyze the effects of the gender variable on gestation economic capital and the development of functional relational capital in the creation and development of entrepreneurship; 4) To analyze the adequacy of the gender variable of institutional initiatives to support entrepreneurship.

JEL: M130, M510, M540.

KEYWORDS: Gender, entrepreneurship, sexual division of labor.

INTRODUCCIÓN

En este artículo se realiza un análisis descriptivo del tejido empresarial en el Estado de Jalisco. Para ello se han utilizado los datos relativos a las unidades económicas recogidos en los Censos Económicos del INEGI, correspondientes al año 2009. Estos censos contienen información detallada sobre las unidades económicas

existentes en cada territorio, sus actividades y su performance económico-financiera. Con dicha información estadística se pretende realizar una radiografía del entorno empresarial en el territorio señalado, a partir del cual se puede llevar a cabo un análisis diagnóstico de su situación empresarial.

Los contenidos del artículo se estructuran de la siguiente manera. En primer lugar, se va a poner la dinámica empresarial en el contexto económico y poblacional específico la región objeto de estudio. En segundo lugar, analizamos la distribución por sectores de las empresas, su tamaño y su producción bruta total. En tercer lugar, se describen las fuentes de financiación utilizadas por las unidades económicas para desempeñar sus actividades. Para finalizar, se extraen algunas conclusiones generales acerca de los datos analizados.

CONTEXTO ECONÓMICO Y DINÁMICA EMPRESARIAL.

En 2009 México registró un total de 5.144.056 unidades económicas, cifra que representa un incremento del 8'9% respecto al año anterior. En total se crearon ese año 419.164 nuevos negocios, la inmensa mayoría de los cuales corresponde a pequeñas y medianas empresas – entre 1 y 250 personas empleados. Dicho crecimiento es consistente con el tejido empresarial mexicano, formado fundamentalmente por pequeños negocios, en particular aquellos que cuentan con menos de 10 trabajadores.

En relación al territorio que aquí es de interés, Jalisco registró la entrada de empresas con un total de 23.204 nuevos negocios, tal como muestra la Tabla 1. Esto significa que en ese Estado se crearon aproximadamente 3,16 empresas por cada 1.000 habitantes. Es importante destacar que el Estado de Jalisco aunque es menor su entrada absoluta de empresas es el más dinámico en cuanto a la creación de empresas en términos relativos a su población.

Tabla 1. Dinámica empresarial, economía y población

	EUM	Jalisco
Dinámica empresarial		
Total unidades económicas 2009	5.144.056	264.361
Iniciaron actividad en 2009	419.164	23.204

PIB sector secundario*	4.365.207	241.531
PIB sector terciario*	7.183.008	466.623
Población		
Habitantes censo 2010	112.336.538	7.350.628

Fuente: INEGI. * Millones de Pesos.

Los datos de entradas de nuevos negocios en Jalisco, correspondientes al año 2009 son bastante consistentes con las tasas de crecimiento en dicho Estado. Jalisco presentó la peor tasa relativa de creación de empresas siendo, además, el territorio con una menor dinamismo económico en 2008. También su tasa de crecimiento fue menor que la media nacional – 1,1% frente al 1,4% a nivel nacional.

Jalisco presenta una estructura productiva con un peso ligeramente mayor de los sectores primario y terciario que la media nacional, siendo en cambio menor la presencia de la industria transformadora.

Dado que no existe un patrón claro que relacione la dinámica empresarial con la estructura productiva del Estado de Jalisco, es necesario echar un vistazo a la distribución sectorial de las unidades económicas recogidas en los Censos.

METODOLOGÍA DE LA INVESTIGACIÓN

Hemos analizado las principales características de las unidades económicas presentes en los Estados de Colima, Guanajuato, Jalisco y Nayarit, en base a la información proporcionada por INEGI, correspondiente al año 2009. La estructura empresarial y productiva de los Estados del centro occidente guarda ciertas similitudes, en el sentido que se trata de economías poco dependientes del sector primario y mucho más enfocadas a los servicios y a la producción industrial.

Para la obtención de la información se han efectuado 62 entrevistas en profundidad en los Estados de Colima, Guanajuato, Jalisco y Nayarit. El perfil de las(os) empresarias(os) es mayoritariamente empresarias(os) en el sector servicios, con elevado capital cultural, con edades comprendidas entre los 30 y 45 años. En México, las mayores tasas de creación de empleo se dan en el sector servicios y comercio, y según datos sobre empleo a largo plazo, los servicios que reflejan mayor vitalidad son los personales (por ejemplo, hostelería, tiempo libre), sociales (educación, sanidad y bienestar social), y los de producción (finanzas, seguros, comerciales e inmobiliarios), mientras que tienden al estancamiento los tradicionales.

DISTRIBUCIÓN POR SECTORES

Como se observa en la Tabla 2, el Estado que presenta un mayor número absoluto de unidades económicas es Jalisco (206.361), seguido de Guanajuato (179.867), y ya a mayor distancia, de Nayarit (39.299) y Colima (26.104). De todos modos, si corregimos el efecto poblacional que, sin duda, existe en dicha distribución observamos que Colima es Estado con una mayor proporción relativa de negocios establecidos, con algo más de 40 unidades económicas por cada 1.000 habitantes. A este le siguen Nayarit y Jalisco, con alrededor de 36 unidades económicas por cada 1.000 habitantes. Un poco más lejos se encuentra, en este caso, Guanajuato, con aproximadamente 33 unidades económicas por cada 1.000 habitantes.

En lo que se refiere a la distribución sectorial de esas unidades económicas, la situación difiere ligeramente entre los distintos Estados objeto de análisis. Tanto en términos absolutos como relativos, Nayarit es la región con un peso específico mayor de la actividad agrícola si medimos este en base al número de unidades económicas. Así, en Nayarit existen 1.219 empresas dedicadas a la actividad agrícola y ganadera, lo que supone el 3,10% del total de empresas en ese territorio, mientras que dicha actividad es meramente residual en las demás regiones analizadas. Por otro lado, Nayarit es, junto con Jalisco, el único de los cuatro Estados donde existen empresas domiciliadas dedicadas a actividades de generación energética. La presencia de empresas mineras en Jalisco y Guanajuato completa el mapa de actividades primarias en los cuatro territorios. En general, la importancia cuantitativa de este tipo de empresas es escasa en los Estados analizados, ya que de existir, su número no supera en la mayoría de casos el 1% del total de negocios establecidos en cada territorio. Sin embargo, como veremos en el apartado siguiente, en términos de ocupación las actividades primarias alcanzan una importancia relativa ligeramente mayor, lo que sugiere la existencia de cierta concentración empresarial en estos sectores de la economía.

Mucha mayor importancia numérica tienen, para esas regiones, las actividades manufactureras. Estas representan aproximadamente entre el 9 y el 13 por ciento del total de empresas, según el caso. De hecho, es en Guanajuato donde estas actividades alcanzan el mayor peso relativo, debido posiblemente al desarrollo de la industria textil y del calzado.

Sin embargo, es el sector comercial, y en particular el comercio al por menor, el que cuenta con un mayor número de negocios. En este caso el peso relativo de la venta al detalle es similar en los cuatro Estados. Guanajuato se erige como el territorio que presenta un tejido empresarial con una mayor orientación al comercio, ya que sus 85.547 empresas de venta al por menor representan el 47,56% del total de empresas ubicadas en su territorio. Le sigue Jalisco, que con 123.990 unidades económicas dedicadas al comercio al por menor, sitúa este sector como el más destacado en términos absolutos y relativos (46,90%) de su

economía en lo que se refiere al computo de número de empresas. Quizás la importancia relativa del turismo en ambos territorios, sector que corre parejo a una importante actividad comercial, explique este resultado. Aun así, Colima y Nayarit, que son también destinos turísticos, presentan una estructura empresarial no menos dependiente del pequeño comercio, representando este el 41,10% y el 42,98%, respectivamente, del total de negocios establecidos.

Tabla 2. Distribución de las unidades económicas por sectores

	Colima	Guanajuato	Jalisco	Nayarit
Total	26.104	179.867	264.361	39.299
Agricultura	206	60	207	1.219
Minería	-	83	107	-
Generación eléctrica, agua y gas	-	-	125	33
Construcción	240	900	1.318	270
Manufactureras	2.523	23.112	29.991	3.567
Comercio por mayor	871	6.523	9.449	1.024
Comercio por menor	10.730	85.547	123.990	16.890
Transportes	403	630	1.021	176
Información	91	533	686	156
Servicios financieros	167	947	1.508	242
Servicios inmobiliarios	510	3.048	3.647	614
Servicios profesionales	634	4.226	5.996	773
Corporativos	-	-	8	-
Servicios de apoyo	609	3.169	5.697	830
Servicios educativos	276	1.969	3.003	313
Servicios de salud	993	7.530	10.210	1.550
Servicios deportivos, culturales y de ocio	299	2.249	3.214	569
Alojamiento, alimentación y bebidas	3.651	17.005	27.637	5.519
Otros servicios	3.843	22.288	36.547	5.538

Fuente: INEGI

Sin embargo, estos Estados se sitúan por debajo de la media nacional, que es del 46,74% en lo que se refiere a la importancia relativa del comercio al por menor. No se observan diferencias significativas entre los citados Estados en lo que se refiere al resto de sectores. Cabe destacar solamente una mayor importancia relativa de los sectores de alojamiento, alimentación y bebidas, y de otros servicios, importancia que oscila entre el 10 y el 15% del tejido empresarial total según el caso. Nuevamente, la preponderancia de las actividades turísticas en buena parte de esos territorios explicaría el hecho que esos sectores afines a la actividad vacacional destaquen sobre otros en la estructura económica de los Estados.

En el caso de Jalisco, que muestra la Tabla 3, un único sector rompe la clara jerarquía que demuestra el trabajo dependiente en relación al trabajo no dependiente. Se trata del sector corporativo, donde los ocupados no dependientes son 172, lo que representa aproximadamente un 58,70% del total de ocupados en ese sector para dicho Estado. Parece ser que de nuevo las empresas corporativas son proclives a la actividad con trabajadores externos a la razón social, no dependientes de ella. Por las mismas razones que las aducidas en el caso de Guanajuato, de nuevo el sector de las empresas de información presenta un uso elevado de la ocupación no dependiente, la cual representa aproximadamente el 36% del total de empleados en ese sector. Se trata de la propia idiosincrasia de ese sector, cuyo mecanismo de funcionamiento ha rechazado la dependencia del profesional a una sola empresa, dándose casos no solo de empleo por cuenta propia sino también de empleo en más de un medio o razón social.

Tabla 3. Distribución del personal ocupado según sector de actividad: Jalisco

	Personal dependiente	Personal no dependiente
Total	1.273.807	215.338
Agricultura	3.950	453
Minería	1.611	290
Generación eléctrica, agua y gas	12.692	108
Construcción	55.380	7.301
Manufacturera	291.236	87.951
Comercio por mayor	76.044	19.800
Comercio por menor	343.943	41.765
Transportes	35.116	5.225
Información	8.998	4.979
Servicios financieros	8.044	2.988
Servicios inmobiliarios	13.767	3.622
Servicios profesionales	34.796	4.644
Corporativos	121	172
Servicios de apoyo	88.544	5.047

Alojamiento, alimentación y bebidas	113.737	21.612
Otros servicios	90.082	3.588

Fuente: INEGI

Otro aspecto vinculado a la distribución de los ocupados en México que puede ser de interés es el de la presencia relativa de hombres y mujeres. En la Tabla 4 podemos observar cuál es el número total de hombres que mujeres que llevan a cabo una ocupación laboral en la unidad económica que forma parte de la encuesta en el Estado de Jalisco. Cabe destacar que en ningún caso se alcanza la paridad entre hombre y mujer, situación que sería más acorde con la distribución poblacional de ambos géneros. Sin embargo, la participación laboral de las mujeres es muy similar en los cuatro Estados y ronda el 40%, cifra que representa a priori una importante, aunque insuficiente, penetración de la mujer en el ámbito laboral.

Tabla 4. Distribución de ocupados por género

	Jalisco
Personal ocupado total	1.489.145
Hombres	884.469
Mujeres	604.676

Fuente: INEGI

El análisis que podemos hacer es, en términos generales, para el caso de Jalisco (Tablas 5). Existen sectores con profesiones ampliamente masculinizadas en sectores como la agricultura, la minería, las energías o la construcción, profesiones asociadas a una importante exigencia física y a condiciones en muchos casos extremas. No es de extrañar, por tanto, que estos puestos de trabajo se hayan asociado tradicionalmente al rol masculino, siendo la penetración de la mujer en estas profesiones difícil, no solamente por las condiciones inherentes al puesto de trabajo sino también a la visión que la sociedad tiene de dichas profesiones.

A MODO DE CONCLUSIÓN

Un lugar común en la literatura empresarial está en afirmar que las empresas necesitan no tanto rechazar el punto de vista masculino, como incorporar lo que las mujeres puedan aportar para hacer frente a las nuevas situaciones empresariales. Se presupone, y así se ha verificado en nuestras(os) informantes, que el concepto de actividad empresarial es neutro al género. Se tiene una visión de la empresa como un ente neutro, sin género, y estereotípicamente, se argumenta que las mujeres son personas con valores positivos a aportar al desarrollo económico y al progreso social, y que el incremento paulatino de mujeres ocupando puestos directivos como creando empresas tiene un alto valor simbólico al contribuir a revalorizar lo “femenino”

como complementario de lo “masculino”. Complementariedad que deriva de la división “natural” de los sexos y que explica que exista una relación clara entre la función económica, política y social (división sexual del trabajo) y una función biológica (sexualidad procreadora). Omitiéndose, de este modo, el hecho de que la diferencia sexual es una diferencia en el grado de individualización y, consecuentemente, de capacidad de poder entre hombres y mujeres.

Tabla 5. Distribución del personal dependiente según género y sector de producción: Jalisco

	Personal remunerado		Propietarios, familiares y otros no remunerados	
	Hombres	Mujeres	Hombres	Mujeres
Total	512.780	314.095	241.392	205.540

EL IMPACTO DEL TLCAN EN EL DESARROLLO DE LA IMMEX Y CAPITAL HUMANO.

Rosalina Jaime Meuly, Universidad Estatal de Sonora

María de los Ángeles Monterde Valenzuela, Universidad Estatal de Sonora

RESUMEN

Las condiciones laborales propiciadas por la industria maquiladora, oscilan entre la precariedad y las condiciones dignas de empleo; dependiendo de la operación de los actores locales: gobiernos, sindicatos, instituciones educativas y empresarios. A 20 años de la firma del TLCAN, se muestran los haberes y deberes del mismo, y se aprecia que una realidad más dinámica y compleja los impulsa, dando por certeza que en el escenario mundial, lo que prevalece es el cambio, la incertidumbre y la falta de respuestas. El proceso de integración regional de las empresas que conforman la economía sonorensa enfrenta aun retos importantes; ya que han pasado 20 años de apertura comercial, y todavía están pendientes algunas tareas fundamentales como: a) establecer la infraestructura de apoyo a la actividad industrial; b) Diseñar las estrategias educativas para la formación profesional y técnica de elemento humano; c) la especialización económica regional y el cambio en el patrón de la geografía económica del estado, a través de la construcción de índices de especialización municipal. Uno de los retos urgentes es profundizar en la especialización regional, puesto que no es homogénea; la infraestructura es limitada en varios municipios y los servicios se ofrecen de forma tradicional, de tal manera que la especialización es producto, en muchos casos, de la crisis de actividades primarias.

PALABRAS CLAVE: TLCAN, capacitación, desarrollo industrial.

NAFTA IMPACT ON THE DEVELOPMENT OF IMMEX Y HUMAN CAPITAL

ABSTRACT

Working conditions fostered by the maquiladora industry, ranging from insecurity and decent employment conditions; depending on the operation of local actors: governments, unions, educational institutions and employers. At 20 years of NAFTA, the assets and obligations thereof are shown, and shows that a more dynamic and complex reality drives, assuming certainty on the world stage, what prevails is the change, uncertainty and the lack of answers. The process of regional integration of the companies that make the Sonoran economy still faces significant challenges; because 20 years of trade liberalization have passed, and are still pending some fundamental tasks such as: a) establish the infrastructure to support industrial activity; b) Develop educational strategies for vocational and technical training of human element; c) regional economic specialization and the change in the pattern of economic geography of the state, through the construction of municipal specialization indices. One of the pressing challenges is to deepen regional specialization, since it is not homogeneous; infrastructure is limited in several municipalities and services offered in the traditional way, so that specialization is the result, in many cases, the crisis of primary activities.

KEY WORDS: NAFTA, training, industrial development.

INTRODUCCIÓN.

Las empresas e industrias son consideradas como sinónimo de evolución, estudios muestran la transferencia de modelos gerenciales hacia las maquiladoras. Desde hace más de 10 años las empresas japonesas aplicaban las técnicas del “sistema de producción japonés” donde la mayor parte de los puestos de trabajo son de baja calificación y de trabajo intensivo, los procesos de racionalización implementados en el proceso de trabajo re-valorizaron el mismo.

Así bien, las industrias que tiene como fin dar procesos productivos a una escala internacional, y su locación se asocia con criterios que son la rentabilidad y accesos a los mercados desde una perspectiva global. Operan mediante importación temporal de materiales que se procesan manufacturan o reparan y luego se exportan al país de origen o bien, a un tercer mercado.

Las maquiladoras por un largo periodo fueron el único segmento de economía en el que se permitía la completa propiedad extranjera de las empresas. El crecimiento fue mayor especialmente desde 1995 en asociación con las condiciones creadas por la entrada en vigor del TLCAN. No obstante, esta dinámica se ha desacelerado dándose un menor crecimiento del empleo y en el cierre de establecimientos productivos.

El régimen fiscal para las maquiladoras ha sido complicado e ineficiente en cuanto a la especificación de sus aspectos prácticos. Las empresas consideran que los impuestos irán en aumento, los costos de operación, incluyendo el gasto administrativo que involucran. Los impuestos se contrapusieron al peso y la relevancia del sector maquilador dentro de la industria manufacturera mexicana.

En las maquiladoras, en cuestión de la estabilidad laboral, ha sido un tema muy debatido donde no se logra un consenso. En general, los salarios de la industria maquiladora de exportación muestran una brecha constante con respecto a los que se pagan en la industria manufacturera. La tendencia que se aprecia en la serie de ambos salarios es de una relativa estabilidad que el caso de la maquila y de fluctuaciones mayores en el caso de la manufactura, hace que en ciertos periodos dicha brecha se cierre de modo que tiende hacia una convergencia asintótica.

La estructura productiva y laboral de los países latinoamericanos se caracteriza típicamente por una brecha productiva respecto a los mejores desempeños a nivel global (brecha productiva externa), por una elevada heterogeneidad estructural (brecha productiva interna), por debilidades en términos de cobertura, calidad y acceso equitativo a los sistemas educación, capacitación y formación profesional.

La preparación de una fuerza de trabajo calificada que contribuya a estrategias de productividad creciente para fortalecer la competitividad de las economías de la región, hay que constatar que actualmente, la calificación de la fuerza de trabajo, desde la perspectiva de las empresas, no está en los niveles requeridos para cumplir plenamente con ella.

REVISIÓN LITERARIA

Hace casi treinta años atrás, en plena década de los ochenta, la paradoja central en la industria maquiladora de exportación (IME) se encontraba básicamente referida a la cuestión laboral, y se presentaba como la re-valorización del trabajo versus la precarización en el empleo. Si bien existían otros problemas en la IME tales como el escaso desarrollo de proveedores locales y el deterioro ambiental, la calidad en el empleo era el asunto medular, toda vez que el empleo era la aportación principal de esta industria asociada con la generación de valor agregado. Desde el inicio del TLCAN en los años noventa, el impacto de éste en el país ha hecho que surjan cambios notablemente en todos los aspectos, enfocándonos en la economía de las industrias y los empleados de las empresas del país. Para que la productividad de una empresa sea

catalogada como creciente, el elemento central debe ser siempre tener una estrategia de crecimiento y de desarrollo que pretende mejoras continuas del bienestar material de la población.

Estas mejoras se transmiten principalmente por medio del mercado laboral, de manera que la productividad creciente también es un determinante fundamental de la calidad de empleo y sus avances, tanto salariales como no salariales. Para que este cambio desde la productividad creciente hacia mejoras de la calidad de empleo sea efectiva se requieren instituciones laborales adecuadas.

En este nuevo milenio se obtuvo mayor modernización y escalamiento de las plantas, organizaciones y personales, sin embargo frente a una pérdida estructural que se presente de ventajas competitivas, es necesario poner como prioridad las estrategias a desarrollarse (corporativas, industriales, laborales, educacionales, locales, entre otras).

La industria maquiladora se encuentra en la mayor encrucijada de su historia, ya que, por un lado existe la difusión de empresas de segunda y tercera generación y esto hace que se presenten cambios cualitativos que apuntan grandes saltos a la frontera. Y por otro, se tiene la grave crisis que ha impactado de manera singular y negativa al empleo y actividad regional donde se asienta la inversión extranjera directa.

Sin menospreciar las limitaciones de la maquila, es necesario reconocer una realidad muy distinta: las empresas continúan operando (2,805 en julio del 2006), siguen creciendo (4.8% de julio 05-06), y continúan siendo definidas por los gobiernos como un sector prioritario (Programa Nacional de Desarrollo, 2000-06). De mayor importancia es el reconocimiento del proceso de evolución como veremos más adelante.

Las empresas realizan procesos cada vez más complejos (productivos y tecnológicos); aumentan el número de productos y modelos que realizan; sustituyen productos; incorporan cada vez más innovaciones de proceso y certificaciones internacionales; realizan cada vez más actividades de diseño e ingeniería de producto; obtienen distinciones por su desempeño en calidad, medio ambiente y seguridad; y las gerencias en empresas extranjeras se mexicanizan.

Pero el nuevo contexto de competitividad en que se ve inserta la maquiladora en México (fuerte competencia por el mercado estadounidense a donde 95% de las exportaciones se dirigen), permite preguntarse si las características de su evolución y el ritmo que experimenta ¿es suficiente para enfrentar el nuevo contexto de competitividad?. La respuesta no es simple ya que la maquila no es un sector homogéneo. Por tanto, analizaremos el escalamiento industrial y el impacto de las actividades maquiladoras en la industria y en los trabajadores, así como de sus potencialidades y limitaciones.

Antecedentes

El Tratado de Libre Comercio de América del Norte (TLC) que entro en vigor en el año 1994 con la participación entre los gobiernos de Canadá, Estados Unidos y México, amplía y profundiza el intercambio de bienes y servicios entre estos tres países signatarios.

La gran asimetría que existe tanto como económica y tecnológica de México frente a esas dos naciones plantea desafíos nuevos y más importantes que los de una mera asociación comercial. El enfoque de esta integración se materializa en lo económico, la actividad comercial ampliada entre los países no basta para avanzar en la integración y la asociación económicas; es requerible una compatibilización tecnológica, amplia comprensión cultural y una aceptación respetuosa y provechosa de las diferencias. (ESPINOSA, E. M. (1994). *La educación superior de México frente al TLC. Comercio Exterior*, marzo.)

Las empresas e industrias son consideradas como sinónimo de evolución. Por lo tanto, enfocándonos en las industrias, se desglosan cuatro niveles de impacto en su escalamiento:

Los cambios intersectoriales: Van de primarios a secundarios y terciarios y en la manufactura de industrias va de trabajo intensivo a intensivas en tecnología.

Los cambios intra-sectoriales: Manufactura de commodities a la producción de bienes de alto valor y servicios con proveedores y clientes en la cadena productiva.

Los cambios en los roles económicos: Los diversos tipos de actividades que hay como complejidad en la producción, mercadeo, diseño entre otras, puede incluir manufactura de ensamble de equipo, marca y diseño original.

Las características del producto ya sean simples o complejas. (Carrillo, J., & Gomis, R. (2003). *Los retos de las maquiladoras ante la pérdida de competitividad. Comercio exterior*, 53(4))

Así bien, en cuestión de realizar actividades más dinámicas y de más tecnología sobresalen los sectores de autopartes y electrónicas; que representan alrededor de dos terceras partes del empleo y el valor agregado nacional de la industria maquiladora en México, y han sido sistemáticamente los más estudiados.

Hay estudios que muestran la transferencia de modelos gerenciales hacia las maquiladoras. Desde hace más de 10 años las empresas japonesas aplicaban las técnicas del “sistema de producción japonés” donde la mayor parte de los puestos de trabajo son de baja calificación y de trabajo intensivo, los procesos de racionalización implementados en el proceso de trabajo re-valorizaron el mismo. Se afirma que las plantas de dicho país han avanzado en la introducción del aprendizaje continuo como una rutina de la organización y se identifican cuatro ámbitos de aprendizaje, que son: Control de calidad donde nadie es más apropiado que el trabajador para mejorar la calidad de los procesos. Círculos de calidad que son constituidos por personas de la misma área de trabajo que se reúnen para identificar problemas comunes y así presentar sus propuestas para la solución a los ingenieros y gerentes. Énfasis de calidad donde mediante una actividad todas las áreas identifican sus principales problemas e interactúan con el departamento de control de calidad. (Carrillo, 2003) Aprendizaje por error que es un sistema donde los trabajadores toman conciencia de las malas decisiones y así no se vuelvan a repetir.

Las Industrias Maquiladoras

Son industrias que tiene como fin dar procesos productivos a una escala internacional, y su locación se asocia con criterios que son la rentabilidad y accesos a los mercados desde una perspectiva global. (Bendesky, 2003) Operan mediante importación temporal de materiales que se procesan manufacturan o reparan y luego se exportan al país de origen o bien, a un tercer mercado. En México, esta actividad creció rápidamente en las últimas dos décadas por los menores salarios, los servicios públicos, costos de operación y los costos de transportes debido a la cercanía geográfica con Estados Unidos y esto significaba una gran ventaja.

Las maquiladoras por un largo periodo fueron el único segmento de economía en el que se permitía la completa propiedad extranjera de las empresas. El crecimiento fue mayor especialmente desde 1995 en asociación con las condiciones creadas por la entrada en vigor del TLCAN. No obstante, esta dinámica se ha desacelerado dándose un menor crecimiento del empleo y en el cierre de establecimientos productivos.

Las maquiladoras toman la estructura global de sus costos como parte de la estrategia de la locación de sus plantas, esto involucra además del costo laboral aquel asociado con los impuestos. EL régimen fiscal aplicable a las empresas maquiladoras ha tenido modificaciones.

El régimen fiscal para las maquiladoras ha sido complicado e ineficiente en cuanto a la especificación de sus aspectos prácticos. Las empresas consideran que los impuestos irán en aumentos los costos de

operación, incluyendo el gasto administrativo que involucran. Los impuestos se contrapusieron al peso y la relevancia del sector maquilador dentro de la industria manufacturera mexicana.

¿Hay Trabajo Decente en las Maquiladoras?

A pesar de varios análisis, ha sido un tema muy debatido donde no se logra un consenso. Sin embargo, las capacidades técnicas y laborales siguen en aumento al elevarse los estándares de calidad, ambientales de seguridad en el trabajo. Por ejemplo, el 60 % de las maquiladoras de sector electrónico y autopartes tienen certificación de las normas oficiales ISO, y esto da como resultado mayor participación e involucramiento para todos los trabajadores; las funciones de técnicos y, particularmente de los ingenieros no solo se han empleado sino que se han enriquecido.

(Carrillo, 2007), Si bien el aumento relativo de profesionistas ha sido lento, en términos absolutos es muy importante (por ejemplo, se han tenido que buscar profesionistas para su contratación en diferentes regiones de México). Los salarios tienden a crecer, aunque en forma lenta, los salarios reales continúan aumentando en las diversas categorías ocupacionales a la vez que han ido mejorando relativamente las condiciones de trabajo.

En general, los salarios de la industria maquiladora de exportación muestran una brecha constante con respecto a los que se pagan en la industria manufacturera. La tendencia que se aprecia en la serie de ambos salarios es de una relativa estabilidad que el caso de la maquila y de fluctuaciones mayores en el caso de la manufactura, hace que en ciertos periodos dicha brecha se cierre de modo que tiende hacia una convergencia asintótica.

Los productos de las maquiladoras entran al mercado de Estados Unidos libres de impuestos o pagando impuestos solo al valor agregado en México. En base a las disposiciones de la ley aduanera y a la tarifa armonizada que se utiliza (especialmente capítulo 98) se establece que cuando los productos de la maquiladora adquieren una ventaja impositiva al volver al mercado estadounidense Algunos productos pueden tener un tratamiento libre de impuestos conforme al Sistema Generalizado de Preferencias

Según (Weller, 2011), la estructura productiva y laboral de los países latinoamericanos se caracteriza típicamente por una brecha productiva respecto a los mejores desempeños a nivel global (brecha productiva externa), por una elevada heterogeneidad estructural (brecha productiva interna), por debilidades en términos de cobertura, calidad y acceso equitativo a los sistemas educación, capacitación y formación profesional, y, finalmente, grandes brechas respecto a la inserción laboral y la calidad de empleo para diferentes segmentos de la fuerza laboral. Los papeles claves se dividen en 4 áreas:

La contribución de una fuerza de trabajo calificada a estrategias de productividad creciente para fortalecer la competitividad de las economías de la región;

La reducción de brechas de productividad y de bienestar por medio de una transformación de los sectores de baja productividad que lleva a la convergencia productiva, para la cual es indispensable que los estratos de productividad más baja cuenten con una fuerza laboral cada vez más capacitada

Una mejora de la calidad de empleo y trayectorias laborales ascendentes.

La inserción productiva de grupos vulnerables que enfrentan obstáculos especiales para su integración al mercado de laboral.

La preparación de una fuerza de trabajo calificada que contribuya a estrategias de productividad creciente para fortalecer la competitividad de las economías de la región, hay que constatar que actualmente, la

calificación de la fuerza de trabajo, desde la perspectiva de las empresas, no está en los niveles requeridos para cumplir plenamente con ella.

AMÉRICA LATINA Y EL CARIBE: EMPRESAS QUE CONSIDERAN EL NIVEL DE CALIFICACIÓN DE LA FUERZA LABORAL COMO OBSTÁCULO MAYOR O MUY SEVERO PARA SU DESEMPEÑO ACTUAL, POR TAMAÑO DE EMPRESA
(En porcentajes)

Es importante señalar que las diferencias en la proporción de las empresas que reportan problemas de este tipo pueden reflejar las diferencias en la cobertura y la calidad de los sistemas de educación y de capacitación, pero que no necesariamente es así.

También puede reflejar diferencias en la estrategia de competitividad de las empresas, ya que estrategias basadas en productividades crecientes requieren una fuerza laboral más calificada que otras, que basan su competitividad, por ejemplo, en el uso masivo de mano de obra barata. Por lo tanto en el primer caso, una buena estrategia sería aumentar sistemas de educación y capacitación, y en el segundo; empresas se contentan con niveles de educación y calificación relativamente básicas. (Weller, 2011). Por otro lado, estas son las empresas que tienen programas de capacitación para tener una fuerza laboral estable en base a su tamaño

METODOLOGÍA

Esta investigación es de tipo descriptiva y documental. Para desarrollarla se acudió a diversas fuentes bibliográficas entre las que se incluyen revistas, periódicos, artículos y libros; así como sitios web. Según Alfonso (1995), la investigación documental, es un procedimiento científico, un proceso sistemático de indagación, recolección, organización, análisis e interpretación de información o datos en torno a un determinado tema.

CONCLUSIONES

En resultado a lo visto anteriormente, la política industrial debe atender las necesidades territoriales para acelerar las ventajas competitivas derivadas de la cercanía; pero de igual importancia, debe desarrollar instrumentos específicos para atender las necesidades de las empresas en función del lugar que ocupan a lo largo de la cadena de valor.

Así bien, una institucionalidad laboral que goza de alta legitimidad y favorece incrementos de productividad, la generación de empleos de calidad y, de esta manera, la cohesión social debe de representar un componente importante de la estrategia de desarrollo de los países latinoamericanos.

Establecer una estrategia de desarrollo que tiene productividades crecientes y la generación de empleo de calidad como pilares claves, sistemas de capacitación y formación profesional de gran cobertura, calidad y equidad son componentes indispensables, La identificación y difusión de la demanda de los consumidores por el Estado y las organizaciones empresariales entre los tamaños de empresa integrados, con criterios de mercadotecnia social, incrementará el aprovechamiento de la capacidad productiva instalada en las medianas y grandes empresas, ya que las MYPES les proporcionarán materias primas, mano de obra calificada y nuevos empresarios .

Hablando del Tratado, podemos decir que en términos macroeconómicos ha tenido resultados positivos en cuanto al aumento en las exportaciones, en la inversión extranjera directa y otros rubros, en este sentido se puede decir que la entrada de México a este bloque económico ha sido exitosa. Sin embargo hablando de términos microeconómicos, el cual a esta investigación le preocupa más ha sido desfavorable, principalmente por la falta de competitividad de las Pymes mexicanas con respecto a las empresas transnacionales ya sea estadounidenses o canadienses , lo que ha propiciado que muchas empresas mexicanas quiebren o sean absorbidas por otra empresa mas grande. Solo se puede mencionar ue las Pymes que han tenido un relativo éxito han sido las que brindan servicios y cabe mencionar que estas no se encuentran dentro de los datos del comercio nacional.

Suponemos que ante la problemática que presenten las Pymes ante la apertura comercial se debe cambiar la estructura de las Pymes, se debe de buscar una competitividad internacional, con el único fin de aprovechar las ventajas que brinda al TLCAN, las cuales son muchas y se deben de considerar con el fin de volver a la Pyme mexicana sólida que pueda competir de tu a tu con las demás empresas extranjeras y

locales también y de esta manera no sean absorbidas por las grandes empresas trasnacionales o simplemente desaparezcan.

CONTRIBUCIÓN A LA FORMACIÓN PROFESIONAL DE CAPITAL HUMANO A TRAVÉS DE LA TUTORÍA

Norma Aguilar Morales, Universidad Juárez Autónoma de Tabasco
Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco
Candelaria Guzmán Fernández, Universidad Juárez Autónoma de Tabasco
Román Alberto Quijano García, Universidad Autónoma de Campeche

RESUMEN

El capital humano es un elemento fundamental en las organizaciones ya que son las personas las que mueven y hacen producir a los recursos materiales, técnicos y financieros; incluyendo a todos los colaboradores, desde los gerentes hasta los operativos. En la educación superior, la formación del estudiante en el pregrado necesita del acompañamiento del tutor para desarrollar las competencias necesarias para el campo profesional. En esta ponencia se presentan los resultados de una investigación cuyo objetivo fue conocerla percepción de los estudiantes de pregrado del área económico administrativa de una universidad pública mexicana acerca del impacto de la tutoría en su formación profesional. El tipo y diseño del estudio fue no experimental, descriptivo, transeccional, con enfoque cuantitativo a través de encuestas. Los resultados reflejan que los estudiantes consideran que la tutoría no está contribuyendo a su formación ya que el desempeño del tutor es deficiente.

PALABRAS CLAVE: Capital Humano, Tutoría, Formación Profesional

CONTRIBUTION TO THE TRAINING OF HUMAN CAPITAL THROUGH MENTORING

ABSTRACT

Human capital is a key element in organizations because it is people movers and produce the material, technical and financial resources; including all employees, from managers to operational. In higher education, student training at the undergraduate tutor escort need to develop the necessary skills for the professional field. This paper presents the research results are presented which aimed to meet her perception of undergraduate students of administrative economic area of a Mexican public university about the impact of mentoring in their professional training. The type and design of the study was non-experimental, descriptive, transactional, with a quantitative approach through surveys. The results show that students consider that mentoring is not contributing to their training as tutor performance is poor.

KEYWORDS: Human Capital, Mentoring, Training

INTRODUCCIÓN

Las instituciones de educación superior, de frente a los problemas de deserción y rezago escolar, que traen aparejados graves conflictos de frustración e infelicidad, tanto para los individuos jóvenes como para la sociedad, y ante la perspectiva de incrementar su eficiencia terminal, se han visto inmersas en la instrumentación e implantación de una estrategia que acerque a los principales protagonistas del proceso del aprendizaje y los haga crecer. Ésta es la tutoría, que involucra a profesor y estudiante en una aventura académica y humana con compromisos de ambas partes y cuyo objetivo es el éxito del alumno durante sus

estudios y en su devenir profesional, así como el crecimiento del profesor como ser humano al consolidar su práctica docente (García y Colomé, 2003).

La propuesta de cambio de cultura docente es hoy en día un renglón común en las Universidades, misma que nos conduce al abordaje de la formación deontológica del profesorado "... en su tarea como docente y en su función, asumida o no, de modelo susceptible de aprendizaje social por parte de los estudiantes." Cuando hablamos del ethos universitario se advierte una actitud nostálgica en el rostro de los profesores, una añoranza de tiempos pasados que fueron mejores en cuanto a valores morales. La charla cobra matices poéticos y el recuerdo revive las gestas cívicas de notables profesores que durante el siglo XIX y primera mitad del XX se pronunciaron de palabra y obra a favor de la educación humanista. El resultado de esta visión retrospectiva, lleva al convencimiento de que la ética universitaria no está hoy en su mejor momento, sin embargo, en el recuento de nuestro quehacer sale triunfante a pesar de la intrusión de la ética de lo público (Barragán y Gallardo, 2003).

PLANTEAMIENTO DEL PROBLEMA Y SU IMPORTANCIA

Uno de los principios que sustenta al Modelo Educativo Flexible de la Universidad Juárez Autónoma de Tabasco, desde el punto de vista de los valores institucionales, es la formación integral de los alumnos, concebido como el proceso continuo de desarrollo de potencialidades de la persona, que equilibran los aspectos cognitivos y socio afectivos, hacia la búsqueda de su plenitud en el saber pensar, saber hacer, saber ser y saber convivir con los demás, como profesionales y personas adaptadas a las circunstancias actuales y futuras. (Universidad Juárez Autónoma de Tabasco [UJAT], 2011).

El Programa Institucional de Tutorías de la UJAT, es un programa estratégico, que busca impactar positivamente en la comunidad universitaria, contribuyendo de manera significativa en la formación integral del estudiante, a través del trabajo conjunto entre profesores y alumnos en el quehacer universitario, con la firme convicción de abatir la reprobación, rezago y deserción, así como incrementar la titulación y la eficiencia terminal (UJAT, 2013).

Desde que se implantó el programa institucional de tutorías en la universidad, se han presentado ciertas inconsistencias en su operatividad, generando descontento tanto en profesores como alumnos

El objetivo fue conocer la percepción de los estudiantes de pregrado del área económico administrativa de una universidad pública mexicana acerca del impacto de la tutoría en su formación profesional a través de la forma de ejercer la tutoría de los profesores y de la confianza que deposita el alumno en su tutor.

REVISIÓN LITERARIA

El Capital Humano

Hasta hace algunos años, las personas eran consideradas como recursos humanos en las organizaciones, en la era de la información el panorama cambió radicalmente por varias razones: El trabajo es cada vez menos físico, muscular y cada vez más cerebral y mental, enfocado mayormente en la creatividad y la innovación. Las personas dejan de ser recursos productivos para convertirse en capital humano (Chiavenato, 2011).

Por otra parte, las personas en su conjunto, forman el capital humano de la organización, su valor está en función de sus talentos y competencias capaces de aportar valor a la organización y de hacerla más ágil y competitiva. Las personas marcan la diferencia en la forma en que se desempeñan en las organizaciones, las cuales son proclives a reunir diferentes tipos de personas para lograr un propósito común (Bohlander y Snell, 2008).

La universidad como formadora de capital humano.

Las instituciones formadoras de capital humano por excelencia son las universidades, tanto a través de la enseñanza presencial como virtual, esta última ha permitido que un mayor número de personas puedan acceder a la formación profesional desde lugares remotos, en tiempo real, lo cual potencializa sus oportunidades de obtener un empleo mejor remunerado o iniciar su propio negocio.

La tutoría.

Algunos de los problemas más frecuentes en la educación superior son los altos índices de reprobación de los alumnos, la deserción y la baja eficiencia terminal, lo cual origina la necesidad de orientar y acompañar al estudiante en su trayectoria escolar, surgiendo así la tutoría como una herramienta que atendiendo a las características individuales y diversas de cada estudiante permite una relación estrecha entre el estudiante de nivel superior y su tutor asignado para guiarlo en su trayectoria escolar.

De esta manera, la tutoría está considerada como un acompañamiento del alumno por el tutor durante su proceso escolar (ANUIES, 2000). Este proceso comprende la atención personalizada o la tutoría grupal a los alumnos por parte de los profesores, para su orientación y seguimiento tanto en aspectos cognitivos como afectivos del aprendizaje que contribuyen a fortalecer su formación integral. La tutoría abarca todo un conjunto de acciones educativas sistematizadas que tienen como eje central al alumno, implica diversos niveles y modelos de intervención y se lleva a cabo en espacios y horarios extracurriculares (Universidad Juárez Autónoma de Tabasco, [UJAT], 2006).

El tutor.

De acuerdo a Molina (2004), el tutor es aquel docente que promueve aprendizajes significativos para lograr ciertas competencias, debe estar en constante proceso de formación para estar en posibilidad de generar encuentros, espacios y valores; ser una persona comprometida con los procesos de aprendizaje y no pretender ser el guía indispensable sino el acompañante dispuesto a desaparecer. Por su parte, Ferrer (1994), considera que el tutor debe preparar a los estudiantes para una intervención social, no solo científica o técnica, al acabar los estudios.

MATERIAL Y MÉTODOS

Diseño del Estudio

El diseño del estudio es no experimental, descriptivo transeccional (Kerlinger y Lee, 2002) en virtud de que en este primer acercamiento se pretendió un diagnóstico de la percepción de los estudiantes sobre el proceso de la tutoría y el desempeño de sus tutores.

Población de estudio

La población bajo estudio está conformada por estudiantes de la División Académica de Ciencias Económico Administrativas [DACEA] de la Universidad Juárez Autónoma de Tabasco. Se empleó un muestreo estratificado, en donde cada uno de los estratos fueron las licenciaturas de la DACEA. La población estará constituida por 1696 alumnos del segundo al quinto ciclo, que son los que actualmente tienen experiencias de tutoría. En la tabla 1 se puede observar la distribución muestral.

Tabla 1: Muestreo estratificado de los alumnos que participaron en el estudio.

Licenciatura	Población	Muestra
Licenciatura en Administración	608	112
Licenciatura en Contaduría Pública	512	94
Licenciatura en Mercadotecnia	500	92
Licenciatura en Economía	76	14
Total	1696	312

Nota: Esta tabla presenta la distribución de la muestra estratificada por programa académico de los alumnos que participaron en el estudio.

Instrumentos de Recolección de Datos

El instrumento empleado para la recolección de datos fue el cuestionario del modelo de tutorías de la Universidad Autónoma de Nayarit (UAN, 2009) el cual se complementó con las categorías descritas por García y Pérez (2013). El cuestionario está conformado por 18 preguntas y estructurado en una escala de tipo Likert, con cinco opciones de respuesta: 1= Nunca, 2=Pocas Veces, 3= Regularmente, 4= Muchas Veces, 5 = Siempre. Adicionalmente se integrarán variables socio demográficas como: promedio, género, y programa de licenciatura (Tabla 2).

Tabla 2: Especificaciones del cuestionario de evaluación de la tutoría.

Variable	Definición Operacional	Reactivos
Información	Información que reciben los estudiantes a través de la actividad tutorial.	1,2,3,4,5
Formación del Estudiante	Autopercepción de la formación adquirida por el estudiante a través de la acción tutorial.	9,10,13,16,17
Clima	Percepción del clima de trabajo con el tutor.	6,7,8,12
Satisfacción del estudiante	Valoración de los estudiantes de la actividad tutorial	11,14,15,18

Nota: Esta tabla presenta las especificaciones y definiciones operacionales de las variables del cuestionario de evaluación de la tutoría.

Recolección y análisis de datos

Los puntajes obtenidos en la escala de evaluación de la tutoría fueron analizados a través de la distribución de frecuencias. Posteriormente, con el análisis de varianza (ANOVA) se determinaron las diferencias que se presentan entre cada una de las dimensiones de la satisfacción laboral y según las variables socio demográficas, así como también las diferencias presentes en los niveles de satisfacción laboral de cada una de las licenciaturas que se imparten en la DACEA. Para el análisis cuantitativo se utilizó el software especializado SPSS.

RESULTADOS

Con la finalidad de establecer categorías de análisis se decidió identificar los cuartiles de la distribución y se derivan las categorías presentadas en la tabla 2.

Tabla 3.- Niveles de satisfacción de los estudiantes en relación a la información recibida en el proceso de tutoría, rango de valores (escala 5– 25).

Satisfacción con la tutoría	Percentil	Rango	%
Menor	25	Valores ≤ 7	29.8
Media	50	8 – 10	21
Alta	75	11 – 14	26.3
Muy Alta	100	Valores ≥ 15	23.4

Nota: Esta tabla presenta la distribución de frecuencias por cuartiles.

Con la finalidad de establecer un criterio más preciso para la población que se puede considerar que está insatisfecha, se consideró únicamente la población registrada debajo del percentil 25. En la figura 1 se ilustra la distribución de frecuencias de los totales en los cuestionarios para evaluar el nivel de satisfacción del estudiante con respecto a la información que reciben de los tutores.

Figura 2: Información que reciben los alumnos por parte de los tutores.

Nota: Esta figura presenta la distribución de frecuencias de la variable “Información que reciben los estudiantes a través de la actividad tutorial”.

En consideración de la distribución y la escala de la prueba (5 – 25), únicamente el 21% de la población demuestra una satisfacción alta y un 26% mediana. Contrariamente, un 21% de la población bajo estudio demuestra poca satisfacción y un 30% expresaron que no obtienen ninguna satisfacción de la información que reciben de sus tutores, por lo cual, en realidad un 51% presenta insatisfacción. En la figura 2 se ilustra la distribución de frecuencias de los totales en los cuestionarios para evaluar el nivel de satisfacción del estudiante con respecto a la autopercepción de la formación adquirida a través de la acción tutorial.

Figura 3: Percepción del estudiante acerca de la formación que reciben a través de la acción tutorial.

Nota: Esta figura presenta la distribución de frecuencias de la variable "formación del estudiantes a través de la acción tutorial".

En consideración de la distribución y la escala de la prueba (5 – 25), únicamente el 23% de la población demuestra una satisfacción alta y un 19% mediana. Contrariamente, un 26% de la población bajo estudio demuestra poca satisfacción y un 32% expresaron que no obtienen ninguna satisfacción de la formación adquirida a través de la acción tutorial, por lo cual, en realidad un 58% presenta insatisfacción. En la figura 3 se ilustra la distribución de frecuencias de los totales en los cuestionarios para evaluar el nivel de satisfacción del estudiante con respecto a la percepción del estudiante acerca del clima de trabajo con el tutor.

Figura 4: Percepción del estudiante acerca del clima de trabajo con el tutor.

Nota: Esta figura presenta la distribución de frecuencias de la variable "Clima de trabajo con el tutor".

En consideración de la distribución y la escala de la prueba (4 – 20), únicamente el 14% de la población demuestra una satisfacción alta y un 32% mediana. Contrariamente, un 28% de la población bajo estudio

demuestra poca satisfacción y un 26% expresaron que no obtienen ninguna satisfacción de la formación que obtienen a través del proceso de tutoría, por lo cual, en realidad un 54% presenta insatisfacción.

En la figura 4 se ilustra la distribución de frecuencias de los totales en los cuestionarios para evaluar el nivel de satisfacción del estudiante con respecto a la valoración del estudiante acerca de la acción tutorial.

Figura 5: Percepción del estudiante acerca de su satisfacción general con la tutoría.

Nota: Esta figura presenta la distribución de frecuencias de la variable "Valoración el estudiante de la acción tutorial".

En consideración de la distribución y la escala de la prueba (4 – 20), únicamente el 23% de la población demuestra una satisfacción alta y un 27% mediana. Por otra parte, un 23% de la población bajo estudio demuestra poca satisfacción y un 27% expresaron que no obtienen ninguna satisfacción del proceso de tutoría, por lo cual, tanto un 50% declaran estar en general satisfechos con la tutoría y otro 50% no.

Descriptivos.

Tabla 4 : Descriptivos de las dimensiones de estudio del cuestionario de tutoría.

Dimensión	N	Mínimo	Máximo	Media	Desv. Tip .
Información que reciben los estudiantes	312	5	25	11.24	5.001
Formación del estudiante	312	5	25	12.15	5.104
Clima de trabajo con el tutor	312	4	63	11.35	5.313
Satisfacción del estudiante con la tutoría	312	3	20	10.76	5.017

*Nota:
Esta
figura*

presenta los descriptivos de las dimensiones de estudio del cuestionario de tutoría.

En la tabla 4 se puede observar que la media más baja (10.76) se presenta en el nivel general de satisfacción del estudiante con el proceso de tutoría. A su vez la media más alta (12.15) se presenta en la dimensión de formación del estudiante a través del proceso tutorial.

Análisis de variabilidad.

Para analizar las dimensiones del cuestionario de satisfacción laboral en relación a los programas de estudio de licenciatura que se imparten en la DACEA se empleó el análisis de varianza ANOVA. A continuación en la tabla 5 se presentan los resultados obtenidos.

Tabla 5: .- Comparación de las medias poblacionales de cada dimensión del cuestionario de tutoría en relación con los programas de estudio impartidos en la DACEA.

Dimensión / Prog. De estudio		N	Media	Desv. Típ.	F	Sig.
Información que reciben los estudiantes	LA	112	10.78	4.832	.658	.578
	LE	14	11.00	5.751		
	LCP	94	11.33	4.434		
	LM	92	11.75	5.623		
	Total	312	11.24	5.001		
Formación del estudiante	LA	112	11.48	4.836	1.730	.161
	LE	14	11.21	5.686		
	LCP	94	12.21	4.763		
	LM	92	13.03	5.587		
	Total	312	12.15	5.104		
Clima de trabajo con el tutor	LA	112	11.00	4.247	1.224	.301
	LE	14	10.00	4.403		
	LCP	94	11.16	4.096		
	LM	92	12.16	7.308		
	Total	312	11.35	5.313		
Satisfacción del estudiante con la tutoría	LA	112	10.34	4.830	.936	.423
	LE	14	9.57	4.569		
	LCP	94	10.89	4.957		
	LM	92	11.33	5.358		
	Total	312	10.76	5.017		

*Nota:
Esta
tabla*

presenta la comparación de medias poblacionales de cada una de las dimensiones de estudio del cuestionario de tutoría con respecto a los programas de estudio de licenciatura.

En la tabla 5 se puede observar que aunque no se registraron diferencias estadísticamente significativas, en la dimensión de información que reciben los estudiantes del tutor la media más baja se registró en la Licenciatura en Administración, a su vez en las tres restantes dimensiones las medias más bajas se presentaron en la Licenciatura en Economía.

CONCLUSIONES

Se concluye que sí hay evidencia de insatisfacción, ya que en las cuatro dimensiones de estudio se registró insatisfacción de acuerdo a la distribución por cuartiles, especialmente en la dimensión de formación del estudiante a través de la tutoría en la cual se registró un nivel de 58% de insatisfacción.

En lo referente a los descriptivos de las dimensiones del estudio del cuestionario de tutoría, la media más baja (1076), se presentó en la dimensión de satisfacción general de estudiante con la tutoría.

A su vez, en el análisis de variabilidad, a pesar de que no se encontraron diferencias estadísticamente significativas de las dimensiones de estudio en relación a los cuatro programas de licenciaturas impartidos en la DACEA, la media más baja se registró en la dimensión de información recibida por el estudiante por medio del tutor en la Licenciatura en Administración y en las tres dimensiones restantes las medias más bajas se presentaron en la Licenciatura en Economía.

Los resultados obtenidos demuestran evidencia de que de acuerdo a la literatura, los tutores no están cumpliendo debidamente con la función que les fue encomendada de ser una guía confiable en la trayectoria académica de los estudiantes, lo cual tiene un impacto negativo en la formación de capital humano de la universidad ya que los tutores no brindan a los estudiantes la información necesaria para que aprovechen todas las actividades extracurriculares disponibles en la universidad y en el medio externo para que enriquezcan su formación.

FACTORES DEL CAPITAL HUMANO QUE DETERMINAN LA CALIDAD DEL SERVICIO POSTVENTA DEL SECTOR COMERCIO EN EL ÁREA AUTOMOTRÍZ DE BAJA CALIFORNIA

Raúl González Núñez, Universidad Autónoma de Baja California.

Cruz Elda Macías Terán, Universidad Autónoma de Baja California.

Leonel Rosiles López, Universidad Autónoma de Baja California.

Santiago Pérez Alcalá, Universidad Autónoma de Baja California

RESUMEN

La presente investigación, pretende analizar los factores del capital humano que determinan la calidad del servicio posventa de las agencias de autos nuevos del sector comercio automotriz. Es importante caracterizar el talento humano desde la perspectiva del trabajador, además de analizar el entorno donde se involucra, el diseño de la organización, la cultura organizacional y el estilo de la administración donde se desempeña. El desarrollo de la investigación está basado en un diseño mixto, investigación cualitativa y también la aplicación de dos cuestionarios, el primero enfocado a conocer las características del trabajador y el segundo se basa en conocer la percepción de los clientes que solicitan el servicio en las agencias. Se analizan las principales teorías e investigaciones de autores enfocados al capital humano, donde se hace un énfasis especial en el modelo de capital humano del investigador y doctor en Administración Idalberto Chiavenato. Es necesario señalar que es un estudio descriptivo, correlacional, donde, se busca conocer qué factores del talento humano son importantes en las personas para ofrecer un servicio con calidad y que cumplan con las expectativas de los clientes. El estudio se desarrolla en las agencias de autos nuevos del estado de Baja California, principalmente en las ciudades de Mexicali, Tijuana y Ensenada. Además se presentan los resultados finales de la investigación realizada en el programa doctoral en Ciencias Administrativas de la Universidad Autónoma de Baja California.

PALABRAS CLAVE: talento humano, calidad, servicio postventa, capacitación. Capital humano.

ABSTRACT

This investigation studies the human capital factors that determine the quality of the new car dealers' after-sales service in the automotive retail sector of Baja California. It is important to characterize the human talent from the worker's perspective, as well as analyzing the environment that surrounds him/her, the organization's model, the organizational culture and the administration style where he/she performs. The investigation's development is based in a non-experimental design because some variables occur which make impossible its manipulation. Also, two surveys were applied; the first one, focused in getting to know the worker's characteristics, and the second one is based in getting to know the perception of the clients who request the service in their agencies. The main theories and investigations of the authors focused on human capital are analyzed where they make a special emphasis in the human capital model of Idalberto Chiavenato, Investigator and Doctor in Administration.

KEYWORDS: Human capital, human talent, organizational culture and service quality.

INTRODUCCIÓN

En este capítulo se presenta la problemática a estudiar, su importancia y cómo su abordaje desde las ciencias administrativas puede dar paso al planteamiento de soluciones estratégicas para las empresas del sector automotriz, obteniendo un resultado positivo en clientes más satisfechos y una mejora en la calidad del servicio posventa.

Las agencias de autos nuevos generalmente cuentan con un taller de servicio donde el cliente debe llevar la unidad para que reciba el mantenimiento preventivo a fin de que hagan válida su garantía, de lo contrario la perdería; por tal motivo se dice que las ventas de servicio de mantenimiento o postventa están ligadas a la venta de autos nuevos.

En los últimos años el comportamiento de ventas de autos ligeros nuevos ha tenido importantes variaciones, debido a las crisis que han impactado el poder adquisitivo de la población mexicana. Según Lozano, A. L.; Lozano, T. D.; Lozano, T. J.; Otero F. I., Vázquez, J.; Moctezuma, D.; Quintana, V. M.; y Reyes, N. C. (2013) de 1986 a 2013 el poder adquisitivo tiene un déficit del 80% si se considera el salario mínimo y el costo de la canasta alimenticia recomendable. Además es preciso señalar que la adquisición de un auto nuevo solo está al alcance de un mínimo porcentaje de la población mexicana.

El presente estudio exhibe los dos instrumentos de investigación que se adaptaron y diseñaron para medir la calidad del servicio, y los factores de capital humano, respectivamente. La investigación es con un enfoque de diseño de investigación mixto, (investigación cualitativa y cuantitativa). El planteamiento del problema es conocer si existe relación entre los factores del capital humano y la calidad del servicio postventa de las pymes del sector comercio en el área automotriz de Baja California. La variable independiente es el capital humano, las dimensiones son talento humano y contexto. Según Idalberto Chiavenato, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante y el contexto es el ambiente interno adecuado para que los talentos florezcan y crezcan. El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración.

Los indicadores de talento humano son: 1.1) Conocimientos, 1.2) Habilidades, 1.3) Actitudes, 1.4) Valores. Los indicadores de contexto son: 2.1) Cultura Organizacional, 2.2) Diseño Organizacional, 2.3) Estilo de la administración. La variable dependiente es la calidad del servicio. Ruiz V. (1996) menciona que según Parasuraman, Zeithaml y Berry (1988) definen a la calidad del servicio como un juicio global del consumidor, relativo a la superioridad del servicio, que resulta de la comparación realizada por los clientes entre las expectativas sobre el servicio que van a recibir y las percepciones de la actuación de las organizaciones prestadoras del servicio y Gronroos (1994). Las dimensiones de la percepción de la calidad del servicio, son las del modelo SERVQUAL: elementos tangibles, la fiabilidad, capacidad de respuesta, seguridad, y empatía. Se limita al área de servicio de las 37 agencias automotrices del estado de Baja California, México, durante el periodo 2012.

REVISION LITERARIA

Capital Humano

Chiavenato (2009), refiere que hablar del recurso humano en las empresas, implica saber que representa realmente el capital humano. Es por eso que entender que significa capital humano es indispensable para el presente trabajo de investigación.

“El término capital humano apareció por primera vez en *Investment in human capital*, un artículo del premio nobel en economía Theodore W. Shultz publicado en 1961 en la *American Economic Review*. Desde entonces, los economistas han cargado muchos términos la maleta actual del capital humano. La mayoría coinciden en que el capital humano comprende habilidades, experiencia y conocimientos. Algunos, como el economista Gary Becker (otro premio nobel), añaden personalidad, experiencia, reputación y credenciales. Y todavía otros, como el consultor de gestión Richard Crawford, equiparan al capital con sus propietarios señalando que el capital humano consiste en personas hábiles e instruidas.” (Davenport, 2000).

Según el Profesor Idalberto Chiavenato 2009, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante. Y el Contexto; Es el ambiente interno adecuado para que los talentos florezcan y crezcan. El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración.

Las funciones de recursos humanos en la actualidad son estratégicamente desarrolladas en las empresas exitosas.

El término de capital humano se refiere a la suma de los conocimientos que poseen los empleados y que le dan una ventaja competitiva a la organización. La importancia de las actividades de recursos humanos se hace evidente cuando se toma conciencia de que los seres humanos constituyen un elemento común a toda organización, en todos los casos son hombre y mujeres quienes crean y ponen en práctica las estrategias e innovaciones de sus organizaciones.

Debemos tener muy en cuenta que los recursos materiales hacen las cosas posibles, pero las personas las convierten en realidades.

Chiavenato (2011) explica que las organizaciones no funcionan sin los individuos, y éstos no viven sin las organizaciones. Cada empresa tiene sus propias características, mientras que la variabilidad humana es infinita y prodigiosa. Además, señala que el área de Recursos Humanos es sensible a los

Calidad En El Servicio

En relación al origen de la palabra calidad, Maqueda, J (1995) menciona lo siguiente: en todos los idiomas expuestos, la etimología de los términos cualidad y calidad nos remonta al latín del adjetivo relativo e interrogativo *qualis* (*qualitas-qualitatem*) como término imprecador (<cuál>, <tal como>, <de qué clase>; el modo de ser correspondía rigurosamente a *talis*) que demanda la esencia, contenido o características de las personas y de las cosas.

Se ha considerado que los principales teóricos que propiciaron el desarrollo del movimiento hacia la calidad son: Deming, Juran, Ishikawa y Crosby, quienes desplegaron sus teorías a partir del mejoramiento del control de la calidad y del trabajo en equipo para lograr un alto nivel de productividad. Anda C. (2004)

El servicio es el conjunto de prestaciones que el cliente espera (además del producto o del servicio básico) como consecuencia del precio, la imagen y la reputación del mismo. Para ofrecer un buen servicio hace falta algo más que la amabilidad y gentileza, aunque estas condiciones son imprescindibles en la atención al cliente. Vértice (2008)

Cuando un cliente valora la calidad de un servicio, no disocia todos sus componentes, sino que la juzga como un todo. Lo que prevalece, por tanto, es la impresión de conjunto y no el éxito relativo de una u otra acción específica. Vértice (2008)

Las personas cambian constantemente de gustos, preferencias y exigencias, entonces las organizaciones deben de identificar las necesidades puntualizadas que requiere el cliente para poder cubrir sus peticiones. El empleado que otorga el servicio, debe hacer buen uso de su comunicación verbal, y no verbal.

EVALUACION DE LA CALIDAD Y EL MODELO SERVQUAL.

Las evaluaciones a través de las percepciones de los clientes, consumidores, usuarios o pacientes en la actualidad, son de uso muy frecuente, por parte de organizaciones, tanto privadas como públicas, de muy diversos sectores, incluido el ámbito sanitario. Los índices de calidad y de satisfacción, conforme el demandante es el juez final e inapelable de la gestión, constituyen uno de los principales activos sobre los cuales se basan las posibilidades de sostener la rentabilidad y el crecimiento de las empresas, o la confianza del ciudadano en los servicios que se le ofrecen. Lo que revelen las evaluaciones a través de las percepciones, ha de determinar en muy buena medida la capacidad competitiva de las empresas. Botero, M. (2006)

El modelo servqual propuesto por Parasuraman, Zeithaml y Berry, en los años ochentas en Estados Unidos, mide la calidad del servicio en las organizaciones comparando la diferencia entre las expectativas, es decir lo que el cliente espera recibir del servicio y las percepciones, se refiere a lo que el cliente percibe al momento de tomar el servicio.

CAPITAL HUMANO Y CALIDAD EN EL SERVICIO.

El servicio es brindado por los integrantes de la organización, hacia el cliente. El servicio es intangible, no se puede tocar, sin embargo es perceptible, se percibe a través de los sentidos del ser humano, el cliente distingue si esta recibiendo un servicio de calidad por parte de la persona que brinda el servicio, ya sea el empleado o el directivo, o si no recibió un buen servicio.

Alcalde (2010) enuncia que se estima más del 20% de los clientes que se retraen de adquirir un producto o servicio lo hace por fallos en la información o atención por parte de las personas encargadas de atender y motivar a los compradores. Ante esta circunstancia es necesario que la atención al cliente sea de la mas alta calidad con la información concreta y precisa de modo que la persona que recibe la información no solo tenga una idea de un producto, sino también de la calidad del capital humano y técnico con el que va a establecer una relación comercial.

METODOLOGIA

Se propone un diseño mixto, investigación cualitativa, y la aplicación de un cuestionario a través de investigación cuantitativa y finalmente que se realice una profundización y evaluación de los resultados a través de investigación cualitativa. Es un estudio descriptivo, correlacional. Además de entrevistas estructuradas a los Gerentes de los departamentos de Servicio. La población está definida por 37 agencias automotrices que comercializan autos nuevos y cuentan con un departamento de servicios. El tener dos sujetos de estudios requirió definir un esquema de muestreo para cada uno de ellos. Considerando un estudio poblacional para el caso de las agencias y muestro para clientes y colaboradores. El total de trabajadores y clientes en el estado de Baja California se muestra en la tabla 1.1.

Tabla 3.1 Población de sujetos de estudio en 2011-2012

MUNICIPIO	MEXICALI	TIJUANA	ENSENADA	TOTAL
Trabajadores del departamento de servicio	199	255	46	500
Clientes que vistan las agencias de autos nuevos en Baja California	4, 273	5, 794	764	10, 831

Fuente:

Elaboración propia con datos de la UCAN (Periodo 2011-2012).

Instrumentos De Investigación.

El primer instrumento es una adaptación del instrumento SERVQUAL, donde se miden las percepciones de la calidad de los clientes que acuden al área de servicio en la agencia automotriz. El segundo instrumento es creación propia, donde se mide la percepción de los factores de capital humano, de los trabajadores del área de servicio. Se utilizó la escala de tipo Likert en los dos instrumentos de investigación. Ésta escala de Likert se compone de 5 respuestas, siendo 1 totalmente en desacuerdo, 2 en desacuerdo, 3 ni de acuerdo ni en desacuerdo, 4 de acuerdo y 5 totalmente de acuerdo.

En el primer instrumento (clientes), al principio se piden datos sobre la identificación de la persona encuestada, como son: el nombre, correo electrónico, año en que visitó por primera vez la agencia, ciudad donde vive actualmente, modelo y año de la unidad automotriz. Para conocer la percepción de los Clientes (Variable dependiente: Calidad en el servicio posventa) se utilizaron 20 ítems que miden las dimensiones de: Confiabilidad (fiabilidad), capacidad de respuesta, seguridad, empatía, bienes materiales (tangibilidad).

En el segundo instrumento (trabajadores), en la identificación del trabajador se piden datos como: puesto, edad, antigüedad en el puesto, últimos estudios, nombre de la agencia, y nombre del gerente general o propietario de la empresa. Para conocer las características de los Factores del Capital Humano de los trabajadores del Departamento de Servicio (Variable independiente: Capital Humano) se utilizaron 32 ítems que miden las dimensiones de: talento humano y contexto. Los indicadores son conocimientos, habilidades, actitudes, valores, cultura organizacional, diseño organizacional, y estilo de la administración.

RESULTADOS

Los resultados derivados de la investigación sobre los factores del capital humano que determinan la calidad en el servicio posventa del sector comercio en el área automotriz se analizaron primero desde una lectura cuantitativa aplicando en primera instancia estadística descriptiva, correlacional. La tabla 1.2 Muestra la ciudad donde viven actualmente los clientes que visitan las agencias de autos nuevos. Representada en su mayoría por clientes de la ciudad de Mexicali con un 61.2% del total.

Tabla 1.2 Ciudad donde viven actualmente los clientes que visitan las agencias de autos nuevos en el estado de Baja California

		FRECUENCIA	PORCENTAJE
VÁLIDOS	MEXICALI	71	61.2
	TIJUANA	35	30.2
	ENSENADA	10	8.6
	TOTAL	100	100

Fuente: Elaboración propia.

Análisis correlacional

Se analizó el constructo multidimensional para fines del modelo de Capital Humano se determinó el coeficiente de correlación de Spearman cuyo resultado es indicado en la tabla 1.3 es $\rho=0.809$, del indicador de los Conocimientos, lo que representa y explica un 65.44% del Talento Humano en la variable independiente del Capital Humano.

Tabla 1.3 Correlación entre Conocimientos y Talento Humano

		TALENTO HUMANO		CONOCIMIENTOS
RHO SPEARMAN	DE	Talento Humano	Coefficiente de correlación Sig. (Bilateral)	.809**
			N	62
		Conocimientos	Coefficiente de correlación Sig. (Bilateral)	1000
			N	62

Fuente: Elaboración propia.

Tabla 1.4 Correlación entre el Talento Humano y las Habilidades de los Trabajadores.

		TALENTO HUMANO		HABILIDADES
RHO SPEARMAN	DE	Talento Humano	Coefficiente de correlación Sig. (Bilateral)	.663**
			N	62
		Habilidades	Coefficiente de correlación Sig. (Bilateral)	1000
			N	62

Fuente: Elaboración propia.

Se determinó el coeficiente de correlación de Spearman (.837) del indicador de la Actitud, lo que representa y explica en la tabla 4.64 en un 70.05% del Talento Humano en la variable independiente del Capital Humano.

CONCLUSIONES

En este capítulo se presentan las conclusiones, algunas reflexiones finales y las recomendaciones y aportaciones derivadas del trabajo de investigación realizado. Así como futuras líneas de investigación. Es importante señalar que los objetivos que se plantearon en el primer capítulo se cumplen. Se analizó el Capital Humano y la Calidad en el Servicio de las agencias de autos nuevos en el estado de Baja California. Se detectaron algunas oportunidades de mejoras para las agencias de autos nuevos en Baja California. Se determinó la relación existente entre el Capital Humano del departamento de servicio en las agencias de autos nuevos y la calidad de servicio en el mismo departamento. Se diseñó un modelo de Capital Humano para las agencias de autos nuevos en Baja California.

Inferencias a partir de las hipótesis

Primera.- El análisis realizado sobre las características del Talento Humano del personal que trabaja en el departamento de servicio del sector comercio en el área automotriz de Baja California, mostró que las

agencias de autos nuevos en Baja California si tienen claridad en definir las características de su personal que trabaja en el departamento de servicio, como sus conocimientos, sus habilidades, sus actitudes y finalmente sus valores. Se rechaza la hipótesis nula para la primera pregunta de investigación. Es decir, no existe evidencia estadística para comprobar que las características del Talento Humano del departamento de servicio del sector comercio en el área automotriz de Baja California no se encuentran identificadas claramente. Lo anterior se puede sustentar con la revisión literaria donde se analizó la importancia de identificar las características del personal en la empresa, el cual se traduce en un mejor servicio con calidad.

Segunda.- Se concluye que las características del contexto del departamento de servicio del sector comercio en el área automotriz de Baja California si se encuentran definidas y si son las adecuadas para que los trabajadores desarrollen sus actividades eficientemente. Por lo tanto, se rechaza la hipótesis nula, es decir, no existe evidencia estadística para comprobar que las características del contexto en el departamento de servicio no se encuentran definidas claramente.

Aportaciones

Algunos de los hallazgos significativos en esta investigación respecto a los clientes que visitan las agencias de autos nuevos en Baja California, fueron que el 88.8% respondieron estar confiados en las promesas que reciben por parte de las agencias al momento de visitar los departamentos de servicios. Aspecto que se debe considerar para poder seguir brindando un servicio con calidad. También es importante mencionar que el 86.2% de los clientes encuestados respondieron haber recibido una buena explicación sobre las necesidades de sus autos en el momento de recibirlos en el departamento de servicio. Respecto a la seguridad que perciben los clientes al momento de realizar una transacción en la agencia de autos respondieron en un 89.7% sentirse seguros de la atención recibida por parte del personal de servicio de las agencias de autos nuevos en el estado de Baja California. Con respecto a la cortesía por parte de los trabajadores del departamento de servicio, el 92.3% de los clientes respondieron haber recibido un trato cortés y amable todo el tiempo durante su estancia en las agencias de autos nuevos en Baja California. En términos generales, se encontró que la percepción de los usuarios respecto a la confianza, atención personalizada y la seguridad al momento de recibir el servicio por parte del trabajador del departamento de servicio es buena. Sin embargo, aun cuando los resultados son alentadores nos revelan un nicho de oportunidades para el mejoramiento de la calidad en el servicio. Específicamente de los indicadores de confianza, responsabilidad, seguridad y empatía.

RESUMEN

El presente trabajo analiza algunos aspectos de la seguridad social en México. De acuerdo con las leyes mexicanas, todos los trabajadores que prestan un servicio personal subordinado, tienen derecho a ser afiliados ante las instituciones encargadas de prestar los servicios de seguridad social al trabajador y sus dependientes económicos. Sin embargo, en la práctica es común encontrar que el patrón establece algunas estrategias tendientes a disminuir el gasto de seguridad social que debe pagar por los trabajadores que tiene a su servicio. Estas prácticas afectan los derechos del trabajador al momento en que desee adquirir vivienda para él y su familia, en la obtención de prestaciones económicas temporales y en la integración del monto que servirá de base para obtener su pensión al terminar su vida laboral. Esta investigación es de tipo descriptivo documental, su finalidad es dar a conocer las consecuencias legales y económicas para el empresario por incumplimiento a las leyes que regulan las prestaciones de seguridad social de los trabajadores. Para conocer el cumplimiento por parte del patrón se entrevistó a trabajadores de 100 empresas y se formularon ejemplos prácticos conforme a las leyes para dar a conocer las consecuencias legales y económicas aplicables al patrón incumplido.

PALABRAS CLAVES: Seguridad Social, Incumplimiento, Consecuencias Legales Y Económicas.

ABSTRACT

This paper discusses some aspects of social security in Mexico. Under Mexican law, all workers providing a subordinate personal service are entitled to be members before the institutions responsible for providing social services worker safety and their dependents. However, in practice it is common to find that the employer provides some strategies to reduce social security expenditures to be paid by workers who have at your service. These practices affect the rights of workers when they want to purchase housing for him and his family in obtaining temporary economic performance and the integration of the amount as a basis for his pension at the end of their working life. This research is descriptive document; its purpose is to present the legal and economic consequences for the employer for breach of the laws governing social security benefits for workers. For compliance by the employer workers were interviewed 100 companies and practical examples were made under the law to publicize the legal and economic consequences applicable to the defaulting employer.

INTRODUCCIÓN

La obtención de servicios de seguridad social ha sido durante muchos años un anhelo de todos los mexicanos, a partir de 1872 la clase obrera en México se empezó a organizar para mejorar sus condiciones de vida y exigir derechos laborales, entre ellos, servicios de salud y prestaciones de seguridad social, sin embargo al gobierno de Porfirio Díaz sofocó sus iniciativas y disolvió las organizaciones de obreros textiles, sastres, artesanos, carpinteros y otros grupos de diversos oficios (Gutiérrez, 1988). En el año de 1906 los trabajadores organizaron históricas huelgas, entre las que destaca la de Cananea Sonora. Entre sus peticiones los trabajadores exigían jornada laboral de ocho horas, que se estableciera un salario mínimo, pensiones laborales y día de descanso semanal. Como resultado de sus demandas en 1913 varios diputados acogieron un proyecto de ley de trabajo, mismo que no fue analizado debido a la situación política del país e inicio de la revolución mexicana.

Fue de esta manea que a principios del siglo XX se acentuaron las protestas de los trabajadores en el país para exigir derechos laborales, apoyados en las ideas de los hermanos Flores Magón y de Madero, los cuales consideraban la protección social un derecho de la clase trabajadora del país. No obstante lo trágico del movimiento revolucionario (Gutiérrez, 1988), como resultado de este, se logró plasmar en la Constitución Política de los Estados Unidos Mexicanos de 1917, en su artículo 123 fracción XXIX los derechos de los trabajadores a prestaciones de seguridad social para ellos y sus familiares. En respuesta a la exigencia de la clase obrera, los presidentes Ortiz Rubio en 1932 y Lázaro Cárdenas en 1938 apoyaron de manera decidida la idea de legislar en materia de seguridad social. Fue en diciembre de 1942, en el gobierno del presidente Manuel Ávila Camacho cuando se firmó la Ley del Seguro Social, misma que fue publicada en el Diario Oficial el 19 de enero de 1943, misma que está considerada como un instrumento de utilidad pública que garantice a la población servicios médicos y protección en los seguros de invalidez, de vida, de cesantía involuntaria del trabajo, de enfermedades y accidentes y de servicios de guardería; cuyo propósito es proteger a los trabajadores y a sus familiares y demás sectores sociales.

El Instituto Mexicano del Seguro Social (IMSS), como institución que organiza y administra los servicios de seguridad social en el país inicia actividades en noviembre de 1944 en el Distrito Federal, un año más tarde extiende sus servicios a las ciudades de Puebla y Monterrey y en 1946 se estableció el servicio en Guadalajara; la población atendida eran obreros de industrias, empleados de comerciantes y de prestadores de servicios.

En la actualidad, de acuerdo con la Dirección de Prestaciones Médicas del IMSS (2014), en su informe mensual a diciembre de 2013, el IMSS da a conocer que los derechohabientes afiliados a ese mes son 16,525,061 trabajadores, cantidad compuesta por empleados del propio instituto y de las empresas, 7,018,631 no trabajadores, incluye seguro facultativo para estudiantes, seguro de salud para la familia y seguro de continuación voluntaria en el régimen obligatorio, además cuenta con 3,423,560 pensionados y 24,194,833 adscritos a una clínica como familiares de los trabajadores y 8,349,878 familiares no adscritos a una clínica, además 11,891,406 derechohabientes que pertenecen al programa IMSS-oportunidades, dando un total de 71,403,369 individuos con derecho a servicios médicos y prestaciones sociales por parte del IMSS; de esta manera se puede observar que el IMSS es la institución de seguridad social más importante en el país, ya que la cobertura de sus servicios de seguridad social abarca al 60% de la población en México.

Con base en la información anterior se puede apreciar la importancia que tiene para la población en México las prestaciones de seguridad social establecidas en la constitución política. De la misma manera resalta la importancia de instituciones cuya finalidad encomendada es organizar y proporcionar servicios médicos y demás prestaciones a la población. De esta manera el IMSS cumple los objetivos para lo cual fue creado, al tener en sus registros de afiliados a más del 50% de la población del país.

Para lograr su cometido el IMSS requiere los recursos financieros necesarios para solventar el costo total de su operación, para ello es necesario la participación de los patrones, ya que conforme a lo establecido en la Ley del Seguro Social, quienes tengan trabajadores a su servicio, deberán enterar al IMSS una cuota individual por cada persona a su servicio, la cual se determinará con base en el sueldo diario que gane el trabajador. Sin embargo, en ocasiones por una inadecuada interpretación de la ley o por establecer estrategias mal fundamentadas por parte de algunos patrones en México, las cuales traen como resultado que se manifieste ante el IMSS un sueldo diario menor al que gana el trabajador, como consecuencia de lo anterior el patrón paga una cuota menor a la establecida en la ley, situación que afecta de manera directa a los trabajadores, ya que el sueldo se toma de base para el pago de prestaciones económicas, adquisición de vivienda y para integrar el monto de la pensión de retiro por vejez; además también afecta las finanzas del instituto al recibir del patrón una cuota menor por cada trabajador. Este trabajo de investigación tiene como finalidad dar a conocer las consecuencias legales y económicas que enfrentan las empresas cuando pagan sus cuotas patronales al instituto de manera incorrecta.

En su introducción esta investigación aborda algunos antecedentes de la seguridad social en México; en la revisión literaria da a conocer algunas disposiciones legales que regulan la previsión social en nuestro país y los comentarios de algunos estudiosos del tema; en la metodología se describe el tipo de investigación, obras consultadas, población de estudio y medios para la obtención de información de campo; en los resultados se revisan las aportaciones de especialistas sobre el tema, se procesa la información de campo recabada y se determinan resultados a través de programas estadísticos, en el apartado de conclusiones, se dan a conocer las conjeturas del investigador al comparar los resultados de la investigación documental y de campo según su opinión.

REVISIÓN LITERARIA

La seguridad social en México ha jugado un papel de gran importancia para el trabajador y su familia, de manera oficial la llegada de estas prestaciones al país se iniciaron con la creación del Instituto Mexicano del Seguro Social, organismo que desde sus inicios a tenido a su cargo la administración y prestación de la seguridad social, para la mayor parte de los trabajadores del país y sus familias. Gracias a las prestaciones de seguridad social, por décadas los mexicanos hemos tenido acceso a servicios de salud, así como a prestaciones por contingencias en el trabajo o prestaciones por vejez o cesantía en edad avanzada, de igual forma millones de mexicanos se han beneficiado con la obtención de una casa habitación a favor del trabajador y de su familia.

En primera instancia el artículo 123 constitucional en su primer párrafo establece el derecho de los trabajadores de obtener un trabajo digno y útil, recayendo en el Estado la creación de fuentes de empleo y la organización social del trabajo. El mismo artículo en su fracción XIV establece la responsabilidad del patrón sobre los accidentes de trabajo o enfermedades profesionales que sufran los trabajadores con motivo de la realización de sus actividades laborales, debiendo el empresario pagar la indemnización correspondiente, de acuerdo al daño sufrido por el trabajador y a los montos establecidos en las leyes complementarias.

Por su parte la ley federal del trabajo es el instrumento que regula las relaciones laborales en México, al efecto en su artículo tercero establece que el trabajo es un derecho y un deber sociales y no es un artículo de comercio. En su artículo 82 menciona que el salario es la retribución que debe pagar el patrón al trabajador por su trabajo, mismo que se integra de acuerdo con el artículo 84 de la misma ley con: el pago hecho en efectivo como cuota diaria, las gratificaciones y percepciones que perciba el trabajador, habitación, comisiones, prestaciones en especie, primas, y cualquier otra cantidad que reciba el trabajador del patrón por el trabajo prestado.

Con relación a lo anterior, el artículo 2 de la Ley del Seguro Social (LSS) expone que los fines de la seguridad social es garantizar a los trabajadores y sus familias el derecho a la salud, a los servicios médicos y demás prestaciones sociales que garanticen el bienestar social, así como la obtención de una pensión previo cumplimiento de los requisitos de ley, la cual será garantizada por el Estado.

Por otra parte el artículo 5 de la misma ley establece que la administración del Seguro Social estará a cargo del propio organismo público descentralizado, de integración operativa tripartita, es decir, concurren los sectores público, social y privado; el cual tendrá el carácter de organismo fiscal autónomo.

Las obligaciones para los patrones se encuentran contenidas en el artículo 15 de la Ley del Seguro Social, mismo que establece que deben registrarse ante el instituto e inscribir a sus trabajadores, informar sus altas, bajas y modificaciones de su salario, dentro de un plazo no mayor de cinco días hábiles al de su acontecimiento; llevar registros de nómina de sus trabajadores, que contengan los días trabajados y salarios percibidos; además determinar las cuotas obrero patronales a cargo del patrón y realizar su pago al instituto, permitir las visitas de éste para la revisión y comprobación de la cuantía de las cuotas y pago de las mismas. En el mismo sentido en su artículo 12 la LSS menciona que son sujetos de aseguramiento del régimen obligatorio las personas que presten un servicio personal remunerado subordinado a un patrón, con independencia de la personalidad jurídica de éste.

De acuerdo con el artículo 28 de la LSS el patrón inscribirá a sus trabajadores ante el instituto con el salario base de cotización que éste perciba al momento de su afiliación, estableciendo como sueldo máximo el equivalente a veinticinco veces el salario mínimo general y como sueldo menor un salario mínimo del distrito federal. Dispone el artículo 38 de la LSS que el patrón al pagar el sueldo deberá retener la cuota que corresponde pagar el trabajador al instituto.

En caso de que el patrón no pague el importe de las cuotas a su cargo y del trabajador o lo haga en forma incorrecta el artículo 39C de la LSS establece que el instituto las determinará presuntivamente con base en la información proporcionada por el patrón, mismas que dará a conocer al patrón, quien deberá pagarlas dentro de los quince días hábiles siguientes en que le sean notificadas.

Respecto de las sanciones a los patrones el artículo 52 de la LSS establece que el patrón que oculte un accidente de alguno de sus trabajadores durante su trabajo o lo reporte de manera indebida, se hará acreedor a las sanciones establecidas en ley. En caso de que el patrón haya manifestado un salario inferior al que gana el trabajador, el instituto solo pagará la pensión al trabajador con el sueldo registrado por el patrón, pero una vez que conozca el sueldo real, se tomará este como base para pagar todas las prestaciones que procedan. En estos casos el patrón deberá realizar el pago de las diferencias determinadas por el IMSS que resulten por la parte del salario omitido (capital constitutivo), más un cinco por ciento por gastos de administración.

En el mismo sentido el artículo 79 de la misma ley da a conocer las prestaciones que integran el monto de un capital constitutivo a que puede hacerse acreedor un patrón, entre las cuales se encuentran: todo tipo de cuidados médicos, análisis clínicos, medicinas, hospitalización, intervenciones quirúrgicas, prótesis, traslados, gastos de funeral, subsidios, indemnizaciones o pensiones y gastos de administración.

De acuerdo con la información de este apartado, se puede apreciar que los derechos de los trabajadores en México y las obligaciones de los patrones en materia de seguridad social, se desprenden de disposiciones constitucionales, de esta manera encontramos que la Ley Federal del Trabajo, regula las relaciones laborales entre trabajadores y patrones y la Ley del Seguro social, se encarga de regular las prestaciones de seguridad social.

METODOLOGÍA

Para el desarrollo del presente trabajo de investigación se llevó a cabo una revisión de los antecedentes de la seguridad social en México, así como de las disposiciones actuales establecidas en las leyes mexicanas, respecto de la regulación de la relación laboral y prestaciones de seguridad social. Se describen las obligaciones que conforme a ley deben cumplir los patrones, así como las consecuencias legales y económicas a cargo del empresario, en caso de incumplimiento u omisión de sus obligaciones y pago de cuotas en materia de seguridad social. Se realizó una encuesta a 100 trabajadores de diferentes empresas para saber en qué medida el patrón esa cumpliendo con sus obligaciones de seguridad social y que porcentaje de patrones pudieran estar sujetos, a un procedimiento administrativo por incumplimiento de las disposiciones legales en esta materia. La información obtenida fue procesada a través de estadística descriptiva para determinar los resultados, que permitan alcanzar los objetivos de esta investigación.

RESULTADOS

Una vez analizadas las disposiciones legales que establecen las obligaciones que en materia de seguridad social tiene el empresario, se dan a conocer algunas de las consecuencias legales y económicas por incumplimiento u omisión en el pago de sus cuotas obrero-patronales de acuerdo con la ley de la materia, algunas de las cuales pueden ser.

El artículo 287 de la LSS establece que las cuotas omitidas y capitales constitutivos, así como su actualización y recargos, impuestas por ley a los patrones, además de los gastos que realice el instituto por cuenta del patrón, tienen el carácter de crédito fiscal, mismo que será exigible de acuerdo con el artículo 291 del mismo ordenamiento, a través del Procedimiento Administrativo de Ejecución. En caso de que el patrón no realice el pago, como consecuencia legal y económica se embargarán bienes suficientes de éste para garantizar el pago del crédito fiscal, los cuales serán rematados en pública almoneda.

Por otra parte el artículo 304 de la Ley del Seguro Social, establece que cuando el patrón realice actos u omisiones que impliquen el incumplimiento del pago cuotas omitidas y capitales constitutivos, como consecuencia legal y económica será sancionado con multa del cuarenta al cien por ciento del monto omitido.

En el mismo sentido el artículo 307 de la misma ley establece que el patrón comete el delito de defraudación fiscal, cuando con engaños o aprovechamiento de errores se omita en forma parcial o total el pago de cuotas obrero-patronales y se beneficien de manera indebida en perjuicio del instituto o de los trabajadores. Cabe aclarar que el delito de defraudación de acuerdo con los artículos del 308 al 311 está penado con prisión, de acuerdo al monto de lo defraudado, con pena que va de tres meses a nueve años de prisión.

A continuación se presenta el resultado obtenido de la investigación de campo, con base a las respuestas dadas por los trabajadores entrevistados, con respecto su situación laboral en materia de seguridad social.

De acuerdo con la información de campo obtenida en la (tabla 1) al pregunta al trabajador si contaba con un empleo y si recibía a cambio una remuneración, el 100% de los entrevistados contesto de manera afirmativa, la razón de esta pregunta fue confirmar la relación laboral conforme a la ley; por otra parte del total de trabajadores encuestados el 76% de ellos contesto que sí están registrados como trabajadores en el seguro social, mientras que el 26% contestó no estar afiliado; En el mismo sentido el 93% de los trabajadores dijo que sí conoce su salario diario, un 7% manifestó no conocerlo, esta pregunta tuvo como objeto conocer el cumplimiento del patrón ante el instituto en la pregunta siguiente; el 68% de los entrevistados contestaron que sí están registrados ante el IMSS con el sueldo diario que ganan, el 32% restante comentó estar registrado con un salario diferente; por último el 90% de los trabajadores participantes manifestó estar conforme con su trabajo, el 10% restante dijo no estar conforme.

Tabla 1: Operacionalización de variables

Variable	Indicadores	Si %	No %
Consecuencias legales y económicas para el empresario por incumplimiento en las prestaciones de seguridad social al trabajador en México.	1. Está usted trabajando y recibe un sueldo por su trabajo?	100	
	2. Está usted registrado ante el IMSS?	74	26
	3. Conoce su sueldo diario?	93	7
	4. Es el mismo sueldo registrado en el IMSS?	68	32
	5. Está conforme con su trabajo?	90	10

Elaboración propia con base en los indicadores analizados en esta investigación.

CONCLUSIONES

Una vez analizadas las disposiciones legales que regulan la seguridad social en México, se puede concluir que éstas establecen de manera clara y precisa las obligaciones del patrón respecto de sus trabajadores. A la vez se confirma la importancia del cumplimiento en forma correcta con el registro de los trabajadores al servicio del patrón, de esta manera el patrón no pone en riesgo su patrimonio, por motivo de multas, capitales constitutivos, gastos de ejecución y embargo de bienes. Se confirma que en México una gran cantidad de patrones no cumple con sus obligaciones de seguridad social, pues el 26% de los trabajadores entrevistados manifestaron no estar afiliados en el seguro social, por consiguiente, en promedio el 26 % de los patrones pone en riesgo su patrimonio familiar por incumplimiento de sus obligaciones en materia de seguridad social. De la misma manera se concluye que un alto número de patrones registra a sus trabajadores con un salario menos al que realmente ganan, situación que también pone en riesgo su patrimonio familiar, pues el 32% de los trabajadores manifestó estar registrado ante el instituto con un salario inferior al que gana.

De los resultados de esta investigación puede observarse que en México la seguridad social es un derecho de los trabajadores y de sus familiares, sin embargo, en la práctica existen empresarios que evaden esta obligación en perjuicio de un amplio sector de la sociedad.

ABSTRACT

El turismo es una industria que ha ido apuntalando a nivel mundial, los consumidores cada vez tiene más acceso a información por internet, lo que fomenta su búsqueda en el proceso de compra, sin embargo no todos los consumidores tienen la confianza de adquirir un boleto de avión o un paquete (avión- hotel) por esta vía y en ese caso acuden a agencias de viaje tradicionales en donde se interactúa con el personal y se finaliza la compra. El objetivo de esta investigación es identificar los riesgos que un comprador percibe al momento de decidir entre la intermediación tradicional y la info-mediación que son las ventas en línea, así como los factores decisivos de compra de los consumidores que viajan de Querétaro a Cancún. El método de análisis que se utilizara para determinar si hay diferencias significativas entre las variables del riesgo percibido es través de un Anova de n factores y un análisis factorial de componentes principales para determinar los factor decisivos de compra que ayuden como elementos estratégicos cuando se establezcan estrategias mercadológicas.

ABSTRACT

Tourism is an industry that has been propping worldwide, consumers increasingly have more access to information on the Internet which encourages their search online process, however not all consumers have the confidence to purchase an airline ticket or package (plane- hotel) in this way and then go to traditional travel agencies where interacts with staff and the purchase is completed. The objective of this research is to identify risks that a buyer sees when deciding between traditional intermediation and info - mediation that are online sales and the purchase factors of consumers traveling from Queretaro to Cancun. The method of analysis used to determine whether there are significant differences between the variables of perceived risk is through an Anova of n factors and principal components factor analysis to determine the decisive factor in purchase to help as strategic elements when strategies are developed market related.

INTRODUCCIÓN

El turismo ha presentado un continuo y vigoroso crecimiento a nivel mundial. Cancún recibió en el 2014 un total de 4.5 millones de turistas de los cuales el 65% son internacionales y el 35% nacionales (Barómetro de Cancún, 2015). Actualmente los turistas nacionales ocupan el segundo lugar (35%) después del mercado americano (45%), por lo que representan un mercado atractivo para los empresarios del sector turístico.

El gran reto de estas empresas es identificar el tratamiento eficaz de un conjunto de productos y servicios como alternativa de trascendencia a largo plazo con la finalidad de desarrollo de nuevas experiencias, en la compra de productos o servicios turísticos (Zárraga, Morejón y Corona, 2010), por lo que se ven en la

necesidad de diferenciar el producto o servicio ya que son el vínculo entre entidades del sector turístico y los clientes finales.

En el 2013 Cancún recibió 18,716 personas de la ciudad de Querétaro que representa el 1.30% de los turistas nacionales que visita este destino turístico (Barómetro de Cancún, 2015). En este mismo año la empresa Volaris tuvo 123 vuelos de Querétaro a Cancún, como se puede ver en la Tabla 1 (Barómetro de Cancún, 2015).

Tabla 1: Vuelos de Querétaro a Cancún

Año	Turistas que vienen de Querétaro a Cancún	Aerolíneas y Vuelos
2005	8,833	
2006	8,087	
2007	10,367	Novoair, un vuelo.
2008	9,664	Novoair, un vuelo. Alma, 133 vuelos.
2009	11,145	
2010	11,036	Aeromexico, once vuelos.
2011	12,010	
2012	16,107	Volaris, 21 vuelos.
2013	18,716	Volaris, 123 vuelos.

Afluencia de turistas que vienen de Querétaro a Cancún, así como las aerolíneas procedentes de Querétaro. Fuente: Barómetro de Cancún, 2015.

Querétaro es un mercado emergente en donde prevalece una capacidad de compra alta y media, sin embargo existe un mercado mixto, en donde se destaca el estilo de vida aspiracional y el consumo por el seguimiento de modas y tendencias, así como sectores muy tradicionalistas en cuanto a familia y trabajo, desconfiando de aquellas instituciones o productos que buscan impresionarles con grandes promesas (Kato y Fernández, 2010). Hasta hace algunos años la única forma de abordar un avión para los que vivían en Querétaro era trasladarse hasta las ciudades de México o León, a partir de noviembre del 2004 se apertura el nuevo Aeropuerto Intercontinental (AIQ) teniendo como destinos ciudades como Houston, Dallas, Cancún, Puerto Vallarta, Tijuana y Monterrey (AIQ, 2015), esto ha permitido la apertura a nuevos destinos turísticos.

Por lo tanto las empresas turísticas en Querétaro tienen nuevos retos que enfrentar al momento de ofertar sus productos o servicios y es importante que se conozcan los factores de decisión de compra de un cliente con el fin de poder brindar un servicio de calidad, en este sentido se identifican los riesgos que un comprador percibe al momento de decidir entre la intermediación tradicional como lo es comprar en una agencia de viajes y la info-mediación que son las ventas en línea, así como los factores decisivos para la compra, de un viaje de Querétaro a Cancún.

Con esta finalidad, el estudio se va a estructurar de la siguiente manera: en primer lugar se realizará una revisión literaria, en segundo lugar se describe la metodología empleada, en tercer lugar los resultados obtenidos y en cuarto lugar los hallazgos y conclusiones, así como futuras investigaciones.

REVISIÓN LITERARIA

El sector turístico se caracteriza por un fuerte dinamismo tanto por parte de la oferta como de la demanda, los destinos sol y playa continúan presentando la mayor oferta a nivel nacional. En este punto la mayoría de las decisiones que toman los turistas no son elecciones independientes, sino decisiones complejas que implican elegir múltiples elementos interrelacionados y que se van tomando en una secuencia temporal (Dellaert, Ettema y Lindh, 1998). Barlés y Matute (2012), identifican tres momentos importantes en la toma de decisión de un turista: (1) Decidir viajar; (2) las decisiones antes de viajar al destino como el alojamiento, empresas con las que viajara, transporte, época del año y duración (Fessenmaier, 1995), y (3) decisiones

durante el viaje como atracciones o lugares a visitar, rutas, gastos, lugares donde parara a comer o descansar, etc. (Dellaert, Ettema y Lindh, 1998).

En estos tres momentos el turista tiene que aplicar el proceso de toma de decisión de compra el cual consta de cinco etapas: (1) Reconocimiento de la necesidad, (2) Búsqueda de información, (3) evaluación de alternativas, (4) Decisión de compra, (5) Comportamientos postcompra.

El reconocimiento de la necesidad, comienza cuando un comprador reconoce tener un problema o una necesidad, hay una diferencia entre el estado actual y el deseado. La necesidad puede ser provocada por estímulos internos como su experiencia previa o estímulos externos como un anuncio de televisión, o una recomendación, etc. (Kotler, Bowen, Makens, García de Madariaga y Flores, 2011).

La búsqueda de información, en esta etapa se estimula al consumidor para que busque más información; podría ser que el consumidor sólo preste más atención, o que inicie una búsqueda de información activa (Kotler y Armstrong, 2001). La duración de la búsqueda que haga un consumidor depende de la fuerza de la motivación, de la cantidad de información inicial, del valor asignado a la información adicional y la satisfacción que se obtiene de la búsqueda (Kotler et al, 2011). El consumidor puede obtener información de varias fuente como se muestra en la Tabla 2.

Tabla 2: Fuentes para obtener información.

Fuentes	Ejemplos
Personales	Familia, amigos, vecinos y conocidos.
Comerciales	Publicidad, vendedores, detallistas, envases, y/o etiquetas.
Públicas	Análisis de restaurantes, editoriales en la sección de viajes, organizaciones de consumidores.
Internet	Las páginas web de las empresas y los comentarios de los visitantes anteriores.

Fuente: Kotler, Bowen, Makens, García de Madariaga y Flores, 2011.

En un servicio turístico las fuentes de información personales tienen mayor impacto porque son percibidas como más creíbles. Lovelock, (1997) clasifica estas fuentes de información en función de la forma en que los clientes pueden reducir el riesgo de adquirir un servicio, como se muestra en la Tabla 3.

Tabla 3: Fuentes de información

Buscar información de fuentes personales respetada (familia, amigos, compañeros). Fiarse de una empresa que goza de buena fama. Buscar garantías. Visitar las instalaciones o probar aspectos del servicio antes de la compra. Preguntar a los empleados con conocimiento sobre servicios competidores. Examinar las claves tangibles y otras evidencias físicas. Utilizar internet para comprar ofertas de servicio.

Fuente: Lovelock, 1997

La evaluación de alternativas, es la etapa del proceso en la que el consumidor usa información para evaluar marcas alternativas de un conjunto de opciones (Kotler y Armstrong, 2001). Esta evaluación se da en varios sentidos: Cada consumidor ve un producto como un conjunto de atributos de producto; Conceden distinta importancia a los atributos relacionados con sus necesidades; Dan diferentes niveles de importancia a cada atributo; El consumidor desarrolla un conjunto de creencias acerca de dónde se sitúa cada marca en relación con cada atributo, las creencias del consumidor pueden variar partiendo de los atributos verdaderos debido a la experiencia del consumidor y los efectos de la percepción que este tenga (Kotler et al, 2011).

La decisión de compra es la esta etapa del proceso de decisión del comprador en la que el consumidor compra realmente el producto (Kotler y Armstrong, 2001), esta puede estar influida por las actitudes de otra persona o por factores situacionales imprevistos como ingresos familiares, el precio y los beneficios esperados del producto. En el sector turístico se da que el consumidor no sabe cuál va a ser la experiencia hasta después de la compra, por lo que los empleados deben hacer todo lo posible para garantizar que tenga una buena experiencia y que la evaluación posterior a la compra sea favorable (Kotler et al, 2011).

El comportamiento postcompra es la etapa del proceso de decisión del comprador en la que los consumidores realizan acciones adicionales después de la compra, con base a la satisfacción o insatisfacción (Kotler y Armstrong, 2001). En este punto se manifiesta la relación entre las expectativas que tenía sobre el producto y el rendimiento percibido del mismo.

Los procesos de compra tradicionales se vuelven más sofisticados y complejos con la aparición del internet, la facilidad de acceso a la información deben llevar a las empresas a revisar sus estrategias de comunicación y gestión de venta online y offline (Ureña, Agudo e Hidalgo, 2011).

El internet ha cambiado la forma en que los consumidores compran los productos o servicios turísticos, mediante la sustitución de las agencias convencionales por los sitios web, el uso de internet hace posible un acceso instantáneo a múltiples fuentes de información (Ureña, Agudo e Hidalgo, 2011). Sin embargo muchos clientes todavía perciben riesgos en las compras realizadas a través de Internet (Fernandes, Fossati y Affonso, 2013). No obstante, aún es pequeña la participación de las compras hechas por internet y las barreras del consumo online debido al gran riesgo percibido por los clientes (Cordeiro, Silveira y Benevites, 2004), como son: el riesgo financiero, se refiere al mal uso de los instrumentos de pago; el riesgo de desempeño, se produce cuando el producto o servicio no es el esperado por el consumidor; el riesgo físico, relativo a causar daños a la salud o a la integridad física del consumidor; y riesgo de tiempo/conveniencia, se refiere a la pérdida de tiempo y conveniencia de la compra (Kovacs y Farias, 2004; Lubbe, 2007; Carvalho, Silva, Corso y Tortato, 2008).

Los riesgos percibidos son un factor significativo en el comportamiento del consumidor, Cunningham, Gerlach, Harper y Young (2005) lo asocian con todas las fases del proceso de compra. Algunos consumidores han posicionado en su mente la red como un canal de “fuente de información”, no como un lugar de compra, ya que facilita la recopilación de información. El internet es un punto de encuentro entre empresas y consumidores que buscan información en la red sobre productos y servicios, sus características y su precio como paso previo a la decisión de compra.

Las agencias de viajes tradicionales son empresas que hacen de intermediaria entre sus clientes y determinados proveedores turísticos, en el marco de unas condiciones tentadoras y atractivas, por lo que están dentro de la cadena de valor de la industria del turismo (Velásquez, Peñá y Macia, 2005). Las ventajas son: buscan simplificar al cliente trámites, tienen un asesoramiento personalizado ya que pueden aconsejar sobre lugares que visitar, se puede pagar en efectivo, se tiene el contacto inmediato ante posibles incidencias en el viaje.

El número de agencias de viaje ha disminuido en los últimos años debido al crecimiento de las reservas por internet. En la actualidad la mayoría de las reservas de las compañías aéreas son efectuadas desde su página web y la mayoría evita pagar comisión a las agencias de viaje (Kotler et al, 2011), al igual que las reservas a hoteles, por lo que la reducción de las comisiones como el crecimiento de las ventas directas de hoteles y compañías aéreas a los consumidores han llevado al cierre progresivo de muchas agencias de viajes en Latinoamérica (Kotler et al, 2011).

METODOLOGÍA

El objetivo del estudio fue identificar los riesgos que un comprador que viaje de Querétaro a Cancún percibe al momento de decidir entre la intermediación tradicional y la info-mediación que son las ventas en línea, así como los factores decisivos de compra. El diseño de la investigación fue de tipo cuantitativo en donde se obtuvieron datos estadísticos que reflejan cifras absolutas y relativas del mercado (Malhotra, 2008) que viaja de Querétaro a la ciudad de Cancún. Se realizó una investigación descriptiva la cual aplica un conjunto de métodos estadísticos inferenciales y multivariados como frecuencias, pruebas de significancia univariada mediante el análisis Anova de un factor, y un análisis factorial para entender el fenómeno. El cuestionario tuvo 33 reactivos en donde se obtuvo un Alpha de Cronbach de .870 donde se aplicaron escalas de medición categórica y métrica

La muestra que se aplicó fue una muestra no probabilística, proceso muestral en el que la probabilidad de selección de cada unidad muestral es desconocida (Hair, Bush y Ortinau, 2004) en este caso se argumenta de esta manera debido a los requerimientos que el Aeropuerto Intercontinental de Querétaro interpuso para poder tener acceso a sus instalaciones, el método que se utilizó fue muestreo por conveniencia que es un procedimiento en el que las muestras se toman por conveniencia del investigador, los supuestos en que se basa el proceso son que la población meta definida es homogénea y los individuos entrevistados son similares a la población, en este caso se hizo a los pasajeros que viajaban de Querétaro a Cancún.

RESULTADOS

Dentro de los resultados el primer análisis fue la obtención de frecuencias de las variables demográficas del estudio en donde se encontraron los siguientes hallazgos. La encuesta fue aplicada al 50.9% de hombres y 49% de mujeres entre los cuales el 5.6% tenía entre 18 y 24 años, el 31.5% entre 25 y 34 años, el 31.5% entre 35 y 44 años, el 22.2% entre 45 y 54 años y un 9.3% más de 55 años. El 77.8% de los encuestados trabaja, el 7.4% estudia y el 11.1% son jubilados.

Entre los servicios que adquirieron el 56.4% compró solamente el boleto de avión, el 21.8% avión más hotel, el 21.8% avión, hotel y alimentos. En cuanto a la forma de pago el 22.5% fue efectivo, el 69.1% fue con tarjeta de crédito y el 5.5% fue con descuento a nómina. La forma en que adquirieron sus servicios fue el 25.5% a través de una agencia tradicional y el 74.5% a través de internet con una agencia en línea.

El medio más utilizado en la búsqueda de información fue el internet con un 81.5%, seguido de la agencia de viaje con un 11.1%, las redes sociales con un 3.7% y recomendaciones de amigos con un 3.7%.

Se realizó un análisis de varianza para comprobar si existe una diferencia estadística entre tres o más medias aritméticas, en este caso se analizaron los riesgos por las cuales puede pasar un consumidor al momento de comprar por una agencia tradicional o en línea. El análisis que se aplicó fue un Anova de un factor que permite estimar sus efectos individuales y conjuntos sobre la variable dependiente, en este caso los tipos de riesgos que es una variable métrica ante la variable independiente que es una variable categórica como fue si adquirió su compra en una agencia establecida o a través de una agencia por internet. La hipótesis nula del Anova declara siempre que no hay diferencias entre los riesgos por parte de los grupos que compraron por una agencia tradicional o por una agencia en línea.

Posteriormente se realizó un análisis factorial de componentes principales para determinar si la información se puede resumir en un menor número de subconjuntos o factores para los elementos decisivos de compra en donde se obtuvo un KMO (Kaiser-Meyer-Olkin) de .880, existen dos grupos los cuales se centran en el servicio y el producto y otro en el precio y comodidad.

CONCLUSIONES

El estilo de vida de la gente que viaja de Querétaro a Cancún hoy por hoy es un mercado joven, ya que el 63% oscila entre 25 y 44 años de edad lo que hace que el estilo de vida sea más aspiracional, siguiendo tendencias de moda.

En cuanto al proceso de compra de un destino turístico mediante la intermediación tradicional (25.5%) y la info-mediación (74.5%) que son las ventas en línea no existe ninguna diferencia estadística en cuanto a los riesgos que se persiguen, pues se aplicó un análisis Anova para identificar si existieran estas diferencias, lo cual resultó negativo, por lo que se puede concluir que ambos tipos de intermediación son perceptibles a los mismos tipos de riesgos; en donde por otro lado al momento de analizar las frecuencias se observa que más del 50% perciben estos riesgos como muy pocos, lo que se puede suponer es que las empresas están gestionando mejor sus operaciones.

Dentro de los factores de decisión de compra que utiliza el consumidor para elegir una empresa u otra, se aplicó el análisis factorial para distinguir los grupos de variables y poder tomar decisiones. Un grupo reúne a los elementos que están alrededor del servicio y el producto como son: servicio, variedad de ofertas, asesorías, atención post-venta, atención personalizada, apoyo a resolución de problemas, descuentos, tecnología y tiempo. Y el otro grupo se focaliza en el precio y la comodidad que debido a estas dos elementos se puede inferir que la venta a través de una info-mediación toma ventaja.

RESUMEN

En este artículo se hace un estudio tomando como parámetro los estándares de competencia que dicta el Consejo Nacional de Normalización y Certificación de Competencias Laborales (CONOCER) y los estándares o competencias solicitados por los hoteleros durante el proceso de contratación de los distintos tipos de personal del área de cocina . Según CONOCER la formación basada en normas de competencia tiene entre otros beneficios el promover el fortalecimiento del capital humano haciéndolo competitivo a nivel mundial y promoviendo una mejor vinculación de los trabajadores con el sector educativo a lo largo y ancho del país. Estas normas de competencia habilitan al trabajador para desarrollarse en contextos empresariales por lo que contribuyen al fortalecimiento de la competitividad. El puerto de Manzanillo de encuentra posicionado en el lugar 25 en cuanto a establecimientos de hospedaje por lo tanto el fortalecimiento del recurso humano proporcionaría una mayor competitividad y aumentaría las posibilidades de figurar como uno de los principales destinos turísticos

PALABRAS CLAVE: Competencias, Estándares, Recurso Humano, Proceso De Contratación, Competitividad.

THE RECRUITMENT PROCESS FOR KITCHEN STAFF IN ACCORDANCE WITH C.O.N.O.C.E.R :THE LEADING HOTELS IN MANZANILLO COLIMA

ABSTRACT

This paper analyzes the recruitment process for kitchen staff based on the proficiency standards named by the National Council of Standardization and Certification of Working Proficiency (C.O.N.O.C.E.R) and the standard or skills requested by the hotel industry for the different types of kitchen staff members. According to CONOCER the training process based on proficiency has among other benefits strengthening the human capital by making it more competitive worldwide and by linking up with the education sector far and wide across the country. This proficiency regulations enable the worker to develop in business contexts and thus contribute to strengthening competitiveness.

Manzanillo is ranked 25 in terms of lodging establishments therefore strengthening human resource would provide greater competitiveness and would increase the chances of ranking as one of the main tourist destinations

KEYWORDS: Skills ,Proficiency, Standards ,Human Capital , Hiring Process, Competitiveness

INTRODUCCIÓN

La definición más popular obtenida al hablar de recursos humanos es: las personas. Sin embargo esta es una definición errónea, ya que los recursos humanos son como su nombre lo expresa recursos que poseen las personas y son útiles para la organización ya que el producto principal que se oferta tanto en el turismo como en la hotelería es el servicio. Es de suma importancia que los empleados de la industria de la hotelería, especialmente los de las áreas operativas, posean ciertas competencias específicas que le den valor agregado al producto. Si bien las características que los empleadores buscan en este tipo de organizaciones deben encontrarse listadas en los manuales de contratación o descripciones de perfiles de puesto, estas características no pueden quedarse solamente en el profesionalismo o el saber hacer. Todas las organizaciones, independientemente de cuál sea su giro, requieren de una serie de recursos o elementos que le permitan alcanzar fácilmente sus objetivos. En el caso de la hospitalidad dichos recursos se reflejarán en cualidades de la persona al desempeñarse en ciertos puestos de una forma eficiente. De ahí la importancia de un proceso de contratación que pueda ir más allá de las entrevistas y solicitudes de trabajo comunes. El reclutamiento, selección, contratación, inducción y capacitación son las fases del proceso de provisión, cada una tiene un objetivo específico, y al ser eficientemente aplicadas permiten que el recurso humano que se capte cubra en el mayor porcentaje posible las necesidades de la organización. Las áreas operativas, en el ramo de la hotelería requieren personal con ciertas cualidades que pudieran no ser tan determinantes en otras áreas. Específicamente en las distintas áreas de la cocina pudiéramos incluir algunas características más puntuales acordes con el puesto, el rango, las actividades y algunas otras variables.

REVISIÓN LITERARIA

Como parte de la globalización en donde la movilización de personas, ideas, capital y tecnología influyen considerablemente en el crecimiento y especialización de los servicios que confirma la industria de la hospitalidad (Reiser 2003). Por lo tanto la demanda de mano de obra flexible, competente y comprometida y con la capacidad de cumplir con los estándares de calidad y servicio (Nilsson 2002) está afirmación puntualiza la importancia que el recurso humano como un factor de competitividad y determinante para el éxito de las organizaciones.

Las competencias son un conjunto de propiedades en permanente modificación que deben ser sometidas a la prueba de resolución de problemas concretos en situaciones de trabajo que entrañan ciertos márgenes de incertidumbre y complejidad técnica. (Galart 2000). En el tema de las competencias laborales especialmente en mercados de trabajo con niveles altos de desempleo se observan tipos: las competencias de empleabilidad que son habilidades básicas como expresión oral y escrita, la resolución de problemas, toma de decisiones y el aprendizaje a base de experiencias, las relacionadas al uso del recurso como el uso de materiales y equipos, dinero entre otros, las competencias interpersonales en las que se encuentran el trabajo en equipo, liderar, negociar, atención al cliente, las competencias de comunicación y las competencias tecnológicas (Scan, 2000).

El Consejo Nacional de Normalización y Certificación de Competencias Laborales es una entidad paraestatal del gobierno federal mexicano y la participación del sector gubernamental, empresarial y laboral, su principal objetivo es contribuir a la competitividad económica y al desarrollo educativo y progreso social de México (CONOCER, 2015) con base en el Sistema Nacional de Competencias de las Personas o SNC.

El SNC se compone por tres piezas claves: Comités Sectoriales de gestión por competencias, instrumentos de transferencia de conocimiento al mercado laboral y de vinculación con el sector educativo, estructura nacional de evaluación y certificación.

Los Comités Sectoriales de gestión por competencias se encuentran integrados por miembros de alto nivel e influencia en la toma de decisiones del sector quienes a su vez integran grupos técnicos para desarrollar

estándares de competencia de personas relevantes para la competitividad de su sector como : conocimientos, habilidades, destrezas, actitudes y comportamientos. Estos comités incorporan estándares internacionales , emiten certificaciones de la autoridad federativa y del sector de tal manera que las certificaciones tengan credibilidad en el mismo y al mismo tiempo pueden ser utilizadas para obtener equivalencias educativas.

Como instrumentos de transferencia del conocimiento al mercado laboral se cuenta con listados de estándares de competencias que pueden ser al igual referentes nacionales y son certificables por la autoridad educativa.

Para este estudio se tomarán en consideración las competencias emitidas para los sectores hotelero y restaurantero, ambos incluidos dentro del sector productivo de acuerdo a la clasificación de CONOCER . Según cifras al2014 de los 460 estándares de competencia publicados en el diario oficial de la federación el 6% son para el área turística , dentro de la que se encuentra implícita la gastronomía. (CONOCER 2015).

La estructura de evaluación y certificación tiene alcance nacional en ella participan el sector empresarial , laboral y académico quienes mediante comités sectoriales aseguran la gestión por competencias además de ofrecer cursos de capacitación basados en competencias y certificaciones.

De 191 instituciones acreditadas a nivel nacional y alrededor de 3000 puntos en todo el país para evaluación y certificación de competencias para el puerto de Manzanillo las instituciones en teoría disponibles son : La Asociación Mexicana de empresas de Capacitación, la CROC (Confederación Revolucionario de Obreros y Campesinos), el CONALEP (Colegio Nacional de Educación Profesional Técnica),SEDESOL (Secretaría del Desarrollo Social) y el DIF nacional.

CONOCER cuenta además con un campus virtual en donde según cifras publicadas desde el 2010 han participado más de 22000 personas

Tabla 1 Estándares de competencias de CONOCER relacionados al personal de cocinas

Título	Comité
Preparación de alimentos	Turismo / Industria restaurantera nacional
Manejo higiénico de alimentos	Turismo
Limpieza de cocina industriales	Turismo

METODOLOGIA

Para este trabajo de investigación se entrevistaron a los responsables del proceso de selección y contratación en las áreas de cocina de los hoteles más representativos del puerto de Manzanillo específicamente gerentes de recursos humanos y/o chef ejecutivo buscando conocer ya sea los parámetros de contratación definidos por la organización o en su defecto las características que ellos buscan en los candidatos a ocupar los distintos puestos de cocina. Además se indagó acerca del proceso de contratación , evaluaciones o filtros que se aplicaran a los candidatos a ocupar alguno de los puestos seleccionados para este estudio.

Este trabajo se enfocó en los puestos de Cocinero o Cocinero de línea, ayudante de cocina y ayudante de limpieza debido a que estos puestos se encuentran directamente relacionados con estándares de competencia. La investigación trata de contrastar los parámetros marcados por los actores responsables del proceso de contratación del personal de cocina en los principales hoteles de Manzanillo y los estándares de competencias establecidos por el Consejo Nacional de Normalización y Certificación de Competencias Laborales y el Sistema Nacional de Competencias.

Los hoteles que se incluyeron para este estudio fueron los más populares y que además contaran con servicio de alimentos y bebidas , además se solicitó que la persona entrevistada fuera la encargada de realizar el proceso de selección y contratación del personal de cocina.

Tabla 2 Hoteles incluidos en el estudio

Hotel	Contacto	Puesto
Hotel Marbella	Lidia Guzman	Gerente de recursos humanos
Hotel Camino Real	Julio Cesar Gómez	Gerente de recursos humanos
Holiday Inn Express	Luis Ramirez	Gerente de capacitación
Hotel Barceló Karmina Palace	Diego Enrique Manzo Delgado	Gerente de recursos humanos
Hotel Las Hadas	Irma García	Gerente de capacitación
Hotel Tesoro Manzanillo	Claudia Cecilia Moreno Quiróz	Gerente de capacitación y reclutamiento
Hotel Gran Festival	Martha Chávez	Gerente de reclutamiento

Una vez conocido el proceso de contratación del personal de cocina en cada una de las organizaciones , se contrastaron con algunos puntos de los estándares de competencias emitidos por CONOCER.

RESULTADOS

El total de los encuestados refirió que el instrumento principal para la contratación es la solicitud de trabajo. Para el puesto de cocinero o cocinero de línea los entrevistados mencionaron que las cualidades buscadas en un candidato son : preferentemente género masculino, educación media superior o técnica, experiencia en cocina, compromiso , disponibilidad de horario , responsabilidad , conocimiento de normas como Distintivo H o Kristal , referencias de empleos anteriores.

En cuanto a filtros de evaluación de competencias solamente 5 de los hoteles evaluados realizan una prueba de cocina a sus candidatos . Los parámetros de evaluación son subjetivos, dependiendo del estilo de trabajo del chef ejecutivo quien tiene la decisión final de contratación

Para el puesto de ayudante de cocina las principales características son : experiencia previa en cocina, educación básica, disponibilidad de horario, compromiso y trabajo en equipo. La evaluación para este puesto en 6 de los 8 hoteles se basa en la información proporcionada en la solicitud de empleo y las referencias previas. Prácticamente las contrataciones para este nivel son automáticas , salvo que haya alguna mala referencia del candidato. La competencia de preparación de alimentos detalla criterios de evaluación en desempeño , en manejo de productos , actitudes hábitos y valores en 4 diferentes elementos o niveles : disposición de la materia prima , equipo y utensilios de corte , coordinar la pre-elaboración de alimentos , elaboración de platillos y dar término al platillo. Cada uno de los niveles detalla las actividades que deberán llevarse a cabo para que se considere como competencia obtenida

La competencia de manejo higiénico de alimentos detalla tres elementos: recepción higiénica y almacenamiento higiénico de alimentos , bebidas y materias primas además de aplicar las prácticas de higiene y preparación de alimentos y bebidas. Ambas competencias en diferentes niveles nos permiten tanto evaluar a los cocineros de línea como capacitar a los ayudantes de cocina. El puesto de ayudante de limpieza es el que menor requerimientos tiene, todos los entrevistados refirieron que la experiencia previa no era necesaria , y los estudios mínimos podía ser formación básica aunque no concluida. Como características indispensables mencionaron la edad mínima por ley y la disponibilidad de horario

La competencia de limpieza de cocinas industriales incluye 3 elementos: Lavado de loza, plaque y cristalería mediante la operación de máquina lavalozas, lavar el área de cocina, lavar los utensilios , equipo de operación de cocina y línea de cocina caliente.

CONCLUSIÓN

La practica administrativa se ve influenciada por la globalización , la elaboración de "trajes a la medida" incluirá el reconocimiento de los talentos de los empleados y el saber cómo aplicarlos a su vida profesional (Manpowe,2011)

Por mucho tiempo las áreas operativas como la cocina han sido consideradas como áreas no profesionalizables. En estos tiempos en que la gastronomía se encuentra disponible como un programa de nivel superior, las procesos de selección y contratación tendrán que elevar sus estándares y sus métodos de evaluación, los estándares de competencia propuestos por CONCER pueden emplearse no solo como instrumentos para la evaluación de candidatos , sino como instrumentos para capacitación, formación y desarrollo del recurso humano dentro de las cocinas.

Uno de los resultados obtenidos de esta investigación fue propiciar las comunicación de algunos de los hoteles incluidos en el estudio con los centros de certificación de Competencias laborales. Otro de los resultados es la iniciativa para la elaboración de instrumentos estandarizados para el ramo de la hotelería y la restaurantería, buscando elevar la calidad de candidatos , la profesionalización de sus empleados además de permitir la inclusión de aquellos miembros del equipo de trabajo con menor preparación como trabajadores calificados y capaces de cumplir exitosamente las funciones que se les encomienda.

Recapitulando el objetivo principal de CONOCER de contribuir a la competitividad económica, el desarrollo educativo y progreso social de México entonces la inclusión de estos instrumentos a los procesos de reclutamiento , selección e incluso la capacitación en las áreas operativas , específicamente en las áreas de cocina , se verán impactadas positivamente.

IMPORTANCIA DEL USO DE LAS TECNOLOGIAS DE LA INFORMACION Y COMUNICACION (TIC) EN LAS PYMES AGRICOLAS

Seidi Iliana Pérez Chavira, Universidad Autónoma de Baja California
Lizzette Velasco Aulcy, Universidad Autónoma de Baja California
José Cupertino Pérez Murillo, Universidad Autónoma de Baja California

RESUMEN

Hoy en día el uso de las Tecnologías de Información y Comunicación (TIC) permite un mejoramiento en los procesos de producción, en las actividades administrativas y en el control de gestión de las empresas agrícolas. Sin embargo por cuestiones de costos en muchas ocasiones no son utilizadas por las Pequeñas y medianas empresas (Pymes). Por lo que estas empresas se enfrentan a un rezago tecnológico que les impide introducirse a mercados o cadenas agroalimentarias. El presente trabajo de investigación nos muestra las importancia del uso de las tecnologías de la información y comunicación en pequeñas y medianas empresas agrícolas del Valle de San Quintín, Baja California. Se realizó una investigación trnsversal, no experimental, la cual se aplico a 30 empresas de la región.

PALABRAS CLAVES: Tecnologías de la Información y Comunicación, Empresas agrícolas, Competitividad

IMPORTANCE OF THE USE OF INFORMATION TECHNOLOGY AND COMMUNICATION (TIC) IN AGRICULTURAL SMEs

Today the use of Information and Communication Technologies (ICT) enables an improvement in production processes, in administrative activities and management control of agricultural enterprises. However for cost in many cases are not used by small and medium enterprises (SMEs). So these companies face a technological gap that prevents them introduced to markets or food chains. This research shows the importance of using information technologies and communication in small and medium agricultural enterprises in the Valle de San Quintín., Baja California. One trnsversal research was conducted, not experimental, which was applied to 30 companies region.

JEL: M10, Q13

KEYWORDS Information Technology and Communication, Agricultural Business, Competitiveness

INTRODUCCION

Las Tecnologías de la Información y la Comunicación (TIC) han tenido una creciente presencia en el campo de la producción de bienes y servicios en todo el mundo. Su utilización determinará en gran medida el crecimiento, la competitividad y la generación de empleos de las empresas, entre las cuales se encuentran las pequeñas y medianas empresas (Pymes). Las Pequeñas y Medianas empresas (Pymes) desempeñan un papel importante en México, ya que contribuyen a la creación de nuevos empleos, apertura de servicios o productos novedosos, al desarrollo de la economía regional y nacional y también al avance en el proceso tecnológico.

Las Pymes se enfrentan continuamente a varios obstáculos para su crecimiento, por su pequeña estructura y sus finanzas ilimitadas, uno de ellos es el uso de las tecnologías de información y comunicación, que en la actualidad están impactando el mundo de los negocios haciéndolos evolucionar rápidamente. Por ello el uso de las TICs es una herramienta que las pymes deberían utilizar más en sus procesos productivos para poder ser empresas más competitivas. El uso de las TICs en las empresas incrementa el crecimiento económico de las mismas, ya que el usarlas facilita el uso de información y mejora el nivel de educación de la fuerza laboral favoreciendo el crecimiento económico de las empresas y por ende del país.

REVISION LITERARIA

Las Pequeñas y Medianas Empresas (Pymes) en la economía de México

En México las pequeñas y medianas empresas (PyMES) representan un 52% del producto interno bruto (PIB) y un 78% del empleo total. Estas representan casi las tres cuartas partes del empleo en México a comparación con estados unidos que es la mitad y en Grecia un 86%, en México la mayoría de las empresas son representadas por PyMES y es más alta que su proporción en empleo total. México ocupa el tercer lugar más alto en proporción en las microempresas concluyendo que carecemos de grandes empresas.

Tabla 1: Clasificación de las Pequeñas y Medianas Empresas en México

Tamaño	Sector	Rango de número de empleados			
Microempresas	Todos	Hasta 10			
Pequeñas	Comercio	De 11			a30
	Industria y servicios	De 11 a 50			
Medianas	Comercio	De 31	a		100
	Servicios	De 51	a		100
	Industria	De 51 a 250			

Datos publicados en el Diario Oficial de la Federación 2009.

Las PyMES son el motor de la economía mexicana, pero en la actualidad se siguen enfrentando a obstáculos ocasionados por diferentes factores como son: la mala organización, la financiación y las restricciones financieras que les impiden llevar a cabo proyectos rentables disminuyendo la productividad y sus posibilidades de crecimiento; la escasa formación académica y la experiencia de los empresarios, su falta de liderazgo, todo esto les impide alcanzar la competitividad.

En gestión tecnológica, presentan falta de conocimientos y experiencias para someter a procesos de selección y negociación de tecnologías. Existe un predominio de equipos con tecnologías de segunda, tercera o más antigua generación especialmente en las pequeñas empresas. Los altos costos de operación se incrementan día a día, una causa son los sistemas instituidos por los bancos para realizar las operaciones financieras, a través de sistemas digitales, otro ejemplo es la complejidad del sistema fiscal que se practica en México es cual obliga a las empresas a realizar las operaciones fiscales a través de su portal, contra con una contabilidad y facturación electrónica.

Las Pymes agrícolas y su relación con las Tics

El desarrollo de las pymes agrícolas en la región depende en gran medida de los mercados internacionales. Esta tarea no es fácil dada la existencia de competidores fuertes, con capacidad económica y financiera significativa, a veces con mejores oportunidades de mercado. Por estas razones, el sector está enfrentado a un desafío de competitividad que lo obliga a mejorar su eficiencia y a introducir permanentemente innovaciones tanto en aspectos tecnológicos como de gestión, aunque para ellos resulte un costo elevado.

Estas exigencias de eficiencia y calidad se han incrementado, también, recientemente en los mercados internos. La estandarización de exigencias de calidad y presentación definidas por las cadenas

agroalimentarias, la progresiva sofisticación de las preferencias de los consumidores y las normativas nacionales sobre sanidad, que cada vez más se asemejan a las de países industriales, plantean niveles de exigencia y competitividad más altos a los productores agropecuarios.

En el caso de las empresas agrícolas el proceso de incorporación de Tics es presionado fuertemente por factores provenientes de cuatro ámbitos: tecnológico (biotecnología, sistemas de riego, riego por goteo), comercial (Certificaciones, exportaciones), institucional (operaciones bancarias, pago de impuestos) y sociocultural (Características de los consumidores, Moda en el consumo).

En el ámbito tecnológico, hay al menos, tres factores que presionan para acelerar la incorporación del manejo de Tics: la biotecnología, la agricultura de precisión y las exigencias de eficiencia en los controles productivos. Es cada vez más difícil, sino imposible, establecer controles, manejar información o monitorear a distancia procesos productivos sin el apoyo de computadoras, softwares especializados y conectividad. Ello obliga también a contar, cada vez más, en los predios, con personal entrenado en el manejo digital.

Por otra parte, el sector público y la institucionalidad financiera y comercial con la que los agricultores se relacionan, empiezan a convertirse, también, en un poderoso factor de presión para la incorporación de Tics. La obligatoriedad de trámites electrónicos (Banca móvil), las declaraciones tributarias (Portal del Sistema de administración tributaria, facturación y contabilidad electrónica), los apoyos del gobierno (Pagina de Secretaría de Economía).

Las Tics y la competitividad en las pymes agrícolas.

Para Reboloso (2000), hablar de tecnología de información es referirse a los medios colectivos para reunir y luego almacenar, transmitir, procesar y recuperar electrónicamente palabras, números, imágenes y sonidos, así como a los medios electrónicos para controlar máquinas de toda especie, desde los aparatos de uso cotidiano hasta las vastas fábricas automatizadas.

Para definir TIC, Barragán (2002) sostiene que las tecnologías de información cubren cualquier tipo de equipo (hardware) o técnicas utilizadas para la obtención, procesamiento y presentación de datos utilizados por cualquier empresa que manipula información como tal. Además, señala que para que exista un manejo adecuado de la información (Barragán, 2002,), la tecnología en uso deberá contar con los siguientes elementos:

Hardware. El equipo que hace el trabajo físico de capturar, procesar, guardar y desplegar la información (por ejemplo: computadoras, discos duros, discos compactos, monitores, impresoras, lectores de códigos de barras, etc.).

Software. Estas son las partes “invisibles” que existen dentro del hardware y que lo hacen funcionar de forma adecuada. El software son instrucciones o algoritmos específicos que controlan la operación del hardware (por ejemplo: sistemas operativos como el Windows 95 o Windows 98, y paquetes productivos como el Word, WordPerfect, Excel que ejecutan acciones predefinidas).

Intervención humana. Puede dividirse en dos partes: primero, la parte humana encargada de la programación y mantenimiento del sistema; y segundo, la parte humana encargada de leer, analizar y tomar decisiones acerca de la información generada por dicho sistema.

Porter y Millar (1985) señalan que la revolución de la información está afectando la competencia desde tres aspectos:

Cambia la estructura de la industria y altera las reglas de la competencia.

Crea ventajas competitivas, otorgando a las empresas nuevas formas de vencer a sus rivales.

Crea nuevos negocios dentro de los existentes, frecuentemente dentro de las propias operaciones de la compañía.

Lo anterior nos permite visualizar la importancia de las TIC en las organizaciones, dado que tales tecnologías no sólo afectan la forma como se realizan las actividades individuales, sino que también mediante nuevos flujos de información han mejorado de modo significativo la habilidad de explotación de los enlaces entre las actividades dentro y fuera de la organización (Porter y Millar, 1985).

En las pymes agrícolas, las tecnologías de información y comunicación de fácil acceso y uso son internet y los teléfonos celulares.

Se dice que internet es la espina dorsal del comercio electrónico, podemos acceder a diversas páginas web de organismos públicos y privados que proporcionan información sobre:

Producción (área cosechada, toneladas producidas, principales países y zonas de cultivos, precios en chacra, etc.).

Comercialización (principales destinos de las exportaciones, origen de las importaciones, precios internacionales, tendencias, etc.).

Fichas técnicas de cultivos (variedades, climas más adecuados, fertilización, manejo de plagas, etc.).

Servicios conexos (buenas prácticas agrícolas, financiamiento, certificaciones, trámites, etc.).

Banca móvil, para realizar pagos a proveedores, traspasos entre cuentas pagos de servicios, etc.

Portal del Sistema de administración tributaria (SAT), pago de impuestos, facturación electrónica, contabilidad electrónica y presentación de declaraciones fiscales.

La Internet sirve como medio de expansión de los negocios a nivel internacional porque reduce la distancia entre los mercados, especialmente en términos de intercambio de información. El fácil acceso a las cadenas de suministro internacionales y a las redes de producción y distribución por medio de la Internet impulsa a muchas empresas a reasignar sus recursos hacia la producción de exportaciones.

El comercio electrónico cobra importancia en las pymes agrícolas, ya que pueden ofrecer sus productos o servicios, con una inversión menor a la requerida, su uso es de fácil y rápido acceso.

El uso de la Internet también ofrece nuevas oportunidades como complemento o como sustituto de la publicidad tradicional. Se logra que las compañías estén más visibles y sean más fáciles de contactar por parte de los clientes actuales y futuros.

En cuanto a los celulares podemos encontrar:

Envío de precios diarios a través de mensajes de texto (sms), lo que permite a los productores poder negociar los precios de sus operaciones.

Utilización de smartphones para el registro de datos sobre cosechas y manejo de recursos hídricos.

Uso del servicio de internet, que facilita las transacciones de las empresas.

METODOLOGIA

El presente estudio responde a una investigación con diseño metodológico no experimental, de tipo descriptivo, tomado de una población de 95 empresas agrícolas, clasificadas entre pequeñas y medianas empresas. Se tomo una muestra de 30 empresas agrícolas, pertenecientes a la región del Valle de San Quintín, Ensenada. A las cuales se les aplico el instrumento de investigación.

El Instrumento que se aplicó fue tipo encuesta el cual está conformado por 40 preguntas con 2, 3 y 5 alternativas de respuesta en la modalidad de opciones de tipo cerrada, las cuales miden las variables operacionales mediante una escala de Likert.

Identificación de la empresa (5 indicadores)
Utilización y adquisición de equipos (5 indicadores)
Formación del personal de la empresa (5 indicadores)
Implementación de software (5 indicadores)
Comercio Electrónico (10 indicadores)
Adopción y uso de Internet (10 indicadores)

RESULTADOS

Según los indicadores de resultados arrojados en la investigación es importante señalar que el 88% de las empresas estudiadas tienen conexión a Internet. El 45% de estas empresas tienen un sitio web y el 40% de las empresas que tienen estableciendo soluciones de comercio electrónico, en la actividad de compras el 54% hace uso de las TICs para realizar sus pedidos, en el tema de ventas el 18% por medio de sitios web y extranet. La banca móvil es utilizada por el 64% de las empresas encuestadas, un 23% sabe utilizar el portal del sistema de administración tributaria. Relacionado con la compra de programas específicos, solo el 13% utiliza algún programa en sus procesos de producción, el resto lleva bitácoras manuales.

CONCLUSIONES

El uso de las TIC en las Pymes agrícolas del Valle de San Quintín permite, entre otras ventajas importantes, ahorrar en los costos de los procesos de la empresa en un corto y mediano plazo, y abrir nuevos canales de venta o comunicación con los actuales y/o nuevos clientes, situación que representa una ventaja competitiva para las compañías, ya que posibilita el acceso a nuevos mercados.

Para lograr un desarrollo adecuado, las pymes deben estar impregnadas de desarrollos tecnológicos y de factores que les permitan ser más competitivas. México deberá invertir más en la investigación y desarrollo, crear nuevas políticas de estado que brinden beneficios para los emprendedores, para que estos puedan crear más empleos y combatir la pobreza que se vive en el país.

Un adecuado uso de las TIC en el comercio electrónico, posibilita a las pymes agrícolas en darse a conocer a un mercado con un número significativo de potenciales clientes, logrando así acceder a importantes beneficios sin tener que realizar una gran inversión y con un soporte publicitario novedoso. A parte de una interesante oportunidad de venta, las plataformas digitales son una excelente oportunidad de negocio y contactos. Aprovechando el boom de las redes sociales, las organizaciones pueden contactarse de manera sencilla con otros profesionales y proveedores que posean interés en su actividad, interactuar en tiempo real con los clientes o dar a conocer las novedades de las mismas. Por lo que aportan valor añadido a las empresas.

Por lo que el uso de las TIC, aseguran una vida más útil de las pequeñas y medianas empresas agrícolas del valle de San Quintín.

MODELOS DE INNOVACIÓN EN LAS ORGANIZACIONES: REFLEXIONES TEÓRICAS Y ESTUDIOS EMPÍRICOS

María Elvira López Parra, Instituto Tecnológico de Sonora
Nora Edith González Navarro, Instituto Tecnológico de Sonora
María del Carmen Vásquez Torres, Instituto Tecnológico de Sonora

RESUMEN

La innovación debe ser un mecanismo prioritario para un gobierno que desea un desarrollo económico. En este estudio se analizan los diferentes modelos de gestión de la innovación y lo que investigadores han concluido en cuanto a quienes serán las organizaciones susceptibles de adoptarlas. Se presentan diferentes puntos de vista con el objetivo de realizar un análisis reflexivo de los diversos modelos que se han presentado a lo largo del tiempo, aplicados a diferentes organizaciones, que explique el proceso de innovación que deberá adoptar la pequeña y mediana empresa.

PALABRAS CLAVE: Innovación, Modelos De Innovación, Administración

MODELS OF INNOVATION IN ORGANIZATIONS: THEORETICAL REFLECTIONS AND EMPIRICAL STUDIES

ABSTRACT

The innovation should be a priority mechanism for a government that wants economic development . In this study different models of innovation management are discussed and what researchers have concluded as to who will be capable of adopting organizations. Different views are presented in order to make a thoughtful analysis of the various models that have arisen over time, applied to different organizations, explain the innovation process to be adopted by SMEs.

INTRODUCCIÓN

La innovación no es un tema que inicio el siglo pasado sino que la humanidad ha evolucionado a través de la innovación para su subsistencia, desarrollo y ahora para su mejoramiento en la calidad de vida. La innovación se ha permeado a todos los sectores, estratos, organismos, etc. con el propósito de impulsar mejores métodos, procesos y estructuras que permitan satisfacer de manera eficiente las necesidades de los consumidores de productos y servicios. En la organización se pueden identificar varios elementos en donde se innova o bien se hacen mejoras de manera significativa para impactar en los consumidores, siendo estos: un proceso, un producto, un modelo o la misma estructura de organización. Los investigadores que han impulsado la innovación en las organizaciones las han llevado, en la mayoría de los casos, a un crecimiento y desarrollo que le han permitido consolidarse con un modelo de negocio específico que la competencia quisiera entender y adoptar para lograr los mismos o nuevos objetivos. Sin embargo en México la cultura de la innovación no se ha permeado en todos los tipos de empresas y organizaciones, debido a que solo se han documentado procesos innovadores en las grandes empresas; no así en la pequeña empresa, grosor

económico en México por el número de empleos que genera, este sector no se ha visto favorecida por estos modelos innovadores que utilizan las grandes corporaciones a través de sus áreas de Investigación y Desarrollo (I+D).

El entorno global y la crisis económica en el que está sumergido cada uno de los países y en especial cada uno de los consumidores, hace necesario que se identifiquen nuevos y mejores productos en términos de la calidad y precio que le permita una mejor calidad de vida. Ello ha llevado a las empresas a cuestionarse constantemente qué se tiene que cambiar o mejorar para tener resultados alentadores en el retorno de sus inversiones. De ahí que para estas organizaciones que no desean morir, la innovación es un factor crítico de permanencia en el mercado debido a que le proporciona mayores probabilidades de mejorar sus ingresos derivados de la producción de bienes y servicios competitivos y diferenciados o bien de la utilización de nuevos procesos, cambios estructurales al interior de la organización y mejoras en la distribución de los mismos. Además que innovar genera nuevo conocimiento y capacidades para hacer frente a los desafíos que se están viviendo.

Moraleda (2004) comenta que la creación de valor empresarial y la posibilidad de sobrevivir en la sociedad exige nuevos planteamientos, esto es, que lo que habitualmente se ha estado haciendo ya no es suficiente para los nuevos panoramas. Arana, Baena, Entrambasaguas, Gutierrez del Pozo, y Martín (2013) comentan que la innovación se justifica porque existen cambios en las necesidades y expectativas de los clientes, cambios en la competencia en cuanto a la creación de nuevos productos o servicios, introducción de nueva tecnología y materiales que hacen que mejoren los productos y procesos, de ahí la importancia de que las organizaciones deben desarrollar nuevas capacidades y atributos que les permita dar respuestas estratégicas y sostenibles a los retos del entorno.

Las organizaciones han estado desarrollando capacidades para ser sustentables y competitivas, esto es que han estado haciendo a un lado la visión netamente económica y de generación de riqueza en su organización, para adoptar proyectos que generen resultados favorables a la sociedad. En estas nuevas organizaciones se crea un ambiente sensible organizacional en donde las relaciones internas (recurso humano) y externas (proveedores, empresas del ramo, inversionistas) se transforman para proponer, a través de procesos de innovación, soluciones óptimas en cuanto las necesidades del entorno (Hernández, 2010).

Lo mismo sucede en la competitividad internacional, la economía mundial se ha caracterizado en la última década, por la apertura de mercados domésticos. Este concepto de competitividad ha sido el eje de la dinámica de las naciones en donde sobresalen los países industrializados debido a que la productividad es el factor que determina la competitividad en las organizaciones y a su vez esta productividad tiene una alta relación con la transformación de la tecnología, de ahí la importancia de la innovación en cualquiera de los componentes que impactan en el desarrollo tecnológico para hacer de la organización un ente más productivo y con ello más competitivo. El problema radica que en las regiones industrializadas la competitividad se da con mayor auge, y en cambio en México, este rubro ha sido semi desarrollado, por lo que nuestra participación en la economía mundial presenta una brecha tecnológica y productiva que separa la trayectoria de los países industrializados y el nuestro (Guzmán y Abortes, 1993)

México entonces debe competir y diferenciarse de otros países y ser capaz de lograr algo que no puedan realizar otras naciones. Los países con costos en mano de obra inferiores a los de México han ganado oportunidades de crecimiento económico aun cuando ya se comenta que en nuestro país la mano de obra es más barata que en China; esto le da una ventaja competitiva al país en la industria exportadora, y quizás se podría prolongar hasta por dos décadas afirmó Bank of America Merrill Lynch (La Jornada, 2013), sin embargo los retos del grosor económico representado por la pequeña y mediana empresa (PYME) van encaminados a lograr una mayor competitividad, por lo que el gobierno muestra un interés por impulsar la innovación para promover la creación de ecosistemas de alto valor agregado de las micro, pequeñas y medianas empresas (Plan nacional de desarrollo, 2013 – 2018).

El presente estudio tiene como objetivo hacer un análisis de los diferentes modelos de innovación que se han presentado a lo largo del tiempo aplicados a las organizaciones, y que expliquen el proceso de innovación que deberá adoptar la pequeña y mediana empresa.

REVISIÓN LITERARIA

La innovación desde el punto de vista de la etimología proviene del latín *innovare*, que significa cambiar o alterar las cosas introduciendo novedades. Pero esta primera aproximación se ha visto renovada por los cambios estructurales que ha tenido el proceso y la gestión de la innovación aplicada específicamente en las organizaciones. Para Druker (2002) mencionado por Soto y Medellín (2010) la innovación “es una cuestión económica, no técnica, no es un destello de genio, es una disciplina sistemática, organizada, rigurosa.

Se puede innovar desde la gestión, en la estrategia, en los procesos y en el producto. El Manual de Oslo (2005) que desde 1992 ha procurado hacer mejoras en la medición de la innovación aplicando una serie de encuestas para identificar la innovación que han tenido las empresas en los rubros de producto, proceso, organización y comercialización. Esta obra ha precisado a través del tiempo los conceptos existentes así como la mejora de los métodos de recolección de datos. El manual deja definido algunos tipos de innovación que son coincidentes con otros autores, entre los que se destacan 4 tipos de innovación que abarcan una variedad de cambios en las empresas: (1) innovación de producto está referida a los cambios importantes o significativos de las características del producto o servicio, incluyendo los productos nuevos como los que han sido mejorados sustancialmente, (2) innovación en proceso se refiere a los cambios significativos en los métodos de producción o distribución; esto es que el cambio o mejora en el desarrollo de un producto o bien los pasos realizados para que se entregue un producto o servicio al consumidor final, se le denomina innovación de proceso; (3) innovación organizacional, es la aplicación de nuevos métodos organizativos o cambios en las prácticas empresariales y en las relaciones externas de la empresa, finalmente (4) la innovación comercial que comprende la puesta en marcha de métodos comerciales novedosos y que pudieran suponer cambios en el diseño del producto, su presentación, promoción o bien en los métodos de fijación de los precios.

Las organizaciones como gestoras de la innovación adoptan sistemas (investigación, el desarrollo e innovación) como elementos estratégicos que tienen influencia en las necesidades de los productos elaborados, los procesos empleados y la estructura de la organización por lo que los países que cuentan con un gran desarrollo industrial han avanzado hacia modelos de innovación que les han permitido ser más eficientes (Arzola, Tablante, y D'Armas, 2012).

Estos modelos se han venido renovando según las necesidades del mercado y las necesidades de los productos que se ofrecen y los procesos para lograr dichos productos, al respecto se presentan algunos tipos de modelos de gestión de la innovación por Velasco, Zamanillo e Intxaurburu (2007) los cuales son: (1) Modelo lineal: este modelo supone que el proceso de I+D puede ser el origen de otros procesos de innovación en donde se puede tener o no éxito y lleva tiempo identificar que se hayan generado innovaciones. Además que las innovaciones no solo vienen de la I+D sino que también puede provenir de una propuesta de mejora o un análisis del mercado sin que haya intervenido la investigación como tal o el desarrollo de tecnología. (2) Modelos por etapas departamentales de Saern que considera a la innovación como una actividad secuencial, de tal forma que la innovación se da en etapas consecutivas, empezando en el departamento de I+D, pasando por diseño, ingeniería, producción, marketing para finalmente obtener un producto. (3) Modelos interactivos o mixtos, este modelo fue creado por Kline conocido también como modelo de enlaces en cadena o modelo cadena-eslabón el cual consiste en lograr una relación entre la investigación de conocimientos técnicos y el desarrollo tecnológico según las necesidades del mercado, por lo que se hace un tanto complejo tener un control de estos dos factores y resolver al mismo tiempo

situaciones del tipo económico, tecnológico que impone el mismo proceso de tal forma que existe una retroalimentación en todas las etapas del desarrollo, para su mejora. De ahí que la I+D es una herramienta para resolver problemas y la empresa va ganando conocimiento para innovar. Este modelo promueve una cultura de la innovación en toda la organización y se puede aplicar a cualquier empresa y de cualquier tamaño. (4) Modelos integrados: En este modelo las acciones de innovación no son tanto secuenciales, aun cuando muestra una seriación de acciones en la gestión de la innovación pero se comienza a considerar procesos simultáneos (Takeuchi y Nonaka). Con este enfoque el proceso de diseño y desarrollo del producto tiene un nuevo enfoque ya que los distintos departamentos trabajan de manera multidisciplinar y todos van juntos desde el inicio hasta el final del proceso de innovación, esto es que existe mayor integración en cada una de las áreas. (5) Modelo en Red (Rothwell), este consiste en un modelo de integración de sistemas y establecimiento de redes mejor conocido como el modelo de 5ta. Generación que propone un aprendizaje desde adentro de las empresas y entre las mismas empresas lo que la innovación es un proceso distribuido en red. En este modelo resaltan las sofisticadas herramientas electrónicas que permiten a las organizaciones ser más eficientes tanto en su interior (formas de organizarse y procesar productos) como de manera exterior (participación de proveedores, clientes y colaboradores).

Estos modelos tienen que ver con las diferentes situaciones que han vivido las empresas a través del tiempo y que las han llevado a lograr sus objetivos.

METODOLOGÍA

La presente investigación es del tipo descriptiva. El objeto de estudio serán los diferentes enfoques sobre los modelos de innovación y las reflexiones y aportaciones que han realizado los investigadores sobre cómo las empresas llevan a cabo el proceso de innovación. La información recolectada para el desarrollo de este documento, fue a través de fuentes secundarias como libros, revistas especializadas y documentos electrónicos por tratarse de una revisión documental y con ello se hicieron, finalmente las conclusiones.

RESULTADOS

A continuación se muestran una serie de reflexiones obtenidos por diferentes instituciones e investigadores que han estudiado y/o propuesto modelos de innovación y evaluado su gestión para la pequeña y mediana empresa.

Sobre los modelos de innovación en las pequeñas y medianas empresas (PYMES)

Cohen y Levin (1989) realizan un análisis profundo de una de las personas que han desarrollado diversos estudios sobre la innovación y que ha dejado un legado de investigaciones empíricas sobre este tema, es Schumpeter (1942) quien en una de sus conclusiones comenta que está impresionado con la innovación que realiza la pequeña empresa por sus características en cuanto a su tamaño, sin embargo en varios argumentos se dice tener un efecto positivo en la innovación debido al tamaño grande de las empresas, esto por que los mercados globales le dan una ventaja a la empresa grande para conseguir financiamiento para la Investigación y Desarrollo (I+D); que el tamaño de las organizaciones tienen una relación con la apertura de los fondos y programas de apoyo para la innovación. Otra afirmación es que existen, en las grandes empresas, la economía de escala apoyada por la tecnología quien le da certidumbre al riesgo financiero que pudieran tener los programas de apoyo. Finalmente se comenta que en las grandes empresas se cuenta con áreas especializadas de I+D y otras actividades profesionalizantes como el área de mercadotecnia y finanzas. En la actualidad esto sigue sucediendo ya que la gran empresa en nuestro país sigue marcando el camino económico y social que se debe seguir, por lo que las aportaciones, apoyos y gestiones que se le obsequian a la pequeña y mediana empresa es precisamente para que de alguna forma sigan el camino de estas corporaciones, sin embargo se puede encontrar en esta situación su ventaja competitiva, ya que al ser organismos flexibles para adaptarse a las circunstancias tienen mayor posibilidad, si así se los permiten las

líneas de acción de los planes de desarrollo, de incursionar en las cadenas de valor en el suministro de insumos y servicios a estas corporaciones y encuentren oportunidades de crecimiento.

Por otra parte Scherer (1965) mencionado por Cohen y Levin (1989) muestra una relación importante entre la innovación, el personal y las patentes que se generan en la organización. A pesar de las muchas investigaciones realizadas sobre la relación entre innovación y el tamaño de las empresas no se cuenta con un consenso entre los diferentes estudios empíricos. De ahí que el proceso de innovación al interior de las empresas es más complejo de lo que se cree, argumenta que la innovación se lleva a cabo considerando la interrelación que existe entre las empresas que tienen una distinción en cuanto a su tamaño, experiencia y atributos, esto es que la empresa grande compra las ideas o inventiva de las pequeñas empresas; entonces dónde quedo el proceso de innovación? ni en la pequeña, ni en la grande empresa sino en el modelo óptimo para cada empresa en donde se promueva el flujo constante de las nuevas ideas; entonces no es necesario estar buscando lo que a la grande empresa le funciona o no, sino identificar qué es lo que hace a una empresa, independientemente de su tamaño, ser innovadora y estar permanentemente en el mercado. También, Schumpeter (1942) comenta que la estructura de un mercado oligopolio, en donde son pocas las empresas que regulan el mercado y el precio, favorece la innovación. Concluyendo con sus aportaciones y la de otros autores presentados por Cohen se observa, en cuanto a la innovación, una consideración amplia en el cambio tecnológico, y no tanto en la relación que guarda el tamaño de las organizaciones y la concentración del mercado.

Al dar un vistazo y recordando porqué en nuestras ciudades han permanecidos en el mercado algunas empresas pequeñas y medianas y han sobrevivido a todo tipo de cambio, como el económico, tecnológico, político y hasta ambiental, tienen una constante independientemente de su tamaño, y es como lo expresan los autores, la promoción de nuevas ideas y como éstas se gestionan para implementarse en las organizaciones.

López, Blanco y Guerra (2009) realizaron un estudio detallado de los procesos de innovación que se han identificado en las diferentes generaciones, resaltando los elementos de cada una de ellas, y sobre esta base realizan su hipótesis que consiste en que los elementos claves que deben formar parte de un modelo de gestión de la innovación en las PYMES en el sector manufacturero para el desarrollo de productos innovadores son: (1) la orientación al mercado: esto es según Narver y Slater (1990) las empresas deben contar con una cultura organizacional que permita crear los comportamientos necesarios para la generación de valor en los productos que ofrecen a sus clientes; (2) creatividad: que según Amabile (1988) se presenta cuando un individuo o un grupo pequeño de individuos crean nuevas ideas y utilizables para el consumidor; (3) investigación y desarrollo (I+D) que según el Manual de Frascati, elaborado por la OCDE (2002) comprende aquellas acciones creativas llevadas a cabo de manera sistemática (a través de la investigación básica, aplicada y experimental) con el propósito de incrementar el conocimiento; (4) diseño de productos que según la Sociedad del Diseño Industrial en América es el servicio profesional que se realiza para: a) optimizar el valor, la función o bien, la apariencia de un producto y b) crear sistemas que beneficien al usuario final y el productor; (5) eficiencia operacional, relacionada con la producción: conjunto de operaciones que sirven para incrementar el valor de los productos económicos de una organización; (6) eficiencia comercial, relacionada con la distribución y la comercialización: conjunto de actividades desarrolladas para lograr de manera eficiente la venta de mercancía en una organización. Como se puede observar las 6 variables del modelo resultan elementos complejos además que parecen estar orientados a empresas grandes, que cuentan con departamentos especializados en D+I y recurso humano calificado sin embargo también estos elementos promueven la creación de nuevas ideas por ser claves para el desarrollo de productos innovadores. En esta investigación se destaca el elemento de creatividad que permite conocer el potencial de creatividad del personal para la mejora de los productos evitando desperdicios. En la práctica, la pequeña y mediana empresa cuenta con procesos flexibles que le permite desarrollar la creatividad sin embargo y debido a la falta de métodos sistemáticos, hace que se desperdicien las ideas innovadoras y queden solo en buenas ideas.

La pequeña y mediana empresa tiene el potencial para generar las nuevas ideas pero no cuenta con capacidad económica que sustente el desarrollo de esa nueva idea. El gobierno en su afán de llevarlas a su crecimiento ha implementado programas y planes de apoyo pero no ha logrado incrementar en una misma proporción la permanencia de esas pequeñas empresas ni ha creado la cultura de innovación al interior de las mismas por lo complejidad que esto resulta cuando de antemano se sabe que las empresas están constituidas por recursos humanos, y en el caso de las pequeñas y medianas empresas cuando logran calificar y capitalizar el conocimiento, este pocas veces perdura pues el recurso humano calificado para a la gran empresa. En los últimos años se ha visto un acelerado crecimiento de las incubadoras y los consultores que dan seguimiento a las nuevas ideas, estas estructuras han logrado incrementar las posibilidades de éxito a las PYMES por lo que se deberá fortalecer estas metodologías, como es el caso de México, a través de las universidades.

Sobre la gestión de la innovación en la pequeña y mediana empresa

Cardenas y Fecci (2007) proponen un modelo de gestión basado en la mejora continua que le permita a la pequeña y mediana empresa desarrollar innovación y de esta manera hacerle frente a los cambios tecnológicos y estar en posibilidades de dar respuestas óptimas al mercado. El modelo se aplico a PYMES metalmeccánicas de la provincia de Valdivia, e inició con la identificación de los problemas y las causas de dichos problemas que le permitieran focalizar y priorizar las acciones que deberán de llevarse a cabo en cada una de las áreas de las empresas objeto de estudio. Entre las propuestas de acciones para llevar a cabo la innovación proponen el reforzar la gestión del recurso humano y la administración de procedimientos por encontrar, como es el caso de la mayoría de las pequeñas y medianas empresas, debilidades en su planeación estratégica debido a que no cuentan con metas claras y definidas a largo plazo. Entre las acciones están: (1) acciones orientadas a los administradores o dueños de las empresas: estas tienen el objetivo de que los administradores sean capaces de transmitir al personal que la orientación hacia la calidad es una estrategia permanente, al respecto la pequeña empresa no cuenta con una cultura de innovación que pudiera identificar una estrategia permanente, en la mayoría de los casos se actúa por impulso por lo que será relevante identificar a aquellas empresas que tienen posibilidades de crecer y ayudarlas a manera de consejería y a través de los centros de apoyo como la universidad y otras organizaciones civiles para impulsarlas en la elaboración y aplicación de su estrategia de calidad; (2) acciones previas relacionadas con la administración y comunicación efectiva del cambio. Al respecto la comunicación efectiva solo se puede dar si la Dirección cuenta con los elementos para ello y uno es el liderazgo que se ejerce sobre la organización y si este líder tiene la visión de llevar a los involucrados a mejorar en el día a día o solamente exige el cumplimiento de las operaciones, el sentir de un líder debe llegar al recurso humano de todos los niveles para la que la comunicación sea realmente efectiva; (3) acciones orientadas a la motivación de los empleados que comprendan que sus funciones están estrechamente relacionadas con la calidad total y esto los lleve a una satisfacción laboral; igual que en el punto anterior la función administrativa de la Dirección es un elemento clave para que todo líder tenga éxito, este debe ser ejemplo y motivación para su recurso humano, quien es realmente el que ejecuta las acciones establecidas por la dirección; (4) acciones orientadas a los sistemas de reconocimiento que estimule a los involucrados, (5) acciones orientadas a incentivar el trabajo de equipo que permita un cambio positivo en el rendimiento de los procesos y las relaciones de los individuos; el recurso humano es un activo intangible en las organizaciones que han tendí gran relevancia, los directivos deben identificar sistemas de reconocimiento e incentivos que realmente motiven al personal y realicen de manera comprometida las funciones de cambio y calidad en las acciones que se realizan; (6) acciones orientadas al crecimiento personal de los directivos, que en el caso de la PYME estas personas no cuentan con un desarrollo de capacidades definidas para la gestión, (7) acciones orientadas a la capacitación y calificación del personal con el fin de desarrollar conocimientos, habilidades y aptitudes para que la organización sea más eficiente y competitiva, (8) acciones orientadas a los proveedores que le garanticen la compra de materiales y los plazos de entrega de productos, (9) acciones orientadas al manejo de residuos para resguardar la salud del personal y contribuir al cuidado del medio ambiente y (10) acciones orientadas

a la innovación tecnológica con el propósito de lograr mayores niveles de productividad, rentabilidad y competitividad que permita a la pequeña y mediana empresa tener una administración de sus finanzas óptima y poder invertir en la especialización a través de la incorporación de tecnología. Este modelo muestra un panorama ideal desde el punto de vista de los emprendedores de la PYME, pero requiere de un seguimiento por las diferentes instituciones u organizaciones enfocadas en la consolidación y desarrollo de estos entes, como pudiera ser la incubación y aceleración de empresas que dentro de sus lineamientos está el acompañamiento durante un determinado periodo hasta el punto de verlas fortalecidas para que ellas mismas puedan seguir operando con una cultura organizacional basado en las capacidades de innovación adquiridas y absorbidas por cada uno de sus miembros.

Arzola, Tablante, y D'Armas, (2012) muestran diferentes modelos de gestión de la innovación que han surgido en los últimos tiempos, identificando las características y aportaciones que cada modelo proporciona entre los que se destaca: (1) el modelo de funciones básicas de la gestión de innovación en donde se fundan las bases de los modelos que le siguieron destacando 5 funciones: a) inventariar, b) evaluar, c) vigilar, d) optimizar y e) proteger; sin embargo en estas funciones no se incluyen los mecanismos de seguimiento y control, que debe tener un sistema; (2) el modelo de la fundación COTEC para la innovación tecnológica, este modelo también propone 5 funciones para llevarse a cabo: a) vigilar, b) focalizarse, c) capacitar, d) implantar y e) aprender, en donde se considera la capacidad de aprendizaje al interior de la organización; (3) la Norma UNE 166002 propuesta por la Asociación Española de Normalización y Certificación (AENOR), similar a ISO 9001, establece los requisitos de un sistema de gestión de la Investigación, mas desarrollo, mas innovación (I+D+i) que incluye una estructura administrativa de soporte en la estrategia del proceso de innovación, con una fuerte responsabilidad por la dirección a través de la medición y acciones que mejoren el sistema; (4) en el cuadro de mando integral propuesto por Kaplan y Norton se destaca dentro de una de las perspectivas internas es la gestión de la innovación que incluye: a) identificar oportunidades, b) gestión de los proyectos y c) diseño, desarrollo y lanzamiento de productos, incluyendo un sistema de medición a través de los indicadores; (5) modelo de generalitat de Catalunya quien dice que “la innovación es generar continuamente buenas ideas y convertirlas en productos y servicios con éxito comercial en el mercado”, cuenta con 4 macro funciones: a) generación de nuevos conceptos, b) desarrollo de productos, c) redefinición de procesos y d) redefinición de la comercialización, este modelo cuenta con un instrumento para la autoevaluación de las empresas en el marco de la innovación y en especial a la innovación de producto sin explicar cuáles son las funciones básicas para la gestión de la innovación; (6) el modelo conceptual para la gestión de la innovación en el sector Servicio (MIS'7) propone siete funciones en la gestión de la innovación: a) liderazgo, b) planificación estratégica, c) procesos, d) satisfacción del clientes, e) organización, f) competencia del recurso humano y g) responsabilidad social, siendo un modelo que se puede adecuar a empresas de servicio pero no incluye, como el modelo anterior, las funciones básicas para la gestión de la innovación; (7) el modelo de innovación en las pequeñas y medianas empresas de servicio (PYMIS) adoptada de la Norma UNE 166002 y como una de sus ventajas es que vincula el éxito en la innovación a la capacidad que tiene la empresa con el compromiso de la dirección, de sus recursos, el proceso y la medición. Dentro de las conclusiones de esta comparación los autores destacan que existe un énfasis en mostrar modelos de gestión de innovación para las empresas industriales, dejando de lado a las empresas de servicio quienes han venido incrementando su participación en el mercado. Por otra parte los modelos van dirigidos a la innovación tecnológica de las empresas industriales y pocos enfocan la innovación desde la perspectiva estratégica. Finalmente comentan que los modelos de innovación dirigidos a la pequeña y mediana empresa son difíciles de implementarse por la falta de formación y la cantidad de recursos disponibles.

Al respecto se puede observar que ya se cuentan con criterios específicos como lo son las Normas para el desarrollo y la formalización de los procesos para llevar a cabo la innovación, sin embargo será importante identificar si estas empresas que cuentan con las certificaciones como empresas innovadoras han tenido incrementado sus indicadores de competitividad con respecto al mercado al que van dirigido o bien si han logrado aplicar estas normas con éxito en cualquier contexto, esto porque en muchos de los casos los

organismos acreditadores basan sus resultados en la conformación de procesos bien estructurados y no se mide realmente el impacto de dicha innovación en lo social y económico. Tampoco se tiene claro que las empresas que han acreditado estos procesos cuenten con capacidades reales de innovación de su personal, esto es que se siguen acreditando o certificando a las empresas por sus procesos y no por los logros realizados por el personal en beneficio de la sociedad.

Sobre las formas de hacerse del conocimiento que implique innovación

Casas y Dettmer (2008) con su aportación sobre las capacidades de innovación que tienen las empresas, muestra los hallazgos de Giobbons et al 1994 donde hace una comparación de producir el conocimiento de forma tradicional o el nuevo modelo heterogéneo de producir dicho conocimiento. En el modo 1 (forma tradicional) el conocimiento se obtiene de manera secuencial como se refiere el modelo lineal, el modelo por etapas departamentales de Searn y el modelo interactivo o mixto de Kline, explicado por Velasco, Zamanillo e Intxaurburu (2007) en donde se regula por las normas de la ciencia, validado y evaluado por la comunidad de especialistas, su origen está definido en el ámbito académico y la academia lo difunde; en el Modo 2 mejor conocido como modelo interactivo, el conocimiento se produce en un contexto de aplicación, su práctica trasciende a diferentes disciplinas pues parte de un lenguaje común y actividades que sirven para resolver desde diferentes puntos de vista la misma problemática, por lo que también es heterogéneo, responsable con la sociedad y reflexivo, flexible, creativo como fenómeno del grupo y cuenta con control de calidad relacionado a las dimensiones del conocimiento social, económico, ambiental y político. Este último modo tiene una postura de construir el conocimiento social y económico basado en el conocimiento. Por otra parte se hace una distinción de las clases del conocimiento según Foray y Lundvall que mencionan 4 clases: (1) relacionada con el ¿saber qué?, (2) el conocimiento que responde a la pregunta ¿saber por qué? y en donde se identifican principios, normas, leyes de la naturaleza, la sociedad y las mentes humanas, (3) ¿saber cómo? y relacionado a las habilidades adquiridas por las personas y las organizaciones y (4) que se refiere a quien y las preguntas serían ¿Quién sabe qué? y ¿Quién sabe cómo hacer qué?. Las primeras dos pueden encontrarse en libros, revistas, diplomados, capacitaciones, seminarios, talleres, etc. y las últimas dos se obtienen a través de la experiencia práctica. Para Casas y Dettmer (2008) aprender puede variar dependiendo de la clase o tipo de conocimiento pero también consideran importante el establecimiento en el cual se da el aprendizaje por lo que menciona cuatro tipos de aprender: (1) el aprender haciendo, (2) el aprender buscando, (3) el aprender interactuando y (4) el aprender usando; estos cuatro tienen una connotación profunda en las actividades rutinarias en una organización como es la elaboración, diseño, distribución y venta que son insumos para el proceso de innovación. Esto es que para que la innovación sea posible en la organización sus actividades de producción, distribución, venta tengan como resultado un nuevo producto, una nueva técnica de hacer las cosas, nuevas formas de organizarse y nuevos mercados, comentado también por el Manual de Oslo (2005) con su 4 tipos de innovación como son: innovación en el producto, innovación en el proceso, innovación en la organización e innovación en la comercialización. Finalmente en su estudio habla del surgimiento de las universidades innovadoras que surgen a partir de los cambios a través del tiempo debido a que de ser instituciones de enseñanza de habilidades y conocimientos teóricos pasaron a ser universidades de enseñanza de habilidades prácticas y conocimiento práctico, pasaron de ser poseedoras y preservadoras del conocimiento a ser productoras del conocimiento y con ello a relacionarse directamente con sociedad a través de la vinculación empresa – universidad.

CONCLUSIONES

Como se observa a través de las conclusiones de los diferentes investigadores que para hablar sobre el tema de modelos de innovación es necesario considerar varios aspectos como el tamaño de la organización, debido a que su estructura organizacional no cabría en los diferentes modelos, por otro lado los modelos no hacen distinciones entre las empresas industriales y de servicio, aunque Arzola, Tablante, y D'Armas, (2012) mencionan al final de su análisis que existen modelos exclusivos para la pequeña empresa del giro

de servicio relacionado con algunas normas sobre el proceso de innovación. Sin embargo no se cuenta con un proceso específico para cada tipo de empresa y tamaño de la organización. Se sugiere que los modelos de innovación que se vayan a aplicar algún tipo de empresa sea seleccionado considerando las necesidades particulares de cada empresa y organización, pues todas son diferentes en su interior y en la forma de relacionarse con su entorno. Se tienen modelos de innovación como una base para ir avanzando en la dinámica de innovar para conseguir la competitividad empresarial que requiere México, sin embargo será interesante identificar los mecanismos que le permitan a las diferentes empresas adoptar un modelo de innovación y lograr sus objetivos. Las universidades juegan un papel importante en la adopción de la innovación desde el interior de sus procesos y recursos debido a que el aprendizaje y las capacidades de innovación deben pasar de un plano teórico a un plano práctico que le permita a los nuevos empresarios emprendedores obtener resultados como son los nuevos productos, nuevos procesos, nuevas formas de organizarse y comercializar a partir de que la conciencia de la innovación se permea en cada uno de los rincones de la organización haciéndola su *modus operandi*, para ello no solo los talleres, seminarios y diplomados serán suficientes por lo que se requiere de experimentarlo, vivirlo en la práctica y adoptarlo. Con los últimos dos autores Casas y Dettmer (2008) se puede comprender que los modelos de innovación que se adquieran serán importantes en la medida que las organizaciones hayan aprendido y aprehendido, esto es, haciendo suyo y capitalizando su conocimiento hacia un bien social y económico.

El Empresario, tiene un espíritu emprendedor que lo llevó a formar su empresa, pasar de la micro a pequeña, luego a mediana y su mayor logro a sido convertirse en grande empresa, sin embargo siguen incursionando los nuevos empresarios a través de las PYME y se requiere que su experiencia se vuelva insumo para el nuevo conocimiento y esta práctica se permeé en toda la organización, esto es que los conocimientos adquiridos por el personal a través de su práctica se pueda ir mejorando día a día.

GESTIÓN DEL RECURSO HUMANO EN HOTELES DE PUEBLA (MÉXICO) Y BOGOTÁ (COLOMBIA): UN ANÁLISIS COMPARATIVO A PARTIR DE MIGSA

Jenny Paola Danna-Buitrago, Fundación Universitaria los Libertadores, Université de Grenoble

Nelson Orlando Alarcón Villamil, Fundación Universitaria los Libertadores

Melva Inés Gómez Caicedo, Fundación Universitaria los Libertadores

RESUMEN

El presente artículo presenta un análisis comparativo de los resultados obtenidos a partir de la aplicación del Modelo de Indicadores de Gestión Sostenible y Asociatividad (MIGSA) a un hotel de la ciudad de Puebla (México) y otro de Bogotá (Colombia). El objetivo es evaluar el alcance de las prácticas y políticas de Recursos Humanos en los dos hoteles, con el fin de vislumbrar la manera como los gerentes manejan a sus empleados. Los resultados son producto de la medición de 22 índices y 5 indicadores que componen una parte del MIGSA, a saber la propiedad denominada Gestión del Recurso Humano. Finalmente, después de obtener diversos resultados tanto cuantitativos como cualitativos, se concluye que la empresa más adelantada en el cumplimiento de normas y la promoción de prácticas que mejoran las condiciones laborales del sector es la colombiana.

PALABRAS CLAVES: Gestión sostenible, Asociatividad, Competitividad, Recurso Humano, cultura organizacional.

HUMAN RESOURCE MANAGEMENT IN HOTELS FROM PUEBLA (MEXICO) AND FROM BOGOTA (COLOMBIA): A COMPARATIVE ANALYSIS USING MIGSA

ABSTRACT

This article undertakes a comparative analysis with respect to the results obtained from the application of the Modelo de Indicadores de Gestión Sostenible y Asociatividad (MIGSA) to a representative hotel in the city of Puebla Mexico and to another in Bogota Colombia. The aim is to assess to what extent the practices and HR policies in the two countries are developed, in order to show how human resource are dealt with. The results are the product of measuring 22 “indexes” and 5 “indicators” that make part of the MIGSA model. After obtaining different quantitative and qualitative results what can be said is that the that promote the practices that improve working conditions the most, is the Colombian one.

KEYWORDS: Sustainable Management, associativity, Competitiveness, Human Resources, Organizational culture.

INTRODUCCIÓN

El turismo es una actividad social, cultural y económica relacionada con el desplazamiento de personas a diferentes lugares del mundo por motivos personales o profesionales (OMT, 2014a), que se convirtió a lo largo del siglo XX en una de las industrias más importantes del mundo (Schéou, 2009). Según la OMT (2014b), esta actividad representa cerca del 9% del PIB mundial - estimando el efecto directo, indirecto e inducido de las actividades propias del sector - y constituye alrededor del 6% de las exportaciones totales.

Se estima que en el año 2014 el turismo movilizó alrededor de 1.138 millones de personas en todo el mundo, lo que refleja un incremento del 4,7 % de turistas con respecto al 2013 (OMT, 2014b). En este orden de ideas, es importante resaltar que el mayor incremento de turistas se registró en la Región de las Américas, conformada por América del Norte, América Central y América del Sur, con un crecimiento del 7%, seguida de Asia y el Pacífico (+5%), de Europa (+4%), del medio Oriente (+4%) y de África (+2%) (World Tourism Barometer, 2015). Se constata igualmente que el incremento porcentual obtenido por la Región de las Américas fue impulsado por América del Norte (+8 %), donde México mostró un aumento de dos dígitos, y por América del Sur, en donde se destaca el comportamiento de Perú (+11%), de Ecuador (+7%) y de Colombia (+5%) (OMT, 2014b). Así pues, se subraya que el número de visitantes a América del Sur se duplicó en el 2014 con respecto al año anterior, situándose muy por encima de la media mundial (World Tourism Barometer, 2015). En este orden de ideas, México y Colombia se distinguen como destinos prometedores en términos de incremento de turistas entre los países de América Latina, pues disponen de un importante patrimonio material e inmaterial (OMT, 2014a). Por una parte, México tiene un legado turístico prehispánico y una amplia oferta de sitios arqueológicos, algunos de los cuales han sido declarados patrimonio de la humanidad por la UNESCO. Igualmente, este país posee un legado europeo representado en edificaciones, catedrales y bibliotecas que dan cuenta de la época colonial y de los virreinos (Instituto Nacional de Antropología e Historia, 2013). Por otra parte, Colombia es un país con diversidad de riquezas naturales, étnicas y arquitectónicas, elementos fundamentales para la creación productos y servicios turísticos, lo que le ha permitido ser clasificada como un destino de clase mundial (Cunin, 2010; Molina, 2011). Por lo anterior, México logró regresar a la lista de los diez países más visitados a escala global en el 2015 y Colombia fue ubicada por Forbes en el sexto lugar entre los diez mejores lugares a visitar durante el mismo año.

Dada la importancia del sector, se destaca que este tiene la capacidad de influir directamente en la generación de puestos de trabajo (De la Cruz Gallegos et al., 2010), creando aproximadamente 1 de cada 11 empleos en el mundo (OMT, 2014a). Así pues, se estima que esta actividad genera alrededor de 150 mil trabajos directos e indirectos en México y cerca de 95 mil empleos de este tipo en Colombia, siendo la actividad hotelera una de las que genera más puestos de trabajo (Turégano, 2005). Bajo esta óptica, conocer la manera cómo los gerentes de hoteles situados en México y en Colombia manejan a sus empleados es de nuestro interés. En efecto, con el crecimiento del sector turístico en los dos países, la actividad hotelera emplea cada vez más personas, de tal manera que la gestión de los gerentes en términos de recursos humanos tiene cada vez más influencia a nivel de la economía nacional. Con respecto a esta cuestión, encontramos que los gerentes de esta actividad buscan que su personal posea orientación al servicio, compromiso ético, actitud proactiva, iniciativa, espíritu emprendedor, respeto por la persona, adaptabilidad al cambio, motivación por la calidad, pulcritud en la apariencia, autocontrol emocional, tolerancia a la diversidad, disponibilidad de horarios, sensibilidad hacia el medioambiente y seguridad en la comunicación (OMT, 2009). De la misma manera, los gerentes desean que la persona que será empleada en un hotel tenga competencias a nivel directivo (por ejemplo planificación, manejo tecnológico, toma de decisiones y creatividad) y a nivel operativo (por ejemplo los idiomas, el trabajo en equipo, la adaptabilidad, la capacidad de trabajo bajo presión y la capacidad de escucha) (ídem.). Sin embargo, a pesar de las altas exigencias, se constata que la actividad hotelera presenta problemas tales como la baja remuneración, la estacionalidad en las contrataciones, las subcontrataciones, los horarios extensos, los altos índices de rotación del personal, la falta de legislación laboral y la concentración de la mano de obra joven (Organización Internacional del Trabajo, 2009). Todo lo anterior vislumbra condiciones laborales extremas, pero no da información sobre la manera cómo los empleados son gestionados al interior del hotel.

En este contexto, el grupo de investigación Competir, de la Fundación Universitaria los Libertadores, ha concentrado sus esfuerzos en aplicar el Modelo de Indicadores de Gestión Sostenible y Asociatividad (MIGSA) en hoteles ubicados en los países objeto de análisis, con el propósito de evaluar el alcance de las prácticas y políticas de Recursos Humanos. Aun cuando el modelo permite medir nueve “propiedades” de la gestión empresarial, se utilizan únicamente para el desarrollo de esta investigación los resultados

arrojados por una de ellas, a saber la propiedad “Gestión del Recurso Humano”. Para esto, se tomó un hotel del centro histórico de Bogotá (Colombia) y otro del centro histórico de Puebla (México). Estos dos hoteles son “representativos”, en el sentido que cada uno de ellos se ubica en una zona de alta operatividad turística. Puebla es una de las ciudades con mayor atractivo cultural e histórico de México y Bogotá posee un reconocido centro histórico con edificaciones, pasajes, plazas, mercados y un amplio desarrollo cultural que la convierte en un lugar de gran afluencia de visitantes que buscan cultura e historia. Igualmente, los dos hoteles elegidos para la investigación poseen una calificación intermedia de tres estrellas, tienen una capacidad instalada similar de 39 y 42 habitaciones respectivamente y presentan una vinculación de personal mayor a 45. Teniendo en cuenta lo anterior, el artículo se estructura de la siguiente manera: en la primera parte, se presenta una revisión de la literatura que denota la importancia del recurso humano en las actividades empresariales en general y en los hoteles en particular. En la segunda parte, se exponen las características del modelo MIGSA y la metodología empleada. En la tercera parte, se presenta el análisis de los resultados obtenidos de la aplicación del modelo en un hotel de la ciudad de Puebla y un hotel de la ciudad de Bogotá, a través de 5 “indicadores” y de 22 “índices” que componen la propiedad “Gestión del Recurso Humano” del MIGSA. Finalmente, se presentan las conclusiones de la investigación.

REVISION DE LA LITERATURA

La creación de un marco jurídico e institucional para el desarrollo del sector turístico de Colombia y México, ha permitido la promoción de atractivos en cada uno de los países. En el caso de México, con la creación de la Comisión Nacional de Turismo en 1946, el gobierno decide promover las actividades turísticas y reconoce en el sector un potencial de interés que debe acompañarse de políticas públicas para su promoción. Por esta razón, entre 1970 y 1982 se crea el Fondo de Promoción e Infraestructura Turística INFRATUR y el Fondo Nacional de Fomento al Turismo FONATUR. Igualmente, se establece la ley Federal de Fomento al Turismo, la Secretaría de Turismo, el Banco Nacional del Turismo BANTUR, el Plan Nacional de Turismo y el Sistema Nacional de Planeación Turística. Todas estas iniciativas contribuyen al posicionamiento del sector turístico mexicano a nivel mundial y a su dinamización. En Colombia, la promoción del sector turístico comienza en 1969 con la creación de la Corporación Nacional de Turismo. Aun cuando las políticas públicas para fomentar el sector turístico en este país surgen en 1969, estas se concentran exclusivamente en el mercado doméstico. Es solo en el año 1991 cuando por medio de la campaña “Sol muisca de Colombia para el mundo”, se da inicio a la promoción internacional de esta actividad. Este nuevo modelo de negocio se refuerza en el año 1996 con la Ley 300 y la creación del Fondo de Promoción Turística. Paulatinamente, surgen iniciativas como la Política de Competitividad, Mercadeo y Promoción Turística de Colombia en 2002, la Política de Defensa y Seguridad Democrática en 2003, la Ley 1101 de 2006, el Plan Nacional de Desarrollo 2007-2010, el Plan Sectorial de Turismo 2007-2010, así como la Política de Mercadeo y Promoción Turística de Colombia en 2009. Estas iniciativas velan por el fortalecimiento de los recursos disponibles para la promoción turística, la seguridad y el desarrollo del sector (Ministerio de Comercio, Industria y Turismo, 2009). En este orden de ideas, se señala que la incursión de Colombia al mercado mundial es reciente, comparada con la de México, y que dicha incursión representa un rezago de más de 40 años de impulso, adecuación y fortalecimiento del sector turístico del país.

Teniendo en cuenta la capacidad del sector turístico de generar empleo (OMT, 2014a), además de la creación de un marco jurídico e institucional para su desarrollo, la literatura destaca la necesidad de implementar políticas de promoción y vinculación del personal, así como la necesidad de instaurar entidades dedicadas al fomento de la formalidad y de la inclusión laboral (Alonso, 2003). De la misma manera, sumado a estas acciones gubernamentales en pro del bienestar del personal, los gerentes deben optar por un manejo integral de su capital humano y gestionarlo según sus competencias, con el fin de transformarlo en un recurso estratégico de la empresa (Alles, 2005; Mondy & Noe, 2005). En este contexto, Ibarra et al (2008) señalan que para lograr el éxito se debe integrar el recurso humano con los propósitos de la empresa. Igualmente, según los términos de Mathis & Jackson (2008), para alcanzar los

objetivos planteados en la estrategia empresarial, se deben tener en cuenta los conocimientos, habilidades, capacidades y actitudes que cada uno de los empleados, a fin de potencializarlos y de mejorar su rendimiento (Orrego, 2015). En este sentido, se estima que la implementación de buenas prácticas en recursos humanos brinda a la empresa una mayor probabilidad de que su productividad sea alta (Chiavenato et al, 1983; Chiavenato & Villamizar, 2002; Maristany, 2000; Sanz & García, 2008; López, 2014). De hecho, las buenas prácticas en el manejo del personal son consideradas como una ayuda para el desarrollo estratégico de la empresa (Huselid, 1995). Por lo anterior, se hace necesaria la existencia de un área encargada de integrar las cualidades del personal con los planes de la empresa y que vele por la integridad física y mental de los mismos (Camejo, 2009); en otras palabras, un área que tenga la capacidad de proponer medios de interacción y sinergia entre los trabajadores (Prieto, 2007) y que promueva prácticas para atraerlo, desarrollarlo y retenerlo (Orrego, 2015).

En el sector turístico particularmente, el manejo dado a los recursos humanos está cobrando día a día mayor importancia, pues el componente humano tiene una incidencia más significativa en el éxito de este tipo de unidad de negocio de prestación de servicios. Según Bañuls et al (2007), el capital humano turístico tiene un papel clave como estrategia competitiva en un contexto internacional, ya que este puede llegar a ser un elemento diferenciador. Lo anterior ocurre pues el personal hotelero debe interactuar de manera directa con los clientes, sin ningún tipo de intermediación (Acosta et al, 2002). Por lo anterior, para que esta interacción se dé de la mejor manera y que el cliente quede satisfecho del servicio, lo que impacta directamente en el desarrollo competitivo del sector de actividad, los empleados deben estar comprometidos, motivados y tener un sentimiento de pertenencia con lo que hacen (Del Castillo, 2000). Esto es posible si la persona encargada de los recursos humanos al interior del hotel logra crear un ambiente laboral en el que sus empleados se sientan satisfechos y parte de la empresa (Galeana, 2004). En este orden de ideas, se desarrollan enfoques y modelos que sirven para medir el impacto de la labor realizada por los empleados en el éxito de la unidad de negocio y/o permiten diagnosticar aspectos propios del entorno que afectan su desempeño interno, con el fin de poder implementar planes de mejora. Estos enfoques y modelos sirven de apoyo a la gestión realizada por el área encargada de dirigir los recursos humanos, pues proveen información sobre el clima organizacional, brindándole la posibilidad de crear opciones de intervención que permitan modificar las actitudes del personal (Aguirre et al, 2010). Entre los enfoques, se destacan 4 según los términos de Serlavós (2013). El primero se concentra en indicadores de eficiencia en las prácticas y con él la reducción de costos. El segundo consiste en el estudio de las mejores prácticas y la réplica de aquellas ya conocidas que pueden ser efectivas. El tercero se basa en los cuadros de mando integral, en la identificación de necesidades y en el mejoramiento de los procesos internos, y el cuarto se focaliza en modelos de cadena causal que pretenden relacionar las prácticas de recursos humanos y las actitudes de los trabajadores, así como aquellas de los clientes.

En cuanto a los modelos, estos miden valores, creencias, símbolos materiales, ritos y actividades que repercuten en el desempeño de los empleados (Barney, 1986), considerados como elementos de la cultura organizacional (Hill, 1988). Entre estos, se destaca el “Modelo de Iceberg” de Schein (2010), que permite determinar las capacidades de un empleado en diferentes aspectos (por ejemplo, las destrezas, los conocimientos y el concepto de sí mismo). A su vez, este modelo vincula la necesidad de identificar las creencias y establecer la manera como estas formas de actuar y de pensar determinan la conducta del empleado en la empresa (Alles, 2003). Asimismo, existe el “Modelo de la Dinámica Cultural” propuesto por Hatch (1993), que vincula las manifestaciones, los símbolos y las interpretaciones como elementos de la cultura, la cual depende de la continua producción y reproducción por parte de los trabajadores. Igualmente, se encuentran otros modelos en la literatura como el “Modelo de Ecuaciones Estructurales” para relacionar el clima organizacional y la productividad (Aguirre et al, 2010) y el “Modelo Amigo” que permite interpretar la realidad organizacional, la cual resulta útil a la hora de intervenir sobre ella (Silla, 1999), entre otros.

Las características de medición de los modelos presentados con anterioridad son variadas, aun cuando estos comparten una misma unidad de análisis, a saber la identificación de los factores internos de la empresa que afectan el desempeño de los trabajadores. En este sentido, se señala que MIGSA, además de vincular los factores internos de la empresa que son representados en la cultura y el clima organizacional, relaciona igualmente factores externos que tienen implicaciones en el desempeño de los trabajadores tales como la realización de actividades dirigidas al trabajador y a su familia, los programas de retiro y de jubilación, el conocimiento del núcleo familiar del trabajador y la existencia de estímulos para la educación de los hijos. En este orden de ideas, MIGSA se presenta como una herramienta de evaluación que mide aspectos que otros modelos no vinculan. Por lo anterior, se utiliza MIGSA para la presente investigación, con el fin de tomar en cuenta más aspectos de la gestión de recursos humanos y así tener una visión más precisa de dicha gestión.

METODOLOGÍA

En la primera parte se presenta MIGSA (i). De esta manera, el lector comprenderá mejor los pasos realizados durante cada una de las fases metodológicas que permitieron la realización de esta investigación (ii). Presentación del Modelo de Indicadores de Gestión Sostenible y Asociatividad (MIGSA).

MIGSA es un modelo construido a partir de variables a través de las cuales se puede diagnosticar el nivel de Gestión Sostenible y de Asociatividad en las prácticas empresariales. Como lo explican Danna-Buitrago et al. (2014), el término “Gestión Sostenible” hace referencia a la manera como la empresa implementa actividades que le permiten mantenerse en su entorno económico, social y medioambiental. Así pues, Gestión Sostenible se entiende como un tipo de gestión empresarial que va más allá de la búsqueda de rentabilidad financiera por tener en cuentas aspectos relacionados a la integración social y a la preservación del medioambiente, incorporando los principios básicos del desarrollo sostenible (Riveros et al, 2010). En el caso de la “Asociatividad”, el termino se refiere a la manera como la empresa coopera con los diferentes actores de su entorno, con el fin de alcanzar objetivos comunes (Liendo & Martínez, 2003) y poder enfrentar en mejores condiciones la competencia (Lozano, 2010), manteniendo al mismo tiempo su independencia jurídica y su autonomía gerencial (Rosales, 1997; Pallares, 2004). En este orden de ideas, MIGSA se concibe como una herramienta que evalúa la compatibilidad a largo plazo entre la empresa y su entorno, para lo cual se utilizan elementos microeconómicos/micro (dimensión Gestión Sostenible) y mesoeconómicos/meso (dimensión Asociatividad) (cf. Esser, 1994; Esser et al., 1996).

La Gestión Sostenible y la Asociatividad, denominadas como “dimensiones” en el modelo, se miden a partir de otras nueve variables denominadas “propiedades”; ocho propiedades para la primera dimensión y una propiedad para la segunda. Cada propiedad constituye un aspecto de una dimensión, mientras que la dimensión es una medición sintética de las diferentes mediciones contenidas en varias propiedades. Así, en la dimensión Gestión Sostenible se tienen en cuenta las siguientes propiedades: Gestión Ambiental, Gestión del Recurso Humano, Gestión del Conocimiento, Gestión de la Ética Empresarial, Gestión Tecnológica, Gestión con la Comunidad, Gestión de Calidad y Gestión de Mercadeo. En cuanto a la dimensión Asociatividad, esta se calcula a partir de la propiedad “Percepciones y Prácticas de Asociatividad” (Bohórquez, et al., 2011; Danna-Buitrago et al., 2014; Bohórquez, et al., 2014). Por su parte, las propiedades son mediciones sintéticas de otras mediciones, contenidas en variables llamadas “indicadores”. En total existen 31 indicadores, 25 para las 8 propiedades de Gestión Sostenible y 6 para la propiedad de Asociatividad. Finalmente, según el mismo principio, cada indicador resulta de “índices”, que a su vez son evaluados mediante 4 descriptores mutuamente excluyentes, los cuales apoyan la medición con datos tomados directamente de la empresa a partir de una entrevista (cf. Danna-Buitrago et al, 2014). MIGSA utiliza un número importante de índices (112) y descriptores (448) para sus cálculos, con el fin de obtener una medición exhaustiva y precisa de la empresa, así como de los factores que influyen en cada indicador y por lo tanto en cada propiedad. Para resumir, MIGSA realiza mediciones a diferentes niveles de síntesis,

desde el nivel más desagregado (112 índices) hasta el nivel más agregado (2 dimensiones), pasando por dos niveles intermedios (31 indicadores y 9 propiedades).

METODOLOGIA UTILIZADA PARA EL DESARROLLO DE LA INVESTIGACION.

Para los fines de esta investigación, se realiza el análisis de los datos arrojados por la propiedad número 2 denominada Gestión del Recurso Humano, y por los indicadores e índices relacionados a dicha propiedad. En efecto, se evalúa el nivel de sostenibilidad en las prácticas y políticas implementadas, con el fin de dar respuesta a la problemática planteada. Así, esta propiedad permite medir el manejo que el hotel da a las prácticas y políticas de gestión que afectan su recurso humano, teniendo en cuenta factores como: condiciones de trabajo, clima laboral, manera de solucionar conflictos, programas de bienestar, respeto a la diversidad, cultura organizacional y procesos de potencialización (cf. Tabla 1). En este orden de ideas, se obtuvo y se analizó la información de la siguiente manera:

Fase 1: Selección de hoteles y variables a aplicar. Se tomó para la investigación un hotel del centro histórico de cada ciudad, los dos calificados con tres estrellas, una capacidad instalada similar de 39 y 42 habitaciones respectivamente y una vinculación de personal mayor a 45. Estos parámetros se tomaron en cuenta con el fin de seleccionar un hotel “representativo” de cada ciudad.

Fase 2: Obtención de información de las empresas seleccionadas. Se obtuvo la información de los hoteles seleccionados de Bogotá (Colombia) y Puebla (México) de la siguiente manera:

Contacto y acercamiento por parte de Grupo Competir con los representantes de los hoteles de Bogotá y en Puebla seleccionados.

Aplicación del MIGSA con el fin de medir diversos factores que contribuyen a la gestión del recurso humano.

Fase 3: Análisis de la información. La información recolectada en los hoteles se analizó teniendo en cuenta los siguientes parámetros:

En la medición realizada a los hoteles, cada propiedad puede llegar a alcanzar un valor entre 0% y 100%. En esta investigación, se midió y analizó la propiedad “Gestión del Recurso Humano”. Por lo anterior, no se tienen en cuenta los resultados obtenidos a partir de las otras propiedades.

Equivalentemente, cada indicador e índice perteneciente a la propiedad “Gestión del Recurso Humano” tiene un valor entre el mismo rango, a saber 0% y 100%. El valor obtenido depende del tipo de gestión que se realice al interior del hotel. Si obtiene 0% en la propiedad, esto refleja la ausencia de esta en su gestión. Por el contrario, si logra el 100% en la medición, se evidencia el compromiso en las actividades realizadas. Todo porcentaje comprendido entre 0% y 100% refleja una situación intermedia. Para analizar los porcentajes obtenidos en la propiedad estudiada, se utilizan los criterios de evaluación conocidos bajo el término de “estadios”, distribuidos en cuartiles (estadio 1, estadio 2, estadio 3 y estadio 4) y presentados en la figura 1. Cada resultado se clasifica en solo uno de los estadios, los cuales son mutuamente excluyentes (no es posible ubicarse en dos estadios al mismo tiempo). En este contexto, se presentan en la figura 1 los criterios de evaluación utilizados para la propiedad Gestión del Recurso Humano.

Las comparaciones de los resultados obtenidos en los dos hoteles se realiza a partir de gráficas, con el fin de dar una representación visual de las diferencias entre Colombia y México.

Por último, se señala que el diagnóstico obtenido a partir de la aplicación de MIGSA debe ser considerado como transitorio, pues el objetivo luego de haber corrido el modelo por primera vez en el hotel, es que este defina una ruta de acción para mejorar la gestión de su Recurso Humano, lo que podría contribuir en cierta medida a mejorar su competitividad.

Figura 1. Criterios de evaluación de MIGSA para la propiedad Gestión del Recurso Humano

Estadio 1 (0% - 25%)	Estadio 2 (26% - 50%)	Estadio 3 (51% - 75%)	Estadio 4 (76% - 100%)
El hotel aún no conoce o simplemente no toma en cuenta elementos de sostenibilidad en la Gestión del Recurso Humano.	El hotel conoce algunos elementos de sostenibilidad aplicables a la Gestión del Recurso Humano pero no los ha implementado o lo hace de manera esporádica.	El hotel conoce elementos de sostenibilidad aplicables a la Gestión del Recurso Humano y está en proceso para su implementación, seguimiento y toma de decisiones.	El hotel ha implementado elementos de sostenibilidad aplicables a la Gestión del Recurso Humano.

RESULTADOS

Los resultados del análisis comparativo muestran el alcance en la promoción de políticas y prácticas de recursos humanos en dos hoteles, uno de Puebla (México) hotel 1 y otro de Bogotá (Colombia) hotel 2. Se observa una mayor eficiencia en el hotel 2, al presentar un 81% en la implementación de prácticas y políticas dirigidas al manejo del personal, ubicándolo en el estadio 4. En cuanto al hotel 1, este alcanzó un 56%, por lo que se sitúa en el estadio 3, es decir, que este conoce cómo implementar buenas prácticas en recursos humanos, pero se encuentra iniciando su proceso de puesta en marcha y seguimiento (cf. Figura 2). Para lograr el diagnóstico anteriormente presentado, la propiedad evaluada cuenta con cinco indicadores (Percepción del Recurso Humano, Empoderamiento del Recurso Humano, Procesos de Potenciación del Recurso Humano, Respeto a la Diversidad y Manejo de Conflictos con los Trabajadores) y 22 índices de medición con sus respectivos descriptores, los cuales permiten obtener información detallada de las prácticas de gestión del recurso humano. A continuación se presentan los resultados detallados de la evaluación de cada uno de los indicadores (cf. figura 23). Figura 2. Resultados de la evaluación de Gestión del Recurso Humano en los hoteles 1 y 2

Figura 2. Modelo de Indicadores de Gestión Sostenible y Asociatividad (MIGSA), aplicado en el sector hotelero de Puebla (México) y Bogotá (Colombia): Propiedad Gestión del Recurso Humano.

Fuente: elaboración propia

En el primer indicador “Percepción del Recurso Humano” se puede identificar que los dos hoteles presentan un nivel de cumplimiento del 58% (hotel 1) y 82% (hotel 2). Estas mediciones son producto de los resultados obtenidos en los índices que componen el indicador: Trato del personal, Clima Laboral y Cultura Organizacional. En este sentido, el hotel 1 y el hotel 2 alcanzaron en el primer índice un nivel de satisfacción similar de los empleados con un 65%; en el segundo índice un 75% y 98% y en el tercer índice un 68% y 85% respectivamente. El segundo indicador “Empoderamiento del Recurso Humano” muestra que el hotel 1 alcanza un 71% de cumplimiento y el hotel 2 un 80%. Estos porcentajes reflejan, que ambos hoteles

conocen los efectos que tiene en una organización la asertividad en la toma de decisiones y el nivel de delegación de responsabilidades. Sin embargo, en términos generales, el hotel 2 tiene un nivel de delegación de responsabilidades y un nivel de toma de decisiones más desarrollado que el hotel 1. En el tercer indicador “Procesos de Potenciación del Recurso Humano”, el hotel 1 presenta un 47% de cumplimiento y el hotel 2 registra un 86%, lo que implica para el hotel 1 deficiencias producto de la falta de inducción al cargo, así como la ausencia de sistemas de compensación, de incentivos diferentes al salario y de programas de jubilación. En el caso del hotel 2, este conoce, implementa y evalúa continuamente los procesos administrativos requeridos en torno a las actividades mencionadas. La diferencia más importante obtenida de la medición se presentó en el cuarto indicador denominado “Respeto a la diversidad”. En efecto, el hotel 1 registra un menor resultado en el cumplimiento con un 28%, mientras que el hotel 2 obtuvo un 93%. Esta diferencia se explica debido al interés del hotel 2 por facilitar las relaciones del trabajador con su familia (propiciando actividades), vincular personal externo mediante pasantías y crear programas de formación. Finalmente, los resultados del quinto indicador “Manejo de Conflictos con Trabajadores” muestran un 75% para el hotel 1 y un 68% para el hotel 2. Esto implica que los dos hoteles reconocen el clima laboral como parte fundamental del desarrollo individual y colectivo. Asimismo, los dos hoteles conocen el grado de incidencia que tiene la toma de decisiones organizacionales y cómo ello afecta el desempeño de la empresa.

Tabla 1. Relación Indicador – Índices de la Propiedad Gestión Recurso Humano

INDICADOR	INDICE	HOTEL 1 (PUEBLA, MÉXICO)	ESTADIO	HOTEL 2 (BOGOTÁ, COLOMBIA)	ESTADIO
PERCEPCIÓN DEL RECURSO HUMANO	Trato del Personal	65%	3	65%	3
	Condiciones Puesto del Trabajo	48%	2	63%	3
	Clima Laboral	75%	3	98%	4
	Programas de Bienestar	45%	2	100%	4
	Cultura Organizacional	68%	3	85%	4
	Relaciones con la Familia del Trabajador	45%	2	63%	3
EMPODERAMIENTO DEL RECURSO HUMANO	Nivel de Delegación Responsabilidades Autoridades	68%	3	76%	4
	Nivel Toma de Decisiones	76%	4	88%	4
PROCESOS DE POTENCIACIÓN DEL RECURSO HUMANO	Selección de Personal con Criterios Específicos	45%	2	95%	4
	Inducción del Cargo y de la Empresa	25%	1	100%	4
	Sistema Salarial	68%	3	90%	4
	Sistema de Contratación	70%	3	75%	3
	Formación Integral del Trabajador	73%	3	70%	3
	Sist. de Compensación e Incent. Diferentes al Salario	25%	1	98%	4

MANEJO CONFLICTOS CON TRABAJADORES	Grado Incidencia en Decisiones Organizacionales	75%	3	68%	3

Fuente: Elaboración propia.

Los resultados obtenidos por los dos hoteles fueron clasificados en los estadios, de acuerdo con el conocimiento, la implementación, el seguimiento y la aplicabilidad de actividades relacionadas con la gestión del recurso humano. Esto puede ser consultado en la Tabla 1. En síntesis, tal y como se muestra en la tabla anterior, el hotel 1 se ubica en los estadios 1, 2 y 3, mientras que el hotel 2 lo hace en el 3 y 4. De esta manera, se puede identificar el avance en el cumplimiento de prácticas y políticas que promueven la expresión de la individualidad, la creación de un entorno en el que prevalece la dignidad humana y el buen trato del personal para cada uno de los hoteles. Por una parte, el hotel de Colombia debe optimizar los mecanismos de trato del personal, las condiciones del puesto de trabajo, las relaciones familia-trabajador-empresa, la formación integral, los programas de retiro laboral y la participación del trabajador en la toma

de decisiones. Por otra parte, el hotel de México necesita mejorar aún más la promoción de programas de bienestar, las relaciones entre familia-trabajador-empresa, la definición de criterios específicos para la vinculación de personal, la inducción al cargo, el uso de sistemas de compensación y desempeño, y la puesta en marcha de Programas de jubilación y retiro voluntario para fortalecer la prestación del servicio, por encontrarse en el estadio 3 en la medición de la propiedad.

CONCLUSIONES

La medición realizada a través de MIGSA evalúa algunas características de las prácticas y políticas de gestión del recurso humano en hoteles e identifica percepciones, actitudes, iniciativas y procesos que atañen a todo el personal de la organización. Con el diagnóstico, se pudo determinar que el hotel de Bogotá registra el mayor adelanto en el cumplimiento de prácticas y políticas de gestión del recurso humano (81%), mejorando las condiciones laborales de sus trabajadores, mientras el hotel de Puebla, aún presenta deficiencias en el conocimiento e implementación de las mismas (56%). Estos resultados concluyen la necesidad de desarrollar en México “buenas practicas” de gestión de recursos humanos, a fin que el sector turismo pueda realmente mantener o mejorar su productividad a largo plazo. Como prolongación de esta investigación sería interesante obtener resultados no solo a partir de un hotel representativo sino a partir de una muestra de hoteles cuya representatividad sea construida de manera estadística tanto en Colombia como en México. Lo anterior con el fin de profundizar los resultados ya obtenidos durante este trabajo.

RECONOCIMIENTOS

Los autores agradecen el apoyo logístico y financiero de la Fundación Universitaria los Libertadores para el desarrollo de la investigación. Igualmente, agradecen los comentarios y recomendaciones recibidas desde la dirección de la línea Institucional de Investigación en Globalización y Desarrollo Sostenible (GDS) de la Fundación Universitaria los Libertadores, así como las modificaciones sugeridas por el profesor-investigador Rémi Stellan. Estos contribuyeron a mejorar la calidad de la investigación. Asimismo, agradecen el apoyo de los propietarios de los Hoteles en los dos países, así como la colaboración de la Benemérita Universidad Autónoma de Puebla. Finalmente, se reconoce el trabajo realizado por la egresada del programa de Administración Turística y Hotelera de la Fundación Universitaria los Libertadores y pasante de investigación proyecto MIGSA, Marta Leiden Prado Espitia, quien corrió el modelo en Puebla.

BIOGRAFÍA

Jenny Paola Danna-Buitrago es Doctora en Sciences Économiques de la Université de Grenoble (Francia), Magister en Sciences Économiques de la Université Pierre Mendès France, Directora línea de Investigación en Globalización y Desarrollo Sostenible de la Fundación Universitaria los Libertadores (Bogotá), Investigadora Asociada del Centre de Recherches en Economie de Grenoble (CREG) y Profesora Invitada de Grenoble School of Management (GEM).

Nelson Orlando Alarcón es candidato a Magister en Administración de la Universidad Nacional de Colombia, Economista, miembro del grupo Competir -categoría C por Colciencias, Docente del Programa de Administración Turística y Hotelera de la Fundación Universitaria los Libertadores.

Melva Inés Gómez es candidata a Magister en Dirección de Empresas de UMECIT, Economista, miembro del grupo Competir catalogado en categoría C por Colciencias, Docente del Programa de Administración de Empresas de la Fundación Universitaria los Libertadores. Bogotá Colombia.

PERSPECTIVAS DE LOS GRUPOS DIRECTIVOS Y DE INVESTIGACIÓN SOBRE LA GESTIÓN DEL CONOCIMIENTO. UN ESTUDIO DE CASO

Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco

Norma Aguilar Morales, Universidad Juárez Autónoma de Tabasco

Luis Argüelles Ma, Universidad Autónoma de Campeche

RESUMEN

La generación de conocimiento es una actividad inherente a los individuos que laboran en las organizaciones y que para las universidades está implícita en su misión. El objetivo del estudio fue determinar si existían diferencias sobre la percepción que los profesores investigadores integrados en grupos de investigación denominados cuerpos académicos, y los equipos directivos de una institución de educación superior, sobre los principales elementos de la gestión del conocimiento. El diseño de investigación fue un estudio de caso holístico con una sola unidad de análisis que se abordó a través de cuestionarios y entrevistas. Estadísticamente los grupos poblacionales no difieren de manera significativa con relación a sus percepciones sobre los elementos de la gestión del conocimiento, pero un análisis más detallado permite identificar diferencias a nivel de las dimensiones, aunado a los resultados de las entrevistas que señalan marcadas diferencias de ambos grupos. Se concluye que hace falta la estructuración formal de un programa de gestión del conocimiento para que se puedan integrar los elementos que hoy día trabajan de forma independiente.

PERSPECTIVES OF DIRECTIVE AND RESEARCH GROUPS, ON KNOWLEDGE MANAGEMENT. A CASE STUDY

ABSTRACT

The generation of knowledge is inherent to individuals who work in organizations or universities. And it has been an implicit activity in their mission. The aim of the study was to determine if there were differences on the perception of the main elements of knowledge management between the teacher researchers integrated into research groups called academic bodies and management teams of a higher education institution. The research design was a holistic case study with a single unit of analysis made through questionnaires and interviews. Statistically the population groups do not differ significantly with regard to their perceptions about the elements of the knowledge management, but a more detailed analysis to identify differences at the level of the dimensions, coupled with the results from the interviews, which indicate marked differences of both groups. We conclude that it is necessary to build of a formal structure of the knowledge management program so in that way, they can integrate the elements that today work independently.

INTRODUCCIÓN

La *Gestión del conocimiento* es una corriente filosófica en la que se combinan diferentes concepciones del término y se presenta, esencialmente, una visión basada en la práctica y el aprendizaje organizacional (Hong, 2011). Este trabajo de investigación centra su atención en las diferentes perspectivas que tienen los equipos directivos, y los grupos de investigación denominados “cuerpos académicos”, figura desarrollada por las autoridades educativas para las Universidades Públicas e Instituciones de Educación Superior (IES) en México.

El enfoque del trabajo es presentar las diferentes visiones de los equipos de trabajo que son esenciales para que la Gestión del Conocimiento se realice, de acuerdo a los principales modelos tanto occidentales (Drucker, 1998; Senge, 2005), como orientales (Nonaka y Takeuchi, 1999).

Problemática de estudio

La universidad es una organización basada en el conocimiento —con distintos énfasis según la universidad de la que se trate—, y cuya misión es generar o crear, transmitir y difundir conocimiento. La generación del conocimiento suele asociarse con la función de la investigación; la transmisión del conocimiento con la función docente; y la difusión o diseminación del conocimiento con la función de extensión. Por tratarse de una organización intensiva en conocimiento, su capacidad para gestionar la creación, transmisión y difusión del mismo, pasa a ser crucial en el mundo contemporáneo.

Zampieri y Colombelli (2012) señalan que la gestión del conocimiento debe considerarse siempre en los niveles en donde se produce (investigación y desarrollo) y en donde se gestiona (nivel directivo) su empleo y utilidad económica. Estos autores afirman que ambos niveles tienen características distintas, pues los niveles operativos se enfocan más a los problemas cotidianos, mientras que los directivos centran su atención en problemas de índole administrativa y estratégica.

El objetivo del estudio fue determinar si existen diferencias sobre la percepción que tienen los profesores investigadores de cuerpos académicos, y los equipos directivos de las divisiones académicas que corresponden al área de ciencias sociales de una institución de educación superior, sobre los principales elementos de la gestión del conocimiento en la organización

El trabajo de investigación que se presenta aporta un diagnóstico cuantitativo y cualitativo de las percepciones que tienen los diferentes equipos de trabajos involucrados en la generación del conocimiento, a través de un estudio de caso en una institución de educación superior en México. Estudios previos del equipo de trabajo han identificado a los equipos directivos y los profesores investigadores que pertenecen a un cuerpo académico, como los actores esenciales en la capacidad de gestión de una institución de educación superior (Magaña, Aguilar, Surdez, Quijano, 2013; Magaña y Aguilar, 2014). Las aportaciones del trabajo, están centradas en el análisis a profundidad que se realizó para identificar las debilidades en el proceso de gestión del conocimiento en ambos grupos, que permitan posteriormente implementar estrategias para solventarlas y consolidar un programa de gestión del conocimiento.

El resto de esta investigación está organizada como sigue. La sección de revisión literaria sobre las perspectivas directivas y de cuerpos académicos para la gestión del conocimiento. En la sección de metodología se describe el diseño de la investigación, cómo se conformó la población y el proceso de recolección y análisis de datos. Después se presenta la sección de resultados con los valores que se reportan del análisis descriptivo. Por último las conclusiones del estudio que integran las líneas de investigación futuras.

REVISIÓN LITERARIA

Actualmente la sociedad del conocimiento es un término que se acuñó a la luz de las teorías de generación del conocimiento (Drucker, 1998; Senge, 2005; Nonaka y Takeuchi, 1999) de finales del siglo XX y principios del XXI, y cuyo principal argumento esgrime que el conocimiento, la creatividad y la innovación se han posicionado como los componentes que pueden hacer más eficientes y competitivas a las organizaciones, y por ello, se crea la necesidad de gestionarlos de manera continua. Considerando lo anterior, puede inferirse que uno de los procesos con mayor relevancia en las organizaciones es, precisamente, la gestión del conocimiento a nivel individual, de equipo y organizacional.

Gestión del conocimiento en equipos directivos

Sparrow (2002) señala que los directivos necesitan hacerse una idea de cómo el conocimiento y la información tienen que ser compartidos por sus equipos de trabajo y las personas que necesitan interactuar entre sí, no pueden ser solo procesadores pasivos de la información deber fomentar y promover los procesos de creación del conocimiento de sus colegas.

Sobre esta necesidad de conciencia directiva se puede encontrar evidencia en los estudios empíricos realizados por Rodríguez (2012) acerca de la gestión del conocimiento de los directivos de diversas universidades chilenas y su impacto en la calidad de las mismas, y en donde se encontró que la calidad de las universidades tiene en la investigación su determinante estructural directo y la calidad de la investigación es la resultante de la gestión institucional, a su vez, la gestión institucional depende de la gestión del conocimiento, en especial de la fase de aplicar conocimiento, pero esta tiene su origen en las fases previas de crear y compartir conocimiento.

En otro estudio que llevaron a cabo Hoyos y Arango (2006), para conocer cuáles son las competencias de quienes lideran programas académicos en la Universidad de Manizales y que han hecho gestión del conocimiento para crear y poner en funcionamiento nuevos programas o para acreditación o re acreditación de calidad se encontró que la universidad gestiona conocimiento disciplinar y conocimiento inter y transdisciplinar que pretende ser de utilidad, por lo cual conviene que las diferentes unidades académicas sean lideradas por personas que estén dispuestas a emprender cambios y generar innovaciones.

Cuerpos Académicos

En México una de las políticas encaminadas a fomentar nuevas formas de generación y aplicación del conocimiento fue la creación de la figura de Cuerpos Académicos (CA) en las instituciones de educación superior públicas, con la finalidad de fortalecer el trabajo colaborativo a través de equipos disciplinarios y multidisciplinarios de trabajo académico (López, 2010). La figura fue creada como política pública de la Secretaría de Educación Pública (SEP) en México para fortalecer las actividades de generación y aplicación del conocimiento a través del Programa de Mejoramiento al Profesorado (PROMEP) hoy convertido en el Programa para el Desarrollo Profesional Docente (PRODEP).

Desde la perspectiva Clark (1998) la esencia de los cuerpos académicos es el trabajo de grupo para la generación del conocimiento, opinión que comparten López (2010) y Maldonado (2005) al compararlos con el concepto de comunidades epistémicas, las cuales son entendidas como una red de profesionales con reconocida experiencia y competencia en un campo particular, y que debido a esta especialización cuentan con suficiente legitimidad en el área de políticas dentro de un campo determinado (Maldonado, 2005, p.108).

La SEP (2014, p. 9) los define como: Grupos de profesores/as de tiempo completo que comparten una o varias líneas de generación de conocimiento, investigación aplicada o desarrollo tecnológico e innovación

en temas disciplinares o multidisciplinarios y un conjunto de objetivos y metas académicas. Adicionalmente atienden los programas educativos (Pe) afines a su especialidad en varios tipos. La investigación colegiada o en equipo fomenta la capacidad institucional para generar o aplicar el conocimiento; identificar, integrar y coordinar los recursos intelectuales de las instituciones en beneficio de los programas educativos y articular esta actividad con las necesidades del desarrollo social, la ciencia y la tecnología en el país.

La figura creada por la SEP se reconoce como un sustento esencial en la formación de profesionales de la educación superior y se le ha identificado como estrategia central en la generación de cuadros de investigación en las universidades.

METODOLOGÍA

Diseño del Estudio

La investigación se realizó a través de un estudio de caso que, de acuerdo con Yin (2003), analiza un fenómeno de manera exhaustiva, el cual se obtiene mediante una descripción detallada y profunda considerando todo el contexto. El estudio tuvo un diseño holístico con una sola unidad de análisis ya que se pretendió únicamente generar un diagnóstico sobre la percepción de los procesos de gestión del conocimiento en los cuerpos académicos y los grupos directivos del caso bajo estudio con la finalidad de compararlos. Adicionalmente, con la finalidad de validar la información obtenida se incluyeron las opiniones de los principales directivos de las tres áreas bajo estudio, así como de los líderes de cuerpos académicos, como parte de una triangulación de datos que permitió conocer el fenómeno a profundidad (Stake, 2010).

Población de estudio

La población considerada en el estudio fueron los profesores integrantes de los cuerpos académicos o grupos de investigación, los líderes de los mismos, y los directivos de tres de las once divisiones académicas de la Universidad Juárez Autónoma de Tabasco (UJAT), las cuales imparten disciplinas asociadas a las ciencias sociales y cuyo análisis preliminar de sus indicadores de gestión, son las que presentaban mayor rezago (Magaña, et al., 2013; 2014).

Actualmente, las divisiones académicas citadas tienen en total 61 profesores investigadores en 15 cuerpos académicos, de ellos 40%(6) está en formación, 53% (8) en consolidación, y solamente una de las divisiones cuenta con un cuerpo académico consolidado (UJAT, 2015, pp. 272 -273). En cuanto a directivos y personal de confianza, actualmente, son 49 profesores los que desempeñan cargos directivos y 52 de ellos operan puestos administrativos, de los cuales únicamente ocho son personal de confianza en las divisiones académicas seleccionadas (UJAT, 2015, p. 356). Ante este panorama, lo conducente fue estructurar un censo para ambos grupos de la población bajo estudio.

En relación al género hay un predominio masculino en la población de profesores en cuerpos académicos (56%), contrario a las cifras que se reportan para el personal directivo, el cual en su mayoría está conformado por mujeres (60%).

Con relación a la edad, las divisiones sitúan sus mayores porcentajes arriba de los 50 años de edad principalmente en la población de profesores. De manera específica, los directivos no rebasan los 60 años de edad, siendo la división C la que reporta el personal directivo más joven.

El número de años laborados es un reflejo de la edad de los participantes en el estudio, en donde se destaca con un 80.8% de la plantilla directiva en el primer rango, lo cual se puede explicar debido a que los periodos de elección de un nuevo director es de cuatro años, con la posibilidad de reelegirse solo por un nuevo periodo y de una política no escrita de cambio de personal con cada administración.

Instrumento

El cuestionario empleado fue una adaptación propia para directivos y profesores de cuerpos académicos del instrumento diseñado por Molina y Marsal (2002) empleado en estudios previos (Magaña, et al., 2013; 2014) donde se evalúan 6 dimensiones de la variable gestión del conocimiento: Implicación de la Alta Dirección, Cultura Organizativa, Capacidad de Gestión, Tecnología, Procesos de la Gestión del Conocimiento e Indicadores.

El cuestionario está conformado por 30 reactivos y adicionalmente se incluyeron tres reactivos socios demográficos: género, edad y antigüedad. Se estructuró en una escala tipo Likert con cuatro opciones de respuesta: D= No, nunca; C= Poco, alguna vez; B= Bastante, a menudo y A= Si, Siempre. La redacción se modificó ligeramente en la versión para directivos y la de cuerpos académicos con la finalidad de no perder el contexto.

Se utilizó el coeficiente Alpha de Cronbach para determinar la confiabilidad, del cuestionario el cual reporto un valor de 0.915, valor que se considera aceptable (Hernández, Fernández y Baptista 2010).

Para la entrevista con los directivos y líderes de cuerpos académicos, se empleó una guía estructurada con base en las dimensiones del cuestionario, la cual fue estructurada acorde a las funciones de cada uno de los grupos bajo estudio. La validación de las entrevistas se realizó mediante la triangulación de las categorías presentadas por cada dimensión del estudio. La triangulación metodológica tiene la finalidad de analizar la validez de la interpretación de la descripción realizada de los datos mediante la verificación con múltiples fuentes de evidencia del fenómeno observado (Stake, 2010).

Recolección y análisis de datos

El cuestionario fue entregado personalmente a la población bajo estudio y fue contestado en el momento para aclarar posibles dudas acerca del mismo, con la finalidad de garantizar la confidencialidad de las respuestas. La etapa de aplicación de cuestionarios se realizó en ocho meses en el período de mayo a diciembre del año 2014. En este mismo período se realizaron las entrevistas a profundidad a los directivos y líderes de cuerpos académicos.

De acuerdo con los objetivos programados, en el análisis que se elaboró se aplicaron medidas de estadística descriptiva y analítica. Dadas las características de los grupos poblacionales, se emplearon pruebas no paramétricas como la prueba U de Mann-Whitney y Kruskal Wallis para análisis de muestras independientes (Anderson, Sweeney, y Williams, 2008), que permitieron determinar si existían diferencias a nivel comparativo entre las variables sociodemográficas en relación con las dimensiones de la gestión del conocimiento y entre los grupos poblacionales bajo estudio.

Con relación a los resultados de las entrevistas se analizaron las transcripciones y se construyeron categorías. Dentro del sistema de categorización y generación de ideas se respetaron los requisitos señalados por Rodríguez, Gil y García (1999): 1) exhaustividad de las categorías: cualquier unidad debe poder ser ubicada en alguna de las categorías. Es decir, el sistema es capaz de cubrir todas las posibles unidades diferenciadas en los datos, 2) exclusión mutua: cada unidad se incluye en una sola categoría. Un segmento de texto diferenciado no puede pertenecer simultáneamente a más de una categoría, 3) único principio clasificatorio: las categorías deben estar elaboradas desde un único criterio de ordenación y clasificación.

Las categorías se determinaron con base en un análisis global de cada una de las dimensiones de la guía de preguntas. De manera general se llegó a un acuerdo con el entrevistado en la idea que, de manera generalizada, fue expresada con mayor frecuencia y presentada para cada categoría

RESULTADOS

Estadística Descriptiva

Con relación a los estadísticos descriptivos se presenta en la Tabla 1 los resultados de ambos grupos con relación a las dimensiones del cuestionario de gestión del conocimiento. Se puede apreciar en la tabla 1 que para los profesores de cuerpos académicos y los directivos la dimensión con la media más alta fue la infraestructura tecnológica. La media más baja para ambos grupos fue la capacidad de gestión, la cual también se destaca por ser en ambos casos la dimensión con mayor variabilidad de respuesta, pues reportan valores altos de la desviación estándar.

La variable gestión del conocimiento percibida por los grupos de investigación denominados cuerpos académicos del área de ciencias sociales reportó en el análisis de frecuencias, de acuerdo a la escala, una media de 64.25, una desviación de 12.965, asimetría de .142 y curtosis de -.766. Con respecto a los equipos directivos el valor de la media se reporta en 67.98, la desviación estándar en 11.835, una asimetría de .142 y curtosis de -.601. Con la finalidad de establecer categorías de análisis se identificaron los cuartiles de la distribución y se derivan las categorías presentadas en la Tabla 2.

Tabla 1: Descriptivos de las dimensiones de la gestión del conocimiento, rango de valores de 25 a 100

Dimensión	Profesores en Cuerpos Académicos			Directivos		
	N	Media	DE	N	Media	DE
Implicación de la alta dirección	61	12.80	2.932	47	13.79	2.711
Cultura Organizativa	61	14.03	2.614	47	13.36	2.577
Capacidad de Gestión	61	10.54	4.089	47	12.55	3.982
Tecnología	61	14.43	3.122	47	15.51	2.561
Indicadores	61	12.44	4.205	47	12.78	3.644

Esta tabla presenta los datos que se reportan para ambos grupos bajo estudio con relación a la media y la desviación estándar obtenidas para cada una de las dimensiones del cuestionario sobre gestión del conocimiento.

Tabla 2: Niveles de gestión del conocimiento, rango de valores de (25 - 125)

Nivel de percepción de los procesos de gestión del conocimiento en cuerpos académicos		Profesores en Cuerpos Académicos			Directivos		
		Percentil	Rango	%	Percentil	Rango	%
No se poseen los elementos para realizar la gestión del conocimiento		25	Valores ≤ 55	27.9	25	Valores ≤ 59	14.9
Se percibe que son pocos los elementos para realizar los procesos de la gestión del conocimiento		50	56 - 64	26.2	50	60 - 69	27.7
Se percibe que se tienen los principales elementos para realizar los procesos de la gestión del conocimiento		75	65 - 74	21.3	75	70 - 75	31.9
Se percibe que se tienen todos los elementos para realizar los procesos de la gestión del conocimiento		100	Valores ≥ 75	24.6	100	Valores ≥ 76	25.5
Media		64.25			67.98		
DE		12.965			11.835		
Prueba U de Mann - Whitney	P	0.133					
	α	.05					

En la tabla se presentan los 4 niveles asignados a los cuartiles de la distribución, que corresponden a la percepción general que tienen los profesores de los cuerpos académicos participantes y los directivos con respecto a los procesos de gestión del conocimiento, así como los valores de la prueba U de Mann - Whitney.

Estadísticamente los grupos poblacionales no difieren de manera significativa con relación a sus percepciones sobre los elementos de la gestión del conocimiento en la organización, sin embargo los profesores se sitúan de forma mayoritaria en el primer cuartil (27.9%), que corresponde a la perspectiva de una ausencia de los principales elementos que se deben realizar para implantar un sistema de gestión del

conocimiento al interior de los cuerpos académicos. Con respecto a los equipos directivos la visión es diferente pues el mayor porcentaje se sitúa en el tercer cuartil y por encima de la media, considerando que si se poseen los principales elementos para realizar la gestión del conocimiento en la organización.

También se compararon las diferencias que pudieran presentarse por aspectos demográficos con relación a la variable de estudio como el género, evaluado con la prueba no paramétrica U de Mann-Whitney, y la prueba de Kruskal Wallis para la edad, antigüedad y división académica, sin embargo tampoco se encontraron diferencias estadísticamente significativas.

Los resultados que se presentan refutan la hipótesis de una diferente percepción en ambos grupos poblacionales, sin embargo un análisis más detallado por dimensión del cuestionario, se hace necesario para evaluar si son definitivos los resultados, pues los elementos de las entrevistas, como se presenta más adelante, presentan un panorama diferente. En el análisis de las dimensiones que conforman la variable, únicamente la capacidad de gestión presenta diferencias estadísticamente significativas de ambas perspectivas (Tabla 3). Para esta dimensión los profesores son lo que reflejan el mayor porcentaje por debajo de la media, lo que significa que no registran tener la capacidad para difundir y gestionar el conocimiento que se genera al interior de la organización y de los cuerpos académicos. Por otra parte, los directivos no piensan de la misma forma, pues para ellos el mayor porcentaje se sitúa precisamente en el último percentil, en donde se afirma que si se tiene la capacidad para generar programas de gestión del conocimiento.

Tabla 3: Análisis comparativo de los niveles percibidos de la dimensión capacidad de gestión, rango de valores de (5 - 20)

Nivel de percepción sobre la capacidad de gestión para realizar programas de gestión del conocimiento	Profesores en Cuerpos Académicos		Directivos	
	Frecuencia	%	Frecuencia	%
Se percibe que no existe la capacidad de gestión para llevar a cabo un programa de Gestión del conocimiento	18	29.5	6	12.8
Se percibe que existe poca capacidad de gestión para llevar a cabo un programa de Gestión del conocimiento	17	56.7	13	27.7
Se percibe que existe una moderada capacidad de gestión para llevar a cabo un programa de Gestión del conocimiento	18	58.1	13	27.7
Se percibe que existe la capacidad de gestión para llevar a cabo un programa de Gestión del conocimiento	8	34.8	15	31.9
Media	10.54		12.55	
DE	4.089		3.982	
Prueba U de Mann - Whitney	P	.015		
	α	.05		

En la tabla se presentan los 4 niveles asignados a los cuartiles de la distribución, que corresponden a la percepción general que tienen los profesores de los cuerpos académicos participantes y los directivos con respecto a la capacidad de gestión para implementar un programa de gestión del conocimiento, así como los valores de la prueba U de Mann - Whitney.

Los resultados de las opiniones de los líderes de cuerpos académicos y directivos, fueron agrupados por cada una de las dimensiones definidas para la gestión del conocimiento y asociadas a una idea central que se convirtió en una categoría, la cual se jerarquizó en función del mayor número de frases asociadas para cada grupo.

En este enfoque de opiniones, las diferencias son notorias esencialmente en la implicación de la alta dirección, la cual se percibe a diferente nivel en ambos grupos; la capacidad de gestión, que está asociada principalmente a las jerarquías, y la falta de políticas y lineamientos de operación de un sistema de gestión del conocimiento; y los indicadores de evaluación, los cuales no están diseñados para medir el impacto del conocimiento que se genera. Se presentan coincidencias en la opinión que se genera sobre la infraestructura tecnológica, indicando que se tienen los elementos técnicos pero no un sistema de Gestión del Conocimiento como tal, y parcialmente en la dimensión de cultura de compartir el conocimiento o cultura

organizativa, en donde se señala que no existen bases de datos que permitan compartir el conocimiento de la organización.

DISCUSIÓN Y CONCLUSIONES

El estudio a nivel cuantitativo no muestra diferencias estadísticamente significativas entre ambos grupos de trabajo, con excepción de la dimensión sobre capacidad de gestión, en donde los directivos perciben una mayor capacidad como resultado del cargo que desempeñan. Estos resultados coinciden de manera general con lo expuesto por Zampieri y Colombelli (2012) en un estudio empírico realizado entre niveles de gerencia y operativos en donde los resultados muestran que las percepciones son muy similares en ambos niveles, contradiciendo la hipótesis central del estudio.

Una de las principales aportaciones del enfoque cualitativo es la apreciación de los líderes de cuerpos académicos sobre la cultura de compartir el conocimiento que se genera, en donde sus opiniones concuerdan con lo que afirma Enríquez (2014), al señalar la relevancia del problema de la ética en la investigación y en articular la entrega de conocimiento, generando con ello una línea de investigación futura sobre esta problemática.

Se concluye que a pesar de que existe un compromiso de ambos grupos, la infraestructura tecnológica, humana, y algunos indicadores de evaluación en la organización que permitirían implementar un sistema de gestión del conocimiento, se requieren políticas institucionales que normen sus procedimientos y funciones dentro del mismo, pues los grupos directivos se han centrado en lo operativo, y los cuerpos académicos han logrado realizar esta configuración a través de las políticas públicas federales, pero la falta de autonomía ha limitado su capacidad de gestión.

Se propone para futuras líneas de investigación, centrarse en la parte operativa de la única dimensión donde se dieron diferencias estadísticas y es sobre la cultura organizacional de integrar el conocimiento como un activo intangible de la organización, para el cual se deben normar los procesos de creación, transferencia y empleo a través de la legislación existente en México.

METODOLOGÍA DANZIG: ESTRATEGIA PARA LA COMERCIALIZACIÓN DE PRODUCTOS TÍPICOS DE CUAUHTÉMOC, CHIHUAHUA, MÉXICO, ENFATIZANDO SU PERSPECTIVA SOCIO CULTURAL

Laura Elizabeth Cavazos González, Instituto Tecnológico de Cd. Cuauhtémoc

RESUMEN

La globalización, conlleva a que las empresas regionales alcancen niveles de desarrollo acordes en la estructura administrativa, tecnológica y de comunicación con sus públicos. Los productos típicos de Cd. Cuauhtémoc, Chihuahua como son el queso, la manzana, la miel, el sotol o la carne seca, registran procesos productivos artesanales y prácticas tradicionales de comercialización. Aunado a esta situación, el consumidor actual es más estricto y cuenta con diversas alternativas para la realización de su respectiva compra. Para incrementar su competitividad, la aplicación de la Metodología Danzig, propone un estilo estratégico de comercialización, enfatizando los aspectos socio- culturales de dichos productos coadyuvando así, a un desarrollo regional sustentable.

PALABRAS CLAVE: Estrategia, comercialización, competitividad, cultura, desarrollo.

DANZIG METHODOLOGY: MARKETING STRATEGY OF TYPICAL PRODUCTS FROM CUAUHTÉMOC CHIHUAHUA, MEXICO, HIGHLIGHTING ITS SOCIOCULTURAL PERSPECTIVE

ABSTRACT

Globalization leads local companies achieve consistent levels of development in the administrative, technological and communication structure with their customers. Artisanal production processes and traditional marketing practices are shown in typical products of Cd. Cuauhtémoc, Chihuahua such as cheese, apple, honey, sotol or jerky beef. Added to this, consumers nowadays are stricter and have several alternatives for their respective purchases. To increase its competitiveness, the application of Danzig Methodology proposes a strategic marketing style, highlighting the sociocultural aspects of these products, this way it contributes to sustainable regional development

JEL: M31, O18, R11

KEYWORDS: Strategy, marketing, competitiveness, culture, development

INTRODUCCIÓN

Cuauhtémoc, Chihuahua, la tercera más poblada del estado, está ubicada en la zona central del mismo, a 104 kilómetros al suroeste de la capital. Está considerada como la puerta de entrada a la región de la Sierra Tarahumara. La ciudad de Cuauhtémoc se encuentra en la llamada "Ruta de la Manzana" que cubre además del municipio mencionado, los de Cusiuhiriachi, Carichí y Guerrero (INEGI, 2001). La producción de manzana es el principal pilar económico, seguida de la producción quesera, de miel y carne seca y además, la creciente actividad de servicios se ha ido integrando en la estructura económica, debido a que es un

punto de reunión de los pueblos y ranchos aledaños (Cruz, 2014). Por ello, las estrategias de comercio, son sencillas, podría decirse que empíricas. Los individuos están inmersos de manera constante en una vorágine de nombres comerciales, slogans, campañas publicitarias y modas; que los diversos medios de comunicación, ayudan a esparcir: anuncios espectaculares, colocados en puntos estratégicos de las ciudades, llamativos empaques, estribillos en la radio e imágenes multicolores en la televisión. Ante la apertura de las plazas internacionales, se ha registrado un incremento en las alternativas de compra tanto en la forma (apartado, crédito sin intereses o renta), como en las marcas. El desenlace fue la hiper competencia, que aunado al auge de internet y de las redes sociales, impelió la transformación de las estrategias de mercado, traduciéndose en un continuo y rápido cambio de gustos e intereses entre los consumidores, que a su vez son cada vez más exigentes y se defienden de las técnicas de marketing agresivas gracias a las organizaciones de defensa de sus derechos (Kotler, 2004). Al terminar el siglo XX e iniciar el XXI, un factor constante ha sido la internacionalización continua de las relaciones comerciales. La privatización gradual de las empresas en China así como su consecuente participación en el mercado occidental, la unificación económica de las naciones de la Comunidad Europea, las cada vez, más comunes firmas de tratados internacionales entre países, son cambios decisivos que plantean grandes retos. (Etzel, et al, 1996).

Observando lo anterior, en esta investigación se examinan los sistemas de comercialización en Cuauhtémoc, Chihuahua a través del análisis de las estrategias de mercadeo y de su competitividad en los productos típicos de la región como son el queso, la manzana, miel, sotol o carne seca y en base a ese análisis, proponer una metodología de comercialización donde destaque la comunicación para el desarrollo ya que la región se encuentra en un momento de transformación socio cultural pues se han incrementado los fraccionamientos residenciales en todas las direcciones del municipio, por la movilidad de la población rural a la ciudad.

REVISION DE LITERATURA

El enfoque general considera a la mercadotecnia como una institución vinculada a la economía nacional y a otros aspectos como el social y cultural. En su acepción particular, abarca una perspectiva de cómo una firma llega a su mercado, desde el desarrollo de productos hasta la fijación de precios, pasando por el sistema de distribución (Kerin, et al, 2003). Esta filosofía se desenvuelve entre factores que conforman el medio ambiente y que son determinantes para formar las estrategias (Ver Figura 1) como el gobierno, el tipo de economía o la cultura por enumerar algunos.

Hoy en día, es inconcebible una vida carente de marcas, anuncios publicitarios, medios de transporte cuya función es distribuir, hasta el más recóndito lugar de la tierra, todo tipo de productos. La importancia de los servicios es manifiesta, impactando no solo en las economías de las familias sino al modificar los roles de sus miembros: La mujer se integra al mercado laboral, surgiendo por consecuencia un sin número de empresas de servicios: guarderías infantiles, negocios de comida rápida, centros de lavado y planchado doméstico, etc. Ante esto, los hombres han tenido que involucrarse en el cuidado de los hijos y en las tareas de limpieza del hogar. En el mundo globalizado, los mercados nacionales se han visto “obligados” a reestructurar no solo sus sistemas de producción y calidad sino su filosofía como organización al enfrentarse a competidores, en ocasiones, más fuertes y experimentados y para lograr la preferencia del cliente optan ya sea incursionar a su vez en otros o bien, aplicar todo un plan mercadológico, que incluye desde mejores servicios postventas, garantías, mejores precios y distribución, que los lleve no solo a una diferenciación sino a una lealtad firme que repercute en una mayor participación de mercado.

Es factible que uno de los factores más concluyentes para el éxito que pueda tener una empresa sea la imagen que da de sí misma al público y el cómo éste le percibe. Las estrategias de mercado al estar dirigidas al consumidor, deben preservar y fomentar la buena imagen de la empresa y su marca publicitaria. A medida que la mercadotecnia se convierte en una actividad cada vez más compleja, los profesionales se están cada vez especializando más psicología, matemáticas, estadística, finanzas, producción, administración

antropología social, logística e informática. Además, se las empresas consideran que el posicionamiento es indispensable para continuar entre la preferencia de su mercado meta y además incrementar la posibilidad de fidelización, el enfoque para negociar y comercializar debe ser más humano, respetando el entorno socio cultural de su mercado en busca de un desarrollo para todos los involucrados (Cavazos, 2014). Michael Porter (1982) indica para la elaboración de una estrategia competitiva contemplar el sector en el que se ubica la empresa, lo que está sucediendo en esa industria, lo que sucede con la competencia, lo que se suscita en el aspecto social y con las fuerzas y debilidades. Propone para el análisis del sector un Diamante (Ver Figura 2) donde las amenazas de nuevos competidores es una amenaza que la empresa debe contemplar y defenderse, creando barreras de entrada que pueden ser desde economías de escala, costos de transporte, acceso a canales de distribución o el efecto de experiencia. Los productos sustitutos son productos que desempeñan la misma función para el mismo grupo de consumidores pero con tecnología diferente. Esta amenaza puede aumentar cuando bajo el impacto de un cambio tecnológico que modifique la relación calidad-precio en relación a de producto-mercado de referencia.

Figura 1 Medio Ambiente de la Mercadotecnia

Laura Cavazos, 2014 "Estrategias de Comunicación para el Desarrollo"

Figura 2 Diamante de las Fronteras y Rivalidades de un Sector

Los clientes tienen un poder negociador frente a los proveedores ya que pueden influir en la rentabilidad potencial de una actividad obligando a la empresa a bajar precios, exigiendo servicios más amplios o mayor calidad. El poder de negociación de los proveedores versus clientes, es que pueden aumentar el precio de entrega o de limitar las cantidades vendidas a un cliente. La tendencia globalizadora mercantil y la competencia cada vez más agresiva, han “obligado” a las compañías a diseñar estrategias innovadoras de comercialización para posicionar sus productos y/o servicios. Entre más éxito se logre con dichas variables, mayor será el grado de competitividad que registre una empresa. El mismo principio aplica para los productos típicos de Cuauhtémoc Chihuahua (manzana, queso, miel, sotol y carne seca), que produce, en su mayoría con sistemas artesanales y no ha desarrollado metodologías para comercializar sus productos (Cavazos 2002). En contraparte, la corriente denominada Comunicación para el Desarrollo (CPD) busca, basada en el diálogo, la interacción y participación de los públicos interesados, promoviendo sus valores y percepciones para incluirlos en la estructuración de propuestas de proyectos que contemplen el desarrollo social y cultural de forma sostenible (Basado en las definiciones de FAO, (2006) y este concepto es la base de la metodología propuesta en esta investigación.

El objetivo general de la investigación es: Desarrollar y proponer una metodología de comercialización que coadyuve al posicionamiento de los productos típicos de Cuauhtémoc, Chihuahua, México.

Los objetivos específicos son:

Analizar el sistema de comercialización de los productos típicos de Cuauhtémoc, Chihuahua, México.
Determinar si en la estructura de comercialización actual de los productos típicos de Cuauhtémoc, Chihuahua, se incluyen sus aspectos culturales y sociales.
Determinar el grado de aceptación por parte de los comerciantes, de la Metodología Danzig.

METODOLOGÍA

Los instrumentos utilizados en la presente investigación fueron:

Revisión documental: Historia de Cuauhtémoc, Chihuahua, Comunicación para el Desarrollo, Desarrollo Sostenible, Cultura.

Observación directa de los procesos de producción y de compradores en centros comerciales.

Encuesta a productores, distribuidores, consumidores, representantes de medios de comunicación.

Entrevistas a representantes de gobierno estatal y municipal.

El procedimiento de análisis se efectuó con el software SPSS, elaborando diversas bases de datos que posteriormente se correlacionaron para determinar la problemática general y de esa forma, desarrollar la metodología Danzig, la cual se desglosa en el apartado siguiente.

RESULTADOS

La Tabla 1 muestra el porcentaje de productores entrevistados para la realización de esta investigación. La mayor parte de la muestra se concentró entre los manzaneros y los queseros que son las dos actividades de mayor impacto en la región. Las prácticas de comercialización en todos los casos, fue de un estilo tradicional, es decir, anunciarse en el mismo establecimiento con carteles de oferta y en la radio e internet.

Tabla 1: Productores Encuestados

Productores entrevistados	%
Manzana	30
Queso	30
Miel	10
Sotol	10
Carne Seca	20

La Tabla 2 muestra que el 62.5% de los comerciantes de Cuauhtémoc, Chihuahua, utilizan una combinación de medios de comunicación como son internet, radio y redes sociales para contactar con sus públicos. La estrategia utilizada por los comerciantes de los productos típicos de Cuauhtémoc, Chihuahua, para incentivar a sus clientes, de acuerdo a la Tabla 3 es a través de descuentos con un 10%, servicios 25%, garantías 8% y un 40% recurre a una combinación de éstos. La Tabla 4 indica de forma clara como el 100% de los comerciantes encuestados, no ha considerado en sus estrategias de mercadeo, el destacar los aspectos socio -culturales de sus productos, desaprovechando así, un esquema excelente para posicionar nuestros productos típicos tanto a nivel nacional como internacional. Tanto el gobierno municipal como estatal concuerdan en que existe una nula aplicación del concepto de enfatizar los aspectos socio culturales. El que decide, es el consumidor y es quien marca las características del producto y actualmente, la compañía que no escucha a su mercado, cuenta con pocas si no es que nulas posibilidades de sobrevivir en el ámbito de la preferencia de su mercado meta y en el de la competencia. La comunicación posee una alta carga de transformación social, contribuye a la democracia, a la construcción de la paz, a la cultura y al desarrollo. Los distintos actores que intervienen en el proceso comunicativo tienen una enorme responsabilidad a la hora de garantizar que el derecho a la comunicación sea efectivo. La aportación central, concretizada en base a los datos encontrados, es la Metodología Danzig. Su logotipo (Figura 3), describe de forma gráfica el significado de una comercialización, donde se comuniquen aspectos socioculturales: El ícono del diálogo indica el interés en promover el diálogo con una disposición total a escuchar e involucrar a todos en una participación activa, donde los participantes cuentan con el mismo poder. Se cierra la problemática de forma eficiente, indicando que ese ciclo se concluye para empezar a partir de ahí la solución de otra situación que se pueda presentar. Todos convergen en un punto de encuentro (eslogan de la metodología) diseñando, soluciones sustentables.

Los tres círculos representan los diversos públicos que interactúan en una problemática dada, que se interconectan entre sí a través del diálogo sustentable. Cada uno es de un color distinto porque cada grupo es diferente y se respeta e impulsa esa diversidad. También de forma indirecta se hace alusión a las tres culturas que conviven en Cuauhtémoc, Chihuahua. El verde significa la expectativa de erigir soluciones sustentables. El azul el respeto a las diversas formas de pensar, a la cultura, a la percepción que se concibe sobre el entorno. El morado es la apertura a escuchar las otras voces que tienen el mismo derecho a opinar diferente. El color áureo, como su nombre lo dice, es salvaguardar el objetivo de que prevalezca la sabiduría para encontrar soluciones integrales emanadas de todos y cada uno de los grupos participantes y que después de resolver una cuestión, esa sinergia se extienda a cada grupo, por ello, a cada esfera le rodea en su base un aro en ese color. El color negro que rodea al símbolo del diálogo y que es el color del eslogan, enfatiza la actitud de escucha profunda y entera. La sombra en azul del símbolo del diálogo, es la importancia del trabajo en equipo, necesario en el cambio social o cambio de paradigma. El nombre de Danzig es azul para resaltar el nombre. Su aplicación se efectúa por fases (Tabla 6) y cuya temática medular estriba en la nueva forma de comerciar, argumentando que la comunicación debe contemplarse como una herramienta estratégica al servicio de la gestión empresarial. De acuerdo a uno de los principios de la comunicación para el desarrollo, el centro del progreso humano se consolida a través del empoderamiento de la gente, y de la administración de sus habilidades y recursos, sin demeritar la riqueza de su medio ambiente y su cultura. Cada fase, cuenta con sus propios formatos de control, especificando las variables de estudio y los elementos de análisis que se contemplan. Por ejemplo, en la de Diagnóstico se considera para

este caso de estudio, la variable de la comunicación para el desarrollo y se cuestiona cuál es la problemática central de cada producto (Tabla 7) y así sucesivamente con las fases restantes.

Tabla 6: Fases de la Metodología Danizg

OBJETIVO GENERAL DE LA METODOLOGIA DANZIG	Promover el diálogo incluyente en un marco de respeto con una participación activa y un diálogo constructivo.
ETAPA	OBJETIVO DE LA ETAPA
0 SONDEO PRELIMINAR	Visualizar el contexto que engloba la problemática planteada e identificar a los beneficiarios.
DIAGNOSIS	Identificar la problemática central relacionada con la comunicación. Determinar el impacto y la actitud de la propuesta con los diversos públicos.
ESQUEMA	Responder el cómo se van a ejecutar: reuniones, responsables, presupuesto, estrategias de comunicación .
IMPLEMENTACIÓN	Controlar los tiempos para implementar cada etapa.
CONTINUIDAD	Dar seguimiento a las acciones para detectar un posible re direccionamiento en la estrategia de comunicación. Equipos, Escenarios, Divulgación.
VALORACIÓN	Medir la. Efectividad y Fortalezas.
REGISTRO	Documentar la aplicación del programa Danzig a este asunto en particular. Esquemas, Responsables.

Tabla 7: Variables y Elementos a Considerar en la Etapa de Diagnosis

ETAPA	ELEMENTOS DE ANÁLISIS
I DIAGNOSIS	¿Cuál es la problemática central del sector quesero artesanal del municipio de Cuauhtémoc, Chihuahua? ¿Se presenta en relación a la comunicación estratégica para la comercialización de su producto? ¿Incide la eficiencia de la mezcla de comunicación estratégica en su competitividad? ¿Existen otros factores que les afecten? ¿Estarán abiertos a comercializar de otra forma su producto? ¿Cuál es el beneficio de comercializar de esta forma? ¿Forma de medir los resultados?
Variables a resolver:	
Grado de presencia de comunicación para el desarrollo en la comercialización del queso menonita.	
Actitud frente al planteamiento de la propuesta	
Beneficios de aplicar la comunicación estratégica integral	
Públicos participantes para el diálogo y para el diseño de las estrategias de comunicación estratégica.	
Índice de valoración	
Formatos para documentar conclusiones y avances	

Al informarles a los públicos muestreados sobre la propuesta de la Metodología “Danzig” un 50% la visualizó como excelente y como una forma de acercar dos estilos distintos de concebir la actividad comercial. Un 25% piensa que es una idea medianamente interesante porque no es fácil romper las estructuras que han imperado desde siempre y el 25% restante la evaluó como inoperante, porque además de los argumentos del segundo grupo, se debe considerar la desconfianza de los productores locales para algunas actividades de ésta índole que el gobierno generalmente es el que las promueve (Figura 4).

Figura 4 Actitud frente a la propuesta “Metodología Danzig”

CONCLUSIONES

La mayoría de las metodologías de esta índole, fallan, en primera instancia, por el inadecuado enfoque de quienes la diseñan, generalmente, gente que labora en el gobierno o en algún organismo que no ha tenido contacto directo con la comunidad en cuestión y que, desconocen por ende, sus símbolos y códigos. Modelos de comunicación para el desarrollo enfocados al aspecto social, se enumeran en demasía, metodologías de planeación estratégica y de comunicación integral guardan el mismo comportamiento. Pero ninguna que conjunte los aspectos humanos, volitivos, culturales y tradicionales con la comunicación mercadológica. En este argumento se fundamenta la Metodología Danzig que reconoce y propone el respeto a las individualidades, promueve la diversidad, el dialogo equitativo y constructivo para la toma de decisiones conjuntas y para ello, todos los involucrados deben mostrar disposición al “alcanzar el punto de encuentro. El considerar el aspecto cultural y social como atributos del queso menonita es una estrategia que al momento no se aplica en esta región y su competitividad comunicativa con sus diversos públicos (proveedores, gobierno, medios de comunicación, entre otros) es muy deficiente. Por ello, una metodología como la Danzig, puede coadyuvar a solventar dicha problemática. La resistencia aparece ante todo cambio, así que no es causal para detener la presentación de la propuesta, la cual puede aplicarse o adaptarse a cualquier sector o grupo interesado en negociar bajo los parámetros de una comunicación sustentable estratégica. El camino es incipiente, generará detractores y defensores. Lo trascendente es atisbar nuevos escenarios, estructurarlos, compartirlos y que a partir de ellos se generen nuevos paradigmas que consoliden la sustentabilidad integral o total en los individuos, empresas y sociedades.

DESARROLLO DE CAPACIDADES PARA LA COMPETITIVIDAD SECTORIAL

Ramón Galván Sánchez, Universidad Autónoma de Baja California

Enselmina Marín Vargas, Universidad Autónoma de Baja California

RESUMEN

La importancia sobre el estudio de la competitividad de una empresa o grupo de ellas, de una región o un país, resulta de vital importancia para la propia subsistencia de las entidades económicas. Considerando algunos factores de influencia para la medición de la competitividad como son la región, las condiciones económicas, geográficas y de otros tipos, estaremos dando un paso hacia la comprensión de la complejidad que representa llevar a cabo dicha tarea. Asimismo, en la búsqueda de la competitividad, las entidades implementan diversas estrategias de impacto, tanto internas como externas, y en ese sentido una de las estrategias adoptadas es el desarrollo de sus capacidades. Por lo anterior, el presente trabajo de fuentes documentadas constituye un acercamiento hacia la investigación de las capacidades sectoriales a través de la perspectiva de la ciencia administrativa, para conocer su influencia como elemento generador de la competitividad sectorial, en grupos de empresas, conglomerados o clusters.

PALABRAS CLAVE: Desarrollo de capacidades, capacidades tecnológicas, agrupamientos sectoriales.

CAPACITY DEVELOPMENT FOR THE INDUSTRY COMPETITIVENESS

ABSTRACT

The importance of studying the competitiveness of a company or group of them, a region or a country, it is vital to the very survival of economic entities. Whereas some influencing factors for measuring competitiveness as are the region, economic, geographic and other conditions, will be taking a step toward understanding the complexity involved in carrying out this task. Also, the search for competitiveness, organizations use various strategies impact, both internal and external, and in that sense one of the strategies adopted is the development of their capabilities. Therefore, this study documented sources constitutes an approach to the investigation of sectorial capacity through the perspective of management science to study its influence as a generator of sector competitiveness, business groups, conglomerates or clusters.

JEL: R1, R13.

KEYWORDS: Capability building, technological capabilities, sectorial groupings.

INTRODUCCIÓN

El desarrollo industrial suscitado desde principios del siglo XX ha llevado a las empresas a un proceso natural de competencia en mercados locales, regionales, nacionales, y en las últimas tres ó 4 décadas, a la competencia internacional como consecuencia de la globalización y los avances tecnológicos. Este último proceso ha provocado la generación de nuevas formas de operación de agrupamientos empresariales, ya sea formales e informales, en función de su actividad, o su ubicación geográfica, entre otras causas. Así pues,

surgen los encadenamientos, distritos industriales, clusters, y otros tipos de agrupamientos conformados en sectores, con diversas características, pero con un común denominador: la búsqueda de la competitividad como elemento fundamental de subsistencia. Asimismo, también han surgido teorías y corrientes en las áreas del desarrollo humano, algunas de ellas, han traspasado sus fronteras de origen, insertándose en el campo de la economía, la administración, la ciencia política, y otras áreas; tal es el caso de la teoría de las capacidades, entendiéndola desde un panorama general, como la capacidad de adquirir y desarrollar nuevas capacidades.

Surgen entonces los siguientes cuestionamientos: ¿cómo aplica el desarrollo de capacidades en el ámbito de las organizaciones empresariales y sectoriales?, ¿existe alguna semejanza entre el comportamiento individual, y social, frente al comportamiento de las organizaciones empresariales en lo que concierne a las capacidades y su desarrollo?

En aras de acercarnos a la información de frontera para dar respuesta a tales interrogantes, ésta investigación aborda primeramente el tema desde una perspectiva conceptual y general; enseguida se estudian algunas corrientes sobre el desarrollo de capacidades y el desarrollo económico; posteriormente se profundiza sobre algunas otras corrientes sobre el desarrollo de capacidades, hasta llegar al estudio del tema central, al interior de las organizaciones. Por último, culmina con el análisis del desarrollo de capacidades en la competitividad sectorial, y se incluyen algunas conclusiones y reflexiones finales.

REVISIÓN DE LA LITERATURA

El Diccionario de Acción Humanitaria y Cooperación al Desarrollo, define a las capacidades como: "...opciones que una persona puede elegir de cara a realizar acciones o alcanzar estados de existencia con los que conseguir el bienestar o afrontar un desastre"; continúa el citado Diccionario definiendo al desarrollo como "...un proceso de aumento de las capacidades de las personas y de consiguiente reducción de su vulnerabilidad". Consultado el 3 de Julio de 2013 en: <http://dicc.hegoa.efaber.net>

Desarrollo de la capacidad

La Organización de las Naciones Unidas para la Alimentación y la Agricultura (FAO, 2010), publicó un documento denominado: "Estrategia Institucional Sobre el Desarrollo de la Capacidad"; donde desde un contexto de desarrollo internacional define a la capacidad como: "la aptitud de las personas, las organizaciones y la sociedad en conjunto de gestionar satisfactoriamente sus asuntos". En dicho documento se hace mención a su concordancia con la consecución de los Objetivos de Desarrollo del Milenio, y con las tres metas mundiales de la FAO en consonancia con los planes nacionales de desarrollo de los países. Asimismo, se menciona que en forma recurrente se asocia el DC con la transferencia de conocimiento y la formación de las personas (capacitación), lo cual es incorrecto, ya que el DC implica un proceso de cambio complejo, no lineal y de largo plazo, en el que ninguno de sus factores o componentes puede constituir por sí solo una explicación del desarrollo de la capacidad.

Evolución del concepto

La comunidad internacional ha adoptado la tendencia de sustituir el término utilizado anteriormente "creación de capacidad" por "desarrollo de capacidad". Éste cambio de término refleja una evolución del concepto, que inicialmente nos denotaba la no existencia de capacidades previas.

En su siguiente fase, nos refiere un concepto con énfasis en el control nacional, y a procesos de cambio endógeno. Cabe aclarar que de acuerdo a la FAO, ambos términos se seguirán utilizando debido a la abundante literatura existente en dicho organismo. Por último, la FAO considera que el DC constituye el principal "modus operandi" que respalda su programa de trabajo.

En la Tabla 1, a partir del trabajo de Castro et al., (2010), se presenta un resumen de las definiciones de términos planteadas por diversos autores a través del tiempo, enfatizando en que hasta la definición de Teece et al., 1997, que es cuando se define el término tal como lo conocemos hoy.

Tabla 1: Principales definiciones de capacidades dinámicas

TRABAJO	DEFINICIÓN
SCHUMPETER (1934)	Capacidad de Innovación: Artífice del proceso de “destrucción creativa”. Características que reúnen los “emprendedores” como actores clave en el proceso de continuo cambio.
NELSON (1991)	Evolución de las Capacidades Esenciales: Construidas sobre una base jerárquica de rutinas organizativas, definidas en función de un contexto Schumpeteriano o evolutivo.
PISANO (1994)	Capacidades de Alterar Recursos: Son el antecedente organizativo y las rutinas estratégicas mediante las que los directivos alteran la base de recursos de la empresa (adquieren, desincorporan, integran y combinan recursos) para generar nuevas estrategias de creación de valor.
TEECCE, PISANO Y MARTIN (1997)	Capacidades Dinámicas: Habilidad de la empresa para integrar, construir y reconfigurar sus competencias internas y externas y adecuarse a entornos de rápido cambio. Reflejan la habilidad organizativa de lograr innovadoras formas de ventaja competitiva.
EISENHARDT Y MARTIN (2000)	Consisten en procesos estratégicos y organizativos específicos (desarrollo de productos, alianzas, toma de decisiones estratégicas) para crear valor en empresas que operan en mercados dinámicos mediante la manipulación de recursos hacia nuevas estrategias de creación valor.
ZOLLO Y WINTER (2002)	Patrón aprendido de actividad colectiva mediante el cual la organización sistemáticamente genera y modifica sus rutinas operativas.
AUGIER Y TEECE (2007)	Se refieren a la capacidad (inimitable) con la que cuenta la empresa para formar, reformar, configurar y reconfigurar su base de activos para poder responder a los cambios en mercados y tecnologías.
WANG Y AHMED (2007)	Orientación en el comportamiento de la empresa a la continua integración, reconfiguración, renovación y recreación de sus recursos y capacidades y, más importante, al incremento y reconstrucción de sus capacidades esenciales en respuesta un entorno cambiante para conseguir mantener la ventaja competitiva.

En la tabla Castro, G. M., Sáez, P. L., & GONZÁLEZ, J. C. (2010) presenta un resumen de las definiciones de términos planteadas por diversos autores a través del tiempo. El autor hace énfasis en la definición de Teece et al., (1997) ya que a partir de ésta es cuando se acuña el término de “capacidades dinámicas” tal y como lo conocemos hoy.

DIVERSOS ENFOQUES DEL DESARROLLO DE CAPACIDADES

Teoría de las capacidades y el desarrollo económico

Álvarez (2001), realiza una revisión exhaustiva sobre las aportaciones de Amartya Sen (premio Nobel de Economía en 1998), a las Teorías del Desarrollo, quién con un enfoque humanista, fue más allá del análisis económico para incluir nociones como los valores, la cultura y la libertad, así como para medir la pobreza y el desarrollo humano; precisamente uno de sus aportes fue la definición del índice de bienestar y pobreza.

Sen A. (2000), abordó también la teoría de la elección social, considerando que la dimensión cultural es la que determina como las personas generan y gastan su ingreso; en este sentido, éste autor propone entender el desarrollo como un proceso de expansión de las libertades reales que disfrutaran las personas, considerando estas libertades como fin y como medio para el desarrollo. A a éste autor también se le reconoce su aportación a la ciencia económica por haber combinado la economía y la filosofía, matizando a través de la ética la discusión de problemas económicos trascendentales, mediante un enfoque de multidisciplinariedad.

Las capacidades estatales

En el ámbito del sector público, se refiere específicamente al rol del Estado como rector y responsable de solucionar la diversidad de problemas que aquejan a la sociedad actual en la mayoría de los países de América Latina. Respecto a lo anterior, Isuani, F. J. (2012), realiza una investigación profunda enfocada hacia los instrumentos de las políticas públicas, asumiendo que éstos son factores clave en las capacidades estatales.

Las capacidades en la educación superior

Aristizábal, A. B., Aguilar, J. F. L., & Walker, M. (2010), en su publicación “La educación superior desde el enfoque de capacidades. Una propuesta para el debate” nos presenta un análisis donde hace resaltar las posibilidades que ofrece el enfoque de capacidades para la educación superior como elemento clave hacia una meta clara y sólida, fundamentada en la expansión de las libertades reales de las personas (en este caso los estudiantes) para elegir llevar la vida que tienen razones para valorar. Asimismo, el Banco Mundial y la Comisión Europea reconocen que la educación universitaria en la sociedad del conocimiento ha coexistido paralelamente al capital humano, llegando a tal grado de medir y justificar las inversiones en capital humano a través de la educación, por su retorno económico, dejando de lado la esfera del individuo y su derecho al aprendizaje, como parte de la construcción de una sociedad democrática.

Las capacidades humanas, la ética y las políticas de desarrollo

Otra importante investigación realizada por Gough, I. (2007), nos ofrece un profundo análisis sobre el enfoque de las capacidades humanas, a través de un estudio comparativo en contraposición con la teoría de las necesidades humanas; el cual lleva a cabo en base en el trabajo de Nussbaum, pero con un enfoque más cercano a la ética y las políticas de desarrollo.

El desarrollo de capacidades en las organizaciones

Después de abordar el desarrollo de las capacidades desde las perspectivas social, humana, y política, con enfoque hacia el campo del desarrollo económico, es preciso aclarar que a través de la ciencia económico-administrativa es como se establece un puente sólido, que permita el tránsito del desarrollo de capacidades, hacia el plano del medio ambiente empresarial y organizacional, hasta ubicarlo en el ámbito de la competitividad sectorial, lo cual constituye una finalidad de éste trabajo.

Expuesta la reflexión anterior, debemos plantearnos las siguientes preguntas: ¿cómo aplica el desarrollo de capacidades para el ámbito de las organizaciones empresariales y sectoriales?; ¿existe alguna semejanza entre el comportamiento individual, y social, con el comportamiento de las organizaciones empresariales en lo que concierne a las capacidades y su desarrollo? En un intento por dar respuesta a las interrogantes anteriores, hemos rescatado algunos trabajos de la literatura especializada, los cuales desde nuestro particular punto de vista, a través de su análisis nos permitirán acercarnos a las respuestas a los cuestionamientos anteriores.

Aprendizaje y construcción de capacidades tecnológicas

La teoría de Vargas, A. T. (2006), constituye un papel crucial en la administración estratégica de las llamadas “capacidades dinámicas”. Por lo anterior, debemos entendemos como proceso de construcción de capacidades tecnológicas, al aprendizaje y acumulación de conocimiento tecnológico, focalizándose en cómo esas capacidades se agudizan, (no cómo se construyen) se mantienen, y se renuevan, lo cual les permite permanecer en la vanguardia tecnológica.

En los países en desarrollo en la década de los setentas, se dio una evolución de los conceptos de aprendizaje y acumulación de capacidades, dando lugar a diversos estudios sobre el tema, convirtiéndose ya en un marco de análisis, lo que dio pauta para que en la década de los noventa apareciera la propuesta de una taxonomía realizada por los autores Bell y Pavit (1995), la cual se denominó: taxonomía de capacidades tecnológicas en las firmas.

En el mismo orden de ideas, resulta oportuno hacer énfasis en la última parte del párrafo anterior, ya que desde nuestro particular punto de vista, es en este momento donde confluyen la teoría de las capacidades,

o el desarrollo de capacidades hacia el ámbito organizacional, reconociéndose y utilizándose por vez primera, el término de capacidades organizacionales.

Los conceptos continúan evolucionando, saliendo a la luz términos como: capacidades nucleares (Prahalad y Hamel 1990) y capacidades dinámicas (Teece y Pisano 1994), entre otros; sin embargo, todos coinciden que el aprendizaje y el conocimiento son esenciales para las firmas para su sobrevivencia y mantener o mejorar sus ventajas competitivas respecto de sus competidores. A partir de entonces, los estudios se han centrado en responder cómo las ventajas competitivas de las firmas pueden ser reforzadas a través de la renovación de sus capacidades o competencias.

Las capacidades dinámicas

Según Roncancio R. (2011), La fundamentación teórica de la corriente de las capacidades dinámicas tiene su origen en la biología, la psicología y la economía. De la biología rescata el concepto de la ecología de poblaciones: de la psicología obtiene los conceptos de aprendizaje y cognición, y de la economía la teoría de la firma; estos conceptos son integrados en una corriente con visión estratégica gerencial, como procesos de aprendizaje colectivo generadores de capacidades internas distintivas y difíciles de imitar.

Lo anterior se fundamenta en las investigaciones de Shoemaker (1993), Barney (1991), Prahalad&Hamel (1990), Teece et al (1997), Penronse (1959, 1965) Selznick (1957), los cuales son citados en el trabajo de Volberda (2004). Roncancio, R. (2011).

Para Bravo Ibarra, E. R., Mundet Hiern, J., & Suñé Torrents, A. (2006), desde la óptica organizacional, es importante tomar en cuenta el grado de combinación de conocimiento. Los recursos son la unidad básica; las capacidades son el resultado de la combinación de recursos, y la combinación de capacidades genera habilidades esenciales para lograr la ventaja competitiva, a lo cual se le denomina como capacidades centrales. La teoría de las capacidades dinámicas se ha expandido rápidamente en el entorno de la administración de empresas, específicamente en el área de la estrategia empresarial o Administración Estratégica, ya que resalta la importancia de las condiciones del mercado en que éstas operan, y el valor de los recursos o capacidades de las mismas. (Cruz, G. J., Navas, L. J., López, S. P. & Delgado, V.M., s.f.). El origen de ésta teoría está ligado a las dos corrientes principales que intentan explicar el incremento de utilidades de las empresas como consecuencia de la ventaja competitiva sostenible; se trata pues, del Enfoque de las Fuerzas Competitivas (Porter, 1981) y la Teoría de Recursos y Capacidades (Barney, 1991), según establece de Castro, G. M., Sáez, P. L., & GONZÁLEZ, J. C. (2010).

Otro aspecto relevante en un sentido más formal sobre el tema que nos ocupa; el hecho de que nuestras fuentes afirman que la teoría de las capacidades dinámicas aplica a las empresas u organizaciones en ambientes cambiantes o dinámicos, y es entonces cuando nos surgen los siguientes cuestionamientos: ¿Qué empresa u organización, sin importar el tamaño de la misma, operando en el entorno actual que le corresponda por su actividad, se excluye de estar expuesta a cambios constantes?

En pleno siglo XXI, una etapa de la existencia humana que es calificada y entendida plenamente como “la era del conocimiento”, “la era de la globalización”, o “la era de la tecnología”, o simplemente atendiendo a la opinión de analistas e historiadores cuando afirman de manera contundente, que la humanidad ha experimentado un cambio mayor en todos sus aspectos durante el segundo quinquenio del siglo XX, que en los últimos dos milenios, fundamentado sobre todo, por la influencia vertiginosa del avance en la tecnología experimentado en las últimas décadas.

Desarrollo de capacidades en la competitividad sectorial

Las Capacidades Tecnológicas a nivel de sectores y países

Vargas (2006), resalta la escasez de literatura especializada al respecto, señalando que la mayoría de los textos disponibles se han concentrado en estudios de caso acotados a una o más firmas integrantes de sectores específicos, por lo que no pueden ser considerados como estudios de un sector. Refiere a un estudio en Korea realizado por Lall en 1992, entre otros, enfocados al estudio de los patrones de desarrollo tecnológico de algunas firmas de la industria química, acero y textil. Dentro de las aportaciones rescatadas en éste estudio, resaltan los aspectos externos a las firmas en los procesos de aprendizaje y la acumulación de capacidades tecnológicas, como son, las políticas gubernamentales relacionadas con la promoción de un modelo de industrialización basado en exportaciones, y el papel de la estrategia de desarrollo tecnológico impulsada por el estado coreano.

Continúa Vargas (2006), argumentando que en un intento por analizar las capacidades nacionales, se toman en cuenta tres elementos que gravitan entre sí, los cuales son: capacidades, refiriéndose a la inversión física; capital humano y esfuerzo tecnológico; incentivos, generales o macroeconómicos, derivados de la competencia doméstica e internacional, y derivados de los mercados de factores (mercados de trabajo y de capital); y las instituciones, industriales, de entrenamiento y tecnológicas. En el mismo tenor, afirma que el marco propuesto y utilizado por Lall, proporciona diversos elementos para el análisis de las capacidades tecnológicas. Sin embargo al conservar cada país sus características particulares, resulta difícil que el marco sea adaptable hacia tal heterogeneidad, por lo que se incorporan al estudio diversas dimensiones nacionales, y se incluyen indicadores como gastos en I+D, tamaño de los recursos humanos, importaciones de bienes de capital, gastos en educación, número de patentes, número de ingenieros en actividades de I+D, entre otros.

En México también ha sido recurrentes los estudios de firmas, en su mayoría se ha tratado de estudios de caso que analizan procesos de aprendizaje, y muy pocos de ellos han abordado el análisis a nivel sectorial. Existe un estudio realizado por Villavicencio y Arvanitis en 2001, sobre una muestra de empresas de la industria química. Los mencionados autores examinaron las capacidades de aprendizaje de esa industria, clasificando a las empresas bajo su contexto en cuanto a tamaño, origen de capital, fuentes de tecnología, entre otras variables; encontrando diferentes comportamientos y patrones de acumulación de conocimiento. (Vargas, 2006).

A nivel Latinoamérica, el status de las investigaciones es similar al caso de México. Llama la atención el interés por estudiar los efectos en la competitividad de las industrias, de la apertura económica y el análisis de los sistemas nacionales de innovación. No se han realizado muchos estudios a nivel sectorial; se hace referencia al estudio de Unger (1985, 1994) de los sectores petroquímico y de máquinas herramientas en México (Vargas, 2006).

La competitividad sectorial. Michael Porter, el referente obligado

En el libro “Ser Competitivo” Porter, M. E. (2009), nos ofrece profundas reflexiones sobre sus trabajos anteriores, así como la evolución de sus ideas a lo largo de casi tres décadas, de publicaciones sobre: ventaja competitiva, clusters, y otras interesantes teorías de la ciencia económico-administrativa. Por lo anterior, se abordará la influencia de la ubicación de las empresas en su ventaja competitiva. Porter (2009), destaca la relevancia de los “cúmulos” o “agrupaciones sectoriales”, analizando de paso, el papel del Estado en la competitividad de las empresas y las naciones; Porter (2009), afirma que para el logro del bienestar económico y social de las empresas, el requisito es que la innovación sea una constante dentro de las mismas, señalando que “la prosperidad nacional se crea, no se hereda”. Señala que ante la presencia de la globalización, las empresas ya no se detienen a establecer metas ni estrategias nacionales, ya que bajo el enfoque global, dichas metas o estrategias son más bien, mundiales o plurinacionales.

Respecto a sus trabajos enfocados al estudio del sector Porter (2009), manifiesta que fueron realizados en un momento en que la empresa tenía el papel de unidad dominante; pero una vez que se analizó la empresa

como conjunto, surgió el interés por estudiar la actividad, para posteriormente avanzar hacia los estudios relacionados con el cúmulo, entendiendo éste último, como la agrupación de empresas atendiendo a su ubicación geográfica. Continúa refiriendo Porter (2009), la importancia de analizar la naturaleza local para conocer el acceso a recursos, capacidades y competencias que pueden influir para decidir sobre una determinada estrategia empresarial, haciendo uso de la ventaja competitiva.

Estudios sectoriales

Refiere de Castro, et al. (2010), que de acuerdo a un estudio empírico con datos secundarios obtenidos del informe “Monitoring Industrial Research: The 2006 Industrial R&D Investment Scoreboard”, aplicado a una muestra de 177 empresas de la industria del software a nivel mundial, se obtuvo como resultado, que las empresas que desarrollan de manera conjunta capacidad de absorción y capacidad de innovación obtienen mejores resultados. Lo anterior se interpreta como la capacidad de absorción a la habilidad de la empresa de reconocer el valor de la nueva información de origen externo, asimilarla y aplicarla con fines comerciales; y como capacidad de innovación, al desarrollo de nuevos productos y servicios, nuevos métodos de producción, identificación de nuevos mercados, nuevas fuentes de suministros y desarrollo de nuevas formas de organización (de Castro, et al., 2010).

Por último, el mismo autor identifica un área de oportunidad para investigaciones futuras en lo relativo a la generación de indicadores más precisos para la medición de las capacidades de absorción e innovación; recomienda la inclusión de datos más complejos considerando datos primarios con datos externos como los de clientes, proveedores, e instituciones, entre otros; además enfatiza sobre la importancia de capitalizar la generación de ésta información para convertirla en una respuesta hacia los cambios del entorno desarrollando nuevos esquemas de organización y modelos de negocio, así como mejora en los procesos productivos y de dirección en las empresas.

En México, podemos referir el caso de la industria textil, de confección de pantalones “jeans” en la comarca lagunera, considerada la capital mexicana de producción de este tipo, para abastecer al mercado estadounidense. Estas empresas tuvieron que diseñar e implementar estrategias para la mejora de sus capacidades productivas de diseño e innovación, así como de comercialización, para contrarrestar sus factores internos y externos, a través de una reorientación estratégica que les permitiera continuar siendo competitivos. (Tokatli, 2004, en Arroyo López, P. E., & Cárcamo Solís, M. D. L., 2009).

Estudios sectoriales. Un caso local

En el año 2004, como respuesta a una solicitud de estudio por parte del Consejo de Desarrollo Económico de Ensenada (CODEEN, 2010) se presentó un documento titulado “PLAN ESTRATEGICO DE DESARROLLO ECONOMICO DEL MUNICIPIO DE ENSENADA 2010”, el cual fue realizado por el Centro para el Desarrollo Regional y Nacional (CEDERENA) del Centro de Estudios Estratégicos de la Escuela de Graduados en Administración Pública y Política Pública (EGAP) del Sistema ITESM, en colaboración del Colegio de la Frontera Norte (COLEF), la Universidad Autónoma de Baja California (UABC), la Secretaría de Economía del Gobierno del Estado (SEDECO), y el despacho Integra Consultores.

En dicho documento, estructurado a través de 4 tareas sustantivas, se llevó a cabo una identificación y análisis de los principales sectores detonantes de la economía de Ensenada. Asimismo, dentro las mencionadas tareas sustantivas, se aborda la integración de clusters económicos potenciales, así como la planeación normativa y estratégica para la integración y desarrollo de los mismos, concluyendo con la generación de un plan estratégico de desarrollo económico del municipio en los mismos términos. A casi diez años de la elaboración de tan importante proyecto, resulta de sumo interés para este trabajo, cuestionar

los avances alcanzados en ese sentido, o bien, por otro lado, investigar si existieron limitaciones o impedimentos para su implementación (Galván, R., & Marín, E. 2009).

En México se miden las condiciones de competitividad utilizando algunos indicadores internacionales con mayor reconocimiento, como el emitido por el Foro Económico Mundial y el Instituto Internacional para el Desarrollo Gerencial, los cuales son publicados en el Reporte Global de Información Tecnológica. Internamente también se utiliza el métrico emitido por el Instituto Mexicano para la Competitividad, entre otros. (Fernández, M. A., 2007).

METODOLOGÍA

Como se mencionó en la introducción, ésta investigación aborda primeramente el tema desde una perspectiva conceptual y general, para seguidamente estudiar algunas corrientes sobre el desarrollo de capacidades bajo diferentes enfoques, hasta culminar con el análisis del desarrollo de capacidades sectorial. A través de pesquisas documentales en revistas y textos científicos nacionales e internacionales, se logró llegar a un cúmulo de información para su análisis y reflexión, y así estar en condiciones de construir la discusión y conclusiones a través del sustento teórico.

DISCUSIÓN Y CONCLUSIONES

La corriente sobre el desarrollo de capacidades aplicada a las organizaciones aún se encuentra en proceso de formación y evolución; una evidencia de ello es la presencia de una serie de definiciones del término, sin consenso sobre alguno en particular.

Uno de los mayores avances sobre ésta teoría consistió en ubicar al individuo como el centro de la misma, con un enfoque humanista, para ubicarlo como un ente libre de tomar decisiones.

En términos de políticas públicas en países subdesarrollados, es cuestionable el éxito de la corriente de desarrollo de capacidades enfocado hacia la competitividad, específicamente la referencia se encuentra en algunos países de América Latina; ello debido a escasos o nulos resultados en su implementación.

Desde el ámbito de las políticas públicas en México, existen esfuerzos importantes en todas las esferas de gobierno para lograr la competitividad de diversos sectores a través de la aplicación de este enfoque, sin embargo, los resultados han sido muy pocos.

Asimismo, el Plan Nacional de Desarrollo 2013-2018, presenta una fuerte inclinación hacia el desarrollo de actividades estratégicas y fomento a la formación y desarrollo de clusters y otros agrupamientos como estrategia para elevar la competitividad del país; sin embargo, esta misma política ya ha formado parte de otros planes de desarrollo, y en todos los niveles de gobierno, así como en algunos países de América Latina.

En concordancia con el párrafo anterior, existe un área de oportunidad en cuanto a la implementación de políticas públicas bajo este enfoque. Lo anterior se origina por una desarticulación entre la concepción de las acciones de gobierno y la implementación, debido a que no se preparan ni se capacitan a los actores involucrados, lo que trae como consecuencia bajo impacto o el total fracaso de dichas acciones.

Jesús Nereida Aceves López, Instituto Tecnológico de Sonora

RESUMEN

En esta investigación se estudian a un grupo de pequeñas y medianas empresas que requieren de un asesoramiento continuo, capacitación y adiestramiento en el manejo de la gestión administrativa. Para realizar este proyecto se establecieron convenios de trabajo e investigación conjunta con 15 medianas y pequeñas empresas. Mediante el método de investigación de consultoría de negocios y la participación de tres académicos que están certificados en la competencia de consultoría de negocios. A través de los diagnósticos que se le realizaron a estas organizaciones, se detectan, una diversidad de situaciones que muestran debilidades dentro de las empresas aquí estudiadas en las: áreas de recursos humanos, administración, mercadotecnia, finanzas y otras. Derivado de este análisis se plantea el siguiente cuestionamiento ¿Cuáles son las necesidades de capacitación, adiestramiento e indicadores de mejora en su gestión administrativa para estas pequeñas y medianas empresas consultadas por un grupo de académicos expertos en esta temática? y cuyo fin es mostrar los resultados de mejora y su indicador bajo el método de consultoría de negocios validado por la norma de certificación de competencias laborales.

PALABRAS CLAVES: Consultora de Negocios, Indicadores De Mejora, Capacitación

BUSINESS CONSULTING A MEANS OF HELP AND IMPROVEMENT INDICATOR FOR SMALL AND MEDIUM ENTERPRISES

ABSTRACT

certification studied a group of small and medium businesses that require continuous advice and training in the handling of administrative management. To make this project were established labor agreements and joint research with 15 medium and small enterprises. By the method of investigation of business consulting and the participation of three academics who are certified in competitive business consulting. In the diagnoses that were performed to these organizations, a variety of situations were detected that show weaknesses in companies studied here, in the areas of human resources, management, marketing finance and other Derived from this analysis, the following question arises, what are the training needs, and indicators of improvement in his administration for these small and medium business consulted for a group of academic experts on this subject whose purpose is to show the results of improvement and indicator under the business consulting method validated by the standard of competency certification.

INTRODUCCIÓN

En la actualidad las Pequeñas y medianas empresas, mejor conocidas como PYMES fortalecen el sector económico según datos del Instituto Nacional de Estadística, Geografía e Informática (INEGI 2010) en México. Es por ello que el ofrecerles ayuda por cualquier medio, es bien recibido por las mismas empresas. La manera de que estas organizaciones se puedan fortalecer y perdurar a través del tiempo es tener una visión a largo plazo en donde incluyan como parte de la gestión administrativa una asesoría o ayuda constante. Resulta interesante recibir opiniones ajenas al personal de la empresa y que puedan opinar desde una perspectiva desde fuera de la organización, en cuanto a ¿cómo se encuentran?, ¿qué podría mejorarse?, ¿cómo influyen los factores de competencia de otras empresas en ellas? y ¿cómo mantener capacitado a su recurso humano, en aras de mantener el compromiso y la filosofía de la empresa para seguir creciendo en una economía tan cambiante? Estas resultan ser cuestionamientos que le ayudan a cualquier organización y bajo el método de consultoría podría irse resolviendo estas interrogantes.

La consultoría de negocios proporcionar una herramienta de apoyo al diagnóstico empresarial, con la cual se pueden observar en cada una de las áreas funcionales y administrativas de estas pequeñas y medianas empresas las necesidades de apoyo así como también cómo es la interacción del personal que trabaja en ellas. Otra forma de auxiliar a las empresas, es detectando en el personal que poseen, en cuanto al capital intelectual que pueden aportar mediante ideas innovadoras y mejoras que requieren día con día las organizaciones. Sumando a la creatividad de socios y asesores forman el factor clave del éxito empresarial.

REVISIÓN BIBLIOGRAFICA

La consultoría de negocios es requerida por los empresarios, gerentes y demás personal que participa en la empresa y que deben tener la confianza de que al recibir una asesoría o consultoría externa, beneficiará y ayudará a obtener mejores soluciones de sus problemas, con lo cual también podrá buscar ideas creativas pero sobre todo a capacitar a su personal y hacerlos sentir que al recibir una indicación externa será un foco de atención a todas las oportunidades que se pueden presentar en la empresa y a su vez debilidades que se pueden mejorar que en muchas de las ocasiones por la misma cotidianidad y operación del negocio; el personal clave como directivos, dueños y gerentes no las observan, o bien, al no prestarles atención dejan ir esas oportunidades. Esto se asemeja cuando una persona tiene tanta actividad que deja de ver sus propias necesidades y tiene que acudir a alguien que le diga cual realmente es su prioridad, a lo que se le denomina consultoría o asesoría personal de negocios lo menciona Norma General de Consultoría de Negocios (2003).

Como lo menciona el documento de referencia de la Consultoría de Negocios bajo el concepto de Peter Druker (2001) “Desde mediados de los años setenta, lo que se conoce sobre administración ha cambiado y en el futuro los gerentes tendrán que ser capaces de aprender cosas nuevas”. En tanto que Hammmmer y Champy (1993) en su libro de “Reingeniería”, a manera de subtítulos expresan “Olvide lo que usted sabe cómo debe funcionar una empresa ¡¡Casi todo esta errado ¡Los consultores son el medio para conducir los cambios como: en competencia de mercado, la cual se ha vuelto más intensa, la tecnología ha modificado la forma de hacer negocio y otras variables que afectan a la organizaciones independientemente de su tamaño. La asesoría externa a través de consultores es la fuerza que ha creado las mejoras e innovaciones en procesos internos dentro las empresas apoyando en metodología apropiadas a las características de estas organizaciones.

La definición de la consultoría parte del trabajo profesional que se ofrece como servicio y su característica es tener método, una capacitación y reconocimientos actuales para brindar la ayuda a las empresas lo menciona Norma Técnica de Competencia Laboral (2003) y también propone que el consultor es aquel profesional que brinda sus conocimientos, destrezas, habilidades y comparte su experiencia para diagnosticar los problemas, ayudar e implementar, capacitar para lograr la solución a los problemas que puede presentar la empresa en estudio, derivado de estos estudio menciona (Norma General de Consultoría

de Negocios 2003) En función de aplicar la consultoria general en los negocios va requerir de conocimientos, experiencias y habilidades que a partir de ellas busquen la calidad de ofrecer los servicios de ayuda al sector productivo. Consultoria de Negocios considera un método de solución de problemas y los maneja a través de cuatro fases que son:

Fase de diagnosticar la situación actual de los negocios, en donde se deriva el diagnostico empresarial, a través de aplicar instrumentos de búsqueda información directa como es entrevista, cuestionario y método de observación directa.

El cuestionario es documento que contiene preguntas encaminadas al área de la empresa que propone investigación y se aplica autoridades, trabajadores y los necesarios para obtener información clave.

Entrevista es un método empleado y consiste en llevar a cabo una plática directa con el personal de la empresa que posee los conocimientos de los temas que se están indagando y proporciona información de primera fuente.

Estas se pueden realizar al personal, gerente, dueños, cliente, proveedores.

Método de observación directa, es un guía diseñado por el que requiere la información y deberá validarlo de manera física y posee las características de pasar inadvertido en su proceso de observación.

El método de fuentes indirectas se apoya en documentos de la organización o bien en otros que permitan resaltar la búsqueda de información como revistas, libros, tecnología etc.

Fase de Sistema de ayuda, en ella una vez que se tiene el diagnostico de las áreas a revisar dentro de una empresa pequeña o mediana, se separan en áreas funcionales y/o administrativas según el caso van desde la administración general, recursos humanos, finanzas, mercadotecnia, calidad y servicio, producción, comercialización, medio ambiente, seguridad ó bien aquella actividad que sea parte de su gestión administrativa.

También utiliza indicadores para la medición de resultados y se apoya con un marco de referencia que significa, es aquel modelo que va a comparar y diagnosticar la realidad de un ente analizado, lo describe la Norma General de Consultoría de Negocios (2003), en otras palabras el modelo de referencia es un estado deseado contra el que vamos a comparar la realidad.

Los indicadores son elementos que permiten observar el comportamiento de las variables que miden el modelo de referencia en función del proceso diagnóstico y va a proponerse mejorar a través del sistema de ayuda en donde se dice la ayuda al área y su indicador, por ejemplo:

Administración como actividad funcional e indicador a mejorar la planeación estratégica.

Recursos Humanos como área de la empresa y su indicador de mejora capacitación.

Finanzas como función administrativa e indicador: Rentabilidad, control de ingreso vs egresos.

Ventas como actividad funcional ó área administrativa su indicador importe de las ventas, precio, descuento etc.

En la fase de implementación y capacitación se realiza una vez que el diagnostico empresarial realiza la propuesta de ayuda a la empresa y lo realiza mediante los indicadores por cada área y estas están sujetas a un proceso de capacitación.

En donde la capacitación es la preparación y adiestramiento a la persona en puesto o área de desempeño.

Indicador son elementos que sirven para observar el comportamiento de una variable en determinado momento en función del cumplimiento de la propuesta de mejora. Finalmente en la última fase de Evaluación y cierre de resultado tendrá que plantear de nuevo el cuestionario o proceso de entrevista o

método de observación de fuente directa e indirecta y comparar los resultados al inicio del diagnóstico como al final de su implementación y capacitación con la mejor intención de observar la mejora como un resultado de asesoría externa por medio de la consultoría general.

Otro tipo de ayuda que reciben las pequeñas y medianas empresas consultadas es en su proceso de desarrollar la planeación estratégica como parte del crecimiento y orientación de la organización como lo dice Peter Druker (2001) identificar factores de competencia, habilidades tecnológicas y dirección el rumbo de la organización como se dice seguir aprendiendo en función de la evolución de la apertura al mercado global y a los constantes cambios que bien las empresas y su administración en la actualidad. Otra parte fuerte de la consultoría de negocios es la ayuda a la gestión financiera y la obtención de sistema de información financiera la cual busca mejorar la toma de decisiones dentro de la empresa. Al igual participa de manera de apoyo y ayuda a planear las contingencias que pueden llevar a cualquier compañía a la quiebra y finalmente todos aquello que de manera conjunta con los empresarios, administradores y directos se puedan establecer mecanismos de cooperación y ayuda inteligente en el bien de la organización.

También se pueden derivar varias preguntas relacionadas con el servicio y la ayuda que ofrece la técnica de consultoría general. El buscar la opción más propia para la solución de problemas, inicia cuando una empresa se encuentra insatisfecha ó es susceptible a mejoras y requiere de un cambio que beneficie a los resultados de esta. Por eso se dice que los empresarios poseen diversas razones para solicitar ayuda, entre ellas se pueden mencionar:

Como mejorar sus operaciones y el mejor manejo de ellas a través de conocimientos y practicas gerenciales actuales.

Otro podría ser una intensa asistencia de carácter profesional y temporal.

Al igual obtener una opinión profesional externa e imparcial que beneficie a la organización.

Finalmente apoyar las decisiones de la gerencia y de los empresarios.

El llevar a cabo la consultoría general es necesario tener bien identificado al tipo de empresa con la que habrá de trabajar y es también es importante iniciar con un diagnóstico de necesidades del ente que participa en este tipo de servicios de consultoría. Entonces definamos que es una empresa según (Ánzola, 2010). Es una unidad económica –social, integrada por los elementos humanos, materiales y técnicos, que tiene como objetivo si de lucro obtener utilidades a través de su participación en el mercado de bienes y servicios haciendo uso de factores productivos como (tierra, trabajo y capital).

En tanto que el segundo foro de MPYMES (Micro y Pequeña y Mediana Empresa, 2010) “es una organización social que realiza un conjunto de actividades y utiliza una gran variedad de recursos (financieros, materiales, tecnológicos y humanos) para lograr determinar objetivos, como la satisfacción de una necesidad o deseo de su mercado meta con la finalidad de lucrar o no.

Ahora bien existen diversos tipos de empresas que se clasifican de acuerdo al diario oficial de la federación el día 30 de junio del 2009 en México. Establece el tamaño del sector, sus rangos trabajadores, en montos de ingresos y sus ventas, observe la Tabla 1

Esta clasificación la emite la Secretaría de Economía en México, con la finalidad de tener una estratificación en el sistema financiero mexicano y que su vez permite, identificar los rangos de tipo de sector que prevalecen en la economía mexicana, así como número de trabajadores, montos de ingresos en función a sus ventas al año. Esto es una muestra de cómo se encuentra el sector productivo en el país. También se identifica aquellas empresas que se han dedicado al comercio, industria y servicio, las cuales se asocian con la actividad preponderante o bien en pocas palabras a lo que se dedican estas agrupaciones en su operación diaria. Dentro de esta división, se ha identificado que algunas de ellas son empresas familiares las cuales se

definen según Grabinsky (2002) “La empresa familiar es aquella en la que los dueños y los que administran toman decisiones estratégicas y operativas, y son miembros de una o varias familias”.

Tabla 1: Estratificación de la clasificación de empresas, giro y número de empleados

Tamaño	Sector	Rango de trabajadores	Rango de montos Anuales (mdp)	Ventas generados (máximo) vs. Ingresos
Micro	Todas	Hasta 10	\$4	\$4.6.
Pequeña	Comercio	Des 11 hasta 30	\$4.01 hasta \$100	\$ 93
Pequeña	Industria	Des 11 hasta 50	\$100.01 hasta \$250.	\$235
Mediana	Servicio			
	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250.	\$235
	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250.	\$235
	Industria	Desde 51 hasta 100	Desde \$100.01 hasta \$250.	\$250.

Fuente: Secretaría de Economía de México 2010.

Esta definición de empresa no difiere del concepto de general de entidad como compañía, más bien viene a reafirmar que este tipo de negocios independientemente de que sean familiares o no, forman parte de la administración del negocio, y ocupan puestos claves dentro de ellas; como es el caso de las pequeñas y medianas empresas que siempre tendrán algo que mejorar, y que para ese proceso de mejora continua requiere ayuda y asesoría staff de una manera profesional y con experiencia en el área requerida; viendo desde esta óptica la ayuda, resulta entonces que la consultoría general es sin duda un medio efectivo y eficiente para apoyar a las organizaciones en procesos claves y exitosos en la gestión en administrativa.

Para entender que es la gestión dentro de la compañía es importante comprende su significado, entendiéndose entonces como una herramienta de administración que se encarga de ejecutar todas aquellas órdenes y actividades que se planearon por la compañía, lo hace mención (Venegas, 2013).

La definición de gestión también tiene que ver con todas las actividades que están vinculadas en la operación diaria de cualquier negocio, como es:

Departamento de personal el cual tiene una gestión relevante ya que es la encargada de reclutar, capacitar y dar inducción a todo el personal de la organización así como el mantener el clima organizacional de la misma.

En el área de Ventas esta es vital, ya que de ella dependerá la gestión de los ingresos que le dan vida a la entidad y apoyada con el servicio y calidad que esperan los clientes; entre otras funciones que se pudiesen realizar. La gestión financiera y contable, su prioridad está encaminada a desarrollar proyectos y mantener operando día con día a la administración en general. Analizando todos los recursos que posee el negocio y que resulten convenientes económicamente, es decir, que, entre todo lo que se presenta, hay que atender el de mayor utilidad, lo menciona (Grabinsky 2002).

Por ello la consultoría general, como herramienta de ayuda busca la mejora opción de ayuda para aquella organización que requiera de este tipo de servicios y sobre todo que busque en su administración el crecimiento, permanencia en el mercado y la mejora continúa en todos y cada uno de sus procesos.

Planteamiento Del Problema

Las empresas siempre tendrán necesidad de ayuda, eso lo dice la historia y lo asegura la evolución de las entidades, para crecer y mejorar las pequeñas y medianas empresas tienen necesidades constantes y variables tanto internas como externas que la afectan, máximo con los cambios tecnológicos, los mercados globales, fiscales y empresariales, que día con día viven cualquier tipo de organización. Para la presente investigación se tiene un patrón de datos que pertenece a un grupo de pequeñas y medianas empresas, en

las cuales se diagnóstico la situación actual de cada una de ellas; mediante la participación de un grupo de académicos expertos en la consultoría de negocios, se detectaron necesidades en ellas como: fallas en el control interno del área financiera, falta de capacitación en su recurso humano, mejorar su mercadotecnia y oportunidades en la gestión administrativa; estas situaciones han permitido plantear el siguiente cuestionamiento ¿Cuáles son las necesidades de capacitación e indicadores de mejora en su gestión administrativa para las empresas que participan este proyecto de investigación y que fueron consultadas por un grupo de académicos universitarios expertos en la consultoría de negocios?

Objetivo: Es mostrar los indicadores de mejora y la capacitación requerida en la gestión administrativa para las empresas participantes en este proyecto a través de la consultoría de consultoría de negocios realizada por un grupo de académicos certificados en este método de ayuda.

MÉTODO

Para desarrollar este proyecto se utilizó una investigación descriptiva, en donde se analizó a cada una de las empresas participantes y con el consentimiento de las mismas, mediante la formalización de convenios de investigación universidad sector productivo, 15 pequeñas y medianas empresas que proporcionaron información, estableciendo un banco de datos para este proyecto, y que además se establecieron compromisos con un grupo de académicos que se encuentran certificados con la competencia de consultoría de negocios y los mismos que portaron el método de investigación en la cuatro fases que se realizan en el procedimiento de ayuda y capacitación como indicadores de mejora que establece la norma conocer de consultoría de negocios que certifica competencias laborales y profesionales en el campo de ayuda y que su vez contribuye con la organización internacional de trabajo (OTI) en el contexto de sur América.

El período que se realizó este proyecto fue el año 2014, abarcando desde enero al cierre de noviembre del mismo año, en dos cortes semestrales de enero a mayo en la participación de diagnosticar a cargo del grupo de académicos apoyados por estudiantes de licenciatura del área de negocios hasta el sistema propuesto de mejora. En la parte de agosto a noviembre se realizó el proceso de capacitación por cada área de gestión administrativa e indicador de mejora como lo señala el modelo de consultoría de negocios de competencia laboral técnica abalado en México.

El tipo de investigación fue descriptiva, los materiales fueron cuestionarios aplicado en sus áreas administrativas: Administración, finanzas, recursos humanos, ventas y otras relativas a las operaciones diaria de negocios. Se usaron instrumentos entrevistas a los gerentes y empresarios. Observación directa por parte de los académicos al diagnóstico de cada negocios y el seguimiento del método de la consultoría de negocios en el tiempo antes señalado.

Objetos: 15 pequeñas y medianas empresas de la localidad del sur de México, en el Estado de Sonora, en su municipio de Cd. Obregón; con las cuales se firmaron convenio de vinculación e investigación y aceptaron el proceso metodológico de la consultoría de negocios en sus cuatro fases: diagnóstico de la situación actual, sistema de ayuda, capacitación e implementación del indicador de mejora. La participación de un grupo de 3 académicos certificados en esta metodología y apoyados por alumnos de las áreas de ciencias económicas y administrativas.

Materiales: Aplicación de cuestionarios guiados a conocer cada una de las áreas administrativas, identificando las funciones operaciones como es el caso de recursos humanos, finanzas, mercadotecnia, administración y otras.

También se aplicaron entrevistas dirigidas al personal de altos mandos y dueños de las empresas, administradores y personales a cargo de estas actividades.

A los empleados de las áreas funcionales como son: comerciales o ventas, finanzas y administración al igual se utilizaron diversas entrevistas a cada uno de los participantes de las organizaciones en estudio, con el fin de identificar en donde se podría tener la ayuda necesaria para mejorar indicadores.

El procedimiento que se estableció se cubrió de la siguiente manera:

Fase 1. Mediante un acuerdo formal, establecido en un convenio de vinculación con las empresas consultadas se estableció el compromiso de realizar consultoría de negocios, como medio de ayuda a mejorar actividades dentro de este grupo de empresas (13 pequeñas y 2 medianas empresas).

Fase 2. En los primeros meses se aplicaron cuestionarios en las áreas de administración de cada una de ellas, estableciendo por cada una entidad, entrevistas personales con cada uno de los encargados; también se les aplicó el instrumento validado por la norma de consultoría general de negocios en las áreas de recursos humanos, ventas, finanzas.

Fase 3. Una vez aplicado los instrumentos de cuestionarios al personal de las áreas funcionales de las empresas, las entrevistas establecidas con los dueños, gerentes y colaboradores claves de las pequeñas empresas así como el medio de observación y los diálogos establecidos con estos entes, es como se obtuvo un diagnóstico empresarial en donde se detectaron las fortalezas, oportunidades de mejora, debilidades y amenazas es como se puede establecer el mecanismo de ayuda y colaboración a través del proceso de consultoría de negocios.

Fase 4. En esta etapa se establece los mecanismos de ayuda y colaboración con el fin de capacitar a estas 15 empresas, y con la participación directa de alumnos de estos cursos de consultoría de negocios y guía académica es como establecieron las mejoras a los indicadores detectados como oportunidad de mejora para cada una de estas pequeñas y medianas empresas.

Fase 5. Acuerdo de entrega de resultados a finales del mes de noviembre del ejercicio del 2014. Los cuales se mostraron en los resultados obtenidos.

RESULTADOS

Una vez realizado el procedimiento de la consultoría de negocios avalada por el grupo de académicos y alumnos que apoyaron al diagnóstico de los negocios y se pudo observar en la tabla n.2 estas empresas que realizaron dichos convenios para este proyecto se detectaron inicialmente una serie de fortalezas que dan el perfil del negocios de manera general y las debilidades de mayor enfoque así como la propuesta del indicador a mejorar y a capacitar. En la Tabla 2: Se observan los resultados de necesidades identificadas por el diagnóstico de cada una de las empresas y se alinean a un indicador de mejora en función de las debilidades en cualquier área detectada.

Esta tabla 2, indica necesidades detectadas en cada tipo de empresa y el resultado del diagnóstico permite identificar en cada una de ellas las debilidades que se fueron apoyadas a través de las estrategias de capacitación, adiestramiento y asesoría por este grupo de expertos en el área de gestión administrativa. La alineación a estos indicadores de área y mejora ayudará en otras investigaciones a evaluar el impacto de las empresas en términos financieros, labores y de responsabilidad empresarial.

En el resultado que muestra la Tabla 3: Indicadores de Mejora y Tipo de capacitación e implementación de ayuda a las 15 pequeñas y medianas empresas, permitir ver proporcionar el área de gestión administrativa apoyada y la mejora implementada mediante la capacitación y su implementación.

Tabla 2: Fase de diagnóstico de necesidades (debilidades) alineado al indicador y área de mejora

Tipo de empresa	Fortaleza	Debilidad	Indicador
Empresa de Servicios	10 años de negocios	Mejorar la planeación estratégica	Capacitación para realizar la planeación estratégica
Servicio	Planeación estratégica	No cuenta con Mercadotecnia	Se realiza un plan de mercadotecnia
Servicio	Competitiva en su negocio	Falta mayor capacitación al recurso humano	Capacitación manejo del personal
Comercial	Experiencia en su giro	Mejorar las Ventas	Capacitación al personal de área comercial
Producción manufacturera	Buena Administración y prestigio	Finanzas	Capacitación en la cobranza
Comercial	Permanencia en el mercado	Finanzas	Mejorar su ventas e incrementar liquidez
Servicio	Reconocimiento de sus clientes	Administración	Capacitación en planeación estratégica
Comercial	Prestigio y constancia	Ventas	Incrementar ventas
Comercio	Experiencia en su negocio	Recursos Humanos	Capacitar a su personal
Servicio	Competitivo y con reconocimiento	Administración	Planeación estratégica
Comercial	Experiencia y reconocimiento	Administración	Planeación estratégica
Servicio	Permanencia en el mercado	Finanzas	Falta de control interno
Servicio	Experiencia en su negocios y reconocimiento	Recursos Humanos	Capacitación al personal
Servicio	Competitivo y con reconocimiento	Recursos Humanos	Capacitación al personal
Comercio	Empresa con solidez en el mercado	Administración	Planeación estratégica

Estos resultados se describen como se proporciono la ayuda a cada una de las empresas participantes en estos proyectos, en la tabla 2: fase de necesidades describe como lo marca el modelo de consultoría, en ella primeramente se identifica el indicador y se propone la mejora y su capacitación en la segunda se aplica la fase de implementación y capacitación dando como resultado la tabla 3: En donde ya se tiene los logros y las mejoras realizadas a cada una de ellas, es decir como producto de la gestión de consultoría de negocios que llevo a implementar, bajo la metodología que maneja esta norma certificada de competencia y cuyo objetivo es contribuir con ayuda y asesoría a este tipo de organizaciones. En la revisión bibliográfica como lo describe la Norma General de Consultoría de Negocios (2003) cual ayuda que reciba un empresa será de gran utilidad en su marcha operación, además que este se estable de forma rutinaria las organizaciones establecen en sus visión administrativa el concepto de mejora continua y en función de lo que menciona (Venegas, 2013) planear actividades hace que funcionen las empresas máximo aquellas que son familiares también lo dice (Grabinsky 2002) que la familia es clave en la administración y éxito de las PYMES.

Finalmente se puede observar que realmente el proceso de consultoria es un medio de ayuda para cualquier organización, sobre todo a las pequeñas y medianas empresas que participaron en este proyecto, y en donde cada una de ellas recibió apoyo en las áreas detectadas como oportunidad de mejorar y se logran beneficiar en recibir talleres, capacitación y adiestramiento por gente experta en esas áreas y que mediante acuerdos formales convenido se logran un investigación de aplicación y de aprendizaje mutuo, tanto para el sector productivo, como los participantes en dicha gestión académica, en donde personal docente y alumnos mantiene la teoría en práctica, generando en un futuro o mejor teoría; y sin duda se refleja en el tiempo de la administración empresarial la participación con las universidades que son las entidades encargadas de transmitir y generar el conocimiento.

Las universidades que formalizan y establecen vínculos estrechos con el sector productivo mediante investigaciones, vinculación, estancias y prácticas, harán un cambio importante y relevante en la sociedad en general, pero sobre todo en la gestión y aplicación del conocimiento en los recursos humanos de ambas entidades logrando finalmente contribuir al bienestar social que requiere cualquier país y la misma humanidad.

CONCLUSIÓN

Siempre existirá la oportunidad de mejorar áreas e indicadores en cada una de las entidades mexicanas, independientemente del giro, tamaño y sector; por ello el mantener una estrecha vinculación con el sector productivo es sin duda un beneficio conjunto entre universidades, académicos y alumnos y sobre todo que el proceso de investigación resulta ser más aplicado y beneficio para sus participantes.

El método de la consultoria de negocios aporta al proceso de investigación cada uno de los pasos necesarios y requeridos para plantear áreas de oportunidad, detectarlas y establecer acciones, estrategias y actividades para cada función administrativa y con el fin que persigue implementar y evaluar los resultados logrados, es sin duda de gran ayudar la asesoría en los negocios.

Otra conclusión sería que se recomienda mantener contacto y seguimiento con empresas ya consultadas por el cuerpo académico de consultoria de negocios con el fin de seguir consolidando nuestro trabajo en beneficio de la sociedad y de la comunidad.

RESUMEN

El objetivo del presente trabajo es realizar un análisis de factores comerciales (precios, fachada, mobiliario, tecnología, surtido, limpieza, calidad en el servicio) en tiendas de abarrotes y relacionarlos con la supervivencia empresarial. El estudio presenta una observación de factores comerciales realizada a tiendas abarrotes en 2012 y su seguimiento en los siguientes 3 años para detectar su supervivencia o mortandad. Los factores comerciales fueron evaluados a través de observaciones realizadas en visitas a los establecimientos (mystery shopper). La muestra abarca un total de 48 tiendas de abarrotes. Durante el periodo de 4 años cerraron operaciones el 16.6% de las tiendas de abarrotes observadas. Un hallazgo de este estudio es que no se encontró relación entre la supervivencia empresarial y el precio, el mobiliario y la tecnología. Por otro lado, se encontró una relación positiva entre la supervivencia empresarial y la fachada, limpieza, el surtido y la calidad en el servicio.

PALABRAS CLAVE: Abarrotes, Supervivencia Empresarial, Mystery Shop

ABSTRACT

The aim of this paper is to analyze market factors (as price, facade, furniture, technology, assortment, cleanliness, quality of service) in grocery stores and relate them to corporate survival. The study presents an observation of commercial factors made to grocery stores in 2012 and its follow in the next three years to detect survival or mortality. The commercial factors were assessed through observations in visits to establishments (mystery shopper). The sample covers a total of 48 stores. During the four years ended operations 16.6% of observed grocery stores. A finding of this study, is that the authors didn't find relationship between business survival and the price, furniture and technology. On the other hand, a positive relationship between business survival and facade cleaning, sorting and quality service has found.

KEYWORDS: Business Survival, Groceries, Mystery Shop.

INTRODUCCIÓN

El principal objetivo del presente estudio es relacionar la supervivencia de las tiendas de abarrotes, con algunos de sus factores comerciales como: precio, fachada, mobiliario, uso de tecnología, surtido, limpieza, calidad en el servicio, etc. en el periodo 2012 – 2015 de las tiendas ubicadas en la Región 101 de Cancún, Quintana Roo, México.

El fenómeno de la supervivencia y la mortandad de micro y pequeñas empresas ubicadas en la Región 101, zona urbana de Cancún, Q. Roo, ha sido objeto de investigación en los últimos 5 años por los autores, pertenecientes al Cuerpo Académico de Innovación Visión Empresarial y Competitividad Internacional. La investigación longitudinal en esta región se inició en el año 2010, y ha continuado con censos anuales para

detectar las nuevas empresas (nacimientos), el cese de operaciones (mortandad) y negocios que continúan operaciones (supervivencia).

Documentos previos han reportado algunos factores que se relacionan con el comportamiento de supervivencia/mortandad empresarial en esta área (Hernández-von Wobeser, 2014)(Hernández-von Wobeser, May, & Martínez, 2015). A partir de este acercamiento previo, los abarrotes han llamado mucho la atención ya que no solamente representan el 14.9% del total de negocios, sino se ha encontrado una alta rotación en su número (muchas aperturas, muchos cierres). Se encontró, por ejemplo, que el comportamiento de supervivencia de los abarrotes era muy distinto al de los Expendios de cerveza (que también ofrecen productos similares): “del total de 83 Abarrotes censados en todo el estudio, estuvieron abiertos en promedio 52 por años, en el periodo 2011-2014. Esta diferencia en el número indica una alta rotación de negocios (nacimientos y muertes simultáneas). Por otro lado, el giro de Expendios de cerveza presenta una enorme estabilidad. El número total de expendios de cerveza que se censaron durante los 4 años fue de 23 unidades número muy cercano al promedio de negocios abiertos en un año (20). Esta diferencia de tan solo 3 unidades, muestra la enorme estabilidad que tiene este tipo de negocios.” (Hernández-von Wobeser, May, & Martínez, 2015, pág. 89). El comportamiento particular de los abarrotes guió la realización de este estudio que se enfoca a este tipo de negocio y busca explorar la relación entre las decisiones comerciales y el futuro del negocio.

A continuación, se realiza una revisión de literatura sobre el tipo de negocio que se focaliza: los abarrotes. Posteriormente se presenta el método de investigación utilizado que consistió en un primer levantamiento a partir de la observación realizada durante la visita a los establecimientos (MysteryShopper), y el seguimiento longitudinal en los siguientes 3 años para detectar la supervivencia o mortandad de los negocios. La muestra abarca un total de 44 tiendas de abarrotes. Finalmente, se exponen algunos hallazgos de este estudio en forma de tablas de frecuencias que calculan razones de supervivencia a partir de los factores analizados.

REVISIÓN LITERARIA

Para un mejor desarrollo del tema, en primera instancia se expone una revisión teórica muy elemental sobre la microempresa y los factores que afectan su éxito o supervivencia. Ya Hernández, May y Martínez (2014), anteriormente trabajaron el punto más a profundidad por las características del estudio longitudinal que han estado realizando desde el año 2010 en la región 101. En el trabajo realizado por los autores en mención titulado “*Relación entre el giro de negocio y supervivencia en microempresas: Estudio longitudinal en Cancún- México*”, consideran el factor “sector”, “subsector” o “giro” en relación a la supervivencia de microempresas y hacen referencia a que no se encontraron estudios de este tipo. Sin embargo, en una clasificación que desarrollan, mencionan cómo están repartidas las microempresas en subsectores o giros diversos e incluso, un hallazgo de su estudio manifiesta que el giro empresarial es un factor que está relacionado a la supervivencia empresarial, detallando los giros en los que el índice es mayor o menor.

Con base a Contreras, (2007), las microempresas son de gran importancia tanto para la economía del país (México), como para la economía familiar, ya que afirma que son las primeras fuentes de autoempleo y empleo de la población menos favorecida (cuatro de cada 10 mexicanos trabajan en una microempresa formalmente establecida), e inclusive el Banco Interamericano de Desarrollo –BID- (2003), menciona que casi nueve de cada 10 trabajadores de la región se desempeñan en emprendimientos de estas características y en la mayoría de los países generan entre 40 y 65 por ciento del ingreso nacional. Sin embargo y no obstante la gran importancia de la microempresa, hasta la fecha no se tiene una definición oficial definitiva (al menos en México). Hernández, May y Martínez (ídem) mencionan que desde 1990 y hasta la fecha, en México ha cambiado en seis ocasiones su definición. La última de ellas se verificó el 30 de junio de 2009 y estuvo a cargo de la Secretaría de Economía, (2009) en donde la Micro empresa se describe como aquella que tiene hasta 10 empleados y/o hasta 4 millones de pesos de ventas anuales.

La Microempresa en específico, ha demostrado su capacidad como un medio efectivo para propiciar el desarrollo económico y mejorar la calidad de vida de los microempresarios, además de fomentar el autoempleo que es sin duda, una forma eficaz por la cual las familias de bajos ingresos pueden ver incrementadas sus ganancias, a través de la realización de una actividad productiva que incorpora la mano de obra familiar, independientemente de los apoyos que pudieran obtener de cualquier índole, ya que como el mismo BDI manifiesta (ídem) “desde el punto de vista del desarrollo, el apoyo a la microempresa no sólo sirve para aliviar la pobreza y estimular la actividad económica; también brinda oportunidades para incrementar la productividad de personas de bajos ingresos dotadas de espíritu emprendedor que generalmente no tienen acceso a servicios financieros formales o capacitación que les permitirían obtener mayor beneficio por sus esfuerzos.”

Si bien es cierto que el tema de las microempresas es un punto de vinculación entre varios investigadores, las definiciones sobre éstas varían de acuerdo al autor, pero lo que si es importante tomar en consideración, es que independientemente del giro en el que se les ubique, de acuerdo con Hernández, May y Martínez (ídem), la microempresa, al igual que otro tipo de empresas, tiene cifras sumamente altas de mortandad empresarial, sin que esto haga desmerecer su importancia a la economía del país o región en donde se desarrolle.

Soriano, (2005), hace alusión de que en México, al cumplir 10 años “solamente el 10% de las empresas maduran, tienen éxito y crecen”. De acuerdo con la página Universo Pyme, (2013) y el Cetro-Crece, “el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones apenas después de dos años en el mercado”. Para la página web degerencia.com: “la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años”.

No obstante la premisa de mortandad comentada por Hernández, May y Martínez (ídem), los mismos argumentan que la microempresa es la forma de emprendimiento más socorrida no solamente en México sino en el mundo entero. El BID (ídem), manifiesta que la microempresa es la principal fuente de trabajo en América Latina y el Caribe. Existen unos 55 millones de estos pequeños emprendimientos, que proveen empleo a unas 110 millones de personas, o casi la mitad de la fuerza laboral de la región (situación vigente hasta nuestros días). En México, así como otros países de Latinoamérica, las microempresas se han convertido en una estrategia de supervivencia de la población y una parte fundamental de la estructura económica del país.

Lo cierto es que la forma en que las microempresas se desarrollan y se emprenden es de las mas variadas, ya que de acuerdo con la visión del emprendedor será el giro forma en cómo ésta será operada, de igual forma la razón por la cual el emprendimiento se dio. De acuerdo con May, Martínez y Aguilera (2012) los emprendedores de cualquier índole o tamaño, al cumplir con sus responsabilidades y obligaciones a todos los niveles, coadyuvan en la generación y distribución de la riqueza y por añadidura aumentan el nivel y la calidad de vida.

Una de las formas en las que las microempresas se emprenden, es dentro del formato conocido popularmente como “tiendas de abarrotes”, o igualmente denominadas como tiendas de barrio, tiendas de esquina, pulperías, tiendas de ultramarinos, bodegas, etc, dependiendo del país en el que se ubiquen. Cuando se habla de tiendas de abarrotes, que es la manera tradicional como se les concibe en México, de acuerdo con el SAT (2013), se alude a “empresas que se ocupan de la compraventa de diversos productos tales como alimentos enlatados o envasados, jugos y néctares, bebidas gaseosas, artículos de limpieza, lácteos, dulces y frituras, carnes frías, vinos y licores, entre otros; al por menor y en la mayoría de los casos al público en general. Con 0 a 10 empleados, menos de 50 Mts² de instalación y no venden bebidas alcohólicas”.

De acuerdo con Campos (2013), las tiendas de abarrotes en México tienen origen en la época de la

conquista, el concepto de la palabra “abarrotes” comenzó a utilizarse en las colonias españolas de América, donde los establecimientos de venta quedaban “abarrotados” de víveres y otros productos tras la llegada de un buque al puerto procedente de España o de otras colonias. Además, se dice que la palabra es de origen gallego y durante el Virreinato se daba a los bultos con mercancía que transportaban las embarcaciones comerciales. Después de esto, las mercancías se conocieron como abarrotes, en lugar de los envoltorios.

A lo largo de la historia de este tipo de comercios en México, de acuerdo con la misma investigadora, se han convertido en productos de primera necesidad y, por lo tanto, altamente redituables. De tal manera que los analistas aseguran que las tiendas se están yendo a poblaciones donde tradicionalmente no tenían presencia. Es tal su importancia en la cultura de consumo de México, que Vicente Yáñez Solloa, representante de la Asociación Nacional de Tiendas de Autoservicio y Departamentales (ANTAD), en un artículo de Suárez (2015), hace mención que cuando llega un supermercado a una zona, el comercio tradicional, las tiendas de abarrotes incluidas, tiende a crecer, siendo que de acuerdo con la misma declaración en el 2014, los negocios estudiados presentan un crecimiento global de 54 por ciento, por lo que podríamos estar frente a una forma de sinergia empresarial entre micros y medianas o grandes empresas que estarían dando pie a una estrategia de supervivencia entre empresas de diferente tamaño pero del mismo sector, independientemente de su formalidad o informalidad ya que de acuerdo con Campos (idem), los comercios de abarrotes, misceláneas, estanquillos o tendejones, comprenden menos de la cuarta parte de los micro-negocios del sector informal a nivel nacional.

De acuerdo con Suárez (idem), esto se debe a que los grandes centros comerciales generan más flujo de visitantes y los comercios pequeños suelen ajustar su oferta a los productos y servicios que las tiendas no manejan. A su vez, la cantidad de empleos que demanda una tienda grande, incrementa hasta en 90 por ciento la presencia de nuevos compradores, quienes demandarán, a su vez, productos y servicios cercanos a su centro de trabajo.

Respecto a los factores que son propios de la empresa en el documento elaborado por Hernández, et al (2014), se mencionan: el tamaño inicial, la rentabilidad, el financiamiento (Arias & Quiroga, 2008). De acuerdo con los estudios de algunos autores, el tamaño es una variable favorable en la supervivencia de la firma cuando esta comienza su ciclo de vida. Arias y Quiroga (2008) citan los trabajos de Segarra (2002) que argumenta la existencia de un tamaño mínimo eficiente para la supervivencia empresarial. Otros estudios de Wagner, (1994) y de Mata & Portugal, (1994) detectaron que el mayor tamaño mejoraba la capacidad de producción y gestión con clientes, proveedores y bancos. Surdez, Sandoval y Aguilar agregarían a este tipo de factores las características de la empresa como el personal que labora, el capital, la tecnología, ubicación, etc. (Surdez, Sadoval, & Aguilar, 2007).

De acuerdo con los estudios realizados en unidades operando bajo el formato de tiendas de abarrotes dentro de la zona de estudio, a través de la realización de censos y con la utilización de la técnica del mysteryshopper, considerando los factores mencionados por los autores consultados, se decidió evaluar el total de las unidades bajo los aspectos exteriores (letrero, fachada, puertas, patrocinios rotulados), interiores (Mobiliario, equipos con los que cuenta, sistema de cobro, etc), Organización (Limpieza, acomodo de mercancía, surtido y variedad de productos) y servicio (No. De empleados, rapidez, trato, proceso de atención al cliente).

La exhibición y surtido, se refiere a la forma en que el local exhibe sus productos, esto contempla: limpieza del local, el acomodo, surtido y variedad de los productos. En cuanto al servicio y de acuerdo con el diccionario, la palabra servicio define a la actividad y consecuencia de servir (un verbo que se emplea para dar nombre a la condición de alguien que está a disposición de otro para hacer lo que éste exige u ordena). Y en este punto en particular, en el estudio realizado se puso especial atención, considerando dentro de los parámetros el número de personas atendiendo la unidad de negocio, la rapidez del servicio, el trato, saludo, la actitud de las personas que atienden, su disposición al buen trato, despedida.

Cabe resaltar que con base en algunos estudios, que independientemente de los factores estudiados dentro de la presente investigación, los que contribuyen a la permanencia de las organizaciones también pueden ser externos a la empresa como la situación económica del entorno, el sistema fiscal, los apoyos crediticios, entre otros (Surdez et al., 2007). Es importante destacar, de acuerdo con Hernández et al (ibídem), que entre las pocas causas de éxito que se pueden encontrar entre las MIPYME, se encuentra el hecho de que los empresarios comprometidos están dispuestos a dedicar todo su tiempo y esfuerzo al negocio, la correcta identificación de las necesidades de los clientes y el conocimiento de la actividad que pretenden desarrollar; siendo recomendable que esto se de principalmente en la etapa inicial del negocio de acuerdo con Puchol, L (2005), ya que de lo contrario se estaría hablando de un autoempleo dentro del emprendimiento.

Después de elegir la ubicación acertada para una tienda de abarrotes, el siguiente paso es el acomodo correcto de la mercancía, es decir aplicar el "merchandising". Término que es el resultado de unir el sustantivo "merchandise", qué significa "mercancía" y el radical "ing", que expresa la acción. Es decir es la acción por la cual se pone el producto en manos del consumidor. Es el conjunto de técnicas para poner el producto en disposición del consumidor en el punto de venta, para motivar la compra de la manera más rentable. Y tener la posibilidad de influir constantemente en el comprador (Muñiz, R., 2010).

En las tiendas de abarrotes lo básico del merchandising es:

1. Tener una fachada atractiva, lo cual podría significar contar con un frente bien decorado, con un escaparate atractivo, permanentemente limpio, y con una entrada que facilite y estimule el ingreso
2. Contar con una exhibición atractiva de los productos dentro del establecimiento; procurando que la cantidad de productos exhibidos sea la adecuada; que el mobiliario no contenga, sino que exhiba los productos, y destacando los productos más vendibles, colocándolos en los estantes a la altura de los ojos.
3. Procurar una buena disposición de los espacios y del mobiliario dentro del establecimiento, permitiendo el libre tránsito y la comodidad de los consumidores.

Lo anterior se reafirma al considerar en la investigación, con base a Opción consultores, (2012), los siguientes aspectos (por mencionar los relevantes para el presente estudio) desprendidos de algunos estudios realizados:

1. El letrero en la fachada es una referencia importante para los compradores, ya que les permite identificar la mayor o menor formalidad o informalidad de los negocios, en lo que se relaciona a su seriedad y al servicio esperado, esto se observó en el estudio de May, Martínez y Aguilera, (2013) y en la investigación desarrollada por Hernández (2013) en la región de estudio.
2. Mobiliario, se toma en consideración este punto en referencia a la infraestructura bajo la cual se ofrecen los productos o servicios a los clientes, ya que de acuerdo con los criterios con los que se llevó a cabo la técnica, el equipamiento de igual forma se percibe como un factor de diferenciación que impacta en el cliente, ya que el carecer del mobiliario adecuado, esto se percibe como una informalidad por parte de la tienda. En este punto se considera mobiliario: Refrigerador (tipo de), aire acondicionado, Televisión, equipo de sonido, computadora, sistema de cobro (código de barras, manual).

Según Yáñez (ibídem) detalla que en cuanto al emprendimiento de una tienda de abarrotes, lo más importante es hacer una planeación adecuada a través de una investigación, para que se pueda establecer

un formato exitoso acorde con la zona y con la capacidad económica de los clientes. Internamente, es necesario trabajar con orden, con una contabilidad puntual y detallada, cuidar el capital y reinvertir en mejoras del negocio, tanto en lo correspondiente al local como a la oferta de productos".

METODOLOGIA

El método de investigación utilizado en esta investigación es el denominado *longitudinal de tendencia*. Este método permite conocer los cambios a través del tiempo de algunas variables de la población, a partir de una lectura inicial (Hernández S. R, Fernández C., C y Baptista L. P., 2010). En este caso la población de estudio es el conjunto de tiendas de abarrotes existentes en la Región 101 de Cancún, en el año 2012 y su supervivencia o mortandad hasta el año 2015. En el año inicial, aparte de observar la supervivencia de las tiendas de abarrotes, éstas se caracterizaron con variables comerciales como: surtido de mercancía, espacio y mobiliario de exhibición en la tienda, nivel de precios, letrero en fachada, limpieza, etc. Se trata de características propias del llamado merchandising o mercadotecnia en el punto de venta. En este caso el método seguido para la caracterización y valoración de estas variables fue el método denominado *mystery shop*. El cliente misterioso o incógnito (en inglés *mystery shopper*) observa y valora, al simular la compra, el equipamiento y mide la calidad en la atención al cliente.

De acuerdo con Nogales, (2004) el cliente misterioso o incógnito es una técnica utilizada para observar el equipamiento, evaluar y medir la calidad en la atención al cliente. Los clientes misteriosos actúan como clientes comunes que realizan una compra o consumen un servicio y luego entregan un informe sobre cómo fue su experiencia. En el caso que nos atañe, la técnica fue utilizada para identificar las características comerciales de las tiendas de abarrotes.

MARCO DE REFERENCIA

La Región 101 es una zona urbana del Municipio de Benito Juárez (Cancún), este municipio se encuentra ubicado en la parte norte del estado de Quintana Roo-México. Este municipio cuenta con una superficie de 1,664 Km² y ocupa el 3.27% del territorio del estado (Cupul & Salazar, 2009). Por su parte la Región 101, es una de las más de 200 regiones o zonas urbanas en que esta dividida esta ciudad. La Región 101 esta ubicada al poniente de la ciudad y tiene una superficie de 47.77 hectáreas y su uso del suelo está destinado, predominantemente para habitación unifamiliar y comercio de barrio conformado por un total de 95 manzanas, según el Diario Oficial del Gobierno del Estado de Quintana Roo (2005), que hace referencia al Plan Director de Desarrollo Urbano de Cancún (PDDU-2005).

Como parte de la metodología utilizada en este documento, se consideró el primer censo realizado por los autores, que se realizó en el año 2011, donde se detectaron 375 microempresas ubicadas en las 95 manzanas de la Región 101. A partir de los hallazgos de ese primer censo se categorizaron los 15 giros (o actividades de negocio) más comunes en estas microempresas: abarrotes, construcción y mantenimiento, alimentos preparados, alimentos y bebidas no alcohólicas, expendio de cerveza, servicio automotriz, café internet, comercio de productos, entretenimiento, estéticas, salud, taller, ropa/accesorio/calzado, lavanderías, papelerías y otros. Se agruparon bajo el rubro "otros" algunas actividades de negocio que estuvieron menos presentes como veterinarias, casetas telefónicas, guarderías, etc. En ese censo se encontró que el 14.9% de los negocios se trataba de tiendas de abarrotes. (Hernández-von Wobeser, May, & Martínez, 2015)

En el censo del 2011 se contó un total de 58 tiendas de abarrotes distribuidas en las 95 manzanas, estas tiendas se tomaron como base para observar su supervivencia a lo largo de los siguientes cuatro años, periodo de 2012 al 2015. Partiendo de dichos 58 negocios se acordó descartar del estudio 10 establecimientos que no contaban con las características mínimas de formalidad para incorporar los factores comerciales. De los 48 restantes, 4 se encontraban ya cerrados (muertos) para 2012, por lo que el tamaño

de muestra quedó en 44 tiendas de abarrotes, cantidad que quedó como base de negocios analizados en este reporte.

Levantamiento y análisis de la información

El uso del censo como instrumento de investigación permitió contar con un conteo censal desde el inicio (2011) de negocios abiertos. También permitió llevar fehacientemente la cuenta, cada año, de la totalidad de negocios abiertos, cerrados y nuevos; esto permitió detectar cuántas y cuáles microempresas han cerrado (mortandad); cuántas se iniciaron (nacimientos) y cuántas continúan abiertas (supervivencia). El periodo 2012-2015 considera cuatro censos. El censo de abarrotes correspondiente al año 2015 es una información adicional, en relación al censo original reportado por los autores en estudios previos ya citados, que permitió saber el número de negocios abiertos (supervivencia) de tiendas de abarrotes hasta este año, con lo cual tenemos el total de negocios que sobrevivieron después de 4 años (2012-2015) que son 30, partiendo de 44 en el 2012.

RESULTADOS

A continuación se presentan los resultados obtenidos de relacionar los factores comerciales: precio, fachada, mobiliario/equipo, exhibición/surtido y servicio.

Para el primer factor se asume considerar el precio de una Coca Cola de 600 ml, como un buen indicador del nivel de precios que ofrece la tienda del conjunto de sus mercancías. Asumiendo que los compradores se ven atraídos por el bajo precio de la tienda y por el contrario, se verían disuadidos a comprar en tiendas de alto precio; con la consecuente supervivencia y mortandad de las tiendas.

En la figura 1, se presenta el resultado de clasificar las tiendas de abarrotes, según el precio de una botella de Coca Cola de 650ml. Esta clasificación, con datos del año 2012, se hizo para identificar por su precios a las tiendas que sobreviven hasta el año 2015 y observar si hay alguna relación del precio con la supervivencia. En este caso no se encontró una relación positiva entre mejor precio y supervivencia. La mayoría de las tiendas (71%) ofrece el producto a 8 pesos. Hay un 2% que lo ofrece a 6.5 pesos y otro 2% a 9 pesos. Observamos que la tienda que vendía a precio bajo cerró, mientras que la tienda de precio alto sobrevivió.

Figura 1. Clasificación de los abarrotes por precio de un producto elegido.

La figura se aprecia cómo se distribuyeron las 44 tiendas existentes en el año 2012. La mayoría de las tiendas (71%) ofrece el producto a 8 pesos. Hay un 2% que lo ofrece a 6.5 pesos y otro 2% a 9 pesos.

Fachada y Letrero

Para este factor comercial comentaremos las siguientes dos tablas. En la primera un factor importante del merchandising es la fachada, ésta se aprecia primero de acuerdo a la existencia o no de un letrero comercial que anuncie que se trata de un establecimiento de abarrotes. En caso de existir el letrero, se observa de qué material esta hecho (ver tabla 1). En seguida se califica el buen o mal estado de mantenimiento de la fachada de la tienda, como se aprecia en la Tabla 2. En general se puede presumir que la existencia de un letrero: tienda de abarrotes y el que la fachada se encuentre en buen estado de mantenimiento, tienen una relación positiva con la supervivencia de las tiendas de abarrotes. La tabla 1 destaca que mientras más formal es el letrero, hay mayor supervivencia, pues donde hubo mayor mortandad, 7 de cada 12, (58%) es en aquellas tiendas que no tiene letrero en su fachada, de las cuales solo el 42% sobrevivió. Pero también se encontró cierta inconsistencia en estos resultados, ya que que las tiendas de fachada más descuidada y aquellas con mejor mantenimiento, fueron las que menor supervivencia tuvieron, con 33% y 60%, respectivamente, como se aprecia en Tabla 2.

Tabla 1. Letrero en fachada de abarrotes y relación con la supervivencia empresarial

LETRERO	Total	Supervivencia	Mortandad	Razón de supervivencia
No hay letrero	12	5	7	42%
Papel	1	0	1	0%
Cartón	13	9	4	69%
Lona	8	6	2	75%
Pintado en el muro	7	7	0	100%
Rotulado con iluminación	3	3	0	100%
	44	30	14	

La tabla expone, en la segunda columna, la relación de las 44 tiendas existentes al año 2012 y el tipo de letrero o anuncio que presentaban en ese año. En la tercera columna se presentan las 30 tiendas sobrevivientes al año 2015 y el tipo de letrero en su fachada.

Tabla 2. Condición de la fachada de abarrotes y relación con la supervivencia empresarial

FACHADA	Total	Supervivencia	Mortandad	Razón de supervivencia
No se pudo determinar	6	2	4	33%
Descuidada	6	4	2	67%
Deficiente	12	10	4	83%
Regular	15	13	2	87%
Perfecto estado	5	3	2	60%

La tabla presenta la clasificación de las tiendas de abarrotes, según la condición y estado de mantenimiento de su fachada y su relación con la supervivencia,

Patrocinio de la fachada

En Tabla 3, se puede apreciar la importancia del patrocinio de la fachada de una tienda de abarrotes, ya que, mientras más importante es la marca que patrocina una fachada de tienda de abarrotes, mayor es la relación de supervivencia, según los resultados en esta pequeña muestra de 44 tiendas en la Región 101. Un punto importante es que 43% carecía de patrocinio y en estas tiendas se dio la menor relación de supervivencia,

con el 53%. Mientras que la de Coca Cola (32%) y la de Pepsi (18%) alcanzan niveles de supervivencia del 79% y 88%, respectivamente.

Tabla 3 Patrocinio de abarrotes y la supervivencia

PATROCINIO	Total	Supervivencia	Mortandad	Razón de supervivencia
Coca Cola	14	11	3	79%
Holanda	1	0	1	0%
Pepsi	8	7	1	88%
Sprite	1	1	0	0%
Powerade	1	1	0	100%
Ninguno	19	10	9	53%
	44	30	14	

En esta table se puede apreciar como las tiendas que ostentan una marca conocida tienen una mejor relación de supervivencia. No así las tiendas que carecen de marca patrocinadora de su fachada.

Mobiliario y equipamiento

El contar con un número mayor de muebles exhibidores de mercancía incide en la mayor supervivencia según se puede apreciar en la Tabla 4. De las 32 tiendas con 3 o más muebles exhibidores, lograron sobrevivir 81%. Qué contrasta con las tiendas que solo tenían hasta 2 muebles, que solo lograron la supervivencia el 33%, la mayoría cerro el negocio.

Exhibición y acomodo

En la Tabla 5, se puede apreciar como la exhibición ordenada y bien acomodada, tienen una mejor relación de supervivencia. Las tiendas cuya mercancía se haya desordenada tiene una menor relación de supervivencia, no así las tiendas con mercancía con acomodo regular o a medias y aquellas que están ordenas por secciones, ambas categorías llegan a una relación de 80% de supervivencia.

Tabla 4. Mobiliario y relación con la supervivencia empresaria

Número de estantes	Total	Supervivencia	Mortandad	Razón de supervivencia
no hay		0	0	0
1-2 mobiliarios		12	4	8
3-5 mobiliarios		32	26	6
		44	30	14

En esta tabla se aprecian solo dos categorías de tiendas, las que tienen hasta 2 muebles exhibidores y las de 3 o más muebles exhibidores. Notándose como que tienen más mobiliario permanecen más que las otras.

Tabla 5. Exhibición de la mercancía y relación con la supervivencia de la tienda.

Acomodo	Total	Supervivencia	Mortandad	Razón de supervivencia
Desordenado	19	10	9	53%
Regular	15	12	3	80%
Ordenado por secciones	10	8	2	80%
	44	30	14	

La tabla presenta tres categorías de acomodo, las desordenado, las de regular que se debe entender como una categoría media, entre las desordenadas y las bien ordenadas. Se observa como las de mejor acomodo presentar mejor razón de supervivencia.

Surtido de mercancía

La Tabla 6 muestra una tendencia a qué las tiendas de abarrotes mejor surtidas, tienen mejor relación de supervivencia. Las tiendas con escaso surtido tienen la más baja relación de supervivencia con el 58%. La de buen surtido llegan al 90% de supervivencia.

Tabla 6. Surtido de mercancía en tiendas y relación con la supervivencia.

Surtido	Total	Supervivencia	Mortandad	Razón de supervivencia
Escaso	12	7	5	58%
Normal	12	9	3	75%
Buen Surtido	10	9	1	90%
Excelente Surtido	6	5	1	83%
No se evaluó	4	0	4	0%
	44	30	14	

La tabla presenta cuatro categorías de surtido, ya que hubo 4 tiendas en que no se pudo valorar su surtido, desde luego las tiendas con buen surtido y excelente surtido, son aquellas con mejor supervivencia.

CONCLUSIONES Y RECOMENDACIONES

Los resultados de este estudio nos permiten observar como la disposición de elementos de comercialización más formales dan a las tiendas de abarrotes una mejor condición de supervivencia. El fenómeno de la supervivencia de los micro negocios que está siendo estudiado, año por año, desde el 2010, por el Cuerpo Académico de Innovación Visión Empresarial y Competitividad Internacional en la Región 101. Permite afirmar que la supervivencia de las tiendas de abarrotes existentes en la Región 101 de Cancún en el año 2012 fue del 68% tres años después, es decir en el 2015.

El estudio nos permite también observar la importancia que tiene para tener una más larga supervivencia, el utilizar en las tiendas de abarrotes elementos de comercialización más técnicos, que son recomendados en las teorías de merchandising y que tienen que ver con el uso de una comercialización más orientada hacia el comprador, que le facilite la compra y se le dé un mejor servicio.

En esta investigación también se aprecia el valor que tiene la metodología de investigación longitudinal, la cual nos permite tener la certeza de medir variables tan difíciles de hacerlo con otros métodos, como es el de la supervivencia de las empresas. Desde luego la limitante de esta metodología y de este estudio es que se refiere a una pequeña muestra de lo que es el conjunto de microempresas existentes en Cancún, pero da

pie a considerar y recomendar el uso de esta metodología para medir la supervivencia y la mortandad a través de una muestra representativa de toda la ciudad.

COMPETITIVIDAD Y DESEMPLEO EN EL MODELO NEOLIBERAL

ABSTRACT

In Mexico since the crisis of the welfare state model, where the state moves from property to regulatory, the state intervention is drastically modified during the 60's and effects Keynes theoretical model. Since then we can say that neo-liberalism denies the state functioning. The objective of the neo-liberal politic is dedicated to remove the obstacles that encourage free competition; this model, in matter of employment and competitiveness, doesn't seem to be working economically at saving the great financial capital. Neo-liberal politic hasn't been able to solve the crisis that promised to solve with its reforms 32 years ago employment has lost dynamism, the number of jobs has changed from 21.5 millions people to 23.5. with an average annual growth of 0.7%. Regarding the real salary during this period, it was reduced to a 73% marking an impact on unemployment, big modern enterprises which adopted innovative workforce technology, are demanding more and better qualified human capital.

INTRODUCCIÓN

México, a partir de la crisis del modelo del estado benefactor, donde el estado transita del estado propietario al estado regulador, podemos citar que una de las razones fundamentales de esta crisis es el endeudamiento externo que el país experimenta en la década de los setenta y que requiere que el gobierno tome medidas

de modernización administrativa, además de las demandas establecidas por organismos multilaterales como Banco Mundial (BM) y el Fondo Monetario Internacional (FMI) precursores de la globalización económica, a la cual se incorporó México a través de firmas de acuerdos y foros como la relación con organismos de carácter internacional.

Los años de insolvencia fiscal suscitada en los 80's en México resultaron detonantes como gobierno interventor que no tenía límites de poder y recursos, las malas decisiones del estado y su estructura autocrítica así como la incapacidad de los privados para evolucionar en su estructura productiva generó la apertura democrática del sistema político y económico.

En los años setenta se altera de manera importante la intervención del estado y afecta al modelo teórico de Keynes (2005), que los gobiernos aplicaban bajo el manejo de la demanda agregada y una política de gasto público que garantizara el pleno empleo, estimular el crecimiento de las economías de mercado y permitir que las poblaciones tuvieran el acceso a la educación, sanidad, vivienda, pensiones, seguro de desempleo (bienestar) y por tanto el estado keynesiano no es la solución, el exceso de la intervención del estado.

El neoliberalismo hace renacer las ideas del liberalismo clásico y le da valor al mercado libre, afirmando que los individuos pueden buscar sus beneficios por sus propios intereses.

Entonces podemos decir que el neoliberalismo niega que el estado funciona, y el mercado libre si lo hará, y que el intercambio voluntario que desarrolla un sistema económico que permita la vinculación de los mercados de factores, de bienes y servicios y financieros podrá satisfacer las necesidades con mucha mayor efectividad que el gobierno, por supuesto dentro del marco de los recursos limitados.

El objetivo de la política neoliberal establece eliminar todos los obstáculos que alienten la libre competencia, proporcionar la apertura y el tipo de cambio libre.

METODOLOGÍA

La investigación que se realizó es de carácter práctico aplicado con un enfoque cuantitativo y cualitativo.

Con el fin de desarrollar un estudio descriptivo y de diagnóstico que permita caracterizar la situación que se vive en México.

Es un estudio analítico y sintético, basado en el procedimiento deductivo.

Una vez estudiados los modelos teóricos en cuestión se organizó la investigación basada en datos históricos con fuentes fidedignas como Instituto Nacional de Estadística Geografía e Informática (INEGI), Secretaría del Trabajo y Previsión Social (STPS), Instituto Mexicano del Seguro Social (IMSS), Observatorio de Salarios de Universidad Iberoamericana Puebla, donde se buscó determinar el estado actual de las variables en cuestión, utilizando las encuestas realizadas a personas que percibe de uno a dos salarios mínimos mexicanos.

A persona que vende en zonas populares, trabajadores de nivel técnico y profesional.

Así se definió los sujetos activos y pasivos del estudio se expuso en el tercer foro de economía de la Benemérita Universidad Autónoma de Puebla, con el fin de obtener conclusiones que requieren de ponerse en la agenda del Estado Mexicano y dar alternativas de mejorar la calidad de vida de los mexicanos.

Se utilizaron técnicas documentadas, a lo que se consultaron fuentes impresas tales como obras bibliográficas, obras de consulta, publicaciones seriadas y fuentes digitales relacionadas con las variables

principales con el fin de establecer lineamientos y fundamentar el análisis y la síntesis que permitirán interpretar la realidad que se desprendiera de todos ello.

Se realizó una sistematización de la información obtenida de las fichas de investigación y generar las fichas de trabajo, de valoración personal se estableció un banco de datos para facilitar el procedimiento, ordenamiento y utilización de la información.

Se utilizó la media aritmética y diagrama de causa-efecto para determinar, cómo se enfrenta la crisis que se va viviendo en México en el contexto actual.

RESULTADOS

La integración e implementación del modelo neoliberal, podemos decir que abarca tres etapas fundamentales la primera (1982-1988) con Miguel de la Madrid en la cual se establecen las bases para el cambio del estado interventor al estado regulador.

La segunda que se da en el sexenio de Carlos Salinas de Gortari (1988-1994) en el cual se generan cambios fundamentales: El recorte drástico del gasto público, inserción al modelo mundial (apertura), la venta de empresas públicas (privatización), la democratización de la vida social.

La tercera abarca los sexenios de Ernesto Zedillo, Vicente Fox, Felipe Calderón y el sexenio en curso de Enrique Peña.

El enfoque de Harold Casswel y Daniel Lerner (2014) en México adquiere relevancia como nueva tecnología de gobierno, que consiste en la racionalidad de la gestión pública, la toma de decisiones horizontales, análisis del costo beneficio, de las acciones gubernamentales y la participación ciudadana; estos elementos se nutren y son acordes en México en la alternancia política, suscitada en el año 2000.

Un aparato administrativo moderno implica, capacidad de inclusión de racionalidades aparentemente contrapuestas como son lo político y lo técnico.

El modelo neoliberal y el impacto en el desempleo

El liberalismo, se funda en la libertad e identifica su análisis en los mecanismos rectores de la economía (Adam Smith, 2005) formuló los siguientes principios básicos: que el individuo es la fuente de sus propios valores morales; que el proceso de comercio e intercambio logra el bienestar colectivo; el intercambio entre las naciones permite acrecentar la riqueza y reduce las tensiones políticas; la doctrina del laissez faire deja ser, que significa la libertad.

Todas las economías de América Latina y el Caribe han realizado reformas estructurales en el sentido de este modelo, con la idea de acelerar su crecimiento económico fundamentalmente en área tales como: liberación comercial; política tributaria, desregularización financiera; privatización; legislación laboral; transformación del sistema de jubilaciones y pensiones.

La economía abierta se orienta al mercado exterior y a la competitividad y en México viene abarcando un periodo de 1982 a la fecha, donde se pasó entonces de estabilización económica a políticas de ajustes estructurales, debido al agotamiento del Estado Proteccionista que propiciaron las crisis financieras y de balanza de pagos entre otras cosas culminando en la crisis de 1982.

Sin embargo, el modelo neoliberal en materia de competitividad y empleo no parece dar resultados en materia económica y se ha tenido que solicitar apoyo de financiamiento exterior principalmente del Fondo Monetario Internacional (FMI), con el objetivo de salvar el gran capital financiero.

Durante 1988-1994 se afianzó el modelo de política neoliberal, Carlos Salinas vendió más de 1000 empresas y comentó que “había que vender bienes para remediar males”.

Se creó el Programa Nacional de Solidaridad (PRONASOL), el cual fue una estrategia para que los mexicanos no protestaran por la política de privatización, difundiendo que ese dinero era para resolver los problemas de la población con menores recursos: la política de Salinas prometió un crecimiento sostenido del 6% y reducción de inflación a un dígito, esto no sucedió, la inflación creció 15.9% en promedio anual y el Producto Interno Bruto (PIB) creció 3.0 en promedio; el salario perdió casi el 24% durante el sexenio, lo cual representó que durante los 12 años del modelo, entre De la Madrid y Salinas se perdió cerca del 66% de la capacidad de adquisición.

En 1992-1998 el 30% de las empresas del Estado fueron vendidas, con el supuesto que de esa manera se sanearían las finanzas públicas.

En 1985 se habían liberalizado el 90% de las fracciones arancelarias manufactureras, la reconversión industrial y la contención salarial.

En 1987 se llegó a un 159% de inflación y se propuso a los sectores productivos del país la suscripción de un pacto económico y que representó no incrementar el precio de los bienes y servicios, el tope a los incrementos salariales y se recomendó al sector privado el no incremento por encima de los costos reales.

Durante 1994-2000 se abrió el capital privado en las áreas de comunicación vía satelital y los ferrocarriles, en 1997 se crean las Administradoras de Fondos de Ahorro para el Retiro (AFORES) y se legisla para permitir el capital extranjero.

En 1995 se prometió crear un millón de empleos anuales y aunque se afirman que fueron más, sólo se cumplió con el 50% de lo prometido, debido a la crisis de inicio del sexenio.

El PIB cayó a 6.2% y la banca entró en crisis y se apoyó al Sistema Bancario a través del Fondo Bancario de Protección al Ahorro (FOBAPROA) y el Instituto de Protección al Ahorro (IPAB) por un monto mayor a los 700,000 millones de pesos, que finalmente se convirtió en deuda pública.

Se rebasó la barrera de los 100 mil millones de dólares de deuda, se siguió perdiendo el poder adquisitivo del salario y creció el desempleo.

Las reformas estructurales significan la desregularización de la economía, y una abierta privatización, lo cual implica una liberación comercial y una apertura a los flujos financieros externos. Esto forma parte de la transformación estructural de la economía dentro del entorno establecido por el programa neoliberal.

Por otro lado la crisis económica de los ochenta, la caída del poder adquisitivo de los salarios, tuvo un efecto inverso en las ganancias de los grandes grupos económicos. La crisis económica se convirtió así, en el principal mecanismo redistributivo a favor de los grandes grupos empresariales y monopólicos. Tan sólo en un año, varias empresas tuvieron rendimientos reales por encima del 100%, cuando la inflación crecía a tasas aceleradas y los salarios caían drásticamente hasta en un 65% en términos reales (Reyes, 2011).

Entrada la década de los noventa, salvo la crisis de 1994-1995 donde se perdió en un año casi 10% de poder adquisitivo, y hasta la actualidad, bajo la regla de establecer el salario mínimo con base a la inflación

esperada, el salario mínimo real ha permanecido estancado, observado pérdidas marginales en función del nivel de inflación, y sin mostrar recuperación significativa alguna.

Con lo anterior, el salario mínimo real, actualmente representa el 25.2% del salario de octubre de 1976 (véase gráfica 1). Dicha situación, es un reflejo de esa caída significativa en el nivel de vida de millones de trabajadores, dado que la fijación del salario mínimo no afecta solamente a quienes lo perciben, sino en general a toda la clase trabajadora, al ser los aumentos a este salario, la base de negociación de los incrementos salariales en cualquier rama o sector de actividad económica.

A manera de ejemplo, entre los efectos de la caída de poder adquisitivo en el salario mínimo, tómese en consideración que de no haber perdido poder adquisitivo alguno, actualmente dicho salario sería del orden de los \$10,800 pesos. Es decir, que el salario mínimo de un obrero promedio de 1976 podía adquirir mercancías equivalentes a un valor de \$10,800 pesos. Actualmente, dado que esa caída en el salario mínimo, afectó a toda la estructura salarial, las personas que obtienen un ingreso similar, en promedio, tienen más de 17 años de escolaridad. Más adelante, describiremos con mayor precisión cuáles han sido los efectos que ha tenido la caída del poder adquisitivo para toda la distribución salarial.

En los últimos años los principales problemas estructurales de la economía sólo se han enfrentado desde otra perspectiva, pero no han sido resueltos. La insuficiencia del ahorro interno continúa, cada vez que la economía crece las importaciones lo hacen más rápido, el gasto del gobierno sigue siendo deficitario ante la usencia de una profunda y equitativa reforma fiscal integral, por mencionar a los principales que nos han llevado a una creciente dependencia del exterior para crecer. No hay duda que las nuevas condiciones de la globalización y de integración a la economía mundial han atado a nuestra economía, pero esto debe superarse.

Se requiere de una integración estratégica y selectiva a la globalización, que permita el desarrollo de economías locales y regionales, a partir de cadenas productivas constituidas por empresas de menor tamaño, que generen gran cantidad de empleo, que produzca tanto para el mercado interno como para la exportación, en condiciones competitivas y de sustentabilidad. La solución no está en que el gobierno lo haga o lo promueva, o sólo el sector privado, está también en la incorporación del resto de la sociedad formada por muchos más que ellos, que padece en grado superlativo las calamidades de una economía mal administrada.

Es necesario impulsar una renovación económica desde todos los rincones de este país, que comience por un gran acuerdo nacional entre todas las fuerzas económicas, políticas y sociales, para acordar el proyecto de nación y el conjunto de valores que inspiraran las acciones (la justicia, la equidad, la verdad, la honestidad, la austeridad, la solidaridad, la eficiencia, por mencionar los principales), en ejercicio pleno de la democracia, que es un dialogo entre iguales. Es necesario que éste se extienda a las demás organizaciones para establecer acuerdo de cooperación y mejoramiento de la productividad, recompensados por mejores remuneraciones para recuperar la confianza en el otro; lo mismo en la familia, el dialogo y la atención a los seres queridos ayudara a cohesionar al grupo y a fundamentar una cultura basada en los valores mencionados, que prefiera lo nuestro sin menoscabo de lo bueno del exterior.

Los precios de lo que exportamos bajan notablemente por la caída del peso frente al dólar, a \$15.30 por dólar, así como el petróleo.

El gobierno federal reduce su gasto y los salarios reales van en caída y por tanto las ventas de las empresas así el despido por la falta de liquidez, salvo el optimismo del gobierno federal, cualquier indicador de la actividad económica va a la baja.

Desde Salinas a Zedillo los resultados se muestran negativos al aplicar el proyecto neoliberal, el cual generó una gran concentración de la riqueza beneficiando a los monopolios, generando que el capital financiero internacional refleje una injusta distribución del ingreso y la riqueza, lo cual produjo más pobres.

La política neoliberal no ha logrado resolver en 32 años crisis que prometió resolver con las reformas neoliberales acordadas con el Fondo Monetario Internacional, lo nuestro fue un crecimiento promedio del Producto Interno Bruto de tan sólo 1.4% y con ello implicó un crecimiento del desempleo.

El empleo perdió dinamismo, el número de ocupados paso de 21.5 millones de personas a 23.5, con un crecimiento medio anual de 0.7%, lo que significó sólo la creación de 182 mil plazas anuales cuando se requerían por lo menos 600 mil, considerando que la población en edad de trabajar crecía a un ritmo de 2.7% anual.

Respecto al salario real en este periodo se redujo a un 73% y por tanto impacta al desempleo, además las empresas grandes y modernas que adoptaron tecnologías innovadoras de mano de obra, demandan capital humano más y mejor calificado.

Jefatura familiar en México: en el 75% de los hogares recae en el hombre, 25% en la mujer; el género del jefe de familia no debe ser relevante, puesto que el artículo 123 constitucional determina la existencia de un salario que permita acceder a mínimos bienestar.

CONCLUSIONES

Como se puede observar el problema del desempleo en México fue y sigue siendo el mayor problema de las políticas neoliberales desde 1982 a la fecha.

La privatización de las empresas públicas pasaron de 1155 en 1982 a 215 en 1994 y más de 440 fueron desaparecidas o liquidadas.

El Estado deja de invertir en la actividad productiva y por tanto genera pocos empleos.

El análisis de la política económica del presidente Peña Nieto la cual pretende el ajuste de la economía, basado en las reformas estructurales de corte neoliberal destacando que tiene como premisa resolver las crisis de 1982 hasta la crisis del 2008.

Su componente se encuentra en una inserción más aguda del modelo globalizador neoliberal, sin embargo, del 2012 a la fecha a mostrado un lento crecimiento económico, escasa absorción de empleo en el sector formal, un incremento importante en la economía informal y de la migración a Estados Unidos.

Un aumento muy alto de extranjerización del sistema financiero y de empresas internacionales, gran concentración de ingreso, mayor pobreza.

El empleo y sus resultados muestran condiciones muy difíciles, se calcula que se deben crear alrededor de 1 millón de empleos anuales, y esto no está sucediendo, lo que está creciendo es una población de economía informal.

La continuidad del modelo neoliberal requiere de cambios de fondo, no en su forma, se requiere de un nuevo proyecto nacional de desarrollo, no ajustes al modelo vigente. Un verdadero cambio con un propósito de resolver los problemas y pobreza de los mexicanos.

IMPORTANCIA DE LA ACTIVIDAD HOTELERA EN EL TURISMO Y PROCESOS DE FORMACIÓN UNIVERSITARIA

Luisa María Herrera Rivas, Universidad de Guayaquil
Edwin Lucero Espinoza, Universidad de Guayaquil

RESUMEN

Se ha enfocado el presente trabajo, alrededor de una de las carencias que atraviesa una importante actividad como la hotelera dentro del turismo en Guayaquil, por cuanto, en su mayoría no tiene una categoría profesional. Por tanto, lo que se pretende, es evidenciar, cuanta necesidad hay del aporte inminente de las Instituciones de Educación Superior, y acaso del Estado, para apuntalar el desarrollo de una alternativa probada en el resto del mundo, de aporte en divisas a los países, que además es sostenible y sustentable por naturaleza, y por cuanto esta importante y productiva actividad, adolece de muchas falencias que disminuyen su calidad, al no recibir el importante insumo de la academia universitaria en la formación de los actores de la misma. El desarrollo de este trabajo, se ha valido con análisis, síntesis inductivo-deductivos, cuantitativos, mediante encuestas, confrontando las distintas consecuencias que se han evidenciado en el trabajo de campo, con la principal causa de éstas, y contrastando con los beneficios del análisis y del posible escenario que resultaría del aporte que daría la academia a esta actividad.

PALABRAS CLAVE: Actividad hotelera, IES, empírico, academia PCNT

IMPORTANCE OF THE HOTEL ACTIVITY TOURISM AND PROCESSES UNIVERSITY TRAINING

ABSTRACT

Has focused this paper, some of the shortcomings that crosses an important activity as the hotel within tourism in Guayaquil, because mostly does not have a professional category. Therefore, the aim is to show, how much need there is the imminent contribution of Higher Education Institutions, and perhaps the state, to underpin the development of a proven worldwide, divided filler in alternative countries, which is also sustainable and viable in nature, and since this important and productive activity, it suffers from many shortcomings that diminish their quality, not receiving the important input of university training academy players in it. The development of this work has used with analysis, inductive-deductive synthesis, quantitative, through surveys, comparing the different consequences are evident in the field, with the main cause of these, and contrasting with the benefits of analysis and the possible scenario that would result from the academy contribution to this activity.

INTRODUCCIÓN

La investigación realizada, parte de una realidad muy notoria en Guayaquil, Ecuador, y es el hecho de que, no existe una correlación o acercamiento entre la academia universitaria y los actores de las actividades

hoteleras. Son muy pocos los profesionales, formados en las universidades, los que prestan sus servicios profesionales dentro del área hotelera y por tanto en el turismo a la vez.

No existe una estructura especializada o adecuada para el desarrollo de la formación de profesionales de línea en la administración hotelera, puntal del turismo formal, no existen materias dedicadas a la formación de profesionales en las actividades que de hecho están cumpliendo en la práctica.

Uno de esos problemas, es el hecho de que es casi un condicionamiento del trabajo hotelero, el no estudiar, por cuanto, al pasar a ser parte de actividades laborales rotativas, es decir, no tienen un horario permanente, sino que está cambiando constantemente, ya es un impedimento para que puedan, o concluir sus estudios, o iniciarlos en determinada área del conocimiento.

Esta es una de las limitantes que tienen los colaboradores de la actividad hotelera, que a su vez se refleja luego en la calidad del trabajo que están en posibilidad de ofrecer a terceros.

Por tanto, la investigación, pretende relieves o destacar las deficiencias que se presentan en esta actividad, generadas por la carencia de un aporte significativo en nuestro país, como lo es el de la formación académica en los principales actores de una de las actividades importantes de la economía del país, como la actividad hotelera, y a la vez, como esto tiene repercusión en el desarrollo del país.

Este trabajo es producto de la observación, análisis, inducción, deducción de los datos cuantitativos, recabados en el campo, de los mismos actores de la actividad hotelera, mediante la aplicación de encuestas estructuradas especialmente, para destacar la situación actual de la formación académica en esta actividad, de manera que, se evidencie el propósito del centro del tema, que es la deficiencia de la participación de las IES en la formación y capacitación de los que hacen la actividad hotelera.

REVISIÓN LITERARIA

En la actividad hotelera a nivel mundial existe mucha información, sin duda, pero en Ecuador la ha empezado a recopilar, procesar y codificar el actual gobierno, de modo que, gran parte de las fuentes que se han utilizado para el presente trabajo, por tanto, se programó en primer término la recopilación, clasificación y organización, para entonces proceder al análisis de la misma, luego de lo cual, se han estudiado las falencias y carencias que se han anotado en la exposición y la revisión de datos recopilados de las encuestas realizadas, de modo que se aportan nuevos datos respecto de una realidad que incide en una de las ciudades más grandes del Ecuador, como Guayaquil.

El Instituto Nacional de Estadísticas y Censos del Ecuador, mediante un censo de la actividad turística nacional, ha proporcionado información valiosa, mediante la cual se puede estratificar la composición de las actividades de hotelería, en las distintas ciudades del Ecuador, entre las que está la ciudad de Guayaquil, con una estratificación de las distintas categorías que se encuentran según el tipo de lugares para hospedaje y hotelería.

Adicionalmente, el Ministerio de Turismo del Ecuador, contrató los servicios de una importante firma consultora legal de Costa Rica, la que realizó un estudio importante en todo el país, logrando entre muchos otros aspectos, realizar un análisis FODA, en el que se pudo lograr un diagnóstico general de la situación general de la situación en la que se encuentra la actividad, presentando un análisis detallado de los objetivos y metas que se han alcanzado en materia de turismo, estableciendo parámetros e indicadores para medir la gestión de lo que se le ha denominado

PLANDETUR 2020 o Plan de Desarrollo Turístico 2020, con el fin de que en este país se den nuevos logros en este ámbito que cobra mayor y determinante importancia en el Ecuador.

METODOLOGÍA

El problema ha sido manejado, mediante el acceso a fuentes de consulta, como se ha indicado, como: datos estadísticos y análisis, que han servido para la elaboración del Plan Nacional de Capacitación Turística del gobierno del Ecuador, que a su vez está orientado a cumplir con el Plan Estratégico de Desarrollo de Turismo Sostenible para Ecuador PLANDETUR 2020; del Instituto Nacional de Estadísticas y Censos INEC; de la Organización Mundial del Turismo, y de los resultados de un estudio solicitado por ministerio de Estado a la firma consultora T&L Consultores, la que realizó un levantamiento técnico de información relevante, respecto a la situación de la del turismo en general en el Ecuador, por zonas y por regiones del país, la condición de éste, en el contexto mundial, análisis FODA, ofreciendo un análisis pormenorizado de los objetivos y metas alcanzadas por las autoridades del Ecuador en materia de turismo, estableciendo parámetros e indicadores para medir la gestión de lo que se ha denominado el PLANDETUR 2020 o Plan de Desarrollo Turístico 2020, con el fin de que en este país se den nuevos logros.

Adicionalmente, se produjeron encuestas personalizadas, para ser aplicadas en campo, de las que se pudo determinar con mayor énfasis y dedicación, la situación de carencia que persigue evidenciar el presente trabajo, respecto del nivel de conocimientos académicos que tiene el personal operativo del sector hotelero en la ciudad de Guayaquil.

Esta información, contrastada con datos tomados del INEC, como de las publicaciones de la Organización Mundial del Turismo, han ratificado el criterio del análisis realizado y descrito en el problema que se ha planteado.

Bajo el método analítico-deductivo-descriptivo, se ha podido establecer que la actividad hotelera a nivel mundial, ha ido copando mayores espacios dentro de las economías de las mayores potencias, así se desprende de las estadísticas que constan en la web del Ministerio de Turismo del Ecuador, en que también recurre a las cifras de la Organización Mundial del Turismo, lo cual destaca la importancia del estudio realizado.

Tanto se ha promovido esta actividad, que es ya una corriente mundial, que en nuestro Ecuador se ha creado un programa denominado “Competencias Laborales”, liderado por la Federación de Cámaras Provinciales de Turismo (FENECAPTUR), cuyo propósito se centra en la formación y preparación del equipo humano de todos los establecimientos hoteleros y turísticos del Ecuador, para re direccionar y reorientar sus conocimientos práctico-empíricos, para acreditarlos con conocimientos más técnicos y tecnológicos bajo el apoyo de un organismo no gubernamental que los avale.

Con este antecedente, es fácil admitir la relevancia que ha cobrado el desarrollo de la actividad hotelero-turística, dentro de las economías de muchos países, debido a la generación de divisas, en este caso para el Ecuador, por tanto, esto justifica también la necesidad de que la academia salga al paso de este crecimiento en el ámbito turístico.

Así se evidencian las carencias de este aporte, puesto que, las IES de muchos de los países, aún no han logrado desarrollar los perfiles adecuados y relacionados con las distintas necesidades de las áreas del desarrollo de la actividad turística que ya se ha ido multiplicando y especializando, pese a su incipiente pero constante crecimiento.

Tabla 1: Composición De Los Servicios De Hospedaje En La Ciudad De Guayaquil

TIPOS	CANTIDAD
HOTELES	57
HOSTALES	46
HOSTERÍAS	14
HOTEL APARTAMENTO	2

RESULTADOS

Como producto del trabajo del campo, basado en las encuestas aplicadas a los gestores y personal operativo, en las distintas locaciones y prestadores de servicios hoteleros, se ha podido evidenciar, que sorprendentemente, esta problemática de la carencia de conocimientos académicos no es exclusividad de las empresas hotelera con categoría cinco estrellas, sino, prácticamente de todas las categorías, es decir, de los hoteles tres estrellas, hosterías, hostales, sitios de alojamiento familiar y de turismo comunitario.

De ello se ha podido conocer la estratificación de la oferta hotelera en el Guayaquil, misma que está conformada de la siguiente forma:

Tabla 1: nivel de conocimientos del personal operativo de los servicios hoteleros en la ciudad de guayaquil

	GERENTES	GERENTES/PROPIETARIOS	MANDOS MEDIOS	PERSONAL OPERATIVO
PROFESIONAL	120	10	20	0
INTERMEDIO	30	20	50	50
BÁSICO	0	120	80	100

Fuente: Encuestas realizadas por autores

CONCLUSIONES

Con base en el análisis realizado, con fundamento en las encuestas y los demás argumentos expuestos, se pude advertir que, el panorama para el desarrollo de la actividad hotelera no es tan prometedor, en lo que respecta a la formación académica, tal vez, a una permanente capacitación, posiblemente, por la gestión que hoy realiza el gobierno nacional, pero de ahí a que se propenda a una participación de las Instituciones de Educación Superior, como verdaderos protagonistas en el cambio de una realidad que en otros países como Suiza, que hoy es un país líder en el turismo, pues ha logrado desarrollar toda una universidad especializada en esta área, como el Swiss Hotel Management School (SHMS), que ofrece programas de licenciatura y maestría en hotelería y turismo con el respaldo de la Universidad de Derby en Inglaterra, no tiene comparativo.

Es tal su importancia, que no solo forma a estudiantes dentro de esta actividad, en Suiza, sino que forma a estudiantes de más de sesenta países de todo el mundo, siendo la más grande institución de enseñanza hotelera, con base en el idioma inglés.

Esta confiere diplomas, que combinan técnicas administrativas modernas para actualizar a los estudiantes en las tendencias modernas del sector hotelero, y sus certificados tienen tres reconocimientos internacionales:

- El del sistema educativo suizo, a través del Swiss Higher Diploma en Administración de Hoteles.
- El del sistema educativo americano, a través de la Asociación Americana de Hoteles.

- El del sistema educativo británico, a través de un título profesional británico llamado Hospitality Management.

También se desprende que la problemática planteada, de la falta de una formación académica en la actividad hotelera, influye en su rendimiento y falta de eficiencia, existe y es muy real, puesto que, no solo se ha evidenciado que esta carencia se presenta más en las empresas de servicios hoteleros de menor o mínima categoría, sino que prácticamente está presente en todas las categorías, pues, el personal operativo, entendiéndose de gerente(a) para abajo, que no cuenta con conocimientos académicos, es decir otorgados por una institución de educación superior, está también en aquellas empresas grandes o de máxima jerarquía hotelera, como en los hoteles de cinco estrellas.

Por lo tanto, se puede recalcar que, pese a que existen IES en donde forman a los futuros administradores de hoteles, restaurantes, agencias de viajes, no existe en el país, una IES que forme docentes para que impartan las diferentes cátedras, de acuerdo a las necesidades de los hoteles de mayor jerarquía, esto es, en relación a su estructura básica por lo menos.

Adicionalmente, hay pocas esperanzas para que el personal operativo de estos establecimientos asista y se formen en una IES, por las limitaciones que se han anotado, a excepción de los empleados con altos cargos administrativos y cuyos horarios les permiten realizar esta asistencia a la Academia, pese a que aún con la ayuda del gobierno a este sector, genera más ingresos en divisas al país.

El Ministerio de Turismo en conjunto con la cartera de gobierno tienen en sus manos la tarea de gestionar un plan, que determine estas deficiencias, necesidades, fortalezas, debilidades y soluciones, para coordinar el cambio que termine la implementación de una capacitación y formación académica que presente una nueva opción de mejora de todo el sector, de cara a la actualización de conocimientos, manejo de herramientas tecnológicas, diversidad de lenguajes y de técnicas de administración y servicios que mejoren notablemente la calidad de la administración y los servicios hoteleros, aún en los prestadores de menor categoría, puesto que todos tienen deben tener las mismas oportunidades, pues es un sector de gran importancia en la generación de ingresos para un país.

No se desmerece ni se desconoce la labor que desarrolla el gobierno nacional, pero estos son medidas parciales o temporales, como el Programa de Competencias Laborales que lleva a efecto el Ministerio de Turismo del Ecuador, o el Programa Nacional de Capacitación Turística, que a la larga no ayuda en mucho para el desarrollo económico del Ecuador, que no apunta a una solución definitiva, sino a soluciones parciales.

Queda entonces a consideración del lector, una interpretación sana del presente trabajo, que solo apunta a evidenciar una carencia en un aspecto importante de la economía de Guayaquil, y por tanto del Ecuador, y que actualmente representa una problemática que debe tener la atención debida dada su trascendencia.

LIMITACIONES

Una de las principales limitaciones encontradas en el desarrollo del presente trabajo, está en el hecho de que, no se cuenta con una información muy variada y completa, que defina el nivel de los conocimientos con que cuentan las personas que forman el universo de la actividad hotelera, que a su vez es parte de la actividad turística en Guayaquil y en el Ecuador.

Otro factor es la disponibilidad de tiempo con que cuentan estas personas para poder colaborar con cualquier tipo de investigación o entrega de información, y por tanto aportar con información valiosa para trabajos

como el presente, además de la dificultad de poder acceder a los lugares que prestan estos servicios de hospedaje.

RESUMEN

Este estudio está centrado en los países de Latinoamérica y el Caribe. Su objetivo fundamental es analizar algunos fenómenos que se dan en el nivel de actividad empresarial, incentivando el emprendimiento con innovación para la creación de empresas socialmente responsables dentro del sector turístico latinoamericano. Por lo tanto, este trabajo pretende realizar un diagnóstico para Latinoamérica, para así llegar a una serie de resultados y conclusiones significativas que permitan apreciar fortalezas, y debilidades actuales y futuras de la región durante el periodo 2006-2030.

ENTREPRENEURSHIP WITH INNOVATION FOR THE CREATION OF ENTERPRISES WITH CORPORATE SOCIAL RESPONSIBILITY IN TOURISM SECTOR

ABSTRACT

This study focuses on Latin America and the Caribbean. Its main objective is to analyze some phenomena that occur at the level of entrepreneurial activity, encouraging entrepreneurship with innovation for the creation of socially responsible companies in the latinoamerican tourism sector. Therefore, this work intended to make a diagnosis for Latin America to arrive to a serie of results and significative conclusions which allow to appreciate strengths, and present and future weaknesses of the region during the 2006-2030 period.

INTRODUCCIÓN

Este trabajo se enfoca en gran medida a los países de Latinoamérica y del Caribe. Su objetivo central es el análisis del emprendimiento con innovación para la creación de empresas con responsabilidad social empresarial en el sector turismo.

En 1999 en el Foro Económico Mundial las Naciones Unidas convocó a empresarios sobre considerar la necesidad de "adoptar y promulgar" principios universales fundamentales para erradicar la pobreza, garantizar la dignidad y los derechos humanos, cuidar el medio ambiente así como las normas laborales que debe seguir el empresariado actual o futuro a través de códigos de responsabilidad social y empresa

sostenible. Los principios especifican que las empresas no deben estar involucradas o promover abusos de derechos humanos, eliminando toda forma de trabajo forzoso e injusto. Las directrices de cooperación promulgadas por la ONU son particularmente importantes por la tendencia para llevar a cabo nuevas formas de asociación económica que no incluyen directamente a los gobiernos. Así en un ambiente de privatizaciones y desregulación laboral internacional es importante establecer estándares de ética entre las partes involucradas pues de no hacerlo se puede incrementar los casos de explotación laboral en todos los tamaños de empresa.

Con respecto al sector turístico, que representa una de las alternativas más viables a corto plazo para disminuir el efecto pobreza en nuestra región, observamos que a la fecha se ha desarrollado en términos generales toda una nueva clasificación y variedad de tipos de turistas. Inicialmente el turista se clasificaba básicamente en un turista de ocio (playa o ciudad); turista de visitas familiares o de amigos, y turista de negocios. Además la estacionalidad o los meses tradicionalmente comunes para vacacionar se han también modificado radicalmente, siendo ya frecuente observar un flujo constante de nuevos tipos de turistas durante todo el año. Ello sin duda representa una oportunidad más para el “emprendedor- innovador” de empresas en este sector. Sin embargo, a la par del desarrollo de nuevos tipos de turismo lícito, también se ha desarrollado otra gama de turismo ilícito con marcada falta de responsabilidad social y que atenta contra la dignidad humana. Tal es el caso del turismo sexual (incluso de menores), el turismo de drogas, el turismo de contrabando, etc.

La importancia del sector turismo es que hoy en día la denominada “industria sin chimeneas” puede ser una solución parcial a los graves problemas que aquejan a la región latinoamericana y del Caribe. Considerando que en general que la región tiene gran potencial turístico por su diversidad geográfica, de clima, fauna y flora, entre otras cosas, representa para muchos gobiernos un sector estratégico y prioritario a desarrollar pues puede ser generador importante de puestos de trabajo.

Es importante que los países que compiten por el turismo creen Comités Técnicos de Estrategia para diseñar los instrumentos de evaluación acordes a los objetivos y acciones del un programa del sector que elimine la explotación y desarrolle el sector con responsabilidad social empresarial. Así se tendrán indicadores cuantificables que midan la actuación en la cobertura de metas de los emprendedores y empresarios actuales, su actuación financiera y económica; la satisfacción de los turistas; la identificación de áreas de oportunidad, la correcta orientación de proyectos de inversión innovadores así como la identificación o mejoramiento de actuales y nuevas necesidades con responsabilidad social empresarial.

REVISIÓN LITERARIA

Después de una época de expansión del sector turístico y hotelero, se ha pasado a experimentar un exceso de capacidad de ocupación en muchos países y un decremento en la demanda que origina uno de los mayores problemas de la Industria Hotelera que es su dificultad para generar suficiente cash flow. Es decir, se ha pasado de un mercado de demanda a uno de oferta con continuos déficits en la tesorería.

Diversos especialistas coinciden en que uno de los problemas fundamentales que se presenta en el sector turismo y hotelero es el proceso de reconversión que puede ser demasiado lento, pues existen ciertos factores que contribuyen a que la situación esté fuera de control en la industria, tales como: Un bajo nivel de tesorería; la desregulación de la industria hotelera en muchos países; la obsolescencia de los hoteles y la dificultad de nuevas financiaciones; la interdependencia del sector turismo y hotelero con la economía nacional y regional, los niveles de violencia e inseguridad, entre otros aspectos.

Al igual que en otros sectores, en el turístico y hotelero la generación de cash flow a corto plazo es de vital importancia. En 1990 Guyot fue de los primeros en señalar que dado el desarrollo hotelero que implica problemas especiales como: complicados costos de propiedad, complejos contratos de administración y un

impredecible turismo que se mueve por todo el mundo, el generar el suficiente cash flow para pagar todos los préstamos a corto plazo constituye el principal éxito de un hotel y esto se da regularmente donde la volatilidad y el ciclo natural de los negocios puede causar problemas. Por ello, actualmente las grandes cadenas hoteleras se han fijado como objetivo fundamental el diversificar sus operaciones fuera de sus fronteras tratando de generar suficiente tesorería para hacer frente a sus problemas de liquidez y solvencia. Ello en definitiva inyecta mayor presión a la industria hotelera local.

El bajo de flujos de turistas en ciertos países y bajo porcentaje de ocupación hotelera formal ha originado un serio peligro para la obtención de tesorería, la creación de los nuevos puestos de trabajo y la generación de las divisas que tanto necesita la economía de un país. Algunos ejecutivos nacionales del sector opinan que la insolvencia y falta de liquidez de gran número de hoteles tuvo su origen en gran medida por el fenómeno de la globalización y el surgimiento de las grandes fusiones hoteleras denominadas “cadenas”. Actualmente estas han desplazado del mercado a un gran número de hoteles nacionales, y después de una época de expansión del sector hotelero, se ha pasado a experimentar un exceso de capacidad de ocupación y un decremento en la demanda que mantiene la dificultad para generar un suficiente cash flow dentro de la industria hotelera nacional en general.

El anterior fenómeno negativo se debe a una transición o reconversión de un mercado de demanda hacia un mercado de excesiva oferta. Esto lleva a ciertos hoteles y empresas del sector a situaciones críticas para su supervivencia, ya que dependen básicamente de los ingresos en efectivo por parte de los clientes. Lo anterior no sucede en el caso de las grandes cadenas hoteleras, que trabajando bajo el esquema de holdings y en coordinación con otras empresas multinacionales del mismo sector, pueden diversificar su riesgo, tal es el caso, por ejemplo, de las multinacionales hoteleras que tienen programas conjuntos con las grandes líneas aéreas, las agencias de viajes multinacionales, las entidades financieras.

Al respecto podemos decir que un hotel puede ser menos competitivo y obsoleto por múltiples razones aunque las tendencias principales son las siguientes: Cambios de localización, cambios en los gustos y cambios en las reglas de competencia.

Dentro del actual contexto competitivo por las divisas del turismo, los países intentan producir y vender un servicio turístico de calidad y en ocasiones distinto. Máxime en un período en que las cifras y las expectativas optimistas que maneja la OCDE determinaron que el turismo mundial duplicó su demanda a finales del pasado siglo, pasando de 460 millones de turistas contabilizados en 1990 a más de 935 millones en el año 2000 y en el 2012 superó los mil millones y se prevé que alcance mil 800 millones en el 2030. En lo referente a los países integrados en la OCDE, la tendencia de crecimiento la calcula el organismo en torno a un 4.5% y 5% anual.

Respecto a los ingresos provenientes del turismo internacional, la Organización Mundial de Turismo (OMT) informó que durante 1999, su tasa de crecimiento fue mayor que la del producto mundial, del comercio internacional o de las exportaciones de otros grandes sectores. Para el 2014 la OCDE hace un análisis en donde la tendencia turística de sus 48 países miembros lideran el turismo mundial, en un 57% según la encuesta que realizaron en el 2013 siendo así los países capaces de sustentar el empleo y añadir valor local, mientras que la OMT manifiesta que las llegadas de turistas internacionales alcanzo una cifra de 1.138 millones, pronosticando para el 2015 un aumento entre el 3% y 4% en pro de una recuperación mundial de la economía superando en un 4,7% la media después de la crisis del 2009.

Por otra parte, el Consejo Mundial de Viajes y Turismo estimó para el año 2000, entre el 10 y 11% del valor mundial de la producción sería aportado de cada nueve puestos de trabajo a escala mundial para 2014. Las cifras muestran que el sector turístico está generando alrededor de 6,5 millones de nuevos puestos de trabajo por el turismo, produciendo con esto al 2013 un crecimiento de 6% y dando trabajo a 266 millones de personas, 6 millones más que en el 2012. Los estadísticos apuntan a que la fuerza de trabajo a nivel

mundial pasará de los 3.000 millones de personas hasta 4.100 millones en 2030. Y aunque este aumento es superior con respecto al ritmo de crecimiento de la población mundial, no existe certeza en que región del mundo se crearán esas empresas y esos puestos de trabajo.

Considerando las estadísticas y los pronósticos de la OMT que para 1997 contabilizaron 613 millones de llegadas de turistas internacionales entre todos los países, con un gasto estimado de 444 mil millones de dólares, los gobiernos dirigen grandes esfuerzos humanos y técnicos para no quedarse fuera de este mercado. Para finales del año 2000 la OMT registró un gasto aproximado de 560 mil millones de dólares por parte de los turistas, una tendencia que se irá incrementado en los próximos años del presente siglo, hasta alcanzar para el 2020 la cifra de mil 602 millones de turistas internacionales cuyo gasto estimado será de dos billones de dólares. Estos datos representan un carácter sostenido del sector y unas tasas medias anuales de crecimiento durante el período 1995-2020, que van del 4.3% hasta llegar al 6.7%. Así, estos porcentajes se sitúan por arriba de la probable expansión mundial de la riqueza que se estima un 3%.

La OMT también estima que en el transcurso de los próximos 20 años habrá un cambio significativo en el mapa del turismo mundial, y sobre todo entre las diez principales potencias de destino del turismo internacional. De acuerdo con sus previsiones, China será el principal país de destino turístico a nivel mundial para el año 2020, con una participación en el mercado del 8.6% (137.1 millones de llegadas turísticas internacionales) y una tasa de crecimiento promedio anual del 8%. Lo anterior se estimó sin considerar a Hong Kong como parte de China, quien ocupará por separado el quinto lugar como país más visitado, estimándose en un 3.7% su participación en el mercado y una tasa de crecimiento promedio anual del 7.3% (sólo por debajo de China). Es decir, si se considera a China y Hong Kong en su conjunto, ambos representarán el 12.3% de captación total del turismo mundial, seguidos de los Estados Unidos (6.4%), Francia (5.8%), España (4.4%), Italia (3.3%), Reino Unido (3.3%), México (3.1%), Rusia (2.9%) y República Checa (2.7%), es de resaltar el crecimiento vertiginoso del turismo internacional previendo un alcance de mil 800 millones para el 2030 ya que esta gran industria representa el 4.7% del PIB, el 21% de la exportación de servicios y un 6% del empleo dando así un diferenciador según el último barómetro del turismo mundial, situando en el 2013 unos ingresos del turismo internacional en 1.197.000 millones de dólares, con una perspectiva positiva que supere en 230.000 millones, el año anterior de la crisis del 2009.

Con respecto a los países más importantes como emisores del turismo mundial, la tendencia se ha incrementado a una tasa media anual del 7.1% para las llegadas de turistas, y un 12.2% en cuanto a ingresos turísticos (excluyéndose el gasto de transporte). Pero el dato más significativo que nos proporciona la OMT sobre el turismo emisor, es el que indica que se presentará un cambio cuantitativo importante entre los diez principales países emisores de turistas. China ascenderá al cuarto puesto, sin incluir a Hong Kong, con una participación en el mercado del 6.2% (100 millones de llegadas generadas a escala mundial). Por otra parte, Rusia se situará en el noveno lugar con una participación en el mercado del 1.9% (30.5 millones de turistas emisores). De esta forma, no sólo la tabla actual de los diez países más visitados se modificará, sino también con la consolidación de las nuevas reformas de apertura económica de China y Rusia, se presentarán ambas naciones como dos nuevos e importantes motores de emisión turística. Esto llevará a Asia Oriental a convertirse en la región más dinámica del turismo mundial para el año 2020.

En cuanto al comportamiento del turismo mundial por regiones, la OMT informó que las de mayor crecimiento durante el período 1990-1995 fueron: Oriente Medio (8.5% de incremento anual promedio), Asia Oriental- Pacífico (8.4%), Asia Meridional (6.3%) y Africa (5.9%). Según sus previsiones, Europa seguirá siendo la región más importante a pesar de que disminuirá su participación en el mercado al pasar del 59% en 1995 al 45% en el año 2020. Actualmente en la mayoría de los destinos de Europa occidental y Meridional se registran crecimientos superiores a la media mundial, destacando los crecimientos de los países mediterráneos como España (9%), Portugal (4%) y el sur de Francia (10%).

Las regiones de Asia Oriental y del Pacífico registrarán un crecimiento anual del 7%, con una cuota de mercado del 27% para el 2020. Si mantienen el ritmo de crecimiento de sus tasas de demanda turística para la región, las que son actualmente muy elevadas y se estiman en un 3.1% anual, para el año 2005 las dos regiones conjuntamente desplazarán al Continente Americano como la segunda región más importante de turismo internacional receptivo.

Con respecto al continente americano, se prevé una tasa de crecimiento del 3.8% anual, con una cuota de mercado del 18%. Las prioridades estratégicas de esta región se dividen básicamente en dos subregiones de desarrollo económico y turístico que son: (1) los Estados Unidos de Norteamérica, cuya exigencia continuará siendo el consolidar sus mercados ya existentes, además de diversificarse hacia nuevos sectores del mercado mundial como el Asiático de alto rendimiento. En 1999, Estados Unidos reanudó su crecimiento de llegadas internacionales a un ritmo lento del 1.7%, mientras Canadá registró un fuerte aumento del 3.7%. (2) La segunda subregión corresponde a Latinoamérica y el Caribe, en donde el turismo sustentable será cada vez más una opción de desarrollo regional y nacional, llegando a convertirse para varios de los 32 países de la región, como la principal actividad comercial generadora de divisas. Para esto se debe reconquistar el mercado estadounidense y canadiense, e incrementar la cuota de mercado europea y asiática.

En la región Latinoamericana y del Caribe, México es el único país que figura entre los 20 principales centros turísticos del mundo, al superar en los últimos años los 20 millones de turistas internacionales. Al mismo tiempo, en 1999 fue el primer país de la región en la captación de divisas (8mil 100 millones de dólares) y en la construcción de hoteles e infraestructura turística (6 mil millones de dólares). Según la Secretaría de Turismo de México (Sectur), todo esto está basado en un modelo tributario que intenta fomentar la inversión turística. Por eso actualmente el régimen fiscal ha permitido que para 1999 haya una inversión de más de 6 mil millones de dólares en proyectos turísticos en el país a través de una serie de incentivos fiscales para los hoteleros. Otros países que registraron durante los últimos años del siglo pasado excelentes resultados en sus tasas de crecimiento fueron Cuba (29%) y Brasil (45%).

RESULTADOS

El Banco Mundial señala que las tasas de inversión privada en Latinoamérica siguen muy por debajo con respecto a las de economías emergentes de Asia que son de las más crecen, sobre todo China e India. Para el FMI y Banco Mundial este crecimiento excepcional asiático se fundamenta principalmente en su fuerte aumento de la productividad total de los factores y la rápida acumulación de capital físico y humano en la región. Pero además se agrega su atractivo turístico en los próximos años para los viajeros mundiales.

Por el momento la región Latinoamericana en general se ha visto favorecida por el alza de los precios de los “comodities” (hidrocarburos, metales y varios productos básicos) principalmente provocada por el vigor de la demanda China. Sin embargo, los expertos alertan a estos países exportadores que no deben confiar en que dichos precios continuarán elevados, pues a mediano plazo se espera que se ponga en operación nueva capacidad de producción para satisfacer el déficit demandado. Es decir, se crearán nuevas empresas en algunos países demandantes o en otros países emergentes que pueden llevar a una reducción significativa de los precios de los “comodities”.

Según numerosos foros organizados en los últimos años por la Organización Mundial del Turismo (OMT), entre 85 países, cuyo objetivo consistió en determinar algunas de las principales características, factores, influencias y condiciones más importantes que se espera se presenten en el sector del turismo en los próximos años (1995-2020), son los siguientes:

El turista será más experimentado, activo, versátil y con mayor conciencia ambiental. Así, el turista cambiará su enfoque de la economía de “servicios” a la economía de las “experiencias”. Esto quiere decir

que el objetivo principal de viajar será para adquirir experiencias únicas que interesen al consumidor. Esto se debe al incremento de la información a través de las nuevas tecnologías de comunicación que tratan sobre la realidad mundial y sobre la concienciación pública en cuestiones sociales, medioambientales y culturales.

El mercado de viajes continuará creciendo a la par del turismo internacional, aunque el turismo nacional seguirá representando la mayoría de los ingresos.

Se apuesta por un desarrollo turístico sostenible a largo plazo.

La competitividad estará vinculada con la rentabilidad. Así, un hotel más competitivo deberá ser más rentable.

El producto turístico presentará como características básicas: la diversificación y la diferenciación. El trabajo estará centrado en lograr obtener el máximo de ventajas competitivas mediante la combinación de la diferenciación del producto, calidad y precio.

Existirá aún más diversificación en las estrategias empresariales, presentándose integraciones verticales de grandes corporativos y los esfuerzos individuales serán de poca magnitud (el 88% de los países incrementará su comercialización en el extranjero y el 78 % centrará sus estrategias de marketing en los mercados turísticos emisores claves).

La presencia de las nuevas tecnologías será indispensable en todos los sectores relacionados con el turismo, destacando las instalaciones, las telecomunicaciones y los transportes entre otros. También con las tecnologías se sofisticará el sistema de comercialización del producto turístico y la tendencia de los mercados turísticos seguirá siendo la competencia global internacional. Este tipo de comercialización será más centrada y agresiva (el 71% de los países encuestados apuesta por que el enfoque de comercialización debe ser más competitivo y agresivo).

La inversión pública y privada serán indispensables en su conjunto, pues todas las potencias turísticas continuarán buscando proporcionar la mejor infraestructura competitiva que coadyuve a asegurar la rentabilidad de la inversión privada.

Las administraciones nacionales de sector se reorientarán hacia la organización internacional del turismo, desarrollando los estados una función coordinada con el sector privado en la promoción de inversiones de desregulación, competitividad, mercadotecnia y desarrollo del producto (el 98% de los países intentará realizar sus campañas de comercialización en cooperación con el sector privado).

CONCLUSIONES.

La OMT afirma que aunque las tasas de crecimiento económico mundial continuarán siendo de moderadas a buenas, el crecimiento del poder de las fuerzas económicas y del mercado internacional, así como, el envejecimiento de la población y su reducción en la población activa de los pocos países industrializados, motivará una mayor inmigración del sur al norte. Todos estos factores combinados, producirán una polarización de gustos y oferta, de tal forma que, según la OMT, habrá un turismo más individualizado a gran escala.

La interdependencia del sector turístico y hotelero con la economía continuará. El sector turístico está ligado a la evolución económica de un país y su importancia radica en crear fuentes de empleo para grandes sectores de la población, así como generar divisas que contribuyan positivamente al desarrollo económico nacional y regional. Los ingresos que se perciben también sirven para anular el déficit del comercio exterior

y activar el empleo. Por ello los gobiernos influyen y participan directa e indirectamente en el desarrollo de esta industria, bien sea mediante subvenciones a fondo perdido, mejorando los tipos de intereses bancarios, fomentando la infraestructura de comunicaciones, transportes y servicios públicos, dando incentivos fiscales, etc.

Actualmente la población mundial asciende a 6.500 millones de habitantes, de los cuales 2.700 millones subsisten con menos de US\$2 diarios. Las previsiones son de 8.000 millones de habitantes para el 2030, con un incremento promedio de 60 millones por año. A pesar de ese crecimiento poblacional combinado con un extraordinario y acelerado desarrollo e innovación tecnológica, así como producción masiva de bienes y servicios a escala mundial, el número de personas que vivirán en la pobreza extrema será de 550 millones de personas (ingresos de menos de US\$1 al día) y 1.900 millones de personas con ingresos de menos de US\$2 diarios. La pobreza, falta de equidad, desarrollo económico y tendencias poblacionales, sin duda alguna jugarán un papel determinante en el corto plazo.

Los estadísticos apuntan a que la fuerza de trabajo a nivel mundial pasará de los 3.000 millones de personas en la actualidad hasta 4.100 millones en 2030. Y aunque este aumento es superior con respecto al ritmo de crecimiento de la población mundial, no existe certeza en que región del mundo se crearán esas empresas y esos puestos de trabajo. Si la hipótesis central del Banco Mundial se cumple, entre 2006 y 2030 el crecimiento económico mundial será un poco mayor que el registrado entre 1980 y 2005, y será impulsado cada vez en mayor medida por los países en desarrollo y emergentes. Sin embargo, hay que tomar en cuenta que actualmente existen por lo menos 100 naciones en diferentes partes del mundo que competirán por un sector estratégico que crea trabajo de manera intensiva y es el sector turístico.

RESUMEN

El objetivo central de ésta ponencia es resumir algunos de los principales resultados académicos y avances investigativos que se han obtenido en el proceso de estandarización contable internacional a partir de los últimos 20 años cuando se comenzó a trabajar sobre: “cómo medir con alto grado de exactitud cuantitativa y a través de índices de concentración, los niveles de Armonización Contable Internacional (ACI) de un país y sus empresas con respecto a las NIC (IAS) y NIIF (IFRS) emitidas por el IASB. Para ello partimos de trabajos tan importantes como los de Van der Tas (1988, 1992, 1995) quien realizó mejoras al Índice de Herfindhal para medir el grado de armonización contable a nivel nacional, y el Índice “I” para medir el grado de armonización a nivel internacional. También destacan los trabajos de Tay y Parker (1990, 1991, 1992) que propusieron que la medida de ACI se debe basar no en el grado de armonización de la normativa contable de un país versus la normativa internacional, sino en las prácticas reales que llevan a cabo las empresas entre sí en diferentes partes del mundo.

MEASUREMENT OF THE ARMONIZATION OF THE ACCOUNTING AND INTERNATIONAL PROCESSES IN COLOMBIA WITH ECONOMETRIC INDEXES AND CLUSTER ANALYSYS.

ABSTRACT

The main objective of this paper is to summarize some of the leading academic research results and advances that have been obtained in the process of international accounting standardization from the last 20 years, when the studies began to work on how to measure with high accuracy and through quantitative indices the concentration levels of International Accounting Harmonization (ACI) in a country and its companies with respect to IAS (IAS) and IFRS (IFRS) issued by the IASB. For that, we review important works of Van der Tas (1988, 1992, 1995) who made improvements to the Index Herfindhal to measure the degree of accounting harmonization in a nation, and the Index "I" to measure the degree of harmonization internationally. They also highlight the work of Tay and Parker (1990, 1991, 1992) who proposed that the ACI measure should be based on real practices of enterprises in different parts of the world.

KEY WORDS. International Accounting Harmonization. Harmonization Indexes. Global Accounting Systems . Tax Code

INTRODUCCION

A partir de una revisión bibliográfica sobre el estado de arte de la medición del proceso de armonización contable internacional, nos proponemos como objetivo central en este trabajo: *“proponer un modelo para medir la calidad de la armonización contable a través del análisis cluster e índices de concentración, aplicados a las Normas Contables Colombianas con respecto a las Normas Internacionales de Contabilidad y las Normas Internacionales de Información Financiera, tanto desde la óptica de la “armonización de derecho” (contabilidad normativa), como de la “armonización de hecho” (contabilidad positiva)”*.

Si cumplimos con este objetivo central, nos permitirá aportar aspectos fundamentales que requerirán de forma urgente la comunidad de usuarios y contables colombianos en dos vertientes, que son:

1. Determinar un diagnóstico sobre el grado real de armonización contable alcanzado por las empresas colombianas al estar adoptando las NIC-NIIF. Ello permite saber en qué punto nos encontramos y cuáles son las normas y prácticas contables más asimétricas entre el sistema contable colombiano y el modelo NIC-NIIF. Al saber lo anterior, podemos definir a qué distancia nos encontramos de un nivel de *“armonización internacional óptimo”*, y esto a su vez permitirá que las empresas colombianas tengan conocimiento sobre en que NIC-NIIF deben poner más énfasis sus esfuerzos armonizadores para producir con mejor calidad su información financiera en un contexto internacional.

2. El segundo aspecto a considerar es si podremos evaluar si existen ventajas inmediatas para las empresas colombianas que ya aplicaron las NIC-NIIF con respecto de aquellas que aún no lo han hecho. Sobre todo en los aspectos de fiscalidad, procesos de medición y cierre, mejoras en la presentación estados financieros para la toma de decisiones o mejora en los marcos conceptuales.

En esta primera fase el modelo propone medir primero: la *“armonización de derecho”* tomando en cuenta las normas contables colombianas con respecto a las NIC-NIIF. Esto a partir de un análisis conceptual entre las últimas dos propuestas conceptuales sobre normatividad contable: la Normativa Colombiana y la normativa NIC-NIIF. Posteriormente, a través de encuestas cerradas y entrevistas abiertas aplicadas a expertos y a una muestra de empresas colombianas clasificadas por sectores y que cotizan en Bolsa, mediremos la *“armonización de hecho”* considerando las prácticas contables reales con respecto a las NIC-NIIF.

Para ello se recomienda utilizar la técnica estadística multivariable del *Cluster y los Índices “H” y “C”*

El análisis Cluster nos proporcionará un criterio de aproximación a través de la distancia euclídea para determinar la cercanía o asimetría de cada país con respecto al tipo de sistema contable armonizado. Este método de agrupamiento es el de Ward, y primero estima las medidas de cada variable dentro de cada cluster. Posteriormente, para cada caso estima la distancia euclídea con respecto a las medidas de los conglomerados. Para ello el método se fija como meta incluir sujetos en cada grupo con base a la minimización de la varianza interna de cada cluster (*García y Gandía: 1998*). Así la expresión se define como:

$$D_{\mu} = \left[\sum_{k=1}^P (x_{ik} - x_{jk})^2 \right]^{\frac{1}{2}}$$

Dónde:

D_{μ} = Distanciamiento entre las prácticas contables del país “i” y el “j”

x_{μ} = Número de Empresas del país “i” que aplican la práctica contable “k”

x_{μ} = Número de empresas del país “j” que aplican la práctica contable “k”.

También se recomienda utilizar los dos siguientes índices que miden los grados de armonización contable y que han dado exitosos resultados en investigaciones previas:

El *Índice de Concentración de Herfindahl (Índice H)* con las adecuaciones propuestas por Van der Tas (1988, 1992). Los valores del baremo de este índice van de 0 a 1. Siendo que, cuando el *índice H* se aproxima más a la unidad, el indicador muestra que existe mayor grado de armonización contable. Esto a partir de las normas o prácticas contables seleccionadas para la estimación. En nuestro caso se seleccionarán únicamente aquellas NIC-NIIF que se consideren más importantes para el modelo armonizador contable colombiano de “derecho” y de “hecho”. El benchmark lo establece el investigador. En nuestro caso probablemente un índice inferior a .7 mostraría una deficiente armonización contable.

La expresión del índice H se define como:

$$H = \sum_{m=1}^M p_m^2$$

Donde:

H = *Índice de Herfindhal*

m = *método o sistema contable alternativo m*

P_m = *Frecuencia Relativa del método o sistema contable m*

O bien:

$$I = m - 1 \sqrt{\sum_{i=1}^n \left(\int_i^1 x \int_{i, \dots, \dots}^2 x \int_i^m \right)}$$

Dónde:

I = *Índice de Herfindhal*

m = *Número de Países*

m = *Número de Métodos Contables Alternativos.*

\int_i^m = *Frecuencia Relativa del Método i en el país m*

Los índices bien aplicados proporcionan mediciones útiles a los interesados en la Imagen fiel y nos indican con base a un estándar en donde nos encontramos y a que distancia estamos con respecto a un benchmark. Sin embargo, los detractores del proceso armonizador argumentan que aunque el benchmark este bien calculado, este no nos dice si (de forma parcial o total) es positivo o negativo en el contexto local para las empresas a la hora de alcanzar o aproximarse a la armonización contable mundial. Por ejemplo, el tema de la ausencia de una reforma fiscal a la par de una reforma contable puede causar más desventajas que beneficios a las empresas locales.

En este modelo primero estudiamos, no sólo algunas de las mejores propuestas académicas para medir la presentación y cuantificación de las normativa contable internacional con respecto a un país o región, sino que también sugerimos posibles escenarios positivos o negativos que podrían afectar a la empresa en algunos de sus factores de éxito económico, financiero y fiscal por el simple cambio de normatividad local versus normatividad internacional.

En una segunda etapa del modelo, con la misma técnica multivariable e índices, nos proponemos analizar si las empresas Colombianas muestreadas tienen o no mayor grado de armonización contable internacional con respecto a una muestra de empresas Latinoamericanas. Esto nos permitirá saber en qué posición nos encontramos a nivel regional, y por lo tanto, si debemos acelerar o no el proceso armonizador para evitar el rezago de globalización contable.

En tercer lugar, el modelo analizara el grado de armonización contable internacional de Colombia con respecto al grado de armonización internacional de los Estados Unidos de Norteamérica y la Unión Europea, pues son las dos instancias que más influyen sobre el camino a recorrer en el proceso armonizador de este país y de la región latinoamericana, maxime si se concretan y amplían los tratados de libre comercio con Colombia.

La justificación de llevar a cabo las últimas dos comparaciones sobre armonización contable colombiana en el mediano plazo, y no únicamente entre Colombia con respecto a la normatividad NIC-NIIF, es que este estudio no puede llevarse a cabo de forma vibariable, pues precisamente tiene un componente fundamentalmente multivariable por su esencia o visión global e internacional. Ello nos llevará a mejores conclusiones sobre el caso de Colombia.

REVISION LITERARIA

Este trabajo retoma parte de los importantes esfuerzos investigativos generados en el mundo contable desde hace 50 años para llegar a un estadio de armonización contable internacional sana, pero además a partir de hace 20 años se comenzó a trabajar para poder determinar con alto grado de exactitud, y a través de un indicador sintético (índice de concentración): el nivel cuantitativo de armonización contable que puede alcanzar un país con respecto a una única normatividad contable internacional. Esta normatividad internacional recibe el nombre de armonización, homologación, normalización o estandarización contable, y es mediante las *Normas Internacionales de Contabilidad* (“NIC” o “IAS”), y posteriormente, las *Normas Internacionales de Información Financiera* (“NIIF” o “IFRS”) que se trata de unificar en un solo modelo los diversos criterios, metodologías, escuelas y sistemas contables del mundo. Estas normas son armonizadas por parte del Consejo de Estándares Internacionales de Contabilidad (*International Accounting Standard Board*: “IASB”).

Entre los trabajos investigativos más destacados para obtener el indicador óptimo que mida el grado de armonización de un país con respecto a las NIC-NIIF están los siguientes: El de *Hatfield (1962)*. A pesar de que sus investigaciones fueron muy sencillas y actualmente tienen poco aporte al tema, fue uno de los pioneros de esta línea de investigación. Algunos historiadores contables opinan que realmente el origen del proceso de estandarización contable (aunque no incluía el problema de la obtención óptima de un indicador de medición armonizadora) se inició en 1962 cuando se fundó el *Centro de Investigación y Educación para la Contabilidad Internacional* de la Universidad de Illinois, donde nace también la revista: “*The International Journal of Accounting*”.

También aquí se considera que se inició el desarrollo de la contabilidad académica y la contabilidad internacional cuyo investigador pionero fue *Gerald Mueller (1963)*. Sin embargo, hasta antes de 1965 existía poco interés por parte de los académicos sobre la armonización contable, e incluso los pocos artículos publicados fueron escritos por contadores públicos no académicos en revistas tales como “*Journal of Accountancy*” (*Baker y Barbu: 2007*, citan los casos de *Brandt: 1962; Englemann: 1962; Jennings: 1962 Enthoven: 1965*). Sobresale el trabajo de *Brand (1962)* quién fue de los primeros en examinar las diferencias entre los principios y las prácticas contables en Europa, recomendando en su trabajo una posible armonización contable mundial. A partir de ello se generaron otros trabajos en el mismo sentido por parte

de los contadores no académicos como: *Linowes (1969), Cairns (1989), Van Hulle (1989), Carey (1990), Fisher (1990), Wilson (1991), Wyatt & Yospe (1993)*.

Pero sin duda alguna entre los excelentes trabajos que llaman la atención por llevar a esta línea de investigación a un extraordinario estado de arte cuantitativo y que es citado en la mayoría de las investigaciones de armonización contable, son los estudios de *Van Der Tas (1988, 1992)*. Sus propuestas han tenido una de las mejores aceptaciones entre los académicos. Esto al haber hecho mejoras al *Indice de Herfindhal* para medir el grado de armonización contable a nivel nacional y el *Indice "I"* para medir el grado de armonización a nivel internacional. Posteriormente, también ha propuesto el *Indice C* para medir los grados de armonización contable. *Herrmann y Thomas (1995), Adhikari y Tondkar (1995), Archer et al. (1995, 1996)* dividieron el *Indice "C"* en dos subíndices: *El Indice intra-nacional y el Indice Intra-international*

Otro estudio importante es el desarrollado por *Tay y Parker (1990,1991)* quienes consideraron que la medida de armonización contable se debe basar no en el grado de homologación de la normativa contable de un país versus la normativa internacional, sino en las prácticas reales que llevan a cabo las empresas entre sí en diferentes partes del mundo. Según *García y Gandía (1998)*, el anterior cambio de óptica dio nacimiento a la diferenciación entre dos tipos de armonizaciones denominadas: "*armonización de derecho*" (contabilidad normativa) y "*armonización de hecho*" (contabilidad positiva). A partir de esto se generaron trabajos similares como el de *Tay y Parker por parte de Emenyonu y Gray (1992)* y *Van Der Tas (1992)*, el cual en esta última investigación introdujo un nuevo indicador de armonización llamado "*Indice C*". *Archer et al (1995, 1996)* al observar esta innovación realizó un estudio comparativo entre el "*Indice H*" y el "*Indice C*", ambos utilizados por *Van Der Tas (1988, 1992)*.

Entre los trabajos más importantes sobre armonización contable con énfasis en compilaciones y estudios comparativos sobre las diferentes prácticas en los países, están los de: *Jennings (1962), Wilkinson (1965), Morgan (1967)*, el preparado por el "*Committee on International Relations of the American Institute of CPAs: AICPA (1965), Da Costa (1978), Bromwich (1980), Fitzgerald (1981), Nair (1982), Nair y Frank (1981), Dopunik (1987), Gray (1988), Sir Bryan Carsberg, Schweikart, Gray y Salter (1996)*. Por su parte otros trabajos en esta misma línea resaltaron la importancia del sistema conceptual, las estrategias para incrementar la armonización y la importancia de medio, véase: *Wallace (1990), Goeltz (1991), Chandler (1992), Van Hulle (1993) y Brown y Tarca (2001)*.

A finales de la década de los 70's *Muller (1967, 1968, 1994)* estableció el punto de inicio para clasificar los sistemas contables y medir sus grados de armonización entre sí.

Los sistemas contables se pueden definir como el conjunto de principios generalmente aceptados que se aplican para producir la información financiera para la toma de decisiones. Además, el sistema contable tiene un segundo componente fundamental: son las prácticas reales que independientemente de que estén aceptadas o no por los principios normativos, sí son las que realmente se aplican al momento de producir dichos estados financieros.

Las clasificaciones de los sistemas contables se iniciaron en 1911 con los estudios de *Hattfield (1962)*. Pero es en los años 70's donde las clasificaciones cobraron más validez por el fenómeno de la internacionalización de los organismos contables y el inicio de los mercados globales. De acuerdo a una revisión bibliográfica histórica que poco ha evolucionado en la última década sobre las clasificaciones a priori de los sistemas contables y considerando sus factores que los definen, son: 1. El Sistema Legal o entorno legislativo y político: normatividad. (*Berry: 1987, Mueller 1994*), 2. La Actividad Reguladora o Control legal del País. (*Nobes y Parker: 1981, Rodriguez: 1991*). 3. Influencia del Estado o Influencia del Mercado. (*Gernon y Bindom: 1992*). 4. Jerarquización Contable. (*Nubes y Parker: 1981, 1989*). 5. Prácticas contables. (*Berry: 1987, De Costa et al.:1978, Frank: 1979*). 6. Prácticas de Presentación. (*Nair y Frank:*

1973, 1975). 7. Prácticas de Medición. (Nair y Frank: 1973, 1975). 8. Profesionalismo y Certificación de los Contadores Públicos y Auditores (Rodriguez: 1991). 9. Los Niveles de Educación de la Comunidad Empresarial y Financiera (Muller: 1994). 10. Los Factores del Entorno. (Mueller: 1994, Gernon y Meek: 1994). 11. Los Niveles de Inflación. (Muller: 1994). 12. Diversidad y Complejidad de las Empresas. (Muller: 1994). 13. Las Relaciones de la Empresa y los Suministradores de Fondos. (Muller: 1994). 14. Las condiciones sociopolíticas. (Berry: 1987). 15. La zona de influencia cultural en la contabilidad. (Frank: 1979, Costa et. al.: 1978, Gray: 1988, Gernon y Bindom: 1992). 16. La zona de influencia de un país sobre otro(s). (Berry: 1987). 17. Las Relaciones Economicas y Políticas con otros países (Muller: 1994)

Según Baker y Barbu (2007), concluyen que partir de 2005 la armonización contable internacional entró en una nueva y tal vez decisiva fase con la experiencia de estandarización de la Unión Europea. Sus opiniones están fundamentadas en una rigurosa revisión bibliográfica de 200 de las mejores investigaciones armonizadoras que datan desde 1965. El trabajo de Baker y Barbu sobre el estado de arte de la armonización contable, y que se puede considerar como uno de los mejores análisis investigativos a nivel internacional, divide la historia de esta línea de estudio en tres fases: el período inicial (1963-1973), el período intermedio (1974 a 1989), y el período de madurez (1990 a la fecha).

En el período inicial se abrieron básicamente 4 estudios pioneros: 1. La armonización contable. 2. Investigaciones comparativas utilizando metodologías descriptivas o considerando factores del entorno, la cultura y la economía 3. Reflexiones sobre los procesos armonizadores contables internacionales y 4. Investigaciones sobre las metodologías empíricas que utilizan métodos estadísticos. En la etapa intermedia se abrieron cuatro nuevas líneas de estudio: 1. Las estructuras conceptuales de la armonización contable internacional. 2. Los factores del medio o ambiente en que se da la armonización contable. 3. El análisis de la historia del IASC y 4. El análisis sobre las nuevas directivas contables.

Por último, en el período de madurez, que es en donde se enmarca este trabajo, se adicionaron 5 nuevas tipologías investigativas: 1. Estudios sobre un único factor (el cultural) que influye y explica las prácticas contables. 2. Trabajos sobre multiples factores, sobre todo económicos, que son los que explican fundamentalmente las diferentes prácticas contables. 3. Investigaciones que hacen énfasis sobre todo en el factor político como primera explicación de las diferentes prácticas contables entre los países. Aquí entra la teoría de la firma al analizar los conflictos que se dan entre los “shareholders” y los que producen la información financiera. 4. Estudios que analizan el impacto que tienen las prácticas de armonización contable sobre el precio de las acciones y el retorno de la inversión. 5. Medidas para medir la magnitud o dimensión del proceso armonizador internacional contable.

METODOLOGIA

Aunque desde la década de los 70's se han realizado excelentes trabajos sobre las metodologías sobre el tema de armonización contable, muchos de estos han sido más bien de revisión normativa y reflexión sobre los contenidos de las NIC-NIIF. Sin presentar de forma metodológica e integral las conclusiones sobre la real aplicabilidad de estas normativas por parte de las empresas. Reiteramos que nuestro esfuerzo va dirigido sobre todo a la determinación de un valor o indicador sintético que mida o proporcione a los usuarios un índice generalmente aceptado en el medio (empresarial, gubernamental y académico) sobre el grado de armonización alcanzado por un país con respecto a las directrices o normativas sugeridas por las más reconocidas instituciones contables internacionales. Con base a lo anterior y basándonos en los trabajos y experiencias de las investigaciones clásicas de Van Der Tas (1992), Tay y Parker (1990,1991) y (1996), la metodología a seguir será la siguiente:

De acuerdo a la revisión bibliográfica existen 5 bases de datos fundamentales en los trabajos empíricos de armonización: las regulaciones o normas contables, los estados financieros, los cuestionarios abiertos y cerrados, las bases de datos públicas (ejemplo bolsas de valores) y las técnicas aplicadas en el laboratorio

empresarial. En nuestro caso estamos desarrollando un cuestionario a partir de la revisión de los que aplican PWC, KPMG, Deloitte and Touche y Ernst and Young.

También se recomienda utilizar como base de datos: los Principios de Contabilidad Generalmente Aceptados y Plan Único de Cuentas, donde está contenida la normativa contable de Colombia. Con respecto a las bases de datos públicas se deben analizar los estados financieros públicos y las Notas a los Estados Financieros. En estos documentos podemos encontrar el tipo de normativa que aplica cada empresa con base a: su sector, tipo de presentación de los informes financieros y contables, así como criterios de clasificación y medición de las cuentas del Balance General y el Estado de Resultados.

Por último, se debe llevar a cabo un análisis sobre la normatividad contable o directrices que marca la entidad gubernamental responsable de cada país así como de las Instituciones de Contadores locales que autorregulan la profesión. En el caso de Colombia el máximo organismo que tiene influencia sobre la normatividad de las PCGA y que regula el Plan Único de Cuentas (PUC) es el Consejo Técnico de la Contaduría Pública a través del Código de Comercio y el Estatuto tributario.

En la primera etapa de este modelo, se enfoca concretamente al tratamiento contable (presentación, clasificación y medición) de las NIC-NIIF con respecto a la normatividad colombiana. Esto para establecer un primer benchmark a través del análisis cluster.

Los resultados del inciso anterior nos permitirá aplicar el indicador Herfindahl (Índice H) al sistema contable colombiano, y cuya validez y confiabilidad quedó demostrada a partir de las investigaciones y resultados positivos de *Van der Tas*. El indicador H continúa siendo uno de los pocos parámetros con mayor aceptación para analizar la sensibilidad de la armonización contable con respecto a los criterios de clasificación de determinado sistema contable regional o mundial.

Para medir el grado de armonización contable “de derecho y de hecho” de Colombia con respecto otros países se debe seleccionar fundamentalmente tres unidades geográficas (considerando las características sui generis de cada sistema contable): las principales economías de Latinoamérica, la Unión Europea y los Estados Unidos de Norteamérica. Para ello se propone utilizar el método estadístico multivariable del Cluster.

MODELO ECONOMETRICO

Para medir la sensibilidad o grado de la armonización contable normativa (analogías y diferencias) de las NIC-NIIF con respecto a las normativas colombianas utilizaremos el *Índice H* y el *Índice C*.

Van der Tas introduce dos variantes al índice “H”: el Índice “C” y el Índice “I”. El Índice “C” lo utiliza para medir la armonización contable nacional cuando una empresa da información para diferentes métodos alternativos de prácticas particulares de contabilidad. En cambio el Índice “I” mide la armonización internacional sobre todo para las prácticas de armonización contable entre dos o más países, y se define como:

El Índice C posibilita observar las diferencias a través de la comparación sobre el grado de armonización contable alcanzado a través del tiempo, entre dos efectos que inciden sobre el mismo *índice C*. Es decir, por una parte nos indica el grado de armonización que se da dentro de cada país analizado, y por otro lado, nos muestra las asimetrías existentes entre cada país analizado.

INDICE H

Para Medir el Grado de Armonización Contable a Nivel Nacional.

(1)

$$I = m - 1 \sqrt{\sum_{i=1}^n \left(\int_i^1 x \int_{i, \dots, \dots}^2 x \int_i^m \right)}$$

Dónde:

I = Índice de Herfindhal

m = Número de Países

m = Número de Métodos Contables Alternativos.

\int_i^m = Frecuencia Relativa del Método i en el país m

El Índice C posibilita observar las diferencias a través de la comparación sobre el grado de armonización contable alcanzado a través del tiempo, entre dos efectos que inciden sobre el mismo índice C . Es decir, por una parte nos indica el grado de armonización que se da dentro de cada país analizado, y por otro lado, nos muestra las asimetrías existentes entre cada país analizado. El Índice C (Según Bernau y Gandía) se expresa como:

$$C = \frac{\sum_{j=1}^m (a_j^2 - a_j) - \sum \sum_{j < k} (a_{jk}^2 - a_{jk}) + \sum \sum \sum_{j < k < l} (a_{jkl}^2 - a_{jkl}) \dots + (-1)^{m+1} \sum \dots \sum (a_{j \dots}^2 - a_{j \dots})}{n^2 - n} \quad (2)$$

Dónde:

M = Número de métodos de medida alternativos

a_{jkl} = Número de Empresas que ofrecen datos basados en métodos de medida j, k, l , etc.

a_j = Número de empresas que aplican el método j .

a_u = Número de empresas que aplican el método j y k .

l_i = Parámetros Fluctuando entre l y m .

INDICE I

El Índice I posibilita medir el Grado de Armonización a Nivel Internacional.

$$I = [\sum_{m=1}^M (\prod_{n=1}^N P_{m,n})]^{1/(N-1)} \quad (3)$$

Dónde:

I = Índice de I

m = método o sistema contable alternativo m

n = país n

$P_{m,n}$ = Frecuencia Relativa del método o sistema contable m en el país n

Con respecto a la aplicación del análisis cluster, artimos de las propuestas metodológicas del análisis multivariable por su potencial explicativo en este tipo de trabajos, que aunque actualmente presentan aún múltiples desacuerdos en cada uno de los elementos que conforman sus respectivos modelos, sirven para llegar a mejores resultados y conclusiones sobre fenómenos complejos donde interactúan simultáneamente más de dos variables. Algunos de los elementos que exigen los modelos multivariables y propensos a mayor desacuerdo entre la comunidad investigadora son principalmente: la obtención y estructuración de

las bases de datos, la selección de las variables independientes y la variable dependiente, la determinación de las unidades temporales y unidad de análisis, el tipo de método estadístico multivariable de interdependencia, dependencia o correlación más adecuado para obtener evidencia empírica, e incluso existen desacuerdos en cuanto a la interpretación de la información obtenida para llegar a conclusiones eficientes. Sin embargo, el análisis multivariable da una perspectiva más completa, que aunque es más compleja resulta más eficiente y complementa los resultados de un análisis univariable o bivariable.

Entre las principales clasificaciones utilizadas en los modelos multivariados están las que los divide en: a) *métodos descriptivos o exploratorios* (no se establece ninguna hipótesis previa); y b) *métodos explicativos o confirmatorios* (se basan en un marco teórico para fundamentar y validar empíricamente una hipótesis). Otra importante clasificación es la que divide a los métodos en: a) *métodos reductivos* (análisis factorial, componentes principales, correlación canónica, análisis de clusters, análisis de correspondencias); y b) *métodos de dependencia* (análisis de la varianza, análisis de la covarianza, regresión múltiple, análisis discriminante, análisis de probabilidad condicional *Logit* y análisis de probabilidad condicional *Probit*).

Por ejemplo, la selección adecuada de la técnica multivariable para un modelo que utilice información contable está en función principalmente de la forma que presente la variable dependiente y la base de datos con la que se estiman las variables independientes. Así, cuando la variable dependiente tiene una forma continua se utiliza la regresión. En cambio, cuando dicha variable dependiente presenta una forma categórica (cualidad: como nivel de armonización conceptual de la contabilidad) se puede utilizar *el análisis cluster o el análisis discriminante*.

El análisis cluster es una técnica considerada como descriptiva que se basa en el análisis de tablas de contingencia y es conceptualmente igual al análisis factorial. El análisis cluster tienen varias versiones entre las que destacan: *Análisis de Correspondencias Canónico*, *Análisis de Correspondencias Múltiple* (es una extensión a tablas de contingencia multidimensionales) y *Análisis de Correspondencias Baricéntrico* (se aplica a problemas de discriminación basado en variables cualitativas). El procedimiento o algoritmo de agrupamiento (*clustering*) se basa en un método de agrupación de un conjunto de vectores a partir de un criterio de cercanía. Esta cercanía se define en términos de una determinada función de distancia, como la euclídea. Los vectores de un mismo grupo (*clusters*) presentan características comunes.

CONCLUSIONES

Lo recomendable para desarrollar adecuadamente investigaciones sobre modelos eficientes de armonización contable internacional, es que la base de datos contables deben presentar en todo momento dos características fundamentales para el usuario: *utilidad y confiabilidad*. Sin embargo, la naturaleza propia de la técnica contable es *provisional*, lo que conlleva que en la práctica este sistema no refleje con exactitud la situación real de una empresa, ni tampoco el resultado contable constituya una buena medida de creación de valor, más si existe alta probabilidad de manipulación a través del *efecto window dressing*. A partir de la experiencia adquirida con todas las investigaciones ya citadas (de tipo básica y aplicada), concluimos de que el proceso armonizador contable internacional exige indicadores y medidas eficientes para valorar sus grados de avance en un país, sector o entre las prácticas que utilizan entre sí las empresas de diferentes países para producir la información contable y financiera. Sin embargo, a la fecha aún no se ha resuelto el problema sobre la real eficiencia de los indicadores de armonización contable, sobre todo en el ámbito de la contabilidad positiva.

GESTIÓN DE PRODUCCIÓN MAS LIMPIA E INTEGRACIÓN DE LA RESPONSABILIDAD SOCIAL EN EL SUBSECTOR EDUCATIVO (HACIA UNA UNIVERSIDAD SUSTENTABLE)

Antonio Gallardo López, Instituto Politécnico Nacional ESCA Tepepan

RESUMEN

En este artículo se investigó la forma de implementar procesos de producción más limpia, en el subsector educativo, el cual es considerado entre los principales para su aplicación. Pero es importante tomar en cuenta a las instituciones educativas ya que por dimensiones y volumen manejado de personas y recursos materiales, son una fuente importante de generación de impactos ambientales negativos, para reducir sus emisiones en diferentes aspectos como ahorro de energía, tratamiento de agua, separación de residuos etc. es necesario conocer sus prácticas y costumbres, los procesos que llevan a cabo actualmente para poder determinar acciones e implementar nuevas gestiones. Siempre existen rubros en los que se puede mejorar o implementar acciones en beneficio del medio ambiente, es por ello, que en esta investigación se realizará un diagnostico en el sector educativo enfocado en las Universidades de la República Mexicana.

PALABRAS CLAVES: Producción Más Limpia, Responsabilidad Social, Certificación Leed

"MANAGEMENT OF PRODUCTION MORE CLEAN AND INTEGRATION OF SOCIAL RESPONSIBILITY IN THE EDUCATION SUBSECTOR (TOWARDS A SUSTAINABLE UNIVERSITY)"

ABSTRACT

In this article we investigated how to implement processes of cleaner production, in the education subsector, which is considered among the top for your application. But it is important to take into account educational institutions since by dimensions and volume managed people and material resources, are an important source of generation of negative environmental impacts, to reduce their emissions in different aspects as saving energy, water treatment, separation of waste etc. it is necessary to learn about their practices and customs, processes currently carried out to determine actions and implement new management always there are products which can be improve or implement actions in benefit of the environment, that is why, in this research will be a diagnosis in the education sector focused on the universities of the Republic Mexicana.

KEYWORDS: cleaner production, Social responsibility, Leed certification

INTRODUCCION

En la actualidad el mundo se ha percatado que ser sustentable es tema de moda, sin embargo necesitamos realmente entender que este concepto es de gran importancia para la sociedad, puesto que la sustentabilidad es satisfacer nuestras necesidades sin comprometer los recursos para las generaciones futuras, es ahí donde cada uno de nosotros entra como pieza clave de la conservación de nuestro futuro.

En la sección de revisión de literatura se plantean los argumentos de los diversos sectores que comenzaron a incursionar, implementando medidas para la conservación del medio ambiente y el bienestar social. Y es por ello que a partir de este punto el sector educativo. Posteriormente se presenta la metodología utilizada, en donde se describe el procedimiento para la descripción de la Producción Más Limpia para implementarla dentro de sus instituciones educativas y así mismo lograr una responsabilidad social universitaria, que lograría el apoyo de todos sus miembros y la convierta en una universidad verde, que no solo se preocupa por el bienestar académico de cada uno de sus alumnos, sino que contribuya con el bien social, formando grandes profesionales. Seguidamente se presentan los resultados de la investigación. Finalmente, las conclusiones, limitaciones y futuras líneas de investigación son presentadas.

REVISIÓN DE LITERATURA

En la literatura de la gestión de la producción más Limpia incide en la reducción de los impactos negativos generados al medio ambiente por el sector educativo específicamente en el nivel superior (Universidades) públicas y privadas. Considerando el tamaño y volumen de estas instituciones es necesario implementar medidas que estén encaminadas a la protección del medio ambiente y la concientización de las personas involucradas en su funcionamiento y participación. La producción más limpia dentro del sector educativo es un tema relativamente nuevo y es por ello que el presente proyecto pretende fungir como pieza clave de futuras investigaciones enfocadas en el cuidado del medio ambiente. Traerá como beneficio la implementación de nuevas prácticas para la reducción del consumo de energía y agua, así como la separación de residuos generadas por dichas instituciones. En un futuro debido a la flexibilidad del estudio se puede trasladar a los diferentes estados de la república. Potenciando sus beneficios y utilidad no solo a corto sino también a un largo plazo. El objetivo es generar un diagnóstico de prácticas sustentables en las instituciones educativas del nivel superior, con el fin de generar recomendaciones e implementar estrategias basadas en la Producción más limpia (energía, agua, separación de residuos) llevando a las instituciones a cumplir con la Responsabilidad Social Universitaria, algo que sin duda repercutirá en la imagen y desempeño de sus actividades al momento de prestar sus servicios a la comunidad estudiantil.

METODOLOGÍA

En este estudio, después de la revisión teórica y planteamiento del problema, como primer paso se llevó a cabo la obtención de la muestra de las universidades, que serían revisadas para encontrar si cumplían con los parámetros en cuanto a la producción más limpia y así implementar un instrumento de evaluación para cada una de las instituciones.

El siguiente paso dentro de nuestra investigación, fue acudir a cada una de las instituciones anteriormente seleccionadas, y revisar a detalle los parámetros según el instrumento de certificación LEED, para posteriormente realizar un análisis del cumplimiento de cada una de las áreas y poder emitir un resultado de acuerdo a los lineamientos de la certificación, encaminados a mejorar sus procesos y del mismo modo realizar las recomendaciones pertinentes para su implementación y puesta en marcha.

Los resultados obtenidos fueron vaciados en hojas de caculo, que posteriormente se transformaron en graficas donde se muestran los resultados por cada una de las áreas de la certificación LEED, así como las universidades aspirantes a una de las categorías de certificación.

RESULTADOS

Aplicando la metodología descrita en la primera fase se ha obtenido las probabilidades de los indicadores utilizados y su respectivo manejo, tales como; Sitios sostenibles, energía y atmósfera, calidad del aire interior, prioridad regional, eficiencia en agua, materiales y recursos e innovación en la operación. La Figura 1 presenta los estadísticos descriptivos de las probabilidades del uso de los indicadores para la

producción más limpia. Las universidades seleccionadas se muestran en la Figura 2. Las tres universidades aspirantes a la certificación en la Figura 3.

Figura 1: Estadísticos de resultados por indicadores de producción más limpia.

Tabla 2: Estadísticos descriptivos del puntaje obtenido por universidad.

Tabla 3: Estadísticos de resultados de universidades aspirantes a certificación LEED.

CONCLUSIONES

De acuerdo a los resultados obtenidos en la investigación nos percatamos de que la sustentabilidad es un tema relativamente nuevo para las instituciones educativas, que existe la iniciativa de generar programas y acciones encaminadas al cuidado del medio ambiente y por consiguiente lograr implementar una responsabilidad social universitaria.

Aunque existen muchas instituciones en las que esta problemática aun no juega un papel importante dentro de sus actividades, ya que no cumplen con parámetros como el ahorro de energía, la utilización consciente del agua, la separación de residuos y la implementación de medios para la generación de energías más limpias. Cabe señalar que aunque la investigación pueda parecer que ha terminado, este solo es el principio de un cambio constante, de la generación de políticas adecuadas para la conservación del medio ambiente, reutilización de recursos así como el uso consciente de los mismos; que debe tomarse muy en cuenta en cada una de las universidades que aún no implementan este tipo de acciones, y en cuanto a las universidades que ya tienen un camino trazado, es necesario estar al pendiente de cualquier área de oportunidad y posible mejora.

Limitaciones

Dentro de las limitaciones hay que resaltar que en la actualidad el tema de sustentabilidad ha llegado a tener un auge trascendente, ya que muchas empresas en diversos sectores han decidido tomar un rumbo hacia la preservación del medio ambiente, es por ello que es importante que las universidades adquieran y hagan parte de sus planes este tipo de prácticas hacia una responsabilidad social universitaria, que tenga como eje primordial el cuidado del medio ambiente en sus lugares de trabajo y de este modo lograr una concientización más a fondo de estos problemas que afectan a la sociedad y a cada uno de los integrantes de dichas instituciones.

De acuerdo a los resultados obtenidos en la investigación la sustentabilidad es un tema relativamente nuevo para las instituciones educativas, que existe la iniciativa de generar programas y acciones encaminadas al cuidado del medio ambiente y por consiguiente lograr implementar una responsabilidad social universitaria. Así mismo, espero que la metodología propuesta para construir la P+L y diseñar la muestra de estimación sea replicada para darle validez en cuanto a la consistencia de los resultados de esta investigación.

LA PERCEPCIÓN DE LOS DOCENTES DE LA FACULTAD DE CONTADURÍA Y ADMINISTRACIÓN DE LA UNIVERSIDAD AUTÓNOMA DE COAHUILA SOBRE EL USO DE LAS TECNOLOGÍAS DE LA INFORMACIÓN Y LA COMUNICACIÓN

Armando Parres Frausto, Universidad Autónoma de Coahuila
Liliana Angélica Guerrero Ramos, Universidad Autónoma de Coahuila
Martín Jaramillo Rosales, Universidad Autónoma de Coahuila
Eliseo Medina Elizondo, Universidad Autónoma de Coahuila

RESUMEN

El uso de las Tecnologías de la Información y la Comunicación ha revolucionado las maneras tradicionales de la educación e implica el desarrollo de nuevas competencias en los docentes y estudiantes. La resistencia al cambio es siempre una barrera que hay que trabajar. El objetivo del trabajo es: Describir la percepción de los maestros acerca del uso de las TICs y de la plataforma de aprendizaje virtual Moodle en el proceso de enseñanza-aprendizaje. La metodología estuvo basada en la aplicación de un cuestionario y entrevistas a profundidad. Los resultados en lo fundamental muestran una situación en la que solo el 60 % de los maestros plantean conocer software para la creación de cursos por internet mientras que el 92 % dice usar la plataforma Moodle.

PALABRAS CLAVES: Tecnologías de Información y Comunicación / Aprendizaje virtual /

THE PERCEPTION OF TEACHERS IN THE SCHOOL OF ACCOUNTING AND ADMINISTRATION OF THE AUTONOMOUS UNIVERSITY OF COAHUILA ON THE USE OF INFORMATION TECHNOLOGY AND COMMUNICATION

ABSTRACT

The use of Information and Communications Technology has revolutionized the traditional ways of education and involves the development of new skills in teachers and students. Resistance to change is always a barrier to work. The aim of this work is: To describe the perception of teachers about the use of ICT and e-learning platform Moodle in the process of teaching and learning. The methodology was based on a questionnaire and in-depth interviews. The results essentially show a situation where only 60% of teachers pose learn software for creating online courses while 92% say they use the Moodle platform.

KEY WORDS: Information technology and Communication / Virtual Learning

INTRODUCCION

Las avances en los Sistemas de educación a distancia apoyados en el uso de Tecnologías de Información y Comunicación (TICs) e Internet ofrecen la posibilidad de una formación personalizada al establecer un

seguimiento continuo del progreso de los estudiantes, lo que permite optimizar algunos de los problemas del proceso de enseñanza aprendizaje, tales como la falta de tiempo y espacios. (Buzón García, 2005)

De esta forma se ha confirmado que los espacios educativos universitarios han hallado, con el uso didáctico de las TICs nuevos escenarios de enseñanza-aprendizaje que les permiten a las instituciones educativas generar diferentes estrategias competitivas en un mundo cada vez más globalizado.

El Moodle, en su primera versión (plataforma open-source), data del año 2002, como resultado de la tesis de Martin Dougiamas, Universidad de Perth, Australia. (Ros) Él fue administrador de WebCT en la Universidad Tecnológica de Curtin. Años más tarde, con una documentación robusta, actualizada, mejorada, y con nueva certificación, Moodle se estableció desde 2007 como líder y ganador de reconocimientos en el estándar de código abierto en el LMS, por sus siglas en inglés para referirse a “Learning Management System” o Sistemas de Gestión del Aprendizaje. (Barrios, Fernández, Godoy, & Mariño, 2012)

La Facultad de Contaduría y Administración (FCA), Unidad Torreón de la Universidad Autónoma de Coahuila atiende una población de 2700 estudiantes con un modelo educativo basado en Competencias Profesionales, y tiene una oferta académica en las áreas económico-administrativas. Desde el año 2009 se comenzó a utilizar la plataforma Moodle en el proceso de enseñanza aprendizaje.

El uso de esta plataforma Moodle, ha permitido entre otras funciones, mejorar la retroalimentación en la entrega de tareas, conservar evidencias sobre la evolución del curso, realizar exámenes no presenciales, que los maestros puedan colocar recursos didácticos digitales para formar una unidad de contenidos, texto, audio, video, entre otros, los que pueden ser utilizados y reutilizados para apoyar el aprendizaje. Todo lo anterior facilita la creación de una cultura de trabajo colaborativo mediante herramientas tecnológicas y de comunicación.

El objetivo general de este trabajo es: Describir la percepción de los maestros acerca del uso de las TICs y de la plataforma de aprendizaje virtual Moodle en el proceso de enseñanza-aprendizaje. Para su desarrollo se presenta a continuación una Revisión de antecedentes de investigaciones relacionadas con el tema. Posteriormente se describe la metodología empleada para el cumplimiento del objetivo propuesto. Se muestran los resultados cuantitativos y las opiniones de los maestros con respecto al uso de la plataforma Moodle. Finalmente se muestran Conclusiones y Referencias Bibliográficas, seguido de la Biografía de los autores.

REVISIÓN LITERARIA

Cuando nos aproximamos al estudio de la sociedad digital en relación con la educación lo hacemos desde un posicionamiento que intenta comprender el potencial efecto transformador de las TIC digitales en los contextos educativos. Partimos del supuesto de que la incorporación de las TIC a la educación, cada vez más acelerada, está produciendo una serie de cambios y transformaciones en las formas en que nos representamos y llevamos a cabo los procesos de enseñanza y aprendizaje. Estos cambios pueden observarse en los entornos tradicionales de educación formal, pero también en la aparición de nuevos entornos educativos basados total o parcialmente en las TIC.

Las condiciones sociales, políticas, económicas y culturales que caracterizan a las sociedades del siglo XXI han permitido, entre otras cosas, el surgimiento de lo que se conoce como la cultura de la sociedad digital. En una sociedad así caracterizada, las tecnologías digitales aparecen como las formas dominantes para comunicarse, compartir información y conocimiento, investigar, producir, organizarse y administrar. En este contexto, se reflexiona sobre la capacidad transformadora que las tecnologías de la información y la comunicación representan para la educación superior universitaria.

Los servicios universitarios, apoyados en las redes digitales, responden a diversos fines. (Tello Díaz & Aguaded Gómez, 2009) identifican básicamente cinco tipos de uso o ámbitos de aplicación de Internet en el contexto de la universidad: a) La presencia institucional de la universidad en los nuevos espacios de comunicación social, traducida habitualmente en un web-site de naturaleza informativa de la propia universidad (Portal web); b) La gestión a través de la red de cuestiones administrativas, conocida como Administración Virtual o Electrónica (AE); c) La utilización de los recursos telemáticos con fines de investigación; d) El acceso virtual a los fondos bibliográficos y otras bases de datos y; e) Espacio para la docencia apoyada en redes de ordenadores, con fines docentes. Cuando se plantea de forma organizada y con apoyo institucional, puede concretarse en la creación de un campus virtual específicamente destinado al desarrollo de actividades formativas.

En particular en este trabajo interesa una primera aproximación a la reacción de los docentes en general ante el uso de las TICs, y en particular el uso que están haciendo de los nuevos espacios para la docencia a través de la plataforma virtual de aprendizaje Moodle.

La utilización de las TIC por el profesorado universitario fue explorada por (Guerra, Gonzalez, & García Santander, 2010) obteniendo entre otros resultados que la mitad del profesorado consideró muy importante la utilización de las TIC para las actividades docentes pero no para el resto de las actividades. No obstante en la categoría de investigación el 61 % le dio la máxima importancia al uso de las TIC en su ámbito profesional.

En la Facultad de Agronomía de la Universidad de Buenos Aires se instaló la plataforma Moodle desde el 2008 y al hacer un análisis de su uso por parte de los docentes llegan a una interesante conclusión acerca de la motivación de los maestros y su aparente resistencia al uso de la plataforma de aprendizaje, ya que consideran que se debe rechazar la falta de eficacia en el uso de estos recursos tecnológicos a las resistencias individuales o falta de motivación, pues se deben revisar las metas para que las mismas sean realistas y tienen “un nivel de complejidad que pueda ser manejada conceptual y técnicamente por la mayoría de los docentes”. (Van Esso, Duran, Ibáñez, & Harris)

METODOLOGÍA

La investigación es del tipo mixta, ya que combinó el uso de técnicas cuantitativas y cualitativas. En principio exploratoria al identificar y analizar referentes de investigaciones previas relacionadas con el tema en estudio.

En lo cuantitativo se aplicó un cuestionario en entrevista directa y personalizada con profesores de la Facultad de Contaduría y Administración que estuvo basado en el instrumento diseñado, aplicado y validado antes por (Guerra, Gonzalez, & García Santander, 2010). En este trabajo se muestran resultados parciales de dicha aplicación. Fue aplicado a 50 docentes que representa un 46 % del total de profesores. Para el procesamiento de los datos los resultados mostrados en este trabajo solo hicieron uso de técnicas descriptivas. Para obtener información de tipo cualitativo se desarrollaron entrevistas a los profesores.

RESULTADOS

La Tabla 1 muestra los resultados obtenidos en algunas de las preguntas de la encuesta atendiendo a un criterio general, y dependiendo de si eran Maestros o Maestras.

Se realizaron entrevistas, para recabar opiniones de los profesores acerca de las tecnologías de información y la aceptación que tendrá la continuidad de la aplicación del sistema Moodle en la Facultad de Contaduría y Administración, que se presentan a continuación.

¿Los sistemas de información pueden proporcionar ayuda para tener una mejor organización en sus clases?

“Bueno, definitivamente sí, los sistemas de información ayudan a mejorar la planeación de las clases y determinan la ejecución de las acciones que se emprenden para mejorar los procesos de enseñanza-aprendizaje.”

Al respecto la apreciación anterior es algo generalizada en la mayoría de los docentes porque mantienen la misma opinión sobre la utilización de los sistemas de información. Otro maestro entrevistado opina:

“Los sistemas de información es una manera de poder ordenada la información que compete al desarrollo de las cátedras”

Tabla 1: Percepción de los Maestros de la Facultad de Contaduría y Administración sobre el uso de las TIC y la plataforma Moodle.

Preguntas	Catedráticos en general (%)	Maestros (%)	Maestras (%)
Conocen software para la creación de cursos por internet	60	56.7	65
Le gustaría trabajar con más recursos tecnológicos	100	100	100
No le agobia tanta información en internet	88	90	85
Las clases no perderán eficacia a medida que vaya incorporando TICS	88	88	90
Va a cambiar las TICS la docencia	44	40	50
No me preocupa utilizar las TICS en el futuro	96	96.7	95
Estoy dispuesto a aprender nuevas TICS	98	96.7	100
Utiliza la plataforma Moodle	92	90	95

Se puede observar en esta Tabla que menos del 50 % de los docentes plantean que habrá un cambio en la docencia derivado de la aplicación de las TICS. Que en porcentaje muy elevado plantean no tener preocupación por utilizar las TICs en el futuro y estar dispuestos a aprenderlas. Contrasta que un 60 % plantea conocer software para la creación de cursos por Internet mientras el 92 % afirma usar la plataforma Moodle.

También se les cuestionó sobre la importancia de la capacitación para fomentar el uso de las tecnologías de información en la docencia y de manera específica se les preguntó lo siguiente:

¿Considera de importancia las capacitaciones que fomenten el uso de las Tecnologías de información en la Docencia?

Los docentes consideran importante la capacitación y manifiestan lo siguiente:

“Es evidente para cualquier proceso y el buen desempeño del ejercicio profesional, en este caso la docencia la actualización y capacitación tiene una trascendencia, porque nos permite comprender los fenómenos actuales de la sociedad como es el caso de estos tiempos que todo se determina por el conocimiento”.

Además se les pregunto ¿Considera usted que las Tecnologías de información ayudan a la retroalimentación de enseñanza-aprendizaje en la pedagogía? En este punto los profesores consideran que el utilizar plataformas en Internet puede lograr crear una mejor retroalimentación en el aprendizaje de los alumnos.

“Por supuesto que las plataformas pueden ayudar a que los profesores puedan retroalimentar las tareas que los alumnos entreguen así mismo esto fomentara una participación más activa por parte de los alumnos y se centraran más en entregar trabajos de mayor calidad”.

“El hecho de retroalimentar los trabajos entregados crea una conexión con el profesor y el alumno, de tal manera que el alumno está sintiendo que se está tomando en cuenta y el profesor tiene la obligación de orientar al alumno en el desarrollo de su trabajo, siendo así una manera de abrir un canal más de compartir inquietudes e información”. (Entrevistado tres)

Esto nos confirma que existe una buena aceptación para la utilización del sistema Moodle y que puede ser de gran ayuda para que haya una mejor comunicación entre el alumno y el profesor.

Otra pregunta que se les realizó es la siguiente ¿Está dispuesto a utilizar las Tecnologías de información en la enseñanza?

“Siempre hay que estar abierto a nuevos canales de aprendizaje, se tiene que estar actualizado, es una necesidad, considero que en la Facultad de Contaduría y Administración, hacen falta aún más cursos de capacitación, esto nos ayudaría a sentir más confianza al utilizar los nuevos sistemas, ya que conociendo sus beneficios, no se convierte en más trabajo si no, una manera de poder hacer mejor las cosas, son cambios a los que a veces uno no está acostumbrado pero hay que tener la mente abierta a nuevas posibilidades”.

CONCLUSIONES

Moodle ha sido un parte aguas en la inducción a las tecnologías de información en varias Universidades del mundo en los últimos años. En esta ocasión la Facultad de Contaduría y Administración, se ve interesada, y en base a la investigación realizada podremos notar como es que se está interesado en estar a la vanguardia y con gran posibilidad de utilizar la tecnología en la educación.

El Sistema Moodle proporciona grandes herramientas al profesor, ya que éste tendrá la oportunidad de monitorear a sus alumnos, su asistencia y la entrega de tareas. Así mismo el profesor podrá retroalimentar en línea las tareas entregadas por los alumnos. Esto representa evidencia sobre la evolución del curso. Así mismo se tendrá todos estos datos de forma organizada, agilizando el proceso de evaluación y los resultados finales. En cuanto a la planta docente, se pretende realizar cursos para conocer las ventajas y beneficio de la utilización del sistema. Uno de los puntos más importantes para poder lograr la implementación del Sistema Moodle es vencer la resistencia al cambio, para esto se implementarán cinco pasos que pretenden establecer metas realistas de avance: 1. Dar a conocer a la planta docente la problemática. 2. Se involucrará a los profesores en reuniones sobre temas de tecnologías y nuevos sistemas de aprendizaje. 3. Se hablará acerca de la plataforma Moodle y sus ventajas. 4. Capacitaciones sobre el uso de la plataforma. 5. Por último se tendrá profesores mejor preparados para el uso de los sistemas de información con una introducción gradual de la misma.

La implementación será de forma paulatina, comenzando con las clases del área de Sistemas, como las materias de informática, siendo así los profesores de materias de informática los que comiencen con esta nueva travesía, esto para el primer semestre, al finalizar la primera fase, se realizarán encuestas de satisfacción tanto a profesores como alumnos, para conocer la aceptabilidad de este sistema. Por otra la Facultad de Contaduría y Administración, tiene capacidad e infraestructura tecnológica para albergar el sistema, la cual estará almacenada en una computadora servidor en el área de informática, misma que va ser administrada por una persona del personal docente, que será designado para realizar los mantenimientos necesarios, así como las altas, bajas, de profesores, alumnos y cursos durante todo el semestre. Esta persona también deberá brindar asesoría a profesores y alumnos que tengan alguna duda acerca del funcionamiento del sistema. Es el profesor que se encargará de explicar en el primer día de clases el modo de utilización de la misma. Y dejar en claro que esta plataforma se considera de gran ayuda y se logrará una mejor participación y retroalimentación del curso entre los alumnos.

LA MADUREZ DE LA OFICINA DE RECURSOS HUMANOS EN PRO DEL DESARROLLO DEL TALENTO HUMANO; CASO SEDE DEL ATLÁNTICO, UNIVERSIDAD DE COSTA RICA

Karol Hidalgo Arias, Universidad de Costa Rica
Olga Irene Cordero Delgado, Universidad de Costa Rica
Ivannia Víquez Barrantes, Universidad de Costa Rica

RESUMEN

El presente artículo describe los resultados obtenidos al elaborar un estudio, cuyo objetivo fue conocer el grado de madurez de la Oficina de Recursos Humanos en pro del desarrollo del talento humano; caso Sede del Atlántico, Universidad de Costa Rica. Para responder a los objetivos de este estudio, la investigación se llevó a cabo mediante el diseño descriptivo y bajo el enfoque metodológico cualitativo. Se percibe como descriptivo porque se define un lugar y un tema específico, que permiten realizar la observación, evaluación y el análisis de la posición de la Oficina de Recursos Humano de la Sede. Asimismo, se clasificó bajo el enfoque metodológico cualitativo, porque dicho estudio permitió describir y analizar diferentes temáticas que envuelve el quehacer de la oficina a cargo del talento humano, así como el de los datos obtenidos. Por otra parte, la información fue recopilada a partir de una revisión bibliográfica, los datos primarios fueron recolectados a través del instrumento de la entrevista, la cual fue auto-dirigida y con preguntas semi-cerradas enfocadas al tema de estudio. La información secundaria fue obtenida a través de la recopilación de documentos existentes, navegación en Internet y otras fuentes documentales relacionadas al tema. Como principales resultados, se obtuvo que la Oficina de Recursos Humanos de la Sede Atlántico, presente una ubicación diferente en cada una de las aristas analizadas, por lo tanto, la oficina presenta un desfase entre estas variables, lo que implicaría definir políticas claras que permita a la Sede lograr la homogeneidad entre dichas fases.

PALABRAS CLAVES: madurez, talento humano, reclutamiento y selección, cultura y clima organizacional, desarrollo y formación.

MATURITY OF THE OFFICE OF HUMAN RESOURCES FOR DEVELOPMENT OF HUMAN TALENT; EVENT VENUE OF ATLANTIC UNIVERSITY OF COSTA RICA

ABSTRACT

This article describes the results obtained when preparing a study whose objective was to determine the degree of maturity of the Office of Human Resources for development of human talent; If Atlantic Headquarters, University of Costa Rica. To meet the objectives of this study, research was conducted using descriptive qualitative design and low methodological approach. It is perceived as descriptive because a place and a specific topic, which allow observation, assessment and analysis of the position of the Romanian Resources Office Headquarters defined. He also fell under the qualitative methodological approach, because this study was to describe and analyze different issues surrounding the work of the office in charge of human talent and the data obtained. Moreover, the information was compiled from a literature review, primary data were collected through the instrument of the interview, which was self-directed and

semi-closed questions focused on the subject of study. Secondary information was obtained through the compilation of existing documents, web browsing and other documentary sources related to the topic. As main results, it was found that the Office of Human Resources of the Atlantic Headquarters, present a different location on each of the edges analyzed, therefore, the office has a gap between these variables, which would define clear policies that allow Headquarters achieve homogeneity between these phases.

KEYWORDS: maturity, human talent, recruitment and selection, organizational culture and climate, development and training.

INTRODUCCIÓN

La administración es una ciencia que está conformada por una serie de disciplinas, tales como mercadeo, finanzas, contabilidad, economía, gerencia, proveeduría, recursos humanos entre otras. Cada una de ellas encierra parte fundamental de los alcances de dicha ciencia; sin embargo, para el presente estudio se analizará únicamente el eje correspondiente a los recursos humanos (RRHH), tema que ha sido analizado por varios autores, tales como Chiavenato (2002) quien define los RRHH como: "...un conjunto de políticas y prácticas necesarias para dirigir los aspectos de los cargos gerenciales relacionados con las personas..." (p.9).

A través de la historia esta disciplina ha formado parte fundamental de la estructura organizacional de una empresa, según estudios realizados, esta disciplina se empieza a conocer desde los orígenes de las sociedades, pero más claro y marcado a partir de la revolución industrial, donde con la aparición de la industria y grandes e importantes máquinas que deben ser operadas por personas, con ello surgió sistemas de administración formales, tanto para las maquilas como con los trabajadores, ya que con la implementación de la tecnología y el factor humano surgieron funciones como administración salarial, horarios, delegación de tareas, captación de personal, capacitación, entre otras que son propias del departamento.

El desarrollo experimentado en el sector empresarial, tocó a cada uno de sus departamentos, los cuales fueron evolucionando con el tiempo, tal es el caso de RRHH donde se marcó un precedente a partir del año 1950, esto según Chiavenato (2002) cuando menciona la presencia de tres eras, conocidas como la Era Clásica, Neoclásica y de la Información.

Adicional a dichas eras, los departamentos de RRHH han pasado por una serie de transformaciones, como bien lo menciona Ballesta (2012) quien aporta un modelo que permite valorar cuál es el grado de madurez del departamento a cargo de la administración de RRHH, dicho modelo está conformado por cuatro fases de transformación, conocidas por el autor como los factores internos de la organización y denominados como "dimensiones", las cuales son indispensables para el análisis de la madurez en la gestión de los RRHH. Así como necesario para la elaboración de estrategias que busquen la modernización, eficacia y eficiencia de dicho departamento.

La figura 1, muestra las cuatro dimensiones citadas por Ballesta (2012), dimensiones fundamentales en el análisis e identificación en el grado de madurez del departamento a cargo de la administración de RRHH.

Figura 1: Dimensiones de madurez para el departamento de RRHH

Fuente: Octavio Ballesta, Blog: Talento en Expansión.

Como bien lo citan autores de la talla de Chiavenato (2002) y Carpio (2004), la administración del Talento Humano, es un eje trascendental para las empresas, ya que son las personas quienes le dan un plus y se convierten en un elemento de éxito para las empresas.

MARCO TEÓRICO O REFERENCIAL

Los negocios y las organizaciones están inmersos en un sistema altamente cambiante y competitivo donde se requiere de talento humano, capacitado, motivado, con conocimientos en diferentes áreas, de manera que dote a las organizaciones de colaboradores que le permitan estar a la vanguardia.

Por otro lado las organizaciones para atraer y retener al personal idóneo deben tomar medidas que las hagan atractivas para trabajar en ellas, lo cual va en función de grado de madurez que cada una desarrolle en cuanto al manejo de personal. A continuación se hace referencia a los términos madurez y talento humano aspectos fundamentales para el desarrollo del talento humano.

Madurez y talento humano

El grado de madurez de una organización está ligado a cambios importantes en la dinámica de las empresas, donde los aportes y empeño de los colaboradores, reflejan el compromiso con la organización, sus objetivos, metas y estrategias, motivados por líderes con influyentes, con inteligencia emocional capaces de crear y mantener organizaciones de excelencia, las cuales invierten en tecnologías que facilitan los procesos de los negocios y en general se promuevan prácticas innovadoras, trabajo en equipo, mejora continua y gestión del conocimiento para mejorar el desempeño del talento humano. Ballesta (2012) y Chiavenato (2009)

El talento humano por lo general se relaciona con las habilidades y destrezas inherentes a cada persona, existe la creencia de que no es posible que el talento sea desarrollado, sin embargo, diferentes autores sostienen que el talento humano es una combinación de la capacidad y deseo de cada individuo, por lo que sí es posible que el talento se desarrolle. Actividades organizacionales como atraer, desarrollar y retener colaboradores deben enfocarse en el desarrollo de talento de las personas.

Según estudio realizado por Manpower (2011) “El mundo gira hoy alrededor del talento. El talento es la fuente de la innovación, el diseño, la eficiencia; en sí, del movimiento. El talento es el objeto y sujeto de la comunicación; es el objeto y sujeto del valor económico” (p.3). Por lo que esta realidad no puede ser obviada por las organizaciones, puesto que el talento humano debe colocarse como un factor esencial en el desarrollo de las organizaciones. Igualmente Manpower (2011) apunta que el desarrollo del talento depende

de factores como saber, poder y sobre todo querer hacer las cosas, esto va transformar las capacidades de las personas, su relación con el trabajo, con la sociedad y sus aspiraciones y expectativas, generando competencias importantes para el desarrollo de sus labores dentro y fuera de la organización.

Alles (2009) hace referencia a la importancia de que las empresas pongan atención a la selección y reclutamiento de personal, se le de seguimiento después de ser seleccionado a través de evaluaciones de desempeño, sin dejar de lado el desarrollo del talento humano, dentro de la empresa.

Reclutamiento y selección

Las organizaciones tienen la necesidad de elegir personas del mercado laboral para poder operar, al mismo tiempo las personas eligen a las empresas en las que desean laborar. De ahí el proceso de reclutamiento y selección de personal, este “se concibe como un proceso de toma de decisiones orientado a la incorporación de los recursos humanos adecuados para resolver las necesidades de una empresa”. (Castaño, López, y Prieto, 2009, p.7)

Según Bateman y Snell (2001) “la selección se basa en el reclutamiento e implica decisiones acerca de a quién contratar” (p.362). La selección es un proceso mediante el cual se comparan los requerimientos de la empresa y el perfil de los postulantes con la finalidad de elegir a quien presente las competencias y talentos que contribuyan al éxito de la organización en el largo plazo (Chiavenato, 2009).

Actualmente se habla de reclutamiento y selección 2.0, este consiste en hacer uso de tecnologías para acceder al mercado laboral y obtener el personal idóneo en los procesos antes mencionados. El uso de redes sociales, bases de datos entre otros, forman un grupo atractivo de herramientas que facilitan los procesos por la rapidez con que se puede obtener la información deseada.

El proceso de reclutamiento y selección es el que permite la incorporación de personal a las organizaciones, a partir de la contratación, un factor fundamental es lograr que los colaboradores conozcan y se apropien de la cultura organizacional, que incluye valores, costumbres, reglas, normativas y formas de hacer las cosas, en si la forma de ser de la empresa. De la cultura organizacional se deriva el clima organizacional que viene a ser la percepción del colaborador con respecto al conjunto de factores que integran la cultura organizacional.

Cultura y clima organizacional

La cultura organizacional es definida por Arnoletto (2009) como “el conjunto de los comportamientos socialmente reconocidos dentro de la organización” (p.71). Esto incluye la filosofía valores, comportamientos, costumbres que definen la forma de hacer las cosas, de compartir y convivir dentro del grupo de trabajo.

A partir de la cultura organizacional surgen esquemas, leguajes, interpretaciones simbólicas, que se desarrollan a partir de la interacción social. Así mismo, la cultura es intervenida por varios factores, tal a como se cita a continuación:

...la cultura puede ser intervenida por la dirección por mecanismos directos como la acción planeada y consciente de sus reacciones frente a las crisis, la planeación de funciones, las recompensas, las prácticas de gestión humana y, en general, por todo aquello que sea atendido, medido y controlado por los líderes; y por mecanismos indirectos de tipo estructural, procedimental, diseño de espacios, manejo de mitos y leyendas y declaraciones formales de filosofía de la empresa. (Murillo, Calderón y Torres, 2009. p.115)

El establecer una determinada cultura y clima organizacional dentro de las instituciones tiene como objetivo guiar la interacción de cada uno de los miembros de la organización. Tiene como funciones; definirlos límites, mediante normas y valores propios, crear un sentido de identidad que sea transmitido a los colaboradores, compartir intereses comunes, socializar a los colaboradores integrándolos a la compañía y coordinar toda la organización, debe guiar y moldear las actividades de los miembros de una institución (González y Olivares, 2004).

Clima organizacional

Los términos cultura y clima organizacional son frecuentemente usados como sinónimos; sin embargo, son diferentes ya que el clima organizacional hace referencia a la percepción que tienen los colaboradores acerca de las relaciones interpersonales en y con los diferentes niveles de mando, la comunicación, la toma de decisiones, del lugar de trabajo, entre otros aspectos, los cuales pueden impactar positiva o negativamente en el desempeño de los colaboradores.

Seisdedos (2003) define el clima organizacional como el ambiente laboral en el cual la percepción individual del colaborador, acerca de su entorno de trabajo, las relaciones con sus compañeros y jefes en el trabajo, equipo, entre otros, influye en la forma de percibir las características de la organización, lo cual influye en la conducta y la forma de realizar sus actividades laborales.

En la misma línea Berbel (2011) menciona que “El clima está formado por las percepciones, actitudes e interacciones entre los individuos que integran la organización” (p.173).

Así mismo, Forehand y Gilmer (1994) citados en (Berbel, 2011) define el clima organizacional como:

El clima es un conjunto de características que describen una organización, las cuales: a) distinguen una organización de otras organizaciones: b) son relativamente duraderas en el tiempo, y c) influyen la conducta de la gente en las organizaciones (p.173).

Arnoletto (2009) menciona nueve dimensiones que explican el clima organizacional, a saber: estructura organizacional, responsabilidad y empoderamiento, recompensa, desafío, relaciones interpersonales, cooperación, estándares, conflictos e identidad.

Lo anterior, contribuye a la motivación o no de los colaboradores y a determinar el clima laboral dentro de la organización, donde la capacitación y la formación del talento humano son importantes factores a tomar en cuenta dentro de la institución.

DESARROLLO, CAPACITACIÓN y FORMACIÓN

Dentro de una organización es importante de desarrollar y capacitar personas, para superar los obstáculos, estar actualizadas y ser viables, tal a como lo indica Chiavenatto (2009) en la siguiente frase: “...abarcan cuestiones complejas, como la preparación de líderes, la introducción del coaching y el mentoring, la educación corporativa continua, la administración del conocimiento, la adquisición de nuevos talentos y el aprendizaje organizacional” (p.398).

Factores indispensables para hacer que las organizaciones sobrevivan en un mundo que está en constante cambio.

El proceso de desarrollo y capacitación de personas según Barquero (1987) es determinante para lograr la eficiencia y el progreso de toda organización, además destaca como aspecto fundamental, “la destreza de la fuerza laboral para realizar, cada uno de sus miembros en el área respectiva, las tareas por las cuales es responsable” (p.99).

El desarrollo de la fuerza laboral es un factor fundamental en las organizaciones para lograr la supervivencia en el largo plazo. “Las habilidades y el rendimiento de los colaboradores y gerentes tiene que ser elevado continuamente. Cubrir los requisitos involucra capacitación y actividades de desarrollo...” (Thomas y Scott, 2001, p.370).

Barquero (1987) destaca la capacitación de personas como:

“el conjunto de de acciones que permiten a una persona alcanzar y desarrollar los conocimientos indispensables para ocupar un puesto de trabajo, y acrecentar las destrezas necesarias para su progreso laboral, con satisfacción de sus necesidades técnicas y humanas y las de la empresa a la cual sirve...” (p.99).

Las personas son quienes tienen en sus manos el impulsar y desarrollar las organizaciones ya que son ellas quienes a través de su esfuerzo y dedicación pueden llevarlas al éxito o al fracaso..

METODOLOGÍA

Con el fin de desarrollar este estudio fue necesario contemplar aspectos metodológicos como: el tipo de investigación, el enfoque, las fuentes de información, las técnicas e instrumentos de investigación, además del procedimiento y las técnicas de análisis de la información.

Por lo tanto, la investigación se llevó a cabo mediante el diseño descriptivo y exploratorio; lo anterior porque se establecieron espacios específicos de observación, tal es el caso de la oficina de Recursos Humanos de la Sede del Atlántico de la Universidad de Costa Rica, así como su participación en los diferentes recintos universitarios que conforman dicha sede, dichos Recintos pueden imaginarse como unidades académicas que deben ser atendidas por esta oficina.

Por otra parte, el estudio se clasificó como exploratorio, ya que este tema hace mención al grado de madurez de la oficina de administración de Recursos Humanos, es un contenido que no ha sido analizado a profundidad por parte de las jefaturas administrativas de las diferentes empresas que cuentan con este departamento dentro de su estructura organizacional.

Así mismo, el enfoque metodológico se clasificó como cualitativo, ya que se analizó información exclusivamente cualitativa, como por ejemplo la descripción de diferentes puntos de vista que permitieron complementar los datos y generar un amplio análisis de la información obtenida. Datos que permitieron generar un criterio y elaborar una serie de aportes, recomendaciones y conclusiones, con el fin de que este departamento logre una homogeneidad entre sus funciones y con ello definir en qué grado de madurez se encuentran.

Por otra parte, las fuentes de información fueron escritas y orales, las cuales se convirtieron en el fundamento básico para obtener los datos que sustentan la investigación. Dentro de las fuentes escritas que se consultaron se encuentran libros del área de la administración, específicamente sobre RRHH y nuevas tendencias del Talento Humano, artículos publicados en revistas de investigación (relacionados con el tema de Administración de RRHH, Talento Humano y grado de madurez del departamento) e información obtenida vía web correspondiente a entidades, sistemas de administración de RRHH y grado de madurez de este departamento.

Por su parte, las fuentes orales utilizadas corresponden a la aplicación de una entrevista vía web al director de dicha oficina así como las jefaturas administrativas de cada uno de los recintos que forman la Sede del Atlántico.

El instrumento utilizado para recopilar la información fue la técnica conocida como la entrevista y la observación directa sobre el proceso de las tareas de la oficina de Recursos Humanos en cuanto a los siguientes ejes temáticos:

Dimensión 1: Reclutamiento y Selección de Personal

Dimensión 2: Formación y Desarrollo

Dimensión 3: Clima, Cultura y Gestión del Cambio

Dimensión 4: Impacto Estratégico

Por su parte, el análisis de la información se llevó a cabo mediante la siguiente serie de pasos: se asoció las ideas principales de la información obtenida, se seleccionó la estrategia básica de la investigación (lectura, interpretación) y la información relevante, se comprobó y aplicaron medidas o criterios para establecer la precisión, la consistencia, la fiabilidad y la validación del proceso de investigación llevado a cabo, así como un análisis comparativo de la información obtenida con respecto al modelo utilizado.

Cabe mencionar que tanto los datos cuantitativos como los cualitativos son el sustento de todo trabajo de investigación, por lo que el proceso de recolección de la información se hizo de manera eficiente y eficaz, ya que de ello dependía que la investigación tuviese el impacto esperado.

HALLAZGOS Y RESULTADOS

Con el objetivo de conocer y definir el grado de madurez del Departamento de Recursos Humanos de la Sede del Atlántico de la Universidad de Costa Rica, se realizó el análisis de las cuatro variables del Modelo de Madurez de la Función de Recursos Humanos descrito por Ballesta, dentro de los principales resultados se encuentran:

Reclutamiento y Selección: según las características que asignan cada una de las variables en los diferentes niveles, se puede determinar que el Departamento de RRHH de la Sede se encuentra en el nivel 3, ya que, aunque presenta algunas características pertenecientes a los niveles 1 y 2, el nivel 3 es quien más se ajusta al estado del Departamento. Ya que, actualmente se aplican como instrumentos de medición prueba Psicológicas que determinan la personalidad de los oferentes.

Asimismo, la política salarial se establece bajo criterios de competitividad del mercado laboral y se realizan dos ajustes salariales anuales. Sin embargo, dentro de los parámetros que define el departamento en otros niveles se encuentran: actualmente no se cuenta con perfiles de puestos sino con manuales de puestos, a mediados del año anterior en dichos manuales cuentan con las competencias institucionales, sin embargo se ausentan las demás. Pero no se puede dejar de lado que es un gran adelanto para el Departamento.

Formación y Desarrollo: el Departamento de RRHH de la Sede no lleva a cabo esta tarea en la Sede, está totalmente a cargo de la Sede Rodrigo Facio, por lo que no se puede asignar un nivel con respecto a esta variable.

Si tomamos en cuenta los datos de la Sede Rodrigo Facio, se registra un problema, ya que las capacitaciones siempre se realizan en las instalaciones de dicha Sede, por lo que el sistema de capacitación de este departamento con relación a las y los funcionarios de Sedes y Recintos no está alcanzando la totalidad de la población universitaria. Aunque el año anterior RRHH de la Sede Rodrigo Facio realizó un cambio en su metodología, trasladando las capacitaciones de Sedes y Recintos, sin embargo únicamente se impartió una capacitación.

Clima, Cultura y Gestión del Cambio: con respecto a esta variable existe una incertidumbre, ya que no se puede determinar en qué nivel se encuentra el departamento, ya sea en el 2, 3, 4 ó 5, ya que según la lectura realizada en el curso, estas variables mencionan características que el departamento no realiza, más bien

son tareas que la Coordinación y la Jefatura Administrativa implementan medidas que proporcionen un ambiente laboral ameno y agradable.

Analizando las características que describe el nivel 1, se puede determinar que es el único nivel que definitivamente se descarta, ya que la administración en el Recinto no se basa en relaciones laborales basadas en la subordinación a la autoridad ni en el control en la ejecución de labores, características que se rechazan dentro del Recinto, ya que no va con el sistema administrativo del mismo.

Debido a lo anterior, se puede determinar que el Departamento de RRHH de la Sede no se encuentra en el nivel 1, pero no se puede determinar en cuál de los otros 4 niveles se puede identificar.

Impacto estratégico: esta última variable se puede situar en el nivel 2, ya que, como se mencionó en el informe N° 3 que se entregó recientemente, el rol estratégico del departamento se basa en que es él quien dota de Talento Humano a los 3 Recintos de la Sede del Atlántico. Sin embargo, el rol estratégico y participación de este departamento en el Recinto presenta un deficiente desempeño, incredibilidad por parte de las y los funcionarios del Recinto de Guápiles.

CONCLUSIONES

Una vez analizadas cada una de las cuatro dimensiones, citadas por Ballesta, en el Recinto de Guápiles, se identificaron las siguientes conclusiones:

Dimensión uno

En el Recinto de Guápiles existe un dilema en cuando al principio de Fayol, Unidad de Mando, ya que actualmente hay diferencia de criterios entre jefaturas del Recinto y de la Sede del Atlántico; generando así incertidumbre entre las y los funcionarios, viéndose reflejado en su clima organizacional.

Como en toda institución, en el Recinto de Guápiles existen diferentes personalidades y generaciones, lo que se puede observar en la cultura organizacional; ya que cada generación tiene una visión diferente de ver y hacer sus tareas, así como el enfoque que dan a su vida y trabajo.

La cultura organizacional del Recinto de Guápiles está presentando cambios positivos, lo anterior gracias al accionar de las últimas administraciones y la forma como las y los colaboradores han reaccionado a las estrategias utilizadas.

Los nombramiento del Director del Recinto se realiza cada dos años, donde la persona que sea asignada tiene la oportunidad de ser nombrado (a) por dos años más (cuatro en total). Por lo que al tener periodos de nombramiento tan cortos, se hace difícil que prevalezca una cultura organizacional, ya que entra en juego la diversidad de criterios, un ejemplo de ello es que en nueve años el Recinto ha pasado por cuatro administraciones.

Dimensión dos

El Departamento de Recursos Humanos de la Universidad de Costa Rica está desfasado, y al ser el máximo ente de la Universidad hace que otras oficinas siga su misma línea; ya que en el momento del estudio no se aplicaba conceptos como contratación por competencias.

El sistema de reclutamiento y selección no está basado en la búsqueda de competencias en los oferentes, ya que se continua con la metodología de comunicar las vacantes por medio de carteles, comunicación de

boca en boca, así como el uso de las pruebas psicométricas, manuales de puesto, evaluación de las capacidades de un oferente por sus títulos.

Actualmente la Sede del Atlántico carece de estrategias para captar profesionales y sus competencias en la zona donde se encuentra ubicada con sus tres Recintos, Guápiles, Paraíso y Turrialba.

Por situaciones salariales, la selección y búsqueda de competencias en los futuros colaboradores, no se lleva a cabo de la mejor manera, ya que a nivel de Sede se prefiere recargar tareas a funcionarios, o bien solicitar un perfil del colaborador menor al que realmente se necesita para una tarea. Sin embargo, cabe mencionar que esta situación se percibe particularmente en Sedes Regionales, ya que en la Sede Rodrigo Facio los puestos administrativos salen mejor calificados que en las Sedes, lo cual puede ser un elemento de desmotivación en la comunidad universitaria.

Dimensiones tres y cuatro

Al comparar los sistemas de clasificación de puestos tradicionales con los modernos se llega a la conclusión que la Universidad de Costa Rica utiliza un sistema híbrido, puesto que utiliza estratos y clases en el diseño de los manuales de puestos, donde se hace un esfuerzo por integrar competencias en los mismos. Sin embargo, en estos se hace referencia solamente a las competencias institucionales dejando de lado las personales.

En el análisis de documentos y la práctica se identificó un desfase entre la aplicación que se le da a estos manuales en la Sede Rodrigo Facio y la Sede del Atlántico, ya que en la primera se trata de orientar hacia un sistema estructural por competencias, mientras que en la Sede del Atlántico aún se le da énfasis a las tareas.

El actual manual de puestos, específicamente en su apartado de actividades esenciales, no tiene bien definidas las funciones que debe realizar el colaborador, por lo que es muy difícil aplicar una evaluación de desempeño dado que estas son encuestas.

En cuanto a la credibilidad del Departamento de Recurso Humanos de la Sede del Atlántico se determina que los colaboradores del Recinto de Guápiles, sienten más confianza y credibilidad en el Departamento de Recursos Humanos de la Sede Rodrigo Facio.

Las evaluaciones de desempeño son importantes y ofrecen información relevante, sin embargo; en la Universidad de Costa Rica no se están llevando a cabo, dado que los manuales de puesto están siendo sometidos a revisión.

LA INFORMALIDAD EN EL ESTADO DE BAJA CALIFORNIA, MÉXICO A CAUSA DE LA INMIGRACIÓN”

Angélica Lidia Saucedo Parra, Universidad Autónoma Baja California

Erika García Meneses, Universidad Autónoma Baja California

Luis Obed Padilla González, Universidad Autónoma Baja California

RESUMEN

Este trabajo de investigación constituye un análisis del dinamismo del sector informal; conocido como las actividades que han logrado insertarse en la dinámica legal y estructura económica del Estado de Baja California a causa de la inmigración. El objetivo es identificar la correlación en la informalidad y la inmigración para demostrar que el esfuerzo de creación de trabajo que ofrece el gobierno es ineficiente para absorber mano de obra y por ello la causa de esta problemática. Se utiliza un modelo de Lewis para medir estas diferencias utilizando el número de trabajadores formales de la Población Económicamente Activa como una variable proxy de inversión en el Estado.

PALABRAS CLAVES: Clasificación Ocupacional, Migración, Diferencias Laborales y Salariales, Mercado Laboral, Política Pública.

INFORMALITY IN THE STATE OF BAJA CALIFORNIA, MÉXICO BECAUSE OF IMMIGRATION

ABSTRACT

This research is an analysis of the dynamics of the informal sector; known as the activities that have succeeded in inserting in the dynamic legal and economic structure of the State of Baja California because of immigration. The aim is to identify the correlation informality and immigration effort to show that job creation offered by the government is inefficient to absorb labor and therefore cause this problem. Lewis model is used to measure these differences using the number of formal workers of active people rate as a proxy variable of capital investment in the state.

INTRODUCCIÓN

Este trabajo constituye un análisis de un *estudio empírico* del sector informal específicamente comercial. Banerjee (1983) y Sethuraman (1992), encuentran estrecha relación entre la emigración rural-urbana y el sector informal en el desarrollo de los mercados laborales y deducen que es inevitable, pues el sector informal es la principal fuente de empleos. Se examina el dinamismo de la Población Económicamente Activa (PEA) en el periodo de 2005 al 2014 con uso de la Encuesta Nacional de Ocupación y Empleo (ENOE), específicamente los trabajadores informales que son parte de esta. Como principal causa del

incremento de la informalidad se supone el crecimiento natural y la inmigración interestatal e internacional; obtenidas de las estadísticas del Consejo Nacional de Población CONAPO.

ANTECEDENTES EN MÉXICO-BAJA CALIFORNIA

La informalidad ha persistido a través de los años, debido a la falta de capacidad para generar empleos formales suficientes, además de que representa un espacio económico que absorbe ciertas actividades que no han logrado insertarse en la dinámica legal y estructurada (Shneider 2004). Los inicios de este tema se dan cuando se analizan los mercados laborales en la Organización Internacional del Trabajo OIT (1972), se introdujo el término de informalidad o sector informal, en la década de los 70's, fueron los primeros estudios en su tipo que cuantificaron su actividad, y que permitieron advertir a los gobiernos la importancia de generar los empleos que el sector formal es incapaz de crear en el corto plazo. En 2002, se reemplazó definitivamente el término sector informal por el más amplio de economía informal. En esta nueva acepción, se diferencian las empresas informales <la base del sector informal> y la fuerza de trabajo involucrada en actividades informales y formales. De esta manera, el universo de la economía informal quedó integrado por las empresas informales y el empleo informal, en una definición que suma relaciones de producción y de empleo. Se establece como asalariado informal a quien carece de algún esquema público o privado de seguridad social, y al trabajador por cuenta propia que no tiene registro del negocio. De igual forma el sector informal se reconoce como un espacio laboral donde persiste la actividad emprendedora y otros tipos de empleos alternos habituales y de baja productividad que ha cobrado gran importancia en México como en el mundo según Taylor (1996), Marcouiller (1997).

Para el Banco Mundial (2009), cuya misión es diferente a la de la OIT, la informalidad no constituye por sí mismo un tema preocupante. La vinculación a la informalidad, ya sea empresas o trabajadores, es una decisión libre y racional de los agentes económicos, resultante de su informado cálculo de costo beneficio; empresarios y trabajadores optan por la informalidad para no asumir los costos que la formalidad impone a empresas y trabajadores. Estos costos incluyen las obligaciones fiscales, parafiscales, las laborales, y las de salud. En esta perspectiva liberal, la informalidad se puede agrupar en dos segmentos principales que difieren por la naturaleza de su respuesta a las condiciones del mercado laboral. La informalidad como una estrategia de sobrevivencia y como táctica para evadir las normas laborales, como se expresa en Perry (2007).

Haciendo un esfuerzo por analizar las causas de la informalidad en el estado se revisan varios estudios que corroboran la estrecha relación entre la emigración de zonas rurales a urbanas y el sector informal (Banerjee, 1983; Sethuraman, 1992). Por la emigración, el crecimiento del sector informal en el desarrollo de los mercados laborales es inevitable pues es el sector informal la principal fuente de empleos. El nuevo empleo lo generan los micro-negocios, los trabajadores por cuenta propia y los trabajadores domésticos; según estimaciones de CONAPO para 2013, Baja California es la única entidad que cuenta con un saldo positivo en migración internacional; esto significa que el número de inmigrantes internacionales (mexicanos o extranjeros que llegan de otro país) es mayor a los emigrantes internacionales (los que salen a otro país). En contraste con esta información, el estado cuenta con una migración neta interestatal positiva de 6 mil 152 personas para el mismo año, ubicando al Estado en el octavo lugar de las 32 entidades de México.

Objetivo General : Identificar la relación causal de los flujos migratorios nacionales e internacionales y la informalidad que se registra en el estado Baja California, México.

Objetivos Específicos

- 1.- Analizar la migración neta internacional e interestatal y su impacto en la informalidad del Estado.
- 2.- Examinar las variaciones de trabajadores informales y formales respecto Población Económicamente Activa PEA en el Estado.

Justificación

El planteamiento del problema en el cual Levy (2008), determina que el debate académico en México sobre la informalidad económica se da desde tres perspectivas: la primera es el mercado laboral, la segunda es la seguridad social y por último las obligaciones fiscales. La informalidad es uno de los factores que limitan el crecimiento y desarrollo económico; el 42% de los ocupados en México según CONAPO (2013). Contrastando Arias (2010), argumenta que inhibe el crecimiento dado que las empresas no tienen ahorro ni inversión: no tienen una propiedad, no hay acumulación de capital ni adquisición de bienes duraderos, los pagos a trabajadores es muy poco y la productividad es baja.

Por su cuenta Poyana y Romero (2010), mencionan que la informalidad es la incapacidad de la economía para absorber toda la fuerza de trabajo con un salario de equilibrio dado y un capital disponible. La PEA en la entidad de estudio constituye cerca del 50% del total de la población en el Estado según datos de la ENOE. Se puede apreciar en el gráfico 1 y 2 los porcentajes promedio del periodo de análisis; la Población Económicamente Activa Ocupada (PEAO) anda cerca del 96% de la PEA y Población Económicamente Activa Desocupada (PEAD) anda alrededor del 4%, en la PEA se engloban los Trabajadores Formales con un 58% y los Trabajadores Informales con 42%; en cuanto al crecimiento de la población en el estado según la CONAPO se tienen dos fuentes principales: 1) crecimiento natural (nacimientos menos defunciones) y 2) crecimiento social (migración nacional e internacional).

Figura 1. Ocupados y Desocupados 2005-2014

Elaboración propia con información de la Encuesta Nacional de Ocupación y Empleo ENOE

Figura 2. Desglose de los Ocupados en Baja California

Elaboración propia con información de la Encuesta Nacional de Ocupación y Empleo ENOE

Baja California, debido a que es un lugar que al igual que otros estados del Norte de México presenta problemas de excedente de mano de obra debido los factores que lo hacen atractivo: el mercado laboral con crecimiento alto en el empleo, el liderazgo en el porcentaje de la población que ganas más de 5 salarios mínimos, las mejores condiciones de ocupación que ofrece un alto nivel de bienestar social entre sus habitantes. Se analizara la relación entre la migración al estado y la absorción de esta en la actividad formal, a través de procesos de adaptación de los programas de política pública estatal y federal para ofertar trabajo formal y determinar si realmente se está absorbiendo el excedente de trabajadores migrantes que se integran a la economía de la entidad.

En un análisis previo se puede denotar que la informalidad ha representado una oportunidad para todo trabajador incapaz de insertarse en la dinámica formal ya sea contratado o independiente, y en la mayoría de los casos se desempeña como emprendedor en negocios familiares de escala productiva reducida. En México como en el estado de Baja California los esfuerzos por integrar a la legalidad las actividades informales han sido insuficientes debido a las grandes desigualdades y a las crisis, lo que ha traído una estructura creciente de la economía informal. La evidencia empírica reciente expone la relevancia de estudiar el problema y determinar sus principales causas que nos determinen políticas de trabajo acordes al contexto en el que se encuentra el estado. En el grafico 3, se puede observar el desglose de la PEA hasta llegar a trabajadores formales TF y trabajadores Informales TI.

Figura 3. Panorama general de los componentes de la PEA

Elaboración propia con información de la Encuesta Nacional de Ocupación y Empleo ENOE

METODOLOGÍA

En este trabajo se considera la informalidad como un residuo, la parte de la fuerza de trabajo remanente, una vez el sector formal atrae el trabajo dadas las condiciones del mercado que depende, como veremos, se tomara en cuenta el total de trabajadores que pertenece a la PEA y de ahí se descuenta el número de Trabajadores Formales TF resultado el número de Trabajadores Informales TI, los TF se considera son absorbidos por los montos de acumulación de capital en la entidad y reforzados por los programas sociales aplicados a través de política pública para lograr la inserción de trabajadores informales a la economía formal. Para ello se considera como proxy de la efectividad de las políticas públicas el número de trabajadores formales en la entidad.

Se considera un marco teórico desde tres perspectivas: La Romántica (enfoque institucionalista): De Soto (1987), Maloney (1998); las personas-empresas se ubican en la informalidad es respuesta al exceso de regulación gubernamental. La Parasitaria (enfoque institucionalista): Perry (2007); las personas-empresas

con un enfoque racional se establecen en la informalidad para evadir impuestos y costos de la formalidad. La del Dualismo (enfoque estructuralista): Lewis (1954, 1979); segmentación de mercado laboral con respecto a la calidad del empleo y los salarios (Sector moderno y tradicional).

El presente estudio considera a la informalidad como un residuo, es decir, la porción de fuerza de trabajo remanente después de que la economía captura todo el trabajo formal que necesita, según la condiciones del mercado del cual depende, por tanto, se opta por la versión estructuralista o dualista, inspirada en la propuesta de Lewis (1958 y 1979) sobre el desarrollo que parte de la segmentación del mercado laboral dividido en 2 fragmentos aislados por la calidad del empleo.

Se utiliza el programa E-views y se estiman regresiones simples utilizando el modelo de Mínimos Cuadrados Ordinarios MCO con una muestra de 2005 al 2014 en forma trimestral contando con 38 observaciones.

MODELO DE ADOPCIÓN

Para efectos de este estudio se opta por la versión estructuralista o dualista, inspirada en la propuesta de Lewis (1958 y 1979) sobre el desarrollo y parte de la segmentación del mercado laboral urbano dividido en 2 fragmentos aislados por la calidad del empleo, que configuran el dualismo, en el que conviven, por un lado, el sector moderno con salarios superiores y rígidos y, en el otro, el tradicional con salarios menores y flexibles y alta movilidad por la inexistencia de barreras de entrada, ver Banerjee (1983); Daniels (2004); Galli&Kucera (2004). Con estas condiciones, se plantea que hay una relación estrecha entre la economía informal y la formal; la función de esta última es propiciar que el mercado laboral formal absorba la mano de obra excedente del sector informal en gran medida.

Arthur Lewis desarrolló un modelo de crecimiento económico que, partiendo de las características de los países en desarrollo, analiza cómo opera la acumulación de capital en éstos. A medida que en un país avanza el sector moderno, gracias a la inversión de sus ganancias, se contrae el empleo en el sector atrasado <que aquí se identifica con el empleo informal>. Es una relación simbiótica en la que se progresa hacia la modernización de la economía, en este momento se logra el camino al pleno empleo de la fuerza laboral en el sector moderno.

SUPUESTOS DEL MODELO LEWIS:

El trabajador emigra cuando percibe que, en el sector moderno (Estado de Baja California), puede obtener un salario superior a su ingreso actual.

El migrante que llega al estado de B.C. enfrenta tres opciones: empleo formal urbano, desempleo o empleo informal en las ciudades.

La tasa de acumulación de capital (inversión), debe de ser mayor a la tasa de crecimiento de la PEA para reducir el sector informal. Por tanto se deduce que si la tasa de crecimiento de la acumulación del capital se mantiene igual al crecimiento de la PEA el sector informal permanecerá; en otras palabras el crecimiento del capital estará absorbiendo al crecimiento de la PEA y el sector informal se mantendrá constante.

FORMALIZACIÓN DEL MODELO DE LEWIS

Se considera que en el estado no hay pleno empleo y se tiene una oferta de trabajo infinitamente elástica, partiendo de estos supuestos, el modelo describe el comportamiento de una economía "dual", que produce un solo bien y en la que coexisten un sector informal y un sector formal.

Se describen las variables a utilizar:

TI=Trabajadores Informales; es el número de Trabajadores que pertenecen a la Población Ocupada. (los ocupados por cuenta propia en la agricultura de subsistencia, así como a trabajadores que laboran sin la protección de la seguridad social y cuyos servicios son utilizados por unidades económicas registradas.

TF=Trabajadores Formales conocidos estos como los ocupados que son laboralmente no vulnerables por la naturaleza de la unidad económica para la que trabajan, con aquellos cuyo vínculo o dependencia laboral es reconocido por su fuente de trabajo. Así como a trabajadores que laboran con la protección de la seguridad social. Utilizada como variable proxy de la acumulación de capital aplicada a través de política pública.

PEAD=Población la cual no trabajó siquiera una hora durante la semana de referencia de la encuesta.

POSE=Población Ocupada Sin Establecimiento en el Estado de Baja California. Es utilizada como una proxy del costo de la formalidad al que se enfrentan los trabajadores por cuenta propia.

TC=Trabajadores subordinados y remunerados por Comercio.

MNI=Migración Neta Internacional; es la diferencia entre los emigrantes (salen) y los inmigrantes (entran), cuando se tiene un saldo positivo significa que el número de inmigrantes internacionales (mexicanos o extranjeros que llegan de otro país) es mayor a los emigrantes internacionales (los que salen a otro país) y negativo en caso contrario.

MNE=Migración Neta Interestatal; es la diferencia entre los emigrantes (salen) y los inmigrantes (entran), cuando se tiene un saldo positivo significa que el número de inmigrantes de otros estados de México es mayor a los emigrantes (los que salen a otros estados) y negativo en caso contrario.

MNEI=Es la suma de Migración Neta Interestatal (IME), más la Migración Neta Internacional (IMI). Lo que se conoce como Crecimiento Social Total.

CN=Crecimiento Natural (Número de nacimientos menos defunciones).

BASE DE DATOS Y LA APLICACION

Se utilizara la Encuesta Nacional de Ocupación y Empleo (ENOE) del Instituto Nacional de Estadística, Geografía e Informática (INEGI), que desagrega la información de los atributos y los sueldos de la población ocupada y en edad de trabajar, sus características en el empleo y otros micro-datos. Se utilizara la información individual de cada empleado en su ámbito formal e informal. Se revisa la base de datos de CONAPO para el estado de Baja California para determinar los flujos de migración interestatal y la internacional; considerando los saldos netos entre la migración y emigración de ambas, además se considera el grado de absorción del Estado de la mano de obra utilizando como variable proxy la PEA.

CONCLUSIONES

Entre mayor sea la población sin establecimiento mayor será el número de trabajadores en la informalidad, lo que está reflejando que de alguna manera los costos de tener un establecimiento son elevados y no se permite el acceso fácilmente.

La absorción de la mano de obra a través de la variable TF indica que a medida que se incrementa en 1% el trabajo formal disminuirá en 44% el número de trabajadores informales.

Entre más crece la actividad comercial en el Estado también aumenta la informalidad ya que esta actividad de distribución es de baja productividad según Levy(2008).

Curiosamente entre mayor sea la migración de población al Estado menor será el número de trabajadores informales lo que muestra tentativamente que estas personas que están llegando posiblemente tengan cierto grado de educación como menciona Videgaray en el estudio Imef a “medida que crece la educación disminuye la informalidad” o de igual forma Arias (2010) argumenta que el sector informal es un sector empresarial que no tarda en formalizar su actividad.

La migración neta nacional e interestatal que ocasiona el excedente de mano de obra está siendo absorbida por la economía formal de la entidad debido a los programas de generación de empleos formales que el gobierno implementa a través de política pública, por ello cada que se encuentra un diferencial del 1% positivo en la variable de MNE y la MNI el número de trabajadores informales disminuye dado que está creciendo la economía formal y el residuo de trabajadores informales será cada vez menor. En contraste se puede intuir que las personas migrantes que llegan a la entidad cuentan con flujos de capital que les facilita incorporarse al sector formal en periodo de tiempo corto.

Por otro lado si el saldo del diferencial en las variables de MNE y MNI es 1% negativo multiplicado por el signo negativo del coeficiente evaluado en las estimaciones, nos percatamos que el número de trabajadores informales aumenta, esto lo explicamos de la siguiente manera; debido a que hay una salida de personas en mayor proporción que la entrada de las mismas se intuye que se está extrayendo parte de la acumulación del capital que estaba generando el trabajo formal lo que ocasiona una caída en este sector y por tanto un aumento en el de trabajadores informales.

Se esperaba una relación directa causal entre migración neta estatal e internacional y la variable de informalidad, es decir, a medida que se incrementara la migración hacia la entidad se esperaba un aumento de la informalidad y viceversa debido a la insuficiencia del capital y de las políticas públicas aplicadas por el gobierno para la absorción del excedente generado por estas personas. Después del análisis de las estimaciones se encuentra una relación indirecta entre la migración y la informalidad, es decir, a medida que se incrementa la migración a la entidad la informalidad descenderá y viceversa.

Dado lo anterior, seguimos con la línea de investigación y análisis dado las repercusiones que trae consigo la informalidad en la economía de una localidad, entidad y de un país. Se harán futuras deducciones sobre los capitales que podrían movilizar los migrantes entre regiones y que sean causas de la generación de trabajo formal y por ende disminuciones en la informalidad en forma general.

RESUMEN

Analizar la problemática de la enseñanza de las matemáticas, específicamente del aprendizaje del cálculo, es el objetivo primordial del presente documento, partiendo de las actividades del alumno ante el conocimiento matemático y del papel del maestro en la construcción del conocimiento por parte del alumno, así como las posibilidades de acción que tiene que superar el maestro, desde el trabajo pedagógico, el fracaso escolar y la selectividad de actividades. La enseñanza del cálculo pudiera considerarse uno de los más grandes retos dentro del ejercicio docente en el área de matemáticas, al analizar la problemática actual que enfrenta el aprendizaje de este, se puede inferir que en gran parte esta, se determina por el trabajo del maestro y por las prácticas de aprendizaje del alumno. Discutir sobre las prácticas que predominan en la enseñanza del cálculo, implica un reconocimiento tanto en los objetivos que se persiguen, como en los métodos que se siguen; la formación docente entonces ha de tomar en cuenta no solamente el dominio de la materia a enseñar, sino también las técnicas didácticas adecuadas a las capacidades cognitivas de los estudiantes.

PALABRA CLAVE: Enseñanza matemática, cálculo, prácticas

DESIGN, IMPLEMENTATION AND EVALUATION OF THE COUNSELING PROGRAM TO IMPROVE THE LEARNING OF CALCULUS

ABSTRACT

Analyze the problems of the teaching of mathematics, specifically the learning of calculus, is the primary aim of the present document, based on the activities of the student to the mathematical knowledge and the role of the teacher in the construction of knowledge by the student, as well as the possibilities of action that has to overcome the master, from the pedagogical workschool failure and the selectivity of activities. The teaching of calculation could be considered one of the greatest challenges within the exercise teaching in the area of mathematics, to analyze the current problems facing the learning from this, it can be inferred that in large part is, is determined by the master's work and the student's learning practices. Discuss practices that predominate in the teaching of calculation, it implies a recognition both objectives pursued, and the methods used; teacher training should then take into account not only the domain of the subject to teach, but also didactic techniques appropriate to the cognitive abilities of the students.

KEYWORD: Teaching math, calculus, practical

INTRODUCCIÓN

El hablar de enseñanza del cálculo, implica el reformular la nueva visión del mundo digitalizado, desde la perspectiva de los alumnos, reestructurando la enseñanza de este, lo que conlleva un cambio en el trabajo del maestro y el rol del alumno, cambiar la lo tradicional o convencional a la resolución lógica de problemas prácticos. Para ello es necesario comprender los aportes de las investigaciones en cuanto al estudio de las dificultades es necesario hacer referencia a la noción de obstáculo epistemológico introducida por el filósofo Bachelard, para él, el conocimiento científico no se desarrolla en un proceso continuo, ni lineal, este es el resultado del rechazo de formas previas de conocimiento que se constituyen en obstáculos epistemológicos.

Continuación este artículo se compone de un marco teórico el cual de sustentó a las teorías y metodologías propuestas, para lograr el objetivo general de la investigación es: Diseñar, implementar y evaluar un programa de asesoramiento continuo de Cálculo para mejorar el rendimiento académico en los alumnos, se aplica el método metodológico Cuantitativo experimental con un diseño de muestra separada pretest-postest, con grupos control, diseño correlacional- descriptivo se desarrolla y aplica un instrumento basado en cuestionario de escala tipo Likert con 25 ítems, y los resultados se validan con la herramienta coeficiente de Alfa Cronbach.

Delimitación del objeto de estudio

Haciendo un recorrido por la experiencia docente frente a los grupos de la universidad Universidad se han identificado algunas características de los alumnos en lo que se refiere al aprendizaje del cálculo: como nociones erróneas para interpretar conceptos fundamentales en los libros, estos generan los planteamientos incompletos e incluso al momento de ejecutar fórmulas y/o uso de razonamiento lógico se ven dificultades para desarrollar las actividades, aunado a la insuficiente capacidad para retener las ideas centrales de la materia y además carecen de vocaciones científicas, especialmente en el área de Matemáticas.

Problematización. Una de las razones por las que algunos alumnos experimentan dificultad para aprender las nociones del cálculo es la forma en que se les enseñan los procedimientos para resolver problemas que todavía no comprenden y por tanto es poco probable que les interese. En muchos cursos actuales de cálculo la enseñanza de ciertos temas se localiza en algunos momentos donde los alumnos se ven obligados a asimilar la gran cantidad de información en tiempos reducidos, el maestro tiene responsabilidad en los resultados vistos en los procesos de enseñanza aprendizaje del cálculo al trabajar de manera expositiva, cuando solo se concreta a contemplar resultados sin involucrarse en ellos.

El modelo educativo que sigue la Universidad implica una gran carga de trabajo escolar para los alumnos en lo que corresponde a la materia de Calculo dicho programa semestral debe desarrollar los temas correspondientes a las cinco unidades, si se considera entonces que la materia en sí es difícil de concebir por los alumnos por lo complejo de los temas, y si le agregamos a esto el tiempo como un factor determinante para el desarrollo óptimo, se pretende entonces encontrar los métodos didácticos adecuados para abordar los temas en su totalidad.

Entonces se intenta aportar una alternativa para la mejora cualitativa de la enseñanza efectiva del cálculo, que nace del interés por realizar una propuesta didáctica que conduzca a abordar los programa mediante un trabajo de y asesoramiento continuo para lograr la enseñanza del cálculo basada en estándares de calidad. Si se busca un aprendizaje significativo fundamentado en el Modelo de Educación Basada en Competencia que rige el actuar docente dentro de la Universidad, el cual determina que no se puede enseñar cálculo reduciéndolo a la memorización mecánica de los hechos, teoremas, definiciones y mucho menos a los procedimientos (*muchos alumnos resuelven correctamente pero no saben lo que hacen*); por el contrario,

lo que debe buscarse es que el alumno aprenda a plantear y resolver problemas que tengan sentido para sí mismo.

Pregunta de investigación. Una tarea importante consiste en concientizar, sensibilizar y preparar a los profesores para que a su vez puedan instruir a los alumnos en ejercitarse y distinguir un pensamiento confuso de un pensamiento eficaz, un razonamiento correcto de un incorrecto dando a los alumnos oportunidades de razonar sobre cuestiones relevantes que sean de su interés, estos podrían desarrollar más fácilmente sus habilidades del pensamiento. Por esta razón el contenido queda planteado en una pregunta que didácticamente incumbe a los docentes. ¿En qué medida el diseño y la implementación del programa asesoramiento continuo en Cálculo mejorara el aprendizaje en alumnos de la universidad

El Objetivo general de la investigación es: Diseñar, implementar y evaluar un programa de asesoramiento continuo de Cálculo para mejorar el rendimiento académico en los alumnos. Los objetivos particulares de investigación son: Reconocer la importancia que tiene el proceso didáctico para lograr comprender los temas de cálculo diferencial e integral. Identificar cuáles son las estructuras cognitivas que apoyan la comprensión del aprendizaje del cálculo Orientar educativa y profesionalmente al alumno, para que aproveche con mayor eficiencia su tiempo de estudio y los recursos necesarios para llevar a cabo su aprendizaje.

Justificación. Las dificultades presentadas en el aprendizaje efectivo del cálculo diferencial e integral están enmarcadas en la complejidad de los objetivos y en las que se asocian a la conceptualización de los temas y aplicaciones; se dirigen a los maestros para concientizar la necesidad imperante de introducir una nueva dirección en la planeación, administración y evaluación del acto educativo; otro aspecto es el orden cognitivo del alumno y la ruptura con la matemática clásica algebraico-geométrico, para dar paso a una matemática totalmente nueva para ellos, aunque los temas de funciones no lo son del todo el concepto de límite, derivada y antiderivada son temas que no conocen y que antes de intentar una conexión con la materia presentan un rechazo total por esta, entrar en el campo del cálculo significa para el alumno reprobación.

La enseñanza del cálculo se reduce a la memorización de definiciones y teoremas, así como a la aplicación mecánica de ciertos procedimientos. En la enseñanza matemática del cálculo existen tres aspectos muy importantes que se deben resaltar; el primero es el aspecto conceptual (planes y programas) que se refiere a lo que se enseña y se aprende (funciones, noción de límites, derivadas e integrales), sus propiedades y las operaciones entre ellas, el segundo aspecto es el algorítmico y calculatorio refiriéndose al cómo se efectúan las operaciones y cuáles son los métodos que dan más rápida y fácilmente los resultados para proporcionar la habilidad necesaria para calcular y comprobar con precisión.

Esta investigación busca encontrar una propuesta didáctica que permita vincular la teoría y la práctica, partiendo del programa de asesoramiento continuo de la materia y de las concepciones de los alumnos, para adaptar las prácticas en el aula estructurando de manera progresiva el cálculo iniciando su estudio de nociones cotidianas, organizando la enseñanza a resolución de problemas de aplicación donde la epistemología de la materia se trabaje de manera tal que el alumno pueda interpretar lo expuesto en los textos con dificultades mínimas.

REVISIÓN LITERARIA

Aquí se aborda brevemente las teorías de aprendizaje que describen la manera en que los teóricos creen que las personas aprenden nuevas ideas y conceptos; frecuentemente estas explican la relación entre la información que ya tenemos y la nueva información que estamos tratando de aprender; desde esta concepción se visualizaran los errores epistemológicos de la enseñanza en el cálculo como disciplina científica y del modo de acceso a su conocimiento. La teoría cognitiva; profesa que la comprensión de las

cosas se basa en la percepción de los objetos y de las relaciones e interacciones entre ellos, este establece que la apreciación de la realidad es adecuada cuando se pueden establecer relaciones entre las entidades. La teoría del procesamiento de la información; trata de describir y explicar el proceso de aprendizaje, mediante el análisis de las formas en que los estímulos que proporciona el medio ambiente son percibidos, codificados y transformados en información significativa, la forma en que se retienen en la memoria y se recuerdan para traducirse en conductas observables en el individuo. La teoría constructivista del aprendizaje; constituye, antes que nada, una posición epistemológica, es decir, referente a cómo se origina el conocimiento, como tal no debe confundirse con una posición pedagógica (Delval, 1997).

Para esta concepción aprendemos cuando somos capaces de elaborar una representación personal sobre un objeto de la realidad o contenido que pretendemos aprender. Así pues, el proceso del aprendizaje significativo está centrado sobre él. En la teoría del aprendizaje significativo; es importante mencionar que psicólogos, así como pedagogos han presentado al aprendizaje de tal manera, que el estudiante logre incluir en su estructura mental conocimientos nuevos mediante ideas previas adquiridas con anterioridad, así mismo otros personajes que han investigado sobre el tema, mencionan que este se da cuando un nuevo conocimiento se conecta con un concepto de relevancia previamente adquirido. “El aprendizaje significativo se logra cuando puede incorporarse a las estructuras de conocimiento que posee el sujeto, es decir cuando el nuevo material adquiere significado para el sujeto a partir de su relación con conocimientos anteriores”. (Pozo; 2003:211).

Propuesta programa de asesoramiento

Cantoral y Mirón (2000) señalan una dislexia escolar en Cálculo, su enseñanza logra que los estudiantes deriven, integren y calculen límites elementales, pero no son capaces de dar un sentido más amplio a esas nociones que les haga reconocer, cuándo un problema requiere de calcular una derivada. Actualmente se reconoce que la problemática adquiere tintes muy particulares que conciernen a aspectos cognitivos “cómo se aprende”, didácticos “cómo se enseña” y epistemológicos “cómo se concibe el saber a enseñar y aprender”. Esto se sitúa en el entorno social que enmarca la interacción entre el contenido matemático, los estudiantes y el profesor “dónde se enseña-aprende”. (Salinas y Alanís, 2009)

La relevancia de esta asignatura esta en cubrir el perfil de egreso para desarrollar capacidades que le permitan incorporarse de manera competente a los estudios de nivel superior, por lo que ese espera que los maestros den prioridad al campo disciplinario para el desarrollo de los procesos lógicos, orientando a los alumnos al análisis y exploración de los fenómenos sociales y naturales como:

La aplicación en la vida cotidiana de los conocimientos para resolver problemas, en base a los principios y leyes que rigen al cálculo.

El manejo reflexivo y crítico del quehacer científico en la toma de conciencia de sus impactos sociales y económicos.

La adquisición de principios en las diferentes áreas de conocimiento que faciliten la decisión en la adecuada decisión de estudios superiores.

Como herramienta para generar modelos matemáticos a la gran variedad de fenómenos científicos que requieran de soluciones para sus problemáticas.

En el que se espera que los alumnos:

Realicen ejercicios y mapas conceptuales donde distinga las distintas funciones matemáticas y sus posibles usos en problemas de la física en general.

Presente por escrito y verbalmente, interpretaciones y soluciones de problemas referentes al mantenimiento industrial a través del empleo de funciones matemáticas, incluyendo su representación gráfica.

Elabore ejercicios representativos de problemas aplicados en la industria en las áreas de electricidad y cinemática y dinámica de elementos de mecanismos aplicando los métodos de derivación y las fórmulas fundamentales del cálculo diferencial de las distintas funciones matemáticas.

Diseño del programa de asesoramiento

En el proceso del diseño del programa de asesoramiento para mejorar la enseñanza del cálculo se proponen en formas distintas estrategias pedagógico - didácticas cuya finalidad será promover el desarrollo de las capacidades, habilidades y destrezas de los alumnos; en este apartado se pretende describir lo que se podría determinar como una propuesta metodológica de trabajo que estará constituida por las estrategias, las técnicas, los recursos que se aplicarán y por las actividades que se realizarán durante el desarrollo de la enseñanza durante el cuatrimestre a fin de brindar condiciones adecuadas para el logro de aprendizajes significativos. Sin olvidar que la propuesta se establecerá de acuerdo a criterios de la dirección de la carrera, tomando en cuenta el contexto y la complejidad de la práctica educativa.

Es de suma importancia recordar que los profesores sean quienes ejecuten los programas de asesorías es una premisa para el éxito de cualquier reforma, porque son ellos en su práctica cotidiana los que llevan a cabo las estrategias didácticas planteadas en los programas de estudio, estos son los actores fundamentales en cualquier cambio educativo (Catalano, Avolio de Cols, y Sladogna, 2004)

Es decir, los docentes deben ser los autores de los programas de estudio que aplican, porque ellos son quienes: 1. Mejor conocen las asignaturas que imparten y pueden reconstruirlas. 2. En su práctica cotidiana se enfrentan a las posibilidades de que los alumnos sean constructores de su propio conocimiento. 3. Pueden retroalimentar sus propias experiencias con sus pares. 4. Hacen realidad los cambios propuestos. A continuación en la tabla 1 se observa la los parámetros del programa

Tabla 1: Dosificación del programa

Cada unidad a desarrollar deberá establece bajo los siguientes parámetros	
Secuencia Didáctica	Nombre de la unidad, b) Objetivo didáctico general, c) Recursos y/o materiales didácticos
Metodología	a) Acciones del docente, b) Actividades sugeridas para trabajar los contenidos en el aula, c) Indicadores de desempeño para lograr las competencias, d) Sugerencias de evidencias de aprendizaje, e) Habilidades, Actitudes y Valores, f) Actividades o estrategias que llevará a cabo para reducir la ansiedad matemática. g) Acciones para incrementar el gusto por las matemáticas. h) Intervenir en casos de alumnos con antecedentes de fracaso académico en el área del cálculo, i) Problemas de contexto de la vida real o de aplicación que considera deban resolver sus alumnos. j) Ejercicios dosificados para que el alumno practique la algoritmia del tema

Fuente elaboración propia. En esta tabla se explica los Cada unidad a desarrollar deberá establece bajo los siguientes parámetros

METODOLOGÍA

Cuantitativo experimental con un diseño de muestra separada pretest-posttest, con grupos control, diseño correlacional- descriptivo, se intenta medir el aprendizaje efectivo del cálculo en función del asesoramiento continuo en la enseñanza; en el cual se pretende establecer la correlación entre las variables señaladas. Las acciones dentro del presente documento está encaminado a cómo el trabajo de asesorías continuas a alumnos mejoran las prácticas de enseñanza y el aprendizaje del cálculo, se espera que las acciones vayan encaminadas a buscar la relación entre las variables mencionadas, porque se determina utilizar el enfoque cuantitativo que va de la teoría generada por otras investigaciones y por la recolección de datos que se pretende obtener (Hernández, 2006).

Enfoque de investigación. La investigación cuantitativa tiene una concepción lineal, es decir, tiene que haber claridad entre los elementos que conforman el problema, tienen que tener definición, estar limitados y saber con exactitud donde se inicia el problema, también es importante saber qué tipo de incidencia existe entre los elementos que conforman el problema. Esta nos ofrece la posibilidad de generalizar los resultados más ampliamente, nos otorga control sobre los fenómenos, así como un punto de vista de conteo

y las magnitudes de éstos. Asimismo, nos brinda una gran posibilidad de réplica y un enfoque sobre puntos específicos de tales fenómenos, además de que facilita la comparación entre estudios similares. Por lo que se usa la recolección de datos para probar la hipótesis, con base en la medición numérica y el análisis estadístico, para establecer patrones de comportamiento y probar teorías.

Método de investigación. Cook y Reichard mencionan “Cuando se aplican métodos cuantitativos se miden características o variables que pueden tomar valores numéricos y deben describirse para facilitar la búsqueda de posibles relaciones mediante el análisis estadístico; aquí se utilizan las técnicas experimentales aleatorias. Conocemos a la metodología como la ciencia que nos enseña a dirigir los procesos de forma óptima para alcanzar los resultados con mayor eficiencia y eficacia. Entonces se usará en método la recolección y el análisis de los datos, elementos constitutivos del método científico para contestar las preguntas de investigación y probar hipótesis, se espera obtener una medición numérica, el conteo y la utilización de elementos estadísticos para poder establecer patrones de comportamiento de una población estudiada, se pretende acotar la información y medir con precisión las variables del estudio (enseñanza y el aprendizaje del Cálculo)

Hipótesis. En esta tesis se pretende encontrar una hipótesis correlacional enmarcada a las variables de asesoramiento y rendimiento académico de los alumnos de la universidad ahora bien a determinadas condiciones de prueba o contrastación, se busca ver cómo se comportan las variables objeto de estudio. Las hipótesis planteadas en la investigación en qué medida el diseño y la implementación mejorará el rendimiento académico en alumnos de la universidad son las siguientes:

Hi: La puesta en práctica de un programa de asesoramiento continuo en la asignatura del cálculo, disminuirá los problemas epistemológicos y cognitivos que afectan significativamente el aprendizaje del este y que su implementación por ende mejorará el aprendizaje en los alumnos

Ho: La puesta en práctica de un programa de asesoramiento continuo en la asignatura del cálculo, no disminuirán los problemas epistemológicos y cognitivos que afectan significativamente el aprendizaje del este y que su implementación por ende no mejorará el aprendizaje en los alumnos

Operacionalización de variables. Debido a lo complejo de los temas, para iniciar con esta investigación educativa se tomarán dos variables el asesoramiento del cálculo y el aprendizaje efectivo de la materia. La variable independiente Asesoría, tiene como categoría los aspectos epistemológicos y el sistema didáctico para el logro de los objetivos en la cual los rasgos a evaluar son el dominio de los temas de los maestros de asignatura y las estrategias didácticas; en lo que corresponde a la variable dependiente hace alusión al aprendizaje del cálculo, la cual tiene como categoría los aspectos cognitivos y la capacidad para aprender la Interpretación de los teoremas, la comprensión de contenidos conceptuales y la aplicación de aprendizajes procedimentales

Instrumento para obtención de información empírica. En este trabajo el método es el camino por donde transitamos para lograr una estructura lógica del proceso, de forma tal que podamos incidir en el objeto para transformarlo, la técnica utilizada para la recolección de información fue un cuestionario tipo escala Likert. El instrumento realizado para medir las variables y determinar en qué medida el diseño y la implementación del programa mejorará el rendimiento académico en alumnos de la universidad es un cuestionario de escala tipo Likert con 25 ítems cuyo tipo de respuesta es considerado de Sumatoria (Siempre, casi siempre, algunas veces, casi nunca y nunca).

RESULTADOS

La validez y la fiabilidad del instrumento. Fiabilidad, confiabilidad o precisión denotan la cualidad de un instrumento que permite que cualquier investigador obtenga la misma lectura, bajo las mismas condiciones,

de acuerdo con Hernández, Fernández y Baptista (1998 pag. 243), "la validez en términos generales, se refiere al grado en que un instrumento realmente mide la variable que pretende medir" El criterio de la fiabilidad, confiabilidad, consistencia y credibilidad del instrumento en esta investigación fue determinado por el coeficiente de Alfa Cronbach, desarrollado por J. L. Cronbach, requiere de una sola administración del instrumento de medición y produce valores que oscilan entre cero y uno. (Hernández, y otros, ob. cit.).

A partir del análisis de varianzas se estableció lo siguiente en alfa: $\alpha = [1.04166667][1 - 0.13131163]$
 $\alpha = 0.90488372$

Se tiene que α tiene 90% de confiabilidad. Considerando la escala de valores que determina el rango de 0.9 a 1 un rango de Alta Confiabilidad y el valor de 0.90 obtenido en el cálculo de la confiabilidad para el Instrumento " se puede decir que el instrumento aplicado en la presente investigación posee un buen grado de confiabilidad, el resultado obtenido indica alta confiabilidad en este instrumento

CONCLUSIONES

Al producirse un giro en la forma de enseñar y aprender se trata de motivar a los alumnos a que reflexionen en lugar de obligarlos a aprender lo que sus profesores habían sido obligados también a aprender, y que se dedicaban solamente a transmitir a sus alumnos. Se ha considerado que uno de los errores más graves de la educación tradicional es fomentar que los alumnos aprendan los productos finales de la investigación científica, en vez de propiciar en ellos el proceso de la investigación misma; de esta manera, no se les enseña a pensar, a ser críticos ni reflexivos. Se concluye que es prioridad del maestro elegir y organizar las actividades del curso más convenientes para lograr un buen aprendizaje en los alumnos, apoyándose en sus conocimientos y experiencia sin limitarse a los contenidos programáticos; se espera pertinente sugerir que las actividades en el salón se adapten para que los alumnos dejen de ser receptores pasivos de lo que explica el maestro en el pizarrón, al mismo tiempo de que se apropien gradualmente del vocabulario, la expresión simbólica que proporciona el cálculo, como el uso de símbolos en límites, derivadas e integrales, lo cual ayudará al alumno a aprender significativamente dándole la capacidad de crear nuevos conocimientos y relacionarlos con las diversas áreas de aprendizaje futuro como son las ecuaciones diferenciales.

Santos Trigo (1993) menciona que "las ideas que los profesores tienen acerca de las matemáticas moldean las actividades del salón de clases" entonces se hace necesario y urgente que el docente cuente con elementos teóricos y metodológicos que le ayuden a modificar su práctica, su 'saber sabio' (Alanís, 2000); por un lado a comprender mejor los conceptos implicados en el desarrollo del pensamiento matemático, y por otro a implementar acciones didácticas pertinentes para favorecer este aspecto en la formación de los alumnos.

Para finalizar se debe recordar que el cálculo al igual que cualquier ciencia, el cálculo ha sufrido una intensa evolución a lo largo de la historia, abriéndose continuamente a nuevos descubrimientos; el pensamiento matemático posee una génesis cuyas raíces epistemológicas están ancladas en lo concreto, que obliga a la reestructuración y reorganización los contenidos abriendo nuevas vías de generalización.

RESUMEN

Este estudio de investigación presenta, los resultados de un diagnóstico aplicando el instrumento de medición liderazgo nivel 5 de Jim Collins, con la finalidad de identificar el grado de liderazgo que presenta la administración pública de la municipalidad de Pococí, Siquirres y Guácimo Costa Rica, y a partir de los resultados que se obtengan de la aplicación del instrumento de medición con la finalidad de realizar un estudio comparativo entre las tres municipalidades, para presentar los resultados y recomendaciones a las autoridades correspondientes y plantear diferentes alternativas o soluciones que ayuden a mejorar el desempeño de sus departamentos, bajo un tratamiento estadístico sustentado en el paquete estadístico SPSS v17.

COMPARATIVE STUDY OF LEVEL 5 LEADERSHIP MODEL APPLIED TO MANAGEMENT HUMAN TALENT IN PUBLIC ADMINISTRATION OF THREE MUNICIPALITIES OF COSTA RICA

ABSTRACT

This research presents the results of an assessment using the measuring instrument level 5 Leadership Jim Collins, in order to identify the degree of leadership that has the public administration of the municipality of Pococí, Guácimo and Siquirres Costa Rica, and from the results obtained from the application of the measuring instrument in order to make a comparative study of the three municipalities, to present findings and recommendations to the relevant authorities and propose alternatives or solutions to help improve the performance of departments, under a statistical treatment supported by SPSS v17.

INTRODUCCIÓN

En la actualidad, se requiere con más urgencia mayor liderazgo en las administraciones públicas. Como es bien sabido el liderazgo ha venido presentando una evolución continua en función de las condiciones que presenta cada organización, en particular en las últimas tres décadas. Este estudio de investigación persigue,

de manera específica aplicar un instrumento de medición que permita medir el grado de liderazgo nivel 5 de Jim Collins en la administración pública de la municipalidad de Pococí, Siquirres y Guácimo Costa Rica. Una vez que se logró la gestión correspondiente con los directivos involucrados en el estudio, se aplicó el instrumento y se midió el grado de liderazgo nivel 5 que presenta la administración pública de Pococí, Siquirres y Guácimo Costa Rica, se realizó un estudio comparativo para presentar ante las autoridades correspondientes los resultados obtenidos y plantear diferentes alternativas o soluciones que ayuden a mejorar el desempeño de sus departamentos.

REVISIÓN DE LITERATURA

Liderazgo de nivel 5

El liderazgo nivel 5, se refiere al nivel más alto, en una jerarquía de capacidades ejecutivas, según Collins, J. (2005). Los líderes de los otros cuatro niveles, en la jerarquía pueden generar altos grados de éxito, pero no el suficiente para elevar a las organizaciones de la mediocridad, a la excelencia sostenida. La siguiente tabla 1, resume la teoría que plantea Collins, J. (2005), en su investigación de liderazgo de nivel 5.

Tabla 1: Características del líder Nivel 5 de Jim Collins

El líder de nivel 5 se sitúa en la cima de una jerarquía de capacidades y es, un requisito necesario para transformar una organización de buena a excelente.
Nivel 5 Ejecutivo de Nivel 5 Desarrolla una grandeza duradera, mediante una paradójica combinación de humildad personal, y voluntad profesional.
Nivel 4 Líder eficaz Cataliza el compromiso, con una visión clara y convincente; y su vigorosa aplicación, estimula al grupo a lograr altos estándares de desempeño.
Nivel 3 Ejecutivo competente Organiza a las personas, y los recursos para la búsqueda eficaz y eficiente, de objetivos predeterminados.
Nivel 2 Colaborador de un equipo Contribuye al logro de objetivos grupales; trabaja eficazmente con otros en un entorno de grupo.
Nivel 1 Individuo altamente capaz Hace contribuciones productivas mediante talento, conocimiento, habilidades y buenos hábitos de trabajo.

Fuente: Collins, J. (2005). Esta tabla muestra los 5 niveles de liderazgo propuestos por Jim Collins, considerados dentro del instrumento de medición del presente estudio de investigación.

Y aunque el liderazgo de Nivel 5, no es el único requisito para transformar una organización buena en excelente –otros factores incluyen sumar a las personas correctas a la aventura (y apartar a las incorrectas), así como crear una cultura de disciplina-, según Collins, J. (2005) muestra que es esencial. Las transformaciones, de bueno a excelente, no ocurren sin líderes de Nivel 5 en el mando. Según investigaciones, Mendoza, R. & Ortiz, C. (2006); Ortiz, G., Amalia, R. (2006); Pedraja-Rejas, L., Rodríguez-Ponce, E., & Rodríguez-Ponce, J. (2008) los líderes transformacionales, ejercen una influencia al interrelacionarse con los miembros del grupo, estimulando cambios de visión buscando el bien común y dejando de lado los intereses particulares, por lo que el liderazgo nivel 5 de Collins se puede identificar como liderazgo transformacional.

Esta teoría, confirma la importancia, de colocar a líderes de Nivel 5 que corresponden a la categoría de tipo transformacional en los puestos clave de la administración pública en las municipalidades de Pococí, Siquirres y Guácimo Costa Rica y de esta manera definir la ruta hacia el mejoramiento continuo. Por otro lado, Mendoza, I., Ortiz, M. & Parker, H. (2007) refieren que los miembros del equipo transformacional se preocupan por otros, se estimulan intelectualmente, se inspiran entre ellos, y se identifican con las metas del equipo lo que logra percibirse en los líderes de nivel 5. La asertividad, por parte de los responsables, de asignar a los líderes de los puestos clave, dentro de la administración pública, reside en la objetividad del

análisis de la currícula presentada, por los sustentantes al cargo público y, que en algunas ocasiones no se cuenta con un proceso de selección y reclutamiento riguroso, si no se cuenta con una herramienta que permita medir el grado de liderazgo nivel 5.

Según Cardona, J. (2004), El modelo “Círculos de Liderazgo y Gestión por 8 hábitos es altamente efectivo e implica una interacción entre clientes y colaboradores partiendo de 8 conceptos: información, visión estratégica, resultados, delegación, aprendizaje, comunicación y negociación, equipo e innovación. En este sentido, para que pueda ocurrir una transformación en el sector público, deberá contar con la determinación de combatir, y abatir el comportamiento organizacional tan arraigado.

Las Instituciones del sector público.

Según Velazquez, G. (2005), en los últimos años se ha observado un deterioro continuo de las organizaciones nacionales en comparación con otras naciones, identificando principalmente la pérdida de productividad, altos costos de producción, lento proceso de comercialización y, sobretudo, ausencia de creatividad e innovación por parte del capital humano. En este sentido, según investigaciones Aguilar, J. (2007); Gutierrez, A., & Gutierrez, J. (2008) el servidor público se motiva, para laborar, por la remuneración, su estabilidad laboral, su satisfacción personal y el poder que pueda ejercer en la organización. En especial es altamente recomendable actuar localmente y buscar la mejora en el desempeño de los líderes a partir de los puestos clave en la administración pública de las municipalidades. Según Castro, A. (2006), el liderazgo es el proceso por el cual una persona tiene la capacidad para influir y motivar a sus seguidores de modo que contribuya al logro de los objetivos establecidos y al éxito del proyecto organizacional.

Según Pedraja, L. & Rodríguez, E. (2004), la relevancia de la decisión, la importancia del compromiso, la probabilidad de éxito, la experiencia del líder y del grupo, el apoyo del grupo al logro de los objetivos y la competencia del grupo son determinantes en la competitividad de las organizaciones. Según Villarzú, J. (2005), transcurrieron las primeras semanas de 1994, y la Corporación Nacional del Cobre (Codelco) estaba a punto de correr la misma suerte que el Titanic. Con 24 000 empleados y utilidades por unos US\$ 516 millones, Codelco era grande, imponente y majestuosa. La mejor herramienta que todo CEO debe poseer según Villarzú, J. (2005); Gil, F., Alcover, M., Rico, R. & Sánchez- Manzanares, M. (2011), es la negociación, y Juan Villarzú, la explotó de una forma por demás sabia. La clave del éxito de Codelco, estriba entre otras cosas, en la decisión del presidente de Chile, Frei en dejar al frente de la empresa de cobre, a Juan Villarzú. Tras estudiar la propuesta de los sindicatos, Juan Villarzú les dijo con palabras textuales: “Miren, ustedes y yo queremos mantener esta empresa estatal. Comparto 90% de lo que ustedes plantean. Trabajemos el otro 10% y lleguemos a un acuerdo”.

METODOLOGÍA

Introducción-El presente estudio es de tipo descriptivo y se llevó a cabo en la administración pública de las municipalidades de Pococí, Siquirres y Guácimo Costa Rica. En este trabajo de investigación, se aplicó el instrumento de medición (cuestionario) del modelo liderazgo nivel 5 de Collins para identificar el nivel de liderazgo que existe en los sujetos de estudio y realizar un estudio comparativo entre las tres municipalidades.

Descripción de la muestra-La muestra estuvo compuesta por 13 sujetos de estudio que trabajan en las jefaturas de la municipalidad de Siquirres, por 20 sujetos de estudio que trabajan en las jefaturas de la municipalidad de Pococí, y por 12 sujetos de estudio que trabajan en las jefaturas de la municipalidad de Guácimo Costa Rica, como se puede observar en la Tabla 2.

Procedimiento de aplicación-Para la aplicación del instrumento de medición (cuestionario), el investigador de la Universidad de Costa Rica visitó a los sujetos de estudio en las municipalidades de Pococí, Siquirres y Guácimo Costa Rica, en primera instancia para agendar la aplicación del instrumento, y posteriormente en la fecha acordada se procedió a la explicación y aplicación del llenado del instrumento de medición obteniendo el 100% de respuesta, por parte de los sujetos de estudio, es decir 45 de 45 sujetos de estudio accedieron a participar en el estudio.

Sujetos de estudio-Jefes del departamento de las municipalidades de Pococí, Siquirres y Guácimo Costa Rica de la administración pública que posean autoridad para tomar decisiones estratégicas y cuenten con personal bajo su cargo.

Objetivo-Identificar el grado de liderazgo nivel 5 en los puestos clave de la administración pública en las municipalidades de Pococí, Siquirres y Guácimo Costa Rica.

Hipotesis

Ho: No existe un nivel de liderazgo nivel 5 significativo en la administración pública de las municipalidades de Pococí, Siquirres o Guácimo Costa Rica.

H1: Existe un nivel de liderazgo nivel 5 significativo en la administración pública de la municipalidad de Pococí Costa Rica.

H2: Existe un nivel de liderazgo nivel 5 significativo en la administración pública de la municipalidad de Siquirres Costa Rica.

H3: Existe un nivel de liderazgo nivel 5 significativo en la administración pública de la municipalidad de Guácimo Costa Rica.

Determinación de la muestra- Aspectos generales de Costa Rica- Con respecto a su ubicación geográfica Costa Rica está situada en América Central, entre los mares: Océano Pacífico y Mar del Caribe. Sus países vecinos son Nicaragua al norte y Panamá al sur. Posee una extensión territorial de 51,100 Km², una población de 4.7 millones y una fuerza laboral de 2.18 millones. Su división administrativa consta de siete provincias: San José (capital), Alajuela, Heredia, Cartago, Guanacaste, Puntarenas y Limón, que a su vez están divididos en 81 cantones.

Tabla 2: Sujetos de estudio las municipalidades de Pococí, Siquirres y Guácimo Costa Rica

	Población	Muestra
Total de sujetos de estudio la Municipalidad de Pococí, Costa Rica	45	45

En esta tabla se muestra la población y muestra obtenida de los sujetos de estudio que participaron en este estudio de investigación, y a quienes se les aplicó el instrumento de medición de Collins.

Factores que se consideraron en el cálculo de la muestra:

a) La población se considera con características homogéneas.

b) Se cuenta con una población finita, ya que el número de dependencias es conocido.

c) Fórmula empleada para el cálculo de la muestra $n = k^2 (p \cdot q \cdot N) / (e^2 \cdot (N-1)) + (k^2 \cdot p \cdot q) = 1.96^2 (0.5 \cdot 0.5 \cdot 45) / (0.05^2 \cdot (45-1)) + (1.96^2 \cdot 0.5 \cdot 0.5) = 45$

Instrumento de medición-El instrumento de medición propuesto se tomó del modelo de liderazgo nivel 5 de Collins directamente del sitio oficial de Jim Collins (ver Anexo 1). El instrumento se compone de 8 reactivos bajo una escala Likert, estableciendo los siguientes criterios: A = Siempre B = Casi siempre C = Frecuentemente D = Casi nunca E = Nunca. La validación de contenido del mismo está sustentada por el modelo de Jim Collins. Apoyado en el tratamiento estadístico que hace referencia García, B. (2005), para

conocer la confiabilidad de un instrumento de medición de tipo cuantitativo, se utiliza el análisis Alpha de Cronbach. Este es de consistencia interna y donde según la Tabla 3 nos arroja un Alpha de Cronbach de .905 para los 8 ítems.

Tabla 3: Confiabilidad del instrumento de medición liderazgo nivel 5 de Collins

Alpha de Cronbach	Ítems
.905	8

Esta tabla muestra el resultado del alfa de Cronbach obtenido a través del análisis factorial realizado con apoyo de SPSS v.17, al instrumento de medición utilizado en el presente estudio de investigación.

En la Tabla 4 se puede observar el comportamiento de los ítems con respecto a su correlación y el grado de confiabilidad con respecto al Alpha de Cronbach si se llegan a eliminar los ítems de manera individual del instrumento de medición.

Tabla 4: Confiabilidad del instrumento de medición liderazgo nivel 5 de Collins por eliminación de ítems para mejorar el Alpha de Cronbach

Ítem	Correlación del ítem corregida	Alpha de Cronbach con el ítem eliminado
LN51. Los líderes que ocupan los cargos más importantes de nuestra organización son ambiciosos, ante todo, por la causa, la organización del trabajo, no de ellos mismos y tienen una voluntad de hierro para hacer lo que se necesita para hacer realidad esa ambición.	.726	.892
LN52. Los líderes que ocupan los cargos más importantes de nuestra organización muestran una trayectoria cada es mejor, a la hora de tomar las decisiones que funcionan para la grandeza a largo plazo de la empresa y su trabajo.	.913	.871
LN53. Los líderes que ocupan los cargos más importantes de nuestra organización practican colocan en la ventana a las personas para dar crédito por el éxito. Cuando se enfrentan a las fallas, se miran al espejo y dicen: yo soy responsable.	.893	.879
LN54. Mientras que algunos miembros del equipo pueden reflejar un liderazgo carismático. Ellos inspiran a los demás principalmente a través de normas de inspiración como la excelencia, el trabajo duro, sacrificio, y la integridad.	.266	.922
LN55. Nuestra cultura valora la sustancia sobre el estilo, la integridad sobre la personalidad, y los resultados sobre las intenciones.	.507	.909
LN56. Los miembros de nuestro equipo de liderazgo, fomentan el diálogo y el debate en la búsqueda de la mejor respuesta (no por el bien de una persona inteligente o ganar un punto) hasta el punto de decisión.	.916	.874
LN57. Una vez que se toma una decisión, los miembros del equipo trabajan unificados detrás de la decisión para asegurar el éxito, incluso aquellos que estaban en desacuerdo con la decisión.	.611	.902
LN58. Cultivamos líderes que tienen los cinco niveles en la jerarquía de nivel 5: individuos altamente capaces, que contribuyen como colaboradores del equipo, ejecutivos competentes, líderes eficaces, y los ejecutivos de nivel 5.	.817	.884

En esta tabla se puede observar el comportamiento de los ítems con respecto a su correlación y el grado de confiabilidad con respecto al Alpha de Cronbach si se llegan a eliminar los ítems de manera individual del instrumento de medición.

La validación de constructo del instrumento de medición se llevó a cabo en SPSS v17 con la prueba de análisis factorial, la Tabla 5 explica el comportamiento estadístico de la variable liderazgo nivel 5 de Jim Collins.

Según Kaiser (1970), el contraste de Kaiser-Meyer-Olkin (KMO) debe ser mayor a 0.5 en los ítems evaluados, de tal manera que no hubo necesidad de eliminar ítems según lo demuestra la Tabla 5, por lo que se incluyeron los 8 ítems propuestos por Collins en el instrumento de medición, adicionalmente a estos 8 ítems se anexaron 4 ítems adicionales de tipo sociodemográfico.

RESULTADOS

Para identificar la clasificación del liderazgo nivel 5 de Jim Collins se codificó como 1=Siempre, 2=Casi Siempre, 3=Frecuentemente, 4=Casi nunca, 5=Nunca y 6=No contestó.

En esta tabla se pueden observar los resultados encontrados en esta investigación al aplicar el instrumento de medición de Collins, se puede observar el grado de liderazgo nivel 5 de Jim Collins que está presente en la municipalidad de Pococí, Costa Rica.

Contrastación de la hipótesis

Tabla 7: Contrastación de la hipótesis

Hipótesis	Resultados	Observación
H1: Existe un nivel de liderazgo nivel 5 en la administración pública de la municipalidad de Pococí, Costa Rica.	Se rechaza por ser menor a 5	Se observa que al obtener una media entre 2.85 y 3.65 en los 8 ítems no existe un valor significativo de que se justifique la presencia del liderazgo nivel 5 de Jim Collins.

En esta tabla de contrastación de hipótesis, se observa que al obtener una media entre 2.85 y 3.65 en los 8 ítems no existe un valor significativo de que se justifique la presencia del liderazgo nivel 5 de Jim Collins en la municipalidad de Pococi, Costa Rica.

Análisis e interpretación de tablas cruzadas

El análisis e interpretación de los datos estadísticos, se llevó a cabo mediante la técnica de tablas de contingencia o tablas cruzadas apoyado de SPSS v17, con la finalidad de observar los resultados encontrados y los factores que influyen en el liderazgo nivel 5 de Jim Collins en la administración pública de la municipalidad de Pococi, Costa Rica. Los resultados encontrados en esta investigación, muestran que el liderazgo nivel 5 de Jim Collins está presente en el grado 3.2, considerando una escala del 1 al 5, y en su mayoría en sujetos de estudio del género masculino, en un rango de edades de 25 a 45 años, solteros y con un nivel de escolaridad de preparatoria o menos.

Contrastación de la hipótesis

Tabla 11. Contrastación de la hipótesis

Hipótesis	Resultados	Observación
H3: Existe un nivel de liderazgo nivel 5 en la administración pública de la municipalidad de Guácimo, Costa Rica.	Se rechaza por ser menor a 5	Se observa que al obtener una media entre 3 y 4 en los 8 ítems no existe un valor significativo de 1 que justifique la presencia del liderazgo nivel 5 de Jim Collins.

En esta tabla de contrastación de hipótesis, se observa que al obtener una media entre 3.00 y 4.00 en los 8 ítems no existe un valor significativo de que se justifique la presencia del liderazgo nivel 5 de Jim Collins en la municipalidad de Guácimo, Costa Rica.

Análisis e interpretación de tablas cruzadas- El análisis e interpretación de los datos estadísticos, se llevó a cabo mediante la técnica de tablas de contingencia o tablas cruzadas apoyado de SPSS v17, con la finalidad de observar los resultados encontrados y los factores que influyen en el liderazgo nivel 5 de Jim Collins en

la administración pública de la municipalidad de Guácimo, Costa Rica. Los resultados encontrados en esta investigación y que se observan en las Tablas 16, 17, 18 y 19, muestran que el liderazgo nivel 5 de Jim Collins está presente en el grado 2, considerando una escala del 0 al 4, en un rango de edades de 25 a 45 años, solteros y con un nivel de escolaridad de preparatoria.

CONCLUSIONES

Como se pudo observar (Mendoza, R. & Ortiz, C. (2006); Ortiz, G., Amalia, R. (2006); Pedraja-Rejas, L., Rodríguez-Ponce, E., & Rodríguez-Ponce, J. (2008)) los líderes transformacionales, tienen algunas de las características del liderazgo nivel 5 de Jim Collins, y pueden ayudar en el desempeño de toda organización, llevándola de buena a excelente en el tiempo. En este sentido (Mendoza, I., Ortiz, M. & Parker, H. (2007)) algunas de las características presentes de todo líder de nivel 5 de Jim Collins, es la forma en que se identifican con las metas del equipo por encima de sus intereses personales. Collins (2005) establece que el nivel 5 de liderazgo es un descubrimiento empírico, no ideológico y que funciona en cualquier tipo de organización. Por otro lado, Aguilar, J. (2007); Gutierrez, A., & Gutierrez, J. (2008) hacen hincapié en que el servidor público se motiva, entre otras cosas, debido a el poder que pueda ejercer en la organización. El reto que presenta toda administración pública, según Pedraja, L. & Rodríguez, E. (2004), es la de elevar la competitividad, tomando como referencia la importancia del compromiso, la experiencia del líder y del grupo, y el apoyo del grupo al logro de los objetivos, lo cual se ve reflejado en el liderazgo nivel 5 de Collins.

De igual manera, otro de los retos importantes (Villarzú (2005); Ascorra, P. (2008)), es que todo líder de una organización logre convencer a sus colaboradores de la estrategia y el rumbo que la organización persigue, ya que de lo contrario ni la mejor gestión ejecutiva logrará un cambio significativo en el desempeño de su equipo de trabajo. Los hallazgos que se observan en este estudio de investigación, lograron cumplir con el objetivo planteado a partir de la hipótesis del nivel de liderazgo nivel 5 de Collins que existe en la administración pública de la municipalidad de Pococí, Costa Rica, donde se observa un grado 3.2, considerando una escala del 1 al 5 de liderazgo nivel 5 de Collins presente en los sujetos de estudio según se puede observar en la Tabla 6 y lo valida la contrastación de hipótesis que se muestra en la Tabla 7. Los resultados obtenidos reflejan la importancia de establecer un plan de acción que permita incrementar el liderazgo nivel 5 de Collins en la administración pública de la municipalidad de Pococí, Costa Rica con la finalidad de elevar la competitividad y brindar un mejor servicio a la comunidad.

Los hallazgos que se observan en este estudio de investigación, lograron cumplir con el objetivo planteado a partir de la hipótesis del nivel de liderazgo nivel 5 de Collins que existe en la administración pública de la municipalidad de Siquirres, Costa Rica, donde se observa un grado 2 en una escala de 0 a 4 de liderazgo nivel 5 de Collins presente en los sujetos de estudio según se puede observar en la Tabla 8 y lo valida la contrastación de hipótesis que se muestra en la Tabla 9. Los resultados obtenidos reflejan la importancia de establecer un plan de acción que permita incrementar el liderazgo nivel 5 de Collins en la administración pública de la municipalidad de Siquirres, Costa Rica con la finalidad de elevar la competitividad y brindar un mejor servicio a la comunidad. Los hallazgos que se observan en este estudio de investigación, lograron cumplir con el objetivo planteado a partir de la hipótesis del nivel de liderazgo nivel 5 de Collins que existe en la administración pública de la municipalidad de Guácimo, Costa Rica, donde se observa un grado 2 en una escala de 0 a 4 de liderazgo nivel 5 de Collins presente en los sujetos de estudio según se puede observar en la Tabla 10 y lo valida la contrastación de hipótesis que se muestra en la Tabla 11. Los resultados obtenidos reflejan la importancia de establecer un plan de acción que permita incrementar el liderazgo nivel 5 de Collins en la administración pública de la municipalidad de Guácimo, Costa Rica con la finalidad de elevar la competitividad y brindar un mejor servicio a la comunidad.

Finalmente se concluye en el estudio comparativo que las municipalidades de Pococí, Siquirres y Guácimo no existe evidencia significativa que demuestre la presencia de un liderazgo nivel 5 de Collins en las

jefaturas de la administración Pública de Costa Rica, por lo que existe un área de oportunidad para implementar programas que permitan desarrollar el liderazgo nivel 5 en los sujetos de estudio en beneficio de dichas municipalidades.

Se invita a investigadores e interesados en llevar a cabo estudios comparativos de otras municipalidades de Costa Rica u otros países a sumar esfuerzos para lograr realizar un diagnóstico más integral, y en donde se consideren otras variables que permitan medir el nivel de liderazgo y competitividad presentes en el sector público.

INTELIGENCIA ÉTICA Y COMPETENCIAS TECNOLÓGICAS EN LOS APRENDICES: DUALIDAD DE CAPACIDADES FORMATIVAS EN EL PROCESO DE ENSEÑANZA APRENDIZAJE

Esmerlis Camargo Torres, Universidad de la Guajira
Marieth Orcasitas Peñaloza, Servicio Nacional de Aprendizaje - SENA
Linda Tromp Villareal, Servicio Nacional de Aprendizaje - SENA

RESUMEN

La presente investigación tuvo como propósito analizar la relación entre la inteligencia ética y las competencias tecnológicas en los aprendices del Servicio Nacional de Aprendizaje - SENA para potenciar las capacidades de los aprendices en el acceso de la información y la gestión del conocimiento. El tipo de investigación es no experimental, explicativa, de campo y transeccional. La población estuvo conformada por 449 aprendices de los diferentes programas tecnológicos de la Regional Guajira en Colombia. La técnica utilizada fue la encuesta auto-administrada, para lo cual se diseñó un instrumento con preguntas en escala de Likert y procesado en el Software SPSS 22.0. Como resultado se pudo evidenciar que los aprendices poseen altas capacidades para tomar decisiones, minimizando efectos perjudiciales y utilizan responsable las herramientas de comunicación en los espacios virtuales disponibles.

ETHICAL INTELLIGENCE AND TECHNOLOGICAL COMPETENCES IN THE APPRENTICE: DUALITY OF CAPACITY TRAINING IN THE TEACHING LEARNING

ABSTRACT

The present investigation aims to analyze the relationship between ethics intelligence and technological skills in learners National Apprenticeship Service - SENA to enhance the capabilities of apprentices in access information and knowledge management. The research is not experimental, explanatory, field and trans. The population consisted of 449 trainees of different technological programs of the Regional Guajira in Colombia. The technique used was self-administered survey, for which an instrument was designed with questions Likert scale and processed in SPSS 22.0 software. As a result, it was evident that learners have high capacity to make decisions, minimizing adverse effects and responsible use communication tools in virtual spaces available.

INTRODUCCIÓN

La utilización de las TIC en la educación, implica que cualquier aprendiz debe sentirse seguro al operar un sistema, ser capaz de interactuar de forma responsable con la computadora, mediante la utilización de los programas instalados, ser un usuario inteligente de la información que se le suministra a través del Internet,

reconociendo el impacto que tiene su uso en la sociedad actual y futura. En ese sentido, formar en el Servicio Nacional de Aprendizaje - SENA para el desarrollo de competencias dentro de la concepción del Modelo Pedagógico de la Formación Profesional Integral - MPFPI implica orientar las acciones de formación hacia el desarrollo del Aprendiz como persona, más allá del desarrollo de las competencias específicas (tecnológicas, transversales) para ocuparse, además por las competencias básicas (ética, comunicaciones, cultura física) dentro de las cuales la ética, se constituye en el medio por excelencia para fortalecer valores y actitudes que le posibiliten, contribuir de manera responsable con el bien ser y el bien estar a nivel personal, social y productivo como expresión de su sentido consciente de existencia en el mundo, el cual se manifiesta de manera activa, participativa y transformadora. Como corolario se plantea en esta investigación analizar la relación entre la inteligencia ética y las competencias tecnológicas en los aprendices del Servicio Nacional de Aprendizaje - SENA, buscando la evidencia del conocimiento mediante la dinámica intelectual de los proceso de enseñanza-aprendizaje con criterios metodológicos de carácter didáctico, activo e interdisciplinario

REVISIÓN DE LITERATURA

La mundialización de los procesos formativos, tecnológicos y sociales es uno de los contextos más cambiantes y dinámicos que trae consigo la calidad informativa, considerando principios y responsabilidades en relación a la ética y la tecnología, conduciendo a la comunidad académica a un nuevo conocimiento social combinando la inteligencia ética con las competencias tecnológicas para afrontar las nuevas estrategias y estilos de aprendizaje. La reflexión anterior nos lleva a analizar diversas nociones sobre la ética, la cual según Cohen (2011) es el conjunto de conductas y normas imperantes en la sociedad y, por extensión, es la reflexión de cómo conducir nuestra vida. Es una expresión de nuestra capacidad de deliberar y decidir de acuerdo con nuestros valores muy personales, por añadidura es un compromiso asumido frente a nosotros mismos e implica ocuparnos de cómo deberíamos vivir y de que deberíamos hacer. El mismo autor teoriza además que la ética no es una actividad más, ni es una habilidad entre otras, es una práctica que nos compromete en cada instante que nos toca vivir. La ética colorea, ilumina toda nuestra vida. Como práctica reflexiva, trata de lo bueno y de lo malo, de lo correcto y de lo incorrecto, valores que se ponen en juego cada vez que discutimos temas sobre la vida y la muerte, el amor, la amistad, la violencia o el dinero.

Al respecto, Seijo & Añez (2008) expresan que la formación en ética debe ser un ingrediente imprescindible en los planes de formación de las instituciones. Además deben buscarse fórmulas educativas que hagan posible que esta disciplina se imparta en los programas académicos previos al acceso a la función pública. De igual forma, García (2014) define la ética como competencia básica que requiere un tipo de aprendizaje cooperativo y un enfoque de inteligencias múltiples, explicando que no es tanto una cuestión de contenidos, sino de capacidades y experiencias de aprendizaje. Indudablemente que los argumentos expresados por cada uno de los autores evidencian la ética como un componente con principios rectores que orientan a los individuos en la concepción de la vida, los cuales deben estar presentes en la formación durante el proceso académico desde las instituciones. Por otro lado, es pertinente abordar el tema de la inteligencia que para Martin & Boeck (2000), debe ser comprendida como la capacidad de abstracción, la lógica formal, la comprensión de complejas implicaciones y amplios conocimientos generales, que deberá incluir méritos como la creatividad, el talento para la organización el entusiasmo, la motivación, la destreza psicológica y las actividades humanísticas; cualidades emocionales y sociales que nadie discutirá que todas estas acciones requieren un comportamiento inteligente y un alto grado de competencia. Es importante destacar que la inteligencia según Gardner (cp García, 2014), no se define a priori en una pruebas, sino en función de lo que se valora en un momento histórico dado y en un contexto concreto. Por ello, puede afirmarse entonces que la inteligencia ética es en realidad un debate y propuesta educativa necesaria en el contexto de un mundo global, manifestadas en las siguientes inteligencias múltiples: lingüística, matemática, musical, espacial, intrapersonal, interpersonal, naturalista, existencial y corporal cinestésica. Dentro de ese marco, García (2014) plantea que definir la inteligencia ética implica examinar sus formatos, su capacidad de crear productos y de resolver problemas, así como cumplir o no los requisitos previos para elevarla a una

categoría de inteligencia de inteligencias. Cabe considerar por otra parte las competencias tecnológicas, la cuales según Choque (2010) representan las capacidades útiles que, lógicamente, exigen un aprendizaje necesario en relación al nuevo mundo que todos hemos de navegar: ese entorno tecnológico que constituye el espacio de nuestra vida. Todo esto lleva a considerar inevitablemente que la cuestión de las competencias tecnológicas es un asunto no sólo importante y necesario, sino complejo y delicado.

La formación de las competencias tecnológicas según Ortiz (2008), deben vincular las capacidades instrumentales del estudiante con las capacidades de pensar, estudiar, analizar, tomar decisiones, buscando la unidad entre la teoría y la práctica, en la medida en que se establece nuevas formas de relaciones sociales. Prepara al estudiante para la comprensión del ejercicio del trabajo, mediante el acceso al conocimiento científico, tecnológico, artístico, humanístico, en fin, acceso a la cultura tecnológica. En ese sentido, Monzó (2006) plantea que las competencias tecnológicas actúan bajo la concepción de tecnología orientada hacia la dimensión global e integral que comprenderá todas las etapas del trabajo productivo y todos los ámbitos del desarrollo humano. En torno a la relación de las variables de estudio, la UNESCO expresa que la ética de la ciencia y la tecnología constituyen su prioridad más importante dentro de las ciencias sociales y humanas, instituyendo habida cuenta del papel dirigente que desempeña la organización en el plano de la ética a nivel internacional, la cual tiene por objetivo tratar los problemas morales planteados por las innovaciones científicas y tecnológicas. Con los argumentos anteriores se busca relacionar en los aprendices la inteligencia ética con las competencias tecnológicas, mostrando gran compromiso en las actividades académicas aplicando un conocimiento integrador, complejo e interactivo para resolver problemas de diversas maneras.

METODOLOGÍA

Esta investigación es de tipo explicativa, no experimental, de campo y transeccional, de acuerdo a los objetivos planteados y los referentes teóricos que sustentan este estudio referido a la inteligencia ética y las competencias tecnológicas en los aprendices del Servicio Nacional de Aprendizaje “Sena”. La población está conformada por 449 aprendices de los diferentes programas de tecnologías en Contabilidad y finanzas, Gestión administrativa, Gestión de Mercados, Negociación Internacional y Gestión Logística de la sede comercial del Servicio Nacional de Aprendizaje “Sena”, Regional Guajira. Posterior a ello se estableció el tamaño de la muestra en 207 aprendices, mediante la aplicación de la siguiente formula estadística:

$$n = \frac{Z^2 * N * P * Q}{E^2 * (N - 1) + (Z^2 * P * Q)}$$

De donde:

n = muestra

N = población

E = error máximo

P = proporción

Z = Coeficiente de confianza

Q = 1-P

Nivel de confianza = 95%

Remplazando:

N = 449

E = 5%

Z = 1,96

P y Q = Probabilidad de éxito o fracaso que tienen un valor del 50% cada uno

$$n = \frac{(1,96)^2 * (449) * (0,5) * (0,5)}{(0,5)^2 * (449 - 1) + (1,96)^2 * (0,5) * (0,5)} = 207$$

$n = 207$

Este proceso investigativo se llevó a cabo a través de la operacionalización de las variables, las cuales se lograron descomponer en dimensiones y estas a su vez en indicadores, así como lo muestra la Tabla 1:

Tabla 1: Operacionalización de las Variables

Objetivos	Variables	Dimensión	Indicador	Items
Identificar los componentes básicos de la inteligencia ética que los aprendices aplican de forma integrada durante el proceso formativo	Inteligencia ética	Componentes básicos de la Inteligencia ética	Lingüística	1, 2, 3 y 4
Describir la capacidades del comportamiento ético que convergen integralmente en los aprendices durante el proceso de enseñanza-aprendizaje			Lógica-matemática	5, 6 y 7
			Musical	8 y 9
			Espacial	10, 11 y 12
	Caracterizar las competencias tecnológicas orientadas hacia la dimensión global e integral que requieren los aprendices para potenciar sus habilidades en el proceso formativo.	Capacidades del comportamiento ético	Intrapersonal	13, 14 y 15
Interpersonal			16 y 17	
Naturalista			18, 19, 20	
Existencial			21 y 22	
Determinar las implicaciones éticas en el uso y aplicación de las tecnologías de información y comunicación adoptadas en el proceso de proceso de enseñanza-aprendizaje	Competencias tecnológicas	Competencias tecnológicas orientadas hacia la dimensión global e integral	Corporal-cinestésica	23 y 24
			Capacidades instrumentales	25, 26, 27 28 y 29
			Internet	30, 31, 32 y 33
			Redes sociales	34, 35, 36 y 37
Establecer la relación entre la inteligencia ética y las competencias tecnológicas en los aprendices del servicio nacional de aprendizaje - SENA Regional Guajira		Implicaciones éticas en el uso y aplicación de las TIC	Espacios virtuales	38, 39, 40, 41, 42
			Normas éticas	43 y 44
			Uso ético y legal	45, 46, 47 y 48
			Propiedad intelectual	49 y 50
La relación se logra a través del cálculo del coeficiente de correlación y su respectivo análisis				

Fuente: Elaboración propia (2015)

El proceso se llevó a cabo mediante la técnica de encuestas aplicadas desarrollada sobre la base de un instrumento diseñado con 50 preguntas en escala de Likert dividiendo cada pregunta en cinco posibles respuestas a las cuales, conforme a lo indicado por los autores (Hernández et al., 2006), se les asignó una calificación del 1 al 5 para una mejor tabulación de las respuestas de la población seleccionada. Para determinar la validez del instrumento se recurrió a cinco (5) expertos en la temática estudiada, quienes evaluaron cada pregunta con relación a los objetivos, variables, dimensiones e indicadores; los juicios emitidos por estos expertos permitieron su diseño final y su aplicación midió su efectividad observando que eran apropiados para el desarrollo de la presente investigación. La confiabilidad del instrumento se calculó con el denominado coeficiente Alfa de Cronbach, indicando un 0,95 equivalente a un 95%, lo que significó que el instrumento fue lo suficientemente confiable para su aplicación definitiva. La información obtenida fue procesada mediante la aplicación del Software SPSS 22.0, el cual permitió cruzar los datos de los indicadores con sus respectivos ítems, luego con las dimensiones de una manera rápida y precisa, arrojando los promedios, desviación estándar, media, y mediana representadas en tablas estadísticas que describen los porcentajes de las respuestas dadas, estableciéndose el siguiente baremo:

Tabla 2: Baremo

Categoría de Análisis Para la Interpretación de la Media		
Categoría	INTERVALO	INTERPRETACIÓN
Muy alto	$4,21 < \bar{x} \leq 5,00$	Ubica la actividad analizada dentro de una frecuencia muy alta.
Alto	$3,41 < \bar{x} \leq 4,20$	Ubica la actividad analizada dentro de una frecuencia alta.
Moderado	$2,61 < \bar{x} \leq 3,40$	Ubica la actividad analizada dentro de una frecuencia media.
Bajo	$1,81 < \bar{x} \leq 2,60$	Ubica la actividad analizada dentro de una baja frecuencia
Muy bajo	$1,00 \leq \bar{x} \leq 1,80$	Indica que la actividad analizada no se está ejecutando
Categoría de Análisis Para la Interpretación de la Desviación Estándar		
Categoría	INTERVALO	INTERPRETACIÓN
Muy alta dispersión	$2,00 < DE \leq 2,50$	Ubica la actividad analizada dentro de una muy alta dispersión.
Alta dispersión	$1,50 < DE \leq 2,00$	Ubica la actividad analizada dentro de una alta dispersión.
Moderada dispersión	$1,00 < DE \leq 1,50$	Ubica la actividad analizada dentro de una moderada dispersión.
Baja dispersión	$0,50 < DE \leq 1,00$	Ubica la actividad analizada dentro de una baja dispersión
Muy baja dispersión	$0,00 \leq DE \leq 0,50$	Indica que la actividad analizada posee una muy baja dispersión

RESULTADOS

En este segmento se presentan las respuestas de la población objeto de estudio, a través de la media, mediana y desviación estándar al analizar las dimensiones componentes básicos de la inteligencia ética, capacidades del comportamiento ético, competencias tecnológicas orientadas hacia la dimensión global e integral e implicaciones éticas en el uso y aplicación de las TIC, como lo muestra la Tabla 3.

Tabla 3: Dimensiones de la Inteligencia Ética y las Competencias Tecnológicas

Dimensiones	Media	Desviación Estándar	Mediana	Moda
Componentes básicos de la inteligencia ética	4.15	0.73	4.00	4.00
Capacidades del comportamiento ético	4.37	0.64	4.00	4.00
Competencias tecnológicas orientadas hacia la dimensión global e integral	4.14	0.87	4.00	4.00
Implicaciones éticas en el uso y aplicación de las TIC	4.02	0.85	4.00	4.00

Fuente: Elaboración propia (2015)

Componentes Básicos de la Inteligencia Ética: Aprendizaje Cooperativo Con Enfoque Hacia Las Inteligencias Múltiples

Con respecto a la dimensión Componentes básicos de la Inteligencia ética, según se visualiza en la Tabla 3, la media es de 4.15 que de acuerdo al baremo la ubica en un nivel alto, la desviación estándar es de 0.73, señalando una baja dispersión de las respuestas. Aunado a ello, se muestra la mediana y la moda en 4.00 señalando que la alternativa de acuerdo fue la respuesta que más se repitió, lo cual significa que los aprendices son capaces de medir el impacto de sus decisiones, tratando de minimizar los posibles efectos perjudiciales, expresan sus valores y principios de forma coherente y buscan espacios para poder desarrollar con mayor facilidad la solidaridad y el servicio a los demás, ratificando con ello lo expresado por Gardner (cp García, 2014).

Capacidades del Comportamiento Ético: Vínculos Esenciales Para la Vida y el Trabajo

Los resultados muestran una media de 4.15 ubicándose en una categoría alta. La desviación estándar es de 0.64, indicando una baja dispersión de las respuestas. Por otro lado, se muestra la mediana y la moda en 4.00 señalando que la alternativa de acuerdo fue la respuesta que más redundó, demostrando con ello, que los aprendices se relacionan con los demás respetando sus ideas y valores sin importar los tuyos, pero sin dejarte influenciar por los demás, facilitando un entorno más natural, ecológico, cuidando la naturaleza y toda forma de vida con responsabilidad. Por otro lado, las respuestas mostraron que son capaces de

establecer vínculos de compromiso mediante la responsabilidad, considerando las tareas como algo esencial en su trabajo y su vida, concepción manifestada por Cohen (2011).

Competencias Tecnológicas Orientadas Hacia la Dimensión Global E Integral

En la Tabla 3, la dimensión Competencias tecnológicas orientadas hacia la dimensión global e integral muestra una media de 4.14 que de acuerdo al baremo se encuentra en el nivel alto, lo que demuestra que son suficientes los conocimientos que poseen los aprendices acerca de los sistemas informáticos. Se observa además que la desviación estándar es de 0.64, señalando una baja dispersión de las respuestas; la mediana y la moda en 4.00 señalando que la alternativa de acuerdo fue la respuesta que más se marcó, lo cual significa que los aprendices acceden fácilmente a materiales educativos disponibles en la red, utilizan el correo electrónico como herramientas de comunicación, las redes sociales como apoyo en sus actividades académicas y espacios virtuales para compartir trabajos con sus compañeros permitiendo con ello enriquecer formación, aspecto que coincide con lo planteado por Monzó (2006).

Implicaciones Éticas En el Uso y Aplicación de las TIC

En cuanto a la dimensión Implicaciones éticas en el uso y aplicación de las TIC, la tabla 3 presenta una media de 4.02, ubicada en una categoría alta, una baja dispersión de las respuestas según la apreciación de los encuestados con una desviación estándar de 0.85, resultados que demuestran que los aprendices son capaces de controlar el tiempo que le dedican al entretenimiento previendo su poder de adicción, conocen las normas éticas en el uso de las TIC, utilizan responsablemente el Internet, respetando la información consultada y los derechos de autor. Deducciones muy acordes con los postulados de Choque (2010), quien establece que las competencias tecnológicas es un asunto no sólo importante y necesario, sino complejo y delicado

Establecimiento de la Relación Entre la Inteligencia Ética y las Competencias Tecnológicas

Los datos que resultan de la aplicación de los instrumentos, son interpretados en función de su relación con los objetivos específicos establecidos y el marco teórico que fundamenta el desarrollo de esta investigación; es por ello que se valora la asociación de inteligencia ética y las competencias tecnológicas para potenciar las capacidades de los aprendices en el acceso de la información y la gestión del conocimiento. Una vez analizados los resultados de esta investigación, se procedió a calcular mediante la estadística descriptiva, la media aritmética de las dimensiones y las variables en estudio, arrojando la siguiente información como lo muestra la Tabla 4.

En relación con la media aritmética de la variable Inteligencia ética se puede observar que existe un 4,26 ubicándola en un nivel muy alto, fundamentado este análisis en lo expuesto por Martin & Boeck (2000), quienes afirman que la motivación, la destreza psicológica y las actividades humanísticas, son cualidades emocionales y sociales que requieren un comportamiento inteligente y un alto grado de competencia. Por otro lado, la variable Competencias Investigativas arroja una media de 4.10 Lo cual representa un alto nivel tales, resultados concuerdan con Ortiz (2008), quien infiere que debe prepararse al estudiante para la perspicacia en el uso de la información, mediante el acceso al conocimiento científico, tecnológico, artístico, humanístico, en fin, acceso a la cultura tecnológica. Los anteriores argumentos expresados reflejan que la aplicación sistemática de la inteligencia ética y las competencias tecnológicas en las instituciones de educación superior crean un alto nivel en el uso responsable de las TIC, ingrediente imprescindible en el desarrollo de los programas de formación que se ofrecen.

Tabla 4: Relación Entre la Inteligencia Ética y las Competencias Tecnológicas

variables	inteligencia ética		competencias investigativas	
Dimensiones	Componentes básicos Inteligencia ética	Capacidades del comportamiento ético	Competencias tecnológicas orientadas hacia la dimensión global e integral	Implicaciones éticas en el uso y aplicación de las TIC
X Dimensión	4,15	4,37	4,14	4,02
X Variable	4,26		4,10	

Fuente: Elaboración propia (2015)

CONCLUSIONES

Puede concluirse en esta investigación que las competencias tecnológicas en los aprendices son fundamentales dentro de su proceso de enseñanza aprendizaje, sobre todo si su utilización es a través de la inteligencia ética, referentes que facilitarían el acceso a la información y el frecuente manejo de las TIC de forma responsable. Por otro lado, se evidenció, que en su mayoría los aprendices poseen altas capacidades para tomar decisiones, minimizando efectos perjudiciales, buscando espacios para poder desarrollar con mayor facilidad la solidaridad y el servicio a los demás. Finalmente, sobre las competencias tecnológicas se demostró que los aprendices acceden fácilmente a materiales educativos disponibles en los espacios virtuales, dándole eso responsable a las herramientas de comunicación y las redes sociales como apoyo en sus actividades de enseñanza-aprendizaje, permitiendo con ello establecer códigos de ética para la práctica tecnológica y el manejo de la información.

LAS JURISPRUDENCIAS QUE HAN MODIFICADO EL SISTEMA TRIBUTARIO

Oscar Bernardo Reyes Real, Universidad de Colima y Universidad de Guadalajara

Rigoberto Reyes Altamirano, Universidad de Guadalajara

Ariel Gutiérrez Ortiz, Universidad de Colima

Cesar Corona Pacheco, Universidad de Guadalajara

RESUMEN

El propósito de esta investigación es identificar las jurisprudencias emitidas por la Suprema Corte de Justicia de la Nación (SCJN) que por su trascendencia hayan tenido un impacto en el sistema tributario mexicano al extremo de modificarlo, los tópicos de relevancia vinculados con la jurisprudencia e identificar de las fuentes documentales o electrónicas. La exploración de la información se efectuó a través de una investigación documental mediante el la metodología exploratoria y descriptiva con un enfoque jurídico documental, obteniendo los siguientes resultados: en función del análisis de la información doctrinal contenida en libros, artículos en revistas y la reflexión ejercida sobre ello se llegó a la conclusión de que las jurisprudencias que han trascendido a tal grado de modificar el sistema tributario mexicano, son aquellas que se han pronunciado respecto de los principios constitucionales en materia fiscal.

PALABRAS CLAVE: Jurisprudencia, Sistema Tributario, Principios Constitucionales, Investigación Jurídica, Investigación Documental

ABSTRACT

The purpose of this research is to identify the jurisprudence issued by the Supreme Court of Justice (SCJ) have had an impact on the Mexican tax system to the extent of modifying its importance, the topics of relevance related to the case and identify of documentary or electronic sources. The exploration of information was made through documentary research by exploratory and descriptive methodology with a documentary legal approach, with the following results: based on the analysis of doctrinal information contained in books, magazine articles and reflection exerted about it was concluded that the case law that have transcended to the point of modifying the Mexican tax system are those that have ruled on the constitutional principles of taxation.

KEYWORDS: Law, Taxation, Constitutional Principles, Legal Research, Document Research

INTRODUCCIÓN

El objeto principal de la indagatoria fue identificar las jurisprudencias más importantes en virtud de tener un impacto el sistema tributario nacional, lo difícil no es identificar las jurisprudencias, el reto mayor de este documento se presentó en función de la determinación del criterio a seguir para poder del universos de documentos contenidos en el semanario judicial de la federación seleccionar las tesis que tuvieran el impacto de modificar el sistema de contribuciones que rige a México, luego entonces, precisamente derivado de esa situación se genera la novedad del documento, siguiendo como criterio para la elección el atinente a las tesis que versaran sobre los principios constitucionales en materia fiscal.

REVISIÓN LITERARIA

El tópico principal de esta investigación son las jurisprudencias que han trascendido de tal manera que han modificado el sistema tributario mexicano, en esa tesitura, es importante iniciar identificando teóricamente

estos dos conceptos: sistema tributario mexicano y jurisprudencia. El sistema tributario mexicano se encuentra integrado a partir de las relaciones que existen entre el gobierno federal y los agentes económicos derivado del acuerdo respecto de las cargas tributarias y el tipo de contribuciones que impondrán a fin de cubrir las finanzas públicas del estado, de forma particular los entes que toman un papel esencial en este acuerdo son el poder legislativo, el presidente de la república, las empresas, los particulares y las agrupaciones y/o asociaciones que representen los intereses de un sector en lo particular, llámeseles sindicatos en representación de los trabajadores o cámaras empresariales que son las porta voces de las empresas que representan alguna rama de la producción nacional e inclusive los partidos políticos nacionales juegan un papel de suma importancia en esa situación.

En ese contexto se puede afirmar que el sistema tributario es el conjunto de contribuciones vigentes en un determinado lugar y época, establecido por el estado con el objeto de regular las fuentes o ingresos públicos, y los gastos de igual naturaleza. Asimismo, sirve como plataforma para establecer los límites a la potestad tributaria que el poder público-fiscal debe tener (Venegas Álvarez, 2010, p. 303). Habiendo definido teóricamente que se entiende por sistema tributario mexicano, se procede abordar lo atinente a la jurisprudencia. En relación al tema de la jurisprudencia, resulta imperioso abordar otro tópico que va de la mano, sin el cual no podría concebirse el de la jurisprudencia, nos referimos a la interpretación y en especial en materia tributaria.

Antes que nada es necesario desentrañar el sentido de la palabra, interpretación, concepto que tiene su raíz del latín *interpretatio*, que a su vez emana del verbo “interpretar” que significa “servir de intermediario, venir en ayuda de”; además, el verbo “interpretar” deriva de *interpre*, que significa “agente”, “intermediario”; agrega que *interpre* designa también al traductor, o sea, a un intermediario singular que aclara, explica o hace accesible, en un lenguaje inteligible, lo que no se entiende; en dicho contexto, *interpretatio* se aplica a lo que hace aquel que “lee” o entiende otras cosas, por ejemplo, los sueños, los augurios u otras lenguas (Covarrubias Rivera, 2011, p. 45). De lo anterior se desprende que interpretar es interceder, salir a la ayuda, ser intermediario en algún asunto, bajar a términos cristiano aquello que parece ser complejo, traducir algo al lenguaje del común de los individuos. En términos jurídicos, el análisis de la ley es una forma particular de interpretación o mejor dicho, uno de los múltiples problemas interpretativos, pues no solo puede interpretarse la ley, sino en general, toda expresión que encierre un sentido; es decir, el problema no es exclusivamente jurídico.

La legislación, como acto expresivo, debe imputarse a la voluntad de los legisladores o lo que es igual: es Derecho lo que estos quieren; sin embargo, no se advierte ni se considera que lo querido por el legislador no coincide en todo caso con lo expresado en la ley, pues lo que aquel pretende es expresar algo que en su concepto debe ser Derecho, más para expresarlo tiene que valerse de un conjunto de signos que otras personas habrán de interpretar y cuya significación no depende, sino en muy pequeña escala, del mismo congresista (Covarrubias Rivera, 2011, p. 48). La interpretación en materia tributaria se inicia con la aparición de las diversas disposiciones fiscales a principios y mediados del siglo XX; en el CFF se prevén las reglas que en materia de interpretación deben seguir los contribuyentes y las autoridades fiscales; no obstante eso, y como se demostrara en otras líneas el contenido de dicho artículo ha sido objeto de diversas controversias relacionadas con la materia de la interpretación fiscal.

Como se ha mencionado lo que da origen a la jurisprudencia es la interpretación de la ley, pudiendo pensarse que esta tarea está limitada únicamente a los tribunales con la competencia y facultades para efectuarlas, lo que tradicionalmente ha traído como afirmación que la interpretación es una función jurisdiccional, no obstante tal afirmación no es del todo correcta, pues todos los involucrados en la ley: Poder Ejecutivo, Legislativo y Judicial e incluso los litigantes la interpretan, tal como se advirtió en algunas jurisprudencias, aun cuando tiene mayor fuerza o está más legitimada que otras, la interpretación judicial. La interpretación según su autor puede derivarse de cuatro diferentes fuentes de creación: auténtica o legislativa, doctrinal, administrativa y jurisprudencial (Nava Rodríguez & Saiz Zorrilla, 2010, p. 171). La doctrina y la misma

corte se han pronunciado a favor de considerar a la teoría del orden jurídico positivo como fuente formal del derecho, la mayor parte de la doctrina considera como fuentes formales del derecho a la ley, la jurisprudencia y la costumbre, derivado del proceso de creación de normas jurídicas. La ley como un acto del Poder Legislativo con la sanción y promulgación del Poder Ejecutivo, la jurisprudencia al establecer criterios de los tribunales del Poder Judicial o de tribunales administrativos, y la costumbre, por el uso reiterativo de determinados hábitos de la comunidad. En el sistema jurídico mexicano, tanto la ley como la jurisprudencia son de carácter obligatorio, aunque en ésta última son más limitados los órganos obligados, siempre y cuando sean aprobadas con la votación mínima expresada en la ley, máxime que las tesis son difundidas a través de los órganos informativos correspondientes, afín de que los gobernados tengan oportunidad de conocer el contenido de tales disposiciones (Nava Rodríguez & Saiz Zorrilla, 2010, p. 185).

Ante las lagunas de la ley, los jueces se convierten en legisladores que tratan de cubrir esos huecos que se han identificado en la legislación aplicando el criterio que se ha formado en virtud de su instrucción en la ciencia del derecho y el conocimiento amplio de los principios y las doctrinas de la ciencia jurídica, convirtiéndose en verdaderos hermeneutas jurídicos. Para Covarrubias Rivera (2011) “la hermenéutica se aplica al intérprete, explicador y traductor de la ley y por lo tanto es relativo a la interpretación, primariamente, de los textos sagrado” (p.132). Es importante señalar que existen diferentes tipos de jurisprudencias y atendiendo a razones teleológicas, existen seis supuestos básicos y una excepción en los que la génesis Jurisprudencial se encuentra legitimada dentro del sistema jurídico mexicano.

Jurisprudencia De Interpretación: Aquella donde el juez pretende interpretar el significado del texto legal dilucidar o explicar el sentido de la norma, cualquiera que sea el método que elija para efectuarlo, siempre y cuando se sujete a lo que dictan los principios del derecho, la doctrina y su formación jurídica

Jurisprudencia de precisión: Esta se genera cuando el juzgado ya ha interpretado la voluntad del legislador, pero no le fue posible interpretar materialmente su letra. Por ello, establece prudentemente, por su cuenta, el alcance normativo de la expresión en comento, precisándola, limitándola, mas no simplemente interpretándola.

Jurisprudencia de integración: Esta se da cuando el juzgador realiza actividad de integración legal ante lo no previsto por el legislador, es decir ante las lagunas de la ley.

Jurisprudencia de interrelación: Cuando en presencia de obscuridad en las hipótesis planteadas en la ley, el juez más que interpretar se da a la tarea de armonizar o conciliar los supuestos normativos que hay en una misma ley, o con frecuencia, entre leyes diferentes.

Jurisprudencia constitucional: Llamamos jurisprudencia constitucional a aquella que tiene como objeto directo de su estudio un precepto constitucional. Esta clase de jurisprudencia emana directa y exclusivamente del Poder Judicial federal, y específicamente de la Suprema Corte de Justicia de la Nación, en virtud de sus facultades para interpretar la Constitución Política de los Estados Unidos Mexicanos.

Jurisprudencia de constitucionalidad: La jurisprudencia de constitucionalidad no tiene como objeto directo versar sobre la Constitución, sino sobre las leyes ordinarias, declarando, eso sí, si dichas leyes se mantienen dentro de los límites normativos que aquélla establece. Siendo así, su función no es la de definir el texto del código fundamental, sino tutelarlos. Su fundamento nace del ámbito de competencia previsto para la SCJN que se encuentra contemplado en los artículos 103 y 105 de la CPEUM; y por otra parte, también de las facultades de la Suprema Corte para sentar jurisprudencia dentro de sus respectivas esferas competenciales de acuerdo con el artículo 94, párrafo séptimo, de la propia Constitución.

Jurisprudencia de excepción por unificación (por contradicción de tesis): Esta forma jurisprudencial surge de la resolución que dirime un conflicto de tesis contradictorias sustentadas entre dos o más tribunales colegiados de circuito o bien entre las salas de la Suprema Corte de Justicia de la Nación.

Se dice que hay contradicción de tesis cuando dos o más tribunales de la naturaleza antes señalada, sustentan criterios totales o parcialmente opuestos o divergentes sobre un mismo planteamiento jurídico. Por ejemplo, cuando dos o más tribunales colegiados, interpretando un mismo artículo de determinada ley, le dan sin embargo interpretaciones o alcances distintos o aun opuestos (Lobo, 2002, pp. 168-172). La conocida ciencia del derecho o mejor definida como el conjunto de principios y doctrinas contenidas en las decisiones de los tribunales o jurisprudencia significa prudencia de lo justo y de acuerdo con el derecho romano “el conocimiento de las cosas divinas y humanas y la ciencia de lo justo y lo injusto”. Es una forma de interpretación de las leyes, la cual en materia fiscal se origina con tres resoluciones ejecutorias ininterrumpidas por parte de los tribunales, es decir: cuando se emite un fallo a favor de un contribuyente, éste es de carácter particular, pero si se dan tres fallos continuos a favor de otros contribuyentes en casos iguales, entonces se crea jurisprudencia, con lo cual se crean beneficios para todos los contribuyentes con la misma situación (Sánchez Miranda, 2013, p. 78). Por tanto y en función de todo lo expuesto en este apartado, se puede concluir que las jurisprudencias que por su trascendencia, objeto de interpretación y son las que pueden modificar sustancialmente al sistema tributario mexicano, son las jurisprudencias de constitucionalidad.

METODOLOGIA

El objetivo principal de esta investigación es identificar las jurisprudencias emitidas por la SCJN que por su trascendencia hayan tenido un impacto en el sistema tributario mexicano al extremo de modificarlo. Resulta interesante en virtud de lo anterior dar respuesta a una pregunta de investigación: ¿Cuáles han sido las jurisprudencias más importantes emitidas por la SCJN que han modificado el sistema tributario mexicano? Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: Definir conceptualmente que es el sistema tributario mexicano, conocer los tópicos más relevantes vinculados con la jurisprudencia, identificar de las fuentes documentales o electrónicas y las tesis jurisprudenciales que hayan modificado el sistema de tributario de México. El cumplimiento de los objetivos planteados, así como la resolución a la pregunta elaborada para la investigación, conducen una hipótesis general. El sistema tributario mexicano ha sido modificado en función de la emisión de tesis de jurisprudencia de la SCJN de la Nación. La investigación empleada es una metodología exploratoria y descriptiva con un enfoque jurídico documental, que al estar direccionada sobre un tópico jurídico, adopta esa índole, en ese sentido la investigación jurídica se define como “el conjunto de actividades tendientes a la identificación, individualización, clasificación y registro de las fuentes de conocimiento de lo jurídico en sus aspectos sistemático, genético y filosófico” (Lara Sáenz, 2003, p. 33) Al ser documental la investigación jurídica tendrá como fuentes principales de información se encontrarán en libros, publicaciones periódicas, legislación, jurisprudencia, documentos extraídos de internet, etc. Por lo que para comprobar la hipótesis, el estudio se basará en el análisis de las fuentes de donde se obtenga la información y la reflexión de los mismos que darán como resultado las conclusiones finales, lo que generara nuevos conocimientos, transformaran los ya existentes e ira perfeccionándolos; consecuentemente se generara mayor desarrollo social y el mejoramiento de la calidad de vida de los miembros de dicha sociedad. Por lo que para cumplir con sus objetivos, el proceso investigativo deberá de ser ordenado, sistematizado, empleando los métodos y técnicas que la ciencia considere válidos para comprobar el conocimiento adquirido (Chávez Hernández, 2007).

RESULTADOS

Después de haber realizado la investigación correspondiente, gestionado y clasificado los documentos mediante el empleo del software de gestión denominado zotero, realizado el análisis y la reflexión de la

información resultado de la indagatoria, finalmente se obtuvieron los siguientes resultados: Las jurisprudencias que a juicio que se han considerado como importantes debido a su impacto en la modificación del sistema tributario mexicano, son las jurisprudencias de constitucionalidad, por tanto se han seleccionado solo algunas de las que se han tomado en consideración para tal efecto y que se señalan a continuación: En relación al principio de legalidad en los impuestos tenemos la jurisprudencia de número de registro 232797, de la séptima época, emitida por el pleno de la SCJN que señala:

“Impuestos, Principio de Legalidad Que En Materia de, Consagra la Constitucion Federal

El principio de legalidad se encuentra claramente establecido por el artículo 31 constitucional, al expresar, en su fracción IV, que los mexicanos deben contribuir para los gastos públicos de la manera proporcional y equitativa que dispongan las leyes y está, además, minuciosamente reglamentado en su aspecto formal, por diversos preceptos que se refieren a la expedición de la Ley General de Ingresos, en la que se determinan los impuestos que se causarán y recaudarán durante el período que la misma abarca. Por otra parte, examinando atentamente este principio de legalidad, a la luz del sistema general que informa nuestras disposiciones constitucionales en materia impositiva y de explicación racional e histórica, se encuentra que la necesidad de que la carga tributaria de los gobernados esté establecida en una ley, no significa tan solo que el acto creador del impuesto deba emanar de aquel poder que, conforme a la Constitución del Estado, está encargado de la función legislativa, ya que así se satisface la exigencia de que sean los propios gobernados, a través de sus representantes, los que determinen las cargas fiscales que deben soportar, sino fundamentalmente que los caracteres esenciales del impuesto y la forma, contenido y alcance de la obligación tributaria, estén consignados de manera expresa en la ley, de tal modo que no quede margen para la arbitrariedad de las autoridades exactoras ni para el cobro de impuestos imprevisibles o a título particular, sino que el sujeto pasivo de la relación tributaria pueda, en todo momento, conocer la forma cierta de contribuir para los gastos públicos del Estado, y a la autoridad no queda otra cosa sino aplicar las disposiciones generales de observancia obligatoria, dictadas con anterioridad al caso concreto de cada causante.

Esto, por lo demás, es consecuencia del principio general de legalidad, conforme al cual ningún órgano del Estado puede realizar actos individuales que no estén previstos y autorizados por disposición general anterior, y está reconocido por el artículo 14 de nuestra Ley Fundamental. Lo contrario, es decir, la arbitrariedad en la imposición, la imprevisibilidad en las cargas tributarias y los impuestos que no tengan un claro apoyo legal, deben considerarse absolutamente proscritos en el régimen constitucional mexicano, sea cual fuere el pretexto con que pretenda justificárseles...” Lo establecido en la tesis jurisprudencial que antecede es trascendental para sistema impositivo de México, en virtud de que en ella se deja de forma clara la manera en que se debe de entender el principio de legalidad, es decir el principio de legalidad que se desprende de la fracción IV del numeral 31 de la CPEUM, no mandata solo que la exigencia del cobro de un tributo se encuentre contemplada en una disposición jurídica, si no que la disposición jurídica donde se establezca la carga tributaria sea lo más clara posible en función de señalar de manera precisa los elementos del tributo, es decir el hecho imponible, el sujeto pasivo de la relación fiscal, la base gravable, la tasa y tarifa, lo anterior a fin de evitar excesos por parte de las autoridades derivado del ejercicio de la potestad tributaria y desvanecer cualquier resquicio de obscuridad que pudiese generar en el cobro de los tributos, situación que vino a establecer la forma adecuada a la observancia del principio de legalidad tributaria en todo el sistema impositivo, no solo a nivel federal sino también en los estados y sus municipios y el régimen especial del Distrito Federal.

En relación a lo expresado con anterioridad, es de suma importancia la siguiente tesis de jurisprudencia de numero: P./J. 106/2006, de la novena época, emitida por el pleno de la SCJN en relación al principio en comento que a la letra establece:

“Legalidad Tributaria. Alcance de Dicho Principio En Relación Con el Grado de Definición Que Deben Tener los Elementos Constitutivos del Impuesto

El principio de legalidad tributaria contenido en el artículo 31, fracción IV, de la Constitución Política de los Estados Unidos Mexicanos, exige que sea el legislador, y no las autoridades administrativas, quien establezca los elementos constitutivos de las contribuciones, con un grado de claridad y concreción razonable, a fin de que los gobernados tengan certeza sobre la forma en que deben atender sus obligaciones tributarias, máxime que su cumplimiento defectuoso tiende a generar actos de molestia y, en su caso, a la emisión de sanciones que afectan su esfera jurídica. Por ende, la jurisprudencia de la Suprema Corte de Justicia de la Nación, tratándose de la definición de alguno de los componentes del tributo, ha declarado violatorios del principio de legalidad tributaria aquellos conceptos confusos o indeterminables para definir los elementos de los impuestos; de ahí que el legislador no pueda prever fórmulas que representen, prácticamente, la indefinición absoluta de un concepto relevante para el cálculo del tributo, ya que con ellos se dejaría abierta la posibilidad de que sean las autoridades administrativas las que generen la configuración de los tributos y que se produzca el deber de pagar impuestos imprevisibles, o bien que se origine el cobro de impuestos a título particular o que el contribuyente promedio no tenga la certeza de la forma en que debe contribuir al gasto público...”

Se desprende de la anterior interpretación jurisprudencial, que la definición de los elementos del tributo contenidos en la legislación aplicable debe ser precisa a fin de generar certeza al contribuyente, evitar la recaudación imprevisible y no dejar en imposibilidad para cumplir a los contribuyentes por el desconocimiento de la carga y la falta de la capacidad contributiva de los obligados, siendo la pieza fundamental de esta determinación el legislador, evitando con ellos la intervención de las autoridades administrativas y los actos violatorios al principio de legalidad tributaria. Dos de los principios constitucionales fundamentales son el de proporcionalidad y el de equidad fiscal y cuyos extremos han sido debidamente definidos por la SCJN en la tesis de número P./J. 2/2009, de la novena época, la cual textualmente dispone que:

“Proporcionalidad Tributaria. Para Determinar Si una Contribución Cumple Con Ese Principio, Es Necesario Atender a Su Naturaleza Para Establecer las Formas Como se Manifiesta la Capacidad Contributiva

La capacidad contributiva no se manifiesta de la misma manera en todas las contribuciones, pues aparece en forma directa e inmediata en los impuestos directos, como los que recaen en la renta o el patrimonio, porque son soportados por personas que perciben, son propietarias o poseedoras de ellos, mientras que en los indirectos la capacidad tiene un carácter mediato como la circulación de bienes, la erogación, el gasto y el consumo, ya que parten de la previa existencia de una renta o patrimonio, y gravan el uso final de toda la riqueza a través de su destino, gasto o tipo de erogación que refleja indirectamente dicha capacidad. Luego, para determinar si una contribución cumple con el principio de proporcionalidad tributaria contenido en el artículo 31, fracción IV, de la Constitución Política de los Estados Unidos Mexicanos, es necesario atender a la naturaleza de dicho tributo a fin de conocer la forma como se manifiesta y modifica la capacidad contributiva...” En el texto jurisprudencial atinente a la proporcionalidad tributaria, la Corte deja en claro que dicho elemento no es uniforme en todos los tributos, lo anterior atendiendo a la capacidad contributiva y el modo en que se manifiesta en las contribuciones, por lo que para determinar si en las contribuciones se respeta la proporcionalidad en su cobro se debe fundamentalmente observar lo relacionado con la naturaleza de la contribución, es decir si se trata de un impuesto directo como el ISR o el predial o si se trata de contribuciones indirectas como el IVA o el IEPS.

Sobre el tópico de la equidad se hace referencia a la siguiente interpretación de la Corte identificada con el número 2a./J. 31/2007, de la novena época, emitida por la segunda sala de la SCJN, en donde se determina que:

“Equidad Tributaria. Criterios Para Determinar Si el Legislador Respeta Dicho Principio Constitucional

Los criterios generales para determinar si el legislador respeta el principio de equidad tributaria previsto en el artículo 31, fracción IV, de la Constitución Política de los Estados Unidos Mexicanos, consisten en que: 1) exista una diferencia de trato entre individuos o grupos que se encuentren en una situación comparable (no necesariamente idéntica, sino solamente análoga); 2) de existir esa situación comparable, la precisión legislativa obedezca a una finalidad legítima (objetiva y constitucionalmente válida); 3) de reunirse ambos requisitos, la distinción constituya un medio apto y adecuado para conducir al fin u objetivo que el legislador quiere alcanzar, es decir, que exista una relación de instrumentalidad entre la medida clasificatoria y el fin pretendido; y, 4) de actualizarse esas tres condiciones, se requiere, además, que la configuración legal de la norma no dé lugar a una afectación desproporcionada o desmedida de los bienes y derechos constitucionalmente protegidos. Por ende, el examen de constitucionalidad de una ley bajo el principio de equidad tributaria precisa de la valoración de determinadas condiciones, de manera escalonada, generando que el incumplimiento de cualquiera de éstas sea suficiente para estimar que existe una violación al indicado principio constitucional, haciendo innecesario el estudio de las demás...”

La SCJN en la anterior jurisprudencia, manifiesta claramente la forma en que se debe de atender a la equidad tributaria, situación que se puede expresar con la siguiente oración “Igual con los iguales y desigual con los desiguales”, sin embargo para ello se debe de atender a un análisis sistemático de las circunstancias que toman en consideración diferencias en el cobro del tributo, la justificación, el destino del tributo y que el cobro no genere una afectación desproporcional o desmedida de bienes o derechos constitucionalmente protegidos, cualquier inobservancia a lo anterior se considera una violación al principio de equidad fiscal. Otros de los principios constitucionales abordados y que han originado interpretación judicial, es el del destino de las contribuciones, siendo lo anterior el motivo de análisis de la siguiente publicación del semanario judicial de la federación y su gaceta identificada con el numero P./J. 15/2009, que estatuye:

“Gasto Público. el Principio de Justicia Fiscal Relativo Garantiza Que la Recaudación No Se Destine a Satisfacer Necesidades Privadas O Individuales

El principio de justicia fiscal de que los tributos que se paguen se destinarán a cubrir el gasto público conlleva que el Estado al recaudarlos los aplique para cubrir las necesidades colectivas, sociales o públicas a través de gastos específicos o generales, según la teleología económica del artículo 31, fracción IV, de la Constitución Política de los Estados Unidos Mexicanos, que garantiza que no sean destinados a satisfacer necesidades privadas o individuales, sino de interés colectivo, comunitario, social y público que marca la Ley Suprema, ya que de acuerdo con el principio de eficiencia -inmanente al gasto público-, la elección del destino del recurso debe dirigirse a cumplir las obligaciones y aspiraciones que en ese ámbito describe la Carta Fundamental. De modo que una contribución será inconstitucional cuando se destine a cubrir exclusivamente necesidades individuales, porque es lógico que al aplicarse para satisfacer necesidades sociales se entiende que también está cubierta la penuria o escasez de ciertos individuos, pero no puede suceder a la inversa, porque es patente que si únicamente se colman necesidades de una persona ello no podría traer como consecuencia un beneficio colectivo o social...” Es claro derivado del texto que antecede que el destino de las contribuciones atendiendo a la finalidad del texto de la fracción IV del artículo 31 de la CPEUM son cuestiones de interés colectivo, comunitario, social y público, y que nunca se justificara en función de dicho objetivo que lo recaudado por el estado atienda cuestiones individuales o de una sola persona y que esto pueda trascender a lo colectivo.

Otra de las especies de las contribuciones son los derechos, contemplados en la legislación fiscal federal en el artículo 2º del CFF, cuya necesidad de existencia, naturaleza y objeto dentro del sistema tributario también ha sido materia de análisis por parte de la SCJN, situación que quedó patente en la siguiente interpretación jurídica de numero 411, novena época, del pleno de la SCJN en donde se señala:

“Derechos Tributarios Por Servicios. Su Evolución en la Jurisprudencia

Las características de los derechos tributarios que actualmente prevalecen en la jurisprudencia de este alto tribunal encuentran sus orígenes, según revela un análisis histórico de los precedentes sentados sobre la materia, en la distinción establecida entre derechos e impuestos conforme al artículo 3o. del Código Fiscal de la Federación del año de mil novecientos treinta y ocho, y su similar del Código del año de mil novecientos sesenta y siete, a partir de la cual se consideró que la causa generadora de los derechos no residía en la obligación general de contribuir al gasto público, sino en la recepción de un beneficio concreto en favor de ciertas personas, derivado de la realización de obras o servicios ("COOPERACIÓN, NATURALEZA DE LA.", jurisprudencia 33 del Apéndice de 1975, 1a. Parte; A.R. 7228/57 Eduardo Arochi Serrano; A.R. 5318/64 Catalina Ensástegui Vda. de la O.; A.R. 4183/59 María Teresa Chávez Campomanes y coags.). Este criterio, sentado originalmente a propósito de los derechos de cooperación (que entonces se entendían como una subespecie incluida en el rubro general de derechos), se desarrollaría más adelante con motivo del análisis de otros ejemplos de derechos, en el sentido de que le eran inaplicables los principios de proporcionalidad y equidad en su concepción clásica elaborada para analizar a los impuestos, y que los mismos implicaban en materia de derechos que existiera una razonable relación entre su cuantía y el costo general y/o específico del servicio prestado (*"derechos por expedición, traspaso, revalidación y canje de permisos y licencias municipales de giros mercantiles, inconstitucionalidad del artículo 14, fracciones i, inciso c), ii, inciso d), de la ley de ingresos del municipio de tecate, baja california, para el año de 1962, que fija el monto de esos derechos con base en el capital en giro de los causantes, y no en los servicios prestados a los particulares."*, vol. cxiv, 6a. época, primera parte; *"derechos fiscales. la proporcionalidad y equidad de estos está regida por un sistema distinto del de los impuestos."*, vol. 169 a 174, 7a. época, primera parte; *"agua potable, servicio marítimo de. el artículo 201, fracción i, de la ley de hacienda para el territorio de baja california, reformado por decreto de 26 de diciembre de 1967, que aumentó la cuota del derecho de 2 a 4 pesos el metro cúbico de agua potable en el servicio marítimo, es proporcional y equitativo; y por lo tanto no es exorbitante o ruinoso el derecho que se paga por dicho servicio."*, informe de 1971, primera parte, pág. 261).

El criterio sentado en estos términos, según el cual los principios constitucionales tributarios debían interpretarse de acuerdo con la naturaleza del hecho generador de los derechos, no se modificó a pesar de que el artículo 2o., fracción III del Código Fiscal de la Federación del año de mil novecientos ochenta y uno abandonó la noción de contraprestación para definir a los derechos como "las contribuciones establecidas por la prestación de un servicio prestado por el Estado en su carácter de persona de derecho público, así como por el uso o aprovechamiento de bienes del dominio público" (A.R. 7233/85 Mexicana del Cobre, S.A. y A.R. 202/91 Comercial Mabe, S.A.). De acuerdo con las ideas anteriores avaladas por un gran sector de la doctrina clásica tanto nacional como internacional, puede afirmarse que los derechos por servicios son una especie del género contribuciones que tiene su causa en la recepción de lo que propiamente se conoce como una actividad de la Administración, individualizada, concreta y determinada, con motivo de la cual se establece una relación singularizada entre la Administración y el usuario, que justifica el pago del tributo..." Transparente es la Corte en esta jurisprudencia y precisa al señalar los fines y naturalezas distintas de los derechos en relación al resto de las contribuciones, en tal virtud se puede expresar que la determinación del hecho imponible del derecho no está subordinado a cumplir con los principios de proporcionalidad y equidad fiscal (capacidad contributiva), debido a que este nada tiene que ver con la riqueza o situaciones económicas del sujetos obligado, dado que un derecho tiene como supuesto jurídico generador, la recepción por parte de un servicio del estado, el uso o el aprovechamiento de un bien de dominio público, luego entonces, su cuantía se determina en función de lo que cuesta al aparato administrativo su atención, es decir de una relación individualizada, concreta y determinada, entre el usuario y la administración pública, situación que en esencia justifica su pago a diferencia de las circunstancias que son tomadas en cuenta para el resto de los tributos, sin embargo cuando se trata del uso o el aprovechamiento de un bien de dominio público, la administración pública se enfrenta al reto de la determinación del monto del derecho en función del beneficio que el sujeto obligado recibe derivado del uso o aprovechamiento del bien que es propiedad de la nación.

CONCLUSIONES

Tarea ardua la de identificar jurisprudencias con la relevancia suficiente para la modificación del sistema tributario mexicano, sin embargo, en función de los conceptos fundamentales que giraron en torno al desarrollo de la investigación y tomando en consideración que la CPEUM y los principios que en materia tributaria se desprende de la misma, son la esencia de donde nace la potestad del estado para la imposición de los tributos, su sistema de finanzas, la forma del cobro de los recursos con los que funcionaran y los términos en que se deberán de plantear las diferentes políticas entre ellas la fiscal, para poder exigir y compeler a los diferentes agentes económicos a contribuir para cubrir el gasto público con el que se pretende la consecución del bien común, resultado básica la decisión de tomar como punto de referencia los principios mencionados y así determinar las jurisprudencias que de manera enunciativa mas no limitativa se eligieron como modificatorias del sistema tributario nacional en virtud de que abordan cuestiones de constitucionalidad, en definitiva no todo está dicho, sin embargo, es un buen comienzo para establecer las pautas de identificación de jurisprudencias de semejante trascendencia.

LA INVERSIÓN EXTRANJERA DIRECTA Y EL EMPLEO EN EL ESTADO DE MORELOS: UN ANÁLISIS PROSPECTIVO

Luis Eduardo Ménez Bahena, Universidad Politécnica del Estado de Morelos

RESUMEN

El presente artículo analiza el impacto que durante la última década tuvo la Inversión Extranjera Directa en el estado de Morelos con respecto a la condición del empleo y a la generación de nuevos puestos de trabajo, se estudia cuáles han sido las contribuciones de las principales empresas exportadoras, de las multinacionales, de las grandes empresas nacionales y de las que componen la industria maquiladora, en el empleo y la generación de nuevos puestos de trabajo, ya que éstas son las que se encuentran vinculadas de forma directa con la inversión extranjera directa, se desarrolla un recuento sumario de la cantidad de empleos que genera la inversión extranjera directa, puntualizando que si su importancia a escala general no es considerable, en el sector manufacturero, por el contrario, es determinante y principal.

PALABRAS CLAVES: Inversión Extranjera Directa, Empleo, Puestos de Trabajo

FOREIGN DIRECT INVESTMENT AND EMPLOYMENT IN THE STATE OF MORELOS: A PROSPECTIVE ANALYSIS

ABSTRACT

This article analyzes the impact over the last decade had foreign direct investment in the state of Morelos with respect to the condition of employment and generation of new jobs, studying what were the contributions of the leading exporters, multinationals, large domestic companies and composing the maquiladora industry, employment and generation of new jobs, as these are what are linked directly with foreign direct investment, develops a summary count of the number of jobs generated by FDI, stating that if their importance to overall scale is not large, in the manufacturing sector, by contrast, is decisive and principal.

INTRODUCCIÓN

La mayoría de los países en desarrollo enfrentan grandes dificultades para resolver cuestiones derivadas no solamente de una mala gestión económica del pasado y de la pobre generación de empleos actuales, sino también de su inadecuada composición sectorial. Ambas características son a la vez causa y efecto del perfil productivo de su estructura económica. Para el estado de Morelos a finales de los sesenta (cuando aún prevalecían altas tasas de crecimiento de ocupación y del producto per cápita) algunos analistas vislumbraban las dificultades que en el futuro enfrentaría para continuar generando empleos así como la indeseable configuración sectorial que desde entonces comenzaba a perfilarse. Entre ellos, Ibarra (1970) pronosticaba que hacia 1980 sólo una parte del incremento de la población activa encontrará trabajo productivo. La mayor carga social recaerá desde luego en los campesinos y trabajadores no calificados. Los mercados de trabajo podrán constituirse en “poderosas fuerzas opuestas a la difusión de los beneficios del desarrollo y, por tanto, generar fuertes distorsiones”. Consecuentemente, sectores de baja productividad

como la construcción y los servicios han venido absorbiendo fuerza laboral en cantidades crecientes. Paralelamente, ha sido muy lenta la transición de empleos de baja calificación hacia aquellos de alto valor agregado. Por lo tanto, el empleo informal y el precario se han incrementado prominentemente al punto de constituir actividades paralelas a las formales. De acuerdo con la CEPAL (2010), siete de cada diez nuevos empleos generados en la región durante la década pasada fueron en el sector informal. El Estado de Morelos es un estado de la región central del país con una población de 1'900,312 habitantes y un producto interno bruto de 1.3 % con respecto al total nacional, está ubicado en la región central del territorio nacional, tiene una superficie de 4,893 km², lo cual representa el 0.25% de todo el territorio nacional, cuenta con 33 municipios siendo la capital del estado Cuernavaca. Los municipios con mayor número de unidades económicas son Cuernavaca, Jiutepec, Yautepec, Temixco, Jojutla y Emiliano Zapata, las unidades económicas registradas en el estado son aproximadamente 100,929 y de las cuales el 95.2% son microempresas. En el 2013 el estado de Morelos recibió 18 millones de dólares por la IED y su destino principal fueron transporte, correos y almacenamiento. Las principales actividades económicas que se realizan en el estado son las referentes al comercio, restaurantes y hoteles, debido a una importante afluencia turística al estado, también es de relevancia la industria manufacturera entre las que destacan los productos metálicos, maquinaria y equipo así como la producción de alimentos y bebidas, sin dejar de mencionar la industria química y la farmacéutica.

REVISIÓN DE LA LITERATURA

En la literatura referente a la inversión extranjera directa se distinguen varios indicadores para medir el comportamiento de dicha inversión con respecto a la generación de empleo, la cantidad y la calidad de los mismos. Philippe Dautrey (2005) realizó un estudio de recursos humanos, el empleo y el desarrollo en Morelos, de acuerdo con la CEPAL (2001) siete de cada diez nuevos empleos generados en la región durante la década pasada fueron en el sector informal.

METODOLOGIA

Importancia del Análisis Prospectivo

De acuerdo con Ortega y Gasset (1926), una sociedad que no sea capaz de pensar y proyectar su futuro está condenada a vivir en el pasado. Pero aún más importante, el Estado moderno está constituido no sólo sobre su pasado sino también sobre la promesa que les hace a los ciudadanos de un mejor futuro. Desde hace mucho tiempo los países desarrollados reconocieron la importancia vital de construir y planear el futuro, lo cual implica su despegue económico, pues gestaron y estimularon desde muy temprano voluntades nacionales para salir del atraso (Pipitone, 2001).

1. Inversión Extranjera Directa y Generación de Empleo

La importancia de atraer Inversión Extranjera Directa en los países desarrollados y en desarrollo, radica en la capacidad que tiene las empresas transnacionales (ET), para crear empleo. No obstante, esta aseveración ha tenido diferentes perspectivas, donde prevalece que la creación efectiva de empleos, dependerá de la forma en que ingresa la IED y de las estrategias de las ET. La Conferencia de las Naciones Unidas para el Comercio y el Desarrollo (UNCTAD, 1994), destaca que si bien, las ET por sus características tienen la capacidad de generar empleos en las economías receptoras, el empleo que han creado ha sido mayor en los países desarrollados, que en los países en desarrollo y a su vez, la tasa de ocupación procedente de las ET ha sido muy poco significativa, comparada con otros grupos empresariales de los países receptores. Esta situación se explica por la tendencia de las transnacionales hacia el desarrollo de actividades con mayor intensidad tecnológica y por la ocupación de personas más calificadas, respecto a los estándares que establecen gran parte de las firmas locales en los países receptores. La UNCTAD también establece tres variables de análisis: cantidad, calidad y localización del empleo. Sobre la cantidad

de empleo, el organismo destaca la importancia de las inversiones nuevas (greenfield en inglés), porque crearán efectivamente empleos netos; sin embargo, si se trata de inversiones por fusiones o adquisiciones, podrían crearse nuevos empleos. En relación a este punto, los estudios empíricos demuestran también una tendencia hacia la racionalización de fuentes de trabajo y hacia la preponderancia de un despido masivo, ante los cambios en la gestión que pueden presentarse, cuando ingresa una ET. Sobre la calidad del empleo, las ET pueden establecer un salario mejor pagado y aumentar la productividad; sin embargo, también es posible que incurran en prácticas laborales indeseables relativas a la promoción y permanencia de la fuente de trabajo, lo que puede repercutir negativamente en la legislación nacional laboral. En relación a la localización, las ET pueden contribuir en la dinámica de creación de empleos, capacitación y desarrollo de recursos humanos más calificados en determinadas regiones del país receptor, pero esta localización puede crear al mismo tiempo un desbalance respecto a otras áreas del país que se encuentren menos desarrolladas y que por lo tanto, no poseen los elementos esenciales que atraen a las inversiones.

Este desequilibrio se explica por las diferencias que pueden propiciarse entre las estrategias de inserción de las ET y los objetivos de las políticas públicas del gobierno del país y estado receptor. Otros estudios (OCDE, 2012) establecen que las ET crean empleo en las actividades productivas de mayor dinamismo, donde el sector manufacturero, de maquila y de servicios son los más importantes. También se establece la relación que existe entre el comercio exterior, la inversión extranjera directa y sus implicaciones en la creación de empleo, enfatizando que los sectores económicos que se caracterizan por su dinamismo exportador son los que crearan más empleo en el país receptor; mientras que puede presentarse una repercusión inconveniente en las ramas productivas, cuando la tendencia hacia las importaciones destruye fuentes de trabajo en empresas nacionales o disminuye la creación de nuevos empleos en las ET. Así mismo, la inversión extranjera hacia el exterior puede ocasionar pérdidas de empleo en el país de origen de la IED de salida, debido a que las actividades económicas de las ET se realizarán en los mercados laborales donde se dirigen. La Comisión Económica para América Latina y Caribe (CEPAL, 2012) pone de manifiesto que prevalece una gran brecha entre los rendimientos obtenidos por las ET y la creación de empleos en las ET que se encuentran en América Latina.

Con estadísticas del organismo, en la región, por cada millón de dólares de inversión extranjera directa se crearon en promedio tres empleos. Esta tasa de ocupación creció en el sector manufacturero, en el comercio y en el turismo, en los que se alcanzaron hasta siete posiciones laborales por cada millón de dólares invertidos. Al respecto, el estudio de la CEPAL refiere que la distribución sectorial de la IED recibida por la región en 2012, mantienen una estructura parecida a la del promedio del periodo 2007–2011; un pequeño incremento en el sector servicios, que fueron el destino más importante, con 44% de las inversiones totales y una leve reducción de la manufacturera, que continuo representando el 30%; mientras que los sectores basados en los recursos naturales mantuvieron la misma participación con 26%. Los argumentos y la evidencia presentada por la CEPAL aportan elementos al debate acerca de la importancia de considerar no solo los montos de IED, sino también las características de los proyectos de inversión y su adecuación a las necesidades de las agendas de desarrollo de los países; por lo tanto, la mayor presencia de IED no garantiza una mayor capacidad para generar empleo. Una de las razones ampliamente difundidas es la importancia de la IED en la generación de empleo, se ha expuesto que esto depende de que las inversiones realmente sean nuevas (greenfield) porque en caso contrario, más bien pueden propiciar despidos masivos ante las nuevas formas de gestión de las ET.

En el contexto nacional, aunque las ET generan empleo, estas cifras son poco significativas comparadas con el resto de las empresas con capital nacional. De acuerdo con el reciente censo económico (INEGI, 2013), las mil empresas más grandes en México emplearon al 16.8% de la población ocupada total y de ese porcentaje, el 10.9% de las personas ocupadas se empleó por empresas con capital extranjero. La consulta de las estadísticas de empleo en el estado de Morelos, proporcionada por el INEGI y la Secretaría del Trabajo y Previsión Social (STyPS), ofrecen resultados en 2014, el nivel de desocupación alcanzó sólo el 1.4%, de una Población Económicamente Activa (PEA) total de 823,049 trabajadores, de la cual sólo

39,148 estuvieron desocupados. Cabe mencionar que en la entidad se presenta un patrón de distribución de la PEA que no coincide con la distribución poblacional territorial. Así, destaca la zona metropolitana de Cuernavaca- conformada por la capital, los municipios de Emiliano Zapata, Jiutepec, Temixco y Xochitepec- como principal centro urbano del estado, que además atrae a la creciente población descentralizada de la capital del país. En Morelos, el porcentaje de mano de obra ocupada en el sector primario ha decrecido significativamente, aunque en menores proporciones, el empleo industrial también ha disminuido.

Reforma Económica y las Exportaciones

Como resultado del fuerte incremento de la deuda externa y de la crisis padecida por el modelo de sustitución de importaciones, el gobierno modificó su política y buscó la implantación de un modelo exportador. Los modelos exportadores acompañados de una gestión estatal promotora de industrias exportadoras y de una alta tecnología, permitieron a varios países orientales, lograr altas tasas de crecimiento en las décadas de los años 70 y 80. Ello modificó las teorías del comercio internacional y del desarrollo, e innovó las de la organización empresarial, integración industrial y regional. Todo este panorama, presente bajo esa nueva orientación internacional, el abandono del proteccionismo, el retiro progresivo del Estado de la actividad económica directa y la lucha contra la inflación, hicieron posible que las nuevas reglas y condiciones se presentaran como políticas necesarias para lograr un sano desarrollo nacional e internacional, dichas políticas se transformaron entonces, en condiciones aceptadas para obtener el apoyo del FMI.

México no sólo las firmó, sino que las incorporó como principios centrales de su política económica. Tanto la contracción del mercado interno y su acelerada apertura, como el encarecimiento del crédito y de las divisas, han sido factores determinantes en la quiebra masiva de empresas pequeñas y medianas, lo que contribuye así al incremento del desempleo y al deterioro de la producción. Como respuesta al desempleo, a la contracción productiva y al deterioro de los salarios, la economía informal se desarrolló con gran rapidez. Sector en donde la ocupación es precaria, no existen contratos, ni prestaciones y los salarios son bajos; sin embargo, los requerimientos en tanto a nivel educativo y experiencia son casi inexistentes, por lo que se ha logrado una rápida y fácil incorporación, lo que ha permitido la sobrevivencia de ese sector. Las cifras de empleo presentadas dan cuenta de ese fenómeno. Frente a este sector tradicional, integrado por miles de pequeños negocios, demandante de una cantidad alta de mano de obra, pero que requiere de poco capital y tecnología, se desarrolla un sector empresarial moderno, con necesidades de capital y tecnología de punta, conformado por un buen número de grandes empresas ligadas al mercado externo, en particular al de los Estados Unidos. Este sector se encuentra compuesto por las principales empresas exportadoras e importadoras del estado, importantes empresas maquiladoras. Es hacia este sector que se dirige la parte

sustantiva de la inversión extranjera y, por tanto, el que analizaremos para conocer de qué manera participa en la oferta y creación de empleos en el estado de Morelos.

Inversión Extranjera Directa en el Caso del Estado de Morelos: Características y Tendencias

Se advierte que la IED que ha ingresado al estado de Morelos en el periodo citado, ha presentado cambios en relación a la participación anual de los flujos, a su prioridad por sector económico y a la modalidad en las formas en que ingresa. No obstante, en poco más de treinta años prevalece una alta concentración de los países inversores en México y aun se presentan niveles desiguales entre las entidades federativas receptoras de las inversiones extranjeras, lo que propicia una gran brecha en términos de productividad, generación de empleo y calificación de la fuerza laboral en el territorio nacional. De acuerdo con Banxico (2004) entre 1995 y 2004 alrededor de 20% de las utilidades de la IED se reinvertió y 60% de la IED total han sido recursos frescos. Hay que destacar que esos flujos de IED se han orientado hacia actividades con alto potencial de desarrollo/crecimiento y ventajas comparativas, como son las plantas maquiladoras, los servicios financieros, las comunicaciones y el comercio de alta tecnología.

Grafica 2: Morelos: IED de Entrada 1990 - 2014

Fuente: Elaboración propia con información del Banco de México

Considerando la Figura anterior, la inversión extranjera directa que ingreso al estado de Morelos en 1990-2014 ha presentado niveles incipientes. En 1990, fue de 178.8 millones de dólares y después vino un descenso pronunciado y no fue hasta el año 2007, cuando los flujos de inversión del exterior comenzaron a incrementarse y el año que presento mejores resultados con 453.3 millones de dólares, en este año presento una tasa promedio de crecimiento anual de 1.40%. En 2008-2014 se da continuidad al proceso de inserción internacional del país y del estado, mediante la negociación de un conjunto de acuerdos comerciales entre México y algunos organismos internacionales, así como con países y regiones con similares o distintos niveles de desarrollo. Los flujos de IED acumulados en estos siete años fueron de 274.2 millones de dólares, lo que significó un promedio anual de 39.17 millones de dólares.

Asimismo, se aprecia que el mayor flujo de inversiones extranjeras que ha recibido el estado de Morelos se presentó en el año 2007. Después de este año se observan ingresos de IED muy pobres llegando a ocupar en el año 2012 la posición número 30 con 5.2 millones de dólares y una tasa de crecimiento de 0.003%. Otro aspecto de interés es que a partir de 2009, el estado de Morelos ha presentado un descenso importante en los niveles de inversión extranjera, comparado con los años anteriores. Las cifras oficiales demuestran que este descenso ha prevalecido hasta el término de 2014, lo que implica que la recuperación sigue estando ausente. Entre 2012 y 2011 se presentó un crecimiento de 0.52%, entre 2012 y 2013 volvieron a presentar un decremento del 0.1% de 106.2 millones de dólares en 2011, a 5.2 millones de dólares en 2012. Aunque gran parte del descenso de estos flujos en la economía morelense ha sido consecuencia de la crisis financiera internacional y del auge del crimen organizado a nivel nacional, esta situación ha implicado que la posición del estado de Morelos como receptor de inversión extranjera haya cambiado en un lapso de 25 años.

Empleo y Exportación

Podemos afirmar que gracias a la reforma, México alcanzó el objetivo de convertirse en un país exportador, sin embargo, no puede afirmarse que el sector externo proporcione los recursos necesarios para el desarrollo, debido a una clara dependencia de las importaciones, cuyo crecimiento con frecuencia ha sido superior al de las exportaciones, generando déficits recurrentes en la balanza comercial traducidos en transferencias al exterior. De manera que el financiamiento del desarrollo es un objetivo sólo alcanzado en forma parcial, y a pesar de que se ha otorgado una participación activa y creciente en los flujos de inversión mundial, particularmente los provenientes de los Estados Unidos, el modelo exportador ha fallado, la baja participación de los insumos del país en los bienes exportados, la falta de integración de la planta productiva y la marginación de la mediana y pequeña empresa, han llevado a la caída de los salarios y a la pérdida del poder adquisitivo, propiciando la caída del consumo y ahorro internos que obstaculizan el desarrollo. La escasa venta de insumos a las empresas maquiladoras y a las empresas exportadoras proviene de la ausencia de encadenamientos de los procesos y grupos industriales nacionales, con respecto a los procesos y grupos industriales de los estados Unidos, deriva también de la forma como operan las multinacionales al interior del estado, y de la forma en que obtienen provecho de lo que consideran son las ventajas comparativas del estado, en este sentido parecería ser que el mantenimiento de bajos salarios en el estado de Morelos se convirtió en una condición para la afluencia de capitales y sustento de las exportaciones. A partir de la reforma económica iniciada en 1982, el estado de Morelos ha incrementado sus exportaciones. Morelos tiene registradas 120 empresas exportadoras las cuales se concentran en los municipios en los que se encuentra la mayor actividad económica, según el cuadro de distribución de las unidades económicas los municipios son: Jiutepec, Cuernavaca, Emiliano Zapata y Cuautla. Si bien la actividad exportadora es diversa, las empresas se agrupan en algunos sectores específicos destacando los siguientes:

Figura 5: Clasificación de los Sectores de Exportación En el Estado de Morelos

Empresas Multinacionales y Empleo

El reemplazo del proteccionismo y de los modelos de sustitución de importaciones por modelo exportadores abiertos y la globalización económica creciente, generó en el mundo un ambiente favorable para las empresas multinacionales, estableciéndose una verdadera competencia entre los países endeudados por ofrecer las mejores condiciones a la inversión extranjera. México ha sido uno de los países que ha modificado, de forma sustancial, su estructura con el fin de atraer capitales. En lo referente al origen de la inversión, las dos terceras partes provienen de los Estados Unidos y una quinta parte llega de Europa. Japón posee una participación marginal, inferior al 5%. México ha sido uno de los países que ha modificado, de forma sustancial, su estructura con el fin de atraer capitales.

Inversión Extranjera Directa y su Relación Con el Desarrollo del Estado de Morelos

Algunos elementos que determinan la capacidad de una región para atraer la IED son las ventajas geográficas, los niveles de infraestructura y crecimiento económico, así como la educación de la población. Gran parte de los objetivos de la política económica nacional se han concentrado en el desarrollo del potencial de otras ciudades. Al respecto, en poco más de treinta años en México prevalece una alta desigualdad en los niveles de inversión extranjera que se captaron en las entidades federativas, lo que propicio una gran brecha en términos de productividad, generación de empleo y calificación de la fuerza laboral en el territorio nacional. En 1990, el Distrito Federal, Nuevo León y el Estado de México concentraron el 77.7% del total de la IED en México. De esa cifra, el estado de Morelos captó 4.8%, mientras que Oaxaca, Chiapas y Campeche concentraron los niveles más bajos con una participación de la IED menor al 0.1%. Morelos resalta, pues según CEPAL la entidad se define como lenta con mal desempeño y mala estructura. Es una entidad que ha perdido en todos los aspectos, porque la dinámica regional de sus sectores ha sido inferior a la media de los sectores a nivel nacional y porque sus estructuras productivas no han estado especializadas en sectores con rápido crecimiento a nivel nacional (CEPAL, 2010:116). En 2010, el 71% de la IED continuó concentrándose en las tres entidades tradicionales (Distrito Federal, Nuevo León y Estado de México). Se observa como avance la integración de otras entidades como Nayarit, Jalisco y Baja California, aunque esta distribución está vinculada con las inversiones extranjeras en la industria eléctrica y electrónica y del sector turismo. Es importante destacar también que Michoacán, Chihuahua y el estado de Morelos han resentido los efectos del crimen organizado y este factor también influyó en su potencial.

El Empleo y la Industria Maquiladora En el Estado de Morelos

La industria maquiladora de exportación inicio sus actividades en 1965, como resultado de una situación de carácter coyuntural. Para analizar la evolución de la industria maquiladora es posible considerar dos etapas de desarrollo, de 17 y 18 años respectivamente. La primera, de 1965 a 1981, opera bajo el modelo de sustitución de importaciones. La segunda de 1982 a 1999, abarca una época de crisis y grandes transformaciones al implantarse el nuevo modelo exportador. Para el estudio que nos ocupa, la última fase de la segunda etapa, la que va de 1994 a 1999, es vital para comprender la evolución reciente del empleo. Durante los doce años iniciales de la primera etapa (1965-1976), se observa un gran dinamismo en el área del empleo, el número de empresas aumentó en forma acelerada, incrementándose el número de empleados. Sin embargo en los años siguientes el dinamismo decayó comportándose de manera directamente proporcional. Posteriormente, la industria maquiladora ha observado un proceso de crecimiento pero, dada su dimensión, este se ha realizado a ritmos más lentos.

Cabe señalar que el 20% de la inversión extranjera, durante los últimos años, se ha colocado en la industria maquiladora. La industria maquiladora de origen norteamericano se desarrolló en el estado de Morelos como una prolongación de la industria norteamericana, la cual, para aprovechar el diferencial salarial entre los dos países, se extendió hasta abarcar la frontera norte. Desde mediados de los años ochenta la industria en el estado de Morelos ha pasado por un intenso proceso de reestructuración productiva, la cual se traduce en una tendencia a la especialización y la polarización industrial. Las ramas químico-farmacéutica y automotriz llevan a cabo una reestructuración exitosa que se expresa en una alta densidad de capital y niveles relativamente altos de productividad y salarios. Por ello esas ramas se han convertido en las más dinámicas de la industria, con el consiguiente incremento de su aporte a la producción manufacturera. Asimismo esas ramas realizan casi el 60% de las exportaciones industriales. La industria con mayor densidad de capital, productividad y salarios relativos se localiza en el municipio de Jiutepec el cual proporciona más del 77% de la producción industrial. La industria asentada en los otros municipios se caracterizan por ser de baja densidad de capital, productividad y salarios relativos, reducidos excepto la ciudad de Cuernavaca donde los salarios se encuentran por arriba del promedio, pese a que registra la productividad del trabajo más baja. En 2013 el estado de Morelos reportó 794 mil trabajadores, principalmente en el sector comercio lo que representó 1.7

RESULTADOS

Vinculado con el ingreso, el empleo constituye otro tema de bienestar que podría tener un efecto importante en las condiciones materiales de vida de las personas. Una medida estándar (inversa) de los resultados del empleo es la tasa de desempleo, que durante la última década siempre ha estado por debajo del promedio nacional. En el primer trimestre de 2014, este indicador fue de 3.6% en Morelos, si bien debe tomarse en cuenta la informalidad. En cuanto a la tasa de participación en Morelos en el primer trimestre de 2014 fue de 57.3. Las estadísticas oficiales de empleo pueden ocultar el tamaño del sector informal, que es extremadamente grande, lo cual puede tener un impacto en el acceso al empleo y en la calidad de éste. Cualquier análisis de los resultados del empleo en el estado de Morelos debe tomar en cuenta que el estado tiene un nivel relativamente alto de informalidad en el mercado laboral. En el primer trimestre de 2014, 35.7% del empleo total en Morelos (27.9% a nivel nacional, INEGI, 2014) estaba en el sector informal, lo que significa que 500 000 personas trabajan sin pagar impuestos. En el mismo periodo, entre las 32 entidades federativas de México, el estado de Morelos tenía la novena tasa más alta de informalidad, según la define el INEGI. Los análisis de la OCDE demostraron que la informalidad en el estado de Morelos tiende a decrecer en periodos de crecimiento económico, y aumentar cuando es elevada la corrupción y la estructura productiva se compone, en promedio, de pequeñas empresa con bajo nivel de Inversión Extranjera Directa.

CONCLUSIONES

El análisis realizado a lo largo de esta investigación nos lleva a concluir que la inversión extranjera directa en el periodo estudiado ha proporcionado un apoyo fundamental al desarrollo de las empresas multinacionales, de la industria exportadora y de la industria maquiladora, sectores que conjuntamente ofrecen alrededor de 823 mil empleos. Por tanto podemos afirmar que su participación en el campo del empleo y en el sector manufacturero es determinante. A primera vista, si se considera que la población ocupada en el estado de Morelos es de 823,049 trabajadores, resulta que la generación de dos millones y medio de empleos, en los que puede incidir de manera fundamental la Inversión Extranjera es poco relevante, pero si se considera que esos empleos sustentan la actividad manufacturera, los servicios financieros y las exportaciones del estado, entonces, su participación que parecía marginal cobra una enorme importancia. Recientemente, la participación de la inversión extranjera en bancos y en grupos financieros se ha hecho relevante. La IED no ha generado a lo largo de los últimos veinticinco años incrementar la calidad de vida de la masa salarial que ocupa. El deterioro de las condiciones sociales y materiales por efecto de la pérdida del poder adquisitivo de masa salarial a nivel nacional, caracterizado por escaso empleo y deficientes condiciones de trabajo digno, es otra problemática acuciante de atender. A ello se suma, El cambio en las estructuras sociales y económicas asociadas con los procesos migratorios intensos y movilidad de grupos poblacionales entre localidades.

RESUMEN

El sector Hotelero es un elemento clave en la dinámica económica de la industria turística en Colombia y en La Guajira. El alojamiento se ha convertido en un mercado altamente competido que exige una gestión moderna que permita presentar resultados económicos positivos e incrementar y mantener su posicionamiento. Esto sería imposible de lograr sin una buena calidad del servicio y la fortaleza de ventajas competitivas que generen incrementos sostenidos en el largo plazo y permitan mantenerse en el mercado generando valor económico. Esta investigación tuvo como objetivo evaluar y analizar la calidad del servicio desde cinco dimensiones diferentes, en los establecimientos hoteleros del municipio de Riohacha, La Guajira. Metodológicamente se abordó desde la perspectiva de los estudios de casos descriptivos.

ANALYSIS OF SERVICE QUALITY IN THE HOTEL INDUSTRY OF RIOHACHA LA GUAJIRA

ABSTRACT

The hotel sector is a key element in the economic dynamics of the tourism industry in Colombia and La Guajira. Accommodation has become a highly competitive market that demands modern management that allows to present positive economic results and increase and maintain its market position. This would be impossible to achieve without a good quality of service and the strength of competitive advantages that generate sustained increases in the long term and allow to remain in the market generating economic value. This research aimed to evaluate and analyze the quality of service, from five different dimensions, in the hotel establishments from the municipality of Riohacha, La Guajira. It has a methodological approach from the perspective of descriptive case studies.

INTRODUCCIÓN

Actualmente las ciudades depositarias de un rico patrimonio paisajístico cultural e histórico se encuentran asociadas al turismo, su dinámica se ha venido potenciando en los últimos años fortaleciendo esa simbiosis entre ciudad y turismo. En este contexto, el turista es un gran consumidor de bienes y servicios y su presencia dinamiza los diversos sectores de la actividad económica, potencia el desarrollo de ramas de

actividades que implican necesidades de consumo de visitantes (hostería, restauración, alojamiento, comercio, servicios, ocio y recreo) e impulsa también el desarrollo de otros sectores convirtiéndose en un factor multiplicador de desarrollo. Colombia en los últimos cuatro años, ha mostrado una tendencia creciente en la actividad turística pasando de 1.978.000 visitantes en 2006 a 2.494.000 en 2009, mientras que el ingreso por divisas al país debido a este renglón de la economía pasó de USD\$2,0 millones a USD\$2,6 millones en los mismos años¹. Estas cifras son resultado de una política dirigida a la oferta turística y a incrementar los recursos para la promoción del país. Se evidencia entonces la necesidad de mantener los logros alcanzados como consolidar al sector como uno de los de mayores perspectivas en la economía nacional, garantizando que la actividad turística sea sostenible e incluyente. El alojamiento constituye un pilar fundamental dentro del turismo. En Colombia este subsector ha venido presentando indicadores de crecimiento coherentes con la reactivación del sector turístico. Entre el año 2001 y 2010 el producto interno bruto del sector de hoteles y restaurantes presentó un comportamiento ascendente que tuvo su nivel máximo en 2007 con una tasa de crecimiento real de 11,8%. Además, en 2012 según informe del DANE, el índice de ocupación hotelera registró un incremento del 5%, subiendo los ingresos reales de los hoteles en cerca del 8% y el empleo aumentó en un 4%, lo que denota que este es un sector en desarrollo y crecimiento.

El sector hotelero de Riohacha

El turismo, aunque poco explotado, es un renglón de la economía de la ciudad que ofrece enormes potencialidades al turista, incluyendo multiplicidad de destinos eco-etnoturísticos y una amplia variedad gastronómica. Sin embargo, según el Observatorio del Caribe Colombiano, Riohacha es la ciudad de menor grado de competitividad entre las ciudades capitales del Caribe colombiano. Ella ocupa el último lugar en infraestructura, recursos humanos y ciencia y tecnología. No obstante, el plan de desarrollo departamental y municipal considera que el turismo es una de las apuestas estratégicas para el desarrollo de la ciudad. El sector hotelero del municipio de Riohacha, se puede calificar como un sector de lento crecimiento, teniendo en cuenta el número de hoteles establecidos por año, el cual registra un promedio de 3 hoteles por año; sin embargo, los años 2008, 2009, y 2012, son los de mayor crecimiento sostenido, por lo que se puede inferir que el sector presenta signos de reactivación.

En este orden de ideas, el departamento de La Guajira para el año 2032 se propone ser el principal destino eco-etnoturístico a partir del aprovechamiento de las potencialidades que le brinda la naturaleza, el ambiente y la cultura, el cual le permita llegar a niveles de ocupación hotelera del 70% anual y una participación del 5% del PIB departamental. Por consiguiente, esta investigación en coherencia con el afán de dar respuesta a los retos que subyacen a este tipo de organizaciones, desde una postura teórica fundamentada, crítica y de rigor científico, buscó evaluar y analizar la calidad del servicio en el sector hotelero del municipio de Riohacha, pues este se convierte en elemento clave para la fidelización de los clientes y consecuente fomento del turismo y generación de valor para el sector en el municipio.

REVISIÓN LITERARIA

Para el análisis de la calidad del servicio como posible inductor de valor económico, se tomaron como fundamentos teóricos planteamientos como el de Benavides (2003), quien afirma que la calidad del servicio se debe estudiar desde una doble dimensión, la interna y la externa; en la primera se precisa una correcta implantación y mantenimiento de la cadena proveedor-cliente; la externa, está basada en un eficaz servicio técnico y una correcta y buena atención al cliente. Igualmente, Acuña (2005), plantea que el término calidad es bastante abstracto y se puede definir como las propiedades de un servicio que permite al usuario o cliente calificarlo de acuerdo con el grado de satisfacción que este le genere. Desde la perspectiva de Zeithaml

¹ Datos tomados del documento “Soportes transversales de la prosperidad democrática”, del Departamento nacional de Planeación de Colombia.

(2003), calidad es la amplitud de la discrepancia o diferencia que existe entre las expectativas o deseos de los clientes y sus percepciones. La calidad de cualquier servicio depende de lo bien que funcionen los elementos que intervienen en el proceso de prestación de servicio y de la capacidad de cada uno de esos elementos para satisfacer las expectativas de los clientes. Por otro lado, desde la perspectiva de Dominici (2010), en la industria hotelera la satisfacción del cliente está asociada principalmente a la calidad del servicio. Asimismo, para Holjevac et al., (2010), la calidad del servicio y la satisfacción del cliente han sido incrementalmente identificados como los factores clave en la batalla por la diferenciación competitiva y la retención de los clientes. En consecuencia, la calidad del servicio redundará en una mayor rentabilidad empresarial. Desde otra perspectiva, Nasutin y Mavondo (2008) se enfocan en la evaluación del valor percibido por el cliente desde tres perspectivas, a saber: 1) Reputación por la calidad, 2) Valor según la relación calidad-precio, y 3) Prestigio. Autores como Juran (1993), Deming (1989) o Crosby (1987) han sido considerados por muchos autores como los grandes teóricos de la calidad. Según Deming (1989) la calidad es un grado predecible de uniformidad y fiabilidad a bajo coste, adecuado a las necesidades del mercado. El principal objetivo de la empresa debe ser permanecer en el mercado, proteger la inversión, ganar dividendos y asegurar los empleos. Para alcanzar este objetivo el camino a seguir es la calidad. Por otro lado, la idea principal que aporta Crosby (1987) es que la calidad no cuesta, lo que cuesta son las cosas que no tienen calidad.

Para Albrecht (2006), desde el punto de vista del cliente, la impresión más vivida del servicio ocurre en el momento de la verdad, es decir, cuando los clientes interactúan con la empresa de servicio. Si bien los primeros encuentros en la cascada de encuentros del servicio pueden ser en especial importantes, cualquier encuentro puede resultar potencialmente crítico si se trata de determinar la satisfacción y lealtad del cliente. Dimensiones de la calidad del servicio Para Zeithaml (2005), los clientes no perciben la calidad como concepto de una sola dimensión, sino que se basan en la percepción de múltiples factores, categorizadas en dimensiones. Entre estos están:

Confiabilidad: es la capacidad para cumplir la promesa del servicio de manera segura y precisa. Significa que la empresa cumpla sus promesas, lo convenido acerca de la entrega, la prestación del servicio, la solución de problemas y los precios.

Respuesta: Es la voluntad de colaborar con los clientes. Destaca la atención y prontitud con la que se hace frente a las solicitudes, las preguntas, las reclamaciones y los problemas de estos.

Seguridad: Es la capacidad de la empresa y sus empleados para inspirar buena voluntad y confianza.

Empatía: Es la atención cuidadosa e individualizada que la empresa brinda a sus clientes, consiste en transmitir la sensación de que son únicos y especiales.

Tangibilidad: es la apariencia de las relaciones físicas, el equipo, el personal y los materiales de comunicación. Todos ellos transmiten representaciones físicas o imágenes del servicio que los clientes, y en particular los nuevos, utilizarán para evaluar la calidad.

Es de anotar que Parasuraman, Zeithaml y Berry, elaboraron el modelo SERVQUAL en 1988 con el objetivo de contrastar las diferentes expectativas de clientes con relación a la percepción del servicio que realmente obtienen; esta herramienta ayuda a proporcionar respuestas a la alta gerencia para brindar un mejor servicio con calidad, y es aun hoy en día un modelo de referencia para estudios de este tipo.

METODOLOGÍA

En esta investigación se utilizó la metodología de estudio de casos múltiples de tipo descriptivo. La unidad de análisis fue el sector hotelero del Departamento de La Guajira, dentro del cual se estudiaron cinco hoteles

con mayor estructura financiera y organizacional del municipio de Riohacha, estos son los hoteles: Arimaca, Majayura, Guajira Premium, Dos palmas y el Hotel Padilla. Se utilizó la técnica del muestreo en la evaluación de la calidad del servicio desde la percepción del cliente, estableciendo como población un rango entre 8.000 y 13.500² turistas alojados en los hoteles seleccionados en el año 2013, arrojando una muestra representativa de 95 turistas, que fueron encuestados de forma estandarizada en cada hotel. La muestra estuvo compuesta por personas adultas, en un rango entre 20 y 60 años de edad. La técnica de recolección de información para abordar la calidad del servicio desde sus dimensiones, fue la encuesta estructurada, que contó con la validez de cinco expertos. También se realizaron entrevistas con directivos y expertos del sector; y se hizo un análisis comparativo entre los hoteles teniendo en cuenta los resultados obtenidos.

RESULTADOS

Los resultados de las medias de cada dimensión de los hoteles estudiados se recogen en la Figura 01, mostrando las diferencias en torno a las percepciones de los clientes con respecto a la calidad del servicio. Por ejemplo, en la dimensión de confiabilidad, el Hotel Majayura es el que tiene un promedio más alto, seguido por el Hotel Arimaca.

Figura 01: Comparativo Dimensiones de la Calidad del Servicio Por Hotel

Fuente: Elaboración propia

En la dimensión Tangibilidad con respecto a la percepción y la apariencia de los aspectos físicos de cada hotel se establecieron diferencias de acuerdo a la opinión de los clientes. Los hoteles Guajira Premium, Majayura, y Arimaca, obtuvieron los mejores resultados respectivamente; por su parte los hoteles Padilla y Dos Palmas obtuvieron promedios de calidad baja de acuerdo al baremo.

² Información suministrada por la Oficina de Turismo del Departamento de La Guajira

Tabla 01: Resumen Descriptivo de la Calidad del Servicio

Hotel	Media	Mediana	Moda	Desv. Tip.	Categoría
Arimaca	3,6	4,0	4,0	1,223	Alta
Majayura	3,8	3,8	3,8	0,457	Alta
Guajira Premium	3,7	4,0	4,0	1,02	Alta
Dos Palmas	3,0	3,0	3,0	1,07	Moderada/Regular
Padilla	3,0	3,0	3,25	1,07	Moderada/Regular

Fuente: Elaboracion propia

En cuanto a los resultados estadísticos, tal como se muestra en la tabla 01, los Hoteles Majayura, Guajira Premium y Arimaca obtuvieron las más altas medias de la encuesta aplicada a huéspedes, lo que de acuerdo al baremo utilizado para la interpretación de los resultados, corresponden a la categoría de calidad alta. De igual manera se evidencia que las calificaciones obtenidas por los hoteles Dos Palmas y Padilla corresponden a resultados de calidad regular.

Figura 021: Media de la Calidad del Servicio

Fuente: Elaboracion propia

De modo gráfico se presentan estas calificaciones en la Figura 02, donde se evidencia que el Hotel Majayura arrojó los mejores resultados en torno a la calidad del servicio desde el punto de vista de la percepción de los clientes al promediar los puntajes en cada una de las cinco dimensiones estudiadas: confiabilidad, tangibilidad, empatía, respuesta y seguridad. Los hoteles que ocupan el segundo y tercer puesto ubicándose cerca al promedio más alto, son el Hotel Guajira Premium y Arimaca, respectivamente. Finalmente los hoteles Dos Palmas y Padilla mostraron los resultados más bajos en la variable de calidad del servicio.

CONCLUSIONES

A partir de los resultados obtenidos en la variable calidad del servicio en los cinco hoteles, se puede concluir que tres de ellos obtuvieron una categoría alta, estos fueron el hotel Majayura, Guajira Premium y Arimaca, respectivamente. Por otro lado los hoteles Dos Palmas y Padilla obtuvieron un resultado de calidad del servicio regular. Las calificaciones más bajas obtenidas de las dimensiones de la calidad del servicio fueron en la dimensión Empatía, lo que quiere decir que los cinco hoteles en su conjunto presentan aspectos

susceptibles de mejora en la capacidad para identificarse con las necesidades y expectativas de los clientes. Por otro lado, la tangibilidad tuvo en promedio una baja calificación causada principalmente por la poca calidad percibida en los hoteles Padilla y Dos Palmas en términos de la apariencia de los bienes tangibles relacionados con equipos, herramientas, edificaciones y espacios utilizados para desarrollar actividades recreacionales. Las dimensiones de la calidad del servicio mejor calificadas fueron: la confiabilidad, la seguridad y la respuesta, sin embargo, dichas calificaciones obtenidas en escala de uno a cinco no alcanzan el umbral del más alto nivel de calidad, lo que indica que hay aspectos susceptibles en la prestación del servicio por mejorar. En términos de la confiabilidad y respuesta, los hoteles con resultados más altos fueron el hotel Majayura y hotel Arimaca, lo que indica una positiva percepción de los huéspedes en términos de las competencias del personal en la prestación del servicio y la imagen que proyecta como empresa responsable del mismo. Así mismo, muestran fortalezas en cuanto a las habilidades del personal para la resolución de los problemas, a la rapidez y amabilidad con la que se prestan los servicios en general; y a la celeridad con que se da respuesta a las solicitudes y reclamos de los huéspedes.

Al analizar la dimensión Seguridad, se tiene que los hoteles con la calificación más alta fueron Majayura y Guajira Premium, lo que permite inferir que brindan una mayor sensación de seguridad a sus huéspedes en términos del resguardo de sus objetos y bienes de valor, a la confianza de no estar siendo estafados con las tarifas, entre otros aspectos. Se concluye en igual forma que es importante mejorar la calidad de los resultados manteniendo un sistema de medición permanente que incluya las estacionalidades en las percepciones de los clientes en torno a la calidad del servicio de los hoteles, que además permita obtener bases para la toma de decisiones gerenciales en torno a proyectos de mejora en la calidad del servicio.

ANÁLISIS DE PANEL CON EFECTOS FIJOS DE LA RELACIÓN ENTRE LA INVERSIÓN EXTRANJERA DIRECTA Y EL CRECIMIENTO ECONÓMICO EN AMÉRICA LATINA

Carlos Enrique Vecino Arenas, Universidad Industrial de Santander
Erika Ximena Miranda Morales, Universidad Industrial de Santander

RESUMEN

Este estudio examina la relación entre la IED y el crecimiento económico en América latina, presenta estimaciones basadas en datos de panel de 18 países Latinoamericanos durante el periodo 1990-2012. Los resultados de las estimaciones del modelo permiten evidenciar la existencia de una relación positiva, aunque débil, entre la IED y el crecimiento económico durante el periodo de análisis, además sugiere que el efecto de la formación bruta de capital sobre el crecimiento es significativo.

PALABRAS CLAVE: Inversión Extranjera Directa, Crecimiento Económico

PANEL ANALYSIS WITH FIXED EFFECTS OF THE RELATIONSHIP BETWEEN FOREIGN DIRECT INVESTMENT AND ECONOMIC GROWTH IN LATIN AMERICA

ABSTRACT

This study examines the relationship between FDI and economic growth in Latin America, presents estimates based on panel data from 18 Latin American countries during the period 1990-2012. The results of the model estimates allow to demonstrate the existence of a positive but weak relationship between FDI and economic growth during the period of analysis, besides suggests that the effect of gross capital formation on growth is significant.

KEYWORDS: Foreign Direct Investment, Economic Growth

INTRODUCCION

La importancia del estudio de la relación IED-crecimiento económico radica en la creciente afluencia que ha tenido este tipo de inversión, específicamente en América Latina desde los años 90 con la liberalización de la economía, el aumento de los flujos de IED han sido significativos. En particular, la IED mundial aumentó un 11% en el año 2013, hasta alcanzar aproximadamente los 1,46 billones de dólares, destacando a las economías en desarrollo, las cuales representaron más del 50% del total de entradas de IED. En América Latina y el Caribe los mayores receptores de IED continúan siendo Brasil y México, los cuales recibieron 64.046 y 38.286 millones de dólares respectivamente (CEPAL, 2014). A partir de la base teórica de los modelos de crecimiento endógeno y neoclásico, esta relación ha sido estudiada desde las siguientes perspectivas: los factores determinantes del crecimiento, los factores determinantes de la IED, el papel de las multinacionales en los países receptores y la dirección de la causalidad entre las dos variables (Chowdhury & Mavrotas, 2006). En efecto, los beneficios y desventajas que genera la llegada de los flujos de IED hacia una economía en desarrollo son tema de discusión entre diversos autores, por un lado se

cuestiona el impacto que tiene directamente sobre el bienestar de la región, dado que se dice que este tipo de inversión causa una especie de “competencia imperfecta” con los competidores locales, por otro lado existen percepciones favorables en el sentido de que la IED contribuye al crecimiento nacional, como fuente de expansión de la capacidad productiva, transferencia de conocimiento y difusión tecnológica. Las investigaciones sobre la relación IED-crecimiento han mostrado resultados en diversas direcciones sobre las economías en desarrollo, algunas concluyen que la IED tiene una relación positiva sobre el crecimiento (Baracaldo, Garzón & Vásquez 2006; Bengoa & Sanchez, 2003), pero otras encuentran poca relación (Sukar, Ahmed, & Hassan, 2011) e incluso una relación negativa (Mencinger, 2003). Por consiguiente, la presente investigación busca agregar valor a la discusión de esta relación en América Latina, concretamente luego de la apertura económica. En ese contexto, El cuestionamiento principal de esta investigación consiste en preguntarse: ¿Existe una relación entre la IED y el crecimiento económico?, de existir, ¿Podría afirmarse que la relación entre la IED y el crecimiento económico en Latinoamérica es positiva y significativa?. El resto del documento presenta cuatro secciones. En la primera parte, se presenta una revisión de la literatura. En la segunda se describe la metodología abordada, posteriormente se presentan las estimaciones con su respectiva interpretación y por último las conclusiones.

REVISIÓN LITERATURA

Amin y Khalid (2014) hacen una revisión literaria en la cual examinan la relación entre la IED y el crecimiento económico desde 1994 hasta 2012, en ella encuentran que la relación es significativamente positiva, aunque en algunos casos es negativa o incluso nula. Dentro de la revisión algunos de los estudios que presentan resultados positivos y significativos se encuentran: Choe (2003), Chowdhury & Mavrotas (2006), entre otros. Dentro de la relación encuentran que uno de los factores influyentes es el nivel de capital humano existente en el país anfitrión mostrando investigaciones con resultados positivos como los de Bengoa & Sánchez (2003) y Solomon (2011). Otro hallazgo son los mercados financieros bien desarrollados y los regímenes de apertura comercial, los cuales también representan efectos positivos en la relación IED-crecimiento económico. Entre las técnicas econométricas utilizadas por los autores anteriormente mencionados se incluyen la regresión OLS (mínimos cuadrados ordinarios), causalidad de Granger, enfoque de efectos fijos y aleatorios, entre otros.

Borensztein, De Gregorio, & Lee (1998) encuentran en una muestra de 69 países en desarrollo que el efecto de la IED en el crecimiento depende del nivel de capital humano disponible en la economía receptora, además que la IED contribuye en mayor medida al crecimiento que la inversión doméstica. Baracaldo, Garzón y Vásquez (2006) analizan el crecimiento económico y los flujos de inversión extranjera directa en 92 países a nivel mundial durante el periodo 1990-2001, sus resultados indican que la IED sí tiene efectos positivos en el crecimiento económico, independientemente del nivel de desarrollo de los países, además concluyen que el grado de formación bruta de capital, la infraestructura, capital humano y los niveles de comercio exterior de cada economía permiten reforzar los efectos que tiene la IED sobre el crecimiento. En América latina se encuentran algunos estudios como el de Amal, Tomio & Raboch (2010) sobre los factores determinantes de la IED, por medio de datos de panel de ocho países entre 1996 y 2008 hallaron que las condiciones para el crecimiento, estabilidad macroeconómica y apertura al comercio se relacionan positivamente con el atractivo de IED para las empresas extranjeras, así como mejores prácticas institucionales y políticas. Además indican que las multinacionales no solamente buscan alcanzar ventajas respecto al acceso a recursos o bajos costos, sino que también están desarrollando estrategias de mercado y búsqueda de eficacia en la región.

Álvarez, Barraza y Legato (2009) estudiaron el impacto de la IED sobre el crecimiento económico para una muestra de 14 países de Latinoamérica, por medio de un modelo de crecimiento endógeno medido en términos per cápita, utilizaron la metodología de datos de panel en el periodo 1996-2003, los resultados de esta investigación evidencian que la IED tiene un impacto positivo y fomenta tanto la formación de capital como el crecimiento económico, así mismo, Bengoa & Sánchez (2003) con un análisis de datos de panel,

en una muestra de 18 países de América latina en el periodo 1970-1999, encontraron que la IED está positivamente correlacionada con el crecimiento económico, resaltando como factor importante el nivel de capital humano, estabilidad económica y mercados liberalizados. Suanes (2012) también estudió la relación con la metodología de datos de panel, en 18 países de América Latina durante los años 1980-2009, encuentra que la IED esta positivamente correlacionada con el crecimiento económico, de la misma forma comprueba la existencia de una relación positiva entre la desigualdad de ingresos y la IED, lo cual implica que si bien la IED contribuye con el crecimiento económico no favorece la relación de ingresos.

En contraste con los resultados positivos, en las economías en desarrollo se encuentran estudios como el de Carkovic & Levine (2002) cuyos resultados indican que la IED no ejerce de manera independiente un impacto positivo sobre el crecimiento. Además, Mencinger (2003) indica que existe la relación entre la IED y el crecimiento, pero es negativa, el autor explica que esto puede ser causado por las adquisiciones, las cuales representaron para el periodo de análisis la principal entrada de IED.

METODOLOGIA

Datos

El análisis empírico procura determinar la relación entre los niveles de IED y el crecimiento en 18 países de América Latina (Argentina, Bolivia, Brasil, Chile, Colombia, Costa Rica, República Dominicana, Ecuador, El Salvador, Guatemala, Honduras, México, Nicaragua, Panamá, Paraguay, Perú, Uruguay y Venezuela) observados durante el periodo 1990-2012. El número de países seleccionados y el periodo de estudio se eligen con base en la disponibilidad de datos. La investigación se lleva a cabo en tres etapas: primero se hace la revisión de la literatura y se especifica el modelo junto con las variables y su signo esperado. La segunda etapa consiste en la recopilación de los datos y la estimación de los coeficientes del modelo en Stata 12. Finalmente en la tercera etapa se analizan los resultados. Con base en la teoría del modelo de crecimiento endógeno, algunos de los factores que influyen en el proceso de crecimiento son la formación de capital, investigación y desarrollo, así como el capital humano, teniendo en cuenta lo anterior y las variables trabajadas en las investigaciones examinadas, se define la tasa de crecimiento del PIB y la IED como principales variables de estudio, el promedio de años cursados como proxy del capital humano y la formación bruta de capital neto como variables de control para observar el comportamiento de la relación IED-crecimiento.

El modelo a estimar es el siguiente:

$$pib_{it} = \beta_1 ied_{it} + \beta_2 esc_{it} + \beta_3 fbcn_{it} + \mu_{it} \quad (1)$$

Donde *pib* corresponde a la variable dependiente, $i = 1 \dots 18$ es el país, $t = 1 \dots 23$ el periodo de tiempo analizado y μ_{it} el error el cual se puede descomponer en tres partes:

$$\mu_{it} = \alpha_i + \phi_t + \varepsilon_{it} \quad (2)$$

Donde α_i representa el componente individual que es invariante a través del tiempo, ϕ_t un componente temporal que es invariable a través de los individuos y por último el término ε_{it} que constituye el efecto de todas las otras variables que varía a través del tiempo y entre individuos (Pérez, 2006). La estructura del error va variar dependiendo si se trabaja con un modelo de efectos fijos o efectos aleatorios.

La definición, descripción y signo esperado de las variables se muestra en la Tabla 1.

Tabla 1: Descripción de las Variables

Variable	Símbolo	Descripción	Unidad de Medida	Fuente	Signo Esperado
<u>Dependiente</u> PIB	pib	Tasa de crecimiento del PIB.	Tasa media de crecimiento anual del PIB.	UNCTAD	NA
<u>Explicativas</u> IED	ied	Flujos de entrada de IED.	Medidos como porcentaje del PIB.	UNCTAD	(+)
Capital Humano	esc	Promedio de años de estudio de la población de 25 a 59 años de edad, por sexo y área geográfica.		CEPAL	(+)
Formación bruta de capital neto	fbcn	Formación bruta de capital neto (Formación bruta de capital menos IED).	Medido como porcentaje del PIB.	World Bank national accounts data.	(+)
Stock IED	ieds	Stocks de IED	Medidos como porcentaje del PIB.	UNCTAD	(+)

RESULTADOS

Estadísticos Descriptivos

Las estimaciones preliminares muestran en la Tabla 3 los estadísticos descriptivos para todas las variables, las mayores desviaciones estándar corresponden a las variables de ieds, fbcn y pib, respectivamente.

Tabla 3: Estadísticos Descriptivos

Variable	Obs	Mean	Std. Dev.	Min	Max
pib	414	3.864113	3.561765	-10.89449	18.28661

esc	208	9.364904	1.308009	6.2	11.9
fbcn	414	17.14621	4.779768	-1.527236	36.61731
ieds	406	25.10643	16.9496	3.084048	83.10723

Fuente: Elaborado por los autores usando stata 12.0 La Tabla 3 resume los estadísticos descriptivos.

La tabla 4 presenta los coeficientes de correlación de las variables analizadas, la mayor correlación que presenta es la que se da entre las variables de stock de IED con los flujos de IED y escolaridad, así como IED-PIB. Esta matriz también indica que no existen problemas de multicolinealidad, puesto que las variables explicativas no tienen valores altos en las correlaciones.

Tabla 4: Matriz de Correlación

	pib	ied	esc	Fbcn	ieds
pib	1

ieds	0.1491	0.6964	0.5361	-0.2309	1

La Tabla 4 resume la correlación de las variables.

RESULTADOS ECONOMETRICOS

Se realizaron ocho estimaciones del modelo como se muestra en la Tabla 5. En las estimaciones se utilizaron los modelos de efectos fijos por país y efectos aleatorios, posteriormente para seleccionar entre los estimadores de un modelo de efectos fijos y uno aleatorio se realiza el test de Hausman, cuyo resultado indica que se rechaza la hipótesis nula, dado que se presentan diferencias sistemáticas en los efectos aleatorios y se selecciona el modelo de efectos fijos como la técnica apropiada de estimación. Para controlar la posible presencia de heterocedasticidad se usan errores estándar robustos.

Tabla 5: Resultados Econométricos

Fuente: elaboración propia. La tabla muestra las estimaciones de los coeficientes de los diferentes modelos, "fe" se refiere a fixed effects y "re" random effects. * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$. Variable dependiente: PIB

Los resultados de la Tabla 5 con relación a la variable IED evidencian valores positivos en todas las estimaciones del modelo, como se esperaba, sin embargo, al analizar la primer columna de los resultados, se observa un coeficiente positivo, pero no significativo, en el modelo en que se incluyen todas las variables se puede observar que por cada unidad de IED el crecimiento económico aumentaría en 0.35277936, no obstante, es notorio el efecto que ejercen las variables de control, puesto que las estimaciones de los coeficientes de la IED se tornan positivos y significativos en la medida en que se incluyen las variables de escolaridad y formación bruta de capital. En particular, se puede observar como el coeficiente de la IED pierde significancia estadística cuando se excluye la formación bruta de capital, lo cual indica su poca robustez. De modo que aunque existe una relación positiva entre IED- crecimiento, el efecto de la IED no es tan fuerte sobre el crecimiento, en el caso de Latinoamérica. Estos resultados, concuerdan con Carkovic & Levine (2002) en el sentido de que la IED no ejerce de manera independiente un impacto positivo sobre el crecimiento.

Asimismo, para determinar el efecto de los stocks de IED sobre el crecimiento, se analiza el último modelo, se encuentra un coeficiente negativo aunque no significativo, lo que podría indicar la baja influencia que ha ejercido la acumulación de IED en el crecimiento en el periodo de análisis. En cuanto a las demás variables explicativas, la formación bruta de capital fijo muestra coeficientes positivos y significativos en todas las estimaciones, de esta manera, un aumento en una unidad de formación bruta de capital fijo representaría un aumento del 0.33606712 en el crecimiento del PIB, este resultado concuerda con lo encontrado por Baracaldo, Garzón y Vásquez (2006) respecto al efecto que ejerce la formación bruta de capital sobre el crecimiento. La variable escolaridad como proxy del capital humano presenta signo positivo, sin embargo este coeficiente no es significativo, de acuerdo a Bengoa & Sánchez (2003), estos resultados pueden ser atribuidos a la falta de calidad de los datos sobre capital humano. Es de anotar que los valores encontrados para esta variable, aunque no son estadísticamente significativos, presentan valores superiores, en un rango de 0.4 -0.6 respecto a los encontrados por Suanes (2012) que varían entre 0.05-0.007. Para el análisis e interpretación de los resultados obtenidos, es necesario ser cautos en cuanto al

hecho de que la disponibilidad de datos para algunos países respecto a la variable proxy del capital humano, limita el trabajo a un panel desbalanceado, razón por la cual se ve disminuida la muestra.

CONCLUSIONES

Con base en las estimaciones a través de la técnica econométrica de datos de panel con efectos fijos se puede concluir que los resultados de los modelos son consistentes con una relación positiva aunque débil entre la IED y el crecimiento, no obstante, el efecto aparentemente significativo que ejerce la IED sobre el crecimiento en América Latina durante el periodo de análisis para algunos modelos examinados. Esto puede explicarse con base en el tipo de IED que llega a estas economías, la cual se ha dado principalmente en forma de adquisiciones, que no suelen proporcionar nuevas capacidades a la economía. Dentro de las variables de control, es importante resaltar el efecto que ejerce la formación bruta de capital neto sobre el crecimiento. Con relación al capital humano, este presenta valores positivos en todas las estimaciones, aunque estos no son significativos, reflejan un efecto de complementariedad junto con la formación bruta de capital para explicar el comportamiento del PIB. Dada la creciente afluencia de IED en las economías en desarrollo, para futuras investigaciones es imperativo evaluar en un contexto más específico o microeconómico, si es posible por sectores o a nivel empresa, para tener una visión más detallada de la composición de la IED y así poder evaluar más concretamente el impacto que esta ejerce sobre el crecimiento.

RESUMEN

La siguiente investigación pretende determinar las tecnologías requeridas en los procesos contables y financiera de las pequeñas y medianas empresa - PYMES, buscando con ello la automatización de la información financiera, factor estratégico dentro de las organizaciones para lograr el incremento de la productividad y competitividad de las empresas objeto de estudio, este estudio posee un enfoque positivista-cuantitativo, con un tipo de investigación es descriptiva y diseño no experimental, de campo. La técnica de recolección de datos fue la encuesta con alternativas de respuesta tipo Likert; validada en su contenido con el juicio de 7 expertos; el cálculo de confiabilidad se realizó con el coeficiente Alfa de Cronbach, obteniendo un valor de 0,94. Los datos obtenidos se procesaron y analizaron utilizando la estadística descriptiva con la determinación de la media y de la desviación estándar, a través de baremos con el rango de los valores. La población estuvo conformada por 246 empresas de los sectores económicos del Municipio de Riohacha, constituida por dos poblaciones finitas, 223 empresas pequeñas y 23 empresas medianas. Como resultado de esta investigación se pudo evidenciar que las PYMES, no cuenta con un sistema de Gestión Tecnológica, ya que no poseen las herramientas o soportes tecnológicos adecuados para la preparación y presentación de la información de los procesos contables y financieras acorde con las exigencias actuales del mercado globalizado, y finalmente, se emitieron algunas conclusiones derivadas de la investigación.

PALABRAS CLAVES: Gestión Tecnología, Lenguaje Digital, Herramientas Tecnológicas, Procesos Contables y Financiera

TECHNOLOGY MANAGEMENT: STRATEGIC FACTOR IN THE AUTOMATION OF FINANCIAL INFORMATION IN SMALL AND MEDIUM ENTERPRISES

ABSTRACT

The following research aims to determine the technologies required in the accounting and financial processes of small and medium enterprises - SMEs seeking thereby automating financial reporting, strategic factor within organizations to achieve increased productivity and competitiveness companies under study, this study has a-quantitative positivist approach with a type of research is descriptive, not experimental design field. The data collection technique was the survey with Likert alternatives; validated in content with the trial of seven experts; Reliability calculation was performed using the Cronbach alpha coefficient, obtaining a value of 0.94. The data were processed and analyzed using descriptive statistics to determine the mean and standard deviation, through scales with the range of values. The population consisted of 246 companies of the economic sectors of the Municipality of Riohacha, consisting of two finite populations, 223 small and medium enterprises 23. As a result of this investigation it was evident that SMEs do not have a system of Technology Management, and lacking the proper tools or media technology for the

preparation and presentation of the information consistent accounting and financial processes with current requirements the global market, and finally, some conclusions from research were issued.

KEYWORDS: Management Technology, Digital Language, Technology Tools, Accounting And Financial Processes

INTRODUCCIÓN

La integración de los mercados nacionales con los mercados globales constituyen un importante proceso a través de la globalización y la Gestión Tecnológica ofreciendo muchas oportunidades para optimar el desempeño de las empresas permitiendo generar conocimiento, relacionado con los procesos de creación, desarrollo, transferencia y uso de la tecnología a pequeñas y medianas empresas de cualquier sector económico. Atendiendo a las anteriores consideraciones, Soto (2005) manifiesta que la tecnología puede incrementar considerablemente la creatividad, eficiencia y productividad de los negocios. La adopción de tecnologías que representen ventajas competitivas, les permite a las empresas competir efectivamente en la economía digital de un mundo global con la capacidad de tomar decisiones con rapidez y flexibilidad. Es importante destacar que según Rincón et al (2006), la informática en la contabilidad desde los años 80 en Colombia se ha convertido en una importante herramienta en el manejo de la información, permitiendo acumular y calcular mayor cantidad de datos en poco tiempo, haciendo que los procesos repetitivos sean fáciles, seguros y rápidos, eliminando errores comunes que se daban en los cálculos manuales. La informática ha eliminado los engorrosos procesos manuales y la mano de obra excesiva en estas actividades administrativas. En la actualidad, se observa que las pequeñas y medianas empresas del municipio de Riohacha, presentan algunos rasgos muy particulares; sus administradores tienen poca tendencia a asumir los nuevos retos relacionados con la gestión tecnológica en los procesos contables y tributarios, trayendo consigo muy escasa innovación de los productos o servicios.

Por otro lado, se observa que las PYMES enfrentan las exigencias de una sociedad caracterizada por la información a través de los medios tecnológicos, sobre todo por entidades de ente y control como la DIAN y la Cámara de Comercio, por las exigentes plataformas que utilizan para armonizar la información contable de las empresas. Resulta claro reconocer que gran parte del sistema de información formal en las empresas está sustentado por la contabilidad y de la eficacia de la información financiera depende la rapidez, el acierto y las decisiones que tome la alta gerencia. En consecuencia, es necesario contar con las herramientas o soportes tecnológicos adecuados, acorde con las exigencias actuales, de tal manera que se pueda producir cambios profundos en la información financiera de las PYMES del municipio de Riohacha. La presente investigación se estructuró de la siguiente manera: revisión literaria para referenciar el marco teórico, explicación de la metodología aplicada, mostrando en detalle el análisis e interpretación de los resultados, sobre los cuales se realizaron las conclusiones y finalmente se mostraron las referencias bibliográficas y biográficas.

REVISIÓN DE LITERATURA

La automatización de la información financiera como factor estratégico de gestión tecnológica dentro de las organizaciones se plantea a través de cuatro aspectos importantes: La estructura funcional para la gestión tecnológica, Adquisición y uso de tecnología, Adaptación a los cambios tecnológicos y la Tecnologías aplicadas en los procesos. En cuanto a la estructura funcional para la gestión tecnológica, Turriago (2002) plantea que existen cuatro áreas críticas que deben ser tenidas en cuenta al momento de adelantar procesos gerenciales de innovación al interior de las organizaciones empresariales: a) el staff de las organizaciones técnicas; b) la estructura de la organización, que debe responder a la unión exitosa entre el flujo de información técnica, el mercado y las tendencias de la actividad de investigación y desarrollo I&D; b) los

vínculos de la estructura de la organización empresarial con el mercado para incorporar exitosamente dichas innovaciones al mercado y d) los métodos de planificación estratégica que promuevan la integración de la alta gerencia de tecnología con todas las dependencias.

Para Hamilton & Pezo (2004), la Gestión Tecnológica es el proceso de adopción y ejecución de decisiones sobre políticas, planes, estrategias y acciones relacionadas con la creación, difusión y uso de la tecnología. Está integrada por un conjunto de teorías, modelos y herramientas aplicadas a: La planeación, organización, operación, orientación control y coordinación de los mecanismos y sistemas informáticos; el flujo de acciones e interacciones que constituyen el proceso de desarrollo tecnológico y las interacciones del desarrollo tecnológico con otros procesos sociales. En ese sentido, Rincón & Peláez (2013) expresan que la adquisición e implementación de tecnología en las empresas, debe ser un proceso planeado que responda tanto a las necesidades como a los objetivos generales. Enfatizan además que existe la necesidad de hacer gestión tecnológica durante el uso de la tecnología, desarrollando estrategias diseñadas para convertir la experiencia en producción y mantenimiento, y en procesos de aprendizaje deliberados, mediante la observación, registro y análisis de esa experiencia.

Lo anterior indica, que la gestión tecnológica en el uso de la tecnología, tiene el objetivo de usar la experiencia como fuente de aprendizaje consciente; procesos de aprendizaje planeados, organizados y desarrollados para una asimilación plena de la tecnología, y lograr así una explotación de su máximo potencial, con la optimización, adecuación y adaptación a las condiciones cambiantes del mercado donde opera. Otro componente importante en esta investigación son los procesos contables y tributarios, iniciando con Bernal (2004), quien expresa que los procesos deben ser compatibles con los objetivos, los cuales se descomponen en una serie de procedimiento y a su vez en métodos. Un cuerpo coordinado de procesos, procedimientos y métodos, que responden al logro de los objetivos, representan el corazón del sistema, ya que es allí justamente donde ocurre la transformación que permite convertir insumos en productos, que van nuevamente a cumplir la misión. El mismo autor enuncia que los procesos son una serie de acciones u operaciones que se realizan de acuerdo con las normas, unos principios, leyes y reglas. Los principales procesos que abarca información financiera son los siguientes:

Clasificación y archivo de la documentación
Verificación y validación de datos
Registro de las transacciones en los libros correspondientes
Ajustes y reclasificación
Cierre del ejercicio

Por otro lado, Rincón et al (2006) menciona la relación tecnología y procesos contables cuando sostiene que los programas informáticos contables se obtienen según las necesidades y liquidez de la empresa, tienen la misma estructura, pues deben cumplir con los mismos parámetros contables y legales, general mente se diferencian por su forma, color y orden, pero siguen realizando las mismas tareas. Algunos de los programas hacen los procesos más rápido, menos engorrosos, otros pueden acumular mayor cantidad de datos, entre otras cosas. Generalmente, las aplicaciones contables se dividen en módulos (Comercial, Nomina, Producción, Cartera, Inventarios, Conciliación Bancaria, entre otros), cada aplicación se diferencia en su distribución. Cada módulo realiza una tarea que se enlaza a los demás módulos. Es importante mencionar también cómo ha evolucionado la presentación de la información a través del lenguaje digital de los Negocio - XBRL (Extensible Business Reporting Lenguaje), sobre el particular Eslava (2013) menciona que éste nace para simplificar la automatización del intercambio de información financiera mediante el uso de XML. La idea de fondo de esta iniciativa no era otra que la de estandarizar el formato con el que la información financiera se distribuye entre los diferentes proveedores y consumidores.

Lo que aporta XBRL como novedoso en su característica de ser XML (Extensible Management Language). El XML es el lenguaje utilizado en internet para el intercambio de información. Un informe de la empresa

expresado en XBRL puede, por ejemplo, ser visualizado en un navegador de internet, capturado en una hoja Excel o incorporado en una base de datos sencilla. Por lo tanto permite crear, recopilar, integrar, consolidar, distribuir, presentar y analizar información empresarial, de forma eficiente e independiente de plataformas y aplicaciones.

METODOLOGÍA

La actual investigación se circunscribe a un diseño no experimental, puesto que se realizó sin manipular deliberadamente o de forma intencional la variable de estudio, en tal sentido y respondiendo al criterio de espacialidad u origen de los datos, es oportuno decir también que este estudio es descriptivo, debido a que se describieron los sucesos y fenómenos en función de la realidad. El tipo de investigación se identificó con los estudios de campo, ya que se llevó a cabo en los sitios donde se presenta el fenómeno objeto de estudio y en los cuales se recolectó la información directamente por parte de los investigadores. Con base en los objetivos de esta investigación, se seleccionaron 246 empresas de los sectores económicos de Riohacha, conformada por dos poblaciones finitas, 223 empresas pequeñas y 23 empresas medianas, datos obtenidos del diagnóstico del mercado laboral 2012. Posterior a ello para el establecimiento del tamaño de la muestra, se aplicó la siguiente formula estadística:

$$n = \frac{Z^2 * N * P * Q}{E^2 * (N - 1) + (Z^2 * P * Q)}$$

Siendo:

n = muestra

N = población

E= error máximo

P= proporción

Z= Coeficiente de confianza

Q = 1-P

$$n = \frac{(1,96)^2 * (246) * (0,5) * (0,5)}{(0,5)^2 * (246 - 1) + (1,96)^2 * (0,5) * (0,5)} = 150$$

$n = 150$

Siendo:

N= Población = 246

E = 5%

Nivel de confianza= 95%

Z =Coeficiente de confianza= 1,96

P=50%

Q=50%

Se diseñó un instrumento en escala Likert, la validada en su contenido con el juicio de 7 expertos; el cálculo de confiabilidad se realizó con el coeficiente Alfa de Cronbach, obteniendo un valor de 0,94, para dar cumplimiento a los objetivos de la investigación, se procesaron los datos recolectados en el instrumento, mediante la aplicación del software estadístico SPSS 20. Para el análisis de cada una de las dimensiones, se decidió utilizar los parámetros establecidos en la estadística descriptiva, en la cual se emplea la media como medida de tendencia central y la desviación estándar como medida del grado de dispersión de las respuestas. Para la interpretación de los estadísticos descriptivos y elaboración de las tablas de resultados fueron utilizados baremos de interpretación de la media y desviación estándar, los cuales se observan en las tablas 1 y 2, donde se aprecia el intervalo, categoría e interpretación.

Tabla N° 1: Categoría de Análisis Para la Interpretación de la Media

Categoría	Intervalo	Interpretación
Muy alto nivel	$4,21 < \bar{x} \leq 5,00$	Ubica la actividad analizada dentro de una frecuencia muy alta.
Alto nivel	$3,41 < \bar{x} \leq 4,20$	Ubica la actividad analizada dentro de una frecuencia alta.
Moderado nivel	$2,61 < \bar{x} \leq 3,40$	Ubica la actividad analizada dentro de una frecuencia media.
Bajo nivel	$1,81 < \bar{x} \leq 2,60$	Ubica la actividad analizada dentro de una baja frecuencia
Muy bajo nivel	$1,00 \leq \bar{x} \leq 1,80$	Indica que la actividad analizada no se está ejecutando

Fuente: Elaboración propia (2015)

Tabla N°2: Categoría de Análisis Para la Interpretación de la Desviación Estándar

Categoría	Intervalo	Interpretación
Muy alta dispersión	$2,00 < DE \leq 2,50$	Ubica la actividad analizada dentro de una muy alta dispersión.
Alta dispersión	$1,50 < DE \leq 2,00$	Ubica la actividad analizada dentro de una alta dispersión.
Moderada dispersión	$1,00 < DE \leq 1,50$	Ubica la actividad analizada dentro de una moderada dispersión.
Baja dispersión	$0,50 < DE \leq 1,00$	Ubica la actividad analizada dentro de una baja dispersión
Muy baja dispersión	$0,00 \leq DE \leq 0,50$	Indica que la actividad analizada posee una muy baja dispersión

Fuente: Elaboración propia (2015)

RESULTADOS

Al concluir la investigación, se muestran los resultados obtenidos al analizar las dimensiones de la variable; Gestión tecnológica como factor estratégico en la automatización de la información financiera en la PYMES, tal como se presenta en la Tabla 3, donde se observa que se ubica en la categoría bajo nivel con una media aritmética de 2.27 y una baja dispersión en las respuestas con una desviación estándar de 0.83, a continuación se presenta detallada cada una de las dimensiones.

Tabla 3: Gestión Tecnológica Como Factor Estratégico En la Automatización de la Información

Dimensiones	Media	Categoría	Desviación Estándar	Categoría
Estructura funcional para la gestión tecnológica	2.06	Bajo Nivel	0.64	Baja Dispersión
Adquisición y uso de tecnología	1.89	Bajo Nivel	1.00	Baja Dispersión
Adaptación a los cambios tecnológicos	2.53	Bajo Nivel	0.89	Baja dispersión
Tecnologías aplicadas en los procesos	2.60	Bajo Nivel	0,77	Baja dispersión
Variable	2.27	Bajo Nivel	0,83	Baja Dispersión

Fuente: Elaboración propia (2015).

La Dimensión: Estructura Funcional Para la Gestión Tecnológica

En la Tabla 3, se observa el comportamiento de la dimensión estructura funcional para la gestión tecnológica, el cual presenta un valor de la media de 2.06 y una desviación estándar de 0,64, ubicándose en la categoría bajo nivel y una baja dispersión en las respuestas. Las opiniones de los encuestados, permiten apreciar que las PYMES de los sectores económicos del municipio de Riohacha, no cuenta con una estructura funcional que favorece la consecución de los objetivos tecnológicos planteados por las empresas, según lo plantea Turriago (2002). Existen cuatro áreas críticas que deben ser tenidas en cuenta al momento de adelantar procesos gerenciales de innovación al interior de las organizaciones empresariales como es su estructura funcional.

La Dimensión: Adquisición y uso de tecnología Según la Tabla 3, se presenta en la dimensión adquisición y uso de tecnología una media de 1.89 ubicándose en la categoría de bajo nivel y una baja dispersión de las respuestas de los sujetos encuestados con una desviación estándar de 1.00, según la apreciación de los encuestados, se evidencia que existe una escasa formación y experiencia de los empresarios en materia de gestión tecnológica, presentándose ausencia de conocimientos y experiencias para acometer procesos de selección, negociación de los diferentes sistemas de información, ya que en su totalidad las empresas disponen solamente de elementos básicos como computadores, equipos con tecnologías de segunda, tercera o más antigua generación, además en cuanto a las conexión a internet se presencia ineficiencias en las redes, lo cual no coincide con lo establecido con Rincón & Peláez (2013), que expresan que la adquisición e implementación de tecnología en las empresas, debe ser un proceso planeado que responda tanto a las necesidades como a los objetivos generales de la empresa.

La Dimensión: Adaptación a los cambios tecnológicos Se presentan los resultados de la dimensión adaptación a los cambios tecnológicos en la Tabla 3, sus registros permiten ubicarla en la categoría de bajo nivel con un valor de la media aritmética de 2.58 y una baja dispersión de las respuestas con una desviación estándar de 0.89. De acuerdo a las respuestas de los sujetos encuestados, se evidencia una baja presencia de las PYMES para adaptarse a los cambios tecnológicos. Lo cual según el postulado de Eslava (2013), se evidencia que la mayoría de las PYMES todavía utilizan técnicas manuales en papel con los procesos contables, tributarios. Por otro lado, desconocen la mayoría de ellos los softwares financieros y los diferentes lenguajes digitales de Negocios - XBRL (Extensible Business Reporting Lenguaje), con la cual debe ponerse a disposición de los usuarios, una información completa y actualizada.

La Dimensión: Tecnologías aplicadas en los procesos Muestra la tabla 3 los resultados de la dimensión tecnologías aplicadas en los procesos, donde se observa una media de 2.27 ubicándolas en la categoría de bajo nivel y una baja dispersión de las respuestas con una desviación estándar de 0.77. También se observó que de acuerdo a las respuestas de los sujetos encuestados la tecnología empleadas por la empresa PYMES es escasa y generalizada, no tienen implementado tecnologías de consultas de operaciones con entidades bancarias y financieras en línea a través de la web, así mismo se pudo evidenciar la poca interacción con las entidades del estado, específicamente con la información y presentación de las declaraciones tributarias ante la Administración de impuestos y Aduanas Nacionales, Aunque no puede desconocerse, que algunas de las medianas empresas han informatizado ciertas actividades de la organización como los ingresos, inventarios cartera de clientes, activos fijos, nominas, control de compras, aunque las mayorías de las pequeñas no han podido iniciar estos procesos, debido a la exagerada concentración de la dirección en una sola persona, que generalmente resulta ser el propietario. Por último, se evidencio que las PYMES del municipio de Riohacha, no cuentan con políticas contables claras en cuanto a los procedimientos financieros, para la cual Bernal (2004), expresa que los procesos deben ser compatibles con los objetivos, los cuales deben realizarse a través de una serie de acciones u operaciones que se ejecutan de acuerdo con las reglas, principios, leyes y normas nacionales e internacionales.

CONCLUSIONES

Una vez finalizada la investigación puede concluirse que las PYMES del municipio de Riohacha, no tienen establecido un sistema de Gestión Tecnológica, lo cual no cuenta con las herramientas tecnológicas que les permitan preparar y presentar la información contable y financiera. De igual manera, de acuerdo a los resultados obtenidos, es necesario establecer programas de capacitación a las PYMES del municipio de Riohacha, en la preparación y presentación de la información contable y financiera en las PYMES, debido a que es obligatoriedad de las empresas, entrenarse y adaptarse a las nuevas tecnologías en todos los procesos, para alcanzar ventajas competitivas en los mercados nacionales e internacionales. Al mismo tiempo a los empresarios deben acceder a nuevos software financieros y contables, máxime cuando se tienen altas exigencias en los lenguajes digitales de los Negocio - XBRL (Extensible Business Reporting Lenguaje), en donde es menester poner a disposición de los usuarios una información completamente

estandarizada, preparada para el tratamiento automatizado por parte de aplicaciones informáticas. Es por ello que este estándar se está aplicando ya a numerosas áreas de la contabilidad, mediante el desarrollo de taxonomías, que son esquemas en XML que permiten codificar diversos documentos con información económica y financiera. Por otro lado, es importante concluir que las PYMES del Departamento de La Guajira, no tiene establecidas políticas claras, para la adquisición y uso de tecnología como fomento a la innovación, ya que Las TIC se han ido introduciendo vertiginosamente en la sociedad, la economía, las organizaciones tanto públicas como privada lo cual han integrado en sus procesos y actividades, convirtiendo la información en un importante recurso.

DIAGNÓSTICO DE LAS HABILIDADES Y ACTITUDES DE LOS ESTUDIANTES QUE ESTÁN POR EGRESAR DE LA LICENCIATURA EN GESTIÓN TURÍSTICA DE LA UNIVERSIDAD AUTÓNOMA DE AGUASCALIENTES

Verónica Ballin de Luna, Universidad Tecnológica de Calvillo
Araceli Gutiérrez Guzmán, Universidad Autónoma de Aguascalientes
Haydee Aguilar Romero, Universidad Autónoma de Aguascalientes
Juan Carlos Moreno Aguilera, Universidad Autónoma de Aguascalientes

RESUMEN

La investigación parte de la inquietud y necesidad de visualizar un perfil basado en competencias a alumnos de la Licenciatura en Gestión Turística de la UAA. Y tendremos que comenzar diciendo que la Universidad Autónoma de Aguascalientes siempre en busca de la profesionalización para sus educandos por medio de actualizaciones constantes, tanto a los programas como a sus docentes; ha logrado certificaciones a nivel Nacional e Internacional, lo cual apoya a los estudiantes para que su formación sea de calidad, en el caso de la licenciatura en Gestión Turística entonces se busca consolidar profesionistas que cubran las necesidades que el campo laboral requiere y por ello es que en el turismo el capital humano es considerado como el recurso más importante que se tiene para afrontar los retos del sector y ofrecer servicios de calidad, de esto, resulta fundamental analizar las competencias que poseen los profesionales del área. Bajo esta premisa, en este trabajo se presenta un diagnóstico, mediante el cual se identificaron las habilidades y actitudes que tienen los alumnos que están por egresar de la Lic. en Gestión Turística de la UAA y se identificaron áreas de oportunidad para implementar estrategias en los programas académicos que apoyen al alumnado.

PALABRAS CLAVES: Competencias Profesionales: Habilidades y Actitudes, Alumnos

ABILITY AND ATTITUDE DIAGNOSTICS OF THE STUDENTS OF THE UNIVERSIDAD AUTONOMA THAT ARE ABOUT TO GRADUATE FROM TOURISTIC ADMINISTRATION

ABSTRACT

This investigation is part of a concern and need to visualize a profile based on competition for the students of Touristic Administration in the UAA. And we'll need to start by saying that the Universidad Autonoma de Aguascalientes always looks to professionalize their students through constant means of updating, for both their programs and teachers: they have obtained certification both on a national and international level which help the students with their quality formation. in the case of Touristic Administration we are looking to consolidate professionals that are needed in the labor field and that's why in tourism the human capital is considered the most important resource that exists to confront the sector's challenges and offer quality services, from that, it results fundamental to analyze the competition that the professionals in that area possess. Under this premise, in this assignment we are presenting a diagnostic, in which the abilities and attitudes of the students who are about to graduate from Touristic Administration from the Universidd Autonoma de Aguascalientes are identified and the ateads of opportunity to implement strategies within the academic programs that support the students are identified as well.

INTRODUCCIÓN

Esta investigación cualitativa se centra en la búsqueda y corroboración de las habilidades y actitudes que los alumnos de LGT del 8vo. Semestre de la UAA y que están por egresar, con la finalidad de detectar si existen posibles áreas de mejora por desarrollar en los alumnos antes de su egreso. Considerando que vivimos en una época que la idea de la formación básica no es suficiente para ejercer sino que hoy en día ya es necesaria una formación complementaria a una titulación (en forma de curso o especialización) y son las empresas las que también opinan sobre los requisitos que los titulados deben de cumplir más allá del conocimiento fundamental académico. Los aspectos tangenciales son a los que nos vamos a referir como competencias y habilidades profesionales, que el mercado laboral demanda y que normalmente no están contempladas de forma sistemática en los planes de estudios.

Competencia: “pericia, aptitud, idoneidad para hacer algo o intervenir en un asunto determinado”

Competente: “buen conocedor de una técnica, de una disciplina, de un arte”

Habilidad:

Capacidad y disposición para una cosa, Gracia y destreza para ejecutar una cosa que sirve de adorno al sujeto, como bailar, montar a caballo etc. Cada una de las cosas que una persona ejecuta con gracia y destreza.

Según el diccionario de la Real Academia de la Lengua En este contexto, las competencias y habilidades nos ayudan a comenzar una actividad profesional, como posteriormente a desarrollarla con éxito dentro de cualquier área; ya que se pueden adquirir de forma general para organizar actividades profesionales y para desarrollar de forma cotidiana sea la que esta sea.

REVISIÓN LITERARIA

Vivimos en una época que la idea de la formación básica no es suficiente para ejercer sino que “hoy en día ya es necesaria una formación complementaria a una titulación, ya sea en forma de curso o especialización” (Van- Der Hofstadt Román y Gómez Gras, 2006, pág.1) y son las empresas las que opinan sobre los requisitos que los titulados deben de cumplir más allá del conocimiento fundamental académico. Estos mismos autores refieren que los aspectos tangenciales son a los que nos vamos a referir como competencias y habilidades profesionales, que el mercado laboral demanda y que normalmente no están contempladas de forma sistemática en los planes de estudios. Gómez Grass (2006) refiere que ante la existencia de un número tan amplio de posibles competencias y habilidades que permiten desenvolverse mejor en el mundo del trabajo, casi tantas como profesiones, y siendo conscientes que en la práctica real es muy difícil separa unas habilidades de otras, pero si algunas nos ayudan a ser más competentes y a obtener una mejor calidad de vida, además de ser las que más fácilmente se pueden plantear de forma general, independientemente de la aplicación posterior concreta que se vaya hacer de ellas. En lo que refiere a las habilidades personales podemos mencionar la comunicación personal ,negociación, presentación de información en público, asertividad como habilidades relacionadas con la comunicación, liderazgo , trabajo en equipo, dirección de reuniones de trabajo, manejo del estrés, creatividad y solución creativa de problemas, gestión de conflictos y gestión de prioridades y del tiempo(Van- Der Hofstadt Román, 2006).

Para Rodríguez et al. (2009), “una competencia personal tiene que ver con una combinación integrada de conocimientos, habilidades, motivos y actitudes conducentes a un desempeño adecuado y oportuno en diversos contextos”. Según estos autores, el término competencia puede ser definido, de manera general como un “saber hacer, sobre algo, con determinadas actitudes”. “Las competencias y habilidades demuestran no solo ser útiles, sino necesarias, para la búsqueda de empleo, como posteriormente para desempeño del mismo” (Van- Der Hofstadt Román y Gómez Gras, 2006, pág.2) Ante la existencia de un número tan amplio de posibles competencias y habilidades que permiten desenvolverse mejor en el mundo del trabajo, casi tantas como profesiones, y siendo conscientes que en la práctica real es muy difícil separar unas habilidades de otras, pero si algunas nos ayudan a ser más competentes y a obtener una mejor calidad de vida, además de ser las que más fácilmente se pueden plantear de forma general, independientemente de la aplicación posterior concreta que se vaya hacer de ellas. En lo que refiere a las habilidades personales podemos mencionar la comunicación personal, negociación, presentación de información en público, asertividad como habilidades relacionadas con la comunicación, liderazgo, trabajo en equipo, dirección de reuniones de trabajo, manejo del estrés, creatividad y solución creativa de problemas, gestión de conflictos y gestión de prioridades y del tiempo (Van- Der Hofstadt Román y Gómez Gras, 2006, pág.169-465).

Objetivos

Detectar cuáles es el perfil de egreso, considerando las competencias y en específico las habilidades y actitudes que han adquirido y desarrollado durante su estancia los estudiantes de la Lic. En Gestión Turística del 8°. Semestre de la Universidad Autónoma de Aguascalientes, a través del contacto y observación de los futuros egresados, y poniendo en comparación los resultados obtenidos de los alumnos y de los docentes con respecto a sus actitudes. Por lo que el propósito fundamental de la investigación cualitativa es detectar y enlistar las habilidades y actitudes adquiridas por los estudiantes de 8°. Semestre de LGT de la UAA para poder definir parte de las competencias (habilidades y actitudes), el perfil de egreso y a su vez poder garantizar que los alumnos adquieren las competencias esenciales para desempeñarse eficazmente en el ámbito laboral.

METODOLOGIA

La Investigación considera un diagnóstico exploratorio y descriptivo, el cual permita tener “la posibilidad de llevar a cabo una investigación más completa sobre un contexto particular” (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2003, pág. 116) en futuras intervenciones. Estos mismos autores indican que los estudios exploratorios pueden ayudar a determinar tendencias, identificar áreas, ambientes, contextos o situaciones de estudio.

Instrumentos

Observación participante, entrevistas basada en encuestas prediseñadas donde se evalúan dos aspectos de los tres más importantes de las competencias del estudiante a punto de egresar, como son las habilidades y actitudes, en el análisis de la información se utiliza una escala de Likert para una más sencilla interpretación de los resultados.

Muestra

Probabilística aplicado a 12 alumnos a punto de egresar de la licenciatura y a 8 profesores que imparten asignatura con los estudiantes.

Procedimiento

Establecimiento del propósito u objetivo de investigación: realizar un diagnóstico. Documentación teórica del área de las competencias, de las habilidades y actitudes, de perfiles del turismo, de la etnografía, y de la investigación cualitativa, de competencias profesionales universitarias, y de los métodos de investigación entre otros.

Reuniones con un grupo de alumnos que están a punto de egresar de la Licenciatura en Gestión Turística del 8°. Semestre de la Universidad Autónoma de Aguascalientes para observar y analizar sus habilidades y actitudes.

Entrevistas a los mismos alumnos en cuanto a sus habilidades y actitudes.

Entrevistas a docentes que comparten aula o signatura con el grupo de alumnos que están a punto de egresar.

Recopilación y análisis de la información obtenida.

Obtención y presentación de resultados en base a la información obtenida.

Limitaciones

El tiempo es un gran condicionante para la recopilación de información y por lo tanto limita un amplio análisis y la obtención de algunos resultados. Los alumnos le dan poco interés o importancia a la investigación, pues consideran que ya no les sirve de mucho ya que están por egresar. Los profesores y sus cargas académicas no tienen suficiente tiempo para participar en la investigación además siempre existe recelo por que algunos profesores investigan y otros no.

Análisis de los Resultados

Comenzaremos el análisis de la información recabada con las Actitudes y dentro de los resultados obtenidos de la entrevista a los alumnos de LGT; encontramos que ellos (alumnos), consideran que la mayoría que tienen la actitud de respeto, seguida de la honestidad y la colaboración, posteriormente las actitudes de puntualidad, compromiso y solidaridad se encuentran visualizadas por el 50% de los estudiantes y las actitudes que solo algunos alumnos consideran tener o pocos de ellos son la amabilidad, la atención, el profesionalismo y la actitud de servicio. Aquí resulta evidente que los alumnos no tienen presente la actitud de servicio a pensar que es una carrera enfocada al 100% al área de servicio.(Gráfico de Actitudes contra porcentaje de Alumnos)

Figura 1: Actitudes Que Consideran Tener los Alumnos de la Licenciatura En Gestión Turística

Actitudes que detectan los Docentes en los Alumnos de LGT por egresar.

En las entrevistas realizadas a los profesores, estos expresaron que las actitudes que más se detectan en los alumnos de LGT. Se encuentran en primera instancia la actitud de servicio y la colaboración; en segundo lugar que son creativos y responsables y las actitudes que solo algunos cuantos presentan son la responsabilidad, el respeto, el entusiasmo y el positivismo. (Gráfico de actitudes contra porcentaje de docentes).

Figura 2: Actitudes Detectadas En los Alumnos de LGT. Por los Docentes

Figura 3: Comparativo de las Respuestas Entre Alumnos y Docentes Con Respecto a las Actitudes Detectadas

A continuación se muestra una tabla donde refleja la segunda parte de la entrevista a los alumnos de LGT, de la UAA, referente a las habilidades. Esta información se dividió en 3 apartados: una en competencias sistémicas, otras ciudadanas o sociales y las últimas refieren a competencias instrumentales. En el apartado de las competencias sistémicas los alumnos consideran tener la habilidad de trabajar en equipo, así como de actuar de manera reflexiva ante nuevas situaciones; y las que menos consideran tener, son la habilidad de gestionar proyectos seguida de desarrollar hábitos de vida saludable. En el apartado de las sociales o

ciudadanas se puede visualizar que consideran tener la habilidad de respeto a la diversidad cultural así como también les gusta actuar de manera responsable de sí mismos, las habilidades que menos consideran tener, son la apreciación de las obras humanas en sus diferentes manifestaciones artísticas.

RESULTADOS

Cuestionario de la Entrevista Cualitativa a los Alumnos

Preguntas	Núm. de Respuestas Obtenidas			
	Nunca	Casi Nunca	Casi Siempre	Siempre
Competencias Sociales Y Ciudadanas				
1. Le gusta actuar de manera responsable y consiente de sí mismo.		1	4	8
2. Respeta la dignidad de las personas en la convivencia humana aceptando la diversidad cultural.	1		2	10
3. Desarrolla una perspectiva ética, reflexiva y de compromiso hacia el bien en común	1	1	3	8
4. Se motiva y conduce hacia la mejora de la realidad social y natural		1	5	8
5. Le gusta contribuir al desarrollo sustentable de manera crítica y con acciones responsables		2	6	6
6. Desarrolla un sentido de pertenencia con los miembros de un grupo y otros.			7	6
7. Aprecia la obra humana en sus distintas manifestaciones artísticas y culturales.		1	7	5
Competencias Sistemicas				
8. Le gusta diseñar y gestionar proyectos pertinentes con iniciativa y espíritu emprendedor		1	8	5
9. Le gusta el trabajo en equipo así como de manera independiente			3	11
10. Le gusta aprender de manera autónoma y buscar la actualización permanente		1	6	7
11. Le gusta actuar de manera flexible ante nuevas situaciones			4	9
12. Le gusta desarrollar hábitos de vida saludable			8	6
13. Se considera una persona líder.		2	5	7
Competencias Instrumentales				
14. Usa de manera eficiente la tecnología de la comunicación y la información			6	7
15. Usa de manera correcta la lengua materna tanto en forma oral como escrita		1	2	10
16. Usa de manera correcta alguna(s) lengua(s) extranjera(s).		5	7	1
17. Considera tener un pensamiento crítico y reflexivo		1	5	7
18. Genera ideas innovadoras		1	6	5
19. Realiza procesos de investigación pertinentes y de calidad		1	7	5
20. Usa de manera adecuada los distintos lenguajes: matemático y lógico, entre otros		1	7	5
21. Se le facilita la toma de decisiones		1	5	7

Análisis de las Habilidades Detectadas Por los Docentes

En el último apartado observamos las competencias instrumentales y la mayoría de los alumnos piensan que tienen la habilidad de usar de manera correcta la lengua materna tanto en forma oral como escrita, seguida de un pensamiento crítico y reflexivo, de la facilidad en la toma de decisiones y la habilidad del uso eficiente de la tecnología; en contraste casi el 50% de los alumnos refieren que no cuentan con la habilidad de usar de manera correcta la lengua(s) extranjera(s).

Figura de Competencias Sociales y Ciudadanas

Figura de Competencias Sistemáticas

Figura de Competencias Instrumentales

En el análisis obtuvimos que el 50% de los profesores detectan que la creatividad y la organización son parte de las habilidades de los alumnos de LGT; posteriormente el 38% de los docentes detectaron que los alumnos hacen uso adecuado de la tecnología, que realizan un adecuado análisis y síntesis de la información, al igual que saben mantener relaciones interpersonales; en contraste identificamos que la gestión de la información, la iniciativa y el espíritu emprendedor, así como la capacidad de comunicarse en lengua extranjera son las que menos se vieron detectadas. En la segunda gráfica de esta página se muestran

las habilidades que los docentes consideran no tienen los alumnos de LGT. que están por egresar de la UAA.

Figura de Habilidades Detectadas Por Docentes a Alumnos

Figura de Habilidades Que NO TIENEN Los Alumnos Detectadas Por Docentes

CONCLUSIONES

El trabajo desarrollado presenta resultados muy positivos e importantes, y sobretodo destaca que los alumnos de LGT de 8°. Semestre, tienen desarrolladas gran parte de las habilidades y actitudes que el perfil de ingreso de la UAA, les requiere. Más sin embargo es importante resaltar que los alumnos adquirieron otras durante su estancia en la universidad, y que si las ponemos en valuación con las que hoy en día les requieren empresas o dependencias, organizaciones e instituciones profesionales del área, aún existen algunos apartados que son susceptibles de una nueva restructuración con la finalidad de apoyar las debilidades detectadas dentro de sus competencias a los alumnos, todo esto con el objetivo de que les permiten posicionarse en el campo laboral de manera satisfactoria.

También dentro de los resultados se destaca la disposición de los alumnos por desarrollar mejor algunas habilidades, como es el segundo y tercer idioma; y considerar lo detectado por los docentes como necesario: el análisis y gestión de la información es realmente indispensable en los alumnos, ya que estas habilidades se considera fundamentales para impulsar su desarrollo laboral y por lo tanto mejorar su desempeño, para que redunden en al perfeccionamiento del servicio ofrecido y en la satisfacción del su empleador y de los turistas. Por último a partir de esta investigación se ha creado conciencia entre los docentes sobre las habilidades y actitudes que los estudiantes deben de desarrollar en su estancia dentro de la universidad

Autónoma de Aguascalientes; lo cual apertura una línea de mejora en los programas y en la metodología de como impartir los mismos, con la finalidad de apoyar al desarrollo de las competencias de los alumnos.

POLÍTICAS DE INVESTIGACIÓN Y FOMENTO A LA INNOVACIÓN DE LAS UNIVERSIDADES PÚBLICAS DEL DEPARTAMENTO DE LA GUAJIRA

Edilberto Santos Moreno, Universidad de La Guajira
Lorena Esther Gómez Bermúdez, Universidad de La Guajira
Martha Josefina Castrillón Rois, Universidad de La Guajira

RESUMEN

La investigación tuvo como finalidad identificar las políticas de investigación y fomento a la innovación de los centros de investigación de las universidades públicas del departamento de La Guajira, Colombia. Sustentada, en los planteamientos teóricos de Medina (2009), Colciencias (2005), Pimienta (2000), Universidad del Rosario (2009), Utria (2006), El Marco legal de la Ciencia, Tecnología e Innovación (CTI) en Colombia, entre otros. Su accionar epistemológico es el enfoque positivista con metodología cuantitativa, de tipo descriptiva, de diseño no experimental, transeccional y de campo; la población estuvo conformada por dos Universidades Públicas del Departamento de la Guajira, como son la Universidad de la Guajira y la Universidad Abierta y a Distancia (UNAD), tomando como unidades de información los vicerrectores, directores de investigación y los líderes los grupos de investigación de ambas instituciones, lo cual representa un total de cuarenta y nueve (49) funcionarios. La técnica de recolección de datos fue la encuesta con alternativas de respuesta tipo Likert; validada en su contenido con el juicio de 7 expertos; el cálculo de confiabilidad se realizó con el coeficiente Alfa de Cronbach, obteniendo un valor de 0,92. Los datos obtenidos se procesaron y analizaron utilizando la estadística descriptiva con la determinación de la media y de la desviación estándar, a través de baremos con el rango de los valores. Los resultados arrojaron un bajo nivel de existencia de políticas de investigación y fomento a la innovación en las instituciones objeto de estudio. Luego se formularon lineamientos estratégicos para el desarrollo de este tipo de políticas. Finalmente, se emitieron algunas conclusiones derivadas de la investigación.

PALABRAS CLAVE: Innovación, Políticas Públicas, Centros de Investigación, Marco Legal, CTI

ABSTRACT

The research aimed to identify research policies and promote innovation in research centers of public universities in the department of La Guajira, Colombia. Sustained in the theoretical approaches of Medina (2009), Colciencias (2005), Pepper (2000), Universidad del Rosario (2009), Utria (2006), The Legal Framework of Science, Technology and Innovation (CTI) in Colombia, among others. Its action is the positivist epistemological approach with quantitative methodology, descriptive, non-experimental, transactional and field design; The population consisted of two public universities in the Department of La Guajira, such as the University of La Guajira and the Open University and Distance (UNAD), building information units vice chancellors, research managers and leaders of research groups both institutions, representing a total of forty-nine (49) members. The data collection technique was the survey with Likert alternatives; validated in content with the trial of seven experts; Reliability calculation was performed using the Cronbach alpha coefficient, obtaining a value of 0.92. The data were processed and analyzed using descriptive statistics to determine the mean and standard deviation, through scales with the range of values. The results showed a low level of existence of research policies and promoting innovation in the institutions under study. Then strategic guidelines for the development of this type of policies were formulated. Finally, some conclusions of the research were issued.

INTRODUCCIÓN

La economía global del conocimiento descansa en la innovación como factor de competitividad y crecimiento sostenido. La innovación, como proceso dinámico, depende de diversos factores: instituciones, estructuras productivas, capital humano, redes sociales, geografía o cultura, constituyéndose en una variable que merece ser analizada en el contexto organizacional. Se resalta que cada día crecen las evidencias de la relación entre el desarrollo tecnológico y el crecimiento económico, así como la importancia de la tecnología y la innovación en el sostenimiento de la competitividad de instituciones y países. Desde esa perspectiva, Colciencias (2005) refiere que la inversión en ciencia, tecnología e innovación ha sido una de las fuentes más importantes de la transformación económica y tecnológica. Tales inversiones deben formar parte de un contexto más amplio, con el fin de crear capacidades en ciencia, tecnología e innovación en las instituciones del sector educativo.

Es de primordial importancia fortalecer la contribución de las universidades colombianas al sistema de innovación; para lograrlo se requiere que reciban apoyo del estado para convertirse en instituciones de educación basadas en mayor medida en la investigación. Esto implica el desarrollo de capacidades, la creación y financiación de centros de investigación para construir una masa crítica en la investigación y la enseñanza y el estímulo a las universidades para desarrollar sus propias estrategias. Se requiere fortalecer la base de conocimientos y se formulen políticas de fomento a la investigación e innovación; es decir, establecer lineamientos de política, programas, proyectos, actividades y acciones que lleven a las universidades a fortalecer sus programas de pregrado, postgrado, investigación y extensión logrando cumplir con su responsabilidad de contribuir con el desarrollo económico y social de las regiones y del país. Sobre la base de las ideas expuestas, atendiendo la política educativa del gobierno colombiano, cuyo objetivo es transformar el sistema educativo en magnitud y pertinencia para garantizar la competitividad del país, conseguir una mejor calidad de vida y mayor equidad; teniendo claro que esta transformación se logra colocando a las universidades en el centro del proceso de desarrollo, se sustenta la intención de identificar las políticas de investigación y fomento a la Innovación establecidas en los centros de investigación de las instituciones públicas de educación superior del departamento de La Guajira, Colombia.

REVISIÓN DE LA LITERATURA

Políticas de Investigación y Fomento a la Innovación de las Instituciones de Educación Superior

Para Utría (2006), el desarrollo científico-tecnológico tiene que ver con la capacidad de un país de producir conocimiento y reflejarlo en una serie de productos que pueden ser artículos, patentes, productos etc., que implica no solo actividades de investigación, sino también de desarrollo tecnológico e innovación. Los países que siguen esta senda construyen un proceso de acumulación de conocimiento, donde forman una masa crítica de científicos e investigadores pioneros, que inician importantes proyectos universitarios. Estos se organizan y surgen grupos de Investigación con infraestructuras disponibles. En la medida en que se van generando estas capacidades, surgen agrupaciones económicas, empresarios innovadores, alianzas público-privadas, alianzas universidad-estado-empresa, y después se conforman conglomerados de innovación, investigación y producción. Este es el proceso normal, que implica la existencia de una cultura científica y tecnológica y una masa crítica de base, que se va transformando mediante determinadas medidas de política pública y la acción del mercado. En este contexto, en Colombia, desde el año 2007 se han producido nuevas políticas públicas, leyes y normas, que han modificado las dos coordenadas que inciden en la transición hacia una sociedad y una economía de conocimiento: el eje de la transformación productiva y social, y el eje del desarrollo científico y tecnológico. Surgen así, entre otras, la política de competitividad enfocada a la transformación productiva, la nueva ley de Ciencia, Tecnología e Innovación, la nueva política

de innovación, la ley de Regalías, la ley de Ordenamiento Territorial y los tratados de libre comercio (TLC). De este modo, han cambiado las bases y los criterios de organización del Sistema Nacional de Ciencia, Tecnología e Innovación. Medina (2009). Desde esa perspectiva, la universidad del Rosario (2009) establece la necesidad de agrupar en seis temas estratégicos todo lo concerniente con el fortalecimiento de la investigación, los cuales se constituyen en dimensiones alrededor de las cuales se debe organizar la Política de Investigación y Fomento a la Innovación de las instituciones de educación superior.

El primer eje hace referencia al fomento de un entorno propicio para la investigación en la Universidad, buscando consolidar el desarrollo de la investigación.

Desarrollar una estrategia de financiación de la investigación para viabilizar el desarrollo de esta última. Incrementar la visibilidad nacional e internacional de los resultados de la investigación por medio de publicaciones científicas en revistas internacionales indexadas.

Fortalecimiento de los Doctorados como estrategia para desarrollar investigación de calidad mundial.

Fomento a la inserción en redes internacionales de investigación.

Desarrollar una estrategia de valorización y gestión del conocimiento vinculándolo a procesos de apropiación social del mismo y fomento a la innovación.

Se señala además, que la Política de Investigación y Fomento a la Innovación de las Universidades debe desempeñar un papel importante en el cumplimiento de su Misión, definida en el Proyecto Educativo Institucional en términos de impartir una sólida formación ética, humanística y científica que, unida a la investigación y a una idónea y exigente docencia, permita a esta comunidad educativa formar integralmente personas insignes y actuar en beneficio de la sociedad, con un máximo sentido de responsabilidad. En función de lo expuesto, considerando que las políticas de investigación y fomento a la innovación deben asegurar una alta calidad en las funciones que llevan a cabo los centros de investigación, buscando responder de manera adecuada a las necesidades y exigencias de la sociedad; al desarrollo de nuevos conocimientos que alimenten las ciencias, las disciplinas y las profesiones y a la solución de problemas de la sociedad, para efecto de la presente investigación en el contexto de los centros de investigación de las instituciones públicas de educación superior, son consideradas las dimensiones: marco legal de la Ciencia, Tecnología e Innovación, políticas de financiación de la investigación, políticas de inserción en redes de investigación y políticas de visibilidad de los resultados de investigación. Marco Legal de la Ciencia, Tecnología e Innovación (CTI) En Colombia

En Colombia, el entorno de la Ciencia, Tecnología e Innovación, ha estado rodeado de diferentes acontecimientos que han aportado de gran manera a la conformación del sistema de Ciencia y Tecnología Nacional, dotado de importantes leyes, programas y documentos que fomentan el desarrollo de estas actividades. Los acontecimientos más importantes de Colombia en esta materia, son:

En el año 1990, se definió la Política Nacional de Ciencia, Tecnología e Innovación

En 1994, se establece el primer CONPES de Ciencia y Tecnología.

En el 2000, se expide el documento CONPES 3080 (Política de Ciencia y Tecnología 2000-2002)

En el 2009, se expide el CONPES 3085, orientado a fortalecer la institucionalidad del Sistema Nacional de Ciencia, Tecnología e Innovación.

En este mismo año, se aprueba la ley 1286 y se crea el Fondo Francisco José de Caldas y se transforma COLCIENCIAS en departamento administrativo, teniendo como objetivo general fortalecer el Sistema Nacional de Ciencia y Tecnología y a Colciencias para lograr un modelo productivo sustentado en la ciencia, la tecnología y la innovación, para darle valor agregado a los productos y servicios de nuestra

economía y propiciar el desarrollo productivo y una nueva industria nacional. Por medio de la mencionada Ley se desarrollan los derechos de los ciudadanos y los deberes del estado en materia del desarrollo del conocimiento científico, del desarrollo tecnológico y de la innovación, se consolidan los avances hechos por la Ley 29 de 1990, pretendiendo: Fortalecer una cultura basada en la generación, la apropiación y la divulgación del conocimiento y la investigación científica, el desarrollo tecnológico, la innovación y el aprendizaje permanentes. Definir las bases para la formulación de un Plan Nacional de Ciencia, Tecnología e Innovación. Incorporar la ciencia, la tecnología y la innovación, como ejes transversales de la política económica y social del país.

Transformar el Instituto Colombiano para el Desarrollo de la Ciencia y la Tecnología “Francisco José de Caldas” -Colciencias-, actualmente establecimiento público del orden nacional, en el Departamento Administrativo de Ciencia, Tecnología e Innovación que se denominará Colciencias. Transformar el Sistema Nacional de Ciencia Tecnología en el Sistema Nacional de Ciencia, Tecnología e Innovación (SNCTI). Fortalecer la incidencia del SNCTI en el entorno social y económico, regional e internacional, para desarrollar los sectores productivo, económico, social y ambiental de Colombia, a través de la formación de ciudadanos integrales, creativos, críticos, proactivos e innovadores, capaces de tomar decisiones trascendentales que promuevan el emprendimiento y la creación de empresas y que in-fluyan constructivamente en el desarrollo económico, cultural y social. Definir las instancias e instrumentos administrativos y financieros por medio de los cuales se promueve la destinación de recursos públicos y privados al fomento de la Ciencia, Tecnología e Innovación.

Articular y optimizar las instancias de liderazgo, coordinación y ejecución del Gobierno y la participación de los diferentes actores de la política de Ciencia, Tecnología e Innovación. Fortalecer el desarrollo regional a través de políticas integrales de descentralización e internacionalización de las actividades científicas, tecnológicas y de innovación, de acuerdo con las dinámicas internacionales. Orientar el fomento de actividades científicas, tecnológicas y de innovación hacia el mejoramiento de la competitividad en el marco del Sistema Nacional de Competitividad. Además de lo anterior, es necesario resaltar que una de las políticas de mayor reconocimiento y de mayor impacto en el tema de Ciencia y Tecnología, es la promulgada en el año 2008 bajo la consolidación del documento titulado “Colombia siembra y construye futuro”, que se denomina como la Política Nacional de Fomento a la Investigación y a la Innovación. Esta política busca crear las condiciones necesarias para que el conocimiento se convierta en un instrumento que aporte al desarrollo del país, priorizando áreas que se consideran fundamentales y que garantizarán la consolidación científica-tecnológica de las futuras alternativas productivas, como lo son: la identificación y uso sostenible de la biodiversidad, el aprovechamiento y la preservación de los recursos hídricos, el desarrollo de la investigación en ciencias de la salud y los estudios sociales colombianos concernientes a la paz y a la cohesión social. De igual manera, contempla los principios, el diagnóstico, los objetivos, las estrategias y los instrumentos de la propuesta que hace el gobierno nacional al país, se erige como pilar fundamental para potenciar a Colombia como una sociedad del conocimiento, buscando capitalizar los recursos naturales, intelectuales e institucionales con los que cuenta el país.

Políticas de Financiación de la Investigación

Para Medina (2009), el nuevo entorno de política pública en el país se ha enfocado en incrementar los recursos y capacidades de Sistema Nacional de Ciencia, Tecnología e Innovación a través de las regalías y de otras fuentes de financiación; pero en el futuro inmediato es necesario favorecer la integración de estos recursos y capacidades con el propósito de ampliar las oportunidades para que las personas y comunidades que trabajan por el desarrollo científico-tecnológico, efectivamente dirijan sus acciones hacia la transformación productiva y social de las regiones. Por su parte, la Universidad del Rosario (2009) desarrolla como estrategia de financiación para visibilizar el desarrollo de la investigación el fondo de investigaciones, por lo cual realiza apoyo directo a la investigación; realiza movilización de recursos externos y mejora la capacidad de gestión de los proyectos de investigación y de las prácticas de

presupuestación. La mencionada universidad considera la investigación como una apuesta de largo plazo para su crecimiento y desarrollo. Por ello, señala que las universidades deben orientar su inversión a la consolidación de los grupos de investigación en las diferentes unidades académicas, al cofinanciamiento de programas de jóvenes investigadores, a la adecuación y actualización permanente de los recursos académicos, infraestructurales, bibliográficos, de bases de datos, informáticos y administrativos destinados a la investigación. Teniendo en cuenta los argumentos planteados y reconociendo que las universidades deben apoyar financieramente las actividades realizadas en los centros de investigación, con el propósito de fortalecer y mantener los estímulos a la investigación y a la producción académica, buscando fortalecer la capacidad de innovación de sus grupos de investigación para resolver la problemática social, política, económica y cultural del entorno; en ese sentido, es relevante analizar las políticas de financiación de la investigación como uno de las dimensiones de las políticas de investigación y fomento a la innovación.

Política de Inserción En Redes de Investigación

Las redes de investigación son asociaciones de I+D para el desarrollo de actividades de investigación y desarrollo tecnológico a partir de proyectos de investigación con el objeto de complementar capacidades y un adecuado reparto de actividades o tareas. Sebastián (1999). En el mismo orden, para Pimienta (2000) una red de investigación es el conjunto de servicios telemáticos puestos a disposición de una amplia comunidad de usuarios. En una visión más amplia, para Colciencias (2005) una red de investigación involucra una relación de unos o más actores interesados en desarrollar un determinado objeto de investigación a fin de orientar esfuerzos, intereses, recursos humanos y financieros hacia el desarrollo de una línea de investigación conjunta y vinculada estrechamente a un centro formal de investigación. El mismo autor establece además, que dicha vinculación se orienta al logro de resultados comunes provenientes de una política de ciencia, tecnología e innovación en cualquier área del conocimiento humano. Las redes de investigación se constituyen en una estrategia para el desarrollo de los sistemas de ciencia y tecnología como mecanismo de apoyo inter y transdisciplinario en el avance de los sistemas de investigación. En este orden de ideas, la universidad del Rosario (2010), señala que las instituciones de educación superior deben establecer políticas orientadas a fomentar y apoyar la inserción de los investigadores en redes de conocimiento a nivel nacional e internacional. Esto implica apoyar la participación de los investigadores en eventos científicos, así como su participación en redes de diversos tipos. En la ciencia contemporánea, las redes científicas se han convertido en uno de sus actores más dinámicos y en uno de los mecanismos más importantes para fomentar y asegurar la calidad. La calidad es uno de los requisitos para poder participar en estas redes.

Desde este ámbito, se sustenta la utilización de las políticas de inserción de los grupos de investigación en redes, como una de las dimensiones de las políticas de investigación y fomento a la innovación, teniendo en cuenta que estas redes se fundamentan en los centros de investigación de las instituciones de educación superior tanto públicas como privadas, considerados como centros de conocimiento con capacidad para regular las ideas, asignar recursos, aplicar métodos aplicar y obtener resultados orientados a la innovación y desarrollo de las distintas áreas del que hacer social.

Políticas de Visibilidad de los Resultados de Investigación

La universidad del Rosario de Colombia (2010), señala que para que el conocimiento sea útil, debe circular, de ahí la importancia de las publicaciones científicas y especialmente el fomento a publicar en revistas internacionales indexadas. Este es un aspecto estratégico para poder asegurar una visibilidad internacional de las actividades de investigación que se desarrollan en las universidades. Es igualmente importante la proyección de la universidad en su entorno y su capacidad para transferir el conocimiento generado por la investigación a su sociedad, con el objetivo de fomentar la innovación, ya sea tecnológica o social, y de contribuir al bienestar de su sociedad. Por lo anterior, es fundamental que en las instituciones de educación superior se establezcan políticas que permitan incrementar la visibilidad nacional e internacional de los

resultados de la investigación mediante publicaciones científicas, para lo cual se requiere establecer lineamientos:

Fomento a publicaciones científicas, especialmente en revistas internacionales indexadas. Establecer estrategias para mejorar la visibilidad internacional de los resultados de las investigaciones, así como incentivos a publicar en revistas indexadas. Política editorial establecida en dos dimensiones: como una necesidad de asegurar una adecuada indexación de la editorial de las universidades y como política de publicaciones periódicas y de indexar estas publicaciones. Análisis permanente de las tendencias de la ciencia, la tecnología e innovación por medio de estudios que permitan identificar tendencias de interés para los grupos de investigación de la universidad. Divulgación de los resultados de la investigación, es decir, difundir al público los resultados más importantes, buscando aportar al desarrollo de una sociedad del conocimiento, pretendiendo crear una opinión pública informada sobre el papel de la ciencia, la tecnología, la innovación en el desarrollo socio-económico y en el bienestar de la población. De lo planteamientos anteriores y teniendo claro que uno de los aspectos más importantes para el desarrollo y consolidación de las universidades en un mundo globalizado como el de hoy, es su capacidad para participar en la ciencia, tecnología e innovación a nivel internacional por medio de publicaciones científicas en las mejores revistas científicas del mundo, se convierte las políticas de fomento a publicaciones científicas y a la visibilidad de la investigación en una dimensión clave para analizar las políticas de investigación y fomento a la innovación.

METODOLOGÍA

El tipo de estudio implementado para el desarrollo de esta investigación fue tipo descriptivo de diseño no experimental, transeccional de campo, la población está conformada por los centros de investigación de las universidades públicas del departamento de La Guajira, Colombia: universidad de La Guajira y universidad Abierta y a Distancia, tomando como informantes claves los vicerrectores de investigación, directores de investigación y las personas con característica de líderes de los grupos de investigación, para un total de 45 personas. El instrumento utilizado para la recolección de datos fue un cuestionario con escala de Lickert. Para dar cumplimiento a los objetivos de la investigación, se procesaron los datos recolectados en el instrumento, mediante la aplicación del software estadístico SPSS 20. Para el análisis de cada una de las dimensiones e indicadores, se decidió utilizar los parámetros establecidos en la estadística descriptiva, en la cual se emplea la media como medida de tendencia central y la desviación estándar como medida del grado de dispersión de las respuestas. Para la interpretación de los estadísticos descriptivos y elaboración de las tablas de resultados fueron utilizados baremos de interpretación de la media y desviación estándar, los cuales se observan en los cuadros 1 y 2, donde se aprecia el intervalo, categoría e interpretación.

Tabla 1: Categoría de Análisis Para la Interpretación de la Media

Intervalo	Categoría	Interpretación
$4,20 < \bar{x} \leq 5,00$	Muy alto nivel	Indica que la actividad que se está analizando se ubica dentro de una frecuencia muy alta.
$3,4 < \bar{x} \leq 4,20$	Alto nivel	Indica que la actividad que se está analizando se ubica dentro de una frecuencia alta.
$2,60 < \bar{x} \leq 3,40$	Moderado nivel	Indica que la actividad que se está analizando se ubica dentro de una frecuencia media.
$1,80 < \bar{x} \leq 2,60$	Bajo nivel	Indica que la actividad que se está analizando se ubica dentro de una baja frecuencia
$1,00 \leq \bar{x} \leq 1,80$	Muy bajo nivel	Indica que la actividad que se está analizando no se está ejecutando

Fuente: Elaboración propia (2014)

Tabla 2: Categoría de Análisis Para la Interpretación de la Desviación Estándar

Intervalo	Categoría
$2,00 < DE \leq 2,50$	muy alta dispersión
$1,50 < DE \leq 2,00$	alta dispersión
$1,00 < DE \leq 1,50$	moderada dispersión
$0,50 < DE \leq 1,00$	baja dispersión
$0,00 \leq DE \leq 0,50$	muy baja dispersión

Fuente: Elaboración propia (2014)

RESULTADOS

En el cuadro 3, se muestran los resultados obtenidos al analizar las Políticas de Investigación y fomento a la innovación, observándose que presenta un valor de la media de 2.64 y la desviación estándar de 0.84. Se observa, de acuerdo a las respuestas de los individuos encuestados, un bajo nivel en la dimensión políticas de financiación de la investigación, así como en las políticas de visibilidad de los resultados de investigación y las políticas de fomento a la inserción en redes internacionales, presentando un moderado nivel en cuanto a la dimensión marco legal de la ciencia tecnología e innovación, tal como se aprecia en el cuadro 3.

Tabla: Políticas de Investigación y Fomento a la Innovación

Dimensiones	Media	Categoría	Desviación estándar	Categoría
Marco legal de CTI	3.03	Moderado Nivel	1.06	Moderada Dispersión
Política de Financiación de la investigación	2.39	Bajo Nivel	0.76	Baja Dispersión
Políticas de visibilidad de resultados de investigación	2.58	Bajo nivel	0.77	Baja Dispersión
Políticas de fomento a la inserción en redes internacionales	2.56	Bajo nivel	0,80	Baja Dispersión
Variable	2.64	Moderado nivel	0.84	Baja dispersión

Fuente: Elaboración propia (2014)

Los resultados anteriores no son acordes a lo planteado por Utria (2006), quien expresa que el desarrollo científico- tecnológico tiene que ver con la capacidad de un país o de una organización de producir conocimiento y reflejarlo en una serie de productos que pueden ser artículos, patentes, productos etc., que

implica no solo actividades de investigación, sino también de desarrollo tecnológico e innovación. Las instituciones que siguen esta senda construyen un proceso de acumulación de conocimiento, donde forman una masa crítica de científicos e investigadores pioneros, que inician importantes proyectos universitarios. Por otra parte, no concuerda con lo establecido en la Universidad del Rosario (2009), donde se señala que la Política de Investigación y Fomento a la Innovación de las Universidades debe desempeñar un papel importante en el cumplimiento de su misión, definida en el Proyecto Educativo Institucional (PEI) en términos de impartir una sólida formación ética, humanística y científica que, unida a la investigación y a una idónea y exigente docencia, permita a esta comunidad educativa formar integralmente personas insignes y actuar en beneficio de la sociedad, con un máximo sentido de responsabilidad. En el mismo cuadro, se puede observar el comportamiento de la variable donde se refleja que el Marco legal de CTI está sobre el promedio de la variable, mientras que las dimensiones Políticas de visibilidad de resultados de investigación, Políticas de fomento a la inserción en redes internacionales y Política de Financiación de la investigación están ubicadas por debajo del mismo.

Dimensión: Marco Legal de la Ciencia, Tecnología e Innovación (CTI) En el cuadro 3, se observa el comportamiento de la dimensión Marco Legal de la Ciencia, Tecnología e Innovación, el cual presenta un valor de la media de 3,03 y una desviación estándar de 1,06, ubicándose en la categoría de moderado nivel y dispersión en las respuestas. Los registros permiten apreciar las respuestas de los encuestados, en cuanto a que de manera moderada el marco legal colombiano de la CTI promueve el incremento de la capacidad científica y la investigación e innovación en las universidades. Los resultados anteriores se explican teniendo en cuenta lo planteado en el marco legal colombiano donde se establece que la Política de Investigación y Fomento a la Innovación de las Universidades se estipulan para crear las condiciones necesarias para que el conocimiento se convierta en un instrumento que aporte al desarrollo del país, priorizando áreas que se consideran fundamentales y que garantizarán la consolidación científica-tecnológica, buscando fortalecer una cultura basada en la generación, la apropiación, la divulgación del conocimiento y la investigación científica, el desarrollo tecnológico, la innovación y el aprendizaje permanente.

Dimensión: Política de Financiación de la Investigación Esta dimensión presenta una media de 2.39, ubicándose en la categoría de bajo nivel y una baja dispersión de las respuestas de los sujetos encuestados con una desviación estándar de 0.76. Según la apreciación de los encuestados, se evidencia que en bajo nivel se dispone de políticas internas de financiación de las actividades de I+D+I; en bajo nivel se tienen establecidas estrategias de la investigación para viabilizar su desarrollo; de igual forma, en nivel bajo los recursos asignados por el gobierno referente al apoyo de I+D+I, a las universidades públicas son suficientes. El análisis anterior no es acorde a lo planteado por Medina (2009), quien establece que el nuevo entorno de política pública en el país se ha enfocado en incrementar los recursos y capacidades de Sistema Nacional de Ciencia, Tecnología e Innovación a través de las regalías y de otras fuentes de financiación; pero en el futuro inmediato, es necesario favorecer la integración de estos recursos y capacidades con el propósito de ampliar las oportunidades para que las personas y comunidades que trabajan por el desarrollo científico-tecnológico, efectivamente dirijan sus acciones hacia la transformación productiva y social de las regiones.

Dimensión: Políticas de visibilidad de los resultados de investigación Los resultados de la dimensión Políticas de visibilidad de los resultados de investigación se presentan en el cuadro 3, sus registros permiten ubicarlo en la categoría de bajo nivel con un valor de la media aritmética de 2.58 y una baja dispersión de las respuestas con una desviación estándar de 0.77. De acuerdo a las respuestas de los sujetos encuestados, se evidencia un bajo nivel en las políticas establecidas para visibilizar los resultados de I+D+I; de igual manera, un bajo nivel en las estrategias establecidas para visibilizar los resultados de I+D+I y se promueve en bajo nivel la visibilidad nacional e internacional de los resultados de investigación. Los resultados obtenidos en esta investigación no concuerdan con lo establecido por Colciencias (2005) y por algunas universidades de Colombia, entre ellas la universidad del Rosario (2010), donde se estipula que para que el conocimiento sea útil, debe circular, de ahí la importancia de las publicaciones científicas y especialmente

el fomento a publicar en revistas internacionales indexadas. Este es un aspecto estratégico para asegurar una visibilidad internacional de las actividades de investigación que se desarrollan en las universidades. Es igualmente importante la proyección de la universidad en su entorno y su capacidad para transferir el conocimiento generado por la investigación a su sociedad, con el objetivo de fomentar la innovación, ya sea tecnológica o social, y de contribuir al bienestar de la sociedad en general. Por lo anterior, es fundamental que en las instituciones de educación superior, se establezcan políticas que permitan incrementar la visibilidad nacional e internacional de los resultados de la investigación mediante publicaciones científicas.

Dimensión: Políticas de fomento a la inserción en redes internacionales La dimensión Políticas de fomento a la inserción en redes internacionales, se ubica en la categoría de bajo nivel con un valor de la media de 2.56 y presenta una baja dispersión de las respuestas con una desviación estándar de 0.80. Los resultados obtenidos, de acuerdo a las respuestas de los sujetos encuestados, dejan entrever que se dispone en bajo nivel de políticas para el fomento a la inserción de los investigadores en redes nacionales; de igual manera, se dispone en bajo nivel de políticas para el fomento a la inserción de los investigadores en redes internacionales y existe un bajo nivel de apoyo financiero para la inserción de los investigadores de las universidades públicas del departamento de La Guajira, en redes nacionales e internacionales. Los resultados obtenidos en la presente investigación son contrarios a lo estipulado por COLCIENCIAS (2005) y la universidad del Rosario (2010), quienes señalan que las instituciones de educación superior se deben establecer políticas orientadas a fomentar y apoyar la inserción de los investigadores en redes de conocimiento a nivel nacional e internacional. Esto implica apoyar la participación de los investigadores en eventos científicos, así como su participación en redes de diversos tipos. En la ciencia contemporánea, las redes científicas se han convertido en uno de sus actores más dinámicos y en uno de los mecanismos más importantes para fomentar y asegurar la calidad.

CONCLUSIONES

Los resultados obtenidos en la investigación dirigida a identificar las políticas de investigación y fomento a la innovación en los centros de investigación de las universidades públicas, muestran que existe una baja presencia de políticas de investigación y fomento a la innovación en los centros de investigación de las universidades públicas. Se observó que se dispone en bajo nivel de políticas internas de financiación de las actividades de I+D+I, no se tienen establecidas estrategias de la investigación para viabilizar su desarrollo, los recursos asignados por el gobierno referente al apoyo de I+D+I a las universidades públicas no son suficientes; no se han establecido políticas claras, ni se han diseñado estrategias para visibilizar los resultados de I+D+I. Se promueve en bajo nivel la visibilidad nacional e internacional de los resultados de investigación; no se dispone de políticas para el fomento a la inserción de los investigadores en redes nacionales e internacionales. Existe un bajo nivel de apoyo financiero para la inserción de los investigadores en redes nacionales e internacionales.

RESUMEN

El propósito de esta investigación, fue analizar la gerencia estratégica de mercadeo como herramienta de productividad en las empresas recicladoras del plástico en el Departamento de la Guajira- Colombia. El estudio se sustenta en las teorías de los autores: Guiltinan, Stanton, Kotler, Fischer y Koontz,. La gerencia estratégica de mercadeo, deja ver la necesidad de cuáles son los mercados presentes y futuros, con el fin de identificar los clientes actuales y potenciales y la productividad permite al empresario, determinar la relación insumo–producto, para evaluar el rendimiento de los talleres, máquinas, equipo de trabajo y empleados. La investigación es descriptiva, transversal de enfoque cuantitativo. Los resultados obtenidos reflejan que las fuerzas micro y macro ambientales y el marco institucional direcciona a la gerencia estratégica de mercadeo en los procesos de reciclajes de esta empresas. También se observa, que influyen con alto nivel de afectación, la segmentación del mercado y el mercado meta definido, se enmarcan bajo un moderado nivel, sin plena identificación de los clientes actuales y potenciales; mientras la eficiencia en la productividad y el desempeño del vendedor y distribuidor se posicionan con bajo nivel de productividad. Se concluye, que la gerencia del marketing sirve como herramienta de productividad.

STRATEGIC MARKETING MANAGEMENT AS A TOOL FOR PRODUCTIVITY IN THE PLASTIC RECYCLERS COMPANIES IN THE DEPARTMENT OF LA GUAJIRA - COLOMBIA

ABSTRACT

The purpose of this research was to analyze the strategic marketing management as a tool for productivity in the plastic recyclers companies in the department of la Guajira, Colombia. The study is based on the theories of the following authors: Guiltinan, Stanton, Kotler, Fischer and Koontz. The strategic marketing management reveals the need for what the present and future markets are, to identify current and potential customers and productivity which allows the businessman in determining the input-output ratio in order to evaluate the performance of the workshops, machinery, staff and employees. The research is descriptive, cross-sectional with a quantitative approach. The results show that the micro and macro environmental forces and institutional framework addresses the strategic marketing management in the recycling processes of those businesses. It is also noted the influence at a high level of involvement, on the market segmentation and the target market defined, that fall under a moderate level, without full identification of current and potential customers, while productivity efficiency and performance of the seller and distributor are positioned with low productivity. It is concluded that marketing management serves as a productivity tool.

KEY WORDS: Strategic Management, Productivity Tool, Recyclers Companies, Department of la Guajira, Colombia

INTRODUCCION

El gerente estratégico primero tiene que entender la naturaleza del medio en que se mueve la organización. Esta es una tarea continua y permanente para la alta dirección, el factor determinante para el éxito o fracaso es la habilidad para enfrentar oportunamente en forma dinámica y acelerada los desafíos del cambio, no solo pueden tener efecto en una u otra compañía individualmente, sino que puede generar la crisis o el repunte de toda una industria. Por su parte, la gerencia estratégica de mercadeo también hace énfasis en el mercadeo corporativo interno, porque el mundo se enfrenta a una sociedad globalizadora, que abre sus fronteras para volverse más independiente. Indudablemente está ante una economía de mercado regulada por la fuerza de la oferta y la demanda. El cliente interno requiere la primera atención, exige ser respetado, reconocido de manera adecuada, informado oportunamente sobre: políticas, objetivos y metas organizacionales, ventajas comparativas empresarial e interpretar adecuadamente las normas de la institución. Ahora bien, la gerencia estratégica de mercadeo, según Harrison (2003) surge como un conjunto de herramientas para agilizar, racionalizar y aumentar la productividad. Sin embargo, la mercadotecnia moderna no debe ser considerada como un instrumento para aumentar las utilidades (si se aplica) o para disminuirla (si no se aplica), resultado al final un factor secundario dentro del proceso productivo. Esta persigue un sistema global de actividades de negocios proyectado para planear, establecer el precio, distribuir bienes, promover servicios que satisfagan expectativas de clientes tanto actuales como potenciales.

La productividad permite al empresario, determinar la relación insumo – producto, el cual sirve para evaluar el rendimiento de los talleres, máquinas, equipo de trabajo y empleados. Al respecto Koont'z y otros (2004), señalan que la productividad implica tanto eficacia en el desempeño individual y organizacional. Por su parte, la eficiencia es el logro de las metas con la menor cantidad de recursos; mientras que la eficacia el cumplimiento de los objetivos. De ahí, una organización es productiva si consigue sus metas paralelamente transformando sus insumos en productos al menor costo. Es pertinente analizar la gerencia estratégica de mercadeo, con el propósito de optimizar los procesos de la productividad en las empresas recicladora de plástico, que minimice racionalmente la contaminación del ecosistema ocasionado por los rellenos sanitarios, que reciben permanentemente cantidades de residuos sólidos, generado en los principales núcleos urbanos, los cuales con un proceso óptimo de selección pueden ser utilizados como materia prima para el reciclaje. En cuanto a los recicladores del plástico en su mayoría no transforman el material recuperado, razón por la cual al vender el residuo se ven obligados a abandonar la fase más rentable del proceso. Esta situación se presenta porque los recicladores son pequeños empresarios o personas particulares que recuperan de diferentes sitios cantidades modestas de plástico junto con otros materiales, los cuales no son suficientes para alimentar una pequeña instalación de reciclado.

De acuerdo al Servicio Nacional de Aprendizaje – SENA (2013) los pequeños empresarios o personas particulares ubicados en el Departamento de La Guajira, desarrollan la actividad recicladora en forma desorganizada, sin definir procesos de planificación para el aprovechamiento y comercialización del plástico reciclable, se nota la carencia de planes para gerenciar de forma eficiente y eficaz la gran cantidad de plástico que se genera en la frontera. En Colombia, la forma más utilizada en los procesos productivos del plástico reciclable, se realiza con el barrido manual, el cual sustituirlo por el mecánico es un dilema para las autoridades, ya que la operación manual absorbe un determinado número de trabajadores no calificados. La recolección con equipo, ha logrado una cobertura superior al 90% en numerosos ciudades

grandes de la región, pero un aspecto crítico es la baja cobertura en ciudades intermedias y menores, por la escasa atención a los asentamientos marginales urbanos. Lund (2006)

En la actualidad se encuentran veintiséis (26) empresas recicladoras de plástico ubicadas en el Departamento de la Guajira-Sena (2013). Sin embargo, los grupos de personas u organizaciones recicladoras aun presentan carencia de estructura organizacional, pareciera que no se afrontan las tareas de combinar en forma óptima una gama de actividades (estratégicas, administrativas y operativas) con un conjunto de personas y recursos. En ese sentido, no se establecen las relaciones que deben mantener las personas con sus labores, las cuales carecen de niveles de autoridad requerida por este tipo de negocio; lo cual se torna pertinente que se desarrolle la gerencia estratégica de mercadeo, que conlleve a un proceso productivo eficiente y eficaz. Los recicladores carecen de tecnología adecuada para implementar el proceso de transformación del plástico, según Sena, (2013). Solo se convierte en un intermediario para vender el material reciclado a sus compradores sin poder entregar un producto transformado a un mercado carente de los mismos, los índices de eficiencia y eficacia son inadecuados para alcanzar los objetivos y metas propuestos en estas organizaciones. Por tal razón le toca vender a un precio muy bajo, que muchas veces son los causantes de retiro o quiebra en esta actividad. La gerencia estratégica de mercadeo, podrá generar las estrategias competitivas que requiere las empresas recicladora para su crecimiento comercial.

Es importante anotar, que existen en esta región Caribe 32 empresas dedicadas a la compra del plástico reciclable, en ciudades intermedias como Santa Marta, Barranquilla y Cartagena, Sena (2013). Que se encargan de procesar todo el plástico que compra mostrando siempre capacidad para comercializar el material que se le ofrezca. El propósito de la investigación fue analizar la gerencia estratégica de mercadeo como herramienta de productividad en las empresas recicladoras del plástico en el departamento de la Guajira-Colombia, con el fin de identificar las fuerzas macro y micro ambientales, describir el marco institucional que direcciona la gerencia estratégica, identificar el mercado de productos resultantes del proceso de reciclaje del plástico, determinar la eficiencia y la efectividad en la productividad desde la perspectiva del cliente interno y externo, con la finalidad de generar lineamientos estratégicos de marketing que incremente la productividad en las empresas recicladora del plástico ubicada en el departamento de la Guajira-Colombia. Seguidamente se presenta la metodología utilizada en la investigación, definiendo el enfoque epistemológico, tipo y diseño de investigación, población, muestra, resultados, y conclusiones de la investigación.

REVISION DE LITERATURA

En la presente investigación se ejecuto una revisión bibliografía de los fundamentos que sustentan las teorías utilizadas para el análisis del tema objeto de estudio. En las bases teóricas se incluyeron un conjunto de términos el cual permiten ubicar al investigador en el establecimiento de acciones relacionadas directamente con la gerencia estratégica de mercadeo y la productividad. Las teorías que sirvieron de sustento teórico, se fundamentaron bajo los siguientes postulados, Stanton, señala que en la gerencia estratégica de mercadeo, en los mercados cambiantes, el consumidor se convierte en el centro de atención de los directivos empresariales. La toma de decisiones estratégica debe tener en cuenta necesidades del consumidor, mecanismo y razones fundamentales que motivan sus decisiones en comprar productos o servicios. La estrategia de mercadeo orienta la acción con base a las condiciones inestables del entorno, motivado por factores como: Competencia, evolución económica, política, sociales, culturales entre otras. En relación a la productividad Guiltinan y otros (2004), señala que es el proceso de estimar el impacto que tiene sobre las ventas un cambio en el precio o en los gastos de marketing; es decir el cambio en las ventas que resulta de una modificación dada en un programa de marketing indica cuan productivo es ese programa. Con frecuencia la expresión funciones de la repuesta de ventas se utiliza para representar la relación entre precio gasto de marketing y las ventas. Es la evaluación de las consecuencias en las ventas o en la

participación del mercado de una estrategia de mercadeo.

En referencia al reciclaje, Lund (2006), afirma que debe entenderse como una estrategia de gestión de residuos sólidos. Un método para la gestión de residuos sólidos igual de útil que vertidos o la incineración, y ambientalmente más deseable. En la actualidad es claramente, el método de gestión de residuos sólidos actualmente preferido. El éxito de un programa de reciclaje depende tanto de una comunicación eficaz como de una operación eficaz. En lo que concierne al plástico como residuos, De Val (2004) manifiesta que tiene un alto valor, relativamente sencillo de recuperar y de reciclar y tan abundante o más que el vidrio en las basuras, paradójicamente no es objeto de un recogida selectiva y prácticamente de la mayoría del que se recupera de la basuras viene de las plantas de tratamientos de la basuras: aunque de las mismas industrias se recuperan cantidades apreciables de plástico, en conjunto el nivel de recuperación es muy bajo.

METODOLOGIA

Esta investigación se clasificó como descriptivo, porque se especificaron naturalmente todas las propiedades importantes encontradas en los componentes esenciales de la gerencia estratégica de mercadeo en las empresas recicladora del departamento de la Guajira; Con base a los objetivos planteados y a las teorías que soportan el presente estudio, esta investigación fue no experimental, descriptiva de campo, de corte transversal, por que los datos necesitados de esta investigación fueron recolectados en un solo momento. La población estuvo conformada por las empresas recicladoras del plástico ubicadas en el departamento de la Guajira, la cual son veinte seis (26) en total, aquellas que realizan la actividad de compra y venta del plástico reciclable. A la vez otra población que se tomó en consideración para el estudio fueron la empresas comercializadoras o compradoras del plástico reciclable, existente en la Costa Atlántica, las cuales son treinta y dos (32), ubicadas en las ciudades de Santa Marta, Barranquilla y Cartagena. Se aplicaron dos (2) cuestionarios los cuales el primero fue dirigido a las Empresas recicladoras del plástico en el Departamento de la Guajira, contentivo de ciento treinta y nueve (139) ítems con respuestas de cinco (05) alternativas tipo frecuencia; y, el otro dirigido a las empresas compradoras del plástico reciclado que se encuentran en la región Caribe, conformado por treinta (30) ítems dirigido a las empresas comercializadoras de plástico reciclado.

RESULTADOS

Tabla: 1 Fuerzas Macro Ambientales

Indicadores	Media	Mediana	Moda	Desviación	Categoría
Condiciones Económica	3,69	4	4	0,61	Alto Nivel
Fuerzas Sociales y Culturales	3,17	3	3	0,63	Moderado Nivel
Fuerzas Políticas y Jurídicas	2,40	3	3	0,58	Bajo nivel
Competencias	2,92	3	3	0,57	moderado nivel
Tecnología	2,17	2	2	0,50	Bajo Nivel

Fuente: *Elaboración Propia*

En la tabla se puede observar, que en el indicador Condiciones Económicas se obtuvo un valor para la media aritmética de 3,69, el cual está incluido en el intervalo que define al rango 4, de la Categoría Alto Nivel, con una mediana y moda concordantes de 4, y una desviación estándar de 0,61, es decir, agrupadas; de lo cual se interpretó que las Empresas recicladoras del plástico en el Departamento de la Guajira poseen un alto nivel de conocimiento de la necesidad de crear las estrategias de mercado en el medio ambiente donde se desenvuelven, para lograr así garantizar el cumplimiento de los objetivos estratégicos. De acuerdo a los resultados obtenidos, se determinó que dentro de las Fuerzas Sociales y Culturales, según se deduce del valor de la media aritmética (3,17) el cual pertenece al intervalo 2,61 a 3,40 del Rango 3, que identifica

a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,63; se evidencia que las empresas recicladoras reflejan con un moderado nivel que las fuerzas sociales y culturales influyen en la estructura dinámica del individuo, grupos y en sus problemas más importantes. Según los resultados obtenidos, se comprobó que dentro de las Fuerzas políticas y Jurídicas, de acuerdo con valor de la media aritmética 2,40 el cual pertenece al intervalo 1,81 – 2,60 del Rango 2, que identifica a la categoría Bajo Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,58; que muy poco las empresas recicladoras se sienten influenciadas ni reciben ningún beneficio de las entidades gubernamentales.

Los resultados obtenidos al señalar las Competencias que están presentes en las Empresas recicladoras del plástico en el Departamento de la Guajira, de acuerdo con el valor de la media aritmética 2,92 el cual pertenece al intervalo 2,61 – 3,40 del Rango 3, que identifica a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,57; mostraron que moderadamente las empresas recicladoras mantienen un ambiente competitivo que influye en sus programas de marketing. Se observa que el indicador Tecnología se obtuvo un valor para la media aritmética de 2,17, el cual está incluido en el intervalo que define al rango 2, de la categorías Bajo Nivel, con una desviación estándar relativamente pequeña con respecto a la media de 0,50; de lo cual se interpretó que las empresas recicladoras objeto de estudio poseen un bajo nivel en cuanto a las tecnologías.

Tabla: 2: Fuerzas Micro ambientales

Indicadores	Media	Mediana	Moda	Desviación	Categoría
Proveedores	4,02	4	4	0,63	Alto Nivel
Intermediarios	2,51	3	3	0,56	Bajo Nivel

Fuente: Elaboración Propia

Según los resultados obtenidos, se comprobó que dentro de las Fuerzas Micro Ambientales, de acuerdo con valor de la media aritmética 4,02 el cual pertenece al intervalo 3,41 – 4,20 del Rango 4, que identifica a la categoría Alto Nivel, con una mediana y moda de 4 y una desviación estándar normal de 0,63; deduciéndose de esta manera que las empresas recicladoras se sienten influenciadas por las fuerzas micro ambientales en sus procesos productivos y de comercialización de los productos reciclados. De acuerdo a los resultados obtenidos, se determinó que el indicador, Intermediarios, según se deduce del valor de la media aritmética (2,51) el cual pertenece al intervalo 1,81 a 2,60 del Rango 2, que identifica a la categoría Bajo Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,56 se evidencia que las empresas recicladoras muy poco se ayudan directamente de los intermediarios en el flujo de bienes y servicios entre una organización y otra.

Tabla: 3: Marco Institucional

Indicadores	Media	Mediana	Moda	Desviación	Categoría
Visión	2,93	3	3	0,71	Moderado Nivel
Misión	3,58	4	4	0,67	Alto Nivel
Objetivos	2,85	3	3	0,57	Moderado nivel

fuentes: elaboración propia

Según los resultados obtenidos, se comprobó que dentro del Marco Institucional, los resultados para el indicador Visión, de acuerdo con valor de la media aritmética 2,93 el cual pertenece al intervalo 2,61 – 3,40 del Rango 3, que identifica a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,71; que la visión de las empresas recicladoras moderadamente proveen el marco de referencia de lo que una empresa es y quiere ser en el futuro. Según los resultados obtenidos, se comprobó que dentro de la Misión, de acuerdo con valor de la media aritmética 3,58 el cual pertenece al intervalo 3,41 – 4,20 del Rango 4, que identifica a la categoría Alto Nivel, con una mediana y moda de 4 y una desviación estándar normal de 0,67; deduciéndose de esta manera que en las empresas recicladoras la misión de

constituye un importante vehículo para transmitir ideales y un sentido de dirección y de metas. Se determinó que el indicador Objetivos, según se deduce del valor de la media aritmética (2,85) el cual pertenece al intervalo 2,61 - 3,40 del Rango 3, que identifica a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,57 se evidencia que las empresas recicladoras algunas veces establecen objetivos basados en los conceptos de misión, análisis de posición y creación de escenarios.

Tabla: 4 Mercado

Indicadores	Media	Mediana	Moda	Desviación	Categoría
Segmentación - Mercado	3,79	4	4	0,62	Alto Nivel
Segmentación-Negocio	3,22	3	3	0,55	Moderado Nivel
Mercado Meta	3,15	3	3	0,64	Moderado Nivel

fuentes: elaboración propia

Se determinó que el indicador Mercado, según se deduce del valor de la media aritmética 3,79 el cual pertenece al intervalo 3,41 - 4,20 del Rango 4, que identifica a la categoría Alto Nivel, con una mediana y moda de 4, y una desviación estándar normal de 0,62 se nota que las empresas recicladoras casi siempre llevan a cabo un estudio de mercado, en conjunto con una serie de investigaciones como lo son, competencia, los canales de distribución, lugares de venta del producto, que tanta publicidad existe en el mercado, precios, entre otros, para asegurar el éxito de la empresa. Se observa en la tabla que en el indicador Segmentación de Negocios se obtuvo un valor para la media aritmética de 3,22, el cual está incluido en el intervalo que define al rango 3, de la Categoría Moderado Nivel, con una mediana y moda concordantes de 3, y una desviación estándar de 0,55, es decir, agrupadas; de lo cual se interpretó que las Empresas recicladoras del plástico en el Departamento de la Guajira, algunas veces se apoyan en buenas medidas en sus departamentos de compras para controlar la entrada de información reducir el número de alternativas y efectuar las negociaciones.

De acuerdo a los resultados obtenidos, se determinó que dentro de las Estrategia Mercado Meta, según se deduce del valor de la media aritmética 3,15 el cual pertenece al intervalo 2,61 a 3,40 del Rango 3, que identifica a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,64; se evidencia que las empresas recicladoras reflejan con un moderado nivel buscan integrar todos los elementos del producto y/o servicio para asegurar que la posición percibida se refuerce en forma enérgica.

Tabla: 5 Productividad

Indicadores	Media	Mediana	Moda	Desviación	Categoría
Eficiencia	2,75	3	3	0,65	Moderado Nivel
Efectividad - Ventas	2,70	3	3	0,64	Moderado Nivel
Desempeño- Territorio de Ventas	2,62	3	3	0,55	Moderado nivel
Desempeño Segmento de Ventas	2,83	3	3	0,62	moderado nivel

Fuente: Elaboración Propia

Según los resultados obtenidos, se comprobó que dentro de los Recursos y Logística, de acuerdo con valor de la media aritmética 2,75 el cual pertenece al intervalo 2,61 – 3,40 del Rango 3, que identifica a la categoría Moderado Nivel, con una mediana y moda de 3, y una desviación estándar normal de 0,65; que algunas veces las empresas recicladoras objeto de estudio existe moderadamente un sistema de logística que garantiza un proceso de comercialización óptimo. Se observa en la tabla que en el indicador Desempeño del Vendedor y Distribuidor se obtuvo un valor para la media aritmética de 2,70, el cual está incluido en el intervalo que define al rango 3, de la categorías Moderado Nivel, con una desviación estándar relativamente pequeña con respecto a la media de 0,64; de lo cual se interpretó que en las empresas recicladoras objeto de estudio las medidas del desempeño del vendedor o distribuidor ayudan moderadamente a los gerentes a determinar si ese desempeño se debe a las acciones del distribuidor o vendedor. Como se nota en la tabla

que en el indicador Desempeño Territorio de Ventas se obtuvo un valor para la media aritmética de 2,62, el cual está incluido en el intervalo que define al rango 3, de la categorías Moderado Nivel, con una desviación estándar relativamente pequeña con respecto a la media de 0,55; de lo cual se interpretó que en las empresas recicladoras objeto de estudio, algunas veces definen el potencial de ventas y de los recursos que se requieren para seguir siendo competitiva. En el indicador Desempeño Segmento de Ventas se obtuvo un valor para la media aritmética de 2,83, el cual está incluido en el intervalo que define al rango 3, de la categorías Moderado Nivel, con una desviación estándar relativamente pequeña con respecto a la media de 0,62; de lo cual se interpretó que en las empresas recicladoras objeto de estudio, algunas veces identifican posibles mejoramientos en la asignación de los recursos de ventas y servicio al cliente.

CONCLUSIONES

Una vez obtenido los resultados y confrontados bases teóricas que sustentan la presente investigación, se determinaron las conclusiones para analizar la gerencia estratégica de mercadeo como herramienta de productividad en las empresas recicladoras del plástico en el departamento de la Guajira- Colombia, las cuales se presentan a continuación: Con respecto a identificar las fuerzas macro y micro ambientales, que influyen en la gerencia estratégica de mercadeo en el sector de las empresas recicladora del plástico ubicada en el departamento de la Guajira, se concluye que las Condiciones económicas y los Proveedores resultaron con alto nivel, por otro lado, las Fuerzas Sociales y Culturales y las Competencia se posicionaron con moderado nivel y por último, las Fuerzas políticas y Jurídicas, la Tecnología e Intermediarios con bajo nivel de productividad.

Seguidamente, al analizar el marco institucional que direcciona la gerencia estratégica en la industria recicladora del plástico en el departamento de la Guajira, se concluye que la Misión se enmarco con alto nivel de importancia, mientras que la Visión y los Objetivos resultaron con moderado nivel. En cuanto a identificar el mercado de productos resultantes del proceso de reciclaje del plástico en la zona de la Guajira Colombiana, se concluye que la Segmentación de Mercado resulto con alto nivel de productividad y la Segmentación de Negocios y la Estrategia Mercado Meta se enmarcaron dentro del rango moderado nivel. Por otro lado, determinar la eficiencia en la productividad desde la perspectiva del cliente interno y externo, en las empresas recicladora de plástico en el departamento de la Guajira, se concluye que los Recursos y Logística, de acuerdo con el baremo de comparación resultaron con moderado nivel de productividad. Asimismo, al determinar la efectividad programa de ventas y distribución, desde la perspectiva del cliente interno y externo, de los programas de venta - distribución de productos en las empresas recicladora del plástico en el departamento de la Guajira, se concluye que el Desempeño del Vendedor y Distribuidor se posicionó con moderado nivel de productividad.

RESUMEN

El propósito de la investigación, fue analizar la distribución estratégica de las artesanías de la etnia wayuu del departamento de La Guajira en los mercados local, nacional e internacional; donde se diagnostica la situación estratégica actual de la comercialización de estos productos artesanales en estos tipos de mercados. El diagnostico se sustenta en las teorías de los autores: Dess y Lumpkin, Hill y Jones, Dwyer y Tanner, Porter, y Garrido. Se fundamenta: En el análisis en la cadena de valor, que es el proceso secuencial de actividades de apoyo que le añade valor al producto y el análisis estructural del sector, que consiste en examinar el entorno competitivo, desarrollado en el modelo de las cinco fuerzas de Porter. La investigación es descriptiva, de corte transversal, bajo un enfoque cuantitativo. Los resultados evidencian que las artesanas de la etnia wayuu, se preocupan por diseñar productos atractivos a los clientes, casi nunca tienen en cuenta su posición geográfica, carecen de los recursos necesarios, tampoco cuentan con canales de distribución a nivel nacional e internacional, nunca se apoyan en las nuevas tecnologías para realizar su comercialización. Se concluye que no existen canales apropiados para la comercialización de las artesanías.

CURRENT SITUATION IN THE STRATEGIC MARKETING OF WAYUU CRAFTS IN THE GUAJIRA DEPARTMENT OF LOCAL MARKETS, NATIONAL, AND INTERNATIONAL

ABSTRACT

The purpose of the research was to analyze the strategic distribution of Wayuu handicrafts in the Department of La Guajira at local, national and international markets; where the current strategic situation in the marketing of the Wayuu crafts are diagnosed in those types of markets. The diagnosis is based on the theories of the following authors: Dess and Lumpkin, Hill and Jones, Dwyer and Tanner, Porter, and Garrido. The analysis on the value chain, which is the sequential process of supporting activities that adds value to the product, and structural analysis of the sector, which is to examine the competitive environment, developed in the model Porter's five forces. The research is descriptive, cross-sectional, under a quantitative approach. The results show that the artisans of the Wayuu ethnic group, worry about designing attractive products to customers, rarely take into account their geographical position, lack the resources, nor do they have distribution channels at nationally and internationally level, never based on new technologies for commercialization. It is concluded that there are no appropriate channels for marketing of handicrafts.

INTRODUCCION

La actividad artesanal de los países de América Latina y del mundo subdesarrollado, ha despertado un expansivo interés en la cultura mundial contemporánea. Países que con los recursos obtenidos por sus exportaciones en este rubro han logrado en los últimos años crear millones de trabajos propios y empleos. Por tanto, tejer es un arte desarrollado por el talento humano capaz de generar riqueza, de asumir su vida, de construirla y mejorarla, porque entre las posibilidades más valiosas del hombre está su potencial creador y una vocación desarrollada. Ambas pueden convertirse en un extraordinario medio para superar la injusticia social y económica. Guerra Cúvelo (2003).

La mujer se especializa en la elaboración de chinchorros, mantas, fajas, cordones y cinturones que sostienen el guayuco del la mujer; cuando va a casarse debe tejer el chinchorro matrimonial, la faja que sostiene el guayuco del hombre, mochilas y demás objetos textiles de uso cotidiano. La mujer wayúu está tejiendo siempre, utiliza cualquier momento que tiene disponible para este efecto, cuando va de viaje o de visita, lleva su labor e incluso de noche hila en la oscuridad. Es la que producen la cantidad de artesanías propia de esta cultura, la cual son comercializadas a los mercados de compradores, pasando por altos niveles de intermediación. El éxito de la estrategia comercialización depende de que tan efectivamente ésta pueda manejar los cambios que se presenten en el ambiente competitivo. La globalización y el cambio tecnológico están creando nuevas formas de competencia; la desregularización está cambiando las reglas de la competencia en muchas industrias; los mercados se están volviendo más complejos e impredecibles; los flujos de información en un mundo fuertemente interconectado le están permitiendo a las empresas detectar y reaccionar frente a los competidores mucho más rápidamente.

De tal manera, se debe de realizar un análisis de la situación actual del mercado para conocer que canal de distribución se debe utilizar con el fin de cubrir todo el mercado meta y lograr una satisfacción del cliente así como la rentabilidad de la empresa. Para ello, es necesario cumplir con ciertos criterios de selección, los cuales según Fischer (2004, p. 124) deben ser tomadas con base en los objetivos y estrategias de la mercadotecnia general de la empresa, que se guían por tres criterios generales: cobertura del mercado, control y costos. Por consiguiente, es pertinente realizar un diagnóstico de la situación estratégica actual en los procesos de comercialización, que consiste en realizar un análisis en La cadena de valor o actividades primarias de apoyo, que se refiere a la idea de que la empresa es una secuencia de actividades para transformar las entradas de materiales en productos que los clientes valoren; y un análisis estructural del sector, que consiste en examinar el entorno competitivo.

Con base a lo anteriormente planteado, Dess y Lumpkin (2003, p. 84) explica que el análisis de la cadena de valor contempla la empresa como un proceso secuencial de actividades creadoras de valor, que es útil para entender los bloques constructores de ventajas competitivas. Existen dos categorías diferentes de actividades, las actividades primarias: logística interna, producción, logística externa, marketing y ventas, y servicios; esta contribuyen a la creación física del producto, su venta y servicio post venta. En segundo lugar las actividades de apoyo: compra, desarrollo, gestión de recurso humano e infraestructura añaden valor a través de las relaciones con actividades primarias como otras actividades de apoyo. En este orden de ideas, en Colombia existen organizaciones como las tejedoras de las comunidades indígenas productoras de artesanías wayuu del Departamento de la Guajira, que al comercializarla le sirve para la subsistencia ya que le permite cubrir ciertas necesidades básicas insatisfechas, al respecto, según estadística realizada por DANE (2010) la elaboración de artesanías ocupa el 17.8% de la población y es la segunda actividad económica en importancia entre la población indígena wayuu.

En las actividades de las comunidades indígenas wayuu, se destaca la producción de artesanías desarrollada por la mujer, quien tiene un papel importante dentro de la cultura wayuu; puede decirse que es la conductora y organizadora del clan, ahora bien, políticamente son muy activas e independientes en su sociedad. La calidad y la belleza de los objetos que laboran se pueden apreciar principalmente en los tejidos de gran calidad y refinamiento y en los diseños tradicionales de las hamacas indígenas denominadas chinchorros, mochilas, pulseras, montas, sombreros y otros elementos de su indumentaria. El valor estético de estas obras, hermosas expresiones de la cultura material indígena es reconocido y valorado tanto nacional como internacionalmente.

Sin embargo, por observaciones realizadas en el sector, pareciera que esta actividad productiva no ha podido trascender de una manera más significativa. Es claro que la Guajira posee una larga tradición en la actividad de comercio internacional; su ubicación geográfica, su vecindad con Venezuela y la disponibilidad de varios puertos en su extensa área de litoral, le otorgan a la región importantes ventajas para dicha actividad. Aun así, en la mayoría de los casos los productos artesanales se realizan únicamente para satisfacer las necesidades de quienes o para quienes se producen y no necesariamente constituyen un bien comercial. Además, los ingresos generados por su venta no son suficientes para una digna subsistencia y los artesanos prefieren dedicarse a otras actividades como la recolección de sal, pesca o pastoreo, por medio de las cuales obtienen liquidez inmediata. Igualmente, las mujeres, quienes son las principales artesanas, están dedicadas al hogar, a la crianza de sus hijos, lo cual no les permiten agilizar su trabajo. Es por ello, que el comercio de dichas artesanías se ha explotado de manera ilegal e informal, sin información cualificada, desconociendo las oportunidades que ofrecen los acuerdos bilaterales y multilaterales celebrados con la nación y otros países y subregiones sin la adecuada infraestructura de servicio complementario. Sin reconocer la importancia que tiene el análisis de la cadena de valor y la situación estructural del sector, que determine la situación estratégica actual que permita una comercialización de las artesanías de la etnia wayuu del Departamento de la Guajira en los mercados local, nacional, e internacional.

De lo anterior se infiere que las comunidades indígenas productoras de artesanías wayuu carecen de una estructura de comercialización que garantice que estos productos lleguen, a los mercados local, Nacional e internacional de forma eficiente, A lo cual se agrega la falta de cultura asociativa entre las tejedoras, lo que impide que la oferta sea permanente. Todo esto, se convierte en un gran obstáculo para cualquier proyecto o empresa que pretenda constituir un canal de distribución estable, de largo alcance, concertado y lucrativo. Se ha detectado por otro lado, que uno de los grandes problemas que tienen las artesanías en su comercialización, en donde los canales de distribución existentes no son los más eficientes. Por lo tanto, el propósito de la investigación es analizar la situación estratégica actual de las artesanías de la etnia wayuu del Departamento de la Guajira en los mercados local, Nacional e internacional, que permita la creación de centros de acopios, cooperativas o pequeñas asociaciones que ayuden a estimular y a organizar la producción y venta de los tejidos, que garantice grandes volúmenes de ventas a dichos mercados, y se pueda lograr la eficiencia y eficacia comercial de los productos artesanales, amprando en un análisis de la cadena de valor o actividades primaria de apoyo, y sobre un diagnostico estructural del sector productivo de artesanía. Seguidamente se presenta la metodología utilizada en la investigación, el enfoque epistemológico, tipo y diseño de investigación, población, muestra, resultados, y conclusiones de este proceso investigativo.

REVISION LITERATURA

En la revisión de la literatura que se relaciona con la situación estratégica actual, se fundamenta en los conceptos teóricos de Hill y Jones (2004) que afirman que para la comercialización de los productos es pertinente, el apoyo en Las actividades primarias tienen que ver con el diseño, creación, entrega del producto, y el servicio de posventa que se le dé, son esenciales en la cadena de valor para lograr óptimos procesos de distribución, a la vez considera las funciones vitales en esta actividades, la investigación y

desarrollo, producción, ventas, y servicios al cliente. Reconoce que la investigación y desarrollo se ocupa del diseño de los servicios y de los procesos de producción, así como de aumentar la funcionalidad de productos/servicios para hacerlos más atractivos a los consumidores. En la cadena de valor en lo que concierne a la comercialización, existen diversas funciones para contribuir a crear valor. A través del posicionamiento de la marca y la publicidad, la función de comercialización puede aumentar el valor que los clientes perciben y que está contenido en el producto de una compañía. En cuanto estos ayuden a crear una impresión favorable del producto de la empresa en las mentes de los consumidores, el precio, la publicidad, promoción, colocación estratégica en los puntos de ventas, y cubrir las necesidades de los clientes, agregan valor. Dwyer y Tanner, (2007). El servicio al cliente en una organización proporciona servicios y apoyo de posventa. Esta función puede crear una precepción de un valor superior en las mentes de los consumidores al resolver problemas de los clientes y apoyarles después de que han comprado el producto. Hill y Jones (2004).

Así mismo, Hill y Jones (2004), alegan que una vez que se han identificado los límites de una industria, los gerentes se enfrentan a la tarea de analizar las fuerzas competitivas en el ambiente que la rodean, para identificar oportunidades y amenazas, que se conoce como análisis estructural del sector. El marco de referencia bien conocido de Michael E. Porter, al que se conoce como modelo de las cinco fuerzas, ayuda a los gerentes a realizar este análisis, que moldean la competencia de las organizaciones, que son: el riesgo de entrada de competidores potenciales, la intensidad de la rivalidad entre las empresas establecidas dentro de una industria, el poder negociador de los compradores, el poder negociador de los proveedores, y la cercanía de los sustitutos para los productos de una industria.

En lo que concierne al concepto de la distribución o comercialización dentro de la mezcla de marketing consiste en hacer llegar el producto a su mercado meta. La actividad más importante para llevar un producto al mercado es arreglar su venta y la transferencia de derechos del productor al cliente final. Otras actividades o funciones comunes son promover el producto, almacenarlo, y asumir parte del riesgo financiero que surge durante el proceso de distribución. Fischer (2004). Los intermediarios son grupos independientes que se encargan de transferir el producto del fabricante al consumidor, obteniendo por ello una utilidad y proporcionando al comprador diversos servicios. Estos servicios tienen gran importancia porque contribuyen a aumentar la eficacia de la distribución. Se clasifican habitualmente a los intermediarios sobre la base si adquieren o no derechos sobre los productos que se están distribuyendo, se reconocen a los mayoristas, detallista, y agentes intermediarios. Que ayudan a comercializar los productos. Con sano criterio, conviene decir que las tejedoras de la étnia wayúu, (en un sentido más amplio y orientado a los propósitos del estudio) son un conjunto de personas que poseen la capacidad de crear y plasmar en bellos diseños (tejidos) la magia de su inspiración. Tejer es un arte que permite la transformación del hilo en hermosos tejidos, que ejercen una actividad profesional creativa en torno de un oficio concreto en un nivel preponderante manual y conforme a sus conocimientos y habilidades técnicas y artísticas, trabajo en forma autónoma, deriva su sustento principalmente de dicho trabajo y transforma en bienes útiles su esfuerzo físico y mental.

METODOLOGIA

Para analizar la situación estratégica actual de las artesanías de la etnia wayuu del Departamento de la Guajira en los mercados local, Nacional e internacional, se fundamentada en un marco metodológico enmarcado bajo los siguientes criterios necesarios para desarrollar. Corresponde con un enfoque epistemológico, definido por Chávez (2007, p. 10), puesto que la forma de comprender así como de explicar la forma en que se conoce lo que sabe, en este caso, de tipo positivista pues, “enfatisa sobre la actividad de la mente humana como participante activo y formativo de lo que ella conoce”. Esto se hace a través de técnicas y que métodos cuantitativos efectuándose un acercamiento de las unidades de información, su interacción con el contexto organizacional, cuya racionalidad está fundamentada tanto en el cientificismo como el racionalismo en relación a las posturas epistemológicas institucionalista; la objetividad es la

única forma de conocimiento; en la cual existe una relación de independencia entre el sujeto que conoce y el objeto conocido.

De acuerdo con el tipo de investigación, este estudio se clasificó descriptivo, la cual es definida por Hernández y otros (2006, p. 102) como aquellos estudios que buscan especificar las propiedades importantes de personas, grupos, comunidades o cualquier otro fenómeno que sea sometido a análisis, miden o evalúan diversos aspectos, dimensiones o componentes del fenómeno a investigar. Es descriptivo, porque se especificaron naturalmente todas las propiedades importantes encontradas en los componentes esenciales en la situación estratégica actual de las artesanías de la etnia wayuu del Departamento de la Guajira en los mercados local, Nacional e internacional; el diseño fue no- experimental, de corte transversal, especificando los efectos que causa la situación estratégica actual en los procesos de comercialización de los productos artesanales de esta etnia, aplicando tres instrumentos de recolección de datos en un solo momento, que para tal caso fue la encuesta directa.

Por lo tanto, para la presente investigación se tomaran en cuenta dos (02) poblaciones: la población A, conformada por dos mil ocho (2.008) artesanas de la etnia wayuu; la población B, conformada por cinco (05) empresas comercializadoras de artesanías ubicadas en la ciudad de Riohacha (Tienda de Artesanías Numartes, Artesanías Cien por ciento Guajira, Artesanías Natca, Stan SENA “SAO – Olímpica”, Artes con Corazón Wayuu). Que fueron las poblaciones objeto de estudio. La muestra representativa para la presente investigación, se fundamento de acuerdo con Martínez (1.997), que especifica que la muestra es la parte de un conjunto o población debidamente elegida, que se somete a observación científica en representación del conjunto, con el fin de obtener resultados válidos. Para la población artesana de la etnia wayuu la muestra fue de trescientos treinta y seis (336) sujetos; y para las empresas comercializadoras se realizo un censo poblacional, se tomo como muestra las cinco (5) empresas comercializadoras. *Como técnica válida con el fin de obtener la información necesaria y realizar el presente estudio, se utilizó un (1) cuestionario versionado, dirigido a las Artesanas de la etnia wayuu, a las Empresas comercializadoras de artesanías, con cuarenta y tres (43) ítems con respuestas de cinco (05) alternativas tipo frecuencia* según la escala de Likert, se determinó la confiabilidad y la valides de los mismos, se concluyo con el análisis e interpretación de los resultados obtenidos de la información recolectada con la aplicación de los cuestionarios.

RESULTADOS

Después de tabular, analizar, e interpretar los resultados obtenidos de la aplicación de los instrumentos dirigidos a la población objeto de estudio, con el propósito de analizar la situación estratégica actual de las artesanías de la etnia wayuu del Departamento de la Guajira en los mercados local, Nacional e internacional, Para realizar el diagnostico se evaluaran dos subdimensiones: Cadena de valor (Análisis interno) y Análisis estructural del sector (análisis externo), a través de doce (12) indicadores y cuarenta y tres (43) ítems. Se procede a señalar los siguientes resultados:

Tabla: 1: Cadena de Valor

Alternativas Indicadores	Artesanas Wayuu					Empresas Compradoras				
	S	C.S	N/D	C.N	N	S	C.S	N/D	C.N	N
Investigación y Desarrollo	70%	30%	0	0	0	50%	20%	30%	0	0
Producción	35%	30%	25%	10%	0	40%	30%	20%	10%	0
Comercialización	0	0	0	20%	80%	0	0	10%	90%	0
Servicio al Cliente	15%	5%	0	70%	10%	0	0	10%	90%	0

Fuente: Elaboración Propia

Alternativas: S= Siempre C.S =Casi Nunca N/D= Ni en Acuerdo Ni en Desacuerdo C.N = Casi Nunca N= Nunca

En la tabla se observa que del 100 % de los sujetos encuestados, 70 % se inclinaron hacia las alternativas Siempre, asociado a un 30 % que está Casi Siempre. De lo que se deduce que, las artesanas en estudio diseñan sus artesanías con características que son atractivas según las necesidades de sus clientes; que concuerda con lo señalado por las empresas compradoras. En lo relacionado al indicador producción, se aprecia que del 100 % de los sujetos encuestados, 35% se ubicaron en la alternativa Siempre, unificado a un 30 % que está Casi siempre en que sus organizaciones artesanales se aseguran que los insumos utilizados cumplan con los estándares de calidad, que también es concordante con lo que creen las empresas compradoras. En lo que respecta a la comercialización, las artesanas encuestadas, el 80% de las respuestas se inclinaron por la opción nunca, el 20% seleccionaron la alternativa Casi nunca, consideran la zona de frontera como una ventaja para comercializar sus artesanías, que no se apoyan en la tecnología, que no cuentan con los recursos financieros, y que solo cuenta con canales locales para distribuir sus productos; que concuerda con lo que manifiestan las empresas compradoras. En lo que respecta al servicio del cliente, Se observa que del 100 % de los sujetos encuestados, 70 % se inclinaron hacia las alternativas Casi nunca, aunado a un 10 % considera que nunca, no se preocupan porque el cliente quede satisfecho después de la compra.

En referencia al indicador manejo de materiales, la tabla muestra, del 100% de las artesanas encuestada, 20 % se inclinaron hacia las alternativas Siempre, aunado a un 80 % que señala que Casi Siempre. Esto indica que las artesanas establecen políticas de manejo de materiales en el proceso de comercialización, que existe una discordancia con lo afirmado por las empresas compradoras, que creen que casi nunca existe un buen manejo de materiales. En relación al recurso humano, del 100 % de las artesanas encuestadas, 30 % se inclinaron hacia las alternativas Siempre, aunado a un 70 % que está Casi Siempre. Se entiende que las productoras de las artesanías wayuu se aseguran que su personal reciba la compensación adecuada, capacitación, en la comercialización de sus artesanías. Con base al indicador sistema de información, Del 100 % de los encuestados, 70 % de las respuestas se inclinaron por la opción Casi Nunca, y el 30 % seleccionaron la alternativa Nunca, cuando fueron consultados para evaluar el indicador sistema de información. Lo cual demuestra que las artesanas no se preocupan por el internet, sistema de información, y tecnología de punta para atender las solicitudes de sus clientes, que existe concordancia con lo que afirman las empresas compradoras. En referencia al indicador infraestructura, Se puede apreciar, que del 100% de las artesanas wayuu, 20% se inclinaron por Siempre, y el 80 % opto por la opción Casi Siempre, lo cual indica que las artesanas de la etnia wayuu cuentan con una infraestructura adecuada para distribuir los productos con seguridad al cliente; se presenta una discordancia con lo afirmado por las empresas compradoras, que creen que las artesanas wayuu casi nunca poseen una adecuada infraestructura.

Tabla: 2: Análisis Estructural del Sector

Alternativas Indicadores	Artesanas Wayuu					Empresas Compradoras				
	S	C.S	N/D	C.N	N	S	C.S	N/D	C.N	N
Barrera de Entrada	0	0	0	15%	85%	0	0	0	95%	5%

Fuente: Elaboración Propia

Alternativas: S= Siempre C.S =Casi Nunca N/D= Ni en Acuerdo Ni en Desacuerdo C.N = Casi Nunca N= Nunca

En la tabla muestra, con base al análisis estructural del sector, del 100% de las artesanas de la etnia wayuu encuestadas, las respuestas se ubicaron en la opción Nunca y Casi Nunca, esto indica que las productoras de las artesanías wayuu no toman en cuenta las políticas gubernamentales para apoderarse de una posición del mercado, no realizan inversiones, ni adquieren materia prima en altos volúmenes para reducir sus costos; existe concordancia con lo que afirman las empresas compradoras. En relación al indicador intensidad de la rivalidad, Se aprecia que del 100% de las artesanas encuestadas, 40% se inclinaron por la opción casi nunca, seguido de 30% que seleccionaron la alternativa nunca, con lo expuesto se puede apreciar que las productoras de las artesanías wayuu toman en cuenta la rivalidad existente en los mercados meta, existiendo concordancia con lo que afirman las empresas compradoras. En lo que respecta al indicador poder de negociación con los proveedores, Se observa que del 100% de las artesanas wayuu encuestadas, el 70% de las respuestas se inclinaron hacia la alternativa Siempre, apoyados por 30% quienes optaron por la opción Casi Siempre. Esto demuestra que la productora de artesanía wayuu selecciona la materia prima más económica para poder mantener una diferenciación de precios ante la competencia; concuerda con lo que manifiestan las empresas compradoras. Y por ultimo en lo que concierne al indicador poder de negociación con los compradores, Se observa que del 100% de los sujetos encuestados, 80% se inclinaron hacia las alternativas Nunca, unificado a 20% que está Casi Nunca. De lo que se deduce que, las productoras de artesanías no se aseguran de conocer como impactan las políticas gubernamentales a su sector productivo; lo cual existe concordancia con lo que afirman las empresas compradoras.

CONCLUSIONES

Luego de analizar y discutir los resultados obtenidos del cuestionario aplicado a la población objeto de estudio, con la finalidad de analizar la distribución estratégica de las artesanías de la etnia wayuu del departamento de La Guajira en los mercados local, nacional e internacional; donde se diagnostica la situación estratégica actual de la comercialización de estos productos artesanales en estos tipos de mercados., se procede a exponer las conclusiones obtenidas de dicho estudio. En la función de Investigación y Desarrollo las artesanas se preocupan por diseñar sus productos con características funcionales atractivas a los consumidores, el cual se diferencian del resto de los artesanos del sector; en relación a la función de producción las artesanas de la etnia wayuu realizan sus actividades de forma tal que perciben la diferenciación de sus productos. En referencia al indicador comercialización las productoras de las artesanías wayuu consideran que formulan estrategias de comercialización para dar a conocer el alcance de sus productos; pero que casi nunca tienen en cuenta la posición fronteriza como ventaja para comercializar las artesanías; ni se apoyan en la tecnología para realizar la comercialización, y tampoco cuentan con los recursos financieros necesarios para distribuir dichos productos; a la vez señalan que poseen canales de

distribución a nivel local, pero que no cuentan con canales de distribución a nivel nacional e internacional. Con base al indicador servicio al cliente las productoras de las artesanías wayuu casi nunca se preocupan porque el cliente quede satisfecho después de la compra; pero que siempre les resuelven los problemas que puedan presentarse posterior a la comercialización de las artesanías; por otro lado en el indicador manejo de materiales las artesanías wayuu no se preocupan por disminuir el tiempo de transporte de sus productos, pero creen que establecen políticas de manejo de materiales en el proceso de comercialización; en referencia al recurso humano consideran que no se aseguran de establecer mecanismos efectivos para seleccionar su mano de obra, pero que casi siempre se aseguran de recibir las compensaciones adecuada, y que se capacitan y forman constantemente para realizar la distribución de sus productos; en el indicador sistemas de información se considera que las artesanías wayuu casi nunca se preocupan por la internet, la tecnología de punta, sistemas de información que les permita mejorar los procesos de comercialización de sus artesanías; pero que siempre cuentan con la infraestructura adecuada para su proceso de comercialización.

De igual forma, en el análisis estructural del sector, en el indicador barrera de entrada las artesanías consideran que casi nunca realizan inversiones para apoderarse de una porción del mercado, y que no toman en cuenta las políticas gubernamentales para apoderarse de una posición del mercado, que nunca adquieren materia prima en alto volúmenes con el fin de reducir costos, y que casi nunca poseen canales de distribución organizado que les permita llegar a sus clientes oportunamente; con base al indicador intensidad de la rivalidad las productoras de las artesanías wayuu tienen en cuenta la rivalidad existente en los mercados meta, no utilizan guerras publicitarias para enfrentar sus rivales, tienen en cuenta la demanda existente en el mercado local, pero no la del mercado nacional e internacional. El indicador poder de negociación de los proveedores, las productoras de las artesanías wayuu siempre seleccionan las materias prima más económica para poder mantener una diferenciación de precio ante la competencia, diferencian sus productos para evitar imitaciones, reconocen que utilizan estrategias de promoción para sus productos; en relación al poder de negociación de los compradores las productoras de las artesanías wayuu nunca se aseguran de conocer como impactan las políticas gubernamentales a su sector productivo.

RESUMEN

El propósito de la presente investigación, es analizar si la gestión social de la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira - Colombia, generan niveles de capacitación y formación que coadyuven a la organización y participación comunitaria en sus prácticas académicas en las comunidades del Departamento de La Guajira. Este estudio se sustenta en teóricos como: González, Acosta, Escobar, Perlan, y Plan de Desarrollo Departamental, donde la gestión social es la construcción de diversos espacios para la interacción social; se basa en aprendizajes colectivos, continuo y abiertos, para el diseño y ejecución de proyectos, que atiendan necesidades sociales, implicando diálogos entre diversos actores, empresas y organizaciones. La presente investigación es de tipo descriptiva, de corte transversal. Los resultados evidencian que existe una favorable gestión social de la Facultad, porque se realiza diagnóstico situacional para determinar problemáticas, causas y alternativas de solución; a la vez, en las prácticas se dan procesos de participación, formación y organización comunitaria, con la finalidad de aprovechar las oportunidades que ofrecen las empresas públicas y privadas para establecer objetivos colectivos y mejorar las condiciones de vida en las comunidades. Se concluye que existe gestión social en la facultad objeto de estudio.

SOCIAL MANAGEMENT OF THE FACULTY OF SOCIAL AND HUMAN SCIENCES AT THE UNIVERSITY OF GUAJIRA - COLOMBIA

ABSTRACT

The purpose of this research is to examine whether the social management of the Faculty of Social and Human Sciences at the University of La Guajira - Colombia, generates levels of training and education that contribute to community organization and participation in its academic practices in communities in the Department of La Guajira. This study is based on theorist such as, González, Acosta, Escobar, Perlan and the Departmental Development Plan, where social management is the construction of various spaces for social interaction; it is based on collective, continuous and open learning, for the design and implementation of projects that address social needs, involving dialogue between different actors, companies and organizations. This research is descriptive, cross-sectional. The results evidence that there is a favorable social management of the Faculty, due to situational diagnosis is made to determine problems, causes and possible solutions; at the same time, practical processes of participation, training and community organization are given, in order to seize the opportunities offered by public and private enterprises to establish collective goals and improve living conditions in the communities. It is conclude that there is social management in the faculty studied.

INTRODUCCION

El avance de la sociedad apalancado en un mundo moderno, el cual evoluciona a gran velocidad imponiendo en todos los sectores nuevas estructuras e innovadoras formas de pensamientos, que llevan consigo una filosofía distinta de ver la vida, así como, una concepción predominante del ser humano en su interacción con el medio, cómo se integra para manejar las distintas esferas de decisión ciudadana; sin embargo, a nivel internacional el ámbito de acción ciudadana aborda elementos de exclusión de la sociedad organizada como un todo imperante y significativo en el marco de la actuación de los hombres.

Desde este punto de vista, la gestión social es una acción entendida como el canal por medio del cual se desarrollan en las personas y en la comunidad un espíritu emprendedor para generar un cambio social, y responder a la búsqueda de la superación y la pobreza, igualmente para que se adquirieran destrezas para abordar un entorno de turbulencia cuyos componentes políticos, económicos, socio-culturales, ambientales y tecnológicos no favorecen los procesos de desarrollo sociales; de ahí, que se requiere afianzar los lazos comunitarios, recuperar los valores colectivos, la identidad cultural, así mismo, implica la convergencia de intereses y necesidades comunes, y finalidades humanas concertadas M. Colomer (2009).

En tal sentido, la gestión social posibilita el desarrollo de ciudadanía, la creación de una cultura de corresponsabilidad, de aceptación de la diferencia, del diálogo, de la información, de la formación, y la aplicación del conocimiento para el progreso, el desarrollo, inclusión social transformación, soportada en herramientas como la planeación estratégica, desarrollo humano, organización, participación, trabajo en equipo, liderazgo y la investigación que permitan dotar a las comunidades de los elementos teóricos y prácticos para lograr la implementación de políticas públicas que materialicen el cambio social y minimicen la pobreza. Entendemos por gestión social, el proceso completo de acciones y toma de decisiones que hay que recorrer, desde el abordaje de un problema, su estudio y comprensión, hasta el diseño y operación de propuestas de la realidad, ya sea a nivel político administrativo y cultural

En tal sentido, al revisar el plan de desarrollo de la Guajira - Colombia, 2011 – 2015, se puede apreciar, la planificación de la Gestión Social que es un instrumento que integra las acciones y recursos sectoriales y locales (salud, educación, bienestar social, cultura, entre otros) Desde un enfoque de derechos para enfrentar las determinantes del deterioro de la calidad de vida, en tal documento se señala, que existe un nivel de pobreza del 25% en los niños de 4 a 10 años, a la vez existe un déficit de educación de un 34.10%, que la desnutrición está en un 35% en niños de 1 a 4 años; se considera que el 86% de los delitos contra menores es una cifra alarmante; que la infracción de menores está relacionada con el hurto en un 23%, en lesiones personales 4.5%; se puede apreciar, que el 77% de estos menores mantienen un consumo de droga que son niños de 12 a 17 años. La tasa de mortalidad por violencia (homicidios, accidentes, violencia intrafamiliar) es del 64% en el 2014, se atendieron 625 menores de 18 años con atención humanitaria, son algunas de las problemáticas que se señalan entre otras.

Por consiguiente, la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, debe estudiar las problemáticas sociales a nivel individual, grupal y comunitario; planificar, organizar, coordinar y dirigir programas de ayuda a la población de acuerdo a las políticas sociales del Estado y a los problemas emergentes en el sistema social; realizar exploración en el medio familiar con fines de investigación, diagnósticos e intervenciones, para que las personas comprendan y superen las dificultades en las relaciones interpersonales y trabajen cooperativamente para conseguir objetivos comunes. Por tal referente, la

comunidad académica (Directivos, Docentes, estudiantes), de la Facultad Ciencias Sociales y Humanas de la Universidad de

La Guajira – Colombia, se convierten en gestores sociales que entregan a las comunidades las herramientas para la integración, destrezas y habilidades con la que cada individuo de la comunidad pueda resolver sus problemas y dificultades. Por consiguiente, la gestión social tienen como objetivo promover el desarrollo de la comunidad que exige una respuesta frente a los problemas de conductas agresivas, relaciones interpersonales, delincuencia juvenil, alcoholismo, drogadicción, falta de sentido de pertenencia, carencia de valores, falta de liderazgo, trabajo en equipo, entre otros, que deben hacer parte de la planeación participativa de los diferentes actores, con el propósito de generar acciones, tendientes a minimizar los conflictos generados en esta región del país de Colombia. Con base, a los planteamientos anteriormente señalados, los docentes y discentes, en coordinación con los directivos de la facultad de ciencias sociales y humanas de la Universidad de la Guajira - Colombia, le corresponde ser un facilitador y orientador de las personas con dificultades sociales señaladas anteriormente, de manera que éstos puedan hallar y utilizar los recursos y medios necesarios para superar sus dificultades y lograr mejores condiciones de vida.

Por consiguiente, esta gestión social busca generar un empoderamiento como un nuevo paradigma fundamentado en las teorías del desarrollo; este concepto ha permitido que los individuos y sociedades quienes hasta ahora estaban marginados de la toma de decisiones, sean ahora el eje central de la intervención. Sin embargo, diversos obstáculos como la falta de una definición consensuada y el limitado trabajo empírico relacionado con este enfoque han impedido que las políticas de gobierno hayan incorporado adecuadamente los procesos de autogestión social. De hecho, los individuos empoderados tienen la capacidad de ser agentes de sus intereses y motivaciones; por ello, pueden actuar en calidad de ciudadanos que elaboran, proponen y gestionan sus iniciativas para interactuar con otras personas, de manera personal o al interior de diferentes tipos de organizaciones, según Henríquez (2004), sin duda, este proceso es dinámico toda vez que permite aristas de participación bajo un ámbito donde prevalece confianza en las intervenciones sociales que se demarquen en las necesidades que satisfacen.

El propósito de esta investigación, fue analizar si la gestión social de la Facultad Ciencias Sociales y Humanas de la Universidad de la Guajira – Colombia, estructurada bajo los siguientes aspectos: Se realiza un diagnostico situacional de la gestión social de esta facultad; se identifican los procesos de organización y participación comunitaria en las practicas académicas; se establecen los niveles de capacitación y formación que se llevan a cabo; con la finalidad de formular lineamientos estratégicos para el mejoramiento de la gestión social de la facultad de ciencias sociales y humanas de la universidad de la Guajira-Colombia. Seguidamente se presentan la metodología utilizada en la investigación, se define el enfoque epistemológico, tipo y diseño de investigación, población, muestra, y se presentan los resultados y conclusiones de este proceso investigativo.

REVISION LITERATURA

Esta revisión literaria se fundamenta en conceptos relacionados con la gestión social, lo que permite señalar los postulados teóricos mas relevantes, en la presente investigación se sustentan bajo los principios teóricos de Ruiz Katherine (2010), quien considera la gestión social, como todo trabajo o servicio orientado al beneficio de cualquier persona, comunidad o institución tomando en cuentas las posibilidades de ejecución (recursos, viabilidad, presupuesto, coherencia, etc.), todo esto en conjunto con las personas o instituciones interesadas en la solución de cualquier problemática que afecte a la comunidad o Estado. Los objetivos constituyen aquello que pretendemos lograr, en su sentido cualitativo y cuantitativo, con intervenciones profesionales, y parten, como es obvio, del objeto. Podemos considerar que el objeto general es conseguir el pleno desarrollo de las personas en su ámbito social y contribuir así, al bienestar social.

Según Henríquez Libia (2004), la Gestión Social se entiende como un conjunto de mecanismos que

promueven la inclusión social y la vinculación efectiva de la comunidad en los proyectos sociales, y permiten que los sujetos cultiven un sentido de pertenencia, de participación ciudadana y de control social para el mejoramiento continuo de su contexto. En tal sentido, el componente de Gestión Social, establece los procesos de participación y funcionamiento de las instituciones para el control social, así mismo, describe la necesidad de articular, y generar información, haciendo usos de los diferentes medios disponibles para desarrollar proyectos educativos institucionales como estrategia para el logro de la participación social.

METODOLOGÍA

La presente investigación se clasifica como descriptiva, porque se van a especificar naturalmente todas las propiedades importantes encontradas en la gestión social de la Facultad de Ciencias Sociales y Humanas, de la Universidad de la Guajira - Colombia. la presente investigación puede catalogarse como no experimental, la cual busca determinar porque los hechos ocurrieron así y se van a observar en su ambiente natural, al analizar la gestión social de la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, con el fin que se realice un diagnostico situacional de la gestión social de esta facultad; se identifiquen los procesos de organización y participación comunitaria; se establezcan los niveles de capacitación y formación que se llevan a cabo; con la finalidad de formular lineamientos estratégicos para el mejoramiento de la gestión social de la facultad de ciencias sociales y humanas de la universidad de la Guajira-Colombia.

La población que va a ser estudiada y sobre la cual se pretende generalizar los resultados, de la gestión social de la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, se tendrá en cuenta a los ciento treinta y siete mil seiscientos veintinueve (137.629) habitantes de la Guajira-Colombia, según el último censo poblacional realizado por el DANE; y el personal que dirige la gestión social de la facultad, que son cinco (5) personas. Se aplicaron dos (2) instrumentos, uno a las personas de La Guajira- Colombia y a al recurso humano que dirigen la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, estarán constituidos por veintisiete (27) ítems cada uno; según los criterios contenidos en la escala de Likert, con preguntas cerradas con base a 5 alternativas: Siempre, Casi Siempre, Regularmente, Casi Nunca, Nunca. Finalmente, Se determina la confiabilidad y validez de los mismos, concluyendo con el análisis e interpretación de los resultados obtenidos de la información recolectada con la aplicación del cuestionario.

RESULTADOS

Después de interpretar los resultados obtenidos de la aplicación de los instrumentos dirigidos a los habitantes de la Guajira-Colombia, y al recurso humano que dirigen la gestión social, de la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, se procede a señalar los siguientes resultados:

Tabla: 1: Diagnostico Situacional

Alternativas Indicadores	Habitantes					Directivos				
	S	C.S	R	C.N	N	S	C.S	R	C.N	N
Síntesis del Problema	30%	40%	25%	5%	0	60%	40%	0	0	0
Causas	35%	38%	39%	0	0	40%	60%	0	0	0
Soluciones	30%	40%	30%	0	0	40%	60%	0	0	0
Medios	5%	60%	35%	0	0	60%	40%	0	0	0
Alternativas	10%	80%	10%	0	0	60%	40%	0	0	0

Fuente: Elaboración Propia

Alternativas: S= Siempre C.S =Casi Nunca R. Regularmente C.N = Casi Nunca N= Nunca

La tabla 1 muestra que los habitantes de la de la Guajira-Colombia, creen que casi siempre en la gestión social de la Facultad de Ciencias Sociales y Humanas, desarrollan diagnostico situacional para determinar las problemáticas sociales de las comunidades esta comunidades; a la vez se identifican las causas que originan dicha problemáticas sociales; en estos diagnostico se señalan los medios requeridos para solucionar los problemas sociales; y se hacen el reconocimiento de las diferentes alternativas para solucionar las problemáticas sociales de las comunidades de esta región; lo cual concuerdan con lo que afirman los directivos de la facultad.

Tabla: 2: Organización Comunitaria

Alternativas Indicadores	Habitantes					Directivos				
	S	C.S	R	C.N	N	S	C.S	R	C.N	N
Necesidades	15%	75%	10%	0	0	0	60%	40%	0	0
Objetivos	30%	50%	25%	5%	0	40%	60%	0	0	0
Recursos Internos	5%	55%	40%	0	0	0	100%	0	0	0
Recursos Externo	25%	60%	15%	0	0	0	60%	40%	0	0
Cooperación	25%	65%	10%	0	0	0	60%	40%	0	0

Fuente: Elaboración Propia

Alternativas: S= Siempre C.S =Casi Nunca R. Regularmente C.N = Casi Nunca N= Nunca

En la tabla se muestra que los habitantes de la Guajira-Colombia, manifiestan que casi siempre en la gestión social de la Facultad de Ciencias Sociales y Humanas, se trabaja sobre la organización comunitaria, con fin de definir los niveles de necesidades en el colectivo comunitario; que se propicia la organización comunitaria con la finalidad de que se establezcan objetivos colectivos, con el propósito que las comunidades resuelvan sus problemáticas sociales; que casi siempre se generan proceso de organización comunitaria, con el fin que se aprovechen los recursos que poseen para puedan resolver sus necesidades comunitarias urgentes; así mismo se propician encuentros de organización comunitaria, con la finalidad de aprovechar las oportunidades que ofrecen las empresas públicas y privadas para mejorar las condiciones de vida en estas comunidades; se da la organización comunitaria con la finalidad de crear procesos de cooperación mutua; se aprecia que existe concordancia con lo que afirman los directivo de la facultad de ciencias sociales y humanas.

Tabla: 3: Participación Comunitaria

Alternativas Indicadores	Habitantes					Directivos				
	S	C.S	R	C.N	N	S	C.S	R	C.N	N
Planeación	55%	15%	30%	0	0	0	60%	40%	0	0
Liderazgo	10%	50%	40%	0	0	60%	40%	0	0	0
Proyectos	25%	40%	10%	25%	0	0	100%	0	0	0
Gerencia social	5%	30%	65%	0	0	0	0	100%	0	0

Fuente: Elaboración Propia

Alternativas: S= Siempre C.S =Casi Nunca R. Regularmente C.N = Casi Nunca N= Nunca

En esta tabla se aprecia que los habitantes de la Guajira-Colombia, afirman que siempre y casi siempre la gestión social de la Facultad de Ciencias Sociales y Humanas, propician la participación comunitaria con el propósito que las comunidades puedan planificar sus actividades en aras de buscar un mejor bienestar social; que casi siempre se generen niveles de liderazgo en las personas que hacen parte de las comunidades de esta región; y que regularmente en la gestión social, se gestiona la participación comunitaria con el propósito que las comunidades gerencien sus proyectos en aras que resuelvan sus problemáticas más sentidas; lo cual concuerdan con lo que afirman los directivos de la facultad.

Tabla: 4: Capacitación

Alternativas Indicadores	Habitantes					Directivos				
	S	C.S	R	C.N	N	S	C.S	R	C.N	N
Cursos	35%	40%	25%	0	0	20%	40%	40%	0	0
Seminarios	45%	50%	5%	0	0	0	0	60%	40%	0

CONCLUSIONES

Después de considerar los resultados obtenidos de la aplicación de las encuestas dirigidas a los habitantes de La Guajira - Colombia, y a las personas que dirigen la gestión social, de la Facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, apoyados en los aportes bibliográficos de M. Colomer (2009), que define la gestión en la intervención profesional, como base de una acción programada que responde eficazmente a las necesidades. A continuación se presentan las siguientes conclusiones: En este orden de ideas, en relación al primer objetivo específico: Realizar un diagnóstico situacional de la gestión social de la facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira-Colombia, se pueden estipular las siguientes consideraciones: Los habitantes de La Guajira-Colombia, creen que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se desarrollan diagnósticos, con el fin de reconocer las

necesidades o problemas más apremiantes, y a la vez se identifican las causas que originan las mismas en esta región; en tal sentido, existe total concordancia con lo que afirman las personas que dirigen dicha gestión en esta facultad. Consideran que la gestión social de la Facultad de Ciencias Sociales y Humanas, en sus diagnóstico situacional establecen las posibles soluciones y los medios requeridos, para contrarrestar las problemáticas sociales de las comunidades de la Guajira-Colombia; por consiguiente existe concordancia con lo que afirman los directivos de esta facultad.

Los habitantes de La Guajira Colombia, opinan que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se hace el reconocimiento de las diferentes alternativas para solucionar las problemáticas sociales de las comunidades; se puede apreciar total concordancia con lo que afirman las personas que dirigen la facultad. Que se evalúan las alternativas más favorables, con el propósito de resolver los problemas sociales de las comunidades; lo mismo consideran las personas que dirigen las prácticas académicas en esta facultad. En relación al segundo objetivo específico: Identificar los procesos de organización y participación comunitaria en la gestión social desarrolladas por la facultad de Ciencias Sociales y Humanas de la Universidad de la Guajira, de la Guajira-Colombia, con base a lo anterior señalado se pueden considerar las siguientes conclusiones:

Las personas que hicieron parte como informantes, en la investigación, consideran que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se propicia la organización comunitaria, con el propósito de establecer objetivos colectivos, para que las comunidades resuelvan sus problemáticas sociales; existe total concordancia con lo manifestado por el recurso humano que dirigen las actividades académicas de la facultad. Los sujetos objeto de estudio en la presente investigación, creen que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se generan procesos de organización y participación comunitaria, con el fin de de aprovechar los recursos que poseen para resolver sus necesidades sentidas; a la vez buscan minimizar las debilidades que presentan; lo cual existe plena concordancia con lo que señalan las personas orientan el proceso de gestión en la facultad.

Los habitantes encuestados en La Guajira-Colombia, afirman que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se propician procesos de organización comunitaria, con la finalidad de aprovechar las oportunidades que ofrecen las empresas públicas y privadas para mejorar las condiciones de vida en las comunidades, y a la vez se busca contrarrestar las amenazas manifiestas en el entorno; en tal sentido, existe concordancia con lo señalado por los miembros que dirigen la facultad. Las personas que hicieron parte como informantes, en la investigación, consideran que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se da la organización comunitaria con el fin de crear procesos de cooperación mutua en las comunidades de La Guajira; lo mismo afirman, el recurso humano que dirigen la gestión en esta facultad.

Los sujetos objeto de estudio en la presente investigación, manifiestan que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se propicia la participación comunitaria, con el propósito que las comunidades puedan planificar sus actividades en aras de buscar bienestar social, ósea que se den procesos de planeación para resolver problemáticas sentidas en su entorno comunitario; por tal razón, existe total concordancia con lo afirmado por las personas que dirigen las acciones académicas en la facultad. Los habitantes encuestados en la Guajira-Colombiana, afirman que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se propicia la participación comunitaria, para generar niveles de liderazgo en las personas que hacen parte de las comunidades de La Guajira, además se capacitan para el manejo de proyectos de autogestión; en tal sentido, existe una concordancia con lo señalado por las personas que dirigen la facultad.

Las personas que hicieron parte como informantes, en la investigación, creen que en la gestión social de la Facultad de Ciencias Sociales y Humanas, se fomenta la participación comunitaria, con el objetivo que formulen proyectos tendientes a resolver sus necesidades sentidas dentro de las comunidades de esta región; lo cual existe, total concordancia con lo que afirman las personas que dirigen las practicas académicas en

esta facultad. Los habitantes encuestados en la Guajira-Colombiana, manifiestan que en la gestión de la Facultad de Ciencias Sociales y Humanas, regularmente se genera la participación comunitaria, con el propósito que las comunidades gerencien sus proyectos en aras de resolver sus problemáticas sociales más sentidas; lo cual existe discordancia total con las personas que dirigen las prácticas en esta facultad, ya que consideran que si existe tal participación, ya que las comunidades tienen la oportunidad de gerenciar sus propios proyectos En relación al tercer objetivo específico:

Establecer los niveles de capacitación y formación que se lleva a cabo en la gestión social de la Facultad de Ciencias sociales y Humanas en las comunidades de la ciudad de Riohacha, con base a lo anterior señalado se pueden considerar las siguientes conclusiones: Se realizan cursos con el fin de capacitarlos, con la finalidad que se genere el desarrollo intelectual y social; en tal sentido, existe concordancia con lo que afirman las personas que dirigen la gestión en esta facultad. Se realizan seminarios, con el fin de crear actitudes autogestionarias y solidarias; lo cual existe discordancia con lo que afirman las personas que dirigen estas prácticas, ya que consideran que regularmente desarrollan para cumplir dicho fin. Los habitantes de la Guajira-Colombia, consideran que en la gestión social de la Facultad de Ciencias Sociales y Humanas, generan procesos de formación, con el objetivo de desarrollar capacidades y crear habilidades de gestión en las personas que pertenecen a la comunidades de la Guajira; en tal sentido existe total concordancia con lo que afirman el recurso humano que dirigen la facultad.

RESUMEN

Las empresas actualmente está ligada con las estrategias empresariales que puedan adoptar o crear las organizaciones, pueden ser desarrolladas de distintas formas. En esta investigación se realiza en la ciudad de Monterrey Nuevo León, México, sobre los factores estratégicos que pueden intervenir para impulsar la internacionalización de las empresas en la industria del acero en el Noreste de México, se recabaron datos mediante una investigación de campo en las principales empresas de la ciudad y analizando estadísticamente la información obtenida sobre Calidad, innovación y Fomento a la Exportación, esta información se obtuvo mediante la medición y el comportamiento de veinticinco variables específicas divididas en tres variables categóricas o constructores que están involucrados en los factores administrativos y productivos, esto con el fin de incursionar en el mercado internacional del acero.

PALABRAS CLAVE: Industria del Acero, Internacionalización, Noreste de México, competitividad.

ABSTRACT

At the present time the companies are linked to business strategies that are able to adopt or create organizations, they can be developed in different ways. This research is taking place in the city of Monterrey, State of Nuevo Leon, Mexico. It is about strategic factors that can interfere to push the internationalization of companies in the steel industry in the Northeast Mexico, data were collected by means of a field research in the most important companies of the city by analyzing this information Statistically, the information was obtained on quality, innovation and promotion of exploitation, this information was obtained by measuring 25 specific variables divided in 3 constructors and their behavior. Those variables are involved in administrative and production factors, all this going to the goal of entering the international steel market.

INTRODUCCIÓN

La industria acerera es una de las más importantes a nivel mundial por ser proveedora de materia prima para una infinidad de industrias, las que destacan el ramo automotriz, construcción, alimentos, electrodomésticos, maquinaria pesada, entre otras. Estas empresas son una gran fuente de riqueza, cuya derrama económica dan beneficios a miles de familias alrededor del mundo. El futuro se vislumbra prometedor para esta industria ya que el crecimiento de los países como China y la India necesitarán una

enorme cantidad de acero así como el resto del mundo ya que la creación de infraestructura requiere de este material.

En el actual mundo competitivo y globalizado, es imprescindible contar con mecanismos y estructuras de relaciones eficaces y eficientes que le permitan a las empresas ganar ventajas competitivas (Jiménez, 2006). En México la industria del Acero se ha desarrollado debido a que la demanda se ha incrementado, en 2012 se tuvo un producción de 18.1 millones de toneladas, lo cual se incrementó un 7.3% respecto al año anterior (CANACERO, 2012).

De manera particular, el noreste de México es el mayor productor del país de acero, según CANACERO en esta zona se produce 7 mil toneladas de acero que representan el 38 % del total de la producción nacional, estados como Coahuila y Nuevo León son altamente productores de este producto, sin embargo debido a la globalización deben de estar en constante innovación para ser más productivos porque existen amenazas del acero que entra a México, principalmente de Asia donde México tienen una balanza comercial negativa de 43 mil MMD arrojando una paridad de 11/1 por lo que la batalla comercial es dura, pero esto también da oportunidad a las empresas Mexicanas de internacionalizarse y entrar a un mercado mundial.

La cadena de la siderurgia se divide en tres grandes sectores, a continuación se explican: Primer Sector: Materias primas es la extracción de minerales metálicos y la obtención del acero. Segundo Sector: Son los productos que corresponden a bloques de acero y laminación en caliente como en frío. Tercer Sector: Son los productos derivados de la laminación y se convierten en los principales insumos para la cadena metalmeccánica.

La cadena siderúrgica provee a las industria de alto valor agregado como la automotriz, petrolera, construcción, etc. En la actualidad las industria en general está inmersa en una competencia global por lo que cada vez el mercado se especializa más, los clientes son más exigentes, piden productos de buena calidad pero con un precio competitivo, este factor a golpeado a un segmento de empresas en México, pero también se han abierto mayores oportunidades de hacer negocio en el mundo.

Se han revisado varios trabajos de investigación que señalan los huecos que existen en investigaciones sobre los elementos que permitan una mayor industrialización de esta industria como es el caso de la revista de Metalurgia que señala en uno de sus artículos que en México existen empresas siderúrgicas importantes pero que requieren de mayores inversiones y estrategias para ser más competitivas con una mayor producción, mejorando la calidad y bajando costos de producción. Otros investigadores, como Fernández 2014, señalan que con la apertura comercial que se dio desde 1998 esta industria Mexicana se ha visto reducida su participación en el mercado a pesar de que esta industria ha aumentado su producción, ya que con la reducción de los aranceles se incrementaron desmedidamente las importaciones como es el caso de hojalata y se tradujo muchas veces en una práctica desleal de comercio principalmente del mercado de China, donde este tiene anualmente un subsidio de U\$52 mil millones(ANDI 2011).

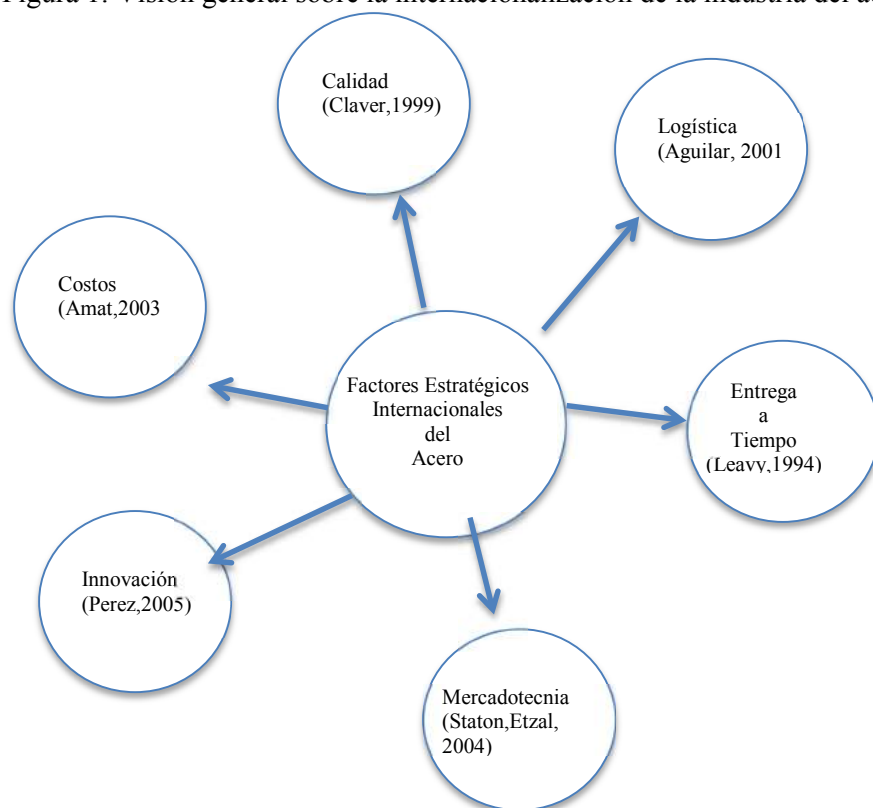

La industria del acero no está exenta de esta tendencia, sino todo lo contrario, siendo una de los sectores estratégicos del país en generación de empleos, es importante que la innovación este presente para ser más competitivo, por lo tanto es importante identificar los factores productivos y administrativos que les permitan elevar su competitividad ante la amenaza del acero asiático que se vende en el mundo. Para algunos investigadores la formulación de estrategias competitivas y productivas implica un análisis de los puntos fuertes y débiles que determine su posición en relación a sus competidores y un análisis interno externo del entorno (Porter, 1980). Las investigaciones se han centrado en el examen de dos tipologías estratégicas: una realizada por Porter (1980) y la propuesta por Miles y Snow (1978). Esta última es más aceptada por su visión organizativa y por considerar la relación entre recursos externos e internos (O'Regan y Ghobadian, 2005).

Miles y Snow (1978) se basan en las siguientes tres premisas: Las empresas que tienen éxito es donde su enfoque sistémico de adaptación a su entorno es el adecuado en tiempo y forma. 2) Identifican claramente las siguientes orientaciones estratégicas que son: defensivas, exploradoras, analizadoras y reactivas. 3) Cualquier Orientación – defensiva, exploradora o analizadora- puede conducir a un buen resultado empresarial. Por otro lado, la internacionalización abarca también los ámbitos administrativos que permiten mejorar de forma integral la productividad de la empresa. Cabe señalar que los aspectos administrativos se ven directamente afectados por el valor que se le da a las relaciones interpersonales en el medio ambiente mexicano, por lo que, esta situación no solo podría ver afectados los indicadores de eficiencia y productividad (Seward, 1991).

REVISIÓN LITERARIA

Para fomentar la internacionalización de la industria del acero es importante determinar los aspectos no sólo de sistemas de producción sino también aspectos administrativos como Mercadotecnia, Logística, Optimización de Costos, Entrega a tiempo, Innovación y Calidad del producto, donde participan de forma integral en toda la cadena de producción, abarcando lo administrativo hasta la entrega del producto. Por lo que el desarrollo del marco teórico en conjunto con la revisión bibliográfica, se determinó que los factores a analizar en este artículo serán las 6 variables propuestas determinantes para la competitividad de la industria a nivel internacional, razón por la cual a continuación se describe cada una de ellas. El modelo gráfico se presenta a continuación, donde se aprecia claramente como intervienen los factores para la internacionalización.

Figura 1: Visión general sobre la internacionalización de la industria del acero nacional

Fuente: Elaboración propia.

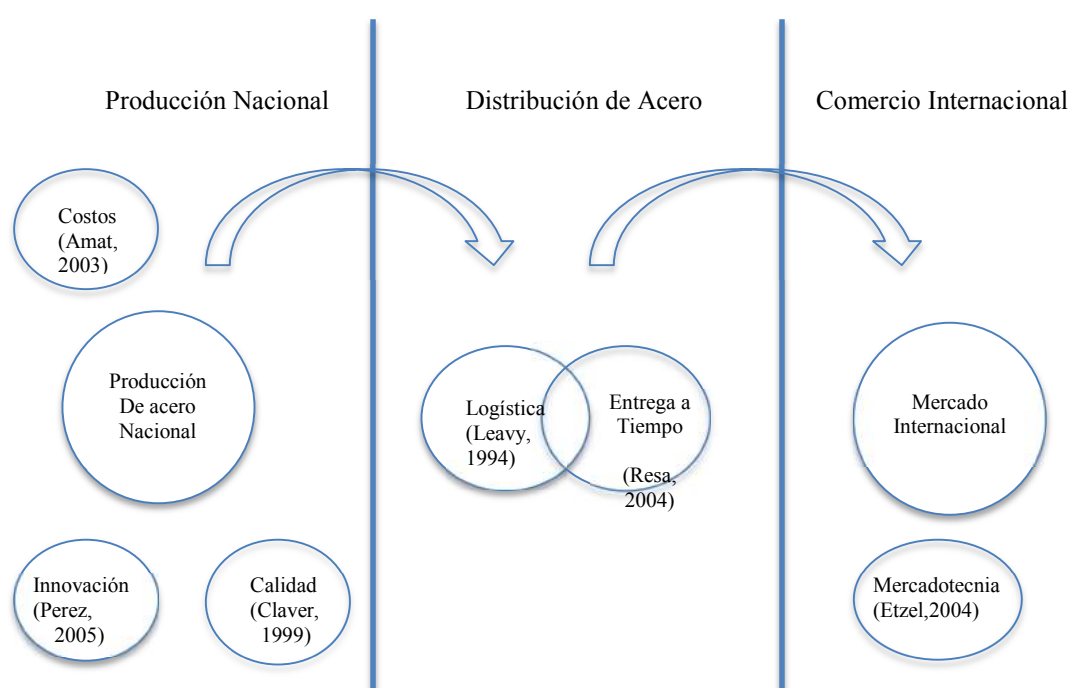

Formación de tabla de constructores

Una vez descrito las características de cada uno de los factores estratégicos que inciden en la internacionalización del acero en el noreste de México, en la tabla 1 se indican el número de investigaciones de cada una de los temas.

Tabla 1. Numero de investigaciones sobre las variables						
Cosnstructor	2011	2012	2013	2014	2015	Referencias relevantes
Calidad	1946	1876	1858	1400	13	(Claver,1999)
Innovación	173	267	149	97	1	Hill y Jones (1996)
Mercadotecnia	10	18	20	11	0	(Castellanos, 2003)
Fuente: (EBSCO, 2015), (Scopus, 2015), (Elsevier, 2015), y (Springer, 2015).						(Pérez et al., 2005)
						Stanton, Etzel y Walter (2004)

En base a la revisión literaria se determine crear un modelo de como los factores interactúan para la incorporación de las empresas en el Mercado internacional, como se muestra en la figura 2.

Figura 2. Relación de las variables para el Mercado internacional

Fuente: Elaboración propia basado en la revisión literaria.

Calidad del producto

Las empresas han controlado el camino a la calidad y han descubierto que pueden ser más competitivas si son capaces de obtener productos y/o servicios de calidad y bajo coste (Claver et al. 1999). Actualmente la calidad se está convirtiendo en uno de los retos estratégicos más relevantes de las empresas. La calidad permite a las empresas mejorar su capacidad de competir en mercados cada vez más extensos y sometidos a profundas transformaciones sobre todo si se compite a nivel internacional, que es el caso de estudio de este proyecto. Esta relación entre calidad y competitividad ha sido establecida por diversos autores. Entre otros para Ivancevich et al. (1996) la calidad “se ha convertido en un elemento competitivo de capital importancia”. Por su parte, Hill y Jones (1996) afirman que el logro de un nivel de calidad permite obtener mayores niveles de eficiencia, puesto que se producen menos errores y defectos, y una mayor capacidad

para satisfacer las necesidades de los consumidores, pues supone el adecuar la actividad de la empresa a las exigencias de sus clientes. Algunos autores destacan de manera general cuatro etapas en desarrollo de la calidad (Garvin, 1988; Claver et al. 1999; Cuatrecasas 1999):

Innovación en la industria

Otro de los factores productivos propuestos a medir es la innovación que se genere en la industria del acero como un factor de impulso a la internacionalización. Se puede iniciar con el trabajo conceptual de Schumpeter, realizado a mediados de la década de 1980, que ha permitido acumular el conocimiento sobre el papel de la innovación y la competitividad de las empresas (Castellanos, 2003). Hoy en día las empresas compiten en entornos más dinámicos, tanto a nivel local, regional y global. Estos entornos se caracterizan por contar con recursos tecnológicos más complejos, diversidad de clientes, mercados más exigentes y libre comercialización de los productos. En este sentido, la innovación es un constructo que ha adquirido una relevancia muy importante en los últimos años, pues las empresas que son capaces de mejorar continuamente en productos, procesos, servicios, etc., logran mayor competitividad.

Mercadotecnia

Otro de los factores estratégicos propuestos teóricamente es el modo en que las empresas subsisten con sus productos o servicios, son las ventas, por lo que este concepto es de vital importancia para cualquier forma de hacer negocios sobre todo a nivel internacional. Por lo tanto, una de las formas o estrategias que las compañías adoptan para mejorar sus ventas es por medio de la Mercadotecnia. Para Lamb, Hair y McDaniel(1994), este concepto se basa en la definición propuesta por la Asociación de Mercadotecnia de Estados Unidos (American Marketing Association), la cual expresa que es el proceso de planeación y ejecución del concepto, precio, promoción y distribución de ideas, bienes y servicios, para crear intercambios que satisfagan objetivos individuales y organizacionales.

METODOLOGÍA

Esta investigación se desarrolló en la ciudad de Monterrey Nuevo León en las 30 principales empresas relacionadas con la industria del acero, recabando su visión sobre la internacionalización de esta industria manufacturera relacionada con el acero, analizando su perspectiva para incrementar sus ventas en el mercado internacional.

Para la creación del instrumento de medición se definieron tres variables categóricas o constructores (Calidad, Innovación, Fomento a la Exportación) y veinticinco variables específicas las cuales se analizan en la tabla 2, tabla 3, tabla 4, sus respuestas pueden seleccionar una de cinco posibles. Los resultados se basaron en la escala de Likert, el cual es un tipo de instrumento de medición o de recolección de datos que disponemos en la investigación. En la tabla 1 se muestra la distribución de las respuestas en cuanto a su valor.

Tabla 1. Escalas utilizadas en el estudio

Respuesta	Totalmente Desacuerdo 1	en 2	En Desacuerdo 3	Neutro 4	De Acuerdo 5	Totalmente Acuerdo de
Ponderación	20	40	60	80	100	

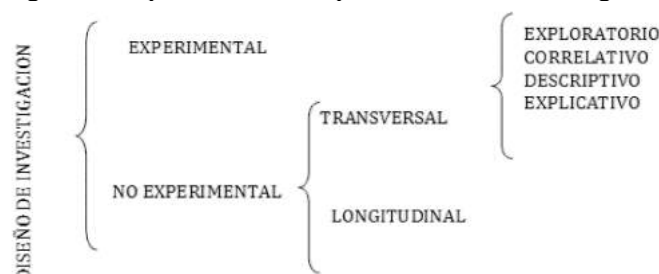

Elaboración propia.

Los resultados se presentan de la siguiente manera, primero se les da una ponderación donde el valor máximo es de 100 y se divide entre el número de respuestas y son los puntos que vale cada una como se muestra en la tabla 1, el segundo paso es contabilizar cada una de las respuestas y multiplicar por la

ponderación, por ultimo teniendo los resultados se divide entre el número de encuestas aplicadas, con esto obtenemos el valor de aceptación respecto a la apreciación de los encuestados.

Todos los datos fueron capturados en un software estadístico para analizar los diferentes indicadores respecto a las variables mencionadas. La investigación es no experimental en la categoría de transversal-descriptiva (Figura 1), debido a que no se están manipulando las variables, simplemente se observa y se recolectan los datos en su contexto natural para ser analizados.

Figura 1. Representación esquemática de la investigación no experimental para este trabajo.

Las entrevistas fueron en el año 2014 a los gerentes o responsables de planta, encargados directos del proceso de manufactura y comercialización de cada una de las empresas encuestadas, por lo que es valiosa su opinión, cuentan con la experiencia y conocimientos sobre la industria del acero nacional y cómo ve el futuro de este industria en tres siguientes grandes rubros: 1.- Calidad, 2.- Innovación y 3.- Exportaciones.

ANÁLISIS DE RESULTADOS Y DISCUSIÓN

En la tabla 2 se muestra como se comportó los resultados sobre la calidad del acero nacional respecto al acero internacional. Las variables con mayor aceptación es la 4 con un 84% (durabilidad del acero nacional), variable 7 con un 81% (la recomendación sobre el usar acero nacional para el desarrollo de productos que compitan a nivel internacional) y 8 con un 87% (La resistencia del acero nacional para mejorar la calidad de los productos que lo usen) siendo este la mayor puntuación de los resultados de Factor Calidad.

En términos de aceptación regulares se encuentran la variable 1 con un 72% (El nivel de calidad del acero internacional es igual al nacional), la variable 6 con un 79% (sobre las especificaciones técnicas, si la industria nacional es capaz de cumplir a la primera). Los niveles más bajos de aceptación son la variable 2 con un 54% (La calidad del acero internacional es superior al nacional), la variable 3 con un 41% (Si el acero de importación es prioridad para realizar productos) siendo la aceptación más baja y la variable 5 con un 50% (La durabilidad del acero internacional es mayor a la nacional).

Con el análisis de esta variable categórica o constructores podemos deducir que los empresarios consideran al acero nacional de una muy buena calidad que compite perfectamente con el acero internacional por lo que el desarrollo de productos nacionales es perfectamente realizables con materia prima nacional. En la Tabla 3 las variables sobre la innovación del acero nacional, la visión de los empresarios es regular en general con una aceptación de las variables 9,11,12,13,14,15 entre el 71% al 73%, solo las variables con mayor puntuación es la 10 con un 76% (Los nuevos productos nacionales generan nuevos negocios) y la variable 16 con un 76% (La industria del acero es innovadora). Por los resultados obtenidos en esta constructor se deduce que en general la empresa acerera nacional e internacional el ofrecimiento de nuevos productos de acero como materia prima es regular, en este campo no tiene mucha actividad.

Tabla 2. Resultados del Factor Calidad del Acero

Factor Calidad	% aceptación
1.- El nivel de calidad del acero nacional es igual al de importación.	72
2.- La calidad del acero que se importa es superior a la de la producción nacional.	54
3.- Respecto a la calidad del acero para realizar los productos que se comercializan dentro y fuera del país, la prioridad es adquirir acero de importación	41
4.- El grado de la durabilidad del acero nacional es confiable para integrarlo a los productos de su empresa y con esto le permite dar garantía a los clientes	84
5.- La durabilidad del acero de importación es superior a la durabilidad del acero nacional	50
6.- En cuanto a las especificaciones técnicas que necesita esta industria, el acero nacional cumple con los requerimientos necesarios como primera opción de compra	79
7.- Se podrá recomendar el acero nacional como una estrategia para incrementar la calidad de los productos nacionales.	81
8.- Los clientes consideran que el acero nacional tiene la resistencia suficiente como para que le proporcione mejor producto	87

Esta tabla muestra los resultados sobre la percepción de los empresarios de la industria del acero en la ciudad de Monterrey, Nuevo León México.

Tabla 3. Resultados sobre la Innovación de la industria acerera nacional.

Factor Innovación	% aceptación
9.- Los productos de la industria nacional del acero que se ofrecen son innovadores.	71
10.- Los nuevos productos de acero nacional puede generar oportunidades para hacer nuevos negocios y explorar nuevos mercados.	76
11.- Si hay recomendaciones por parte de los proveedores sobre alguna modificación de los productos de acero nacional se realizan sin problemas.	71
12.- La empresa en la industria del acero siempre tiene una alternativa nueva para cubrir los constantes cambios en los productos según las necesidades de los clientes.	71
13.- En general se puede considerar a la industria del acero nacional como una industria innovadora.	73
14.- Los productos de acero de importación están en constante innovación.	71
15.- El grado de innovación de productos de acero nacional es competitivo respecto a la industria extranjera.	73
16.- En general considera innovadora la industria del acero nacional.	76

Esta tabla indica los resultados sobre la Innovación de la industria acerera.

En la tabla 4, observamos que la variable 17 con un 81% (La calidad del acero cumple para la exportación), en las variables 18,19 y 23 con un 71% (Costo del acero nacional, innovación para el producto y si existe información para el empresario para exportar, respectivamente), la variable 20 con un 65% (Preferencia para vender el acero a nivel nacional o internacional), la variable 24 con un 63% (El potencial de vender acero nacional en el extranjero) y la variable con menor aceptación es la 25 con un 51% (La estabilidad económica nacional que le permita hacer negocios en el extranjero).

En este constructor podemos resumir que por una parte los empresarios consideran que el acero nacional no tiene problemas en calidad para competir a nivel internacional que los costos son regulares así como la innovación. Los empresarios no consideran mejor vender en el extranjero que a nivel nacional, donde existe un problema es en los trámites aduaneros por la burocracia que se tiene en los trámites aduaneros, también están preocupados en la estabilidad económica de México ya que este es un factor preponderante para hacer negocios internacionales, por lo que no tienen confianza en la solides de peso mexicano.

Tabla 4. Resultados sobre las exportaciones de la industria del acero nacional

Fomento de las Exportaciones	% aceptación
17.- La calidad de los productos del acero nacional cumplen los requisitos internacionales para exportar fácilmente.	81
18.- El costo de los productos del acero nacional permiten hacer competitivos los productos para ser exportables.	71

19.-La innovación en la producción del acero nacional es un elemento que hace diferencia en el mercado internacional.	71
20.- Considera que es mejor vender el acero en el mercado nacional que en el internacional.	65
21.- La visión de los empresarios mexicanos es comercializar el acero en el extranjero.	72
22.- El exportar acero nacional de un margen de utilidad mayor que el comercializarlo a nivel nacional.	72
23.- En este sector se tiene información suficiente para encontrar clientes en el extranjero.	71
24.- Existe un potencial para exportar los productos del acero nacional por las facilidades que hay en los trámites aduaneros.	63
25.- La estabilidad económica nacional permite tener acceso a clientes alrededor del mundo y no preocuparse por el tipo cambiario de la moneda	51

Esta tabla indica los resultados sobre las exportaciones de productos donde se usa el acero nacional

CONCLUSIÓN

El acero es uno de los materiales más utilizados para la construcción de muchos de los productos que utilizamos diariamente, el futuro se ve prometedor a pesar de que existan algunos substitutos como por ejemplo el plástico, sin embargo hay productos donde en este momento no se puede sustituir, por eso la importancia de esta industria, además por el tipo de infraestructura que se requiere para la producción del acero es generador de empleos y riqueza en los lugares donde están situadas estas fábricas, en la revisión literaria se muestra un modelo de cómo funciona la industria y se profundizo en los temas de calidad, innovación y exportaciones haciendo un inspección minuciosa respecto a estos temas.

El mayor volumen de ventas del acero producido en México se vende en el país por lo que se dio la tarea de preguntar a los empresarios su visión de él porque no se exportaba más y por qué el producto se quedaba localmente, con la información obtenida podemos concluir que el acero nacional dependiendo al sector que este dirigido tiene una calidad igual o superior a la del extranjero por lo que en este rubro no existe problema, en donde si está estática esta industria es en cuanto a la innovación, los productos que se ofrece son los mismos durante mucho tiempo por lo que es una industria que evoluciona un ritmo lento, probablemente por el tipo de producción que se tiene, en cuanto a la exportación la realidad de los empresarios por un lado están seguros de que el acero cumple con los requisitos para ser exportables, pero por otro lado carecen de información de donde pueden enviar sus productos en el mercado internacional. Con este desconocimiento de los empresarios se les dificulta determinar los costos y sus márgenes de utilidad, con esto para toma de decisiones para participar a nivel global, el gobierno mexicano y las cámaras asociadas a esta industria se vuelven importantes para permear la información necesaria y el asesoramiento que requieran los empresarios para impulsarlos internacionalmente.

Para investigaciones futuras se podrá investigar sobre la gobernanza de esta industria y que tipos de apoyos tienen la industria extranjera en sus países de origen respecto a la que se tiene aquí en México, además de inspeccionar los costos de producción derivados de los insumos que necesitan estas fábricas y subsidios respecto a otros países.

ESTADO DEL ARTE DE LAS METODOLOGÍAS PARA LA EVALUACIÓN SOCIAL EN PROYECTOS DE INVERSIÓN

Diana Matilde Marín Flórez, Universidad Industrial de Santander
Orlando Enrique Contreras Pacheco, Universidad Industrial de Santander

RESUMEN

La evaluación del impacto social se define como los procesos de análisis, seguimiento y gestión de las consecuencias sociales tanto positivas como negativas de las intervenciones planeadas. Contribuyendo a la cuantificación de los impactos sociales, éste estudio presenta el conocimiento acumulado sobre las metodologías para la evaluación social en proyectos de inversión. La literatura muestra que existe una amplia brecha entre las metodologías como teoría y su aplicación dentro de los proyectos, de igual forma se concluye que la evaluación del impacto es vista como un medio para adquirir los permisos en lugar de un proceso para la comprensión de los impactos. Asimismo, se evidencia una tendencia de crecimiento del 42,3% en promedio, de la producción de artículos científicos sobre la temática, especialmente en países como Australia, Holanda y Reino Unido. Se identifican las principales metodologías aplicadas a sectores específicos que se destacaron a través del análisis del contenido de los artículos seleccionados, en total se encontraron 18 metodologías para la evaluación social, adicionalmente se determinan algunas de las limitaciones de la evaluación social.

PALABRAS CLAVES: Revisión Sistemática, Metodología de Evaluación Social, Proyecto de Inversión, Sostenibilidad

STATE OF THE ART OF THE METHODOLOGIES FOR SOCIAL ASSESSMENT IN INVESTMENT PROJECTS

ABSTRACT

Social impact assessment is defined as the process of analysis, monitoring and management of both positive and negative social consequences of planned interventions. Contributing to the quantification of social impacts, this research develops a systematic review to establish a theoretical framework presenting the accumulated knowledge on methodologies for evaluating social investment projects. The literature shows that there is a wide gap between theory and applied methodologies within projects, in the same way, the impact assessment is seen as a method to acquire the permits instead of a process for understanding the impacts. Also, from 2006 to 2014 by 42.3% in average increase of scientific articles on the subject, and a considerable number for 2015, mainly evidenced in countries like Australia, Netherlands and United Kingdom. The main methodologies applied to specific sectors was found by analyzing the contents of the highlighted selected items, in total 18 methodologies for social assessment, additionally the bad practices of professionals and non-unification between companies, communities and government, are some of the limitations of the social assessment.

KEYWORDS: Systematic Review, Social Assessment Methodology, Investment Project, Sustainability.

INTRODUCCIÓN

El desarrollo sostenible, tal como se define en el Informe de la Comisión Brundtland, es el desarrollo que satisface las necesidades del presente sin comprometer la capacidad de las generaciones futuras para satisfacer sus propias necesidades (Sánchez, 2014). Asimismo, desde la década de 1990, los factores ambientales y sociales se han vuelto cada vez más importantes en las consideraciones estratégicas para las empresas de cualquier tamaño. Es así como la estrategia organizacional sostenible se podría definir como el proceso de adaptación de la organización con su propio entorno para mantener un equilibrio dinámico (Moorea, 2009); y dado que el desarrollo de una organización proviene de la adecuada gestión de sus proyectos; es claro que su evaluación integral debe darse en la vía de lo sostenible.

Se da por descontado que hoy en día, el abastecimiento sostenible de servicios eficientes, fiables y asequibles es un requisito esencial en los proyectos de inversión. Sin embargo varios proyectos se han aplicado a un costo de miles de millones de dólares en el mundo y no han proporcionado beneficios sostenibles para la sociedad (Shiferaw, et al, 2013) lo que corrobora que es necesario monitorear también los impactos de los proyectos en su entorno (Korytárová, et al, 2013).

El impacto social de proyectos ha atraído una mayor atención y verificación por parte de las comunidades, gobiernos y una mayor cantidad de compañías en los últimos tiempos. El cómo se distribuyen los costos y beneficios del desarrollo de recursos tiene una enorme influencia en el éxito de los proyectos y el entender esto ha llevado a fortalecer las políticas del gobierno y de las compañías, respecto a la evaluación del impacto social, responsabilidad social y relaciones comunitarias (Dezhi, et al, 2014).

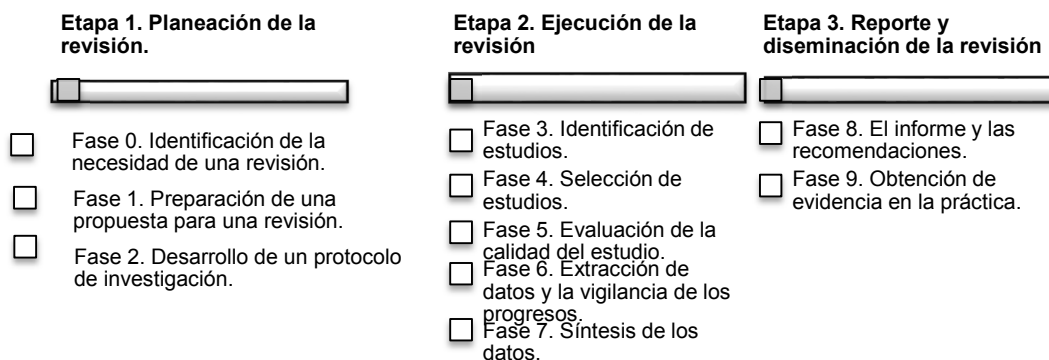

En éste artículo se presenta un estudio analítico del conocimiento acumulado que hace parte de la investigación documental basada en el análisis de documentos escritos y que tiene como objetivo inventariar y sistematizar la producción en el área del conocimiento (Vargas y Calvo, 1987), sobre las metodologías utilizadas para medir el impacto social en proyectos de inversión.

En primer lugar, se realizó una búsqueda, recolección y depuración de textos concernientes al tema y analizando los documentos se realiza un marco de la situación actual, del contexto en el que se encuentra esta temática y se señalan las metodologías principales utilizadas para la evaluación social en proyectos de inversión aplicada a sectores específicos. Cabe resaltar que a lo largo del documento, se presentan algunos conceptos que mencionan los autores, pero que por efecto del alcance de la investigación, solo serán mencionados, tal como lo hacen los autores en la revisión de la literatura. Finalizando, se presenta en una tabla del resumen de las metodologías mencionadas anteriormente, las cuales se clasificaron respecto a seis conceptos, sirviendo como cuadro informativo y comparativo.

METODOLOGÍA

Para el desarrollo de ésta investigación se utilizó la metodología de revisión sistemática, la cual adopta métodos explícitos y sistemáticos para la identificación, selección y evaluación crítica de la información sobre un tema de interés (Thorpe, et al, 2006), garantizando que la investigación sea fiable y rigurosa. A continuación se presenta su estructura.

Figura 1: Etapas de una revisión sistemática

Protocolo de investigación

El protocolo de investigación presenta la ecuación de búsqueda para cada base de datos (Ver Figura 2), los criterios de inclusión y exclusión (Ver Tabla 1) que fueron implementados como directrices de la revisión sistemática desarrollada para la obtención de la mejor evidencia que garantizara la objetividad y calidad de la investigación realizada.

Tabla 1: Criterios de inclusión y exclusión

Criterios de inclusión	<ol style="list-style-type: none"> 1. Se incluyeron los documentos encontrado en la colección principal de la plataforma <i>Web of Science</i> y lo encontrados en la plataforma de <i>ScienceDirect</i> 2. Se incluyeron todos los documentos encontrados en las bases de datos en el intervalo de tiempo comprendido entre 2006 y 2014. 3. Se incluyeron solamente los tipos de documentos que son artículos, también se tuvo en cuenta literatura gris (repositorios académicos). 4. Se incluyeron solo artículos en Inglés y Español
Criterios de exclusión	<ol style="list-style-type: none"> 1. Se excluyeron todos los documentos que no estuvieran relacionados con la temática de la investigación 2. Se excluyeron los documentos que no se encontraran dentro del periodo de tiempo establecido. 3. Se excluyeron los tipos de documentos tales como: editorial, corrección, resumen, cartas, noticias. 4. Se excluyeron los artículos que no son escritos en Inglés y español

Figura 2: Ecuaciones de búsqueda

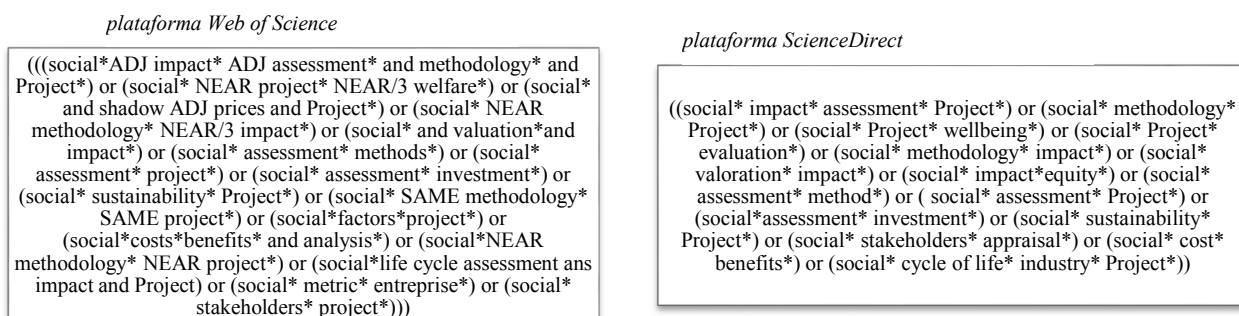

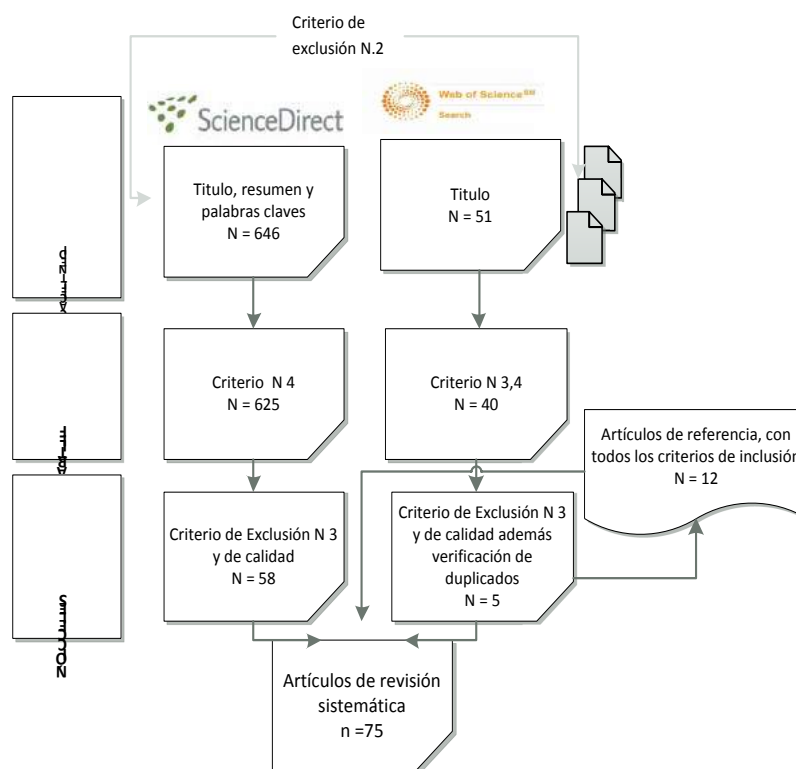

Figura 3: Proceso de Selección de Artículos para Revisión Sistemática

RESULTADOS

El seguimiento realizado a la literatura de la evaluación social mediante el análisis bibliométrico permitió la identificación de la dinámica de producción de artículos científicos relacionados con la temática en el mundo. Comparando los 75 artículos se evidenció que Australia cuenta con un (26%), seguido de (10%) de los países bajos, Reino Unido posee el (8,7%) Estados Unidos y China con (7,8%), Alemania y Sudáfrica con (6,57%), España con (5,26%), Irán y Finlandia con (3,9%), Japón, Canadá, Francia e Italia cuentan con un (2,63%). Se puede decir que Australia es el país que cuenta con el mayor porcentaje de investigaciones. No se encontró artículos de Colombia dentro de la investigación.

Figura 4: Producción de artículos por años de publicación

En la Tabla 2 se puede observar el top 10 de los autores principales referentes a la evaluación social, en el cual cabe resaltar a Frank Vanclay y A.M. Esteves de Holanda como los autores con el mayor número de publicaciones.

Tabla 2: Autores principales

Frank Vanclay	11
A.M. Esteves	5

Tabla 3. Metodologías para la evaluación social en proyectos de inversión

METODOLOGÍA	DESCRIPCIÓN	VENTAJAS	LIMITACIONES
Evaluación del Impacto (IA) (De Smedt, 2010) Evaluación del Impacto de Recursos Humanos (HRIA) (Salcito, et al, 2014)	Metodología que relaciona los derechos humanos en la evaluación del impacto	Garantizar el carácter exhaustivo de los estudios sociales formales y el acoplamiento entre los equipos de EIA, SIA y EIDH en las discusiones sobre las alternativas de diseño de proyectos.	Aún no se encuentra lo suficientemente desarrollada para la implementación continua dentro de la evaluación de proyectos
	Metodología que compara el uso de herramientas científicas para la EI satisfactoria utilizada por los investigadores y los responsables políticos en casos seleccionados.	Compara el uso de herramientas científicas para lograr una EI satisfactoria.	Brecha potencial entre las contribuciones de los investigadores y los tipos de instrumentos de evaluación que los responsables políticos están dispuestos a utilizar.
Evaluación del impacto Social (SIA) (Vanclay y Prenzel, 2014), (Vanclay, 2003), (Alagan y Aladuwa, 2012)	Metodología compuesta por la unión de la gestión de conflictos y SIA	Facilita la realización de una evaluación desde la perspectiva de las personas o grupos afectados para obtener información sobre los problemas potenciales de conflicto.	Cuestiones concretas de conflicto y los detalles de la implementación de la evaluación, así como con la voluntad de las partes interesadas a que cooperen y participen, y con el fondo institucional general
	Doce principios de aplicación en SIA de la International Asociación for Impact Assessment (IAIA)	Involucra a todos los interesados en el proceso de evaluación social.	La subjetividad existente en identificar cuál es el nivel o el alcance de la SIA y si el proyecto a merita el desarrollo de la misma.

Evaluación de Riesgo Social (SRA) Evaluación de Riesgo e Impacto Social (RSIA) (McLellan y Corder, 2013) (Mahmoudia, et al, 2013)	Metodología, Sistema de información geográfica de participación pública (PPGIS)	Utiliza tecnología de sistema de información geográfica (GIS) y coloca a las personas afectadas por el proyecto en los puestos de toma de decisiones	Existen limitaciones en la elaboración de la práctica de la metodología
	Metodología SUSOP ® que relaciona la probabilidad de ocurrencia de las consecuencias sociales	Revela la incertidumbre acerca y la gravedad de los hechos y las consecuencias de una actividad con respecto a ser humano	Se limita a la evaluación ex ante, los posibles impactos
	Metodología híbrido entre la evaluación del impacto social y riesgo social	Enfoque holístico. Su salida no sólo explora los impactos tanto positivos como negativos, también se ocupa de la gestión y mitigación de dichos impactos.	Podría llegar a ser compleja en cuanto a su aplicación
Análisis del Ciclo de Vida (LCA) Análisis del Ciclo de Vida Social (S-LCA) (Benoît, et al, 2010)	Esta metodología es un proceso sistemático utilizando la mejor ciencia para recoger mejores datos disponibles acerca de los impactos sociales	Identifica, conoce, comunica y reporta el impacto social; establece estrategias y planes de acción; en todo el ciclo del producto o activo	Debido a su reciente aparición aún se encuentra en desarrollo
Evaluación del Impacto socioeconómico: Análisis Costo-Beneficio (CBA) (Martínez-Paz, 2014) Evaluación Social (Cartes y Contreras, 2007)	Los costos o beneficios causados por un proyecto se puede medir en unidades monetarias, es decir, rentabilidad socioeconómica	Indicadores armonizados con los que comparar la rentabilidad social de los proyectos alternativos, refleja el verdadero costo para la sociedad de utilizar una unidad adicional de capital en un proyecto costos sociales de un proyecto	Siendo una Metodología cuantitativa, no existe una relación directa con la opinión de los afectados del proyecto esta metodología no incluye los costos de los riesgos sociales
EVALUACIONES SOCIALES SECTORIALES			
EVALUACIÓN SOCIAL EN PROYECTOS HÍDRICOS (Larson , et al, 2007) (Bryan Tilt, et al, 2009)	Índice de evaluación llamado Costo RAP \$ / MWh / año. Este índice presenta una relación de los gastos de reasentamiento estimado y la generación anual de energía	Permiten establecer un marco de referencia de las metodologías que se están utilizando en la práctica para la evaluación social en proyectos de inversión.	La subjetividad de los expertos para determinar los enfoques de la evaluación social.
	El autor presenta, buenas prácticas para realizar la evaluación social	Se presentan estudios de caso que validan las metodologías mencionadas.	La especificación de las métricas, ya que cada proyecto del mismo sector posee factores sociales diferentes. Capacitación del personal en software especializado.
EVALUACIÓN SOCIAL EN PROYECTOS DE BIOENERGÍA (Krajnc y Domac, 2007) (Cambero y Sowlati, 2014) Bogetoft , (Cambero y Sowlati, 2014)	Plantean el modelo SCORE, se basa en la teoría general de multiplicador keynesiano. Evalúa el gasto de una población y los empleos generados.	Se utilizan métricas integradas, proporcionan una cobertura más amplia de los aspectos de sostenibilidad desde múltiples perspectivas teóricas, siendo estas las más utilizadas.	
	Presentan el marco del Análisis del Ciclo vida social S-LCA, apropiado para los biocombustibles.		

EVALUACIÓN SOCIAL EN PROYECTOS DE CONSTRUCCIÓN (Allouche y Sterling, 2014) (Dezhi Li. et al, 2014) (Valdes-Vasquez et al, 2013)	Método de modelización integrada para evaluar y optimizar los criterios económicos, ambientales y / o sociales en el diseño y planificación para la producción de bioenergía es el de optimización multi-objetivo (MOO).
	Identifica los costos sociales que genera construcción
	Presenta un metodología para la obtención de indicadores de construcción
	Ofrecen una guía de mejores prácticas de la sostenibilidad social durante la fase de planeación y diseño de proyectos de construcción
EVALUACIÓN SOCIAL EN PROYECTOS EXTRACCIÓN (Falck y Spangenberg, 2014)	Presenta una metodología compuesta por indicadores de evaluación de la comisión Europea.

CONCLUSIONES

Lograr el desarrollo sostenible, integrando los pilares económico, ambiental y social, requiere que exista metodologías de evaluación que permitan cuantificar los posibles impactos negativos o positivos de un proyecto sobre la sociedad, con el fin de tomar medidas de prevención o mitigación, o maximizar sus beneficios.

El desarrollo de proyectos de inversión genera impactos sociales, en algunos casos irreversibles. Es por esto que existe la necesidad de establecer metodologías adecuadas que permitan, a quienes toman las decisiones, realizar juicios informados en todas las etapas de realización de un proyecto, enfatizando en el uso de metodologías ya que, hacen más probable iluminar los problemas potenciales. La literatura muestra que existe una amplia brecha entre las metodologías, como teorías, y entre su aplicación dentro de los proyectos, esto puede ser una consecuencia de las limitaciones existente de las mismas. Adicionalmente, se puede concluir que existen pocas metodologías de tipo cuantitativo.

La responsabilidad social presenta mayor frecuencia en los últimos años, lo que podría ser consecuencia de la norma ISO 26000 creada en el 2010. Sin embargo, la evaluación del impacto es vista como un medio para adquirir los permisos, en lugar de ser un proceso para la comprensión de los impactos. La literatura muestra que la evaluación social es una temática con una tendencia creciente de 42,3% en promedio en el número de artículos producidos del 2006 al 2014, destacando que al finalizar éste intervalo de tiempo se presenta un mayor sesgo en el crecimiento de publicaciones. Adicionalmente, se observa que a pesar de que no había iniciado el año 2015 en el momento en que se realiza la búsqueda, sin embargo, se encuentra un número considerable (6) de artículos de este año, lo cual reafirma que la tendencia de producción de artículos del 2015 se ve descrita de forma creciente.

De acuerdo con el análisis bibliométrico se hace evidente que Australia es el país con la mayor investigación en la evaluación social de proyectos. Lo cual es consecuente con la información aportada por el Índice de Desarrollo Humano (IDH) 2011, difundido por la ONU, en el que presenta a Australia como el segundo mejor país para vivir. Dentro de los autores más relevantes de la evaluación del impacto social se destaca a Frank Vanclay y Ana María Esteves ambos de nacionalidad Holandesa con el 21% de los documentos encontrados.

A través de la revisión de la literatura se encontraron 18 metodologías de tipo cualitativo y cuantitativo clasificadas en seis conceptos: Evaluación del Impacto, Evaluación del Impactos Social, Evaluación del Riesgo Social, Evaluación del impacto socioeconómico, Evaluación del Análisis del Ciclo de vida y Evaluaciones sociales Sectoriales; Hídrico, Bioenergía, Construcción y Extracción.

PERCEPCION DE LOS EMPRENDEDORES FRENTE A LA INCLUSION DE LA IMAGEN CORPORATIVA EN LOS PLANES DE NEGOCIOS: CASO LA GUAJIRA

Erick Johan Sierra Ortiz, Universidad de La Guajira
Wilmar Sierra Toncel, Universidad de La Guajira
Angela Nair Ortiz Rojas, Universidad de La Guajira
Karen Nahyr. Sierra Ortiz, Universidad Politécnica de Valencia

RESUMEN

El propósito del presente artículo es analizar la percepción que tienen los gerentes emprendedores frente a la importancia de la imagen corporativa en los procesos de diseño del plan de negocios e incubación de una empresa embrionaria. La investigación fue tipo descriptiva con diseño no experimental y de campo. Para la recolección de la información se utilizó la encuesta estructurada con respuestas dicotómicas y múltiples validada por cinco expertos y medida su confiabilidad mediante el coeficiente alpha cronbach. Se fundamentó teóricamente en los planteamientos de Costa (2003), Borello (2008), Pizzolante (2010), Van Riel (1997) entre otros. Para el análisis e interpretación de los resultados se utilizó el análisis de frecuencias y estadísticos de tendencia central y medidas de dispersión de la estadística inferencial, además para establecer la categorización del fenómeno investigado se utilizó el baremo construido por los investigadores. Como conclusión se pudo establecer que la imagen corporativa es una valiosa herramienta comunicacional y gerencial para lograr el éxito organizacional sin embargo, no es considerada importante dentro de los planes de negocios y etapa de incubación. Como reflexión final se recomienda a las micro, pequeñas y medianas empresas -MIPYMES- utilizar el plan de negocios para planificar la construcción de la imagen corporativa.

PERCEPTION OF ENTREPRENEURS REGARDING THE INCLUSION OF CORPORATE IMAGE IN THE BUSINESS PLANS: CASE LA GUAJIRA

ABSTRACT

The purpose of this article is to analyze the perception of entrepreneurs regarding the importance of corporate image in the business plan design process and incubation of an embryonic company. The research was descriptive, non-experimental and field design. Structured survey with dichotomous and multiple responses validated by five experts and measurement reliability using Cronbach's alpha coefficient was used for data collection. It was based on theoretical approaches of Costa (2003), Borello (2008), Pizzolante (2010), Van Riel (1997) among others. For the analysis and interpretation of results frequency analysis and statistical measures of central tendency and dispersion from inferential statistics were used; in addition, in order to establish the categorization of the investigated phenomenon, there was used the scale constructed by the researchers. In conclusion, it was established that the corporate image is a valuable communication and management tool for achieving organizational success however is not considered important in business plans and stage of incubation. As a final reflection it is recommended for MIPYMES to use the business plan for planning the construction of corporate image.

PALABRAS CLAVE: Plan de negocio, imagen corporativa, identidad corporativa, empresas embrionarias.

INTRODUCCIÓN

Los procesos de internacionalización de la economía, acompañados de recesión y crisis financiera global, han desencadenado una serie de desequilibrios y desajustes en los sistemas económicos mundiales generando todo tipo de reflexiones endógenas en los diferentes países. Entre muchas de las posiciones y causas de tales flagelos se enuncian las falsas economías productos de las actividades especulativas del sistema bursátil y financiero, la falta de productividad de bienes y servicios como las verdaderas fuentes de riquezas, altas tasas inflacionarias y el desempleo entre otras. Dichas preocupaciones han hecho que gobiernos y actores productivos planten la necesidad de generar políticas públicas y acciones que incentiven el emprendimiento empresarial e innovador con altos componentes de I+D, capaz de generar empleo productivo y riquezas a sus propietarios así como acciones de responsabilidad social para mejorar la calidad de vida de la humanidad.

En este orden de ideas, las micro, pequeñas y medianas empresas –MIPYMES–, se han convertido en un importante instrumento para generar nuevos empleos productivos debido en gran parte al estancamiento inercial de la dinámica de la gran empresa. No obstante esa visión de los gobiernos en una acción responsable de desarrollo, el emprendimiento como acto de creación de nuevas empresas se convierte muchas veces en terreno árido difícil de arar debido a la alta competencia y a las condiciones de desigualdad en los mercados globales. Este panorama de turbulencia y mutaciones se convierte en un reto para los emprendedores, que deben mejorar cada día su capacidad técnica y gerencial para garantizar el éxito empresarial.

Al respecto, Calderón & Castaño (2005), manifiestan la importancia que revisten las micro, pequeñas y medianas empresas para el desarrollo económico de los países. Estas empresas siempre han figurado a lo largo de la historia como entidades relacionadas con la vida cotidiana, aunque es hasta hace apenas dos décadas que se les empieza a dar la importancia requerida, puesto que tanto en los países industrializados, como en los que están en vía de desarrollo han fortalecido su política de apoyo como parte integral de los planes de crecimiento nacional. Esto es debido a que se ha comprobado que ante circunstancias difíciles, las MIPYMES pueden amortiguar de forma positiva la caída del empleo y la producción, además de ayudar al progreso de las regiones.

No obstante, los programas de acompañamiento que recibe el inversor promisorio en los procesos de incubación, maduración y sostenimiento de las nuevas empresas, estos no son suficientes para enfrentar el mundo empresarial, debido a ello, juega un papel importante la capacidad innovativa de los empresarios, sus dotes de estrategia y de liderazgo comunicacional, para posicionar las nuevas empresas. Para lograr este objetivo deben iniciar con buenas bases y herramientas gerenciales que permitan solidificar este proyecto, por lo tanto el plan de negocios, el plan comunicacional y de marketing se convierten en elementos indispensables en el posicionamiento de la empresa.

En lo que respecta a Colombia, la política del emprendimiento de nuevas empresas ha sido fortalecida en las últimas décadas creándose varias empresas de base tecnológica conocidas como incubadoras de empresas entre ellas Incubar del Caribe, Génesis (Antioquia), Incubar Córdoba, Cesar, Corporación Innovar (Cundinamarca), Incubar Colombia, Incubar Eje Cafetero, Corporación Innovar, Corporación Islas Vivas (San Andrés), Incubar (Tolima), que han promovido la creación de muchas MIPYMES en Colombia, generando muchos empleos y dinamizando la economía.

De igual modo, en el Departamento de La Guajira, entre los años de 2013 y 2014 con recursos del Sistema General de Regalías se ha apoyado con capital semilla, asesoría y acompañamiento a 170 unidades productivas. Estos proyectos empresariales fueron tomados como grupo focal para indagar la percepción

de los gerentes sobre la inclusión de la imagen corporativa en los planes de negocios que son presentados como requisito para recibir capital semilla y asesoría de los fondos de financiación como el Fondo Emprender; asimismo fueron abordados para conocer si hacían uso de la imagen corporativa para identificar y posicionar su empresa en la fase de incubación y desarrollo empresarial que es el objetivo del presente artículo.

A continuación el lector encontrará el soporte teórico de la investigación en cuanto a la imagen corporativa, los planes de negocios y la fase de incubación; el proceso metodológico de la investigación; los resultados y conclusiones de la misma.

REVISIÓN LITERARIA

Hablar de la imagen corporativa debe partir del análisis conceptual de la comunicación organizacional como elemento que ha alcanzado el estatus de herramienta de gestión valiosa e indispensable para la gestión. De tal manera que Van Riel (1997) considera que junto a la gestión financiera, de producción y de recursos humanos, es inductora de valor al logro de los objetivos de la empresa. En tal sentido Pizzolante (2010) argumenta que ella se convierte en estratégica en la medida en que se sabe dónde está y a donde se quiere llegar, y para lograrlo se debe contar con una visión entrenada para analizar y comprender espacialmente aquello que rodea la empresa y las diferentes situaciones que vive.

Así mismo, plantea que la imagen corporativa es tridimensional. Una dimensión hace referencia al entorno empresarial, es decir todo aquello que circunda a la empresa y es el espacio donde se forma la imagen corporativa. La segunda la constituye el contorno empresarial, es el borde externo que comunica en forma voluntaria o no los rasgos particulares de la personalidad empresarial recibiendo el nombre de identidad corporativa y por último la parte no tangible de la empresa, donde están anclados los valores, normas y principios que se conoce como cultura corporativa la cual se proyecta dentro y fuera de la empresa al momento de interrelacionarse sus miembros. El dintorno empresarial encierra la forma de ser y hacer las cosas, el estilo de vida, que compartidos caracterizan y hacen particular la empresa.

Por otro lado, la imagen corporativa, constituye una de las más importantes herramientas comunicacionales con las que cuentan las organizaciones para posicionar su razón de ser, mercadear sus productos y un potencial instrumento competitivo en una economía globalizada, multiescalar y multidimensional; pero también puede convertirse en un arma mortífera cuando no se aplica un tratamiento técnico científico para construir ese imaginario de organización soñado por los propietarios y más grave aun cuando no existe una coherencia entre las acciones y los mensajes simbólicos que emite a sus clientes, proveedores y otros grupos de interés.

Para Costa (2003), Martínez & Salazar (1999), Pizzolante (2010) y Van Riel (1997), la imagen corporativa es la imagen psicológica que una sociedad se representa mentalmente de una organización, una sólida estructura mental, conformada por mensajes formales e informales, voluntarios e involuntarios que llegan a la opinión pública y que sostiene la credibilidad de las empresas, instituciones y personas, por los que la gente describe, recuerda y valora la empresa

Según las perspectivas teóricas anteriores, la imagen corporativa implica la representación de los objetos en la mente de quien percibe por los sentidos los mensajes simbólicos, sin embargo, para crear esa estructura mental paradigmática que hace que el receptor responda positiva o negativamente a los impulsos eléctricos del sistema nervioso central a través de las neuronas conductoras, la organización debe hacer un esfuerzo comunicacional planificado con indicadores de medición que permitan establecer los impactos y efectos de corto, mediano y largo plazo que causen en los grupos de interés.

Fundamentos conceptuales y metodológicos de los planes de negocios en procesos de incubación empresarial

Las incubadoras de empresas nacen en los 70 en Europa y Estados Unidos de Norteamérica, se definen como entidades gestoras e impulsoras de conocimiento e investigación, ciencia y tecnología, generadoras de redes interinstitucionales, de estrategias de sostenimiento en el tiempo, de especialización en sectores determinados, de relación con inversionistas ángeles, la formalización de negocios informales, y la agrupación de empresas en unidades de negocios por sectores (Hu, Liu & Qiu, 2009; Lalkaka, 2002).

Su importancia reside en la estimulación a emprendedores a cristalizar o llevar a feliz término sus ideas o planes de negocios, con el fin de dotarlos con las técnicas apropiadas para la creación de empresas sostenibles; logrando con ello también el desarrollo socioeconómico y regional del país. (Bravo, 2004; Hu, Liu & Qiu, 2009; Lalkaka, 2002), Sin embargo, no solo son desarrolladoras de conocimiento e investigación, también constituyen modelos de desarrollo económico (Nodriz, 2005). Tal es así que este nuevo tipo de empresas ayudan a fortalecer los talentos empresariales basados en la investigación y la innovación, diseñando estrategias de investigación desarrollo, y de comercialización de los productos generados en las empresas incubadas (Bravo, 2004). Por otro lado, Lalkaka (2002) argumenta que una incubadora de empresas es una infraestructura limitada con profesionales, servicios e instalaciones, ayudas técnicas y comerciales.

También puede considerarse como un programa que cuyo objetivo es facilitar iniciativas de emprendimientos o negocios de base tradicional y/o tecnológica, que brinda asistencia para que las nuevas empresas sobrevivan y crezcan durante su etapa de despegue, en la cual son más vulnerables (Hu, Liu & Qiu, 2009). En general, las incubadoras ofrecen por tiempo limitado un espacio físico compartido con otras empresas; una vez vencido este, las empresas graduadas pueden optar por una nueva localización e independizarse de la incubadora. Así pues estas cumplen el papel de empresas matriz, ya que abrigan las ideas de los emprendedores y se enfocan en darle forma, desde sus inicios, invirtiendo principalmente en los estudios necesarios para la transferencia y la comercialización de tecnologías (Bravo, 2004; Hu, Liu & Qiu, 2009; Lalkaka, 2002). Además, estas incubadoras ofrecen los recursos necesarios para alcanzar el objetivo propuesto, el cual debe ser el de convertirse con el tiempo en una empresa fuerte y sólida, con una base tecnológica iniciada a partir de la idea primigenia.

Al mismo tiempo se convierten en impulsoras de desarrollo socioeconómico de la localidad donde operan, permitiendo así que las empresas nacientes se desarrollen, participen y se mantengan activamente en un buen nivel competitivo. No obstante, es una labor que se lleva a cabo por un período límite. Aquí los emprendedores deben tener presente el largo plazo. En efecto, los emprendedores participantes deberán sensibilizarse y tomar conciencia de que hay que desarrollar altos niveles de eficiencia para poder participar en los mercados globales.

En definitiva, el éxito o supervivencia de una incubadora depende del aprovechamiento eficiente de sus recursos y capacidades para competir con éxito con otras empresas. En este sentido, las incubadoras de éxito prestan mucha atención al cumplimiento de criterios claves, como la buena gestión administrativa, gestión de personas, gestión de sus recursos financieros, el desarrollo de redes empresariales y el desempeño organizacional, entre otros. (Nodriz, 2005).

Por otro lado, para que los emprendedores materialicen sus ideas y proyectos empresariales en muchos países de América Latina, estos deben estructurar un plan de negocios que no es más que un estudio simplificado y previo a factibilidad del proyecto empresarial con el cual dan a conocer a los posibles financiadores o incubadoras el alcance de su proyecto y las implicaciones en su proceso de conformación, gestión y etapa inicial de desarrollo.

En la perspectiva anterior, Borello (2008) le otorga el calificativo de herramienta útil, en la determinación de la factibilidad de una inversión o en la gestión de la actividad empresarial, se concibe como un plan adhoc realizado en la fase de análisis de una nueva iniciativa y antepuesto a la valoración del atractivo y la viabilidad financiera del proyecto; igualmente, constituye un documento formal elaborado por escrito que sigue un proceso progresivo, realista, coherente y orientado a la acción, que incluye en detalle las acciones futuras que ejecutaran el dueño y los colaboradores para el logro de los objetivos y metas de la empresa.

En el mismo sentido, Siu (2002), plantea que el plan de negocios es un documento que especifica en lengua escrita un negocio que se pretende iniciar o que ya se ha iniciado. En él se expone el propósito general de una empresa, los estudios de mercado, técnico, financiero, organizacional, incluyendo temas como los canales de comercialización, el precio, la distribución, el modelo de negocio, la ingeniería, la localización, el organigrama de la organización, la estructura de capital, la evaluación financiera, las fuentes de financiamiento, el personal necesario junto con su método de selección, la filosofía de la empresa, los aspectos legales entre otros.

Así mismo Varela (2005), argumenta que el plan de negocios es un proceso para darle a la empresa una identidad, una vida propia. Es un procedimiento para enunciar de forma clara y precisa los propósitos, las ideas, los conceptos, las formas operativas, los resultados y en resumen la visión del empresario sobre el proyecto. Es un mecanismo de proyectar la empresa en el futuro, de prever dificultades y de identificar posibles soluciones a las coyunturas que pudiesen presentarse.

Por otro lado, en cuanto a las ventajas que ofrece el plan de negocios, sin duda la principal la constituye en el hecho de que facilita la interpretación de las distintas circunstancias donde se van a desarrollar las actividades de la empresa; por lo tanto, teniendo en cuenta la complejidad y dinámica de los mercados actuales ninguna empresa puede crecer y competir sin realizar un análisis integral que involucre las variables intervinientes, verificando si el emprendimiento es o no factible. Además considera el riesgo y la incertidumbre asociados con el éxito o fracaso del mismo.

Del mismo modo, el plan de negocios debe servir para identificar las problemáticas a las que se enfrenta el futuro empresario tales como: falta de capital de inversión y acceso a las fuentes de financiamiento, prever situaciones que afectan la rentabilidad, introducir en forma eficaz nuevos productos y servicios al mercado, establecer y aplicar normas de producción, control de calidad, estrategias de marketing.

Por último, el plan de negocios engloba a todos los planes de la empresa, incluyendo al plan de marketing y al plan de ventas. Además se considera que es documento vivo en el sentido de que se debe estar actualizando constantemente para reflejar cambios no previstos con anterioridad. Un plan de negocios razonable, que justifique las expectativas de éxito de la empresa es fundamental para conseguir financiación y socios capitalistas.

Percepción de los emprendedores sobre la imagen corporativa en los planes de negocios Una de las causas a las cuales se alude la falta de inclusión de la imagen corporativa en los elementos a considerar en la estructura del diseño de un nuevo negocio son: las limitantes de tipo financiero, incipiente capacidad gerencial y técnica que hacen que fijen presupuestos ontológicos, ubicando en el último peldaño de la prioridad del gasto y la inversión a la publicidad y con ello la imagen corporativa. Sin embargo cuando suelen considerarla tienen un pensamiento reducido del alcance, relacionándola solo con la imagen gráfica con relevancia en la forma, es decir, a la estética y no a su fondo filosófico de identidad cultural es decir, sus valores, creencias, principios, entre otros y el imaginario de organización de los dueños y trabajadores es decir la visión y la misión. De esta manera el concepto holístico sistémico que subyace a la imagen corporativa como reflejo de la cultura organizacional se pierde resultando un pensamiento segregado, reduccionista y desorganizado de la empresa.

En este sentido, Perozo & Urdaneta (2006), con relación a los procesos de proyección de la imagen corporativa, consideran que las MIPYMES no cultivan procesos organizados para la proyección de su imagen corporativa y en ocasiones ni siquiera han construido la identidad corporativa

METODOLOGÍA

La presente investigación se enmarca en el paradigma cuantitativo, de tipo transeccional descriptivo y se aborda desde un diseño no experimental, de campo y documental. La unidad de análisis fue el sector de las empresas que están en proceso de gestación o en su etapa inicial de creación apoyadas por el Fondo Emprender de Colombia a través del departamento de La Guajira. Se fundamentó teórica y conceptualmente en Costa (2003), Pizzolante (2010), Martínez & Salazar (1999), Van Riel (1997) entre otros; desde la perspectiva de la imagen corporativa en Borello (2008), Perozo & Urdaneta (2006), Siu (2002) en relación con el plan de negocios. En cuanto a la recolección de la información se utilizó la encuesta estructurada tipo Likert con respuestas múltiples, validada por cinco expertos en el área de administración y el emprendimiento y medida su confiabilidad con la técnica de Alpha cronbach. La población estuvo conformada por 170 gerentes promisorios de empresas en gestación del programa Emprender en la ciudad de Riohacha. Por ser una población pequeña se optó por aplicar el censo poblacional. Para el análisis e interpretación de los resultados se utilizó el análisis de frecuencias y los estadísticos de tendencia central y medidas de dispersión de la estadística inferencial. Además para establecer la categorización y presencia del fenómeno investigado se utilizó el baremo construido por los investigadores con cinco categorías.

RESULTADOS

Un 75% de la población encuestada estuvo de acuerdo con que elaboró un plan de negocios con el objetivo de presentarlo a las posibles entidades financiadoras e incubadoras.

Un 63% considera que los planes de negocios facilitan la consecución de los recursos y es un buen instrumento para guiar los primeros pasos de vida de la empresa.

El 85% de los encuestados manifestó que no incluyó en su plan de negocios elementos de la imagen corporativa.

El 95% manifestó que no había incluido en el plan de negocios: logos, símbolos o mensajes gráficos de identidad del negocio con propósitos de posicionamiento estratégico del mismo.

El 90% de los encuestados manifestó su desconocimiento de la verdadera importancia de la imagen corporativa como activo clave en el posicionamiento del proyecto y de la empresa.

Un 60% de la población manifestó que la causa de no incluir en los planes de negocios elementos de la imagen corporativa era la falta de presupuesto para financiar su diseño.

Cuando se averiguó sobre si el costeo de la imagen se había incluido en los presupuestos del plan de negocios el 72% manifestó estar en desacuerdo.

Un 70% de la población encuestada considera importante la elaboración de los planes de negocios como estrategia para el posicionamiento y venta de la idea, buscar financiación y acompañamiento para la incubación del negocio.

El 95% de los gerentes propietarios encuestados no maneja el concepto de imagen corporativa como un activo clave para incluir en el plan de negocios.

El 65% de la población estuvo de acuerdo que el plan de negocios le ayudo a promover de mejor forma la idea del negocio.

Un 53% de los encuestados estuvo de acuerdo en que para el diseño del plan de negocios siguió un modelo preestablecido sugerido por las empresas financiadoras.

CONCLUSIONES

En virtud de los resultados obtenidos se concluye que la percepción de los empresarios de las MIPYMES en procesos de gestación acerca del plan de negocios, es que son de suma importancia en la estrategia de posicionamiento de la idea, consecución de los recursos para la financiación y asesoría para iniciar las primeras operaciones.

Así mismo, consideran el plan de negocios como un instrumento que debe incluir los lineamientos para estructurar y gestionar la imagen corporativa en las empresas en gestación; pero los gerentes emprendedores promisorios le restan importancia a la construcción de la imagen corporativa, sobre todo aquella que recoge los elementos de la cultura organizacional y la identidad cultural como: visión, misión, creencias, valores, simbolismos, de forma planificada, siguiendo un rigor técnico y científico.

En ese orden de ideas, también se concluye que la causa de la no inclusión de la imagen corporativa en los planes de negocios de las empresas en gestación es el poco conocimiento que tienen los empresarios sobre el efecto de la publicidad en la mente de clientes y su relación con la decisión no solo de compra sino de referenciación e imagen mental.

Del mismo modo los emprendedores que inician nuevas empresas son conscientes de la necesidad que tienen de dar una merecida importancia a la inclusión y gestión de la imagen corporativa como estrategia gerencial para lograr el éxito organizacional, por lo tanto debe ser asumida como elemento de identidad y de visión compartida por el stakeholder.

Por último, se concluye que así como se elabora el plan de negocios, en su marco metodológico y filosófico se debe contemplar la construcción de la imagen corporativa y lineamientos para su gestión.

RESUMEN

El modelo tradicional del negocio de abarrotes en México ha ido evolucionando en los últimos años, surgiendo nuevos competidores para las tienditas de barrio. Uno de estos nuevos competidores en el estado de Colima es la cadena de tiendas de conveniencia Kioscos, con un formato similar al de los OXXO's de FEMSA, líder nacional en este segmento de mercado. En el presente estudio se realiza un análisis comparativo de las preferencias de los consumidores sobre los aspectos del negocio de las tiendas de barrio y las cadenas de conveniencia. Como metodología se aplicaron encuestas y entrevistas tanto a consumidores como encargados de las tiendas. Aquí se muestra como resultado estadístico que para los consumidores los principales factores de competitividad del negocio son el precio, la rapidez del servicio, la variedad de productos, el horario y la ubicación. Otro hallazgo en el contexto general de este segmento de negocios es que las tiendas de abarrotes tradicionales tienden a estancarse por falta de una administración eficiente y carecer de profesionalismo en cuanto a estrategias de mercadotecnia para asegurar su éxito en estos competidos canales de distribución especializados.

PALABRAS CLAVE: Tiendas de Abarrotes, Innovación, Precio, Producto

INNOVATION IN SMALL BUSINESSES

ABSTRACT

The traditional model of the grocery business in Mexico has evolved in recent years, emerging new competitors for neighborhood's grocery stores. One of these new competitors in the state of Colima is the chain of convenience stores Kiosks with a format similar to FEMSA's OXXO national leader in this market segment. In the present study is performed a comparative analysis of consumer preferences on the business aspects of local shops and chains of convenience. As research methodology were applied surveys and interviews for consumers as well as shopkeepers. Here is shown as statistical result for consumers that the main competitiveness factors are price, speed of service, product variety, schedule service and location. Another finding in the general context of this business segment is that traditional grocery stores tend to stagnate for lack of efficient administration and lack of professionalism in terms of marketing strategies to ensure success in these competitive sector.

KEYWORDS: Grocery Stores, Innovation, Price, Product

INTRODUCCIÓN

Las tiendas de abarrotes tradicionales son un factor de sustento en la economía de las familias y cobra importancia en toda la república ya que el país tiene más micro empresas que empresas medianas o grandes

y la competencia en este segmento de mercado es fuerte con las cadenas de conveniencia como OXXO de FEMSA y 7eleven. Como enfoque teórico para los estudios comparativos se plantea la competitividad administrativa, con autores y teorías de la organización de negocios, con elementos clásicos como la cadena de valor de Porter (2003) y variables como la logística interna y externa hacia los consumidores, además de considerar otros estudios como por ejemplo análisis del consumidor de Han, Y. y Hansen, H. (2012). Se aborda este tipo de negocios en el estado de Colima, como caso de estudio, para una metodología de investigación inductiva, de las principales variables de competitividad del negocio de abarrotes. Se trata de analizar la logística de la competencia en el negocio de las tiendas de abarrotes modificada en años recientes con el establecimiento de modernas tiendas de conveniencia en el estado de Colima, principalmente de las cadenas OXXO y Kiosco. En el presente estudio se realiza un análisis comparativo de las preferencias de los consumidores sobre los aspectos del negocio de las tiendas de barrio y las cadenas de conveniencia.

Según las opiniones preliminares en sondeo aplicado a algunos comerciantes de la ciudad de Colima, hacen referencia a que hace 20 años eran un buen negocio, cuando las tiendas grandes aun no estaban presentes ni llegaban a establecerse, como lo han hecho las cadenas Aurrera, Walmart, Soriana, y las tiendas de conveniencia. En los últimos años han llegado las tiendas como los Kioscos y Oxxo's con estructura de negocios de empresas medianas como algo que surge de la mezcla de tiendas de abarrotes y las tiendas grandes. A partir de entonces se plantea la problemática de la disminución de la competitividad de las tiendas de abarrotes, agudizándose el impacto desde el inicio del año 2010 en que se expandieron las tiendas de conveniencia incrementando el margen de competencia de este tipo de negocios en el estado de Colima, surgiendo la problemática de las tiendas de abarrotes de barrio de enfrentar este nuevo ambiente de mercado en el que las cadenas mencionadas han ido tomando clientes.

Para determinar las estrategias de mercadotecnia para la competitividad de las tiendas de abarrotes, se plantean las siguientes preguntas de investigación: ¿Cómo ha evolucionado la competencia en el negocio de abarrotes? ¿Cuáles son las principales variables para la competitividad del funcionamiento de las tiendas de abarrotes hacia los consumidores? ¿Cuáles son los productos y servicios esenciales en los que deben innovar las tiendas de abarrotes para mantener su competitividad en el mercado frente a la modernización introducida por las cadenas de tiendas de conveniencia? ¿Qué tan importantes para el éxito de las tiendas de abarrotes con los consumidores son: el precio, el servicio (horario y rapidez en la atención), los productos (surtido, variedad y calidad), la ubicación y la modernización (merchandising, anuncios exteriores, innovación en promociones)?

El objetivo es investigar las estrategias de desarrollo de las tiendas de abarrotes, generar un estudio de las principales variables de mercadotecnia para la competitividad entre las tiendas tradicionales y las tiendas de conveniencia, ya que ambas tienen un margen similar de productos a la venta y servicios de abarrotes. Como hipótesis se plantea que las principales variables para el éxito del negocio de abarrotes son: el precio, el servicio, los productos, así como la ubicación del negocio. De manera similar, es necesario realizar un estudio de cuáles son los principales aspectos que le permitan competir a las tiendas tradicionales frente a las tiendas de conveniencia, que estrategias de marketing pueden implementar estos establecimientos para que mantengan su mercado y por consiguiente, la rentabilidad de su negocio.

El reciente establecimiento en el estado de Colima de nuevas tiendas identificadas como de conveniencia ha tenido un aumentado notable en los últimos años. El crecimiento de este formato ha generado una serie de cambios en la competencia comercial que han promovido nuevos hábitos de consumo, motivado en parte por el mayor número de usuarios de vehículos privados como medio que ha promovido que los consumidores realicen un uso más extensivo de cajones de estacionamientos. Tener en cuenta aspectos como estos, por más simples que parezcan, pueden generar cambios en la forma de obtener mejores resultados de venta en el negocio de abarrotes. El despegue y afianzamiento del comercio de conveniencia se ha desarrollado provocando que los comercios tradicionales e independientes se vayan a la quiebra y las tienditas de barrio tienen serias dificultades de supervivencia. Así, es posible afirmar que los

establecimientos de conveniencia, al contrario que otros formatos comerciales dedicados a la alimentación más afianzados, han sido capaces de consolidarse sin necesariamente cumplir muchos de los requisitos que benefician más a los consumidores, como precios bajos, surtido de productos amplio.

En este estudio, se ha seleccionado el estado de Colima como el laboratorio espacial donde analizar, desde la perspectiva de la competencia en el negocio de abarrotes, las principales variables o estrategias del formato del mercado de este negocio, que está experimentando una competencia comercial tan significativa.

REVISIÓN DE LITERATURA

Las estrategias de mercadotecnia son acciones que se realizan en función de los elementos: precio, producto, plaza y promoción para encaminar a los negocios con relativa permanencia, hacia el éxito y su desarrollo, como señalan Phillip Kotler y Gary Armstrong (2010). En cuanto a la estrategia de mercadotecnia básica en países en desarrollo, Lucas (2003) señala sobre las prioridades que los ejecutivos de las grandes empresas ven el producto en primer lugar de importancia; el precio, en segundo; la distribución en tercero; y las estrategias de promoción, en último. Estas grandes empresas como FEMSA se están expandiendo en el negocio de abarrotes, con lo que las tiendas tradicionales están enfrentando la competencia de las tiendas de conveniencia, que se han conformado como uno de los formatos emergentes (Mira, Moreno y Espinosa, 2009).

Las grandes empresas se caracterizan por su alto nivel de organización, la líder mundial es Walmart. Este formato de tiendas en el estado de Colima incluyen Aurrerá, Soriana y Comercial Mexicana. Esta tendencia se ha estado desarrollando a partir del siglo XXI en diversos países de habla hispana. Mira, Moreno y Espinosa (2009), señalan que en el negocio de abarrotes, las tiendas tradicionales están enfrentando la competencia de las tiendas de conveniencia, que se han conformado como uno de los formatos emergentes.

Christopher Payne y David Ballantyne (1994), comentan la evolución en los servicios de abarrotes, donde comenzaron a surgir los supermercados de autoservicios. Esto apoyó en gran manera a las amas de casa trabajadoras y también era una posibilidad de exponer mayor cantidad de productos. Lo que antes tenían que comprar en varias tiendas, ahora se lo encuentran empaquetado y a la mano. Con solo recorrer un solo centro comercial con un carrito de compras se podría hacer el mandado de la semana. Los expertos en marketing encontraron la mejor solución a la excesiva producción y la ventaja de poder exponer toda la venta de artículos en un mismo local, satisfaciendo las necesidades del ciudadano en cuanto a comodidad y rapidez de encontrar todo en un solo lugar (Payne & Ballantyne, 1994).

Los mini-súper y las tiendas de conveniencia, de tamaño mediano, registran un "boom" en nuestro país. El ejemplo de este fenómeno en el estado de Colima son las tiendas de la cadena OXXO y Kiosko. El concepto comercial de OXXO está diseñado para satisfacer las necesidades de los consumidores, ofreciéndoles una serie de "ventajas" como cercanía, horario de 24 horas en muchos de los casos, fácil acceso, rapidez y comodidad de compra haciendo de su estrategia la venta de productos a las personas que llevan una rápida vida cotidiana.

Una tienda de abarrotes, a diferencia de una tienda de conveniencia, es un establecimiento físico pequeño en donde la gente puede adquirir bienes de consumo diario. No es una agrupación sino una propiedad independiente, generalmente de una familia, donde se opera para tener un modo de vivir y salir adelante. En las colonias populares y en las zonas rurales las tiendas de abarrotes venden comida diaria: verduras como zanahorias, papas, calabacitas, col, lechuga, pasilla, pimienta, jitomate, cebolla, chile, etc., así como diversas frutas como limón, melón, plátano macho, plátano manzano, plátano Valery, guayabas, mango, pepino, jicama. La importancia de estos establecimientos es que surten de productos de abarrotes al menos al 39 % de las familias pobres del país (Pinto et al., 2006). Es por ello, que se tiene en cuenta que cada vez que se abre una tienda de autoservicio como lo es Oxxo y Kiosko, las tiendas de barrio tienden a disminuir

en las ventas y una consecuencia de esto es que los dueños de las “tienditas” optan por cerrarlas porque no pueden competir contra las tiendas de conveniencia.

Las tienditas tradicionales de barrio, en lo que se refiere a la modernización de su estilo no parece tener mucha evolución, ya que se le suele dar poca importancia de poder ser un negocio grande o cadena de mercadeo de productos, a lo que más llegan es a ser minisúper de barrio formados por pequeñas familias (Erosa, 2011).

Cliente. De acuerdo con Czinkonta y Ronkainen (2008) para tener una pequeña empresa el punto principal o se puede decir que la meta es que el cliente quede satisfecho con lo que compra siempre, a su vez este o estos productos siempre deben estar presentes, de una manera fácil de hacerlo es tener en cuenta varios consumidores saber sus gustos y preferencias de esta forma el cliente siempre va a estar satisfecho de haber encontrado lo que buscaba. Se debe desarrollar un perfil de nuestro consumidor-meta, podemos describir a nuestros clientes en términos demográficos (edad, sexo, composición familiar, ingresos, ubicación geográfica) o por su estilo de vida. Para ello es importante preguntarse: ¿son nuestros consumidores conservadores o innovadores? ¿Tradicionales o modernos? ¿Qué tan seguido van a comprar lo que le ofrecemos y por qué? etc. La teoría de marketing estipula que la conducta de los individuos en sus decisiones de compra está expuesta a múltiples influencias internas (demográficas, socioeconómicas, psicológicas) y externas (entorno, sociales, estrategias de marketing) que moldean los significados específicos en las decisiones de compra (Duarte et al., 2013; Han y Hansen, 2012; O'Donnell, 2009).

Precio. Para Hoffman (2002), la variable principal es el precio del producto, todo gira alrededor de éste y lo concerniente a las utilidades, por medio de la eficiencia en la administración del negocio. Lo anterior se complementa con el siguiente punto clave: el cliente, ya que si el cliente no está satisfecho, se pierde y se va a comprar a otro negocio. Para Hoffman el cliente es impactado en forma importante por el factor del precio. De acuerdo a lo anterior, el cliente principalmente busca precios bajos, con calidad en los productos, satisfecha esta situación se convierte en un factor de demanda con lo que finalmente se logra englobar el principal aspecto a considerar según Hoffman, el cual es el servicio al cliente. En conclusión, de acuerdo a esta teoría, una vez teniendo demanda de adquirir los productos que necesita, corresponde dar un buen servicio al cliente por parte del vendedor (Hoffman, 2002, p.171). Los establecimientos pequeños utilizan el precio como una forma de satisfacer a los clientes y así generan competencia a los demás establecimiento, con la facilidad de no perder al cliente, si no de que permanezcan, no tanto atraerlos por la publicidad como lo hacen las tiendas de conveniencia (Czinkonta y Ronkainen, 2008).

Ubicación. Si el terreno en donde se va a llevar a cabo el establecimiento está bien ubicado, por ejemplo en una esquina muy concurrida, su ganancia es remunerada doble, y si la competencia se localiza muy alejada no hay manera de que le gane clientes a la que tiene una ubicación privilegiada. (Czinkota y Ronkainen, 2008)

Productos. Las grandes empresas atraen a sus clientes por su diversificación de producto. De ahí viene la oferta y demanda de los productos, esto hace que incrementa la venta de cualquier tienda de abarrotes. Por otro lado algunos autores como Villareal (2002), han señalado problemáticas económicas y sociales del negocio de abarrotes, que en los barrios facilitaban el vicio del alcohol, productos también vendidos por las tiendas de conveniencia al igual que los cigarros. Un ejemplo de ello es la cerveza que en algunas tiendas de barrio, la fian, prestan el envase o hasta lo regalan. Entonces como al vendedor le conviene más por suelto que por botella pues a él le vale que el cliente se alcoholice; el solo quiere vender (Villareal, 2002).

RESULTADOS

Como resultado de la investigación de las estrategias de desarrollo de las tiendas de abarrotes, y con base en el marco teórico de los diversos elementos y variables que determinan su competitividad, así como de

acuerdo a estudios de las tiendas de conveniencia, encontrados en la revisión documental, los hallazgos sobre los principales factores empíricos para el éxito con los consumidores de este tipo de negocios se muestran en las tablas y gráficas descritas a continuación, arrojadas por el procesamiento estadístico realizado en SPSS.

En el caso de estudio, en el estado de Colima, la mayor competencia se da en las principales zonas urbanas, y de los datos empíricos de la opinión de los clientes y comerciantes resulta que las principales variables para el éxito son: el precio, el servicio (horario y rapidez en la atención), los productos (la variedad y tener a la mano productos sustitutos en caso de que no encuentren el buscado), así como la calidad de los productos (principalmente en productos perecederos como frutas y verduras), así como la ubicación del negocio, en cuanto que facilita las compras al cliente por la comodidad y cercanía. Este último aspecto de la modernización en las tiendas de conveniencia incluye el estacionamiento, el equipamiento de la tienda, el ambiente con mesas, aire acondicionado, baños, así como la realización de promociones en los medios, desde anuncios exteriores, hasta el uso de la televisión.

Con base en el análisis de fiabilidad de escalas propio de SPSS, aplicando procesamiento estadístico de recodificación y agrupación a los rangos e intervalos de las bases de datos de resultados de las variables clasificadas por conglomerados, las ponderaciones globales resultaron como se muestra en la figura 1.

De los resultados se observa que otras variables que se han incorporado a la competencia con las tiendas de abarrotes y en las que éstas últimas se están modernizando es en ofrecer recarga de teléfono con tarjetas de prepago y más comúnmente a través de celular. Tradicionalmente las tiendas de abarrotes por la familiaridad con algunos de sus clientes de barrio suelen manejar crédito o facilidades de pago, aspecto que las tiendas de conveniencia facilitan al contar con terminal para pago con tarjeta de crédito bancaria.

CONCLUSIONES

En la presente investigación lo principal para la preferencia de los clientes fueron el precio, la rapidez de atención, variedad de productos, el horario y la ubicación. Se trata de analizar la logística de la competencia en el negocio de las tiendas de abarrotes modificada en años recientes con el establecimiento de modernas tiendas de conveniencia en Colima, principalmente de las cadenas OXXO y Kiosco, modernización que consiste más que nada en tener una nueva cara de las tiendas de abarrotes, otro estilo de venta dándole la confianza a los clientes del autoservicio de productos, esto requiere merchadising con más accesibilidad de los productos en anaqueles, vitrinas y exhibidores. Mayores posibilidades de autoservicio puede significar para los clientes una mayor rapidez en la atención en combinación con el uso de sistemas de punto de venta que automatizan y facilitan despachar a los clientes con código de barras que registran los productos.

Precio. De la investigación se desprende que más importante que la rapidez de atención es el precio, que es un elemento que genera ventaja en la tienda de abarrotes para elevar sus ventas. Por mencionar un ejemplo, los productos de la marca Bimbo, resultaron aproximadamente dos pesos más caros en las tiendas OXXO y Kiosco que en las tiendas de abarrotes tradicionales del estado de Colima.

Variedad de productos. Otra variable importante de la competitividad y de la estrategia de marketing en el negocio de abarrotes es la variedad de productos. En este aspecto las tiendas de abarrotes tradicionales tienen un buen margen de maniobra lo que les puede dar una competitividad en cuanto a mayor flexibilidad de surtido de productos y marcas, ya que se advierte en el estado de Colima que las cadenas de tiendas de conveniencia parecen tener convenios con ciertas marcas. Por ejemplo en el refresco de cola algunas tiendas de conveniencia no venden productos Pepsi, ejerciendo prácticamente un monopolio de oferta de productos Coca-cola. En cambio en las tiendas de abarrotes tradicionales sí suele haber mayor variedad de marcas a la venta en refrescos existiendo mayor libertad tanto de la marca Pepsi como de Coca-cola, aunque también existen monopolios. Igualmente en cuando a productos de farmacia, la variedad es muy limitada en las tiendas de conveniencia, mientras que en las tiendas de abarrotes tradicionales ofrecen una alta variedad de

productos, por ejemplo para bebés, para la gripa y diversos malestares comunes, etc. En conclusión hay mayor flexibilidad y variedad de productos en las tiendas de abarrotes tradicionales, las cuales venden desde productos de farmacia, ferretería, perfumería, papelería, lonchería y hasta ofrecen entretenimiento con máquinas de juegos. Sin embargo, las tiendas de conveniencia destacan en algunos segmentos como la venta de café con una diversidad de variedades de bebidas calientes y frías, así como en otros refrigerios y alimentos preparados.

Horario. Además de la variedad de productos en los que las tiendas de abarrotes tradicionales aparecen con mayor flexibilidad que las tiendas de conveniencia, otras variables esenciales son la ubicación y el horario. De la investigación realizada en Colima, se desprende que las tiendas de abarrotes tienen un horario de 17 a 18 horas corridas, abriendo algunas desde las 5 de la mañana y cerrando algunas hasta la 1 de la mañana. La mayoría de las tiendas de abarrotes tradicionales cierran de 11 de la noche a 7 de la mañana. En cambio, las tiendas de conveniencia de Colima tienen horario corrido las 24 horas los 365 días del año, prácticamente nunca cierran, mientras que las tiendas de abarrotes tradicionales descansan algunos días del año, principalmente los días santos y navidad en que cierran sus puertas varias horas del día. Algunos de los productos como la cerveza ya no se puede vender en la noche, por lo que el horario de la tienda de abarrotes sigue siendo competitivo con el de las de conveniencia en cuanto a venta de bebidas embriagantes. En cambio productos como el café en sus diferentes presentaciones es una ventaja de las tiendas de conveniencia en el horario de la madrugada. Los aspectos anteriores son los que principalmente impactan en los clientes consumidores, para que cómodamente adquieran productos en los diversos horarios.

Ubicación. Finalmente el quinto aspecto esencial para competir en el negocio de abarrotes según los resultados de la presente investigación es la ubicación. En esta variable las tiendas de abarrotes por sus ubicaciones en esquinas cercanas a los consumidores compiten entre sí con las tiendas de conveniencia. En cuanto a ubicación las tiendas de abarrotes están en cualquier lugar a diferencia de las tiendas de conveniencia que están en lugares más transitados de las zonas urbanas del estado de Colima y cuentan con espacio de estacionamiento propio para varios autos a la entrada de este tipo de negocios.

Principales variables de competitividad en abarrotes. De esta manera, en conclusión de la investigación se desprende que las principales variables de competitividad del negocio de abarrotes y tiendas de conveniencia en Colima son en primer lugar el precio (más de 95% de factor de importancia), seguido muy de cerca de la rapidez del servicio, de la variedad de productos y del horario (aproximadamente 95% de factor de importancia), además de la ubicación (91% de factor de importancia). Estos son factores esenciales que determinan la competitividad y supervivencia de estas empresas, las cuales se dedican a giros comerciales similares, casi idénticos.

Tiendas de Conveniencia: Administración Especializada. La diferencia de las cadenas de conveniencia es que están organizadas y coordinadas como empresas medianas especializadas en su administración, mientras que las tiendas de abarrotes tradicionales son microempresas, prácticamente todas ellas familiares, administradas generalmente en forma empírica, es decir, sin especialización profesional en administración.

Modernización y Promoción. En segundo orden de importancia, lo que ha marcado mayor diferencia en la estrategia de marketing en el negocio de abarrotes, es la estrategia de modernización de las tiendas de conveniencia con respecto a las tiendas tradicionales de barrio. Este último aspecto de la modernización en las tiendas de conveniencia incluye el estacionamiento, el equipamiento de la tienda, el ambiente con mesas, aire acondicionado, baños, así como la realización de promociones en los medios, desde anuncios exteriores, hasta el uso de la televisión. El equipamiento de la tienda es mucho mayor, así como las promociones y aspectos publicitarios de los Oxxos y Kioscos, le dan un ambiente moderno a la tienda. En este aspecto aparece aplicada la imagen y posicionamiento de las tiendas de conveniencia por medio de la identificación de su estilo moderno que las hace lucir diferentes de las tiendas de abarrotes tradicionales de Colima.

En conclusión con base en los resultado de la investigación con los clientes consumidores de Colima, el equipamiento de la tienda tiene un factor de importancia cercano al 88%, seguido de las promociones con 86%, el ambiente de la tienda con 81% y el estacionamiento con un factor de importancia de casi 80%. En espacio propio para estacionamiento de autos destacan las tiendas de conveniencia que facilitan a los clientes llegar a comprar con comodidad y permanecer dentro de la tienda consumiendo, para lo cual cuentan con clima, mesa y espacio de barra así como para sentarse.

Estrategias de Marketing. Las tradicionales tiendas de abarrotes no optan por realizar estrategias para elevar sus ventas y lograr la rentabilidad porque seguir igual lo ven más fácil, que los proveedores les proporcionen la publicidad y les dejen la mercancía. En ocasiones por la difícil situación de las familias que no tienen para resurtir su tienda, incluso por dar fiado a los vecinos, que a veces duran semanas en cubrir deudas superiores a los mil pesos, por la problemática de falta de liquidez de gran parte de la población en colonias populares. En cambio, las tiendas de conveniencia no enfrentan estos problemas porque no fian a los clientes y son más estrictos en llevar una administración especializada donde sus finanzas y rentabilidad son esenciales para su negocio.

RESUMEN

El propósito de esta investigación fue analizar las estrategias de gestión social integral del plan de gobierno del Municipio de Riohacha - La Guajira- Colombia. El estudio se sustenta en teorías de autores como: Negri, Cohen, Soria, Martínez, y Pardo. En el cual la gestión social, es un instrumento que integra acciones y recursos sectoriales y locales, desde un enfoque de derechos, para enfrentar los determinantes del deterioro de la calidad de vida de las comunidades. La investigación es de tipo descriptiva, no experimental, de corte transversal. Los resultados evidencian que estas comunidades reconocen la carencia de servicios públicos, que garanticen mejores condiciones de vida, aunque existe voluntad política, la asistencia técnica por parte del gobierno es deficiente. También, se adolecen de proyectos y programas de capacitación comunitaria. Se concluye, que casi nunca se identifican las problemáticas para trazar las estrategias de gestión social, regularmente se inspeccionan los niveles de confianza entre los miembros que participan, la comunidad afirma, que no se preocupan por conocer las diferentes reglas establecidas para legitimar las relaciones, a pesar de ser un Municipio rico en recursos naturales, hay mucha deficiencia en la gestión social integral del gobierno.

INTEGRAL SOCIAL MANAGEMENT STRATEGIES OF GOVERNMENT PLAN OF THE MUNICIPALITY OF RIOHACHA - LA GUAJIRA COLOMBIA

ABSTRACT

The purpose of the research was to analyze the integral social management strategies of government plan, 2012-2015, of the municipality of Riohacha, la Guajira, Colombia. The study is based on the theories of the following authors: Negri, Cohen, Soria, Martinez, and Pardo. In which social management is an instrument that integrates actions and sectoral and local resources, from a rights-based approach to face the determinants of deterioration of the communities' quality of life. The research is not experimental, descriptive transversal. The results show that those communities recognize the lack of public services, which will ensure better living conditions, although there is political will, technical assistance from the government is poor. Also, there is a deficiency of projects and community training programs. It is concluded that almost never the problematic to draw social management strategies is identified; confidence levels regularly are inspected between participating members. The community says that the government does not care to know the different rules established to legitimize the relationship, despite being a rich Municipality in natural resources, there are many deficiencies in the integral social management of government.

INTRODUCCION

El sistema político colombiano desde la segunda mitad del siglo XX, el clientelismo y el autoritarismo, se erigieron como ejes articuladores del sistema, así como referentes percibidos como legítimos de las conductas políticas de gobernantes y gobernados. La respuesta de la ciudadanía a esta doble condición fue diversa, de un lado, el abstencionismo de un porcentaje creciente de la población que no veía en las elecciones un instrumento favorable a sus intereses; en el otro el incremento de las protestas ciudadana ante la incapacidad del Estado de satisfacer las necesidades de la población, por último, la intensificación del conflicto armado, como respuesta a la no solución de los problemas que enfrentan los ciudadanos.

En tal sentido, la Gestión Social Integral se constituye como la herramienta que integra las acciones y recursos sectoriales y locales (salud, educación, bienestar social, cultura, entre otros) Desde un enfoque de derechos para enfrentar las determinantes del deterioro de la calidad de vida, respetando la autonomía e iniciativa municipal, cruzando líneas de inversión de las entidades involucradas y apoyando a los alcaldes y alcaldesas en la formulación y ejecución de acciones integrales mediante la promoción de espacios de discusión transectoriales para la construcción colectiva de los proyectos en cada municipio, provincia o territorio priorizado, uno de los grandes retos de la Gestión Social Integral, es la articulación institucional y sectorial con el propósito de garantizar los derechos humanos, lo cual requiere de una nueva forma de gestión en el municipio y el departamento.

Este proceso contiene como reto central, la capacidad de leer integralmente la realidad, desde la perspectiva de los derechos y en el marco de procesos participativos que recojan la voz de los múltiples actores, considerando la vida concreta de la gente. Aquí se trata de avanzar en una lectura de esta realidad sin simplificarla, articulando los varios niveles de construcción y reproducción de desarrollo, el bienestar y la autonomía desde los marcos analíticos de la sobre determinación social.

En este orden de ideas, la estrategia de Gestión Social Integral en los Municipios, se requiere realizar los siguientes pasos: i) las condiciones específicas, situaciones, relaciones, necesidades e intereses de las comunidades; ii) Conocer los elementos claves de la información, análisis, y seguimiento en las estrategias; iii) la capacitación y formación para desarrollar habilidades ciudadanas de los agentes públicos y comunitarios; iv) articulación de los diferentes sectores de mayor pobreza y vulnerabilidad; v) y las decisiones y voluntad política para realizar convocatorias permanentes con el fin de comprometer más actores en las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha-La Guajira- Colombia. Cohen (2005)

En referencia a lo anteriormente expuesto, el primer paso obedece al reconocimiento que el municipio tiene territorios donde claramente se concentra la pobreza y que esta tiene como protagonistas un grupo poblacional relevante como es la infancia, la adolescencia y la juventud, no solo por su cantidad sino por ser potenciadores del desarrollo humano y convivencia ciudadana. Identificados los territorios prioritarios y con la precisión de los objetivos de política de la infancia, la adolescencia y la juventud que se deben garantizar de manera inmediata, por tal razón es pertinente que en este Municipio se concreten estrategias, donde se establezcan dichos reconocimientos, con la finalidad, de analizar las políticas de bienestar social desarrolladas en las comunidades del Municipio de Riohacha.

El paso siguiente, de la estrategia es la identificación de elementos claves de la estrategia a desarrollar, los cuales son los siguientes: Información, análisis y Seguimiento, a partir de Información Municipal unificada y veraz, como una herramienta indispensable para realizar el seguimiento al estado del ejercicio de los derechos fundamentales de las familias y para contar con datos unificados para la evaluación de la gestión social municipal, es necesario conocer si el Municipio de Riohacha La Guajira – Colombia posee sistema de información que garantice el análisis y seguimiento de las familias ubicadas en este territorio Municipal.

El tercer paso corresponde a la formación de agentes públicos y comunitarios, para fortalecer y desarrollar capacidades y habilidades ciudadanas, en el ejercicio de participación en la toma de decisiones dentro de la Gestión Social Integral de lo público en los barrios, comunidades y territorios más cercanos, y consolidar de esta manera, la autonomía y la autogestión social comunitaria, para la construcción participativa de políticas públicas sustentables, con un enfoque de Derechos.

En este orden de ideas, el cuarto paso establece la prestación de servicios articulados, entre los sectores, desde sus contenidos, procedimientos y oportunidad. Su propósito es acercarse a los territorios con menor presencia institucional brindando formación y asistencia técnica, para focalizar y priorizar personas y familias en situación de mayor pobreza y vulnerabilidad, a través de la identificación y la disminución de barreras de acceso a la atención integral sectorial y transectorial y el empoderamiento de la comunidad. Es necesario construir y definir rutas de accesos a la seguridad alimentaria, servicios para adolescentes gestantes, niños y niñas en situación de discapacidad y la atención a la violencia sexual y familiar, es pertinente analizar el nivel de presencia institucional que brinda el plan de gobierno, en las comunidades del Municipio de La Guajira - Colombia, a los núcleos familiares más vulnerables.

Por último, realizar convocatoria permanente a más actores que se comprometan con las estrategias para lo cual, la clave del éxito es: La decisión y voluntad política de desarrollar la estrategia del alcalde y los secretarios de despacho; El liderazgo y capacidad de convocatoria y concertación de las entidades nucleares del eje social, bienestar social, salud y educación; La apropiación cada vez más amplia de los agentes Departamental y Municipal institucionales del fundamento conceptual y metodológico de la estrategia; La oportunidad de evidenciar resultados exitosos a corto plazo; La posibilidad de trabajo articulado y unificado sin perder la especificidad de cada sector, haciendo de la estrategia un instrumento útil y beneficioso para el todo y las partes.

Con base a lo anteriormente expuesto se puede evidenciar, la pertinencia de hacer un análisis a la Estrategia de Gestión Social Integral del plan de Gobierno del Municipio de Riohacha- La Guajira –Colombia, estructurada bajo los siguientes factores relevantes: en la sección de revisión literaria se plantea los argumentos que sustentan la estrategia de gestión social integral, con la finalidad de determinar los alcances del actual plan de gobierno que se desarrolla en este Municipio, el cual se identifican las condiciones específicas, las situaciones, relaciones, necesidades e intereses de las comunidades que son objeto de atención; se conocen los elementos claves de la información, análisis y seguimiento de las estrategias; se determina la capacitación e información para desarrollar habilidades ciudadanas de los agentes públicos y comunitarios; se establecen la articulación de los diferentes sectores de mayor pobreza y vulnerabilidad; se determinan las decisiones y voluntades políticas para realizar convocatorias permanentes con el fin de comprender mas actores en las estrategias de gestión integral del plan de gobierno del Municipio de Riohacha –La Guajira –Colombia. Seguidamente se presenta la metodología utilizada en la investigación, definiendo el enfoque epistemológico, tipo, y diseño de investigación, población, muestra, y posteriormente se presentan los resultados y conclusiones de la investigación.

REVISION LITERATURA

En la revisión teórica desarrollada en la estrategia de gestión social integral, se asumieron conceptos que permiten conocer fundamentos de la presente investigación, estas teorías se relacionan con Cohen y otros (2005), quien dice que la gestión social integral es el análisis la formulación, evaluación, implementación y monitoreo de las políticas públicas, programas y proyectos sociales y de las condiciones institucionales y organizacionales necesarias para obtener resultados adecuados. Estos compromisos requieren acuerdos de los diferentes actores involucrados para la consecución y obtención de resultados positivos y reales; tras la elaboración de una proyección ordenada, sistematizada y con la posibilidad de replantearse en cualquier momento de su ejecución.

En este sentido, la Gestión Social integral, es aquella que se ocupa de construir diversos espacios destinados a la interacción social y a la superación de aquellos problemas u obstáculos que se presentan en las comunidades, y que impiden el funcionamiento y existencia de algunos grupos. Por otra parte, la Gestión, se encarga de administrar y organizar los recursos a nivel organizacional, así como también, al conjunto de acciones sociales dedicadas al desarrollo sostenible, y a la realización de actividades orientadas a una comunidad, en busca de mejor calidad de vida.

Según Cohen (2005), la Estrategia de Gestión Social Integral, está orientada a resolver problemas a concretar un proyecto, un deseo, pero también puede referirse a la dirección y administración que se realiza en una empresa, organización, comunidad, e incluso a nivel del gobierno, acciones fundamentales para orientar el proceso administrativo y alcanzar los objetivos a los que se desea llegar. En otras palabras, constituye la ruta a seguir para alcanzar los propósitos, objetivos y metas planteados en el corto, mediano y largo plazos, fundamentados en los cinco (5) pasos de Estrategia de Gestión Social Integral (las condiciones específicas, elementos claves de la información, capacitación y formación, articulación de los diferentes sectores, las decisiones y voluntades políticas).

METODOLOGÍA

Esta investigación, es de tipo Descriptivo, porque tiene como propósito describir la situación o evento, es decir, cómo es y se manifiesta dicho fenómeno, en este caso, son las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha – La Guajira -Colombia. Por tal razón, el diseño puede considerarse no experimental, de corte transversal, la cual busca determinar porque los hechos ocurrieron así y se van a observar en su ambiente natural, al analizar las Estrategias de Gestión Social Integral del plan de Gobierno del Municipio de Riohacha, el cual persigue realizar un análisis de las condiciones específicas, de los elementos claves de información, para desarrollar habilidades ciudadanas de los agentes públicos, y la articulación de los diferentes sectores de mayor pobreza, para realizar convocatorias permanentes, con el fin de comprometer más actores en las estrategias de Gestión Social Integral.

En la presente investigación la población está conformada por los habitantes del Municipio de Riohacha, la cual la constituyen quinientos setenta y siete mil cuatrocientos setenta y dos (577.472), en cuanto al tamaño de la muestra estará determinada según la fórmula de Martínez (1997). Se necesitan realizar ciento cincuenta y seis (156) encuestas a los habitantes del Municipio de Riohacha.

Para efectos de la presente investigación, se utilizó un (1) cuestionario, dirigido a los habitantes del Municipio de Riohacha, con Treinta y cinco (35) ítems con respuestas de cinco (05) alternativas tipo frecuencia; según los criterios contenidos en la escala de Likert, con preguntas cerradas con base a las siguientes alternativas: Siempre, Casi Siempre, Regularmente, Casi Nunca, Nunca

RESULTADOS

Después de interpretar los resultados obtenidos de la aplicación del instrumento dirigido a los habitantes de la ciudad de Riohacha, con el propósito de analizar las estrategias de gestión social integral del plan de gobierno del Municipio de Riohacha - La Guajira- Colombia, se procede a señalar los siguientes resultados:

Tabla: 1 Condiciones Específicas

alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Asistencia Escolar	91%	9%	0	0	0
Empleo	0	14%	66%	20%	0
Salud	0	0	71%	20%	9%
Servicio Publico	0	0	95%	5%	0

Fuente: Elaboración Propia

En relación a la asistencia escolar se muestra que las personas que habitan en las comunidades de Riohacha, consideran que el gobierno hace estudios previos para definir las condiciones de educación existente; pero manifiestan que regularmente desarrollan programas para conocer el nivel de empleo; también se aprecia que ellos, consideran que se realizan estudios para reconocer las necesidades en el plano de la salud, y a la vez afirman que regularmente desarrollan inspecciones, con el fin determinar la eficacia de los servicios públicos.

Tabla: 2 Necesidades

Alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Supervivencia	32%	39%	29%	0	0
Protección	0	0	95%	5%	0
Relación	64%	36%	0	0	0
Confianza	0	14%	86%	0	0

Fuente: Elaboración Propia

En esta tabla se aprecia Las comunidades del municipio de Riohacha, que participaron en este proceso investigativo, creen que casi siempre el gobierno Municipal determina la necesidades prioritarias que permitan la supervivencia de los miembros de estos sectores; afirman que regularmente se preocupa por conocer las necesidades de protección comunitaria existentes en esta zona; manifiestan que siempre el gobierno municipal busca conocer cuáles son las necesidades de relaciones comunitarias que requieren los habitantes de estos sectores; que regularmente se inspecciona los niveles de confianza que se da entre los miembros que participan activamente en este sector;

Tabla: 3 Información

alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Recopilación	0	0	71%	20%	9%
Procesamiento	0	14%	66%	20%	0
Conocimiento	0	0	91%	9%	0

Fuente: Elaboración Propia

En esta tabla se observa las personas que respondieron las encuestas, consideran que regularmente el gobierno del municipio de Riohacha recolecta la información que permiten reconocer los niveles de requerimientos de estos sectores; creen que regularmente desarrollan estrategias de gestión social integral con base a los resultados de la información que fue suministrada por ellos como mimbros activo de estos barrios; manifiestan que casi nunca el gobierno Municipal, traducen conocimiento la información suministrada por ellos, para implementar proyectos sociales de interés;

Tabla: 4 Capacitación

alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Desarrollo de capacidades	0	0	95%	5%	0
Habilidades Ciudadanas	0	0	71%	20%	9%

Fuente: Elaboración Propia

Esta tabla muestra Las comunidades encuestadas en el municipio de Riohacha, creen que regularmente el gobierno Municipal realiza proyectos de capacitación con el fin de desarrollar capacidades comunitarias en los miembros pertenecientes a esta comunidad; manifiestan que regularmente el gobierno Municipal realiza proyectos de capacitación con el objetivo de crear habilidades ciudadanas a los miembros pertenecientes en estas comunidades;

Tabla: 5 Formación

alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Autogestión Comunitaria	0	0	71%	20%	9%
Formación a Comunidades	0	0	0	98%	2%
Gestión Local	0	0	0	98%	2%

Fuente: Elaboración Propia

Esta tabla muestra que los habitantes del municipio de Riohacha, que dieron respuestas a la encuesta, afirman que regularmente el gobierno Municipal, implementa proyectos de formación con el propósito de generar autogestión comunitaria en estos sectores; que casi nunca el gobierno Municipal se preocupa por que estas comunidades tenga formación integral que coadyuven en el beneficio comunitario; creen que casi nunca, desarrolla proyectos de formación en gestión local que permita que estos habitantes implementen sus proyectos comunitarios;

Tabla: 6 Articulación de los diferentes Sectores

alternativas Indicadores	Siempre	Casi siempre	Regularmente	Casi Nunca	Nunca
Seguridad Alimentaria	64%	36%	0	0	0
Accesos a Servicios	0	0	0	91%	9%
Asistencia Técnica	0	0	0	98%	2%

Fuente: Elaboración Propia

En esta tabla se observa que las personas que hacen parte de las comunidades del municipio de Riohacha, afirman que siempre el gobierno Municipal lidera proyectos de seguridad alimentaria para estos sectores

comunitarios; manifiestan que casi nunca tienen acceso a los servicios básicos en forma continua; consideran que casi nunca reciben asistencia técnica por parte de los integrantes del gobierno Municipal para gestionar el desarrollo comunitario.

CONCLUSIONES

Después de interpretar los resultados obtenidos de la aplicación de las encuestas, dirigidas a los habitantes del Municipio de Riohacha-La Guajira-Colombia, y sustentados con los aportes de teóricos de Negri (2008), el cual dice que la gestión social integral, se refiere al proceso de lectura integral, de las necesidades de la población en los territorios definidos, a partir de lineamientos conceptual, metodológico y operativos, que permitan representar las expresiones individuales y colectivas, con base a los objetivos de esta investigación se procede a señalar las conclusiones correspondientes:

En relación al primer objetivo específico: Identificar las condiciones específicas, las situaciones, relaciones, necesidades e intereses de las comunidades que son objeto de atención en las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha, La Guajira Colombia, se pueden estipular las siguientes conclusiones:

Los habitantes del Municipio de Riohacha, consideran que la gestión social integral del plan de gobierno, realizan estudios previos para determinar los requerimientos de asistencia escolar y salud; pero regularmente desarrollan programas que permiten conocer el nivel de empleo de estas comunidades; es importante afirmar que estos habitantes manifiestan que el gobierno Municipal, no realizan inspecciones, con el fin de determinar la eficiencia de los servicios públicos en estas comunidades. Casi nunca determinan el grado de privación que se tienen del uso de los servicios públicos prioritarios en estos sectores del Municipio; a la vez reconocen que no se realizan censo con el fin de identificar el nivel de permanencia con que prestan los servicios públicos que provienen del gobierno Municipal.

Las sujetos objetos de estudio de esta investigación, afirman que la gestión social integral del Plan de gobierno Municipal, determina las necesidades prioritarias que permiten la supervivencia de los habitantes de esta localidad, pero regularmente se preocupan por conocer las necesidades de protección comunitaria existente en este sector; a la vez estas personas consideran que el gobierno Municipal de Riohacha, busca conocer cuáles son las necesidades de relación comunitaria que se requieren, así mismo manifiestan que regularmente se inspeccionan los niveles de confianza que se dan entre los miembros que participan activamente en estos sectores.

En relación al segundo objetivo específico: Conocer los elementos claves de la información, análisis, y seguimiento en las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha-La Guajira Colombia, se pueden considerar las siguientes conclusiones:

Los miembros encuestados en el Municipio de Riohacha-La Guajira Colombia, afirman que la gestión social integral del plan de gobierno, regularmente recolecta la información que permite reconocer los niveles de requerimientos de estas localidades; consideran que en forma regular desarrollan estrategias de gestión social integral con base a los resultados de la información que fue suministrada por los miembros de estas comunidades, también creen que casi nunca la información suministrada se traduce en conocimientos para implementar los proyectos sociales de interés.

En relación al tercer objetivo específico: Determinar la capacitación y formación para desarrollar habilidades ciudadanas de los agentes públicos y comunitarios que participan en las estrategias de Gestión Social Integral en el Plan de Gobierno es Momento de Gobernar (2011-2015), en las comunidades de la ciudad de Riohacha, se pueden considerar las siguientes conclusiones:

Las personas que respondieron la encuesta que hacen parte del Municipio de Riohacha, consideran que regularmente el gobierno en su gestión realiza proyectos de capacitación, con el fin de desarrollar capacidades comunitarias y habilidades ciudadanas en los miembros pertenecientes a estas comunidades. Los habitantes del Municipio de Riohacha, manifiestan que regularmente el gobierno Municipal en su gestión social, implementa proyectos de formación, con el propósito de generar autogestión comunitaria, a la vez consideran que casi nunca el gobierno se preocupa porque las comunidades obtengan formación integral que coadyuven en el beneficio comunitario; y tampoco se desarrollan proyectos de formación en gestión local que permitan que estos habitantes implementen sus proyectos comunitarios.

En relación al cuarto objetivo específico: Establecer la articulación de los diferentes sectores de mayor pobreza y vulnerabilidad, en la priorización de las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha, se pueden considerar las siguientes conclusiones: Las personas que respondieron la encuesta que hacen parte de las comunidades del Municipio de Riohacha, consideran que el Municipio en su gestión social lidera proyectos de seguridad alimentaria para estos sectores comunitarios; a la vez manifiestan que casi nunca tienen acceso a los servicios básicos en forma continua, y como miembros de estas comunidades no reciben asistencia técnica por parte de los integrantes del gobierno Municipal para gestionar el desarrollo comunitario.

En relación al Quinto objetivo específico: Determinar las decisiones y voluntad política para realizar convocatorias permanentes con el fin de comprometer más actores en las estrategias de Gestión Social Integral en el Plan de Gobierno del Municipio de Riohacha, se pueden considerar las siguientes conclusiones:

Los habitantes del Municipio de Riohacha, afirman que existe voluntad política por parte del gobierno Municipal, para determinar acciones que garanticen decisiones que permitan mejorar las condiciones de vida de estas comunidades; pero regularmente el gobierno Municipal, actúa de forma concreta hacia fines sociales; y a la vez reconocen que parcialmente se han generado cambios en estas comunidades en beneficio de todos.

ANALISIS DEL USO Y DEPENDENCIA DEL TELÉFONO CELULAR EN LOS ALUMNOS DE LA FACULTAD DE ADMINISTRACIÓN Y CONTADURIA DE LA UA de C.

Lilia Alanis Gómez, Universidad Autónoma de Coahuila
Verónica Villarreal Sánchez, Universidad Autónoma de Coahuila
Flor Nava Cruz, Universidad Autónoma de Coahuila

RESUMEN

En este estudio se muestra análisis acerca del rendimiento académico del uso y dependencia del teléfono celular, la manera en que influye en sus estudios y adicción del mismo. Dicho análisis se realizará con los alumnos de la Facultad de Administración y Contaduría de la Universidad Autónoma de Coahuila, con el objetivo de observar la influencia del teléfono móvil. Si bien la tecnología es una herramienta que ha facilitado la resolución de los diversos problemas que aquejan al ser humano, ya que a través de los tiempos ha venido a reemplazar la mano de obra; esto trae grandes beneficios pero va de la mano una serie de consecuencias a causa de ello. Uno de los grandes avances como lo es el teléfono celular se ha convertido en un arma de doble filo, pues si bien ayuda también se ven las dificultades en el uso y control de estos, que en estos tiempos resulta casi imposible estar al margen de estos aparatos que si bien son de utilidad también han venido a sustituir aspectos importantes en la vida de las personas. El avance tecnológico ha transformado los medios de comunicación y en consecuencia no sólo se hacen llamadas sino almacenar, descargar y enviar archivos e información, mandar mensajes instantáneos, conectarse a Internet, chatear online, enviar y recibir correo, ver televisión, escuchar radio, almacenar música y escucharla y demás. Se considera que la tecnología nos ha sobrepasado ya que no hay un control en su uso, se da inicio desde temprana edad enfocándose en su mayoría del tiempo a estas Tecnologías de la información y de la comunicación, avanza a zancadas mientras que la conciencia humana avanza a paso de tortuga y lentamente va dejando al lado aspectos fundamentales en la vida del ser humano. Como lo dijo Albert Einstein: "Temo el día en que la tecnología sobrepase nuestra humanidad. El mundo solo tendrá una generación de idiotas"

PALABRAS CLAVE: Tecnología, uso, consumo, adicción.

ANALYSIS OF USE AND DEPENDENCE ON CELL PHONE IN THE STUDENTS OF THE FACULTY OF MANAGEMENT AND ACCOUNTING OF THE UADEC.

ABSTRACT

This study analyzes the academic performance use and dependence on cell phones, how it affects their studies and their addiction to it. This analysis was conducted to students from the Faculty of Business Administration and Accounting from the Autonomous University of Coahuila, in order to study the influence of the mobile phone. While technology is a tool that has helped to resolve a diversity of problems that the human being daily faces, it has come to replace the workforce; this brings great benefits but also comes along with a series of consequences with it. One of the great advances of technology, the cellular device, has become a double-edged sword, as it sure aids us, but also comes with difficulties in the use and control of it. Nowadays, it seems almost inevitable to fall in the addiction of the cellphone which is of great use,

but has also showed to substitute important aspects in a person's life. Technological progress has transformed media and therefore the use of it does not only allow to make calls but to store, download and send files and information, as well as sending instant messages, surfing the internet, chatting online, sending and receiving e-mails, watching TV, listening to radio, storing and listening to music and what not. It is considered that technology has overtaken us since there is no control in its use. It begins at an early age focusing most of the time in technologies of information and communication, it advances in strides while the human consciousness walks at a turtle pace, and it slowly puts aside fundamental aspects of the human life. As Albert Einstein said: "I fear the day that technology will surpass our human interaction. The world will be a generation of idiots."

KEYWORDS: technology, use, consumption, addiction.

INTRODUCCIÓN

El uso de la tecnología es una herramienta que ha facilitado la vida de todos en los últimos tiempos, cada día hay avances científicos que se aplican a la tecnología móvil y el internet que de alguna manera pueden o no afectar los jóvenes de este siglo, pero sobre todo a los de las personas que nacieron en los años 80 que son los que más influencia pueden tener. Esto se ve influenciado en cambios de hábitos en su vida diaria, desde el aspecto social hasta en su educación como son los estudios. El uso del teléfono celular se ha visto incrementado en la mayoría de las personas así también es utilizado como un medio de comunicación inminente es utilizado como: interacción social, agenda, moda, reproductor de música, juegos, acceso a Internet, cámara digital, computadora, etc. Por otro lado, en palabras de Javier Echeverría (2001), este tremendo empuje que la nueva tecnología infringe en nosotros no solamente nos ofrece infinitas posibilidades como medios de acción para resolver problemas de la vida cotidiana como comunicarnos a distancia o resolver tareas, sino que además ha trasladado nuestra atmósfera de desarrollo, que si bien se había concentrado durante siglos en el entorno natural para luego pasar al entorno urbano alrededor del siglo XVIII, ahora amenaza seriamente en convertirse en un entorno casi totalmente virtual, que implica el desplazamiento de los espacios naturales y urbanos, así como el cambio en los hábitos sociales y de comportamiento de los individuos, sobre todo de los jóvenes que han nacido y se han desarrollado en la esfera del cambio.

La telefonía celular ha marcado una nueva era en los estudiantes, ya que si bien trae grandes beneficios como estar a la vanguardia en la información actualizada, tales como consulta de libros, noticias, Clases a distancia a través de videos, consultas didácticas en general para su educación también trae consecuencias en donde se ven afectados por vicios y adicciones. En este análisis plantearemos si el teléfono celular afecta o no a los estudiantes de la FAC de la UADEC con los resultados de las encuestas aplicadas a una muestra de 80 alumnos, para mostrar resultados sobre el uso, dependencia personal en su aplicación diaria, consumo y preferencias del mismo. Este estudio será de mucha importancia para la dirección del plantel así como para los profesores de la institución escolar.

Planteamiento

La Tecnología ha llegado a las grandes ciudades originando consecuencias para el hombre donde este ha olvidado como desempeñarse sin ella, la realidad nos dice que hay un serio peligro que suponen algunas conductas que generan entre los menores y adolescentes el abuso de nuevas tecnologías como el móvil o internet, que cambiar su comportamiento así como de tener desequilibrio, como procesos similares a los que ocurren en el consumidor de drogas.

Es una situación que vemos día a día en la mayoría de las personas que pasan colgados del teléfono mensajeando o en el chat mayormente, estas son algunas de las características que distinguen a los niños y adolescentes de nuestro tiempo y que, a simple vista, podrían pasar por herramientas que les distraen y entretienen. Sin embargo, cuando esas aficiones se convierten en adicción, es cuando comienzan a surgir

los problemas. Lo cierto es que no se puede pasar por desapercibido este problema ya que según los expertos la gran mayoría de los adolescentes de nuestro país abusan del celular o de Internet, aunque aún no se sabe a cuántos de ellos afecta. Ya que en muchos de los casos se convierte este abuso en problemas con la familia, rendimiento escolar, que es el caso que haremos en este análisis. El uso excesivo de los celulares, tabletas, videojuegos y aparatos para reproducir música, genera adicción en niños y adolescentes, afirmó el investigador de la Universidad de Guadalajara (UdeG), Francisco Gutiérrez Rodríguez. Los celulares tienen grandes consecuencias como lo es la adicción a estos aparatos tecnológicos que se vuelven indispensables que sin percibirlos ha ido avanzando a través de los años como una droga que no se puede vivir sin ella por lo que se debe abrir los ojos para seguir utilizándola en lo que si beneficia y combatir en lo que perjudica porque de otra manera afectará paulatinamente sin darnos cuenta cada vez más la sociedad. El propósito del análisis de este trabajo es para dar a conocer el uso e impacto de los teléfonos celulares así como el comportamiento y dificultades que conlleva el uso del celular en los jóvenes estudiantes de la Facultad de Administración y Contaduría en su salón de clases. Así mismo conocer cómo afecta su rendimiento escolar. Actualmente, las tecnologías de información y comunicación parece que son indispensables para todas las personas en especial para los jóvenes. Por lo que el aumento de índice de reprobación de los jóvenes incrementa debido a la distracción que los celulares generan en un estudiante en un salón de clases.

Objetivo General-Reconocer si el uso del celular afecta o no a los alumnos y explicar de qué manera puede ser un problema para tener información útil para las autoridades de la Institución

Objetivos Particulares

- Reconocer si el uso del celular afecta el rendimiento escolar en los alumnos
- Explicar de qué manera puede ser un problema en el rendimiento escolar
- Aplicar por medio de encuestas a alumnos de un salón de clase si el alumnado ha reducido su rendimiento escolar.
- Analizar la información obtenida de las encuestas por medio de gráficas.
- Compartir los resultados con las autoridades estudiantiles sobre este problema.

MARCO TEORICO

En nuestro País la telefonía celular está administrada y controlada por 4 compañías principales como son: TELCEL, MOVIESTAR, UNEFON, IUSACELL y NEXTEL. Últimamente el mercado de las telecomunicaciones ha crecido a pasos agigantados al grado que se les ofrecen a los usuarios planes tan accesibles que la gran mayoría cuenta con un aparato de estos. Esto gracias a los niveles de competencia en que se manejan las grandes compañías.

El desarrollo del teléfono celular ha sido muy acelerado. Primero lo definíamos como un dispositivo electrónico que permitía la conexión a una red de teléfonos, pero ahora decimos que es un dispositivo inalámbrico donde convergen tecnologías digitales de la comunicación: Internet, radio, televisión, almacenamiento de información y desarrollo de multimedia. Uso, consumo y apropiación del teléfono celular en un contexto urbano (Distrito Federal) Derecho a Comunicar | Número 3 | Septiembre – Diciembre 2011 ISSN: 2007-137X 83

Concretamente, nos referimos al teléfono celular como un fenómeno de convergencia digital de la comunicación, donde hoy Internet y los periódicos en línea juegan un papel importante en el acceso a la información. Uso, consumo y apropiación del teléfono celular en un contexto urbano (Distrito Federal) Derecho a Comunicar | Número 3 | Septiembre – Diciembre 2011 ISSN: 2007-137X 99

De lo anterior se desprende la idea del cambio que se ha producido a través de los tiempos donde ha generado cambios sociales por el uso indiscriminado de las nuevas generaciones a partir de la nueva tecnología donde el caso del teléfono móvil se ha dado de una manera más acelerada donde ahora se tienen

muchas aplicaciones como audio, video, acceso a internet, enviar y recibir correo, chatear escuchar música, radio, tv, etc.

METODOLOGIA

Este análisis muestra parte de los resultados de un estudio exploratorio transversal realizado con la técnica de encuesta durante el mes de febrero de 2015 sobre el uso, consumo y preferencias del teléfono celular. Esta encuesta se aplicó a una muestra de 60 alumnos de manera aleatoria en la Facultad de Administración y Contaduría de la Universidad Autónoma de Coahuila la cual tiene una población de 250 estudiantes de una edad de entre 17 y 27 años. Con tales fines fue utilizado un instrumento desarrollado especialmente para este análisis, el cuál fue diseñado para una población de jóvenes de la Facultad de Administración en Piedras Negras.

Prueba De Hipotesis

La administración de la Facultad a través de su Departamento Académico asegura que en la actualidad el uso del celular por parte del alumnado es un factor que afecta en más del 50 % en el aprovechamiento educativo de los alumnos, algunos miembros de la administración dicen que es menos. Con la finalidad de determinar si existe evidencia en la proporción de alumnos afectados en su aprovechamiento por el uso del celular, se tomó la decisión de aplicar una encuesta a los alumnos para conocer su opinión, Se encuestó a una muestra de 60 alumnos de los cuales el 56 alumnos manifestaron que si afectaba el aprovechamiento. Utilizando un nivel de confianza de 5% determinar si la administración de la Facultad tiene razón o no.

Análisis De Muestras

Figura 1: ¿Cuenta Con Un Celular Actualmente?

Figura 2: ¿Para Usted Es Indispensable El Teléfono Celular?

Figura 3: ¿Usa Su Celular Más De Cinco Horas Al Día?

Figura 4: ¿Es El Teléfono Celular Uno De Los Factores Que Provoca La Falta De Comunicación Familiar De Los Jóvenes En La Actualidad?

Figura 5: ¿Con Que Propósito Usas El Celular?

Figura 6: ¿Utiliza El Celular Con Fines Académicos?

Figura 7: ¿Tienes Adicción Al Celular?

Figura 8: ¿Qué Opina Del Uso De Los Teléfonos Celulares En Clase?

Figura 9: ¿A Qué Edad Tuvo Su Primer Celular?

Figura 10: ¿Cuántas PERSONAS POSEEN CELULAR EN SU CASA?

RESULTADOS PRUEBA DE HIPÓTESIS

DATOS							
INSATISFACCION		MUESTRA			NIVEL DE SIGNIFICANCIA		
X = 43		n = 60		p = 0.500		α = 5%	
Alumnos							

Determinar Hipótesis Nula (H_0) e Hipótesis Alternativa (H_1):

El uso del celular NO incide en el bajo aprovechamiento escolar de los alumnos

$H_0: \mu =$	HIPOTESIS NULA
	$H_0: \mu < 0.50$ Alumnos

$H_1: \mu =$ El uso del celular incide en el bajo aprovechamiento escolar de los alumnos

HIPOTESIS ALTERNATIVA		
$H_1: \mu >$	0.50	Alumnos

Calcular Nivel De Confianza, Punto Critico e Intervalos De Confianza

Por los resultados obtenidos podemos concluir que hay suficiente evidencia estadística para inferir que la Hipótesis Nula es falsa, y asegurar que el uso del celular de manera extrema SI afecta el aprovechamiento de los alumnos, para esto será necesario establecer una estrategia en la Facultad con el objetivo de revertir este comportamiento que afecta a los alumnos y al prestigio de la Facultad, y así, llegar y mantener altos nuestros índices de aprovechamiento.

CONCLUSIONES

Se da por válida la hipótesis planteada ya que según datos obtenidos en nuestro estudio pudimos verificar los efectos negativos que el uso del celular ha tenido sobre nuestros estudiantes. Entre los problemas encontrados vinculados directamente tenemos: Desatención de aspectos importantes ya que un porcentaje considerable hace uso de la telefonía celular más de 5 horas. Entre estos tendríamos la familia, trabajo y estudio. Se encontraron respuestas positivas de que si el celular lo utiliza para fines académicos pero las evidencias de los maestros nos dicen que esa respuesta es incorrecta. La verdadera incógnita es saber si los profesores aprovecharan las nuevas tecnologías como una ayuda a la enseñanza, para hacer clases cada vez más claras a través de presentaciones multimedia, o para cambiar de paradigma y concentrarse en la creación, la gestión y regulación de situaciones de aprendizaje (PERRENOUD, 2004).

RECOMENDACIONES

Las nuevas tecnologías exigen que los docentes desempeñen nuevas funciones y también, requieren nuevas pedagogías y nuevos planteamientos en la formación docente. De los maestros depende Lograr la integración de las Tecnologías en el aula, reestructurar su pedagogía y fomentar clases dinámicas, estimulando la interacción cooperativa, el aprendizaje colaborativo y el trabajo en grupo. Esto exige adquirir un conjunto diferente de competencias para manejar la clase. (UNESCO, 2008)

Se considera que todos los maestros lleguen a un acuerdo de prohibir categóricamente a todos los alumnos que durante el horario de clases mantengan los celulares apagados, ya que así podrán concentrarse mejor, obteniendo el máximo rendimiento. Es recomendable que la dirección avale el acuerdo hecho por los docentes con respecto al punto anterior, ya sea mediante o a través de una reglamentación interna. Donde quede estipulado que está prohibido del uso de celulares por los alumnos durante la hora clase.

EL PAPEL DE LA ETICA EN EL DESEMPEÑO DE LOS PROFESIONALES DEL TURISMO EN LA GUAJIRA

Olivia Isabel Rangel Luquez, Universidad de La Guajira
Marelis Mercedes Alvarado Mejía, Universidad de La Guajira
Wilmar Sierra Toncel, Universidad de La Guajira
Angela Nair Ortiz Rojas, Universidad de La Guajira

RESUMEN

El propósito del presente trabajo fue analizar el papel de la ética en el desempeño de los profesionales del turismo en La Guajira. El constructo teórico estuvo sustentado en autores como Morín (2005), Cortina (1993), Follari (2003), Mantecón (2012), entre otros. Fue una investigación de tipo descriptiva con diseño no experimental y de campo, la población estuvo constituida por 286 gerentes de las empresas turísticas del departamento de La Guajira, el instrumento aplicado obtuvo una confiabilidad del 91%. Los resultados evidenciaron que solo el 5,24% de los gerentes encuestados poseen formación disciplinar relacionada con el turismo. En cuanto a la dimensión principios éticos esta arrojó una media aritmética de 2.53, ubicándose en la categoría alta del baremo, reflejando presencia de estos valores en la actuación de los gerentes de las empresas turísticas.

PALABRAS CLAVE: Ética, Profesionales del Turismo, Empresas Turísticas

ABSTRACT

The purpose of this study was to analyze the role of ethics in the performance of tourism professionals in La Guajira. The theoretical construct was supported by authors such as Morin (2005), Cortina (1993), Follari (2003), Mantecón (2012), among others. It was a descriptive research with non-experimental and field design, the population consisted of 286 managers of tourism enterprises in the department of La Guajira, the instrument applied scored a reliability of 91%. The results showed that only 5.24% of the managers surveyed have disciplinary training related to tourism. Regarding the ethical principles dimension is an arithmetic mean of 2.53, ranking in the top category of the scale, reflecting the presence of these values in the performance of managers of tourism businesses.

KEYWORDS: Ethics, Tourism Professionals, Tourism Businesses

INTRODUCCIÓN

Reflexionar sobre la importancia de la actitud ética de los profesionales en el desempeño de la actividad turística en los actuales escenarios mundiales caracterizados por una creciente demanda de espacios para el ocio, el esparcimiento, el uso intenso del conocimiento, las tecnologías e innovación y el cambio en los gustos de los consumidores, ha creado dilemas éticos en su comportamiento socio-laboral producto de los impactos indeseables de prácticas inadecuadas en el incontrolado crecimiento del sector en perjuicio de su integral desarrollo, poniendo a prueba los principios que demarcan los códigos éticos. Desde esta perspectiva, se entiende la ética como la ciencia que trata sobre la moral, capaz de considerar como válidos unos comportamientos y otros no, comparar las pautas morales que presentan las personas buscado su

fundamento y legitimación. Además investiga lo específico del comportamiento moral; enuncia principios generales y universales inspiradores de toda conducta mediada por el interés de regular a través de normas o códigos las acciones concretas de los seres humanos. En este sentido, el presente trabajo analiza el papel de la ética como reto para los profesionales en la gestión del turismo en La Guajira, teniendo en cuenta que el *ethos*, según la visión aristotélica significa temperamento, carácter, hábito, modo de ser (Escobar, 1992); pero ese carácter o modo de ser se refiere al hombre en sociedad, ya que la ética no tiene sentido lejos del individuo, por el contrario: existe a partir del hombre y constituye una conquista del mismo a través de su vida, por lo que esta debe estar presente en cada una de las actividades desempeñadas por el hombre. De allí el papel fundamental en el rol de los profesionales del sector. Ahora bien, para lograr el propósito de la presente investigación se acudió en primera instancia a la revisión de la literatura, para entender e interpretar la ética y su importancia en el desarrollo de las competencias de los profesionales del turismo, seguidamente se plantea la metodología que permitió abordar el desarrollo de los objetivos, se analizan los resultados y finalmente se presentan las conclusiones.

REVISIÓN LITERATURA

Los planteamientos éticos de Morín (2005), son pertinentes para asumir la tarea de construcción de un *ethos* en los profesionales de esta primera mitad del siglo XXI; en primer lugar, porque rompe con la separación del juicio de hecho y el juicio de valor e integran conocimiento y ética en una totalidad compleja que explica con mayor integralidad esta tarea formativa, donde estas aspiraciones éticas del hombre en sociedad tiene que ver con la acepción actual de la ética aplicada a las distintas disciplinas (Cortina, 1993), buscando una transdisciplinariedad en el tratamiento de la ética y una transversalidad en su estudio como única forma de incorporarla a la vida cotidiana. Por otro lado, para Follari (2003), la ética no es solo un código moral de conductas permitidas y prohibidas, sino también el efecto de un ser-con-otros que, de alguna manera, depende del relativismo cultural, de las creencias, supuestos básicos, acuerdos, principios, credos o filosofías que se encuentran inmersas en cada grupo humano. Desde otro punto de vista García (2002) argumenta que la conducta no ética además de poner en peligro la supervivencia de las organizaciones, impide disfrutar de una vida buena y bien convivida.

Dado lo anteriormente expuesto se puede afirmar que para lograr un desempeño satisfactorio en las actividades turísticas, es necesario un profesional capaz de utilizar criterios y principios éticos, por sus obligaciones morales inherentes a la prestación de un servicio de calidad que implica básicamente: un trato íntegro, respetuoso, responsable, con sentido social que invoca la humanización del ser como exigencias de su realidad, con el derecho irrenunciable a determinar y conducir su vida con autonomía, entendiendo que todos los seres humanos son iguales con los mismos derechos y obligaciones, orientado al servicio de los demás, al bien común y la atención a los necesitados. Obviamente, sin olvidar el respeto por el medio ambiente, prescribiendo conductas en códigos de ética medioambiental por las que se ha de regir el desarrollo o a la gestión del turismo Upchurch (2000).

Así pues, actuar éticamente significa no solo hacerlo con dignidad, sino con responsabilidad y compromiso asumiendo las consecuencias de su ejercicio con respecto a las situaciones planteadas, las actividades realizadas y las proyecciones generadas relacionadas con el respeto por la naturaleza y la cultura que le confiere sentido al devenir compartido. Por lo tanto, los principios éticos de humanización, autonomía, igualdad, solidaridad, sustentabilidad, cooperación, integridad y responsabilidad, deben ser actitudes que contribuyan a un desarrollo integral de la actividad turística. Desde la esfera profesional, la ética proporciona un marco de actuación de trabajo para dirigir las funciones esenciales de los profesionales para establecer políticas y desarrollar estrategias en los servicios que ofrecen. De esta manera, el establecimiento de principios básicos para obtener una práctica y un buen comportamiento de los profesionales se debe formular un código de ética que regule la actuación de estos. Donde el perfil profesional, se entienda como el conjunto de competencias que identifica la formación de una persona para asumir las responsabilidades propias del desarrollo de funciones en una determinada profesión, orientadas a desarrollar la capacidad de

usar conocimiento, habilidades y actitudes integradas en el epítome profesional del individuo. (Mulder, Weigel y Collins, 2007). Por lo anterior se genera la necesidad de regular la actuación de los profesionales del turismo, dando pie a la creación del Código Ético Mundial para el Turismo, aprobado por la Asamblea General de la Organización Mundial del Turismo (OMT) en el año 1.999, el cual integra un conjunto de principios básicos que guían el desarrollo del turismo y sirven de marco de referencia para los interesados en el sector, con el objetivo de reducir al mínimo los efectos negativos del turismo sobre el medio ambiente, el patrimonio cultural y las comunidades locales, al tiempo que se aprovechan al máximo sus beneficios para la promoción del desarrollo sostenible y la mitigación de la pobreza, convirtiéndose en instrumento de carácter voluntario no vinculante. Para los efectos el turismo se interpreta como una actividad compleja multidimensional estudiada desde distintos enfoques como industria, sistema y fenómeno social. Dicha complejidad, radica en la relación del turismo con diversos sectores que permiten su existencia, definiéndose habitualmente como aquel conjunto de actividades que realizan las personas durante sus viajes y estancias, en lugares distintos al de su entorno habitual, por un período de tiempo consecutivo inferior a un año con fines de ocio, negocio u otros motivos OMT (2012). Así mismo, una práctica social de naturaleza espacial generadora de actividades económicas no marginales. Mantecón (2012).

Desde otra perspectiva, también se define el turismo como la suma de fenómenos y relaciones que surgen de la interrelación de turistas, comerciantes, gobiernos anfitriones y comunidades anfitrionas en el proceso de atraer y hospedar a turistas y visitantes Mc Intosh (1989). También existen diversos modelos que tratan de explicar esta actividad como un sistema complejo, con base en las relaciones dinámicas no lineales que existen entre los elementos que la componen y su respuesta a impulsos externos e internos, considerando las condiciones de su desarrollo en el modelo económico imperante, el comportamiento de los turistas, los medios de transporte y las tecnologías de la información disponibles, las modificaciones en las formas de organización social y laboral, los operadores turísticos, las estructuras de soporte, así como las organizaciones y asociaciones públicas o privadas Baggio (2007).

En lo que respecta al departamento de La Guajira como territorio con potencialidades para el desarrollo de actividades eco-etno turistas, en los últimos años se ha evidenciado un crecimiento exponencial, dada la importancia para el gobierno nacional quien ha considerado el turismo como locomotora de desarrollo, por ser un destino turístico de clase mundial con oportunidades y ventajas competitivas. Desde la perspectiva de la oferta turística, en La Guajira el 72% de los establecimientos de turismo inscritos en el Registro Nacional de Turismo (2013), corresponden a establecimientos de alojamiento y hospedaje, el 16% a agencias de viaje. En cuanto a la demanda, los turistas que visitan La Guajira, realizan los mayores gastos per cápita diarios en transporte desde y hacia el departamento y en alimentos y bebidas. No obstante, esta práctica en La Guajira, ha sido históricamente direccionada empíricamente sin rigor científico y técnico capaz de contribuir a su desarrollo, sustentabilidad y sostenibilidad, dejando espacio para actuaciones antiéticas de sus operadores que de una u otra forma ensombrecen la imagen de destino turístico, ameritando replanteamiento en la acción y gestión del sector iniciando por la formación de los propietarios y operadores turísticos, sobre todo si se tiene en cuenta que en el 2020 La Guajira se visiona como el principal destino eco turístico y comunitario del Caribe, llegando a niveles de ocupación del 70% anual en la planta hotelera y a una participación del 5% del PIB departamental, de acuerdo al plan de competitividad departamental.

METODOLOGÍA

El procedimiento metodológico de la presente investigación, estuvo determinado por dos aspectos centrales que facilitaron el acercamiento a los objetivos establecidos, por un lado se destacan las aportaciones teóricas que permitieron el análisis e interpretación del objeto de estudio y por el otro las distintas etapas del desarrollo del proceso de investigación. En primer lugar, las propuestas teóricas permitieron identificar los indicadores que sirvieron para investigar a los sujetos de estudio y analizar las condiciones actuales de la comunidad objeto de estudio. En segundo lugar, el proceso permitió situar la investigación como de tipo descriptiva, inductivo, transeccional con un diseño no experimental y de campo. Donde la población objeto

de estudio estuvo constituida por 1001 gerentes de los establecimientos turísticos conformados por hoteles, restaurantes y agencias de viajes del departamento registrados en la Cámara de Comercio de La Guajira; a los cuales se les aplicó un instrumento a una muestra representativa de 286 gerentes. La técnica de recolección de datos utilizada fue la encuesta telefónica con preguntas cerradas y tipo liker. Para determinar la validez, del instrumento este fue sometido al juicio de cinco (5) expertos en el área empresarial específicamente en el área de turismo y ética. La confiabilidad se estableció a través del coeficiente de confiabilidad de Alfa Crombach, aplicado a una muestra piloto equivalente al 20% de la población obteniéndose un resultado de 0.91, significando una alta confiabilidad del instrumento.

$$E_k = \frac{K}{K-1} \left[1 - \frac{\sum_{i=1}^K S_i^2}{S_T^2} \right] = \text{siguiente Baremo:}$$

Rango	Intervalo	Categorías
4	3,25.....4,00	Muy alta
3	2,50.....3,24	Alta
2	1,75.....2,49	Moderada
1	1,00.....1,74	Baja

Fuente: Elaboración propia.

En el caso específico de la presente investigación, el objetivo del instrumento diseñado fue recolectar los datos necesarios para determinar los principios éticos presentes en la actuación de los gerentes de las empresas turísticas, el cual contó con cuatro alternativas de respuestas: siempre, casi siempre, casi nunca y nunca.

RESULTADOS

En este aparte se hace referencia a los hallazgos encontrados en relación con los componentes éticos de los profesionales en turismo en el departamento de La Guajira, así como los niveles académicos que identifican la profesionalización en turismo de los gerentes de las empresas turísticas, dichos resultados se muestran a continuación.

Tabla 2: Principio éticos

Indicadores	Alternativa (%)								Estadístico	
	Siempre		Casi siempre		Casi nunca		Nunca		Promedio	Media
Humanización	74	26%	40	14%	108	38%	64	22%	2.43	2.53

Responsabilidad	72	25%	125	44%	45	16%	44	15%	2.79	
Categoría	Alta									

Fuente: Elaboración propia.

De acuerdo a la tabla 1, la dimensión principios éticos obtuvo una media aritmética de 2,53, ubicándose en la categoría alta. En cuando a los indicadores se evidenció el siguiente resultado: el de humanización un 38% de los encuestados indicaron que casi nunca las acciones sociales aplicadas en el sector turístico se dan en función del bien común, el 26% manifestaron que siempre en las empresas se aplican los códigos de

éticas, Así mismo el 22% expresó que nunca y el 14% indicaron que casi siempre. En referencia al indicador autonomía, se desprende que el 80% de los encuestados respondieron que casi siempre gozan de plena libertad en las actividades laborales, seguido a ello el 12% manifestaron que casi nunca poseen el derecho irrenunciable para determinar sus acciones, y un 8% que nunca se determinan las acciones dentro de las empresas turísticas.

Por otro lado, en el indicador igualdad, se evidencia que el 78% de los encuestado indicaron que nunca se manejan estrategias para evitar la discriminación entre el personal, el 22% restante difiere de esta afirmación. En el mismo orden de ideas para el indicador solidaridad, se evidencia que el 51% de la población objeto de estudio muestra acciones de solidaridad aplicadas a las actividades propias del sector, sin embargo el 49% manifiesta la ausencia de la misma. Para la responsabilidad el 69% manifiesta que se cumplen a cabalidad con los encargos, funciones y tareas que se derivan del desarrollo de sus funciones, el 31% restante no cumple a cabalidad. En lo atinente a la sustentabilidad el 58% manifestó que contribuyen a la mejora económica y social que satisface las necesidades y valores de los grupos interesados, manteniendo las opciones futuras y contribuyendo a la conservación de los recursos naturales, en tanto, el 42% señaló no contribuir a ello. En cuanto a la cooperación el 71% expresaron que manejan estrategias de colaboración que permiten potenciar el clima grupal, lograr el éxito y recompensar el rendimiento de los operadores turísticos, mientras que un 29% manifestaron que no se manejan. En cuanto a la integridad el 75% señalaron que actúan conforme a las normas éticas y sociales en las actividades relacionadas con el trabajo y el 25% restante difiere de esta afirmación. En referencia al nivel académico de los gerentes de las empresas turísticas en el departamento de La Guajira, se encontró:

Figura 1: Nivel Académico de los Gerentes de Empresas Turísticas de la Guajira

Fuente: Elaboración propia, con base en la encuesta del estudio.

Como se puede observar del total de los encuestados el 36,71% posee un título profesional de pre o postgrado y un 63,29% distribuidos en: no tienen estudios, tienen primaria, bachiller, técnico y tecnólogo, como se muestra en el cuadro 24, lo que demuestra una baja relación con el conocimiento profesional de los agentes vinculados al sector turismo. Por lo cual analizando a los que tienen estudios con énfasis en turismo, se encontró:

Figura 1: Distribución de Profesiones de los Gerentes de Empresas Turísticas de la Guajira

Fuente: Elaboración propia, con base en la encuesta del estudio.

De esta manera se evidencia que de los 286 empresarios turísticos presente en la región, solo 105 son profesionales con negocios en el sector turismo, el 66% son aquellos que ya han recibido su título profesional, el 14% están cursando los últimos semestres de la carrera profesional, un 8% han terminado la especialización, el 6% son aquellos que terminaron académicamente su profesión pero aún no se han graduado, por último el 3% ha terminado su maestría o está cursándola. Además se encontró que de estos profesionales en turismo solo 15 de ellos ostentan un título profesional en turismo, como se muestra a continuación.

Figura 3: Profesionales Con Énfasis En Turismo

Fuente: Elaboración propia, con base en la encuesta del estudio.

De los 15 profesionales que son emprendedores profesionales vinculados al sector turismo, el 53% terminó administración turística y hotelera, el 20% administración con énfasis en turismo, el 13% planificación y gestión en turismo y el 7% estudió para ser Chef y recreación y educación turística. Del total de la muestra (286), solo el 5,24% tienen formación profesional relacionada con el turismo.

CONCLUSIONES

El propósito de analizar el papel de la ética en el desempeño de los profesionales del turismo, plantea el debate del desarrollo, sus agentes y la comunidad frente al desafío de asumirse y asumir los atributos que en su territorio acreditan la naturaleza y la cultura. Por lo que contribuir al mejor devenir de la actividad turística implica entender que incluso en turismo el desarrollo local exige acciones e inversiones interesadas en hacer objeto de producción y consumo los atributos de la localidad. Desde esta perspectiva, se presentan algunas conclusiones, que sin duda evidencian la necesidad de fortalecer algunos aspectos relacionados con esta actividad.

En primer lugar, se evidencio que los principios éticos se posicionan en una categoría alta, por lo que se asume una actitud favorable hacia a la actuación de estos actores, lo que implica que sus acciones sociales son aplicadas en función del bien común, así como la correcta aplicación de códigos de éticas, gozando de plena libertad en sus actividades laborales y el derecho irrenunciable para determinar sus acciones dentro de las empresas turísticas. Sin embargo, se evidencia que no se manejan estrategias para evitar la discriminación entre el personal, aunque se muestren acciones de solidaridad aplicadas a las actividades propias del sector y se cumpla a cabalidad con los encargos, funciones y tareas que se derivan del desarrollo de sus funciones. Considerando que con ello, contribuyen a la mejora económica y social que satisface las necesidades y valores de los grupos interesados y contribuyen a la conservación de los recursos naturales, manejando estrategias de colaboración que permiten potenciar el clima grupal, lograr el éxito y recompensar el rendimiento de los operadores turísticos, por lo cual consideran que actúan conforme a las normas éticas y sociales en las actividades relacionadas con el trabajo.

En segundo lugar, que la relación turismo- formación profesional en el departamento de La Guajira, es bastante deficiente puesto que se evidenció que del total de los gerentes de operadores turísticos encuestados tan solo el 36,71% poseen un título profesional de pre o postgrado. Además, que de los 105 profesionales que poseen negocios en el sector turismo, la mayoría de ellos son aquellos que ya han recibido su título profesional. Un 14% se encuentra entre los que están cursando los últimos semestres de la carrera profesional, han terminado la especialización, aquellos que terminaron académicamente su profesión pero aún no se han graduado y por último los que han terminado su maestría o están cursándola. Así mismo de los 15 profesionales que están vinculados al sector turismo ostentan títulos en: administración turística y hotelera, administración con énfasis en turismo, planificación y gestión en turismo, Chef y recreación y educación turística. Por lo que finalmente se concluyo que del total de la muestra (286), solo el 5,24% tienen formación profesional relacionada con el turismo.

De esta manera, se puede concluir que asumir la ética en relación al desarrollo turístico trasciende la concepción de la política y se convierte en una estrategia que propicia valores e inclusión, a través de la puesta en marcha de la actividad, asumiendo las necesidades como potencialidades, acudiendo a profesionales que asumen el desafío como propio y apelando a un modelo de concepción y gestión social del desarrollo. Explicándose entonces, como un proceso de transformación, a través del cual se pretende fomentar el bien hacer de las personas, a fin de lograr una conciencia plena del entorno que envuelve a todo ser humano. Por ello, resulta necesario reflexionar en relación con los imperativos actuales y la necesidad de formar un profesional integralmente con un comportamiento humanista y con los valores que exige la sociedad como pilar fundamental de su formación.

CARACTERIZACIÓN DEL SISTEMA DE TRANSPORTE PÚBLICO TERRESTRE BINACIONAL FRONTERIZO COLOMBIA Y VENEZUELA

Noralbis Cardeño Portela, Universidad de La Guajira
Edwin José Cardeño Portela, Universidad de La Guajira
Edgar Enrique Bonilla Blanchar, Universidad de La Guajira

RESUMEN

El transporte utilizado para el desplazamiento de personas y cosas. La forma como nos transportamos determina el grado de desarrollo de la sociedad, ello implica movimientos en tiempo real de un sitio a otro, lo cual afecta la economía, por los costos mismos del transporte en sus diferentes modos sea terrestre, aéreo, marítimo y fluvial. En Colombia, los pasos de frontera se constituyen en dinamizadores de la actividad comercial y social entre nuestro país y los vecinos, especialmente hacia y desde Venezuela, con quien compartimos la más extensa de las fronteras; importante para el departamento de La Guajira entre Paraguachón, municipio de Maicao, hacia la ciudad de Maracaibo, Estado Zulia, República de Venezuela. La investigación, busca mostrar las condiciones de calidad del transporte público terrestre del parque automotor, el cual se ha quedado rezagado; se aprecia que la totalidad de los vehículos son obsoletos, generan incomodidad y ponen en riesgo la seguridad de las personas que los utilizan; además causan una alta contaminación ambiental. Después de caracterizar se propondrán estrategias de mejora. Además servirá a las comunidades e instituciones como fuente de información valiosa para la formulación de políticas y toma de decisiones relacionadas con la dinámica del sector. La población a estudiar dos cooperativas (182) afiliados, la muestra será de (46) sujetos, tipo de investigación descriptivo, documental, transversal, no experimental, las técnicas a utilizar son: la observación la encuesta y la entrevista.

PALABRAS CLAVES: Transporte Público, Integración Binacional, Intercambio.

CHARACTERISTICS OF THE SYSTEM OF PUBLIC LAND TRANSPORT BINATIONAL BORDER COLOMBIA AND VENEZUELA

ABTRACT

The transport used for the movement of people and things. The way we travel determines the degree of development of society, this implies movements in real time from one place to another, affecting the economy, by the same transport costs in different ways either land, air, sea and river . In Colombia, the border crossings constitute facilitators of commercial and social activity between our country and neighbors, especially to and from Venezuela, with whom we share the longest border; important for the department of La Guajira between Paraguachón, municipality of Maicao, the city of Maracaibo, Zulia State, Republic of Venezuela. The research aims to show the quality conditions of ground public transport fleet, which has been left behind; They shows that all the vehicles are obsolete, generate discomfort and endanger the safety of people who use them at risk; also they cause high environmental pollution. After characterizing improvement strategies are proposed. It will also serve the communities and institutions as a source of valuable information for policy and decision making related to the dynamics of the sector. The population studied two cooperatives (182) members, the sample shall be (46) subject, type of descriptive research, documentary, transversal, no experimental techniques used are: observation survey.

KEYWORDS: Public Transport, Binational Integration, Exchange

JEL: L90, L91, L98, P40, P45

INTRODUCCION

El servicio de transporte terrestre como sistema está conformado por los siguientes elementos: la infraestructura, los agentes y el parque automotor, que conforman el subsistema de su oferta. A este se le adiciona las personas y bienes que conforman el subsistema de demanda; éste sistema adquiere significado en la medida en que opere en un entorno determinado, definido por un marco territorial.

Por tanto, el marco territorial que ocupa el estudio, está constituido por la zona de frontera que conforman el departamento de La Guajira, en Colombia y el estado Zulia, en Venezuela; ésta zona históricamente ha mantenido una integración espontánea, producto de la coexistencia cultural y las relaciones socioeconómicas, que se dan por encima de las relaciones binacionales (Observatorio, 2009: 69).

Se observa a diario que, son muchas las personas residentes en La Guajira que se desplazan hasta los diferentes municipios del estado Zulia en la república Bolivariana de Venezuela, principalmente a su capital Maracaibo, algunos con el propósito de llevar a cabo actividades comerciales, otros en busca de educación superior; igualmente, desde el Zulia llegan, específicamente a la ciudad de Maicao, a vender mercancías cuando la diferencia del cambio de moneda les brinda algunas ventajas comparativas, otros están en búsqueda de trabajo teniendo en cuenta la crisis de Venezuela y les favorece el cambio de moneda en este momento.

Así mismo, la legislación colombiana permite la importación de combustibles, bienes de la canasta familiar, originarios de los municipios colindantes, para consumo exclusivo dentro de las Unidades Especiales de Desarrollo Fronterizo determinados por el decreto 1814 de 1995. Es de recordar que el paso de mercancías provenientes de los países que componen la Comunidad Andina de Naciones, y las personas provenientes de otros departamentos del Caribe colombiano y del interior de la nación, ingresan a distintas ciudades de Venezuela, a través de la frontera de Colombia – Maicao – Cucuta.

Cabe resaltar, que el transporte de pasajeros se multiplica progresivamente, fruto de los convenios en educación superior firmados entre la universidad de La Guajira y las universidades del estado Zulia, para estudios de alta formación de su personal docente, egresados de pregrado y administrativos, los cuales se desplazan hasta el vecino país con una periodicidad semanal. De igual manera se trasladan docente de Venezuela hacia Colombia para trabajar en las diferentes maestrías y doctorados en convenio.

En este orden de ideas, el transporte de personas, localizadas en la frontera entre La Guajira y el estado Zulia, el servicio carece de infraestructura logística, no cuenta con una operación que garantice las condiciones apropiadas para la dinámica y la dimensión que genera el alto flujo de movimiento vehicular, producto de la trashumancia cotidiana en referencia. Por ejemplo, la carretera que parte desde el área urbana del municipio de Maicao hasta el corregimiento de Paraguachón, se encuentra en excelentes condiciones, toda vez que hace parte de la concesión de carreteras de la troncal del caribe colombiano y su mantenimiento y vigilancia privada y estatal es permanente. No ocurre lo mismo, desde Paraguachón en el sitio conocido como “La Raya” hasta la ciudad de Maracaibo, la carretera está en pésimas condiciones, generando peligro a la integridad de las personas que la transitan, poniendo en alto riesgo la vida de los pasajeros, los accidentes han dejado varios muertos y personas discapacitadas.

Así mismo, están los inconvenientes del parque automotor, el cual se ha quedado rezagado; se aprecia que la totalidad de los vehículos son obsoletos, generan incomodidad y ponen en riesgo la seguridad de las personas que los utilizan; además causan una alta contaminación ambiental. No cumplen con las normas mínimas exigidas en Colombia, no poseen la póliza de seguro vigente obligatorio (SOAT), carecen de

licencia para conducir, las cooperativas no cuentan con las pólizas de responsabilidad civil contractual y extracontractual, previsto en el decreto 170. De igual manera los conductores exceden los niveles permitido de velocidad, en su mayoría conducen entre 140 y 160, así mismo transportan pimkina de gasolina en el baúl del vehículo para venderla en Maicao, en caso de accidente las pérdidas humanas son inevitable.

De otra parte, es aún mayor las dificultades mostradas por los agentes, se aprecia altos niveles de desorganización colectiva laboral, a tal punto que es imposible diferenciar una empresa de la otra, carecen de distintivos visibles y logos en sus vehículos, los cuales no son fáciles de identificar, niegan a los usuarios la posibilidad de escoger su preferencia. Si bien es cierto que existen terminales de transporte en las ciudades de Maicao y Maracaibo, los pasajeros de tránsito son recogidos en diferentes lugares de estas ciudades, apropiándose los transportadores de calles y calzadas, generando desorden público y obstrucción del tránsito de los vehículos particulares.

Sin duda alguna, el escenario se aprecia desde diferentes tópicos, teniendo en cuenta que al tratarse de un transporte binacional de movimiento constante y creciente, las soluciones deben plantearse desde las perspectivas del ordenamiento jurídico de cada país, considerando acuerdos preexistentes y aquellos que pudiesen emanar en lo sucesivo.

Adicionalmente existe en el tránsito operativo del transporte de pasajeros entre las ciudades de Maicao y Maracaibo, el ingreso a los dos países de manera desigual, tanto en el departamento de La Guajira como en el estado Zulia, la informalidad se aprecia en que la mayoría de los transportadores son colombianos y sus vehículos son venezolanos, si bien es cierto no se discute la legalidad de las cooperativas, es el hecho de no contar con la debida habilitación de vehículos con procedencia y origen formal de ambos países, por su parte del Ministerio de Transporte de Colombia no avala mediante convenio binacional la facilidad en la movilidad de los vehículos en general.

Por todo lo anterior, uno de los aspectos de mayor importancia es caracterizar el sistema de transporte público terrestre y analizar las normas vigentes para el transporte de personas en zona de frontera. Lo anterior permite proponer estrategias que mejoren la calidad del mismo.

Por todo lo anterior se plantea el siguiente interrogante:

¿Qué caracteriza el sistema de transporte público terrestre de pasajeros en la frontera binacional, entre el departamento de La Guajira en Colombia y el estado Zulia en Venezuela, y cuáles serían las acciones para mejorar la prestación de su servicio?

Para dar respuesta al interrogante se plantea el Objetivo General: Caracterizar el sistema de transporte público terrestre de pasajeros en la frontera colombo venezolana, comprendido desde el municipio de Maicao Departamento de La Guajira en Colombia, hasta la ciudad de Maracaibo en el Estado Zulia de Venezuela develando estrategias que optimicen la prestación del servicio.

A continuación se plantean los siguientes objetivos específicos:

Realizar un diagnóstico sobre de las condiciones de las empresas prestadoras del servicio de transporte público terrestre de pasajeros, su parque automotor, su infraestructura y aspectos legales a cumplir en la zona de frontera.

Identificar la viabilidad de una organización empresarial binacional que responda a las necesidades y expectativas de los usuarios que utilizan el servicio de transporte en la frontera.

Proponer acuerdos binacionales entre las repúblicas de Colombia y Venezuela que facilite, haga sostenible y optimicen el servicio de transporte binacional fronterizo.

REVISIÓN LITERARIA

El sistema de transporte tiene como finalidad trasladar personas o bienes entre lugares geográficos diferentes que constituyen puntos de origen y destino. En atención a los componentes de la definición puede señalarse que para el traslado deben utilizarse instalaciones y vehículos en buen estado; las personas y bienes deben ser transportadas con todas las medidas de seguridad y comodidad y los puntos de origen y destino deben contar, también, con todas las condiciones para que las esperas y llegadas sean lo más agradables posibles.

Para su análisis deben definirse y tenerse en cuenta los elementos que conforman la oferta de transporte, y los que conforman la demanda de transporte. El primero de ellos es donde generalmente han versado los estudios y las discusiones, dejando de lado el segundo. El subsistema de la oferta de transporte está conformado por la infraestructura, los agentes y el parque automotor. La demanda la conforman los bienes y las personas que son transportados; todos poseen una serie de atributos, en el caso de los pasajeros pueden ser de características demográficas, socioeconómicas y culturales.

En este sentido, el sistema de transporte terrestre de pasajeros está articulado con otros sistemas que conforman el entorno, entre los cuales pueden señalarse el sistema físico, el sistema socioeconómico, el sistema político y el sistema espacial.

Subsistema de oferta de transporte

Como fue mencionado, el subsistema de oferta de transporte público está constituido por los elementos de la infraestructura, que en el caso del transporte por carretera, al cual se dirigirá esta investigación, son las carreteras, gasolineras (o estaciones de servicio). Los elementos del parque automotor o material móvil, integrado por el conjunto de vehículos de diferentes capacidades y sistemas técnica, dándoles diferente rendimiento, son los que materializan el desplazamiento.

De Rus y otros (2008) señalan que el modo de transporte por carreteras no se necesita apenas coordinación entre los vehículos que utilizan la infraestructura, en el sentido de que no es necesario determinar unos horarios para el acceso de los vehículos o para la recogida o bajada de los pasajeros. Sin embargo, la importancia del tiempo adquiere una dimensión especial, convirtiéndolo en una variable tan importante o más que el costo monetario en las decisiones de los individuos o empresas.

Aspectos Legales vigentes, la constitución nacional de 1991, no incorpora disposición expresa sobre la actividad del transporte, ni sobre el servicio público terrestre específicamente, circunstancia que obliga a expedir la Ley 105 de 1993, por medio del cual se dictaron disposiciones básicas sobre la intervención del Estado en la actividad del transporte, se adoptan los principios fundamentales del transporte en general y del transporte público particular, se establecieron las competencias, se reglamentó la planeación en el sector transporte y entre otras disposiciones, se prevé la expedición de normas vertebrales de la intervención estatal en el sector, tales como un Estatuto de Transporte y un Código Nacional de Tránsito.

El estatuto Nacional de Transporte fue adoptado mediante la Ley 336 de 1996 y el Código Nacional de Tránsito mediante la Ley 769 de 2002. Exigencia normativa para habilitación

En ejercicio de la facultad reglamentaria⁷ y de las previstas en las leyes 105 de 1993 y 336 de 1996, el Gobierno Nacional expidió los decretos 170 a 175 de 2001, mediante los cuales reglamentó los diferentes tipos de Servicio Público de Transporte Terrestre Automotor (SPTTA):

- Colectivo metropolitano, distrital y municipal de pasajeros: decreto 170 de 2001;
- Pasajeros por carretera: decreto 171 de 2001;
- Individual de pasajeros en vehículos taxi: decreto 172 de 2001;
- Especial: decreto 174 de 2001;
- Carga: decreto 173 de 2001; y
- Mixto: decreto 175 de 2001.

En dichos decretos, a los que en conjunto nos referiremos como los decretos de la serie 170, a excepción de las empresas de carga, se condiciona la habilitación de una empresa para prestar el tipo de SPTTA de que se trate en cada caso, a la vigencia de seguros de responsabilidad civil contractual y extracontractual.

En el caso del SPTTA de carga, no está vigente el condicionamiento legal de la habilitación de las empresas que lo presten a la vigencia de pólizas de seguros. No obstante se dispone que las empresas deban, obligatoriamente, tomar por cuenta propia o por cuenta del propietario de la carga, un seguro que cubra las cosas transportadas contra los riesgos inherentes al transporte. La vigencia del seguro operará como presupuesto legal de la habilitación¹⁰, sólo cuando el gobierno reglamente sus requisitos, condiciones, amparos y cuantías.

El esquema de aseguramiento previsto en los decretos de la serie 170, en términos generales se estructura así:

Obligatoriedad, como condición de habilitación.

Otorgado por una compañía de seguros autorizada para operar en Colombia

Riesgos inherentes a la actividad transportadora, comprendiendo por tales la responsabilidad civil contractual y extracontractual.

Póliza de responsabilidad civil contractual que cubra al menos:

- _ Muerte;
- _ Incapacidad permanente;
- _ Incapacidad temporal;
- _ Gastos médicos, quirúrgicos, farmacéuticos y hospitalarios.
- _ El monto asegurado por cada riesgo no inferior a 60 smmlv por persona.

Póliza de responsabilidad civil extracontractual que cubra al menos:

- _ Muerte o lesiones a una persona;
- _ Daños a bienes de terceros;
- _ Muerte o lesiones a dos o más personas.
- _ El monto asegurado por cada riesgo no inferior a 60 smmlv, por persona.
- _ Prima a cargo del propietario del vehículo: empresa transportadora o vinculada.

Vigencia de los seguros como condición para la operación de los vehículos legalmente

Vinculados a las empresas. Además las Aseguradora deben informar a la autoridad de transporte competente sobre la terminación o revocación del seguro

Exigencia normativa para movilización

Las empresas habilitadas para la prestación del SPTTA de pasajeros en cualquiera de sus modalidades, sólo podrán hacerlo con equipos registrados para dicho servicio y oficialmente vinculados a la empresa respectiva.

La vinculación de un vehículo a una empresa de transporte público es la incorporación de este al parque automotor de la misma. Se formaliza con la celebración de un contrato que se ha denominado de vinculación celebrado entre el propietario del vehículo y la empresa; que se oficializa con la expedición de la tarjeta de operación por parte de la autoridad de transporte competente. Así, además de las condiciones de aseguramiento en función de la habilitación para prestar el SPTTA en alguna de sus modalidades, en la legislación nacional se han consagrado también condiciones para que cualquier vehículo pueda transitar en el territorio nacional y para que, además, un vehículo pueda legalmente operar en la prestación del SPTTA mediante su vinculación a una empresa habilitada.

Para obtener o renovar la tarjeta de operación, la empresa, que es la responsable de adelantar el trámite en relación con la totalidad de los vehículos a ella vinculados, debe acreditar ante la mencionada autoridad de transporte competente, entre otros:

Fotocopia de las pólizas vigentes del Seguro Obligatorio de Accidentes de Tránsito, SOAT, de cada vehículo; y

Certificación expedida por la compañía de seguros en la que conste que el vehículo está amparado por las pólizas de responsabilidad civil contractual y extracontractual de la empresa solicitante.

En relación con la vigencia de pólizas de responsabilidad civil contractual y extracontractual previstas en los decretos de la serie, como condicionamiento de la operación de los vehículos vinculados a una empresa de transporte público, ya nos referimos en el aparte anterior.

En lo que hace al Seguro Obligatorio de Accidentes de Tránsito, SOAT¹⁷, la obligación legal de su suscripción respecto cualquier vehículo como presupuesto para que éste pueda transitar en el territorio nacional, está previsto en el Código Nacional de Tránsito Terrestre y en el Estatuto Orgánico del Sistema Financiero.

El SOAT tiene principalmente el objeto de lograr la atención de todas las víctimas de los accidentes de tránsito y cubrir la muerte o los daños corporales físicos causados a las personas; los gastos que se deban sufragar por atención médica, quirúrgica, farmacéutica, hospitalaria, incapacidad permanente; y los gastos funerarios y los ocasionados por el transporte de las víctimas a las entidades del sector salud.

El SOAT incorpora las siguientes coberturas, con lo montos que se indican:

Gastos médicos, quirúrgicos, farmacéuticos y hospitalarios por lesiones con una indemnización máxima de quinientas (500) veces el salario mínimo legal diario vigente al momento del accidente.

Incapacidad permanente, con una indemnización máxima de ciento ochenta (180) veces el salario mínimo legal diario vigente al momento del accidente.

Muerte de la víctima como consecuencia del accidente, en cuantía equivalente a seiscientas (600) veces el salario mínimo legal diario vigente al momento del accidente.

Gastos funerarios, con una indemnización máxima de ciento cincuenta (150) veces el salario mínimo legal diario vigente al momento del accidente.

Gastos de transporte y movilización de las víctimas para su atención, en cuantía equivalente a diez (10) veces el salario mínimo legal diario vigente al momento del accidente.

El valor de estas coberturas se entiende fijado para cada víctima; por lo tanto, se aplican con prescindencia del número de víctimas resultantes de un mismo accidente.

Las coberturas del seguro obligatorio son exclusivas del mismo y por ello no podrán incluirse en otras pólizas. Las entidades aseguradoras deben adecuar pólizas y tarifas en las cuales exista coincidencia con las coberturas propias del seguro obligatorio, a fin de evitar duplicidad de amparos y del pago de primas.

Responsabilidad del transportador

Desde la perspectiva de los transportadores se identifican ciertos puntos críticos en los pronunciamientos jurisprudenciales, con obvio reflejo en el plano normativo, que estarían generando situaciones de desequilibrio o asimetría contra el prestador del SPTTA. Los puntos, que se examinarán en detalle en su oportunidad, son:

Presunción de culpa del transportador, en materia contractual con base en lo señalado en el artículo 1003 del código de comercio.

Presunción de culpa en materia extracontractual - carácter de actividad peligrosa del transporte

Responsabilidad solidaria del empresario por daños ocasionados por sus vehículos afiliados.

Reconocimiento y valoración de perjuicios morales.

Lucro cesante – Requerimiento de acuerdo expreso.

Desde la perspectiva de esta parte del análisis, procede indicar que el examen de las posiciones jurisprudenciales señaladas se aplicará a evaluar su correspondencia con la normatividad vigente, detectando los puntos normativos cuya aplicación refleja que requerirían evaluación; o la determinación de otros factores no directamente normativos que pudieran estar incidiendo en esos pronunciamientos.

METODOLOGIA

El estudio está situado en el enfoque Cualitativo - Cuántico, que permite examinar los datos de manera científica, con ayuda de la estadística, análisis de documentos, el tipo es descriptivo, documental, transeccional, el diseño no experimental y de campo, se observaron y caracterizaron el servicio de transporte público binacional entre Colombia y Venezuela Frontera Paraguachón – Maracaibo.

CONCLUSIONES

A modo de conclusión con el estudio se espera comprobar las siguientes hipótesis;

Hipótesis 1: “Conocer las condiciones reales de las empresas prestadoras del servicio de transporte público terrestre de pasajeros, su parque automotor, su infraestructura y los aspectos legales que deben cumplirse en la Frontera Colombo - Venezolana”.

Hipótesis 2. “Las actividades desarrolladas en la investigación permiten la viabilidad de una organización empresarial binacional que responda a las necesidades y expectativas de los usuarios que utilizan el servicio de transporte en la frontera”.

Hipótesis 3: “Las actividades desarrolladas en la investigación permiten proponer acuerdos binacionales entre las repúblicas de Colombia y Venezuela que facilite, haga sostenible y optimicen el servicio de transporte binacional fronterizo”.

RESUMEN

En Colombia, los desórdenes músculos esqueléticos, se han convertido en un problema de creciente magnitud. Estas patologías se están volviendo la principal causa de ausentismo laboral o enfermedad laboral en el país; la nueva tabla de enfermedad profesional Expedida el 5 de agosto 2014, pretende un control del riesgo, para lograr una disminución e incidencia de enfermedades relacionadas con el trabajo. Debido que muchos de estos casos pueden llegar a ser prevenibles y modificables por las condiciones de trabajo evitando patologías que pueden llegar a ser de un alto costo para la empresa, dado que en ocasiones son superiores estos costos a la eliminación del riesgo. Cabe resaltar que uno de los aspectos de mayor importancia es identificar los factores de riesgo asociados a: restricciones posturales, posición sedente prolongada, movimientos repetitivos, puestos de trabajo y accesorios computacionales ergonómicamente inadecuados en los trabajadores de la Universidad de La Guajira, por lo tanto se requiere realizar una valoración Fisioterapéutica, que permita conocer el estado osteomusculares de los funcionarios usuarios con video terminales. Población 145 empleados, muestra 33, tipo de investigación descriptivo- no experimental, las técnicas a utilizar son: La observación, entrevista, se realizarán valoraciones fisioterapéuticas, para determinar los hallazgos DME y proponer un programa de acondicionamiento físico para los trabajadores.

PALABRAS CLAVES: Salud, Desordenes Musculo Esqueléticas, Condiciones De Riesgo, Estado De Salud.

SKELETAL MUSCLE DISORDERS IN ADMINISTRATIVE PERSONNEL USERS OF VIDEO TERMINALS

ABSTRACT

In Colombia, skeletal muscle disorders have become a growing problem. These diseases are becoming the leading cause of absenteeism or illness in the country; the new table of occupational disease issued on August 5, 2014, aims to control risk and lead to lower incidence of work-related diseases. Because many of these cases can be preventable and modifiable by working conditions avoiding diseases that can become a high cost to the company, because sometimes these costs are higher risk elimination. Significantly, one of the most important aspects is to identify risk factors associated with: postural restrictions, prolonged sitting position, repetitive movements, jobs and computer accessories ergonomically inadequate workers at the University of La Guajira, therefore It is required to perform a physiotherapy assessment, designed to show the status of officials musculoskeletal users with video terminals. Population 145 employees, shows 33 types of non-descriptive-experimental research, the techniques used are: Observation, interview, physiotherapy assessments are conducted to determine the DME findings and propose a fitness program for workers.

INTRODUCCION

En Colombia, el Primer informe de enfermedad profesional en Colombia 2001 – 2002 - 2004; mostraron en el año 2001, que al agrupar los diagnósticos reportados por sistemas, el 65% corresponde al sistema musculoesquelético. El diagnóstico más frecuente reportado fue el síndrome del conducto carpiano (322 casos) con el 27% del total de casos. El segundo lugar fue para el Lumbago (141 casos), con el 12% del total. Notando un incremento constante, por parte de los desórdenes musculoesqueléticos de origen ocupacional (DME), los cuales pasaron del 65% en el año 2001, al 82% de todos los diagnósticos en el año 2004. Estos DME afectan básicamente dos segmentos corporales: miembro superior y columna lumbosacra

Conociendo que en Colombia, los desórdenes músculos esqueléticos, se han convertido en un problema de creciente magnitud. Puesto que cada vez más, estas patologías se están volviendo la principal causa de ausentismo laboral o enfermedad laboral en el país. Así mismo la nueva tabla de enfermedad profesional Expedida el 5 de agosto 2014, con la cual se pretende lograr un control de este riesgo en salud. Para lograr una disminución e incidencia de enfermedades relacionadas con el trabajo. Debido a que muchos de estos casos pueden llegar a ser prevenibles y modificables por las condiciones de trabajo evitando patologías que pueden llegar a ser de un alto costo para la empresa, dado que en ocasiones son superiores estos costos a la eliminación del riesgo.

En este orden de ideas la Universidad de la Guajira, a pesar que propende por el bienestar de sus administrativos, dotándoles de sillas ergonómicas, realizando campañas de prevención en salud, existe un riesgo con el uso de video terminales y su relación con los desórdenes musculoesqueléticos; en algunos casos los empleados se quejan de tensiones musculares o sobrecargas músculos, manifiestan dolores lumbares de la columna por las largas horas de trabajo, movimientos repetitivos, posición inadecuada al momento de sentarse, puestos de trabajo incómodos por tener muy poco espacio, y accesorios computacionales ergonómicamente inadecuado.

De igual manera algunos administrativos se quejan de dolor crónico con entumecimiento, parestesias y hormigueo en el pulgar, el índice corazón y el anular, durante el día el dolor parece agravarse por el movimiento forzado y la repetición de la mano. También manifiestan dolor que irradia a lo largo de la superficie anterior del brazo hasta el hombro o el cuello. Lo anterior permite inferir que puede tratarse del síndrome del túnel carpiano, cabe resaltar que algunos empleados han sido incapacitados y hasta han sido operados de esta enfermedad.

Por todo lo anterior, uno de los aspectos de mayor importancia a conocer en los trabajadores de la Universidad de la Guajira, es realizar una valoración Fisioterapéutica, que permita conocer el estado osteomusculares de los funcionarios usuarios con video terminales y proponer un programa que mejore su calidad de vida laboral.

Por todo lo anterior se plantea el siguiente interrogante:

¿Cuáles son las condiciones musculo -esqueléticas de los funcionarios administrativos usuarios de video terminales de la Universidad de La Guajira?

Para dar respuesta al interrogante se plantea el Objetivo General: Conocer las condiciones músculos -esqueléticas de los funcionarios administrativos usuarios de video terminales, de la Universidad de La Guajira. A continuación se plantean los siguientes objetivos específicos:

Identificar la prevalencia de desórdenes músculos esqueléticos por medio de la valoración fisioterapéutica en los funcionarios administrativos con video terminales
Identificar condiciones de riesgo para presencia de patologías musculares de miembro superior y columna en la población objeto estudio.
Caracterizar el estado de salud músculos esquelético de los funcionarios administrativos usuarios de video terminales
Diseñar un programa de acondicionamiento físico en trabajadores con video terminales.

REVISION LITERARIA

El presente estudio se encuentra sustentado con la teoría: La norma técnica # 3955 redactada por el ICONTEC el día 23 de Octubre de 1993, elaborada por la Secretaria Técnica de Normalización del Consejo Colombiano de Seguridad, define la ERGONOMÍA como: “disciplina que estudia al hombre en sus aspectos fisiológicos, anatómicos, psicológicos y sociológicos, en su relación con el empleo de objetos y sistemas propuestos enmarcados en un medio, para un fin determinado. Aplica un conjunto de conocimientos científicos en busca de la optimización del sistema hombre - máquina - medio para lograr un máximo de seguridad, confort y eficiencia, acorde con el desarrollo tecnológico.

ERGONOMÍA: Según, la Asociación Internacional de Ergonomía, la ergonomía es el conjunto de conocimientos científicos aplicados para que el trabajo, los sistemas, productos y ambientes se adapten a las capacidades y limitaciones físicas y mentales de la persona.

ERGONOMIA DEL TRABAJO: da los elementos para el diseño del método y el puesto de trabajo, para plantear los instrumentos, maquinas, tareas y posiciones del cuerpo que nos aseguren la optimización de la producción preservando la salud del trabajador.

DME: Son las alteraciones de diferentes estructuras corporales dadas como causa de diferentes interacciones entre músculos articulaciones y nervios. Los DME de origen laboral se van desarrollando con el tiempo y son provocados por el propio trabajo o por el entorno en el que éste se lleva a cabo. También pueden ser resultado de accidentes, como por ejemplo, fracturas y dislocaciones. Por lo general, los DME afectan a la espalda, cuello, hombros y extremidades superiores, aunque también afectan a las inferiores pero con menor frecuencia. Se considera “TRABAJADOR CON VIDEO TERMINAL” a quien opera de manera sistemática o habitual por un promedio de 20 horas semanales con video terminal, sin contar los recesos previstos por la legislación.

POSTURA: Posición general del cuerpo, o de las partes del cuerpo entre sí, respecto al puesto de trabajo y a sus componentes.

PUESTO DE TRABAJO: Conjunto constituido por un equipo de visualización dotado o no de unidad central, teclado o terminal de entrada o programas constitutivos de la interfaz hombre/máquina o todos o la combinación de dos de ellos, así como accesorios opcionales y elementos periféricos, así como del entorno de trabajo inmediato.

MOVIMIENTO: Es la esencia del trabajo y se define por el desplazamiento de todo el cuerpo o de uno de sus segmentos en el espacio.

LESIONES MUSCULOESQUELÉTICAS: Conjunto de alteraciones que abarcan una amplia gama de signos y síntomas que pueden afectar distintas partes del cuerpo (manos, muñecas, codos, cuello, espalda) así como distintas estructuras anatómicas (huesos, músculos, tendones, nervios, articulaciones).

PREVALENCIA: Es el número total personas que presentan síntomas o padecen una enfermedad durante un periodo de tiempo, dividido por la población con posibilidad de llegar a padecer dicha enfermedad. La prevalencia es un concepto estadístico usado en epidemiología, sobre todo para planificar la política sanitaria de un país.

PAPEL DEL FISIOTERAPEUTA EN SALUD OCUPACIONAL: el fisioterapeuta puede desenvolverse, trabajando en la prevención y promoción de hábitos saludables, llevándolo a su vez a planear actividades en higiene y seguridad industrial; además de brindar las bases teórico prácticas para el desarrollo de acciones de planeación, organización, ejecución y evaluación de la salud física, mental y funcional de los trabajadores en relación bidireccional con su puesto de trabajo, dentro de la empresa a la cual hace parte, buscando potencializar condiciones labores seguras, higiénicas, sanas y estimulantes minimizando en lo posible la incidencia de accidentes de trabajo y enfermedades profesionales.

ANATOMIA DE LA EXTREMIDAD SUPERIOR: El miembro superior o torácico está formado por cuatro segmentos

Hombro

Brazo

Antebrazo

Mano

Figura 1. Anatomía Miembro superior

Figura 2. Movimientos del hombro

BRAZO: El esqueleto del brazo consta de un sólo hueso: el húmero, un hueso largo, par, no simétrico que ofrece un cuerpo y dos extremos.

Articulación del codo. El codo es una articulación que une el brazo con el antebrazo conectando la parte distal del húmero con los extremos proximales el cúbito y el radio. El codo es una articulación en bisagra/pivot. Con tres articulaciones:

- Articulación humero radial
- Articulación humero cubital
- Articulación radio cubital proximal.

Figura 3. Anatomía de la muñeca

Movimientos de la muñeca.

Flexión de la muñeca: 0° a 80° - 90°

Extensión de la muñeca: 0° a 70° - 80°

Desviación radial: 0° a 20° - 25°.

Desviación cubital 0° a 35° - 45°.

La MANO está constituida por 27 huesos que se agrupan en tres áreas distintas:

huesos del carpo
huesos del metacarpo
huesos de los dedos

CARPO: Está formado por ocho huesos pequeños en dos hileras transversales, una hilera superior o antebraquial y una hilera o metacarpiana. La primera comprende cuatro huesos: el escafoides, el semilunar, el piramidal y el pisiforme.

La segunda comprende igualmente cuatro: el trapecio, el trapezoide, el grande y el hueso ganchoso. Todos los huesos del carpo son irregularmente cuboideos y por consiguiente tienen seis caras. De estas 6 caras, dos, la anterior o palmar y la posterior o dorsal son rugosas y están en relación con las partes blandas de la región palmar y de la región dorsal. Las otras cuatro, superior o braquial, inferior o metacarpiana, externa o radial e interna o cubital, son lisas y están recubiertas de cartílago.

Figura 8. Anatomía de la mano

DEDOS: Son los órganos esenciales de prensión y del tacto, muy móviles. Sus huesos están articulados con los metacarpianos y también se numeran del 1 a 5 comenzando por el pulgar. Están formado por tres columnitas decrecientes que se denominan falanges (primera, segunda y tercera falanges) aunque a veces reciben los nombres de falange, falangina y falangeta. El pulgar solo consta de dos falanges, faltando la segunda o falangina.

Protocolo De Exploración Física Columna

Las quejas más frecuentes en los trabajadores son los dolores a nivel de cuello, hombros y regiones dorsal y lumbar, sin olvidar las molestias en extremidades superiores.

Columna Vertebral: Por inspección observamos si el trabajador presenta alguna postura o actitud anormal, anotándola en los cuadros dispuestos al efecto.

Posteriormente, con la plomada y una regla, medimos la distancia existente entre aquella y la zona de máxima lordosis, tanto cervical como lumbar. La movilidad del raquis, si disponemos de

goniómetro, la mediremos en grados; si no, se consignará en cm., para las movilizaciones siguientes:

- Columna lumbar.
- Columna cervical.
- Ciático.
- Hombro.

METODOLOGIA

El estudio está situado en el enfoque cuantitativo, que permite examinar los datos de manera científica, con ayuda de la estadística, el tipo es descriptivo, transeccional, el diseño no experimental y de campo, se observaran los puestos de trabajos, se aplicará una entrevista, se realizarán valoraciones para determinar (DME) a que están expuesto los empleados de la Universidad de La Guajira.

CONCLUSIONES

A modo de conclusión con el estudio se espera comprobar las siguientes hipótesis;

Hipótesis 1: “Existen desordenes musculo esqueléticos en los funcionarios administrativos a causa del uso de video terminales en la jornada de trabajo establecida por la universidad de la Guajira”.

Hipótesis 2. “Están expuestos a condiciones de riesgo, y presentan patologías musculares de miembro superior y columna la población objeto de estudio”.

Hipótesis 3: “La valoración de los funcionarios administrativos que usan video terminales, permite caracterizar el estado de salud musculo esquelético”.

Hipótesis 4: “Las actividades desarrolladas en la investigación permite diseñar un programa de acondicionamiento físico en los trabajadores con video terminales”.

RESUMEN

Debido a la importancia del dominio del idioma inglés en la actualidad y el bajo nivel del mismo en los habitantes del estado de Tabasco, surge de la interrogante sobre la existencia de un mercado viable para una escuela de enseñanza del idioma inglés en la ciudad de Villahermosa. Este estudio parte de la hipótesis que la implementación de dicha escuela es factible, ya que se considera que esta será aceptada por los habitantes de la ciudad. La investigación se encauzó en un estudio cuantitativo y pretendía conocer el número de personas interesadas en adquirir servicios educativos de idioma inglés. El método utilizado fue el exploratorio con diseño observacional, transversal, no experimental. El instrumento de recolección de datos fue la encuesta para posteriormente ser interpretados a través de gráficas. De esta investigación se pudo concluir que una nueva escuela de inglés será aceptada en población de 26 a 40 años de edad, más aún, si ésta ofrece desarrollar las habilidades básicas que aseguren una correcta comunicación en este idioma.

PALABRAS CLAVE: Estudio de mercado, innovación, comportamiento del consumidor

INTRODUCCIÓN

El entorno globalizado en el que vivimos, ha ocasionado que cada vez sean mayores las exigencias en cuanto al dominio de idiomas extranjeros. Education First (EF), una compañía internacional dedicada a la enseñanza de idiomas creó en 2011 el Índice de Nivel de Inglés (EPI EF) como medición estandarizada del nivel de inglés de los adultos que permite establecer una comparación entre países y a través del tiempo. Este índice demostró el bajo dominio del idioma inglés que existe en México al igual que en Tabasco, que fue una de las entidades que obtuvo menor puntaje en el país.

El estudio surge a través de la interrogante sobre la existencia de un mercado viable para una escuela de enseñanza del idioma inglés en la ciudad de Villahermosa, Tabasco, y tiene el objetivo de realizar una investigación de mercado para determinar la factibilidad de implementar una escuela para la enseñanza del idioma inglés en la ciudad de Villahermosa, Tabasco.

Este estudio se realizó en la ciudad de Villahermosa, Tabasco en el año 2013, siendo objeto de estudio la población de esta ciudad de entre 23 y 40 años de edad que hubieran estudiado inglés en alguna escuela de la misma ciudad.

REVISIÓN DE LITERATURA

Presencia del inglés en el mundo

Según la ONU, en 2013 sumamos 7,162 millones de habitantes en el mundo (Quo, 2013) y se hablan casi 7,000 lenguas diferentes. El inglés es el tercer idioma más hablado en el mundo, con un total de 335 millones de personas. A pesar de que el idioma inglés ocupa el tercer lugar dentro del ranking de idiomas más hablados en el mundo, es éste el que se habla en más países que el resto de los idiomas (Lewis, Simons, & Fennig, 2013).

En nuestros días, Saber inglés abre las puertas a grandes oportunidades, la consultora Transearch, afirma que los estudios realizados por la misma, apuntan a que los profesionales que tienen un dominio alto de inglés, perciben sueldos 41% superiores a los que no, y los que tienen un nivel de inglés medio un 24% más. Por otra parte, el gerente general de Seminarium Certificación, afirma que puestos de servicios globales, ganan un 18% más cuando hablan inglés fluido.

Education First (EF) fundada en 1965 por el empresario Bertil Hult, es una firma privada con 15 divisiones que ofrece una gama de programas educativos desde cursos de idiomas, viajes educativos, títulos académicos, e intercambios culturales. Con la misión de romper barreras de idioma, cultura, y geografía, EF ha ayudado a personas de todas las edades y nacionalidades a convertirse en ciudadanos del mundo (Education First, s.f.).

En 2011, EF creó el EPI EF (Índice de Nivel de Inglés) como una medida estandarizada del nivel de inglés de los adultos que permite establecer una comparación entre países y a través del tiempo. Se trata del primer índice que compara los conocimientos medios de inglés de adultos procedentes de diferentes países. En 2012 se realizó la segunda publicación de este índice, para el cual se obtuvieron datos exclusivos de 1.7 millones de adultos mediante pruebas de inglés gratuitas realizadas durante dos años, de 2009 a 2011. En esta publicación incluyeron datos como la variación de inglés por género, edad, trabajadores de diversos sectores laborales, entre otros.

Inglés en América Latina

Según el EPI EF, en general, el inglés de América Latina es muy bajo, lo cual podría justificarse por la importancia que tiene el idioma español en la zona, mismo que se utiliza como lengua compartida para el comercio continental, la diplomacia y los viajes, que provoca una menor motivación para aprender inglés.

Argentina es el único país en América Latina que tiene un nivel de inglés moderado, esto puede deberse a que en Argentina, el índice de alfabetización es más elevado que el promedio en la región, así como el promedio de años de escolarización. Sin embargo, la inestabilidad económica de este país ha obstaculizado el desarrollo del mismo y ha evitado que las inversiones en educación hayan ido aumentando con el tiempo.

Dominio de inglés en México y Tabasco

Según el estudio realizado por EF en 2012, México tiene una competencia general de dominio del inglés bajo, al haber obtenido 48.60 puntos en promedio en una prueba en la que el mayor puntaje fue de 68.91 obtenido por Suecia y el menor de 42.53 por Libia. México se encuentra en el lugar 38 de 54 países que participaron en el estudio en todo el mundo.

Tabasco se encuentra en la posición número 10 de 29 estados participantes con un nivel muy bajo del idioma, al haber obtenido 47.86 puntos, mismos que se encuentran por debajo de la media del país. En el caso de las ciudades más importantes del país, la Ciudad de México, Ciudad Juárez, Mexicali y Monterrey obtuvieron puntajes superiores a la media, sin embargo, esto no es garantía de que posean un nivel aceptable de inglés.

DATOS Y METODOLOGÍA

Planteamiento del problema

El entorno globalizado en el que se desarrolla nuestra sociedad actualmente, ha hecho que las “barreras” del idioma que existían entre países cada vez sean menores, esto ha provocado que cada vez sea más necesario el dominio de idiomas extranjeros ya sea para disfrutar de un viaje o tener mejores oportunidades laborales, incluso para encontrar información en internet, donde está concentrada información proveniente de todo el mundo y por consiguiente se encuentra en tantos idiomas como países a los que llega el internet.

Actualmente, muchos países se han preocupado por el hecho de que sus habitantes adquieran los conocimientos necesarios en otros idiomas, ya que esto representa un vehículo esencial para el desarrollo, en especial para aquellos países enfocados al comercio exterior (Rivas, 2007).

De la información en la web, el 80% este disponible en inglés (Iglesias, 2011), así como que el 22.3% de los usuarios de internet utilizan el inglés como idioma para comunicarse (Internet World Stats, 2010). Además, el inglés es el idioma que se ha adoptado a nivel internacional como oficial en ciertas aerolíneas y el comercio internacional (Embajada Británica en Santiago, Chile, s.f.), todo esto ha provocado que el inglés sea el idioma principal para unir naciones aun cuando éstas tengan grandes diferencias culturales.

Delimitación del estudio

Debido a la importancia que el idioma inglés tiene en el mundo, este estudio se limitará a investigar las características de estudio, conocimiento e interés de la población de la ciudad de Villahermosa, Tabasco en el año 2013. Así mismo se pretende conocer la competencia existente en torno a este sector en la misma localidad con el objetivo de determinar la factibilidad de implementar una escuela para la enseñanza del idioma inglés en ésta misma ciudad.

En el estudio realizado por EF en 2012, Tabasco obtuvo una puntuación de 47.86 lo que lo califica con un dominio de inglés “muy bajo” (Education First, 2012). Esto, aunado a que son pocas las personas que estudian inglés, plantea la problemática central de ésta investigación.

Preguntas de investigación

¿Existe un mercado viable para una escuela de enseñanza del idioma inglés en la ciudad de Villahermosa, Tabasco?

¿Cuáles son las características de la población de la ciudad de Villahermosa en el estudio del idioma inglés?

¿Existe demanda de servicios educativos en idioma inglés en la ciudad de Villahermosa?

¿La población de la ciudad de Villahermosa está dispuesta a pagar servicios educativos en idioma inglés?

¿Cuál sería la competencia a la que se enfrentaría una nueva escuela de enseñanza del idioma inglés?

Objetivos

El objetivo general:

Realizar una investigación de mercado para determinar la factibilidad de implementar una escuela para la enseñanza del idioma inglés en la ciudad de Villahermosa, Tabasco.

Los objetivos específicos:

Identificar las características de estudio del idioma inglés del cliente potencial.

Identificar la demanda y la oferta de servicios educativos del idioma inglés en la ciudad de Villahermosa. Demostrar la factibilidad de la implementación de una escuela para la enseñanza del idioma inglés en Villahermosa.

Justificación

Con la realización de esta investigación, se conocerá la oferta y demanda existente en la ciudad de Villahermosa, Tabasco, lo cual servirá de base para la apertura de una nueva escuela para la enseñanza del idioma inglés. El modelo que se proponga al finalizar la investigación, beneficiará a la población de esta ciudad, ya que propondrá una escuela de inglés que tomará en cuenta las necesidades insatisfechas hasta el momento, así como las características de los clientes potenciales en cuanto tiempos, poder adquisitivo, entre otros.

Por otro lado, el resultado de ésta investigación proporcionará información relevante para la institución y así determinar o no, la apertura de la escuela, los tiempos de recuperación de la inversión y dará las pautas necesarias para planear las estrategias adecuadas para que la escuela genere un impacto favorable en los clientes potenciales.

Hipótesis

La implementación de una nueva escuela para la enseñanza del idioma inglés es factible debido al interés de la población de Villahermosa en aprender el idioma.

Diseño del estudio

La presente investigación se encauza en un estudio cuantitativo que pretende conocer el número de personas interesadas en adquirir servicios educativos del idioma inglés, así como la oferta actual de estos servicios en la ciudad de Villahermosa.

El método a utilizar será el exploratorio ya que se trata de una problemática que no se ha abordado con anterioridad en nuestra ciudad. El diseño de esta investigación se puede definir como observacional, transversal, no experimental, ya que los datos serán recolectados en un solo momento en un tiempo único y no pretende controlar ni modificar ninguna de sus variables (Sampieri, Collado, & Lucio, 2010).

Población y muestra

La población de estudio de esta investigación se encuentra representada por adultos que cuenten con solvencia económica para adquirir los servicios educativos de una escuela de inglés, para esto se tomarán como participantes adultos entre 23 y 40 años de edad, ya que según el estudio de EF, son las personas más activas en el estudio o conocimiento del idioma inglés.

También se analizará la oferta actual de servicios educativos en idioma inglés en la ciudad de Villahermosa, con el fin de conocer los servicios que prestan y el público al que están dirigidos y en las encuestas a la población se buscará conocer el nivel de posicionamiento que tiene cada una de estas instituciones.

Según datos del INEGI, en el censo de población de 2010, en Villahermosa habitan 640,359 personas (INEGI, 2010), con edad promedio de 27 años (INEGI, 2012). Para fines de este estudio, las edades de la población objetivo se agruparán en cuatro rangos: 23-25, 26-29, 30-35, 36-40, esto, debido a la agrupación que se dio en el estudio de EF que nos permita generar una relación con aquel estudio, así como para

facilitarnos la aplicación de encuestas en nuestra población objetivo. De acuerdo a esto, la población que se estudiará estará compuesta de la siguiente manera (ver Tabla 1).

Tabla 1 Población total de Villahermosa por edad según sexo (23 – 40 años)

Rango de edad	Población total	Sexo	
		Hombres	Mujeres
23-25	35288	16846	18442
26-29	41583	19516	22067
30-35	59943	28130	31813
36-40	47960	22935	25025

Fuente: Elaboración propia con base en datos del INEGI, 2010

Tamaño de la muestra

En el caso de los habitantes de la ciudad de Villahermosa que serán encuestados, la muestra se determinará por el muestreo por cuotas, que consiste en la selección de la misma considerando características específicas presentes en la población, por lo que la muestra habrá de tenerlas en la misma proporción (Gallego, 2004).

En este caso se decidió establecer los estratos en base al sexo de los encuestados, ya que según datos del estudio realizado por EF, las mujeres son quienes presentan un nivel más alto en dominio del idioma inglés, esto denota que en el sexo femenino se puede encontrar más interés por adquirir los servicios de una escuela de enseñanza del idioma inglés.

Tabla 2 Cálculo de la muestra de la población de Villahermosa

Estrato	Total	Total por estrato	Población por estrato				Muestreo por cuotas			
			23-25	26-29	30-35	36-40	23-25	26-29	30-35	36-40
Hombres	184774	87427	16846	19516	28130	22935	16	19	28	22
	100%	47.3%	9.2%	10.5%	15.2%	12.4%	168	195	281	229
							1684	1951	2813	2293
							16846	19516	28130	22935
Mujeres		97347	18442	22067	31813	25025	18	22	31	25
		52.7%	9.9%	11.9%	17.3%	13.6%	184	220	318	250
							1844	2206	3181	2502
							18442	22067	31813	25025

Fuente: Elaboración propia con base en datos del INEGI

Siguiendo los datos de la tabla del muestreo por cuotas, se encuestarán en total a 85 hombres; 16 que se encuentren entre los 23 y 25 años de edad, 19 entre los 26 y 29, 28 entre los 30 y 35 y finalmente 22 entre 36 y 40 años. Y a 96 mujeres; 18 que se encuentren entre los 23 y 25 años de edad, 22 entre los 26 y 29 años, 31 entre los 30 y 35 años, y finalmente 25 entre los 36 y 40 años.

Técnicas y procedimientos

En el caso de la población de Villahermosa, se aplicarán encuestas con preguntas cerradas enfocadas a conocer hábitos de estudio, interés en el idioma, así como conocer el posicionamiento en la mente de estos de las actuales escuelas de inglés que hay en la ciudad.

Marco teórico

Philip Kotler, considerado padre de la mercadotecnia moderna, considera a esta disciplina como un proceso social y administrativo mediante el cual grupos e individuos obtienen lo que necesitan y desean, a través de generar, ofrecer e intercambiar productos de valor con sus semejantes (Merca2.0, 2010).

Según Kotler (2002), la investigación de mercados es: el diseño, la obtención, el análisis y la presentación sistemática de datos y descubrimientos pertinentes para una situación de marketing específica que enfrenta la empresa. Los objetivos que persigue esta técnica de recolección de datos es el suministrar información, no datos, al proceso de toma de decisiones a nivel gerencial, así como satisfacer las necesidades del cliente, ya sea mediante un bien o servicio requerido, es decir, que el producto o servicio cumplan con los requerimientos y deseos exigidos cuando sea utilizado.

La investigación de mercados busca determinar el grado económico de éxito o fracaso que pueda tener una empresa al momento de entrar a un nuevo mercado o al introducir un nuevo producto o servicio y, así, saber con mayor certeza las acciones que se deben tomar, así como ayudar al desarrollo del negocio, mediante la adecuada planeación, organización, control de los recursos y áreas que lo conforman, para que cubra las necesidades del mercado, en el tiempo oportuno (López, 2011), esta permite tomar mejores decisiones que benefician a la empresa y su importancia radica en que nos permite conocer al consumidor, por lo que podemos adaptar nuestro plan de mercadotecnia a las necesidades, deseos, costumbres y motivaciones del consumidor, permitir disminuir los riesgos al proporcionar información necesaria para la definición de la mejor política de mercadotecnia posible. Además, la investigación de mercados es una fuente generadora de información a través de la recolección de hechos para inferir las consecuencias futuras probables a fin de valorar las ventajas e inconvenientes de las alternativas de acción.

RESULTADOS

Como se determinó con anterioridad, se encuestó a habitantes de la ciudad de Villahermosa entre 23 y 40 años de edad, divididos en cuatro grupos. Describiendo en primer lugar y de forma general las características del total de la población. En cuanto al estado civil, a pesar de las diferencias de edades existentes, solo el 10% es casado y la mayoría son solteros.

Del mismo modo, se interrogó el nivel de estudios de las personas que participaron en las encuestas, de los cuales el 90% estudiaron licenciatura, mientras que el 7% tiene estudios superiores y sólo el 3% tiene estudios inferiores al nivel superior. Este resultado refleja que este segmento, es el más interesado en dominar el inglés, esto se puede deber a que tienen un mayor conocimiento de la ventaja que representa el dominio de un segundo idioma.

La última pregunta de información general, cuestionaba sobre la institución en la que estudiaron, las respuestas fueron agrupadas según su clasificación. Con esto pudimos confirmar lo que afirma EF sobre la baja calidad en la enseñanza del idioma inglés en las escuelas públicas, por lo que los estudiantes de estas, instituciones optan por recibir clases de inglés de forma externa.

En la siguiente variable del cuestionario, se pretendía conocer los hábitos de estudio de la población de Villahermosa respecto al idioma inglés, en primer lugar se les preguntó en qué escuela de inglés habían estudiado por última vez. De las escuelas mostradas como opción, los encuestados en los diferentes grupos de edades solo seleccionaron las seis que se muestran en el gráfico. Esta gráfica nos da una primera impresión sobre el posicionamiento que tienen las escuelas de inglés en los habitantes de la ciudad de Villahermosa.

Figura 1 Escuelas en las que han estudiado los habitantes de Villahermosa

Por otra parte, los resultados también demostraron que es mayor el porcentaje de mujeres que el de hombres que ha estudiado inglés, lo que nos ayuda a comprobar otra afirmación de los estudios realizados por EF, en el que se establece que las mujeres son las que están más interesadas en estudiar este idioma.

Posteriormente se preguntó a los encuestados la razón por la que habían elegido dicha escuela, a lo que el grupo de 23-25 años respondió en su mayoría que se basaron en el bajo precio del curso en primer lugar, y en la ubicación y método de enseñanza como segunda y tercera razón. Una minoría de este grupo de edades, dijo haber elegido los cursos de determinadas escuelas debido a promociones que ofrecieron algunas de estas y algunos otros participantes por convenios que tenían algunas otras con la institución en la que cursaban el bachillerato u algún otro nivel de estudios. Para el grupo de 26-29 años, lo más importante para elegir su escuela fue también el bajo costo del curso, y las demás opciones tuvieron la misma importancia entre sí. En el grupo de 30-35 años, el bajo costo y las instalaciones del lugar tuvieron la misma importancia para tomar la decisión de estudiar ahí. En el caso de este grupo de edades, los hombres más que las mujeres fueron quienes manifestaron fijarse más en las instalaciones. Finalmente, se pudo apreciar que el grupo de 36-40 años le da mayor importancia al método de enseñanza. Es probable que esto se deba a que a esta edad, las personas tienen mayor poder adquisitivo y se interesan más por una escuela que les asegure el aprendizaje antes que el costo de la misma.

Figura 2 Razón por la que los habitantes de Villahermosa eligieron su última escuela de inglés

Posteriormente se preguntó a los participantes si ha estado en más de una escuela de inglés, a lo que una cantidad notablemente menor, ha sido la que ha estado en dos escuelas, y los que han estado en tres o más escuelas, solo se presentan en los grupos de 30-35 años y en una pequeña parte de los del grupo 23-25 años. El grupo de 23-25 años dio como razones del cambio algunas características de la escuela, como el método de enseñanza y la dificultad que les ocasionaba, así como el poco avance que notaban en su conocimiento del idioma. Conforme avanzan las edades en los grupos de encuestados, las razones son cada vez menos

relacionadas con la escuela, ejemplo de estas son la falta de tiempo para ir a las clases, falta de recursos económicos y cambios de domicilio.

La siguiente variable de la encuesta pretendía conocer el nivel de dominio de inglés de los habitantes de la ciudad de Villahermosa. Esta variable utilizó una tabla en la que se mostraban las habilidades que deben dominarse en un idioma para lograr tener una comunicación efectiva, lectura, escritura, gramática, comprensión y expresión oral. Estos se presentaron en una tabla que contenía una escala del 1 al 5, en la que los participantes debían elegir el número que calificara más certeramente su dominio de cada una de estas habilidades en el idioma inglés. Después de concentrar las autoevaluaciones de todos los participantes, se calculó el promedio de estos para tener una calificación media que pudiera describirnos el dominio promedio de inglés por parte de la población de Villahermosa. Los resultados se muestran en la tabla siguiente.

Tabla 3 Autoevaluación de los habitantes de Villahermosa en dominio del inglés

Mujeres						
Edad	Lectura	Escritura	C.O.*	E.O.**	Gramática	Promedio general
23-25	4.3	4	3.7	3.5	3.5	3.8
26-29	2.4	2	3.3	1	1.5	2.04
30-35	3.3	4	3.8	3.7	4	3.76
36-40	3	3	1.2	4	2.3	2.7
Promedio	3.25	3.25	3	3.05	2.83	3.08
Hombres						
Edad	Lectura	Escritura	C.O.	E.O.	Gramática	Promedio general
23-25	3	3	3.2	2.4	2.8	2.88
26-29	4.3	3.8	4	4.2	3.7	4
30-35	3.3	3.7	3.7	3.3	3.7	3.54
36-40	3.3	3.7	1.6	3	2.7	2.86
Promedio	3.48	3.55	3.13	3.23	3.23	3.32
Promedio poblacional	3.36	3.4	3.06	3.14	3.03	3.2

*C.O. = Comprensión oral

**E.O. = Expresión oral

Fuente: Elaboración propia del autor

Como la tabla demuestra, la población de Villahermosa tiene de manera general un promedio de 3.2, el cual nos dice que la población tiene un dominio del inglés intermedio según su propia autoevaluación.

Según el estudio de EF, las mujeres son las que tienen un nivel un tanto superior de inglés a los hombres, sin embargo con esta investigación, pudimos comprobar que en el caso de la ciudad de Villahermosa, los hombres son quienes presentan una calificación superior según los promedio de las autoevaluaciones de cada una de las habilidades.

Otro dato importante es que, si bien EF afirmaba que la diferencia generacional era un factor determinante en el dominio del idioma, en esta investigación se ha demostrado que en Villahermosa, solo se cumple en el caso de los hombres.

En el caso de las mujeres, existe una diferencia en el dominio del idioma que no se relaciona en su movimiento generacional. Tanto mujeres de 23 a 25 como las de 30 a 35 años tienen un nivel con escasa diferencia y las de 26 a 29 años tienen un nivel de inglés inferior a las de 36 a 40 años, quienes conforman

el único grupo de mujeres que confirman la diferencia generacional que afirma EF. Por otra parte, en los hombres es posible notar que siguen de cerca, la tendencia que establece EF en su investigación, ya que los hombres de 26 a 29 al igual que los de 30 a 35 años tienen un nivel superior en el dominio del idioma comparados con los que se encuentran en las edades límites (23-25 y 36-40 años).

Otro punto interesante que se rescata de esta variable, son las habilidades en las que se consideran menos preparados los participantes, ya que demuestran que la habilidad para entender conversaciones orales es el punto más débil de todos, lo que nos servirá como estrategia para basar el plan del método de enseñanza de la escuela de inglés que se desea implementar.

La siguiente variable de la encuesta deseaba conocer el interés que tiene la población de Villahermosa en adquirir los servicios de una escuela de enseñanza del idioma inglés, esta es una de las partes más importantes del trabajo, ya que es aquí donde se analizará la aceptación que tendría esta escuela para la enseñanza del idioma inglés. En primer lugar, esta variable cuestionó a los participantes acerca de su interés en estudiar inglés, a lo que casi la totalidad de los cuatro grupos de edades respondió que sí, y 12.5% del grupo de 23-25 años dijo que no por apatía o en algunos casos porque ya han terminado un curso de inglés en alguna escuela. Sin embargo si consideramos de forma general a la población participante, el 94% dijo estar interesado en estudiar inglés.

La siguiente interrogante, preguntaba si estarían dispuestos a pagar una escuela de inglés que les asegurara desarrollar las habilidades básicas para lograr una buena comunicación en cualquier idioma, mismas que con anterioridad se autoevaluaron los participantes, a lo que el 97% dijo que si, mientras que el 6.25% del grupo de 23-25 años dijo que no por las mismas razones que la pregunta anterior y el 25% del grupo de 35-40 años también dijeron que no, ya que consideraban que una escuela que asegure desarrollar todas estas habilidades podría ser muy costosa.

Para concluir con la serie de preguntas de la encuesta, se preguntó a los participantes qué tan importante consideran el dominio del inglés en la actualidad, para esto, de forma similar a la autoevaluación del dominio del mismo, se presentó una tabla con una escala de 1 a 5 en la que debían seleccionar la que más se acercara a su creencia, en la que el 1 significaba nada importante mientras que el 5 era muy importante. A esta pregunta, el 87.5% del primer grupo (23-25 años) respondió con la escala 5 y el resto 4, por lo tanto en este grupo hay quienes lo consideran importante, pero no trascendental como para marcar una diferencia. Por otra parte, el resto de los grupos de edades, respondió que la importancia del dominio de este idioma es muy alta y significativa, en tanto que el 100% de los otros grupos lo calificó en la escala 5.

En esta variable se pudieron obtener los datos más importantes para nuestra investigación, ya que, además de que pudimos comprobar que los habitantes de la ciudad están interesados en estudiar el idioma, también comprobamos que están conscientes de la importancia del inglés, y lo que es más, están dispuestos a pagar por el servicio educativo. Todo esto asegurara la demanda de nuestros servicios.

CONCLUSIONES

El objetivo principal de la realización de esta investigación de mercado era determinar la factibilidad de implementar una escuela para la enseñanza del idioma inglés en la ciudad de Villahermosa, Tabasco, misma que fue comprobada con los porcentajes positivos que obtuvieron las preguntas de la encuesta aplicada a la población referente al interés por el estudio del idioma.

Según las encuestas el 100% de la población sabe la importancia que tiene el idioma inglés en la actualidad como herramienta de trabajo, es por ello que el 94% de la población está interesada en estudiarlo y el 97% considera importante pagar por servicios educativos de este idioma, en especial si esta escuela le asegura al alumno desarrollar todas las habilidades necesarias para comunicarse en este idioma.

Siguiendo los datos que fueron posibles recolectar por medio de las encuestas, se proponen las características básicas que debe cubrir una nueva escuela de enseñanza de inglés para adultos en la ciudad de Villahermosa.

En general, la comprensión y expresión oral, es decir la habilidad para escuchar y hablar, son las que la población reconoce tener menos desarrollada. Es por ello que en la propuesta de inglés, se debe desarrollar un sistema de enseñanza que se base mayormente en la práctica y desarrollo de listening y speaking (entender y hablar) desde el primer momento, y se encuentren inmersos en un ambiente 100% en inglés, integrando simultáneamente otras habilidades del idioma.

Con el objetivo de apoyar a la población en el sentido financiero, pretendemos lograr financiamiento para colegiaturas parcial o total de parte de donantes enlistados en el catálogo publicado por el Foundation Center, para lo cual ya estamos elaborando la justificación y resumen ejecutivo requerido por algunos donantes. Con esto el monto que los estudiantes paguen se podría reducir en un porcentaje considerable que nos dará una ventaja sobre nuestra competencia.

CONTRALORÍA SOCIAL EN LAS UNIVERSIDADES PÚBLICAS: PRACTICA DE TRANSPARENCIA Y RENDICIÓN DE CUENTAS

Elia del Carmen Moreno Ibarra, Universidad Estatal de Sonora
Esthela Carrillo Cisneros, Universidad Estatal de Sonora
Oscar Acosta de los Santos, Universidad Estatal de Sonora
Ma Guadalupe Bustamante Ruiz, Universidad Estatal de Sonora
Valeria Jacqueline Quiroga Moreno, Universidad Estatal de Sonora

RESUMEN

La Contraloría Social constituye una práctica de transparencia y de rendición de cuentas y se reconoce como el espacio de los beneficiarios y de la ciudadanía, para que de manera organizada verifiquen el cumplimiento de las metas y la correcta aplicación de los recursos públicos federales asignados a las Universidades Públicas del país, a través del Programa Integral de Fortalecimiento Institucional (PIFI) y el Programa para el Desarrollo Profesional Docente (PRODEP), antes Programa de Mejoramiento del Profesorado (PROMEP), dando así cumplimiento a lo dispuesto en la Ley General de Desarrollo Social

Este mecanismo tiene como propósito el seguimiento, supervisión y vigilancia de los programas PIFI y PROMEP para coadyuvar al logro de las metas y la correcta aplicación de los recursos asignados a los mismos, contribuyendo así a la transparencia y la rendición de cuentas a la sociedad.

Por lo anterior el presente estudio tiene como finalidad realizar un diagnóstico sobre la participación de los beneficiarios de la comunidad universitaria de estos programas y la efectividad de la gestión de la contraloría social, el diagnóstico se realizó mediante la aplicación de cuestionarios de forma aleatoria a los beneficiarios de cuatro Universidades Públicas del Estado de Sonora. Resultados que servirán de guía y retroalimentación para el mejor desempeño de las mismas.

SOCIAL MONITORING AT PUBLIC UNIVERSITIES: PRACTICE OF TRANSPARENCY AND ACCOUNTABILITY

ABSTRACT

The Social Comptroller is a practice of transparency and accountability and is recognized as the space of the beneficiaries and of citizenship, so in an organized way, you must check the fulfilment of the goals and the correct application of federal public resources allocated to public universities in the country, through the integrated program of institutional strengthening (PIFI) and the program for teacher professional development (PRODEP) before improvement of faculty (PROMEP) program, thus giving compliance with provisions of the General Law of Social development mechanism is intended to the tracking, monitoring and surveillance of the PIFI and PROMEP programmes to contribute to the achievement of the goals and the correct application of the resources allocated to them, thus contributing to transparency and accountability to the society. Therefore the present study aims to make a diagnosis on the participation.

BREVE ANÁLISIS DE RENTABILIDAD EN LA INDUSTRIA TABACALERA EN MÉXICO

Marina Elizabeth Salazar Herrera, Universidad Veracruzana

María del Pilar Enríquez Gómez, Universidad Veracruzana

Arturo Zepeda Pineda, Universidad Veracruzana

Elena Aguilar Canseco, Universidad Veracruzana

RESUMEN

En este estudio se realiza una investigación del impacto que tiene la industria tabacalera en México desde la perspectiva social y económica, así como la proporción que ocupa dentro de la economía nacional. El caso que se presenta corresponde a una empresa mexicana con características de empresa familiar, que le permite beneficiar en forma directa a las familias que trabajan en la siembra, cosecha, proceso y exportación de la planta de tabaco; así mismo, se abordará la posición que ocupa México en la industria tabacalera a nivel mundial. El objetivo de este trabajo es mostrar la rentabilidad de la siembra y cosecha de la hoja de tabaco, sus beneficios para los agricultores y el sello distintivo que le impone el agricultor a una cosecha muy apreciada en el extranjero. La importancia del estudio del cultivo de la hoja de tabaco en México es debido a la posición que ocupa como parte de la economía nacional, generadora de divisas y como conservador de la cultura en las entidades donde se siembra.

BRIEF ANALYSIS OF PROFITABILITY IN THE TOBACCO INDUSTRY IN MEXICO

ABSTRACT

This is a study on the impact of snuff industry in Mexico from a social and economic perspective and proportion it occupies in the national economy performs. The case presented corresponds to a Mexican company with characteristics of family business that allows you to benefit directly to families who work in planting, harvesting, processing and export of plant snuff; a brief analysis of the financial statements in an enterprise engaged from planting, harvesting and selling leaf snuff is made. In this idea aim of this paper is to show the profitability of snuff from planting, tried to land, harvesting and selling the product sheet that among other characteristics is locally itself is manufactured. The importance of studying the leaf cultivation of snuff in Mexico due to its position within the national economy, generating foreign exchange and as a conservative culture in states where it is planted.

INTRODUCCIÓN

El tabaco por más de un siglo ha estado ligado a la vida de los mexicanos en los aspectos económicos, culturales y sociales; así como México, muchos países son productores de la hoja de tabaco por ser ésta una importante generadora de empleo e ingresos para los agricultores; además en una alternativa atractiva para aquellos suelos pobres y con escasez de agua, poco rentable para otros cultivos. La alta calidad del tabaco que produce México es cada vez más cotizado en los mercados internacionales para la fabricación de puros, situación que favorece las exportaciones de este tipo de producto del tabaco y genera gran cantidad de

empleos en zonas específicas donde se produce el puro. **Hay municipios donde se** conjunta la riqueza de la región y se plasma en grandes terrenos fructíferos para la **siembra**; más del 50% de sus habitantes han visto en los **plantíos de tabaco** una fuente de ingreso que combinan con el **arte** de elaborar puros. Hay zonas **tabacaleras** al 100%, con imagen a nivel internacional por la cosecha del tabaco, la venta de la hoja y el puro hecho a mano, en el Estado de Veracruz existen importantes zonas de tabaco, esto dentro de la República Mexicana.

El proceso de la hoja de tabaco comprende: la selección de terrenos, el proceso de la siembra, el proceso de cultivo, la recolección, el proceso de curación y por último el proceso de fermentación de la hoja. Cada uno de estos procesos se lleva a cabo de forma manual y cuidadosa para que la hoja se coseche y venda o trabaje intacta, sin cortes. Los principales estados en México que producen la hoja de tabaco son –en orden de importancia- Veracruz, Nayarit, Chiapas, Guerrero y Jalisco (SAGARPA). Para la realización de este trabajo hubo que trasladarse y tomar in situ la información relacionada a la siembra, cosecha y proceso de la hoja de tabaco en el Estado de Veracruz. De la misma manera se obtuvo información relacionada a sus Estado Financieros de los años 2013 y 2014.

REVISIÓN DE LITERATURA

Bien dicen los estudiosos de la sociedad -en sus diferentes disciplinas- que no podemos eludir la realidad incuestionable de que vivimos en organizaciones; nos desenvolvemos en ellas, las estudiamos y tratamos de explicar muchas veces su accionar. Buscamos resolver sus problemas, mejorar su vida, prolongar su existencia, explicar sus cambios y en ocasiones hasta controlarlos. Para ello, se han establecido diferentes teorías, al respecto Harmon y Mayer (1999) argumentan: “La palabra teoría, en su sentido más amplio, alguna vez aludió a convicciones sobre lo bello, lo verdadero y lo bueno. Era un producto de la revelación divina y la razón natural. Y la política era su criada, cuyo cometido era crear lo bello, lo verdadero y lo bueno en la sociedad. Con el tiempo, la política perdió su intención de crear una sociedad buena y se convirtió en el método para mantener la estabilidad social a fin de que los individuos se empeñaran, en relativa paz, en hacer realidad sus nociones privadas del bien. Con esto, la teoría se volvió más una idea que una creencia; más intelectual y en esencia menos religiosa.” (Harmon y Mayer, 1999: 92) En retrospectiva, la teoría nos permitía diseñar nuestra sociedad en forma adecuada, de aquí fueron las primeras obras de Max Weber (1964, 1968, 2005) -con la burocracia, la sociedad ideal y equilibrada-, Chester Barnard (1968) y el volumen *The Functions of the Executive*, o Herbert A. Simon (1950) y *Administrative Behavior*, autores como Bobbio (2005), Crozier (1974), Etzioni (1975) y Mintzberg (1984) todos estudiosos de las organizaciones, de sus estructuras, experiencias y modelos. Y por otro lado, Ortega (2011) y Calderazi (2013) en las finanzas.

METODOLOGÍA

La definición de la metodología estuvo en función del tema principal de nuestro estudio y que comprende la rentabilidad de la industria tabacalera desde la perspectiva social. A partir de la problemática y el diagnóstico preliminar, se fijó el objetivo metodológico en dos momentos de acción; primero en conocer ¿cómo se procesa la hoja de tabaco? y segundo ¿son rentables las tabacaleras en el sureste de México? El método corresponde a un estudio de caso y es cuantitativo, ya que se basa en los registros financieros de 2 años y se profundiza en el impacto social, en virtud de que todo el proceso desde la siembra hasta la manufactura del puro, elaborado con la hoja de tabaco, depende de un proceso manual, y en este aspecto, las familias, su cultura y finanzas depende de este tipo de empresa. En el campo de trabajo, la realidad social no siempre es fácilmente observable, de ahí que se haya tenido la necesidad de trasladarse a los campos de cultivo para conocer desde la siembra, la tierra, la cosecha y la manufactura del puro.

Las acciones que incluyen la observación in situ, el análisis de datos, el estudio documental y el desarrollo de índices financieros permitirán sentar las bases para concluir si estas empresas son rentables. De aquí que,

este estudio estará compuesto en dos partes: I) la observación del proceso de siembra, cosecha y manufactura de la hoja de tabaco, II) el análisis de caso de rentabilidad financiera y económica.

PLANTEAMIENTO

La principal característica económica del cultivo de tabaco, que por razones técnicas no puede alcanzar un alto nivel de mecanización, es la muy elevada utilización de mano de obra, que puede llegar a las 2,200 horas de trabajo anuales por hectárea. En la Unión Europea, esta actividad emplea alrededor de 200,000 personas en los sectores de producción y transformación. En términos de ingresos y de capacidad de empleo, el cultivo del tabaco es la tercera actividad agrícola en México. De 1998 a 2010, la producción anual de hojas de tabaco ha sobrepasado las 45 000 toneladas métricas y el área cultivable ha crecido en 30 000 hectáreas. Las ventas de cigarros nacionales han superado los 60 000 millones de dólares y desde la década de los setenta del siglo pasado se emplean en la industria manufacturera más de 5 000 trabajadores. Sin embargo, México no se encuentra entre los principales productores de hoja de tabaco del mundo. En 2005, ocupó el lugar número 38 con una producción de poco más de 16 mil toneladas, lo cual equivale al 0.25% de la producción mundial.

De acuerdo a Escuder (2007) la producción y el comercio del tabaco a nivel mundial se basa fundamentalmente en que las labores comerciales son una mezcla de hojas de tabaco de diverso origen cuyas calidades vienen determinadas por numerosos factores naturales o tecnológicos, como: calidad de la variedad, clima, suelo y agua de riego, técnicas de cultivo, abonado y la tecnología de la transformación como el curado, fermentación y almacenamiento. Ahora bien, entre 1998 y 2005, se observa que el número de hectáreas cosechadas se redujo de 32 mil a menos de 9 mil. Dada la similitud entre las tendencias de volumen producido y el área cosechada, el rendimiento por hectárea ha permanecido bastante estable, alrededor de 1.7 toneladas por hectárea en todo ese periodo. Los factores que se relacionan con la caída de la producción de la hoja de tabaco en los últimos años son los precios bajos que se manejan a los productores, el incremento en las importaciones y además se debe de considerar que la ORGANIZACIÓN MUNDIAL DE LA SALUD (OMS) ha emprendido una campaña en contra del tabaquismo y la ley que se ha aprobado en México para prohibir fumar en lugares públicos cerrados.

También las campañas publicitarias producto de las regulaciones y disposiciones gubernamentales en contra del tabaco han mermado el consumo de la hoja de tabaco en México. En este punto se plantea la reflexión: **¿Cuál es el futuro del cultivo del tabaco, en cuanto a las regulaciones ya que se han vuelto más estrictas y la Organización Mundial de la Salud (OMS) pretende desincentivar el cultivo del tabaco?**

Por el estudio realizado encontramos que la industria tabacalera apoyó los objetivos originales del Convenio Marco (FCTC) pero éste se ha desviado de ellos con recomendaciones de políticas que ya no tienen sentido. En tanto exista demanda por el tabaco, a los agricultores le debe impedir su cultivo si así lo deciden. En vez de ello debería alentárseles a sembrar una serie de cultivos a la par del tabaco para reducir su dependencia en un solo cultivo. Las recomendaciones desarrolladas por los facilitadores y presentadas en la reunión de trabajo del grupo en febrero están dramáticamente fuera de contexto. Sugieren que los gobiernos deben actuar para:

Reducir el suministro de material prima / tabaco reduciendo el área designada para el cultivo de tabaco
Prohibir el apoyo económico a productores de tabaco, y
Ordenar/por mandato programas de sustitución de cultivos para los campesinos dedicados a la producción de tabaco.

Parte I. Observación del Proceso de Siembra, Cosecha y Manufactura de la Hoja de Tabaco

La Producción de la Hoja del Tabaco: Para el corte y arreglo de las hojas de tabaco se requiere de habilidades aprendidas a lo largo de varias generaciones, por ello es que en este tipo de trabajo se incorpora toda la familia, incluyendo a menores, cuya edad promedio es de cuatro años y medio, encontrándose dos niñas por cada niño. Como es de esperarse, el riesgo de otros problemas de salud asociados con el cultivo y cosecha de tabaco se incrementa dada la presencia de factores como: limitado acceso a los servicios de salud, deficientes condiciones de nutrición, analfabetismo, monolingüismo, bajos ingresos y la falta de servicios básicos. Planta de tabaco Las tierras al sureste de México son las que se utilizan para cultivar el tabaco de los puros “ATV” Dos tipos de plantas de tabaco son utilizadas en la elaboración del Puro: el corajo del que se obtienen las hojas para la capa y el criollo de sol, que provee las hojas para la tripa y el capillo. El cultivo de corajo se planta bajo lonas de algodón, “los tapados”, a fin de proteger a las del exceso de sol, vientos y parásitos, y las hojas tengan una apariencia uniforme y textura suave y sedosa; cada planta contiene 16 ó 17 hojas (que permitirán la elaboración de unas 30 capas). _El criollo de sol crece a la intemperie con 12 ó 13 hojas. El primer paso es la selección de terrenos, en la agricultura del tabaco se inicia con la selección y preparación de los terrenos; intenta no sembrar en pendientes muy pronunciadas, para evitar el arrastre de las semillas. Las raíces de las plantas de tabaco son muy delicadas y requieren suelos sueltos prosperar. Por eso, el veguero rotura sus campos repetidas veces, convirtiendo la vegetación en un nutriente natural del suelo. A fin de evitar que la estructura del suelo se altere, solo se utiliza la tracción animal. Posteriormente el proceso de siembra empieza con las minúsculas semillas de la planta del tabaco, se tratan durante 45 días y se plantan en fila recta; existen dos variedades de semillas, que originan dos plantas de tabaco muy diferentes: corajo y criollo. Las semillas se plantan en septiembre y cosechan en febrero, siendo inspeccionada cada planta unas 150 veces por los cultivadores del tabaco (los vegueros).

Una vez colocadas las simientes en el semillero, se cubren con tela o paja para protegerlas de los rayos del sol, de efecto nocivo en esta primera fase; a los 5 u 8 días comienza la germinación del tabaco; pasados 2 o 3 días se remueve la cubierta por la mañana y por la tarde, para que los plantones se aclimaten al medio. A los 10 o 12 días de nacida en el semillero, se inicia la aplicación de insecticidas y de fungicidas; éstos evitarán el desarrollo de las plagas y de las enfermedades que afectan al tabaco. Tras 35 días, hacia la segunda quincena de octubre, las plantas de tabaco alcanzan unos 15 a 20 cm de alto y se denominan posturas; Ahora se procede a su trasplante a las vegas definitivas; las tierras ya han sido enriquecidas con carbonato de calcio, abono orgánico y otros. Esta fertilización se repite a los 10 y a los 25 días; se inicia ahora las labores de cultivo y aporque. Ya para el proceso del cultivo, la trasplantación de las posturas a las vegas, se inicia el cultivo y el aporque, a fin de eliminar las malas hierbas y facilitar el desarrollo de la plantación y el crecimiento de las plantas de tabaco. Así, durante los 45 o 50 días que éstas necesitan para alcanzar su completa madurez, cada una es visitada regularmente a fin de realizar labores de azada y control de las plagas, y sobre todo, para eliminar sus yemas terminales y axilares. La terminal se elimina para estimular el crecimiento de las hojas, lo que provoca la aparición de hijos o yemas axilares, que serán separadas también, es el desbotone del tabaco. La planta criollo produce 4 de las 5 hojas que intervienen en la composición de un Puro y originan la diversidad de sabores presentes en las distintas marcas; la planta criollo es la única variedad típica del genuino tabaco Cubano. A diferencia del corajo, las plantas de criollo se exponen al sol para lograr la más amplia variedad e intensidad de sabores que se utilizan en las diferentes ligas que utilizan los puros. La planta Corajo toma su nombre de la famosa plantación "El Corajo", donde su semilla se desarrolló; produce solo una hoja, la capa. Su producción es más costosa que las otras hojas de un puro. Las de corajo se agrupan en siete niveles según su posición en el tallo o posición foliar, a fin de su recolección y clasificación. Las capas se clasifican por colores: claro, doble claro, colorado claro, colorado maduro y maduro. Poco después de la siembra del corajo, que puede alargarse unos 40 días, hombres en zancos erigen unas grandes extensiones de tela de algodón para proteger la vega. La planta del tabaco, respecto de sus hojas, se divide en tres partes: la corona, el centro y la inferior: todas son recolectadas. Al alcanzar las hojas su pleno desarrollo, nace el botón, que se alimenta de las sustancias contenidas en las mismas; por ello se arranca o desbotona. La planta se esforzará por reproducir hijos o yemas, que también habrán de eliminarse; los vegueros llaman a esta operación "repasar" o deshijar. El "repasador", con el dedo índice y la uña del dedo pulgar, arranca de un solo golpe las yemas o hijos para

evitar deterioros. Así se logra un hoja superior, de color verde claro; cuando ésta tiene pequeñas marcas verde-amarillo está lista para y corte y fermentación. Las más perfectas se eligen para capa.

El Proceso de Recolección

Cincuenta días después de la siembra comienza la recolección del tabaco; trabajo muy duro: las hojas hay que recogerlas una a una y a mano, y como máximo dos o tres a la vez. Cada planta de corajo tiene 8 o 9 pares de hojas; las hojas están situadas en niveles distintos (de abajo arriba: libre de pie, uno y medio, centro ligero, centro fino, centro gordo y coronas). Las hojas de cada nivel se recogen de forma independiente, cuando están maduras, a intervalos de 6 ó 7 días: el ciclo de recolección de una planta dura unos 40 días. Las plantas de criollo poseen 6 o 7 pares de hojas clasificadas en ligeros, secos, volados y capotes; las hojas situadas al pie de la planta ofrecen un sabor más suave, por ser las de más tiempo y las más sombreadas. Más arriba en la planta, las hojas tienen mayor fortaleza, al estar más expuestas a la luz solar. El ligero se obtiene de las hojas superiores y es más aromático; el seco, de las hojas intermedias, y es más ligero y de aroma más sutil; el volado, de las hojas inferiores de la planta, es menos aromático, siendo su función asegurar que el cigarro arda correctamente, la siguiente fase es la curación.

Proceso de Curación

En las casas del tabaco, los trabajadores deben vigilar la humedad, la temperatura y las lluvias; según varíen estos factores, abren y cierran sus puertas. Uno de los primeras actuaciones que deben realizar es el ensarte; las "ensartadoras", con grandes agujas, unen por pares las hojas y las colocan en largos palos de madera, llamados cujes ; estos cujes se suben a unos maderos horizontales (llamados barrederas) donde se apoyan sus extremos; en cada jornada, se completan unos 100 cujes, por lo general. Un cuje es una vara recta de unos 4 m de largo con determinado grueso en cada una de sus puntas; es un elemento muy útil en el proceso de secado y curado del tabaco (de 45 a 60 días, según sea el clima). Para conseguir un buen cuje hay que cortarlo y mantenerlo en agua salada durante unos 50 días; luego hay que pelarlo, así no transmite el olor de su madera a las hojas de tabaco. Finalmente, se le quitan los nudos a fin de evitar posibles daños a las hojas. Los cujes se entresacan de los pantanos, las costas sin arena o de los espesos manglares. Todo el tabaco se cura o seca al aire, durante unos 50 días; este proceso, largo y natural, es supervisado de forma constante y asegura temperatura y humedad controladas; las hojas ensartadas, se sitúan cerca del suelo y, cuando se van secando, se suben a la parte superior de la casa del tabaco. Primero las hojas adquieren un color amarillo y luego, gracias al proceso de oxidación y pérdida de la clorofila, toman el color dorado-rojizo que indica que están listas para la 1ª fermentación del tabaco. Tras el proceso de secado se procede al zafado o amarre del tabaco. Ahora, sigue la fase de fermentación. Por último el proceso de fermentación procede con el zafado o amarre del tabaco; de esta fase depende, en gran parte, la calidad del puro; Ahora las hojas ensartadas en los cujes (1000 a 1500 por unidad) se bajan. Respecto de la planta corajo, la bajada se realiza por la mañana, cuando no hace mucho calor; en otro caso, al contacto de la mano, la hoja de tabaco puede quebrarse si está demasiado seca; luego, el "zafador" parte el hilo y las hojas quedan liberadas. Aquí se destaca la influencia de la cultura de los agricultores, y Veira (1997) destaca "la existencia a favor de nuevos valores de eficacia y productividad, el cambio de paradigma supone, en realidad, un cambio cultural en las organizaciones públicas." Los agricultores desde los cambios en la reglamentación han debido cambiar y adecuarse a los mercados mas globalizados, ya que en México, pese a que la producción es una generadora de divisas, ha sufrido los embates de las disposiciones gubernamentales. Por otro lado, y continuando con la cultura Hall (1996) concluye lo mismo que todo cambio gubernamental u organizacional requiere de un cambio de cultura.

Parte II. Análisis de Caso de Rentabilidad Financiera y Económica

A continuación se presentan los Estados Financieros de una empresa Tabacalera del sureste de la república mexicana, correspondiente a los años 2013 y 2014, cuya razón social se omite por razones de

confidencialidad y protección de datos y serán sujetos al análisis de razones de rentabilidad financiera y económica.

Total capital	64,788,420	17	38,245,621	12
	372,256,56			
Total pasivo y capital	5	100	315,188,909	100
Estado de Resultados				
	2013		2014	
	\$	%	\$	%
Ingresos brutos	27,620,67	100	26,261,402	100
Costos de producción	629,311	2.28	542,327	2.07
Utilidad del periodo	26,991,36	97.72	25,719,075	97.93
Razones de rentabilidad Financiera y Económica				
	2013	2014		
Rentab. sobre ventas	97.08%	99.36%		
Rentab del capital	34.92%	90.76%		
Rentab sobre activo	4.50 %	5.77 %		

Dado que la rentabilidad mide la eficiencia con la cual una empresa utiliza sus recursos financieros, ésta no debe desperdiciar los mismos. En este sentido, los recursos financieros mostrados en los estados financieros anteriores, han sido utilizados eficientemente conforme al análisis siguiente:

Determinando los índices de “rentabilidad sobre ventas”, se expresa la correlación entre el margen de utilidad con las ventas, mismos que ascienden a 97.08 y 99.36 en los periodos de 2013 y 2014 respectivamente, alcanzando el 100% en ambos periodos, lo cual indica que el nivel de rentabilidad es favorable. Respecto a la “rentabilidad sobre los activos”, se mide la correlación entre la utilidad neta y el activo, en la cual si fuera uno significaría que la utilidad neta es igual al activo, sin embargo esta correlación es de 4.50 y 5.77 durante los periodos 2013 y 2014 respectivamente, lo cual significa que obtenemos más productividad al activo, incrementándose de un periodo a otro en beneficio de la rentabilidad. Por último la “rentabilidad del capital” que mide la correlación entre la utilidad neta y el patrimonio, si fuera uno significaría que la utilidad neta es igual al patrimonio, esto es, la utilidad por cada peso invertido por los accionistas, sin embargo los resultados denotan valores por encima de uno, 34.92 y 90.76 en los periodos de 2013 y 2014 respectivamente por lo que se obtiene más rentabilidad a los recursos propios en el periodo 2014.

En resumen los índices de rentabilidad son satisfactorios y permanecen estables de un periodo a otro, no así el de la rentabilidad de capital, donde se refleja un aumento significativo entre los periodos.

CONCLUSIÓN

En función al análisis efectuado, tanto del producto como de la rentabilidad financiera y económica, se concluye que la industria tabacalera crea utilidad con los recursos que posee, por lo que es una alternativa para impulsarla en aquellos lugares donde existen suelos pobres con escasez de agua poco rentable para otros cultivos, no así para el tabaco, cuya producción en México es cada vez más cotizada en los mercados internacionales para la fabricación de puros, situación que favorece las exportaciones de este tipo de producto generando empleos en zonas específicas donde se produce. La industria tabacalera es considerada de gran importancia a nivel mundial, ya que desde el cultivo del tabaco proporciona a los países en desarrollo importantes ingresos, además de los ingresos fiscales a los gobiernos por el consumo de tabaco procesado en cigarros. Las empresas fabricantes de tabaco requieren hoy en día, la implementación de nuevas estrategias de competencia para mantenerse en el mercado, asumiendo las modificaciones planteadas por las autoridades tanto nacional como internacional, que le permitan disminuir sus costos y afrontando las diferentes leyes fiscales y normas de salud que impidan su desarrollo.

RESUMEN

Estudiantes de la Licenciatura en Ecología, durante las prácticas realizadas en la comunidad Comca'ac identificaron la necesidad de capacitar sobre el cuidado del medio ambiente, residuos sólidos, uso y aprovechamiento de los recursos naturales para solventar los problemas de contaminación que viven en la comunidad. El objetivo se alcanzó a través de la capacitación por medio de talleres y cursos a los niños de la etnia, con el fin de lograr la concientización y que estos a su vez transmitan lo aprendido a sus familias y generaciones futuras, fue importante conocer y adaptarse a la idiosincrasia de la etnia para el desarrollo y ejecución del proyecto.

PALABRAS CLAVES: Medio Ambiente, recursos naturales, residuos sólidos, contaminación, comunidad, concientización, talleres, cursos, Comca'ac.

TRAINING FOR THE ENVIRONMENT CARE AND USE OF NATURAL RESOURCES THROUGH WORKSHOPS AND COURSES FOR CHILDREN OF THE COMCA'AC COMMUNITY (SERIS) IN PUNTA CHUECA, CITY OF HERMOSILLO, SONORA.

ABSTRACT

Students of the degree in ecology, during their professional practices made at the community of Comca'ac, identified the need for training on environmental protection, solid waste, use and exploitation of natural resources to solve the currently pollution problems of the community. The objective was achieved through training workshops and courses to children of the ethnic community in order to get people aware and in turn transmit what they had learned to their families and future generations, it was important to learn and adapt to the idiosyncrasies of the Comca'ac for the development and execution of the project.

INTRODUCCIÓN

Los estudiantes de la Licenciatura en Ecología de la Universidad Estatal de Sonora, dentro de su formación integral académica tienen que realizar el Servicio Social y sus Prácticas Profesionales, y este proyecto emanó cuando cuatro estudiantes involucrados realizaron sus dos primeras prácticas profesionales, en donde las primeras son sobre Recursos Naturales y las competencias involucradas fueron aplicar las técnicas de análisis en campo y laboratorio en los recursos naturales (agua, suelo, aire) para caracterizarlos y monitorearlos bajo la normatividad ambiental aplicable, las asignaturas antecedentes para poder realizar estas prácticas son las siguientes: Monitoreo de Fauna, Monitoreo de Vegetación y Cartografía.

También cumplieron con las Prácticas sobre ciencias ambientales y los conocimientos y habilidades son, diseñar y evaluar planes y proyectos de educación ambiental y aprovechamiento sustentable de los recursos naturales (agua, suelo, aire, fauna y flora) acordes a la normatividad nacional e internacional vigente y lograr una cultura de responsabilidad con el ambiente y la sociedad, y las asignaturas para cumplir con las segundas prácticas son Cartografía, Edafología, Monitoreo y Análisis de aire, y Monitoreo y Análisis del Agua.

Por lo anterior, y habiendo cumplido con las dos competencias en prácticas profesionales obligatorias ya que la tercera práctica es opcional, los estudiantes de Ecología al hacer su visita de campo decidieron implementar este proyecto en la comunidad rural Seri, la cual esta ubicada en el Municipio de Hermosillo, Localidad de Punta Chueca, y específicamente las actividades y talleres se desarrollaron en el Centro de Cultura de la Comunidad, a la población infantil en general.

Este tipo de proyectos son muy importantes ya que forman parte de los trabajos de estudiantes y maestros, siendo en este caso con alumnos de la carrera de ecología, con la finalidad de acercar a la comunidad a los diversos temas de educación ambiental, así mismo, el difundir valores de respeto a todas las formas de vida, contribuir a la convivencia y participación ciudadana para lograr una gestión racional de los recursos con previsión hacia el futuro, propiciar la construcción de modelos económicos y sociales ambientales sustentables, ayudando a incentivar a un cambio cultural, para desarrollar modelos educativos propios, acordes con las necesidades socio-ambientales locales y regionales.

Al iniciar, observaron en la comunidad una situación de contaminación por residuos sólidos, por lo que los estudiantes involucrados en el proyecto consultaron con su asesora de prácticas profesionales y docentes de la carrera de Licenciados en Ecología de la UES, la propuesta de impartir los cursos/talleres en la comunidad. En ésta, se realizó una entrevista con las autoridades de la etnia Comca'ac, para plantearles el proyecto, el cual fue recibido con agrado y aprobaron la participación de los niños. Posteriormente, se elaboró y planeó cada una de las tareas a ejecutar, creando un calendario de actividades, los objetivos, las reglas de trabajo y horarios, presentándole a las autoridades y a los niños de la localidad, a quienes les pareció un plan muy divertido y lo aceptaron gozosos.

El programa de capacitación que implementaron para los niños Seris, se conformó de cuatro Temas medulares: 1. Ambiente, 2. Comunidad, 3. Basura e Impacto Ambiental, y 4. Beneficios de un Ecosistema Sano, los cuales tuvieron una duración de tres meses por tema aproximadamente para cada uno.

El objetivo del Tema de Ambiente, fue familiarizar a los niños con los conceptos básicos de ecología, exponiéndoles temas como: Naturaleza, Medio Ambiente, Ecología, Ciclos de la Materia y Cadena Trófica (relacionado con la nutrición).

Los talleres y las actividades fueron:

- 1) Lotería Seri: la dinámica consistía en jugar con los niños, y que éstos reconocieron a su vez los seres vivos que se encuentran en su entorno;
- 2) Adopta una Planta: que los niños se interesen en cuidar una planta y se haga cargo de sus cuidados en general;
- 3) Jardín botánico: crearon un jardín botánico con especies endémicas, y que los niños identificaran las plantas con su nombre científico y su nombre en español y en su propio dialecto;
- 4) Concurso de figuras de arena: los niños realizaron figuras de arena a la orilla de la playa;
- 5) Relaciones del ecosistema: los niños eligieron un elemento natural (árbol, pájaro, coyote, venado, agua, tierra, aire, etc.) y dirán en voz alta que elemento es, para que todos sepan los elementos que componen su ecosistema. Con una cuerda se irán conectando cada uno de los elementos. Se podrá ir viendo gráficamente las distintas relaciones de dependencia que se generen entre los elementos las distintas relaciones de dependencia que se generan entre los elementos de ese ecosistema;
- 6) Leyendas de la comunidad: posterior al relato tradicional realizaron un dibujo referente al tema y rellenarlo con materia de reúso; y
- 7) Proyección de videos: se les proyectó a los niños un video sobre el medio ambiente, y después se les explicaron las dudas.

El objetivo del tema de Comunidad, fue mostrar a los niños como la etnia ha sobrevivido a lo largo del tiempo de forma sustentable y armónica con la naturaleza, como está su situación actual y hacerles ver el deterioro del medio ambiente. Los temas a tratar en este apartado fueron: Explotación sustentable (caza, pesca y recolección), Animales en peligro de Extinción, y situación actual de la comunidad.

Los talleres que se aplicaron es este apartado fueron:

Concurso de máscaras de animales: los niños realizaron sus propias máscaras de papel mache, para el juego de la “cacería”;

Salvemos a las tortugas: se delimita un campo que será el mar. Dos participantes tomados de la mano serán un barco pesquero, el resto serán tortugas. A la orden, el barco sale a cazar tortugas. Al ser cazadas, las tortugas se quedan a un costado (zona de tortugas cazadas) y así hasta que las tortugas se extingan o quedan muy pocas. Como variante agregamos un barco del grupo “los tortugeros”;

Pintura facial: en esta actividad participaron integrantes de la etnia pintándose las caras para reforzar parte de su cultura;

Cuentos, danza y cantos: la población adulta nos transmitió enseñanzas relevantes de diversos temas;

Taller de artesanías: se elaboraron collares y pulseras tradicionales;

Visitas a la Isla del Tiburón: se observaron las diferencias entre su localidad y un lugar libre de contaminación;

Plática “Uso de las plantas medicinales”: se reforzó sus tradiciones ancestrales;

Uno de los recursos naturales en la vida diaria: se elaboraron productos como jabones, shampoo, conservas, etc., con recursos naturales.

En el tema de Basura e impacto ambiental el objetivo fue concientizar a los niños sobre la disposición final de la basura, es decir, la utilización que se le puede dar y las consecuencias de no tomar medidas adecuadas de separación, reúso, reciclado y confinamiento de los distintos tipos de desechos. Cabe agregar, que el

promotor cultural e integrante de la etnia los apoyó con su experiencia y conocimiento para realizar la práctica de campo en la Isla del Tiburón.

Los temas que se trataron fueron: Tipos de Desechos orgánicos e inorgánicos, Clasificación y Separación de basura, Regla “las 3 R’s” reducir, reusar y reciclar, Impacto de los residuos sólidos en la comunidad y áreas vecinas (ambiente marino y terrestre), Remuneración de material reciclable.

Los talleres que se realizaron fueron:

Clasificación y separación de basura: se realizó la identificación de basura orgánica e inorgánica e implementaron la separación de los residuos en el centro cultural y en sus hogares;

Composta: elaboración de composta (Mezcla desmenuzada hecha de materia orgánica descompuesta como sobrantes de comida, pasto, hojas) a la que se agrega tierra para obtener un buen sustrato para las plantas. Ofrece al suelo una gran cantidad de nutrientes, una buena textura para retener el agua y permitir la aereación;

Arte basura: se realizó la elaboración de diversos productos con material de reúso;

Reciclado de papel: elaboración de hojas con papel de reúso;

La basura también es dinero: se incentivó a los niños con un convivio de fin de curso, con el recurso obtenido del reciclado de material.

El tema Beneficios de un Ecosistema Sano, el objetivo fue que los niños reflexionaran desde un punto de vista local, regional y global, del beneficio de un lugar libre de contaminación y como se puede lograr implementando el conocimiento y técnicas aprendidas en el curso, para que así crezcan con una mente y actitud sustentable, Los temas a tratar fueron: Salud, Aprovechamiento de Recursos y Turismo.

Los talleres y actividades realizadas fueron las siguientes:

Piñata: se elaboró una piñata con material reciclado para el convivio de fin de curso;

Exposición del portafolio de evidencias: dar a conocer el material recaudado durante el curso;

Promoción turística: se calendarizó de acuerdo a las festividades ya existentes en la comunidad.

Los jóvenes estudiantes contaron con diversos apoyo institucionales para la realización de este proyecto, al igual que también lo solventaron con recursos y material propio como vehículo, Laptop, Mano de obra, Capacitación a niños para con esto poder atender la problemática de la cultura-ambiental de la etnia.

REVISIÓN LITERARIA

Sandoval (2010:36), señala que los españoles nombraron a la unión de grupo de nómadas que vivían a lo largo del continente y en las islas del tercio medio del Golfo de California, como “seris, herís, o heres”, nombres tomados de los Yaquis. El significado de Seris es “Los que salen de la arena o los que viven en la arena.” Anteriormente la etnia se ubicaban desde Carborca hasta Guaymas, y hacia el interior del macizo continental, más allá de la ciudad de Hermosillo, en el estado de Sonora, México.

El territorio Comca’ac se encuentra en el área del Golfo de California una de las principales regiones del mundo en flora y fauna. Se localiza entre los paralelos 28º 50’ y 29º 20’ de latitud norte y los meridianos 111º 40’ y 112º 40’ longitud oeste, comprendiendo una extensión de 6,100 km. Su superficie terrestre se ubica en Punta Chueca y Desemboque, incluye la Isla del Tiburón y su litoral adyacente. Entre la franja costera y el área insular se encuentra una zona intermedia conocida como Canal del Infiernillo, zona de rica productividad marina que también es parte, en forma exclusiva, del territorio tradicional reconocido a los Seris, ya que éste es su columna vertebral. Específicamente Punta Chueca, se localiza a 30 kilómetros al norte de Bahía de Kino, región que antes también formaba parte del territorio Seri, y que a su vez se encuentra a 30 kilómetros de Hermosillo, capital del estado. Frente a Punta Chueca se encuentra la Isla del Tiburón que es una reserva ecológica de uso exclusivo para la comunidad Seri. (Sandoval, 2010)

La comunidad Seri tiene aproximadamente 900 habitantes, y se han resistido a los cambios y transformaciones de la globalización, defendiendo su cohesión comunitaria y sobre todo su identidad. Actualmente se practica muy poco la caza y su actividad se ha reducido a la recolección de semillas del desierto y algunos frutos, dependiendo en gran parte su economía de la pesca, la cual comercializan a través de una cooperativa. (www.jornada.unam.mx › Reportajes)

La modernidad actual ha traído en gran medida la pérdida de identidad y el consumo de drogas por parte de los jóvenes de la comunidad. Lo que ha proliferado es la comercialización y consumo de sodas, (bebida embotellada), comida chatarra, dulces y caramelos, alimentos enlatados, entre otros; provocando altas incidencias de problemas de salud como la desnutrición, diabetes, problemas dentales, obesidad.

Lo anterior trae como consecuencia el no saber manejar los desechos y la basura inorgánica específicamente los plásticos que proliferan a lo largo de la bahía y calles de su localidad. Lo planteado despertó el interés de los estudiantes de Ecología de la UES para enseñarles a manejar los desechos y cuidar su hábitat, poniendo con esto su aportación.

METODOLOGÍA

La formación integral del estudiante es esencial en toda institución educativa y las prácticas profesionales es parte fundamental en el quehacer académico, ya que es una modalidad del aprendizaje en la cual el estudiante, después de haber cumplido con el nivel específico de conocimientos y habilidades los aplica, refuerza y acrecienta en una institución pública, privada o social, durante un período de tiempo o hasta que culmine con un trabajo en donde explique lo realizado en su estancia con la empresa o institución según, sea el caso. Las prácticas profesionales forman parte del plan de estudios, con sus correspondientes valores en créditos académicos. De acuerdo a cada Programa Educativo, el número, desarrollo y control están sujetos a los requerimientos particulares.

En este análisis se abocó a los conocimientos que adquieren los alumnos como parte de su experiencia directa en lo que será su quehacer diario de acuerdo a su perfil profesional. En este caso el proyecto se inició con la inquietud de estudiantes de la carrera de Lic. En Ecología al realizar sus prácticas profesionales y decidieron implementarlo en esa comunidad rural indígena.

La experiencia que tuvieron los estudiantes al realizar sus prácticas, y el acompañamiento de la Directora (familiar de una de las estudiantes) del Museo de los Seris que se encuentra ubicado en Bahía de Kino Nuevo, facilitó la realización de poder entrar a la comunidad y aplicar los talleres y cursos, ya que es difícil introducirse a territorio Comca'ac a implementar cualquier tipo de trabajo, debido a su autonomía e idiosincrasia de los pobladores.

La metodología utilizada en esta investigación fue descriptiva, y cualitativa porque el investigador está en contacto directo en el campo donde se desea aplicar. Por lo anterior es menester generar las herramientas adecuadas como las encuestas, la entrevista, etc., generando con esto información de primera mano en nuestro proyecto fueron los niños Seris, y después procesar y tener la información necesaria en nuestra interpretación y resultados.

CONCLUSIÓN

El presente proyecto como se explicó anteriormente, emanó de las prácticas profesionales y la tarea esencial de los estudiantes fue fortalecer el proceso cultural y educativo que reciben en las aulas los niños Seris, concientizándolos de cómo deben llevar a cabo el cuidado del medio ambiente, haciéndoles entender que ayudando al ecosistema mejora su calidad de vida en todos los sentidos.

Los estudiantes iniciaron por explicarles la definición y aclaración de conceptos básicos de ecología, lo cual fue sorprendente que los niños estén muy familiarizados con la mayoría de éstos, reforzando los ya conocidos y se les explicó algunos conceptos nuevos.

Uno de los Talleres fue “la Lotería Seri”, actividad importante, ya que la comunidad cuenta con su propia lotería, en la cual con figuras de plantas y animales de la región, los niños fueron reconociendo su entorno con figuras con nombres en español y en Comca’ac para familiarizarlos con su idioma materno.

Otra de las dinámicas fue “la telaraña de la vida”, que les permitió a los niños observar las conexiones tróficas del ecosistema, en donde se ilustra de manera muy entretenida que pasa si un componente del medio ambiente falta.

Figura 1. Taller “La Lotería Seri” y “La Telaraña de la Vida

Estudiante con niños Seris en el Taller de “La Lotería Seri” y “La Telaraña la vida”

Para reafirmar las actividades anteriores se realizó el juego de “banderitas del medio ambiente”, dividiendo el grupo de treinta niños que asistían regularmente, en equipos que representaba a las plantas, otro a los animales, otro a la basura, uno más de los componentes abióticos y un último a los seres humanos encargados de remediar los daños causados por la basura.

Otra de las actividades fue una exposición en el aula de clase donde se abordó el tema de los componentes bióticos y abióticos del ecosistema y la cadena alimenticia.

Con el fin de crear conciencia en los pequeños se realizó un espacio en el cual los niños narraron leyendas de la comunidad y se reflexionó su significado, muchas de las leyendas tienen enfoque ecológico por lo que se hizo hincapié en esas historias, al terminar las narraciones cada niño dibujó algo referente a los temas vistos.

Se les instruyó a los niños como se realiza la clasificación de la basura y con los desechos orgánicos se elaboró una composta que se utilizó para abonar un jardín botánico que se elaboró posteriormente. Cada uno de los niños adoptó una planta del jardín botánico y se hicieron responsables de su cuidado.

Así mismo, con los desechos inorgánicos se les explicó que se pueden re-utilizar o reciclar y que al hacerlo obtienen beneficios económicos, por lo que se les propuso recolectar material que se pudiera reciclar y con el dinero que se ganara se realizaría una fiesta infantil al final de los cursos/talleres.

También se abordó el tema de sustentabilidad con enfoque de aprovechamiento de recursos naturales a través de la optimización de las técnicas ancestrales como la caza, pesca y recolección, haciendo énfasis en proteger las especies de animales y plantas que se encuentran en peligro de extinción y que viven en el territorio de la etnia. Con esto se trató de sensibilizar a los niños con el tema de los Residuos Sólidos dentro de su comunidad, para poder reflexionar al respecto de la situación del medio ambiente actual del grupo étnico se invitó a los niños a una jornada de limpieza de la zona del banco de arena “Punta Chueca”, destacando que es un lugar de anidamiento de algunas especies de aves y también de tortugas marinas.

Figura 2. Taller basura e impacto ambiental

niños Seris y estudiantes de la UES recolectando basura.

Con el material recolectado se procedió a clasificar y separar los residuos sólidos, integrando los residuos orgánicos a la composta, los inorgánicos en reutilizables y reciclables, utilizando el papel para demostrar una técnica de reciclado y además la creación de artesanías con materiales viables para tal propósito.

Figura 3. Clasificando lo recolectado en la Playa

Estudiante de ecología dando la instrucción a niños Seris de la clasificación de lo Recolectado en la playa.

Se habló muy enfáticamente sobre la contaminación que vive su localidad y los niños hicieron propuestas de que es lo que se puede hacer para reducir la basura, para éste tema se visitó “La Punta” área de la comunidad donde anidan muchas aves y se observó la contaminación que ocasiona el no depositar la basura en su lugar, se hizo un concurso con el fin de limpiar la playa seguido de uno de figuras de arena, premiando a los ganadores.

Uno de los talleres que más fascinó a los niños fue el arte basura, en el cual se elaboraron diversos productos con material de re-uso, uno de los productos fueron sillones hechos de botellas de refrescos, los niños se impactaron al ver que tan rápido conseguían el material para fabricarlos, pues alrededor estaba lleno de botellas tiradas. Con lo anterior, notaron que de esta forma muchas cosas que creen que es basura aún pueden ser útiles y pueden evitar la contaminación. Además durante los cursos se efectuaron talleres de los cuales se obtuvieron algunos objetos para su uso personal y familiar como mesas, taburetes, así como materiales de evidencia como fotos, videos, artesanía, máscaras, composta, un jardín botánico.

También se realizaron eventos con juegos, concursos como parte final del proyecto. Para cerrar los Cursos/Talleres, se realizó uno taller en donde elaboraron piñatas con material de re-uso, concluyendo con su festejo con lo que se ganó de la venta del material de reciclaje.

Figura 4. Festejo de fin de Curso con piñata

Los niños festejaron la culminación de sus cursos con Piñatas que ellos mismos elaboraron.

La relación con los niños fue un poco difícil según los comentarios de los estudiantes ya que por su cultura son rebeldes y es difícil disciplinarlos por su idiosincrasia ya que son muy libres y no saben estar en lugares cerrados y eso los ponía inquietos y a veces hasta un poco complicado de controlar, así mismo, de los cuarenta niños Seris en ocasiones asistían treinta, en otras treinta y cinco, por preferir irse a pescar con sus padres. Sin embargo, se cumplió con el programa establecido quedando satisfechos los estudiantes de Licenciatura de Ecología con la experiencia obtenida con este proyecto de equipo, ya que pudieron aportar lo aprendido en clases transmitiendo sus conocimientos. Los estudiantes y maestros involucrados apoyaron con este proyecto recolectando entre los universitarios de la UES donándoles ropa, despensas, telas para sus artesanías, pinturas y herramientas.

LA EVALUACIÓN DE LAS MATEMÁTICAS FINANCIERAS EN LA MODALIDAD DE EDUCACIÓN A DISTANCIA

Mónica Bibiana González Calixto, Universidad del Tolima

RESUMEN

Esta ponencia presenta una experiencia de aula relativa a la evaluación de las Matemáticas Financieras, en el curso de Métodos Cuantitativos para Proyectos, de la Especialización de Gerencia de Proyectos, del Instituto de Educación a Distancia (IDEAD) de la Universidad del Tolima, Colombia. La experiencia fue vivida durante el segundo semestre del 2014, con dos grupos del mismo programa pero ofrecidos en diferentes ciudades. Los cuarenta y seis estudiantes eran profesionales de diferentes disciplinas. En ellos se observó que la evaluación de matemáticas financieras es fundamental para su aprendizaje, los instrumentos de evaluación se asimilan de diferentes maneras, pero los errores sistemáticos son similares en ambos grupos.

En la primera parte se contextualiza la evaluación en el IDEAD, en la segunda se plantean los principios de evaluación para este curso. La tercera parte sugiere las condiciones favorecedoras de una evaluación para el aprendizaje de este tema; la cuarta parte, presenta las técnicas e instrumentos de evaluación aplicados y en la quinta parte se reflexiona acerca de los errores sistemáticos que se presentan en el curso.

PALABRAS CLAVE: Matemáticas financieras, evaluación, educación a distancia.

ASSESSMENT OF FINANCIAL MATHEMATICS IN THE FORM OF DISTANCE EDUCATION

ABSTRACT

This paper presents a classroom experience on the assessment of financial mathematics in the course of Quantitative Methods for Project Specialization in Project Management, the Institute of Distance Education (iDEAD) of the University of Tolima, Colombia. The experience was lived during the second half of 2014, with two groups of the same program offered in different cities. Forty-six students were professionals from different disciplines. In them it was noted that the evaluation of financial mathematics is essential for learning, assessment instruments are treated in different ways, but the systematic errors are similar in both groups.

In the first part the assessment is contextualized in IDEAD in the second assessment principles for this course arise. The third part suggests the conditions favoring an assessment for learning this subject; The fourth part presents the techniques and tools of evaluation applied in the fifth and reflects on the systematic errors that arise in the course and strategies to overcome them.

KEYWORDS: Financial mathematics, evaluation, distance education.

INTRODUCCIÓN

La Evaluación del aprendizaje en el IDEAD, ha sido objeto de reflexiones tendientes a fundamentar teóricamente su ejercicio. En 1991, se creó la coordinación de investigación evaluativa, encargada de la

evaluación de la pertinencia del material pedagógico utilizado para el desarrollo de la tutoría y el desempeño de los tutores y coordinadores de los centros regionales.

En 1996, la propuesta de reforma curricular del IDEAD, se asumió la evaluación como el seguimiento riguroso de los procesos educativos que se daban en el marco del desarrollo curricular, teniendo como características la flexibilidad, la apertura y la autorregulación. Por su parte, el componente de verificación del rendimiento académico fue regulado con base en los lineamientos establecidos en el acuerdo 00024 de 1995, que definió los pasos a seguir por los docentes para calificar, oficializar e institucionalizar las notas. De acuerdo con el Proyecto Educativo Institucional PEI (2015), En la Universidad del Tolima, la evaluación está concebida como la observación continua desde la conciencia reflexiva sobre las estructuras complejas académicas y la práctica pedagógica de los actores educativos. Este proceso promueve la reflexión y la investigación y permite dar sentido en los momentos de aprendizaje. Sin embargo, a pesar de las reflexiones el proceso de evaluación, en la Universidad del Tolima, en la práctica ha estado más enfocado a la evaluación académica que a la formativa.

Proceso actual de evaluación del aprendizaje en el IDEAD

Actualmente el acuerdo 00024 de 1995, plantea la evaluación en dos etapas, así:

1. Evaluación permanente: corresponde al 60%. Son las actividades realizadas durante el curso. Se determinan en el Acuerdo Pedagógico con sus respectivos porcentajes.
2. Convocatoria 1. (Evaluación Final): corresponde al 40%. Consiste en la aplicación de una prueba, en la que se evalúan todos los temas tratados en el semestre académico. Sólo la pueden presentar los estudiantes debidamente matriculados.

Cuando un estudiante reprueba, se puede presentar a segunda convocatoria. En este caso la evaluación permanente y la primera convocatoria equivalen al 50% y la segunda convocatoria al otro 50%. El estudiante puede elegir no ser objeto de ningún proceso de evaluación permanente desarrollado en el proceso de encuentros presenciales y trabajo independiente, en este caso el 100%, de la calificación corresponde a la obtenida en la convocatoria 1. En este caso también aplica la segunda convocatoria. Si el estudiante ha presentado su proceso de evaluación permanente pero no se presenta a convocatoria 1, la convocatoria 2 equivale al 40% y no tiene derecho a más evaluaciones. Si el estudiante no tiene nota del 60% ni de la convocatoria 1, puede presentarse a convocatoria 2 la cual tendrá un valor del 100%.

El curso de Métodos Cuantitativos para Proyectos de la Especialización en Gerencia de Proyectos

La especialización en Gerencia de Proyectos del IDEAD, se encuentra adscrita al Instituto de Educación a Distancia-IDEAD de la Universidad del Tolima. Tiene como propósito de formación apropiar conocimientos y fortalecer habilidades para liderar acertadamente las etapas que conciernen al desarrollo de los proyectos. (Universidad del Tolima, 2015). Este programa tiene una duración de dos semestres, el curso de Métodos Cuantitativos para Proyectos se ubica en el primer semestre. La finalidad de este curso es proporcionarle al profesional las herramientas de mayor trascendencia en el campo de las finanzas, la estadística y las operaciones que le permitan desarrollar habilidades en la toma de decisiones. El plan de curso contempla cinco unidades de las cuales dos se enfocan en las matemáticas financieras.

Matemática Financiera

La Matemática Financiera, utiliza las matemáticas para determinar el valor del dinero en el tiempo, con el fin de poder tomar decisiones de inversión, financiamiento y efectivo a nivel personal o empresarial. Allí, se analiza el efecto del interés compuesto y la inflación, en valores ubicados en el presente y en el futuro, se calculan tasas de interés, anualidades y herramientas de evaluación de proyectos de inversión. Las

operaciones matemáticas que se deben realizar en esta temática son muy simples, sin embargo es necesario plantear ecuaciones que requieren tener muy claros los conceptos y un buen nivel de análisis, con el fin de que los resultados sean correctos.

La matemática financiera implica la realización y aplicación de fórmulas que deben arrojar resultados exactos, pues lo que se calcula son valores y tasas, que en la vida real significan dinero, y de estar mal calculados, podrían permitir decisiones fatales para las finanzas personales o empresariales. Para que los resultados sean lo más cercanos posibles a la realidad, se debe partir de algunos datos proyectados, por lo que existe un riesgo que incide en las decisiones de los empresarios, inversionistas o analistas.

El cálculo de un valor presente o futuro, es necesario para poder estimar el valor real del dinero en un determinado momento en el tiempo. Por ejemplo, si hoy presto mil dólares para que me los devuelvan dentro de 10 años, necesito aplicar conceptos de interés compuesto y de inflación; de manera que recupere el poder adquisitivo de mi dinero y además tenga un excedente o rendimiento, por el hecho de haber dejado de disfrutar de mi dinero durante ese tiempo, es decir, el costo del dinero que estoy prestando.

REVISIÓN LITERARIA

La evaluación de los aprendizajes

La evaluación de los aprendizajes, es un proceso constante que utiliza variadas técnicas e instrumentos para observar y guiar los aprendizajes de una persona hacia unos estándares, criterios o supuestos preestablecidos o contruidos a medida que avanza el proceso de enseñanza aprendizaje, con el fin de acompañar y valorar la calidad de dicho proceso y del aprendizaje como tal. Cuando se evalúa el aprendizaje se busca determinar el estado, progreso o nivel del mismo, dada una situación deseada, también muestra la forma como el estudiante aprende. La evaluación le permite al estudiante pensar en su avance, establecer aspectos de mejora, crear estrategias para mejorarlos y continuar con su formación.

Según el Ministerio de Educación Nacional, la evaluación es una herramienta para promover el aprendizaje efectivo, la pertinencia de la enseñanza, la comprensión de las metas del aprendizaje y la motivación del estudiante (MEN, 2013). La evaluación de los aprendizajes es un *proceso*, que no sólo aporta información sobre el grado de apropiación de un aspecto específico del plan de estudios, sino que se constituye en una oportunidad de aprendizaje para profesores y estudiantes, sobre las disciplinas y las profesiones que los convocan en el proceso educativo, y sobre el proceso mismo.

En el presente documento se entenderá la evaluación como un proceso complejo de los aprendizajes, orientado al perfeccionamiento continuo de la vida y de las prácticas, que persigue la formación integral de los estudiantes, con miras a incidir positivamente en las transformaciones culturales, políticas y económicas que demandan los distintos contextos sociales.

Técnicas e instrumentos de evaluación

Las técnicas e instrumentos de evaluación proporcionan continuamente al docente, información relevante sobre el progreso del aprendizaje de los estudiantes; la técnica es más amplia que el instrumento permite diferentes procedimientos, estrategias e instrumentos. El instrumento apoya a la técnica y permite recoger información específica (Castillo y Cabrerizo, 2009, p. 328).

El instrumento para recoger la información deseada es la rúbrica analítica o matriz de valoración analítica, en la cual, “el profesor evalúa inicialmente, por separado, las diferentes partes del producto o desempeño y luego suma el puntaje de estas para obtener una calificación total” (Bujan, Recalde y Aramendi, 2011, citando a Moskal, 2000 y Nitko, 2001).

Principios de Evaluación

Los principios entendidos como las normas o ideas fundamentales que rigen el pensamiento o la conducta (Real Academia Española, 2015), son imprescindibles para la evaluación, pues orientarán la manera de actuar tanto del docente como de los estudiantes.

Santos (2010), sugiere doce principios de la evaluación: es un fenómeno moral, es un proceso, tiene un componente corroborador, es un proceso participativo, utiliza un lenguaje, utiliza elementos diversos, es catalizador, posee un contenido complejo y globalizador, requiere conocimiento del proceso de enseñanza-aprendizaje, tiene que servir para el aprendizaje, se debe realizar meta-evaluación y debe ser un acto colegiado.

Error sistemático

El error sistemático, es el que la mayoría de los estudiantes comete con frecuencia en el proceso de aprendizaje de algún tema (Abrate, Pochulu, y Vargas, 2006). Según Anijovich, R. y González, C. (2011), estos errores se pueden tratar planteando situaciones problemáticas que cuestionen las concepciones equivocadas, usando contraejemplos y colaboración de aquellos que ya los superaron.

METODOLOGÍA

Esta experiencia se vivenció con dos grupos de Métodos Cuantitativos para los Negocios, ofertados en Ibagué-Tolima y Armenia-Quindío en los meses de noviembre y diciembre durante el semestre B de 2014, en la modalidad a distancia.

El grupo de Ibagué era de 24 estudiantes: 15 mujeres y 9 hombres, y el grupo de Armenia era de 22 estudiantes: 9 mujeres y 13 hombres, en ambos con un rango de edad de 27 a 45 años, profesionales en diferentes disciplinas, principalmente contadores, administradores, economistas e ingenieros. Las tutorías fueron desarrolladas durante siete sábados continuos. El curso se realizó en 21 horas presenciales (Acuerdo Pedagógico: 2 horas, 5 encuentros presenciales de 3 horas cada uno y 2 momentos evaluativos de 4 horas) y 80 horas de trabajo independiente.

En los dos grupos se aplicaron los mismos contenidos programáticos y las mismas técnicas e instrumentos de evaluación.

RESULTADOS

A continuación se presentan algunos principios propuestos para la evaluación educativa en general y otros específicos para la evaluación escrita de Matemáticas financieras.

Principios generales de evaluación del aprendizaje:

Individual y grupal: La evaluación debe permitir una valoración del aprendizaje del estudiante cuando trabaja solo y cuando trabaja con otros, dada la diversidad de personalidades y estilos de aprendizaje, la evaluación no puede privilegiar solamente a aquellos que trabajan bien individualmente, es necesario considerar el aprendizaje y desenvolvimiento grupal.

Dentro y fuera del aula: La evaluación debe usar múltiples escenarios, que permitan el aprendizaje. Es muy útil realizar evaluación en escenarios reales y abstractos.

Utilización de múltiples instrumentos: El uso de múltiples instrumentos permite que los estudiantes complementen y confronten sus aprendizajes y que se abra el pensamiento hacia diferentes maneras de interpretación. Estos instrumentos se deben utilizar de acuerdo al tema que se esté tratando en el aula.

Valoración del proceso y del esfuerzo del estudiante: Si bien la evaluación debe ser objetiva, también es necesario considerar a cada persona como única, tener en cuenta sus dificultades en el aprendizaje y tratar de motivar y potencializar al estudiante para que las supere. Por lo anterior tratar al estudiante como ser humano y persona, le permite al profesor valorar el aprendizaje de cada uno de ellos.

Flexibilidad: La evaluación se debe realizar de acuerdo al curso que se esté dirigiendo, docentes y estudiantes pueden acordar al inicio del semestre los porcentajes que se asignen a cada instrumento o técnica de evaluación aplicados en el curso.

Principios de evaluación para el curso de Matemáticas Financieras:

Transparencia: debe ser conocida por todos los estudiantes al momento de entregar el instrumento, no antes o parcialmente a algunos estudiantes. Las dudas que se lleguen a solicitar durante la evaluación serán solamente de forma o enunciado; es decir que no se ayudará a resolver la evaluación a ningún estudiante. No se esconderán los pliegos o los resultados, es decir que se entregará el pliego revisado a cada estudiante.

Claridad y objetividad: Al calificar, se revisa el primer punto de todos los estudiantes, luego el segundo de todos y así sucesivamente, con el fin de observar las diferentes maneras de resolver el ejercicio y reducir tiempos en la revisión. Esta actividad se debe hacer sin mirar el nombre del estudiante, evitando que la nota quede sesgada a subjetividades derivadas de la relación docente-estudiante.

Los enunciados deben ser revisados varias veces y deben ser desarrollados por el docente y por algún par antes de llevarlos a los estudiantes; una vez aplicado el instrumento, se debe evaluar constantemente. El enunciado, debe ser claro, pero permitirle al estudiante desarrollar capacidades analíticas, organizativas, lógicas y de resultado.

Retroalimentación y evaluación oportuna: Se debe entregar en clase y personalmente el pliego revisado a los estudiantes, una vez los estudiantes lo tengan en la mano, los problemas deben ser resueltos y explicados por el profesor en el tablero, de manera que el estudiante pueda verificar los errores y aciertos y pueda reclamar en caso de alguna equivocación en la calificación. Los contenidos se deben evaluar al final de cada unidad, no se deben acumular temas y temas para hacer evaluación, pues esto dificulta el aprendizaje y los estudiantes se sentirían agotados y estresados en el momento del examen.

La evaluación debe estar relacionada con los contenidos y temas tratados en el aula: se deben evaluar los temas que han sido revisados, tratados, estudiados y discutidos en el aula. Por eso es necesario que se acuerden los temas que se tratarán en el curso, pues de allí saldrán los temas a evaluar. De lo contrario se puede generar inconformismo por parte de los estudiantes.

Condiciones para una evaluación continuada favorecedora del aprendizaje en el curso de matemáticas financieras

Con base en Gibbs y Simpson (2009), y en la experiencia evaluativa con los estudiantes analizados, se proponen aquí algunas condiciones que se consideran favorecedoras del aprendizaje en Matemáticas Financieras:

Planeación conjunta entre docentes y estudiantes: La evaluación planeada desde el primer día de clases, plantea temas, momentos y maneras de evaluar. También explica las razones o justificaciones de dicha evaluación. En matemáticas financieras, los estudiantes suelen olvidarse de las aplicaciones que tienen los cálculos que realizan en clase a la vida real. Por esta razón, argumentar claramente la importancia de cada proceso evaluativo y la utilidad del tema para su labor profesional, permitirá que ellos se sientan comprometidos desde un principio con su propio aprendizaje.

Crear un ambiente cómodo de confianza, cordialidad y motivación: Las condiciones del contexto, tanto físicas como emocionales son de gran importancia para favorecer el aprendizaje, cuando se dispone un aula

con apoyos audiovisuales, temperaturas adecuadas y espacios agradables, se dispone también mentalmente al estudiante para escuchar y reflexionar los asuntos que se tratan allí.

Por otra parte, el trato estudiante-profesor, determina la disposición y entusiasmo que se otorga tanto para aprender como para enseñar. En este sentido, los estudiantes deben sentir confianza en que su profesor conoce el tema, evalúa objetivamente y se interesa por enseñar de una manera respetuosa; así se logra recibir respuestas positivas y actitudes receptivas por parte de los estudiantes.

Realizar talleres individuales y extraclase: La matemática financiera requiere de un gran esfuerzo individual, por lo que se hace necesario evaluar talleres que se trabajen extraclase. Esto afianza la disciplina, el autoaprendizaje y la generación de preguntas que se resolverán en los encuentros presenciales.

Realizar talleres grupales en clase y extraclase: Los talleres grupales son muy importantes para favorecer el aprendizaje, pues algunos estudiantes logran entender mejor cuando sus compañeros les explican desde diferentes perspectivas y con diferentes palabras a las utilizadas por el profesor. Cuando estos talleres son en clase, permiten el acompañamiento del profesor y la resolución de dudas inmediatamente.

Cuando los talleres son extraclase, se contribuye a la resolución de preguntas y conflictos propios de un grupo, lo que conlleva también en ocasiones a un proceso investigativo o de indagación, búsqueda de otras fuentes diferentes al profesor y por consiguiente un mejor proceso cognitivo, así como el fortalecimiento del trabajo en equipo.

Porcentajes adecuados para los diferentes tipos de evaluación: Los porcentajes que se asignen a las actividades evaluativas deben ser acordes con la complejidad del proceso. Cuando se asignan porcentajes altos a actividades que no ameritan suficiente esfuerzo y no propician un aprendizaje significativo, los estudiantes asumen el curso y los temas de una manera más relajada y se disminuye la oportunidad de aprender.

Evaluar la evaluación: Generar un ambiente de autocrítica en los estudiantes, fomenta la madurez, responsabilidad y conciencia de que cada uno es responsable de sus resultados. Los estudiantes de matemáticas financieras, algunas veces tienen dificultades para analizar las situaciones o problemas financieros que se les pueden presentar y la respuesta usual utilizada por ellos es que el “profesor me puso xxx nota”, pero cuando se genera la autocrítica planteada desde el inicio del curso, los estudiantes tienden a asumir su responsabilidad y a decir “me saqué xxxx nota”.

Cuando se evalúa la evaluación, el estudiante tiene la oportunidad de retroalimentar, preguntar e indagar otras respuestas posibles; analizar sus errores y reflexionar acerca de estos; compartir y comentar con sus compañeros las causas de sus errores y todo lo anterior le permite aprender mejor.

Técnicas e instrumentos de evaluación aplicadas

En matemáticas financieras el uso de diversas técnicas e instrumentos es indispensable, dada la temática y la dificultad que se presenta en algunos estudiantes para apropiar y aplicar los métodos adecuados en cada caso.

En la tabla 1, se mencionan algunas técnicas e instrumentos de evaluación utilizados en matemática financiera y luego se amplía la presentación de una de ellas:

Tala 1: Técnicas e instrumentos de evaluación utilizados en matemática financiera

Técnicas	Instrumentos
De Observación	Sistema de categorías Listas de Control Diario de aula
De interrogación	Cuestionario Exámenes Pruebas objetivas
Otras técnicas	Rúbricas

Nota: Elaboración propia Basada en Castillo y Cabrerizo (2009)

Una estrategia utilizada para la evaluación de los temas en este curso, es la elaboración de un juego. Este juego se irá mejorando y agregando nuevos problemas a resolver, a medida que avance el semestre y se evaluará al final del curso. El instrumento para recoger la información deseada es la rúbrica analítica.

Los estudiantes organizados en grupos, deben inventar un juego de mesa, para que otros estudiantes en sus mismas condiciones puedan aprender el tema tratado. El juego debe contener al menos 15 problemas de matemáticas financieras para resolver y 10 preguntas de conceptos, diseñados por los autores del mismo. El juego se debe sustentar ante los compañeros, se debe hacer un manual o instructivo para los jugadores y se deben llevar las copias físicas del juego, necesarias para jugar en clase en grupos acordes a las características del mismo.

Rúbrica

El juego es una estrategia muy interesante, pues permite evaluar múltiples aspectos necesarios para la solución de problemas matemáticos usados en este curso. Para diseñar y resolver un problema, se requiere analizar, interpretar, tener creatividad, imaginarlo en la realidad, trabajar en equipo, preguntar, discutir, argumentar las respuestas y verlo desde diferentes perspectivas. En la tabla 2, se presenta la rúbrica diseñada por la autora, con base en un formato propuesto por Blanco (2008). Allí se organizaron los criterios de evaluación en tres grandes grupos: el diseño del juego, los problemas planteados y resueltos en el juego y la socialización del mismo. Se busca evaluar no solo las capacidades matemáticas, sino también creativas, de trabajo en equipo, de calidad en el juego diseñado y otros aspectos que involucren aprendizajes necesarios en la gerencia de proyectos.

Tabla 2: Rubrica para la evaluación del juego

Nota: Elaboración propia

Criterios	Vlr pto	Evaluación Cualitativa			Nota
De los problemas:		Se cumple Totalmente	Se cumple parcialmente	No se cumple	
a. Diseño y redacción de los problemas: los problemas están bien redactados, claros y brindan toda la información necesaria para ser resueltos.		Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	
b. Número de problemas y preguntas conceptuales: se cumple con la cantidad solicitada					
c. Complejidad de los problemas: Los ejercicios están al nivel de complejidad de problemas tratados durante el curso, para resolverlos se deben plantear ecuaciones, convertir tasas de interés, aplicar fórmulas de anualidades, valor presente y futuro, gradientes etc.	2,0				
d. Aplicación a la realidad: los problemas plantean una situación que se puede presentar en la vida real.					
e. El trabajo escrito que acompaña al juego, contiene la resolución de los problemas planteados en el mismo, sus procesos y sus respuestas son correctas. Además se encuentra bien presentado y organizado.					
Del juego:					
a. El juego es divertido e interesante: Los estudiantes sienten curiosidad y deseos de jugar		Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	
b. El juego propicia el aprendizaje y la interacción de los jugadores: se propone la resolución de problemas de matemáticas financieras, la respuesta a preguntas conceptuales y se mezcla con las características propias de un juego, como pagar penitencia, empezar de nuevo, ganar premios, encontrar pistas o tesoros etc.	1,8				
c. Instructivo: el juego se explica en un manual para el usuario y es fácil de entender.					
De la Socialización:					
a. El juego está bien presentado: las fichas o cartones son adecuadas para su manejo y uso, es llamativo y colorido		Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	Espacio para anotaciones y justificación de la nota	
b. La explicación oral del juego: es clara y motivadora					
c. El trabajo se entregó a tiempo y con todas las indicaciones: de 2 a 6 páginas, a espacio y medio, letra arial 12, márgenes simétricas de 2.5, con tener citas y referencias según normas APA.	1,2				
d. Trabajo en equipo y manejo del tiempo: En la presentación intervienen y participan todos los integrantes del grupo. La presentación del juego no se excede de 15 minutos.					
e. Se asume una actitud positiva ante sugerencias de mejoramiento y se realizan los ajustes recomendados.

Errores sistemáticos que se presentan en el curso y estrategias para superarlos

En el curso de matemáticas financieras, algunos de los errores sistémicos que se presentan con frecuencia, y que fueron visualizados en los dos grupos de estudiantes de la Especialización en Gerencia de Proyectos del Instituto de Educación a Distancia (IDEAD), se explican a continuación:

Errores de formulación de una ecuación: los estudiantes tienen dificultades al plantear la ecuación, en ocasiones porque piensan matemáticamente en términos de fórmulas y números y no conceptualmente. Si los estudiantes tienen claros los conceptos de valor de dinero en el tiempo, podrán primero realizar un buen flujo de caja gráfico y luego representar el momento en el tiempo a donde se quieren llevar los datos, con esto ya pueden plantear una ecuación o igualdad.

Tomar las tasas de manera porcentual: como es natural el ser humano tiende a tomar tasas de interés de manera porcentual, pues generalmente se representan así. Sin embargo para hacer uso de las fórmulas utilizadas en matemáticas financieras, es necesario que las tasas se expresen de manera numérica y no

porcentual. Los estudiantes generalmente al comienzo del curso cometen el error de utilizar dentro de la fórmula la tasa expresada porcentualmente, lo que genera graves consecuencias en los resultados.

Ver las fórmulas y los números y no analizar si los resultados son coherentes al problema planteado: los estudiantes generalmente se centran en los números, las fórmulas y la calculadora, sin poner atención y lógica a los resultados que obtienen.

Por ejemplo si me prestan 10 millones hoy para devolverlos en 5 años con una tasa anual del 12%, y quiero saber cuánto dinero tengo que entregar, el resultado correcto aplicando las fórmulas es \$17.623.416,83. Por sentido común, se espera que la suma que se debe obtener es mayor, porque estoy pagando intereses y porque el valor que estoy determinando está en el futuro y se presenta un efecto generado por la inflación. Además si hacemos cálculos simples mentalmente podríamos pensar que 5 años al 12% significan más del 50%, de crecimiento del valor, lo que significa que tendremos que pagar en intereses más de 5 millones (que es el 50% del valor prestado). Sin embargo, en muchos casos, los estudiantes para este problema obtienen resultados, por ejemplo de 12 millones y lo asumen como correcto.

CONCLUSIONES

La evaluación es fundamental para el aprendizaje de las matemáticas financieras, por lo tanto debe entenderse como un proceso que le permita al estudiante y al docente mejorar su formación y actitud en este campo. Los instrumentos de evaluación se asimilan de diferentes maneras en cada grupo de estudiantes y en cada estudiante, dadas las diferencias de edad, género, profesión, estilos de aprendizaje, contexto, etc. Los errores sistémicos, se presentan principalmente por la falta de análisis y de aterrizar las cifras a una realidad imaginaria, que le permitiría al estudiante aplicar su pensamiento lógico y obtener mejores resultados. La atención y estrategias que se planteen para disminuir estos errores, son retos para el profesor y le permiten evolucionar en su actividad docente. El aprendizaje está lleno de experiencias que por su condición traen aciertos y desaciertos, pero siempre que se propicie la reflexión se puede potenciar el aprendizaje a partir de las respuestas que se den a cada resultado, de los nuevos pensamientos e interpretaciones y de las retroalimentaciones.

La creatividad es fundamental en el proceso de aprendizaje y enseñanza, incluido en este proceso la evaluación. Los mecanismos de observación, deben ir más allá de lo visible en el aula. La evaluación entonces llega a la subjetividad, a las maneras propias del individuo que utiliza para poder responder a las exigencias de la disciplina y las maneras propias del docente para percibir su progreso y aprendizaje. Diseñar un juego, le permite al estudiante desarrollar múltiples habilidades y pensar de manera diferente las matemáticas financieras, es decir, desde quien se plantea problemas y no desde el estudiante que se dedica a solucionar los problemas que otros le plantean. La rúbrica puede ser muy útil para la evaluación objetiva, formativa e integrada.

Por ser un curso de la modalidad a distancia, se observó un trabajo colaborativo entre los estudiantes. Se observa también que nuevos tipos de instrumentos utilizados generan inquietudes, pero a la vez un gran entusiasmo por mostrar un buen trabajo y lograr aprender para enseñarle a sus otros compañeros.

RESUMEN

El Cuadro de Mando Integral (CMI) es una valiosa herramienta de gestión, con carácter general, los ejemplos de éxito en su implementación están asociados a las empresas de gran dimensión. En el entorno actual y en un país como México, en el que el ámbito empresarial está integrado mayoritariamente por Pequeñas y Medianas Empresas (PYMES), la importancia económica y social de éstas empresas es innegable. Así, el presente artículo tiene como objetivo proporcionar algunas ideas acerca de qué factores influyen en la aplicación del CMI en las PYMES, qué ventajas o inconvenientes proporciona su empleo, qué perspectivas son las más adecuadas, qué caracterizan a las empresas que lo adoptan, cuál el grado de conocimiento y utilización en PYMES en Mexicali, así como qué causas de abandono o no implantación se identifican. Para averiguar si dichas organizaciones conocen y están a adoptar el CMI, hemos generado un cuestionario a 45 PYMES de la localidad. Los resultados obtenidos permiten concluir que aunque la mayoría de los encuestados conoce el CMI, su utilización en dichas organizaciones es muy reducida.

PALABRAS CLAVE: Cuadro de Mando Integral, PYMES, Gestión Estratégica.

THE SCORECARD AS A MANAGEMENT TOOL STRATEGIC IN SMALL AND MEDIUM ENTERPRISES IN MEXICALI, B. C.

ABSTRACT

The Balanced Scorecard (BSC) is a valuable management tool, in general, examples of successful implementation are associated with large undertakings. In the current environment and in a country like Mexico, where the business sector is mostly composed of small and medium enterprises (SMEs), the economic and social importance of these companies is undeniable. Thus, this article aims to provide some ideas about what factors influence the implementation of BSC in SMEs, what advantages or disadvantages provides employment, what prospects are best suited, which characterize the companies that adopt, what knowledge and use in SMEs in Mexicali grade and what causes of abandonment or no implementation are identified. To find out if these organizations known and to adopt the BSC, we generated a questionnaire to 45 SMEs in the locality. The results obtained indicate that although the majority of respondents know the BSC, use in these organizations is very low.

INTRODUCCIÓN

Las PYMES representan uno de los papeles más significativos en la economía mundial no solo en cuanto a la generación de empleos sino también en lo que respecta a la producción de bienes y prestación de servicios. Sin embargo, estas empresas enfrentan una cada vez mayor competencia, derivada del proceso de globalización de los mercados y de la evolución tecnológica, que han alterado los factores críticos de éxito y, en consecuencia, han provocado mayores amenazas a su supervivencia. Son las empresas con menos recursos, desconocen su mercado, a su cliente, su competencia, sus fortalezas y debilidades, tanto como las amenazas del entorno, es muy posible, que también dejen de ver sus oportunidades. A este aspecto podemos añadir la inexperiencia de los gestores como emprendedores y líderes, su falta de conocimiento de los negocios (y sus costes) y el hecho de que disponen de informaciones no estructuradas e inadecuadas para la toma de decisiones. En el caso concreto de México, la gran mayoría de empresas son de pequeño y mediano tamaño y están administradas normalmente por el propietario o por su familia. En muchas de estas empresas no está implantada una cultura de difusión de estrategias, sin embargo los usuarios de la información contable demandan cada vez más información de carácter estratégico. Derivado de eso, se evidencia la necesidad de adopción de nuevas herramientas de Gestión, en especial del Cuadro de Mando Integral (CMI), que ayuden a la evaluación del desempeño y la toma de decisiones estratégicas, permitiéndoles adaptarse a los cambios del entorno interno y externo y a las exigencias de un mercado cada vez más globalizado.

REVISION LITERARIA

La Gestión de las Pymes y el CMI

Las PYMES constituyen uno de los motores generadores de empleo y riqueza, teniendo un papel fundamental en la economía mundial y en particular en México donde juegan un papel protagonista del desarrollo del país, esto como consecuencia de su elevado peso relativo en el tejido empresarial. En efecto, su contribución es esencial si pensamos en términos de volumen de transacciones, de valor añadido, flexibilidad y capacidad de adaptación a las oscilaciones coyunturales. Según Lopes [1999], a pesar de la extrema diversidad y de que no existe una definición específica de esta categoría de empresas, existen algunas características comunes a todas ellas, entre las que señala la identidad entre propiedad y dirección de la empresa; la fuerte relación entre la familia y la empresa; el carácter personalizado de las relaciones con los clientes y la disponibilidad limitada de medios financieros. De una forma semejante, Russo [2009] y Andersen et al. [2001] señalan un conjunto de particularidades que diferencian a las PYMES de las grandes organizaciones empresariales, en concreto el hecho de que los propios gestores pueden ser vistos simultáneamente como socios/accionistas; la simplicidad inherente tanto a su estructura organizativa (más plana) como a nivel de los procesos de gestión, donde la delegación de poderes y funciones es prácticamente inexistente; el predominio de empresas no cotizadas; la escasez de recursos y la consiguiente dificultad para acceder a tecnologías y sistemas de gestión, así como a personal especializado (que exige elevada remuneración); el bajo poder para negociar con bancos y con proveedores y clientes de gran dimensión; la ausencia de información pública y auditada; la dependencia, por regla general, de un elemento clave: el empresario, quien garantiza la supervivencia y continuidad empresarial; y, finalmente, el hecho de que su ámbito de actuación es esencialmente regional y nacional.

Remontándonos a la introducción del CMI por Kaplan y Norton en 1992, como un instrumento de medición del desempeño y de planificación de las actividades estratégicas, los ejemplos de éxitos en la implementación del mismo recogidos en la literatura se refieren, en su mayor parte, a las empresas de gran dimensión, sobre todo a las empresas multinacionales. Según Fernandes et al. [2006], a pesar de que Kaplan y Norton argumentaron la aplicabilidad de su modelo en las PYMES, no ofrecieron soluciones prácticas específicas en el sentido de facilitar dicha implementación en un entorno donde la limitación de recursos y

la pericia son factores clave. Así, el CMI se convirtió en un concepto ambiguo, lo que llevó a los autores a proponer una estructura y un enfoque metodológico para la implementación del CMI en PYMES, enfatizando que una estructura metodológica robusta, el conocimiento correcto del concepto de CMI y su utilidad para la empresa son las claves de éxito en su implementación en una PYME.

En opinión de Andersen et al. [2001], el recurso a la planificación estratégica puede mejorar el desempeño de las PYMES, asegurando el equilibrio entre objetivos operativos a corto plazo y objetivos estratégicos a largo plazo. El CMI, por sus características, es precisamente una herramienta que puede permitir (y favorecer) esta reorientación estratégica en el desempeño de este tipo de unidades empresariales. Además, la implantación del CMI en las PYMES tiene sentido en la medida en que, a semejanza de las grandes empresas, las PYMES también tienen necesidad de una gestión estratégica: definir una dirección estratégica; conocer el negocio y el entorno y establecer prioridades, pues de otra forma no les será posible identificar, analizar y alcanzar objetivos estratégicos. A este respecto entendemos que el valor añadido para las PYMES de un CMI reside precisamente en la implementación y comunicación de la estrategia corporativa, ya que distintos autores han señalado que las PYMES no tienen una clara estrategia corporativa. Como señalan Kaplan y Norton [2001], el primer principio de las organizaciones basadas en la estrategia es la traducción de la estrategia definida por la alta administración en términos operativos, formulando relaciones causa-efecto entre los objetivos estratégicos. Se pretende que la traducción de la estrategia en un conjunto de indicadores informe a la empresa sobre la realización de los objetivos y sobre las causas de los resultados obtenidos. Ello será posible con el recurso a mapas estratégicos, que representan una arquitectura genérica, lógica y completa para la descripción de la estrategia, en la medida en que lo que no puede ser gestionado no puede ser medido y que no se puede medir aquello que no se puede describir. De esta forma, si la estrategia puede ser descrita de forma lógica y sistematizada, a través de mapas estratégicos, aumentan las hipótesis de éxito en su implementación. Así, para comunicar los objetivos de la dirección, será necesario traducirlos y hacerlos comprensibles por los diferentes responsables implicados en la marcha de la empresa.

Para la implementación del CMI hay que considerar que se empieza con la traducción de la estrategia de una unidad de negocio en unos objetivos estratégicos específicos, destacando aquellos procesos que son más decisivos e importantes para alcanzar una actuación realmente extraordinaria de cara a los clientes y accionistas. Partiendo de esto, se clarifica los objetivos estratégicos, aspecto crucial en la medida en que, normalmente, las afirmaciones contenidas en la misión organizacional tienden a ser poco claras y es difícil alcanzar un consenso total sobre la importancia relativa de los objetivos estratégicos, muchas veces relacionado con la historia funcional y la cultura de la organización y con los intereses específicos de cada individuo. En muchas organizaciones hay muy poca comprensión compartida respecto a los objetivos generales y a la contribución e integración de diferentes unidades funcionales. Así, la clarificación y traducción de la estrategia en un conjunto integrado de objetivos e iniciativas específicas, tanto a corto como a largo plazo, capaces de describir los factores críticos de éxito y de reflejar la forma con que la PYME pretende transformar activos intangibles en activos tangibles a través de relaciones causa-efecto, intenta crear un consenso acerca de la visión y de la estrategia de la PYME [Jordan et al., 2011; Kaplan y Norton, 1997]. Para Russo [2009], la caracterización del CMI como herramienta de articulación e implementación de la estrategia facilita su implementación en las PYMES, ya que éstas presentan dificultades en la implantación de los principios de gestión estratégica. Así, esta herramienta facilitará la descripción de la visión y los objetivos estratégicos, resaltando que el gestor en las PYMES tiene un contacto directo con las áreas operativas de la organización por lo que el CMI deberá ser estructurado y centralizado en el nivel jerárquico más elevado, sin desagregarlo a otros niveles jerárquicos inferiores. Añade, además, que los puntos fuertes de las PYMES deberán ser salvaguardados de la vertiente formalmente compleja que caracteriza al CMI original.

Según Alonso [2004], el CMI es una herramienta útil para conocer el rendimiento de las PYMES. De igual manera, para Sabaté y Joval [2002: 418], el CMI “implantado como herramienta para disponer de

información para la gestión de la empresa permite, al tiempo que identificar las desviaciones, (...) el examen de los resultados obtenidos de los indicadores que se establezcan para la gestión de la empresa, y establecer las medidas oportunas en caso de que no fuera del todo correcto”. En definitiva, de acuerdo con Pesantes y Faggioni [2002], el CMI implica la utilización de indicadores de control, financieros y no financieros, que se relacionan estrechamente con la misión y estrategia de la empresa, lo que puede ayudar a corregir las deficiencias administrativas que causan el fracaso a medio y largo plazo de las PYMES.

Las Perspectivas del CMI en las Pymes

Perspectiva Financiera: La perspectiva financiera recoge todas aquellas medidas o indicadores que tradicionalmente han sido utilizadas por el sistema informativo contable Para reflejar el grado en que la empresa está alcanzando sus objetivos financieros, así como la cuantificación económica de las decisiones tomadas. Para Fernández-Feijóo et al. [2003: 46] “el CMI hace explícitos los objetivos financieros, adaptándolos a las particularidades del entorno competitivo, estrategia específica y fase de la vida de los productos o servicios ofertados por las PYMES”. García et al. [1999] proponen un conjunto de medidas financieras para las PYMES, siendo las principales:

- Agilizar el proceso de recepción de pedidos;
- Reducir los desfases entre plazos de cobro y pago a través de la mejora del poder de negociación con clientes y proveedores;
- Atender primero a los pedidos que aporten más rentabilidad al negocio;
- Evaluar las diferentes opciones de financiación a corto plazo y gestionar adecuadamente el disponible bancario;
- Elaborar presupuestos de tesorería de manera formalizada.

Paralelamente, el CMI debe posibilitar la vinculación de los objetivos financieros a la estrategia organizativa, suministrando de forma comprensible a los miembros de la organización los indicadores financieros relevantes para la ejecución de la estrategia. Además de permitir ajustes entre diferentes unidades de negocio y unidades en distintas fases de sus ciclos de vida, el CMI explicitará los objetivos financieros y evaluará la gestión del riesgo operativo y financiero de la PYME [Kaplan y Norton, 1997].

Perspectiva De Clientes: La perspectiva de clientes refleja la creación de valor desde el punto de vista del cliente, considerado el eje central de cualquier organización, es decir, busca medir la percepción de la actuación de la empresa por parte de sus clientes. García et al. [1999] opinan que las PYMES, en general, tienden a prestar poca atención a los atributos del producto y a la forma en que se debería actuar sobre ellos. Así, es fundamental definir prioridades estratégicas por segmentos y propuestas de valor basadas en los atributos de los productos o servicios ofertados por la empresa, en la imagen de la misma y en sus relaciones con los clientes y en la propuesta del valor añadido que la PYME aporta a sus clientes en la satisfacción de sus necesidades [Fernández-Feijóo et al., 2003; García et al., 1999]. En otras palabras, el análisis del valor añadido es crucial en las PYMES puesto que suministrará información para el desarrollo de ventajas competitivas. Las exigencias de los clientes y el cambio constante de su perfil obligan a las PYMES a reflejar sobre sus necesidades y a adaptar los procesos productivos a esas necesidades, identificando clientes y segmentos de mercado que representan una fuente de rendimiento y que aporten positivamente para el desempeño financiero de la organización, desarrollando productos más diferenciados y personalizados. Para Olve et al. [2002], esta perspectiva, al describir el camino a tomar en la creación de valor para los clientes, representa el “corazón del CMI”, una vez que si la empresa falla en la oferta de productos y servicios dentro de las exigencias de satisfacción del cliente, en la retención y captación de nuevos clientes, su supervivencia estará amenazada. De esta forma, la PYME debe dedicar especial atención a todos los cambios registrados en el comportamiento de los clientes, mostrándose apta a responder a esos cambios.

Perspectiva De Procesos Internos: La perspectiva de procesos internos refleja la cadena de valor de cada empresa, la cual está formada por un conjunto de procesos que son la fuente de ventajas competitivas, es

decir, a través de los cuales la organización crea valor para sus clientes y produce los resultados financieros deseados. En lo que respecta a esta perspectiva, Fernández-Feijóo et al. [2003: 48] afirman que “el logro de un buen conocimiento de los procesos internos parece, a priori, más sencillo en las PYMES que en una gran empresa, dado su menor número y complejidad. Sin embargo, el interés por establecer un análisis sistemático de las características de coste, calidad, tiempo y actuación, no se hizo patente en este tipo de empresas hasta poco tiempo”. El enfoque del CMI ofrece medios para visualizar la organización como una cadena de procesos integrados y no como un conjunto de departamentos separados. En este sentido, la perspectiva interna supone la identificación de los procesos internos críticos para generar valor y alcanzar la excelencia, debiendo incluirse tanto medidas de procesos como de resultados, capaces de conducir a la realización de los objetivos de los clientes y accionistas, es decir, esta perspectiva conlleva a la identificación previa de los procesos clave en la generación de valor para los grupos de mayor interés para la empresa: los accionistas y los clientes [Kaplan y Norton, 2001].

Perspectiva De Aprendizaje y Crecimiento: La perspectiva de aprendizaje y crecimiento busca la evaluación de la capacidad de innovación y aprendizaje de una organización en base a las inversiones realizadas en personal, sistemas y procedimientos. Como las expectativas de los clientes están en constante cambio, las PYMES son presionadas a hacer mejoras continuas, siendo fundamental la habilidad de las personas en aprender e innovar, tanto en términos individuales como en términos colectivos. Según Kaplan y Norton [2001] es improbable que las empresas sean capaces de alcanzar sus metas a largo plazo para los clientes y procesos internos utilizando las tecnologías y capacidades actuales. Así, los objetivos financieros, de clientes y de los procesos internos sólo serán alcanzados si la PYME posee una infraestructura que apoye esos objetivos y que provenga de las personas, sistemas y procedimientos organizacionales, es decir, las perspectivas de los clientes y de los procesos sólo constituirán factores críticos de éxito en el caso de que la organización forme a sus recursos humanos e invierta en Tecnologías de Información (TI). Es precisamente en este contexto donde el CMI encaja perfectamente, ya que las metodologías de evaluación del desempeño que lo han antecedido no abordaban claramente la importancia del proceso de aprendizaje para el éxito organizacional.

Los factores que influyen y miden la perspectiva de aprendizaje y crecimiento son los menos desarrollados tanto en PYMES como en grandes empresas, ya que el reconocimiento de los recursos humanos como un recurso de la organización aún es reciente, debiéndose invertir en la medición de su experiencia, conocimientos y capacidad para desarrollar nuevas capacidades al servicio de la organización. Importa subrayar que la perspectiva de aprendizaje y crecimiento refleja la base para la construcción de un CMI excelente tanto en las PYMES como en las grandes empresas, una vez que se orienta hacia la formación y mejora de las habilidades de los empleados y a la calidad de los sistemas de información utilizados.

A tenor de lo expuesto, las perspectivas del CMI son las distintas ópticas desde las que puede considerarse la actuación de la empresa. En otras palabras, son las distintas dimensiones críticas o claves de la organización en base a las cuales se puede analizar/evaluar el desempeño organizativo. Estas perspectivas establecerán los parámetros necesarios para la gestión de la empresa y deberán permitir el equilibrio entre: (a) objetivos a corto, medio y largo plazo; (b) medidas externas (centradas en los accionistas y clientes) e internas (centradas en los procesos críticos de innovación, aprendizaje y crecimiento); (c) resultados deseados e inductores de rendimiento (vectores del desempeño); (d) medidas objetivas y subjetivas; y (e) medidas financieras y no financieras. La figura 1 resume las cuatro perspectivas sugeridas por Kaplan y Norton y las cuestiones más importantes para cada una de ellas. Importa subrayar que las perspectivas básicas propuestas se deben ver sólo como un guion o como un modelo, no siendo por eso obligatorias y únicas. Parafraseando a Kaplan y Norton [1996], no se deben ver como una “camisa de fuerza”. De esta forma, serán las circunstancias del sector y la estrategia de la unidad de negocio las que determinarán la necesidad de agregar una o más perspectivas complementarias.

La Implementación Del CMI En Las Pymes: Ventajas y Aspectos Críticos

Bastos y Gomes [2009] han analizado los factores que influyen en la decisión por parte de las PYMES de implementar y utilizar sistemas de medición del desempeño. Para los citados autores, dichos factores tienen que ver en gran medida con la convicción por parte de las PYMES de que los factores determinantes de su éxito competitivo son la excelencia técnica del producto y la adopción de procesos de decisión rápidos. Para Thakkar et al. [2009], las ventajas de las PYMES tienden a ser de comportamiento, haciendo hincapié en la diferenciación cualitativa y la innovación. Se centran más en los recursos financieros, en el corto plazo y en inculcar una mejor comunicación e incentivos para la explotación del conocimiento interno. En este sentido, para Russo [2009] y McAdam [2000] existe un conjunto de factores que favorecen la implementación eficaz del CMI en las PYMES:

- Definición clara de la estrategia organizacional;
- Mayor atención prestada a los recursos y a las infraestructuras necesarias para la implementación de los planes estratégicos;
- Alineamiento de la estrategia definida, las medidas y los procesos de desempeño a las mejoras registradas en los resultados y a los procesos operativos, en virtud de un modelo de medición más riguroso;
- Aumento del rigor en los procesos y en la orientación de las PYMES, con respeto por el carácter informal de las relaciones entre colaboradores y clientes;
- Mejora en el alineamiento de la organización a las necesidades de los clientes;
- Mayor implicación y participación de los trabajadores, apostando por su calificación, reconocimiento y satisfacción y desarrollando iniciativas en términos de innovación organizacional (la perspectiva de aprendizaje y crecimiento ya no se deja en segundo plano);
- Vinculación del desempeño a un sistema de incentivos y recompensas;
- Comunicación de la estrategia por toda la organización;
- La centralización del poder en la alta dirección facilita la implementación del CMI por la influencia ejercida por aquella a nivel de la reorientación empresarial de cara a la creación de valor a largo plazo.

Como principales ventajas de la adopción del CMI en las PYMES se señalan el aumento de su capacidad de respuesta a los cambios del entorno en el que operan; la obtención de consenso, compromiso y cooperación entre sus miembros; la mejora de los procesos internos, incrementando su rendimiento operativo; las relaciones con clientes, proveedores, empleados y la comunidad quedan reflejadas en el CMI; y la promoción de patrones de calidad y mejora en la cooperación entre diferentes equipos de trabajo, fortaleciéndose, asimismo, la cultura organizativa [Russo, 2009; Teixeira y Marques, 2006; Fernández-Feijóo et al., 2003; McAdam, 2000; García et al., 1999; Jennings y Beaver, 1997]. Para Carpinetti et al. [2008], la implantación y manutención de sistemas de medición ayuda a las PYMES a centrarse en los factores claves del desempeño y a estimular el proceso de toma de decisiones basado en el análisis de la información. A tenor de lo expuesto, frente a las ventajas citadas anteriormente, Russo [2009], Russo y Martins [2005] y McAdam [2000] hacen referencia a los siguientes problemas asociados a la implementación del CMI en las PYMES:

- El enfoque formal y complejo del CMI puede limitar la flexibilidad que caracteriza a la mayoría de las PYMES en el desarrollo personalizado de sus negocios con los clientes;
- Las especificidades de las PYMES no siempre son compatibles con la significativa inversión de medios humanos y financieros necesarios para la implantación del CMI;
- El elevado tiempo que se necesita para una efectiva implementación del CMI contrasta con la falta de disponibilidad de tiempo para la evaluación del desempeño organizacional por parte del empresario/gestor de las PYMES y/o la práctica ausencia de empleados especializados en estos asuntos;
- La inestabilidad, incertidumbre y riesgo del entorno que rodea las PYMES dificulta la integración de las estrategias previamente definidas;
- La prevalencia en la mayoría de las PYMES de una visión a corto plazo en detrimento del largo plazo;

- El excesivo énfasis en la medición del desempeño de los empleados, quienes pueden sentirse limitados en lo que afecta a la realización de su trabajo.

Objetivos

Como se ha comentado con anterioridad, además de proporcionar algunas ideas acerca de qué factores influyen en la aplicación del CMI en las PYMES, qué ventajas o inconvenientes proporciona su empleo, qué perspectivas son las más adecuadas y qué caracterizan a las empresas que lo adoptan, este trabajo pretende obtener evidencia empírica sobre el conocimiento y utilización del CMI en PYMES de Mexicali, así como identificar las principales razones inherentes a la no adopción o abandono del CMI en dichas organizaciones.

METODOLOGÍA

Como medio básico para la recolección de los datos se optó por la realización de una encuesta a través de un cuestionario a una muestra de 45 PYMES ubicadas en Mexicali, B.C. Las cuestiones fueron agrupadas en bloques en función del tema o asunto al que se referían. Las preguntas eran principalmente cualitativas, aunque en menor grado también se incluyeron algunos aspectos cuantitativos. Así, el cuestionario estaba integrado esencialmente por preguntas cerradas, mayoritariamente de elección múltiple y dicotómica, con aplicación de escalas del tipo nominal y ordinal para ser posible codificar las respuestas (como, por ejemplo, escalas tipo Likert). Se intentó recoger las opiniones de los encuestados sobre el tema objeto de estudio y se han incluido también, en menor medida, algunas cuestiones abiertas para identificar la percepción de los encuestados respecto al CMI, complementando la respuesta obtenida en las cuestiones cerradas. La primera parte incluye cuestiones relativas a las características específicas de las organizaciones a analizar, identificando algunas características generales de las empresas, tales como la región donde actúan, su dimensión, edad/fecha de constitución, caracterización jurídica y control, si poseen alguna certificación (de calidad y/o medioambiental). La segunda parte del cuestionario se destinó a obtener información sobre las características del mercado y el entorno organizativo. Se buscó recabar información respecto a la estructura de la organización; el grado de incertidumbre percibida del entorno; si la organización posee una estrategia organizativa definida y sigue un proceso de planificación estratégica así como si la misión, visión y objetivos estratégicos están claramente definidos. Se consideró una la tercera parte del cuestionario a obtener información sobre el CMI. Los datos recogidos se han tratado estadísticamente con recurso al programa SPSS.

RESULTADOS

La caracterización de las empresas de la muestra en función de la antigüedad año de fundación, se realizó estableciendo varias franjas de edad. Tal y como se puede observar, casi la mitad de las PYMES se encuentran dentro de alcanzar la primera década de antigüedad. En este sentido la empresa más “joven” tiene 1 año. Siendo interesante en el sentido de que las PYMES que superan los primeros 4 años, pueden considerarse que generaran permanencia.

Es relevante el conocer si las PYMES estudiadas llevan a cabo un proceso de planeación dentro de sus actividades, siendo de relevancia el hecho de que si consideran la planeación como fundamento de su estilo de trabajo, teniendo a su favor el hecho de conocer lo relevante y trascendental que esto es para el buen funcionamiento de la empresa.

Llevar a cabo planeación**Antigüedad de la empresa****Formalidad de la planeación****Uso de herramientas estratégicas****Utilizan herramientas estratégicas****Competencia del entorno****Conocimiento del CMI**

En el instrumento realizado, la planeación se dividió en cuatro niveles: sofisticada, formal, informal y sin plan. El criterio utilizado se basó en: (1) si el plan se encontraba por escrito; y (2) si cumplía con los requisitos de una planeación formal.

Los resultados muestran que solo el 20% de las PYME tienen una planeación sofisticada y el 23% cuenta con una planeación formal.

Sin embargo, el 17% no planea y el 40% lo hace de manera informal, es decir, no tiene un plan por escrito. Al realizar un análisis más profundo de los datos, los resultados de la figura 2 sugieren que puede existir mayor probabilidad de mejorar el rendimiento de la empresa mediante la aplicación de un proceso formal de planeación, que a través de un proceso emergente e informal. También se encontró que las empresas que tienen una planeación sofisticada tienen un rendimiento mayor que las que planean de manera informal o no planean.

Conociendo que si llevan a cabo la planeación dentro de la empresa, aun cuando esta sea de manera informal en la gran mayoría de los casos, también es crucial el conocer si utilizan herramientas estratégicas como apoyo a su desempeño, obteniendo que el 60% de las empresas objeto de estudio si implementan dichas herramientas, partiendo de este cuestionamiento fue de interés conocer qué tipo de ellas son las más utilizadas.

En cuanto a la utilización de herramientas Estratégicas se encontró que las herramientas más utilizadas son: el análisis de recursos y capacidades de la empresa, con 20%; el análisis de fuerzas, oportunidades, debilidades y amenazas (FODA), con 17%; y el análisis de cultura organizacional (17%). Los resultados del análisis muestran que las PYME que utilizan en mayor medida estos instrumentos tienen una planeación estratégica más formales. Estos resultados refuerzan otros estudios que han encontrado que las empresas que emplean herramientas estratégicas experimentaron un efecto positivo y significativo entre la formalidad de la planeación, mayor eficacia en su ejecución y un rendimiento superior. Sin embargo, se aprecia un uso limitado de estas herramientas, particularmente las que se relacionan con aspectos estratégicos.

De igual manera se puede observar el grado de competencia del entorno/mercado donde opera la organización. La casi totalidad de las organizaciones consideran que se enfrentan a un entorno/mercado bastante competitivo.

En lo que respecta al conocimiento de la herramienta de gestión CMI por parte de los encuestados, se pudo observado que, con carácter general, las organizaciones conocen el CMI, lo que indica que dicha herramienta divulgada entre los empresarios. Sin embargo, también destaca el importante porcentaje de encuestados en las PYMES que manifestaron desconocer el CMI.

CONCLUSIONES

Es generalmente aceptado que las PYMES son el núcleo competitivo no solo de la economía de México sino también de la economía mundial. Limitaciones no solo de orden financiera sino también a nivel de los sistemas de información y de recursos humanos calificados, de la definición de la estrategia (o la ausencia de la misma) y de procedimientos para su divulgación en una organización, así como la poca importancia atribuida a la planificación formal y estratégica y a la inclusión de medidas de carácter no financiero y la inexistencia de una articulación entre la estrategia y los resultados logrados son factores que caracterizan y limitan la actuación de muchas PYMES y pueden llevar a su fracaso. Además, las PYMES se caracterizan por la capacidad de respuesta rápida, eficiente y variada a los cambios producidos en el entorno interno y externo de la organización debido a la simplicidad y a la poca jerarquía en sus estructuras. Todo esto hace que estas empresas merezcan una atención especial, no debiendo ser consideradas secundarias en comparación con las empresas de mayor dimensión. Una opción viable es el CMI como una herramienta

que sirve de apoyo a los dueños de las PYMES, al proporcionarles un conjunto de informaciones que ayudan a la toma de decisiones. Así, el CMI es una herramienta que ayuda las organizaciones, independientemente de su dimensión, a satisfacer las expectativas de sus colaboradores y a articular y comunicar los objetivos estratégicos y evaluar su ejecución. Por consiguiente, la forma de propiedad y la estructura de gestión son factores contingentes decisivos en la utilización de sistemas de gestión del desempeño formalizados como el CMI.

Algo importante que se debe destacar es el hecho de que las empresas familiares tienden a basarse más en la intuición y en contactos personales e informales que en planes formales de medición y gestión del desempeño. Por lo tanto la gestión de las empresas administradas exclusivamente por su propietario es significativamente diferente, ya que los gerentes-propietarios de pequeñas empresas tienden a tener estilos de gestión más informales y más personalizados. Algo que facilita la implementación del CMI es el reducido número de niveles jerárquicos y la concentración de la toma de decisiones en la alta dirección pueden llevar a una menor utilización de dicha herramienta, considerando que las organizaciones con un mayor grado de formalización y diferenciación vertical tienden a adoptar herramientas de gestión más innovadoras. Además, a medida que aumenta el grado de descentralización los sistemas de información de gestión deben volverse más sensitivos y sofisticados, aumentando la necesidad de controles formales en sustitución de los controles informales.

En efecto, el CMI es una herramienta propuesta en la literatura como un medio para responder a los nuevos desafíos planteados por el entorno cambiante al que se enfrentan las organizaciones contemporáneas. Es precisamente en escenarios de incertidumbre donde el CMI se revela como más necesario, dada la necesidad de la empresa en anticiparse y reaccionar a los cambios en el entorno. Teniendo en cuenta el elevado conocimiento y la amplia divulgación del CMI es previsible un crecimiento de su implantación en los próximos años. Además, atendiendo a las respuestas obtenidas, podemos afirmar que, en general, las organizaciones entienden perfectamente el concepto y están en condiciones de llevar a cabo con éxito la implementación del mismo. Sin embargo, considerando que las mismas no disponen de muchos recursos ni de personal especializado y que el propietario, en general, acumula funciones administrativas y operativas, resaltamos la importancia de que el proceso seguido en la implantación del CMI sea simple, comprensible y poco burocrático. Además, teniendo en cuenta que este tipo de empresas no posee muchos niveles jerárquicos, entendemos que se justificaría la implementación de un CMI a nivel corporativo, ya que la comunicación suele fluir naturalmente. En cualquier caso, opinamos que el establecimiento de un panel adecuado de objetivos/indicadores bien definidos y comunicados, en cuya definición se haya promovido la participación de todos los miembros de la organización y que permitan difundir los resultados alcanzados y realizar comparaciones en el tiempo y en el espacio constituye la base para el éxito de la adopción del CIM en las PYMES.

EGRESADOS DE CIENCIAS ADMINISTRATIVAS Y HÁBITOS DE ESTUDIO. DIAGNÓSTICO DE TRES COHORTES

Ángel Esteban Gordillo Martínez, Universidad Autónoma de Chiapas
Juan Carlos Román Fuentes, Universidad Autónoma de Chiapas
Rafael Timoteo Franco Gurría, Universidad Autónoma de Chiapas

RESUMEN

Esta investigación describe los resultados que arroja la aplicación de test sobre hábitos de estudio a egresados de tres cohortes de cuatro programas de licenciatura matriculados en la Facultad de Contaduría y Administración de la Universidad Autónoma de Chiapas, México. La información generada señala que en las cuatro licenciaturas las variables mejor ponderadas por quienes egresan de esos programas corresponden a Estado fisiológico y Actitud hacia el estudio; mientras que las mayores áreas de oportunidad se ubican en lo relacionado a Distribución del Tiempo y Ambiente Físico; sin dejar de reconocer que los problemas de lectura se presentan en los cuatro programas; en proporciones que alcanzan 24% en Administración; 33% en Contaduría; 34% en Gestión Turística y 42% en Sistemas Computacionales. Se concluye que en los actuales procesos de rediseño curricular deben replantearse los objetivos y contenidos de las actuales asignaturas: Naturaleza del conocimiento y aprender a aprender; como herramientas básicas del proceso de formación profesional y considerar la incorporación de actividades transversales que refuercen las competencias requeridas.

PALABRAS CLAVES: hábitos de estudio, egresados, educación superior

STUDY HABITS AND ADMINISTRATIVE SCIENCE GRADUATES. DIAGNOSIS OF THREE COHORTS

This paper describes results that throw the application of test on study habits to graduates of three cohorts of four undergraduate programs enrolled in the Accounting and Administration School, of the Chiapas University. The generated information indicates that in four degree courses the best weighted variables for those who graduate from these programs correspond to physiological status and attitude towards the study; while mayor opportunity areas are located in regard to time distribution and physical environment: recognizing that reading problems are presented in the four programs; in proportions which reach 24% in administration; 33% in accounting; 34% in tourism administration and 42% in computer systems. Concludes that current processes of redesign curricular should think the objectives and content of the subjects: knowledge nature and learn to learning; as basic tools of the professional formation process and consider the incorporation of cross-cutting activities that reinforce the skills.

LA PERCEPCION DEL FUNCIONAMIENTO DE LA VENTANILLA UNICA DE COMERCIO EXTERIOR SOBRE LAS OPERACIONES DE IMPORTACION Y EXPÓRTACION EN EL PUERTO DE MANZANILLO, COLIMA, MEXICO

Oscar Bernardo Reyes Real, Universidad de Colima y Universidad de Guadalajara

Manuel Rubio Maldonado, Universidad de Colima

Ariel Gutiérrez Ortiz, Universidad de Colima

Cesar Corona Pacheco, Universidad de Guadalajara

RESUMEN

El propósito de esta investigación es mostrar la percepción que se ha generado por parte de los agentes aduanales adscritos a la asociación de agentes aduanales del puerto de Manzanillo, Colima, A. C. (AAPUMAC, A. C.), como gestores de las operaciones de comercio exterior que se realizan por la aduana de Manzanillo respecto del funcionamiento de la ventanilla única de comercio exterior (VUCE) para la realización de los trámites necesarios para la extracción de mercancías de comercio exterior del recinto fiscal del puerto de Manzanillo, Colima. La recolección de la información que constituyó esta indagatoria fue a través de una investigación de campo efectuada mediante la aplicación de una encuesta como instrumento de recopilación de datos sobre una muestra de 97 individuos que se determinó respecto de la población de agentes aduanales y sus empresas adscritos a la AAPUMAC, A. C., la encuesta se aplicó a los ejecutivos de tráfico que laboran en estas empresas, llegándose a los siguientes resultados: Los encuestados consideran que la VUCE ha simplificado y facilitado los trámites debido a la no presentación en físico de documentos, principalmente en las operaciones de importación, sin embargo, consideran que los días necesarios para dicha liberación son los mismos que antes de la utilización de la VUCE, respecto de los costos, la percepción es de una reducción, pero en un porcentaje muy alto los encuestados expresaron que se tuvo que invertir en capacitación y contratación de personal para operar con la VUCE, en relación a los actos de corrupción la percepción es positiva debido a considerarlos a la baja, por otro lado el principal inconveniente en la gestión del despacho es la falla del sistema con el que opera la VUCE.

PALABRAS CLAVE: Ventanilla única de comercio exterior, tramites, simplificación, facilitación, importación, exportación.

PERCEIVED QUALITY OF SERVICE OF THE FOREIGN TRADE SINGLE WINDOW IN MANZANILLO, COLIMA, MEXICO

ABSTRACT

The purpose of this research is to show the perception that has been generated by the association of affiliated brokers port of Manzanillo, Colima, AC (AAPUMAC, AC), as managers of foreign trade customs agents performed by the office of Manzanillo regarding the functioning of the single window of foreign trade (VUCE) to perform the necessary procedures for the extraction of foreign trade goods of the fiscal area of the port of Manzanillo, Colima. Collecting information that constitutes this investigation was through field research carried out by applying a survey as a tool for collecting data on a sample of 97 individuals was determined for the stock of brokers and affiliated companies the AAPUMAC, AC, the survey traffic executives working in these companies was applied, reaching the following results: Respondents believe that VUCE simplified and facilitated procedures due to the absence in physical

documents, mainly in import operations, however, believe that the days required for this release are the same as before using the VUCE respect of costs, the perception is reduced, but in a very high percentage of respondents said they had to invest in training and staffing to operate VUCE regarding corruption perception is considered positive because of the low, on the other hand, the main drawback in managing the office is the fault of the system that operates VUCE.

INTRODUCCION

El 31 de marzo de 2008, se publica en el Diario Oficial de la Federación órgano de difusión oficial en México, el Decreto por el que se otorgan Facilidades Administrativas en materia Aduanera y de Comercio Exterior, en el cual se determinó que la Secretaría de Economía (SECON) y la Secretaría de Hacienda y Crédito Público (SHCP) implementarán acciones permanentes de simplificación, automatización y mejora de los procesos aduaneros y de comercio exterior.

El 14 de Enero del año 2011, se publica en el Diario Oficial de la Federación, el Decreto por el que se establece la VUCE, Decreto que en su artículo cuarto establece las actividades que podrán realizarse a través de la VUCE.

El uso obligatorio de la VUCE no se da sino hasta el 01 de Junio de 2012, en función de que el 31 de mayo del 2012 se publicó en el Diario Oficial de la Federación la Décima Resolución de Modificaciones a las Reglas de Carácter General en Materia de Comercio Exterior para 2011 y sus anexos, Glosario de Definiciones y Acrónimos, 1 y 22, en vigor a partir del 1 de junio del 2012, en donde se realiza una de las principales modificaciones a la Regla 1.9.16, que contiene la regulación que estaba en las reglas 3.1.31 y 3.1.32.

La modificación abordada en el párrafo que antecede, estableció que se debe de requerir a los contribuyentes para que transmitan electrónicamente mediante la VUCE la información contenida en la factura o en cualquier documento que exprese el valor de las mercancías de comercio exterior en las operaciones de importación y de exportación, destacando que dicha transmisión podrá realizarse previamente al despacho a través de agente o apoderado aduanal, sin necesidad de que intervenga el contribuyente interesado y las personas morales podrán continuar con el empleo del sello digital tramitado ante el SAT, así como éstos recibirán un acuse denominado “número del COVE” el cual manifestarán en el pedimento respectivo (Reglas de Carácter General en Materia de Comercio Exterior para 2011, 2012).

En virtud de lo antes descrito se advierte el uso de medios electrónicos y las tecnologías de la información y la comunicación para la realización del despacho de mercancías de comercio exterior con el objeto de hacerlo más simple, ágil y automatizado, todo en beneficio de los usuarios de las aduanas, la cadena de suministros global y el comercio exterior de México. No obstante lo anterior según datos de las encuestas del índice de desempeño logístico 2014 formuladas por el Banco Mundial (BM), en el rubro de la eficiencia de los procesos del despacho de mercancías, donde se evalúa por parte de los encuestados la velocidad, sencillez y previsibilidad de los tramites en una escala de 1 a 5, donde 1 es la peor calificación y 5 la mejor, México obtuvo una calificación de 2,69, descendiendo 4 posiciones en ese rubro, del lugar 66 al 70 de 160 economías sometidas a la evaluación, teniendo como tiempo de espera de las mercancías para la exportación de 3 días y en importación 6 días (<http://www.bancomundial.org/>). Por lo que el propósito de la investigación es conocer ¿cuál ha sido percepción del funcionamiento de la VUCE sobre las operaciones de importación y exportación en el puerto de Manzanillo, Colima, México?

REVISION LITERARIA

El comercio internacional, comercio exterior o comercio entre naciones, definido como “el conjunto de movimientos comerciales y financieros y en general todas aquellas operaciones cualquiera que sea su naturaleza, que se realicen entre naciones; es pues un fenómeno universal en el que participan las diversas comunidades humanas” (Osorio, 1995), actividad que exige para establecer esas relaciones necesarias derivadas de los movimientos comerciales y financieros, formas que logren facilitar el flujo de la información que se genera por esos actos, mismo que da como consecuencia que el movimiento de los bienes sea más dinámico.

En ese contexto, y acorde con las ideas y conceptos acerca del comercio exterior y la globalización concebidas por Reyes (2006) y Trejo (2008), el primero de los autores en mención expresa que la revolución tecnológica ha trascendido a dos aspectos importantes del comercio internacional: la comunicación y el transporte.

La circunstancia descrita en el párrafo anterior ha impulsado a efectuar acciones en materia logística y de fiscalización donde se ha impactado de manera positiva, debido a que el traslado de mercancías se realiza de manera rápida y sencilla, cumpliendo con su entrega en los tiempos previstos y las revisiones aduaneras son más efectivas en virtud de la incorporación de la tecnología para evitar revisiones intrusivas que puedan ocasionar la interrupción en la cadena de suministros global.

En tal tesitura la globalización de las economías requieren de tecnologías que faciliten la transmisión de la información entre sí, por lo tanto, se puede afirmar que las tecnologías de la información y la comunicación (TIC) están presentes en todos los niveles de la sociedad actual, desde las más grandes corporaciones multinacionales, a las pymes, gobiernos, administraciones, universidades, centros educativos, organizaciones socioeconómicas y asociaciones, profesionales y particulares (Suarez, 2007), encontrando en las TIC un instrumento poderoso para poder participar en los mercados mundiales; promover la responsabilidad política; mejorar la provisión de servicios básicos, y realizar las oportunidades de desarrollo local. Pero sin políticas innovadoras de TIC, muchas personas en los países en desarrollo – especialmente los pobres- se quedarán atrasados (Pérez, 2006).

En virtud de lo anterior, la rapidez y la sencillez son cuestiones que están implícitas en el comercio internacional actual, cobrando mayor relevancia la innovación en las ideas respecto de los bienes y servicios que se ofrecen en el mercado global. Aspectos como el origen de las mercancías, calidad, tiempo de producción y precio, pasan a ser segundo plano.

En la vida cotidiana se puede observar como el uso de los códigos de barras, las páginas webs de empresas transnacionales como walmart o de empresas nacionales como cinepolis, son herramientas poderosas para poder comercializar y promocionar los productos y servicios que estas corporaciones ofrecen a la población, ciertamente, la forma de hacer negocios, no solo interna, sino con el resto del globo ha dado un giro vertiginoso, si una empresa se considera competitiva, necesariamente es una empresa que emplea algún tipo de tecnología para el desarrollo de sus actividades, es evidente que no solo el sector privado ha echado mano de las cuestiones tecnológicas, también el estado ha tenido de manera forzosa que sumarse al fenómeno tecnológico.

La aduana que es una de las autoridades más activas en materia de comercio exterior, emplea sistemas, software y equipos que le ayudan al desarrollo eficiente y simple de sus funciones de fiscalización, control y vigilancia del intercambio internacional de bienes, esto permite maximizar el empleo de los recursos que tiene disponible; el sistema automatizado aduanero integral, sistema de selección automatizado, sistema electrónico aduanero, la página de internet de la VUCE, el portal del servicio de administración tributaria, los rayos gamma empleados en cruces fronterizos, terminales ferroviarias y puertos marítimos, los rayos x

usados en las salas internacionales de pasajeros en los aeropuertos, la utilización de tabletas electrónicas por parte de los verificadores aduanales, esclusas y sistemas de control para la entrada y salida de personas y medios de transporte, son algunas de los dispositivos, sistemas y herramientas que las autoridades aduaneras usan para la realización eficiente, sencilla y predictiva de sus funciones como facilitadores del comercio internacional.

Del tema central de la investigación se desprenden dos elementos que se consideran torales, estos elementos son: tecnologías de la información y la comunicación y administración pública. Las tecnologías de la información y la comunicación (TIC) es un término que contempla toda forma de tecnología usada para crear, almacenar, intercambiar y procesar información en sus varias formas, tales como: datos, conversaciones de voz, imágenes fijas o en movimiento, presentaciones multimedia y otras formas, incluyendo aquéllas aún no concebidas. En particular, las TIC están íntimamente relacionadas con computadoras, software y telecomunicaciones. Su objetivo principal es la mejora y el soporte a los procesos de operación y negocios para incrementar la competitividad y productividad de las personas y organizaciones en el tratamiento de cualquier tipo de información (Tello, 2008:3).

La administración pública es la forma de organización que adopta el gobierno a fin de cumplir con el propósito del bien común, en gran parte del mundo se han incorporado las TIC en los procesos de gobierno y administración pública, situación que en opinión de autores como d'Alòs-Moner (2011) y De la Rosa y Senso (2003) se ha efectuado buscando la eficacia y eficiencia de la labor pública, entonces cuando sumamos las TIC y la administración pública tenemos como resultado el concepto de gobierno electrónico o e-government, el segundo de los autores de cita advierte que se debe de tener mucho cuidado respecto de la forma en que se utiliza las TIC en las funciones públicas, debido a que existe una línea muy delgada entre gobierno electrónico y administración electrónica, lo que genera la coyuntura de explicar ambos conceptos. De modo sencillo se puede establecer que el gobierno electrónico es la incorporación de la internet y otros mecanismos digitales o electrónicos para la realización de la gestión del gobierno, por el contrario del concepto de administración electrónica se desprende el procesamiento y manejo de la información a través de medios informáticos, es decir en la administración electrónica se carece de gestión e interacción con el gobernado.

Los autores arriba aludidos establecen de modo muy claro lo que debe y no debe de ser el gobierno electrónico tomando como base la experiencia de países europeos como Finlandia, Holanda, Alemania y España, que como se hizo mención en el párrafo anterior la cuestión fundamental que distingue a un gobierno electrónico de un gobierno que emplea la tecnología a su alcance para realizar el manejo de información, es la gestión e interacción con el pueblo a través de la tecnología.

En los estudios desarrollados por d'Alòs-Moner (2011) y De la Rosa y Senso (2003), se puede encontrar que en la incorporación de la tecnología en los procesos de gobierno genera muchos retos, desde la adaptación de un marco regulatorio adecuado que dé certeza jurídica a las relaciones que se generen por medios digitales entre gobierno y gobernado, la inversión en infraestructura y capacitación para su ejecución, la difusión de esta nueva forma de hacer gobierno para su mayor aprovechamiento y por último una evaluación objetiva que permita tener datos cuantitativos respecto de los costos que se han generado y los beneficios que se han obtenido, es decir regularmente cuando un gobierno hace algo lo difunde por todos los medios que le es posible y que el presupuesto le permita, en algunas ocasiones aunque el presupuesto no se lo permita, aquí el chiste es cacaraquear el huevo, entonces no solo se invierte en tecnología, se invierte en difusión, se invierte en capacitación, se gasta y se gasta dinero, la cuestión aquí es ¿ese dinero que se gastó el estado se ha traducido en servicios eficaces y eficientes, en la atención de las necesidades del pueblo, en la interacción efectiva gobierno-ciudadano?, En resumen, ¿las TIC en la administración pública ha generado un impacto positivo en la vida del pueblo al grado de ser justificable la inversión?.

En ese contexto, por ejemplo, se puede observar que en México el gobierno en los distintos niveles de gobierno como ayuntamientos, gobiernos de los estados, secretarías de estados, direcciones generales, etc. a fin de vender la idea del gobierno electrónico ha creado portales de internet, que lejos de llegar a ser herramientas efectivas de gobierno electrónico, son utilizados para propaganda política, para dar a conocer al pueblo lo que están haciendo en favor de ellos.

No obstante lo anterior, el gobierno de México se enfrenta al reto de la brecha digital, brecha que por desgracia se ha querido abatir regalando tabletas a los niños de primaria o abriendo centros de cómputo en lugares donde no hay luz y mucho menos acceso a internet, pero no hay que ir muy lejos, en las universidades públicas e incluso privadas de todo el país se pregonan ser universidades de talla mundial, ya sea por sus eventos, ya sea por su investigación, instalaciones, etc. Sin embargo, el acceso a internet inalámbrico en los campos muchas veces no es posible o existe infraestructura para tal objeto sin funcionar, entonces, si esto ocurre en la sociedad y las universidades que son las generadoras de conocimiento, como se podría suponer que en México se implementa de manera adecuada la tecnología en la administración pública. Atinente a lo descrito en este párrafo en la décima segunda edición del informe global de tecnología de la información emitido por el foro económico mundial (FEM) en el año en curso, donde se involucra un total de 148 países y se analiza entre otras variables, el grado con el que la población está preparada para hacer usos de las infraestructuras y contenidos digitales, de entre los países latinoamericanos México se ubicó en el lugar 79, por debajo de Chile que se colocó en el lugar 35, Panamá en el 43 y Costa Rica el 53 (<http://www.weforum.org/>).

Aunado a lo anterior en ocasiones los requisitos o trámites que impone el gobierno para que los ciudadanos tengan acceso a los servicios gubernamentales mediante plataformas digitales, a pesar de que aparentemente no genera costo para el particular, es necesario llevar a cabo algún trámite administrativo que requiere de inversión de tiempo, para después no saber qué hacer o bien que el servicio ofrecido no está en pleno funcionamiento.

Todo lo antes expresado se genera a partir de la investigación de Rodríguez (2004) en virtud de la cual se concluye que para lograr la participación de los ciudadanos en el gobierno electrónico debe de ser sencillo y no exigir requisitos específicos y excluyentes de participación derivado de costos adicionales, además de que las páginas de internet de ven de ser amigables para fomentar y facilitar su uso.

METODOLOGIA

El objetivo principal de esta investigación es conocer la percepción del funcionamiento de la VUCE sobre las operaciones de importación y exportación en el puerto de Manzanillo, Colima, México. Resulta interesante resolver algunas cuestiones: ¿Cuáles han sido los beneficios generados para el desaduanamiento de mercancías a partir de la implementación de la VUCE? ¿Cuál ha sido la operación de comercio exterior que ha visto un incremento en el volumen de sus operaciones derivado de la implementación de la VUCE? ¿Cuál ha sido el impacto que sobre la capacitación del personal que participa en la gestión del despacho de mercancías se generó derivado de la implementación de la VUCE? ¿Qué afectaciones se han presentado derivado de la implementación de la VUCE? ¿Cuál es la percepción que existe por parte de las agencias aduanales en relación a la función de la VUCE y los actos de corrupción en el proceso del despacho de mercancías?

Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: conocer los beneficios generados para el desaduanamiento de mercancías a partir de la implementación de la VUCE, identificar la operación de comercio exterior que derivado de la implementación de la VUCE ha visto un incremento en el volumen de sus operaciones, conocer si existe algún impacto sobre la capacitación del personal de las agencias aduanales que participan en la gestión del despacho de mercancías se generó derivado de la implementación de la VUCE, conocer si se han generado afectaciones derivado de la

implementación de la VUCE, conocer la percepción que existe por parte de las agencias aduanales en relación a la función de la VUCE y los actos de corrupción en el proceso del despacho de mercancías.

El cumplimiento de los objetivos planteados, así como la resolución a las preguntas elaboradas para la investigación, conducen una hipótesis general. Derivado del inicio de las funciones de la VUCE se ha generado una percepción por parte de los agentes aduanales adscritos a la aduana de Manzanillo respecto de los beneficios, el incremento en el volumen de operaciones, la capacitación del personal que interviene en la gestión del despacho, las potenciales afectaciones y de los actos de corrupción. En el transcurso de la investigación se determinó la cantidad agencias aduanales que se encuentran asociadas a las función de la VUCE en la aduana de Manzanillo y al tenerlas plenamente identificadas se siguió el método inductivo, ya que se planteó que el inicio del funcionamiento de la VUCE genera una percepción por parte de los agentes aduanales adscritos a la aduana de Manzanillo respecto de los beneficios, el incremento en el volumen de operaciones, la capacitación del personal que interviene en la gestión del despacho, las potenciales afectaciones y de los actos de corrupción, situación que podría ser aplicada en general en cualquier otro tipo de organización para identificar estas situaciones y que su desempeño sea eficiente.

La investigación tendrá un enfoque cuantitativo y descriptivo ya que para comprobar la hipótesis, el estudio se basará en el instrumentos de medición aplicado, dicho instrumento es un cuestionario que se podrá tabular de manera estadística, a través de herramientas informáticas como el Excel. Cabe hacer mención que la información analizada fue obtenida de una encuesta que se aplicó a las agencias aduanales relacionadas con la función la VUCE que es de 130, sobre la cual se realizó el estudio estadístico, es importante señalar que a fin de determinar la muestra se utilizó la fórmula de muestra de poblaciones finitas, considerando un universo finito cuando la población objeto de estudio es menor a 500000. La investigación de campo se realizó durante el año 2013. La población a la que se le aplicó la encuesta se determinó en base al padrón de Agencias Aduanales que se encuentran asociadas a la asociación de agentes aduanales del puerto de Manzanillo, Colima, A. C. (AAPUMAC) y que se encuentran relacionadas con la función de la VUCE, de lo anterior se desprende una población de 130 agencias aduanales asociadas a esta organización y que se encuentran ubicadas en el puerto de Manzanillo, Colima, México, de las cuales nuestra muestra constó de 97 entidades a aplicarles la encuesta.

Las personas a las que se les aplicó la encuesta fueron ejecutivos de tráfico, pertenecientes a cada una de las 97 agencias aduanales para tener un valor más correcto en las gráficas producto de la tabulación de resultados, estos individuos tienen como característica principal el laborar para una agencia aduanal y participar en las operaciones de comercio exterior que realizan como parte de sus servicios estas organizaciones ubicadas en el puerto de Manzanillo, Colima, México. Se elaboró una encuesta de 22 preguntas que servirán de apoyo para conocer la percepción del funcionamiento de la VUCE sobre las operaciones de importación y exportación en el puerto de Manzanillo, Colima, México.

RESULTADOS

Después de haber realizado la investigación correspondiente, de haber tabulado y graficado los datos y finalmente haber realizado el análisis y la respectiva interpretación, se obtuvieron los siguientes resultados: En relación a los beneficios o aspectos positivos que ha traído consigo la VUCE, el 82% de los encuestados considera que la puesta en marcha de VUCE ha generado ventajas para los usuarios de entre las cuales las principales son la simplificación en los tramites del despacho con 42% de las respuestas y la agilidad en las operaciones con 30%, por otro lado cuando se planteó que la implementación de la VUCE favorece al crecimiento económico y el incremento de la competitividad de la aduana y puerto de Manzanillo el 79% respondió afirmativamente señalando como uno de los por qué de sus respuesta debido a que consideran que esta medida genera competitividad en virtud de tener como efecto la reducción de costos de los trámites y tiempos en la operación aduanera, en relación a esto mismo el 87% considera que el despacho de las mercancías por la aduana y puerto de Manzanillo se ha vuelto más rápido.

No obstante lo anterior, a los que formaron parte en la contestación de este instrumento se les cuestionó respecto de los días que antes de la entrada en función de la VUCE se llevaban para la extracción de mercancías del recinto portuario, teniendo como respuesta principal con un 42% de 4 a 6 días, en relación con esto mismo se les planteó cuantos días había llevado el mismo proceso ya con la puesta en función de la VUCE donde el 57% considera que sigue siendo la misma cantidad de días. Respecto a las horas empleadas para llevar a cabo la revisión de las mercancías durante el reconocimiento aduanero antes del inicio de la función de VUCE, los encuestados respondieron en un 53% que son de 2 a 4 horas, ahora bien, con el funcionamiento de la VUCE el 57% de los resultados de la encuesta arroja que los usuarios consideran que siguen siendo las mismas horas empleadas para la revisión de las mercancías.

Cuando se planteó a los encuestados el asunto de la simplificación administrativa, el 69% consideran que si se han simplificado los trámites tras la implementación de la VUCE debido a que ya no se hace la presentación física de documentos ante la aduana, lo anterior apoyado con otra de las respuestas donde se manifestó que una de las circunstancias que representa el mayor cambio en este rubro es la eliminación del uso de documentos teniendo un 73% de los resultados.

Siguiendo con el rubro de los beneficios, se planteó a los que contestaron la encuesta si con el empleo de la VUCE había existido una reducción en los costos de la operación a lo que un 53% considera que si la hay, siendo la circunstancia que ha generado la reducción de estos costos el rubro de papelería, teniendo un 76% de los resultados en la encuesta, derivado de la exigencia en la digitalización de los documentos que anteriormente se presentaban en físico para la realización de los trámites en las agencias aduanales se tuvieron que aperturar nuevos puestos o al menos disponer de personal y equipo para poder efectuar los trámites bajo este nuevo esquema. En lo atinente a si con el inicio de las operaciones mediante el uso de la VUCE se percibe un incremento en el volumen de operaciones de comercio exterior por aduana y puerto de Manzanillo, un 56% de los resultados arrojan que si se percibe incremento, respecto de lo 52% de los encuestados considera que las operaciones de importación son en las que se ha notado el incremento en su volumen.

En el aspecto de la capacitación del personal de las agencias aduanales que participan en la gestión del despacho de mercancías que se generó a raíz de la implementación de la VUCE se observó que en un 94% los encuestados manifestaron la necesidad de capacitación para el correcto uso de la VUCE, teniendo con un 60% de las respuestas que la manera en que se capacitó al personal fue a través de cursos soportados por la agencia aduanal donde se labora, sin embargo, se observó un interesante 21% de respuestas en el rubro de otras opciones, donde se expresó que esas opciones eran: cursos impartidos por personal de la misma empresa, a través de un manual por internet proporcionado por la Secretaría de Hacienda y Crédito Público (SHCP) y cursos proporcionados por la AAPUMAC A. C., en relación al tiempo que se tomó para la capacitación del personal el 38% respondió que había sido de una a dos semanas y un 28% señaló ser de 2 a 5 días, expresando con un 85% que con dicha capacitación se había facilitado la gestión del despacho de mercancías por la aduana y puerto de Manzanillo.

Resultado interesante conocer la relación del uso de la VUCE y los actos de corrupción, donde el 54% señala tener la percepción de que han disminuido los actos corruptos por parte de las autoridades aduaneras, no siendo óbice de lo anterior un 39% de los encuestados señala no percibir esa disminución.

En el rubro de afectaciones un 71% de los resultados expresan si percíbilas, siendo algunas de las circunstancias que han generado las mencionadas afectaciones: las fallas en el sistema (la conexión del sistema de la agencia aduanal con el de la autoridad) con un 78%, lo cual representa el principal problema que se presenta presente durante el despacho y desaduanamiento de las mercancías, generándose como consecuencias retrasos en la extracción de los bienes, siendo principalmente un aspecto operativo el que se ve afectado constatándose lo anterior con el 65% que expresa esa percepción, pudiéndose concluir que tanto los rubros operativos, logísticos y económicos van de la mano, lo cual al existir un inconveniente en la operación, generara demoras lo cual se traducirá en un obstáculo en la logística y por consiguiente un gasto.

CONCLUSIONES

Algunas de las investigaciones e ideas de autores que se tienen a la mano como las de Armas y Colmenares (2007), Reyes (2006) y Trejo (2008), ubican el éxito de la modernización del aparato estatal mediante las TIC en las administraciones tributarias y afirman que el objeto de la incorporación de las TIC a la función de las oficinas tributarias es ofrecer servicios más eficientes y rápidos en favor de los usuarios, definitivamente se observa la cuestión del incremento en la recaudación y la accesibilidad de los datos de los contribuyentes; en el caso de las aduanas el uso de la tecnología para los ojos de la autoridad es observado como una excelente oportunidad de mejorar sus procesos de fiscalización para la detección de incumplimientos e ilícitos que pudieran generar perjuicios a las arcas federales, sin embargo, contrario a lo que afirman los autores referenciados, en la práctica se puede observar; no obstante las TIC, infraestructura y herramientas con las que cuenta la autoridad; como no se ha podido convertir en eficiente a la función aduanera.

Lo anterior debido a que como se señaló en el apartado de resultados, no obstante que existe una percepción positiva respecto de la implementación de la VUCE, estos señalan que los días para la extracción de mercancías derivado de su desaduanamiento y las horas que se toma la autoridad a fin de llevar a cabo sus revisiones, siguen siendo las mismas.

Quizás ha habido una mejora para la autoridad, en el sentido de que cuenta con toda la información de sus operaciones, sin ser de libre uso para los interesados y sus inspecciones las pueden efectuar sin el empleo de documentos facilitándoles el acceso a la información de cada operación, sin embargo, lo único que cambio fue respecto del empleo del papel.

Para el usuario de la aduana, llámese importador, exportador o agente aduanal, se ha expresado que las cargas han sido muchas, han tenido que adaptar sus equipos a los nuevos sistemas de la aduana, capacitar personal en el uso de dichos sistemas y sub utilizar empleados digitalizando documentos, quizás algunos trámites ya no se tengan que realizar de forma presencial en algunas oficinas, pero el trámite, aunque en la misma oficina se tiene que efectuar de un modo u otro, el verdadero ahorro o mejora que se ha vivido a raíz de la intensificación del empleo de TIC en la aduana es en el papel, según se ha expresado.

En algunos estudios sobre la percepción que tienen los ciudadanos respecto del gobierno electrónico y tomando como referencia las investigaciones realizadas por Arcila, Monsalvo, Ramos y Santrich (2014) y Cardona (2004), la primera situación que se manifiesta en el sentir de los ciudadanos es que falta difusión respecto de los servicios que pueden proporcionar los gobiernos a través de medios electrónicos, es decir, sobre este respecto en relación al inicio de la VUCE, hubo una intensa campaña por medios masivos de comunicación, presentación ante los representantes de los actores: asociaciones de agentes aduanales, recintos fiscalizados y demás autoridades.

En segunda instancia se conoce de las indagatorias de los autores aludidos que el medio más empleado con la idea del gobierno electrónico son las páginas web o portales alojados en la internet, siendo en el caso de la VUCE, la principal fuente de acceso al sistema para poder gestionar los trámites aduanales

Otro aspecto que trasciende en las referencias que se tomaron para el análisis en relación a la percepción que se tiene respecto de la función de la VUCE es que se percibe más confiabilidad en un servicio prestado vía electrónica respecto de los servicios prestados por la vía tradicional, se espera mayor satisfacción y reducción de costo. Las situaciones aquí descritas son hallazgos obtenidos en los estudios de Arcila, Monsalvo, Ramos y Santrich (2014) y Cardona (2004), que de manera específica se relacionan con el tópico que ocupo esta investigación, siendo el discurso del gobierno federal respecto de la modernización de las aduanas, situación que en la realidad no ha logrado hacerse sentir con la fuerza que se esperaría .

El gobierno de México desarrolló la VUCE que junto con el sistema electrónico aduanero, utilizan el internet para recibir la información de las operaciones de comercio exterior de los interesados, siendo este portal el medio para la transmisión de los datos que contendrán los pedimentos en operaciones de importación o exportación al sistema automatizado aduanero integral (SAAI), donde la autoridad aduanera concentra la información y emplea para que sus funciones de fiscalización, control y vigilancia sean más eficientes y eficaces.

No obstante lo anterior y el propósito tan positivo de este desarrollo en materia aduanera, se percibe con esta indagatoria que el avance más importante ha sido en materia de simplificación debido a la eliminación del uso de documentos físicos para la realización de los tramites del despacho aduanero y su desaduanamiento, sin embargo en el rubro de agilización, la percepción de la mayoría de los individuos que participaron en la indagatoria es que ha resultado lo mismo con o sin VUCE, además que en lo único que se percibe una mejora positiva económicamente hablando es en la reducción en el uso del papel, pero por otro lado se tuvo que invertir en capacitación y en personal para poder ejecutar de manera adecuada las operaciones mediante el empleo de la VUCE.

Otro punto favorable que se suma a la idea de servicios confiables derivado del uso de tecnología en los trámites aduaneros es el hecho que los usuarios tengan una sensación positiva en relación a la reducción en los actos de corrupción, ya que al no poder manipular físicamente documentos que contengan información trascendente en el despacho de mercancías, se encuentran limitados de ofrecer sus favores a cambio de una buena tajada de dinero.

GERENCIA ESTRATÉGICA EN EL SERVICIO DE TRANSPORTE URBANO DE MOTO TAXIS EN LA CIUDAD DE RIOHACHA LA GUAJIRA- COLOMBIA

José Antonio Sánchez González, Universidad de la Guajira

Víctor José Iguaran Manjarres, Universidad de la Guajira

RESUMEN

El propósito de esta investigación, fue implementar la gerencia estratégica en el servicio de transporte urbano de moto taxis en la ciudad de Riohacha la Guajira- Colombia. El estudio se sustenta en las teorías de los autores: Wenz, Davis, Avila, Prieto, Guiltinan y Harrinson. La gerencia estratégica de servicio se enmarca en realizar un diagnóstico de las condiciones internas y externas que regula la prestación del mototaximos en esta ciudad, se identifica el marco institucional que orienta el rumbo estratégico del mismo, y se analiza la calidad y la satisfacción del cliente de este servicio de transporte urbano. La investigación es descriptiva, transversal de enfoque cuantitativo. Los resultados obtenidos reflejan que la falta de recursos económicos, capacidad, trabajo en equipo son debilidades, mientras las habilidades, experiencia, y la eficiencia son ciertas fortalezas en la prestación de este servicio utilizado por más de treinta y cinco mil (35.000) personas, la tecnología, las acciones legales y competencias se manifiesta como amenazas, y la única oportunidad son los valores sociales y culturales que condiciona el transporte de moto taxis. Se concluye que no existe una organización que agrupe este gremio que direcciona bajo un marco institucional este servicio.

COMPORTAMIENTO DEL RÉGIMEN DE INCORPORACIÓN FISCAL A UN AÑO DE SU IMPLEMENTACIÓN EN MÉXICO

Elia del Carmen Moreno Ibarra, Universidad Estatal de Sonora
Esthela Carrillo Cisneros, Universidad Estatal de Sonora
Ma Guadalupe Bustamante Ruiz, Universidad Estatal de Sonora
Valeria Jacqueline Quiroga Moreno, Universidad Estatal de Sonora

RESUMEN

La presente es una investigación descriptiva que muestra el comportamiento y desarrollo del Régimen de Incorporación Fiscal (RIF) a un año de su implementación. El nuevo régimen se estableció en la reforma de la Ley del Impuesto Sobre la Renta (LISR 2014), con el fin de simplificar y promover la formalidad de las personas físicas que realizan actividades empresariales, sustituyendo al Régimen Intermedio y el REPECO por un régimen de incorporación de estímulos fiscales con duración de 10 años que prepare a las personas físicas para ingresar al régimen general, aplicable sólo a personas físicas que realicen actividades empresariales, que enajenen bienes o que presten servicios por los que no se requiera para su realización título profesional, con ingresos anuales de hasta dos millones de pesos.

El análisis del comportamiento a través de la información y estadísticas del RIF muestra una eficiencia relativa a través del incremento del padrón de contribuyentes, fiscalización y recaudación a un año de su implementación con la reforma hacendaria en México, así como su impacto en la creación de empleos formales y economía nacional.

CASINOS EN SONORA: IMPULSO O COMPLEMENTO AL DESARROLLO TURÍSTICO?

Elia del Carmen Moreno Ibarra, Universidad Estatal de Sonora

Esthela Carrillo Cisneros, Universidad Estatal de Sonora

Ma Guadalupe Bustamante Ruiz, Universidad Estatal de Sonora

Valeria Jacqueline Quiroga Moreno, Universidad Estatal de Sonora

RESUMEN

La presente investigación tiene como objetivo realizar un diagnóstico de la percepción de la instalación y operación de los casinos en el estado de Sonora, Sonora es considerada entidad federativa con más centros de apuesta per cápita en México, en los últimos años se ha dado una proliferación desmedida de los mismos sin cumplir con los requisitos regulatorios de ubicación.

A través de la aplicación aleatoria a una muestra no probabilística de 300 encuesta de opinión, se pretende realizar un diagnóstico de opinión donde entre los resultados más importantes arrojados muestran que el 85% de la percepción de la población encuestada consideran que la instalación de los casinos no contribuye como impulso al turismo, mientras que el 60% consideran que contribuye al esparcimiento de los habitantes locales, y un 55% al deterioro económico de la población. Mientras que un 75% está en contra de la instalación de más casinos, y un 65% considera que los casinos deben ser instalados en puntos estratégicos donde existan viajeros y no cerca de los habitantes.

SISTEMA GEO-ESPACIAL DE INFORMACIÓN CULTURAL PARA FORTALECER LA ADMINISTRACIÓN PÚBLICA DEL ESTADO DE VERACRUZ, MÉXICO

Patricia Arieta Melgarejo, Universidad Veracruzana
Luis Fernando Villafuerte, Universidad Veracruzana
Juan Alí Gutiérrez Guzmán, Universidad Veracruzana

RESUMEN

México es un país con mucha diversidad cultural y un territorio extenso y variado, por lo cual contar con un atlas de infraestructura y patrimonio cultural de Veracruz representa grandes avances en el desarrollo de estrategias integrales, siendo dicho sistema una iniciativa de la Subdirección de Artes y Patrimonio del Instituto Veracruzano de Cultura, con apoyo del Consejo Nacional para la Cultura y las Artes, así como la Facultad de Contaduría y Administración región Xalapa, cuyo objetivo es conformar un sistema geo espacial de intercambio de información cultural que fortalezca la administración pública a partir de la revisión, actualización y difusión del patrimonio cultural, material e inmaterial de las distintas regiones del estado de Veracruz. Dicho sistema Geo espacial permitirá conformar una herramienta de registro, catalogación y mapeo de la diversidad cultural y artística del estado de Veracruz, mismo que generará datos, estadísticas e indicadores, acerca de diversas dinámicas socioculturales en torno al sector cultural para disponer de parámetros estadísticos eficaces para la administración y el desarrollo de la política cultural estatal, optimizando la proyección y el impacto social de las misma, como herramienta de análisis acerca del sector cultural veracruzano. De esta manera, se conforman tres matrices de información (datos cuantitativos, datos cualitativos y datos espacio-territoriales) acerca del patrimonio cultural, con los cuáles se realiza el estudio. El resultado del cruce de dicha información contenida en estas distintas matrices de datos enfocadas a los objetos culturales, permitirá generar información documental homogénea, parámetros estadísticos y un análisis territorial de la cultura.

PALABRAS CLAVE: Patrimonio Cultural, información espacial, administración pública

KNOWING THE AREA THROUGH THE GEOGRAPHIC INFORMATION SYSTEMS FOR PUBLIC POLICY PRIORITY

ABSTRACT

Mexico is a country with great cultural diversity and an extensive and varied territory, which have an atlas infrastructure and cultural heritage of Veracruz represents great progress in developing comprehensive strategies, said system an initiative of the Division of Arts and Heritage Veracruz Institute of Culture, with support from the National Council for Culture and Arts, and the School of Accounting and Administration Xalapa region, which aims to form a spatial geo-exchange system, cultural information to strengthen public administration from revision, updating and dissemination of cultural, tangible and intangible heritage of different regions of the state of Veracruz. This space Geo system will form a logging tool, cataloging and mapping of cultural and artistic diversity of the state of Veracruz, it will generate data, statistics and indicators on various socio-cultural dynamics around the cultural sector to provide effective statistical parameters Management and development of state cultural policy, optimizing the projection and the social impact of the same, as an analysis tool for Veracruz cultural sector.

Thus, three matrices of information (quantitative data, qualitative data and space-spatial data) about the cultural heritage, with which the study is conducted conform. The result of crossing the information contained in these different data matrices focused on cultural objects to generate homogeneous documentary information, statistical parameters and territorial analysis of culture.

KEYWORDS: Cultural Heritage, spatial information, public administration

INTRODUCCIÓN

La dinámica cultural que nuestro país presenta, tiene una relación estrecha con la fusión de pueblos y culturas, en la diversidad de sus procesos y condiciones de vida que resultan un tanto complejas y que en sus distintos escenarios han ido marcando etapas importantes en su evolución, como es el caso del crecimiento urbanístico que ha instaurado las sociedades contemporáneas, al encontrarse inmersas en el proceso de globalización y de nuevas formas de organización social y económica, donde dichas transformaciones han cambiado la percepción y valoración del patrimonio cultural, dándole un papel protagónico.

Es así como la cultura de nuestro estado es dinámica, ya que su historia y evolución descansa en la diversidad, y cuyo origen histórico está basado en una pluralidad de pueblos que habitaron y coexistieron sujetos a fenómenos internos y externos con rasgos de un pasado muy complejo a partir de la conquista y un presente que es la puerta de acceso al mercado global.

Hoy por hoy la capacidad organizativa del gobierno debe tener una óptima participación de las autoridades en las tareas de la preservación del patrimonio cultural, siendo éste un eje de la política de Estado, ya que los derechos culturales son derechos humanos fundamentales que requieren de una institucionalidad de la Administración Pública de la Cultura, y que en esta sociedad de la información y digitalización debe hacer más fácil el registro, actualización, seguimiento y difusión del patrimonio cultural material e inmaterial de las distintas regiones del estado de Veracruz, con el apoyo de una organización administrativa especializada y equipada con herramientas tecnológicas y digitales para una moderna Administración Pública.

REVISIÓN LITERARIA

El Patrimonio Cultural y la Administración Pública

El tema que hoy atañe a muchos territorios, guarda relación con el tema del patrimonio e identidad cultural, mismo que se está revalorizando como parte de la memoria fundamental de un país o de una región, referirse a las artes y a la cultura es una cuestión cuya relevancia y consideración por parte de las comunidades y sociedades, es cada vez mayor e imperante, lo cual se ve reflejado en la gradual consolidación de las políticas públicas relativas a la cultura a nivel local e internacional.

La dimensión histórica o patrimonial que posee nuestro país proyecta la creatividad ancestral y contemporánea, la cual ha promovido políticas públicas de conservación y restauración para la recuperación de la identidad cultural, que gracias a las iniciativas en tierras europeas, la UNESCO comienza a liderar a finales de las postguerras mundiales, a partir de 1948 (Arizpe, 2006).

A partir de la Conferencia Mundial sobre Políticas Culturales celebrada en México en 1982, se asumió la responsabilidad colectiva de que se debían concretar el diseño e implementación de políticas culturales nacionales y locales, conviniendo en lo siguiente:

“La cultura da al hombre la capacidad de reflexionar sobre sí mismo. Es ella la que hace de nosotros seres específicamente humanos, racionales, críticos y éticamente comprometidos. A través de ella discernimos los valores y efectuamos opciones. A través de ella el hombre se expresa,

toma conciencia de sí mismo, se reconoce como un proyecto inacabado, pone en cuestión sus propias realizaciones, busca incansablemente nuevas significaciones, y crea obras que lo trascienden” (UNESCO, 2010).

En dicho informe se hace un señalamiento que expresa la necesidad de redefinir las políticas culturales a fin de integrarse a las políticas económicas y sociales, de tal manera que los valores culturales nacionales y locales sean considerados en la gestión de la economía, donde la concepción de Patrimonio Cultural cambia, por lo que una de las actividades de la Administración Pública es la de asegurar que el Patrimonio Cultural sea un patrimonio común, además de establecer canales de comunicación para una mejor promoción, otorgándole gran relevancia en la vida cotidiana del individuo.

La Administración Pública al ser uno de los instrumentos principales a través del cual el Estado puede concretar sus acciones, como también el campo de las políticas públicas es uno de los objetos de estudio de la Administración Pública, que juega un papel preponderante en la redefinición de los problemas públicos relacionados con el patrimonio cultural (Franco Corzo, 2012), donde se tiene una visión del término en el que se busca una perspectiva más amplia, tanto del heredado como del actual, en el cual se reconozca el justo valor de los sitios, monumentos y declaratorias patrimoniales, para así promover su adecuado conocimiento.

La Información Espacial y Los Sistemas Geo-Espaciales

En el mundo en que nos desarrollamos cualquier cosa puede tener una dimensión espacial, así como muchos de nuestros problemas cotidianos como por ejemplo: los efectos de una tormenta, la localización de los servicios públicos, el destino de un viaje, entre otros, considerando que todo lo que ocurre en el mundo tiene lugar en algún sitio.

De acuerdo a Antoni Pérez, lo espacial es espacial ya que todos los elementos del mundo pueden definirse por su posición, considerando que su componente espacial es esencial en una gran variedad de disciplinas, dando como resultado información espacial que conlleva a decisiones únicas, complejas y difíciles (Pérez Navarro, 2011).

Los mapas son considerados como el lenguaje natural de la Geografía, ya que son los encargados de suministrar los datos espaciales, así como también el medio de comunicación del análisis geográfico, los cuales muestran relaciones, diferencias, agrupamientos y pautas geográficas. Son abstracciones planas de la realidad que se construyen con símbolos, formas geométricas, colores y texturas para representarlos como modelos reducidos de una determinada región sobre la superficie de la tierra, cuyo grado de reducción se expresa generalmente a través de una escala gráfica o numérica.

La información espacial se representa en un Sistema de Información Geográfica (SIG), es decir, las características del mundo real deben simplificarse para obtener representaciones que puedan almacenarse y manipularse en una computadora, a través de representaciones internas digitales de la información. Por lo anterior, muchos países aprovechan la infraestructura tecnológica y cuentan con bastante información geoespacial, la cual les ha sido útil para la toma de decisiones en diversos campos, por lo cual existe una definición más aterrizada de los SIG's desde el punto de vista tecnológico de acuerdo a Juan Peña (Peña Llopis, 2006) :

Un Sistema de Información Geográfica se entiende como la unión de la información y herramientas informáticas (programas o software) para su análisis con unos objetivos concretos, cuya base es una serie de capas de información espacial en formato digital, que representan diversas variables, o bien capas que representan objetos a los que corresponden varias entradas en una base de datos enlazada.

A través de los Sistemas de información es viable obtener una explicación o respuesta a hechos y fenómenos que suceden en la superficie terrestre, a través de la interrelación en el espacio y tiempo de los diferentes elementos del medio natural y humano, siendo así una importante herramienta geográfica para entender y proponer acciones concretas.

SISTEMA GEO-ESPACIAL DE INFORMACIÓN CULTURAL

El Sistema Geo-Espacial de Información Cultural de Veracruz es una iniciativa de la Subdirección de Artes y Patrimonio del Instituto Veracruzano de Cultura, con apoyo del Consejo Nacional para la Cultura y las Artes, estrategia que surge de la necesidad de crear nuevos canales de información integrales para la difusión del conocimiento cultural del estado, con el objetivo de conformar una red de intercambio de información estructural que fortalezca los procesos en la Administración Pública, partiendo de la revisión, actualización y difusión del patrimonio cultural material e inmaterial de las distintas regiones del estado de Veracruz. Dicho sistema permitirá dar a conocer la localización de las diversas entidades culturales y artísticas, así como mejorar la comprensión de las relaciones estéticas y simbólicas con su entorno.

Planteamiento del problema

El estado de Veracruz recaba en su historia y cultura los orígenes del mundo mexicano, en donde la fusión entre los pueblos nativos y los venidos de los barcos coloniales dieron nacimiento a una cultura multifacética rica en recursos naturales y culturales.

Tres culturas autóctonas poblaron al territorio, hoy estado de Veracruz: los huastecos, los totonacas y los olmecas y fueron éstos una vasta comunidad de pueblos emparentados étnica y culturalmente.

Actualmente el gobierno del estado de Veracruz suma grandes esfuerzos en desarrollar herramientas y estrategias administrativas para dar seguimiento a la gran diversidad cultural en el territorio estatal. Dicha cultura es significado de volúmenes de información complejos, por su amplia gama de elementos que la constituyen.

Hoy en día se cuenta con herramientas tecnológicas que al paso del tiempo han desarrollado una metodología viable en fusionar el manejo de grandes volúmenes de información en un entorno espacial, dando la posibilidad de estudiar los elementos geográficos que enriquecen a dicha información del estado de Veracruz.

Es en este sentido donde surge la necesidad de consolidar sistemas geo-espaciales dentro de la administración pública, dando paso al desarrollo de nuevas metodologías en la forma de ver y representar la información, fusionando los datos administrativos junto con los datos espaciales de los mismos.

Justificación

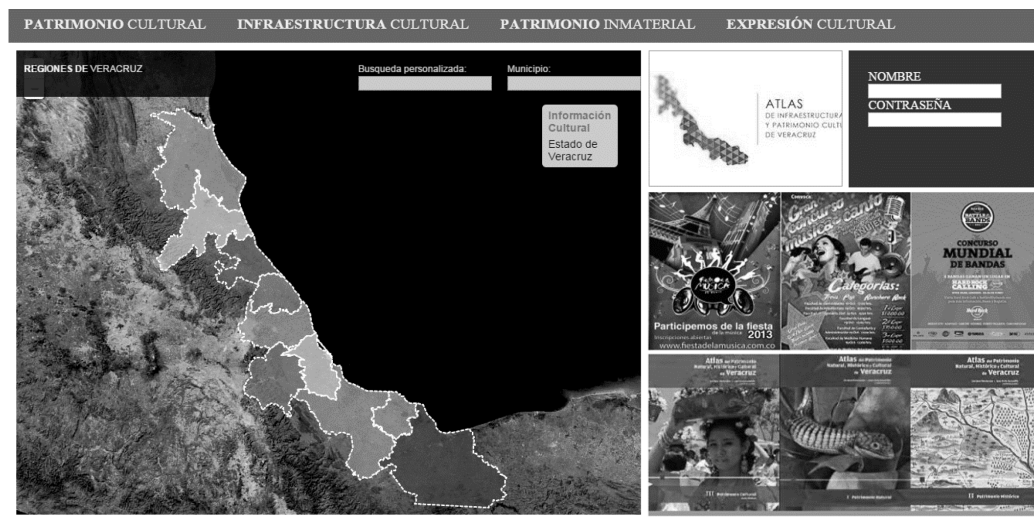

En nuestros días sin lugar a duda internet funge como un escaparate a nuevos horizontes dentro de las sociedades de la información y del conocimiento, donde las plataformas en la nube son en gran medida océanos ricos en datos históricos y relevantes para la realización de procesos administrativos. Estos bancos de información manipulados de manera eficiente a través de las redes y telecomunicaciones fortalecen y facilitan en todo sentido la toma de decisiones.

En épocas recientes el auge de los sistemas espaciales dentro de los procesos administrativos ha llevado a grandes resultados, siendo estos fuertes pilares de la evolución en la admiración pública ya que estos sistemas representan una singular línea de desarrollo, dando pauta a la planeación de estrategias.

Dentro de estas nuevas estrategias en particular existen los llamados SIG que implica la incorporación adecuada de mapas y elementos geográficos, a la información recabada dentro de algún caso de estudio, dando paso al desarrollo de sistemas geoespaciales dentro del perfil administrativo, cuyo impacto ha sido tan relevante en la Administración Pública que poco en poco se han desarrollado grandes herramientas dinámicas que sin lugar a duda son un nuevo rubro en los sistemas administrativos.

En este sentido Contar con un Sistema Geo-Espacial de Información Cultural del Estado de Veracruz permitirá conformar una herramienta de registro, catalogación y mapeo de la diversidad cultural y artística del estado de Veracruz. Generar datos, estadísticas e indicadores, acerca de diversas dinámicas socioculturales en torno al sector cultural veracruzano, permitiendo contar con parámetros estadísticos eficaces para la administración y el desarrollo de la política cultural estatal, optimizando la proyección y el impacto social de las mismas; como herramienta de análisis acerca del sector cultural veracruzano.

Fuente: Elaboración propia

Alcance y delimitación del proyecto

Conocer y localizar las diversas manifestaciones culturales y artísticas, es el primer paso para el reconocimiento de la identidad y la pertenencia de los individuos y sus comunidades, así como para comprender las relaciones estéticas y simbólicas con su entorno. En ello se basa el conocimiento, la valoración y la estimación de las potencialidades de los conjuntos de bienes culturales de orden material como construcciones, arquitecturas, objetos, obras de arte; pero también del inmaterial, como los ritos y costumbres, lenguas, músicas, danzas y saberes populares producto del conocimiento generacional de una comunidad.

Figura 2. Presentación de entidades culturales del estado

Fuente: Elaboración propia

Es importante precisar que éste proyecto no sólo es una representación de la infraestructura cultural del estado de Veracruz, ya que con éste conocimiento se sienta un precedente de información que tiene la potencialidad de mejorar las acciones de la Administración Pública respecto a la cultura en el estado, al identificar y clasificar la localización, distribución y tipología de los recintos culturales de Veracruz. Mediante la construcción de ésta metodología se podrán diseñar un conjunto de herramientas y estrategias sólidas, para el acopio, almacenamiento y difusión del patrimonio cultural de los veracruzanos, logrando cumplir los objetivos planteados.

Objetivo General: Conformar y desarrollar una herramienta integral que dé a conocer la riqueza cultural del Estado de Veracruz, de esta forma se conformará un sistema Geo-Espacial de la diversidad cultural en el estado, siendo una plataforma capaz de integrar y presentar la información de manera amplia y detallada, en un mismo sitio.

Objetivos Específicos

Desarrollar un sistema de catalogación, registro y mapeo de las entidades culturales.

Maximizar el alcance del proyecto con las diversas tecnologías de la información.

Potenciar una herramienta de aporte y ayude a la toma de decisiones.

Garantizar una óptima calidad de servicio en la presentación de la información.

Promover la capacidad de manejar y almacenar en tiempo y forma grandes volúmenes de información.

Ofrecer un escaparate de aprendizaje para el público en general.

METODOLOGÍA

El desarrollo de éste proyecto ha requerido de una investigación descriptiva, ya que se detallan los antecedentes y características de los Sistemas espaciales, de los Sistemas de Información Geográfica, y la relación que guardan con la Administración Pública para ofrecer información significativa en un ambiente digital, donde se lleva a cabo el registro y seguimiento del patrimonio cultural del estado de Veracruz.

Por otro lado fue necesario determinar una metodología temática definida en cuatro campos generales, debido a la riqueza, cantidad y diversidad de bienes y manifestaciones culturales y artísticas que se expresan en las distintas regiones del estado. Cada uno de estos géneros incluye una categorización de objetos culturales de acuerdo a la clasificación para la catalogación de bienes culturales emitida por UNESCO Y el Consejo Nacional para la Cultura y las Artes; facilitando los procesos de acopio, sistematización, análisis y representación de la información, que contendrá el Sistema geo-Espacial de información Cultural de Veracruz. De esta manera, se determinó la siguiente clasificación temática:

PATRIMONIO CULTURAL

Zonas arqueológicas
Centros históricos
Zonas de monumentos históricos
Monumentos artísticos
Patrimonio ferrocarrilero
Obra pictórica declarada Patrimonio Nacional
Arte sacro
INFRAESTRUCTURA CULTURAL Museos
Centros culturales
Casas de cultura
Casas de artesanías
Galerías
Teatros
Salas de conciertos o auditorios
Salas de cine
Bibliotecas
Centros de educación artística y cultural
Fototecas
Hemerotecas
Archivos estatales y municipales
Fonotecas
PATRIMONIO INMATERIAL Lenguas
Fiestas y tradiciones
Danzas
Música
Indumentaria
Gastronomía
Tradición oral y saberes populares
Artesanías
EXPRESIÓN CULTURAL
Artes visuales
Danza
Teatro
Música
Literatura

Dicha catalogación se realizó en apego a la siguiente metodología de desarrollo:

Registro de información de cada entidad cultural
Vaciado de la información al sistema geográfico
Presentación de la información para el usuario

Obtención de resultados estadísticos.

Figura 3. Registro de información geográfica de las diversas entidades culturales

Fuente: Elaboración propia

RESULTADOS

Dentro de las características en sistemas administrativos existen vertientes que han llevado a la evolución de la Administración pública, dando como resultado un panorama detallado de los elementos que pueden constituir un segmento de información.

Puntualmente esto tiene que ver con los beneficios que brindan estas nuevas técnicas en los sistemas de la Administración Pública que a su vez conforman una mejor perspectiva de los datos estáticos ante el usuario final. Dando un giro relevante al contexto, cambiando el enfoque sectorial que en muchas ocasiones se tiene como resultado.

En este sentido se da la pauta a determinar un contexto real y uniforme de los elementos y características de la información recabada, que a su vez enriquecen el diseño de nuevas estrategias y conlleva al apoyo de toma de decisiones a través de un amplio panorama de los elementos de estudio.

Independientemente de los mecanismos que se utilicen en el tratamiento de los datos éstas nuevas técnicas tienen la capacidad de modernizar la visión integrar de la información, dentro del sector de la Administración Pública. Desde hace algunos años estas herramientas son parte de las grandes estrategias que permiten la evolución de los procesos administrativos.

El Sistema Geo-espacial de Información Cultural de Veracruz brinda información detallada acerca de las características formales, estéticas y simbólicas de los bienes culturales y artísticos, tanto materiales como inmateriales; además, permitirá ubicarlos en el territorio y representar algunas de las dinámicas espacio territoriales del sector cultural en esta región. Para este intercambio de información, se diseñaron distintas herramientas para el acopio, sistematización y almacenamiento de datos como (fichas técnicas, formatos de catalogación, base de datos Geo-Estadística, cartografía temática). De ésta manera, se conforman tres matrices de información (datos cuantitativos, datos cualitativos y datos espacio-territoriales) acerca del patrimonio cultural, con los cuáles se realiza el estudio. El resultado del cruce de información contenida en estas distintas matrices de datos enfocadas a los objetos culturales, permite generar información documental homogénea, parámetros estadísticos y un análisis territorial de la cultura.

CONCLUSIONES

Como resultado del desarrollo e investigación del Sistema Geo-espacial de Información Cultural de Veracruz, es posible concluir que existe una gran demanda por proporcionar herramientas actuales que faciliten y agilicen los procesos en la Administración Pública,

Si examinamos con detenimiento el desarrollo de dichas herramientas en las últimas décadas podemos concretar que los sistemas administrativos son parte de la evolución diaria, que nace de las necesidades de agrupar ciertas características y elementos fundamentales para el desarrollo de estrategias. Dando paso a las nuevas tecnologías de la información que son en la actualidad pilares del conocimiento y desarrollo humano.

En este sentido se vuelve fundamental para el Instituto Veracruzano de la Cultura consolidar el desarrollo de una herramienta capaz de analizar el espacio-territorial de la cultura, para entender las relaciones de similitud y diferencia entre las distintas regiones del estado de Veracruz; ya que las fortalezas de sistemas radican no sólo en conocer que, como y donde se encuentran localizados los recintos culturales y los servicios y actividades que brindan al público, sino que constituye una base sólida para la toma de decisiones en la gestión, administración, difusión y salvaguarda del patrimonio cultural y artístico de los veracruzanos.

DESARROLLO DE UNA METODOLOGÍA PARA DETERMINAR EL POTENCIAL DEL TURISMO RURAL EN OASIS SUDCALIFORNIANOS DE MÉXICO

Francisco Isaías Ruiz Ceseña, Universidad Autónoma de Baja California Sur

RESUMEN

El proyecto de investigación se orienta en realizar un análisis de las ventajas comparativas y competitivas de las localidades asentadas en los principales Oasis ubicados en Baja California Sur México: Oasis San Ignacio y Oasis Mulegé (Municipio de Mulegé), Oasis San Javier (Municipio Loreto), Oasis La Purísima, Oasis San Isidro, Oasis San José y San Miguel de Comondú (Municipio Comondú) y Oasis El Chorro ubicado en el Municipio de Los Cabos. La metodología sugerida en este documento muestra la posición que ocupa cada Oasis en materia de riquezas naturales y del entorno (ventajas comparativas) con respecto a los demás sitios objeto de estudio, así como la posición que ocupan por sus ventajas competitivas frente a las demás localidades, esto permite identificar aquellas amenazas y nichos de oportunidad para el desarrollo de la actividad del Turismo rural en los Oasis Sudcalifornianos.

Palabras clave: Turismo Rural, Potencial Turístico, Competitividad y Desarrollo.

DEVELOPMENT OF A METHODOLOGY FOR DETERMINING THE POTENTIAL OF RURAL TOURISM IN BAJA CALIFORNIA SUR OASIS OF MEXICO

ABSTRACT

The research project focuses on an analysis of comparative and competitive advantages of settled locations in major Oasis located in Baja California Sur Mexico: San Ignacio Oasis and Mulege Oasis (Municipality of Mulege), San Javier Oasis (Municipality of Loreto) , La Purísima Oasis, San Isidro Oasis , San Jose and San Miguel de Comondú Oasis (Municipality of Comondú) and El Chorro Oasis located in the municipality of Los Cabos. The methodology proposed in this paper shows the position of every Oasis on natural resources and the environment (comparative advantages) with respect to the other sites under study, and their position for their competitive advantages over other locations, this allows to identify the threats and niche opportunity for the development of rural tourism activity in Baja California Sur Oasis.

KEYWORDS: Rural Tourism, Tourist Potential, Competitiveness and Development.

INTRODUCCIÓN

La presente investigación es producto del trabajo que se realiza dentro del Taller de Investigación Comercial, Aduanera y Observatorio de Negocios (TICAO) de la Universidad Autónoma de Baja California Sur y se deriva de estudios anteriores realizados dentro de los trabajos del Proyecto “Opciones productivas con aprovechamiento sustentable del agua para las comunidades rurales de los 5 municipios sudcalifornianos con principales puntos de oasis”; este proyecto esta anclado a la labor que empezó a realizarse en el año de 2011 cuando se decide dar comienzo al Proyecto Estratégico de Desarrollo Sustentable: Oasis Sudcalifornianos, promovido por el Gobierno del Estado de Baja California Sur. El presente trabajo se enfoca en el análisis de 8 oasis de los más de 171 que se encuentran en B.C.S. (Breceda,

et.al. 2010), para el caso de estudio estos son los oasis determinados: Oasis de San Ignacio y Oasis Mulegé (Municipio Mulegé), Oasis San Javier (Municipio Loreto), Oasis La Purísima, Oasis San Isidro, Oasis de San José y San Miguel de Comondú (Municipio Comondú) y en el Municipio de Los Cabos el Oasis El Chorro.

Uno de los temas más socorridos en los últimos años es el tema de la competitividad visto desde la perspectiva del negocio, en este aspecto la actividad turística no se ha visto desprotegida de ser incluida como una rama de la economía con un intenso dinamismo, de forma tal, que para el año 2013 generó 1,197 miles de millones de dólares a nivel global y en México dejó una derrama de 13.9 miles de millones de dólares, lo que le represento al país una variación porcentual del 9.5% con respecto al año anterior (OMT 2015).

En el caso de México en lo que respecta a la percepción de turistas esta fue de 2,599.5 miles de personas en lo que va del 2015 contra 2,274.4 miles de personas registradas durante todo 2014; en lo que a derrama de divisas se refiere en 2014 estas fueron por \$1,389.1 Millones de dólares y en lo que va de este año estas alcanzan un \$1,583.8 Millones de dólares (BANXICO 2015).

De acuerdo al Barómetro del Turismo Mundial México ocupa el Décimo Quinto puesto en lo que a llegadas de turistas se refiere, siendo superado por países como Francia, E.E.U.U., España, China, Italia, Turquía, Alemania, Reino Unido, Rusia, Tailandia, Malasia, Hong Kong, Austria y Ucrania (Barómetro Turismo OMT 2015). En cuanto al rubro de divisas por turismo internacional México ocupa el Vigésimo tercer lugar superado por casi las mismas naciones que lo superan en afluencia, en cuanto al gasto del turismo internacional decae al vigésimo noveno sitio superándolo países americanos como Brasil.

Es por lo anteriormente expuesto más que vital el concebir, una estrategia basada en una correcta planificación de las actividades turísticas al interior de México que permita por un lado aprovechar las ventajas naturales que presentan algunas entidades federativas con respecto a otras, y por otro lado las ventajas competitivas que como nación se han desarrollado para facilitar la vida de los residentes de las localidades y para ser cada vez más participes de un mundo más globalizado e interrelacionado. Como se expresó con anterioridad el término competitividad cobra gran relevancia en el entorno económico actual, la competitividad que de conformidad con Porter (1991) está dada por el hecho que mientras “la principal meta económica de una nación es producir un alto nivel de vida para sus ciudadanos, se vincula a la competitividad la capacidad de conseguir el bienestar y por lo tanto está determinada por el nivel de productividad con la que una nación, región o clusters, utilizan sus recursos naturales, humanos y de capital” (CEPAL/ONU 2006), es por tanto factor preponderante para el cambio, el desarrollo económico de las regiones tanto en magnitudes globales, nacionales, regionales y locales.

Como lo expresa Porter en su concepto, se puede deducir que parte de la competitividad que desarrolla un país, región o clúster deriva de forma directa de los recursos naturales que se encuentran en su entorno, de los cuales la población hacen uso para la satisfacción de sus necesidades básicas, esto ha sido corroborado en lugares como Taiwán donde el aprovechamiento de las ventajas que les han concedido las variables endógenas naturales con las que cuenta, les permiten ofrecer una gama considerable de servicios innovadores para el turista tanto internacional como local, pero además deben ser consideradas las variables como transportación y/o logística, Información, Promoción, TIC's, entre otras (Tsai, et.al. 2012).

De forma más concreta el concepto de competitividad aplicado al turismo se centra en la idea expresada por Hassan de que la competitividad turística se define como la capacidad de un destino para crear e integrar productos con valor añadido que permitan sostener los recursos locales y conservar su posición de mercado respecto a sus competidores (Hassan, 2000), o bien como dirían Ritchie & Crouch es “la capacidad de un país para crear valor añadido e incrementar de esta forma el bienestar nacional mediante la gestión de

ventajas y procesos, atractivos, agresividad y proximidad, integrando las relaciones entre los mismos en un modelo económico y social” (Ritchie y Crouch, 2003).

Es justo en el desarrollo de ventajas competitivas donde la tendencia en cuanto a las actividades relacionadas al turismo no convencional o de masas son aún más necesarias, cito el caso de las experiencias relacionadas con actividades del así llamado turismo alternativo como es el caso del Turismo Rural, donde el crear ventajas que permitan a los habitantes de las localidades competir si bien no en igualdad de circunstancias, si por lo menos haciendo uso de los determinantes con que cuenta de manera local para atraer al turista que gusta de experiencias que el gran turismo no puede ya brindarle y que se relacionan de forma mas directa con la naturaleza y el entorno social más sencillo, lejos del bullicio de las urbes, por esta razón cada vez más las experiencias en tipo de estrategias se han ido desarrollando como es el caso del Reino Unido donde el aprovechamiento de este tipo de herramientas a permitido a las localidades adaptarse y crecer, esto fortalece a la empresa familiar hace uso de los recursos de manera eficiente y sostenible pero sobre todo genera un encadenamiento productivo entre los prestadores de servicios turisticos rurales y los empresarios locales en otras ramas de la economía dispuesto a ser partícipes de la experiencia, logrando así un mejoramiento de los niveles de bienestar basados en esta vinculación de tipo productivo (Haven-Tang y Jones, 2012).

Por lo anterior, se hace necesario para la experiencia sudcaliforniana la búsqueda de escenarios alternativos para lograr este ansiado estado de las cosas, por lo que es menester de este trabajo de investigación aplicado, el construir una herramienta que pueda ser utilizada como primer paso para la elaboración de dicha estrategia al determinar por una parte la potencialidad de los oasis en Baja California Sur basada en las variables endógenas naturales (ventajas comparativas) y por otro lado, determinando la competitividad del destino en base a las variables exógenas y/o ventajas competitivas adquiridas o desarrolladas.

REVISIÓN DE LITERATURA

Las alternativas de desarrollo de un sector económico son determinadas por la variedad de maneras en el que se desarrollan las actividades inherentes a él, en el estado de Baja California Sur los distintos niveles de gobierno (estatal, municipal y local) se enfrentan a una problemática de tipo cuello de botella, donde se encuentran enfrascados en lo concerniente a la toma de decisiones en una incapacidad total derivado de la constante indagación por las vocaciones reales que pudiesen otorgarle identidad y certidumbre a las empresas familiares locales, en su mayoría micros y pequeñas, por tanto no es exagerado decir que en esta cuestión la actividad turística no se encuentra exenta de dicho argumento, más bien lo padece de forma severa.

Lo que no debe de perderse de vista es el hecho de que las actividades y proyectos en el sector turismo, pero sobre todos aquellos relacionados con el turismo no convencional como lo es el caso que nos ocupa (turismo rural), se debe hacer uso de los recursos naturales cuidando en todo momento su preservación, de forma tal que pueda hablarse de un desarrollo económico sostenible que permita a las nuevas generaciones contar con alternativas para su inserción en el mercado laboral.

Se han desarrollado algunas metodologías bajo este propósito con miras a lograr medir por un lado la cuestión del potencial de un sitio para realizar en el mismo actividades vinculadas al sector turismo y por otro el detectar los determinantes de la competitividad turística que impactan en ese sector. Para lograr dilucidar con claridad cada aspecto que se considera importante contemplar para la elaboración de una herramienta de este tipo, a continuación de forma sucinta enlistaremos algunas de las principales aportaciones teóricas en las cuales se ha basado el desarrollo del presente trabajo.

Modelo de Calgary: Modelo propuesto por los autores Crouch y Ritchie en 1999, ellos dibujan a través de un claro marco referencial una herramienta que permite socorrer a los destinos para que puedan de alguna

forma presentar competencia con otros destinos y otras empresas de forma constante y eficaz dentro del mercado turístico, pero con un aclarando que en la búsqueda del incremento en los niveles de bienestar se logra un beneficio social a la par (Crouch y Ritchie, 1999). Para tales efectos consideran dos elementos: la ventaja comparativa (recursos endógenos) lo que comprende a los recursos humanos, recursos físicos, conocimiento de los recursos, disponibilidad de capital, infraestructura turística, recursos históricos y culturales y tamaño de la economía; por otra parte el segundo elemento a considerar son las ventajas competitivas (recursos desplegados) que consisten en la capacidad de utilizar los recursos que se han generado o adquirido de manera eficaz a largo, lo que conlleva ser eficiente y eficaz.

Modelo Integrado de Competitividad: Este modelo fue desarrollado por los autores Dwyer y Kim (2003), se le considera uno de los esquemas más completos en cuanto a la interpretación de las variables que determinan la competitividad de un destino se refiere. Basándose a nivel de referencia en el modelo de Calgary, Dwyer y Kim proponen su modelo integrado que contempla y segmenta los distintos tipos de recursos con que cuenta una localidad y los dividen de la siguiente manera: recursos heredados, recursos creados y recursos de soporte. Dichos recursos y sus interacciones son quienes determinan el éxito del destino turístico y otorgan cimiento a la competitividad turística del lugar.

Este modelo de forma complementaria contempla las condiciones de índole situacional, la gestión del destino y la demanda del mismo. Es en base a las interrelaciones de estos factores y variables subyacentes que se gesta la competitividad de los destinos turísticos, que conllevan en su pleno desarrollo al mejoramiento de los niveles de bienestar de los locales o habitantes de los lugares objeto de análisis (Dwyer y Kim, 2003).

Monitor de Competitividad: El Monitor de Competitividad se basa en el desarrollo hecho por Gooroochurn y Sugiyarto en 2005, conocido como Índice de competitividad turística y el conocido como el monitor de competitividad del World Travel and Tourism Council (WTTC). El WTTC en coordinación con el Instituto Christel DeHaan Travel Research (TTRI) de la Universidad de Nottingham, desarrollaron el llamado Monitor de Competitividad (CM) para turismo, cuyo fin es el de realizar indicadores de referencia en materia turística entre naciones.

Esta metodología puede resumirse en dos grandes procesos. Como primer procedimiento se seleccionan 23 indicadores y se normalizan de conformidad con los lineamientos marcados por Naciones Unidas, como segundo momento se procede al cálculo de un índice de tipo agregado orientado a cada uno de los ocho grupos.

Paso siguiente, en base a la metodología CM, se elabora el indicador sintético de competitividad, este se calcula obteniendo una media ponderada de cada uno de los ocho indicadores compuestos, se utiliza para tal fin el análisis factorial de acuerdo a Gooroochurn y Sugiyarto. De acuerdo a sus desarrollo consideran que no todos los factores repercuten igual en la competitividad del destino o localidad turística para ellos el peso específico de cada factor está dado para cada indicador de la siguiente forma: Tecnología (0,220), Indicador social (0,217), Recursos humanos (0,153), Precio (0,147), Apertura (0,126), Infraestructura (0,101), Factor humano (0,033) y Medioambiente (0,003) (Gooroochurn y Sugiyarto, 2005).

Propuesta Metodológica para Oasis Sudcalifornianos: Esta propuesta metodológica para el caso específico de los Oasis fue elaborada por Mendoza y Dominguez (2014), este método busca determinar la viabilidad de llevar a cabo en cada oasis actividades relacionadas con el turismo rural, en el mismo analizan la importancia de contar con una herramienta que pudiese permitir la evaluación de las variables internas a través de una matriz que relacionara cada aspecto vinculado con el entorno natural y social de los oasis, mismo que les otorgan las características particulares con que cuenta, de forma tal que se obtuviese una valoración del potencial de estas variables como indicador de la posibilidad natural-social de realizar ahí actividades de este tipo, por otro lado evalúan a través de una segunda matriz las variables externas que

tienen que ver con aquellos servicios que son de vital importancia o por lo menos así valorados por el turista, esto para utilizar dicha evaluación como un termómetro para ubicar en que posición se encuentra el lugar con respecto del resto de las localidades que compiten con el para la realización de este tipo de turismo en específico. Una vez obtenidos ambos resultados se cruzan para establecer que variables (internas o externas) representan una ventaja competitiva real y cuales pudiesen ser en el corto, mediano y largo plazo las principales problemáticas a enfrentar (Mendoza y Domínguez, 2014).

Breve análisis del Estado del Arte Presentado: Las distintas metodologías aquí presentadas si bien representan una aproximación a la realidad de un fenómeno por demás dinámico como lo es el turismo, sirven de base para el desarrollo de futuros acercamientos al análisis de los principales determinantes que dan vida a la actividad turística. En el caso de la mayor parte de ellas se encuentra la problemática derivada del hecho que para poder ejecutarlas se debe contar con una amplia gama de datos en casi todos los casos desagregados, cosa que en un país como México y sobremanera en el estado de Baja California Sur, representa un verdadero reto al no contar con dicha información a la mano, por lo que el investigador se ve obligado a tener que generarla con la incalculable pérdida de tiempo y recursos financieros que ello conlleva. Además algunos de estos modelos asumen ciertos criterios de valor a algunas variables que son eminentemente cualitativas y, por ende, difíciles de cuantificar sino es a una cierta apreciación del evaluador, por tanto no carece de un alto componente de margen de error al depender de marco de referencias distintos de acuerdo a quien es el encargado de levantar y analizar los datos. Por esta razón es menester del presente ofrecer una alternativa para la valoración de dichas potencialidades basada en la experiencia del trabajo en las comunidades y bajo el criterio de que una apreciación más detallada de ciertos fenómenos permite una aproximación a la realidad más cercana de lo alcanzado hasta ahora, usando como base todo método desarrollado por colegas a lo largo del estudio del sector turismo a nivel global.

METODOLOGÍA

Para el análisis de las localidades asentadas en torno a estos Oasis se he dividido el trabajo en dos vertientes, la primera en relación al análisis de las variables endógenas naturales de las mismas determinando así su potencialidad, y por otro lado, un breve análisis de las variables exógenas, haciendo uso de la información a través de una herramienta similar al Modelo WEF se determinará cuáles de estos sitios cuentan con las características que los hagan competitivos en cuantos al desarrollo de negocios de turismo rural se refiere.

La Metodología recoge algunos conceptos de cada una de las corrientes teóricas y de aplicación anteriormente citadas, al igual que con el Modelo Calgary tomaremos las variables endógenas o inherentes al entorno de cada oasis concretamente en lo que a ventajas comparativas se refiere pero dejando fuera el aspecto social de la comunidad en lo que al análisis de la variables internas se refiere, para realizar esto, al igual que el Modelo Propuesto por Mendoza-Domínguez (2014) utilizaremos una matriz para medirlas (Bote Gómez, 1997)) pero con la diferencia que no se consideran dentro de este Item aspectos como el Entorno Social y el Entorno Económico por considerarse más bien componente primordial que otorgan competitividad al lugar al representar ventajas competitivas del lugar, una vez que éstas han sido generadas o adquiridas por la comunidad. Al final se evaluarán como variables internas las características generales (léase naturales) del entorno bajo los siguientes rubros y ponderación (Tabla 1):

Tabla 1. Matriz de Medición de Variables Internas (Naturales) de los Oasis y su Ponderación.

VARIABLE INTERNA PONDERACIÓN (%)	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					TOTAL IVNO VALORACIÓN
	FLORA (a)	FAUNA (b)	GEOMORFOLOGÍA (c)	CLIMA (d)	AGUA (e)	
	0.22	0.22	0.1	0.16	0.3	1.0

FUENTE: Elaboración Propia.

Donde:

Flora (a). Se valoraron las especies nativas (endémicas y no endémicas) e introducidas por el hombre.

Fauna (b). Especies endémicas y aquellas que no, se tomó en cuenta si existen animales migratorios en la zona. De ser así el puntaje otorgado es mayor.

Geomorfología (c). Se valora mas alto si la zona cuenta con geoformas como lagos, volcanes, calderas, acantilados, cañones, escurrimientos de basalto, etc. Con menor porcentaje si el terreno es poco escarpado tendiendo a plano, esto por el tipo de actividades turísticas que se limitan de ser así.

Clima (d). La valoración más alta es enfocada a los sitios que mantienen una temperatura media entre 15° y 20° (16%), valoración media (8%) a temperaturas promedio situadas en los rangos (10°C-14°C) y (21°C-25°), y por último el valor inferior de 0 a las situadas en los rangos extremos de (9°C hacia abajo) y (26°C hacia arriba); estos segmentos se consideraron así derivado de que son las temperaturas en las que se pueden realizar las actividades de Turismo rural de forma más cómoda.

Agua (e). Se le otorga a esta variable la mayor puntuación debido a que el recurso hídrico es vital para este tipo de actividades sobre todo cuando se habla de Oasis.

IVNO: Índice de las Ventajas Naturales del Oasis. Entre más cercano a 1 mayor potencial natural para el Turismo rural.

Con respecto a la medición de las variables que definen la competitividad como tal, tenemos a las variables que definen a las ventajas competitivas del lugar, en este caso y a diferencia de otras propuestas, se desarrolla una tabla de variables competitivas con una batería de indicadores que miden las principales ventajas en este rubro con que cuenta el lugar (variables que se han generado a lo largo del tiempo o bien han sido adquiridas como es el caso de las tecnología y medio de comunicación moderno).

Dichos indicadores se basan en una primer instancia en los utilizados por el Monitor WTTC estos evalúan lo siguiente: competitividad de precios, factor humano, desarrollo infraestructuras, medio ambiente (referido a aspectos relacionados a su cuidado), desarrollo tecnológico, recursos humanos, apertura turística y desarrollo social. De conformidad con lo que comenta Bravo (Bravo Cabria, 2004), basándonos en el aporte que ofrece la metodología del Medidor de Competitividad (CM) que los autores Gooroochurn y Sugiyarto complementan desarrollando “un indicador sintético de competitividad, obteniendo una media ponderada de cada uno de los ocho indicadores compuestos, donde los pesos se han obtenido utilizando técnicas de análisis factorial” (Gooroochurn y Sugiyarto, 2005). Este Indicador es el que se ha decidido utilizar pero en una versión adaptada a las características propias de un ecosistema como lo es el Oasis, pero en la importancia y peso que le dan Gooroochurn y Sugiyarto será idéntico, quedando como se muestra a continuación (Tabla 2).

Tabla 2. Tabla resumen de las ponderaciones otorgadas a los 8 indicadores sugeridos por Gooroochurn y Sugiyarto. (Medición de Competitividad basado en Ventajas Competitivas de los Oasis).

INDICE	VALOR (PONDERACIÓN %)
Tecnología	0.22
Indicador social	0.217
Recursos humanos	0.153
Precio	0.147
Apertura	0.126
Infraestructura	0.101
Factor humano	0.033
Medioambiente	0.003
IC	1

FUENTE: Elaboración basada en Gooroochurn, N., & Sugiyarto, G. (2005). Competitiveness indicators in the travel and tourism industry. *Tourism Economics*, 11(1), 25-43.

Estas ponderaciones en ambos instrumentos es derivado del hecho que no todas las variables inciden de igual manera sobre el potencial y la competitividad del lugar objeto de estudio, por tanto, es basado en la opinión de pequeños grupos y a través del método Delphi que se centra en el trabajo con grupos de expertos en este tipo de actividades (no solo académicos sino empresarios), así como análisis del tipo de Focus Group (con gente que práctica el turismo rural de forma habitual) que se han decidido los porcentajes expresados en la Tabla 1 y se ha generado una nueva clasificación basado en la Tabla 2 mostrada con anterioridad pero adaptada al desarrollo de las ventajas competitivas desde lo local, que se puede apreciar a detalle en la Tabla 3.

Tabla 3. Tabla de Medición de las Variables a considerar para determinar la Competitividad basada en Ventajas Competitivas de los Oasis

INDICE	VALOR (PONDERACIÓN %)
Tecnología	0.1
Precio	0.05
Vías de Acceso	0.1
Servicios Básicos	0.1
Factor Humano	0.3
Medio Ambiente	0.15
Patrimonio Cultural	0.2
ICO	1

FUENTE: Elaboración propia.

Donde:

Tecnología. Si el poblado cuenta con CPU's, acceso a TIC's (wifi), teléfono, radio y Televisión.

Precio. Referido a los precio de Hospedaje y alimentación del poblado tomando en cuenta la Paridad del Dólar.

Vías de Acceso. Si se cuenta con vías de acceso al poblado pavimentadas, si la carretera es Federal o Estatal e importancia de la misma.

Servicios Básico. Si se cuenta con alumbrado público, luz eléctrica en casas, agua potable, Servicios Médicos.

Factor Humano. Nivel de escolaridad de la población, Cultura de la población hacia los negocios en materia de Turismo y servicios.

Medio Ambiente. Cultura de la gente respecto al cuidado del medio ambiente, si se cuenta con programas de cuidado del entorno y PET.

Patrimonio Cultural. Se refiere si cuenta con Vestigios culturales prehispánicos, de la colonia, pinturas rupestres, tradiciones propias y procesos artesanales de producción.

ICO: Índice de Competitividad del Oasis. Entre más cercano a 1 mayor ventaja competitiva presenta para el desarrollo del Turismo Rural.

Con la información que se desprende de cada Tabla se puede inferir si el Oasis cuenta con las ventajas comparativas necesarias para desarrollar en el actividades vinculadas al Turismo Rural, (Tabla 1) a la vez de determinar si se cuenta con las ventajas competitivas suficientes para que se pueda emprender negocios con éxito en estas zonas (Tabla 3) de forma tal que si los indicadores derivados de estas tablas se acercan a la Unidad (Valor 1) se hablaría que el Oasis presentan condiciones optimas para el desarrollo del Turismo Rural.

El denominado índice de potencial y competitividad del oasis (IPCO) se elabora con los resultados arrojados por las tablas que miden el potencial del oasis (Ventajas Comparativas) y la competitividad (Ventajas Competitivas). La fórmula del Índice de Potencial y Competitividad del Oasis (IPCO), considera una escala de 0 a 1 considerando de forma ponderada-equilibrada ambos tipos de ventajas (50% y 50%) y se expresa:

$$IPCO = [(IVNO*0.5) + (ICO*0.5)]$$

Donde:

IPCO = 1 El oasis cuenta con altas posibilidades de solventar y soportar actividades de Turismo Rural.

IPCO = 0 El oasis no cuenta con altas posibilidades de solventar y soportar actividades de Turismo Rural.

RESULTADOS

Los resultados obtenidos de la evaluación del potencial de turismo rural en los Oasis Sudcalifornianos objeto de estudio, son los mostrados en la Tabla 4. Se puede apreciar con claridad que en su mayoría los Oasis objeto de estudio presentan condiciones naturales idóneas para el desarrollo de actividades turísticas rurales, siendo los Oasis de San Isidro, Mulegé y La Purísima los que muestran los resultados más elevados

en este rubro, caso contrario de los Oasis de San Javier y El Chorro que presentan menor fortaleza en este tipo de ventaja derivado principalmente de los problemas relacionados con el recurso hídrico en abundancia (en épocas de secas) y en lo que a distribución se refiere (sobre todo en el caso de San Javier) y en el caso de El Chorro al estar situado en una Zona Natural protegida que por razones obvias restringe las actividades productivas.

Los Oasis de San Ignacio, Mulegé y San Javier son los que presentan mayor ventaja en lo que se refiere al rubro de Competitividad medido a través de las principales variables listadas en la Tabla 5, esto derivado principalmente a que son los Oasis ubicados sobre o cercanos a la carretera Transpeninsular que recorre todo el estado de Baja California Sur y que funge como principal vía de acceso para el turismo en la entidad; además que son los oasis más ricos en patrimonio cultural ya que en ellos se localizaron los primeros asentamientos humanos de la época misional y fungen como pueblos fundacionales del Estado. Preservan a su vez la forma tradicional de elaborar algunos productos y cuentan con un atractivo propio para la realización de senderos y actividades vinculados a la cultura del rancho sudcaliforniano. En contraparte el Oasis de El Chorro es el que presenta menos atractivos en estos términos y por lo tanto para las actividades de turismo rural se muestra en clara desventajas con las otras localidades.

La Tabla 6 Muestra el Resultado general en términos de Potencial y Competitividad para Turismo rural de los distintos Oasis, demostrando que los Oasis más proclives a sostener actividades vinculadas con este tipo específico de turismo alternativo son los Oasis de San Ignacio, San Isidro, Mulegé, La Purísima y San Javier en ese orden, situando el desarrollo de este tipo de actividad en la parte norte del Baja California Sur.

Tabla 4. Matriz de Medición de Variables Internas (Naturales) de los Oasis y su Resultado.

VARIABLE INTERNA	ENTORNO NATURAL (Variables Endógenas / Ventajas Comparativas)					TOTAL IVNO VALORACIÓN
	FLORA (a)	FAUNA (b)	GEOMORFOL OGÍA (c)	CLIMA (d)	AGUA (e)	
OASIS (Valor Máximo Esperado)	0.22	0.22	0.1	0.15	0.3	1.0
Oasis San Ignacio	0.11	0.22	0.05	0.08	0.3	0.76
Oasis Mulegé	0.11	0.22	0.10	0.08	0.3	0.81

Oasis El Chorro	0.11	0.22	0.10	0.08	0.15	0.66

FUENTE: Elaboración Propia.

En lo referente a las Variables que otorgan competitividad a cada una de las localidades asentadas en los oasis se pueden apreciar dichos resultados en la Tabla 5.

CONCLUSIONES

Con los resultados anteriormente expuestos se puede concluir que el Turismo Rural es una actividad con alta probabilidad de ser realizado en los oasis sudcalifornianos sobre todo en aquellos ubicados en la parte norte del estado tanto del lado del Pacífico como del Mar de Cortez, derivado no solo en sus riquezas naturales (ventajas comparativas) sino en su riqueza en materia de patrimonio cultural y recurso humano que muestra una actitud proactiva hacia los negocios y apertura al turista; otros oasis con potencial natural se han visto afectados por factores de corte cultural en materia de la poca disponibilidad y apertura de la población hacia actividades relacionadas con el turismo, como es el caso de los Oasis de San José y San Miguel de Comondú.

Es conveniente trabajar en materia de capacitación en materia de apertura al emprendedurismo acompañado de forma muy cercana con trabajo de conservación del patrimonio natural y cultural que permita hacer de la opción productiva del turismo rural, una posibilidad real para el bienestar de la población de manera sustentable pero sobre todo sostenible.

Tabla 5. Tabla de Resultados de la Medición de las Variables a considerar para determinar la Competitividad basada en Ventajas Competitivas de los Oasis
