From the strategic decision makers of these firms, the drivers (pull and push factors) were inconsistent from one industry to another and from one firm to another within an industry. Such perceptions present a challenge especially to host countries, as there are no simple policy formulations adoptable to attract FDI. However, employing the likert scale ranging from 1 = not important to 5 = extremely important, Dippenaar ranked a number of market-related factors influencing the firm's decision to go international. Some authors in the related studies (e.g. Ngowi, 2001; Ankinkugbe, 2005; Asiedu, 2005) considered the same factors and Dippenaar's approach is plausible.

About 19 pull factors obtained an average score of greater than or equal to 2 and 9 of the push factors achieved an average score of greater than or equal to 2. Table 1 below gives a full detail of these factors and their rankings and scores.

The results indicate the less importance of policy related factors. Such issues as regulatory environment, economic/fiscal incentives and regional economic agreements obtained very low ranks and have very low average scores. This is the same observation with push factors as capital account liberalization and domestic regulatory constraints have average score of less than 2.30 and have low ranks. Nevertheless, analysis should be on industry by industry and firm by firm as the sample include firms which are understandably different in terms of what they consider to be vital factors or constraints for their businesses. A case in hand is that of a sugar producer who is likely to consider labor costs as important while the retailer will be much more concerned about similarity in preferences as with country of origin.

Other important factors that determine flow of FDI into a country or region revolve around the risks and obstacles that may give an extreme challenging environment. In the US-Africa Business Summit of 26 June 2003, Taylor stated that risk - both real and perceived – is the primary reason more capital is not flowing to Africa. According to Taylor, despite the fact that Africa represents incredible potential, low cost of labor and vast natural resources, investors remain wary. Investors are afraid of putting their money in a place that all too often is perceived to be wracked by war, famine, AIDS and corruption.

Table 1: Sample Mean – Pull And Push Factors Ranked By Their Importance In Influencing Decisions To Carry Out FDI

Pull Factors ranked by their importance	Ranking	Score
High returns on investment	1	4.47
High Margins	2	4.12
Market growth/ GDP growth	3	3.94
Size of the market	4	3.76
Liberalization and Privatization	5	3.59
Low host country competition	6	3.53
English as a key language	7	3.18
Low taxes and tariffs	8	2.94
Similar market environment/ consumer preferences as SA	9	2.76
Acquisition opportunity	9	2.76
Similar institutional/regulatory environment as SA	11	2.59
Level of GDP per capita	12	2.53
Presence of key clients	12	2.53
Geographical proximity	12	2.53
Low labor/factor costs	15	2.47
Economic/fiscal incentives	16	2.29
Low cost entry	17	2.24
Similar culture as SA	17	2.24
Regional economic agreements	19	2.00
Presence of domestic competitor operating in market	19	2.00

Push factors ranked by their importance	Ranking	Score
Geographical diversification	1	4.18
Earnings diversification	2	4.12
Saturated domestic market/Small domestic market	3	4.59
Global industry trends	4	3.41
Increased domestic competition	5	2.47
Capital Account liberalization	6	2.29
Necessity to invest excess capital	6	2.29
Domestic regulatory constraints	8	2.06
Rising domestic costs	9	2.00

Adriaan Dippenaar compiled this table. The table summarizes the average scores and rankings of the pull and push factors of Foreign Direct Investment. A score close to 1 shows that the pull or push factor is less important in determining the level of FDI. However, a value close to 5 shows that a greater number of the respondents rated the factor highly (Dippenaar, 2009).

The other obstacles include inefficient or nonexistent infrastructure, bureaucracy, lack of respect of human rights and lack of rule of law, no respect of property rights, currency fluctuations and political instability. Dippenaar (2009) considered a number of these factors and used the likert scale to rank them. The scale ranged from 1 = no risk to 5 = very severe risk. Table 2 gives a summary of the findings.

In Table 2, corruption, political instability and lack of skilled labor have ranks. It is difficult to dispute the effects of political instability given the common experiences of uprisings, riots, and in some cases of coups in Africa. Of late, African countries are associated with elections, which are inconclusive, and marred with violence. With the new formula of forming government of national unity (three cases of Kenya, Zimbabwe and Madagascar), mistrust continues to impede flow of investments in most Sub-Saharan countries.

Corruption ranks the highest risk indicating that it is sand in the engine of development in most Sub-Saharan Africa. It is believed that it magnifies the cost of doing business and has a potential of influencing negatively on the reputation of the firm. Corruption is contagious such that it is difficult for the firm to control the risk and making sure that its people do not get involved in corruptive tendencies (Kwok and Tadesse, 2006). In countries where corruption is perceived to be high, investors are hesitant to take risk and do business there.

Table 2: Risk Factors Ranked By Their Severity

Risk Factor	Ranking	Score
Corruption	1	3.89
Political Instability	2	3.83
Lack of skilled labor	3	3.78
Economic instability	4	3.72
Regulatory environment	4	3.72
Contract enforcement	4	3.72
Quality of infrastructure	7	3.59
Respect of property	8	3.56
Threat of economic policy reversal	9	3.28
Market growth/GDP growth	10	3.22
Ability to remit dividend earnings	11	3.18
Taxes and tariffs	12	3.17
Threat of nationalization	13	3.06
Level of bureaucracy	13	3.06
Quality of life	13	3.06
Crime/Physical insecurity	14	3.00
Underdeveloped capital markets	15	2.83
Availability of joint venture partners	16	2.82
Anticompetitive behavior	17	2.76
Labor/Factor costs	18	2.61
Lack of local suppliers	19	2.56
Lack of raw materials	20	2.25

Adriaan Dippenaar compiled the table. The score reflects the mean value of the 5-point scale (1 = no risk, 2= minor risk, 3= moderate risk, 4 = major risk, 5= very severe risk). From the table, the figures show that the higher the average score, then the riskier the factor (Dippenaar, 2009).

EMPIRICAL RELATIONSHIP BETWEEN FDI AND THE KEY DETERMINANTS IN AFRICA

Asiedu (2005) used a panel data for 22 countries in Sub – Saharan Africa for the period 1984 – 2000. The main aim was to analyze the impact of government policy and country characteristics such as economic, institutional and political factors. The model also included such variables as natural resource endowment, macroeconomic stability, FDI regulatory framework, corruption, effectiveness of legal system and political instability. Unlike the study by Dippenaar, Asiedu examines the impact of a wide range of variables on FDI including the natural resource availability. The arguments of both authors are plausible. For Dippenaar, availability of natural resources is an uncontrollable factor such that if it is the main determinant of FDI, that would mean that the poor resourced countries will attract very little or no FDI regardless of the policies the country pursues. However, Asiedu showed that even in the Eclectic Theory, natural resources play a vital role and its inclusion in the model has support from theory and in the practical sense.

The choice of variables in the model by Asiedu was also informed by the work of World Business Environment Survey (WBES) in 1999/2000, World Development Report Survey (WDRS) in 1996/1997, World Investment Report (WIR) Survey in 1999/2000 and the Center for Research into Economics and Finance in Southern Africa (CREFSA) survey in 2002. Asiedu summarized the results of these four surveys and table 3 below illustrates this summary.

Similar to results in Table 2, corruption stands out to be an important factor that constrains FDI. It has a rank of number 1 in WBES, number 2 in WDRS, number 1 in WIR survey and number 3 in CREFSA survey. This corresponds very well with the findings by Dippenaar (2009) on the survey of 15 South African firms investing in Sub-Saharan Africa. The other factor that came out to be important constraint in WBES and WDRS is Weak Infrastructure. However, in the WIR survey and CREFSA survey, 27% and 30% of firms respectively identified it as a constraint.

Table 3: Average Rating for each Constraint and Percentage of Firms Identifying a Factor as a Constraint: Constraints on FDI to Sub-Saharan Africa

Constraints on FDI to Sub-Saharan Africa: Average Rating for each constraining Factor			
WBES (1= no constraint, 4 = severe constraint)		WDRS (1= no constraint, 6 = severe constraint)	
Corruption	2.80	Taxes and regulations	4.50
Weak Infrastructure	2.75	Corruption	4.47
Street Crime	2.70	Weak Infrastructure	4.28
Inflation	2.67	Crime	4.25
Financing	2.64	Inflation	4.11
Organized crime	2.57	Lack of access to finance	3.95
Political instability	2.43	Policy Uncertainty	3.88
Taxes and Regulation	2.24	Cost Uncertainty	3.75
Exchange Rate	2.15	Regulations on Foreign Trade	3.64

Constraints on FDI to Sub-Saharan Africa: Percentage of Firms Identifying a Factor as a constraint			
WIR Survey		CREFSA Survey	
Corruption	49	Policy Uncertainty	47
Lack of access to global market	38	Macroeconomic Instability	42
Political and Economic Outlook	28	Crime	35
Cost of doing business	28	Corruption	35
Lack of Access to Finance	28	Policy Uncertainty	34
Weak infrastructure	27	Weak Infrastructure	30
Tax regulation	24	FDI Regulations	24
Unskilled labor	23	War	19
FDI Regulatory Framework	21	Labor Unrest	17

The table was extracted from Asiedu (2005). It shows a summary of four surveys. WBES and WDRS use likert scale to measure the influence of each constraint. WIR survey and CREFSA survey calculates the percentage of respondents who identified a factor as a constraint. For WBES, the likert ranges from 1 to 4 and that of WDRS ranges from 1 to 6.

Asiedu (2005) considered the factors summarized in tables above as seven independent variables. The first variable was natural resource intensity and the share of minerals and oil in total exports is the proxy. The second variable was attractiveness of the host country's market and the host country's GDP is used to measure attractiveness in this model. However, in the study by Dippenaar (2009), host country's attractiveness is represented by a myriad of factors and not just its GDP. Infrastructure development is the third variable and number of telephones per 1000 population is the proxy of this variable. Admittedly, this proxy of infrastructure has a number of limitations. However, data relating to telephones per 1000 population is readily available. The fourth variable is the macroeconomic stability as measured by the inflation rate. The fifth variable in Asiedu's model is the openness to Foreign Direct Investment. Unlike other studies that use share of trade in GDP as measure of openness, in Asiedu's model, an index that captures risk to operations, taxation, repatriation of profits and labor costs was used. This index ranges from 0 to 12 where a high score represent more openness.

Host country's institutions as represented by corruption and the extent to which the rule of law is enforced represent the sixth factor. Both corruption and rule of law are measured as ratings from 0 to 6. For corruption, high rating implies more corruption but for rule of law, high rating implies a more efficient legal system. The last factor is the political instability and for this, Asiedu employed four measures that are coups, number of assassinations, number of revolutions and riots.

The fixed-effects panel estimation was used for its merits of allowing the analyst to focus on changes within different units over time and that of keeping the estimates unbiased even when data is missing for some periods for some cross sectional units. All the variables showed the predicted signs and were highly significant at conventional levels.

Table 4: Asiedu's Fixed Effects Estimations

Variable	Model 1	Model 2	Model 3	Model 4
Intercept	-56.874*** (.007)	-52.676** (.018)	-68.160*** (.002)	-57.586* (.013)
Market Size = Log (GDP)	2.386** (.018)	2.196** (.033)	2.910*** (.004)	2.426** (.018)
Natural Resource = share of fuel and minerals in total exports (%)	.0038*** (.007)	.035** (.013)	.038*** (.007)	.035** (.014)
Infrastructure = Log (Phones per 1000 population)	1.223*** (.006)	1.287*** (.004)	1.102** (.013)	1.220*** (.007)
Macroeconomic Stability = Lag (Inflation)	-0.011** (.049)	-0.011** (.036)	-0.012** (.027)	-0.011** (.042)
Lag (Openness to FDI)	.177** (.038)	.195** (.024)	.179** (.036)	.185** (.033)
Institutional quality = Lag (Corruption)	-0.380** (.045)	-0.398** (.037)	-0.430** (.024)	0.456*** (.035)
Institutional quality = Effectiveness of the Rule of law	0.472*** (.001)	0.453*** (.001)	0.468*** (.001)	0.456*** (.001)
Country Risk = Number of Assassinations	-0.633** (.016)			
Country risk = lag (number of Coups)		-1.080** (.031)		
Country risk = number of Riots			-0.221** (.016)	
Country Risk = number of Revolutions				-0.490* (.063)
Number of countries				
Number of observations	22	22	22	22
Notes:	144	144	144	144

The table summarizes Asiedu (2005) empirical results. The p-values are in parenthesis and ***, * and, * denote significance at 0.01, 0.05, and 0.10 levels respectively. The dependent variable is FDI/GDP.

DESCRIPTION OF DATA AND THE VARIABLES

The study uses data from 40 randomly selected Sub-Saharan African countries for the period 1990-2008. For each variable, the data source is stated. The dataset is a typical panel dataset calls for the use of panel data models.

Net FDI from within region: This is divided by the country's GDP for that particular year and is the dependent variable in this model (e.g. in Jordaan, 2005). Some of the data is obtained from the Global Insight and country profiles under the World Bank website.

Market Size: In literature, for instance, Hejazi and Pauly (2003), market size is an important factor that investors consider when deciding on where to invest. Jenkins and Thomas (Econews) interviewed 81 UK, Swiss and German firms to find out why these firms invest in the SADC region and found out that 84% of firms indicated the importance of the market size (Khadaroo and Seetanah, 2007). The level of GDP per capita is the close proxy of market size. The results of Dippenaar (2009) research supports that most of Africa's market is untapped.

Export concentration ratio: Some empirical studies of the determinants of FDI consider natural resources as one of the independent variables to explain FDI inflows. The share of fuel and minerals in total exports (Asiedu, 2002) for example, measures this. In this study, the export concentration ratio is the measure of natural resources. The argument is that countries exports are determined by their comparative advantages. When the concentration ratio in a country is low, then the country does not depend on few products as its exports and that country is relatively rich. It is therefore, expected that countries with low export concentration ratio do attract more FDI. Data for export concentration ratio is obtained from UNCTAD datasets.

Macroeconomic stability: As in other studies, e.g. Ahmed, Arezki and Funke (2005), inflation is the measure of economic stability. With reasonably low inflation, FDI inflows are encouraged. In this case, it is expected that investors consider the behavior of inflation levels and the previous period's inflation levels would determine the current FDI inflows. Thus, I used the inflation with lag of one. Data for inflation is from Global Insight datasets.

Institutional quality: Corruption index and rule of law index frequently measure this. Very few Sub-Saharan Countries have readily available information for the rule of law index for long periods. In my study, one measure of institutional quality, corruption perception index (CPI), is included as one of the independent variables. It is also included in lag form as current levels of corruption would influence next period's investment decisions. A maximum value of 10 indicates that the country is highly clean and a value of zero shows that the business people consider the country to be highly corrupt. Thus with low values of CPI, FDI inflow is predicted to be weakened.

Landlockedness: This is measured as a dummy. A country that is not landlocked is given a value of one and zero otherwise. Literature and some studies for example, Naude and Krugell (2005) suggest the importance of geography in determining the levels of FDI.

EMPIRICAL ANALYSIS

The study employs fixed effect estimation model. It is applicable to panel data analysis. This estimation technique is commonly used for time-series cross-sectional data analyses. The other important virtue of this approach is that there is little justification for treating the individual countries effects as uncorrelated with the other regressors as is assumed in the random effects model. Given that countries are the units in our study, the random effects treatment may suffer from inconsistency due to correlation between included variables and the random effect. The dataset also suffers a serious challenge of missing data. It is a highly unbalanced panel given the fact that not all countries included have up to date information concerning the variables in the model. Our sample size also point to the same effect that it is from a very small population and supports the use of fixed effect estimation model.

In the study, I expect high level of heterogeneity across countries. Looking closely at the determinants included in the model, there is a balance between factors that the government can influence and those that it has little influence over. For instance, the government can influence economic policies to control high levels of inflation and its harmful effects. The government can also establish institutions to deal with corruption and rule of law. However, very little can be done to influence resource endowments as we see that some countries are oil rich and others are not. At the same time, a country cannot change its location. It can only improve its accessibility by improving infrastructure and becoming an active member in the integration. On the other hand, with skills development, some countries may improve on their comparative advantage and positively influence their export concentration.

For each of the 40 countries considered, data for each variable and for the period 1990-2008 is captured. As highlighted earlier on, there are some missing values in the dataset as it was difficult to fill all the information for the period considered. The table below summarizes the results for the three models.

In model 1, lag inflation emerged as insignificant. All the other variables are found to be significant at all conventional levels and have the predicted signs. In model 2, the location variable is introduced in the model. With the exception of lag inflation, all the other variables came out to be significant. The model also shows that the level of FDI varies with the location of the country. Countries with seaports enjoy more regional FDI compared to their counter parts. Model 3 includes the lag of FDI as one of the regressors. Results show that it is also a significant variable in explaining FDI flows. This is expected assuming that foreign investors bring with them a number of advantages such as skills. It is expected that

more and more foreign investors would follow as skills base, infrastructure and information availability improve.

Table 5: Empirical Results for the Fixed effect estimation

Variable	Model 1	Model 2	Model 3
Intercept	-11.269*** (0.001)	-13.171*** (0.000)	-14.002** (0.063)
Market Size = Log (GDP per Capita)	5.474*** (0.000)	6.2767*** (0.000)	4.4331*** (0.007)
Natural Resource = Export Concentration Ratio	10.4262*** (0.000)	10.342*** (0.000)	9.786*** (0.000)
Institutional Quality = lagCorruption	1.457*** (0.007)	1.728*** (0.001)	0.934*** (0.003)
Macroeconomic Stability = Lag (Inflation)	-0.00338 (0.516)	-0.0068 (0.161)	-0.0704 (0.641)
Landlockedness	-	5.6631** (0.0393)	4.456** (0.012)
Lag FDI	-	-	13.342*** (0.000)

This table illustrates the fixed effect estimation results. The p-values are in parentheses. In the table, *** denotes that the variables are significant at the lowest conventional level which is 0.01.

CONCLUSION

The study analyzed the determinants of net FDI inflow within Sub-Saharan Africa. The study entailed to fill the information gap about the determinants of regional FDI empirically. The results show that less corruption, large market size, high resource endowments and low inflation positively influences FDI inflows. It also established that landlocked countries receive less regional FDI compared to their counter parts. This study is important as it ascertains that Sub-Saharan African countries can promote growth in the region through promoting regional investments. Government policies may attract FDIs from countries within region. Depending on the geographical distance, some countries within the region share same cultural norms and this may facilitate investment and economic growth. A positive move by the regional investors may also be a good sign to the overseas investors that Africa is an equally good destiny for their investments.

RATES OF RETURN OF EDUCATION IN PAKISTAN: AN UPDATE FROM THE PIHS, 2001-02

Javed Ashraf, University of St. Thomas

ABSTRACT

This study has updated earlier work on the rates of return to education in Pakistan. Our findings broadly mirror the findings of earlier researchers. We find that even relatively low levels of education (Middle level) leads to a significant enhancement in earnings. We also find that women tend to have higher returns to education than do men. This of and by itself suggests a reallocation of resources towards females in the educational sphere.

INTRODUCTION

After a flurry of studies in the 1970s and 1980s, there appears to have been a barren period in which little attention was directed towards computing rates of return to education in Pakistan. Recently however, some studies, both published and unpublished have investigated this important area. This article updates, and provides comparisons with the results of some of these studies. Most of these studies, including this one, determine that the returns to females are higher than they are for males. This is a finding with considerable policy significance.

METHODOLOGY AND DATA

The data used for this study were drawn from the 2001-02 *Pakistan Integrated Household Survey (PIHS)*, and were collected by the Government of Pakistan's Federal Bureau of Statistics. The objective of the *PIHS*, a national sample survey, is to provide household and community level data which can be used to monitor, evaluate and assess the impact of the Social Action Program. The *PIHS 2001-02* is the fourth round of the project. Previous rounds were conducted in 1995-96, 1996-97, and 1998-99. The *PIHS* is a large sample survey covering 16,182 households. The occupation variables were determined using the *Pakistan Standard Classification of Occupations (PSCO)*, 1994 as revised by the *International Standard Classification of Occupations (ISCO)*, 1988. A detailed listing of the occupational categories is available in Sadiq and Akhtar (2006).

The model used for this study was standard and straightforward. The wage equation used for the estimates in this study is:

$$\text{Log Monthly Salary} = \alpha + \sum_{i=1}^{11} \beta_i X_i + \sum_{i=1}^8 \delta_i OC_i + \sum_{i=1}^9 \mu_i IC_i \quad \text{equation (1)}$$

where the X_i represent eleven characteristics of working individuals that impact earnings, OC_i are eight occupational categories, and IC_i represent nine industrial categories.

Compactly stated the joint determination of participation and earnings is given by:

$$\ln W_{mi} = \beta_{m0} + \beta_{m1} X_{mi} + \beta_{m2} [-f(\text{EMP}_i / F(\text{EMP}_i)] + u_{mi} \quad (2)$$

$$\text{Emp}_{mi} = Z' \delta_{mi} + \varepsilon_{mi} \dots \dots \dots (3)$$

for males, and:

$$\ln W_{mi} = \beta_{m0} + \beta_{m1}X_{mi} + \beta_{m2}[-f(EMP_i/F(EMP_i)) + u_{mi} \dots\dots\dots(4)$$

$$Emp_{mi} = Z'\delta_{mi} + \varepsilon_{mi} \dots\dots\dots(5)$$

for females. X_{mi} and X_{fi} represent characteristics of males and females respectively, as represented in equation (1), and Z is a subset of X , and represents those worker characteristics that are instrumental in determining whether an individual will be in the workforce. In equations (2) and (4), the selectivity variables proxy for the probability of male and female participation in the workforce. The use of these variables leads to consistent estimation of the coefficients of the equation.

EMPIRICAL RESULTS

Table 1 lists the coefficient estimates from three different regressions: the first for the entire sample, and the other two for males and for females separately.

AGE: We used AGE as a proxy for experience. As expected, we found AGE to be positively correlated to earnings. However, both the size of the coefficient estimate as well as the statistical significance of the variable was considerably higher for men than they were for women. The negative coefficient for AGE-SQUARED confirmed the concavity of the age-earnings profile, although it was statistically insignificant for females. The coefficient estimates indicate that earnings rises by 2.3% for every year that a male advances in age. The percentage increase for women, was lower, at 1.2%.

MARITAL-STATUS: It has been suggested in the literature that married individuals tend to have higher earnings than those unmarried. Our finding of a positive and statistically significant coefficient for MALE reinforces the findings of other researchers. Our coefficient estimates indicate that married men earn approximately 8% more than their unmarried counterparts, while the gain for married women is 6%.

OCCUPATION: Nine different occupations were identified in the data. Our regressions included eight of these, with Elementary Occupations as the missing base variable. The coefficient estimates associated with each of these occupations (listed in Table 3) indicate the earnings premium relative to respondents employed in the elementary occupations ranged from 5 percent to 70 percent. Given the broad definitions of the occupational categories, it is difficult to provide much meaning to these estimates.

INDUSTRIAL CATEGORY: Ten industrial categories were identified in the data. Nine of them were included in the regressions, with Agriculture, Forestry, Hunting and Fishing being the missing base variable. As with the occupational categories, the industrial categories were very broadly defined. The only industry with a considerable premium relative to the omitted base was Finance and Real Estate, where the earnings premium was 39% above those from the omitted base industry.

MALE: Our coefficient estimate suggests that males earn 15% more than females. The gender earnings gap is well documented, and we will therefore refer the interested reader to these other studies. They include Ashraf and Ashraf (1993a, 1993b).

RETURNS TO EDUCATION

The principal objective of this study was to determine the rates of return to different levels of education in Pakistan. Five levels of education were identified in the earnings equation: Middle (eight years of schooling), Matric (ten years of schooling), Intermediate (twelve years of schooling), Bachelors (fourteen years of schooling), and Masters and Other Advanced (sixteen or more years of schooling). Less than

Middle level of education was the missing base variable in the regression equation. Consistent with *a priori* expectations, coefficient estimates rose monotonically with the level of education. The percentage gain to men and women from different levels of education (relative to the base of “less than middle level of education”) is shown below in Table 3. These results show the considerable enhancement in earnings from receiving progressively higher levels of education. The differences across gender are relatively minor, underlining the benefits that accrue to both men and women with formal academic instruction. As a clear recommended policy measure, it reinforces the need to provide education as a means to combat poverty in the country. Even the attainment of Middle level of education would, in the case of females, enhance earnings by 13%. Given distressing levels of economic well-being, such an enhancement of income would be welcome.

CONCLUSIONS

This study has updated earlier work on the rates of return to education in Pakistan. Our findings broadly mirror the findings of earlier researchers. We find that even relatively low levels of education (Middle level) leads to a significant enhancement in earnings. We also find that women tend to have higher returns to education than do men. This of and by itself suggests a reallocation of resources towards females in the educational sphere.

ESTABLISHING A WHOLLY FOREIGN OWNED ENTERPRISES IN PEOPLE'S REPUBLIC OF CHINA

Boštjan Polajžer, University of Primorska Slovenia

ABSTRACT

The purpose of the following article is present research outcomes of registering a wholly foreign owned company in China, and to compare it with the establishment of a limited liability company in the European setting. On the basis of the research, we established a uniform model that should serve as guidance to future foreign entrepreneurs who intend to establish a wholly foreign owned company in China. With the help of an interview method, we obtained information from the selected respondents, and this information served us to verify and to compare the European and Chinese ways of company registration. The information obtained in this manner was analyzed, and served as a basis to draw up a model of registering a wholly foreign owned enterprise in China. We used comparative theoretical study of company registration models in the selected European countries, on the basis of which we observed that registering a limited liability company in the European setting does not differ significantly from country to country. All national and local legislation as well as the procedures in the EU countries are relatively similar, the only difference in the European setting can be observed in the amount of the start-up capital required and the time for establishment that can take from 1 - 30 days. The research enabled us to set up a uniform theoretical model of establishing a limited liability company in the European setting. The research contributed towards the clarification of some important issues faced by European as well as other international investors who plan to establish a wholly foreign owned company in China, or a company resembling those they establish in their own countries, in their full ownership. The mentioned research and the model of establishing a wholly foreign owned enterprise can serve as guidance or instruction to foreign investors planning to establish their own company in China.

INTRODUCTION

Globalization can be defined as a process in which the role of geographical distances in international and regional economic, political, socio-cultural relationships is becoming less significant, which influences the potential borderlessness and internationality of relationship networks and co-dependence (Lubbers and Koorevaar, 1999). In the past decades, the role of geographical distances diminished also in China, which is a result of the globalization process, which left its mark in China in the field of economy, politics, culture, society and security. From the economic perspective, globalization often means a rapid growth in international trade and exchange of goods, currencies, technology, and capital, in an increasingly open, integrated and borderless international world of economy (Intriligator, 2001).

China remains a great, though multi-layered, opportunity for the world. On the one hand, the developing Chinese market with 1.3 billion inhabitants offers infinite business opportunities, while on the other hand, the country as a whole remains gravely undeveloped, and consequently, the price of its workforce low. Numerous Slovenian companies should seriously consider both alternatives if they wish to survive and win in the global competitive game. Companies operating in global industries that are multiplying are being forced to internationalize their activities from the strategic point of view (Kotler, 1997).

Through the process of economic reforms, China has succeeded in achieving something that the western world required more than hundred years. Economic reforms modeled on the capitalist states have transformed China into an important power in the world economy. From the beginning of the reforms in 1979, which aimed at opening up the market, and until today, China has become one of the fastest developing economies. From 1979 to 2004, China's GDP grew at an average rate of 9.3%, and China has the second largest economy in the world, following the USA, measured in purchasing power parity; nevertheless, per capita GDP is still relatively low (Fishman, 2005).

Small and medium-sized companies are increasingly included into international exchange. This is particularly evident in small countries such as Slovenia, where it is very difficult to attain any visible advantages brought about by the economy of scale and maintain efficiency and competitiveness without expanding beyond the national boundaries (Trtnik, 1999). Studies of Slovenian companies have revealed different levels of internationalization of companies from various regions and branches (Glas, et. al., 1999). As opposed to small enterprises in large countries, new dynamic companies in small countries cannot develop for long within their own countries, as they soon become limited by small national markets. Therefore, they should focus on international markets, where modern technologies, fast and available communications and changes on the international market enable them to have a more active role in global operations. Even in large developed countries, such as the USA, the report on small exporters (SBA, 2008) reveals that their export share tripled between 1987 and 1997, and in 1999 already amounted to 31% of the total export, with a tendency of further growth.

Internationalization can be described as a process of increasing involvement in international operations (Welch and Luostarinen, 1988).

Fletcher (2001) notes that companies wishing to internationalize have certain characteristics in common, of which, the most important are: readiness to develop a product for other markets, technological advantages, readiness to enter foreign markets, focusing on research and development and the nature of products.

China has developed special principles of foreign trade that are a base for commercial cooperation with foreign countries. Nevertheless, new circumstances and an increasingly liberal legislation, particularly after China has joined the WTO, have forced China to operate in a totally different direction, and its foreign trade is based on special principles (Dezan & Associates, 2006).

According to the Asian Development Bank, by 2020 China will become the largest commercial partner in the eastern Asia and will replace the USA as the most important foreign trading partner of Japan. In the trade balance with Asia, China will show deficit, while it will show trade surplus with the rest of the world (Asian Development Bank, 2007).

The EU is the second largest partner of China (immediately after the USA) in the exchange of goods; however, according to the National Bureau of Statistics of China, the EU should soon become number one Chinese partner (Bilateral Trade Relations, 2006). At the beginning of 1980, the EU enjoyed trade surplus with China, however, according to Eurostat, the EU is now facing trade deficit with China, and in 2006, the deficit amounted to EUR 131 billion (Eurostat, 2003). This is the largest bilateral trade deficit of the EU.

Considering all of the above mentioned facts and an increasing internationalization of companies and globalization of markets, all large companies are striving to penetrate this enormous market. However, the market is full of traps we should be aware of, and, at the same time, we should familiarize ourselves with the Chinese business environment, local rules, regulations and customs, if we wish to successfully enter and perform on the market.

In our research paper we wanted to define a process of establishing a new company in the PRC. When investigating the process, we identified all basic elements that influence establishing a company in China, as well as specific features that are a result of political and social environment, and compared this to Europe. We then set up a model that can serve as a basic tool for other enterprises wishing to establish their own company in China.

Business process can be defined as a set of logically related implementing and supervisory procedures and activities, which result in a planned product or service (, or, in our case, a model for establishing a company in China. It can be defined as an integrated set of activities and tasks, the purpose of which is add value to input elements in the process at the output part of the process for the client or buyer (Harrington, 1997; Smith and Fingar, 2006). Project Management Institute (1996) defines a project as a target-oriented, unique activity, consisting of a number of inter-related activities; a project has a defined beginning and an end, and is limited by time, business elements and costs.

The purpose of our research was to compare the establishment of a company in the European setting and in China, and thus set up a uniform model that could serve to future foreign investors as a framework or a guide for registering a limited liability company in China. A project objective is precisely defined, financially limited and has a deadline; the project objective is specific (Keeling, 2000).

With the help of interviews we collected information from the selected respondents, and this information served us to examine and compare the European and Chinese ways of company registration. The data obtained in this manner was analyzed and served us to set up a model of registration procedure in China. A wholly foreign owned enterprise is a type of a company most commonly used by foreign investors in China. This form enables foreign investors to perform independently on the Chinese market, and gives them a complete control over all company operations (Invest in China, 2006).

METHODOLOGY

We have researched a possibility of establishing a company in the People's Republic of China, as recently, an increasing number of companies have been deciding to establish production companies in this business and economic environment. For this purpose, we conducted a qualitative research – a case study. Data and information were obtained with the help of an interview. We decided to use semi-structured interview for the purpose of our research. This method was chosen mainly because of the nature of the selected topic and the realistic state in the Slovene economy. From this perspective, the use of a semi-structured interview seemed the optimum choice, as on the one hand, it helped us to learn about the experience of Slovenian companies and managers, and a manager from the European setting, who decided to register a wholly foreign owned enterprise in China, and, on the other hand, it enabled us to check the stated facts with specialized consultants who are employed by the Chinese government and work for its benefit. We then compared the diversity of answers given by officials working in specialized institutions for registering foreign companies from three different provinces, and two entrepreneurs who have registered a company in the PRC. Information obtained in this manner was analyzed with the help of the content analysis method as defined by Esterbay-Smith, Thrope and Lowe (2002); from the information obtained, we identified key characteristics and, at the same time, managed to retain the richness of the material, which was used to prove our final conclusions and to set up a model of establishing a company in China.

Our semi-structured interview contained 12 research questions. The questions were set in a manner which enabled us to obtain as much information as possible about the registration procedure of WFOE in the PRC. Interviews were conducted with European managers and Chinese consultants for registration of foreign companies in the PRC, as well as in specialized institutions which offer assistance to foreign investors when opening a company or representative office in China. Our research was carried out in

Guangdong, Shanghai, Zhejiang and Jiangsu provinces, where the majority of foreign investment is made and the majority of companies are registered. We decided to research different provinces in order to establish whether a uniform system of establishing a wholly foreign owned production company exists in China.

In the course of our empirical research we mainly had to overcome the limitations in the sense of contents, methodology, space, time, and language. By triangulation, i.e. examining the selected topic from different perspectives, which were represented by different respondents, we raised the credibility of our research. A Chinese consultant found himself in a double role - in the role of an official of the PRC, who has to act for the benefit of his people and their social interest, and in the role of a consultant advising foreigners in his own country. This can bring about ethical dilemmas.

RESULTS

Analysis and the interpretation of information was divided into two sets: analysis and interpretation of information collected from theoretical sources, such as, various sources and literature studied in the theoretical part, and information obtained with the help of our interviews. Theoretical information was compared to the information obtained with the interview; on the basis of this information, we then tried to set up a uniform model of establishing a wholly foreign owned enterprise in China.

From the analysis of the documents and sources, it can be concluded that a more or less uniform system of registering a limited liability company exists in Europe, which has enabled us to set up a uniform registration model, as evident from Figure 2. Furthermore, relatively similar statutory regulations and secondary acts for establishing a LLC exist in different EU countries, the main differences can be observed in the amount of the initial capital required, tax on revenue from capital, and publication of a company in various public documents. A limited liability company in the European economic setting can be registered within 2 to 30 working days.

On the basis of information gathered from literature and sources, a more or less uniform model of registering a limited liability company can be established, containing certain specific features that were identified in individual countries.

When examining Chinese literature and sources on establishing a company in China, we have concluded that uniform rules and regulations concerning the establishment of a company or WFOE in China exist, however, these can differ from province to province. Other secondary acts and regulations exist in certain provinces, which must strictly be observed when establishing a company.

On the basis of our research, we have discerned that local customs and rules must be observed, as these enable a smoother registration of a wholly foreign owned enterprise. If we wish to register a company, we must be well-informed about local rules and regulations; while at the same time, it is highly recommendable to hire a specialized local organization that is not owned by the state, but working independently as a consulting firm, with experience in the field of registration of such companies; we particularly recommend an international company that has references in the field of company registration in the PRC. We can conclude that local consulting firms operating under the auspices of the state are not neutral, but operate for the benefit of the state and local authorities. At the same time, it can be concluded that the registration of a WFOE is much simpler in the economic and tax-free zones rather than outside. These zones already contain all infrastructure; we can hire already constructed premises or land and build a facility that will suit our needs, in compliance with the rules of the zone and local spatial planning regulations.

Types of foreign owned companies are universal throughout China, however, foreign investors most frequently decide to register wholly foreign owned enterprises, as this type enables them a certain level independence, as well as the protection of their interests and know-how. It is well-known that Chinese authorities want to acquire as much foreign knowledge and technology as possible, and want to utilize these for their own benefit and the development of their own capacities, as well as launch them on their national and foreign markets. There is still a great threat of technology leakage and plagiarism in China.

REGISTRATION PROCEDURE MODEL FOR ESTABLISHING AN ENTERPRISE IN THE PRC

On the basis of the carried out research, analysis of relevant literature and sources about establishing a wholly foreign owned enterprise in the PRC, we have drawn up a registration procedure model for establishing a wholly foreign owned enterprise – WFOE, which could serve as a basic framework during registration procedure of a WFOE in the PRC. The model contains all essential elements that appear during the registration of WFOE and all particularities that foreign investors should pay attention to prior to and when registering a company. The elements in the model were obtained from theoretical findings and conclusions made on the basis of the research (interview) that was carried out in China.

The set up model contains all elements that offer investors a quick and up-to-date insight into the registration procedure of a wholly foreign owned enterprise, the course of registration and foreseen costs related to company registration. The model also enables us to see the time course of the registration and its duration.

The registration procedure model of a wholly foreign owned enterprise (WFOE) is demonstrated in Figure 1, and has been divided into five main steps that lead to an official establishment of a WFOE; however, official establishment does not necessarily mean that the company may begin its operations. In order to complete the registration, several other procedures have to be carried out, some of which overlap or can be carried out simultaneously, while others cannot be carried out prior to the step ahead.

REGISTRATION PROCEDURE MODEL OF A WFOE

We set up a model of registration procedure of a wholly foreign owned enterprise (WFOE), which takes into account all the important steps that are indispensable during registration. Our model is based on theory, practical experience and research results.

The model reveals that six to eight weeks are required for registration or obtaining a business license, however, a company cannot start operating immediately, as other registration procedures before other state authorities, for instance, tax, customs and inspection authorities have to be carried out. In order to obtain all licenses and to open an RMB and foreign currency account, we need 16 to 20 weeks. Nevertheless, any procedure can get prolonged, since much depends on correct documentation submitted to individual state authority. Length of the procedure also depends on a province and local legislation.

Registration of a company in the PRC must be approached in the same manner as project work. The project of establishing a company in the PRC begins with an idea and continues with team approach that leads to company registration. As authors (Devetak, 2003; Potočan et. al., 2008; Meško et. al., 2009; Fatur and Likar, 2009) pointed out, an idea is only a step on the way towards innovation, which, in our case, men as registration of a company in the PRC.

The registration procedure model of a wholly foreign owned enterprise (WFOE) is presented in Figure 1, however, there might be some deviations regarding the time component and the procedures, as these may vary depending on the location and requirements of local authorities, as well as the nature of the activity

the company will perform. Certain specific activities will require some additional documents, consents and certificates, which are not presented in this model.

The model was set up on the basis of findings from literature, sources and research work in the PRC, and can be applied to the most common type of production companies that register a WFOE in the PRC.

Findings Based on Comparing the European and Chinese Models of Establishing a Company

The European model and procedure for establishing a limited liability company in the European setting have revealed that similar procedures and documents for the registration of a limited liability company are required in all the European Union Member Countries.

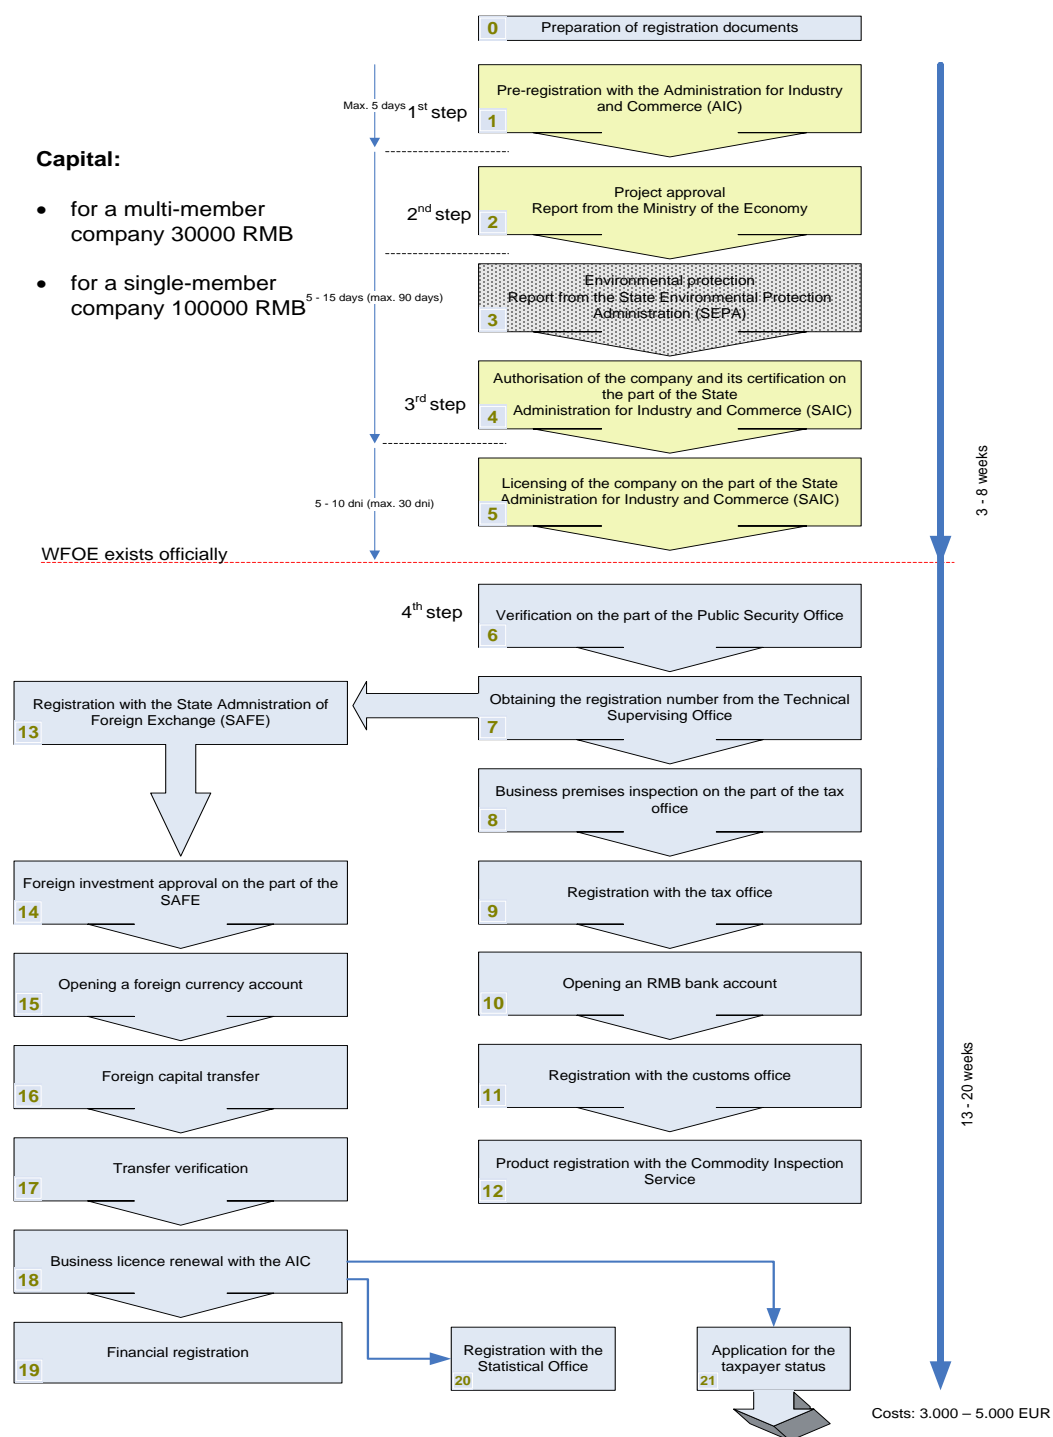

The European model of establishing a limited liability company and the Chinese model of establishing a wholly foreign owned enterprise cannot be compared, since the two companies do not perform the same functions, and the registration procedures also differ significantly. The comparison of registration procedures of the two companies, regardless of their object of the operations, reveals significant differences regarding contents and duration. Establishing a limited liability company in Europe is notably different and simpler, while registering a WFOE is rather complex, particularly from the point of view of the national and local legislation, regulations and other significant elements that must be considered when registering a company in a certain region in the PRC.

We have also noted that when registering a wholly foreign owned enterprise in the PRC, foreign investors should hire a local consulting firm dealing with company registration, as these offer assistance during the procedures of obtaining various licenses and permits. The comparison reveals that registering a wholly foreign owned enterprise is much costlier than registering a limited liability company in the European setting. In addition, no special consulting agencies are required when registering a limited liability company in Europe, as one can carry out the entire registration procedure on their own; in China, however, such consulting agencies are a must.

When comparing the initial capital, we noted that a minimum initial capital required to establish a wholly foreign owned enterprise in China equals RMB 30,000 or EUR 2,918.57, while the initial capital required in Europe varies between EUR 7,000 to 18,000. Therefore, it can be seen that a significantly lower amount of initial capital is required in China, however, registration itself is more expensive and the registration procedure more complex.

On the basis of relevant literature and our research (the interview) in China, we have concluded that no unique or similar procedures exist when registering a limited liability company in the European setting and a wholly foreign owned enterprise in China; these two establishment models therefore cannot be compared. Furthermore, registration procedure of a wholly foreign owned enterprise is much more complex and lengthy than registration of a limited liability company in the European setting.

Figure 1: The Model of Establishing a WFOE in The PRC

CONCLUSION

We have presented a registration of a WFOE to everyone intending to register a company in China in the future. With this research, we wished to contribute to a better understanding of Chinese registration

procedures. The establishment process was presented from the perspective of a project approach, since establishing a company is a project that begins with an idea and ends with obtaining a business license. Characteristics of registering a WFOE were presented through the analysis and synthesis of numerous, mainly foreign, literature and sources dealing with the registration of a WFOE, and through examining relevant legislation and local rules and regulations, which was later verified by the empirical research based on interview.

The research helped us to shed more light on some key problems and dilemmas faced by European and foreign investors that have or will establish a Wholly Foreign Owned Enterprise (WFOE) in China. We believe that our research can offer additional help to companies deciding to enter China through their own WFOE companies, or can serve as a good reference material. Initially, we carried out a theoretical research of company registration in the European setting and noted that the procedures for registering a limited liability company in the European environment do not differ significantly, apart from certain specific features.

In China we investigated the establishment of a wholly foreign owned enterprise, which bears the greatest similarity to a limited liability company in the European setting. The research revealed that a unified umbrella law governing the establishment of a WFOE in China exists, however, local rules and customs have to be observed in various provinces. Most importantly, we noted that China has a uniform national legislation governing a WFOE registration, nevertheless, local legislation that deviates from the national legislation also has to be observed, particularly in special administrative regions, where special legislation is in force. The umbrella legislation has been adapted to the national interests, and protects the Chinese economy.

The research enabled us a deeper insight and understanding into registrations processes, which had previously been analyzed theoretically. The initial analysis of legislation, rules and regulations, literature and sources, enabled us to carry out a high quality research. The research questions confirmed certain theoretical findings and gave us a better understanding of the registration concept. Findings from literature, sources and our research enabled us to set up a model of establishing a WFOE in China. The model demonstrates the entire registration procedure of such a company in the PRC.

The model can serve to foreign investors who have decided to register a WFOE in the PRC as a basic framework for registering such company, as it clearly demonstrates and describes the procedure that must be followed if we want to successfully register a company in China. The registration of a WFOE is very complex, and we have concluded that it cannot be compared or equaled to registering a limited liability company in the European setting. Certain similarities in some procedures do exist; nevertheless, the entire registration procedure differs greatly from the European one and is much more time consuming.

The case study gave us a deeper insight into the registration of a wholly foreign owned enterprise in China, and is one of the first ones of this kind in Slovenia. The research itself makes a great contribution to economy and science. For the economy, the research offers a quick insight into the registration procedure of WFOE in China. For science, the research presents a base which can be further expanded through the research of registration procedures for other types of companies in China, or to compare registration procedures between local and foreign investors.

BIOGRAPHY

Bostjan Polajzer, MSc. is present Head of Marketing at ETOL d.d. Slovenia and appointed lecturer of Marketing and Management at University of Primorska, Faculty of Management Koper. He can be contacted at: ETOL d.d., Skofja vas 39, SI-3211 Skofja vas, Slovenia. Email: polajzer@gmail.com.

LONG-RUN OPERATING PERFORMANCE OF PREFERRED STOCK ISSUERS

Devrim Yaman, Western Michigan University

ABSTRACT

In this paper, we study the long-run operating performance of preferred stock issuers. We use three different measures of operating performance; pre-tax cash flows, profit margin and return on assets. We study the performance of industrial firms, financial firms, and utilities separately, as well as the performance of the whole sample. Our results indicate that the operating performance of preferred stock issuers as a whole declines in the three-years before the issue. We find that profitability continues to decline after the issue. This finding is consistent with earlier findings on bond and common stock issuers. We also find that the decline in profitability is more pronounced for financial firms, although the cash flows of financial firms increase after the offering. The results show that the operating performance after the issue is worse for firms that raise large amounts of capital through the issue. There is also some evidence that preferred stock issuers with information asymmetry have lower operating performance following the issue.

INTRODUCTION

Preferred stock is an essential and popular method of raising capital by firms. During the period 1985-1999, firms raised \$324.63 billion in U.S. markets by engaging in 2,636 preferred stock offerings. Over the same period, firms made 7,017 seasoned equity offerings raising \$606.03 billion (Bajaj, Mazumdar, and Sarin, 2002). Since 1990 the size of the public market for preferred stock quadrupled, reaching \$193 billion in 2005 (Dash, 2009). Despite the importance of preferred stock, there are only a handful of studies on this security. Prior studies focus on the announcement returns, characteristics and the motivations of issuing firms. Recently, Howe and Lee (2006) and Abhyankar and Ho (2006) study the long-run stock performance of preferred stock issuers.

In this paper, we study the long-run operating performance of preferred stock issuers. The only other study that examines this issue is Lee and Johnson (2009). We extend previous research by studying the change in operating performance of our sample firms from the period right before the offering, besides raw operating performance. We also contribute to the literature by analyzing the factors that may affect the operating performance of preferred stock issuers. We use recent data and our sample period is long, covering a period of 13 years.

Our sample consists of 1,334 publicly issued non-convertible preferred stock issues offered in US markets between 1992 and 2004. We measure operating performance using three proxies; the cash flows of the firm, the profit margin, and the return on assets. We study the performance of industrial firms, financial firms, and utilities separately, as well as the performance of the whole sample. We find that the operating performance of firms in all industry types deteriorate gradually until the issuance. Profitability is also lower after the issue compared to the year before the issue. This decrease in performance is more pronounced for financial firms, although there is an increase in the cash flows of these firms. We find that the performance of firms that issue large amounts of preferred stock is better than the performance of firms that issue small amounts. There is also some evidence that firms with low book-to-market ratios and large firms have better post-issue performance.

The rest of this paper is organized as follows: In section 2, we summarize the findings of previous studies on the long-run stock and operating performance of bonds and stocks. In section 3, we develop our

hypotheses and in section 4, we present the results of the tests of these hypotheses. In section 5, we conclude the paper.

HYPOTHESES ON THE LONG-RUN OPERATING PERFORMANCE OF PREFERRED STOCKS

Preferred stock is a hybrid security that has both debt-like and equity-like characteristics. Just like debt, preferred stockholders get a stated amount of dividend. In case of liquidation they also receive a stated value. However, just like common stock dividends, when determining the taxable income of a corporation, preferred dividends cannot be deducted as interest expense. Also, as with common stockholders, preferred stockholders cannot force the firm into bankruptcy if the firm cannot pay the dividends (Ross et al. 2008). The hybrid nature of this security implies that the long-run operating performance will be similar to the performance of bonds and stocks.

Spiess and Affleck-Graves (1995, 1999) show that the long-term stock performance of both bonds and common stock are negative. This finding is consistent with the argument that firms take advantage of “windows of opportunity” and issue securities when they are overvalued. Similarly, Hansen and Crutchley (1990), McLaughlin et al. (1998a), and Cheng (1998) show that the long-run operating performance of bond and common stock issuers is also negative. Since preferred stock has both debt and equity characteristics, we expect preferred stock issuers to have negative long-run operating performance.

McLaughlin et al. (1998a) indicate that two years before the issue there is a decrease in the operating performance of common stock issuers compared to the previous year, although the performance increases a year before the issue. In the case of bond issuers, the operating performance declines gradually beginning three years before the issue. The hybrid characteristic of preferred stocks suggests that the operating performance of preferred stock should also decrease in the years leading to the issue year. However, the window of opportunity hypothesis suggests the opposite effect of an increase in operating performance in the years before the issue. In this hypothesis, firms issue securities when the firm is in good financial position and therefore there should be an improvement in operating performance prior to the issue.

In Myers and Majluf (1984), overvaluation of securities is higher for firms with high information asymmetry. Therefore, Myers and Majluf predict a more negative operating performance following preferred stock issues when firms have high information asymmetry. Miller and Rock (1985) argue that unanticipated financing implies that managers expect a shortfall in future cash flows. Hence, Miller and Rock predict a negative relation between the size of the issue and the operating performance after the offering. Consistent with these arguments McLaughlin et al. (1998a) show that bond and common stock issuing firms with the largest information asymmetry (measured with the size and market value of the firm) have the largest declines in operating performance following the issue while McLaughlin et al. (1998b) show companies that make relatively larger offers have larger declines in operating performance following the issue. Similarly, Loughran and Ritter (1995) and Spiess and Affleck-Graves (1995) show that the poor long-run stock performance following common stock issues is more severe for smaller firms while Spiess and Affleck-Graves (1999) show that for bond issuers the long-run stock performance is worse for smaller firms, and firms with large issues. In this study, we test whether similar relations exist for preferred stock issuers and measure whether smaller firms, firms with high market-to-book ratios, and firms that issue large offerings obtain lower long-run operating performance following preferred stock issuance.

METHODOLOGY AND RESULTS

Data and Sample Characteristics

Our sample consists of non-convertible preferred stock issues offered in US public markets between 1992 and 2004. All issues are completed and traditionally registered. We obtain issue-related data from Thomson Financial's Securities Data Corporation (SDC) Database and firm-related data from Compustat. As in D'Mello et al. (2003), we classify firms with two-digit SIC codes of 49 as utilities, firms with one-digit SIC codes of 6 as financial institutions and all other firms with valid SIC codes as industrial firms. Our final sample consists of 1,334 preferred stock issues offered by 876 firms. 96 of these issues were made by industrial firms, 989 issues were made by financial firms, and 249 issues were made by utilities.

Table 1: Frequency Distribution of Offerings and Firms

Year	All Firms		Industrial Firms		Financial Firms		Utilities	
	# of issues	# of firms	# of issues	# of firms	# of issues	# of firms	# of issues	# of firms
1992	229	143	15	11	141	85	73	47
1993	288	198	18	15	182	131	88	53
1994	69	57	8	7	42	35	19	16
1995	38	32	1	1	35	29	2	2
1996	85	80	17	17	54	49	14	14
1997	109	106	11	11	79	77	19	18
1998	66	64	7	7	54	52	5	5
1999	64	59	11	10	46	42	7	7
2000	15	12	0	0	13	10	2	2
2001	37	35	0	0	32	30	5	5
2002	17	17	0	0	15	15	2	2
2003	195	130	3	3	187	122	5	5
2004	122	87	5	5	109	76	8	8
Total	1,334	876	96	80	989	655	249	147

This table presents the frequency distribution of publicly placed preferred stock offerings in US markets during the period 1992-2004 and the firms that made these offerings. Preferred stock offering data is obtained from Thomson Financial's Securities Data Corporation Database.

Table 1 presents the frequency distribution of preferred stock offerings and firms that make the offerings over the sample period. The number of issues varies throughout the sample period and most of the offerings were made during the first half of the sample period for the whole sample and the three subsamples. In the first six years there were a total of 818 issues made compared to 516 issues made in the last seven years. The number of offerings for the first six years is 70 for industrial firms, 533 for financial firms, and 215 for utilities. For the whole sample, the lowest number of offerings was in the year 2000 while the highest number of offerings was in 1993. There were 15 preferred stock issues made by 12 firms in 2000 and 288 offerings made by 198 firms in 1993. The highest number of issues was also in 1993 for industrial firms and utilities with 18 and 88 offerings in each group respectively. There were no preferred stock offerings in years 2000, 2001, and 2002 for industrial firms while utilities had only 2

offerings in years 1995, 2000, and 2002. For financial firms, the lowest number of offerings was in 2000 (13 offerings) and the highest number of offerings was in 2003 (187 offerings).

Table 2: Firm and Issue Characteristic

Variable		All Firms	Industrial Firms	Financial Firms	Utilities
Total Assets		40,690.22 (2,923.79)	25,550.08 (3,549.36)	44,499.07 (2,952.98)	3,813.64 (1,672.76)
Market Value of Equity		4,065.08 (1,109.00)	6,824.88 (3,290.00)	3,969.15 (1,056.00)	1,762.00 (649.00)
Issue Size		135.26 (72.05)	222.19 (150.00)	140.41 (70.00)	81.29 (50.00)
Standardized Issue Size		0.0506 (0.0283)	0.1214 (0.0432)	0.0441 (0.0252)	0.0318 (0.0342)
Market-to-book Ratio		0.2832 (0.1600)	0.3715 (0.2750)	0.2768 (0.1200)	0.3100 (0.1600)
Exchange (%)	NYSE/AMEX	89.62	63.64	91.94	89.31
	NASDAQ	5.25	10.91	5.53	1.53
	Other	5.13	25.45	2.53	9.16

This table presents the firm and issue characteristics of the sample. Total Assets is the book value of total assets. Market Value of Equity is the price multiplied by the number of common shares outstanding. Issue Size is the total proceeds from the issue. Standardized Issue Size is the total proceeds divided by the book value of total assets. Market-to-Book Ratio is the price multiplied by the number of common shares outstanding, divided by common equity. Exchange (%) shows the percentage of firms in the sample listed in NYSE/AMEX, NASDAQ, and other exchanges. All firm-specific variables are measured at the end of the fiscal year before the offering. In each row (except for the exchange), the first figure is the mean value while the figure in parentheses is the median value.

In Table 2, we present the characteristics of the firms and issues in our sample. The average book value of assets in our sample is \$ 40,690 million while the median is \$ 2,924 million. Financial firms have the highest average asset size with \$ 44,499 million. The average asset size is \$ 25,550 million for industrial firms and \$ 3,814 million for utilities. We define market value of equity as the price of common stock multiplied by the number of common shares outstanding. The average market value of equity in the sample is \$ 4,065 million while the median is \$ 1,109 million. Industrial firms have the largest market value of equity with a mean of \$ 6,825 million and a median of \$ 3,290 million. The average market value of equity is \$ 3,969 million for financial firms and \$ 1,762 million for utilities.

We use two measures for the size of the issue; raw issue size and standardized issue size. Raw issue size is the total proceeds raised from the issue and standardized issue size is the total proceeds adjusted by the book value of the assets of the firm. The average raw issue size is \$ 135 million for the whole sample while the median is \$ 72 million. On average, the issues were about 5.06% of the total assets of the sample firms. Industrial firms issued the largest offerings with an average size of \$ 222 million, representing 12.14% of their assets. The average issue size was \$ 140 million and \$ 81 million for financial firms and utilities, representing 4.41% and 3.18% of their assets, respectively.

In this paper, we measure the growth opportunities of the firm with the market-to-book ratio. Market-to-book ratio is the stock price of the firm multiplied by the number of outstanding common shares of the company, divided by common equity. The average market-to-book ratio is 0.28 for the sample firms while the median of this ratio is 0.16. Industrial firms have the highest market-to-book ratio with a mean of 0.37 and a median of 0.28. The average market-to-book ratio is 0.28 for financial firms and 0.31 for

utilities. 89.62% of the sample firms were listed on the New York Stock Exchange (NYSE) or the American Stock Exchange (AMEX) while 5.25% of were listed on NASDAQ. 63.64 % of industrial firms were listed on NYSE or AMEX while 10.91 % were listed on NASDAQ. 91.94% of financial firms and 89.31% of utilities were listed on NYSE or AMEX.

Measures Of Operating Performance

Following Lee and Loughran (1998), Lewis et al. (2001), and Hertz et al. (2002) we use the profit margin and the return on total assets as our measures of operating performance. We measure profit margin as income before extraordinary items divided by net sales and return on total assets as income before extraordinary items divided by total assets. As in McLaughlin et al. (1996, 1998a, 1998b), Alderson and Berker (2000), and Lewis et al. (2001) we also use the pre-tax cash flows as an additional measure. A benefit of the pre-tax cash flow measure is that it is not impacted by the changes in interest expense, the level of assets in place, and the level of taxes that may affect the other measures. Hence, pre-tax cash flows will not be affected by the capital structure policies, investment levels, and the tax status of the sample firms. We measure pre-tax cash flows with the operating income before depreciation and amortization (Compustat item 13). We standardize pre-tax cash flows with the book value of assets (Compustat item 6) because the cash flows depend on the value of the firm's assets and with standardized cash flows we can compare the performance of firms with each other and across time.

As in McLaughlin et al. (1998b), we analyze the long-run operating performance of preferred stock issuers over a seven-year period, beginning three years before the issue and ending three years after the issue. We also study the change in operating performance of the sample firms after the offering compared to their performance before the offering. Change in operating performance is the difference in the operating performance measures in one, two, and three years after the offering from the performance in the year before the offering.

Long-Run Operating Performance

In Table 3, we present the mean and median operating performance results for the years -3 to +3 relative to the issue year. Panel A shows the results for the whole sample. The average pre-tax cash flows decrease from 7.35% of total assets in year -3 to 6.07% in year -1. There is some increase in the pre-tax cash flows in years +1 and +3, and a decrease in year +2. The average profit margin decreases from 18.24% in year -2 to 17.65% in year -1. The profit margin increases to 18.66% in year +1 but decreases to 13.52% in year 3. The average return on assets is 2.37% in year -3 and decreases to 1.61% in year 0. The return on assets increases to 2.2 % in year +1 but decreases again in year +3. The median values follow the same pattern for most periods.

Panel B of Table 3 presents the annual operating results for industrial firms. There is a dramatic decrease in operating performance before the offering until the issue year using all three measures. The average pre-tax cash flows drop from 14.74% in year -3 to 7.29% in year 0. The profit margin drops from 5.32% to -4.58% and the return on assets drops from 2.27% to -4.09% during the same period. After the issue, pre-tax cash flows increase to 15.02% in year +1 but decreases to 12.10% the next year. The profit margin and return on assets follow the same pattern. The profit margin increases to 6.17% in year +1 and decreases back to 4.02% in year 2 while the return on assets increases to 3.37% and decreases to 1.75% during the same period.

The operating performance results for financial firms are presented in Panel C of Table 3. We observe a pattern of a decrease in operating performance before the issue in financial firms as well. The average pre-tax cash flows decrease from 4.96% to 3.79% and return on assets decreases from 2.28% to 2.06% from year -3 to year -1. The average profit margin increases from 19.94% in year -3 to 20.18% in year -2

but decreases back to 20.13% in year -1. After the offering, the average pre-tax cash flow decreases from 4.03% in year +1 to 3.86% in year +2, although it increases to 4.11% in year 3. The average profit margin and return on assets decrease gradually to 14.61% and 1.41% respectively in year +3.

Table 3: Annual Operating Performance

Variable	Year -3	Year -2	Year -1	Year 0	Year +1	Year +2	Year +3
Panel A: All Firms							
Cash Flows	7.3536 (6.5513)	6.5816 (5.6575)	6.0696 (4.7565)	5.1665 (4.3510)	6.575461 (4.731298)	5.987353 (5.052596)	6.945141 (5.171019)
Profit Margin	18.1308 (12.7200)	18.2390 (14.7400)	17.6541 (14.0700)	18.2992 (13.7200)	18.6592 (14.0100)	16.3591 (13.1900)	13.5225 (12.3000)
Return on Assets	2.3659 (2.4200)	2.1441 (1.9500)	1.9973 (1.9250)	1.6052 (1.6750)	2.2080 (1.6400)	1.7296 (1.3300)	1.6502 (1.4100)
Panel B: Industrial Firms							
Cash Flows	14.7431 (12.7837)	13.7466 (13.3050)	12.3092 (11.0507)	7.2885 (11.4676)	15.0202 (12.5078)	12.1041 (11.0269)	13.7169 (12.5660)
Profit Margin	5.3178 (3.3800)	3.0189 (4.5300)	-2.1432 (3.0700)	-4.5820 (6.0950)	6.1705 (4.8400)	4.0206 (4.2100)	5.1678 (6.8800)
Return on Assets	2.2722 (2.4200)	1.1272 (1.5300)	0.7768 (1.5800)	-4.0870 (1.7350)	3.3668 (2.8700)	1.7461 (2.6900)	2.7994 (3.7050)
Panel C: Financial Firms							
Cash Flows	4.9567 (4.2475)	4.1101 (3.3695)	3.7872 (2.7215)	3.9193 (2.8401)	4.0295 (3.3419)	3.8604 (2.9126)	4.1071 (3.1340)
Profit Margin	19.9354 (15.7150)	20.1845 (17.2500)	20.13011 (15.8600)	21.3340 (16.0800)	20.4568 (16.0650)	17.9460 (14.3600)	14.6091 (14.0550)
Return on Assets	2.2835 (2.0250)	2.1592 (1.8600)	2.0613 (1.7850)	2.1610 (1.3600)	2.0262 (1.3500)	1.6414 (1.2300)	1.4109 (1.1700)
Panel D: Utilities							
Cash Flows	11.6226 (12.5536)	11.4608 (12.6520)	10.3836 (10.3228)	10.1182 (9.6433)	10.5782 (11.0401)	11.2125 (11.9108)	11.4978 (12.0442)
Profit Margin	11.2082 (11.7700)	11.3091 (11.2500)	10.2082 (9.4600)	8.8610 (6.3400)	10.8155 (10.5000)	10.5322 (9.9000)	11.1578 (10.6800)
Return on Assets	3.7927 (4.1900)	3.5609 (3.6600)	3.0227 (2.9800)	2.6082 (2.3300)	3.1827 (3.2100)	3.3900 (3.6200)	3.5511 (3.4100)

This table presents the mean and median annual operating performance of the sample firms. Cash flows is the operating income before depreciation and amortization standardized with the book value of assets. Profit Margin is the income before extraordinary items divided by net sales and Return on Assets is the income before extraordinary items divided by total assets. We classify firms with two-digit SIC codes of 49 as utilities, firms with one-digit SIC code of 6 as financial institutions and all other firms with valid SIC codes as industrial firms. In each row, the first figure is the mean value while the figure in parentheses is the median value.

In Panel D of Table 3, we present the operating performance results for utilities. There is a gradual decrease in the operating performance of utilities before the offering. The average pre-tax cash flow decreases from 11.62% to 10.12% from year -3 to year 0, while the profit margin and return assets decrease from 11.21% to 8.86% and 3.79% to 2.61% respectively. The average profit margin decreases

from year +1 to year +2 while the pre-tax cash flow and the return on assets increase gradually after the offering. Overall, the results in Table 3 show that there is a decrease in the operating performance of preferred stock issuers before the offering. This result is consistent with the findings of McLaughlin et al. (1998a) for the case of stock and bond issues. We find that the decrease in performance exists in all industry types. Our results also indicate that the decrease in performance continues after the offering, except for utilities.

Table 4: Changes in Operating Performance

Variable	Year +1	Year +2	Year +3
Panel A: All Firms			
Cash Flows	0.7442 (0.1222)	0.3777 (0.2665)	0.7677 (0.1864)
Profit Margin	0.9334 (0.5200)	-1.1632 (-0.1800)	-4.6356 ^a (-1.600) ^c
Return on Assets	0.1876 (-0.1600) ^b	-0.2770 (-0.2100) ^a	-0.3917 (-0.3350) ^a
Panel B: Industrial Firms			
Cash Flows	3.1002 (1.0437)	0.3669 (-0.0080)	1.8364 (0.9440)
Profit Margin	7.8122 ^c (1.7700)	5.8547 (0.9800)	7.9024 ^c (1.7300)
Return on Assets	2.6911 (0.8800)	0.9065 (0.1000)	2.2100 (1.5900)
Panel C: Financial Firms			
Cash Flows	0.2128 ^c (0.1225)	0.3646 ^b (0.2685)	0.4179 ^b (0.1345)
Profit Margin	0.2580 (0.3300)	-1.9440 ^c (-0.2900)	-6.3186 ^a (-2.7200) ^a
Return on Assets	-0.0625 (-0.1600) ^b	-0.4240 ^a (-0.3150) ^a	-0.7200 ^a (-0.4750) ^a
Panel D: Utilities			
Cash Flows	0.1947 (-0.4627)	0.4866 (0.0073)	0.7720 (0.6234)
Profit Margin	0.6073 (-0.0200)	0.4156 (1.2400)	1.0411 (2.1900)
Return on Assets	0.1600 (-0.2900)	0.2956 (-0.0100)	0.4567 (0.0600)

This table presents mean and median changes in operating performance of sample firms after the offering. Change in operating performance is defined as the operating performance in years +1, +2, and +3 minus the operating performance in year -1, where year 0 is the issue year. We measure operating performance with cash flows, profit margin, and return on assets. Cash Flows is the operating income before depreciation and amortization standardized with the book value of assets. Profit Margin is the income before extraordinary items divided by net sales and Return on Assets is the income before extraordinary items divided by total assets. We classify firms with two-digit SIC codes of 49 as utilities, firms with one-digit SIC code of 6 as financial institutions and all other firms with valid SIC codes as industrial firms. In each row, the first figure is the mean value while the figure in parentheses is the median value. ^a, ^b, and ^c denote significance at 1, 5 and 10 percent levels respectively.

Table 4 shows the change in operating performance of preferred stock issuers following the issue compared to their performance before the issue. The change in operating performance is defined as the difference in operating performance of the firm in years +1, +2, and +3 minus their performance in year -1. Panel A presents the change in performance of all firms in our sample. There was no significant change in the pre-tax cash flows in the three years after the issue. The profit margin, however, decreased significantly three years after the issue. The average decrease in profit margin is 4.64% while the median decrease is 1.6%. The median decrease in return on assets was also significant in all three years following the offering. For example three years after the offering the operating performance decreased by 0.34%.

In Panel B of Table 4, we present the change in performance for industrial firms while in panels C and D we present the change in performance for financial firms and utilities, respectively. For industrial firms although there is no significant change in the pre-tax cash flows and return on assets in the three years after the offering, there is a marginal increase (significant only at 10% level) in the average profit margin of industrial firms in years +1 and +3. The average pre-tax cash flow increases for financial firms after the offering while the profit margin and return on assets decrease. For example, in year +3 the average pre-tax cash flows increase by 0.42% while the median cash flow does not change significantly. During the same period the average decrease in profit margin is 6.32% while the median decrease is 2.72%. The return on assets decreases significantly in all three years. The average decrease in return on assets is 0.42% in year 2 and 0.72% in year 3. There is no significant change in the operating performance of utilities in our sample.

Overall, the results in Table 4 show that profitability, measured with the profit margin and return on assets, decreases after the offering. This result is consistent with Howe and Lee (2006) and Abhyankar and Ho (2006) who find negative stock performance for preferred stock issuers following the issue. The results is also consistent with Hansen and Crutchley (1990), McLaughlin et al. (1998a), and Cheng (1998) who find negative operating performance after the issuers of common stocks and bonds and with Spiess and Affleck-Graves (1995, 1999) who find negative long-run stock returns for common stock and bond issuers. Our results indicate that the decrease in profitability is most pronounced for financial firms. There is some increase in the pre-tax cash flows of financial firms although there is no significant change for the whole sample.

Factors That Affect Long-Run Operating Performance

We study the factors that affect the operating performance of preferred stock issuers in Table 5. We specifically test whether information asymmetry and amount of financing affect the long-run operating performance of preferred stock issuers. We measure information asymmetry with the growth opportunities and the size of the firm. Smith and Watts (1992) argue that managers of firms with better growth opportunities will have better knowledge of the firm's future prospects compared to outsiders. Hence, there is higher information asymmetry between managers and outside investors for firms with better growth opportunities. Similarly, information asymmetry will be higher for smaller firms since fewer analysts follow them (McLaughlin et al., 1998a). The amount of financing is measured with the total proceeds from the issue standardized with the book value of assets. In this table, we test the differences in the changes in operating performance after the offering for different subsamples. We define the change in operating performance as the operating performance in year +3 minus the operating performance in year -1, where year 0 is the issue year.

Table 5: Determinants of Operating Performance

Variable	All Firms	Industrial Firms	Financial Firms	Utilities
Panel A: Market-to-Book Subsamples				
Cash Flows	1.3441 (-0.1988)	7.4355 (5.1015)	-1.2934 (-0.7904) ^b	1.6047 (1.9818)
Profit Margin	2.9065 (-4.4600) ^b	7.8674 (1.5500)	3.6494 (-5.365) ^b	-0.2135 (1.2150)
Return on Assets	0.0455 (-0.2500)	3.0033 (2.7200)	-0.1584 (-0.4250)	0.1815 (0.5250)
Panel B: Asset Size Subsamples				
Cash Flows	-1.2095 (-0.0311)	3.6547 (3.0535)	0.1473 (0.3916)	-1.9774 (-2.9372)
Profit Margin	-1.8027 (0.9850)	1.4718 (4.1850)	3.2179 (-0.0800)	4.7275 (2.0400) ^c
Return on Assets	0.5831 (0.4100) ^b	1.1462 (4.3600)	0.4234 (0.4400)	-0.057 (-0.0150)
Panel C: Standardized Issue Size Subsamples				
Cash Flows	3.1908 ^c (1.6333) ^b	8.0772 (6.0706)	1.1870 (1.4129) ^b	1.6455 (2.9372)
Profit Margin	5.9691 ^c (3.6250) ^b	4.6014 (-1.6100)	5.3651 (4.7550) ^c	1.5770 (-0.2400)
Return on Assets	0.2213 (-0.1450)	1.1411 (1.5750)	-0.1337 (-0.2000)	1.0965 ^c (1.4400)

This table presents the differences in mean and median changes in operating performance of sample firms after the offering. Change in operating performance is defined as the operating performance in year +3 minus the operating performance in year -1, where year 0 is the issue year. In Panel A, the difference in the change in operating performance is the change in operating performance for firms with market-to-book ratios above sample median minus the change in operating performance for firms with market-to-book ratios below sample median. In Panel B, the difference in the change in operating performance is the change in operating performance for firms with total assets above sample median minus the change in operating performance for firms with total assets below sample median. In Panel C, the difference in the change in operating performance is the change in operating performance for firms with standardized issue size above sample median minus the change in operating performance for firms with standardized issue size below sample median. In each row, the first figure is the mean value while the figure in parentheses is the median value. ^a, ^b, and ^c denote significance at 1, 5 and 10 percent levels respectively.

In Panel A, we test the influence of the growth opportunities. We measure growth opportunities with the market-to-book ratio of the firm. In this panel, we define the difference in the change in operating performance with the change in operating performance for firms with market-to-book ratios above sample median minus the change in operating performance for firms with market-to-book ratios below sample median. We find that the median difference in the change in profit margin is significantly negative for the whole sample. This result indicates that the profit margin is lower for firms that have high market-to-book ratios. We also find that the median cash flows and profit margin are lower for financial firms with high market-to-book ratios, although growth opportunities do not affect the long-run performance of industrial firms and utilities. In Panel B, we measure information asymmetry with the size of the firm proxied by the total assets. Total assets is the total book value of assets. In Panel B, the difference in the change in operating performance is defined as the change in operating performance for firms with total assets above sample median minus the change in operating performance for firms with total assets below sample median. We find that for the whole sample the median return on assets is higher for large firms

while for utilities the profit margin is higher. The size of the firm does not have an influence on the performance of industrial and financial firms.

We measure the influence of the size of the issue in Panel C. In this panel, the difference in the change in operating performance is defined as the change in operating performance for firms with standardized issue size above sample median minus the change in operating performance for firms with standardized issue size below sample median. For the whole sample, we find that both the mean and median differences in the change in cash flows and profit margin are significantly positive. This results shows that cash flows and profit margin are higher for firms that make larger offerings. We also find that the median cash flow and profit margin are higher for financial firms that issue larger offerings while the average return on assets is higher for utilities that issue large offerings.

The findings in Table 5 indicate that overall the long-run operating performance is better for firms that make larger offerings. There is also some evidence that preferred stock issuers with low information asymmetry have better operating performance. The latter result is consistent with McLaughlin et al. (1998a, 1998b) who find similar results for the cases of bond and common stock offerings.

CONCLUSIONS

In this paper, we study the long-run operating performance of the issuers of preferred stock. We hypothesize that the operating performance of preferred stock issuers will decrease before the issue and this decrease will continue after the issue. We also expect the decrease in operating performance to be more pronounced for firms with high information asymmetry and larger offerings.

Our sample consists of non-convertible completed preferred stock issues offered in US public markets. There are 1,334 issues in our sample offered by 876 firms during the 1992-2004 period. Consistent with our hypothesis, we find that there is a decrease in operating performance of preferred stock issuers before the offering. The decrease is evident in industrial firms, financial firms, and utilities. After the offering, overall there is a decrease in the profitability of preferred stock issuers. The decrease in profitability is more pronounced for financial firms, although these firms have higher cash flows after the offering. We also find that issuers of large offerings have better long-run operating performance after the offering. There is also some evidence that preferred stock issuers with low information asymmetry have better operating performance.

Our study shows that preferred stock issuers in different types of industries can have different long-run operating performances. Future studies should analyze whether these differences in operating performance persists for stock and bond offerings. Future research should also study the industry effect in long-run stock performance.

ANALYTICS: FOUNDATION OF EFFECTIVE PORTAL SERVICE MANAGEMENT

Peter Géczy, National Institute of Advanced Industrial Science and Technology (AIST)
Noriaki Izumi, National Institute of Advanced Industrial Science and Technology (AIST)
Kôiti Hasida, National Institute of Advanced Industrial Science and Technology (AIST)

ABSTRACT

Organizational portals are vital parts of knowledge-intensive organizations. They play several critical roles: a) provide a platform for deployment of web-based services; b) envelop distributed internal resources; and c) present a centralized access to resources and services. Portal services often incorporate digitalized organizational business processes. Digitalization enables automation of business processes and facilitates improved management and operating efficiency of organizations. Despite advancements in technology and significant investments, it is commonly observed that web services implementing business processes have low usability. Generally, low usability results from misalignment between natural characteristics of human interactions with services in digital environments and their design and implementation. Human-service interaction analytics expose hidden difficulties and enable effective innovation and management of portal services. We present pertinent managerial implications of analytic findings from a case study of a large-scale organizational portal with a significant number of services. The findings provide actionable knowledge for effective evidence-based management, reengineering, and innovation of portal services.

ISLAMIC FINANCE VS. CONVENTIONAL FINANCE: AN ACADEMIC DISCUSSION

Diaeldin Osman, King Fahad University for petroleum and Minerals
Md. Hamid Uddin, Sharjah University

ABSTRACT

A struggle has occurred where complacency once existed. No longer is the consumer confident that the U.S. Federal Reserve can orchestrate a stable economy with Adjustments to the money supply and messages from the bully pulpit. Nor, are investors confident that the SEC can ensure transparency and financial responsibility of large corporations. A worldwide recession has decimated economies. In the search and struggle to find a way out of the recession and then to maintain a healthy growth rate the U.S. Federal Government has broken new ground in many areas through new regulation,

It is extremely difficult to accept ideas that are not within our normal perceptual experience. For decades there has been a struggle between asset based economies and interest based economies. Islamic countries favor an asset based economy and the capitalistic countries and interest based economy. Islamic financial institutions must participate with the other contracting party on a profit sharing basis. Interest, per se, cannot be charged or received according to Islamic finance. In capitalistic countries, ownership of the asset and the debt secured by that asset do not share proportionately in the gain or loss from the asset as they do under the Islamic concept.

Even money is perceived from a different perspective in both economic systems. In interest-based economy, money is traded like an asset. In an Islamic economy money is only a medium of exchange. Derivatives have proliferated in interest based economies over the past decade and subsequently the market for these derivatives dried up creating a world-wide recession. Dislocations will occur in markets and the choice is whether an asset based system can handle those disruptions better than an interest based system.

This paper discusses the pros and cons of the two systems and as well as their common ground that could provide for a more stable world economy.

IMPACT OF WOMEN HEADS-OF-STATE ON HUMAN DEVELOPMENT

Amod Choudhary, City University of New York, Lehman College

ABSTRACT

This study explores the relationship between women heads-of-state and their impact on Human Development in their country. Mainly, the intent of this paper is to determine whether women heads-of-state do a better job as compared to their male counterparts in improving health, education and economic status of their citizenry. A thorough review of Human Development Index (HDI) data shows that although women heads-of-state have a higher and positive impact on HDI as compared to their male counterparts, this difference in their performance is not statistically significant. The source of the data used in this study is Human Development Reports available at <http://hdr.undp.org/statistics/>. The HDI data used in this study is from Human Development Reports 1998, 2002, and 2008

CONTINUOUS IMPROVEMENT IN THE U.S.A.: A SURVEY

Luis A. J. Borges, Saint Xavier University, Chicago

ABSTRACT

Continuous improvement is an endless journey to achieve excellence and organizations have to take different strategic options in order to drive the companies to accomplish their objectives: stay in business and increase their market share. The paper describes the theoretical background, the methodology with a survey conducted in the United States of America to find out about techniques and tools applications. The respondents were from service and manufacturing companies. The respondents were directors and managers. The results show where American companies have decided to put their resources in order to achieve improvements. In the end, some ideas will be formulated for future applications, such as comparison with other countries, and updating the same survey to the period after the current recession.

KEYWORDS: Continuous improvement, operations strategy, technique applications

INTRODUCTION

“Continuous improvement, in regard to organizational quality and performance, focuses on improving customer satisfaction through continuous and incremental improvements to processes, including by removing unnecessary activities and variations.

” (http://managementhelp.org/quality/cont_imp/cont_imp.htm). It is an endless journey, and will depend on the organizations’ strategic options to drive them to their objectives. There are several techniques and tools available to use, which are described in the theoretical background with twofold objectives: to stay in business, and to increase the market share. A survey was conducted in the United States before the recession of 2008/2009. The details of the survey are described in the methodology. Then, it will be presented the analysis of data and conclusions will be presented.

THEORETICAL BACKGROUND

Continuous improvement techniques and tools used in the survey are described below. They are total quality management, statistical quality control, quality control tools, design of experiments, kaizen, lean manufacturing, six-sigma approach, and empowerment. Some of the Malcolm Baldrige National Quality Award criteria such as customer focus, strategic planning, information & analysis, and process analysis were also used in the questionnaire, since they are relevant as a path to excellence.

Total Quality Management – TQM: “In a TQM effort, all members of an organization participate in improving processes, products, services and the culture in which they work.” (<http://www.asq.org/learn-about-quality/total-quality-management/overview/overview.html>). “The quality philosophies of Deming (1982, 1986); Juran (1964, 1988, 1989); Ishikawa (1986, 1990); Feigenbaum (1951); Crosby (1979) are based on customer focus. According to Stephanou and Spiegel (1992), the total quality management process was based on Deming’s principle, Juran’s approach to quality improvement, and Feigenbaum’s company-wide approach to quality control. Ishikawa (1986, 1990) added some contributions in Japan such as the Cause-and-Effect diagram and quality control circles. Crosby (1979) introduced the “zero defects” concept. Howe et al (1995) state that, despite some successes, TQM has shown that 60-70% of the programs fails to achieve their stated objectives” (Borges & Contreras, 2005)

Seven Quality Control Tools: Ishikawa (1986, 1990) stated the Seven Quality Control tools as Check sheets, Pareto Diagram, Cause-and-Effect Diagram, Histogram, Scatter Diagram, Run Charts, and Flow charts. These tools are very well known and were used even before the quality movement and, some of them such as Pareto Diagram were introduced by Juran (1989). Statistical process control (SPC): This tool is based on control charts, originally developed by Walter Shewhart in the early 1920s. A control chart helps you record data and lets you see when an unusual event (<http://www.asq.org/learn-about-quality/statistical-process-control/overview/overview.html>). Periodic samples of the process are taken, and then compared with the control limits previously calculated to see whether the process is in control or out of control.

Design of experiments: It consists of the efforts to use analysis of variation, in many cases applying experimental designs. According to Montgomery (1997), the application of experimental design techniques early in process development can result in (a) improved process yields, (b) reduced variability and closer conformance to nominal or target requirements, (c) reduced development time, and in (d) reduced overall costs. Moreover, it can be used to evaluate and compare basic design configurations and material alternatives.

The Malcolm Baldrige National Quality Award (MBNQA) criteria: The MBNQA was created in 1998 to encourage American companies to reach excellence. The author chose the following criteria items for the survey Customer Focus - Market and customer requirements, expectations and preferences. Human Resources - Training and Motivation to reach the worker's maximum potential. Strategic Planning - Objectives and Action plans development and deployment. Information and Analysis - Systems management for performance measurement. Processes - Process development management for operation units. Kaizen: It means "improvement". Kaizen strategy calls for never-ending efforts for improvement involving everyone in the organization – managers and workers like

(http://www.1000ventures.com/business_guide/mgmt_kaizen_main.html). "It is a problem solving process approach used to obtain gradual improvements. Immediate actions are carried out and some follow-up meetings are scheduled for the more time-consuming suggestions." (Borges & Contreras, 2005). Lean Concepts: Jones (1992) proposes that lean production emphasizes five elements of plant organization in the lean system: (i) the delegation of responsibilities to front-line workers; (ii) their organization into work teams; (iii) employee involvement in continuous improvement; (iv) the use of visual factory controls; and (v) the use of just-in-time approach to eliminate in-process buffers and eliminate waste.

Six-sigma Approach: Pande et al (2000) states that based on the statistical theory, the six-sigma approach was launched by Motorola and popularized by Jack Welch, GE's C.E.O. It consists of the application of DMAIC – Design, Measure, Analyze, Implement, and Control – projects supported by a consistent training basis and applications aimed at reducing defects and improving process productivity.

Empowerment: It consists in giving responsibility to the employees to participate in the decision-making process. Rayner (1994) states that many U.S. corporations are trying to increase the level of workforce participation and involvement in the decision-making process. Employee empowerment aims at the development of the capability of the workforce. In doing so, the organization can be more flexible and ready to adapt to change.

METHODOLOGY

The methodology consisted of the analysis of data collected from an anonymous and blind survey in the USA. The surveys involved some general questions about the companies' location, age, products, size, and market (whether they are regional or international). The respondents were directors, managers.

The questionnaire (Appendix A) asked about techniques and tool applications in a scale from 1 to 5, with 1 meaning successful application, 2 meaning applying waiting for results, 3 meaning to implement in the future, 4 meaning not successful, and 5 meaning no interest in applying. The techniques and tools were: total quality management, statistical quality control, quality tools, design of experiments, kaizen, lean manufacturing, six-sigma approach, ISO 9000, and empowerment. The Award criteria were customer focus, human resources, strategic planning, information and analysis, and process. The data was collected in the year before the 2008/2009 recession. From 600 questionnaires, 32 answers were compiled after rejecting 5 because they were not attending the researchers' requirements.

Besides, the survey presented a short definition for each and every one of the techniques and tools, in order to facilitate the understanding of each construct, as there are some gray areas between or among some of the techniques and tools. Therefore, the author could identify whenever there were some inconsistencies in application of those techniques above mentioned.

RESULTS

The majority of the respondents were from the state of New York (60%), and the remained were from California, Minnesota, Pennsylvania, Illinois, and Connecticut. 80% of the respondents were from the manufacturing area in diversified line of products, and the remained from services. Owing to the nature of the survey, it seems that organizations in the service industries were not particularly interested in answering the questionnaires. This can justify the poor return. The results will show were the companies decided to put their resources in order to achieve improvements in the processes.

The respondents belonged to different organization sizes: 10% were from micro-companies (1-10 employees), 40% from small businesses (10-100 employees), 20% from medium organizations (100-250 employees), and 30% from large organizations. The majority of the organizations (70%) were old (more than 25 years old). The organizations do business internationally in most of the respondents' companies (70%).

Table 1: Results of the survey

Techniques/Tools (%)	1	2	3	4	5	Total Response
TQM	46.9	40.6	3.1	6.3	3.1	100
SPC	48.4	22.6	9.6	0	19.4	97
Seven QC Tools	50.0	20.0	13.3	3.4	13.3	94
DOE	24.1	17.2	17.2	3.5	38.0	91
Customer Focus	46.7	40.0	13.3	0	0	94
HR	31.0	34.5	27.6	0	6.9	91
Strategic Planning	33.3	30.0	10.0	16.7	10.0	94
Information & Analysis	23.3	43.3	16.7	3.3	13.4	94
Process	44.8	31.0	6.9	3.5	13.8	91
Kaizen	22.2	29.6	7.1	0	40.8	84
Lean concepts	42.9	17.9	7.1	7.1	25.0	88
Six-Sigma	18.5	11.1	33.3	3.7	3.3	84
Empowerment	28.6	10.7	21.4	14.3	25.0	88
ISO-9000-94	33.3	0	0	0	66.7	38
ISO-9000-2000	63.6	9.1	0	0	27.3	69

The scale translates as 1. Successful; 2. Implemented, waiting results; 3. To implement in the future; 4. Unsuccessful; 5. Not interest. See in bold the highest values for each technique.

As one can see from Table 1, there are significant successful implementations and implementation waiting for results in the following techniques: TQM, SPC, Seven Quality Control Tools, Lean Concepts, and ISO-9000-2000. One can assume that the respondents who did not check ISO-9000-94 (low response) have chosen not do it because they were already in the most recent ISO-9000 certification.

Moreover, the Malcolm Baldrige National Quality Award criteria items were successfully implemented/implemented waiting results in the majority of organizations also.

The other tools and techniques that were not highly successfully in use, such as Design of Experiments, Kaizen, and Six-Sigma seems to require much more technical expertise than the others, or are not applicable in all organizations. It is noticeable that Empowerment is not that successfully implemented (28.6%) and implemented waiting for results (10.7%). One can justify that by the majority of the respondents were from the manufacturing organizations were empowerment might not be that representative as in service organizations.

The answers for the questions on percentage of improvement and in which period the improvement occurred was not considered in the results by the author due to either the answer inconsistencies, or lack of appropriate answers by the respondents.

CONCLUSIONS

Continuous improvement efforts are endless. The survey pointed out that 73% of the subjects believe that the competition is very strong in their sectors, although only 24% think that it will become worse in the future, and 65% agree that there will be more cooperation in the future. However, as one can see from the survey results, there is still much room for improvement. From Table 1, one can infer the areas that need improvement. Individually the respondents can tackle their weaknesses in order to improve their overall performance. The survey also shows that 52% of the subjects believe that self-organization is possible in their companies. However, the survey was not designed to reflect any choice of sequence to reach self-organization.

The use of internet has changed how organizations show themselves. 90% of the respondents answered that their organizations have website. From the ones that use the website, 79% use for advertisement, 46% for selling purposes, 13% for ordering to suppliers, 8% for suppliers auctioning, and only 4% for information. Some work can be developed in the future emphasizing individually manufacturing sectors, and/or services. Moreover, the same survey should be applied after the recession of 2008/2009 in order to compare the results to this survey. International comparisons should be done either.

APPENDIX

Appendix A: Questionnaire regarding the use of Improvement Techniques

Please note that the responses to these questionnaires are confidential and no persons or organizations will be named as a result of this research. If you would like more information on the results of this study please contact: Luis Borges, Ph.D. lborges@medaille.edu

Company Background

Organization Size (employees) (please check): 1-10 ____ 10-100 ____ 100-250 ____ above 250 ____
 Facility Location (city): _____ Facility Age (years): _____
 Company Location (please check): National ____ International ____
 Manufactured Product(s): _____ Main Product SIC Code _____
 Name of Service product(s): _____

Please score the following concepts according to the following scoring system (1-5) and Percentage of Improvement reached in what period wherever applicable:

- 1.
2. Successfully applied
3. Implemented, waiting results
4. To implement in the future
5. Not successful
6. Not interested in implementing at this time

Concept	Score	% Improv	Period
Total Quality Management (company wide continuous improvement for customer satisfaction)			
Statistical Quality Control (use of process control charts)			
Use of 7 quality control tools (check sheets, Pareto diagram, cause and effect diagram, histograms, scatter diagrams, run charts, flow charts)			
Design of Experiments (use of DOE for process optimization)			
Customer Focus (market and customers requirements, expectations and preferences)			
Human Resources (training and motivation to reach the worker's maximum potential)			
Strategic Planning (mission, objectives and action plans - development and deployment)			
Information and Analysis (systems management for performance measurement)			
Processes (process development management for operation units)			
Kaizen Workshops (use of kaizen workshops for continuous improvement)			
Lean Manufacturing (use of Just-In-Time, Lean concepts, cell manufacturing etc.)			
Six-Sigma Tools (use of 6-sigma methodology to improve process or products)			
Empowerment (Operational autonomy for different teams to make a decision)			
ISO-9000:1994 Certification			
ISO-9000:2000 Certification			
Other? Please, specify - Use the verse of the page if you need.			
Total	N/A		

Please check the appropriate answer.

1. Does your company have a website? Yes ___ No ___
2. If yes, How do you use your website? Advertise only ___; Sell to customers ___;
Order to your suppliers ___; Auction for your suppliers ___; Other, please, specify

3. Is the competition very tough in your market segment? Yes ___ No ___ Don't know ___
4. Is the trend for competition to intensify in the near future? Yes ___ No ___ Don't know ___
5. Do you think that self-organization is possible within your company? Yes ___ No ___ Don't know ___
6. Will cooperation increase in the market in the near future? Agree ___ Disagree ___ Why?
_____ Many thanks for your time.

OCCUPATIONAL STRESS IMPACT WITHIN THE MODERN MARKET ECONOMY ORGANIZATIONS

Iulian Mitut, The Academy of Economic Studies Bucharest

ABSTRACT

Considering the challenges revealed by the evolution of modern market economy and in response to appellant permanent and re-crystallization under various forms of long seen organizational stress, in reality, the individual state interest in work and professional relationship with his performances have generated a series of concerns within sizing the human factor quality of life. Working environments are significantly changing with the introduction of new technologies, materials and work processes. Changes in work design, organization and management can produce new risk areas that may lead to increased stress levels and, eventually, to a serious deterioration of mental and physical health. Repositioning the center of gravity, in the effective use of human capital, stands out the necessity for diminution or even elimination of occupational stress that is par excellence the substance of economic efficiency and a measure of fertility vitally important work, which is why saving time will reasonably be regarded as a last court of labor-saving and labor productivity growth as a fundamental form through which the economy of time ensures the organizational growth within the modern market economy.

KEYWORDS: Occupational Stress, Human Capital, Small And Medium Enterprises, Psycho-Economic Effects, Modern Market Economy.

INTRODUCTION

On the light of technical progress, economically and socially in the last five to six decades we see that comfort and wellbeing, learning content enrichment generates the premises for easing the work and their living conditions, something that can reflect positively on bio-psycho-social development of individuals and human communities. Continuing on the same line, one can say that modern civilization has created conditions for the emergence of new challenges to the health of humans and many risk factors for their lives.

Considering the challenges posed by the evolution of modern market economy and in response to appellant permanent and re-crystallization under various forms of organizational problems long seen in reality, the individual state interest in work and professional relationship with his performances have generated a series of concerns about quality of life for sizing the human factor.

Worldwide, prevention Stress at Work is one of the main aspects of the basic objective of the ILO to promote as many opportunities for women and men to obtain employment and decent production in conditions of freedom, equity, security and human dignity. Therefore, only the European Union at Work Stress affects 40 million people and produces yearly losses of about 20 billion.

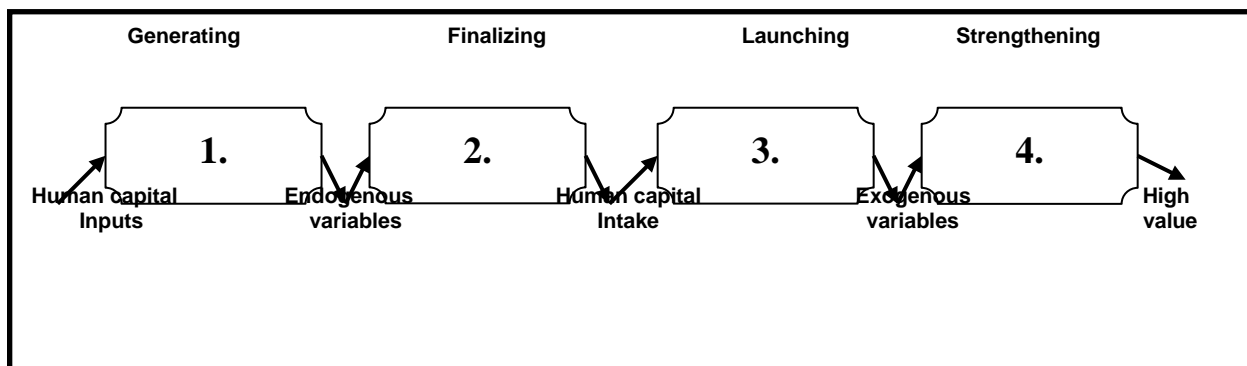

Australia Stress at Work was the main cause of 26 percent of occupational diseases and accidents at work in the average for all occupations, but the financial system - Banking it reaches 47 percent and 44 percent for education. In the U.S. a day on average over one million employees have sick leave due to ill health caused by occupational stress, which is thus responsible for half of the 550 million days absence from work per year. A study three years at a large corporation indicates that 60% of employee absences from work were due to occupational stress.

In Romania, the collective labor contract at the national level for 2007-2010, published in the Official Gazette, Part V, No. 5cc of January 29, 2007, embraces, for the first time, the need of Stress Management at Work: Art 37. underlines: “In order to prevent and reduce stress levels at work, the employer together with the signatories of the collective labor contract will be made necessary in order to translate the standards management unit for managing stress at work”.

But at the same time, a survey by Neogen, reveals that over half of Romanian employees prefer jobs with high stress and well paid. 54% of respondents say that rather demanding job, but better paid, while 26% of employees would agree to drop their salary by 15%, for a quieter life. Depending on occupations, employees in the legal field would accept 10% less stressful job even for a much lower salary. On the opposite side are employees of Commerce / Retail (62%) and those in marketing (59%), who say they prefer to be stressed and well-paid.

Therefore human capital faced not only with mental stress which is reflected in the combined action of several types of stress agents. A typical state of the mental stress test is to be found in the combined action of stress following: fear of failure, evaluation of the impact on schools, families, micro-groups, state run home exam, extensive application during the examination. But also with:

Figure 1: Strengthening economic results by optimizing endogenous and exogenous variables that modify human capital influx

Professional stress is determined by the concomitant action or not stresorilor physical (noise vibration, temperature variations, light), chemical (volatile chemicals, an irritable).

Stress under load character is determined by changes to certain professional activities. Increasing the share of surveillance and control activities, dialogue with the control panel or computer over peer cooperation resulting in reduced communication, excessive monotony, isolation. Also required to perform certain repetitive tasks, which dull subject not find any justification or inactivity can become sources of stress.

Stress overload. It is characteristic of people with longer working hours and loads of great diversity. Frequently occurs among managers, especially those of medium level. Studies have shown that this usually give managers a high proportion of professional and progressively reduce problems for time for family and relaxation. Although the stress of overload occurs on different intensities, as well as all types

of stress based on individual characteristics, survey data indicate that exceeded the average 65 hours per week affects most managers.

Table 1. The Relationship between Working Hours and Stress Level

Number of hours worked weekly	Stress level (%)	
	High (assessed by 63% of subjects)	Low (assessed by 63% of subjects)
under 40 de hours	39,8	60,2.
41-60 hours	68,0	32,0
61-65 hours	83,3	16,7
66 hours and over	94,4	5,6

European Agency for Safety and Health at Work (EU-OSHA) warns, a new report published by the European Risk Observatory, the fact that work related stress is one of the biggest challenges in safety and health work facing Europe and the number of people suffering from stress-related illnesses caused or made worse by work is likely to grow.

Stress was ranked second in most reported work-related health problems, affecting 22% of EU workers (2005). Studies suggest that between 50% and 60% of all lost working days are related. In 2002, the annual economic cost of work-related stress in the EU15 was estimated at 20,000 million.

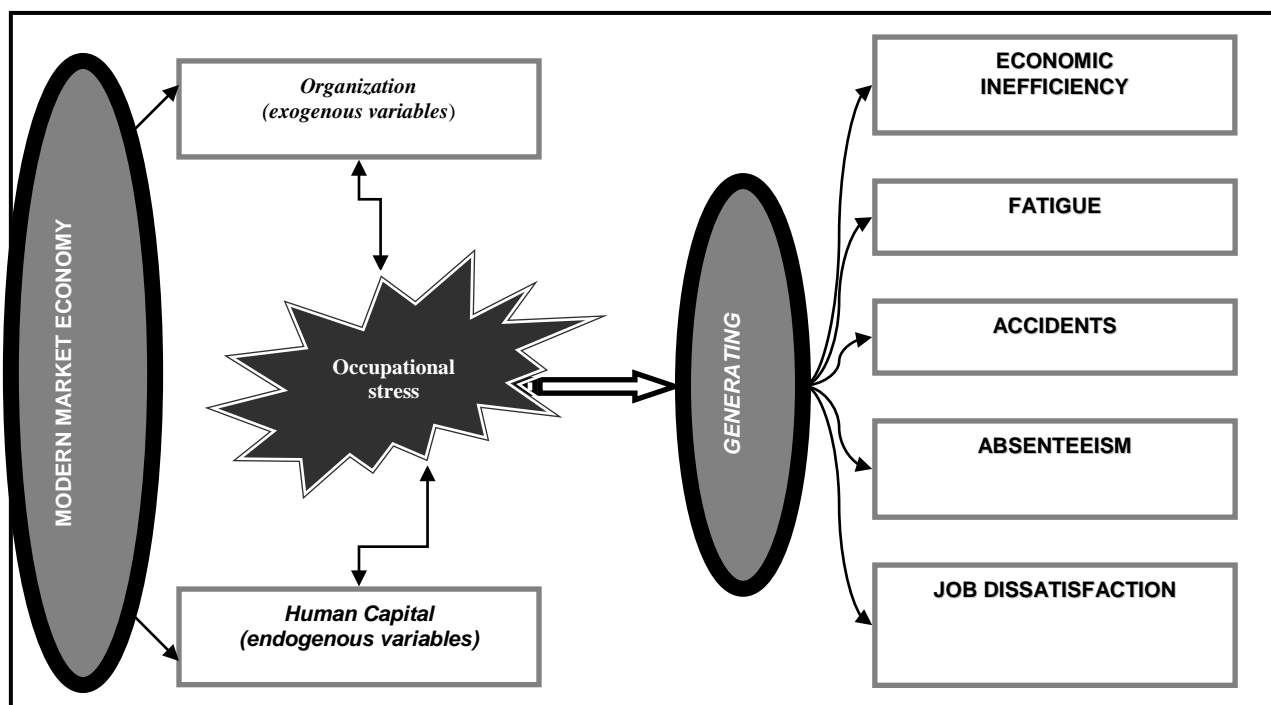

Working environments are significantly changing with the introduction of new technologies, materials and work processes. Changes in work design, organization and management can produce new risk areas that may lead to increased stress levels and, eventually, to a serious deterioration of mental and physical health. A new report by the European Agency for Safety and Health at Work shows that the main psychosocial risks are related to new forms of contracts of employment, job insecurity, the work intensification, high emotional demands, workplace violence and an imbalance between private and professional life.

Manifestation of contradictory trends and complexity of the human condition, created by the shift from modern civilization to the postmodern civilization. Health places a leading social scale values that define the standard of living and quality of life. Health has become a very valuable not only for individual welfare but also human communities and their health protection and promotion of individual interest depășii and turned into a leading problem for any human community. Interest in the individual state job and his professional relationship with performance generated a number of industrial plant research in social psychology.

Long-term, stress can seriously affect an already vulnerable to illness and time disease.

There are people for whom stress is a powerful energizer. These people have native or developed through training and resistance to stress and can be observed the following features: self-assurance in different situations, change is viewed not as a threat but a challenge to competition, the ability to assume risk, deep involvement in work life and personal views and flexibility in actions, the realization that I can change stressful situations, but may accept and overcome so.

Figure 2. Psycho-Economic Affects of Occupational Stress within Modern Market Economy

Potential effects of stress can be grouped into five broad categories, namely:

- subjective effects: anxiety, aggression, apathy, boredom, fatigue, malaise, low self-esteem, anxiety, feelings of loneliness;
- behavioral effects: prone to accidents, alcoholism, abuse of coffee tend to eat and / or excessive smoking, impulsive behavior;
- cognitive effects: decreased ability to take rational decisions, poor concentration, decreased attention, hypersensitivity to criticism, mental blocks;
- physiological effects: increased blood glucose, pulse, blood pressure, dry mouth, cold sweating, dilated pupils;
- organizational effects: absenteeism, low productivity, isolation, job dissatisfaction, reduced liability, reduced loyalty to the organization, resignation.

CONCLUSIONS

The impact of stress on a person can manifest in a variety of forms. As previously mentioned, stress can affect how individuals respond to address disease and discomfort. Also, stress causes a person to become irritable, withdrawn, cautious, energetic, optimistic, it depends on the nature of stress, whether negative or positive. While stress can have beneficial effects, distress can lead to behaviors such as drug abuse and address behavior that may lead to injury. These behaviors and the like are ways to address negative stress.

Repositioning the center of gravity in the effective use of human capital that stands out the diminution or even eliminate occupational stress is par excellence the substance of economic efficiency and a measure

of fertility vitally important work, which is why saving time reasonably be regarded as a last court as labor-saving and labor productivity growth as a fundamental form through which the economy of time.

Consequently, the economy is mirror-work time in work or cost effectiveness in labor productivity levels and labor productivity dynamics essentially characterizes the dynamic economy of time and labor. Achievement in the same time a greater quantity of material means for practical economy. Also, the effect obtained as a social work unit is greater or, conversely, the more is less expense of social work in order to obtain a certain effect due to both economic efficiency is higher. So while increasing employment economy ultimately tantamount to raising labor productivity and economic efficiency.

TQM ADOPTION IN PUBLIC HOSPITAL: MANAGEMENT AND EMPLOYEES PERCEPTIONS

Prabha Ramseook-Munhurrin, University of Technology, Mauritius

Vedmani Munhurrin, Industrial Engineer and Researcher

Arkrasunsingh Panchoo, University of Technology, Mauritius

ABSTRACT

Total Quality Management (TQM) has emerged as a potential solution to improve the efficiency and effectiveness of health care provision and is becoming increasingly important for the successful operation of public hospitals. The aim of the study is to determine the extent to which TQM can be adopted in public hospitals in Mauritius. The objective of the study is to assess management and employees perceptions on the critical factors influencing effective TQM adoption in public hospitals. A questionnaire comprising of items on a 5-point Likert scale was used to capture the perceptions and the data was analyzed using descriptive statistics and t-tests. The findings showed that the TQM dimensions have a significant impact on the perception of management and employees. Analysis of variance (ANOVA) was further employed to examine if the critical factors were perceived differently by management and employees. The results also revealed that management perceives TQM adoption as being relevant and effective, in the case of public hospitals.

INTRODUCTION

One of the fastest growing industries in the service sector is the health-care industry (Andaleeb, 1998). The health care industry has restructured its service delivery system in order to survive in an unforgiving environment resulting from maturation of the industry, reduced funding, and increased competition (Williams, 1994; Cho *et al.*, 2004). Total Quality Management (TQM) is a philosophy with the aim of achieving an overall performance. TQM has become a globally strategic force, which may lead to several benefits: improved customer satisfaction, greater employee focus and motivation, reduced waste and improved overall performance (Juran, 1988). TQM has thus emerged as a potential solution to improve the efficiency and effectiveness of health care provision and is becoming increasingly important for the successful operation of public hospitals. Many hospitals are turning towards TQM adoption for cutting costs and overall improvement in the quality of the services provided. It is argued that the measurement of quality is not yet well established in the health care industry although there are some measurement mechanisms in place (Huq, 1996; Yang, 2003; Huq, 2005). There is also the growing consensus that customer satisfaction is an important indicator of health care quality and many hospitals are searching for ways to change the delivery of patient care through TQM (Schalk and Dijk, 2005). However, most of the studies on TQM were in the manufacturing sector with limited studies within the service sector. Therefore, it is imperative that a proper study is carried out to ensure that the adoption of TQM is a worthwhile initiative in public hospitals. Public hospitals have always been criticized for their poor service quality and to implement a quality improvement program management in public hospitals may not be aware of the benefits of adopting and implementing a quality improvement program. Thus this study aims to investigate the extent to which public hospitals in Mauritius are willing to adopt TQM as their main driver towards quality improvement. This study assesses the perceptions of management and employees on the adoption of TQM in public hospitals.

The present study examines TQM adoption in a public hospital from the management and employees perspectives. The paper is organized as follows: first, the paper reviews the literature on TQM and its application in the health care as well the key factors of TQM. Finally, the findings are presented

LITERATURE REVIEW

TOTAL QUALITY MANAGEMENT

TQM has become one of the competitive strategies of choice during the 1990s and has been widely implemented throughout the world (Rad, 2006). However, TQM in the service industry is still in the early stages of theory development (Vouzas and Psychogios, 2007). TQM has been defined and represented in a variety of ways, for example, a search for excellence, creating a “right first time” attitude, zero defects and delighting the customer (Moore and Brown, 2006). TQM is an organization-wide process, where employees are motivated and empowered to do the right things, right first time and every time, to reflect on what they do and to improve what they do (Mohanty and Behera, 1996). As opposed to manufacturing organizations, where TQM is applied widely, service in organizations is more difficult to measure due to the intangibility, inseparability, variability and perishability of the service characteristics. A mere claim of TQM adoption is not sufficient, rather, clear understanding and training of personnel in the TQM philosophy is necessary to prevent it becoming a management fad (Ehigie and McAndrew, 2005).

TOTAL QUALITY MANAGEMENT AND HEALTH CARE

Quality improvement in health care organizations is considered as a means to better meet the needs and expectations of patients. According to Yang (2003) adopting TQM in the health care industry is not as smooth or successful as in the manufacturing or service industries. As put forward by Huq (1996) today hospitals are being challenged to look at their operations and find more efficient ways to do business. Many hospitals are turning towards TQM for cutting costs and overall improvement in the quality of the services provided. The concept started becoming popular in the health care industry during the late 1980s (Garvin, 1988; Westphal, Gulati and Shortell, 1997). Patient satisfaction is becoming increasingly important for the successful operation of private and public hospitals (Andaleeb, 1998; Yang, 2003; Cho *et al.*, 2004). Yang (2003) further argues that the use of TQM has provided a partial cure to service quality problems in healthcare organizations. In US healthcare, TQM is associated with the Baldrige model and has been viewed recently by some as too ambitious for healthcare, while in Japan, healthcare services have not introduced TQM, but some hospitals have set up quality control circles which have been running successfully for some time (Øvretveit, 2001). Past studies found that there was a growing consensus that patient satisfaction is an important indicator of health care quality. Huq (1996, 2005) argued that determining the factors associated with patient satisfaction is a significant issue for health care providers. TQM further aims to provide organizations with a model for success through customer satisfaction (Vouzas, and Psychogios, 2007). However, that there are some barriers encountered during the implementation of TQM in public and non-profit organizations due to the bureaucratic culture and the passive behaviors. Consequently TQM initiatives must include an in-built culture of continuous improvement, which can help an organization satisfy the needs of its customers on an ongoing basis (Walsh, Hughes and Maddox, 2002). Even the health care industry is bonded with the cultural background and the traditional professional style of leadership among physicians and other top management. It is good to note that government health sector has less flexibility in its resource allocation and human resources management

CRITICAL FACTORS INFLUENCING TQM

TQM adoption and implementation requires changes in structure, system, and process as a necessary precondition to achieve improved business performance and changes in employee behaviour (Yang,

2003). It is therefore important to identify the critical factors that influence the success of TQM adoption and implementation in service organizations (Taylor and Wright, 2003). Some of these critical factors are briefly discussed.

Factor 1: Top management commitment: Management acts as the driver for TQM implementation, creating values, goals and systems to satisfy customer expectations and to improve an organization's performance (Juran, 1988; Dale and Plunkett, 1990; Ahire, Golhar and Waller, 1996; Huq, 2005; Rad, 2006) and responsible for providing direction and encouragement to the organization [20]. Management commitment is crucial for a company's quality development since, with their support and contributions, adequate resources will be allocated to enhance the training activities resulting in better quality measurement, improved customer satisfaction and benchmarking. Hospital directors are exposed to normative pressures to adopt innovative management practices such as TQM (Taylor and Wright, 2003; Huq, 2005).

Factor 2: Employee involvement: Employee involvement is a critical component of TQM. TQM requires total management commitment to ensure employees indulge in quality work culture and hence create healthy corporate image by rendering quality services to the customers (Huq, 2005; Schalk and Dijk, 2005). Increased employee's participation in the overall quality strategy brings an increased flow of information and knowledge and contributes to the wellness of the organization for resolving problems [8]. For employees, a significant aim of TQM is the broadening of work responsibilities.

Factor 3: Customer satisfaction: TQM makes customer satisfaction the number one organization priority, where an emphasis is placed on meeting or exceeding external customer expectations in every transaction (Kangi, 1998). A close relationship with the customers is necessary to fully determine their requirements, thus customer involvement is necessary in the product design and development process (Das, Paul, and Swierczek, 2008). TQM is one such philosophy which aims to provide organizations with a template for success through customer satisfaction (Arasli and Ahmadeva, 2004). Customer focus is the emphasis placed by hospitals in meeting the unlimited expectations of its customers (Das, Paul, and Swierczek, 2008).

Factor 4: Teamwork: Teamwork is a critical factor in TQM as teamwork is essential in having a fully functioning process management and improvement, especially in medical treatment; it requires cooperation among all related departments (Westphal, Gulati and Shortell; 1997; Huq, 2005; Vouzas, and Psychogios, 2007). According to Yang (2003), teamwork is important to overcome sectionalism and to strengthen cooperation for improving quality (Huq, 2005). The most difficult aspect of TQM is to create an environment of "all one team" (Rad, 2005). The author further adds that everyone throughout the organization must work together to improve processes and to execute them with energy and efficiency.

Factor 5: Processes: TQM is centered for an effective management of processes and continuous customer satisfaction (Kanji, 1998). The process is improved by reducing the source of variation that exists within it and everyone, in the TQM environment, is required to gain additional capabilities to improve the process (Eng Eng and Yusof, 2003; Huq, 2005). Schalk and Dijk are of the opinion that hospitals will have to focus on integrating their various processes in different levels that include quality management, human resource management etc. to meet and exceed customers' expectations and to achieve organizational excellence (Schalk and Dijk, 2005).

Factor 6: Continuous improvement: Continuous improvement is a powerful concept related to the pursuit of never-ending improvement in meeting external and internal customer needs (Huq, 1996; Taylor and Wright, 2003; Schalk and Dijk, 2005). Kanji points out that continuous improvement require management by facts and commitment of all employees with an emphasis on teamwork to promote a bottom-up thrust for quality improvement (Kanji, 1998). Continuous improvement is the philosophy of improvement

initiatives that increases success and reduces failure and must be integrated into the management of all systems and processes (Huq, 1996; Walsh, Hughes and Maddox, 2002; Vouzas and Psychogios, 2007).

Factor 7: Training: Training is a very important tool for promoting and developing skills related to an organization's beliefs and values to change to a culture that places high value on quality. Once management has the skills to lead the TQM process, the rest of the organization should be trained to ensure a systematic, integrated, consistent organization-wide effort (Rad, 2005). The author further asserts that an emphasis on continuous learning and improvement, induces a positive culture where there is sufficient behavioral modification to warrant a sustainable TQM climate. Providing training to employees in problem solving skills is one of the most important activities for organizational climate change (Taylor and Wright, 2003).

Factor 8: Culture change: Instilling quality-oriented culture requires change of attitudes, value systems, and beliefs. TQM is an educational process aiming at changing the behavior and attitudes of organizational members and then developing quality sensitive organizational culture (Huq, 2005; Rad, 2006). Organizational culture has a significant effect on the successful TQM implementation (Rad, 2005). Culture is something collective in an organization and therefore not a characteristic of individuals within it. It is necessary for the management to cultivate concern for employee participation and continuous improvement, and encourage organizational changes.

Senior management commitment is the most essential antecedent of TQM success (Taylor and Wright, 2003). Customer focus, participation and teamwork and continuous improvement are the principles on which TQM is grounded (Yang, 2003; Huq, 2005; Rad, 2005). Huq (2005) found that organizational culture has a significant effect on the successful implementation of TQM. Many healthcare administrators did not believe that TQM adoption leads to a better organizational performance, in financial terms, and as a strategic advantage (Øvretveit, 2001; Schalk and Dijk, 2005). Vouzas and Psychogios (2007) assessed managers' awareness of TQM and they found three items: continuous improvement and training, total employee empowerment and involvement and quality driven culture, representing the whole concept of TQM approach. Unlike several previous studies, this study did not attempt to assess the implementation of TQM or its actual impact on quality improvement (Westphal, Gulati and Shortell, 1997; Yang, 2003), it rather focuses on TQM adoption as the critical event of interest.

RESEARCH METHODOLOGY

This study was initiated to explore the adoption TQM in a public hospital in Mauritius. The objective of the research was to measure management and employees' perceptions of quality management practices in public hospital. Based on the literature review, a questionnaire comprising of 28 attributes was developed, focusing on the TQM principles: teamwork, customer satisfaction, continuous quality improvement, and an emphasis on empowering employees to identify opportunities to improve quality and top management commitment, organizational culture and service process. The questions were measured on a 5-point Likert scale, ranging from '1 = strongly disagree' to '5 = strongly agree'. A pre-test was performed before the final data collection to determine if the questionnaire was well understood. The survey was conducted in one of the five major public hospitals in Mauritius and 40 and 200 questionnaires were respectively distributed to managers and employees across the hospital departments. The managers were top management in-charge of the different departments in the hospital, while employees were the medical staff, other health care professionals and administrative staff. Out of the 200 questionnaires, 155 questionnaires were retained for analysis while all the 40 questionnaires from the managers were used for analysis. Data was collected over a period of two weeks.

RESULTS and DISCUSSIONS

Table 1 revealed management and employees perceptions of TQM adoptions across the 8 dimensions. The results of study indicated that all the 28 attributes were statistically significant at $p < 0.05$ and $p < 0.1$ (Table 1). Management has the highest perception for “Employee training is provided in quality principles” (mean = 4.35), followed by “Employees are actively involved in quality-related activities” (mean = 4.30), “Our organization conducts a customer satisfaction survey on a regular basis” (mean = 4.20), and “Employees are very committed to the success of our organization” (mean = 4.20). These results show that management highly wishes to bring quality to every department of the hospital. The results further revealed that management had low perceptions for “Management is in routine contact with customers and employees” and “Feedback received from patients is used continuously to improve the work that we do” both attributes scored a mean of 1.75.

From the employees’ perspectives, the attributes that were highly rated are “Employees are actively involved in quality-related activities” (mean = 4.30), followed by “Our organization conducts a customer satisfaction survey on a regular basis” (mean = 4.16) and “We carry out performance assessment to measure excellence in service delivery” (mean = 4.15). Table 1 also revealed that employees had poorly rated “Management is in routine contact with customers and employees” and “Feedback received from patients is used continuously to improve the work that we do” both scoring a mean of 1.75. It is observed that both management and employees have the same perceptions regarding employees’ involvement in quality-related activities, conducting customer satisfactions survey on a regular basis, management contact with employee and customers as well as feedbacks from customers being used for continual improvements.

The overall mean for the eight TQM critical factors are statistically significant and the perceptions of both management and employees vary across the eight factors. It seems that management is not fully satisfied with the extent of ‘teamwork’ (mean = 2.13) as compared to employees’ perceptions (mean = 3.12). Previous studies concluded that teamwork is a key factor in the successful implementation of TQM (Huq, 2005; Rad, 2005). Moreover, the most important aspect of teamwork among employees and management in public hospitals seems to be the need for teams to work closely and to coordinate work with a view to quality improvement (Huq, 1996). The results of this study clearly indicate that much need to done by the hospital, in terms of teamwork. It is further observed that the overall perceptions among management and employees seem be quite low as regard to ‘continuous improvement’. However, management view continuous improvement as a factor which already exists in the hospital. The perceptions among management reveal that the hospital should have procedures and processes established to ensure that incremental and ongoing improvements are made to products and services. The results on ‘management commitment’ dimension are mixed. The overall mean scores for management and employees to the 5 attributes associated with ‘management commitment’ are 3.75 and 3.39 respectively.

Table 1: Descriptive Results For The 8 Dimensions

Attributes	Management				Employees			
	Mean 2.13	S.D 1.01	t-value 3.749	Sig. 0.002	Mean 3.12	S.D 1.19	t-value 3.366	Sig. 0.001

All our processes have been designed to meet quality standards.	3.30	0.47	-1.758	0.045	3.20	0.72	-1.411	0.012

Table 1 shows management and employees perceptions across the eight TQM critical factors.

Management and employees tend to agree to most of the attributes with the exception of “There are clear quality goals identified by management”. It appears that both management and employees are not happy with the level of management commitment in the organization. Management commitment is an essential antecedent of TQM success (Huq, 1996; Zairi, 2000; Taylor and Wright, 2003; Rad, 2006). However, in the present study, this factor still needs to be improved. The results reflect the findings of Rad (2005) who concluded that, for health care organizations in which managers were committed to TQM, its success was greater than in other organizations with a lower management commitment. Both management and employees agree (mean = 4.18 and 3.96 respectively) that without proper and continuous ‘training’, TQM cannot be adopted. Based on the above, it is found that the opinion of the respondents is justified. For a service provider ‘customer focus’ is the most important factor and the results show that ‘Customer focus’ has been poorly perceived by management and employees as both scored a mean of 2.71. It is observed that, health care managers do have a problem in determining indicators and tools for receiving patients’ ideas and suggestions, assessing their satisfaction level about the health care services and trying to improve their satisfaction. Questions on this factor focused on whether the needs and opinions of customers are monitored by the hospital. Customer feedback process is an integral part of the TQM approach. The results concur with the work of Rad (2005) who found that giving no attention to patients and their needs and wants is another reason for TQM failure in health care organizations.

The overall mean (3.00) indicates that there is a tendency for management to disagree with the statements pertaining to ‘employee involvement’ as compared to employees (mean = 3.50), as a factor of TQM adoption. Both management and employees share the view that TQM involves everyone in an organization. This study revealed that the level of employee involvement is quite low and therefore does not reflect the view of Zairi (2000) who reported that the issue of employee commitment and involvement, as a critical quality factor for successful TQM adoption. Management and employees have poorly perceived the attributes under the dimension ‘organizational culture’ and the overall mean for this dimension as perceived by management is 2.40 and that of employee is 1.99. Thus, the culture and attitudes within organizations needs to be changed if TQM is to be adopted but it is argued that changing mindsets is the hardest of management jobs. This finding indicates there must be changes in attitudes, communications, employee involvement and commitment if the hospital intends to adopt TQM. The dimension ‘processes’ was poorly perceived by both management (mean = 3.60) and employees (mean = 3.30). Process management is seen as a major obstacle toward TQM adoption both by management and employees. According to the respondents, benchmarking is almost inexistent and moreover resources are not allocated based on processes. The development of procedure and documentation are vital for control and improvement for TQM adoption.

Hospitals have a unique situation in which variation is almost inherent to the environment. Although in some cases management is justified in putting the blame on the employees, in many cases variations in quality is caused by common causes that management is not ready to acknowledge. The results of this study show that there has not been as much visible involvement and support by management as is probably needed to effect the cultural change that is necessary to move forward at a steady pace. Therefore, determination of causes of quality variation is extremely important for TQM to be successful in a hospital. Significant efforts have not been made at this point in time to reduce these common causes of variation and the common causes observed from this study include inadequate collaboration among employees, failure to put the customer at the centre of the process, and lack of empowerment.

ANOVA ON TQM CRITICAL FACTORS

In order to determine whether any significant differences exist between management and employees perceptions regarding TQM adoption on the eight critical factors, One-Way ANOVA test was performed for each of the eight TQM critical factors. This analysis can help illuminate the direction and magnitude of change that both respondents experience with regard to their position in relation to each TQM critical

factor. Therefore, it is important for hospital administrators to understand the effect of key critical factors on management and employees perceptions on TQM adoption. From the ANOVA results of Table 2, it is seen that six of the eight constructs namely, teamwork, management commitment, training and employee involvement results show statistically significant different means between management and employees perceptions at $p = 0.01$ level while continuous improvement and customer focus show significant differences at $p = 0.05$ level. The two critical factors that were not significantly different across all critical factors were: organizational culture and processes.

Table 2: Results Of ANOVA

TQM critical factor		Mean	F-value
Teamwork	Management	3.23	22.24**
	Employees	3.78	
Continuous improvement	Management	3.89	14.52*
	Employees	2.45	
Management commitment	Management	3.71	17.56**
	Employees	2.21	
Training	Management	3.40	9.27**
	Employees	2.90	
Customer focus	Management	3.73	22.16*
	Employees	3.57	
Employee involvement	Management	2.58	4.20**
	Employees	3.21	
Organizational culture	Management	2.78	11.12
	Employees	2.90	
Processes	Management	3.01	1.25
	Employees	2.89	

Significance: * $p < 0.05$; ** $p < 0.01$; Table 2 shows management and employees perceptions mean differences on TQM critical factors. The results revealed six significant differences for the TQM critical factors.

CONCLUSION

In general, both management and employees have displayed some positive attitudes towards the adoption of TQM. Sustained improvements can come only through the commitment and participation of everyone involved. Commitment for continual improvement from management is high, however, involvement of employees in the initiation of a corporate culture consistent with the TQM goals is lacking in the hospital. The adoption of TQM requires employees to reconceptualize the boundaries of their jobs, reshape their attitudes toward quality, and engage in new behaviors. Another key to the successful TQM adoption is the determination of the organization's customers and the customer's needs. Increase in TQM participation by management and employees will also help them in identifying their customers, that is, internal and external customers. Employee awareness of the customer will help to move the hospital towards a customer-focused orientation. Another key aspect of successful TQM adoption is developing a TQM culture. In this context it is worth mentioning that the organizational culture in the hospital has not undergone sufficient change at the current time. The results of the study also indicate that hospital is not investing their time and effort to develop foolproof methods and procedures. It is important that management demonstrate their commitment to the hospital processes and to provide the necessary resources to permit employee to participate in quality improvement activities.

ENSURING STUDENT ENGAGEMENT THROUGH INSTANT FEEDBACK

Kalpana Pai, Texas Wesleyan University

ABSTRACT

Research has revealed that the effective use of instructional technology can engage students more actively, enhance the learning process and facilitate higher-level learning. Clickers are being used with increased frequency in higher education. Clickers are very effective in providing instant feedback to both the students and the instructor. The purpose of this paper is to discuss the process used to integrate Classroom Response System (CRS) technology in small classes. Emphasis is placed on the implementation. Student feedback about the classroom strategy is also discussed.

INTRODUCTION

If you've ever watched *Who Wants to Be a Millionaire?*, you've seen this technology in action. The technology behind the "Ask the Audience" feature (in which audience members use a clicker to punch in their answers to a multiple choice question, and the results are displayed in a bar graph) is now being used in the classroom. Clickers refer to an electronic application where a receiver attached to the instructor's computer captures information from student keypads in response to questions posed by the instructor. The system may be referred to as a Classroom Response System (CRS), Student Response System (SRS), personal response system, Classroom communication system, audience voting system or electronic voting system. Responses are instantly recorded and statistically analyzed for potential immediate feedback for the instructor and students. The question and student responses can then become the basis of classroom discussion and learning.

BACKGROUND

Texas Wesleyan University, founded in 1890 in Fort Worth, Texas, is a United Methodist institution with an enrollment of about 3000 students. I teach economics, finance and statistics in the School of Business. Class sizes are small, ranging from 10 to 40 students. Clickers have been used successfully in large classrooms at various universities. However, I currently use them in small classes, with less than 40 students. I have been using the clickers since Fall 2007.

In recent years, post secondary institutions are increasingly adopting CRS in their teaching (Duncan 2006). With the introduction of newer technology, you can now take these Clickers from class to class. There has also been a considerable reduction in the monetary cost of these systems. There are various companies offering these systems. Most have a radio frequency reader that costs about \$100 to \$200, but will offer one free with the purchase of about 100 clickers. On average, the clickers cost about \$30 apiece. There are also clickers that include a display screen and a numeric pad allowing students to compute answers. The clickers can also be bundled with textbooks as a package for students to purchase from a bookstore. Instructors can choose to have students purchase the clickers or buy a set for themselves. I chose to buy a set of clickers that can be used in multiple classes during the same semester.

LEARNING OBJECTIVES/GOALS

I had three learning objectives: (1) Increased student engagement, (2) Immediate feedback to students, and (3) Feedback on learning to the instructor.

DESCRIPTION OF INNOVATION

Moving from a lecture based classroom to one where students were more engaged and involved was my goal. After attending the Teaching Innovations Program (TIP) organized by the American Economic Association in the summer of 2007, I decided to use clickers in my classroom. The TIP workshop was the first time I saw clickers in action. It was the application of technology to increase student engagement and feedback to both students and instructors – goals

I wanted to achieve.

I am still the only instructor on my campus to use this technology. However, other departments have ordered sets of clickers after observing my classrooms or demonstrations I have given at my campus. More clickers will be used at our campus next year.

DETAILS OF IMPLEMENTATION

At the end of each chapter, I pose five multiple choice questions to the students. The students key in their answers and the results are displayed on a projected computer screen at the front of the classroom. The instructor then shows the correct answers by making that bar on the graph turn green. The instant feedback the technology provides is helpful for both the instructor and the students. Rather than relying on evaluating the one or two students who volunteer to answer instructor questions, to see if the entire class has understood a concept, I can now get an accurate estimate of the classroom learning. If 90 percent of the class gets a question wrong, that tells the instructor, “The students haven’t understood the concept and he/she needs to spend more time on it.” On the other hand, a student may think, “If everybody else seems to be getting the correct answer and I’m the only one who got it wrong, perhaps I should start spending some more time on this or look for some extra help.”

Another advantage of the clickers is the anonymity they provide. While I keep track through the computer program of a student’s answers to incorporate into the final grade, the answers are anonymous in the classroom setting. If a student is shy, they don’t have to be embarrassed to answer the question. The person next to them doesn’t have to know what answer they picked, so they’re a little more open in terms of trying to answer.

Questions used can be planned ahead or designed on the go in the classroom. Any medium can be used to ask the questions, e.g. MS Word, PowerPoint, etc. The software takes a screen shot of the question asked and the instructor can always go back to review questions asked previously. If students are linked to clickers, grades can be assigned. The process of assigning grades to questions is very simple and a grading scheme can be set for each class or for the entire semester at one time. Once the grading scheme is set, the software calculates the grades. If the scheme is set prior to the session, grades are available immediately. The instructor can also go back after a session and change the grading scheme if desired. Grades can be imported into classroom management systems such as Blackboard. Student performance can be tracked as well.

LESSONS LEARNED

Upon reflection, I am very happy with my decision to use clickers in the classroom. The students in my classes are definitely more engaged. They enjoy using the clickers. They like the immediate feedback they receive. They tell me it helps them know where they stand in terms of understanding the materials covered.

The benefits of using clickers include: (1) Feedback to the instructors to modify pedagogy to reinforce topics that students may not have understood, (2) Feedback to the student to identify topics not

understood well and to seek help with, and (3) More engaged students. The costs involved besides the monetary cost are: (1) Time required to design or select questions for use in the classroom, (2) Time to implement a session in the class, which might take away from time assigned for coverage of required topics. However, given the benefits, I think most instructors would be happy to put in a little bit of extra time to have more engaged students.

At the end of Spring 2008, I gave a clicker perception survey to the students in two Principles of economics classes that had used the clickers. The results indicated that a majority of the students enjoyed using the clickers in the class. Most students agreed that they felt comfortable answering questions in the class since they knew the responses were anonymous and that they thought the clickers helped improve their understanding of the subject matter. About 50% of the students agreed that using the clickers helped improve their grade in the class. More than 80% recommended using clickers again in that course. About 60% of students said they would like to see clickers used in other classes as well.

Until Fall 2009, I used the clickers at the end of each chapter. In Spring 2010, I used a two-step evaluation process, allowing students to answer the question once without consulting other students and a second time when they can discuss the answer with their neighbors prior to clicking their responses. The hope is that students will finally move towards the correct answer. However, this does involve use of more time in the classroom. In the future, I would like to use a few clicker questions during each class session, perhaps every 15-20 minutes or so, about 3 questions in a 50-minute class session. Keeping in mind students' attention spans, this might be a better method to use. My advice to other instructors is to give this technology a try. Some companies allow a risk-free trial for 30 days before a purchase decision needs to be made. Given the numerous benefits of clickers, they are definitely worth a try.

MARKETING THE HOTEL SECTOR IN THE ECONOMIC CRISIS

Perunjodi Naidoo, University of Technology Mauritius

Prabha Ramseook-Munhurrin, University of Technology Mauritius

Ashwin K. Seetaram, Association of Hoteliers and Restaurateurs, Ile Maurice

ABSTRACT

The rapid spread of the economic crisis has affected the number of international tourist arrivals and the hotel industry in many regions of the world with dwindling occupancy rates. Tourists were more price sensitive and more likely to change their buying patterns during periods of economic hardship. The economic crisis affected different regions of the world including the small developing island destination of Mauritius where uncertainty and doubts in the markets caused a decrease in tourist arrivals which resulted in a reduction in occupancy rates for its hotels. This study attempts to investigate the marketing mix strategies of product, price, place and promotion used by the hotel industry in these turbulent times to reduce decreasing occupancy rates. A survey was undertaken among 75 Marketing Managers of the hotel industry in Mauritius. As this is an exploratory study, the survey enabled the researcher to probe into the marketing mix strategies used by hotels during the financial crisis. The information gathered was analyzed using descriptive statistics and recommendations were suggested.

INTRODUCTION

Research investigating the impacts of the global economic crisis on the tourism industry indicated that it would have only regional and sectoral repercussions (Smeral, 2009). However, the economic crisis which started in the second half of 2007 has had a profound impact on the economies and industries of several developed and developing countries. Tourism demand has been most affected by adverse economic conditions (Song and Lin, 2010). A period of economic slowdown can be particularly harmful to the tourism industry and previous studies have shown that an economic crisis negatively affects the number of international tourist arrivals in countries affected by the crisis or causes a decrease when the generating markets are affected by the crisis. An economic downturn brings changes in consumer behaviour, increased unemployment and loss of income (Smeral, 2009). A study conducted by Okumus, Altiney and Arasli (2005:102) demonstrated that the economic crisis in Turkey reduced the tourist demand from Turkey which forced hotels in Northern Cyprus to work with fewer people and to postpone their future investment because of higher costs and lower revenue. Consumers are likely to change their buying patterns during economic hardship and stress (Ang, 2001). Tourists as consumers restrict their financial spendings as they become more insecure about their jobs and reduced purchasing power. A study carried out by Shama (1981) has shown that consumers bought less and searched for cheaper products. In such situations, it has also been argued that consumers engage in more price substitution, more deferment of purchase of expensive products, increase in do-it-yourself activities, and greater emphasis on products which offer greater value for money (Ang, 2001). Prideaux (2000) explains that uncertainty regarding job security and apprehensions to meet future financial obligations may be the primary reasons for reduced tourism activity. Smeral (2009) argues that during the period of economic slowdown, tourists tend to reduce their holiday expenditure in terms of cheaper accommodation, fewer visits to restaurants, shorter stays and nearer destinations. Therefore, consumers are more likely to become price sensitive and purchase items which offer more value for money.

Mauritius is a small island developing state where tourism is one of the main pillars of its economy. While the history of tourism in Mauritius dates back to some four decades, it is only recently that the Government has put tourism in the forefront to become one of the main industry of the economy to replace the fading textile and sugar sector. Mauritius has achieved a remarkable success in its tourism sector for the last two decades. This achievement can be seen through the increase in tourist arrivals and since then the number of tourist arrivals has been increasing to 930,456 in 2008 as opposed to 718,861 in 2004. The year 2008 started well for the Mauritian tourism sector during the first 3 months, however, by the end of the year, the country experienced a decrease in the number of international tourist arrivals and tourism receipts for the month of November and December (Ministry of Tourism, 2009). According to the Central Statistical Office (CSO, 2009), the number of tourist arrivals fell by 2.4% and 6% for the month of November and December 2008 as compared to the previous year. Moreover, the first 6 months of 2009 encountered an average fall of 9.3% in international tourist arrivals leading to a decrease of 14% in tourism receipts (CSO, 2009) for the same period in 2008.

The behaviour of international tourists has impacted on the hotel sector which has witnessed a fall in its occupancy rates. In its monthly survey, the Association of Hoteliers and Restaurateurs Mauritius (AHRIM, 2008) stated that among its hotels, there has been a decrease in the occupancy rate of an average of 10% in the middle of 2008 and about 15% by the end of the same year. The decline was also evident in for the first 6 months of 2009 (AHRIM, 2009) where the hotels experienced a fall in room bookings of 11 %. It was observed that tourists from France and Reunion Island preferred to rent self-catering bungalows which were cheaper than hotels. This shift in purchase behaviour has been associated with the economic crisis which has compelled tourists to alter their spending patterns as they preferred to substitute large hotels for smaller self-catering accommodation. Therefore, ways must be examined to increase the hotel occupancy rate as it is a major contributor to the economy of Mauritius. Cizmar and Weber (2000: 238) noted that marketing practices are positively contributing to the business performance especially during the crisis situation and the authors have linked some factors of marketing effectiveness to business performance. However, no studies examined the importance of the marketing mix strategies used by hotels in periods of economic crisis. Hence, it is important to examine the marketing strategies that can be adopted by hotels in order to fend the economic crisis and increase their occupancy rates. Additionally, research investigating the impacts of economic crises on the tourism industry is scant (De Sausmarez, 2000) and such studies have not been conducted in a small island developing economy. Therefore the purpose of the study is to examine the marketing mix strategies used by hoteliers during the period of economic crisis in the small island of Mauritius. The marketing mix variables that would be examined in the study are that product, price, place and promotion.

The paper is organised as follows: the introductory section identifies the context and presents the purpose of the study. The next section reviews the relevant literature on the marketing mix variables. The research methodology is then presented followed by the results and discussion. The last part of the study concludes the paper.

LITERATURE REVIEW

Establishing effective marketing mix strategies is critical for Marketing Managers. McCarthy's (1960) 4Ps – product, price, promotion, and place can be regarded as the traditional elements of the marketing. The marketing mix is the set of marketing tools a firm uses to pursue its marketing objectives in the target market (Borden, 1984:3). It should be designed to influence consumer decision-making and lead to profitable exchanges. When an organization markets its products, it needs to create a successful mix of the right product, sold at the right price, in the right place and using the most suitable promotion tools.

Product is explained as anything that is being offered to a market such as physical goods, services, events, organizations, people, and ideas (Kotler and Armstrong, 2004). As such, tourism products offer a combination of services and goods. In the tourism industry, the fundamental concern is to provide the appropriate bundle of benefits [products and services] to consumers which meet the changing needs and demands of the consumer (Kotler and Armstrong, 2004). According to Ferrell (2005), the product is the core variable of the marketing mix strategy in which organisations can offer consumers symbolic and experiential attributes to differentiate products from competitors. Product is also associated quality, design, features, brand name and size (Borden, 1984; Zeithaml and Bitner, 2003). A product has also been viewed as having three levels: the core product, the actual product and the augmented product (Zou and Cavusgil, 2002). The core product consists of main benefits that the consumer is looking for such as accommodation and meals in the case of a hotel. The actual product has the characteristics of quality level, features design and packaging. According to Kotler (2004), the quality of the product refers to the ability of the product to perform its functions. The augmented product enables the organization to differentiate its service offering by deliver more than the expectations of customers.

Price is the only variable of the marketing mix that generates revenues for a firm, whereas all other elements of the mix are associated with costs (Kotler, Bowen, and Makens, 2006; O'Connor, 2003; Shoemaker, Lewis, and Yesawich, 2006). It is the amount of money charged by the organization in exchange of a product or service or sum of values provided to consumers. Docters, Reopel, Sun and Tanny (2003) state that price is a way of communicating and sending the right message to its customers. Organisations have several market segments with multiple price sensitivities and concerns. Kotler and Armstrong (2004) state that by setting a price, it is important to look at its competitors' pricing strategies. Hospitality firms use various methods to set prices for their offerings. Hospitality managers often select different pricing approaches based on a combination of several factors: a firm's cost structure, competitors' prices, and customer value perceptions of hospitality products (Raab, Mayer, Kim and Shoemaker, 2009). For example, Zeithaml, Bitner, and Gremler (2006) argue that, because price serves reflect quality for customers, it must be determined very carefully and thus marketers should price their products or services based on customer's perceptions of the value of the offered product or service. They also use several price adjustment strategies, such as volume-based, time of purchase discounting or discriminatory pricing (Kotler, Bowen, and Makens, 2006). Shoemaker *et al.* (2006) suggested that pricing is a powerful force in attracting attention and increasing sales and that it can also have major influence on customer loyalty.

Place also referred to as distribution channels serves mainly to make services accessible and available to consumers (Woodruffe, 1995). Buhalis (2001) explains that the functions of distribution channels are to provide tourists with information and travel arrangement services. He adds that distribution channels should therefore bundle tourism products together; and also establish mechanisms that enable consumers to make, confirm and pay for reservations. Distribution channels also facilitate the search process for consumers (Wynne *et al.*, 2001). The hospitality industry used a range of distribution channels to distribute their products and services such as travel agents, tour operators, visitor information centers, sales representatives and the Internet. Several channels may be used in conjunction, catering for differences in consumer needs or product requirements (Reinders and Baker, 1998). The internet is known as the modern distribution channel and Martin (2004) believes that it is expected to bring new opportunities for business development and competitive advantage. According to Richer and Carter (1999) the internet provides hotel organizations with a cost-effective channel without the high distribution costs of conventional media. Additionally, consumers are aware that the cost of web distribution is lower than any other channels, and expect cheapest rates via electronic routes (O'Connor, 2003).

Promotion in the marketing mix is also referred to as communications and is aimed at target groups who need to receive information about the products and services in order to purchase (Woodruffe, 1995). According to Kotler *et al.* (2006) the promotion mix of the hospitality industry consists of several

elements such as personal selling, sales promotion, public relations, direct mail, trade fairs and exhibitions, advertising and sponsorship. Advertising is one of the most commonly used types of promotion. It is a paid, non-personal presentation of offerings (ideas, goods, or services) by an identified sponsor (Herrera, Lopez and Rodriguez, 2002). Advertisements are designed inform, convince and trigger purchase regarding products and services. Sales promotion is another major aspect of promotional mix. According to Herrera *et al.* (2002), sales promotion involves a number of techniques designed to stimulate purchase of the product over the short-term. Examples include contests, special offers and rebates. Public relations are the practice of managing the flow of information between an organization and its publics (Grunig, 1984). Common activities include speaking at conferences, winning industry awards, working with the press, and employee communication. PR can be used to build rapport with employees, customers, investors, voters, or the general public (PRSA, 2009). Direct marketing uses direct mail, electronic mail, and telemarketing to stimulate purchase. The product, price, place and promotion strategies should be used together as a combination of strategies to counter the effect of the financial crisis and survive during this period of uncertainty.

METHODOLOGY

A quantitative approach was chosen for the study. A questionnaire was distributed through electronic mail to the Marketing Manager of 75 hotels in Mauritius. The questionnaire consisted of 6 sections. The first section included questions on characteristics of the hotel establishment. Section 2 to Section 5 consisted of statements regarding the Marketing Mix variables of Product, Price, Place and Promotion used by the hotels during the period of economic crisis. The respondents provided ratings to these statements based on a Likert scale ranging from (1) strongly disagree, (2) disagree, (3) neither disagree nor agree, (4) agree to (5) strongly agree. Section 6 gave an opportunity to the respondents to provide general comments through open-ended questions.

A pilot study was conducted to identify if the electronic mail was a suitable method to distribute the survey instrument and to determine areas of ambiguity in the questionnaire. The questionnaires were emailed to 3 Marketing Managers, a Destination Promotion Officer and the Chief Executive Officer of the Association of Hoteliers and Restaurateurs Mauritius where the purpose of the study was explained in the email. Following the pilot study, the questionnaire was slightly modified. Two product-related statements: gastronomy and business statements were added as possible features of product strategy. Participants in the pilot study stated that Marketing Managers may be unwilling to disclose information easily and therefore it was important for the researcher to clearly explain through follow-up phone calls that the information will remain confidential.

Convenience sampling was used to identify the 75 Marketing Managers of the hotel sector in Mauritius. All the 75 hotels of the Association of Hoteliers and Restaurateurs of Mauritius were selected to participate in the survey. It was deemed that the sampling size was highly representative of the total number of 100 hotels in Mauritius. Additionally, the up-to-date email addresses of all sampled Marketing Managers were readily available from the contact list of the Association of Hoteliers and Restaurateurs Mauritius. The revised questionnaire was attached to an explanatory mail and sent to the 75 Marketing Managers. They were informed to return the completed questionnaire by email to the researcher and to contact the latter by the same mode of communication or by phone if they needed further information or clarifications. To ensure higher response rate, follow up telephone calls were made after sending the email and in several cases meetings were also arranged with the Marketing Managers.

RESULTS AND DISCUSSION

The results show that only 57 Marketing Managers responded to the survey resulting in a response rate of 76%. Out of the hotels surveyed, 9% was categorized as 2 stars, 26% as 3 stars and the same amount of

as 5 stars (Table 1). The majority of the hotels (39%) were categorized as 4 stars. Additionally, 19.4% of the hotels own between 51 and 100 rooms, 24.5% between 101 and 150 rooms and 22.8% each for the categories between 151 and 200 and above 200. Out of the respondents 56% of the hotels were owned by local groups, 27% of the hotels were managed individually and 17% were owned by an international group.

Table 1: Characteristics of Hotels

Category	Items	Percentage (%)
Classification	1 Star	0
	2 Stars	9
	3 Stars	26
	4 Stars	39
	5 Stars	26
Number of Rooms	<50	10.5
	51-100	19.4
	101-150	24.5
	151- 200	22.8
	>200	22.8
Ownership of Hotels	Local group	56
	International Group	27
	Managed Individually	27
Main markets for hotels	France	100
	United Kingdom	62
	Reunion Island	51
	South Africa	42
	Italy	41
	Germany	37
	India	27
	Australia	22
	Switzerland	12
	Local	39

The table reflects the characteristics of hotel establishments based on classification, size, ownership and markets targeted.

The results also reveal that France is the main market targeted by all hotels, followed by the United Kingdom, Reunion Island, South Africa, Italy and Germany. Thus, the main markets targeted by hotels are Europeans and the latter have been affected by the economic. As stated by Chen (2009), the occupancy rate of hotels depends on the development and economic conditions in its own location and in the foreign tourist markets. Hence, economic hardship faced by European customers has resulted in lower occupancy rates of these hotels since it is the main tourist generating market.

The following sections measure the perceptions of hotel managers regarding the marketing mix strategies used during the 2008- 2009 economic crisis period. Descriptive statistics were used to find the mean, standard deviations and t-value for each strategy. Cronbach alpha was also calculated for the 4P's and the results revealed that the internal consistencies of the scales are all quite high. All the four marketing mix strategies have a coefficient of above 0.60, that is, 0.723, 0.635, 0.768 and 0.782 were obtained for product, pricing, place and promotion. The alpha coefficient for the total scale was 0.625. According to Nunnally and Bernstein (1994) reliability coefficients greater than or equal to 0.50 are considered sufficient for further exploration.

Table 2 shows that during the crisis, 56% of hotels surveyed did not alter their product strategy. They maintained that out of the 44% who changed their product strategies, it was seen that the hotels used augmented products in order to differentiate from international and local competitors during the economic crisis. 97% of respondents have included free nautical activities or a wider choice of such activities for tourists. The findings also reveal that 70% of respondents have either developed or improved their spa and wellness product. 60% of hotels offered gastronomy cuisine as one of their distinctive product offers.. 19% of hotels developed or improved their golf facilities. Ecotourism is also offered as a main augmented

product for 5% of hotels located on the hillside which is appropriate for the consumption of such activities. 5% of the respondents improved their business activities due to their location in the city centers. The rest of the hotels (15%) developed value for money accommodation, wedding facilities and experiencing local culture as part of their augmented product.

Table 2: Marketing Mix of Hotels

Strategies	Items	Percentage (%)
Augmented Product	Golf	19
	Spa and Wellness	70
	Nautical activities	97
	Ecotourism	5
	Gastronomy	60
	Business	5
	Others	15
Price of Rooms	Half Board	60
	Full Board	16
	All Inclusive	12
	Bed and breakfast	12
Distribution Channels	Tour operators (TO)	63
	Travel agents (TA)	5
	Hotel Website	15
	Sales representatives	5
	Selling directly to walk-in-clients	12
Promotion	Advertising	27
	Sales promotion	21
	Direct marketing	2
	Public relations	17
	Exhibitions and trade fairs	29
	Sponsorship	4

The table identifies the product, price, distribution channels and promotion strategies used by hotels during the economic crisis

The findings also revealed that 60% of hotel rooms in Mauritius were sold on half-board basis, that is, breakfast and dinner are included in the costs. It has to be noted that regardless of the crisis, most large hotels in Mauritius sell their rooms on half-board basis. 16% of hotels prices were on full-board basis (breakfast, lunch and dinner included). 12% of hotels offered rates on an all-inclusive basis only. This practice has been increasing as hoteliers believed that it brought competitive advantage. Consumers during periods of economic crisis tend to purchase services which they perceive as having greater value for money (Ang, 2001) and are less willing to increase their expenses by dining in restaurants (Smeral, 2009). Therefore, all-inclusive packages enable the customer to purchase the whole bundle of food and beverage services at a special price. The findings also reveal that 12% of hotels which reflected hotels with less than 100 rooms applied the bed and breakfast pricing concept. The results regarding distribution channels reveal that 63% of hotels distribute their products via tour operators. 15% of sales are carried out through the hotel website. 12% of tourists are walk in clients. Sales representatives and travel agents represent about 5% of hotel sales respectively.

Table 3 presents the results of effective product strategies adopted by the hotels in Mauritius during the economic crisis. The most effective measure during the crisis period for all types of hotels was to carry out intensive marketing (mean of 4.6), followed by increasing the visibility of the establishment internationally (mean of 4.2). Increasing the visibility of the hotel locally was considered less effective than internationally as it scored a mean of 3.2. Training of the staff to increase the level of service received a mean of 3.9 and the respondents considered this strategy as effective during the period of crisis. The literature has shown that periods of low demand such as a financial crisis provided a good opportunity to carry out internal structural reforms and apply new concepts where resistance to technological and organizational innovations is easier to overcome (Smeral, 2009). Although this has not completely been the case for the hotel industry in Mauritius, it is seen that nevertheless, management used the opportunity of low demand to improve the level of service by training staff. The upgrading of

product packages (mean of 3.2), offering of free nights stays (mean of 3.7) and free leisure activities (mean of 3.3) were considered effective for targeting international tourists. Conversely the less effective product strategy was “complimentary/promotional gifts” (mean of 2.9) as these gifts were given when the client were already in the hotels and thus they were not effective to motivate the client to select the hotel but were rather used to satisfy clients at the hotel and reinforce that they had made the right decision. This could in subsequently motivate customers to select the hotel in future purchase intentions and thus encourage repeat patronage.

Table 3: Effectiveness of Product Strategies used by the Hotel Sector

Items	Mean	SD	t-value
Training of staff to improve service delivery	3.9	1.05	27.89
Complimentary/Promotional gifts to clients	2.9	1.08	19.93
Upgrading of packages, i.e. half board to Full board or higher room standard	3.2	1.16	20.03
Free nights for long stay	3.7	0.97	28.49
More leisure activities for free	3.3	0.65	37.67
Intensive marketing of the hotel and its products	4.6	0.48	71.86
Increase product visibility locally	3.2	1.26	19.08
Increase visibility internationally	4.2	0.86	36.54
Improve image of the organisation	4.1	0.83	36.64
Improve the quality and variety of the F&B offered	3.6	1.13	23.74

Table 3 shows the mean scores of the product-related strategies developed by hotels to reduce falling occupancy rates.

Price was another marketing strategy considered during the economic crisis by hotels. The results reveal that 69% of the respondents adopted price cuts during the crisis. This concurs with Smeral (2009) who argues that tourist prices for foreign stays are expected to get cheaper in 2009 and 2010. However, it is also noticed that for the case of Mauritius, prices for the local market has also been reduced to attract local customers and increase occupancy rates. Times of hardship have urged people to spend less and to opt for more necessary items as opposed to vacations to a long haul destination. Hotels adopted price reduction so as to appeal more attractive to its markets. Massive discounts were given to tour operators by 15% of the hotels whereas added value such as upgrading from half-board to full-board was given by 21% of the respondents. The tour operators requested 7% to reduce their prices. Promotion and last minute offers were undertaken by 28% of the hoteliers so as to reach targeted level of occupancy expected.

As shown in Table 4, the two most effective strategies for the hoteliers were the selling of rooms in a bundle (mean of 3.8) i.e. the rooms were sold with the air tickets and excursions to tour operators and the charging of different prices for different markets (mean of 3.7). Price bundling may be profitable if consumers differ in their willingness to pay for the separate components of the bundle (Venkatesh and Mahajan, 1993). The sales of product in bundles enable the consumer to benefit from several products at a lower price rather than having all the products separately but at a higher price for each of the products. Selling of rooms in a bundle at lower prices helps the hotel to increase the room occupancy and thus benefiting from the extras that are being consumed by the guests. Shama (1981: 13) pointed out that in such period consumers are more price sensitive and there is a need either to reduce the price of the product or to offer more value for the same price. The strategy of charging various prices to various markets was adopted by hotels as the markets less affected by the crisis was charged higher prices than those affected by the crisis. Special prices were also offered to the local markets. Thus, the differential pricing strategies are based on the financial capabilities of each market to purchase the product. No new hotels responded to the survey, thus there was no strategy for new entrants adopted such as price skimming and price signaling. Some respondents found effective and adopted strategies which involves

price cuts during certain points in time (mean of 3.2). For example, during holiday periods in the French market, prices were reduced. The variation of the price during the low and the high season was another important strategy for the hoteliers (mean of 3.1). However, strategies involving high priced items such as offering high price to non-knowledgeable customers (mean of 1.4), low priced product with high priced complementary goods (mean of 1.9) were considered not effective by the hotels.

Table 4: Effectiveness of Pricing Strategies used by Hotels

Items	Mean	SD	t-value
Temporary price cut offered at different points in time, i.e. during holidays in markets	3.2	1.17	20.06
Price systematically change during certain period (e.g. peak season)	3.1	1.44	16.16
Different price for different market segment	3.7	1.38	18.78
Low quality product offered at high price to non knowledgeable customers	1.4	0.60	17.71
New product introduced at low price to attract customers	3.3	1.31	19.09
Irregular discounts announced through advertisement	3.2	0.96	24.89
Price related to client's perception of the product	3.3	1.19	20.84
Product sold in a bundle or package	3.8	1.01	28.61
Product introduced at high price and then price goes down gradually	2.1	0.86	18.49
High quality product sold at high price	2.5	1.20	15.50
Product sold at low price but complementary at very high price.	1.9	0.88	16.26

Table 4 shows the pricing strategies used by hotels to reduce falling occupancy rates

Table 5 shows that emphasis was placed on the distribution channels during the crisis. All of the statements listed in the questionnaire received a minimum mean of 3.2. The most effective as considered by the respondents was providing information through the hotel website. This information includes the features and services offered by the hotels as well as any discounts or promotion undertaken by the establishment. Given its low costs and its potential as a boundless platform for marketing and advertising, the respondents were agreeable that more emphasis should be placed on the internet promoting all the features of the establishment. The hoteliers were agreeable that maximum information should be given to the tourist online for online booking (mean of 3.9). However, the use of social website (mean of 3.2) was not considered as effective as using the internet. Selling their product in packages, to tour operators (mean of 4.2) and travel agents (mean of 4.3), together with attractions and air tickets at lower price enabled many hoteliers to maintain and strengthen their long-term relationship with these organizations. The findings concur with Imrie and Fyall (2001:63) who state that alliances can assist hotels in developing in appropriate strategies and be more competitive. This alliance with the tour operators and travel agents and has proven to be fruitful in the period of crisis. Incentives such as discounts given to travel agents (mean of 3.8) and tour operators (mean of 3.7) were considered effective as these incentives motivates the tour operators and travel agents to sell the hotels. Incentives were also given to Sales Representative to increase sales and this strategy was successful as it scored a mean of 3.4. Discounts were given to walk-in clients (mean of 3.4), especially the local clients, by the hoteliers (22%) so as to motivate them to either extend their stay or come back to hotels for short week end breaks.

Table 6 shows that results of the promotional strategies adopted by the hotels. During the period of crisis, most of the hoteliers were agreeable to the fact that sales promotion was the most effective tool of the promotion mix as it scored a mean of 4.2. As Ang (2001) argues, during such periods, there is more price substitution, and greater emphasis on products which offer greater value for money. Public relations including exhibitions and fairs scored a mean of 3.8 and was considered as second most effective as it gives the hotelier a possibility to show the product in international fairs where all the tourism stakeholders are present including the international tour operators and travel agents. However, it is a costly strategy to be present in the international fairs or for eductours to come to visit the hotels in Mauritius which also include the cost of airfares, accommodation and entertainment. Nevertheless, the hoteliers did not reduce

their promotion budget drastically and recognized the importance of such promotional techniques in international markets.

Table 5: Effectiveness of Place strategies used by the Hotel Sector

Items	Mean	SD	t-value
Tour operators			
o Sell in volume at low price	3.2	1.29	18.37
o Discounts offered to TO	3.7	0.93	30.19
o Sell in attractive packages	4.2	0.50	62.81
Travel agents			
o Incentives offered to Travel Agents	3.8	0.58	46.76
o Price at discounted rate	3.8	0.64	44.23
o Product sold in packages	4.3	0.60	52.37
Internet			
o Hotel website (giving information)	4.5	0.63	52.48
o Possibilities to book online	3.9	1.00	28.69
o Email facilities	3.6	1.13	23.58
o Use of social network (facebook)	3.2	0.99	23.58
Sales representatives			
o More resources made available	3.5	1.17	21.71
o Incentives to Sales rep	3.4	0.91	26.41
Selling directly to walk-in-clients			
o Discounts	3.4	1.37	18.24

Table 5 reveals the place related strategies categorized as tour operators, travel agents, internet, sales representative and walk-in clients

Advertising (mean of 3.6) was considered as effective by the hoteliers as there was a need to target new markets and to informing them about the offerings of the hotel. The internet has been mostly used for advertisements and increasing the visibility of the hotel and its services. Moreover the sales promotion undertaken had to be advertised both locally for the local market and internationally. Direct marketing (mean of 2.6), and sponsorship (mean of 2.1) were not considered to be very effective to boost up sales in a short term period.

Table 6: Promotion Strategies

Items	Mean	SD	t-value
Advertising	3.61	0.93	29.09
Sales promotion	4.20	0.64	48.73
Direct mail	2.62	0.91	21.27
Public relations	2.90	1.11	18.91
Direct selling	3.36	0.85	27.91
Exhibitions and trade fairs	3.81	1.02	27.20
Sponsorship	2.12	0.93	16.02

CONCLUSIONS

The aim of this study was to determine the marketing mix strategies used by the hotel industry in the economic crisis to increase the hotel occupancy rates. The study has shown that several marketing mix strategies were developed by the hotel industry to fend off the impact of the financial and economic crisis. In terms of product strategies, it has been seen that hotels carry out intensive marketing strategies,

especially in international markets to strengthen the image and positioning of the organization. The least effective strategy was to provide complimentary gifts to clients as it did not directly influence their purchase behavior and did not help to reduce the falling occupancy rate. The pricing strategies that were most successful for hoteliers were product sold in bundles such as packages sold to travel agents and tour operators. Additionally, discriminatory pricing was also useful since it enabled the hoteliers to offer tailor-made prices to specific markets. The strategy of offering low quality product at high prices was not successful with customers. The internet and tour operators were found to be the most effective distribution channels in times of economic crisis. It was also seen that the other distribution channels such as travel agents, walk-in sales and sales representative all had an important role to play in effectively distributing the product to consumers. The most effective promotion strategies were sales promotion, exhibitions and fairs as well as advertising. It is important to note though that although sales promotion was greatly used, hoteliers did not massively reduce the prices of luxury hotels but, on the other hand, offered additional free nights or more leisure activities to maintain the high-end positioning of such establishments. As Smeral (2009) notes, major discounts should be avoided because it will be difficult to restore the original price level in the economic recovery period.

Hoteliers must be cautious in developing tourism marketing strategies in times of economic crisis as its impact can be particularly harmful to a small remote island such as Mauritius which is situated around 12 hours from its major and most affected market which is Europe. As Smeral (2009) notes, in economically difficult times, consumers are more likely to select domestic or closer destinations which are easy to reach and less costly. Traveling to these destinations also offers the possibility of day trip which is not possible when travelling to a small destination like Mauritius. In such period, it is recommended that hoteliers use the marketing mix variables judiciously. It is also recommended that the hotels focus on repeat visitors who are confident about the product that they have already experienced.

The limitations of the study must be noted. The findings reveal mostly the opinions of Marketing Managers from large hotels as there was a low response rate from smaller hotels. Future studies should investigate the marketing mix strategies of small hotels. Other studies can also determine whether the classification, size and ownership of hotels influence the strategies adopted by the hoteliers.

PERFORMANCE APPRAISAL OF KNOWLEDGE BASED COMPANIES – A CONSTRUCTIVIST APPROACH

Nicoleta Radneantu, Romanian-American University
Dragos Radneantu, TransNet Ltd

ABSTRACT

Nowadays, we may observe that most important asset in many knowledge-based organizations is the internally generated intangible assets. However, the traditional financial statements do not register an important part of the intangible capital, because it is almost impossible to identify and evaluate it. Therefore, we started for our research from Ohlson evaluation model and we add as an independent variable the value of internally generated intangible assets of an IT organization. After we tested the model, we observe a close connection between the used variable, which can lead us to the conclusion that companies should also provide additional intangible assets information in their financial statements or in their explanatory notes, because they generate future benefit which must be taken into account by the organization' stakeholders.

INTRODUCTION

New challenges brought by knowledge-based economy led to awareness regarding the necessity and importance of information when about survival, performance and continuity of knowledge based companies.

The appearance of knowledge-based companies determined a growth in the importance of intangible assets, assets considered as competitive advantage by most companies, which led to a situation where the market value of such a company became larger than its accountant value. This tendency will grow in the future and remains a present reality.

Currently, at both national and international level, internally generated intangible assets are not generally recognized in annual financial statements, because they are not the result of a previous transaction with a third party, their future benefits are uncertain and there is no cost which can be considered as trustworthy. Table no. 1 shows the level of recognition of intangible assets in annual financial statements in different countries.

The main argument for the necessity of an appraisal model for intangible assets would be the difficulty of evaluating them as well as the high costs involved in measuring this kind of assets, but also the incertitude of results. The main problem of measurement systems is the impossibility to measure social phenomena with precision. All measurement systems, including traditional accounting ones, must relay on monetary units such as dollars, euro etc, as well as on measurement units that do not represent the real value of an event or an action that caused a certain phenomenon.

This leads to discrepancies between managers' expectations, promises made by the developers of the method and the reality of the systems; all this leading to the creation of very fragile, manipulation subject systems.

Indicators used to evaluate intangible assets become useful only if they can provide significant, relevant information to companies. Pitifully most of previous research is based on identifying elements that are easy to measure, collect and report. In most of cases, the result of the evaluation is irrelevant and the data is useless for its end users.

Table no. 1 – The Level of Recognition of Intangible Assets in Annual Financial Statements in Different Countries

Countries/Standards which do not recognize internally generated intangible assets in their financial statements	Countries/Standards which recognize internally generated intangible assets with short amortization period in their financial statements	Countries/Standards which recognize optional internally generated intangible assets in their financial statements
Canada China Denmark Germany IASB India Israel Japan Norway Spain UK USA	Holland Saudi Arabia	Australia Belgium Brasil Bulgaria Czech Republic Finland France Italy Luxemburg Malaysia New Zealand E.U. Directives

MODEL OF PERFORMANCE APPRAISAL FOR KNOWLEDGE BASED COMPANIES

We consider that a knowledge-based organization is an innovative company that generates future benefit using mainly its intangible assets and intellectual capital, which is investing in training, in employment and in long life learning, which is developing an open culture and an internal knowledge base and expanding links with customers, suppliers and external human resources.

A present problem for knowledge-based companies is the recognition of internally generated intangible assets in financial situations. This is the reason why we will use the value of internally generated intangible assets as an independent variable in our appraisal model.

We will use the Ohlson evaluation model (1995) as a starting point. In this model, the value of a company is determined from its market value and accounting value:

$$P_{it} = bv_{it} + \alpha_1 x_{it} + \alpha_2 v_{it}$$

Where:

P_{it} = the market value of company “i” in a “t” period of time

bv_{it} = the accounting value of company “i” in a “t” period of time

x_{it} = the economic profit of company “i” in a “t” period of time

v_{it} = other information

If we include internally generated intangible assets in Ohlson evaluation model, we will obtain the following assessment:

$$P_{it} = bv_{it} + \alpha_1 x_{it} + \alpha_2 IGIA_{it}$$

Where:

P_{it} = the market value of company “i” in a “t” period of time

bv_{it} = the accounting value of company “i” in a “t” period of time

x_{it} = the economic profit of company “i” in a “t” period of time

$IGIA_t$ = internally generated assets in a “t” period of time

THE MODEL ECONOMETRICAL TESTING, THE RESULTS ANALYZE AND THEIR INTERPRETATION

In order to test the model I used annual values from 2001-2008 for the Romanian company TransNet Ltd. TransNet Ltd is one of the top web editors, and the 25 websites in its portfolio covers the most diverse categories, related to the demand of the market and internet consumer needs.

TransNet Ltd earned its market leader reputation on the youth segment age 17 – 19. Its main sites sum over 100 million pages open on a monthly basis by over 14 million unique visitors. We chose this company because we consider IT companies are representative to the characteristics of knowledge-based companies.

We used the data in the financial statements of the company, and the company's evaluation report - report made by The National Association of Romanian Appraisers member - for the data regarding internally generated intangible assets.

The linear regression for the proposed model is:

$$P_{it} = C(1) * x_{it} + C(2) * bv_{it} + C(3) * IGIA + C(4) + \varepsilon$$

Where:

ε = the scholastic or random (error) component

C(1), C(2), C(3), C(4) = regression coefficients

In order to test the model we used EViews program. In table no. 2, we enclose the values for the dependent and independent variables for 2001-2008, data we will use in testing the proposed model. The intensity between variables is measured with the help of the R-squared method. Thus table no. 3 shows us that R-squared = 98,6545%, and Adjusted R-squared = 97,6454%, which means that approximately 98% of the variation in market value can be explained by means of variables used in our model. Only 2% represent hidden factors that cannot be explained taking into consideration the presupposed independent variables.

Table no. 2. The Variable Used the Proposed Model

Variables	Year 2001	Year 2002	Year 2003	Year 2004	Year 2005	Year 2006	Year 2007	Year 2008
Pt	592.601	959.168	1.534.192	1.571.605	1.870.392	2.445.005	2.604.827	2.875.967
xt	112.064	340.581	202.806	231.783	297.601	31.441	357.012	433.963
bvt	250.412	449.292	857.569	981.353	1.134.767	1.419.515	1.521.476	1.552.990
IGIA	116.724	13.897	317.496	325.497	427.887	545.507	594.074	753.968

As for the auto correlation of errors the Durbin Watson measurement calculated in Eviews leads us accept the hypothesis that errors are self correlated because DW=1,8648, errors are considered to be independent if DW is approximately 2.

Table no. 3. Ordinary Least Squares Method

Dependent Variable: PT
 Method: Least Squares
 Date: 03/30/10 Time: 21:55
 Sample: 2001 2008
 Included observations: 8

Variable	Coefficient	Std. Error	t-Statistic	Prob.
BVT	1.235139	0.328868	3.755729	0.0198
IGIA	0.771477	0.646539	1.193242	0.2987
XT	0.316231	0.364205	0.868277	0.4342
C	167924.8	142164.8	1.181198	0.3030
R-squared	0.986545	Mean dependent var		1806720.
Adjusted R-squared	0.976454	S.D. dependent var		803003.8
S.E. of regression	123218.7	Akaike info criterion		26.58816
Sum squared resid	6.07E+10	Schwarz criterion		26.62788
Log likelihood	-102.3526	F-statistic		97.76329
Durbin-Watson stat	1.864885	Prob(F-statistic)		0.000338

The coefficients of the linear multifactor regression are significantly different from zero, which can be seen from the analysis of probability values “Prob” for coefficients in the regression model. As the latter takes values smaller than 5% for all of the model’s coefficients, the conclusion we draw is that the latter are significantly different from zero. If we want to test the validity of the model we analyze „prob F” whose value is $0.000338 < 0.005$, so the model is considered valid.

CONCLUSION

This study analyses the influence of the accounting value, residual profit and internally generated intangible assets on market value. After testing the model one can see a close connection between the used variable, which can lead us to the conclusion that companies should also provide additional intangible assets information in their financial statements or in their explanatory notes, because they generate future benefit which must be taken into account by the organization’ stakeholders.

We consider that in order to reduce the 2% representing hidden factors in the model – factors that cannot be explained taken into consideration independent presupposed variables - we can add a new independent variable such as business recipe, customer loyalty, alliances, etc.

We must mention that the model we developed in order to appraise the performance of knowledge based companies has its limits and benefits determined by finding a value for internally generated intangible assets.

We can mention the following limits of the model:

- the model was tested on a company in Romania in the IT field
- the IT industry was the only one analyzed, other industries not being included in the study
- data regarding intangible assets are only estimates, because companies do not use specific evaluation methods
- the inexistence of an appraisal method for internally generated assets that would allow comparisons

Beyond the limits of the model, we can conclude that the present study offers a real and a fundamented diagnosis regarding internally generated assets when evaluating the performance of a company.

URBAN LOCATION AND THE SUCCESS OF CASINOS IN FIVE STATES

Thomas E. Lambert, Indiana University Southeast
Arun Kumar Srinivasan, Indiana University Southeast
Uric B. Dufrene, Indiana University Southeast
Hokey Min, Bowling Green State University

ABSTRACT

Over the last 30 years or so, many states in the US have legalized casino gambling/gaming in an effort to boost tax revenues. Four mid-western (Illinois, Indiana, Iowa, and Missouri) and two southern (Louisiana and Mississippi) states adopted legalized gaming in the form of riverboat casinos due to legal restrictions originally against land-based casinos. Following changes in state laws, land-based casinos and racinos (a combination of a casino and a race track) have since appeared in these states, although riverboat casinos still compose the majority of the establishments in most of these states. Although the scholarly literature is replete with articles on whether casinos make a difference in state tax revenues or cause an increase in crime, bankruptcies or other negative externalities, few if any have been written about the efficiency and effectiveness of casino operations and what external factors (location, size of market, etc.) are important to casino success. With so many states relying on casino revenues and others recently enacting or trying to permit casino gaming, it would be desirable to know those factors which influence casino success. This paper finds that urban location, urban size, income, and climate variables appear to influence casino efficiency and effectiveness. Tax dollars often hinge on the type of casino permitted and related location decisions. Hence, such decisions have public policy implications, and this article is perhaps the first to pinpoint factors that determine casino success.

DEPOSITOR SENSITIVITY TO RISK OF ISLAMIC AND CONVENTIONAL BANKS: EVIDENCE FROM INDONESIA

Erie Febrian, Universitas Padjadjaran, Indonesia
Aldrin Herwany, Universitas Padjadjaran, Indonesia

Islamic banks operate without involving interest, and therefore are believed to be less risky during the financial crisis than are conventional banks. This advantage may not be significant if government either partially or fully guarantees any bank deposit at certain level. In other words, public can be indifferent to risk of both Islamic banks and conventional banks in the existence of deposit insurance. However, there have been insufficient studies that cover issue on the impact of deposit insurance on depositors' behavior that operates market discipline. This research conducts empirical tests on whether risk of Islamic banks and conventional banks have influenced depositors in Indonesia, during the period of blanket scheme application (January 2002 – August 2005), and during the period of explicit deposit insurance implementation (September 2005 – December 2009), using cross-section analysis. This research also investigates behavior of Indonesian depositors towards risk of both types of bank during the US crisis through panel data analysis. We employ data of all insured domestic banks in Indonesia, from January 2002 to December 2009.

ENTREPRENEURSHIP AND MARKET ORIENTATION AS DETERMINANTS OF INNOVATION: THE ROLE OF BUSINESS SIZE

Evelyn García Zamora, Universidad de Salamanca
Óscar González-Benito, Universidad de Salamanca
Pablo A. Muñoz-Gallego, Universidad de Salamanca

ABSTRACT

In the important effort to understand what enhances innovation, the extent to which innovative actions rest on organizational values, beliefs and interests is particularly crucial. This study analyses the impact of organizational culture—specifically, the firm's entrepreneurial and market orientation—on different innovation dimensions. It also considers the role of business size in the relationship between organizational culture and innovation. An empirical study with a sample of 440 variously sized enterprises from five industrial sectors in Spain demonstrates the relationship between market orientation and entrepreneurship and innovation. Business size does not cause the relationship, though it moderates the relationship regarding management and marketing innovations.

ASSESSMENT OF INTEGRATION OF DEVELOPING COUNTRIES ON THE INTERNATIONAL CREDIT MARKET

Anna Frolova, Academy of Finance

INTRODUCTION

The main share of the international market of issued bank loans is occupied by developed countries whereas developing countries are inferior in the volume of both issued and obtained from abroad loans. The following chart presents the volume of issued loans of developed and developing countries. The indices of developed countries exceed manyfold those of developing countries, and this trend occupies many years already. As the chart shows in the year 2008 the volume of issued bank loans of developed countries is just below the level of 20 billion dollars whereas the result of developing countries barely exceeds 2.5 billion dollars. These are the factors explaining the situation:

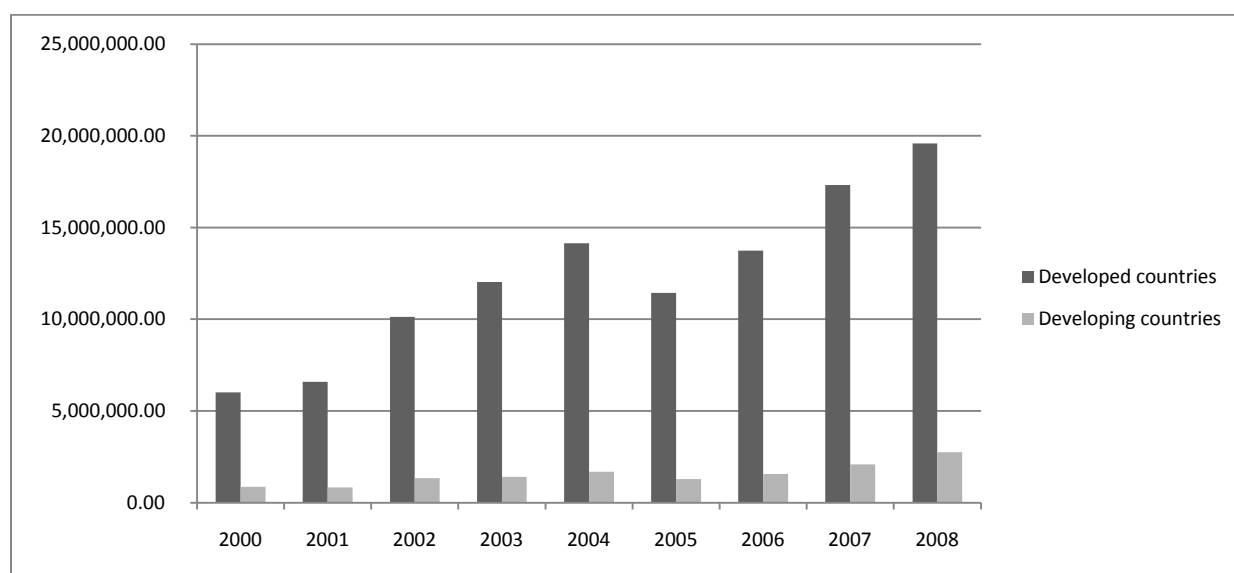

- thanks to the dynamically circulating economy of developed countries, they possess huge amounts of spare funds ready to be involved into lending process;
- credit institutions of developed countries are highly sound and quite stable (at least before the global financial crisis made us doubt it) and banking operations are standardized. Besides people have confidence in banking sector (again, before the financial crisis almost ruined it);
- the banking system of developed countries easily overcomes the state borders becoming wider-spread and penetrating the economy of developing countries.

Chart 1. Correlation of volumes of issued bank loans in developed and developing countries (in thousands of dollars)

Moreover, developed countries demonstrate the high positive dynamic of volumes of issued bank loans. According to the chart banks of developed countries issued loans for the sum of 12 billion dollars in 2003 and almost 20 billion dollars in 2008. So the growth rate during 5 years makes up 67%. Nevertheless, despite the moderate indices of volume, developing countries show even a more considerable positive dynamic of volumes of issued bank loans: in 2003 the volume approximated to 1.5 billion dollars, but in 2008 this index totaled 2.7 billion dollars, so the growth rate made up more than 80%. As a result of globalization, the relations between participants of world credit market are becoming more and more complex. So do the forms of their cooperation. This led to the development of syndicated loans on the international level.

In view of this point let us have an insight into the structure and dynamic of the market of syndicated loans. The graph below demonstrates the participation of developed and developing countries on this market. It shows that developed countries' performance is once again much better than that of developing countries, given volumes of issued loans of developed countries exceed those of developing countries. In details the portion of developed countries in 2007, when the market faced its peak, occupied about 84% of the total volume of issued syndicated loans. Nevertheless, growth rate of loans issued by developing countries during the period of 2000-2007 rose dramatically by 346%. This fact demonstrates rapid upsurge of lending activity of developing countries. Still this growth may lead to the growth of credit risks. In the year 2008 both developed and developing countries faced the sharp fall in volumes of syndicated loans due to the global financial crisis when credit risk exposure and the reduction of spare funds led to the cut in lending.

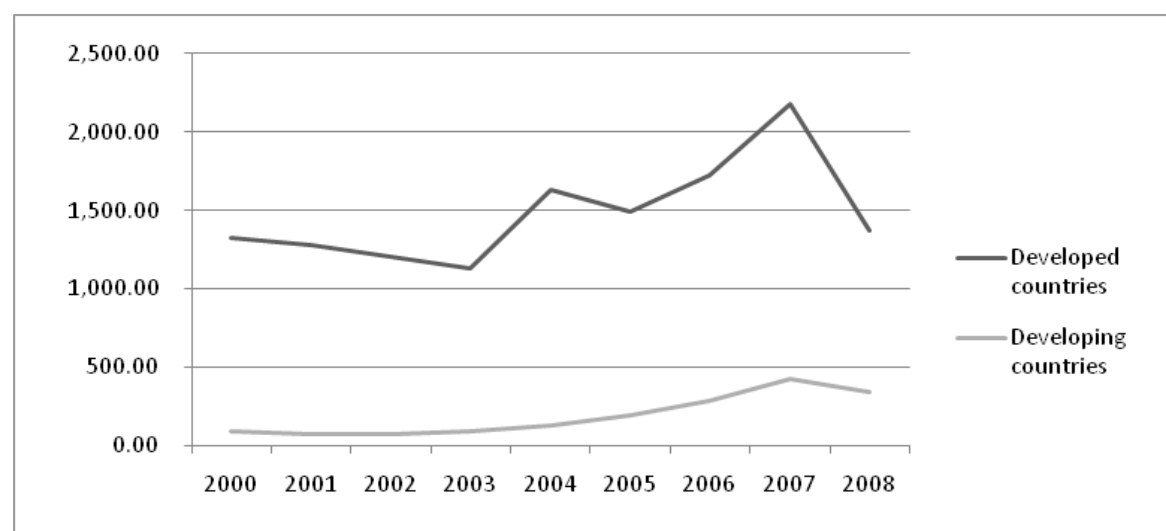

Graph 1. Dynamic of issued syndicated loans (in millions of dollars).

ASSESSMENT OF INTEGRATION OF DEVELOPING COUNTRIES ON THE INTERNATIONAL FINANCIAL MARKET (BONDS)

The present situation on the international financial debt market which is presented by bonds mainly is also characterized by predominance of developed countries. This can be explained by the high development of the institution of stock markets in these countries. Besides potential investors possess huge spare funds, while the borrowers are able to repay their liabilities for obligations in due time. The chart below presents the correlation between the share of issuers of bonds in developing and developed countries on the market of international debt instruments. The percentage of each remained quite stable over the last years: the share of issuers of international debt securities in developed and developing countries fluctuated between 92 and 95 %, and 5 and 8 % respectively.

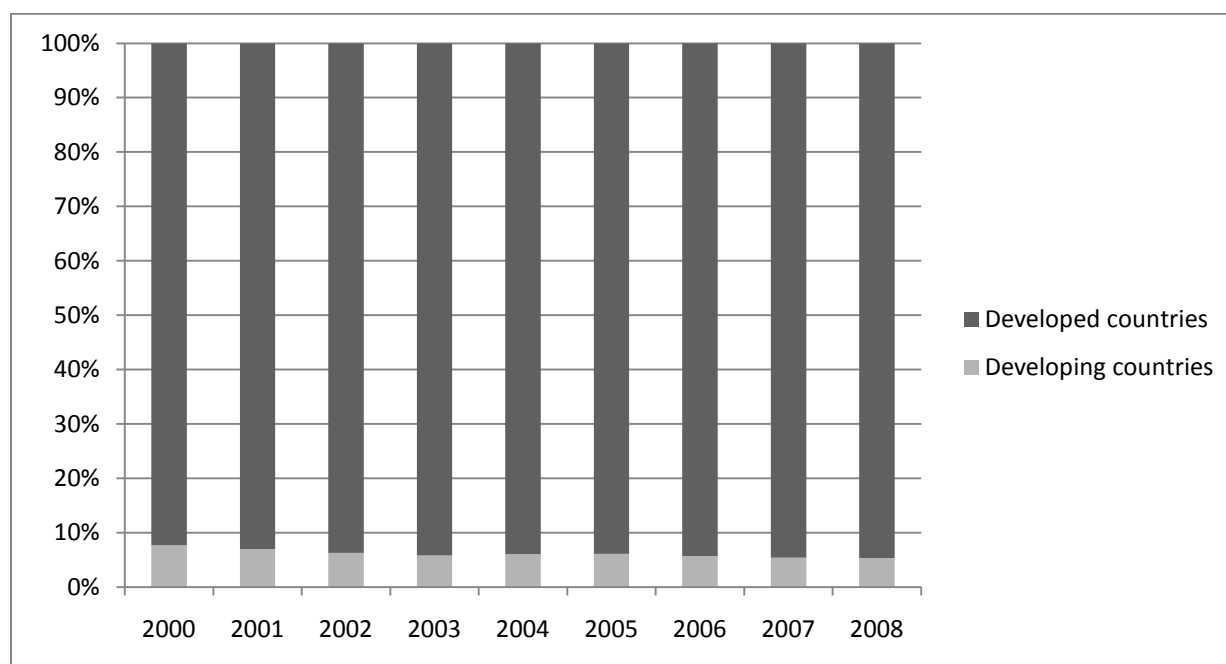

Chart 2. The percentage of issuers of debt securities

Still the percentage of developing countries was going down over the period of 2000-2008. This is not particularly connected with the fall of volume of issued international debt securities by developing countries.

This point is obviously supported by the following graph which demonstrates the reverse trend: over the years of 2000 to 2008 the volume of issued international debt securities by developing countries was rising slightly from just under 500 billion dollars to nearly 1250 billion dollars. This may testify that developing countries are gradually integrating on the international debt securities market, having its indices growing.

Graph 2. Dynamic of volume of issued debt securities by developing countries (in billions of dollars)

GLOBAL COST OF CAPITAL: THE CASE OF GCS

Rathin S. Rathinasamy, Ball State University
 Les Livingstone, University of Maryland
 Chinmoy Sahu, Universitäts21 Global, Singapore

ABSTRACT

GCS is a hypothetical multinational company in the IT industry. It is a major player in the IT arena catering to clients from a variety of industries. The case provides an opportunity to examine various issues that need to be considered in making capital budgeting decisions. One of the significant issues is that of determining the cost of capital which forms the basis for the hurdle rate used to decide the acceptance or otherwise of a capital investment project. The case is built around this central issue. The other related issues addressed include book-value versus market-value weights, risk-premiums for different types of projects and capital rationing.

KEY WORDS: Global Cost of Capital, Required Rate of Return and Risk Premiums

INTRODUCTION

Global Computer Systems (GCS) is an IT company that develops and manufactures IT products and services worldwide. Its major operating segments include Global Technology Services, Global Business Services, Software, Systems and Technology, and Global Financing. The majority of the company's enterprise business, which excludes the company's original equipment manufacturer (OEM) technology business, occurs in industries that are broadly grouped into six sectors – financial services, public, industrial, distribution and communications as well as small and medium sized businesses.

In spite of the current global financial crisis, GCS appears to be doing very well. In January of 2009, it announced better than expected fourth quarter earnings with net income of US\$4.4 billion, up from US\$4 billion the previous year. According to its CEO, GCS “performed well in an extremely difficult economic environment” in year N+4 and that the company will “enter the year in a very strong position”.

Table 1: GCS's Summary Financial Data (N+2–N+4)

All GCS bonds are rated Aaa by Moody's and AAA by Standard & Poor's. Bond ratings categories are as follows:

	Moody's	Standard & Poor's	
Highest Quality	Aaa	AAA	Investment Grade
High Quality	Aa	AA	
Upper Medium	A-1, A	A	
Medium	Baa-1, Baa	BBB	
Speculative	Ba	BB	Not Investment Grade
Highly Speculative	B, Caa	B, CCC, CC	
Default	Ca, C	D	

Currently, in the capital budgeting arena, each GCS division has its own method of calculating the cost of capital resulting in different hurdle rates; thus, it leads to non-uniformity with regard to accept/reject

decisions on capital investments. GCS feels that in order to maximise shareholder value, it has to come up with company-wide guidelines for calculating its cost of capital and standardise the hurdle rates and accept/reject decisions throughout the company.

For the year N+6, GCS is considering the following capital budgeting projects with these projects spread around the globe:

Table 5: GCS's N+6 New Projects Under Consideration

Project	Net Investment Cost (US\$, in millions)	Proposed Location	Estimated IRR	Type of Project
1	\$500	Europe	26.3%	Existing product, new market
2	\$400	USA	13.5%	New product, new market
3	\$650	Asia	8.6%	Expand existing product in existing market
4	\$1,500	Asia	23.4%	New product, existing market
5	\$350	USA	24.6%	Replace Equipment
6	\$750	Europe	10.2%	Expand existing product in existing market
7	\$250	Asia	26.7%	Existing product, new market
8	\$325	Asia	18.8%	New product, existing market

Further, GCS has a total budget allocation (capital constraint) of US\$4.2 billion for the N+6 capital investment budget.

Project risk tends to vary with project type, as described in the following table.

Table 6: Type of project and degree of risk.

Type of Project	Degree of Risk
Routine replacement of equipment	Minimal
Cost reduction	Low
Expand existing products in existing markets	Moderate
Add new products in existing markets	Moderate-High
Expand existing products in new markets	Moderate-High
Add new products in new markets	High

THE TASK

Gordon Crown, Chief Financial Officer of GCS, would like you to help him develop a company-wide cost of capital policy that is consistent with modern finance theoretical constructs. He would also like you to provide your recommendation on the acceptability of the projects for N+6 listed in Table 5 above. He also feels that since stock prices often fluctuate, it would be advisable to use book value weights in computing the component capital costs and the cost of capital.

However, his young deputy, Helen Chang who is a recent MBA graduate, feels that market prices are very important indicators of the health of the company and they provide very good signals to the corporation in terms of the future directions. As such, she feels that the market value weights approach would be the best approach.

She is also of the opinion that the Required Rate of Return on any given project, in addition to the WACC should also include various risk premiums like stand-alone or project specific risk which can be further broken down into political risk, repatriation risk, exchange rate risk etc. Further, she believes that the required rate of return should be increased by about 1% to allow for capital investment projects that have no cash inflows, such as pollution control equipment and safety equipment. These capital expenditure projects are required by law, but earn no cash inflows although they have a cost of capital. So their cost of capital must be earned by capital expenditure projects that do have cash inflows.

GUIDE TO THE TASK

Having recently completed MBA Finance at Ball State University, you feel that you are up to the task. At the minimum, you have decided that you have to do the following:

- 1. For component costs:
 - i. Compute the before- and after-tax cost of GCS debt.
 - ii. Compute the cost of equity (assuming all funds come from internal sources):
 - a. Using the constant growth Gordon Dividend Valuation Model
 - b. Using the Security Market Line Equation (SML) from the Capital Asset Pricing Model (CAPM)
- 2. Compute the Weighted Average Cost of Capital (WACC)
 - i. Using book value weights for debt and equity
 - ii. Using market value weights for debt and equity
- 3. Be sure to calculate the WACC for two different debt and equity costs in step 2 above.
- 4. Address the pros and cons of using market value weights versus book value weights and reconcile the divergent views of Crown and Chang.
- 5. Compute the Required Rate of Return for the project(s), adding appropriate risk premiums subjectively. These risk premiums can differ depending on the nature and continental location of the projects.
- 6. Make a recommendation as to which, if any, of the investments identified in Table 5 should be accepted taking into account the capital constraint.

Note:

i. GCS is part of several stock market indices such as the Dow Jones Composite Average, S&P 100, S&P 500 and S&P Composite 1500.

ii. The long-run average return on the S&P 500 Index is 12.4%.

iii. T-bills and T-bill rates can be found [Bonds Online](#).

iv. The beta of GCS is 0.91. Use 5.0 for the equity premium (sometimes called the market risk premium) which is the market-wide premium demanded by investors for investing in stocks rather than in virtually risk-free U.S. Treasury securities. GCS common stock is presently trading at \$95 per share.

v. You can find daily interest rates for Moody's Aaa bonds at the following website <http://www.federalreserve.gov/releases/h15/Update/>. Essentially, you can find the current market value for the bonds listed in Table 4 by using these daily interest rates. For the foreign currency bonds listed in Table 4, you have to use the book values for the market values. You may want to recall that corporate bonds have a face value of \$1,000 unless otherwise stated. Bond interest is normally paid twice yearly on June 30 and December 31. Assume that all bonds mature on December 31.

vi. Include charts and tables, where appropriate. Clearly state your assumptions and provide detailed calculations, where necessary.

VALUATING INTERNET FIRMS: LIMITS OF REAL OPTIONS METHOD

Safwan Mchawrab, Reims Management School

ABSTRACT

This research aims to explain how adjusted DCF model (Rappaport & Mauboussin, 1999), and precisely the Real option model, is unable to explain the spread usually found between fundamental value and market price for Internet Firms. Real options methods are used to enhance the valuation process, to capture the value of future opportunities, and to explain the important spread that is often found between fundamental value (calculated by DCF) and market price (Kester, 1984). In order to value Internet Firms, Rappaport & Mauboussin (1999) proposed an adjusted DCF process combining DCF method and Real option theory using the option pricing model of Black & Scholes (1973). In this research, through three study cases (Amazon, Dell & Google), we found that Real option pricing model is able to attribute only less than 10% of the spread to real options identified and potentially exercised.

Key words: Valuation, DCF, Real options, Strategy, Internet Firms.

THE ISSUE OF THE BUDGETARY BALANCE UNDER THE CURRENT CRISIS

Liliana Bunescu, Lucian Blaga University of Sibiu
Diana Marieta Mihaiu, Lucian Blaga University of Sibiu
Alin Opreana, Lucian Blaga University of Sibiu

ABSTRACT

A budgetary deficit is the amount by which the government's income falls short of the expectations set forth in its budget over a given time period. In most cases, those who experience a budget deficit must borrow funds to make up the difference between projected and actual income and expenses. The borrower must pay interest on this amount, also known as debt, which further increases expenses for the following time period. In this way, budgetary deficits tend to grow over time with the accumulation of loans and interest payments. The current economical situation in Romania is looking to fund its budgetary deficit through effective methods that would have positive effects on medium and long term over the main economic imbalances (unemployment and inflation), having as final purpose the economical recovery and sustainable growth of it.

INTRODUCTION

The budgetary deficit represents a negative situation with which the public budget can face itself with. Although the budgetary deficit was not accepted by the classic finance theory, nowadays the possibility of elaborating the state budget with deficit and accepted practice and often met at the level of most states, accentuated also by the effects of the worldwide economical crisis. (Opreana A, Bunescu L, Cindea D. M, 2009).

Under the economical and socio-political context of the last century one of the major dilemmas that gave rise to many economists' studies was born: the budgetary policy versus the monetary policy. This dilemma is even more to the fore in this period characterized by major economic crisis and imbalance.

The economical policy was different, depending on the political orientation of each government party. Thus, the periods in which the monetary policies targeted the control and the price stability that were fiercely supported by the people that represented the monetary domain namely the Chicago School have alternated with periods in which the governments have adopted economical policies based on encouraging employment by increasing the public expenditure, these policies have their roots in the economical thinking of the followers of Keynes and the Cambridge School.

For the monetary people the budgetary or fiscal impulses can affect revenues but only on short term. The government's spendings financed through public loans or taxes will lead to the suppression of an approximately equal volume of expenditure both on the consumption part and on the investments one, so that eventually the production, the employment and the global income will not suffer major changes. It is considered that the fiscal, budgetary policy should settle itself with following up a balanced budget, facilitating the redistribution of the incomes and the resources reallocation and dealing with the production and the efficient management of the public goods that cannot be given to the private initiative. In this context the Government's efforts should be aimed towards the improvement of the structure of various markets, towards ensuring free competition that would lead to broadening these markets and making them more liquid and more efficient and thereby favoring the economic growth.

THE RESULTS OF THE MEASURES FOR FINANCING THE BUDGETARY DEFICIT IN ROMANIA

Financing the budgetary deficit is a fundamental problem of the current budgetary policy at international level. The money for financing the budgetary deficit is increasingly harder to find, while the state risks losing control over the expenditures. The financing needs of a state are amplified because of the economic crisis. The crisis has left its mark over the Romanian state revenue to the treasury, which doesn't rise up to the level estimated in the budget. This is the term most used to characterize the existent imbalance between the resources and the needs of the public sector.

The situation of the budgetary deficit and of the public debt in Romania is presented in the table below:

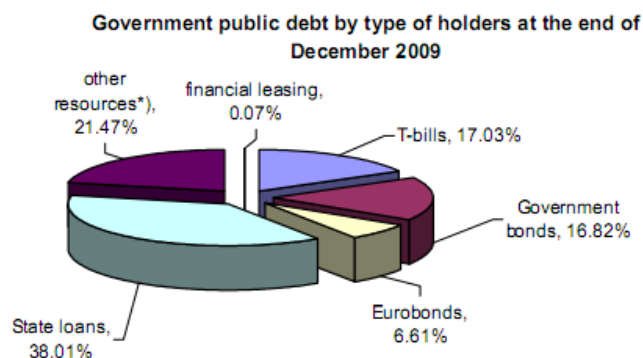

Table 1: The budgetary deficit and the public debt in Romania in the period 2000 - 2009

The indicator	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
The public debt as % from GDP	22.5	25.7	24.9	21.5	18.7	15.8	12.4	12.6	21.78	29.29
The budgetary deficit as % from GDP	-4.7	-3.5	-2.0	-1.5	-1.2	-1.2	-2.2	-2.5	-5.5	-7.2
The budgetary deficit (mln euros)	-1897.3	-1582.7	-973	-786.2	-744.3	-923.6	-2119.9	-3140.2	-7597.7	-8318.7

The source: The Ministry of Finance of Romania and Eurostat

The last two years are noted through a significant increase of the budget deficit of Romania as a consequence of the current economical crisis. Under these circumstances the budgetary deficit of Romania in 2009 reached a share of 7.2% of GDP that is 8318.73 million euros (35173.3 million lei). Romania since the year 2008 no longer meets the Maastricht criteria on the budget deficit. The agreements with the international financial institutions provide a target to decrease to a value below 3% until 2011. Romania's public debt increased in 2009 with almost 40 billion lei, reaching 29.29% of GDP, rising by nearly eight percentage points from the level recorded in late 2008, 21.78% of GDP according to the Public Finance Ministry, but it has an acceptable level if we would compare it with the level from Hungary which is over 70%, or with the Maastricht Treaty requirements for 60% of GDP.

Figure 1: The structure of the public debt in Romania at 31.12.2009

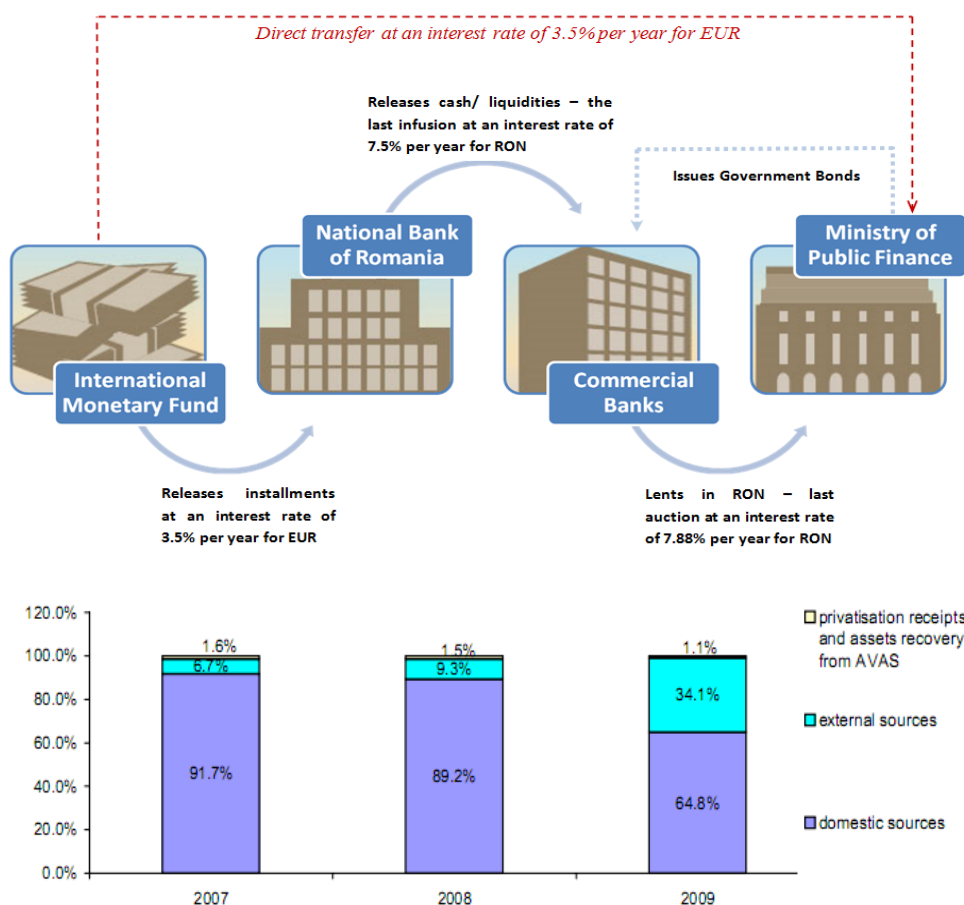

The source: The Public Finance Ministry of Romania

Divided on the type of instruments, the largest share from the public debt belongs to the state loans (38%), followed by the T-bills, with a share of 17%, and the state bonds (16.8%). The eurobonds represent 6.61% from the total loans, while funding from other sources accounts for 21.47%.

For the year 2009, the funding of the budgetary deficit was realized in a more balanced proportion from domestic and foreign sources. The financial terms of the external loans from the international institutions are more favorable than those applicable to the loans from the domestic capital market and the use of these instruments for financing the budgetary deficit leads to decreasing the interest costs thus reducing the debt service, as it can be seen in the figure below:

Figure 2: Financing the budget deficit in Romania 2009

Loans from international financial institutions

The need of a loan from the international financial institutions has become a priority in Romania immediately after the preparation and adoption of the budget for the year 2009. Romania joined the long list of countries from Eastern Europe (Hungary, Serbia, Latvia, etc..) that need an emergency loan from the IMF to cover the deficiency of the public financial resources.

The *International Monetary Fund* (IMF) approved a 24-month SDR 11.4 billion (about €12.9 billion or U.S. \$ 17.1 billion) Stand-by arrangement for Romania to support an economic program designed by the Romanian authorities and intended to cushion the effects of the sharp drop in capital inflows while addressing the country's external and fiscal imbalances and strengthening the financial sector (IMF,

2009). The annual interest to the IMF loan is a reasonable interest rate (3.5%), a relatively modest cost compared to the one which Romania can borrow from on the foreign markets. The IMF loan was and will be obtained in installments by the end of 2010, and its reimbursement will be made gradually by 2015.

By fulfilling the performance criteria and the structural objectives agreed through the Stand-by agreement, the Romanian authorities and the representatives of the International Monetary Fund (IMF) have decided that half of the amount of installments of the IMF, agreed by the end of 2009 (amounting to 1563. 500,000 SDR), to be used for financing the state budgetary deficit, under the need to balance the State General Account of the Treasury.

The Stand-By Arrangement will be combined with other multilateral financial support. The total international financial support package will amount to €19.9 billion (about U.S. \$ 26.4 billion), with the *European Union* providing €5 billion (or about US\$6.6 billion), the *World Bank* €1 billion (or about U.S. \$ 1.3 billion), and the *European Bank for Reconstruction and Development (EBRD)*, the *European Investment Bank (EIB)*, and the International Finance Corporation (IFC) has combined €1 billion (or about U.S. \$ 1.3 billion), the interest is being calculated depending on the Euribor rate to which there will be added a few basis points (Medrega C., 2009).

Issues of government bonds

To the loans contracted by the Romanian state from the international financial institutions adds the issue of the government bonds on the domestic or international market. Thus, on November 26, 2009, the Ministry of Finance launched on the domestic capital market, through tender, an issue of government securities with an announced value of 500 million euro and with a maturity of 364 days. The amounts drawn were used to finance the budgetary deficit and to refinance the public debt. On 11th of March 2010, the Finance Ministry placed 1 billion euros' worth of five-year Eurobonds on the international market, the issue was oversubscribed by almost five times. The titles have a coupon of 5% and the return offered to the investors was about 5.18% per year.

The recovery of the arrears from the fiscal Romanian taxpayers

The number of taxpayers that record outstanding tax liabilities against the Romanian state budget is continuously growing. The main reason invoked by the bad taxpayers that register outstanding tax liabilities is primarily the size of the tax burden, to which it is added the lack of liquidity brought by the global financial crisis. Analyzing the situation of the large taxpayers regarding the state of nonpayment of the tax obligations to the state budget, the situation is alarming.

In the year 2010 Romania has to recover over one billion euro from the great contributors that recorded debts to the budget on December 31, 2009, according to the National Agency for Fiscal Administration (NAFA). On the list of the major debtors, published by the NAFA, there are 440 taxpayers whose debts to the budget sum up to about 4.2 billion lei. In only two months these have increased by about 500 million lei on the background of the economical crisis.

As seen from the table and figure above, the highest share in the outstanding obligations to the state budget are owned by the interests and the default charges (49%), followed by the value added tax (22.33%), and the lowest share is owned by the income tax (4%). If the case of the state budget, on 31.12.2009 the amounts owed by the major contributors in value of 4273.6 million lei represent 12% of the budget deficit published by the Ministry of Public Finances, which is in value of 35,173.6 million lei for the year 2009. Although this study focuses only on the large taxpayers' debt, we must not overlook the considerable amounts owed by thousands of small and medium taxpayers. Certainly by collecting them the budget revenues would increase significantly resulting in a significant decrease in the budgetary deficit.

Figure 3: The structure of the outstanding obligations to the state budget in 2009 (Large taxpayers)

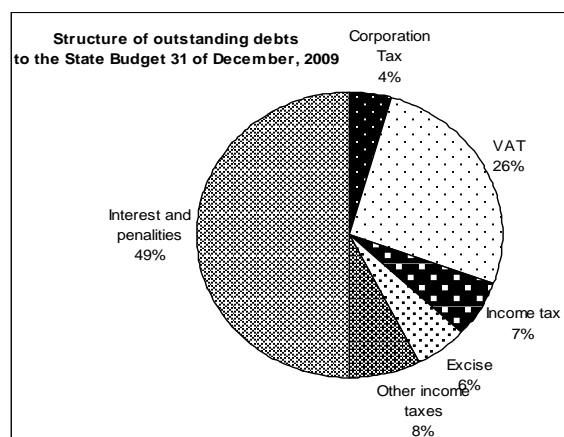

Table 2: The statement of outstanding Obligations to the state budget in 31.12.2009 (Large taxpayers)

The state budget	mil. RON	
Total	4,273.60	100 %
The income tax	187.90	4 %
VAT	1,116.40	26 %
Tax on salary	280.70	7 %
Duties	236.30	6 %
Other taxes on income	321.40	8 %
Interests and penalties	2,132.00	50 %

A study made by the National Institute of Forecast of Romania highlighted the idea that there is a fairly strong correlation between the homogeneity of the coalitions in power and the dynamic shortages. Usually, it is found that when the political coalition in power is composed of a large number of different political guidance, as is the case of Romania, the budgetary policy loses its coherence and the deficits amplify themselves. Conversely, in countries where the power is hold by only one strong party, the chances of applying an efficient management of the public debt is much higher. (Albu L, Pelinescu E, 1999). The statements above apply perfect in the situation in Romania at the end of the last year. Romania didn't have a government to receive the third tranche from the IMF, for 1.5 billion euros, of which half is used to cover the budget deficits. The political scandal has deprived Romania from a cheaper access to the foreign markets. The Romanian local banks have made the most of the bad situation in which the state budget was found in late 2009, demanding higher interests than those about 10% offered by the Government.

INTERNATIONAL COMPETITIVENESS: AN ANALYSIS OF THE INTERACTION OF QUALITATIVE AND QUANTITATIVE INDICATORS

Tony Mutsune, Iowa Wesleyan College

Fidelis Ezeala-Harrison, Jackson State University in Mississippi

ABSTRACT

This paper presents a model for analysis of the various factors of both qualitative and quantitative dimensions which, for a given country, determines the level, degree, and ability to sustain international competitiveness over time. It utilizes a structural model that depicts (micro and macro level) competitiveness as the nation's relative ability to make efficient use of its resources. It finds that long-term national competitive advantage for a country depends on: (1) the necessary (micro-level) quantitative factors of total factor productivity, cost efficiency, and technology; and (2) the sufficiency (macro-level) qualitative indicators involving governmental and institutional parameters, and socioeconomic infrastructure. The proposition is verified with application of micro data drawn from across U.S. industrial sectors utilizing standard econometric approaches.

AGRICULTURAL BIOTECHNOLOGY AND GOVERNMENT REGULATION

Anthony J. Daboub, The University of Texas at Brownsville

ABSTRACT

This study reviews some of the major theories regarding the origin of government regulation of business. It then applies these theories to a specific case, the regulation of agricultural bio-technology, in order to examine how social, political, economic, and business forces combine to shape government and firm behavior over time. This case illustrates the influence exercised by business on government, the influence of the government on business, and the influence of society, i.e., public opinion, on both. It also shows the effect that bad management decisions can have on even the most effective use of corporate power.

THE IMPACT OF DIRECT-TO-CONSUMER ADVERTISING OF ETHICAL DRUGS ON THE HEALTH CARE DELIVERY SYSTEM

Hudson Nwakanma, Florida A & M Univeristy

Gail Thompkins, Florida A & M Univeristy

Prince C. Nwakanma, University of Port Harcourt in Nigeria

ABSTRACT

There was a time, not too long ago, when it was an unspoken subject. No one talked about it, no one joked about it and it was never mentioned in television advertising or at football games. Five years later, it seems everyone knows about erectile dysfunction, or male impotence. The ads are everywhere, and Viagra - the first oral drug to treat the problem - is one of the best-known brands in the country. The above observation highlights how far pharmaceutical advertising of prescription (ethical) drugs has come. Direct-to-Consumer (DTC) advertising which is defined as any communications effort by a pharmaceutical company to promote prescription (ethical) drugs to the general public using the lay or popular media such as TV, radio, print and telephone, has become a major phenomenon in the marketing of ethical drugs. The last few years has seen a geometric growth in the advertising dollars spent on DTC advertising in the United States of America for approximately \$800 million in 1996 to \$2.7 Billion in 2001. A study by researchers at Harvard University and the Massachusetts Institute of Technology that looked at effect of direct-to-consumer (DTC) advertising on spending for prescription drugs study found that, on average, a 10% increase in DTC advertising of drugs within a therapeutic drug class resulted in a 1% increase in sales of the drugs in that class. When this result is applied to the 25 largest drug classes in 2000, the study found that every \$1 the pharmaceutical industry spent on DTC advertising in that year yielded an additional \$4.20 in drug sales. DTC advertising was responsible for 12% of the increase in prescription drugs sales, or an additional \$2.6 billion, in 2000. This paper presents a historical discussion of OTC advertising and its implication to the health care delivery system. Specifically, the paper

- (1) *Presents a historical discussion of DTC advertising in the United States.*
- (2) *Discusses the impact of DTC on consumers and*
- (3) *Provides some brief reflection on the future of DTC advertising in the Pharmaceutical Industry.*

THE IMPACT OF GLOBAL DEMOGRAPHIC TRANSITION ON US STOCK MARKET PERFORMANCE AND EFFECTIVE INVESTMENT STRATEGIES

Jonathan Ohn, Bloomsburg University of Pennsylvania

In the first part of the paper, we discuss two important dimensions of global demographic transition – 1) projected change in the relative size of major workforce aged between 25 and 64 and 2) changing pattern in the percentage of senior population of age 65 and above – for low developed versus more developed countries and across different regions - North America, Asia, and Sub-Saharan Countries. In the second part of the paper, we discuss the historical evidence on the relationship between the demographic workforce structure and US stock market performance. More specifically, we investigate the impact of the change in major workforce aged between 40 and 64 on the performance of the US S&P 500 Stocks (using the demographic data from the US Census Bureau and the Real S&P 500 index from Robert Shiller's website at Yale University). Using the estimation results, we then show the predicted performance of US stock markets for the coming decades, based on the demographic projection by the US Census Bureau. Finally, we discuss some effective investment strategies faced with the expected situation during the coming decades.

HIGHER ORDER MOMENTS RESAMPLING

Giuseppe Galloppo, Università di Roma Tor Vergata

ABSTRACT

This paper develops a set of portfolio optimization models that involve a resampling approach of the higher order moments, first four moments, of financial assets return distributions. The Resampled Efficiency (RE) techniques introduce Monte Carlo methods to properly represent investment information uncertainty in computing MV portfolio optimality. Notwithstanding the central limit theorem, for both the academic and the financial communities it is a familiar stylized fact that stock market returns exhibit latent higher moment risk in the form of negative skewness and high kurtosis. Take a cue from these considerations we have added higher-order moments to the resampling rule. We discuss the solution of the higher order moments resampling approach replaying an investment game that compares the performance of a player using four portfolio schemes for determining portfolio weights using a Monte Carlo based resampling approach. Extensive computational results are obtained on a real-world dataset of the returns of 3 index basket equity for a set of portfolio models with two different resampling approaches. In summary, when the higher moments of stock return distribution are accounted in the resampling optimisation algorithm surprisingly success has been mixed.

WHAT HAS WORKED IN OPERATIONAL RISK?

Giuseppe Galloppo, University of Rome Tor Vergata
Alessandro Rogora, RETI S.p.a.

ABSTRACT

Financial institutions have always been exposed to operational risk – the risk of loss, resulting from inadequate or failed internal processes and information systems, from misconduct by people or from unforeseen external events. Both banking supervision authorities and banking institutions have recently showed their interest in operational risk measurement and management techniques. This newfound prominence is reflected in the Basel II capital accord, including a formal capital charge against operational risk, based on a spectrum of three increasingly sophisticated measurement approaches. The objective of this paper is to increase the level of understanding of operational risk within the financial system, by presenting a review of the literature on the modelling techniques proposed for approach such risk in financial institutions. We perform a comprehensive evaluation of commonly used methods, with a view to compare the performance of different estimators and quantitative estimation methods, for implementation of operational risk measurement. We find that there is currently high variability in the quality and quantity of disclosure on operational risk so, as our conclusion, we try to offer instructive and tractable recommendations for a more effective operational risk measurement.

ROLE OF BUDGETING IN ENVIRONMENT OF FINANCIAL CRISIS

Libuše Šoljaková, University of Economics Prague

ABSTRACT

The differing opinions of both experts and managers on the application of budgets during the financial crisis were inspiration for the empirical study that is oriented on the importance of budgets to performance management. The paper results from the empirical research. Analyses and conclusions presented in this paper cover the following issue: The first part analyses changes in the application of budgets in recent years and the indicators of these changes and on the opinions of managers of budgets and explores whether managers consider budgets an important management tool supporting and improving management. Analyses concentrate also on differences between the attitudes of financial and non-financial managers and between middle level and top managers. The second part of the project focuses on recognition of factors that have an influence on budget consideration such as methods of budget preparation, manager participation in budgeting process, level of power and responsibility managers, relation to incentive scheme, and the personal characteristics of managers.

KEYWORDS: Budgeting; Corporate Governance; Management Tools.

INTRODUCTION

Budgets are one of the most widely used tools for planning and controlling organizations. But during the last ten years or so attitudes that companies should go “beyond budgeting” and abandon budgeting in practice have been presented by experts in both literature and in discussion meetings. The aim of the research was to discover whether budgeting is able to support and improve companies management during large financial crisis and whether companies have changed their budgeting practices in connections with financial. The research was conducted in two phases with a questionnaire survey and direct interviews with managers.

LITERATURE REVIEW

It was implicitly assumed that budgets serve as an important managerial need and textbooks such as Drury (2007), Kral (2006), Fibírova and Soljakova (2005), Fibírová and Soljakova and Wagner (2007) rehearse the importance of budgets in: planning, co-ordinating, communicating, motivating, controlling and evaluating operations; Horngreen (2006): “Budgets are a major feature of most management control systems, they can compel planning including the implementation of plans, provide performance criteria, promote communication and coordination within organization, affect behavior and organizational processes“. The researchers wished to establish the conditions in which different forms of budgeting were appropriate, not to challenge the usefulness of budgeting itself (Lorino 1996), Kaplan and Norton (1996), Eschenbach (2000). However, this changed in the 1990s as Hope and Fraser (1997, 1998, 1999, 2003) mounted a wide-ranging critique of the manner in which budgeting systems are typically implemented. They observed and described budgeting systems highlighting “the often bureaucratic and expensive nature of the budgeting process, the failure of budgeting to meet the needs of managers in uncertain and competitive environments and the likelihood that budget systems would lead to managerial “gaming” of the numbers.”

METHODOLOGY

The research is based on direct investigation of the actual situation in the Czech Republic during the financial crisis. The questionnaire was developed and then sent to 250 random screen of industrial and commercial companies in the Czech Republic. Seventy-two responses are included in this research. The companies included in the research operate in various areas of business (see Figure 1). Then several top managers (Chief Executive Officers and Chief Financial Officers) were interviewed directly. The analyses are based on basic statistical methods.

Hypothesis

The empirical research assured the following main hypothesis:

The budgets are still important tools and their role has increase during the financial crisis.

Methods of preparing budgets and budgetary control as well as the flexibility of budgets to have an influence on using budgets during financial crisis.

Hypothesis A

The budgets are still important tools and their role has increase during the financial crisis.

According to the empirical research most companies (59 %) consider budgets as a *traditional significant tool useful for decision making and control*. Budgets have to be continually used during the financial crisis and they have to adapt to changes in the business environment.

10 % of companies use budgets in a traditional manner but budgets are *only a formal tool* required, for example, by banks, financial institutions, and owners. They are not used as active management tools and financial crisis has no opinion on the application. The reasons could be:

- management has no interest; they prefer intuitive and interactive management methods;
- the business activity is fixed and developed continually;
- the business activity is too variable to predict using budgets.

Only 6 % of the companies have eliminated or reduced the application of budgets because:

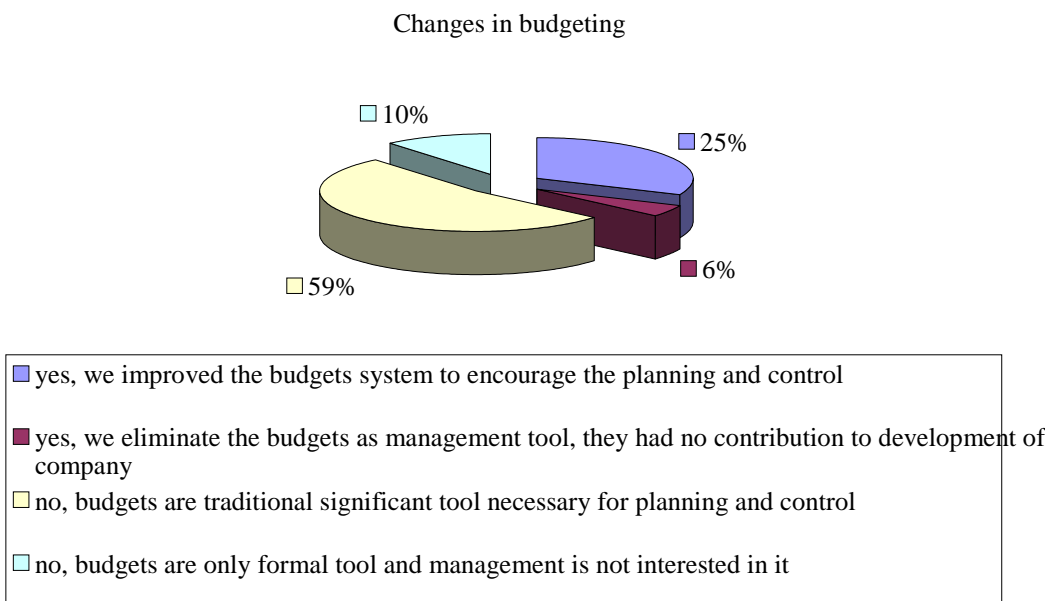

- budgets do not encourage the business development and performance.
- budgets are *only bureaucratic and administratively complicated tools*; expenses regarding budget preparation and control have been higher than the benefit obtained from budgets.
- the budgets were only a formal tool.

25 % of companies have intensified application of budgets during the financial crisis and this change was evoked by:

- the owner in connection with a change of ownership (25 %);
- managers in connection with the development of companies (44 %);
- new managers in connection with their arrival in the post (31 %).
-

Budgeting practice has changed in recent years but, according to this research, little of it was driven by the “beyond budgeting” movement. Instead there has been an intensification of the budgeting processes application. (See figure 3)

Figure 1: Changes in Budgeting

The following alternatives of budget consideration were tested for the purpose of proving the analysis of using budgets:

- Budgets are only *non flexible and administratively complicated tools*. They have negative influence on behavior companies partly during the financial crisis, because they limit and formally measure business activities of the companies and their business units without any careful analyses of the actual conditions and development possibilities. Budgets also support irrational manager behavior in order to meet the budgets. They, for example, move the sales or cost on purpose from period to period.
- Budgets represent an *important management control tool* supporting business behavior during the financial crisis. They serve a number of useful purposes:
 - ⇒ coordinating and communicating the activities of various parts of the organization and ensuring that the parts are in harmony with each other during the quickly changing conditions;
 - ⇒ motivating managers to achieve the best;
 - ⇒ controlling activities.
- Budgets provide *important information for decision making*, for setting standards, costs, margin, profit of products and customers. They contribute to product volume and structure optimizing and the optimalize of performance.

Managers were to use a scale from 1 to 5 to value their acceptance of the budget. (1 – absolute disapproval, 5 absolute acceptance). The answers were analyzed in relation to financial and non-financial managers and in relation to the level of power and responsibility. Table 1 shows the average value according to the manager groups

Table 1: Budget consideration

Consideration	Financial managers	Non-financial managers		
		top	middle and lower	
			high level of power and responsibility	low level of power and responsibility
Bureaucratic and administratively complicated tool	1,000	1,316	1,579	2,316
Important management control tool supporting and improving corporate governance	3,539	3,342	2,000	1,158
Important tool for decision making	3,697	3,482	1,789	1,211

Outcomes show the positive budget consideration by all top managers – both financial and non-financial. Research did not confirm the different attitudes of financial and non-financial top managers toward budgets. In our opinion the relatively small variances in outcome for financial and non-financial managers' is more the result of the different priorities of managers than from attitudes toward budgets themselves. The decreasing level of power and responsibility means the low positive attitude toward budgets. Middle and lower level managers with a low level of power and responsibility consider budgets as a bureaucratic, non-flexible and administratively complicated tool that neither supports management control nor decision making.

Managers prefer the role of budgets in decision making to management control but the difference is not significant enough to make a distinct conclusion. An analysis of budget consideration according to shareholder's structure confirms a relation of the shareholder's structure to their consideration of the budget. For example a negative attitude toward budgets has managers of companies that belong to foreign holding – see table 2.

Table 2: Budget as bureaucratic and administratively complicated tool according to the shareholder's structure

Consideration	Financial managers	Non-financial managers		
		top	middle and lower	
			high level of power and responsibility	low level of power and responsibility
Sole investors	1,000	1,167	1,000	1,000
Domestic holding	1,000	1,316	1,737	1,842
Foreign holding	1,000	1,421	1,842	2,684

Negative budget consideration by middle and lower level managers in foreign holding is caused above all by:

- the limited possibilities of these managers to take part in the budget process, managers take part in the first phases of budgeting process, but both higher level and board create and approve final budgets without coordination with responsible managers. Then the responsible managers do not accept the budgets as proper target,
- the incompatibility between company goals and the goals of these managers,

- the poor ability of top managers and board to explain all the circumstances and contexts of the budgets to each other and lower level of managers,
- the lower flexibility of management systems in multination holdings

On the other hand the companies of sole investors are able to involve the middle and low-level managers in the process of budget preparation and budgetary control, to ensure easier communication and clearer contribution analysis. The positive budget consideration in relation to shareholder's structure shows table 3 and 4.

Table 3: The budget as a management control tool according to the shareholder's structure

Consideration	Financial managers		Non-financial managers	
	top		middle and lower	
			high level of power and responsibility	low level of power and responsibility
Sole investors	3,000	3,000	3,000	1,667
Domestic holding	3,526	3,105	1,842	1,211
Foreign holding	3,526	3,316	2,684	1,000

Table 4: The budget as a tool for decision making according to the shareholder's structure

Consideration	Financial managers		Non-financial managers	
	top		middle and lower	
			high level of power and responsibility	low level of power and responsibility
Sole investors	3,000	3,667	3,000	1,667
Domestic holding	3,842	2,789	1,632	1,105
Foreign holding	3,737	3,737	2,263	1,421

The positive budget consideration outcomes from (excepted traditional points):

- setting the goals for each level of management,
- supporting internal control system, they could prevent some frauds
- coordinating of activities

Hypothesis B

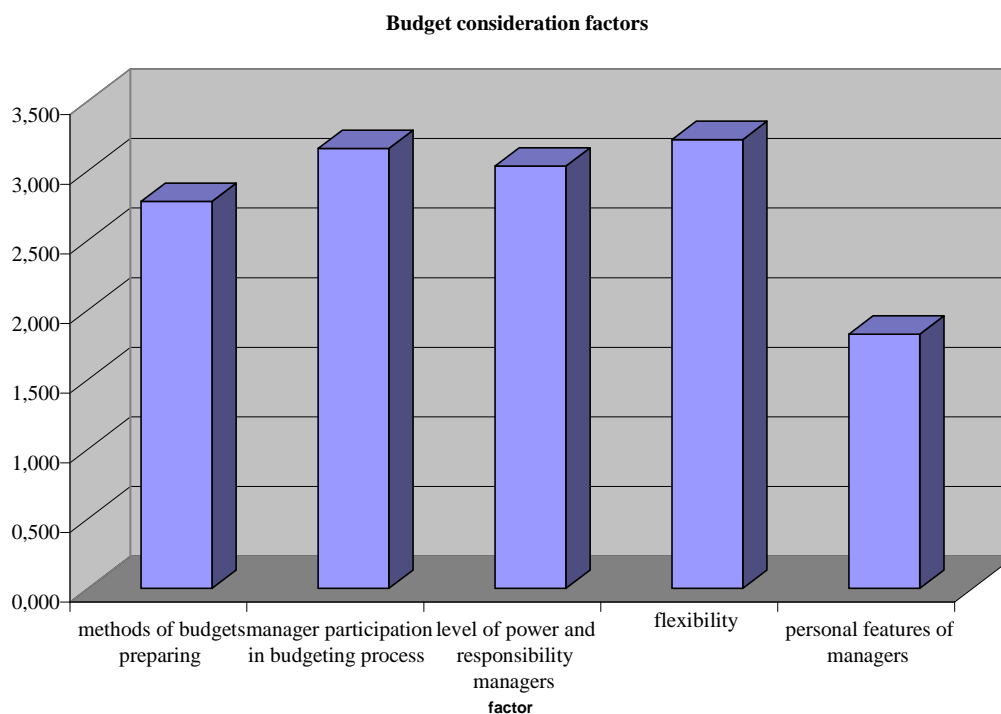

Methods of preparing budgets and budgetary control as well as the flexibility have an influence on budget consideration.

Managers should evaluate the influence of the following factors on budget consideration:

- methods of budgets preparing
- manager participation in budgeting process
- level of power and responsibility managers
- flexibility of the system
- personal features

The responses were scaled from 1 to 5 (1- no significant, 5 – most significant). The figure 4 shows the average valuation.

Figure 2 – Budget consideration factors

The flexibility of the budgeting system is the most important factor according to the study. This factor absolutely supports budget application in changing environment, the changes of conditions of business environment required flexible systems. The second most important factor referring to the previous point is manager participation in the budgeting process. In the case that managers have the opportunity to take part in budget preparation and control and they accept the budget as a personal task, budget efficiency increases. If the budget is only a directive and managers do not accept them or they consider them as unmeetable, managers have no motivation to meet the budget goals.

This opinion supports the importance of the third factor – the level of manager power and responsibility. The lower the importance was found in respect of methods of budget preparation. Most companies use traditional methods based on the actual outcome in the previous year adjusted by supposed changes in volume and structure of activities. The personal characteristics of managers carry the least importance. The research does not confirm that today there is no possibility to control a lot of managers (above all the creative characteristic) through budgets or similar “hard” measures.

CONCLUSIONS AND SUMMARY

A survey of 72 companies investigated whether companies still use budgets, whether practice is changing and what the attitudes of financial and non-financial managers are towards budgets in connection with financial crisis. Companies still use budgets, even intensifying their application over what is required, above all in connection with changes in ownership, managers in connection with the development of companies, new managers in connection with their arrival in post. The dynamically developing companies and more developed companies consider budgets more significant and use budgets more intensively. These companies also permanently try to improve budgeting systems.

The attitudes of top financial and non-financial managers toward budgets are broadly positive. The middle and low managers do not consider budgets as such an important tool. Negative consideration of budgets by middle and low level managers in multinational companies is caused above all by limited manager possibilities to take part in the budget process and the poor ability of top managers and owners to explain all circumstances and contexts of budgets. Changes have led to additional techniques or analytical detail rather than a reduction in traditional budgeting. A relation to incentive scheme and manager participation in budgeting process are the most important factors according to the study. These factors absolutely support budget consideration as tool for motivation and control. On the other hand the personal features of managers are not very significant.

MANAGEMENT STRATEGIES FOR GLOBAL CLIMATE CHANGE

Honorio Todino, Thompson Rivers University, Canada

The management of Global Climate Change is a new paradigm that is moving into very high priority in the minds of managers. For example, in one survey by Accenture the global consulting firm, 64% of consumers worldwide say they are willing to pay a higher price for goods and services that produce lower greenhouse gas emissions (Makower, 2009). In 1997, the Kyoto Protocol was concluded and established legally binding obligations for developed countries to reduce their greenhouse gas emissions. Governments around the world recently met and negotiated the Copenhagen Accord in December 2009. Twenty three multinational corporations came together in the G8 Climate Change Roundtable, a business group formed at the January 2005 World Economic Forum. The group published a statement stating that there was a need to act on climate change and stressing the importance of market-based solutions. It called on governments to establish "clear, transparent, and consistent price signals" through "creation of a long-term policy framework" that would include all major producers of greenhouse gases (WEF 2005).

In management literature, the seminal paper of Porter and Linde (1995) reviewed the prevailing view that there is an inherent and fixed trade-off: ecology versus the economy. Most of the prevailing management literature since Porter and Linde about sustainable management, green management and the management of global climate change is based on the premise of free market competition. In 2009, Randers and Gilding distributed a seminal working paper that argued that businesses will not act sufficiently to manage their impact on global climate change until it is almost too late and the state of the environment becomes critical. They suggested a crisis management approach whereby national governments would effectively nationalize their economies as the only viable option left to avert catastrophe. Therefore, this paper suggests a continuum of different management strategies under conditions of global climate change in a range of economic environments from free market competition to total nationalization.

BANKING IN LATIN AMERICA AFTER THE GREAT FINANCIAL CRISIS

Gianfranco A. Vento, Regent's College

ABSTRACT

The goal of the paper is to analyze the banking and financial systems in Latin America, also highlighting how the recent financial crisis modified them. The investigation starts from the state-of-the-art analysis of Latin American financial industry, pointing out the most peculiar features of banking business.

The paper is divided in three sections. The section one offers an overview of Latin American economies, linking this to banking and financial sector trends in the continent over the last decade. The most significant contemporary themes relating to the structure and performance of Latin American banking systems - including the limited depth and the narrow focus on financial intermediation, the low efficiency of financial intermediation, the limited economies of scale and diversification – are analyzed in detail. Specific attention is paid to the high level of dollarization, the role of foreign banks, the peculiar boom and bust cycles in lending and the limited access to financial services for many retail customers in Latin America.

The second section of the paper is dedicated to a deep analysis of banking and financial industries in some of the most significant Latin American countries. In this framework, the role of central banks and monetary policy, the domestic financial regulation and supervision, the role of capital markets, the key features of domestic banking industries and the role of foreign banks are also deepened. The section is concluded with a chapter which investigates the key topics of banking business also in different countries in Latin America.

The third section of the research is focused on the perspectives of the banking industry after the crisis. Beginning from an analysis of the efficiency of Latin American banks, the third part also investigates the increasing role of commercial banks in supplying microfinance services within the continent. Developments in the access to financial services, mobile banking facilities as well as remittances are also noted. The part three terminates with an analysis on the current development and prospects of banking industry in Latin America after the crisis, highlighting the structural changes in Latin American financial systems, the development of capital markets, the deregulation and reregulation of banking systems, the privatization trends and the foreign bank entry, the declining role of state-owned banks, the bank consolidation, the intra-regional financial integration and the new business, which are in process to be developed (i.e. private banking and wealth management). The conclusions of the paper are dedicated to the overall impact of the Great Financial Crisis on Latin American banking industry and the perspectives for the future.

OPTIMAL INVESTMENT FOR INSTITUTIONAL INVESTORS UNDER VALUE-AT-RISK (VAR) CONSTRAINT IN CHINESE STOCK MARKETS

ZhengXiong Chen, Ryerson University, Toronto

Ayse Yuce, Ryerson University, Toronto

ABSTRACT

Value at Risk (VaR) is defined as the worst expected loss under normal market conditions over a specific time interval at a given confidence level. Given the widespread usage of VaR, it becomes increasingly important to study the effects of the portfolio optimization subject to the VaR constraint set by the fund manager. In this paper, we examine the classical portfolio optimization models and the most popular VaR methodologies. We show that the portfolio optimization models under VaR constraint provide the clear insight to the mean-variance decision. We also consider the problem with the extra tracking error constraint. Furthermore, we provide an empirical analysis on the model by using China's market data. VaR estimates are produced via Monte Carlo simulations.

Keywords: Portfolio optimization, mean-variance, VaR, Monte Carlo, GARCH

THE GENDER NATURE OF CPA FIRMS OPERATING IN SAUDI ARABIA

Hussam A. Al-Angari, King Abdulaziz University

ABSTRACT

This paper aims at exploring the relationship between gender concepts and opportunities to work and be promoted to high professional positions within CPA firms operating in the Kingdom of Saudi Arabia, and finding out the extent to which there are restrictions that forbid females from achieving that. A methodological approach based on the Habermasian 'three stage discursive process' (Habermas, 1988) has been used to carry out an empirical case-study based examination within the audit context of Saudi Arabia. This involved participants from three audit firms as well as a number of selected participants from various interest groups. Participants from each of the selected audit firms have engaged in an equal opportunity-based discourse process, where they were committed to co-operation in their search for 'truth' on the basis of allowing the 'force of the better argument' to emerge (Laughlin, 1987; Habermas, 1988). This research concludes that the gender distinction between male and female in Saudi CPA firms is rooted to cultural norms, values and beliefs that are embedded and taken for granted within the Saudi. Although some participants had some concerns regarding the consequences of direct and indirect interactions between female and male colleagues or clients' employers, most participants have reached a conclusion that: in the absence of legal, regulatory and religious restrictions and educational variations, employing female as professionals and allowing equal opportunities for promotions to higher levels (including partnership) among all firm professional staff (including female) would help to develop their firms in many ways as well as the Saudi society, while not causing any harms to the firms' strategic planning, decision making, policies and professional performance.

INTRODUCTION

Little attention has been given to the application of gender concepts to CPA firms as organizations and accounting and auditing practices in most societies. In a highly religious social, economic and political context of the Kingdom of Saudi Arabia, females function permeated by gender stereotypes, and it is obvious that being a CPA and working for CPA firms is dominated by men. Yet, the debate about females' roles as accountants and auditors has prompted a reassessment of the traditional Saudi stereotype of women as housewives. Although women are being recently given some administrative opportunities in some Saudi CPA firms, they are severely discriminated against. Thus, the range of opportunities available to females to professional work would always be limited and the prospect of a woman being a CPA is much less favorable than for a man. This indicates that the situation in Saudi Arabia is not far from many leading countries such as the United States and the UK (Kotke and Agars, 2005; Oshagbemi and Gill, 2003), where men are more likely than women to aspire to top management in most types of professional and business organizations and that, consistent with traditional stereotypes of males and managers, a gender identity consisting of high masculinity and low femininity was associated with aspirations to top management (Manning, 2002; Powell and Butterfield, 2003).

Research Objectives and Importance

This paper aims at exploring the relationship between gender concepts and opportunities to work and be promoted to highly professional positions within CPA firms operating in the Kingdom of Saudi Arabia. The research tries to answer the question of: why is a woman less likely to become a manager or partner in a Saudi CPA firm? The main idea is to find out the extent to which there are restrictions that forbid females from occupying senior executive professional level at Saudi CPA firms, and primarily upon:

- The extent to which such restrictions are rooted to religious and cultural norms, values and beliefs that are embedded within the Saudi society,
- The extent to which such restrictions are supported by Saudi accounting legal and regulatory rules, standards and codes of ethics,
- The extent to which such restrictions are related to the notions of legitimacy and appropriateness of appointing less educated and qualified party (i.e. females) which constitutes the majority of the Saudi society.
- And, the extent to which such restrictions impacts upon the strategic planning, decision making, policies and performance of Saudi CPA firms.

The importance of exploring the above issues would considerably be of a high grade of significance, as it would highlight some remedies that could help in assuring the advancement of gender and professions' concepts in a marginally growing auditing industry, especially when Saudi Arabia has recently joined the World Trade Organization (WTO).

RESEARCH METHODOLOGICAL APPROACH

A methodological approach based on the Habermasian 'three stage discursive process' (Habermas, 1988) has been used to carry out an empirical case-study based examination within the audit context of Saudi Arabia. This involved participants from three audit firms (from A1 to A3). These selected three firms range in nature (international, local with international co-operation and local). The selection of participants in the interviews and 'discursive processes' within each of the three firms involved consideration of their hierarchical positions (e.g. partners, managers, and senior and junior audit staff) and the conditions required for them to participate in the research (e.g. willingness to participate and awareness of the gender issues). In addition to the three audit firms, interviews have been carried out with the secretary general of the Saudi Organization for Certified public Accountants (SOCPA), , and the chairman of the board of directors of the Saudi Accounting Association (SAA), and randomly selected accounting professors and students.

The participants from each of the selected audit firms have engaged in an equal opportunity-based discourse process, where they were committed to co-operation in their search for 'truth' on the basis of allowing the 'force of the better argument' to emerge (Laughlin, 1987; Habermas, 1988). A 'three stage discursive processes' were undertaken in each site, in which every individual involved had different contribution at each stage. The insights gathered from the first stage ('formulation of critical theorems', e.g. initial understanding of the key areas of concern) were subject to challenges and refinements at the second stage ('processes of enlightenment') when the participants were introduced and asked to discuss and give their views regarding the issues under investigation. The refined insights, emerging from the second stage, formed the basis of the strategies that the participants have chosen from in the third and final stage ('selection of strategies') for the pursuit of the development they desired for their organizations.

Insights into the Saudi auditing context will be provided in the next section followed by a literature review, prior to the discussion and concluding comment that will be provided in the final section of the paper.

INSIGHTS INTO THE SAUDI AUDITING INDUSTRY

The period taken in developing the auditing profession in Saudi Arabia is considered to be relatively short. It was first introduced as a profession in the Kingdom in 1950, as it received the first legal acceptance through the first Income Tax Act. But despite the limited length of this period, the Saudi auditing profession has witnessed several major stages of development, starting from the period when

auditing was practiced in the absence of regulations, to the appearance of limited rules and conditions concerning the competence of the auditor and his rights and obligations by the passage of the first Companies Act in 1965, to the enactment of the first CPA Law in 1974 which has been seen as lacking of the minimum basic requirements needed for organizing the profession (e.g. professional standards, ethical codes and quality control and continues training programmes), to the approval of the first package of professional standards by the Ministry of Commerce in 1983, as a result of remarkable efforts made by the Ministry with the aid of one of the pioneer national professional firms. During these stages, a number of academic conferences dealing with “methods of developing the accounting and auditing profession in the Kingdom” has taken place in King Saud University, the first conference was followed by the establishment of the first academic association for accounting in the Kingdom in 1981 under the name of the “Saudi Accounting Association”.

Through the above mentioned stages, the Saudi auditing profession has suffered from two fundamental issues. Firstly, the absence of an appropriate system for accounting education and training, and hence, the lack of qualified national professionals. Secondly, the absence of a specialized regulatory body, which led to the absence of obligatory professional standards, ethical codes and other rules and regulations required for controlling the practices of auditors, and hence, the difficulty of comparing and judging the quality of professional performances. These difficulties had led to the emergence of a gap between the economic development and the profession. Despite the considerable increase in the numbers of national and international professional audit firms, determining the level of quality was left to the practitioners of these professional firms.

The current modern structure of the organization of auditing profession in Saudi Arabia is traceable to issuance of the present CPA Law by the Royal Decree No. 12/M in November 1991. The issuance and implementation of the new CPA Law is seen as a culmination of the efforts put into the development of a Saudi conceptual framework by the Ministry of Commerce, professionals and the SAA. Article 19 of the Law entails the establishment of a professional body (Saudi Organization for Certified Public Accountants, SOCPA) responsible for and authorized to organize, regulate and promote the accountancy profession. The objectives of SOCPA can be summarized as follows: (1) reviewing, developing and issuing accounting and auditing standards, (2) setting and organizing professional fellowship examinations, which should include theoretical topics and practical skills as well as related regulations, (3) organizing continuous training programmes, (4) undertaking research on accounting and auditing related issues, (5) publishing journals, books and bulletins on accounting and auditing related issues, (6) monitoring professional compliance with the 1991 CPA Law and the issued accounting and auditing standards and codes of ethics, and (7) participating in local and international accounting and auditing conferences (SOCPA, 1994, CPA Law of 1991, Article 19, pp. 6-7).

Although this body operates under the supervision of the Ministry of Commerce, it reflects a remarkable movement in the nature of the Saudi accountancy regulatory system, from having been entirely governmental in form to becoming a quasi self-regulatory system, since almost half of the total number of participants in SOCPA’s Board of Directors is certified public accountants. The new CPA Law provides not only regulations concerning the internal regulation of the profession, conditions of registration, registration procedure, obligations and penalties of certified public accountants, but also the mechanisms that enable the implementation of such regulations.

Following the establishment of SCOPA, the auditing profession in Saudi Arabia has witnessed remarkable changes. Fundamental changes, among others, have been reflected in the nature of the new regulatory system, moving from a governmental form to becoming closer to a professional self-regulatory form. Following this remarkable reform, basic requirements needed to the enhancement of the profession (e.g. accounting and auditing standards, ethical codes, quality review programs and licensing rules) have been prepared by a number of specialised committees formed within SOCPA, and approved and enacted

by SOCPA's Board of Directors during a relatively short period of time. In addition, during the same period SOCPA has organized accounting and auditing conferences and training programmes, undertaken and published research on existing accounting and auditing practices and a professional bulletin.

The practice of auditing in Saudi Arabia has also gone through many stages of development, starting the beginning when auditors used to undertake comprehensive checking and testing of all transactions and account balances included in the records and financial statements, then moving to make use of statistical sample methods and analytical review in order to reduce the extent and depth of auditing procedures, and finally applying the systems based and risk based approaches (Al-Angari, 2004). Similarly, the roles and functions of auditing firms have also witnessed a considerable movement, especially during the past decade, when these firms began to concentrate on providing value-added audit services in order to compete within a highly competitive market. Such a movement has brought about new concepts of auditing and gave the opportunities to audit firms to market a wide range of consulting services beside the traditional auditing and accounting services. This transition contributed to give a considerable commercial feature to the professional services provided by these firms, and led in its turn to change the predominant concept of the role and function of these firms which were based mainly on practicing auditing and other accounting services in a way that assures providing the best professional service to the economic community and society in general (Al-Angari, 2003).

Finally, it must be noted that despite of the considerable efforts made for the development in the organizing and practicing of the auditing profession in Saudi Arabia, empirical evidences indicate the existing of some major problems, including the failure of professionals to comply adequately with many professional rules and regulations despite the implementation of the quality review programme by SOCPA over auditing firms (Al-Angari and Sherer, 2002). It is a matter of fact that the difficulty which the professional firms face in accepting the compliance with any new regulation is mainly associated with the freedom they enjoyed throughout the stages that were prior to the issuance of 1991 CPA Act. Moreover, the Saudi auditing profession environment suffers from the continuity and spread of the low audit fees and its negative effects, not only on the relationship between professional firms, but also on the nature and quality of services provided by them (Al-Angari, 2005). It also suffers from the limited number of professional firms, as well as the existence of monopoly over professional services exercised by limited number of big firms. Recent statistics indicate that 78% of the income of professional firms in the Kingdom (102 firms) is concentrated in only 11 firms, which employ 53% of the total number of auditing practitioners in the Kingdom (The SOCPA Magazine, Issue. 23, January, 2000, p. 2).

LITERATURE REVIEW

Traditional approaches to organizational change have been dominated by assumptions privileging stability, routine, and order. As a result, organizational change has been reified and treated as exceptional rather than natural. However, modern organisational theories of change shift focuses to consider the interaction between organisational factors such as its culture, values and core activities (Miller and Friesen, 1980a, 1980b and 1984; Ranson et al., 1980a and 1980b; Walsh et al., 1981; Greenwood and Hinings, 1988; Hinings and Greenwood, 1988); individual psychological factors such as resistance to changing environment (Bovey and Hede 2001); organisational structural inertia (Hannan and Freeman, 1984); gender and managerial levels (Manning, 2002; Powell and Butterfield, 2003; Mano-Negrin and Sheaffer 2004; Kottke and Agars 2005; Miller 2007), and leadership styles (Kark, 2004). These theories mainly relate organisational change to human action and discourse, and therefore, bring an organisation to a secondary accomplishment, in a double sense (Fairclough 2005; Dougherty, 2008). Accordingly, an organisation is seen as "an attempt to order the intrinsic flux of human action, to channel it towards certain ends by generalising and institutionalising particular cognitive representations", it is "a pattern that is constituted, shaped, and emerging from change, and finally organisation aims at stemming change but, in the process of doing so, it is generated by it" (Tsoukas and Chia 2002).

The gender literature with respect to organisations and organisational change is remarkably growing (Eagly and Johannesen-Schmidt 2001). Jones (1998), in trying to conceptualise gender relations theories, argues that there is a need to implement a more spatially aware epistemology in the production of such theory, by which a theoretical approach to organisational gender relations is centred around the concept of 'gender culture'. Thus, to understand gender in the workplace more effectively, it needs to be theorised through the daily social practices which occur in specific organisations. This argument is explored through a case study of the way in which investment banks in the City of London reproduce masculine 'gender cultures' through the recruitment process. Building on the recent work of McDowell (Capital culture: gender at work in the city. Oxford: Blackwell, 1997), the research presented considers the way in which the 'pre-organisational gender culture' of investment banking recruits contributes to the reproduction of masculine gender cultures in those organizations. It also explores how the recruitment process itself (in the shape of interviews, assessment techniques and selection criteria) is also imbued with masculine cultural attributes, and thus aids the reproduction of hegemonic masculinities within the investment banking workplace.

Halford and Savage (1995) sought to re-frame existing debates about economic restructuring and organisational theory, drawing - precisely - upon the literature on changes in British local government in order to show how restructuring is concerned with changing the qualities of organisational members. They have demonstrated how this recognition offers a corrective to most common views of restructuring. They have also explored the way in which current forms of restructuring appear to be undermining traditional forms of managerial masculinity and allow some scope for women to move into senior jobs, but also consider how new forms of masculinity are emerging. Based on their argument that "restructuring is an on-going and human process open to contestation and manipulation", They conclude by "emphasising that, since restructuring should not simply be seen as a process administered from the top, there is inevitably a degree of indeterminacy about how gender is implicated in current restructuring processes" (see: Halford et al., (1997) for extended scope to include nursing).

By stating that gender inequality is still persistent in organizational practices while a dominant perception of equality occurs at the same time, Benschop and Doorewaard (1998) examined the divergence of practice and impression of gender distinctions. They argued that "both the persistency of gender inequality and the perception of equality emerge from a so-called gender subtext: the set of often concealed, power-based gendering processes, i.e. organizational and individual arrangements (objectives, measures, habits), systematically (re)producing gender distinctions". The paper provided an empirical study conducted within five departments in the Dutch banking sector, where gender subtext were explored in three organizational settings: namely, "show pieces (the token position of the few women in top functions), the mommy track (the side track many women with young children are shunted to) and the importance of being asked (the gendered practices of career making)" (see also: Kane 1999; Powell and Butterfield 2003).

Acker (2006) demonstrated the way in which organisational change emerging from gender issues can take place through organized and planned movement. He asserted that organizations have "gender regimes", internal structures, processes and beliefs that distribute women and men into different tasks and positions. The case he provided illustrates how different local gender regimes affect the change process and how this process, in turn, affects women and men in diverse ways (see also: MacLeod et al., 1992; Oshagbemi and Gill 2003).

By focusing on variation between men and women in terms of health within paid employment environment, Emslie et al., (1999) asserted that while women have longer life expectancy than men, they have higher rates of morbidity, particularly for minor and psychological conditions, although most research on gender and health has taken only limited account of the gendered distribution of social roles.

Using wide survey method, they have examined men and women working full-time for a large British business organizations, focusing on three main questions, namely: “do gender differences in minor morbidity remain if we compare men and women who are employed in similar circumstances?; what is the relative importance of gender, grade of employment within the organisation, perceived working conditions and orientation to gender roles for minor morbidity?; and finally, are these factors related to health differentially for men and women?”. They conclude that “the gendered nature of much of adult life, including paid work, continues to shape the experiences and health of men and women at the end of the twentieth century”.

Bradley (1999) provided five case-study within which he interviewed wide range of female and male employees in five different organizations. He explored how processes of gendering were played out in the sphere of employment. The author developed a new approach to power in terms of the range of resources which were used by women to challenge male domination and by men to resist women's encroachment. This approach is used to unpack the complexities of power relations of gender and class as they are played out in the everyday lives of working people.

In contrast, studies conducted within developing countries tends to focus on different issues. Goetz and Gupta (1996), for example, highlighted the dramatic growing of the credit available to poor rural women since the mid-1980s by special credit institutions in Bangladesh. This was for the purpose of contributing to women's empowerment. The paper examined the assumption that while women in Bangladesh continued high demand for loans, their manifestly high propensity to repay. This was through exploring variations in the degree to which women borrowers control their loans directly. They concluded that a preoccupation with “credit performance” (measured primarily in terms of high repayment rates) affects the incentives of fieldworkers dispensing and recovering credit, in ways which may outweigh concerns to ensure that women develop meaningful control over their investment activities (For broader study see: Singh and Zammit, 2000; Omar and Ogenyi, 2004).

EMPIRICAL INSIGHTS

Legal and regulatory rules that govern the Saudi audit industry would mainly be illustrated in the Saudi CPA Law of 1991 and all of SOCPA's issued professional regulations (i.e. accounting and auditing standards, code of professional ethics, continues training program, quality review program, professional fellowship eligibility, announcements,...etc.). None of these rules and regulations addresses any condition relating to restricting women from practicing accounting and auditing nor occupying administrative or professional positions at CPA firms operating in Saudi Arabia. Conditions for being enrolled in the CPA record, as stated in the Saudi 1991 CPA Law, are free from any gender distinction. This fact was appreciated by all of the research participants, supported by an argument that many Saudi women have obtained SOCPA fellowship certificates, which is the most important requirements to become a CPA, in addition to being a Saudi national, hold a BA degree in accounting or equivalent discipline, and have a proper professional experience.

Similarly, in terms of accounting education, same acceptance conditions and rules and campus capacities apply to both male and female students. No distinction is made between male and female students during joining a BA accounting program in terms of program contents and facilities except that each party has its own separated campus. Graduates from both campus shall have been given equal opportunity to gain similar accounting knowledge and theoretical and practicing education. CPA firms as well as banks and other public sector organizations, in contrast, always seek to employ more male than female accounting graduates. Although it was so difficult to reach an agreed statement supporting that conclusion among participants from the three audit firms under research, the majority have clearly accepted the following view:

...the conduct of our core activities require visiting clients, traveling between sites and contact colleagues face to face...if we employ Saudi females, we have to ensure that they are not mixed with male members in our offices...we also have to implement certain requirements that hinder the nature and design of our work place, meetings and trainings...our clients will be so surprised and consider it as a waste of time if a female auditor visited their organizations...our limited experience with employing females indicates so many difficulties that we can not really cope with. (Partner in A2).

In the absence of legal and regulatory restrictions and educational variations, discussions within the second stage of the “discursive process” (i.e. ‘processes of enlightenment’) had been directed to justify the state of present poor female opportunities within Saudi CPA firms. It was clear that the gender distinction between male and female in Saudi CPA firms might be rooted to religious and cultural norms, values and beliefs that are embedded and taken for granted within the Saudi society.

Conflicts between the core activities and nature of work required for any female member of a CPA firm, on one hand, and the religious and cultural norms, values and beliefs that are embedded and taken for granted within the Saudi society on the other hand were not seen by most participants as caused by religious factors, due to the fact that women are not forbidden from all sorts of work (including working for CPA firms) according to the Islamic religion as long as certain requirements relating to the work place (i.e. separated offices and separated restroom) is implemented together with complying with the Islamic dress code. Direct and indirect contacts with male colleagues are also not forbidden as long as such contacts are not discreet and taken face to face in private situations. These conflicts reside - as most participants believe - in culture, norms and beliefs embedded and taken for granted within the Saudi society. A clear illustration of that is the consequences of direct and indirect interactions between female and male colleagues or clients’ employers. This was seen to be a significant concern to some participants. The following view reflects the main issues under concern:

...I understand that we started to appreciate females since the past few years...five years ago no one would believe that women will be accepted to work together with men in one place except hospitals and medical clinics...banks have started to open female branches long time ago, but they were capable and the banking industry encouraged that economically...now a day you can see female clerks in most open space department stores and some types of business organizations especially those related to marketing activities where they spend most of their time making phone calls to potential client with no need to interact face to face with men...the situation for us is quite different...our professional staff at all levels need to work very close to each other, attend our scheduled seminars and training programs and visit and deal directly with male accountants and executives of the companies we audit...what would you expect from them if they suddenly find a female member contacting them directly or indirectly...lots of changes need to be carried out if we wanted to involve female members, not only because mixing male and female in closed offices is not acceptable in our country as it is forbidden by our Islamic rules, but also to avoid the consequences of such social shock!!! (Partner in A1).

In contrast, the majority of participants did not accept the above argument, while making clear that the Islamic religion has no connection to the issues under concern. Those have came to a conclusion that employing female as professionals and allowing equal opportunities for promotions to higher levels (including partnership) among all firm professional staff (including female) would help to develop their firms in many ways, as illustrated in the following view:

...according to SOCPA’s Saudisation rules, we have to have at least %30 of our professional staff Saudi nationals...we always suffer from not being able to comply with the required number of Saudi national member in our firm mainly because it is quite difficult to attract new male Saudi national graduates to work for us while our initial salaries and benefits are far less than so many public sector organizations...I can

assure you that if we start to employ more and more female graduates we will be able to make gradual savings (Senior Manager in A1).

Most participants who supported the above view believed that CPA firms shall open the door to employing female graduates and assure equal opportunities for obtaining promotions to higher levels especially when they can obtain SOCPA fellowship certificates and become CPAs. They also see such a movement as a must for the development of their firms and society while not casing any harms to the firms' strategic planning, decision making, policies and professional performance.

SUMMARY AND CONCLUDING COMMENTS

This paper aims at exploring the relationship between gender concepts and opportunities to work and be promoted to high professional positions within CPA firms operating in the Kingdom of Saudi Arabia, and finding out the extent to which there are restrictions that forbid females from achieving that.

A methodological approach based on the Habermasian 'three stage discursive process' (Habermas, 1988) has been used to carry out an empirical case-study based examination within the audit context of Saudi Arabia. This involved participants from three audit firms as well as a number of selected participants from various interest groups. Participants from each of the selected audit firms have engaged in an equal opportunity-based discourse process, where they were committed to co-operation in their search for 'truth' on the basis of allowing the 'force of the better argument' to emerge (Laughlin, 1987; Habermas, 1988).

This research concludes that the gender distinction between male and female in Saudi CPA firms is rooted to cultural norms, values and beliefs that are embedded and taken for granted within the Saudi. Although some participants had some concerns regarding the consequences of direct and indirect interactions between female and male colleagues or clients' employers, most participants have reached a conclusion that: in the absence of legal, regulatory and religious restrictions and educational variations, employing female as professionals and allowing equal opportunities for promotions to higher levels (including partnership) among all firm professional staff (including female) would help to develop their firms in many ways as well as the Saudi society, while not casing any harms to the firms' strategic planning, decision making, policies and professional performance.

By way of concluding, it must be said that although there were consensus regarding the absence of legal, regulatory and religious restrictions for employing female as professionals and allowing equal opportunities for promotions to higher levels among all firm professional staff (including female) as well as the absence of educational variations between male and female accounting graduates, the required strategic actions that can enable such a movement was not obvious. In particular, being listed in the CPA record and obtaining a CPA license for a female member was seen to be very similar to driving and obtaining diving license for female in Saudi Arabia, which has not ever occurred while there is no clear regulations that state women illegibility nor it is seen to be against the Islamic religion. If audit firms start to employ more female accounting graduates, only time can show what can happen to the growing number of females holding SOCPA's fellowship certificates.

ANALYSIS OF INTERNATIONAL M & A MOVEMENTS IN CONSUMER SECTOR: A PROPOSAL OF SELECTIVE IBSI 20 INDEX FOR BEVERAGES SUBSECTOR

José Ramón Sánchez Galán, Universidad Antonio Nebrija, Madrid (Spain)

ABSTRACT

The present research paper intends to analyze the way M&A movements give different possibilities for companies from beverages subsector, especially those concerned with international operations, such as Coca Cola or Suntony for instance. We have two objectives: first, to develop a deep study of beverages subsector to understand its circumstances, with special consideration to companies involve in M&A processes. Second, we have created a selective index, named IBI 20 (International Beverage Selective Index) which includes twenty companies selected for certain considerations: liquidity, international business influence and market cap, principally. However, this work has some limitations that we cannot obviate. We have two, mainly: First, to select the number of companies for the index requires an extra effort away from our purpose. Furthermore, it is important to keep in mind legal considerations depending on where the index will be negotiated: we suggest the Spanish Stock Exchange market, in euros. Finally, in this study we do not try to contemplate all considerations, but to highlight the possibility to be used as an introductory analysis for further researches in this field.

ARTICULACIÓN INSTITUCIONAL DE LA TUTORÍA CON EL PROGRAMA DE APOYO A ESTUDIANTES INDIGENAS EN CENTRO DE ESTUDIOS SUPERIORES DEL ESTADO DE SONORA

Aracely Gutiérrez Serna, Centro de Estudios Superiores del Estado de Sonora
Ricardo Ernesto Anaya Rosas, Centro de Estudios Superiores del Estado de Sonora
María Isabel Delgado Félix, Centro de Estudios Superiores del Estado de Sonora

ABSTRACT

En la última década, son evidentes las dificultades de acceso a la educación superior para ciertos sectores y grupos de la población mexicana, en particular, las poblaciones de origen indígena tienen mayores retos para incorporarse a una formación profesional. Aunada a la pobreza y la marginación geográfica, la diferencia cultural representa un obstáculo no visible, pero con alto impacto en las posibilidades reales de acceso, permanencia y egreso en el sistema educativo en sus diversos niveles. De esta forma se hace referencia a los estudiantes de medios rurales o indígenas, los cuales presentan las tasas más bajas en el ingreso a educación superior; es por ello que en el contexto universitario mexicano, surge en el Centro de Estudios Superiores del Estado de Sonora (CESUES) el Programa de Apoyo a Estudiantes Indígenas en Instituciones de Educación Superior (PAEIIES), el cual inevitablemente se encuentra articulado a la acción tutorial. Cabe mencionar que cada estudiante, así sea el más humilde, o el que más recursos posea, ambos merecen ser atendidos y tratados de igual manera; así mismo, poseen capacidades, habilidades, actitudes y aptitudes distintas que favorecen la individualidad y la riqueza cultural que las Universidades poseen; Es por ello, que la educación superior ha de actualizarse y propiciar un ambiente intercultural, de tal manera que el estudiante indígena pueda encontrar un futuro prometedor en pro de sí mismo y de sus comunidades.

PALABRAS CLAVE: PAEIIES, Interculturalidad, CESUES.

In the last decade, they are obvious difficulties to access higher education for certain groups and sectors of the Mexican population, including populations of Indian origin. Individuals of Indian origin have greater challenges to join vocational training. These individuals face poverty and geographical isolation, cultural difference. These obstacles are not visible, but they have high impact on the real possibilities of access, retention and graduation in the educational system at various levels. This affects students from rural or indigenous communities, which have the lowest rate of entry to higher education. For these reason, the Centro de Estudios Superiores Del Estado de Sonora (CESUES) develops the Program to Support Indigenous Students in Institutions of Higher Education (PAEIIES), which is inevitably articulated with the action tutorial.

KEYWORDS: PAEIIES, interculturalism, CESUES

INTRODUCCIÓN

Uno de los retos más importantes que actualmente enfrenta la educación superior, es el incrementar la participación de estudiantes de grupos económicamente marginados y los índices de eficiencia terminal, así como el disminuir las altas tasas de deserción.

En la última década, son evidentes las dificultades de acceso a la educación superior para ciertos sectores y grupos de la población mexicana, en particular, las poblaciones de origen indígena tienen mayores retos

para incorporarse a una formación profesional. Aunada a la pobreza y la marginación geográfica, la diferencia cultural representa un obstáculo no visible, pero con alto impacto en las posibilidades reales de acceso, permanencia y egreso en el sistema educativo en sus diversos niveles.

Inclusive cuando la educación pública se ha propuesto llegar a todas las esferas y grupos sociales, los índices de participación de estudiantes provenientes de grupos económica y culturalmente marginados son muy bajos. Quienes logran ingresar, sostenerse y concluir sus estudios se enfrentan a una serie de problemas de todo tipo que convierten su formación en una verdadera hazaña por tener limitaciones estructurales que determinan y refuerzan procesos de exclusión y, en el mejor de los casos, una baja calidad en la formación de quienes logran egresar.

De esta forma se hace referencia a los estudiantes de medios rurales o indígenas, los cuales presentan las tasas más bajas en el ingreso a educación superior; es por ello que en el contexto universitario mexicano, resulta sumamente relevante implementar medidas que contribuyan a disminuir los índices antes mencionados y en correspondencia a esta situación, surge en el Centro de Estudios Superiores del Estado de Sonora (CESUES) el Programa de Apoyo a Estudiantes Indígenas en Instituciones de Educación Superior (PAEIIES), el cual inevitablemente se encuentra articulado a la acción tutorial.

En el reconocimiento de este evidente rezago de alumnos potenciales que se encuentran en los medios rurales, marcado principalmente por la diferencia educativa de las distintas etnias de México, se diseñó un proyecto auspiciado en sus inicios por The Ford Foundation y la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) con la finalidad de fortalecer a las universidades interesadas en atender las necesidades educativas de la población indígena.

Bajo ese interés el CESUES, se incorpora al grupo de Universidades Mexicanas aplicando el PAEIIES en una de sus cinco unidades académicas; siendo pionero en el estado de Sonora con la implementación de este programa en el 2003.

El PAEIIES inició su operación en la Unidad Académica Benito Juárez, la cual se encuentra situada en el sur del estado de Sonora, específicamente en el municipio de Benito Juárez, donde la mayor parte de la población es de la etnia MAYO; es por ello que el programa ha tenido como objetivo principal el fortalecer los recursos de soporte académico, asistencia y orientación profesional para la integración de los estudiantes Indígenas de la región sur del estado de Sonora y así mejorar su desempeño académico dentro de la Institución, quienes al egresar de la universidad logren impactar en el desarrollo de sus comunidades y poblaciones de origen.

METODOLOGÍA

Este programa inició sus operaciones atendiendo a 47 estudiantes provenientes de comunidades indígenas de los alrededores de la cabecera municipal, generando así, una estrategia de acción, orientada hacia una población marginada. A través del PAEIIES se desarrollan diversas acciones destinadas a evitar la deserción, lograr la permanencia y el mejor aprovechamiento por parte de los estudiantes indígenas que se encuentran inscritos en la Universidad.

Dichos estudiantes participaron en un proceso de selección exhaustivo, con la finalidad de elegir a los jóvenes que realmente cumplieran con los criterios requeridos. Estos criterios de selección, fueron establecidos por la institución a sugerencia de la ANUIES, los cuales son:

Promedio escolar de preparatoria igual o mayor a 80.

Haber nacido en alguna comunidad de origen indígena.

Tener conocimiento y/o dominio de la lengua del grupo étnico al que pertenece.

Que uno o ambos padres del estudiante cumpla con los dos requisitos antes mencionados.

RESULTADOS

Actualmente se atienden a 244 estudiantes indígenas, distribuidos en sus cuatro programas educativos, incrementando así más de 500% la incorporación de estos jóvenes a la educación superior, en comparación con la cantidad de jóvenes atendidos al inicio del Programa en CESUES; éstos han sido atendidos por un padrón de tutores capacitados especialmente para la atención personalizada y especializada de nuestros estudiantes indígenas.

De esta forma, el CESUES ha logrado establecer una matrícula importante de estudiantes indígenas, los cuales reciben algunos beneficios, entre los que destacan:

Los cursos de nivelación académica; Los cuales facilitan la integración del estudiante, con respecto a alguna área específica de conocimiento. Generalmente son solicitados por los mismos estudiantes a través de sus tutores.

Las sesiones de tutorías; Las cuales facilitan el proceso y desarrollo académico, debido a que dentro de la institución se encuentra una persona responsable de la supervisión y apoyo de las actividades que desempeña. El tutor, es quien detecta las necesidades para canalizar a la instancia correspondiente, sin embargo no solo se detectan las deficiencias sino también las fortalezas y aquellas habilidades en las cuales el alumno se desempeña mejor, esto con la finalidad de que se desarrolle y pueda obtener algún provecho de sus conocimientos.

Orientación profesional y psicológica; La cual ha sido detectada por medio de la tutoría y canalizada por parte del tutor de manera oportuna.

Canalización a servicio médico; Actualmente, la Universidad cuenta con un consultorio totalmente equipado en cuanto a infraestructura, mobiliario y medicamentos para poder intervenir y atender al alumno cuando así sea requerido; así mismo se cuenta con el apoyo de la Secretaría de Salud del Estado de Sonora, la cual ha desarrollado diversas actividades en pro de la salud de los estudiantes, así como de la creación de ambientes saludables dentro y fuera de la Universidad.

Vinculación con áreas de la institución; Las personas responsables del PAEIIES deben mantenerse actualizadas con respecto a la información de los servicios estudiantiles que tienen otros departamentos y coordinaciones de la universidad. Esto con la finalidad de brindar a los estudiantes indígenas información veraz y oportuna acerca de las posibilidades que se encuentran disponibles para su beneficio.

Las asesorías académicas; Tienen el objetivo de reforzar los conocimientos básicos en un tema en específico y se pueden otorgar por medio de los profesores de la asignatura o a través de los estudiantes avanzados en la misma.

Movilidad estudiantil; Con esta posibilidad, los estudiantes pueden tener acceso al intercambio con otras universidades de México o el extranjero y así poder ampliar su criterio y panorama profesional en las áreas de conocimiento afines a su carrera.

Acceso a becas PRONABES e Institucionales; Por medio de la difusión oportuna de las fechas y de los trámites para la solicitudes de becas PRONABES, hemos logrado que el 60% de nuestros estudiantes indígenas tengan acceso a los recursos económicos que la beca les proporciona.

Otro elemento totalmente indispensable para la efectiva ejecución del PAEIIES, es la figura del tutor; rol representado por un profesor de la DES, el cual tiene como misión principal el ofrecer acompañamiento académico a su tutorado a fin de lograr un equilibrio bio-psico-social. Actualmente los tutores o guías académicos como se les llama en algunas universidades, han participado en cursos y talleres de capacitación orientados a las diferencias culturales de los estudiantes indígenas, las condiciones de marginación, los elementos propios del trabajo tutorial y el desarrollo de estrategias de apoyo académico especializadas. Toda la capacitación ofrecida a los tutores ha sido con el objetivo de dotar de medios y herramientas que apoyen a los jóvenes indígenas que han ingresado al nivel de Licenciatura y que logren una formación integral y así culminen sus estudios con el mayor éxito posible y en el plazo previsto en los planes de estudio.

Sin embargo, dentro de las actividades que el PAEIIES ha desarrollado a lo largo de su implementación, se han presentado dificultades y obstáculos que han sido atendidos a través de las instancias correspondientes, a fin de solventar y eficientar el proyecto; la mayoría de las problemáticas han sido detectadas y atendidas por medio de la acción tutorial, algunas de ellas han sido categorizadas en las siguientes dos áreas:

Académicas:

Escaso vocabulario

Limitada socialización

Pasividad académica

Deficiencias en las áreas de informática y matemáticas

FISICAS Y EMOCIONALES: (Según Datos Arrojados Por El EMA 2009*)

Obesidad

Consumo alto de alcohol

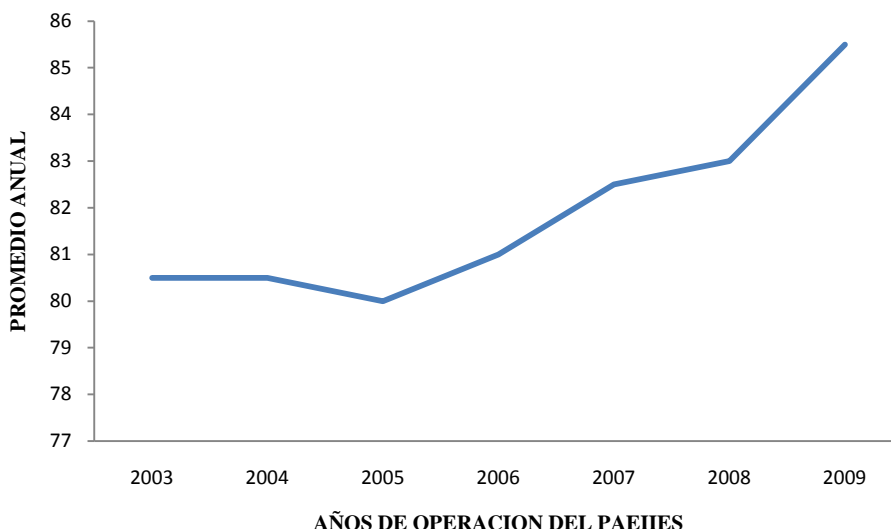

Problemática en el área sexual

* EMA (Examen Médico Automatizado aplicado por la UNAM a toda la población estudiantil)

Los avances y alcances que el PAEIIES ha tenido con respecto a sus inicios han sido determinantes para su permanencia dentro de las Universidades; en el CESUES, los índices de aprovechamiento escolar han aumentado 5% con respecto al promedio obtenido en el año 2003 cuando inicia su operación (figura 1); considerando las características y deficiencias conceptuales de los estudiantes indígenas, se considera que este porcentaje es significativo para su ejecución.

Otro avance obtenido a través del Programa de Apoyo Académico a Estudiantes Indígenas y del Programa Institucional de Tutorías ha sido el mejorar y eficientar la actividad tutorial, misma que en el año 2005, alcanzó el 100% de cobertura en servicios a la matrícula total de la Universidad; lo cual no significa solamente que nuestros 244 estudiantes fueron atendidos por un tutor, sino que la atención y el seguimiento que se ha llevado a las situaciones particulares de cada estudiante, tales como académicas, económicas, psicológicas y sociales, han garantizado que las condiciones generales de participación y desarrollo en la educación superior para los estudiantes indígenas sean cada vez mayores.

Figura 1: Comparación de promedio escolar anual de los estudiantes PAEIIES.

Comportamiento de las calificaciones promedio de los estudiantes inscritos al PAEIIES en CESUES Unidad Académica Benito Juárez.

CONCLUSIONES

Los resultados son evidentes, en ellos queda claro, que a pesar de la distancia existente entre lo proyectado y lo vivido, las actividades realizadas por el PAEIIES, han significado un aliento para la formación de los jóvenes estudiantes y para el fortalecimiento cultural y de identidad al que se enfrentan.

Cabe mencionar que cada estudiante, así sea el más humilde, o el que más recursos posea, ambos merecen ser atendidos y tratados de igual manera; así mismo, poseen capacidades, habilidades, actitudes y aptitudes distintas que favorecen la individualidad y la riqueza cultural que las Universidades poseen. La cual debe ser aprovechada de la mejor manera y propiciar el intercambio de cultura para así poder llegar en algún momento a formar parte de una sociedad intercultural, esto significa que no solo haya respeto entre culturas, sino que haya una verdadera relación entre ellas, de tal manera que se presente una interacción.

Es por ello, que la educación superior ha de actualizarse y propiciar un ambiente intercultural, de tal manera que el estudiante indígena pueda encontrar un futuro prometedor en pro de sí mismo y de sus comunidades.

Recordando que la finalidad de este programa es contribuir al cumplimiento de los objetivos planteados por la tutoría, el cual es que el estudiante sea competitivo en un mundo en el que los problemas económicos, los desastres naturales y los problemas de inseguridad son el tema diario, es importante rescatar y atender a la juventud que intenta superarse, así sea el joven más humilde de alguna comunidad enclavada en la selva o en una montaña. Las universidades han de estar ahí en atención de aquellos que quieran estudiar y ofrecer a la sociedad las soluciones de acción a las problemáticas que se presenten.

DEFINICIÓN DE ESTRATEGIAS Y MECANISMOS EN APOYO A LA IMPLANTACIÓN DE UN MODELO DE CALIDAD

María Cristina Sánchez Romero, Instituto Tecnológico de Orizaba
Marco Antonio Olguín Hernández, Caminos y Puentes Federales de Ingresos y Servicios Conexos
Ángel Machorro Rodríguez, Instituto Tecnológico de Orizaba

RESUMEN

En la actualidad, las organizaciones buscan la calidad, para ello, se han apoyado en sistemas probados por diferentes organizaciones. Las empresas gubernamentales no son la excepción, tal es el caso de Caminos y Puentes Federales de Ingresos y Servicios Conexos de México en la cual se ha desarrollado un sistema con base en ISO 9001:2000 e ISO 14001:2004, sin embargo, no ha sido implantado en todas las plazas de cobro que conforman la organización. En específico en la plaza de cobro 45 de Fortín, Veracruz, se tiene el propósito de implantar el modelo de calidad, sin embargo, los intentos anteriores no han tenido éxito. Es en las organizaciones públicas en donde el principio “la calidad debe ser por convicción y no por obligación” cobra fuerza. Por ello, a partir de un diagnóstico de competitividad organizacional en donde el factor humano es relevante, se establecieron estrategias y mecanismos para propiciar el cambio de actitud del personal y conducirlo hacia la implantación del sistema de calidad. La definición de estrategias a partir de las deficiencias detectadas, llevó a la selección e implantación de mecanismos. Los resultados que a la fecha se tienen llevan a suponer que se está en el camino correcto.

INTRODUCCIÓN

Caminos y Puentes Federales de Ingresos y Servicios Conexos CAPUFE, empresa pública a nivel nacional en México, ha establecido un Sistema de Gestión de la Calidad y Ambiental con la finalidad de incrementar su rendimiento, satisfacer las necesidades de sus clientes y aumentar la eficacia de sus recursos, para ello, pone a disposición del personal el Manual de Gestión de la Calidad y Ambiental mediante la copia oficial que se encuentra en la intranet como se establece en el Procedimiento General de Control de Documentos. Se mantiene el Sistema de Gestión de la Calidad y Ambiental mediante las auditorías internas, y mejora continuamente su eficacia en apego a la normativa ISO 9001:2000 e ISO 14001:2004 basado en el Círculo de Deming (Planear-Hacer-Verificar-Actuar).

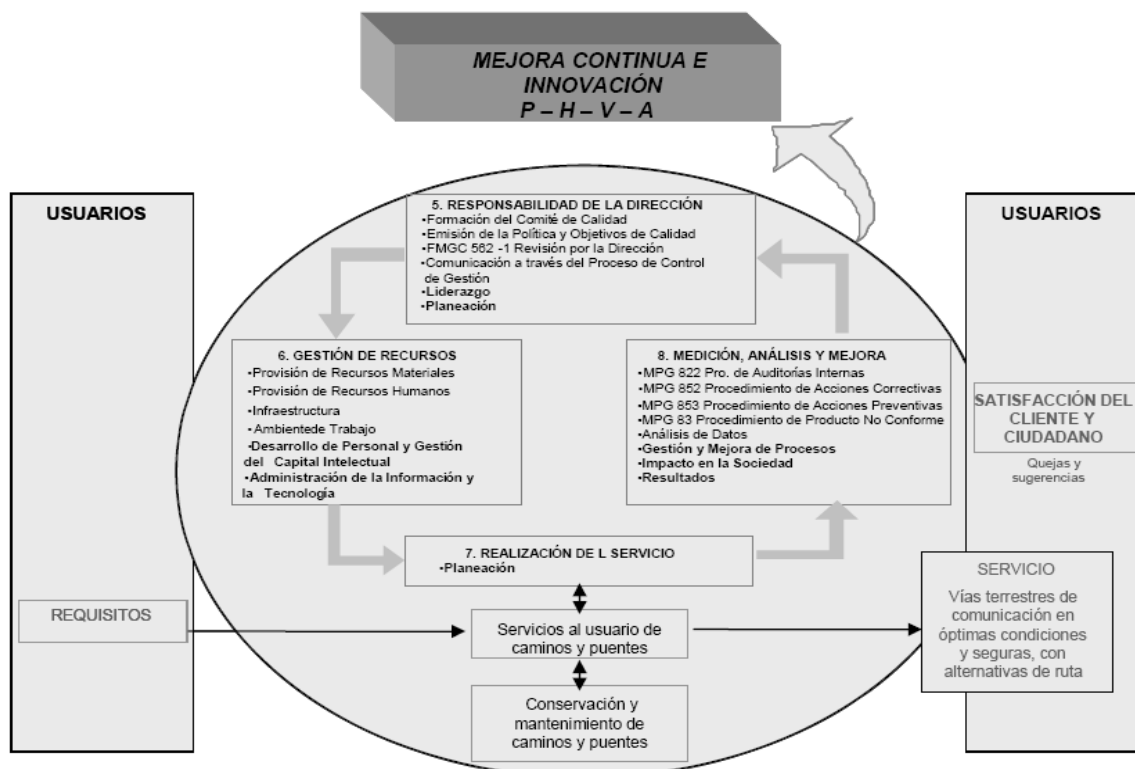

Actualmente, el Sistema de Gestión de la Calidad y Ambiental se ha implantado en CAPUFE a nivel nacional, <http://serviciosintranet/Normateca%20Versión%202003-12-05/frames.htm>, aunque solo de manera parcial en:

- la Dirección General
- la Dirección de Administración y Finanzas
- la Dirección de Operación
- la Dirección Técnica
- la Planta de Pinturas y Emulsiones
- la Delegación Regional IX, Guadalajara, Jalisco
- la Delegación Regional II, Culiacán, Sinaloa
- la Delegación Regional VIII, Reynosa, Tamaulipas

REVISIÓN LITERARIA

Los modelos de calidad creados en las diferentes latitudes son instrumentos prácticos que ayudan a las organizaciones a establecerlos, midiendo en qué punto se encuentran dentro del camino hacia la excelencia. Con base en estos sistemas, CAPUFE ha identificado los procesos necesarios para el Sistema de Gestión de la Calidad y Ambiental de la siguiente manera presentados en la figura 1.

Figura 1: Modelo de calidad en CAPUFE

En esta interacción, se incluyen los criterios de los Modelos de Calidad de la Administración Pública Federal: Satisfacción del Cliente y Ciudadano, Liderazgo, Desarrollo del personal y gestión del capital intelectual, Administración de la Información y la Tecnología, Planeación, Gestión y mejora de procesos, Impacto en la sociedad, Resultados.

Documentos

Este Sistema de Gestión de la Calidad y Ambiental de Caminos y Puentes Federales de Ingresos y Servicios Conexos incluye los siguientes documentos:

- *Manual de Gestión de la Calidad y Ambiental (MGCA)*: describe de manera general el sistema de calidad y ambiental e incluye la declaración de la política de calidad y objetivos de calidad.
- *Manual de Procedimientos Generales (MPG)*: integrado por Procedimiento General de Control de Documentos, Procedimiento General de Control de Registros, Procedimiento General de Auditorías Internas, Procedimiento General de Servicio No Conforme, Procedimiento General de Producto No Conforme para la Planta de Pinturas y Emulsiones, Procedimiento General de Acciones Correctivas y

Preventivas, y Procedimiento General de Formación y Métodos de Operación del Comité y Subcomités de Calidad.

- *Manual de Procedimientos Específicos (MPE)*: Contiene la información referente a procedimientos particulares de cada área, Diagramas de Interacción de Procesos, Organigramas, cuando las áreas así lo requieran.
- *Instructivos de Trabajo Específicos (ITE)*: Indican de manera detallada cómo deben realizar algunas actividades, (no aplica en todos los casos).
- *Registros de Calidad y/o ambiental*: Son los documentos que muestran evidencia del funcionamiento del Sistema de Gestión de la Calidad y Ambiental, su distribución y resguardo se encuentra descrito en el “Procedimiento General de Control de Registros”.

La documentación se encuentra contenida en medio impreso o electrónico dependiendo de las necesidades y actividades de cada área.

Un instrumento de Diagnóstico de Competitividad Organizacional (DCO) es el que presenta Álvarez (2001), el cual contiene 112 variables críticas agrupadas en siete indicadores y forma parte del material empleado en este estudio, los indicadores son:

- A. Cultura Organizacional
- B. Nivel de Concientización y Participación con la Organización
- C. Nivel y estilo de comunicación y toma de decisiones
- D. Nivel y desarrollo del potencial organizacional
- E. Nivel de conceptualización de la calidad y la productividad
- F. Visualización del Entorno Externo Competitivo
- G. Nivel de Conocimiento de Posición Competitiva

METODOLOGÍA

Diagnóstico

Con el conocimiento de que el modelo se ha implantado en otras plazas sólo parcialmente, se inicia por conocer el nivel como organización en que se encuentra la plaza de cobro 45 de Fortín, Ver. El instrumento empleado fue el DCO aplicado a dos administradores, un encargado de turno y doce cajeros. Siguiendo la metodología indicada para el uso del instrumento, se concluyó que la Plaza de Cobro tiene un nivel de madurez de 38.03% y un nivel de desperdicio de 47.75%, así como que, con base en los valores establecidos para cada etapa, se determina que la plaza de cobro se ubica en la de normalización.

Por otra parte, la calificación de cada indicador, se empleó para seleccionar aquellos de menor valor al considerar que eran elementos susceptibles de mejorar. Cada uno de estos siete componentes está conformado por indicadores, así, el primer componente, *Cultura Organizacional*, se revisa a través de 11 indicadores; el segundo componente *Nivel de concientización, integración, compromiso y participación con la Organización*, así mismo el nivel de concientización sobre el concepto de cliente interno y externo, se encarga de crear un clima positivo de trabajo través de 18 indicadores.

El tercer componente *Nivel y estilo de comunicación y toma de decisiones* está íntimamente ligada con la información, base de la comunicación para determinar directrices, exhortar y divulgar a todos los niveles, horizontal y verticalmente para lograr la misión de la Organización, se revisa a partir de 37 indicadores, de éstos se seleccionaron siete que tienen en su ponderación un nivel bajo (malo y muy malo).

El cuarto componente *Nivel y desarrollo del potencial organizacional* inquiriere sobre el plan de excelencia en calidad, en donde el punto vital es el ser humano, quien genera la calidad y la productividad, todo esto vía 15 indicadores, de los cuales se incluyen solamente 3 para el siguiente paso. Del quinto componente *Nivel de Conceptualización de la Calidad y Productividad así como la identificación de sus principales indicadores*, se eligieron 3 indicadores.

El sexto y séptimo componente *Visualización del entorno externo competitivo* y *Nivel de conocimiento de la posición competitiva* se encargan de sondear sobre las experiencias que todos los competidores a nivel nacional e internacional realizan con el fin de llegar a los mercados potenciales en la búsqueda de ser líder en los mercados estratégicos, que para el objeto del presente estudio no resulta necesario para las consideraciones de este estudio.

Matriz de indicadores

Conocido cada uno de los componentes y en qué consisten por medio de los indicador que los conforman, el siguiente paso fue, mediante una matriz de relación, calificar como influyen los indicadores detectados y seleccionados en los criterios del modelo de calidad de CAPUFE, como demanda, se anotan los elementos del modelo de calidad, la escala es la usual, relación fuerte 9, media 3, posible relación 1 y ninguna relación el espacio vacío. Parte de esta matriz se presenta en la figura 2.

Figura 2 Matriz de relación

			Parámetros del Diagnóstico de Competitividad Organizacional														
Matriz de relaciones: Formato en blanco listo para edición			1	2	3	4	5	6	7	8	9	10	11	12	13	14	
			Cultura Organizacional	Nivel de concientización, integración, compromiso y participación con la Organización						Nivel y estilo de comunicación y toma de decisiones							
Necesidad Superior	No	Necesidad del Cliente	Conocimiento de compromisos, objetivos, premisas y prioridades a corto y mediano plazo	Competitividad	Integración y organización	Integración en solución de problemas	Deseo de logro y perfección	Autocontrol	Conceptualización de cliente interno	comunicación en la organización	Nivel de comunicación con el nivel superior inmediato	Nivel de comunicación de niveles superiores a inferiores	Comunicación de objetivos, compromisos, futuro, políticas y recomendaciones	Desarrollo a través de la capacitación y el autoaprendizaje	Conocimiento de planes actuales y futuros de lo que se espera del individuo	Sistema de desarrollo profesional a través de la mejora continua	
Modelo de calidad CAPUFE	1	Secuencia e interación de los procesos	Identificación de los procesos	3	3	3	3	1	1	9	1		1	9	3	3	3
	2		Interacción de los procesos	3	3	3	3	1	1	9	1		1	9	3	3	3
	3		Aplicación de los procesos	3	9	9	9	9	9	9	3	3	9	9	9	3	3
	4	Operación y control de procesos	Control de acciones preventiva y/o correctivas	3	9	9	9	9	9	3	3	3	3	9	9	3	3
	5		Difusión de indicadores	3	9	3	3	3	1	3	9	3	3	9	9	3	3
	6		Medios electrónicos para el control	3	3	3	3	1	1	3	9	1	1	3	9	1	1
	7	Disponibilidad de los recursos e información necesarios	Anteproyecto de presupuesto	9	3	3	3	1					1	3	1		
	8		Mejoras en la capacidad del equipo	9	3								1	3	1	3	
	9		Registros de compras	3										3	1		
	10		Licitaciones	3										3	1		
	11	Seguimiento y medición de procesos	Manual de procedimientos específicos	1	1			1	1	3	3	1	3	9	3	1	3
	12		Análisis de la información	1	1			1	1	1	3	3	1	9	1	1	1

A partir de la relación de elementos en la matriz, la tabla 1 indica la puntuación media que sirvió de base para establecer las estrategias que lleven a mejorar los requisitos generales del SGC.

Tabla 1 Puntuación media requisitos generales SGC

	Secuencia e interacción de los procesos	Operación y control de procesos	Disponibilidad de recursos e información necesarios	Seguimiento y medición de procesos	Resultados planeados de los procesos
Puntuación media	4.00	4.10	0.83	3.17	7.03

Se puede observar que el área que cuenta con mayor impacto con respecto a las demás es el requisito denominado Resultados planeados de los procesos, mismo que abarca los siguientes conceptos: Acciones necesarias para alcanzar resultados, la comunicación fluye eficazmente, informes sobre lo realizado y mejora continua de los procesos. Sin embargo, también se consideran los de puntuación 4.1 y 4.0, correspondientes a Operación y control de procesos y Secuencia e interacción de los procesos respectivamente.

Estrategias

Como solución a estas problemáticas, se realizaron las siguientes acciones para lograr la implantación del modelo de calidad en la Plaza de Cobro. Divididas las acciones en tres áreas, primero las que se refieren a los *Resultados planeados de los procesos*, enseguida a la que se refiere a la *Operación y control de los procesos* y finalmente las que afectan a la *Secuencia e interacción de los procesos*. Ejemplo de ello es la siguiente tabla.

Tabla 2. Estrategias y Líneas de Acción

Requisito general del SGC: Resultados planeados de los procesos	
Concepto	1. Acciones necesarias para alcanzar resultados
Estrategia	Proceso de identificación de mejoras
Línea de acción A	Disponer en la empresa de un proceso para identificar y gestionar las acciones de mejora.
Concepto	2. La comunicación fluye eficazmente
Estrategia	Comunicación interna y comunicados de la Dirección
Línea de acción B	Generar un sistema de comunicación que permita alcanzar los objetivos institucionales
Línea de acción C	Difundir a todo el personal el marco normativo de CAPUFE
Concepto	3. Informes sobre lo realizado
Estrategia	Proceso de selección de datos críticos
Línea de acción D	Crear un proceso de selección de datos de aquellas actividades que afecten o puedan afectar la Declaración de Propósitos (misión, visión y objetivos)
Estrategia	Plan de indicadores
Línea de acción E	Elaborar un método de recolección de datos en el que se indique la periodicidad y el responsable de recopilarlos
Concepto	4. Mejora continua de procesos
Estrategia	Uso de metodologías de mejora
Línea de acción F	Implantar las 5 S's en la empresa

Para cada una de las líneas de acción, se establecieron los mecanismos o pasos para su logro; como ejemplo para la línea de acción B “Generar un sistema de comunicación que permita alcanzar los objetivos institucionales”, el mapa de este mecanismo se presenta en la figura 3.

En esta línea de acción se anota:

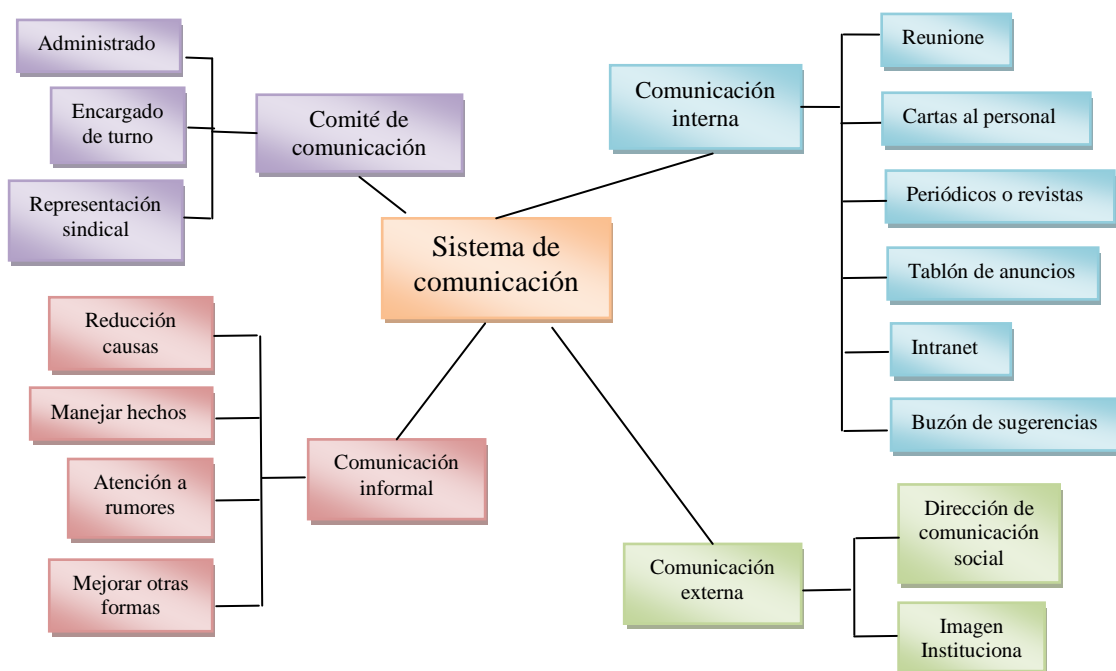

Se entiende por comunicación empresarial toda actividad comunicativa integrada, producida por la empresa y dirigida a todo público, tanto internos como externos, con el fin de crear una relación favorable con ellos y así poder alcanzar los objetivos planificados; en consecuencia se llevarán al cabo los siguientes pasos:

1. Creación de un comité de comunicación, formado por el administrador de la Plaza de cobro, un encargado de turno y el representante sindical en la plaza de cobro, afín de que coordine investigaciones, realice comunicaciones tanto internas como externas, seleccione canales de difusión idóneos; este en contacto permanente con la alta dirección.
2. Aplicación, control seguimiento y evaluación de acciones: es decir búsqueda de canales idóneos internos y externos (notas de prensa, boletín informativo, revista, folleto, etc.) encuestas que comprueben la existencia del plan.
3. Establecer la liga de la totalidad del personal al desarrollo de la empresa, ya que la comunicación transforma a la empresa en un terreno familiar, implicando y favoreciendo la integración de todos; la idea a comunicar es “estamos todos en el mismo barco”.

4. La comunicación informal puede presentarse a través de noticias o comentarios, pero también puede adquirir un carácter negativo y convertirse en un rumor, por lo cual se están emprendiendo las siguientes acciones:

- Reducción de las causas del rumor. Para controlar los rumores, lo mejor que se puede hacer es indagar cuales han sido las causas en lugar de detenerlos cuando hayan comenzado a difundirse.
- Manejo de hechos. Una vez difundido el rumor, la mejor solución es dar a conocer hechos reales a través de una fuente digna de credibilidad.
- Mejorar otras formas de comunicación. Implementar otras formas de comunicación formal (circulars, memorandos, revistas, etc.)
- Atención a rumores. Prestar atención a cualquier rumor sea cual sea su importancia.

Figura 3. Mapa del sistema de comunicación

5. Establecer los siguientes medios de comunicación interna:

- Reuniones.
- Cartas al personal.
- Periódico o revista interna.
- Tablón de anuncios.
- Buzón de sugerencias.
- Intranet.

6. En lo que respecta a la comunicación externa CAPUFE cuenta con una dirección de comunicación que se encarga de difundir a todos los clientes la imagen e información útil que concierne a la empresa, por tal motivo, su aplicación se basa en las políticas que la misma dirección envía.

Las estrategias y mecanismos se están implementando, de acuerdo al momento y disponibilidad de recursos.

RESULTADOS

Como resultado de la aplicación de mecanismos generados por las líneas de acción como la E que corresponde a: Elaborar un método de recolección de datos en el que se indique la periodicidad y el

responsable de recopilarlos, se establecieron los indicadores mostrados en la tabla 3. Para cada uno de los indicadores se tiene un responsable, la perspectiva se interpreta como hacia quienes está dirigido, este conjunto coherente de indicadores proporciona a la administración de la Plaza de Cobro una visión comprensible de la organización. Los indicadores están relacionados con todos los procesos de la Plaza. A cada uno de los indicadores se les dio validez, así para el número de fallas de ECT, se cuestiona:

¿Fue fácil de medirlo? ¿Se midió rápidamente? ¿Proporcionó información relevante en pocas palabras? ¿Se graficó fácilmente?

Tabla 3 indicadores en la plaza de cobro

Indicador	Responsable	Perspectiva	Tendencia	Unidad	Frecuencia
Nº. de accidentes	Administrador	Clientes	↓	Eventos	Mensual
Nº. de arrastre de grúa	Operador de grúa	Clientes	↑	Eventos	Mensual
Quejas	Administrador	Clientes	↓	Número	Mensual
Depósitos por peaje	Encargado de turno	Financiera	↑	Número	Mensual
Ingresos por telepeaje	Encargado de turno	Financiera	↑	Número	Mensual
Aforo total	Encargado de turno	Financiera	↑	Número	Mensual
Nº de fallas de ECT	Administrador	Interna	↓	Eventos	Mensual
Ausentismo	Administrador	Personas	↓	Número	Mensual
Asistencia al trabajo	Administrador	Personas	↑	Número	Mensual

Actualmente se está recopilando la información de acuerdo a la frecuencia. La comunicación periódica al personal, del resultado de su trabajo, ha servido para ir mejorando los resultados de la actividad que cada uno desarrolla.

Otra de las actividades que se llevaron a la práctica fue la implantación del proyecto de 5'S los resultados no son solo visuales sino también cuantitativos, algunos de ellos son:

Cabinas de cobro: 12 piezas de material para proceso de morralla retiradas de la consola y un recipiente con comida.

Oficina de encargados de turno: 10% espacio liberado en librero

Oficina de administradores: 26 kg de papel enviado a reciclar, 7 kg de equipo enviado a la basura.

Durante la aplicación de esta metodología en las diferentes áreas, se logró identificar aspectos positivos y negativos, dentro de los positivos podemos mencionar: mayor comodidad para trabajar, facilidad para encontrar el material y documentos, facilidad para limpiar las áreas físicas, mayor control de materiales y documentos y control visual de los mismos.

CONCLUSIONES

El diagnóstico de competitividad organizacional fue determinante para conocer al factor humano ya que el punto inicial es que ha sido el principal impedimento para la implementación del sistema de calidad en esta plaza de cobro. Conociendo los indicadores del DCO que impactan en los requisitos del modelo de calidad, y cómo es la relación entre ellos, se pudieron establecer las estrategias y mecanismos para propiciar el cambio principalmente de actitud del personal y conducirlo hacia la implantación del sistema de calidad en un futuro próximo.

Los resultados que se tienen a la fecha, han motivado al personal quienes no solo observan los cambios en la organización, sino también los beneficios en ellos mismos, esto es un indicio del cambio de actitud del personal que labora en la plaza de cobro, así, una vez implementadas todas las estrategias y mecanismos y su respectiva evaluación, se espera que el personal esté preparado para implementar el modelo de calidad.

DESCENTRALIZACION FISCAL EN MEXICO: UN ENFOQUE DESDE LOS INGRESOS PUBLICOS

Manuel Diaz Flores, Universidad Autónoma de Aguascalientes
Roberto González Acolt, Universidad Autónoma de Aguascalientes

RESUMEN

La descentralización fiscal en el contexto del Sistema Federal Mexicano se presenta como una opción viable, aunque compleja, para avanzar hacia una mayor autonomía financiera de estados y municipios los cuales estarían en condiciones de promover una participación más activa en sus localidades para fortalecer aquellos ingresos que son generados en sus propios territorios. En este trabajo se muestra que hay alternativas viables para hacer una distribución más equitativa de los recursos federales que se recaudan a través del Impuesto al Valor Agregado (IVA) y el Impuesto sobre la Renta (ISR) para fomentar la responsabilidad fiscal en los tres niveles de gobierno. La tesis central del trabajo considera como condición para avanzar en este proceso descentralizador que cada nivel de gobierno debe tener una fuente de recursos fuerte, dinámica y sustentable generada en su propio territorio y por tanto vinculada a su propia dinámica económica local. Entre los desafíos más importantes para lograr la implementación de este tipo de propuestas destacan la heterogeneidad entre los 32 estados que integran la Federación y sobre todo entre los 2,450 municipios del país los cuales registran importantes rezagos en materia de sistemas de gestión y profesionalización de sus funcionarios.

INTRODUCCION

El alto grado de dependencia financiera que tienen los estados y municipios de México y en consecuencia la fragilidad en las finanzas de estos gobiernos ha quedado documentado por diversos trabajos sobre el tema. El objetivo de esta investigación es mostrar la importancia de fortalecer las finanzas públicas de estos ámbitos de gobierno de una manera sostenible en el tiempo en donde los tres niveles de gobierno salgan fortalecidos. De ahí que el énfasis no se ponga en la modificación de la fórmula usada para distribuir los recursos, sino más bien en la forma de generarlos de manera cooperativa y coordinada. El estudio de caso que aquí se presenta es el estado de Aguascalientes y sus municipios en donde se muestra que su dinámica económica le representa un potencial importante para fortalecer sus ingresos propios a través de la recaudación que hace en su territorio de los dos impuestos federales más importantes como son el IVA y el ISR, así como la modernización catastral para que los municipios ejerzan su potestad tributaria Constitucional en materia de recaudación del Impuesto a la Propiedad Inmobiliaria. Este trabajo llama la atención sobre la necesidad de aplicar políticas diferenciadas y emprender un proceso de descentralización gradual y planeada debido a la diversidad y desequilibrios regionales que privan en el sistema federal mexicano.

REVISION LITERARIA

El tema del federalismo fiscal mexicano es uno de los tópicos más estudiados debido a su importancia, trascendencia y complejidad. Sin embargo, no se ha investigado lo suficiente ya que los planteamientos generales no logran incorporar las particularidades de la problemática regional y local. Así también los estudios de caso no han sido los suficientes como para establecer parámetros claros que permitan guiar y enfrentar los desafíos que implica un proceso profundo de descentralización fiscal. Desde la perspectiva académica, existe una gran variedad propuestas que van desde reformas parciales al Sistema de Participaciones y/o sistemas de incentivos a través de la colaboración administrativa en la recaudación de los impuestos federales, hasta cambios más profundos que implican redefinir atribuciones, funciones, competencias y potestades tributarias. Algunos de los trabajos más representativos sobre el federalismo fiscal

mexicano son (Aghon 1996), (Astudillo 1999), (Cabrero 1996), (Giugale 2000), (Sampere y Sobarzo 1998), (Diaz 2003) y Diaz (2009). Sin embargo, quedan aún muchas interrogantes que no han tenido una respuesta satisfactoria y algunas otras que han surgido recientemente como resultado de esta reflexión colectiva.

METODOLOGIA

El marco teórico metodológico se diseñó tomando como referencia básica la Teoría del Federalismo Fiscal que desarrolla Wallace E. Oates, en su obra *Fiscal Federalism*, publicada en el año de 1972. En esta obra se estudian las interrelaciones entre las haciendas locales y con el nivel federal, así como la asignación de competencias y la importancia de los ingresos locales en lo que respecta a su reparto y coordinación. Así también, se incorpora el enfoque sobre el papel del sector público de Richard Musgrave que desarrolla en su obra *The Theory of Public Finance* publicado en 1959. En esta obra se argumentan las tres funciones básicas del sector público: la distribución equitativa de la renta, la estabilización de los precios y la asignación eficiente de los recursos, además del tratamiento de las imperfecciones del mercado que pueden generar situaciones especiales como las externalidades, los bienes públicos y el monopolio. Los aspectos administrativos y de gestión pública, se abordan desde la perspectiva de la New Public Management, que incorpora a la administración pública conceptos aplicados inicialmente en la administración de los negocios, como la calidad, la innovación, el cliente, la evaluación de los resultados. Para realizar los cálculos sobre una nueva forma de distribuir los recursos entre los tres niveles de gobierno (federal, estatal y municipal), se utilizó el siguiente modelo de Regresión: Se consideró una ecuación del tipo $Y = B_0 + B_1X + \epsilon$

en donde;

Y = Es variable dependiente.

X = Es la variable independiente.

B_0 = El parámetro constante de regresión.

B_1 = El coeficiente de regresión.

ϵ = Es una variable aleatoria normalmente distribuida con media cero.

De donde se obtiene $Y = B_0 + B_1X$ por el método de Mínimos Cuadrados.

En el caso que nos ocupa:

X = Es el Producto Interno Bruto del estado de Aguascalientes como variable explicativa.

Y = La recaudación total del estado de Aguascalientes, la recaudación en el estado del Impuesto Sobre la Renta tanto de personas físicas como morales (ISR), la recaudación estatal del Impuesto al Valor Agregado (IVA) y las participaciones federales recibidas por el estado de Aguascalientes.

Esta técnica aplicada en Diaz (2003), se complementa en el presente estudio con otra que se integra con una serie de Indicadores de Gestión que permiten medir la Eficiencia, la Eficacia y la Efectividad del desempeño de las administraciones municipales en materia de su autonomía financiera, autonomía tributaria, de su ingreso per cápita por impuestos, la carga de la deuda y sus respectivos intereses, el gasto per cápita y el balance financiero municipal, entre otros.

Dada la heterogeneidad entre los estados de la Federación Mexicana se consideró ilustrativo hacer este ejercicio con un caso de estudio con la finalidad de ir ampliando el análisis a otros estados con características similares. El caso de estudio seleccionado fue el Estado de Aguascalientes con un poco más de un millón de habitantes en el 2005, un estado manufacturero, con un crecimiento de su economía y niveles de bienestar superior al promedio nacional. Integrado por solamente 11 municipios.

RESULTADOS

En el siguiente cuadro se presenta un resumen de los resultados más relevantes en donde destaca el coeficiente de determinación (R^2) que mide el poder explicativo del modelo de regresión, es decir, la parte de variación de Y explicada por la variable X . De acuerdo con los valores de (R^2), 96% de la variación total de la recaudación estatal y del Impuesto al Valor Agregado (IVA) son explicadas por el modelo de regresión, lo cual es un nivel muy satisfactorio de explicación. Así también en el caso de la recaudación del Impuesto Sobre la Renta (ISR)

con una cobertura de 89% y las participaciones federales con un coeficiente de 99% muy cercano a 1 que es el valor máximo que puede tomar. La constante B_0 indica la intersección de la recta con el eje de las Y o bien el valor que toma esta última cuando X tiene un valor de cero. En sentido estricto, en este ejercicio la variable independiente no puede tomar el valor de cero dado que el PIB puede estancarse, decrecer pero nunca puede ser cero. El coeficiente B_1 en todos los casos es positivo, lo que indica que cuando aumenta el Producto Interno Bruto del estado también se incrementa la recaudación en la proporción señalada en el cuadro. Finalmente, la significancia de B indica que el término constante no resulta muy significativo y que el coeficiente B_1 es significativo, ya que se rechaza la hipótesis nula y se acepta la hipótesis alterna en donde B, es diferente de cero, de donde se puede deducir que el modelo es consistente.

RESULTADOS DE LAS REGRESIONES LINEALES CON LOS DATOS OBSERVADOS

Variables dependientes del PIB estatal	R ²	B_0	B_1	Significancia B_0	Significancia B_1
Recaudación total	0.962	-127287	0.07234	0.162	0
Recaudación por IVA	0.963	-92089.9	0.03429	0.039	0
Recaudación por ISR	0.89	-58483.2	0.02661	0.316	0
Participaciones federales	0.995	-18084.2	0.03269	0.204	0

Tomando como base estos valores se hizo una proyección para el caso del Estado de Aguascalientes y sus Municipios en tres escenarios, el primero considera un crecimiento cero del Producto Interno Bruto del Estado, el segundo un crecimiento del Producto Interno Bruto Estatal de 2% y el tercero considera un crecimiento del 4%. Este ejercicio muestra que la propuesta de descentralización en la que el estado de Aguascalientes y sus municipios participa de una forma más activa de los dos impuestos federales con mayor potencial recaudatorio incrementa entre un 20 y 30% sus ingresos aún en el escenario más pesimista que considera un crecimiento de cero (Díaz 2003). Más aún, una ventaja extra es que la tendencia en el corto y largo plazo es a incrementarse, es decir, se va actualizando en el tiempo, además de las ventajas de liquidez que implica para las finanzas estatales y municipales el contar con estos recursos sin demora. Adicionalmente, tomando en consideración que los municipios tienen de acuerdo a la Constitución Política de los Estados Unidos Mexicanos la potestad tributaria de recaudar el impuesto a la propiedad inmobiliaria (impuesto predial) como su principal fuente de recursos propios, se calcularon los potenciales recaudatorios de este impuesto y resultaron ser fuentes importantes de ingresos (Díaz 2009).

CONCLUSIONES

La conclusión más importante es que la descentralización fiscal ofrece atractivas ventajas en materia de autonomía financiera de los gobiernos estatales y municipales debido a que fortalece sus finanzas con ingresos generados en su propio territorio. En el actual Sistema Nacional de Coordinación Hacendaria en México el gobierno federal tiene la facultad de recaudar los impuestos más importantes como el Impuesto al Valor Agregado (IVA) y el Impuesto Sobre la Renta (ISR) de personas físicas y morales. Así también los municipios tienen la facultad de recaudar el impuesto a la propiedad inmobiliaria, no obstante existen diversos obstáculos técnicos, administrativos, políticos y de recursos humanos que estas instancias tienen que superar para ejercer esta facultad. En el caso de los estados hace falta fortalecer sus ingresos propios ya que no cuentan con un impuesto importante que impacte sus finanzas. Los resultados de este estudio son muy semejantes a otros estudios que se han hecho sobre el federalismo fiscal mexicano, sin embargo la presente propuesta implica transformaciones de fondo, a diferencia de algunos cambios que se

proponen a nivel de la fórmula de coordinación fiscal o bien en el mejor de los casos alguna participación marginal de los estados sobre el Impuesto Sobre la Renta (ISR). La limitación es que se trata de un estudio de caso, aplicable a algunas entidades federativas con características similares pero que ya incorpora elementos nuevos de reflexión que no estaban presentes en los estudios generales sobre el federalismo fiscal. Así también, sugiere líneas de investigación en aspectos poco estudiados como los potenciales tributarios de los estados mexicanos, la modernización del cobro del impuesto a la propiedad inmobiliaria y estudios que establezcan tipologías de estados y municipios según sus capacidades y potenciales en los cuales se puedan aplicar políticas diferenciadas de descentralización fiscal.

LA INNOVACIÓN PRESENTE EN LA EVOLUCIÓN DE LA INDUSTRIA AUTOMOTRIZ A NIVEL MUNDIAL

Jovita Georgina Neri Vega, Universidad Autónoma de Querétaro
Rafael González Zarza, Universidad Autónoma de Querétaro

RESUMEN

En este trabajo se presenta la evolución que ha sufrido la industria automotriz a nivel mundial, las innovaciones que aparecen en cada etapa, los cambios originados por las regulaciones gubernamentales, comenzando por la etapa artesanal, donde lo importante era además de satisfacer al cliente, la satisfacción misma del artesano al crear un producto único, con todo lo que esto conlleva en costo y tiempo. Continuando con la época Ford, que se caracteriza por la producción en serie y la economía en costo y tiempo, esta época tuvo su lapso dorado, donde Ford creó, desarrollo y dominó rápidamente la industria mundial más grande de la época, pero nunca pudo diseñar el sistema completo de administración que necesitaba para tener un control efectivo, ya que esto le tocaría hacerlo a Alfred P. Sloan. La siguiente época es la manufactura esbelta que se caracteriza por usar "menos de todo" en comparación a la producción en serie (menos trabajo, menos espacio de fabricación, menos inversión). Terminando con la época en expansión a partir del año 2000 y hasta la época actual, donde sin duda el automóvil se ha convertido en un elemento indispensable para el desarrollo de las actividades del hombre.

ABSTRACT

This paper presents the developments that have suffered the worldwide automotive industry, innovations that appear in each stage, the changes caused by governmental regulations, beginning with the traditional stage, where it was also important to satisfy the customer, the same artisan satisfaction by creating a unique product, with all that this involves cost and time. Continuing with the Ford era, characterized by mass production and economy in cost and time, this time had its golden period, where Ford created, development and rapidly dominated the world's largest industry of the time, but could never design the whole system of administration needed to have effective control, as this will touch it to Alfred P. Sloan. The next time lean manufacturing is characterized by using "less of everything" as opposed to mass production (less work, less manufacturing space, less investment). Ending the growing season from the year 2000 until the present day, where no doubt the car has become an indispensable element for the development of human activities.

INTRODUCCIÓN

El comportamiento estratégico en las empresas es muy diverso, sobre todo en industrias tan complejas como la Automotriz, han sido muchos los autores que han intentado una descripción de la evolución histórica de la industria automotriz americana a través de cómo la innovación y el uso de alta tecnología, especialmente las tecnologías de información, afectan su productividad. El trabajo de estos autores, sin embargo, no hace un estudio detallado de los varios aspectos del comportamiento estratégico de la industria automotriz mundial. Son varias las etapas por las que ha atravesado la industria automotriz mundial en su proceso de evolución, una primera parte la constituye la época artesanal, con la cual se da inicio a la fabricación de autos, después viene la época Ford, donde se busca la reducción de costos a través de la producción en serie y el modelo T, en seguida la producción en serie se acerca a la innovación de Alfred Sloan para la diversificación de modelos automotrices, la siguiente época es la manufactura esbelta, en la cual se reconoce el ingenio de los japoneses, cuyo propósito es utilizar menos de todo para mejorar la calidad en el proceso de producción, en seguida se tratará la época de la empresa en Expansión

en la cual Lee Iacocca puso en práctica la idea de la manufactura delgada, y por último se abordará el presente y futuro de la industria automotriz, el cual se enfoca en la búsqueda de nuevos mercados, de alianzas estratégicas e innovaciones en la tecnología.

METODOLOGÍA

La metodología de investigación utilizada es el método histórico comparativo (Babbie, 2000), el cual consiste en varios niveles de construcción teórica, además de la realización de un estudio de tendencia que consiste en registrar los cambios con el tiempo de alguna población en general.

Época Artesanal (1890-1908)

En los comienzos de la década de 1890 empresas como Panhard & Levassor (P&L) construían algunos automóviles bajo pedido explícito del cliente. Estas empresas se convirtieron en unas de las pocas ensambladoras de automóviles, dando así origen al sistema de producción artesanal. La firma P&L, se reunió con Gottlieb Daimler (fundador de la compañía que fabrica el Mercedes Benz) para diseñar el estándar Sistema Panhard, un ingenio de gasolina de alta velocidad, alcanzaba el límite legal de 12 millas por hora, con el motor delante, los pasajeros en filas detrás, y con tracción en las ruedas traseras Womanck, et al. (1992). El volumen de producción era muy bajo, debido a que el trabajo de las técnicas artesanales causaba variaciones inherentes a este tipo de manufactura. Los costos eran altos y no bajaban en relación al volumen producido, por lo que sólo los ricos podían tener un auto (Suñe, 2004).

Época Ford

Henry Ford encontró la manera de superar los problemas inherentes a la producción artesanal produciendo un auto susceptible de ser fabricado en serie y que cualquier persona podía manejar y reparar sin necesidad de un chofer o mecánico. Esta fue la base del revolucionario cambio que sufrió la industria automotriz (Flink, 2001). El proceso de fabricación que desarrolló Ford y que le permitió inaugurar la industria automotriz moderna, fue posible gracias a un modelo de automóvil, el modelo T, que fue lo suficientemente adecuado para ser producido en serie (Holtz, 1998). En Septiembre de 1908 William Durant, por su parte, fundó la General Motors Company, competidora de Ford la cual estuvo en problemas desde el principio. Posteriormente la perdería para dar origen a la Chevrolet Motor Company en 1915, cuya presidencia fue tomada por Alfred Sloan. Sloan. Walter P. Chrysler fue el otro competidor importante, y la última gran fuerza constructora individual de la época en la industria automotriz americana.

La Época Dorada De La Producción En Serie (1930-1973)

La combinación de las prácticas de fabricación de Ford, más las técnicas de administración y mercadotecnia de Sloan y las formas de control en la asignación del trabajo, dieron como resultado la producción en serie (Flink, et al, 2001). Sloan también aplicó un sistema financiero para controlar las inversiones en la planeación de nuevas marcas, publicidad, Sloan transformó General Motors en una empresa capaz de producir una amplia gama de productos. La empresa tenía inicialmente cinco modelos que iban del más barato al más caro (Chevrolet, Buick, Oldsmobile, Pontiac y Cadillac), para que sus compradores fueran ascendiendo de un modelo a otro dependiendo de sus ingresos (Seiler, 2008). Los japoneses estaban desarrollando una nueva manera de hacer las cosas que fue llamada Manufactura Esbelta (Rubenstein, 2001).

La Época De La Manufactura Esbelta (Lean Production 1973-1990)

Después de la segunda guerra mundial, Eiji Toyoda, y Taiichi Ohno de la Toyota Motor Co. en Japón, fueron los precursores del concepto de producción adelgazada (Montiel, 2001). Al principio de la aplicación entre mejor sea el individuo para el trabajo en equipo, menos sabrá de una especialidad específica. (Dennis, 2002). La meta automovilística de las empresas japonesas con respecto a la calidad fue la de “tiene que ser perfecto”. Los fabricantes que utilizaban el método de la producción adelgazada trabajaban bajo el supuesto de que nunca podrían alcanzar la meta de perfección total, por lo que adoptaron el método de mejora continua de los círculos de calidad (Ohno, 1999). Los proveedores en la producción adelgazada pedían: 1. los fabricantes firmaban acuerdos cooperativos. 2. los proveedores eran seleccionados en base a su habilidad para alcanzar los estándares. 3. los fabricantes comparten con los proveedores información de desarrollo del producto. 4. los fabricantes pidieron el envío de componentes con las base del sistema Justo a Tiempo (kanban). Kanban es una herramienta basada en la manera de funcionar de los supermercados. Kanban significa en japonés "etiqueta de instrucción".

Posteriormente Mazda, que en un inicio tuvo problemas en acceder a las plantas ensambladoras de Estados Unidos, logró una alianza estratégica con Ford, llamada Auto Alliance International, en la cual construirían autos deportivos. Al igual que Mazda, Mitsubishi se acercó a Chrysler para compartir su planta y producir autos deportivos. A Eiji Toyoda y Ohno, les tomó más de veinte años de incesante esfuerzo para poder aplicar completamente las ideas de la producción adelgazada.

La Época De La Empresa En Expansión (Extended Enterprise 1990-2000)

Los fabricantes en Estados Unidos alcanzaron altas utilidades mediante la manufactura esbelta de dos maneras: velocidad (en todos los procesos) y economías de escala. Esta aplicación marcó una época determinante cuando a Lee Iacocca lo nombraron presidente de Chrysler (Curcio, 2001).

Durante décadas se siguieron formando alianzas estratégicas. Un ejemplo fue la unión de Daimler Benz con Chrysler Corporation en 1998, lo que llevó a DaimlerChrysler a un alto rango en la producción de autos en el mundo y facilitó la expansión que ofrecieron economías de escala, empezando con la adquisición de Mitsubishi en el 2000. (AMIA, 2009)

El Futuro De La Industria Automotriz Mundial (2000 En Adelante)

En el siglo XX y el naciente XXI el automóvil ha cambiado la vida del ser humano radicalmente, brindándole prosperidad, libertad, movilidad y placeres que hacen que la vida no se pueda imaginar sin él. En este siglo, los elementos que definen al mercado automotriz son: factibilidad (práctico), comodidad y status (Olsen, Cabadas, 2002). Las grandes alianzas estratégicas en la industria de suministros automotrices lo están llevando con una tendencia hacia la globalización. Los proveedores que se han de mantener en el mercado global deben de encontrar una óptima posición en la cadena de valor, desarrollar una estrategia factible, fijar las prioridades en los procesos de innovación, optimizar sus propios procesos y también asegurar la transferencia del conocimiento. Actualmente los mercados más fuertes son los de Europa del Oeste, Norte América y Japón que se caracterizan por el aumento de competencia, altos costos locales y saturación de mercados. (AMDA, 2009). Adicionalmente a esto, las empresas automotrices están explorando nuevas tecnologías que en el futuro de la industria automotriz serán muy importantes (Arteaga, 2003).

CONCLUSIONES

El panorama histórico de la industria automotriz que ha sido reflejado en este trabajo, deja claro que las empresas de esta industria no solamente compiten en unos cuantos aspectos estratégicos, sino que a lo

largo de su historia, han probado ser un sector industrial extremadamente complejo en el que se han combinado una serie de posibilidades estratégicas, mismas que han desencadenado diversos mecanismos de rendimientos, haciendo que este mercado se concentre en unas cuantas grandes empresas. Las estrategias adoptadas por cada una de las empresas han sido muy diversas, todo de alguna manera para no desaparecer ante los retos que implican las innovaciones. En los años ochenta, por ejemplo, a medida que el ritmo de los avances tecnológicos en la industria del automóvil se aceleró, Aston Martin y firmas similares tuvieron que aliarse con los gigantes automovilísticos (Ford, en el caso de Aston Martin) para acceder a los conocimientos expertos en áreas que van desde el control de los gases emitidos a la seguridad ante los choques. El costo de desarrollar estos conocimientos por sí mismos hubiera sido simplemente imposible. En los años noventa surge otra amenaza para estas firmas artesanas, a medida que las firmas que dominan la producción adelgazada —lideradas por los japoneses— comenzaron a ir detrás de sus nichos de mercado que eran demasiado pequeños y especializados para que los productores en masa, como Ford y General Motors, los hubieran atacado con éxito. Honda, por ejemplo, sacó un deportivo NS-X de carrocería de aluminio que constituyó un ataque directo al nicho de Ferrari en deportivos de ultra prestaciones. Los productores artesanos tradicionales tendrán que adoptar también los métodos de la producción adelgazada o desaparecer como especie después de más de un siglo, todo como una consecuencia lógica de los avances y la innovación.

AGENCIA DE DESARROLLO INTEGRAL UABJO-SEDESOL

Ana Luz Ramos Soto, Universidad Autónoma “Benito Juárez” de Oaxaca

RESUMEN

Uno de los objetivos de la Universidad Autónoma “Benito Juárez” de Oaxaca, es la vinculación del sector educativo con el sector público, el cual, ha logrado con la Agencia de Desarrollo Integral UABJO-SEDESOL, cuyo objetivo es: identificar las oportunidades de desarrollo de la población de los municipios con menor Índice de Desarrollo Humano del estado de Oaxaca; para la realización de propuestas de mejorar las condiciones de vida de la población, esto, a través de diagnósticos municipales de las variables: salud, educación, vivienda e infraestructura social, generación de ingresos y medio ambiente, una vez elaborados, realizar planes de desarrollo de gran visión, a través de una planeación estratégica con las autoridades y población de los municipios, con el apoyo económico de la Secretaría de Desarrollo Social, conjugándose el esfuerzo de dos instituciones una educativa y la otra del sector público, unidas en una sola meta, el lograr la disminución de los altos índices de marginación.

INTRODUCCIÓN

En el 2006 la Secretaría de Desarrollo Social (SEDESOL), publica una convocatoria, dirigida a las Universidades Públicas del estado de Oaxaca, con la finalidad de formar Agencias de Desarrollo Integral; por lo que la Universidad Autónoma “Benito Juárez” de Oaxaca (UABJO) participa haciendo una propuesta de consultoría para atención a municipios de la entidad Oaxaqueña.

México es una de las economías con una marcada desigualdad en los ingresos, provocando con esto que se presente un aumento en la segmentación de los mercados laborales en particular entre el sector formal e informal, estudios econométricos confirman que la distribución en la desigualdad de los ingresos está frenando actualmente el crecimiento en los países de América Latina (Altenburg, 2000).

Las disparidades en la distribución del ingreso en escala nacional son notorias, en un estudio donde se midió la desigualdad del ingreso por regiones con el indicador del Coeficiente de Gini (C.G.), los resultados que se obtuvieron, hicieron marcadas diferencias, en la región Peninsular reportó un C.G. de 0.600 (Hernández Laos, 1984), se debe en parte a los enclaves turísticos de Cancún y Mérida que se ubican en esta región, caracterizada por elevados índices de población rural que labora en ocupaciones agropecuarias de muy baja productividad. En la región del Norte, cuyos estados colindan con la frontera de Estados Unidos, el Coeficiente de Gini que registra fue de 0.450. y la capital de México se ubica en un sitio intermedio, con un C.G. de 0.527 debido a las existencias de actividades industriales y de servicios de muy alta productividad, la presencia de condiciones de subempleo o de empleo informal, producto de las corrientes migratorias rurales-urbanas que han sido características de esta región. A la región del Pacífico Sur le incorpora los estados más pobres del país, Chiapas, Guerrero y Oaxaca, la cual es una región con proporción importante de población de origen indígena donde a semejanza de lo que ocurre en otros estados, frente a la pobreza existe migración, hacia el centro del país, y hacia el vecino país del norte.

El Estado de Oaxaca es una de las entidades más marginadas del país, ubicándose en tercer lugar, tan solo por arriba de Guerrero y Chiapas, de acuerdo con los cálculos del Consejo Nacional de Población (CONAPO), de los 570 municipios que integran el estado, el 38.8% están clasificados en las categorías de muy alta marginación, 23.0% de alta, 34.3% de media, 2.8% de baja y 1.2% de muy baja marginación, aunado que está ubicado en el área geográfica “C” y en este sentido la pone en desventaja con los salarios

mínimos profesionales, ya que los que establece la ley, de acuerdo a la zona geográfica no corresponde a la realidad. Por las mismas condiciones este fenómeno repercute aun más en las zonas rurales donde ni siquiera se percibe un ingreso, trayendo consigo un desplazamiento de personas de estas zonas a hacia las urbanas, en busca de empleo, de ingresos, de oportunidades educacionales, niveles de vida mejor, abandonando el campo, presentándose ante ellos un panorama diferente al que ellos creen, por que no cuentan con la preparación educativa necesaria, ni son mano de obra calificada; esto provoca un desequilibrio en el mercado laboral producto de este desplazamiento, aumentando la oferta laboral de empleos poco calificados, y como consecuencia se da un crecimiento de la economía informal

METODOLOGÍA

La metodología que propuso la UABJO, fue de acuerdo a una planeación estratégica, realizar un diagnóstico económico, social, político y cultural de los espacios geográficos a analizar; la SEDESOL, tiene como objetivo la atención a microrregiones con características de alto índice de marginación y bajo índice de desarrollo humano. Los primeros espacios que se atendieron, están ubicados en diferentes regiones del estado: los municipios de Yogana y San Miguel Mixtepec se ubican en la Región de Valles Centrales, San Pedro y San Pablo Ayutla en la Región Sierra Norte, y Santa Cruz Acatepec en la Región de la Cañada, después se continuo con nueve municipios ubicados en la Región de la Cañada.

Una vez elaborado el diagnóstico de las variables: salud, educación, vivienda e infraestructura social, generación de ingresos y medio ambiente, se entablo una relación con el cabildo municipal de cada municipio para informarles de los resultados, y programar una reunión con la población de los municipios e invitar a las localidades que pertenecen a estos pueblos; de igual modo, se les informó del trabajo realizado con la población así como las problemáticas identificadas; que consistió en aplicar un cuestionario de perfil socioeconómico al cabildo y a la población, para el análisis de los entrevistados, se utilizó la metodología descrita por Boltvinick (1997), relativa a las necesidades básicas satisfechas o método directo. Partiendo de los indicadores registrados en las encuestas por hogar, se analizaron los componentes o dimensiones de adecuación de la calidad y cantidad de la vivienda (calidad de construcción), la sanitaria (agua, drenaje, escusado), y la energética (electricidad, combustible para cocinar) (Daltabuit, 2000). En la formulación de las preguntas se tomó el diseño de la investigación social que propone Gomezjara que consiste en detallar las características de las viviendas, datos de los ocupantes de la vivienda, cambios de residencia y datos económicos de las personas entrevistadas que aportan un ingreso al hogar (Gómez jara, 1997).

En las reuniones con la población de cada uno de los municipios, integrantes de los cabildos y algunos de los habitantes hicieron propuestas que fueron tomadas en cuenta para la elaboración de los planes de gran visión de las diferentes vertientes, lo que permitió se hicieran los programas y proyectos con metas a corto, mediano y largo plazo, teniendo el apoyo de estudiantes de las diferentes escuelas de la universidad (Facultad de Contaduría y Administración, Escuela de Economía y la Facultad de Arquitectura 5 de Mayo).

RESULTADOS

Los municipios objeto de análisis presentan similitudes en las variables socioeconómicas, por lo que este trabajo presenta una muestra de un municipio ubicado en la Región de la Cañada, Santa Cruz Acatepec, el municipio ocupa un superficie total de 7.00 km², cuenta con una densidad poblacional de 185.86 habitantes por Km², el 82.78% de la población habita en la cabecera municipal, el resto de la población se ubica en núcleos rurales; se encuentra ubicado en la parte norte del Estado, Colindando con los siguientes municipios: al Norte con Eloxochitlán de Flores Magón, al Sur con San Mateo Yolochochitlán y San Lucas Zoquiápan y al Oeste con San Jerónimo Técoatl. De Este a Oeste del municipio pasa la

carretera federal que lo comunica con la ciudad de Oaxaca de Juárez y con los estados de Puebla y Veracruz.

De acuerdo con el conteo de población y vivienda 2005 de INEGI el Municipio cuenta con 1 301 habitantes, en la visita realizada los días 10 y 11 del mes de Enero por los alumnos de la Escuela de Economía de la Universidad “Benito Juárez” de Oaxaca, se obtuvo la información de la Casa de Salud que indica que la población actual es de 970 habitantes, de los cuales 464 son hombres y 506 mujeres, constituyéndose 250 familias las cuales habitan en 233 casas.

Actualmente funge como Presidente Municipal una mujer, restándole dos años de gestión, municipio que en distintas ocasiones ha sido dirigido por un administrador nombrado por el Gobernador del Estado, esto, por cuestiones políticas no habían podido acordar un Presidente Municipal, esta comunidad se rige por el sistema de usos y costumbres.

Población

La cabecera municipal cuenta con 1,077; el resto de la población se encuentra distribuida en las tres localidades que tiene el municipio; la localidad que tiene menos número de habitantes es el Porvenir con 16; Piedra Tendida y Agua Peñafiel cuentan con 100 habitantes la primera y 108 la segunda localidad.

El 100% de la población habla lengua indígena materna, el mazateco, de acuerdo con información recabada entre los directores y maestros de los distintos centros escolares de la comunidad, esto dificulta su aprendizaje, solamente el 10 % de la población escolar habla correctamente el español.

Actividad económica

La principal actividad económica para este municipio, son las actividades agrícolas, siembran maíz, frijol y café. Existen huertos para el cultivo de diferentes frutas, el suelo es propicio para el cultivo de frutas y flores de diferentes especies, siendo este muy productivo. En el aspecto de la ganadería existe la cría de diferentes tipos de animales principalmente aves de corral, borregos y chivos.

La población económicamente activa del municipio asciende a 424 personas, de las cuales el (81%) se dedica a actividades agrícolas, el (13%) se encuentra inmerso en actividades terciarias específicamente en comerciales; el (5%) en actividades industriales y el (1%) en otras actividades.

Resultados del trabajo de campo

Se detecta tres tipos de migración, golondrina, pendular y permanente, niveles educativos bajos, el 55% de la población femenina es analfabeta, la mayoría de los habitantes mayores de 18 años, declaran saber leer y escribir, pero se detectó, que con gran dificultad son capaces de deletrear, esto trae como consecuencia un gran desinterés por la educación de sus hijos, identificándose el analfabetismo disfuncional, el 90% de la población está por debajo de la línea de la pobreza, identificándose un contexto de pobreza económica y social y una economía de autoconsumo. La población en su mayoría es joven, los padres de familia prefieren que los hijos atiendan los trabajos de campo que ir a la escuela. El 100% de la población no cuenta con servicios de salud, asisten a una casa de salud, donde se carecen de los más elementales servicios como lo es las medicinas, atiende una señora que tiene conocimientos mínimos de salud, afuera hay un letrado que dice se atienden a los enfermos más graves en Huautla de Jiménez un municipio que queda a una hora y media de camino.

El perfil socioeconómico de los integrantes del cabildo dio como resultado bajos niveles educativos, tres de los integrantes cuenta con la primaria terminada, dos no saben leer y escribir, sus ingresos son mínimo,

comentaban que la población emigra a las ciudades de Puebla, Oaxaca y México en búsqueda de mejores condiciones de vida, abandonando sus tierras, quedando improductivas, algunas parcelas son trabajadas por los hijos de los migrantes, de igual manera se detecta población joven de 14 y 15 años con hijos, madres adolescentes.

En la visita a la comunidad se detectó capital verde, cuentan con recursos naturales como lo es el agua, arena, grava, el clima es propicio para productos primarios, tienen una cultura ancestral de medicina alternativa, se presentó una falta de comunicación por el manejo del idioma español por parte de los habitantes, teniendo como intérprete a los hijos de ellos.

RECOMENDACIONES

Se debe realizar acciones tendientes a erradicar el analfabetismo estas tienen que desarrollarse simultáneamente en dos direcciones:

1. Alfabetización de adultos y
2. Prevención de fracasos escolares.

Con respecto a la alimentación, este, como un factor extrínseco que más influye en el crecimiento y desarrollo a lo largo de la infancia, en esta edad es muy importante la correcta alimentación pues esta aporta la energía y los nutrientes necesarios para garantizar un crecimiento y desarrollo óptimos.

El desayuno es una de las comidas importantes del día y debería proporcionar la cuarta parte de las necesidades nutritivas diarias del escolar. Los aportes nutricionales del desayuno inciden de forma decisiva en el estado nutricional y de salud a largo plazo ya que, tras las horas de ayuno de la noche, un desayuno adecuado ayuda a modificar una serie de parámetros fisiológicos como la glucemia y la secreción de insulina y favorecen la disposición del niño para las labores escolares y el ejercicio.

El desayuno adquiere especial importancia en los escolares. Aquellos que no desayunan adecuadamente completan con dificultad las necesidades diarias de calorías, calcio, vitaminas, minerales y otros nutrientes con las demás raciones del día. Estudios han demostrado, que aquellos niños que en los primeros tres o cuatro años de vida no han recibido una alimentación rica en leche, queso, carne, pollo y pescado, presentan un coeficiente mental menor, que los que tuvieron la oportunidad de ingerir estos alimentos. Si estos niños mejoran su alimentación más tardíamente, esta falla en el desarrollo cerebral ya no es recuperable. Diseñar un programa de desayunos escolares, que en el corto plazo permite mejorar de manera significativa la nutrición en la población escolar del municipio.

En la infraestructura es importante contar con salones y baños dignos, pizarrones nuevos, sillas, material didáctico, equipo de computo actualizado, una biblioteca equipada con libros que cumplan su función de desarrollar y estimular el aprendizaje, la sugerencia es solicitar estos apoyos al programa de escuelas de calidad presentando un proyecto integral de mejora a la educación del Municipio.

La educación es la principal herramienta para el progreso de los pueblos, y por ende la solución de sus grandes problemas; entre los principales la superación de la pobreza, cierto es que la educación juega un papel primordial en los países que han alcanzado vida de calidad para sus ciudadanos, no es el único factor a considerar, pero es imposible obviarlos si se desea mejorar una país.

Finalmente se menciona que se debe incorporar en los procesos educativos un importante contenido de educación de valores, educación para la paz, educación en y para los derechos humanos, educa-acción ambiental, educación popular, educación liberadora, educación para la vida, aprendiendo a vivir, educación para la mundialización, educación intercultural, toda una variedad de prácticas pedagógicas

que tienen por finalidad la enseñanza para la convivencia diaria y la superación de los problemas sociales que afrontan en su espacio de vida; que persiguen la superación de la pobreza en su ámbito comunitario. Estas prácticas son ejemplo de cómo incorporar ese sentido de lo propio y lo global en aprendizaje permanente, desde el trabajo con niños y niñas hasta con adultos de distintas condiciones sociales. No se puede seguir un camino de competencia desleal donde los grandes devoran a los pequeños. Se debe tomar en cuenta que para cambiar a cada niño o niña a los que se les enseñamos a leer y a escribir, a los jóvenes a los que les informamos de historia patria, como si estuviésemos educando al próximo presidente de nuestra nación, a los próximos ministros, a los líderes de partidos políticos, a los próximos gerentes de grandes y pequeñas empresas, a los líderes y dirigentes que necesitamos para superar la pobreza que rezaga al estado de Oaxaca.

LA GERENCIA DE PORTAFOLO DE TARJETAS DE CREDITO EN COLOMBIA

Santiago García Carvajal, Universidad EAN

RESUMEN

El propósito de este artículo es definir opciones estratégicas para administrar de portafolios de tarjetas de crédito en Colombia, que consideren una visión céntrica en el consumidor como eje de la cadena de valor. Las herramientas empleadas para cumplir este propósito son: 1) La rueda de análisis del consumidor para conocer la relación del individuo con el entorno 2) La mezcla de mercadeo de servicios financieros para identificar los puntos de ejecución del estímulo artificial con el consumidor 3) El Análisis factorial exploratorio para identificar segmentos de mercado latentes en el ciclo de vida del producto 4) La Matriz del Boston Consulting Group para identificar el comportamiento histórico y la posición estratégica de cada banco 6) La matriz híbrida de comunicación integrada de marketing para combinar acciones de publicidad y promoción de las características intangibles del producto.

PALABRAS CLAVE: Tarjetas de Crédito, Marketing Estratégico

ABSTRACT

The main purpose of this article is determining strategic options for Colombian Credit Card portfolio management considering a consumer centric value chain approach. The tools utilized to accomplish this purpose are: 1) The Wheel of consumer analysis to determine an individual vs environment relationship 2) A financial service marketing mix to determine the right place and time to engage on artificial stimuli to the consumer 3) Exploratory factor analysis to determine latent market segments 4) Boston Consulting Group Matrix to determine historical behavior and product life cycle 5) Hybrid Communication Matrix to determine promotion and publicity combination of non physical product attributes.

JEL: M310

KEYWORDS: Credit Cards, Strategic Marketing

Las fusiones y adquisiciones en el sistema financiero Colombiano han aumentado las economías de escala de los bancos y esto debe traducirse en beneficios al consumidor, mayor cubrimiento internacional, seguridad transaccional por canales electrónicos, facilidades de empleo de la tarjeta de crédito como medio de pago e incrementos en la calidad de productos y servicios en la pirámide del marketing de servicios, para lograr esto, el ciclo de vida como análisis de categoría de producto es una herramienta fundamental para que los esfuerzos de los ejecutivos de mercadeo muestren un balance favorable al evaluar los resultados del plan de marketing estratégico de Tarjetas de crédito de un Banco. El ciclo de vida de una tarjeta de crédito es necesario no solo a la hora de determinar las cuotas de ventas sino también los insumos o réditos que la tarjeta demanda o genera, deben ser consideradas para este propósito las estrategias de saneamiento de cartera, segmentación, diferenciación y modificación de la curva de la demanda.

ASISTENCIA TECNICA AGROPECUARIA: RESPONSABILIDAD DE ESTADO

Apolinar Castro Esquivel, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

la propuesta “asistencia tecnica agropecuaria: responsabilidad de estado”, es demanda consensada resultante de foros temáticos regionales, convocados por la Cámara de Diputados Federal y del Estado de Sonora, a organizaciones de productores, a instituciones ligadas al campo; es retomar funciones a 25 años; es fortalecer el crecimiento productivo con sentido social; es fortalecer la vinculación productor – universidad; es la resultante de investigación aplicada dialéctica y analítica; complementada con la experiencia profesional a través del Centro de Estudios Superiores del Estado de Sonora, México. Fundamentan la propuesta, realidades y opiniones: La asistencia técnica es factor de cambio en el crecimiento de la productividad y la calidad de exportación. Enlace entre productor y programas institucionales, universidades y centros de investigación. Co-partícipe en la creación de la Revolución Verde de alcance mundial. La FAO, la OCDE, opinan sobre la creciente demanda alimentaria, la seguridad, el auto-abasto, que para hacer frente a la crisis alimentaria solo con apoyo a la infraestructura y a la

ASISTENCIA TECNICA.

El Plan de Trabajo, se fundamenta en las Líneas Eje:

- Coordinación de Funciones
- Financiamiento y Apoyos
- Planificación
- Organización
- Regionalización
- Evaluación

EFFECTIVIDAD DE LAS TIC A NIVEL EMPRESARIAL EN EL CONTEXTO COLOMBIANO

Sandra Cristina Riascos Erazo, Universidad del Valle, Cali - Colombia

ABSTRACT

El ambiente organizacional exige que las empresas actuales sean cada día más competitivas lo cual implica la realización de actividades administrativas más eficientes y eficaces; es por lo anterior que en el mundo de hoy ha sido necesario la implementación de un entorno tecnológico el cual permita aumentar la efectividad de las mismas. Las Tecnologías de la Información y las Comunicaciones (TIC) han tenido un impacto interesante en la dinámica de las empresas del siglo XXI, en este sentido, Las organizaciones exigen que sus procesos administrativos respondan a las necesidades del entorno, por tanto, sus tecnologías tanto blanda como dura deben satisfacer normas de calidad para responder adecuadamente al entorno competitivo al cual se enfrentan, por otra parte, es una preocupación constante de muchos investigadores identificar la forma de evaluar la efectividad de las TIC a nivel empresarial. El presente artículo ilustra los resultados de una investigación orientada a establecer un mecanismo que permita evaluar la efectividad de las TIC utilizadas a nivel empresarial, igualmente, se muestra el marco teórico que rodea el desarrollo de la investigación.

INTRODUCCIÓN

El desarrollo empresarial a nivel mundial, nacional y regional refleja un cambio de paradigmas gracias a la incursión de las Tecnologías de la Información y las Comunicaciones (TIC) en las estructuras funcionales de la organización, esto quiere decir que el avance tecnológico ha modificado los niveles de eficiencia y eficacia en los procesos que tienen que ver con el tratamiento de la información.

Si bien es cierto que las TIC se consideran como herramientas de apoyo para la realización de las actividades administrativas de las organizaciones es importante establecer la necesidad de mantener un procedimiento constante relacionado con la evaluación de la efectividad de las TIC. En este sentido, y después de haber realizado una revisión literaria se estableció que no existe un modelo definido que facilite a las organizaciones evaluar la efectividad de las TIC implementada.

En el presente documento se ilustra un resumen sobre la construcción del modelo en primer lugar, fue fundamental establecer la importancia de las TIC a nivel Colombiano, en segundo lugar, se realizó un análisis sobre las diversas herramientas TIC que utilizan las organizaciones para desarrollar sus procesos administrativos y en tercer lugar, detallar cada característica que debe ser evaluada a través de diversas subcaracterísticas que facilitan la valoración de cada una.

Finalmente, es importante presentar unas conclusiones sobre el trabajo realizado de tal forma que permita puntualizar los aspectos de mayor relevancia en el estudio de la evaluación de la efectividad de las TIC en el contexto empresarial. Así como también de un apartado relacionado con las recomendaciones que se deben considerar para una posterior implementación del modelo en una muestra de empresas preferiblemente pequeñas y medianas donde el concepto de TIC ya se ha insertado hace un tiempo considerable.

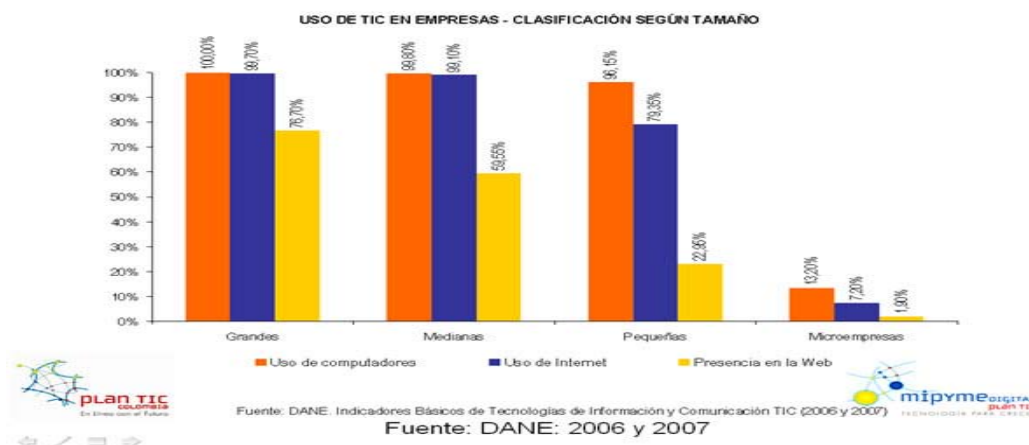

CONTEXTO EMPRESARIAL COLOMBIANO

Según el Ministerio de Tecnologías de la Información y las Comunicaciones, Colombia ocupa el primer lugar entre 33 países de la región, según el ranking de las Naciones Unidas. La Organización de las

Naciones Unidas le ha dado una excelente noticia a Colombia, al revelar esta semana (Enero 14 del 2010) un nuevo reporte mundial de Gobierno Electrónico. Colombia se ubicó como el país más avanzado en América Latina y el Caribe. Pasó del puesto 7 al 1 en la región y del 52 al 31 en el mundo, mejorando en 21 posiciones frente a la medición anterior.

En este sentido, el DANE informa que el uso de las TIC se encuentra entre un 100 y 96% el uso de equipos de cómputo e internet en las grandes, medianas y pequeñas empresas, aunque su presencia en la web todavía no es muy notoria. Es preocupante el caso de las microempresas donde la utilización de computadores e internet y su presencia en la web no supera el 14% (figura 1). Es importante considerar esta información para la planificación de programas que permitan un equilibrio en el uso de TIC en las diversas escalas empresariales.

Figura 1. Uso De Las TIC En Empresas -Clasificación Según Tamaño

Finalmente, es evidente mencionar que las Tecnologías de la Información y las Comunicaciones ya se incluyen en la agenda empresarial, por tanto amerita otorgarle un nivel de importancia y de estudio que permita profundizar en procedimientos que faciliten su utilización en búsqueda del máximo beneficio que estas puedan ofrecer.

Herramientas TIC Utilizadas a Nivel Empresarial

Entre las principales herramientas TIC que más se utilizan a nivel empresarial, se identificaron las ilustradas en la Figura 2.

Dentro del análisis realizado se encontraron ejemplos de cada una de las herramientas TIC utilizadas, además de un inventario de software utilizado para las diversas actividades administrativas que enfrenta la organización actual.

EVALUACION DE LA EFECTIVIDAD DE LAS TIC A NIVEL EMPRESARIAL

La evaluación de la efectividad de las TIC contribuiría a la gestión tecnológica que debe realizar el empresario del siglo XXI considerando las características que tienen las empresas de hoy y la inclusión de la tecnología informática en sus procesos empresariales.

Para la construcción de un modelo que permita evaluar de forma integral la efectividad de las TIC se considero la norma ISO 14598 (1999), la norma propone que el rango de una escala de medida se

constituya por dos contextos satisfacción que involucran: excede los requisitos y rango objetivo e insatisfacción que implica: mínimamente aceptable e inaceptable.

Figura 2. Análisis de herramientas TIC utilizadas a nivel empresarial

Considerando los anteriores parámetros y teniendo en cuenta que las TIC juegan un papel importante en la toma de decisiones de la alta gerencia, se establece en el presente modelo que la efectividad es el resultado de la valoración de tres aspectos fundamentales que son: la eficiencia, la eficacia y la seguridad (figura 3).

Este modelo busca evaluar la efectividad de las TIC de forma integral, por tanto las características en las cuales se fundamenta la valoración son:

Figura 3: Modelo para evaluar la efectividad de las TIC

La eficiencia a nivel administrativo implica la capacidad de obtener los mayores resultados con la mínima inversión (Robbins y Coulter, 2005), es decir en el proceso administrativo se debe optimizar al máximo los recursos de la organización entre los que se destaca las TIC; por tanto, el profesional de la administración debe apreciar que tan eficiente es las TIC de su entorno empresarial.

La eficiencia involucra: la optimización del comportamiento temporal y la utilización de recursos. El primero, se refiere a la proporción de tiempos de respuesta y tiempos de proceso que requiere las TIC para brindar resultados a los usuarios en este caso al entorno organizacional. Para la medición de la eficiencia se tendrá en cuenta los siguientes aspectos:

- Comportamiento temporal: La eficiencia de las TIC involucra el tiempo del proceso desde el momento donde el usuario digita el primer carácter hasta el momento en que se obtiene los resultados necesarios para la toma de decisiones (Weber, 1998). El comportamiento temporal es un aspecto que tiene relación con la proporción de tiempo que utiliza un sistema tecnológico en producir los resultados esperados para la organización, desde el momento de la entrada de datos hasta la salida de información.
- Utilización de los recursos: esto quiere decir que para la medición se debe considerar de cada herramienta informática los requerimientos maquina (hardware) para que esta pueda funcionar en óptimas condiciones, dentro de éstos se identifican: tipo de procesador, cantidad de memoria, espacio de disco duro, etc. por otra parte, el recurso software que necesita como: sistema operativo y programas adicionales indispensables para que la herramienta informática funcione adecuadamente y finalmente, el talento humano se debe evidenciar que capacitación requiere el usuario para estar en condiciones de utilizar la tecnología informática a evaluar.

Desde la perspectiva administrativa la eficacia implica completar las actividades para conseguir las metas de la organización; se define como “hacer las cosas correctas” (Robbins y Coulter, 2005), esto quiere decir que el administrador debe evaluar si las TIC que tiene la organización apoya eficazmente al logro de los objetivos de la empresa. Para la medición de la eficacia se considerarán los siguientes aspectos:

- Nivel de la utilización de las TIC: es decir, es necesario que se estime en cada uno de los procesos administrativos el nivel de utilización de herramientas informáticas como apoyo para la realización de cada uno de ellos, en relación al tiempo y la medida adoptada puede ser: muy frecuente, frecuente y poco frecuente.
- Incremento de la productividad: la medición de este aspecto implica considerar el costo invertido en las TIC y los beneficios obtenidos por la misma; algunos de los beneficios generados de las TIC son subjetivos y no pueden ser cuantificables fácilmente como por ejemplo: el aumento del nivel de credibilidad de la organización, el aumento de innovación, el aumento de clientes. Establecer el incremento de la productividad generado por las TIC permitirá apreciar de forma objetiva la eficacia que ha tenido la misma sobre la organización.

La seguridad hace referencia a un conjunto de métodos y herramientas destinados a proteger la información y por ende los sistemas informáticos ante cualquier amenaza, un proceso en el cual participan además personas (Ramio, 2006); para la valoración de esta actividad se considerará la norma ISO 17799 (2002) y autores como Castillo y otros (2006) donde comentan que la seguridad representa la asociación entre la disponibilidad, confiabilidad e integridad.

- Disponibilidad: Se refiere a la disponibilidad de la información cuando ésta es requerida por el proceso de negocio ahora y en el futuro. También hace referencia a salvaguardar los recursos necesarios y capacidades asociadas (COBIT, 2001), al respecto Rakitin (1997) afirma que la disponibilidad es el grado en el cual las TIC permanece operable sin la presencia de fallos, y por tanto se relaciona con los procesos no interrumpidos del procesamiento de información (Lodensteijn, 2000).
- Confiabilidad: La confiabilidad se refiere a la provisión de información apropiada para los procesos administrativos con el fin de operar la entidad y para ejercer sus responsabilidades de reportes financieros y de cumplimiento. Así mismo, como la protección de información sensible contra divulgaciones no autorizadas (COBIT, 2001). También se puede definir como el conjunto de atributos que respaldan la capacidad del software para mantener un desempeño bajo ciertas condiciones en un período de tiempo (ISO 9126).
- Integridad: La integridad según Alonso (1988) es la condición de suficiencia para cumplir los objetivos. En general, este aspecto se constituye en un control de la satisfacción del usuario como

lo señala González (2001), al afirmar que la integridad se refiere a los resultados fiables, completos, puntuales y exactos de las aplicaciones.

METODOLOGÍA

La investigación desarrollada se fundamenta en efectuar las siguientes actividades: en primer lugar, se efectuó una revisión bibliográfica que permita identificar los antecedentes de la situación de las TIC en el ámbito empresarial a nivel de Colombia. Posteriormente, se establecieron las generalidades de las TIC con el propósito de identificar la terminología que se utiliza a lo largo del proyecto.

A continuación se presenta las aplicaciones de las TIC en el contexto organizacional, especialmente en las áreas funcionales de la empresa como por ejemplo: el direccionamiento estratégico, recursos humanos, mercadeo, contabilidad y finanzas, entre otras. Finalmente, se constituye el modelo para la evaluación de la efectividad de las TIC en el entorno empresarial, considerando los aspectos analizados anteriormente.

CONCLUSIONES

Las exigencias del nuevo usuario de la organización se pueden identificar como optimización de los procesos comerciales, el seguimiento de su actividad mercantil, la eficiencia en el servicio, entre otras; esto le ha implicado a la empresa repensar su estructura e incorporar herramientas que apoyen los procesos de la organización, asumiendo esto como estrategias para conformar una organización de forma competitiva e innovadora, capaz de dar respuesta a las inquietudes y exigencias del cliente del siglo XXI.

La influencia de las tecnologías en el ámbito organizacional ha transformado y seguirá transformando considerablemente la visión estratégica de la organización, esto lleva necesariamente a que las organizaciones realicen cambios relevantes, que en muchas ocasiones van involucrar la misión y visión corporativas.

En el transcurso de la investigación, se ha identificado la posición de la organización frente a la inclusión de las TIC y la importancia que le han brindado para que su relación con la empresa lleve a que los procesos administrativos se desarrollen de forma oportuna y pertinente en función de la empresa.

Si bien es cierto, las organizaciones conscientes del reto de las TIC han invertido grandes sumas de dinero y destinado personal y recursos para hacer de este proceso una estrategia para obtener los mejores resultados; es importante, determinar el grado de efectividad de las TIC en este proceso.

Después del proceso investigativo desarrollado es importante concluir que la evaluación de las TIC permite a la alta gerencia asumir un papel crítico frente a la conveniencia de incluir TIC en ciertos procesos administrativos. En este sentido, es relevante anotar que toda herramienta puede apoyar o entorpecer el desarrollo de una organización por tanto es importante que se analice cuidadosamente y se efectúe una evaluación constante sobre la efectividad de las TIC en los procesos de negocio.

RECOMENDACIONES

El modelo requiere ser implementado para obtener una primera evaluación, y lo más conveniente para este proceso sería realizarla en el sector empresarial de las pequeñas y medianas empresas del departamento del Valle del Cauca, que por razones de presupuesto no fue realizada para esta primera parte de la investigación. De igual modo se propone una segunda fase que permita la validación del modelo con expertos, los cuales podrían ser ingenieros de sistemas o personal encargado de analizar las tecnologías de la información y las comunicaciones que las empresas pretenden adquirir.

RESUMEN

El presente trabajo fue realizado con base en la normatividad mexicana. El objetivo de este estudio es analizar los medios de impugnación en materia tributaria, particularmente el Recurso de Revocación como medio de defensa. Se realizó un estudio descriptivo de tipo documental, a través del cual se llevó a cabo un análisis de las leyes aplicables a este recurso. Se plantearon y analizaron ejemplos en los que se aplican las leyes relativas a los actos que pueden ser impugnados por el contribuyente, incluyendo: los que determinan contribuciones y sus accesorios, niegan la devolución de cantidades a favor del contribuyente, dictan las autoridades aduaneras y aquellos en que las autoridades exijan el pago de créditos fiscales cuando éstos se han extinguido. Con base en el análisis realizado se presentan en este estudio algunas recomendaciones para que los contribuyentes conozcan e interpongan este medio de defensa ante actos administrativos que pongan en riesgo su patrimonio familiar y empresarial.

PALABRAS CLAVE: recurso de revocación, medio de defensa,

INTRODUCCIÓN

En México la utilización de los medios de defensa en materia tributaria cada día toma mayor relevancia. Cuando a un contribuyente la autoridad administrativa en materia fiscal le notifica una sanción, el contribuyente que conoce del acto, una vez que analiza los hechos u omisiones que dan origen al inicio de la facultad de ejercicio de la autoridad, se encuentra ante la posibilidad de escoger una de dos opciones: pagar o inconformarse. Si decide pagar el importe de la sanción, se dará por terminado el acto administrativo. Si el contribuyente se encuentra inconforme con el acto que da origen a la sanción que se le ha notificado, o con la actuación de la autoridad en el procedimiento aplicado en la notificación de la sanción, éste podrá recurrir a la utilización de medios de defensa, como serían: el recurso de revocación, el juicio contencioso administrativo, o a solicitar la protección de las Leyes federales a través del amparo directo, entre otros.

Con frecuencia los empresarios, industriales y profesionistas, que se ven afectados por actos administrativos en materia tributaria, y que no cuentan con una asesoría experta en esta área, no utilizan los medios de defensa establecidos en la ley tal vez por desconocimiento de los mismos. Algunos autores como Saldaña (2004) y Navarrete (2004) han coincidido en cuanto a que cada vez son menos los contribuyentes que utilizan los medios de defensa en materia fiscal por desconocimiento sobre los supuestos procesales básicos para hacer valer sus derechos ante la autoridad. De ahí la importancia de que se realice la presente investigación para brindar información sobre este tema desde una perspectiva práctica que resulte sencilla, clara y orientadora.

En consecuencia el propósito de este estudio es orientar al empresario, al profesionista, al industrial y a cualquier contribuyente que se encuentre en una situación jurídica similar a los ejemplos planteados en este trabajo, en el uso del recurso de revocación como medio de defensa ante un acto administrativo, de una manera que le resulte fácil de comprender y al mismo tiempo orientadora.

REVISIÓN LITERARIA

Para conceptualizar el recurso administrativo de revocación, tomaremos las palabras de algunos autores que lo han definido, así García (2001) define al recurso de revocación como “un mecanismo de defensa administrativo contemplado en el Código Fiscal de la Federación, que tienen los contribuyentes para impugnar las resoluciones dictadas por el Fisco que les causen un agravio en sus derechos.” Por su parte Saldaña (2004) define al recurso de revocación como “un medio de defensa que constituye instancia, y dependerá de las circunstancias especiales para creer conveniente su interposición, sin ser óbice que tal recurso conozca y resuelva la autoridad fiscal.” Paz y Mesta (2004) definen al recurso administrativo de revocación en materia fiscal de la siguiente manera:

es un medio legal de impugnación o defensa, establecido en el Código Fiscal de la Federación, con el que cuentan los particulares que resulten afectados en su esfera jurídica por actos y resoluciones administrativas-fiscales definitivas de la autoridad fiscal y que se tramitan ante la misma a través de un procedimiento administrativo, que tiene por objeto mediante una resolución administrativa revocar o modificar dichos actos o resoluciones y con el fin de reestablecer el orden jurídico violado y sobre todo la legalidad de la actividad administrativa.

En consecuencia podemos decir que el recurso administrativo de revocación es un medio de defensa al cual puede recurrir el particular para hacer valer el estado de derecho, ante un acto de la autoridad administrativa que le causa un perjuicio en sus bienes y en su persona.

El uso de los recursos administrativos en México no es de data reciente, Armienta (2001) ubica su utilización desde tiempos de la Colonia, cuando eran interpuestos ante el Virrey para protegerse de los abusos de la autoridad fiscal. Asimismo se ha encontrado que desde el siglo XIX, ya se presentaban estos medios de defensa contra resoluciones de autoridades administrativas, así lo relata Saldaña (2004) quien señala la presentación del recurso de revisión en los tiempos de la Ordenanza General de Aduanas Marítimas y Fronterizas en el año 1885, contra las resoluciones dictadas por los Administradores de aduanas. También en la Constitución Federal de 1917, este autor observa diversas disposiciones fiscales que consignan recursos administrativos. Saldaña (2004) hace referencia a los antecedentes de los recursos administrativos señalando los siguientes ordenamientos jurídicos que a lo largo del tiempo dieron forma al recurso de revocación, como lo fueron la Ley para la Calificación de las Infracciones a las Leyes Fiscales y la Aplicación de Penas de 1929, el Reglamento de la Ley para la Recaudación de los Impuestos sobre Sueldos, Salarios, Emolumentos, Honorarios, Utilidades, de las Sociedades y Empresas del 21 de febrero de 1924 y la Ley del Impuesto sobre la Renta de 1925. Otro ordenamiento mencionado por el autor que da origen al recurso de revocación es la Ley de Organización del Servicio de Justicia, en materia Fiscal para el Departamento del Distrito Federal en 1929, que preveía por medio de un jurado de revocación las inconformidades de los particulares. Por su parte Carrillo (1973) coincide con Saldaña (2004) al señalar que a partir de 1929 el recurso de revocación tomó interés, considerando que en ese año la Suprema Corte de Justicia planteó la tesis “de que la procedencia del amparo en materia administrativa está condicionada al agotamiento de los recursos o medios de defensa con que el particular cuente para impugnar una decisión que lo agravie”. Sin embargo según Paz y Mesta (2004) en materia fiscal no fue sino hasta 1938 que se incluyó en el artículo 73 del Código Fiscal de la Federación la figura del recurso administrativo en defensa de violaciones cometidas por la autoridad en el procedimiento de notificación.

Actualmente el Código Fiscal Federal en su Título V dedicado a los procedimientos administrativos, específicamente en su artículo 116 establece que “contra los actos administrativos dictados en materia

fiscal federal, se podrá interponer el recurso de revocación”. Asimismo en su artículo 117 se refiere a la procedencia del recurso de revocación diciendo en qué casos el recurso de revocación es aplicable y menciona las siguientes: las resoluciones definitivas dictadas por autoridades fiscales federales que determinen contribuciones, accesorios o aprovechamientos; nieguen la devolución de cantidades que procedan conforme a la ley; dicten las autoridades aduaneras; cualquier resolución de carácter definitivo que cause agravio al particular en materia fiscal; contra actos de autoridad que exijan pago de créditos fiscales; contra el procedimiento administrativo de ejecución, cuando el interés jurídico de terceros se vea afectado, o cuando la autoridad determine el valor de bienes embargados en los casos en que exista discrepancia en cuanto al valor del bien según el contribuyente. El mismo ordenamiento jurídico en su artículo 131 establece que la autoridad fiscal deberá dictar resolución y notificarla al contribuyente en un plazo no mayor de tres meses; sin embargo si el particular presenta pruebas en el transcurso del primer mes de interpuesto el recurso, el plazo para que la autoridad emita su dictamen será ampliado hasta cinco meses, de acuerdo al artículo 123, último párrafo de la ley en comento.

De acuerdo con Sánchez (2005) en la elaboración del recurso de revocación se deben reunir los siguientes requisitos: debe presentarse por escrito; debe llevar el nombre, denominación o razón social, domicilio del contribuyente y el registro federal de causantes; deberá señalar la autoridad ante la cual se interpone el recurso y el motivo por el cual se hace la promoción; el particular deberá señalar domicilio para oír y recibir notificaciones por parte de la autoridad y en su caso manifestar el nombre de la persona a quien se autoriza para que las reciba; deberá firmar el escrito mediante el cual se interpone el recurso, en caso de persona moral deberá firmarlo el representante legal y en caso de no saber firmar se debe imprimir la huella digital, debe indicar el acto que impugna; los agravios causados al particular y las pruebas de los hechos controvertidos.

El artículo 123 del Código Fiscal de la Federación señala que en caso de que el promovente no cumpla con los requisitos establecidos en el artículo 121 y 122 del mismo ordenamiento jurídico para la presentación del recurso de revocación, se requerirá al particular para que los presente dentro del término de 5 días, y de no hacerlo se tendrá por no interpuesto el recurso.

Cabe señalar que la interposición del recurso de revocación es un medio de defensa optativo para el particular, pues este puede interponer de manera directa un juicio de nulidad ante el Tribunal Federal de Justicia Fiscal y Administrativa.

METODOLOGÍA

En el desarrollo de este trabajo de investigación se analizó en primer término la normatividad mexicana, con el propósito de analizar las disposiciones fiscales en relación a los medios de defensa que pueden ser interpuestos por los contribuyentes. Este trabajo es de tipo descriptivo documental. Hecha la revisión de las disposiciones fiscales se procedió al planteamiento de ejemplos que pueden dar origen a que el particular utilice medios de defensa. Después de presentar de manera específica los ejemplos en los que se puede interponer el recurso de revocación se procedió a hacer una serie de recomendaciones considerando este recurso como un medio de defensa para evitar una afectación en los recursos de la empresa. Los resultados obtenidos a través del análisis y presentación de ejemplos permitieron plantear una serie de recomendaciones.

RESULTADOS

Se plantean a continuación una serie de ejemplos en los que se aplican las leyes relativas a los actos que pueden ser impugnados por el contribuyente a través del recurso de revocación. En primer término se considera el caso de algunos actos que determinan contribuciones y sus accesorios, el cual podría tener su

origen a partir de la revisión por parte de la autoridad fiscal de los registros contables a un contribuyente. Supongamos que en esta revisión la autoridad considera no deducibles algunas deducciones realizadas por el empresario y esto origina que la utilidad fiscal se incremente, por consecuencia la base para determinar el impuesto resulta mayor, de tal forma que la autoridad determina una diferencia de impuesto y accesorios a cargo del contribuyente. En este caso el recurso de revocación sería aplicable si el contribuyente considera que a la autoridad no le asiste la razón al modificar la base del cálculo de impuesto. El particular puede presentar el recurso de revocación alegando que sus deducciones registradas sí cumplen con los requisitos de ley.

El siguiente ejemplo hace referencia al caso en que la autoridad niega la devolución de cantidades a favor del contribuyente. Supongamos por ejemplo que el empresario solicitó en devolución un saldo a favor de Impuesto al Valor Agregado que resulta luego de haber realizado operaciones con sus clientes y proveedores; sin embargo la autoridad niega la devolución al promovente, en virtud de que según su base de control, uno de los proveedores no cumplió con sus obligaciones fiscales. Por tal motivo el empresario agraviado tiene la opción de interponer el recurso administrativo de revocación como primer instancia, presentando la documentación probatoria de que él realizó en forma correcta la operación con el proveedor aludido.

Un tercer ejemplo de la interposición del recurso de revocación lo podemos observar en los casos en que la autoridad aduanera finca un crédito fiscal. Supongamos como ejemplo el caso de un particular que vive en la franja fronteriza de México con Estados Unidos, quien conduce un automóvil propiedad de un familiar, el automóvil ostenta placas del segundo país en mención. Al ser detenido por un verificador fiscal de la entidad quien revisa la legal estancia de los vehículos en México y al encontrar éste que el vehículo en cuestión no está debidamente importado, procede a su incautación, fincando posteriormente un crédito fiscal por el valor del vehículo y derechos de importación. En este caso el particular puede interponer el recurso de revocación alegando la falta de competencia del verificador para iniciar un juicio administrativo que de como resultado la incautación del vehículo, el cual sólo puede ser iniciado por la autoridad competente.

El cuarto ejemplo se refiere a aquellos casos en que las autoridades exijan el pago de créditos fiscales cuando éstos se han extinguido. Supongamos un crédito fiscal el cual la autoridad notificó a través de un tercero hace más de cinco años. Posteriormente regresa la autoridad a exigir el pago del monto más sus accesorios. En este caso el particular puede interponer un recurso de revocación alegando desconocimiento del crédito fiscal y la prescripción de la facultad de la autoridad para exigirlo.

CONCLUSIONES

Al término de la presente investigación documental se plantean las siguientes conclusiones:

PRIMERA.- El recurso de revocación en el ámbito jurídico mexicano juega un papel muy importante ya que es la primera instancia a través de la cual el particular puede hacer valer sus derechos ante la autoridad administrativa y solicitar la cancelación de créditos fiscales que pongan en riesgo su patrimonio empresarial y familiar.

SEGUNDA.- El recurso de revocación es un medio de defensa fácil de redactar, el cual puede ser elaborado sin tecnicismos complejos e interpuesto por el propio particular.

TERCERA.- El recurso de revocación es un medio de defensa económicamente accesible ya que no es indispensable la contratación de un abogado para interponerlo.

CUARTA.- El recurso de revocación permite un acercamiento del particular con la autoridad, el cual le brinda la oportunidad de conocer el criterio de ésta. La información obtenida a través de la resolución emitida respecto del crédito impugnado puede resultar de gran utilidad en la promoción del siguiente medio de defensa ante una nueva instancia administrativa.

QUINTA.- El recurso de revocación no implica el desplazamiento del particular a otras localidades, ya que lo puede presentar en la misma ciudad donde vive y ante la autoridad de la propia localidad.

RESUMEN

Este artículo ofrece una visión panorámica de la realidad de los factores claves en las exportaciones del sector del mueble. Ubicado en un escenario de escasas barreras de entrada y anclado en la favorable coyuntura económica del pasado más reciente, esta industria ha experimentado un rápido crecimiento que exige con premura un replanteamiento de las estrategias de actuación basado en la orientación hacia otros mercado. Paralelamente, en la desfavorable coyuntura actual, ante la debilidad del mercado interior, cada vez son más las empresas que asientan como estrategia el comercio exterior para asegurar su subsistencia. De forma considerable, el efecto arrastre de la crisis económica y de la construcción ha influido la comercialización del mueble de modo muy negativo. This article offers a panoramic approach to the reality and the exports trends of furniture industry. Located in a stage of short red tapes and situated in the good economic situation of the past few years, the furniture industry has remarkably increased his development, this fact demands a quickly change of strategies focus on international trade. Regarding this matter, in the currently worrying economic situation, more and more companies try to remain in market by business globalization. Certainly, consequences of financial crisis and the halt in construction have affected the furniture exportations in a negative way.

MODELACIÓN DINÁMICA NO LINEAL DEL SISTEMA DE BOMBEO DE GAS L.P EN LA INDUSTRIA PETROLÉRA MEXICANA

Alejandra Torres López, Instituto Tecnológico de Apizaco
Tomás Morales Acoltzi, Universidad Nacional Autónoma de México

RESUMEN

El gas licuado de petróleo (gas L.P.) en México, es bombeado a cada una de las 5 estaciones establecidas en la red del ducto y hacerlo llegar a cada terminal y posteriormente a los clientes. Una de las formas de llevar el control de este sistema es mediante el registro manual de 28 variables que establece la empresa efectuado cada dos horas durante 365 días, lo que origina una gran cantidad de información. Este contexto dio la oportunidad de desarrollar una investigación que consistió en analizar el control del sistema de bombeo de gas L.P. bajo el enfoque de la teoría de los sistemas dinámicos no-lineales, determinando la dimensión del atractor y límite de predictibilidad de cada una de sus variables. Esto puede beneficiar a la empresa, en el sentido de que tal vez no sea necesario monitorear todas las variables, representando un ahorro en costos, optimización de horas-hombre, disminución de enfermedades laborales, entre otros, así como el de trabajar con el sistema de calidad, para que éste trabaje para el hombre. Este enfoque permite ser una alternativa en el ámbito de la administración del trabajo porque se obtienen las variables de mayor complejidad dentro de la empresa.

INTRODUCCIÓN

La expresión *caos determinista* puede parecer una contradicción en los términos enfrentados; caos y desorden frente a determinismo y orden. Con esto quiere darse a entender que la pérdida de la información que caracteriza al caos, no es debida a circunstancias más o menos aleatorias. La representación y modelación de estos sistemas complejos puede ser complicada, sin embargo, su tratamiento no es imposible y abre una interesante perspectiva a la investigación científica en todos los campos. En las últimas décadas la aplicación de la Teoría de los Sistemas Dinámicos No-Lineales se ha extendido a diversas áreas del conocimiento como en: ciencias naturales, ciencias sociales, antropología, sociología, psicología, medicina, administración, economía, música, ingeniería, entre otras (Stewart, 1991:189-191)

REVISIÓN LITERARIA

En el área de la administración y economía, por ejemplo, en el artículo de “Las Mariposas Revolotean por la Administración Pública”, (Vargas, 2000), analiza que en sistemas organizacionales complicados, donde interactúan múltiples variables, el identificar el punto de apalancamiento óptimo, es más que simplemente encontrar la variable dominante. Las mejores estrategias para cambios organizacionales pueden requerir la utilización de múltiples palancas, con la esperanza de que una o varias de ellas produzcan el resultado esperado. Esta última limitación no implica que la teoría del caos no pueda ser aplicada a la administración pública, sencillamente demuestra que el proceso tendiente a aumentar la comprensión de la administración pública desde la teoría del caos aún está en evolución. De igual forma revela la complejidad del mundo de la administración pública, de las organizaciones como tal, y de los posibles efectos de las decisiones públicas sobre la sociedad.

La Organización de los Estados Americanos (Guadarrama, 1997) analiza la “Formación de Recursos Humanos en Biotecnología en América Latina y el Caribe”, apoyado en la teoría de los fractales.

El primer apartado, contempla la identificación de las cadenas productivas con potencial biotecnológico en América Latina y el Caribe y sus eslabones económicos susceptibles de innovaciones biotecnológicas, para caracterizar el fractal tecnológico con el que operan. Estas interrelaciones o encadenamientos productivos y comerciales, están determinados por las tecnologías utilizadas en los eslabones o sectores que conforman las cadenas productivas.

Los economistas han intentado estudiar y comprender los movimientos de precios en la bolsa de valores, los cuáles pensaban que estos movimientos no seguían una ley determinada, sino que tenían un comportamiento aleatorio y que se podían reflejar en una curva gaussiana, pero no tenían éxito, debido a que los precios de diferentes acciones, no se ajustan a la distribución normal. Fue Mandelbrot, el primero que vio los valores de los precios del algodón desde una perspectiva no lineal. Hizo la suposición de cambios discontinuos en los precios, para llegar a la predicción de una distribución de estos precios. Esto lo representó mediante una gráfica, en donde el eje vertical, se tenía la cantidad relacionada con la variación de precios, y en el eje horizontal los precios. Obtuvo distintos conjuntos de puntos, que correspondían a escalas de tiempo muy diferentes (días, meses, años); en las cuales no se observaban diferencias entre las escalas temporales, es decir, las fluctuaciones a lo largo de estas diferentes escalas de tiempo, son similares, o sea, la estructura de los precios es fractal. Doyne Farmer, Norman Packard y James McGill en Nuevo México, han llevado este análisis de la economía mucho más adelante, considerando que la dinámica que rige los fenómenos económicos es no lineal. Un efecto de ésta, es que una causa pequeña puede ejercer un gran efecto (Braun, 1996:146-148). Actualmente, los economistas están utilizando los wavelets para predecir los precios del petróleo crudo. Mediante este método, ellos esperan obtener un pronóstico para hacer más eficiente este mercado (Shahriar, 2005).

Problemática A Resolver

Actualmente la empresa petrolera mexicana, invierte fuertemente en la implementación de Sistemas de Calidad para sus productos y servicios, con el objeto de satisfacer los requerimientos establecidos por sus clientes, así como el ampliar su mercado nacional e internacional, cumpliendo con estándares de seguridad y protección ambiental.

De acuerdo a la opinión vertida por personal directivo de la empresa, se pudo conocer que para cumplir con los procesos de Aseguramiento y Certificación de Calidad, los operarios deben registrar un sinnúmero de variables (alrededor de cien), originándose un gran volumen de datos, los cuales son archivados y no fácilmente pueden ser analizados para prevenir incidentes y/o accidentes. Como resultado de todo este esfuerzo, se observa que no hay una satisfacción plena por parte de los altos directivos de la empresa, debido a que el éxito esperado no es en forma permanente, ya que en gran parte, solo se trabaja para cumplir con los requerimientos del Sistema de Calidad mientras dura la auditoria o evaluación, y posteriormente se presenta un periodo de relajación del sistema, originando que se pierda la inercia del mismo. Bajo este contexto, “el operario termina trabajando para satisfacer el sistema y no con el sistema, como es su finalidad.”

Este intercambio de información, permitió desarrollar un trabajo de investigación con el sistema de bombeo del gas L.P., ya que para su control, el operario debe registrar 28 variables cada dos horas durante 365 días, lo que origina 122,640 datos/año, que en muchas ocasiones no pueden ser analizados en forma conjunta por ejemplo cuando se presenta algún incidente, o se quiere conocer como se comporta el sistema, debido al gran trabajo que implica al hacerlo de manera tradicional, como pueden ser con técnicas clásicas de la estadística. Ante esto, el enfoque de los sistemas dinámicos no-lineales, nos permite determinar, de que al menos con una sola variable es posible conocer la dinámica del sistema a través de sus invariantes como son la dimensión del atractor y el límite de predictibilidad asociada a cada variable.

La investigación permitió caracterizar las variables del sistema de bombeo de gas L.P. con la finalidad de determinar cuáles son las que contienen mayor información del sistema, en que dimensión viven y cuál es su límite de predictibilidad, es decir, se evaluará el grado de complejidad del sistema, el cuál aparentemente es elevado debido al número de variables que interactúan.

Cabe mencionar que el trabajar con el enfoque de la Teoría de los Sistemas Dinámicos No-Lineales no se orienta a desplazar los métodos tradicionales de análisis, ni tampoco los Sistemas de Calidad, sólo pretendemos mostrar la diversidad de su aplicación, ya que son un complemento de lo que nos ofrece el enfoque lineal siendo otra alternativa para analizar y administrar el comportamiento de los procesos industriales. Como resultado de la aplicación de los conceptos de la teoría del caos, se tendrá una simplificación del número de variables, representando beneficios socio-económicos y tecnológicos para la empresa. La hipótesis del trabajo fue “con una sola variable registrada, es posible conocer la dinámica del sistema de bombeo de gas L.P., a través de sus invariantes como son la dimensión del atractor y el límite de predictibilidad asociada a cada variable”.

METODOLOGÍA

La metodología consistió en estudiar las características de los sistemas dinámicos no-lineales (disipativos); analizar la información de las variables del sistema en estudio, para detectar si hay faltantes de registro y cuáles fueron las posibles causas de esto, así como el obtener el periodo de funcionamiento para la formación del banco de datos; seleccionar una serie de tiempo de una misma bomba del sistema en estudio que contenga al menos 512 datos sin interrupción de operación; caracterizar las variables del control del sistema de bombeo de gas L.P., esto se hizo con métodos lineales y no lineales. El procesamiento de los datos se realizó mediante el apoyo de softwares: Number Cruncher Statistical System-2000 (NCSS-2000), paquete estadístico STATPACK, y el Time Series Analysis (TISEAN); analizar los resultados y obtener las conclusiones del trabajo.

En la investigación se trabajaron con métodos lineales y no-lineales para caracterizar las variables elegidas del sistema a analizar, comparar los respectivos resultados y evaluar la funcionalidad de estos métodos. El Impacto socio-económico del análisis del sistema de bombeo de gas L.P. es de suma importancia, debido a que México tiene solo un ducto Lpg para llevar el producto a las estaciones de bombeo establecidas en el país, por lo que su control es básico, ya que tiene que evitarse pérdidas financieras a la empresa petrolera mexicana, a sus clientes, y el tener un impacto negativo en el mercado. El gas L.P. es bombeado a cada una de las cinco estaciones, y todas cuentan con la misma infraestructura. El registro de información de cada variable del sistema se obtuvo del reporte diario de operación de la empresa, del período 1º Enero/ 02 al 24/Marzo/04.

Se determinaron dos series de tiempo debido a que se tienen dos bombas trabajando: la número 71 es la principal y la 72 se utiliza como reemplazo. Se realizaron las gráficas de puntos de cada una de las variables para evaluar su comportamiento; esto permitió determinar el trabajar con sólo 20 variables ya que fueron las que presentaban mayor variabilidad. Posteriormente se experimentó con cada variable mediante métodos lineales y no lineales.

Los experimentos que se efectuaron con el enfoque lineal y no lineal fueron:

Métodos lineales:

- Análisis de comportamiento estacionario.
- Espectro de potencia.
 - ⇒ Análisis de armónicos.
 - ⇒ Método de wavelet (ondículas).

- Determinación de la τ mediante autocorrelación.

Métodos No Lineales:

- Determinación de la τ mediante el análisis de información mutua.
- Límite de predictibilidad.
- Dimensión del atractor.

Tabla 1. Variables registradas del Reporte Diario de Operación.

Código	Variable	Unidad de Medida
V-1	Gas combustible	Lbs/pul2
V-2	Cabezal de combustible	Lbs/pul2
V-3	Apertura de válvula de combustible (0) (Actuador)	
V-4	Presión de descarga comprimido	Lbs/pul2
V-5	Quemador	Lbs/pul2
V-6	Aceite bomba United	Lbs/pul2
V-7	Presión aceite caja engranes	Lbs/pul2
V-8	Cojinetes calientes	Lbs/pul2
V-9	Dif. Filtro admisión aire	Pulg. Agua
V-10	Nivel aceite lubricante bastidor	%
V-11	Temperatura aceite lubricante	oC.
V-12	Temperatura de bomba- par 1	oC.
V-13	Temperatura de bomba- par 2	oC.
V-14	Temperatura de bomba- par 3	oC.
V-15	Temperatura de bomba- par 4	oC.
V-16	Temperatura de bomba- par 5	oC.
V-17	Temperatura de bomba- par 6	oC.
V-18	Temperatura de bomba- par 7	oC.
V-19	Temperatura de bomba- par 8	oC.
V-20	Promedio	oC.
V-21	Temperatura opcional maquina	oC.
V-22	Velocidad del G.G.	%
V-23	Velocidad de T.P.	%
V-24	Presión de succión	Kg/cm2
V-25	Presión de descarga	Kg/cm2
V-26	Bombeo instantáneo	Bis/hr
V-27	Voltaje de C.F.E.	
V-28	Presión en gasoducto	Kg/cm2

Esta tabla presenta la codificación de cada variable que es registrada manualmente, así como las unidades en que se miden a cada una de ellas.

Tabla 2. Series de tiempo de la bomba 71 y 72 obtenidas en el período especificado.

Bomba	Periodo	No. de Días	Total de datos registrados
71	24 /Noviembre/ 03 al 11 /Enero/ 04	49	16,449
72	27/ Mayo / 03 al 15 / Agosto / 03	81	25,144

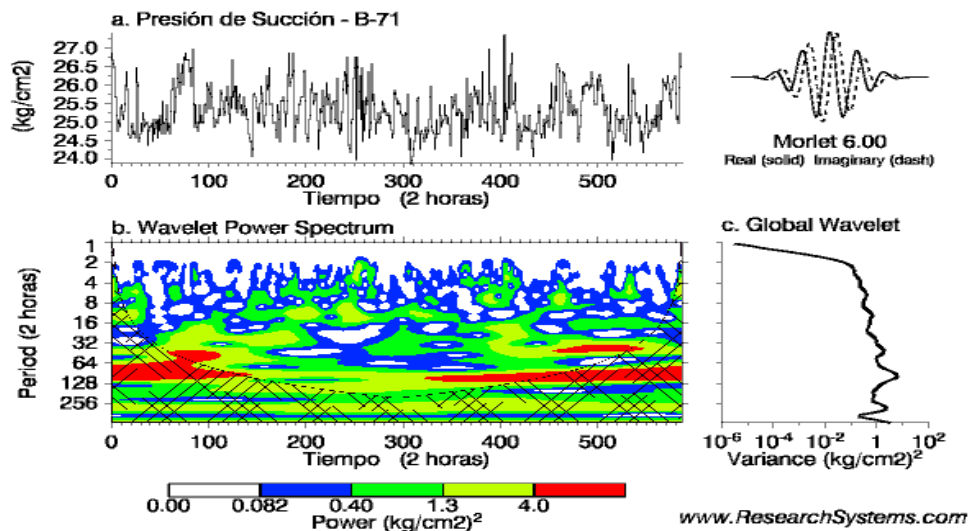

Esta tabla presenta la magnitud del banco de datos con que se trabajo para los análisis correspondientes .
Fuente. Elaboración de autor.

RESULTADOS

Los resultados de las pruebas bilaterales t-Student, dependen de la ventana de datos que se analice. Lo que infiere en el cambio de los criterios de decisión, puede deberse en parte al grado de complejidad que se presenta a lo largo de cada serie de tiempo. También se tiene un efecto de subjetividad, debido a la habilidad del muestreo. El análisis de ondículas de cada variable y series de tiempo visualiza al espectro de potencia en el dominio de tiempo/frecuencia y permiten identificar las frecuencias activas a lo largo del tiempo, así como la presencia de un comportamiento estacionario.

Por ejemplo en la figura. 1, indica que hubo mayor actividad en esta última serie, en el intervalo de tiempo 0 a 150 y de 350 a 588, y en un período de 40 a 128, parte de esta área de frecuencias activas, se localiza por encima y dentro del cono de influencia.

Figura 1. Espectro de potencia en el dominio tiempo-frecuencia de Presión de Succión de la bomba 71.

Esta figura indica que no hay presencia de un comportamiento estacionario en toda la serie de tiempo.

Fuente. Elaboración de autor.

Tabla 3. Resultados de la ubicación del 1^{er} mínimo local obtenido por coeficiente de autocorrelación e información mutua de las series de tiempo B-71 y B-72.

Código	Variable	Valor de τ 1er. mínimo local			
		Coeficiente de autocorrelación		Información mutua	
		B-71	B-72	B-71	B-72
V-3	Apertura de válvula de combustible	2	3	7	8
V-4	Presión de descarga comprimido	17	3	8	14
V-6	Aceite bomba United	8	3	3	3
V-7	Presión aceite caja engranes	3	3	3	3
V-8	Cojinetes calientes	2	2	3	3
V-11	Temperatura aceite lubricante	4	4	3	3
V-12	Temperatura de bomba- par 1	7	5	4	4
V-13	Temperatura de bomba- par 2	4	5	4	4
V-14	Temperatura de bomba- par 3	4	20	4	9
V-15	Temperatura de bomba- par 4	4	20	4	3
V-16	Temperatura de bomba- par 5	4	2	4	3
V-17	Temperatura de bomba- par 6	4	5	4	3
V-18	Temperatura de bomba- par 7	4	5	4	4
V-19	Temperatura de bomba- par 8	4	4	4	4
V-20	Promedio	4	4	5	3
V-21	Temperatura opcional maquina	7	2	6	6
V-24	Presión de succión	6	3	4	3
V-25	Presión de descarga	4	4	8	5
V-26	Bombeo instantáneo	20	2	9	16
V-27	Voltaje de C.F.E.	2	4	7	4

En la tabla se observa que con el método no lineal (información mutua) hay mayor consistencia en la ubicación del primer mínimo local con respecto al método lineal (autocorrelación).

Fuente. Elaboración de autor.

El límite de predictibilidad aunado a la dimensión del atractor, va ha permitir determinar la dinámica del sistema, que es lo que se establece en la hipótesis de nuestra la investigación. Para la obtención del límite

de predictibilidad de cada variable, primero se calculó el máximo exponente de Lyapunov, donde la variable V-12 a V-20 son de un carácter menos dinámico, debido a que casi no cambia el valor del exponente de Lyapunov, en contraste con las variables de V-24 a la V-26 que son más dinámicas. Por lo consiguiente, a un mayor valor del exponente de Lyapunov, corresponderá un menor límite de predictibilidad. Ante la determinación de estos valores, *¿Qué representa el límite de predictibilidad de cada variable?* Representa la máxima longitud para predecir el comportamiento a partir de t_0 , mas allá de ese período no se puede predecir su comportamiento.

Por ejemplo la variable de Bombeo Instantáneo (V-26) de la serie de tiempo B-72, su límite de predictibilidad, es de 0.0568 (método Kantz) y 0.0044 (método Rosenstein), tendiente a un carácter finito, porque su límite es menor a 1, haciendo que se tenga poca predictibilidad. Así por ejemplo si se analiza el límite de predictibilidad de 14.9254, que corresponde a la variable de Presión de Succión (V-24) de la serie B-72, representa 14 puntos a partir de t_0 para predecir su comportamiento, lo que equivale a 28 horas, ya que cada punto corresponde a un dato registrado cada dos horas. Con respecto a la dimensión del atractor los resultados de las series B-71 y B-72 de las variables que convergen, así como la dimensión del atractor, y el valor de la dimensión Embedding se muestran a continuación.

Tabla 4 Dimensión de información de las series de tiempo B-71 y B-72 de aquellas variables que convergen.

Variable	Serie de tiempo	Valor del punto de convergencia = Dimensión del atractor (d)	Valor de la dimensión Embedding (m) $m=2d+1$
V-7	B-71	0.2520	3
V-27	B-71	0.00526	3
V-14	B-72	0.02269	3
V-25	B-72	0.5762	3
V-26	B-72	0.00064	3

La tabla presenta las variables que convergieron de ambas series, y se observa que es una valor fraccionario menor a 1, por lo que es un fractal. Fuente. Elaboración de autor.

Se observa que el valor de convergencia de las variables es menor a 1, lo que no representa muchos grados de libertad; por lo que la dimensión del atractor (dimensión de información) de las respectivas variables de las series de tiempo es 1, permaneciendo invariantes sus características. El valor de embedding indica que para la reconstrucción del espacio fase se requiere tres variables.

CONCLUSIONES.

Las serie de tiempo B-71 y B-72 presentan un comportamiento fractal, debido a que siempre se obtuvo el mismo valor de τ en el análisis de información mutua efectuado a las diferentes longitudes de las series estudiadas. También se pudo evaluar que con menos de 512 datos aún se puede determinar el delay, cuyo procedimiento se realizó mediante el coeficiente de autocorrelación, resultando ser menos consistente que los obtenidos mediante información mutua, el cuál presenta una consistencia entre las variables analizadas.

El límite de predictibilidad en general obtenido de las series de tiempo B-71 y B-72 tienden a un carácter finito, es decir, tienen poca predictibilidad, aunque en la primera de estas series, el 30% de las variables presentan un mayor límite de predictibilidad, lo que se traduce como mayor variabilidad y grados de libertad con respecto a la segunda serie. De las 20 variables analizadas de cada serie de tiempo, resultó

que la de Bombeo Instantáneo es la más estable en el sistema, porque su límite de predictibilidad es menor a 1.

La dimensión del atractor determinada por las variables analizadas, nos permite concluir que nuestro sistema estudiado vive en un espacio geométrico de valor 1, es decir, el objeto geométrico que representa a nuestras series analizadas tiene un valor de 1. Por consiguiente el valor de la dimensión de Embedding es 3, obtenido de aplicar $2d+1$, esto significa que el espacio fase estará conformado por tres variables.

Después de haber realizado una comparación entre métodos lineales y no lineales, estos últimos describen de mejor manera los datos, lo que significa que nuestras series de tiempo seleccionadas *no* tienen un alto grado de complejidad o no linealidad. Cabe aclarar que la hipótesis de la investigación que se aplicó, también fue que “*debería haber diferencia entre los métodos lineales y no lineales*”, de no ser así, que es una opción posible, entonces nuestro sistema sería casi lineal.

PERCEPCIÓN DE LA CALIDAD DE SERVICIO DE LOS USUARIOS DE LOS PROGRAMAS SOCIALES EN SALUD: CASO CENTROS ASISTENCIALES DEL ESTADO ZULIA- VENEZUELA

Rubén Araujo, Universidad del Zulia -Venezuela
Caterina Clemenza, Universidad del Zulia-Venezuela
Elizabeth Castro, Universidad del Zulia-Venezuela
Euclides Torres, Universidad del Zulia-Venezuela

RESUMEN

La ponencia tiene como propósito conocer la percepción de los usuarios de los programas sociales en salud, en cuanto a la calidad de servicio prestada por los Centros de Diagnóstico Integral (CDI) administrados por el Ejecutivo Nacional y la Red de Centros Ambulatorios pertenecientes a la Gobernación del estado Zulia. Las unidades de observación fueron los CDI y los Ambulatorios ubicados en la ciudad de Maracaibo. La investigación es descriptiva con diseño no experimental, y de campo. Se elaboró un instrumento tipo cuestionario aplicado a la muestra de 120 usuarios, seleccionados intencionalmente. Los resultados evidencian como los usuarios reaccionan acercándose o evadiendo el ambiente donde se presta el servicio, por lo que entenderlos se convierte en una estrategia para solventar los inconvenientes que atentan contra el servicio. El servicio recibido en los centros asistenciales es el resultado de una cadena interrelacionada de éstos, donde no sólo las evidencias físicas son evaluadas, sino además su carácter intangible. Se concluye que la percepción del servicio es buena, basándose en las dimensiones Tangibles, Seguridad; Fiabilidad, Responsabilidad y Empatía. Sin embargo, la existencia de ciertas deficiencias en el desempeño del servicio deben ser atendidas de inmediato por las administraciones regionales y nacionales.

PALABRAS CLAVE: calidad de servicio, satisfacción de los usuarios, necesidades, percepción, sector salud

DISEÑO DE PROPUESTA PARA MEDIR LOS NIVELES DE FLEXIBILIDAD LABORAL EN LA INDUSTRIA MANUFACTURERA DE MÉXICO

Manuel Alejandro Ibarra Cisneros, Universidad Autónoma de Baja California

Lourdes Alicia González Torres, Universidad Autónoma de Baja California

Raúl González Núñez, Universidad Autónoma de Baja California

ABSTRACT

Uno de los mecanismos que permiten un mayor grado de competitividad tanto a nivel empresarial como a escala nacional e internacional se relaciona con el uso eficiente del capital humano y sus costos. Las legislaciones laborales son el marco institucional de referencia por el cual las empresas pueden hacer uso de diversos mecanismos para maximizar los beneficios derivados del uso del personal en una empresa. Sin embargo, en la mayoría de los países de América Latina no existen datos que permitan ni identificar ni cuantificar en qué medida se utilizan los mecanismos de flexibilidad laboral ni mucho menos existen encuestas a nivel nacional que lo lleven a cabo con excepción de Chile. La presente propuesta de proyecto de investigación tiene por objetivo diseñar una encuesta que facilite identificar los niveles de flexibilidad laboral que se implementan en la industria manufacturera de cualquier ciudad del país, además, busca determinar qué aspectos de la flexibilidad laboral externa, interna o salarial es más utilizado y cuáles son las causas de su uso. Adicionalmente, la encuesta busca generar una serie de datos que permita analizar en qué medida la legislación laboral permite el uso adecuado de la fuerza de trabajo. Los resultados permitirán generar información que aun no existe en la región de Baja California, México; y con los cuales se puede proponer un cambio en ciertos aspectos de la legislación laboral mexicana para fomentar de esta manera la competitividad del país mediante la eficiencia en el uso del capital humano.

PALABRAS CLAVE: flexibilidad laboral, rigidez, encuesta, indicadores, industria manufacturera.

INTRODUCCIÓN

La flexibilidad laboral como estrategia de competitividad empresarial ha sido utilizada de manera importante en diversas economías desde la década de los años ochenta, primero aplicada en las sociedades más desarrolladas para luego ser permeada a escala global con mayor o menor intensidad. Una parte importante de la literatura existente sobre esta temática señala que una organización que cuente con niveles adecuados de flexibilidad laboral presenta mayores oportunidades de aprovechar a su capital humano, esto al maximizar sus habilidades, capacidades y estar en constante aprendizaje de diversas actividades dentro de la organización. Palacio y Álvarez (2004), señalan que la condición de flexibilidad en el mercado de trabajo se puede definir como la capacidad de poder realizar, con escasas o casi nulas restricciones normativas, cambios en la cantidad, estructura, funciones y/o coste del factor trabajo utilizado en el proceso productivo. Se trata de facilitar adaptaciones relativamente rápidas del empleo y los salarios frente a alteraciones coyunturales o estructurales de la economía.

El surgimiento de la flexibilidad laboral puede ser explicado desde diversas vertientes; la primera de ellas, hace referencia al marco institucional del mercado de trabajo (Chávez, 2001). Numerosos estudios sostienen que durante la década de los años cincuenta y sesenta, se desarrolló una considerable expansión de los beneficios empresariales como consecuencia de un sistema económico y productivo que logró su maximización. Esto permitió que los Estados realizaran una serie de cambios institucionales con el objetivo de crear un adecuado marco de protección tanto laboral como social. La protección contra el despido injustificado, el desarrollo del seguro por desempleo y otro tipo de compensaciones; así como de

los salarios reales que experimentaron un incremento durante dos décadas. Este tipo de políticas gubernamentales de carácter social han sido consideradas por los enfoques liberales como las precursoras de una serie de rigideces sobre el mercado de trabajo, al igual que del fortalecimiento del sindicalismo a escala mundial y de la contracción de los beneficios de las empresas.

La segunda vertiente de ideas, señala que la flexibilidad es el resultado de cambios en el contexto económico general. Argumentan que las economías fuertemente reguladas por políticas orientadas al mercado interno, el elevado proteccionismo a las empresas nacionales, políticas de gasto público como mecanismo de creación de empleo a costa de un excesivo endeudamiento, y el alto número de empresas de carácter estatal si bien, creaban mucho empleo, resultaron ser altamente ineficientes. Todas estas medidas que, al principio fueron parte del éxito económico y social de los países durante más de dos décadas, resultaron ser los propios causantes de su declive. La solución planteada fue, de nuevo, el cambio de modelo económico hacia el aumento de la competitividad y la apertura económica.

La tercera explicación, establece que la flexibilidad surge como producto de los cambios en el sistema de producción de tipo fordista, el cual tuvo que transformarse ante los intensos cambios manifestados. Las necesidades y gustos de los consumidores experimentaron un cambio, pasando de los productos iguales o estandarizados a la fabricación de productos diferenciados; a su vez, los procesos tuvieron que adaptarse a las nuevas especificaciones y pasar de ser un sistema rígido a uno altamente flexible.

Por último, para otras corrientes recientes, su interés en la flexibilidad se relaciona con la necesidad en establecer medidas que logren acabar con todas aquellas rigideces que existen a nivel micro y macroeconómico en las relaciones laborales. Nickell (2003) y Nunziata (2003) comparten la idea de que la existencia de instituciones son un factor determinante para crear, o bien, desincentivar el empleo en una economía determinada. Así como existe un amplio debate sobre el origen y repercusiones que trae la implementación de la flexibilidad laboral sobre el mercado de trabajo, existe también una intensa discusión sobre cómo se estructura ésta. Entre las diversas tipologías que se han desarrollado, la más habitual hace referencia en dividir a la flexibilidad laboral en externa (numérica), interna (funcional) y salarial; de esta manera se logra identificar de forma más específica que mecanismos se utilizan tanto a escala macroeconómica como microeconómica.

ANTECEDENTES

El análisis de la flexibilidad laboral en México comienza a desarrollarse de manera relevante desde principios de la década de los años noventa cuando el país se encontraba por incursionar de manera profunda en la apertura económica a raíz de la negociación y firma del Tratado de Libre Comercio con América del Norte. En esta fase, diversos estudios se enfocaban en analizar las repercusiones que traía consigo para el sector obrero –sobre las condiciones de vida y de trabajo- la puesta en marcha de la reconversión industrial impulsada por Miguel de la Madrid desde mediados de la década de los ochenta y altamente aprovechada por Carlos Salinas de Gortari que ante la entrada de empresas trasnacionales al país, la eliminación de las barreras al comercio internacional y la privatización –incluyendo principalmente el ingreso de la industria maquiladora de exportación- los contratos colectivos de trabajo debían sufrir modificaciones tendientes a permitir un mayor grado flexibilización dentro de las empresas para con ello hacer uso de manera más discrecional de la fuerza de trabajo y se permitiesen ajustes salariales en función de los niveles de productividad de la empresa. En este tenor comienzan a llevarse a cabo una serie de estudios que analizan el comportamiento de los sindicatos ante tal circunstancia, así como de los cambios en materia de flexibilidad laboral que se implementan en los contratos colectivos de trabajo de numerosos sindicatos tanto en la frontera norte como del resto del país, para ello se pueden mencionar sólo algunos de los estudios más representativos: Carrillo y Hualde, (1991); Covarrubias, A.

(1992); De la O Martínez M.; Quintero, C. (1992); Zapata, (1995); De la Garza, (2000); Quintero, (1993), (2000).

Desde finales de los años noventa, esta línea de investigación es impulsada fuertemente al constituirse la Asociación Mexicana de Estudios del Trabajo, la cual sirve como medio de difusión de análisis y trabajos de investigación tanto empíricos como teóricos sobre temas de flexibilidad laboral, condiciones de vida del trabajador, sindicalismo, colectivos más desfavorecidos en las relaciones laborales y el mercado de trabajo, entre otros.

A partir de la presente década se han seguido desarrollando una vasta cantidad de estudios que manejan como principal línea de investigación el impacto de las relaciones laborales ante la flexibilización en la contratación colectiva (Campos, G. 2001. Pérez, G. 2002; Pérez, G.; Tunal, G. 2002; Tunal, G. 2003).

En las últimas dos décadas esta línea de investigación ha sido sin lugar a duda la más utilizada debido a que los cambios productivos-organizacionales dentro del sector productivo del país han llevado a que las condiciones de la clase trabajadora deban modificarse, por lo que al estudiar los contratos colectivos se logran identificar diversos cambios relativos a la flexibilidad laboral. Sin embargo, han sido pocos los estudios que han logrado medir cuantitativamente el grado de flexibilidad laboral que experimentan las empresas en el país; parte de esta explicación, se debe a la dificultad en el acceso a los datos, ya que no existen en el país bases de datos que permitan medir algunos aspectos de la flexibilidad laboral como sí lo hay en países como España o Chile, donde en este último se ha desarrollado la denominada encuesta laboral "ENCLA", la cual permite tener un panorama muy interesante sobre los mecanismos de flexibilidad laboral externa, interna y salarial utilizadas por las diversas industrias y sectores del país.

Por su parte, en México la mayoría de los estudios cuantitativos (Guerrero, C.; Schettino, M. 2000) se enfocan en medir el empleo, la productividad y los salarios desde un nivel macroeconómico; o bien, a medir la flexibilidad laboral desde el análisis de las legislaciones laborales (Bensusán, G. 1992; Bensusán, G. 2001; De Buen, C. 2000) ambos tipos de estudios son de gran utilidad ya que permiten conocer el comportamiento del mercado laboral mexicano.

Entre los estudios más relevantes que se han llevado a cabo para medir el grado de flexibilidad laboral en las empresas de una ciudad o región, se encuentra el realizado por De la Garza (2000) quién realizó un estudio en el cual combinó los datos de la desaparecida encuesta ENESTYC y los datos de la encuesta MIM (diseñado por la Universidad Autónoma Metropolitana) la cual se aplicó en diversas ciudades del país, los resultados de esta investigación fueron altamente relevantes ya que fue el primer estudio en su tipo y permitió conocer de manera objetiva el uso de los diferentes mecanismos de flexibilidad laboral implementados en las empresas del país.

Adicionalmente, los estudios realizados se han enfocado en investigar la situación prevaleciente en determinadas empresas (TELMEX, Minerías de Cananea, planta de automóviles FORD, etc) y en algunos casos en estudiar la situación de la industria maquiladora de la frontera norte.

Por su parte, no se encontró información que demuestre la existencia de estudios sobre la flexibilidad laboral en la ciudad de Mexicali, Baja California, ni tampoco sobre la industria manufacturera de la región. En general, no se han realizado estudios sobre esta temática en la ciudad, por lo que esta es un área de oportunidad que debe ser aprovechada para que en un futuro cercano los resultados de este proyecto puedan ser extrapolados a otras ciudades y regiones del país.

JUSTIFICACIÓN

No se puede negar que la legislación laboral mexicana fue en su momento un ejemplo de modernidad para varios países latinoamericanos, ya que promovía la estabilidad laboral, protección legal sobre las

condiciones de vida del trabajador ante sus patrones y presentaba un esquema de derechos y beneficios (seguridad social, vivienda, educación, etc.) que en su diseño pretendía consolidar un mercado de trabajo altamente funcional; sin embargo, con el paso de las décadas y los cambios económicos, productivos, socio demográficos y tecnológicos han ocasionado que la estructura del mercado de trabajo en México se encuentre distorsionada y fuera de sintonía con la actualidad en la que se encuentra la sociedad nacional y mundial. Es por ello, que muchos actores provenientes de diversas corrientes han externado la necesidad de realizar modificaciones a la legislación laboral en aras de “modernizarla” y lograr encaminar al mercado de trabajo a un nuevo punto de equilibrio, donde trabajadores y empresarios puedan confluír sus intereses en un beneficio mutuo. Para llevar a cabo adecuaciones a la Ley Federal del Trabajo es necesario primeramente conocer que han hecho las organizaciones para responder a los cambios en la demanda y en la economía, cómo han logrado subsistir pese a no existir una legislación laboral flexible que permita un mejor uso de la fuerza de trabajo según las necesidades de la organización. Para ello, resulta muy importante conocer los mecanismos de flexibilidad laboral que utiliza comúnmente la industria manufacturera de la ciudad de Mexicali así como su grado de implementación con el objetivo de lograr mantener un nivel adecuado de competitividad.

Asimismo, contar con información tanto cuantitativa como de carácter cualitativa permitirá determinar cómo se visualiza el uso de la flexibilidad laboral por parte de los empresarios y por parte de los sindicatos; esto dará como resultado que los datos obtenidos en la investigación puedan servir de base para proponer adecuaciones a la ley Federal del Trabajo en función de los hallazgos encontrados en el sector manufacturero de la ciudad. Adicionalmente, se presenta una ventana de oportunidad para generar información que coadyuve a enriquecer la discusión en torno a los beneficios o no de realizar una reforma laboral, así como el generar una metodología que permita medir los niveles de flexibilidad laboral en distintos sectores de la economía de todo el país.

Dada las características de la investigación, el instrumento diseñado puede ser extrapolado a otras ciudades y regiones del país, ya que las variables utilizadas son aplicadas en su mayoría por la totalidad de las empresas no sólo manufactureras sino también en otros sectores de la economía. Mucho se habla de si el mercado de trabajo en México es altamente rígido o, por el contrario, presenta rasgos significativos de flexibilidad laboral, por lo que resulta importante comenzar con la realización de estudios que permitan medir el efecto real de la flexibilidad laboral dentro del sector productivo del país; pero sobretudo, contar con un instrumento que permita su medición y con ello poder reproducir dicho instrumento a nivel regional y nacional buscando a futuro que se diseñe a nivel nacional un instrumento que permita medir la flexibilidad laboral y así, poder tener argumentos sólidos que permitan incidir sobre las políticas públicas del país.

Objetivos E Hipótesis El objetivo general de la investigación consiste en identificar los procesos de flexibilidad laboral que se presentan en la industria manufacturera de la ciudad de Mexicali, Baja California.

Objetivos Específicos

- Determinar los mecanismos de flexibilidad laboral que utiliza la industria manufacturera de la ciudad de Mexicali, Baja California.
- Diseñar una encuesta que permita medir los mecanismos de flexibilidad laboral de tipo externa, interna y salarial.
- Identificar las posturas y percepciones existentes hacia la flexibilidad laboral por parte de la gerencia (empresariado) y de los representantes sindicales mediante el diseño y aplicación de un cuestionario de carácter cualitativo.

- Construir un indicador sintético de flexibilidad laboral que permita medir el grado de implementación de los diversos mecanismos de flexibilidad.
- Identificar los subsectores de la industria manufacturera con mayor y menor grado de flexibilidad laboral.
- Proponer ante la Secretaría del Trabajo y Previsión Social una encuesta que permita obtener información a nivel nacional sobre la utilización de diversos mecanismos de flexibilidad laboral, la cual pueda servir como apoyo en el desarrollo de políticas públicas sobre el tema laboral y enriquecer una futura propuesta de modificación a la Ley Federal del Trabajo.

La *hipótesis* planteada sostiene que los procesos de flexibilidad laboral implementados en la industria manufacturera de la ciudad de Mexicali, Baja California son principalmente de carácter externo (numérico) e interno (funcional) y en menor medida de carácter salarial.

Una segunda *hipótesis* planteada indica que las posturas a favor de la flexibilidad laboral son compartidas entre el empresariado y el sindicalismo aunque con ciertos matices en la implementación de algunos mecanismos, esto como resultado de una cultura laboral joven en comparación a la zona centro y sur del país, una economía con mayor dinamismo y la cercanía con los Estados Unidos, el cual es un país altamente flexible en materia laboral, lo que propicia que una buena parte de los trabajadores miren como algo natural el uso más flexible de la fuerza de trabajo en las empresas.

METODOLOGÍA

El diseño de la investigación será principalmente de carácter cuantitativo y en menor medida de tipo cualitativo; es decir, será de tipo cuantitativo dado que se diseñará y aplicará una encuesta que permita determinar los mecanismos de flexibilidad laboral que utilizan las empresas de la industria manufacturera de la localidad. Además, la investigación será de carácter cualitativa dado que se aplicarán una serie de cuestionarios los cuales están dirigidos tanto a los empresarios o la gerencia de la empresa, como a los líderes sindicales. El objetivo de este instrumento es conocer las posturas que ambos actores tienen sobre la implementación de la flexibilidad laboral en las empresas, por lo que en este caso algunas preguntas serán de tipo abierto y con un margen de respuesta amplio. En el caso de la información cuantitativa esta se obtendrá de la codificación de las respuestas y las variables utilizadas a través del uso de variables dicotómicas, numéricas y de escala según la naturaleza de la información solicitada. Asimismo, la investigación será de carácter descriptivo y de corte transversal debido a que se identificarán las características y mecanismos de flexibilidad laboral utilizados en la industria manufacturera en la actualidad.

En la investigación se aplicará un muestreo probabilístico estratificado ya que se desea tener muestras representativas de cada una de las nueve divisiones que componen la industria manufacturera, esto con el objetivo de brindar un grado de representatividad adecuado para cada uno de las divisiones.

La clasificación de las empresas manufactureras se conformará según al giro en que se encuentran realizando su actividad; también por el tamaño de la empresa, la nacionalidad (en función del origen del capital invertido), si cuenta con un sindicato o no, y si la empresa está orientada hacia el mercado interno o externo. Adicionalmente, para el diseño de la encuesta se utilizará como modelo a seguir la Encuesta Laboral (ENCLA) de la Dirección del Trabajo de Chile, la cual es única en su tipo en América Latina y sobre la cual se obtiene una vasta información sobre el funcionamiento del mercado de trabajo en todos los sectores de la economía chilena. Para efectos de la investigación, se pretende utilizar como referente y contar de esa manera con un sustento metodológico ya comprobado a lo largo de más de 10 años.

Para llevar a cabo la aplicación de la encuesta y los cuestionarios, primeramente se validará la información proveniente de la Cámara Nacional de la Industria de la Transformación (CANACINTRA)

con la base de datos de la Secretaría de Desarrollo económico (SEDECO) del Estado de Baja California con el objetivo de eliminar cualquier discrepancia que impida determinar el número de empresas manufactureras de la ciudad.

Los resultados obtenidos serán integrados en bases de datos para posteriormente realizar los análisis estadísticos necesarios para determinar los procesos de flexibilidad laboral utilizados en la industria manufacturera. Para el diseño y construcción del indicador sintético de flexibilidad laboral se recodificarán distintas variables utilizadas en la encuesta, para con ello obtener información en forma de intervalos y así realizar una clasificación de las divisiones que aplican con mayor intensidad (es decir, existencia de mayor flexibilidad) mecanismos de flexibilidad; o bien, identificar aquellas divisiones con un menor grado de uso (mayor grado de rigidez).

Para la realización del indicador antes mencionado, fue necesario basarse en el modelo desarrollado por Nicoletti G.; Scarpetta S. y Boylaud O. (2000), quienes aplican la técnica del análisis factorial para asociar aquellas variables que presentan un cierto grado de homogeneidad y que permitan la realización de componentes con los cuales se podrá determinar en qué aspectos las empresas están más orientadas hacia la rigidez o flexibilidad. La relevancia de este proyecto de investigación radica en que permite generar conocimiento hasta ahora inexistente para la ciudad y con posibilidades de ser extrapolado a otras regiones del país e incluso a nivel nacional.

LAS DIMENSIONES DEL CAPITAL Y EL DESARROLLO HUMANO EN LAS PYMES: ANÁLISIS DE CASOS

Olga Lucia Díaz Villamizar, Universidad de la Salle
Marleny Cardona Acevedo, Universidad de la Salle

RESUMEN

Esta ponencia tiene por objetivo Identificar los determinantes organizacionales y comprender las percepciones de los empresarios líderes de las PYMES de Bogotá acerca de las dimensiones del capital humano y el desarrollo humano. La metodología se centra en un análisis de la información obtenida en la consulta a 18 empresas que se encontraban registradas en el 2007 en la Cámara de Comercio de Bogotá. Los Datos fueron tomados de la investigación "Dinámicas y relaciones entre los emprendimientos, el capital humano y los sistemas productivos en las Pymes de Bogotá". Los resultados del estudio muestran que las empresas consultadas son de un solo dueño y que el asumen las decisiones frente a lo financiero, mercadeo, producción y recurso humano. Así mismo, se diluye una propuesta de políticas de manejo de sus trabajadores más estructural dentro de la empresa.

ABSTRACT

This paper aims to identify organizational determinants and understand the perceptions of business leaders of SMEs in Bogota about the dimensions of human capital and human development. The methodology focuses on an analysis of information obtained in consultation with 18 companies that were registered in 2007 in the Bogota Chamber of Commerce. Data were drawn from the investigation, "Dynamics and relationships between enterprises, human capital and productive systems in SMEs in Bogotá." The results of studies show that companies are consulted by a single owner and that take decisions against the financial, marketing, production and human resource. Likewise, a proposal dilutes management policies more structural workers within the company.

PALABRAS CLAVES: Pymes, Capital humano, Desarrollo Humano,

KEYWORDS SMCs, Human Capital, Human Development.

INTRODUCCIÓN

Las Pymes emergen como estructuras productivas flexibles que se debaten en el fortalecimiento de los campos fundamentales de la organización, es así como en la medida en que luchan por estabilizar los procesos también por la continuidad del negocio. En el proceso de estructuración un punto fundamental esta en la capacidad para fortalecer el recurso humano y el desarrollo que a través de este tipo de empresas se logra. De acuerdo con estudios de Adriani, Biasca y Rodríguez (2003), Cardona y Cano (2005), las PYMES latinoamericanas presentan debilidades, por un lado, en torno a el sistema de gestión por las fallas en el direccionamiento y falta de reconocimiento las necesidades de sus clientes y por el otro, el capital humano encuentra dentro de la empresa un trabajo deshumanizado, que le genera desmotivación, no se escuchan las ideas de mejora que proponen los trabajadores y con esto se impide el desarrollo de las personas. Según Cardona et. al., (2005) el fenómeno del desarrollo y sostenibilidad de las empresas es complejo y está sujeto a las diferentes barreras a la entrada, a los cambios permanentes en el entorno macroeconómico, a las relaciones interempresariales que afectan la organización industrial hacia adelante y hacia atrás para el fortalecimiento del capital humano, a la existencia de un factor innovativo o de un conocimiento específico, y a la capacidad empresarial para la toma de decisiones.

El marco de referencia para el análisis de los resultados en las PyMes consultadas se centra en que: a) las habilidades competitivas y de expansión están determinantes el comportamiento tanto del consumidor nacional como del exportador con las posibilidades y obstáculos; b) el proceso de internacionalización muestra que es más rápido en empresas de servicios que en manufactureras; c) los factores que favorecen el crecimiento de las empresas son la calidad de liderazgo, la orientación al mercado, la organización compleja - descentralizada y participativa, el conocimiento enriquecido por la formación continua y los vínculos con redes en el entorno; d) en los estudios se ha encontrado que el 38% de las PyMes no tienen un presupuesto para investigación y desarrollo (I+D) y aproximadamente la cuarta parte tiene un 10% de su presupuesto para éste ítem; y e) además, el 31% de las empresas no protegen sus secretos empresariales. Por esto se considera prioritario la aplicación de políticas en torno a la protección de la propiedad intelectual (Portafolio, 2005). Con estos elementos, se presentan los resultados y la discusión sobre la situación de las empresas consultadas.

Referentes En El Análisis De Las Pequeñas Y Medianas Empresas (Pymes)

El capital humano es una categoría que en la última década ha tomado mucha importancia para explicar fortalezas en las organizaciones que no se explican desde la inversión en capital. Los permanentes cambios del entorno y la Globalización llevaron a pensar que solo las grandes empresas, eran capaces de dar respuesta a los requerimientos del mercado; por tanto las políticas de estado se enfocaron a darles apoyo y mecanismos de protección para su crecimiento. Sin embargo en la década de los ochenta, gracias a los sectores de telecomunicaciones, comunicación e investigación en productos farmacéuticos esta percepción cambió, y el gobierno descubrió que las pequeñas y medianas empresas son las que se adaptan más fácilmente a los cambios mundiales, tienen mayor innovación, generan empleo y constituyen el 99,5% de las empresas Colombianas.

Por tanto las políticas actuales de desarrollo empresarial se empezaron a orientar a la eliminación de barreras, la corrección de fallas de mercado y fomento de la competitividad, pero, con un inconveniente para el 95% de las empresas que están constituidas y hacen parte de este grupo, ya que en el sector financiero no son consideradas sujetos de crédito por los escasos recursos financieros y los índices de mortalidad de las mismas (Portafolio, 2006). Por lo anterior no se puede desconocer que las pequeñas y medianas empresas son un factor fundamental en la generación de empleo y en el crecimiento. Es innegable, que las PYMES es el segmento empresarial que más obstáculos afronta para su desarrollo, especialmente en el acceso a créditos sobre todo de largo plazo, ya que es con éste que se puede soportar la inversión y el crecimiento en los negocios., dificultad para acceso a la tecnología, limitaciones para competir ante economías de escala, deficiente infraestructura física, falta de asociatividad, inestabilidad política, la inflación, la tasa de cambio, altos impuestos, problemas de seguridad, inequidad frente a las grandes empresas, altos costos fijos, entre otros (Sánchez, Osorio y Baena; 2007).

En Colombia hay 1.343.521 empresas en los sectores de industria, comercio y servicios, que ocupan 2.818.430 trabajadores, de las cuales 9.099 son pequeñas empresas generadoras del 6.05% del empleo, y 3.111 son medianas con una ocupación del 10.29% del empleo. Las Pymes generan el 37% de la producción, tienen una estructura productiva más flexible que otro tipo de empresas (ibíd.) y la situación competitiva se muestra en la Tabla No.1

Ante esta situación, el gobierno tomó conciencia de la importancia de mejorar el entorno de este sector y creó la Ley 905 de 2004, conocida como la ley de MiPyMes; para eliminar las barreras de acceso al financiamiento, el diseño y desarrollo de instrumentos de apoyo, tales como el Fondo Colombiano de Modernización y Desarrollo Tecnológico de las Micro, Pequeñas y Medianas empresas (Fomipyme), para incentivar la modernización y desarrollo tecnológico de estas empresas.

Cuadro No. 1: Resumen de tipología de pymes

Grupos	Acopi	Barriga	Rodríguez
1	35% Pymes competitivas plenamente	34.9% Pymes con capacidades competitivas de nivel alto 7.9% y medio alto 27%	32% Pymes mayoría industrial, más de 30 empleados, presentaron incrementos en ventas, utilidades, empleo, acceden a consultoría
2	35% Pymes competitividad intermedia	36.1% Pymes con capacidades competitivas de nivel medio	30% Pymes en su mayoría de servicios con bajo conocimiento sin variaciones en ventas y utilidades ni mercados
3	30% Pymes con agudos problemas competitivos	29% Pymes con capacidades competitivas de nivel medio	28% Empresas pequeñas que presentan disminución en ventas, utilidades y empleo, no exportan.

Fuente: Portafolio, 2006; 33

La Ley de PYMES define las pequeñas empresas como aquellas que tienen activos brutos entre 501 y 5.000 salarios mínimos legales vigentes o entre 10 y 50 trabajadores; la mediana empresa como aquella que posee activos brutos entre 5.001 y 30.000 salarios mínimos legales vigentes o entre 51 y 200 trabajadores. Por su parte también Colciencias apoya las Pymes por medio de la financiación de proyectos de investigación, desarrollo tecnológico e innovación (I+D+I) hasta un 70%, que se realizan de manera conjunta entre unas o varias empresas en modalidad de cofinanciación y con el fin de consolidar la estrategia de innovación y desarrollo tecnológico. Otros aspectos en los que se apoya a las PyMes se encuentran: a) las exportaciones, apoyadas y promovidas por entidades tales como Mincomercio, Proexport y Bancoldex; y b) Calificación de mano de obra, el gobierno a través del Conpes designó al Sena para cualificarla y potencializarla.

Las principales deficiencias que se encuentran en el sector de las PyMes son: a) un sistema de gestión con direccionamiento débil, falta de identificación clara de necesidades de los clientes, no trabajan de manera proactiva y no existen objetivos claros; b) aseguramiento de la calidad donde los procesos, no son claros, no hay estandarización de procesos, generación de grandes desperdicios; c) El capital humano con nivel de trabajo deshumanizado, no se evidencia inversión para mejora y desarrollo de las personas; d) estructura financiera y contable inadecuada; e) sistemas de innovación y aprendizaje no satisfactorios, al igual que los sistemas de comercialización e información. Por otra parte se evidencian fortalezas en producción y operaciones, y en los aspectos legales (Portafolio, 2006).

Capital Humano Y Desarrollo Humano En Las Pymes

Capital Humano: Se entiende el capital humano (CH) como el conjunto de capacidades y habilidades que son adquiridos o desarrollados a través de los conocimientos, la experiencia, la educación formal, la capacitación, y las condiciones de trabajo que afectan directamente la salud y la productividad de las personas. Este, hace referencia a los procesos de gestión del talento humano, tanto desde las políticas públicas para el desarrollo de la sociedad con sistemas productivos y su relación con el desarrollo de las personas.

Schultz, Becker y Werther (cit. en Cardona et al., 2007), definen el capital humano desde lo económico y productivo, reconociendo que las personas aportan a las organizaciones habilidad física, conocimientos y capacidades productivas, que se pueden potencializar a través de la educación y la experiencia, para alcanzar los objetivos organizacionales. Por su parte Sen (cit. en Babativa y Díaz, 2009) lo define desde las cualidades y las capacidades.

El capital humano, para Sen (1998), se concentra en el carácter de los seres humanos, que por medio de sus habilidades, conocimientos y esfuerzos, aumentan las posibilidades de producción. Dadas sus características personales, sus antecedentes sociales, sus circunstancias económicas, entre otros, una persona tiene la habilidad para hacer (o ser) ciertas cosas que por alguna razón juzga valiosas. La razón para esa valoración puede ser directa (el funcionamiento involucrado puede enriquecer su vida en forma

directa, como estar bien nutrido o estar saludable o indirecta (el funcionamiento involucrado puede contribuir a la producción futura o alcanzar un precio en el mercado).

La perspectiva del capital humano (Sen et al, 1998) puede – en principio – cubrir ambos tipos de valoración pero – por convicción – se suele definir en términos de valor indirecto: las cualidades humanas que se pueden emplear como “capital” en la producción tal como se emplea el capital físico. En este sentido, la concepción de capital humano más restringido cabe dentro de la perspectiva más amplia de capacidades que pueden incluir las consecuencias directas e indirectas de las habilidades humanas.

Por tanto, el concepto de capital humano como perspectiva básica del desarrollo de sistemas productivos, se fundamenta desde el enfoque de gestión humana.

El Capital Humano Desde El Enfoque De Gestión Humana

Los procesos de Gestión Humana son fundamentales para lograr articular objetivos individuales con objetivos organizacionales e institucionales, los cuales son alcanzables a partir de las personas, con actividades enfocadas a mantener, utilizar, evaluar y retener la fuerza de trabajo eficiente, tal como lo afirman Werther y Keith (2008)

Factores como la educación, la salud, el servicio médico, la distribución del ingreso y la satisfacción de las necesidades fundamentales permiten a las personas mejorar su propia vida y tener mayor libertad para hacerlo. El factor económico el cual contribuye a que la gente tenga una vida más realizada y la educación, permiten que la producción de bienes sea más efectiva por parte de la persona que ha sido educada; este factor beneficia directamente a la persona porque incrementa sus ingresos, desarrolla su potencial intelectual permitiéndole comunicarse de manera argumentada. Smith (cit. en Sen, 1998) creía que a través de la educación se lograba el mejoramiento de las capacidades humanas, siendo habilidades especiales que parecen distinguir a los hombres en diferentes profesiones, los que dan como consecuencia la división del trabajo.

En este sentido, el planteamiento de Chiavenato (2002), complementa al referirse a que las organizaciones exitosas logran sus objetivos a través de la gestión del talento humano y el desarrollo del capital intelectual; son las personas, quienes proveen conocimientos y capacidades, convirtiéndose en un elemento básico de la eficacia organizacional; por tanto, deben ser vistas como socias de la organización. Las personas no son solo recursos, sino sujetos activos, inteligentes, con habilidades y destrezas necesarias para la competitividad de la empresa, que toman decisiones, emprenden acciones e innovan. Por ende, es posible considerar para el éxito organizacional procesos de gestión humana tales como: admisión de las personas, aplicación de personas, compensación de personas, desarrollo de personas, mantenimiento de personas y monitoreo de personas.

Finalmente, es de gran importancia mejorar el clima organizacional y las comunicaciones, para lograr calidad en el trabajo, propiciar el desarrollo de los trabajadores, aumentar su productividad, los rendimientos, la calidad en el trabajo y la salud de los trabajadores.

Desarrollo Humano En Las Pymes

Las preocupaciones por el desarrollo humano han permitido ir consolidando diversas maneras de concebir las dinámicas productivas de la sociedad se proyecta a futuro y pretende legitimar sus modos de proveer bienestar a los individuos que a ellas pertenecen, aspectos estos que siempre han estado determinados por la naciones más poderosas. Se habla de desarrollo y de sustentabilidad pero se deja de lado el tema de lo humano. Pensar sobre lo *humano* resulta hoy de actualidad y necesario, para generar pautas de interpretación en la comprensión de lo humano y “se trata de reivindicar lo humano como razón de ser del desarrollo...” (Rendón, 2007: 128).

Por ello, formar en lo humano al interior de la unidad productiva, implica entender la educación para el trabajo como la capacitación y calificación en los individuos que participan de actividades productivas sea el principio de la conformación de capital humano. Así, Nussbaum (cit. en Babativa y Diaz, 2009) identifica las capacidades básicas del ser humano desde: el medio ambiente, el control del entorno, el respeto por las especies y su conservación, el juego y la recreación, la vida, las emociones, el pensamiento y la razón (ver figura 1), y es con ellas, que tanto la empresa como el empresarios se enfrentan a desarrollar unidades productivas.

Figura 1. Capacidades Básicas del Ser Humano

Fuente: Babativa y Diaz, 2009

METODOLOGÍA

El objeto de estudio son las organizaciones, y en ellas, lo relacionado con el capital humano que garantiza la funcionalidad de la estructura y dinámica organizacional. La investigación es de tipo analítico y descriptivo, para lo cual se contempló el análisis comparado de la documentación recopilada en relación con teorías de capital humano y los indicadores de desarrollo humano. Se seleccionó y analizó información de fuentes secundarias sobre la temática de capital humano, se elaboraron encuestas a 18 empresas Pymes del sector manufacturero en la ciudad de Bogotá D.C., y finalmente se realizó un análisis y síntesis correlacional, donde se idéntico la relevancia de factores como la educación, la capacitación y la experiencia en la dinámica de las PyMes de Bogotá

RESULTADOS

El fortalecimiento de las estructuras empresariales va más allá de una capacidad de producir es un entramado de relaciones que van acumulando sostenibilidad para lograr en el territorio desarrollo humano con la acumulación de capital físico y humano. Se presenta debilidad en las relaciones entre empresarios, expresadas en que sus lazos fuertes, no son necesariamente determinantes en la conformación de redes y articulaciones de colaboración interempresas y la noción de confianza, que si bien gana un espacio importante desde el marco teórico, en la práctica resulta cuestionado. Además, el capital social disponible a través de una densa red de relaciones personales, no está siendo traducido en oportunidades de negocios que garanticen el mercado y sostengan la producción aunque el fenómeno de flexibilidad e informalidad en que operan algunas organizaciones, conduzca a un mecanismos débiles en el mercado.

Contexto Empresarial

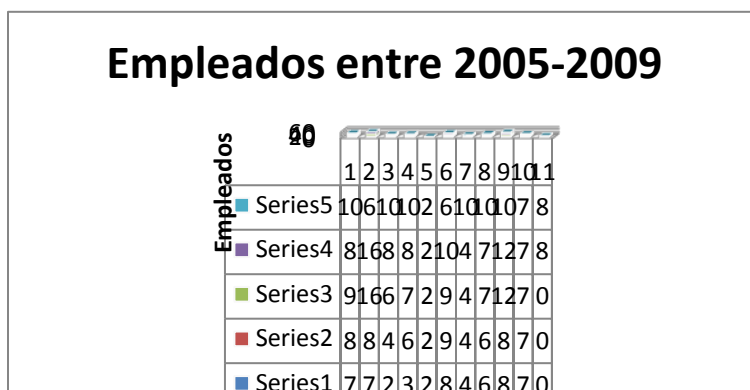

En la consulta a las 18 empresas del sector manufacturero de la ciudad de Bogotá y donde el contacto para la encuesta fue el Gerente y/o administrador se encontró que la mayoría son unipersonales, están localizadas en diferentes lugares de la ciudad lo cual permite dar una visión desde diferentes lugares de la ciudad. Más de la mitad de las empresas son de los sectores alimentos y de la confección, tienen menos de 20 trabajadores y son intensivas en trabajo. Los sistemas productivos de las empresas responden a las necesidades que tienen de recurso humano y capital las organizaciones. Es interesante cuando se pregunta

por el origen del capital el reconocimiento de que en algunas se tiene participación del capital extranjero. En este grupo de empresas entrevistadas se encuentran particularidades propias del tamaño en términos de la organización del trabajo y la producción que determinan la competitividad.

Empleo, Rotación Y Capacidades

La flexibilidad es una característica de estas empresas para la sobrevivencia, aunque el grupo consultado muestra mucha estabilidad para la producción. Entre el periodo comprendido entre 2005 a 2009, 11 de las empresas del estudio generaron el siguiente número de empleos: para el año 2005 - 54 empleos, para el año 2006 - 62 empleos, para el año 2007 - 79 empleos, para el año 2008 - 90 empleos y para el año 2009 - 89 empleos (7 de las empresas no especifican el número de empleos generados durante este periodo de tiempo). Se muestra que en el período se presentó un crecimiento del 8,75% en el empleo. También, se muestra que el 90% de la población trabaja en el área de producción, de los cuales el 55% son hombres y el 45% son mujeres. Así mismo, en la figura 5, se presenta en la serie 1 corresponde al empleo generado durante el año 2005 por 11 de las empresas encuestadas. La serie 2 corresponde al año 2006, la serie 3 al año 2007, la serie 4 al año 2008, la serie 5 al año 2009 (figuras 2)

Figura 2: Empleos entre 2005-2009

De los 89 empleos generados en el 2009, por las empresas consultadas, el 54% de los trabajadores están en cargo operativo y su nivel educativo es educación básica y media. Adicionalmente con nivel educativo básico están 2 jefes de planta y una secretaria. En el nivel educativo medio se encuentran 12 gerentes, 1 asistente y 3 secretarias. Y en el nivel educativo superior se encuentran 1 auxiliar, 1 supervisor, 1 jefe de planta 9 gerentes y 3 ingenieros. Dentro de las empresas encuestadas están cursando estudios formales 2 personas de planta y 1 administrativo. En ninguna de las empresas se reconoce una ayuda escolar para los hijos de los trabajadores (figura 3)

En las Pymes entrevistadas, el 50% de las empresas consideran que la educación formal es el aspecto más importante para el buen desempeño laboral. En cuanto a programas de capacitación que se ofrece a los colaboradores, se encontró que solo el 22% de las empresas SI tienen contemplados este tipo de beneficios para el trabajador, el 50% NO ofrecen capacitación y el 28% no definió (figuras 4 y 5). La salud ocupacional sabiendo que es parte de la legislación debe ser significativa pero no es claro el resultado. Solo el 22% de las empresas encuestadas realizan capacitaciones en salud ocupacional para sus trabajadores, el 45% no y el 33% no específica.

Figura 3. Nivel educativo cargos operativos

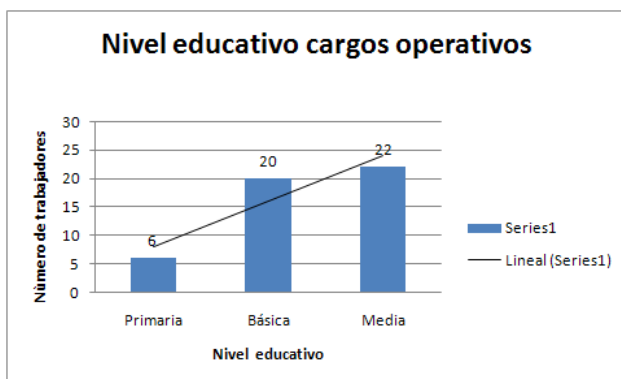

Figura 4. Capacitación a los trabajadores

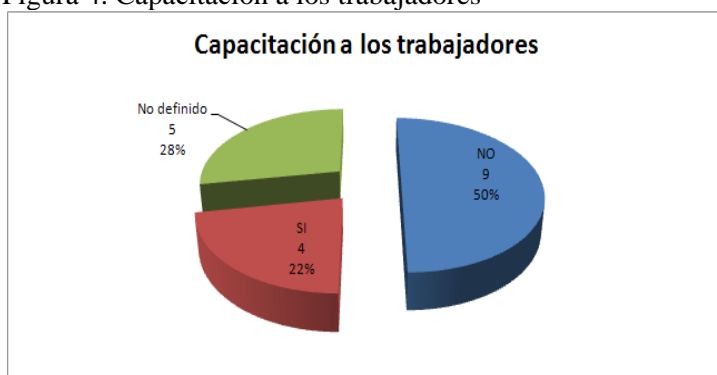

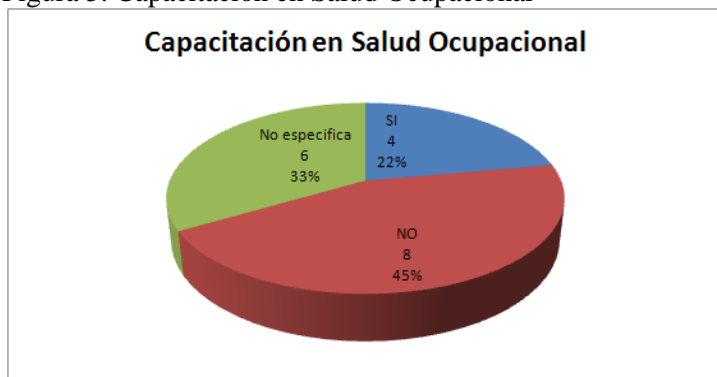

Figura 5. Capacitación en Salud Ocupacional

Los empleadores manifiestan que no suministran capacitación a sus empleados porque no la requieren (17%), porque no hay capacitadores adecuados para el negocio al que se dedica la empresa (5%), porque los trabajadores están suficientemente capacitados (11%), porque tienen dificultades para retener los trabajadores capacitados (6%) convirtiéndose en un gasto para la empresa, no en inversión. Y el 61% no sabe o no responde (figura 6).

Las empresas que han realizado capacitación para sus trabajadores en el 50% de los casos ha sido interna, el 5% interna, el 6% ha realizado capacitación tanto interna como externa y el 39% no definió el mecanismo de capacitación utilizado, pero dicen los beneficios de la capacitación se ven reflejados en aumento de la productividad de los trabajadores (11%) y en un 28% en la mejora del trabajo en equipo

(figura 7). Además, consideran en el 39% de los casos definen que la capacitación es necesaria, el 11% que es innecesaria, el 6% que la capacitación permite a la empresa se mas productiva y competitiva (figura 8).

Figura 6. Motivo para no ofrecer capacitación

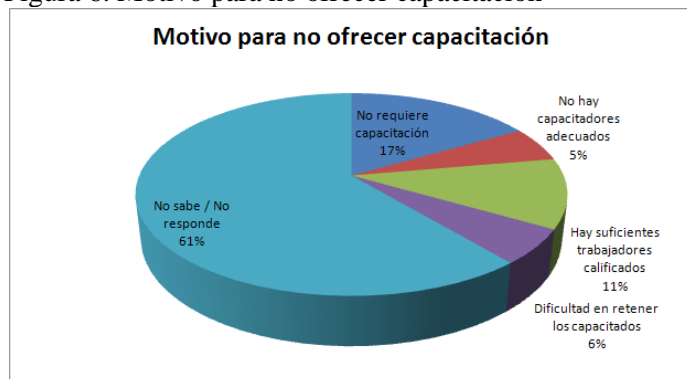

Figura 7. Beneficios de la capacitación

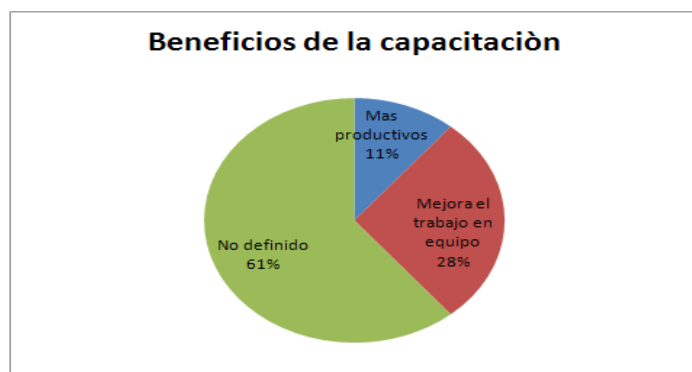

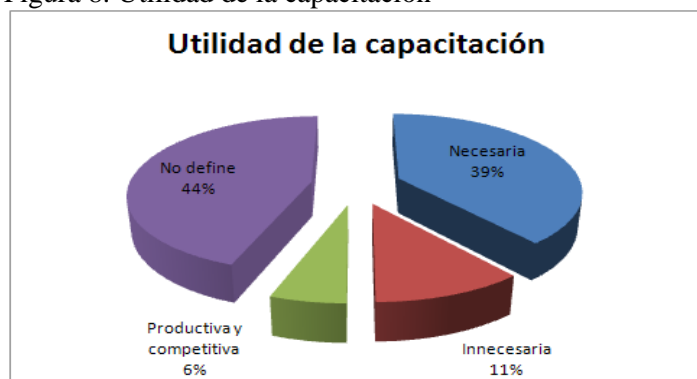

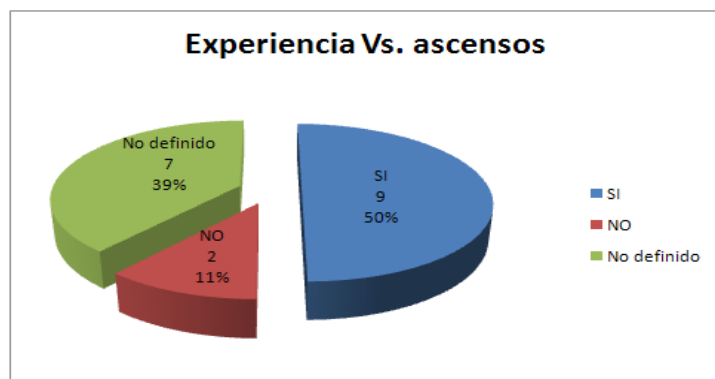

Figura 8. Utilidad de la capacitación

En las PyMes donde se realizaron las entrevistas, consideran el 50% de los gerentes o administradores encuestados que la experiencia tiene una relación directa con los ascensos dados a los trabajadores, el 11% no considera que los ascensos se den por la experiencia en el cargo y el 39% no define esta relación (Figura 9). El límite en la acumulación de capital humano esta en la dinámica de las empresas encuestadas, en general se consideran que no se requiere de experiencia para el cargo a ocupar.

Figura 9. Relación entre experiencia y ascensos

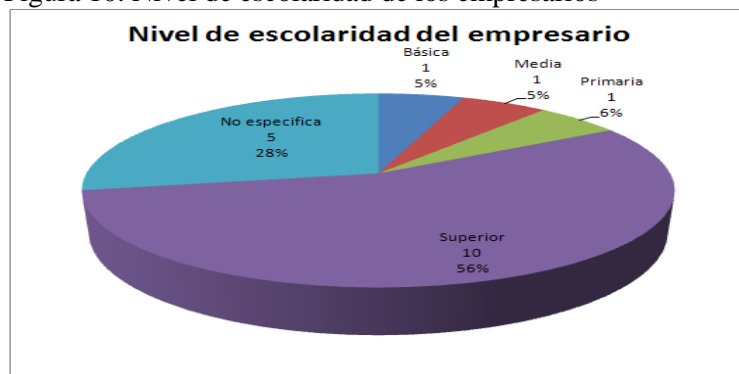

Empresario, Gestión Y Sistema Productivo

El liderazgo del gerente en las empresas consultadas es evidente, son calificados, tienen edad para hacer prospectiva. El 33% de los empresarios encuestados se encuentran en el rango de edad entre 25 a 40 años, el 28% entre 40 a 55 años, el 11% son mayores de 55 años y el 28% no especifica el rango de edad.

El proyecto empresarial tiene muchas posibilidades en este grupo porque los empresarios son jóvenes, el problema es que la capacitación es por experiencia más que por calificación, aunque la consideran fundamental. El otro punto es que la educación superior es notable en los administradores. El 56% de los empresarios tienen nivel de escolaridad superior, el 16% el nivel educativo se encuentra entre primaria – básica y media. El 28% no especifica su nivel de escolaridad (figura 10). El nivel de escolaridad de los empresarios es alto; el 30% son ingenieros, el 30% diseñadores, el 20% administradores, el 30% diseñadores, el 10% abogados y el 10% tienen estudios de postgrado en ciencias administrativas (figura 11).

Figura 10. Nivel de escolaridad de los empresarios

La formación de los empresarios es importante para identificar las competencias comunicacionales. El 33% de los empresarios tienen más de 20 años de experiencia en el área en la cual desarrollan su negocio en la actualidad. El 11% tiene entre 10 a 20 años de experiencia, el 22% entre 1 a 10 años de experiencia y el 6% tiene menos años (figura 12) y el 6% de los empresarios tienen manejo alto de lengua extranjera, el 39% nivel medio, el 22% nivel bajo y el 33% no especifica o no maneja lengua extranjera.

Figura 11. Formación del empresario

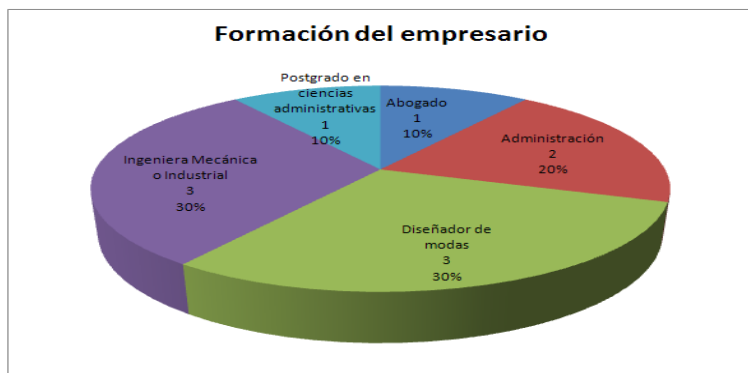

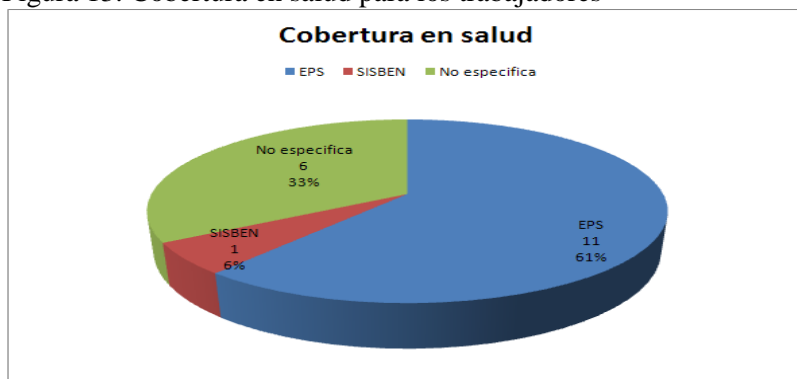

Figura 12. Experiencia de los empresarios en el área del negocio

Frente a los perfiles específicos, el 17% de las empresas tienen área de comercial y/o mercados, el 39% no y el 44% considera que no aplica para la empresa. Del personal que maneja el área comercial y/o mercados el 17% manifiestan que tienen baja formación en mercadeo, el 22% el nivel formación es media y el 11% tienen un buen nivel de formación en el área. La estabilidad de los trabajadores se manifiesta cuando se les pregunta por la rotación. En un 33% los empresarios consideran que la rotación de operarios es baja y el 28% que es media. Mientras que el 56% de la rotación en cargos de supervisores o administrativos, es baja, dado que en su mayoría estos cargos son ocupados por los dueños de la empresa. Así, el 61% de las empresas tienen cobertura de salud a través de la EPS, el 6% del sisben y el 33% no especifica la cobertura (Figura 13).

Figura 13. Cobertura en salud para los trabajadores

CONCLUSIONES Y RECOMENDACIONES

Esta primera articulación entre desarrollo humano como fundamento de la formación de capital en las empresas, es una de muchas explicaciones al trabajo que desarrollan y proyectan las empresas. Por eso más que un trabajo concluyente, tanto en la propuesta referencial de la literatura como en los resultados se buscó abrir puertas para el desarrollo de otros proyectos de investigación desde el enfoque de capital humano.

La propuesta es continuar en el fortalecimiento de este campo problemático, desarrollando estudios que tienen que visibilicen la dinámica de las unidades productivas en el territorio. Es en este, donde se genera la construcción social, para las dinámicas económicas y sociales tanto internas como externas, de las relaciones y estructuras de poder, las manifestaciones culturales de los empresarios y trabajadores. Las unidades productivas aparecen como el mecanismo por medio del cual se estructuran las relaciones inter e intrasectoriales.

Las posibilidades de ampliación del campo de investigación se pueden orientar desde lo territorial y desde lo sectorial, teniendo en cuenta lo siguiente:

1. Profundizar en el modelo de PYMES fortalecido en el capital humano que garantice capacitación e innovación.
2. Tomar en cuenta la existencia de redes y cadenas productivas como una propuesta de desarrollo humano empresarial.
3. Estudios con estas características aportan información al análisis de las estructuras y sectores productivos a nivel regional, que fortalecerían el diseño de los Planes de Desarrollo locales y regionales, teniendo en cuenta lo público y lo privado.
- 4.
5. Ampliar los estudios que permitan observar el ciclo de vida de las firmas en los sectores industriales.
6. Construir modelos por regiones y por sectores para impactar las políticas industriales.

LOS FACTORES DE ROTACIÓN LABORAL Y AUSENTISMO EN CADENA DE TIENDAS DE CONVENIENCIA DE LA CIUDAD DE MEXICALI, MÉXICO

Manuel Alejandro Ibarra Cisneros, Universidad Autónoma de Baja California

Lourdes Alicia González Torres, Universidad Autónoma de Baja California

Bertha Alicia Contreras Cervantes, Universidad Autónoma de Baja California

ABSTRACT

Los elevados niveles de rotación y ausentismo en toda organización constituyen uno de los principales retos que deben ser encarados por los administradores de recursos humanos con el objetivo de fomentar la estabilidad laboral y con ello lograr el retorno de la inversión en capital humano que ha realizado la organización hacia sus trabajadores. Habitualmente, la rotación se asocia con bajos niveles salariales y un inadecuado reconocimiento del esfuerzo de los trabajadores (falta de motivación); sin embargo, existen otros factores como los ambientales, los de ubicación geográfica y visión de la organización a futuro que también inciden en la rotación laboral y el ausentismo. El presente estudio de caso consiste en analizar las causas que originan los elevados niveles de rotación laboral y ausentismo en una cadena de tiendas de conveniencia en la ciudad de Mexicali, Baja California. Los resultados obtenidos del estudio de caso permiten diseñar una serie de medidas que busquen disminuir los indicadores de rotación y ausentismo y, a la vez, permitan incrementar los niveles de motivación y productividad laboral.

PALABRAS CLAVE: rotación, ausentismo, productividad, capital humano, estudio.

INTRODUCCIÓN.

La rotación laboral y el ausentismo son constantes problemas que influyen de manera negativa en los niveles de productividad de una empresa, lo que se suele traducir en mayores costos de reclutamiento, capacitación y adiestramiento. La rotación es un fenómeno habitual en toda clase de organización y en ocasiones es considerada como positiva en los casos en que un trabajador es causante de constantes problemas que derivan en mayores costos para la organización si esta opta por el despido del mismo. Sin embargo, en la gran mayoría de los casos la rotación es un fenómeno altamente negativo.

De manera similar, el ausentismo tiene efectos negativos significativos al evitar que la organización pueda realizar de manera planeada sus procesos productivos, la ausencia de trabajadores provoca que algunas actividades deban retrasarse o incluso llegando a su suspensión, por lo que los costos para las organizaciones impactan también de manera negativa.

Tanto el ausentismo como la rotación son fenómenos considerados como habituales en la mayoría de la empresas, es imposible que estas no se presenten pero se pueden reducir mediante la implementación de mecanismos que permitan mantener estimulados a los trabajadores y en algunas situaciones ser flexibles en el otorgamiento de permisos a sus empleados en aras de evitar ausentismo intempestivo, es mejor un ausentismo planeado y controlado.

En la ciudad Mexicali Baja California, se encuentra una cadena de tiendas de conveniencia que se ha ido consolidando con el paso de las décadas hasta alcanzar la preferencia por parte de los consumidores de la localidad. Dicha cadena posee una plantilla constante de 650 empleados entre directivos, administrativos y personal operativo.

En los últimos dos años la empresa ha estado experimentando un incremento en los niveles de rotación y en menor medida de ausentismo, esto está ocasionando que en ocasiones las diferentes actividades de la empresa se vean afectadas al existir constantes retrasos por falta de personal, lo que obliga a la empresa a mantener niveles altos de contratación de personal que se traduce en un incremento de los costos laborales y en la pérdida de mano de obra calificada la cual es reemplazada paulatinamente por una mano de obra inexperta que tarda meses en adaptarse y dominar los procesos de la empresa.

Es así, como se consideró analizar las causas que provocan los altos índices de rotación y ausentismo en la empresa y buscar de esta manera los mecanismos para disminuirla hasta niveles óptimos.

DESARROLLO.

Para determinar las causas por las que se presenta la rotación y el ausentismo en la cadena de tiendas de conveniencia se identifican los diversos factores que logran explicar de manera adecuada tales problemáticas.

Los factores de rotación laboral y ausentismo se consideran los siguientes:

Factores Internos De La Organización O Factores Individuales:

- a) Biográficos: como la edad, sexo y experiencia previa, se considera que a menor edad mayor es el nivel de rotación; por su parte, las mujeres tienen menos rotación que los hombres, y a mayor nivel de experiencia mayor es el nivel de rotación.
- b) Habilidades y Aptitudes: Cuanto mayores sean los niveles de habilidades y aptitudes mayor es el nivel de rotación.
- c) Percepción: Cuanto mayor percepción de oportunidad de mejores empleos mayor la rotación.
- d).-Personalidad: Cuanto mayor dinamismo e inequidad laboral padece el trabajador, mayor la rotación.

Factores Organizacionales:

- a).-Autonomía y Responsabilidad: A mayor autonomía y responsabilidad en las actividades que se desarrollan menor es la rotación.
- b).-Reconocimiento: la falta de reconocimiento de parte de la gerencia ocasiona una mayor rotación.
- c).- Liderazgo y Supervisión: la excesiva supervisión y un liderazgo autocrático por parte de la gerencia es un indicativo de elevados niveles de rotación y ausentismo.
- d).-Presión y estrés: estos factores son cada vez más relevantes en las organizaciones.
- e).-Relaciones Humanas en la Empresa: Mayor integración hace que haya menos rotación.
- F).-Condiciones Físicas de Trabajo: labores altamente demandantes físicamente, la rotación aumenta.
- E).-Fatiga: se relaciona de la misma manera que el inciso anterior.

Factores Laborales

- a).- Salario: El trabajador recibe el salario oportuno comparándolo con empleados de su misma categoría en la misma o distinta empresa.
- b).-Beneficios Sociales.
- C.-Política Salarial de la empresa.
- d).- Jornada de Trabajo.
- e).-Oportunidades de Progreso Profesional y f).- Turnos. Todos estos factores son hoy en día uno de los más relevantes y comunes de por qué existe la rotación de personal.

Factores Al Exterior De La Organización O Factores Ambientales.

a).-Estabilidad del Mercado de Trabajo. (Oferta y Demanda). A medida que exista un mercado laboral dinámico, donde las diferencias salariales sean elevadas entre empresas, los niveles de rotación suelen incrementarse de la misma manera.

b).-Interferencia con la vida familiar. c).- Cultura en el entorno. d).-Valores Sociales. Son también otros factores que desafortunadamente suelen no ser tan atendidos por la gerencia.

METODOLOGÍA

La empresa diseñó una encuesta que se ha venido aplicando siempre que un trabajador decide separarse de la empresa y también cuando falta a laborar, dicha encuesta hace algunas preguntas de opción múltiple que permite conocer algunas de las causas ya mencionadas, por lo que se procedió a analizar todas y cada una de las encuestas que se aplicaron en un lapso de seis meses, con ello se logró tener una cantidad significativa de encuestas contestadas y así se pudo obtener información muy significativa.

El periodo de análisis de las encuestas fue de enero a junio de 2009 y en ella se consideraron los meses donde habitualmente existe mayor y menor rotación y ausentismo. Además, se realizó una base de datos con la cual se trabajó para poder obtener la información que a continuación se presenta. Cabe aclarar, que en el estudio no se utilizó una muestra debido a que por el número de personas que rotaron o se ausentaron a laborar, la muestra estadística indicaba que se debía encuestar a casi todos ellos, por lo que mejor se decidió analizar todos y cada uno de los casos.

Resultados Relevantes

Durante los seis meses en que se analizaron a los trabajadores que optaron por abandonar la empresa (35 bajas), el 80% fueron del sexo masculino con una media de edad de 32 años, Asimismo, el 70% de los que abandonaron la empresa eran solteros. Lo que avala la idea de que los hombres tienden a rotar más que las mujeres y sobre todo entre los jóvenes que con respecto a las personas de mayor edad y que además son solteras. La antigüedad promedio de los trabajadores fue de solo 2 años, lo que señala como a menor antigüedad la gente tiende a rotar más que la gente con mayor antigüedad. Entre los diversos niveles jerárquicos, la mayoría de las personas eran operarios. Es decir, son personas con niveles escolares bajos (secundaria principalmente) y niveles bajos de cualificación.

La causa que mas indicaron por la cual decidieron cambiar de empresa consistió en la necesidad de conseguir un empleo mejor pagado, con mayor número de prestaciones y donde el nivel de estrés fuera menor. Dado que la mayoría de ellos señalaron que sus empleos eran agobiantes en parte por lo tiempos limitados para concluir con sus actividades y en parte por sus supervisores, quienes solían no tener tratos amables hacia ellos. En el caso de los hombres el factor que más influyó para la salida del empleo fue la búsqueda de mejores oportunidades de empleo; mientras que en las mujeres el principal factor fue el familiar, ya que gran parte son madres solteras, por lo que buscan horarios más flexibles y ad hoc a su situación.

Adicionalmente, se detectó que existió elevados niveles de desmotivación laboral e inconformidad por lo forma tan impersonal en la que eran tratados, este factor también fue relevante dado que un personal con ausencia de motivación se traduce en una productividad inferior, de ahí la necesidad de la organización por implementar una serie de cursos hacia el personal directivo y de supervisión para que estos trasmitan mensajes de motivación y ofrezcan un trato más ameno y respetuoso. Al analizar la situación del mercado laboral, este se mostró bastante reprimido debido a la crisis económica que padeció el país, las oportunidades de nuevos empleos fue mínima para todos los niveles de cualificación de la mano de obra; sin embargo, los altos niveles de rotación se siguieron presentando a pesar de esta situación. Lo que significa que el descontento por parte de los operarios hacia los supervisores fue tal que estuvieron

dispuestos a renunciar a su puesto de trabajo. Esta situación encendió los focos rojos en la empresa y a raíz de esa información se trabajó en mejorar el aspecto motivacional y de trato hacia el empleado.

En el caso del ausentismo, la encuesta reveló que una tercera parte falta a su centro de trabajo debido a la lejanía existente de sus casas hacia el centro de trabajo, en muchas ocasiones no existe un sistema de transporte público eficiente ni tampoco económico, por lo que se suelen presentar niveles importantes de ausentismo en aquellos días donde se presentan lluvias que ocasionan la incomunicación de las colonias donde viven hacia con el centro de trabajo (debido en parte a que los trabajadores habitan en zonas de la periferia de la ciudad la cual no cuenta con todos los servicios públicos ni de infraestructura. En este punto la proporción de hombres y mujeres que se ausentan es similar.

La principal causa de ausentismo por parte de las mujeres consiste en no tener con quien dejar a sus hijos para ir a trabajar, al ser en su mayoría madres solteras no cuentan con la posibilidad de encargar a sus hijos con algún familiar o en alguna guardería (debido en su mayoría a la falta de recursos para hacerlo). Por su parte, la principal causa de ausentismo entre los hombres no se pudo establecer de manera clara debido a las múltiples opciones que señalaron; sin embargo, al analizar de manera detallada los días en que se presentaron el mayor número de inasistencias se descubrió que fue en los días lunes. La literatura existente sobre la psicología del mexicano en el trabajo refleja que un rasgo que se presenta en parte del trabajador mexicano consiste en la poca importancia que este le da a laborar en días lunes como resultado de haber experimentado fines de semana donde los trabajadores asistieron a reuniones sociales hasta altas horas de la noche. Por ello, se pudo inferir que la causa real fue esta y no las causas que ellos originalmente señalaron.

CONCLUSIONES

Los resultados de las encuestas permitieron reflejar una situación donde la administración no ha estado llevando a cabo un trabajo de retroalimentación constante sobre el sentimiento del trabajador hacia con la empresa y las condiciones laborales en las que vive. De ahí los elevados niveles de rotación que se presentan. A partir de estos hallazgos, la administración comenzó a diseñar cursos de capacitación en el tema de motivación y sensibilidad en el trabajo el cual fue dirigido a los supervisores con el objetivo de que estos traten de mejor manera a los empleados. Además, se dejó de presionar al trabajador para que realice sus actividades y realmente se comenzó a ejercer un verdadero trabajo de supervisión integral y no solo de acoso hacia el trabajador.

Otra de las acciones implementadas por la administración fue la definición objetiva de los perfiles de ingreso a la empresa, con ello se pretende seleccionar a personas con mayor edad, padres de familia que presentan mayor estabilidad laboral. Además, se está buscando la forma de apoyar a las trabajadoras que son madres solteras para que puedan asistir a sus labores. Por último, el proceso de selección pretende ser más estricto para lograr contratar a trabajadores más responsables y que vivan en zonas más cercanas a los sitios de trabajo.

ANÁLISIS DE LA POLÍTICA ANTI-INFLACIONARIA EN MÉXICO (2008-2009) DE ACUERDO A UN ESTUDIO ECONOMETRICO

Erika Olivas Valdez, Centro de Estudios Superiores del Estado de Sonora Unidad Hermosillo

RESUMEN

Este trabajo de investigación analiza las estrategias y acciones realizadas por el Banco de México a partir de la crisis financiera Mundial originada en Estados Unidos en el 2008, para contrarrestar los efectos inflacionarios a través de la aplicación de una Política Monetaria heterodoxa y comparando dichas acciones, con los resultados obtenidos en la tesis de maestría: “Inflación en México (1948-1999): Un análisis con Vectores Autorregresivos”, elaborada por la misma autora de este trabajo y en la que se adjudica el origen de la inflación a cinco variables: Las desviaciones del PIB respecto al PIB potencial (brecha del PIB), tasa de devaluación (tasa de crecimiento del tipo de cambio), crecimiento de la tasa de interés y de los salarios reales. Aplicando una metodología en la que se desarrolló un modelo de vectores autoregresivos con un rezago y cinco variables explicativas, además de incluir dos variables exógenas, (dummies) que tratan de capturar los cortes estructurales vividos en 1973 y 1982, debido a la gran alza de precios del petróleo y a la crisis de deuda externa.

INTRODUCCIÓN

Después de dos décadas de crecimiento económico sostenido e inflación moderada en los años 50's y 60's, México ha experimentado, desde el comienzo de la década de los setenta, un paulatino deterioro en la dinámica del desarrollo, caracterizado por fuertes oscilaciones en las tasas de crecimiento real del producto interno bruto (PIB) y una marcada tendencia al alza en el ritmo de la inflación. Lo más preocupante es que los incrementos no seden en periodos de auge, mucho menos en crisis. Ahora el problema es controlar los incrementos inesperados y mayores al aumento de la producción, sobre todo aquellos originados en los mercados financieros que ante el proceso de globalización afectan a todas las economías del mundo. Por lo anterior, el presente trabajo de investigación estudia el fenómeno inflacionario, haciendo una comparación de los recientes problemas económicos y financieros que se presentaron en México como secuela de la crisis Financiera Mundial del año 2008, para ello, se retomaron los resultados arrojados por la tesis de maestría (Olivas,200) de una servidora en la que se adjudica el origen de la inflación a cinco variables y se aplica un análisis econométrico basado en un modelo de vectores autorregresivos. La política monetaria implementada desde que se le otorgó la autonomía al Banco de México, ha resultado aparentemente favorable como una estrategia para el control de la Inflación, no obstante, en este trabajo haremos referencia a este tipo de política relacionándola con los resultados del modelo ecométrico en cuestión.

REVISIÓN LITERARIA

Inflación y Política Monetaria en México

Uno de los fenómenos que tradicionalmente ha recibido la mayor atención por parte de los economistas es la inflación. Posiblemente no estaría entre los principales tópicos económicos si fuera únicamente un fenómeno de crecimiento de magnitudes nominales, sin un efecto sobre el sector real. Sin embargo, existe documentación empírica que muestra una relación entre esta y la asignación de recursos, la distribución de los mismos, la distribución del ingreso, el desarrollo económico y por ende sobre el bienestar de la población. El crecimiento de precios no es un fenómeno nuevo, en realidad en cualquier sociedad mercantil que utilice el dinero como medio de cambio existe la posibilidad de inflación. Los incrementos

en precios están presentes no solo como tendencia a largo plazo, sino que se ha vuelto un fenómeno crónico en el sentido de que subsiste tanto en las fases de auge como en las recesivas del ciclo económico. Durante el transcurso de la historia la inflación ha sido justificada por varias versiones, como un fenómeno puramente económico, o bien, por el excesivo intervencionismo estatal, lo cierto, es que cualesquiera que sea el origen no ha podido ser manipulado de tal forma que detenga el incremento de precios o la tan nombrada **espiral de precios**, a pesar de que durante los sexenios de los Presidentes Fox y Calderón, los niveles de inflación no hay rebasado más de un dígito. Durante las últimas décadas la inflación a tratado de ser abatida a partir del control de precios, salarios (pactos intersectoriales) y tipo de cambio (fijación con intervención), obteniéndose considerables resultados, que merecen ser estudiados.

La inflación se define teóricamente como el crecimiento sostenido en el nivel general de precios. Es un fenómeno económico de amplias raíces y repercusiones sociales y políticas, mediante el cual se registra un alza generalizada y sostenida de los precios de la mercancía: carestía (Aguilar, 1985). El incremento de precios, como tal, no es un problema relevante, el problema radica en los incrementos permanentes y desmesurados de esta. Ya que desalienta la inversión, las condiciones de comercio entre países y sobre todo crea inestabilidad económica. Esta, afecta a todas las capas sociales, sobre todo a la clase trabajadora; cuando el incremento de los precios es mayor que el incremento de sus ingresos, se deteriora su nivel de vida.

A lo largo de las tres últimas décadas, México ha soportado por lo menos tres crisis económicas asociadas con altos incrementos en los precios; en 1982, con el problema de tipo de cambio flotante al caer las exportaciones del petróleo (caída en la demanda mundial) y aunado al inconveniente de pago de la deuda, la inflación rebasó los niveles de 100% de incremento. Para 1987 se presenta una nueva crisis con la caída del precio del petróleo internacional (debido a la sobreoferta del producto), para finales de 1994, la crisis financiera (salida de capital extranjero y pagos de deuda de corto plazo) abatió al país, generándose inestabilidad económica (cayo la inversión extranjera directa y especulativa, la producción y el nivel de empleo) con incrementos de la inflación mayores al 30% para el año de 1995, sin embargo, con respecto a Diciembre del año de 1994 el incremento alcanzo niveles del 50%.

Finalmente, podemos decir que la primera crisis financiera internacional de este siglo no fue la excepción, ya que también provocó incrementos considerables en la inflación de México, provocando desvaríos en los pronósticos del Banco de México, respecto a esta variable. Los esfuerzos para controlar el proceso inflacionario han adquirido cada vez más importancia dentro del conjunto de objetivos de la política gubernamental, hasta ubicarse en la actualidad en el primer plano de las preocupaciones nacionales.

En cuanto a la planeación de política económica; se observa que la inflación es considerada como uno de los principales problemas a resolver: “*Entre los factores que explican el repunte de los precios de este año figuran el mayor deslizamiento del tipo de cambio controlado, derivado de la caída de los ingresos de nuestras exportaciones de petróleo, la cual no alcanzó a ser compensada por la contención fiscal y crediticia.*” Lo anterior fue manifestado por Miguel de la Madrid en su cuarto informe de gobierno, mientras que para Carlos Salinas reducir la inflación hasta un solo dígito, fue su obsesión durante todo su sexenio, como una forma de resolver los problemas heredados por el gobierno del anterior gobierno (iniciándolo con tasas altas de inflación después de la crisis petrolera). Los cuales abatió implementando políticas de contención de precios y pactos intersectoriales. Ernesto Zedillo, buscó la estabilidad económica a través del fomento al ahorro interno e inflación moderada, de esto menciona lo siguiente en su quinto informe: “*Al abatir la inflación cancelamos el impuesto más agresivo, sustituimos la especulación por la inversión productiva y construimos una nueva certidumbre para crecer, generar empleos y competir en el mercado* (Zedillo, 1999).

Altas tasas de inflación, no acordes a los incrementos del resto de las variables macroeconómicas genera inestabilidad: pérdida del poder adquisitivo, desestíma la inversión y afecta la balanza de pagos, por mencionar algunos efectos.

La postura del Banco de México respecto a su Política Monetaria para finales del 2007 y durante todo el 2008 fue restrictiva al mismo tiempo que el tipo de cambio se depreciaba. El panorama para México en el año 2008 no mejoró, ya que el problema a nivel mundial de los mercados financieros se encrudeció y la estrategia del Banco de México para contener los mercados de capitales domésticos a través de su intervención fue realizar las siguientes acciones para estabilizarlos: Relajamiento de la política monetaria, Creación de facilidades para la provisión de liquidez de los mercados financieros, principalmente al mercado cambiario, Garantías para la emisión de nueva deuda bancaria y Extensión de la protección a los depósitos de los ahorradores.

Modelos VAR Para El Análisis De La Inflación.

Los modelos de Vectores Autorregresivos (VAR) no son sumamente novedosos, lo que resulta más novedoso son las pruebas y aplicaciones que actualmente se le han dado. Los usos generalmente señalados para los modelos VAR son dos: el explicativo, para evaluar empíricamente las relaciones entre las variables y el de pronóstico. Las variables incluidas en el modelo son procesos estacionarios, con cortes estructurales y existe una relación causal entre las mismas. Por ello se encontrará una relación estable entre las variables, en el corto plazo. Sin embargo, el problema no es cual modelo o técnica sea la mejor, sino la más pertinente para el estudio. En años recientes ha surgido un interés por combinar métodos, en particular por el uso del procedimiento de Johansen para cointegración, basado en la estimación de un VAR sin restricciones. Esta nueva metodología permite analizar los supuestos sobre restricciones en los parámetros que no han sido confirmados por los datos, y al mismo tiempo considerar las propiedades de orden de integración de las series y la posible presencia de cointegración entre estas (Galindo, 1997).

En el caso de variables macroeconómicas y especialmente para el caso de México, es común encontrar que las series cuentan con un corte estructural, que bien puede ser un impulso o un cambio de nivel. Por ello, observando las variables, se encontró dos cortes; uno en el año de 1973 que se supone provocó un cambio de nivel en las variables. Debido en gran parte al incremento desmesurado de precios del petróleo internacional. Arrastrando un efecto hasta los años ochenta, viviéndose desde 1982 a 1988 la parte más inestable del periodo. Aunado, de nuevo al shock petrolero de 1986 (Caída de precios). De esto, se concluye que era necesario, aplicar pruebas de raíz unitarias que fuesen capaces de capturar el efecto del quiebre y además el proceso estacional, esto debido a las crisis sexenales de las que es característico el país de México. Para ello, se utilizó la metodología de Perron y las pruebas de (Dickey - Fuller) para asegurar la existencia de raíz unitaria o bien garantizar que se trata de un proceso estacionario. En este caso el modelo esta compuesto de un bloque de seis ecuaciones con un retraso para cada una de ellas y su aportación al estudio de la inflación se plasma a continuación en la siguiente sección del documento.

RESULTADOS DEL MODELO DE VECTORES AUTORREGRESIVOS VS POLÍTICA ANTI INFLACIONARIA APLICADA POR EL BANCO DE MÉXICO

De acuerdo a los resultados de la tesis de Maestría; “Inflación en México (1948-1999): Un análisis con Vectores Autorregresivos”, las variables más importantes dentro del proceso de determinación de la inflación, son el tipo de cambio, desde un primer momento y los salarios que si bien no tiene efectos contemporáneos sobre la inflación, si los tiene en periodos subsecuentes. Un elemento importante a destacar de esta investigación, es el hecho de que la inflación en el corto plazo no responde como un proceso de expectativas inflacionarias, en el sentido que, modificaciones de esta variable estén explicadas

en gran parte por ella misma. Otro aspecto importante es el hecho de que en este caso, al igual que en la bibliografía consultada, el tipo de cambio (tasa de devaluación) representa el principal instrumento generador de inflación en el corto plazo. Mientras que el salario es el segundo elemento determinante del proceso inflacionario (sin contemplar a la propia inflación). Asumiendo que los resultados del modelo son acertados, podemos decir que el Banco de México actuó correctamente al intervenir en el Mercado Cambiario a través de dos subastas de dólares, en las que se asignaron \$ 4,178 millones de dólares y ante demandas excepcionales de divisas se volvieron a subastar \$ 1,000 millones de dólares (Banco de Mexico, 2009), esto como control indirecto de la inflación.

También la producción es un elemento determinante de la inflación, por lo que el modelo de demanda agregada concuerda con el caso empírico de México. En tanto que la demanda agregada del modelo teórico es sustituida por el PIB en el modelo econométrico, es un determinante del nivel de precios de una economía, al igual que la tasa de interés que representaría los movimientos de la oferta agregada. Así, la fijación de precios, incluiría los tres elementos básicos del modelo: Balanza comercial, oferta y demanda agregada (equilibrio externo e interno). Se corroboró que el petróleo es una variable determinante de la inflación. Sin embargo, su significancia no es sustentada por las pruebas estadísticas correspondientes. No obstante, durante los últimos años se ha visto que los precios del petróleo jugaron un papel importante en la determinación de la inflación, ya que hasta principios del año 2008 los precios del petróleo a nivel mundial fueron elevados y a la par la economía mexicana no parecía sufrir tanto los embates de la crisis mundial, curiosamente cuando los precios del petróleo al igual que los montos de exportación bajan (al cierre del año 2008) se empieza a ver los efectos rezagados de la crisis mundial en la economía mexicana.

El modelo al igual que la teoría nos indica que la tasa de interés es un importante instrumento para alentar la producción en sentido inverso, muy a pesar de las nuevas formas de alentar la inversión en la práctica; por ejemplo el banco de México a través de la Junta de Gobierno decidió disminuir las condiciones monetarias en dos ocasiones a lo largo del año 2007, por lo que la tasa de interés se incrementó de 7 a 7.25% y finalmente al 7.5% al cierre del mismo año (Banco de Mexico, 2009), es decir prefirió mantener el control de la oferta monetaria y del mercado cambiario. Todo lo anterior, justifica el hecho de que el Banco de México tratará de controlar las expectativas de inflación a mediano y largo plazo, sacrificando un poco la tasa de interés que durante el año 2008 paso de 7.5% a 8.25%.

La economía mexicana se ha caracterizado por ser una economía petrolizada, además dependiente de los factores de economías externas (Sobre todo de la de Estados Unidos, de hecho solo podemos argumentar sobre esta economía, ya que el tipo de cambio del peso fue con respecto a la moneda de este país. La cual es una variable incluida en el modelo) y actualmente de factores financieros. Esta última afirmación, la hacemos basándonos en los resultados arrojados para las variables dummies que contemplan este tipo de eventos. Lo cual quedo demostrado empíricamente después de los efectos inflacionarios provocados en el año 2009 y que se adjudican a la crisis financiera iniciada en los mercados financieros de Estados Unidos y su subsecuente especulación en los mercados financieros mexicanos (principalmente en el mercado cambiario). No obstante los resultados económicos aparentemente positivos en el 2008 de la economía mexicana, para el año 2009 no se puede decir lo mismo, ya la economía mexicana empieza a vivir de forma rezagada (en comparación con otras economías del mundo) los efectos negativos de la crisis financiera mundial y del mercado estadounidense, lo que coincide con el modelo econométrico planteado; donde la inflación es principalmente determinada por las cinco variables anteriormente mencionadas, pero con un periodo de rezago, el cual recordaran es de un año.

CONCLUSIONES

La política Monetaria por sí sola no es un instrumento que pueda corregir los incrementos en los precios o espiral inflacionaria, se requiere de un política económica que fomente el crecimiento, productividad y justifique el crecimiento en los salarios para mejorar el nivel de vida de los trabajadores sin tener un

impacto en el corto plazo en los precios de la economía en general. La economía mexicana debe estar encaminada a enfatizar programas y políticas salariales, pero no necesariamente pactos contractuales. Y asegurar un tipo de cambio que mantenga estable el nivel general de precios. Definitivamente los factores externos, como las expectativas cambiarias o especulaciones financieras, seguirán afectando a la inflación mexicana, en la medida que esta no cuente con bases sólidas en el sector productivo. Lo que implica la necesidad de políticas económicas que fomenten la capacidad productiva de las empresas mexicanas y su desarrollo tecnológico.

Los precios de los insumos derivados del petróleo no debieran de estar sujetos a los precios internacionales del petróleo crudo, ni mucho menos de los productores estadounidenses. Si existiera una industria petrolera en México capaz de generar todo tipo de derivados de este recurso, la capacidad productiva del país y la rentabilidad de este sector fuese mayor. Los estímulos monetarios y fiscales pueden ser una estrategia para contrarrestar problemas económicos como la inflación, no obstante, hay que recordar que las variables como inflación son resultado de especulaciones generadas por los mismos entes económicos de una sociedad, lo que conlleva a concluir que también se debe tener expectativas positivas de los empresarios y consumidores sobre el funcionamiento de su propia economía y de las instituciones que intervienen en el crecimiento de la misma.

LA INNOVACIÓN PRESENTE EN LA EVOLUCIÓN DE LA INDUSTRIA AUTOMOTRIZ A NIVEL MUNDIAL

Jovita Georgina Neri Vega, Universidad Autónoma de Querétaro
Rafael González Zarza, Universidad Autónoma de Querétaro

RESUMEN

En este trabajo se presenta la evolución que ha sufrido la industria automotriz a nivel mundial, las innovaciones que aparecen en cada etapa, los cambios originados por las regulaciones gubernamentales, comenzando por la etapa artesanal, donde lo importante era además de satisfacer al cliente, la satisfacción misma del artesano al crear un producto único, con todo lo que esto conlleva en costo y tiempo. Continuando con la época Ford, que se caracteriza por la producción en serie y la economía en costo y tiempo, esta época tuvo su lapso dorado, donde Ford creó, desarrollo y dominó rápidamente la industria mundial más grande de la época, pero nunca pudo diseñar el sistema completo de administración que necesitaba para tener un control efectivo, ya que esto le tocaría hacerlo a Alfred P. Sloan. La siguiente época es la manufactura esbelta que se caracteriza por usar "menos de todo" en comparación a la producción en serie (menos trabajo, menos espacio de fabricación, menos inversión). Terminando con la época en expansión a partir del año 2000 y hasta la época actual, donde sin duda el automóvil se ha convertido en un elemento indispensable para el desarrollo de las actividades del hombre.

ABSTRACT

This paper presents the developments that have suffered the worldwide automotive industry, innovations that appear in each stage, the changes caused by governmental regulations, beginning with the traditional stage, where it was also important to satisfy the customer, the same artisan satisfaction by creating a unique product, with all that this involves cost and time. Continuing with the Ford era, characterized by mass production and economy in cost and time, this time had its golden period, where Ford created, development and rapidly dominated the world's largest industry of the time, but could never design the whole system of administration needed to have effective control, as this will touch it to Alfred P. Sloan. The next time lean manufacturing is characterized by using "less of everything" as opposed to mass production (less work, less manufacturing space, less investment). Ending the growing season from the year 2000 until the present day, where no doubt the car has become an indispensable element for the development of human activities.

INTRODUCCIÓN

El comportamiento estratégico en las empresas es muy diverso, sobre todo en industrias tan complejas como la Automotriz, han sido muchos los autores que han intentado una descripción de la evolución histórica de la industria automotriz americana a través de cómo la innovación y el uso de alta tecnología, especialmente las tecnologías de información, afectan su productividad. El trabajo de estos autores, sin embargo, no hace un estudio detallado de los varios aspectos del comportamiento estratégico de la industria automotriz mundial. Son varias las etapas por las que ha atravesado la industria automotriz mundial en su proceso de evolución, una primera parte la constituye la época artesanal, con la cual se da inicio a la fabricación de autos, después viene la época Ford, donde se busca la reducción de costos a través de la producción en serie y el modelo T, en seguida la producción en serie se acerca a la innovación de Alfred Sloan para la diversificación de modelos automotrices, la siguiente época es la manufactura esbelta, en la cual se reconoce el ingenio de los japoneses, cuyo propósito es utilizar menos de todo para mejorar la calidad en el proceso de producción, en seguida se tratará la época de la empresa en Expansión

en la cual Lee Iacocca puso en práctica la idea de la manufactura delgada, y por último se abordará el presente y futuro de la industria automotriz, el cual se enfoca en la búsqueda de nuevos mercados, de alianzas estratégicas e innovaciones en la tecnología.

METODOLOGÍA

La metodología de investigación utilizada es el método histórico comparativo (Babbie, 2000), el cual consiste en varios niveles de construcción teórica, además de la realización de un estudio de tendencia que consiste en registrar los cambios con el tiempo de alguna población en general.

Época Artesanal (1890-1908)

En los comienzos de la década de 1890 empresas como Panhard & Levassor (P&L) construían algunos automóviles bajo pedido explícito del cliente. Estas empresas se convirtieron en unas de las pocas ensambladoras de automóviles, dando así origen al sistema de producción artesanal. La firma P&L, se reunió con Gottlieb Daimler (fundador de la compañía que fabrica el Mercedes Benz) para diseñar el estándar Sistema Panhard, un ingenio de gasolina de alta velocidad, alcanzaba el límite legal de 12 millas por hora, con el motor delante, los pasajeros en filas detrás, y con tracción en las ruedas traseras Womanck, et al. (1992). El volumen de producción era muy bajo, debido a que el trabajo de las técnicas artesanales causaba variaciones inherentes a este tipo de manufactura. Los costos eran altos y no bajaban en relación al volumen producido, por lo que sólo los ricos podían tener un auto (Suñe, 2004).

Época Ford

Henry Ford encontró la manera de superar los problemas inherentes a la producción artesanal produciendo un auto susceptible de ser fabricado en serie y que cualquier persona podía manejar y reparar sin necesidad de un chofer o mecánico. Esta fue la base del revolucionario cambio que sufrió la industria automotriz (Flink, 2001). El proceso de fabricación que desarrolló Ford y que le permitió inaugurar la industria automotriz moderna, fue posible gracias a un modelo de automóvil, el modelo T, que fue lo suficientemente adecuado para ser producido en serie (Holtz, 1998). En Septiembre de 1908 William Durant, por su parte, fundó la General Motors Company, competidora de Ford la cual estuvo en problemas desde el principio. Posteriormente la perdería para dar origen a la Chevrolet Motor Company en 1915, cuya presidencia fue tomada por Alfred Sloan. Sloan. Walter P. Chrysler fue el otro competidor importante, y la última gran fuerza constructora individual de la época en la industria automotriz americana.

La Época Dorada De La Producción En Serie (1930-1973)

La combinación de las prácticas de fabricación de Ford, más las técnicas de administración y mercadotecnia de Sloan y las formas de control en la asignación del trabajo, dieron como resultado la producción en serie (Flink, et al, 2001). Sloan también aplicó un sistema financiero para controlar las inversiones en la planeación de nuevas marcas, publicidad, Sloan transformó General Motors en una empresa capaz de producir una amplia gama de productos. La empresa tenía inicialmente cinco modelos que iban del más barato al más caro (Chevrolet, Buick, Oldsmobile, Pontiac y Cadillac), para que sus compradores fueran ascendiendo de un modelo a otro dependiendo de sus ingresos (Seiler, 2008). Los japoneses estaban desarrollando una nueva manera de hacer las cosas que fue llamada Manufactura Esbelta (Rubenstein, 2001).

La Época De La Manufactura Esbelta (Lean Production 1973-1990)

Después de la segunda guerra mundial, Eiji Toyoda, y Taiichi Ohno de la Toyota Motor Co. en Japón, fueron los precursores del concepto de producción adelgazada (Montiel, 2001). Al principio de la aplicación entre mejor sea el individuo para el trabajo en equipo, menos sabrá de una especialidad específica. (Dennis, 2002). La meta automovilística de las empresas japonesas con respecto a la calidad fue la de “tiene que ser perfecto”. Los fabricantes que utilizaban el método de la producción adelgazada trabajaban bajo el supuesto de que nunca podrían alcanzar la meta de perfección total, por lo que adoptaron el método de mejora continua de los círculos de calidad (Ohno, 1999). Los proveedores en la producción adelgazada pedían: 1. los fabricantes firmaban acuerdos cooperativos. 2. los proveedores eran seleccionados en base a su habilidad para alcanzar los estándares. 3. los fabricantes comparten con los proveedores información de desarrollo del producto. 4. los fabricantes pidieron el envío de componentes con las base del sistema Justo a Tiempo (kanban). Kanban: Es una herramienta basada en la manera de funcionar de los supermercados. Kanban significa en japonés "etiqueta de instrucción"

Posteriormente Mazda, que en un inicio tuvo problemas en acceder a las plantas ensambladoras de Estados Unidos, logró una alianza estratégica con Ford, llamada Auto Alliance International, en la cual construirían autos deportivos. Al igual que Mazda, Mitsubishi se acercó a Chrysler para compartir su planta y producir autos deportivos. A Eiji Toyoda y Ohno, les tomó más de veinte años de incesante esfuerzo para poder aplicar completamente las ideas de la producción adelgazada.

La Época De La Empresa En Expansión (Extended Enterprise 1990-2000)

Los fabricantes en Estados Unidos alcanzaron altas utilidades mediante la manufactura esbelta de dos maneras: velocidad (en todos los procesos) y economías de escala. Esta aplicación marcó una época determinante cuando a Lee Iacocca lo nombraron presidente de Chrysler (Curcio, 2001).

Durante décadas se siguieron formando alianzas estratégicas. Un ejemplo fue la unión de Daimler Benz con Chrysler Corporation en 1998, lo que llevó a DaimlerChrysler a un alto rango en la producción de autos en el mundo y facilitó la expansión que ofrecieron economías de escala, empezando con la adquisición de Mitsubishi en el 2000. (AMIA, 2009)

El Futuro De La Industria Automotriz Mundial (2000 En Adelante)

En el siglo XX y el naciente XXI el automóvil ha cambiado la vida del ser humano radicalmente, brindándole prosperidad, libertad, movilidad y placeres que hacen que la vida no se pueda imaginar sin él. En este siglo, los elementos que definen al mercado automotriz son: factibilidad (práctico), comodidad y status (Olsen, Cabadas, 2002). Las grandes alianzas estratégicas en la industria de suministros automotrices lo están llevando con una tendencia hacia la globalización. Los proveedores que se han de mantener en el mercado global deben de encontrar una óptima posición en la cadena de valor, desarrollar una estrategia factible, fijar las prioridades en los procesos de innovación, optimizar sus propios procesos y también asegurar la transferencia del conocimiento. Actualmente los mercados más fuertes son los de Europa del Oeste, Norte América y Japón que se caracterizan por el aumento de competencia, altos costos locales y saturación de mercados. (AMDA, 2009). Adicionalmente a esto, las empresas automotrices están explorando nuevas tecnologías que en el futuro de la industria automotriz serán muy importantes (Arteaga, 2003).

CONCLUSIONES

El panorama histórico de la industria automotriz que ha sido reflejado en este trabajo, deja claro que las empresas de esta industria no solamente compiten en unos cuantos aspectos estratégicos, sino que a lo largo de su historia, han probado ser un sector industrial extremadamente complejo en el que se han combinado una serie de posibilidades estratégicas, mismas que han desencadenado diversos mecanismos de rendimientos, haciendo que este mercado se concentre en unas cuantas grandes empresas. Las estrategias adoptadas por cada una de las empresas han sido muy diversas, todo de alguna manera para no desaparecer ante los retos que implican las innovaciones. En los años ochenta, por ejemplo, a medida que el ritmo de los avances tecnológicos en la industria del automóvil se aceleró, Aston Martin y firmas similares tuvieron que aliarse con los gigantes automovilísticos (Ford, en el caso de Aston Martin) para acceder a los conocimientos expertos en áreas que van desde el control de los gases emitidos a la seguridad ante los choques. El costo de desarrollar estos conocimientos por sí mismos hubiera sido simplemente imposible. En los años noventa surge otra amenaza para estas firmas artesanas, a medida que las firmas que dominan la producción adelgazada —lideradas por los japoneses— comenzaron a ir detrás de sus nichos de mercado que eran demasiado pequeños y especializados para que los productores en masa, como Ford y General Motors, los hubieran atacado con éxito. Honda, por ejemplo, sacó un deportivo NS-X de carrocería de aluminio que constituyó un ataque directo al nicho de Ferrari en deportivos de ultra prestaciones. Los productores artesanos tradicionales tendrán que adoptar también los métodos de la producción adelgazada o desaparecer como especie después de más de un siglo, todo como una consecuencia lógica de los avances y la innovación.

CONTRIBUCIÓN DE LOS RECURSOS EDUCATIVOS ABIERTOS AL APRENDIZAJE SIGNIFICATIVO DE LAS TIC EN EL ESTUDIANTE UNIVERSITARIO

Lilián Ivetthe Salado Rodríguez, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

La investigación tuvo como objetivo determinar cómo contribuyen los recursos educativos abiertos al aprendizaje significativo del uso de las tecnologías de información y comunicación en estudiantes de educación superior. Este se realizó de agosto a noviembre del año 2009 en una universidad pública del noroeste de México. Participaron tres profesores y 79 alumnos. Fue un estudio de casos múltiple transversal e interpretativo donde encuesta y observación fueron las técnicas utilizadas para la obtención de información y su análisis indican que los recursos educativos abiertos sí contribuyen al aprendizaje significativo del uso de las TIC.

INTRODUCCIÓN

La aparición de la tecnología ha provocado el surgimiento de nuevas prácticas y formas de hacer las cosas, ocasionando una transición en la sociedad, es decir, el paso de la sociedad industrial a la sociedad de la información (Lozano, 2007). Factores como la globalización, la sociedad del conocimiento, entre otros, han modificado la manera de hacer las cosas (Terceiro, 2001), en la educación han surgido nuevos retos, se han creado nuevas oportunidades pero también se han desarrollado nuevas desigualdades; un ejemplo de lo anterior es la llamada brecha digital. El propósito de esta investigación es describir la contribución del uso de recursos educativos abiertos (REA) al aprendizaje significativo en la utilización de las tecnologías de información y comunicación (TIC) en estudiantes universitarios.

REVISIÓN LITERARIA

Los Recursos Educativos Abiertos (Rea)

En el fórum de la UNESCO (Sicilia, 2007) se definió el término de Recurso Educativo Abierto (REA), como los materiales en formato digital que se ofrecen de manera gratuita y abierta para educadores, estudiantes y autodidactas para su uso y re-uso en la enseñanza, el aprendizaje y la investigación. La importancia de los REA en la actualidad, es que son considerados un elemento importante de las políticas que quieren mejorar la enseñanza en todos los niveles (incluida la educación permanente) en la sociedad de la economía y el conocimiento (Ferrán *et al.*, 2007).

Implicaciones De Un Aprendizaje Significativo

El aprendizaje significativo constituye una meta ideal de aprendizaje que reconoce el papel que juegan los aprendizajes previos en la apropiación de nuevos conceptos y reconoce el papel del estudiante como protagonista de su propio aprendizaje. Durante el aprendizaje significativo el aprendiz relaciona de manera sustancial la nueva información con sus conocimientos y experiencias previas Ausubel, citado por (Díaz Barriga, 2003:108). Se requiere disposición del aprendiz para aprender significativamente e intervención del docente en esa dirección. El aprendizaje significativo implica la apropiación profunda de los contenidos. Al respecto Díaz Barriga, 2003:108, indica que si se logra el aprendizaje significativo, se trasciende la repetición memorística de contenidos inconexos y se logra construir significado, dar sentido a lo aprendido, y entender su ámbito de aplicación y relevancia en situaciones académicas cotidianas.

La Enseñanza De Las Tic

El objetivo de las TIC es facilitar la estructuración de la información y, por lo tanto, su circulación (López de Blas, 2005). Las prácticas educativas no necesitan elegir estar a favor o en contra de la tecnología, sino que tendrán que aprender cómo beneficiarse de ellas, haciendo un análisis crítico y profundo de lo que se necesita para hacerlas herramientas útiles (Santana citado por Pariente 2006). Por otro lado, hay que considerar que por sí mismas las TIC e Internet no educan ni reemplazan al profesor, (Benvenuto, 2003) sino que son recursos poderosos cuya incorporación debe considerar nuevos roles de la comunidad educativa, maestro, alumnos, directivos escolares, etc. Así como nuevos contenidos educativos en los programas de estudio con sus nuevas formas de evaluar.

METODOLOGÍA

Pregunta De Investigación

¿Cómo contribuye el uso de los Recursos Educativos Abiertos al aprendizaje significativo en la utilización de las TIC por parte de los estudiantes universitarios? Para dar respuesta a la pregunta se realizó una investigación con estudio de caso múltiple de tipo transversal e interpretativo. En un corte de tiempo se examinó el proceso seguido por tres profesores universitarios, quienes aplicaron diferentes REA en sus clases y, posteriormente se describieron e interpretaron los reportes de estudiantes y profesores sobre la experiencia.

Marco Contextual

Centro de Estudios Superiores del Estado de Sonora (CESUES)

Es una institución de educación superior pública en el noroeste de México donde se ofrecen diversos programas educativos. Se trabajó con 79 estudiantes del curso Tecnologías de la información, siendo éste un curso de tronco de formación básica obligatorio para todos los estudiantes de primer ingreso en la institución, cuyas edades oscilan entre los 18 y los 25 años. En cada grupo se utilizaron tres REA en tres sesiones de clase los cuales fueron proporcionados por los profesores del curso a través de la plataforma moodle y las sesiones se llevaron a cabo en una sala de cómputo donde cada estudiante contó con una computadora con acceso a Internet.

Instrumentos

Se utilizaron tres instrumentos para la recolección de los datos: un cuestionario para alumnos, un cuestionario para profesores y una rejilla de observación.

RESULTADOS

Los resultados más interesantes de la triangulación de datos para cada una de las categorías en las que se dividió la investigación fueron los siguientes *Categoría Recursos Educativos Abiertos (REA)*: El 77% de los alumnos considera que el Recurso Educativo Abierto fue ameno e interesante y que les facilitó la comprensión del tema, el 80% de los estudiantes consideró el REA como un buen complemento para los temas de su curso. Estos resultados fueron corroborados al 100% por los profesores encuestados y por las rejillas de observación de las clases.

Categoría Aprendizaje significativo: Para el 69% de los estudiantes la actividad con el REA fue apropiada y motivadora, para el 75% de los alumnos la actividad promovió la comunicación y su participación, por último para el 74% de los educandos la actividad mejoró su interés por el curso, por

estudiar y por el tema. Los datos anteriores fueron ratificados por el 80% de las encuestas de profesores y el 47% de los datos registrados en las rejillas de observación de clases.

Categoría uso de las TIC: Para el 82% de los alumnos el REA incentivó el usar las TIC y reafirmar que éstas son útiles para adquirir nuevos conocimientos. Para el 84% de los educandos el REA promovió el interés en el uso de las TIC y afirmaron que les facilitó la elaboración de sus trabajos. A partir de la utilización del REA, el 88% de los estudiantes considera aún más importante aprender sobre el manejo de las TIC. El 92% de los resultados de los profesores y el 75% de las rejillas de observación de clase confirmaron lo encontrado en la opinión de los alumnos.

CONCLUSIONES

Con base en los resultados y su interpretación se puede confirmar que el uso de Recursos Educativos Abiertos (REA) contribuye de manera favorable, al aprendizaje significativo del uso de las Tecnologías de Información y Comunicación (TIC), por parte de los estudiantes universitarios. Y se da respuesta a la pregunta de investigación ¿Cómo contribuye el uso de los Recursos Educativos Abiertos al aprendizaje significativo en la utilización de las TIC por parte de los estudiantes universitarios? Afirmando que las actividades que implicaron el uso de los REA resultaron motivadoras, interesantes, amenas, facilitaron y complementaron la comprensión del tema, promovieron la comunicación y participación de los estudiantes, mejoraron su interés por el tema, por el curso y el estudio en general. Además, incentivaron al alumno a utilizar las TIC, al descubrir o reafirmar que son indispensables en su quehacer académico y como futuros profesionistas; al mejorar y facilitar sus labores con su utilización. Los repositorios de Recursos Educativos Abiertos se convierten en una fuente de materiales innovadores y actualizados para mejorar el proceso educativo incursionando en nuevas formas de hacer las cosas, motivando a la búsqueda de nuevos y mejores caminos que conduzcan a una preparación idónea de los jóvenes con todos los retos que actualmente se les imponen, aun cuando no se cuente con las mejores condiciones tecnológicas en las instituciones para ir ampliando las oportunidades y estrechando las brechas.

BIOGRAFÍA

Lilián Ivetthe Salado Rodríguez, Maestra en Tecnología Educativa, Centro de Estudios Superiores del Estado de Sonora. Originaria de Hermosillo, Sonora, realizó estudios profesionales de Ingeniería en Sistemas Computacionales en el Instituto Tecnológico de Hermosillo, donde se graduó en el año 2000. En el año de 2009 se titula con mención honorífica de Maestra en Tecnología Educativa por el Instituto Tecnológico y De Estudios Superiores de Monterrey. Su experiencia de trabajo ha girado, principalmente, alrededor del campo de la educación, con una experiencia de 12 años en la docencia, ha impartido clases en los niveles de preescolar hasta licenciatura.

CAMPISMO COMO OPCIÓN PARA MICROEMPRESARIOS RURALES, CASO: ERÉNDIRA, BAJA CALIFORNIA, MÉXICO

Ricardo Verján Quiñones, Universidad Autónoma del Estado de Baja California
José Gabriel Ruiz Andrade, Universidad Autónoma del Estado de Baja California
Omaira Cecilia Martínez Moreno, Universidad Autónoma del Estado de Baja California

RESUMEN

El campismo es una actividad turística sustentable para microempresarios que puede ser realizada dentro de las zonas rurales del estado de Baja California, lo anterior permitiría generar opciones de desarrollo económico para zonas que no se han visto favorecidas por el desarrollo Turístico del Corredor Tijuana-Ensenada o del resto de las áreas turísticas urbanas de Mexicali, San Felipe y Tecate. En Baja California ha existido una vocación hacia la prestación de servicios turísticos y dada la demanda de opciones recreativas tanto de los residentes de la misma entidad como de otros puntos del país y de diferentes partes del mundo, específicamente del suroeste de los Estados Unidos y de Canadá, existe una oportunidad para desarrollar el turismo local, regional e internacional bajo esta modalidad.

INTRODUCCIÓN

La forma en que se puede realizar turismo rural en Baja California tiene elementos característicos que lo alejan de la definición tradicional de convivencia turística dentro de esta zona, pero que como actividad turística realizada en las áreas campestres del estado validan la acepción que se propone en este trabajo.

Conceptualización Del Turismo Rural En Baja California

Al hacer una revisión sobre la forma en que se ha trabajado con el turismo rural en Baja California, se analizaron las diferentes conceptualizaciones que se han utilizado en Europa, Centro y Sudamérica, encontrándose que estas últimas suponen diferentes acciones que se dan dentro de zonas rurales, particularmente en áreas agrícolas en donde los prestadores de servicios turísticos participan de la vida común y rutinaria de una granja, rancho o hacienda y por lo cual pueden integrar a sus huéspedes en actividades tradicionales de esa zona y de la comunidad. En este sentido, Valderrama y Flores (2007) sostienen que el turismo rural es una modalidad más del turismo alternativo, que propicia una actividad recreativa de calidad, realizada en un espacio no urbano, de bajo impacto tanto sociocultural, como ambiental, que facilita vivencias y experiencias que enriquecen el desarrollo de la personalidad y el espíritu, que hace accesible la comprensión de la realidad de las comunidades anfitrionas, mediante la convivencia respetuosa y valorada con sus pobladores, generando una derrama económica con beneficios directos para los prestadores de servicios locales y propiciando niveles crecientes de satisfacción y bienestar generalizado para los locales y para sus visitantes.

Por su parte la Secretaría de Turismo a nivel Federal en México SECTUR (2004) define al turismo rural como los viajes que tienen como fin realizar actividades de convivencia e interacción con una comunidad rural, en todas aquellas expresiones sociales, culturales y productivas cotidianas de las mismas; mientras que en Baja California el turismo rural ha sido considerado como una actividad turística realizada en el campo, zona rural o en una zona campestre y que es posible hacerse en cualquier espacio no urbano, teniendo como objetivo disfrutar del tiempo libre y la recreación dentro de un contexto natural, campestre y pacífico; este tipo de turismo viene a ser una integración entre el turismo rural y el alternativo, de las

cuales el campismo sería la actividad principal, generando con esto la idea conceptual del turismo campestre.

En otro orden de ideas, el turismo de aventura forma parte del turismo alternativo y sería el más adecuado para integrar actividades relacionadas con el campismo, pero al llevarse a cabo dentro de zonas no urbanas también se combina con la ruralidad. Por lo tanto, se está conceptualizado dentro de las actividades a realizarse en el turismo rural y que eventualmente se integraría con el turismo campestre. Desde esta perspectiva Verján, Valderrama y Ruiz (2008) plantean que el concepto de turismo rural no está bien relacionado con las actividades que pueden estar incluidas dentro del contexto de Baja California y su zona rural, por lo que el manejo del concepto de campismo en el espacio rural sí puede estar asociado a las zonas campestres, donde las personas asocian al “campo” con actividades que permiten la libre interacción con la naturaleza dentro de escenarios naturales y en los que las facilidades turísticas para campistas pueden reactivar la economía de comunidades que no tienen opciones económicas para dedicarse a la agricultura y que adaptando sus propiedades pueden ofrecer alternativas para desarrollar este tipo de turismo campestre que desde el punto de vista de los campistas es más cercano a su idea de recreación y de las actividades que pueden realizar en esos sitios.

Características Del Ejido Eréndira, Baja California

Se encuentra ubicado a 100 kilómetros al sur de la ciudad de Ensenada, Baja California, es una población que tuvo como origen la actividad agrícola a través de la conformación de un ejido, entendido como una propiedad de uso común y de beneficio colectivo, que en este caso obtiene beneficios económicos por agricultura, pesca y turismo. Al ser comunidad costera tiene acceso a playas rocosas y de arena, bañadas por las aguas frías del Pacífico, de clima tipo mediterráneo con lluvias de invierno. Cuenta con acceso por carretera pavimentada hasta el poblado y terracería en las calles locales. Existen campos agrícolas, cooperativas pesqueras, un hostel, un hotel de categoría económica y varias zonas de acampar privadas con cuota de ingreso y otras públicas de libre acceso.

Objetivo De La Investigación

Describir qué alternativas de campismo son requeridas por el mercado que demanda la prestación del servicio de campamentos, en este caso prestado por microempresarios de la zona rural del ejido Eréndira respecto a: infraestructura, servicios complementarios y atención personal.

METODOLOGÍA

La delimitación del estudio se da a partir del territorio del ejido Eréndira en Baja California en donde se ubican microempresarios de la zona rural. En la investigación empírica se consideró la aplicación de un instrumento para la obtención de datos primarios que permitieran identificar las preferencias de los usuarios para con esto proponer la mejora en el caso de la prestación de servicio y de sus instalaciones. La aplicación del instrumento antes citado se realizó en las ciudades de Tijuana y Ensenada que son los mercados potenciales locales más cercanos al punto en estudio. La investigación fue de tipo transversal durante el periodo vacacional de verano comprendido de junio a septiembre de 2008, continuando con el análisis de datos preliminares y finales durante 2009.

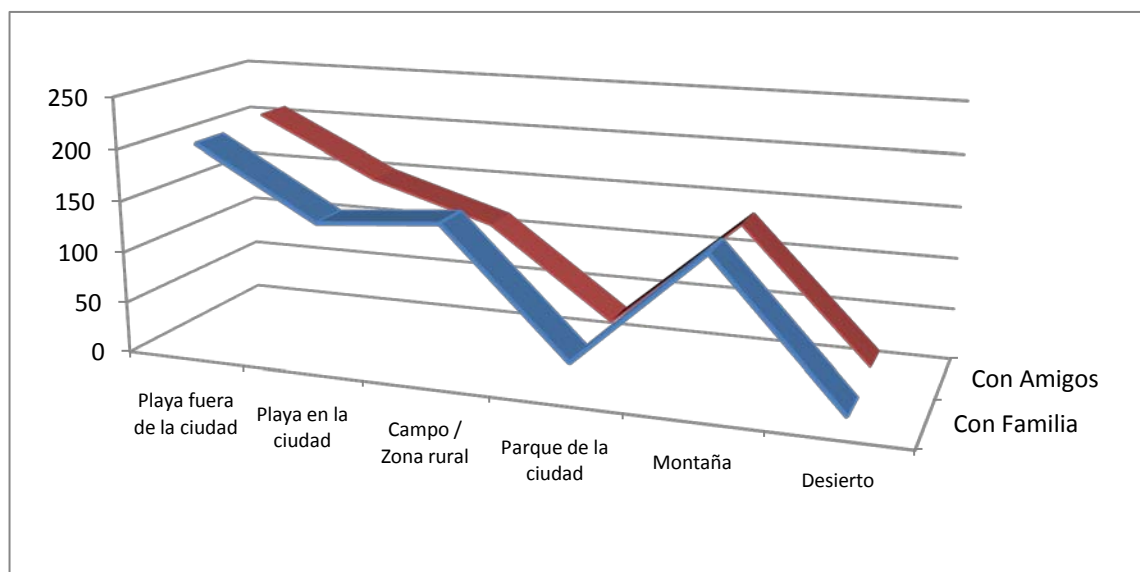

RESULTADOS

Existe una posición favorable en la población objetivo de este estudio, con respecto al campismo como actividad recreativa sustentable para desarrollar un tipo de turismo cuyo escenario principal sea la zona rural, aunque esta última no está bien identificada como tal por el mercado meta, ya que al momento no se han incorporado del todo actividades puramente rurales. Por lo tanto, la interacción parcial con habitantes

de estas comunidades se da con propósitos de información, para la provisión de algún tipo de facilidades turísticas si es que se necesitan y la compra de productos locales. Actualmente, los beneficios para los habitantes del ejido Eréndira en Baja California solo se han limitado a la venta de productos agrícolas, ganaderos o pesqueros. También obtienen beneficios por el comercio de quesos, legumbres, tortillas de harina, alimentos preparados, venta de leña, pescados, mariscos, etc.

Existe un agrado por acampar en *ranchos* que han sido considerados así por el solo hecho de estar ubicados en el campo, contar con árboles y disfrutar de un ambiente *natural* y al aire libre; asimismo hay disposición para realizar campamentos en zonas de montaña y playas alejadas de las ciudades. En tanto que una de las opciones más populares son los balnearios ubicados en las zonas campestres de los municipios de Tecate y Ensenada, así como los *campos turísticos* que son espacios dedicados a la recreación y campismo en zonas no urbanas y que son promovidos por la Secretaría de Turismo de Baja California (2010), en este sentido, el ejido Eréndira cuenta con espacios específicos en los que se puede combinar la experiencia rural con campamentos en la playa. Con respecto a la preferencia para acampar con familia o amigos, los resultados indicaron una mayor preferencia por la playa fuera de la ciudad; seguido por la montaña y la zona rural o el campo; playa en la ciudad, parque en la ciudad y el desierto fueron los menos preferidos como de muestra en la **figura No. 1**.

Figura No. 1: Preferencias para Acampar

Esta figura muestra la preferencia de opciones para acampar disponibles en Baja California, México.
Fuente: Elaboración propia

CONCLUSIONES Y RECOMENDACIONES

Con respecto a las oportunidades detectadas en la zona rural, Hernández (2009) sostiene que buscar alternativas de ingreso para las zonas rurales responde a la necesidad de reactivar la economía de éstas áreas, pues actualmente la mayoría se limita al desarrollo de actividades primarias como la agricultura, la ganadería etc., lo que ocasiona bajos ingresos derivados de ellas, provocando con esto que la gente joven tienda a emigrar y el potencial humano disminuya. Debido a estos factores, el *turismo rural* se ha visualizado como una forma de diversificar la oferta turística dirigida a segmentos motivacionales que prefieren vacacionar en las comunidades rurales, además de ser una opción para obtener ingresos por este concepto provocando o generando así el arraigo rural; asimismo establece que las estrategias deben ir dirigidas hacia una verdadera participación de las comunidades, asegurando la continuidad de las

actividades propias del campo, una opción laboral y el mantenimiento de su cultura y medio ambiente. Además considera que es aquí donde radica la importancia del modelo como estrategia de recuperación y fortalecimiento del sector, el enfoque que se le da a las empresas de turismo rural en el país se orienta fundamentalmente a atender mercados de bajos recursos, por lo cual los ingresos por este concepto no son significativos. Un factor que influye en el carácter precario de muchos de los establecimientos de turismo rural en el país, es la escasa disponibilidad de recursos con que cuentan los propietarios de estos establecimientos y el nivel socio-económico que predomina en el campo. Lo anterior se ve agravado porque la mayoría de las empresas no tienen acceso al crédito, aún cuando detentan la propiedad de la tierra. Aquí cabe recordar que del orden del 70% del territorio nacional es propiedad del sector social (ejidatarios y comuneros). Gran parte de los atractivos turísticos del país están en sus tierras.

Las nuevas tendencia del mercado turístico muestran que el turismo pudiera incrementar el número de personas que encuentren en las zonas rurales o campestres la alternativa para realizar actividades recreativas o de esparcimiento, en este sentido esta investigación se centró en encontrar qué facilidades turísticas se requieren para hacer que propietarios de terrenos ubicados en esa zona puedan ofertar actividades turísticas de bajo impacto que les beneficien tanto social como económicamente, ya que determinar qué requiere el usuario permite mejorar las instalaciones, además de coadyuvar en la mejora de opciones dentro de un contexto de desarrollo sustentable.

Los resultados sugieren una preferencia por las playas fuera de la ciudad, las montañas y el campo o zona rural como opciones para realizar campismo; en este sentido el ejido Eréndira tiene condiciones que le permitirían captar a dos de los tres segmentos, ya que en su condición rural con playa la hacen un producto diferenciable en términos de atributos que pueden ser destacados y eventualmente generar un modelo turístico en el que se posicione tanto como alternativa para hacer turismo rural o un destino de playa. Los ranchos campestres y zonas de acampar en la playa de la zona rural debieran incluir servicios básicos tales como baños y sanitarios, provisión de artículos de consumo masivo esencial, contar con capacitación con respecto a opciones recreativas, distancias entre lugares de interés y vías de acceso bien señalizadas. Resultados preliminares sugieren que existe disposición para la realización de actividades relacionadas con el campismo en el estado de Baja California, pero se requiere de mayor información sobre las alternativas y consistencia en la oferta de servicios complementarios que pueden ser ofertados por los habitantes del ejido Eréndira, quienes pueden en conjunto promover un nuevo producto turístico del que pueden tener beneficios en común.

Esther Ibarra Estrada, Instituto Tecnológico de Tijuana, México

RESUMEN

El objetivo de la investigación es identificar los factores que determinan la competitividad internacional en la industria maquiladora del sector electrónico de Tijuana, Baja California., México. La metodología de investigación consistió en utilizar como referencia el modelo de competitividad sistémica para conocer el enfoque de los diferentes modelos de competitividad existentes en las organizaciones a nivel internacional, nacional y estatal. Con los resultados obtenidos se espera aportar información importante que sirvan de referencia al sector empresarial, educativo y gobierno Para la toma de decisiones estratégicas y como contribución de evaluación de desarrollo económico industrial.

PALABRAS CLAVES: Competitividad, Industria Maquiladora, Sector Electrónico

INTRODUCCIÓN

La competitividad es el producto de la interacción compleja y dinámica entre cuatro niveles económicos y sociales de un sistema nacional, que son los siguientes: El nivel micro, de las empresas, las que buscan simultáneamente eficiencia, calidad, flexibilidad y rapidez de reacción, estando muchas de ellas articuladas en redes de colaboración mutua; el nivel meso correspondiente al Estado y los actores sociales, que desarrollan políticas de apoyo específico, fomentan la formación de estructuras y articulan los procesos de aprendizaje a nivel de la sociedad; el nivel macro, que ejerce presiones sobre las empresas mediante exigencias de desempeño; y, por último, el que se llama nivel meta, que se estructura con sólidos patrones básicos de organización jurídica, política y económica, suficiente capacidad social de organización e integración y capacidad de los actores para la integración estratégica. Al respecto, la competitividad de una empresa se basa en el patrón organizativo de la sociedad en su conjunto y por tanto es sistémica (K. Esser, 1996).

De acuerdo al Instituto Nacional de Estadística e Información (INEGI 2004) las empresas maquiladoras de exportación a nivel nacional, ofrecen fuentes de empleo a 1,115,30 personas, es decir, 3% de la población económicamente activa (PEA) del país, existen 2811 maquiladoras en México, el Estado de Baja California ocupa el primer lugar nacional con 902 maquiladoras instaladas (32% nacional) en sus cinco municipios, siendo la ciudad de Tijuana donde se concentra el 65% a nivel estatal, lo que representa un 20% a nivel Nacional. El sector electrónico de industria maquiladora en Tijuana, Baja California, representa a nivel estatal el 62% de la población económicamente activa (PEA). Tijuana, ciudad caracterizada por su dinamismo industrial, ostenta el primer lugar en número de industria maquiladora instalada a nivel nacional, donde las operaciones de empresas globales y nuevas prácticas laborales siempre están encaminadas a satisfacer los retos de la competitividad internacional, identificándose las prácticas operacionales a través de la innovación, capacitación y la investigación tecnológica, hacia una fuerte cultura de mejoramiento continuo y satisfacción del cliente. Las empresas maquiladoras del sector electrónico se les propone ser evaluadas y conocer cuáles son los factores que

inciden en la competitividad local, estatal e internacional para fortalecer sus debilidades y capitalizar sus fortalezas. Por otra parte las instituciones de gobierno requieren conocer y actualizar el marco jurídico donde las políticas públicas provean incentivos hacia las prácticas que reditúan en un entorno competitivo de las empresas y con ello la economía y bienestar de la población. Las instituciones educativas por su parte deben coadyuvar a través de una estrecha vinculación de actualizar sus planes y programas de estudio para que los recursos humanos que provean, sean de un nivel de conocimientos apropiados para la dinámica industrial y demanda competitiva internacional del sector electrónico.

REVISIÓN LITERARIA

Competitividad

Michael Porter (1990) define a la competitividad como “La producción de bienes y servicios de mayor calidad y menor precio que los competidores domésticos e internacionales, que se traducen en crecientes beneficios para los habitantes de una nación al mantener y aumentar los ingresos reales” en otras definiciones este mismo autor trata a la competitividad como un indicador que mide la capacidad de competir que se tiene ya sea dentro de una nación o dentro de una empresa. La Organización para la Cooperación y el Desarrollo Económico OCDE (2000) menciona que la competitividad es el grado en que un país, estado o región produce bienes de servicio bajo condiciones de libre mercado, los cuales enfrentan la competencia de los mercados internacionales mejorando simultáneamente los ingresos reales de su población y la consecuente productividad de sus empresas y gestión gubernamental.

El Diamante de la Competitividad de Porter.

El modelo de Diamante para la ventaja competitiva de las naciones de Michael Porter, es un modelo que puede ayudar a comprender la posición comparativa de una nación en la competencia global. Este modelo se puede utilizar para estudiar regiones geográficas dentro de un país. Porter dice que el crecimiento industrial sostenido, difícilmente se podrá construir siempre sobre los mismos factores básicos heredados (tierra, ubicación, recursos naturales, mano de obra y tamaño de la población local); la disponibilidad de estos factores puede minar la ventaja competitiva. Porter introduce el concepto denominado de racimos (**clusters**) por sus siglas en inglés, o grupos de firmas interconectados, de proveedores, de industrias relacionadas, y de las instituciones ubicadas en ciertas regiones.

Estos racimos (Clusters) son concentraciones geográficas de compañías interconectadas, de proveedores especializados, de proveedores de servicio y de instituciones asociadas en un campo específico. Crecen en las ubicaciones, en donde hay suficientes recursos y capacidades, se amontonan y alcanzan un umbral crítico, dándoles una posición dominante en una determinada actividad económica, con una decisiva y sostenible ventaja competitiva sobre otras regiones, y es posible que también lleguen a tener una supremacía mundial en ese campo específico. Porter plantea que los racimos pueden influenciar la competitividad de tres formas: a) Pueden aumentar la productividad de las compañías en el cluster, b) Pueden conducir la innovación en el campo de la actividad y c) Pueden estimular nuevos negocios en el campo. Según Porter, en general la ventaja competitiva de las naciones, es el resultado de 4 avanzados factores y actividades, ligados, en y entre las compañías que participan de estos clusters.

Factores avanzados ligados para la ventaja competitiva

Condiciones de la demanda: Si los clientes en una economía son exigentes, la presión que ejercen sobre las empresas será mayor y las obligara a mejorar constantemente su competitividad, vía productos innovares, de alta calidad, etc. Industrias de soporte relacionadas: La proximidad espacial de industrias ascendentes y descendentes, facilitara el intercambio de información y promoverá un intercambio continuo de ideas e innovaciones. La condición de los factores: Al contrario de la sabiduría convencional,

Porter discute que los factores dominantes de la producción (o los factores especializados), son creados y no heredados.

Competitividad sistémica

El concepto de competitividad sistémica se caracteriza por contener cuatro niveles analíticos distintos, pero interconectados entre sí: el nivel meta, el nivel macro, el nivel meso y el nivel micro. (Ver Tabla 1)

Tabla 1 Modelo de Competitividad Sistémica

Nivel	Enfoque	Características
Meta	Cultura	Desarrollo de habilidades y conocimientos de la sociedad en caminados a la competencia a través de una formación social .
Macro	Economía del País	Variables macroeconómicas, reformas de políticas fiscal, presupuestaria, monetaria y cambiaria, equilibrio del sistema económico.
Meso	Industria por región y sector	Políticas que fomenten la formación de infraestructura y apoyo a las industrias.
Micro	Estructura de las empresas	Factores de comportamiento de la empresa; productividad, costos, esquemas de organización, innovación, gestión empresarial, calidad, flexibilidad y rapidez.

En la tabla se muestra que al analizar la competitividad desde varios niveles en un país, el nivel micro representa una estrategia de análisis para la presente investigación.

Nivel Meta. Forma parte integral de los otros niveles, y se refiere a la capacidad de organización por parte de todos los actores, para canalizar los conocimientos sociales, que permitan a su vez regular y conducir correctamente, tanto a nivel macro como micro los intereses del futuro. Que permitan cohesionar esfuerzos para generar ventajas nacionales de innovación y conocimiento, es decir el desarrollo de habilidades y conocimientos de la sociedad encaminados a la competencia, a través de una formación social de estructuras que permitan la modernización de la economía.

Nivel Macro. Se refiere a las variables macroeconómicas y su estabilización, para poder competir en el mercado mundial, pues su inestabilidad no permite operar eficientemente el mercado nacional y limita el crecimiento de la economía.

Nivel Meso. Dentro de este nivel es considerado el desarrollo de políticas que fomenten la formación de estructuras y apoyo específico hacia aquellas industrias o empresas líderes en el mercado nacional, así como también formar y apoyar aquellas empresas que consideren que puede alcanzar a los líderes o la formación de competidores. Dentro de este nivel se considera lo nacional y regional o local, pues son procesos distintos pero no por ello no interconectados.

Nivel Micro. “A nivel micro, se identifican factores que condicionan el comportamiento de la empresa, como productividad, los costos, los esquemas de organización, la innovación con tecnologías, la gestión empresarial, el tamaño de empresa, etc.” (Rojas: 1999: 14). Siendo los indicadores de la productividad del trabajo y el capital la calidad, la flexibilidad y la rapidez.

Puesto que las empresas ya no compiten de manera aislada, sino en forma de cluster, en grupos de empresas de un sector, y en donde es necesaria una estrecha relación con los sectores productores de conocimiento y tecnología, como lo son las universidades, centro de investigación y desarrollo, instituciones financieras, entre otras. También una mejor organización de los diferentes departamentos que conforman la cadena de valor, tanto para disminuir tiempos perdidos, como para disminuir inventarios y hacer más estrecha la comunicación hacia el mercado. Por lo que la visión de la competitividad sistémica resalta a diferentes niveles los retos a los cuales se enfrenta la empresa, la región y las naciones ante los nuevos requerimientos de la industria, en un plano internacional.

Industria Maquiladora

El concepto de maquiladora de acuerdo al Diario Oficial de la Federación, ha venido sufriendo diferentes adecuaciones desde sus inicios, sin embargo el concepto publicado más reciente es el siguiente: “Proceso industrial o de servicio destinado a la elaboración, transformación o reparación de mercancías de procedencia extranjera, importadas temporalmente, para su exportación o a la prestación de servicios de exportación”.

METODOLOGÍA

Objetivos de la investigación

El objetivo general es identificar los factores que determinan la competitividad internacional de la Industria maquiladora del sector electrónico en la ciudad de Tijuana, Baja California.

Objetivos específicos:

1. Determinar los factores inherentes a las empresas que inciden en la competitividad y como se instrumentan
2. Determinar los factores del contexto internacional que inciden en la competitividad de la industria maquiladora en Tijuana Baja California.

Hipótesis de la investigación

Las empresas que implementan sistemas de administración del conocimiento, y que son instrumentados a través de vinculación con el sector educativo y con sus clientes, favorecen la competitividad.

La investigación se enfoca a analizar los diferentes modelos de las organizaciones a nivel internacional, nacional y estatal (Tablas de la 2 a la 10) dentro del ámbito de competitividad que inciden en el análisis de la industria maquiladora, tomando como referencia el modelo de competitividad sistémica en sus cuatro niveles, con la finalidad de identificar los factores asociados a nivel micro sistémico, los cuales servirán para sustentar teóricamente las bases de un instrumento que contenga los factores a evaluar para las empresas sujetos de estudio.

Una vez realizada la investigación cuantitativa, se identificaron las características de las empresas líderes a través de los estudios de SEDECO (Secretaría de Economía del gobierno del estado de Baja California), SE (Secretaría de Economía), SIEM (Sistema de Información Empresarial Mexicano) e INEGI (Instituto Nacional de Estadística, Geografía e Información).

Con base en los resultados se creará un diagnóstico de los factores que determinen la competitividad de la industria maquiladora del sector electrónico, con lo que puede facilitar el reconocimiento de las áreas y prácticas de oportunidad y sus fortalezas en las organizaciones. Las conclusiones explicarán los hallazgos obtenidos en el proceso de determinación de los factores de competitividad, con lo que se propondrán una serie de acciones e iniciativas en términos del sector empresarial, educativo y gobierno. Buscando poder contribuir al desarrollo económico y bienestar de la población económicamente activa de la ciudad de Tijuana Baja California, México.

RESULTADOS

Desde el punto de vista de la competencia entre naciones la Comisión Económica para Latinoamérica y el Caribe (CEPAL) establece cuatro factores clave para la competitividad de las mismas: desempeño económico, eficiencia del gobierno, eficiencia empresarial e infraestructura. (Ver Tabla 2)

Tabla 2 WEF (Foro Económico Mundial) Índice de Competitividad Global.

Factores	Enfoque sistémico
Infraestructura	Meso
Instituciones	Meta
Estabilidad Macroeconómica	Macro
Salud y Educación Primaria	Meso
Educación Superior y Capacitación	Meso
Eficiencia de los mercados	Meso
<i>Eficiencia del mercado laboral</i>	Micro
Sofisticación del mercado financiero	Meso
Preparación Tecnológica	Meso
Amplitud del Marketing	Meso
<i>Sofisticación de las empresas</i>	Micro
<i>Innovación</i>	Micro

En la tabla el modelo de 12 pilares del Foro Económico Mundial contiene 3 pilares enfocados a nivel micro sistémico, los cuales son: “Eficiencia de mercado laboral, Sofisticación de las empresas e Innovación”; representando dicho modelo útil para el análisis de la competitividad internacional desde la perspectiva de las empresas.

Tabla 3 IMD (Instituto para el Desarrollo Gerencial) Índice de Competitividad Internacional.

Factores	Variables	Enfoque sistémico
Eficiencia de Gobierno	Finanzas Públicas, Política Fiscal, Entorno Institucional, Legislación empresarial, Entorno Social	Macro
Actividad Económica	Economía doméstica	Meso
<i>Eficiencia Empresarial</i>	<i>Productividad, Mercado laboral, Finanzas, Prácticas administrativas, Actitudes y valores.</i>	Micro
Infraestructura	Infraestructura básica, Tecnología, Infraestructura científica, Salud y medio ambiente, Educación	Meso

En la tabla se muestra que el Instituto para el Desarrollo Gerencial, maneja un eje de cuatro factores para la determinación de la competitividad de los países, de los cuales el factor denominado “Eficiencia Empresarial” está orientado a nivel micro sistémico, el cual incluye subíndices de referencia y peso específico, para realizar análisis precisos de la competitividad internacional.

Tabla 4 ISO (Organización Internacional para la Estandarización)

Factores	Enfoque sistémico
Definición y campo de aplicación	Micro
Terminología de las organizaciones	Micro
Requerimientos legales	Meso
Sistemas de gestión	Micro
Estructura y responsabilidad de la organización	Micro
Gestión de los recursos	Micro
Realización del producto y/o servicio	Micro
Análisis, medición y mejora continua	Micro

En la tabla se observa que este modelo representa una base para el diagnóstico de la gestión empresarial de las organizaciones en términos de estandarización y planificación estratégica, de las ocho factores de referencia contiene 7 directamente de importancia para determinar la competitividad de una organización en el nivel micro sistémico, a excepción de la cláusula de requerimientos legales.

Tabla 5 PND Plan Nacional de Desarrollo del Gobierno Federal Mexicano (2006-2012)

Factores	Enfoque sistémico
Estado de Derecho y seguridad.	Macro
Economía competitiva y generadora de empleos.	Macro
Igualdad de oportunidades.	Meta
Sustentabilidad ambiental.	Meso
Democracia efectiva y política exterior responsable	Macro

En la tabla se observa que dentro de los ejes del plan nacional de desarrollo del gobierno federal mexicano, no contiene lineamientos de utilidad directa para el análisis de la competitividad empresarial a nivel micro sistémico.

Tabla 6 IMCO (Instituto Mexicano de Competitividad)

Factores	Enfoque sistémico
Competitividad Empresarial	Micro
Desarrollo Sustentable	Micro

En la tabla se observa que el modelo de competitividad nacional mexicano contiene dos ejes básicos para el nivel micro sistémico, uno sustentado en las característica de competitividad de negocio y el segundo eje enfocado a los planes estratégicos para el futuro del negocio en términos de subsistencia a mediano y largo plazo, denominado “Desarrollo sustentable”

Tabla 7 CEC – CNIMME (Centro de Estudios de Competitividad – Consejo Nacional de la Industria Maquiladora de Exportación)

Factores	Enfoque sistémico
Empleo Formal	Meso
Cultura Laboral	Meso
Desarrollo Tecnológico	Meso
Infraestructura Regional	Meso
Desarrollo Social	Meso
Industria Limpia	Meso
<i>Desarrollo Sustentable</i>	Micro

En la tabla se muestra un factor de nivel micro sistémico, denominado “*Desarrollo Sustentable*” el cual tiene como objetivo identificar la capacidad de planeación estratégica de permanecer a mediano y largo plazo en el mercado en un equilibrio con los recursos naturales.

Tabla 8 Plan Estatal de Desarrollo 2008-2013 del Gobierno Estatal de Baja California, México

Factores	Enfoque sistémico
Seguridad y Justicia Integral	Macro
Formación para la vida	Meta
Desarrollo Regional Sustentable	Meso
Economía competitiva	Meso
Bienestar y Desarrollo Humano	Meta
Gobierno al Servicio de la Gente	Macro

En la tabla se observa que dentro de los ejes del Plan estatal de desarrollo del gobierno de Baja California, no contiene lineamientos de utilidad directa para el análisis de la competitividad empresarial a nivel micro sistémico.

Tabla 9 Observatorio de Competitividad Estatal – Secretaria de Desarrollo Económico de Baja California, México

Factores	Enfoque sistémico
Factor Personas	Meso
Factor Infraestructuras	Meso
Factor Gobierno	Macro
Factor Resultados Económicos	Macro
<i>Factor Empresas</i>	Micro
Factor Innovación, Ciencia y Tecnología	Meso
Factor Manejo del Medio Ambiente	Meso

En la tabla se muestra que el Observatorio tiene un factor de nivel micro sistémico, denominado “*Factor Empresas*” el cual tiene como principal objetivo medir productividad, calidad de las empresas y finanzas

Tabla 10 Índice de Competitividad Sistémica de las Entidades Federativas (ICSar, 2009)

Factores	Enfoque sistémico
<i>Factor Empresario</i>	Micro
<i>Factor Empresa</i>	Micro
Factor Sector Regional	Meso
Factor Nacional	Macro
Factor Valores Sociales	Meta
Factor Internacional	Macro

En la tabla se muestra que Índice de competitividad sistémica de las entidades federativas, tiene dos factores del nivel micro sistémico, denominado “*Factor Empresario y Factor Empresas*” los cuales miden: Inversión, Austeridad, Competitividad, Responsabilidad y Responsabilidad Social, Cadenas de Suministros, Mejoramiento Continuo, Productividad, Calidad Total, Innovación y Tecnología de Punta, Evaluación Globalización de Proyectos.

CONCLUSIONES

La competitividad internacional, demanda que las empresas desarrollen capacidades locales con alcances globales, capitalizando la experiencia de sus vocaciones empresariales. Así como establecer alianzas

estratégicas denominadas recientemente como Clusters, que faciliten la cadena de suministros en las regiones para fortalecer sus operaciones y sus retos en términos de satisfacción con sus clientes. La estrategia de bajos costos operacionales no es la única decisión acertada en las organizaciones que compiten a nivel internacional, si no la capacidad de maximizar las vocaciones empresariales de la región y la proveduría local.

Desde una perspectiva sistémica la sociedad requiere un plan de nación local, que incluya políticas públicas nacionales adaptadas a las necesidades locales descentralizando los programas y políticas asociadas al apoyo y gestión empresarial a programas que promuevan la estabilidad y desarrollo económico de la sociedad, engrandeciendo la cultura de los valores del trabajo y vocación de superación profesional, incentivando la creatividad, innovación e inventiva del mejoramiento continuo en el área de trabajo o en sentido emprendedor del profesionista.

La sociedad empresarial del país en sus diversos sectores económicos debe promover las relaciones interinstitucional y la colaboración entre niveles de la sociedad del conocimiento para incentivar la calidad de vida de la ciudadanía. La ciudad de Tijuana Baja California, México representa un icono para el desarrollo perseverante del ciudadano Mexicano que busca oportunidades de mejor su futuro de vida, siendo una característica del desarrollo y crecimiento de la ciudad desde la década de 1960 cuando se crearon las primeras industrias maquiladoras en la frontera norte de México. El gobierno del estado de Baja California, debe fortalecer las acciones de apoyo para el desarrollo tecnológico en las empresas maquiladoras del sector electrónico, y la calidad de los programas de estudios en las universidades que forman el recurso humano calificado que requiere la industria, para que no exista un obstáculo al llegar empresas que necesitan ingenieros o personal staff, así como las habilidades y destrezas especializadas de lenguaje y software.

RECOMENDACIONES

En las siguientes Tablas 11 y 12 se plantea las recomendaciones de seguimiento a los resultados y conclusiones de la presente investigación para contribuir al estado del arte en el tema de estudios de competitividad sistémica en la industria maquiladora del sector electrónico. Tabla 11 Propuesta de la Investigación: “Factores que determinan la Competitividad en la Industria Maquiladora del Sector Electrónico en Tijuana, Baja California, México”

Nivel	Enfoque	Responsable	Características	Acción Específica
Meta	Cultura	Los 3 niveles de Gobierno y la Sociedad Federal, Estatal y Municipal	Desarrollo de habilidades y conocimientos de la sociedad	Desarrollar programas de Estudios específicos sobre vocaciones empresariales por la Ciudad y Estado.
Macro	Economía del País	Organismos Empresariales	Variables macroeconómicas	Desarrollar políticas públicas sobre apoyos para capacitación e innovación tecnológica sectorial, incentivar la inversión en ciencia.
Meso	Industria por región y sector	Empresas	Políticas que fomenten la formación de infraestructura y apoyo a las industrias	Gestionar la vinculación interinstitucional en las universidades, organismos empresariales y empresas para capitalizar la experiencia sectorial y consolidar clusters industriales.
Micro	Estructura de las Empresas		Factores de comportamiento de la empresa; productividad, costos, esquemas de organización, innovación, gestión empresarial, calidad, flexibilidad y rapidez	Fomentar actividades de clusters de empresariales para fortalecer las cadenas de suministro y la gestión de empresarial en términos de capital de trabajo y generación del conocimiento, para posicionar la competitividad de la curva de aprendizaje de la región.

En la tabla se muestra las propuestas de los factores que determinan la competitividad empresarial, así como acciones específicas a desarrollar en una fase inicial de seguimiento a la consolidación de la implementación de los factores en una región empresarial.

Tabla 12 Aportación al Sistema Empresarial Mexicano (SIEM) de la Secretaría de México (SE) del Gobierno Federal, a través del Censo Económico Nacional: “Factores que determinan la Competitividad en la Industria Maquiladora del Sector Electrónico en Tijuana, Baja California, México”

DESARROLLO ENDÓGENO EN MICROREGIONES DE MÉXICO A TRAVÉS DE PROYECTOS MINEROS

Gaudencio Francisco López Bustamante, Centro de Estudios Superiores del Estado de Sonora
Erika Olivas Valdez, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

Históricamente se ha visto en el caso de México, como ciertas microregiones de este País, han surgido y desarrollado a la par de proyectos mineros, que han generado crecimiento económico en las comunidades donde están asentados dichos proyectos, a través de la inversión extranjera directa en la mayoría de los casos. Lo que ha generado, el acceder a nuevas tecnologías e infraestructura para la industria y la población de la localidad. Estas comunidades utilizan y transforman sus recursos naturales para ser exportados insertándose en el proceso de globalización a partir de características peculiares o locales. Se ha demostrado que la industria minera ha favorecido el cuidado del ambiente a través de la creación de nuevos ecosistemas o la reposición de los afectados. Por lo anterior, se plantea que los proyectos mineros encabezados por el Grupo México, cumplen con las características del desarrollo endógeno, ya que se logra crecimiento económico, desarrollo humano, mejora en la calidad de vida, urbanización y todo esto, cuidando el ambiente y buscando la estabilidad laboral del personal, así como su integridad, con el objetivo siempre de fortalecer a la Comunidad Minera.

INTRODUCCIÓN

En México existe una disparidad en cuanto la distribución del ingreso, esto debido principalmente a que el desarrollo tecnológico y productivo de nuestro país, esta segmentado o concentrado en zonas urbanas. Ante esta situación los proyectos mineros resultan una estrategia de crecimiento y desarrollo equitativo, ya que para la instalación de las minas, no se contempla la existencia previa de infraestructura y desarrollo de la región como en el caso de sectores como el Maquilador. Las decisiones de invertir radican en la existencia de recursos o yacimientos mineros que resulten rentables, lo que conlleva una serie de beneficios para todas las comunidades asentadas alrededor de estos yacimientos.

Generalmente, al concretar un proyecto minero se genera derrama económica para toda la región. En otros casos, se forman comunidades y centros mineros ante la inversión y requerimientos propios de la mina para su funcionamiento. Existen microregiones (se entiende por microregión, a aquellas comunidades formadas por menos de 10,000 habitantes) que se podría decir, que crecen y se desarrollan a la par de este tipo de actividad extractiva. Por ello, se hace referencia a los modelos de crecimiento endógeno que explican el desarrollo de las localidades a partir de la transformación de sus recursos naturales y el cuidado del ambiente, como una forma de generar crecimiento sustentable y mejoría en la calidad de vida de los miembros de la localidad. Características que coinciden con los proyectos mineros llevados a cabo por el Grupo México, una de las principales empresas de este ramo productivo.

En este documento se encontrará información sobre el caso de una Comunidad del Estado de Sonora, que ha experimentado el crecimiento y mejora en la calidad de vida de sus pobladores a partir de la existencia de una mina que da vida a casi el 70% de los empleos de la región de forma directa; y a partir de este análisis, se hacen pronósticos respecto a los beneficios que pudiera tener en otras microregiones del país, como es el caso del Proyecto El Arco, en Baja California, México, donde su población es escasa al igual que la existencia de infraestructura, la cual tendrá que ser generada por la misma empresa, para en un futuro probablemente convertirse en un enclave económico.

REVISIÓN LITERARIA

Planteamientos sobre desarrollo endógeno

Endógeno significa "Que nace en el interior. Aquello que se origina en virtud de causas internas". Por ello se plantea que ese tipo de corriente ideológica aplica a los requerimientos necesarios para el desarrollo de las microregiones de México, donde las características son muy peculiares o bien el desarrollo tecnológico e infraestructura no existen como lo concebimos en algunas ciudades de este país.

Para desarrollar un proyecto minero, la comunidad no se ajusta a la industria minera globalizada, la empresa tendrá que ajustarse a las circunstancias que rodean a estas comunidades, para que esta finalmente pueda integrarse al crecimiento económico del mundo. El Desarrollo Endógeno busca la satisfacción de las necesidades básicas, la participación de la comunidad, la protección del ambiente y la localización de la comunidad en un espacio determinado. Busca que los procesos locales y globales se complementen. Su meta es el desarrollo en el nivel local, de la comunidad, pero que trascienda hacia arriba, hacia la economía del país, hacia el mundo.

Al ser la minería un sector estratégico y generador de derrama económica, se espera que con cada proyecto de inversión en este rubro, las comunidades involucradas mejoren su calidad de vida, ya que un proyecto minero, por si solo, implica un consumo enorme de recursos tanto naturales como humano, así como de prestación de servicios para su funcionamiento. Lo que lleva a las comunidades a ser enclaves económicos. De acuerdo a todo lo anterior, un modelo de desarrollo endógeno estaría orientado al crecimiento productivo con inclusión social, donde participan sectores vinculados a la economía popular, pequeños, medianos y grandes empresarios. El desarrollo se fundamenta en la diversificación de la producción de bienes y servicios, vinculada a las diversas cadenas productivas.

Cuando una inversión minera se concreta en una región, esta prácticamente asume que a través de la transformación de sus recursos naturales (minerales: principalmente cobre, oro y plata) y la prestación de servicios, los empleos se multiplicaran y el bienestar social estará garantizado, así como la calidad de vida. Si bien es cierto que los modelos de desarrollo endógeno también plantean el cuidado del medio ambiente, los proyectos mineros contemplan la creación de nuevas zonas de reforestación por cada ecosistema que se destruye, la empresa debe contemplar un plan para la reposición del ecosistema dañado en alguna zona cercana que garantice las condiciones de bienestar ambiental de la comunidad. Por lo tanto, el Desarrollo Endógeno es un proceso en que lo social se integra a lo económico y a lo ecológico. Específicamente permite que a las comunidades transformar sus recursos para producir nuevas fuentes de empleo, alcanzar el desarrollo personal y de la comunidad, generar desarrollo tecnológico e infraestructura y elevar la calidad de vida.

El desarrollo local aparece como una nueva forma de mirar y de actuar desde lo local en este nuevo contexto de globalización. El desafío para las sociedades locales está planteado en términos de insertarse en lo global de manera competitiva, capitalizando al máximo posible sus capacidades por medio de las estrategias de los diferentes actores en juego. La endogeneidad se convierte en motor de nuevos procesos de definición del bienestar para la sociedad. Postula como meta la autonomía nacional en diversos ámbitos estratégicos, tales como energía, tecnología y alimentación; a través del desarrollo de una infraestructura industrial y empresarial eficiente.

Desarrollo del sector minero en México

La minería es la rama industrial más antigua que se desarrollo en México. En un principio, ligada a los intereses coloniales, se privilegio la extracción de metales preciosos que posteriormente eran enviados a Europa. Con sistemas netamente manuales y basados en la explotación intensiva y extensiva de la mano

de obra, la nueva España y el México independiente de la primera mitad del siglo XIX fueron importantes productores de oro y plata. Se desarrolló así una importante industria en la rama extractiva, la cual estaba orientada fundamentalmente a la exportación, con una fuerte inversión extranjera.

Durante este proceso, la minería rompe con la antigua estructura colonial y adquiere nuevas características: marcada dependencia con respecto al capital y los mercados internacionales, modernización tecnológica, diversificación productiva y su desplazamiento hacia las regiones norteañas.

El Grupo México, es uno de los mayores productores mundiales de cobre, está a punto de construir una de sus minas mas grandes en un remoto terreno del noroeste de la República Mexicana, donde la nueva mina denominada El Arco se ubicará en la península de Baja California, en donde esta empresa minera espera se produzcan 190,000 toneladas de cobre, y otros derivados metálicos que acompañan a este producto incluyendo oro y plata, todo esto a partir del año 2012.

ANÁLISIS DE PROYECTOS MINEROS Y GENERACIÓN DE CRECIMIENTO ECONÓMICO EN LA MICROREGIÓN DE NACÓZARI, SONORA

En esta sección del documento se realiza un análisis sobre la Comunidad Minera de Nacozari en Sonora, para resaltar los resultados generados por el sector minero y asociarlos con el desarrollo endógeno a través del crecimiento de este tipo de comunidades mineras. Lo anterior, debido a que esta comunidad servirá como ejemplo de explotación de minas a Cielo Abierto, ya que las características de esta comunidad, son similares a las de futuros proyectos mineros en el resto del país y que están programados por el Grupo México, como el caso del Proyecto El Arco, en Baja California. Para la realización de este proyecto se requiera de una Inversión multimillonaria de casi 2 mil millones de dólares que serán invertidos a lo largo de tres años y detonará el desarrollo de una región actualmente despoblada por los siguientes 25 años dando empleo a 5000 personas para cubrir con la operación minera proyectada.

La mina de El Arco tendría repercusiones como detonador económico al obligar al igual que otras comunidades mineras a un proyecto de desarrollo urbano. Previo se realizaría una visita a Mexicana de Cobre y Mexicana de Cananea que son otras instalaciones de Minera México en Sonora para conocer en minas similares a la que se pretende crear en la mina El Arco y así poder visualizar la magnitud del proyecto. Este tema ya es revisado por el Municipio de Ensenada a quien le corresponderían los servicios en este nuevo asentamiento que implicaría una nueva población en el Sur de Baja California que se convertiría en la más alejada de la cabecera municipal en el Distrito minero de El Arco- Calmalli.

El ingeniero Xavier García, presidente de Grupo México - Minera México, comento que la inversión total del proyecto incluyen dos plantas piloto para pruebas metalúrgicas, una de flotación y una de lixiviación (ESDE), con dos tiros para extracción de mineral, la construcción de una planta de energía y plantas desaladoras para proveer de agua a las operaciones de la mina.

Por lo que con este presupuesto la compañía minera también construirá casas, escuelas y una clínica de salud para los trabajadores de El Arco, y asimismo pavimentará los caminos existentes. Uno de los resultados más notorios de desarrollo endógeno es el caso de Nacozari en el Estado de Sonora, mina que pertenece al Grupo México y que desde su creación ha buscado el desarrollo de la Comunidad para facilitar su operación. Generando la infraestructura necesaria, medios de comunicación, desarrollo del sector educativo y salud, por mencionar algunos. A continuación se indican algunos datos sobre los beneficios que ha adquirido esta comunidad a través del tiempo, gracias a la actividad minera que prácticamente engloba a todas las actividades económicas de esta región. La principal fuente generadora de empleos en este municipio es la mina Mexicana de Cobre S. A. de C. V., que absorbe el 80 por ciento de la mano de obra, ocupando a 3,012 empleados de los cuales 2,065 pertenecen al sector obrero y 947 ocupan puestos de confianza.

Cuenta con una población económicamente activa de 4,361 habitantes, de los cuales 4,289 se encuentran ocupados y 72 sin ocupación. Lo que representa un 69% de la población económicamente activa, laborando en la empresa minera, sin contemplar aún, los trabajadores de empresas terciarias, las cuales prestan servicios de mantenimiento y proveedores, anclados en la región para solucionar los problemas que surjan de la operación de la mina, de forma inmediata.

"La Caridad", mina de la región es considerada como la tercera mina de cobre más grande del mundo. Lo que implica que la Comunidad de Nacozari, Sonora, esta inmersa en el proceso de producción de este mineral a nivel mundial, cumpliéndose así con una inserción en el mercado global a partir de la existencia de un recurso natural de la localidad. Para el desarrollo de la actividad comercial se cuenta con un mercado que alberga a 27 locales dedicados a diferentes giros, se tiene además la preferencia de 97 establecimientos, entre los cuales destacan 32 tiendas de abarrotes, 18 comercios (ropa, zapaterías, restaurantes), 5 tintorerías, 3 farmacias y 2 estaciones de gasolina. Para su desarrollo se requiere un centro de abastos que permita eliminar el intermediarismo y así abaratar los costos de los productos. Respecto al cuidado del medio ambiente, el sector minero a través del grupo México, a procurado fomentar el desarrollo sustentable de la comunidad aplicando programas de reforestación y creación de nuevos ecosistemas con la intención de recuperar y evitar la extinción de especies propias de la región.

Para ello, se cuenta con viveros propios que reponen el recurso extraído en los procesos de implementación de la infraestructura (Desmontadero). En el caso del uso del agua, se cuenta con tratadoras de aguas residuales, para el mejor aprovechamiento de este liquido vital, ya que en Sonora es escaso. Programas sociales del cuidado de flora y fauna a través de programas de reciclaje. Por ejemplo; PLANET PARTNER DE HP – MEXICANA DE COBRE, en el cual se recicla todo el plástico y se envía para su transformación a Estados Unidos, donde se obtiene como producto final macetas de plástico, que son vendidas en el mercado. Un alto porcentaje de los recursos obtenidos de la venta de estas macetas, son destinados a la creación y preservación de la tortuga de mar, en el Estado de Guerrero, México.

CONCLUSIONES

Si el desarrollo endógeno plantea la integración de la región a los mercados internacionales a través de la transformación de sus recursos naturales para producir nuevas fuentes de empleo, alcanzar el desarrollo personal y de la comunidad, generando desarrollo tecnológico e infraestructura, que eleva la calidad de vida de sus pobladores, entonces se concluye que el sector minero más que afectar al entorno ecológico y poner en riesgo la vida de los trabajadores mineros, resulta una actividad generadora de empleos confiables, gracias a la adquisición de nuevas tecnologías que minimizan los riesgos de trabajo y que a su vez no dañan a la ecología como se ha manejado en otros documentos. Esta afirmación solo aplica para el caso de proyectos mineros a cielo abierto y específicamente de acuerdo a los resultados obtenidos en las inversiones del Grupo México, que fue el que se tuvo como referencia para el presente caso de estudio.

IMPLEMENTACIÓN DE LA DISCIPLINA DE MEJORA CONTINÚA EN UN ALMACÉN

Liliana Pérez Trujano, Instituto Tecnológico De Orizaba
María Cristina Sánchez Romero, Instituto Tecnológico De Orizaba

RESUMEN

Resulta importante en la administración moderna el papel que tiene el almacén dentro de las organizaciones, de ser considerado como la bodega o depósito donde se guardaban los materiales que producción o ventas requería, se ha convertido en un medio para lograr economías potenciales y aumentar las utilidades de las empresas; de esta manera el control y el buen manejo de un almacén es vital en la búsqueda de ventajas competitivas de una empresa. En el Grupo Industrial Parissi (GIPSA) se ha verificado esta importancia y atendiendo esa necesidad se implementan sistemas de mejora continua (Chang 1996) para solucionar los problemas de este departamento. Primeramente, es primordial trazar objetivos claros y medibles, pues se debe saber y mantener objetivos sobre los cuáles descansen todos los esfuerzos cometidos, apuntando hacia ellos; ya que como escribió Lewis Carroll, “si no te importa adónde vas, cualquier camino es bueno”. A fin de lograr los objetivos previstos, se procede a implementar un sistema de mejora continua e integral, denominado KAIZEN. El alcance del presente artículo se centra en el primer paso hacia esa mejora continua, la implementación de la metodología denominada 5's. El recurso humano al ser el factor más importante, primero debe ser concientizado y preparado para asumir esta nueva filosofía de vida beneficiando así a la empresa y extendiendo el mismo de manera personal.

INTRODUCCIÓN

El Grupo Industrial Parissi (GIPSA) se encuentra ubicada en el centro del estado de Veracruz, México. En ella se produce y comercializa insumos químicos (productos terminados) y materias primas (productos utilizados para elaborar otros artículos) tanto a menudeo como a gran escala, GIPSA ha ido creciendo poco a poco, empezando como empresa familiar y hoy día surte productos a una gran cantidad de clientes de manera permanente.

En la actualidad cuenta con las áreas de crédito y cobranzas, ventas, administración y almacén, así como con un laboratorio de elaboración de especialidades químicas. Uno de los primeros pasos es determinar el área de mayor oportunidad de mejora en la empresa. Esto ha llevado a observar que en el almacén se han desatendido procesos internos que, para llegar a ser una empresa competitiva, son muy necesarios. Descuido, errores u omisiones son situaciones frecuentes en dicha área; aunado a esto, no existe delegación de responsabilidades, y se observa desorganización en este departamento.

Por lo tanto, existe la preocupación por mejorar la administración y el uso de los recursos tanto humanos como técnicos; para ello, se realiza el estudio a fin de identificar las áreas de oportunidad mediante herramientas administrativas y básicas, tales como: diagramas de árbol, gráfica de pareto, diagrama de afinidad, diagramas de causa-efecto, etc. Una vez detectados los problemas, se analizan y evalúan, para plantear estrategias que proporcionen una mejor organización administrativa, mayor control de sus productos, menos desperdicios y/o mermas, desarrollando así una disciplina de mejora continua en el departamento.

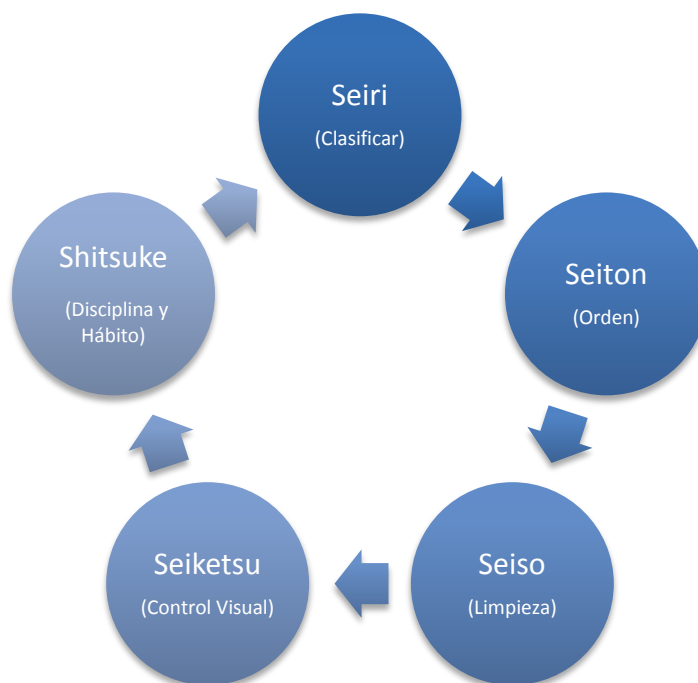

REVISIÓN LITERARIA

Una de las principales filosofías de mejora continua es el Kaizen, término que proviene de dos ideogramas japoneses (*Kanjis*), *KAI* que significa Cambio, y *ZEN* que significa Bueno, que combinados nos resulta la palabra mejoramiento (Suárez 2007). Desde el punto de vista estratégico el Kaizen es la acción sistemática y a largo plazo destinada a la acumulación de mejoras y ahorros, con el objeto de superar a la competencia en niveles de calidad, productividad y costos.

Sin embargo, implementar una cultura de mejora continua en una empresa, no es algo que suceda mágicamente, el cambio de mentalidad debe darse desde alta dirección para que a partir de ahí se cuente con el apoyo y la motivación necesarios hacia los empleados para poder lograr mejores niveles de calidad en el trabajo.

Dentro de la gran gama de metodologías de mejora que ampara el Kaizen, hay una en especial que es, a consideración de los autores, el cimiento para que en lo futuro se pueda ir creciendo en los programas de mejora, esta es la aplicación de las 5's. Esta metodología es universal, se puede aplicar en todo tipo de empresas y organizaciones, tanto en talleres como en oficinas, incluso en aquellos que aparentemente se encuentran suficientemente ordenados y limpios (Rey Sacristán 2005).

Las 5S se han aplicado en diversos países con notable éxito y son las iniciales de cinco palabras japonesas que nombran a cada una de las cinco fases que componen la metodología:

Las tres primeras fases - Organización, Orden y Limpieza - son operativas.

La cuarta fase - Control Visual - ayuda a mantener el estado alcanzado en las fases anteriores - Organización, Orden y Limpieza - mediante la estandarización de las prácticas.

La quinta y última fase - Disciplina y Hábito - permite adquirir el hábito de su práctica y mejora continua en el trabajo diario. Las 5 fases se abordan sucesivamente.

IMPLEMENTACIÓN

Antes de iniciar con la implementación, uno de los primeros pasos es concientizar al recurso humano de ser la parte vital del éxito o fracaso de la mejora continua que se plantea. Es por ello que se recurre a la capacitación constante, a través de personal mismo y personas expertas en el campo y esto se va logrando a través de pláticas motivacionales, talleres de trabajo de mejora, videos de resultados alcanzables, convidándolos a participar con sus experiencias e ideas a ser parte del programa de mejora. Con la finalidad de que cada etapa de las 5's sea llevada adecuadamente llegando a su fin más deseado: Shitsuke, es decir, la disciplina y el hábito.

Seiri

Consiste en:

- ❖ Separar en el sitio de trabajo las cosas que realmente sirven de las que no sirven
- ❖ Clasificar lo necesario de lo innecesario para el trabajo rutinario
- ❖ Mantener lo que necesitamos y eliminar lo excesivo
- ❖ Separa los elementos empleados de acuerdo a uso, seguridad y frecuencia de utilización con el objeto de facilitar la agilidad en el trabajo

Beneficios

- ❖ Liberar espacio útil en almacén
- ❖ Reducir los tiempos de acceso al material
- ❖ Mejorar el control visual de stocks de repuesto y elementos de producción
- ❖ Preparar las áreas de trabajo para el desarrollo de acciones de mantenimiento autónomo.

Seiton

Consiste en:

- ❖ Consiste en organizar los elementos que hemos clasificado como necesarios de modo que se puedan encontrar con facilidad. Ordenar en mantenimiento tiene que ver con la mejora de la visualización de los elementos de las máquinas e instalaciones industriales.

Beneficios:

- ❖ Facilita el acceso rápido a elementos que se requieren para el trabajo
- ❖ Se mejora la información en el sitio de trabajo para evitar errores y acciones de riesgo potencial
- ❖ Se libera espacio
- ❖ La seguridad se incrementa
- ❖ La empresa puede contar con sistemas simples de control visual de materiales y materias primas en stock de proceso
- ❖ El estado de los equipos se mejora y se evitan averías
- ❖ Mejora de la productividad global de la planta

Seiso

Consiste en:

- ❖ Limpieza significa eliminar el polvo y suciedad de todos los elementos del almacén
- ❖ Implica inspeccionar el equipo durante el proceso de limpieza.
- ❖ Integrar la limpieza como parte del trabajo diario como una actividad de mantenimiento autónomo

Beneficios:

- ❖ Reduce el riesgo potencial de que se produzcan accidentes
- ❖ Mejora el bienestar físico y mental del trabajador
- ❖ Se incrementa la vida útil del equipo
- ❖ Se reducen los desperdicios de materiales y energía
- ❖ La calidad del producto se mejora y se evitan las pérdidas por suciedad y contaminación del producto y empaque

Seiketsu

Consiste en:

- ❖ El estandarizar pretende mantener el estado de limpieza y organización alcanzado con la aplicación de las primeras 3's.
- ❖ Mantener el estado de limpieza alcanzado con las tres primeras S
Enseñar al personal a realizar normas con el apoyo de la dirección y un adecuado entrenamiento.

Beneficios:

- ❖ Se guarda el conocimiento producido durante años de trabajo
- ❖ Se mejora el bienestar del personal al crear un hábito de conservar impecable el sitio de trabajo
- ❖ El personal aprende a conocer con detenimiento el equipo y el producto que maneja
- ❖ Los tiempos de intervención se mejoran y se incrementa la productividad de la planta

Shitsuke

Consiste en:

- ❖ Significa evitar que se rompan los procedimientos ya establecidos.
- ❖ Implica control periódico, visitas sorpresa, autocontrol de los empleados, respeto por sí mismo, por los demás y mejor calidad de vida laboral

Beneficios:

- ❖ Se crea una cultura de sensibilidad, respeto y cuidado de los recursos de la empresa
- ❖ La disciplina es una forma de cambiar hábitos
- ❖ Se siguen los estándares establecidos y existe una mayor sensibilización y respeto entre personas
- ❖ El cliente se sentirá más satisfecho ya que los niveles de calidad serán superiores
- ❖ El sitio de trabajo será un lugar donde realmente sea atractivo llegara cada día

RESULTADOS

Uno de los factores y claves del éxito fue el fuerte compromiso por parte de la alta dirección para conseguir los objetivos, así como el entusiasmo y participación de todo el personal involucrado en el área. De los beneficios que se han obtenido se puede hablar sobre el espacio que ocupaban los materiales, desocupando pasillos en un 50 %, se deshicieron de un 20 % envases en mal estado y también se revisó la documentación que se utiliza, encontrando y desechando formularios innecesarios. Asimismo se crearon secciones dentro del almacén, tales como: sección de herramientas auxiliares, sección de producto terminado, sección de materia prima, sección de devoluciones, para hacer posible un mejor tiempo en buscar y encontrar el material disponible, así como las herramientas utilizadas para su disposición. Se adicionaron controles visuales para concientizar el uso de equipo de protección, el correcto manejo de materiales para prevenir accidentes, y también para evitar despilfarros de los productos fluidos al momento de despachar.

La limpieza del área de trabajo ha pasado a ser parte del trabajo diario del personal, logrando una mejor imagen, y haciendo uso de herramientas y equipo limpio.

Se elaboró un proceso de etiquetado, estandarizándolo para evitar errores, y mejorando los tiempos de servicio.

Todo lo anterior es parte de lo que se ha logrado, también se consiguió establecer un comité dinámico (porque van cambiando constantemente) que sea el revisor de los procedimientos ya establecidos para darles seguimiento y evitar que estos se rompan.

CONCLUSIONES

De la problemática observada de desorganización y descontrol en almacén, la implementación de las 5s proporciono una ventaja estratégica en relación a los competidores, al sumar de forma continua mejoras en los procesos, productos y servicios.

La empresa ha quedado convidada de los beneficios que la disciplina de mejora continua otorga tanto en su vida profesional como en la personal, por lo que ha solicitado que se extienda a las demás áreas, así como a otras dos empresas propiedad del director que son: una empresa de transportes y una comercializadora de productos petroleros.

LAS COMUNIDADES DE PRÁCTICA Y LA GESTIÓN DEL CONOCIMIENTO: UN ESTUDIO DESCRIPTIVO

Juan Carlos Alicea Rivera, Universidad de Puerto Rico

RESUMEN

Las investigaciones sobre gestión del conocimiento en las organizaciones muestran que algunos proyectos fracasan porque consideran las dimensiones tecnológicas y estratégicas en su implantación, no los aspectos humanos y socioculturales. Ante esta situación, la formación de comunidades de práctica en las empresas es una alternativa excelente, ya que éstas integran las tres dimensiones ya mencionadas. Esta investigación consiste en explicar qué constituyen, cómo fenómeno organizacional, las comunidades de práctica, y cómo difieren estructuralmente de la estrategia de gestión de conocimiento. Este es un estudio descriptivo, cuya intención es comparar los campos de comunidades de práctica y gestión del conocimiento, a través de la identificación, descripción y análisis de los artículos publicados en revistas académicas y populares sobre ambos temas entre los años 1995 a 2004. Este artículo demuestra que la estructura conceptual y práctica revelada por las publicaciones sobre dichas comunidades, aunque de inclinación académica y psicosocial, integra los aspectos tecnológicos, gerenciales y psicosociales. Por esta razón, difiere de la estructura de gestión de conocimiento, la cual es de orientación tecnológica y popular.

INTRODUCCIÓN

Peter Drucker (1993) estableció que el conocimiento sustituiría al capital como factor clave en la producción de bienes y la prestación de servicios en las empresas. En consecuencia, la gestión adecuada de dicho conocimiento es la estrategia gerencial de mayor importancia hoy día.

No obstante, no hay consenso en lo que respecta al valor y significado de este tipo de gestión ni de su utilidad como herramienta gerencial (Ponzi, 2002). Una de las dificultades principales estriba en haber centrado los proyectos de gestión del conocimiento alrededor de las tecnologías de información casi con carácter de exclusividad (Skyrme, 1997). No obstante, el paradigma del conocimiento que se ha destacado durante los últimos veinte años destaca que el problema no reside en las capacidades tecnológicas en sí mismas, sino en no ser capaz de “capturar y retener” el conocimiento que, tácitamente, poseen sus recursos humanos. (O’Dell & Jackson, 1998; Nonaka & Takeuchi, 1995).

Entonces, ¿qué es “gestión del conocimiento”? Desde el uso literal de la frase misma, ¿no están implicados la gerencia y los sistemas de información como disciplinas determinantes? ¿Qué importancia práctica tienen el contexto empresarial y el elemento humano en el manejo del conocimiento?

Definiciones De Gestión Del Conocimiento

La mayoría de las definiciones que ofrecen los autores más citados en la literatura que se ha escrito bajo el concepto de gestión de conocimiento presentan el concepto desde una variedad de construcciones teóricas. Por ejemplo, aunque Nonaka y Takeuchi (1995) no usaron el término “gestión del conocimiento”, sí definieron el concepto “conocimiento organizacional” como “la capacidad con la que cuenta la empresa para crear nuevo conocimiento y distribuirlo por toda la organización. Esto exige diseñar los procesos necesarios para trabajar colectivamente en la creación de conocimiento en las empresas, una intervención activa del elemento humano.

Skyrme (1997), por otra parte, la define como “gerencia explícita y sistemática de conocimiento vital en las empresas...”. Esta definición está más orientada hacia la tendencia a categorizar al conocimiento como activo productivo, por lo que el énfasis es en el manejo estratégico. O’Dell y Jackson (1998) establecen que la gestión del conocimiento “permite transferir el conocimiento correcto a las personas y al tiempo correctos...”.

A la luz de estas definiciones podemos destacar tres aspectos. Primero, todo proyecto de gestión de conocimiento tiene como objetivo capturar información pertinente a través de sistemas electrónicos de información. Segundo, dicha gestión es un proceso gerencial ya que añade valor a la empresa y promueve un desempeño eficiente. Tercero, que dado que tiene que tomarse en cuenta la cultura organizacional y los recursos humanos, la perspectiva psicosocial no puede dejarse de lado en estos proyectos.

Por otro lado, la literatura académica e industrial y las investigaciones que en estos ámbitos se han realizado en los últimos años confirman la importancia de estas tres dimensiones en la gestión del conocimiento (Muzumdar, 1997; Mattila & Larsen, 2002) Ponzi (2002) analizó lo publicado en revistas académicas, semi-académicas y populares, entre 1991 a 2001, con la intención de entender la evolución y desarrollo intelectual del campo de gestión del conocimiento y demostró que, desde el inicio de los noventa, la orientación tecnológica fue la de mayor consideración e impacto en las publicaciones de negocios, científicas y sociales.

Sin embargo, los intentos por desarrollar programas de gestión del conocimiento con orientación particular hacia lo tecnológico y estratégico, siguen induciendo a pérdidas a las empresas (Beazley, et al., 2002; Malhotra, 2004). Por eso, varios estudiosos de cambio y conducta organizacional proponen que es necesario conocer cómo los seres humanos construyen conocimiento en interacción social y dinámica si es que se quiere crear un ambiente que propenda al aprendizaje continuo (Argyris, 1978; Lave & Wenger, 1991).

Ante ese cuadro, y desde finales del siglo XX, se propuso una herramienta de corte psicosocial a esos fines: la creación de comunidades de práctica en las organizaciones (Wenger, 1998). Estas comunidades atienden los elementos sociales, culturales y cognoscitivos necesarios para una adecuada gerencia del conocimiento. Además, facilitan y motivan la interacción entre los distintos componentes de la organización, lo que motiva la creatividad e innovación en las empresas.

Comunidades De Práctica

Para Malhotra (1997), una comunidad de práctica es un conjunto de individuos que se mantienen unidos mediante relaciones informales a través de las cuales comparten identidad, unidad de propósito y de significado. Por otra parte, uno de sus proponentes principales, Etienne Wenger (2002), menciona que tales comunidades comparten experiencias constantes dentro de un dominio de conocimiento, las cuales les permiten desarrollar perspectivas, prácticas y enfoques particulares, así como un sentido de identidad.

¿Qué implican estas definiciones? Específicamente, que la búsqueda productiva y desarrollo del conocimiento en las empresas involucra a todos los miembros de una organización en colaboración y esfuerzo mutuos. La interacción que se da entre los miembros de las comunidades de práctica sirve para que puedan combinar tanto los aspectos tácitos como los aspectos explícitos de la gestión de conocimiento (Wenger, 2002). Es por medio de participar en tales comunidades que los miembros producen conocimiento amplio y siempre actualizado. La formación de comunidades de práctica en las empresas trasciende estos problemas, ya que el énfasis está en los aspectos psicosociales asociados al manejo del conocimiento.

Pero, ¿es que las comunidades de práctica descartan el uso de la tecnología y los procesos gerenciales como orientación en los proyectos de gestión del conocimiento? No, estos sistemas le sirven para interactuar dentro de los dominios específicos de conocimiento que se trabajen en la comunidad y fortalecer las discusiones grupales (McDermott, 1999; Wenger, 2002). Los trabajadores del conocimiento necesitan comprender las aplicaciones de las nuevas tecnologías a sus contextos empresariales. Sin embargo, aún en empresas que cuentan con comunidades de práctica se observa una ausencia de compromiso de parte de los empleados a colaborar entre sí. (Merali, 2002).

Si las comunidades de práctica son una alternativa para lidiar con el manejo del conocimiento en las empresas porque ayudan a evitar la polarización hacia lo tecnológico y estratégico, sería preocupante que se reflejaran las mismas tendencias de los proyectos de gestión. Por tanto, al analizar la estructura conceptual de las comunidades de práctica, como disciplina o construcción teórica, ¿conservan, las comunidades de práctica, la misma orientación o atienden lo cognoscitivo y lo social?

METODOLOGÍA

Problema De Investigación

El problema de investigación, por lo tanto, consiste en explorar qué constituyen, cómo fenómeno organizacional, las comunidades de práctica, y qué relación estructural guarda con el concepto de gestión de conocimiento. Este estudio es un análisis descriptivo comparativo entre los campos de comunidades de práctica y gestión del conocimiento. El objetivo es identificar, describir y analizar las características de lo publicado en revistas académicas y populares, y la luz que arroje sobre las posibles relaciones entre los campos.

Establecemos seis hipótesis con la intención de demostrar si hubo o no cambios en la naturaleza del contenido de las publicaciones relacionadas con comunidades de práctica y con gestión del conocimiento cuando se comparan los periodos 1995-1999 y 2000-2004. Además, hubo cambios en la naturaleza del contenido de las publicaciones relacionadas con comunidades de práctica y gestión del conocimiento cuando se comparan a partir de los tipos de revistas en que fueron publicadas durante los años bajo investigación?

En esta investigación usamos tablas de contingencia y pruebas de independencia estadística entre variables, mediante el uso de la estadística “ji-cuadrado” (χ^2). La prueba no-paramétrica, ji-cuadrado (χ^2), sirve para corroborar las hipótesis establecidas para pruebas de independencia entre datos nominales o variables categóricas.

Usé la base de datos “ABI/Inform Global” del servicio de base de datos “Proquest” para seleccionar los artículos, ya que la investigación es selectiva y sólo se usan como evidencia el número de artículos asociados con administración de empresas y publicados, separadamente, bajo los dos campos de estudios relacionados en este trabajo: gestión del conocimiento y comunidades de práctica. Además, esta base de datos solo recopila artículos con esta característica y está dividida, específicamente, en revistas académicas, semiacadémicas y populares.

CONCLUSIÓN

La investigación demostró que, a partir del 2002, las publicaciones relacionadas con manejo del conocimiento en las organizaciones se han orientado hacia sugerir la formación de comunidades de práctica como plataforma. De hecho, hubo una disminución sostenida en los artículos de gestión del conocimiento con contenido de sistemas de información a partir de ese año.

Además, hubo diferencias significativas entre la naturaleza del contenido con el que se publicaron artículos de gestión del conocimiento y la época en que se publicaron los artículos, pero no así en el caso de los artículos relacionados con comunidades de práctica. Esto implica que sólo el contenido de los artículos de comunidades de práctica fue independiente de la época en la que los artículos se publicaron, lo que parece indicar que es una construcción teórica mejor definida en el caso de las comunidades de práctica.

Por otra parte, los tipos de revistas sí influyeron en la naturaleza del contenido de las publicaciones sobre gestión del conocimiento tanto en el periodo de 1995 a 1999, como en el de 2000 a 2004. A partir de 2002 se observó que la reducción sostenida en artículos sobre gestión del conocimiento esta acompañada de una reducción sostenida en los artículos publicados en revistas populares y las publicadas con contenido de del campo de sistemas. Por lo tanto, concluyo que las revistas populares con contenido de sistemas de información determinaron, consistentemente, lo publicado sobre gestión del conocimiento para todos los años. Durante 1995 a 1999, hubo tan pocos artículos sobre comunidades de práctica que las relaciones absolutas entre el tipo de revistas y el contenido de las mismas que comunican los datos no muestran relación significativa alguna. De hecho, los pocos artículos publicados durante ese periodo asociaban los conceptos comunidades de práctica y aprendizaje organizacional.

Ya para la época de 2000 a 2004, el total de artículos publicados bajo comunidades de práctica fue casi tres veces y media superior a la época anterior. Los tipos de revistas sí influyeron sobre la naturaleza del contenido de las publicaciones sobre comunidades de práctica durante ese periodo. De hecho, las revistas académicas con contenido de conducta organizacional determinaron, consistentemente, lo publicado sobre comunidades de práctica para todos los años.

En resumen, mientras la inclinación teórica de las publicaciones sobre gestión de conocimiento ha privilegiado los aspectos técnicos, la inclinación teórica de las publicaciones sobre comunidades de práctica es hacia los aspectos conductuales. La combinación de la formación de comunidades de práctica y los proyectos de gestión del conocimiento servirían para manejar el conocimiento en las organizaciones desde sus vertientes más importantes: la tecnológica, la estratégica y la psicosocial.

EVALUACIÓN DE LA PROCURACIÓN DE FONDOS DE OSC'S DE LA REGIÓN CENTRO DEL ESTADO DE COAHUILA, MÉXICO

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México
Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila- México
Rosa Carmina Espino Hernandez, Universidad Autónoma de Coahuila-México

ABSTRAC

El presente trabajo se realizó con el objetivo de generar conocimiento de la forma de obtención de procuración de fondos de las OSC'S que existen en la región centro del estado de Coahuila, para posteriormente proponer estrategias que contribuya a prolongar la permanencia en la comunidad y así lograr su fin social por el cual fue creado. La metodología empleada consistió en obtener información cuantitativa de 27 Organismos de la sociedad civil de la región centro del estado de Coahuila, México mediante un cuestionario estructurado, para enseguida procesarlos en el software estadístico SPSS. El resultado de la prueba estadística Cross Tabs, muestra que el coeficiente de contingencia obtenido no es significativo a un nivel de confianza del 95%; por tanto, no se puede afirmar que existe una relación entre el tipo de estrategia adoptada por las OSC's en las diferentes fuentes de procuración de fondos con la publicación de informes a sus donantes y comunidad en general sobre sus fuentes de procuración de fondos y porcentajes de participación.

PALABRAS CLAVES: Procuración de fondos, estrategias, Organismos de la Sociedad Civil (OSC'S)

INTRODUCCIÓN

La diversidad de las organizaciones de la sociedad civil en el mundo entero es muy amplia: Tales como aquellas que operan a través de la formación de redes de colaboración hasta las que trabajan de manera independiente hacia el logro de su misión y visión, o bien quienes están muy estructuradas, con programas y sistemas bien establecidos, hasta las que en realidad se componen de una o dos personas con buena voluntad y deseos de hacer cosas, pero sin infraestructura, estructura organizacional, o presupuesto definido, entre otros. Cita Ramírez (2004) que en México, es hasta el 2004 que el gobierno reconoce y les da legitimidad a las OSC'S que operan en el país y para ello crea la “Ley federal de fomento a las actividades de las organizaciones de la sociedad civil”, la cual además de permitir su registro público, tienen el compromiso de rendir informes y presentar comprobantes del uso y dinero que administren y de ser necesario serán fiscalizadas.

De acuerdo al padrón integrado por el “Patronato voluntario de promotores de Coahuila” la cantidad de OSC existentes en y para la región centro del estado, del 2005 al 2009 fluctúa entre 68 y 77 organismos con una variedad de finalidades sociales. En los últimos años la región centro del estado de Coahuila ha quedado a la zaga en el surgimiento y sostenimiento de los organismos de las sociedades civiles existentes, lo cual genera un retraso en la atención de problemas de índole social o apoyo a la población en estado de vulnerabilidad y que el gobierno no ha podido atender.

El conocer las características así como las condiciones de procuración de fondos bajo el cual operan las OSC de la región centro del estado de Coahuila, contribuirá a la generación de conocimiento sobre el diseño de estrategias que apoye o mejore su independencia para el ejercicio de sus funciones. Por ello es importante conocer y evaluar las opciones o alternativas en la procuración de fondos que les permite el sustento económico hacia el logro de su visión y misión.

La información que se presenta se encuentra organizada conforme a lo siguiente: en el primer apartado

se presenta la revisión de literatura efectuada sobre el tema, enseguida se presenta la metodología empleada en el estudio para posteriormente mostrar los resultados y las conclusiones del mismo.

REVISIÓN LITERARIA

Esta investigación se realiza a través de la perspectiva de los diferentes modelos estratégicos aplicados en la procuración de fondos como parte del plan estratégico financiero de una OSC para lograr su misión y visión.

Cita Rosillón y Villalobos (2007) que Las OSC, como su propio nombre lo indica, “son organismos conformados por la Sociedad Civil. Su origen se debe fundamentalmente a la necesidad de lograr objetivos comunes en el que el Estado no tiene injerencia”. Cuentan con cinco características cruciales: Son entidades organizadas, privadas, separadas del gobierno, no distribuyen ganancias entre sus asociados y en ellas se realiza actividades voluntarias y gratuitas. Estas pueden actuar en las áreas de: asistencia social, desarrollo y vivienda, derechos humanos, medio ambiente, filantropía, salud, educación e investigación y cultura.

En cuanto a la regulación de la operatividad de estos organismos, Tapia y Robles (2006), observan que: “El mayor problema al que estas organizaciones se enfrentan frecuentemente es la escasez de recursos con los cuales realizar su trabajo. Esto repercute también en la baja profesionalización e institucionalización. En México, las fuentes de procuración de fondos pueden ser a través de:

- Gobierno federal (Solo si cuenta con su CLUNI *clave única de inscripción al registro federal de las organizaciones de la sociedad civil*, una vez por año, a través de la participación de proyectos específicos).
- Gobierno del estado (Participación única por año) a través de proyectos, además de ser necesario estar legalmente constituido.
- Fundaciones.
- Cuotas de recuperación de los beneficiados.
- Donativos de la población en general.
- Sector empresarial.
- Realización de eventos por la OSC

Estas tres últimas de procedencia local, nacional o internacional. Para cubrir los gastos operativos que genera en el cumplimiento de su misión solamente se pueden cubrir por las tres últimas opciones de procuración de fondos.

En el artículo de Berger (2006) publicado en “Revista Harvard Review of Latin América” da a conocer como una estrategia más para la obtención de fondos y diversificar las fuentes de ingresos de las organizaciones de la sociedad civil es a través de la búsqueda de alternativas para proveer servicios y vender productos en el mercado, lo que ha sido etiquetado como “Estrategias de desarrollo de ingresos” (*Earned Income Strategies*). Cabe recordar que la palabra estrategia proviene del griego *Strategos*, que significa “un general” El término estrategia aplicado a las organizaciones es definido por Koontz *et.al* (1998) como “El modelo o plan de acción para asignar recursos escasos con el fin de ganar una ventaja competitiva y lograr objetivos con un nivel de riesgo aceptable” Hoy las OSC’S están aplicando crecientemente *Earned Income Strategies* para financiar sus actividades operativas, estrategias que a su vez están relacionadas o alineadas con las respectivas misiones sociales. Las OSC’S que alcanzan sostenibilidad económica a través de actividades asentadas en el mercado, pueden obtener recursos financieros para obtener sus propósitos sociales.

Cita el organismos Shapiro Para que una OSC sea sostenible económicamente tiene que cumplir los siguientes requisitos: Tener más de una fuente de ingresos, poseer más de una forma de generar ingresos, disponer de una planificación estratégica, financiera y de acción regularmente, disfrutar de sistemas financieros adecuados, contar con una buena imagen pública así como tener una autonomía financiera. En otras palabras, el organismo necesita una estrategia para la sostenibilidad financiera. La experiencia que tiene Shapiro en el área de finanzas para el uso de los organismos de la sociedad civil le permite aportar las siguientes opciones estratégicas de financiación:

- Financiación de donantes
- Ingresos (cuotas, ventas, ofertas).
- Cuotas de afiliación.
- El público general (acontecimientos especiales, solicitudes de correo directo, campañas de inversión y recolectas).
- Inversiones.
- Control de gastos.

En la que la selección de una opción no excluye a la otra. Shapiro coincide con Munch (2008) y Kluyver (2001) cuando menciona que una estrategia para la procuración de fondos, tendrá mayores posibilidades de éxito cuando parte de un análisis del entorno, pudiendo ser a través de un *Análisis FODA*.

Problema: Las OSC de la región centro del estado de Coahuila de Zaragoza desconocen y carecen de estrategias para la procuración de fondos que les permita la sostenibilidad económica para el logro de su misión y visión social.

Preguntas de investigación

1. ¿Cuenta la organización con un programa de procuración de fondos específico, alcanzable y medible?
2. Existe relación entre la antigüedad, y variedad en la fuentes de obtención de fondos en la obtención de fondos?
3. ¿Cuáles son las fuentes de obtención de fondos y recursos con mayor frecuencia utilizada?
4. ¿En caso de contar con programas de procuración de fondos, las OSC cuentan con personal calificado y dedicado a cumplir las metas del programa?

Objetivo General: Diseñar estrategias para la procuración de fondos de las OSC'S que les permita la sostenibilidad económica para el logro de su misión y visión social.

METODOLOGÍA

Esta investigación se llevo a cabo un estudio de tipo descriptivo y correlacional, la investigación empleada fue mixta: documental y de campo. Esta investigación se realizo en dos etapas metodológicas: la primera consistió en realizar una investigación documental para identificar diferentes alternativas que existen para la procuración de fondos de las OSC'S de la región centro del Estado de Coahuila.

En la segunda etapa se realizo una encuesta utilizando cuestionario con escala tipo Likert; la muestra quedo conformada por 27 organizaciones de la sociedad civil localizados en 5 municipios que cuentan con organismos de éste tipo. (Monclova, Frontera, Castaños, San Buenaventura y nadadores) de la región centro del Estado de Coahuila, cuyo objetivo primordial es la "Asistencia Social". Para

el procesamiento de los datos que arrojaron la totalidad de cuestionarios aplicados, se utilizó el software (SPSS/w, versión 17.0) para cálculo de estadísticos descriptivos y de relación.

RESULTADOS

De la información proporcionada por el “*Patronato voluntario de promotores de Coahuila*” (enfocado a promover, coordinar y fortalecer acciones de coparticipación ciudadana a fin de ayudar a mejorar la calidad de la gente vulnerable del Estado de Coahuila), se logró formar un directorio de OSC’S localizados en los municipios de la región centro del Estado de Coahuila, el cual contiene datos tales como:

- Nombre de la institución
- Presidente y/o representante legal
- Dirección, teléfono y correo electrónico
- Características de la comunidad que atiende
- Tipo de atención que ofrece
- Actividades que realiza con la finalidad de dar el servicio a la población meta
- Registro CLUNI

Como se observa, de los 10 municipios que forman la región centro del estado, el total de OSC’S se encuentran localizadas en los municipios de Frontera, Castaños, San Buenaventura, Nadadores, Escobedo y predominantemente en Monclova por ser la ciudad de mayor población en la región. Del Total de los organismos registrados, 17 de ellos se encuentran sin funcionamiento temporalmente; las causas son desconocidas.

A continuación se presentan los hallazgos obtenidos en la segunda etapa de la investigación con respecto a los datos generados por las OSC’S encuestadas. La tabla 1 muestra que de acuerdo a su finalidad social su distribución, identificando que del 100% de organizaciones el 54 % se enfoca mayormente a la Asistencia Social. Del total de organismos enfocados a la asistencia social, el 53 % se encontró que tienen una dependencia administrativa, financiera y operativa a instituciones religiosas de cobertura internacional, así como el 25% de clubs de cobertura internacional y el 22% restantes operan con sus propios medios y recursos.

El resultado de la prueba estadística Cross Tabs, muestra que el coeficiente de contingencia obtenido no es significativo a un nivel de confianza del 95%; por tanto, no se puede afirmar que existe una relación entre el tipo de estrategia adoptada por las OSC’S en las diferentes fuentes de procuración de fondos con la publicación de informes a sus donantes y comunidad en general sobre sus fuentes de procuración de fondos y porcentajes de participación.

JUSTIFICACION

Las OSC carecen de suficientes recursos económicos para llevar a cabo sus funciones. Si bien es cierto que en la actualidad resulta atractivo para los empresarios el hacer inversiones en filantropía como parte de su cartera de activos, las diversas Asociaciones y Fundaciones deben competir entre sí por estos recursos, e incluso deben competir contra las Asociaciones y Fundaciones propias de los mismos empresarios y de personas allegadas a los funcionarios de alto cargo. Para ello, es necesario que este tipo de instituciones cuenten con una estructura organizacional formal y bien establecida; además de integrarse por un personal profesional y comprometido. Su supervivencia depende en gran medida del uso eficiente de los recursos con que cuenta. La Planeación estratégica surge como una herramienta útil para hacer más eficiente el uso de los recursos y a la vez sustentar la petición de los mismos. dirigido a las

pequeñas OSC's y que contribuya a superar los desafíos que presentan en la consecución de sus metas en un marco de competitividad

Tabla 1 Categoría de OSC'S de acuerdo a su finalidad, en la región entro de Coahuila, México

Enfoque	Participación
Asistencia Social	54 %
Desarrollo y Vivienda	0 %
Derechos Humanos	4 %
Medio Ambiente	0 %
Filantropía	20 %
Salud	2 %
Educación e Investigación	5 %
Recreación y Deportes	5 %
Cultura	5 %
Asociaciones Profesionales y laborales	5 %
TOTAL:	100 %

ANALISIS DE LAS CONDICIONES DE APLICACIÓN DE CLUSTERS AGROINDUSTRIALES: CASO IV REGION, CHILE

Erico Wulf Betancourt , Universidad de La Serena

Jorge Rojas Lobos, Universidad de La Serena

ABSTRACT

This paper analyses the necessary condition to take into account to implement clusters .At the same time, it evaluates the relevance of these factors within the framework of implementing cluster in the regional economy of Coquimbo, 465Km north from Santiago, Chile. Five sectors are defined to evaluate that potential, all of them part of the advanced agricultural, more elaborated products. The main conclusion based on statistical tools, is that the region has a potential for clusters, although actually there is no one close to be fully implemented.-

INTRODUCCION

Cluster analysis has been a very important subject within the field of regional competitiveness based on the Porter´s approach to improve it .There are many examples of successful experiences, around Latin America and the rest of the world. There are also many failures surrounding the implementation of clusters, because it requires a set of conditions at the beginning but also to keep it moving along the way, while the cluster get to its maturity level. This paper has three sections. The first sections deal with a brief review of the literature focused on the conditions to implement clusters. The second section is referred to data , methodology and results. The third section is related to conclusions of this research.-

KEY WORDS: Clusters, Políticas de fomento productivo ,actores críticos

REVISIÓN DE LA LITERATURA

La capacidad de las firmas para innovar, desarrollarse y crecer se potencia en un ambiente de cooperación y competencia, que aprovecha sinergias a través de su agrupamiento, que involucra tanto al sector privado como público y se complementa con la educación, la innovación y la tecnología. Porter (1990)

Este modelo, sostiene que la diversidad e intensidad de relaciones funcionales entre empresas explican la formación de un *cluster* y su grado de madurez. Estas relaciones se refieren a los cuatro puntos del "diamante" de competitividad; es decir, las relaciones de competencia entre empresas de la misma actividad; las relaciones con sus proveedores, con actividades de apoyo, con productores de insumos complementarios y con proveedores de insumos y factores especializados. En el análisis de Porter, los *clusters* se dan en torno a los recursos naturales, como en a actividades basadas en aprendizaje y conocimiento.

El ciclo de vida de un cluster incluye cuatro etapas (Rosenfeld 2002): la embrionaria, la de crecimiento, la de madurez, y la de declive del *cluster*. En la etapa embrionaria, el cluster produce únicamente para el mercado local o regional ,y en general, requiere de esfuerzos en inversión e innovaciones para hacer frente a cuellos de botella del contexto local (Bianchi, Miller y Bertini, 1997). La fase de crecimiento del *clusters* es aquella en que "los mercados se desarrollan lo suficiente como para expandirse, atraer imitadores y competidores, y estimular los emprendimientos (Rosenfeld, 2002)". Un *cluster* está en su madurez cuando los procesos han adquirido una rutina y, más imitadores han entrado al mercado. En esta fase tiene fundamental importancia la habilidad para innovar al interior del *cluster* y para moverse hacia

actividades de mayor valor agregado. Por último, el *cluster* entra en una fase de declive cuando los productos que éste produce, se vuelven reemplazables por sustitutos más efectivos.

Tabla 1: Fases de implementación de un cluster

Primero	a. Observar la existencia de una gran empresa o concentración de empresas y sus eslabones en la cadena de valor, así como con las instituciones.
	b. Observar las relaciones horizontales, identificando industrias que atraviesan eslabones comunes a la cadena de valor o producen bienes o servicios complementarios.
	c. Identificar las industrias relacionadas horizontalmente cuando utilizan insumos, tecnologías especializadas similares.
Segundo	a. Aislar las instituciones que proveen al <i>cluster</i> con habilidades especiales, tecnologías, información, capital o infraestructura, y a toda organización colectiva que participe en el encadenamiento.
Tercero	a. Analizar políticas de Gobierno y otros organismos reguladores relevantes

Esta tabla especifica las fases necesarias para implementar clusters, considerando las condiciones de sustento y proyección del cluster.-

Fuente: Documento de docencia disponible en Internet. Profesor Erico Wulf.

DATOS Y METODOLOGIA: AGROINDUSTRIA REGIONAL

La región de Coquimbo, tiene un alto desarrollo del sector primario, especialmente minero de marcada volatilidad debido a fluctuaciones en precios y producción. La diversificación hacia una agroindustria mas competitiva, representan las condiciones necesarias para lograr un crecimiento estable de la economía regional, se debilitan .-

Para este estudio, se consideran como sectores agroindustriales el vitivinícola, el pisquero, los deshidratados, el olivícola y el de conservas. Además, serán considerados tres indicadores directamente relacionados con el concepto *cluster*, los que corresponden a: el empleo, la productividad y la competitividad de la región. Se aplica el formato de análisis sugerido por Feser (2001), que se orienta a los aspectos de política.-

Empleo

La Región de Coquimbo ha presentado aumentos sostenidos en el número de ocupados, incluso mayor al sostenido a nivel país. El sector más dinámico en cuanto al aumento de ocupados, ha sido Servicios, cuyo crecimiento promedio ha estado en torno al 3,95% anual, seguido por Agricultura y Pesca, ambos con un 0,76% y 0,46% respectivamente, que incluyen los sectores mencionados. Sin embargo, la participación del empleo sectorial dentro del total es de 20,4 %.-

Productividad

En el caso de la Región de Coquimbo, la productividad del trabajo se ha incrementado un 30% durante el período 1997-2006, a una tasa promedio anual del 3,37%. Sin embargo, entre los años 2001 y 2002 se produjo una disminución de la productividad regional (- 3,6%), en la que influyen la menor productividad de todos los sectores excluido Pesca.-

Competitividad De La Region

En las mediciones utilizadas por el WEF, la competitividad, está asociada a siete factores considerados estratégicos o claves en la determinación de la competitividad de un territorio. Todos ellos, con la misma ponderación o importancia en la determinación del indicador. Al revisar el Ranking Global de Competitividad, la Región de Coquimbo se encuentra en sexto lugar a nivel nacional.

DESCRIPCION DEL ESCENARIO REGIONAL

A modo de simplificar el análisis se asumirá que los riesgos identificados pueden ser controlados por las entidades correspondientes. En consecuencia, las estrategias pertinentes deberían orientarse preferentemente hacia potencialidades, y desafíos.

Figura N°1: Síntesis de Problemas Identificados

Esta figura muestra que existen insuficiencias de capital humano, infraestructura básica, e Investigación y desarrollo

Fuente: Elaboración Propia basada en documentos de Investigación de CORFO, 2008.

SECTORES AGROINDUSTRIALES REGIONALES

La Región de Coquimbo posee condiciones óptimas para llevar a cabo los *clusters* calidad, entre otros. Así, los productos agroindustriales- relevantes para esta investigación- que posee la región de Coquimbo para llevar a cabo los *clusters* son los siguientes:

Tabla 2: Sectores Agroindustriales identificados

Agroindustria del Pisco	- siendo éste el principal sector agroindustrial de la Región, ya que esta zona es ideal para la plantación de uva pisquera y es la principal fuente de trabajo de todos los cooperados que forman parte de las grandes cooperativas pisqueras de Chile.
Agroindustria del Vino	- se ha comprobado que la Región posee características- tanto de suelo como de clima- favorables para la elaboración de vinos de calidad. Es por ello que en la región se está cultivando en mayor cantidad uvas vineras.
Agroindustria Olivícola	- es la provincia del Limarí la que presenta las condiciones para implementar <i>clusters</i> olivícolas, debido a que cuenta con características físicas esenciales para cultivar olivos, sin embargo aún es un sector agroindustrial incipiente.
Agroindustria de Conservas	- ésta es una fuente de trabajo- principalmente- para los pequeños y medianos empresarios (MYPYMES) que elaboran productos en conserva, en su mayoría propios de la región, además de duraznos, damascos, entre otros.
Agroindustria de los Deshidratados	- estos productos se elaboran principalmente en la zona de Salamanca que presenta las condiciones para elaborar deshidratados de ají y pimentón rojo, siendo una fuente de trabajo para los lugareños de esa zona.

Esta tabla identifica los sectores agroindustriales que forman parte del análisis.-

Fuente: Elaboración propia: 2009.

En principio, la identificación de sectores agroindustriales, a nivel nacional, corresponde a priorizaciones considerando diversos factores como competitividad y crecimiento. A nivel regional, la identificación se realiza considerando el valor de las exportaciones. Sin embargo, la identificación para este estudio

corresponde a la incorporación de valor agregado a productos primarios relevantes para la región. Se consideraron 5 sectores agroindustriales, los cuales son: agroindustria del vino, pisco, aceite de oliva, deshidratados y productos en conservas. La identificación de dichos sectores permitirá, posteriormente, validar o no la existencia de *clusters* agroindustriales en la Región de Coquimbo.

PARAMETROS DE MEDICION PARA LA EXISTENCIA DE UN CLUSTER

Los siguientes parámetros de medición permitirán evaluar si los sectores agroindustriales mencionados cumplen con los requerimientos básicos para ser un *cluster* agroindustrial de la región de Coquimbo. Estos parámetros están clasificados por categorías medidas a través de evaluaciones de 0 a 1 para cuantificar su nivel de evolución. La evaluación se hizo en base a los datos y antecedentes reunidos, así como mediante entrevistas abiertas.

Tabla N°3 Parámetros de Medición para determinar la existencia de un cluster

PARÁMETROS		DESCRIPCIÓN	NIVEL		
			BASICO	MEDIO	AVANZADO
Proveedores de insumos	de	Determinará si el sector agroindustrial cumple con esta condición para ser un <i>cluster</i> . Además se debe confirmar si la agroindustria señalada posee proveedores de insumo que faciliten su producción.			1
Instituciones financieras		Con este parámetro se evaluará si el sector agroindustrial cuenta con fuentes de financiamiento para su proceso productivo, a través de las instituciones financieras.		0.5	
Canales de Distribución y Consumidores	de y	Relacionados con la comercialización de los productos y la potencialidad de mercado para cierto producto.		0.5	
Innovación, ciencia y tecnología		Asegura el crecimiento continuo que debe presentar un <i>clusters</i> , para ser considerado un <i>clusters</i> en crecimiento, el mayor tiempo posible y no pasar la barrera del declive prematuramente.	0		
Proveedores de infraestructura especializada	de	Importante al considerar que un <i>cluster</i> debe contar con una infraestructura adecuada para la producción, es por ello que se requiere que esta sea especializada.	0		
Gobierno Central		Apoyo gubernamental para desarrollar un <i>cluster</i> .		0.5	
Agencias ambientales		La producción de un sector agroindustrial no debe afectar al medio ambiente.	0		
Asociaciones comerciales		Los sectores agroindustriales para potenciarse como un <i>cluster</i> deben contar con asociaciones comerciales .		0.5	
Conectividad		Conectividad adecuada, para el transporte de productos .	0		

Esta tabla clasifica en escala binaria el nivel de evolución de los distintos factores relevantes en la implementación de un cluster

Fuente: Elaboración propia: 2009.

Para que un sector sea considerado como un cluster, deberá contar con 5 clasificaciones positivas y no más de 2 clasificaciones negativas(0).-

POTENCIALIDAD DEL SECTOR PARA UN CLUSTER

A continuación se señala una serie de parámetros de medición que para esta investigación son relevantes. Con ellos, se pretende comprobar qué sector de la agroindustria regional posee mayores proyecciones para desarrollarse como un *cluster* agroindustrial en la región de Coquimbo. Estos parámetros están clasificados por categorías medidas a través de evaluaciones de 0 a 1 para cuantificar el nivel en que se encuentra el parámetro. La evaluación y determinación del nivel correspondiente, se hizo a partir de la revisión bibliográfica y de entrevistas abiertas.

Tabla N°4 Parámetros de Medición para determinar la potencialidad para un cluster

PARÁMETROS	DESCRIPCIÓN	NIVEL		
		BASICO	MEDIO	AVANZADO
Proyectos de I&D	Capacidad de desarrollar proyectos de inversión en su área para lograr un desarrollo económico propicio para la región.	0		
Proveedores de Insumos	Esto tiene relación con los proveedores de fertilizantes, maquinaria, infraestructura de riego, entre otros, que aseguran el proceso de cultivo.			1
Potencial de Mercado	Condiciones de mercado que permiten asegurar la proyección de un <i>cluster</i> , todo esto principalmente relacionado con la demanda por el producto éste posea.		0.5	
Ventajas Agro-climáticas	Relacionado con las potencialidades que posee la región en cuanto a características climáticas, para el desarrollo adecuado de los diferentes cultivos.			1
Disponibilidad de Materias Primas	Relacionado con el aseguramiento de semillas, plantas y todo tipo de materia prima que asegura la futura producción.		0.5	
Ventajas Acuerdos Comerciales	Relacionado con los tratados de libre comercio que tiene Chile, y el mercado externo que es mayor, por lo que se requiere de cubrir las necesidades de los diferentes mercados internacionales.			1
Conectividad	Relacionado con la condición de poseer una conectividad adecuada, tanto como para el transporte como la comercialización de los productos, entre las localidades de la región.	0		
Asociaciones Comerciales	Pretende determinar el nivel de asociatividad existente entre las empresas del rubro, así asegurar la real potencialidad de un <i>cluster</i> en cada sector,	0		
Personas	Este parámetro tiene como fin lograr determinar la participación de personas, tanto calificadas como no calificadas, que son requeridas para el buen funcionamiento de un eventual <i>cluster</i> agroindustrial.		0.5	

Esta tabla determina el nivel de evolución de los factores que determinan la potencialidad de un cluster.-

Fuente: Elaboración propia: 2009.

Esta tabla muestra la evaluación de cada variable relevante para la potencialidad de un cluster. Para que un sector sea considerado como potencialmente apto para implementar un cluster, deberá contar con 5 clasificaciones positivas (1) y no más de 2 clasificaciones negativas, (0) de cada uno de estos factores aplicados a dicho sector.-

RESULTADOS EMPIRICOS

Hipótesis de Investigación

H⁰: Existen las condiciones para implementar clusters agroindustriales en la Región de Coquimbo.

H^a: No existen las condiciones para implementar un clusters agroindustriales en la Región de Coquimbo.

Se rechaza la hipótesis nula, esto es validado mediante el análisis FODA y el análisis de los Factores Críticos, los cuales arrojan que la región no posee características básicas para implementar clusters agroindustriales, validando en consecuencia la hipótesis alternativa.

Sin embargo, utilizando instrumental estadístico (modelo SPSS aplicado al análisis de conglomerados), y dados el coeficiente de empleo, productividad y competitividad, es posible detectar que existe potencialidad para organizar clusters agroindustriales, principalmente en base a la probable existencia de algunos factores complementarios para clusters de una misma área productiva, aunque de distinto sector. Los resultados de este análisis se muestran a continuación, (Tabla N°11 y N°12)

Tabla N° 5 Matriz de distancias

Caso	Distancia euclídea al cuadrado				
	1	2	3	4	5
1	,000	4075,000	1975,000	21550,000	20225,000
2	4075,000	,000	4600,000	13975,000	16150,000
3	1975,000	4600,000	,000	16875,000	13550,000
4	21550,000	13975,000	16875,000	,000	3825,000
5	20225,000	16150,000	13550,000	3825,000	,000

Esta es una matriz de disimilaridades que muestra el nivel de aproximación entre los distintos cluster.

Tabla 6: Vinculación promedio (Inter-grupos). Historial de conglomeración

Etapa	Conglomerado que se combina		Coeficientes	Etapa en la que el conglomerado aparece por primera vez		Próxima etapa
	Conglomera do 1	Conglomera do 2		Conglomera do 1	Conglomera do 2	
1	1	3	1975,000	0	0	3
2	4	5	3825,000	0	0	4
3	1	2	4337,500	1	0	4
4	1	4	17054,167	3	2	0

Esta tabla identifica los niveles de agrupación de los clusters, destacando el Cluster 1 y Cluster 3

Fuente: Análisis estadístico Jorge Rojas L 2009

CONCLUSION

Luego de haber identificado los cinco sectores agroindustriales: Oliva, Vino, Pisco, Conservas y Deshidratados, se determinó que no existen *clusters* agroindustriales en la Región, resultado de la medición de los parámetros basados en la investigación de campo, de los cuales solo uno de ellos tiene nivel avanzado, cuatro en nivel medio y los cuatro restantes en nivel básico, sin embargo para formar un cluster agroindustrial el sector del aceite de oliva es aquel que posee mayor potencialidad, seguido por los sectores del vino y pisco.

Además, la matriz de análisis estadístico muestra que dados los actuales coeficientes de empleo, productividad y competitividad, existen condiciones de complementariedad entre el cluster del pisco y el de aceite de oliva, lo cual podría explicarse por algunas condiciones de gestión que son complementarias para ambos casos.

CONSTRUCCIÓN DE UN NUEVO MODELO EDUCATIVO EN EL CESUES Y EVALUACIÓN DE SUS RESULTADOS A PARTIR DE UN ESTUDIO DE DESERCIÓN ESCOLAR

Bertha Guadalupe Ojeda García, Centro de Estudios Superiores del Estado de Sonora Unidad Hermosillo.
Erika Olivas Valdez, Centro de Estudios Superiores del Estado de Sonora Unidad Hermosillo.

RESUMEN

El Centro de Estudios Superiores del Estado de Sonora (CESUES) es una Universidad que ha vivido cambios transcendentales como institución educativa, entre ellos la implementación de un Nuevo Modelo Educativo denominado “Enface”, ya que los ejes fundamentales, bajo los cuales se articula dicho modelo, son tres: Enfoque centrado en el estudiante y aprendizaje, basado en competencias profesionales, y flexibilidad curricular y académico administrativa. El objetivo de este documento es exponer el proceso metodológico que se ha llevado a cabo para la elaboración e implementación del Modelo y como a través de un estudio, para evaluar el nivel de deserción escolar de esta institución se verifica una parte de los objetivos iniciales de dicho modelo, es decir se esperaba que con la implementación del nuevo modelo, el nivel de deserción escolar disminuyera con respecto a otros ciclos escolares donde se trabajaba con un modelo educativo tradicional. Por lo que también se exponen los resultados de un estudio de deserción, los cuales se relacionan con la implementación del modelo Enface, como forma de evaluar y sugerir mejoras al mismo.

INTRODUCCIÓN

El presente trabajo tiene como finalidad describir la metodología aplicada por el Centro de Estudios Superiores del Estado de Sonora, para la elaboración e implementación del modelo educativo denominado “ENFACE”, como una forma de explicar las expectativas que se tienen por parte de la institución sobre dicho modelo, para mejorar indicadores como el desempeño académico de los alumnos y deserción escolar, por mencionar algunos. No obstante y a pesar de que el modelo solo tiene cerca de tres años de implementarse, se investigó el nivel de deserción escolar a través de un estudio de caso de la Licenciatura en Comercio Internacional en la Unidad Académica Hermosillo del Centro de Estudios Superiores del Estado de Sonora, durante el período escolar 2009-1. Para el estudio de este caso, se realizó una investigación documental sobre los artículos y documentos oficiales publicados por esta institución educativa y como docentes de esta universidad, hemos sido partícipes de la aplicación de este modelo así como de los diferentes trabajos, cursos y talleres tomados como parte de la capacitación necesaria previa a la elaboración e implementación del Modelo. La segunda parte de esta investigación, es de campo y de tipo cuantitativa, ya que se presentan los resultados de un trabajo estadístico realizado sobre deserción estudiantil en el Centro Educativo, obtenidos a partir del análisis de la encuesta diseñada para este propósito. Estos resultados muestran que la población del CESUES al ingresar a la institución llega con condiciones desfavorables para realizar estudios en un porcentaje aproximado al 30%, que inciden en la deserción: tales como, alumnos que trabajan y estudian simultáneamente, que pertenecen a familias con niveles socioeconómicos medio y bajo, y/o viven fuera de una estructura familiar nuclear. Sin embargo, los factores personales no son los únicos que inciden en la deserción escolar, debido a que se combinan con los factores de tipo académico e institucional.

REVISIÓN LITERARIA

Desde finales del siglo XX, la educación de todos los niveles es objeto de atención prioritaria en la mayor parte de los países, en virtud del reconocimiento de su importancia estratégica en la transformación de la sociedad y de los individuos para asumir los retos que el nuevo contexto nacional e internacional presenta. Las instituciones de educación superior han emprendido importantes procesos de cambio de sus modelos educativos, incorporando innovaciones surgidas de los avances de los distintos campos de conocimiento con el propósito de lograr mayor pertinencia y calidad en su funcionamiento. De ahí, que varias instituciones obtén por cambiar los patrones tradiciones de enseñanza y planten es sus Planes Institucionales la creación de nuevos Modelos Educativos. No obstante, la teoría plantada por los diversos autores expertos en el tema, no puede llevarse a aplicar como receta de cocina y cada institución educativa deberá adaptar y crear el Modelo Educativo de acuerdo a sus recursos.

Ya que a través de los últimos años han tomado mayor relevancia los programas y sistemas nacionales para evaluar y acreditar la educación superior, se ha vuelto imperante realizar los cambios necesarios y adoptar algunas de las acciones encaminadas a mejorar la calidad de la educación y de los programas académicos. Atendiendo estas exigencias, CESUES en el año del 2005 inicio los trabajos preliminares a la creación de un Nuevo Modelo Educativo, con la conformación de un Equipo de Trabajo, formado por autoridades y docentes de esta institución educativa.

No obstante las altas expectativas sobre los resultados futuros del modelo ENFACE, específicamente sobre la calidad de la educación y la generación de recurso humano, no se puede asegurar el éxito rotundo, por ello y como parte de un trabajo de tesis de maestría de la profesora Bertha Ojeda García, se estudio el grado de deserción de los alumnos que estaban cursando el segundo semestre de la Licenciatura en Comercio Internacional, como una forma de evaluar parcialmente los resultados de dicho modelo.

La deserción estudiantil se presenta tanto en universidades públicas, como en las privadas, siendo muy diferentes los factores que afectan al educando en cada una de ellas y que provocan el abandono de los estudios. En México existen resultados al respecto, que provocan que se reflexione acerca de lo que está sucediendo en las universidades. En el Estado de Sonora, al igual que lo reportado en el resto del país, se han realizado muy pocas investigaciones acerca del abandono de los estudios, particularmente se encuentra el realizado a nivel bachillerato por Valdez, *et al* (2008), donde se manifiesta que el nivel de deserción estudiantil, en esa etapa, es del 16.5%. También se encuentra un estudio realizado en el 2007 por la Universidad de Sonora, a nivel licenciatura, donde se encontró, en la cohorte 2005-2, un 12.8% de deserción, hasta la fecha en que efectuó la investigación (Pacheco y Burgos, 2007)

En el Centro de Estudios Superiores del Estado de Sonora (CESUES), no existen estudios profundos acerca de este tema, sin embargo, sí se cuenta con datos sobre la matrícula de alumnos en cada ciclo escolar, con lo que es posible obtener porcentajes de retención y deserción para cada uno de ellos, de tal manera que, el índice de deserción es muy variable, los porcentajes van desde el 7% al 17%, aproximadamente, durante los últimos siete años. En el período 2008-1, se tuvo un 11.03% de deserción en todas las Unidades Académicas de la Universidad.

En la carrera de Licenciado en Comercio Internacional (L. C. I.), que se encuentra en la Unidad Académica Hermosillo, para esta licenciatura, se cuenta con datos muy interesantes acerca de las generaciones del 2005, 2006 y 2007. El total de alumnos de esas tres generaciones inscritos en el período 2007-2, es de 416 y al 2008-2, se tienen 346, con lo que se puede calcular su índice de retención en el último año, obteniéndose 83.17%, de tal manera que el índice de deserción de las últimas tres generaciones, en el último año es del 16.83%, que es un dato que cae dentro del intervalo que se maneja para la universidad y también para la unidad académica. Además, en el período 2008-1 se tuvo un índice de deserción del 15.74%; esto, si se toma en cuenta a todo el alumnado de la carrera. Por otra parte, si

estos datos se manejan desde otro punto de vista, se puede ver que los índices de deserción por generación (considerando las del 2005 al 2007), desde su ingreso hasta el 2008, son más elevados que los porcentajes mostrados anteriormente. Es importante mencionar que para realizar todos los cálculos anteriores, fue necesaria la aportación de información por parte del Departamento de Control Escolar de CESUES Unidad Académica Hermosillo.

Los datos anteriores desalientan considerando que en la institución y específicamente en la Unidad Académica Hermosillo, se han hecho esfuerzos para lograr incrementar la retención, a través de la implementación de una serie de programas que buscan dar apoyo integral al estudiante. La propuesta de este trabajo es que para lograr la retención del estudiante es necesario conocer cuál es el perfil del alumnado que pertenece a esta licenciatura; qué impacto tiene en la vida del estudiante, la deserción de la universidad; cómo afecta a la institución la deserción de alumnos; cómo se puede disminuir el índice de deserción y por ende, aumentar el índice de retención de estudiantes.

METODOLOGÍA

Modelo Educativo ENFACE

Se entiende el modelo educativo en CESUES como la representación de un conjunto de elementos interrelacionados entre sí de manera sistémica para producir resultados de carácter educativo y que incluyen el ideario, los valores y propósitos institucionales que definen el individuo que se pretende formar y a partir del cual se diseñan estrategias curriculares, didácticas y de infraestructura sustentadas en la organización y normatividad académico administrativa de la institución. (Nuevo Modelo Educativo, Documento Ejecutivo preliminar, CESUES, Hermosillo, Sonora, Junio 2006.)

Para el CESUES, la incorporación del enfoque centrado en el estudiante y en el aprendizaje como uno de los ejes del cambio de su modelo educativo permite que el estudiante logre aprendizaje significativo en dos vertientes estrechamente vinculadas: a) la adquisición de los contenidos propios de la formación profesional y b) aprender a aprender. Esto se traduce, concretamente, en la incorporación de nuevas formas de abordaje del proceso educativo. El Modelo adopta el enfoque por competencias profesionales con la intención de lograr la pertinencia académica, profesional y social de la propuesta curricular. La competencia profesional se entiende como la capacidad de un sujeto para realizar una función o actividad a partir de la integración de los conocimientos, habilidades, actitudes y valores requeridos para ella, considerando ciertos parámetros deseables en su ejecución. Los programas educativos del CESUES están diseñados con base en dos niveles de competencias: Las Genéricas y las específicas, mientras que la flexibilidad curricular se define, como el proceso mediante el cual se incorporan progresivamente diversos elementos académicos y administrativos orientados a garantizar condiciones favorables al ingreso, permanencia, desarrollo y egreso de los jóvenes. (Nuevo Modelo Educativo, Documento Ejecutivo preliminar, CESUES, Hermosillo, Sonora, Junio 2006.)

Para la creación e implementación de este modelo, se realizaron varios estudios de diagnóstico, destacando la participación del sector empresarial, estudiantil y de la ciudadanía en general, de los que se recogieron importantes puntos de vista, a través de encuestas y grupos focales.

Metodología De La Investigación Sobre Deserción En El Modelo Educativo

Esta investigación fue de tipo no experimental-transeccional-descriptiva; no experimental, porque no hay manipulación intencional de las variables, dicho de otra manera, únicamente fue una observación de la evidencia, para después examinarla a profundidad; transeccional o transversal, puesto que se realizó en un solo momento, es decir, se aplicó una encuesta una sola vez, en un tiempo predeterminado, también se realizó una entrevista a alumnos por única ocasión; descriptiva, ya que se colocó a una muestra de

alumnos en varias variables para describir a la población de estudio. Se manejó el enfoque cuantitativo, debido a que se realizó un análisis de alumnos que pertenecen a una población grande, formada por 138 individuos. La herramienta básica que utiliza este paradigma para analizar los datos es la estadística; el método que predomina es el hipotético deductivo, (Hernández Sampieri *et al*, 2006:5; León y Montero, 1997).

Los estudiantes que forman parte de la población de estudio, se encontraban cursando el segundo semestre de la licenciatura en Comercio Internacional, durante el período 2009-1 y que corresponden a una porción del alumnado que se encuentra en riesgo de abandonar los estudios, debido a que es en ese período cuando se presenta con mayor frecuencia la deserción escolar (Himmel, 2001:93). Se tomó en cuenta que el tamaño de la población de estudio es de 138 individuos para calcular el tamaño de la muestra, con un margen de error del 5% y un nivel de confianza del 95%. El tamaño de la muestra resultó de 102 individuos. Una vez que se realizó el cálculo anterior, se procedió a seleccionar a las personas a través de un proceso aleatorio simple.

RESULTADOS DE DESERCIÓN EN CESUES DESPUÉS DE LA APLICACIÓN DEL MODELO ENFACE

En esta sección se hace referencia a los resultados obtenidos del estudio estadístico y muestreo aplicado a los alumnos de segundo semestre durante el ciclo escolar 2009-01, en la unidad académica Hermosillo, del Centro de Estudios Superiores del Estado de Sonora, donde entre otras cosas se obtuvo la siguiente información: El promedio de edades de la población de estudio es de 20 años, con una desviación estándar de 2.9 años; lo que significa que un alto porcentaje de los alumnos que ingresan a esta licenciatura en CESUES acaban de egresar de educación media superior. Se encontró que el 79.38% de los estudiantes que ingresan a CESUES proceden principalmente de tres ciudades del estado: Hermosillo, Guaymas y Empalme. El 27.84% de los estudiantes cuenta con un empleo, laborando en promedio 25.5 horas a la semana con una desviación estándar de 14.03 horas. De los estudiantes trabajadores, el 52.2% refiere que trabaja para tener independencia económica, el 34.8% manifiesta que lo hace para sostener sus estudios, 8.7% para ayudar al gasto familiar y 4.3% para sostener a su familia.

La mayoría de los estudiantes hacen referencia a que viven con ambos padres y éstos son el 69.07%; el 4.12% vive en familias monoparentales sostenidas por la madre. Por otra parte, el 16.5% se ve en la necesidad de vivir con un familiar; un 2.06% vive con su cónyuge y se encontró que el 5.16% vive solo. Estos porcentajes sugieren que una vez más aproximadamente el 30% de la población estudiantil que ingresa a CESUES no forma parte de una familia nuclear. El 85% de los jóvenes que estudian la carrera de Comercio Internacional, son de clase media, media baja o baja, lo cuál pudo ser un factor de riesgo para que se presente la deserción de la licenciatura, como lo indican otros investigadores.

Por otro lado, la mayor parte (un 79%) de los estudiantes de la carrera de L. C. I. son egresados de preparatorias oficiales. Terminaron este nivel de escolaridad con un promedio de 8.4 con desviación estándar de 0.65. En cuanto a la elección de CESUES como primera institución de nivel superior, únicamente el 56.7% de la población de estudio afirmó que esta Universidad sí fue su primera opción, lo cual indica que para el 43.3% ésta fue su segunda o tercera opción. También se encontró que los alumnos piensan que lo que provoca mayores problemas en el aprendizaje es, en orden de importancia, los hábitos de estudio de los alumnos, la cantidad de tareas, los sistemas de evaluación, la carga excesiva de materias y la actitud de los profesores, tomando como referencia la respuesta que otorgaron en primer lugar a cada uno de esos aspectos.

CONCLUSIONES

La población del CESUES llega en un porcentaje aproximado del 30% con condiciones que favorecen la deserción: trabajan y estudian simultáneamente, pertenecen a familias con niveles socioeconómicos medio y bajo, y/o viven fuera de una estructura familiar nuclear. Para el 19.6% de los estudiantes que ingresan a CESUES su carrera no es la primera opción elegida, sino la segunda por lo que la deserción puede manifestarse por una orientación vocacional inapropiada y que a esto se suma que algunos de ellos expresan insatisfacción con los docentes, con el modelo pedagógico de la escuela y en términos generales con la carrera, porque no es lo que ellos esperaban. Si bien el perfil de los estudiantes que ingresan a la carrera de Comercio Internacional en la Unidad Académica Hermosillo, refleja la necesidad de trabajar sobre los programas y mecanismos escolares, así como sobre los modelos pedagógicos y de evaluación que aplican los docentes; también se observa que los factores de naturaleza personal no son en sí mismo la causa única y directa de la deserción de estudiantes; es importante observar que la combinación de factores de naturaleza académica e institucional cobran fuerza en este estudio.

El CESUES tiene frente a sí la tarea de un nuevo ejercicio de comprensión e interpretación de las necesidades educativas de los jóvenes y la sociedad, ya que ahora reciben estudiantes-padres, estudiantes-trabajadores, estudiantes de diversos estratos sociales, estudiantes críticos y estudiantes con intereses fuera de las instituciones educativas. Para esta población los mecanismos de enseñanza, diálogo y evaluación unilaterales, convencionales, centrados en la perspectiva del maestro como experto, resultan además de impertinentes difíciles de sobrellevar.

Si bien el perfil de alumnos que recibe el CESUES tiene rasgos particulares, estos últimos no difieren en gran medida de los rasgos que presentan estudiantes de un gran número de Instituciones Educativas en el Estado y de acuerdo a los resultados de este estudio, tampoco muestran un impacto determinante en su decisión de permanecer o dejar la carrera, es probable entonces que una explicación más fina de los factores de deserción de los estudiantes de Comercio internacional del CESUES, se encuentre fuera de las aulas y no necesariamente depende de la calidad del modelo educativo que aplique la institución, no obstante todos estos señalamientos planteados en este documento servirán para la mejora continua de dicho modelo educativo.

LAS PYMES EN EL MUNDO DEL COMERCIO ELECTRONICO, LA CREATIVIDAD, Y SERVICIO A TRAVÉS DE UN CASO DE ÉXITO “LA CASONA DEL PERFUME”

Emma Vanessa Casas Medina, Centro De Estudios Superiores Del Estado De Sonora

Rossana Palomino Cano, Centro De Estudios Superiores Del Estado De Sonora

RESUMEN

En el proceso de globalización que vivimos ha obligado a las empresas a diversificar mercados y utilizar medios que les permitan la mayor difusión y promoción de sus productos o servicios a un menor costo y riesgo, como es el caso del comercio electrónico (e-commerce), que obliga a los negocios a eficientar su cadena de abastecimiento para brindar un mayor valor agregados en las transacciones. Esta herramienta actualmente es utilizada, por algunos pequeños empresarios, que les permite acceder a mercados con recursos limitados, como es el caso de la Casona del Perfume, empresa dedicada a la compra - venta de perfumes de menudeo y mayoreo, que aun año de la implementación de esta estrategia de comercialización electrónica a crecido gracias a la combinación del uso de la tecnología, creatividad y sobre todo el servicio al cliente.

INTRODUCCIÓN

Las pequeñas y medianas empresas (pymes) actualmente se ven amenazadas por las grandes empresas, que cuentan con una marca posicionada, prestigio, estructura, innovación, personal calificado, servicio, filosofías de mejora continua y sobre todo capital para invertir, situación que ha obligado a los pequeños empresarios a buscar opciones que le permitan sobre llevar esta situación. Para lograr salir adelante, las pymes requieren combinar estrategias que les permitan incrementar sus ventas, por lo que en este trabajo se presentan los resultados de la combinación del uso del comercio electrónico, la telefonía, creatividad, servicio y sobre todo liderazgo para crecer. Ya que para comprar un bien o un servicio no es necesario salir a la calle para encontrar el producto perfecto, simplemente se necesita tener acceso a internet para encontrar un producto o servicio específico, debido a que esta herramienta acerca a los clientes a una galería de productos y servicios que pueden evaluar en tan solo unos minutos. Además es un giro que permite ser uno su propio jefe administrar las horas que se trabajan y además de decidir cuánto ganar. En este documento se encontrará información de la situación actual del mercado del comercio electrónico en América Latina, el proceso de desarrollo y evidencias sobre el buen funcionamiento de esta estrategia, así como un caso de éxito de “La Casona del Perfume” es empresa que se dedica a la comercialización de mayoreo y menudeo de perfumes originales a través del internet.

Marco Teórico.

El comercio, es una de las actividades ancestrales del ser humano, el cual consiste en el proceso o mecanismos necesarios para la compra venta de bienes o servicios, desde su producción hasta el cliente final, implicando la investigación de mercado con el fin de interpretar los deseos del consumidor, la publicidad que anuncia la existencia del producto, la posibilidad de adquirirlo, y en que lugar, a la vez que se utilizan los métodos de persuasión, la venta al por menor y finalmente, la adquisición por parte del público. Actividad que ha cambiado constantemente de modalidad como la venta por catalogo en los 20s, los anuncios en la televisión y 1989 aparece un nuevo servicio, la WWW (World Wide Web, Telaraña Global), permite acceder a la modalidad de *E-Commerce*, el cual Comprende la compra, venta,

marketing, y servicios para productos o servicios por medio de redes de computadoras. Se puede ver como aplicaciones e-business aplicadas a las transacciones comerciales.

(<http://www.monografias.com/trabajos36/e-business-e-commerce/e-business-e-commerce2.shtml>)

No es otra cosa que, todas las actividades relacionadas para la realización de la gestión de negocios: ofrecer y demandar productos y/o servicios, buscar socios y tecnologías, hacer las negociaciones con su contraparte, seleccionar el transporte y los seguros que más le convengan, realizar los trámites bancarios, pagar, cobrar, comunicarse con los vendedores de su empresa, recoger los pedidos. Utilizando a la red como medio para facilitar el intercambio de bienes y servicios. Que consiste en que el negocio pone en línea su catalogo de productos, el clientes los visualiza, selecciona y formaliza la adquisición de productos o servicios ofrecidos en línea. Siendo un acceso abierto a sus potenciales clientes a una enorme vidriera virtual, así como también, renovar estos productos, dialogar con sus clientes y por lo tanto ajustarse a sus necesidades En la actualidad, existe una gran cantidad de empresas que se dedican a esta actividad, quizás el caso más conocido sea el de "*Amazon.com*" el cual es un sitio web que inicialmente se diseñó para la venta y distribución de libros a través de este medio y en donde actualmente un usuario cualquiera puede adquirir artículos de casi cualquier tipo, los mismos que llegan a vuelta de correo, prácticamente a cualquier lugar del mundo, después de la respectiva confirmación de la venta.

Situación Actual Del E-Commerce.

Esta tendencia crece de forma acelerada. De acuerdo al estudio de comercio electrónico a consumidores en América Latina presentado por Visa de 2005 a 2007 estas adquisiciones crecieron un 121% llegando a US\$10980 millones, entre los países que lideran este crecimiento acelerado están Venezuela, que creció en una tasa de 224%, seguido por Chile con un 183%, México con un 143% y Brasil con 116%. Las proyecciones para este año se estiman una facturación de US\$30,000 millones. El crecimiento de las compras por internet ha logrado que las oportunidades de negocio virtuales usen hasta un 200% mas lucrativas que las que arrancan en locales convencionales debido al ahorro que significa la renta de instalaciones, así como el número de clientes que es posible captar con la comercialización, debido a la ventaja que se puede encontrar a cualquier hora y los 365 días del año.

El acceso a la Web en el país no se detiene. La Asociación Mexicana de Internet (AMIPCI) revela que en el país existían un total 27,6 millones de internautas al cierre del 2008, cifra que representa un crecimiento de 16.4% en relación con el año anterior que se registraban un total de 23.7 millones de Usuarios.

Implementación Del Ecommerce.

A pesar de la información que hay en los medios de comunicación de las ventajas de este sistema, son pocos los pequeños empresarios que se animan a utilizarlo, muchos por desconfianza o por desconocer el procedimiento de implementación. Por lo anterior, para iniciar con el pie derecho en el mundo del Internet, que es todo un reto se puede sortear con las siguientes indicaciones en relación a la experiencia obtenida:

1. Establecer un plan de negocios. Donde quede muy claro cual será nuestra visión y misión y en base a esto determinar todas las líneas de acción a través de este medio.
2. Verificar costos. En México el registro de un dominio así como un hospedaje tiene un precio que varía de los 1500 a los 5000 anuales, que dependerá si requieres servicios adicionales como mayor capacidad, cuentas de correo electrónico entre otros el precio se eleva.
3. Muestra confiabilidad. Se debe de genera la confianza entre el cliente y el negocio sobre la legitimidad de la empresa, se debe adoptar un certificado de calidad que pueda respaldar al consumidor, debido a que un alto porcentaje de los clientes no quiere proporcionar sus datos de sus tarjetas de crédito, Se recomienda que obtengas el sello de confianza de la AMIPCI, que es un distintivo electrónico con un certificado digital adjunto, que reconoce a los negocios que promueven

- el cumplimiento de la privacidad de la información y están legítimamente establecidos. (<http://www.sellosdeconfianza.org.mx/comoobte.php>)
4. Adopta variedad de formas de pago. Como depósito bancario, transferencias o pago por tarjeta de crédito, se recomienda que sean todas, para brindar mayores opciones al cliente. Hay empresas que ofrecen el servicio a cambio de un porcentaje mínimos de las ventas como PayPal (www.paypal.commx) o Dinero Mail (www.dineromail.com) como medios mas baratos para recibir los pagos de los clientes con una tarjeta de crédito, debido o cuenta bancaria o bien verifique con su banco si ofrece el servicio de pago en línea con un costo del 1 al 3% del valor total de la transacción.
 5. Facilita las adquisiciones. Añadir a la página el carrito de compras que le permita la fácil visualización de los productos comprados, precios, impuestos, forma de pago y envío.
 6. Adopta tu espacio. Ya sea en tu casa, un espacio donde se tengan los anaqueles para organizar el inventario, mesa de trabajo, computadora con acceso a internet.
 7. Telefonía móvil, como el objetivo de este negocio es ahorrar y brindar servicio, se debe de contar con un teléfono con oficina móvil con un costo de 800 pesos mensuales.
 8. Vende servicio. Establece un sistema de suministro como en la entrega para que siempre se tenga disponibilidad y cumplimiento en las ordenes en tiempo y forma.
 9. Aprovechar las redes sociales. Como hi5, facebook, metroflog, myspace, twitter, para poder llegar al corazón de los clientes.
 10. Utiliza telefonía. Las compañías de celular y radios, ofrecen el servicio de mensajería que su precio varía en relación a las necesidades del cliente de 3000 a 6000 pesos, medio que se puede promocionar la pagina.
 11. Plan de mercadotecnia. Se considera el costo de 3000 a 5000 pesos por posicionamiento en los principales buscadores como google o yahoo que permita aparecer como primera opción en la búsqueda.
 12. Tramitología. Únicamente se debe de preocupar por registrar la empresa en la Secretaria de Hacienda y Crédito Público (SHCP) para la impresión de facturas que requerirán los clientes.
 13. Marcas. Registrar ante el Instituto Mexicano de Propiedad Intelectual (IMPI).
 14. Diversificar la oferta. Las tiendas *on line*a, vende innovación, razón por la que se debe de diseñar un catálogo amplio de alternativas que puedan segmentar en rublos y generar el interés del cliente.

Son los procedimientos mínimos que cualquier empresario que este dispuesto a incursionar en este medio debe de tomar en cuenta.

Caso de éxito

En la ciudad de Hermosillo, Sonora, hace cinco años aproximadamente una recién egresada decidió incursionar en el mundo de los negocios, empezó con la venta de varios productos utilizando la estrategia de venta de puerta a puerta, al evaluar situación implicaba mucho tiempo, desgaste de recursos, se decidió por el sistema de *network*, con los cuales siguió trabajando hasta el año pasado. Sin embargo, ella sentía que su crecimiento era poco, así decidió enfocarse a uno de sus productos que es la comercialización de *perfumes originales*, para lo cual realizó un estudio de mercado que consistió en la evaluación de dos alternativas, una de ellas era el establecimiento fijo, en el cual determino que las dos es una buena opción, sin embargo los costos de arrancar el proyecto eran demasiado alto, principalmente la renta o compra del local que representarían un 15 a un 25% de las utilidades, empleados, infraestructura y sobre todo el posicionamiento de la empresa en el mercado.

La otra opción era utilización de la *web*, se creo una página como simple medio de promoción al negocio que ya se tenía, pero el mismo mercado, obligo en un año a utilizar todo el sistema del *e-commerce*, la creatividad y la mejora del servicio. Primero, se tuvo que analizar toda la cadena de abastecimiento, hacer convenios de colaboración con los proveedores, bajar precios, aumentar líneas de crédito y sobre todo servicio, en el cual se redujera el *lead time* de 15 a 5 días, puesto en frontera.

Además se trabajo con la reducción de tiempo tanto con el agente aduanal y líneas transportistas, con la finalidad de ofrecer un mejor servicio de entrega. Se evaluó las diversas opciones formas de pago para el consumidor que se encuentran en el mercado, utilizando el punto de venta bancario a través de Internet y las promociones de 3 hasta 12 meses sin intereses. Al mismo tiempo, se iniciaron los servicios programación, diseño, hospedaje y asesoría de la página, en la cual se cuenta comunicación con los proveedores tanto de producto como de servicio de logística y aduanales, estadísticas, monitoreo de envíos y pagos.

Cuando la logística se concluyo, empezó con el programa de promoción, el cual se hacen convenios con empresas y sindicatos de la localidad para que sus empleados, visualicen los productos, comparen, ordenen y se les haga descuentos por nómina. Actualmente se están trabajando con convenios de colaboración con empresas e instituciones públicas, para la publicidad de la página en sus eventos.

Se utiliza la promoción por medio de telefonía, donde se envían a los usuarios mensajes de promociones y descuentos, servicio que es muy económico y que tiene gran impacto en los clientes meta. Lo anteriormente expuesto, son algunas de las actividades que se han realizado para el funcionamiento del negocio, que a un año de funcionamiento del negocio ha crecido sus ventas en un 173% en relación a las ventas del 2008, con una reducción del 63% de los costos de operación y sobre todo es un buen escaparate para el posicionamiento de la empresa y poder establecerse en un futuro no muy lejano.

CONCLUSIONES

Las empresas virtuales son una excelente oportunidad para aquellas empresas que deseen atraer clientes, generar una buena comunicación a con sus proveedores y generar un posicionamiento en el mercado.

Permite a las pequeñas empresas acceder al mercado global. Ya que estos, tradicionalmente han sido incursionado por aquellas empresas multinacionales, abriendo el acceso a las pymes que no cuentan con los recursos necesarios para funcionar en el extranjero. El crecimiento de las compras desde Internet, provoca una disminución en los precios, y en consecuencia, una reducción en costos, sobre todo el servicio al cliente, aumentando la necesidad de la entrega rápida y directa. La cadena de valor será cada vez menos tolerante con la necesidad de inventarios y almacenamiento. Será inevitable el incremento de la competencia, así como de la necesidad de dinero electrónico.

DIRECCION ESTRATÉGICA SECTORIAL PARA LA INTERNACIONALIZACIÓN DE MERCADOS DE LAS COOPERATIVAS. ACEITE DE OLIVA

Víctor Manuel Martín López, Cátedra de Estudios Cooperativos

Valentín Molina Moreno, Fundación Caja Rural de Toledo

Ignacio Ruiz Guerra, Universidad de Castilla-La Mancha

RESUMEN

Durante los últimos 200 años el sector oleícola ha sucumbido al crecimiento exponencial de la superficie cultivada en general y la dedicada a la explotación oleícola en particular. Este crecimiento de superficie cultivada, y sobre todo el liderazgo mundial en producción de Aceite de Oliva provoca que se tenga que diversificar el riesgo en los mercados, para asegurar que la venta de la producción, si un mercado disminuye de forma brusca, no provoque una carencia de alternativas para la venta de su producto. El sector cooperativo en España es en muchos casos un claro representante de la industria del medio rural, y en muchos casos es la verdadera razón del desarrollo rural en esas zonas, sin el cual, perdería un gran aporte económico para el mantenimiento de la renta per capita de los habitantes de esas zonas. El sector oleícola, aunque suponga apenas el 5% del mercado mundial de grasas vegetales, necesita de una apertura a nuevos mercados internacionales, y la estrategia, en momentos de claros síntomas de crisis económica mundial, provocan que se basen en determinaciones que eviten altas cuotas de riesgo, pero que aporten una rentabilidad que permita la estandarización de ese mercado para que en momentos de bonanza económica permitan una mejora de las condiciones alcanzadas en este momento. Este trabajo trata de mostrar las Oleoestrategias, estrategias del sector oleícola para el desarrollo de nuevos canales de comercialización internacional que permitan diversificar el riesgo y dinamizar la acción de los intermediarios dedicados a la venta de Aceite de Oliva.

Palabras Clave: Estrategia, comercialización, internacional, Aceite de Oliva, desarrollo.

INTRODUCCIÓN

En un mundo globalizado, y recientemente aceptado, la competitividad de las empresas, sectores y territorios depende de la capacidad de innovación (OCDE: 1999). La innovación comporta un proceso complejo y colectivo en el que los ámbitos rutinarios de la empresa (producción, comercialización, etc.) han adquirido una más que apreciable relevancia. La innovación es entendida como un proceso en el que con frecuencia es necesaria la participación de una pluralidad de actores distintos, que interaccionarían definiendo sistemas de innovación (Lundvall y Johnson: 1994). Por lo tanto el territorio puede propiciar una proximidad geográfica entre actores (Rallet y Torre: 2004) y, sobre todo, unos valores y unas representaciones compartidas que favorezcan la generación de confianza entre dichos actores y, por consiguiente, la cooperación entre las mismos necesaria para generar innovaciones.

El sistema agroalimentario español, y en particular el sistema agroalimentario de Castilla-La Mancha están centrados, mayoritariamente en el sector vitivinícola y el sector oleícola, entre otros, pero destacando estos dos sobre el resto. Como decíamos estos sistemas necesitan innovar para poder competir, y así ha quedado patente en el momento en el que los mercados se han paralizado por causa de la crisis económica mundial en la que vivimos, y que es la primera crisis mundial tras la globalización, siendo estos sistemas los que más han sufrido la paralización de los mercados por la ralentización del consumo por parte de los clientes, y se han tenido que crear mecanismos de cooperación, e incluso ha sido necesaria su creación para el mantenimiento y supervivencia de los sistemas agroalimentarios y de los sectores agrícolas en el medio rural, ya fueran de manera formal o informal (Gallego: 2008) entre

empresas y entre empresas y otros actores (públicos y/o privados) que han sido necesarios para que estos sistemas operen como auténticos sistemas de innovación y no sólo de producción (Cooke et al: 1998).

Las cooperativas desarrollan su actividad económica de acuerdo con unos principios que pueden alimentar el crecimiento de una trama de relaciones socio-económicas (capital relacional) y socio-políticas (capital social) propicias, a su vez, para generar la confianza que requiere la cooperación entre empresas y entre éstas y el sistema científico-tecnológico. Así se podría facilitar la creación de la proximidad organizada (relacional) necesaria para dotar de fluidez a las relaciones entre actores distintos dentro de los sistemas territoriales de producción y de innovación. Pero la presencia de una amplia red de cooperativas también podría definir ciertas inercias y factores de bloqueo.

Este artículo desarrolla y pone a prueba este marco teórico evolucionista tratando de evidenciar cómo la organización y la dinámica innovadora del sistema agroalimentario del sector oleícola (Aceite de Oliva) están significativamente condicionadas por la presencia de las cooperativas almazaras. Las cooperativas son ricas en capital social (Spear: 2001; Morales: 2002; Mugarra: 2005), por tanto, en la medida que el capital social favorece la confianza y la cooperación entre actores, las cooperativas se erigen en estímulo al desarrollo territorial (Mozas y Bernal: 2006). Partiendo de la base que las cooperativas forman parte del entramado institucional que constituye la matriz compartamental de estos sistemas, de lo que es lógico inferir que van a influir en la naturaleza y evolución del proceso innovador. Las cooperativas pueden ser esenciales en el estadio interrelacional de las empresas.

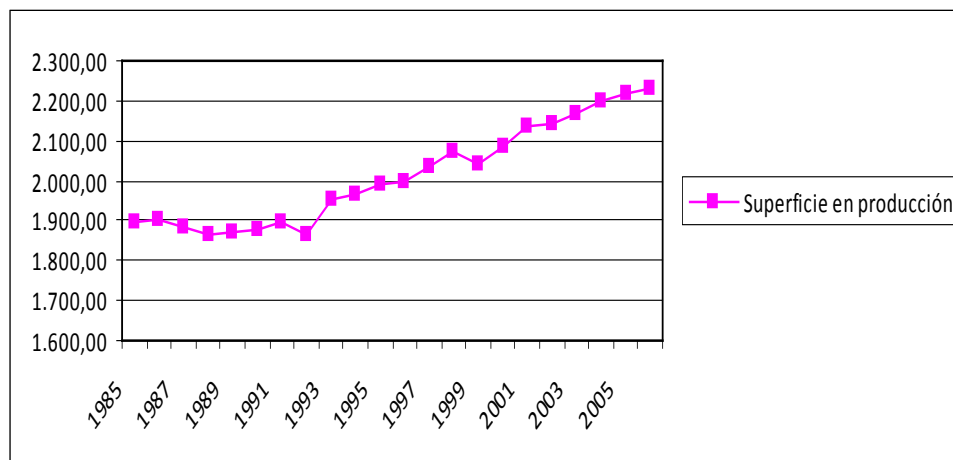

Sistema Agroalimentario: Oleicultura

En este caso el sistema del sector oleícola de un determinado territorio como es la Comunidad Autónoma de Castilla-La Mancha supone en la medida en que integra toda una densa trama de actores que presentan relaciones intersectoriales significativas a lo largo de toda la cadena de valor, a la par que mantienen y conservan una serie de rasgos característicos y diferenciadores que se han mantenido a través de la historia (Rallet y Torre: 2004; Crevoisier: 2004). La organización institucional de la Economía Social es propicia para lograr una adecuada articulación entre el capital relacional y el capital social estimulando así los procesos de innovación y de cambio en el territorio en el que se encuentra asentado el sistema agroalimentario.

El sector del Aceite de Oliva tiene una gran relevancia económica y social en determinadas zonas de la geografía española, en el caso particularizado de Castilla-La Mancha en las zonas en las que predomina siempre se caracteriza por ser medio rural dedicado casi exclusivamente al cultivo de Olivos, y en menor medida vid y cereales. La producción de la oleicultura de Castilla-La Mancha supone el 7% de la producción nacional de Aceite de Oliva, situándose en el segundo lugar por superficie, producción de aceituna y por producción de Aceite de Oliva. Los últimos datos publicados en el Anuario de Estadística Agroalimentaria (2007), establecen la superficie total dedicada al cultivo de aceituna de almazara en España en 2.319,9 mil hectáreas para 2006. En 1985, la superficie destinada al cultivo de olivar de aceitunas de almazara se situaba en 1.929,10 mil hectáreas de terreno, lo que supone un importante incremento de la superficie destinada a este fin, como se puede observar en la *Evolución de la superficie en producción*.

Este incremento de la superficie en producción destinada al cultivo del olivar, pone de manifiesto la importancia de esta actividad agrícola sobre la economía de muchas regiones, y supone además una importante base sobre la que se sostiene el equilibrio ecológico de un gran número de comarcas españolas. El aumento registrado de la superficie en producción del olivo a lo largo de la historia, se ha producido como consecuencia de la sustitución llevada a cabo por el hombre, de la vegetación natural de tipo mediterráneo por este tipo de cultivos.

Arcas (1999) señala que tanto el clima como el suelo juegan un papel importante en la actividad agraria, limitando las producciones a obtener, así como la calidad de las mismas y la época de salida al mercado. Y, aunque el progreso técnico permite actuar sobre estas variables, el nivel de incertidumbre y riesgo que incorporan a la actividad agraria en general, y a la olivarera en particular, es elevado. Como ya señalaron Alonso, A. M. y Guzmán, G (1999) el olivar no está formado únicamente por los olivos, sino que siempre tiene una serie de recursos asociados a él como el suelo, el agua, otras plantas y los animales que habitan en los mismos.

Cuadro. Distribución de la superficie olivarera por Comunidad Autónoma. 2007

Comunidades Autónomas	Total Hectáreas	%
Andalucía	1.515.320	60,38
Extremadura	255.310	10,17
Castilla-La Mancha	397.173	15,83
Cataluña	116.112	4,63
Comunidad Valenciana	91.701	3,65
Aragón	57.346	2,28
Resto	76.715	3,06
TOTAL	2.509.677	100

Los datos facilitados por el Instituto Español de Comercio Exterior ponen de manifiesto el comportamiento de las exportaciones e importaciones, evidenciando en la última década la superioridad de las cantidades exportadas sobre las importadas. Lo anterior es sin lugar a dudas el resultado de la existencia, cada vez mayor, de un sector exportador que se está mostrando muy dinámico, a pesar de las dificultades del mismo para la apertura de nuevos mercados, especialmente en continentes diferentes a Europa. La creciente liberalización de los mercados a nivel mundial y la reforma de la Política Agraria Común, han llevado a muchos productores de Aceite de Oliva a impulsar y mejorar la comercialización de sus productos.

Fuente: Consejo Oleícola Internacional

En las últimas campañas el volumen de importaciones españolas ha aumentado considerablemente, debido al importante esfuerzo realizado por el sector oleícola, ya que esta llevando a cabo una importante labor para su desarrollo y promoción, de tal manera que, pueda ser percibido como un producto de calidad beneficioso para la salud. Por este motivo, es necesaria la importación de aceite, para satisfacer la demanda existente. Las exportaciones realizadas de Aceite de Oliva español son muy altas, ya que es percibido en el resto del mundo como un aceite de gran calidad, motivo por el cual, las exportaciones son tan altas, aunque en los últimos años se han reducido dichas exportaciones debido a que en estas campañas la producción de aceite de oliva fue considerablemente inferior que durante campañas anteriores.

OLEOESTRATEGIAS

Autores especializados en el sector oleícola han afirmado de unos años a esta parte que el caso concreto del sector del Aceite de Oliva carece de un sistema de estrategias “en aval” por parte de las cooperativas almazaras integradas por los olivicultores, excepto algunas experiencias más modernas (Sanz, Rodríguez-Zúñiga, Mili: 1997), esto viene dado por las cooperativas que no están preparadas para el desarrollo de un modelo de comercialización eficiente y competitivo.

Las administraciones autonómicas y locales son las que tienen asignado un papel más relevante en el fomento de las etapas de la innovación más cercanas al mercado (Mulet: 1998), en cambio la administración estatal tiene una responsabilidad normativa y de coordinación, así como velar por la creación de conocimiento científico.

La innovación es otra de las estrategias que han seguido, según las necesidades, o las capacidades de cada una de las cooperativas almazaras, pues son las que concentran la mayor parte de la producción oleícola: “innovar es convertir invenciones en procesos, productos o servicios que tienen éxito en el mercado. Sin

consecuencias positivas sobre la generación de beneficios no hay innovación”, (Mulet: 1998). Esta aplicación conceptual de la innovación está generando ciertas descompensaciones en muchas cooperativas que han realizado importantes inversiones en tecnología y no están recibiendo unos rendimientos acordes con las necesidades financieras que les acucian. Para este mismo autor existen 3 tipos de innovación atendiendo al origen de la idea de partida:

- Gerenciales.
- Comerciales.
- Tecnológicas.

Las bajas capacidades tecnológicas y de competitividad se deben, no sólo, a factores parcialmente estáticos como pueden ser, la carencia de infraestructuras adecuadas o a la falta de instrucciones y también al déficit de capital social (Coronado y Acosta: 1999). Es necesario dar un giro de una estrategia de oferta fundamentada en proporcionar recursos para desarrollar actividades de I+D+i, hacia una de demanda en la que el empresariado tiene un papel más activo.

Otras opciones detalladas de modelos de innovación que han sido definidas ya en el siglo XXI (Joly y Lemarie: 2000):

- *Co-construcción*: el mercado no pre-existe, es el trabajo colectivo de los actores que están implicados quienes lo definen y lo ponen en su lugar.
- *Delegación*: Modelo más clásico en el que los participantes identifican y representan el mercado, lo que permite simplificar los procesos por un recorte en el tiempo de la innovación y en el de la difusión.

El concepto de innovación en el sector del Aceite de Oliva está basado también en un detalle de “saber-hacer” localista, basado en una transferencia o integración técnica que concierne a la transmisión de la tecnología en el seno de las empresas-almazaras de pequeño tamaño. En este caso las almazaras han evolucionado desde la entrada en la Unión Europea, cambiando el sistema de los procesos productivos con una clara ventaja comparativa en la transmisión del “saber-hacer” local como valor añadido a las mejoras e innovaciones tecnológicas. Es decir, que los avances técnicos han ayudado a mejorar la calidad del Aceite de Oliva, han estandarizado los métodos de producción, pero el sector del Aceite de Oliva, como recoge este estudio, tiene un algo más, ese valor añadido que le hace ser imprescindible en los hogares, en la cultura mediterránea; la innovación tecnológica es una ventaja y un beneficio, pero sin olvidar el verdadero valor intrínseco del producto que se está tratando: el Aceite de Oliva: “cuanto mayor sea la importancia del cambio en el entorno, más debe procurarse basar la estrategia en sus recursos y capacidades internas, en lugar de hacerlo en el mercado”, (Grant: 1996).

El considerar los recursos y capacidades internos como elemento estratégico exige de éstos el que sean escasos, valiosos y difícilmente imitables y sustituibles (Barney: 1991). Es necesario que del análisis interno de las competencias fundamentales se torne en elemento básico e ineludible en la formulación de la estrategia del sector (Hamel y Prahalad: 1990). Cuando se pretende la comercialización del Aceite de Oliva, se busca obtener ventajas mediante la diferenciación de productos y tendrá que competir básicamente con el concepto de calidad de producto. De unos años a esta parte se ha pasado de un consumo de masas a un consumo de calidad, donde el consumidor no se rige tanto por el precio sino por la calidad de los productos (Sanz, Rodríguez-Zúñiga, Mili: 1998). Los pilares fundamentales sobre los que se había regido la diferenciación de los productos podía venir condicionada por diferentes alternativas (Porter: 1980):

- Calidad del producto.
- Confianza en el producto.
- Innovación de producto.

- Servicios periféricos.
- Marca.

Esta ha sido la apuesta del sector del Aceite de Oliva, la diferenciación a través de la calidad, lo que permitirá vender a precios más altos, y por tanto conceder mayor rentabilidad a los olivicultores. Este concepto de calidad se certifica a través de organismos como las Denominaciones de Origen (D. O.), las Indicaciones Geográficas Protegidas (IGP) o la Agricultura Ecológica (ECOLABEL). Teniendo en cuenta que pertenece a un sistema económico que está integrado por trabajadores y organizaciones donde el conocimiento, basado en la producción y consumo de saberes en donde los productos no son un conjunto de objetos físicos sino más bien una variedad de servicios intangibles por la incorporación del conocimiento al activo que supone el producto oleícola (Bueno: 2000a). Las estrategias de internacionalización, la diferenciación y la diversificación hacia nuevas gamas de productos, pero ante la necesidad de reducir costes y mejorar la competitividad la racionalización de los procesos logísticos está adquiriendo especial relevancia en las estrategias empresariales.

Entre estas estrategias también se encuentran las nuevas formas de acuerdo y relaciones entre los productores y los canales de distribución agroalimentaria, principales proveedores de las crecientes grandes superficies que, desde hace unos años, se han convertido en los principales vendedores de Aceite de Oliva en nuestro país, suponiendo un 54,4% (Porter: 1980; Mili, Rodríguez-Zúñiga, Sanz: 1997), un porcentaje más alto sólo en este producto que la media de ventas totales en cuanto a productos alimentarios, del que se encargan de la comercialización del 45%, lo que quiere decir que los clientes tienden a proveerse de este producto en este tipo de superficies, más que de otros productos también alimentarios. Esta competencia horizontal desarrollada en los últimos años ha provocado que los márgenes de beneficio se hayan ajustado considerablemente, reduciendo las vías de para obtener crecimientos presupuestarios.

Otro tipo de estrategias que se siguen en los mercados agroalimentarios, cuanto se pretende abrir nuevos canales de comercialización parten de la base, no sólo de los estudios de mercado, en los que las cifras van a dar una información teórica de lo que realmente puede funcionar. En este caso, lo que importa es que el producto sea adecuado para el gusto del consumidor, por lo que se realizan estudios con consumidores, de diferentes productos con catas a ciegas, lo que permite conocer sus gustos, si los sabores se adecuan a su paladar, si los olores serán adecuados y atractivos para el consumidor, etc. De esta manera, otra de las estrategias que se han de seguir en el sector oleícola es la adecuación de la venta de Aceite de Oliva con unas características adecuadas al público que se dirige. Realizar *coupages* para que el sabor del Aceite de Oliva sea más delicado, más afrutado, más picante o menos; en realidad lo que se trata es de adecuar las características naturales del Aceite de Oliva al paladar de los nuevos tipos de consumidor.

Comercio Exterior Del Aceite De Oliva

Desde el punto de vista comercial las almazaras cooperativas realizan, fundamentalmente una labor de producción y almacenamiento. Del total de su producción, una pequeña parte la venden envasada, aunque la mayor parte de la producción es vendida a granel a las industrias de refinado y/o envasadoras. La escasa implicación de los productores de Aceite de Oliva en la comercialización de sus productos, perdiendo con ello el valor añadido que generan las actividades de comercialización entre las causas más importantes que en la literatura se apuntan como explicativas de esta situación (Mozas et al: 1997):

- Los socios cooperativistas no se han preocupado por la calidad de los aceites producidos.
- Falta de orientación de las almazaras cooperativas hacia el mercado final ya que los propios cooperativistas entienden a su cooperativa como el mercado final, conciben la cooperativa como un mercado de entrega de la producción que como algo propio.

- Falta de profesionalización del sector cooperativo y, por lo tanto, escasa orientación al mercado y ausencia de gestión empresarial.
- Reticencia a la realización de inversiones en actividades comerciales.

Castilla-La Mancha tiene un escaso peso en el conjunto de las exportaciones de España, tan sólo supone 1,6%, en estos años en los que la situación económica mundial se a frenado en Castilla-La Mancha ha supuesto que las importaciones han caído un 18%, mientras que la media nacional ha sido una caída de tan sólo el 1%, por lo que la Balanza de Comercio Exterior se ha estabilizado, pero a peor. El Aceite de Oliva ha de mejorar las estrategias de competitividad para poder entrar con éxito en nuevos mercados, como una estrategia importante es un uso razonable de su estrategia competitiva de base, que es la clave para el éxito de las empresas dependen de. Debido a varias diferencias en la estrategia básica son muy grandes en las empresas para ello es necesario implementar con éxito sus necesidades legítimas con los diferentes recursos y habilidades. La estrategia básica también significa que las medidas de organización, procedimientos de control e innovadoras diferencias institucionales.

Las empresas deben tomarse en consideración lo que significa la estrategia competitiva de base, generalmente se basa en sus necesidades únicas para determinar el estado de los recursos y de esta manera, tomar las estrategias de comercialización apropiadas. En las primeras etapas de las empresas para entrar en un sector y obtener un punto de apoyo es muy importante, es probable que se tomen en común la estrategia para el limitado número de los recursos se utilicen en un mercado en particular, asentando así un determinado segmento en el mercado de la industria. Sin embargo, cuando acaparen la suficiente fuerza, es posible que no se conformen con ser un líder en un segmento concreto del mercado, es en este momento, cuando pueden recurrir a ajustar su estrategia de base a la diferenciación total, a través de la estrategia de liderazgo en costes, a fin de poder alcanzar una mayor cuota de mercado para eventualmente reemplazar al líder original que existiera en el sector oleícola y convertirse en el líder del mercado sectorial. Si el sector cooperativo no logra identificarse con su propia estrategia competitiva básica, entonces se ve atrapada en la posición central, por lo tanto queda en una situación estratégica de negocio en una condiciones muy desfavorables, careciendo de una cuota de mercado, y no alcanzando un marco de diferenciación de los productos teniendo que tender a la ventaja de costes de recolección. En la industria del aceite de oliva, muchas empresas carecen de una buena situación por sus propios recursos y se encuentran atrapados entre unas estrategias en las que los beneficios son escasos e incluso son incapaces de mantener su posición en el mercado al que han accedido. Algunas de estas empresas, al no haber detectado de manera temprana su ventaja competitiva, tienen que tender a establecer una estrategia competitiva de base. Ya sea para tomar las medidas necesarias para alcanzar el liderazgo en costes, o al menos un nivel de costes comparable con los que tiene la competencia, necesitará de una inversión de marketing positivo para alcanzar la magnitud de la contratación y por lo tanto la necesidad de alcanzar la cuota de mercado mínima. Es necesaria que la capacidad de la empresa dentro de la industria del aceite de oliva pueda lograr a largo plazo un importante nivel de desarrollo, siendo la construcción de marca corporativa un pilar fundamental a nivel estratégico para la implantación comercial del sector cooperativo en el mercado nuevo.

CONCLUSIONES

El sector del Aceite de Oliva necesita de la innovación para llevar a cabo un meditado sistema de comercialización que le genere una seguridad de venta de productos con un valor añadido que hasta ahora no ha sabido explotar por la condición asumida en el tiempo de que la cooperativa sólo se dedica al almacenamiento de la producción oleícola y había que esperar que los intermediarios se encargaran de la comercialización, que es, en definitiva, donde se alcanzan los más importantes beneficios en el sector agroalimentario. Del mismo modo, las necesidades mostradas en el estudio hacen que sea imperiosa la creación de nuevos cuadros de mando en las cooperativas que conozcan el funcionamiento de los mercados y sepan de gestión administrativa y empresarial, y especializados en el particular

funcionamiento y gestión de las cooperativas agroalimentarias, y las almazaras en particular. El comercio exterior es la solución para poder asegurar la comercialización de la producción de las cooperativas almazaras de Castilla-La Mancha, pero si se tiene en cuenta que las estrategias que han llevado a cabo hasta ahora han partido de la base del inmovilismo es adecuado pensar que los claros déficit de conocimiento y de experiencia en el comercio exterior puedan llevar al fracaso, para ello las estrategias determinan que, el sector oleícola, conservador e inmovilista, nunca tenderá al riesgo excesivo en la búsqueda de nuevas soluciones, pero es necesario el cambio en la situación económica actual. El cambio se ha producido ya con la generación de nuevos tipos de alianzas y cooperación intercooperativa para la creación de mayor representatividad en los mercados con unos volúmenes más importantes de producción que permitan una mayor flexibilidad en la venta de la producción a las industrias refinadoras-ensadoras, o bien la venta directa en los mercados internacionales.

ESTRATEGIAS DE EFICIENCIA ANTE ESCENARIOS DE CRISIS. CONTROL INTERNO Y DESARROLLO AL EXTERIOR

Víctor Manuel Martín López, Cátedra de Estudios Cooperativos

Valentín Molina Moreno, Fundación Caja Rural de Toledo

Ignacio Ruiz Guerra, Universidad de Castilla-La Mancha

ABSTRACT:

El escenario económico actual maximiza la necesidad de desarrollar estrategias de control de los costes internos a la vez que hace necesario mostrar al exterior que las carencias de liquidez en el mercado no son acusadas por la propia entidad. El desarrollo de este tipo de estrategias desde un sector como es el financiero, y más poniendo como caso el de una entidad financiera perteneciente a la Economía social, una cooperativa de crédito, en la que, desde su fundación, se generan recursos para reinvertirlo en la sociedad en la que desarrolla su actividad a través del apoyo que lleva a cabo con asociaciones, fundaciones, grupos sectoriales, etc. Este tipo de planteamientos han de ser un ejemplo de buenas prácticas para el sector financiero que ha dejado caer a la economía mundial en un escenario de crisis generalizada que aportará más sombras que luces, pero que se ha debido a una serie de circunstancias que se presentan en este trabajo de investigación como planteamiento de lo que no se debe realizar en una entidad financiera contrastado con los resultados de una Sociedad Cooperativa de Ahorro y Crédito como es la Caja Rural de Toledo, situada en las primeras posiciones de control de la morosidad, de eficiencia empresarial y de porcentaje de rentabilidad en España. Ante la situación actual se abren nuevas perspectivas para el momento en el que estos aspectos pierdan protagonismo, es decir, que cuando comience el período de recuperación que sucede a todo período de crisis, las entidades que van a sobrevivir serán mucho más fuertes, y deberían declarar un pacto por la “estrat-ética”, el cual prevendrá al sistema para que esta situación no vuelva a producirse, o por lo menos dependa de otros factores diferentes a los que nos han llevado hasta esta situación.

PALABRAS CLAVE: estrat-ética, estrategia, eficiencia, control, rentabilidad.

INTRODUCCIÓN

La Dirección Estratégica por parte de las entidades que constituyen el sector bancario, y aquellas que pertenecen a la Economía Social como las Cajas Rurales en España, como cooperativas de crédito y ahorro, hacen que sea un campo de estudio propio de la Organización de Empresas de escasa profusión, pero de alta cualificación (Sanchís, Zurdo, Calvo, etc.). En el desarrollo de las aplicaciones prácticas de la Dirección Estratégica de las Cajas Rurales, viene dado por la practicidad de los elementos teóricos que se trazan desde ámbitos académicos, (Menguzzato y Renau: 1991; Bueno: 1995; Navas y Guerras: 1997). Porter plasmó, a través de su particular y tan seguida visión de la estrategia (1980), los parámetros de estrategia competitiva que han llevado a situaciones en las que se suponían las mejores medidas a llevar a cabo en determinadas situaciones, y hoy día se ha visto que esas determinaciones han sido correctas aunque, como todo, el campo de la practicidad también necesita de cierta flexibilidad para su puesta en práctica.

La participación de las mismas sobre el total del sistema bancario en términos de volumen de depósitos y de créditos es significativamente baja, aunque su especialización en la financiación al sector agrario y a sus socios cooperativistas les da una relevancia cualitativa destacada, lo que justifica la necesidad de realizar un estudio detallado sobre las mismas (Melián Navarro, Palomo Zurdo, Sanchis Palacio Y Soler Tormo; 2006: p.37-58). En definitiva, las cooperativas de crédito, aunque mantienen un peso cuantitativo

muy inferior al de bancos y cajas de ahorro, desempeñan un papel cualitativo determinante en la financiación de determinados tipos de sectores y colectivos, como son el sector agrario y el cooperativismo.

Si como se planteaba a finales de los años 70 las diferentes estrategias requerían de diferentes formas de organizar la tecnología, las estructuras, los procesos y las políticas de recursos humanos (Miles y Snow: 1978), queda patente la necesidad de aplicar también una serie de planteamientos básicos que faciliten la labor de desarrollo de este tipo de estrategias que complican en gran medida el trabajo de control interno. Así como los factores de contingencia son los responsables de la determinación de un modelo de diseño estructural (Mintzberg: 1979), y por lo tanto la Dirección Estratégica también determina en qué sector o mercado oferta sus productos o servicios (Miles y Snow: 1984; Child: 1972, Grant: 1996), y también selecciona cómo y en qué sentido compete, es por lo tanto la estrategia el filtro fundamental a través del que la organización se configura mediante el sistema estratégico.

Si como decían Miles y Snow la postura tradicional mantenía la secuencia:

Factores de Contingencia	Elección de la Estrategia	Diseño Estructural	Procesos
--------------------------	---------------------------	--------------------	----------

Hoy en día hay que decir que todo se ha venido abajo porque el sistema ha perdido un importante elemento que había mantenido hasta hace unos años, y que, a lo largo de los años se convirtió en un factor determinante de equidad en los mercados: los principios y valores. Diferente a lo que Nadler y Tushman aplicaron (1997) sobre la socialización de los individuos a través de unas políticas de recursos humanos basados en el liderazgo, las normas y valores, las relaciones informales además de las formales, la influencia, etc. La manera en que el sistema financiero español se ha ajustado a este tipo de modelo ha supuesto que se hayan desarrollado una serie de procesos de desregulación en las operativas, así como una adaptación tecnológica y jurídica constante y teniendo en cuenta la adaptabilidad a un mayor conocimiento por parte de los clientes que han adquirido una cultura financiera mucho más completa que años atrás. Y del mismo modo las entidades financieras apostaron por la diversificación de negocio a través de la internacionalización, las adquisiciones y fusiones y la cooperación entre ellas, y perdieron en el camino esos valores de ética y buen gobierno.

CARACTERIZACIÓN DE UNA CRISIS FINANCIERA

Desde 1994, el mercado inmobiliario experimentaba un fuerte crecimiento, que excedía con creces la demanda residencial y que respondía a diferentes factores, incluida la especulación. En los años anteriores a la crisis, la construcción de viviendas en España alcanzó las 800.000 unidades, siendo la demanda un tercio de esa cantidad. El *boom* inmobiliario se vio acompañado en EEUU, entre 2003 y 2005, por el crecimiento de las hipotecas de alto riesgo o *subprime*, al amparo de una fuerte revalorización de los inmuebles y de unas condiciones de financiación excepcionales. Ante la insuficiencia del pasivo tradicional, se recurrió al ahorro externo, sobre todo en las economías con mayores incrementos del crédito como España (García-Montalvo, 2008).

En el verano de 2007, con el estallido de la crisis *subprime*, desaparecen las bases sobre las que se apoyaba el crecimiento. Desde mediados de 2005, se daba un fuerte aumento de la morosidad de los créditos hipotecarios de baja calidad en los EEUU, que se acelera a principios de 2007, lo que afecta al sistema financiero. El estallido se desencadena el 9 de agosto, cuando BNP Paribas congela los reembolsos de tres fondos de inversión y se suceden problemas de refinanciación en los mercados internacionales. A partir de entonces, se concatenan intervenciones de urgencia de los bancos centrales nacionales para estabilizar los sistemas financieros.

El efecto inmediato fue una pérdida de confianza en los mercados financieros internacionales en los que se negociaban tanto los valores sobre hipotecas *subprime* como, de especial relevancia en el caso español, los títulos hipotecarios emitidos para responder a la demanda de crédito. Prácticamente desapareció la fuente de liquidez exterior, que como balón de oxígeno alimentaba las necesidades de financiación de nuestra economía. Bancos y cajas tuvieron que reducir en más de la mitad las emisiones de cédulas hipotecarias por falta de compradores, pero en cambio duplicaron las titulizaciones de crédito. Durante los meses de julio y agosto de 2007, los bancos perdieron un 2,55% de sus depósitos, mientras que las cajas y las cooperativas lo hicieron en un 0,53% y 0,28%, respectivamente. Posteriormente, los bancos recuperaron más vigorosamente la captación de depósitos, arrebatando cuota de mercado a sus competidores.

El punto de inflexión se produjo tras iniciarse el cambio de tono de la política monetaria, y, como puede observarse, se inicia con la moderación en el crecimiento de los préstamos a los hogares para la compra de inmuebles, que posteriormente se extiende al resto de los segmentos. En la UEM, en cambio, la evolución del crédito agregado presenta en el último bienio un perfil más estable, aunque el comportamiento de las tres clases de financiación es claramente divergente. Así, mientras que los fondos destinados a financiar la adquisición de vivienda se desaceleraron, los otorgados para consumo y otros fines crecieron a un ritmo sostenido y los concedidos a las sociedades no financieras continuaron acelerándose hasta el primer trimestre.

La Ética Como Estrategia De Desarrollo

La ética en la empresa depende en muchos casos del sector, pero en la actividad financiera dependen en gran manera de la transparencia en la gestión y la actividad, orientándose a la comunicación veraz y a la credibilidad que se traslade con la misma. Este tipo de prácticas ya se estaba llevando a cabo en el sector de la Economía Social desde la aplicación de la Circular basada en las medidas que introdujo la Ley 26/2003 de 17 de julio para fomentar la transparencia de las entidades de valores admitidos a negociación en mercados secundarios oficiales.

La determinante formulación de unos principios éticos que presidan las decisiones y actuaciones que de ellos se desprendan fomentarán unos cimientos que representen el marco de referencia imprescindible para la legitimación y aceptación de la actuación de una organización, de ahí que una entidad financiera establezca unas medidas de control interno y autorregulación de las actuaciones que permitan formalizar la creación de un valor añadido ante el entorno en el que desarrolla su actividad para generar confianza por parte de las sociedades en las que operan.

Este tipo de estructuración interna requieren de un marco documental que recapitule este tipo de estrategias a los que se denomina “códigos éticos” (Schwartz: 2001), la toma de decisiones éticas, convertidas ya en un término diferente: ESTRAT-ÉTICA, pues ya no sólo es el código que rige el pormenorizado procedimiento de actuación, sino que en la actualidad se ha convertido en un pilar fundamental de credibilidad ante los potenciales clientes, y se toma como un factor determinante de la “estrategia” de la entidad financiera.

Este término de nuevo cuño, formado por:

Estrat: ESTRATEGIA *estratos* (ejército), *estrategie* (conducir, guiar).

Ética: ETHOS

La toma de decisiones entre empleados y ejecutivos basándose en principios y valores éticos son un factor de diferenciación en la actualidad, y ha llegado un momento en el que incluso sirven como un valor añadido para las entidades que los cumplen, ya que éstas son las que menos han sufrido los efectos del

profundo lapsus económico que ha provocado a la economía mundial el que entidades financieras de gran importancia hayan entrado en bancarrota por una serie de activos tóxicos que les han dejado sin capital suficiente para afrontar sus propias responsabilidades y hayan tenido que ser rescatadas por las instituciones públicas de control con fondos públicos también para evitar el crack de las principales economías desarrolladas.

Los códigos han de ser impulsados para el desarrollo ejecutivo (Kaye: 1996) y a su vez se pueden buscar resultados, pues la banca tradicional ha sido rentable sin entrar en otros cometidos que no fueran los suyos primigeniamente, otros autores los han entendido como sistemas de control organizacional (Weaber y Treviño: 1999) sin que por ello haya sido utilizado como una guía para el comportamiento de la entidad, caso de Caja Rural de Toledo. Algunos autores han criticado que los códigos éticos son reacciones a conductas internas rechazables y para evitarlas se constituyen como instrumentos de regulación y control de los intereses de la organización mucho más que un medio para el desarrollo ético de la organización (Lozano: 1999), corriendo el peligro de convertirse en una herramienta de gestión más, cerrándose la organización en sí misma y dificultando la reflexión sobre la que se integra ese código en la cultura de la organización y el contexto de las responsabilidades compartidas entre el capital humano que conforma la plantilla de trabajadores. Por lo tanto los códigos éticos han de ser herramientas esenciales para la formación del enfoque centrado en los valores y ayudando a avanzar en el razonamiento (McLagan: 1998), y a su vez cumplir con una imagen externa que ayuda a mejorar el negocio, la reputación corporativa, atrae inversiones externas (Kaye: 1996; Schroeder: 2002; García de Madariaga y Valor: 2004). Incluso se ha dado que las empresas crean este código ético para mejorar sus resultados financieros ya que consiguen que el Return on common equity aumente hasta un 50% en comparación con otras empresas que no tienen ese código y además tenían una mayor volatilidad que los que no la tenían.

ESCENARIOS DE DESARROLLO DE ESTRATEGIAS

Toda esta situación se ha producido por una serie de factores que han partido de una crisis de valores, que ha desembocado en una crisis financiera y ésta a arrastrado hasta una crisis económica mundial. En este caso la situación económica se ha vislumbrado desde los puestos directivos de la entidad desde dos enfoques para afrontarlo:

- Enfoque Interno:
 - o Líneas básicas del negocio tradicional de banca
 - o Tipos de interés clásicos
 - o Control estricto de la política de riesgos
 - o Política comercial basada el servicio y no en el volumen
 - o Capacidad de adaptación y flexibilidad en las estructuras ante los imprevistos del mercado
 - o Cumplimiento de la normativa del Banco de España
 - o Política de I+D+i
 - o Fortalecimiento de las capacidades directivas y de gestión
 - o Adaptación del Organigrama
 - o
- Enfoque Externo:
- - o Implantación de una unidad de reestructuraciones y refinanciaciones
 - o Establecimiento de la dudosa como objetivo estratégico comercial
 - o Fortalecimiento del Dpto. de Impagados, Dudosos, extrajudicial y judicial
 - o Potenciación del área de control de riesgos financieros
 - o Fomento de habilidades de observación y reducción de márgenes de error
 - o Potenciación de trabajo en equipo entre los empleados

Los puntos básicos sobre los que se sustentará el mantenimiento de la marca y la credibilidad de la entidad están basados en una serie de elementos que pertenecen no sólo al área de gestión, sino que, en el sistema financiero y empresarial tienen significación en el área de Responsabilidad Social, de ésta manera se establecen también mimbres de diferenciación frente a la competencia al apostar, por ejemplo, por el progreso social y económico de la comunidad autónoma.

El carácter de las Cajas Rurales destacaba por el cumplimiento de las siguientes coincidencias, ya que hasta ahora se identificaban como entidades financieras de ámbito territorial y de origen geográfico, pero las circunstancias actuales han empujado al Banco de España a emprender una reforma del sistema bancario español para racionalizar y reestructurar el sector, olvidando la raigambre territorial de las entidades financieras, y otro de los factores que les ha definido ha sido que centraban su negocio en las operaciones de banca al por menor. Estas entidades, las cooperativas de crédito o cajas rurales, han detentado en su objeto social que sirvan a las necesidades financieras de sus socios y de terceros mediante el ejercicio de las actividades propias de las entidades de crédito. Las acciones estratégicas a tomar por parte de las entidades financieras de la Economía Social parten de la base de un análisis DAFO pormenorizado, que a continuación queda señalado de manera resumida

Análisis interno

Fortalezas

Especialización
Atención al Cliente
Proximidad Territorial
Segmentación
Eficiencia

Debilidades

Escasa cualificación
Gestión desprofesionalizada
Baja aplicación TICs
Desconocimiento del Marketing bancario
Excedentes de Tesorería

Análisis Externo

Oportunidades

Cambios jurídicos
Liberalización
Diversificación: terceros no socios
Poder de los clientes
Intercooperación

Amenazas

Cambios tecnológicos
Intensidad competitiva
Importancia del tamaño
Mayores exigencias de los clientes
Nuevos servicios financieros

Las acciones estratégicas a llevar a cabo serán de esta manera las que siguen a continuación para la mejora de la eficiencia a través de la detección de recursos y capacidades clave para compensar el reducido tamaño relativo con restos de entidades de crédito, alianzas estratégicas entre cajas rurales para alcanzar un mayor tamaño que les permita competir en mejores condiciones y las alianzas con otras clases de cooperativas. Y para la mejora de la eficacia para el trato preferencial a los socios, y ampliar los servicios financieros a los clientes a la vez que potenciará la RSC.

CONCLUSIONES

Las cooperativas de crédito son, junto con las cajas de ahorro, las entidades de crédito que más han incrementado su cuota de participación sobre el total del sistema financiero en España, durante los últimos quince años. En el ámbito operativo las entidades financieras de la Economía Social están apelando al sistema de banca tradicional para la captación de depósitos que avalen las estrategias financieras de las entidades frente a otros tipos de emisiones de valores que han caído en una crisis de confianza muy importante en los últimos meses.

Las cajas rurales, y en este caso el sistema bancario español está bajo un importante plan de reajuste y sobre todo se está redistribuyendo la racionalidad en el sistema de gestión y sobre todo se está redimensionando con una fuerte disminución de las oficinas de las entidades financieras para frenar el deterioro de la solvencia de los costes operativos de cada oficina, en cambio las cooperativas de crédito, si deciden hacer desaparecer la fuente esencial de su realidad de negocio no tendría sentido su propia existencia como entidades con un valor diferenciador por estar asentadas allá donde la banca comercial no llega, al medio rural.

De todas formas alcanzarán una red de entidades más acorde con la dimensión del mercado financiero español que puede complementarse sin que pierdan su esencia y su razón de existir, servicios financieros mejores y con menores costes para sus clientes.

RESUMEN

Un componente esencial para facilitar el aprendizaje es conocer a los alumnos. Los estilos de aprendizaje y actitudes difieren en gran medida para los que cursan la educación superior, de igual manera las preferencias de los adultos que han retomado sus estudios de universidad después de varios años o los de una mamá que trata de balancear su vida personal y profesional. Esta investigación está orientada a conocer cuáles son las características de los estudiantes de la FIN Tecate para saber qué tan diversa es la población estudiantil, a qué generación pertenecen, cuáles son sus preferencias hacia los métodos de enseñanza aprendizaje y qué tan familiarizados están con la tecnología. Los resultados de esta investigación demuestran que en la población estudiada la diversidad no es factor representativo y que la mayoría de los estudiantes pertenecen a la generación “Y” o del milenio. También resalta que utilizan principalmente la tecnología para socialización sin embargo esas herramientas no las prefieren en los métodos de enseñanza aprendizaje. Cada institución educativa debe encontrar sus propias respuestas a través de un diagnóstico de su población estudiantil para establecer estrategias que contribuyan a la toma de decisiones de los administradores y los docentes de educación superior.

PALABRAS CLAVE: Métodos de enseñanza aprendizaje, generación del milenio, diversidad, tecnología, desarrollo académico.

LA MATRIZ INSUMO PRODUCTO DE LA ECONOMÍA DE AGUASCALIENTES

Roberto González Acolt, Universidad Autónoma de Aguascalientes

Manuel Díaz Flores, Universidad Autónoma de Aguascalientes

Felipe de Jesús Salvador Leal Medina, Universidad Autónoma de Aguascalientes

RESUMEN

La finalidad de este trabajo es estimar una matriz insumo-producto para el estado de Aguascalientes. El método utilizado en la construcción de la matriz es el de Flegg et al (1995) y Flegg y Webber (1997). La matriz estimada se presenta en su versión agregada y con sus tres principales cuadros: transacciones, coeficientes técnicos y multiplicadores.

INTRODUCCIÓN

La matriz insumo producto (MIP) es una tabla de doble entrada que registra las transacciones intersectoriales de compra-venta que realizan los sectores económicos en un periodo determinado, las filas representan los sectores vendedores y las columnas a los compradores. A pesar de las grandes ventajas que tiene la MIP regional, en el Estado de Aguascalientes no se cuenta con un instrumento de planeación como éste. ¿Por qué es importante que en Aguascalientes se tenga una MIP? Una MIP de Aguascalientes permitiría identificar cuáles son las actividades económicas estratégicas que puedan constituirse en determinantes para el desarrollo regional, además se conocería la naturaleza de los encadenamientos productivos hacia atrás y hacia delante. Con esta herramienta analítica el Estado podrá detectar los sectores productivos con mayor peso en la economía e incentivar su potencial de locomotora en la economía mediante políticas públicas de fomento a la demanda final.

REVISIÓN LITERARIA

Uno de los retos de los modelos insumo-producto regionales es el referente a las fuentes de información. Estimar una matriz mediante la aplicación de cuestionarios directos en la región para recabar, homologar y organizar la información estadística, implica costos monetarios elevados y en algunos casos, desfase de la información obtenida (Pino y Illanes, 2003). Una alternativa para regionalizar una MIP son los métodos de estimación indirectos (Non-survey), los cuales son baratos y necesitan de una menor información estadística, sin embargo, garantizan un grado de confiabilidad aceptable de acuerdo a los objetivos propuestos. También, existe un enfoque híbrido, que combina la encuesta directa y el enfoque non-survey (Fuentes *et al*, 2004). Dada las ventajas de tiempo y dinero que ofrecen los enfoques indirectos, su utilización en la regionalización de matrices es práctica común. Habitualmente en la aplicación de este enfoque, se parte de la MIP nacional y mediante el uso de información secundaria –estadísticas regionales, censos económicos, anuarios estadísticos, etcétera-, y procedimientos mecánico-estadísticos se obtiene la matriz regional de transacciones

Fuentes y Brugues (2001) refieren las técnicas indirectas más importantes para estimar una MIP regional: coeficiente de localización simple, coeficiente de localización solo compradores, coeficiente de localización interindustrial, coeficiente de localización semilogaritmico, ajuste de oferta-demanda, ajuste de oferta-demanda modificado, los coeficientes de compras regionales y el ajuste biproportional (RAS). Y recientemente, dentro de este conjunto de técnicas indirectas, se tiene el método de Flegg y Webber. La utilización de las técnicas indirectas para estimar matrices regionales en México ha sido extenso y diverso, así por ejemplo, se utilizó el ajuste de oferta y demanda -diseño de balanzas comerciales regionales que incluyen la producción regional de un bien i (oferta regional) menos los requerimientos

regionales del mismo bien (demanda regional)- para estimar la matriz de Coahuila (Ibarra, 1998), Tamaulipas (Valdes, 1998) y Nuevo León (Castañón, 1998). El método biproporcional (RAS), consiste en ajustar una matriz inicial A por unos coeficientes rectificadores por filas (R) y por columnas (S), de tal manera que permita calcular una nueva matriz (A^*) (Pulido y Fontela, 1993). Este método con algunas variantes se utilizó para estimar la MIP de Baja California (Fuentes, 2005) y la matriz interregional del Centro-Occidente (Colima, Jalisco, Michoacán y Nayarit) (Callicó et al, 2003). Por su parte, el enfoque de Flegg y Webber, el cual se explicara ampliamente líneas abajo, fue aplicado para estimar la MIP de Nuevo León (Soto, 2000) y Coahuila (Dávila, 2002)

METODOLOGÍA

A continuación se describe las características de algunos coeficientes empleados en los modelos regionales de insumo producto –incluyendo el método al cual se recurrirá en el estudio presente.

El coeficiente de localización simple, proporciona información de la contribución del empleo de un sector económico en una región, dividida por la participación en el empleo del sector correspondiente a nivel nacional. Este coeficiente se expresa de la siguiente forma (Flegg y Webber, 1997):

$$SLQ_i = RE_i/NE_i \times TNE/TRE \quad (1)$$

Donde: SLQ_i = Coeficiente de localización simple en la rama i; RE_i = Empleo regional en la rama i; TRE = Empleo total de la región; NE_i = Empleo nacional en la rama i; TNE = Empleo total nacional. Si $SLQ_i > 1$, entonces existe una elevada contribución del empleo en la rama económica de la región, al contrario, si $SLQ_i < 1$, la participación del empleo en la rama productiva regional es baja, y cuando $SLQ_i = 1$, tenemos una aportación del empleo de la rama de actividad idéntica a la nacional. La proporción RE_i/NE_i incorpora el peso relativo del sector oferente i, mientras que la razón TNE/TRE incluye el peso relativo de la región.

Por otra parte, el coeficiente de localización de industria cruzada se expresa por la siguiente fórmula:

$$CILQ_{ij} = SLQ_i/SLQ_j = RE_i/NE_i / RE_j/NE_j \quad (2)$$

Se supone que el sector i es oferente de insumos al sector j. Así, el peso relativo del sector oferente i es medido por la razón RE_i/NE_i , mientras que, el peso relativo del sector comprador j se mide por RE_j/NE_j . Un inconveniente de este coeficiente es que excluye la importancia relativa que tiene la región. Si el sector oferente en la región es relativamente pequeño en comparación con el comprador, entonces $CILQ_{ij} < 1$ por lo que algunos insumos necesarios por el sector j tienen que ser importados fuera de la región. Una fórmula que incluye tanto, el peso relativo del sector oferente i y del sector comprador j, como la región, es el coeficiente de localización semilogarítmico de Round.

$$RLQ_i = SLQ_i / \log_2(1 + SLQ_j) \quad (3)$$

Flegg *et al* (1995) y Flegg y Webber (1997) analizan algunas deficiencias del coeficiente RLQ_i . Primero, suponen dos hipotéticas regiones: A con 10% del empleo nacional y B con 20%. Además, consideran $RE_i/NE_i = 0.08$ y $RE_j/NE_j = 0.12$. Se espera que la región B sea más autosuficiente y por lo mismo tenga un RLQ_i más elevado. Sin embargo, no es así, el RLQ_i es igual a 0.70 en A y de 0.59 para B.

Segundo, los autores referidos cuestionan por que se transformo logarítmicamente sólo SLQ_j , y no se hizo lo mismo con SLQ_i . Su conclusión es que en el planteamiento de Round no existe ninguna justificación teórica o empírica de la diferencia en la transformación realizada en los dos coeficientes de localización simple.

El coeficiente de localización de Flegg *et al* (1995) y Flegg Webber (1997) intenta superar las limitaciones de los coeficientes anteriores, y se define como:

$$FLQ_{ij} = CILQ_{ij} \times \lambda^* \quad (4)$$

Donde

$$\lambda^* = [\log_2(1 + TRE/TNE)]^\delta; \quad 0 \leq \delta < 1$$

λ^* es un escalar que representa la región. Basado en el trabajo de Flegg se establece que un valor razonable para δ es 0.3. A diferencia de la fórmula de Round, el coeficiente FLQ_{ij} produce un estimador más elevado para la región que tiene una participación mayor en el empleo nacional. Con base en el coeficiente FLQ_{ij} , se puede estimar los coeficientes de insumos intrarregionales (r_{ij}), los cuales determinan el monto de insumos regionales i para producir una unidad de producción regional j .

$$r_{ij} = FLQ_{ij} \times a_{ij} \quad (5)$$

donde a_{ij} es el coeficiente técnico de producción de la matriz nacional. Flegg *et al* (1995) y Flegg y Webber (1997) consideran la siguiente situación:

$$FLQ_{ij} \geq 1 \rightarrow FLQ_{ij} = 1 \text{ por lo tanto } r_{ij} = a_{ij}$$

$$FLQ_{ij} < 1 \text{ por lo tanto } r_{ij} = FLQ_{ij} \times a_{ij} \quad (6)$$

Es decir, si el FLQ_{ij} es mayor o igual a uno, entonces el coeficiente de insumos intrarregionales es igual al coeficiente técnico nacional. Cuando FLQ_{ij} es menor a 1, entonces el coeficiente de insumos intrarregionales es igual al coeficiente FLQ_{ij} multiplicado por el coeficiente técnico de producción de la matriz nacional.

RESULTADOS

La metodología anteriormente descrita con algunas variantes, se aplicó para construir la MIP de Aguascalientes. Los pasos fueron los siguientes:

1).- Como base y modelo para la regionalización de la MIP de Aguascalientes, se empleó la matriz insumo-producto de México para el año 2003. De esta matriz se extrajeron los coeficientes técnicos nacionales (a_{ij}), que se emplearon para estimar los r_{ij} .

2).- De la base de datos del SAIC (2005), se extrajo la información del personal ocupado total a nivel nacional y estatal por subsector para elaborar los coeficientes de localización simple y de industria cruzada.

3).- Para derivar λ^* , primero se calculó el cociente TRE/TNE mediante el empleo total en Aguascalientes (TRE) y el empleo total nacional (TNE), el resultado fue de 0.3, mientras que, el coeficiente δ se tomó del trabajo de Flegg y Webb (1997) con un valor de 0.3. Como consecuencia el escalar λ^* fue de 0.2956.

Con la información anterior se obtuvieron los coeficientes de localización de Flegg *et al* (1995) y Flegg y Webber (1997) para Aguascalientes. Cuando el FLQ_{ij} fue uno o mayor que uno, entonces el coeficiente de insumos intrarregionales fue igual al coeficiente técnico de matriz insumo-producto de México. Si el FLQ_{ij} fue menor que 1, entonces el coeficiente de insumos intrarregionales fue igual al coeficiente FLQ_{ij} multiplicado por el coeficiente técnico de producción de la matriz nacional. De esta manera fue estimada la matriz de coeficientes intrarregionales de Aguascalientes.

La matriz de transacciones de Aguascalientes se divide en 69 sectores, sin embargo, por cuestiones de espacio y presentación se agrupó a tres sectores. El sector primario abarca 5 ramas de actividad económica, el secundario comprende 21 ramas y el terciario incluye 43 ramas. A partir de esta matriz se obtiene la de coeficientes técnicos de Aguascalientes –que muestra el costo unitario de los sectores económicos. La tabla 1 muestra estos coeficientes: así por ejemplo, por cada peso de valor bruto de la producción que genera el sector primario, compra 10.80 centavos de insumos al sector secundario, 12.15 centavos de insumos al sector terciario, paga 00.35 centavos de impuestos sobre bienes y servicios, etcétera.

Tabla 1: Matriz de coeficientes técnicos de Aguascalientes. Agregada a tres sectores

Sectores económicos	Sector primario	Sector secundario	Sector terciario
Sector primario	0.0568	0.0186	0.0004
Sector secundario	0.1080	0.2510	0.0419
Sector terciario	0.1215	0.1146	0.1556
Usos de la ET de origen nacional e importado	0.2863	0.3842	0.1979
Importaciones totales	0.0217	0.1016	0.0104
Impuestos sobre bienes y servicios	0.0035	0.0040	0.0040
Subsidios a bienes y servicios	0.0006	0.0005	0.0004
Impuestos sobre bienes y servicios netos de subsidios	0.0029	0.0035	0.0036
Total de usos de origen nacional e importado a precios comprador	0.3109	0.4892	0.2119

Fuente: elaboración propia

Con la información de la matriz de coeficientes técnicos se deriva la de multiplicadores -que presenta los efectos directos e indirectos que causa el cambio de la demanda final en los diferentes sectores económicos. La tabla 2 presenta ésta matriz para Aguascalientes. Si suponemos que en el sector primario la demanda aumenta en un peso, entonces dicho sector tiene que aumentar su producción en 1.06 pesos, el secundario en 16.31 centavos y el terciario en 17.52 centavos. Por otro lado, si la demanda final se incrementara en un peso en el sector secundario, las actividades económicas primarias de manera indirecta elevarían su producción en 2.67 centavos, el propio sector secundario la incrementaría aproximadamente en 1.35 pesos y el terciario en 18.70 centavos. Situación similar se presenta cuando la demanda final se eleva en un peso en la actividad terciaria; la producción crece en 00.18 y 6.71 centavos en los sectores primario y secundario respectivamente, y en el mismo sector terciario en 1.19 pesos.

Tabla 2: Matriz de multiplicadores

Sectores económicos	Sector primario	Sector secundario	Sector terciario
Sector primario	1.0635	0.0267	0.0018
Sector secundario	0.1631	1.3494	0.0671
Sector terciario	0.1752	0.1870	1.1937

Fuente: elaboración propia

CONCLUSIONES

Se estimó la MIP de Aguascalientes mediante la metodología de Flegg *et al* (1995) y Flegg y Webber (1997). La estructura de la MIP de Aguascalientes, se presenta de manera agregada en tres sectores. La finalidad es ilustrar los principales resultados de las matrices de transacciones, coeficientes técnicos y multiplicadores. Con esta herramienta analítica se podrá detectar los sectores productivos con mayor peso en la economía e incentivar su potencial de locomotora en la economía mediante políticas públicas de fomento a la demanda final. Por lo tanto, una segunda etapa de la investigación es utilizar esta matriz para detectar sectores clave y estratégicos de la economía de Aguascalientes.

ANÁLISIS CON ENFOQUE MULTIVARIADO DE LOS FACTORES DE MERCADOTECNIA Y CAPACITACIÓN EN EL USO DE CALCULADORAS CON TECNOLOGÍA CAS EN EL NIVEL SUPERIOR EN EL ESTADO DE TLAXCALA, MÉXICO

Myrna Enedelia González Meneses, El Colegio de Tlaxcala, A.C.

Alejandra Torres López, Instituto Tecnológico de Apizaco

José Luis Hernández González, Instituto Tecnológico de Apizaco

RESUMEN

Se requiere conocer cuál es el área de oportunidad con la incorporación de calculadoras provistas con Sistemas Algebraicos de Cálculo en la Educación Superior Tecnológica, mediante la discriminación estadística de los factores que influyen en el uso y consumo de esta nueva tecnología, en instituciones de educación superior en el Estado de Tlaxcala, México. Aunque en los planes de estudio vigentes se ha propuesto utilizar algún software o calculadora, la gran mayoría de los docentes no están preparados para ese cambio debido a diversos aspectos como son la falta de: infraestructura, material didáctico acorde con nuevas tecnologías, capacitación, además del desconocimiento de las bondades en su uso. Por medio del Análisis Multivariado, se discriminan y categorizan los atributos provenientes de un cuestionario aplicado a alumnos que cursan los primeros seis semestres de las carreras de ingeniería y ciencias exactas para conocer la relación que existe entre los factores que limitan la comercialización.

INTRODUCCIÓN

La incorporación de nuevas tecnologías en la Educación Media Superior y Superior es uno de los principales objetivos en las reformas de los planes de estudios. Actualmente, existe una gran variedad de nuevas tecnologías como la educación a distancia y el uso de software didáctico en el salón de clases; en el caso específico de la enseñanza de las matemáticas, se cuenta con un sinnúmero de recursos que pueden ayudar en el aula para mejorar la enseñanza-aprendizaje, uno de esos recursos, es el uso de nuevas calculadoras provistas con tecnología llamada CAS (Computer Algebraic System) Sistemas Algebraicos de Cálculo. Aunque el mercado de venta de calculadoras se encuentra limitado para tres o cuatro marcas líderes que venden directamente sus productos en establecimientos específicos como tiendas especializadas, también hay pequeños distribuidores; sin embargo, la promoción y distribución no han sido suficientes para dar a conocer estas calculadoras. Debido al desarrollo y creación de nuevas carreras en instituciones de nivel superior, ha surgido la necesidad de distribuir el producto bajo ciertas condiciones; además, existe la necesidad de crear micro y pequeñas empresas para generar una economía orientada a la prestación de diversos servicios, como son: el diseño de material didáctico, diseño de planes de estudios, capacitación docente, capacitación al público en general (usuarios de la tecnología), entre otros. Bajo este contexto, se desarrolló un trabajo de investigación cuya finalidad fue cuantificar el grado de influencia de factores de mercadotecnia que afectan directamente la comercialización de calculadoras, para lo cual, se utilizaron las técnicas estadísticas de Análisis Multivariado por Componentes Principales y Conglomerados, las cuales permitieron evaluar y jerarquizar los factores más importantes para el uso y consumo de calculadoras con tecnología CAS en Instituciones de Educación Superior Tecnológica en el Estado de Tlaxcala, México.

REVISIÓN LITERARIA

La incorporación de nuevas tecnologías en el sector educativo, ha generado la creación de nuevas líneas de investigación en el área de las matemáticas educativas, la necesidad de disminuir el índice de reprobación en las materias de Ciencias Básicas y mejorar la educación en diversos niveles educativos, ha planteado la necesidad de incorporar el uso de esas nuevas tecnologías en el salón de clases, se han implementados cursos experimentales para iniciar la incorporación del uso de Calculadoras con Tecnología CAS en diferentes escenarios. La Subsecretaría de Educación Básica y Normal de la SEP, en colaboración con el Instituto Latinoamericano de Comunicación Educativa (ILCE), implementan un nuevo modelo pedagógico y didáctico en 28 escuelas secundarias, en 14 estados del país, para la incorporación de del uso de las TICs para la enseñanza de la física y las matemáticas con diversos software y calculadoras TI92. Rojano describe como se llevó a cabo el proyecto de incorporación de nuevas tecnologías por parte de la Subsecretaría de educación Básica y menciona como es la propuesta de reforma curricular en las matemáticas en la educación secundaria. Se describe la propuesta didáctica para el cálculo usando calculadoras de la marca Texas Instruments, modelo Voyage 200, realizado por Jesús Rodolfo Rodríguez y Luis Felipe Flores López del Instituto Tecnológico de los Mochis en Sonora. Con respecto a este estudio, se demostró que el uso de calculadoras con tecnología CAS, mejoró el aprendizaje en la materia de Cálculo Diferencial, debido a que los alumnos de grupo piloto, se sintieron más motivados para la realización de las diversas actividades propias de la materia, en comparación con el historial que existía de grupos anteriores.

Al respecto, los investigadores Waits y Demana comentan que los nuevos planes de estudio, se basan en realizar algunas reformas que van desde cambiar los enfoques académicos hasta la certificación y acreditación de sus carreras. Se requiere cambiar la cultura académica basándose en los enfoques constructivistas, que es necesario el uso de nuevos recursos tecnológicos, así como mejorar la infraestructura de las instituciones educativas: instalaciones, equipo de cómputo, laboratorios, etc; primordialmente se debe enfatizar en la actualización de los profesores desde su práctica docente hasta la capacitación tecnológico-científica. Sin embargo, la falta de presupuesto y capacitación a los docentes en el uso de estas nuevas tecnologías, ha limitado tales expectativas de cambio; se sabe, que algunos profesores muestran cierto rechazo al uso de estas tecnologías, así como el desconocimiento del potencial del equipo actual y las bondades didácticas del uso de tecnologías CAS. En otros países, principalmente en Estados Unidos, se le ha dado tal importancia al uso de las calculadoras al grado que se ha permitido el uso de estas en los exámenes de admisión a nivel licenciatura.

Aunque existe una gran variedad de productos para la enseñanza de las matemáticas, su uso en el nivel medio superior y superior está muy limitado. Elaborar una buena estrategia de comercialización impactará a la población estudiantil en gran medida, ya que como se menciona en la revisión literaria, existen reformas a los planes de estudio actuales que permiten el uso de las calculadoras como parte de la currícula escolar.

METODOLOGÍA

La población a estudiar es de nivel licenciatura y está constituida por siete instituciones que ofrecen carreras de Ingeniería y Ciencias Exactas, se encuentran distribuidas geográficamente en todo el Estado de Tlaxcala, e incluyen tanto universidades estatales y privadas así como institutos tecnológicos centralizados y descentralizados.

Aunque es relativo el nivel socio-económico de la población, conviene aclarar que el Instituto Tecnológico de Tlaxcala, es la única institución de carácter particular, el Instituto Tecnológico de Apizaco y el Instituto Tecnológico Superior del Altiplano son de carácter federal, mientras que las demás instituciones pertenecen al Gobierno del Estado y es importante hacer notar que las instituciones:

Universidad Politécnica de Tlaxcala, Instituto Tecnológico Superior de Tlaxco, son instituciones de nueva creación.

La muestra en estudio se realizó con estudiantes del primero al sexto semestre, ya que en las retículas de los planes de estudio, se observó que las materias básicas del área de ingenierías y matemáticas son: matemáticas, física, química, probabilidad y estadística, por lo que a los alumnos de dichos semestres, se consideró como la población objetivo y futuro mercado meta.

Por ser Tlaxcala el Estado más pequeño de la República Mexicana, los factores culturales, afectivos, etc., no son tomados en cuenta, ya que se considera que las condiciones económicas, culturales y sociales son similares y no influyen drásticamente en el estudio.

Se realizó el estudio de mercado para conocer más información acerca de los posibles atributos a considerar, de ello se desprende que los factores a cuantificar y jerarquizar son:

- | | |
|---------------------------|--------------------------------------|
| 1 Marca | 2 Precio |
| 3 Colocación del Producto | 4 Uso del Producto |
| 5 Publicidad | 6 Planes de venta |
| 7 Promoción | 8 Incorporación en planes de estudio |
| 9 Capacitación | |

Objetivo de la escala: Determinar los atributos que influyen en la preferencia del modelo de calculadora, marca y precio, además de conocer como se obtuvo la información del producto y que conocimientos se tienen del mismo en cuanto a información y características técnicas.

Para definir las escalas, se consideraron los siguientes componentes:

- Componente de Conocimientos. Información que el individuo tiene acerca del producto y características técnicas del mismo.
- Componente Conductual. Expectativas del comportamiento de compra o intenciones de acción respecto al producto.

Escalas De Respuestas:

De acuerdo con Rensis Likert y Stevens, se pueden utilizar escalas de respuesta graduada, y los anclajes de respuesta están considerados mediante un referente gráfico, referentes verbales, además de respuestas abiertas pero limitadas con porcentaje. Los cuales se ejemplifican a continuación:

Referente verbal

☐ Texas Instruments ☐ Casio ☐ HP ☐ Sharp ☐ Otra

Referente gráfico

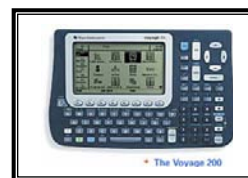

CIENTÍFICA

Cualquier modelo

GRAFICADORA

Cualquier Modelo
Casio, HP, TI

Respuesta de Intervalo

Marca _____ (de 0 a 100%)

La tipología de escalas es:

1. Nominal. Permite identificar categorías y son mutuamente excluyentes.

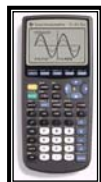

☐ Si ☐ No

2. Ordinal. Permite representar categorías.

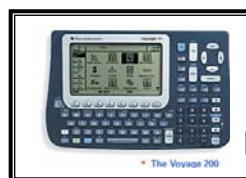

CIENTÍFICA

Cualquier modelo

GRAFICADORA

Cualquier Modelo Casio, HP, TI

3. Intervalo. Categorías mediante escalas.

Marca _____ (de 0 a 100%)

Tamaño De La Población

De acuerdo con datos proporcionados por el Departamento de Estadística de la Subdirección General de Planeación de la Unidad de Servicios Educativos de Tlaxcala (USET), las Instituciones de Educación Superior en el Estado de Tlaxcala son 26 y reportan una población total de 24,825 alumnos.

La población a estudiar es de nivel licenciatura y está constituida por siete instituciones que ofrecen carreras de Ingeniería y Ciencias Exactas, las cuales se encuentran distribuidas geográficamente en todo el Estado de Tlaxcala, e incluyen tanto Universidades Estatales, Privadas e Institutos Tecnológicos centralizados como descentralizados.

Los cuestionarios se aplicaron a grupos de alumnos de los primeros cinco semestres en cada carrera, así como al personal docente que imparte las materias de: matemáticas, física, química, probabilidad y estadística. Derivado de las características para la determinación de la población a trabajar, se obtuvo como resultado: 3,413 alumnos y 351 docentes.

Tabla 1. Tamaño Poblacional de las Instituciones de Educación Superior seleccionadas

INSTITUCIONES	Población Alumnos	Tamaño muestral Alumnos
1) Universidad Politécnica de Tlaxcala	985	242
2) Instituto Tecnológico de Apizaco	938	231
3) Universidad Autónoma de Tlaxcala	779	191
4) Instituto Tecnológico Superior del Altiplano	383	94
5) Instituto Tecnológico Superior de Tlaxco	243	60
6) Instituto de Estudios Superiores del Magisterio	51	13
7) Instituto Tecnológico de Tlaxcala	34	8
TOTAL	3413	839

La metodología empleada para el desarrollo de este trabajo contempla los siguientes pasos:

1. Se diseñó un instrumento de medición para la recopilación de información basado en las escalas modificadas de Likert y Stevenson para redacción de ítems en análisis multivariado, basándonos en la revisión literaria referente a la metodología para la recopilación de datos por medio de cuestionario.

2. Se determinó el tamaño de la muestra por medio de la estratificación por racimos para la población de instituciones de nivel superior seleccionadas.
3. Se validó el cuestionario a nivel piloto
4. Se aplicaron 839 cuestionarios a los estudiantes en las instituciones y carreras seleccionadas de acuerdo con el tamaño de muestra determinado.
5. Se elaboró un software en lenguaje de programación Builder C++ para la captura y codificación de la información.
6. Se capturó y codificó la información proveniente de los cuestionarios para su tratamiento estadístico.
7. Se aplicó un análisis de estadística descriptiva para verificar si la información era válida para su tratamiento estadístico.
8. Se corrigieron errores de codificación de acuerdo con los resultados obtenidos con estadística descriptiva.
9. Se utilizaron dos técnicas de Análisis Multivariado de acuerdo con los resultados arrojados por el análisis con estadística descriptiva. En coordinación con la empresa LOGICIELS, S.A. de C.V., se analizaron los datos con el software STAT_ITCF, así como Minitab versión14.

RESULTADOS

Se obtuvo una matriz de 839 elementos (individuos) y 16 variables observadas. La mayoría de las variables son del tipo nominal, constituyendo lo que se conoce como matriz de datos que es de dimensión 839x16. Se realizó un análisis exploratorio univariado que permitió detectar problemas como: valores atípicos y pérdida de valores debido a la captura de la información y codificación, además de obtener otras estadísticas de interés como la mediana, la moda, el valor máximo y mínimo de cada una de las variables.

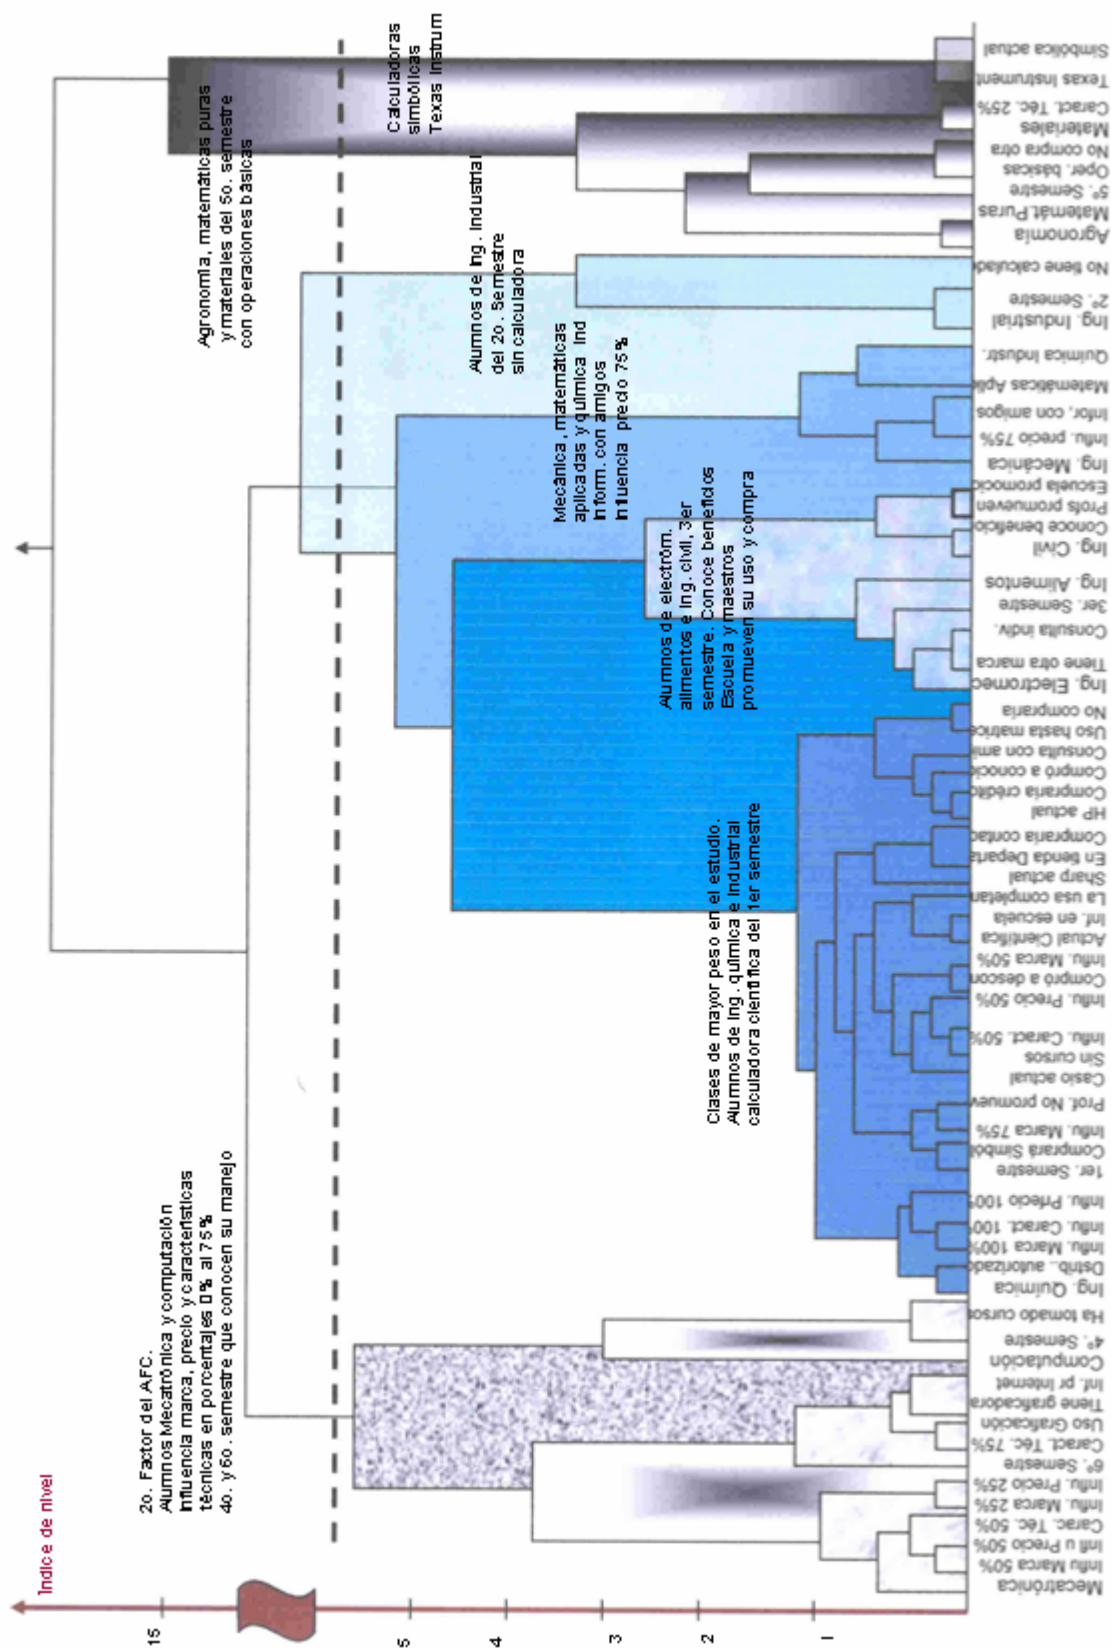

Se observa que las mayores magnitudes de correlación son la marca y el precio con un 0.438 y la correlación de la marca de la calculadora con la que cuenta el alumno y el tipo con un -0.311, se considera una correlación baja y el signo indica una pendiente descendente en una de las variables; lo que indica, que no existe una relación significativa porque hay un alto grado de dispersión en el conjunto de datos.

Tabla 2. Resultado del análisis de Componentes principales

	Componentes					
	1	2	3	4	5	6
CARRERA_N1	.272	-.290	.265	-.402	-.262	.230

PUBLICIDAD1_M2	-.162	.005	-.427	.322	-.498	-.005
PRECIO_M3	.108	.306	-.456	-.090	.248	-.315
PLANESVTA_M4	.006	-.190	-.142	.398	.212	.416
IPEPROMOCION_M5	.185	-.225	.273	.294	-.372	-.213
PUBLICIDAD2_M6	.182	-.390	.382	.233	-.114	.058
PROMPLANESVTA_M7	.169	-.031	.304	.413	.147	-.565

La reducción de las variables no implica que alguna de ellas debe desaparecer, es decir, se trata de encontrar estrategias que permitan abordarlas de manera simultánea y agrupar cuáles de ellas se pueden abatir en diferentes instantes de tiempo, espacio o recursos.

Figura 1. Dendograma 1

Nivel De Mercado Actual

Finalmente, para cuantificar el porcentaje de alumnos pertenecientes a cada segmento, se considerará la pertenencia a la carrera. El nivel de mercado queda conformado de la siguiente manera:

1) Alumnos que usan adecuadamente la calculadora. Se refiere a alumnos de las carreras de Mecatrónica y Computación, tienen una influencia hacia la marca y el precio del producto, el porcentaje de uso en cuanto a las características técnicas del producto varía del 0 al 75%, y son alumnos del 4to a 6to semestre, de acuerdo a su retícula de estudios, han cursado del 80 al 100% de las materias de Ciencias Básicas, además, cuentan con la habilidad de programar y tienen un mejor dominio de los dispositivos electrónicos por el perfil de su carrera. Estas carreras se encuentran ubicadas en el Instituto Tecnológico de Apizaco, en la Universidad Politécnica de Tlaxcala, en la Universidad Autónoma de Tlaxcala y en Instituto Tecnológico de Tlaxcala. El total de alumnos pertenecientes a este grupo son 72, es decir, constituyen un 8.58%

2) Alumnos novatos. Son alumnos de primero y segundo semestres de las carreras de aplicación, son la clase con mayor peso en el estudio y muestran una fuerte tendencia al uso de las calculadoras científicas, corresponden a los alumnos de Ingeniería Química e Ingeniería Industrial, entre otras, su producto lo han adquirido con distribuidores autorizados, mencionan que les interesa la compra de una calculadora con cálculo simbólico, el estudio refleja que sus profesores no promueven el uso de la calculadora, aunque de acuerdo con su retícula, ya han cursado 1 o 2 materias del área de matemáticas, las calculadoras de su preferencia son las de marca Casio y Sharp, son alumnos que no han tomado cursos sobre el manejo y uso de calculadoras, la información con la que cuentan para comprar el producto, la obtienen en la escuela y se interesan por comprar una calculadora a crédito. Estos alumnos, se encuentran ubicados en el Instituto Tecnológico de Apizaco y en la Universidad Politécnica de Tlaxcala. Se consideran dentro de este grupo, únicamente a alumnos de primero y segundo semestres, con un total de 134, es decir, el 15.97%; cabe mencionar, que en este grupo deberán incluirse alumnos de otras carreras, y que la suma de los segmentos, no forzosamente resultará en un 100%, ya que como se puede observar en el dendrograma, algunos alumnos pueden encontrarse ubicados dentro de dos segmentos. Este grupo, también incluye a las ingenierías de Electromecánica, Alimentos y Civil del primero y segundo semestres, donde tenemos 357 alumnos, que representan un 42.55% del total de la muestra.

3) Alumnos informados. Son alumnos de la carreras de Electromecánica, Alimentos y Civil, no han tomado cursos para usar sus calculadoras, pero conocen los beneficios del uso del producto, además, mencionan que su escuela y maestros promueven el uso y compra de calculadoras, la consulta para comprar una calculadora, la hacen de manera individual, son alumnos de tercer semestre y están cursando aproximadamente el 50% de las materias de Ciencias Básicas, son los alumnos que representan un mercado potencial para el uso y consumo de calculadoras debido al perfil de su carrera. Para los alumnos informados, la carrera de Ingeniería Civil se encuentra en el Instituto Tecnológico de Apizaco, la de Electrónica, se encuentra en el Instituto Superior de Tlaxco, y la carrera de Alimentos, en el Instituto Tecnológico Superior del Altiplano de Tlaxcala. Se consideran a los alumnos desde el tercero hasta el sexto semestres, con 76 alumnos y un 9.06% del total de la muestra.

4) Alumnos que no usan calculadoras. Son alumnos de la carrera de Industrial del segundo semestre. Aunque es muy poca la cantidad de alumnos en este caso. Se encuentran ubicados tanto en el Instituto Tecnológico de Apizaco, como en la Universidad Politécnica de Tlaxcala. También, se muestra a los alumnos de las carreras de Mecánica, Licenciatura con Especialidad en Matemáticas y Química Industrial, en este grupo y probablemente se deba a su formación con 125 alumnos y un 14.9% del total, se incluyen alumnos de todos los semestres para las carreras mencionadas excepto la de Industrial.

5) Alumnos que no requieren de calculadoras. Son alumnos de las especialidades en: Agronomía, Matemáticas Aplicadas y Materiales, son alumnos del 5to semestre que ya han cursado aproximadamente

del 80% al 100% de las materias de Ciencias Básicas y debido al perfil de su carrera, donde la mayoría de las materias cursadas requieren de una amplia manipulación de los modelos matemáticos para la resolución de problemas de las materias de aplicación, la carrera de Alimentos no hace un gran uso de manipulación matemática en sus materias y solamente requieren de hacer operaciones básicas. Los alumnos manifiestan que sus maestros, no promueven el uso del producto porque no les hace falta utilizar este tipo de equipos. Sin embargo, se puede hacer una segmentación geográfica para el caso de este tipo de alumnos, ya que se conoce en qué institución se imparten dichas carreras y la ubicación de cada uno de los institutos, por ejemplo, la carrera de Matemáticas Aplicadas, se ubica en la Facultad de Ciencias Básicas de la Universidad Autónoma de Tlaxcala, la carrera de Agronomía, se encuentra en el Instituto Tecnológico Superior del Altiplano de Tlaxcala y la especialidad de Materiales, se encuentra en el Instituto Tecnológico Superior de Tlaxco. Aunque la mayoría son alumnos del quinto semestre, se considerarán todos los semestres para este segmento, con un total de 89 alumnos, lo que representa un 10.61% del total de la muestra.

CONCLUSIONES

Las técnicas estadísticas de análisis multivariado, permiten una segmentación eficiente de variables tanto cuantitativas como cualitativas. En la jerarquización de los factores de mercadotecnia obtenidos con la técnica de Conglomerados, se observa que es factible seleccionar diversas estrategias para atacar el mercado. Con respecto al planteamiento original del problema, se demostró que las técnicas de análisis multivariado, permiten la segmentación eficiente de variables tanto cuantitativas como cualitativas, además, se cuantificó el grado de influencia entre cada una de las variables. Reducir el número de variables utilizadas en un problema determinado, no implica que las variables originales desaparezcan; lo que se logra con el método de componentes principales es conocer si existe la posibilidad de tener una mezcla de factores y atacarlos simultáneamente con la estrategia de mercado adecuada. En el análisis que se hizo mediante el dendrograma, se observó que las ventas están limitadas por la falta de conocimiento del producto tanto en alumnos como en maestros y la difusión en cuanto a diversidad de productos y características técnicas de los mismos, debería hacerse desde que los alumnos inician sus carreras, sin embargo, se muestra que no todas las carreras deberán considerarse iguales, ya que, como se observó en la segmentación, hay alumnos que no requieren del uso de calculadoras por su perfil profesional, aunque se encuentren estudiando una ingeniería.

EVALUACIÓN DE LA GESTIÓN ADMINISTRATIVA Y FINANCIERA DE LA EMPRESA ENERGÍA SOCIAL S.A. E.S.P., EN CARTAGENA

José Morelos Gómez, Universidad de Cartagena

RESUMEN

La efectiva toma de decisiones de la gerencia moderna, demanda la adecuada y oportuna, aplicación de las herramientas del diagnóstico administrativo y financiero, desde el enfoque sistémico; Este paradigma de sistemas constituye una de las formas de pensamiento más avanzadas en la comprensión de la dinámica de las organizaciones y en la implementación, de modelos de diagnóstico de gestión, que permiten el mejoramiento continuo de los resultados en los procesos de cambio organizacional. Bajo este enfoque se desarrolla la evaluación de la gestión administrativa y financiera de la empresa Energía Social S.A. E.S.P., identificando los factores administrativos de desempeño, entorno y estructura organizacional, planificación estratégica y diagnóstico financiero, con el propósito de revisar sus acciones y estrategias, proponiendo alternativas de mejoramiento en virtud del grado de conocimiento y aplicación en la organización.

PALABRAS CLAVE: Diagnóstico, Management, Organización, Gestión, Diagnóstico Administrativo, Diagnóstico Financiero y Administración.

INTRODUCCIÓN

Para llevar a cabo la aplicación de los diagnósticos de las funciones administrativas y financieras en la empresa Energía Social S.A., en esta investigación se procederá a realizar el análisis interno de los resultados de las áreas funcionales de gestión con el propósito de establecer las comparaciones pertinentes, en virtud de sus objetivos y de los resultados, medios de información, indicadores de gestión entre otras herramientas utilizadas en la empresa. Así mismo, se abordará el análisis de la descripción de los medios humanos, materiales y organización, con el fin de identificar las posibles causas de las deficiencias, que se derivan de las áreas administrativas y financieras de la empresa Energía Social S.A.

Seguidamente, para la evaluación de los indicadores de gestión y control, en las áreas funcionales administrativas y financieras, se tomará como herramienta fundamental de aplicación, el instrumento tipo lista de chequeo; el cual proporcionará información pertinente y confiable para la toma de decisiones en virtud del mejoramiento de sus áreas funcionales. Se revisarán las actividades que se realizan en cada una de las áreas administrativas y financiera, con el propósito de determinar la naturaleza y calidad de estas actividades. En esta etapa se pretende encontrar la correlación existente en las operaciones de las áreas administrativas y financiera, y la influencia, que ejercen las fuerzas internas de la organización sobre estas áreas funcionales. Por último, según el análisis de los hechos encontrados en las etapas anteriormente descritas, se procederán a definir las relaciones causales entre los factores y acontecimientos (resultados), identificados en la aplicación del diagnóstico de las áreas administrativa y financiera de la empresa, con el propósito de dar a conocer a la dirección las propuestas y recomendaciones pertinentes (puntos fuertes y débiles), encontradas en el trabajo de diagnóstico.

REVISION LITERARIA

Conceptos de Administración, Organización y Gestión

El pensamiento sistémico desde la década de los años cincuenta, viene siendo incorporado con gran fuerza a la teoría administrativa, por sus importantes aportes y transformaciones al desarrollo administrativo y complejo mundo de la tecnología y la información organizacional. Este paradigma de sistemas constituye una de las formas de pensamiento más avanzadas en la comprensión de la dinámica de las organizaciones y en la aplicación, de modelos de diagnóstico de gestión que permiten el mejoramiento continuo de los resultados en los procesos de cambio organizacional. Este análisis sistémico propone entonces la consideración de tres elementos básicos -el sistema objeto (la organización y sus partes componentes), el operador (analista, interventor) y la relación que se establece entre ambos (Schvarstein, 2000:303), con el propósito de poder establecer las causas de las desviaciones en el desempeño organizacional, y su relación, con las especificaciones establecidas en los objetivos y políticas de la organización, desde la acertada toma de decisiones en la administración.

El concepto de “administración”, se irrigo en los medios académico y empresarial colombianos, desde la adopción del taylorismo como materia de estudio, entre 1911 y 1912, en la Escuela de Minas de Medellín. Para el año de 1912 se reportan las primeras traducciones de los textos de Taylor (1911), realizadas por Alejandro López Mayor (1984). Desde entonces el término “Management” fue traducido en Colombia como “administración” bajo la connotación taylorista (aplicación principios de la administración científica) Por su parte, Jean Francois Chanlat (2002:29), define el management, como “la gestión de un conjunto de prácticas y actividades fundadas sobre cierto número de principios que apuntan a una finalidad: la búsqueda de la eficacia, sobre todo económica”.

Diagnóstico De La Gestión Administrativa: Se considera que el diagnóstico de la gestión administrativa, comprende el estudio general de la empresa, el entorno en que opera, sus objetivos estratégicos, la administración del personal, sus métodos de operación y control, para medir los avances en los programas, las líneas de autoridad y responsabilidad, la calidad y cantidad de información para la toma de decisiones (Fleitman, 1997:2,22).

Diagnóstico de la Gestión Financiera: El estudio de este diagnóstico comprende, el análisis de todos los estados financieros de la empresa (balance general, estado de resultados, entre otros), indicadores de liquidez, rentabilidad y endeudamiento, políticas de financiación, decisiones de inversión, políticas de dividendos y reparto de utilidades, naturaleza del crecimiento de los activos, análisis del manejo de caja, recaudos y desembolsos, manejo de las cuentas por cobrar; así como también el análisis de la estructura de endeudamiento y de capital. Así mismo, se define el diagnóstico financiero “como el estudio que se hace de la información que proporciona la contabilidad y de toda la demás información disponible, para tratar de determinar la situación financiera de la empresa” (García, 1999:190), no obstante, es importante considerar para la realización de un análisis financiero, toda la información de tipo cuantitativa y cualitativa, histórica y proyectada.

METODOLOGÍA

Para la evaluación de la gestión administrativa y financiera se requirió de un estudio de tipo Analítico–Descriptivo, dado el propósito de identificar las características de la gestión administrativa y financiera de la empresa Energía Social S.A. E.S.P., en Cartagena. La población de la presente investigación está compuesta por la estructura organizacional de la empresa Energía Social S.A E.S.P., a fin de garantizar la confiabilidad de los resultados.

Como fuentes primarias se identificaron los funcionarios de los niveles medio y alto, en las instalaciones de la empresa Energía Social S.A. E.S.P., en Cartagena, la recolección de ésta información se hizo a través de encuestas y entrevistas estructuradas. Para la recolección de información secundaria se tomó toda la información documental existente (manuales, planes estratégicos, estados financieros, etc.)

El instrumento diseñado para la recolección de la información consta de dos partes, una primera que corresponde a la evaluación del diagnóstico administrativo, en donde se identifican las variables de análisis de cada uno de los factores de desempeño organizacional, entorno organizacional, planificación estratégica y estructura organizacional. Y la segunda parte orientada a la evaluación del diagnóstico financiero a partir de las decisiones de inversión, planificación y control, tomadas por el responsable de la gerencia financiera. La información recolectada se analizó sistemáticamente e integrada a una base de datos utilizando el paquete estadístico SPSSTM (versión. 13), el cual nos permite simplificar el número de variables en la estructura de los datos, a fin de encontrar los componentes principales más importantes en términos de su correlación.

Confiabilidad Y Prueba De Validez

Desde la perspectiva teórica de Hair, J. Anderson, R. Tatham, R. y Black, W. (1999:22), la confiabilidad es una señal de la regularidad entre dos medidas de la misma cosa, es decir, hace referencia a que el instrumento repite los mismos resultados cuando en sus distintas aplicaciones y en las mismas circunstancias, explica que tan consistentes, exactos y estables son los resultados alcanzados al aplicar el instrumento. Una técnica comúnmente usada, es la validez interna del análisis, en esta investigación se midió la confiabilidad que se obtenía de cada factor del análisis factorial a partir de la prueba (Kaiser-Meyer-Olkin) KMO, el cual permite comparar la magnitud de los coeficientes de correlación observados con la magnitud de los coeficientes de correlación parcial. El estadístico KMO varía entre 0 y 1. Los valores pequeños (menores que 0.5) indican que el análisis factorial puede no ser una buena idea, dado que las correlaciones entre los pares de variables no pueden ser explicadas por otras variables y para valores grandes (mayores a 0.6) se considera que si es pertinente la aplicación del análisis factorial.

Análisis De Validez Interna

Para comprobar la validez de cada factor por separado, se analizaron los resultados del estadístico KMO, su correlación y validez, con cada uno de los factores analizados para la evaluación de la gestión administrativa y un factor para la gestión financiera. La tabla 1, muestra cada factor y la validez del estadístico KMO.

Tabla 1. Análisis Validez Interna de Factores

FACTOR	ESTADISTICO KMO
Desempeño Organizacional	0,861
Entorno Organizacional	0,742
Planificación Estratégica	0,677
Estructura Organizacional	0,796
Diagnóstico Financiero	0,755

Fuente: Cálculos realizados por el autor

RESULTADOS ANALISIS FACTORES PRINCIPALES

Factor 1: Desempeño Organizacional: El desempeño organizacional en la empresa Energía Social S.A. E.S.P., se desarrolla bajo las indicaciones estratégicas definidas conjuntamente por la alta gerencia, en virtud de su contribución al desarrollo social de las comunidades, la disponibilidad de los recursos tecnológicos de la empresa, conocimiento de la misión y visión, así como la evaluación del desempeño organizacional y su adaptabilidad en relación con los cambios del entorno.

Factor 2: Entorno Organizacional: El componente de entorno organizacional tiene una observación aceptable en la empresa. Los cambios no planeados que afectan políticas y objetivos con una calificación porcentual negativa del 21.8% CAMBIOSN, la consideración de las amenazas y oportunidades potenciales (6.2%) AOPOTENC, así como los cambios y disposiciones políticas del entorno (5.2%) DIPOLIST, son poco tenidas en cuenta por los trabajadores; Lo anterior se explica por la baja importancia que resta la gerencia a las amenazas, cambios y disposiciones políticas del entorno.

Factor 3: Planificación Estratégica: Este factor de planificación estratégica, no sobrepasa el nivel medio-alto, en cuanto a la calificación que dieron los trabajadores de las variables relacionadas con este factor, no obstante, los resultados muestran una alta correlación entre sus variables, los cuales de acuerdo con los promedios obtenidos se pueden ubicar en tres espacios: el primero definido por los componentes ESTRATEG con el (12.6%), SEGUIPLA (12.7%), PARTDIR (12.7%), ESTRACEP (12.4%) y PLANPRG (12.4%), con niveles medios, los cuales explican la baja aceptabilidad que tienen la anteriores variables en relación con el seguimiento que realiza la empresa, a los planes, políticas - programas y procedimientos.

Factor 4: Estructura Organizacional: Los resultados obtenidos en el factor estructura organizacional de la empresa Energía Social S.A. E.S.P., evidencian, al igual que en los demás factores analizados 1, 2, y 3, una importante correlación entre sus componentes, toda vez que la variable CENTRALI el cual participa con el 24.5%, justifica el alto grado de centralización por parte del nivel directivo, en cuanto a toma de decisiones en la empresa se refiere, seguido de la aplicación de los principios de calidad utilizados en la organización CALIDAD (21.5%) y su incorporación en las funciones y responsabilidades de los colaboradores.

Factor 5: Diagnostico Financiero: El diagnóstico financiero está relacionado con la percepción de las decisiones que se toman en virtud de las inversiones, la planificación y el control, en el área financiera de la empresa. En este análisis podemos apreciar que de acuerdo a la percepción de los funcionarios, el diagnostico financiero obtiene un resultado favorable del 37.5% si se hace énfasis en las necesidades de efectivo mediante sus proyecciones de flujos de fondos (EFECTIVO) y del 25.6% en la realización de inversiones orientadas a la financiación de proyectos de normalización anual de redes eléctricas (INVERSIO). Bajos estos resultados se aprecia la congruencia de las decisiones tomadas tanto por la gerencia general y financiera, en virtud de las políticas de desarrollo de zonas subnormales.

CONCLUSIONES

Como resultados de esta investigación, podemos resaltar de la evaluación de la gestión administrativa, a partir del análisis factorial por componentes principales de los factores, desempeño, entorno organizacional, planificación estratégica y estructura, que para el primero, éste incide positivamente contribuyendo al desarrollo social de las comunidades, con relación al entorno organizacional, los cambios no planeados que afectan, las políticas y objetivos institucionales, son mirados con escepticismo por los empleados, así mismo, las amenazas y cambios y disposiciones políticas del entorno, no son tenidos en cuenta por los colaboradores, por razones de cumplimiento de la normatividad regulatoria vigente.

Es de resaltar, también, en el factor de planificación estratégica, la baja aceptabilidad en los niveles medio- bajo, debido al nulo seguimiento que realiza la empresa a sus planes, políticas-programas y procedimientos, derivado de la baja participación que tiene la gerencia en la estructuración de los mismos. Sin embargo, en los niveles altos presentan el efecto contrario siendo ampliamente conocidos. En el análisis de la estructura organizacional, se observó que la empresa Energía Social S.A. E.S.P., posee una alta centralización respecto al proceso de toma de decisiones por parte del nivel directivo, es decir, no existe, empoderamiento para la toma de decisiones en los niveles medios. Por otro lado, se resalta el bajo grado de alineamiento entre la estrategia, la cultura y la estructura de la empresa. En este mismo sentido, en la evaluación de la gestión financiera, podemos resaltar como aspectos de baja relevancia para la empresa, el hecho realizar bajas reinversiones en nuevos proyecto de normalización de redes eléctricas para el mejoramiento de líneas y conexiones en barrios subnormales. Sin embargo, también se obtuvo en términos la planificación de los recursos, que la empresa hace énfasis en las necesidades de efectivo mediante las proyecciones de flujos de fondos.

RESUMEN

This study looks to establish if there is any relation between the development of resources and capabilities of women and the levels of competitiveness of the businesses that they create, in a developing country, where location has repercussions in the income levels or the value added as a result of these activities. This study uses a model of structural equations, which pins down the different interactions existent between the latent variable which is competitiveness and the parameters (product innovation, human resource, new technology, quantity of competitors or the market structure, type of opportunity, economic activity, and intensity of the export and the expansion mode of the market). This model type allows the analysis of reciprocal and simultaneous relations present among the different variables, while takes into account the measurement errors (Saurina and Coenders, 2002).

INTRODUCCION

Según los resultados que se presentan en el informe del GEM Colombia 2007, se observa que los nuevos emprendimientos femeninos (menos de 3.5 años) están relacionados con los bajos niveles de ingresos de las mujeres que los crean. Esto genera la percepción, que las mujeres asumen este reto por la necesidad de generarse su propio ingreso y con altas expectativas de que esta sea su opción de vida laboral, dada el grado de flexibilidad que ofrece y el equilibrio que puede generar para desarrollar las otras facetas de la vida (familia, hijos, educación, entre otros). Este tipo de necesidades personales, se constituyen en su objetivo primordial y hace que las mujeres se preocupen menos por obtener altas rentabilidades. (Fasci and Valdez, 1998; R DeMartino, R Barbato, 2003).

Como resultado de este análisis, este estudio concluye que la internacionalización de las nuevas empresas creadas por mujeres colombianas, es explicada por la innovación, el tipo de actividad económica y el modo de expansión de la empresa. No es extraño afirmar que productos con alta calidad y que sean nuevos para el consumidor tienen mayores ventajas al entrar en nuevos mercados; es de resaltar que el sector económico donde las mujeres crean más empresas es en actividades orientadas al consumo. Sin embargo, la variable tecnología influye negativamente en las exportaciones tempranas, al parecer estos productos innovadores no están respaldados por nuevas tecnologías. Otro resultado interesante es que la mayor educación de las mujeres es explicado por el nivel socioeconómico al que pertenecen, es claro que las mujeres que viven fuera de los niveles de pobreza tienen un nivel de educación superior que le da más habilidades y destrezas a la hora de crear su propia empresa. Así las mujeres con más educación, son las que logran que su empresa se expanda en su mercado, siendo más competitivas, lo cual se refleja en la mayor productividad de estas. Lo anterior se ve reflejado en la calidad del producto, el nivel de innovación y la manera como se hace efectivo el servicio. La innovación de las empresas femeninas, se ve influenciada por el nivel de competencia, a mayor sea la cantidad de competidores, más innovación desarrolla en la empresa, pero esto está mediado por el mayor interés de estas mujeres por lograr su independencia económica.

Para este trabajo se hace un análisis de los datos relacionados con algunas variables del informe GEM Colombia 2007. Dichos datos fueron recopilados por medio de una encuesta realizada por el Centro Nacional de Consultoría (CNC) y que se aplicó telefónicamente 1600 cuestionarios en las cinco principales ciudades capitales (Bogotá, Medellín, Cali, Barranquilla y Bucaramanga) y en tres ciudades

capitales de departamento (Santa Marta, Cúcuta y Pasto) y 400 cuestionarios cara a cara en 23 municipios, de áreas rurales, seleccionados aleatoriamente con poblaciones inferiores a 10000 habitantes. Para analizar los datos y cumplir con los objetivos trazados en este estudio, primero se realiza estadística descriptiva teniendo en cuenta solamente la caracterización para el género femenino. Se analizan variables como Tipo de involucramiento en el emprendimiento por oportunidad, Ingreso total del negocio, Nivel educativo, Inicio del negocio como alternativa de carrera, Consideración del producto como nuevo, Tipo de tecnología usada, Actividad Económica de la empresa y Nivel de Intensidad de la exportación, si las hay. Para este análisis se utiliza el programa SPSS en su versión 15.0.

Luego, se genera un modelo de ecuaciones estructurales, donde se precisan las diferentes interacciones existentes entre las variables latentes y los parámetros. Este tipo de modelos permite analizar relaciones recíprocas y simultáneas presentes entre diferentes variables que miden un constructo (como la calidad del servicio), mientras toma en cuenta el error de medida (Saurina y Coenders, 2002).

Después de realizado el diagrama estructural, se procede a convertir éste en un conjunto de ecuaciones estructurales, para lo cual se formularon dos subconjuntos llamados “modelo de medida” y “modelo estructural”. Los dos modelos son complementarios entre si y representan la totalidad de las relaciones contempladas en el modelo.

Mientras el modelo de medida especifica las relaciones que guardan los factores o variables latentes con sus respectivos indicadores (Jöreskog, 1969), la parte estructural especifica las relaciones direccionales de las variables latentes (o dimensiones como en este caso) entre sí. Los resultados del modelo se analizaron con el programa AMOS 16, que se validan mediante la técnica del análisis factorial confirmatorio mediante el cual se tiene un control completo sobre la especificación de los indicadores de cada factor (variable latente). Además, permite un test estadístico de calidad de ajuste para la solución confirmatoria del factor propuesta.

CONCLUSIONES

Finalmente, y de acuerdo con los objetivos planteados en este trabajo, se puede concluir de los análisis empíricos.

- La variable internacionalización es explicada positivamente por la innovación, el tipo de actividad y el modo de expansión de la firma. No es extraño afirmar que productos con alta calidad y que sean nuevos para el consumidor tienen mayores ventajas al momento de ofrecerlos; también cabe resaltar que el sector económico donde las mujeres crean más empresas es en actividades orientadas al consumo. Por el contrario, la variable tecnología influye negativamente en la intensidad de las exportaciones debido a que las mujeres no indican niveles de nueva tecnología en las nuevas empresas.
- La variable Recurso Humano es impactada positivamente por el nivel socioeconómico, lo cual podría dar a entender que entre mayor oportunidades tengan las mujeres de vivir fuera de los niveles de pobreza, así mismo su nivel de educación será cada vez mayor generando habilidades y destrezas que son atractivas a la hora de contratación laboral. De la misma manera, el capital humano influye positivamente en el modo como la empresa expande su mercado y atrae clientes; esto se debe a que cuando existe personal altamente calificado o con estudios superiores, la organización se hace cada vez más fuerte, ágil y con mejores proyecciones. Lo anterior se ve reflejado en la calidad que tenga el producto, el nivel de innovación y la manera como se hace efectivo el servicio. También, la empresa podrá crecer en un sector productivo específico con trabajadores especializados para ello, es decir, los trabajadores asumirán responsabilidad organizacional en la medida en que todo su esfuerzo, conocimiento y dedicación lo compartan
- para el bien común.

- La inversión en niveles de educación genera un efecto positivo sobre el nivel de productividad laboral. Es decir, que si las mujeres emprendedoras logran obtener un alto nivel de formación podrían contribuir en mayor proporción a la competitividad de su empresa.
- La existencia de altos niveles de capacitación crea la posibilidad de adaptarse mejor a los cambios tanto internos como externos, dado que es menos costoso la asimilación de nuevas tecnologías o la reorientación de los trabajadores hacia nuevos procesos y/o tareas.
- La variable Innovación presenta relaciones causales positivas a partir de la cantidad de competidores que tenga la empresa y el tipo de oportunidad que tomaron las mujeres para crear nuevas empresas, teniendo en cuenta que lo que buscan es mayor independencia económica. Aunque las inversiones en actividades de innovación, en promedio, son muy reducidas (0,05% del PIB) si se compara con otros países, situación que puede generar la tendencia a generar innovaciones de tipo incremental y no de tipo radical. Esta situación limita los resultados en términos de competitividad y por ende, plantea la necesidad de mejorar los niveles de inversión en recursos humanos y tecnológicos para fomentar el desarrollo de nuevos productos y/o procesos.
- Una posible solución para mejorar los niveles de innovación y por ende la competitividad, es por medio del desarrollo de capacidades de relación o de cooperación, que permita el intercambio de información, de recursos para el desarrollo compartido de capacitación tecnológica, financiación, entre otros recursos o capacidades que pueden llegar a consolidar una ventaja competitiva.
- Este estudio permite sensibilizar con respecto al género, reconociendo la existencia de diferentes roles, pero altamente correlacionados (mujer, madre, empresaria, etc.), haciendo necesario la creación de políticas y programas específicos, y que generen un balance entre sus papeles socialmente aceptados.
- Es necesario reconocer que este estudio no logra incluir variables que reporten la existencia de otros recursos o capacidades presentes en las diferentes organizaciones, debido principalmente a la limitación de la base de datos utilizada. Sin embargo, no se desconoce la relevancia de recursos y capacidades relacionadas.
- También esta investigación presenta interesantes datos que brinda a las autoridades de políticas públicas colombianas, permitiéndoles crear nuevos programas de apoyo y llegar a tomar decisiones para fomentar y consolidar los emprendimientos femeninos, impactando positivamente en la disminución de las brechas de género.
- Entre las políticas a desarrollar, pueden estar las relacionadas con disminución de la vulnerabilidad de tipo financiero de las mujeres y su grupo familiar, por medio de organismos de apoyo para estimular el mercadeo de bienes y servicios para llegar a otros mercados, acceso a fuentes de crédito, acciones de facilitación para la creación de redes de mujeres emprendedoras, entre otras. De igual forma, brindar asesoría o capacitaciones sobre temas administrativos y financieros, para mejorar la efectividad organizacional.
- De igual forma, debido a los diferentes roles de las mujeres, organismos de apoyo pueden generar la promoción de esfuerzos emprendedores, dados los beneficios de flexibilizaciones de horarios, superación y desarrollo personal o profesional, entre otras.

ALIANZAS DE TRABAJO COLABORATIVO ENTRE LA FACULTAD DE CONTADURÍA Y ADMINISTRACIÓN U. N. - UADEC Y EMPRESAS DEL RAMO METAL-MECÁNICO, SISTEMAS DE COSTEO APLICADOS PARA EL APRENDIZAJE PRÁCTICO DE LOS ESTUDIANTES

Leonor Gutiérrez González, Universidad Autónoma de Coahuila
Sandra de la Garza Cienfuegos, Universidad Autónoma de Coahuila

ABSTRACT

El trabajo de investigación refiere los sistemas de costeo aplicados en las empresas metal mecánicas INMAGUSA, METELMEX y PROMSA ubicadas en Monclova, Coahuila; entidades competitivas, con el desarrollo y con presencia en el mercado nacional e internacional. Participaron funcionarios empresariales, catedráticos investigadores y estudiantes del IV semestre de la Facultad de Contaduría y Administración quienes cursan la materia de Costos II; el proyecto se centra en el área de producción, utilizando cuestionarios y guías de observación como instrumentos para obtener información respecto al proceso productivo y los sistemas utilizados. Se encontró que los sistemas desarrollados en las tres empresas son una mezcla de: costeo por procesos, órdenes de producción; basados en actividades, estándar, real, predeterminado, y promedio. Estos sistemas se complementan, de tal manera que al ser utilizados en conjunto, se determina el costo del producto. Finalmente, se cumple el objetivo de las alianzas y trabajo colaborativo, adquirir conocimiento entre los involucrados

PALABRAS CLAVE: sistemas de costeo, empresas, alumnos, competitividad

INTRODUCCIÓN

El trabajo expone la interrelación de teoría-práctica de los sistemas de costeo, observados como temas curriculares en el programa de Costos II, que se imparte a los estudiantes del IV semestre de la Facultad de Contaduría y Administración, de la Universidad Autónoma de Coahuila. Considerando las alianzas de trabajo institución educativa – empresa y la necesidad de poner en práctica los objetivos relacionados con la generación de conocimiento mediante ejercicios vivenciales lo más apegados a la realidad, surge la iniciativa de este proyecto entre las figuras anteriormente mencionadas que les permita obtener por un lado, reforzar los mensajes teóricos recibidos en las aulas y por el otro, que los empresarios cuenten con la oportunidad de recibir comentarios frescos de estudiantes con potencialidades de desarrollo y perspectivas de convertirse en profesionales con perfiles de preparación presentes y que las empresas manifiestan como necesidad de desarrollo y exigen para que en un futuro coadyuven sean más competitivos y permanezcan en el contexto de un mercado cada vez más competitivo en calidad y precios. Por lo anteriormente expuesto, se decide realizar este trabajo de investigación, que permita la participación conjunta de funcionarios, investigadores y alumnos, para reafirmar e incrementar los conocimientos fundamentados en experiencias y competencias.

ANTECEDENTES

Amplios beneficios se logran cuando existen trabajos a través de alianzas de colaboración entre la Academia y la Empresa, pero deberá existir un compromiso por parte de los involucrados para darles

continuidad. En la actualidad, permean aspectos relacionados con la gestión innovadora al realizar actividades de colaboración entre la Universidad y el Sector Productivo.

Desde esta perspectiva, a la educación se le ha asignado la responsabilidad de ejecutar estrategias de desarrollo en función de las necesidades que el entorno demanda, García (1987), habla de la sociedad del conocimiento, cuyo rol protagónico corresponde a la educación. Por su parte Drucker (1994), expresa: *... el paso a la sociedad del conocimiento coloca a la persona en el centro...plantea nuevos retos, nuevos asuntos, nuevos problemas y nuevas preguntas totalmente sin precedentes, relativas a la representante de la sociedad de conocimiento, la persona educada* (p.229). Sin duda, a la universidad le atañe una importante cuota de responsabilidad respecto a los retos planteados, característica ésta que la obliga a asumir nuevas modalidades de organizar e impartir el conocimiento, a fin de facilitar la aproximación de las comunidades a formas de vida en las que prevalece el desarrollo.

Es de suma importancia la gestión de conocimientos prácticos, a través de la vinculación del sector productivo y el educativo, mediante estrategias adoptadas entre ambos, en este caso, el establecimiento de alianzas de trabajo que permita a los estudiantes adquirir, desarrollar y fortalecer éstos y por otra parte a los empresarios, brindar la oportunidad de mostrar a éstos la realidad de las diferentes técnicas teóricas manifestadas en realidades prácticas, tangibles, medibles y susceptibles de ser mejoradas.

Para el desarrollo de este trabajo se considero el tema de los sistemas de costeo ya que en el ámbito de la administración en México como en el resto de los países del mundo, son la base fundamental para que técnicamente y de la manera más objetiva y segura posible, se determinen los costos que se invierten en la fabricación de productos o bien para determinar igualmente las inversiones ocurridas en servicios, cuando el giro sea éste. Indudablemente, que ello conlleva a realizar planes de desarrollo en las empresas; el tener plenamente identificados la visión, la misión y los objetivos, facilita mejor sus acciones.

METODOLOGIA

Atendiendo a una primera aproximación, el proyecto observa el enfoque de investigación exploratoria, en cuanto al estudio y análisis del caso sobre el enfrentamiento de los conocimientos teóricos referentes al los sistemas de costeo y su aplicación en la práctica, ya que existía una debilidad en la percepción de los estudiantes respecto a la práctica y utilización de los mismos.

Para la generación del conocimiento práctico sobre los sistemas de costeo, los estudiantes orientados por los maestros, trabajan en base a una guía que cuenta con observación, entrevista dirigida y cuestionarios para la recopilación de la información respecto al tema de costos.

Una vez realizado el estudio se utilizó un cuestionario para medir el grado de conocimiento y comprensión sobre la aplicación de los sistemas de costeo en las tres empresa metal-mecánicas que participaron en el desarrollo del caso.

Los ejecutivos de las empresas mostraron amplio interés respecto a la relación con maestros y estudiantes de la Facultad de Contaduría y Administración para lograr un vínculo entre ambos y así promover la práctica de la currícula universitaria.

RESULTADOS Y CONCLUSIONES

El estudio permitió que los estudiantes incrementaran sus conocimientos prácticos y llegara a ser esta investigación, una experiencia invaluable ya que al finalizar el trabajo colaborativo se puede concluir que, en base a los resultados de la investigación, aprendieron cual es el análisis del proceso productivo y del método de costeo que cada empresa utiliza, así como los elementos del costo; materia prima, personal

operario, mantenimiento preventivo, correctivo, servicios, consumibles, depreciación, capacitación, gastos directos y otros costos y gastos.

Los resultados se presentan en la tabla 1.

Teoría	Aplicación	Aportación al alumno
Costos por órdenes de producción y Costos estimados	Caso practico realizada por equipo, basada en la empresa investigada PROMSA	<ul style="list-style-type: none"> • Experiencia práctica • Trabajo en equipo • Involucramiento en el campo laboral
Costos por procesos, estándar, estimado e históricos.	Caso practico realizada por equipo, basada en la empresa investigada METELMEX	<ul style="list-style-type: none"> • Experiencia práctica • Trabajo en equipo • Involucramiento en el campo laboral
Costos por procesos, estándar y reales (híbrido)	Caso practico realizada por equipo, basada en la empresa investigada INMAGUSA	<ul style="list-style-type: none"> • Experiencia práctica • Trabajo en equipo • Involucramiento en el campo laboral

Esta tabla presenta los temas que se ven en clase y su aplicación práctica en las diferentes empresas, así como la aportación al alumno al final de la investigación, cabe mencionar que durante todo el semestre se trabajó en el aula y la empresa al unísono. Participando activamente un total de 36 estudiantes.

Leonor Gutiérrez González; Sabinas, Coahuila, México. 1961. Catedrática Investigadora de la Universidad Autónoma de Coahuila desde 2002, madre de 3 hijos. Contadora Pública con Maestría en Administración de Empresas, actualmente estudiante de Doctorado en Administración y Alta dirección. Forma parte del CA en Consolidación “Administración”. Ingresó como catedrática después de laborar en AHMSA en el área de Costos de Producción.

Sandra de la Garza Martínez; Saltillo, Coahuila. Catedrática Investigadora de la Universidad Autónoma de Coahuila desde 2003; carrera de Ing. Administrador de Sistemas, Maestría en Administración y Liderazgo, actualmente estudiante del Doctorado en administración y Alta Dirección, laboró en la Cía. Sistel de Telefonía en la Ciudad de Monterrey, N. L. Experiencia docente por 20 años.

METODOLOGÍA PARA DETERMINAR LOS FACTORES FINANCIEROS QUE INCIDEN EN EL FRACASO EMPRESARIAL DEL SECTOR TIC'S EN BUCARAMANGA 2004-2009

Diego Fernando Santisteban Rojas, Unidades Tecnológicas de Santander (UTS)

RESUMEN

En el año 2005 se construyó la Agenda Interna de Competitividad para Santander, en la cual se definieron once (11) sectores estratégicos, para los cuales el gobierno proyectaba enfocar sus recursos y esfuerzos. Los sectores priorizados fueron: Agroindustrial, Ciencia y Tecnología, Calzado, Energía, Joyería, Metalmecánica, Salud, Tecnologías Limpias, Turismo, TICS y Artes Gráficas. Desde esta óptica, el presente proyecto pretende analizar el sector TIC'S, como uno de los sectores priorizados en la Agenda Interna de Competitividad del departamento de Santander, específicamente para la ciudad de Bucaramanga. El proyecto se desarrollará a través de la aplicación de herramientas financieras con las cuales se analizará el sector TIC'S, con miras a determinar las variables que conllevan al fracaso empresarial, para tal fin. Para el cumplimiento de los objetivos de la investigación se desarrollarán tres tipos de metodologías: *la exploratoria, la explicativa y la correlacional*. Con esta investigación se espera obtener un compilado de experiencias y de razonamientos, que permitan a los futuros empresarios, contar con una herramienta de consulta, que describa los errores cometidos por otros empresarios y de esta manera sea mucho más sencillo, enfrentar los diversos escenarios del mundo empresarial. La investigación y sus resultados permitirán a la comunidad en general (estudiantes de administración y áreas afines, docentes, empresarios y demás), contar con una guía de consulta enfocada en el análisis financiero. Es de resaltar que este es un proyecto en desarrollo.

INTRODUCCIÓN

Las Tecnologías de la información y Comunicación (TIC'S) ofrecen un salto en el progreso de los países en vía de desarrollo, en el campo social, político, económico y cultural haciendo que la brecha digital sea menor a la de los países en desarrollo. Como se manifiesta en el Plan Nacional de Tecnologías de la información y la Comunicación: " Las TIC'S son una gama amplia de servicios, aplicaciones y tecnologías, que utilizan diversos tipos de equipos y de programas informáticos, y que a menudo se transmiten a través de las redes de telecomunicaciones ". Actualmente, estas tecnologías se han constituido en herramientas que se encuentran al alcance y al servicio de la comunidad, donde se logran beneficios concretos en la medida que se apropien de ellas y las hagan parte de su desempeño cotidiano. En Colombia, el Gobierno Nacional reconociendo su importancia, el impacto en la competitividad y teniendo la oportunidad de dar un salto en su desarrollo, las ha incluido en el modelo de desarrollo del país, elaborando la Agenda de Conectividad donde se toman acciones concretas para fomentar el uso de estas y auspiciar la investigación en este campo, para obtener mejor productividad, fortalecer las empresas y optimizar su producción.

Este documento pretende reflejar la intensión de la investigación a realizar en el sector de la TIC'S en Bucaramanga, como aporte investigativo al sector productivo Santandereano; ya que estas son el motor de desarrollo en las regiones, en la medida en que sus actores estén preparados para emplearlas y lograr así un cambio económico y social, porque su uso ha significado una revolución en la forma como se produce, divulga y utiliza la información en la sociedad. La importancia de la investigación es presentar el panorama del sector TIC'S, donde se pretende recolectar y analizar información del sector TIC'S en cuanto a sus antecedentes y evolución, para contextualizar un poco el sector, además de las diferentes

metodologías existentes y de los aspectos financieros relevantes para la investigación, posteriormente se hará el diseño de la metodología y se utilizará el Excel como herramienta tecnológica de base para el proyecto; y por ultimo la metodología diseñada se validara a través de una prueba piloto, con una muestra seleccionada de empresas del sector TIC'S, donde se evidencie la determinación de las razones o variables que llevaron al fracaso desde el punto de vista financiero, y a su vez servirá para aplicar en empresas aún en funcionamiento para determinar su estado financiero actual. Este proyecto, se constituye en un elemento fundamental para conocer el sector en el departamento de Santander y visualizar nuevas posibilidades estratégicas para el desarrollo del mismo.

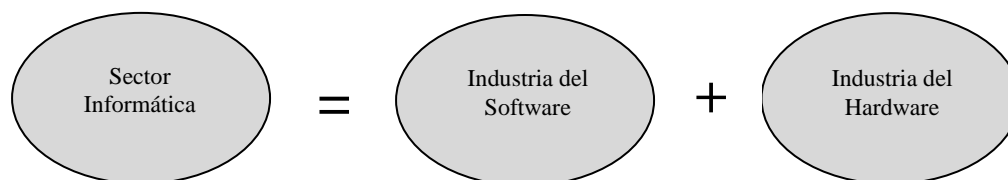

REVISIÓN LITERARIA

Contextualización Sector Tic'S.

Desde hace algunos años, se ha venido hablando de una serie de términos, que se han ampliado con la globalización económica y cultural y que hacen referencia a las Tecnologías de la Información y la Comunicación TIC'S, y su influencia en la sociedad y la economía. La tendencia de estos dos fenómenos, ha concluido con el florecimiento de conceptos como: nueva economía, economía digital, sociedad de la información, sociedad del conocimiento, sociedad red, empresa, clúster del software entre otros. Poco a poco se evidencia la nueva sociedad de las TIC'S.

El desarrollo de las computadoras electromecánicas comienza desde los años cuarenta y de software a partir de los años sesenta. Desde el punto de vista económico, la industria se ha denominado Sector Informático (hardware y software), como se aprecia en la figura 1, integrada por todas las compañías que se dedicaron a la fabricación de computadores y de programas informáticos. La industria toma auge con el lanzamiento del primer microcomputador, personal computer (PC) en el año de 1981 por parte de IBM, lo que lleva al diseño y producción de programas que “corran” en los PC.

Figura 1. Composición Sector Informático

En el transcurso de los años 60, el desarrollo de las telecomunicaciones con base en la transmisión de paquetes de datos, da origen a un nuevo sector el de las TIC'S, (ver figura 2), conformada por las industrias de hardware, software y telecomunicaciones, que impulsará una nueva era llena de oportunidades y amenazas para todos quienes integren el sector.

Figura 2. Composición Sector TIC'S

Análisis Financiero.

El entorno externo que rodea a las empresas, posee una serie de variables económicas que son de vital importancia para la toma de decisiones empresariales. En ese entorno económico se encuentran dos sub entornos: el macro y el micro. El primero de ellos ofrece conocimientos amplios acerca del sistema financiero, las políticas económicas y las cuentas de la balanza comercial entre otras, mientras que en el segundo de ellos; ubica los principios a nivel de empresa que deben ser tenidos para el éxito de una organización, algunos de estos son la oferta y la demanda, estrategias para maximizar utilidades, política de precios y relación utilidad-riesgo entre otros. Estos son los aspectos que el encargado de las finanzas debe estar monitoreando constantemente.

La actividad financiera comprende tres funciones esenciales:

1. *Preparación y análisis de información financiera.* Se refiere a la adecuada preparación de informes financieros para la correspondiente toma de decisiones a nivel gerencial.
2. *Determinación de la estructura de activos.* Se refiere a la calidad, clase y cantidad de activos que una organización requiere para la ejecución de su actividad comercial. También determina cuando adquirir, reemplazar o retirar activos fijos de la organización.
3. *Estudio del financiamiento de la empresa.* Se refiere a las fuentes de financiación que se han de utilizar en los diferentes horizontes de tiempo: corto, mediano y largo plazo, además de determinar la distribución entre pasivos o patrimonio para soportar los activos, sin dejar a un lado el costo de cada fuente.

Teniendo en cuenta las funciones esenciales de la actividad de un departamento o área financiera de una organización, se resalta que el objetivo financiero de toda organización es y deberá ser: *maximizar el valor de la empresa*. Debe quedar claro que el objetivo financiero no debe ser confundido con maximizar utilidades, ya que estas son solo parte del componente de generación de valor para una organización. El análisis financiero es un proceso que abarca las actividades de recopilar, interpretar, comparar y estudiar los estados financieros de una organización. Esto implica calcular e interpretar porcentajes, indicadores y tasas para evaluar el desempeño financiero y operacional del negocio.

Indicadores Financieros.

Las razones o indicadores financieros son el resultado de establecer una relación numérica entre dos cantidades. Usualmente estos indicadores suelen relacionar cifras del balance general y del estado de resultados de cualquier organización. No todas las relaciones tienen un sentido lógico, por tal razón se han seleccionado una serie de indicadores que deben ser analizados, donde según su resultado es decisión de la organización adelantar estudios e investigar sus causas. Según Ortiz (2006), estos indicadores se clasifican en:

Un indicador por sí solo no dice nada, sino es comparado con un patrón o un estándar, para así poder establecer si es una situación favorable o desfavorable para la organización en el momento del análisis.

Valor Económico Agregado (Eva®).

Según Ortiz (2006), el EVA® (*marca registrada por Stern & Stewart*), significa *Economic Value Added* o lo que lo mismo en español, *Valor Económico Agregado*. Este indicador mide la capacidad de una organización para crear riqueza, teniendo en cuenta factores como la eficiencia y la productividad de sus activos, su estructura de capital y el ambiente donde estas organizaciones operan. Su fórmula es: $EVA® =$

$UNA = (ANF \times CPC)$, donde UNA es utilidad neta ajustada, ANF es activo neto financiado y CPC costo promedio de capital.

Figura 3. Clasificación de los indicadores financieros

Liquidez	Razón Corriente	
	Prueba Ácida	
Endeudamiento	Nivel de endeudamiento	
	Endeudamiento financiero	
	Impacto de la carga financiera	
	Cobertura de intereses	
	Concentración del endeudamiento en el corto plazo	
	Leverage o apalancamiento	
Actividad	Rotación de cartera	
	Período promedio de cobro	
	Rotación de inventarios	Empresas Comerciales
		Rotación de inventario de mercancías (veces)
	Rotación de inventarios	Días de inventario a mano
		Rotación de inventarios de materias primas (veces)
		Días de inventario de materias primas a mano
		Rotación de productos en proceso (veces)
		Días de inventario de productos en proceso
		Rotación de productos terminados (veces)
		Días de inventario de productos terminados
	Rotación de activos fijos (veces)	
	Rotación de activos operacionales (veces)	
	Rotación de activos totales (veces)	
Rendimiento	Margen bruto de utilidad	
	Margen operacional de utilidad	
	Margen Neto de utilidad	
	Rendimiento del patrimonio	
	Rendimiento del activo total	

Según García (2009), este indicador también se denomina ganancia económica, es la diferencia entre la UODI que una empresa obtiene y la mínima que debería tener. Cuando la rentabilidad del activo es igual al costo de capital no hay valor agregado ni destruido para los propietarios, socios o accionistas. Su formula sería: $EVA = UODI - (Activos \times CK)$, donde UODI es la utilidad operacional y CK es el costo de capital.

Flujo De Caja Libre (FCL)

Según García (2009), el Flujo de Caja Libre (FCL) es el flujo de caja que queda disponible para los acreedores financieros y los socios. A los acreedores financieros se les atiende con Servicio a la Deuda (capital más intereses), y a los propietarios con la suma restante, con la cual ellos toman decisiones, una de las cuales es la determinación de la cantidad a repartir como dividendos. Se calcula así: a la utilidad neta se le suma las depreciaciones y amortizaciones de activos diferidos más los intereses, donde se obtiene el Flujo de Caja Bruto; posteriormente al FCB se le suma el aumento del capital de trabajo neto operativo y el aumento de activos fijos para reposición, obteniendo así el FCL.

Ebitda

Según García (2009), Corresponde a las iniciales en ingles de *Earnings before Interests, taxes, depreciation and amortization*, o lo que es lo mismo en español *Utilidad antes de intereses, impuestos, depreciación y amortizaciones*. Es decir, el EBITDA es la utilidad operativa que se calcula antes de descontar las depreciaciones y amortizaciones. Al EBITDA se le conoce también como Utilidad Operativa de Caja. En ultimas el EBITDA se calcula así: $EBITDA = Utilidad\ operativa + depreciaciones + amortizaciones$.

METODOLOGÍA

Para el cumplimiento de los objetivos de la investigación se desarrollarán tres tipos de metodologías. *La exploratoria*, diseñada para obtener un análisis preliminar de la situación con un mínimo de costo y tiempo. Se emplean enfoques amplios y versátiles. Investiga problemas que han sido poco estudiados, su premisa es profundizar desde perspectivas innovadoras y preparan el terreno para futuras investigaciones; *explicativa*, en busca de responder o dar cuenta del porqué del objeto que se investiga y *la correlacional*, con el fin de analizar y describir la relación existente entre las variables estudiadas. Este tipo de investigación permite realizar predicciones, así mismo explica las relaciones entre las variables y su cuantificación. La investigación constará de tres fases fundamentales, las cuales se describen a continuación. El proyecto se ha dividido en tres etapas: estructuración de la metodología de trabajo, implementación de la metodología diseñada y validación de la metodología diseñada. Estas etapas fueron resumidas en el último párrafo de la introducción de este documento.

RESULTADOS

Teniendo en cuenta que este proyecto se encuentra en desarrollo, en su primera etapa; se plantean los siguientes resultados de investigación:

Tabla1. Resultados de investigación

Resultados de nuevo conocimiento	artículo en revista indexada
	libro de investigación
Resultados tecnológicos	aplicativo software
Resultados de formación	cuatro estudiantes de monografía de grado
Resultados de difusión	una ponencia internacional
	una ponencia Nacional
	seminario de socialización de los resultados de la investigación
Otros resultados	desarrollo de seminario de actualización para la comunidad académica UTS
	artículo en revista no indexada

CONCLUSIONES

Las conclusiones serán resultados acordes a los tres objetivos planteados para el proyecto, estos son:

1. Diseñar una metodología que permita determinar las variables financieras que inciden en el fracaso empresarial del sector TIC'S en Bucaramanga, a través de la aplicación de las cuatro categorías indicadores financieros (indicador de liquidez, indicador de actividad, indicador de rentabilidad e indicador de endeudamiento), el cálculo del valor Agregado EVA, el margen Ebitda y la determinación del Flujo de Caja Libre.
2. Implementación de la metodología diseñada, soportada en una herramienta tecnológica.
3. Validar la metodología diseñada a través de una prueba piloto, en una muestra de empresas del sector TIC'S

BIOGRAFIA

Diego Fernando Santisteban R., nació en Barrancabermeja, Colombia, el 26 de Mayo de 1976. Es profesional en Administración de Empresas y especialista en Alta Gerencia. Ha laborado profesionalmente en países como México y Estados Unidos en áreas comerciales y administrativas, en Bucaramanga ha laborado en empresas constructoras, textiles, de apuestas y bancarias, fue Docente Investigador en la Universitaria de Investigación y Desarrollo - UDI y actualmente es Docente Investigador en las Unidades Tecnológicas de Santander – UTS. A su vez, ha sido consultor empresarial y conferencista en el programa Expopyme de Proexport operado por la Universidad del Rosario en temas de Mercadeo y Plan Exportador.

PROYECTO DE CREACIÓN DE UN CENTRO DE CAPACITACIÓN TURÍSTICA PARA LA HUASTECA POTOSINA BAJO UN ENFOQUE DE SUSTENTABILIDAD Y DESARROLLO DE COMPETENCIAS

Irma Brígida Suárez Rodríguez, Universidad Autónoma de San Luis Potosí
Marco Antonio Pérez Orta, Universidad Autónoma de San Luis Potosí

RESUMEN

Ante una competencia cada vez más agresiva y numerosa entre destinos que aspiran a ser la mejor alternativa para los visitantes, se requiere de una completa participación de los actores que conforman la oferta turística; obligándose a otorgar un producto y servicio de calidad. La región de la Huasteca Potosina cuenta con una diversidad de atractivos naturales y culturales susceptibles a ser desarrollados para la actividad turística y que se pueden encaminar hacia el turismo de naturaleza. Se ha observado que esta actividad emergente en la región se realiza con bajos niveles de calidad acompañada de la degradación de elementos paisajísticos, en buena medida provocada por la carencia de programas eficaces de capacitación continua. La Unidad Académica Multidisciplinaria Zona Huasteca propone la creación de un Centro de Capacitación Turística para la Huasteca Potosina que le permita a los prestadores de servicios, a los funcionarios municipales y a los integrantes de las propias comunidades desarrollar, ampliar y reafirmar sus conocimientos; a través de cursos integrales de actualización y perfeccionamiento de conocimientos y habilidades, desarrollo de actitudes y valores, la sistematización de procesos y prevención de riesgos, bajo un enfoque de sustentabilidad y el desarrollo de competencias, para otorgarles mayores ventajas competitivas.

PALABRAS CLAVE: Capacitación, Competencias, Sustentabilidad, Sector turístico, Certificación.

ABSTRACT

Before an aggressive and numerous competition between destinations who aspire to be the best choice for visitors; requires full participation of the actors of tourism; forcing to give a product and service quality. The Huasteca Potosina region has a diversity of natural and cultural attractions susceptible to be developed for tourism and geared towards nature tourism. There has been this emerging activity in the region is low-quality accompanied by degradation of scenic elements, largely caused by the lack of effective programmes for the continuous training. The Unidad Académica Multidisciplinaria Zona Huasteca proposes the creation of a centre of tourism training for Huasteca Potosina enabling service providers, municipal officials and members of communities, develop, expand, and reaffirm their knowledge; on comprehensive courses updating and improvement of knowledge and skills, development of attitudes and values, the systematization of processes and risk prevention, under an approach to sustainability and the development of skills to give them greater competitive advantage.

KEYWORDS: Training, competition, sustainability, tourist sector, certification

JEL: A23

INTRODUCCIÓN

La actividad turística hoy día es considerada uno de los sectores de más rápido crecimiento de la economía mundial; para algunos países es la primera generadora de ingresos. Según el Barómetro OMT del Turismo Mundial de la Organización Mundial del Turismo (2006), en 1970 se contaban 40 países considerados como destinos turísticos... hoy podemos nombrar más de 140. Países con economías

desarrolladas compiten por el turismo con países de economías emergentes y viajar se convierte casi en una necesidad básica. La humanidad globalmente considerada ha optado por ser nómada, eliminando el sentido de territorialidad, García Canclini (2007).

Ante una competencia cada vez más agresiva y numerosa entre destinos turísticos que aspiran a ser la mejor alternativa para los visitantes; lo que hace la diferencia es la calidad del servicio recibido así como el aprovechamiento sustentable de los recursos. Pensemos en el cliente como si fuera un emperador romano que al bajar o subir su pulgar estará diciendo -Vivirás o morirás-", en el momento en que decida comprar o no los productos o servicios de la organización, Frydman (2005); los viajeros actuales buscan experiencias más auténticas, exigen calidad ambiental y seguridad, reciben mucha información y escogen los mejores estándares de calidad y servicio al mejor costo. Lograr esto requiere de personal altamente capacitado en todos sus niveles.

REVISIÓN LITERARIA

La Importancia del Turismo en México

El turismo es también para México una de las bases económicas; en el 2008 ingresaron a nuestro país por concepto de divisas internacionales 12,121 millones de dólares, arribando al país 20 millones 294 mil turistas internacionales, Banco de México (2009); la inversión turística privada alcanzó la cifra récord en 2008 de cuatro mil 641 millones, Padrón Nacional de Proyectos de Inversión de la Secretaría de Turismo de México (2008). Este sector aporta más de 8 por ciento del Producto Interno Bruto Nacional y contribuye con más de 9 por ciento de los empleos directos e indirectos, SECTUR (2008).

Sin embargo, la masificación del turismo trae consigo contaminación ambiental, depredación, desechos y basura, desplazamiento de comunidades, abusos contra los derechos humanos, desconocimiento de las culturas, trabajo y salarios injustos, por mencionar sólo algunos. El turismo global amenaza a las comunidades indígenas, sus creencias religiosas y tecnologías, sus lugares sagrados, sus estructuras sociales, la fauna, los ecosistemas, sus economías y derechos básicos, reduciéndolos simplemente a otro producto de consumo agotable, McLaren (2003) .

Afortunadamente no hay país, región o destino que no busque la mejora constante para captar turistas. Los diversos organismos internacionales que buscan promover niveles de vida más elevados, fuentes de empleo, preservación del medio ambiente y desarrollo económico y social, se han dado a la tarea de regular y proclamar instrumentos legales que aseguren el logro de estos fines; utilizando la concientización y capacitación como principal herramienta, Molina (1998).

La sustentabilidad de la actividad turística.

El concepto de sustentabilidad ha sido incorporado al desarrollo turístico, se ha convertido en uno de los requisitos que el mercado ha impuesto para atraer a la demanda; necesaria para aumentar la competitividad y la rentabilidad de la oferta. Aquellos pueblos que conserven sus tradiciones, su cultura y su medio ambiente serán las potencias del turismo en el futuro, Torruco (2006).

Para nuestro gobierno el turismo es una actividad de alta prioridad; el objetivo general que marca el Plan Nacional de Desarrollo Turístico 2007-2012 es: "...fomentar el desarrollo turístico a través del fortalecimiento de la oferta turística, garantizando la calidad y cuidando el aprovechamiento sustentable de los recursos mediante actividades de planeación, gestión, promoción y capacitación del recurso humano. A pesar de los resultados habitualmente buenos del turismo mexicano, es necesario diseñar estrategias que permitan el desarrollo del turismo a través de la intensificación de los esfuerzos para alcanzar la competitividad regional; mejorar la oferta actual y aprovechar las oportunidades que ofrecen las nuevas tendencias del mercado, desarrollando y vendiendo productos turísticos diversificados, bajo una marco de sustentabilidad.

La capacitación basada en competencias

El mundo de la producción y los servicios se ha visto afectado por las transformaciones a gran escala, en cuanto a la forma de inserción de las economías nacionales en los mercados modernos globalizados, las exigencias crecientes de productividad y competitividad, el desarrollo sustentable, el uso creciente de nuevas tecnologías y conocimientos aplicados en todos los niveles del quehacer productivo, Martens (1997). En este escenario aparece el enfoque de competencias aplicado a las políticas y los programas de formación técnica y capacitación de recursos humanos, manifestándose en diferentes planos de los sectores económicos. A partir de la segunda mitad del siglo pasado, en algunos países se han llevado a cabo importantes esfuerzos en materia de educación, pasando de un proceso de enseñanza tradicional, a una educación centrada en el aprendizaje; existe una necesidad de recuperar el carácter social de la educación, Zarzar (2005).

La educación y la capacitación basadas en competencias ofrecen una formación profesional pertinente; tratando de responder a los cambios provocados por la globalización. La formación de los individuos, vista como un aprendizaje a lo largo de la vida, se puede concebir desde la formación inicial, que corresponde a la educación formal recibida antes de insertarse en el campo laboral; hasta la formación permanente, que incluye el avance en la educación formal así como la capacitación para y en el trabajo (bajo la supervisión de un superior o de un compañero o dentro de programas específicos), González (1997).

En 1992 las Secretarías de Educación Pública y del Trabajo y Previsión Social de México realizaron un análisis en el país acerca de la educación técnica y la capacitación que concluyó a finales de 1994. Este estudio mostró que las mayores debilidades del sistema de capacitación técnica y formación en México son, la escasa preparación de los trabajadores; poca flexibilidad y relevancia de los programas ofrecidos ante las necesidades cambiantes del mercado laboral; deficiente calidad de los programas de capacitación; y falta de estructuras institucionales adecuadas para la participación del sector productivo en el diseño y desarrollo de la capacitación. En cuanto a los programas de capacitación analizados, se señaló que no existe confianza en su eficacia, ni normas comparables con las cuales evaluar la efectividad de los diferentes programas; fue entonces que estas Secretarías pusieron en marcha los primeros estudios sobre la educación basada en normas de competencia, Secretaría de Educación Pública de México (1994).

El Enfoque de Competencia Laboral y su Certificación

Una variable importante para lograr la competitividad de las empresas se basa en atender las necesidades del individuo en cuanto a su formación integral. El enfoque de competencia laboral responde a la necesidad de mejorar la calidad y pertinencia de la educación así como la formación de recursos humanos; implica que las empresas modernicen sus sistemas de capacitación; brindando a los trabajadores conocimientos, habilidades, actitudes y valores, adaptándolos a los nuevos perfiles ocupacionales, creando individuos preocupados por la adquisición y actualización continua, acorde a los requerimientos de las organizaciones.

Particularmente los países en desarrollo enfrentan la necesidad de encontrar nuevas y más favorables formas de inserción en el contexto internacional, y deben recurrir para ello a su más abundante,preciado e inagotable recurso: su gente. De ahí, la importancia y proyección que el modelo de competencia laboral ofrece a los países en desarrollo, Ducci (1997).

Los trabajadores deben contar con elementos suficientes para hacer frente a los cambios previsibles en el entorno laboral y se benefician de éstos, mediante el desarrollo de acciones tendientes a incrementar sus habilidades, su capacidad para desarrollar diversas tareas y asumir mayores niveles de responsabilidad, lo que les permitirá mejorar su productividad y sus remuneraciones, Secretaría del Trabajo y Previsión Social (2007).

La certificación de competencias, asimismo, toma un papel importante; existen organismos, criterios, instrumentos y expertos que certifican el desarrollo de competencias en el recurso humano. Es un proceso mediante el cual un organismo de tercera parte reconoce y certifica que un individuo ha demostrado ser competente -o todavía no- para una función laboral determinada; a través de la certificación, las empresas

pueden orientar sus programas de capacitación, agilizar y reducir costos de reclutamiento, selección y contratación de personal, SEP (1995).

El Sistema de Normalización y de Certificación de Competencia Laboral, surge en México con el propósito principal de establecer las bases que permitieran reorganizar las distintas formas de capacitación de la fuerza laboral, evaluando y certificando los conocimientos, habilidades, destrezas, actitudes y valores de las personas, aplicados al desempeño de una función productiva a partir de los requerimientos de calidad y eficiencia esperados por el sector productivo, Secretarías de Educación Pública y del Trabajo y Previsión Social de México (1995).

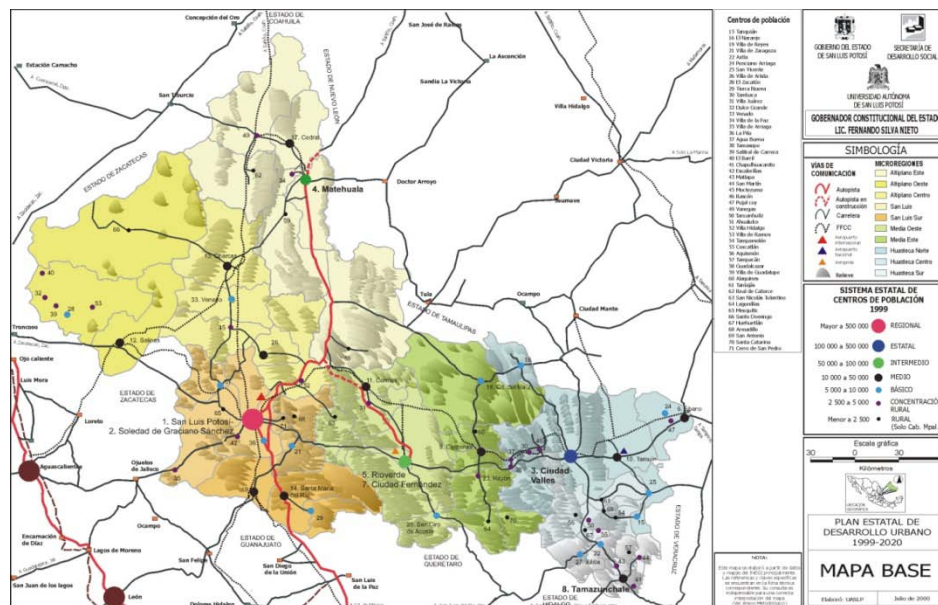

La Unidad Académica Multidisciplinaria Zona Huasteca (UAMZH) De La Universidad Autónoma De San Luis Potosí (UASLP)

Cabe destacar la relación que existe entre la educación superior, la economía y la sociedad; la calidad, cobertura y equidad de la educación superior, su pertinencia y actualización curricular; así como el desarrollo de competencias en los individuos para la vida y para el trabajo, Bamett (2001). La tarea esencial de una universidad es la de crear, transmitir, registrar y compartir el conocimiento, lo que implica tanto propiciar su construcción como su socialización. La educación superior, como productora y reproductora del conocimiento, tiene la obligación de responder a las necesidades de la sociedad y de la economía, Thierry (1999).

El Contexto Socio Geográfico

El estado de San Luis Potosí se ubica en la región norte-centro del territorio nacional, cuenta con 58 municipios, los cuales se encuentran distribuidos en cuatro zonas geográficas principales: Región Huasteca, Media, Centro y Altiplano Potosino.

Figura1. Mapa del Estado de San Luis Potosí y principales vías de comunicación

La Huasteca Potosina, una de las cuatro zonas que conforman el estado, enclavada en medio de la Sierra Madre. Esta región se denomina así por la presencia en ella de importantes grupos huastecos. El 94.8% de los hablantes de lenguas indígenas en el estado, residen principalmente en los municipios que integran la huasteca potosina, siendo el náhuatl y el tenek las mas predominantes. La zona se encuentra formada por los siguientes municipios: Xilitla, Huehuetlán, Coxcatlán, Tampamolón Corona, Tanquián de Escobedo, Tancanhuitz de Santos, San Antonio, Axtla de Terrazas, Tampacán, Matlapa, San Martín Chalchicuautla,

Tamazunchale, Aquismón, Tamasopo, El Naranjo, Tamuín, Ebano, Tanlajás, San Vicente Tancuayalab y Ciudad Valles (punto principal de la Zona Huasteca, 265 km. al este de la capital del estado).

La Huasteca Potosina, por su ubicación geográfica, atractivos, clima y vegetación, permite ofrecer diversas formas de turismo de naturaleza, como lo es el turismo de aventura (rafting, rappel, kayak, montañismo, cascadísimos, espeleología, buceo, snorkel, entre otras); el turismo rural (actividades que pueden ser realizadas al interactuar con las comunidades rurales); y el ecoturismo, (observación de flora y fauna, campismo, caminata, senderismo, entre otras).

Entre los principales atractivos se encuentran: La zona arqueológica de El Consuelo y Tamtoc, cascadas y río Tamasopo, Puente de Dios, las Cascadas de Micos, río El Salto, Cascada de Tamul, el Sótano de las Golondrinas, Nacimiento de Tambaque, El Castillo del Inglés y Las Pozas de Xilitla, cascadas de Minas Viejas, el Meco y Sótano de las Guaguas.

Sin embargo, a través de varios recorridos por esta zona se puede observar que hace falta profesionalismo, una buena planeación y gestión para poder proyectar a los municipios, ausencia de calidad en los servicios ofrecidos y pocas acciones responsables para el aprovechamiento sustentable de los recursos, falta de integración y trabajo conjunto entre los actores que conforman la oferta turística; así como reducidos programas de capacitación que les permita a las comunidades disfrutar de los beneficios que ofrece esta actividad.

La Infraestructura y Programas Educativos de la Unidad Académica Multidisciplinaria Zona Huasteca (UAMZH)

La UAMZH es una institución educativa de nivel superior cuya misión es formar profesionistas capaces, competitivos, y comprometidos con la sociedad; a través de brindar a los estudiantes una formación adecuada al entorno, centrando el valor del ser humano mediante el desarrollo de valores como la ética, eficacia y honradez. Cuenta con instalaciones de calidad, que ofrecen al alumnado las condiciones adecuadas para su desarrollo integral. La infraestructura de primer nivel que se tiene cuenta aulas y laboratorios que albergan los seis programas educativos que actualmente se imparten, Administración, Bioquímica, Contaduría Pública, Derecho, Gestión y Políticas Públicas y Turismo Sustentable. Entre los servicios que ofrece la UAMZH están, Difusión Cultural, Centro de Atención a Estudiantes, Departamento de Servicio Social, Centro Médico Universitario, Centro de Innovación Educativa (Centro de Cómputo y el Departamento Universitario de Inglés) así como el Centro Integral de Aprendizaje (CIA).

La UAMZH, atendiendo al compromiso social y a su participación con la sustentabilidad, se ha dado a la tarea de realizar importantes esfuerzos hacia la capacitación basada en el enfoque de competencias, identificando y construyendo nuevos ámbitos de saberes, desde una perspectiva que permita la adaptación a las nuevas circunstancias; observándose una evolución en lo que respecta a la oferta de formación procurando cubrir los requerimientos y necesidades de los diferentes sectores económicos, tratando de atender los rezagos existentes y mejorando las condiciones de calificación y empleo

La UAMZH se enfrenta al desafío de las demandas del sector; coadyuvando a la formación y desarrollo de recursos humanos con el perfil ideal acorde a la demanda y a las necesidades reales; vinculando la capacitación además, a otros servicios de apoyo a las empresas, tales como investigación y desarrollo, aprovechamiento sustentable de los recursos, asistencia técnica y modernización de la administración, entre otros; permitiendo así una atención integral y adecuada a la realidad de cada empresa

La vinculación entre la UAMZH y el sector público y privado resulta un importante reto; identificando aquellas competencias que requiere el trabajador actual para tener un mejor desempeño en el mercado laboral y cuáles son las mejores formas de desarrollar en estos esos conocimientos, habilidades, actitudes y valores con el fin de adaptar la oferta de formación y capacitación. Asimismo, contar con docentes e instructores capacitados, desarrollando ambientes de aprendizaje pertinentes que den respuesta a las necesidades del mercado laboral.

METODOLOGÍA

Para la realización de este trabajo se analizaron diferentes perspectivas teóricas referentes a la capacitación basada en el desarrollo de competencias y la sustentabilidad; se abordó este estudio bajo el enfoque metodológico cualitativo, la metodología se sustenta en que esta investigación busca la percepción, interpretación y la experiencia de los individuos sobre la realidad de este tema; el documento se estructura de lo general a lo particular. Debido a que se trata de una investigación de tipo cualitativa, la entrevista a profundidad fue el instrumento metodológico utilizado para la recolección de datos acerca de las necesidades de capacitación del sector turístico en la región Huasteca potosina.

RESULTADOS

Se llevaron a cabo entrevistas a profundidad con la Dirección de Turismo Municipal y la Delegación de Turismo del estado, así como con prestadores de servicios turísticos en el municipio de Ciudad Valles (este municipio se tomó como modelo para la región, debido a su tamaño, importancia e influencia), con el fin de conocer la realidad en lo referente a la capacitación.

En cuanto a las entrevistas realizadas a prestadores de servicios turísticos se encontró lo siguiente.

- Estos reconocen la importancia de contar con recursos humanos competentes para lograr sus objetivos; son conscientes de la importancia de la capacitación y de que esta forme parte de su cultura organizacional; para conseguirlo están de acuerdo en invertir en la formación y desarrollo de sus recursos humanos.
- Se encontró que éstos no saben dirigir los programas de capacitación al logro de los objetivos, consideran los costos de la capacitación como un gasto y no como una inversión, así como el temor a alterar la estructura de jerarquías y remuneraciones.
- Coinciden en que no toman en cuenta a la capacitación entre sus planes y programas, debido principalmente a la falta de organismos dedicados a la capacitación turística dentro de la localidad, la tendencia de los trabajadores a abandonar el empleo, la inexistencia de políticas de capacitación dentro de las empresas, el conformismo por parte de los empleados y que no son abiertos a aceptar cambios o a ser orientados por otras personas.
- Reconocen la improvisación del servicio ofrecido, que trae consigo deficiente calidad; no realizan prácticas en beneficio de un desarrollo sustentable; relacionando estos problemas a la ausencia de programas de capacitación que les impide contar con personal competente.
- Normalmente contratan personal sin capacitación y muestran altos índices de rotación de personal, debido principalmente a los bajos rendimientos, la llamada “piratería” de empleados competentes entre la competencia.

Los encargados de la Dirección de Turismo Municipal y la Delegación de Turismo comentaron lo siguiente:

- Algunos cursos que ofrece la Dirección de Turismo Municipal, son de calidad en el servicio, tratamiento de quejas y sugerencias, tecnologías de la información, conducción de grupos, cultura turística, primeros auxilios, rescate acuático, entre otros; los cuales cubren las necesidades de la demanda de formación de personal de contacto. La Dirección no cuenta con un presupuesto propio para ofrecer capacitación, y esta se realiza por medio de gestión y patrocinios a través de los propios prestadores de servicios y de otras dependencias y organismos.
- La Delegación de Turismo si cuenta con un presupuesto para tal fin, elaborándose un catalogo de cursos que se ofertaran durante el año, realizando la gestión correspondiente.
- Ambas dependencias coinciden en que hay muy poca participación por parte de los prestadores de servicios, principalmente responden aquellos establecimientos que presentan mayor afluencia y que se encuentran mas directamente relacionados a la actividad, como son los hoteleros, operadores de viajes y guías de turistas. El área restaurantera no visualiza los beneficios que trae consigo la

actividad, y por lo tanto no cuentan con una visión de calidad y se involucran muy poco con la capacitación.

- En cuanto a cursos para niveles medios y altos mandos son otorgados principalmente por la Secretaría de turismo estatal a través de una serie de recomendaciones o sugerencias que les hacen llegar los prestadores de acuerdo a sus necesidades.
- Se otorga la certificación MODERNIZA a establecimientos turísticos, referente a procesos de operación, en donde va implícita la capacitación del personal.
- No existen aun programas de certificación de competencia laboral en los recursos humanos.
- Existen cursos enfocados a comunidades, básicamente de turismo rural, los cuales por su naturaleza y condiciones de operación son impartidos generalmente in situ.
- Ninguna de las dos dependencias cuenta con las instalaciones adecuadas para otorgar los cursos de capacitación y tienen que realizarlos con el apoyo de otras instituciones.
- La capacitación que ofrecen ambas dependencias es otorgada por instructores avalados por la Secretaría de turismo, así también por personas con basta experiencia en el ramo y aquellos certificados por la Secretaría del Trabajo y Previsión Social.
- Las dependencias investigadas consideran que el proyecto que se propone si tendrá éxito, ya este representaría un beneficio para la actividad turística; y comentan que en la medida que sea posible apoyaran en la gestión y promoción de aquellos cursos que les resulten interesantes.

•
Justificación de Creación de un Centro de Capacitación Turística para la Huasteca Potosina, bajo un Enfoque de Sustentabilidad y Desarrollo de Competencias.

Una fuerza laboral con mayor nivel de escolaridad y capacitación es factor indispensable para que México retome la senda de crecimiento económico sostenido que requiere, así como para competir exitosamente en el mercado internacional. El nuevo perfil de la economía abierta requiere que tanto las empresas como los trabajadores y los sistemas de capacitación respondan rápidamente a los requerimientos y características de los mercados, Resnik (1997).

Es de vital importancia que el recurso humano cuente con los conocimientos, habilidades y destrezas, actitudes y valores, que le otorguen el sentido de calidad que el cliente espera recibir y que permita a las empresas del sector turístico en la Huasteca potosina obtener ventaja sobre sus competidores. No debemos pensar en los empleados como un simple par de manos, sino como seres humanos inteligentes, que son capaces de aprender, si se les da oportunidad de hacerlo.

Anteriormente se consideraba una gracia del patrón dar capacitación, hoy en día es una obligación establecida en la Ley Federal del Trabajo de nuestro país, en su Título Cuatro: “Derechos y Obligaciones de los trabajadores y de los patrones”; Capítulo III bis, “De la capacitación y adiestramiento de los trabajadores”, que comprende del Artículo 153 A al 153 X. Es pues obligación legal del patrón dar capacitación y adiestramiento, porque con ello el trabajador desempeñará mejor su trabajo, aumentara su nivel de aptitudes y no solo se benefician los trabajadores, sino también el patrón ya que se reflejará en el aumento de la productividad y mejores servicios de su empresa, lo cual redundará en la preferencia de los clientes ante la competencia y un uso adecuado de los recursos; no olvidemos que aun contando con excelentes sistemas en selección de los empleados, el trabajo será inútil si no se respalda con un programa de capacitación constante. La obligación del trabajador es aprovechar al máximo los recursos que se le imparten.

Por lo anterior, aprovechando la infraestructura de primer nivel con la que cuenta, la multidisciplinariedad que le otorgan los diferentes programas educativos que ofrece, así como el modelo educativo que ha venido proponiendo la institución basado en el desarrollo de competencias, la UAMZH ha proyectado crear un espacio que la vincule con el sector turístico público y privado a través de la oferta de

capacitación y formación del recurso humano con un enfoque basado en competencias y en la sustentabilidad; enfocándose a aquellas empresas del ramo que pretenden diferenciarse de la competencia, mejorar su rendimiento, desarrollar a su personal y utilizar de manera sustentable sus recursos.

Objetivo General del proyecto: Elevar la calidad de los servicios turísticos y las prácticas sustentables en la región; desarrollando oferta de capacitación que dote a los recursos humanos de conocimientos, habilidades, destrezas, actitudes y valores; los cuales sean reconocidos oficialmente por medio del otorgamiento de un diploma, donde se certifica que el participante es apto para desempeñar una ocupación o bien es competente para desarrollar determinadas funciones.

Objetivos específicos

- Favorecer el desarrollo integral del recurso humano del sector turístico de la región.
- Vincular la oferta de capacitación con las necesidades reales del sector.
- Diseñar contenidos acordes a las condiciones que operan en la realidad, relevantes y significativos, integrando la teoría y la práctica, el trabajo manual y el trabajo intelectual, (saberes teórico, práctico/técnico, metodológico y social).
- Proponer distintas vías y ambientes de aprendizaje, reconociendo que el aula no es el único lugar de aprendizaje.
- Establecer estrategias de evaluación integral, congruentes y exigentes.
- Promover el desarrollo de la creatividad, la iniciativa y la capacidad para la toma de decisiones.
- Establecer cambios en lo que los individuos saben y en el uso que pueden hacer de lo que saben.
- Promover la autonomía del individuo.
- Formación integral centrada en el aprendizaje significativo.
- Aplicar la práctica como recurso para consolidar lo que se sabe, para poner en acción lo que se sabe y para aprender más.
- Reconocer al individuo como capaz de autodirigir y organizar su aprendizaje.
- Diseñar experiencias de aprendizaje que permitan arribar a diferentes soluciones o a varias vías de solución.
- Crear entornos que sean cooperativos, colaborativos y apoyadores.
- Priorizar estrategias didácticas en las que los participantes jueguen un papel activo, que les permita descubrir y construir conocimiento por sí mismos.
-

Alcance y localización: Se pretende cubrir las necesidades de capacitación de la región Huasteca potosina. El centro de capacitación se ubicará en las instalaciones del programa educativo de Turismo Sustentable de la UAMZH.

Limitaciones: Insuficiente apoyo del sector público para la operación del proyecto, falta de demanda de los prestadores de servicios turísticos, desinterés por parte del recurso humano en la capacitación, así como la dificultad de horarios apropiados para la impartición de la capacitación.

Inversión: Se cuenta ya con las instalaciones necesarias en la UAMZH acordes al alcance del proyecto y se pretende que esta sea auto financiable a través de cuotas de recuperación del servicio.

Descripción del servicio: Los tipos de capacitación que se ofrecerán, estarán acordes a las necesidades de capacitación del sector y se pretende sean pertinentes a las diversas circunstancias y contexto para cubrirlas.

La capacitación para “hacer”, que es la que generalmente se practica y se refiere al desarrollo de conocimientos, habilidades y destrezas para poder actuar sobre las cosas. Es la capacitación que parece

ser más útil y de resultados más inmediatos. La capacitación para “llegar a ser”, que por lo regular es ignorada, pero es vital para que el personal pueda realmente llegar a ofrecer un servicio de calidad. Se enfocará hacia el desarrollo de aquellas actitudes y valores que permitan el desarrollo del individuo; es decir, hacia el perfeccionamiento de su personalidad.

Así también, la capacitación para “hacer y llegar a ser”, en la cual se prestará especial atención al obrar humano en la conveniencia de la empresa. Tiene un doble objeto: el hacer trabajo conjunto, esto es, el trabajo en su dimensión social y organizado; y por otra parte, el desarrollo del hombre como miembro de grupos de la comunidad de la empresa y de la sociedad en general.

Erróneamente las empresas consideran que lo esencial es la eficiencia en el trabajo, como si este pudiese desprenderse del trabajador en su calidad humana. Ocurre con frecuencia que se emplea únicamente la capacitación para hacer, el trabajador puede adquirir la habilidades y destrezas necesarias, pero se siente desligado de la labor que ejecuta, no se identifica con ella, se está entonces en presencia del trabajo deshumanizado y del trabajador enajenado, sin que se vincule con la empresa y descubra el valor o significado social de su esfuerzo. Asimismo, las solas actitudes y valores no bastan, el empleado puede manifestar cortesía y amabilidad, pero el cliente puede quedar insatisfecho; nos inquieta y nos lleva a reflexionar el comentario que a veces se escucha: “la gente que te atiende es muy amable pero ineficiente”.

Una competencia es una capacidad productiva de un individuo que se define y mide en términos de desempeño en un determinado contexto laboral, y no solamente en términos de conocimientos, habilidades, destrezas, actitudes y valores; éstas son necesarias pero no suficientes por sí mismas para un desempeño efectivo, CONOCER (1995). Por lo anterior, en este proyecto aseguramos que la única forma de subsanar tales deficiencias es abordar la capacitación en toda su amplitud, se complementarán los tipos de capacitación, ya que no pueden desligarse. A través de nuestra capacitación se pretende desarrollar a su vez la capacidad de innovación, adaptación y auto aprendizaje en los participantes.

Se aplicará una evaluación diagnóstica a cada participante con el objeto de identificar el grado de conocimientos, habilidades y destrezas, actitudes y valores que estos poseen con el fin de otorgarle mayor pertinencia al proceso de enseñanza/aprendizaje.

Etapas de Desarrollo del Proyecto

Primera etapa: Esta fase del proyecto comprende la aplicación y el análisis de los resultados de la investigación acerca de la situación actual de la capacitación de la región con el fin de identificar los requerimientos de capacitación en cuanto a conocimientos, habilidades, actitudes y valores que demandan las empresas del sector y el desarrollo sustentable de la actividad.

Segunda etapa: Tendrá como propósito la definición de la oferta de capacitación que se pondrá al alcance del sector turístico a través de cursos, seminarios, talleres, conferencias y prácticas, entre otros, para cada uno de los comportamientos laborales identificados en la primera etapa; así como los conocimientos, habilidades, actitudes y valores asociados a cada nivel; esto con el objeto de alcanzar la pertinencia en la capacitación y formación que demanda el sector en la región, aunado a la capacidad, recursos e infraestructura de la universidad. Asimismo se definirán las metodologías, estrategias, herramientas y materiales que se utilizarán en el proceso de aprendizaje significativo; finalmente, se elegirán las formas de evaluación de los desempeños con la finalidad de completar el proceso y asegurar el desarrollo de competencias en los participantes.

Tercera etapa: Esta etapa incluye la vinculación de la oferta de capacitación y formación de la universidad con los organismos de normalización, certificación y evaluación locales, estatales e internacionales, públicos y privados, a fin de que dicha oferta sea validada y acreditada por estos y obtenga un reconocimiento de transparencia, objetividad, confiabilidad, validez y pertinencia; y que a su

vez ofrezca un mayor valor para el recurso humano. Esto permitirá a las empresas del sector turístico de la región contar con recursos humanos calificados que demanda la transformación productiva, la innovación tecnológica y la competencia en los mercados globales.

Cuarta etapa: Vinculación con el sector turístico de la región a fin de comercializar la oferta del centro de capacitación, a través de acciones de promoción que incluyen publicidad, relaciones públicas, paquetes, convenios, patrocinios, visitas, entre otras actividades a fin de concientizar a los prestadores de servicios turísticos acerca de los beneficios de la capacitación como una ventaja competitiva.

CONCLUSIONES

Ante el escenario de competitividad que muestra la actividad turística, es importante que las empresas del sector turístico cuenten con personal altamente calificado que les permita elevar la calidad de los servicios turísticos y las prácticas sustentables; a través de programas de capacitación continua que dote a los recursos humanos de conocimientos, habilidades, destrezas, actitudes y valores, permitiéndoles un desarrollo integral y una mayor productividad, mejorando sus niveles de vida. Se requiere de la completa participación de este sector, diseñando programas de capacitación -otorgados por ellos mismos o por instituciones y organismos- que permitan al capital humano que labora dentro de ellas ofrecer al turista un servicio de calidad que supere sus expectativas y sea capaz de realizar sus tareas a través de prácticas sustentables en pro de un aprovechamiento racional de los recursos.

La capacitación basada en competencias ofrece una formación profesional pertinente; tratando de responder a los cambios provocados por la globalización, en la cual la formación de los individuos sea vista como un aprendizaje a lo largo de la vida, desde su educación inicial hasta su formación permanente, que incluye el avance en la educación formal así como la capacitación para y en el trabajo, a través de un programa de capacitación acorde a las necesidades actuales del mercado laboral. Concluimos que la Creación de un Centro de Capacitación bajo un enfoque de sustentabilidad y desarrollo de competencias en la Huasteca potosina coadyuvaría a ofrecer un servicio de calidad a los turistas, así como a crear conciencia de la sustentabilidad de esta actividad.

ALGUNAS CONSECUENCIAS COMERCIALES DEL USO EFECTIVO DE LAS NUEVAS DIRECTRICES INTERNACIONALES SOBRE MATERIALIDAD EN AUDITORÍA EVIDENCIA EMPÍRICA EN MÉXICO Y ESPAÑA

Sergio Iván Ramírez Cacho, Universidad de Colima, México

Javier Montoya del Corte, Universidad de Cantabria, España

Francisco Javier Martínez García, Universidad de Cantabria, España

Pablo Carrasco Guerreo, Universidad de Colima, México

RESUMEN

Durante la etapa de emisión de informe, la evaluación cualitativa de las incidencias detectadas en la auditoría - mediante los factores contenidos en la Norma Internacional de Auditoría (revisada y reeditada) 450 - plantea nuevos desafíos y compromisos para los auditores, imponiéndoles, entre otras circunstancias, una mayor carga de trabajo y la necesidad de utilizar su juicio profesional de forma más intensiva y reflexiva. En esta Comunicación se presenta evidencia empírica obtenida en México y España, respecto a ciertas consecuencias que sobre dicho escenario podrían afectar la relación comercial que los auditores mantienen con sus clientes. Los resultados demuestran que a pesar del probable incremento de informes con salvedades, la imagen de la entidad auditada no se perjudicaría ante terceros, ni se incrementarían los costos del servicio de auditoría. Por lo tanto, tampoco aumentaría el riesgo de que los auditores pierdan como clientes a las entidades auditadas y, en general, la buena relación comercial auditor-entidad auditada no se vería afectada.

INTRODUCCIÓN

Durante los últimos años, debido a una normativa con ciertas lagunas evidentes, entre los auditores ha existido una fuerte tradición de formar los juicios y tomar las decisiones de materialidad sobre bases única y exclusivamente cuantitativas. Esta situación se ha mantenido apenas inalterable, a pesar de que los hechos acontecidos y las críticas a la profesión auditora han puesto de manifiesto que constituye una práctica incompleta para alcanzar algunas características fundamentales de la información financiera, como transparencia, relevancia, fiabilidad y comparabilidad. De ahí que se haya permitido que los gestores de algunas empresas, en complicidad por acción u omisión con sus auditores, hayan aprovechado la discrecionalidad que ofrece la normativa en cuanto al empleo de los umbrales numéricos para manipular la información financiera y así poder cumplir con las expectativas generadas, principalmente sus pronósticos de utilidades (Levitt, 1998).

En respuesta a las lagunas normativas y a los vacíos conceptuales aludidos anteriormente, algunos organismos, como la Federación Internacional de Contadores (IFAC), han puesto énfasis en la revisión de las directrices que deben guiar la aplicación de la materialidad en las auditorías. Entre otras reformas, este organismo internacional ha impulsado la consideración de una corriente que persigue el uso a un mismo nivel de los factores cuantitativos y cualitativos en la formación de juicios y en la toma de decisiones de materialidad. Es decir, que defiende que la naturaleza y las circunstancias concretas que rodean las incidencias en la información financiera, deben estar también presentes, y tomar importancia, en la formación de juicios y en la toma de decisiones por parte de los auditores.

Así, y en busca de mejorar la calidad de la información que nutre al sistema financiero, la IFAC sometió a los procesos de *revisión* y *reedición*, entre otras, a la Norma Internacional de Auditoría 320: la

materialidad en auditoría” (en lo sucesivo NIA 320; IFAC, 2009, pp.392-396). De cuya actualización surgió la NIA (revisada y reeditada) 450: “*evaluación de las incidencias detectadas durante la auditoría*” (en adelante, NIARR 450; IFAC, 2009: 379-390) (FC-450), entre cuyo contenido existe una lista de factores cualitativos (FC-450) que los auditores deben utilizar, desde el pasado 15 de diciembre de 2009, para evaluar la significatividad de las incidencias detectadas, y no corregidas, durante la auditoría. Bajo estas nuevas pautas, deberán decidir considerando bases cualitativas y cuantitativas, si dichas incidencias conducirán a la emisión de informes con salvedades

Ante esta situación, nos propusimos realizar un estudio empírico para conocer qué consecuencias podrían tener el uso efectivo de los FC-450, sobre la relación comercial que los auditores mantienen con sus clientes, y así dilucidar si éstos podrían contribuir a aportar más valor y calidad tanto a las auditorías como a los estados financieros de las empresas, participando de esta manera en la recuperación de la confianza perdida en la actividad auditora y en el restablecimiento del prestigio social de la profesión, lo cual, sin duda, estimularía los mercados financieros y reactivaría la economía actualmente sumergida en una etapa de crisis.

METODOLOGÍA

Al tratarse de una norma internacional, el objetivo del trabajo se centró en analizar de forma comparada la posición que mantienen los auditores de dos países diferentes, en concreto de México (ACMx) y España (ACSp), en cuanto a las consecuencias que el uso efectivo de los FC-450, podría proyectar sobre la relación comercial que existe entre los auditores y sus clientes; obteniendo así evidencia de su proximidad o lejanía (*gap*) en la consideración de esta cuestión. La hipótesis general planteada, TABLA 1, arrojó evidencia empírica sobre las consecuencias que, si se hace uso efectivo de tales factores, los auditores esperan que se produzcan sobre la relación comercial que mantienen con sus clientes (H_0).

TABLA 1 Objetivos Específicos E Hipótesis Del Estudio Empírico

OBJETIVO E HIPÓTESIS	
	Comparar el grado de acuerdo existente entre los ACMx y ACSp respecto a las consecuencias que se podrían derivar de la utilización efectiva de los FC-450, particularmente sobre la vinculación entre el auditor y la empresa auditada
H_0	Los ACSp y los ACMx presentan un distinto grado de acuerdo respecto a las consecuencias que se podrían derivar sobre la relación entre el auditor y la empresa “auditada a partir de la utilización efectiva de los FC-450”
<i>Hipótesis general perseguida, respecto a las consecuencias comerciales que el uso efectivo de los FC-450 proyectará sobre la relación comercial que el auditor mantiene con clientes (empresas auditadas)</i>	

La metodología empleada para el contraste de las hipótesis consistió en pruebas paramétricas y no paramétricas de estadística inferencial (García Benau y Giner Inchausti, 2000; García Benau *et al*, 2000; Duréndez Gómez-Guillamón, 2001; Beattie *et al*, 2006; Fuentes Barberá y Pucheta Martínez, 2006; Guisande, 2006: 104; Pagano, 2006:339; Montoya del Corte, 2008:277). Por tanto, para determinar si podía afirmarse que la valoración media manifestada por ambos colectivos respecto a ciertas preguntas que se les plantearon difería entre sí de forma notable, se utilizó el contraste estadístico de la *Prueba T* para muestras independientes, que contrasta la igualdad de medias entre dos muestras distintas, véase Formula 1 y 2. Es decir, que si dichos valores resultaban estadísticamente distintos se pondría de manifiesto que la percepción de unos y otros era significativamente diferente a niveles del 5%. De forma complementaria, los datos fueron analizados mediante herramientas de estadística descriptiva, con tablas de contingencia, con un análisis de frecuencias y con el estadístico inferencial *U de Mann-Whitney* (prueba no paramétrica). El índice alfa de Cronbach (1951), demostró que las respuestas de los sujetos a las preguntas planteadas gozaban de excelentes niveles de fiabilidad (Hair *et al*, 2004:394; Pérez López, 2005:693).

$$H_{0x} = \mu_1 = \mu_2 \quad (1)$$

$$H_{1x} = \mu_1 \neq \mu_2 \quad (2)$$

Como instrumento para la recolección de información en ambos países se utilizó un cuestionario que contenía tres Bloques de preguntas, el cual se diseñó para que fuera contestado como una encuesta de respuesta anónima y en base a los trabajos de (García Benau *et al*, 1993; García Delgado, 1994; Martínez García y Somohano Rodríguez, 1997; Duréndez Gómez-Guillamón, 2001; y Montoya del Corte, 2008). Las preguntas de los Bloques II y III fueron redactadas de tal forma que los sujetos debían indicar, mediante una escala Likert, su total desacuerdo con el número 1, desacuerdo parcial con el 2, indiferencia con el 3, un acuerdo parcial con el 4 y con el 5 una posición de acuerdo total con las cuestiones planteadas. La muestra analizada estuvo constituida por 101 contadores públicos certificados afiliados al Instituto Mexicano de Contadores Públicos (ACMx), y por 352 individuos inscritos en el Registro Oficial de Auditores de Cuentas del Instituto de Contabilidad y Auditoría de Cuentas de España (ACSp).

RESULTADOS

Las consecuencias que podrían derivarse del uso efectivo de los FC-450 sobre la vinculación entre el auditor y la empresa auditada. Una comparación entre los auditores de México y España.

Mediante la contrastación tanto de la hipótesis como de las subhipótesis y un análisis de frecuencias, se revela que la correcta aplicación de los FC-450 no impactaría de forma negativa la relación comercial que los auditores mantienen con las empresas auditadas. En concreto, mientras la mayoría de ACMx y ACSp coinciden en una opinión de indiferencia respecto a que el uso de tales factores incrementarían mucho el costo de las auditorías (H_0^A) y el riesgo de perder como cliente a la entidad auditada (H_0^C), o que perjudicarían la buena relación auditor-entidad auditada (H_0^B); una minoría revela estar parcialmente en desacuerdo con que la imagen de la entidad auditada se dañaría y perjudicaría ante terceros (H_0^D). Asimismo, en la TABLA 2 se observa que ninguna de las cuatro subhipótesis planteadas obtiene diferencias estadísticamente significativas entre los valores medios alcanzados por ambos colectivos. De ahí que se den por válidas tanto la H_0 como las H_0^A , H_0^B , H_0^C y H_0^D .

TABLA 2 Consecuencias relacionadas con la vinculación entre el auditor y la empresa auditada

CONSECUENCIAS/SUBHIPÓTESIS		TOTAL		ACMx			ACSp			Dif.Sig.
		\bar{X}	S	\bar{X}	S	FREC	\bar{X}	S	FREC	$Pv \leq \alpha$
1	H_0^A ¿Incrementaría mucho el costo de las auditorías?	3.14	1.26	3.22	1.38	50.00	3.12	1.23	42.00	0.531*
2	H_0^B ¿Perjudicaría una buena relación auditor-entidad auditada?	3.34	1.21	3.16	1.37	49.40	3.38	1.16	49.00	0.205*
3	H_0^C ¿Incrementaría el riesgo de perder como cliente a la entidad auditada?	3.28	1.18	3.09	1.38	43.90	3.32	1.12	44.50	0.181*
4	H_0^D ¿Dañaría la imagen de la entidad auditada y la perjudicaría frente a terceros?	2.80	1.23	2.87	1.33	40.24	2.79	1.21	29.50	0.521*

(*) Diferencia estadísticamente significativa al 5%, detectada mediante las pruebas *T de Student* y *U de Mann-Whitney* para muestras independientes.

CONCLUSIONES

Como se desprende del estudio empírico llevado a cabo, tanto los auditores encuestados en México como en España, si bien con un distinto grado de acuerdo, consideran que la profesión auditora y sus ejercientes son algunos de los principales aspectos que saldrían beneficiados si efectivamente se utilizaran los factores cualitativos de la materialidad. A pesar de que la nueva directriz NIARR 450 contiene nuevos y mayores requisitos para evaluar las incidencias detectadas durante la auditoría, se han revelado posiciones que van del desacuerdo parcial a la indiferencia, respecto a que se incrementarían mucho el costo de sus servicios, se dañaría la imagen de la entidad auditada perjudicándola ante terceros y, por tanto, se incrementarían el riesgo de perder clientes. En resumen, la relación comercial entre el auditor y sus clientes (entidades auditadas) no se verá afectada por el uso de los FC-450.

EFFECTIVIDAD DE LOS PROGRAMAS DE APOYO GUBERNAMENTAL A LAS MIPYMES EN BAJA CALIFORNIA

Patricia Valdés Flores, CETYS Universidad

Celsa Guadalupe Sánchez Vélez, CETYS Universidad

RESUMEN

En México, las Micro, Pequeñas y Medianas Empresas (Mipymes) representan 99% del total del sector empresarial y tienen una participación significativa en el Producto Interno Bruto, así como en la generación de empleos. Frente a un escenario global de intensa competencia, las Mipymes mexicanas enfrentan el desafío de modernizarse para mejorar su competitividad y así mantener y/o expandir sus mercados en los ámbitos nacional e internacional. Por ello, en los últimos años ha aumentado el interés del gobierno por diseñar e implementar programas de apoyo para la consolidación y desarrollo de estas empresas en nuestro país. El objetivo de la investigación es analizar la efectividad de los programas gubernamentales de apoyo a las Mipymes en Baja California, durante el periodo 2000-2009, con el fin de aportar elementos que fortalezcan las políticas públicas que realmente promuevan el desarrollo de estas empresas. Para ello se utilizará un instrumento diseñado por el Banco Interamericano de Desarrollo para evaluar la capacidad institucional de los programas oficiales de apoyo a las pequeñas empresas de América Latina y el Caribe, que incluye los factores de estabilidad institucional, capacidad de atención a los problemas de las Mipymes, coordinación interinstitucional y proceso de aprendizaje de las instituciones.

LAS UNIVERSIDADES Y LA VINCULACION CON EL SECTOR PRODUCTIVO EN MEXICO: LA UNIVERSIDAD DE SONORA

Francisco Espinoza Morales, Universidad de Sonora

Lidia Amalia Zallas Esquer, Universidad de Sonora

Antonia Camargo Pacheco, Universidad de Sonora

RESUMEN

La presente investigación “Las Universidades y la vinculación con el sector productivo en México: La Universidad de Sonora”, se habla de la importancia de los avances científicos tecnológicos en el desarrollo de la economía y de las Instituciones de Educación Superior y sus vínculos con el sector productivo. Para el análisis se parte de las perspectivas filosóficas que describen la economía y la sociología. La economía porque sustentaremos una realidad que requiere del estudio de las relaciones económicas, el desarrollo y crecimiento económico, uso de tecnología; y en el terreno de la sociología, que nos permite comprender los problemas relacionado con la sociedad, sus individuos, su participación social y las organizaciones. Las dos perspectivas científicas permiten ver la vinculación como una práctica social. Se analizan las dificultades que tiene la Unidad Regional Sur de la Universidad de Sonora para vincularse con el sector productivo. Se plantea la necesidad de un nuevo esquema de vinculación Universidad de Sonora sector productivo a partir de desarrollar propuestas estratégicas de vinculación, que genere conocimiento y contribuya a la construcción regional de un sistema productivo competitivo y mejore la organización industrial mediante mecanismos de coordinación institucional entre industria, empresas y organismos educativos. La Investigación tiene como objetivos, aportar elementos teóricos metodológicos que contribuyan al logro de una vinculación eficiente y participativa de la Universidad de Sonora con el sector productivo.

PALABRAS CLAVE: Vinculación, Universidad, Sector Productivo.

INTRODUCCION

La Investigación, “Las Universidades y la vinculación con el sector productivo en México: La Universidad de Sonora”, se presenta como un tema importante, ya que la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO, la Asociación Nacional de Universidades e Institutos de Educación Superior (ANUIES) y la propia Secretaría de Educación Pública (SEP) han recomendado impulsar y normar la vinculación de las Universidades con el sector productivo.

El sector productivo tiene necesidad de recurrir a fuentes confiables de conocimientos, que den respuestas a sus problemas actuales y futuros, entre los cuales resulta de importancia la productividad del trabajo y del capital, que responden a los determinantes principales del nivel de vida de la población. Por otro lado, la Universidad está obligada en crear las condiciones requeridas para responder a las necesidades que demanda la sociedad en su conjunto, en la medida en que se identifica con los problemas económicos y sociales de su entorno. El Plan de Desarrollo Institucional (2009-2013) de la Universidad de Sonora, contempla un Programa de vinculación con los sectores social y productivo. Además, la Ley Orgánica de la Universidad de Sonora contempla en su estructura la figura del Consejo de Vinculación Social.

La Investigación se planteó la siguiente pregunta ¿Cuáles son las dificultades que enfrenta la Unidad Regional Sur de la Universidad de Sonora para vincularse con el sector productivo? Y tuvo como objetivo general: Aportar elementos teórico-metodológicos que contribuyan al logro de una vinculación eficiente y participativa de la Universidad de Sonora con el sector productivo, y como objetivos

particulares: 1. Determinar las principales dificultades de la Universidad de Sonora para poder vincularse con el sector productivo del sur de Sonora y 2. Proporcionar resultados que puedan ser útiles en la promoción de políticas educativas de apoyo al sector productivo.

REVISION LITERARIA

Para el análisis de las Universidades y la vinculación con el sector productivo en México: La Universidad de Sonora, se parte de las perspectivas filosóficas que describen la economía y la sociología. La vinculación es vista como parte de la sociedad, que contribuye al desarrollo de una comunidad a partir de la educación. Desde el punto de vista social, se retoman los valores, los medios y los fines necesarios para llevar a cabo dichos procesos. En lo educativo, la vinculación tiene que ver con la formación y capacitación de cuadros profesionales que respondan al entorno. En cuanto a las investigaciones realizadas y que buscan comprender el comportamiento de las Universidades y el Sector Productivo en los lazos de vinculación, donde se ponen de manifiesto dificultades, beneficios, productividad y utilización de transferencia de ciencia y tecnología.

A continuación se presentan algunos de esos estudios: La Dra. Nancy Schavino de Vitoria, de la Universidad Santa María; en Caracas, Venezuela (2001), presenta un análisis sobre la Vinculación – Universidad – Sector Productivo, en el marco de la sociedad global. Dimensiones teóricas y explicativas de un modelo de correspondencia intersectorial. Es una investigación teórica, con técnicas cuantitativas que concluye que los tiempos actuales donde predominan los medios electrónicos, el surgimiento de las nuevas tecnologías, las redes de información que generan cambios, transformaciones se requiere desarrollar nuevas metodologías del aprender, es decir, se requiere aprender a aprender.

El equipo de Estudios Industriales de la Facultad de Economía de la Universidad Autónoma de Puebla (UAP), realizó un estudio sobre la Vinculación de las IES con el Sector productivo a través de la investigación científica tecnológica y estuvieron coordinados por la Mtra. Ma. Isabel Vázquez Avelar, donde se plantearon como objetivo central llegar a conocer, los problemas o retos a los que se enfrenta la investigación científica para poder vincularse con el sector productivo; es un estudio cuantitativo, utilizando instrumentos como la encuesta, entrevistas con investigadores que tienen proyectos de vinculación.

Otra investigación es la que realizó la ANUIES en 1996, llamada “Un diagnóstico sobre la vinculación universidad- empresa” , CONACYT – ANUIES coordinada por Mónica Casalet y Rosalba Casas, para conocer el estado real de la colaboración entre la academia y la empresa del país, buscar modalidades de cooperación que faciliten la canalización de los conocimientos y del personal formado hacia algunos objetivos de producción, calidad y productividad e identificar algunos factores claves para la adecuada relación entre las empresas y las universidades.

La Mtra. Patricia Acuña, de la Coordinación de Estudios de Planeación de la ANUIES realiza un estudio Vinculación Universidad Sector Productivo, donde define los objetivos de la vinculación para la universidad y para el sector productivo. Habla de la Universidad latinoamericana, de sus razones de la necesidad de la vinculación, de los actores participantes de la vinculación y las formas en las que se presenta ésta y pone claro los beneficios de la vinculación para la Universidad y para el sector productivo.

En 1997, el investigador sinaloense Santos López Leyva publica su obra “La vinculación de la ciencia y tecnología con el sector productivo: su perfil económico,” y en ella propone un objeto de estudio centrado en el proceso de vinculación entre el sector productivo de una economía y el de la ciencia y tecnología de la misma, haciendo énfasis en el perfil económico de este propósito. En el estudio se establece que la

vinculación es una categoría social porque en ella intervienen un conjunto de actores sociales formulando redes de conocimiento y de intercambio.

METODOLOGIA

La investigación se desarrolló bajo la óptica del paradigma cualitativo (Rodríguez, 1996) y en cuanto al método se utilizó la Etnografía Educativa, entendida según Martínez (1999), como el método de investigación por el que se aprende el modo de vida de una unidad social concreta. Se busca comprender la complejidad estructural de la vinculación a partir de la etnografía educativa haciendo una descripción del objeto de estudio.

Para la realización de la investigación se apoyó en instrumentos como el cuestionario y el programa estadístico SPSS, para la organización de los datos y el manejo porcentual de las opiniones de los participantes. Para la obtención de la información se aplicó un cuestionario a las autoridades universitarias de la Unidad Regional Sur de la Universidad de Sonora, a los alumnos, a los docentes, a empresarios y a agrupaciones patronales. También se realizaron entrevistas abiertas a los representantes empresariales y a empresarios.

Algunas de las supuestas dificultades que tiene la Universidad de Sonora para vincularse con el Sector Productivo del sur de Sonora son aquellas que se relacionan con la propia Universidad y tienen que ver con la falta de pertinencia de los programas y planes de estudio de su oferta educativa, la infraestructura adecuada para el desarrollo de la investigación científica y se atiende la desarticulación entre investigación y docencia.

El Sector Productivo enfrenta dificultades propias de su desarrollo que se manifiestan en la falta de formación de recursos humanos que responda a su potencial creador de riquezas, así como el desinterés, desconfianza y desconocimiento del sector sobre los bienes y servicios que puede ofertar la Universidad de Sonora y por tanto el desconocimiento de los beneficios de la vinculación, producto de la escasa promoción y desarrollo de proyectos y programas de investigación aplicados al sector productivo.

La vinculación se ve obstaculizada por la falta de coordinación y comunicación entre los Centros Educativos de educación superior y el sector productivo, pero también hace falta estimular la vinculación mediante apoyos económicos.

RESULTADOS

Para la verificación de la categoría, pertinencia de los planes y programas de estudios, en la que se planteó analizar la subcategoría: contenidos temáticos, y se abordó la subcategoría analítica, actualización curricular. Las Autoridades Universitarias opinaron que los programas y planes de estudios en un 25% están dirigidos a los requerimientos del sector productivo. Infraestructura: Para verificar la categoría Infraestructura, se hizo un diagnóstico de sus condiciones, a partir de describir un contexto de la unidad de análisis.

Las subcategorías biblioteca, centro de cómputo, aulas para clases, refrigeración, cubículos para maestros, salas audiovisuales, instalaciones deportivas, reportan el siguiente diagnóstico: Biblioteca, se encuentra en excelente condiciones, mediante el programa de mejoramiento de biblioteca. El Centro de Cómputo Académico, es de uso general, está organizado en tres laboratorios y se les da servicio a todos los estudiantes. Los edificios, en promedio, tienen 17 años. La refrigeración es un problema que cada año se acentúa aún más, ya que producto de los cambios en los ecosistemas. De las salas audiovisuales operan siete. Los cubículos para profesores son insuficientes y además se comparten entre dos y en algunos casos hasta tres profesores. Las instalaciones deportivas son insuficientes.

Desarticulación existente entre investigación y docencia. Con respecto a los Proyectos de Investigación, según datos proporcionados por la Vicerrectoría de la Unidad Regional Sur, es escasa con los profesores y poca participación de alumnos. De los docentes entrevistados, solamente el 7.5% realiza investigación. En cuanto al grado académico de los docentes el 60% tiene grado de maestría.

Formación de recursos humanos. Los empresarios dicen que en un 11% reciben cursos de capacitación. En cuanto al grado de aceptación solamente el 22% acepta los servicios de la UNISON. Aceptación de los egresados de la UNISON. De los que trabajan 33.3% lo están haciendo en empresas públicas, el 20.5%, en privadas, 7.7% en empresas del Sector Social y en instituciones educativas 2.6%. Los egresados de la Universidad de Sonora son aceptados en el sector productivo en un 55%.

Desinterés, desconfianza y desconocimiento de lo que ofrece la UNISON. El 72.2% no tienen vínculos de colaboración con la Universidad de Sonora y un 28.8% dijeron que sí tienen colaboración con la UNISON. La subcategoría Convenios de Colaboración. La Unidad Regional Sur ha firmado convenios de colaboración con los Ayuntamientos del sur de Sonora. Desconocimiento de los beneficios de la Vinculación. El 50% de los empresarios conocen de los servicios que ofrecen las Universidades.

Para verificar la categoría escasa promoción y desarrollo de proyectos, un 22% conocen de las Universidades. Apoyos financieros. Las autoridades educativas, funcionarios empresariales y públicos deberán promover los apoyos a las tareas de vinculación mediante programas, proyectos de impulso a la investigación y desarrollo tecnológico.

CONCLUSIONES

El nuevo orden internacional expresado en la globalización económica exige eficiencia de las instituciones nacionales y en este momento la vinculación de la universidad con el sector productivo representa un esfuerzo por hacer eficientes las instituciones en su interrelación.

El estudio ha evidenciado los supuestos teóricos de partida, que abordan la vinculación como una categoría social en virtud de que en ella intervienen un conjunto de actores sociales individuales e institucionales (instituciones, estudiantes, docentes, investigadores, empresarios, etc), producto de un proceso histórico de desarrollo socio-institucional complejo, en el que se articulan factores económicos, tecnológicos, de percepción social, educativos, etc.

La vinculación se ve así obstaculizada tanto por la falta de coordinación y comunicación entre la Universidad y el sector productivo, como por los escasos apoyos en recursos económicos destinados al impulso de actividades de investigación y desarrollo tecnológico, entre los que sobresale la falta de apoyos gubernamentales. La vinculación hace referencia a una categoría de carácter institucional, por lo que debe ser asumida en el marco de las políticas nacionales de educación, científicas y tecnológicas y de innovación, mediante una visión de largo plazo de alto valor para el desarrollo nacional, y el sistema de Ciencia y Tecnología debe constituirse como mecanismo de enlace entre la oferta académica y las demandas del sector productivo.

ACTITUDES HACIA LAS MUJERES GERENCIALES DE PUERTO RICO Y SUS VIVENCIAS AL INTERIOR DE LAS EMPRESAS

Eva Judith López Sullivan, Universidad de Puerto Rico, Ponce

RESUMEN

Esta investigación estudió la relación entre el género, la edad, la educación, y la actitud hacia las mujeres gerenciales puertorriqueñas. Además, investigó las significaciones que tienen estas actitudes para una muestra de féminas gerenciales. Se utilizó una metodología mixta. Las muestras consistieron de 564 estudiantes (fase cuantitativa) y 25 mujeres gerenciales (fase cualitativa). Para la fase cuantitativa se utilizaron dos instrumentos: una planilla de datos socio-demográficos y la Escala de Actitudes hacia Mujeres que Ocupan Posiciones Gerenciales (Álvarez, 1994). Para la fase cualitativa se utilizó una planilla de datos socio-demográficos y una guía de entrevistas semi-estructuradas. Se llevaron a cabo análisis descriptivos para las variables de la hoja de datos socio-demográficos de la encuesta y de las entrevistas. Para el análisis cuantitativo se realizó el procedimiento ANOVA y pruebas t para evaluar si los géneros, diferían entre sí de manera significativa con respecto a las medias. En la parte cualitativa se utilizó análisis de contenido. Constituye el primer estudio en Puerto Rico con un acercamiento mixto que estudia las actitudes hacia las mujeres gerenciales, y expone la visión de éstas sobre las significaciones sociales que tienen sus aportaciones y trabajo en puestos de mando en las organizaciones.

INTRODUCCIÓN

La presente investigación se realizó desde un acercamiento metodológico mixto. Consistió de dos fases: la primera fue cuantitativa y la segunda fue cualitativa. En la primera fase se estudiaron las actitudes de una muestra de quinientos sesenta y cuatro (564) estudiantes graduados y sub-graduados de Puerto Rico hacia las mujeres de la Isla que ocupan posiciones gerenciales. Además, se investigó la relación entre el género, la edad, el estado civil, la educación, tipo de puesto gerencial, el tipo de organización, el estatus de trabajo, el área de especialidad académica y la actitud hacia las mujeres que ocupan posiciones gerenciales. Se auscultó si existían diferencias estadísticamente significativas en las actitudes por las variables antes mencionadas. Para realizar esta fase de la investigación, se utilizaron dos instrumentos. Primero, se utilizó una planilla de datos socio-demográficos. El segundo instrumento utilizado fue la Escala de Actitudes hacia Mujeres que Ocupan Posiciones Gerenciales (Álvarez, 1994)

En la segunda fase, se estudiaron las significaciones que tienen estas actitudes (de la fase cuantitativa), para una muestra de veinticinco (25) féminas gerenciales de la misma zona geográfica de la Isla. Para esta fase cualitativa se utilizó una planilla de datos socio demográfico y una guía para desarrollar entrevistas semi-estructuradas. La guía de las entrevistas semi-estructuradas se diseñó tomando en consideración los resultados de la administración de la Escala de Actitudes hacia las Mujeres que Ocupan Puestos Gerenciales (Álvarez, 1994), y los estudios cualitativos que sobre este temario, se han realizado en Latinoamérica y otros lugares del mundo como Estados Unidos y Europa. Las preguntas se diseñaron con el propósito de que las gerenciales entrevistadas analizaran desde la perspectiva de sus vivencias, los significados sociales de los resultados obtenidos en la administración de la Escala de Actitudes hacia Mujeres que Ocupan Posiciones Gerenciales a los estudiantes graduados y sub graduados. Además, las entrevistas permitieron conocer vivencias al interior del mundo corporativo en Puerto Rico desde una perspectiva de género.

REVISIÓN LITERARIA

El Censo de Puerto Rico ha señalado que las mujeres constituyen la mitad de la población (51%) de la Isla (Junta de Planificación, 2000). Representan el 42% de la fuerza laboral y el 60% de los votantes en las elecciones políticas (Silva, 2000). López (2005) señaló que la cantidad de mujeres estudiando en instituciones universitarias tanto públicas como privadas, ha aumentado considerablemente en los últimos veinte años y en la actualidad constituyen el 61% de la población universitaria de Puerto Rico. El 70% de las personas en la Isla preparadas académicamente o en vías de completar un grado académico, son mujeres (Carrasco 2003). Las estadísticas en el área de educación señalan que el 60% de las féminas de la Isla con estudios universitarios tienen maestrías y doctorados (Bigas, 2003). No obstante, la Procuraduría de Asuntos de la Mujer de Puerto Rico (2009) señaló, que aunque se reconocen los logros académicos femeninos, el discrimen por género es palpable, especialmente en lo que se refiere a la aportación de las mujeres al mundo del trabajo asalariado. Este discrimen se manifiesta en la doble jornada de trabajo, el techo de cristal, el diferencial de salario, la baja participación femenina en empleos tradicionalmente masculinos, el hostigamiento sexual y el trato desigual por maternidad y embarazo, entre otros.

Por otra parte, a pesar de la importancia que tiene la presencia femenina en la sociedad puertorriqueña, los estudios sobre las mujeres en el mundo del trabajo son muy escasos. Las investigaciones sobre las mujeres gerentes y su situación dentro de las organizaciones en Puerto Rico son aún más limitadas. No se ha encontrado ningún estudio que permita tener una idea de la cantidad de mujeres gerentes en la Isla, el perfil de éstas o sobre los problemas que confrontan en las organizaciones.

METODOLOGÍA

Para llevar a cabo el procesamiento de los resultados, se utilizaron análisis descriptivos para las variables socio-demográficas de la hoja de datos socio demográficos de la encuesta así como la de las entrevistas. Se deseaba conocer el perfil de ambas muestras estudiadas. En la fase cuantitativa se deseaba determinar si existían diferencias estadísticamente significativas y probar las hipótesis. Por esto se realizó el procedimiento de ANOVA, con un nivel de probabilidad de .05. Además, se utilizaron pruebas *t* para evaluar si los dos grupos que conformaron los géneros, diferían entre sí de manera significativa con respecto a las medias. En la fase cualitativa, la información recogida en las entrevistas se analizó a través de análisis de contenido.

RESULTADOS

En la fase cuantitativa, se encontraron diferencias estadísticamente significativas entre la escala total y cada sub escala por las variables socio demográficas de género, edad y educación. Por otro lado, en la fase cualitativa esta investigación encontró que los estereotipos negativos hacia la mujer, así como las actitudes y prejuicios de los superiores ya sean explícitos o tácitos, impiden a las féminas ascender y abrirse camino en las organizaciones. Además, se reconoció que el origen cultural de las empresas puede ser determinante en las oportunidades que se le ofrezcan a la mujer para ser reclutadas, permitirle desarrollarse y retenerlas en los trabajos.

CONCLUSIONES

Esta investigación constituye una aportación importante en el campo de la Psicología Industrial en Puerto Rico ya que puede ayudar a lograr elevar el nivel de conciencia sobre la necesidad e importancia de mirar críticamente la posición de las mujeres gerenciales en las organizaciones como fuerza

importante de trabajo. Es el primer estudio en Puerto Rico con un acercamiento mixto que ha investigado las actitudes hacia las mujeres gerenciales, además de exponer o describir la visión de éstas sobre las significaciones a escala social que tienen sus aportaciones y trabajo en puestos de mando en las organizaciones de la Isla.

BIOGRAFIA

Eva J. López Sullivan, posee dos bachilleratos: uno en Ciencias Políticas y otro en Gerencia Industrial con una concentración en Finanzas del Recinto Universitario de Mayagüez, Puerto Rico. Posee dos maestrías: una en Administración de Empresas con especialidad en Mercadeo de la Universidad de Puerto Rico y otra en Educación Religiosa de La Pontifica Universidad Católica de Puerto Rico. Además posee un doctorado en Psicología Industrial Organizacional. Su tema de interés en investigación es la mujer y las empresas.

PERTINENCIA DE LA ENSEÑANZA DE LA ECONOMÍA PARA EL PROFESIONAL DEL COMERCIO INTERNACIONAL

Edgar Piña Ortiz, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

En este documento se plantea la necesidad de evaluar la pertinencia actual de las materias de economía incluidas en el Programa Educativo (PE) de la carrera de Licenciado en Comercio Internacional que se ofrece en el Centro de Estudios Superiores del Estado de Sonora (CESUES), en México. Esta investigación en proceso, parte del reconocimiento de que los contenidos y los métodos actuales de enseñanza de la ciencia económica no han sido suficientemente justipreciados a la luz de los intereses y necesidades del profesional de esta disciplina del comercio y tiene como propósito revisar los elementos de competencia ofrecidos en PE, para valorar su pertinencia en el mercado de trabajo de los especialistas en negocios internacionales. En congruencia con los resultados que se obtengan en esta exploración, se replantarían los contenidos y estrategias didácticas en el aula y fuera de ella para asegurar las competencias profesionales de los egresados de la carrera.

JEL: A

PALABRAS CLAVE: pertinencia educativa, ciencia económica, comercio internacional.

ABSTRACT

This paper raises the need to assess the pertinence of economics subjects included in the curricula of the Bachelor of International Business, offered at the Centro de Estudios Superiores del Estado de Sonora, Mexico. This research in progress departs from the assumption that economics topics and current teaching methods of this subject have not been sufficiently appraised, mainly in light of the interests and needs of professionals in this discipline. This new approach under analysis is intended to review the elements of competence offered in the program's courses, in order to evaluate their effectiveness in the labor market for specialists in foreign trade. Consistent with the expected results in this investigation, further changes in the content and teaching strategies in the classroom and beyond, would be made to ensure the best professional performance of the graduates of this degree program.

KEYWORDS: educational pertinence, economics, international commerce.

INTRODUCCIÓN

Al inicio, en el transcurso y al final de muchos cursos de economía para estudiantes de diversas carreras, los profesores de la materia es posible que perciban en la mirada, el gesto disimulado de cientos de alumnos una interrogación inquietante relacionada con la pertinencia de los temas expuestos en clase.

Si la capacidad de comunicación de los profesores de economía con sus alumnos fuera de alguna forma más eficaz de lo que normalmente es, seguro que la respuesta que los estudiantes darían estaría relacionada con la utilidad que los conocimientos de la ciencia económica tendrán en su vida profesional. Dejando aparte otros factores que inciden en la eficacia y pertinencia de la enseñanza de la economía en nuestras universidades, es claro que la situación a la que nos enfrentamos los profesores de las distintas

carreras tiene que ver con una propensión humana natural, que en mi país se expresa en un dicho popular que no por sencillo y recurrente pierde su validez: “cada loco con su tema”.

Así, sin reflexionar lo suficiente en la potencial utilización de los conocimientos de la ciencia económica por parte de los futuros profesionistas del comercio internacional, el turismo, la mercadotecnia, la administración y las finanzas, por mencionar algunas de las carreras de la actualidad, se diseñan los programas de estudio y se llevan al aula, obteniéndose un resultado muchas veces confuso, difuso, de difícil apreciación y que en el mejor de los casos se manifiesta en la producción de graduados con una interesante cultura económica, pero con una dudosa utilización de las herramientas analíticas de la economía.

En la carrera de Licenciado en Comercio Internacional del CESUES, son algunas las materias relacionadas con la ciencia económica, de las cuales Economía, Economía Internacional, Ambiente de los Negocios, Desarrollo Sustentable y Mercados Financieros Internacionales, son las que mayormente ofrecen oportunidades de proponer a los estudiantes conocimientos y herramientas analíticas pertinentes a su futura actividad profesional. Sin embargo, es claro que docentes y funcionarios poco hemos hecho por evaluar la idoneidad de los diversos contenidos programáticos de las materias mencionadas, ocupándonos en el mejor de los casos en adecuar las mismas temáticas a los renovados planes de estudio y a los novedosos modelos educativos que ocasionalmente se promueven.

Con este tipo de problemática presente en nuestra Institución, se han revisado algunos antecedentes de investigación sobre el tema de la pertinencia y la calidad de la educación universitaria y específicamente la relacionada al ámbito de los especialistas del comercio y negocios internacionales en nuestra región y hasta ahora lo que se ha encontrado es de gran valor académico, pero no está referido a la cuestión específica que nos ocupa, es decir, la enseñanza de la economía a estudiantes de comercio internacional. A continuación se revisan algunas de las aportaciones disponibles y que tienen relación con el tema.

REVISIÓN LITERARIA

Los investigadores que se han ocupado del tema de la pertinencia de la educación superior en los países latinoamericanos, han enfocado sus esfuerzos con diversos intereses y perspectivas entre las que se pueden mencionar la vinculación de las universidades con los sectores productivos y con la sociedad; la calidad y eficacia de los planes de estudio y sobre la necesidad de que las instituciones se adapten al cambiante mundo de las tecnologías de la información, que en la actualidad permea a todo los ámbitos de la vida y la forma de hacer negocios.

En el campo de la enseñanza de la ciencia económica a aspirantes a economistas, destacan los estudios que cuestionan la compatibilidad de los contenidos con la realidad económica de la región; la eficacia de los métodos didácticos en la formación de los profesionales de la materia y hay quienes inclusive objetan la conveniencia de enseñar conocimientos y métodos propios de países desarrollados.

Por último, pero no por ello menos importante, existen estudios que tratan sobre la conveniencia de adaptar los esquemas de enseñanza de la economía a las necesidades de otras carreras como las ingenierías. Para Malagón (2003), el tema de la pertinencia de la educación superior debe enfocarse desde cuatro puntos de vista: El primero se refiere a la necesidad de que las universidades se sintonicen con el mundo actual y sus dinámicas; el segundo se relaciona a la vinculación con el sector productivo, mientras el tercero enfatiza la naturaleza social de la vinculación de la universidad y su entorno; el cuarto, denominado integral, resulta de alguna forma como síntesis de los anteriores e introduce al currículo como un eje central de la pertinencia. Para este autor los sistemas pedagógicos convencionales han mostrado su incapacidad para responder a las necesidades actuales de una formación integral centrada en la creatividad, comprensión, participación y construcción social del conocimiento. Por su parte para

Michael Gibbons (1998), el hecho de que las universidades sean instituciones estables y resistentes al cambio, plantea la interrogante de si serán capaces de responder a las cambiantes necesidades de los estudiantes y los empresarios del siglo XXI.

Para la investigadora venezolana Hebe Vessuri (1996), la multiplicación de clientelas, la competencia de otras instancias de saber y formación; la presión de la lógica comercial y empresarial, las demandas de mayor transparencia pública, el aumento del ritmo y del costo de la renovación de conocimientos, son algunos de los temas que plantean a las universidades latinoamericanas importantes desafíos para su modernización y adecuación al nuevo entorno. De las investigaciones que se ocupan de la pertinencia de la enseñanza de la ciencia económica a los futuros profesionales de la economía, para los efectos de este trabajo llaman particularmente la atención dos tipos: Las que se ocupan de los aspectos didácticos y las que cuestionan la pertinencia del paradigma neoclásico y las limitaciones del lenguaje matemático que este modelo involucra.

Alexander Tobón (2008), al explorar algunos elementos didácticos para la construcción de una propuesta pedagógica para la enseñanza de la economía, considera cuatro esferas del proceso educativo: la cátedra magistral renovada, el trabajo académico en el aula, el trabajo académico fuera del aula y la asesoría. Este autor advierte que para llevar a cabo este objetivo, es necesario antes que nada determinar la relación profesor-estudiante como fundamento del proceso.

La especialista argentina Karina Forcinito (2009), en un documento en el que presenta algunas reflexiones en torno a la enseñanza de la economía a profesores en la materia, propone un método guiado por paradigmas y en interdisciplinariedad con las otras ciencias sociales. De las investigaciones que reflexionan sobre la pertinencia de la enseñanza de la economía basada en el paradigma de la corriente neoclásica, aquí consideramos el trabajo de Gómez León (2007) y el de Olmos (2006). Estos autores, con enfoques y argumentación diferente, cuestionan el uso del lenguaje matemático en la economía y la influencia que los paradigmas de la escuela neoclásica han tenido en las facultades de economía de Latinoamérica.

METODOLOGÍA

Es relativamente fácil advertir que la economía y la administración de negocios internacionales se traslapan en muchas formas. Para ser competente el economista necesita poseer un conocimiento razonablemente satisfactorio de cómo actúan los hombres de negocios, pero éstos para ser competentes requieren saber interpretar lo que ocurre fuera de sus propias actividades.

Es con estas premisas básicas que nuestra investigación sobre la pertinencia de la enseñanza de la economía a estudiantes de comercio internacional se enfoca, y para ello es que estamos trabajando en precisar los aspectos metodológicos que nos permitan revisar a conciencia el estado del arte en el tema y conocer a la mayor profundidad posible, tanto las características de la demanda del mercado de trabajo de nuestros graduados, como el desempeño por ellos logrado en su vida profesional. De esta forma estaremos en posibilidad de replantear los contenidos de la enseñanza de la economía y materias afines en nuestra universidad.

RESULTADOS

El resultado general esperado, consistirá en un Plan de Estudio de la Carrera de Licenciado en Comercio Internacional, que contemple un currículo y contenidos didácticos más acordes a las necesidades reales que el egresado habrá de enfrentar en su desarrollo profesional. En la misma forma se espera con lo anterior diseñar un Perfil del Egresado compatible con los requerimientos del mercado de trabajo del profesional del comercio internacional en nuestro país y eventualmente en otras partes del mundo.

CONCLUSIÓN

Nuestra expectativa al presentar esta investigación en proceso en este Congreso Global en Administración de Empresas y Finanzas, es el de conocer proyectos similares que se pudieran estar llevando a cabo en países hermanos del continente, contactar con los responsables y compartir experiencias, metodologías y hallazgos que faciliten y enriquezcan los resultados en beneficio de los nuevos profesionistas que el desarrollo integral de las economías demanda.

LA EDUCACIÓN COMO FACTOR DE COMPETITIVIDAD Y DESARROLLO HUMANO EN LA MICROEMPRESA CANCUNENSE

Miguel Angel Olivares Urbina, Universidad del Caribe

Francisco May Hernández, Universidad del Caribe

Oswaldo Aguilera Muñoz, Universidad del Caribe

RESUMEN

La presente investigación permite identificar las características de la microempresa del municipio de Benito Juárez en el Estado de Quintana Roo, México, al considerar el factor educación de sus propietarios y descendientes y su relación con la competitividad de sus empresas. Con respecto a este tipo de empresas existen pocos datos estadísticos fiables, ya que en su mayoría estos establecimientos se encuentran dentro del sector informal, desconociendo exactamente su aportación a la riqueza del país. Según NAFIN (Nacional Financiera) se calcula que el 43% de las empresas fracasa por errores administrativos y que sólo dos de cada 10 empresarios está capacitado formalmente para administrar su propia empresa.

PALABRAS CLAVE: Microempresa, educación, desarrollo.

INTRODUCCIÓN

En México el 96% de las empresas son micro (S.E., 2010), la mayoría de estas surgen de una corazonada más que de un conocimiento significativo del negocio y sus características, siendo solo un medio de subsistencia para su propietario. Identificar las características de las microempresas facilita el proceso de desarrollo de programas y políticas acordes a la problemática de estas unidades productivas, mejorando la calidad de los empleos existentes, creando nuevos empleos e incrementando su productividad a fin de mejorar las condiciones en las que se desenvuelven buscando reducir la pobreza. Una de las limitaciones más frecuentemente señalada en este tipo de empresa es la baja calidad de gestión empresarial que poseen, entendida ésta como la poca capacidad gerencial de sus dueños debido al bajo nivel de escolaridad, mejorar la productividad e ingresos en este importante segmento podría repercutir en la reducción de la pobreza y la desigualdad. Según la visión del Banco Mundial, la educación podría ayudar en la transición hacia un nivel más próspero de autoempleo y de bienestar (McGrath, Kenneth, 1994).

REVISIÓN LITERARIA

En México, la Secretaría de Economía considera microempresa a la que tiene entre 0 y 10 trabajadores, independientemente del sector al que pertenezca. De acuerdo al último censo económico del INEGI 2004, de cada 100 empresas mexicanas, 96 son microempresas; contribuyen con el 40.6% del empleo y aportan el 15% del PIB, por lo anterior las microempresas representan un sector estratégico de crecimiento económico y de empleo fundamental para el país. Sin embargo las microempresas presentan desventajas ante la incorporación de nuevos modelos de negocios, lo que impide la sobrevivencia y permanencia de las mismas en el mercado, entre las principales desventajas podemos mencionar:

- Limitada profesionalización.
- Crecimiento desordenado.
- Imagen comercial descuidada e insalubre.
- Administración informal
- Limitados accesos al financiamiento.

Otras características de las microempresas son la gran facilidad de entrada y salida y el poco uso de la tecnología las cuales inciden en su pobre desarrollo. Ocho de cada diez microempresas señalan que tienen problemas, entre los que destacan: falta de clientes, competencia y bajas ganancias. Sin embargo nueve de cada diez microempresarios están dispuestos a continuar con sus empresas (Contreras, 2006), pero en su mayoría no cuentan con un plan de mejora empresarial por lo que se vislumbra un futuro incierto y sin cambios.

En nuestro país, la mayoría de la sociedad se encuentra inmersa en los problemas típicos de los países en vías de desarrollo (desempleo y pobreza), en la cual los individuos buscan autoemplearse estableciendo una unidad productiva, a fin de generar ingresos destinados específicamente al consumo a fin de poder subsistir.

En un estudio realizado por el Banco Interamericano de Desarrollo (BID) y la Fundación para el Desarrollo Sostenible (FUNDES) destaca que la edad promedio de los dueños de microempresas varía entre los 35 y 40 años, su principal motivación de los dueños para iniciar sus proyectos tiene que ver con aspectos personales y su nivel educativo es muy variable. La educación formal en las microempresas en América Central alcanzó una media de cinco años para 1999, lo que implica que los trabajadores no terminaron la primaria. Afirma que el 48% de los ocupados no ha completado la primaria, mientras que un 41% no terminó la secundaria y menos del 12% ha logrado una calificación mayor a la secundaria (Arroyo, 2002). El nivel educativo de los microempresarios refuerza el hecho de que los negocios que éstos dirigen se concentran en actividades de baja complejidad (como el comercio y los servicios), de poca productividad, y por tanto de reducidos ingresos.

METODOLOGIA

El objetivo principal de la investigación es identificar las características de las microempresas cancenenses cuya sobrevivencia y competitividad se encuentra relacionada con la educación de los propietarios y sus descendientes. ¿Representan las microempresas un sector estratégico para reducir la pobreza y mejorar el bienestar de sus propietarios y descendientes? ¿Crean empleo y contribuyen significativamente a incrementar la riqueza del país? ¿Es la educación el camino para mejorar la productividad y la competitividad de las microempresas y el nivel de vida de las familias que dependen de ellas?

El estudio esta sustentado en una investigación documental y de campo de tipo descriptiva, para el logro de los objetivos se siguió el siguiente procedimiento:

- a) La población objeto de estudio fue la correspondiente a 24,466 Microempresas de diferentes sectores económicos registradas en el SIEM del estado de Quintana Roo.
- b) La investigación se baso principalmente en información obtenida por medio de un cuestionario dirigido a propietarios de microempresas, de los tres sectores productivos. (Anexo 1).
- c) El procesamiento de los datos cuantitativos se realizó mediante estadística descriptiva y los resultados son mostrados mediante cuadros.

RESULTADOS

Considerando la clasificación de empresas de la Secretaría de Economía con base al número de empleados, el 100% de las empresas encuestadas en el municipio de Benito Juárez, Quintana Roo, corresponden a microempresas. El 11% no cuenta con Registro Federal de Causantes (RFC). El principal motivo de emprendimiento es originado por una necesidad, seguido del deseo de incrementar el ingreso familiar con un 36 y 35 por ciento respectivamente y solo el 29% emprendió al detectar una oportunidad.

El 86% de los microempresarios destina a la educación entre el 15 y 30 por ciento de sus ingresos.

El 46% de los propietarios cuenta con un nivel de educación básica, el 20% cuenta con estudios de preparatoria y con algún título universitario el 34%. Asimismo en promedio los hijos se encuentran en niveles educacionales de nivel básico con un 36%, preparatoria con un 36% y a nivel universitario con un 27%.

Con respecto a la contribución a los ingresos familiares un 48% de los entrevistados comentó que existe un ingreso adicional al de la microempresa, ya sea por parte de la esposa o hijos, asimismo la participación de la familia en la operación del negocio es fundamental ya que los hijos apoyan en el 31% de los casos y la pareja en un 26%. El 71% de los encuestados se encuentra más satisfecho económicamente que antes de iniciar el negocio y en un 81% de los casos respondió que el negocio ha contribuido a una mejor relación familiar. El 65% de los microempresarios ahorran, de los cuales el 67% lo hace en bancos, el 12% en cajas de ahorro y el 21% en otro tipo de esquema de ahorro.

CONCLUSIONES

Independientemente de los beneficios que las microempresas aportan a la economía del país, estas enfrentan grandes problemas que deben ser resueltos para hacerlas más competitivas. La microempresa ha sido para la mayoría de sus propietarios un medio de subsistencia como resultado del desempleo y en muy pocos casos surgen como una oportunidad de mercado. Una de las principales causas de fracaso de la microempresa es la falta de preparación de sus dirigentes, con poca cultura empresarial, independientemente de la calidad de sus productos y/o servicios, lo que les impide ser competitivos. En este sentido, la educación y capacitación en temas administrativos se presenta como una alternativa que requieren muchos microempresarios para competir en los diversos mercados en el que se desenvuelven, ya que sin una inversión en educación y formación de sus propietarios y descendientes nunca pasaran a un estado de generación de riqueza. Existe una relación directa entre el nivel de escolaridad de los propietarios y la gestión empresarial, a medida que se incrementa el nivel de escolaridad de los propietarios, la microempresa pasa de un estado de subsistencia a uno de generación de riqueza y de mayor bienestar.

EVALUACIÓN DE PROPUESTA DE MODELO DE CERTIFICACIÓN MUNICIPAL DE COMISIONES DE LOCALIDADES FÍLMICAS

Julio Alonso Iglesias, Universidad Veracruzana

RESUMEN

La actividad integrada de la relación cine y turismo, se va fortaleciendo cada día en México, cada año se realizan más de 1000 filmaciones de películas, comerciales y cortometrajes mediante el apoyo de comisiones fílmicas ya sean de carácter federal o local, que promueven los espacios geográficos de las regiones a las que representan estas comisiones, su vez que ofrecen los servicios turísticos servicios, como apoyo a la filmación de películas y otros productos audiovisuales. Sin embargo esta actividad se encuentra en un proceso inicial de desarrollo a nivel estatal, en lo jurídico y operativo, y a nivel municipal es incipiente y es precisamente donde las comisiones fílmicas municipales pueden articular con mayor profundidad las relaciones entre el sector turístico local y las empresas del sector que seleccionan su espacio geográfico para desarrollar su producto. Esta evaluación busca justificar la creación de un modelo de comisión fílmica municipal, que cumpla los objetivos de promoción y apoyo a la filmación de películas, que beneficie a la comunidad local y a las empresas relacionadas que dan apoyo a estas compañías de filmación y se plantear un proceso de certificación como medio de control de calidad en sus operaciones y garantizar su viabilidad a largo plazo.

PALABRAS CLAVE. Cine, turismo, municipio y comisiones

INTRODUCCIÓN

Actualmente en el mundo se desarrolla una gran actividad económica en relación a la filmación de películas, programas de televisión, comerciales, y documentales, que generan a nivel mundial un ingreso de más de 120,000 millones de dólares y dan empleo a cientos de miles de personas ya sea de manera directa o indirecta. Adicionalmente es uno de los canales más eficientes para exportar la cultura e imagen de los países.

Un punto importante, es la relación que tiene con la actividad turística, que le da el soporte para lograr a filmación de estos productos, no solo a nivel local, también allende las fronteras, con apoyos como hospedaje para los actores, personal de producción y de apoyo, también el servicio de catering, transporte local y foráneo, ya sea terrestre aéreo o naval. Salones de reuniones de trabajo y medios de comunicación. Por otro lado se requiere el apoyo de las autoridades ya sean locales, estatales y federales, para las licencias y permisos diversos, para la filmación de los productos. Por último están los indispensables escenarios para la filmación que pueden ser las calles, museos, edificios históricos, parque, zonas naturales, playas, e islas entre otros que permiten recrear los entornos necesarios para el desarrollo de estos. La integración de estos elementos se puede lograr con la creación de una comisión fílmica, que coordine la actividad turística de la comunidad local y de poblaciones aledañas, conocer y ofrecer los escenarios naturales que cuenta el municipio, y a su vez facilitar la producción de películas y otros productos, mediante la gestión de las licencias y permisos mediante el procedimiento de una ventanilla única. Los objetivos de una comisión fílmica deben ser:

El fomento y desarrollo del sector cinematográfico y audiovisual en general.

La promoción del espacio geográfico que cubre.

La coordinación, gestión y promoción de los agentes económicos y culturales que intervienen en la producción del sector.

Participar en las actividades de desarrollo, normatividad, debate de la relación cine-turismo.

En el caso de México, los bajos costos de filmación, permiten que sea un lugar atractivo para las producciones cinematográficas.

REVISIÓN LITERARIA

Desde que se creó en 1975 la AFCI, el proceso de implantación de comisiones fílmicas, se ha extendido a nivel mundial, llegando a más de 300 las oficinas en todo el mundo, y el beneficio de algunas de ellas a ha llegado a ser de ingresos mayores a 5,000 millones de dólares al año que han beneficiado a la comunidad local. A nivel nacional existe prácticamente de manera nula investigación sobre el tema, sin embargo a nivel internacional, existen algunas trabajos de investigación en torno a la relación de cine y turismo, sin embargo es hasta años recientes que se analiza con mayor detalle el trabajo que desempeñen las comisiones fílmicas, algunas investigaciones analizan el tema desde el punto de vista previo como generador de recursos, otros como generador de recursos económicos de manera posterior a la producción y también existen investigaciones del impacto que genera en el espacio geográfico en el que se desarrolló la filmación. Así como investigaciones que tratan los temas como el impacto cultura y la imagen que genera al resto del mundo los espacios geográficos de la filmación la investigación de algunos

METODOLOGÍA

La investigación será de carácter transversal y explicativa, de manera inicial se realiza un trabajo de diagnóstico en diversos estados de la República Mexicana, de la situación que guardan los municipios que han tenido actividad de producción fílmica, el estado que guarda la actividad turística local y el marco jurídico en el que operan, para efecto de tener elementos que permitan desarrollar un modelo único de certificación de las comisiones fílmicas municipales y sus indicadores respectivos de medición del desempeño de las mismas con el fin de que los responsables de los mismos puedan tomar decisiones en la gestión de los mismos. En la segunda etapa de la investigación y desarrollo, se concentrará en el estado de Veracruz, que ha tenido actividad de producciones fílmicas de carácter nacional e internacional.

La Hipótesis A Confirmar Es: Existen las condiciones para la certificación del modelo de operación de las comisiones fílmicas a nivel municipal que permitan su evaluación y posterior toma de decisiones en su desempeño.

RESULTADOS DE LA INVESTIGACIÓN

El diagnóstico previo que se realizó en 14 municipios de los estados de Veracruz, Puebla, Distrito federal y Baja California, en el que se realizó un trabajo documental en el aspecto jurídico y de campo en el estudio del aspecto turístico local permitió desarrollar un análisis de los factores que inciden en la actividad de las comisiones fílmicas y que permiten tener variables para el desarrollo de indicadores de gestión.

CONCLUSIONES

En base a los resultados obtenidos en la primera etapa de la investigación actualmente se está trabajando en la propuesta del modelo de operación de estas y los indicadores que permitirán evaluar su desempeño y su posterior certificación con el fin de poder conocer el estado que guardan las comisiones fílmicas municipales y colaborar en el desarrollo de mejores políticas que permitan a estas competir favorablemente en un entorno internacional cada vez mas complicado en atraer las producciones fílmicas que se realizan a nivel mundial.

Gloria Vidrio Llamas, Universidad de Guadalajara

ABSTRACT

La agresividad con que los empresarios enfrentan los retos hoy, integrándose como parte de un grupo empresarial para generar fuerza en el mercado competitivo o adhiriéndose a bloques estratégicos emprendidos por los gobiernos de algunos países que estos emprenden en el afán de impulsar a las empresas. La generación de nuevos mercados los cuales se acercaron más a México, una vez que apareció el Internet como herramienta estratégica de ventas, además de que emergió Rusia como un mercado desecho y que hoy en día viene a ser un centro mas de distribución de el Tequila jalisciense, aunado a esto es necesario considerar los cambios tecnológicos que se han tardado algunos años en llegar al campo mexicano por lo que es necesario que el Consejo Regulador del Tequila, de los primeros pasos en una apertura y se presente como el impulsor de la tecnología al campo mexicano obteniendo ganancias para sus empresarios siendo el primero en garantizar apoyos para el campo dejando de ser esta una carga para la ya tan azotada economía mexicana vía impuestos. La presente investigación pretende llevar a cabo el análisis de una empresa productora de agave azul tequilana weber, y abastecedora exclusiva de una compañía tequilera, filial de esta misma, situada en los altos de Jalisco y cuyo centro de operaciones se encuentra en Tepatitlán de Morelos, y pretende crear un modelo administrativo que sea utilizado en la administración de las operaciones del campo, y que con esto pueda controlar el mismo la producción de su agave. Se implementaron una serie de herramientas administrativas las cuales se espera generen resultados económicos favorables tanto en la reducción de costos de producción y provocar certidumbre en el control de inventarios, calidad de la materia prima para la empresa tequilera a la cual abastece de manera exclusiva, necesario para planificar sus ventas futuras de manera confiable y rentable. El análisis contempla la participación activa y el involucramiento de todo el recurso humano que participa directa e indirectamente en las operaciones agrícolas y administrativas de la empresa. La hipótesis a la cual se le pretende dar respuesta al termino de la presente investigación es que “Los modelos administrativos hechos para la industria tequilera en la producción de agave generaran ganancias para los productores tequileros evitando con ello la propagación de plagas en la planta acrecentando la industria y colocándola como potencial para el Estado de Jalisco”,

INTRODUCCIÓN.

La falta de planeación en el agro mexicano, es uno de los grandes problemas a los que se ha enfrentado México, sin embargo para la industria tequilera, represento una gran ventaja y oportunidad de negocio con las naciones al contar con la protección que otorga la Denominación de Origen del Tequila (DOT) según el diario oficial de la federación, 5 de Diciembre de 1974.

Desde entonces y hasta la fecha muchos son los problemas que ha tenido la industria tequilera jalisciense entre otros, sobreoferta de materia prima y con ello el desplome de precios y la escasez de la misma ocasionando una competencia voraz entre los industriales por conseguir el agave, pagando precios elevados por kilogramo disminuyendo considerablemente las utilidades de las grandes empresas y el

cierre de algunas pequeñas tequileras, desaprovechando así el “boom” del tequila que se puso de moda en todo el mundo a partir del año 1996 y que ha crecido de manera importante.

Muchos son los inconvenientes que los productores de agave han presentado a los tequileros en el afán de conseguir el aseguramiento de un precio alto para la materia prima del tequila, pero nada comparado a la voz de los especialistas quienes con su ciencia pueden apoyar en la eliminación de barreras para la producción de esta, por lo tanto es necesario priorizar los apoyos al campo pues por la urgencia del productor las plantas llegan a comercializarse aun sin madurar generando con esto plagas y daño a los ecosistemas y podría ser este el fin de algo que pudo ser detonante de fuentes de empleo seguras e ingresos para Jalisco.

En el año del 2000 se acrecentó la escasez de materia prima la industria tequilera demandaba grandes cantidades de agave según el Consejo Regulador del Tequila (CRT) tan solo en el primer semestre de 1999 se consumieron 339 mil toneladas 50 mil toneladas menos que en 1999 con un precio por kilogramo de agave de tan solo \$10.00 pesos. Lo que generó este problema fue que varias industrias tequileras cerraron, se compraron variedades diferentes al Tequilana Weber variedad azul, y el aumento de siembras del producto atraídos por la demanda de este, además fue aquí cuando las empresas tequileras iniciaron de nuevo en la siembra de su propio producto incluso y lo más riesgoso fuera de la zona de denominación de origen.

Próxima se encuentra la industria a enfrentar una escasez del producto, por un lado debido al desaliento de algunos productores por el último precio presentado que rondaba los \$3.00 a \$4.00 pesos por kilo de agave además de plagas que se han presentado y la falta de apoyo al campo principalmente a este que es un sector que da empleo a varias familias y que poco a poco ha ido muriendo. La empresa en cuestión a quien llamaremos “Agaves Azules” objeto del presente estudio entre 1998 y 1999 inició con la compra de predios de agave para cumplir con los volúmenes de producto que el cliente le solicitó ya que sus propias siembras no le garantizaban la cantidad requerida en ese momento se llegaron a pagar hasta \$17.00 por kilo de agave.

La hipótesis a la cual se le pretende dar respuesta al término de la presente investigación es que “Los modelos administrativos hechos para la industria tequilera en la producción de agave generaran ganancias para los productores tequileros evitando con ello la propagación de plagas en la planta acrecentando la industria y colocándola como potencial para el Estado de Jalisco”, las malas prácticas en la siembra de agave azul tequilana weber, por la ambición de ganar unos cuantos pesos más en el presente sin ver hacia el futuro por ejemplo se calcula que desde la plantación hasta la “jima” (*labor de cortar las pencas y el tallo subterráneo, se llama la jima, y el experto que la realiza es el jimador*) (Ruy Sanchez, 2007), o cosecha del agave trascurren de diez a catorce años, por lo que habría que aclarar que el ciclo del cultivo varía no solo de acuerdo a con las diferentes regiones donde se cultiva, sino también dentro de una misma plantación. Sin embargo los productores antiguos comentan que se ha reducido el ciclo del cultivo en al menos 2 años. Ellos creen que esta reducción se debe principalmente al manejo actual, reforzado por la selección de hijuelos grandes, la fertilización, el control de maleza los laboreos de suelo (Valenzuela, 2003).

Este es el momento de prevenir porque si los especialistas detectan que las plagas pueden desaparecer la inversión que se hiciera en este momento se convertirían en ganancias fructíferas en el corto plazo. Parte de una situación de crisis (*generalizada en todo el sector agavero*), por altos costos de producción, poca disponibilidad de agave para ofrecer al consumidor tanto en cantidad como en calidad, en esta época donde la demanda es alta y el precio elevado, un mal manejo de los recursos tanto humanos como materiales y económicos y el poco o nulo interés que existe tanto por la empresarios del tequila como por el CRT por tener un producto de calidad ocasionaran que en un momento dado exista una crisis de

dimensiones incalculables en torno un añejo producto del cual somos herederos y que por esto nos toca cuidar.

En México existe una gran carencia de sistemas y técnicas administrativas aplicadas como tal en los agro negocios, derivado quizás, por la tenencia de la tierra tan pulverizada que no permite una planeación adecuada en la producción de cultivos a gran escala, o por la falta de capacitación y conocimiento de metodologías administrativas por parte de los actores directos e indirectos en la agricultura del país, que coadyuven a eficientar los recursos utilizados en el agro Mexicano y obtener mayores utilidades que generen crecimiento económico de las regiones (SAGARPA, 2008).

La agresividad con que los empresarios enfrentan los retos hoy, integrándose como parte de un grupo empresarial para generar fuerza en el mercado competitivo o adhiriéndose a bloques estratégicos emprendidos por los gobiernos de algunos países que estos emprenden en el afán de impulsar a las empresas. La generación de nuevos mercados los cuales se acercaron más a México, una vez que apareció el Internet como herramienta estratégica de ventas, además de que emergió Rusia como un mercado desecho y que hoy en día viene a ser un centro mas de distribución de el Tequila jalisciense, aunado a esto es necesario considerar los cambios tecnológicos que se han tardado algunos años en llegar al campo mexicano por lo que es necesario que el CRT de los primeros pasos en una apertura y se presente como el impulsor de la tecnología al campo mexicano obteniendo ganancias para sus empresarios siendo el primero en garantizar apoyos para el campo dejando de ser esta una carga para la ya tan azotada economía mexicana vía impuestos.

Importante considerar que el administrador de empresas agroindustriales no solo deberá contar con conocimientos administrativos obtenidos en sus años de paso por las Universidades, sino que además deberá ser generador de ideas y comprensión del campo, profundo entendimiento de factores de tipo biológico que pudieran afectar a la planta, además de estar listo para los cambios drásticos del mercado debido a los constantes problemas climatológicos, tecnológicos e incluso cambios drásticos en las políticas gubernamentales ya sea de México o de los países compradores del producto.

El administrador de un agronegocio muestra variados niveles de la aplicación de estas habilidades dentro del proceso administrativo. Pudiendo ser exitosos aquellos quienes han dominado y logrado controlar tanto los aspectos técnicos de su negocio como sus habilidades técnicas de administración, y que además pueden aplicar las correctas combinaciones de estas dos para controlar cada nueva situación que se le presente (Bererlein & Schneeberger, 1986).

La presente investigación pretende llevar a cabo el análisis de una empresa productora de agave azul tequilana weber, y abastecedora exclusiva de una compañía tequilera, filial de esta misma, situada en los altos de Jalisco y cuyo centro de operaciones se encuentra en Tepatitlán de Morelos, y pretende crear un modelo administrativo que sea utilizado en la administración de las operaciones del campo, y que con esto pueda controlar el mismo la producción de su agave.

Se implementaron una serie de herramientas administrativas las cuales se espera generen resultados económicos favorables tanto en la reducción de costos de producción y provocar certidumbre en el control de inventarios, calidad de la materia prima para la empresa tequilera a la cual abastece de manera exclusiva, necesario para planificar sus ventas futuras de manera confiable y rentable. El análisis contempla la participación activa y el involucramiento de todo el recurso humano que participa directa e indirectamente en las operaciones agrícolas y administrativas de la empresa. Por lo tanto es necesario además llevar a cabo las siguientes acciones como parte esencial del logro del objetivo principal:

- Realizar un diagnóstico de la situación de la empresa en cuanto a producción de agave en los últimos años así como entablar una relación de estos con los indicadores que afectan la calidad (kilogramos de agave por piña, % azúcares reductores).
- Reorientar la misión, visión y valores de la empresa haciendo que formen parte de ello al personal.
- Establecer el organigrama de producción de agave haciendo que con este se reorienten las estrategias administrativas de tal forma que la visión se convierta en una empresa agroindustrial.
- Capacitar al personal de la organización generando instrumentos que permitan eficientar su desempeño.
- Establecer un control en el manejo de recursos materiales permitiendo la reducción significativa de costos en el cultivo. Así como identificar y proponer la estructura de costos del cultivo de la empresa.
- Dar los primeros pasos en la generación de la cultura de creación de modelos administrativos a la medida de los agronegocios.

De suma importancia se considero llevar a cabo la aplicación de la teoría y los conceptos básicos de administración, esperando encontrar explicación a situaciones internas (manejo inadecuado de los recursos, falta de planeación de actividades, falta de compromiso y poca motivación del recurso humano, etc.) que afectan a la producción de agave azul, *Tequilana Weber*, materia principal en la elaboración de tequila. Para lograr el cumplimiento de los objetivos planteados, se recurrió a las técnicas y herramientas básicas de la administración, y se busco adecuar un modelo especial para la producción de agave, así mismo se emplearon estrategias de desarrollo organizacional, para el manejo del personal que participa directa e indirectamente en las operaciones agrícolas y administrativas de la empresa generando una alta motivación y un compromiso con la misma. Los resultados previos sin ser definitivos aun ya que no ha terminado el tiempo de análisis propuesto que es hasta el término de madurez del agave.

RESULTADOS PREVIOS

1. Desde la implementación del modelo que inicio a finales del 2005, optimizo la productividad en la organización reflejándose en los flujos de trabajo.
2. Se efectuó de manera inicial el análisis DOFA, los resultados permitieron plantear adecuadamente las estrategias administrativas acorde a la organización invitando a mejorar la calidad en la totalidad de los procesos.
3. Los marcos de referencia de los principios administrativos que fueron consultados resultaron compatibles con el desarrollo organizacional de “Agaves Azules” lo cual se espera que de cómo resultado un agronegocio demasiado productivo.
4. Se da prioridad al manejo del control de inventarios, apoyando a los jefes de área para el establecimiento de “actividades clave” que presenten una reducción de costos considerable en relación a los años anteriores.
5. Escuchar con constancia al personal reconociéndoles los éxitos logrados apoyándolos en el logro de objetivos personales acordes con los institucionales provocando con ello que se sientan útiles y procuren la mejora constante.
6. Se realizan actualmente la redefinición de puestos para establecer al personal en el lugar adecuado, logrando un beneficio a la organización en el aspecto económico.
7. A la vez que se manejan los perfiles de puesto se evalúan las necesidades de capacitación a fin de elaborar un programa de capacitación de personal.

EFFECTOS ECONÓMICOS Y SOCIALES DERIVADO DE LAS ACTIVIDADES TURÍSTICAS EN EL PUERTO DE MANZANILLO COMO DESTINO DE PLAYA

Aurelio Deniz Guizar, Universidad de Colima
Nuchnudee Chaisatit Thampalo, Universidad de Colima
Manuel Rubio Maldonado, Universidad de Colima

ABSTRACT

The port of Manzanillo, Colima, has lived far-reaching economic and social environments changes this has been reflected in the activities of the tourist and commercial area, the business side has had a great take-off to national and international levels, but not the tourism which has been relegated the tourism as predominant economic activity, tourism in the port is recognized as key to economic development, the generation of formal employment and development of our port in the State of Colima, in the commercial part flow of goods in the port operation has increased exponentially. As such, the investment in Manzanillo in the port field would be another way that society would be rewarded their activities linked to the business of the port side either within the tourist or business. , Manzanillo have not been exploited as a whole, because the interest of an investigation to identify strategies, as well as proposals to make this beach destiny place clearly attractive. The combination of the tourism industry with the port there has been, in spite of all the natural attractions to a beach destination. This research is related to the impact of tourism activities in the economic and social in Manzanillo, sector consideration to the quality of life of the inhabitants of Manzanillo, the distribution of income, global economic landscape, and factors that cause a variation in the level of life and finally make an analysis of the problems, giving thus proposed in where the supply of tourism, providing an increase in employment in those people dedicated to the tourist sector can increase depth. The main objective is to know in detail the impact tourism activities in the port, the economic and social sectors of the inhabitants of Manzanillo, as well as the standard of living of people who is working on tourism on the level of living that they have.

RESUMEN

El puerto de Manzanillo, Colima, ha vivido cambios trascendentales en los entornos económico y social, esto se ha reflejado en las actividades del ámbito turístico y comercial, la parte comercial ha tenido un gran despegue a nivel nacional e internacional, mas no así el turismo que se ha visto relegado como actividad económica preponderante, el turismo en el puerto es reconocido como pieza clave en el desarrollo económico, la generación de empleos formales y desarrollo social de nuestro puerto, en el estado de Colima, En la parte comercial el flujo de mercancías en la operación portuaria se ha incrementado de manera exponencial. Visto así, la inversión en Manzanillo en el ámbito portuario sería otra manera por la cual la sociedad vería recompensada sus actividades vinculadas a la parte comercial del puerto ya sea en el ámbito turístico o comercial. Turísticamente, Manzanillo no ha sido explotado en su totalidad, es por ello el interés de una investigación que permita identificar estrategias, así como realizar propuestas que hagan de este destino turístico de playa un lugar netamente atractivo. La combinación de la industria turística con la portuaria a la fecha no se ha realizado, a pesar de todos los atractivos naturales que un destino de playa debe tener. La presente investigación está relacionada con el impacto de las actividades turísticas tanto en el sector económico como social en Manzanillo, Examinando a profundidad la calidad de vida de los habitantes de Manzanillo, sus ingresos, distribución del ingreso, panorama económico global y factores que provocan una variación en el nivel de vida y finalmente hacer un análisis de las problemáticas, dando así propuestas en donde se pueda incrementar la oferta de las actividades turísticas, proporcionando un incremento laboral en aquellas personas dedicadas al ámbito turístico. El objetivo principal, es conocer de una manera detallada el impacto que tienen las

actividades turísticas que se practican en el puerto, en los sectores económicos y sociales de los habitantes de Manzanillo, así como el nivel de vida de las personas dedicadas al turismo.

INTRODUCCIÓN

Implementar técnicas para expandir mercado por medio de promoción y publicidad así como hacer gestión para que los inversionistas se interesen por Manzanillo y mejorar su infraestructura, es de lo que la Secretaría de Turismo Colima se ha encargado para formar un puerto más atractivo como destino de playa, es por ello que se ha hecho más frecuente el arribo de turistas y la sociedad se ha interesado en ofrecer los servicios necesarios que el turista demanda para tener una mejor estancia. La sociedad se interesa en ello para obtener un beneficio económico, el cual trae consigo una mejor calidad de vida y conforme se obtiene una mejor calidad de vida por medio de este ingreso los servicios van mejorando además surgen actividades turísticas las cuales son un atractivo adicional el cual genera una derrama económica y una fuente de empleo para la sociedad. En los últimos años, Manzanillo ha destacado por ser un puerto comercial muy importante y esto es una gran oportunidad para el sector turístico por ello, es muy importante que la sociedad esté involucrada debido a que gran parte de la población depende de las actividades turísticas que en el puerto se desarrollan. Esto solo será posible si se considera al turismo en el estado de Colima como una actividad económica de Prioridad cual debe ser, logrando de esta manera que la actividad turística se fortalezca como un instrumento de alto impacto para el desarrollo económico y social del estado y principalmente del municipio de Manzanillo, que el gobierno y la sociedad en su conjunto le reconozcan el papel estratégico que el turismo representa. Para ello es importante propiciar que los diversos servicios turísticos que se ofrecen sean impulsados a la utilización reactivando así el destino económicamente. Logrando de esta forma que las empresas que prestan servicios y productos turísticos en Manzanillo, tengan las características suficientes para ser competitivas en calidad, diversidad y precio para los mercados nacional e internacional que visitan Manzanillo como su opción en destinos de playa.

Problema científico: El impacto económico y social derivado de las actividades turísticas en Manzanillo como destino de playa.

Objetivo general: Buscar un equilibrio en los entornos económico y social derivado de las actividades turísticas que se realizan en el puerto de Manzanillo.

Objetivos específicos: Identificar el nivel de vida de las personas que laboran en el sector turístico del puerto de Manzanillo. Conocer el nivel social de las familias manzanillenses que son beneficiadas por el turismo de la localidad. Incentivar la calidad en la prestación del servicio. Crear una cultura turística en los habitantes de la localidad. Proponer alternativas de mejora para impulsar el turismo en Manzanillo. Realizar un acopio de información misma que sirva para futuras generaciones.

Objeto del estudio: Teórico: Lo económico, social y mercadotécnico aplicado en el entorno turístico. Práctico: La actividad Turística en Manzanillo, Colima, como destino de playa.

Área de investigación: El área de estudio de esta investigación es la Administración como actividad económica y en específico la economía, lo social y la mercadotecnia turística, como disciplina auxiliar en turismo, con las que habrá de conducirse este trabajo.

Tópicos de investigación: Administración, Economía, Mercadotecnia, Investigación de Mercados, Promoción, Comercialización y lo social.

Hipótesis de la investigación: Económicamente ¿Cómo impactan las actividades turísticas en la sociedad de Manzanillo, Colima?

MÉTODOS A UTILIZAR EN LA INVESTIGACIÓN

La búsqueda y acopio de datos se orientó a la obtención de información primaria ya que se obtuvo a través de investigaciones específicas (trabajo de campo), principalmente por medio de encuestas y de la observación, también se utilizó la investigación secundaria ya que se consultó a la Secretaría de Turismo del Estado de Colima, publicaciones oficiales de la Secretaría de Turismo, de la Organización Mundial de Turismo, etc. Se utilizaron métodos cuantitativos de los resultados obtenidos de las encuestas, se analizaron bajo métodos estadísticos y sobre hechos observables con la finalidad de poder controlar las variables y medir los resultados.

Se formó un grupo de voluntarios de la Escuela de Comercio Exterior integrado por 12 estudiantes que aplicaron encuestas directas tanto trabajadores del sector turístico como a proveedores de servicios turísticos para obtener las dos partes del estudio.

De acuerdo con Ceballos Hernández, este trabajo se auxiliará del método deductivo. Dado que se parte de lo general, a lo particular que sea aplicable a la realidad de la actividad turística en Manzanillo, Colima, México.

Técnicas a utilizar en la investigación: Visitas domiciliadas a trabajadores del sector turístico, Reuniones con prestadores de servicios turísticos, aplicación de encuestas, tormenta de ideas, entrevistas, sistemas estadísticos en la concentración de información, herramientas matemáticas.

Valor teórico: Lo fundamentan los conceptos actuales en materia de económica y social en los entornos turísticos y los entes involucrados en la prestación de los servicios.

Valor metodológico: Esta compuesta esencialmente por los marcos conceptuales y las estrategias diseñadas, con posibilidad de aplicación en el equilibrio económico y social de los prestadores de servicios turísticos.

Valor práctico: Se enfoca primordialmente a la factibilidad de lograr un equilibrio entre la fuerza laboral y el nivel de vida de los prestadores de servicios turísticos en Manzanillo.

Valor social: Radica en la identificar estrategias de cómo pueden mejorar las condiciones de vida las personas que se dedican a las actividades comerciales en el ámbito turístico en el puerto de Manzanillo. Si logran que los visitantes utilicen los servicios turísticos y propicien así una mayor derrama económica y una significativa reactivación económica local.

DESARROLLO

La obtención de la información relevante que pretenda ser lo suficientemente fiable depende potencialmente de un buen diseño de la encuesta, la cual servirá de base para el posterior análisis del estudio que se pretende realizar. Dentro de dicho proceso de búsqueda de información se deberá hacer hincapié que no solamente lo plasmado en la encuesta será considerado, en ocasiones, de una plática informal con el encuestado también se obtiene información valiosa que será importante tomar en cuenta. Para la creación y diseño del instrumento, se consideró determinante que éste no debería de ser muy extenso ya que era posible que el encuestado se rehusara a brindar su opinión, de lo contrario, haciéndolo con pocas preguntas e inclusive algunas de ellas con opciones, el proceso de obtención de la información sería más amigable. Adicionalmente se consideraron los siguientes aspectos: el enfoque de la investigación, las bases teóricas, los objetivos trazados, la variable que se pretende medir y el contexto donde se aplica el instrumento. Como se mencionó anteriormente, el objetivo era aplicar encuestas tanto a

los prestadores de servicio como a los trabajadores, y que al final las opiniones de ambos se pudieran confrontar y de esta manera obtener estrategias económicas y sociales que beneficien a ambas partes.

Cálculo Del Tamaño Del Mercado

Nos apoyaremos en el método de muestreo aleatorio simple con reemplazo. Consiste en obtener una muestra estadística al azar de una población, de forma que cualquier muestra de tamaño n tenga la misma probabilidad de ser extraída. Cuando la unidad seleccionada se repone en la población manteniendo constante la estructura de ésta, se dice que el muestreo es aleatorio con reemplazo.

Partiremos en que la población para calcular la muestra en la encuesta a los prestadores y trabajadores, estará en función de la cantidad de total de gente involucrada en el sector turístico, Para la estimación se usa la técnica de estimación por intervalos de confianza de poblaciones finitas. En nuestro caso, el objetivo del muestreo es analizar una proporción de prestadores de servicios y de trabajadores del sector para que a partir de éstas obtengamos conclusiones de la población total.

Conjuntando la información y utilizando las estimaciones, tenemos que el valor promedio de los turistas que llegan al puerto, es de 25,592 turistas, en ese periodo, siendo éste el valor que utilizaré como el Tamaño de la Población (N) para el desarrollo del presente estudio.

Para la estimación del tamaño de la muestra se utiliza la siguiente fórmula:

$$\text{Ecuación 1.0}$$

$$n = \frac{N Z^2 p q}{d^2 (N - 1) Z^2 p q}$$

En donde: Para calcular el tamaño de la muestra se utilizará la formula finita.

Z= nivel de confianza

p= probabilidad de éxito, o proporción esperada

q= probabilidad de que ocurra un evento

d= precisión (error máximo admisible en términos de proporción)

N= tamaño de la población. (lo que se desea conocer)

N= 20,673

Z= 95% = 1.96

$$n = \frac{(20,676)(1.96)^2 (.5)(.5)}{(.05)^2 (20,676-1) + (1.96)^2 (.5)(.5)} = \frac{19,857.2304}{52.6479} = 377$$

p= 50%

q= 50%

d= 5%

Para nuestra investigación utilizaremos un intervalo de confianza del 95%, con una probabilidad de 50% de que ocurra o no el evento. Y un intervalo de confianza del 95% para obtener así el error de estimación igual al 5%.

Realizando las operaciones se obtiene el tamaño de la muestra: **377**

Este resultado nos dice que nuestra encuesta deberá realizarse a cuando menos 377 personas para obtener un 95% de confianza en nuestros resultados obtenidos, por ello se optó por aplicarla a 400 personas. Una vez que se cuenta con la información necesaria, se realizará el análisis del mercado en general con cada una de las respuestas plasmadas, en donde se han detectado las corrientes actuales y las tendencias de los

involucrados, así como las necesidades genéricas de los mismos, con sus tipos de demandas. Está claro que para obtener estos resultados, los aspectos económicos y sociales no serán los únicos a investigar, tenemos muchas áreas de oportunidad, y gran parte de estas aparecieron en la encuesta, pero el presente trabajo solamente se avocará a los aspectos social y económico.

La investigación de campo se realizó en diversos establecimiento de hospedaje, agencias de viajes, tour operadoras, moteles, aerolíneas, arrendadoras de autos y todo aquel establecimiento que ofrece servicios turísticos en el puerto de Manzanillo, con el fin de obtener información confiable el cuestionario utilizado como instrumento de acopio de información contiene las siguientes preguntas:

1.- ¿En qué porcentaje considera que las personas que visitan Manzanillo hacen uso de las actividades que usted proporciona?

El 1.5% de las personas encuestadas consideran que las actividades turísticas que se realizan en manzanillo se utilizan del 10%, el 22% consideran que se utilizan entre el 10% y 30%, el 46.5% consideran que se utilizan el 40% y 60% y el 30% consideran que las actividades son completamente utilizadas por las personas que visitan el destino.

2.- ¿Qué actividades turísticas son las que se realizan más?

El 50% prefieren realizar actividades acuáticas, el 9.5% de los prestadores consideran que los turistas buscan actividades de turismo alternativo y el 40.5% de los prestadores consideran que las visitantes prefieren tours organizados

3.- En los servicios turísticos que su empresa otorga ¿cuál es la edad promedio del usuario?

El 1% de los visitantes son personas menores de 10 años, el 10.5% de 11-19 años, el 47% entre 20 y 35 años de edad, el 28.5% considera de 26 a 50 años y solo el 13% son personas de 51 o más años.

4.- ¿En temporada alta, cuanto es lo que considera que el visitante gasta aproximadamente en las actividades turísticas que realiza?

En el puerto de Manzanillo el 6.5% de los prestadores de servicios turísticos encuestados consideran que el 7% de las personas que vienen al destino gastan entre \$100 y \$300 pesos por servicios, el 15.5% entre \$400 y \$600 pesos, el 26% entre \$700 y \$900 pesos en servicios turísticos, el 20.5% entre \$1000 y \$1300 y finalmente el 31.5% gastan más de 1400 pesos.

5.- ¿Se les otorga algún descuento en las actividades turísticas?

El 59.5% de las personas que ofrecen servicios turísticos otorgan descuentos a sus clientes y solo el 40.5% de las personas no realizan descuentos.

6.-En las actividades turísticas que usted participa ¿considera que obtiene la remuneración adecuada?

El 69% de los prestadores de servicios turísticos no están conformes con las remuneraciones que se les otorga por parte de las empresas, el 31% consideran que de acuerdo a sus habilidades el salario es el adecuado.

6.1 ¿Obtiene algún beneficio adicional al realizar las actividades turísticas?

El 43% de las personas obtienen beneficios adicionales como propinas, el 20.5% trabajan con comisiones adicionales a su salario fijo y solo el 1% obtiene remuneraciones distintas a propinas y comisiones.

7.- En el tiempo que tiene trabajando aquí, ¿Ha obtenido algún ascenso o promoción laboral?

El 35.5% de los prestadores de servicios turísticos han obtenido ascensos el 64.5% no han sido ascendidos ya que consideran que hay preferencias

8.- En un aproximado ¿A cuánto ascienden sus ingresos diarios?

El 31% de las personas encuestadas gana de \$56 a \$150 pesos por día, el 41.5 entre \$151 a \$350 pesos, el 15.5% de \$351 a \$500 pesos por día, el 8.5% de \$501 a \$1000 pesos por día y solo el 3.5% de las personas tiene salarios considerables que van desde los \$1001 pesos a más por día.

9.- *En un porcentaje aproximado ¿Cuánto del dinero ganado se destina a los gastos familiares?*

El 26% de los encuestados aportan del 0% al 30% de sus ingresos a su familia, el 34% solo aportan del 40% al 70% de sus ingresos y el 40% trabajan para aportan del 80% al 100% de sus ingresos.

10.- *¿Cuenta con casa propia?*

El 81.5% cuentan con casa propia y solo el 18.5% cuentan con casas rentadas, casas compartidas con familiares o financiadas por el banco o diferentes instituciones.

10.1.- *¿La casa donde vive es propia, rentada, prestada, compartida o financiada?*

El 13% tienen casa propia, el 18.5 de las personas viven en casa rentada, el 18% de las personas comparten su casa con familia y el 50.5% de las personas viven en casa financiada por diferentes instituciones.

10.2.- *¿Cuantas recamaras tiene la casa?* El 15.5% cuenta con una recamara, 32.5% con dos, 45% con 3, 4.5% con 4 s, y 5% con 5 recamaras.

10.3.- *¿Cuántas personas habitan en su casa?* El 7% solos, el 12% de 2 personas, 31% de 3 personas, 23% de 4 personas, 23% de 5 personas y el 4% de 6 o más personas.

11.- *¿Qué tipo de transporte utiliza?*

El 35.5% en urbano, el 11% en taxi, el 1.5% en bicicleta, el 18.5% en moto y el 34% cuenta con auto propio.

12.- *¿Tiene hijos?*

El 59% Sí tienen hijos y el 41% No tiene.

12.1.- *Si tiene hijos ¿estudian?* El 50% Sí estudian y el otro 50% No estudia.

12.2.- *¿Qué tipo de escuela es en la que estudian?* El 74% están en publicas y el 26% en privada.

12.3.- *¿Cuál es el nivel de escolaridad de su(s) hijo(s)?* El 8% preescolar, 12% primaria, 18% secundaria, 34% bachillerato y el 28% universidad.

13.- *¿Qué actividad realiza usted en su tiempo libre?*

El 16.5% suele caminar, el 10.5% va al cine, el 2% va a la disco, el 7.5% va al gimnasio, el 12% leen y el 51.5% hace otras actividades.

14.- *La actividad que realiza, ¿Genera algún gasto para su economía?*

Al 63% les genera un gasto y el 37% hace actividades que no generan gasto significativo.

HALLAZGOS

Entre lo más significativo de las encuestas realizadas, encontramos que los prestadores de servicio están conscientes que las actividades de mayor utilización son las acuáticas pero que también la gente busca mucho los recorridos culturales y de ciudad y que existe una tendencia creciente al turismo alternativo, de las personas involucradas en el sector un gran porcentaje no cuenta con casa propia, no tiene auto para desplazarse, vive en casa financiada y tiene a los hijos estudiando lo que dificulta su avance en el nivel socio económico, emocionalmente se sienten frustrados por no haber logrado alguna promoción en su ámbito laboral, los deportes que realizan en su mayoría deben de ser aquellos que represente una erogación mínima ya que existe un número significativo de trabajadores que invierten del 80 al 100% en el gasto familiar es importante y urgente que los prestadores de servicios consideren y motiven a su

capital humano de lo contrario corren el riesgo de tener empleados y colaboradores poco competitivos lo que pone en riesgo que los visitantes no vivan intensamente el destino y por ende pierdan el interés en regresar al destino, afectando económicamente por igual a los involucrados en la prestación de los servicios turísticos.

En esta tabla se agrupan los resultados más significativos compilados en las encuestas.

CONCLUSIONES

El impacto económico y social que el turismo tiene en el puerto de Manzanillo es significativo, sin embargo el nivel de compromiso manifestado por autoridades y por la sociedad misma no permite el avance como se quisiera o se logra en otros destinos, Manzanillo es la punta de lanza del turismo en el estado y como tal debe de promocionarse ya que es una actividad económica que comercializada apropiadamente permitirá un efecto económico multiplicador que ayudará a elevar el nivel de vida de todos aquellos que viven de y para el turismo. Con la coparticipación de la población Manzanillense ofreciendo mejores servicios y atención a los turistas el destino se verá fortalecido por la fuerza que a la sociedad de Manzanillo caracteriza como es su amabilidad aunado a la inmensa riqueza natural con la que cuenta, ello conducirá a una mayor afluencia turística y por ende una reactivación económica del sector lo que se reflejará en un mejor nivel de vida de la población en general.

Probado esta que el turismo en el estado de Colima es una actividad que beneficia y reactiva la economía y contribuye de una forma significativa a elevar el nivel socioeconómico y cultural de los habitantes y Manzanillo no es la excepción ya que nadie puede negar que el turismo ha favorecido el desarrollo del puerto, pero falta mucho por hacer, para que los servicios que se ofertan en el destino sean utilizados de manera plena y no solamente por temporadas. Lográndose así mejores ingresos que van directamente en beneficio económico de la sociedad elevando el nivel de vida del trabajador, colaborador o prestador de servicios turísticos.

SIGNIFICADOS DEL PROGRAMA DE ESTÍMULOS A DOCENTES EN LA UNIVERSIDAD DE SONORA

Lidia Amalia Zallas Esquer, Universidad de Sonora

Francisco Espinoza Morales, Universidad de Sonora

Francisca Elena Rochin Wong, Universidad de Sonora

RESUMEN

*El programa de estímulos surge en los años ochenta y se le da impulso a partir de 1990 mediante un proceso de evaluación establecida institucionalmente en las Universidades. La investigación muestra los significados que construyen los docentes sobre el programa de estímulos en la Unidad Regional Sur de la Universidad de Sonora. El trabajo se inscribe dentro de la metodología cualitativa y se realizó mediante el método etnográfico. La información recabada corresponde a 25 entrevistas semiestructuradas a los docentes **que fueron** procesadas en el programa Atlas ti. Además se aplicó un cuestionario a 678 estudiantes de las Divisiones de Ciencias Económicas y Sociales y Ciencias e Ingeniería, procesados en el SPSS. Según los significados de los docentes el programa ha traído resultados positivos, también ha contribuido a la generación de sentimientos desfavorables y a la instauración de prácticas académicas no apropiadas para la institución, sin embargo los docentes tienen un desempeño adecuado desde el punto de vista de los alumnos. Es necesario crear espacios de reflexión, comprensión, empatía mediante el trabajo en equipo para motivar el trabajo académico que permita desarrollar un proceso de evaluación cualitativo. Procurar una cultura educativa donde la evaluación sea vista como un proceso de reflexión que favorezca el desarrollo del docente Universitario, eleve el mejoramiento académico en la Unidad Regional Sur de la Universidad de Sonora.*

PALABRAS CLAVE: evaluación docente, políticas de evaluación, construcción de significados.

INTRODUCCION

Las políticas de evaluación institucional tienen su origen durante el siglo XX. Entre 1983 y 1985, el Reino Unido, Francia y Holanda plantean la evaluación de programas académicos. En 1989, los países como México, Chile, Brasil y Colombia incluyeron en su Programa Nacional de Desarrollo la evaluación de los sistemas de educación superior. Los organismos internacionales de crédito, como el Fondo Monetario Internacional (FMI), parcialmente el Banco Mundial (BM) y la Organización para la Cooperación y Desarrollo (OCDE) han tenido una gran influencia en la determinación de políticas económicas y sociales (entre ellas las educativas) de los países en deuda, vía los condicionamientos al otorgar y negociar préstamos. En los noventa el Banco Mundial visualiza la posibilidad de manejar recursos adicionales, desvinculando los niveles de remuneración de las escuelas del servicio público, que se traduce en la implantación de programas de estímulos al desempeño, independiente del salario y de los préstamos, previa evaluación al desempeño (Izquierdo 2000).

En México, al inicio del sexenio de Miguel De la Madrid, la caída de los precios del petróleo y el aumento de las tasas de interés internacionales, internaban al país en un largo período de crisis que iba posteriormente a provocar drásticas reducciones al subsidio de la educación superior. La evaluación se vincula a la administración de los recursos financieros y es usada como vía para pedir cuentas a las instituciones de educación superior (IES). Con este fin, la Secretaría de Educación Pública (SEP) concede a las instituciones educativas líneas de financiamiento especial para cubrir los montos de las becas académicas. El programa de Evaluación del personal académico es instrumentado en el grueso del sistema de educación superior nacional; actualmente, la mayor parte de las instituciones educativas de este nivel mantienen este tipo de procesos (Rodríguez, 2000).

En el caso de la Universidad de Sonora se implementó en 1990, el programa de estímulos al desempeño docente con el propósito de compensar, reconocer y estimular la calidad, la dedicación y la permanencia en el trabajo docente. El diseño de los procedimientos mecanismos de evaluación son establecidos en el Reglamento del Programa de Estímulos al Desempeño del Personal Docente (2003). A partir del 2005, el Colegio Académico realiza algunas modificaciones al Reglamento del programa (del 2003), en donde la Comisión Institucional de Evaluación es la que se encarga de revisar y evaluar las solicitudes de ingreso al programa.

En la Unidad Regional Sur de Universidad de Sonora, el Programa de Estímulos se utiliza para evaluar las actividades académicas de los docentes de tiempo completo y que no trabajan más de ocho horas a la semana fuera de la institución. Dependiendo de los resultados de la evaluación obtendrá una puntuación total, se le asigna un nivel, pueden alcanzar de un salario de hasta siete salarios mínimos mensuales, en pago con periodicidad bimestral durante un año.

Estudiar los significados de los académicos de la Unidad Regional Sur acerca del programa de estímulos permite conocer, por un lado los resultados positivos del programa y por otro, los sentimientos desfavorables provocados por el mismo, de igual forma reconocer la instauración de prácticas académicas surgidas de la aplicación del programa, la valoración que realizan los académicos sobre la comisión de evaluación, además permite explorar que tipo de desempeño tienen los docentes que participan en el programa desde el punto de vista de los alumnos.

OBJETIVO GENERAL

Describir los significados que construyen los académicos acerca del programa de estímulos en la Unidad Regional Sur de la Universidad de Sonora.

METODOLOGÍA

La investigación fue realizada con el enfoque cualitativo Rodríguez, Gil (1999), Sandín (2003), Alvarez-Gayou (2005), mediante entrevistas semiestructuradas tuvieron una secuencia de temas y algunas preguntas sugeridas; presentan una apertura en cuanto al cambio de tal secuencia y forma de las preguntas, de acuerdo con la situación de los entrevistados. Se construyó un guión que tuvo la finalidad de permitir dar un seguimiento a la información para cada entrevistado permitiendo reflexionar sus vivencias, valoraciones y forma de conceptualizar los significados del programa de estímulos.

La información recabada corresponde a 25 entrevistas semiestructuradas aplicadas a 25 de los 48 docentes de tiempo completo que participaron en el Programa de Estímulos. Para decidir el número de entrevistas se coincidió con Bertaux (Rodríguez, 2000), que se refiere a un “punto de saturación” que consiste en un conocimiento profundo sobre el objeto de estudio, este punto puede ser alcanzado con más o menos entrevistas. Se aplicó un cuestionario a 678 estudiantes, fueron procesados en el SPSS, para conocer el desempeño de los académicos que participan en el programa de Estímulos.

RESULTADOS

Es a partir de 1990 que se impulsó el programa de estímulos al desempeño académico mediante un proceso de evaluación establecida institucionalmente (Izquierdo, 2000). La Universidad de Sonora, con el fin de fortalecer y profesionalizar la labor desempeñada por sus profesores de tiempo completo, contempla el programa de estímulos al desempeño docente: este programa, actúa como un mecanismo de estímulos que revierte a favor de los ingresos económicos del docente, es a la vez un instrumento de evaluación del profesorado. El docente que decide ingresar a este programa tiene conocimiento de que se le calificará su productividad académica a partir de sus funciones sustantivas: docencia,

investigación y difusión. los académicos se someten a un proceso de evaluación para ubicarlos en distintos niveles que desde luego impactaron en sus salarios y les permite gozar de estímulos económicos dependiendo del resultado de su evaluación.

Los significados del programa de estímulos a los docentes en la Unidad Regional Sur de la Universidad de Sonora, se abordan desde la perspectiva de Bruner (1991). Como se menciona, el proceso de significados es trabajado desde Bruner, quien desarrolló la teoría de la construcción de significados como resultado de la interacción de diversos mundos posibles mentales, los cuales son primero mentales que físicos. Estos mundos pueden ser nuestro medio social, nuestra educación, nuestras relaciones y otros aspectos que influyen en el desarrollo de cada ser humano. De esta manera podría pensarse que los académicos construyen sus significados en torno a su vínculo a partir de su interacción con la cultura. El programa ha desarrollado una dualidad de resultados por un lado positivos y por otro lado negativos. Primero, el programa de estímulos al desempeño docente ha tenido algunos resultados positivos, entre los que se encuentran:

Los beneficios económicos, los docentes perciben una compensación económica después de ser evaluados por lo que están de acuerdo con el programa y consideran que debe de seguir y mejorarse, en tal sentido Díaz Barriga(1996), Canales (2002) plantean que la función más importante que ha cumplido el programa ha sido el de compensar el salario. Los docentes de la Universidad de Sonora Consideran que es motivante recibir un estímulo económico por las actividades académicas que ellos realizan, piensan que es un reconocimiento al trabajo cumplido.

El programa ha permitido la reorientación de las prácticas académicas, el académico no sólo se dedica a lo que es hora aula, a lo que es impartir la asignatura y evaluar, se les ha ampliado el campo de acción donde aparece la gestión, la investigación, la vinculación, tutorías, les ha abierto la posibilidad de estudiar posgrados. Dentro de las actividades que más desarrollan los académicos están: elaborar material didáctico, utilizar las nuevas tecnologías, dar tutorías, participar en foros, impartir cursos (e inclusive fuera de la institución), realizar y participar en mesas redondas, recibir cursos, impartir conferencias realizar manuales, elaborar materiales didácticos, escribir artículos, participar en la organización de diversos eventos académicos.

El programa de estímulos ha motivado a buscar autoperfeccionamiento y actualización en los académicos. Además de aumentar su productividad académica, ha impulsado su capacitación, a ser más organizados y a comprometerse a desarrollar más actividades, los docentes mencionan que al realizar la evaluación los hace reflexionar sobre sus deficiencias y hacia donde orientar su trabajo. Es evidente la responsabilidad de los académicos frente al grupo, ya que cuidan no faltar a clases, se preocupan por los alumnos y buscan tener una buena imagen ante ellos, además de estar atentos a sus necesidades, se observa compromisos y responsabilidad. Otro aspecto que se considera favorable es que la guía de evaluación contempla la diversidad de actividades académicas que desarrollan. El reglamento se encuentra en la página de la Universidad. Se lanza anualmente la convocatoria y se publica en la página de la Universidad, al igual que los formatos correspondientes, todos los académicos de tiempo completo tienen acceso a computadora e internet. Segundo, existe la manifestación de sentimientos desfavorables acerca del programa de estímulos al desempeño docente como:

Los académicos aceptan el programa de estímulos por su racionalidad económica al respecto Canales(2002) afirma que las protestas que caracterizaron el ingreso a estos programas en los marcos institucionales prácticamente desaparecieron al poco tiempo y que actualmente son una medida rutinaria, mientras que Inclán (2002) plantea que estos sistemas han llegado para quedarse y aceptado como “natural”. Ibarra Colado(2002:4) plantea que este programa ha “significado importantes beneficios económicos de corto plazo, un gran número de académicos han preferido mantener su boca cerrada y su intelecto dormido, sin apreciar las consecuencias a más largo plazo.”

A los docentes de la Universidad de Sonora no les gusta ser evaluados, lo consideran incomodo, les causa intranquilidad, ansiedad, malestar pero no hay un rechazo al programa, lo aceptan por el estímulo económico. Es interesante analizar por qué los docentes aceptan las reglas del juego aun considerando que son injustas y que presionan al docente. Se representa su práctica como una carrera en la que se puede entrar o no entrar, frente a lo cual se opta por lo primero, tratando de mejorar sus ingresos. Los académicos han decidido permanecer callados y aceptar el programa. Esta aceptación silenciosa y acrítica, pasiva se demuestra en la falta de impugnaciones.

Otro aspecto es el estrés de los académicos por el cumplimiento de la convocatoria del programa. El tener que cumplir con lo establecido en la convocatoria cuando se tiene que formar el expediente de solicitud, durante ese período los académicos viven un estrés, presión y preocupación constante por integrar los puntos que les exige el programa para obtener un buen nivel, andan de prisa reuniendo documentos. En muchas ocasiones los docentes sienten frustración y hasta culpa por no desarrollar más actividades.

Los académicos cuando no son evaluados correctamente se desmotivan para seguir desarrollando su trabajo, mencionan que no exista una explicación sobre el llenado de formatos, además en rubros en donde se avalúa el uso de instrumentos didácticos a los que por carencias de infraestructura no pueden acceder por no existir esas condiciones en las aulas universitarias, que se modifique el reglamento y a último momento se enteren, que no hay apoyo para la investigación, ésta es escasa y se realiza de manera aislada, no hay una revista arbitrada de las Divisiones para publicar artículos y el programa exige trabajar mucho para lograr un buen nivel esto coincide con Díaz Barriga (1996), que plantea que los docentes sienten que han trabajado mucho para lograr una puntuación alta en el programa.

En el programa se le da una puntuación a la evaluación de los estudiantes que realiza sobre el desempeño del docente y esto les preocupa a los académicos. Éstos consideran que es una evaluación muy subjetiva y se sienten temores ante la opinión de los alumnos. Existe inconformidad por el instrumento, el que consideran que no es el apropiado para evaluar. Tercero, el programa ha contribuido a la instauración de una práctica académica que privilegia la cantidad sobre la calidad de las actividades académicas, se ha estimulado el acopio de constancias, se da activismo y negociación entre los académicos, no hay evidencias de que el programa mejore el desempeño docente. Se puede apreciar que:

Entre los académicos hay coincidencias en que la evaluación es muy cuantitativa, pero no hay rechazo abiertamente, sino a la manera en que es llevado a la práctica, la iniquidad estaría dada por los criterios muy diferentes utilizados por las comisiones de evaluación. El programa ha estimulado el acopio de constancias, los docentes solicitan constancias por todo y para todo, realizando sólo las actividades que vienen plasmadas en la guía general de evaluación, dándose negociación por documentos para acreditar actividades, haciéndose más frecuente en actividades que aparecen como colaboradores en los trabajos académicos, con lo dicho “me anotas, te anoto”. Lo anterior coincide Hinostroza (2003), considera que el programa impulsa al activismo y negociación de productos académicos.

Cuarto, existe inconformidad de los académicos por la actuación parcial de la comisión de evaluación, ya que funciona como verificadora de firmas. Es decir, que el docente recibe un resultado numérico, vía documento mediante la estructura institucional. Por lo que no hay una retroalimentación, por lo que la evaluación se convierte en un trámite administrativo de mejora en el salario, el mismo Díaz Barriga (Benítez, 2001), expone que una función básica de la evaluación docente es retroalimentar el funcionamiento del sistema escolar.

Quinto los académicos tienen un desempeño docente adecuado desde el punto de vista de los estudiantes. Los profesores de tiempo completo de la Unidad Regional Sur de la Universidad de Sonora cumplen con las expectativas de los alumnos, así lo demuestra el estudio; éstos tienen una buena actuación como docentes que los evalúa con buenos resultados. Los docentes muestran fortalezas, pero

hay algunas dimensiones que se deberán potenciar más. Los resultados hacen pensar que los docentes han alcanzado madurez profesional en su campo y la docencia. Por la edad, antigüedad, categoría académica.

En general, los docentes de tiempo completo de la Unidad Regional Sur de la Universidad de Sonora tienen un desempeño docente adecuado, esto demuestra una preocupación de los profesores por realizar bien su trabajo. Se deben estimular estos comportamientos y establecer condiciones para mantenerlos, e incluso potenciarlos. Esto permite mencionar que los docentes de tiempo completo y que participan en el programa, tienen aceptación y una buena imagen ante los alumnos. Las fortalezas de los docentes están en: la asistencia a las sesiones de clases, desde un principio los profesores presentan los criterios de evaluación, dominan los contenidos de las materias que imparten, prestan atención a los alumnos y evalúan en relación con los objetivos y los contenidos del curso. Por lo que, en opinión de los alumnos los profesores de licenciatura dominan la materia, se preocupan por mostrar sus conocimientos sobre ésta y se da una buena relación maestro-alumno, se interesan quedar bien con los alumnos y ser bien evaluados; se interesan sobre la enseñanza-aprendizaje, las necesidades de los alumnos y cómo relacionarse con ellos.

CONCLUSIONES

Según los significados de los docentes el programa presenta una dualidad por un lado podemos apreciar resultados positivos como: Beneficios económicos, reorientación de las prácticas académicas hacia la gestión, investigación, vinculación, tutorías y estudiar posgrados, utilizar las nuevas tecnologías, buscar el autoperfeccionamiento y actualización constante. Por otro lado los docentes expresan que el programa ha contribuido a la generación de sentimientos desfavorables y a la instauración de prácticas académicas no apropiadas para la institución como: su racionalidad económica, estrés en los académicos, simulación de trabajo, acopio de constancias, activismo y negociación de actividades académicas, sin embargo los docentes tienen un desempeño adecuado desde el punto de vista de los alumnos. Es necesario crear espacios de reflexión, comprensión, empatía mediante el trabajo en equipo para motivar el trabajo académico que permita desarrollar un proceso de evaluación cualitativo.

Cristina Zepeda Ibarra, Universidad de Guadalajara
Alfredo Tomás Ortega Ojeda, Universidad de Guadalajara

RESUMEN

La creciente internacionalización de las instituciones de educación superior ha traído como consecuencia un incremento en la movilidad de estudiantes y profesores, el desarrollo de redes de investigación y la oferta de titulaciones de licenciatura y posgrado en forma compartida. Es por ello que la acreditación internacional es actualmente un tema de gran relevancia, y derivado de la misma la necesidad de crear estándares y criterios de calidad compartidos entre distintos países y sistemas universitarios. Una experiencia innovadora en este sentido ha sido el proceso de evaluación y acreditación del Centro Universitario de la Costa Sur (CUCSUR) de la Universidad de Guadalajara, México, por la agencia europea AQU Catalunya (AQU), proceso en el cual se diseñó una metodología específica para adaptar los Criterios de Garantía de Calidad Europeos (EQAR), derivados del Proceso de Bolonia, al contexto de una universidad latinoamericana. En el presente trabajo se describe y analiza la metodología, organización y resultados de este ejercicio de evaluación internacional que aporta importantes elementos para abrir nuevos caminos de cooperación entre los sistemas universitarios de América y Europa.

INTRODUCCIÓN

El sector de la enseñanza superior es trascendental para el desarrollo de cualquier país, pues es ahí donde se forman los futuros empresarios, colaboradores y gobernantes. Ante un entorno cada vez más competitivo, a escala nacional e internacional, las instituciones universitarias requieren de acciones que refuercen su posición. La evaluación y/o acreditación internacional pasa por ser uno de los servicios con expectativas de mayor crecimiento en los próximos años. El Centro Universitario de la Costa Sur (CUCSUR) de la Universidad de Guadalajara, México, ha implementado durante los últimos seis años una política de compromiso con la calidad, que lo ha llevado a crear un Sistema de Gestión de Calidad y alcanzar la certificación de procesos de gestión académica bajo la norma ISO 9001-2008. Sin embargo, lo más relevante ha sido buscar la mejora continua de su oferta educativa, mediante la acreditación nacional de todos sus programas.

La acreditación nacional es un proceso voluntario, ejecutado por pares por medio de agencias, generalmente no gubernamentales, y tiene como propósito garantizar públicamente la calidad de los servicios académicos que ofrece una institución, certificar condiciones apropiadas para recibir subsidios públicos, aportes privados, facilitar la movilidad estudiantil, promover el mejoramiento de instituciones y programas (ANUIES, 1997). Sin embargo, la acreditación nacional ya no es suficiente, resulta esencial contar con evaluaciones de organismos internacionales que garanticen la calidad educativa de la institución.

Así pues, a finales de 2006 se inició el primer contacto con la Agencia per a la Qualitat del Sistema Universitari de Catalunya (AQU Catalunya), la cual es una agencia pública e independiente creada en 1996 y reconocida por la Asociación Europea para la Garantía de la Calidad de la Enseñanza Superior (ENQA), cuya principal función es efectuar evaluaciones del sistema universitario de Cataluña, pero también evaluar a instituciones universitarias de otros países, estando capacitada para acreditar, con los estándares reconocidos por la Unión Europea, a instituciones, programas educativos y profesores. Cabe resaltar que la AQU Catalunya y la Agencia Nacional de Evaluación de la Calidad y Acreditación (ANECA) del Estado Español y la Organización de Acreditación de los Países Bajos y Flandes (NVAO) son las tres primeras agencias a nivel de la Unión Europea que forman parte del Registro Europeo de Garantía de la Calidad (EQAR) (AQU, 2009).

Posteriormente en marzo de 2008 la agencia AQU realizó por primera vez una evaluación de programas educativos en Latinoamérica. Fueron seis carreras de licenciatura impartidas por el CUCSUR las que se sometieron a este proceso. El resultado de esta evaluación generó para CUCSUR seis planes de mejora avalados por la agencia AQU, en los que se establecen con claridad las metas y acciones que permitirán que los programas educativos alcancen en el corto plazo la acreditación europea, y en adición a ello, la agencia y CUCSUR publicaron un informe bilingüe de esta experiencia (Casas Rius, et al., 2008). Como una segunda etapa de este proceso, la agencia AQU propuso al CUCSUR la realización de una segunda evaluación, en busca de la acreditación como institución de impartición universitaria, con lo cual este Centro Universitario será el primero en el país en buscar una acreditación institucional, figura que aún no se establece en el ámbito nacional.

En el presente trabajo se identifica la necesidad de fomentar los procesos de evaluación y alentar la acreditación internacional, con el fin de propiciar la mejora continua, el aseguramiento de su calidad y la posibilidad de abrir nuevos caminos de cooperación entre los sistemas universitarios de América y Europa. Por tal motivo, se transmite la experiencia innovadora del CUCSUR en el proceso de evaluación y acreditación, por la agencia europea AQU Catalunya, proceso en el cual se diseñó una metodología específica para adaptar los Criterios de Garantía de Calidad Europeos (EQAR), derivados del Proceso de Bolonia, al contexto de una universidad latinoamericana.

REVISIÓN LITERARIA

ANUIES (1997), identifica la acreditación como un procedimiento usualmente sustentado en un autoestudio, que tiene como objetivo registrar y confrontar el grado de acercamiento del objeto analizado con un conjunto de criterios, lineamientos y estándares de calidad convencionalmente definidos y aceptados (ANUIES, 1997).

En materia de calidad universitaria, la acreditación (fuera *ex ante* o *ex post*) ha sido un distintivo que, desde la perspectiva de los estados, suponía que ciertos estándares mínimos se cumplieran por parte de todos los agentes que impartían enseñanzas con reconocimiento estatal. Las enseñanzas reconocidas por parte del Estado podían ser incluidas, por ejemplo, en tratados con otros países con la finalidad de conseguir equivalencias internacionales en el valor de los títulos (Casas Rius, et al., 2008). AQU Catalunya es una agencia pública experimentada en la garantía externa de la calidad de los programas universitarios y que, en el marco regulador español y catalán, está autorizada para acreditar titulaciones universitarias. También destaca por ser una de las agencias europeas más activa en la participación de proyectos de evaluación internacional a fin de desarrollar elementos metodológicos para este tipo de práctica (AQU, 2009).

Desde la óptica mexicana, AQU Catalunya es considerada como una agencia extranjera reconocida en el marco europeo de garantía de la calidad. Su solvencia se apoya en una evaluación externa de su calidad que tiene en consideración su estatus legal, su carácter independiente, su trayectoria y el uso de una

metodología que permite su mantenimiento en ENQA como miembro de pleno derecho y su presencia en el registro EQAR (AQU, 2009). La no disponibilidad de estándares globales de calidad inclina a AQU Catalunya a adoptar el criterio de la bilateralidad anteriormente mencionada, por el que la institución acreditada por esta agencia fuera de Cataluña deberá tener un nivel de calidad mínimo equivalente al que presentan las facultades y escuelas integradas en universidades catalanas. De todas formas, esta bilateralidad queda redimensionada por el uso de los estándares europeos (ESG), de carácter más global (Casas Rius, et al., 2008).

METODOLOGÍA

La metodología de AQU Catalunya, la cual se tuvo que adaptar al caso CUCSUR, tiene cuatro etapas, las cuales se detallan a continuación. Primero se realizó un análisis pormenorizado de la Guía de Evaluación proporcionada por AQU Catalunya, para conocer sus características e identificar los problemas de conceptualización, terminología e incluso de lenguaje. La adaptación de la Guía al CUCSUR y sus formatos de autoestudio fueron negociados con AQU Catalunya, acordándose una versión final que fue la utilizada para la evaluación interna.

Para elaborar el informe interno (autoinforme) se formó con *comité de evaluación interna (CAI)*, integrado por personal docente, administrativo y alumnos. Quienes se dieron a la tarea de estructurar dicho informe. El informe se estructura en ocho capítulos: Calidad de los títulos y programas; Profesorado; Recursos para el aprendizaje; Información; Relaciones con el entorno y con la sociedad; Investigación y Gobierno. Para cada uno de ellos se establece en primer término una evaluación cuantitativa basada en un grupo de indicadores, dentro de los cuales se incluyen los indicadores europeos de calidad (ENQA) y los indicadores críticos (Fundamentales sombreados en gris en las tablas siguientes) que la agencia AQU establece para centros de educación superior. Son un total de 69 indicadores con una escala de valoración de 0 a 4, para un puntaje máximo de 276 y un mínimo de 160 para alcanzar la acreditación. Los indicadores fundamentales requieren un puntaje mínimo de 3 (López, Roca, Samitier, Casas, Arnaiz, & Saurí, 2009). A continuación se presenta la valoración cuantitativa determinada por el CAI.

Tabla 1: Calidad de los Títulos y Programas

INDICADORES		0	1	2	3	4
1.1.	Existencia de planificaciones a cargo de los organismos pertinentes (Departamentos) de los programas educativos y las materias (*)					X
1.2.	Especificación de los objetivos formativos en la planificación de los programas educativos (en forma de competencias profesionales o equivalentes)					X
1.3.	Oferta de diversas modalidades de enseñanza (presencial, semi-presencial, e-learning, etc.) para atender a grupos sociales y necesidades diversas (*)				X	
1.4.	Existencia de un programa sistemático de evaluación de los programas educativos y las materias que incluya planes de mejora: revisión de resultados, consultas a los implicados, propuestas de mejora, etc. (*)					X
1.5.	Revisión periódica de los programas de las materias a cargo de comisiones de expertos			X		
1.6.	Participación del profesorado en los procesos de mejora					X
1.7.	Participación de los estudiantes en los procesos de mejora (*)					X
1.8.	Revisión de los programas educativos y materias con los egresados y empleadores (*)			X		
1.9.	Se toman medidas para ayudar a los alumnos que han ingresado al centro y que precisan complementos de formación				X	

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 20

Tabla 2: Profesorado

	INDICADORES	0	1	2	3	4
2.1	Hay garantías de que los docentes dominan las materias al nivel que los corresponde (*)				X	
2.2	Los docentes poseen conocimientos y técnicas didácticas pertinentes para ejercer la docencia y todo lo que ello implica (*)				X	
2.3	Existe posibilidad real de que profesorado de otras instituciones puedan acceder a la docencia de ésta					X
2.4	El sistema de elección y de contratación del profesorado garantiza que éstos tienen las competencias mínimas necesarias (*)					X
2.5	Existe un sistema riguroso y fiable de evaluación del profesorado (*)				X	
2.6	Hay un sistema de perfeccionamiento del profesorado en activo (*)				X	
2.7	Se ofrece al profesorado que muestra bajo rendimiento la oportunidad de mejorar sus competencias y conocimientos (*)				X	
2.8	Existe la posibilidad de dar de baja a los docentes que se muestran ineficaces de manera continuada (*)			X		
2.9	El profesorado competente ve reconocida su calidad					X
2.10	Hay un sistema para la movilidad del profesorado					X

fuentes: informe de valoración interna del centro universitario de la costa sur para la acreditación institucional. 2009.

Tabla 3: Recursos para el Aprendizaje

	INDICADORES	0	1	2	3	4
3.1	Existe variedad de recursos actualizados puestos a disposición de los estudiantes para su aprendizaje (*)				X	
3.2	Los alumnos cuentan con un tutor que los orienta y ayuda en los estudios (*)				X	
3.3	Hay un sistema de evaluación sobre la adecuación de los recursos humanos y materiales puestos a disposición de los estudiantes (*)				X	
3.4	Los docentes tienen variados recursos materiales y funcionales para la docencia y su preparación				X	
3.5	Existe un "campus virtual" operativo y de fácil uso para los docentes y estudiantes			X		
3.6	Los laboratorios y talleres son adecuados a las carreras impartidas				X	
3.7	Las aulas son adecuadas para realizar las actividades docentes				X	
3.8	Hay espacios adecuados para reuniones de grupo, tanto de docentes como de estudiantes					X
3.9	Se cuenta con un sistema de información a los alumnos sobre los recursos y su uso.					X

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Tabla 4: Evaluación de los Aprendizajes

	INDICADORES	0	1	2	3	4
4.1.	Hay criterios de evaluación de los aprendizajes vinculados con los objetivos y competencias propuestas en las carreras y materias (*)				X	
4.2.	Los criterios de calificación están claramente formulados (*)					X
4.3.	Hay más de un evaluador para ponderar las calificaciones otorgadas (*)			X		
4.4.	Se hace un seguimiento sistemático del progreso de los alumnos, derivando directrices para ayudar a los estudiantes que no han superado las evaluaciones correspondientes (*)			X		
4.5.	Hay una normativa que contempla las posibles incidencias en las evaluaciones (ausencias, enfermedades, etc.) (*)					X
4.6.	Existe la disponibilidad pertinente para poder dar cuentas de los criterios aplicados en las evaluaciones (*)					X
4.7.	Existe la posibilidad por parte de los estudiantes de poder revisar los exámenes y las calificaciones					X
4.8.	Hay un reconocimiento de los estudiantes de alto Rendimiento					X

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Tabla 5: Informació

	INDICADORES	0	1	2	3	4
	La institución tiene un sistema de recopilación de información objetiva con respecto a:					
5.1	Resultados académicos generales (*)				X	
5.2	Vinculación de los egresados con el mercado de trabajo (*)			X		
5.3	Perfil de los estudiantes (*)				X	
5.4	Opiniones del profesorado				X	
5.5	Opiniones de los estudiantes (*)				X	
5.6	Opiniones del personal no docente			X		
5.7	Situación de la institución respecto de otras semejantes (*)				X	
5.8	Se hacen públicos los resultados globales del centro (*)					X
5.9	Existe un sistema informativo claro y actualizado sobre la institución y su oferta académica (web)					X

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Tabla 6: Relaciones de la Institución con el Entorno y con la Sociedad en General

	INDICADORES	0	1	2	3	4
6.1.	La institución tiene vinculación con organismos sociales extrauniversitarios					X
6.2.	La institución tiene vinculación con organismos y asociaciones académicas y culturales nacionales e internacionales				X	
6.3.	La institución tiene vinculación con organismos empleadores de sus titulados				X	
6.4.	Existe una bolsa de trabajo al servicio de los estudiantes y titulados			X		
6.5.	La institución participa en actividades de cariz social: culturales, deportivas, de atención a personas desfavorecidas, etc.					X
6.6.	Hay un programa activo para garantizar la equidad de todas las culturas y etnias confluentes				X	
6.7.	Hay un programa activo para garantizar la equidad de género				X	
6.8.	La institución tiene un programa activo de preservación del medio ambiente: ahorro energético, tratamiento de residuos, etc.				X	
6.9.	Se respeta la diversidad cultural compatible con las finalidades de la institución				X	
6.10.	Se ofrecen cursos o programas de formación continua				X	

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Tabla 7: Investigación

	INDICADORES	0	1	2	3	4
7.1	La institución fomenta la investigación además de la calidad docente					X
7.2	Hay un reconocimiento institucional de la investigación realizada				X	
7.3	Se participa en proyectos y convenios de investigación con otras instituciones, redes, etc. para la realización de investigaciones compartidas				X	
7.4	Se cuenta con publicaciones en revistas científicas de referencia internacional				X	
7.5	La institución cuenta con estudios de doctorado				X	
7.6	El profesorado tiene la titulación de doctor en una proporción adecuada a las necesidades académicas de la institución			X		
7.7	Se cuenta con investigadores con reconocimiento nacional / internacional				X	

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Su elaboración se llevó a cabo mediante un ejercicio participativo e incluyente que involucró a miembros de los distintos sectores de la comunidad; alumnos, profesores, trabajadores administrativos y directivos. La valoración cuantitativa presenta un puntaje total de 228 puntos, lo que de acuerdo con la Guía de la agencia AQU supera el nivel notable de calidad. En los indicadores fundamentales la casi totalidad de ellos alcanza o supera la valoración de 3, lo cual ubica al CUCSUR en una posición favorable en el proceso de evaluación.

Tabla 8: Gobierno

	INDICADORES	0	1	2	3	4
8.1	La institución tiene un sistema de gobierno al que se accede de manera pública y transparente.					X
8.2	Los cargos de gestión rinden cuentas periódicamente de su actividad.					X
8.3	Los equipos directivos tienen una planificación a corto y medio plazo.					X
8.4	Los estudiantes tienen facilidad de acceso a la información administrativa.					X
8.5	Hay información actualizada sobre la estructura de gobierno de la institución.					X
8.6	La comunicación intra-institucional es rápida y fluida entre los cargos y los implicados.				X	
8.7	El personal de administración y servicios tiene un papel reconocido en el gobierno general de la institución.					X

Fuente: Informe de Valoración Interna del Centro Universitario de la Costa Sur para la Acreditación Institucional. 2009.

Además de la valoración cuantitativa, en cada capítulo se realizó una evaluación cualitativa de cada indicador, una valoración de las evidencias presentadas y una discusión de los puntos fuertes y débiles del capítulo, para concluir con una valoración global del mismo. La evaluación cualitativa permite identificar aspectos fundamentales de la organización y sistematización de procedimientos académicos, de gestión, vinculación y gobierno que representan fortalezas institucionales. De dicho análisis se concluye que existen condiciones para garantizar; un desempeño notable de la oferta educativa de licenciatura y posgrado; que el profesorado posee conocimientos y habilidades didácticas adecuados a su función, y se impulsa la formación de profesores a nivel doctorado; que se han desarrollado espacios físicos, equipamiento y recursos pertinentes para el proceso de aprendizaje; que los criterios de evaluación responden a los objetivos de formación de los programas educativos, están disponibles para los estudiantes, y son consultables de manera abierta; se ha sistematizado la información sobre el desempeño académico y administrativo del CUCSUR, lo que permite contar con instrumentos de planeación pertinentes; existe vinculación académica, científica y social; se fomenta y reconoce la investigación, las redes científicas y se impulsa el posgrado; se cuenta con una estructura de gobierno adecuada y la comunicación interna es eficiente, se informa de manera regular a la comunidad y a la opinión pública y se asegura la participación de la comunidad en el gobierno.

De igual manera se identificaron los procesos, áreas y actividades que requieren atención y el desarrollo de estrategias de mejora, como son; la evaluación externa de carreras y programas, el seguimiento de egresados y la retroalimentación con empleadores, la optimización del sistema de tutorías, la integración de sistemas de información institucional y el desarrollo de la investigación científica con mayor equilibrio entre los departamentos académicos, entre otros.

El informe interno de evaluación del CUCSUR es el resultado de la primera etapa del proceso de acuerdo con la Guía de Evaluación de los Centros Externos 2009 de la agencia AQU Catalunya. Esta Guía fue diseñada incorporando elementos de referencia para el entorno latinoamericano, producto de la colaboración anterior de AQU y CUCSUR (López, Roca, Samitier, Casas, Arnaiz, & Saurí, 2009).

Posteriormente, un *comité externo*, compuesto por el Dr. Jaume Sarramona, catedrático de Pedagogía de la Universidad Autónoma de Barcelona, el Mtro. Sergio Fuenlabrada, catedrático del Instituto Politécnico Nacional de México y el Sr. Josep Grifoll, director técnico de AQU Catalunya y coordinador de este proyecto de evaluación, realizó una visita al centro, entre el 19 y el 22 de octubre de 2009, que incluyó: una revisión de evidencias referidas al funcionamiento del Centro y una agenda de entrevistas

mantenidas con responsables del Centro, profesores, alumnos, egresados, empleadores y personal de administración y servicios.

Al respecto, el comité externo resaltó su satisfacción por la transparencia y sinceridad con que el Comité de Evaluación Interna se expresó. El trabajo permitió conocer debidamente el funcionamiento del centro, que en muchas dimensiones presenta realidades muy meritorias. En relación a las evidencias presentadas, consideraron que han sido bien estructuradas y en general se han ajustado a lo necesario para verificar la justificación de la valoración de los indicadores. En aquellos casos en que se solicitaron evidencias complementarias, estas fueron facilitadas con rapidez y exactitud. Se constató que la comunidad universitaria ha estado suficientemente representada en el Comité de Evaluación Interna, organizado en subcomités que trabajaron de forma especializada dada la amplitud de los aspectos a evaluar. La participación de la comunidad universitaria fue muy elevada, puesto que se contó con más de 70 personas implicadas en el proceso. Se pudo constatar que el proceso de evaluación interna, se ha convertido en un estímulo para la introducción de mejoras inmediatas en el Centro, lo cual sin duda va a colaborar en el proceso general de avance hacia la excelencia (Fuenlabrada, Sarramona & Saurí, 2009).

RESULTADOS

Los resultados obtenidos permitieron en primer lugar tener un panorama general del CUCSUR a nivel internacional y un conocimiento particular de las fortalezas y debilidades del mismo. Esta información sirvió de base para fundamentar acciones que permitieran elevar la calidad de los servicios educativos.

La agencia AQU identificó como principales fortalezas del centro las siguientes:

- Una masa crítica de profesorado elevada, lo que permite diversificar los ámbitos de especialización de la docencia. El perfil y experiencia profesional del profesorado contratado es alto.
- Se cuenta con normativas orientadas a la mejora de la calidad del profesorado.
- La modernidad de las instalaciones del CUCSUR corresponde con las necesidades de los programas impartidos.
- El centro tiene iniciados numerosos procesos de obtención de información cuantitativa y cualitativa que permitirá realizar análisis sobre la situación de los diversos programas. Además, existen publicaciones que ofrecen información básica sobre el centro y su situación en el contexto de la Universidad de Guadalajara.
- Se han establecido convenios con sectores económicos, sociales y profesionales para la realización de prácticas profesionales y el servicio social por parte de los estudiantes.
- La institución fomenta la investigación por parte de su profesorado y ofrece canales para compartir investigaciones con otras universidades, nacionales y extranjeras. Se cuenta con algunos profesores de reconocimiento internacional.
- El equipo de gobierno es activo y se preocupa por la calidad docente que ofrece el centro por medio de su oferta educativa, rindiendo cuentas a través de informes que son públicos y conocidos. Los órganos directivos cuentan con herramientas de planificación que incorporan estrategias de mejora con metas preestablecidas.
- El centro cuenta con una normativa interna para la aprobación de las carreras y control de los programas de las materias; asimismo tiene instalada una cultura de mejora que le lleva a someterse a evaluaciones nacionales e internacionales en búsqueda de la excelencia.
-

De igual forma, el resultado del proceso condujo a una acreditación internacional inicial de la calidad del CUCSUR. Este reconocimiento tiene una validez de dos años, a partir del 1 de enero de 2010, y podrá ser extendido hasta 2015, si antes de finalizar el 2011 el Centro ofrece evidencias sobre las siguientes acciones recomendadas por la agencia catalana:

Acción 1: Planificar en base a competencias profesionales todas las carreras del Centro.

Acción 2: Disponer de un número de profesores doctores superior al 25% del total de la plantilla.

Acción 3: Contar con un sistema de evaluación en función de las competencias profesionales, aplicando el principio de interdisciplinariedad que suponga la evaluación en equipo de varios docentes en los casos requeridos.

Acción 4: Comprometerse a incrementar las relaciones con otras universidades nacionales e internacionales, con especial incidencia en la movilidad de profesores y alumnos.

Acción 5: Disponer de información pública sobre el desarrollo profesional de los graduados.

Acción 6: Desarrollar la investigación en las diversas áreas y carreras al mismo nivel que la docencia, y fomentar su difusión en revistas de prestigio nacional e internacional.

Acción 7: Ampliar la cobertura del programa de tutorías a la totalidad del alumnado.

Acción 8: Desarrollar las posibilidades docentes del campus virtual y aplicarlas al mayor número de asignaturas.

Acción 9: Crear una bolsa de trabajo propia para el CUCSUR.

Acción 10: Avanzar en la transparencia informativa para usuarios relevantes (estudiantes, nuevos estudiantes, empleadores) y en consolidar los procesos de captación de información referente a los niveles de calidad del centro.

CONCLUSIONES

El proceso de acreditación reflejó de manera honesta, clara y objetiva el nivel de calidad internacional del CUCSUR, y constituye un elemento válido de diagnóstico de sus fortalezas y debilidades, de tal manera que permite identificar las oportunidades de mejora para consolidar su posición en un entorno más global. Asimismo, facilitó la autocrítica y permitió ordenar decisiones para mejorar la función social del quehacer institucional, contribuyendo así en la consolidación de la autonomía responsable ante la sociedad.

Es de resaltarse la vinculación lograda con la comunidad universitaria y los diversos sectores, los que apoyaron en el logro de los objetivos del CUCSUR adaptados al entorno regional. El CUCSUR ha asumido el reto y el compromiso que representa el reconocimiento internacional recibido, por lo que continuará trabajando con pertinencia social, responsabilidad y transparencia en las acciones recomendadas por la agencia AQU.

La acreditación institucional complementará la estrategia de aseguramiento de la alta calidad y permitirá generar información confiable y transparente para que la sociedad esté bien informada sobre las características de la institución. Sin embargo, el proceso de acreditación no resulta ser suficiente si no va acompañado de una cultura de calidad al interior de la institución y de un compromiso serio por parte de los gobiernos para promoverla y desarrollarla. Por último, es recomendable un esfuerzo inversor en la formación en sistemas de garantía de calidad que faciliten la implantación de métodos de acreditación internacional eficientes y efectivos.

LA ADMINISTRACIÓN FINANCIERA UNA UTOPIA EN LAS MICROEMPRESAS

Gladys Yaneth Mariño Becerra, Universidad Pedagógica y Tecnológica de Colombia - UPTC
Inelia Medina Sandoval, Universidad Pedagógica y Tecnológica de Colombia - UPTC

ABSTRACT

El artículo presenta resultados del proyecto de investigación Tendencias del Manejo Financiero de las Mipyme en Boyacá, en primer lugar un avance en el estado del arte de la Administración Financiera resultado de un rastreo bibliográfico sobre su historia, en segundo lugar una comparación de la forma como se ejerce la administración financiera en Estados Unidos, México, España y Colombia, a partir del estudio de autores de estos países, y en tercer lugar se plantea la brecha existente entre la teoría y la práctica de la administración financiera, a partir del contraste de la teoría propuesta por diferentes autores expertos en el tema, con los resultados obtenidos de las investigaciones con microempresarios del departamento de Boyacá provincia centro de los sectores: comercio al por mayor y al por menor, automotriz y manufacturero. Frente al panorama de los resultados surge la duda de la aplicabilidad de los modelos existentes de Administración Financiera en las microempresas.

INTRODUCCION

El artículo presenta resultados de investigación que conducen a los autores a plantear el interrogante La Administración Financiera: Una Utopía en las Microempresas? La Empresa constantemente se ve abocada por la incertidumbre que rodea la toma de decisiones, en este proceso adquiere especial importancia la información adecuada y pertinente que le sirva como base o referente para establecer objetivos y elegir opciones que conduzcan a su cumplimiento.

Dentro de los resultados se presenta en primer lugar un avance en el estado del arte de la Administración Financiera resultado de un rastreo bibliográfico sobre su historia, en segundo lugar una comparación de la forma como se ejerce la administración financiera en Estados Unidos, México, España y Colombia, a partir del estudio de autores de estos países, y en tercer lugar se plantea la brecha existente entre la teoría y la práctica de la administración financiera, a partir del contraste de la teoría propuesta por diferentes autores expertos en el tema, con los resultados obtenidos de las investigaciones con microempresarios del departamento de Boyacá provincia centro de los sectores: comercio al por mayor y al por menor, automotriz y manufacturero.

Frente al panorama de los resultados surge el interrogante sobre la correspondencia de la teoría consignada en textos, propuesta y argumentada por expertos en el tema y la practica desarrollada al interior de las microempresas, donde está la diferencia?, que acciones se deben seguir para disminuir esta brecha?, es acaso esta una de las causas del atraso empresarial del departamento?.

REVISIÓN LITERARIA: LA DIRECCIÓN FINANCIERA

Para James Van Horne la toma de decisiones, ejecución y coordinación de las actividades propuestas es función de la dirección. En el área financiera además de ejecutar lo planeado se toman tres tipos de decisiones básicas las cuales definen la función financiera empresarial:

- a. Decisiones de inversión: determina la cantidad de activos que requiere la empresa y se basa en las siguientes preguntas: ¿Por qué invertir?: da respuesta a los índices de rentabilidad que satisfagan las expectativas de los inversionistas y cubran los costos de capital; ¿En que invertir? es un estudio de posibilidades planteadas por el sector económico; ¿Cuándo invertir? esta dado en

función del tiempo vivido por la empresa, la representatividad en el mercado y la situación global de la economía y ¿Cuanto invertir? el cual depende del estado financiero de la empresa.

- b. Decisiones de financiamiento: es responsabilidad de la gerencia financiera obtener los recursos eficientemente los cuales contribuyan a minimizar el costo de capital. Esta decisión depende sustancialmente de variables interrelacionadas como el costo medio ponderado del capital, el valor de la empresa que utiliza fondos de crédito y el precio del mercado del capital contable aportado por los socios. Hay varias fuentes de financiamiento que se agrupan básicamente en 2: Fuentes internas: financiación por parte de los socios a través de la emisión de acciones o la utilización de utilidades. Fuentes externas: esta dado por el mercado financiero y el mercado de capitales; Las decisiones de inversión y financiación están muy relacionadas ya que la primera depende de la segunda.
- c. Administración de activos: cuando se adquieren activos y se obtiene el financiamiento adecuado, también es necesario administrarlo con eficiencia; los administradores financieros tiene distintos grados de responsabilidad operativa sobre los activos existentes en la empresa, esta responsabilidad, los obliga a preocuparse por el manejo de los activos corrientes más que por el de los activos fijos.

El mundo actual exige que las empresas manejen en forma eficiente el área financiera utilizando el proceso administrativo en dicha área, para tomar decisiones que ayuden a operar a las organizaciones y que estas cumplan su objetivo de maximización del valor de la empresa.

METODOLOGIA

METODO DE INVESTIGACIÓN: Deductivo,

TIPO DE ESTUDIO exploratorio y analítico en cuanto se inicia en un proceso de conocimiento con la identificación de cada una de las partes que caracterizan una realidad y de esta manera se puede establecer relaciones entre los elementos que componen la investigación.

ESTADO DEL ARTE DE LA ADMINISTRACIÓN FINANCIERA

Las Finanzas son consideradas como una categoría histórico-económica, porque se ubican en el espacio y en el tiempo y porque se dan en el marco de las relaciones monetarias mercantiles. También son una categoría de Valor, porque se encuentran ligadas al movimiento del valor en su forma monetaria con la obtención, empleo y creación de fondos monetarios. Según Ricardo De La Luz Domínguez El término de Finanzas proviene del concepto latino FINACIA, que significa pago en dinero, el cual fue utilizado inicialmente en los Siglos XVI y XVII en Italia y fundamentalmente en sus principales ciudades comerciales, Florencia, Génova y Venecia. Posteriormente, el concepto fue utilizado en forma más amplia y relacionado básicamente con el sistema monetario y con la creación de recursos monetarios por parte del Estado para poder atender sus funciones económicas y políticas (2008. p.1)

Momentos de la Historia de la Administración financiera

1. Siglo XIX las finanzas surgen como campo de estudio haciendo parte de la economía
2. 1920 surgen como una disciplina independiente.
3. Década de los treinta la atención se concentro en los problemas de estructura sólida de capital y aparece el análisis financiero como disciplina dentro de las finanzas.
4. 1940 la obra del profesor Erich Schneider inversión e interés (1944): pone de manifiesto una idea en la actualidad vigente: una inversión viene definida por su corriente de pagos y cobros.
5. 1950 se empieza a implementar la planeación y el control contable, aparece los presupuestos y el análisis de activos.
6. En la década de los 60 se cimientan las bases para estudios de riesgo e incertidumbre.

7. 1970 se plantea el objetivo de la administración financiera como la maximización del valor de la empresa.
8. 1980 las investigaciones se concentran en las formas de valoración de activos.
9. 1990 cobro impulso la teoría de valoración de empresas

Estado del Arte de la Administración Financiera en: Estados Unidos, España, México y Colombia

A continuación se muestra las conclusiones que surgieron de la elaboración de un paralelo comparativo de la función financiera en los países citados, la metodología para la obtención de estos resultados es la de revisión bibliográfica de autores de cada país, Con el análisis se encontró lo siguiente:

1. En lo que hace referencia a la definición de las finanzas como función empresarial, Estados Unidos y México, encaminan el objetivo de las finanzas, hacia la consecución administración y financiación de los recursos de la empresa; mientras que Colombia y España definen la función financiera en pos de la maximización del valor de la empresa y su crecimiento rentable.
2. En la parte organizativa solo cambia los nombres de los cargos pero básicamente en esto lo cuatro países tienen cierta similitud al definir las funciones que desarrollan cada uno de los miembros del área financiera, igualmente el responsable del área financiera rinde directamente informes al gerente general.
3. En planeación Estados Unidos y España tienen un modelo parecido en cuanto parten de un análisis del entorno financiero, un diagnostico financiero interno a través de ratios o indicadores financieros y proponen un plan de acción con proyección de los diferentes estados financiero, en México la planeación se hace mas mirando el entorno económico de la empresa y en Colombia se toma como referente la planeación estratégica general de la empresa por esto se parte de un diagnostico externo de todas las áreas empresariales y finalmente se llega a una planeación departamental.
4. El control financiero en Colombia, Estados Unidos y España es básicamente el mismo, el modelo se propone como mecanismos de este los presupuestos, inventarios y, planes financieros. Lo único que se plantea como diferente es el modelo para empresas multidivisionales que propone Estados Unidos, en México se propone otra metodología, en la cual se empieza el control desde el mismo momento de la planeación con la definición de objetivos y su forma de medir el cumplimiento, luego se compara planeado versus ejecutado y se obtiene las desviaciones ante las cuales se toman acciones correctivas.
5. En cuanto a la dirección los cuatro países proponen exactamente lo mismo la función de la dirección financiera es la inversión, financiación y administración de los recursos de la empresa, plantean diferentes opciones para evaluar las inversiones y establecer una estructura financiera sólida.

BRECHA ENTRE LA TEORIA Y LA PRACTICA DE LA ADMINISTRACION FINANCIERA EN LAS MIPYME DE LAS PROVINCIA CENTRO DEL DEPARTAMENTO DE BOYACA (COLOMBIA)

A continuación se muestran los principales aspectos del área financiera de las micro, pequeñas y medianas empresas del departamento de Boyacá Colombia, para la consecución de esta información se encuestaron a empresarios de los sectores de comercio al por mayor y menor, servicios y, manufactura.

Los microempresarios no diferencian el objetivo financiero del objetivo de mercadeo ya que sus esfuerzos están encaminados a la satisfacción del cliente y no se concentran en maximizar el valor de su empresa, o en un objetivo más pequeño como es la obtención de utilidades, ellos definen la función financiera a través de procedimientos básicos como: Identificación de las necesidades financieras de su empresa, rendir informes a los propietarios, manejo de utilidades e impuestos y revisión de ingresos y egresos de la empresa.

Como consecuencia de que en la gran mayoría de las microempresas quien maneja el área financiera es el dueño y su nivel de educación es bachiller o básica primaria los empresarios no conocen las herramientas financieras y por ende no elaboran los estados financieros, el único que elaboran es el estado de resultados, por que según ellos muestra la viabilidad de la empresa, pero para conocer si una empresa es viable o no se deben realizar estudios de inversión y financiación, los estados financieros nos muestran en momento dado cual es la situación financiera de la empresa y que necesidades tiene.

En relación con la importancia de la contabilidad en sus empresas, no la llevan por desconocimiento de la forma de hacerlo, o porque creen que por su tamaño no es necesario conocer a profundidad los movimientos de los recursos que tienen, por esto existe la necesidad de concientizarlos sobre las finanzas y sus funciones en una empresa. No se tiene la cultura de la recolección y registro de información financiera, por ende no se llevan los libros y soportes legales necesarios para el manejo de la contabilidad en una empresa.

La forma como los empresarios determinan sus utilidades no es la más adecuada, ya que no tienen en cuenta de manera exacta la asociación de los costos y gastos a sus ingresos. No se percibe la cultura del ahorro, que permita incrementar las posibilidades de reinversión, orientados a reforzar aspectos como la tecnología, la capacitación, el mejoramiento de capital de trabajo que redunden en el crecimiento y desarrollo empresarial. Si bien los microempresarios tienen un cuenta el manejo de los inventarios, solo lo hacen por el control, a través del conteo de productos, sin embargo lo realizan de una manera inadecuada ya que no conocen el procedimiento para la elaboración de Kardex, así como los diferentes métodos de valoración que existen como son el: Peps, Ueps y Promedio Ponderado

Por otra parte debido al exceso de trámites que exigen las entidades crediticias, algunos microempresarios prefieren el crédito con prestamistas los cuales cobran tasa de interés hasta del 10% mensual, lo cual trae como consecuencia la reducción de las utilidades del ejercicio, iliquidez y un alto riesgo de quiebra. En cuanto a otras formas de financiación utilizan proveedores, a través de ellos se aprovecha la oportunidad para ofrecer crédito a sus clientes guardando el equilibrio entre el cobro y el pago.

CONCLUSIONES

Las finanzas como campo de estudio surgieron desde la revolución industrial, sin embargo es notable que los autores se han concentrado en la gran empresa y no han diseñado herramientas para microempresas, dejando así una brecha a la hora de aplicar la teoría de la administración financiera que ellos proponen.

Al realizar un paralelo comparativo de la forma como Estados Unidos, México, España y Colombia conciben las finanzas se concluye que la administración financiera tuvo origen en Estados Unidos y por tal motivo lo que otros países hacen es adoptar el modelo propuesto por Estados Unidos a las condiciones de su país, es decir entre estos países no existen diferencias sustanciales.

En el departamento de Boyacá es visible el atraso de las microempresas en todas las áreas de la administración, es preocupante que quien toma las decisiones financieras y en general todas las decisiones son personas con bajo nivel académico y por tal razón lo hacen en una forma muy empírica, lo cual puede ser un factor sustancial que pone en peligro su supervivencia y crecimiento.

Los autores financieros exponen un perfil para el gerente financiero, con ciertas destrezas y nivel académico determinado, en la realidad de las microempresas no se cumple, por lo cual desde la academia se deben implementar mecanismos de apoyo a los microempresarios, planes de capacitación y además diseñar modelos de administración financiera que hagan viable su aplicabilidad en empresas de este tamaño.

Es destacable la capacidad y perseverancia de los microempresarios en Boyacá, dado que a pesar de la problemática presentada en el manejo de las finanzas, su experiencia, su trayectoria y conocimiento les ha permitido mantener, a muchos de ellos, su empresa.

LA EVALUACIÓN DEL DESEMPEÑO EN LAS EMPRESAS MAQUILADORAS DE LA FRONTERA NORTE DE MÉXICO TEORÍA Vs REALIDAD

Francisco Manuel Solórzano Chavira, Universidad Autónoma de Ciudad Juárez

ABSTRACT

Las organizaciones empresariales y no empresariales mexicanas, especialmente las de tipo maquilador en esta fronteriza ciudad al norte de México, buscando alinearse con las tendencias globalizadoras actuales se están viendo inmersas en la necesidad de alinear sus operaciones administrativas con sus operaciones de manufactura y transformación para seguir siendo consideradas de clase mundial, por lo que ahora el departamento de personal de cada una de ellas está asumiendo el nuevo rol que le corresponde al convertirse en el principal vínculo entre dirección-fuerza laboral, y esta intensamente comprometido con la más reciente modalidad esencial de evaluar el desempeño de todos y cada uno de los integrantes de la organización para conocer su potencial de desarrollo dentro de la organización, lo que incluye trabajadores operativos, empleados administrativos, técnicos de todo nivel, supervisores, jefes de área, gerentes departamentales y altos directivos con base a modernas técnicas extranjeras novedosas en donde se incluye principalmente la de 360 grados y la de competencias laborales para que todos ellos adquieran una perspectiva real del resultado de sus esfuerzos vía el suministro de una retroalimentación objetiva, oportuna, clara y sistemática.

PALABRAS CLAVES: evaluación del desempeño, empresa maquiladora, clase mundial, competencias, 360 grados.

INTRODUCCIÓN

Se puede iniciar este análisis acerca de la evaluación del desempeño (ED) (considerada esta, como el cumplimiento de las obligaciones inherentes a un puesto de trabajo específico) en las empresas asegurando que en México, conforme pasa el tiempo, la ED, se ha convertido en una práctica (programa) de carácter administrativo, necesario y formal para revisar, comparar, medir, calificar e informar periódica y constantemente la forma en que trabajan las personas para evaluar su desempeño en forma individual y en equipos de trabajo; así como para valorar el rendimiento (considerado este, como la proporción entre la rentabilidad obtenida y los medios utilizados) de la organización misma.

Los programas para Evaluar el Desempeño son difíciles de diseñar y administrar pero se están convirtiendo en instrumentos de alta prioridad en todas las organizaciones, principalmente para el departamento de personal (DRH), ya que esta práctica administrativa no es un fin en sí mismo sino el medio que hará posible alcanzar mejores niveles de eficiencia y productividad y permitirá tomar decisiones acerca de las necesidades de desarrollo, promociones, aumentos salariales, capacitación, adiestramiento, transferencias y despidos, que cada organización tiene. De esta manera, los programas para ED se convierten en una actividad en la que personal (RH) desempeña un papel determinante en su coordinación y desarrollo; sin embargo, debe ser responsabilidad absoluta de la gerencia departamental y su participación en ella es un factor clave para que el programa tenga éxito.

De esto estaré hablando en esta primera parte de una investigación mayor que pretende identificar los métodos actuales que las organizaciones de esta localidad están utilizando y las tendencias hacia nuevos esquemas que requieren de una mayor y mejor preparación de parte de los involucrados en evaluar el

desempeño, y de la organización misma, que espero, pronto conduzca a un trabajo de mayor envergadura, interés y utilidad.

REVISIÓN LITERARIA

La evaluación del desempeño en la actualidad es una función administrativa de mayor importancia debido a la necesidad de las organizaciones de conocer que las acciones y esfuerzos de la fuerza laboral de todos los niveles están encaminados a lograr o superar resultados previstos en los objetivos institucionales previamente establecidos. Conocer fortalezas y debilidades de todos y cada uno de los integrantes de toda estructura organizacional a nivel operativo y administrativo se ha convertido en algo esencial e imperativo para poder determinar con exactitud y objetividad quien está haciendo bien las cosas y quién no. La eficiencia y eficacia de los resultados así como la competitividad y rentabilidad de las organizaciones dependerá fuertemente de la manera en que se cumplen cada una de las funciones administrativas: previsión, planificación, organización, dirección y control. El trabajo en las organizaciones está en constante cambio y las prácticas del personal también, en consecuencia los integrantes de cada una de ellas cada vez mas está siendo juzgado por los resultados que produce. (Rodríguez, 2000)

Con base a esta filosofía, las organizaciones empresariales y no empresariales mexicanas tratando de ser consideradas de clase mundial, buscan mantenerse en la mejor condición para buscar, identificar, seleccionar, obtener (contratar), desarrollar y conservar durante el mayor tiempo posible personas preparadas y no preparadas, con los perfiles idóneos conforme a su estructura organizacional buscando reducir la rotación, mejorar las interrelaciones personales, optimizar la solución de problemas y conflictos laborales, trabajar más efectivamente internamente y desarrollar planes de carrera y de vida que le permita a sus trabajadores, empleados, técnicos y los diferentes niveles de directivos, buscar de diferente forma como mejorar su desempeño y como progresar en su carrera empresarial, para lo cual son muy importantes las descripciones de puestos que establecen con claridad los parámetros de desempeño de las personas que van a ocupar cada puesto en cada estructura organizacional, ya que sin estas descripciones y estos parámetros no habrá nada contra que evaluar.

En México, cuando menos en lo que respecta a las organizaciones empresariales de la Frontera Paso del Norte, todavía no se le da la importancia y seriedad a lo que esta función representa y algunas de ellas, las menos, a estas alturas, todavía no cuentan con programas formales de evaluación de desempeño para generar verdaderos programas de desarrollo administrativo y gerencial y una base congruente que permita remunerar adecuadamente el trabajo bien hecho.

Es definitivo que el éxito o fracaso de evaluar el desempeño de los integrantes de cada organización dependerá de la visión, misión, valores, filosofía y objetividad generada e instrumentada de parte de sus dueños que permeara hacia todos los niveles inferiores.

El término desempeño implica varias cosas a la vez: a) la forma o manera en que una persona realiza y cumple con su trabajo, b) la calidad con que la acción o actividad laboral es realizada, y, c) la eficacia de los resultados logrados. Un trabajo bien realizado generalmente conlleva a un buen resultado, un buen resultado es fruto del buen desempeño y es directamente proporcional a la manera y calidad con que se hacen las cosas.

La evaluación del desempeño debe ser una experiencia de aprendizaje y desarrollo de experiencias para la persona evaluada y para quien evalúa, que debe incluir una retroalimentación oportuna, clara y objetiva. Por lo tanto, la forma en que se realiza y retroalimenta la evaluación es muy importante, considerando que la evaluación del desempeño debe ser una actividad continua que forma parte del diario quehacer de todas y cada una de las personas que participan en la productividad de las empresas. Mondy y Noe, 2005, recomiendan realizar evaluaciones en fechas programadas en lugar de aplicarlas cada año con base a

fecha de contratación, ya que si dichas evaluaciones no se realizan al mismo tiempo, será imposible hacer comparaciones objetivas y necesarias entre las personas evaluadas.

En este momento me permito hacer una reflexión con respecto a lo que en el contexto académico la evaluación del desempeño significa y permite:

- a) formular y emitir un juicio de valor razonado acerca de lo que el estudiante aprendió y construyó durante el curso, que lo autoriza a ó le impide continuar (Bonvecchio & Maggioni, 2006).
- b) Conocer la eficiencia de la institución, medida por las tasas de aprobación y reprobación - comparar, medir y calificar resultados contra objetivos (metas, promesa) preestablecidos y previamente comunicados (Bertoni, 2000).

Lo que es perfectamente aplicable a lo que se busca en las empresas, ya que el objetivo principal es proporcionar una descripción precisa del nivel de desempeño de los trabajadores/empleados durante el pasado e identificar el potencial de desempeño de todos y cada uno de ellos a un futuro inmediato y/o mediano ya que permite establecer parámetros de desempeño relacionados con el puesto ocupado o a ocupar y que determinan como debe ser el actuar laboralmente. (Werther y Davis, 2000).

Chiavenato (2009), cuestiona con respecto a la evaluación del desempeño, ¿qué importa más, el desempeño en el puesto o la aportación de las competencias que requiere la organización .? Asegurando que el beneficio inmediato debe ser la productividad individual con base a resultados logrados, y que la evaluación individual debe estar ligada al desempeño grupal, al desempeño del departamento al que pertenece y al desempeño global de la empresa.

METODOLOGÍA Y LIMITACIONES

Lo primero que se vale preguntar es ... ¿qué se pretende con esta investigación? Son varias las cosas que se pretenden, la primera es determinar si, ¿se evalúa el desempeño verdaderamente o solamente se hace un remedo de ello? ¿Los métodos utilizados por las empresas de la localidad son apegados a la teoría y a la práctica real? ¿Son los métodos utilizados simples adaptaciones de las empresas maquiladoras al país en que operan y se obtienen resultados distorsionados?

Las limitaciones de este trabajo inician con la muestra utilizada la cual no es muy abundante y tal vez, ni siquiera es adecuada, ya que se consideraron solamente algunas de las empresas de la localidad más representativas de corporaciones de clase mundial operando en esta fronteriza ciudad tales como: GM, GE, Siemens, Fox Con, y, Electro Lux. Los datos que se presentan han sido obtenidos del 2007 al 2009, con base a pláticas informales (no se utilizaron cuestionarios previamente elaborados para no inhibir toda aquella posible información que se puede obtener cuando la plática es de carácter informal y que no causara ningún problema laboral) con personas que trabajan en dichas organizaciones en diferentes niveles jerárquicos, que van desde gerentes departamentales, técnicos, empleados administrativos hasta trabajadores operativos, quienes conforman la fuerza laboral de las empresas aquí involucradas, como testimonio de la realidad de las cosas, ya que en la mayoría de ellas el acceso a este tipo de información es restringido y la información real al respecto es escasa y fuera del alcance de un trabajo de esta naturaleza; sin embargo, la mayoría de los aspectos y factores aquí presentados son muy reales y fáciles de comprobar. De tal manera que la investigación es no experimental de campo, cualitativa con método de entrevista y de observación, en donde la información proviene principalmente de la fuerza laboral ya mencionada de diferentes niveles operativos y administrativos de ciertas empresas de la localidad y que

son o han sido alumnos/as de la materia de RH que imparto en la UACJ o que en alguna ocasión trabajaron bajo mi supervisión o dirección.

RESULTADOS EMPIRICOS

En respuesta a las preguntas que se formulan al principio se pueden concretizar los siguientes resultados. Algunas actividades son difíciles de evaluar en términos cuantificables y medibles, sin embargo, la mayor parte de ellas se pueden dividir en segmentos objetivos que permiten la medición. La dirección necesita conocer y determinar con qué valor contribuye cada persona, departamento ó unidad, a la organización, lo que le servirá de base para establecer futuros estándares ó normas de trabajo que ayudarán a facilitar esta práctica. Si una actividad es necesaria e importante operacionalmente, se debe medir a como dé lugar. Cuando sea difícil establecer indicadores de desempeño en términos cuantificables, se deben buscar medidas ó criterios subjetivos, que aunque sean limitados, serán mejores que no tener ninguno e ignorar la función de control.

Una primera respuesta es que, la mayoría de las organizaciones visitadas por no decir el cien por ciento de la totalidad, siguen utilizando el método clásico y más antiguo conocido como “escalas gráficas de calificación/escalas de puntuación/escalas gráficas/escalas de evaluación”, que evalúan entre 5 y 10 factores del comportamiento y actitudes de la persona a evaluar (calidad, cantidad, confiabilidad, actitud, asistencia, puntualidad, cooperación, trabajo en equipo, iniciativa, comunicación, compañerismo, liderazgo, etc.), factores de desempeño o comportamientos y actitudes que selecciona y valora cada empresa de acuerdo a sus muy particulares necesidades aun que en ocasiones dichos factores no sean relevantes al trabajo que se realiza.

En la utilización de este método él o los evaluadores no necesariamente están adecuadamente preparados para ello y prácticamente realizan una evaluación subjetiva de la manera en que trabajan los evaluados y conceden puntos en una escala de mayor a menor. Escalas que pueden ir del 1 a 7 (excelente; supera expectativas; cumple expectativas; en ocasiones no cumple expectativas; necesita mejorar, etc.), de acuerdo a su muy particular punto de vista. La importancia de este tipo de evaluación es que las empresas tienden a ligar los incrementos salariales a las calificaciones obtenidas en ella.

Su facilidad de comprensión y adecuación a cualquier nivel sin importar el puesto que ocupen, su bajo costo, escasa capacitación y sencillez de aplicación, que permite evaluaciones rápidas de muchos trabajadores, la han colocado en el método favorito de las empresas; sin embargo, se debe cuidar que la evaluación no se convierta en algo rutinario que no busca mejorar debilidades ni ofrecer oportunidades de crecimiento sino determinar quien tiene que ser despedido.

Otra respuesta es que para evaluar los mandos medios (supervisores y jefes de área) estas mismas empresas utilizan diferentes opciones de métodos, sin embargo los más utilizados son la Administración por objetivos (APO) y los Assessment centers (Centros de evaluación y desarrollo).

La APO y de autocontrol, es una técnica también relativamente sencilla y que en el presente tiende a convertirse en una evaluación participativa por objetivos (EPPO) que consiste en que toda aquella persona que tiene personal bajo su mando se reúne en forma individual con cada una de ellas para establecer de común acuerdo objetivos a lograr que motiven altos desempeños y que sean mensurables. Los objetivos pueden ser de tipo institucional, departamental y personal, se programan fechas de inicio y terminación, se generan estrategias de acción a realizar y posibles fechas para ajustar las actividades realizadas que pueden ser trimestrales o semestrales. Por supuesto, la evaluación de resultados finales para la toma de decisiones también es predeterminada en donde se espera que tanto la cantidad como la cantidad de labores realizadas sean de acuerdo a las expectativas previstas. (Werther y Davis, 2008).

Los Assessment centers o Centros de evaluación lo utilizan empresas como General Motors (Delphi) de la localidad para evaluar el potencial a futuro de sus mandos medios e identificar posibles candidatos para puestos de alta dirección. Por supuesto, este es un método costoso que requiere de contar con un lugar especialmente preparado para ello y el tiempo para llevarlo a cabo. Las personas que son seleccionadas para asistir y atender este tipo de desarrollo tiene que pasar por, una evaluación individual primero, luego se selecciona un grupo específico de candidatos para participar en entrevistas de profundidad y exámenes psicológicos, al mismo tiempo que se valoran los antecedentes personales de cada uno de los participantes. Hecho esto, dichos candidatos participaran en mesas de trabajo, ejercicios de simulación de condiciones reales de trabajo, juegos de negocios por computadora para la toma de decisiones, actividades para asumir cierto tipo de liderazgo, etc., actividades en donde serán evaluados conforme a su comportamiento individual y en grupo, por un equipo especializado de evaluadores (3 a 5) de un buen nivel y que puede incluir psicólogos de apoyo, quienes otorgan cierta puntuación, la cual va siendo promediada con la de los otros para tratar de llegar a una evaluación lo más objetiva posible.

La respuesta no final pero si, última por el momento, es que la tendencia más reciente de algunas empresas de la localidad que son filiales de poderosos corporativos como Siemens, GM, GE, Fox Con, Trifusion, para evaluar el desempeño, competencias y resultados (logros) de personas con posiciones de alto nivel (gerentes departamentales hasta alta dirección) gerencial utilizan la Evaluación de 360 grados o evaluación de muchas fuentes (Dessler, 2001). La teoría es que se trata de valorar las competencias que ya posee y está aplicando en su trabajo e identificar aquellas de que carece y que se necesitan para mejorar lo que ya hace, y su desarrollo personal.

Este tipo de evaluación requiere de obtener opiniones (sólo eso, opiniones) de diferentes personas que están en contacto directo con la persona evaluada acerca de su manera de trabajar. El hecho de llamarse 360 grados (del compás) es que simbólicamente representa todas y cada una de sus relaciones con su entorno de operaciones. Generalmente, las identidades de los evaluadores específicos no se le dan a conocer al evaluado. (Hellriegel, et al, 2005) Un ejemplo muy sencillo de esto es: Solórzano contesta las llamadas telefónicas a la brevedad. Él si me escucha cuando le explico algo.

Chiavenato (2009), considera que una evaluación de 360 tiene un enfoque predominantemente administrativo y conductual, que requiere que participen en ella todos los elementos que tienen alguna interacción con el evaluado. Que debe empezar con una autoevaluación personal; así como de sus pares, su gerente (jefe) inmediato superior, otros gerentes departamentales en la misma estructura organizacional, los altos directivos o ejecutivos que pueden incluir al CEO, los clientes tanto internos como externos y los proveedores que tal vez también pudieran ser internos y externos. Esto es, todas las personas en torno del evaluado. Chiavenato también asegura, que para el evaluado es bastante difícil ya que no es fácil estar o quedar suspendido entre dos varas o sobre una pasarela a la vista de todos, recibiendo un tiroteo que le llega de todas partes, si no tiene una mente abierta y conoce y acepta el sistema, su posición es muy vulnerable.

Mondy y Noe (2005), mencionan en su libro que el mismo Jack Welch ex de GE, alguna vez comentó que este método de 360 se había “disfrazado” en su empresa y que las personas se decían cosas agradables unas a otras generando buenas calificaciones para todos. Sin embargo, en la actualidad casi todas las empresas que utilizan esta técnica han encontrado formas para evitar trampas (pero no dicen cuales) y observa que el mayor riesgo de esta evaluación es la posible pérdida de confiabilidad en la retroalimentación, ya que se trata de información muy sensible que en manos equivocadas, puede influir en el desarrollo de las carreras personales.

La entrevista de ED y la retroalimentación respectiva es esencial para el desarrollo del trabajador, pero un programa efectivo de ED exige un diálogo continuo con los trabajadores, señalando la responsabilidad personal de desarrollo que se debe tener y el apoyo de la dirección que se debe dar. La entrevista de ED

debe tener los siguientes objetivos: a) analizar el desempeño, b) cuantificar resultados, y, c) sugerir formas para corregir debilidades y proponer medios para mejorar resultados. Es frecuente que las entrevistas con las personas de alto desempeño sea una experiencia satisfactoria para todos, pero hay renuencia a entrevistar a las personas que han demostrado un bajo y hasta mal desempeño, ya que se puede dar el factor ansiedad y se puede dar una tendencia a posponer estas entrevistas.

Algunos evaluadores sorprenden a la persona evaluada con comentarios de errores ó problemas en el pasado, como el de... “al principio del semestre, usted no coordinó adecuadamente el nuevo programa de corte de piel para los asientos traseros de la Ford Explorer y pudimos haber perdido un cliente muy valioso”. La buena práctica gerencial y el sentido común establecen que se traten estas situaciones cuando suceden y que no se guarden para la entrevista de evaluación.

La ED debe ser un excelente instrumento de carácter administrativo para la organización, los trabajadores, la dirección general y hasta para las organizaciones sindicales, que se debe practicar en forma intensa, sistemática, clara, y eficazmente; teniendo siempre en cuenta que el comportamiento pasado no se puede cambiar, pero sí hay muchas probabilidades de que el desempeño futuro pueda ser mejorado. De tal manera, los programas de ED deben ser experiencias agradables para las personas que participan en ella, sin embargo, en la práctica generalmente no lo son. Las actitudes negativas son fáciles de identificar y lo ideal es que los trabajadores salieran de sus entrevistas de ED con sentimientos positivos hacia el evaluador, el jefe inmediato superior, su puesto de trabajo, la organización y sobre todo con ellos mismos, ya que de lo contrario, las probabilidades de un mejor desempeño serán nulas ó mínimas cuando la autoestima ó ego del trabajador ha quedado por los suelos.

CONCLUSIÓN

La ED de los trabajadores debe ser objetiva por lo cual es necesario ayudarse de todos aquéllos medios disponibles que permitan valorar en forma independiente cada una de las características necesarias y deseadas para que una persona desempeñe las tareas y deberes necesarios, así como, para que ejerza la responsabilidad correspondiente en un puesto de trabajo específico con la mayor corrección y precisión posibles.

Por lo pronto y por lo que respecta a esta primera parte del trabajo, se puede decir que la tendencia general empresarial con respecto a la evaluación del desempeño de todos y cada uno de los integrantes de la organización es con rumbo a la aplicación del método 360 degrees feedback, conocida en español como, evaluación de origen múltiple o de 360 grados (Edwards & Ewen, 1997). El problema de las empresas locales radica en, tratar de generalizar su aplicación a todos los niveles operativos y administrativos; esto es, se puede decir que su aplicación es solamente parte de lo que la teoría señala, ya que no todo el personal debe ser evaluado con este método.

Por supuesto, el método de las preferencias de la mayoría de las organizaciones locales, a la fecha, sigue siendo el de escalas graficas, precisamente por su facilidad de aplicación, su bajo costo, el poco tiempo que requiere para evaluar grandes cantidades de personas, pero sobre todo, que a las personas evaluadas se les facilita comprender y adaptarse a dicho método ya que saben que en la mayoría de las ocasiones, sus aumentos salariales estarán directamente relacionados con la calificación obtenida en dicha evaluación.

Se recomienda no olvidar que existen diferentes niveles jerárquicos tanto en el ámbito operativo como en el administrativo, por lo tanto un solo método no debería ser aplicado a todos ellos, no importando el grado de adaptación a que se haya sometido el método. La ED no debe buscar los mismos resultados cuando evalúa a un operador, que cuando evalúa a un técnico, un supervisor o a un gerente departamental. Diferentes puestos, diferentes perfiles, diferentes expectativas y diferentes tareas y responsabilidades, en

consecuencia y siguiendo el decimo principio de Fayol, “un lugar para cada cosa, y cada persona en su lugar”, es cuestión de entendimiento, ubicación y aplicación. Por lo tanto, se puede decir que el desempeño si está siendo evaluado, pero no para los fines que deberían ser. El principal uso que se le da, es para despedir a quien no iguala o rebasa las expectativas.

Con base a esta filosofía, otorgar salarios iguales a todos los que ocupan puestos iguales, como lo señala la Ley Federal del Trabajo vigente mexicana, (Arellano, 1996) tal vez sería injusto, ya que los que trabajan mejor, no tendrían razón para continuar esforzándose y los que lo hacen menos bien no tendrían interés por mejorarse. Lo mismo sucede con la antigüedad, esta no debe ser considerada como prebenda de preferencias y superioridad. Evaluar el desempeño evita y/o minimiza favoritismos y cometer errores al momento de determinar quiénes son los elementos valiosos de la organización, además de establecer lo que se necesita hacer para incorporar a las personas o equipos de trabajo que por una u otra razón aún no se han integrado a ella.

En lo que respecta a la necesidad e importancia de la entrevista de ED, esta puede convertirse en una actividad difícil de realizar para el evaluador si no cuenta con los conocimientos, preparación, tacto, paciencia y gentileza al momento de aplicarla. El elogio debe darse cuando se merece. La crítica es difícil de absorber. Las personas con frecuencia no entienden la llamada crítica constructiva, como tal; pero no se puede evitar al ED. Se deberá entender que toda persona tiene deficiencias que tal vez no puedan ser corregidas con facilidad, si es que se pueden corregir del todo. La crítica continua conduce a la frustración y perjudica enormemente el desarrollo de los trabajadores. *Las evaluaciones de puntos delicados deben concentrarse en las deficiencias, no en la persona.* Una entrevista bien planificada y conducida eficientemente nunca podrá compensar una relación laboral pobre durante el resto del año. De la misma manera el evaluado debe tener tanto la motivación como la habilidad para mejorar su desempeño (Arthur, 1997). El comportamiento indeseado debe advertirse e indicarse, pero de ser posible, sin amenazar la autoestima de las personas.

Para terminar esta parte, es penoso reconocer que todavía son varias las empresas en esta localidad que son filiales de corporativos extranjeros que no utilizan la ED en todos los niveles operativos y solo la aplican a ciertos ejecutivos, porque no consideran necesario evaluar el resto de la fuerza laboral por muy diversificada que este la fuerza laboral, especialmente la operativa, y que además porque se considera que su aplicación puede generar problemas y hasta conflictos laborales.

LA COMPETITIVIDAD INTERNACIONAL DE LOS SECTORES PRODUCTIVOS CASO SECTOR LÁCTEO DE BOYACÁ

Marlen Suarez Pineda, Universidad Pedagógica y Tecnológica de Colombia - UPTC

ABSTRACT

El presente artículo asume la competitividad a partir de la diferencia entre los conceptos de ventaja comparativa y ventaja competitiva. La primera se ubica en los fundamentos de la ciencia económica, a partir de los trabajos de David Ricardo, la segunda es más ambigua y está vigente el debate sobre cuáles factores la determinan mejor. El teorema de HECKSCHER_ OHLIN expone que cada país exporta el bien que utiliza intensamente el factor más abundante. De esta forma, la ventaja comparativa de un país dependerá de que exporte aquel bien cuya producción es relativamente intensa en el factor con el que está relativamente bien dotado y por el que asume un menor costo. La participación desde la academia en estas discusiones, y la preocupación por explicar por qué hay regiones más capaces que otras de construir ventajas competitivas a partir de sus ventajas comparativas, con el consecuente desarrollo de sectores productivos competitivos, han motivado el desarrollo de una investigación denominada “Análisis de competitividad internacional del sector lácteo en el departamento de Boyacá”, cuyo objetivo es el de determinar el nivel de competitividad internacional del sector lácteo en el departamento de Boyacá y definir estrategias para el mejoramiento de su posición competitiva.

INTRODUCCION

Esta investigación se propone la determinación del nivel de competitividad internacional del sector lácteo de Boyacá y las estrategias que se deben implementar para que mejore su posición competitiva, se analizan las presiones que enfrenta la industria y los determinantes de ventaja competitiva con base en los aportes teóricos de Michael Porter y se reconocen condiciones de la industria a nivel internacional.

Se presenta en este trabajo los resultados de la aplicación de los dos modelos citados, unido al resultado del análisis de factores claves de éxito de este sector; una revisión del panorama del sector en el orden internacional también es un resultado de este trabajo. Finalmente, se evalúan las opciones estratégicas del sector para el departamento de Boyacá considerando las propuestas de valor: liderazgo en costos, diferenciación o enfoque; y, se consideran estrategias relacionadas con sistemas de producción de valor.

REVISIÓN LITERARIA

El primero de los grandes economistas, que habló sobre competitividad a nivel internacional, fue el clásico DAVID RICARDO, cuando refiere que las grandes utilidades logradas algunas veces por comerciantes particulares en el comercio exterior elevarán la tasa de utilidades del país y quitarán capital de otros usos, para ser empleado en el nuevo y provechoso comercio exterior, provocando un alza general de precios, que a la vez aumentaría las utilidades.

Ricardo, establece una serie de teorías, sobre los beneficios del comercio internacional, para el mejoramiento de los ingresos de un País, y hace mención por primera vez, a las ventajas competitivas, en la medida en que es más beneficioso para un País, producir aquellos bienes, en los que tiene una ventaja competitiva mayor, en razón a que sus costos de producción son muy bajos y proceder a importar aquellos en los cuales la producción interna es mas costosa, que su adquisición en el extranjero (Ricardo, 2003). Con la aparición del Liberalismo Económico, cuya máxima rectora, era el dejar hacer, dejar pasar, con lo cual se significa que la oferta y la demanda, regulan las fuerzas del mercado, lo que conlleva a que a través de estas, se puedan regular los precios, y por lo tanto la competitividad de los mercados y quien

tengan mayores ventajas, obtendrá mayores utilidades y podrá tener un posicionamiento mayor en el mercado. En este comercio internacional, es necesario tener en cuenta la ventaja competitiva, en la medida en que la ventaja competitiva de una industria depende no solo de su productividad en relación a la industria extranjera, sino también de la tasa de salarios en relación a la tasa de salarios extranjera; una tasa salarial de una industria en un país, depende a su vez, de la productividad relativa en otras industrias del mismo país (Krugman, 1997).

Michael Porter señala que las empresas de una nación deben pasar de competir sobre ventajas comparativas explicadas en bajos costos de mano de obra o recursos naturales, a competir sobre ventajas competitivas como la calificación de los trabajadores y la capacidad para introducir y difundir innovaciones que incrementen la productividad de los factores de producción.

El trabajo se adelanta con la adopción de una teoría desarrollada por Michael Porter, que tiene dos herramientas, una para hacer análisis de industria, y otra, para identificar los determinantes de la ventaja competitiva. El análisis de la industria láctea de Boyacá, se aborda bajo la metodología de las Cinco Fuerzas Competitivas y la determinación de los factores de la región que entorpecen o contribuyen con la creación de ventajas competitivas en el sector lácteo, se lleva a cabo con la herramienta conocida como el Diamante de Competitividad.

METODOLOGIA

Por el tamaño de la población y la ubicación geográfica en el departamento de Boyacá, se aplicó el método probabilístico de muestreo aleatorio simple para poblaciones determinadas, porque se establecen de manera previa el número de unidades de muestreo que existen en el Departamento. Se tomó una muestra representativa de las empresas del Sector Lácteo de tamaños micro, pequeño y mediano.

Se aplicaron dos instrumentos diseñados para medir las presiones de las Cinco Fuerzas Competitivas y la condición de los factores del Diamante Competitivo.

la Industria Láctea en Boyacá

La producción de leche en Boyacá tiene fundamentalmente tres destinos: las plantas ubicadas en Cundinamarca de las grandes empresas nacionales, el mercado de leche cruda para consumidores directos y las micro y pequeñas empresas procesadoras del Departamento localizadas en el corredor Centro-Tundama - Sugamuxi, y la zona de Chiquinquirá, que fabrican principalmente quesos, yogurt, kumis, leche descremada, crema de leche y otros.

El desarrollo de las unidades productivas de derivados lácteos en Boyacá corresponde a una estructura paralela al desarrollo de esta industria en el nivel nacional. Para este último, la presencia de capital multinacional es importante, la participación de la economía solidaria es fuerte, hay una creciente diferenciación por la calidad de la materia prima, las condiciones tecnológicas son competitivas, la diversificación de productos es alta, y los sistemas de distribución a la red de detallistas son muy desarrollados. Contrario a este panorama las empresas de Boyacá muestran altos grados de informalidad, ausencia de capital multinacional y de esquemas asociativos, status sanitario de materias primas cuestionable (uso de leche cruda), tecnología artesanal, sistemas de distribución de escaso desarrollo, largo ciclo de vida de productos tradicionales y ausencia de innovación en los procesos productivos.

En la Región se producen aproximadamente 1.500.000 litros de leche diarios de los cuales alrededor del 85% (Federación de Ganadores de Boyacá) son acopiados para industrialización afuera por las compañías ALPINA, COLANTA, ALQUERÍA, ALGARRA, y PARMALAT entre otras. Estas compañías tienen un mayor poder de negociación en la compra de la leche, por los volúmenes y sostenibilidad de los contratos que manejan y por los precios que están dispuestos a pagar siempre que se les cumpla con exigencias higiénicas y sanitarias, que además respaldan con sistemas de bonificación a

favor de los proveedores que observan las buenas prácticas de ordeño y manipulación de la materia prima. Adicionalmente, hacen acompañamiento a los finqueros para el logro de certificaciones sanitarias (libre de aftosa y brucelosis) y para elevar las condiciones higiénicas de la leche, facilitando equipos de ordeño y desarrollando programas de sensibilización y asistencia técnica.

Los productos fabricados por estas compañías líderes en el mercado nacional se muestran en una amplia gama de derivados que incorporan permanentemente atributos diferenciadores y se disponen en la red nacional de detallistas para el consumo masivo: CARREFOUR, EXITO, OLIMPICA, CARULLA, etc.

Las empresas boyacenses adquieren la materia prima de los pequeños productores más cercanos, quienes por sus volúmenes de producción y su baja calidad sanitaria no pueden vender a las compañías grandes. El precio que pagan estas pequeñas a sus proveedores es menor frente al de aquellas compañías. Los productos fabricados por las empresas de la Región son iguales para todas las unidades productivas y no han cambiado en aspecto alguno desde hace varias generaciones. La comercialización de los productos tiene lugar a través de intermediarios informales de la ciudad de Bogotá, quienes distribuyen puerta a puerta y surten tiendas y puntos de venta en plazas de mercado de esa ciudad (CORABASTOS, Siete de Agosto, Restrepo, Plaza Palermo y Bosa, entre otras), otros comercializan en el ámbito de la localidad donde producen. Con el sistema de logística y distribución, ocurre lo mismo que con el sistema de producción, se aparta de todas las normas sanitarias, acudiendo inclusive a transportar en la noche los derivados lácteos a Bogotá para evadir los controles, dado que utilizan vehículos sin las condiciones mínimas exigidas.

COMPETITIVIDAD INTERNACIONAL DEL SECTOR LÁCTEO EN BOYACÁ

El análisis de los determinantes de ventaja competitiva para el Sector Lácteo de Boyacá, llevado a cabo a partir del modelo de Diamante de Competitividad de Porter, reporta que las empresas procesadoras de lácteos en Boyacá exhiben alta dotación de recursos básicos, mientras que los recursos avanzados son escasos e inexistentes en la mayoría de los participantes en el Sector, de esta manera el escenario para la innovación y para el desarrollo de nuevos productos y nuevos mercados no existe.

La demanda como determinante de ventaja competitiva, se muestra como una condición negativa, en la medida que no es una fuente de ideas de innovación como tampoco la favorece por los bajos niveles de exigencia que hace sobre los productos. Los sectores conexos y de apoyo se presentan también con un papel negativo para los propósitos de la competitividad, la industria no tiene la posibilidad de contar con proveedores de materias primas certificados, no existe en la Región desarrollos empresariales en servicios logísticos que apoyen los sectores industriales de alimentos, los organismos del gobierno no desarrollan programas sistemáticos de apoyo al Sector, apenas se registran las acciones relativas al control del cumplimiento de las normas de orden sanitario, los organismos financieros y las instituciones de educación y de investigación no tienen entre sus prioridades intervenciones en el Sector.

La estrategia y estructura de las empresas, por su parte, es una determinante que se califica de muy baja favorabilidad, por la escasez de planeación en el mediano y largo plazo, acompañada de escaso conocimiento por parte de los empresarios acerca de este tipo de industria en el ámbito nacional e internacional; las estructuras de las empresas son fuertemente centralizadas, los procesos y procedimientos no se encuentran definidos, y los mecanismos de control y evaluación son inexistentes.

La aplicación del modelo de análisis de industria –Cinco Fuerzas Competitivas- permite señalar que el Sector tiene barreras muy débiles para el ingreso de nuevos competidores, dado que los productos no tienen atributos diferenciadores altamente reconocidos por el cliente, no existen marcas fuertes que hayan logrado significativos grados de fidelización y los proveedores de la materia prima cambian con mucha facilidad de cliente siempre que le signifique un mejor precio por el litro de leche. La presión de

productos sustitutos es altamente favorable, es decir que no existe esta presión, no se identifican productos sustitutos que signifiquen amenaza para el crecimiento de la industria. El poder de negociación de los proveedores es relativamente alto por el papel que ejercen las grandes empresas procesadoras que teniendo sus plantas fuera de Boyacá hacen importantes acopios de materia prima en la Región, dejando para el fabricante local las opciones de proveedor más pequeño, lejano y con materia prima de inferior calidad. El poder de negociación de los clientes es alto por tratarse de un producto homogéneo que le abre grandes facilidades al comprador para cambiarse de proveedor sin dificultades. La rivalidad entre los competidores se califica como desfavorable para el Sector en la Región, por la existencia de muchos participantes informales que compiten principalmente con precio.

Se señalan entre las amenazas para el Sector, la velocidad del cambio tecnológico que impacta las infraestructuras productivas de este tipo de industria, el ingreso de nuevos participantes provenientes de otros departamentos y del exterior, el cambio permanente de la normatividad, el cambio acelerado de los hábitos de consumo de este tipo de productos, el crecimiento de la informalidad y los aspectos de tipo ético que se manifiestan en el bajo compromiso por la inocuidad del producto, a través de todo el sistema de producción de valor (productor de materia prima-transformador-distribuidor).

La mayor debilidad del Sector, se define en la falta de direccionamiento estratégico de las empresas, traducida en una falta de visión, de objetivos de largo plazo y planes de acción que reconozcan las realidades del entorno, lo cual las ha consagrado en el carácter de unidades económicas de subsistencia y no como verdaderas unidades empresariales. Por su parte la mayor fortaleza toma asiento en la dotación de condiciones naturales relativas a fuentes de materia prima, localización geográfica estratégica, y fuentes de mano de obra aunque no calificada.

La formulación estratégica encierra una propuesta de construcción de capital social como labor transversal a cualquier plan de acción, con el propósito de crear el clima para alcanzar apuestas colectivas y puedan superarse gradualmente las dificultades de orden ético que encara el Sector. En segundo orden se propone la estructuración de un sistema integrado de producción de valor tipo clúster que incorpore en la apuesta de competitividad a las empresas de la cadena y a las instituciones gubernamentales, instituciones de educación e investigación, entidades financieras y otras industrias conexas. Finalmente se recomienda una estrategia de competitividad que anime la dinámica del clúster, siguiendo el enfoque teórico de Porter, Hill Ireland, Hoskinsson y Thompson, y se refiere a una diferenciación con enfoque, según la cual la apuesta de competitividad debe basarse en elaborar productos altamente diferenciados y dirigidos a segmentos de mercados determinados.

CONCLUSIONES

El trabajo de campo con los empresarios y la consulta a organismos gremiales y a responsables de la política pública sectorial, permiten precisar que los factores claves de éxito del Sector Lácteo son: capacidad para aprovechar economías de escala, capacidad técnica para asegurar la calidad, capacidad y recursos para desarrollar atributos diferenciadores, y, capacidad y recursos para gestionar la cadena de suministros.

Las oportunidades que se definen para el Sector se relacionan con la diferenciación de los productos en aprovechamiento de las condiciones singulares de la materia prima que se produce en la Región, y con la posibilidad de asociar la marca de los productos a una marca región. La cercanía con Bogotá y los más recientes desarrollos de infraestructura vial, le suponen al Sector la oportunidad de conquistar una participación importante en mercados de alto crecimiento. Las integraciones hacia adelante y hacia atrás se configuran también como una oportunidad del Sector, por la proximidad geográfica entre los actores del sistema de producción de valor, lo cual le permitiría aprovechamiento de economías de escala. De acuerdo con el estudio de Araujo Ibarra, una de las oportunidades de Boyacá en el mercado de los Estados

Unidos está en el renglón de los quesos, por las ventajas comparativas que se tienen relativas a la disponibilidad de recursos físicos favorables.

La creación y puesta en marcha de un sistema de producción de valor como acción estratégica para la construcción de la competitividad del sector lácteo de Boyacá, requiere una investigación juiciosa de carácter multidisciplinario, que se ocupe de caracterizar los aspectos antropológicos de las comunidades de Boyacá, para comprender las motivaciones verdaderas que les conducen a buscar aliados y a construir en colectivo. A partir de los resultados de estudios como el que se propone, se dispondrá de orientaciones para desarrollar planes de acción que intervengan en el capital social, creando los escenarios de compromisos conjuntos y solidarios.

ABSTRACT

La investigación contribuye al desarrollo regional, propicia la interacción entre sector productivo, academia, gobierno y comunidad. Estudia los eslabones de la cadena productiva de la papa, aplicada en la SAT “Papas de Casablanca del Municipio de Arcabuco Boyacá”. Se aborda como factor determinante la planificación y la aplicación de buenas prácticas en los procesos de siembra, cosecha y poscosecha de la papa para la obtención de un producto de calidad. A partir de los resultados de un cultivo experimental, se diseñan y estandarizan dos alternativas de industrialización de la papa, jarabe de glucosa y fructuosa. Además, se desarrolla un estudio de mercado que permite determinar la viabilidad de la producción y comercialización de los productos de agroindustria mencionados, y el análisis organizacional y financiero que determina la inversión y sus posibilidades vía creación de empresa.

INTRODUCCION

La investigación muestra los resultados obtenidos con el desarrollo del proyecto “desarrollo de productos de innovación con alto valor agregado a partir de la papa para la SAT papas de Casablanca del municipio de Arcabuco departamento de Boyacá”. se presenta en cuatro partes, la primera parte describe el estudio de mercados que determina la viabilidad de los productos de innovación en lo que respecta a oferta, demanda y precio, se complementa con la inteligencia de mercados que profundiza sobre el comportamiento de la oferta; la segunda parte presenta la metodología de planificación del cultivo de la papa para garantizar la producción continua del tubérculo, incluye el diagnostico participativo con los agricultores que establece la situación de la SAT al inicio de la ejecución del proyecto, dentro del diagnostico se analizan aspectos administrativos, de participación activa de los asociados y del desarrollo de su actividad productiva, que permitió establecer la línea base de información; en la tercera parte se muestra el diseño y estandarización para la obtención de dos productos de innovación a partir de la papa, jarabe de glucosa y jarabe de fructuosa, con su correspondiente caracterización; en la cuarta parte se plantea la estructura de costos de producción que determina el costo unitario de los productos de innovación, además la evaluación financiera que determina una aproximación sobre la viabilidad económica del aprovechamiento estos productos de innovación a nivel industrial;

REVISIÓN LITERARIA

El proyecto de investigación es de carácter interdisciplinar, confluyeron temáticas y conocimientos de la ingeniería agronómica, de la ingeniería y química de alimentos y la Administración de Empresas. Desde la agronomía se trabajo lo relacionado con el levantamiento de la línea de base, la planificación de la producción agrícola, el manejo de cosecha y poscosecha, e implementación de nuevas alternativas tecnológicas vinculadas, se realizo a través de la metodología de las escuelas de campo; desde la Ingeniería y Química de Alimentos se trabajo en el diseño y estandarización de subproductos de papa, se obtuvieron y caracterizaron mediante análisis fisicoquímico los productos jarabe de glucosa y jarabe de fructuosa, y desde la Administración de Empresas se trabajo en investigación e inteligencia de mercados, planeación estratégica, costos y, evaluación de proyectos. A continuación se presentan los aspectos teóricos, conceptuales y prácticos más relevantes que se tuvieron en cuenta.

1. Para las escuelas de campo se trabajo con la metodología propuesta por Paulo Freire, educador, que hablo de la “necesidad de reemplazar la educación tradicional de tipo vertical por una “educación problematizadora” que le permitiera a las personas analizar y cuestionar su realidad, diferenciándola de la pedagogía y la enseñanza dirigida a adultos.
2. En el proceso de obtención de subproductos a partir del almidón de papa se utilizaron los procedimientos propuestos por autores como: Ing. Bárbara Fanelli, **Miguel Calvo**, SOUZA ARROYO, Verónica. HIDRÓLISIS ENZIMATICA DE UN POLISACARIDO VEGETAL (ALMIDON), GARCÍA Roman Miguel. Transformaciones de Almidones entre otros
3. Para el caso empresarial se tuvo en cuenta las metodologías para la realización de investigaciones e inteligencias de mercadeo de varias fuentes de internet así como de docentes de la escuela de Administración de empresas de la Universidad Pedagógica y Tecnológica de Colombia, para la formulación estratégica los conceptos de Peter Drucker quien opina que "la estrategia requiere que los gerentes analicen su situación presente y que la cambien en caso necesario, saber que recursos tiene la empresa y cuáles debería tener"; en 1962 Alfred Chandler: "el elemento que determina las metas básicas de la empresa, a largo plazo, así como la adopción de cursos de acción y asignación de recursos para alcanzar las metas" (1ra definición moderna de estrategia strategy and structure) Henry Mintzberg : "el patrón de una serie de acciones que ocurren en el tiempo" en su opinión, los objetivos, planes y base de recursos de la empresa, en un momento dado, no son más importantes que todo lo que la empresa ha hecho y en la realidad está haciendo. Esta concepción enfatiza la acción; las empresas tienen una estrategia, aún cuando hicieran planes.

METODOLOGIA

El proyecto se desarrolla en el municipio de Arcabuco departamento de Boyacá, con la Sociedad Agraria de Transformación “Papas de Casablanca”.

Tipo de estudio: El tipo de estudio es descriptivo porque identifica las características de los universos de investigación, señala formas de conducta, establece comportamientos concretos y descubre y comprueba asociación entre variables. Además, se desarrolla un estudio de tipo experimental para obtener los subproductos, se realizan pruebas de ensayo y error a nivel de laboratorio y planta piloto.

Método de investigación: Se utilizan los métodos inductivo, deductivo y de análisis.

Para la ejecución del proyecto se desarrolló cada objetivo por etapas para dar cumplimiento a las actividades propuestas y, para las escuelas de campo de agricultores ECA, la participación acción, producto de las actividades participativas realizadas con los productores asistentes de la asociación, donde además se capacitaron sobre el manejo integrado del cultivo.

INVESTIGACIÓN E INTELIGENCIA DE MERCADEO

Con los resultados obtenidos se determina la viabilidad de la producción y comercialización de estos productos. El diagnostico del sector se basa en la recolección y análisis de información secundaria de los sectores seleccionados como mercados potenciales, se realizo análisis estadístico a los datos obtenidos y la información fue analizada de acuerdo con la metodología MPVA y, la valoración competitiva de los sectores y formulación de estrategias¹ de acuerdo con los planteamientos de Michael Porter y la matriz de evaluación sugerida por Fred David. Se evidencia que es viable la producción de almidón de papa de jarabe de glucosa y fructosa, por el volumen de toneladas consumidas en el mes (ver tabla No. 1). Dadas las consideraciones anteriores, a continuación se hace referencia a la posición de los consumidores de estos dos productos con respecto a la actual competencia identificada en el estudio.

Tabla. 1 demanda potencial del almidón y el jarabe de glucosa

Tipo de producto	Cantidades consumidas en el mes/ empresas encuestadas Bogotá	Precio promedio de compra
Almidón de papa	11.8 toneladas	\$ 2'500.000- 3'000.000
Jarabe de Glucosa	15.000.000 litros	\$ 30.000 a 40.000

Fuente: encuestas aplicadas en la ciudad de Bogotá, en el mes de febrero de 2008 por el CREPIB

Distribución: Según el análisis de la información recolectada, el proceso de distribución es directo en la empresa, es decir las empresas que comercializan lo entregan directamente a sus consumidores, este varía la forma de entrega en tiempo y espacio dependiendo del volumen y lugar donde se encuentra el consumidor.

Competencia: Dentro de la valoración de los competidores actuales se encontró a las comercializadoras de almidón de papa, ya que la mayoría de almidón consumido es importado, por otra parte, en el caso del jarabe de glucosa este es importado principalmente de países como Estados Unidos, Bélgica y Francia por empresas como Cadbury Adams, Italo, Compañía Nacional de Chocolates, Firminich entre otras.

De acuerdo a los resultados arrojados por el estudio de mercados se reconocen dos grandes líneas estratégicas para la SAT, diversificación de productos orientada al cultivo de variedades de papa para el mercado de consumo en fresco y el segmento industrial, y el desarrollo de productos dirigido a la elaboración de almidón de papa, jarabe de Glucosa y jarabe de fructosa.

METODOLOGÍA DE PLANIFICACIÓN DEL CULTIVO DE PAPA QUE GARANTICE LA PRODUCCIÓN DURANTE TODO EL AÑO CON UN RENDIMIENTO CONSTANTE Y AMBIENTALMENTE AMIGABLE.

La aplicación de la metodología ECA se realizó en talleres donde se inicia con el diagnóstico de conocimientos de los participantes: de su entorno, del manejo del cultivo, de conocimiento que tienen de plagas y enfermedades y de métodos de control, donde grupos de trabajos de cinco personas en promedio, expresaron libremente sus ideas. En la etapa de diagnóstico se tiene que el 60% de los productores reconoce muy bien las prácticas de manejo del cultivo, define los ciclos de vida de las plagas, reconocen el riesgo por el mal uso de los plaguicidas,

Se logró establecer con los productores los siguientes aspectos mínimos para la planificación de las siembras escalonadas del producto: Identificar los volúmenes de tubérculo, según la variedad que demanda el mercado; destino de los tubérculos y variedades ya sea para consumo en fresco o agro industrial; cuantificar las áreas de siembra que satisfaga los volúmenes de producción por variedad que demanda el mercado; caracterizar las áreas de siembra por los potenciales riesgos que se puedan presentar, por encharcamiento, presencia de heladas, granizadas, disponibilidad de agua en periodo seco y por favorecer la presencia de plagas y enfermedades y malezas entre otros; ubicación de las áreas en el calendario de siembras dentro del régimen lluvioso, teniendo en la cuenta los potenciales riesgos que se puedan presentar por los diferentes fenómenos climáticos y por la presencia de plagas y enfermedades; determinar por área de siembra la cantidad de actividades de labranza (arada, rastrillada), necesidades de semilla, fertilizantes, control de plagas y enfermedades y malezas, número de horas riego, actividades e insumos de cosecha y mano de obra en general; estimar los costos de producción por área de siembra; determinar fuentes de financiación; cronograma de actividades o calendario de disponibilidad del apoyo logístico humano y financiero; distribución de las siembras y responsabilidades entre los asociados a la SAT según calendario.

DISEÑO Y ESTANDARIZACIÓN DE SUBPRODUCTOS DE PAPA

Por medio de Hidrólisis enzimática se obtuvieron dos subproductos derivados del almidón de papa, jarabe de glucosa y jarabe de fructosa, el proceso se divide en: *Licuefacción* el resultado de la acción de la enzima α -amilasa, sobre la amilopectina es una hidrólisis parcial que produce maltosa quedando el núcleo ramificado, dando origen a las dextrinas (dextrinas límite). *Sacarificación*: Llevado a cabo el proceso de licuefacción es necesario agregar al sustrato parcialmente hidrolizado la glucoamilasa para romper los enlaces 1-6 de la amilopectina ya que la α -amilasa es también incapaz de actuar sobre los enlaces α 1-6 de la amilopectina, lo que permite un aprovechamiento más completo del almidón. Este proceso enzimático se denomina: sacarificación. *Isomerización jarabe de glucosa*: Ya obtenido el jarabe de glucosa, es concentrado hasta llevarse a un contenido en sólidos totales superior al 70% ya que esto facilita la acción de la enzima glucosa isomeraza durante el proceso. Sin embargo, previo a la isomerización, se requirió activar la enzima teniendo en cuenta las recomendaciones dadas por la casa comercial.

EVALUACION DE LOS COSTOS DE PRODUCCIÓN DE LOS SUBPRODUCTOS DE PAPA QUE SIRVAN COMO BASE PARA LA IMPLEMENTACIÓN DE UNA INDUSTRIA

Se toma como punto de partida el diseño y desarrollo de los productos, que comprende el estudio y análisis de los diferentes factores de orden organizacional, económico, técnico, financiero, administrativo e institucional vinculados, con esta información se realiza la evaluación que consiste en medir objetivamente las variables resultantes de la formulación del proyecto y convertirlas en cifras financieras con el fin de obtener indicadores útiles para medir su viabilidad. Para la evaluación y determinación del costo se determinan aspectos claves como el tamaño del proyecto, el flujograma de producción, el análisis y evaluación de tecnología requerida, el estudio financiero y la evaluación. Una vez realizados todos los aspectos anteriores se concluyo que el proyecto financieramente es viable, dado que evaluado a un costo de oportunidad del 15% representa un valor presente neto de \$ \$ 210.427.977,69; La tasa de rentabilidad que genera el proyecto es del 31.64% 16.64% adicional al costo de oportunidad. Desde la perspectiva del desarrollo de este proyecto los beneficios sociales que se visualizan son la generación de 20 empleos directos, la movilización de recursos en inversión social a través del pago de impuestos, satisfacer una necesidad de un mercado con consumo permanente, que conlleva a obtener mejores ingresos estables a los productores de papa, y en general propiciar una mejor calidad de vida.

CONCLUSIONES

- a. De acuerdo a los resultados arrojados por el estudio de mercados se reconocen dos grandes líneas estratégicas para la SAT, diversificación de productos orientada al cultivo de variedades de papa para el mercado de consumo en fresco y el segmento industrial (papas fritas o congeladas), y el desarrollo de productos dirigido a la elaboración de almidón de papa.
- b. En el mercado de consumo en fresco se reconocen como principales segmentos potenciales para la SAT, mayoristas, detallistas y el segmento domestico, en los que principalmente se deben cumplir con los parámetros exigidos en la Norma NTC 341, que define los requerimientos y tolerancias para la papa de consumo; por otro lado la organización debe ajustar sus procesos internos relacionados con la logística de comercialización y procesos de almacenaje, selección y empaque, entre otros para satisfacer las necesidades de los almacenes de cadena y cumplir con el Acuerdo sobre Buenas Prácticas Industriales, Comerciales y de Defensa del Consumidor de la ANDI y FENALCO, firmado para el 2004.
- c. La incursión en nuevos mercados exige que la SAT fortalezca las áreas críticas, debe fortalecer su talento humano en gestión comercial y administrativa, mejorar su procesos de producción con el fin de contar con productos estándar y de calidad de acuerdo a los parámetros exigidos por el consumo en fresco y la industria, establecer políticas de venta como organización y fortalecer su área contable a fin de contar con soporte financiero para acceder a recursos de cofinanciación.

RESUMEN

El desarrollo integral de una sociedad supone la consideración de diferentes factores; cognitivos, sociales, culturales, normativos, etc., por mencionar algunos, siendo las Instituciones Públicas las responsables de generar las acciones o políticas públicas orientadas al Desarrollo Endógeno de los Municipios. Desde el punto de vista jurídico, el factor normativo es uno de los más importantes para el estudio, debido a que de él depende gran parte del desarrollo de una sociedad (población, país, etc.), en el momento del adecuado desempeño de la administración pública. Las instituciones, su estructura, fundamento normativo y reglamentario son la condición de posibilidad del orden social; el municipio, como institución es el encargado de dirigir a la sociedad en su ámbito territorial de competencia, para lo cual se rige por determinados lineamientos normativos en su funcionamiento. Un documento clave para llevar a cabo la gestión de la administración pública es el Plan Municipal de Desarrollo con base en la planeación participativa, democrática de los actores. El Plan Municipal de Desarrollo, debe ser avalado y aprobado por la Legislatura del Estado en turno; debido a la responsabilidad de los actores en su cumplimiento con el propósito de lograr el beneficio de la sociedad donde se refleja su Desarrollo. El cual funge como instrumento de planificación mediante el establecimiento de los factores primordiales del territorio en un periodo de gobierno, mismos que tienen el fin de generar mejores condiciones de vida para los habitantes, a partir del uso eficiente y eficaz de sus recursos. Sin embargo, más allá del discurso, en la realidad no siempre se logra el desarrollo, de ahí nuestra propuesta de analizar y evaluar que tanto la planeación municipal del desarrollo propicia un desarrollo endógeno, entendido este como el conocimiento, potenciación y activación de los principales capitales de una región determinada.

ABSTRAC

The comprehensive development of a society involves the consideration of different factors, cognitive, social, cultural, legal, etc., To name a few, being public institutions responsible for generating actions or public policies Endogenous Development of Municipalities. From the legal point of view, the regulatory factor is one of the most important for the study, because it determines much of the development of a society (population, country, etc.), When the proper performance public administration. The institutions, their structure, policy and regulatory basis is the condition of possibility of social order, the municipality, as an institution is responsible for leading the company in its territorial area of competence, which is governed by certain guidelines in its policy operation. A key document to carry out the management of public administration is the Municipal Development Plan based on participatory planning, democratic actors. The Municipal Development Plan should be endorsed and approved by the Legislature of the State in turn; because of the liability of the actors in their compliance with the purpose of achieving the benefit of society that reflects its Development. Which serves as a planning tool through the establishment of the essential factors of the territory in a period of government, who have themselves to generate better living conditions for residents, from efficient and effective use of resources. However, beyond the speech,

in reality is not always possible development, hence our proposal to analyze and evaluate both the municipal development planning promotes endogenous development, understood as knowledge, empowerment and activation key capital of a region.

INTRODUCCIÓN

El trabajo tiene como propósito establecer cuál es su estructura, funcionamiento y el comportamiento del Plan de Desarrollo de la Administración Pública en el Municipio de Amecameca, Estado de México y su relación con el Desarrollo Endógeno del mismo, en donde se establece que todo organismo público que representa a los actores de la sociedad deben buscar los beneficios y crecimiento para los mismos. Ahora bien, desde el punto de vista jurídico, el factor normativo es uno de los más importantes para el estudio, debido a que de él depende gran parte del desarrollo de una sociedad (población, país, etc.), en el momento de su adecuado desempeño. Un documento clave para llevar a cabo la gestión de la administración pública es el Plan Municipal de Desarrollo con base en la planeación participativa, democrática de los actores. El Plan Municipal de Desarrollo, debe ser avalado y aprobado por la Legislatura del Estado en turno; debido a la responsabilidad de los actores en su cumplimiento con el propósito de lograr el beneficio de la sociedad donde se refleja su Desarrollo. El cual funge como instrumento de planificación mediante el establecimiento de los factores primordiales del territorio en un periodo de gobierno, mismos que tienen el fin de generar mejores condiciones de vida para los habitantes, a partir del uso eficiente y eficaz de sus recursos.

El cual funge como instrumento de planificación mediante el establecimiento de los factores primordiales del territorio en un periodo de gobierno, mismos que tienen el fin de generar mejores condiciones de vida para los habitantes, a partir del uso eficiente y eficaz de los recursos.

REVISIÓN LITERARIA

Para saber la efectividad de un plan de desarrollo, es necesario el análisis del mismo, tratando de encaminar el avance obtenido, al desarrollo endógeno, en consideración a que el desarrollo sino las personas en su individualidad y en su sociabilidad, respaldándose en las políticas públicas, vinculadas a hechos políticos, diseñadas para la generación de los procesos virtuosos de desarrollo, sin omitir que estas políticas públicas han mostrado un fracaso sorprendente, que muchos se niegan a aceptar, pero que está allí, visible, y no obstante que las mismas están reguladas de manera lícita por nuestra legislación vigente, que emana característicamente de la Constitución Política de los Estados Unidos Mexicanos en su artículo 115, y dirigiéndolo a nuestro caso específico, el Municipio, estableciendo su integración y su investidura jurídica para manejar su patrimonio, así como las demás legislaciones en donde nos indica la forma de estructura y competencia para poder realizar un Plan de Desarrollo, en donde se debe de crear la participación ciudadana y organizaciones sociales tal y como lo establece la Ley Orgánica Municipal del Estado de México, ahora bien la participación de los habitantes se debe realizar mediante las comisiones que son determinadas, con el fin de recabar información de los demás habitantes poblacionales para

coadyuvar a la elaboración del Plan de Desarrollo y en caso particular el Plan de Desarrollo Municipal, claro que si bien es cierto que quien conduce al municipio es el Presidente municipal, él mismo debe tomar en cuenta la participación de los ciudadanos, pues quién sino los mismos pobladores son los mejores observadores de las necesidades del territorio de población en el que habitan, sin dejar a un lado que para realizar un buen plan de desarrollo no se deben omitir aspectos importantes conducentes a el desarrollo; local-económico, socio-cultural y político-administrativo, en tanto que ni el Estado, ni los sectores privados o públicos, pueden producir el progreso de las personas; solo pueden crear las condiciones de entorno, sin dejar de hacer referencia a un aspecto substancial como lo es la comunicación entre instituciones y ciudadanos, lo cual nos lleva a la creación de un ciudadano activo y responsable, en medida del grado confianza entre unos y otros, así como los valores y normas que compartan, en el actuar del desarrollo de su población dentro de su espacio económico y político.

Si bien es cierto que el plan de Desarrollo en su estructura esta apegado a la normatividad jurídica siendo él mismo parte medular del Municipio en tanto que las políticas públicas se derivan al ver materializado el plan de desarrollo a partir de la ejecución de proyectos y acciones establecidas en el, mismas que nos conlleven a mejorar la construcción de un desarrollo en el territorio, el cual se debe ir efectuando de localidad en localidad, con la efectiva participación ciudadana y la activación de todos los actores presentes en la localidad bajo un enfoque de abajo hacia arriba, debiendo coordinar las acciones desde todas las instancias Nacionales, regionales y LOCALES, en donde se requiere de la participación activa del sector empresarial, de las organizaciones no gubernamentales, de las Universidades y de las distintas instancias gubernamentales. Todos movidos con un solo fin, Mejor calidad de Vida para todos. Tomando incluso al Desarrollo Endógeno como una política pública para superar la desigualdad social, y formar al mismo tiempo la colocación de los diferentes actores sociales en el proceso de transformación de un Estado, partiendo de dimensiones en un desarrollo endógeno territorial; la Gestión del Conocimiento Regional, convirtiéndose en un proceso de aprendizaje colectivo regional y lograr así la formulación y evaluación de planes elaborados en la región, aspecto importante en nuestra investigación, ya que nuestra región carece de este punto elemental, de igual manera el desarrollo de la Institucionalidad, nos lleva a su objetivo práctico que es la investigación y desarrollo de las competencias socio-institucionales con el propósito de mejorar la institucionalidad regional y las relaciones Estado-Sociedad.

Partiendo de las políticas públicas gubernamentales, el funcionamiento de las MIPYMES como parte del motor generador de empleos del país, se espera lograr un modelo que proponga la integración de los mismos, en el desarrollo endógeno de los municipios de la región, que cumplan con el propósito de generar estrategias que permitan dicho desarrollo. De acuerdo a lo anterior, el primer eje empezará por determinar el rol de las políticas públicas que en la actualidad se están conociendo como acciones públicas, que no son más que la responsabilidad que tiene el estado para lograr el crecimiento del país y que se encuentran fundamentada en sus Planes de Desarrollo en todos sus niveles, para ello Aguilar (2009), comenta que “la evaluación de las políticas públicas constituyen asuntos de muy reciente interés en la agenda de interés intelectual y en conocimiento en el campo de las ciencias sociales, y que en México su estudio e interés inicia cuarenta años después que en los Estados Unidos, y que es una actividad que ha alcanzado gran importancia entre los gobiernos”, y que se encuentra deficientemente articulado, debido a los periodos de mandatos diferentes que se manejan en México, asimismo, se debe a la alternancia de los partidos políticos en los diferentes niveles de gobierno.

La presencia de diferentes modelos organizacionales para la implementación de políticas públicas, Aguilar (1996), dice que “la preocupación esta en torno de la implementación de los programas sociales que surgen del reconocimiento de que las políticas públicas no pueden comprenderse al margen y separadamente de los medios de ejecución, debido a la insistente presencia de patrones básicos tales como: pretensiones desmedidas, ejecuciones deficientes, resultados insignificante. Por lo que se ha desarrollado un consenso razonablemente amplio, que determina la incapacidad del gobierno para dar cumplimiento a las promesas de que se generan de una pobre concepción de las políticas publicas”, por

lo que las políticas se transforman en acciones administrativas, y lo fundamental sería que se transformaran en acciones públicas con ciertas simplificaciones decisivas. Aguilar (2006), continúa diciendo que “el rasgo más importante de la teoría organizacional es su anarquía conceptual”, por lo que al referirse a la literatura existente comenta que la diversidad de colección de teorías que al implementarlas son incompatibles y contradictorias. Lo que produce un síntoma inequívoco de que en este campo el conocimiento es “blando”. Esto no quiere decir que debería ser “duro”, ni tampoco que algún día lo será. Simplemente significa que es extremadamente difícil utilizar el conocimiento de este tipo como base para el análisis. Richard Nelson (1974), referido por Aguilar (2006), comenta que “El problema de realizar cambios organizacionales adecuados”, rebasa con mucho la capacidad que actualmente tienen las diversas tradiciones del análisis de las organizaciones. Por lo que en la actualidad se carece de estructuras intelectuales normativas capaces de orientar eficazmente en lo que se refiere a las opciones o modificaciones organizacionales, asimismo, se carece de un lenguaje que permita hacer un listado y hablar de las opciones organizacionales de manera fluida. A partir de lo anterior, el desarrollo sustentable es aquel que satisface las necesidades del presente sin poner en peligro las necesidades de generaciones futuras.

De acuerdo con la “Agenda 21”, requiere la integración de los tres pilares del desarrollo: crecimiento económico, progreso social y normas ambientales. La creación de oportunidades de empleo es un elemento central del pilar social del desarrollo sustentable y requiere una política de empleo integrada.

El empleo presenta una perspectiva dual, ya que es a la vez un objetivo y una consecuencia del desarrollo socioeconómico y es también un importante elemento para la estabilidad política y social. La creación de empleo es esencial para la reducción de la pobreza. Una tasa de desempleo elevada y persistente provoca la inestabilidad política y social y causa un gran impacto psicológico en las personas.

METODOLOGÍA

La metodología que se aplicará en este proyecto estará basada por un lado desde los apoyos metodológicos de los diferentes autores para el levantamiento de los datos y procesamiento de los mismos, y por otro lado, investigando fuentes bibliográficas que le van a dar el sustento teórico a la investigación. Desde el punto de vista del levantamiento y procesamiento de los datos, se utilizará con base en los diferentes tipos de investigación presentados por los diversos autores, necesarios para delimitar y entender la investigación que se lleva a cabo: es un estudio observacional; en este estudio el observador sólo describe el fenómeno estudiado. No puede modificar a voluntad propia ninguno de los factores que intervienen en el proceso. La observación realizada es participativa, debido a que interactúa con los fenómenos observados. Asimismo, es de tipo estudio retrospectivo parcial; el estudio cuenta con una parte de información; el resto está por obtenerse. Con la información proporcionada por parte del Municipio de Amecameca y el plan municipal de desarrollo 2006-2009, los cuales ayudarán a determinar cuál ha sido su comportamiento y el efecto sobre el Desarrollo Sustentable. También es un estudio de investigación de campo; analiza un determinado límite para conocer su estructura y relaciones sociales. Su principal característica consiste en que se realiza en un medio natural que rodea al individuo. Para esta investigación, se tomará en consideración la visita al Municipio, y por consulta a los documentos que se encuentran disponible sobre la ejecución del Plan de Desarrollo Municipal, con el propósito de establecer el análisis FODA, y determinar los elementos que ayuden a la elaboración de acciones públicas en propuesta de planes y programas, que cumplan con los aspectos jurídicos correspondientes. Es un estudio no experimental transversal y longitudinal; estudio en el cual se miden una sola vez las características de uno o más grupos de unidades en un momento dado, por un lado, y por el otro poder realizar comparaciones de los resultados y determinar la eficiencia del Municipio de acuerdo a las estructuras funcionales, jurídicas y estructurales del Plan de Desarrollo Municipal. También es un estudio descriptivo; estudio que solo cuenta con una población la cual se pretende describir la parte estructural y jurídica que sirve como base para la elaboración del Desarrollo Sustentable y como participa en el desarrollo de la Región.

RESULTADOS

Debido a que la investigación sigue en proceso los resultados obtenidos a la fecha, son de carácter teórico y de diagnóstico, el cual reflejan desde el punto de vista jurídico que hay deficiencias en la aplicación de las leyes de acuerdo a la estructura del Plan de Desarrollo Municipal, por lo que trae como consecuencia incongruencias en la aplicación de las leyes, asimismo las políticas públicas se ejercen en función de la negociación entre los integrantes de la nueva organización y los beneficiados que participaron en colaboración con las nuevas autoridades. En el ejercicio del Plan de Desarrollo, en la mayoría de las ocasiones no se ejecutan al 100%, por lo que quedan incompletas y se ve reflejado en el Desarrollo Endógeno del Municipio, debido a que no se cumplen con las políticas públicas planteadas.

CONCLUSIONES

Se concluye que al término de la investigación, se tenga un esquema del Plan de Desarrollo Municipal, que este basado en las necesidades del Desarrollo Endógeno del Municipio y que beneficie a los actores. Asimismo, que su estructura esté relacionado de manera coherente y lógicamente con su fundamentado Jurídico establecido.

RESUMEN

La calidad del servicio y la responsabilidad social, que brindan las instituciones a los individuos, las organizaciones y a la sociedad, están regidas por la administración pública en sus diferentes niveles (Municipal, Estatal y Federal). Uno de los pilares fundamentales que se toma en consideración en el Plan Nacional de Desarrollo 2006-2012; es la prestación de servicios de salud, donde cada vez se generalizan más las expectativas y la unificación de criterios; y se busca un estándar de calidad de vida; por lo que los programas de salud pública deben cumplir con la seguridad con responsabilidad social.

Dicho esto, los CRIS (Centro de Rehabilitación e Integración Social) tienen la función de otorgar servicios de calidad a la sociedad y a las organizaciones en general, mediante programas de rehabilitación de amplia cobertura y dependen de las políticas públicas establecidas por los municipios y los estados en atención al cumplimiento de las metas enunciadas. Debido a lo anterior, la conveniencia de la investigación reside en identificar el contraste de las acciones de las instituciones de servicios de salud, de acuerdo a la calidad de sus servicios y la responsabilidad social, cuando se refiere a la funcionalidad de las instituciones públicas y a las posibles acciones apegadas a la racionalidad comunicativa en el cumplimiento real de la responsabilidad social que se tiene para con la comunidad.

INTRODUCCIÓN

La modernidad como herencia del siglo XVI y de la ilustración del siglo XVII viene a instituir a la racionalidad como uno de los principales valores a partir de los cuales se engranan el orden social, económico y político, esta racionalidad entra en crisis debido a que llegó a un irracional crecimiento científico y tecnológico de sobre-explotación de los recursos naturales, hasta llegar a la explotación del hombre por el hombre en cualquiera de los modelos económicos y de desarrollo conocidos.

Desde esta perspectiva, en el siglo XXI se plantean diversos diagnósticos acerca de la modernidad, uno de los cuales es el planteamiento de Habermas, quien traza la posibilidad de recuperar los elementos positivos de la modernidad, señalando también los negativos como la racionalidad instrumental y estratégica, y estos, a su vez, como causantes de la crisis de la modernidad, y menciona que se requiere desarrollar una racionalidad comunicativa en términos normativos que lleve a la consideración de los factores que propicien el bienestar del ser humano, como sería la convivencia con los demás y con la misma naturaleza; a partir de este contexto histórico - teórico uno de los temas que llaman la atención y que requieren investigación, sistematización y complejización, es el tema de la calidad y la responsabilidad social.

En términos teóricos y conceptuales, ambos conceptos tienen historias distintas, la calidad por un lado vincula con este mundo moderno capitalista; racionalista, materialista, individualista, que lleva a la incesante búsqueda de la eficacia y la eficiencia y, por tanto, su discurso es usado en el ámbito de la industria, la producción, los servicios y el mundo corporativo en general. Por otra parte, el discurso de la responsabilidad social, el cual, si bien surge a principios del siglo XX a partir de los nuevos conceptos Taylorianos de la división del trabajo, en donde el desarrollo tecnológico da nacimiento a industrias cada vez más complejas, y quienes a su vez precisaron de trabajadores especializados y más difíciles de reemplazar, generando un escenario que comenzó a crear conciencia entre los industriales sobre las ventajas de no tener personal accidentado o enfermo, así como también de máquinas o equipos detenidos, lo cual además tendrá influencia en el impulso de programas de seguridad social, principalmente, en los países desarrollados, siendo estos los primeros indicios de la responsabilidad social.

Ahora bien, son diversos los espacios, lugares e instituciones en el ámbito público o privado, en los cuales, en esta primer década de la historia del siglo XXI, que se habla de calidad y, además, de responsabilidad social; siendo este un discurso que cada vez se generaliza más a partir de las expectativas de globalización y unificación de criterios que se buscan para alcanzar que el ser humano construya para sí mismo y la sociedad en la que vive, un estándar de calidad de vida en un estado de completo de salud tal y como la concibe la Organización Mundial de la Salud (OMS).

Es entonces bajo este criterio que se describe que la rehabilitación basada en el Sistema de Salud, consiste en la aplicación de medicina de rehabilitación a través de los Servicios de Salud Pública y Seguridad Social en sus diferentes niveles, lo que va desde la llamada Rehabilitación Simplificada que se puede aplicar en un Centro de Salud, hasta los procedimientos más sofisticados como el trasplante de órganos, prótesis e implantes que se llevan a cabo en los Institutos y Hospitales de alta tecnología. Aunado a esto, la atención de la discapacidad en el Sector Salud mediante programas de rehabilitación tiene una amplia cobertura. Como ejemplo se puede decir que la Secretaría de Salud atiende a personas con discapacidad a través de los Institutos Nacionales de Salud, y los Institutos Nacionales de Medicina de Rehabilitación, Ortopedia, Comunicación Humana, integrados en el Centro Nacional de Rehabilitación. Asimismo se realiza la formación y capacitación de personal especializado en Medicina de Rehabilitación, Medicina de la Comunicación Humana, Ortopedia, Terapia Física, Terapia Ocupacional, Terapia del Lenguaje, Prótesis y Órtesis etc. y además, en diversos hospitales de los Servicios Estatales de Salud se cuenta con servicios de Rehabilitación y se tienen ya preparadas las normas y los instructivos, para la prestación de estos Servicios en unidades del primer nivel de atención. Por otro lado, en cada uno de los Estados de la República existe un Centro de Rehabilitación y Educación especial adscritos al Sistema Desarrollo Integral de la Familia Nacional (SNDIF) y algunos a los DIF estatales, así como numerosas unidades básicas de rehabilitación, como el Centro de Rehabilitación e Integración Social ubicado en Chalco, Estado de México.

PLANTEAMIENTO DEL PROBLEMA

Dentro del anterior contexto se menciona que un centro de rehabilitación social tiene fines eminentemente humanos y tiene que ver con el dolor y la búsqueda del bienestar de la persona humana, dentro del esquema de la modernidad, y de acuerdo a Habermas, la racionalidad estratégica y la racionalidad instrumental han invadido a las esferas de la racionalidad comunicativa y es desde esta perspectiva que se vuelve interesante realizar la investigación en el CRIS, dadas sus características de ubicación y por ende, la diversidad poblacional que es susceptible de atención, ya que el mismo, tiene un área de influencia desde centros urbanos hasta las poblaciones rurales en las faldas de los volcanes.

De este modo la problemática que se plantea, se obtiene de las encuestas, de la observación directa del comportamiento del personal de servicio y de entrevistas informales hechas a pacientes del CRIS a los familiares de estos, de tal forma que se encontró que existen los elementos necesarios para señalar que

efectivamente la crisis de la razón mencionada anteriormente, tiene efectos directos en la sociedad, y que se ven reflejados de manera directa en los servicios de Calidad y en la forma como son percibidos e interpretados por los pacientes, sus familiares y los propios prestadores de estos servicios de acuerdo a la Responsabilidad Social que debe cumplir como Institución de la Administración Pública, de tal forma que la manera de resolverlo es bajo los criterios de la acción comunicativa, para que sea factible la comunicación completa, abierta y con el compromiso del entendimiento entre dos seres humanos que interactúan para recibir uno, y brindar el otro, un servicio que la administración pública brinda sin costo significativo para el cliente y por tanto no especula un lucro para con la sociedad.

REVISIÓN LITERARIA

Para establecer un marco teórico que permita hacer la sistematización y la complejización de la calidad y la responsabilidad social, primero se establece el ángulo de visualización a partir de la perspectiva Habermasiana, instalada en el paradigma socio-crítico, en la medida de este paradigma está planteando que el conocimiento no solo es válido en sí, por sí mismo, sino que este conocimiento debe revelar las estructuras de poder que están causando el problema social que está latente al momento en que la responsabilidad social corporativa se está constituyendo como un elemento que valida a la calidad en sus estructuras corporativas, manteniéndose fundamentalmente en la razón estratégica e instrumental dejando de lado a la razón comunicativa, que establece que, la relación entre dos individuos debe ser por consentimiento mutuo y sin intenciones escondidas.

Dentro de este paradigma socio crítico existen múltiples actores, sin embargo es interesante la perspectiva de Habermas en la medida en que hace un diagnóstico de la modernidad; hace una crítica a la racionalidad y plantea que la racionalidad no es una, sino que es diversa, es entonces que ese diagnóstico de la modernidad y de las alternativas que genera de los vicios o problemas que tenemos en la modernidad sirven para enmarcar el estudio de la calidad y la responsabilidad social concretamente en el centro de rehabilitación e integración social de Chalco, en la medida en que esta teoría permite potenciar la visualización de las posibilidades y limitaciones de la teoría de la responsabilidad social inscrita en la calidad de los servicios de salud del CRIS de Chalco.

Es por lo anterior que se usa para este estudio, el paradigma socio crítico; y no el positivista ni el fenomenológico hermenéutico, porque no se pretende generar solamente datos empíricos para la verificación de algo, no sólo se quiere comprender las cosas, que es lo que permitiría el paradigma fenomenológico hermenéutico; el estudio se apega al paradigma socio crítico porque se quiere comprender, pero además es necesario criticar el orden social establecido, dado que, a partir de la perspectiva Habermasiana, se encuentra que hay mecanismos de perversión dentro del sistema social que se pueden ubicar en el momento en que la responsabilidad social es bifronte, porque esta teniendo inercialmente los vicios de la modernidad, implementándose como una racionalidad instrumental legitimadora del orden establecido de la calidad, pero que también se ve de manera emergente la racionalidad comunicativa de la que habla Habermas; la racionalidad comunicativa es donde los individuos no buscan ni someter al otro ni engañarlo, como ocurre en la racionalidad instrumental y en la estratégica, sino que es donde los individuos buscan abrirse a los demás para comunicarse acerca de asuntos del mundo, de la vida, desenagadamente, entonces este discurso de la responsabilidad social está atravesado tanto por los intereses de la racionalidad estratégica e instrumental pero por otra parte esta la racionalidad comunicativa que llega a plantear el entendimiento entre los individuos a partir del imperativo ético kantiano que viene a fundamentar los discursos de los derechos humanos, a partir de los cuales se plantea que debemos ser responsables no solo con los otros sino también con el planeta.

La racionalidad como fuente actual de la generación de conocimiento, da la pauta para que el modelo económico capitalista se instaure de forma genérica en la vida productiva de las naciones, y es esta racionalidad la que permite que cada vez existan formas más sofisticadas de explotación de los recursos

del planeta y de la humanidad. Esta forma de explotación ha sido sustentada con criterios de calidad de procesos que van en la búsqueda incesante de la eficacia y la eficiencia y en estricto apego a la racionalidad instrumental y estratégica diferenciada por Habermas, dejando sin visualizar de forma concreta la racionalidad comunicativa que se basa en la interacción desinteresada de dos individuos y que solo se establece mediante valores éticos. Es por esto que el concepto de responsabilidad social debe ser abordado desde la perspectiva de la racionalidad comunicativa Habermasiana, porque de otra forma solo se utilizará en un elemento más de validación del sistema de producción actual que deja de lado el bienestar de la sociedad y la comunidad en la que se encuentra inserto. Es entonces la problemática planteada involucra a la responsabilidad social y la calidad como ejes de contraste para la consecución de la satisfacción de las necesidades del individuo y sus familiares inscritos en el CRIS.

Es entonces que en este esquema, inicialmente se hizo el análisis de los conceptos generales de la calidad, revisando el consenso general que existe desde Deming (Deming, 1986), Juran (Summers, 2006), Crosby (George & Alvarez, 2005), Feigenbaum (Feigenbaum, 1985), Ishikawa (Ishikawa, 1986) como los más representativos hasta nuestros días, mencionando de manera general las significaciones paradigmáticas de la calidad en servicios de salud enunciados por Avedis Donabedian (Donabedian, 1988) y que si bien son acordes, no corresponden del todo a la visión holística de la calidad y la responsabilidad social requeridos en un ente social, que aun siendo una institución pública que brinda servicios de salud, no deja de ser también una empresa de servicios, por tanto será analizada como tal. Continuando con los términos de la calidad y para hacer énfasis en la visión Habermasiana, se hará la descripción de los gaps de servicio de Parasuraman, Zeithaml, y Berry (Parasuraman, Zeithaml, & Berry, 1985), porque se reconoce la importancia de como ellos identifican las discrepancias entre el entendimiento y la comprensión que tienen los prestadores de servicio del servicio mismo y la percepción que tienen los pacientes y sus familiares, para de esta forma, tener la visión de los posibles sesgos de información en el caso de estudio.

Posterior al análisis de las teorías de calidad y la crítica desde la perspectiva del paradigma Socio-Critico, se habla de la Responsabilidad Social basada en el discurso de los derechos humanos que a su vez están fundamentados en el imperativo categórico Kantiano, para de esta forma abordar claramente las diferencias existentes entre la responsabilidad social que bien pudiera estar basada en la ética y soportada por las teorías de Habermas y Rorty, y la responsabilidad social corporativa llevada por diversas corporaciones internacionales, para de esta manera acentuar la validez que tienen dentro de este esquema los conceptos de misión y visión del CRIS, en cuanto su esencia humana y por ende su apego a la racionalidad comunicativa.

Para poder enmarcar al CRIS como institución y parte fundamental en el estudio del caso, se analizó históricamente y de manera profunda el sistema de desarrollo integral de la familia, desde el nacimiento del mismo, hasta la descripción de actividades que se realizan en el CRIS de Chalco, posteriormente se revelaron las condiciones en las que se encuentra con respecto a la calidad en el servicio de salud y el entendimiento que tienen los pacientes y servidores públicos acerca de la responsabilidad social, y que estos sirvan como elemento catalizador que permita la visualización del sesgo existente en lo referente a la responsabilidad social.

Una vez establecido el contexto general del estudio, y redundando un poco al respecto, enfáticamente se sabe entonces que el presente estudio permite hacer el análisis en un ente social que presta servicios de salud, como lo es el CRIS de Chalco, que esta sujeto a parámetros de calidad de tal forma que se podrá hacer un estudio analítico de las actitudes del personal involucrado y de los pacientes que ahí se atienden y sus familiares, para de esta forma establecer los contrastes y comparaciones pertinentes de la calidad misma y la responsabilidad social inscrita en el propio servicio, esto con la finalidad de que una vez equiparada la información proporcionada por los entrevistados sea posible emitir las reflexiones pertinentes en cuanto a la necesidad social de entendimiento, comunicación y asimilación de la importancia que tiene la comprensión de la persona humana, su comunidad y medio ambiente.

Es por esto que la conveniencia de la investigación reside en el contraste de las acciones que tiene la institución y lo que en realidad reciben los usuarios, es decir, se identifica que la calidad se refiere a procedimientos desde el punto de vista del CRIS, pero desde el punto de vista del paciente se refiere a la funcionalidad del mismo, de tal forma que, si el personal directivo y operativo del CRIS ejercen sus actividades desde la perspectiva funcional, las acciones posibles estarán apegadas a la racionalidad comunicativa y por ende derivarán en un cumplimiento real de la responsabilidad social que tienen para la sociedad.

Lo anteriormente dicho tiene relevancia social, debido a que se vuelve altamente posible que cumplimiento de las metas de atención sean superadas desde el punto de vista del CRIS, pero más importante aún, los pacientes y sus familiares se sabrán atendidos con calidez humana y por ende, sabrán que sus necesidades en este ámbito serán satisfechas.

En definitiva los resultados obtenidos tendrán aplicación práctica en lo que se refiere a la atención de los pacientes y sus familias y al mismo tiempo sentará las bases para llamar la atención hacia la responsabilidad social que realmente este dirigida a la sociedad, marcando una pauta de valor teórico distinta a la responsabilidad social corporativa que sigue las directrices capitalistas de resultados y beneficios por medio del usufructo de los recursos a su alcance.

Finalmente se puede mencionar que el presente estudio tiene la visión de ayudar a dar las bases o la utilidad metodológica que sirva como pauta para la definición de la conceptualización de la responsabilidad social

METODOLOGÍA DE LA INVESTIGACIÓN

Con base en lo anteriormente descrito el cuestionamiento guía para la presente investigación es: ¿La racionalidad comunicativa es fundamental para establecer la relación entre responsabilidad social corporativa y la responsabilidad social y además vincularlas con la calidad de los servicios de salud del centro de rehabilitación e integración social de Chalco? La respuesta a la interrogante se puede conocer una vez que se logre identificar, conocer y establecer la relación entre la responsabilidad social que tiene el CRIS de Chalco en la calidad de los servicios de salud prestados, basada en la racionalidad comunicativa, y si ésta efectivamente cumple con el propósito de dar una atención de alta calidad humana, profesional, en un entorno de respeto garantizando la igualdad de oportunidades, y el ejercicio de los derechos del paciente y sus familiares. Esta respuesta no se puede lograr de forma concreta sin antes sistematizar los conceptos involucrados y que para lograr su alcance deben ser catalogados en los puntos siguientes: Categorizar la Responsabilidad Social de los servicios de rehabilitación que brinda el Centro de Rehabilitación e Integración Social del DIF en Chalco. Identificar y analizar cada uno de los elementos de los servicios de salud. Interpretar las funciones institucionales para describir la responsabilidad social que tiene la misma para con la comunidad. Analizar los elementos de la racionalidad comunicativa en la responsabilidad social y la calidad en los servicios del CRIS. -Identificar si el servicio de salud otorgado tiene alta calidad humana -Identificar la garantía de igualdad de oportunidades en los derechos de los pacientes y sus familiares. Concretamente y a partir de la comprensión de los puntos anteriores, sabremos entonces que los resultados del estudio nos permitirán establecer que realmente la responsabilidad social basada en la racionalidad comunicativa, cumple con el propósito de dar una atención de alta calidad humana, profesional, en un entorno de respeto garantizando la igualdad de oportunidades, y el ejercicio de los derechos del paciente y sus familiares, por lo que se establece la relación entre la responsabilidad social que tiene el CRIS de Chalco en la calidad de los servicios de salud prestados.

Finalmente se hace énfasis en que el presente estudio es de tipo cualitativo, de nivel descriptivo, de investigación acción y de diseño no experimental, transaccional o transversal; realizado en las

instalaciones del CRIS en Chalco en el Estado de México, en febrero de 2010. Y que para su aplicación se tomaron en cuenta las consideraciones éticas en lo referente al Reglamento de la Ley General de Salud en Materia de Investigación para la Salud, (SS, 2009).

RESULTADOS

El comportamiento humano en las organizaciones de salud dentro del esquema de administración pública, ha sido focalizado hacia los sistemas de gestión de la calidad, y por ende el personal involucrado se ve sometido a cursos de liderazgo, motivación, gerencia participativa, proceso grupal, comunicación, entre otros, siempre teniendo como meta la excelencia organizacional en lo que se refiere a la productividad, calidad, mercado, competitividad, aunque en la práctica sus efectos estén distantes del propósito pretendido, es decir, que estén lejos de lo esperado. El razonamiento anterior es producto de los resultados parciales obtenidos hasta el momento debido a que los trabajadores vienen sufriendo reclamos acerca de esa situación. Se ha exigido de ellos respuestas que se unan a las de los demás profesionales para la conformación y concretización de la eficacia prevista. En otros términos, se le ha exigido al personal que tiene contacto directo con el paciente y sus familiares, una actuación que esté de acuerdo con los deseos organizacionales, ofreciéndole como contrapartida fundamental, mayor atención para sus propias dimensiones laborales de procedimiento, así como también para aquellas de sus colaboradores y sus clientes. Lo anteriormente mencionado trae como resultado que el trabajador pierda la perspectiva humana del desarrollo de sus funciones poniendo poca atención en el proceso de comunicación que debe tener en atención a los pacientes, estableciéndose esta únicamente en los parámetros técnicos que requiere el tratamiento ofrecido, olvidando que en la mayoría de los casos el paciente proviene de sectores de bajos recursos y por ende tiene poca comprensión de la terminología especializada lo que trae como consecuencia que el propio paciente y sus familiares tengan la impresión de que están siendo mal atendidos, o que sus necesidades de rehabilitación no están atendidas completamente ya que no le es posible comprender completamente el proceso que lleva el servicio que se le está brindando, y que en muchas ocasiones es de largo plazo, es entonces que el paciente opta por abandonar el tratamiento buscando otras alternativas que difícilmente encuentra en las cercanías de la zona. Finalmente se puede decir que a pesar de que el personal que labora en el CRIS de Chalco, cumple con las labores de servicio encomendadas, y que si bien, no tiene un sistema de gestión de la calidad implementado, generalmente se cumple con las directrices de calidad de servicio marcadas por el Gobierno del Estado de México, estas labor no es plenamente reconocida por los pacientes y sus familiares, debido a los obstáculos que se forman en la comunicación que se establece entre los prestadores de servicio y sus clientes ya que ni uno ni otro es capaz de definir claramente cuales son las expectativas que tiene del otro y por tanto no cierra el ciclo completo de entendimiento que debería existir para una sana comprensión del problema a tratar.

CONCLUSIONES

El análisis del estudio realizado permite tener una visualización genérica de cómo el modernismo ha entrado en crisis a partir de la razón, sin embargo, también se ha podido vislumbrar, con el apoyo de la razón comunicativa de Habermas, que es posible encontrar al individuo como eje principal de recuperación de los valores de la ética kantiana y por ende equilibrar el concepto de responsabilidad social hacia el desarrollo integral de la calidad en las corporaciones y la sociedad, de tal forma que sea posible vincularlos de manera implícita en el desarrollo de la administración pública.

El estado de crisis de la razón trae como valor implícito el deterioro del entendimiento y conceptualización del concepto de calidad, aplicada mayormente a corporaciones, y de esta forma permite el surgimiento del paradigma emergente de la responsabilidad social, sin embargo, la misma se está constituyendo en elemento validador de la calidad en medida en que se busca sea un instrumento de medición y certificación para el ente económico y por lo tanto continúe apegado a la razón instrumental y estratégica. Por otro lado, se logro descubrir que la razón comunicativa conlleva los elementos

necesarios para llevar a la responsabilidad social a ser el medio regulador de las acciones del ente humano en medida en la que esta interactúa con sus semejantes en la provisión de servicios, y es de esta forma en la que puede ser elemento de soporte para el desarrollo integral de los sistemas de producción actuales.

Por lo anteriormente descrito se puede decir que el personal que labora en una empresa de administración pública, en este caso de salud, debe asumir una actitud comprensiva, siendo capaz de entender y aprender que el sentido que el propio paciente da al servicio es significativo y consecuente para la percepción de la responsabilidad social de la institución. De tal forma que si el personal de servicio respalda su conducta en el desarrollo de esa dimensión, puede convertirse en un gestor de la responsabilidad social de la administración pública hacia la comunidad.

MATERIALES DIDACTICOS DIGITALES PRESENTES EN LA EVALUACION NACIONAL A EGRESADOS DE LA LICENCIATURA EN CONTADURA

Edelmira Sánchez Delgado, Universidad Autónoma de Ciudad Juárez

ABSTRACT

El objetivo de elaborar el material didáctico digital interactivo que enseguida se describe fue proporcionar una herramienta de apoyo de autoevaluación fiscal, a los alumnos que cada semestre se preparan para presentar el Examen General de Egreso EGEL-C, siendo ésta una prueba de Cobertura Nacional que tiene como propósito identificar si los egresados de Licenciatura en Contaduría cuentan con los conocimientos y habilidades necesarios para iniciarse eficazmente en el ejercicio de la profesión. La citada herramienta fue materializada en un CD-ROM interactivo cuyo contenido es un ensayo de examen a través de una serie de reactivos teóricos y prácticos referentes a las diversas disposiciones fiscales vigentes elaborados conforme a los lineamientos del Centro Nacional de Evaluación para la Educación Superior, A.C., (CENEVAL). El uso del referido material didáctico digital está en fase de experimentación por lo que el siguiente paso será analizar los resultados obtenidos en el área fiscal de aquellos sustentantes que hubieran utilizado el CD-ROM interactivo en su preparación para el citado examen.

PALABRAS CLAVE: Material didáctico digital interactivo y herramienta de apoyo.

INTRODUCCION

Hoy en día, las Tecnologías de Información y Comunicación (TIC's) están impactando en el quehacer humano y profesional de los mexicanos. La educación superior debe tomar conciencia de estos nuevos contextos o cambios tecnológicos y aprovechar las ventajas que le brinda el uso de estas tecnologías, elaborando y usando materiales didácticos innovadores que coadyuven a fortalecer el proceso de enseñanza-aprendizaje. En virtud de lo anterior y contando con el apoyo de expertos en Tecnología Educativa, en la Universidad Autónoma de Ciudad Juárez se elaboró un material didáctico digital a través de un CD-ROM interactivo con el objetivo de ofrecer una herramienta de estudio que a la vez permita reafirmar conocimientos correspondientes al Área de Fiscal a los estudiantes que cada semestre se preparan para presentar el Examen General de Egreso de la Licenciatura en Contaduría EGEL-C.

Breves Antecedentes Historicos De Los Materiales Didacticos

- Como referente del primer material propiamente didáctico se cita la obra *Orbis Sensualium Pictus* de J.A. Comenio. Elaborada en el siglo XVII, que representa una combinación de texto escrito con representaciones pictóricas y estaba escrito en lengua “vernácula”, características que lo convertían en didáctico.
- En el siglo XIX, el material didáctico impreso se convierte en el eje central de gran parte de las acciones de enseñanza y aprendizaje en cualquiera de los niveles de educación, desde la infantil hasta la universitaria.
- El Libro de texto durante los siglos XIX y XX es un medio material didáctico más entre los restantes materiales curriculares (Martínez Bonafé, 2002.)

- El siglo XXI es la generación de la cultura digital. Los niños y jóvenes de este siglo están sumergidos en variadas experiencias multimediáticas. Esta generación usa habitualmente distintas tecnologías digitales. Para ellos la telefonía móvil, la navegación por Internet, o la televisión digital son experiencias cotidianas y no excepcionales.

Generalidades Del Examen General De Egreso De La Licenciatura En Contaduría (Egel-C)

- Es un examen de opción múltiple ya que cada pregunta o problema se acompaña de tres distractores verosímiles y una respuesta correcta que evalúan las áreas o competencias establecidas por el Consejo Técnico como esenciales y significativas a la formación del Licenciado en Contaduría en el país; acordadas como comunes entre las instituciones formadoras participantes y reconocidas como altamente sensibles para medir la calidad de la formación profesional en el área.
- Evalúa resultados de aprendizaje. No se refiere a los elementos ni a los procesos para lograr ese aprendizaje, sino a los resultados obtenidos.

Contenido Del Examen:

Las áreas corresponden a ámbitos profesionales en los que actualmente se organiza la labor del Licenciado en Contaduría. Las subáreas comprenden las principales actividades profesionales de cada uno de los ámbitos profesionales referidos. Por último, los aspectos por evaluar identifican a los conocimientos y habilidades necesarios para realizar tareas específicas relacionadas con cada actividad profesional.

Tabla 1: Estructura general del EGEL-C por áreas y subáreas

Área / Subárea	% en el examen	Número de reactivos
1. Determinación de la estructura contable	4.0	10
2. Valuación y presentación de información financiera	6.0	14
3. Integración de estados financieros básicos	8.8	22
4. Determinación de estados financieros en su conjunto	0.8	2
1. Cálculo de costos unitarios	12.0	29
2. Análisis de costos	4.4	11
3. Generación de indicadores de desempeño	0.8	2
4. Identificación de actividades que agregan valor a la empresa	1.6	4
5. Diseño del sistema de costeo	2.0	5
1. Análisis de estados financieros	4.4	11
2. Interpretación de estados financieros	4.0	6
3. Evaluación de alternativas de financiamiento e inversión	5.2	10
4. Administración de registros financieros	1.2	3
5. Elaboración del presupuesto	2.4	6

1. Delimitación del mercado legal tributario de la entidad	11.6	29
2. Cálculo de contribuciones de la entidad	6.8	16
	8.8	20
1. Evaluación de los procesos de la organización como auditor interno		
2. Revisión de los estados financieros como auditor externo	7.2	17
3. Revisión de las obligaciones fiscales	8.0	20
Reactivos piloto		25
	Total	262

Esta tabla muestra la Estructura del examen EGEL-C aprobada por el Consejo Técnico del Centro Nacional de Evaluación para la Educación Superior, A.C., (CENEVAL) en reunión del 15 y 16 abril de 2009.

PRINCIPALES CARACTERISTICAS DEL MATERIAL DIDACTICO DIGITAL ELABORADO PARA APOYAR A LOS SUTENTANTES DEL EXAMEN EGEL-C:

- Es un CD-ROM interactivo que consta de 150 preguntas teórico-prácticas relativas al área fiscal, elaboradas bajo el criterio CENEVAL y en apego a las disposiciones fiscales vigentes distribuidas de la siguiente manera:

Impuesto sobre la Renta	50
Impuesto Empresarial a Tasa única	10
Impuesto a los Depósitos en Efectivo	10
Impuesto al Valor Agregado	40
Código Fiscal de la Federación	40
Total	150
- Permite al estudiante conocer la puntuación obtenida en escala del 0 al 100
- En el caso de los reactivos que hayan sido contestados de manera incorrecta, se le proporciona la respuesta correcta, el fundamento legal y el desarrollo de las operaciones en aquellos reactivos prácticos.
- Incluye las leyes fiscales vigentes tomadas directamente de la página de Servicios de Administración Tributaria (SAT).

CONCLUSIONES

En el quehacer educativo es indispensable que los docentes nos demos a la tarea de estar siempre en la búsqueda de material innovador, diferente y creativo que favorezca nuestras estrategias de enseñanza-aprendizaje y que tomemos conciencia del beneficio que ello representa para nuestros estudiantes. Considero que si en nuestros centros de trabajo se nos provee de los apoyos necesarios para producir material didáctico digital pues debemos de sacar el máximo provecho de ello produciendo y usando dichos materiales tendientes a motivar, a generar más conocimientos y a ser mediadores de cultura para accionar y potenciar las competencias de los educandos de este siglo y que cada uno de nosotros antes de la aplicación de alguna propuesta realicemos un estudio crítico sobre los materiales propuestos para asegurarnos de que podrán funcionar dentro de un contexto práctico frente al uso de otros materiales

didácticos digitales, asimismo, creo que es de primordial importancia que aparte de preocuparnos por la constante actualización en lo que a nuestra disciplina se refiere, también lo hagamos en cuanto al uso de las Nuevas Tecnologías de Información y Comunicación para estar acordes a los tiempos y a las demandas de calidad en la educación que la sociedad nos reclama.

LA CADENA PRODUCTIVA DE PRODUCTOS NO TRADICIONALES EL CASO DE UNA EMPRESA PRODUCTORA DE CHAMPIÑÓN ORGÁNICO

Gerardo Vera Muñoz, Benemérita Universidad Autónoma de Puebla

Montserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla

María del Carmen Domínguez Ríos, Benemérita Universidad Autónoma de Puebla

RESUMEN

El objetivo de este trabajo es analizar los factores que han contribuido al ascenso industrial de una empresa familiar productora de champiñón orgánico dentro de la cadena productiva de productos no tradicionales. Se parte del enfoque de las cadenas productivas desarrollado por Gereffi (2001), que hace una puntual distinción entre la cadena productiva dirigida al productor y la cadena productiva dirigida al comprador. Este enfoque propone que, como resultado de la dispersión global de las cadenas productivas, aumentan las oportunidades de los países en desarrollo y de sus empresas de participar y ganar a partir del comercio. Esto implica cambiar de actividades intensivas en mano de obra a actividades intensivas en capital y habilidades, que conlleven aprendizaje organizativo, para alcanzar el ascenso industrial que permita mejorar la posición de la empresa en el comercio internacional y en las redes de producción. Los resultados obtenidos a partir de un estudio de caso, sugieren que para lograr el ascenso industrial es necesaria una serie de factores institucionales y regulatorios que favorezcan el entorno donde se desenvuelve la empresa, pero además, lo que resulta trascendental es su capacidad de aprendizaje, las redes sociales, el desarrollo de nuevos productos y las estrategias de comercialización.

PALABRAS CLAVE: productos no tradicionales, cadena productiva, ascenso industrial

EL MEJORAMIENTO CONTINUO DE LA CALIDAD A TRAVES DE LA ADMINISTRACION DE LOS PROCESOS

Fidel Antonio Mendoza Shaw, Centro de Estudios Superiores del Estado de Sonora México

RESUMEN

El trabajo que presento pretende despertar el interés sobre el modelo propuesto para que sea considerado como una alternativa de organización, que bajo mi opinión, quizá sea el modelo de administración del futuro y la clave del éxito para el logro de la competitividad internacional. El posibilitar el acceso a un modelo de calidad principalmente a la micro, pequeña y mediana empresa permitirá la implementación de mejoras de la calidad en cada uno de los procesos que operan permitiendo la mejora continua de los productos y servicios que en ellas se realizan. El mejoramiento continuo de la calidad a través de la administración de los procesos constituye un instrumento gerencial para toda la organización en virtud del cual los bienes y servicios de óptima calidad vienen a ser el baluarte competitivo más importante ahora y en el futuro. En mi opinión los procesos, tienen que controlarse a fin prever los problemas y los evita antes de que ocurran. La capacitación es fundamental para lograr cambios en una organización, y sobre todo cuando se trata de mejorar los productos y servicios que se ofrecen. Hay que recordar que el recurso humano es el que crea la tecnología y no al revés.

CONTINUOUS QUALITY IMPROVEMENT THROUGH THE PROCESS ADMINISTRATION

Fidel Antonio Mendoza Shaw, Centro de Estudios Superiores del Estado de Sonora México

ABSTRACT

The work presents a proposed model of continuous quality improvement through process management. It is the author's opinion that this model is the answer to improve future global competitiveness. This model is suitable and valuable for Medium and Small Businesses. The author emphasizes control and training as vital parts of his model

KEY WORDS: Model of Quality, Continuous Improvement, Administration of Processes.

EXPORTACIONES AGROALIMENTARIAS DE SONORA : UNA APROXIMACION A LOS FACTORES DE COMPETITIVIDAD

Rosalina Jaime Meuly, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

Sonora es uno de los estados cuya contribución en el comercio exterior ha ido en ascenso durante los últimos años, exporta a 116 países y mantiene un potencial como otros 112 productos la mayor parte son productos procesados.

ABSTRACT

Sonora is one of the states whose contribution in the foreign trade has gone in ascent during the past few years, exports to 116 countries and maintains a potential as other 112 products most are products process.

INTRODUCCIÓN

La economía mundial contemporánea se caracteriza por la integración internacional y globalización de la producción y los mercados. Como consecuencia de este proceso, que ha inducido además, una tendencia hacia la liberalización de las economías de escala tendencia también se ha globalizado e intensificado en casi todas las ramas y sectores productivos, por lo tanto la globalización no es un fenómeno exclusivo de las actividades manufactureras. Esta ha permeado la agricultura y sistemas o cadenas alimentarias a escala mundial. Precisamente el calificativo de agricultura globalizada ha sido elaborado para señalar que las condiciones materiales de la agricultura moderna, por sectores y áreas, están siendo construidas cada vez mas desde procesos regulatorios y económicos que son globales en alcance, y carácter, y se presenta así una integración de los agro-sistemas en su conjunto (Le Heron,1993). Algunas tendencias y retos resultantes de este nuevo entorno son los siguientes: 1) la competencia es universal,2) la baja tecnología tiende a perder importancia,3) desplazamiento de la importancia de los recursos naturales y mano de obra barata, 4) crecientes estándares de calidad, 5) la competencia se realiza en todas las etapas de producción y coemrcializacion,6)alianzas estratégicas de las firmas exitosas, 7) comercio entre países desarrollados e intra- sectorial, 8) neo-proteccionismo (Presidencia de la Republica, 1994).Sonora es uno de los estados cuya contribución en el comercio exterior ha ido en ascenso durante los últimos años. Entre el 2005 y 2007, sus exportaciones de alimentos procesados crecieron a una tasa de 47.4 % promedio anual(SE), con una participación en las exportaciones totales de la entidad de 2.8 % en el primer año a 13% en el segundo. Así mismo exporta 116 productos al mercado extranjero y mantiene un potencial de exportación en otros 112 productos, la mayor parte de los cuales son alimentos procesados y semiprocesados providentes del sector agropecuario y pesquero. Además, 37 de las 843 empresas exportadoras de alimentos en el país que elaboran productos estilo mexicano, se localizan en esta entidad. Sus ventas externas se concentran en legumbres y hortalizas preparadas o en conserva de pescados y mariscos, jamones y trozos, sardinas preparadas, camarón congelado y preparaciones para salsas (Bancamext,2006).Se puede decir que el grupo de alimentos que registra mayor crecimiento en Sonora es relacionado con el mercado de exportación, los sectores antes mencionados, muestran un crecimiento promedio anual extraordinario que va de preparación de legumbres que va del 43.6% en el caso de legumbres hasta el 192% para alimentos diversos.

COMPETITIVIDAD DEL ESTADO DE SONORA

Estudios comparativos recientes sobre niveles de competitividad sitúan a Sonora en el quinto lugar en términos de posición competitiva con respecto a 32 estados de la república, solo superado por Nuevo León, Distrito Federal- estado de México, Jalisco y Baja California (Gobierno del Estado de Sonora, 2008). De un total de 21 indicadores de competitividad, destaca en la tercera posición en bajo costo de infraestructura física básica y para negocios, y en la cuarta respecto a poder de compra.

Sin embargo este tipo de ejercicios representa un marco de referencia importante para analizar la competitividad de Sonora a escala general, existe una ausencia casi total de estudios sobre el posicionamiento competitivo y sus factores determinantes, a nivel sectores y ramas productivas específicas, como el caso de los distintos segmentos de la industria alimentaria. Como señala Porter (Porter 1990), para competir exitosamente en una economía globalizada se requiere contar con fundamentos económicos vitalizados, que provean una plataforma adecuada para alcanzar ventajas competitivas. De acuerdo a dicha propuesta, en condiciones actuales los fundamentos económicos con trabajo calificado, infraestructura avanzada, acceso a innovaciones tecnológicas, investigación y desarrollo, capital de inversión y riesgo, así como la calidad de vida, son mucho más relevantes para el crecimiento económico de alta calidad, que los factores tradicionales de clima de los negocios, tales como mano de obra barata, costo del suelo, e incentivos fiscales especiales, entre otros.

El contexto descrito es el marco general donde se mueven los agentes dedicados a la actividad de agronegocios, particularmente aquellos dedicados a los mercados de exportación. En México, los estados de la frontera norte han sido considerados entre los más importantes y de mayor potencial para abastecer al país de productos agrícolas y alimentos semiprocesados.

De acuerdo a datos oficiales, en 1997 estas entidades aportaban el 19.9% del total del valor de la producción de la rama de alimentos, bebidas y tabaco, así como el 19.0% de su personal ocupado y el 12.7% de los establecimientos. Durante la década de los noventa, el índice de productividad promedio en dicha rama ha sido superior a la media nacional. Así mismo, su extensión geográfica y calidad de recursos los ha convertido en entidades estratégicas para impulsar la competencia en la exportación de granos, hortícolas, frutas, ganado, camarón y otros productos demandados en el extranjero.

Su aportación a las exportaciones totales del país en 1997, fue de alrededor del 37.6%. Sonora es uno de estos estados cuya contribución en el comercio exterior ha ido en ascenso durante los últimos años. Entre 1988 y 1996, sus exportaciones de alimentos procesados crecieron a una tasa de 47.4% promedio anual, con una participación en las exportaciones totales de la entidad que pasó de 2.8% en el primer año a 13% en el segundo. De esta manera exporta 116 productos al mercado extranjero y mantiene un potencial de exportación en otros 112 productos, la mayor parte de los cuales son alimentos procesados y semiprocesados provenientes del sector agropecuario y pesquero.

EXPORTACIONES AGROALIMENTARIAS Y COMPETITIVIDAD REGIONAL.

La apertura comercial del país no sólo ha provocado cambios en los patrones de la base productiva y de comercio con el exterior; también ha generado una tendencia favorable a la internacionalización de la agroindustria de alimentos. Desde 1985, los cambios en la Ley de Inversiones Extranjeras y las nuevas regulaciones en materia arancelaria, motivaron la afluencia de nuevos flujos de capital en empresas de exportación entre las que se encuentran las llamadas "agro maquilas". Estos nuevos flujos de capital propiciaron la inversión en proyectos conjuntos para la producción de alimentos procesados y también motivaron la compra de grandes empresas nacionales por parte de consorcios internacionales, acelerando el comercio de alimentos con los países de Norteamérica, Europa y Asia. Al

finalizar 1996, México contaba con una plataforma de exportación de aproximadamente 908 empresas exportadoras de alimentos distribuidos en 44 actividades industriales de procesamiento que contribuyeron aproximadamente con el 3.1% de las exportaciones totales manufactureras. Entre 1989 y 1994, el valor acumulado de los diez principales productos que México envió hacia el exterior ascendió a cerca de 8,500 millones de dólares lo que significó el 51.2% de las exportaciones totales de alimentos.

Estos consistieron en camarón congelado, legumbres y frutas, jugo de naranja, café tostado, abulón en conserva, fresas congeladas, azúcar, otros jugos de frutas, atún congelado y carnes de ganado. El destino de dichos productos fueron los mercados de Estados Unidos, Japón, Canadá, España, y algunos otros países de América Latina.

Por lo que respecta a Sonora, esta entidad cuenta actualmente con una plataforma de exportación de alrededor de 60 plantas industriales que envían alimentos procesados y semiprocados hacia Estados Unidos, Japón, Corea del Sur, Hong Kong, China, Canadá y algunos países de América Latina y Europa, principalmente. En conjunto, estas empresas generan 11,300 empleos y poco más del 75% de ellas se localizan en Hermosillo, Caborca, Ciudad Obregón, Guaymas y Huatabampo, de las cuales se destaca la capital del estado que concentra más del 40%.

El 26% del total tiene relación comercial directa con los países de la región Asia-Pacífico. La mayor parte se dedica al empaque y procesamiento de frutas y verduras, cortes de carne de res y cerdo, y en pescados y mariscos. Además, existe gran potencial de exportación en procesamiento de aves (pollo, pavo y avestruz), carne seca y deshidratada, harina, pan y productos de molienda, dulces regionales, licores destilados y alimentos preparados para animales, entre otros.

Desde la perspectiva de los determinantes de las ventajas competitivas, se puede concluir que lo anterior ha sido posible, gracias a la posición que, a nivel general, mantiene la industria de alimentos en factores de producción, tales como recursos humanos, recursos físicos, de conocimiento, de capital e infraestructura, los cuales pueden ser considerados hasta hoy, medianamente favorables para la competitividad regional. Su posición es destacada en disponibilidad de personal calificado y especializado, en bajo costo de la mano de obra, favorable ubicación geográfica en relación a los mercados de exportación, recursos de infraestructura hidroeléctrica, existencia de centros de investigación y desarrollo, y en un aceptable nivel tecnológico, tales como equipo de cómputo, internet y otros sistemas de información.

También ha contribuido la mejoría que registró en los últimos años los servicios de preenfriado y congelado, acopio, envasado y empaque de productos hortícolas, los sistemas de transporte, las facilidades otorgadas a la inversión extranjera, la disposición de los empresarios locales para establecer convenios de asociación y coinversiones, y la baja rotación de personal en las empresas de procesamiento. Esto ha permitido incrementar las potencialidades competitivas de la región y ha facilitado una integración cada vez más creciente de las industrias procesadoras con el sector primario en productos derivados del trigo, maíz, oleaginosas, hortalizas, pescado, etc.

No obstante, la industria de alimentos también se ha visto desaprovechada en sus potencialidades productivas, debido a la persistencia de insuficiencias y la carencia de ventajas en lo referente a innovación tecnológica propia, centros de informática y acceso generalizado a bancos de datos. Asimismo, debido a la lentitud en trámites de exportación, mal estado del servicio ferroviario para transportación de materias primas, instalaciones portuarias deficientes, elevado costo del peaje que encarece los costos de transporte, escasa vinculación entre centros de investigación y universidades con empresas y productores y, sobre todo, en disponibilidad de capital y atractivos programas de financiamiento. Todo esto ha ocasionado que la integración entre la mayor parte de las firmas alimentarias de Sonora con el exterior, siga estando circunscrita, fundamentalmente a relaciones de

compra-venta . Los eslabonamientos productivos alrededor de los principales productos alimenticios que se exportan son aún débiles, coyunturales y, con frecuencia, carentes de continuidad. El desarrollo de cadenas productivas se ha visto limitado por la ausencia de intercambios intensivos en tecnología, capital y mano de obra especializada y, en algunos casos, por las dificultades en materia de infraestructura y servicios avanzados.

Si bien se dispone de insumos básicos y equipo técnico para la integración de cadenas productivas, éstas se ven limitadas por la inexistencia y disponibilidad de industrias productoras de maquinaria y equipo especializado, por los escasos vínculos y colaboración entre las empresas del ramo, por los deficientes canales de comercialización, mercadeo y distribución y por las elevadas tasas de interés y costo de los insumos. Cabe señalar, incluso, que una alta incorporación de las empresas micro, pequeñas y medianas, continúan con rezagos productivos y tecnológicos, problemas de infraestructura, de procesamiento, refrigeración y transporte, escasos recursos económicos y poca capacidad de gestión frente a las instituciones crediticias. De hecho, después de la crisis de diciembre de 1994, se ha tambaleado la existencia de algunas industrias ligadas a la producción de granos y oleaginosas, así como también la de algunas empresas procesadoras de alimentos de origen animal vinculadas con la producción avícola, lechera y cárnica.

Los incrementos en los costos de producción han limitado el crecimiento de los ingresos reales de las empresas frenando la posibilidad de adquirir maquinaria y equipo e incorporar tecnología nueva, inhibiendo así la modernización de la planta productiva para un mayor número de empresas. Sin embargo, la apertura comercial está empujando a los productores a elevar la eficiencia y productividad, incluso cuando para un buen número de empresas la Competitividad sigue estando basada en costos, en el tipo de cambio y en la existencia de recursos naturales, más que en innovación tecnológica. En un estudio reciente sobre la estructura de las exportaciones y competitividad de la economía sonorense, se concluía que, en términos de posicionamiento y eficiencia en los mercados internacionales, las exportaciones “definitivas” de la entidad entre las cuales se encuentran las de la industria alimentaria y productos primarios, mantienen una situación de retirada (posicionamiento desfavorable y eficiencia baja) o de vulnerabilidad (posicionamiento desfavorable y eficiencia alta).

En ese sentido, la dinámica exportadora de un buen número de empresas seguía basando sus estrategias en ventajas comparativas estáticas. Por otra parte, se puede considerar positivo para el desarrollo de la competencia, el hecho de que Sonora ha empezado a ser considerado como centro de ubicación de algunas empresas transnacionales y empresas menores, no obstante que se reconocen las debilidades que todavía registra la planta productiva. Así, por ejemplo, entre las inversiones más importantes de los últimos años, destacan Cervecería Cuahutémoc en Navojoa, Horti-Son, Gamesa Sabritas en Cajeme, SANA Internacional en San Luis Río Colorado, Enlatadora de Huatabampo y Yavaros Industrial en Huatabampo, Cítricos del Litoral del Pacífico; así como varias empacadoras hortofrutícolas ubicadas en la Costa de Hermosillo, Carbó y Pesqueira, además de diversas plantas de productos marinos ubicadas en Guaymas y Huatabampo. En ellas se han invertido fuertes cantidades de capital para impulsar procesos de reconversión productiva y adaptarse a la nueva estructura de demanda internacional de productos agrícolas.

También sobresale la expansión internacional de empresas ampliamente conocidas en el mercado local como es el caso de Valmo, Alpro, Mezor, Bachoco, Kowi y Cervecería Modelo, entre otras. La competencia por los mercados internacionales en algunas de estas empresas concentra cada vez más en ventajas tecnológicas de mediano y largo plazo, de ahí que algunas de estas empresas utilicen técnicas derivadas de la electrónica, así como el uso discreto del software y el hardware, tecnología láser, infrarrojo, nuevos materiales, etcétera; además de los conceptos de calidad total y entregas justo a tiempo, referidas al conocimiento integral de todos los procesos que se suscitan en la esfera productiva, en la de circulación y en la del mercado.

EXPORTACIÓN DE CARNE HACIA LA REGIÓN ASIA- PACÍFICO

La exportación de carne en Sonora es uno de los ejemplos mas exitosos que se mantienen con la Cuenca del Pacifico. Desde 1974, se exportan desde el puerto de Guaymas se exportan canales de cerdo congelado. Sin embargo es a partir de los años noventa que ello cobraría un crecimiento de precedentes, debido, entre otros aspectos, al mejoramiento de la capacidad tecnológica y aumento de la capacidad productiva que registraron empresarios al grupo Norson en Hermosillo. La tasa anual de crecimiento a la exportación de carne de cerdo fue de 77%, esto paso de 3.8 millones de dólares a 39.2 millones y 762 toneladas al iniciar los noventa.

En el transcurso de la entrada en vigor del TLACAN las exportaciones a Japón reflejan una baja considerable en las ventas, presumiblemente debido a la incertidumbre imperante en la economía nacional ante el desconocimiento y la desconfianza que representa la trascendental negociación, situación que fue recuperándose al iniciar 1997. El reconocimiento de la calidad de la carne de cerdo de Sonora en el mercado Japonés, Ha sido un elemento clave para incrementar las exportaciones y abrir nuevos mercados con los países de la cuenca. Entre las empresas que se han destacado en exportación son las siguientes: Grupo Valmo, exporta a Costa Rica, Japón, estados Unidos, Corea, procesa 700 canales diarios.

Kowi: Exportan a Estado Unidos, Japón, Hong Kong, Malasia, Colombia, Grecia, Chile y provee de materias primas a firmas de productos como Chata, Kir, Sigma, Parma, Gerber, Zwan, con una capacidad de sacrificio diario de 2,500 cerdos. Alpro: Es la única empresa en Sonora que cuenta con la calidad de clase, mundial con los sistemas Blast Freezer, con capacidad de 250 toneladas diarias. comercializa cortes congelados a Japón y junto con Valmo, Pisa y mayokowi lideran las exportaciones mexicanas de productos cárnicos de cerdo del país.

El reconocimiento de la calidad de la carne de cerdo de Sonora en el mercado japonés , ha sido un elemento clave para incrementar las exportaciones y abrir nuevos mercados con los países de la Cuenca . Informes internacionales señalan que la carne de Sonora representa , junto con la de Estados Unidos, Canadá y Corea , la mejor opción de abasto para el mercado nipón . Esto se ha visto favorecido por el hecho de que los hábitos de alimentación de la población japonesa presentan un marcado cambio hacia la preferencia y consumo de productos cárnicos .

Actualmente, el abastecedor líder y natural de carne de cerdo del Japón es Taiwán , donde ya se han presentado limitaciones a su producción nacional debido a restricciones de tipo ecológico, recientemente impuestas por su gobierno. Por ello, Japón ha empezado a orientar la adquisición de productos cárnicos hacia otros mercados. Esta situación ha representado una oportunidad para los productores sonorenses , ya que cuatro de las principales plantas exportadoras han ampliado su capacidad de producción y reconvertido sus procesos tecnológicos para hacer frente a la demanda de ese país. Entre las empresas que han destacado en el campo señalado, se encuentran las siguientes:

Valmo. En el comercio de la carne con el exterior, esta empresa cuenta con un rastro Tipo Inspección Federal (TIF) , reconocido por Japón , Estados Unidos, Corea y Costa Rica.

Actualmente, opera al 100% de su capacidad en sacrificio de puerco con 8 mil animales mensuales y 3,500 reses. Exporta a Japón a través de una compañía taiwanesa y entre sus planes está el establecer una alianza estratégica con una compañía japonesa para expandirse en los mercados de Asia e incursionar en Estados Unidos. Tienen proyectado procesar puerco nacional o traerlo de Canadá y la Unión Americana para procesarlo y exportarlo ; de ahí el interés en generar nuevas áreas para duplicar su volumen de producción y llegar a procesar 600 ó 700 canales diarios.

Geneti- Kowi . Es también una planta de sacrificio Tipo Inspección federal , considerada por los productores nacionales de puerco como una de las más modernas de América Latina . Su base de operaciones está ubicada en Navojoa , donde integra desde la crianza del puerco hasta rastros y plantas de proceso, con aproximadamente 2,000 empleados. En el rastro, sacrifican y cortan diariamente 1,750 cerdos (525 mil animales sacrificados en un año y 45 mil toneladas de carne de cerdo). Su producción la dirigen al mercado nacional y al de Japón . En el ámbito nacional, Kowi cuenta con centros de distribución en sus principales zonas de consumo (Culiacán, Monterrey, Guadalajara , Mérida y la Ciudad de México) .Además , provee de materias primas a firmas como productos Chata,Kir, Sigma , Parma ,Gerber, Zwan , y otras de similar importancia en México. Exporta a Japón , Hong Kong, Malasia y Colombia.

Alpro. Es otra empresa del ramo de productos cárnicos ,localizada en Hermosillo, que ha logrado niveles importantes de producción en el mercado local, internacional.Alpro grupa y re presenta a gran parte de los productores de ganado porcino de la región centro del estado. Cuenta con una capacidad de producción mayor a 500 mil cerdos y genera 800 empleos. En el área de sacrificio, cuenta con la tecnología más avanzada y reconocida a nivel mundial como los sistemas de congelación blastfreezer,con capacidad para 120 toneladas diarias.

Mezoro. Otra de las firmas importantes de Sonora con proyección en el comercio mundial . Actualmente su mercado principal es el mexicano pero tienen planes de exportar al mercado de Estados Unidos, una vez abierta la frontera. En años anteriores tenían contemplado crecer hacia mercados orientales (China y Taiwan) exportando productos avícolas en piezas congeladas, pero debido al interés que tienen estos países tan sólo por partes de muy bajo valor como vísceras no se realizó el intercambio. Durante 1996, Mezoro vendió 600 mil pavos en todo el país,650 mil en 1997 y aproximadamente 812 mil en 1998; su participación en el mercado del noroeste fluctúa entre un 70% y un 75% y un 40% en el nacional.

En lo que respecta a sus ventas de pollo, actualmente participan con el 1% del mercado nacional y cubre alrededor del 50% del mercado del pollo en el ámbito regional (Norte de Sonora y Baja California) . La producción de pollo en 1996 fue de un millón 400 mil aves (2,200 toneladas), en 1997 de 1 millón 600 mil animales sacrificados y de 2 millones en 1998.Desde abril de 1995, mantienen convenios de asociación con el grupo Jerome Foods en el área avícola, donde dicha asociación representa un 60% de los ingresos del grupo, que incluye actividades agrícolas, construcción y producción de puerco. Para Mezoro, parece ser que esa asociación le ha permitido no sólo mantenerse en el mercado nacional, sino que también incursionará a nivel internacional en algunos segmentos productivos.En estas nuevas plantas exportadoras , se observa el reforzamiento de actividades integradas, las cuales aprovechan el equipo y la tecnología ya instalados para la elaboración de diversos productos con mayor cobertura internacional . Así , una planta puede utilizar la misma línea de producción para la obtención de distintos productos gracias a la incorporación de sistemas de bandas flexibles que pueden ser desmontadas y readaptadas a diversos productos

A manera de conclusión: hacia el fortalecimiento de la capacidad exportadora

Las tendencias recientes observadas en el comercio exterior de productos alimenticios fabricados en Sonora, muestran un potencial de exportación mayor que en otras décadas y una ,mayor interés de los empresarios por aprovechar el nuevo ,marco regulatorio de comercio exterior, así como acelerar las transformaciones tecno-productivas que indiquen en el crecimiento de la productividad y la calidad de los productos. De acuerdo con información extraída de entrevistas con empresarios locales, aproximadamente una cuarta parte de las empresas sonorenses exportadoras con más de 15 empleados, mantiene relaciones de compra venta con la región Asia. Pacífico, aunque este porcentaje es mayor debido al triangulación a través de Estados Unidos.

Las potencialidades de Sonora son cada vez mayores en productos semi procesados y procesados, gracias a la alta calidad de las materias primas locales y al integración creciente que registran las industrias procesadoras con el sector primario en productos derivados de trigo, maíz, oleaginosas, hortalizas, pescado, etc. Actualmente, las oportunidades para hacer negocios se concretan cada vez en ventajas derivadas de crecimiento aunque inestable de la demanda de productos semiprocesados en el mercado internacional y las facilidades legales para realizar las inversiones en agro maquila de alimentos. Es decir se ha creado una plataforma regional competitiva para la producción y exportación de estos productos. Para mantener le dinamismos que registran las empresas exportadoras es necesario poner atención en aquellos factores que limitan el crecimiento e inhiben las potencialidades de una integración y desarrollo de nuevos proyectos para la región.

Las potencialidades competitivas de Sonora son cada vez mayores en productos semiprocesados y procesados , gracias a la alta calidad de las materias primas locales y a la integración cada vez más creciente que registran las industrias procesadoras con el sector prima rio en productos deri vados del trigo, maíz , oleaginosas , hortalizas , pescado . Más de veinte grandes empresas han ap rovechado las ventajas que ofrece la ubicación estratégica de la regió n para exportar grandes volúmenes de alimentos hacia los países de la Cuenca del Pacífico y otros países del extranjero.

Junto con esto,han sido importantes los avances en tecnología de procesamiento y control de calidad, lo que ha permitido a las empresas cubrir sat i sfactoriamente los requisitos internacionales de sanidad, conservación e higiene, y con ello garantizar productos libres de enfermedades. Asimismo, las barreras del idioma y comunicación entreproveedores extranjeros han sido superadas en muchas de estas empresas gracias a la contratación de especialistas y al uso cada vez más creciente de computadoras e internet .Actualmente, las oportunidades para hacer negocios se concentran cada vez más en ventajas derivadas del crecimiento aunque inestable de la demanda de productos semiprocesados en el mercado internacional y las facilidades legales para realizar inversiones en agromaquila de alimentos, así como para establecer convenios de asociación o coinversiones con empresarios sonore nses. Asi mismo, ello ha sido posible debido a la mejoría e incremento que registran los servicios de preenfriado y congelado, acopio y almacenamiento de productos en fresco ; además de la existencia de una ofe rta suficiente de mano de obra calificada en actividades de procesamiento y a la baja rotación de personal que existe en estas actividades. Es decir, se ha creado una plat a fo rma regional competitiva para la producción y exportación de estos productos.

Sin embargo, para mantener el dinamismo que registran las empresas exportadoras es necesario poner atención en aquellos factores que limitan el crecimiento e inhiben las potende in tegración y desarrollo de nu evos proyectos en la region . Pa r a que un mayor número de empresas micro, pequeñas y medianas tengan acceso al comercio con el exterior es recomendable impulsar una clara integración y especialización de productores y prove edo res que permita establecer una vigorosa cooperación y rivalidad local , y crear sobre esta base una ventaja competitiva sustentable.Asi mismo, es necesario establecer los mecanismos apropiados para transferir tecnología a ese tipo de negocios. Los programas de formación de empresas integradoras pudieran constituir una alternativa distinta de organización para fab ricar productos y atacar mercados de exportación . Esto podría contribuir al desarrollo de encadenamientos productivos , ventajas competitivas dinámicas y no simplemente estáticas , complementariedades sectoriales y la creación de nuevos mercados y nu evas oportunidades de mercado para la región .Asi mismo, es necesario superar las debilidades que afectan al sector de alimentos y que aún se concentran en la escasez de info rmación respecto al conocimiento de los mercados y factibilidad de exportacion ; trámites lentos y bu rocraáticos para trasladar productos al extranjero ; alto costo del dinero deri va d o de políticas fiscales y crediticias que afectan el financiamiento a la producción de pequeñas y medianas empresas; a pesar de los avances, la aún escasa vinculación entre investigación tecnológica agroindustrial y los productores locales; el alto costo del peaje y mal estado del servicio ferroviario para transportación de materias primas; así como las deficiencias de las instalaciones

portuarias y en los servicios que prestan algunos parques industriales del sur de Sonora. Así mismo, es necesario desarrollar sistemas de comunicación eficientes que permitan conocer y hacer frente a las amenazas que derivan de factores exógenos y que pueden afectar el potencial exportador.

Estas tienen que ver con barreras no arancelarias en los Estados Unidos y Japón que afectan la exportación de productos procesados; con declaraciones de prácticas dumping en los Estados Unidos para productos mexicanos; variaciones en los precios internacionales para productos semiprosesados y cambios bruscos en la demanda; inflación e inestabilidad en las políticas financieras y monetarias que afectan la estructura de costos de las empresas; a utilidades mento de trabas y burocratismo en frontera en la transportación de productos frescos y procesados mexicanos.

Para potenciar las posibilidades que brinda el mercado asiático en el largo plazo, las empresas sonorenses deberán buscar una competitividad sistémico-estructural, en relación a la naturaleza estructural del conjunto de los sectores exportadores, en vez de la competitividad secto-funcional. La estrategia productiva y comercial debe pasar de una simple orientación a la exportación, a una industrialización orientada a la competencia y a la competitividad. Lo anterior requiere también de una política regional territorializada, en coordinación con los niveles macro y meso económicos. En síntesis, las exportaciones agroalimentarias parecen constituirse en un elemento importante para la diversificación del comercio exterior de México. De ahí la relevancia de establecer un marco de política más adecuado para su desarrollo.

CONSIDERACIONES METODOLÓGICAS PARA EL ESTUDIO DE LA INNOVACIÓN EMPRESARIAL

María del Carmen Domínguez Ríos, Benemérita Universidad Autónoma de Puebla-México

Gerardo Vera Muñoz, Benemérita Universidad Autónoma de Puebla-México

Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla-México

RESUMEN

El objetivo de esta investigación es estudiar la innovación como un componente fundamental y un resultado de las capacidades tecnológicas de las empresas. Se presenta el marco teórico sobre tres vertientes el diagnóstico, la estrategia y las capacidades tecnológicas y el impacto del cambio tecnológico. El diagnóstico estratégico propone el análisis del entorno global, industrial y del mercado específico. Se intenta identificar el aporte de la tecnología a la competitividad de la empresa; específicamente si alguna de las tecnologías que domina la empresa es la fuente de desempeños superiores frente a sus competidores, si es la base de su diferenciación competitiva o la fuente de sus búsquedas y apuestas competitivas. Las capacidades distintivas constituyen el núcleo de la selección de las estrategias y del comportamiento estratégico al permitirle a la empresa aprender a competir con base en su singularidad y no solo con base en las características de la industria. La innovación como proceso coloca el acento en la forma como esta se percibe y produce en las diferentes etapas a que da lugar (concepción, creación, investigación, desarrollo, producción y comercialización) y en la forma en que estas se articulan.

PALABRAS CLAVE: Estrategia, Innovación, Empresas

INTRODUCCIÓN.

En un diagnóstico estratégico convencional primero se realiza un análisis del entorno y para efecto de este se divide en tres Hitt, et al. (1999), Jhonson y Aholes (2001), Thompson (1999), Hill y Jones (1996).

1) el entorno global, constituido por las condiciones macroeconómicas de la economía, por los factores sociales y culturales, por condiciones políticas y regulatorias, así como tecnologías, las cuales son analizadas en 2) el entorno industrial, que estudia la posición de la empresa frente al poder de presión de cinco fuerzas (los proveedores, los clientes, los productos sustitutos, los competidores potenciales y el grado de rivalidad que existe en el mercado);

3) el mercado específico, en el cual se despliega el juego competitivo de los competidores directos de la empresa, con el fin de obtener preferencias del consumidor y de generar ventajas competitivas frente a sus rivales. Después de diagnosticar el entorno se analizan las condiciones internas de la empresa con el fin de identificar sus fortalezas y debilidades relativas, atributos que los hagan mejores que los ofrecidos por sus competidores.

Los recursos se definen como los insumos del proceso de producción; entre ellos se encuentran el equipo, las habilidades de cada empleado, las patentes, las finanzas (Hitt, et al., 1999). Estos recursos por si solos no crean ventajas y su valor estratégico está determinado por el grado en que pueden contribuir a la generación de fortalezas únicas (capacidades distintivas) y al logro de una ventaja competitiva (Rangote, 1999).

Las empresas cuentan con recursos tangibles e intangibles. Los tangibles son activos físicos y medibles, los intangibles son cualitativos, específicos de la empresa, difíciles de medir y transferir. Los recursos tangibles se clasifican en recursos físicos, humanos, organizacionales y financieros. Entre los recursos intangibles se encuentran la reputación de la empresa y tecnológicos vinculados a la innovación, y que

corresponden a bases de datos, programas, derechos de propiedad intelectual, patentes, marcas registradas y derechos reservados, conocimientos prácticos, redes de trabajo, cultura de la organización, características de comportamiento, entre otros. Los recursos intangibles, en comparación con los tangibles, son una fuente superior y poderosa de capacidades distintivas y de generación de ventajas competitivas.

Las capacidades se configuran a partir de la agrupación de recursos tangibles e intangibles de la empresa para realizar alguna tarea o para lograr algún resultado específico. Estas representan la habilidad o aptitud de una empresa para combinar y aprovechar los recursos que ha integrado en forma intencional para lograr una condición deseada. Como se conforman los procesos al interior de las empresas, las capacidades son específicas a cada una de ellas, mientras que los recursos están en el flujo del mercado. Las capacidades distintivas constituyen el núcleo de la selección de las estrategias y del comportamiento estratégico al permitirle a la empresa aprender a competir con base en su singularidad, en lo que la diferencia, y no solo con base en las características de la industria.

En los análisis estratégicos se deben ante todo identificar capacidades distintivas (Tidd, 2000).

De acuerdo con las características definidas por Barney (1991), para ser considerada como distintiva, una capacidad debe ser (Hitt, et al., 1999):

- Valiosa: crea valor para una empresa al neutralizar los peligros o al aprovechar las oportunidades.
- Rara: un bajo número de los competidores o ninguno la poseen.
- Insustituible: no posee equivalentes estratégicos.
- Costosa y difícil de imitar: otras empresas no la pueden desarrollar con facilidad. Una capacidad puede ser costosa de imitar, primero.

Cuales de las capacidades de la empresa son distintivas en la cadena del valor, plantilla que las empresas utilizan para determinar su posición de costos e identificar los diversos medios que puede emplear para facilitar la puesta en práctica de la estrategia a nivel de negocios. Una empresa debe considerar la posibilidad de subcontratar aquellas actividades primarias y de apoyo en las que no puede crear ni captar valor. La subcontratación es la compra a un proveedor externo de una actividad para crear valor. La razón principal por la cual la subcontratación se utiliza a menudo es que pocas empresas poseen los recursos y capacidades que se requieren para lograr la superioridad competitiva en todas las actividades primarias y de apoyo.

Revisión Literaria Del Análisis Estratégico Y La Tecnología

La primera perspectiva enfatiza en el entorno externo a la empresa y, en la segunda, los análisis se centran en los aspectos internos y, más específicamente, en los recursos y capacidades con que cuenta la firma.

La primera vertiente, denominada de la organización industrial (Hitt, et al., 1999), y dentro de la cual se encuentran los planteamientos de Porter, los resultados económicos dependen del ambiente industrial, en medida en que se parte del paradigma de estructura-comportamiento-resultado (Velez, I.; Torres, S.; Aguilar, J., 2000). Lo clave para la empresa es posicionarse en una industria atractiva y construir ventajas por medio de las economías de escala y el aumento de la concentración de la producción industrial, en medida en que mejoran su posición competitiva y sus resultados vía poder de mercado.

La segunda vertiente se centra en la parte interna de la empresa. Su preocupación no es identificar si la industria es atractiva, sino estudiar el ambiente interno en búsqueda de capacidades únicas, es decir, valiosas para el mercado, difícilmente sustituibles e inimitables, le permite a la empresa ventajas competitivas sostenibles y rentas superiores al promedio o monopolísticas. Así la estrategia se basa en crear recursos y capacidades sobre los que se pueda tener un control monopolístico. La sostenibilidad de la

ventaja competitiva dependen de tres elementos: el índice de obsolescencia de las capacidades distintivas debido a cambios en el entorno, la disponibilidad de sustitutos de las capacidades distintivas, y la facilidad de imitar capacidades.

Este enfoque, denominado de los recursos y las capacidades, define como un conjunto de recursos, capacidades y aptitudes distintivas heterogéneas que interactúan. Las relaciones involucran conocimientos que son acumulados y apropiados a través del tiempo en procesos de aprendizaje específicos de cada empresa. Las capacidades de innovación están en la base del proceso estratégico, que puede acudir a la generación de innovaciones como forma de obtener ventajas competitivas y de mejorar su posición en el mercado.

Al interior de una misma industria, se pueden presentar ambos comportamientos dependiendo del momento de una misma industria, se pueden presentar ambos comportamientos dependiendo del momento por el que esta atraviese o las condiciones internas de la empresa.

En el momento de analizar el comportamiento estratégico de las empresas es la advertencia de Mintzberg (1984) en el sentido de que si bien existen estrategias explícitas, formuladas en un plan estratégico, también pueden existir estrategias emergentes, de carácter implícito, surgidas de manera informal y que por tal razón, no se encuentran en ningún documento formal. Los esfuerzos se deben orientar a establecer si existe un patrón de comportamiento más o menos consistente, de cual se pueda deducir la existencia de una estrategia emergente realizada.

METODOLOGÍA

Se intenta identificar el aporte de la tecnología a la competitividad de la empresa; más específicamente, si alguna de las tecnologías que domina la empresa es la fuente de desempeños superiores frente a sus competidores, si es la base de su diferenciación competitiva o si, incluso, es la fuente de sus búsquedas y apuestas competitivas.

Se acude a la noción de las tecnologías claves o esenciales (Dussauge, Hart y Ramantsoa, 1992). Éstas se entienden como la posesión y dominio de tecnologías críticas para otorgarle a sus procesos y productos, sean estos bienes o servicios, atributos que los hacen mejores que los que ofrecen la competencia para los consumidores.

Las tecnologías esenciales son tecnologías básicas o genéricas, en la medida en que constituyen el saber hacer fundamental para producir el tipo de bienes o servicios que le permite a cualquier empresa ingresar y permanecer en un mercado específico. Estas tecnologías que de una parte, están obligadas las empresas que actúan en el negocio; de otra parte, este saber contiene altas potencialidades tecnológicas en la medida en que les facilita a las empresas desarrollar productos que les permiten desenvolverse en uno o en distintos sectores. El estudio de la explotación de estos saberes o tecnologías básicas suele dar origen al análisis de los “racimos” o “árboles tecnológicos” (Escorsa y Valls, 1997), planteados inicialmente por Giget (1984).

El estudio del árbol tecnológico permite establecer el desarrollo del potencial de las tecnologías básicas de las empresas y su alcance en la aplicación en diferentes mercados o sectores. No obstante, desde una perspectiva estratégica, la indagación se orienta a determinar si en la empresa han existido desarrollos de ese saber fundamental que le hayan permitido diferenciarse tecnológicamente y si además, en la explotación de esas capacidades tecnológicas diferenciadas se han generado ventajas competitivas en diferentes mercados o sectores. Parlad y Hamel (1990)

La evolución y desarrollo de las prácticas en que se materializan tanto la gestión como las capacidades tecnológicas de la empresa, constituyen el contexto tecnológico micro en el cual se realizan los procesos de innovación, su análisis proporciona elementos para la comprensión de la innovación.

El referente evolutivo que orienta este trabajo también se revela en la percepción de que el conjunto de prácticas en que se expresan las capacidades tecnológicas de la empresa tiene niveles de desarrollo y de complejidad ascendentes.

Las capacidades tecnológicas se agrupan en capacidades de inversión, de producción y de vinculación. Las capacidades de inversión se refieren a aquellas habilidades necesarias antes de crear una nueva instalación o de expandir una planta existente, como por ejemplo, las habilidades para identificar, seleccionar y negociar la tecnología necesaria; determinar los costos de capital del proyecto, la convivencia de la escala y la diversidad de productos; comprender las tecnologías básicas implicadas. Estas capacidades afectan la eficiencia con la que operará la planta.

Las capacidades de producción van desde las habilidades básicas (por ejemplo, control de calidad, operación y mantenimiento), las habilidades un poco más avanzadas (como la adaptación del equipo, su mejoramiento o su uso en otras aplicaciones), hasta aquellas más existentes (investigación, diseño e innovación). Dentro de estas capacidades se encuentran las tecnologías de procesos de producto. Estas habilidades determinan que tan bien se aplican las actividades internas para absorber las tecnologías que se adquieren o se copian de otras empresas, así como para operar y mejorar algunas de ellas.

Las capacidades de vinculación son necesarias para transmitir y recibir información, habilidades y tecnología de agentes externos, como proveedores, asesores, subcontratistas, consultores, entre otros. Estas capacidades se pueden tomar como el marco para estudiar la subcontratación, la cooperación, las alianzas estratégicas, entre otras. Las relaciones con el entorno afectan la eficiencia productiva de la empresa, la difusión de la tecnología en la economía y profundización de la estructura industrial.

Las capacidades de eslabonamiento de las empresas se concentrarán en sus relaciones interempresariales y con otras instituciones, vistas estas desde la perspectiva de su articulación con el sistema nacional de innovación (Freeman, 1995; Lundvall, 1992 y Nelson, 1993).

Desde este enfoque se considera que la empresa hace parte de una red de agentes e interacciones que propician la creación, uso y difusión del conocimiento económicamente útil, así como los ritmos de las innovaciones. La empresa se articula a ellos con el fin de efectuar por la vía de la cooperación sus actividades de desarrollo tecnológico.

Este estudio se recurre a la definición de innovación planteada por el Manual de Frascati (OECD, 1996 a: 19), entendida como la transformación de una idea en un producto nuevo o mejorado que es introducido en el mercado, o en un proceso de fabricación nuevo o significativamente mejorado que es utilizado en la industria o en el comercio. Sobre tal definición varias aclaraciones resultan pertinentes: primero, para efectos del presente debe serlo para el mercado en el que se desenvuelve la empresa, independientemente de si este es local, regional, nacional o internacional. Segundo, por los objetivos de la investigación, los procesos de innovación y resultados en que se materializa se mirarán de dos maneras: en cada caso concreto y en términos de las trayectorias tecnológicas de las cuales hacen parte, o a las que dan lugar en la empresa. Siguiendo el libro verde de la innovación de la Comisión europea (1995), el término “innovación” designa a la vez el proceso y su resultado.

La noción de innovación como proceso coloca el acento en la forma como ésta se percibe y produce, en las diferentes etapas a que da lugar (concepción, creación, investigación, desarrollo, producción y comercialización) y en la forma en que éstas se articulan. En este sentido, la visión tradicional que la concibe como fruto de un proceso lineal empujado por el avance del conocimiento, como un flujo unidireccional, en el cual solo es posible comenzar con la investigación hasta culminar en la

comercialización, dio lugar al modelo alternativo de Kline (1985). Este autor argumenta que en la mayoría de los casos la “cadena de innovación” comienza con un hallazgo en el mercado, es decir, con una idea sobre como se puede mejorar un producto o sistema dado; continua con un “diseño analítico” (invención) seguido de un “diseño detallado”; de uno o varios rediseños; de la producción y, por ultimo, de la distribución al mercado.

Se alude al concepto de encadenamientos y, segundo con la conexión entre cada una de las etapas y la investigación, debido a que en cualquiera de ellas surgen problemas y para resolverlos el conocimiento requerido no existe; entonces se inicia una investigación por medio de la cual se obtendrá la solución y se enriquecerá la masa de conocimiento existente en la empresa (Kline, 1985).

El modelo no-lineal de la innovación, hace evidente como el proceso de innovación no se caracteriza por ser ordenado ni mucho menos simple, y cómo la dinámica tecnológica fluye en ambas direcciones: del esfuerzo tecnológico a la ciencia y de la ciencia a la tecnología. Así, la tecnología puede proporcionar dispositivos útiles que refuerzan la investigación científica, y de los signos del mercado puede apoyar el desarrollo de tecnologías comercialmente viables.

La innovación no es un proceso lineal con un orden bien delimitado y un encadenamiento automático, sino un sistema de interacciones y retroalimentaciones entre las diferentes funciones, y entre participantes cuya experiencia y conocimientos se refuerzan mutuamente y se acumulan. En la práctica a los mecanismos de las interacciones internas en la empresa, como la colaboración entre las diferentes unidades y la asociación y participación de los empleados en el proceso de innovación. La importancia otorgada con las redes con las que la empresa se asocia, con otras empresas, institutos de investigación, centros de desarrollo tecnológico, laboratorios de investigación, entre otros.

El grado de innovación se clasifica como radical o incremental. La innovación radical introduce conceptos totalmente nuevos e implica el desarrollo de nuevas capacidades y habilidades; provoca el reemplazo de un producto por otro; produce cambios profundos en las técnicas de producción; conlleva la creación de nuevas ramas de industria o de servicios; y el crecimiento de sistemas tecnológicos totalmente nuevos.

La innovación incremental modifica productos, servicios y procesos existentes por medio de mejoras sucesivas. De esta manera refuerza una posición establecida por una innovación de tipo radical [por ejemplo, la introducción de los microprocesadores de equipos electrónicos (Comisión Europea, 1995)]. El alcance de la innovación se define en función de los mercados en los cuales se puede considerar como tal, esto es, en el mercado local, regional, nacional e internacional.

La innovación también se puede clasificar según su tipo, esto es, según sean de producto, de proceso, organizacionales, en comercialización, (Jaramillo, et al., 2000), en este estudio solo se consideran las de producto y las de proceso. Los estudios de caso analizarán tanto el proceso de innovación, haciendo énfasis en las particularidades del cambio técnico y la innovación en las empresas, tales como la heterogeneidad tecnológica de las empresas, la informalidad de los proyectos de I+D, y las diversas vías y trayectorias a través de las cuales se obtienen innovaciones, no necesariamente por actividades de I+D.

Se adopta una perspectiva evolucionista de la innovación, ya que no solo se busca analizar sus resultados de manera aislada, sino también entender los esfuerzos, mecanismos, gestión y procesos adelantados por una empresa para alcanzarlos. Uno de los objetivos centrales del proyecto es estudiar las conductas tecnológicas de las empresas consideradas, enmarcadas en el contexto de sus estrategias empresariales. Los procesos de innovación descritos arriba corresponden a innovaciones puntuales que, en la medida en que suceden, van generando aprendizajes producidos por la experiencia; estos se acumulan y se traducen en mayores habilidades para generar otras innovaciones, a veces más complejas. La trayectoria de la empresa que define sus particulares capacidades tecnológicas y de innovación, que son difícilmente transferibles y que la diferencian de la competencia (Nelson y Sampat, 2001).

El marco presentado permite analizar el proceso de desarrollo de las tecnologías básicas y de conversión en tecnologías esenciales, esto es, estratégicas, en la medida en que se constituyen en fuentes de diferenciación y de ventajas competitivas; también permite analizar el desarrollo de las capacidades tecnológicas, vistas estas desde una perspectiva funcional; este contexto facilita el análisis de los procesos puntuales y de las trayectorias que siguen la innovación en la empresa. El marco teórico descrito brinda elementos que permiten caracterizar la innovación, identificar los factores que inciden en su dinámica y sus efectos en el terreno competitivo, tecnológico y en las habilidades mismas para innovar.

CONCLUSIONES

Por impacto se entiende aquel cambio con respecto a una situación inicial que es provocado, en este caso, por la innovación. Este se puede evaluar en términos de su éxito técnico y de su éxito comercial. El éxito técnico está asociado directamente al logro mismo de la innovación y a los efectos benéficos que desde la perspectiva tecnológica se deriva de ella. El éxito comercial se determina por las mejoras en el desempeño económico alcanzado por la empresa a partir de una innovación; desempeño que depende de la respuesta del mercado ante la innovación, es decir, su aceptación, la cual se puede establecer a partir de indicadores tales como los cambios en las ventas, la participación de la empresa en el mercado, o en los márgenes de utilidad a los ofrecidos por la competencia.

Una innovación puede inducir otras innovaciones; o puede generar aprendizajes que abran las puertas a innovaciones de mayor complejidad y alcance. Aun en la eventualidad de que en el corto plazo la innovación constituye un fracaso técnico y/o comercial, si la empresa establece las causas del mismo y logra aprendizajes derivados de dicha indagación, que le permitan corregir los errores detectados, es posible que ésta fortalezca sus actividades de innovación, y en consecuencia desarrolle capacidades que le permitan obtener procesos y productos nuevos o mejorados que sean aceptados por el mercado. Las innovaciones tienen efectos sobre las capacidades tecnológicas y de innovación de la firma que pueden ser detectables y evaluables en el mediano o largo plazo. Otro efecto indirecto de las innovaciones de la empresa, está relacionado con imagen en el mercado, aunque es más difícil de establecer, que el mercado la perciba como una empresa innovadora puede convertirse en el largo plazo en un rasgo distintivo que opere como un elemento diferenciador frente a la competencia.

El proceso de innovación se describe, en cada paso, partiendo de identificar el origen de la idea de la innovación, los objetivos que persigue, el proceso detallado que se sigue hasta lograr la innovación, destacando los contratiempos, desplazamientos y ajustes de la idea inicial frente al resultado final.

LA SIMPLIFICACIÓN DE LOS TRÁMITES DE LA CREACIÓN DE LAS SOCIEDADES MERCANTILES

Marisa Dinis, Instituto Politécnico de Leiria

RESUMEN

En este documento intentaremos explicar muy someramente los trámites necesarios para la creación de una empresa a la luz del régimen jurídico español y reflexionar sobre las nuevas formas de creación de empresas sobre todo sobre los nuevos métodos de creación telemática. Al efecto traemos a colación las normativas aplicables en España y asimismo aquellas que se tienen desarrollado en los países en su entorno y que presentan verdaderas innovaciones en el presente ámbito.

PALABRAS CLAVE: sociedades mercantiles; nuevas tecnologías; creación telemática; economía sostenible.

CONSIDERACIONES PRELIMINARES

En este análisis estudiaremos el actual proceso de simplificación de los trámites administrativos de constitución de algunas sociedades mercantiles. En verdad, los legisladores de los distintos países, así como el legislador comunitario, vienen realizando importantes esfuerzos para facilitar la constitución de las sociedades mercantiles (proceso de desformalización). El legislador español refuerza este intento al afirmar, en la exposición de motivos del Proyecto de Ley de Economía Sostenible, aprobado por el Gobierno en el pasado mes de marzo de 2010, que con la dicha Ley se “*introduce una serie de novedades directamente vinculadas con el impulso de la competitividad del modelo económico español, eliminando obstáculos administrativos y tributarios*”.

Con la simplificación de los trámites administrativos esperase además incentivar a la creación de sociedades mercantiles. Tratase sobre todo de una exigencia que deriva del actual contexto de crisis económica que, como es sabido, demanda de los gobiernos tomadas de medidas con el objetivo de impulsaren la creación de estructuras económicas y sociales que permitan un real crecimiento financiero. Las acciones legislativas levadas al cabo por el Gobierno español, en consonancia con las orientaciones provenientes del llamado G20 y de la Unión Europea, revelan una preocupación para reforzar el sistema financiero español y trabar las quiebras de actividad económica-financiera que últimamente se tienen verificado. La recuperación económica y social no es posible sin la existencia de un tejido empresarial consistente, fuerte y saludable que sea apto a generar riqueza, trabajo, creación y consumo. Así las cosas es por demás evidente la importancia del mantenimiento de la existencia de las empresas ya instaladas en el mercado y la necesidad de la creación de nuevas. Y porque las trabas económicas y administrativas a la creación de nuevas empresas son consideradas el primer obstáculo a su aumento deberán los gobiernos promover las necesarias medidas para disminuirlas. El trabajo de los gobiernos no está todavía completo acá de las fronteras o tampoco allá de ellas. Tanto es así que, como resulta del reciente estudio del “Instituto Nacional de Estadística” con referencia ya al año de 2010, “*en el mes de enero se crean 6.266 sociedades mercantiles, un 3,6% menos que en el mismo mes de 2009 y un 2,0% menos que en diciembre de 2009*”.

La importancia de los estudios empíricos y estadísticos relevase sobre todo en el hecho de crearen y publicitaren *rankings* de países en distintas materias lo que naturalmente permite la comparación entre los países analizados. Ahora bien, como es sobradamente conocido, en el ámbito económico-financiero, la buena imagen de un país es propicia a estimular nuevas inversiones, nombradamente extranjeras, y concomitantemente a elevar el índice de desarrollo ya instalado. Además de los informes del “Instituto

Nacional de Estadística”, son una importante referencia mundial en el entorno económico, financiero, social y empresarial de un país los informes *Doing Business*, los datos apurados y publicitados por la Organización para la Cooperación y el Desarrollo Económicos y, bien así, los informes reveladores del Índice de Competitividad Global del Fórum Económico Mundial. Vejamos algunos de los datos de estos informes, relativos a España, que mismo sin un análisis exhaustivo permiten hacer una radiografía general al estado económico-financiero del país. Así las cosas, véase que, de acuerdo con el informe *Doing Business*, cuyo objetivo principal reside en hacer una medición cuantitativa a las regulaciones sobre aperturas de empresas, obtención de crédito, protección de inversores, entre otros que no se relacionan directamente con el nuestro estudio, “*se premian con mejores puestos a aquellos países que tengan procedimientos simplificados para aplicar la regulación existente, por ejemplo si cuentan con oficinas de ventanilla única para dar cumplimiento a las formalidades de apertura de una empresa*”.

Nótese que los informes *Doing Business* engloban dos tipos de datos “*el primer tipo proviene de la revisión de las leyes y regulaciones*” y el segundo “*consiste en indicadores de tiempo y movimiento que miden la eficiencia en alcanzar un objetivo legislativo*”. Nótese asimismo que especialmente en lo concerniente al segundo indicador las nuevas tecnologías pueden representar una verdadera ventaja ya que permitirán alcanzar los objetivos legislativos más rápidamente y con una disminución de los costes. Atentando ahora en los números de este informe, véase que España mientras ocupa el puesto 62, en un universo de 183 países, en el “*ease of Doing Business rank*”, cae para la deshonrosa posición 146 en lo que concierne al índice “*apertura de un negocio*”, casi veinte puestos atrás de Costa Rica que ocupa el puesto 127. Véase asimismo que los países en torno a España y, por lo tanto, aquellos que más peligrosamente amenazan y compiten con la economía española, ocupan, relativamente al mismo índice puestos más animadores. Es lo que se verifica con Inglaterra, puesto 16, Francia, puesto 22, Portugal, puesto 60, Alemania, puesto 84. Creemos que el puesto ocupado por España se relaciona directamente con la exigencia de se cumplieren cerca de 10 procedimientos para la apertura de un negocio lo que se traduce inevitablemente en una pérdida de tiempo muy elevada. Nótese asimismo que los dos puestos ocupados por España, anteriormente referidos, son peores relativamente al informe *Doing Business* relativo a 2009.

A su vez, el “*Global Competitiveness Report 2009-2010*”, elaborado por el “*World Economic Forum*”, revela que también aquí España perdió puestos frente a los mismos índices relativos al informe de 2008/2009. Efectivamente, mientras el más reciente informe “*World Economic Forum*” España ocupa el puesto 33, sobre 133 países analizados, en el informe anterior conquistó el puesto 29. El problema mayor es que una vez más las economías más cercas a España, y por eso competidores más directos, llevan avanza es estos índices de tal forma que Suiza ocupa mismo la primera posición, Alemania la séptima, Inglaterra la decimotercera, Francia la decimosexta, Bélgica decimoctava y, entre otros, Luxemburgo vigesimoprimer.

Resulta claro que de los estudios empíricos referidos España tiene que cambiar algo. El propio Gobierno se ha enterado de esta necesidad y también por eso proyectó la Ley de la Economía Sostenible que promueve medidas que pretenden solucionar algunos de los problemas planteados y apuntados como causadores de la continuidad de la crisis. Así sucede pues con las medidas propugnadas para la creación de empresas que, de acuerdo con las propuestas plasmadas en el Proyecto de Ley de Economía Sostenible, resultará en un aumento del uso de las nuevas tecnologías y consecuentemente en una disminución de costes y tiempo utilizado en su creación.

LOS TRÁMITES ADMINISTRATIVOS NECESARIOS PARA LA CREACIÓN DE LAS SOCIEDADES MERCANTILES

En el plan nacional, verificamos que la tramitación administrativa en la creación de una empresa no es homogénea para todas las empresas y depende de la naturaleza de la actividad económica que se pretende

desarrollar. Comprobamos, además, que se dividen en dos los periodos más importantes del proceso de creación de una empresa: el primero reside en la ejecución de los trámites necesarios para la creación de la empresa, es decir, el momento en que la empresa empieza a gozar de personalidad jurídica que le permite contratar con terceros; el segundo, comprende el momento después de la adquisición de la personalidad jurídica hasta el momento en que se encuentran cumplidos todos los trámites administrativos que son indispensables para el ejercicio de la actividad económica propuesta por el emprendedor. La tramitación administrativa para la constitución de una sociedad mercantil depende de la forma jurídica elegida por el emprendedor. Sin embargo, independientemente de la forma jurídica adoptada siempre es necesario concretizar numerosos trámites que se realizan ante diferentes organismos o entidades que son, la mayor parte de las veces, administraciones locales, como es el caso de los trámites a realizar delante de la Administración o Delegación de Hacienda, del Ministerio del Trabajo y Seguridad Social y del Registro Mercantil. El principal trámite del proceso de constitución de una sociedad mercantil es el otorgamiento de la escritura pública de constitución. Cuando se trata de una sociedad de capital su constitución exige escritura pública que se otorga frente al Notario y que requiere la presentación de la certificación negativa del nombre y de los estatutos. Dentro de los tres meses desde el otorgamiento de la escritura, frente al Registro Mercantil, con la presentación de la liquidación del impuesto de transmisiones patrimoniales y de la primera copia de la escritura de constitución, se debe proceder al registro de la sociedad. En la escritura se incluyen los estatutos que fijan las reglas de funcionamiento de la sociedad y, por eso, debe ser redactada por profesionales que deben, además, ajustar los estatutos a los intereses de los promotores y de la clase de sociedad que se pretende constituir.

No obstante, en muchas ocasiones es el propio Notario, quien, a instancias de los socios acomoda los estatutos a las necesidades de los socios fundadores. El otorgamiento de la escritura y la aprobación de los estatutos de la sociedad se hacen ante notario con la firma de los socios fundadores. Este trámite sólo se concluye mediante la presentación al notario del certificado del Registro Mercantil Central referente a la no-coincidencia del nombre propuesto y del comprobante de depósito bancario de las aportaciones dinerarias que conforman el capital social, así como del documento nacional de identificación y del número de identificación fiscal de cada socio. Resulta directamente de las palabras precedentes que los trámites de creación de una empresas son muchos y morosos y, por lo tanto, creemos que el Gobierno tiene que actuar coordinadamente en tres frentes distintos: el normativo, desarrollando las normas necesarias para una disminución de los trámites administrativos y para una nueva forma de tramitarlos; el tecnológico, creando un sistema eficaz, seguro y accesible; y el administrativo, consiguiendo una efectiva coordinación entre todos los organismos intervinientes en el proceso de constitución de sociedades.

NUEVAS FORMAS DE CONSTITUCIÓN DE EMPRESAS. PROCESO DE TRAMITACIÓN TELEMÁTICA DE CONSTITUCIÓN DE EMPRESAS

El legislador español ha introducido en la legislación el recurso a las nuevas tecnologías para facilitar la creación de pequeñas y medianas empresas en forma de sociedad limitada; sin duda, la forma social más utilizada en las últimas décadas en el tráfico económico, hasta el punto de constituir actualmente la forma básica de organización jurídica de empresas. Para ello, ha optado por facilitar la creación de microempresas, mediante el reconocimiento de un subtipo societario: la sociedad limitada nueva empresa.

La normativa que regula las sociedades de responsabilidad limitada permite, desde el año 2003, con el Real Decreto 682/2003, de 7 de junio, la utilización de los medios telemáticos en la constitución de la empresa. Primeramente, solo la puesta en marcha de la sociedad limitada nueva empresa admitía la utilización de las nuevas tecnologías (Ley 7/2003, de 1 de abril), pero en el año 2006, a través del Real Decreto 1332/2006, de 21 de noviembre, tal facultad se extendió a las sociedades de responsabilidad limitada en general, tal como dejaba antever el contenido del precepto de la disposición adicional octava de la Ley 2/1995, añadida por la Ley 7/2003. El objetivo de agilizar el proceso de creación de empresas en España originó la creación del Centro de Información y Red de Creación de Empresas que se puede

definir como siendo “una red de puntos de asesoramiento e inicio de tramitación (PAIT), en los que se asesora y se prestan servicios a los emprendedores, tanto en la gestación, tramitación administrativa y puesta en marcha de sus iniciativas empresariales como durante los primeros años de actividad de las mismas”.

El Sistema de Tramitación Telemática es un sistema informático que tiene por base el Documento Único Electrónico – formulario administrativo que ofrece la ventaja de sustituir hasta dieciséis formularios en papel exigidos en la creación de una sociedad limitada a través del procedimiento tradicional – y que permite la creación de empresa a través de expedientes electrónicos. Con ello se llevará a cabo el intercambio de la documentación necesaria para la creación de empresas mediante la interacción con los sistemas informáticos dispuestos por cada uno de los actores que intervienen en el mismo. El STT garantiza al emprendedor un servicio global y unificado para la creación de empresas”.

La validez jurídica del proceso se encuentra asegurada una vez que todos los mensajes y documentos electrónicos están firmados electrónicamente a través de la firma electrónica reconocida de cada uno de los intervinientes en el proceso que presenta una eficacia jurídica igual a la firma manuscrita del documento presentado en soporte de papel. Además, es el empleo de la firma electrónica reconocida tantos en las relaciones entre las Administraciones Públicas y los ciudadanos como entre éstas y los notarios y registradores mercantiles que garantiza la seguridad del sistema telemático de constitución de sociedades.

Como es sabido, el país que se encuentra más desarrollado relativamente a la utilización de las nuevas tecnologías es los Estados Unidos de América. En relación con la aplicación de las tecnologías de la información e la comunicación a la constitución de las sociedades y a su funcionamiento el Estado del Delaware es aquello que se encuentra más avanzado. En verdad, el Estado del Delaware es, de entre todos los ordenamientos jurídicos que analizamos, aquello que permite la más rápida y sencilla constitución de una empresa porque las exigencias son muchísimo pocas y porque todo se hace de forma completamente electrónica.

La mayor parte de los países europeos tiene apostado en simplificar los trámites administrativos necesarios a constitución de las empresas sea a través de la utilización de las nuevas tecnologías de la información y la comunicación sea a través de la creación de agencias especialmente creadas para el tratamiento de tales materias. Portugal es un buen ejemplo de ambas las situaciones. Portugal tiene dos formas jurídicas especiales de crear empresas de manera rápida e sencilla. Una, la «*empresa na hora*», es regulada por el *Decreto-Lei* n.º 111/2005, de 8 de julio y consiste en un régimen especial de constitución inmediata de sociedades mercantiles de responsabilidad limitada o por acciones. Otra la «*constituição on-line de sociedades*» es regulada por el *Decreto-Lei* 125/2006, de 29 de junio, y tiene como principal ventaja la posibilidad del emprendedor constituir una sociedad de forma completamente electrónica. En verdad, todos los procedimientos conducentes a la puesta en marcha de la sociedad se realizan a través de un *site* en la Internet, reglado por portaría del Ministro de la Justicia. Estas formas de constitución de sociedades no son admisibles cuando el emprendedor tiene la pretensión de crear otro tipo jurídico de sociedades mercantiles, es decir, no es admitida para la constitución de sociedades colectivas, para las sociedades comanditarias y para las sociedades anónimas europeas.

Los proyectos “*empresa na hora*” y “*empresa on-line*” son verdaderamente originales. En efecto, en el año de 2006, la originalidad de la iniciativa “*empresa na hora*” fue reconocida por la Comisión Europea que le atribuyó el primero premio en la categoría de “reducción de los encargos administrativos para las empresas”. Asimismo, el Banco Mundial consideró tal iniciativa meritoria y la refirió en su estudio “*Celebrating Reform 2008*” como un suceso que “inspiró otros países”. En verdad, Angola y Cabo Verde han solicitado apoyo legal y técnico para implementaren tales iniciativas en sus ordenamientos jurídicos. A su vez, Eslovenia, Hungría, Egipto, Mozambique, Chile, Brasil, Finlandia, Suecia, China, San Tome y

Príncipe, Bosnia-Herzegovina, Rumania, Estonia, Argentina, Uruguay, Timor y la propia España han visitado el servicio con el objetivo de conocer los procedimientos adoptados por Portugal en el proceso de creación de empresas. Al fin, y revelador de una verdadera cooperación internacional, aún en el ámbito del proyecto “*empresa na hora*”, Portugal estableció un acuerdo con Estonia que permite que un portugués cree una empresa en Estonia y un estonio cree una empresa en Portugal a través de la Internet y sin cualesquier desplazamientos físicos a los servicios de la creación de empresas.

La importancia del asunto aquí en estudio es de tal forma elevada que, como referimos anteriormente, el legislador español, bien así los demás, sigue concediéndole tratamiento legislativo. Así es de hecho lo que sucede con las intenciones del Proyecto de Ley de Economía Sostenible en cuyo capítulo I introduce medidas de simplificación de los trámites administrativos destinados a agilizar la constitución de sociedades e la adopción de actos societarios. La reforma, en las palabras del propio Proyecto de Ley, “permitirá la tramitación telemática de las operaciones y de las obligaciones de publicidad de los actos del tráfico mercantil, y que todos los trámites necesarios para la constitución de sociedades de responsabilidad limitada puedan llevarse a cabo, con carácter general, en un plazo máximo de uno o cinco días”. Aún de acuerdo con el referido Proyecto de Ley, las innovaciones en la constitución de sociedades de responsabilidad limitada por vía telemática se producen sobre todo en el plazo de otorgamiento de la escritura de constitución que pasará a ser de un día hábil contado desde la recepción de la certificación negativa de denominación expedida telemáticamente (en el plazo de un día hábil) por el Registro Mercantil Central.

Con la introducción de las nuevas tecnologías en este ámbito la escritura de constitución de sociedades será remitida de forma telemática por el Notario al Registro Mercantil del domicilio social, en el mismo día de su otorgamiento, salvo cuando el solicitante no autoriza tal remisión por parte del Notario. En esta última situación será el propio solicitante a remitir la escritura al Registro Mercantil, que podrá ocurrir de forma telemática, después de obtener la respectiva copia electrónica. Posteriormente compare al Notario autorizante de la escritura de constitución solicitar telemáticamente la asignación provisional de un Número de Identificación Fiscal que pasará a definitivo después de la inscripción de la sociedad en el Registro Mercantil.

Alguna particularidad asume la constitución de sociedades de responsabilidad limitada cuyo capital social no es superior a 3.100 euros y cuyos estatutos se adaptan a algunos de los aprobados reglamentariamente. Proceso distinto sigue asimismo la “constitución de las sociedades mercantiles de capital que no sean de responsabilidad limitada o que, siéndolo, tuvieren entre sus socios personas jurídicas o el capital social fuere superior a 30.000 euros o cuyo órgano de administración delimitado en los estatutos sociales no se estructure como un administrador único, varios administradores solidarios, cualquiera que sea su número, o dos administradores mancomunados, se ajustará a las siguientes reglas”. En las primeras agilízase más aun los procedimientos y en las segundas permitiese, no obstante se traten de procesos bien más complejos, la utilización de las nuevas tecnologías en la respectiva constitución. En nuestro juicio, no obstante ser clara la intención de introducir verdaderamente las nuevas tecnologías en la constitución de las sociedades mercantiles, el Proyecto de Ley de Economía Sostenible se muestra poco ambicioso no aprovechando, desde luego, las experiencias legislativas de otros países que, desde hace algún tiempo, incorporaran las referidas tecnologías en la vida societaria.

PROCESO DE INTERVENCIÓN EN UNA COMUNIDAD RURAL CASO EJIDO ESTANQUE DE NORIAS EN CUATRO CIÉNEGAS COAHUILA MÉXICO

Verónica De León Estavillo, Universidad Autónoma de Coahuila
Fernando Agüeros Sánchez, Universidad Autónoma de Coahuila
Claudia Nohemí Aguayo de la Cerda, Universidad Autónoma de Coahuila

RESUMEN

Los procesos de cambio vividos por nuestra sociedad en las últimas décadas, han sido de gran impacto en nuestras formas de vida y vinculación con nuestro entorno, por lo que las formas tradicionales de operar los programas de apoyo existentes en nuestro país requieren de un enfoque más integral y acorde a los requerimientos y necesidades de cada región. En este trabajo se presentan los resultados obtenidos en un proceso de intervención cuya finalidad fue facilitar un proceso de cambio acerca de las formas actuales de organizarse y administrar sus recursos agropecuarios con un manejo sustentable en la comunidad “Ejido Estanque de Norias” del municipio de Cuatro Ciénegas, Coahuila México. Esta intervención se apoya en una investigación de carácter mixto donde se obtuvo información acerca de las condiciones de vida de sus habitantes, los roles que desempeñan los hombres y las mujeres en las actividades que se llevan a cabo en dicha comunidad y en las reuniones grupales para establecer un plan de trabajo que les ayudará a mejorar sus condiciones de vida actuales.

ABSTRACT

The processes of change experienced by our society in recent decades have made a tremendous impact on our ways of life and relationship with our environment, so that traditional ways of operating the existing support programs in our country require a more comprehensive and consistent approach to the requirements and needs of each region. This paper presents the results obtained in a process of intervention aimed at facilitating a process of change on existing forms to organize and manage their agricultural resources management with sustainable in the community “Ejido Estanque de Norias” in the municipality of Cuatro Cienegas, Coahuila, Mexico. This intervention is supported by a mixed investigation where information was obtained to know the living conditions of its inhabitants, the roles of men and women in the activities carried out in the community and conducting group meetings to establish a work plan that will help them improve their current living conditions.

KEY WORDS: Process of change, Intervention, living conditions.

INTRODUCCION

En este trabajo se plantea la necesidad de llevar a cabo procesos de intervención con un enfoque sistémico a fin de facilitar procesos de cambio en las comunidades, principalmente de carácter ejidal, acerca de las formas actuales de organizarse y administrar sus recursos. El problema que dio origen a esta intervención es que la brecha entre productores con sistemas de alta eficiencia y productores que tienen sistemas de subsistencia es cada vez mayor. Se considera que esta situación no les permitirá estar en condiciones de competir y sí incrementar la importación de alimentos en la región. El proyecto de intervención del caso que se presenta está fundamentado en una investigación de carácter mixto con un enfoque participativo a través del cual se buscó desarrollar un sistema de capacitación – extensión y transferencia de tecnología para productores de ganado bovino en zonas rurales del estado de Coahuila México e incidir en mejorar sus condiciones de vida.

El plan de trabajo consistió en realizar la investigación con los habitantes de la comunidad sobre sus condiciones socioeconómicas de vida, posteriormente llevar a cabo reuniones grupales para conocer sus expectativas de vida en la comunidad y clarificar el rol a desempeñar por los investigadores, finalmente efectuar el levantamiento de información de sus cabezas de ganado bovino y capacitar a los involucrados en esta actividad en un manejo más adecuado del mismo.

REVISION LITERARIA

Intervenir significa operar sobre la capacidad de cambio que tenga el sistema como tal, relacionarse con el sistema humano, vivo, en funciones, con el propósito de ayudarlo teniendo presente que el sistema existe por sí mismo y es independiente del interventor. Realizar estos procesos de intervención en comunidades rurales significa para el investigador, además de lo anterior, estar consciente de que se pueden llegar a jugar dos roles, investigador y actor al mismo tiempo, los que en su momento pueden resultar que sean difíciles de unir o que resulten incompatibles.

En este tipo de intervenciones, el investigador puede elegir diferentes estrategias o métodos de intervención, sin embargo uno de los más usados es el conocido como investigación – acción, o investigación participativa o colaborativa, por lo que el abanico de opciones para el investigador resulta bastante amplio. Esto último conlleva sus riesgos pues puede adentrarse tanto en la dinámica grupal y ser arrastrado a los procesos de dichos grupos y el devenir de los acontecimientos locales. Los resultados obtenidos por lo tanto pueden llegar a ser totalmente diferentes de los que en principio se habían planeado. No obstante estos “peligros” e incertidumbres, el poder coadyuvar a estas comunidades a que sean promotoras y gestoras de su propio desarrollo es un desafío y un compromiso que vale la pena tomarlo.

En el caso de nuestro país, el minifundio predomina y se caracteriza, entre otras cosas, por una baja vinculación al mercado, ubicarse en áreas de bajo potencial productivo, tener importantes procesos de deterioro de los recursos naturales y una baja eficiencia en el aprovechamiento del agua. Económicamente, el producto interno bruto (PIB) silvoagropecuario y pesquero (71% agricultura y 22% ganadería) ha declinado 5% y emplea 20% del total de la fuerza de trabajo, en las actividades del campo del país. (SAGARPA 2005).

La pobreza alcanza en el país al 81.5% de la población en el campo, de la cual el 55.3% se encuentra en pobreza extrema. El sector agropecuario tiene una baja aportación al PIB (6%) un rezago en el crecimiento (1.6% contra 3.4% nacional) y presenta un bajo valor agregado al producto (30% vs. 50 – 60% en Latinoamérica), así como altos costos de transacción. (Informe 2007 SAGARPA, INCA Rural). La población rural es de 24.5 millones de habitantes y la PEA es de 10.7 millones, de los cuales 61.7% son trabajadores sin tierra. 9.3% son productores sin tierra y 29% productores con tierra (INEGI 2005).

Esta situación se presenta con mayor agudeza en el sector ejidal y entre las principales causas de estas condiciones se identifican, además de las ya mencionadas un enfoque centrado en lo agropecuario y la producción primaria, falta de claridad en los derechos de propiedad, deficiente articulación de las políticas e instrumentos públicos hacia el sector, un bajo nivel educativo y nulo desarrollo de habilidades competitivas, así como un bajo perfil del productor para desarrollarse como emprendedor. Las estrategias de desarrollo en el campo han consistido normalmente en establecer políticas de apoyo económico directo al productor, pero sin tomar en cuenta el entorno en general y las condiciones y/o características de cultura y formas de vida, lo que en muchos casos hace que los recursos que se dan en especie, por ejemplo, sean utilizados luego para comercializarlos más adelante o bien utilizarlos como alimento.

Por lo que, no obstante contar con programas de apoyo y campañas de difusión, en la actualidad la brecha entre los productores con sistemas de alta eficiencia y productores que tienen sistemas de subsistencia, es más grande, independientemente que pertenezcan al sector social o privado. El estado de Coahuila cuenta con una población, según censo del 2005, de 2346 678 habitantes, y una superficie de 151,571 km. cuadrados, constituyéndose por este concepto en el 3er. Estado con mayor superficie territorial Coahuila tiene 18 municipios eminentemente rurales que concentran el 16.6% de la población del estado con solo el 6% de su población dedicada al sector primario.

METODOLOGÍA

Para llevar a cabo esta intervención se eligió hacerlo bajo un enfoque sistémico con el propósito de generar y/o mantener una visión holística e integradora tanto de los procesos económicos como su impacto en las condiciones de vida como comunidad. La metodología de investigación utilizada corresponde a un carácter mixto ya que implicó, por una, parte hacer un diagnóstico y la aplicación de técnicas establecidas para el manejo de actividades agropecuarias (cuantitativa), así como de carácter cualitativo donde el enfoque fue investigación – acción .

Instrumentos

Los instrumentos utilizados en el manejo de las actividades agropecuarias se basaron en la guía básica de cuidado del ganado bovino establecida por los centros de recolección y sacrificio de ganado “Rastros” y que se fundamenta en el reglamento establecido por la Secretaría de Fomento Agropecuario. Para conocer las condiciones de vida y sus expectativas sobre la comunidad el instrumento elegido fue realizar entrevistas, mediante guión pre establecido, a cada una de las familias y la validación del instrumento se hizo por jueceo y comprendió un programa de capacitación a los entrevistadores sobre la técnica de la entrevista y uso del instrumento. Posteriormente se realizaron reuniones grupales con un pre-programa para conocer sus expectativas sobre la comunidad, respetando los protocolos de interacción establecidos en la comunidad. Los hombres atendieron lo relativo al ganado y las mujeres lo referente a las condiciones de vida y lo que esperan pase en el ejido.

Muestra

La muestra fueron las 40 familias que conforman dicho ejido.

Fundamento

El proyecto se fundamentó en lo siguiente: si se llevan a cabo en forma básica registros económicos y se refuerzan algunas acciones de sanidad, reproducción y comercialización, dentro del sistema productivo bovino de carne y se les **capacita** para que **sean** los propios **administradores del sistema**, se ha considerado que impactará en mejorar las condiciones socioeconómicas de la comunidad.

RESULTADOS

Los resultados obtenidos en el diagnóstico de las actividades agropecuarias que se presentan en la siguiente tabla, contiene información antes del proyecto y lo que se logró con el mismo.

Los datos obtenidos en las entrevistas realizadas a las familias se agrupan en factores utilizados para realizar los estudios de condiciones de vida, mismos que se presentan de manera resumida en la siguiente tabla:

Sin el proyecto	Con el proyecto
Manejo: 1.- No se llevan registros de producción 2.- Porcentaje de preñez 50% 3.- Mortandad superior al 5% 4.- No ofrecen suplementación del ganado en épocas críticas 5.- Peso al destete promedio de 140 – 150 kilogramos. Zoosanitario: 1.- Falta de un programa zoosanitario adecuado (vacunas y desparasitantes) Base de datos origen genético y productivos: 1.- El grupo no lleva ningún registro Comercialización: 1.- Venta de ganado en pie a intermediarios con precio por kilogramo de \$ 22.00 - \$24.00	Manejo: 1.- Llevar registros de producción 2.- Porcentaje de preñez 60 – 65% 3.- Mortandad inferior al 5% 4.- Aplicación de suplementación de ganado en épocas críticas 5.- Peso al destete promedio de 170 – 180 kilogramos. Zoosanitario: 1.- Establecimiento de un programa zoosanitario adecuado (vacunas y desparasitantes). Base de datos origen genético y productivos: 1.- Implementar programa de registros, base de datos, estadísticas, eventos climatológicos, para la toma de decisiones para el desarrollo de la ganadería. Comercialización: 1.- Venta de ganado en pie en la frontera con precio por kilogramo de \$32.23 (considerando el precio de \$ 1.22 dólar la libra y el tipo de cambio del dólar a \$11.00 m.n.)

Tabla de resultados sobre el manejo del ganado bovino antes y después del proyecto (elaboración propia).

Concepto o rubro	Descripción
Composición general de la muestra	Número de familias encuestadas 40. No. de integrantes por familia (promedio) 4- 6 El 95.8% tiene registrados a sus hijos, el resto están aún muy pequeños. Se observaron matrimonios con más de 20 años de casados, hecho que puede corresponder a que el 70% de la población sobrepasan la edad de 45 años.
Alimentación	Los adquieren en la Cd. de Castaños, el resto en la tienda Conasupo ubicada en la misma comunidad, otros productos como lácteos, carne, frijol, algunas hortalizas son producidas en el ejido.
Salud	El 90% de la población consulta en la Clínica Rural que pertenece al IMSS Castaños. Las enfermedades más atendidas son las respiratorias, de lumbalgia, alta presión y diabetes. No es significativo el número de habitantes que utiliza servicios médicos particulares.
Ingreso Económico	El 71.5% de las familias perciben 2 salarios mínimos (s.m.), el 26:8% 3 s.m. y el 1.7% 4 s.m. El 74.5% tiene cuenta de ahorro en un banco u otra institución financiera ya que es requisito para acceder a los programas de Pro Campo y Pro Gan. El mayor gasto es en comida y aspectos de salud, posteriormente escuela, ropa y accesorios (es muy poco lo asignado) y lo hacen una vez al año.
Educación	Se cuenta con un maestro de Educación Primaria, los de nivel Secundaria asisten a Tele secundaria ubicada en el Ejido Dolores del municipio de Castaños ubicado a 22 km. El 79% de los habitantes cuenta con nivel primaria, el 10% secundaria y un 11% preparatoria.
Vivienda	Se detectaron en un 40% de las viviendas que no tienen piso de cemento. Solo el 5% cuenta con cuarto de baño dentro de la vivienda. El 35% de las casas son de adobe, o enjarre de lodo con albarda y troncos de mezquite.
Agua Potable	Su fuente de agua depende de un pozo ubicado a 12 km.
Vías de Comunicación	Se encuentra ubicado a 58 Km. de la carretera Monclova – Saltillo y 34km. de camino de terracería. Se cuenta con un teléfono comunitario y la fuente de energía eléctrica, recientemente (3 meses)

Tabla sobre condiciones socioeconómicas de vida de los habitantes del ejido Estanque de Norias en Cuatro Ciénegas, Coahuila. México (elaboración propia)

Sobre las expectativas de vida en la comunidad se citan las de mayor incidencia: Las mujeres desean que sus hijos reciban la educación básica (primaria y secundaria) en el ejido, ya que temen “malas” influencias en el ejido al que actualmente van porque se encuentra cerca de la carretera federal y a un lugar donde paran muchos operadores de transporte de carga pesada que los pueden inducir al consumo de drogas. Ellas desean desarrollar otras actividades económicas que les reditúen ingresos independientemente de los de su esposo o padre. Asimismo, desean que los servicios de salud en su comunidad mejoren y sean permanentes.

De igual forma comentaron que desean se cierre un expendio de cerveza que está en el ejido y que es operado por el hermano del Comisario en turno, ya que eso altera los ánimos de los hombres. Sobre las actividades realizadas con los hombres: Se persiguieron tres objetivos básicos: Construir conjuntamente con las personas involucradas en las actividades de producción agropecuaria mejores

formas de explotación y producción. Capacitarles en tecnologías acordes a su realidad y entorno que les permitan ser más eficientes, con un enfoque sustentable. Propiciar un cambio de enfoque sobre las formas de administrar su empresa o actividad empresarial. Se les hizo hincapié en que deben involucrar a uno o dos miembros de su familia para dar continuidad a la empresa, pues en este ejido en particular se observó que el 70% de la población sobrepasa los 45 años.

CONCLUSIONES

Los resultados obtenidos con el proceso de capacitación llevado a cabo en el ejido presentaron avances (tal como se muestra en la tabla pág.7). Sobre mejoramiento de condiciones de vida lograron que se llevara luz eléctrica al lugar lo que les permitirá conservar sus alimentos, así como la producción de queso y crema por el momento. Para poder llevar a cabo este trabajo se conformó un grupo multidisciplinario, con la finalidad de lograr una intervención sistémica, ya que no solo es necesario atender lo concerniente a las actividades productivas sino al desarrollo de capacidades también que incidan en el autodesarrollo de la comunidad.

Las limitaciones encontradas en esta investigación fueron la distancia, el tiempo para hacer el seguimiento, los roles que siguen hombres y mujeres en la comunidad, así como una actitud de dependencia hacia los programas de apoyo ofrecidos por el gobierno. Y por parte de los investigadores el tratar de mantener la objetividad y evitar tomar partido ante las condiciones de vida observadas.

Por lo que se considera se requiere potenciar el desarrollo humano, considerar la naturaleza de las comunidades e incidir en el desarrollo social equilibrando el uso racional de los recursos naturales y el desarrollo económico de la región, así como la formulación, aplicación y evaluación de las políticas y programas de apoyo que incidan en el mejoramiento de las condiciones de vida. Se trató de reconocer la interdependencia entre el interventor y el ejido pero nos enfocamos hacia como mantener o incrementar la autonomía de ellos como una unidad en movimiento, auto responsable, que tiene la obligación de estar en control sobre su propio destino.

EL IMPACTO EN LAS INVERSIONES DESTINADAS A LOGRAR UN DESARROLLO SUTENTABLE EN EMPRESAS SOCIALMENTE RESPONSABLES A TRAVÉS DE LAS INVERSIONES FINANCIERAS

Felipe de Jesús Salvador Leal Medina, Universidad Autónoma de Aguascalientes

Roberto González Acolt, Universidad Autónoma de Aguascalientes

RESUMEN

Nuestro objetivo es analizar las inversiones financieras que realizan las Empresas Socialmente Responsables (ESR), y a través de ese análisis conocer el impacto en las inversiones para lograr un desarrollo sostenible. En 2009 diez empresas recibieron el distintivo de ESR por parte del Centro Mexicano para la Filantropía (Cemefi), por nueve años consecutivos: Deloitte, Grupo Bimbo, Grupo Financiero BBVA Bancomer, Hewlett Packard México, Holcim Apasco, S.C. Johnson & Son, Shell México, The Coca Cola Export Corporation, Wal-Mart de México y ZIMAT. Los resultados muestran que solo cuatro empresas expresan que efectúan actividades en inversión de tecnología y buscan un desarrollo sustentable. Esta investigación es de tipo documental y bibliográfica, ya que la información aquí recabada se obtuvo a través del Cemefi, además que la extensión es de tipo caso, las empresas analizadas fueron tomadas de una lista publicada por el Cemefi. Los alcances de esta investigación son descriptivos y exploratorios, debido a que es un tema relativamente nuevo. Los materiales utilizados fueron el Internet, bibliografías y revistas. Las unidades de observación son las ESR. La investigación tendrá una segunda fase en donde se analizaran aquellas prácticas de responsabilidad social que realizan las empresas pertenecientes al estado de Aguascalientes.

NIVEL DE SATISFACCIÓN DE LOS PRACTICANTES DE LA FACULTAD DE CONTADURÍA Y ADMINISTRACIÓN DE LA UNIVERSIDAD AUTÓNOMA DE COAHUILA DURANTE SU ESTANCIA EN LA EMPRESA

Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México

Margarita E. García Fajardo, Universidad Autónoma de Coahuila-México

ABSTRACT

El presente trabajo se llevó a cabo con la finalidad de conocer el nivel de satisfacción de los practicantes de la Facultad de Contaduría y Administración de la Universidad Autónoma de Coahuila durante su estancia en la empresa asignada en la ciudad de Monclova, Coahuila y sus alrededores. El estudio es de tipo descriptivo, el cual se realizó en dos etapas metodológicas; en la primera se llevó a cabo una investigación documental para conocer el procedimiento administrativo que opera actualmente en el departamento de Prácticas Profesionales y en la segunda etapa se encuestó a los alumnos que terminaron y acreditaron sus prácticas profesionales durante el periodo de Agosto a Diciembre de 2009. Los resultados obtenidos en la primera etapa es la ausencia de un reglamento que facilite el procedimiento para cumplir con las prácticas profesionales. En la segunda etapa se encontró que los alumnos calificaron el nivel de satisfacción en las Pequeñas empresas y las organizaciones del sector Comercial con las condiciones propicias para no producir insatisfactores; mientras que para el género masculino es importante el espacio físico, mobiliario y herramientas, y para el género femenino es la seguridad e higiene.

PALABRAS CLAVE: Prácticas Profesionales, nivel de satisfacción, condiciones de trabajo.

INTRODUCCION

En respuesta a las necesidades de crear profesionistas competitivos en el ámbito laboral de nuestro país, en la Universidad Autónoma de Coahuila (UAdeC) los planes y programas de las carreras contables y administrativas fueron sometidos a evaluación y ajustes dando como resultado una reforma curricular. En Agosto del 2003 se implementó dicha reforma en la que los cambios realizados fueron, tomando en consideración los requerimientos de los egresados de la Facultad de Contaduría y Administración (FCA) de la UAdeC por parte del sector empresarial de la región.

Las modificaciones realizadas en los planes de estudio de las carreras contables administrativas: basarlos en un sistema de créditos que agiliza movilidad y tránsito de alumnos, hacerlos semiflexibles, para permitir dosificar la carga académica, tronco común homologado para todas las carreras, incluirles un área optativa de acentuación, disponibilidad de las materias en todos los semestres, horarios adecuados, implementar programas de tutorías, incluir prácticas profesionales y diversas formas de titulación. Entre los cambios implementados durante la formación del estudiante, está la realización de prácticas profesionales las cuales podrán efectuarse una vez que el alumno haya cubierto al menos el 75% de las asignaturas acreditadas. Habiendo concluido tanto su estancia en la organización, como la entrega del reporte de actividades realizadas durante su permanencia, el alumno aprueba dicho requisito. Actualmente, son más las universidades del país que han implementado en su curricula la práctica profesional con carácter de obligatoriedad y un reglamento de prácticas profesionales para su

operacionalización que marca las regulaciones durante su proceso en el que el alumno lograra su acreditación.

Es importante conocer el nivel de satisfacción de los alumnos que han acreditado sus prácticas profesionales de las carreras de Licenciatura Contaduría, LAE y LARH que ofrece la FCA de UAdeC durante su estancia en la organización, en cuanto a las condiciones de trabajo.

REVISIÓN LITERARIA

Hoy en día para las universidades tanto públicas como privadas es de especial interés asegurar que los alumnos antes de terminar su carrera con un título profesional cuenten con una mínima experiencia con la cual puedan aplicar el conocimiento adquirido durante su formación y percibir lo que es el campo laboral; por ello el haber insertado las prácticas profesionales como parte de su formación profesional.

Según la Asociación Nacional de Universidades e Institutos de Educación Superior (ANUIES, 2006) en el Glosario de Términos Vinculados con la Cooperación Académica se entiende por Prácticas Profesionales a aquellas: “actividades que realizan los estudiantes dentro de una empresa pública o privada. En el marco estratégico de la movilidad académica se recomienda dar a los estudiantes oportunidad de realizar prácticas profesionales en empresas internacionales.”. (ANUIES, 2006, p. 9)

Por otro lado, la Universidad Autónoma de Coahuila señala (UAdeC) que la “Práctica Profesional es la actividad teórico-práctico, que el estudiante realiza, consistente en la aplicación de los conocimientos y destrezas que apoyan en las necesidades propias de los sectores de producción de bienes y servicios, tanto públicos como privados con un programa y tiempo determinado y que asegura el ejercicio eficiente y efectivo de la profesión”.

De acuerdo a los Lineamientos para la Práctica Profesional de la UAdeC en el artículo 25 inciso “e”: “el estudiante que esté inscrito en el Programa de Prácticas Profesionales tiene el derecho de evaluar el proyecto al que fue asignado por la organización”. Esto permite a los directivos de la facultad conocer las condiciones propicias que optimicen el aprovechamiento del estudiante durante su práctica profesional o bien, si existe un obstáculo que este limitando su desempeño.

Teoría Bifactorial De Herzberg

Unas de las teorías motivacionales que nos ayude a interpretar la experiencia laboral obtenida por el alumno en la práctica profesional es la teoría de “Motivación e Higiene de Herzberg” propuesta en 1959. Esta se basa en dos factores: el de satisfacción o intrínseco y el de insatisfacción o extrínseco también llamado factor higiénico. El primer factor se refiere a las condiciones que tienen relación directa con el contenido del puesto de trabajo que producen un efecto de satisfacción y está integrado por: ascensos, el trabajo en sí mismo, el sentido del logro, posibilidades de crecimiento, responsabilidad y reconocimiento. El segundo factor (insatisfacción), se refiere a las condiciones que rodean al individuo al realizar su trabajo y que pueden ser psicológicamente poco saludables para el trabajador, el cual está integrado por: condiciones de trabajo, administración y políticas de la empresa, relaciones interpersonales con los compañeros de trabajo, relaciones interpersonales con el supervisor o jefe inmediato, supervisión técnica, salarios y prestaciones, seguridad en el trabajo, status y vida personal. (Herzberg et al. 1967).

METODOLOGÍA

Esta investigación se llevó a cabo un estudio de tipo descriptivo; y se realizó en dos etapas: la primera consistió en una investigación documental para conocer los procedimientos administrativos que operan

actualmente en el departamento de Prácticas Profesionales de la FCA de UAdeC para asignar al alumno a la organización, la validación y la obtención de los créditos aprobatorios en el kardex.

En la segunda etapa se encuestó a través de un cuestionario estructurado y de carácter institucional, a un total de 104 los alumnos que terminaron y acreditaron sus prácticas profesionales durante Agosto – Diciembre de 2009, correspondiendo a 31 de Licenciados en Administración de Empresas (LAE), 28 de la Licenciatura en Administración de Recursos Humanos (LARH) y 45 de la Licenciatura en Contaduría (LC). Para efectos de esta investigación, se tomó como muestra a 92 alumnos de las carreras ya mencionadas. Para el análisis de los datos utilizó el paquete estadístico SPSS versión 17.0.

RESULTADOS

De la información reunida de la Coordinación de Prácticas Profesionales de la FCA de la UAdeC, en la primera etapa del proyecto se obtuvo como resultado la descripción del proceso administrativo para la realización y acreditación de las Prácticas Profesionales que a continuación se muestra:

Descripción Del Proceso Administrativo Para Prácticas Profesionales.

- Se inicia cuando una institución pública o privada solicita a través de un registro de programa de Prácticas Profesionales, en el cual hace la solicitud del practicante.
- El programa es revisado y evaluado por un catedrático de la carrera y si es acorde, la facultad envía de dos a tres alumnos a presentación y entrevista inicial a la institución.
- La organización selecciona al alumno de acuerdo a criterio utilizado en la entrevista.
- El alumno seleccionado por la organización realiza la práctica, la cual deberá ser un mínimo de 240 horas, respetando el horario acordado con la empresa.
- Al terminar su estancia en la empresa, el practicante es evaluado por su supervisor en relación el desempeño realizado en la empresa a través de un cuestionario institucional, y también esta le extiende al practicante una carta de terminación de Prácticas Profesionales.
- El alumno cuenta con un período no mayor a dos meses para elaborar y entregar a la Coordinación de Prácticas Profesionales un reporte de actividades realizadas, conocimientos tanto aplicados como adquiridos por primera vez en la empresa; el cual verifica si el contenido del programa registrado fue realizado, una vez evaluado satisfactoriamente el reporte final del alumno, el alumno acredita la Práctica Profesional.
- El practicante evalúa el proyecto de Prácticas Profesionales asignado por la empresa.

A pesar de que dicho procedimiento fue establecido de acuerdo a los lineamientos para la realización de Prácticas Profesionales de la UAdeC, no existe un reglamento interno en la FCA de la UAdeC que regule y contemple su aplicación correcta para las características y necesidades específicas de los alumnos de esta facultad. A continuación se presentan los hallazgos obtenidos en la segunda etapa de la investigación con respecto a los datos generados de los alumnos que han concluido sus Prácticas Profesionales de las carreras de Licenciados en Contaduría, Administración de Empresas y Administración de Recursos Humanos en el período comprendido de Agosto - Diciembre de 2009.

Caracterización De Los Alumnos Y De Las Empresas.

Del total de 92 alumnos que terminaron el proceso de Prácticas Profesionales el 26% de ellos la llevaron a cabo en la Micro Empresa, 15 % en la Pequeña Empresa, 22% en la Mediana y 37% en la Grande.

Factores Que Determinan El Nivel De Satisfacción De Los Practicantes

De acuerdo al instrumento institucional aplicado al alumno una vez terminada y acreditada su práctica profesional se considera como factores de satisfacción: sentido de logro, posibilidades de crecimiento; y en cuanto a los factores de insatisfacción son: condiciones de trabajo, seguridad en el trabajo, relaciones interpersonales, salarios y prestaciones.

Relación Entre El Tamaño De La Empresa Y El Nivel De Satisfacción Del Practicante

De los resultados obtenidos sobre el tamaño de la empresa y el nivel de satisfacción del practicante con respecto a las condiciones de trabajo durante su estancia, se observa que las empresas Grandes demandaron mayor cantidad de practicantes, seguidas por las Micro empresas; sin embargo, el practicante calificó de manera excelente a las empresas Pequeñas en cuanto al espacio físico en un 86% y en un 85% a las Medianas; el mobiliario proporcionado, los practicantes dieron mayor puntuación a la Mediana en un 80% , seguida por un 79% por la Pequeña empresa; por otro lado, las herramientas proporcionadas, los practicantes calificaron en un 68% a las empresas Grandes y en un 65% a las Medianas; en relación a la Seguridad de las instalaciones los practicantes calificaron en un 93% a las empresas Pequeñas seguidas por las Grandes en un 79%; y con respecto a la Higiene de las instalaciones los practicantes calificaron el 79% de las empresas Grandes y Pequeñas.

Basándonos en la teoría de la empresa que cuenta con las condiciones propicias para no producir insatisfacción es la Pequeña empresa ya que los resultados obtenidos arroja que se encuentran en mejores condiciones en cuanto a espacio físico, mobiliario, seguridad e higiene; una explicación probable puede ser que el pequeño empresario cuida las condiciones de físicas del trabajo ya que en caso de un accidente le representaría un desembolso significativo que los puede llevar a un desequilibrio económico.

Relación Existente Entre El Sector De La Empresa Y El Nivel De Satisfacción Del Practicante

Las empresas del sector de Servicios demandaron mayor cantidad de practicantes, seguidas por las empresas de Transformación, sin embargo, el practicante le dio mayor puntuación al espacio físico a las empresas del sector Comercial en un 78% y a las del Gobierno en un 75%; en cuanto al mobiliario proporcionado los practicantes calificaron en un 75% a las empresas del sector Gobierno y Transformación; por otro lado, en cuanto a las herramientas proporcionadas, los practicantes calificaron en un 75% a las empresas de Otros sectores y en un 67% por las del sector Comercial; en relación a la Seguridad de las instalaciones los practicantes calificaron en un 84% de las empresas del sector de Transformación y las del Gobierno en un 75%; en la Higiene de las instalaciones los practicantes calificaron el 79% de las empresas del sector de Transformación seguidas por las de Comercio en un 78%.

Fundamentándonos en la teoría de la empresa que cuenta con las condiciones propicias para no producir insatisfacción en las empresas del sector Comercial ya que los resultados obtenidos arroja que se encuentran en mejores condiciones propicias en cuanto a espacio físico, herramientas e higiene; y las empresas del sector Transformación arrojaron que las mejores condiciones en cuanto a mobiliario, seguridad e higiene.

Relación Existente Entre El Género Y El Nivel De Satisfacción Del Practicante

El practicante del género masculino calificó de excelente en cuanto al espacio físico en un 67%, mobiliario en un 79% y herramientas en un 67%, y el género femenino calificó de excelente la seguridad e higiene en un 75% y 74% respectivamente.

CONCLUSIONES

Actualmente el departamento de prácticas profesionales cubre las necesidades de gestión demandadas por la facultad y los alumnos, la forma de cómo se lleva a cabo la solicitud de ingreso, registro, terminación y liberación de prácticas profesionales se puede mejorar a través de la creación de un reglamento interno que además de servir de guía a los involucrados, establezca tiempos y límites para el registro, entrega de reportes y liberación de prácticas profesionales, de esta manera se puede reducir la saturación de los trámites ofreciendo una mejor atención al alumno y a las organizaciones.

De acuerdo a la segunda etapa de la investigación, los resultados obtenidos en cuanto al nivel de satisfacción que tienen los alumnos en relación al tamaño de la empresa en la que realizaron sus prácticas profesionales, las condiciones propicias para no producir insatisfacción es la Pequeña empresa ya que se encuentran en mejores condiciones en cuanto a espacio físico, mobiliario y seguridad e higiene.

Sin embargo, los practicantes calificaron que las empresas del sector Comercial son las que consideran tener mejores condiciones en cuanto a espacio físico, herramientas e higiene; y las empresas del sector Transformación arrojaron que las mejores condiciones son en cuanto a mobiliario y seguridad e higiene. Sin embargo, en el género masculino es importante el espacio físico, mobiliario y herramientas; y para el género femenino calificó de excelente la seguridad e higiene. Por lo cual, el instrumento aplicado en este estudio, no hay resultados significativos a un nivel de confianza del 95%, por lo que no se puede afirmar que exista relación entre estas variables.

UN MODELO DE LIDERAZGO EMOCIONAL EFECTIVO CASO DE ESTUDIO FACULTAD DE CIENCIAS ADMINISTRATIVAS

Karla E. Cervantes Collado, Universidad Autónoma del Estado de Baja California

Martha E. Verdugo Saldivar, Universidad Autónoma del Estado de Baja California

RESUMEN

Como resultado de la dinámica de los mercados globales, la sociedad actual requiere que los estudiantes de Universidades e Institutos estén adquiriendo una cultura de Liderazgo, lo que significa que estén integrando a competencias como: valores, habilidades, conocimientos y actitudes que les permitan desarrollar actitudes positivas y creativas para lograr su autorrealización a la vez que inciden en el mejoramiento de la comunidad universitaria. En este contexto La Facultad de Ciencias Administrativas ha implementado a lo largo de los últimos 6 años, actividades para fomentar las actitudes y capacidades de Liderazgo en maestros y alumnos. La Facultad implantó desde el año 2005 el “Congreso Sinergia” con el fin de impulsar en los estudiantes, docentes y egresados actitudes que le permitan fomentar valores hacia una cultura de Liderazgo y así promover la participación de cada alumno y docente dentro del ámbito de su perfil. Sin embargo los esfuerzos realizados en este programa, en los últimos tres años han rendido frutos, en el año 2009 se ha logrado consolidar en la última administración debido a que el sistema modificó su organización, estructura y participación. Lo cual ha provocado ciclos de avance y retos a vencer en las próximas administraciones.

PALABRAS CLAVES: Liderazgo, emocional, efectivo.

INTRODUCCIÓN

El surgimiento o aparición del concepto de liderazgo en el ámbito organizacional amerita hacer referencia a la evolución que ha tenido la administración como la actividad esencial para garantizar la coordinación de los esfuerzos individuales y grupales, en otras palabras, desde que los seres humanos comenzaron a formar grupos para el logro de propósitos comunes y en la medida en que la sociedad empezó a depender crecientemente de estos grupos la administración se hizo más importante. (Koontz 1998).

Hoy en día muchos de los que aplican el concepto de liderazgo emocional efectivo, en las áreas de recursos humanos lo hacen porque es lo último en la moda de las áreas de administración, no porque realmente se encuentren convencidos de los beneficios que se obtienen al aplicar el modelo. Algunos directivos de escuelas o empresas elijen pensar que este tema es ligero o que no necesariamente debe revisarse como una habilidad que amerita aprenderse y dominarse, porque desconocen las implicaciones y las llaves de oro que el manejo de los patrones de pensamiento optimista abre a una persona, no obstante todas aquellas personas que lo han aplicado han reconocido sus beneficios y ventajas dentro de las organizaciones (Mills 2007).

PLANTEAMIENTO DEL PROBLEMA

La calidad académica no es referida solamente en términos cognoscitivos, también requiere medirla en términos de respuesta a las necesidades de la sociedad, la pertinencia significa congruencia, oportunidad y adecuación de las actividades de las IES a las necesidades sociales y a los requerimientos de desarrollo de la nación. Dentro de este ámbito, la productividad y la innovación, ambas aplicaciones del conocimiento al trabajo, son generadoras de valor. La Palma(2004).

En una sociedad cada vez más abierta y compleja hay una necesidad creciente que la educación debe estar dirigida a promover necesidades y competencias, no solo conocimientos cerrados o técnicas programadas. La UNESCO (Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura) plantea en su misión para la educación: “Permitir a todos sin excepción, hacer fructíferos todos sus talentos y todas sus capacidades de creación. Que cada uno pueda responsabilizarse de sí mismo y realizar su proyecto personal”. Dentro de los requisitos planteados para que el sistema de educación superior sea innovador se hace énfasis en la formación de actitudes de Liderazgo. (UNESCO 1998:10).

METODOLOGÍA

El presente trabajo es un estudio teórico de tipo descriptivo, a través del método de estudio de caso, para el cual se emplearon fuentes primarias como la observación directa del fenómeno y se consultaron fuentes secundarias como textos bibliográficos, revistas e internet. Posteriormente se llevó a cabo un análisis de la información obtenida y finalmente las autoras elaboraron una propuesta de consolidación del congreso de sinergia y los eventos a realizarse.

RESULTADOS Y CONCLUSIONES

Después de realizar un análisis de la evolución que ha tenido el liderazgo efectivo y emocional de los directivos durante los periodos del 2008-2 al 2009-2 los eventos realizados se observó que:

- El congreso de Sinergia se consolida en el año 2009
- En Marzo del 2009 se implementa el Ier simposium, denominado “Merkamorfosis” organizado por alumnos de mercadotecnia.
- Se logró en un 90% la participación de alumnos como organizadores de los eventos efectuados en el año 2009.
- Por parte de la dirección se le concedió la importancia de contar con alumnos como parte fundamental de los comités organizadores de los diversos eventos efectuados.
- Por primera vez en la historia de la FCA en el año 2009 se obtuvieron dos registros de ISBN el primero para la publicación de memorias en un disco compacto y en segundo la publicación de un libro impreso.
- Se logró una sinergia entre directivos, docentes y alumnos que participaron en la organización logrando los resultados anteriores.

Se pudo observar que el formato de organización de eventos, simposium, congresos en la FCA en el 2009 fue sin precedentes y para garantizar los resultados favorables es invariable el liderazgo emocional efectivo ejercido por la dirección, así mismo la participación de docentes y alumnos contagiados por el mismo y principalmente estos últimos que son parte clave en cada evento mencionado.

PROPUESTA

- El Congreso de Sinergia debe ser un evento que se designe un solo coordinador general considerando el perfil del mismo y de los docentes y alumnos participantes de las seis carreras.
- Se debe realizar una planeación estratégica en el programa donde se establezcan objetivos definidos con sus correspondientes estrategias, programas y políticas.
- Es importante que se elabore el Reglamento de asistencia y participación a Congresos, simposium, coloquios y foros.

- Debe existir una coordinación y comunicación constante entre la administración y las coordinaciones de los programas académicos.
 - Se propone que se realice un solo evento por semestre que involucre a todos los programas académicos en la misma fecha.
 - Para consolidar el programa se debe continuar organizando los eventos y darle seguimiento a los proyectos presentados.
 - La dirección debe ser promotor de los apoyos para los eventos y fungir como enlace real entre los eventos y los departamentos que otorgan los apoyos.
 - Aunque existan cambios en las áreas administrativas, se debe dar continuidad a las actividades programadas y considerar aquellos elementos que favorecieron a los mismos.
- Garizurrieta, M. y Sangabriel, I. (2005).

Para finalizar, es importante hacer una reflexión acerca de la importancia de ejercer un liderazgo efectivo emocional para el éxito de cada una de las actividades dentro de la FCA se debe proporcionar una formación humanista, crítica, enfocada a la investigación o una formación empresarial. Useche, L. (2007).

RESUMEN

Con este proyecto se pretende alcanzar un impacto social de la Facultad de Ciencias administrativas hacia la comunidad, al conocer y atender la demanda del sector productivo de mano de obra profesional en las áreas económico-administrativas, fortaleciendo los lazos de vinculación con dicho sector. Al vincular organizaciones empresariales con el potencial humano que solucione sus necesidades y dadas las circunstancias económicas imperantes en la actualidad, esta propuesta se proyecta como una oportunidad de apoyar al alumno universitario, brindarle un espacio de promoción y gestión de sus potencialidades en una etapa de madurez académica muy cargada de responsabilidades escolares. Se conformara un grupo de empresas participantes y un grupo de alumnos interesados, manejando así la oferta y la demanda de oportunidades laborales creando una base de datos con estos elementos, homologando información proporcionada por empresas y alumnos interesados. A la vez los egresados y alumnos beneficiados, incorporados en el sector privado, producirá un efecto multiplicador al promover y difundir las bondades de este proyecto, abriendo posibilidades de continuar con una segunda etapa del proyecto, en donde se lleve a cabo una investigación de los resultados alcanzados y difundidos al interior de las empresas u organizaciones empresariales de la localidad.

INTRODUCCION

Las Bases de Datos han existido mucho antes de la aparición de las computadoras éstas eran herramientas rudimentarias que fácilmente guardaban información en una simple “libreta” de anotaciones hasta cajas de cartón o archiveros de lamina. Las bases de datos modernas que están basadas en computadoras se encuentran a nivel mundial gracias a la supercarretera de la información más conocida como “Internet”, se tiene acceso a ellas en forma remota por más lejano que sea la ubicación de éstas. Se pueden encontrar bases de datos de cualquier tipo y costos variados, dependiendo de las características que se soliciten, las primeras bases de datos eran poco accesibles en cuanto a costo, conforme avanza la tecnología sus precios han bajado en forma considerable sin embargo el uso de Internet ha creado una nueva necesidad “las Bases de Datos a través de la Web”, llevando la adquisición de este producto a la elevación de los costos nuevamente. [M. Maslakowski, 2001].

Los avances de la tecnología, la globalización y los diferentes tratados de comercio han dado origen a la búsqueda, organización y actualización de la información, encontrando dificultades para actualizar, ordenar y distribuir flujos de información confiable para los usuarios, para lo cual se han creado programas de aplicación que cubran los requerimientos de información para la eficiente administración de datos dentro de las empresas e instituciones educativas. Una base de Datos es una colección de datos almacenados en archivos relacionados, son sistemas que se diseñan para la gestión de grandes volúmenes de información que hacen referencia a una determinada entidad, las Bases de Datos requieren de un gestor de Base de Datos para (SGBD), que proporcione seguridad, sea eficiente y eficaz en el uso, recuperación y almacenamiento de la información. [A. SILBERSCHATZ, 2000]. Objetivo de las Bases de Datos; es

que para mantener la información en una computadora es almacenar en archivos en forma permanente, que permita a los usuarios manipular la información para crear programas de aplicación que puedan extraer y agregar registros que den respuesta a las organizaciones, evitando los inconvenientes de: Redundancia e inconsistencia, dificultades de acceso y aislamiento de los datos, así como problemas de integridad, acceso concurrente y problemas de seguridad entre otros. [A. SILBERSCHATZ, 2000].

REVISION LITERARIA

El diseño de base de datos es el proceso por el que se determina la organización de una base de datos, incluidos su estructura, contenido y las aplicaciones por desarrollar. Durante mucho tiempo, el diseño de bases de datos fue considerado una tarea para expertos: más un arte una ciencia. Sin embargo, se ha progresado mucho en el diseño de bases de datos y éste se considera ahora una disciplina estable, con métodos y técnicas propios. Debido a la creciente aceptación de las bases de datos por parte de la industria y el gobierno en el plano comercial, y a una variedad de aplicaciones científicas y técnicas, el diseño de una base de datos desempeña un papel central en el empleo de los recursos de información de la mayoría de las organizaciones.

Las últimas dos décadas se han caracterizado por un fuerte crecimiento en el número e importancia de las aplicaciones de bases de datos. Las bases de datos son componentes esenciales de los sistemas de información, usadas de manera rutinaria en las computadoras. El diseño de bases de datos se ha convertido en una actividad popular, desarrollada no solo por profesionales sino también por personas que no son expertas. A finales de la década, cuando las bases de datos entraron por primera vez en el mercado de software, los diseñadores de bases de datos actuaban como artesanos, con herramientas muy primitivas: diagramas de bloques y estructuras de registros eran los formatos comunes para las especificaciones y el diseño de base de datos se confundía muy frecuentemente con la implantación de las bases de datos. Esta situación ahora ha cambiado: los métodos y modelos de diseño de base de datos han evolucionado paralelamente con el progreso de la tecnología en los sistemas de bases de datos. Se ha entrado en la era de los sistemas relacionales que ofrecen poderosos lenguajes de consulta (SQL), herramientas para el desarrollo de aplicaciones e interfaces amigables con los usuarios. Las bases de datos hoy en día incluye la teoría relacional de datos, el procesamiento y optimización de búsquedas de información, control de concurrencias, gestión de transacciones y recuperación de datos.

Desafortunadamente el diseño de bases de datos no es una metodología muy popular; la mayoría de las organizaciones no toma en cuenta estos métodos de diseño y esto se considera con frecuencia una de las principales causas de fracaso en el desarrollo de sistemas de información.

METODOLOGIA

En el mercado existen diversos programas comerciales de bolsas de trabajo que promueven empresas particulares y que tienen un costo para los interesados, así como en organismos empresariales a través de sus cámaras como son de Comercio, de la Industria de Transformación de la Construcción, de los tres niveles de gobierno, en la UABC, y en medios de comunicación entre otros. El resultado de esta investigación da como resultado la creación de un currículo profesional que permita al estudiante promocionarse profesionalmente.

El instrumento para la obtención de la información se diseña con requerimientos que son importantes para las empresas según los puestos que ofertan y que deben estar homologados con los intereses de los estudiantes con la finalidad de apoyarlos a integrarse a la fuerza de trabajo en el sector productivo de la región. La idea principal de esta página no es el de ser una bolsa de trabajo, sino una página que les proporcione a las empresas los perfiles de todos aquellos alumnos de la Facultad de Ciencias Administrativas que sean aptos para ser entrevistados por los empresarios; para esto la página no le

proporcionará a las empresas la información personal de los candidatos sino el perfil que tiene cada uno de ellos.

En base a esto se está creando un software que busca cruzar la información proporcionada por las empresas y los interesados para localizar en forma automática a los candidatos idóneos para las vacantes al comparar los requisitos que deben coincidir de un 95% al 100% y con los resultados favorables obtenidos ponerlos en comunicación a través del correo electrónico automáticamente. El desarrollo de este software se está trabajando bajo el esquema de la Ingeniería de Software el cual inicia con el levantamiento de requerimientos para lo cual los alumnos deberán proporcionar:

MATRÍCULA

Nombre completo (Apellido Paterno, Apellido Materno, Nombre(s))

Facultad a la que pertenece

Carrera a la que pertenece

Dirección particular

Teléfono particular

Correo electrónico

Teléfono personal

Dónde hizo el servicio social

Dónde realizó la práctica profesional

Habilidades con las que cuenta (Ej. Si es informático lenguaje de programación que maneja, administrador de base de datos que sabe usar)

En el caso de las empresas, éstas deberán proporcionar:

Nombre completo de la empresa

Giro de la empresa

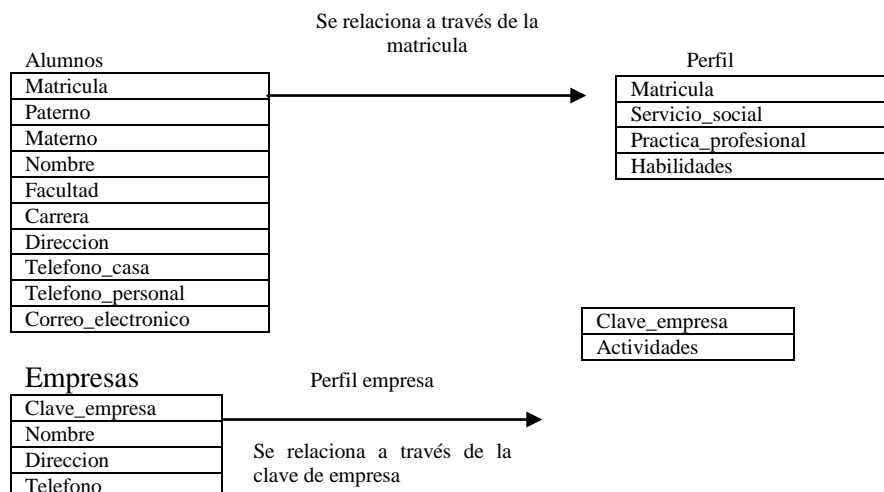

Dirección de la empresa

Teléfono de la empresa

Actividades a las que se dedica la empresa

Correo electrónico

En base a estos requerimientos se busca un diseño que cumpla con los estándares de desarrollo establecidos por la Facultad de Ciencias Administrativas, a través de su centro de TI, en cuanto a páginas web, los cuales consisten en utilizar como plataforma de programación flash, php, asp y como base de datos MySQL o SQL Server 2005. De estas posibles herramientas se elige para la elaboración de este proyecto la plataforma flash utilizando como base de datos MySQL. Se elige flash por ser una de las herramientas más novedosas y fáciles de usar así como también el administrador de base de datos MySQL, sin olvidar que estas son herramientas open source, es decir, una herramienta de libre licencia sin costo. El esquema de base de datos es el siguiente

No hay que olvidar que hoy en día ya existen templates (plantillas) de diseños de libre licencia que facilitan el trabajo, por lo que se elige uno de estas plantillas a la cual solo se le van haciendo las adecuaciones que se requieren para hacerlo de uso propio para la Facultad de Ciencias Administrativas. La plantilla de diseño elegida es el siguiente:

Esta figura muestra la información de la persona a la que pueden contactar para resolver dudas.

CONCLUSIÓN

El propósito de este proyecto es vincular a los alumnos y egresados de la Facultad de Ciencias Administrativas, con la finalidad de integrarlos al sector productivo con las empresas vinculadas con la institución, apoyando con ello al desarrollo profesional y a la economía. Al mismo tiempo evaluar las condiciones de conocimiento y actualización de los alumnos para conocer el grado de oportunidad de satisfacción de las necesidades empresariales. Para propiciar el acercamiento y vinculación laboral entre estudiantes y empresarios para fortalecer la actividad laboral temprana en los alumnos.

Fortalecer los lazos de responsabilidad social de la facultad con los sectores productivos de la comunidad, aportando soluciones del entorno a su problemática de contratación de mano de obra profesional y sustentada en una formación integral del alumno. Al finalizar el proyecto se buscara la forma de aplicar este programa en otras necesidades de la Facultad como son: becarios, servicio social, estancias de alumnos y profesores, prácticas profesionales, etc. Colocar alumnos y egresados interesados en empresas de su interés. Elevar el nivel económico de los interesados Proporcionar a los alumnos y egresados oportunidades para su desarrollo profesional en empresas de la región.

CHINA FACTOR IMPORTANTE EN LA DISMINUCIÓN DE LA ACTIVIDAD MAQUILADORA: CASO CIUDAD DE TEHUACÁN PUEBLA

Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla

RESUMEN

El objetivo del trabajo es indagar la causa preponderante de la disminución de la actividad de la maquila Tehuacanera. Para ello, se parte de la ubicación de las maquiladoras dedicadas a la confección de ropa dentro de la parte conceptual con el apoyo de diferentes autores que han realizado trabajos enfocados a las maquiladoras localizadas en la frontera norte de México para posteriormente identificar las causas de la disminución de la actividad desde la óptica de los informantes clave de la maquila. El trabajo se desarrolló a través de una investigación cualitativa, bajo el método del estudio de caso. El diseño cualitativo incluyó un trabajo de campo, seleccionando una empresa del municipio de Tehuacán, Puebla en la que se realizaron entrevistas a profundidad y con sujetos considerados como informantes de la maquila, con elementos clave de la empresa, a través de una guía de entrevista, de tal forma que fuera posible ir corrigiendo e introduciendo nuevos factores según fuesen apareciendo en el transcurso de la entrevista. Para así poder determinar el factor preponderante que ha provocado la disminución de la actividad maquiladora. Obteniendo como resultado que la competencia de productos chinos junto con los de otros países asiáticos son la causa preponderante de la disminución de la actividad maquiladora de las empresas localizadas en la ciudad de Tehuacan, Puebla.

FACTORES DETERMINANTES QUE MARCAN UNA VENTAJA COMPETITIVA DEL LUGAR. ESTUDIO EN LAS PYMES DEL SECTOR COMERCIAL EN LA ZONA FRONTERIZA DE REYNOSA, TAM, MÉXICO

María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila. Torreón.

Víctor M. Molina Morejón, Universidad Autónoma de Coahuila. Torreón.

Víctor M. Martínez Rocha, Universidad México Americana del Norte

RESUMEN

Los factores de localización empresarial y de competencia espacial de las ciudades juegan un papel esencial en la evolución del desarrollo económico y social desde un enfoque territorial de la competitividad. Las ciudades deben aprovechar sus fortalezas y disminuir sus debilidades con el fin de seguir creciendo y creando ventajas competitivas (Porter, M, 1995). Las decisiones de localización de las empresas afectan su capacidad competitiva, por lo que el estudio de los diversos factores de localización, y en particular los estratégicos para futuros emplazamientos, servirá tanto a la dirección empresarial como a la administración municipal-estatal para gestionar óptimamente este proceso de toma de decisiones. El trabajo presentado es una continuidad del estudio realizado en la frontera norte de Tamaulipas en el sector maquilador industrial y transportista, basado en la adaptación del Modelo Conceptual de la Localización Empresarial. (Contreras, F, et al, 2004). Objetivo. Identificar las variables que influyen significativamente en la toma de decisiones en el sector comercial y el grado de influencia de estas en la localización empresarial. Metodología. Se realizó un estudio de campo, por medio de encuestas a PYME del sector comercial, en particular Franquicias, por cuanto es el sector de mayor dinamismo económico después de la industria maquiladora en el Estado y refleja la atracción de capitales nacionales y extranjeros, en la Ciudad de Reynosa en la frontera noreste de México. Se obtuvo una muestra final de 37 observaciones válidas, y se utilizaron las técnicas estadísticas descriptivas, y Prueba t, para determinar las variables significativas en el proceso analizado. La identificación de los factores determinantes de la ventaja competitiva, y la comparación entre diversos sectores de la economía en la Ciudad fronteriza seleccionada, contribuirá a desarrollar un ambiente propicio para la instalación de nuevas PYME y la relocalización de las existentes, y con ello, la atracción de capitales y la generación de nuevas fuentes de empleo.

PALABRAS CLAVES: competitividad territorial, ventajas competitivas, factores de localización.

INTRODUCCIÓN.

En el mundo competitivo, el análisis de los factores de localización empresarial permite constatar que las decisiones empresariales siguen modelos de comportamientos diversos, complejos y cambiantes, por cuanto su estructura depende de cada caso específico de estudio (Koskosidis, Y., Powell, W. 1990). Pero en última instancia, los directivos de cada organización, propietarios o no, son los que después de un proceso en el que intervienen componentes racionales y otros más subjetivos, deciden cuándo realizar y dónde localizar las inversiones. (Ramírez A. 2002).

El Estado de Tamaulipas y el municipio de Reynosa en particular, han trabajado con la participación de los diferentes actores territoriales en la definición de la Agenda de Competitividad para el 2010 y 2012, cuyo propósito fundamental es la atracción y retención de las inversiones y talentos. Ello justifica la realización de estudios de la competitividad desde una dimensión territorial, para las cuales existen dificultades en su medición y por ello la necesidad de utilizar *estimaciones e inferencias estadísticas y estudios empíricos*. Por ello, la investigación presentada es una continuidad del estudio realizado en la frontera norte de Tamaulipas en el sector maquilador industrial y transportista, basado en la adaptación del Modelo Conceptual de la Localización Empresarial. (Contreras, F, et al, 2004). Su objetivo es

identificar las variables que influyen significativamente en la toma de decisiones en el sector comercial y el grado de influencia de estas en la localización empresarial en la Ciudad de Reynosa, Estado de Tamaulipas. .

La revisión bibliográfica de los estudios en el campo de las decisiones de localización tales como Von Thunen (1820), (Butler, 1986), Alfred Weber (1909), Walter Christaller (1933), así como el enfoque de la ventaja competitiva de las naciones de M. Porter (1991), con especial énfasis en aquellos estudios aplicados que tratan de aportar soluciones fundamentadas, constituyen el sustento teórico para abordar la problemática de esta investigación.

La investigación se sustenta en las variables de localización que resultaron significativas en estudios previos (Towroe, 1972; Aurioles y Pajuelo, 1988; Aureoles y Cuadrado, 1989; Cotorruelo y Vázquez, 1997; Argüelles, 1997; Galán, 1998), como elementos explicativos de la decisión de localización empresarial, y éstas son: Mano de obra calificada, Suelo disponible, Accesibilidad, Abastecimiento de materias primas, Vías de comunicación, Infraestructura, Actitudes de la comunidad, Condiciones climatológicas, Clima económico, social y político (Ramon-Solans, J., Ferriz, R., 2006). Una representación del modelo se presenta a continuación:

METODOLOGÍA

La investigación tiene como antecedente el Estudio empírico sobre la importancia de los diferentes factores de competitividad en la localización de las inversiones y es particular de los factores de carácter estratégicos, que abarcó el sector manufacturero y transportista de las Ciudades del Noreste.

Como el objetivo de la investigación es contribuir a la Agenda de Competitividad de Reynosa, Tamaulipas la cual define la competitividad como la: “Capacidad para atraer y retener inversiones directas productivas, nacionales y extranjeras, así como la producción, atracción y retención de talentos”, con el fin de proporcionar “Bienestar social, crecimiento y desarrollo económico y calidad de vida”, el planteamiento que siguió esta investigación, en cuanto al objetivo de contribuir a mejorar el proceso de toma de decisiones para la localización de actividades empresariales, mediante la identificación de criterios válidos, fue probar la siguiente hipótesis: Los factores estratégicos de localización de las empresas son los mismos para las empresas con modelo de franquicias que para las restantes PYME del sector comercial.

Se diseñó un estudio de campo para analizar los factores de localización de acuerdo a su importancia según el modelo conceptual diseñado por A. Contreras (2004), aplicado y mostrada su validez para las empresas transportistas y maquiladoras, de las ciudades fronterizas del noreste de México. Como uno de los principales propósitos de este estudio se refiere a las decisiones de localización empresarial, las encuestas se aplicaron a los directivos que trabajan profesionalmente en el giro de las empresas mencionadas.

Con los instrumentos diseñados se recolectan los datos y se procesan con el análisis estadístico univariado descriptivo para determinar la importancia y calificaciones de cada uno de los factores de la muestra final, la prueba t para comparar la importancia y significación de los factores con respecto al origen nacional o internacional de la empresa, con el uso de la herramienta SPSS/pc Versión (12.0).

El cuestionario aplicado para la medición consta de seis secciones. El procedimiento desarrollado para obtener la muestra final de 37 encuestas aplicadas en las empresas del sector comercial de la Ciudad de Reynosa del noreste de México fue el siguiente: se capacitó a dos estudiantes de 8vo. Semestre de la Licenciatura en Administración que realizaba su proyecto de investigación final para que se dedicara a

visitar las empresas y contactara a los directivos para que contestaran el cuestionario. El tiempo de aplicación de las encuestas fue de dos meses , en el periodo octubre-noviembre del 2009.

RESULTADOS

Características Socio Económica Del Estado.

Tamaulipas es un estado fronterizo de la región Norte-Este, con un PIB estatal de 28 800 millones de dólares que representa 3.3 por ciento de la economía nacional (la 11ª más grande). Se distingue por la fuerte actividad maquiladora de exportación e importante actividad comercial, así como los flujos de IED. Dentro de ellos, el que alcanzó el mayor crecimiento anual promedio del 1993- 2005 es el del comercio, restaurantes y hoteles y constituye la fuente de empleo más grande con 330 364 trabajadores que representa el 23,5% del total estatal, lo que explica la selección del sector como campo de acción de la investigación. El Estado estableció una estrategia de competitividad para aumentar su desempeño económico, la cual incluye un componente de innovación y se basa en el modelo de la triple hélice y se basa en identificar las ventajas competitivas de cada región, donde varias son importantes y especializadas en diferentes sectores.

Características Socio Demográficas De La Indagación Empírica Realizada.

La caracterización socio demográfica de las 37 empresas participantes en el estudio de campo, de los Gráficos 2 al 5, muestran que todas clasifican por el No. de empleados como pequeñas empresas y en cuanto al origen de las empresas comerciales, las extranjeras en su mayoría Franquicias representan el 65 % y las nacionales o de otros estados el 35%. De acuerdo con los datos generales de los encuestados, desde el punto de vista descriptivo el 97% de los directivos son menores de 40 años, en lo referente al grado de escolaridad el 62% tiene carrera de licenciatura e ingeniería terminada. Esto datos reflejan que las empresas están siendo dirigidas por personas relativamente jóvenes, emprendedoras y cualificadas profesionalmente para la gestión empresarial.

Importancia De Los Factores De Localización Empresarial.

El análisis comparativo de la importancia y calificación de cada uno de los factores de localización empresarial, reflejó que los grupos de factores decisivos al momento de considerar la decisión de localización de la empresa son:

Tabla I Importancia de los factores de localización empresarial.Fuente: Elaboración propia, 2009.

FACTORES EN GENERAL	Promedio Importancia	Posición Importancia
Factores de mercado	1,828	1
Factores de costo	2,280	2
Factores estratégicos	2,566	3
Factores de aglomeración interna	4,833	4
Factores jurídicos	5,0	5
Factores de aglomeración externa	5,117	6
Factores personales	5,476	7
Ayudas oficiales (préstamos o subsidios)	5,578	8

Como puede observarse en la tabla No. 1, los factores principales en la localización de las empresas está el mercado, el costo y los estratégicos,, que aunque son los mismos que para el estudio previo en el giro

de maquiladoras y transportistas, si cambia el orden de importancia, pues para ellos fue: costo, estratégicos y mercado, lo cual puede ser explicado a partir de que la mayoría de las empresas funcionan con esquemas de Franquicias donde el costo está bien estudiado y definido con la eficiencia de los procesos y calidad de los productos y por el hecho de que en la Ciudad existe una gran cantidad de establecimientos comerciales tanto locales como nacionales dado el dinamismo del sector industrial, el crecimiento geográfico y su ubicación en una zona fronteriza de mucho tránsito de carga y de personas físicas. Otras dos apreciaciones es el lugar de las ayudas oficiales que se diferencia del 4to al último lugar en la actual, que también se puede explicar por el tipo de empresas, en su mayoría consolidadas en el extranjero y en el país, a pesar de ser pequeñas en la localidad, lo que confirma la idea de la ventaja y menor riesgo de utilizar los modelos o esquemas de franquicias para el inicio de un nuevo negocio. En la evaluación de cada uno de los factores, en una escala de intervalo de 7 puntos medida en “totalmente de acuerdo” hasta “totalmente en desacuerdo” se tienen los siguientes promedios totales. Nos detendremos en aquellos tres que recibieron mayor puntuación.

Dentro de los factores de mercado resalta el mercado local así como los ejes de comunicación de la ciudad. Esto se corresponde con el crecimiento demográfico y el propio crecimiento y dinamismo del sector industrial maquilador. A diferencia de los sectores de maquiladoras y transporte donde el buen acceso a Estados Unidos fue el mejor valorado. En los factores relacionados al costo se obtiene con calificaciones de conformidad el relacionado al suelo en propiedad y los bajos costos de la mano de obra y con calificaciones de inconformidad los precios del suelo industrial son bajos. Con respecto al estudio del sector maquilador y transportista existe diferencia porque el primer lugar lo ocupó los costos de la mano de obra y el tercer lugar el suelo en propiedad.

En cuanto a los factores estratégicos se manifiesta una de las ventajas comparativas que tiene la localidad y el Estado de tener un mercado de fuerza de trabajo en cantidad y con una calificación adecuada, al nivel medio-alto de la tecnología predominante y jóvenes en su mayoría. Coincide con los resultados del sector maquilador y transportista.

Dentro de estos factores destaca las grandes aglomeraciones poblacionales lo que se corresponde con el tipo de sector. Así como las fuentes de abastecimiento. Las diferencias existentes con el estudio del sector maquilador y transportista presentan diferencias que son explicadas por el tipo de empresa donde la tradición industrial es importante y la proximidad a las fuentes de abastecimiento. De los factores jurídicos todos obtiene calificaciones de conformidad, excepto el nivel de burocratización de la administración pública y las leyes del medio ambiente. Coinciden en ambos estudios las leyes laborales y la sindicalización, por el buen ambiente que existe en la ciudad. Dentro de los factores con calificaciones de conformidad se tiene la existencia de buenos servicios financieros seguida de la densidad industrial en la zona y los servicios de salud y educativos, lo cual coincide con los resultados de las maquiladoras y transportistas. Resalta como negativo la poca importancia asignada a centros de investigación.

En último y penúltimo lugar de importancia se tienen los factores personales y de ayudas oficiales respectivamente con las calificaciones siguientes: Los factores personales son evaluados en desacuerdo a las raíces de la empresa y la localización de la residencia de los dueños con la empresa. Definitivamente este factor es el de menor relevancia al momento de la decisión de la localización de una empresa. En la aplicación de la prueba t se consideró la variable de segmentación en la clasificación de la empresa según su origen, extranjera en modalidad de franquicia o nacional, Y no se encontraron diferencias significativas en las medias de los factores generales. En los factores de mercado y costo las empresas nacionales califican de manera más heterogénea, es decir con una varianza mayor lo que nos indica que tenemos mayor dispersión en los datos con respecto a la calificación promedio.

CONCLUSIONES

De los 8 grupos de factores en general al momento de la decisión de localización de la empresa y que se considera que representan una ventaja competitiva para las empresas, por orden de importancia son: los factores relacionados al mercado, los costos, factores estratégicos, de aglomeración interna, jurídicos, de aglomeración externa, factores personales y por último los ayudas oficiales. La importancia asignada al mercado indica que las PYME, requieren apoyo público en áreas que puedan mejorar fundamentalmente su capacidad y potencial comercial, como información sobre el mercado, certificaciones, registro de códigos de barras, vínculos con empresas grandes, capacitación y acceso a tecnología.

Los factores que inciden en la localización empresarial han variado a lo largo del tiempo debido a la evolución económica social de los países en el entorno mundial, los cambios tecnológicos y de organización industrial y de servicios. La investigación realizada muestra que son fundamentalmente de carácter económico los siguientes: Alto número de clientes en la zona, Alto número de clientes en la zona, Suelo en propiedad, bajos costos de la mano de obra y las leyes laborales para la empresa. Aunque también han adquirido importancia.

La revisión bibliográfica realizada puede contribuir al enriquecimiento de la perspectiva futura de la investigación, pues nos impulsa a transitar de los factores “tradicionales” de la ventaja competitiva a otros factores que se incluyen en los nuevos modelos del diamante de la competitividad de Porter. De ahí la necesidad de incluir otros aspectos importantes en las ventajas competitivas que ayudarían a resolver las debilidades que tiene la inversiones extranjeras en el país, con el fomento a la creación de cluster o cadenas productivas y de logística, atracción por los recursos y talentos humanos, la infraestructura científica y tecnológica y los sistemas locales de innovación que impulsen y eleven los niveles y grados de innovación empresarial. Ello implicaría una reformulación del diseño metodológico e instrumentos de la investigación.

Esta investigación contribuye al proceso de lograr el óptimo aprovechamiento en el campo de la localización de las actividades empresariales, específicamente en lo que respecta a la toma de decisiones, al brindar una fuente de información directa, desde la perspectiva de los propios empresarios, que pueden contribuir a la atracción de las inversiones. Y además plantea insuficiencias y limitaciones para la atracción y retención de las inversiones, propósito fundamental de la agenda de competitividad del Reynosa para el 2010-2012.

REFLEXION SOBRE LA SOBREVIVENCIA DE LAS PYME EN EL ESTADO DE COAHUILA, MÉXICO

Víctor Manuel Molina Morejón, Universidad Autónoma de Coahuila, Unidad Torreón

Manuel Medina Elizondo, Universidad Autónoma de Coahuila, Unidad Torreón

ABSTRACT

Son innumerables los estudios, análisis e interpretaciones que sobre la sobrevivencia de las PYME (SME en inglés) se han escrito en diferentes espacios e idiomas. Esta ponencia está contenida dentro de un proyecto de investigación, iniciado en 2008, que se desarrolla conjuntamente en los municipios mexicanos de Torreón, Frontera y Monclova del Estado de Coahuila, en ella se combinan aspectos de la investigación cualitativa con lo cuantitativo. Se parte del problema clásico tantas veces analizado ¿qué motiva la baja sobrevivencia de las PYME? para luego incursionar en un tipo de investigación descriptiva al buscar respuestas en diferentes segmentos: el primero con profesores universitarios vinculados a temas de administración que dan sus opiniones de acuerdo con su experiencia académica; el segundo con grupos de empresarios que estudian maestría o doctorados dentro de los programas de nuestra facultad y tercero con empresarios que han logrado que su PYME mantenga nivel de actividad por más de dos años. Todas estas opiniones, codificadas en forma de respuestas, al procesarse estadísticamente con auxilio del paquete SPSS, dan una alta confiabilidad dado que alcanzan valores de Alfa de Cronbach superiores a 0,8. La validez se logra al comparar estas opiniones con muchas de las informaciones que están referenciadas en la bibliografía sobre este problema. Los resultados se presentan en forma de matrices que incluyen paquetes de variables como: Causas de la Baja Sobrevivencia, clasificadas en orden de importancia, Temas Principales que engloban estas causas y los Momentos en que estas causas tienen más preponderancia. Para hacer estas matrices más comprensibles, su contenido se desmonta en forma de Árbol de Problemas dentro de un ambiente de Marco Lógico.

REVISIÓN LITERARIA

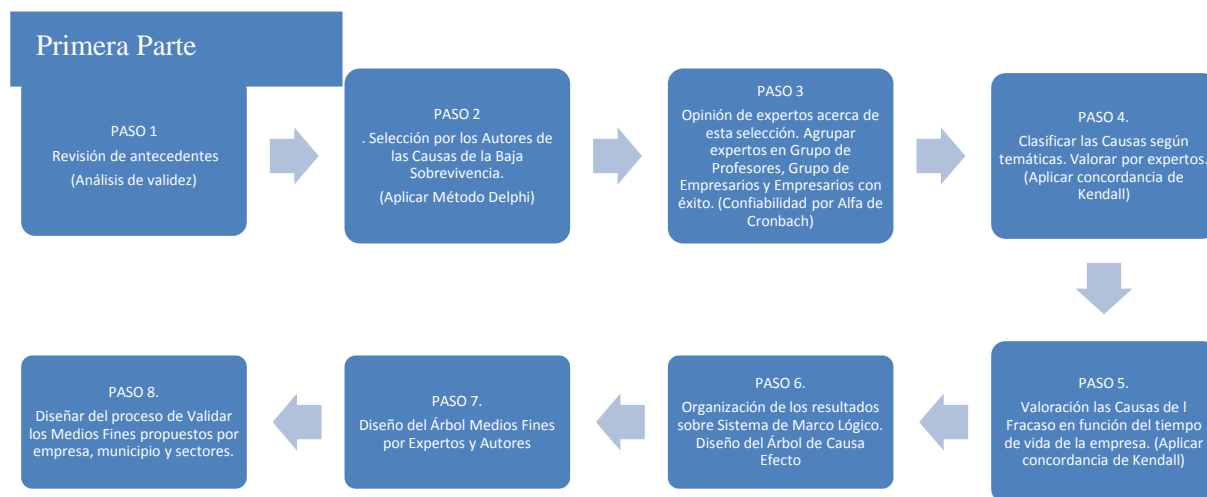

En México, que es el contexto principal en que se enmarca este artículo, no sólo se ha escrito mucho sobre el particular, sino que hay múltiples organizaciones que en su misión tienen reflejada el apoyo a la PYMES. Dentro de los artículos o reseñas sobre las causas del fracaso de la PYMES en México se encuentran los brindados por: Termómetro Empresarial de NAFIN 2008, se evalúan a las empresas por varios parámetros entre los que se encuentran: Reconocimiento y lealtad del cliente, definir objetivos y metas claras, estructura de costos, mejora de procesos, indicadores de gestión, orientación a la administración general, rendimiento de capital...y otros. NAFIN 2009, caracteriza las causas del fracaso en: Incompetencia o falta de experiencia de sus directivos, la “emoción” que se pierde luego que inicia la empresa, la falta de controles adecuados, la falta de capital suficiente y la falta de una identificación correcta del riesgo. En nuestro criterio NAFIM emplea términos y definiciones que la generalidad de las PYMES desconoce cómo evaluarlos y por tanto la propia autoevaluación que los empresarios hagan contendría un por ciento de incertidumbre por el desconocimiento del significado de esas preguntas

METODOLOGÍA

En la Figura 1 se muestran los 8 pasos de esta primera parte del diseño de la investigación empleando el método de investigación descriptiva, basada en procedimientos científicos donde se recolectan datos básicos o puros y se procesan para luego ser interpretados dentro del marco de la estadística no paramétrica.

Se abarca el periodo desde la revisión de antecedentes hasta el proceso de pre-validación de esta primera parte (octubre de 2008 – noviembre de 2009). Una segunda parte de la investigación –no presentada en este artículo- se desarrolla actualmente para evaluar –con los propios empresarios- lo que entienden acerca de las soluciones particulares que estamos brindando a cada PYME.

Figura 1: Diseño de la investigación. Primera parte

Esta Figura muestra el análisis realizado por los autores de la metodología de la investigación y su orden de realización. Se pretende demostrar la validez de la información basado en los estudios bibliográficos, la confiabilidad de las respuestas a las encuestas aplicadas a través del coeficiente Alfa de Cronbach y la concordancia o no de las respuestas a través del coeficiente de Kendall.

La idea central de este trabajo no es hacer un estudio de las causas de la baja sobrevivencia de las PYMES a partir de la revisión de los antecedentes que se brindan en la bibliografía consultada, la particularidad de este estudio es, en primera, que a partir de esta exhaustiva revisión y de la opinión directamente obtenida de profesores de administración y de empresarios exitosos de tres municipios mexicanos, se logra obtener una matriz primaria de causas del fracaso de las PYMES, matriz que mediante rondas Delphi y métodos de procesamiento de la estadística no paramétrica se va ajustando y perfeccionando en función de la opinión de estos, hasta que el valor de Alfa de Cronbach es ligeramente superior a 0,83 tal como se puede apreciar en la Figura 3. Para garantizar más la confiabilidad de los resultados obtenidos se aplica la Prueba de Friedman. La hipótesis nula de la prueba de Friedman es que las 39 variables tienen la misma importancia. Si la significación es mayor que 0.05 se acepta la hipótesis con un 95% de confianza. En caso contrario se rechaza la hipótesis. En el caso de la prueba de Friedman la significación es menor que 0.05 (0,034) por lo que se rechaza la hipótesis nula, es decir, las 39 variables no tienen la misma importancia por lo que se demuestra la validez de la realización del test Delphi.

El segundo aspecto que caracteriza esta investigación es que las causas se agrupan por temas específicos, los cuales son también validados estadísticamente y como tercer aspecto las causas se agrupan en función del momento de existencia de la PYMES en que esta causa provoca un efecto más negativo. A partir de tener ejecutados estos tres pasos y siguiendo la metodología del Sistema de Marco Lógico, se diseña un Árbol de Causa-Efecto y su correspondiente Árbol de Medios-Fines. Estos Medios representan reales soluciones obtenidas de la experiencia de los consultados que permitirán sean validados en la realidad y he aquí que este último paso es el que más distingue este proceder de todo lo encontrado anteriormente en la bibliografía consultada, o sea, se posee un amplia información (Medios) de cómo lograr “salvar” a una determinada PYME del fracaso porque se le puede brindar información no sólo de la Causa que puede motivar su debacle sino del tema (Mercado, Operación, Finanzas...etc) y del momento en que este se

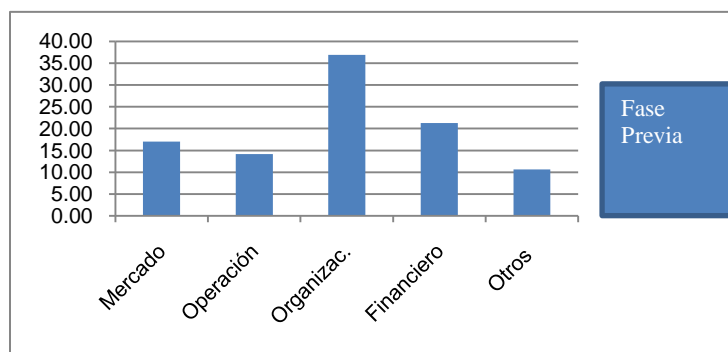

puede producir (cuando se está formando, cuando está tratando de consolidarse o cuando está ya en un estadio superior).

RESULTADOS

Interpretación de los resultados de algunas de las encuestas.

A diferencia de otros estudios sobre PYMES, en este se logran definir Causas que influyen más decisivamente en el fracaso o baja sobrevivencia en los tres momentos de la vida de la empresa en que nuestra investigación ha clasificado la existencia de estas: Fase Previa, Fase de Puesta en Marcha y Fase de Pre-consolidación.

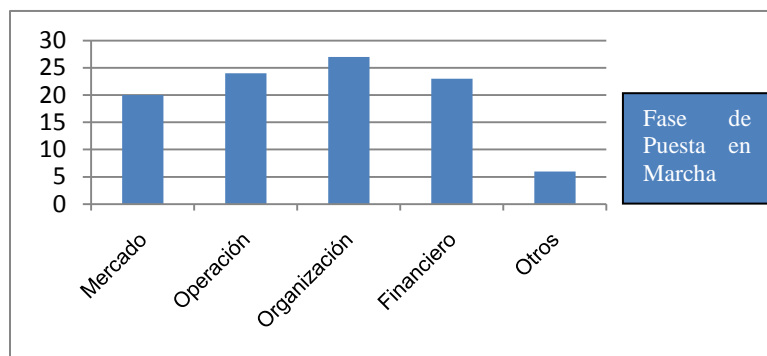

Figura 2. Gráfico de los resultados de la correlación de la Fase Previa con los Temas

Aquí se ha graficado los por cientos en que cada Tema influyen en la Fase Previa. Como se aprecia, casi el 40% se relaciona con el Tema Organización mismo que se identifica con las causas: Falta de experiencia, trámites burocráticos, poca orientación hacia la administración, irrealidad de las metas a alcanzar y compleja documentación a llenar. De idéntica forma en el Tema Financiero las causas más relevantes son cálculo incorrecto del presupuesto requerido (para comenzar), desconocimiento de las fuentes de financiamiento requeridas y altas tasas de interés para acceder a financiamientos.

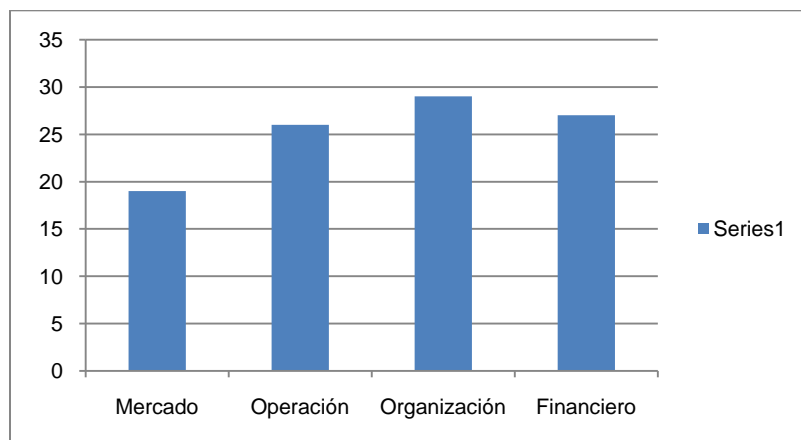

En la Fase de Puesta en Marcha Figura 3 se puede apreciar que se pierde la preponderancia relativa del tema Organización y los Temas de Operación y Financiero se incrementan.

Figura 3. Gráfico de los resultados de la correlación Fase Puesta en Marcha con Temas

En la Fase de Pre-consolidación Figura 4 se puede apreciar el significativo incremento del tema Financiero y el incremento del Tema Operación.

Figura 4. Gráfico de los resultados de la correlación Fase Pre-consolidación con Temas

CONCLUSIONES

Hay dos principales aspectos que se poseen como información que puede contribuir a alertar a las PYME acerca de los problemas que se le pueden originar en cada una de las Fases de su vida. En cada una de esas Fases se identifican cuáles son los Temas que más predominan, en todos se aprecia la significación del tema Organización que incluye los aspectos relacionados con la administración de la Empresa visto desde la planeación hasta el control y además desde las vertientes de la capacitación -con vista a superar la falta de experiencia- y la reacción al cambio entre otros. En la Fase de Puesta en Marcha no sólo se deben tener en cuenta estos aspectos de organización-administración sino que cobra un mayor impulso lo relacionado con el Tema de Mercado con causas tales como problemas para vender y desconocimiento del mercado, el entorno y la competencia también tiene significancia el Tema Operación del negocio con causas como la alta centralización, los compromisos de familia por encima de resultados exitosos o la excesivas inversiones en activos fijos. Finalmente en la Fase de Pre-consolidación el tema con una mayor pendiente positiva es el Financiero en el que se destacan como causas que pueden llevar a la PYME a su fracaso las relacionadas con la mala estructura de costo, el no contar con capital de reserva y el inadecuado nivel de rendimiento del capital.

ANÁLISIS DE LA INDUSTRIA DE LA CONSTRUCCIÓN, ESTADO DE PUEBLA MÉXICO

Rafaela Martínez Méndez, Benémerita Universidad Autónoma de Puebla

RESUMEN

En este trabajo de investigación se presenta un análisis de la industria de la construcción en el Estado de Puebla comparándolo con cifras a nivel nacional (México), en cuanto, la productividad de la mano de obra, inversión, la ganancia y la rentabilidad de la misma, por subsectores, ramas, sub ramas y clases. Realizando algunas reflexiones acerca de la globalización y su impacto en este sector, enunciando algunas características particulares de la industria de la construcción. Como la inmovilidad del producto, la producción in situ entre otras. El objetivo del presente trabajo de investigación es realizar un análisis del comportamiento de algunas variables económicas que prevalece en la empresa pequeña del sector económico de la construcción en el estado Puebla.

PALABRAS CLAVE: Globalización, actividad constructora, empresa.

INTRODUCCIÓN

El sector económico de la construcción en el estado ha sido y es fundamental para dinamizar el crecimiento económico. En este sentido el fracaso de estas empresas, traerá serias repercusiones, económicas y sociales, por lo cual es motivo suficientes para realizar una investigación sobre este tema. En este contexto, se define al sector de la construcción como actividad económica en donde se da la combinación de materiales y servicios para la producción de bienes tangibles. Una de las características que la distingue de otras industrias es su planta móvil, su producto fijo y en algunos casos distinto. El sector Construcción está constituido por el conjunto de actividades orientadas a la edificación de inmuebles habitacionales y no habitacionales; a la construcción de obras de ingeniería civil u obra pesada; así como también al trabajo especializado que están vinculados a la construcción.

En este contexto, la productividad de la mano de obra y rentabilidad de las pequeñas empresas del sector de la construcción en el Estado de Puebla y el personal ocupado mide la eficiencia organizacional. Por lo que surge la siguiente pregunta: ¿La rentabilidad, en la industria de la construcción en el subsector edificación en el Estado de Puebla, objeto de este estudio está sostenida en el uso de la fuerza de trabajo ya que no hay una fuerte inversión en tecnología para el mejoramiento de sus procesos productivos?

El objetivo del presente trabajo de investigación es realizar un análisis del comportamiento económico que prevalece en la empresa pequeña del sector económico de la construcción en el estado Puebla. Este trabajo de investigación está integrado por tres apartados: el primero trata algunas consideraciones teóricas como es la globalización; y las particularidades de este sector económico; en un segundo apartado se trata de la metodología utilizada; en el tercer apartado se dan los resultados que se obtuvieron del análisis y finalmente las conclusiones.

ALGUNAS CONSIDERACIONES TEÓRICAS

La Globalización y la Industria de la Construcción en México

La globalización significa que las economías nacionales están hoy más integradas con la economía internacional, que los bienes, el capital y las comunicaciones, así como las personas, se han acercado más. Esto ha sido resultado de la apertura de las economías y así como del rápido cambio tecnológico.

En este contexto, se puede decir que en la globalización los fenómenos y procesos que lo caracterizan abarcan los ámbitos económicos, políticos y socioculturales. En el ámbito económico se presentan tres categorías principales. (Barba y Solís, 1997; p. 4) la globalización de las finanzas y el capital expresado como la desregulación de los mercados financieros, la movilidad de capitales y el incremento de fusiones y adquisiciones: b) la globalización de mercados y c) la de la tecnología en la cual se destaca la informática y las telecomunicaciones. En lo que se refiere al ámbito político se perfila la globalización de competencias en materia de reglamentación y en el debilitamiento de los gobiernos nacionales a favor de organismos internacionales.

Antes de iniciarse el proceso de la inserción de México a la economía globalizada, en la segunda mitad de la década pasada, el mercado de ingeniería y construcción nacional mantenía un razonable equilibrio, entre la capacidad instalada de la industria de la construcción y la suma de la demanda estatal y privada de infraestructura, para el desarrollo de las actividades económicas. En 1988, el gobierno entrante aplicó una profunda reforma estructural y aceleró el proceso de apertura económica, asignando a la inversión privada el carácter de motor del desarrollo. En el mercado de la construcción, el gobierno dio un giro que le permitía ofertar en licitaciones internacionales, el desarrollo de obras de infraestructura que incluían su paquete financiero. La utilización de esta modalidad propicio el arribo de empresas extranjeras (Horcasitas, 2001; 15). En su mayor parte, estas empresas se abocaron a construir plantas bajo la modalidad, de llave en mano y en el mejor de los casos, permitieron la participación a las empresas mexicanas con sólo el 25% del total de cada contrato, principalmente dentro del sector energético nacional y en la construcción de plantas termoeléctricas o petroquímicas.

En 1990, con los nuevos esquemas planteados por el Estado, se definieron los primeros proyectos concesionados y las grandes constructoras incursionaron en proyectos paquete participando con financiamiento en construcción, entrando de lleno en las concesiones de autopistas de cuota y plantas termoeléctricas. Con los acuerdos negociados en el Tratado de Libre Comercio (TLC), se esperaba que la industria de la construcción mexicana pudiera participar en el mercado internacional de la construcción que aun hoy se encuentra confinado principalmente a la ejecución de megaproyectos e involucra sólo a las firmas transnacionales más grandes. Sin embargo, es indudable que desde su entrada en vigor en 1994, las empresas constructoras nacionales se han visto obligadas a acelerar su modernización para competir.

En consecuencia, y hechas algunas excepciones, la industria de la construcción mexicana, al igual que otras ramas industriales, estaba débil y descapitalizada en la coyuntura de la apertura, debían competir con estándares internacionales, aunque no contaría con los recursos de tipo mundial que tenían las empresas de otros países.

De hecho, el tamaño de las 15 mil empresas socias de la Cámara de la Industria de la Construcción era muy pequeño, comparado con las empresas constructoras de Estados Unidos y los demás países desarrollados. Estadísticas de 1989 de la cámara registraban 74 empresas gigantes (capital social mayor de 3.6 millones de dólares), y facturaron en promedio 10.6 millones de dólares mientras que en contraste, la empresa de menor contratación de la lista de las 400 constructoras de Estados Unidos obtuvo, en ese año 53 millones de dólares. Así mismo en el ámbito mundial, las principales compañías eran más grandes que las empresas constructoras nacionales. El disponer de una tecnología avanzada constituía una ventaja competitiva, puesto que significaba la posibilidad de producir más con menos recursos. Esto hacía necesario que las empresas mexicanas en lo general, y las constructoras en particular se incorporaran a los métodos tecnológicos de vanguardia, ya que el escaso roce con empresas que utilizaban tecnologías avanzadas no habían permitido que la industria nacional asimilara e incorporara el desarrollo de mejores procesos de producción como se verían en los: a) Métodos. El uso generalizado de microcomputadoras y de software transformaban las prácticas de diseño arquitectónico, provocando reducción de costos; b) Equipo. Las nuevas adquisiciones de maquinaria y equipo de alta tecnología, como el equipo de acción hidráulica, torres de construcción, grúas trepadoras, máquinas pavimentadoras continuas, etc. habían hecho a las empresas constructoras más competitivas. c) Materiales. El uso de nuevos materiales para

reducir los costos e incrementar su vida útil se volvía cada vez una necesidad imperante, en este sentido el uso de los plásticos era un ejemplo claro, ya que tenía una amplia gama de aplicaciones..d) Componentes. El método de construcción prefabricada agilizaba ya la construcción, reducía los costos de la mano de obra, disminuía los retrasos de obra y requería de una estructura de investigadores profesionales especializados en el campo.

Lo grave de estas consideraciones es que la ineficiencia de la construcción fue transferida al usuario final, dado que se encontraba en un mercado cautivo. Durante algunos años, aun sin la existencia de un tratado explícito de libre comercio que incluyera a los servicios de construcción, se registraron actividades en México por lo menos una decena de las mayores constructoras norteamericanas.

La Particularidad De La Actividad Constructora.

La industria de la construcción se caracteriza por algunos rasgos que también presentan algunas otras industrias, pero que en su combinación sólo se dan en la industria de la construcción: a esta combinación peculiar de rasgos particulares cabe denominarla como la especificidad de la actividad constructora. Estos rasgos particulares cuya combinación genera una situación específica abarcan todos los niveles: proceso de trabajo, financiamiento, estructura industrial, etc.; pero son las características del producto de esta actividad las que tienen mayor peso explicativo en la peculiaridad de la construcción como actividad económica.

Características de esta industria; a) La inmovilidad del producto, rasgo más sobresaliente es la inmovilidad del producto, es decir que el producto físico no es transportable, característica que les da el nombre de bien inmueble o bien raíz, término para designar a los bienes que no se pueden transportar. (Grijalbo, 1986) b) La producción in situ, a exigencia de producción in situ del bien inmueble convierte a la actividad constructora en un híbrido de la industria y los servicios. En tanto la actividad constructora se concreta en un producto físico tangible, la construcción constituye una industria, pero su actividad debe realizarse no ante el cliente que solicita el servicio sino en el lugar en que él lo requiere, por lo que a la exigencia de producción in situ la podríamos considerar como un componente de prestación de servicios en la actividad constructora) El desdoblamiento en fabricación y montaje en la construcción. La exigencia de producción in situ no afecta a todas las tareas en las que se pueden desagregar la construcción o edificación. Existen una serie de etapas, tareas o funciones que inevitablemente tienen que ser realizadas en el lugar de las obras ya que no pueden ser trasladadas a una planta fija, por ejemplo: el movimiento de tierras, las cimentaciones, el tratamiento y terminación de áreas exteriores, la implementación de redes de servicios y el montaje o instalación de elementos prefabricados. (Boyer y Hollingsworth, 1997; p .123), .d) dispersión de la demanda y de la oferta en la construcción. La naturaleza inmueble del producto determina una localización geográfica de la demanda pues cada obra debe emplazarse en el lugar que la entidad propietaria lo solicite. Aún tratándose de servicios constructivos solicitados por un mismo cliente (por ejemplo diversas actividades de mantenimiento en las distintas unidades hospitalarias, la necesidad de prestar cada uno de los servicios in situ, desagrega la demanda en servicios de construcción geográficamente dispersos.

En esta dispersión de la demanda contribuye también el tipo de producto. A mayor especialización de una compañía constructora en un tipo de producto, por ejemplo mantenimiento de instalaciones hospitalarias, mayor será la dispersión de la demanda y mayores sus exigencia de movilidad para cubrirla. Situación análoga tiene lugar con la especialización en algún tipo de cliente: la especialización en la construcción de restaurantes para una cadena de comida rápida implica asistir a aquellas ciudades que conforman el plan de crecimiento de la empresa restaurantera. e) Diseño y construcción como unidad contradictoria. La singularidad de cada proyecto implica que toda obra requiere de un proyecto específico diseñado para cada ocasión. A diferencia de la industria manufacturera en la que cada diseño se ejecuta múltiples veces, en la construcción ambos procesos corren a la par, incluso no son pocos los casos en que se presentan

varios diseños para -en el mejor de los casos- sólo ejecutar uno. f) La importancia del producto de construcción. Una de las maneras como se manifiesta la singularidad del producto es la producción por encargo que representa a una buena parte de la producción de las empresas constructoras.

En la industria manufacturera, la complejidad técnica se expresa en la estructura de la fábrica, estando relativamente resuelto el problema técnico del producto final luego de los primeros lanzamientos comerciales. En cambio, en la industria de la construcción, la singularidad del producto demanda un estudio específico para cada proyecto, lo que hace posible que las características técnicas del producto final condicionen el tipo de empresas que pueden ingresar al mercado. (Vitelli 1976: 1.12)

Por ejemplo, en el sector no residencial la construcción de un camino rural abre la posibilidad de participación a un número y tipo de empresas muy distintas que las de una carretera de altas especificaciones. En el sector residencial, en las circunstancias en las que el Instituto Nacional de Vivienda para los Trabajadores (INFONAVIT) opera como desarrollador inmobiliario contratando empresas constructoras, no resulta lo mismo que el instituto concurre un proyecto de construcción de 2,000 viviendas que cuatro proyectos de 500. La especificación del producto y su modulación condicionan el tipo de empresas que pueden participar.

METODOLOGÍA

En este trabajo de investigación se aplicó la técnica documental, lo que permitió la recopilación de información para enunciar las consideraciones teóricas que sustenta, el estudio (análisis).

Los criterios que se toman para clasificar a la empresa según su tamaño son principalmente: el monto de sus ventas, el tamaño de sus instalaciones, el monto de sus capitales, la fuerza de trabajo, la importancia productiva. El criterio para clasificar la pequeña empresa de la empresa industrial según su tamaño, es el definido por el Diario Oficial de la federación (30 de marzo de 1999). El criterio definido por este órgano oficial es; se considera pequeña empresa industrial, a aquella que cuenta entre 31 y 100 empleados como se muestra en la tabla 1.

Tabla 1. Clasificación del tamaño de la empresa por número de empleados.

Tamaño	Sector		
	Industrial	Comercial	Servicios
Microempresa	0-30	0-5	0-20
Pequeña empresa	31-100	6-20	21-50
Mediana empresa	101-500	21-100	51-100
Gran empresa	501 en adelante	101 en adelante	101 en adelante

Esta tabla nos muestra la clasificación de las empresas en micro, pequeña, mediana y gran empresa según la Secretaría de Comercio

Los rubros industria, Comercio, y Servicios incluyen los siguientes sectores económicos: 1) Industria: Minería, manufactura, electricidad, Agua y construcción, incluye un total de 16 subsectores económicos, 2) Comercio: Comercio incluye un total de dos subsectores económicos. 3) Servicios: Servicios financieros y de alquiler, y servicios comunales y sociales, hoteles y restaurantes, profesionales. Incluye un total de 13 subsectores económicos.

Indicadores De Análisis

Los indicadores que se tomaron para realizar este análisis son: productividad, inversión, ganancia y rentabilidad. *Productividad*. Existen diferentes definiciones en torno a este concepto ya que se ha transformado con el tiempo, en términos generales, la productividad es un indicador que refleja que tan bien se están usando los recursos de una economía en la producción de bienes y servicios. Así pues, una

definición común de la productividad es la que la refiere como una relación entre recursos utilizados y productos obtenidos y denota la eficiencia con la cual los recursos -humanos, capital, conocimientos, energía, etc.- son usados para producir bienes y servicios en el mercado, para el análisis se utilizó la fórmula siguiente:

$$\text{Productividad} = \frac{\text{Producción bruta total}}{\text{Personal total de la razón}} \quad (1)$$

Inversión. La inversión es todo desembolso de recursos financieros para adquirir bienes concretos durables o instrumentos de producción, denominados bienes de equipo, y que la empresa utilizará durante varios años para cumplir su objeto social, la fórmula que se utilizó para el análisis es:

$$\text{Inversión} = \frac{\text{Activo fijo total}}{\text{personal total}} \quad (2)$$

Ganancia. Valor del producto neto vendido menos los pagos a todos los factores productivos, incluyendo el costo de oportunidad de los factores aportados por los mismos propietarios de la empresa. En este concepto, la ganancia es la compensación al propietario por su iniciativa y esfuerzo en asumir el riesgo, para el análisis se utilizó la siguiente fórmula:

$$\text{Ganancia} = \text{valor agregado censal} - \text{remuneraciones} \quad (3)$$

Rentabilidad. Es el rendimiento, ganancia que produce una empresa. Se llama gestión rentable de una empresa la que no sólo evita las pérdidas, sino que, además, permite obtener una ganancia, un excedente por encima del conjunto de gastos de la empresa. La rentabilidad caracteriza la eficiencia económica del trabajo que la empresa realiza, la fórmula que se aplicó para el análisis es:

$$\text{Rentabilidad} = \frac{\text{Ganancia}}{\text{Activo fijo total}} \quad (4)$$

RESULTADOS

Análisis De La Industria De La Construcción Del Estado De Puebla México

La industria de la construcción en México atiende a las necesidades de infraestructura que demanda la sociedad, su contribución económica a nuestro país es significativa, ya que su aportación a la riqueza generada por la actividad productiva ha ido en aumento en los últimos años como se ve en la tabla 1, en 1999 aportaba el 4.36% al Producto Interno Bruto (PIB), en el 2007 su aportación es de 6.91%. ver tabla 2 .

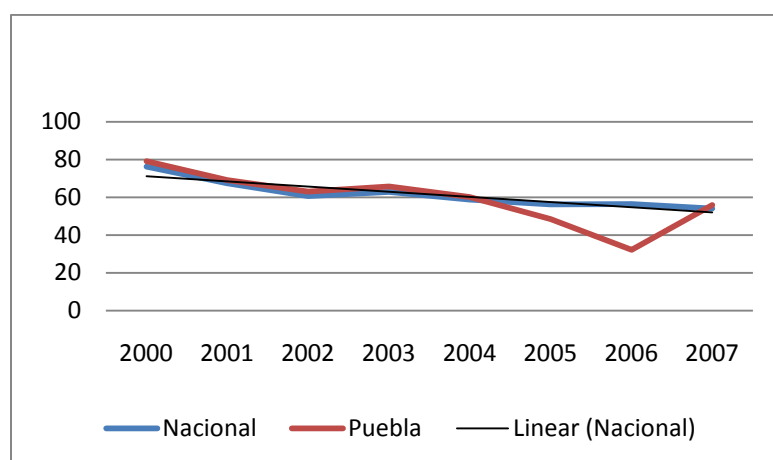

Tabla 2. % de participación del sector de la construcción al PIB.

año	PIB de la construcción en miles de pesos a precios del 2003	Total	Estructura porcentual
1999	270642	5269653	4.36
2000	292179	5734645	5.09
2001	326318	6245546	5.22
2002	380233	6964058	5.46
2003	470217	7162773	6.56
2004	495166	7480189	6.65
2005	514234	8825889	6.68
2006	553495	8082328	6.85
2007	577840	8359944	6.91

Esta tabla nos muestra la contribución de la industria de la construcción al PIB, de 1999 a 2007

En este orden de ideas y con base a los datos que arroja la Encuesta Nacional de la Industria de la Construcción realizada por el Instituto Nacional de Estadística, Geografía e Informática (INEGI) se desprende que este sector económico en Puebla lleva cinco años continuos de baja producción de obra, tanto a nivel nacional como en el estado de Puebla, en el 2006 la participación de obra a nivel Nacional indicó un 56.4%, en el 2007 las cifras muestran 54.1%, en el estado de Puebla se registran las siguientes cifras 32.2% y 55.9% respectivamente, como se ve en la figura 1,

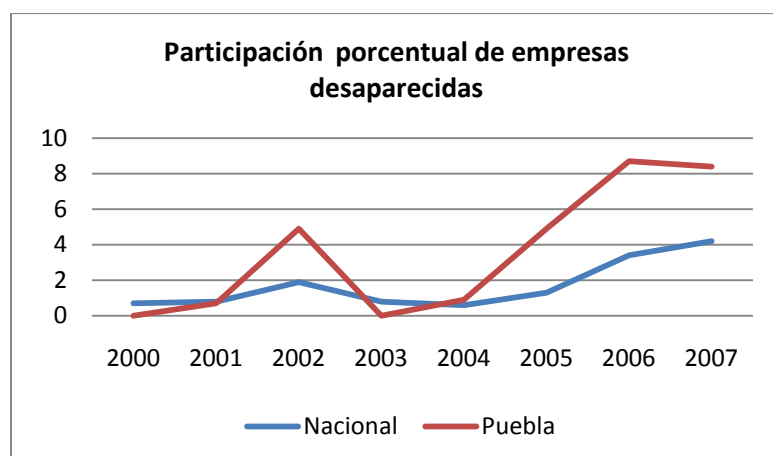

Figura1. Participación Porcentual de empresas activas.

Esta figura muestra la baja producción de obra de las empresas activas del sector de la construcción tanto a nivel nacional como en el estado de Puebla..

Este sector ha presentado, en los últimos años, un alto índice de cierre de empresas, en el estado de Puebla que sobrepasa al índice de cierre a nivel nacional; así en el año 2006 a nivel nacional el porcentaje es de 3.4% y en el estado de Puebla en el mismo año, el porcentaje es del 8.7% como se muestra en la figura 2.

Figura 2. Participación Porcentual De Empresas Desaparecidas.

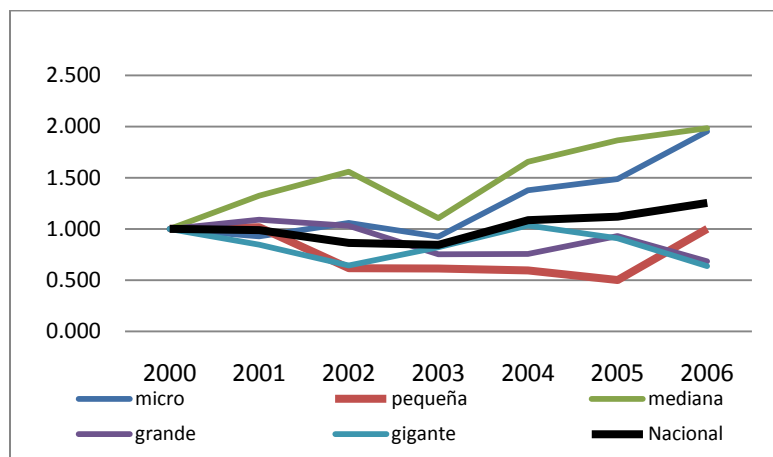

Esta figura muestra la participación porcentual de las empresas constructoras desaparecidas tanto a nivel nacional como en el estado de Puebla

Uno de los indicadores que se analizó son: el *índice de productividad de la mano de obra*. Como parámetro principal se tomó la relación que existe entre el valor de la producción y el valor de las

remuneraciones, tanto a nivel nacional como estatal. Según tamaño de la empresa se puede observar que el índice de productividad de la mano de obra de la empresa pequeña del estado de Puebla (2001, 0.898; 2002, 0.613; 2003, 0.556; 2004, 0.492; 2005, 0.424; 2005, 0.789) en los últimos años se encuentra por debajo del índice nacional ver figura 3.

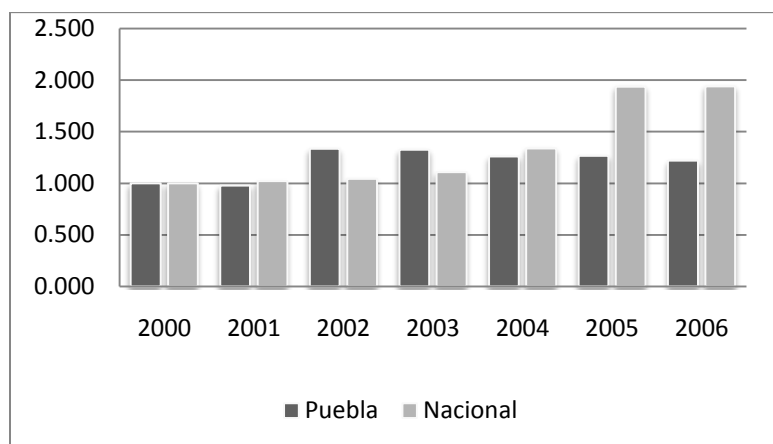

Figura 3. Índice de personal ocupado

Esta figura muestra los índices de personal ocupado del micro pequeño, mediano, grande, gigante, empresa de la industria de la construcción a nivel nacional.

Por último el *índice de rentabilidad*, como parámetro principal se tomó la relación que existe entre el valor de las utilidades netas y el valor de la producción, encontrando que a partir del 2004 el índice es 1.260; en el 2005, 1.265 y en 2006, 1.217 en el estado de Puebla, y a nivel nacional los índices son para los mismos años: 1.338, 1.937, 1.939 respectivamente, por lo que se puede observar en la figura 4, que la rentabilidad de las empresas pequeñas del Estado de Puebla es menor en los últimos tres años, que la rentabilidad de las empresas de ese rubro a nivel nacional.

Figura 4. Rentabilidad De Las Empresas Pequeñas

Esta figura nos muestra la rentabilidad de las empresas constructoras a nivel estado de Puebla y a nivel Nacional

En México el sector económico de la construcción está conformado por las siguientes clases según el INEGI, hay 5943 empresas registradas a nivel nacional y en el Estado de Puebla 164 empresas ver tabla 2.

Tabla 2. Número de empresas por clase en el sector de la construcción

Clase	Número de empresas Nacional	Número de empresas Puebla
Edificación de vivienda unifamiliar	2174	72
Edificación de vivienda multifamiliar	433	0
Administración y supervisión de edificación residencial	65	0
Edificación de naves y plantas industriales excepto su administración	364	11
Administración de naves y plantas industriales	3	0
Edificación de inmuebles comerciales, institucionales y de servicio excepto su administración	2881	81
Administración y supervisión de edificación de inmuebles comerciales, institucionales y de servicio	23	0
Total	5943	164

Esta tabla nos muestra el número de empresas por clase tanto a nivel nacional como en el estado de Puebla

La industria de la construcción está integrado por los subsectores: edificación, construcción de obra de ingeniería civil u obra pesada y trabajo especializado para la construcción, al realizar un análisis del censo económico 2004 de este sector como se ve en la tabla 1. El subsector que presenta la menor productividad a nivel nacional es el de edificación con un índice de 253, el que presenta mayor productividad con un índice de 383 es el subsector de la construcción de obras de ingeniería civil u obra pesada. El indicador de inversión, también indica que el subsector edificación presenta un menor índice que es de 36, el subsector de la construcción presenta una mayor inversión que es 101. El indicador de rentabilidad es mayor en el subsector de edificación y menor en el subsector de la construcción de obra de ingeniería.

El comportamiento de a nivel Puebla, en el índice de productividad construcción de obras de ingeniería presenta el mayor índice de productividad 261 y el de menor productividad el de trabajo especializado con un índice de 174, ver tabla 3. En lo que se refiere a inversión el subsector edificación presenta un menor índice 38 y el de mayor inversión el subsector de la construcción de obras de ingeniería civil. En lo que se refiere a rentabilidad el subsector edificación presenta el mayor índice 1.8 y el que presenta un menor índice de rentabilidad es el subsector construcción de obra de ingeniería civil u obra pesada. Por lo tanto se puede deducir que la rentabilidad, en la industria de la construcción en el subsector edificación, objeto de este estudio está sostenida en el uso del trabajo ya que no hay una fuerte inversión en tecnología para el mejoramiento de sus procesos

Tabla 3. Índices de productividad, inversión y rentabilidad

Subsector	NACIONAL				PUEBLA			
	Productividad	inversión	Ganancia	Rentabilidad	Productividad	Inversión	Ganancia	Rentabilidad
Edificación	253	36	20460041	1.6	261	38	586910	1.8
Construcción de obras de ingeniería civil u obra pesada	383	101	16242162	0.8	261	135	503079	0.6
Trabajos especializados para la construcción	285	66	3079196	1.1	174	56	38017	0.7

Esta tabla nos muestra los índices de productividad, inversión y rentabilidad del subsector de la construcción edificación

El subsector edificación objeto de este estudio, se encuentra dividido en dos ramas que son: a) la edificación residencial y b) la edificación no residencial. Se realizó un análisis de los censos económicos del 2004 los cuales indican que el índice de productividad a nivel nacional ver tabla 3. Fue mayor en la

edificación residencial 272 y menor en la edificación no residencial, el índice de inversión por el contrario fue menor en la rama edificación residencial 28 y mayor en la rama edificación no residencial 46. El índice de rentabilidad en la rama edificación es mayor 2 y en la rama edificación no residencial es de 1. En Puebla el índice de productividad ver tabla 3, también es mayor en la rama edificación residencial 292 y menor en la rama edificación no residencial 207. Esta rama presenta en edificación residencial un bajo índice 28 y un mayor índice de inversión en edificación no residencial 207. Una mayor rentabilidad en la rama edificación residencial y una menor rentabilidad en la rama edificación no residencial de 1.

Tabla 4. Índices de productividad, inversión y rentabilidad

	NACIONAL				PUEBLA			
RAMA	Productividad	Inversión	Ganancia	Rentabilidad	Productividad	Inversión	Ganancia	Rentabilidad
Edificación residencial	272	28	13688549	2	292	28	486531	3
Edificación no residencial	228	46	6771492	1	207	56	100379	1

Esta tabla nos muestra los índices de productividad, inversión y rentabilidad por rama de la construcción, edificación residencial y no residencial.

Las ramas edificación residencial y edificación no residencial se subdividen en las sub ramas edificación residencial, edificación de naves y plantas industriales y edificación de inmuebles comerciales, institucionales y comerciales. En este análisis por sub ramas se encontró que el índice mayor de productividad a nivel nacional se encuentra en la sub rama edificación de naves y plantas industriales con un índice de 295 ver tabla 4, y el menor índice es el de la sub rama edificación de inmuebles comerciales. En lo que se refiere a inversión el mayor índice es el de edificación de inmuebles comerciales y el de menor índice es la edificación residencial. El índice de mayor rentabilidad se encuentra en la sub rama edificación residencial 2. En productividad la sub rama edificación a nivel Puebla presenta una mayor productividad, menor inversión que las otras sub ramas y un alto índice de rentabilidad 3

Tabla 5. Índices de productividad, inversión y rentabilidad

	NACIONAL				PUEBLA			
SUB RAMAS	Productividad	Inversión	Ganancia	Rentabilidad	Productividad	Inversión	Ganancia	Rentabilidad
Edificación residencial	272	28	13688549	2	292	28	486531	3
Edificación de naves y plantas industriales	295	45	1433447	1	184	44	23045	1
Edificación de inmuebles comerciales institucionales y de servicios	215	46	5338045	1	212	59	77334	1

Esta tabla nos muestra los índices de productividad, inversión y rentabilidad por sub ramas tanto nacional como del estado de Puebla

Las sub ramas que componen esta rama son: a) edificación residencial, b) edificación de naves y plantas industriales, c) edificación de inmuebles comerciales, institucionales y de servicio. En cuanto a los indicadores podemos ver en la tabla 5, que la sub rama edificación residencial presenta una mayor rentabilidad en Puebla que a nivel nacional así como una mayor productividad, en cuanto a la inversión es la misma. Donde existe una mayor inversión es en la sub rama de edificación de inmuebles de 46.

Tabla 6. Índices de productividad, inversión y rentabilidad

Clases	NACIONAL				PUEBLA			
	Productividad	Inversión total	Ganancia	Rentabilidad	Productividad	Inversión	Ganancia	Rentabilidad
Edificación de vivienda unifamiliar	269.2	27.8	11333988	2.3	295.2	26.3	365895	3.3
Edificación de vivienda multifamiliar	286.6	29.4	2328298	2.5	289.2	30.9	119240	2.8
Administración y supervisión de edificación residencial	278.2	57.7	26263	1.2	83.1	40.2	1396	1.0
Edificación de naves y plantas industriales excepto su admón. y supervisión	296.2	44.9	1432816	1.3	183.6	44.0	23045	0.8
Edificación de inmuebles comerciales institucionales y de servicios excepto su admón. y supervisión	214.3	46.2	5309023	0.9	212.2	58.8	77536	0.5

Esta tabla nos muestra los índices de productividad, inversión y rentabilidad clases tanto nacional como del estado de Puebla

La sub rama edificación se encuentra dividida en las siguientes clases: edificación vivienda unifamiliar, edificación vivienda multifamiliar administración y supervisión de edificación residencial, edificación de naves y plantas industriales excepto su administración y supervisión y edificación de inmuebles comerciales institucionales y de servicio excepto su administración. En esta clase a se nota una diferencia en los índices de productividad a nivel nacional menor de 269.2 y a nivel del estado de Puebla 295.2, la inversión a nivel nacional es mayor que en el estado de Puebla 27.5 y 26.3 respectivamente ver tabla 5. A diferencia de la rentabilidad en el estado de Puebla es mayor 3.3 y a nivel nacional 2.3 en lo que se refiere a edificación de vivienda unifamiliar. Lo que se puede deducir que la rentabilidad de las empresas constructoras en el estado de Puebla se basa en la productividad de la mano de obra ya que no existe una fuerte inversión en tecnología como sucede en la clase de edificación de naves y plantas industriales con un 44.9.

CONCLUSIONES

A manera de conclusión se puede decir que La industria de la construcción se constituye por una gran variedad de actividades con un desempeño heterogéneo, que llevan a su clasificación en subsectores, ramas, sub ramas y clases Tomando como base los datos censales del Instituto de Estadística Geografía e Informática que las empresas del sector económico de la construcción son muy rentables en el Estado de Puebla, que la rentabilidad de las empresas constructoras que se dedican a edificación de vivienda unifamiliar se basa en la mano de obra y no en la inversión de equipo de alta tecnología. En este sentido, el disponer de una tecnología avanzada implicará una ventaja competitiva, puesto que significa la posibilidad de producir más con menos recursos. Esto hace necesario que las empresas mexicanas constructoras deben incorporarse a los métodos tecnológicos de vanguardia lo cual permitirá el desarrollo de mejores procesos de producción, que se vería reflejado en los: a) métodos, el uso generalizado de microcomputadoras y de software transforman las prácticas de diseño arquitectónico, provocando reducción de costos, b) equipo., las nuevas adquisiciones de maquinaria y equipo de alta

tecnología, como el equipo de acción hidráulica, torres de construcción, grúas trepadoras, máquinas para pavimentar continuas, etc., hacen a las empresas constructoras más competitivas; c) materiales, el uso de nuevos materiales para reducir los costos e incrementar su vida útil se vuelve cada vez una necesidad, en este sentido el uso de los plásticos es un ejemplo claro, ya que tiene una amplia gama de aplicaciones; d) componentes, el método de construcción prefabricada agiliza ya la construcción, reduciendo los costos de la mano de obra, disminuyendo los retrasos de obra lo cual requería de una estructura de investigadores profesionales especializados en el campo. Por lo tanto las empresas constructoras mexicanas deben realizar una fuerte inversión en equipo, para que logren ser más competitivas ante este entorno globalizante.

DESCRIPCIÓN DE LAS MIPYME Y SU APORTACIÓN AL ÍNDICE DE DESARROLLO HUMANO: CASO REGIÓN 101, CANCÚN-MÉXICO

Lorena Hernández von Wobeser, Universidad del Caribe

Mario Gabriel Martínez Casas, Universidad del Caribe

Francisco J. May Hernández, Universidad del Caribe

RESUMEN

El presente trabajo presenta la primera etapa de una investigación de campo longitudinal que tiene por objetivo principal describir las características de las Micro, Pequeñas y Medianas empresas (MiPyMe) en una colonia (Región 101) de Cancún, México. En esta primera etapa se exponen los resultados de un censo de las MiPyMe de la Región 101 cuyos resultados servirán para un posterior análisis del impacto de dichas empresas en el Índice de Desarrollo Humano de los empresarios y sus familias. Las características de las empresas de esa región se reportan mediante cuadros y gráficos en la sección de resultados.

PALABRAS CLAVE: Microempresa, MiPyMe, Índice de Desarrollo Humano

INTRODUCCIÓN

Actualmente el sector empresarial de las MiPyMe es un tema de mucha relevancia, esto se debe a que ellas representan el principal sustento de la economía Mexicana, además de contribuir como fuente principal de empleo. A pesar de que México está constituido principalmente por MiPyMe y que son el motor principal de crecimiento, estas tienen un alto índice de mortandad ya que sólo dos de cada diez empresas alcanzan su quinto año de operación. Partiendo de estos datos, resulta altamente relevante estudiar las características de las Micro, Pequeñas y Medianas empresas mexicanas así como su impacto en el índice de Desarrollo Humano de su población.

REVISIÓN LITERARIA

Situación De Las Mipyme En México

De acuerdo con la página web del INEGI las MIPyME se definen como: “Acrónimo o siglas con el que se identifica a las micro, pequeñas y medianas empresas mexicanas, legalmente constituidas para realizar actividades productivas.” La Secretaría de Economía menciona en su página web que “Las MIPyME’s generan el 52 por ciento del Producto Interno Bruto y contribuyen con el 72 por ciento de los empleos formales. En el año 2003 existían en México 3’005,157 empresas, de las cuales el 99.8 por ciento son MiPyME’s.”

De acuerdo a la publicación de la Confederación de Cámaras Industriales de los Estados Unidos Mexicanos (CONCAMIN): “En México, como en el resto del mundo, el índice de apertura de empresas micro, pequeñas y medianas, es tan elevado como el de mortandad. Cada año inician actividades entre 300 mil y 400 mil MIPyMES industriales, agrícolas, comerciales y de servicios. Esto significa que cada 24 horas surgen, en promedio, entre 800 y 1,000 nuevos negocios, pero el 90% de ellos habrá cerrado o emigrado a la informalidad, antes de cumplir sus primeros 5 años de operación”

En México muchas de estas empresas, al no contar con el apoyo necesario, recurren a la informalidad y dejan de estar constituidas legalmente para realizar sus actividades productivas. En base a la publicación

de la CONCAMIN existen dos principales motivos por lo que las MiPyMe's recurren a la informalidad o a cerrar debido a:

1. El ambiente en el que se desarrollan, lo cual les impide prevalecer en el sector formal a causa de: los trámites; las diversas disposiciones gubernamentales federales, estatales y municipales; los constantes cambios en materia fiscal; los costos de operar en la formalidad (costos de seguridad social, entre otros) y la falta de apoyos oficiales oportunos y eficaces.
2. Se debe a la forma en que tales empresas son dirigidas, es decir, falta de conocimientos en cada una de las áreas de la empresa.

Conforme a los datos ya mencionados se observa que las MiPyMe's aparte de ser la principal fuente de economía y de un generador de empleos, también contribuyen al Índice de Desarrollo Humano, que de acuerdo con la investigación realizada por Olivares et al "mide la capacidad adquisitiva real de la gente, su esperanza de vida, su longevidad, sus niveles de salud, de educación y de vida con base en un amplio complejo de indicadores que no abarcan exclusivamente al producto nacional bruto ni se centran en él".

Situación De Las Mipyme En Benito Juárez (Cancún)

Ahora bien, aterrizando el tema en nuestra localidad, conforme a la investigación realizada por Olivares, et al, el INEGI (2005) menciona que el municipio de Benito Juárez del estado de Quintana Roo posee el 73.10% del total de las empresas (15,270 unidades), de las cuales el 96.16% son micro empresas (14,684 unidades). Con base en estos números, si se considera que, el 70% de las MIPYMES no llega a los dos años de operación, entonces se deduciría que aproximadamente 10,279 empresas del total en el municipio Benito Juárez están con amplias posibilidades de cerrar en el mediano plazo.

METODOLOGÍA

Este trabajo presenta una investigación descriptiva transversal, que según Danhke "busca especificar las propiedades, las características, y los perfiles de personas, grupos, comunidades, procesos, objetos o cualquier otro fenómeno que se someta a un análisis" (Hernández Sampieri, 2008).

El presente trabajo se trata de la primera etapa de una investigación de campo longitudinal que tiene por objetivo describir las características de las Micro, Pequeñas y Medianas empresas (MiPyMe) en una colonia (Región 101) de Cancún, México. A fin de identificar la ubicación y número de microempresarios instalados en la región 101. Se realizó un censo de uso del suelo comercial en esta región. Para ello se utilizó una cédula cuyo propósito fue el identificar los siguientes datos: Nombre del microempresario, Nombre comercial del negocio, Giro, Tamaño del negocio, Apariencia general del negocio, Actitud del microempresario hacia la mejora de su negocio.

Marco De Referencia

El Municipio de Benito Juárez, se encuentra ubicado en la parte norte del estado del estado de Quintana Roo, que con una superficie de 1,664 Km² ocupa el 3.27% del territorio del estado. Al año de 2009, el PIAMPI estima la población de Cancún en unos 700,000 habitantes. Esta población habita en 205 áreas urbanas, en que está dividida la ciudad. Estas áreas se denominan "supermanzanas" o "regiones" y su nomenclatura es numérica, aunque irregular. Ahora bien, descontando las dos áreas hoteleras, que son, predominantemente, de uso turístico. El resto o 203 regiones, presentan diferencias urbanas y socio-económicas muy marcadas.

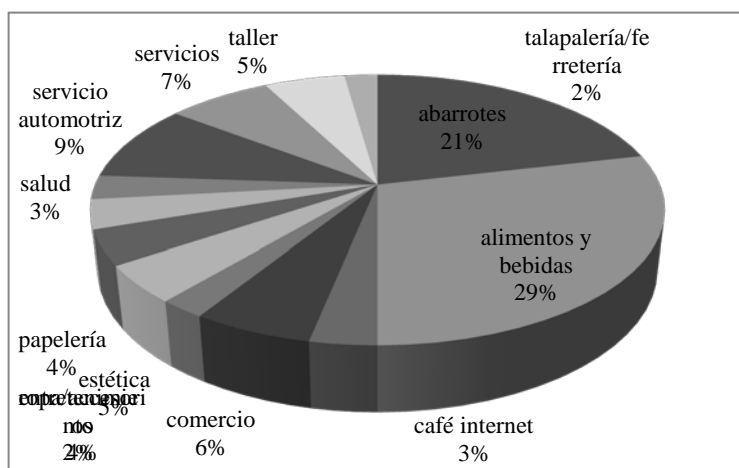

La región 101, objeto de nuestra investigación, está ubicada en la zona noroeste de la ciudad de Cancún. Siendo una de las denominadas regiones, presenta un bajo nivel de urbanización, tanto en lo concerniente a la falta de pavimentación en calles y banquetas, como en lo concerniente al tipo de casa – habitación

predominante. El Plan Director de Desarrollo Urbano de Cancún (PDDU, 2005), establece que la superficie territorial de la región 101 es de 47.77 hectáreas y su uso del suelo esta destinado, predominantemente, para habitación unifamiliar y comercio de barrio. La población que habita la región 101, es según el PDDU, de 11 mil 130 habitantes, que representa el 2% de la población de la ciudad. En cuanto al nivel de ingresos de la población que habita la Región 101, el mismo PDUC los clasificó como nivel D+, es decir con un ingreso mensual de entre \$ 6,800 y 11,599 pesos, de acuerdo a los niveles AMAI. Por último, cabe señalar que la Región 101, constituye una de las 10 Regiones más violentas y necesitadas de programas de acción para contribuir al desarrollo de esa población.

RESULTADOS: PRESENTACIÓN Y ANÁLISIS

Mediante la cédula se encontraron en la Región 101 un total de 349 micro y pequeñas empresas. Que se presentan en la Figura 2: Censo de MiPyMe's en la Región 101, Cancún Qroo. Cabe destacar que en la Región no se encontraron organizaciones medianas o grandes salvo las escuelas primarias, secundarias y organizaciones gubernamentales de la zona. Del total de las 349 empresas, 50% corresponde a negocios de Alimentos y Bebidas así como Abarrotes/Minisuper. Cabe destacar que un alto porcentaje de dichos negocios comercian con bebidas alcohólicas, principalmente la cerveza. (Ver Figura 1)

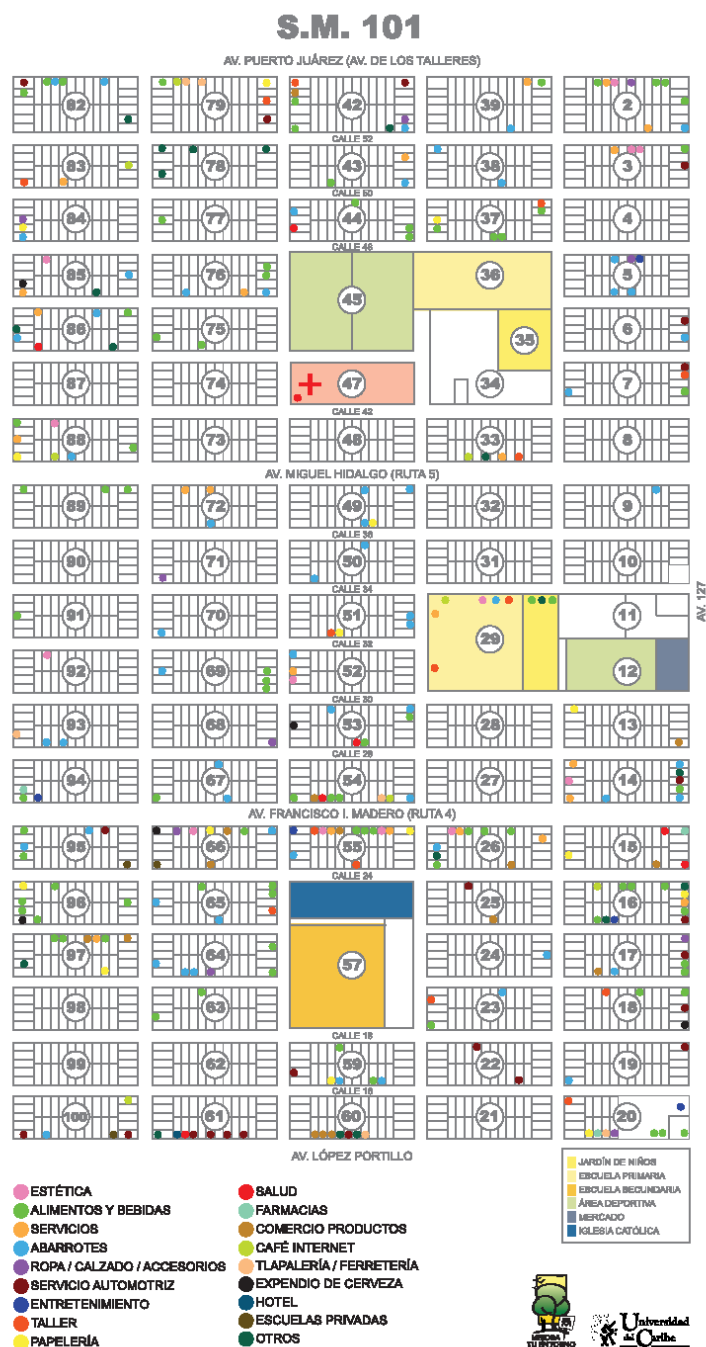

Figura 1: Distribución por Giro de MiPyMe de la Región 101

Esta figura muestra la enorme participación de los negocios de alimentos y bebidas, así como Abarrotes o Minisuper que presenta la Región.

Otro dato que llamó la atención es que el 29% de los negocios no tienen ni siquiera nombre comercial. Esto nos habla de la informalidad en que operan dichos negocios. En este aspecto, también fue significativo encontrar que de los negocios con nombre comercial, el 41% tienen un nombre propio (ya sea apellido o nombre de pila) que en su generalidad tiene relación con el dueño y/o su familia. Por último un dato que merece mención es que el 32% de los encuestados mencionaron no tener interés para recibir asesorías y/o capacitación gratuita para sus negocios, mientras que el 68% restante mostró interés.

Figura 2: Censo de MiPyMe's en la Región 101, Cancún Q.Roo

Esta figura muestra las manzanas y lotes de la Región 101. Se indican en ella las MiPyMe's que se encontraron y el giro al que pertenecen.

CONCLUSIONES

En la presente investigación se cumple con el objetivo de describir las características de las MiPyMe de la Región 101 de Cancún. A partir de estos resultados se continuará la investigación a una segunda etapa donde se identificarán las aportaciones de dichas MiPyMe al Índice de Desarrollo Humano de los microempresarios y sus familias.

Por último cabe mencionar que en el caso de México, como ya se ha mencionado, las MIPyMES constituyen más del 90% de las empresas y por tanto una fuente estratégica en la generación de empleos e ingresos del país. El impulso a la competitividad de las empresas mexicanas representa una estrategia de largo aliento de combate a la pobreza y a favor del desarrollo humano.

RESUMEN

Actualmente, las organizaciones cuyos objetivos son la alta productividad, excelencia en la gestión y aumento significativo en los resultados y la generación de un adecuado ambiente laboral, basan su éxito en la competitividad organizacional misma que propicia condiciones de aprendizaje continuo para diseñar estrategias flexibles e integrales que permitan una rápida adaptación al entorno respetando la filosofía empresarial. El objetivo de este proyecto fue identificar el estado actual de una empresa en términos de indicadores de competitividad. Treinta y seis colaboradores de un total de 180 fueron encuestados siguiendo la metodología propuesta por Consulting Club y considerando factores críticos de éxito como cultura organizacional; nivel de concientización, toma de decisiones, nivel de conceptualización de la calidad y visualización del entorno externo competitivo. Los resultados obtenidos demostraron la falta de un plan de desarrollo integral a mediano y largo plazo así como la carencia de sistemas operativos y administrativos e identidad del personal con la empresa. La generación del diagnóstico de competitividad motivó la implementación de las acciones correctivas pertinentes a través de cursos de capacitación, talleres de trabajo en equipo e identificación de prácticas operativas en empresas líderes en su ramo; lo que permitió alcanzar niveles de competitividad significativamente superiores.

INTRODUCCIÓN

En el ámbito internacional de la economía actual, las organizaciones con mayor madurez prevalecen en términos de continua preferencia dentro de su mercado incluso sobre aquellas con mayor antigüedad y número de colaboradores; dicha característica puede reflejar la capacidad de la empresa en aspectos como la alta productividad, excelencia en la gestión, aumento significativo en los resultados de negocio y la generación de un adecuado ambiente laboral, mismos que le permiten competir satisfactoriamente. La competitividad organizacional engloba todos estos aspectos y propicia condiciones de aprendizaje continuo para diseñar estrategias flexibles e integrales que permitan una rápida adaptación al entorno respetando la filosofía empresarial. En los últimos años, la competitividad de la economía mexicana ha tenido un rezago importante (Guzmán et al., 2007); de acuerdo con IMCO (2006) en el año 2004, México se ubicó en el lugar 31 de 45 países evaluados (dos posiciones por arriba de China) siguiendo los indicadores propuestos por el Foro Económico Mundial (World Economic Forum) y el International Institute for Management Development. En el año 2008 (SUL, 2008), China subió hasta el nivel medio-alto desde el nivel medio-bajo anterior, situándose en el puesto 34 a nivel mundial, después de Chile (26), y seguida por México (52) y Brasil (72). Ante esta situación y como consecuencia del fenómeno de la globalización, resulta indispensable incorporar no sólo a las empresas transnacionales sino a la industria mediana y pequeña a la alta competitividad para conquistar y mantener mercados a nivel local, nacional e internacional.

El diagnóstico de competitividad es una herramienta para la implementación de cambio organizacional (Alannah et al., 2001; Andersen, 1998) y ayuda, a través de indicadores, a detectar las fortalezas y

debilidades de la empresa, así como las oportunidades y amenazas que existen dentro de su mercado. Así, el objetivo de este proyecto fue identificar el estado actual de una agroindustria en términos de indicadores de competitividad y la implementación de acciones que favorezcan el incremento significativo de sus niveles competitivos.

METODOLOGIA

Para evaluar el nivel de madurez competitiva actual así como su evolución después de la implementación de estrategias de cambio, se consideró la metodología propuesta por Consulting Club (1995) la cual incluye 112 indicadores agrupados en los 7 elementos de administración principales que se presentan en la Tabla 1.

Tabla 1. Indicadores del diagnóstico de competitividad organizacional

Elemento	Indicadores principales
Cultura organizacional.	Misión, filosofía, valores, normas, políticas, productos, compromisos y objetivos.
Nivel de concientización, integración, compromiso, participación con la organización y concepto de cliente interno y externo.	Confianza, credibilidad, orden, disciplina, seguridad, delegación de responsabilidades, deseo de logros y perfección, aportación de conocimientos, autocontrol y conceptualización de tipos de clientes.
Nivel y estilo de comunicación y toma de decisión.	Nivel de comunicación interna, detección de necesidades para un mejor desempeño, deseo de cambio e innovación para la perfección, conocimiento de manual operativo, sistemas de ventas y comercialización, sistema de detección de necesidades del cliente, sistema de mejora continua.
Nivel y desarrollo del potencial organizacional.	Madurez de la estructura organizacional, experiencia industrial, nivel académico de la organización, programa de educación básico de cultura de la organización, programa de clima organizacional, programa de desarrollo profesional.
Nivel de conceptualización de la calidad y la productividad.	Programa de calidad total, auditoría del sistema operativo de calidad, concientización de la calidad y productividad.
Visualización del entorno externo competitivo	Matriz competitiva (reputación, precio, cartera de productos, rapidez de entrega, costo de tecnología), porción del mercado por competidor (participación en mercado nacional e internacional).
Nivel de conocimiento de posición competitiva	Conceptualización de ventajas competitivas, conocimientos de competidores, mercado potencial total, detección de necesidades del mercado, detección de oportunidades y amenazas, proyección del mercado potencial.

La escala de interpretación a seguir durante el diagnóstico se presenta en la tabla 2.

Tabla 2 Escala de interpretación de indicadores

Rango	Observaciones
0.00-10.00%	Pésimo
10.01-30.00%	Muy malo
30.01-40.00%	Malo
40.01-60.00%	Regular
60.01-70.00%	Bueno
70.01-90.00%	Muy bueno
90.01-100.00%	Excelente

Debido a la importancia y alcance del diagnóstico, su aplicación y análisis fue elaborado en coordinación con el equipo directivo de la empresa. La generación de resultados fue obtenida mediante el siguiente procedimiento (Álvarez Torres, 1998; Cruz, 2001):

1. La utilización del instrumento de evaluación (Aplicación de la encuesta; validación de indicadores)
2. Selección de la muestra. (Treinta y seis colaboradores de un total de 180 fueron encuestados)
3. Aplicación de la encuesta. (Programa de aplicación óptima de encuestas)
4. Jerarquización indicadores. (Asignación de valor cuantitativo basado en su importancia)
5. Obtención y evaluación de resultados obtenidos. (Detección del nivel actual de competitividad)
6. Establecimiento de estrategias y acciones correctivas.

RESULTADOS

En la Tabla 3, se resumen los resultados obtenidos del total de encuestas aplicadas. Con base en el paso tres del procedimiento; la selección de la muestra consideró colaboradores de tres diferentes niveles de la empresa; gerencia, supervisores y colaboradores. Una vez establecidos los criterios de evaluación para cada uno de los indicadores se definieron niveles o calificaciones máximas alcanzables para cada elemento de administración. Como se aprecia todos los indicadores presentaron niveles extremadamente bajos de cumplimiento (muy malo), destacando por su bajo nivel elementos como nivel de conceptualización de la calidad– productividad (11.9%), el cual implica la aplicación de una estrategia competitiva que engloba el proporcionar productos de calidad a bajo costo. También, se detectó la carencia de un apropiado clima de trabajo que permita lograr la participación voluntaria y el compromiso de todos sus integrantes con la organización (17.57%). Cabe destacar que el resto de los elementos evaluados (excepto el nivel y desarrollo del potencial organizacional) están por debajo de un 30% de cumplimiento incluso se detectó que la visualización del entorno externo competitivo tuvo un porcentaje apenas superior al 14% y, considerando que sólo fueron incluidos dos indicadores de competitividad, es clara la falta conocimiento acerca de los mercados potenciales y sus necesidades por cubrir. El nivel y desarrollo del potencial organizacional fue el único elemento que alcanzó un porcentaje regular de cumplimiento (60.33%) lo que refleja una mediana habilidad del personal para generar productos de excelencia.

Tabla 3. Resumen de resultados del diagnóstico

Elemento	Número de indicadores	Máxima calificación a alcanzar	Calificación obtenida	Porcentaje de cumplimiento
Cultura organizacional	11	1100.00	279.02	25.37
Nivel de concientización, integración, compromiso y participación con la organización	18	1800.00	316.24	17.57
Nivel y estilo de comunicación y toma de decisiones	37	3700.00	994.03	26.87
Nivel y desarrollo del potencial organizacional	15	1500.00	905.00	60.33
Nivel de conceptualización de la calidad-productividad	15	1500.00	178.45	11.90
Visualización del entorno externo competitivo	2	200.00	28.55	14.28
Nivel de conocimiento de la posición competitiva	14	1400.00	332.33	23.74
Total	112	11,200	3033.63	25.72

Ante este panorama se consideró en conjunto con el equipo directivo de la empresa aplicar e implementar acciones correctivas de cambio de la situación actual predominante. Así, se elaboraron y programaron

cursos de capacitación, talleres de trabajo en equipo e identificación de prácticas operativas en empresas líderes en su ramo. Después de un periodo de 90 días de operación con las nuevas estrategias corporativas, los mismos indicadores fueron nuevamente evaluados. Los resultados obtenidos se presentan a continuación en la Tabla 4.

Resulta evidente el hecho de que la implementación de acciones correctivas en los principales elementos e indicadores que conformaron el diagnóstico de competitividad tuvo como resultado un incremento cuantitativamente significativo. Como se aprecia en la Tabla 4, de los siete elementos administrativos atendidos, 4 de ellos lograron pasar de un nivel muy malo a un nivel regular; los niveles de desarrollo del potencial organizacional y el nivel de conocimiento de la posición competitiva lograron calificaciones correspondientes a un nivel muy bueno (> 70.01%). Es importante resaltar que el nivel de concientización, integración, compromiso y participación con la organización obtuvo un porcentaje de cumplimiento de sólo el 32.31% lo que lo situó en la más baja posición de mejora; lo anterior se puede atribuir a la resistencia al cambio del recurso humano principalmente en áreas no pertenecientes a la gerencia y supervisores.

Tabla 4 Resumen de resultados del diagnóstico después de la implementación de acciones correctivas

Elemento	Número de indicadores	Máxima calificación a alcanzar	Calificación obtenida	Porcentaje de cumplimiento
Cultura organizacional	11	1100	493.70	44.88
Nivel de concientización, integración, compromiso y participación con la organización	18	1800	581.53	32.31
Nivel y estilo de comunicación y toma de decisiones	37	3700	1600.78	43.26
Nivel y desarrollo del potencial organizacional	15	1500	1348.42	89.89
Nivel de conceptualización de la calidad-productividad	15	1500	839.21	55.95
Visualización del entorno externo competitivo	2	200	105.39	52.70
Nivel de conocimiento de la posición competitiva	14	1400	986.69	70.48
Total	112	11,200	5955.72	53.18

CONCLUSIONES

Con base en los resultados obtenidos se pudo determinar que antes del diagnóstico de competitividad la organización se encontraba en una etapa de calidad no competitiva (convencional), lo anterior reflejado en: la carencia de sistemas operativos y administrativos, falta de un plan estratégico, bajos niveles de capacitación y entrenamiento de personal. El procedimiento de evaluación de la competitividad permitió establecer acciones de cambio significativo en la organización. En efecto, el resultado global de competitividad, inicialmente 25.72%, se incrementó en aproximadamente un 106%, obteniendo un valor final de 53.18% que se aproxima a indicadores considerados como regulares y que representan un cambio importante en el corto plazo.

Con base en la experiencia adquirida durante el presente proyecto, se destacó la importancia de la concientización de cada empresa y sus niveles de competitividad con los que regularmente opera, ya que con ellos se pueden generar estrategias que la conduzcan por mejores directrices dentro de mercados cada día más exigentes. La importancia de la técnica empresarial diagnóstico de competitividad radica en que con su aplicación se puede contribuir a mejorar las debilidades y afianzar las fortalezas de la

organización. La agroindustria, motivo objeto de este proyecto elevó significativamente sus niveles de competitividad y se proyecta actualmente como una organización en crecimiento y mejora continuos.

EL ENTORNO ECONÓMICO DE MÉXICO Y SUS VARIABLES, PROPUESTA DE UN MÉTODO QUE PERMITA ANALIZAR SU SITUACIÓN ECONÓMICA A TRAVÉS DE SUS PRINCIPALES INDICADORES

César Sánchez Ocampo, Universidad Autónoma De Baja California
 Lourdes Alicia González Torres, Universidad Autónoma De Baja California
 Jesús Francisco Gutiérrez Ocampo, Universidad Autónoma De Baja California

RESUMEN

El entorno económico de México debe analizarse con un sistema integral que nos permita identificar las variables más importantes y así, poder obtener un diagnóstico efectivo. El análisis que planteamos en este trabajo está desarrollado de tal forma que revisa, analiza y sugiere una recomendación de la información obtenida de los siguientes temas: Política Fiscal el cual incluye análisis del presupuesto de ingresos y egresos del 2008, tomando los siguientes temas en especial: educación, programa de atención a zonas marginadas, campo mexicano y el TLCAN en el sector agrícola, inversión en infraestructura, Pemex, desarrollo social y seguridad pública. En otro sentido también se analiza el tema de Balanza de pagos ofreciendo un panorama de las cuentas que la integran y sus posibles implicaciones. Y para terminar se analiza el entorno económico nacional donde se toman algunos temas de mayor interés actual debido a su influencia en nuestra economía, entre los cuales se encuentran los siguientes: Posible recesión de Estados Unidos, Caída de las Bolsas de Valores, Recorte de las tasas de interés de la FED, Reforma energética en México, y el IETU.

PALABRAS CLAVE. Entorno económico, Política fiscal, Balanza de pagos, Economía mexicana, Recesión.

ECONOMIC ENVIRONMENT OF MEXICO AND VARIABLES, OFFER A METHOD FOR ANALYZE YOUR SITUATION THROUGH ITS ECONOMIC INDICATORS MAIN

ABSTRACT

The economic environment in Mexico should be discussed with a comprehensive system that allows us to identify the most important variables and thus to obtain an effective diagnosis. The analysis we propose in this paper is developed in such a way that reviews, analyzes and suggests a recommendation from the information obtained from the following subjects: Fiscal Policy, which includes analysis of income and expenditure budget of 2008, taking the following subjects in particular education, care program for poor areas, rural Mexico and NAFTA on the agricultural sector, infrastructure investment, PEMEX, social development and public safety. In another sense also discussed the issue of balance of payments by providing an overview of the accounts that comprise and their possible implications. And finally analyzes the domestic economic environment where you take some current topics of major interest because of their impact on our economy, among which are the following: Possible U.S. recession, Fall of the Stock Exchanges, Clipping the interest rates from the Fed, energy reform in Mexico, and the Flat Tax.

KEYWORDS. Economic, fiscal policy, balance of payments, Mexican Economy, Recession.

FACTORES QUE INFLUYEN EN LA COMPRA DE VINO EN USUARIOS DE PÁGINAS WEB DE BODEGAS

Jesús Pastor Tejedor, Universidad de Zaragoza

Luis Navarro Elola, Universidad de Zaragoza

Ana Clara Pastor Tejedor, Universidad de Zaragoza

KEYWORDS: Marketing estratégico, Ecuaciones Estructurales, Comercio electrónico, sector del vino

INTRODUCTION

En este estudio se analiza los factores que influyen en el uso de Internet para comprar, al igual que en los demás países de la Unión Europea, en España el comercio electrónico no ha parado de crecer desde 2004, pero lo ha hecho a un ritmo menor que el promedio de los demás países. Debido principalmente a la desconfianza a la hora de proporcionar datos personales y bancarios a través de la web. A pesar de esto, España es uno de los veinte países con más usuarios de Internet, según datos de 2007. Ocupa el número catorce y representa el 1,8% del uso mundial, lo que equivale a un 42% de la población nacional. Aproximadamente, veinte millones de españoles usan Internet, sin discriminar aquí usos personales o empresariales.

Internet se expande cada día y su uso alcanza cada vez horizontes más lejanos. Uno de los objetivos más comunes de los últimos años con los que se emplea Internet es para comprar, intercambiar información, hablar... se hace uso de esta ventaja de manera más común, pero aún así, existen reticencias o falta de confianza hacia “destaparse”, es decir, a ceder parte de los datos personales o financieros que el uso con estos fines de Internet implica. Se analizará como influye la confianza, la usabilidad de un sitio web, la seguridad, la satisfacción del consumidor y el compromiso en un sector muy importante para España como es el sector del vino.

Numerosos estudios de toda la segunda mitad del siglo XX definen el término confianza desde diversos puntos de vista y apuntan definiciones con peculiaridades propias de cada uno. Se analizará según la perspectiva del Marketing, calidad y las características del comercio electrónico. El concepto de confianza ha sido ampliamente estudiado por los expertos para descubrir cómo influye a la hora de realizar transacciones electrónicas. De la misma manera, otros aspectos tales como la seguridad percibida por el usuario a la hora de gestionar sus datos, la satisfacción del cliente en experiencias anteriores e incluso la usabilidad de la página se relacionan estrechamente con esta confianza y predisposición a hacer uso de Internet para realizar compras.

Las variables del estudio son: la confianza, teniendo en cuenta tres factores que la definen: la honestidad y benevolencia y competencia percibida por parte de consumidor, la satisfacción del consumidor, la usabilidad del sitio web, la seguridad en el tratamiento de datos privados, el compromiso y la intención de compra del vino a través de Internet. Para ello se estudia cuándo y en qué condiciones un consumidor que visita páginas web donde puede comprar vino y realizar dicha compra online o, al menos, se siente motivado para ello con el fin de poder diseñar una estrategia diferenciada de otros productos para las empresas que lo comercializan.

METODO

Se realizó un formulario siguiendo las hipótesis del trabajo con una la escala Likert de siete puntos. Los encuestados debían elegir un sitio web que manejaran con relativa frecuencia relacionada con el vino y

que hubiesen comprado dicho producto alguna vez a través de él para fijarse en la citada página cuando respondiesen a las preguntas.

Se envió la encuesta diseñada a diversos portales de Internet que la colgaron en su web. Por otro lado, se distribuyó entre varias bodegas del Somontano y de La Rioja, las cuales la difundieron por medio del correo electrónico a los clientes de su base de datos. Finalmente, se remitió adjunta a todo el personal de la Universidad perteneciente al Campus Río Ebro a través del correo electrónico. El formato de la encuesta constaba de dos pestañas: una para cumplimentar la encuesta propiamente dicha y otra para aportar datos de carácter más personal tales como edad, estudios realizados, lugar de procedencia, frecuencia de compra, etc.

El proceso consistía en descargarse la encuesta desde el mail recibido o desde el sitio web donde aparecía colgada, rellenarla debidamente y adjuntarla en un correo para remitirla a una dirección creada expresamente en gmail para llevar a cabo este estudio.

Se recibieron 102 encuestas rellenas durante el plazo establecido para la recepción de las mismas (mes de abril). Todas ellas se recibieron correctamente y no hubo problemas con lecturas de archivos con formatos en versiones incompatibles, ni de ningún otro tipo. Debido a la sensibilidad mostrada por la metodología de modelos de ecuaciones estructurales a la presencia de datos ausentes, el análisis de éstos fue meticuloso; no obstante, todas las encuestas estaban debidamente cumplimentadas, con lo cual no hubo que realizar ningún análisis previo de este tipo de datos.

En primer lugar, todos los consumidores residían en España. En su mayoría eran hombres (60%) y el rango de edad en el que se encontraban era de 25 a 44 años. Por lo general, el nivel de formación que posee el encuestado es universitario, la experiencia en el uso de Internet es de más de cinco años y los accesos a Internet bastante frecuentes (varias veces al día). Sin embargo, la frecuencia con la que el propio encuestado considera que compra vino a través de Internet es, a pesar de hacerlo, baja.

RESULTADOS

Una vez se recibieron los cuestionarios y se revisaron para su comprobación, los datos fueron elaborados para pasar a ser tratados. Se procedió a la validación de las escalas inicialmente propuestas para la medición de las variables componentes del modelo de investigación.

Se efectuaron primeramente una serie de análisis exploratorios de fiabilidad. Estos análisis estuvieron caracterizados por el uso del indicador alpha de Cronbach y la correlación ítem total.

En segundo lugar, las escalas fueron sometidas a varios análisis exploratorios de dimensionalidad con el objetivo de depurar aquellos ítems que aún presentaban niveles de convergencia bajos o que poseían una capacidad explicativa reducida del constructo sobre el que cargaban. Esta estrategia permitió la depuración de ítems hasta alcanzar niveles de ajuste suficientemente altos con los que trabajan los modelos confirmatorios que posteriormente se utilizarían.

En la tabla 1 se muestran los resultados definitivos con los que pasaremos a la siguiente fase de análisis. Han sido obtenidos después de realizar las depuraciones pertinentes. (Se ha eliminado usab5, conf1 y conf2)

Tabla 2: resultados de los análisis exploratorios definitivos

APLICACIÓN DEL MODELO ECUACIONES ESTRUCTURALES

Para aplicar la metodología de las ecuaciones estructurales, se debe evaluar la fiabilidad, dimensionalidad y validez del modelo de medida, tareas que se realizan en base a un Análisis Factorial Confirmatorio global.

A continuación (tabla 2) se muestran los resultados definitivos obtenidos después de realizar las depuraciones pertinentes (se ha eliminado conf6 e inten4).

Tabla 2: resultados de los análisis confirmatorios definitivos

Ítem	Criterio de convergencia débil		Criterio de convergencia fuerte	R2
Usabilidad				
usab1			0,879	0,773
usab2	12,760	17,659	0,876	0,767
usab3	13,747	17,062	0,906	0,820

La validez del modelo de medida se consigue cuando el modelo mide realmente lo que el investigador pretende. Se analiza la validez de contenido, convergente y discriminante.

De contenido:Respecto a la validez de contenido, las escalas utilizadas se pueden considerar válidas al estar basadas en la teoría existente.

Convergente:La medición de la validez convergente se puede realizar a través del Bentler-Bonett Non Normed Fit Index (BBNNFI), que, como ya se ha dicho, tiene un valor cercano a 0,9. Además, la tabla 3 muestra otros índices que exige la comprobación de esta validez.

Tabla 3: índices para comprobar la validez convergente

Índice	Valor aceptable
Cargas estandarizadas	Mayor o igual que 0,4
AVE	Mayor o igual que 0,5
FCC	Mayor o igual que 0,7

El cálculo de la AVE y la FCC se corresponde con las expresiones siguientes. Los resultados se observan en la tabla 4.

$$AVE = \frac{\sum_{i=1}^n \lambda_i^2}{\sum_{i=1}^n (\lambda_i^2 + \varepsilon_i)} \quad FCC = \frac{(\sum_{i=1}^n \lambda_i)^2}{(\sum_{i=1}^n \lambda_i)^2 + \sum_{i=1}^n \text{var}(\varepsilon_i)}$$

Discriminante: Por último, existe validez discriminante si los coeficientes de correlación no superan el valor de 0,8 y si al calcular el intervalo de confianza (IC) como se indica en la fórmula que vemos a continuación, el valor 1, no está incluido en ninguno de ellos.

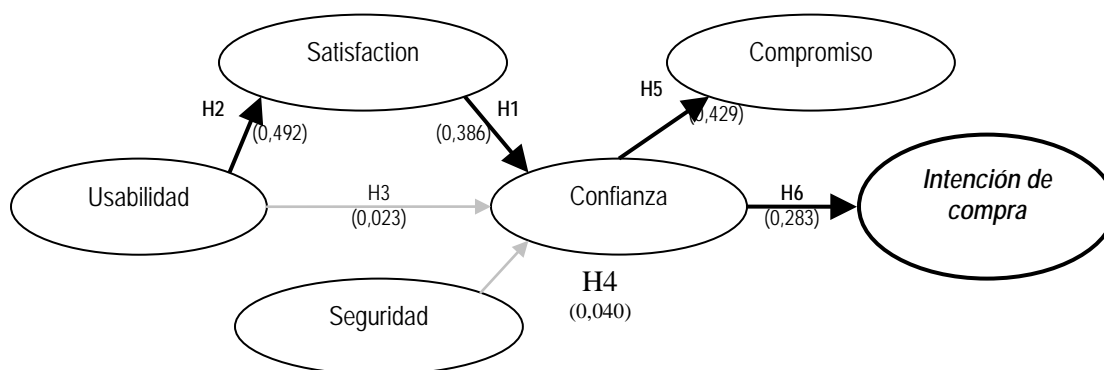

Tabla 5: correlaciones e intervalos de confianza para parejas de variables

Variables relacionadas		Correlación	Desviación típica	IC	
F1-F2	Usabilidad-Satisfacción	0,223	0,035	0,154	0,292

ANÁLISIS CAUSAL DEL MODELO

En la figura se muestran las ecuaciones interpretadas, es decir, con el nombre de las variables y el coeficiente que las relaciona. Aparecen destacadas las relaciones que consideramos significativas (coeficiente mayor que 0,3, aproximadamente) y la hipótesis que se acepta; por eliminación, en las relaciones no destacadas se rechaza la hipótesis correspondiente.

Figura 1: resultados de las ecuaciones interpretados

Se observa cómo la confianza está influenciada en mayor medida por la satisfacción (aceptamos H1), pero casi nada por la usabilidad (rechazamos H3) ni por la seguridad (rechazamos también H4). Sin embargo, la usabilidad afecta de manera indirecta en la confianza, ya que destaca la influencia que tiene en la satisfacción (aceptamos H2). Finalmente, la confianza influye tanto en el compromiso como en la intención de compra (aceptamos H5 y H6).

CONCLUSIONES

En vista de los resultados del estudio se puede afirmar, que el vino es un producto que, por el momento, tiene muy poca venta por Internet.

Se puede interpretar este resultado de dos maneras: como una falta de confianza en Internet a la hora de comprar, pero de manera general; es decir, que no importa el producto, ya que, como defiende la literatura, España es uno de los países con el comercio electrónico menos desarrollado de la UE y sus habitantes de los menos confiados al respecto. Ante esta situación, las empresas poco pueden hacer salvo esperar un cambio cultural en la población que desemboque en un cambio de mentalidad respecto a las nuevas tecnologías para que sean aceptadas con menos recelo, sin olvidar que un esfuerzo por su parte, hará que este cambio sea más rápido y eficaz.

Si se considera en cambio, que el resultado ha sido así por tratarse de este producto en concreto y analizamos en las causas que provocan este recelo, quizás la más refrendada sea el hecho de que es un producto que necesita unas condiciones especiales en su manipulación y en el transporte hasta el domicilio se corra el riesgo innecesario de que pueda salir perjudicado. Otro de los motivos más aceptados es que es un producto alimenticio y, en general, este sector es un sector más “atrasado” en la venta online que otros.

De cualquier forma, Internet es un canal de venta que día a día va cobrando importancia y fortaleciéndose, sin decir con esto que sea mejor, ni sustitutivo de los canales de venta tradicionales. Si nos fijamos en las conclusiones extraídas del modelo estudiado, hay un camino que favorece tanto el compromiso como la intención de compra a través de Internet y es la usabilidad, que desemboca en mayor satisfacción al navegar y fomenta la confianza del consumidor. La página web es el escaparate que cualquier empresa muestra a sus clientes a través de Internet. El estudio revela que un diseño cuidado, la inclusión de foros de opinión donde intercambiar experiencias sin tener que salir de la propia página y de espacios donde sugerir a la propia empresa sin necesidad de tener que recurrir al correo electrónico son aspectos que mejoran la usabilidad. Así mismo, resulta más agradable y ordenado un sitio web donde saber en cada momento donde se está, con un sistema de pestañas o niveles visible para poder saltar de uno a otro desde cualquier punto de la navegación.

Además, este aspecto mejorará de manera indirecta tanto las ventas a través de otros canales como la propia imagen de la empresa, porque el hecho de que no se compre a través de la web no significa que no se tome información de ahí; de hecho, muchos consumidores tradicionales utilizan Internet como principal fuente de información antes de realizar sus compras.

Como ha revelado el estudio, la confianza influye además en el compromiso con la empresa y esto repercute en el rendimiento de la misma, sea por el medio y motivo que sea, de manera que se puede concluir, que potenciar la imagen de la empresa en Internet así como incluirlo como canal de venta junto a los tradicionales, tendrá importantes resultados, a medio – largo plazo.

Entre las futuras líneas de investigación cabe señalar la realización de un contraste del estudio realizado a una muestra de mayor tamaño y más experimentada en la compra de vino por Internet, ya que se ha visto que en un 70% de los encuestados la frecuencia de compra de vino online no había sido muy alta.

En segundo lugar, se plantea, como superación a una de las limitaciones observadas en la presente investigación, la réplica del estudio en otros países (Francia o Italia, donde el vino es un producto importante, por ejemplo) para comparar los resultados y comprobar si la confianza online enfocada al mismo producto es comparativamente superior e investigar las causas de esta diferente situación.

En tercer lugar y como complemento al presente estudio u otros futuros similares, resultaría interesante estudiar minuciosamente el perfil de la gente que habitualmente compra vino a través de Internet y valorar sus gustos y sugerencias respecto a las web que visitan, ya que como se ha comprobado, la usabilidad tiene una repercusión importante, tanto en la satisfacción como en la confianza. En base a esto diseñar una web adaptada a dichas sugerencias.

En cuarto y último lugar, ligado en cierto modo con la opción anterior –puesto que el estudio sería de gran importancia–, se podría hacer un plan de viabilidad para una bodega que quiera potenciar este canal de venta de su producto, valorando las diferentes estrategias que puede adoptar para fomentar la venta de su vino a través de Internet.

PROCURACIÓN DE MATERIA PRIMA. SU CORRECTO SEGUIMIENTO EN UN SISTEMA ELECTRÓNICO PARA REDUCIR GASTOS EXTRAS EN LA TRANSPORTACION DEL PRODUCTO

Irma Leticia Morales, Instituto Tecnológico de Ciudad Juárez
Alberto Cárdenas Valenzuela, Instituto Tecnológico de Ciudad Juárez
Mary Azul Nafarrate Salomón, Instituto Tecnológico de Ciudad Juárez

RESUMEN

El presente trabajo es un estudio cuantitativo no experimental transeccional tipo correlacional – causal. Se analizan cambios ocurridos en la variable independiente (control de procuración de materiales) en relación con la variable dependiente (numero de arneses enviados tarde a causa de retraso del material). La empresa investigada en este estudio de caso fue una maquiladora dedicada al mercado automotriz, contando dentro de ella con el departamento de abastecimiento de materias primas. El Departamento presenta fallas en el abastecimiento de materias primas para la fabricación de arneses prototipo automotriz, ya que no cuenta con un debido sistema que controle el seguimiento del material. Actualmente la maquiladora objeto de estudio no está mostrando con la suficiente claridad el seguimiento y tiempo de entrega de los materiales. Este flujo crea confusiones al momento de revisar el material recibido y el solicitado y ocurriendo en algunos casos que se produzca duplicidad en el pedido, también dificulta el proceso para la toma de decisiones para el área de ventas, ya que la obtención de la información es tardía y/o incorrecta y demerita el servicio ofrecido al cliente. Los resultados obtenidos recomiendan incluir el sistema electrónico interno al área de procuración de material para que el seguimiento de las materias primas sea más exacto y se pueda con ello reducir el costo extra en la transportación del producto terminado.

PALABRAS CLAVE: procuración de materia prima, sistema electrónico, reducción de costos

INTRODUCCIÓN

Un entorno altamente competitivo demanda procesos con tiempos de ciclos más cortos, mejor aprovechamiento de recursos, y un manejo de información ágil y confiable para que las empresas proveedoras de productos y servicios puedan competir y convertirse en líderes en el segmento de la industria en el que se desarrollan. (Ochoa, 2004) La nueva configuración de la industria también demanda empresas que sean innovadoras no solamente en sus productos y servicios, sino también en los procesos internos donde existen más oportunidades de llevar a cabo estudios para lograr ventajas competitivas que nos permitan el éxito en las organizaciones.

Una de las estrategias competitivas para la industria maquiladora automotriz a nivel internacional es el tener una optimizada cadena de suministros, ya que, los insumos justo a tiempo proporcionan en gran medida un mercado satisfecho. Muchos cambios están ocurriendo a nivel mundial, exigiendo una nueva postura por parte de las organizaciones y la información es crucial para el desempeño de la cadena de suministro porque constituye la base sobre la cual los gerentes toman decisiones. La tecnología de la información consta de herramientas que se emplean para conocer la información, analizarla y ejecutar acciones basadas en esta para mejorar el desempeño de la cadena de suministro. (Chopra, Mendl, 2008). Cabe mencionar que el campo de estudio de la presente investigación fue el eslabón de la procuración de las materias primas, siendo el objetivo general de esta investigación el analizar y demostrar el impacto que produce el tener un sistema electrónico único de control interno como herramienta competitiva para

llevar el correcto seguimiento en la procuración del material en una empresa arnesera, productora de manufactura internacional. Siendo esto la manera de mantener y mejorar la competitividad de la industria maquiladora automotriz a nivel internacional nivel internacional. (Ochoa, 2004). A continuación se presenta la revisión de la literatura más relevante, la metodología utilizada así como la recolección de datos, el análisis de los resultados y finalmente las conclusiones y recomendaciones para futuras investigaciones.

REVISIÓN DE LITERATURA

El concepto de la cadena de suministro es muy importante hoy en día; este es un término que surgió en la década de los 80, pero es hasta principios de los 90's que las organizaciones empiezan a considerar que, administrar exitosamente sus cadenas de suministro es determinante para incrementar su competitividad. (Cobas-Flores & Mata, 2008) La palabra "cadena" implica una serie de organizaciones lineales, pero en la práctica las organizaciones están involucradas en una "red", por lo cual este término debería ser utilizado en lugar de cadena. Por otro lado, el término "suministro" implica el flujo y relaciones en una sola dirección y sentido, pero realmente las empresas tienen flujos y relaciones cliente-proveedor, es decir, en ambos sentidos, por lo que el término "relaciones clientes-proveedor" o "relaciones entre miembros logísticos" debería ser utilizado en lugar de suministro. (Cobas-Flores & Mata, 2008).

Tal como lo citan Chopra y Meindl (2008). Una cadena de suministro está formada por todas aquellas partes involucradas de manera directa o indirecta en la satisfacción de una solicitud de un cliente. La cadena de suministro incluye desde el fabricante y proveedor hasta a los transportistas, almacenistas, vendedores al detalle e incluso a los mismos clientes. Una cadena de suministros es dinámica e implica un flujo constante de información, productos y fondos entre las diferentes etapas. Las etapas de una cadena de suministro típica incluyen: Clientes, Detallistas, mayoristas/distribuidores, fabricantes, proveedores de componentes y materia prima. Cada etapa en la cadena de suministro se conecta a través del flujo de productos, información y fondos. Estos flujos ocurren con frecuencia en ambas direcciones y pueden ser administrados por una de las etapas o un intermediario. No es necesario que cada etapa esté presente en la cadena de suministro. El diseño apropiado de esta depende tanto de las necesidades del cliente como de las funciones que desempeñan las etapas que abarca. (Chopra y Meindl, 2008).

El funcionamiento de una cadena de suministro depende de los niveles de desarrollo de tres factores: integración dentro de la firma, colaboración entre las organizaciones involucradas y sincronización de todo el sistema para lograr un flujo de información y de bienes sin interrupciones. (Gigola, 2001). De otro modo, en su forma más simple, la cadena de suministro consiste en tres componentes principales: el proveedor, la empresa y el consumidor. El proveedor entrega bienes y servicios necesarios por la empresa; la empresa alimenta los insumos del proveedor a su proceso de transformación para crear sus propios productos; y el consumidor es la última fuente de demanda. La administración de la cadena de suministros une a proveedores, empresas y clientes en un flujo continuo de tal manera que el patrón de los insumos, transformación, y resultados es imitado a través de la cadena de suministros en diferentes ocasiones. Así cada elemento de la cadena de suministros es, en cierto momento, el proveedor del insumo, el transformador o receptor de un resultado. Cualquier cliente que comparte una relación a un producto a través de la retroalimentación, provee un comentario a los proveedores o la empresa que transforman el producto (Ruiz, 2002). Administrar efectivamente las cadenas de suministro es vital tanto para las organizaciones como para los países, ya que afecta los criterios básicos de competitividad, que son el costo, la calidad y el tiempo de entrega del producto requerido por el cliente. Anteriormente del enfoque hacia las cadenas de suministro se decía que una organización podía satisfacer dos de los tres criterios básicos de competitividad, es decir, si el cliente lo quiere rápido y con calidad el costo es alto, si lo quiere a bajo costo y con calidad, lleva mucho tiempo elaborarlo, y si lo quiere rápido y a bajo costo no se garantiza la calidad. La integración de la cadena de suministro permite cumplir no sólo con estos tres criterios básicos sino con otros como la innovación, seguridad, flexibilidad, precisión, accesibilidad,

visibilidad y confiabilidad, siendo estos factores claves de la competitividad internacional. (Cobas-Flores & Mata, 2008). En la actualidad la competencia no es entre organizaciones, sino entre cadenas de suministro, sin importar la dimensión o el poder que cada empresa pueda tener. La cadena de suministro es una parte esencial para poder competir, en otras palabras, cualquier organización necesita tener una buena relación con los diferentes miembros de sus cadenas con la finalidad de poder penetrar mercados y extenderse internacionalmente. Hay enfoques o estrategias de negocios esenciales que forman parte de estas redes de suministro para facilitar su adecuado funcionamiento: algunos de los mas destacados son: Desarrollo de proveedores, subcontratación (outsourcing) e Inventario Administrado por el Proveedor (Vendor Managed Inventory) (Cobas-Flores & Mata, 2008).

Para impactar en las cadenas de suministro, estas estrategias de negocio requieren de una transformación fundamental que puede ser complementada por el modelo de las 4Cs. Tal como lo citan Cobas y Mata (2008), este modelo está conformado por los conceptos de confianza, compromiso, comunicación y colaboración. La tecnología de procuración de materia prima electrónica es una de las diversas aplicaciones que han surgido para complementar las tecnologías de información y de esta manera desarrollar tiempos más cortos en el abastecimiento de insumos generando ventajas competitivas. (Ochoa, 2004) La procuración electrónica de materia prima es considerada por los directivos de empresas de clase mundial como una herramienta que proporciona un retorno de inversión superior a otros proyectos de tecnologías de información, y genera una significativa reducción de costos en un periodo de tiempo corto después de su implementación. Crouch, (2003) señala que la reducción de costos es consecuencia de los siguientes factores: Disminución en los niveles de inventario, Requisición de materia prima en base, Eliminación de excesos, Cumplimiento de planes de producción y Reducción de gastos originados por transportación del material

METODOLOGÍA

El objetivo de este estudio es la procuración de materia prima. Su correcto seguimiento en un solo sistema electrónico para reducir gastos extras en la transportación del producto. ¿Cuál es la relación que existe entre el poseer un sistema de control interno de materia prima con el costo extra que se genera por envíos fuera del periodo de tiempo pactado con el cliente, en una economía internacional globalizada? El presente trabajo es un estudio de campo, cuantitativo no experimental transeccional tipo correlacional – causal de la procuración de la materia prima a través de un sistema electrónico para reducir gastos extra en la transportación del producto. La empresa investigada en este estudio de caso fue una empresa líder que emplea miles de trabajadores en México. La información fue recolectada con el 100% de las personas que se dedican a procurar el material y que utiliza dos tipos de sistemas de (software) para solicitarlo y archivos de Excel para llevar el seguimiento.

Se aplicó un cuestionario tipo likert el cual se dividió en datos generales y 3 medibles: En cuanto a los medibles, fueron enunciados de sistema (9 preguntas), enunciados de tiempo (7 preguntas) y enunciados de costo (4 preguntas). Para analizar los datos se utilizó el modelo de coeficiente de correlación de Pearson (Anderson, Sweeney y Williams, 2005) El coeficiente de correlación de Pearson, es una prueba para analizar la relación entre dos variables medidas en un nivel por intervalos o de razón. (Hernández, 2008). La hipótesis de investigación planteó:

Ho. Un sistema de control interno en una empresa de manufactura automotriz para el seguimiento de los materiales no tiene una relación estadísticamente significativa como herramienta para reducir el gasto extra de transportación del producto y la optimización de la cadena de suministro interna. Ha. Un sistema de control interno en una empresa de manufactura automotriz para el seguimiento de los materiales tiene un impacto directo como herramienta para reducir el gasto extra de transportación del producto y la optimización de la cadena de suministro interna. Las variables planteadas fueron: Variable independiente.- El control de procuración de materia prima (sistema) Variable dependiente.- Número de

arneses enviados tarde a causa del retraso del material (gasto extra) La fórmula para el Coeficiente de correlación de de Pearson: datos de una muestra, se presentará como sigue:

$$r_{xy} = \frac{S_{xy}}{S_x S_y} \quad (1)$$

Donde:

r_{xy} = coeficiente de correlación de la muestra.

S_{xy} = covarianza de la muestra.

S_x = desviación estándar muestral de x .

S_y = desviación estándar muestral de y .

Fórmula para la desviación estándar muestral de x .

$$S_x = \frac{\sqrt{\sum (x_i - \bar{x})^2}}{n-1} \quad (2)$$

Fórmula para la desviación estándar muestral de y .

$$S_y = \frac{\sqrt{\sum (y_i - \bar{y})^2}}{n-1} \quad (3)$$

RESULTADOS

Aplicado el cuestionario la siguiente tarea fue la de describir los valores obtenidos para cada variable, Esto se realizó utilizando las medidas de tendencia central, utilizando la moda, mediana y media, cuya formula podemos representarla de la siguiente manera:

$$\bar{x} = \frac{x_1 + x_2 + x_3 + \dots + x_n}{N}$$

Donde:

x_1, x_2, \dots = datos numéricos

N = tamaño de la muestra.

De acuerdo a lo anterior podemos establecer la media, en base a la siguiente tabla:

Tabla 1: Puntajes Por Empleado Y Arnese Defectuosos

Total puntaje por empleado	No. de arneses que tuvieron faltantes de material y que fueron enviados con cargo a nuestra cuenta.
79	6
57	9
75	8
86	4
78	5
78	5
75	6
80	4

Total de puntajes arrojados por el cuestionario Likert y para el costo de empleado

Teniendo como resultado lo siguiente:

Media para puntajes totales= 76

Media para No. De arneses con faltantes = 5.875

También se aplicó la desviación estándar, la cual nos indica el promedio de desviación de las puntuaciones con respecto a la media la cual fue utilizada para esta investigación. Su formula se expresa de la siguiente manera:

$$\sigma = \sqrt{\frac{(x_1 - \bar{x})^2 + (x_2 - \bar{x})^2 + \dots + (x_n - \bar{x})^2}{N}} \quad \sigma = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{N}}$$

Donde:

X=datos numéricos de la variable.

\bar{x} = media de los datos agrupados.

N= tamaño de la muestra.

Teniendo como resultado lo siguiente:

Desviación estándar para puntajes totales= 7.8740

Desviación estándar para No. De Arneses con faltantes= 1.6909

Los resultados fueron correlacionados (media y desviación estándar de puntajes totales contra media y desviación estándar no. de arneses que tuvieron faltantes de material y que fueron enviados con cargo a nuestra cuenta, a manera de establecer una interacción entre la el sistema y su importancia como herramienta competitiva en una empresa manufactura mundial.

De esta manera se realizó la correlación como sigue:

X= puntajes totales

Y= No. total de arneses que tuvieron faltantes de material y que fueron enviados con cargo a nuestra cuenta

Dando como resultado lo siguiente:

Coefficiente de Pearson = -0.854318877 de la muestra p= 0.0007

Lo cual nos ubicó en la posibilidad de poder realizar la prueba de significancia de la muestra, Obteniendo lo siguiente:

$$Tc = \frac{r - 0}{\sqrt{1 - r^2}}$$

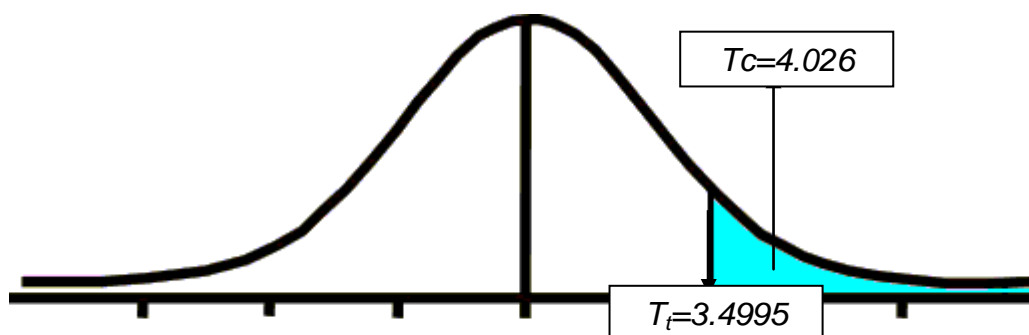

$$n - 2$$

Tc= 4.026

Grados de libertad = N - 1 = 8 - 1 = 7

Tt=3.4995

Figura 1: Prueba De Significancia De La Muestra

Como se puede observar en los resultados de el coeficiente de correlación Pearson, se tiene una correlación negativa, por lo tanto se rechaza la hipótesis nula, es decir; un sistema de control interno en la planta donde se realizó el estudio para el seguimiento de los materiales no tiene una relación estadísticamente significativa como herramienta para reducir el gasto extra de transportación del producto y la optimización de la cadena de suministro interna. Dando como resultado lo siguiente:
Coeficiente r de Pearson = -0.854318877 de la muestra. $P = 0.007$

Arrojando en este caso una correlación negativa considerable es decir cada vez que X aumenta una unidad, Y disminuye siempre una cantidad considerable. Dicho de otra manera a mayor puntaje dentro del cuestionario tipo Likert de manera individual, menor será el resultado de los arneses con faltantes de material y que fueron enviados con cargo a cuenta de la planta por empleado. Para comprobar la veracidad de la hipótesis nula la cual se estableció como $H_0 = 0$ y mediante los resultados de correlación de Pearson, se estableció la prueba de significancia arrojando lo siguiente:

T_c = para la muestra = 4.02

T_i = para la muestra = 3.4995

CONCLUSIÓN

Debido a la necesidad de que la empresa arnesera recupere la competitividad en la actual economía internacional globalizada, se recomienda incluir al sistema electrónico interno al área de procuración de material para que el seguimiento de las materias primas sea más exacto y se pueda con ello reducir el costo extra en la transportación del producto terminado. La información es la base principal para el desempeño de la cadena de suministro de cualquier organización. Citando principalmente la importancia de la información basada en un sistema electrónico para el manejo del eslabón de la procuración de materias primas en una empresa maquiladora productora de manufactura mundial automotriz y reduciendo con el mismo el gasto extra por envío fuera del tiempo pactado con el cliente. Este problema de investigación se determinó en base a que los materiales solicitados, ya se encontraban en la planta y no se daba aviso al área de materiales, ya que cada empleado cuenta con un seguimiento de la mercancía en archivos propios de Excel.

De acuerdo al diseño de la presente investigación el cual se basa en la correlación lineal de Pearson, se logró determinar que existe una correlación negativa, lo anterior muestra que a mayor puntaje dentro del cuestionario menor será el número de arneses que presenten faltantes de material y que sean enviados con cargo a nuestra cuenta. es decir, que después de haber realizado el análisis de los datos proporcionados por cada uno de los candidatos a quienes se les aplicó el instrumento de medición se llegó a la conclusión

que para la muestra de la población $N = n = 8$, la hipótesis nula se rechaza, por lo tanto, un sistema de control interno en la planta en la cual se hizo la investigación para el seguimiento de los materiales tiene un impacto directo como herramienta para reducir el gasto extra de transportación del producto y logrando con ello la optimización de la cadena de suministro interna. Si las organizaciones contaran con una buena base de datos para el desarrollo de la cadena de suministro para cada uno de los departamentos involucrados, se puede lograr una ventaja competitiva considerable sobre las demás organizaciones del mismo ramo industrial, ya que, el tener la información a la mano facilita el correcto seguimiento y desarrollo de la cadena de suministros.

DEDUCCIÓN EN LA LEY DEL IMPUESTO SOBRE LA RENTA DE LAS CUOTAS ESCOLARES POR EDUCACIÓN BÁSICA PRIVADA

Martha Sheila Gómez González, Universidad de Guadalajara

RESUMEN

La educación básica en México es obligatoria, según lo establece la Constitución Política, además de gratuita. Pero la educación otorgada por el Estado, conforme a indicadores nacionales e internacionales, no cumple las expectativas esperadas por los organismos evaluadores, a pesar de su regulación y los esfuerzos que el gobierno, a través de sus diversas administraciones, ha hecho por crear un marco nuevo de educación de calidad, centrado en la globalización y en la competitividad.

Algunos padres de familia deciden no dirigir a sus hijos hacia la educación pública por su baja calidad; obligándose a recurrir a la educación impartida por instituciones particulares, lo cual disminuye la carga financiera del Estado; ante esto se debe considerar si éste tiene capacidad de otorgar educación básica a todos sus ciudadanos y con la calidad que sugieren los organismos evaluadores.

En el presente trabajo se establece una propuesta fiscal que permite a los contribuyentes la deducción en la Ley del Impuesto sobre la Renta de las cuotas escolares pagadas por educación básica, a partir de un diagnóstico del aspecto legal y fiscal actual de la educación en México, la calidad educativa, la población escolar en la educación básica y el presupuesto público asignado.

PALABRAS CLAVE: Educación básica, calidad educativa, costo, deducción.

INTRODUCCIÓN

Una de las funciones y obligaciones del Estado es otorgar a sus ciudadanos servicios públicos; en particular, de educación básica. La información acerca de la calidad de la educación básica que se imparte en México es escasa y dispersa. La que hay coincide que en promedio, está bastante lejos de alcanzar los estándares que exige la sociedad del conocimiento. Puesto que la educación básica obligatoria en México, según lo establece la propia Constitución Política debe ser gratuita; el Estado cumple con esta obligación a sus ciudadanos, pero la educación que otorga de acuerdo a los resultados de las evaluaciones nacionales realizadas por el mismo gobierno señalan que ésta no cumple las expectativas esperadas por los mismos, por ello, algunos padres de familia deciden no dirigir a sus hijos hacia la educación pública por su baja calidad; y recurren a la educación impartida por instituciones particulares, lo cual disminuye la carga financiera al Estado. Por ello se debe considerar si el Estado mexicano tiene la capacidad para otorgar educación básica en sus tres niveles, y que la misma cumpla con los requisitos básicos para que se pueda considerar de calidad satisfaciendo: cobertura, equidad, eficacia, eficiencia y pertinencia.

Ante la incapacidad económica del Estado para otorgar educación básica a todos sus ciudadanos, y al no otorgar una educación pública de calidad, y con base a estos parámetros surge la importancia de establecer un beneficio o incentivo fiscal a los contribuyentes que pagan por recibir la educación básica en una institución privada.

Esta investigación se centra en todo momento en la educación básica, pues es en ésta donde se adquieren las bases necesarias para la formación de un individuo, pero además por considerarse obligatoria para otorgarla al Estado, y para recibirla a sus ciudadanos. El alcance de esta investigación se basó en datos o en cifras oficiales obtenidas de Instituciones Gubernamentales, aún cuando en algunos casos no me fue

posible tener información suficiente, lo cual limitó en cierta medida hacer una investigación con mayor amplitud.

REVISIÓN LITERARIA

Educación básica

La Secretaría de Educación Pública en su página de Internet <http://basica.sep.gob.mx> [accesado 5 de marzo 2009] señala que la educación básica es la etapa de formación en la que se desarrollan las habilidades del pensamiento y las competencias básicas en los educandos con el objetivo de brindarles las herramientas necesarias para su vida cotidiana, así como las disposiciones y actitudes que normarán su vida. Está descrita en la legislación como un derecho y una obligación de los ciudadanos y comprende tres niveles obligatorios: preescolar, primaria y secundaria. Por ello es importante señalar que el Artículo 37 de la Ley General de Educación la Educación básica se integra por:

- a) La educación elemental
- b) La educación primaria
- c) La educación secundaria
- d) La educación indígena

a) Educación elemental

La Educación Elemental es un acercamiento a la educación en los primeros años de vida del niño, está constituida por la Educación Inicial en sus dos modalidades de atención: escolarizada y no escolarizada, la Educación Preescolar y la Educación Especial.

- *Educación inicial escolarizada:* Es el primer nivel de la Educación Básica. Tiene como propósito contribuir a la formación armónica y al desarrollo equilibrado de los niños desde su nacimiento hasta los 5 años 11 meses de edad, estableciendo sistemáticamente objetivos y actividades dentro de un programa pedagógico y actividades de estimulación temprana, todo esto en el marco de los Centros de Desarrollo Infantil, (CENDI).
- *Educación inicial no escolarizada:* El objetivo de la educación inicial no escolarizada es brindar asesoría a padres, madres y personas que participan en el cuidado y la crianza de niños y niñas de cero a cuatro años de edad en comunidades rurales e indígenas de alta marginación con el fin de enriquecer las prácticas de crianza que favorezcan el desarrollo de competencias y lograr, entre otros beneficios, una transición exitosa a la educación preescolar, busca favorecer el desarrollo de competencias de los niños y las niñas de cero a cuatro años de edad a través de la formación y orientación de los padres de familia, agentes educativos y otros miembros de la comunidad para propiciar el mejoramiento de las prácticas de crianza.
- *Educación Preescolar:* La Educación Preescolar como primer peldaño de la formación escolarizada del niño mexicano, brinda a las niñas y los niños de 3,4 y 5 años una atención pedagógica congruente con las características propias de la edad. La función social de la educación preescolar es brindar oportunidades de socialización en ambiente distinto al familiar y contribuir al desarrollo de todas las potencialidades de los niños y las niñas del nivel, haciendo énfasis en las competencias cognitivas, socio-afectivas y de lenguaje. Democratizar las oportunidades educativas, atendiendo a la diversidad y brindar especial influencia positiva a las niñas y niños en situación de riesgo y con necesidades especiales.
- *Educación Especial:* Es la atención que se da a todos los niños, niñas y jóvenes que presentan Necesidades Educativas Especiales (NEE), dando prioridad a los que presentan alguna discapacidad.

Su misión es favorecer el acceso y permanencia en el sistema educativo a niños, niñas y jóvenes que presentan necesidades educativas especiales asociadas o no a alguna discapacidad, con los recursos que les permitan desarrollar sus potencialidades al máximo e integrarse educativa, social y laboralmente.

b) Educación primaria

La Educación primaria está considerada en el Artículo Tercero Constitucional y en la Ley General de Educación como parte esencial y obligatoria en la formación integral del individuo. Es el nivel que consolida el proceso de socialización del niño, proporciona las herramientas fundamentales para la apropiación de la cultura, mediante el desarrollo del conocimiento, hábitos, actitudes y valores esenciales en el proceso formativo del individuo.

c) Educación secundaria

En este nivel se contribuye a elevar la calidad de la formación de los estudiantes que terminan la educación primaria mediante el fortalecimiento de los contenidos y necesidades básicas de aprendizaje; integra los conocimientos, habilidades y valores que permiten continuar los aprendizajes con un alto grado de independencia.

La Educación secundaria también se imparte con carácter obligatorio a través de las siguientes modalidades:

- *Secundaria general*: El objetivo primordial que impulsa la Educación Secundaria General es el de proporcionar una educación que identifique a los educandos con los valores nacionales, los prepare para continuar con su preparación académica y los dote de elementos científicos y culturales suficientes para enfrentar su realidad individual y colectiva.
- *Secundaria técnica*: Este servicio educativo tiene como finalidad, además de proporcionar formación humanística, científica y artística, la de brindar educación tecnológica básica que permita a los alumnos no sólo la adquisición de conocimientos, habilidades y destrezas manuales, sino también que aprecie el significado que la tecnología tiene en su formación para participar productivamente en este mundo globalizado y en el desarrollo de nuestro país.
- *Telesecundaria*: Es una modalidad de educación secundaria escolarizada, cuyo objetivo consiste en proporcionar secundaria a jóvenes que viven en comunidades rurales que no cuentan con este servicio, o en lugares en que la cobertura educativa no es suficiente.

d) Educación Indígena

Tiene como objetivo atender niñas, niños y jóvenes indígenas, ofreciendo una educación con enfoque intercultural bilingüe que garantice la calidad, equidad y pertinencia; de la misma manera favorecer el acceso a los diferentes servicios educativos lo que permita disminuir el rezago educativo así como la deserción y reprobación escolar para lograr elevar de manera significativa la eficiencia terminal.

Calidad Educativa

La mayoría de los autores que han escrito sobre el tema de la calidad de la educación coinciden en señalar la poca concreción del concepto y las dificultades que surgen al tratar de cuantificar sus implicaciones, las cuales por lo regular están relacionadas a diferentes perspectivas filosóficas en que se sustentan. El concepto de calidad educativa es un concepto asociado a los costos y beneficios de los sistemas educativos. Se refiere a los efectos positivamente valorados por la sociedad respecto del proceso de formación que llevan a cabo las personas en su cultura. Sin embargo, actualmente también se asocia el concepto a la mejora de los procedimientos para cumplir con los objetivos que se plantean alcanzar, y que son determinados por quienes influyen o toman las decisiones que repercuten en la educación. Para Cobo (1985, p. 358) una educación será de calidad en la medida en que todos los elementos que intervienen en ella se orienten a la mejor consecución posible.

La calidad educativa se identifica con un producto educativo válido; entendiendo la validez como funcionalidad, como congruencia con las necesidades, expectativas y aspiraciones educativas de los individuos y la comunidad y que en la práctica resulta también eficaz, (De la Orden, 1993, p. 264)

Muñoz (2003, p. 13) explica “que la educación es de calidad cuando está dirigida a satisfacer las aspiraciones del conjunto de los sectores integrantes de la sociedad a la que está dirigida; si al hacerlo se alcanzan efectivamente las metas que en cada caso se persiguen; si es generada mediante procesos culturalmente pertinentes, aprovechando óptimamente los recursos necesarios para impartirla y asegurando que las oportunidades de recibirla – y los beneficios sociales y económicos derivados de la misma – se distribuyan en forma equitativa entre los diversos sectores integrantes de la sociedad a la que está dirigida. González (2000, p. 59) señala que los factores que tienen mayor incidencia en la calidad educativa según un estudio realizado por Cano García (1998) de carácter bibliométrico son el profesorado, currículum, evaluación, y organización escolar. A partir de esta clasificación se analizan distintas definiciones de calidad en cada uno de estos aspectos:

- *La calidad centrada en el profesorado*: existen afirmaciones que hacen depender exclusivamente la “garantía de calidad” de la formación de su profesorado; desde esta perspectiva, la responsabilidad del sistema educativo se descarga en ellos y consideran que la mejora de la calidad del profesorado pasa por procedimientos rigurosos de selección que permitan elegir solamente a los candidatos más cualificados y muy motivados; una formación pedagógica inicial breve y basada en la práctica; una remuneración suficientemente motivante que evite la fuga de de estos profesionales a otras profesiones; planes de desarrollo profesional y una profesión que ofrezca posibilidades de promoción.

- *La calidad centrada en los programas formativos*: desde este ámbito de la calidad de la evaluación del currículum y de los procesos de enseñanza aprendizaje serán objetivos fundamentales. La calidad del currículum consiste en planificar, proporcionar, y evaluar el currículum óptimo (según los criterios de cada país) para cada alumno, en el contexto de una diversidad de individuos que aprenden. La calidad de los procesos de enseñanza-aprendizaje viene garantizada cuando posibilita, potencia y produce el resultado de humanizar más a todos y a cada uno de los agentes implicados.

- *La calidad centrada en centros/instituciones*: la calidad de los centros e instituciones educativas no podemos lograrla a través únicamente de medidas políticas diseñadas de manera estandarizada y uniforme. Nuestra historia reciente ha mostrado que si bien estas decisiones han servido de impulso y cambio, se han vuelto incapaces de asegurar la calidad educativa de manera equitativa en las diversas escuelas del país.

Como señala González (2000, p. 61) la idea de la eficiencia escolar se asienta en el panorama educativo internacional. Las iniciativas desarrolladas por políticas educativas denotan que en la actualidad la educación tiene que asumir el papel de explicar el origen de las diferencias en el rendimiento de los alumnos y las instituciones educativas en general. La UNESCO, con base a las evaluaciones internacionales en educación ha señalado que en México estamos profundamente mal, por debajo de países mucho más pequeños y pobres de la región como Bolivia, Barbados o Granada.

El Banco Mundial identifica la educación con la creación de escuelas que estén controladas por las comunidades o que estén privatizadas: “**Educación**: Construir más escuelas de educación primaria cuando los dineros son fácilmente desviados, las comunidades no están organizadas y los ciudadanos casi no tienen voz, conduce a la ausencia de docentes y salones de clase desbaratándose, abandonadas. Si los recursos se hubieran dirigido a los hogares pobres para que enviaran a los niños a la escuela, se les hubiera fortalecido para demandar una mejor calidad en la educación. (En muchos aspectos..) Para muchos aspectos de la educación básica, el cliente se encuentra en la mejor posición para juzgar los servicios, por lo tanto, el mayor beneficio vendrá de aumentar la participación de los pobres en el

sistema –por ejemplo, teniendo a las comunidades o los hogares haciendo más en el manejo de la escuela- En síntesis, para el Banco Mundial, educarse es ir a la escuela.

Para el Fondo Monetario Internacional -cuya razón de ser es promover la cooperación internacional en temas monetarios internacionales y facilitar el movimiento del comercio vía la capacidad productiva- el concepto de servicios se extiende hasta comprender áreas que tradicionalmente se interpretan como estructuras de aseguramiento de derechos fundamentales, como la educación, la salud o la previsión social. En ambas instituciones, la identificación de la educación con la escolarización es total y siempre va ligada con políticas de ajuste estructural impulsadas también por el FMI.

Por su parte, la Organización para la Cooperación y el Desarrollo Económico (OCDE) como corporación internacional compuesta empeñada en coordinar las políticas económicas y sociales de los países que se agrupan en ella, mantiene una fuerte injerencia en educación, no obstante que sus principales objetivos son:

- Promover el empleo, el crecimiento económico y la mejora de los niveles de vida en los países miembros, y asimismo mantener su estabilidad.
- Ayudar a la expansión económica en el proceso de desarrollo tanto de los países miembros como en los ajenos a la Organización.
- Ampliar el comercio mundial multilateral, sin criterios discriminatorios, de acuerdo con los compromisos internacionales.

En México, la educación se ha considerado un bien público donde el gobierno juega un papel central, producir este servicio involucra a lo largo del tiempo un múltiple proceso burocrático y social, que puede entenderse mejor dirigiendo el estudio a los años, cuando se construyeron las bases para el desarrollo social del país y donde la educación fue vista como elemento de integración nacional, necesario para la unificación del país y todos los objetivos se supeditaron a su expansión, articulando intereses de los grupos docentes, administrativos y técnicos en una estructura burocrática compleja. Actualmente, el Presidente Felipe Calderón Hinojosa tiene una visión clara sobre el desarrollo y la política educativa nacional. Bajo su guía se ha formulado el Plan Nacional de Desarrollo con una visión llamada 20-30. Dentro de esta visión es indispensable construir un escenario deseable de la educación y de cada uno de sus tipos al año 2030 con el fin de diseñar las políticas y orientar acciones a desarrollar en el corto y mediano plazo consistentes en:

1. Reducir las desigualdades regionales, de género y entre grupos sociales en las oportunidades educativas.
2. Impulsar el desarrollo y utilización de nuevas tecnologías en el sistema educativo para apoyar la inserción de los estudiantes en la sociedad del conocimiento y ampliar sus capacidades para la vida.
3. Promover la educación integral de las personas en todo el sistema educativo.
4. Fortalecer el acceso y la permanencia en el sistema de enseñanza media superior, brindando una educación de calidad orientada al desarrollo de competencias.
5. Ampliar la cobertura, favorecer la equidad y mejorar la calidad y pertinencia de la educación superior. Pese a los efectos del desarrollo social sobre la distribución de los conocimientos, el sistema educativo mexicano no ha tenido la capacidad de neutralizar los efectos de la pobreza sobre la adquisición del aprendizaje. Así lo demuestra la preocupación de las autoridades educativas mexicanas por ofrecer educación básica a las poblaciones excluidas, en especial en las zonas rurales.

Deducción

En lo referente a las deducciones, Cárdenas (2004, p. 204) considera la misma como “Cada una de las cantidades que deberán ser restadas de otra. En materia impositiva, cada una de las partidas que la ley

autoriza para ser rebajadas de los ingresos brutos a efecto de determinar el ingreso neto”.La Ley de Impuesto sobre la Renta no define que se considera deducción, pero señala diferentes términos referidos a las mismas y que son los siguientes:

Deducciones autorizadas: Como tal, se consideran aquellos conceptos de gasto e inversión que le permiten al contribuyente restarlo a sus ingresos por los cuales se encuentra obligado al pago del impuesto a efecto de disminuir la base gravable sobre la cual se tiene que determinar el impuesto correspondiente, siempre y cuando se cumplan con los requisitos de deducibilidad que la misma ley establece, como los son su estricta indispensabilidad de efectuarlos para la obtención del ingreso, que reúnan requisitos fiscales, etc.

Deducciones personales: A diferencia de las deducciones autorizadas, las deducciones personales las pueden efectuar las personas físicas solamente, y se refiere a gastos que efectúa el contribuyente para un beneficio personal. El artículo 176 de la Ley del Impuesto sobre la renta señala como deducciones personales los pagos por honorarios médicos, dentales, hospitalarios, y los gastos funerales efectuados por el contribuyente para sí, , para su cónyuge o para la persona con quien viva en concubinato y para sus ascendientes o descendientes en línea recta, los donativos no onerosos ni remunerativos, los intereses reales efectivamente pagados por créditos hipotecarios destinados a casa habitación, las aportaciones complementarias de retiro, las primas por gastos médicos, los gastos destinados a transportación escolar de los descendientes en línea recta cuando sea obligatoria y los pagos efectuados por concepto de impuesto local sobre ingresos por salarios. Ante lo anterior, es importante señalar que fiscalmente no existe un tratamiento a las cuotas escolares.

Costo

En términos generales *Costo* significa “la cantidad que se da o se paga por algo”

En esta investigación se abordará el costo que tiene el Estado por otorgar educación pública básica.

METODOLOGÍA

De acuerdo con el método de investigación utilizado, la presente investigación es de tipo descriptiva, pues se enfoca en describir la situación actual de la educación en México. Este trabajo de investigación se considera un estudio de campo, pues la información se recolectará de la proporcionada por Dependencias Gubernamentales y por Organismos Internacionales.

A pesar de ello, con la información obtenida se realizará un análisis de la misma a efecto de responder la pregunta de investigación y con ello, en su caso, la elaboración de la propuesta, objeto de este estudio.

Para desarrollar las secuencias operativas de la investigación, se ejecutaron los siguientes pasos:

- Recopilación del material bibliográfico, histórico, legal y estadístico pertinente a los objetivos y fundamentos teóricos del estudio, a la selección de información y a los antecedentes del marco teórico.
- Definición de los aspectos metodológicos pertinentes al desarrollo del estudio.
- Análisis estadístico y discusión de los resultados.
- Formulación y presentación de una propuesta de modificación a la Ley del Impuesto Sobre la Renta.

RESULTADOS

A continuación se presentan los principales datos y cifras resultado de la investigación efectuada, los cuales se presentan en cuatro diferentes ejes: cobertura educativa, costo, e indicadores nacionales e internacionales.

Cobertura Educativa

Se han registrado importantes avances en materia educativa durante los últimos años. Aún persisten rezagos de consideración en el sistema educativo nacional. Los más importantes son la falta de oportunidades de gran parte de la población para acceder a una educación de calidad, y a los avances en materia de tecnología e información. Para el ciclo escolar 2007-2008, la matrícula total del sistema educativo nacional escolarizado se conformó por 33.3 millones de alumnos, equivalente al 31.5% de la población total del país.

En el calendario escolar 2007-2008, 1'144,093 maestros brindaron servicios de educación básica a 25.5 millones de niños y jóvenes en 220,348 escuelas, conforme a la distribución presentada en la Tabla 1:

Tabla 1: Distribución de la educación básica

Nivel educativo	Alumnos	Docentes	Escuelas
Preescolar	4'745,741	214,548	88,426
Primaria	14'654,135	564,822	98,225
Secundaria	6'116,274	364,723	33,697
Total	25'516,150	1,144,093	220,348

Esta tabla presenta la cobertura de la educación básica en México en el calendario escolar 2007-2008

Como se muestra en la Tabla 2, el sostenimiento de la educación básica corresponde no sólo al Estado, sino también a instituciones particulares:

Tabla 2: Sostenimiento de la educación básica

Organismo	Alumnos	Docentes	Escuelas
Federal	1'678,859	93,457	35,619
Estatat	21'449,235	902,558	158,484
Autónomo	3,714	286	18
Particular	2'384,342	147,792	26,227
Total	25'516,150	1'144,093	220,348

Esta tabla presenta el sostenimiento de la educación básica en México en el calendario escolar 2007-2008

El rezago en educación básica se estima en más de 30 millones de personas de más de 15 años que no concluyeron, o que nunca cursaron la primaria o la secundaria. De ellos, la mitad son jóvenes de entre 15 y 35 años. Actualmente, los años de escolaridad promedio de las personas de 15 años y más, es de 8.1 años. Según lo señala el Plan Nacional de Desarrollo 2007-2012 se propone alcanzar, al final del sexenio del Presidente Felipe Calderón Hinojosa, un promedio de 12.5 años. En 2008, la mayor cobertura se logró en educación básica: la preescolar, con 66.9%; la primaria, con 94.1%, y la secundaria con 87%.

Una comparación con otros países que, como México, integran la Organización para la Cooperación y el Desarrollo Económico (OCDE), muestra que, si bien es satisfactorio el avance de la matrícula en educación primaria, el de los demás niveles es insuficiente. Mientras que en México 77% de la población en edad de trabajar tiene solamente escolaridad básica, en los países de la OCDE este promedio es de 30%. Igualmente, mientras que en México 23% de la fuerza laboral tiene estudios superiores a la secundaria, en los otros países miembros de la Organización 67% tiene niveles educativos de preparatoria y mayores.

Costo

Como lo señala la Ley General de Educación en su Artículo 25, el Ejecutivo Federal y el gobierno de cada entidad federativa, con sujeción a las disposiciones de ingresos y gasto público correspondientes que

resulten aplicables, concurrirán al financiamiento de la educación pública y de los servicios educativos. En 2008, México gastó en educación 722,190.1 millones de pesos, equivalentes a 6.3% del PIB. Sin embargo, 90% de los recursos se destinó al gasto corriente, lo que significa que el monto disponible para inversión e innovación es significativamente pequeño en comparación con las necesidades de cambio cualitativo que presenta el sistema educativo.

En este mismo año, el gasto público participó con el 77.4% del financiamiento educativo; de éste, el 62.5% fue erogado por la Federación, el 14.8% por los gobiernos estatales, y el 0.2% por los gobiernos municipales. El sector privado participó con el 22.6% del gasto educativo total.

El gasto público por alumno y por nivel educativo, publicado por la Secretaría de Educación Pública en la página <http://www.dgpp.sep.gob.mx> [consultado el 19 de enero de 2010], los cuales se presentan en la Tabla 3.

Tabla 3: Gasto Público Federal 2008 Por Alumno Y Por Nivel Educativo

Concepto	Monto
Preescolar	12.6
Primaria	11.4
Secundaria	17.6
Profesional Técnico	16.8
Bachillerato	24.0
Superior	53.9

Esta tabla representa el costo anual por alumno y por nivel educativo de la educación pública en México en 2008.

Los datos expresados se encuentran en millones de pesos.

Las escuelas particulares que imparten educación básica contribuyen con:

Tabla 4: Cobertura educativa de educación básica en escuelas privadas o particulares

Nivel	Alumnos	Docentes	Escuelas
Preescolar	713,973	43,399	14,643
Primaria	1'208'444	52,157	7,597
Secundaria	561,925	52,236	3,987
Totales	2'484,342	147,792	26,227

Esta tabla muestra la cobertura educativa en educación básica que se tiene en las escuelas privadas o particulares en México en 2008.

Indicadores Nacionales E Internacionales

En el actual Plan Nacional de Desarrollo 2007-2012, en la estrategia nacional de política pública, se enuncia que es necesario, en forma coherente, lograr una educación de calidad, enriquecedora en valores, relevante para el mundo productivo en todos los niveles de formación y que cada vez alcance a más mexicanos. La calidad educativa comprende los rubros de cobertura, equidad, eficacia, eficiencia y pertinencia. Una educación de calidad y equitativa facilita a los individuos que su esfuerzo se traduzca en mayores ingresos y les permite una mayor libertad de elección.

Un indicador relevante para entender el problema de la calidad educativa es el desempeño de estudiantes de primaria y secundaria. Éste continúa siendo muy bajo en lo referente a la comprensión de lectura, la expresión escrita y las matemáticas. Así, las escuelas urbanas presentan niveles de logro sistemáticamente más elevados que las telesecundarias o las escuelas de educación indígena.

Esta disparidad en la calidad educativa es de especial importancia pues, actualmente, las instituciones públicas de educación básica atienden al 87% de los estudiantes, mientras que sólo 13% tiene acceso al sistema de educación privada, donde además de tener un mejor desempeño en el aprendizaje, la

posibilidad de cursar materias extracurriculares relacionadas con el deporte, el arte, la cultura y los idiomas, propicia una formación más integral.

En México, el Instituto Nacional para la Evaluación de la Educación (INEE) es un organismo que contribuye al mejoramiento de la educación a través de evaluaciones integrales de la calidad del sistema educativo y de los factores que la determinan, así como de la difusión transparente y oportuna de los resultados para apoyar la toma de decisiones, la mejora pedagógica en las escuelas y la rendición de cuentas, como lo es la prueba ENLACE, la cual mide los conocimientos y habilidades definidos en los planes y programas oficiales de estudio de educación básica, en las asignaturas de Matemáticas, Español y, desde 2008, de una tercera asignatura, iniciándose con Ciencias en 2008 y continuando con Formación cívica y ética en 2009, la cual se aplica en todas las escuelas de educación básica del país.

Este 2009, la prueba se aplicó a más de 13 millones de estudiantes de educación básica en escuelas públicas y privadas del país. Las escuelas privadas alcanzan calificaciones mejores a las logradas por las escuelas públicas. Por su parte, los alumnos de telesecundaria, educación comunitaria e indígena son quienes obtienen los puntajes más bajos. Además, la brecha en calidad entre escuelas públicas y privadas sigue siendo considerable. Los resultados obtenidos muestran que el mayor porcentaje de la educación básica impartida por particulares se encuentra en el rango de bueno o de excelente. El porcentaje más alto obtenido por el Estado corresponde a resultados de insuficiente o elemental. Las tablas 5, 6 y 7 muestran los resultados obtenidos en la prueba ENLACE aplicada en 2009 en las disciplinas de español (Tabla 5), Matemáticas (Tabla 6), y Formación Cívica y ética (Tabla 7).

Tabla 5: Resultados de la Prueba ENLACE 2009 en el área de Español.

Nivel Escolar	Insuficiente (%)	Elemental (%)	Bueno (%)	Excelente (%)
<u>Primaria:</u>				
CONAFE	44.7	45.3	9.3	0.7
General	18.9	50.4	27.1	3.7
Indígena	50.0	40.3	8.9	0.8
Particular	5.1	29.2	48.0	17.7
<u>Secundaria:</u>				
General	31.7	51.1	16.7	0.5
Técnica	32.3	50.3	16.9	0.5
Telesecundaria	39.5	48.3	11.9	0.3
Particular	12.1	41.5	42.4	4.1

Esta tabla muestra los resultados de la Prueba ENLACE 2009 en el área de Español

Tabla 6: Resultados de la Prueba ENLACE 2009 en el área de Matemáticas.

Nivel Escolar	Insuficiente (%)	Elemental (%)	Bueno (%)	Excelente (%)
<u>Primaria:</u>

Particular	4.1	15.5	56.3	24.2

Esta tabla muestra los resultados de la Prueba ENLACE 2009 en el área de Formación Cívica y Ética

Respecto a indicadores internacionales, el Programa Internacional de Evaluación de Alumnos (PISA) de la OCDE es un esfuerzo realizado en colaboración, que implica a todos los países de la OCDE y a un número considerable de países asociados, para medir hasta qué punto los estudiantes de 15 años están preparados para afrontar los desafíos de las actuales sociedades del conocimiento.

La evaluación está orientada al futuro: se centra en la capacidad de los jóvenes de utilizar sus conocimientos y destrezas para afrontar los retos de la vida real, más que en el dominio de currículos educativos concretos. Esta orientación refleja un cambio en los objetivos de los mismos currículos, que cada vez más se ocupan de la aplicación del conocimiento en lugar de limitarse a su adquisición. Se escoge a alumnos de 15 años porque en la mayoría de países de la OCDE se trata de la edad en que aquellos se acercan al final de su escolarización obligatoria.

PISA evalúa los conocimientos de los estudiantes, pero también su potencial para reflexionar acerca de sus conocimientos y experiencias y aplicar estos a situaciones del mundo real. Por ejemplo, si quisiera entender y evaluar las indicaciones científicas sobre seguridad de los alimentos, un adulto no sólo necesitaría poseer algunas nociones básicas sobre la composición de las sustancias nutritivas, sino que debería ser capaz de aplicar esa información. El término *literacy* (competencia) se utiliza para condensar este concepto más amplio de conocimientos y destrezas.

Asimismo, este indicador examina la distribución de la puntuación de los alumnos en cada país.

El número de países que fueron examinados en este indicador es de 36 países, donde Finlandia encabeza la lista con 563 puntos, siguiéndole Canadá (534), Estonia (531), Japón (531), Alemania (516), Estados Unidos (489), España (488), Chile (438), entre otros. México se encuentra en penúltimo lugar con 410 puntos, el último es ocupado por Brasil con un puntaje de 390. Es importante señalar que la media establecida por la OCDE es de 500 puntos.

CONCLUSIONES

Con esta investigación se trata de aportar un beneficio social – fiscal a todas aquellas personas que recurren a la educación básica por sus propios medios, y no en espera de la que otorga el Estado, por lo que ya se ha expuesto con anterioridad. Para otorgar este beneficio, o incentivo fiscal se establece la necesidad de permitir a los contribuyentes la deducción de las cuotas escolares pagadas por educación básica obligatoria, como parte de las deducciones personales en la Ley del Impuesto sobre la Renta, y que se puedan considerar como tales en la declaración anual del ejercicio.

Permitir la deducción representará para el Estado una captación de menores ingresos para la prestación de los servicios públicos, lo cual lo debe obligar a realizar una transformación real al sistema educativo nacional, en aras de otorgar educación básica de calidad y que sea útil a la sociedad y poder seguir contando con los recursos necesarios para ello, debe realizar acciones a fin de mejorar la calidad y equidad

educativa, contar con suficientes plantales, buenas condiciones de infraestructura, un mayor número de maestros capacitados y preparados para su desempeño, y evaluar y mejorar el contenido de sus programas educativos, dejando de lado la burocracia y el sindicalismo que por años han afectado al sistema educativo nacional.

Así, la deducción se consideraría dentro de las deducciones personales en la Ley del Impuesto sobre la Renta, y la aplicará el contribuyente padre de familia por un monto mensual de 3 salarios mínimos del área geográfica del contribuyente elevado al año, por cada descendiente en línea recta. Este gasto lo podrán considerar como deducción personal cuando los montos que se paguen sean por concepto de inscripción y de colegiaturas por la educación de sus hijos en escuelas particulares que imparten educación básica con autorización o reconocimiento de validez oficial según la Ley General de Educación.

Los niveles que se consideran para la deducción corresponden a la educación básica: preescolar, primaria y secundaria; mismos que el Estado está obligado constitucionalmente a otorgar a sus ciudadanos. Al establecer el límite de deducción de 3 salarios mínimos del área geográfica del contribuyente se pretende que los contribuyentes que obtienen menores ingresos reciban un mayor beneficio que los contribuyentes que reciben un ingreso mayor a este límite.

La deducción personal por el monto propuesto y para los niveles educativos señalados disminuiría significativamente la utilidad gravable para el cálculo del Impuesto sobre la Renta, lo que permitiría a las familias contar con un mayor ingreso disponible.

Por último, y pensando en hacer este trabajo más completo en un futuro, será necesario obtener información financiera respecto del total de ingresos obtenidos a nivel nacional por las instituciones particulares que otorgan educación básica, considerando sólo el concepto de matrícula o inscripción y cuotas escolares; así como la determinación de que otros factores (además de la baja calidad educativa y la falta de espacios) inciden en la decisión de algunos padres de familia para no enviar a sus hijos a las escuelas públicas, y decidirse por las instituciones particulares.

ESTRATEGIAS PROSPECTIVISTAS DE COMERCIALIZACIÓN INTERNACIONAL DEL SECTOR AGROALIMENTARIO ESPAÑOL BASADO EN EL FORMATO DE FRANQUICIA: CASO ACEITE DE OLIVA Y VINO DE CASTILLA-LA MANCHA

Francisco José May Hernández, Universidad del Caribe

Ignacio Ruiz Guerra, Fundación Caja Rural de Toledo

RESUMEN

Las principales decisiones de la dirección estratégica de las empresas son las responsables del camino a seguir en los mercados (Porter: 1980), pero éstas tienen que tener diferentes canales para visualizar alternativas y soluciones en momentos de incertidumbre. El sector del Aceite de Oliva en España es un sector que subsiste gracias a los incentivos que la Unión Europea inyecta a los agricultores para que mantengan una renta suficiente para sobrevivir de la olivicultura, pero el gran hándicap de este sector está centrado, desde hace muchos años, en la comercialización. Durante los últimos años en los que el ritmo de los mercados se ha reducido ostensiblemente el sector oleícola necesita de nuevas fórmulas que solucionen las caídas en el precio del Aceite de Oliva. Acostumbrados a exportar en torno al 50% de la producción a granel, el valor añadido de la venta se queda en los intermediarios del Aceite de Oliva y los grandes distribuidores no españoles. El sector oleícola de España está soportado en un alto porcentaje por almazaras cooperativas pertenecientes al medio rural que no cuentan, ni con personal cualificado, ni con estructuras y volúmenes sólidos de producción para afrontar la entrada en los nuevos mercados internacionales emergentes si no es de manera colegiada con otras cooperativas en grupos de comercialización. Estos grupos de cooperativas para la comercialización del Aceite de Oliva cuentan con el volumen necesario, la estructura y la fuerza para tomar decisiones estratégicas innovadoras. Una nueva estrategia que el sector cooperativo español no ha tomado en ningún momento es el de crear una marca propia de franquicias por el que se realicen aperturas de oficinas comerciales de productos cooperativos a nivel internacional para, desde un punto de vista aperturista, conseguir acercar los productos de las cooperativas a los consumidores y a su vez, innovar en modelos que reducen considerablemente el riesgo de la inversión, pues el peso de la misma lo lleva el franquiciado. La creación de un modelo prospectivista de este tipo de estrategia es el resultado de este trabajo, que demuestra, cómo la viabilidad de la innovación comercializadora pasa por tomar decisiones estratégicas en momentos de incertidumbre.

PALABRAS CLAVE: Cooperativas, Internacionalización, Franquicias, Valor añadido.

ESTADO DE LA CUESTIÓN: VINO Y ACEITE DE OLIVA

En un mundo globalizado en donde el intercambio comercial de bienes y servicios es una actividad común entre individuos, empresas y países, resultaría difícil concebir que existan productos de consumo regular que no estuvieran a la vanguardia en estrategias de comercialización ni mucho menos inmersos en el intercambio comercial de manera directa y comprometida dentro de su sector. Ante este panorama y con base a investigaciones respecto a los productos que se elaboran en la zona de Castilla la Mancha, se detectó la urgencia de desarrollar estrategias que permitieran la expansión de mercados que potenciaran el crecimiento del sector vitivinícola y oleícola a través de la implementación de formatos alternativos de negocios, en este caso la franquicia.

¿Porqué investigar respecto al sector vitivinícola y oleícola español, específicamente el de la zona de Castilla-La Mancha? Porque el sector vitivinícola español tiene una gran importancia, tanto por el valor económico que genera como por la población que ocupa. España, con 1,5 millones de has. destinadas al cultivo de la uva (de la que el 97 % se destina a transformación), sigue siendo el país con mayor extensión de viñedo de la Unión Europea y del mundo (más de un tercio de la superficie total de la UE, seguida por Francia e Italia con un 25 % cada una, lo que representa más de un 15 % del mundo), y Castilla-La Mancha es la primera de las regiones de España en cuanto a superficie dedicada a este tipo de cultivo con más del 50% de la producción nacional. La vid ocupa el tercer lugar en extensión de los cultivos españoles, detrás de los cereales y el olivar.

Tomando en consideración algunos datos para resaltar la importancia de lo mencionado, según estimaciones del Ministerio de Agricultura español, la producción española de vino para la campaña 2003/2004 se estimó en unos 46,7 millones de hls. (incluido el mosto), lo que suponía un incremento de un 17 % respecto al año anterior. Esta cifra coloca la producción española en segundo lugar en el ranking mundial, detrás de Francia con una producción estimada de 47,3 millones (-9% comparada con 2002/2003). En tercer lugar, Italia con 44,9 millones experimenta un descenso en su producción de un 2%. La producción de vino (junto con el mosto) representa en España el 2% de la producción final agraria total y el 3,3 % del valor de la producción vegetal. El valor de las ventas netas en el año 2001 fue de 4.474 millones de euros. El incremento del valor de las ventas netas entre los años 1995 y 2000 fue de 57,6 %, el mayor de los experimentados en toda la industria agroalimentaria española. La participación de este sector en el conjunto de la industria pasó de un 6 % a un 8 % en el mismo periodo.

Tabla 1. Comparativas Grandes Cifras del sector

3.337.000	1.180.000	566.429	17%	48,00%

España, con 1,1 millones de has. destinadas al cultivo de la uva (de la que el 97% se destina a transformación), sigue siendo el país con mayor extensión de viñedo de la Unión Europea y del mundo (más de un tercio de la superficie total de la UE, seguida por Francia e Italia con un 25% cada una, lo que representa más de un 15% del mundo), con una tradición elaboradora de vinos que se remonta a la época de los romanos. La vid ocupa el tercer lugar en extensión de los cultivos españoles, detrás de los cereales y el olivar.

Tabla 4. Producción España

España				
	1.167.700	1.167.700	1.159.600	1.142.400
	6.539.812	5.271.737	5.601.852	6.927.600
	45.500.000	33.900.000	39.400.000	47.330.000

Fuente: M.A.P.A. e I.N.E.

Los rendimientos del viñedo son bajos, por ello España que es el primer país del mundo por extensión de viñedo, es el tercero en cuanto a producción de vinos. Esta característica, puede restar algo de

competitividad a la industria vitícola, pero en compensación, se producen uvas de elevada calidad y sanidad, que producen gran variedad de vinos por toda la geografía. Hay parcelas muy numerosas con superficies medias muy pequeñas, lo que constituye una debilidad desde el punto de vista de racionalización de los costos de producción, pero es un factor clave para el asentamiento poblacional y de redistribución de renta, sobre todo en el medio rural, donde por ejemplo, Castilla-La Mancha cuenta con 919 municipios en el que el 90% tienen una población inferior a 15.000 habitantes.

Tabla 5. Producción De Uva Y Vino /Ha

España

Rentabilidad/Ha; teniendo en cuenta que las ventas de vino en 2001 alcanzaron la cifra de 4.844.811.000 €(I.N.E.) obtenemos que la rentabilidad por hectárea en España se sitúa en 4.149'02 €/ha.

Castilla-La Mancha

La producción media de vino de mesa en las últimas campañas es de 17.25 millones de hectolitros. Las Comunidades Autónomas de Castilla-La Mancha y Extremadura son las que más elaboran este tipo de vinos, con el 67 y el 11,5% del total de la producción nacional, respectivamente.

Tabla 6. Producción Castilla La Mancha.

A pesar de tener la mayor extensión de cultivo dedicada al viñedo, Castilla la Mancha sigue teniendo unos rendimientos inferiores a la media española y europea y que pueden traducirse en una menor cantidad de hls/ha de producción de vino. Así, en el año 2000 se dio la menor diferencia siendo la productividad española de 38.96 hls/ha por los 37.48 hls/ha de Castilla la Mancha, lo que supuso solo un 3.8% más de productividad. Esta diferencia se ve incrementada en los años siguientes siendo la diferencia en el 2001 del 17.67% , en el 2002 del 18.90% y en 2003 del 15.61% de mayor producción de España sobre Castilla-La Mancha.

En cuanto al Aceite de Oliva, la Unión Europea tiene una gran importancia en la producción de éste. Es necesario destacar que, el 98% del total del Aceite de Oliva producido a nivel mundial tiene su origen en

la cuenca del Mediterráneo. Esto se debe a las óptimas condiciones que presenta esta zona para la producción de dicho aceite.

Observando los datos siguientes y centrándonos en el caso de Castilla-La Mancha se puede decir que, la producción de Aceite de Oliva no es tan intensiva como en el total de España, es más, de la producción nacional supone un 7% y se sitúa en segunda posición en cuanto a niveles de producción detrás de Andalucía, que produce el 80% del total de Aceite de Oliva español, y es el máximo productor a nivel mundial, a lo que hay que sumar que la superficie destinada al cultivo del olivar y el número de olivos es muy superior en porcentaje al de producción de Aceite de Oliva de Castilla-La Mancha y sobre todo tiene mayores extensiones dedicadas al cultivo intensivo.

	MUNDO	UE	España	Castilla-La Mancha	CLM/UE (%)	CLM/España (%)

Importaciones (miles de toneladas)	568	96	40,6	-	-	-

Fuente: Elaboración propia a partir de Agencia para el Aceite de Oliva.

La producción de Aceite de Oliva en España para el año 2010 se ha visto seriamente afectada debido a las duras condiciones meteorológicas por recientes heladas, nieves e intensas lluvias que se han producido en los meses en los que se debía haber llevado a cabo la cosecha. En el caso concreto de Castilla-La Mancha se estiman unas pérdidas de 86 millones de euros. Esto supone una pérdida de entre el 40 y el 50% de la cosecha de aceituna para la producción de Aceite de Oliva.

Por tanto, esta pérdida cuantiosa de la cosecha y el empeoramiento de las condiciones de la aceituna recolectada ponen en riesgo el mantenimiento de las cotas de calidad que se estaban manteniendo en los últimos años, ejerciendo un efecto negativo sobre aquellas familias que dependen económicamente de la recolección de la aceituna, la imagen de marca de calidad creada y, por tanto, sobre la economía general del país.

COOPERATIVISMO AGROALIMENTARIO Y COMERCIALIZACIÓN

Durante muchos años el cooperativismo de comercialización oleícola se ha convertido en una realidad económica consolidada para el sector agrario de la región de Castilla-La Mancha (Martín, Molina y Ruiz: 2009); su actualidad es siempre tendente a la contabilización de datos negativos, siendo esta circunstancia algo natural, por lo complicado de los mercados y, sobre todo, el mercado de comercialización del Aceite de Oliva, en el que existen multitud de intermediarios que encarecen el producto de forma innecesaria y reducen los márgenes hasta límites por debajo de la rentabilidad asumible por las cooperativas y sus socios.

La tradición y el desarrollo alcanzado por estas cooperativas ha requerido de la creación de grupos asociados de cooperativas que han creado, *ad hoc* empresas dedicadas a la comercialización de su producto, lo que los ha convertido en actores importantes en los ámbitos de decisión del sector oleícola y una referencia imprescindible para el asociacionismo agrario español; en efecto, estas empresas

constituyen, sin duda, un subsector muy importante del cooperativismo en Castilla-La Mancha tanto en términos de número de cooperativas como en volumen de negocio, y por lo tanto con una mayor eficiencia en las ventas respecto al resto de los sectores tradicionales del cooperativismo agrario castellanomanchego.

Estudios anteriores realizados sobre el comportamiento empresarial de estas cooperativas han puesto de manifiesto una mejora de los resultados económicos a medida que aumentaba el volumen de negocio de las entidades de segundo grado creadas. Esta mejora se pone de manifiesto en la mayor rentabilidad obtenida por las mismas, tanto en términos estáticos (ratios contables de rentabilidad económica o financiera) como en términos dinámicos (tasa interna de rendimiento global de los períodos de estudio analizados) (Caballer y Segura, 1995). No obstante, ha sido imposible encontrar relaciones funcionales que permitan establecer las causas de la misma; los datos analizados muestran siempre una elevada correlación lineal entre la variable ventas y los componentes del coste total de la cooperativa, lo que, unido a la ausencia de relación entre las ventas y el coste unitario, induce a pensar que estamos ante un proceso de producción con rendimientos a escala constantes, partiendo de funciones de producción homogéneas de grado uno.

Este hecho podría ser explicado por la alta estandarización alcanzada en la tecnología de los procesos de producción de la comercialización agroalimentaria, unido a la subordinación de la función de operaciones en el ámbito de la cooperativa, lo que ha conducido a la proporcionalidad entre costes e ingresos, que hacen inútiles los intentos de establecer una dimensión óptima (Vidal *et al*, 1999).

Los estudios anteriores que han afrontado el análisis de la eficiencia de las cooperativas se han centrado, básicamente, en comparar la forma cooperativa de empresa con su contrapartida capitalista, incidiendo en alguna de las principales diferencias entre ambas: objetivos globales, sistemas de control y representación, distribución de excedentes y transferencia de la propiedad, etc., y la forma en que estas diferencias afectan al logro de la función objetivo de la empresa (Enke, 1945; Clark, 1952; Helmberger, 1964; Anderson *et al*, 1979; Anderson *et al*, 1980), o bien en la estructura de los derechos de propiedad y sus implicaciones sobre el coste y la eficiencia (De Alessi, 1983; Porter y Scully, 1987) y en este caso, y siguiendo con la necesidad de diversificar la procedencia de las líneas de negocio, se ha hecho necesaria la innovación para salvaguardar la supervivencia del sector, y sobre todo, del medio rural que lo sustenta a lo largo y ancho del territorio español, dándose por sentado que, en el mundo globalizado en el que vivimos, se hace imprescindible tener abiertos canales de comercialización y de exportaciones para facilitar la diversificación del riesgo, y para poder afrontar este tipo de estrategias es necesaria la acumulación de fuerzas, es decir, crear vínculos comunes para compartir costes en la comercialización, y así evitar que se multipliquen los costes por tantas cooperativas como existen.

COMERCIO EXTERIOR DE PRODUCTOS AGROALIMENTARIOS

La mayor consideración de las propiedades beneficiosas del Aceite de Oliva para la salud de las personas a nivel mundial ha propiciado una mayor expansión del producto. Por lo que, por regla general, las exportaciones españolas han ido creciendo, experimentando sobretudo un espectacular crecimiento a partir del año 2000.

En Castilla-La Mancha existen cuatro Denominaciones de Origen reconocidas, las cuales son: Aceite Campo de Montiel, Aceite de la Alcarria, Aceite Campo de Calatrava y Montes de Toledo, las cuales suponen casi la mitad de la superficie de olivar existente en Castilla-La Mancha.

En este año ha representado para Castilla-La Mancha en cuanto a comercio exterior, según el Consejo Económico y Social de CLM y un último informe del Instituto Español de Comercio Exterior (ICEX, Octubre 2009) una serie de cambios en las expectativas que se tenían planteadas a futuro.

El primer dato importante que nos revela el informe, es el escaso peso que tiene Castilla-La Mancha en el conjunto de las exportaciones totales en España, tan sólo un (1,6%), cifra en la que los esfuerzos por conseguir mejores resultados han de aumentar el ritmo de avance de las exportaciones. Un dato más positivo, y contrario a lo sucedido en años anteriores, es la reducción de la elevada dependencia regional del exterior, que se traduce en un descenso de las importaciones (una caída del 18% en Castilla-La Mancha frente al 1% de España).

Años	Aceite de Oliva		Aceite de Oliva virgen			
	Comercio exterior		Precios percibidos por los agricultores (euros/100kg)			
	(toneladas)		Extra	Extra	Fino	Corriente

2003	71.169	573.121		225,22	215,92	200,89
2004	82.697	672.216		243,90	234,92	227,16
2005	114.556	549.626		305,03	299,84	288,28
			Extra		Virgen	Lampante
2006	132.928	509.677		564,32	370,08	158,20
2007	80.130	690.813		581,10	474,68	136,82

Esto se traduce en una mejora de la Balanza de Pagos por Cuenta Corriente, ya que las salidas de la comunidad no disminuyen tanto como las entradas procedentes del extranjero. Al igual que ocurre con las exportaciones, el peso de Castilla-La Mancha en el total de las importaciones es minúsculo (un 2,4%) del total de España.

Algo que es importante considerar para objeto del presente trabajo es que Castilla-La Mancha presenta una menor orientación a los mercados exteriores que la media nacional española, es decir, se autoabastece de bienes y mercancías en mayor medida que el resto de comunidades, que se nutre del mercado externo (presenta un grado de apertura regional del 8,4% frente al 17,2 % nacional). No obstante, es preciso aclarar la dificultad de extrapolar estos datos a la realidad geográfica de los flujos comerciales de la comunidad, ya que muchos de éstos se realizan a través de otras Comunidades Autónomas fronterizas.

Hay que considerar que la Unión Europea de los 27, es el principal socio comercial , un 80% de los productos castellano-manchegos están destinados a exportación, mientras que en el total de las importaciones un 84% proviene de la Unión Europea. Los principales consumidores son Portugal

(20,2%), Francia (16,8%), Alemania (13,1%), Italia (9,3%) y Reino Unido (4,7%) entre los comunitarios. Fuera de las fronteras europeas el impacto de las exportaciones es mínimo, como ocurre en EEUU (2,9 %), en África (5,9%, centrándose la mitad de la mercancía en Marruecos) o Asia (4,8%). Este último apartado es susceptible de mejora, y se deben reforzar esfuerzos para ampliar cuota en destinos emergentes (bloque de países BRIC). Lo interesante de este panorama es el área de oportunidad que representa el mercado de América Latina, en este caso México.

Los intercambios comerciales en las provincias de Castilla-La Mancha (formada por 5 provincias) se llevan a cabo teniendo un reparto bastante equitativo en las exportaciones entre ellas, no ocurriendo lo mismo en las importaciones. En Octubre de 2009, según datos oficiales publicados por informe mensual ICEX se comprueba que Toledo ocupa el segundo lugar con 558.3 millones después de Ciudad Real. Estos datos se refieren a un momento muy puntual del año 2009 (el mes de Octubre), por lo que no es significativo de la tendencia mostrada a lo largo de todo el ejercicio económico. Para ello nos servimos de la tasa de variación interanual de la exportación y se comprueba el dinamismo de las ventas al exterior. La provincia que se encuentra más activa según dicha tasa interanual es Guadalajara (3,5%), el resto de provincias arrojan cifras negativas: Cuenca (-5,6%), Toledo (-7,3%), Ciudad Real (-14,7%) y Albacete cerrando la lista (-16,8%). Otro dato positivo es que esta tasa ha sido más favorable en Castilla-La Mancha que la media nacional (un -9,5 frente al -17,5%).

La especialización comercial y la descomposición sectorial de los intercambios comerciales permite extraer una primera conclusión: las compras y ventas a economías extranjeras se concentran en algunos sectores y ramas de manufacturas. En el caso de la exportación, el sector Alimentos (32,3%), la rama de Productos químicos (19,7%), Otros bienes de equipo (9%) y Otras semi-manufacturas (5,8%), acapararon en conjunto el 67% de las ventas al exterior. Otras exportaciones como Maquinaria para industria, Manufacturas de consumo, Metales no ferrosos, Componentes del automóvil y Calzado, siguen la lista en menor proporción.

Se han producido modificaciones dispares en el patrón comercial de la región, la tendencia ha sido afianzar y seguir manteniendo el peso de algunas de las ramas de mayor protagonismo en Castilla-La Mancha para otros bienes de Consumo, Calzado y Alimento. La especialización se mantiene en Metales no ferrosos mientras que se suaviza en Muebles y otras manufacturas de consumo.

Como se esperaba, siete de las partidas más vendidas al exterior pertenecen a la rama Alimentos, siendo el vino de uvas frescas y mosto de uvas el producto estrella más demandado por clientes extranjeros.

NUEVAS EXPECTATIVAS COMERCIALIZADORAS AL EXTERIOR

Se pueden considerar ventajas comparativas reveladas de la especialización comercial de un área económica en determinadas producciones en función de los costos y precios relativos frente a sus competidores, aunque existe un déficit comercial en aquellos sectores necesitados de una alta tecnología, mientras que los sectores de demanda más dura y menor contenido tecnológico presentan superávit.

Con el paso del tiempo se ha modificado la fuente de las ventajas comerciales. Las ventajas comparativas localizadas en las producciones intensivas en el factor relativamente más abundante, la mano de obra no cualificada y la dotación de recursos naturales, se han reducido sustancialmente. Por otro lado, se ha conseguido la especialización de la región en otro tipo de ramas de actividad más dinámicas (equipos de oficina, telecomunicaciones y metales no ferrosos).

Para poder considerar la posibilidad de crecer el comercio exterior del Aceite de Oliva y el Vino, la información es un aspecto clave a la hora de abordar la salida a los mercados exteriores, ya que antes de salir es necesario analizar los mercados atractivos para nuestros productos, estudiar su tamaño, consumo,

evolución, economía, política, estructura, barreras comerciales, etc. Todo ello nos ayudará a seleccionar los mercados más interesantes y a poner en marcha una eficaz estrategia de promoción.

El objetivo del presente trabajo es proponer un método alternativo de comercialización para ambos productos, el vino y el aceite de oliva, con el fin de potenciar su capacidad de adquisición más allá de las fronteras españolas e inclusive europeas, para lo que se estudia la posibilidad de desarrollar una propuesta de modelo para la distribución en exclusiva, preferentemente con el diseño del formato de franquicias mediante la apertura de Unidades de Negocios en territorio extranjero propiedad de las cooperativas.

¿Porqué desarrollar un esquema bajo el formato de franquicias? Si consideramos que de acuerdo con May (2008) la franquicia es *un formato de negocio con posicionamiento de marca que permite la explotación de un concepto desarrollado y probado en su viabilidad y documentado en manuales por un emprendedor denominado franquiciante a través del otorgamiento de los derechos a otro emprendedor inversionista denominado franquiciatario, cuya unión o alianza se estipula bajo las cláusulas de un contrato de franquicia*. Entonces valdría la pena analizar el Aceite de Oliva y los vinos de la zona de Castilla-La Mancha, que, como se ha comentado a lo largo del presente trabajo, gozan de aceptación en los mercados en los que incursionan; sin embargo solo es su Denominación de Origen (D. O.) el respaldo con el que cuentan, es decir, no han desarrollado Unidades Estratégicas de Negocios (UEN), ex profeso, para la comercialización exclusiva de sus productos y, que permita lograr un posicionamiento de marca que les abra la posibilidad de comercializar, adicional a los productos mismos, el formato que les permita el ingreso a nuevos mercados, pudiendo ser éste, el de las franquicias. Por lo que uno de los primeros pasos a seguir es la determinación de una “unimarca” que ampare a los productos provenientes de Castilla-La Mancha y que sea su escaparate ante los posibles inversionistas – emprendedores que se interesen por el formato.

¿Cuál de las formas en las que se presenta la franquicia sería el idóneo? Identificando cada una de éstas nos encontramos que de acuerdo con Ferreira (2009) Un sistema de distribución exclusiva es la forma extrema de la distribución selectiva, la cual es la que se usa cuando determinado producto está disponible solo en pocas tiendas y se utiliza en productos de especialidad o de lujo. La selección exclusiva se lleva a cabo en una región predefinida, un sólo distribuidor recibe el derecho exclusivo de vender la marca y se compromete generalmente a no vender marcas competitivas. En contrapartida, el distribuidor acepta no referenciar marcas competidoras en la misma categoría de productos.

Una estrategia de cobertura exclusiva es útil cuando el fabricante quiere diferenciar su producto por una política de alta calidad, de prestigio o de calidad de servicio que significa que solo uno o unos cuantos distribuidores en un área determinada tienen el derecho de distribuir o comercializar determinado producto. Puesto que los compradores tienen que buscar o viajar muy lejos para comprarlo, la distribución exclusiva suele confinarse a bienes especiales de consumo. La distribución limitada también sirve para proyectar una imagen de exclusividad del producto. La estrecha cooperación entre fabricante y distribuidor facilita la puesta en marcha de este programa de calidad. Las ventajas e inconvenientes de este sistema son las de la distribución selectiva, pero ampliadas. Cabe señalar que una forma particular de distribución exclusiva es la franquicia.

La franquicia de distribución o producto se caracteriza por ser la propia empresa franquiciadora la que facilita los productos de venta, bien suministrándolos ella misma o bien actuando a modo de central de compras. Estos productos pueden ser fabricados por la propia central o por terceros, pero en cualquier caso se distribuyen en la red de forma exclusiva con la marca de la franquicia. Así el producto es el elemento de fidelización del franquiciatario, ya que no puede adquirirse a través de terceros para su distribución, por lo regular son tiendas de ropa, joyas o muebles las que se apegan a éste tipo de franquicia, sin embargo, por las propiedades de los productos que estamos considerando, el potencial para que se utilice este formato es real.

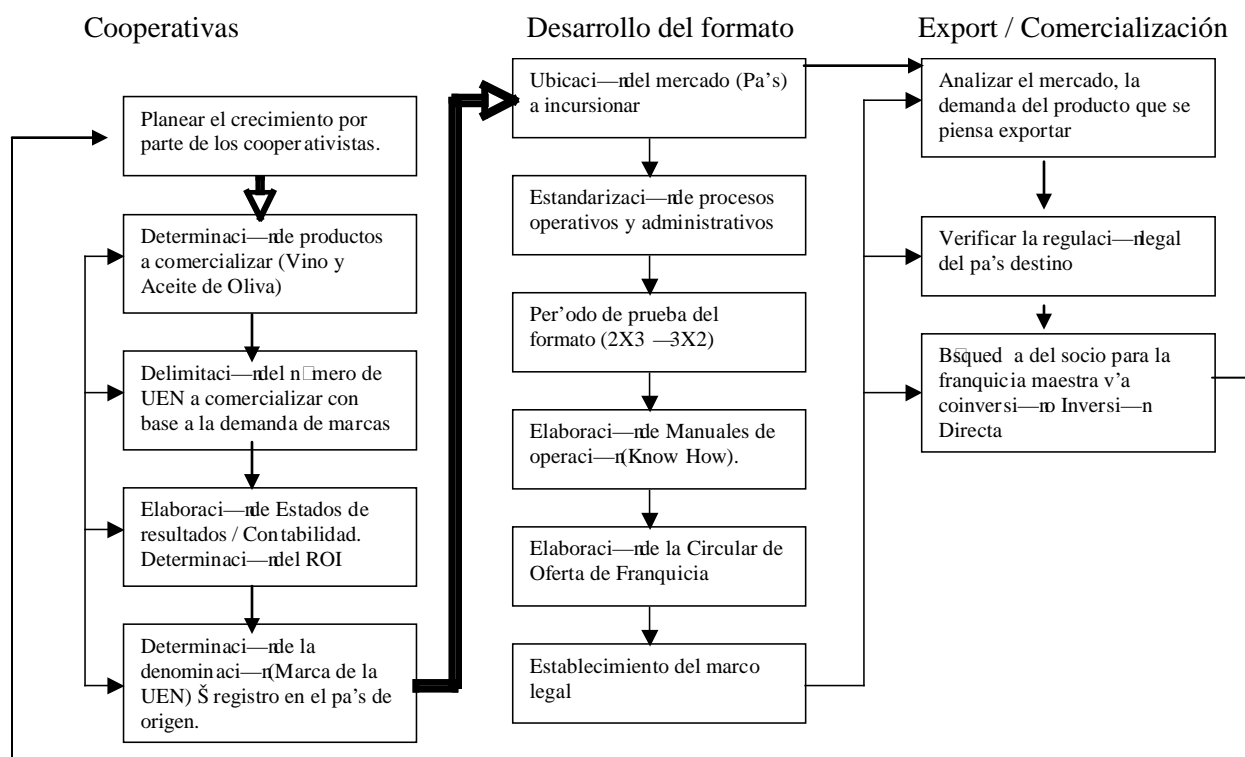

En este modelo de franquicia, el franquiciatario tiene mayor libertad de actuación en cuanto a la comercialización, aunque también recibe un know how específico.

Los productos tema de la presente investigación cumplen a criterio de los autores las premisas de exclusividad, alta calidad, prestigio, etc. Por lo que sería este esquema el recomendable y bajo el que se elaboraría la propuesta de modelo, tomando en consideración la urgencia en primera instancia del desarrollo y creación de una UEN con marca propia y creada ex profeso para la comercialización de los productos. Además de acuerdo con la Asociación Mexicana de Franquicias (AMF) dentro de los giros que han tenido más auge en los últimos años debido a las transformaciones culturales se encuentra todo lo relacionado con productos para el cuidado personal, gimnasios, comida saludable, productos orgánicos, etcétera. La preocupación por llevar un nivel de vida más sano va en aumento en la población, al menos en México, por lo que explotar conceptos relacionados puede ser muy productivo

La urgencia de la creación de una marca radica en que el papel de éstas en el comercio cada vez se consolida más, a grado tal que la actividad comercial está cada vez más impulsada por la marca, que se generaliza entre los consumidores, por medio de la publicidad, la mercadotecnia y el lanzamiento de productos de promoción que han alcanzado en la actualidad un alto grado de sofisticación auxiliadas por estudios de mercado con las correspondientes tendencias Psicológicas de los consumidores. En este contexto la marca se convierte en un elemento sensible en la conquista de los mercados, pues su carácter distintivo la convierte en el instrumento central de la disputa de la competencia. A opinión de Aaker (1996), hoy por hoy, muchas de las marcas con un alto prestigio venden más por la calidad de los productos o servicios que respaldan. A esto se llama equidad de marca, la cual es un conjunto de cualidades que implica una inversión para crear y mejorar las mismas.

De acuerdo con Torres (2010), es un hecho que toda empresa necesita poner en circulación sus productos o servicios en el mercado, en muchas ocasiones se puede tener las mejores ideas o productos pero no se cuenta con el canal de distribución adecuado lo que podría condenar los productos al fracaso; sin embargo también está la posibilidad de que alguien quiera invertir en un producto pero no tenga la idea adecuada, pues bien, es en este punto donde se ubican las bondades para poner en circulación los productos o servicios de las empresas utilizando un formato como el de las franquicias, en este caso de los productos provenientes de las cooperativas de Castilla la Mancha.

¿Qué ventaja conlleva el desarrollar el formato como estrategia de expansión hacia nuevos mercados? de acuerdo con los expertos en la materia como Gallastegui y Feher entre otros, la franquicia presenta la ventaja de que, aunque el Franquiciante y el franquiciatario se unen a través de un contrato de franquicia, ambos son económica y legalmente independientes, ya que el Franquiciante es una especie de “proveedor” del franquiciatario quien debe aportar el capital para el establecimiento de la UEN que operará bajo la marca que provee el franquiciante con todo el Know How correspondiente, que da la garantía del soporte y conocimiento del sector. De desarrollarse el formato bajo esta premisa, deberán seguirse algunos pasos, mismos que se presentan en la propuesta del modelo, el cual queda de la siguiente manera:

Elaboración propia.

Como se puede apreciar, el modelo propuesto se divide en tres partes.

1. Cooperativas (productos a comercializar).
2. Desarrollo del formato.
3. Exportación / comercialización del formato de la franquicia.

Esta propuesta se centra exclusivamente en el proceso inicial de la conformación del formato, ya que una vez que se ubique al socio, deberá analizarse la norma bajo la cual opera el país destino en cuanto a la introducción de los productos que operará la marca. Una ventaja indudable es aprovechar los países con los que España tiene acuerdos comerciales o relaciones favorables en donde se tenga conocimiento que ya el producto se está exportando, como el caso de México, algunos países latinoamericanos y la unión americana, sin contar los propios de la Unión Europea.

Si se analiza la posibilidad de aprovechar las ventajas de poder franquiciar para expandirse a nuevos mercados, las cooperativas obtendrían la posibilidad de integrarse hacia delante de manera directa. Con la implementación de Unidades operando bajo una marca potencian la posibilidad de colocar sus productos en otros mercados de manera exclusiva con capital de terceros, para lo cual deberán en primera instancia desarrollar y probar el formato de franquicias a través de realizar la apertura de tres unidades (sucursales) por dos años en territorio español o como Inversión Extranjera Directa en otros países. Aunque esta fórmula pueda parecer para algunos un tanto obsoleta, ofrece, desde la óptica del presente documento, garantías que permitan corroborar la rentabilidad del negocio.

CONCLUSIONES

El desarrollar una propuesta de modelo de franquicia para apoyar las estrategias de comercialización desarrolladas para productos como el Aceite de Oliva y los vinos procedentes de la zona de Castilla-La

Mancha en España, indudablemente representaría un parteaguas en la manera tradicional en como se ha venido desarrollando la distribución y venta de productos provenientes de esta zona.

Parte importante para hacer que la estrategia augure éxito, es sin duda el poder crear, con base a la homologación de opiniones de quienes conforman el grupo de cooperativistas, una empresa que represente bajo una marca franquiciable bajo el esquema de distribución en exclusiva, los productos que se incluyan dentro de las UEN que se pretendan comercializar y que darán ese sello distintivo a la marca – empresa que se cree.

El proceso no es inmediato, pero sí alcanzable en el mediano plazo a fin de poder desarrollar lo pertinente para evitar en la medida de lo posible el fracaso de la estrategia. Si bien es cierto que, de acuerdo con diversas declaraciones por expertos y diversa bibliografía en la materia las franquicias no garantizan en ninguna medida el éxito, sí minimizan la posibilidad del fracaso.

RESUMEN

Ante un entorno dinámico y turbulento, las organizaciones se tienen que enfrentar a la renovación de mercados de trabajo y de disciplinas, lo que debe impulsar a sus directivos a diseñar programas de capacitación y desarrollo que promuevan el crecimiento personal y que incrementen los índices de productividad, calidad y excelencia en el desempeño de tareas laborales, a fin de obtener una ventaja competitiva. El presente documento refiere información que permite identificar la importancia de una capacitación con calidad, al encontrarse ante un entorno globalizado donde la nueva sociedad del conocimiento, impactada por las tecnologías y nuevos sistemas obligan a las organizaciones a facilitar el aprendizaje en el lugar de trabajo; provocando el generar stocks de conocimientos tanto en lo individual, grupal y organizacional que apoyen en su gestión. Seguros de que la calidad en la capacitación impacta en la productividad, lo ideal es diseñar programas de capacitación donde se trabaje simultáneamente con el “hacer y el llegar a ser”, ya que esto implica para el personal, lograr realizar un trabajo en conjunto, que apoye su desarrollo personal como miembro de un equipo, de un grupo, de la misma comunidad empresarial y por ende de la sociedad en general.

PALABRAS CLAVES: Calidad, Productividad y Capacitación

QUALITY AND PRODUCTIVITY: “A BINOMIAL TOWARDS THE GROWTH”

ABSTRACT

Before dynamic and turbulent surroundings, the organizations must face the renovation of markets of work and disciplines, which must impel its directors to design programs of qualification and development that promote the personal growth and that increase the indices of productivity, quality and excellence in the performance of labor tasks, in order to obtain a competitive advantage. The present document refers information that allows to identify the importance of a qualification with quality, when being before globalized surroundings where the new society of the knowledge, hit by the technologies and new systems forces the organizations to facilitate the learning in the work place; causing generating stocks of knowledge as much in individual, group and the organizational thing that support in their management. Insurances of which the quality in the qualification hits in the productivity, the ideal is to design qualification programs where it works simultaneously with “doing and getting to be”, since this implies for the personnel, to manage to altogether make a work, that supports its personal development like member of an equipment, a group, the same enterprise community and therefore of the society in general.

KEYWORDS: Quality, Productivity and Qualification.

INTRODUCCIÓN

Desde finales del siglo pasado la historia se ha venido caracterizando por una aceleración del cambio, esto ha venido proporcionando el que las organizaciones se preocupen y ocupen por darle el justo valor a la necesidad de “aprender a aprender” y “aprender a desaprender”; es decir, el entender el efecto que la

globalización a propiciado al mundo de los negocios y las fuerzas que mueven a estos, el reconocer la urgencia de iniciar a generar conocimientos, habilidades, actitudes y comportamientos entre todos los que conforman la fuerza de trabajo en cada uno de sus niveles a fin de que se mantenga un espíritu de competitividad, que los apoye a la adaptación de dichos cambios.

Y es que a medida que se genere nuevo conocimiento, las organizaciones serán capaces de aprender debido a que las personas aprenden; reconociendo por lo tanto que las personas es el activo más importante con el que cuentan las organizaciones. El factor humano es cimiento y motor de toda empresa y su influencia es decisiva en el desarrollo, evolución y futuro de la misma. El hombre es y continuara siendo el activo más valioso de una empresa. (Siliceo, 1998).

Por otra parte Orozco y Jiménez (1998), opinan que la gente es definitivamente el factor más importante en cualquier proceso, ya que es el único capaz de mejorar, crear e innovar, el factor determinante en el fracaso o en el éxito de toda organización y la responsabilidad de toda alta dirección es la de extraer el talento y la creatividad que es inherente a todo ser humano a través de su educación, capacitación y entrenamiento. Finaliza al comentar que las empresas que mayor inversión realicen en este rubro serán sin lugar a dudas las únicas que tienen probabilidad de sobrevivir y ser competitivas en el siglo XXI.

El actual entorno de crecimiento económico que se vive en el ámbito internacional, nacional y local requiere de empresas productivas, con organizaciones competitivas que se adapten a las diferentes dinámicas de los mercados, a la innovación y al cambio tecnológico; por lo que demandan, hoy por hoy, recursos humanos con altos índices de conocimientos y educación, así como mayores niveles de capacitación de todo el personal que labora dentro de estas empresas. (Córdova, 2005)

Hoy en día las empresas tienen que recurrir a estrategias de cambio para alinear un entrenamiento a los procesos críticos del negocio y garantizar su competitividad y permanencia en la sociedad, por lo que la capacitación se ha convertido en un autentico proceso de cambio, dirigido a hacer mas eficiente el desempeño de los empleados e impactar la productividad de las organizaciones. (Pinto, 2000). Debiendo ser los directivos primeramente quiénes deben estar concientes de la importancia de llevar a cabo una capacitación con calidad, a fin de facilitar el aprendizaje en el lugar de trabajo; provocando con ello, el generar stocks de conocimientos tanto en lo individual, grupal y organizacional que apoyen en su gestión. Esta celeridad en los cambios obliga a las organizaciones no tan solo a allegarse del mejor capital humano, sino el de motivarlo e incentivarlo a fin de poder mantenerlo dentro de la misma, para que pueda ser más productivo día con día.

Seguros de que la calidad en la capacitación impacta en la productividad, lo ideal es diseñar programas de capacitación donde se trabaje simultáneamente con el *“hacer y el llegar a ser”*, ya que esto implica para el personal, lograr realizar un trabajo en conjunto, que apoye su desarrollo personal como miembro de un equipo, de un grupo, de la misma comunidad empresarial y por ende de la sociedad en general.

Reconociendo que la capacitación constituye uno de los pilares fundamentales sobre los que se sustenta el proceso de aprendizaje organizacional y que posibilitan la adquisición y desarrollo de competencias (se desglosará el termino más adelante) laborales, que incrementan la efectividad y calidad de los trabajadores.

Frente un proceso de capacitación siempre se asocian procesos de cambios tanto de aptitud, actitud y de imagen; ya que se espera la creación de nuevas habilidades y destrezas ante la generación de nuevos conocimientos que en el mediano y largo plazo se puedan consolidar estos sobre la base de la creación de nuevos valores culturales no tan solo dentro de la cultura organizacional sino lo más importante en lo personal; motivando así el desarrollo y calidad de los individuos y por lo tanto el conformar los equipos de trabajo bajo un clima de confianza y respeto.

De ahí la importancia de establecer un programa de capacitación, en función a los resultados obtenidos en el Diagnostico de Necesidades de Capacitación (DNC) previamente realizado, mismo que debe ser motivado y promovido por la alta dirección, debiendo establecer desde sus inicios claramente los objetivos y resultados que se esperan obtener para hacer posible el poder medir el impacto en la gestión de las competencias y el incremento en la productividad posterior a la capacitación.

Es necesario dejar de ver a la capacitación como un gasto únicamente y no como lo que realmente es: una inversión, o en el peor de los casos tan solo como una obligación gubernamental y no como una opción de crecimiento en la productividad de su empresa y competitividad en los mercados, es pues importante que las organizaciones destinen recursos significativos a las acciones de capacitación tanto internas como externas, cuidando el poder medir el impacto que la misma causa en la productividad. El poder observar la transferencia de la capacitación a la conducta laboral diaria, los efectos sobre la organización y los efectos de valor final (productividad y relación costo/beneficio), pudiendo así determinar el retorno de inversión.

Por todo lo anterior, se dice que una capacitación de calidad en las organizaciones, conduce a la rentabilidad mas alta dentro de las mismas, generando cambios positivos y que apoyan en la realización de este binomio de capacitación-productividad que provoca un crecimiento individual, de equipo y organizacional, que aplicado en sus tareas, impacta incrementalmente a la organización y a su cultura, motivado por ese cambio profundo de no limitarse a tratar tan solo en “*ser*” o “*hacer*” sino “*hacer y el llegar a ser*”, pasando de la lógica de cambios posibles a la lógica de cambios profundos y necesarios, según palabras de Felipe Calderón, Presidente de México, donde además nos advierte que hoy los mexicanos estamos llamados a transformar las instituciones y las estructuras heredadas del siglo XXI para construir precisamente, dijo, las instituciones y estructuras del México del futuro.

DESARROLLO

La introducción de cambios y la aspiración de que estos se coronen con el éxito, tiene entre sus exigencias la preparación que requieren, tanto aquellos que deben conducirlos, como los que deben llevarlos a cabo. Ello determina la necesidad de modificar comportamientos y crear nuevas habilidades. (Ramírez y García, 2005). Según Mayo y Lank (2000), cada empresa tiene un lenguaje propio que transmite sus mensajes. Por eso una organización que aprende necesita un conjunto compartido de palabras que hablen de la capacidad de la gente, y que refuercen los mensajes de aprendizaje necesarios. Manejando que el termino popular en los años noventas es el de “competencias”. Este es, sin embargo, un término más bien genérico y puede significar cosas muy diferentes para distintas personas. Es preferible la descomposición en:

- Conocimiento: (lo que alguien sabe)
- Habilidades: (lo que alguien puede hacer)
- Actitudes: (las creencias que moldea su forma de hacer las cosas)
- Experiencia: (lo que alguien ya ha hecho)

La capacitación según Siliceo (1998), es dar a un candidato elegido la preparación teórica que requiera para llenar su puesto futuro con toda eficiencia.

En la opinión del consultor Zapata (2005), se puede esperar que las personas que recibieron una capacitación puedan reaccionar en forma correcta, pero no ser capaz de aprender o bien de poner en practica lo aprendido, o fallar simplemente a la hora de aplicar lo aprendido en su puesto de trabajo; lo que otros autores han denominado: “*saber*”, “*saber estar*”, “*querer hacer*”, “*poder hacer*”. Este modelo plantea que la unión de los anteriores elementos llevan al “*hacer*” o sea, a la competencia, que resulta observable para los demás y que permite establecer diferentes niveles de desempeño de las personas en su

ámbito personal y/o profesional, ya sea durante la realización de tareas diversas o en sus interacciones sociales”.

Por otra parte Carlos Kasuga distinguido industrial mexicano, en una conferencia hablaba sobre el orden de los valores:

1. El bien ser (voluntad, actitud, calidad)
2. El bien saber (inteligencia, capacitación)
3. El bien hacer (habilidad, entrenamiento)
4. El bien tener (recompensa honesta)

Y Manrique (2008), defiende que dentro de un entorno dinámico y con mercados más exigentes, éstos promueven entre las organizaciones la necesidad de contar con personas cuyas competencias no solamente se centren en aspectos de “elegibilidad” (conocimiento y habilidades específicas del puesto), sino también presenten aspectos de “idoneidad” (actitudes, valores, motivaciones y atributos). Que les permitan desenvolverse con eficiencia y eficacia en el desarrollo de sus actividades. De esta forma, la organización se ve beneficiada con un capital humano que le permite enfrentar positivamente los cambios.

Es necesario dejar de ver a la capacitación como ya se menciono anteriormente como un gasto o bien como una obligación gubernamental, más bien debe verse como una inversión y como una opción de crecimiento en la productividad de su empresa y competitividad en los mercados, destinando recursos significativos a las acciones de capacitación tanto internas y externas, cuidando el poder medir el impacto que la misma causa en la productividad. Lo paradójico es que en búsqueda de ofrecer capacitación que eleve la productividad del capital humano, no se cuenta con una evaluación de la inversión en esa actividad, pero este será tema de otro estudio en otra ocasión. Cuestionando así, el desempeño de los niveles gerenciales. Por lo que en ocasiones los procesos de cambio fracasan, pues la capacitación a los directivos y la falta de preparación a otros miembros de la organización impiden una comunicación efectiva entre ellos. Por ello deben de existir acuerdos entre todos los miembros para lograr resultados exitosos.

Un programa de capacitación espera que impacte no solo a la persona, sino también a los equipos de trabajo y a la organización en sí, por eso es fundamental que esta se lleve a cabo en todos los niveles. “Los impactos deberían dimensionarse en términos de cantidad y cualidad y ellos deberían ser comparados con estándares esperados que son característicos para organizaciones similares a la organización que es foco de la evaluación”. (Zapata, 2005).

Se debe conocer como impacta el proceso de capacitación en el desempeño de las organizaciones, como se invierten sus recursos materiales y financieros, así como su activo más importante, su capital humano. Se debe poner especial cuidado en el tipo de capacitación que se esta realizando, evaluar la efectividad de la entidad capacitadora, no tan solo para cubrir las expectativas de su capital humano, sino también para conocer los cambios esperados después de que se haya aplicado el programa, donde se esperan cambios actitudinales, dónde se esta convencido de aplicar y llevar a la practica lo aprendido.

Por eso la importancia como se indica al inicio de este documento de que hoy por hoy, las empresas tienen que recurrir a estrategias de cambio para alinear tal entrenamiento a los procesos críticos del negocio y garantizar su competitividad y permanencia en la sociedad.

CONCLUSIÓN

Por todo lo anterior se puede concluir que si la capacitación es efectiva en las organizaciones, ésta las conduce a la rentabilidad más alta dentro de la misma, generando cambios más positivos. Es así como ella

misma crea imagen y mejora el conocimiento del puesto en todos los niveles de la organización. Motiva la mejora en los canales de comunicación, teniendo como resultado la ágil toma de decisiones y la solución de problemas, promoviendo el desarrollo con vistas a la promoción.

Por eso la importancia como se indica al inicio de este documento de que hoy por hoy, las empresas tiene que recurrir a estrategias de cambio a través de una capacitación de calidad, pero sobre todo motivar cambios y poder evaluar dichos procesos a fin de alinear tal entrenamiento a los procesos críticos del negocio y garantizar su productividad, su competitividad que produzca un crecimiento constante de manera integral, asegurando entonces su ventaja competitiva y por ende su permanencia.

GESTIÓN DEL CONOCIMIENTO EN LAS UNIVERSIDADES

Blanca Estela Córdova Quijada, Universidad Autónoma del Estado de Baja California

Blanca Estela López López, Universidad Autónoma del Estado de Baja California

Luis Ramón Moreno Moreno, Universidad Autónoma del Estado de Baja California

RESUMEN

Desde los albores de la Revolución Industrial no habían tenido los directivos tanto que aprender a aprender y desaprender sobre el arte de liderazgo como fue en la década de los 90's; al encontrarse frente a tanta información tan diversa y confusa. Se vislumbraba entonces un mundo de caos e inseguridad, lleno de cambios, donde la economía no se basara únicamente en la tierra, el dinero o las materias primas, sino en el capital intelectual. Es en esa década que aparece el enfoque "Gestión del conocimiento", concepto que está asociado al surgimiento de la "Sociedad del conocimiento", considerado como una novedad en las grandes empresas y donde algunos comenzaron a aplicarlo inclusive a la administración universitaria. El artículo tiene como objetivo determinar el papel que juega el líder en la gestión del conocimiento en las universidades, ya que en base a ello, se debe propiciar el máximo rendimiento social y económico de los recursos puestos a su disposición, a través de una administración eficiente de su capital intelectual que agrupa los activos intelectuales y de naturaleza intangible.

PALABRAS CLAVES: Gestión del Conocimiento, Sociedad del conocimiento, Liderazgo

“MANAGEMENT OF THE KNOWLEDGE IN THE UNIVERSITIES”

ABSTRACT

From the dawn of the Industrial Revolution they had not had the directors as much that to learn to learn and to unlearn on the leadership art as since was in the 90's decade; when being as opposed to as much so diverse and confused information. One glimpsed then a world of chaos and insecurity, plenty of changes, where the economy was not based solely on the earth, the money or the raw materials but in the intellectual capital. It is in that decade that appears the approach "Management of the knowledge", concept that is associate to the sprouting of the "Society of the knowledge", considered like a newness in the great companies and where some began to apply it including a the university administration. The article must like objective determine the role that the leader in the management of the knowledge in the universities plays, since on the basis of it, the maximum social and economic yield of the resources made its available is due to cause, through an efficient administration of its intellectual capital that groups the intellectual assets and of intangible nature.

KEY WORDS: Knowledge Management, Society of the Knowledge, Leadership.

INTRODUCCION

La nueva economía, la globalización y las nuevas tecnologías son algunos de los elementos que han hecho que la "Gestión del Conocimiento" (GC), vaya adquiriendo cada vez más importancia. Es desde principios de la década de 1990, que el enfoque de la GC se ha convertido en un tema de candente actualidad (Von Krogh, et.al.2001), La comunidad científica a mostrado un gran interés por la GC, interés

que ha ido parejo al estudio de temas tales como la nueva economía, la visión de las empresas como organizaciones capaces de generar ventajas competitivas mediante el conocimiento, el capital intelectual, los activos intangibles, entre otros (Serradell, 2003).

Y es que las organizaciones del futuro solo podrán adquirir y mantener ventajas competitivas mediante el uso adecuado de la información, y, sobre todo del conocimiento, termino muy asociado con el surgimiento de la "sociedad del conocimiento" anunciado por Peter Drucker en su libro "Las Nuevas Realidades".

Las Universidades deben de poner toda la atención en materia de cambios en la economía y la administración y es que al aparecer como una novedad la GC en las grandes empresas, estas no pueden dejar de aplicarlo en su administración por ser precisamente un sistema de conocimiento, teniendo como tarea central formar profesionales y especialistas de distintas disciplinas, a través de las siguientes funciones: "función investigadora y creadora de conocimiento", "función educadora donde se transmite y se forma conocimiento" y "la función gestora" tema central de este documento, donde se administra el conocimiento y que las autoridades encargadas de hacerlo, deben estar a la vanguardia de las nuevas técnicas de GC. (Esteban, 2004).

En la actualidad según Pérez L, (2004), casi todos admiten que la universidad debe realizar actividades productivas, innovadoras, de servicios, de asistencia técnica en cooperación con organismos públicos, empresas y organizaciones sociales. Asimismo Ugarte Vega (2007) asegura que las universidades deben buscar modernizar su gestión administrativa de acuerdo a las demandas del entorno, estableciendo estrategias que le permitan aprovechar y optimizar sus recursos a fin de ser una organización dinámica, creativa e innovadora, que permita logros de eficiencia y productividad y sobre todo de ética profesional, elemento fundamental para generar conciencia de sus responsabilidades en el desarrollo social, la producción y el fortalecimiento de su cultura organizacional apoyados por la gestión de líderes con una visión compartida y una cultura institucional de acuerdo a las exigencias de los cambios en la escena de investigación, enseñanza y gestión, que generen acciones institucionales que respondan a la necesidad de toda la sociedad.

Y es que desde los albores de la Revolución Industrial no habían tenido los directivos tanto que aprender a aprender y desaprender sobre el arte de liderazgo como fue en la década de los 90's; y es que al encontrarse frente a tanta información tan diversa y confusa, misma que da pie a la entrada de la era de la información y del conocimiento, generando la transición de la sociedad industrial a la sociedad del conocimiento.

El nuevo entorno al que se enfrentan todas las instituciones es altamente competitivo y caracterizado por mayores exigencias de calidad, servicio e imagen, lo que obliga a las organizaciones a ir reestructurando sus procesos a fin de eliminar costos, potencializar las ideas innovadoras, en convertir la calidad en la atención y servicio al cliente en la única razón de existir de las mismas. Según Itza (2007) se debe comprender que en la nueva era del conocimiento la consecución de la ventaja competitiva deja de estar ligada a la obtención de economías de escala para pasar a depender de la flexibilidad de las empresas, que se fijaran la mejora de la calidad y la respuesta a las necesidades del mercado como principales objetivos. Y es que cualquier organización que gestione el conocimiento, le significa el conseguir las sinergias entre los miembros de la comunidad para mejorar la productividad y, por ende los resultados esperados. Siendo todo esto posible solo a través de un capital humano liderado por directivos comprometidos con el cambio permanente, acelerado e interdependiente que permita vivir esta nueva realidad que devuelve toda su importancia al individuo, mismo que conforma los equipos de trabajo comprometidos y que llevan a las organizaciones al éxito.

LA UNIVERSIDAD Y LA GESTION DEL CONOCIMIENTO

El cambio del significado del saber, que empezó hace doscientos años, ha transformado la sociedad y la economía. Es por ello que a las personas se les considera el activo más importante de la empresa, ya que su saber le proporciona a estas una ventaja competitiva, pues una vez que se ponen en práctica los conocimientos los otros recursos pueden obtenerse con facilidad. Proporcionar saber para averiguar en qué forma el saber existente puede aplicarse a producir resultados es, de hecho lo que significa gestión.

Se puede definir a la gestión del conocimiento aplicada a la universidad como un nuevo paradigma. De manera general podría decirse que se trata de un enfoque para acumular y orientar los recursos científicos y tecnológicos de manera sistemática a fin de alcanzar objetivos deseados por una institución o por la sociedad en general. (Perez L., 2004)

Ante un contexto económico, social y tecnológico como el actual, se están provocando cambios a los que también las universidades deben adaptarse. La educación superior es ahora accesible a muchos, lo que justifica en parte el aumento de la competitividad entre las universidades. Además, la rapidez de la transferencia de conocimiento a generado una, cada vez mayor demanda de formación continuada por parte de los profesionales y las empresas. La GC es una disciplina adecuada para integrar con fluidez esas nuevas necesidades a la educación superior, tanto en la gestión de la institución universitaria en si como en sus funciones de investigación y docencia según conclusiones en documento emitido por la Secretaria General de la Conferencia de Rectores de las Universidades Españolas (CRUE) y redactada por Roc Fages.

Según Larrea se entiende la gestión del conocimiento, como el factor que permite la ruptura de esquemas dentro de la educación tradicional, principalmente la universitaria en el ámbito de la generación de nuevos conocimientos y habilidades.

Por otro lado Valdez opina que la gestión del conocimiento es una nueva cultura empresarial, una manera de gestionar las organizaciones que sitúa los recursos humanos como el principal activo y sustenta su poder de competitividad en la capacidad de compartir la información y las experiencias y los conocimientos individuales y colectivos.

Donde establece que el líder es, en esencia, un constructor de cultura y un animador de procesos, porque tiene como retos:

- Crear una visión, difundirla y seguirla
- Definir la misión y el código de valores de la organización, comunicarla y reforzarla sistemática y congruentemente, en especial con su ejemplo
- Identificar, enriquecer y encauzar el capital intelectual de la empresa
- Ser agente de cambio y gestionarlo al interior de la organización
- Crear y sostener la mejora continua
- Establecer y controlar, con claridad y justicia, los objetivos, funciones, responsabilidades y roles del personal
- Fortalecer el trabajo en equipo, los procesos humanos al interior de la empresa y el clima organizacional
- "Estar presente", o sea, entrar en contacto y diálogo con los seres humanos que componen la organización o se relacionan con ella
- Promover un alto nivel de energía y orientación a los resultados, premiándolos cuando se produzcan

Tareas no tan fáciles de realizar, pero que solo a través de un liderazgo efectivo y comprometido, será posible, ya que son las universidades las que contribuyen de forma decisiva a la producción científica y, cada vez más, de manera cuantiosa, directa y variada. En este sentido, para maximizar la aportación de la comunidad científica en el incremento de la base de conocimiento de la sociedad, es necesario orientar los procedimientos de las universidades hacia la adopción de programas de medición y gestión del capital humano. (Bueno 1998,2002).

En relación al Conocimiento, el nuevo paradigma es la Sociedad del Conocimiento está produciendo profundos cambios en nuestro mundo, impulsados principalmente por los nuevos medios disponibles para crear y divulgar información mediante tecnologías digitales, de forma que las comunicaciones y los mecanismos de coordinación se están digitalizando en muchos sectores de la sociedad (Cepal, 2003).

Convirtiendo a la GC en un punto de presión y referencia para orientar los cambios que tiene que efectuar el sistema educativo; por una parte para formar los nuevos cuadros profesionales y por la otra para mantenerse en coherencia o sintonía con los cambios macro estructurales, en los que es participe y determinan las características de la educación del futuro. Davenport (1998),

LA GESTION DEL CONOCIMIENTO Y EL LIDERAZGO

Etimológicamente, liderazgo es cualquier intento expresado de influenciar e impactar la conducta de otras personas, tanto en el plano individual como en el colectivo, que se orienta al logro de objetivos esforzándose con buena disposición, esto es, trabajando de manera entusiasta en su consecución. El liderazgo ha sido un tema de interés desde los tiempos antiguos en que las personas se reunían en grupos para lograr objetivos. Sin embargo no fue sino hasta principios del siglo XXI que los investigadores comenzaron a estudiarlo. Estas primeras teorías del liderazgo se centraron en el líder (teoría de rasgos) y cómo el líder interactuaba con los miembros de su grupo (teorías del comportamiento) (Robbins, 2005).

En este sentido, la nueva orientación estratégica de la gestión del capital humano ha dado un vuelco al diseño de las tareas a realizar en las universidades, es importante que las universidades practiquen en su gestión lo que enseñan en las aulas. Peter Drucker (1991) argumenta que estamos entrando en la sociedad del conocimiento, donde el recurso económico ya no es el capital, ni los recursos naturales, sino que es y seguirá siendo el conocimiento. Por ello los líderes generadores de conocimiento en la organización deberán ser los protagonistas que construyan prácticas sistemáticas, que permitan administrar su aprendizaje continuo, dentro de un ambiente de cambio, donde las actividades se realicen en un clima de confianza y respeto que apoyen a la aplicación de la innovación y la creatividad continua. Determinando así el comportamiento competitivo de las universidades.

CONCLUSIÓN

Como conclusión del presente documento, podemos afirmar que los líderes de las Universidades deben de crear las condiciones necesarias para facilitar el aprendizaje entre su equipo de trabajo, ya que ante las demandas de cambio e innovación que ha generado la globalización, estas están obligadas a estar a la vanguardia en lo que a gestión del conocimiento se refiere. Son las universidades las que desempeñan un rol de suma importancia en la formación del capital intelectual de todas las disciplinas y a todos los niveles, en la creación y desarrollo de procesos, sistemas, transferencia y adaptación de las nuevas tecnologías ante los requerimientos de la sociedad moderna que pugna por conocer las diferentes técnicas para hacerle frente a un entorno empresarial competitivo y global; que busca llevar a las empresas al logro de sus objetivos a través del manejo de información que aplicada propicie ese conocimiento que apoye en la toma de decisiones acertadas que resuelvan la problemática a la que se enfrentan día con día; pero que al estar estas lideradas por profesionales visionarios, logran establecer esa ventaja competitiva que las proyecta a crear y diseñar a las Universidades del futuro.

EL FRACASO DE LAS MICRO, PEQUEÑAS Y MEDIANAS EMPRESAS EN QUINTANA ROO, MÉXICO: UN ANÁLISIS MULTIVARIANTE

Edith Navarrete Marneou, Universidad de Quintana Roo

Edgar Sansores Guerrero, Universidad de Quintana Roo

RESUMEN

El rol de las micro, pequeñas y medianas empresas (PYME) en la economía mexicana indican que resulta importante comprender por qué este tipo de empresas fracasan. El objetivo de esta investigación es determinar los factores que inciden en el cierre de las PYMES en el Estado de Quintana Roo, México. Los resultados obtenidos, a través del análisis multivariante, indican que el factor más importante es la planeación estratégica.

PALABRAS CLAVE: quiebra, fracaso, PYME, desarrollo, factores.

INTRODUCCIÓN

Actualmente las micro, pequeñas y medianas empresas (PYME) en México representar un motor que impulsa el desarrollo económico del País. De acuerdo al Instituto Nacional de Estadística y Geografía (INEGI) en 2005, el 97.7% de las empresas en el país son micro y pequeñas empresas (PYMES), mismas que generan el 42 por ciento del Producto Interno Bruto manufacturero y el 64 por ciento del empleo en el país.

A pesar del rol que desempeñan las PYME en la economía éstas enfrentan muchos obstáculos que han propiciado una alta tasa de mortandad en sus dos primeros años de operación. En Quintana Roo las PYMES presentan una escasa formación de desarrollo de las habilidades empresariales, poca capacidad de producción, insuficientes sistemas de información, desconocimiento del mercado, problemas de comercialización, falta de vinculación con programas para el desarrollo e innovación tecnológica y, en general, un difícil acceso a esquemas de financiamiento ofrecidos por la banca comercial. El objetivo principal de esta investigación es identificar los factores que conllevan al fracaso empresarial de las PYME establecidas en el Estado de Quintana Roo, México; con el fin de plantear soluciones viables para evitar la alta mortandad de este tipo de empresas.

REVISIÓN LITERARIA

La literatura reporta un gran número de investigaciones orientadas a determinar los factores que inciden en la quiebra de empresas. De acuerdo a estas investigaciones las razones por las cuales las empresas fracasan son Falta de un plan de negocios.- Un plan de negocios es un documento que define el propósito y las metas de la empresa. También especifica el monto de la inversión, la fuente de financiamiento, la estructura organizacional y el modelo de negocio en el cual se sustenta la empresa (Ang, 1991). Sin un plan de trabajo las PYME pierden de vista sus metas y se tornan vulnerables ante factores negativos que propician su insostenibilidad. Ang (1991) considera que la planeación juega un rol primordial en el éxito empresarial y que su ausencia eleva el riesgo de quiebra. Aunque dicho documento resulta necesario, históricamente existe una relación inversa entre el tamaño de la empresa y la existencia de un plan estratégico. Perry (2001) afirma que rara vez una pequeña empresa cuenta con un plan de negocios, lo que le impide identificar posibles fuentes de financiamiento.

Insuficiencia de capital.- Debido a la falta de financiamiento las PYME inician operaciones con limitado capital que les permite sobrevivir en un periodo de tiempo corto (dos años). Fredland, y Morris (1976) identifican dos etapas críticas en las cuales se debe inyectar capital para sostener la empresa. Primero al iniciar un negocio, los propietarios estiman los recursos necesarios para cumplir con sus obligaciones en el corto plazo siendo su fuente de financiamiento préstamos a familiares y amigos. La segunda etapa ocurre entre el año dos y tres, una vez que los recursos iniciales se han agotado.

Inadecuado uso del financiamiento.- Además de ser insuficiente los recursos financieros, existe la tendencia por parte de los propietarios para destinar dichos recursos al pago de sus créditos personales. La obtención de nuevos fondos se complica dado que las pequeñas empresas no participan en el mercado de valores y la banca comercial no les otorga financiamiento ya que representar un gran riesgo. La falta de crédito para las PYME limita su crecimiento, aumenta la rotación del personal e inhibe el desarrollo de nuevos productos o servicios.

Vulnerabilidad de lo nuevo (Liability of Newness).- Un gran número de estudios muestran que la tasa de mortalidad de empresas disminuye a medida de que aumenta la edad del negocio. El número de empresas creadas con anterioridad así como el grado de involucramiento en la gestión de las mismas, juegan un rol significativo para explicar las diferencias en el desarrollo de los nuevos negocios. En este sentido, no hay mejor manera de aprender acerca de crear una empresa que haber trabajado en una, o mejor aún, haber fundado una (Stewart y Gallagher, 1986). La falta de experiencia es además uno de los principales obstáculos a los que se enfrentan los emprendedores, especialmente en lo relacionado con la planificación financiera del negocio, la gestión del mismo y la contratación de servicios externos.

Excesiva carga financiera.- Para mantenerse en el mercado algunas empresas se endeudan por encima de su capacidad de pago, esta situación puede originarse por un incremento en los precios de la materia prima, una inadecuada política de crédito a los clientes, inexistencia de un plan de adquisiciones, crecimiento en la planta laboral, entre otros .

Crecimiento acelerado.- Cuando una pequeña empresa crece a una tasa mayor (exponencial) al de su industria se presentan dos problemas. El primero consiste en el sobre endeudamiento que tiene que realizar dicha empresa para poder solventar la adquisición de materia prima. El segundo subyace en la necesidad de contratar personal adicional que permita atender los nuevos niveles de producción pero con los mismos fondos (Fredland, y Morris, 1976).

Cambios en la política industrial.- Los cambios en la regulación y la reorientación de los programas de apoyo a las PYME pueden causar un efecto adverso. El gobierno inhibe el desarrollo de las PYME a través de la excesiva regulación, la aplicación de tasas impositivas altas, la disminución de su gasto, el establecimiento de plazos largos para el cumplimiento de sus obligaciones con sus acreedores y la disminución de sus programas de apoyo. Los cambios en la política industrial afectan el desarrollo de la economía local y, por ende, impactan en el desempeño de las PYME.

Falta de capacidad para acceso a nuevos mercados.- Para que las PYME puedan progresar es importante que los propietarios apliquen métodos que les permitan identificar y analizar su mercado. El desconocimiento del mercado propicia una mala ubicación del negocio, desventaja ante la competencia, altos costos de producción. **Carencia de habilidades gerenciales.-** Principalmente durante la fase inicial de una empresa, la falta de habilidades empresariales en un propietario puede hacer que un negocio fracase. Esto puede no ser aplicable durante los últimos períodos de crecimiento y madurez de las empresas en donde los conocimientos administrativos y la habilidad de gestión son necesarios. El desarrollo de una PYME esta en función de muchas variables, incluyendo las características individuales del propietario y su comportamiento. Los empresarios, en general, tienen una alta necesidad de logro y conciencia social.

En consecuencia, el personal y las características de personalidad de un propietario puede ser una causa de fracaso empresarial (Gaskill, 1993).

Causas familiares.- Algunas enfermedades crónicas degenerativas, fallecimientos, divorcios, incapacidades físicas, desacuerdos entre los socios, cambios de residencia, etc. afectan la continuidad de muchas empresas. Esta situación tiene un mayor impacto en las pequeñas empresas debido a su conformación y génesis.

METODOLOGÍA

Primeramente se realizó un análisis de componentes principales de los datos existentes y cuya finalidad es evaluar los factores internos que ocasionan el cierre de PYME y revisar la estructura de cuatro componentes que se propone a priori. Los análisis estadísticos se realizan a través del Programa Estadístico Informático SPSS (Statistical Package for the Social Sciences), sin la opción de manejo de valores perdidos.

De 397 encuestas realizadas que constituyen las características de las empresas, de las cuales se eliminan 47 debido al alto porcentaje de inconsistencias en la información. Para asegurar la aplicabilidad del análisis factorial, se realiza la prueba de esfericidad de Barlett, la que resulta altamente significativa ($P = 0.000$) y con un valor de Kaiser de .705; indicando así que la matriz de correlación difiere de la idéntica, habiendo patrones de asociación entre las respuestas a los reactivos lo que permiten la identificación a las variables latentes subyacentes. El resultado obtenido en la prueba sugiere la presencia de cuatro factores que explicarán la mayor parte de la varianza original. La solución de 4 factores explica el 75.18 por ciento de la varianza original.

Se declaran altamente significantes todas aquellas cargas superiores a $2(0.081) = 0.162$ en valor absoluto. Varios reactivos resultan con cargas significantes en más de un factor, asignándose a aquel factor en el cual exhibían la mayor carga y en el cual se agrupan con otros reactivos que a priori forman parte de la misma sección o componente de satisfacción. En la tabla 1 se describe el contenido de cada uno de los cuatro factores extraídos.

Tabla 1: Factores

Componentes	Factores	Valor
Administración estratégica	Reacción ante competidores.	.699
	Estrategias de precios.	.686
Capacidad Financiera	Solidez o fortaleza financiera.	.718
	Establecimiento de precios.	.656
Administración de Recursos Humanos	Recursos Humanos.	.787
	Salarios.	.741
Capacidad de Marketing	Fluctuación en ventas.	.485
	Percepción de los clientes.	.461

La tabla 1 muestra los cuatro componentes principales así como sus valores estadísticos. Fuente: Elaboración propia.

La primera columna de la tabla propone un nombre genérico que identifica al componente, la segunda columna resume el contenido de los reactivos que se asignan a este componente y la tercera muestra las cargas correspondientes a cada reactivo dentro del factor. Posteriormente se realiza un análisis a través un modelo de regresión múltiple basado en mínimos cuadrados ordinarios que permite determinar el impacto de cada uno de los componentes en el cierre de las empresas.

Este modelo se presenta por medio de la ecuación:

$$y = \alpha + \beta_1 X_1 + \beta_2 x_2 + \beta_3 x_3 + \beta_4 x_4 + \varepsilon_i$$

En donde:

y= Utilidad o pérdida de la empresa (unidades monetarias)

$\beta_1 x_1$ = Componente 1 (Administración estratégica)

$\beta_2 x_2$ = Componente 2 (Capacidad Financiera)

$\beta_3 x_3$ = Componente 3 (Administración de Recursos Humanos)

$\beta_4 x_4$ = Componente 4 (Capacidad de Marketing)

ε_i = Representa un componente aleatorio (los residuos) que recoge todo lo que las variables independientes no son capaces de explicar.

Al realizar la regresión $y = \alpha + \beta_1 X_1 + \beta_2 x_2 + \beta_3 x_3 + \beta_4 x_4 + \varepsilon_i$ se obtiene el siguiente resultado:

Tabla 2: Resultados

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	Durbin-Watson
1	.980 ^a	.960	.956	27246.94875	.933

b. Dependent Variable: CDT

La tabla 2 muestra que todas las variables independientes incluidas en el análisis explican un 98 % de la varianza de la variable dependiente, pues R^2 corregida = .98. Elaboración propia.

Por otra parte el estadístico F contrasta la hipótesis nula de que el valor poblacional de R es cero y, por tanto, nos permite decidir si existe relación lineal significativa entre la variable dependiente y el conjunto de variables independientes tomadas juntas. El valor del nivel crítico Sig. = 0,000 indica que sí existe relación lineal significativa. Por lo que respecta a los coeficientes de cada una de las variables y al nivel de significancia de cada una de ellas, se observa que el componen 1 es el que determina las utilidades de la empresa y por ende su sobrevivencia en el mercado

Tabla 3: Coeficientes.

		Coefficients ^a			T	Sig.
		Unstandardized Coefficients		Standardized Coefficients		
Model		B	Std. Error	Beta		
1	(Constant)	2.867	.072		39.671	.000
	REGR factor score 1 for analysis 1	.023	.073	.033	.311	.002
	REGR factor score 2 for analysis 1	.164	.073	.242	2.251	.027
	REGR factor score 3 for analysis 1	-.113	.073	-.167	-1.553	.142
	REGR factor score 4 for analysis 1	-.113	.073	-.167	-1.553	.112

a. Dependent Variable: Utilidades

La tabla 3 muestra que el coeficiente del componente uno es significativo estadísticamente. Fuente: Elaboración propia.

Lo anterior permite determinar que la administración estratégica incide en el fracaso de la PYME en Quintana Roo ya que la capacidad de respuesta ante los cambios que presenta el mercado; así como el proceso de adaptación a las condiciones de la competencia genera estabilidad a dichas empresas.

CONCLUSIONES

De acuerdo a los resultados obtenidos en las pruebas estadísticas aplicadas en esta investigación se identificó como factores que inciden en la decisión de cierre de las PYME la competencia, la planeación estratégica, el conocimiento del mercado, la administración financiera y la administración de los recursos humanos. Siendo el más significativo, estadísticamente, la poca o nula planeación del negocio; esto se debe principalmente a que las empresas en la entidad surgen a partir de situaciones coyunturales y no como resultado de un proceso de planeación estratégica, es decir, surgen para solucionar un problema de subsistencia y no como un aprovechamiento de las oportunidades que presenta el mercado.

GESTIÓN HOTELERA ORIENTADA A LA PROTECCIÓN DEL AMBIENTE Y SU IMPACTO EN LA IMAGEN DE LA EMPRESA. CASO HERMOSILLO, SONORA, MÉXICO

Mariza Aguirre Fimbres, Centro de Estudios Superiores del Estado de Sonora

ABSTRACT

Este estudio se enmarca en el concepto de desarrollo sostenible y turismo sostenible, así como los elementos esenciales del desarrollo sostenible en la industria hotelera. En particular este trabajo se centra en el análisis de las prácticas ambientales aplicadas en la hotelería de la ciudad de Hermosillo, Sonora, México. Adopta la metodología expuesta por Silvia Ayuso referida a grounded theory la cual establece un enfoque interdisciplinar que combina métodos cuantitativos y cualitativos; se divide en tres partes importantes. La primera parte es teórica- analítica y tiene como finalidad discutir y describir el concepto de turismo sostenible y su aplicación en la gestión hotelera desde la perspectiva ambiental. La segunda parte, práctica - analítica pretende investigar en los hoteles de 3, 4 y 5 estrellas de la ciudad de Hermosillo, Sonora, México el empleo de prácticas ambientales utilizando, para ello, un cuestionario con la intención de medir los elementos esenciales de sostenibilidad ambiental. La tercera parte la constituye una sección interpretativa que tiene como finalidad exponer los resultados obtenidos en la segunda parte y exponer las fortalezas y debilidades resultantes de la investigación.

INTRODUCCIÓN

La investigación tiene como objetivo general, determinar la situación actual de los elementos esenciales del desarrollo sostenible de la industria hotelera de la ciudad de Hermosillo, Sonora, México, para facilitar al empresario valorar los impactos que ocasiona su actividad económica en el ambiente, e identificar la importancia de lograr una reputación de empresa ambientalmente responsable. La contaminación ambiental está vinculada a todos los sectores económicos, por lo que la industria turística y en particular la hotelera, no está exenta de ello; asimismo, se deben considerar las repercusiones de los elementos contaminantes que recibe la comunidad objeto de estudio a través de la prestación del servicio de hospedaje, de ahí la importancia en la implementación de acciones pro ambientales en las empresas hoteleras, lo que traerá como consecuencia la disminución de impactos negativos al medio físico asociados a sus operaciones al reducir costos tanto en el consumo energético, como en el agua y en la generación de residuos.

REVISIÓN LITERARIA

La definición de “desarrollo sostenible” apareció en 1987 en el documento denominado Nuestro Futuro Común, que es conocido a nivel mundial como “Informe Brundtland” producto de la “Comisión Mundial sobre Medio Ambiente y Desarrollo” (World Commission on Environment and Development, (WCED) por la Organización de las Naciones Unidas; la cual realiza informes respecto a la situación del ambiente a nivel mundial, estableciendo que es “aquel que satisface las necesidades de la generación presente sin comprometer la capacidad de las generaciones futuras para satisfacer sus propias necesidades” (Ascención, 2005: 81, Pérez, 2004: 22, Wearing, 1999: 29 y Chávez, 2005: 42), entendiéndolo como un proceso de cambio social responsable con el ambiente, en el sentido del avance material y moral de la sociedad.

La propia Organización Mundial de Turismo en la Agenda 21 para Viajes y Turismo define el turismo sostenible como aquel que “satisface las necesidades de los turistas actuales y de las regiones de destino, al mismo tiempo que protege y garantiza la actividad de cara al futuro. Se concibe como una forma de gestión de todos los recursos de forma que las necesidades económicas, sociales y estéticas puedan ser satisfechas al mismo tiempo que se conserva la integridad cultural, los procesos ecológicos esenciales, la diversidad biológica y los sistemas que soportan la vida” (OMT 1999:18).

METODOLOGÍA

Fue de gran utilidad el empleo del esquema metodológico utilizado por Silvia Ayuso (2003) en su trabajo titulado *Gestión Sostenible en la Industria Turística* (2003), ya que nos pareció un método práctico y adecuado por la claridad conceptual que maneja y porque encaja con nuestros objetivos. Para ello recabamos datos cualitativos (orígenes y evolución del concepto de turismo sostenible y prácticas ambientales). Posteriormente se hizo un análisis combinando tanto datos cualitativos como cuantitativos, es decir, la sostenibilidad ambiental a través de la aplicación del cuestionario cuyo propósito es identificar las prácticas ambientales que emplea la hotelería hermosillense, utilizando como base la Guía de Buenas Prácticas Ambientales, Sector Turismo (hoteles y campos de golf) 2003, el cual se presentó a la totalidad de los hoteles de 3, 4 y 5 estrellas existentes e inscritos en la Oficina de Convenciones y Visitantes de la ciudad de Hermosillo, Sonora, México. Seguidamente nos concentramos en el trabajo de interpretación tomando en cuenta el diagnóstico de las buenas prácticas ambientales y sus fortalezas y debilidades.

El cuestionario evalúa nueve aspectos relacionados con las prácticas ambientales a través de sus 62 indicadores ordinales, que buscan detectar los niveles de información, organización y acción a favor de la preservación del ambiente tales como: necesidad de políticas ambientales; organización y recursos humanos; información y sensibilización (clientes y proveedores); ahorro de agua; ahorro de energía; iluminación; otros puntos de ahorro de energía; ecoconsumo y gestión de residuos urbanos especiales y peligrosos.

RESULTADOS

Del estudio realizado para determinar la situación actual de los elementos esenciales del desarrollo sostenible de la industria hotelera hermosillense, encontramos que en términos de fortalezas y debilidades clasificamos las 9 variables diagnosticadas en este apartado siendo satisfactoria la situación global, como se muestran en el cuadro número 1.

Se observa que las variables son aceptables; en algunas de ellas existe un margen importante para la mejora, sobre todo en la información y sensibilización (clientes y proveedores); en algunos puntos sobre el ahorro del agua, de energía y, en particular, se sugiere prestar más atención a la gestión de los residuos urbanos, especiales y peligrosos.

CONCLUSIONES

Como hemos podido ver en esta investigación, los elementos esenciales del desarrollo sostenible relacionados con el: gasto energético, uso racional del agua, gestión de residuos y sensibilización ambiental dirigida al personal, clientes y proveedores son prácticas recurrentes en la industria hotelera de Hermosillo; por ello es importante que esas prácticas se den a conocer a los clientes, proveedores y sociedad en general, con el fin de informar las actuaciones que en materia ambiental se están empleando.

Es importante considerar mecanismos de difusión efectiva (documentos, letreros, reconocimientos, certificados, anuncios) que permitan transmitir a los huéspedes el nivel de cumplimiento de la legislación ambiental aplicable y el entorno favorable en que se sitúan las instalaciones.

Cuadro 1: Fortalezas Y Debilidades De Las Buenas Prácticas Ambientales

Principales Fortalezas		Principales Debilidades	
Políticas Ambientales			
Clientes sensibilizados con el ambiente	79%		
Conocimiento de la legislación ambiental	63%		
Trabajo en ambiente no deteriorado	58%		
Organización Y Recursos Humanos			
Política ambiental definida	84%		
Cuentan con un responsable del ambiente	74%		
Personal sensibilizado con el ambiente	74%		
Personal involucrado en la gestión ambiental	74%		
Información Y Sensibilización (Clientes Y Proveedores)			
Delimitación de áreas de fumadores y no fumadores	95%	Compromiso ambiental formalizado	26%
Buzón de sugerencias ambientales	74%	Programa ambiental a disposición de clientes	11%
Información sobre el ahorro de agua en habitaciones y lugares públicos	58%	Utilización de símbolos ecológicos	11%
Sensibilizan a proveedores sobre la política ambiental	58%		
Ahorro de Agua			
Controles sobre el consumo de agua	100%	Informan resultados a clientes y personal	37%

Usan plantas naturales	84%		
Compra de productos que minimizan el impacto ambiental	84%		
Se usan dosificadores automáticos	84%		
Optan por botellas retornables	74%		
Se informan a proveedores el interés por el ambiente	63%		
Gestión de los Residuos Urbanos, Especiales y Peligrosos			
Objetivos de reducción de residuos	79%	Utilizan colores diferenciados por categoría de residuos	37%
Clasifican envases y embalajes	68%	Colocación de carteles respecto a la recogida selectiva	37%
Separan residuos peligrosos de la basura orgánica	63%	De los resultados se informa al personal y a la clientela	32%
Se informa al personal sobre la recogida selectiva de basura	53%	Compostaje de residuos orgánicos	16%

Considerando que la mayor parte de los hoteles tienen definida su política ambiental, es trascendental comunicarla a sus empleados, huéspedes, proveedores y sociedad en general, con la finalidad de generar una cultura de compromiso y responsabilidad hacia la conservación del ambiente que refleje sus resultados tanto al interior como al exterior de la empresa. El agua es uno de los recursos fundamentales para el desarrollo y tiene una especial prioridad en la desértica región y, por lo tanto, su ahorro se considera de mucha importancia en la operación del hotel; esto se ve reflejado en los aspectos fundamentales que se vigilan en los establecimientos hoteleros de Hermosillo.

El ahorro de energía es otra de las preocupaciones fundamentales, genera más acciones que el ahorro del agua, entre las que destacan: la organización de las áreas climatizadas de forma tal que se asignan primero aquellas que se encuentren ocupadas; el uso de instalaciones individuales para que el huésped desconecte el aparato de aire acondicionado a voluntad; el seguimiento y medición de los consumos energéticos.

Existen buenas prácticas ambientales ligadas a la iluminación ya que sólo hemos detectado bajo nivel de aplicación en lo relativo a la instalación de detectores de presencia, cuyo uso repercutiría en ahorros del consumo energético con el consiguiente ahorro en costes. Respecto al elemento identificado como “Otros puntos de ahorro de energía”, se concluye que se hace buen uso y manejo de las cámaras frigoríficas, hornos y placas de cocina haciendo mantenimiento periódico y el uso oportuno de tiempos para congelar o descongelar los alimentos.

En general las prácticas de ecoconsumo están generalizadas en las unidades hoteleras de la ciudad de Hermosillo, ya que el promedio de esta variante es del 86%, reflejando así altos porcentajes en el uso y empleo de productos que minimizan el impacto en el ambiente.

En suma, en una valoración global observamos buenas prácticas ambientales por parte de la industria hotelera hermosillense, teniendo áreas de oportunidad diversas ya que en muchos casos existe un déficit de información y divulgación de los resultados de las acciones realizadas, aún cuando existe un margen importante para la mejora, destacando una carencia de atención en el aspecto del manejo de residuos urbanos, especiales y peligrosos. Por último, debemos mencionar que este tipo de acciones referidas a las buenas prácticas ambientales, permiten al hotelero hermosillense promoverse como empresa ambientalmente responsable.

LOS RETOS DE LAS EMPRESAS FAMILIARES ANTE SU CONTINUIDAD CASO TEHUACÁN

Hilario Díaz Guzmán, Universidad Popular Autónoma del Estado de Puebla

Miguel Ángel Corona J., Universidad Iberoamericana

Yésica Mayett M., Universidad Popular Autónoma del Estado de Puebla

RESUMEN

La empresa familiar es un motor generador de riqueza económica y bienestar social a nivel mundial. Sin embargo, presenta una tasa de mortalidad muy alta, debido principalmente al reto que representa el conjuntar los diferentes fines e intereses de los sistemas que la componen. Un problema grave al que se enfrenta la empresa familiar en México es la falta de formalidad, la ausencia de reglas para diferenciar sus sistemas y poder conservar por un lado la armonía en la familia y por el otro, la competitividad y rentabilidad en la empresa. Esta es una investigación documental y de campo mediante la aplicación de cuestionarios a empresas familiares de manufactura, comercio y servicios de la ciudad de Tehuacán, Puebla, cuyo objetivo principal es determinar el grado de profesionalización de las empresas familiares de dicha ciudad y analizar cómo se relaciona con el desempeño exitoso de la organización familiar.

INTRODUCCIÓN

La empresa familiar es un tipo peculiar de organización empresarial, donde confluyen tres sistemas: empresa, familia y propiedad; el fin de cada uno es diferente: la familia busca armonía, la empresa pretende competitividad y la propiedad necesita ser rentable. De acuerdo al Grupo Europeo de Empresas Familiares y la Family Business Network (2008), sin importar el tamaño, una empresa es familiar si:

1. La mayoría de los votos son propiedad de la persona o personas de la familia que fundó o fundaron la compañía, o, son propiedad de la persona que tiene o ha adquirido el capital social de la empresa; o son propiedad de sus esposas, padres, hijo(s) o herederos directos del hijo(s).
2. Al menos un representante de la familia o pariente participa en la gestión o gobierno de la compañía.
3. Cotizando en bolsa el fundador, sus familiares o descendientes poseen el 25% de los derechos de voto a los que da derecho el capital social ¹.

¹ Nota aclaratoria: Una característica típica de las compañías cotizadas es la fragmentación de su propiedad. El mayor accionista (o bloque de accionistas) en muchas ocasiones tiene menos del 50% de los derechos de voto. En dichas compañías un accionista (o bloque de accionistas) puede ejercer influencia decisiva sobre aspectos fundamentales de gobierno corporativo sin tener la mayoría de los votos. El punto cuarto de la definición se refiere a empresas en las que la familia no cuenta con la mayoría de los votos pero que, a través de su participación accionarial, puede ejercer influencia decisiva

Ahora bien en la perspectiva social de la organización, el sistema familiar y el sistema empresarial son incompatibles, con objetivos y prioridades diferentes, lo que produce tensiones propias de su interacción. Es decir, el sistema familiar es introvertido, busca igualdad y seguridad para sus miembros y cultiva valores, está compuesto por individuos relacionados por vínculos de sangre o de naturaleza política (Cannizzaro, 2007). En contraste, el sistema empresarial es objetivo, extrovertido, orientado al cambio, basado en el logro de resultados, y la relación entre sus miembros es de tipo laboral (Pablo, 2007).

En México existen alrededor de 10 millones de empresas familiares (Secretaría de Economía, 2009), las cuáles generan el 75% de los empleos, y representan el 80% de la actividad económica del país (Universidad de Monterrey, 2008, citado en Pérez, Mánica y Pérez, 2008). Las estadísticas relacionadas al ciclo de vida de las empresas familiares mexicanas son preocupantes, 8 de cada 10 mueren antes de los 2 años de vida (Valda, 2009), de cada 100 que inician, sólo 30 sobreviven a la primera generación y cinco a

la segunda (Foro Mundial de Empresas Familiares, 2009). Entre las principales causas de su fracaso están: la falta de objetivos, de planes y reglas claras para manejar el negocio (Coparmex, 2008) y las relaciones familiares no equilibradas en la empresa (Moreno, 2009).

EJES TEÓRICOS

Son varios los enfoques que han observado el comportamiento de las empresas familiares en varios lugares del mundo y la mayoría de los autores coinciden en que, al buscar un equilibrio entre la parte emocional de la familia y la racionalidad de la empresa se generan conflictos que entorpecen su gestión e impiden su continuidad. Lo anterior lleva a suponer que, el gran secreto de las empresas familiares reside en la armonía familiar (Bavera, 2004). Dicha armonía está basada en factores como, la comunicación efectiva, la unión, el compromiso, la confianza, y la ausencia de conflictos. Una comunicación efectiva es indispensable para conservarla (Bavera, 2004), que en combinación con el establecimiento de reglas claras empresa-familia minimizan la existencia de conflictos (Serebrenik, 2008). Otro destacable coadyuvante en el logro de relaciones armoniosas es la confianza, que contribuye a la cohesión del grupo filial. En una empresa familiar sana existen intereses comunes y un fuerte compromiso para su consecución, por lo tanto, otros factores a destacar son: la unidad y el compromiso. Un elemento fundamental, es el liderazgo, ya que es determinante para la continuidad de la empresa familiar, un buen líder en la familia es capaz de hacer compatibles los intereses divergentes entre la empresa y la familia (Ramírez, s.f.). Como se puede apreciar es fundamental concebir a la empresa familiar, como una organización y un sistema estructurado a partir de dos subsistemas, el familiar y el empresarial, que en una relación dialéctica, van encontrando causas que varían en función de la claridad de sus objetivos y de la identificación de sus intereses, en el marco de reglas de convivencia que creen institucionalidad y generen confianza. De esto se deriva que profesionalizar la vida en las empresas, pero sobre todo en las familiares es un paso definitivo para su permanencia y competitividad en esta época de cambios vertiginosos provocados en gran parte por la gran competencia propiciada por la globalización.

PLANTEAMIENTO DEL PROBLEMA

En Tehuacán, los principales sectores económicos están conformados por empresas familiares; en el 2002, las industrias más importantes eran la del vestido, las embotelladoras de refresco, la producción de ónix, la producción ganadera y la industria del calzado (Barrios y Santiago, 2003). Marco Antonio Balseca (2008), refiere que, durante el periodo de 1940 a 1980, surgieron empresas familiares que al pasar de los años fueron absorbidas por compañías transnacionales, actualmente la única empresa refresquera familiar con capital local es Agua Mineral de Tehuacán San Francisco. Por otra parte, Sergio Adame (2010), menciona que en Tehuacán: “sólo 2 de cada 10 comercios resisten los estragos de la crisis y el resto concluyen en el cierre del establecimiento”. Al igual que la industria refresquera y el comercio, muchos otros sectores se han visto afectados por factores de diferente índole, tanto internos como externos, repercutiendo principalmente en la falta de continuidad de las empresas familiares de la región. Pero ¿por qué hay empresas que han sorteado la influencia negativa de factores externos e incluso de operación e interacción interna, siendo familiares? Aunque la literatura ya ha avanzado sobre el particular, las condiciones propias del lugar y de la idiosincrasia también juegan un papel relevante, por ello investigar la situación de las empresas familiares en Tehuacán, segunda ciudad en importancia en el Estado de Puebla, es trascendente para el futuro de estas organizaciones, y como consecuencia para la generación de empleo y de progreso en la región. Como resultado de la revisión de la literatura, se deduce que la falta de profesionalización es una de las principales causas que impiden la continuidad de la empresa familiar mexicana. Por lo tanto el problema consistirá en identificar el grado de profesionalización de las empresas familiares de Tehuacán, y cómo influye en el desempeño de la familia dentro del sistema empresarial.

OBJETIVOS GENERAL Y PARTICULARES

El objetivo general del presente estudio es determinar el grado de profesionalización de las empresas familiares de Tehuacán y analizar cómo se relaciona con el desempeño exitoso de la organización familiar. Los objetivos particulares que se persiguen son: determinar y analizar los principales obstáculos a los que se enfrentan las empresas familiares de Tehuacán para profesionalizar su empresa; analizar cómo se relaciona el nivel de profesionalización de una empresa familiar con la armonía familiar; analizar cómo se relaciona el nivel de profesionalización de las empresas familiares con la calidad de su sistema de comunicación para la resolución de conflictos familiares; determinar los principales conflictos familiares de las empresas de Tehuacán y analizar su relación con el desarrollo de su profesionalización.

ALCANCES Y LIMITACIONES

El estudio comprenderá empresas familiares de manufactura, comercio y servicios de Tehuacán y su región, que se encuentran en las etapas de crecimiento y madurez. Este proyecto es un estudio transversal que se efectuará en el lapso de un año (2010).

METODOLOGÍA

Esta es una investigación documental y de campo mediante la aplicación de cuestionarios a empresas familiares de manufactura, comercio y de servicios de la ciudad de Tehuacán y localidades circunvecinas. Los alcances de la investigación son: exploratorio, se busca dar una visión general acerca de la empresa familiar en Tehuacán; descriptivo, se pretende detallar las características de la empresa familiar en Tehuacán y la problemática para su continuidad; y explicativo, se busca determinar las causas que impiden su continuidad. A partir de la revisión de la literatura, se diseñarán modelos para plantear las relaciones entre las variables para cada una de las hipótesis. En seguida se diseñará el instrumento y se probará antes de aplicarlo. Simultáneamente se identificará el marco muestral y se determinará una muestra estratificada que considere sector de actividad y tamaño de la organización. En el diseño del instrumento se integrarán todos los elementos que permitan la operacionalización de las hipótesis, con escalas de Likert y de intervalo, así como nominativas para variables de control. Se utilizarán métodos de análisis estadístico como el análisis de varianza y el de tablas cruzadas. Para la captura, procesamiento y presentación de los datos se utilizarán los programas de Excel y SPSS.

HIPÓTESIS Y SU OPERACIONALIZACIÓN

Las hipótesis que guiarán este trabajo están relacionadas con los elementos internos estructurales y de funcionamiento de las empresas familiares, a saber:

H1: Las empresas familiares con un mayor grado de profesionalización tienen un mejor desempeño.

Grado de Profesionalización = f (Planeación estratégica, Nivel de educación formal, Proceso de comunicación formal, Capacitación continua, Normas claras empresa-familia, Formación en nuevas tecnologías de la comunicación, Consultores externos, Sistemas de control y gestión del desempeño, Política de Recursos Humanos con criterios profesionales, Implementación de herramientas para la profesionalización)

H2: Las empresas familiares con mayor grado de profesionalización tienen mayor armonía familiar

Armonía familiar = f (Grado de profesionalización)

H3: Las empresas que tienen un mayor grado de profesionalización tienen un mejor sistema de comunicación.

Comunicación eficiente= f (Grado de profesionalización)

H4: Los factores que obstaculizan el proceso de profesionalización de una empresa familiar son: Rigidez en la cultura familiar, falta de reglas claras, comunicación deficiente, falta de liderazgo

Obstáculos para profesionalizar la EF= f (Rigidez en la cultura familiar, Falta de reglas claras, Comunicación deficiente, Falta de liderazgo)

RESULTADOS ESPERADOS

Los resultados que se espera conseguir con este estudio, son:

- Conocer la situación actual de las empresas familiares de los sectores: manufacturero, de comercio y de servicios de la ciudad de Tehuacán.
- Analizar como incide el grado de profesionalización en el desempeño de las empresas familiares de manufactura, comercio y servicios.
- Identificar si la profesionalización de dichas empresas está afectando su continuidad.
- Determinar la influencia de los factores principales que obstaculizan la profesionalización, para derivar las recomendaciones pertinentes.

Las pretensiones de esta investigación son: Fortalecer las empresas familiares de Tehuacán aportando soluciones a sus principales debilidades; aumentar su esperanza de vida; concientizar sobre su papel, como generadoras de riqueza y bienestar social, así como de la importancia de su continuidad para la economía regional y nacional

LA RESPONSABILIDAD SOCIAL EMPRESARIAL, CARÁCTERISTICA DE LAS BARRERAS DE ENTRADA PARA PENETRACIÓN EN LA EXPANSIÓN GLOBAL: UN CASO APLICADO A LA INDUSTRIA DE LA CIUDAD DE MEDELLÍN

Giovanni Pérez Ortega, Universidad Nacional de Colombia Sede Medellín.
Lizeth Yuliana Sepúlveda Atehortua, Instituto Tecnológico Metropolitano
Martín Darío Arango Serna, Universidad Nacional de Colombia Sede Medellín

RESUMEN

Este artículo explica los resultados de la investigación descriptiva acerca las principales características de las barreras de entrada, que encuentran las empresas colombianas al momento de penetrar en los mercados globales. El caso se desarrolla en 70 empresas de la ciudad de Medellín, en los sectores de alimentos, textiles, confección y metalmecánica, a partir de la aplicación de un formulario de entrevista construida desde el marco conceptual de las Barreras de Entrada, y de las Estrategias de Responsabilidad Social Empresarial –ERSE-. Entre las conclusiones más importantes, se destaca que las RSE, se han convertido en el nuevo mecanismo para tener la opción de penetrar a los mercados globales vía exportación, por lo que se erige como una nueva función para la gestión del estratega moderno, y que aunque el concepto de ERSE, ha sido impulsado fundamentalmente por organismos multinacionales, ubicados en Europa y Norteamérica, hoy día cuenta con amplio apoyo ciudadano y muchas ONG, gobiernos, consultores, asociaciones de consumidores, etc., lo que denota que será la tendencia que habrá que no solo explorar, sino cumplir dentro de la gestión administrativa.

PALABRAS CLAVE: Estrategias de Responsabilidad Social Empresarial –ERSE-, Barreras de Entrada, Estrategias de Expansión Global, Gestión Sostenible.

INTRODUCCIÓN

Las barreras de entrada son mecanismos que impiden el acceso a mercados locales, cuando una empresa intenta la penetración a los mercados globales, mediante una estrategia de expansión global. En la medida que la marcha de la globalización siga su camino de integración de las naciones con mercados comunes, el desarrollo de las tecnologías de información y de las comunicaciones se constituyan en la base inicial de competencia, la responsabilidad por el planeta sea una preocupación de los ciudadanos, las empresas que penetran a mercados globales se encontrarán con novedosas barreras de entrada que han evolucionado desde la productividad y con ello los precios bajos; la calidad y la necesidad de durabilidad; la innovación y con ello la flexibilidad; a lo que se conoce hoy día como Responsabilidad Social Empresarial –RSE- y el consecuente diseño de estrategias de responsabilidad social empresarial. Este trabajo explica mediante el análisis descriptivo, las nuevas características de las barreras de entrada a las que encuentran 70 empresas exportadoras de tres sectores específicos de la ciudad de Medellín en Colombia.

REVISION DE LA LITERATURA

Cuando para las empresas, los mercados locales no logran satisfacer los esperados potenciales de sus objetivos estratégicos –supervivencia, rentabilidad y crecimiento-, éstas se ven en la imperiosa necesidad de conseguir participación en los mercados internacionales a través de acciones tales como: (1) trasladar sus habilidades distintivas, (2) realizar lo que se conoce como economías de localización; y o (3) bajar la curva de experiencia antes que los competidores, disminuyendo los costos de creación de valor. (Hill and

Jones, 1996). Estos mecanismos, en la literatura estratégica se desarrollan en lo que se conoce como estrategias de expansión global, tal como lo manifiestan: David (2003), Hitt, Ireland and Hoskisson, (1999), Hill and Jones (1996), Thompson and Strickland (1999), y Porter (1987).

Adicionalmente, la tendencia que están creando la globalización de los mercados, los tratados comerciales y la apertura de fronteras al comercio exterior apoyados por las políticas públicas, especialmente para el caso colombiano, mediante la promoción que el gobierno realiza para atraer inversiones extranjeras (Pérez, Sepúlveda y Arango, 2009), incrementa la acción empresarial de salir a vender a otros países – expansión global-, que a su vez se convierte en una actividad altamente competitiva.

Pero estas empresas que compiten en el mercado global usualmente enfrentan dos tipos de presiones competitivas: (1) Presiones para el logro de reducciones en costos, y (2) Presiones para obtener mayor capacidad de aceptación local. Ambas presiones establecen exigencias conflictivas para la empresa; para el caso de las primeras, obliga a que la empresa minimice sus costos unitarios. Según Pérez, Sepúlveda y Arango (2009), para lograr este objetivo, la empresa puede optar por ubicar sus actividades productivas en el sitio más favorable de bajo costo en cualquier parte del mundo donde sea posible. También puede ofrecer un producto estandarizado al mercado global con el fin de disminuir la curva de experiencia tan rápido como sea posible. Por otro lado, responder a las segundas presiones, requiere que la empresa diferencie su oferta de productos y estrategia de mercado de un país a otro, en un esfuerzo por acomodarse a las diversas exigencias que surgen en cuanto a las diferencias nacionales tanto en gustos como preferencias de los consumidores, prácticas de negocios, canales de distribución, condiciones competitivas, y políticas gubernamentales. Los costos pueden incrementarse de manera significativa, debido a la diferenciación entre los países y la imposibilidad de estandarización de los productos. (Hitt, Ireland and Hoskisson, 1999).

Según, Bain (1956), Porter (1980), Weizsacher, (1980), Stigler, G. J. (1968), estas dos presiones se conocen en la literatura estratégica como Barreras de entrada, que son uno de los requisitos indispensables para considerar un sector como estratégico. La no existencia de estas barreras es una de las condiciones para que se dé competencia perfecta; situación esta poco probable en la actualidad competitiva mundial.

Con relación al mismo tema, según Pérez y Bedoya (2005), las empresas en Colombia al momento de penetrar a los mercados globales, han encontrado que su relación con la sociedad debe convertirse en prioritaria. Esta relación con la sociedad, incluye preocupaciones y acciones relacionadas con el desarrollo sustentable, la conformación de capital social, y lo que se conoce como Responsabilidad Social Empresarial –RSE-, que incluye la toma de conciencia por parte de las empresas de una perspectiva a largo plazo, considerando no sólo la construcción de valor para los accionistas, sino para el conjunto de actores sociales relacionados directa o indirectamente con su entorno de influencia; conformándose un nuevo grupo de barreras de entrada bien del tipo “Presiones para el logro de reducciones en costos”, y, o, “Presiones para obtener mayor capacidad de aceptación local”.

METODOLOGÍA

Con el fin de identificar las principales barreras para penetración a los mercados locales cuando una empresa ha emprendido el camino de la expansión global, el grupo GICO adelantó la investigación que acá se presenta, utilizando una muestra representativa de empresas antioqueñas de diferentes sectores industriales, utilizando herramientas descriptivas que permitieron caracterizar dichas barreras y diagnosticar la situación actual de esas empresas en materia de ERSE.

Tomando como base las definiciones de Roitstein sobre RSE, Hill y Jones sobre Estrategias de expansión global, la de Pesca sobre ERSE y la de Torres sobre la Guía de Estandarización en Responsabilidad Social y con el fin de evidenciar las principales barreras de entrada al penetrar a mercados globales, se tomó una

muestra inicial de 20 empresas medianas de los sectores: alimentos, textiles y joyería, en las que se aplicó una entrevista a profundidad diseñada a partir de la información secundaria que conforma el marco conceptual de la investigación. Por ser un estudio exploratorio, este servirá para precisar hipótesis, elaborar nuevas preguntas de investigación, y seleccionar un sector industrial específico. Los entrevistados fueron en su mayoría los representantes legales de las empresas y en casos particulares el director de mercadeo y ventas. El formulario guía de entrevista se presenta en el Cuadro 1.

Cuadro 1. Guía de Entrevista

ENTREVISTA CARACTERIZACIÓN DE LAS BARRERAS DE ENTRADA A MERCADOS GLOBALES	
NOMBRE DE LA ORGANIZACIÓN: _____	
1.	De los ingresos de su empresa, qué porcentaje proviene de actividades desarrolladas en el mercado global.
2.	Seleccione los países de los cuales provienen los ingresos del mercado global
Estados Unidos Venezuela Ecuador Chile Argentina Uruguay México España Inglaterra	
Otros (por favor escríbalos) _____	
3.	De la siguiente lista, enumera las barreras de entrada que usted considera se presentan al momento en que su empresa intenta penetrar en los mercados globales.
1. Normas de Calidad 2. Normas ambientales 3. Seguridad Social 4. Salarios 5. Ecoeficiencia 6. Protección a empleados 7. Equidad de Género 8. Trabajo Infantil 9. Utilización de recursos naturales 10. Maltrato a animales 11. Tratados y acuerdo Internacionales. Cuales _____ 12. Precio	
4.	De las barreras de Entrada que Usted enumeró ¿en cuales está trabajando actualmente?
5.	De las barreras de Entrada que Usted enumeró ¿en cuales piensa trabajar en el mediano plazo?
6.	De las barreras de Entrada que Usted enumeró ¿en cuales piensa trabajar en el largo plazo?
7.	De las barreras de Entrada que Usted enumeró ¿en cuales definitivamente no va a trabajar?
8.	De las barreras de Entrada que Usted enumeró ¿en cuales piensa, debe trabajar el sector al que su empresa pertenece?

RESULTADOS

Entre los principales resultados se cuentan el alto número de empresas de los que sus ingresos provienen de países como Venezuela, Ecuador y Estados Unidos (82%), el bajo porcentaje de ingresos provenientes de los mercados globales, en promedio el 25% de los ingresos proviene de los mercados globales (Desviación estándar 5%), lo que muestra que estas empresas consiguen sus recursos en el mercado interno. Las principales barreras de entrada identificadas en los mercados globales suramericanos (excepto Chile y Uruguay), y Centro Americanos (excepto México) son en su orden: Normas de Calidad, Precio, Tratados y Acuerdos Internacionales. Las principales barreras de entrada identificadas en los mercados globales de España, Inglaterra, Estados Unidos, Chile y Uruguay son en su orden: Normas de Calidad, Precio, Ecoeficiencia, Normas ambientales, Trabajos infantil, equidad de género, protección a empleados.

Las principales normas en las que están trabajando en actualmente las empresas en su orden son: Normas de Calidad, Tratados y acuerdos Internacionales, las principales normas en las que piensan trabajar en el mediano plazo las empresas en su orden son: Ecoeficiencia y Normas ambientales. Las principales normas en las que piensan trabajar en el largo plazo las empresas en su orden son: Equidad de género y trabajo infantil.

CONCLUSIONES

Las estrategias de Responsabilidad Social empresarial, se han convertido en el nuevo mecanismo para por lo menos tener la opción de penetrar a los mercados globales vía exportación, por lo que se erige como una nueva función para la gestión del estrategia moderno, sin embargo aún los empresarios de la ciudad de Medellín, no han iniciado ni piensan iniciar acciones tendientes a establecer en sus empresas, verdaderas estrategias de responsabilidad social empresarial.

A pesar de que las estrategias de responsabilidad social empresarial fortalecen la estrategia de negocio de la empresa, al integrarla con las redes sociales del entorno, de tal forma que se mejora las condiciones de vida de la comunidad en la que opera, al mismo tiempo que se obtienen beneficios empresariales tan significativos como la disminución de costos, los empresarios encuestados tienen otras preocupaciones prioritarias, entre las que se destacan las normas de calidad.

LAS EMPRESAS FAMILIARES Y SUS ORGANOS DE GOBIERNO: CASO EMPRESAS DE GUADALUPE VICTORIA

Mariana Monserrat Valenzuela Montoya, Universidad Autónoma de Baja California

ABSTRACT

Las empresas son un elemento fundamental para el desarrollo económico de un país, constituyen una fuente de empleo amplia, además de que actúan como agentes del desarrollo económico de una comunidad. Las empresas familiares son el tipo predominante de empresa en todo el mundo. Están ligadas a nuestra vida económica y social, tienen en su identidad como empresa, las mismas características que cualquier otra empresa; la diferencia es su conexión con una familia o grupo familiar que posee una influencia directa en la dirección y control de la misma. El propósito de este trabajo es dar a conocer los resultados iniciales del Diagnóstico de las Empresas Familiares de Guadalupe Victoria pertenecientes al Valle de Mexicali, así como conocer los órganos de gobierno de éstas, con la finalidad de ayudar a la familia empresaria a cristalizar su visión en acciones concretas. Los órganos de gobierno involucran a los tres subsistemas de la empresa familiar (propiedad, familia y empresa) y durante este proceso cada uno de éstos experimentará cambios importantes.

INTRODUCCIÓN

La empresa es la institución que toma las decisiones sobre la utilización de los factores de producción para obtener los bienes y servicios que se ofrecen en el mercado; es el instrumento universalmente empleado para producir y poner en manos del público la mayor parte de los bienes y servicios existentes por la economía; para tratar de alcanzar sus objetivos, obtiene del entorno los factores que emplea en la producción, tales como materias primas, mano de obra, capital, maquinaria y equipo. En el presente trabajo se habla sobre las empresas familiares, sus características y los órganos de gobierno que existen en ellas. Además de que se da a conocer el resultado del diagnóstico aplicado a las empresas familiares de Guadalupe Victoria ya que esta ciudad se encuentra en vías de desarrollo por el aumento de población, llegada de instituciones de educación y de reconocidas empresas. Se aplicó una encuesta a una muestra de 22 empresas, como herramienta para obtener la información necesaria para diagnosticar el desarrollo de las empresas y encontrar los puntos en los cuales deben de trabajar para lograr la profesionalización.

REVISION LITERARIA

ORIGEN DE LAS EMPRESAS FAMILIARES

El sueño de hacer algo productivo por cuenta propia y de ser independiente puede cristalizarse con la formación de una empresa. Generalmente las empresas nacen con muy pocos recursos, escasos apoyos y en un ambiente de incertidumbre. Lo que mueve a los que las inician es la consecución de una idea. Su visión es de corto plazo y esta ligada a la supervivencia. La mayoría de los obstáculos se superan gracias a la gran determinación personal de los fundadores, a su trabajo incansable, a la austeridad, al ahorro, así como por su determinación de aprovechar al máximo los limitados recursos de que disponen. Así nacen casi todas las empresas familiares.

EMPRESA FAMILIAR

Por empresa familiar se entiende a la organización mercantil cuyo capital accionario pertenece, en su mayoría a los miembros de una familia y en la que alguno de sus integrantes por línea consanguínea o parentesco político -sin ser accionistas- desempeñan altos puestos ejecutivos. (Álvarez Cuevas)

Las empresas familiares son emprendimientos económicos en donde trabajan una o más familias. Sus integrantes ocupan los distintos puestos, desde los cargos de operarios hasta el director, aunque también suelen contratarse empleados que no pertenezcan a la familia. (Monsó Luis) La empresa familiar es aquella cuya propiedad, dirección y control de las operaciones está en manos de una familia. Sus miembros toman las decisiones básicas (estratégicas y operativas) asumiendo por completo la responsabilidad de sus acciones. (Soto Figueroa)

Una empresa familiar es aquella en la que el capital y, en su caso, la gestión y/o el gobierno están en manos de una o mas familias, que tienen la capacidad de ejercer sobre ella una influencia suficiente para controlarla, y cuya visión estratégica incluye el propósito de darle continuidad en manos de la siguiente generación familiar. (Sánchez-Crespo) Aunque no existen datos exactos que proporcionen información precisa de la proporción que guardan las empresas familiares con las que no lo son, debido a que los censos no clasifican a las empresas como familiares y no familiares algunos autores mencionan que a nivel mundial, de 65 a 80 por ciento de las empresas son manejadas o pertenecen a una familia (Family Business Review III. 1990). De ahí, la importancia en ocuparse de este tema. A pesar de que no hay consenso sobre la definición de empresa familiar, la mayoría de los expertos la asocian con el control accionario y la dirección de la organización en manos de los miembros de una familia. Unos la definen en función del grado de involucramiento de la familia, mientras que otros la ven como una organización destinada a ser transferida a la siguiente generación para su control y administración.

Diferencia Entre Familia Y Empresa:

La familia es una institución, cuyas finalidades más importantes son: la preservación de la vida, la reproducción de la especie, el crecimiento de los hijos, el cuidado de la salud, la elaboración de la identidad, la contención frente a las crisis vitales, la protección de las adversidades y el aprendizaje de la vida emocional (manejo de los celos, la rivalidad, los miedos.) Por otro lado, están las empresas, que son organizaciones cuya finalidad más importante es la productividad y rentabilidad (ganancia económica). Cuando los roles de parentesco y los roles laborales, en la empresa familiar, están bien diferenciados y respetados hay más posibilidades de una convivencia armónica. Pero es muy común que aquellos se mezclen, eventualidad que se convierte en un factor que genera conflictos.

Características De Las Empresas Familiares

Las empresas familiares difieren en una serie de aspectos importantes con respecto a las empresas institucionales. Estas tienen que ser capaces de evaluar las dinámicas que rigen las conductas de su fundador, la familia y la organización en su conjunto. Necesitan desarrollar habilidades especiales que les permitan identificar y resolver los problemas que plantean estas dinámicas y adoptar estrategias ingeniosas para fomentar el crecimiento de la empresa, transferir el poder y el control de esta. Podemos encontrar empresas familiares en casi todos los sectores, pero en donde han probado tener éxito y una presencia relevante es el sector comercial y de servicios, donde la administración está controlada por su propietario-fundador y familiares más cercanos, donde la atención personalizada es fundamental para dar satisfacción a los requerimientos de los clientes. Básicamente, las empresas familiares tienen las siguientes características:

a) Dentro de las empresas familiares los puestos más importantes (aquellos que tienen la autoridad y responsabilidad de tomar decisiones) son ocupados por los mismos miembros.

- b) En estas empresas el poder de decisión (control de las acciones) reside en su totalidad, o en su mayoría en la familia y es manejada por una persona o por el núcleo familiar.
- c) El patrimonio familiar está involucrado en la empresa para poderla considerar familiar.
- d) Están integradas por el fundador (padre de familia) y sus hijos. Ésta es la estructura básica de la que parte una empresa familiar típica.

Una de las ventajas de formar una empresa familiar es que las personas se identifican con el proyecto, lo sienten suyo y, por lo tanto, muestran un alto grado de interés y compromiso en y con el objetivo para que resulte un éxito.

EL MODELO DE LOS TRES CÍRCULOS

Para que una empresa se considere familiar, debe existir relación entre la empresa, la familia y la propiedad. El modelo de los tres círculos de Tagiuri y Davis (1982), representa la unión que existe entre estos tres subsistemas.

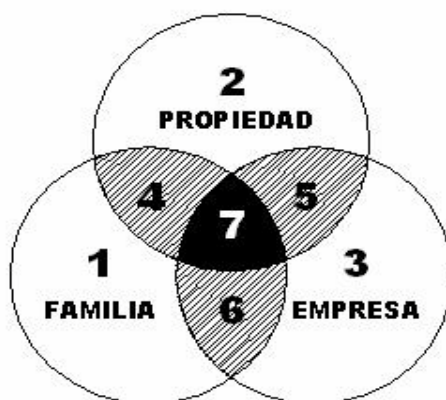

Figura 1. Modelo de tres círculos desarrollado por Renato Tagiuri y John A. Davis. Se encuentra en "Bivalent Attributes of the Family Firm", ensayo de 1982, Harvard Business School, Cambridge MA. Reimpreso en 1996, Family Business Review, vol IX num.2 pp.199-208

El desarrollo del modelo de los tres círculos permite analizar mejor la problemática de las relaciones familiares y empresariales, ya que los individuos que participan directa o indirectamente en un negocio familiar tienen intereses y puntos de vista que difieren de acuerdo con sus situaciones particulares. Cada uno de estos círculos representa un subsistema y cada uno interactúa con los otros, influyéndolo, cambiándolo y ese cambio hace que él mismo tenga que cambiar.

Por ejemplo, un miembro de la familia que trabaje en la empresa, pero que no tenga participación en la propiedad (sector 6) podría favorecer oportunidades de empleo y avance más generosas para los miembros de la familia que aquél que es, digamos, un miembro de la familia que tiene parte de la propiedad, pero que trabaje en algún otro lado (sector 4) o un empleado que no tiene intereses familiares ni en la propiedad.

El ámbito de la propiedad persigue el mantenimiento de la armonía accionaria, la gestión del patrimonio familiar con el fin de mantenerlo y aumentarlo, y el mantenimiento y mejora de la rentabilidad y la posición competitiva. Entre sus actividades críticas destacan la definición del plan estratégico de la empresa, el diseño y gestión eficaz de los órganos de gobierno accionarial y la elección de los miembros del consejo de administración, la gestión de los conflictos entre accionistas, y la selección del sucesor. El órgano de gobierno suele ser el consejo de administración.

El ámbito de la familia persigue el mantenimiento de la armonía familiar y el desarrollo personal de sus miembros. Entre sus actividades críticas destacan la definición de la misión familiar y del protocolo familiar, el diseño y gestión eficaz de los órganos de gobierno familiar, y la gestión de los conflictos familiares. El órgano de gobierno es el consejo familiar.

En tercer lugar, **el ámbito de la empresa** persigue la máxima eficacia, la mejora del clima organizacional y el continuo desarrollo organizativo. Entre sus actividades críticas destacan el diseño de la estructura organizacional, la gestión del cambio y de la innovación, y el establecimiento de la política de recursos humanos: selección, desarrollo, identificación y compromiso del personal. El órgano de gobierno es el comité de dirección. La empresa familiar tiene tres dimensiones claramente diferenciadas pero que entre ellas puede haber una elevada probabilidad de superposición de roles.

Igualmente, el modelo de los tres círculos permite clarificar uno de los puntos centrales en la comprensión de la problemática de la empresa familiar: la existencia de diferentes grupos de interés. Una parte importante de las dificultades que aparecen en las empresas familiares están relacionadas con la existencia de diversos grupos con intereses diferentes. Para crecer, los negocios familiares deben reconocer la necesidad de una administración profesional y el hecho de que en ocasiones los intereses familiares deben ser subordinados.

ÓRGANOS DE GOBIERNO DE LAS EMPRESAS FAMILIARES

Los órganos de gobierno son figuras constituidas en la empresa familiar con la pretensión de ayudar a la familia empresaria a cristalizar su visión en acciones concretas. Son estructuras que se crean, tanto para mantener la armonía familiar y alcanzar los objetivos familiares como para incrementar el valor de su patrimonio. Existen diversas modalidades jurídicas para constituir sociedades, pero por lo general, gran parte de las empresas familiares no se crean bajo un régimen de sociedad mercantil. Si lo hicieren de esa forma, ésta figura (la de sociedad mercantil) obliga a contar al menos con un consejo de administración y una asamblea de accionistas, que deben reunirse legalmente cuando menos una vez al año; además, en los últimos años ha surgido una figura llamada consejo familiar, la cual ha logrado gran aceptación en las empresas familiares.

La asamblea de accionistas es el órgano supremo de gobierno de una empresa y constituyen un foro en el cual los propietarios abordan diversos temas para fijar posiciones con respecto a la empresa que poseen. El consejo de administración se encarga de defender los intereses de los accionistas, que son clarificados gracias a las asambleas. El consejo familiar, que surge de la asamblea familiar, articula formalmente y en una manera organizada los deseos e intereses de los miembros de la familia con respecto al negocio.

La asamblea de accionistas, el consejo de administración y el consejo familiar son mecanismos de articulación entre los subsistemas de propiedad, familia y empresa (Belausteguigoitia Rius).

La figura anterior trata de describir de manera gráfica la interrelación que guardan los órganos de gobierno constituidos en las empresas familiares. Para desgracia de las organizaciones y su propietarios, estos órganos de gobierno rara vez operan en la práctica. Es muy común que las comidas familiares se conviertan en mesas de trabajo y de asuntos de negocio. Al no llevarse a cabo de manera formal las juntas y asambleas, se pierde una gran oportunidad de participación de los miembros de la familia, donde escuchen y sean escuchados, donde den a conocer sus dudas e inquietudes, sus ideas y propuestas.

Por desgracia, en un gran porcentaje de empresas familiares no operan los órganos de gobiernos por alguna de estas razones: a) por desconocimiento de su gran utilidad, b) por su costo, que para algunas es innecesario, c) porque a los dueños y fundadores no les gusta que los controlen y que alguien les lleve la contraria, d) porque los dueños piensan que pierden autoridad si consultan a alguien y comparten responsabilidades, y e) porque el consejo puede implicar una importante inversión de tiempo.

La Manera Como Aparecen Y Se Unen, Está Representada En La Siguiente Figura.

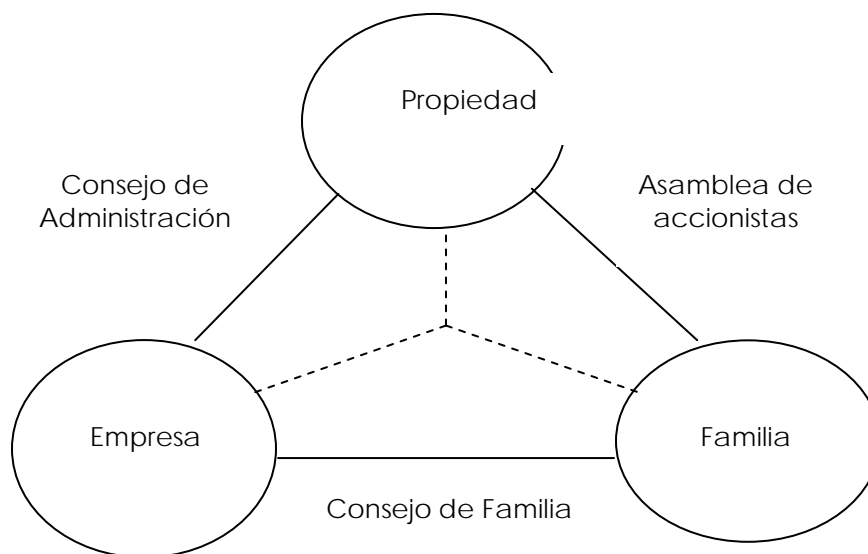

Figura 2. Órganos de gobierno y su interacción en la empresa familiar (Belausteguigoitia Rius).

Asamblea De Accionistas:

Es el órgano de gobierno más importante de todos, dado que se trata del foro de quienes poseen la organización. La visión, los valores y los intereses de los accionistas, que en el caso de estas organizaciones suelen ser miembros de una misma familia, deben ser tenidos muy en cuenta por el consejo de administración, y también deben ser puestos en práctica por quienes se encargan de la gestión de la compañía.

La asamblea de accionistas da algunas importantes directrices para el manejo de la compañía que se deben tomar en cuenta en la operación cotidiana. Dentro de los temas que se abordan en las reuniones están:

- a) Decisión sobre mantener el control de la empresa en manos de la familia
- b) Decisiones de carácter estratégico.
- c) Giros en los que les interesaría ingresar o evitar.
- d) Evaluación de los consejeros y directores de la empresa.

Consejo De Administración:

En las empresas los consejos de administración operativos deben verse como una figura fundamental, ya que estos dan al empresario una nueva visión y pueden asesorarlo cuando está equivocado, de esa manera se rechaza la intuición como único elemento para tomar decisiones, además de que los obliga a llevar una planeación sistemática, por lo que al final terminan siendo buenos críticos y asesores.

Las empresas familiares encontrarían solución a sus problemas si decidieran crear un consejo de administración que operara con regularidad y eficacia, ya que algunos de los aspectos que se podrían abordar en las juntas de consejo de administración son los siguientes:

- a) Revisión de la marcha de la organización.
- b) Formulación o aprobación de los planes estratégicos y el cumplimiento de los objetivos.
- c) Asesoramiento a la dirección general y a su equipo directivo.
- d) Aprobación de la gestión directiva, incluidos los presupuestos y estados financieros.

Además de los órganos sociales propios de cualquier sociedad mercantil como la Asamblea de Accionistas y el Consejo de Administración, en las Empresas Familiares y en los Protocolos Familiares se pueden contemplar otros distintos, de carácter familiar, como la Asamblea Familiar y el Consejo de Familia. Es frecuente, asimismo, la existencia de otros órganos de carácter accesorio como la figura del asesor externo, que resulta muy práctica para facilitar el proceso de intercomunicación familiar o resolver los conflictos que pudieran suscitarse.

Consejo De Familia

Dentro de la estructura del Protocolo, el Consejo de Familia es el órgano ejecutivo y de gobierno de la familia en relación con la empresa, aunque “per se” no tiene facultades formales para decidir en nombre de la misma. Suele estar integrado por el fundador de la familia, así como por las cabezas de cada rama familiar (es decir, el padre y los hijos del cabeza de familia). Tiene la obligación de mantener actualizado el protocolo familiar y de aplicarlo correctamente. Entre sus funciones principales se encuentran:

- a) El control familiar de la empresa.
- b) Definir los intereses de la familia con respecto a la empresa.
- c) Requisitos de la contratación de familiares.
- d) Sucesión del grupo directivo.
- e) Elaboración del Protocolo Familiar.
- f) Velar por el cumplimiento, aplicación y, en su caso, revisión del Protocolo Familiar.
- g) Servir de cauce y encontrar soluciones a los posibles conflictos entre miembros de la familia.

El Consejo de Familia no tiene funciones tasadas, por lo que puede decidir sobre todas las cuestiones o requisitos que le atribuya el Protocolo Familiar concreto que se firme. Resulta conveniente regular en el Protocolo determinados puntos relativos al funcionamiento y composición del Consejo de Familia, con la finalidad de que exista una respuesta eficaz ante los problemas que puedan suscitarse entre la familia y los órganos sociales de la Empresa Familiar.

DIAGNÓSTICO DE LA EMPRESA FAMILIAR

Basado en el Modelo de los tres círculos y de acuerdo al breve Diagnóstico de la Empresa Familiar que maneja Imanol Belausteguigoitia Rius las empresas familiares pueden hacer un rápido diagnóstico sobre los subsistemas empresa, familia y propiedad para detectar algunos puntos que merecen especial atención, para cada subsistema o rubro se plantean diez preguntas, que se responden al marcar una de las cinco columnas de la parte derecha del cuestionario siguiendo el siguiente criterio como se muestra a continuación:

A continuación se muestran los resultados del diagnóstico, considerando las diferentes puntuaciones que obtuvieron las empresas encuestadas:

- a) Si se obtuvieron más de 120 puntos (El valor máximo es de 150), la empresa familiar ha alcanzado un buen desarrollo y ha hecho lo necesario para dar continuidad a la organización a través de la siguiente generación.
- b) Si se obtuvieron entre 90 y 119, la empresa está en vías de profesionalización y es necesario implementar algunos cambios para aumentar sus posibilidades de éxito.

c) Si se obtuvieron entre 60 y 89 puntos, aún deben realizarse cambios importantes para, por un lado, articular en forma armónica tanto a la empresa como a la familia y, por el otro, hacer más competitiva a la empresa. Hay indicios de que se están realizando cambios, que aún no son tan evidentes.

d) Una clasificación menor de 60 puntos ilustra a una empresa en desarrollo que está lejos de lograr la profesionalización.

1) Totalmente De Desacuerdo 2) En Desacuerdo 3) Indeciso 4) De Acuerdo 5) Totalmente De Acuerdo.
Encuesta Para Realizar El Diagnóstico De La Empresa Familiar:

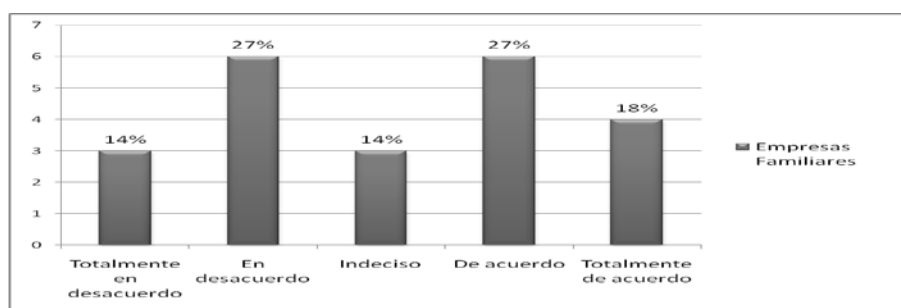

#		Inventario de la Empresa Familiar	1	2	3	4	5
EMPRESA	1	Las metas de la organización están claramente definidas					
	2	Existe un plan estratégico de largo plazo por escrito					
	3	Regularmente se llevan a cabo evaluaciones de desempeño de todos los miembros de la familia que laboran en la organización.					
	4	Existe un consejo de administración, donde se incluyen miembros ajenos a la familia.					
	5	Existe un ambiente empresarial que permite el desarrollo de los miembros de la generación más joven.					
	6	Las promociones están basadas en meritos y las compensaciones de los miembros de la familia están de acuerdo con sus habilidades.					
	7	Existe una clara definición de puestos y todos tienen claro, incluidos los miembros de la familia, lo que se espera de ellos en la empresa.					
	8	Profesionales ajenos a la familia ocupan altos cargos en la empresa.					
	9	La toma de decisiones es descentralizada, se delega la autoridad y la responsabilidad.					
	10	La empresa cuenta con políticas claras sobre la contratación de parientes					
	11	Los planes empresariales de largo plazo toman en cuenta las circunstancias de la familia.					
FAMILIA	12	La familia se reúne formalmente para discutir temas de la empresa, y ha instalado un consejo de familia.					
	13	La entrada a la empresa es totalmente voluntaria, por lo que no existe presión alguna, por parte de la familia, para incorporarse a ella.					
	14	Existe un plan de sucesión escrito.					
	15	Existe compromiso por parte de los miembros de la familia hacia la empresa.					
	16	Los sucesores tienen experiencias profesionales en otras empresas antes de incorporarse a la empresa familiar.					
	17	Existe una clara visión del negocio compartida entre familia y empresa.					
	18	La empresa es más que una herramienta para hacer dinero					
	19	Los miembros de la familia son capaces de trabajar armónicamente, y en caso de existir diferencias son capaces de solucionarlas.					
	20	Los miembros de la generación mayor tienen planes para después del retiro.					
	21	El negocio ha sido valuado y se revisa su valor periódicamente.					
	22	La familia tiene un acuerdo de compraventa de acciones que todos comprenden y aceptan.					
PROPIEDAD	23	La información financiera y de otras áreas del negocio se presenta con regularidad a todos los que tienen derechos a solicitarla.					
	24	El sucedido ha determinado cuándo y cómo se retirara de la empresa.					
	25	El sucedido sabe como hará la sucesión, particularmente en temas sobre propiedad, y lo ha comunicado a sus familiares.					
	26	Los sucesores aprueban la forma en que se planea la sucesión.					
	27	El sucedido ha hecho testamento de todas sus pertenencias y lo ha comunicado a los miembros de la familia.					
	28	El sucedido ha contemplado las implicaciones futuras de su decisión al hacer el plan de sucesión.					
	29	El sucedido piensa que sus descendientes no se enfrentarán por dejar un testamento confuso e injusto.					
	30	El sucedido y su cónyuge han hecho un presupuesto para el retiro.					
		Subtotal (numero de marcas por columna)					
		Valores	X1	X2	X3	X4	X5
		Totales (subtotales multiplicados por valores)					

RESULTADOS

Se aplicó la encuesta a 22 empresas de la comunidad de Guadalupe Victoria perteneciente al Valle de Mexicali, considerando los principales aspectos que considera el Modelo de tres círculos, para realizar un breve diagnóstico y conocer la situación actual de éstas empresas familiares, ya que fue una de las principales características al seleccionar a las empresas, que fueran empresas familiares. Posteriormente a la aplicación se procedió a elaborar una base de datos para poder graficar los resultados obtenidos, mencionando los puntos más importantes dentro de cada uno de los rubros de Empresa, Propiedad y Familia, graficando cada una de las variantes, solo que por cuestiones de espacio de redacción se presentarán solo algunos de los aspectos más relevantes en cada rubros relativos a los órganos de gobierno en las empresa familiares encuestadas.

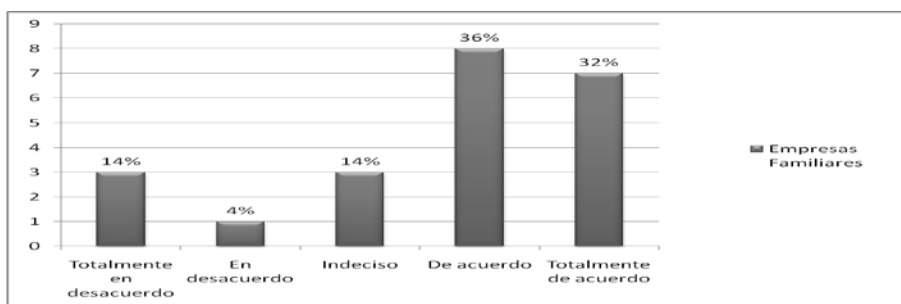

Empresa

4.- ¿Existe Un Consejo De Administración, Donde Se Incluyen Miembros Ajenos A La Familia?

Los datos arrojados por las encuestas aplicadas a los empresarios de Ciudad Guadalupe Victoria, nos muestra que un 41% de los empresarios no incluyen a miembros ajenos a la familia a su consejo de administración, sin embargo un 45% están de acuerdo en integrar a estos miembros a su consejo y un 14% se encuentra indeciso respecto a esta variable.

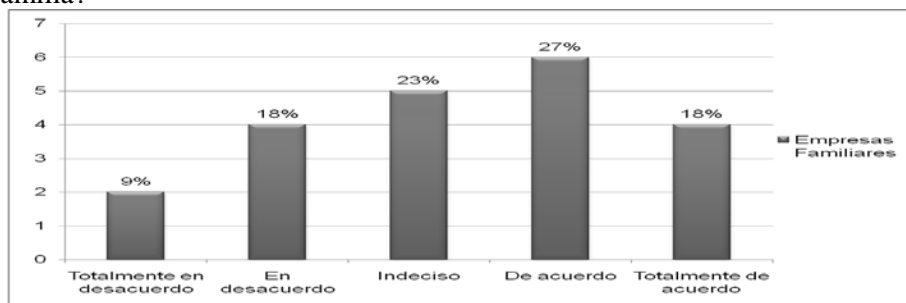

10.- ¿La Empresa Cuenta Con Políticas Claras Sobre La Contratación De Parientes?

Según los datos recabados mediante el diagnóstico aplicado a los empresarios de Ciudad Guadalupe Victoria muestra que el 36% los empresarios están de acuerdo en contar con políticas claras sobre la contratación de parientes, el 32% está totalmente de acuerdo, por otra parte el 14% se encuentran indecisos y 18 % restante no está de acuerdo con tener las políticas sobre la contratación de parientes.

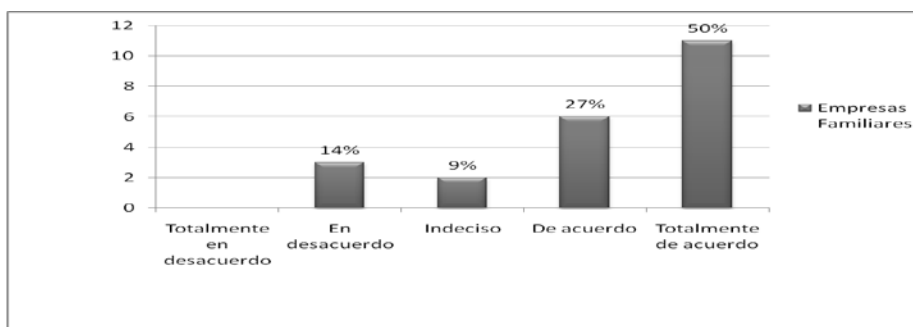

Familia

12.- ¿La Familia Se Reúne Formalmente Para Discutir Temas De La Empresa, Y Ha Instalado Un Consejo De Familia?

La gráfica muestra que un 45 % de las empresas encuestadas están de acuerdo en reunir la familia para discutir temas importantes, solo el 27 % empresas no están de acuerdo con tal situación y el 23 % restante de las empresas se encuentran indecisos en su respuesta.

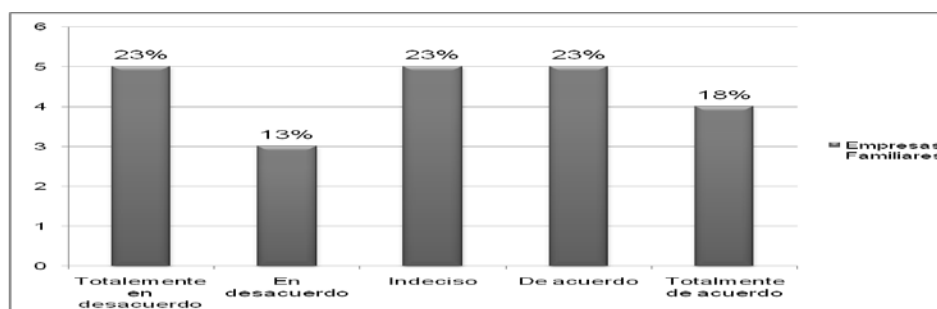

13.- ¿La Entrada A La Empresa Es Totalmente Voluntaria, Por Lo Que No Existe Presión Alguna, Por Parte De La Familia, Para Incorporarse A Ella?

La gráfica muestra que el 77 % de las empresas encuestadas permiten la entrada voluntaria a los miembros de su familia a las mismas para no provocar frustración que afecte a la organización y solo el 14 % está en desacuerdo con lo anterior y el 9 % restante se encuentra indeciso con su respuesta.

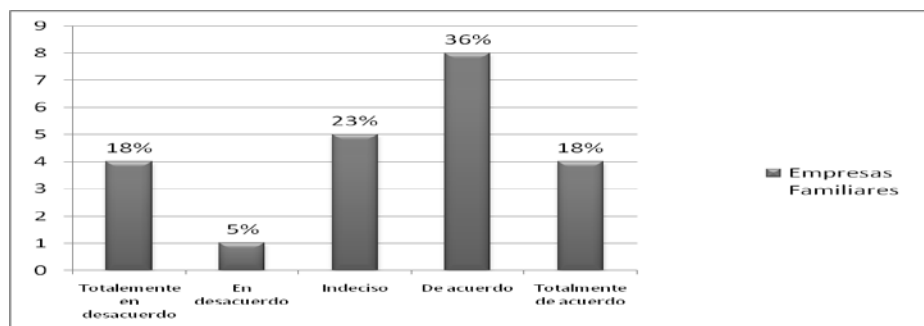

Propiedad

22.-La Familia Tiene Un Acuerdo De Compraventa De Acciones Que Todos Comprenden Y Aceptan.

La gráfica muestra que el 41% de las empresas tienen un acuerdo de compra venta de acciones que todos comprenden y aceptan, mientras que el 23% se encuentra indeciso en su respuesta lo que indica que no todos aceptan o están de acuerdo, solo algunos, y el 36% restante no tiene ningún acuerdo respecto al tema.

23.-La Información Financiera Y De Otras Áreas Del Negocio Se Presenta Con Regularidad A Todos A Los Que Tienen Derecho A Solicitarla.

La gráfica muestra que en la mayoría de las empresas familiares encuestadas la información financiera y de otras áreas puede darse a quien tiene el derecho de solicitarla ya que el 54% afirman que si presentan con regularidad a todos la información que requieren, el 23% no esta de acuerdo con esto y el 23% restantes se encuentra indeciso en su respuesta.

CONCLUSIONES

De acuerdo a los resultados del diagnóstico realizado en las empresas familiares de Guadalupe Victoria muestra que estas empresas se encuentran en vías de profesionalización, ya que son solo algunos puntos en los cuales se deben trabajar para lograr un buen desarrollo y para darle continuidad a la organización generación tras generación. Los órganos de gobierno involucran a los tres subsistemas de la empresa familiar (propiedad, familia y empresa) y durante este proceso cada uno de éstos experimentará cambios importantes. En términos generales la mayoría de las empresas familiares diagnosticadas han logrado articular en forma armónica tanto a la empresa como a la familia y propiedad, lo cual las hace sin lugar a duda más competitivas día con día.

EMPRESA. En este rubro y de acuerdo a los diagnósticos se muestra que la mayoría de los empresarios están de acuerdo en integrar a miembros ajenos a la familia es decir en que exista un Consejo de Administración ya que en las empresas familiares además de actuar como árbitro en el caso de conflictos familiares, puede establecer límites a todos y cada uno de los integrantes de la compañía, reduciendo así los enfrentamientos de carácter personal entre miembros de la familia. Además es de suma importancia que las empresas familiares cuenten con políticas claras sobre la contratación de parientes esto sobre todo con el fin de establecer una buena articulación entre sus miembros.

FAMILIA. Es importante que se establezca un Consejo de Familia debido a que es quien tiene la obligación de proponer, preparar y elaborar el Protocolo Familiar, así como velar por el cumplimiento y aplicación; y a la vez servir de cauce y encontrar soluciones a los posibles conflictos entre los miembros de la familia. En cuanto a la entrada de algún miembro a la empresa es importante que la gente se sienta realizada haciendo lo que le gusta, encontrándole significado a su tarea y colaborando en su ambiente, ya que todo en la naturaleza tiene un propósito y tiende al equilibrio, por lo que el trabajo creativo de cada uno tiene que estar en armonía.

PROPIEDAD. En este punto es importante mencionar que en el caso de que la Asamblea de Accionistas se reúnan una vez al año los propietarios y que reciban información general sobre la marcha del negocio, los planes que se tienen para el futuro, ya que esto brinda una seguridad en cuanto a la formalidad y claridad de la información financiera y de otros aspectos referentes a la empresa.

RESUMEN

Se investiga el sistema tributario en América Latina para hacer un análisis de las repercusiones económicas en la población y los beneficios en el sector social en sus diferentes estratos sociales a fin de conocer cuál es el impacto en la calidad de vida de cada uno de los países. Se encontró que cuando las normas de contribución son más complejas la cantidad de impuestos recaudados es menor, así mismo, se encontró que el sector social que más recursos económicos tiene, paga menos impuestos, al haber artículos fiscales que les permite evadir el pago de impuestos, desprotegiendo a los que menos tienen. De este análisis se desprende una propuesta de fiscalización para la creación de la Unión de Países Latinoamericanos que les permita asociarse y enfrentarse los embates de la globalización mundial.

Palabras Clave: Tendencias del Sistema tributario, América Latina y Propuesta para la competitividad.

INTRODUCCIÓN

Los impuestos ocupan un lugar importante en la estructura del sector público y son un tema importante para el desarrollo económico y motivo de controversia en los gobiernos. Los distintos grupos de la sociedad siempre le exigen al Estado menos y menores impuestos, la burocracia, por su parte buscará aumentar los ingresos del Estado, fundamentado en las necesidades sociales y para promover el desarrollo, por lo cual siempre demandaran de mayores gastos. Los gobiernos requieren disponer de los recursos suficientes para cumplir con sus funciones básicas, y mediante la política tributaria tiene capacidad para redistribuir los recursos financieros en los distintos sectores de la población. A través del manejo de los impuestos los gobiernos pueden favorecer el crecimiento o la estabilidad, el ahorro o el consumo, la inversión productiva o la inversión financiera, entre otras disyuntivas económicas. La política tributaria es uno de los mecanismos más poderosos con que cuenta el Estado para influir en la asignación de recursos y la distribución del ingreso y la riqueza. La carga fiscal en los países desarrollados llega a representar hasta el 60% del PIB (Producto Interno Bruto) (Ayala, 2005:218-219).

En la mayoría de los países de América Latina los resultados fiscales están todavía muy lejos de equipararse a las cifras de referencia de la OCDE (Organización para la Cooperación y el Desarrollo Económicos). Entre 1990 y 2006 el total de ingresos gubernamentales alcanzó en Latinoamérica una media de sólo un 23% del PIB, frente a un 42% en los países de la OCDE. Los ingresos puramente tributarios sólo constituyen un 16% del PIB de la región frente al 35% que alcanzan en los países de la

OCDE; a su vez, de los ingresos tributarios, sólo el 25% proviene de impuestos directos en América Latina, frente al 42% en los países de la OCDE y, en América Latina, sólo pueden atribuirse 4% al impuesto individual sobre la renta, frente al referente de la OCDE de 27% (OCDE, 2008).

De manera que existe una baja recaudación fiscal, problema que se ve reflejado en los ingresos del Estado, donde el principal afectado, es el ciudadano, ya que la inversión para satisfacer las necesidades públicas en Latinoamérica, se ve afectada debido a la escasez de recursos, los cuales deben ser satisfechos por los gobiernos. También existen marcadas diferencias en el modo en que se estructuran los ingresos públicos, el grado de descentralización de los sistemas fiscales y la cantidad y calidad de los servicios públicos que reciben los ciudadanos a cambio de sus impuestos (Adams, 1999:79).

Por otro lado, el potencial de la política fiscal en América Latina, está siendo significativamente infrautilizado. Mientras los impuestos y las transferencias sociales reducen la desigualdad en diecinueve puntos de Gini en Europa, la diferencia es de menos de dos puntos en América Latina (el índice de Gini es una medida de la desigualdad de la renta que va desde cero – todo el mundo tiene la misma renta – a cien – una sola persona recibe toda la renta) (Dayton, 2008). La distribución de la renta presenta unos altos niveles de concentración. Muchos países alcanzan un valor del índice de Gini superior al 0,5. América Latina es la región que ofrece la peor distribución de la riqueza en el mundo (Díaz, 2005:18).

De manera que, la política fiscal no es sólo un medio de gestión macroeconómica, sino un instrumento que los gobiernos latinoamericanos pueden emplear para proseguir el desarrollo. Sin embargo, la estabilización macroeconómica no es el único objetivo de la política fiscal. Los sistemas fiscales pueden proporcionar los recursos necesarios para llevar a cabo inversiones y transformaciones estructurales en pro del crecimiento. Los impuestos y el gasto público pueden combatir de manera directa la pobreza y la desigualdad, dos problemas que siguen acosando a los países de América Latina. Por lo que se requiere establecer un sistema tributario justo y eficiente, objetivo que aun no se cumple plenamente. Los requisitos de un sistema tributario ideal mantienen su vigencia: eficiencia económica, sencillez administrativa, flexibilidad para adaptarse a un entorno cambiante, transparencia política y equidad, todos ellos son todavía los componentes esenciales de un sistema fiscal ideal para América Latina.

REVISIÓN DE LITERATURA

Los sistemas tributarios de América Latina han sido objeto de numerosos estudios especializados entre los que cabe citar CEPAL (1998), Pita (1994), Shome (1998), Tanzi (2000), Silva (2007), Silva (2008), entre otros durante la primera década del siglo XXI, ellos forman parte de una vasta literatura especializada que ilustra los importantes cambios registrados en los sistemas tributarios de los países de la región en las últimas dos décadas, abordándose también, en algunos de ellos, el tratamiento de los factores determinantes -o causas acompañantes- de tales reformas. Los estudios en pauta son de gran riqueza empírica, permitiendo identificar importantes tendencias generales así como aspectos específicos de la variada experiencia latinoamericana en materias tributarias. La literatura es basta en los análisis sobre las tendencias y desafíos que deben enfrentar los países en América Latina en cuestión del sistema tributario. La gran mayoría ha identificado los retos a los que se enfrenta la región y han propuesto algunas acciones.

Tendencias De La Política Fiscal En La Economía Mundial

El notable cambio de la economía internacional y la creciente globalización ha influido en una tendencia a que los países traten de orientar sus políticas tributarias en una misma dirección, ello ha contribuido, ciertamente, a que los países en lo individual tengan un margen de maniobras menos para manejar internamente con mayor soberanía su política. Actualmente ya no funciona la fórmula tan ampliamente aceptada según la cual la carga tributaria debería ser progresiva y el Estado tenía el derecho, ahora los

países usan la imposición como un instrumento básico de la política social y económica. Hoy en día este consenso se encuentra amenazado y bajo un duro ataque de la globalización (Steinmo, 1993:29).

En los últimos años, han ocurrido cambios importantes en la economía mundial, que han desafiado a la teoría y política fiscal convencionales. Entre estos cambios destacan:

- Una mayor interdependencia de las políticas fiscales de distintos países atribuible a la globalización económica.
- Intensa movilidad de capitales relacionadas con la explosión de la teleinformática.
- Mayor disponibilidad de información sobre transferencias de capitales que afectan a las estructuras fiscales locales.
- La gran mayoría de las economías se han abierto a la competencia internacional lo cual influye en una pérdida relativa de eficiencia de las políticas fiscales domésticas para estabilizar la economía.

Todo ello significa que las decisiones en materia fiscal de un país a un año afectarán a la política fiscal de otro país y a sus variables económicas más allá de este horizonte temporal. Esto es muy importante en un contexto en el cual la deuda externa acumulada es muy grande, el riesgo de una importante fuga de capitales significativa, y los controles institucionales a los mercados de capitales son precarios o inexistentes. Estos cambios han obligado a pensar la política fiscal más allá de las limitaciones de los enfoques keynesianos convencionales. Como se sabe la economía keynesiana privilegiaba más los aspectos macro y menos los microeconómicos, más la estabilización y menos la eficiencia (Ayala, 2005:224).

A nivel mundial, las políticas fiscales tienen que apoyar la actividad económica en el corto plazo. A este respecto el Fondo Monetario Internacional (FMI, 2010:6), recomendó que para el 2010, las economías del mundo deberán planificar los estímulos fiscales vinculados a la crisis, procurando reducir los déficit fiscales sin perder de vista la necesidad de proteger el gasto en reducción de la pobreza y en ayuda externa, así como de reformar el gasto en prestaciones sociales, entre otras medidas. Sin embargo esta expectativa exige no solo un repliegue del estímulo fiscal vinculado con la crisis, sino también de establecer estrategias de ajuste fiscal, para reducir los déficits fiscales sin perder de vista la necesidad de proteger el gasto en reducción de la pobreza y en ayuda externa; y reformar el gasto en prestaciones sociales, entre otras medidas.

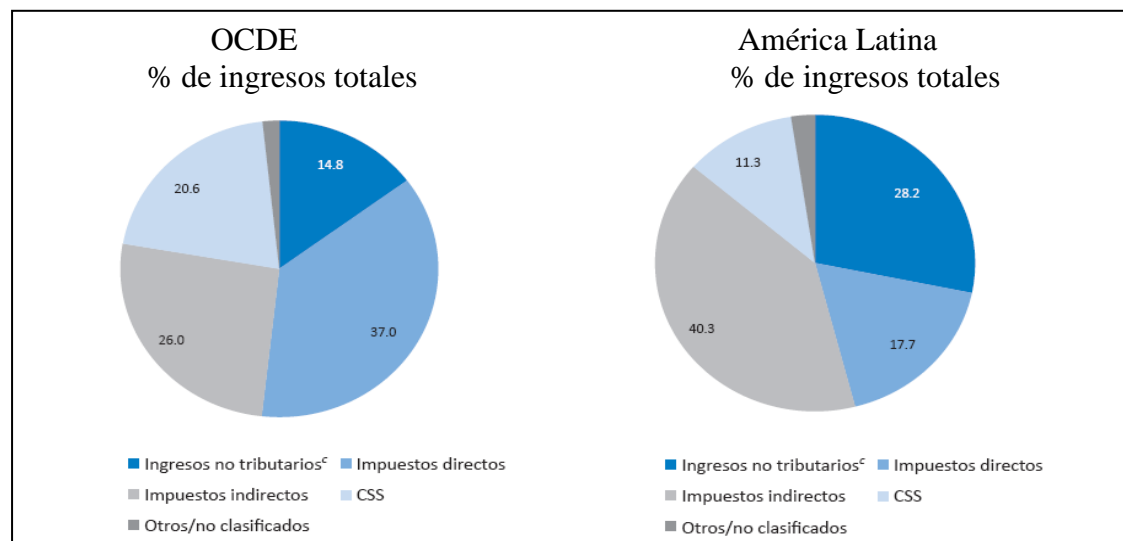

La Situación Actual Del Sistema Tributario En América Latina: Tendencias Y Resultados Fiscales

Existe una tendencia y una gran cantidad de opiniones, que en América Latina y en los países en desarrollo, el sistema fiscal debe ser capaz de financiar un nivel adecuado de gasto público de la forma más eficiente y equitativa que sea posible. Ello exige, incrementar la recaudación para financiar los gastos públicos esenciales sin necesidad de incurrir en un endeudamiento excesivo y minimizando los posibles efectos desincentivadores sobre la actividad económica. No obstante los países en desarrollo encuentran una serie de dificultades estructurales para implantar un sistema fiscal eficaz (Díaz, 2005:18). En un estudio realizado por la OCDE (2008:15-212), analizó las tendencias fiscales en América Latina versus países de la OCDE, el cual obtuvo los siguientes resultados:

El ingreso como el gasto público en América Latina se halló por debajo del promedio de la OCDE. En cuanto a la dimensión de los ingresos se observa (Figura 1), que los ingresos no tributarios resultan mucho más importantes para las finanzas públicas en América Latina, donde representan, en promedio, un 8% del PIB. Por su parte, los ingresos puramente tributarios sólo constituyen un 16% ciento del PIB de la región frente al 35% que alcanzan en los países de la OCDE; a su vez, de los ingresos tributarios, sólo el 25% proviene de impuestos directos en América Latina, frente al 42% en los países de la OCDE. La

política fiscal latinoamericana es procíclica: por lo general, los gobiernos gastan más durante los periodos de auge económico y menos en caso de recesión.

Figura 1. Composición de los Ingresos en Países de América Latina y de la OCDE. (Promedios regionales, 1990-2006).

Fuente. Cálculos del Centro de Desarrollo de la OCDE, con base en Estadísticas de Finanzas Públicas de CEPAL ILPES, en Estadísticas de Ingresos Públicos en América Latina del Centro de Desarrollo de la OCDE, en Revenue Statistics de la OCDE, y en General Government Accounts de la OCDE.

Sin embargo, obligados por la necesidad de tener recursos, el reto para los gobiernos ha sido afinar sus políticas de impuestos con objeto de no castigar demasiado el ingreso y la marcha de la economía. Por ejemplo, para no perjudicar a los que menos ganan, el impuesto se retira en forma proporcional a la capacidad económica de quien paga dicho impuesto. Esto se logra con un sistema de impuestos conocido como *progresivo*, donde quien más gana paga proporcionalmente más impuestos.

Por el contrario, se dice que un sistema impositivo es *regresivo* si extrae proporcionalmente mayores recursos a quien menos ingresos generan. Obviamente, un sistema regresivo no es deseable porque es desproporcional y genera injusticia. Además de proveer bienes y servicios, el gobierno debe procurar igualdad de oportunidades (de educación, vivienda, cultura, entre otros.) entre los miembros de una sociedad.

Por ejemplo en México, una reducción del IVA beneficiaría a los sectores más ricos de la población. Adicionalmente, algunos productos con tasa cero y exentos ayudan a disminuir la regresividad de la estructura actual del IVA. Sin embargo, ello no significa que no se tenga que revisar las exenciones y tasa cero de algunos productos, en especial aquéllos que no están dentro de la canasta básica, como por ejemplo, las gomas de mascar, jugos y néctares, y demás.

De los anterior, se infiere que el Sistema Tributario en América Latina a un sigue siendo débil, sin embargo existen otros estudios en los que se analizan otros aspectos sobre el sistema tributario en América Latina y abordan diferentes aspectos sobre la baja recaudación fiscal.

METODOLOGÍA

A través del estado del arte, se identificaron las tendencias y retos del sistema tributario en América Latina, así como las posibles propuestas que se han manifestado en distintos foros y análisis académicos. Así mismo, a través de un análisis empírico se han propuesto alternativas de un sistema tributario que permita la creación de la Unión de Países Latinoamericanos que les accedan asociarse y enfrentar los desafíos de la globalización.

RESULTADOS

El retomar las experiencias de otras naciones sobre todo de los países en desarrollo, permite a los países emergentes tener un referente de políticas justas y equitativas, sin embargo las experiencias de las reformas fiscales llevadas a cabo en América Latina, desde la década de los 50 del siglo XX, se pueden considerar como un conjunto de fracasos, donde los modelos tributarios que se implantaron en los textos legales, generaron graves problemas económicos y relevantes enfrentamientos sociales. Existe una obsesión por establecer modelos tributarios provenientes de los países desarrollados, pero no se ha tomado en cuenta las realidades y los entornos económicos, sociales y culturas de los países de Latinoamérica, cuyas acciones no corresponden a las necesidades, circunstancias sociales y económicas e, incluso, las normas jurídicas y la mentalidad de los ciudadanos de América Latina.

No se quiere decir que las políticas y programas de los países desarrollados no son eficaces, sino más bien, que se reconoce que las administraciones tributarias en América Latina, en muchos de los casos están politizadas, son clientelistas, sin medios materiales y con funcionarios con baja calidad en sus métodos de trabajo, han llevado al fenómeno de la corrupción generalizada en el servicio público y la imbricación de los intereses y los grupos de presión existentes entre la administración y los sectores sociales oligárquicos, ocasiona el fracaso inmediato de brillantes sistemas y programas fiscales que no han pasado del papel a la realidad.

La mayoría de las reformas fiscales en América Latina se han hecho a espaldas de los obligados tributarios, a los cuales ni se les consulta ni se les ayudaba a la hora de aplicar los tributos, ni se consideraba la incidencia, en términos de renta o costes de cumplimiento, de las reformas. Por lo cual las políticas públicas no han logrado avanzar hacia la igualdad social, ni mejorado las infraestructuras o los servicios públicos, no debe extrañarse la resistencia social existente en toda América Latina a pagar impuestos.

Sin lugar a dudas, la administración y el sistema tributario ha sido motivo de reflexiones y debates, así como una gran cantidad de propuestas sobre todo para América Latina. ¿Pero porque para esta región? La historia pudiera contestar esta pregunta, por muchos años los países de América Latina, fueron colonias de los países Europeos, situación que aun se sigue en esta connotación, aunque América ha logrado su independencia nacional, sin embargo, sigue bajo el yugo de los países desarrollados. Basta con ir de compras y en cualquier país Latinoamericano se encontrará artículos importados de primera necesidad a bajos costos, restando importancia y poca demanda a los artículos nacionales. Por otro lado, porque si contando con grandes extensiones de tierras disponible para el cultivo y mantener la soberanía alimentaria, los países tienen que importar y endeudarse, lo cual genera inconformidades, porque el gobierno requiere ingresos y establecen políticas emergentes solo para el corto plazo.

En la revisión de literatura, no se encontró, que manifestaran como desafíos en el sistema fiscal en América Latina, la delincuencia, al crimen organizado, los bajos índices en los derechos humanos, políticos corruptos, los problemas ambientales, el exceso de basura y contaminación, el aumento de la prostitución, la escasez de agua, la desigualdad de género y el maltrato de niños y mujeres, los problemas raciales, la baja calidad en la educación básica, los bajos niveles de desarrollo tecnológico y transferencia

de tecnología, las pocas oportunidades de adquisición de una vivienda con servicios públicos (agua, luz, pavimentación, drenaje, teléfono, entre otros), el narcotráfico, policía corrupta, la pérdida de identidad nacional y cultural, indígenas soslayados de la economía y de derechos, migración del sector rural a las grandes ciudades dejando las tierras sin producción por falta de recursos, programas de TV y entretenimiento que distraen y enajenan al ciudadano, escasos servicios médicos y hospitalarios, todo ello, es una realidad que vive América Latina. La mayoría de los esfuerzos y programas de desarrollo han sido sectoriales, es decir, se han dirigido a resolver un problema específico, cuando tendría que ser un programa integral que abarcará todos los sistemas fallidos de una nación, es como quitar una piedra de un ahoyo para tapar otro hoyo.

La pregunta que nos atañe es: ¿América Latina y el Caribe no cuenta con los elementos necesarios para salir adelante económicamente? ¿A caso necesita de los países desarrollados para emerger en su economía? ¿Necesita que otros países del primer mundo, lo dirijan y rija su proceder nacional, autónomo y soberano? ¿Solicitar financiamiento, para aumentar la deuda pública, mientras se pagan excesivos sueldos a los funcionarios públicos, cuando no llegan los recursos a los programas de desarrollo? Los países de América Latina necesitan emerger de una utopía globalizante, bien se sabe que la región no es competitiva con los países de la OCDE, mientras tanto qué tenemos que hacer, ya que los países de Europa y los del MERCOSUR, tienen acaparado el mercado, son los que ponen las reglas y políticas de los mercados financieros, que si estornuda EEUU se refría América Latina. Porqué ha aumentado la calidad y nivel de vida en la Unión Europea, qué los hace diferentes a los de América Latina. A estas y más interrogantes en las asimetrías entre los países de América Latina y los países desarrollados, se debe en gran parte a:

La pérdida de identidad nacional, cultural y de responsabilidad ciudadana, los habitantes son incrédulos de los gobernantes, organismos públicos y de sus promesas y procederes corruptos.

Burócratas poco éticos, en todos los niveles de gobierno, son elegidos y puestos por amistades (o compadrazgos) con la finalidad de conseguir beneficios económicos a costillas del pueblo. Sin velar por los intereses de la ciudadanía quien los elogia.

La escasa o nula acción colectiva de los habitantes de América Latina para forjar empresas, competitivas y fortalecer la economía del país.

La baja densidad y cohesión de redes de conocimiento (entre las academias e instituciones de investigación), redes empresariales, redes de innovación tecnológica, las redes de innovación agroalimentaria, las redes económicas y tributarias, las redes sociales, que permitan detonar el desarrollo y crecimiento de la región.

Por otra parte, los países Europeos se unieron con el fin de agilizar su mercado, unificaron una moneda que en comparación con el dólar tiene mucho mayor valor adquisitivo en el mercado, aumentaron y agilizaron las líneas de comunicación vía terrestre, pasas de un país a otro sin visa, pero más aun, son los portadores internacionales de nuevos procesos tecnológicos y científicos en todos los aspectos. Al respecto, se infiere que la unión hace la fuerza. ¿Qué necesita América Latina? La respuesta sería, unirse para formar una “Unión Latinoamericana” para emerger y ser competitiva.

Propuesta Para Conformar La Unión De Países Latinoamericanos Para Ser Competitivos A Nivel Mundial

Esta propuesta no es la panacea para América Latina, todas las estrategias, programas y políticas públicas propuestas han sido relevantes y en ciertos puntos acertados, sin embargo nos olvidamos del factor más impredecible, insoslayable, incierto y muchas veces fortuito, nos referimos al ciudadano, al habitante, a la

persona, al individuo gobernado. ¿Qué tiene que ver con la eficiencia y eficacia del sistema tributario de una nación? O más aun, ¿Con las políticas hacendarias, en la recaudación y la distribución de la riqueza? Al respecto, cabe mencionar que los que pagan los impuestos son los ciudadanos de un país, es por ello que primero se tiene que sensibilizar al individuo, a desarrollar una cultura tributaria desde la infancia, a elevar el nivel educacional y cultural hacia un Estado de bienestar, de ahorro, de colaboración, de participación política y económica. Por ello se presenta la siguiente propuesta: “Programa de Creación de Redes Sociales de Innovación para la Acción Colectiva en América Latina”.

El objetivo de este programa es promover acciones colectivas, a través de la participación de coaliciones en el sector salud, educación, empresarial, turístico, político, gubernamental, científico, tributario, entre otros, con el fin de crear asociaciones entre los países de América Latina, y otras instituciones regionales o internacionales para crear consensos de una forma participativa, utilizando nuevas herramientas para la distribución del conocimiento, innovando y tomando riesgos controlados.

Este programa tiene dos metas; 1) promover la acción colectiva en todas las actividades económicas, sociales, culturales y de educación para crear redes con organismos internos, nacionales con el fin de cohesionar y fortalecer a cada nación en forma interna y después enlazarse con otros países, 2) crear una plataforma en la cual los participantes de diferentes segmentos de la sociedad pueda trabajar en coalición para revisar las prácticas y reformas positivas o negativas de la política pública, e 3) iniciar la unión de países Latinoamericanos para crear redes sociales de innovación en todos los aspectos económicos, políticos, culturales y sociales.

El diseño de este programa está dividido en cuatro etapas entrelazadas:

Fase I. Promover la sinergia entre los grupos o sistemas a fines. Impulsar alianzas entre las instituciones, grupos, sectores relacionadas con fines comunes.

Fase II. Crear redes sociales de innovación. Implica reconocer que las organizaciones no sólo forman grupos, sino también redes. Y para este programa las redes son redes de personas, que se conectan y vinculan, aunque estas personas sean directores o gerentes de las organizaciones, no se conectan cargos entre sí, se conectan personas (Rovere, 1996).

Esta fase del programa se debe emprender una serie de vínculos entre pares, en la ciencia, la tecnología, la educación, la salud, la cultura, la investigación, la economía, entre muchas otras áreas, dando lugar a una red cuya estructura este orientada al aprendizaje estratégico. Para ello se propone adoptar la propuesta formulada por Rovere (1996), donde el proceso de construcción de una red se establecen cinco niveles a saber: 1) Reconocimiento, 2) Conocimiento, 3) Colaboración, 4) Cooperación y 5) Asociación. Donde cada nivel sirve de apoyo al siguiente.

El primer nivel, el de reconocimiento, se traduce en la aceptación del otro. La dificultad de interactuar consiste en que no se reconoce que el otro existe. No hay forma de crear redes con otros a los cuales no se reconoce su derecho de existir y opinar. En este nivel el valor que deben de generar las personas es la “Aceptación”.

El segundo nivel es el de conocimiento. Una vez que el otro es reconocido como par, como interlocutor válido, se empieza a despertar el interés por conocer lo que hace y cómo lo hace. Existe el interés de saber quién es el otro, entender cómo se ve el mundo desde ahí. En este nivel el valor a manifestar por parte las personas es el “Interés”.

Un tercer nivel es el que surge a partir del interés y del conocimiento del otro, lo cual lleva a la colaboración, es decir en el sentido de “trabajar con”. No es una ayuda sistemática, no es una

colaboración organizada, sino espontánea. Se registran momentos, hechos, circunstancias donde se constatan mecanismos de colaboración que empiezan a estructurar una serie de vínculos de reciprocidad. Se empieza a colaborar y se espera reciprocidad. El valor que generará la colaboración es la “Reciprocidad”.

En el cuarto nivel ya se registran algunas formas sistemáticas de cooperación, es decir “operación conjunta”. Este nivel implica un proceso más complejo porque supone la existencia de un problema común, lo cual significa que hay una “co-problematización” y existe una forma más sistemática y estable de operación conjunta. Hay, en suma, un compartir sistemático de actividades. El valor para que se dé la cooperación es la “Solidaridad”

Finalmente, existe el quinto nivel donde se da la asociación. Implica el establecimiento de vínculos formalizados en contratos y convenios. Se debe considerar todos aquellos vínculos donde existen proyectos o actividades que suman recursos económicos y personas con objetivos comunes y con visión de largo plazo. El valor que permite crear redes sociales de colaboración e incita a la acción colectiva de grupos es la “Confianza”.

Por lo que se infiere que cuando no existe confianza, no se generan vínculos que promueva la sinergia en las organizaciones y esto hace que las políticas públicas no se lleven a cabo. De manera que es necesario que los integrantes de las organizaciones y organismos gubernamentales y ONG’s mejoren su nivel de confianza, reciprocidad y fortalezca la red de cooperación para lograr una mejor articulación, lo cual dependerá de las relaciones entre las personas, el cual es un elemento común de la acción colectiva.

Fase III. Creación de innovaciones. Por innovación en este programa, se está haciendo referencia a todo cambio basado en conocimiento que genera riqueza. En esta fase el fin es crear un modelo de red o innovación abierta, que den lugar a innovaciones trascendentales con gran impacto económico y social. Se asemeja a un ecosistema o red en el que múltiples actores o nodo, cada uno con diferentes recursos y capacidades, interactúan y co-desarrollan nuevos bienes y servicios que la sociedad valora, así como nuevos programas para elevar la calidad de vida de los países (Ander, 2006). Para esta fase es necesario articular seis grandes actores o nodos a saber (Radjou, 2004 y 2006; Ruelas y Sull (2006); Muñoz et al, 2004):

Investigadores/Inventores. Los cuales conducen las labores de investigación y desarrollo en las diferentes áreas del conocimiento para generar riqueza de un país. Generalmente este tipo de actores no tiene las capacidades para traducir en bienes y servicios comercializables o imponer programas y políticas gubernamentales, con el conocimiento que generan. A esta categoría pertenecen los centros o institutos de investigación, universidades, centros de desarrollo tecnológicos y aquellas empresas que invierten importantes sumas en la investigación y desarrollo.

Financiadores. Proveen los fondos para que investigadores desempeñen sus respectivos roles en la red de innovación. Dichos fondos pueden ser suministrados en forma de crédito, capital de riesgo, reembolsos, subsidios, etc. A este pertenecen los organismos financieros como bancos comerciales y de fomento, fideicomisos, organismos públicos, empresas, organizaciones no gubernamentales, entre otras.

Transformadores. Identifican, capturan o compran las ideas y conocimientos de los investigadores, donde las someten a una serie de procesos de validación y transformación hasta llegar a la generación de bienes y servicios con valor de uso y de cambio, así como adaptar los programas y políticas públicas a los diferentes sectores de la economía del país.

Transferidores/difusores. Asumen la función de identificar, familiarizarse y disseminar los conocimientos, bienes o servicios a nivel de los diferentes actores que demuestren interés y necesidad por adoptarlos con

el propósito de generar valor. A este grupo corresponden a los asesores, consultores y organismos que tienen contacto con la ciudadanía en necesidad.

Empresarios/grupo a beneficiar. Bajo un enfoque lineal, este actor suele ser concebido como el último eslabón de una cadena que empieza con el investigador. En quien incorpora los conocimientos y bienes a los procesos productivos, comerciales y conocimientos reflejados en programas y políticas públicas, con el propósito de crear valor. Sin embargo este actor también puede asumir cualquiera de los anteriores roles, ya que en el proceso de innovación ocurre una serie de adaptaciones que dan lugar a nuevos descubrimientos que alimentan a los investigadores.

Orquestadores/articuladores. Este nodo actúa entre iguales y es el que identifica la oportunidad ente iguales, reúne y coordina a los demás actores de la red para formar una combinación novedosa de recursos que hacen posible la innovación a nivel de los procesos productivos, comerciales, políticos, culturales, sociales y económicos. Los recursos incluyen tanto activos tangibles (redes de distribución, equipo/maquinaria, dinero) como activos intangibles (tecnología, experticia, marcas, programas gubernamentales, políticas públicas, innovaciones, entre otras). Así, la orquestación consiste en coordinar al resto de los actores o nodos para proporcionar una combinación novedosa que satisfaga una demanda de los clientes, es decir, de la ciudadanía.

Bajo una concepción de esta naturaleza, el problema que enfrenta América Latina en todos sus sectores, incluyendo el sistema tributario, para mejorar su capacidad competitiva a nivel mundial, se requiere un enfoque de sustentabilidad y equidad social el cual reside en la innovación (no sólo tecnológica, sino administrativa, organizativa y de gestión). América Latina requiere que el conocimiento generado se convierta en riqueza, y este proceso requiere un proceso. El ciclo debe comenzar en la investigación que genere conocimiento, para posteriormente se transforme en innovación tecnológica, para luego convertirse en un proceso, insumo, programa o política para incorporarla al sector o área en la que se requiere ayudar mediante la creación de redes sociales de innovación.

La innovación debe adecuarse a tres dimensiones:

- (i) Organizaciones eficaces y eficientes , en particular la administración tributaria de todos los niveles de gobierno, así como la administración de aduanas;
- (ii) Políticas bien orientadas , en particular las políticas fiscal (tributaria y presupuestaria), monetaria y cambiaria que contribuyen a definir el ambiente macroeconómico ;
- (iii) Instituciones funcionales a los objetivos trazados , esto es, un conjunto de reglas de juego (formales e informales) que definan un sistema de incentivos compatibles con los fines por alcanzar, sumado a un sistema de instrumentos y procedimientos capaces de asegurar el eficaz cumplimiento de contratos y obligaciones.

CONCLUSIONES

En resumen, el grado de éxito de una Administración Tributaria está asociado a un gran número de variables que trascienden las clásicas explicaciones macro económicas y las de política tributaria. En países con esquemas impositivos similares y con economías compatibles, de "performance" en la recaudación de tributos ha sido muy dispar. Por lo tanto se debe prestar particular atención al desarrollo de capacidades administrativas para la resolución de este "enigma". Se trata, en síntesis, de estudiar cómo se reconstruye el estado en América Latina. Para ello es menester un "approach" multidisciplinario. América Latina para ser competitiva a nivel mundial debe: Garantizar la legalidad del sistema impositivo a través de la sincronización, simplificación, procedimiento y la administración tributaria en los niveles nacional, regional y local.

Fortalecer la capacidad de gestión de la administración tributaria, procurando la autonomía administrativa y fortalecer una cultura tributaria capaz de permear favorablemente la sociedad hacia una cultura de la contribución

Construir una visión compartida de largo plazo que cuente escenarios potenciales del accionar organizacional en el marco de los retos de modernización del Estado, globalización e internacionalización de la economía. Incorporar a todos los actores en un proyecto nacional capaz de redundar en el afinamiento de las estrategias de acción necesarias para garantizar el adecuado cumplimiento de las obligaciones.

La administración tributaria debe actuar con rapidez ante la dinámica con la que se mueve el comercio electrónico. Pero más aun, reconocer que el implementar un sistema tributario bajo un enfoque de red de innovación no puede ser llevada a cabo por un organismos o administración, sino en colaboración con otros agentes y como resultado de la interacción de los mismos. Lo cual permitirá que los países de América Latina puedan unirse bajo un mismo sistema que les permita la cohesión entre sí, y ser más competitivos a nivel mundial.

EVOLUCIÓN DE LOS PROYECTOS DE VINCULACIÓN EN LA CARRERA DE LAE EN LA EIN-GV

Mariana Monserrat Valenzuela Montoya, Universidad Autónoma del Estado de Baja California

Griselda Guillén Ojeda, Universidad Autónoma del Estado de Baja California

ABSTRACT

Como una alternativa para la formación profesional y en base al modelo curricular de la Universidad Autónoma de Baja California (UABC), la Escuela de Ingeniería y Negocios, Guadalupe Victoria, ha trabajado desde el 2007-2 con Proyectos de Vinculación con Valor en Créditos (PVVC) cumpliendo el objetivo de proporcionarle a la sociedad del Valle de Mexicali, profesionistas de la Licenciatura en Administración de Empresas (LAE), capaces de solucionar problemas reales empresariales. Desde entonces a la fecha, los PVVC se han trabajado con diferentes empresarios, han participado tres grupos distintos de estudiantes de LAE y los docentes han perfeccionado la forma de aplicar los proyectos. En estos tres años los PVVC han evolucionado de forma favorable para todos los participantes: para la EIN-GV la ha posicionado entre la comunidad empresarial como una universidad que le ayuda a mejorar su competitividad; a los alumnos, han adquirido una formación profesional que los hace capaces de solucionar problemas empresariales; a los maestros han dado una perspectiva amplia de la situación que viven los empresarios del Valle. Hoy los PVVC continúan evolucionando, durante el semestre 2010-1 se está trabajando el nuevo proyecto Desarrollo del Potencial Empresarial, uno de los retos actuales de la carrera de LAE.

INTRODUCCIÓN

La Escuela de Ingeniería y Negocios, Guadalupe Victoria (EIN-GV) es parte de la Universidad Autónoma de Baja California (UABC). Fue creada por el Consejo Universitario el 16 de noviembre de 2006. Actualmente cuenta con 385 estudiantes que cursan las licenciaturas en Administración de Empresas, Psicología e Ingeniero en Computación; al mismo tiempo en la Escuela se imparten los respectivos troncos comunes: Ciencias Administrativas, Ciencias Sociales, Ciencias de la Ingeniería (Padilla, 2008).

Al ser la misión de la EIN-GV “desarrollar profesionistas de calidad, cuyos conocimientos sean pertinentes social y profesionalmente; profesionistas que estén comprometidos con el desarrollo de la comunidad y de su estado, promoviendo siempre el ejercicio de los más altos valores éticos y profesionales” (Idem), la Escuela busca proporcionarle a sus estudiantes opciones que les permitan incrementar sus conocimientos y ponerlos en práctica en ambientes reales, así como fortalecer sus valores retribuyéndole a la comunidad con su conocimiento para el desarrollo de la misma.

La EIN-GV es la primera Institución de Educación Superior que llega a Ciudad Guadalupe Victoria la cual es una población en crecimiento; al llegar la EIN-GV en la ciudad, trabaja impulsando este crecimiento con el desarrollo de profesionistas de calidad comprometidos con el desarrollo de la ciudad. En el camino a lograr lo anterior, se han establecido diferentes estrategias incorporadas a los planes de estudio para que los estudiantes refuercen y pongan en práctica sus conocimientos, habilidades, actitudes y valores; entre estas estrategias se encuentran la implementación de los Proyectos de Vinculación con Valor en Créditos (PVVC), aplicados desde el semestre 2007-2 en la EIN-GV con empresas de Ciudad Guadalupe Victoria.

El objetivo de este documento es dar a conocer la experiencia que se ha obtenido a partir de los PVVC en la formación y el desarrollo de los estudiantes de la carrera de LAE de Empresas como una estrategia para que los estudiantes desarrollen los conocimientos, habilidades y valores referentes a su carrera y a la par efectuar una vinculación con la comunidad empresarial.

REVISIÓN LITERARIA

El Modelo Curricular

Para la UABC el Modelo Educativo es la base sobre la cual se diseñan y desarrollan sus planes y programas académicos. La estructura de los contenidos, las políticas de vinculación laboral y social, la movilidad, la incorporación y uso de tecnologías, medios de comunicación que favorecen y fortalecen en el docente y su quehacer como facilitadores del aprendizaje, proporciona al alumno temas de interés para complementar su formación profesional (citado en Valenzuela, Bravo, 2007).

Una de las ventajas que ofrecen los planes de estudio que se perfilan con el actual Modelo Educativo de la UABC, es la flexibilidad y el diseño basado en el modelo de competencias profesionales, todo esto con el fin de formar alumnos con un perfil profesional actualizado, con una actitud de que él mismo construya su aprendizaje, capacitado, competente, que sepa trabajar en equipo, pero sobre todo con valores bien cimentados, que posea las habilidades y conocimientos en ambientes reales en beneficio de su comunidad y de la sociedad en general (ídem).

Educación Situada

Como parte de las estrategias que se utilizan para fortalecer los planes de estudio, se maneja la educación situada o en situ como normalmente se le conoce. El aprendizaje situado toma diferentes formas y nombres, como cognición situada, participación periférica legítima, aprendizaje cognitivo (cognitive apprenticeship) o aprendizaje artesanal (Hendricks, 2001, citado en Díaz Barriga, 2003). A través de un enfoque situado se busca un aprendizaje centrado en auténticas prácticas educativas, debiendo ser éstas congruentes, significativas y propositivas (Díaz Barriga, 2003).

La UABC a través de sus políticas educativas y propósitos del Modelo Educativo, es un ejemplo de la educación situada en donde el estudiante participa activa y responsablemente de su propio proceso formativo. Las modalidades de aprendizaje de la UABC que propician el aprendizaje situado o educación situada, de acuerdo al artículo 155 del estatuto escolar son las siguientes:

- Ayudantías de investigación
- Ejercicio investigativo
- Apoyo a actividades de extensión y vinculación
- Proyectos de vinculación con valor en créditos
- Servicio social comunitario asociado a la currícula
- Servicio social profesional asociado a la currícula
- Prácticas profesionales.

La enseñanza situada destaca la importancia de la actividad y el contexto para el aprendizaje, reconociendo que el aprendizaje es un proceso de enculturación donde los estudiantes gradualmente se integran a una comunidad de prácticas sociales. Siendo la idea central que aprender y hacer son acciones inseparables (Díaz Barriga, 2003).

Existen diferentes estrategias de enseñanza que podemos aplicar como docentes, en las cuales el profesor utiliza herramientas de manera adaptativa y flexibles acordes a las necesidades del contexto que promueven el aprendizaje significativo en los alumnos. Las estrategias para el aprendizaje significativo centradas en el aprendizaje experiencial y situado, que se enfocan en la construcción de conocimientos en ambientes reales son:

- Aprendizaje centrado en la solución de problemas auténticos
- Análisis de casos
- Método de proyectos
- Prácticas situadas
- Aprendizaje en el servicio
- Trabajo en equipos cooperativos
- Ejercicios, demostraciones y simulaciones situadas
- Aprendizaje mediado por las nuevas tecnologías de la información

Consideramos que la estrategia de los PVVC es adecuada para que el estudiante ponga en práctica conocimientos previos, desarrollando actividades específicas en una organización y refuerce sus habilidades y actitudes, en el entorno real de los negocios, en la localidad. Los PVVC forman parte del tipo de aprendizaje significativo al centrarse los proyectos en la solución de problemas auténticos, en base a un caso empresarial, a través de trabajos en equipo.

Además desde una perspectiva experiencial, donde el alumno aprende a través de la experiencia personal, activa y directa con el fin de iluminar, reforzar y asimilar el aprendizaje cognitivo, (Posner, 1998, citado en Díaz Barriga, 2003) plantea como rasgos centrales del enfoque de proyectos:

- Tipos de conocimiento para preparar a los alumnos: conocimiento social, conocimiento propio (actitudes) y habilidades cada vez más complejas. Por consiguiente, implica un enfoque desarrollista, de currículo en espiral.
- Énfasis: en asuntos del mundo real de interés práctico para los estudiantes.
- Se focaliza en preparar a los alumnos para la ciudadanía.
- Particularmente exitoso en poblaciones de alto riesgo (baja motivación, abandono escolar).

De hecho, Scardamalia y Bereiter (en Daniels, 2003, citado en Díaz Barriga, 2003), postulan que la principal función de la educación debería ser la construcción de conocimientos colectivos mediante el aprendizaje basado en problemas y el aprendizaje basado en proyectos, incorporando aprendizajes para el manejo de la información y la alfabetización tecnológica requeridos en la sociedad del conocimiento.

Proyectos de Vinculación con Valor en Créditos

Un proyecto es una iniciativa de carácter temporal que surge para la obtención de un resultado singular. (Proyecto Management Institute, 2000, citado por Klastorin, 2005) Por otra parte la vinculación se define como el conjunto comprensivo de procesos y practicas planeadas, sistematizadas y continuamente evaluadas, donde los elementos académicos y el sector productivo se relacionan íntimamente unos con otros con el propósito de desarrollarse y realizar acciones de beneficio mutuo (citado por Aguilar, Ramírez).

El Estatuto Escolar de la UABC, en el artículo 156 menciona que un PVVC, tiene varias alternativas para el logro de créditos, así mismo puede integrar diversas modalidades de aprendizaje a la vez. Según el artículo 158, el objetivo por el cual se otorgan créditos a los PVVC estriba en los beneficios que aportan estos a la flexibilidad curricular y al modelo de competencias para dar fortaleza a la adquisición del

conocimiento más allá de las aulas y propiciar el acercamiento a su área profesional (Estatuto Escolar de la UABC, 2006).

Los PVVC son aquellos que se encuentran considerados en los planes de estudio y que se desarrollan en sectores externos en los que participan estudiantes y docentes, existen los procesos de asignación, conversión y transferencia de créditos hacia actividades académicas que incorporan la educación situada o formación en ambientes reales.

Los programas de estudio en sus diferentes etapas refuerzan los conocimientos teóricos, a través de incrementar los trabajos teórico-práctico desarrollando con ello las competencias profesionales mediante la participación del alumno en el campo laboral, orientándolo hacia la integración y aplicación de los conocimientos adquiridos en el desarrollo de diversos PVVC.

METODOLOGIA

Experiencia de los PVVC en la EIN-GV

La EIN-GV, consideró que la estrategia adecuada para la formación profesional de los estudiantes y para establecer una relación ganar-ganar con los empresarios, era la implementación de los PVVC. De esta forma desde el periodo 2007-2 en la EIN-GV se han implementado los PVVC, con empresas de la localidad. Para lo cual, en el inicio de la aplicación, se realizaron las siguientes actividades:

1. Se revisaron los planes de estudio del quinto y sexto semestre de la carrera de LAE el cual está homologado con la Facultad de Ciencias Administrativas del plan por competencias 2002-1.
2. Se analizó el modelo de vinculación de la Universidad Autónoma de Baja California.
3. Se revisó el procedimiento de operación de los PVVC.
4. Se evaluó la implementación de los PVVC en los semestres quinto y sexto de la carrera de LAE.
5. Se platicó con empresas de la comunidad de Guadalupe Victoria para implementar los proyectos.
6. Se diseñaron y registraron los Proyectos ante el Departamento de Formación Profesional y Vinculación de la UABC.
7. Se elaboraron convenios de colaboración con las empresas participantes.
8. Se realizaron seminarios durante la duración del proyecto para asesorar a los estudiantes en el logro de los objetivos.
9. Se realizaron presentaciones al final del proyecto con los empresarios en donde se les hizo entrega de los resultados y la información recabada durante el proyecto.

A lo largo de estos tres años y medio, los proyectos han llevado diferentes nombres según las actividades que los estudiantes realizan en las empresas. Todos los PVVC tienen como objetivo en común el estudiante desarrolle los conocimientos, habilidades y valores de manera integral y simultánea, asociados a la situación actual de las empresas, creando así una pertinencia social y profesional, y además que la empresa, en la cual se aplica el PVVC, incremente sus oportunidades de negocio y competitividad. Sin embargo, es importante destacar que dependiendo de cada proyecto y necesidades de la empresa son las actividades que se realizan.

En el *Proyecto Diagnóstico Situacional Empresarial* los estudiantes realizan a la empresa un diagnóstico de la situación referente a la unidad de aprendizaje que estén tomando, en este caso son: Mercadotecnia, Análisis Financiero, Derecho Fiscal, Desarrollo de Recursos Humanos y Métodos Cuantitativos, abarcando con éstas las áreas en la empresa de Ventas, Finanzas, Derecho Fiscal y Recursos Humanos. Al

finalizar el proyecto los estudiantes entregan al empresario los resultados del análisis de la empresa y propuestas para mejorarla. De esta forma el alumno y el empresario a través del proyecto detectan áreas de oportunidad para mejorar y ser más competitivas en su entorno.

Por otra parte el *Proyecto Implementación de un Nuevo Producto o Servicio*, consiste en que los alumnos realizan un análisis de la empresa en base a las unidades de aprendizaje que cursan en el sexto semestre de la carrera, las cuales son: Mercadotecnia II, Impuestos, Desarrollo de Pequeñas y Medianas Empresas, Administración del Capital de Trabajo, Liderazgo, Métodos Cuantitativos II y Administración de Sueldos y Salarios; en base a la cual el estudiante le propone al empresario ó microempresario la implementación de un nuevo producto o servicio, en base a la situación en la que se encuentra.

Un tercer proyecto que se ha manejado es *Asistencia Microempresarial para Apoyo al Empleo en Baja California*, a través del cual se brinda asesoría a micro, pequeñas y medianas empresas referente a cómo mejorar su condición financiera, capacitación y actualización mediante la implementación de un nuevo producto o servicio en microempresas de la localidad, esto con la condición de que se formalicen ante las autoridades correspondientes. La dinámica que se ha trabajado en este proyecto es asociar algunas de las unidades de aprendizaje que maneja el estudiante como por ejemplo: Impuestos y Administración del Capital de Trabajo, por mencionar algunas.

Por otro lado han sido diferentes empresarios los que han participado en cada proyecto en total se han trabajado con 8 empresas medianas: Agua Tap, Ferretera Muñoz, S.A. De C.V., Hotel Dial, RD Centro Automotriz, S. De R. L. De C.V., Recolectora de Materiales Reciclables del Valle, S.A. de C.V., Grupo El Progreso de Baja California, S.A. de C.V., Valle Congelado, S.A. de C.V. y Mercado Corona. Por otro lado, durante el semestre 2009-1 se trabajó con la asistencia a microempresarios, atendándose a 30 de ellos. Ver Tabla 1.

Nombre del Proyecto	Semestre	Empresa Participante	Alumnos Participantes
Diagnóstico Situacional Empresarial	2007-2	Agua Tap	5
		Ferretera Muñoz, S.A. De C.V.	6
Implementación de un Nuevo Producto o Servicio Empresarial	2008-1	Hotel Dial	5
		RD Centro Automotriz, S. De R. L. De C.V.	6
		Recolectora de Materiales Reciclables del Valle, S.A. de C.V.	8
Diagnóstico Situacional Empresarial	2008-2	Grupo El Progreso de Baja California, S.A. de C.V.	7
Asistencia Microempresarial para Apoyo al Empleo en Baja California	2009-1	30 microempresarios de la comunidad de Guadalupe Victoria	15
Diagnóstico Situacional Empresarial	2009-2	Valle Congelado	6
		Mercado Corona	8

Tabla 1: Esta tabla muestra la integración de los PVVC en los diferentes periodos, así como las empresas y alumnos participantes.

La aplicación de estos proyectos en las empresas ha evolucionado al pasar de los semestres. Uno de estos ha sido que hoy los convenios que se realizan con las empresas para los PVVC, se firman en una ceremonia en la que están presentes autoridades de la UABC, de la EIN-GV, empresarios y alumnos participantes. Lo anterior le da formalidad, representatividad y proyección en la comunidad publicándose en medios regionales el acontecimiento, proyectando lo que se va a realizar.

Al inicio de la aplicación de los PVVC, fue una labor exhaustiva para convencer a los empresarios de abrir las puertas de sus empresas para que los alumnos de la EIN-GV realizarán un diagnóstico, los microempresarios se manifestaban inseguros respecto a la confidencialidad de la información ya que era un servicio que no se le iba a cobrar; aun cuando se le explicaba al empresario que había criterios para

manejo de información y que no se cobraba porque la EIN-GV y los estudiantes también obtenían beneficios. Esta situación se ha ido modificando con el paso del tiempo, actualmente es más sencillo que el empresario acepte la entrada de los estudiantes a su empresa, pues se ha corrido la voz en la comunidad empresarial sobre el trabajo de los estudiantes y los resultados, incluso hay empresarios que manifiestan estar en disposición para que los alumnos realicen los PVVC en sus empresas.

Lo anterior nos habla de que actualmente hay un posicionamiento de la Escuela en la comunidad empresarial del Valle. Anteriormente se tenía que trabajar en la sensibilización con la comunidad para que conocieran lo que es la Universidad, su objetivo y el sentido social que tiene de vincularse con la comunidad como una forma de reciprocidad y solidaridad con su entorno. Hoy a través de los PVVC la comunidad conoce y reconoce a la UABC, recurren a ésta buscando apoyo; esto se manifiesta en el PVVC de Asistencia Microempresarial para Apoyo al Empleo en Baja California, con el cual se logró reforzar el papel de la UABC en la sociedad. Otro aspecto que ha reforzado el posicionamiento en la comunidad, es que los resultados de los PVVC se han publicado en algunos medios de comunicación regionales, lo que han permitido que la comunidad se entere del quehacer universitario.

En cuanto al alumno, cada grupo pasa alrededor de un año en los PVVC, tiempo en el cual vemos en ellos una madurez profesional, un mayor compromiso, mentalidad abierta, proactividad, responsabilidad y mayor disposición para el trabajo en equipo. Hoy los primeros estudiantes que participaron en los PVVC han egresado y manifiestan que fue su participación en la PVVC un aspecto definitivo para su crecimiento como profesionales.

Por otro lado como resultado de estos proyectos, alumnos del séptimo semestre de LAE Antonia Segura Saldivar y Andrés Venegas García, presentaron una ponencia dentro del *II Coloquio Estudios sobre Competitividad*, en la ciudad de Tijuana Baja California, México, organizada por el Cuerpo Académico *Planeación y Desarrollo*, integrado por alumnos docentes de la UABC. La ponencia se tituló *Proyecto Estrategias para Fomentar el Empleo en Zonas Rurales*, y cabe mencionar que fue todo un éxito su presentación ya que los felicitaron, primeramente porque para participar pasaron por un comité evaluador y compitieron con investigadores de amplia experiencia, además de ser los únicos alumnos que presentaron trabajos en ese evento. Esta misma ponencia fue presentada dentro del *III Coloquio de Investigación: Avances y Productos en la EIN-GV*, en el cual maestros de la EIN-GV y alumnos presentaron sus trabajos que durante el año se expusieron en foros nacionales e internacionales; parte del objetivo de este coloquio es fomentar en los estudiantes la cultura de la productividad y la investigación desde etapas tempranas en su formación académica.

Para el docente participante en los PVVC, es muy enriquecedor y gratificante este proceso; bajo el esquema de que “nunca se deja de aprender”, los cuales obtienen una visión de cómo trabajan las empresas privadas, en específico de Ciudad Guadalupe Victoria, es decir conocen más sobre la cultura de la región, aspecto básico que ha permitido lograr la identificación de la UABC con la comunidad. Esto ha permitido encontrar formas de cómo convencer, tratar y explicar diferentes puntos a los microempresarios, ayudando a entender la cultura empresarial del Valle, sobre todo porque es una región rural, en la que las empresas son familiares, ambas características son definitivas para el comportamiento de las mismas.

Además los PVVC, han permitido a los docentes realizar productividad para dar a conocer los avances y resultados que se han tenido en la escuela con la aplicación de estos proyectos, ya que somos la primera escuela dentro de la UABC, que maneja los proyectos de acuerdo a la metodología explicada anteriormente.

CONCLUSIONES

Con estos proyectos la EIN-GV como parte de la UABC contribuye a brindar respuesta a los problemas que enfrenta la comunidad de Ciudad Guadalupe Victoria: primero a través de la formación profesional de LAE con una formación profesional sólida y responsables con su sociedad; además se apoya a las pequeñas y medianas empresas, las cuales al participar en los PVVC, obtienen un diagnóstico que les permite identificar las áreas de oportunidad de las empresas y brindar sugerencias para impulsarlas o bien implementar un nuevo producto o servicio para mejorar su negocio, y por último fomentar el autoempleo en las microempresas de la localidad.

Los PVVC han fortalecido los conocimientos, habilidades, actitudes y valores de los estudiantes de LAE, y les ha permitido hacer conciencia de la importancia de los mismos al momento de ejercer su profesión además de su responsabilidad como estudiantes y futuros egresados de la UABC, ya que con esto se ha fortalecido la habilidad emprendedora y entusiasta al involucrarse en negocios reales, adicionalmente participaron haciendo propuestas para mejorar la competitividad de las empresas, lo cual permite un mayor desarrollo de la comunidad.

Con la aplicación de estos proyectos se está poniendo en práctica el Modelo Educativo basado en competencias centrado en el aprendizaje en ambientes reales y con ello favorece la práctica docente dejando de lado la enseñanza tradicional; fortaleciendo la vinculación del estudiante con el sector laboral donde se insertará al término de su formación profesional.

Actualmente la vinculación entre la EIN-GV y los sectores sociales y productivos de la comunidad de Guadalupe Victoria se han fortalecido a través de la incorporación de los PVVC, permitiendo la colaboración conjunta de las estructuras educativas y las empresas, posicionando a la Escuela y a la UABC, permitiendo que éstas, logren su objetivo y el sentido social que tienen de vincularse con la comunidad como una forma de solidaridad y reciprocidad con la sociedad.

Hoy la aplicación de los PVVC en la carrera de LAE, son una fortaleza para la EIN-GV, pues los estudiantes han fortalecidos su formación profesional, lo que distingue a la EIN-GV como una escuela que forma egresados de calidad.

RESUMEN

En la actualidad el modelo de un currículum ha sufrido una serie de cambios en su proceso por el tiempo, ahora bien, el currículum vitae se ha convertido en un instrumento básico para el intercambio de información curricular con el objeto de facilitar la gestión de las ayudas en las entidades corporativas, en las cuales buscan los empresarios poder tener un acercamiento laboral con los candidatos a ingresar a laborar a sus empresas. Recientemente se han diseñado un sinfín de formatos de currículum a efecto de que sean aplicables para que toda empresa tenga una oportuna y satisfacción de la información de los posibles candidatos a sus empresas, por lo que el presente documento pretende diseñar y aplicar una base de datos a efectos de poder fortalecer los lazos entre el estudiante próximo a egresar y los empresarios, a efecto de que como corresponsable con los sectores productivos se pueda proporcionar una posibilidad de solución a los nuevos egresados así como poder colaborar a efecto de que sea una forma de poder formar al estudiante en una forma integral insertándolo en la vida laboral.

INTRODUCCION

El término latino *curriculum vitae*, el cual significa literalmente “carrera de la vida”, por analogía y contraposición a *cursus honorum*, la carrera profesional de los magistrados romanos. Por simplificación se usa el término *curriculum* o currículum, mientras que en ocasiones se puede encontrar Curriculum vitae et studiorum (carrera de vida y estudios). Con todos ellos nos referimos al conjunto de experiencias (laborales, educacionales, vivenciales) de una persona. Se aplica comúnmente en la búsqueda de empleo, siendo requisito indispensable su presentación para solicitar empleo en la mayoría de los puestos. Hoy en día se observa como las empresas que han salido adelante a pesar de la situación económica que se vive a nivel mundial han tenido que hacer importantes modificaciones en la estructura de sus organizaciones, cambios tales como; reducción de personal, capacitación de empleados para alcanzar nivel de “multidisciplinarios”, reclutamiento de personal más especializado, énfasis en la cultura laboral de trabajo en equipo, entre otros.

REVISION LITERARIA

¿Cómo Es Un Currículum?

El currículum es un resumen de tu historia personal, escolaridad y experiencia y describe las competencias que has desarrollado durante tu formación. Los perfiles solicitados por las empresas cada vez son más especializados, requieren una serie de actitudes y habilidades para cubrir unos puestos determinados. Es el documento mediante el cual se venderá ante el empleador y ante las diversas bolsas de trabajo. Saucedo Gastelúm (2009) afirma que las bolsas de trabajo operan como un gran mercado laboral y que inicialmente se formaron en las universidades para buscar empleo para sus egresados.

¿En Qué Momento Debemos Mandar Nuestro Currículum Al Empleador?

El currículum debe enviarse y/o entregarse personalmente no solo cuando sabemos de alguna vacante en particular si no también cuando deseamos ponernos a disposición de alguna empresa y que esta analice si cubrimos el perfil de alguna vacante disponible. Diariamente el empleador recibe muchos CV para cubrir una sola vacante es por eso que nosotros debemos encargarnos de que el nuestro sea el más atractivo, interesante, y sobre todo apto.

Importancia Del Currículum Vitae

Si se busca trabajo es determinante saber comunicar de la mejor forma tus conocimientos y experiencia. Los reclutadores de talento esperan que el *Curriculum Vitae* sea la presentación clara y concisa de los datos personales, educación, experiencia profesional y habilidades de quien aspira a un empleo. El principal objetivo del *Curriculum Vitae* es capturar la atención del reclutador para obtener una entrevista.

El *Curriculum Vitae* posee una triple función:

1. Darte a conocer al futuro empleador
2. Concentrar la atención durante la primera entrevista sobre los aspectos más importantes de tu educación, experiencia profesional y habilidades
3. Después de la entrevista, recordar a tu futuro empleador los datos que mejor hablan de ti.

Estructura Del Currículum Vitae

Debes resaltar los puntos que se adecuen mejor con la función que quieras desempeñar en la organización. Es imperativo no mentir.

Título del CV.

Objetivo.

Datos personales

Formación académica.

Experiencia profesional.

Actividades extraacadémicas.

Idiomas.

Otros datos de interés.

Reglas De Oro De Un CV

El dominio de los conocimientos técnicos de la profesión, cualquiera que se trate, no es garantía de alcanzar una vacante en el mercado laboral tan competitivo de la actualidad; no obstante la facilidad de aprendizaje a través de los diversos medios tecnológicos al alcance, se presenta como un reto para los profesionistas cómo demostrar en una organización pública o privada, el tener los conocimientos necesarios para ser contratado y una vez en la institución, enfrentar otros retos de superación y competencia interna en dicha empresa. Por lo anterior, es necesario expresar a los interesados en insertarse en el mercado laboral, los puntos básicos para una correcta elaboración de un curriculum vitae y que enseguida se mencionan sintetizada mente.

1. Un buen *Curriculum Vitae* se escribe en una página, a lo sumo en dos.
2. Refleja en el *Curriculum Vitae* que reúnes las exigencias del puesto de trabajo.
3. El *Curriculum Vitae* se debe enviar siempre en original.
4. Un buen *Curriculum Vitae* debe estar bien estructurado.
5. Es conveniente que incluyas la fecha en el *Curriculum Vitae*.
6. Destaca tus cualidades, pero nunca mientas.

Antes De Comenzar A Escribir El Currículum

Es fundamental que antes de comenzar a escribir tu currículum se tenga bien clara la información que se va a dar, así como el orden en que va a hacer. El currículum tiene que presentar los datos de forma clara y concisa, bien explicada y sin rodeos. Tenga en cuenta que sólo se tendrá una breve oportunidad de causar buena impresión a quienes se tienen que contratar.

Por ello, antes de ponerse a redactar el currículum, es importante que planee y responda a una serie de cuestiones.

- ¿Para quién se va a escribir el currículum?
- ¿Qué puesto voy a solicitar?
- ¿Tendré la preparación necesaria?
- ¿Cuáles son los logros profesionales?
- ¿Cuál fue la experiencia profesional anterior?
- ¿Qué idiomas hablo?
- ¿Domino la informática?
- ¿Que otras experiencias puedo acreditar?

Una vez contestadas estas cuestiones seguro que tendrás una visión general más clara de cómo tiene que ser o cómo deberás organizar tu currículum. Es el momento de comenzar a escribir.

PROCESO DE AUTOANÁLISIS

Es el estudio, con detenimiento, de nuestras características de personalidad (actitudes, puntos fuertes y débiles, hábitos, logros, aptitudes, etc.). Tenemos que conocernos bien para poder ofrecer al mercado laboral las soluciones que esperan de nosotros.

Conceptos Que Se Deben Entender En El Proceso De Autoanálisis

- Actitudes.
- Aptitudes.
- Puntos fuertes y débiles.
- Hábitos.
- Logros.

Recomendaciones Para El Envío Del Curriculum Vitae Por Email

- La extensión del CV como archivo adjunto debe ser breve, sin abusar de negritas, subrayados, etc.
- Los diseños deben ser sencillos, sin gráficos, ni imágenes.
- No es conveniente enviar fotografía y mucho menos en archivo aparte.
- Si te la solicitan utiliza el formato jpg.
- No incluyas imágenes en formato bmp.
- Nunca incluya macros en el documento.
- No acompañes el documento con archivos ejecutables (*.exe).
- En Asunto, escribe tus apellidos y nombre.
- En Asunto, debe incluir la referencia de la oferta en el caso de que esté enviando su CV en contestación a una oferta.
- Si envías el documento como archivo adjunto, denomínalo con tus apellidos y nombre, evitando de esta forma generalidades del tipo CV.doc, que pueden confundir y no identificar claramente tu CV con respecto a otros candidatos.

Tipos de currículum vitae

Además de los diversos formatos que cada persona pueda dar a su propio currículum existen diversos currículum normalizados establecidos por las instituciones oficiales. Así, por ejemplo, en 2002 se creó un modelo de CV Europeo que ha sido sustituido actualmente por el Europass En España, la Fundación Española para la Ciencia y la Tecnología (FECYT) con el apoyo del Ministerio de Ciencia e Innovación (MICINN) y las Comunidades Autónomas, está liderando el proyecto Currículum Vitae Normalizado de (CVN) que comprende la información que todas las clases de investigadores, tecnólogos o innovadores, puedan necesitar para reseñar la trayectoria de su actividad y sus resultados. El modelo de currículum CVN xml es un instrumento básico para el intercambio de información curricular con el objeto de facilitar la gestión de las ayudas públicas o privadas de todas las entidades del Sistema Español de Ciencia-Tecnología-Empresa (SECTE). Además, dependiendo del modo de organización de la información, el *curriculum vitae* puede ser de tres tipos:

1. **Cronológico:** consiste en ordenar el currículum vitae del más antiguo al más reciente. No es recomendable cuando se ha cambiado de trabajo con frecuencia.
2. **Inverso:** permite destacar la experiencia laboral reciente. Recomendable si ésta tiene relación con el puesto de trabajo al que aspiramos.
3. **Temático o Funcional:** consiste en ordenar el currículum vitae por bloques temáticos. Recomendable cuando la experiencia es muy dispersa o cuando hay grandes espacios de tiempo en los que no se ha trabajado.

En algunos casos se puede hablar también de un currículum combinado o mixto. En este caso, la información se organiza temáticamente aunque mantiene la distribución cronológica (o cronológica inversa) dentro de cada bloque.

Lo relevante de los tipos de curriculum no es la clasificación en sí misma, sino el manejo que los interesados deseen darle, pero aún más importante que eso, es orientar a los alumnos por egresar acerca de las habilidades y actitudes que les interesa al empresariado que posean.

Dadas las condiciones económicas imperantes a partir de la crisis de finales de 2008, la mayoría de los profesionistas prefieren depender de un patrón, según las cifras de la secretaría de trabajo y previsión social (observatorio laboral, 2010); lo que provoca mayor necesidades de programas y proyectos de investigación que vinculen y promuevan el intercambio de información entre empresarios e instituciones de educación superior que facilite su acceso a fuentes productivas.

CONCLUSIONES

Uno de los objetivos estratégicos de la Asociación Nacional de Universidades e Instituciones de Educación superior, (ANUIES, 2010) es aportar soluciones a los problemas de la educación superior y uno de los grandes retos de las universidades contemporáneas es no sólo preparar profesionistas, sino además buscar su inserción en el mercado laboral; en este sentido los programas tendientes a incorporar a los egresados en los sectores productivos, cumplen con una función eminentemente social.

El trabajo de investigación “*Desarrollar Un Modelo Automatizado Aplicando Las TIC’s, Para Vincular Estudiantes y Egresados de la Facultad de Ciencias Administrativas con el Sector Productivo*”. Que se lleva a cabo en la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California y del que se esperan resultados a finales del 2010, tiene por objeto fortalecer la vinculación con el sector empresarial y poner a su disposición la información académica y profesional de los alumnos próximos a egresar, para cumplir con un doble objetivo: por un lado, ofrecer un banco de especialistas en áreas contable-administrativas para ocupar mandos medios y superiores y por el otro, asegurar el análisis y la retroalimentación de las habilidades que se deben fortalecer con los contenidos de los programas

educativos. Los resultados de dicha investigación se darán a conocer en un segundo trabajo de difusión, una vez que se dispongan al concluir el trabajo.

Las instituciones de educación superior, principalmente las de naturaleza pública, tienen el compromiso social de formar profesionistas que cumplan y satisfagan las expectativas del campo laboral de sus comunidades y no simplemente dedicarse a producir recursos humanos, que muchas de las veces, no alcanzan a ocupar un trabajo formal en su área de especialidad.

Debería constituirse en un deber institucional de toda universidad, preparar no solamente en los aspectos valorables y de conocimientos, sino además en aquellas habilidades prácticas inherentes a su formación profesional, tales como realizar una correcta búsqueda de trabajo, cómo elaborar un impecable curriculum vitae, desarrollar las habilidades del lenguaje no verbal, cómo llevar a cabo una correcta entrevista de trabajo, entre otras. Las instituciones de educación superior deben crear o fortalecer sus áreas de capacitación en las unidades académicas que preparen a los alumnos próximos a egresar en las actividades operativas básicas, estableciendo en los planes de estudios respectivos, materias optativas o cursos intersemestrales 100% prácticos, como talleres de entrevistas de trabajo, elaboración de curriculum, cursos intensivos de búsqueda de empleo, talleres prácticos de lenguaje no verbal, Etc.

Las diversas dependencias federales como las Secretarías de Educación Superior, de Trabajo y Previsión Social y de Economía entre otras, deben de crear fondos y dar mayor difusión a los fondos ya disponibles que promuevan y fomenten las habilidades prácticas y operativas que sirvan a los alumnos próximos a egresar, para insertarse de inmediato a la fuerza de trabajo del país y con ello no sólo se estaría apoyando directamente a los egresados, sino que además se estaría propiciando el desarrollo y la economía nacionales, tan necesarios en estos tiempos que se viven en México.

EL COMERCIO EXTERIOR DE MÉXICO Y CENTROAMÉRICA, ANÁLISIS Y DETERMINACIÓN DEL PATRÓN COMERCIAL DE 1993-2002

Elías Sosa Sánchez, Benemérita Universidad Autónoma de Puebla

RESUMEN

Este artículo analiza los índices de comercio intra-industrial de México con los países centroamericanos, con datos oficiales a cuatro dígitos del sistema armonizado, para los años de 1993 a 2002, se presentan índices por país, se constata además una relación positiva con la existencia de acuerdos de libre comercio.

INTRODUCCIÓN

Esta temática de interés vital para las economías de nuestras regiones se compone de los siguientes contenidos y tiene los siguientes objetivos; Identificar por medio del índice de Grubel y Lloyd qué productos de México tienen ventajas comparativas con respecto a Centroamérica y viceversa, en el periodo comprendido de 1993 y 2002. Verificar cual es la intensidad en el uso de factores productivos para desarrollar el comercio internacional entre estas dos áreas geográficas (México y Centroamérica). Al igual de cómo está compuesta la estructura productiva sectorial de cada país. Con este análisis esperamos aportar elementos, que contribuyan a explicar el comercio intra-industrial, entre estas dos áreas geográficas buscando proponer a través de las ventajas comparativas un desarrollo socioeconómico más homogéneo en sus industrias de comercio internacional.

DETERMINANTES DEL CRECIMIENTO Y EL DESARROLLO ECONÓMICO: EL CASO MÉXICO (1994-2008)

Maria Del Rosario Fatima Robles Robles, Universidad CESUES

RESUMEN

México es un país con enormes desigualdades, cerca del 50% de su población se encuentra en pobreza de patrimonio por otra parte, un mexicano encabeza la lista de de Forbes, Carlos Slim, ocho mexicanos más, forman parte de dicha lista. Las políticas de crecimiento y desarrollo seguidas por el Estado mexicano, no han sido muy diferentes a las del resto de los países latinoamericanos, a partir del gobierno de Lázaro Cárdenas, siguió un modelo keynesiano, con una fuerte participación estatal, privilegiando el desarrollo hacia adentro, protegiendo la industria local, con un control estatal mediante la inversión y administración pública en áreas estratégicas, la implantación de este modelo se vio coronada cuando en los años 60, el gobierno de Adolfo López Mateos, se dio el llamado milagro mexicano, cuando la economía de nuestro país, creció ininterrumpidamente y en año de 1964, alcanzo el 11.01% del PIB. Sin embargo, con la implantación de este modelo no se alcanzaron las metas económicas propuestas, la deuda externa de nuestro país llego a niveles insostenibles. A partir de 1982, México, da los pasos para un cambio a un modelo de corte neoliberal, mediante el Estado se retira de la intervención de la economía

PALABRAS CLAVE: Modelo de desarrollo, desarrollo, crecimiento.

INTRODUCCION

Los términos utilizados en el titulo del presente ensayo, en el lenguaje común no son muy diferentes, desarrollo y crecimiento, muchas veces son utilizados como sinónimos, para la ciencia económica son cualitativamente diferentes, aunque interrelacionados. En el presente ensayo, se analizara las determinantes en el crecimiento y el desarrollo económico de México, y con ello, las políticas seguidas por el Estado Mexicano, para pretender alcanzar el desarrollo.

México, es un país de enorme desigualdades, con una población de 47.4% que viven en pobreza de patrimonio (INEGI 2009), sin embargo la revista Forbes publico hace unos días que nueve mexicanos aparecen en la lista de los más ricos del mundo, encabezándola Carlos Slim, que inicio su fortuna en México y luego la extendió a otras partes del mundo. El presente ensayo, pretende explicar, el porqué, se presentan estas desigualdades, en un país que como México, hace más de medio siglo inicio con medidas económicas para alcanzar el crecimiento económico con la finalidad de lograr el desarrollo y hace un análisis de los resultados de las mismas y los logros alcanzados. Por lo tanto, para conocer las “determinantes del crecimiento y desarrollo económico: El caso de México (1994-2008)”, partiremos por conocer las diferentes teorías y porque no decirlo ideologías ligadas a estos conceptos de crecimiento y desarrollo que unimos en este ensayo.

ANTECEDENTES

Osvaldo Sunkel señala que los conceptos que se utilizan para referirse a un país, necesariamente vinculan a una determinada visión o teoría, la cual destaca aspectos característicos y preestablece un diagnóstico de las causas básicas y por ende de la política de desarrollo a seguir, así señala, cuando se habla de “países pobres”, el concepto que prevalece es el de la distribución del ingreso, tanto entre países como en sus habitantes, los que hablan del “subdesarrollo”, lo ven como una etapa en el proceso histórico, los que usan

la expresión “en vías de desarrollo” ven la posibilidad de aprovechar el potencial productivo y el acento en la “dependencia” es poner énfasis en las características de las relaciones económicas, tecnológicas y políticas entre los países desarrollados y subdesarrollados. (Sunkel 1982). El concepto de crecimiento se refiere al incremento porcentual del Producto Interno Bruto (PIB) de una economía en un periodo de tiempo $(PIB_2 - PIB_1)/PIB_1 = \Delta PIB/PIB$. El crecimiento es una medida de bienestar de un país o región.

El Concepto De Desarrollo Por Su Parte

Dice Sunkel

“La idea de desarrollo se centra, en cambio, en el proceso permanente y acumulativo de cambio y transformación de la estructura económica y social, en lugar de referirse a las condiciones que requiere el funcionamiento óptimo de un determinado sistema o mecanismo económico” (Sunkel 1982, 23) .

Al analizar los conceptos de desarrollo, de las diferentes teorías es necesario tomar una visión o ideología, y al formular este ensayo, es igualmente necesario. No se puede soslayar este hecho, ya que en éste como en otros análisis, el no tomar una posición o querer ser neutral, realmente es colocarse en una posición.

“Parece pues conveniente clasificar en tres las principales tendencias entre las que se preocupan actualmente del desarrollo, las que lo conciben como crecimiento, las que lo perciben como un estado o etapa, y las que se enfocan el desarrollo como un proceso de cambio estructural global”. (Sunkel 1982, 29).

Las diferentes “visiones” o teorías acerca del crecimiento, se pueden clasificar en las siguientes:

El desarrollo como crecimiento:. Lo definen en términos de ingreso per capita (PIB) y el desarrollo en términos de tasa de crecimiento. Su enfoque principal es la influencia que la inversión tiene sobre el crecimiento del ingreso, el equilibrio dinámico y la ocupación. Esta visión del crecimiento, ha tenido influencia en los países subdesarrollados y por ende en México, debido al énfasis que se hace en la inversión que permite asociarla a la escasez de capitales considerado un problema básico del subdesarrollo. Otra característica es el énfasis que estas teorías hacen del papel del Estado, ya sea para que estimule la inversión, como inversor público o mantenga el gasto público elevado. En esta visión reduccionista, el problema de los países subdesarrollados, es el de una mayor capacidad de acumulación y el desarrollo queda asegurado con la elevación de tasas de ahorro e inversión, es también una visión que no toma en cuenta las condiciones de los países desarrollados, suponiendo que el desarrollo (con todas sus consideraciones), es una meta a la cual todos los países tienen que llegar.

a) El desarrollo como etapa.

Este enfoque parte de determinadas características que se presentan en el subdesarrollo, como puede ser un excedente de mano de obra, situación de mercado insuficientes, baja de productividad prevaleciente cuando falta capital, etc. y a partir de esta caracterización que son concebidas como “el problema” se formulan determinadas teorías que determinan políticas a seguir, con la finalidad de señalar, como a través de la superación de determinadas etapas del subdesarrollo se puede llegar a una sociedad equivalente a la de los países desarrollados.

Este enfoque, ha suscitado esfuerzos y políticas, de diferentes países que han establecido programas tendientes a mejorar las condiciones o subsanar estas características detectadas. Al igual que la visión anterior, se concibe el desarrollo de las sociedades subdesarrolladas como una etapa para alcanzar el modelo de las sociedades desarrolladas.

b) El desarrollo como un proceso de cambio estructural global.

Desde hace más de medio siglo, muchos países de América Latina, incluyendo México, han realizado esfuerzos y llevado a cabo políticas de mejoramiento económico y social, sin embargo, el crecimiento acumulativo, aparece lejano, no se han logrado, las características que determinan el desarrollo.

Se ha señalado que los esfuerzos de inversión y de industrialización, por ejemplo, no lograrán los efectos esperados, o deseados, cuando prevalecen en algunos sectores de la economía, como en la agricultura, estructuras e instituciones que dificultan el avance tecnológico, el mejoramiento de la productividad y la utilización eficiente de los recursos y que tienen a agudizar la concentración del ingreso y la desigualdad de oportunidades.” (Sunkel 1982, 35).

Algunos teóricos de la CEPAL y otros llamados “estructuralistas”, ponen el acento en la función del Estado como orientador, promotor y planificador, y en una reforma y ampliación sustancial de las modalidades de financiamiento externo y del comercio internacional”. (Sunkel 1982, 35).

A través de un proceso de autocrítica, se plantearon nuevos retos y se fijaron nuevas posturas. En esta visión se postula que el subdesarrollo es parte del proceso histórico global del desarrollo, que desarrollo y el subdesarrollo son dos caras de un mismo proceso histórico universal; que ambos procesos son históricamente simultáneos y se encuentran vinculados funcionalmente.

Esta visión o ideología, reconoce que los países subdesarrollados no son iguales a los países desarrollados, el desarrollo a alcanzar por estos países adquiere otras características en las cuales se reconoce la cultura nacional y de las rasgos que le son propios con la finalidad de fortalecerlos y lograr un desarrollo, que no sea ya el modelo a seguir que los países desarrollados han establecido. Reconociendo las características que le son propias a los actores para los cuales se pretende el desarrollo.

MODELOS DE CRECIMIENTO

Pero ¿Cómo se logra el crecimiento económico? La escuela clásica, que surge de forma sistematizada a finales del siglo XVIII, tenía ya como inquietud principal tratar de explicar el crecimiento y desarrollo económico, desarrolla una teoría del valor y valor del trabajo, entre otras. Las características principales de dicha escuela es el “laissez faire laissez passer”, es decir:

por una parte, a pesar de que en apariencia las acciones de las unidades económicas son desordenadas, se entiende que el conjunto de estas acciones obedece a cierto mecanismo que presenta regularidades, susceptibles de ser expresados por leyes; por otra parte, se admite que este mecanismo tiene tales características que, si lo deja operar libremente, lleva a obtener un resultado óptimo, en el sentido que el sistema económico se ajusta a la medida necesaria para el logro de la producción máxima factible” (Sunkel 1982, 99) ,

Eje fundamental de las teorías clásicas. David Ricardo (1772-1823), formulo la “ley de los rendimientos decrecientes”, válida para las economías agrícolas, ya que las industrialización introduce rendimientos crecientes a escala, en esta teoría se establece que a medida que se intensifica la cantidad producida de un bien, la utilidad marginal tiende a disminuir. En el modelo ricardiano, se establece que el capital aumenta por medio del ahorro y que es el subproducto del trabajo o plusvalía es lo que genera excedente económico.

A inicios del siglo pasado, después de la crisis del capitalismo de 1929, surgieron nuevas teorías de corte keynesiano, con la finalidad de establecer y demostrar mediante modelos matemáticos, las diferentes variables que determinan el crecimiento. El modelo Harrod-Domar, fue establecido por Sir Roy Domar (Inglaterra) en 1939 y por Evsey P. Domar(Estados Unidos) en 1946, los cuales en forma independiente desarrollaron un modelo, que sirvió de base, para las políticas económicas. En el cual se estable que para

alcanzar el crecimiento y sostenerlo, es necesario que la producción (trabajo) y el capital productivo crezcan en la misma proporción. Este supuesto del modelo, muestra que el crecimiento es muy inestable, ya que en el largo plazo, es muy difícil lograr lo que el modelo propone, para ello requerirá necesariamente la participación del Estado.

Tomando las bases del modelo de desarrollo exógeno de Harrod-Domar, Robert Solow (1956), desarrollo el modelo de crecimiento neoclásico, este modelo, incluye el nivel de tecnología y establece que $Y = A K^\sigma L^{1-\sigma}$. Donde Y = Producto, A =Nivel de Tecnología, K =Capital Total, σ = Fracción del producto producida por el capital o coeficiente de los rendimientos marginales decrecientes.

Otra función relevante de este modelo es: $\Delta K = sY - \delta K$

En la primera parte de la ecuación, que es el ingreso multiplicado por la tasa de ahorro, la segunda parte de la ecuación, representa la inversión de reposición, que representa cuanto capital se ha depreciado por lo que es necesario reponerlo.

Lo característico de este modelo de crecimiento es que considera el progreso tecnológico, como la única fuente de crecimiento sostenido.

El pensamiento de la CEPAL (Comisión Económica para América Latina y el Caribe. Organismo dependiente de la Organización de las Naciones Unidas (ONU) fundada en 1948. Sus labores se centran en la investigación económica). Surge a partir de la década de los cuarentas como una respuesta de científicos latinoamericanos al estancamiento económico de esta región y con la finalidad de reconocer sus diferencias y en la búsqueda de un fortalecimiento de estas naciones frente a los países desarrollados. El concepto “centro-periferia” fue planteado por el argentino Raul Presbich (Raul Presbich, 1901-1986) el centro del debate fue en la CEPAL y con este concepto se hace referencia a las características disímiles que asume el ciclo entre esos dos tipos de economía, y a las distintas posibilidades que ofrecen en ellas los instrumentos cambiarios y monetarios para hacer frente a los problemas del empleo de la fuerza de trabajo, respecto a la distinta aptitud de cada tipo para defender los precios de sus exportaciones, en las fases de contracción del nivel de actividad” (Rodríguez 1983).

El pensamiento de la CEPAL, no constituye un modelo económico, como los vistos anteriormente, para los cuales, alcanzar el crecimiento económico es visto en términos de la inclusión de diferentes variables, como son el ahorro, la inversión, el crecimiento tecnológico, el crecimiento del PIB por trabajador, etc. Es una “visión” del crecimiento, que plantea “Crecimiento para quién? ¿A quién conviene el crecimiento?

La teoría de la CEPAL, reconoce las diferencias estructurales del centro-periferia, sus desigualdades, sus diferentes estructuras productivas y sociales, abandona, la visión de que el subdesarrollo es una etapa anterior al desarrollo, que todos los países estamos en la misma pista de carreras, solamente que unos más atrasados que otros.

Esta serie de teorías, fueron determinantes para algunos países de América Latina, de 1940 hasta inicios de los 80, ya que el desarrollo que buscaron y por ende las medidas económicas y políticas que tomaron para alcanzar el crecimiento económico diferentes países de América Latina, incluido México, estuvieron inspirados en este pensamiento y llevaron a cabo, una serie de medidas económicas planteadas por esta escuela.

Entre los planteamientos fundamentales fue “el deterioro de los términos de intercambio” teoría planteada por Raúl Presbich, la cual señalaba que estos países periféricos exportaban productos primarios en cambio el centro exportaba productos manufacturados, señalaba en el marco de esa división internacional del trabajo, los países subdesarrollados no retenían los frutos del progreso técnico y estos tendían a concentrarse en el centro. Mientras los salarios reales tendían a estancarse en los países periféricos, estos

y las utilidades aumentaban en los países centrales” (Guillen 2004, 9) Así que una de las medidas planteadas por estas teorías es la necesaria industrialización de estos países, ya que como la periferia nace sin sistema productivo, el desarrollo implica la construcción de un sistema productivo articulado y coherente, susceptible de asegurar, por sus propios medios, la reproducción ampliada del capital. Ello conlleva la creación de una base endógena de acumulación de capital. Dicho esfuerzo de creación de un sistema productivo es, pues, una tarea histórica e implica la puesta en marcha de un proyecto nacional” (Guillen 2004, 5).

Sí hasta antes de estas fechas, las teorías clásicas eran las dominantes para muchos países latinoamericanos y con ellas el papel del Estado en la economía era del de “dejar hacer, dejar pasar”, esta nueva visión, le da un rol fundamental, así lo señala Sunkel, El objetivo principal era la modernización, la industrialización como vehículo para incorporar tecnología. Lo central fue el paso de economías abiertas, integradas al mercado mundial hasta los años treinta y como un papel insignificante del Estado, a economías relativamente cerradas y en las que el Estado asumió un rol fundamental. Es decir, se postulo que el agente de crecimiento pasara a ser el Estado y el mercado interno en vez del mercado internacional. Este periodo se llamo, en trabajos más reciente, el periodo estado céntrico”. (Sunkel, El desarrollo de América Latina ayer y hoy 2005, 2).

EL CASO MÉXICO: (1994-2009).

Antecedentes.

A partir del gobierno de Lázaro Cárdenas se establecieron las bases en la infraestructura económica con la nacionalización del Ferrocarril, el Petróleo, la creación de la Comisión Federal de Electricidad, entre otras medidas. De esta manera, entra México, al igual que los países de Latinoamérica a una nueva fase del crecimiento económico, impulsado por modelos keynesianos, y también de alguna manera influido por el pensamiento cepalino, todo ello apoyado por políticas económicas del estado mexicano como una respuesta a las crisis del capitalismo de 1929. Este modelo que priorizaba el desarrollo hacia adentro, mediante la sustitución de importaciones y daba al Estado el papel de rector de la economía nacional, como vimos anteriormente, estuvo vigente de 1940 a 1982. En los 60's con el gobierno de Adolfo López Mateos (1958-1964), se dio lo que se conoce como milagro mexicano, ya que la economía creció ininterrumpidamente, y en el año 1964 alcanzo el record de 11.01% del PIB, a partir de 1970, con el gobierno de Luis Echeverría, se continuo con el crecimiento del PIB, acompañado de una alta inflación, que estalla en el año de 1976, con una devaluación del peso del 76%. Para el año de 1982, las crisis económicas, se hicieron más notorios y el Estado no pudo ya continuar con el proteccionismo por el fuerte endeudamiento y los magros resultados económicos que presentaba la economía mexicana, por lo que para el año de 1982, con una inflación que alcanzó el 581% y una reducción del PIB con respecto a 1981 de -.52% que provoco una severa crisis económica se inicia con Miguel de la Madrid Hurtado un nuevo modelo económico. (INEGI, www.inegi.org.mx 2010)

Esto es, por decirlo así, visto como una derrota de las medidas tomadas por el estado mexicano con la finalidad de lograr el desarrollo, en algunos años, se logro el crecimiento económico, sin embargo no logro fructificar en el desarrollo de la sociedad mexicana. Como vimos anteriormente, varios países latinoamericanos alinearon sus políticas económicas a las teorías de la CEPAL y a la par de seguir modelos keynesianos para alcanzar el crecimiento, se tomaron políticas públicas con la finalidad de impulsar la industrialización, sustituir las importaciones y alcanzar una base interna de acumulación de capital con la finalidad de constituirse como entidades con presencia en los ámbitos económicos mundiales.

Mucho se ha discutido del porqué este fracaso de este modelo en Latinoamérica y no sólo en México, diversos autores lo han abordado, y han señalado Se aspiraba a conseguir mayor autonomía frente al

centro, lo que permitiría, con el tiempo, construir una base endógena de acumulación de capital” (Guillen 2004, 10) y continua. “Sin embargo, dicho objetivo, resulto inalcanzable, pese a los indudables avances en la dirección de sustentar la acumulación de capital en un motor interno. Las dificultades financieras y tecnológicas se acrecentaron con el avance de la industrialización en los años sesenta. Los empresarios locales encontraban crecientes obstáculos para acceder a la producción de bienes intermedios y de capital. En el centro se consolidaba el poder de las empresas transnacionales (ET), en ese entonces primordialmente estadounidenses, que incursionaban *por* todo el mundo. (Guillen 2004, 10) y continúa

“Se configuró una estructura industrial desarticulada, sesgada hacia el consumo suntuario; una industrialización “trunca” que carecía de una base endógena de acumulación de capital. Los avances para crear una base científica y tecnológica propia fueron fragmentarios y se circunscribieron a algunas actividades, generalmente controladas por el Estado, o se efectuaron en las universidades públicas, las que realizaban proyectos, la mayoría de las veces separados de las actividades productivas” (Guillen 2004, 11).

Guillen en su obra, siendo un investigador mexicano, no se refiere exclusivamente a México, al realizar este artículo, pero es muy significativo, la regularidad con que actúa la ciencia económica, salvo algunas diferencias, que no vamos a analizar en este ensayo, lo que paso en México, paso en lo general en algunos otros países latinoamericanos que siguieron estos modelos para alcanzar el crecimiento y también, por los mismos años, se plantearon la necesidad de seguir un nuevo modelo porque las medidas seguidas hasta esos años, habían agotado ya los recursos estatales y los resultados para muchos de ellos eran en lo general muy parecidos a los antes expuestos.

Modelo Neoliberal (*neoclassical liberalism*) (1983).

A partir de 1983, con el gobierno de Miguel de Lamadrid, se inicia en México al igual que en otros países latinoamericanos el cambio de modelo económico, a uno de corte neoliberal, con orientación hacia afuera, en la cual se minimiza la participación estatal, se da énfasis en la exportación de manufacturas como eje de la acumulación de capital y que según algunos teóricos fue consecuencia de las necesidades de los países desarrollados, ante la crisis de la posguerra, de buscar la penetración a nuevos mercados, es por ello que la internacionalización se convirtió en una estrategia. Es por ello, señalan, que el Fondo Monetario Internacional y el Banco Mundial, dictaron a los países una serie de compromisos que debían a seguir en su condición de deudores. Así lo señala Guillen. A la nueva estrategia, que consistía en diez medidas de política económica que abarcaban desde la disciplina fiscal hasta la liberalización comercial y financiera, se le bautizo como el Consenso de Washington” (Guillen 2004, 14)

El modelo de Corte Neoliberal, se ve fortalecido por las medidas seguidas por el presidente Carlos Salinas de Gortari, que termino la entrega de las empresas que aún controlaba el estado mexicano a los capitales nacionales y extranjeras, como fueron el caso de Teléfonos de México, la privatización de la banca, la venta de la Mina de Cananea, las reformas a los artículos constitucionales 27 y 123 y la firma del Tratado de Libre Comercio de América del Norte (TLCAN), entre otras. Estas medidas sin embargo, no se vieron reflejadas en crecimiento económico, ya que en promedio en este sexenio, el crecimiento de la población fue de 1.9%, el crecimiento económico promedio en este periodo fue de 2.0% y el crecimiento de la economía promedio mundial fue de 3.9%, lo que da un magro crecimiento económico de México de solamente 0.01% (www.reporteindigo.com 2010).

Continuación del Modelo Neoliberal (1994-2008).

El año de 1994, es uno de los más negros de la historia económica reciente de México, la crisis en México tuvo repercusiones a nivel mundial, el endeudamiento histórico de este ejercicio, contradice notablemente las prioridades de los objetivos señalados por el gobierno México al asumir el modelo neoliberal, la

balanza comercial tuvo un saldo negativo, según cifras del INEGI, en este periodo fue de -18,464 mil millones de dólares, la deuda bruta en porcentaje del PIB para el periodo de 1995 fue del 59.2% del PIB. Esta crisis, llamada por algunos analistas como la “primera crisis de la globalización”, fue provocada por la inestabilidad causada por la apertura comercial, y sobre todo por la apertura financiera efectuada bajo los parámetros del Consenso de Washington” (Guillen 2004, 17).

La tasa del crecimiento anual del PIB, una de las tasas usadas para medir el desarrollo de un país, según los teóricos que ven el crecimiento como una etapa para alcanzar el desarrollo, en estos años de 1994 – 2008, ha sido francamente negativo, únicamente en el sexenio de Ernesto Zedillo, creció 0.05%, arriba de la tasa de crecimiento de la población, para después de ese sexenio ir francamente picada, según datos del INEGI, el PIB de los años 2001 al 2007 fue de.

2001	2002	2003	2004	2005	2006	2007
-0.20	0.8	1.4	4.2	2.8	4.8	3.3

Elaboración propia según datos del INEGI. Principales indicadores económicos 1993-2007

Según la datos publicados por la revista Indigo, si analizamos el crecimiento del nivel de vida de los mexicanos y tomamos el crecimiento acumulado de 1976 al 2009, años en que estuvieron vigentes los dos modelos del crecimiento económico (Substitución de importaciones y el modelo neoliberal) y tomamos el crecimiento económico de 1983 al 2009, año en que estuvo vigente el modelo neoliberal únicamente, el crecimiento económico acumulado solamente es del 0.06%.

Concepto	1976-2009 (Vigencia de los dos modelos)	1983-2009 (Vigencia modelo neoliberal)
Crecimiento Economía mundial	2.9%	2.1%
Crecimiento de la población	1.7%	1.5%
Crecimiento del nivel de vida	1.2%	0.6%
Dif. Entre población y nivel de vida	0.5%	0.9%

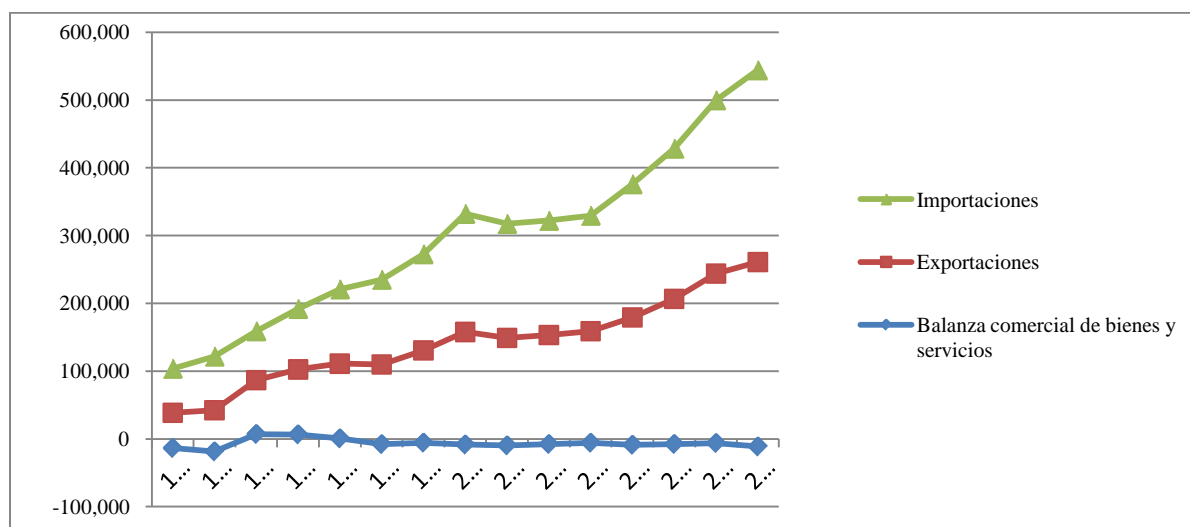

Elaboración propia con base en los datos publicados en www.reporteindigo.com

Lo que establece, que este modelo ha estancado el crecimiento en el país y son casi tres décadas ya de la implementación del mismo, que en cuanto al crecimiento del nivel de vida en el país ha representado en términos reales un retroceso, porque otras economías si han estado haciendo lo que nuestro país ha dejado de hacer, en este tiempo, colocando a México, en una situación cada vez más difícil para la recuperación del ritmo de crecimiento económico, tan necesario para alcanzar el desarrollo.

Uno de los objetivos, al cambiar al modelo neoliberal, fue el de dinamizar el mercado y abrirse al exterior con la finalidad de hacernos más competitivos, lograr la diversificar las exportaciones mexicanas, transformar el modelo maquilador por una industria exportadora.

Como podemos observar en la siguiente gráfica, la balanza comercial en el periodo de 1993 al 2007, ha sido negativa, la exportación de crudo, se ha venido reduciendo año con año, y de tener una participación en la década de los 80's del 57.9% paso en el año 2009 al 9.7%, las exportaciones del sector primario, también cayeron drásticamente, de una participación del 8.5% en los 80's pasaron al 2.5% en el 2009, de tal manera que el grueso de las exportaciones se encuentra ahora en el sector manufacturero que del 30.8% de los 80's paso a con un 87.1% de participación actual.

GRÁFICA 1

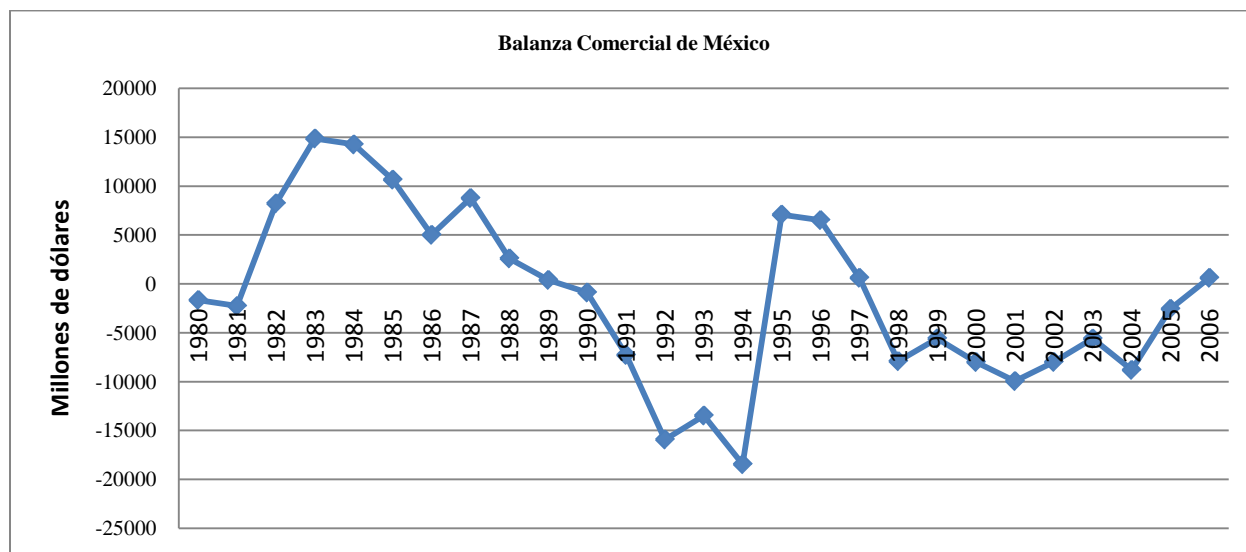

Elaboración propia en base a información del INEGI

Estas cifras, no son nada halagüeñas. Las reservas petroleras, según declaraciones del propio gobierno mexicano, han declinado considerablemente en los últimos años y Pemex, no ha logrado ser rentable y las exportaciones agrícolas, si bien, muestran un ligero incremento en miles de pesos, no logra compensar la participación que tenía en la década de los 80's, la producción agrícola o el campo mexicano, no ha logrado colocarse en los estándares internacionales de manera competitiva, con la finalidad de no reducir su participación en las exportaciones.

En información proporcionada por el INEGI, "Balanza Comercial 1980-2008", podemos observar que en los ejercicios de 1983 a 1987, la balanza comercial, mostraba números favorables para la economía mexicana, con respecto a años anteriores.

GRÁFICA 2

Elaboración propia en base a la publicación del INEGI (INEGI, Información oportuna sobre la balanza Comercial de México durante junio del 2006 2006)

Sin embargo, esta aparente recuperación mostrada en los años de 1983 a 1988, en los que inicio el modelo neoliberal, se fue en picada en el sexenio de Carlos Salinas de Gortari y no se ha vuelto a recuperar.

Si verificamos las cifras de la balanza comercial en estos años, podemos observar que si bien la exportación de manufacturas es la que contribuye en mayor medida a la cuota de las exportaciones, también lo es en las importaciones que se requieren para abastecer a las industrias o maquiladoras, es decir se importa la materia prima, material de empaque, maquinaria y otros implementos que requiere esta industria, y el saldo del valor agregado que se produce en nuestro país, es casi nulo, por lo que logra impactar de manera favorable la balanza comercial y por ende el tan buscado crecimiento económico.

Por otra parte, al observar las cifras de las exportaciones petroleras, podemos concluir que en las ramas como la agropecuaria, extractiva, manufacturera tradicional, es poco el avance que ha tenido en estos 27 años, y no es valido, dejar de lado estos rubros, que si bien, algunos de ellos eran exportaciones primarias, como la agropecuaria y extractiva, las cifras, no reflejan un avance significativo y pudiéramos pensar, que sufrieron un abandono en medidas gubernamentales o privadas con la finalidad de lograr mayor participación de estos rubros en las exportaciones.

No se puede decir que ya no somos exportadores del sector primario y estamos transformando la industria exportadora con la salida del país de productos manufacturados en México, señala Guillen. Las Empresas Transnacionales y las maquiladoras son el núcleo principal del sector exportador mexicano. Con la entrada en vigor del TLCAN se esperaba la desaparición gradual de las maquiladoras y su sustitución por una industria exportadora más sólida y articulada. Pero en vez de un proceso de industrialización de la maquila, se ha producido, por el contrario una maquilización de la industria” (Guillen 2004, 18) Por la brevedad del espacio, estas son solo algunas de las variables que se analizaran en el presente ensayo, las cuales nos permiten concluir lo siguiente.

CONCLUSIONES

Con casi tres décadas de haber implementado el modelo neoliberal en México, las variables económicas que analizamos anteriormente, muestran un retroceso en el crecimiento económico, pues si bien, ha habido un crecimiento acumulado en todos estos años de 0.06%, la población ha crecido 1.5% en el mismo periodo, lo que nos da un retroceso del 0.09%. Pero aún más, si lo comparamos con el crecimiento de la economía mundial que fue del 2.1%, vemos que lo que México ha dejado de hacer o de crecer, en estas tres décadas, será determinante para el posicionamiento futuro de nuestro país.

Año tras año, los políticos mexicanos, enfrascados en tomar un botín que no les pertenece, han abandonado, tareas prioritarias que sí les corresponden, de la marcha económica del país. El gobierno se lavo las manos, de sus tareas, al asumir el modelo neoliberal, cosa que no han hecho países que han implementado este modelo. Y si bien, se puede señalar que existen, organismos como la Secretaria de Economía, Nacional Financiera, el Banco de Comercio Exterior, esta cultura de dejar hacer, de voltear para otro lado mientras se desmantela nuestro país, de entrega de los recursos humanos, materiales y sociales a las empresas trasnacionales ha permeado en los diferentes organismos y al no contar con una visión de futuro plenamente estructurada, con objetivos de posicionamiento claro de las diferentes rubros económicos, cada dependencia, actúa de forma separada y sin tomar medidas que incidan directamente en crecimiento económico de los rubros que le corresponden. Cada vez más observamos, que la economía en nuestro país y los recursos, son un botín político, que se olvidaron los objetivos que deberían regir, buscar el crecimiento económico y tomar las medidas necesarias para ello.

El modelo neoliberal, reprodujo y multiplico los vicios señalados al modelo anterior de sustitución de importaciones, que fue el endeudamiento excesivo del estado mexicano, pero no mejoro ninguna de las otras variables. Para el grueso de los mexicanos, se incrementaron las exportaciones manufactureras pero

a la vez las importaciones por este rubro también crecieron, se continuo con el modelo maquilador, que no contribuye y no se ha conectado o lo ha hecho de forma muy escasa con el mercado interno. Por otra parte, se ha avanzado muy poco en la distribución del ingreso y México ocupa el lugar 91 de 124 países en este rubro, con un índice GINI de 48.5%. Los costos sociales del modelo neoliberal, son más numerosos y porque no decirlo más dolorosos, el número de habitantes en pobreza de patrimonio se ha incrementado notablemente alcanzando cifras cercanas al 50% de la población, con más de 20 millones en pobreza extrema en el país.

Un país con la mitad de la población en pobreza, sin posibilidades de ahorrar, de comprar, de divertirse, es más sin posibilidades de alimentarse adecuadamente, no puede pensarse en un crecimiento económico. La política económica y social del gobierno mexicano, para combatir la pobreza o por lo menos paliarla es la mediante los programas sociales, oportunidades en estos últimos dos sexenios. No se esta haciendo nada, por un combate real, si ya no fue con esta generación, por lo menos con la siguiente con la finalidad de insertarlos al mercado laboral, a la vida productiva.

CONEVAL, en su reporte publicado el 18 de julio del 2009, reporta que el número de personas, en situación de pobreza alimentaria aumento de 13.8% el 2006 al 18.2% el 2008. En este mismo informe, reporta logros en los rubros de seguridad social. Podemos observar, las mejoras en las condiciones de vida, de seguridad social, de educación, no se han dado, y entre más tiempo se tome para llevar medidas que realmente tiendan a abatir estos indicadores, más se van a precarizar las condiciones de vida, de esa mitad o más de la población.

Podemos hablar de políticas sociales y económicas adecuadas, cuando en nuestro país, casi la mitad de la población, con pobreza de patrimonio el 47.4% según cifras del CONEVAL, con el 44.1% de la población sin protección de seguridad social, con el 23.2% de la población mayor de 15 años con primaria incompleta, y con 7.3% de la población mayor de 15 años analfabeta, un mexicano es el más rico del mundo, seguido por ocho mexicanos más en este millar de personas más ricas del planeta. No, es imposible hablar de políticas adecuadas en materia social o económica, estamos ante un enorme fracaso de estas políticas, estos datos, son dados por organismos reconocidos por el gobierno, y muchos otros que nos falto analizar. Es por eso, que cerramos este rubro con la pregunta. ¿Crecimiento económico? Para quién.

FACTORES EN EL DESARROLLO DE LA COMPETITIVIDAD: EL MODELO DE COMPETITIVIDAD SISTÉMICA EN LA INDUSTRIA DEL SOFTWARE EN BAJA CALIFORNIA

Ulises Orozco-Rosas, Universidad Autónoma de Baja California

Eduardo Ahumada-Tello, Universidad Autónoma de Baja California

Robert Efraín Zárate Cornejo, Universidad Autónoma de Baja California

RESUMEN

La industria del software como parte de las tecnologías de la información, está tomando fuerza a tal grado que constituye la columna vertebral de la economía en algunas naciones. Es por ello que en México se le está dando la importancia que requiere, pues su desarrollo puede llevar al país a competir con otros ya experimentados en este campo y los beneficios que traería consigo, no solo económicos sino también en cuestiones de desarrollo tecnológico. Tanto México como nación y Baja California como región, cuentan con algunas condiciones favorables para convertirse en un competidor mundial en este ramo, tales como: ubicación geográfica, perfil demográfico y estado de desarrollo tecnológico. En líneas generales, la industria del software en Baja California aparece como una de las más consolidadas, aunque con un menor número de empresas y organizaciones que otros estados de la nación, que cuentan con una mayor dinámica. En esta investigación se busca una perspectiva de los factores que influyen en el desarrollo de la competitividad, para ello el análisis es llevado a través de la óptica del modelo de competitividad sistémica, el cual busca respuesta a la falta de un entorno empresarial eficaz, que permita a las empresas construir una competitividad duradera, en un entorno de negocios cada vez más difícil y con la participación de múltiples actores.

PALABRAS CLAVE: Competitividad Sistémica, Industria del Software, Nivel Meta, Nivel Meso, Nivel Micro, Nivel Macro.

INTRODUCCIÓN

La industria del *software* constituye un eje importante para mejorar las condiciones económicas de los países menos desarrollados ya que ofrece ventajas sobre otros sectores, gracias a que es intensiva en conocimiento, requiere recursos humanos calificados, genera empleos bien remunerados, propicia la innovación tecnológica, no contamina y las inversiones iniciales en infraestructura requieren poco capital financiero. Las posibilidades que ofrece este sector son respaldadas con las experiencias de países como la India, Israel e Irlanda que han logrado insertarse en la economía mundial, cubriendo distintas áreas de oportunidad en esta industria (Casalet, 2007).

Baja California es uno de los estados más dinámicos del México debido a su fuerte actividad económica, la cual es impulsada por la estrecha interacción con el resto del mundo, especialmente con su vecino del norte: Estados Unidos. Esta actividad se ve influenciada por la recepción de grandes flujos migratorios procedentes del sur del país, los cuales llegan en busca de cruzar a los Estados Unidos o de un empleo mejor remunerado. Estas particularidades son la clave para que la economía de Baja California muestre una dinámica diferente al resto de México (Plascencia & Alcalá, 2008). El concepto de *Competitividad Sistémica* busca respuesta a la falta de un entorno empresarial eficaz que permita a las empresas construir una competitividad duradera en un entorno de negocios cada vez más difícil y con la participación de múltiples actores (Narváez, 2009). Tres aspectos fundamentales para lograr una competitividad sostenida son:

- a) Énfasis en la innovación como factor central del crecimiento económico.
- b) Una organización capaz de aprovechar los procesos de aprendizaje e innovación en todas sus áreas.
- c) Redes de colaboración orientadas a la innovación y apoyadas por diversas instituciones y un contexto institucional con capacidad para fomentar la innovación.

En esta investigación se ve a la industria del *software* en Baja California a través de la óptica del modelo de competitividad sistémica, pues este nos provee de un marco general que nos permite identificar el gran número de determinantes de la competitividad de un país o una industria en lo particular, y evaluar –a la luz de las interacciones entre esos elementos– las condiciones y posibilidades de inserción internacional en un momento determinado. Este marco, ofrece una perspectiva de análisis que es especialmente útil para el estudio de los procesos específicos de interacción local-global que implica el desarrollo regional (García, 2009).

REVISIÓN LITERARIA

El concepto de Competitividad Sistémica es un modelo heurístico que combina los discernimientos cruciales de las ciencias económicas, sociales y otras disciplinas para el mejor entendimiento de las fuerzas que conducen el desarrollo económico. La intención detrás de la formulación del concepto fue, primero, permitir una mayor adecuación del análisis de los países y localidades en los cuales se quiere ir más allá de los enfoques reduccionistas y baja complejidad; segundo, permitir una mayor adecuación de la formulación de políticas, en particular recomendaciones que no son basadas en la asunción de condiciones ideales en términos de calidad y capacidad de gobernanza, pero si en un entendimiento realista de la existencia en términos de la definición del problema, formulación de las propuestas de acción y la implementación (Meyer-Stamer, 2008).

Últimamente, la competitividad de una empresa se basa en el patrón organizativo de la sociedad en su conjunto. Los parámetros de relevancia competitiva en todos los niveles del sistema y la interacción entre ellos es lo que genera ventajas competitivas. La Organización para la Cooperación y el Desarrollo Económico (OCDE) aplica a la competitividad así resultante el atributo de "estructural". El Instituto Alemán para el Desarrollo (GDI, por sus siglas en inglés) a través de un estudio le da preferencia al concepto de "competitividad sistémica" para enfatizar los siguientes aspectos: la competitividad de la economía descansa en medidas dirigidas a un objetivo, articuladas en cuatro niveles del sistema (el nivel meta, macro, meso y micro) y se basa asimismo en un concepto pluridimensional de conducción que incluye la competencia, el diálogo y la toma conjunta de decisiones, concepto al que están adscritos los grupos relevantes de actores (Esser et al, 1994).

El concepto de Competitividad Sistémica, se caracteriza y distingue, ante todo, por reconocer que un desarrollo industrial exitoso no se logra meramente a través de una función de producción en el nivel micro, o de condiciones macroeconómicas estables en el nivel macro, sino también por la existencia de medidas específicas del gobierno y de organizaciones privadas de desarrollo orientadas a fortalecer la competitividad de las empresas (nivel meso). Además, la capacidad de vincular las políticas meso y macro está en función de un conjunto de estructuras políticas y económicas y de un conjunto de factores socioculturales y patrones básicos de organización (nivel meta).

La Competitividad Sistémica aproxima conocimientos, la crucial importancia de condiciones favorables en un marco macroeconómico, instituciones robustas y una predecible política macroeconómica para el desarrollo económico. Esto enfatiza, a través de un ambiente macroeconómico favorable que es necesario pero aun no condición suficiente para el proceso de crecimiento sostenido. Intervenciones objetivas por el gobierno u otros actores son necesarias para enfocarse en las fallas del mercado, las fallas de la red, esto

mantiene una actualización de la existencia de industrias y el surgimiento de nuevas, las cuales son necesitadas para competir a una escala global (Meyer-Stamer, 2008).

METODOLOGÍA

El diseño desarrolla un plan para la obtención de la información: el enfoque del estudio es cuantitativo porque usa la recolección de datos. Con base en la medición numérica se utiliza estadística descriptiva, para establecer patrones y la descripción de los factores. El alcance es descriptivo, porque considera a un fenómeno y sus componentes, mide conceptos y define variables. El diseño es no experimental y de corte transversal. No experimental porque es un estudio que se realiza sin la manipulación deliberada de variables y en el que solo se observan los fenómenos en su ambiente natural para después analizarlos. Transversal porque es la recolección de datos en un único momento. En base al marco de referencia establecido, la muestra consta de 11 empresas dedicadas al desarrollo de *software*, tomadas de un universo de 27 que son las que se identificaron como empresas de desarrollo de *software* dentro de las 60 empresas que integran formalmente el sector de empresas dedicadas a las Tecnologías de la Información en Baja California.

Como base se utiliza el modelo de Competitividad Sistémica (Esser et al, 1994), desarrollado en el Instituto Alemán para el Desarrollo (IAD), y como referencia para el instrumento de medición se adaptó el estudio realizado por aregional.com en el Reporte de Competitividad Sistémica del estado de Chihuahua y sus regiones, mismo que fue entregado el 15 de Diciembre de 2005 (AREGIONAL, 2005). El proceso de recolección de datos se llevo a cabo mediante la aplicación del Cuestionario de Competitividad Sistémica a las empresas dedicadas al desarrollo de *software* en Baja California, este fue aplicado por dos medios: 1) En forma presencial directamente en la ubicación de la empresa y 2) Cuestionario aplicado vía correo electrónico. Con los datos obtenidos de la aplicación del instrumento se busca identificar mediante los factores que componen el modelo de competitividad sistémica, las oportunidades de desarrollo competitivo que pueda tener la Industria del *Software* en Baja California, y así mostrar la perspectiva del entorno en la industria desde el enfoque de la competitividad sistémica.

RESULTADOS

Nivel MetaValores socioculturales: Los valores socioculturales son identificados como la base de ideas que los integrantes de una sociedad usan como referencia para tomar decisiones con respecto a: contextos humanos, aspectos de la realidad, situaciones de la vida y fenómenos sociales (ITESM, 2008). En el presente estudio se identificó al trabajo, la creatividad y la diversidad cultural como pilares de la sociedad en Baja California. A su vez el estudio encontró a la delincuencia, el aislamiento regional y la informalidad como defectos característicos de Baja California. Lo anterior representa la oportunidad de mejora en diferentes áreas que van desde lo social hasta lo económico, atravesando por lo tecnológico, en busca de maximizar el potencial de Baja California. Logrando con ello ir más allá de mitigar los problemas y defectos que caracterizan a la región, logrando llegar a una competitividad sustentada basada en la sociedad como pilar esencial.

En Baja California los grupos minoritarios (personas con capacidades distintas, indígenas, adultos mayores) como parte de la sociedad constituyen una parte importante de la diversidad que muestra el estado. De los cinco municipios que componen el estado, Tijuana y Mexicali son los municipios que presentan mayor discriminación hacia los grupos minoritarios tomando como base los resultados del cuestionario aplicado para el presente estudio. Del total de empresas solamente el 9 por ciento de ellas emplean a personas integrantes de grupos minoritarios, como parte de sus operaciones normales. Se le preguntó a las empresas de la industria si tienen contemplado contratar a personas pertenecientes a los grupos minoritarios en el corto plazo (un año), a lo cual el 18 por ciento contestó positivamente. Los valores socioculturales cambian a medida que las instituciones también se transforman a lo largo del

tiempo (ITESM, 2008), los datos mostrados nos dan una impresión a la alza de la mejora en las empresas con respecto a su entorno social.

Gobernabilidad: A continuación tratamos con la gobernabilidad en Baja California, para ello los datos que arroja la encuesta conformaron un índice de gobernabilidad, este captura la percepción que tienen los empresarios de la industria sobre la gobernabilidad que se presenta en el estado, los resultados resaltan a los municipios de Mexicali y Ensenada, en ese orden, como los municipios que presentan mejor gobernabilidad. A su vez se la encuesta coloco a el mismo Mexicali y Ensenada sucesivamente como los municipios de Baja California con mayor estabilidad política.

Estado de Derecho: La esencia de un Estado de Derecho consiste en (la pretensión de) que el derecho guíe el comportamiento de las personas (es decir alcance plena efectividad); ésta no es en sí misma una virtud moral, sino “una condición necesaria para que el derecho sirva directamente a cualquier buen propósito” (Báez, 2002). La percepción de los empresarios sobre la violencia e inseguridad que se tiene en el estado muestra a Tijuana con el mayor índice y a Tecate con el menor. A su vez el 18 por ciento de los integrantes de la industria del software consideran que el gobierno del estado es eficaz en materia de procuración de justicia y seguridad pública.

Responsabilidad y cohesión social: El 18 por ciento de los empresarios pertenecientes a la industria del software son miembros activos de alguna organización no gubernamental (ONG) o asociación civil (AC). El objetivo de la participación en estas organizaciones/asociaciones es la generación de valores y hacer conciencia ciudadana en temas como la seguridad, educación, medio ambiente, fomento tecnológico, cooperación, vinculación, etc. Algunos ejemplos de estas organizaciones/asociaciones en el estado son Activate A.C., Patronato Cecut, Niños y niñas de México, entre otras. Cada vez son más las empresas que desean asumir plenamente su responsabilidad social (prácticas más honestas, transparencia en la gestión, respeto al medio ambiente, ...) puesto que son más conscientes de que en la economía actual de mercado, la legitimidad para poder operar ha de venir concedida por todos aquellos agentes o grupos de interés con los que se relaciona la organización (De la Ceusta & Valor, 2003).

La cohesión social es un estado en el que existe una visión compartida entre los ciudadanos y el gobierno acerca de un modelo de sociedad basado en la justicia social, la primacía del estado de derecho y la solidaridad “...*Las políticas públicas a favor de la cohesión social serían aquellas que: a) Desarrollen identidad común, b) Construyan solidaridad, c) Establezcan horizontes de confianza, d) Establezcan situaciones de igualdad de oportunidades, e) Generen en la comunidad relaciones basadas en la reciprocidad*” (EUROPEAID, 2007). El 73 por ciento de los empresarios encuestados participan en obras benéficas o son voluntarios en alguna institución. A los mismos se les pregunto si conocían a gente miembro de alguna organización no gubernamental o asociación civil, a lo cual el 82 por ciento contesto favorablemente.

Política de competencia: Cuando se les pregunto a los empresarios de la industria acerca de la planeación en conjunto con el gobierno, el seguimiento y calidad de estos planes, la respuesta encontrada fue: que la planeación regularmente se lleva en conjunto para cuestiones que implica la participación de ambos, sector empresarial y gobierno, esto se realiza con mucha frecuencia, pero el seguimiento y la calidad de los planes es muy deficiente, además de una carencia muy fuerte de difusión y falta de alineación de los objetivos, con lo cual el beneficio para la región no alcanza el impacto planeado. La visión de largo plazo existe, pero el problema de estos planes mayormente es con los cambios efectuados cada ciclo de gobierno, lo cual los limita y en muchos casos, estos no son llevados a cabo de la forma para la cual se diseñaron. Con referencia al impacto del sector informal de productos importados en la industria del *software*, más del 50 por ciento de los encuestados contestaron que este no afecta en su negocio. El 55 por ciento de los empresarios consideran que existen políticas y apoyos que resguardan la producción del sector. Más del 40 por ciento de estas políticas y apoyos de protección a la producción del sector son

deficientes, dejando esto un amplio margen en la oportunidad de mejorar y adaptar las políticas en beneficio tanto de la industria como de la región. El 55 por ciento de los empresarios consideran la existencia de medidas que regulan la entrada de productos ilegales (contrabando). Del 55 por ciento que considera la existencia de medidas que regulan la entrada de productos ilegales, más del 80 por ciento considera que estas medidas son deficientes.

Fomento a la exportación: Los programas de fomento a las exportaciones están orientados a promover la productividad y la calidad de los procesos que elevan la competitividad de las empresas y permiten su incorporación adecuada al mercado mundial. Lo anterior, con base en la reducción de cargas arancelarias para los insumos, partes y componentes que se incorporarán en el producto de exportación y la simplificación de trámites administrativos por parte del gobierno federal (SE, 2009). Se les pregunto a los empresarios de la industria acerca del conocimiento de los programas por parte del gobierno para apoyar la exportación, a lo cual solo el 10 por ciento conoce de estos programas. Del 10 por ciento que contestaron en forma positiva ninguno de los encuestados ha sido beneficiado por los programas del gobierno para la exportación.

En conclusión el nivel meta se refiere al modelo general de organización de la vida política, jurídica y económica de una sociedad, al conjunto de elementos socioculturales y de valor, a los acuerdos explícitos e implícitos sobre los grandes propósitos nacionales en el mediano y largo plazo; a la capacidad de organización y gestión de la sociedad para su logro, para movilizar los recursos y las aptitudes creativas y de resolución de conflictos. De la información obtenida por el instrumento en el nivel meta, podemos concluir: que el trabajo, la creatividad y la diversidad son los valores que caracterizan a la región de Baja California. Pero los efectos positivos de estos son contrarrestados por el alto índice de violencia y la discriminación presentada a ciertos grupos de la sociedad. Hay tendencias a la mejora, y muchas áreas de oportunidad para la mejora. Habrá que evitar los esfuerzos aislados, es necesario el reforzamiento y alcance de los programas que vinculan a los diferentes actores en pos de la mejora y transformación hacia una competitividad sostenida en la región en un marco de beneficio social.

NIVEL MACRO

Política comercial: Suele llamarse así al conjunto de medidas gubernamentales que regulan el comercio internacional. La política comercial define entonces la estructura de los aranceles, las prohibiciones, cuotas y contingentes a la importación, y los incentivos a la exportación; también tiene relación directa con la creación de áreas de libre comercio, los acuerdos bilaterales o multilaterales y la conformación de uniones aduaneras. La política comercial puede considerarse como una parte específica de la política económica de un gobierno, pues sólo de este modo es posible concebir una acción coherente sobre el desarrollo de las actividades económicas (EUMED, 2009). Dentro de la percepción sobre el grado de apertura del negocio. El 27 por ciento de las empresas dedicadas al desarrollo de software en el estado, realizan actividades de exportación y/o importación. A estas mismas se les pregunto en qué medida les afectaba las variaciones en el tipo de cambio, a lo cual más del 50 por ciento respondió que afecta de manera significativa.

Entorno macroeconómico: Para que el sistema financiero pueda operar eficientemente, captando y canalizando los recursos hacia aquellas actividades económicas en las cuales existan ventajas comparativas y se logre alcanzar mayores niveles de desarrollo, además de una reglamentación que promueva el desarrollo eficiente de los diversos componentes del sistema financiero, es necesario que la economía se desenvuelva en un entorno macroeconómico estable. Entre más estable sea una economía - medida en términos de bajas y estables tasas de inflación-, menor será la incertidumbre que impere en las diferentes actividades económicas. Esto permite que tanto las empresas como los individuos puedan realizar actividades que tengan un horizonte de planeación de largo plazo, lo cual se reflejará en mayores niveles de desarrollo económico (CIDAC, 2009).

Cuando una economía se desenvuelve dentro de un marco de estabilidad macroeconómica, los precios relativos, tanto de bienes como de factores de la producción, tienden a reflejar su escasez relativa y, por lo tanto, el precio mide su verdadero costo de oportunidad. Lo anterior permite que los recursos sean asignados a aquellas actividades en donde el rendimiento real esperado es mayor, aprovechando las ventajas comparativas disponibles. Por el contrario, cuando la economía se desenvuelve bajo un escenario de inestabilidad, la incertidumbre se incrementa, distorsionándose con ello la asignación de recursos, porque al existir inflación, el cambio de los precios, además de reflejar el cambio en el costo de oportunidad en el uso de los recursos, también incluye un componente que refleja el incremento general en el nivel de precios.

Debido a que los agentes económicos no disponen de perfecta información, tienen que dedicar recursos reales para determinar si el cambio en el precio del bien se debe a un cambio en el precio relativo o a un incremento nominal provocado por la inflación. El asignar recursos reales a esta actividad, representa por sí mismo una distorsión en la asignación de recursos, misma que se refleja en un nivel de ingreso real menor al potencial (CIDAC, 2009).

De los datos recabados del instrumento aplicado a las empresas, al evaluar la percepción general del entorno macroeconómico en la industria del *software* en Baja California, el 100 por ciento de los encuestados manifiestan que no existe una política de competitividad sistémica.

Política financiera: A partir del conjunto de criterios, lineamientos y directrices que utiliza el Estado para regular el sistema financiero nacional y canalizar los recursos hacia las actividades productivas se fundamenta la política financiera. El sector financiero permite que los proyectos productivos puedan llevarse a cabo. Es presentar recomendaciones de política pública para lograr que el sector financiero responda a los retos que la competitividad sistémica plantea, haciendo un uso eficiente de los recursos escasos de la economía (AGEXPORT, 2004). A continuación se muestra la percepción sobre el acceso a créditos para la actividad productiva. El 36 por ciento de las empresas encuestadas manifiestan haber solicitado financiamiento bancario o de algún otro tipo. De las empresas que han solicitado algún tipo de financiamiento, muestran a la Banca Comercial como el medio más utilizado en este rubro. En general el acceso a fuentes de financiamiento es deficiente, pues más del 70 por ciento así lo refleja en la encuesta.

El nivel macro representa la suma de los acuerdos del nivel meta, plasmados en las políticas macroeconómicas y macro sociales. A manera de conclusión en este apartado, se puede ver que la región tiene grandes oportunidades si decide orientar a su industria de *software* a la exportación. La región cuenta con un punto de ubicación estratégico único, que impulsaría y sería de gran beneficio al implementar programas y mecanismos de exportación para las empresas. Parte de estos mecanismos y políticas tienen que fundamentarse en eficientes sistemas de financiamiento que motiven y beneficien a todas las partes involucradas. El gobierno cuenta con excelentes programas, que son reconocidos y tomados como modelo de aplicación por países en Latinoamérica, el área de oportunidad que se presenta aquí, es darle a esos programas la profundidad y el alcance necesario para que tengan impacto en la región y en consecuencia el mejoramiento de la misma, especialmente del contexto económico y social.

NIVEL MESO

Fomento tecnológico: Percepción sobre los programas de apoyo tecnológico a empresas. El 55 por ciento de las empresas encuestadas, conocen los programas del gobierno de apoyo tecnológico a empresas. Dentro de los programas gubernamentales de apoyo que mencionaron los empresarios de la industria se encuentran: PROSOFT (siendo este el más conocido), programas de CONACYT, INNOVATE, INNOVAPYME y PROINNOVA. Del total el 9 por ciento de las empresas se ha beneficiado de alguno de los programas del gobierno de apoyo tecnológico ya mencionados. El mismo 9 por ciento manifiesta

conocer algún centro de apoyo tecnológico en la localidad. Este bajo porcentaje muestra la falta de vinculación entre institutos de investigación con el sector empresarial. Y la carencia de políticas que promuevan estas prácticas en promoción a la mejora no solo del sector empresarial, si no de los mismos centros de investigación y la región en conjunto.

El 64 por ciento de las empresas encuestadas tienen planeado en el corto plazo utilizar algún servicio de apoyo tecnológico. El 27 por ciento de las empresas encuestadas considera que existe una política de fomento tecnológico. Del 27 por ciento de las empresas que consideran que existe una política de fomento tecnológico, el 40 por ciento considera que si se le da seguimiento a la misma.

Encadenamientos productivos: La percepción que se encontró al preguntarle a la industria si se ha aumentado los encadenamientos productivos en la industria maquiladora de exportación, muestra que solo el 14 por ciento lo considera así. El bajo porcentaje nos muestra la falta de competitividad, así como la falta de mecanismos que vinculen a los sectores participantes para reforzar la participación en el exterior. Sumado a lo anterior se encontró en lo general un beneficio deficiente para la industria del software en lo que respecta a la presencia de la industria maquiladora en la región, dado que son contadas las empresas de software que han tenido un beneficio de la industria maquiladora y más allá de ello una relación de negocios sostenida que de beneficio a ambas partes.

Al preguntar si se ha reorientado la estrategia para fortalecer los encadenamientos productivos, el 17 por ciento de los encuestados contesto positivamente, lo cual no lleva a deducir que hay una falta de atención y seguimiento a las políticas de desarrollo, así como la falta de fomento y vinculación de los componentes de la industria.

Formación profesional: La percepción que se encontró al preguntarle a la industria si considera que los centros de educación superior y/o centros de investigación cubren las necesidades del sector empresarial, fue promedio, lo cual nos lleva a decir que es muy valiosa la aportación de estos centros de educación e investigación, pero hay ciertas áreas y necesidades que quedan por cubrir, lo cual nos habla de una separación entre los programas académicos y los requerimientos de la industria, la falta de una vinculación y alineación de objetivos entre las instituciones educativas y centros de investigación con la industria, cobra efectos que obligan a replantear las políticas de vinculación y desarrollo.

Políticas selectivas de fomento: Hay que poner en práctica políticas selectivas de comercio, cooperación científico tecnológica y financiación del desarrollo, que permitan emplear las relaciones externas a favor de la estrategia que se plantee. Puesto que las empresas grandes y modernas con gerencias diversificadas en las áreas de producción, innovación y finanzas, que permiten la integración más activa en el mercado internacional, no pueden surgir sino a largo plazo, se impone manejar la producción para la exportación a través de compañías comerciales o incluso una agencia coordinadora con experiencia internacional y medidas de fomento estatal activas (Esser, 1985). Cuando se le pregunto a las empresas acerca de la existencia de una política de fomento sectorial, solo el 27 por ciento respondió conocerla.

El 73 por ciento de las empresas de *software* en la operación de su negocio manifestaron tener una colaboración con negocios del mismo giro (competidores directos) con el fin de conseguir mejores condiciones con sus proveedores y/o clientes, o bien para conseguir apoyos del gobierno del estado. El 55 por ciento de las empresas forman parte de alguna cámara u organismo empresarial. De este 55 por ciento, más del 60 por ciento asiste a eventos y cursos de la cámara u organismo empresarial casi siempre.

El nivel meso corresponde a las políticas específicas de fomento económico formuladas y ejecutadas por los sectores público, privado y social, a su capacidad para articularse entre sí y satisfacer las necesidades de las empresas de servicios de apoyo y asesoría, para promover el desenvolvimiento de las condiciones generales para la producción. A manera de conclusión se puede ver que en promedio las empresas

conocen los programas de fomento tecnológico, pero el aprovechamiento de los mismos es muy escaso, esto nos marca que hay trabajo por realizar en la difusión e implementación de los programas. Al igual resalta que existe un desconocimiento por parte de las empresas de la existencia de los centros tecnológicos de la región, lo cual nos habla de la oportunidad que se presenta en vincular a la industria y los centros de desarrollo tecnológico, así como a las Instituciones de Educación Superior (IES), todos ellos actores fundamentales en el desarrollo competitivo de la región, y en especial interés de la industria del *software* en Baja California.

NIVEL MICRO

Formación del empresario: Por mucho tiempo, se miró el interés de estudiar en las universidades como una simple carrera de ascenso social y de obtención de un "cartón". Pero hoy se está cambiando esa visión en un contexto de competitividad creciente de los mercados (Ferro, 2007). El 91 por ciento de los empresarios encuestados consideran que en la actividad de su negocio es importante su formación educativa y profesional. Más del 90 por ciento de los empresarios consideran que ha afectado favorablemente su formación educativa y profesional en su actividad empresarial. El 73 por ciento de los empresarios encuestados asiste a programas de capacitación y actualización. El 45 por ciento de las empresas encuestadas proporcionan cursos de capacitación.

Propensión al ahorro: El 91 por ciento de los empresarios encuestados suelen ahorrar y/o invertir un porcentaje de su ingreso personal. El 50 por ciento de los empresarios encuestados suelen ahorrar y/o invertir entre 10 y 20 por ciento de su ingreso personal, el 30 por ciento menos del 10 por ciento y un 20 por ciento de los encuestados suelen ahorrar y/o invertir más del 40 por ciento de su ingreso personal.

Entorno económico: Percepción sobre el entorno económico local para la realización de negocios. Se encontró que el 82 por ciento de los empresarios encuestados tienen planes de expansión en su negocio actual. De este 82 por ciento mencionado, el 89 por ciento considera a Baja California como un lugar para expandir su negocio, el 33 por ciento considero a otro estado de la nación como lugar de expansión y solo el 22 por ciento ve la expansión fuera del país.

El 55 por ciento de los empresarios consideran iniciar otro negocio de su propio giro. El 100 por ciento de los empresarios consideran a Baja California como el lugar para iniciar otro negocio de su propio giro, adicionalmente a esto el 17 por ciento considera otro estado del país y de igual porcentaje es el que desea hacerlo fuera del país. Los empresarios que no han considerado iniciar otro negocio de su propio giro, se centran mayormente en la misma razón: no lo han considerado, seguido de la falta de infraestructura, personal capacitado y recursos financieros.

El 45 por ciento de los empresarios planean iniciar otro negocio en otro giro. De este 45 por ciento, el 80 por ciento lo harían en Baja California y solo el 20 por ciento fuera del país. La razón: "*no lo he considerado*", es la razón principal por la cual el 55 por ciento de los empresarios no planean iniciar otro negocio en otro giro. De las empresas encuestadas ninguna cuenta con algún tipo de instrumento financiero que las proteja de fluctuaciones en el tipo de cambio.

El 82 por ciento de las empresas encuestadas manifestó conocer los programas del gobierno de apoyo a empresas, dentro de los programas más conocidos se encuentra: Prosoft, seguido por Fondo Pyme, Probecad, Fomix, Empreser, CAE, Protege, Proinnova, Innovatec, Innovapyme, México First, etc. El grado de impacto del entorno general en la localidad en las relaciones cliente-proveedor, habiendo un sentimiento compartido en promedio por el favorecimiento de este al igual que el efecto nulo.

Flexibilidad productiva y calidad: Se tiene un alto porcentaje de empresas que han implementado mejoras para elevar la calidad y competitividad de sus productos, el estudio arrojó que esta área se cubría con un

82 por ciento. Dentro de las propuestas más fuertes se encuentra la certificación MOPROSOFT. El 18 por ciento de las empresas encuestadas poseen alguna certificación de calidad o cumplen con alguna normatividad o estándar.

INNOVACIÓN Y DESARROLLO

El ahora Programa para el Desarrollo del Sector de Tecnologías de la Información (PROSOFT 2.0) tiene como antecedente el Programa para el Desarrollo de la Industria de Software (PROSOFT), el cual fue lanzado en octubre de 2002. La nueva versión de PROSOFT 2.0 hará énfasis en que el alcance del programa incluye actividades relacionadas con los servicios de TI y los relacionados con el outsourcing de procesos de negocio (BPO, por sus siglas en inglés). Se encontró que el 64 por ciento de las empresas conocen el programa para el desarrollo de la industria de software (PROSOFT). Del 64 por ciento de empresas que conocen PROSOFT el 18 por ciento de estas lo han utilizado.

El 67 por ciento de las empresas consideran que se ha sustituido a las fuentes (recurso humano, conocimiento, plataformas, proveedores, etc.) importados utilizados en el desarrollo, por fuentes nacionales. El 36 por ciento de las empresas manifiestan ser proveedoras de algún servicio a la industria maquiladora.

El nivel micro se conforma por el conjunto de empresas de los diferentes tamaños y sectores de actividad, la cultura empresarial donde se encuentran inmersas, su capacidad gerencial y para integrarse a las diversas formas de asociación y cooperación inter empresarial, por las actividades que desarrollan para subsistir, crear y desarrollar ventajas competitivas. El instrumento nos arroja datos que nos orillan a concluir que la formación educativa es esencial para el buen desarrollo de las empresas en la industria del software, tanto los empresarios como los profesionales que participan en esta industria deben poseer alto grado de preparación y actualizarse constantemente, muy el ritmo de esta industria es muy intenso y demandante.

Es necesario alinear los planes de estudio en las IES con las demandas actuales de la industria, pues esta será la forma de eliminar esfuerzos aislados, que fomentan un desarrollo lento y entrada tardía al contexto mundial. Como punto a remarcar es necesario fomentar la alta especialización en cuestiones relevantes a la industria. La calidad con que realicen su trabajo las empresas será factor determinante a la hora de competir no solo en el mercado local, sino en el internacional, donde las certificaciones son demandadas en alto grado. Y estas marcan la pauta de quien puede competir por los mejores mercados.

CONCLUSIONES

La investigación nos lleva a deducir que la competitividad es más bien el producto de un patrón de interacción compleja y dinámica entre el Estado, las empresas, las instituciones intermediarias y la capacidad organizativa de una sociedad. La competitividad de un sector de actividad económica, se basa en el patrón organizativo de la sociedad en su conjunto, los parámetros de relevancia competitiva y la interacción entre ellos, que es, en última instancia; la interacción que genera ventajas para la región.

Los hallazgos de la investigación plasmados en este documento buscan describir los factores que integran una competitividad sostenida para la industria del *software* en Baja California, esta perspectiva es presentada desde el enfoque del modelo de competitividad sistémica, la interrelación entre estos factores es pieza clave para el desarrollo de la competitividad en la región. Los factores que se identifican como centrales son: la innovación, el conocimiento y la estrecha relación entre las instituciones, publicas, académicas y privadas.

Se presentan áreas de mejora, el nivel meso representa uno de los cuales habrá de trabajar a fondo, y sus consecuencias de mejora se verán reflejados en los diferentes niveles que componen el modelo. La propuesta desprendida de esta investigación toma al modelo de Competitividad Sistémica como el vehículo que lleve a la industria de software al impulso del desarrollo económico y social en la región de Baja California. Para ello habrá que utilizar a la innovación, el conocimiento y la interacción de las instituciones como motor de desarrollo. Esta interacción de los tres actores principales es vital para el exitoso desarrollo y alcance de la prosperidad y bienestar social que busca la región de Baja California.

RESUMEN

En tan solo unos años, el panorama tecnológico-académico ha experimentado profundos cambios. El creciente desarrollo de la enseñanza on-line ha hecho necesaria la realización de plataformas de e-learning que proporcionen un sistema de administración de cursos. En el presente trabajo de investigación se desarrollará la experiencia en la utilización de las TIC's en la Facultad de Ciencias Administrativas, Unidad Mexicali, de la Universidad Autónoma de Baja California, específicamente del portal de internet Blackboard, el cual ha sido concebido especialmente para el mundo académico. Su ciclo se desarrolla durante un semestre ordinario, permite la facilitación de la comunicación, la colaboración y la participación de los alumnos e instructor, así como la evaluación del trabajo y el rendimiento de los alumnos mediante una amplia gama de posibilidades. Este un sistema de enseñanza flexible, ampliable, abierto y sus principales posibilidades se centran en el área de la formación académica, que permite una reducción drástica de los costos de integración de aplicaciones y datos.

PALABRAS CLAVE: TIC's, proceso enseñanza-aprendizaje en línea, blackboard, enseñanza colaborativa, enseñanza semipresencial, profesor como facilitador.

ABSTRACT

In only years, the technological-academic panorama has experienced deep changes. The increasing development of education online has made the accomplishment of platforms necessary of elearning that provide a management system of courses. In the present work of investigation the experience in the use of TIC's in the Faculty of Administrative Sciences will be developed, Mexicali Unit, of the Independent University of Baja California, specifically of Blackboard internet, which has been conceived specially for the academic world. Its cycle is developed during an ordinary semester, allows the facilitation of the communication, the collaboration and the participation of the students and Profesor, as well as the evaluation of the work and the yield of the students by means of an ample range of possibilities. This is a learning flexible system, expandable education, opened and its main possibilities are centered in the area of the academic formation, that allows to a drastic reduction of the costs of integration of applications and data.

KEY WORDS: TIC' s, process education-learning, blackboard, collaborative education, almost presence education, professor like facilitator

INTRODUCCIÓN

La presencia de las TIC's en los procesos educativos en Educación Superior ha sido escasa. Lo que determina el éxito de una experiencia de incorporación de las TIC's a nivel institucional es su articulación con la misión y los objetivos Educativos institucionales. Aspectos organizativos, institucionales, educativos (enseñanza-aprendizaje) y tecnológicos deben ser considerados al momento de implementar una innovación al respecto. La Facultad de Ciencias Administrativas Unidad Mexicali de la Universidad Autónoma de Baja California inició en el año 2004 la implementación de una estrategia institucional de incorporación de las TIC's en los procesos educativos. En el presente trabajo se aborda un marco

conceptual frente al tema y se presenta la experiencia institucional: fases, estrategia, metodología y resultados.

La UABC impulsa la implementación de un enfoque de educación flexible, centrado en el aprendizaje del alumno y fundamentado en la evaluación colegiada; con un currículo que incluya toda la generación de conocimiento que se logra con la investigación; como con el servicio social, como elemento de pertinencia y retribución a la comunidad, buscando que el estudiante asuma un papel protagónico en su propia educación.

En particular, se pretende generar un ambiente de aprendizaje y sensibilidad entre los estudiantes respecto de sus compromisos sociales y la superación de los límites que imponen los recursos disponibles, que incentive su creatividad y apoye sus propuestas, que motive su participación y proporcione oportunidades de apreciar y aprovechar sus talentos, trabajando en conjunto con sus compañeros y en vinculación con el contexto externo que lo rodea, cuidando que la innovación académica, cada vez más necesaria, genere un aprendizaje relevante y pertinente, donde el papel del profesor como facilitador adquiera especial importancia.

REVISIÓN LITERARIA

Filosofía educativa: Los fundamentos que sustentan el proceso pedagógico de la institución, en concordancia con el "Informe de la Comisión Internacional para el Desarrollo de la Educación (1992)" de la UNESCO, destacan los siguientes principios que forman la nueva visión para la educación: aprender a aprender; aprender a hacer; aprender a vivir juntos; y aprender a ser.

Componentes Básicos Del Modelo Educativo De La Facultad De Ciencias Administrativas De La UABC

La educación es una estrategia para lograr la formación y actualización permanente de los individuos, enfocándose hacia la vinculación de los procesos de aprendizaje con las habilidades requeridas en la práctica profesional y en el trabajo, y enfatiza la actuación o el desempeño del sujeto en un contexto particular y con diversos niveles de complejidad.

inició en el año 2004 la implementación de una estrategia institucional de incorporación de las TIC's en los procesos educativos.

Blackboard Academic Suite™ Los LMS, son sistemas integrales de administración, distribución, control, seguimiento de contenidos y recursos educativos en un ambiente compartido de colaboración, que utiliza la tecnología de Internet para su operación, lo cual hace posible su acceso desde cualquier lugar en cualquier momento. Un sistema para ser denominado como un LMS debe contener o permitir integrar herramientas de publicación y producción de contenidos, comunicación sincrónica y asincrónica, administración de cursos y agentes, además de posibilitar la creación de comunidades o grupos de aprendizaje, ofreciendo así, tanto a alumnos como a profesores ambientes de enseñanza-aprendizaje de primer nivel.

Los sistemas de administración de conocimiento son sistemas distribuidos de hipermedia para administrar el conocimiento en organizaciones, brindar soporte a la creación, captura, almacenamiento y disseminación del expertis y el conocimiento.

El conocimiento en el caso de los KMS es el Know-how de las organizaciones. Es la habilidad que las organizaciones tienen para operar, tomar decisiones importantes y establecer la dirección de sus estrategias. Como una organización administrar su conocimiento involucra cómo se dan los procesos de trabajo, rediseñar estos procesos y dirigirlos a nuevas estrategias.

La idea de los KMS es brindarles a los empleados de una organización el acceso al conocimiento explícito de la compañía, a hechos, fuentes de información y soluciones. Hacer que los empleados compartan el conocimiento (en su cerebro y en documentos) puede potencialmente dirigir a una más efectiva forma de resolver problemas y puede dirigir a ideas para mejorar o diseñar nuevos productos y servicios. La meta de los KMS es tener la información correcta para la persona correcta en el tiempo correcto. Esto incrementa la eficiencia por ende dirige a ventajas competitivas

Blackboard es un administrador de cursos que, a través de sus bastas herramientas de publicación de contenidos, comunicación, evaluación y control, permite crear espacios de aprendizaje virtuales que facilitan enormemente la educación a distancia. Su característica más importante al respecto es ser una aplicación para Internet lo cual hace que la barrera del tiempo y espacio se rompa; alumno y profesor pueden estar en contacto independientemente del lugar donde se encuentren, basta tener una conexión a Internet para ingresar a un espacio común de interacción.

Las TIC's En Los Procesos Docentes En Educación Superior: Los procesos pedagógicos y educativos en educación superior no son siempre visibles. Se ha dejado a merced del educador la construcción del mundo del aula. Esto se debe en parte al énfasis que se ha puesto en los contenidos, más que en la didáctica y el ambiente mismo de aprendizaje (Duart y Sangrà, 2000).

Consideraciones Para La Incorporación De Las TIC En Educación Superior: Como lo sugiere Collis (2004), la generación de un proceso de incorporación de las TIC's en los procesos educativos debe verse como un proceso de innovación. Como lo expresa la autora, el proceso puede verse en tres fases: Iniciación del cambio, Escalabilidad del cambio (implementación), Institucionalización del cambio. Adicionalmente en cada una de estas fases deben cuidarse aspectos que se articulan y complementan de muy diversas formas, tales como:

Institucionales y organizativos;

Pedagógicos y educativos (proceso enseñanza-aprendizaje), y

Tecnológicos.

Condiciones Organizativas E Institucionales En Educación Superior

Dentro de las condiciones del entorno institucional que deben articularse con el rol de las TIC's en los procesos educativos se encuentran:

El Modelo Educativo: La universidad en red (o su componente virtual) debe tener un modelo pedagógico definido, en el cual quede recogida la metodología que se va a utilizar, los objetivos propuestos, los materiales didácticos, la acción docente, y el sistema de evaluación a implementarse. Según Duart y Sangrà (2000), los modelos representativos de la educación superior son:

Modelos Centrados En Los Medios, Modelos Centrados En El Profesorado

Modelos centrados en el estudiante. Los autores hablan de la necesidad de encontrar “un modelo equilibrado en el que cada uno de los componentes (medios, profesor, estudiante) tiene un papel fundamental pero no necesariamente superior a los otros dos”.

La política institucional: La estrategia de incorporación de las TIC's a los procesos educativos, debe articularse con los planes institucionales. En la medida en que se entienda como un propósito común será más factible llegar al establecimiento de las condiciones necesarias para su mejor implantación. Por lo tanto, la institución debe formular de manera clara las políticas, espacios, tiempos, incentivos, etc., que acompañarán y viabilizarán el cambio.

Los procesos de aprendizaje: El aprendizaje como lo plantea Bates (2001), es una búsqueda individual y colectiva de significado y relevancia. Como lo expresan algunos autores (Duart y Sangrà, 2000; Moreira y Guitert; Bates, 2001; McVay Lynch, 2002), en la sociedad de la información esta búsqueda, de manera explícita, debe trascender los contenidos y llegar al área de la creatividad, la resolución de problemas, el trabajo colaborativo, destrezas éstas requeridas para trabajar en una economía basada en conocimientos y en la vida en general (Bates, 1999).

METODOLOGÍA

El objetivo principal de esta investigación es conocer la utilidad que ofrece el uso del portal Blackboard en el proceso de enseñanza-aprendizaje, como una herramienta tecnológica-académica, puesto que la educación en línea se ha introducido y se encuentra avanzando a pasos agigantados en dicho ámbito.

Debido al gran incremento de la oferta de educación en línea y a la gran demanda educativa existente, las instituciones educativas de educación superior han buscado una alternativa de enseñanza masiva, introduciendo la educación a distancia dentro de sus ofertas de instrucción, al analizar la experiencia de la Facultad de Ciencias Administrativas en la utilización de este tipo de TIC's, se podrá establecer un precedente que fundamente la necesidad de disponer dentro de la UABC de una plataforma que les permita ir más allá de los cursos y de las aulas, incorporando los innumerables recursos educativos que comprende el entorno de aprendizaje en red, lo cual permite a cualquier alumno o profesor acceder a los recursos de enseñanza en cualquier momento y desde cualquier lugar a fin de conseguir sus objetivos educativos.

La investigación se realizó dándole seguimiento con el grupo 42 en la materia de Reglas Particulares de la carrera de Licenciado en Contaduría, de la Facultad de Ciencias Administrativas Unidad Mexicali de la UABC, dándose de alta al inicio del semestre 2009-2 en el Centro de Educación Abierta (CEA) de la misma UABC, quienes al recibir la solicitud de incorporación de la materia dieron de alta a la totalidad de alumnos inscritos a dicha materia. Al Profesor se le asignó la responsabilidad de proporcionar la instrucción básica del contenido de Blackboard. En el área de Documentos de Blackboard se encuentran los instructivos de uso tanto para el docente como para el estudiante, teniendo cada uno de éstos la responsabilidad de su análisis. La materia se clasifica como semipresencial, impartándose semanalmente 4 presenciales y 1 a distancia.

INICIATIVA INSTITUCIONAL

Facultad de Ciencias Administrativas

La Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California, es una unidad Académica ubicada en la Ciudad de Mexicali, Baja California, cuenta a su vez con dos extensiones ubicadas una en la zona rural y la segunda en el Puerto de San Felipe; inició la implementación de la experiencia institucional de incorporación de las TIC's en los procesos educativos en el año 2004. El contexto de esta implementación tiene las siguientes características: la Facultad de Ciencias Administrativas, Unidad Mexicali, es una Facultad presencial con alta tradición, aceptación y credibilidad en el estado de Baja California y en el interior del país.

En el marco del PDI (Programa de Desarrollo Institucional) actual se sitúa como una de sus Políticas Institucionales en la INICIATIVA GENERAL 10.1 TECNOLOGÍA DE LA INFORMACIÓN Y LA COMUNICACIÓN EN APOYO A ACTIVIDADES SUSTANTIVAS. Esta iniciativa pone de manifiesto la importancia de contar con sistemas de información eficientes y adecuados a las necesidades del modelo educativo UABC, así como de mantener una continua actualización y mejora de la infraestructura informática de apoyo, a la vez que busca mejorar la utilización de las nuevas tecnologías de información y

comunicación por parte de los universitarios, en este sentido en la Facultad de Ciencias administrativas se adoptaron metodologías docentes para mejorar los procesos de aprendizaje, se identificó como estrategias fundamentales la actualización docente en pedagogías y metodologías modernas y el apoyo que pueden ofrecer las TIC's a los procesos educativos presenciales. Adicionalmente, se viene implementando una reforma curricular institucional inspirada en la necesidad de mejores estrategias de aprendizaje individual y colaborativo (uso eficiente del tiempo de estudio). Dentro de este contexto se perciben los ambientes virtuales de aprendizaje como estratégicos para el apoyo a los procesos educativos presenciales. Como lo plantea Collis (2004), la generación de un modelo de incorporación de las TIC's en los procesos educativos debe verse como una innovación pedagógica.

En seguimiento a la iniciativa Institucional de la formación y actualización pedagógica y profesional del personal académico, se atiende la necesidad de contar con personal académico capacitado para implementar adecuadamente el modelo educativo UABC (Universidad Autónoma de Baja California), en beneficio de los estudiantes.

Sus objetivos específicos son: Mejorar las habilidades pedagógicas y la actualización profesional de los docentes, para asegurar la calidad de los programas educativos, e Incrementar el número de profesores que actúen como facilitadores.

Estrategia Global: La Facultad de Ciencias Administrativas en base al PDI, incorporó como estrategias: Fortalecer el programa institucional de formación docente, que incluye además de los profesores de licenciatura a los profesores de posgrado, habilitándolos en las nuevas tecnologías del aprendizaje y nuevas formas de aprender a aprender, así como en estrategias didácticas congruentes con el desarrollo de las competencias estipuladas en los Programas Educativos (PE).

En este sentido la Facultad de Ciencias Administrativas y en respuesta a las inquietudes de profesores de contar con herramientas para la administración de sus cursos, se iniciaron capacitaciones en el uso de la plataforma Blackboard. Originalmente se tenía disponible la versión 7.3 de Blackboard Learning System. Con el crecimiento de la demanda así como de nuevas necesidades de información se adquirió la versión 8 Academic Suite. Algunas de las nuevas características y mejoras son las siguientes:.

DESCRIPCIÓN GENERAL

En búsqueda de la mejora continua se incorporó una nueva versión, Blackboard Académic Suite™, versión 8, la cual introduce una serie de nuevas características, siendo unas de las principales:

SafeAssign™

Centro de Calificaciones (antes libro de calificaciones)

Foro de discusiones

Evaluación

SafeAssign™

Descripción general SafeAssign™, es una nueva herramienta que compara los documentos presentados (tipo ensayo, informes, reportes, etc.) contra un conjunto de otros trabajos académicos para identificar las zonas de coincidencia. SafeAssign se puede utilizar para evitar el plagio y crear oportunidades para ayudar a los alumnos a utilizar correctamente citas o parafraseo de fuentes.

SafeAssign se basa en diferentes bases de datos: Internet, © ProQuest, ABI / Inform © base de datos, archivos documentales institucionales, y la base de datos de referencia de usuarios de Blackboard a nivel global. En cualquier área de contenido se puede insertar una entrada de SafeAssign para que el alumno entregue ahí su documento. Inmediatamente al ser enviado por el alumno, se genera un reporte de coincidencia con información en otras fuentes, el alumno puede ver el reporte pero ya no puede editar su documento.

La herramienta de SafeAssign está integrada con el Centro de Calificaciones, es decir, que en el momento que se abre un espacio para entrega de tarea con SafeAssign, inmediatamente se abre una columna en el Centro de Calificaciones donde el Profesor puede ver el reporte de coincidencia con otras fuentes, asignar la calificación y retroalimentación el trabajo.

Centro de Calificaciones

Descripción general: Casi totalmente rediseñado, el Centro de Calificaciones tiene nuevas capacidades y mejoras al Libro de Calificaciones anterior. Algunas de las nuevas características o mejoras incluyen las siguientes: Un nuevo diseño de la barra de herramientas, barra de título de acción. La capacidad de crear e imprimir informes, tales como las calificaciones finales, para enviar a los alumnos u otros interesados. Edición directa: la capacidad para editar directamente a través de las celdas de calificación de la hoja de cálculo.

Nuevos cálculos de calificaciones, parciales o totales.

Vista inteligente - la capacidad de clasificar a los estudiantes en grupos basados en criterios preseleccionados. Una multitud de maneras de personalizar la pantalla del Centro de Calificaciones.

Página principal del Centro de Calificaciones La Barra de acción en la página principal del Centro de Calificaciones contiene múltiples funciones, entre ellas las siguientes:

Agregar columnas

Gestión de los períodos de calificación.

Esquema de clasificación.

Vista inteligente.

Enviar calificación a los alumnos por correo electrónico.

Creación de informes.

Visualización de un historial de calificaciones.

El centro de calificaciones ahora es más parecido a una hoja de cálculo, es posible introducir los resultados, tales como resultados, porcentajes, u otras formas de clasificación directamente en las celdas. En las distintas columnas, celdas y filas, el profesor puede rápidamente realizar múltiples funciones que antes requerían varios clics.

Informes: A través del Centro de Calificaciones, el profesor puede crear un informe que muestra las diversas calificaciones y la información de los alumnos. Un informe podría ser utilizado, por ejemplo, como una nota final o un informe de parciales de las actividades de los alumnos. El profesor puede controlar las calificaciones que se muestran en el informe, así como lo que aparece la información de los alumnos. Los informes se pueden imprimir desde la pantalla.

Cálculo de las calificaciones En el Centro de Calificaciones, el profesor puede calcular parciales o integrar ponderados finales. Existe ahora la posibilidad de que el profesor pueda elegir columnas para ponderar un parcial y luego agregar una columna de total ponderado, donde sólo agregue para ser calculadas las calificaciones de cada parcial.

Vista inteligente de calificaciones: Los profesores tienen la capacidad de personalizar el Centro de Calificaciones para mostrar un subconjunto de los alumnos, sobre la base de criterios preseleccionados. Los alumnos pueden ser clasificados por grupos de trabajo, mediciones, u otros criterios. Una vez construido y guardado el criterio de calificación en la función de Vista inteligente, se pueden ver tantas vistas como el profesor desee configurar lo cual hace más sencillo el ingresar notas al poder navegar fácilmente entre una vista y otra.

Tablero de Discusión

Descripción general: El tablero de discusión es una herramienta de enseñanza basada en resultados, que puede aplicarse de diferentes maneras para mejorar el aprendizaje y medir el rendimiento.

Las principales funciones de tablero de discusión son:

Secuencia: Consiste en la publicación inicial y la serie completa de respuestas a esa publicación en el foro del tablero de discusión.

Detalle de la secuencia: Es la página que muestra la vista secuencial de todas las publicaciones de una secuencia junto con la publicación seleccionada.

Publicación: Es una entrada de un tablero de discusión enviada a una secuencia o utilizada para comenzar una secuencia. También se utiliza como un verbo para referirse a la acción de enviar un anuncio.

Rol de foro: Es un tipo de rol que se asigna a todos los miembros del tablero de discusión de cada foro, y permite especificar los privilegios dentro de ese foro. Un usuario puede tener un rol por foro; no obstante, el rol de un usuario puede variar en cada foro. Pudiendo ser: lector, participante, evaluador, moderador y director.

Calificar foro: Es el proceso de asignar una calificación a un usuario por su rendimiento en el foro.

Calificar publicación

Es el proceso de evaluar una publicación con base a una escala fija de 5 puntos.

Recopilar publicaciones: Es el proceso de seleccionar una o más publicaciones o secuencias para incluirlas en una página que se pueda ordenar, filtrar, imprimir y guardar como un documento. La recopilación se reúne en un formato que se pueda ordenar, filtrar, imprimir y guardar como un documento que pueda visualizarse en un navegador.

Secuencia bloqueada: Es una secuencia que se puede leer pero no modificar. Los usuarios no pueden enviar publicaciones a una secuencia bloqueada.

En cola para moderación: Es una lista de publicaciones que deben ser aprobadas antes de que aparezcan en el tablero de discusión.

Evaluación

Descripción general: Los profesores utilizan evaluaciones para determinar el conocimiento de los alumnos, medir sus progresos y reunir información sobre ellos. Existen dos tipos de evaluaciones:

Pruebas: Las pruebas se crean para verificar el nivel de conocimientos y aptitudes de los usuarios inscritos en el curso. Las Pruebas permiten al profesor asignar valores de puntuación a cada pregunta en exámenes o pruebas. Cuando un alumno termina una prueba, la misma se envía para su calificación. Los resultados quedan registrados en el Libro de calificaciones.

Sondeos: Los sondeos son útiles para efectuar encuestas, evaluaciones y controles aleatorios de conocimiento. Funcionan de la misma manera que las Pruebas y con frecuencia ofrecen las mismas opciones. Las preguntas de los Sondeos no reciben valores de puntuación. Los Sondeos no se califican.

RESULTADOS: PRESENTACIÓN Y ANÁLISIS

Se observó que por parte de los alumnos hubo resistencia para tomar la materia bajo la plataforma Blackboard, aduciendo que tendrían que dedicar el doble del tiempo asignado a la materia, y que además no contaban con el equipo necesario. Conforme fue avanzando el semestre y obteniendo mayor experiencia en la utilización de las herramientas que ofrece dicho portal, observaron las bondades de la aplicación de la materia por esta vía, debido a que en su gran mayoría se costean sus estudios y en ocasiones existe la necesidad de salir de la ciudad, aprovechando la impartición de la materia por este medio, así como la entrega de sus trabajos de investigación y exámenes, les permitió resolverlos en el lugar en que se encontraban en tiempo y forma, y consultar sus dudas al docente y a sus propios compañeros, desarrollando sus habilidades de investigación y colaborativo.

El educador que impartió la cátedra, fue capacitado por el CEA en el manejo de esta plataforma, adquiriendo con ello nuevas habilidades en el desarrollo de los contenidos temáticos de su materia, material bibliográfico y elaboración de reactivos acordes a los objetivos generales y específicos de ésta; y a su vez, le permitió revisar continuamente si el material y los reactivos eran congruentes con los temas que se imparten en la materia. Respecto del contacto con los alumnos por este medio, además de transmitir los conocimientos técnicos, los indujo al autoaprendizaje individual, incentivó el sentido de responsabilidad presentando en tiempo y forma, cada uno de los elementos necesarios para acreditar la materia y fomentó el uso de la tecnología como una herramienta didáctica y de uso en su práctica profesional.

“La práctica docente no puede reducirse a un problema de asunto curricular y operativo, tampoco debe limitarse a un asunto puramente instrumental y de manejo de técnicas, o a un trabajo de exposición de carácter demostrativo de ciertas habilidades y destrezas, o reducirla a la imitación y repetición de un modelo que desconoce la complejidad de los procesos de construcción y re-construcción del conocimiento inherente a la enseñanza, el aprendizaje y en general, al quehacer educativo” (Calonje, Patricia. 1997)

La preocupación por investigar los acontecimientos en el aula, como las habilidades del profesor, el clima de la clase, la motivación, las formas de enseñanza de cada profesores, las estructuras y formatos instruccionales establecidas para las actividades emprendidas, son una constante en la investigación de la práctica docente, en este caso, nos estamos refiriendo a una práctica docente distinta, a través de un asesor en línea, como definición genérica será un asesor en línea aquel que utilice medios electrónicos para comunicarse con sus alumnos, por tanto el asesor que utilice el correo electrónico para realizar sus asesorías pueda considerarse un asesor en línea, así como, aquel que utilice el teléfono, el audioconferente, una red de video, también llamados conferencias en inglés, el chat o simplemente las herramientas de publicación en web, el concepto en línea nos refiere para manejar y administrar sus comunicaciones. Podemos considerarnos asesores en línea al utilizar la plataforma Blackboard.

CONCLUSIONES

El presente trabajo hace un análisis de la práctica docente de los facilitadores o asesores de cursos en línea y basados en el aprendizaje de la esta investigación, concluiremos relacionando algunas las características y funciones de éste, así como, sus principales retos. Los cambios acelerados de nuestra sociedad y en el mundo, exige un aumento del nivel cultural y de la capacidad de aprender de las personas; razón por la cual la tarea del docente cada día tiene mayor importancia.

Como respuesta a este desafío, y considerando que las tecnologías de la información y comunicación constituyen recursos potencialmente efectivos para el aprendizaje, la Universidad Autónoma de Baja California ha implementado el uso de las tecnologías de la información y la comunicación por medio del portal Blackboard, como apoyo adicional a la enseñanza, pretendiendo eliminar con ésto las barreras geográficas y políticas, facilitando la transferencia y diseminación de la información, posibilitando una nueva visión del mundo y promoviendo cambios de paradigmas en la educación.

Sería deseable establecer un modelo de práctica docente única para cursos en línea, pero no hay que olvidar que existe una diversidad de propuestas los cuales encuentran factores que tienen que ver con la necesidades de cada curso y con relación a los niveles de educación y a las diferentes áreas del conocimiento e incluso, hasta relacionado con la experiencia docente y de los sistemas tecnológicos de los educadores. Sin embargo, es importante el reconocer de la diversidad mencionada y proponer algunos criterios generales que permitan orientar a la práctica de educación a distancia en la formación de los educadores de hoy.

Algunas funciones características del profesor (Acevedo, 2004):

1. Dedicar tiempo suficiente a planificar los procesos de enseñanza-aprendizaje y la programación de aula, así como a la evaluación de la enseñanza practicada para mejorarla.
2. Son flexibles con el currículum y la propia programación.
3. Tienen altas expectativas sobre sí mismos y sus alumnos, siendo capaces de animar, apoyar y potenciar las iniciativas de éstos.
4. Potencian la aplicación de los conocimientos al mundo real. Dan tiempo para discutir y evaluar estas aplicaciones.
5. Hacen que los alumnos vean la utilidad de la ciencia y la tecnología y les dan confianza en su propia capacidad para utilizarlas con éxito. No ocultan, sin embargo las limitaciones de éstas para resolver los complejos problemas sociales.
6. Crean que el aprendizaje debe trascender fronteras. Llevan la clase a personas y recursos diversos. Educen para la vida y para vivir.

En relación a las características de las funciones anteriormente relacionadas, presentamos algunos de los retos que tiene un facilitador en línea, respecto a su práctica docente, cuando comienza con un grupo de educandos que no están familiarizados con la modalidad o que se encuentran renuentes a éstas:

1. Correcto manejo de la comunicación mediada por tecnologías, concretamente en el uso de la computadora y los programas del portal Blackboard.
2. Propiciar un ambiente de trabajo tanto individual como en grupos; cuando se trabaja como grupo, se favorecen las interacciones posibles con los compañeros y asesores, y si se tiene la oportunidad de contactar con expertos invitados, se multiplican la “línea de la comunicación” con que el estudiante puede contar.
3. Conforme el educando desarrolla sus habilidades en el desarrollo de actividades por la plataforma Blackboard, independientemente de desarrollar sus conocimientos básico de la computadora y de la navegación por Internet, el educador desarrolla la la obligación de asegurarse de que los estudiantes

avancen en ese sentido y a la par junto con la temática del curso, ya que puede existir heterogeneidad en el ritmo de trabajo con el grupo.

4. Mediante el manejo de la herramienta de SafeAssign™, Centro de Calificaciones y mediante el uso de los Foro de Discusión, el estudiante hará uso de ambientes virtuales que puede hacer de dichas herramienta trabajo colaborativo por excelencia.

Para ser docente, asesor o facilitador en línea se debe contar con una capacidad profesional totalmente novedosa, calificada, con habilidades de comprensión, manejo de plataformas, habilidad para discernir lo que quiso formular el diseñador, concluyendo, es una novedosa competencia laboral del siglo XXI.

GENERACIÓN DE ENTORNOS DE CONOCIMIENTO EN EL ÁMBITO EDUCATIVO Y EMPRESARIAL DE MÉXICO

Eduardo Ahumada-Tello, Universidad Autónoma De Baja California
Robert Efraín Zárate Cornejo, Universidad Autónoma De Baja California
Juan Manuel Perusquia Velasco, Universidad Autónoma De Baja California

RESUMEN

En un país como México, con cambios constantes en las estructuras organizacionales y envuelto en un entorno privilegiado donde la ubicación geográfica y la oportunidad de mercado confluyen, se torna especialmente importante considerar aspectos que involucran la generación de conocimiento. Una sociedad globalizada, como la actual, donde a cada momento el crecimiento económico y cultural depende de los avances que en materia tecnológica desarrollen las naciones, ejerce presión sistemática sobre los países que no crean conocimiento, sino que solamente lo consumen o utilizan. Se hace cada vez más importante el rubro de la educación, como parte esencial de la preparación del elemento humano como capital creador, intelectual y transformador de su sociedad. Y es aquí donde los gobiernos deben promover y capacitar a su capital humano para lograr crear organizaciones que fundamenten sus actividades en el conocimiento. Los países en desarrollo al modificar sus planes curriculares en la educación y al descubrir cuál es la realidad de la misma en resultado que esta da para sus habitantes puede mejorar su desempeño y llevar a cabo un cambio estructural que le brinde ventaja competitiva en el entorno global en el que se ve involucrada y de esta manera lograr un crecimiento sostenible. Este trabajo contesta a las cuestiones sobre el papel de estas organizaciones, su desempeño en el entorno global de competencia y su participación real en la creación de una sociedad mexicana basada en el conocimiento.

PALABRAS CLAVE: Entornos de conocimiento, Investigación y Desarrollo, Educación, Empresa.

INTRODUCCIÓN

La sociedad moderna es un enigma aun para los más importantes e innovadores pensadores modernos. En ella, se plasman infinidad de acciones y actitudes organizacionales que se piensa suelen ser las mejores tendencias para el desarrollo. El establecimiento del ser humano como el factor de cambio ha logrado modificar la percepción de la realidad circundante. En naciones como la nuestra, donde por muchos años se han llevado a cabo proyectos de crecimientos supeditados a la riqueza ecológica, específicamente al petróleo, a la industria maderera, a la agricultura y a la pesca; encontramos ahora un auge en el enfoque tecnológico y científico. En Neira y Guisan (1999) se realiza una revisión literaria de crecimiento económico considerando especialmente el papel que el capital humano ejerce en el crecimiento del PIB y por lo tanto en el desarrollo económico de sus respectivos países. Una relación presente en este proceso es la educación, de ella se deriva el afán por lograr una mejora en la producción de conocimiento. En diversos foros podemos encontrar que no es posible una mejora social sin la adaptación de su población a los cambios globales. (De la Fuente, 2002), esta adaptación se inicia crucialmente en las organizaciones que componen las sociedades que poco a poco se fortalecen en el ámbito científico.

La educación y la cultura organizacional se levantan así mismas como ejes cruciales en el cambio de los pueblos, es allí donde las grandes modificaciones surgen, donde los planes estratégicos a largo plazo se planean, se implementan y en el mejor de los casos, surten efectos como en Irlanda (Díaz de Sarralde, 2005), donde se apostó definitivamente a la formación tecnológica y el desarrollo de aplicaciones en

materia de software computacional siendo uno de los países que más han crecido en este rubro, contando claro está, con el apoyo de las organizaciones educativas, gubernamentales y de la industria privada.

En este documento se analizan los puntos más importantes en cuanto al crecimiento que en materia educativa generadora de conocimiento han promovido las instituciones educativas en nuestro país, esto como condicionante principal de la actitud y percepción organizacional hacia la investigación científica y al desarrollo sustentable (I+D) que desembocan en una mejora competitiva de los productos mexicanos. Aunque la responsabilidad de cambio hacia la mejoría no es responsabilidad exclusiva de los gobiernos, si es este el que debe establecer el camino por el que se promueven los cambios, siendo estos definitivamente, implementados a largo plazo, y como reflejo primario se debe encontrar un mejor orden organizacional en las empresas y un respaldo uniforme a la I+D

REVISIÓN LITERARIA

Globalización: Este nuevo concepto pretende describir al entorno moderno como una sociedad internacional sin límites, más allá de fronteras, barreras arancelarias, diferencias étnicas, credos religiosos, ideologías políticas y condiciones socio-económicas o culturales. Surge como consecuencia de la internacionalización cada vez más acentuada de los procesos económicos, los conflictos sociales y los fenómenos político-culturales.

En sus inicios, el concepto de globalización se ha venido utilizando para describir los cambios en las economías nacionales, cada vez más integradas en sistemas sociales abiertos e interdependientes, sujetas a los efectos de la libertad de los mercados, las fluctuaciones monetarias y los movimientos especulativos de capital. Afectados también sin duda, por el crecimiento de la necesidad de crear capital humano, personas capacitadas para hacer frente a los retos que el conocimiento genera. Los ámbitos de la realidad en los que se refleja la globalización son la economía, la innovación tecnológica y el ocio (Friedman, 2006).

Los grandes sucesos sociopolíticos de finales del siglo XX, tales como la unificación de las Alemania y la caída de la Unión Soviética, logran imponer una acusada mundialización de nuevas ideologías, planteamientos políticos de "tercera vía", apuestas por la superación de los antagonismos tradicionales, como "izquierda-derecha", e incluso un claro deseo de internacionalización de la justicia. Temas que definitivamente se ven enmarcados en tratados internacionales que decretan la forma en que se tratan temas tan variados como el comercio, la educación y los medios de producción.

Sociedad de la Información: En internet la sociedad de la creación, distribución y manipulación de la información forman parte importante de las actividades culturales y económicas. La sociedad de la información (SI) es vista como la sucesora de la sociedad industrial, relativamente similares son los conceptos de la sociedad post-industrial (Bell, 1999), la sociedad postmoderna, entre otros.

Cuando una sociedad logra que el número de empleos que se basan en la manipulación y manejo de información es mayor a los que están relacionados con algún tipo de esfuerzo físico (Machlup, 1962). se dice que está formándose una sociedad de información. Aun cuando no existe un concepto universalmente aceptado de las SI, la mayoría de los autores concuerda en que alrededor de 1970 se inició un cambio en la manera en que las sociedades funcionan (Masuda, 1984). Este cambio se refiere básicamente a que los medios de generación de riqueza poco a poco se están trasladando de los sectores industriales a los sectores de servicios. En otras palabras, se supone que en las sociedades modernas, la mayor parte de los empleos ya no estarán asociados a las fábricas de productos tangibles, sino a la generación, almacenamiento y procesamiento de todo tipo de información. Los sectores relacionados con las tecnologías de la información y la comunicación (TIC), desempeñan un papel particularmente importante dentro de este esquema.

Desde la perspectiva de la economía globalizada contemporánea, la sociedad de la información concede a las TIC, el poder de convertirse en los nuevos impulsores de desarrollo y progreso. Si en la segunda mitad del Siglo XX los procesos de industrialización fabriles marcaron la pauta en el desarrollo económico de las sociedades occidentales que operaban bajo una economía de mercado. A principios del Siglo XXI, se habla más bien de las "industrias sin chimenea"; es decir, el sector de los servicios, y de manera especial, las industrias de la informática.

Algunos autores sugieren que este modelo de desarrollo tuvo un origen más preciso a principios de la década de 1990, en el llamado "Consenso de Washington", en el que el grupo de los países desarrollados definieron algunos de los principales lineamientos económicos que habrían de adoptarse para enfrentar el problema de los llamados "países en vías de desarrollo" y el fracaso de sus economías. Algunas de las acciones derivadas de este acuerdo y que se han observado en todo el mundo occidental, son: a) La privatización de las industrias de las telecomunicaciones. b) La desregulación del mercado de las telecomunicaciones. c) La búsqueda del acceso global a las TIC. (Williamson, 2004)

Muchos críticos han señalado que la SI no es sino una versión actualizada del imperialismo cultural ejercido desde los países ricos hacia los pobres, especialmente porque se favorecen esquemas de dependencia tecnológica, logrando influir para que la educación de estos países responda a sus necesidades. Quienes están a favor de la SI sostienen que la incorporación de las TIC en todos los procesos productivos, ciertamente facilitan la inserción a los mercados globales, donde la intensa competencia obliga a reducir costos y a ajustarse de manera casi inmediata a las cambiantes condiciones del mercado. En todo caso, aun quienes se muestran optimistas con respecto a la SI, admiten que la brecha digital es uno de los principales obstáculos en este modelo de desarrollo. A grandes rasgos, este fenómeno se refiere a todos aquellos sectores que permanecen por muy diversas razones, al margen de los beneficios y ventajas asociados a las TIC. De acuerdo a la declaración de principios de la Cumbre de la Sociedad de la Información llevado a cabo en Ginebra Suiza en 2003, la SI debe estar centrada en la persona, integradora y orientada al desarrollo, en que todos puedan crear, consultar, utilizar y compartir la información y el conocimiento, para que las personas. Las comunidades y los pueblos puedan emplear plenamente sus posibilidades en la promoción de su desarrollo sustentable y en la mejora de su calidad de vida. Sobre la base de los propósitos y principios de la Carta de las Naciones Unidas, fundamentada en una modificación educativa que permita la promoción y creación de nuevas alternativas en materia de desarrollo y en creación de patentes para beneficio de las naciones

Sociedad Del Conocimiento

La noción de Sociedad del Conocimiento fue utilizada por primera vez en 1969 por Peter Drucker y en el decenio de 1990 fue profundizada en una serie de estudios detallados publicados por investigadores como Mansel y Stehr (Rodríguez, 2001). Actualmente la podemos ver en casi cada uno de los discursos que se manejan tanto en el ámbito académico como en el empresarial y político. Un país que no cuenta con un sistema científico generador de conocimiento no puede aspirar a mejores niveles de desarrollo científico y sustentable (De la Fuente, 2002)

Previo al concepto de "conocimiento", surgen las llamadas "sociedades de la información" con el uso e innovaciones intensivas de las tecnologías de la información y las comunicaciones, donde el incremento en la transferencia de información, modificó en muchos sentidos la forma en que se desarrollan muchas actividades en la sociedad moderna. Sin embargo, la información no es lo mismo que el conocimiento, ya que la información es efectivamente un instrumento del conocimiento, pero no es el conocimiento en sí, el conocimiento obedece a aquellos elementos que pueden ser comprendidos por cualquier mente humana razonable, mientras que la información son aquellos elementos que a la fecha obedecen principalmente a intereses comerciales, retrasando lo que para muchos en un futuro será la sociedad del conocimiento.

Cabe destacar que la sociedad del conocimiento no es algo que exista actualmente, es más bien un ideal o una etapa evolutiva hacia la que se dirige la humanidad, una etapa posterior a la actual era de la información (Rodríguez, 2001), y hacia la que se llegará por medio de las oportunidades que representan los medios y la humanización de las sociedades actuales, mientras la información sólo siga siendo una masa de datos indiferenciados (hasta que todos los habitantes del mundo no gocen de una igualdad de oportunidades en el ámbito de la educación para tratar la información disponible con discernimiento y espíritu crítico, analizarla, seleccionar sus distintos elementos e incorporar los que estimen más interesantes a una base de conocimientos, aquí surge de nuevo la necesidad de comprender el currículo oculto, entonces seguiremos estando en una sociedad de la información, y no habremos evolucionado hacia lo que serán las sociedades del conocimiento, siendo estas últimas las que en el afán de sostener una superioridad sobre las primeras, tratan en teoría, de mantener un currículo que les permita mantener la ventaja competitiva.

En 1974, Peter Drucker escribió su libro “La sociedad post-capitalista”, en el que destacaba la necesidad de generar una teoría económica que colocara al conocimiento en el centro de la producción de riqueza. Al mismo tiempo, señalaba que lo más importante no era la cantidad de conocimiento, sino su productividad. En este sentido, reclamaba para una futura sociedad, para una sociedad de la información en la que el recurso básico sería el saber, que la voluntad de aplicar conocimiento para generar más conocimiento debía basarse en un elevado esfuerzo de sistematización y organización. Drucker, afirma que la sociedad del conocimiento sería una sociedad en la que la gestión empresarial cambiaría radicalmente su relación con los trabajadores del conocimiento empleados, pues éstos últimos estarían mucho menos necesitados de instituciones empresariales e incluso de la tradicional gestión del conocimiento que las primeras lo estarían de ellos, encontramos en esto una esperada modificación de en la cultura organizacional moderna, un cambio empresarial y una orientación más pronunciada de la empresa hacia el I+D

METODOLOGÍA

Justificación: México es un país en vías de desarrollo (Martínez, 1999), pero aun así está considerado como una economía en crecimiento. Es por ello que sus métodos educativos son cuestionados y son puestos sobre la balanza de la comparación mundial. Esta se acrecienta cuando se incluye la participación empresarial y organizacional en los medios de producción y en la generación de patentes que son el reflejo primario de la I+D en la empresa privada.

Países que anteriormente apostaron a la creación de diferentes estrategias de crecimiento, como por ejemplo el uso de los recursos naturales, ahora apuestan a los recursos humanos, al nuevo valor intelectual de las naciones. Es indispensable analizar si es posible la aplicación de los conocimientos previos a este entorno y preguntarnos si nuestro país está siendo objetivo en sus intentos por generar y producir más y mejores elementos humanos que generen valor a la nación. Los ejemplos de Japón, Alemania y recientemente Irlanda (Díaz de Sarralde, 2005) nos invitan a pensar más en lo que educamos y promovemos en las personas que capacitamos, y preguntarnos:

- ¿Para qué trabajos están siendo capacitados nuestros estudiantes universitarios y los empleados en las organizaciones?
- ¿Es realmente una educación de calidad la que se recibe?
- ¿Somos educados para convertirnos en una sociedad del conocimiento?
- ¿Las organizaciones de México responden a las necesidades del fenómeno de la globalización?

Las respuestas nos pueden dar una orientación de hacia dónde está siendo guiado nuestro país, no es fácil lograr que una cultura organizacional se modifique en un sentido, pero estudios como este pueden motivar

la realización de cambios educativos en un inicio y organizacionales por correspondencia, que regresen ese pasado creativo que la nación mexicana tiene en sus culturas precolombinas. No nos es desconocido el concepto creativo, no es un tema nuevo, sin embargo, es innegable que siglos de educación pasiva y bancaria (Freire, 1973) y sometida a intereses no descubiertos nos llevan a pensar en la dificultad de la creación de nuevos planes educativos que mejoren la tendencia a la I+D.

Mediante este trabajo se cuestiona el enfoque educativo que se da en México. Se analizan posibles tendencias productivas para la generación de capital humano y sobre todo se hace mención del concepto de currículo oculto, el cual, se referencia como aquella intención global o macro social que el país en cuestión tiene sobre el uso de su capital humano para aprovechar al máximo sus virtudes y orientar en ese sentido su educación. Es por ello que el objetivo principal sería:

- Describir el enfoque de las empresas en el desarrollo de actividades de investigación y desarrollo así como el papel que juegan en este aspecto la educación y el gobierno.
- Analizar si las organizaciones de México responden a las necesidades de fenómenos globales, por ejemplo: la protección ecológica, de inclusión y de género que exige el desarrollo sustentable.

HIPÓTESIS

H1. Las empresas mexicanas se ven debilitadas por la falta de actividades de investigación y desarrollo, presentándose con esto una desventaja competitiva en el entorno global y haciéndolas incapaces de responder a fenómenos globales de inclusión, desarrollo sustentable y equidad de género

H2. El acceso a la investigación no es una de las metas del currículo educativo mexicano, provocando de esta forma la creación y el fortalecimiento de una sociedad de información e impidiendo a su vez que surja la sociedad del conocimiento.

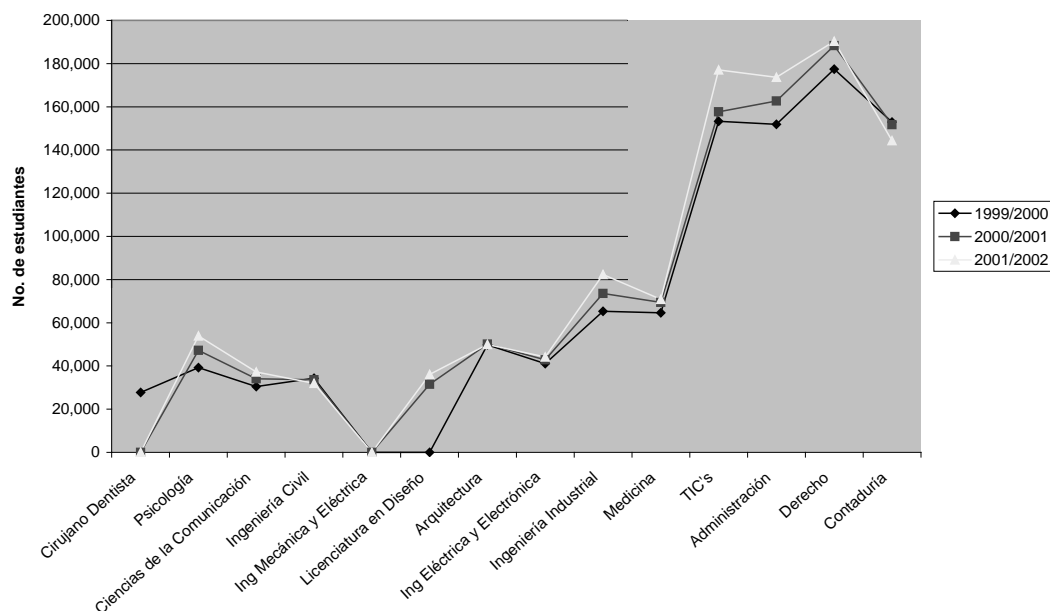

METODOLOGÍA APLICADA

Para la realización de este trabajo se llevo a cabo la investigación bibliográfica del sistema mexicano de estadística INEGI (Instituto Nacional de Estadística, Geografía e Informática), así como la consulta de diversos autores y organismos especializados en la recolección como el OCDE (Organisation de Coopération et de Développement Economiques) de información procedente de organizaciones. Seleccionando información referente a la educación superior y a la formación especializada de elementos orientados a la investigación. Parte a su vez de los trabajo previos efectuados por Ramón de la Fuente (2002), rector de la UNAM (Universidad Nacional Autónoma de México), sobre la importancia del establecimiento de un sistema de investigación científica eficiente para el desarrollo y crecimiento de países.

RESULTADOS

En la figura 1 podemos analizar la realidad tangible de que las carreras de ingeniería y áreas médicas, donde se ve mayoritariamente la presencia de investigadores no son ni por margen cerrado de las más solicitadas en México. Encontramos que la única área científica que compite contra las ya tradicionales carreras de Administración, Contaduría y Derecho, son las de Tecnologías de Información y Comunicación, las cuales son mas orientadas hacia el manejo de la información que hacia la creación de la misma. En México es mayor el uso que la creación de herramientas de información. La demanda de capacitación y la responsabilidad de las organizaciones en la creación de la cultura de I+D va hermanada con los intereses de los estudiantes

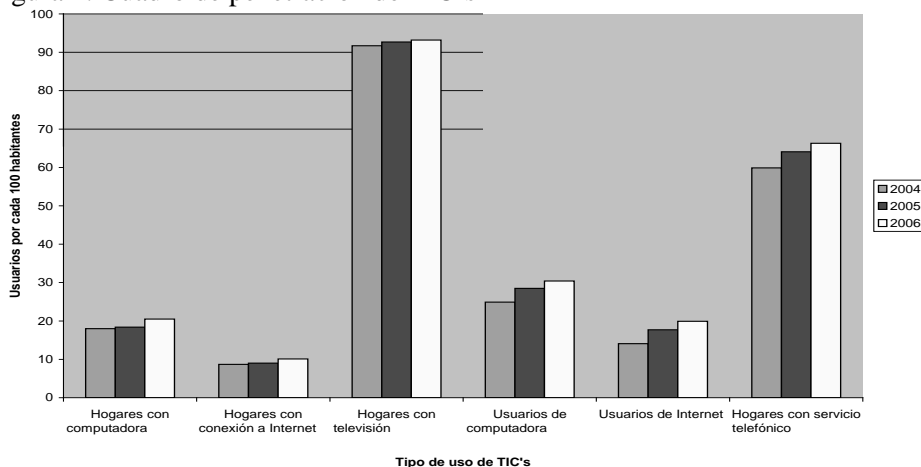

Figura 1. Matricula por carreras en México

Fuente: ANUIES.

Ahora bien, en la figura 2 se aprecia un crecimiento constante en el uso de las tecnologías de información y de comunicación en los hogares mexicanos, sin embargo, la televisión se mantiene como el medio de comunicación masiva más utilizado. Se puede concluir que el uso de las computadoras sigue siendo hasta cierto punto inaccesible para la mayor parte de la población. Recordemos que el capital humano se ve influenciado por los mensajes que se reciben de todo el entorno socio-cultural donde se desenvuelve, a esto, hay que agregar que los contenidos televisivos no son, muchas veces, de alto contenido educacional, sino más bien de solamente entretenimiento.

Figura 2. Cuadro de penetración de TIC's

Fuente: INEGI. Encuesta Nacional sobre Disponibilidad y Uso de Tecnología de Información en los Hogares.

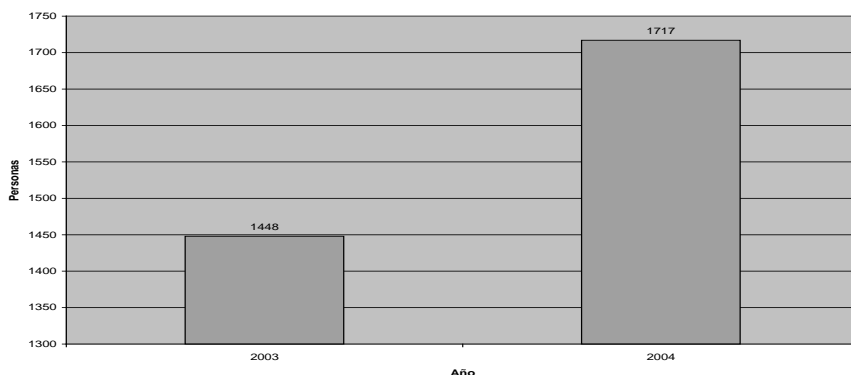

INEGI. Sistema de Cuentas Nacionales de México. Producto Interno Bruto Trimestral 2002-2004.

INEGI. Indicadores de la Encuesta Industrial Mensual por División y Clase de Actividad Económica, Banco de Información Económica.

Se muestra en la figura 3 la cantidad de personas que egresan del mayor grado de especialización posible. Estas personas son las generadoras de conocimiento nuevo y por consiguiente son la medula de la

sociedad del conocimiento que se produce en el país y son los responsables de que las organizaciones se vean a si mismas como corresponsables de implementar tareas de I+D. Sin embargo este número no es suficiente. No se promueve este nivel de estudio, de la cantidad de alumnos graduados de licenciatura menos del 1% logra llegar al nivel de doctorado, los alumnos no ven la adquisición de este tipo de estudios como algo deseable y esto termina impactando la producción científica.

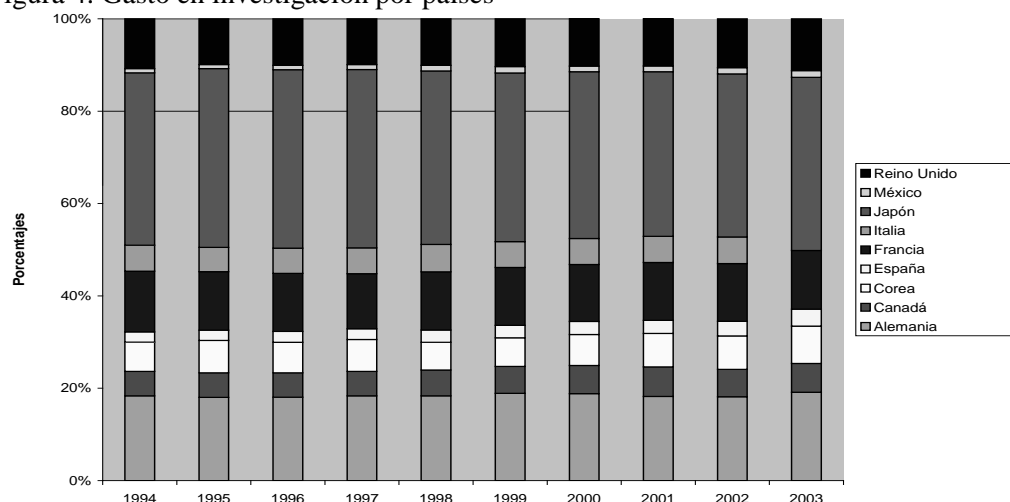

Figura 3: Graduados de Progrmas de Doctorado en Mexico

Fuente: CONACYT. Informe General del Estado de la Ciencia y la Tecnología, 2005. México, D.F., 2005. Instituto Mexicano de la Propiedad Industrial (IMPI). IMPI en Cifras 2006. México, D.F., Enero 2006

En la figura 4 se demuestra que México es, entre el grupo de países del OCDE, el que menos gasto destina a la promoción de la investigación, aquí se puede responder a la pregunta del porque no hay más alumnos en programas doctorales, ¿cuál es el futuro económico que espera a un estudiante de doctorado?, ¿realmente es una opción remunerante?, ¿el gobierno destina alguna partida presupuestal para la investigación que justifique el crecimiento de los programas?, ¿qué tan complejo es el acceso a los beneficios de existentes en los diferentes organismos que manejan los apoyos a los investigadores y a sus investigaciones? ¿Cuántas empresas promueven el desarrollo de actividades de I+D?

Figura 4. Gasto en investigación por países

Informe General del Estado de la Ciencia y la Tecnología, 2005. México, D.F., 2005. Para los demás países, 1994-1995 al 2003: OCDE. Main Science and Technology Indicators, Volumen 2001/2 al 2005/2.

CONCLUSIONES

La educación en México está directamente relacionada con las políticas de inversión y con los convenios que en materia económica se deba llevar entre nuestro país y sus aliados comerciales.

- Ambas hipótesis se demuestran, la educación interfiere directamente con los resultados organizacionales y el avance en materia de investigación y desarrollo crea desventaja competitiva e incapacidad de crear espacios de desarrollo de apertura hacia los fenómenos globales mencionados anteriormente.
- La educación está supeditada al currículo que la política educativa de los países pretenda seguir para producir elementos humanos que manejen uno de los dos tipos de sociedades que se generan en la actualidad.
- La sociedad de la información es principalmente la que maneja las tecnologías creadas en otros lugares y por otras personas y la sociedad del conocimiento es la que de alguna forma genera esas tecnologías, esos elementos que surgen de la investigación.
- Un país recupera su independencia tecnológica cuando apuesta a la capacitación profesional, superior y especializada de sus elementos humanos, creando así el llamado capital humano. Por lo que el capital humano es ahora el elemento más importante de las sociedades modernas, sin este, el país queda como un simple proveedor de materia prima y de mano de obra barata, un país que pretenda crecer y desarrollarse en todos los sentidos debe promover la capacitación de sus habitantes. De esta forma las organizaciones necesitan apoyarse en la educación para que hacer frente de forma efectiva a la competencia que el mundo moderno le impone. Para ello necesita dedicar parte de sus recursos a la I+D como fuente creadora de bienes innovadores.
- Revisión del currículo de nivel básico a las carreras universitarias para que estas promuevan la investigación
- Creación de espacios de intercambio de conocimiento en los procesos entre organizaciones mediante medios masivos de comunicación (Ahumada, 2009)

PLANEACIÓN ESTRATÉGICA PARA LA PROMOCIÓN DE TURISMO EN EL MUNICIPIO DE CUATRO CIÉNAGAS, COAHUILA

Sandra Patricia De La Garza Cienfuegos, Universidad Autónoma De Coahuila

Armandina Margarita Olloqui López, Universidad Autónoma De Coahuila

Rubí Araujo Pérez, Universidad Autónoma De Coahuila

RESUMEN

El presente trabajo denominado Planeación Estratégica para la promoción de turismo en el municipio de Cuatro Ciénegas, Coahuila, se desarrolla entre 2009 y 2010 y siendo un tema de actualidad, se refiere al diagnostico que se realizó para fortalecer el turismo que ha disminuido después de haberse declarado área natural protegida en 1994, y cerrando las pozas (playitas y Becerra) por la Profepa en el año 2007. La idea motivadora de este estudio es presentar una propuesta sustentada y sustentable para el desarrollo de la comunidad. es decir, utilizar la planeación estratégica aplicada para diseñar la forma más eficiente de ofrecer alojamiento sin descuidar el patrimonio cultural de esta entidad, elemento potencial para el desarrollo turístico teniendo como prioridad la conservación del medio ambiente ya que el patrimonio cultural es vital para el desarrollo turístico, entonces será de gran importancia investigar los servicios con que cuentan para atender a los visitantes y será necesario estudiar la forma actual en que se promocionan. Se aplicaron 186 encuestas a los prestadores de servicios de las MiPYMES y entrevistas diversas a representantes de instancias de gobierno y se complemento con investigación de carácter documental, y ponencias que ha investigado sobre este tema.

INTRODUCCION

El principal motivo de este estudio es presentar una propuesta para el desarrollo del turismo en el municipio de Cuatro Ciénegas, Coahuila, México, una alternativa para crear atracción al turismo ya que el turismo es considerado como el desplazamiento voluntario de los individuos a espacios diversos a los lugares de descanso, recreación o culturales se genera por la gente y para la gente. Buscar bases para la integración del turismo, así como las estrategias de planeación para lograr un desarrollo turístico cultural sustentable. Por este motivo se pretende atraer el turismo intelectual, comenzar a generar conductas y hábitos en la comunidad y personal que brinda el servicio.

REVISIÓN LITERARIA

El municipio de Cuatro Ciénegas cuenta con 9,545 habitantes último censo hecho por INEGI (2009). El valle de Cuatro Ciénegas de Carranza, Coahuila, cuenta con más especies endémicas que cualquier otro lugar en Norteamérica (Stein et al, 2000), en términos de ecosistemas únicas del mundo. Gran parte de su biodiversidad está asociada a un complejo de pozas, ciénegas, lagunas y ríos. Desde la década de los 60 el valle de Cuatro Ciénegas a sido reconocido como un importante municipio de endemismos de flora y fauna silvestre. El uso del agua de las pozas con fines agropecuarios y visitantes principalmente de la región centro del Estado de Coahuila estos factores ponen en riesgo de desaparecer las diferentes especies del valle. Por lo tanto en 1994 causó que fuera declarado como área natural protegida de flora y fauna ya que muchas especies de plantas y animales se encuentran en la lista del gobierno mexicano de especies en peligro o amenaza de extinción .abriendo en unos meses mas tarde la oficina local del *Área de Protección de Flora y Fauna Cuatrociénegas (APFFCC)*, bajo la dirección de CONANP, unidad de la SEMARNAT (Secretaría del Medio Ambiente y Recursos Naturales). Ubicada junto al museo de Venustiano Carranza ubicado a menos de una cuadra de la plaza principal.

A partir de la invitación realizada a nivel mundial en el año 2007 para elegir a través de millones de votos del mundo a las 13 maravillas de México. Fue organizada por la televisora mexicana TV Azteca y el Consejo de promoción turística de México, tanto lugares naturales como los creados por el hombre. La votación se llevo a cabo del 17 de Julio al 25 de Septiembre registrando un total de 1, 421,434 votos. Quedando el valle de Cuatro Ciénagas dentro de las 13 maravillas naturales de México. Por lo tanto atrajo una gran cantidad de turistas Aventureros (busca un viaje distinto en cada ocasión, suele no tener responsabilidad ante el desarrollo sustentable). Causando daños ecológicos en las pozas (Becerra y Playitas) esto origino que la PROFEPA (Procuraduría Federal de Protección al Ambiente) clausurara el acceso a estas aéreas y las Dunas. Por este motivo la cantidad de turistas a disminuido notablemente, sin embargo sigue recibiendo visitantes interesados en realizar estudios sobre esta región.

METODOLOGÍA

Conscientes de que se trata de una Planeación Estratégica a largo plazo como son los procesos de cambio, se trata de beneficiar a la comunidad en general, protegiendo principalmente la flora y fauna silvestre buscando una planeación estratégica adecuada para atraer el turismo intelectual (busca conocer la cultura del lugar, la gastronomía dicen que tienen una actitud respetuosa en los entornos que visitan). Contar con una investigación que pueda ser utilizada para difundir la conciencia patrimonial que influya favorablemente en la sustentabilidad del turismo generando impactos positivos en el caso de Cuatro Ciénagas. Diseñar estrategias de diversión, esparcimiento, ocio y actividades que beneficien tanto a los prestadores de servicio como a los habitantes de la comunidad.

Definición del problema: a la clausura de las pozas (becerra y azul) el turismo disminuyo considerablemente además de la falta de trabajo en conjunto por parte de Gobierno, municipio y Profepa a generado que no se avance en el proceso de una buena planeación estratégica para la conservación de flora y fauna silvestre y la preparación de los prestadores de servicio como los habitantes de la ciudad.

Objetivo de la Investigación: Establecer criterios de gestión patrimonial para la ciudad de Cuatro Ciénagas, que nos conduzca al buen funcionamiento del turismo cultural. Analizar los prestadores de servicio en la actualidad si cuentan con la infraestructura necesaria y se encuentran capacitados para atender al turismo. Encaminar la normatividad hacia un modelo de seguimiento en la actividad turística.

HIPOTESIS DE LA INVESTIGACIÓN

Se pretende analizar el plano actual para proyectar el escenario óptimo

- 1.- la capacitación del recurso humano está relacionada posiblemente con la competitividad de las PYMES.
- 2.- las empresas de servicios que cuentan con un plan estratégico e invierten en capacitación son más eficientes y rentable.

Las técnicas utilizadas fueron entrevistas, encuestas una directamente a los prestadores de servicio, Se eligió una muestra de 186 encuestas de los nueve principales establecimientos que brindan hospedaje y 8 de alimentación así como 20 negocios establecidos en la cabecera municipal.

MARCO TEORICO

Enfoque de la Planeación Estratégica nos menciona en su libro Lourdes Munch (2008) el Ecléctico.- se concibe como un proceso de transformación. Toma principios y técnicas de las diversas escuelas de planeación y ofrece la posibilidad de un enfoque integral de la administración estratégica, que aprovecha las ventajas de las otras escuelas.

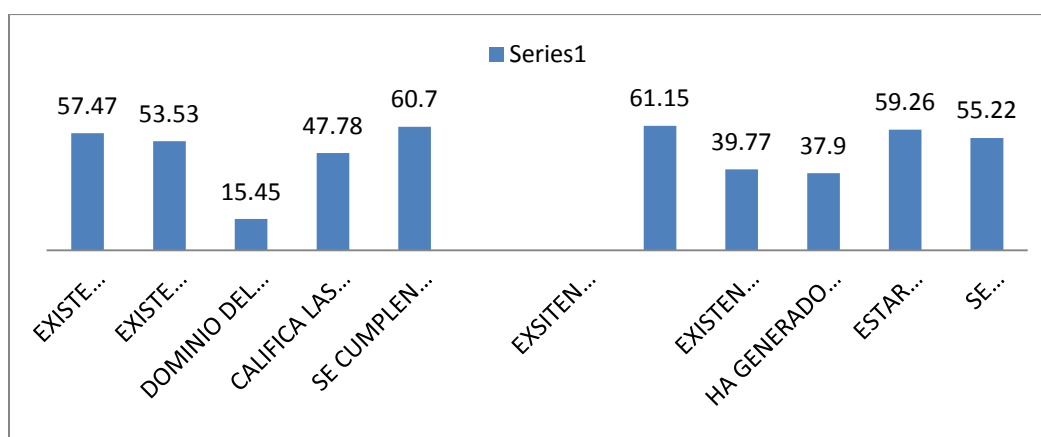

Sus aportaciones son:

- La planeación mantiene un proceso de transformación en relación con las variables de los entornos externo e interno.
- El plan en su caso, es la base para adecuar la estructura organizacional.
- Se orienta hacia todas las aéreas, a través de equipos de trabajo.
- Rediseño de procesos, de acuerdo con las necesidades del plan
- Movilización a nivel de unidades estratégicas de negocio.

La metodología que se estudia en el presente texto sigue el enfoque eclético.

Los enfoques anteriores se orientan a organizaciones del sector privado. Cabe mencionar que para la gestión de gobiernos existen metodologías de planificación económica que han tomado conceptos de planeación estratégica.

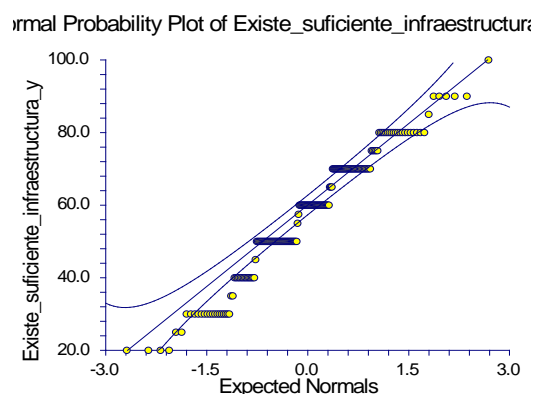

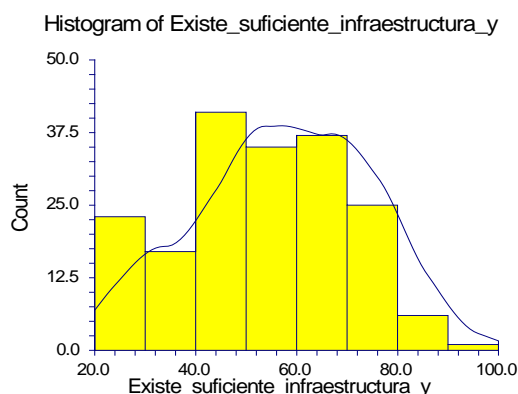

Resultados: Presentación Y Análisis

Se encontró en la aplicación de las encuestas que los Hoteles de 3 estrellas(5) si se encuentran organizados para recibir a los visitantes, cuentan con servicios completos, alimentación, bar y cuentan con una persona bilingüe e información para el visitante, los demás solo cuentan con servicio de hospedaje, no cuentan con información para el visitante y algunos no tienen una persona bilingüe, nos encontramos que a los sitios de paraderos turísticos cuenta con 47.78% les falta adecuarlos para recibir una cantidad mayor de visitantes. La mayoría de los prestadores de servicio no cuenta con normas de consumo de ahorro del agua, pero les interesa participar en programas de capacitación ya que un 15% domina el idioma ingles. Al obtener Cuatro Ciénagas estar dentro de las 13 maravillas del mundo la comunidad se vio favorecida pero al cierre de las pozas el turismo disminuyo notablemente un 37.9%.

En la entrevista con Héctor González (conanp) en Cuatro Ciénagas manifestó que actualmente existen guías pero aun no pueden visitar las pozas y los arenales (dunas). Por lo tanto aun no se ha incrementado el número de visitantes, además se está trabajando con un proyecto de reciclado de la basura con el fin de modificar conductas y hábitos en separar la basura en orgánicos e inorgánicos

Plots Sección of Existe_suficiente_infraestructura_y

Summary Section of Existe_suficiente_infraestructura_y

Count	Mean	Standard Deviation	Standard Error	Minimum	Maximum	Range
185	57.47283	17.09943	1.257175	20	100	80

The geometric mean confidence interval assumes that the $\ln(y)$ are normally distributed.

The harmonic mean confidence interval assumes that the $1/y$ are normally distributed.

Estadígrafos

Mínimo	20	El mínimo de los encuestados es 20
Máximo	100	El máximo de los encuestados es 100
Rango	100	La opinión de los encuestados oscila entre 0 a 100
Media	57.47	El promedio de la opinión de los encuestados es de 57.47
Mediana	50	La mitad de los encuestados le dan valor a la infraestructura de 50 o más
Moda	50	Existen varios encuestados que opinaron que la infraestructura de servicio en Cuatro Ciénegas se encuentra a la mitad.
Desviación estándar	17.09	El rango de 38.91- 67.09 es la opinión de la mayoría sobre la infraestructura de servicio en la Ciudad de Cuatro ciénegas.
Asimetría	-0.52	La opinión de los encuestados se carga a lo positivo
Curtosis	2.41	Tienden a ser una sola opinión
Coefficiente de variación	.42	
Coefficiente de dispersión	.35	Existen dos grupos de opiniones
Normalidad	Normal	No se rechaza la normalidad

Del resultado del análisis se observó que la opinión de los encuestados oscila entre 20 a 100 Máximo, existen dos grupos de opinión uno de ellos está en 38.91 a 67.09 que ahí se encuentra La mayoría de las opiniones. La opinión que más se repitió es de 50(modal) .no se rechaza La normalidad.

PROPUESTA

Con respecto a la infraestructura de los prestadores de servicio al incrementar el turismo se puede invertir en ampliaciones.

Actividad	Objetivo	Dirigido A
Taller para la elaboración del plan estratégico	Establecer un programa de trabajo para atraer el turismo intelectual incluir en sus establecimientos aéreas para acampar.	Prestadores de servicio MIPYMES
Curso sobre el porqué del área restringida	Modificar conductas de la comunidad y turistas	Prestadores de servicio, comunidad en general y turismo.
Cursos del Idioma Ingles y atención al cliente.	Capacitar a los prestadores de servicio y Guías Turísticos	Prestadores de servicio MIPYMES.
Crear un Tur con Guías y establecer normas de protección.	Visitar las aéreas protegidas, conocerlas, pero sin dañar, mediante un buen plan estratégico con medio de transporte (Tran-vía).	Guías Turísticos.

CONCLUSIONES Y LIMITACIONES

Las personas que habitan en el municipio de Cuatro Ciénagas están en la espera de que la Secretaria de Turismo les ayude estratégicamente para atraer el turismo ya que una de las actividades de este índole es fuerte en esta comunidad. y al obtener un lugar dentro de las 13 Maravillas del mundo aumento el turismo y al ser declarado zona de área protegida disminuyo un 40%.

Este estudio es parte de un caso específico del cual se ha hecho mención anteriormente, por lo cual se limita a presentar resultados obtenidos con base en el procesamiento de los datos de las encuestas efectuadas a la muestra determinada para la región..

ABSTRACT

El estudio se enfoca a las diferentes apreciaciones que se han escrito sobre el vinculo entre universidad-empresa, en la universidad se obtiene aprendizaje teórico y en la empresa se aprende sobre la practica. En la universidad se realiza la investigación mientras que en la empresa se desarrolla. Este vínculo pareciera en sentido figurado como la dificultad de unir el agua y aceite. Sin embargo, todo indica la gran necesidad que existe entre los dos entes, ya que al incorporarse los egresados al ambiente laboral se dan cuenta de que la universidad es una cosa y la empresa otra muy diferente. La ligación entre universidad y empresa es como una relación cliente-proveedor, ya que se preparan profesionistas para que la empresa los absorba. Entonces es evidente que la única manera de que la empresa obtenga profesionistas con el perfil deseado, es tener un seguimiento del aprendizaje que obtiene el alumno en la universidad para complementarlo con conocimientos prácticos, mediante proyectos de vinculación. La vinculación efectiva universidad-empresa es la que tiene como meta guiar al estudiante en dirección del éxito profesional, enseñando desde el inicio de su carrera, el aprendizaje teórico junto a su aplicación en el medio laboral.

INTRODUCCIÓN

El fracaso de la vinculación de la educación superior no es un problema exclusivo de México, el mismo proceso o el mismo comportamiento se encuentra al menos en los países de América Latina. Aquí se presentan algunos de los resultados detectados en varias regiones por dos estudiosos del tema. En Brasil, 8.3% de las empresas encuestadas declararon que la vinculación con la universidad fue importante para el desarrollo y logro de innovaciones; sin embargo, las universidades son la opción menos mencionada como origen de ideas para la innovación [...] por otro lado, en México, los acuerdos de cooperación para proyectos innovadores solo alcanzaron el 6% de las empresas encuestadas[...] A su vez, en Venezuela, las vinculaciones con universidades son 3.5%....mientras en Chile, 25% de las empresas declara haber realizado contratos con universidades; de éstas las que declaran intensidad media o alta en la firma de contratos con universidades alcanzan 3.7% del total. Campos (2005).

Considerando el párrafo anterior en el que la universidad latinoamericana y sus respectivos entornos productivos tienen una tarea pendiente de realizar en materia de vinculación. Pues existen evidencias sólidas de que se inicia por medio de actividades, pero no tiene la amplitud que debiera para una mayor efectividad de resultados constantes. En una sociedad cada vez más compleja, y que aspira a ser moderna, las empresas son, igual que las universidades, poseedoras y transmisoras de grandes porciones del conocimiento y la tecnología en uso; por tanto deben ser consideradas por ellas mismas y por la sociedad como participantes de pleno derecho en la formación de los jóvenes. Inversamente: la necesidad de que educación se extienda a toda la vida no podrá satisfacerse si las universidades monopolizan esta tarea y no se asocian con las empresas y otras organizaciones para hacerla viable.

ANTECEDENTES

Históricamente a la educación le ha correspondido la ardua tarea de planear y ejecutar estrategias de desarrollo en función de las necesidades que el entorno demande como consecuencia de los rápidos y turbulentos cambios que en su seno se producen. Por ello se habla de la sociedad del conocimiento, cuyo rol protagónico corresponde a la educación (García, 1996). En América Latina y específicamente Venezuela se han dado escasas experiencias en cuanto a la vinculación a pesar de que se ha escrito mucho en esta cuestión. En función de esta necesidad se han realizado esfuerzos mundiales, nacionales y regionales entre los cuales es importante señalar; a nivel mundial: Valera (1994-97), Hidalgo (1996), D'Onofrio y Cols. (1998), Álvarez (1999), Coronado y Col. (2001); a nivel nacional; García G. (Op. Cit.), Pirela (1991-96), Paredes (1996), Espinoza (1999), y en el ámbito regional: Dillon (1998), Martínez (1998), Espósito de Díaz (1999) y Colmenárez (2002).

De acuerdo con lo planteado en el programa de vinculación por la secretaria de educación pública en el año 2004, que menciona las acciones concretas en las instituciones educativas de México y algunos países muestran un panorama más amplio en modelos de organización. “Los procesos de apertura y de integración en mercados de ámbito superior están configurando una economía cada vez más globalizada, en la que la competencia llega rápidamente de todas partes.” La relación Universidad - empresa, que sigue despertando un gran interés, a pesar de que desde hace más de veinticinco años el argentino Jorge Sábato escribió que el grado de la innovación en un país es el resultado de una acción múltiple y coordinada del gobierno, la estructura productiva y la infraestructura científico-tecnológica. Martínez (2008). En la mayoría de los países latinoamericanos las relaciones entre universidad y empresa existen, pero en algunos casos en estado agonizante.

METODOLOGIA

Para la realización de este trabajo se adoptó un diseño cualitativo, con un acercamiento a la investigación documental. El estudio se inició con una búsqueda de documentos en la propia Internet, a partir de las palabras claves: vinculación universidad empresa, ganancia en el vínculo y factores que influyen para que no se logre la vinculación. Para tal fin, se utilizaron algunos de los motores de búsqueda disponibles en la red, como: Altavista, Google. Como resultado, se localizaron más de 30 referencias a sitios y documentos. En una revisión preliminar, se detectaron que sólo alrededor de 17 sitios y documentos parecían mostrar los principales aspectos del tema, mientras el resto sólo hacían mención del asunto o elaboraban aplicaciones prácticas de las propuestas hechas por otros autores. Además, la bibliografía de los documentos seleccionados sirvió de apuntador hacia otras referencias que coincidían en su importancia sobre el tema, así que fueron recuperadas en este momento. Hasta aquí se reunieron unos 12 artículos científicos, sitios en Internet, libros y artículos de difusión que se consideraron representativos del tema. La metodología siguió tres fases: identificación de estudios relevantes, requisitos para la inclusión y análisis para la adecuación de la información respecto del tema.

RESULTADOS Y CONCLUSIONES

A través de este recorrido textual sobre la temática de vinculación universidad empresa, se percibe como es un fenómeno problemático de llevar a cabo, por la falta de cooperación entre la Universidad y la Empresa, puesto que ambos entes han logrado salir adelante, cada uno desde diferentes expectativas de crecimiento. Sin embargo, existe un problema en cuestión de la efectividad del capital humano en la empresa, dicho personal está formado por la universidad, y si ésta desconoce las expectativas productivas difícilmente contribuye positivamente, en los diferentes textos se ha trabajado en que exista vinculación, solo que con ciertos factores que conducen al fracaso como son:

- Escaso reconocimiento universitario sobre la importante contribución que puede tener la transferencia de tecnología a los presupuestos para investigación.
- Las operaciones de las unidades de vinculación generalmente no cuentan con recursos suficientes y su administración, frecuentemente, está fragmentada y pobremente coordinada.
- La responsabilidad de la identificación de invenciones explotables comercialmente, en la mayoría de los casos, se deja al propio investigador.
- En muchos casos los procesos de valuación de proyectos utilizados son rudimentarios. En las etapas iniciales, se realizan pocos análisis de mercado, usualmente debido a limitaciones presupuestarias.
- Actitudes demasiado pasivas y selectivas para involucrarse en proyectos nuevos.
- Dejar las negociaciones en manos de administradores que no dedican tiempo completo a la vinculación.
- Ineficientes sistemas de seguimiento a los compromisos contractuales.

Se concluye que la desvinculación que existe entre Universidad - Empresa, se debe a la falta de comunicación efectiva, así mismo a diferencias de ideologías, es decir, que no se presentan fallas en la preparación del recurso humano, sino en la conexión que debiera acompañar a ambos sectores. A pesar de que existen políticas de comunicación.

Las causas que han impedido efectuar un trabajo en conjunto son, en primer lugar, una falta de confianza de los actores que participan; en segundo término, la inexistencia de un ente formal articulador entre ellos; luego, el desconocimiento de fuentes de financiamiento y, finalmente, el debilitamiento de las oportunidades para un diálogo efectivo. Se propone la manera para establecer una solución a los problemas antes planteados que sería la existencia de un organismo, llámese empresa o corporación, en el cual participen la Universidad, el Gobierno y las micro, pequeñas y medianas empresas, lo cual debe existir en cada una de las regiones, ya que cada una de ellas presenta particularidades propias. La vinculación involucra a la Universidad a la Empresa y al Estado, donde existe una problemática por: el desconocimiento de la trascendencia que tiene la universidad en el sector social, el desequilibrio entre la oferta de profesionistas y la demanda de los mismos en el mercado laboral, el cierre de empresas por falta de apoyo en su administración y el aumento de desempleo por cierre de empresas. Que se combaten con: el fortalecimiento de la formación profesional, conocimiento del Sector productivo (PYMES) de la potencialidad de los egresados de la universidad, impulso a las empresas a través de acciones de gestión e innovación, estructura del gobierno para apoyar las alianzas y colaboraciones que surjan entre la Universidad y la Empresa.

Obteniendo beneficios como: la consolidación de la pertinencia social de las instituciones de educación, preparación de profesionales capaces de interpretar los grandes cambios, retos que actualmente el presente demanda, mejoramiento de la administración de las empresas a través de innovación constante y en la sociedad se lograría potenciar el crecimiento económico y lograr mejores condiciones de vida para la población

Mara Alejandra Reyes Osua, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

Los incesantes y variados cambios que ha tenido la sociedad en todo el mundo, ha motivado que el enfoque tradicional de formación profesional este siendo sustituido por otro que pone mayor énfasis en la formación de competencias profesionales. Ante este contexto, el Centro de Estudios Superiores del Estado de Sonora implementa el modelo educativo Enfocado en el Aprendizaje y las Competencias del Estudiante, organizado con base en: a) las competencias profesionales, b) la flexibilidad curricular y académico-administrativa y c) el enfoque centrado en el estudiante y el aprendizaje. Uno de los pilares de dicho modelo es la "secuencia didáctica" como herramienta pedagógica en la construcción de las competencias profesionales. Después de haber realizado una investigación del tipo no experimental, los resultados presentan la percepción de los alumnos ante la secuencia didáctica, correlacionándose ésta con la variación entre el promedio final de la preparatoria y el promedio obtenido durante el semestre 2009- en la Universidad..

PALABRAS CLAVE: constructivismo, modelo educativo, secuencia didáctica.

ABSTRACT

The incessant and varied changes that society has had worldwide has motivated that the traditional approach to training is being replaced with one that places greater emphasis on skills training. Given this context, the Centro de Estudios Superiores del Estado de Sonora implement the educational model Focus on Learning and Skills Student organized based on: a) professional skills, b) the flexibility of curricula and academic-administrative and c) student-centered approach and learning. One of the pillars of this model is the "teaching sequence" as a teaching tool in building professional skills. After making a non-experimental research, the results show the perceptions of students before the teaching sequence, correlating it with the average grades variation between the end of the high school and the average during the semester 2009-2 in the University..

KEYWORDS: constructivism, educational model, teaching sequence

INTRODUCCIÓN

Teniendo en cuenta que un modelo educativo es una representación que refleja el diseño, la estructura y los componentes esenciales de un proceso formativo que sirve de guía para la acción, el Centro de Estudios Superiores del Estado de Sonora (CESUES) acorde a las exigencias actuales, ha implementado importantes cambios en su estructura académica con la implementación del modelo educativo ENFACE, que por sus siglas significa: ENFocado en el Aprendizaje y las Competencias del Estudiante y se organiza en torno a tres ejes fundamentales y estrechamente articulados: el enfoque centrado en el estudiante y el aprendizaje, el enfoque educativo basado en competencias profesionales y la flexibilidad curricular y académico administrativa (CESUES, 2006).

El eje centrado en el estudiante y el aprendizaje, se refiere a que se promueve la equidad entre los estudiantes, promoviendo apoyos académicos administrativos, económicos y de servicios estudiantiles que estimulan la construcción de su propio aprendizaje, en el desarrollo de las competencias profesionales se promueve la capacidad integral del estudiante para desempeñarse eficazmente en situaciones específicas del ámbito laboral y la flexibilidad curricular implica que se incorporan elementos académicos y administrativos, para garantizar condiciones favorables en el proceso formativo del estudiante, además de que se diversifican las experiencias y estrategias de aprendizaje, se otorga mayor peso al trabajo independiente del estudiante, permitiendo la autonomía y autorregulación del aprendizaje por medio de la planeación de su programa de curso (Agudelo, 2003).

De esta manera, la secuencia didáctica representa una poderosa herramienta pedagógica para apoyar al estudiante en el desarrollo de sus programas de curso, para lograr los objetivos fundamentales del modelo educativo ENFACE: formar profesionales con un alto nivel de competencias que les permitan ser generadores del desarrollo del conocimiento, de competencias y estrategias de aprendizaje, capaces de facilitar la integración de saberes (saber, saber ser y saber hacer) con la experiencia cotidiana y que se constituyan en agentes de desarrollo social.

REVISION LITERARIA

Es a finales del presente siglo, cuando a la par de innumerables cambios estructurales que marcan esta época, surge el constructivismo como corriente epistemológica válida, que sostiene que nuestros conocimientos no se basan únicamente en el entorno, sino que son resultado de lo que un observador construye a partir de analizar dicho entorno (Camejo, 2006). Destacando lo señalado por Pitágoras de que es el hombre la medida de todas las cosas y el mismo hombre quien determina como son las cosas, se pone en evidencia que la comprensión del mundo no proviene de descubrirlo, sino de las inferencias que se llevan a cabo para lograr dicha comprensión.

En este mismo contexto, Platón (427-347 a.C.) sostiene que todo conocimiento implica una determinada permanencia y que si los objetos se hallasen en constante transformación, el pensamiento no podría retenerlos; si bien afirma que el conocimiento no puede reducirse a simples sensaciones, también considera que la razón está en la cabeza, la energía moral en el pecho y el deseo en el abdomen, por lo que, sostiene, la parte del alma tiene el privilegio de la inmortalidad (Camejo, 2006).

Por otro lado, Hume destaca a partir de la teoría de la causalidad, la existencia de dos razones fundamentales, las relaciones de las ideas y las cuestiones de hecho; por lo que afirma que nuestros razonamientos consisten en comparar y descubrir relaciones constantes o inconstantes de los objetos entre sí. Sostiene que la causalidad es el resultado de una secreta conexión que permite a la mente inferir acerca de un objeto cuando es seguido o precedido de otro. Cabe mencionar los postulados de Piaget, quien afirma que nuestros conocimientos no provienen ni de la sensación ni de la percepción, sino de la totalidad de la acción, lo que implica que el conocimiento no se recibe en forma pasiva sino que se construye a partir de la suma de acciones (Camejo, 2006).

De estas afirmaciones se desprende que el conocimiento no se genera a partir de la observación pasiva, sino que se edifica a partir de las acciones consientes del individuo, de la observación y las experiencias vivenciales de su entorno, lo que representa un quiebre rotundo de la ciencia, dado que se habla de construir conocimiento, es decir, constructivismo.

En respuesta a lo anterior, las instituciones de educación superior han emprendido importantes procesos de cambio de sus modelos educativos, incorporando innovaciones surgidas de los avances de los distintos campos de conocimiento con el propósito de lograr mayor pertinencia y calidad en su funcionamiento.

Al respecto, se han identificado algunas tendencias relevantes que han marcado desde hace algunos años, el proceso de transformación de las instituciones de educación superior. Estas son: La emergencia del enfoque centrado en el estudiante y en el aprendizaje, la flexibilidad curricular y académica y el enfoque educativo basado en competencias, estas tendencias engloban distintos procesos y elementos que transforman los paradigmas que sustentan el proceso educativo, su gestión y administración.

Respecto a las bases psicopedagógicas, se advierte el interés por incorporar el constructivismo y otros enfoques cognoscitivistas y socioculturales, que inciden directamente en el desarrollo del enfoque centrado en el estudiante, en el aprendizaje y en la utilización de experiencias educativas que requieren una implicación más activa por parte del mismo. Desde el punto de vista de la gestión y administración de la institución y del proceso educativo, se advierte la importancia de la evaluación y la acreditación, así como el uso casi generalizado de la planeación y gestión estratégicas. De particular importancia es la emergencia del enfoque de formación por competencias, que sin duda, provoca un cambio fundamental en la concepción de la formación profesional.

Ante estas reformas educativas, en donde se transita de un modelo tradicional hacia un modelo constructivista, resulta indispensable la implementación de herramientas que brinden soporte ante un cambio de tal magnitud, los jóvenes universitarios abandonan el programa educativo tradicional con el que han sido formados a lo largo de su vida, para formarse a partir de la universidad con un programa educativo bajo el enfoque de las competencias. En este contexto, la secuencia didáctica (SD) viene a representar una valiosa herramienta en el aprendizaje autoregulado del que aprende, así como en la planeación secuencial de las actividades por parte del facilitador.

La SD implicará entonces una sucesión premeditada (planificada) de actividades (es decir un orden), las que serán desarrolladas en un determinado período de tiempo (con un ritmo). El orden y el ritmo constituyen los parámetros de las SD; además algunas actividades pueden ser propuestas por fuera de la misma es decir, realizadas en un contexto espacio- temporal distinto al aula (Rodríguez, 2007).

En el CESUES, la construcción de las SD tiene como punto de partida el perfil de egreso del programa educativo de que se trate, logrando una alineación entre las competencias de dicho perfil, con las competencias del módulo, las competencias de la asignatura y los elementos de competencia. Las SD representan una verdadera herramienta pedagógica para el que aprende, éstas incluyen, competencias de módulo, de asignatura, elementos de competencia, fases por elemento, así como contenido, estrategias de información y tiempo de dedicación, tomando en cuenta tanto las actividades supervisadas como las independientes (Anexo 1). Elementos importantes en la SD son también la forma de evaluación, los atributos genéricos, los valores y actitudes a desarrollar, así como la especificación de evidencias a presentar y fuentes de referencia.

OBJETIVO

Medir el impacto que ha tenido el uso de la secuencia didáctica en el desempeño académico de los estudiantes, correlacionándose ésta con la variación entre la calificación promedio obtenida al final de la preparatoria y la calificación promedio obtenida durante el semestre 2009-2, con el fin de identificar áreas de oportunidad de dicho instrumento.

METODOLOGÍA

El enfoque de la investigación es cuantitativa, con un diseño del tipo no experimental, ya que las variables no pueden manipularse deliberadamente (Mertens, 2005 en Hernández, 2006). A efecto de determinar y analizar las relaciones entre las diferentes variables que se midieron, se aplicó un cuestionario en la semana del 8 al 12 de marzo, a estudiantes de los cuatro programas educativos y seleccionados al azar.

Las variables que se consideran en la investigación son el nivel de uso de la secuencia didáctica, el promedio obtenido por los estudiantes en la preparatoria y el promedio obtenido durante su estancia en CESUES hasta el 09-2.

En relación a los sujetos de la investigación, se considera a todos los estudiantes del CESUES inscritos en el modelo educativo ENFACE.

El cálculo para el tamaño de la muestra se determinó utilizando la siguiente fórmula:

$$n = (Z^2 pqN) / (Ne^2 + Z^2 pq) \quad (1)$$

Considerando un nivel de confianza del 95%, y un margen de error del 5%.

Participantes

De una población de 468 alumnos del modelo educativo ENFACE en los cuatro programas académicos, se determinó una muestra de 349, considerando los siguientes criterios:

De inclusión: Alumnos inscritos en el modelo educativo ENFACE

De exclusión: Alumnos inscritos en el plan 2001.

Prorrateándose la muestra según el número de estudiantes escritos por programa educativo, como se indica a continuación:

Tabla 1. Población y muestra de alumnos.

Licenciatura	Población	Muestra
Nutrición Humana	187	126
Sistemas Computacionales y Administrativos	125	94
Comercio Internacional	96	77
Acuacultura	60	52
TOTAL	468	349

Se determinó el tamaño de la muestra por cada uno de los programas educativos que ofrece CESUES Navojoa.

Instrumento de recolección de datos:

Como instrumento de recolección de datos se utilizó un cuestionario compuesto de 21 reactivos con opción de respuesta dicotómica, para medir el impacto que la secuencia didáctica ha tenido en el desempeño académico de los estudiantes. Las preguntas fueron diseñadas para medir el grado de conocimiento de los estudiantes en cuanto a la sd, así como la opinión de los mismos respecto al uso del mencionado instrumento.

Procedimiento

Para el desarrollo de esta investigación, se llevó a cabo el procedimiento que se describe:

1. Determinación de la población.
2. Determinación de la muestra.
3. Prorrato de la muestra tomando en consideración el número de sujetos inscritos en cada uno de los programas educativos.
4. Determinación de tres tiempos para la aplicación de cuestionarios.
5. Aplicación de los cuestionarios en un primer tiempo.
6. Captura de datos en base de datos.
7. Elaboración de las gráficas de los datos en hoja de cálculo de Excel.
8. Preguntas de discusión.

9. Análisis.
10. Presentación de resultados.

RESULTADOS

Conforme a los datos arrojados por el instrumento de recolección de datos, reobserva que el 97% de los alumnos utilizan la secuencia didáctica, no obstante que en la preparatoria el 84% de los alumnos no habían utilizado, por lo que se puede afirmar que la implementación para el uso de la secuencia didáctica ha sido con éxito.

Por otro lado, en relación al uso se encontró que el 89% de alumnos analizan la secuencia didáctica al inicio de la asignatura, coincidiendo con el 90% de alumnos que afirma que el profesor realiza las estrategias de formación que indica la secuencia didáctica y el 87% de alumnos que opinan que si son evaluados conforme a lo establecido en la secuencia didáctica.

En su parte operativa, resultó que un 14% de los alumnos, opina que las fuentes de referencia del curso no coinciden con lo que indica la secuencia didáctica y el 27% de los alumnos dicen no encontrar en biblioteca los títulos que indica la secuencia didáctica. Por el contrario el 91% de alumnos opina que las actividades del curso se apegan a la secuencia didáctica.

Además, el impacto encontrado es que el 93% de los alumnos considera que la secuencia didáctica es una herramienta de apoyo para ellos y el 87 % de alumnos recomiendan su uso.

Finalmente se encontró que la calificación promedio de estos alumnos ascendió significativamente al pasar de un 8.3 de calificación en preparatoria a un 8.9 de calificación en universidad.

Tabla 2. Resultados de la encuesta aplicada a los alumnos de Modelo ENFACE

Preguntas	Respuestas	
	SI	NO
¿Has utilizado la secuencia didáctica?	97 %	3 %
¿En tu clase analizan la secuencia didáctica al inicio de la asignatura?	89 %	11 %
¿Consideras que la secuencia didáctica es una herramienta de apoyo para el alumno?	93 %	7 %
¿Habías utilizado la secuencia didáctica en la preparatoria?	16 %	84 %
¿Consideras que las actividades de tu curso se apegan a la secuencia didáctica?	91 %	9 %
¿Tu profesor realiza las estrategias de formación que indica la secuencia didáctica?	90 %	10 %
¿Eres evaluado conforme a lo establecido en la secuencia didáctica?	87 %	13 %
¿Las fuentes de referencia de tu curso coinciden con lo que indica la secuencia didáctica?	86 %	14 %
¿Encuentras en la biblioteca los títulos que indica la secuencia didáctica?	73 %	27 %
¿Recomiendas el uso de la secuencia didáctica?	87 %	13 %

Esta tabla muestra los resultados en términos relativos de la apreciación de los alumnos respecto de algunos aspectos relacionados con la secuencia didáctica.

CONCLUSIONES

Sin duda, la implementación del modelo educativo ENFACE, en el cuál el uso de la secuencia didáctica es herramienta pedagógica de apoyo al estudiante, presenta resultados muy satisfactorios, pues un alto porcentaje de alumnos la usa, la recomienda y considera que le sirve de apoyo.

Por otro lado, en menor medida pero sin dejar de ser satisfactorio, los maestros cumplen con las estrategias de formación y evaluación que indica la secuencia didáctica. Se aprecia que hay una razonable

minoría de maestros que no cumplen con lo que indica la secuencia didáctica, por lo que se recomienda capacitar e involucrar a todo el personal docente en la elaboración y actualización de las secuencias didácticas.

En el mismo sentido, se debe tener especial atención en asegurar la pertinencia de las referencias con el contenido del curso, así como asegurar la existencia de dichas referencias en biblioteca.

Por último, en esta primera exploración se puede inferir que la secuencia didáctica ha sido factor clave en el incremento de la calificación promedio de los alumnos que se forman con el Modelo ENFACE.

ABSTRACT

El presente trabajo fue realizado conforme a la normatividad mexicana. El objetivo de este estudio es identificar la autonomía conforme a derecho que posee el Estado como órgano fiscalizador supremo, así como la actividad financiera que lo rodea. Se realizó un estudio descriptivo de tipo documental, a través del cual se llevó a cabo un análisis de la Constitución y del Derecho Tributario, así como un comparativo con legislaciones de otros países a fin de identificar las obligaciones y perspectivas que ofrecen otros países en materia tributaria. Se plantearon y ejemplificaron las obligaciones del Estado, el nacimiento del tributo y la importancia de conocer el marco teórico que circunda el pago de impuestos así como la autonomía que posee el Estado para establecer impuestos de forma obligatoria. Con base en el análisis realizado se presentan en este estudio, algunas conclusiones y recomendaciones para los lectores interesados en conocer la actividad financiera del estado y su relación con el pago de tributos.

INTRODUCCIÓN

El Estado realiza diversas actividades para la ejecución de sus finalidades. A través del Poder Ejecutivo desarrolla una actividad que se encamina a la realización de los servicios públicos y a la satisfacción de las necesidades generales. Es necesario tener conocimiento de la Actividad Financiera del Estado ya que de esta derivan los impuestos, por consecuencia es importante estudiar de donde se originan y quien esta facultado para la imposición de los mismos.

El Estado tiene la capacidad de recaudar los impuestos conforme el artículo 25 de la Constitución Mexicana el cual establece: “Corresponde al Estado la rectoría del desarrollo nacional para garantizar que este sea integral y sustentable, que fortalezca la soberanía de la nación y su régimen el democrático y que, mediante el fomento del crecimiento económico y el empleo y una mas justa distribución del ingreso y la riqueza, permita el pleno ejercicio de la libertad y la dignidad de los individuos, grupos y clases sociales, cuya seguridad protege esta Constitución.”

En base a lo citado anteriormente es notorio que el Estado a través de su Plan Nacional de Desarrollo, planea, coordina y orienta la actividad económica del país, a través de la Ley de Ingresos y el Presupuesto de Egresos, estableciendo todas las contribuciones que a su parecer sean necesarias para cubrir los gastos y así cumplir el plan de desarrollo, promoviendo el crecimiento económico para lograr una verdadera distribución de la riqueza.

Esta actividad, que tiene una importancia primordial en el Estado moderno, ha recibido el nombre de actividad financiera, la cual según Giannini en su libro Instituciones de Derecho Tributario, la cumple el Estado “para administrar el patrimonio, para determinar y recaudar los tributos, para conservar, destinar o invertir las sumas ingresadas” y se distingue de todas las demás, en que no constituye un fin en si misma, o sea en que no atiende directamente a la satisfacción de una necesidad de la colectividad, sino que cumple una función instrumental de fundamental importancia, siendo su normal desenvolvimiento una condición indispensable para el desarrollo de todas las restantes actividades.

El fiscalista mexicano Joaquín B. Ortega ha definido la actividad financiera como “la actividad que desarrolla el Estado con el objeto de procurarse los medios necesarios para los gastos públicos destinados a la satisfacción de las necesidades públicas y en general a la realización de sus propios fines”.

REVISIÓN LITERARIA

La Actividad Financiera del Estado ha sido el principal fundamento de los tributos, llegando así Mayolo Sánchez Hernández a definirla como una actividad que desarrolla el Estado y que consiste en procurarse los recursos necesarios para estar en condiciones de sufragar los gastos públicos, destinados a satisfacer las necesidades colectivas a su cargo, mediante la prestación de los servicios públicos correspondientes.

Dentro de las necesidades que el Estado debe satisfacer, se encuentran las necesidades individuales, que son aquellas que afectan al individuo, independientemente de sus relaciones con la sociedad y el Estado. Del mismo modo, los individuos al vivir en sociedad provocan el surgimiento de determinadas necesidades y que determinados individuos no pueden satisfacerlas, por ello es necesario que se provea la satisfacción de los mismos

Por último, cuando surge la comunidad política en cualquiera de las formas del Estado, se le adjudica al Estado el cumplimiento de la tarea de satisfacer determinadas necesidades públicas. El conocimiento del proceso histórico acerca del fenómeno financiero, es de vital importancia pues permite ubicar en el tiempo, la actividad financiera del estado, lo que facilitará la comprensión de algunos temas, así como su planteamiento y las soluciones ofrecidas.

Dentro del Marco Histórico pudiéramos ubicar periodos que por su trascendencia constituyen el precedente de la Actividad Financiera del Estado. La historia muestra, que en algunos Estados de la antigüedad como Egipto, Grecia, y Roma, la riqueza se obtenía mediante la guerra y la conquista de otros pueblos, es decir, la fuerza del Estado No permitía los asuntos públicos, estos solo se obtenían median coacción.

La evolución del pensamiento financiero comenzó con el Cameralismo, esta corriente se presento con diferentes autores alemanes de los siglos XVII y XVIII, quienes tomaron el nombre por la derivación del vocablo Kammer que significa Cámara o Gabinete Real. Esta disciplina contiene nociones de Administración y gobierno, de Economía, Política Económica y de Finanzas Publicas.

Otra etapa de vital importancia en el establecimiento de la Actividad Financiera del Estado fue el pensamiento económico de Adam Smith, el cual estuvo influido por los fisiócratas. El pensamiento de Adam Smith en cuestión financiera, estuvo dirigido hacia dos temas: el papel del Estado y principios de la imposición.

Ya en el siglo XX, después del conflicto bélico de la Primera Guerra Mundial se desataron crisis económicas que culminaron con la depresión económica del año 1930, este hecho influyo en el pensamiento económico financiero. Al igual que la Segunda Guerra Mundial, contribuyo a dejar a un lado las ideas liberales acerca del automatismo del mercado y del papel pasivo que en la Economía debía desempeñar el Estado.

METODOLOGÍA

En la presente investigación se realiza un análisis de la importancia de la Actividad Financiera del Estado así como de sus orígenes como elemento clave para la implementación de los tributos en México. El presente estudio es documental. La investigación se realizó teniendo como universo el establecimiento de tributos en México. Se buscó información documental acerca de los orígenes del Derecho Tributario como principal disciplina reguladora del nacimiento de los impuestos, así como se busca establecer que el

Derecho Tributario es una disciplina intersubjetiva y formal, lo que la distingue de la política como la ética y de la economía.

Como parte del estudio, se busca destacar la autonomía legislativa que posee el Estado, poder en virtud del cual hace uso para la creación de Leyes Tributarias, es importante destacar, que las normas relativas a esa rama del Derecho constituyen un cuerpo de leyes separado y orgánico.

Es tal como nos muestra Jarach, Dino en su Curso Superior, en donde declara que el carácter de imposición se transforma en una especie de voluntariedad, y en lugar del término impuesto, que recuerda a la fuerza o el poder de imperio, en todas las constituciones francesas a partir de 1791 incluida la mexicana, se habla de contribuciones, por la razón histórica de que ya no existe la imposición como poder de imperio estatal sobre los ciudadanos, sino un poder estatal que se ejerce a través de un instrumento que es la Ley, o sea de un acto del Poder Legislativo.

De ahí que como fuente principal de la Actividad Financiera del Estado surja la rama del Derecho Tributario o Derecho Fiscal como también se le conoce, esta, está integrado por el conjunto de normas jurídicas que se ocupan fundamentalmente de regular la percepción de las contribuciones y las relaciones entre el Poder Público (Fisco) y los contribuyentes que tienen la obligación de cubrirlas.

Otro de los aspectos trascendentales entonces radica en destacar que la labor del jurista no es la de legislar, sino su misión consiste en ofrecer los instrumentos técnicos idóneos para realizar los propósitos del legislador, así al emanar la norma, se valorara críticamente el resultado obtenido.

RESULTADOS

Como es bien sabido hoy día, el tributo ya no se paga a los pueblos conquistadores, más bien es un instrumento subordinado al orden jurídico y asociado a la consecución de los más grandes objetivos comunitarios, es decir, el tributo es el elemento clave de la Actividad Financiera del Estado para satisfacer las necesidades colectivas.

Es digno de mención que el 16 de Noviembre de 1937 el Tribunal Fiscal Federal en México, dicta su famosa tesis, en la que sostiene que “debe atribuirse carácter de fiscal a cualquier ingreso del Erario, a toda prestación pecuniaria a favor del Estado, sin que interese distinguir si el deudor es un particular, persona física o moral, algún establecimiento público, ya sea entidad federativa u organismo municipal”.

Concluyendo entonces, lo que da el carácter de fiscal a un crédito es la circunstancia de que el sujeto activo de él sea el poder público y no afecte el sujeto pasivo para precisar el carácter de la prestación adecuada; el sujeto activo y no el pasivo proporciona el criterio necesario para precisar si la relación jurídica es de naturaleza fiscal. Por tanto, dicha tesis es muy clara al declarar que todos los créditos a favor del Erario Federal tienen el carácter de fiscales.

La Suprema Corte de Justicia de la Nación Mexicana (SCJN) por su parte declara en su tesis 158 de 1917 que por materia fiscal debe entenderse “todo lo relativo a impuesto o sanciones aplicadas con motivo de la infracción a las leyes que determinan impuestos”.

En un Estado de Derecho, como el mexicano, es importante que tanto el estado como los gobernados actúen dentro del orden jurídico, y para ello se encuentran establecidos en la Carta Magna, en los artículos 1, 14, 16 y 17 algunas máximas que tanto Estado como gobernado deben seguir para una mayor consecución del citado orden jurídico. Esto implica que el Estado no puede actuar sino sólo a partir de potestades en principio, expresamente consagradas por la norma jurídica y que son atribuibles sólo a él y sólo dentro de los límites marcados por las leyes.

El establecimiento de normas revela de forma eficaz el limitado poder del Estado y es además garante de la seguridad del gobernado, pues a merced de ella, el Estado no tiene mas formas de expresarse, que las que halle en el número de potestades que le atribuya la norma jurídica y respecto al gobernado, este encara sus relaciones frente al poder público dentro de un escenario de certidumbre a sabiendas que el Estado solo puede hacer lo que las potestades le permitan, nada fuera de ellas.

Para que haya estado de derecho si es una condición necesaria la exigencia de un ordenamiento jurídico y la proclamación del deber de sujeción a el. Por ello, es necesario que el ordenamiento jurídico consagre un cuerpo de garantías o derechos fundamentales a favor del gobernado, que asegure a favor de el un fácil acceso a demandar la tutela o protección de los jueces cuando van lesionados sus derechos e intereses legítimos, que la independencia de los jueces este garantizada, que los fallos de estos encuentren un adecuado acatamiento, etcétera.

Hoy día, en el siglo XXI el tributo, no puede existir en un Estado Democrático, si este no tiene una realidad justificada, es decir como fenómeno sometido y sujeto a todas las exigencias del Estado del Derecho. Lo primordial será entonces al establecer un tributo, su realidad jurídica, es decir si la ley no establece el tributo, este no existe, por tanto su primera naturaleza o condición es la jurídica y luego vendrán todas las demás.

CONCLUSIONES

Tras haber realizado la presente investigación se plantean las siguientes conclusiones: Primera: El punto de partida cuando se habla de materia tributaria, será la Constitución Política de los Estados Unidos Mexicanos, ya que al ser la Carta Magna o la norma de normas, esta se convierte en la norma jurídica que da legalidad y sustentación al resto de los componentes del orden jurídico mexicano. Es la Constitución la que definirá los elementos estructurales del edificio tributario, quien debe construir el sistema tributario, conforme a que principios debe cumplirse tal encomienda, etcétera.

Segunda: El legislador tendrá la tarea de cumplir el cometido constitucional de construir un sistema tributario con las características ordenadas por ella. Sin embargo vez tras vez, se han observado irregularidades en la puesta en marcha del establecimiento de tributos, que van desde un gravamen que no va de acuerdo a la capacidad económica de quien ha de soportarlo, hasta el quebrantamiento del principio de legalidad establecido en nuestra Constitución Mexicana al momento de creación de las Leyes, otras veces la batalla estriba en una norma jurídica legal pero viciada por circulares u ordenamientos internos de las Autoridades Hacendarias.

Tercera: El derecho tributario entonces enmarcado dentro de la Actividad Financiera del Estado, tiene mucho que decir, en la fase de la elaboración de los impuestos, al ofrecer al legislador una guía para juzgar sobre la lógica económica del sistema, sobre sus efectos económicos y sobre las alternativas posibles. Pero cuando la ley impositiva ha sido publicada, es decir, cuando el contribuyente se encuentra cara a cara ante una norma tributaria concreta, la cual en ocasiones es difícil de entender, no es momento de discurrir sobre las posibilidades de traslación que el tributo ofrece, o sobre las consecuencias que se habrían derivado para el, es mas bien el momento de ver si el contribuyente encuadra en el supuesto, es decir se trata de determinar que tipo de efectos ha derivado para él, el establecimiento de esta nueva ley.

RESUMEN

Peter Drucker (1962) hizo referencia a la logística como “el continente oscuro de la economía” y señaló que es la más descuidada y a la vez la más prometedora área de los negocios”. La globalización obliga a las empresas a crear estrategias que les lleven a la reducción de costos, en especial los costos de logísticos, afectan directamente la competitividad de las empresas en forma negativa con baja productividad y elevados costos. En México los costos logísticos en promedio representan del 15 al 20% del Producto Interno Bruto (PIB), afirma la Secretaría de Economía (APICS), siendo el sector logístico del comercio internacional uno de los mas importantes, a pesar de ser considerado como una función de costos innecesarios que no agregan valor. El exceso de regulación y normatividad por el gobierno, la falta de infraestructura en comunicación y transportes, de apoyos fiscales y Tecnologías, afectan la competitividad de las empresas del país México ocupa la posición 60 en competitividad a nivel mundial, conclusiones publicadas (Reporte Gobla de Competitividad, 2009) en el Encuentro de Logística; se requiere de desarrollo tecnológico e infraestructura, integración de cadenas de suministro efectivas, así como herramientas y mecanismos que permitan a las empresas crear estrategias hacia una ventaja competitiva y por ende a la productividad.

ABSTRACT

Peter Drucker (1962) referred to the logistics as " the dark continent of the economy " and indicated that it is the most careless and simultaneously the most promising area of the business ". The globalization forces to the companies to create strategies that take them to the reduction of costs, especially the costs of logistic, they affect directly the competitiveness of the companies in negative form with low productivity and high costs. In Mexico the logistic costs in average represent from 15 to 20 % of the Internal Brute Product (GDP), it affirms the Secretariat of Economy, being the logistic sector of the international trade one of the more important, in spite of being considered to be a function of unnecessary costs that do not add value. The excess of regulation and normatividad for the government, the empty of infrastructure in communication and transport, of fiscal supports and Technologies, they affect the competitiveness that the country. Mexico occupies the position 60 in competitiveness worldwide, conclusions published in the Meeting logistics; it is needed of technological development and infrastructure, effective chains of supply, as well as tools and mechanisms that allow the companies to create strategies towards a competitive advantage and finally to the productivity.

PALABRAS CLAVE: Competitividad, costos logísticos, cadena de suministro, productividad

INTRODUCCION

Hasta hace algunas décadas la logística no se consideraba como área importante de los negocios, pero debido a la Globalización, la competitividad de los mercados internacionales, así como la crisis actual por la que atraviesan gran parte de las empresas, las colocan dentro de escenario de cambios permanentes. En este escenario los clientes son cada vez más exigentes, se tienden a estandarizar los procesos y elevar la calidad tanto en los productos como en los servicios, dentro de todos estos cambios la calidad en el

servicio al cliente es sumamente importante y sobre todo la reducción de los costos logísticos tanto para el área de ventas como para la empresa en general.

La logística debe entenderse como un sistema integral, cuyo objetivo sea ofrecer el producto adecuado en el momento, lugar, cantidad y calidad adecuadas: todo ello tratando de eliminar los conflictos de intereses existentes, con el objetivo de minimizar no ya los costos parciales de cada función, sino los costos totales de la cadena de suministro” Urzelai A. (2006)

En México los costos logísticos representan en promedio del 15 al 20% del Producto Interno Bruto (PIB), datos proporcionados por la Secretaría de Economía, indicados por Asociación para la Administración de Operaciones, capítulo México (APICS). El sector logístico es uno de los sectores más importantes del país, debido al intercambio comercial con el país del norte considerando que dichos costos en la Pequeñas y Medianas Empresas (PYME) “se estiman 13% del total de las ventas y 25% más que el gasto equivalente en los Estados Unidos” datos publicados por Santiago Macías Coordinador General de COMPITE.

Cantidades importantes si consideramos que las PYME’s en México representan el 98% de las empresas y que a su vez estas consideran los costos logísticos irrelevantes, o de nula importancia, o en el peor de los casos no los toman en cuenta dentro de su gestión, a pesar de que “dichos costos actualmente representan entre el 6 y 7% de la facturación total de dichas empresas”, (publicado en la revista-e DatoPymes).

Como consecuencia de los datos anteriores, surge como herramienta de apoyo dentro de la logística, la Cadena de Suministro tomando creciente importancia, desarrollando la necesidad de crear una cultura empresarial que permita a las organizaciones competir satisfactoriamente en los diferentes mercados, integrando y coordinando las actividades de todos los participantes a través de la administración compartida en los procesos clave negocios que generan valor.

Al hablar Sablón Neyfe, et al (2009) de Cadena de Suministro,...“se refiere a la unión de todas empresas que participan en la producción, distribución, manipulación, almacenamiento y comercialización de un producto y sus componentes; es decir, integra todas las áreas que hacen posible que un producto o servicio salga al mercado en un momento determinado. Esto incluye proveedores de materias primas, fabricantes, distribuidores, transportistas y detallistas”.

Podemos aseverar que para elevar la competitividad es necesario efficientizar la cadena de suministro, considerada como un factor importante que puede garantizar la permanencia estratégica en el mercado, elevando los niveles de competitividad en el país y otorgando una ventaja competitiva a las empresas. Por lo que sería conveniente apoyar a las empresas mexicanas para elevar los niveles de competitividad que van en decadencia

EL presente trabajo pretende analizar la importancia de los costos logísticos, su evolución, la gestión de la Cadena de Suministro como medida de competitividad empresarial; definir conceptos básicos y posteriormente se presentarán datos relacionados con la problemática de competitividad visto desde la logística en México y finalmente se presentarán retos y conclusiones.

REVISION LITERARIA

Logística

La logística definida por Council of Logistics Management (CLM) como “la parte del proceso de la cadena de suministro que planea, implementa y controla eficiente y efectivamente el flujo y

almacenamiento de bienes, servicios e información relacionada desde el punto de origen hasta el consumo, para así satisfacer las necesidades del cliente”.

En dicha definición del CLM, no se hace referencia al traslado de personas comenta Long D. (2009), por lo que el considera una definición de logística comercial, según el mismo autor, la logística comercial “se refiere al mas elevado nivel de integración de las operaciones de la compañía”, como la participación de finanzas y mercadotecnia en el trabajo logístico. En cambio la logística integrada para Long D. (2009), “es similar a la anterior pero hace hincapié en la coordinación con los proveedores y los clientes”. El mismo autor hace una diferenciación cuando se incluye el traslado de personas, nos dice que se trata de logística integrada. Desde su punto de vista la logística eficiente requiere de la coordinación de otras compañías, otras organizaciones y de muchas personas, es hacer que todos trabajen en beneficio de la empresa.

Bowersox D. (2007) nos dice que la logística “se enfoca en la responsabilidad de diseñar y administrar sistemas con el fin de controlar el movimiento y el posicionamiento geográfico de la materia prima, el trabajo en proceso y el inventario terminado al costo total mas bajo”. El mismo autor nos hace reflexión que la logística implica la administración del procesamiento de pedidos, el manejo de materiales, el inventario, el transporte y la combinación del almacenamiento, y el empaque; todo esto integrado mediante la red empresarial, para conseguir una ventaja competitiva.

Czinkota, M. (2008) define la logística internacional como: “el diseño y la administración de un sistema que controla el flujo de materiales dentro, entre y fuera de la corporación internacional”. En su definición abarca un concepto de movimiento total de bienes, incluyendo en forma simultánea importaciones y exportaciones, adoptando un enfoque de sistemas reconoce los vínculos entre los componentes logísticos dentro y fuera de la organización.

Otra definición nos dice que “la logística agrupa actividades que ordenan los flujos de materiales, coordinando recursos y para asegurar un nivel determinado de servicio al menor coste posible; Heskett, James, mencionado por: Pau, J y Navascué (2006).

El Council of Logistics Management define la logística como “la parte del proceso de gestión de la cadena de suministro encargada de planificar, implementar y controlar de forma eficiente y efectiva el almacenaje y flujo directo e inverso de los bienes, servicios y toda la información relacionada con éstos, entre el punto de origen y el punto de consumo, con el propósito de cumplir con las expectativas del consumidor”.

La logística debe entenderse como un sistema integral, cuyo objetivo sea ofrecer el producto adecuado en el momento, lugar, cantidad y calidad adecuadas: todo ello tratando de eliminar los conflictos de intereses existentes, con el objetivo de minimizar no ya los costos parciales de cada función, sino los costos totales de la cadena de suministro” Urzelai A. (2006)

la integración de las actividades en función de asegurar el flujo y garantizar un alto nivel de servicio al cliente procurando la reducción de costos de: Almacenaje, despacho, aprovisionamiento, transporte, distribución, atención a pedidos, planificación y control de la producción, reciclaje y control de residuos, control de la calidad, mantenimiento y protección al medio ambiente entre otras. El área de logística se debe encargar de gestionar que cada una de las actividades se realice en forma coordinada garantizando una solución integral en el servicio al cliente.

Evolución De La Logística

Las prácticas empresariales del siglo XX, la estructura de distribución, la tecnología utilizada y para efectuar la entrega de mercancías, ha evolucionado de acuerdo a las necesidades del entorno. En las últimas 5 décadas, la logística ha cobrado mayor relevancia a medida que las distancias se acortan por la Globalización. Expandiéndose más allá de la actividad de transporte, en la actualidad abarca una perspectiva más amplia e integrada a la administración de costos y suministros hasta llegar a un posicionamiento en el mercado. Desde los tiempos en que Marco Polo, se tenía que conseguir el equilibrio entre la operación logística como el transporte y los inventarios los gerentes de logística comenzaron, resultó evidente que se podía ganar una ventaja competitiva al proveer un servicio logístico de clase superior a clientes selectos, en particular, a los estratégicos desde épocas muy remotas

Posteriormente se utilizó la logística en la milicia para posteriormente ser adoptada por las empresas como medida eficiente de competitividad y para incrementar la rentabilidad del negocio. El detonador importante para mejorar las capacidades de la logística fue, la reducción de costos, el uso de la tecnología desarrollo de las capacidades de la logística y mejor servicio al cliente. La logística fue evolucionando conforme a los requerimientos del entorno.

En 1959 se descubre la logística integral y la concientización de los costos totales. Enfoque de costos como estructura sistémica. 1960, la optimización del servicio al cliente a través de mejorar el desempeño. En 1970, la logística se centra en el recurso del outsourcing integrado por multioperacionales existe un nuevo interés en la integración de las operaciones, es en esta se implantan conceptos como Justo a Tiempo (JIT) que llegó a beneficiar el manejo de los inventarios. 1980 se modifican las prácticas en los negocios con programas nuevos y filosofías administrativas que se utilizan como herramienta de competitividad. 1990 se hace énfasis en las relaciones cercanas con los clientes. Se desarrollaron relaciones muy cercanas con los clientes, sobre todo con los denominados clientes estratégicos y se enfoca la atención en establecer alianzas con los proveedores; todo con el afán de aumentar el control logístico total sobre la empresa. 2000 Existe una clara conciencia de la necesidad de realizar una transformación en la administración para afrontar con éxito la administración logística de la cadena de Suministros.

Costos Logísticos

La exigencia de los mercados, la integración de bloques económicos y la globalización, han obligado a las empresas de todo el mundo a entrar en un proceso de mejoramiento continuo a fin de competir y mantenerse en el mercado, busca atender eficientemente a sus clientes, acortar tiempos de entrega y haciendo uso eficiente de las nuevas tecnologías, dando como consecuencia la elevación de costos, entre ellos los costos logísticos, anteriormente llamados costos de distribución, de pedido, almacenaje, etc.

Existe una gran cantidad de costos de operación que produce un efecto negativo en la eficiencia, elevando los costos de los productos, llamados costos ocultos. Los costos logísticos afectan directamente la competitividad de las empresas “en parte al exceso en la regulación y normatividad del gobierno, así como la falta de infraestructura en comunicación y transportes según conclusiones del V Encuentro de Transporte y Logística.

El controlar los costos logísticos “se ha vuelto una necesidad para las compañías que participan en comercio internacional, dicho control es vital para mantener la competitividad, los gerentes requieren de información precisa enfocada a la reducción de costos de la cadena de suministro para asegurar la maximización de la rentabilidad” Prieto M. y Valladares H.(2007).

Respecto al control de costos Foster & Young (1997) lo consideran uno de los aspectos prioritarios al que debe enfrentarse la administración de las organizaciones en general y en las logísticas en particular teniendo como centro del control la búsqueda de los inductores de costos

Cadena De Suministro

El concepto de supply chain management (SCM) se ha traducido literalmente al castellano como “gestión de la cadena de suministro”, ha cobrado fuerza en el mundo de los negocios convirtiéndose en un factor importante de los escenarios logísticos. Urzelai A. (2006) la define “como una estrategia global encargada de gestionar conjuntamente las funciones, procesos, actividades y agentes que componen la cadena de suministro

Hablar de Cadena de Suministro,...“se refiere a la unión de todas empresas que participan en la producción, distribución, manipulación, almacenamiento y comercialización de un producto y sus componentes; es decir, integra todas las empresas que hacen posible que un producto salga al mercado en un momento determinado. Esto incluye proveedores de materias primas, fabricantes, distribuidores, transportistas y detallistas” (Sablón Neyfe, et al). La Administración de la cadena de suministro, “consiste en la colaboración de las empresas que persiguen un posicionamiento estratégico común y pretende mejorar su eficiencia operativa”. El concepto de cadena de suministro integrada suele ilustrarse mediante un diagrama que relaciona las empresas participantes en una unidad competitiva coordinada”. Bowersox D. (2007)

Para Long D. (2009) la cadena de suministro “es la integración de procesos clave desde el usuario final hasta el proveedor original que surte los productos, servicios o información que agreguen valor para el cliente y otros terceros interesados”. El mismo autor nos define la Administración de la cadena de suministro se como “el concepto que identifica la manera en que los eslabones de la cadena se integran para promover la eficiencia” La integración de la cadena de valor es relevante para aumentar el valor del proceso completo para todas las empresas participantes, creando mayor valor para el consumidor

Competitividad

La competitividad “es la capacidad que tiene una empresa o país de obtener rentabilidad en el mercado en relación a sus competidores. La competitividad depende de la relación entre el valor y la cantidad del producto ofrecido y los insumos necesarios para obtenerlo (productividad), y la productividad de los otros oferentes del mercado. El concepto de competitividad se puede aplicar tanto a una empresa como a un país. Porter M. (2003) define la ventaja competitiva “las empresas de una nación deben pasar de competir sobre ventajas comparativas (bajo costo de mano de obra o de recursos naturales) a competir sobre ventajas competitivas que surjan a partir de productos y procesos únicos”.

“Una empresa tiene una ventaja competitiva cuando cuenta con una mejor posición que sus rivales o competidores, para asegurar a los clientes y defenderse contra las fuerzas competitivas,”

Es “la capacidad de crear un entorno que favorezca el crecimiento sostenido de la productividad, y que refleje en niveles de vida mas elevados para la población”. Abel y Romo (2004) Al hablar de competitividad de un país se refiere a su capacidad de vender productos o servicios en el mercado internacional, en relación a los otros competidores en el mercado. La competitividad de un país estaría determinada por la suma de la competitividad de las firmas de ese país.

PROBLEMÁTICA DE COMPETITIVIDAD EN MÉXICO

Competitividad En México

La eficiencia de la logística como factor clave de la competitividad mundial, pone a México con un porcentaje de 13.5% en el PIB, mientras que Estados Unidos como principal competidor maneja un 9.5% cifras proporcionadas por la Secretaría de Economía. Así mismo el país ocupa la posición 60 en el Reporte Global de Competitividad 2008 – 2009. Uno de los factores que miden el desempeño logístico en las empresas es la calidad en la infraestructura, el entorno económico, la fiabilidad del sistema comercial y la cadena de suministro.

En México los costos logísticos representan en promedio del 15 al 20% del Producto Interno Bruto (PIB), datos proporcionados por la Secretaría de Economía, indicados por Asociación para la Administración de Operaciones, capítulo México (APICS). El sector logístico es uno de los sectores más importantes del país, debido al intercambio comercial con el país del norte considerando que dichos costos en la Pequeñas y Medianas Empresas (PYME) “se estiman 13% del total de las ventas y 25% más que el gasto equivalente en los Estados Unidos” datos publicados por Santiago Macías Coordinador General de COMPITE.

Lahore (2009) hace la comparación de los países de América Latina con la OCDE, donde ilustra de manera detallada cuáles son los mayores retos, donde se encuentran principalmente en los factores que miden el entorno institucional, las infraestructuras, la innovación, la preparación tecnológica y la educación. El Foro Económico Mundial (WEF, por sus siglas en inglés) define la competitividad como “el conjunto de instituciones, políticas y factores que determinan el nivel de productividad de un país”¹. Desde 1979, el FEM ha elaborado anualmente el Reporte Global de Competitividad (RGC) donde se analizan los factores macro y microeconómicos que determinan la competitividad de los países.

Tabla no. 1 Índices de Competitividad Mundial

Países	Índice Global de Competitividad	Requerimientos Básicos	Eficiencia	Innovación y sofisticación
	08-09			
Chile	28	36	30	44
Barbados	47	33	56	51

Fuente: Informe Global de Competitividad 2009 – 2010 del Foro Económico Mundial

En el reporte sobre la competitividad el Foro de Economía Mundial 2009, México se ubico en el lugar 60 en el ranking de competitividad, mismo sitio que ocupo el año pasado. Entre los principales problemas para realizar negocios, según el informe de la competitividad 2009-2010, están la ineficiencia de la burocracia, con 5.5 por ciento de las respuestas; la corrupción, con 12.8 por ciento; el crimen y el robo, con 12.4 por ciento; el acceso al financiamiento, con 12.3 por ciento, y las regulaciones laborales restrictivas, con 10.5 por ciento”.

Dentro de la clasificación de los países de Latinoamérica, México ocupa el sexto lugar después de Chile, que se encuentra en el sitio 30; Puerto Rico, en el 42; Costa Rica, en el 55; Brasil, en el 56, y Panamá, en el 59. En es estudio de este año se incluyeron 133 países en lugar de los 134 del año pasado, pues Moldavia salió del estudio por falta de datos. Desplaza Suiza a EU en competitividad

"La competitividad muestra la posición competitiva de los países del mundo en todas las etapas de desarrollo” Estos pilares son: Instituciones, Infraestructura, Estabilidad Macroeconómica, Salud y Educación, Capacitación y Eficiencia en el mercado laboral y de bienes, eficiencia Financiera, Preparación tecnológica, Innovación y sofisticación empresarial (INCAE, Revista de Negocios, 2010) México se mantiene en la posición 60, destaca su tamaño de mercado, clusters relativamente bien desarrollados en algunas regiones del país y buena dependencia en manufactura, sin embargo tiene deficiencias considerables en Instituciones, cargas laborales, burocratización, disciplina fiscal y diversificación en la economía.

Podemos distinguir que la logística al igual que la cadena de suministro no son una moda, sino una pieza fundamental o herramientas encaminadas a la consecución de ventajas competitivas basadas en la reducción de costos como estrategia Si consideramos el nuevo entorno mundial donde el concepto de globalización o mundialización nos lleva a que los proveedores puedan estar en cualquier parte del mundo, las fábricas también repartidas por todo el mundo y los clientes sin duda en cualquier parte, es evidente que la función logística cobra una importancia de primerísimo nivel. El coste de la logística en el entorno internacional puede llegar hasta un 30% del costo del producto. Asociación para la Administración de Operaciones (APICS) Capítulo México (2008)

CONCLUSIONES

En el mundo actual los clientes demandan una gran variedad de productos y servicios, con características especifica en el tiempo oportuno, esto aunado a la internacionalización de actividades comerciales y globalización hace que los mercados se vuelvan más exigentes, los tiempos de entrega mas cortos, los procesos más costosos y el desempeño de actividades operativas tal como la transportación, fabricación y entrega de materiales, productos y servicios sea más rentable y eficiente. Si a esto le agregamos tecnologías de la información nos dará como consecuencia un aumento significativo en los costos.

Las empresas se ven obligadas a tomar muy en serio el concepto de Gestión Logística y cadena de suministro, si realmente quieren tener una ventaja competitiva y permanecer en el mercado mediante la reducción de costos. Al definir y entender la estructura de costos la administración tomadora de decisiones puede analizar y crear nuevas estrategias que permitan llegar a niveles elevados de competitividad. Podemos concluir que la logística y la cadena de suministro son pieza fundamental en la reducción de costos y no son una moda que pronto desaparecerá, sino una consecución de ventajas competitivas basados.

REFLEXIONES

No todo esta perdido pues existen evidencias de que se esta trabajando al respecto por parte de las empresas, certificando ejecutivos especializados en Cadena de Suministro, proporcionando

financiamiento y capacitación a pequeñas empresas para compra de equipo de tecnologías de la información, se trabaja en la cultura organizacional que apoye a mejorar el ambiente de trabajo, se habla de mejorar la infraestructura de cada una de las regiones del país y de fortalecer la economía promoviendo en integrando a las empresas en cluster que les permitan crecer en conjunto y beneficiar a todos.

PERCEPCIÓN DEL CAMBIO DE MARCA CUANDO EL PRODUCTO ES EL ESTABLECIMIENTO COMERCIAL: CASO SUSTITUCION DE ALMACENES VIVERO Y ALMACENES LEY POR ALMACENES ÉXITO - CARTAGENA DE INDIAS COLOMBIA

Emperatriz Londoño Aldana, Universidad De Cartagena
María Eugenia Navas Ríos, Universidad De Cartagena

RESUMEN

Los diferentes atributos de una marca, de acuerdo con López y Benlloch (2005), sirven para crear vínculos positivos, generar confianza y garantizar la credibilidad del producto que representa. Dichos vínculos refuerzan la imagen de marca percibida por el usuario o consumidor y el consecuente posicionamiento de la misma. Cuando este concepto hace referencia al establecimiento de venta al detalle “la marca” corresponde al nombre que éste tenga; es decir, indistintamente de las marcas de los productos, siempre que el cliente elige el sitio para proveerse “compra” el almacén. La presente investigación se centra en el contraste de la percepción que tienen los compradores cambio de marca de Almacenes Vivero y Almacenes Ley por Almacenes Éxito, los cuales aunque comparten geográficamente el área de influencia, los efectos difieren considerablemente.

PALABRAS CLAVE: Imagen, posicionamiento, marca, comercio minorista, supermercado, hipermercado.

INTRODUCCION

En Colombia, al igual que en otros países de América Latina, desde el punto de vista del comercio al por menor, la década del noventa se caracterizó por el crecimiento de las grandes cadenas de supermercados e hipermercados y el ingreso al mercado de fuertes competidores internacionales. Este crecimiento producido en medio de fuertes crisis económicas generó una fuerte competencia intertipo e intratipo, en beneficio de la captura del consumidor, evidenciándose con un comportamiento atípico en el ciclo de vida del establecimiento comercial, toda vez que se evidenciaron características de canibalismo en plena etapa de introducción.

Posteriormente, la dinámica comercial de grandes superficies se ha focalizado en la ampliación de la cobertura a nivel nacional y a la concentración de las principales cadenas nacionales y extranjeras. El mercado de grandes minoristas, actualmente se concentra mayoritariamente en sólo seis cadenas principales: Almacenes Éxito, Organización Olímpica, Carrefour, La 14 Makro y Alkosto. La base de dichos cambios se encuentra tanto en las estrategias de crecimiento interno como externo de las respectivas organizaciones.

El crecimiento externo fundamentado en las alianzas, compras y fusiones de supermercados e hipermercados, de una u otra forma ejerce un efecto positivo o negativo en el consumidor. Este efecto se evidencia a través de la percepción que tienen los compradores respecto al obligado cambio de una marca con la que se sentían identificados y acostumbrados, por otra con la que deben iniciar un proceso de adaptación.

MARCO TEORICO

La primera actividad mercantil reconocida por la humanidad fue la comercial; ésta, inicialmente, consistió en vender los excedentes de la producción propia para posteriormente hacerlo con la de otros productores a la manera de intermediación entre el productor y el consumidor potencial. La ampliación de los mercados y el fortalecimiento de la división social del trabajo, convirtieron al comerciante en un profesional encargado de establecer el *punte* entre una serie de productores, que ofertaban bienes diversos, y un mundo disperso de consumidores con diferentes necesidades y bajos volúmenes individuales de compra, bien fuera recorriendo las distancias que los separaban (comerciante nómada) o estableciendo lugares de encuentro como los puestos en el mercado o locales comerciales (Bonilla y Bejarano, 2001:16).

Dentro de la gestión empresarial, la distribución comercial abarca el conjunto de actividades necesarias para situar los bienes y servicios producidos, a disposición del comprador final en las condiciones de lugar, tiempo, forma y cantidad deseadas (Chirouze, 1982; 5). Como instrumento de marketing, tiene como objetivo trasladar el producto desde su origen -la fábrica- hasta el consumidor final, es decir, su misión es poner el producto a disposición del consumidor final o del comprador industrial en la cantidad demandada, en el momento que lo necesite y en lugar donde desee adquirirlo; esta función, es llevada a cabo fundamentalmente por el comerciante, quien compra o tiene en depósito los productos para su posterior venta (Santesmases, 1996; 542)

El comercio minorista tiene la particularidad de proyectarse y diferenciarse de los demás no solamente por la calidad y variedad de los productos que vende sino por las características propias del punto de venta en que opera. Ello unido a las estrategias de marketing utilizadas genera lazos de unión con clientes y compradores no permanentes que apuntan a un posicionamiento en la mente de los mismos y por ende una recordación de marca. En este orden de ideas el enfoque teórico que respalda la investigación de la cual se deriva el presente documento se fundamenta en los conceptos de marca, imagen y posicionamiento.

Marca: Según la Asociación Americana de Marketing, marca (Stern, 2006) es “*un nombre, un término, una señal, un símbolo, un diseño, o una combinación de alguno de ellos que identifica productos y servicios de una empresa y los diferencia de los competidores*”. Esta definición llevada al campo del marketing, en concepto de Benett (1988), hace referencia a un nombre, término, signo, símbolo, diseño o cualquier combinación de estos conceptos utilizados para identificar bienes y servicios a la venta, es decir, como afirma Drawbaugh (2001), las marcas consisten en representaciones verbales y visuales asociadas a organizaciones y sus servicios (Fournier, 1998).

Para López y Benlloch (2005), la marca se compone de diferentes atributos, beneficios, valores, cultura, personalidad, con un claro objetivo: *crear vínculos positivos, para generar confianza, garantizar la credibilidad del producto que representa*; por ello cada marca ocupa una posición en el mercado, configurada por una serie de atributos y característicos que los consumidores asocian o asignan a la misma en relación con las demás marcas con quienes compite (García. G., 2007). Cuando se trata de un negocio de venta al detalle, los atributos mencionados se focalizan en las características de propias el establecimiento, por tanto las marcas de los productos que oferta pasan a convertirse en uno de ellos (Londoño, 2008).

Imagen de marca

La imagen de marca es un concepto muy intuitivo, aunque la acotación terminológica del mismo presenta cierta dificultad (Martinez, Pina, 2005). De acuerdo con Dobni y Zinkhan (1990), desde las primeras investigaciones sobre la materia, que surgieron en los años 50 del siglo XX, hasta prácticamente nuestros

días, no ha existido un consenso suficiente ni en la definición de imagen de marca ni en la forma de hacer operativo este constructo. Keller (1993) se refiere a ésta como las “percepciones sobre la marca que se reflejan como asociaciones existentes en la memoria del consumidor”(Keller 1993) . Dichas asociaciones, anota, pueden descomponerse en atributos, beneficios y actitudes y crearse de la experiencia directa con el bien o servicio, por la información comunicada (por la propia empresa, otras fuentes comerciales y a través del efecto boca-oído) y mediante la realización de inferencias en función de los conocimientos sobre la empresa, país de origen y cualquier otra asociación preexistente. Refiriéndose a las mismas Aaker (1992) manifiesta que ayudan en el proceso de decisión del consumidor ya que sientan las bases para la diferenciación y la extensión del nombre y proporcionan una razón para comprar, a la vez que se crean sentimientos positivos hacia la marca.

Santesmases (2007) se refiere a la *imagen de marca* como una representación mental de los atributos y beneficios del producto o marca. Es un fenómeno multidimensional que depende de cómo se perciben tales atributos y beneficios. La percepción del producto puede determinarse mediante técnicas estadísticas, que miden la posición en un *mapa* (mapa perceptual) de los productos en relación con la de los demás.

En la actualidad, dice Costa (2004), la sostenibilidad de las organizaciones mayoritariamente tiene su asiento en el grado de reconocimiento *de marca* por parte de los consumidores y que apunta al sostenimiento de las ventas en el tiempo. Ella es el resultado cuantitativo y cualitativo de todas sus comunicaciones, por tanto se configura a partir de una serie de fuentes de información, derivadas de las características del bien o servicio como tales (envase, precio, vendedor, distribución) de las acciones de comunicación acerca de éstos y de las experiencias (buenas o malas) pasadas o actuales y personales o a través de terceros con los mismos.

Imagen De Marca En Los Establecimientos Comerciales

La imagen de un establecimiento comercial, afirma Martineau (1958), hace referencia a la forma en la que el establecimiento es definido en la mente de los compradores, en función de sus *características funcionales* y de una serie de atributos psicológicos. A ello, agregan Vásquez Casielles (1989) y Azpiazu (1992): La percepción de los establecimientos por parte del consumidor y las elecciones reales y preferidas que éste realiza, permiten identificar grupos de establecimientos más directamente competitivos, en cuanto a imagen percibida, como a la distribución del gasto y tipo de compra de que se trate, entre los establecimientos considerados.

Como quiera que la imagen de marca de los establecimientos comerciales se refiera al conjunto de *impresiones de carácter subjetivo que el consumidor asocia respecto a una determinada marca o establecimiento*, dichas impresiones afectan su percepción y condicionan su proceso de compra. Podns, et., alia (2008), proponen un modelo conceptual para la elección de un punto de venta (figura 1), el cual se sustenta en los fundamentos de los diferentes conjuntos de elección, la relación imagen-satisfacción del cliente, las teorías generales del comportamiento del consumidor así como la conducta que este seguiría una vez elegido el punto de venta y efectuada la compra (comportamiento post-compra); estos aspectos dicen, en buena medida vienen determinados por el papel que ejerce la imagen en el comportamiento del consumidor pues esta variable decide en última instancia el punto de venta elegido.

METODOLOGIA

El presente documento se deriva de una investigación fundamentalmente descriptiva utilizando el método transversal de encuestas, sin dejar de lado la causalidad de algunas variables en beneficio de la necesaria contrastación de hipótesis. Dado que la investigación busca contrastar el efecto del *cambio de marca* cuando al consumidor se le sustituye un establecimiento por otro, en este caso Almacenes Vivero por

Almacenes Éxito y Almacenes LEY por Almacenes Éxito, dentro de un área de influencia compartida, se ha tomado una muestra de 89 personas (1 por familia) en cada caso. Resultado de la aplicación de la fórmula de proporciones para población infinita, en donde el *elemento muestral* (UPM) corresponde a hombres y mujeres mayores de 18 años y la *unidad muestral* (USM) el supermercado donde se recoge la información.

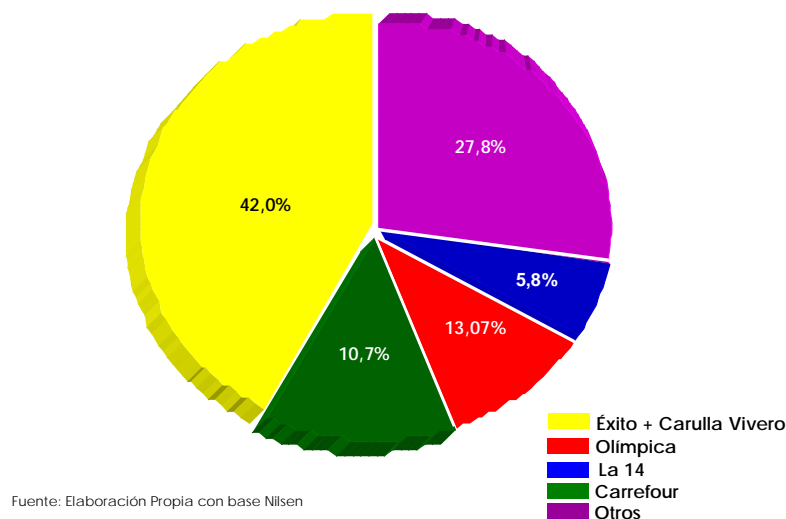

La variable principal (p) se refiere al porcentaje de personas que se considera afectado por el cambio de marca; por ende (q) corresponde al porcentaje de personas para quienes dio cambio es indiferente, con un nivel de confianza del 97% y un margen de error de 1% Las variables analizadas desde la percepción del consumidor hacen referencia a la *ubicación y accesibilidad, calidad, variedad y precio de productos ofertados, ambientación comodidad del establecimiento y servicio al cliente.*

El procesamiento de la información y validez del instrumento de recolección de información se llevó a cabo con la utilización del software DYANE, *versión 4, Diseño y análisis de encuestas en investigación social y de mercados* Para el análisis de la percepción del consumidor frente al cambio de marca, además de las tabulaciones simples y cruzadas se ha utilizado una escala de Likert con valoración de cinco puntos que permite hacer un AFC (análisis factorial de correspondencias). La validación de esta escala con el coeficiente Alfa de Cronbach dio resultados superiores al 0.7 (Peterson, 1994) lo que muestra su alta consistencia interna.

ANÁLISIS DE RESULTADOS

La dinámica comercial de grandes superficies en Colombia ha desembocado en la concentración de las principales cadenas de venta al detalle en donde sólo una de ellas (Organización Olímpica) es de capital totalmente nacional. Los movimientos comerciales ocurridos durante la última década han apuntado tanto al crecimiento interno como al crecimiento externo de dichas organizaciones. El crecimiento externo resultado de las diferentes alianzas, compras y fusiones ha llevado a Almacenes Éxito a colocarse a la cabeza de los grandes minoristas con una participación en el mercado del 42%. Ver figura 1.

Figura 1. Grandes Minoristas: Participación en el Mercado

Dentro de las adquisiciones realizadas por Almacenes Éxito y que constituyen el centro de interés en la investigación por tener asiento en la ciudad de Cartagena, se encuentran Almacenes Ley de la cadena Cadenalco y Almacenes Vivero de la Cadena Carulla-Vivero.

Motivos de compra Al contrastar los resultados provenientes de la percepción que tienen los compradores de la nueva *marca* en función de las características de las *marcas* a las que accedían antes, se ha encontrado que mientras que el cambio de Ley a Éxito ha tenido efectos favorables, en el caso del cambio de Vivero Castellana por Éxito Castellana, el efecto ha sido igualmente favorable y las personas añoran la marca anterior; muchas de ellas al referirse al nuevo almacén lo llaman Vivero y otras han preferido cambiar de proveedor.

Es importante señalar que anteriormente el comprador podía acceder a tres marcas diferentes que se encontraban a lo sumo a un kilómetro de distancia; hoy en ese mismo espacio se encuentra una sola marca con tres puntos de venta con un área de influencia compartida. Al mirar los motivos por los cuales los compradores acceden a la nueva *marca* se ha encontrado que en ambos casos el principal motivo para elegir a estos establecimientos es *la buena ubicación y facilidad de acceso al establecimiento así como la cercanía del sitio de vivienda*. En otros motivos como *buenos precios, variedad y calidad de productos y marcas, así como el tipo de promociones*, favorecen al Éxito de los Ejecutivos mas no al Éxito Castellana, pues es mínimo el número de personas que encuentra conveniente este tipo de aspectos. Ver tabla 1.

Tabla 1. Motivos De Compra En Los Supermercados

MOTIVOS DE COMPRA	ÉXITO LOS EJECUTIVOS		ÉXITO LA CASTELLANA	
	FREC	%	FREC.	%
1 Buena Ubicación/acceso	53	51,46	42	47,19

TOTAL	410	(103)	297	(89)

Efecto del cambio de marca desde la perspectiva del comprador

Percepción de los productos ofertados

De acuerdo con la calificación asignada, desde el punto de vista del género se encontró que tanto para hombres como para mujeres la *presentación de los productos* no difiere mucho; en cuanto a la variedad de los mismos, mientras que para los compradores del anterior Ley, el cambio de marca ha favorecido la *variedad*, para los actuales compradores de Éxito Castellana, el Vivero les ofrecía más variedad de productos. Otro tanto sucede con la percepción que se tiene de la *calidad, los precios y las promociones*. Se exceptúa lo referente a la percepción de las *marcas propias* en Éxito Castellana, en donde la misma prueba muestra que existen diferencias significativas en la opinión de hombres y mujeres, lo cual se puede afirmar con un nivel de confianza superior al 98% ya que $p=0,0065$. Ver tabla 2

Percepción sobre el ambiente Esta particularidad hace que hombres y mujeres perciban de forma diferente aspectos como *la música, ruido, iluminación y sonido*. Si se hace la comparación entre almacenes, el comportamiento es similar al encontrado con las variables analizadas anteriormente: los compradores del Éxito Castellana consideran que la ambientación del almacén era mejor cuando en las mismas instalaciones funcionaba Vivero. Los compradores del Éxito los Ejecutivos por el contrario estiman que es mejor el ambiente de este almacén que el que tenía Almacenes LEY. La percepción de los actuales compradores de Éxito Castellana, en este caso, es fácilmente explicable por cuanto con el anterior almacén de origen costeño. las personas tenían identidad cultural (costa Caribe). El actual almacén es de originario del interior del país. caso, es fácilmente explicable por cuanto con el anterior almacén de origen costeño. las personas tenían identidad cultural (costa Caribe). El actual almacén es de originario del interior del país.

Tabla 2. Percepción De Los Productos

Fuente: Encuesta

Percepción sobre el servicio en el punto de venta Del análisis de las variables *actitud/aptitud de los empleados, oportunidad en la información, atención, identificación, presentación personal, capacitación y número de empleados*, en función de lo que se tenía antes, se deriva una percepción favorable hacia el servicio recibido en el Vivero ya que la calificación media sobrepasa el nivel de indiferencia.. En El Ley igualmente no se presentan diferencias significativas pero la opinión favorece el servicio prestado por el actual Éxito Los Ejecutivos. En lo referente a servicios adicionales, deja en claro que eran mejores los ofertados por Vivero a sus clientes, mientras que en el caso del Ley las calificaciones favorecen es a los servicios adicionales del Éxito.

CONCLUSIONES

El resultado de la unión de dos marcas, en detrimento de la desaparición de una de ellas, en este caso salida del mercado de Vivero y Almacenes Ley al ser reemplazadas por Éxito, deja al comprador en un estado inicial de desamparo en donde muchas veces la única salida es buscar adaptarse a la nueva marca y

recordar con nostalgia la marca anterior cada vez que se enfrenta a un cambio en su proceso rutinario de compra. Sin embargo, en otros casos ese cambio de marca constituye una reivindicación comercial y social. En el caso de la sustitución de Vivero Castellana por Éxito Castellana los compradores evocan con nostalgia al anterior almacén y sienten que en ningún aspecto la nueva marca les proporciona los productos, la variedad de marcas, las promociones, el trato y el ambiente al interior del establecimiento.

Además, muchos de ellos, sienten que con la salida de Almacenes Vivero del mercado se fue parte de su cultura, ello en cierta medida los ha llevado a proveerse en establecimientos con marcas completamente diferentes. En el caso del Ley la investigación muestra que el efecto es totalmente opuesto, ya que las personas manifiestan haber ganado con el cambio de marca. Parte de esta ganancia radica en la ampliación y modernización locativa. Para quienes el vínculo con las anteriores marcas persiste, se observa que si bien acuden a Almacenes Éxito Castellana y Los Ejecutivos en sus manifestaciones orales, queda claro que van es al Vivero Castellana y al Ley de Los Ejecutivos.

EL COMPORTAMIENTO ORGANIZACIONAL DENTRO DE LAS COMERCIALIZADORAS DE AUTOS USADOS EN MEXICALI, BAJA CALIFORNIA ANTES Y DESPUÉS DE LA ENTRADA EN VIGOR DEL TLCAN: DESDE UN PUNTO DE VISTA CUALITATIVO

César Sánchez Ocampo, Universidad Autónoma De Baja California
Lourdes Alicia González Torres, Universidad Autónoma De Baja California
Jesús Francisco Gutiérrez Ocampo, Universidad Autónoma De Baja California

RESUMEN

Este trabajo analizo desde el punto de vista cualitativo el comportamiento organizacional en la comercialización de autos usados en Mexicali, Baja California. Con el fin de conocer las estrategias de competitividad que han sido utilizadas por nuestras comercializadoras de autos en la frontera, tomando en cuenta la experiencia de uno de los grandes empresarios que ha sobrevivido a varias crisis durante varias décadas. Para lo cual utilizamos el método cualitativo lo que nos permitió identificar las variables más importantes (como parte del comportamiento organizacional las variables independientes en cuanto a aquellas que posee la persona). Ya que este método de investigación nos llevo a conocer más en cuanto a la relación que guarda la administración donde muchas veces empíricamente los empresarios aplican sus conocimientos y las reacciones que ocurren en cuanto al comportamiento social de las personas que se involucran con la empresa y el comerciante a lo largo de su vida. Esta investigación también logro identificar el impacto que los individuos, los grupos y las estructuras tienen sobre el comportamiento dentro de las organizaciones, con el propósito de aplicar tal conocimiento al mejoramiento de la competitividad de las comercializadoras de autos en la región fronteriza de Mexicali, Baja California

PALABRAS CLAVE: Comportamiento Organizacional, Autos Usados, Comercializadoras, Competitividad, Libre comercio.

ORGANIZATIONAL BEHAVIOR IN THE BUSINESS CAR USED IN MEXICALI, BAJA CALIFORNIA BEFORE AND AFTER THE ENTRY INTO FORCE OF NAFTA: FROM A QUALITATIVE PERSPECTIVE

ABSTRACT

This study analyzed from the qualitative point of view organizational behavior in the marketing of used cars in Mexicali, Baja California. In order to meet competitive strategies that have been used by our trading of cars on the border, taking into account the experience of one of the big businesses that has survived several crises for decades. For which we used the qualitative method allowed us to identify the most important variables (as part of organizational behavior as independent variables to those owned by the person). Since this method of investigation led we to learn more about the relationship of administration where employers often empirically apply knowledge and reactions that occur in social behavior of people involved with the company and trader throughout his life. This research also could identify the impact that individuals, groups and structures have on behavior within organizations, in order to apply this knowledge to improve the competitiveness of car traders in the border region of Mexicali, Baja California.

KEYWORDS: Organizational Behavior, Used Cars, marketing, competitive, free trade.

RESUMEN

Actualmente las organizaciones se enfrentan a la globalización, la cual implica rápidos cambios en el entorno interno y externo, donde la clave es el elemento humano al ser con quien y para quien se trabaja en la satisfacción de sus necesidades, de aquí la importancia de su adaptación a los cambios. Por ello, es necesario diseñar herramientas que permitan a las instituciones conocer su actual comportamiento para saber si éste ha permitido alcanzar las metas, de lo contrario, tendrán que proponerse las mejores estrategias para lograrlas. Esta investigación está enfocada a los trabajadores administrativos, por ser los involucrados en el diseño de las mismas. Para tal propósito se plantean tres ejes significativos: Cultura Organizacional (CO), Desempeño (D), y Productividad (P); que pueden ser la base del éxito y competitividad de toda organización. Para mayor comprensión dichos ejes pudieran considerarse como un proceso, donde el individuo (insumo) debe ser capaz de adoptar las pautas que marca la respectiva CO, D será el reflejo del grado de integración y compromiso asumido en la etapa anterior al ejecutar favorablemente las actividades encomendadas, y P serán los resultados que obtiene la empresa por la incorporación del individuo capaz de adaptarse a las etapas anteriores.

INTRODUCCIÓN

El hombre como un ente social por instinto busca relacionarse con los seres que le rodean, más aún, desde el punto de vista Administrativo esto cobra un interés especial cuando pretende incorporarse laboralmente a una organización (productora de bienes o servicios), ya que inherentemente buscará la aceptación de los miembros que la integran, lo cual implica que debe cambiar y moldear sus patrones de conducta arraigados, a los indicados por la empresa. Siendo este el inicio para una compañía que busca ser exitosa, y si ya lo es, entonces que se mantenga y haga los esfuerzos necesarios por aumentarlo logrando ser altamente competitiva. Por esta razón, la presente investigación aborda a las empresas bajo un enfoque sistémico, debido a que en su manejo interior se ve reflejada su interacción con el ambiente externo; al mismo tiempo, los esfuerzos de dicha investigación estarán dirigidos a los trabajadores administrativos del Centro Universitario UAEM Amecameca. Consecuentemente, cabe destacar que los tres ejes fusionados de la investigación serán: 1.- la Cultura organizacional, como base de la alineación humana, 2.- Desempeño, y 3.- Productividad, como el logro de los objetivos para alcanzar las metas organizacionales.

REVISIÓN LITERARIA

Esta investigación aborda la importancia que tiene la cultura organizacional en el comportamiento de los individuos pertenecientes a una organización, es decir, que tan grande es el poder que ejerce sobre éstos, para que eleven su nivel de desempeño, y en consecuencia se logre un incremento sobre el nivel de productividad organizacional, mejorando entonces la eficiencia y eficacia del organismo. Para ello se analiza a la empresa con el modelo de sistema abierto, el cual establece los siguientes parámetros: 1.- Entrada o insumo (input), 2.- Procesamiento o transformación (throughput), 3.- Salida, resultado o producto (output), 4.- Retroalimentación (feedback), 5.- Medio Ambiente (environment) (Chiavenato,

2001). Dicho sistema se encuentra rodeado de factores internos y externos, por lo cual está expuesto a constantes cambios que resultan del nivel de exigencias del mercado, es decir, las organizaciones deben estar a la vanguardia, ser innovadoras y sobre todo responder de forma rápida y satisfactoria a las necesidades de los consumidores. De lo contrario, al rezagarse en sus procesos y no hacer el propósito por adaptarse a los cambios requeridos, corren el riesgo de fracasar y por lo tanto de desaparecer. Bertalanffy (2006), menciona como propiedades del sistema: adaptabilidad (para responder a cambios internos y externos), optimización o sub-optimización (modifica o no el sistema para alcanzar los objetivos), éxito (se mide en la medida en que alcanza sus objetivos).

Es así, que en este estudio el análisis es de la siguiente forma: existe un sistema abierto denominado empresa u organización, el cual se encuentra rodeado de un ambiente externo que considera aspectos políticos, económicos, sociales, tecnológicos, etc. que forman parte del actual proceso de globalización; que a su vez es responsable del citado cambio y adaptación de las organizaciones, a fin de que sean capaces de enfrentar la competitividad y lograr la supervivencia. Como ya se mencionó, este sistema también está rodeado de un ambiente interno, que ni más, ni menos conforma la esencia misma de la empresa, por lo cual es este el ambiente propicio donde se desenvuelve el proceso propuesto por la investigación, y que se encuentra estructurado por las siguientes tres variables: Cultura Organizacional (CO), Desempeño (D), y Productividad (P).

Chiavenato (2001), señala que las organizaciones son un sistema de actividades, que están coordinadas y tienen la finalidad de lograr un objetivo en común; así mismo, afirma que la organización existe a partir de la interacción de 2 o más personas y que los principales requisitos para que sea efectivo es que haya personas capaces de comunicarse, estén dispuestas a actuar conjuntamente, y deseen obtener un objetivo en común.

De ello se desprende que cuando el individuo busca incorporarse a la empresa lo primero que hará será desarrollar el proceso de comunicación con el propósito de interactuar con el personal de la empresa y así sea éste el primer medio de incorporación a la misma. Sin embargo llegará influenciado en menor o mayor grado por las ideologías del ambiente externo; donde al ingresar a la empresa se encuentra con una estructura social sustentada por valores, costumbres, mitos y tradiciones que en conjunto conforman la CO; la cual perfila las acciones que posteriormente el individuo (trabajador administrativo) debe ejecutar. En el modelo de organización de Katz y Kahn se establece que toda organización crea su propia cultura con sus propios tabúes, costumbres y usos (Chiavenato, 2001). Aunado a la CO inciden los parámetros de la empresa como sistema social funcional; siendo éstos el sentido de pertenencia a la organización, responsabilidad individual, la jerarquización adecuada entre los distintos niveles, los canales de comunicación apropiados, límites claros, y el adecuado ejercicio de autoridad (Vázquez y R. L.

de Moyano, 1988). Si este conjunto de características que involucra la Cultura Organizacional son correctamente asimiladas por los individuos (insumo de la empresa), el reflejo de ello estará en el incremento de su nivel de desempeño; puesto que al sentirse miembro identificado y absoluto, asume un alto grado de responsabilidad y conciencia, al saber que su existencia en la IES es porque se esperan resultados óptimos (logro de metas y objetivos específicos) que contribuyan al éxito o fracaso de la misma. Entonces si la persona logra asimilar y hacer suya la CO, grandes posibilidades existen de que eleve el desempeño de sus actividades y por lo tanto logre elevar el nivel de productividad de la organización, consiguiendo con ello que el resultado esperado este reflejado en el incremento de demanda, puesto que los alumnos buscan IES competitivas y reconocidas que contribuyan favorablemente en su continuo desarrollo intelectual.

Sin embargo ¿cómo dar a conocer a los empleados administrativos la Cultura Organizacional a fin de mejorar su desempeño y en consecuencia lograr una organización con alto nivel de productividad? evidentemente como se mencionó anteriormente, es necesario utilizar formas de comunicación con el

objeto de transmitir a los trabajadores administrativos precisamente la Cultura Organizacional que tiene la empresa a fin de crear el sentimiento de miembros identificados con la ella y lograr nuevas actitudes y comportamientos.

Nokolas Luhmann profesa una teoría del conocimiento fundada en una teoría de la sociedad, y describe a la sociedad como un sistema recíproco de comunicación con sentido, así, en vez de analizar las diferentes funciones sociales, esta nueva teoría adopta una forma estructural como es la emergencia evolutiva de círculos comunicativos cerrados, cada uno de los cuales desarrolla una función propia. Si tales círculos son cerrados se produce una diferenciación sistémica de modo tal que cada sistema se forme distinguiéndose de un entorno. (Moreno y Domínguez, 2003). De este modo la IES como sistema en su ambiente interno informa a través de diversas formas de comunicación su CO a los empleados.

En este caso se consideran los Principios de Sistema de Información Gerencial, que se enfocan a describir la importancia de la información y los niveles jerárquicos organizacionales a los cuales llega. Más aún el término Sistemas de Información Gerencial (SIG), no se limita únicamente a la información requerida por las gerencias, si no a la información requerida por todas aquellas personas que toman decisiones. Entonces la importancia de SIG en el sistema organizacional radica en que la información es la base del funcionamiento de toda la organización, mientras mejor sea la información en una organización, ésta podrá administrar mejor sus recursos; es ventaja competitiva, porque permite tomar decisiones efectivas respecto al devenir de la organización, y permite a los supervisores un mejor control del trabajo bajo su responsabilidad. Un sistema de información implica la comunicación entre las personas, sobre situaciones que afectan el trabajo y el desempeño de los miembros de la organización (Waterfield y Ramsing, 2001).

A comienzos de los años ochenta, las diferencias de productividad entre el modelo de gestión empresarial norteamericano y el de la industria japonesa, despertó el interés por la cultura organizacional. Peters y Waterman (1982) realizaron una investigación en organizaciones calificadas como excelentes en un período completo de veinte años -1961 a 1980- y concluyeron en que no sólo los japoneses tenían una cultura original y que estas empresas se movilizaban alrededor de valores clave. Recientemente, grandes éxitos y fracasos han sido atribuidos a la cultura. (Peters y Waterman, 1982). La cultura es así una variable o un medio que podría ser administrado para mejorar el desempeño y el logro de los objetivos (Smircich, 1983). Y la dirección de una organización puede entonces, formular una estrategia interna para aumentar la identificación y la cohesión de los integrantes alrededor de los valores escogidos como clave para la estrategia externa. (Garay, 2009).

Si se trata de una variable, la cultura organizacional podría ser un recurso o medio para alcanzar objetivos. Y si ese recurso agrega valor, es diferente en sus características a la cultura de otras organizaciones y no es fácilmente imitable por los competidores, puede convertirse en ventaja competitiva y en un activo estratégico que sustente el éxito (Barney, 1986). De igual manera, una estrategia y su implementación a través de estructuras y sistemas, no alineada con el sistema cultural -creencias y valores- podría llevar a ineficiencias, un deterioro en el desempeño y la pérdida de eficacia en el logro de objetivos. La consecuencia de estos pensamientos ha impulsado al management a crear técnicas destinadas a cultivar creencias, supuestos y valores que puedan movilizar conductas alineadas con las estrategias organizacionales (Garay, 2009)

Distintos autores han considerado el tema de la funcionalidad de la cultura organizacional, la cual se logra cuando está alineada con la estrategia y conjuntamente crean una identidad organizacional. Los valores que la sostienen aumentan la cohesión de los integrantes con la identificación y el compromiso. También crean una fuerte imagen positiva hacia afuera y se aumenta la posibilidad de instalación de estos valores nuevos en la sociedad. Por esto la cultura funcional logra: otorgar a sus integrantes un claro sentido de identidad, especificar qué es importante y cómo hacer las cosas, reduciendo la ambigüedad, la inseguridad y la ansiedad de los integrantes, sustituir normas y reglamentos escritos, reforzar el compromiso y la

identificación, crear una imagen institucional distintiva, e instalar supuestos, creencias y valores (Garay, 2009) En definitiva una cultura puede existir en toda la organización o en una división, filial, planta o departamento de ella. Esta idea de cultura organizacional es algo intangible, pero que afecta todo cuanto ocurre en la empresa (Guizar, 2004) como es el grado de desempeño y la productividad.

METODOLOGÍA

Por las características que aborda el estudio, se determina un diseño de investigación cualitativa, debido a que la observación estudiada por los métodos cualitativos incluye la comprensión de la totalidad social. Este trabajo se encuentra en desarrollo como una investigación de tipo documental. Por el nivel de conocimiento, es una investigación de tipo descriptiva que combinada con ciertos criterios de clasificación sirve para ordenar, agrupar o sistematizar los objetos involucrados en el trabajo indagatorio. Este trabajo de investigación se encuentra desarrollado bajo un proceso lógico deductivo; al enlazar en una pieza con enfoque de tipo sistémico a la Cultura organizacional, desempeño y productividad.

RESULTADOS

Con el proceso abordado CO-D-P, los trabajadores administrativos del Centro Universitario UAEM Amecameca deben asumir y llevar a cabo los valores que aprenden de la CO del organismo, de tal forma que manifiesten su sentido de pertenencia y al obtener actitudes y comportamientos que favorezcan su desempeño en sus actividades, y al ser encargados del establecimiento de objetivos (el más importante es atraer alumnos y con ella múltiples consecuencias favorables) consigan como productividad una IES con mayor demanda que sepa enfrentar adecuadamente las exigencias del mercado a fin de garantizar su permanencia en el mismo para el bien de la sociedad.

CONCLUSIONES

Cuando se cuenta con una cultura organizacional definida, aprehendida y fuerte; el trabajador administrativo tiene altas probabilidades de lograr el mejor desempeño posible logrando mejorar los niveles de productividad y conseguir que la empresa alcance sus metas, sea exitosa y enfrente adecuadamente los retos que impone la globalización, garantizando su supervivencia en el entorno. La empresa que logra integrar: CO, D, y P como un proceso asegura cambios favorables en su ambiente interno y externo.

RESUMEN

El mundo presenta profundos y significativos cambios sociales, económicos, políticos y culturales que impactan la vida de las naciones, modificando la manera de pensar y actuar de los grupos humanos, el orden político y la organización económica de los países, teniendo un mayor impacto en el mercado de trabajo y en consecuencia, en la formación de los profesionistas para este. La formación flexible por competencias profesionales se ha establecido como un factor de garantía para ejercer una profesión con éxito. El trabajo y la educación son temas de constante análisis y debate, ya que son factores determinantes para el desarrollo de las naciones a nivel económico y social. Es por ello que las instituciones de educación superior, buscan garantizar una formación profesional e integral que posibilite un buen desempeño laboral. Por lo que el principal objetivo de la Universidad Autónoma de Baja California (UABC), es llevar acabo revisiones de sus planes de estudios de acuerdo a sus estatutos, por lo cual la Lic. en Negocios Internacionales, en sus 15 años de existencia dentro de la Facultad de Contaduría y Administración ha modificado en dos ocasiones su plan de estudio, para dar cumplimiento con las necesidades del entorno laboral actual.

INTRODUCCION

La licenciatura de Negocios Internacionales, se crea en 1995, por la necesidad de contar con profesionistas capacitados en temas de negociación y comercio internacional, dada la reciente apertura económica de México con el Tratado de Libre Comercio de Norteamérica (TLCAN) firmado en 1994 con Estados Unidos y Canadá, por lo que la Facultad de Contaduría y Administración (FCA) de la UABC junto con la Universidad Estatal de San Diego (SDSU), desarrollaron el plan de estudios de esta licenciatura con la intención de contar con un programa de doble de grado en el área de negocios internacionales con el objetivo de contar con profesionistas con una visión global capaces de desenvolverse en una ambiente económico y comercial lleno de cambios y desafíos inesperados.

A siete años de haberse creado la Licenciatura en Negocios Internacionales, la FCA de la UABC reviso y reestructuro sus planes y programas de estudios, debido a los cambios del entorno y a las nuevas necesidades del profesionista y empleador, identificando así la necesidad de establecer planes educativos con un enfoque de competencias, entiéndase como competencia *en el ámbito de la educación escolar, que es aquello que permite identificar las necesidades de cualquier persona para dar respuesta a los problemas a los que se enfrentará a los largo de su vida.* (Zabala & Arnau, 2007) Teniendo impacto en los diferentes ámbitos de su vida, mediante acciones en las que se involucran actitudes, procedimientos y conceptos para la toma de decisiones.

Es por ello que el plan de estudios de 2002-1 busca dar una formación integral a los estudiantes donde los conocimientos conceptuales les permitan tener a su vez una responsabilidad social y ética para hacerle frente a los retos y oportunidades al entorno cambiante de ese momento. El plan de estudios 2009-2

continúa con el enfoque de competencias pero poniendo atención a los cambios de México a consecuencia de una crisis internacional que ha afectado a empresas nacionales, multinacionales y extranjeras; buscando dar respuesta con un profesionista capaz de identificar nuevas oportunidades de negocios fuera de la región del TLCAN.

ANTECEDENTES

La Facultad de Contaduría y Administración de la UABC se encuentra ubicada en una de las regiones fronterizas más transitadas del mundo, que se caracteriza por su avanzado desarrollo económico en comparación con otras regiones de México, e influenciada por su situación geográfica se ve en la necesidad de crear una nueva Licenciatura que vaya de acuerdo con el rápido desarrollo y crecimiento de la región, efecto que se dio principalmente con la apertura económica de México con la firma del TLCAN en 1994.

La Licenciatura en Negocios Internacionales nace 1995 con el Plan 1995-1, donde su enfoque principal, es educar profesionistas mediante un proceso de enseñanza basado en objetivos, entendido: *“Como un proceso que ha de partir de la aclaración previa de los objetivos que se pretenden conseguir, habiendo de especificarse estos lo más concretamente posible, e incluso preconizando el hacerlo en términos de conducta (Sacristán)”*; determinando que el principal objetivo fue crear profesionistas que pudieran desarrollar estrategias de negocios hacia el norte del país, tomando en cuenta las diferencias culturales, que pudiera resolver problemas de administración de negocios con el pleno conocimiento de los aspectos jurídicos y legales de ambos países, y sobre todo que pudiera incentivar y orientar a las empresas mexicanas en la creación de nuevos negocios fuera del País, específicamente en el mercado estadounidense y así incrementar en una mayor proporción el intercambio comercial de ambos países.

Las cambiantes formas de organización del trabajo requieren no sólo una nueva cultura laboral con énfasis en la colaboración, el trabajo en equipo, el aprendizaje a lo largo de la vida y en mejores condiciones laborales y salariales, sino también una nueva cultura educativa en las instituciones de educación superior para que asuman el compromiso de formar a sus alumnos como personas competentes para el ejercicio de su profesión, desde los procesos educativos formales y no una vez que éstos hayan egresado, es por esto que la Facultad de Contaduría y Administración genera una restructuración del plan de estudios 1995-1 en base a un nuevo proceso de enseñanza-aprendizaje, el cual está basado en competencias plan denominado 2002-1.

Dado a que la enseñanza se encuentra centrada en el estudiante, y que esta exige una la renovación continúa por los constantes y rápidos cambios en México y específicamente en nuestra región, como en el resto del mundo, han obligado a crear y desarrollar nuevas estrategias para subsistir y a su vez ser mucho más competitivos a nivel regional e internacional.

El resultado de la modificación del plan de estudios 2002-1 y que dio pie al desarrollo del plan 2009-2 de la licenciatura en Negocios Internacionales, surgió como consecuencia del trabajo de evaluación al plan actual, esto con la finalidad de dar continuidad con un plan de estudios orientado al desarrollo de competencias profesionales. Para ello se consideró un ejercicio de reflexión colectiva donde se involucraron académicos de la Dependencia de Educación Superior de Ciencias Económico Administrativa por áreas de conocimiento y por etapas formativas y a los resultados obtenidos de la aplicación de un diagnóstico a empleadores, egresados, alumnos y maestros.

PLANES DE ESTUDIOS DE LA LIC. EN NEGOCIOS INTERNACIONALES

Plan 1995-1: El plan de estudios de la Lic. en Negocios Internacionales tiene como objetivo que sus egresados tengan un perfil profesionista con conocimientos en el ámbito de los negocios internacionales entre México y Estados Unidos de Norteamérica, con una formación en disciplinas socio-culturales de ambos

países y el manejo de dos idiomas español e inglés, para enfrentar los cambios generados por la globalización de la economía.

Por ello dentro de los requisitos de ingreso a esta licenciatura los alumnos debían presentar examen ante la UABC en el siguiente orden: examen de inglés de la Educational Testing Services (ETS), examen psicométrico y examen de conocimientos generales. Tomando en cuenta que el aspirante a ingresar a esta licenciatura, debía acreditar el examen de inglés para poder considerar el puntaje sus otros exámenes.

El plan de estudios 1995-1 se desarrolló en base a las siguientes áreas del conocimiento: Administración, Contabilidad, Finanzas, Economía, Derecho, Idiomas, Socio-Cultural.

Movilidad Estudiantil: La internacionalización del estudiante se da solamente con programas específicos de la facultad, los cuales nacen al mismo tiempo que la Licenciatura en Negocios Internacionales.

- Programa con doble grado académico:
 - Programa MEXUS. SDSU y UABC. (1995).

Plan 2002-1: El plan de estudios 2002-1 de la Lic. en Negocios Internacionales se desarrollo en base a un nuevo proceso de enseñanza-aprendizaje, el cual está basado en competencias siendo ya un programa homologado con la Facultad de Ciencias Administrativas de la UABC-Mexicali y es durante el 2004-1 que se establece un tronco común de un semestre con las licenciaturas de administración de empresas y contaduría.

Como requisito de ingreso a esta licenciatura el estudiante debía presentar exámenes ante la UABC en el siguiente orden: examen de inglés de la Educational Testing Services (ETS), examen psicométrico y examen de conocimientos generales. Tomando en cuenta que el aspirante debía acreditar el examen de inglés para poder considerar el puntaje de sus otros exámenes. Pero a partir del 2004-1 el aspirante a este programa educativo solo debía presentar el examen de conocimientos generales y psicométrico, ya que estos le permiten el ingreso a tronco común y es durante su primer semestre que se les aplica el examen de inglés para ingresar a esta licenciatura.

Este plan tiene como objetivo que sus egresados tengan un perfil profesionalista que le permita contar con un amplio conocimiento sobre las condiciones y las posibilidades que existen dentro de la empresa o institución para competir en una entorno internacional, que pueda formular e implementar estrategias factibles dentro de un ambiente internacional, además de poder determinar y aprovechar la forma en que afecta el entorno económico y comercial a nivel internacional el funcionamiento y desarrollo de las empresas tanto a nivel doméstico como mundial.

Los programas de movilidad estudiantil se empiezan a considerar como parte fundamental de la formación del estudiante, y complementando así uno de los objetivos generales de la Universidad el cual se enfoca principalmente, en la Promoción e Internacionalización de los programas educativos.

- Programas con doble grado académico:
 - Programa MEXUS. SDSU y UABC. (1995).
 - Convenio UABC- Universidad de Valparaíso Chile (UV). (2004).
- Programas con triple grado académico:
 - Programa CANMEXUS. UQAC, SDSU y UABC (2002)
 - Programa de PANAMERICA. UABC, SDSU y UV. (2004)

- Programa con Diploma de Técnicos en Comercialización Internacional.
 - Programa de Intercambio entre UABC y la Université Claude Bernard Lyon 1. (2000)

Plan 2009-2; El plan de estudios 2009-2 de la Lic. en Negocios Internacionales continua bajo el esquema de competencias, reestructurando el número de semestres, contenidos de las asignaturas y esquemas de estudios. Además, de que el programa educativo cuenta con un tronco común con las licenciaturas de contaduría, administración de empresas, informática, mercadotecnia y turismo que corresponde a los dos primeros semestres, motivo por el cual para su ingreso a esta licenciatura deberá acreditar un examen de inglés durante su segundo semestre de tronco común, obteniendo como mínimo 450 puntos del examen TOEFL (Paper Score Base) de la ETS. Uno de los cambios principales es que el estudiante debe acreditar mínimo dos semestres de un idioma diferente al inglés y al español. Este plan se desarrolló en base a las siguientes áreas del conocimiento: Economía, Comercio, Administración, Contable/Financiera, Derecho, Informática, Humanidades y Matemáticas

Este plan tiene como objetivo que sus egresados tengan un perfil profesionalista que sea sensible a las diferencias culturales con una base multidisciplinaria que le permita interactuar en un ambiente doméstico e internacional en aspectos administrativos, jurídicos, económicos, financieros y de competitividad, con liderazgo positivo para que promueva el desarrollo económico del país.

METODOLOGIA

Plan 1995-1: No se aplicó una metodología específica, si no que se desarrolló en base a una necesidad regional, que el estudiante de administración de empresas no cumpliera, ya que en ese momento el perfil de estudiante estaba enfocado a los recursos humanos y a la administración general dejando fuera aspectos internacionales e idioma.

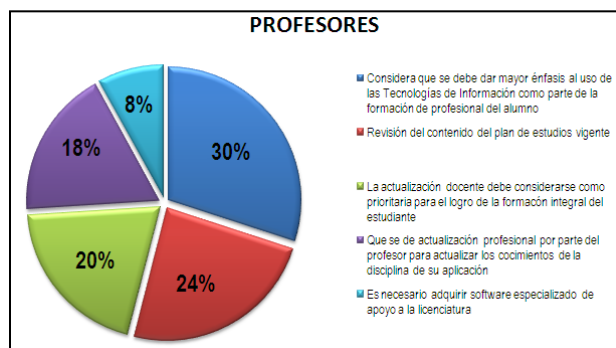

Plan 2002-1: No se aplicó una metodología específica si no que se consideró la consulta de planes de estudio de otras Instituciones Educativas del país, así como un sondeo realizado de forma interna y externa, y las recomendaciones de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES).

Durante la reestructuración de este plan de estudios, se encuentra la necesidad de reforzar y desarrollar las siguientes habilidades:

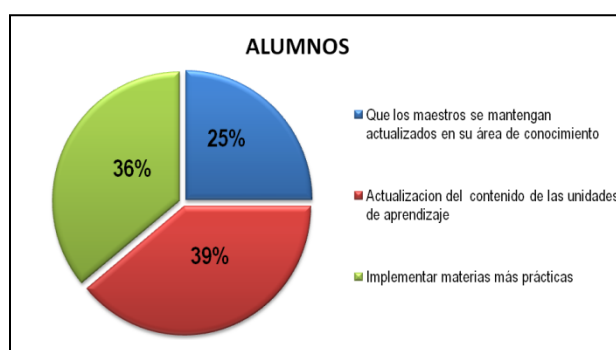

1. Técnicas y procedimientos de comercialización de productos entre México - Estados Unidos y el resto del mundo (nivel internacional).
2. Capacidad de Análisis sobre las tendencias de los mercados internacionales.
3. Que el alumno conozca más a fondo sobre el TLCAN y del resto de los Tratados comerciales que ha firmado México.
4. Conocimiento, y manejo de los mecanismos de apoyo a la industria exportadora de México, tanto gubernamentales como de la Banca de Desarrollo.
5. Promoción a las inversiones dentro y fuera del país.

Plan 2009-1: La metodología aplicada para identificar necesidad de reestructura y/o modificación del plan de estudios de esta licenciatura, fue a través de la aplicación de un diagnóstico realizado con profesores, alumnos, egresados y empleadores obteniendo los siguientes resultados:

Profesores: Se encuestó al 15% de los profesores que imparten en el plan de estudios de la licenciatura en Negocios Internacionales de los Campus Tijuana y Mexicali, dando como resultado lo siguiente:

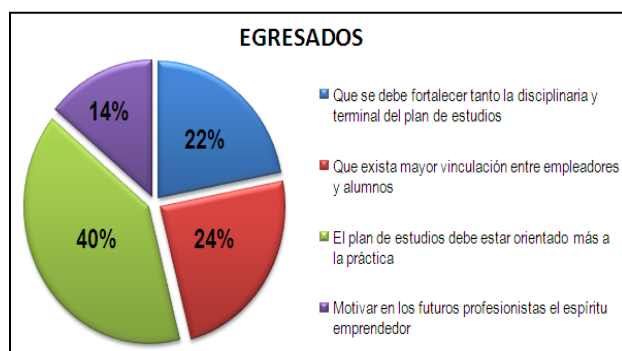

Alumnos: Se encuestó al 10% de los alumnos del plan de estudios de la licenciatura en Negocios Internacionales de los Campus Tijuana y Mexicali, dando como resultado lo siguiente:

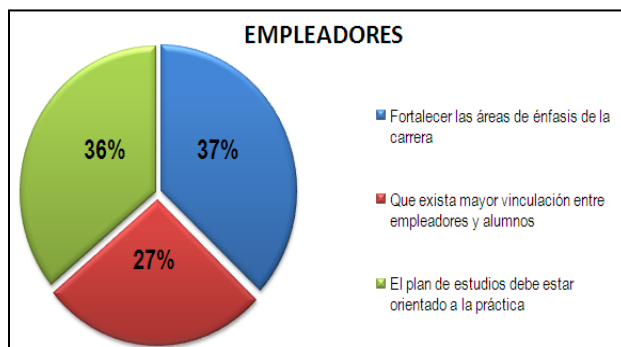

La encuesta nos indica que para los alumnos de la DES CEA el plan de estudios actual en cuanto a su formación es buena, pero que existen aspectos a mejorar para contar con una formación integral. Entre los aspectos más sobresalientes a mejorar se encuentran los relacionados al proceso de enseñanza, pues consideran necesario se hagan esfuerzos para que los maestros se mantengan actualizados y mejoren así la labor docente. En cuanto al contenido de las unidades de aprendizaje es necesario que se actualice, pues en algunos casos el contenido de las mismas no es suficiente y además de buscar la manera de que sean enfocadas en cuestiones más prácticas que teóricas.

Egresados: Se encuestó al 10% de los egresados del plan de estudios de la licenciatura en Negocios Internacionales de los Campus Tijuana y Mexicali, dando como resultado lo siguiente:

En general los egresados del plan de estudios de la licenciatura en Negocios Internacionales se encuentran actualmente laborando en áreas administrativas y en empresas tanto del sector público como privado. Los egresados de este plan de estudios nos indican que la UABC cuenta con espacios físicos y de apoyo de muy buen nivel.

Empleadores: De las encuestas realizadas al sector empresarial se puede identificar lo siguiente:

En general, los empleadores consideran que debe existir mejor vinculación entre campo laboral y alumnos; también que los Licenciados en Negocios Internacionales deben poseer los conocimientos en el área de mercadotecnia internacional, finanzas internacionales, negociación, logística, comercio exterior, derecho aplicado a los negocios, administración, finanzas corporativas, economía y comercio internacional. Los cuales son básicos para la realización de las actividades propias del entorno laboral, así como también buscar que el plan de estudios de la licenciatura en Negocios Internacionales debe estar orientado a la práctica.

RESULTADOS Y CONCLUSIONES

Actualmente el mundo exige profesionistas con experiencia práctica con una visión del mundo real que le permita tomar decisiones correctas y/o justas en el momento preciso. Un programa educativo enfocado a la práctica le proporcionara al alumno las herramientas y la seguridad para hacer un profesionista efectivo ante las problemáticas laborales actuales.

Así como el mundo se globaliza, el sistema educativo debe evolucionar a la par apoyándose en cimientos prácticos más que teóricos, pero no hay que olvidar que en gran medida estos cambios dependen del factor humano que se encuentra frente al aula y de los antecedentes que el estudiante presenta en su formación educativa previa a la universidad.

MODELO DE EVALUACIÓN FINANCIERA PARA LA PRODUCCIÓN Y COMERCIALIZACIÓN DE UCHUVA (PHYSALIS PERUVIANA L) EN BOYACÁ, COLOMBIA

Diana Astrid Buitrago Núñez, Universidad Tecnológica de Pereira – Universidad Pedagógica y Tecnológica de Colombia

Juan Nicolás Montoya Monsalve, Universidad Nacional de Colombia Sede Manizales y Universidad Rey Juan Carlos Madrid

RESUMEN

El departamento de Boyacá en Colombia produce uchuva tipo exportación y vende su producto a través de comercializadoras internacionales, los productores dedicados a este cultivo están organizados en empresas de economía solidaria las no tienen estructurada la información contable y financiera respecto a los procesos de producción y comercialización de uchuva, debido a que las empresas de pequeños productores no han establecido procesos financieros adecuados que permitan una evaluación financiera. El objetivo principal frente a esta problemática es realizar un modelo de evaluación financiera que permita normalizar la producción y comercialización de uchuva en las organizaciones Procoaven, Asofrusams y Asoprocién en el departamento de Boyacá, Colombia. Se efectuará como primera medida una evaluación de las diferentes variables financieras comprometidas en la producción y comercialización de uchuva, luego, se determinarán las prácticas financieras aptas para la valoración y evaluación de costos e ingresos, y por último se evaluarán las diferentes herramientas financieras requeridas en la optimización de los análisis financieros con el propósito de que estas empresas se desarrollen y crezcan en el área contable y financiera.

PALABRAS CLAVE: Evaluación Financiera, Producción y Comercialización de Uchuva, Modelo, Prácticas Financieras

INTRODUCCIÓN

Existen en el departamento de Boyacá, Colombia 203 organizaciones de pequeños productores agropecuarios constituidas como empresas asociativas de economía solidaria representadas en asociaciones, cooperativas y sociedades agrarias de transformación, de las cuales 13 empresas se dedican a la producción de uchuva tipo exportación. Los procesos técnicos para la producción de uchuva se han venido estandarizando con todas las organizaciones, sin duda alguna para el pequeño productor el manejo de su cultivo es lo más importante dejando de lado los procesos de recolección, registro, análisis y evaluación de la información contable y financiera respecto a los procesos de producción y comercialización de uchuva. Los productores desconocen la importancia de llevar dicha información y lo consideran como un proceso complejo para su aprendizaje y práctica; De ahí que los pequeños productores no apliquen prácticas financieras en sus empresas.

Si los productores tienen un modelo a seguir para llevar su información contable y financiera y al mismo tiempo comprendan la importancia de realizarlo en su empresa, podrán participar en pactos comerciales pues tendrán conocimiento pleno de los costos de producción, precio de costo, precio de venta y puntos de equilibrio en unidades entre otros. Tendrán la posibilidad de exportar su producto directamente al cliente en la unión europea y terminaran conociendo el mercado en todos sus aspectos. De tal manera que es importante realizar una evaluación de las diferentes variables financieras comprometidas en la producción y comercialización de uchuva, determinar las prácticas financieras aptas para la valoración y evaluación de costos e ingresos y evaluar las diferentes herramientas financieras requeridas en la optimización de los análisis financieros. Lo anterior con el propósito de realizar un modelo de evaluación

financiera que permita normalizar la producción y comercialización de uchuva para los pequeños productores organizados en el departamento de Boyacá, Colombia.

PLANTEAMIENTO DEL PROBLEMA

En la producción, hay una alta participación de productores con áreas de cultivo, generalmente, no mayores a una hectárea. En el ámbito de la comercialización, un gran número de empresas participan de un negocio de exportación que es relativamente pequeño en su dimensión (58 empresas exportaron un total de 6421,66 TM en el 2005). Se evidencia una débil coordinación entre productores para el acopio de volúmenes que permita reducir la participación de los intermediarios mayoristas. Aunque hay evidencias de cooperación entre los proveedores y las empresas compradoras, a través de acuerdos verbales o escritos, que se establecen generalmente, con los intermediarios y los productores con mayores volúmenes de producción; la intermediación es una característica importante de la cadena, que ha limitado la efectiva comunicación entre los actores, con relación a las demandas en materia de costos, desarrollos financieros, calidad e inocuidad. Por otra parte, la competencia generada por la presencia de tantos compradores, podría traducirse en una menor necesidad, por parte del productor/proveedor de asegurar una venta anticipada para su producto, y de dar cumplimiento a los compromisos establecidos en los acuerdos. Igualmente, es probable que el escenario de relativa poca competencia que enfrenta el producto, en el ámbito internacional, sea en parte responsable de la poca coordinación y organización de la cadena y el bajo encadenamiento entre los actores.

Previamente, las empresas exportadoras más grandes habían incursionado en el establecimiento de cultivos propios, sin embargo, dado los requerimientos de mano de obra y la experiencia del agricultor, optaron por asegurar el suministro de la fruta bajo sistemas de coordinación con proveedores (FAO, 2005). Sin embargo, el nuevo escenario definido por la necesidad de dar cumplimiento a las demandas en materia de calidad, costos, y desarrollo financiero, podría generar importantes cambios en estructura organizacional de la cadena. Las empresas exportadoras están incursionando en el establecimiento de cultivos propios, a mayor escala, principalmente en tierras arrendadas, para asegurar un suministro confiable de la fruta en la cantidad requerida y producida bajo los requerimientos de calidad impuesta por los compradores. Dada la presión por dar cumplimiento a los requisitos de la certificación Global Gap, es probable que la integración vertical (establecimiento de cultivos propios) gane participación en los sistemas de proveeduría de las empresas exportadoras. La velocidad en la cual ocurra este proceso de integración es poco predecible, y estará determinado en gran manera, por la capacidad de las empresas de minimizar los riesgos de producción en los cultivos y del conocimiento económico, financiero y contable que logren desarrollar, de cara a establecer la verdadera rentabilidad del sector, y el valor agregado que día a día están generando, siendo más atractiva para los productores e inversionistas.

En la medida en que el establecimiento de cultivos propios sea una alternativa viable, y gane participación en el ámbito de las empresas exportadoras; el proceso determinará, en gran medida, las posibilidades de los pequeños productores de participar del negocio de exportación o, por el contrario, proveer fruta exclusivamente para el mercado nacional, el cual está en creciente desarrollo. Igualmente, se evidencia la ausencia de cooperación de entidades públicas y privadas para la consolidación de esquemas financieros que permitan la proyección de volúmenes de exportación y la concreción de recursos y sotes a lo largo de la cadena.

El sector ha sido objeto de recientes esfuerzos institucionales orientados a facilitar la aplicación de programas orientados al mejoramiento de la calidad e inocuidad, pero no se ha realizado en materia de lo financiero. No se cuenta con un manual guía para la aplicación de buenas prácticas financieras, que inviten al conocimiento de las estructuras de costos y mucho menos, a la evaluación del valor económico agregado y los rendimientos de la inversión, tampoco se ha capacitado a los productores sobre la importancia del conocimiento del mercado financiero en el que se encuentra inmerso. Por otra parte, dado

el tamaño del mercado, es difícil que las empresas productoras se interesen en el registro ordenado de la actividad financiera en este cultivo, por lo que los niveles de gestión financiera podrían situarse en nivel cero.

En el departamento de Boyacá, Colombia existen 13 empresas de economía solidaria que agrupan 350 productores de uchuva, legalmente constituidas en diferentes municipios. De las cuales hacen parte las organizaciones: Procoaven, que está ubicada en el municipio de Ventaquemada la cual cuenta con 47 asociados y cuyo objeto social es la producción de uchuva para exportación, actualmente vende su producto a la comercializadora internacional El Tesoro Fruit y tienen 47 hectáreas de uchuva sembrada, con un rendimiento de 30 toneladas por hectárea/año; Asoprocién, ubicada en el municipio de Ciénega, cuenta con 37 productores de uchuva para exportación, tienen 12 hectáreas sembradas, con un rendimiento de 27 toneladas por hectárea/año y venden su producto a la comercializadora internacional Andes Export Company y Asofrusams, ubicada en el municipio de San Miguel de Sema, cuenta con 47 productores de Uchuva para exportación, tienen 16 hectáreas sembradas, con un rendimiento de 25 toneladas por hectárea/año y venden su producto a la comercializadora internacional Andes Export Company. Siendo estas las más representativas del sector en número de asociados y en volúmenes de producción.

La Secretaría de Fomento Agropecuario a través del programa agenda exportable y Plan Crecer, han venido realizando un acompañamiento a estas organizaciones en las diferentes áreas como: legal, tributaria, administrativa, productiva, contable y de mercadeo con el objeto de fortalecerlos a nivel empresarial y hacerlos más competitivos en los mercados internacionales, sin que aún se logre llegar a los niveles deseados.

Actualmente la Gobernación de Boyacá en convenio con la Cámara de Comercio, Proexport y las Comercializadoras Internacionales han impulsado un proyecto denominado FAIR TRADE o Comercio Justo en el mercado de la uchuva con el propósito de lograr que las organizaciones de pequeños productores hagan parte del negocio de las exportaciones y reciban apoyo en los procesos de implementación y certificación. La mayoría de los productores de uchuva son propietarios de la tierra, realizan el cultivo de manera individual, en parcelas entre 1 y 5 hectáreas y la diversifican con otros cultivos. Los productores, han iniciado su siembra sin el conocimiento del manejo técnico del cultivo y de la comercialización. El aprendizaje lo hacen a través de experiencias propias y de los demás cultivadores de la zona, quienes se informan entre sí, de las utilidades obtenidas por la fruta en época de alta demanda.

Con el incremento de las exportaciones de uchuva, también se ha incrementado el área cultivada, ha pasado de ser un cultivo silvestre o semisilvestre de cosechas esporádicas a siembras en monocultivo, donde se deben programar todas las actividades, incluyendo el manejo de poscosecha, para hacerlo sostenible económicamente. El rendimiento de fruta se estima en 20.000 kg/ha en el ciclo total del cultivo de 15 meses; una hectárea del cultivo genera aproximadamente 3.3 empleos directos durante el ciclo vegetativo y 6.5 empleos en la fase productiva. La fruta se destina en pequeña escala para el consumo directo en el mercado nacional.

Las tendencias económicas actuales de globalización, integración, cambios en los hábitos de consumo, etc; ofrecen retos y oportunidades al sector de pequeños productores tanto urbanos como rurales. Sin embargo, debido a su precaria competitividad, se hace cada vez más difícil lograr el enlace sostenible de este sector con los mercados en crecimiento. La competitividad de los productores dependerá de la capacidad de organización y de adoptar una orientación al mercado, sin embargo aún no se concretizan unidades de apoyo, privadas o públicas, que integren desarrollos organizativos o empresariales, o generen capacitación económica, financiera y empresarial.

En la actualidad, la uchuva se cuenta entre los frutales con mayor dinamismo en la actividad exportadora; junto con el lulo, la mora y el agraz o mortiño, conforman un grupo de especies frutícolas adaptadas a ecosistemas de clima frío moderado cuyas posibilidades de impactar mercados internacionales son promisorias y por ello CORPOICA ha incursionado en el estudio de diversos aspectos ecofisiológicos y de poscosecha de dichas especies. La producción de frutales para consumo en fresco o para procesamiento agroindustrial requiere superar múltiples limitantes relacionadas en especial con la oferta de material genético adaptado a condiciones agroecológicas específicas y el suministro de material de siembra de alta calidad, la solución de problemáticas fitosanitarias que limitan la producción y la inserción los mercados internacionales; así mismo, es necesario desarrollar tecnologías para optimizar el manejo de los cultivos y la agregación de valor durante la poscosecha y conocer específicamente de procesos financieros que coadyuven a tal integración.

Los departamentos productores de uchuva como Antioquia, Cundinamarca y Boyacá principalmente, no tienen estructurada la información contable y financiera respecto a los procesos de producción y comercialización de uchuva, debido a que las organizaciones de pequeños productores no han estructurado procesos financieros adecuados que permitan una evaluación financiera de la producción y comercialización de uchuva y las características en que se ha desarrollado el mercado de manera artesanal y de pequeños minifundios

METODOLOGÍA

Hipótesis

Para desarrollar el sector productor y comercializador de la Uchuva, en algunas organizaciones de Boyacá, se requiere de un modelo financiero, que permita la integración de los conceptos de calidad y rentabilidad?

Metodo

La investigación se realizará por el método de síntesis con el objeto de analizar variables internas y externas del sistema contable y financiero de la producción de uchuva en las organizaciones Procoaven, Asofrusams y Asoprocien del departamento de Boyacá. Es un estudio de tipo analítico pues contiene todas las fases de estudio pertinentes para poder ejecutar la investigación. Como primera medida se evaluarán las variables financieras comprometidas en la producción y comercialización de uchuva para estas organizaciones. Luego se determinarán las prácticas financieras aptas para la valoración y evaluación de costos e ingresos en estas empresas.

Y por último se evaluarán las diferentes herramientas financieras requeridas en la optimización de los análisis financieros. Para la evaluación de las variables financieras es necesario realizar trabajo de campo donde se requiere contacto directo con los pequeños productores y las comercializadoras internacionales, para ello será importante la compañía de la Secretaria de Fomento Agropecuario del departamento de Boyacá como también de los programas agenda exportable y Plan Crecer adscritos a esta dependencia e interesados en apoyar estos procesos.

Es indispensable el contacto con los diferentes actores de la cadena como pequeños productores organizados como Procoaven del municipio de Ventaquemada, Asoprocien del municipio de Ciénega y Asofrusams del municipio de San Miguel de Sema en el departamento de Boyacá, las comercializadoras internacionales e instituciones siendo estas dos últimas las que poseen gran parte de la información contable y financiera pertinente para la investigación. La selección y evaluación de la información recolectada será analizada y posteriormente se elaborará el modelo de evaluación financiera teniendo en cuenta las necesidades de la producción y comercialización de la uchuva.

RESULTADOS ESPERADOS

- ☐ La creación de un modelo que permita la evaluación financiera de la producción y comercialización de la uchuva pues no se ha realizado ningún adelanto en este aspecto.
- ☐ La selección de las variables financieras más relevantes a tener en cuenta en la producción y comercialización de la uchuva.
- ☐ Las prácticas financieras adecuadas para el registro, análisis, interpretación y evaluación en la producción y comercialización de uchuva.
- ☐ Información contable y financiera real, precisa y exacta en este campo.
- ☐ Las organizaciones tendrán la posibilidad de participar en pactos comerciales con criterio y conocimiento en aspectos financieros de su negocio.

IMPACTO DEL PROYECTO

- ☐ Se beneficiarán con este proyecto de investigación a 350 pequeños productores de uchuva organizados. Lo cual permitirá que tengan un pleno conocimiento en el área contable y financiera de sus agroempresas.
- ☐ El modelo de evaluación financiera permitirá que el productor conozca el mercado financiero respecto a su producto.
- ☐ Este proyecto de investigación facilitará a la Gobernación de Boyacá y la Secretaria de Fomento Agropecuario del departamento los diferentes convenios adelantados como FAIR TRADE entre otros.
- ☐ Si los productores organizados tienen conocimiento de los aspectos contables y financieros y realizan las prácticas financieras adecuadas, el proceso de producción y comercialización de la uchuva va a tener mejores resultados a nivel de calidad y rentabilidad.
- ☐ La implementación del modelo de evaluación contable y financiera tiene que desarrollarse desde cada una de las fincas de esta manera la empresa que estos constituyen cumplirá a cabalidad con el objeto social que los motivó a asociarse.

LA ADMINISTRACIÓN ESTRATÉGICA COMO HERRAMIENTA DE MERCADOTECNIA EN LAS MIPYMES DEL SECTOR DE ALIMENTOS EN BAJA CALIFORNIA, MÉXICO

Ricardo Verján Quiñones, Universidad Autónoma de Baja California
Jorge Antonio Valderrama Martínez, Universidad Autónoma de Baja California
Margarita Ramírez Torres, Universidad Autónoma de Baja California

RESUMEN

El documento plantea la integración de elementos descriptivos de la actuación empresarial para el sector de alimentos en Baja California, México, diferenciándolas por tamaño y localización municipal, para tal intención se identifica y analiza información relacionada con la percepción empresarial respecto a la calidad de su producto, cambios realizados al interior del proceso productivo, conocimiento de normas de calidad y la flexibilidad productiva, lo anterior como parte de la administración estratégica utilizada como herramienta de mercadotecnia.

INTRODUCCIÓN

Una percepción socialmente aceptada respecto a la operación y desarrollo de toda organización señala que la inadecuada administración es la principal causa de fracaso y posterior desahucio de muchas empresas; la experiencia validada de una administración efectiva, eficiente y de calidad sigue siendo una condición imprescindible para toda empresa y de toda empresa, la cual puede servir de base al desarrollo estratégico de mercadotecnia posterior.

IMPORTANCIA DE LA ADMINISTRACIÓN

Berumen, Arriaza y Ceja (2007) señalan que las empresas como instituciones de coordinación asumen el proceso de organización, lo cual genera diversos costos de dirección. Lo anterior está asociado con la asignación eficiente de recursos, escenario empresarial implicado con las siguientes dimensiones: técnica (productividad), económica (efectividad) financiera (rentabilidad), institucional (cultura empresarial) y estratégica (adaptación a los entornos interno y externo). Tradicionalmente son las propias empresas quienes establecen las relaciones entre ellas, definiendo su priorización y manejo, asumiendo ellas mismas los riesgos y las consecuencias de sus decisiones, de tal forma que la coordinación entre la empresa y sus entornos la realiza una sola persona de manera convencional, generalmente bajo el esquema de administrador único.

La administración se concibe como un proceso de acción que comprende una sucesión de funciones interdependientes que guían la función directiva hacia el logro de la mejora de procesos y mayores rendimientos. Los empresarios conciben el producto demandado, movilizan los medios requeridos para la producción, coordinan tanto actividades internas como las relacionadas con el ambiente externo, en dinámicas cada vez más complejas y aceleradas.

Frente a cambios continuos de la realidad en las que se desenvuelven las empresas se exige la adopción de procesos, lo cual da paso a la estrategia de atención y respuesta a lo nuevo y a la anticipación de los cambios por venir, en este sentido Veciana (2002) considera que la estrategia se enfrenta siempre a nuevas situaciones y nuevos problemas, supone para empresarios la necesidad de decidir en un momento dado, si entra en un nuevo sector y se sale de otro; si combate la competencia o establece una

colaboración con ella; si adopta ya una nueva tecnología, un nuevo sistema de calidad o espera ver sus resultados en otras empresas. Todas estas cuestiones siguen siendo decisiones estratégicas por que deben ser tomadas en situaciones nuevas, distintas y no siempre validas para todos.

Es así como Rodríguez, (2001) define que dependiendo de la naturaleza de las empresas y de las necesidades y personalidades particulares los empresarios y/o administradores pueden elegir entre un enfoque empírico que se apoya en el sentido común o por un enfoque racional que se apoya en la aplicación de teorías y técnicas en un proceso de aplicación de conceptos, políticas y procedimientos. Destacando en este último enfoque el carácter estratégico de las decisiones a favor de la eficiencia interna, orientación al entorno externo y perspectiva de avance empresarial.

LA ADMINTRACIÓN ESTRATÉGICA

La innovación es el proceso de crear y poner en práctica una idea o proyecto nuevo, a efecto de perfilar su consideración dentro de una organización, Hellriegel, Jackson, Slocum (2007) refieren tres tipos básicos de innovación, siendo estas: técnica, de proceso y administrativa. La primera relacionada con la creación de nuevos bienes y servicios, la segunda implicada en la creación de una nueva forma de producir, vender o distribuir un bien o servicio existente y la última ocurre cuando se propone un nuevo diseño de organización para la producción y entrega de bienes y servicios, advierten los autores que con frecuencia varios tipos de innovación se relacionan y se presentan de manera combinada, de esta manera la administración estratégica bien llevada fortalece la aplicación de una mercadotecnia congruente con sus capacidades y oportunidades.

Actualmente un creciente número de organizaciones dependen sustancialmente de la innovación para tener éxito en su estrategia, el ser más innovador resulta muy importante, tal vez definitivo. Por ello las empresas deberán ser capaces de generar e integrar el conocimiento, tanto interno como externo, solas y muchas veces acompañadas, para desarrollar y ofrecer nuevas características en los productos o servicios que se adapten de manera efectiva a las condiciones del mercado demandante.

Las mipymes han sabido manejar y transmitir el conocimiento tácito por generaciones, como una singularidad de su práctica-acción. Flores (2002), señala que es necesario que estas empresas adopten nuevas prácticas para eficientizar la administración de su conocimiento. La innovación ofrece una nueva manera de concebir la empresa, donde cualquier individuo pueda aportar ideas, creando una identidad propia a la organización, en pro de asegurar un equilibrio entre el conocimiento social y el bienestar económico de la misma.

METODOLOGÍA

La información central se apoya en el entorno y desenvolvimiento de las micro, pequeñas y medianas empresas del sector de alimentos en Baja California, México. Entre los resultados obtenidos se cuenta con una base de datos que se mantiene actualizada a través de una estrategia de vinculación investigación-docencia, El soporte metodológico de la investigación realizada, su marco contextual y referencial, el diseño y aplicación de técnicas de selección, codificación y levantamiento directo conforman una estructura académica y social la cual puede soportar análisis continuados y el planteamiento de nuevos proyectos.

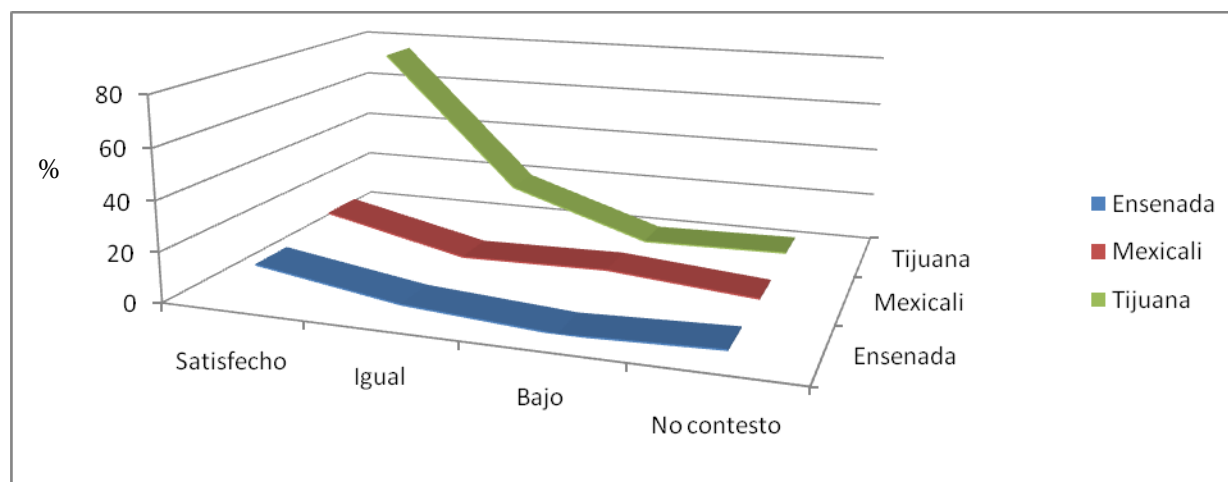

Para el procesamiento de la información seleccionada, el equipo de trabajo validó la utilización del programa estadístico informático SPSS (Statistical Package for the Social Sciences), dada su cobertura y factibilidad de aplicación al campo empresarial, de manera particular se consideró un universo de 142 empresas de alimentos, identificadas por tamaño en micro, pequeñas y medianas empresas así también por municipio, es decir empresas localizadas en Tijuana, Ensenada y Mexicali.

Por el tema propuesto en el presente trabajo se identificó información seleccionada relacionada con la percepción empresarial respecto a la calidad de su producto respecto a sus competidores, capacidad de cambio, conocimiento de normas de calidad y flexibilidad productiva. El grado de significación para el caso de alimentos las empresas de Tijuana considera un 70%, para el caso de Ensenada representan el 13% y para Mexicali la participación capta un 17%.

RESULTADOS

Se presenta un análisis aplicado a las mipymes encuestadas: Consideran a nivel estatal que la calidad de su producto es en casi un 77% (76.92%) superior en comparación con sus competidores a nivel nacional y solo un 21% (21.08%) lo consideraron igual, lo cual nos indica una condición competitiva relativamente positiva como se muestra en la figura No.1.

Figura No.1 Referencia del Nivel de Estatal de calidad percibido por los empresarios

Esta figura muestra el nivel estatal de calidad del producto percibido respecto al de sus competidores en Baja California, México
Fuente: Elaboración Propia

Reforzando lo anterior el 75.20% de los encuestados a nivel estatal aceptaron que están implementando algún control de calidad a su producción mientras que el 24.80% declaró no hacerlo.

De manera secuencial los empresarios mencionaron que para mejorar su condición de confianza han tenido que hacer modificaciones en cuanto al diseño del producto lo cual les ha permitido mejorar su posicionamiento en el mercado, lamentablemente esta situación sólo fue protagonizada por el 63.92% de las empresas encuestadas en los tres municipios, evidenciando que el 36.08% restante no ha hecho cambios en su producto, manifestando márgenes de inmovilidad que probablemente no respondan a las exigencias que el mercado actual demanda.

En cuanto al proceso de producción las mipymes expresaron que están lo suficientemente preparadas para hacer las modificaciones requeridas en el corto y mediano plazo en caso de que el mercado se los exigiera, la mayoría de ellas 88.23% dice poder hacer los cambios y el resto 11.77% dice no estar preparado para poder satisfacer la demanda, lo anterior se relaciona con la capacidad de producción que tienen las empresas en cada uno de los municipios, por ejemplo Mexicali tendría un nivel de respuesta del 89.90%, seguido por Tijuana con un 87.90%, dejando a Ensenada con un 86.90%.

En términos generales las micros, pequeñas y medianas empresas localizadas en el Baja California consideran estar preparadas para atender su mercado original, ya que muestran un conocimiento de las normas de calidad exigidas en el ámbito nacional en un promedio del 72.37 % en los tres municipios, presentándose por arriba de este promedio las empresas de Mexicali, mientras que las instaladas en Tijuana y Ensenada se ubicaron por debajo de este parámetro, en contrapartida el desconocimiento de este conjunto normativo en promedio asciende al 27.63%, congruente a ello las empresas mexicalenses están en una mejor posición respecto a sus pares de las otras ciudades.

Respecto al conocimiento empresarial de la normas de calidad en el ámbito internacional el promedio estatal es del 53.37%, porcentaje que deja al descubierto un elemento fundamental asociado a una limitada posibilidad de acceso a mercados internacionales, el que las empresas bajacalifornianas desconozcan este conjunto normativo en un 47.63% es evidencia de ello. Las empresas de Ensenada fueron quienes manifestaron una mejor situación proporcional de conocimiento ya que se ubicaron en un promedio específico del 60.90% a diferencia parcial de las empresas de Mexicali quienes registraron un 51.10% y de las empresas de Tijuana con un 45.10%.

CONCLUSIONES

Con respecto al inicio en las empresas Fischer y Espejo (2007) sostienen que cuando el negocio comienza, sus gerentes están tan ocupados tratando de encontrar los fondos, clientes, equipos y materiales, que no tienen tiempo para realizar una planeación adecuada. La gerencia está totalmente inmiscuida en las operaciones necesarias para sobrevivir. Por lo tanto, no hay un equipo de planeación y no se cuenta con mucho tiempo para planear. Muchas empresas micro, pequeñas y medianas se encuentran en esta situación debido a que su preocupación inmediata es encontrar los recursos para competir en el mercado. Con un segundo momento deberán de iniciarse con la administración de mercadotecnia y como una estrategia de desarrollo del negocio.

Desde una perspectiva teórica-conceptual un recurso histórico de las micro, pequeñas y medianas empresas es que muchas de ellas por su estilo de actuación y práctica cotidiana han sabido manejar y transmitir el conocimiento tácito por generaciones, pese a ello, actualmente se hace necesario que las empresas adopten nuevas formas de actuación empresarial en donde la innovación se fomente tanto en la creación de nuevos productos, nuevas formas de comercialización así como en la restructuración de la producción, todas asociadas a la administración del conocimiento, definiendo una nueva etapa administrativa por parte de las organizaciones impactada por una fuerte vinculación del entorno interno con el externo ya que sirve como elemento central al enfrentar los retos que implica una mercadotecnia efectiva y que han practicado de manera empírica.

Ejemplo de contrastación entre el referente teórico y la realidad identificada es que las micro, pequeñas y medianas empresas en el sector de alimentos que fueron inicialmente encuestadas consideran tener una condición competitiva positiva, toda vez que de acuerdo a su propia percepción la calidad de su producción es superior e igual a la de sus competidores a nivel nacional, un porcentaje menor afirmó el haber implementado algún tipo de control de calidad en su proceso productivo y aún en menor grado reconocieron haber realizado modificaciones al diseño de su producto en los dos últimos años, lo anterior visto de manera integral muestra evidencia de una administración no estratégica por parte de un alto número de empresas, toda vez que fundamentos claves como son el control de calidad y la innovación productiva no son estructuralmente consideradas impactando en una relativa baja productividad y una relativa baja competitividad.

Como análisis continuado las empresas bajacalifornianas sujetas a estudio consideran estar preparadas para atender su mercado original, conociendo en un alto porcentaje las normas de calidad exigidas en el ámbito nacional sin embargo su conocimiento sobre normas internacionales es proporcionalmente menor,

a nivel municipal son las empresas localizadas en Ensenada y en Mexicali en donde los registros son relativamente mejores respecto a los de Tijuana, este referente general nos permite visualizar posibilidades reales de acceso a los mercados internacionales evidenciando en un alto número de mipymes, una débil condición exportadora y la atención casi exclusiva del mercado nacional, dicha situación es compartida con otras realidades regionales de nuestra economía nacional en donde las ventajas geográficas, históricas y coyunturales son actualmente sustituidas y/o complementadas por ventajas estructurales “creadas”, estimuladas por programa, desarrolladas por estrategia conjunta e individualizada, visualizada y propiciada por emprendimiento y política de fomento, entre otras vías formales.

IMPORTANCIA DE LOS COSTOS EN EL DESARROLLO DE LA COMPETITIVIDAD EN LA MIPYMES DE BARRANQUILLA

Alberto Muñoz Santiago, Fundación Universidad Del Norte
María Jimena Wilches De Angelis, Fundación Universidad Del Norte
Daniela Montserrat Ros Zapata, Fundación Universidad Del Norte
María José Rosado Guerrero, Fundación Universidad Del Norte

El presente artículo muestra las conclusiones de una investigación realizada en MIPYMES de la ciudad de Barranquilla. En él se resume la poca importancia que tienen para la mayoría de estas empresas los costos y su incidencia en la competitividad de las mismas. Asimismo se revelan cuáles son los sistemas de información con los que cuentan las MIPYMES y la utilización que le dan a los mismos. Se observa que para gran parte de la muestra, la información relacionada a los costos y a la contabilidad es considerada sólo como un requisito de tipo tributario, al mismo tiempo que los presupuestos son poco utilizados como herramienta de planeación y control dentro de estas empresas.

Desde hace mucho tiempo, la competitividad es el motivo más frecuentemente utilizado dentro de la estrategia empresarial como justificación para planear, desarrollar e implementar ideas de negocio que le permitan a las empresas ser más productivas y hacer factible la optimización y buen uso de sus recursos. La eficiencia y eficacia en una organización son fundamentales al momento de establecer ventajas competitivas al interior del sector económico al que pertenece, haciendo que la calidad y la innovación se conviertan para que se adopten modelos administrativos que fomenten el crecimiento y la rentabilidad de la inversión.

En la actualidad todos los países del mundo luchan por promover e implementar en sus empresas sistemas competitivos que les permitan enfrentar el desempleo, la inestabilidad y la brecha económica que se abre cada vez más debido a la globalización, y su efecto en países en vía de desarrollo que no cuentan con los suficientes avances tecnológicos y científicos para la productividad. Las Micro, Pequeñas y Medianas Empresas (MIPYMES) hoy en día se constituyen como las principales generadoras de empleo, por lo cual los países en vía de desarrollo están estimulando la creación y el fortalecimiento de las mismas.

Sin embargo estas empresas (PYMES) no son ajenas a una serie de problemáticas que inciden directamente sobre su rentabilidad y competitividad, y que en algunos casos puede llevar incluso al cierre de las mismas. De acuerdo con algunos analistas las causales principales se relacionan con:

1. Ausencia de una verdadera visión de marketing,
2. Deficiencias en las áreas de producción y operaciones,
3. Desconocimiento de los sistemas básicos de control de gestión y
4. Caso omiso a la planificación.

Algunas de las características más notables de las Microempresas están relacionadas con el grado de informalidad en que operan, lo cual se ve reflejado en el porcentaje que representan aquellas empresas que no llevan registros contables(42%). “Aunque no existen cifras oficiales sobre informalidad en las Pymes, se estima que un porcentaje importante de ellas lleva a cabo prácticas empresariales informales, debido a los altos costos de operar en la formalidad.”

La finalidad de las MIPYMES, como la de toda empresa, es generar utilidades usualmente a través de dos condiciones: El incremento de los precios de venta o la reducción de los costos de operación, siendo esta

última la más utilizada debido a la dificultad que se presenta para llevar un control de los precios del mercado. No obstante, se ha demostrado que una de las principales causas de la desaparición de las MIPYMES la constituye la defectuosa administración de los costos. Por ello, resulta indispensable para estas empresas el conocer sus niveles de costos de operación y de producción, analizarlos detalladamente y en consecuencia, controlarlos en forma adecuada.

Los costos representan una herramienta útil y desempeñan un papel fundamental para la toma de decisiones en las áreas de producción, finanzas, mercadeo y recursos humanos ya que orientan al establecimiento de cursos de acción acordes a los objetivos y a las condiciones de la empresa. Teniendo en cuenta la importancia que tienen las MIPYMES, vale la pena indagar sobre la implementación de los sistemas de costos en ellas, si existe deficiencia en la ejecución de tales sistemas y de ser así demostrar la relación de ciertas variables tales como sector, antigüedad, volumen de ventas, capacidad exportadora, entre otros.

Luego de haber realizado el análisis de los Sistemas de Costos en las MIPYMES Barranquilleras se reafirma la importancia que posee el hecho de contar con un sistema de control, tanto en la gestión contable y de recursos financieros como en los costos, independientemente a la naturaleza de micro, pequeña y mediana empresa. Esto se pone en manifiesto debido a que la mayor parte de la muestra cuenta con este tipo de sistemas por considerarlos un elemento fundamental para mantener un orden en sus operaciones y por ser una alternativa para crear ventajas sobre la competencia.

Sin lugar a duda, el dominio de los sistemas genera una implicación muy considerable en la productividad, efectividad y crecimiento de las empresas. Ahora bien, según lo que se observó en dicha investigación, no es suficiente la utilización de cualquier tipo de herramienta o sistema de control si no se tiene una interpretación adecuada sobre el mismo.

IMPACTO DE LA APLICACIÓN DE LAS TICS EN PYMES DE MONTERÍA Y SU RELACIÓN CON LA GENERACIÓN DE EMPLEO

Benjamín Castillo Osorio, Universidad Del Sinú-Sede Montería

RESUMEN

El objetivo general de esta investigación es determinar la incidencia que ejerce la aplicación de las nuevas y modernas tecnologías de la información y las comunicaciones(TICS) en la dinámica del sector de las PYMES en la ciudad de Montería, y su impacto en la generación de empleo, de igual forma el crecimiento económico del Departamento, para la búsqueda de la generación de empleo, se propende también generar y transmitir nuevos conocimientos acerca de la creación de nuevas empresas que aporten al sector de la pequeña y mediana empresa en esta franja geográfica de nuestra región Caribe, no sólo en empleo sino también a la contribución del Producto interno bruto regional y Nacional, abriendo nuevas posibilidades de producción y por ende de exportaciones diversificadas, tales como las provenientes de la agroindustria, se identifican 3 objetivos específicos: 1. Definir y clasificar las pequeñas y medianas empresas por actividad económica dentro de cada sector de la economía regional y nacional. 2. Determinar el potencial de crecimiento o atraso del sector empresarial en la economía regional comparado con el nivel nacional. 3. Establecer el perfil de las pequeñas y medianas empresas y de los Propietarios. En cuanto a la metodología empleada se puede decir que la investigación se desarrolla, teniendo en cuenta la revisión de literatura o fuente secundaria y luego la fuente primaria o aplicación del instrumento (encuesta). Es importante recordar que al hacer el análisis se encuentra como resultado lo siguiente: El 98.2% de las organizaciones en Córdoba pertenecen al sector Microempresarial y las pequeñas y medianas empresa solo alcanzan un 1.4% y 0.4% respectivamente, y por tanto se concluye que nuestra Región es microempresarial por excelencia y del sector 3 de la Economía es decir servicios, y la mayoría de Los gerentes son jóvenes. Finalmente se dice que la Economía Cordobesa dejó de ser Agrícola y Ganadera y se ha convertido en Región Micro empresarial por excelencia sobre todo del sector servicios (Comercio), lo primero hay que hacer ingentes esfuerzos para volver a recuperar el tiempo perdido en este sector tan importante de la Economía Cordobesa.

PALABRAS CLAVES: Crecimiento, desarrollo, conocimiento, empleo, tecnologías, comunicación empresas. PYMES

INTRODUCCION

Es importante tener en cuenta que el problema de Los Empresarios de Córdoba y de Montería en particular reside fundamentalmente en la escasez de recursos para incursionar en nuevas posibilidades de producción con la aplicación de nuevas y modernas tecnologías, que de una u otra manera sirven como pilar fundamental para su crecimiento, por tanto esta investigación está encaminada a poder contribuir en la medida de lo posible proponer alternativas de solución a este grave problema por el que atraviesan muchos de los empresarios de Córdoba y Colombia, pues como se sabe vale la pena determinar la incidencia que ejerce la dinámica de las TICS sobre el sector de las PYMES en la ciudad de Montería, y su impacto en la generación de empleo y el crecimiento y desarrollo económico del Departamento para la contribución al producto interno bruto (PIB) y por consiguiente al mejoramiento de la calidad de vida de sus asociados. Para fortalecer el objetivo propuesto se debe tener en cuenta los siguientes elementos: Definir y clasificar las pequeñas y medianas empresas por actividad económica dentro de cada sector de la economía regional y nacional. Determinar el potencial de crecimiento o atraso del sector empresarial en la economía Cordobesa comparado con el nivel nacional.

Aporte a la calidad de vida de los Empresarios de Montería y a la sociedad cordobesa.

Propuestas de alternativas para la búsqueda de solución a los diferentes problemas por los que atraviesa el gremio que conforman el sector de las pequeñas y medianas empresas en Montería, especialmente el de la franja de los servicios, que es el de mayor peso dentro del contexto regional, para coadyuvar con el crecimiento y desarrollo de las mismas.

El desarrollo de esta investigación, tiende a la búsqueda de generar nuevos conocimientos acerca de la dinámica Empresarial que presenta el sector de las PYMES en la ciudad de Montería, la aplicación de las TICs y su impacto en la generación de empleo tanto en la economía regional y nacional.

Se dice que por infortunio nuestro departamento y por consiguiente el municipio de Montería aún no cuenta con ellas, ni con el capital humano preparado o capacitado para enfrentar este reto, lo que de suyo obstaculiza el proceso dinamizador de la economía.

METODOLOGÍA.

En lo concerniente con la metodología empleada se puede decir lo siguiente:

Este trabajo de investigación se desarrolla inicialmente, teniendo en cuenta la revisión de la literatura en una primera fase, o sea la fuente secundaria y luego en la segunda fase se aplicaron (358) encuestas, al total de las pequeñas y medianas empresas (PYMES), legalmente constituidas y registradas en la Cámara de Comercio de la ciudad de Montería, tomando como marco de referencia el espacio temporal comprendido entre 2004 y 2008, así mismo aprovechando la información del censo de población de 2005, para darle piso jurídico a la información manejada en términos de población, de otro lado se aplicó una entrevista directa, que reportará la información de fuente primaria.

RESULTADOS

De otro lado es importante clarificar que los principales problemas enfrentados por los pequeños y medianos empresarios en los últimos 5 años, están interrelacionados y en cierto modo se derivan de la coyuntura económica, nacional y mundial, falta de recursos económicos, poca rentabilidad, escasa demanda, cobro de cartera y difícil acceso a los canales financieros formales, todos los empresarios del departamento de Córdoba, al igual que los micro empresarios de la ciudad de Montería y los del resto del país, sin lugar a dudas tienen este denominador común, y presentan la misma sintomatología, obviamente que hay otros factores de perturbación que más adelante describiremos en forma más detallada; de ahí la importancia que reviste tratar de buscarle salida y propuestas de solución a este grave problema que dificulta y obstaculiza el proceso de crecimiento de estas organizaciones empresariales que de cualquier forma proporcionan mucho beneficio a la sociedad, lo cual se traduce en todo lo que tiene que ver con la generación de empleo y por ende del desarrollo económico y social, y en última instancia en mejor calidad de vida para sus asociados.

“Desde 1980, hasta nuestros días, las pequeñas y medianas empresas han venido jugando un papel muy importante dentro del contexto de la economía colombiana, indudablemente por su contribución a la generación de empleo, a la producción manufacturera y a la demanda de bienes y servicios, así como también al mejoramiento de la calidad de vida de sus asociados, sin embargo, conscientes de las limitaciones que hoy en día existen, en relación con el desarrollo y crecimiento de las MIPYMES, y con la mejor intensión que se realicen trabajos de investigación serios y acertados, que permitan tipificar de la manera más objetiva y concreta, las posibles soluciones al problema no sólo de las PIMES sino también de las MIPYMES, nace aquí la importancia que reviste seleccionar las variables más representativas, que de una u otra manera, señalarán las tendencias y aproximaciones más relevantes en el cuerpo de la investigación”.

“La micro empresa en Colombia, tiene su origen a partir de 1983, y brinda una coyuntura muy importante para dar impulso a las pequeñas industrias que se formaron antes de la gran depresión de 1929, lo cual genera un rápido crecimiento para abastecer el mercado nacional. La industria siguió concentrada en la producción de bienes de consumo y los intermedios ocupando la microempresa un segundo lugar”. Con el objetivo fundamental de ubicar a las microempresas en el contexto regional, nacional e internacional, se considera de mucha importancia hacer esta breve reseña histórica, para poder mirar el proceso de desarrollo o estancamiento que han venido registrando durante este último quinquenio. las organizaciones empresariales en el municipio de Montería, data más o menos de unos 60 años, es decir 4 años después de fundada la cámara de Comercio de Montería, de todas maneras es importante tener presente que este trabajo recoge todas las inquietudes, necesidades básicas y tipifica los diferentes problemas por la que atraviesan los empresarios que se encuentran comprometidos con múltiples actividades económicas, bajo sus tres formas de presentarse al mercado, que por ende pertenecen al sector servicios propiamente dicho, o sea al sector tres (3) de la economía colombiana, puesto que sin duda alguna se presentarán diversas propuestas y alternativas con viabilidad para el crecimiento y desarrollo de las pequeñas y medianas empresas (PYMES), lo cual redundará en beneficio de todos los sectores de la sociedad que participan en la vida económica de Montería, el departamento, la región caribe y por que no decirlo, hasta trascender el ámbito del nivel nacional e internacional, y de esta manera recuperar el tiempo perdido en el proceso de desarrollo y crecimiento de la economía regional.

SITUACIÓN ACTUAL DE LA PROBLEMÁTICA DEL SECTOR PYMES EN MONTERIA

En estos momentos, se puede inferir que de acuerdo con estudios realizados al interior del Departamento de Córdoba en materia organizacional, todas las pequeñas y medianas empresas (PYMES), que existen en la región, vinculadas al proceso productivo requieren de grandes inversiones para poder enfrentar el reto de la competitividad y de esta forma convertirse en organizaciones de tipo exportadora en gran escala y ponerse de cara al tratado de libre comercio que se pretende firmar con el mercado más grande del mundo como lo es el de Los Estados Unidos de Norteamérica, de otra parte puede decirse que el principal problema reportado por los mismos empresarios es la falta de fondos, seguido por un incremento fuerte de la poca rentabilidad y, en menor medida, la carencia de mercado; pero dada la situación coyuntural por la que atraviesa el país, y por ende el último acontecimiento histórico registrado recientemente, o sea la firma del “tratado de libre comercio el pasado 22 de Noviembre (2006), en las oficinas del Banco interamericano de desarrollo con los Estados Unidos “ (Revista Semana Colombia- Pág 25- 2008), y que ahora falta la aprobación por parte de ambos congresos, el nuestro y el Norteamericano, no es nada fácil perder una oportunidad tan valiosa como es la de negociar con el mercado más grande del mundo, por lo que este proceso entraría a dar respuesta en cierto modo a esa problemática planteada arriba; en consecuencia esta es una labor de alto nivel del Gobierno y que de ninguna manera puede dejar pasar por alto este hecho de gran trascendencia para la el crecimiento y desarrollo del país.

El sector empresarial cordobés, ha experimentado cambios significativos e importantes en los últimos dos decenios, tal vez con mucho retraso en relación con otras regiones del país, pero de manera significativa, pasando poco a poco de una economía eminentemente campesina, agraria casi de subsistencia, a otras más diversificadas en la cual se presentan manifestaciones muy tangenciales en actividades como la agroindustria con leves avances, por otro lado la prestación de servicio, del transporte terrestre en todas sus modalidades, las telecomunicaciones, el comercio de bienes materiales y los demás servicios complementarios. Surgen así nuevas empresas locales o se establecen algunas con origen en otras regiones del país y con ellas se le imprime algunas modificaciones a la estructura del mercado laboral local y regional, no sólo por nuevas posibilidades de generación de empleo, sino también por el incremento de los niveles de productividad exigidos, además por el estricto seguimiento de que son objeto las empresas por parte de las autoridades que buscan asegurar el cumplimiento de las disposiciones legales vigentes concernientes con esta materia; todos estos cambios que se han

mencionado de manera generalizada, no siempre han significado modificaciones al interior de las empresas para garantizarles un adecuado desarrollo y crecimiento con miras a direccionar o jalonar el progreso y el desarrollo económico y social de la región. Sea cual fuere la realidad, lo cierto es que la rotación laboral en las empresas de Montería y el resto del departamento, obedecen fundamentalmente a la gama diversificada de actividades informales que se encuentran regadas por todas partes, es decir todo lo que tiene que ver con el comercio callejero y otras formas de “rebusque” como suele denominárseles, la informalidad o trabajo disfrazado; de continuar, persistir y mantenerse esta situación las empresas en Montería y Córdoba, seguirán perdiendo su capacidad de liderazgo y sostenibilidad para ser competitivas y por consiguiente sin ningún tipo de futuro para insertarse en el mercado nacional e internacional, pues es imposible ocultar que las autoridades son cada vez más estrictas, exigentes y drásticas en el cumplimiento de los procesos que rigen la ley, y por tanto la aplicación de las sanciones son más severas, lo cual trae como consecuencia lógica, el descalabro económico de los empresarios; que sin duda se verán en la imperiosa necesidad de cerrar sus negocios y de otro lado la pérdida de imagen social de las empresas, señaladas como incapaces y poco cumplidoras de sus funciones sociales y obligaciones laborales contractuales.

De acuerdo con la investigación realizada por (Alberto Castañeda C y Rafael Cubillos L., 2004) denominada *Tercera evaluación de los programas de apoyo a la microempresa*, “el sector microempresarial ocupa un lugar significativo en la economía colombiana, ya que genera cerca del 18% del PIB urbano y, en promedio, durante las últimas dos décadas, ha representado cerca del 60% de la fuerza de trabajo del país”. Su importancia estratégica ha sido apreciada desde tiempo atrás, hasta el punto de que casi cualquier política de desarrollo empresarial y social en Colombia ha tenido vínculos estrechos con su desarrollo; dentro de este marco referente, la Ciudad de Montería y el departamento de Córdoba, no escapa a este proceso y en consecuencia este sector aunque en forma muy tímida aporta al producto interno bruto, pero en otras condiciones de productividad y competitividad, las cosas serían diferentes, por ello no es inmediato ya que:

“En los últimos años el mundo ha entrado en un proceso de rápida transformación. Los cambios en los sistemas políticos, económicos y en los valores sociales, nos llevan a un punto en que las nociones convencionales no son pertinentes muchas veces.

Uno de los aspectos externos de mayor incidencia es la globalización la cual afecta de manera directa a las empresas. La globalización plantea retos a las empresas; les abre nuevas oportunidades de expansión en el exterior y le añade complejidad a la dirección de las empresas. También afecta a los gobiernos ya que les imponen restricciones cada vez mayores a la hora de diseñar sus políticas económicas. Igualmente la globalización de los mercados incide también en la sociedad civil, y el cambio social y cultural. Este fenómeno ha provocado una creciente e intensa rivalidad internacional en diversos sectores de la economía.

La creciente rivalidad internacional, la aceleración de la innovación tecnológica, el proceso de unión económica europea, el incremento de las importaciones procedentes del Sudeste Asiático, la integración creciente de los distintos mercados financieros internacionales, la aprobación del acuerdo de libre comercio entre Canadá, México y Estados Unidos, o la mayor cooperación económica a nivel internacional son fenómenos estructurales de mucha actualidad que marcan un auténtico punto de ruptura con la evolución económica internacional hasta hace muy pocos años.

La rivalidad generada, las acciones proteccionistas y la aparición de nuevas tecnologías, han contribuido a que la crisis actual no sea puramente coyuntural sino el reflejo de cambios estructurales que se vienen produciendo en la economía mundial. Hoy la empresa si pretende ser internacional debe hacer un análisis profundo de ventajas competitivas para lograr penetrar en los mercados internacionales, tales como: eficiencia (ventajas comparativas, sistemas propios y economía de escala), flexibilidad (diversificación y operar en otros mercados), aprendizaje (conocimiento de los mercados externos, marketing), marcas,

prestigio (ser visible) y acompañamiento a los clientes (seguimiento de sus clientes). Este conocimiento le permitirá tomar decisiones acertadas. Además de lo anterior, la empresa tiene que ser consciente del cambio que se debe generar en los aspectos de cómo penetrar en el mercado, estructuras administrativas, visión y estrategias. Son fundamentales las habilidades gerenciales de quienes dirigen y las herramientas administrativas para desplegarlas en estas empresas con miras a internacionalizarse o para fortalecerse ante el fenómeno de globalización. La administración estratégica sería un excelente punto de partida para implementar en este entorno turbulento y dinámico que tienen las empresas.

Como es de público conocimiento, los empresarios de Montería y los restantes del departamento, al igual que los de muchas otras ciudades capitales y Departamentos, presentan la misma situación y tienen un corte muy similar, pues se constituyen en el epicentro de la economía regional, dadas sus condiciones muy particulares, puesto que no son tenidas en cuenta en forma individual, ya que en última instancia cuando acuden a solicitar recursos del crédito interno ante los organismos que ofrecen financiamiento a estos sectores que están explotando cualquier actividad económica, se les frena la posibilidad, dado que sólo tienen acceso a los créditos los gremios y grupos asociados, cooperativas entre otros, por tanto lo que se pretende es que esto no siga sucediendo, romper con este esquema retardatario; pues todos presentan la misma problemática y se quejan constantemente por los factores perturbadores que más sienten al interior de sus organizaciones, cuales son la escasez económica, la falta de fuentes financieras con créditos blandos, entre otros como para no ir más allá, pues estos son factores fundamentales y determinantes para que éstas puedan cumplir su función dentro del ámbito de la producción local, regional, nacional y aún en el concierto internacional. En nuestro Departamento, “los microempresarios, no cuentan con un proceso de planeación racionalmente aplicado y adecuado, sino más bien deficiente, tal como lo muestran estudios recientes donde se afirma que el 64%, no busca capacitación en materia de Planificación y administración de empresa, (B. Castillo.-2006) normas procedimientos, técnicas y herramientas de desarrollo tecnológico tales como las TICs, que contribuyan al crecimiento y fortalecimiento de su propio negocio, de otro lado el alto índice de desconocimiento de las políticas y normas del Estado en todo lo atinente a la creación de empresas y los beneficios que perciben relacionados con impuestos, tasas, contribuciones, subsidios, es decir aspectos que la ley 590 de 2000 les otorga.

Relación De Empresas Por Categorías Ley 590 De 2000 Existentes En Cordoba.- 2008.

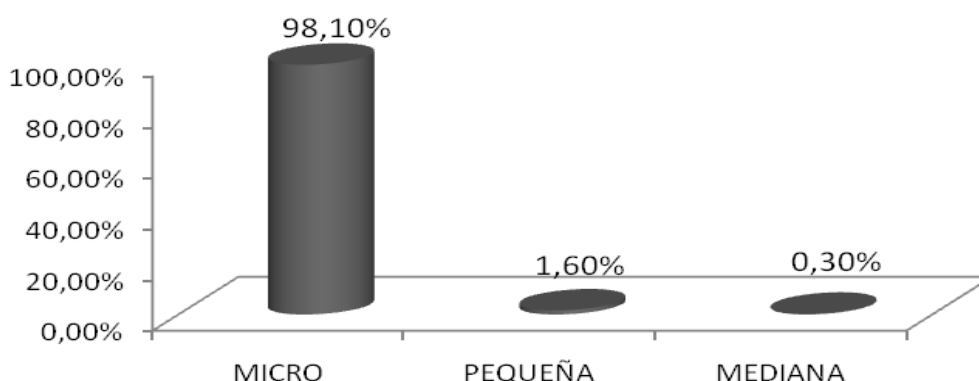

Tabla No 1

Tipo	Micro	Pequeña	Mediana	Total
Resultados				
Total Unidades	5.039	82	15	5.136
Total.	98.1%	1.6%	0.3%	100%

Cálculos del investigador. Benjamín Castillo Osorio.- Noviembre 2008, Información C. Comercio de Montería.- Noviembre 2008

En la tabla No 1, se observa con claridad que hasta marzo de 2008 el Departamento sólo contaba con 12.981 negocios, de los cuales el 98.1% correspondían a microempresas, sólo Montería cuenta ya con 5.136 negocios, de los cuales paradójicamente el 98.2% corresponden a microempresas, es decir cifras muy parecidas a la anterior. De igual manera, ocurre que las pequeñas y medianas empresas, en 2008, representan el 1.6% y el 0.2% respectivamente. De todo lo antes expuesto se puede inferir que la microempresa en Montería se ha expandido o ha tenido un crecimiento vertiginoso equivalente a un 52.3% con relación al periodo comprendido entre 2003 y 2008 (ver tabla y figura No 1).

Figura 1: Participación Porcentual por Categoría de Empresas

Fuente: Trabajo de campo junio de 2009.- Cálculos del investigador. B Castillo Osorio

PARTICIPACION PORCENTUAL DE PYMES EN SECTORES DE LA ECONOMIA

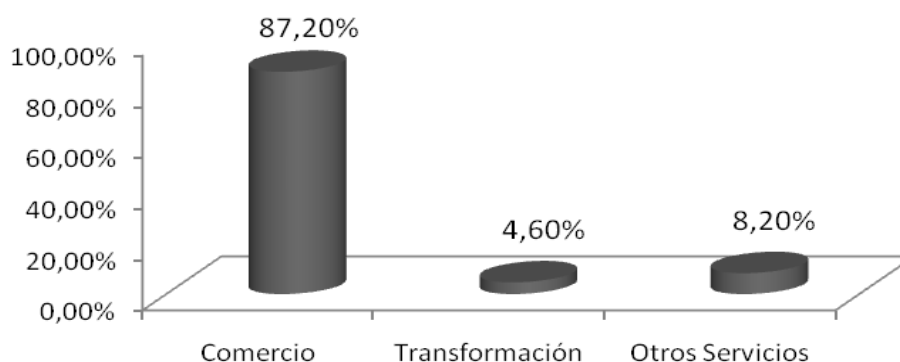

En lo que concierne al análisis de la información de fuente primaria, o sea la suministrada por los empresarios inmersos en el proceso de producción de todo el departamento de Córdoba, se puede apreciar el siguiente comportamiento:

Tabla 2: Participación De Las Pymes En Los Sectores De La Economía

No	ACTIVIDAD ECONOMICA	No DE EMPRESAS	% DEL TOTAL
1	Comercio	17	87,2
2	Transformación	9	4,6
3	Otros Servicios	16	8,2
TOTAL		358	100

Fuente: Trabajo de campo junio de 2009.- Cálculos del investigador. B Castillo Osorio

Figura No. 2: Participación Porcentual de las PYMES en la Economía

Fuente: Trabajo de campo junio de 2009.- Cálculos del investigador. B Castillo Osorio

Hoy en día, un número representativo de empresarios le están apostando a todas aquellas actividades económicas que están relacionadas con el renglón de la comercialización de bienes y servicios, o mejor pertenecientes al sector terciario, las cuales representan el 87.2% del total de las empresas, le sigue en su orden de importancia otros tipos de servicios con un 8.2% y en tercer lugar actividades pertenecientes al

sector secundario(industrial) es decir aquellas que están siendo objeto de un proceso de transformación, en sus diversas ramificaciones, las cuales alcanzan un 4.6% (ver tabla y figura No 2).

Por lo antes expuesto, se puede afirmar que nuestro departamento en estos momentos centra su atención en lo que tiene que ver con el proceso de desarrollo del sector comercial, y su participación en el crecimiento y desarrollo de la economía regional y nacional, las cuales están determinadas indudablemente por un importante y representativo número de estas actividades.

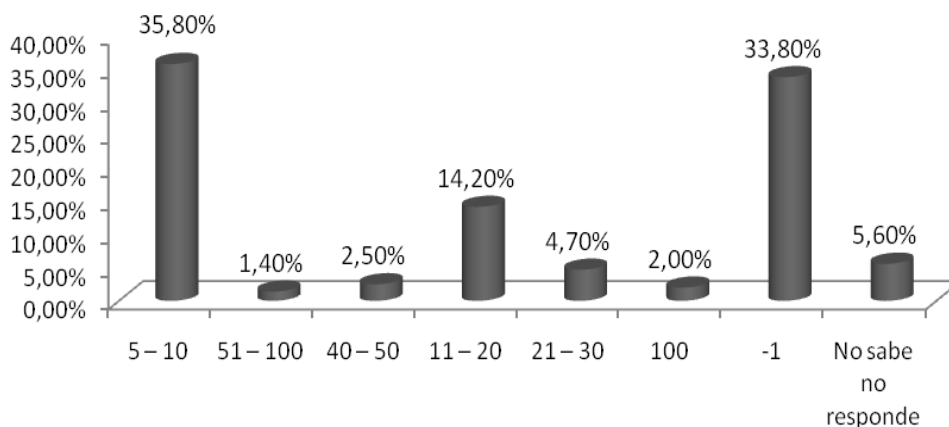

¿En qué rango ubica usted el capital con que inició su empresa?

Tabla No 3

Rango del capital inicio (millones)	Frecuencia	Porcentaje
5 – 10	128	35,80%
51 – 100	5	1,40%
40 – 50	9	2,50%
11 – 20	51	14,20%
21 – 30	17	4,70%
+ 100	7	2,00%
- 1	121	33,80%
No sabe no responde	20	5,60%
Total	358	100,0%

Fuente: Trabajo de campo junio de 2009.- Cálculos del investigador. B Castillo Osorio

Figura No. 3: Porcentaje

Fuente: Trabajo de campo junio de 2009.- Cálculos del investigador. B Castillo Osorio

De acuerdo con los resultados obtenidos de la fuente primaria, se tiene que el capital con que inició su empresa comprendido entre 5 y 10 millones de pesos lo representa el 35.8%, y menos de un millón de pesos, lo reporta un 33.8% del total, y los que tienen un monto de capital más representativo ubicados en el rango de 11- a 20 millones de pesos, se encuentran los que respondieron y alcanzan un 14.2% del total de los empresarios objeto de esta investigación(Ver tabla y figura No.3)

De otro lado, es sabido que la situación económica por la que viene atravesando el país, en materia de desempleo no es nada fácil, por tanto Córdoba no escapa a ello, y todo esto obedece al proceso de internacionalización y globalización de la Economía.

En lo atinente a la generación de empleo es importante resaltar que por cada diez mil (10.000) habitantes y por subregión de las empresas en Córdoba, se encuentra que el Centro reporta un 31.7% la subregión San Jorge un 17.3% y en tercer lugar está la del Bajo Sinú que representa el 12.7%, éstas como los indicadores más altos, el resto que corresponde a 4 subregiones suman el resto del total que equivaler al 38.3%.

Lo antes expuesto permite afirmar categóricamente que en nuestra región, la mayor parte de los empleos generados se dan en la capital, puesto que es ahí donde hay mayor concentración de empresas y por ende mayor número de población.

CONCLUSIONES

Desde mucho tiempo atrás, las empresas en Córdoba, son en su mayoría jóvenes y se encuentran en manos de gente joven pero no cuentan con las herramientas tecnológicas Tics en éstas. Las empresas en Córdoba han evolucionado de tal manera que se han incrementado en un 67% sin aplicar las herramientas Tics en este último decenio. En lo concerniente con los cambios experimentados, deja entrever que se han dedicado más al sector servicios sin contar con la tecnología de punta microempresarial abandonando el sector agropecuario que muchos años le ha dado gloria a nuestra región con su aporte al PIB nacional y regional.

Las Tics son importantes porque le va a permitir al Gerente de la Pequeña y Mediana empresa de Montería y por ende de la región, contar con unas herramientas eminentemente técnicas que puede aplicar con mucha facilidad para la planificación, ejecución, evaluación, control y retroalimentación de sus actividades económicas, con el fin de mejorar su productividad y a su vez contribuir con el desarrollo regional y aún nacional, a través del incremento del (P. I. B.) producto interno bruto nacional.

A partir de estos momentos, nuestro interés reside en darle a conocer a todos los Empresarios del Departamento de Córdoba, que es importante plantearle al gobierno central, la necesidad imperiosa de modernizar las micro, pequeñas y mediana empresas, por medio de una política institucional sólida, pues como se sabe ya existe el FOMIPYME, pero esto no es todo, se requiere de acciones más contundentes. Dentro de los instrumentos que nuestro equipo propone, para la modernización de las PYMES, se encuentra crear un Fondo de reconversión y modernización productiva, puesto que se encargará de aportar a los bancos y Organizaciones del Estado, que tienen que ver con esto, tales como BANCOLDEX, FONADE, FINAGRO entre otros.

La importancia de esta tarea es que los pequeños y medianos empresarios, puedan acceder a líneas de créditos en mejores condiciones y de esta manera modernizar e invertir en tecnología de punta para que su empresa sea competitiva y esté a tono con el proceso de internacionalización y globalización de la Economía. La herramienta inteligencia de negocio, es clave para el desarrollo de las PYMES. Los propietarios de pequeñas y medianas empresas entienden, incluso mejor que cualquier otro, que deben centrar sus esfuerzos en la gestión del negocio y no en el funcionamiento de sus sistemas tecnológicos. Como importantes motores del cambio y la innovación, demandan una tecnología que sirva para resolver los problemas que tienen en sus negocios y por ello están empezando a adoptar nuevas herramientas que les permitan ordenar y aumentar la disponibilidad de toda la información almacenada en sus organizaciones para facilitar la toma de decisiones tomando como base las soluciones de inteligencia de negocio (en inglés business intelligence).

Estas soluciones cuentan con un doble componente: el estratégico, que se refiere a las herramientas y al modo en el que se relacionan entre sí para ofrecer una visión global del negocio; y el operativo, que hace referencia a la capacidad de contar con acceso a toda la información en tiempo real para poder tomar mejores decisiones tácticas en el día a día.

Anexos- Avances Del Proyecto.
Fase II.

Información relacionada con algunas de las herramientas computacionales que utilizan o no los gerentes y los ingenieros y técnicos en sistema en las pymes de montería.

Frecuencias

usted como gerente o administrador tiene conocimientos de la inteligencia de negocios (business intelligence)

Tabla No 1: Conocimiento de la Inteligencia de Negocios (Business Intelligence)

		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
Válidos	No	52	35,4	35,4	35,4
	Si	95	64,6	64,6	100,0
	Total	147	100,0	100,0	

Usted como gerente o administrador tiene conocimiento de la inteligencia de negocios?

FUENTE: Trabajo de Campo, cálculo del Investigador. Benjamín Castillo Osorio Julio de 2009

Es importante resaltar que el 64.6%, dice que como gerente tiene conocimiento de la inteligencia en los negocios y el 35.4% respondió que no tiene la menor idea de esto, lo cual es muy delicado ya que es muy alto el índice de población empresarial que no conoce las herramientas computacionales, tal como lo muestra la tabla No 1.

EVALUACIÓN DE LA GESTIÓN ESTRATEGICA EN EL MANEJO FISCAL EN COLOMBIA - PERIODO 1990 AL 2002 Y SU APOORTE AL DESARROLLO ECONOMICO

Alberto Muñoz Santiago, Fundación Universidad Del Norte

Jorge Pacheco Fuentes, Fundación Universidad Del Norte

Alex Paramo Samper, Fundación Universidad Del Norte

El presente trabajo analiza los resultados de la política pública de la tributación colombiana desarrollada por los gobiernos de los años 1990 y 2002. Se revisarán las principales distorsiones que generaron los modelos aplicados y la relación existente entre el crecimiento económico del país y las políticas fiscales.

Este enfoque toma en cuenta dos aspectos fundamentales, el primero es la gestión estratégica gerencial de cada uno de los últimos tres presidentes de nuestro país, Dr. Cesar Gaviria Trujillo, Dr. Ernesto Samper Pizano y Dr. Andrés Pastrana Arango sin incluir al actual, Dr. Álvaro Uribe Vélez; y el segundo aspecto, consiste en valorar mediante el análisis comparativo de los resultados, el verdadero impacto en el crecimiento económico de las reformas tributarias aplicadas por cada gobierno para financiar los gastos y la inversión.

Se tomaron en cuenta el factor externo como agente que afecta la política fiscal y el desarrollo doméstico. Aquí se analizarán las grandes decisiones del país como fue la de la apertura económica y la globalización de la economía, y como ha afectado, ya sea positiva o negativamente a la economía nacional.

Después analizar los Planes de Desarrollo realizados por los tres gobiernos comprendidos en el periodo 1990 a 2002, de estudiar el resultado de las reformas tributarias efectuadas en dicho periodo, y haber evaluado el estilo de liderazgo mostrado por los tres Presidentes, se puede concluir lo siguiente:

- Los Planes de Desarrollo son el futuro visualizado por cada presidente, en los cuales, con la sumatoria de variables y manejo tanto financiero como social, se pronostican las actividades a realizar con el fin de buscar el incremento del nivel de vida de los colombianos, con empleos sostenibles que auguren un crecimiento del País.
- Cada diseño de los Planes fue estructurado pensando en que las políticas trazadas eran la mejor alternativa posible de entre muchas que se podían visualizar.
- *El Plan de Desarrollo realizado por el Dr. Cesar Gaviria*, se centró en el cambio del modelo de desarrollo económico, buscando dejar atrás el Estado Proteccionista y enfocándose en un modelo que fuese más competitivo y abierto a las otras economías, generando así una mayor comercialización de bienes y servicios encaminados al comercio exterior, con mecanismos ágiles y sin barreras que permitieran generar el crecimiento sostenible del país. Este cambio hizo necesario que se fortalecieran los diferentes entes territoriales con el fin de lograr un mayor dinamismo en el Estado.
- *El Plan de Desarrollo elaborado por el Dr. Ernesto Samper*, se enfocó en dar un mayor sentido social al Estado, buscando la participación del mismo en el direccionamiento de la economía y centrarse en las áreas claves del país con el fin de influenciar de manera positiva en su desarrollo sostenible. La idea fue que el Estado participara activamente en el desarrollo de políticas que mejoraran la calidad de vida de los colombianos.
- *En el Plan de Desarrollo del Dr. Andrés Pastrana*, se centró en fortalecer la gobernabilidad del País, luchando por enfatizar la parte organizacional y de control del Estado, más que en la operativa, para lo cual los organismos del estado deberían estar preparados para ejercer el control en las diferentes instancias públicas. Se profundizó fuertemente en el desarrollo de la descentralización de los entes

territoriales, ya que esto permitiría un mayor desarrollo del país y un buen manejo de los recursos económicos proporcionados por el Estado Central.

- Las reformas tributarias deben responder a una respuesta de estrategias encaminadas a llevar al país por la senda del crecimiento sostenible, generando un enfoque estructural que busque la equidad en la implementación de la misma.
- Durante los tres periodos presidenciales se realizaron 8 reformas tributarias principales, que pretendieron darle los recursos al Estado para su manejo financiero.
- La finalidad era obtener los recursos para la financiación de los diferentes planes del gobierno. Los resultados no fueron los mejores debido a que aún cuando el ingreso proveniente de las reformas aumentaron, los gastos del Estado fueron superiores, dejando como resultado el déficit fiscal y consecuentemente el aumento de la deuda externa, debido a que se requerían los recursos para cubrir los gastos del Gobierno.
- Los cambios planteados en las reformas que se han realizado han sido respuestas a las necesidades que se presentan. La realizada en el periodo del Presidente Cesar Gaviria fue la que trató temas de carácter estructural, debido a que obedecía a la estrategia del cambio de enfoque en el modelo económico que iba a facilitar el proceso de transformación en que se encaminaba el país.
- Las presentadas por el Presidente Ernesto Samper y por el Presidente Andrés Pastrana, buscaban solamente incrementar el ingreso de los recursos para los diferentes planes, pero no planteaban reformas estructurales que permitieran generar los recursos de manera sostenible.
- Los índices de evasión y elusión siguen siendo elevados, trayendo como consecuencia que los recaudos no lleguen a alcanzar los niveles esperados para el completo funcionamiento del Estado.
- Los ingresos generados junto a los ingresos obtenidos con la venta de las empresas que el Estado poseía han sido las fuentes de recursos para el desarrollo de la gestión del gobierno, pero los recursos provenientes de la venta de las empresas no son permanentes sino temporales debido a la misma naturaleza del mismo.
- Las reformas no deben ser un instrumento utilizado solo para generar recursos por una vigencia, sino reformas que permitan desarrollar la economía de manera ágil y que por ende conlleve a los resultados que necesita el país para encontrar la senda de la sostenibilidad.
- El papel del Presidente es el cargo más importante del país, las personas que lo tienen son aquellas que han demostrado un liderazgo a través de la vida pública y que han desarrollado en las distintas instancias del gobierno.
- El Presidente Cesar Gaviria, tomó las riendas de un país que se encontraba cerrando un ciclo económico, así como también en una de las épocas más cruentas del narcotráfico colombiano, en donde figuras importantes del gobierno habían muerto, como consecuencia de este terrible flagelo.
- La tarea encomendada no fue fácil, tuvo cambiar el marco económico en el cual la economía se venía desenvolviendo y llevarlo a otro nivel, más participativo, mas abierto. El estilo de liderazgo utilizado por el presidente fue decisivo para lograr las metas trazadas.
- El objetivo de realizar el cambio de modelo económico fue un éxito, debido que aún cuando el sistema tenga sus detractores, es el que se encuentra funcionando y ha permitido lograr un mayor desarrollo al país.
- El Presidente Ernesto Samper, recibió a un país con deseos de crecer. Indudablemente, el flagelo del narcotráfico influenció en el desarrollo del plan de desarrollo, ya que se empleó la mayor parte del tiempo en tratar de salir ileso en el proceso en que se encontraba involucrado y no se dedicó el tiempo deseado para realizar los cambios presentados en el plan de desarrollo.
- El Salto Social quedó postergado para próximas vigencias en donde se retome los apartes principales de dicho proyecto y se pueda lograr una implementación adecuada.
- El Presidente Andrés Pastrana, enfrentó un país en crisis, tanto en el orden económico como en el orden social, lo que hizo necesario enfocarse en una de las mayores problemática que tenía en su momento, la de lograr la paz.

- Los resultados no se dieron en este orden, pero aún así la economía empezó a dar mejores signos vitales y con el estilo de liderazgo implementado por el presidente Pastrana, se logró entrar en la senda del crecimiento económico que tanto necesitaba el país.

Aún cuando al final de la década de los noventa, el país estaba encontrando la senda del crecimiento económico, los resultados que dejaron las crisis no se dejaron esperar. La pobreza y la inequidad continuaban latentes y el mercado laboral continúa deprimido, a causa de que los ingresos en los sectores más pobres son cada vez más reducidos.

Es posible decir que los noventa, fue una época de grandes cambios a nivel estructural, cambios que integraron al país en la economía mundial, dando así inicio a mayores oportunidades en el ámbito de los negocios. Esta integración, fue muy difícil, ya que el país no estaba preparado para ella. Los ajustes al sistema económico hicieron que se desarrollaran reformas tributarias que aún cuando elevaron el ingreso, no fueron suficientes para cubrir la necesidad del gasto, por lo tanto la inversión social no compensó el alto índice de pobreza que vive el país.

El crecimiento económico de los diez años, situado en el promedio de 2,5%, deja notar que los esfuerzos realizados no dieron los resultados suficientes para cerrar la brecha de la pobreza. El progreso esperado y pronosticado en los planes de desarrollo no se llevó a cabo, solamente se pudieron realizar algunos aciertos que permitieron que el país siguiera en marcha para sobrevivir en medio de las crisis.

El liderazgo de cada uno de los presidentes fue clave para salir de las crisis que se desarrolló en cada momento, logrando un mayor énfasis el gobierno del Presidente Cesar Gaviria, quien tomó la responsabilidad de sacar al país del proteccionismo de la economía y llevar a cabo los cambios necesarios para que se dieran los resultados esperados.

COMPETENCIAS PROFESIONALES Y LA EDUCACIÓN

Araceli Gutiérrez Guzmán, Universidad Autónoma de Aguascalientes

Haydeé Aguilar Romero, Universidad Autónoma de Aguascalientes

Juan Carlos Moreno Aguilera, Universidad Autónoma de Aguascalientes

RESUMEN

Las Instituciones de Educación Superior, a partir de su misión fundamental de formar estudiantes y generar conocimiento, deben forjar una nueva visión de la educación que ubique a los educandos como eje central en la perspectiva de una educación permanente, que favorezca su integración a la sociedad del conocimiento del siglo XXI y su participación activa en los procesos de cambio social que conduzcan a un mundo más humano, más justo y de respeto a la naturaleza. El Modelo Educativo Institucional está inspirado en la historia, vocación, misión y fines de la UAA; enmarcado en la normativa Institucional y proyectado en su visión y en el cambio permanente del conocimiento y de la sociedad. Expresa como fin y máxima aspiración la formación de sus estudiantes. El MEI se caracteriza por ser: consistente, al dar continuidad a su planteamiento y desarrollo; innovador y dinámico, al buscar de manera permanente la calidad; sistemático, al buscar la integración de sus funciones sustantivas; flexible, a la investigación y difusión, lo que le permite a los estudiantes y profesores contrastar e integrar lo que pasa en diversos espacios de aprendizaje dentro y fuera de la Institución y lo que sucede en los escenarios laborales.

INTRODUCCIÓN

Al considerar en la actualidad, el contexto del fenómeno de la globalización, se percibe una fuerte influencia y demanda internacional por alcanzar niveles más altos de competitividad y excelencia en todas las áreas: la del conocimiento y la educación, de la tecnología, de la política, de lo económico, de la cultura, entre otros. En este contexto se necesita una educación que responda a este contexto. La Educación basada en competencias es una tendencia que tiene sus orígenes en la necesidad mundial de relacionar más estrechamente las habilidades de la persona con su ámbito de acción, la economía globalizada ha propiciado un proceso de modernización en la formación profesional, siendo las tendencias principales la búsqueda de una alta capacidad de aplicación de los conocimientos a la vida real, a la solución de problemas y a la innovación.

El entorno económico y laboral actual, en constante proceso de cambio y globalización, está exigiendo a los titulados universitarios un conjunto de capacidades, habilidades y actitudes complementarias a su formación profesional. La valoración de las denominadas competencias profesionales” se está convirtiendo en un factor determinante para acceder al mercado laboral.

La ANUIES, por su parte, postula que la formación integral significa incorporar en el diseño nuevos modelos educativos centrados en el aprendizaje, la construcción de competencias generales y específicas que consideren desde perspectivas multidisciplinarias, conocimientos, habilidades, actitudes y valores que construyan en concordancia con el contexto histórico, cultural, económico y político, atendiendo asimismo al desarrollo físico y moral del individuo.

REVISIÓN LITERARIA

El término competencia que se define en el diccionario de la Real academia Española, por medio de una de sus acepciones, como “Pericia, aptitud, idoneidad para hacer algo o intervenir en un asunto determinado” (Real Academia Española 2004). Autores como Bogoya (1996) plantea que “la competencia es vista como una oportunidad o una capacidad para poner en escena una situación problemática y resolverla, para explicar su solución y para controlar y posicionarse de esta. Torrado

(1995) se trata de un conocimiento derivado de un aprendizaje significativo", ligado a ciertas realizaciones o desempeños. CONOCER (1997) "capacidad productiva de un individuo que se define y mide en términos de desempeño en un determinado contexto laboral, y no solamente de conocimientos, habilidades, destrezas y actitudes; éstas son necesarias pero no suficientes por sí mismas para un desempeño efectivo". Según Castellanos, (2003) "la competencia es una configuración psicológica que integra diversos componentes cognitivos, metacognitivos, motivacionales y cualidades de la personalidad en estrecha unidad funcional. Cejas (2006) comparte esta definición cuando define que la competencia es un sistema de componentes (cognitivos, metacognitivos, motivacionales y cualidades de la personalidad) que posee un individuo para desenvolverse eficientemente en su vida como ser social en todas las facetas.

El concepto de competencia en México comienza a utilizarse en 1993, quien lo da a conocer es el Consejo Nacional de Certificación de Competencias laborales (Conocer) en 1993 y de ahí se aplicó en los programas de CONALEP a través de la formación de competencias para el trabajo (Ibarrola, de 2008) y en el diseño de cursos de competencia laboral que se ofrecían también desde los bachilleratos tecnológicos. Es hasta 2007 y 2008, a partir de la concepción del Marco curricular Común, que se inicia con un ambicioso proyecto federal para la Reforma Integral de la Educación Media Superior y con ello la concepción de competencias de bachiller y competencias docentes de sus profesores. Independientemente de la problemática particular del concepto, y al margen de la revisión histórica que podríamos realizar al respecto, lo que nos interesa es realizar un intento de clarificación en este campo, para llevar a cabo una estructura que nos sirva de base para establecer competencias profesionales que estén vinculadas con la empresa.

OBJETIVOS GENERAL

Centrar en el alumno el trabajo en la preparación profesional y buscar el fomentar en él la adquisición de nuevos conocimientos y habilidades así como el acercamiento entre los sectores educativo y productivo con dos acciones importantes, el desarrollo de competencias genéricas: consultivas, técnicas y metodológicas y el desarrollo de competencias específicas o disciplinares.

Objetivos Específicos

- Vincular la formación del estudiante en la institución con la práctica profesional.
- Desarrollar la capacidad del individuo mediante su formación y capacitación profesional.
- Incrementar su desarrollo profesional a través de las relaciones humanas y sociales mediante la realización de prácticas que realicen los estudiantes.
- Promover las actividades de todo tipo de turismo y generar conciencia en el cuidado de los lugares naturales de País.

METODOLOGIA

El diseño de la investigación del presente trabajo fue de tipo literaria, descriptiva y participativa, buscando especificar el cumplimiento de los objetivos y características de la Universidad Autónoma de Aguascalientes, en vinculación con empleadores del estado de Aguascalientes. Además de describir las necesidades y los retos a los que se enfrentan los estudiantes e impulsarlos de manera profesional y laboral.

La educación por competencias permite vincular la formación o capacitación, que se promueve desde las instituciones educativas con la realidad de la práctica profesional. Los modelos basados en competencias implican así mismo una integración y adecuación de capacidades, conocimientos y habilidades cognitivas, afectivas, psicomotoras y sociales que puedan ser utilizadas eficazmente en situaciones generalizables de

la profesión. Por lo que podemos decir que, competencia es la capacidad para resolver situaciones complejas (problemas) en un contexto determinado.

La Competencia Profesional u Holística, relaciona atributos, tareas y contextos, busca ligar los atributos generales con el contexto profesional e incorpora la ética y los valores como elementos de un desempeño competente.

Competencias Básicas: Son las capacidades intelectuales indispensables para el aprendizaje de una profesión. Genéricas: Son la Base común de una familia de profesiones y se refieren a las situaciones generales de la práctica profesional que requieren de respuestas complejas. Específicas: Son la base particular de una profesión y están vinculados a condiciones específicas de ejecución.

Principios De La Educación Por Competencias

- Acercar al alumno más pronto al campo ocupacional
- Integrar la teoría y la practica
- Reconocer actitudes y valores en la formación profesional
- Reconocer el aprendizaje independientemente del lugar donde se adquiere
- Centrar el aprendizaje en el alumno
- Trabajar en equipo.

La Formación Parte de Problemas reales a particulares:

- Uso de materiales que simulan la vida real o situaciones reales.
- Disponibilidad de recursos para ayudar al estudiante a esclarecer los problemas y tratar con ellos
- Énfasis en el trabajo cooperativo entre estudiantes y el apoyo del tutor.

Cualidades de la Educación por Competencias

- Transferibilidad
- Multi- referencialidad
- Formación en alternancias (vincularlo con empresas)
- Emergencia (situaciones no previstas)
- Aprender de lo imprevisto o lo disfuncional (que debemos hacer para que los alumnos aprendan mejor)

Condiciones de una Educación por Competencias

- Diseño de propuestas curriculares por competencias profesionales
- Congruencia de los propuestas curriculares con las políticas y fundamentos de la institución educativa
- Elaboración de programas de estudio (unidades de aprendizaje) desde el marco de las competencias.
- Evaluación del aprendizaje de competencia.
- Condiciones

<u>Condiciones de los Recursos Humanos</u>	<u>Condiciones Pedagógicas Didácticas</u>	<u>Condiciones Institucionales</u>
<ul style="list-style-type: none"> • Formación del Personal Docente • Capacitación de Mandos medios y superiores • Capacitación del personal administrativo 	Cambios en las prácticas educativas: <ul style="list-style-type: none"> • Métodos de Enseñanza (diseño de estrategias) • Materiales y recursos didácticos que promueven el auto aprendizaje. • Evaluación (requiere evidencias de aprendizaje que integren la teoría y la práctica) 	<ul style="list-style-type: none"> • Condiciones mínimas para su implementación • Diseño de instalaciones e infraestructura • Convenios para ampliar campos de practica

Características de las Competencias

- Constituyen un sistema abierto
- Son estándares de salida
- Vinculadas a la capacidad de realizar las funciones profesionales en el mundo real.
- Son independientes de los métodos pedagógicos y de entretenimiento
- Deben ir más allá del presente para considerar el futuro.
- Deben responder a las necesidades del presente

Para la investigación participativa se buscó dar respuesta a los siguientes puntos a través de una encuesta con empleadores:

Necesidades

- De lograr en los procesos de formación de recursos profesionales una suficiente y adecuada integración entre la teoría y la práctica.
- De formar recursos altamente competentes para realizar intervenciones eficaces e integrales.

Retos

- Definir las competencias profesionales que los egresados deben poseer al terminar sus estudios.
- Optar por perspectivas teórico – metodológicas, bajo las cuales se logre una vinculación entre la teoría y la práctica; la formación de los profesionales y las demandas de los contextos ocupacionales.

Implicaciones

- Aprendizaje colaborativo
- Aprendizaje basado en problemas
- Aprendizaje orientado a proyectos
- Aprendizaje basado en el método de casos

Propuesta de Instrumentos (Evaluación del Aprendizaje)

1. Evidencias de Aprendizaje. Son variables que permiten al docente inferir en el conocimiento
2. Criterios de desempeño. Calidad mínima para que una capacidad sea aceptable.
3. Campo de Aplicación
4. Calificación. Como se distribuye la participación.

Modelo Educativo Flexible

Características:

- Mediación del juicio crítico, la exploración y el uso de perspectivas interdisciplinarias.
- Prioridad del trabajo de equipo (grupos)
- Adecuada relación entre la teoría y la práctica
- Fomento de la creatividad.

Participación En El Foro Con Empleadores

Para el cumplimiento de los objetivos se elaboró una encuesta como instrumento para conocer las necesidades de los empleadores y sus recomendaciones.

Validación de Competencias Genéricas por Empleadores del Programa Educativo de la Universidad Autónoma de Aguascalientes

Señalar el grado de importancia que a su juicio, tiene cada una de las competencias propuestas para el trabajo que el egresado desempeña. Para ello, marque, una “X” en el cuadro que exprese su opinión.

Competencias Genéricas		Grado de Importancia de la competencia considerando el trabajo que el profesionalista desempeña en su empresa			
		Nada Importante	Poco Importante	Importante	Muy Importante
1	Usar de manera eficiente las tecnologías de la comunicación y la información.				
2	Usar de manera correcta la lengua materna tanto en forma oral como escrita.				
3	Usar de manera correcta alguna(s) lengua(s) extranjera(s).				
4	Pensar de manera crítica y reflexiva				
5	Generar ideas innovadoras				
6	Realizar procesos de investigación pertinente y de calidad				
7	Usar de manera adecuada los distintos leguajes: matemático, logístico, entre otros.				
8	Diseñar y gestionar proyectos pertinentes				
9	Trabajar en equipo así como de manera independiente				
10	Aprender de manera autónoma y buscar la actualización permanente				
15	Desarrollar y una perspectiva ética, reflexiva y de compromiso hacia el bien común.				
16	Motivar, negociar y conducir hacia la mejora de la realidad social y natural.				
17	Contribuir al desarrollo sustentable de manera crítica y con acciones responsables.				
Otro(s): Especificar					

RESULTADOS

Para cumplir con los objetivos se participó en un foro con empleadores en el cual se busca validar las competencias genéricas para los programas educativos de la educación, tomando como instrumento la aplicación de la encuesta con empleadores, obteniendo de manera general las siguientes respuestas:

Preparar a los individuos para:

- Ser personas con un perfil humano.
- Ser proactivos emprendedores, creativos con una ética sustentada en un compromiso social.
- Realizar planes y acciones acordes con el mercado, además de contar con el conocimiento de áreas en tecnologías de información, economía, finanzas, inglés, etc.
- Ser proactivos, emprendedores y muy creativos.
- Tener una información ética sustentada en un compromiso social.

CONCLUSION

Se requiere institucionalmente visión común previa al trabajo de rediseño de programas con base en competencias. Se puede afirmar es que un enfoque basado en competencias necesita incluir el dominio de conceptos, actitudes y habilidades y la posibilidad de demostrarlo bajo condiciones reales de desempeño.

Las estrategias y programas educativos deben repensarse para la inclusión de esta nueva visión de futuro. Es decir, es indispensable para quienes formamos para la vida profesional, debemos tener un enfoque del dinamismo al que se enfrentaran quienes tendrán que estar preparados para aprender por sí mismos y trabajar cooperativamente conforme la demanda del campo profesional.

Sin duda hay mucho que aprender y que hacer para adoptar este enfoque educativo, la figura del profesor constituye la clave para el proceso de transformación de las instituciones educativas y así lograr el salto cualitativo que espera la sociedad.

NIVEL DE ADOPCIÓN Y APROVECHAMIENTO DE LAS TIC'S EN PYMES DE QUINTANA ROO: EL CASO DE LAS REFACCIONARIAS AUTOMOTRICES EN CANCÚN

Enrique Corona Sandoval, Universidad Del Caribe, Cancún Q. Roo, México

Lucila Zárraga Cano, Universidad Del Caribe, Cancún Q. Roo, México

RESUMEN

Conocer el nivel de adopción y aprovechamiento de tecnologías de la información (TI) en las Pymes, además del tipo de herramientas tecnológicas utilizadas, sus usos, usuarios y antigüedad, principalmente en el sector de las refaccionarias en el municipio de Benito Juárez, Cancún, México, en donde se desarrolló un primer diagnóstico del uso de la tecnología que ha servido para orientar este estudio y proporcionar un marco de trabajo definido. El estudio comprende una investigación exploratoria la cual fue aplicada a las refaccionarias de Benito Juárez, considerando una muestra probabilística, aplicando herramientas estadísticas para validar los resultados. Es importante resaltar el aporte de las tecnologías de información aplicadas a las refaccionarias aportando ventajas competitivas y generando una mayor dinámica en la industria local.

PALABRAS CLAVE: Tecnologías de la información, Pymes, Gestión Tecnológica, Competitividad.

ABSTRACT

The objective of this study was to determine the level of adoption and use of information technology (IT) for SMEs, including the type of tools used, uses, users and old, mainly in the parts stores in the municipality of Benito Juárez, Cancún, Mexico, where he developed a preliminary assessment of the use of technology has served to guide this study and provide a framework defined. The study includes an exploratory investigation which was applied to the repair shops of Benito Juárez, considering a probability sample, applying statistical tools to validate the results. It is important to highlight the contribution of information technologies applied to the parts stores providing competitive advantages and creating a more dynamic local industry.

Keywords: Information technology, SMEs, Technology Management, Competitiveness

INTRODUCCIÓN

Desde la perspectiva del estudio de las PyMES, el aspecto del nivel de uso y adopción de las tecnologías de la información está poco explorado. Las aplicaciones tecnológicas para PyMES son limitadas, así como el escaso interés de los micro, pequeños y medianos empresarios en su adopción y uso. El impacto de las tecnologías de la información y la comunicación, gracias a la globalización está fuera de toda discusión. Al momento se aprecian algunos de sus efectos, como la interdependencia entre los países y su ciudadanía, todo derivado de la interconectividad y las herramientas disponibles. Es un tema complejo e incluye tanto aspectos económicos como culturales, sociales y políticos. En el aspecto económico, los tratados comerciales, la evolución en aspectos relativos a la logística, y el uso intensivo de las TIC, han facilitado el incremento de las transacciones comerciales, presionando a sus sectores empresariales, (en especial a las PYMES), a ser más competitivas. El interés de este trabajo es explorar hasta qué punto las Tecnologías de la Información y la Comunicación (TIC) pueden jugar un papel importante para mejorar

la productividad y la competitividad de las PYMES en Quintana Roo, en este caso limitado al estudio de las refaccionarias automotrices asentadas en la ciudad de Cancún, municipio de Benito Juárez.

Cabe destacar la elección del sector autopartes a través de su canal de comercialización detallista tradicional; del año 2008 al 2009, la participación de mercado de ventas en línea se incrementó de 0.5% al 1.1% en un mercado dominado por las ventas en línea de boletos de avión y productos turísticos, 79% según AMIPCI. (Estudio AMIPCI de comercio electrónico, 2009).

REVISIÓN LITERARIA

Según el estudio denominado “Oportunidades de negocios electrónicos para las PYMES, 2005” México presenta una gran disparidad entre el uso de las TIC entre pequeñas y medianas empresas y las grandes empresas consolidadas, menciona que solo el 25% de las Pymes utilice la computadora para su operación rutinaria en procesos de gestión, y menos del 10% para realizar transacciones comerciales con clientes o proveedores.

Si bien Heeks, (2002) señala la importancia de la adopción de las TIC para el mejoramiento de la productividad de las empresas, al resaltar el papel que la información juega en los procesos y en los resultados de cualquier gestión empresarial, debe reconocerse que falta a su vez información relativa la toma de decisiones respecto a la adquisición y uso de las TIC por parte del núcleo administrativo de las PyMES.

Kaushik y Singh (2003) señalan que el acceso, adopción y uso de las TIC generan un gran crecimiento económico para las empresas usuarias, amén de la economía local y regional, es decir son un factor de competitividad empresarial sin importar el tamaño de la empresa o la infraestructura incorporada.

Se puede concluir que la decisión de una Pyme para tratar de alcanzar un alto nivel de adopción de TIC es el resultado de muchos factores. Estos factores no solo incluyen el tradicional análisis costo-beneficio de una decisión de inversión, sino la complejidad de la tecnología y el grado de preparación electrónica de la red de consumidores y proveedores. Finalmente, la revisión de los factores determinantes, también indica que el tamaño de la empresa y las opiniones de su administración - generalmente por parte del propietario o familia- puedan tener un considerable impacto en su decisión por incursionar en el comercio electrónico y tener éxito ante este reto.

DISEÑO DE LA INVESTIGACIÓN

El diseño de la investigación se desarrolló durante el primer trimestre del 2010, a través de tres fases que a continuación se describen.

Fase I identificación del Problema EL objetivo de este estudio es conocer el panorama general de las TIC's en las Refaccionarias automotrices de la ciudad de Cancún registradas en el SIEM a través de un sondeo como primer ejercicio para posteriormente hacer un estudio concluyente. El estudio es a través de una investigación exploratoria para examinar el problema y brinde una mayor conocimiento y comprensión, lo cual guiara a la definición del problema con más precisión, identificar cursos alternativos de acción, desarrollar hipótesis y lo más importante establecer prioridades para la investigación posterior.

Fase II diseño del cuestionario: El diseño de las preguntas estuvo conformado por preguntas abiertas y preguntas cerradas como se especifica en la tabla 1 a través de un cuestionario que se aplicó a 47 refaccionarias del municipio de Benito Juárez las cuales por el número de empleados están en la clasificación de pyme.

Tabla 1: Ficha Técnica del Cuestionario

Tamaño de muestra	47 refaccionarias
Levantamiento de encuesta	Mes de marzo del 2010
Lugar de levantamiento	Cancún Q. Roo
Encuestadores	Alumnos de Servicio Social
Tipo de preguntas	17.2% Abiertas 82.8% Cerradas

Datos relevantes del levantamiento del cuestionario. Elaboración Propia.

Fase III aplicación del cuestionario: Se tomo una muestra de 47 refaccionarias al aplicarse el cuestionario que consistió en probar un cuestionario en una pequeña muestra de encuestados, para identificar y eliminar los problemas potenciales. El objetivo de probarlo fue mejorar el instrumento. Malhotra (2008 –pp. 319) dice que como regla general, no debe usarse un cuestionario en encuesta de campo sin una prueba piloto adecuada.

El cuestionario fue aplicado por estudiantes de la Universidad del Caribe previamente capacitados, y distribuidos por sectores en donde mayor concentración de refaccionarias se encuentra en Cancún.

El cuestionario se valido por contenido, que es una evaluación subjetiva pero sistemática de qué tan bien representa el contenido de la escala el item de medición en cuestión. Además de validar el criterio que refleja si una escala se comporta como se esperaba en relación con otras variables seleccionadas como criterios significativos. El instrumento se midió con Alfa de Cronbach que es un índice de consistencia interna, en donde si su valor es cercano a la unidad se trata de un instrumento fiable que hace mediciones estables y consistentes, en este caso se obtuvo un alfa de .831 lo cual fue aceptable.

RESULTADOS

- El 89.4% de las refaccionarias utilizan computadoras en sus establecimientos, mientras que el 10.6% no utilizan computadoras
- Se les pregunto si contaban con una página web y sólo el 31.9% de las refaccionarias cuentan con esta herramientas, sin embargo cuando se les preguntó si actualizaban su página web el 60.0% dijo que siempre, el 20% casi siempre, 6.7% algunas veces y 2% nunca.
- Tan sólo el 50% es usuario de la banca por Internet.
- El 43.5% realiza pagos en línea, mientras que el 56.5% no.
- El 31% de los usuarios con computadora utilizan la tecnología para el pago de sus impuestos en línea, sin embargo es bajo en comparación al 69% que no lo utiliza.
-

Tabla 2: Bases de datos con las que cuenta la refaccionaria

Base de datos	SI	NO
Ventas	70.2%	29.8%
Clientes	63.8%	36.2%
Proveedores	72.3%	27.7%
Precios	78.7%	21.3%

Refaccionarias que cuentan con una base de datos. Fuente: Elaboración propia

- El uso de la tecnología de la información que utilizan las refaccionarias se plasma en la tabla 3 en donde se observa que la utilizan mayormente para inventarios, ventas, contabilidad, proveedores, clientes además del uso del correo electrónico.

Tabla 3: Uso de la TIC's en diferentes aspectos.

	N/A	2	3	4	5	Total

Utiliza el chat	46.8	4.3	10.6	2.1	36.2	100

Características de uso de las TIC's de las Refaccionarias de Cancún. Fuente: Elaboración propia.

CONCLUSIONES

Dado que el estudio mostró un alto nivel de adopción de aplicaciones de cómputo por parte de las refaccionarias, principalmente orientado su uso a la gestión empresarial, es necesario mencionar que si bien tienen la herramienta, sus usos se limitan a procesos operativos internos, dejando de lado la función de conectividad, la cual está representada en su mayoría por el Internet, donde su uso si es limitado. Una gran proporción de las refaccionarias encuestadas cuentan con conexión a Internet, pero paradójicamente, su uso corresponde principalmente a su relación con proveedores, descuidando lo relativo a su página Web, contacto con clientes, CRM, e-commerce, e-business, etc.

El estudio indica que la incorporación de las TIC al negocio inicia como soporte de los procesos operativos, comienzan por el área contable y posteriormente se extienden a otros sectores administrativos de la organización. Por lo que es interesante determinar el comportamiento de las PYMES, respecto a las prácticas de adopción más comunes en relación con el e-commerce y e-business. Según la naturaleza jerárquica de las TIC en los procesos de negocio (Alfaro, 2004), el cual menciona que la primera etapa está conformada por la estrategia, la segunda por los procesos operativos y la tercera por las herramientas simplificadoras de la eficiencia, en donde las TIC se vuelven indispensables, determinamos que las refaccionarias encuestadas se encuentran en el nivel dos, teniendo como principales retos para maximizar el impacto de las TIC los siguientes:

- Incorporar el acceso a internet, principalmente de banda ancha, como elemento de comunicación exterior, banca electrónica, business to business y business to consumer.
- Cambiar procesos de negocios antes de implementar más tecnología
- Crear cultura tecnológica orientada al servicio

JUSTIFICACIÓN JUSFILOSÓFICA DE LA CONCESIÓN ADMINISTRATIVA DEL TRATAMIENTO Y DISPOSICIÓN DE AGUAS RESIDUALES EN TAMAULIPAS, MÉXICO

Jesús Apolinar Martínez Puebla, Universidad Autónoma De Tamaulipas

Eugenio Ruíz Torres, Universidad Autónoma De Tamaulipas

Claudio Ernesto Hernández Morales, Universidad Autónoma De Tamaulipas

ABSTRACT

Mediante una investigación de campo no experimental – transeccional de medición única y apoyados en el método exegético-analítico; se analizó la factibilidad jurídica y filosófica la concesión administrativa del servicio público municipal de tratamiento y disposición de aguas residuales en el Estado de Tamaulipas, y se demostró la congruencia entre los elementos del rescate, la reversión, el término y la garantía de los derechos de los sujetos de la concesión, así como los intereses legítimos de las masas, de los de a pie, lo que nos permite ofrecer fundamentos científicos que justifican la concesión administrativa, misma que contribuirá a resolver el problema de contaminación del agua y escasez de este vital líquido en la época de estiaje. Razonamos la interrupción de seguir dogmáticamente los postulados de una doctrina en particular, cuando es temporal, para corregir una deficiencia, tomando las providencias necesarias para que esa práctica no afecte la estructura del Estado. Y cuando el gobierno realiza sus funciones y no alcanza satisfacer todas las necesidades de las masas, debe privilegiar el bien público sobre los dogmas de las doctrinas que practica y permitir que los particulares inviertan recursos económicos para satisfacer las carencias colectivas.

INTRODUCCIÓN

Actualmente en Tamaulipas existe una gran preocupación por la escasez de agua y por la contaminación del Golfo de México, ríos, presas y sistema lagunario en su interior. Tanto las autoridades municipales de la zona norte y sur, así como los gerentes generales de los organismos operadores de agua han manifestado en múltiples ocasiones que los diferentes vasos de captación registran constantemente niveles críticos que ponen en riesgo el suministro de agua potable para el consumo doméstico y la industria. En el presente los grandes núcleos urbanos tamaulipecos como Nuevo Laredo, Matamoros, Reynosa, Cd. Victoria, Río Bravo, Cd. Mante, Cd. Madero, Tampico y Altamira no aprovechan la tecnología existente para el tratamiento y reutilización de aguas residuales que es una alternativa para garantizar el suministro del vital líquido.

Por otro lado, las grandes industrias consumen directamente de las corrientes y vasos de captación el agua que hace falta en las ciudades en época de estiaje. Tan solo la paraestatal “Petróleos Mexicanos” en las condiciones actuales, sin considerar el crecimiento previsto por la inversión del 1200 millones de US dólares para la construcción de nuevas plantas, está consumiendo directamente de la Laguna del Chairel (Principal vaso de captación para el abastecimiento de agua potable en la zona sur de la Entidad que comprende el área metropolitana de las ciudades de Tampico-Madero-Altamira): 1200 litros por segundo, lo que equivale, aproximadamente al 30% del consumo total diario.

En la zona de nuestro ejemplo, la producción de aguas residuales es de 2800 litros por segundo, mismos que no se están tratando y contaminan severamente el sistema lagunario, el Río Pánuco, Río Tamesí y el Golfo de México según lo demuestra la denuncia sistemática en los principales medios impresos de

comunicación masiva del lugar. Lo anterior es solo un ejemplo de la contaminación de todo el sistema lagunario, de la exposición de residuos de hidrocarburos, materias fecales, basura industrial, exceso de maleza acuática que amenazan con el colapso del ecosistema. Respecto a la necesidad e importancia de la presente investigación, hacemos referencia al desarrollo sustentable, en cuanto al cuidado del medio ambiente, ya que en Tamaulipas se han realizado muchos esfuerzos para atraer inversiones nacionales y extranjeras que generan empleos y desarrollo, lamentablemente estos esfuerzos traen aparejados las grandes facilidades que se les otorgan a los empresarios para que se instalen legitimados por la normatividad ambiental de nuestro país.

Esta situación dio origen a nuestro problema social, ya que los organismos operadores de agua no cuentan con el dinero suficiente para construir las plantas tratadoras de aguas residuales que se requieren así como la construcción de nuevas redes debido al crecimiento de los asentamientos humanos, el desarrollo de la industria y puertos, y atender al mismo tiempo el mantenimiento preventivo y correctivo de las redes de drenaje, agua potable y alcantarillado. Tampico y Altamira son los puertos más importantes del Estado de Tamaulipas.

En consecuencia, teniendo en cuenta que el Código Municipal para el Estado de Tamaulipas regula en los artículos 170 al 185 los servicios públicos municipales así como su explotación a través de la figura jurídica de la concesión a los particulares, de acuerdo con el tercer párrafo del artículo 171 del citado código, podrá concesionarse el servicio público municipal de tratamiento y disposición de aguas residuales, y sin embargo en la actualidad no es derecho positivo, el problema está vigente y urge solucionarlo, de ahí que el problema de investigación quede definido de la siguiente manera: ¿Puede constituir la concesión administrativa del servicio público de tratamiento y disposición de aguas residuales, un instrumento jurídico viable para resolver el problema de contaminación del agua y escasez de este vital líquido en la época de estiaje en Tamaulipas, ante la imposibilidad material de la Administración Pública local para solucionarlo?

Para darle respuesta a la problemática investigativa nos propusimos la siguiente hipótesis científica: La concesión del servicio público municipal de tratamiento y disposición de aguas residuales a particulares en Tamaulipas puede ser una contribución a la solución del problema de contaminación y escasez de agua en Tamaulipas y es factible desde el punto de vista jurídico.

De dicha hipótesis advertimos los siguientes elementos:

Variable independiente. - La concesión administrativa del servicio público de tratamiento y disposición de aguas residuales como instrumento jurídico viable

Variable dependiente. - Contribución a la solución de la contaminación del agua y escasez de este vital líquido en la época de estiaje en Tamaulipas

Objetivo General. - Ofrecer fundamentos científicos que justifiquen filosóficamente la concesión administrativa de este servicio público municipal, que contribuirá a resolver el problema de contaminación del agua y escasez de este vital líquido en la época de estiaje en Tamaulipas, a partir de demostrar su factibilidad jurídica.

Objetivos específicos:

1. Analizar la normatividad, jurisprudencia y los aspectos teóricos fundamentales que caracterizan a la concesión administrativa y al servicio público en México.
2. Identificar las debilidades, amenazas, fortalezas y oportunidades de un servicio público municipal de tratamiento y disposición de aguas residuales, descentralizado en Tamaulipas.

3. Identificar las debilidades amenazas, fortalezas y oportunidades de un servicio público municipal de tratamiento y disposición de aguas residuales, concesionado en Tamaulipas.
4. Demostrar la factibilidad jurídica de la concesión administrativa del servicio público municipal de tratamiento de aguas residuales en Tamaulipas.

La lógica nos indica que se requiere una gran inversión para construir los humedales o plantas tratadoras, es por eso que la presente investigación tiene un alto contenido social al contribuir modestamente al desarrollo sustentable de Tamaulipas, del cual los beneficiarios directos serán las mujeres y hombres comunes; *los de a pie*, debido que al haber suficiente agua en todas las épocas del año, no se encarecería.

REVISIÓN LITERARIA

Parafraseando al maestro Víctor Manuel Rojas Amandi (Rojas, 1991), Según el legado filosófico de Hegel “Todo lo real es racional y todo lo racional es real”, advertimos que la realidad es que existe una institución administrativa de especial importancia denominada concesión, y esta institución inherentemente posee una racionalidad y lo racional para ser tal, de acuerdo con Hegel, se debe encontrar justificado por una necesidad; entonces ¿Cuál es esa necesidad subyacente y socio histórica que le otorga la racionalidad a la concesión?. Doy una respuesta concreta: la satisfacción de necesidades colectivas, el bien público, cuando una Administración Pública no tiene la posibilidad económica o técnica para satisfacer esa necesidad. Luego entonces, mientras subsista la necesidad que da sustento a la racionalidad de la concesión y no se pierda esta última, subsistirá también la realidad.

Cuando aceptamos que procurar el bien público es un fin del Estado y no una función de este, no debiera ruborizarnos quien lo hace: el gobierno o los particulares, sino que realmente se persiga el bienestar de la colectividad, que *los de a pie* verdaderamente se beneficien de las tareas que lleva a cabo el binomio Gobernantes y Gobernados. ¿Cuáles tareas deberían o podrían estar reservadas al gobierno y cuáles a los particulares? Nuestra respuesta es inmediata: las que sean necesarias para obtener el bien público, con la premisa mayor que si la realidad social lo exige; no debemos empeñarnos en que el Estado en una condición ficticia de elasticidad o gelatinosidad adopte la forma del molde, que aunque posea mas virtudes que defectos no fue diseñado para él con exclusividad, es algo abstracto, debe tomar lo mejor de la doctrina pero anteponer el interés colectivo al dogma del deber ser plasmado en tinta y papel.

Justificamos la interrupción de seguir dogmáticamente los postulados de una doctrina en particular cuando es temporal, para corregir una deficiencia, satisfacer una necesidad colectiva tomando las providencias necesarias para que esa práctica no afecte la estructura del Estado. Y cuando el gobierno realiza sus funciones y no alcanza satisfacer todas las necesidades de las masas, debe privilegiar el bien público sobre los dogmas de las doctrinas que practica y permitir que los particulares inviertan recursos económicos para satisfacer la necesidad colectiva. Si para tal efecto es necesario reformar el orden jurídico creado por la clase en el poder; deberá hacerlo, ya que el derecho como fenómeno es susceptible de reflexiones e indagaciones filosóficas apoyadas en las condiciones materiales de su existencia: Es preciso mencionar a continuación la expresión que se lee en el Manifiesto del Partido Comunista de Marx y Engels “vuestro derecho no es mas que la voluntad de vuestra clase erigida en la ley, una voluntad cuyo contenido está determinado por las condiciones materiales de existencia de vuestra clase” (Marx y Engels, 1971).

Agregamos que dicha concesión para que se justifique desde el punto de vista social y filosófico debe realizarse con carácter temporal en tanto el gobierno no tenga la capacidad para otorgar el servicio por sí mismo, y a la vez deberá ser garante de que la población obtenga un beneficio a su salud y que la utilidad que obtengan los empresarios sea justa en relación con el trabajo realizado y no les permita acumular dinero en exceso que los haga caer en un círculo vicioso donde el dinero que les sobre es el que hará falta en los bolsillos de *la gente de a pie*.

Hemos venido insistiendo que en el Estado de Tamaulipas se están contaminando los ríos, lagunas, presas y aguas litorales. Según cifras aportadas por el Instituto Nacional de Estadística, Geografía e Informática (INEGI) en la Entidad hay 677,489 viviendas de las cuales solo 450,634 disponen de drenaje conectado a la red pública, es decir, 226,855 hogares no cuentan con drenaje y tienen desagüe a río, laguna, mar, barranca, o fosa séptica.

También es del dominio público, gracias a la información que proporciona el organismo citado; que de estas 677,489 viviendas solo cuentan con agua potable entubada y su respectiva conexión 432,753 hogares. Y solo hay 22 plantas municipales tratadoras de aguas residuales con capacidad de 2687 litros por segundo, aunadas a otras 41 plantas industriales tratadoras de aguas residuales con capacidad de 1179 litros por segundo, lo que resulta ridículo e insuficiente para evitar la contaminación de los principales vasos de captación y corrientes de agua en este territorio. Por ejemplo, mientras se están depositando 2800 litros por segundo de aguas residuales en el sistema lagunario de la Zona Conurbada de los municipios de Tampico-Madero-Altamira: la disponibilidad de drenaje es de 24.6% para Altamira, de 82.6% para Cd. Madero y de 82.5% para Tampico. La disponibilidad de agua entubada es de 41.2% para Altamira, de 91.1% para Cd. Madero y de 92.5% para Tampico lo que refleja la desigualdad social y una oferta de los servicios públicos municipales referidos muy por debajo de la demanda de los habitantes y un problema de contaminación terrible.

La concesión administrativa se erige como alternativa para solucionar este gran problema, es una *herramienta jurídica* que contribuiría a garantizar el abastecimiento de agua a la industria y sobre todo a los habitantes de esta provincia tan desequilibrada en los recursos acuíferos. Negar esta posibilidad de progreso con una actitud conservadora traería un enorme perjuicio, propiciaría un déficit de agua con la consiguiente consecuencia de ser incosteable para los particulares en el futuro una inversión estratosférica con relación a la que se requiere en la actualidad. La concesión administrativa entre la función pública y el desarrollo sustentable juega un papel muy importante, ya que representa una solución territorial, una respuesta inteligente en Tamaulipas a un problema de contaminación con una actitud progresista, desprovista de molduras ideológicas que aprisionan y no permiten ver un valor jurídico superior como lo es el bien público temporal de la mano de un ambiente sano para nosotros y las futuras generaciones de tamaulipecos.

El servicio público es una actividad técnica directa o indirecta, de la administración pública activa o autorizada a los particulares, que ha sido creada y controlada para asegurar de una manera permanente, regular, continua y sin propósitos de lucro, la satisfacción de una necesidad colectiva de interés general, sujeta a un régimen especial de derecho público (Serra,1988). De lo anterior se deriva que la actividad que se realiza para satisfacer una necesidad colectiva no la puede llevar a cabo cualquier persona, ya que se requiere de ciertas habilidades o conocimientos así como herramientas o equipo en algunos casos. Normalmente esta actividad la ejecuta la administración pública ya sea federal, local o municipal y por vía de excepción los particulares a través de la institución jurídica que estudiamos aquí denominada concesión.

Un concepto legal que advertimos en el derecho mexicano proviene de la Ley Orgánica del Departamento del Distrito Federal, abrogada, por cierto, mediante decreto publicado en el Diario Oficial de la Federación el 29 de diciembre de 1978, En su artículo 23 estableció un criterio que subsiste en la Ley Orgánica de la Administración Pública del Distrito Federal vigente, misma que en el artículo 10 establece “Para los efectos de esta ley, se entiende por servicio público la actividad organizada que se realice conforme a las leyes o reglamentos vigentes en el distrito federal, con el fin de satisfacer en forma continua, uniforme, regular y permanente, necesidades de carácter colectivo, la prestación de estos servicios es de interés público.” Aún cuando encontramos la anterior disposición legal que está basada en la doctrina del derecho administrativo comentada en la página anterior, encontramos la limitante que el

ámbito espacial de validez de esa norma se circunscribe al territorio del Distrito Federal en nuestro país por lo que conscientes de esta situación recurrimos al poder judicial federal mexicano; La Suprema Corte de Justicia de la Nación, que establece en la tesis 419 de la segunda sala de 1985 que “El servicio público consiste en la actividad que se desarrolla para satisfacer una necesidad colectiva de carácter económico o cultural, mediante prestaciones que por virtud de norma especial del poder público, deben ser regulares, continuas y uniformes”.

También la Suprema Corte de Justicia de la Nación (México) aportó un concepto jurisprudencial del Servicio Público, al afirmar que: “El Estado para dar satisfacción en forma regular y continua a ciertas categorías de necesidades de interés general, puede determinar qué actividades pueden ser consideradas como servicio público y establecer, desde luego un régimen jurídico especial que tenga por objeto facilitar el que se satisfagan rápida y cumplidamente las necesidades que determine la declaración del servicio público. El Estado puede prestar directamente el servicio o bien darlo en concesión que se otorgue a particulares, pero en ambos casos es indispensable que mediante el Poder Legislativo se haga la declaración respectiva y se reglamente el servicio”.

Igualmente es de suma relevancia recordar que en Tamaulipas está vigente hasta el año 2006 una ley de orden público que tiene por objeto establecer las bases para la prestación del servicio público municipal estudiado en este documento académico, que consta de 129 artículos contenidos en trece capítulos y seis artículos transitorios; me refiero a la Ley Del Servicio Público de Agua Potable, Drenaje, Alcantarillado, Tratamiento y Disposición de las Aguas Residuales del Estado de Tamaulipas, originalmente denominada Ley del Servicio de Agua Potable y Alcantarillado del Estado de Tamaulipas, contenida en el Decreto 319 del 12 de Junio de 1992 y reformada su denominación por Decreto N° 124 del 4 de diciembre del 2002, de la LVIII legislatura del H. Congreso del Estado.

Tratando de sintetizar el estudio del citado ordenamiento jurídico, decidimos hacer énfasis en el capítulo tercero que se refiere a la operación de los sistemas ya que representa para nosotros un aval de lujo el H. Congreso del Estado cuando la quincuagésima cuarta legislatura realiza una separación gramatical, lógica y jurídica del servicio público municipal que nos ocupa, al redactar de la siguiente forma el artículo 31.- “compete a los organismos operadores prestar el servicio público de tratamiento y disposición de aguas residuales que se generan en su jurisdicción, promoviendo al efecto procesos de tratamiento y el fomento de instalaciones alternas que sustituyen al drenaje sanitario” Esta figura de derecho que necesita de una norma jurídica para su creación, tiene como finalidad la satisfacción de necesidades colectivas teniendo los requisitos de regularidad, continuidad y uniformidad en su cumplimiento, debiendo estar desprovisto de fines de lucro preferentemente y estar sujeto a un régimen jurídico mixto o de derecho público cual sea el caso de un organismo paramunicipal, de la existencia de un contrato administrativo o como lo proponemos: por conducto de una concesión administrativa.

Con relación al debatido tema de la naturaleza jurídica de la concesión, a manera de aportación personal, podemos apuntar que *“la concesión administrativa es un acuerdo de voluntades mediante el cual una autoridad competente habilita a una persona física o moral con capacidad técnica, jurídica y económica para la explotación de un bien o servicio público que normalmente realiza la administración pública, para la satisfacción de necesidades de la colectividad.”* Apoyados en estas verdades doctrinarias y legales, de una manera muy respetuosa, emplazamos la imprecisión del jurista Acosta Romero cuando concluye que la concesión constituye un acto administrativo discrecional, del órgano de la Administración Pública, que aplica en un caso concreto las disposiciones que regulan la materia de concesión. Nada tiende contrato, ni de acto mixto.

No estamos de acuerdo en llegar a esa conclusión por el solo hecho de que a su buen saber y entender, la mayoría de las concesiones se otorgan por medio de actos administrativos discrecionales en México. No porque se repita una situación se hará de esta un imperativo, un dogma.

Parafraseando a Cortes Ibarra cuando realiza su crítica a la Teoría normativa de la culpabilidad escribiendo. “Si afirmo que patricio es inteligente, estoy juzgándolo y con mi juicio reconozco (declaro) una condición personal de él, pero mi juicio no crea esa condición; Patricio no es inteligente porque yo lo diga, no es mi declaración la que hace que él sea inteligente; yo me concreto a reconocerlo, a declararlo; pero aunque yo no lo hiciera, de igual modo el sería inteligente, como a la inversa, mis reiteradas declaraciones sobre su condición de inteligente, no haría que lo sea, sino lo es” (Cortes, 1992).

Aún cuando fuera cierto que en nuestro País se repite el otorgamiento de concesiones mediante actos administrativos, nos parece un argumento muy débil para establecer un principio o determinar la naturaleza jurídica de la concesión, ya que en el supuesto que así sucede en nuestro país, no quiere decir que así tenga que ser. El maestro García Máynez, cita al gran filósofo Kant, el que en su obra Fundamentación de la metafísica de las costumbres, subrayó que de la observación de los hechos no es correcto desprender conclusiones normativas. La circunstancia de que algo ocurra en determinada forma no nos autoriza para declarar que así debe ocurrir. El versado jurista mexicano, cuando nos brinda las primeras cátedras universitarias de derecho, afirma con su reconocida sencillez; que el pez grande devore al chico, o que el pueblo fuerte sojuzgue a débil, no demuestran que así deba suceder; simplemente indican que así sucede. (García, 1996).

Respecto a los sujetos que intervienen en una relación jurídica establecida por una concesión administrativa; la doctrina los enuncia como elementos subjetivos de la concesión: El concedente, es la autoridad federal, local, o municipal que de acuerdo con las normas que regulan la organización y funcionamiento de la administración pública, está facultado, en representación del gobierno para otorgar una concesión al gobernado. Normalmente se trata de un funcionario de la administración pública centralizada, aunque también los organismos descentralizados pueden otorgar concesiones a los gobernados siempre y cuando los bienes o servicios aludidos sean de naturaleza pública. El concesionario es una persona física o moral, con capacidad técnica, económica y jurídica para realizar una actividad técnica encaminada a satisfacer necesidades colectivas.

Así como posee derechos el concesionario tiene obligaciones entre las que podemos destacar; En términos generales, debe realizar la tarea que le fue encomendada con apego a los principios de regularidad, generalidad y continuidad, para satisfacer las demandas de los usuarios. Deberá llevar a cabo la actividad técnica que le fue encomendada con estricto apego al derecho administrativo y particularmente a las disposiciones que emanan del título de concesión en lo referente al inicio de las actividades, la calidad del servicio, dar mantenimiento preventivo y correctivo a los bienes públicos que fueren otorgados en custodia, necesarios para la operación hasta el último día del plazo.

También los bienes que no son públicos, pero que el concesionario haya adquirido para la operación del servicio; debe mantenerlos en buen estado desde el inicio hasta el final del tiempo que fue estipulado en el acto concesional. Estos derechos son los más representativos, los que sin duda apoyan firmemente nuestra postura a favor de la concesión administrativa, ya que representan garantías tanto para la autoridad concedente como para los usuarios consistentes en una prestación que se deriva de una acto administrativo mediante el cual la administración pública da por terminada la relación jurídica entre concedente y concesionario, recuperando los bienes públicos dados en concesión por causas de utilidad pública, siempre y cuando respete los principios de equidad, seguridad, certidumbre jurídica. El rescate es una terminación anticipada de la concesión y para que se pueda presentar, la administración pública debe acreditar plenamente una causa de interés público (Béjar, 2006). La autoridad administrativa debe fundar en derecho y motivar su acto jurídico apegado a los requisitos constitucionales, deberá igualmente indemnizar al particular por daños y perjuicios “un rescate prematuro, antes del vencimiento del plazo o término de la concesión, implica necesariamente el pago de una indemnización, que estará en función directa de los daños y perjuicios (Canasi, 1964).

Recordemos que existen serias carencias de los servicios de agua potable y drenaje en Tamaulipas y que en esta Entidad no se están tratando debidamente las aguas residuales, por lo que es deseable dar la cobertura total de estos servicios a las viviendas censadas y se pueden cubrir estas deficiencias con el dinero que no se invierta en construir plantas tratadoras de aguas residuales. Una inversión proyectada a quince años, cantidad de tiempo por la que se puede otorgar una concesión administrativa en Tamaulipas, por 800 millones de pesos, tomando en cuenta una tarifa de \$ 3.80 m³, con una demanda por segundo de 2500 litros, se puede recuperar en un tiempo de retorno de 4 años y 6 meses, y en el año quince habría un ingreso de 1658 millones de pesos y una utilidad de los empresarios al final de este período de 789 millones de pesos. El proyecto es rentable y muy atractivo para todos, ya que insistimos, se pudiera resolver el problema definitivamente. Los negocios difícilmente se hacen con dinero prestado por Instituciones Bancarias por el cual se tienen que pagar intereses, tal y como pretende financiar la construcción de las plantas tratadoras de aguas residuales el gobierno actual. Los ciudadanos pagaríamos un servicio muy caro por ser doble nuestra aportación, a través de la tarifa y los costos financieros de un crédito. En cambio, esta segunda opción representa tener todos, agua, drenaje y tratamiento de aguas residuales, las que serían aprovechadas por la industria y los agricultores. En el articulado de la Ley de Aguas del Estado de Tamaulipas se reproducen y desarrollan las disposiciones del Código Municipal, particularmente encontramos en el precepto numero dieciocho, fracción segunda, el fundamento legal que permite la concesión administrativa que abordamos en esta investigación y se confirma y desarrolla en el capítulo II del Tercer título denominado: de la participación privada.

METODOLOGÍA

Entre los métodos que se utilizaron, está el análisis teórico-jurídico, mediante el cual exploramos los principales fundamentos que nos permiten sentar las bases en cuanto a los enfoques conceptuales y metodológicos que desarrollamos en esta investigación. Otro método empleado es el método histórico – lógico, que atiende a la doctrina y jurisprudencia constituida hasta la fecha y que abarca las diferentes etapas del derecho en materia administrativa y constitucional, también utilizamos el exegético - analítico, que nos permitió una mejor comprensión del sentido y alcance de las normas jurídicas.

Llevamos a cabo una investigación de campo que nos permitió conocer la cobertura real de los servicios de agua potable, drenaje, alcantarillado, tratamiento y disposición de aguas residuales en Tamaulipas, a través de un diseño metodológico que está sustentado en un método matemático que nos permitió conocer la opinión de *los de a pie* y cruzar esta información con los datos oficiales que fueron expuestos con claridad en el cuerpo del escrito. Mediante el método matemático determinamos el universo que comprende en este caso todo el Estado de Tamaulipas, calculando el tamaño de la muestra de la población a la cual se le solicitó respondiera un cuestionario que nos proporciona información veraz de la realidad social y de calidad del servicio público ya referido. Recorrimos los 43 municipios del Estado de Tamaulipas para llevar a cabo una investigación no experimental – transeccional de medición única para analizar cuál es el nivel de aceptación y cobertura del servicio público de Agua potable, drenaje, alcantarillado, tratamiento y disposición de aguas residuales en las viviendas seleccionadas dentro del universo que comprende las 677489 que reporta el Instituto Nacional de Estadística Geografía e Informática.

Para encontrar las Debilidades, Amenazas, Fortalezas y Oportunidades del citado servicio público; llevamos a cabo una serie de entrevistas a destacados investigadores, servidores públicos federales, estatales y municipales, de los poderes Ejecutivo y Legislativo y activistas de la ecología para conocer sus diagnósticos respecto a la forma en que se otorga actualmente. Y también les preguntamos respecto a la concesión administrativa de esta actividad técnica en estudio.

Se interceptaron los comentarios recibidos por dichas personas reunidos en dos grupos diferentes; los legisladores y el Secretario de Desarrollo Urbano y Ecología, en la sala de juntas del palacio legislativo en Cd. Victoria, Tamaulipas. Los servidores públicos municipales, académicos, funcionarios de los organismos operadores de agua de la zona conurbada de Tampico, Madero y Altamira, nos reunimos en la sala interactiva de la Unidad Académica de Ciencias Jurídicas y Sociales de la Universidad Autónoma de Tamaulipas en Tampico, para hacer un análisis de los resultados de la Matriz DAFO.

RESULTADOS

1.- El 41.48% de los tamaulipecos considera que el servicio público de agua potable es bueno. El 32.29% opina que es prestado con calidad regular. El 26.23% nos informó que este servicio es otorgado por los organismos operadores de agua con mala calidad y el 40.40% de las viviendas en Tamaulipas no cuenta con el servicio de toma domiciliaria de agua potable, independientemente de cómo califique la calidad del servicio en su comunidad. Este último rubro contrasta dramáticamente con las cifras oficiales, ya que según el INEGI solo el 30.41% de las viviendas no cuentan con este servicio contra el 40.40% obtenido en nuestra encuesta. Esta situación es gravísima porque estamos en pleno siglo XXI y los organismos operadores de agua promovidos por el ejecutivo estatal están contrayendo deuda para aventurarse en el saneamiento de las aguas residuales cuando no tienen la capacidad para llevar agua a todos los hogares.

2.- El 30.55% de los tamaulipecos considera que el servicio público de drenaje sanitario es bueno. El 34.97% opina que es prestado con regular calidad. El 34.48% nos informó que este servicio es otorgado por los organismos operadores de agua con mala calidad y el 57.55% de las viviendas en Tamaulipas no cuenta con el servicio de descarga domiciliaria, independientemente de cómo califique la calidad del servicio en su comunidad. Confirmamos que una gran parte de las viviendas no cuentan con este servicio y están depositando las aguas residuales a los ríos, presas y lagunas de Tamaulipas. En el Estado según el INEGI el 36.44% no tienen drenaje conectado a la red pública y de acuerdo con nuestro estudio esta cifra es mayor; 57.55%. Lo que nos dijeron los encuestados directamente viene a confirmar las versiones de los ecologistas, medios de comunicación y académicos, en el sentido de que existe en Tamaulipas una gran contaminación y escasez de agua.

3.- Respecto al servicio de alcantarillado y canales pluviales no poseemos referencias oficiales, sin embargo, fuimos y le preguntamos a la población su sentir y arrojaron las siguientes cifras; el 20.36% opinó que esta actividad es realizada bien por los organismos operadores de agua. El 32.72% considera que es otorgado con regular calidad, pero el 46.92% reprueban la calidad de esta actividad técnica. Como puede observarse hay enormes carencias también en este rubro. La población no está de acuerdo en que se sigan depositando las aguas negras en las lagunas y demás cuerpos de agua, así se lo preguntamos y la gran mayoría; 1891 personas de un total de 1895 nos lo hicieron saber. El 96.56% de la población no está de acuerdo en que los organismos operadores de agua contraigan más deudas de las que ya tienen con la finalidad de tratar las aguas residuales, y todos los entrevistados están de acuerdo en que se solucione ya el problema de la contaminación y escasez de agua.

Destaca la confianza en el marco jurídico vigente que da certidumbre a los sujetos de la concesión administrativa del servicio público municipal de tratamiento y disposición de aguas residuales. Otra fortaleza es la solución inmediata a un problema social existente que el gobierno de Tamaulipas ni los organismos paramunicipales pueden resolver porque se encuentran descapitalizados. Advertimos que sigue manifestándose en los debates la oposición de ciertos sectores tradicionales, como las generaciones más adultas generalmente, hacia la intervención de los particulares en tareas que originalmente le corresponden al Estado. Sin embargo, la clase en el poder ya decidió a través de sus representantes en el H. Congreso del Estado de Tamaulipas, votando por unanimidad a favor de la concesión administrativa del servicio público aquí estudiado. Y los académicos y servidores públicos municipales a través de este ejercicio, han confirmado la voluntad general de que la solución más inteligente al problema de

contaminación y escasez de agua en época de estiaje es: la inversión privada a través del acto jurídico concesional.

CONCLUSIONES

1. La Nueva legislación local que permite otras opciones para administrar el servicio, entre ellas, la concesión del servicio público municipal de tratamiento y disposición de aguas residuales a particulares, puede ser una contribución a la solución del problema de contaminación y escasez de agua en Tamaulipas.
2. La Suprema Corte de Justicia de la Nación, en México, reconoció que el otorgamiento de una concesión de un servicio público pudiera tener tanto una naturaleza jurídica administrativa como contractual lo que da por terminado en el país el debate al respecto.
3. Asumimos la concesión como un acuerdo de voluntades mediante el cual una autoridad competente habilita a una persona física o moral con capacidad técnica, jurídica y económica para la explotación de un bien o servicio público que normalmente realiza la administración pública, para la satisfacción de necesidades de la colectividad.
4. Es factible la concesión administrativa del servicio público municipal de tratamiento y disposición de aguas residuales en el Estado de Tamaulipas desde el punto de vista jurídico, ya que se demostró la congruencia entre los elementos del rescate, la reversión, el término y la garantía de los derechos de los sujetos de la concesión, así como los intereses legítimos de las masas, de los de a pié.
5. La Constitución Política de los Estados Unidos Mexicanos, la propia del Estado de Tamaulipas, el Código Municipal recientemente reformado al respecto, la nueva Ley de Aguas así como los recursos administrativos, el juicio de lo contencioso administrativo y la posibilidad de recurrir al amparo y protección de la justicia federal a través del juicio de garantías representan un marco jurídico e instituciones que garantizan la factibilidad jurídica de la concesión administrativa del servicio público municipal de tratamiento y disposición de aguas residuales en Tamaulipas.
6. Para que se justifique la concesión desde el punto de vista social y filosófico debe realizarse con carácter temporal. En tanto el gobierno no tenga la capacidad para otorgar el servicio por sí mismo, deberá ser garante de la población, de manera que esta obtenga el beneficio social esperado, así mismo velar porque la utilidad que obtengan los empresarios sea justa en relación con el trabajo realizado. Cuando la concesión sea considerada como estratégica, deberá tener especial control político por parte de la administración pública, para evitar abusos.
7. La concesión administrativa en relación con la función pública y el desarrollo sustentable que debe proveer, puede representar una solución territorial, una respuesta inteligente en Tamaulipas a un problema de contaminación y una actitud progresista; un desarrollo endógeno que nos permita satisfacer necesidades sociales de saneamiento, permitiendo al mismo tiempo reducir el gasto público municipal y estatal a través de los organismos descentralizados en mención, reducir la deuda, hacer más eficaces estos servicios públicos, reducir los costos mediante la reducción de riesgo, ejecutar obras públicas con el dinero que no se invertiría en la construcción de plantas tratadoras de aguas residuales, o comprarlas por “paquete”, la construcción de Humedales y que los municipios obtengan una gran oportunidad para sanear sus finanzas.
8. El orden jurídico de los países es *maquillado* para que las empresas transnacionales y de las burguesías locales que contaminan el medio ambiente puedan operar dentro de los *límites*

permitidos que no siempre corresponden con la mejor opinión de los expertos. De ahí que la herramienta jurídica en estudio cuando se aplica, pudiera llevar implícita la oposición de la idiosincrasia popular, que relaciona directamente a los concesionarios y capitalistas con el abuso y la contaminación, sin embargo, el manejo de esta situación con pulcritud, con aseo jurídico-administrativo puede contribuir a una mayor legitimidad del Estado, mayor aceptación entre los gobernados. Los servidores públicos cuidarán que no sea a cualquier costo, por encima del derecho de terceros, desequilibrando la distribución de la riqueza y contaminando el medio ambiente.

9. La percepción ciudadana muestra una realidad social diferente a la que reportan las cifras oficiales aportadas por el INEGI, demostrándose mediante la investigación de campo realizada, que existen graves rezagos en agua potable y drenaje, así como la inexistencia del tratamiento de las aguas residuales en Tamaulipas, lo que significa la necesidad de una gran inversión económica que en la actualidad los organismos operadores de agua no están en condiciones de realizar, que se agudizará con el incremento geométrico de la población, el asentamiento de muchas industrias que consumen agua y contaminan, así como con la fuga de capitales del país.

BIOGRAFÍA DE LOS AUTORES

Jesús Apolinar Martínez Puebla, es Doctor en Ciencias Jurídicas por la Universidad de La Habana, Diputado Local de Mayoría Relativa por el II Distrito Electoral en el H. Congreso del Estado de

Tamaulipas durante la LVII Legislatura, actualmente titular de la cátedra de Bases Jurídicas de la Administración Pública en la Licenciatura en Derecho y la Maestría en Administración Pública en la Unidad Académica de Ciencias Jurídicas de la UAT, donde funge como Secretario Técnico.

Eugenio Ruíz Torres, es Licenciado en Derecho y Máster en Docencia en Educación Superior, se desempeñó como titular de la Subdirección de Recursos Humanos de la Universidad Autónoma de Tamaulipas, Secretario Administrativo y actualmente Director de la Unidad Académica de Ciencias Jurídicas y Sociales de la Universidad Autónoma de Tamaulipas, es Profesor de Tiempo Completo en la carrera de Licenciado en Derecho, impartiendo la cátedra de Derecho Económico.

CLAUDIO ERNESTO HERNÁNDEZ MORALES, es Contador Público Auditor y Máster en Docencia en Educación Superior, Secretario de Finanzas de la Unidad Académica de Ciencias Jurídicas y Sociales de la Universidad Autónoma de Tamaulipas, desempeñándose actualmente como Profesor de Tiempo Completo, titular de la cátedra de Contabilidad de Costos en la carrera de Licenciado en Turismo.

LAS COMPETENCIAS DE LOS GUÍAS DE TURISTAS COMO VENTAJA COMPETITIVA EN EL SECTOR TURISTA: CASO CANCÚN, QUINTANA ROO

Lucila Zárraga Cano, Universidad del Caribe, Cancún

Enrique Corona Sandoval, Universidad del Caribe, Cancún

Víctor Manuel Molina Morejón, Universidad Autónoma de Coahuila, Unidad Torreón

RESUMEN

Se presenta una descripción de las competencias laborales que las operadoras turísticas (tour operadoras) exigen a los guías de turistas para desempeñar mejor sus funciones ya que son una pieza clave en la experiencia que los turistas tienen de un destino turístico, siendo ellos en gran parte responsables de la imagen que un turista se lleva a su país de origen. El objetivo de esta investigación es analizar cuales son las competencias profesionales más valoradas por los tour operadores al momento de contratar los servicios de un guía de turista, que representará a su empresa; a través de análisis estadísticos, como medidas centrales y coeficientes discriminantes. La discusión se aborda sobre las competencias genéricas, específicas y básicas que permitan desempeñar de manera más eficaz la labor del guía en el marco del Estado de Quintana Roo, para generar un análisis comparativo entre lo que los turistas y las tour operadoras más valoran.

PALABRAS CLAVE: guía de turista, competencias, conocimientos, actitud, habilidades, destino turístico.

ABSTRACT

A description of the work skills that tour operators require tour guides to better perform their duties because they are a key part of the experience tourists have of a tourist destination, which are largely responsible for the image a tourist is taken to its country of origin. The objective of this research is to analyze what are the skills most valued by tour operators in hiring the services of a tourist guide to represent your company, through statistical analysis as core measures and discriminatory. The discussion deals on generic skills, and basic specific enabling more effectively perform the work under the guidance of the State of Quintana Roo, to generate a comparative analysis between what the tourists and tour operators value most.

KEY WORDS: tourist guide, knowledge, attitude, skills, tourism destination.

INTRODUCCIÓN

Desde los años 80 ha surgido un auge de diversos destinos turísticos a nivel mundial en donde los servicios turísticos juegan un papel importante para la elección de los mismo por parte del turista (Valls, 1996). Quintana Roo estado turístico por excelencia se encuentra ubicado al sureste de la República Mexicana, derivado de la importancia que tiene la llegada de turistas al estado, y siendo esta la principal fuente generadora de ingresos, existe una preocupación constante por parte de la Secretaría de Turismo del Estado por mantener y mejorar los servicios que se ofrecen.

Una parte esencial que distingue al Estado de Quintana Roo es su hospitalidad y su buen servicio, la demanda que se tiene a estos destinos es un consumidor turístico con más experiencia y que busca vivir emociones diferentes, aparece un interés especial por el fomento de las atracciones que gozan de un patrimonio cultural (Moreno, 2004). Cuando algunos de los turistas viajan al estado, esperan conocer

parte de la historia de México, su cultura, sus tradiciones y sus bellezas arqueológicas, reflejadas en todas partes incluso en el servicio que ofrecen los guías de turistas. Hay una demanda evidente por adquirir los servicios de un guía de turista ya que acerca a los turistas a tener experiencias interculturales del destino turístico que se está visitando (Xiu, Weiler y Sam, 2002), los guías de turistas son parte importante ya que son el contacto directo con los visitantes y por lo tanto influyen mucho en la imagen que ellos se llevan del estado.

El objetivo de este estudio es analizar cuáles son las competencias laborales más valoradas por los tour operadores para lograr un mejor desempeño por parte de los guías de turistas. Además de generar un análisis comparativo entre lo que los turistas y las tour operadoras valoran más para generar mayor competitividad.

REVISIÓN LITERARIA

La adaptación de nuevos paradigmas en el escenario turístico a nivel mundial, considera a nuevos consumidores, nuevas tecnologías, nuevas formas de producción, nuevos estilos de gestión y nuevas condiciones del entorno (Poon, 1993), ante estos cambios se hace imprescindible considerar el capital humano como uno de los factores clave para crear ventajas competitivas.

Go y Gowers (2000) afirman que entre los elementos esenciales de competitividad en turismo destaca la importancia de la calidad, entendida como el modo en que los operadores son capaces de proveer de forma eficiente el producto turístico.

Los recursos humanos turísticos están vinculados estrechamente con los parámetros de calidad que el turista percibe, por lo tanto el éxito de las empresas está unido a la capacidad profesional de sus trabajadores. La calidad del servicio está vinculada a la calidad de su capital humano, constituyendo una pieza clave de competitividad (Lillo, et al., 2007).

Conceptualización Del Guía De Turista.

Autores como McDonnell (2001) menciona que la función primordial del guía de turista es transferir la cultura, Cohen (1985) dice que la función principal del guía de turista es elevar el nivel de satisfacción del turista a través de sus experiencias vividas en el tour.

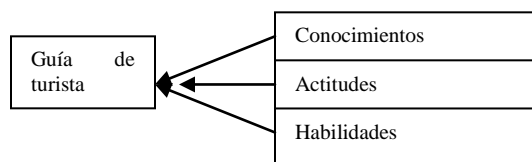

Leiper (1996) muestra otra cara de la función del guía y ésta es la de mentor, ya que es el encargado de transmitir la información dándole la interpretación correcta obteniendo como resultado un mayor entendimiento de la cultura, el énfasis desde este punto de vista es lograr transmitir las normas, reglas y costumbres del destino turístico a personas que visitan la zona.

Competencias Profesionales Para El Desempeño Del Guía De Turista

Las competencias laborales son las cualidades de las personas para desempeñarse productivamente en una situación de trabajo, no solo depende de las situaciones de aprendizaje escolar formal, sino también del aprendizaje derivado de la experiencia en situaciones concretas de trabajo (Rodríguez, 2007), por lo tanto se entiende como el conjunto de conocimientos, habilidades y actitudes verificables, que se aplican en el desempeño de una función productiva (Lasida, 1998). Medina (2009) en su tesis sobre la formación basada en competencias en la era del conocimiento y la formación, estructura las competencias como básicas, específicas y genéricas (tabla 3).

Según Swarbrooke (1999) existen tres competencias laborales las cuales fomentan una relación más positiva entre el guía de turista y el turista logrando romper todas las barreras interculturales. Los factores son: conocimiento, actitud y habilidades.

Figura 2: Competencias Laborales Que Se Requieren En La Formación Del Guía De Turista Para Un Mejor Desempeño De Sus Funciones.

Competencias laborales que requiere el guía de turista para desempeñar de manera más eficiente su trabajo. Fuente: Swarbrooke J. (1999) Sustainable Tourism Management UK, CABI Publishing p.42

Tabla 3: Competencias laborales aplicadas al guía de turista.

Competencia	Nivel	Sustento	Se manifiesta	Aplicación al turismo	Ejemplos
Básica	Conocimiento	Aprendizaje de hechos, conceptos y principios	Ciencia aplicada, capacidades intelectuales indispensables para una profesión.	Conocimientos aplicados al turismo.	Científicos: Geográficos, históricos, arqueológicos, arquitectónicos, ecológicos, etc. Idioma: Al menos un idioma extranjero. Prácticos: Rutas, horarios de servicio, primeros auxilios, idiosincrasia de diversas culturas, etc
Específica	Habilidades	Aprender procedimientos	Análisis funcional.	Habilidades	Habilidades de comunicación y tecnología
Genérica	Actitud	Aprendizaje de valores, normas y actitudes.	Comportamiento	Actitud de servicio	Predisposición, proactividad, sonrisa, amabilidad, empatía.

Competencias laborales adaptadas a la profesión de guía de turista. Fuente: Elaboración propia basada en el trabajo Medina, (2009).

MÉTODOLÓGICA DE LA INVESTIGACIÓN

El diseño de la investigación para elaborar el estudio fue a través del método de investigación descriptiva que se basa en procedimientos científicos para recolectar datos puros, a través de un cuestionario aplicado a 40 tour operadoras que manejan guías de turistas, en el mes de marzo del 2010, los cuestionarios fueron aplicados a nivel de gerencia.

El instrumento se midió con Alfa de Cronbach que es un índice de consistencia interna, en donde si su valor es cercano a la unidad se trata de un instrumento fiable que hace mediciones estables y consistentes, en este caso se obtuvo un alfa de .831 lo cual fue aceptable.

RESULTADOS

El nivel escolar que prevalece en los guías de turistas que contratan las tour operadoras es de 37.5% con licenciatura, 17.5% preparatoria, 17.5% carrera técnica y 27.5% tiene primaria, secundaria o algún curso de guía; sin embargo el 62.5% de las tour operadoras consideran que lo óptimo es tener nivel licenciatura.

El 61.5% de las tour operadoras piensan que los guías de turistas deben hablar dos idiomas, el 30.8% tres idiomas y sólo un 5.1% cuatro idiomas. El inglés y el español son los idiomas que más se exigen al momento de contratar.

Los guías de turistas se preparan más en los temas de actualización de la zona, historia de los mayas, historia en general; sin embargo requieren de cursos de primeros auxilios ya que no se preparan en este ámbito. Dentro de las competencias básicas que más valor le dan las tour operadoras se encuentran: Conocimientos de historia, primeros auxilios, conocimientos de la zona. En cuanto a las competencias específicas las tour operadoras requieren que los guías tengan más habilidad en comunicarse en otro idioma, de negociación, y habilidades tecno – motrices como manejo de tecnología y habilidad en conducir un vehículo.

En cuanto a las competencias genéricas las que más se valoran por las tour operadoras son: ser organizado, tener una actitud de servicio, comprometido e interactuar con otras personas. En un estudio realizado por Zárraga y Corona (2010) sobre las expectativas de los turistas cuando contratan los servicios de los guías de turistas, los aspectos más valorados son que los guías vestan uniforme, porten gafete, domine el tema, que den respuestas a las inquietudes, que tengan un trato amable y transmita confianza, que hable otro idioma, que maneje equipo y sea una persona adulta. Haciendo el análisis podemos concluir que las competencias laborales que más se exigen pueden cumplir con las expectativas que el turista espera.

Tabla 12: Expectativas del turista vs. Competencias laborales del guía

Expectativas de los turistas cuando contratan un guía de turista	Competencias laborales cuando las tour operadoras contratan un guía de turista para brindar un servicio.
Vistan uniforme	Nivel de Estudios, Conocimientos de Historia, Conocimientos de la Zona Geográfica, Cultura en General
Pertenezcan a una empresa	
Porten gafete	
Duración del recorrido	
Dominio del tema	
Que de respuestas a sus inquietudes	Nivel de Estudios, Conocimientos de Historia, Conocimientos de la Zona Geográfica, Cultura en General
Trato amable	Organizado, Actitud de Servicio
Transmita confianza	
Idiomas	
Utilización de equipo	
Persona adulta	
	Idiomas que hablan
	Manejo de Tecnología
	Comprometido

Análisis de las expectativas que busca un turista al momento de contratar un guía versus las competencias que una tour operadora exige cuando contrata a los guías para prestar el servicio. Fuente: Elaboración propia

DISCUSIÓN Y CONCLUSIONES

Este documento se centra en el objetivo de analizar las competencias más valoradas por las tour operadoras para que los guías de turistas desempeñen mejor sus funciones. Centrándose en los tres factores que señala Swarbrooke (1999) que son: conocimientos, actitudes y habilidades, la Secretaría de Turismo del Estado expide una certificación a las personas que desempeñen la labor del guía, actualmente no hay estadísticas precisas sobre el número de guías de turistas certificados en Quintana Roo, ya que este trámite se puede realizar en cualquier parte del país, por lo que se vuelve difícil determinar la muestra, además de que los guías de turistas trabajan como freelance, por lo que tienen una movilidad empresarial constante.

Como conclusión conociendo la importancia estratégica de los guías de turistas para el desarrollo del estado, así como su correcta capacitación y formación es necesario proponer una instancia que regule y fomente las tres dimensiones mencionadas en el documento para generar mayor competitividad en el

desempeño de sus funciones y de esa manera tener un mejor control, por lo que se deben de proponer programas en donde se estén capacitando constantemente además de evaluarlos en las diferentes competencias laborales. Es importante destacar que no se aprecian en la curricula de las universidades de las zonas, las competencias básicas para la formación de los guías de turistas por lo que esto es un área importante que se tiene que desarrollar en un futuro.

DOBLE IMPOSICIÓN TRIBUTARIA EN MÉXICO EN LA IMPORTACIÓN DE BIENES

José Manuel Osorio Atondo, Centro de Estudios Superiores del Estado de Sonora

ABSTRACT

Se presenta un análisis jurídico consistente en la doble imposición tributaria en la determinación de la Base Gravable del Impuesto al Valor Agregado en la Importación de bienes tangibles, incidiendo en la capacidad económica de los contribuyentes al ingresar mercancías a territorio mexicano, violando el principio constitucional tributario de proporcionalidad; invitando a que, al legislar en materia tributaria en México, se respeten los principios tributarios constitucionales sin afectación a los contribuyentes en su capacidad contributiva.

INTRODUCCIÓN

El Estado Mexicano tiene la facultad o el poder tributario que se le confiere para exigir el pago de contribuciones para el ejercicio de sus funciones de acuerdo a la Constitución Política de los Estados Unidos Mexicanos en su Artículo 31 fracción IV, la cual representa la ley suprema de acuerdo a la estructura jurídica de México. Por lo tanto, todas las leyes tributarias deben de tomar en cuenta y no contradecir la carta Magna. Sin embargo, en la implementación de dichas leyes hay casos en los que se violan los principios constitucionales tributarios plasmados en dicha ordenanza, como es el caso de la doble imposición; es decir pagar más de dos impuestos sobre un mismo bien y la acumulación de un impuesto sobre otro impuesto. Sin duda alguna el gobierno de México ha firmado tratados para evitar la doble tributación con otros países; sin embargo, no solamente en el ámbito internacional se presenta la doble imposición, puesto que en la aplicación de impuestos domésticamente nos encontramos actos de doble imposición como es el caso de la importación de bienes tangibles.

LOS INGRESOS DEL ESTADO MEXICANO

Para que una nación pueda desarrollarse requiere de ingresos para cubrir el gasto público de la misma, de tal forma que en cada ejercicio fiscal, en el caso del gobierno mexicano, a través de la cámara de diputados y el ejecutivo tienen la facultad de promover leyes; elaboran, presentan y aprueban la Ley de Ingresos, también conocida como el presupuesto de ingresos para aplicarse en el siguiente ejercicio fiscal conjuntamente con la Ley de Egresos. Gran parte de esos ingresos que requiere el Estado provienen del pago de impuestos que los mexicanos aportan de manera directa e indirectamente, contribuyendo de esta forma al gasto público que tiene que cubrir el primero, mediante el orden, el bien común, la justicia, la libertad y la seguridad jurídica de sus habitantes.

Serra (1974, p. 78 citado por Arriola 2000) afirma que, “Las actividades públicas llamadas por algunos autores funciones públicas, son servicios de los cuales no puede prescindir una sociedad, como la justicia, la defensa nacional, la policía, los transportes, la actividad educativa y económica del Estado, el crédito público y otras”.

En relación a las funciones públicas, es notable el aspecto económico, pues el Estado requiere de elevados recursos económicos para estar en condiciones de proporcionar los servicios públicos a los que está comprometido. Por tal motivo, al convertirse el Estado en un ente económico, demanda percepciones monetarias para el cumplimiento de sus funciones como tal. Este sustento económico proviene principalmente de ingresos de exportación de petróleo y del cobro de contribuciones e impuestos que gravan la riqueza generada por las actividades productivas y el consumo de sus habitantes.

Relación Jurídica-Tributaria En México.

Sin embargo, el pago de contribuciones no se realiza porque los mexicanos así lo decidan, sino por mandato legal. La potestad del Estado para el cobro de esos impuestos se sustenta en la Constitución Política de los Estados Unidos Mexicanos, en su Artículo 31, Fracción IV. En dicho ordenamiento se establece la Relación Jurídica Tributaria entre el Estado y sus gobernados, de carácter obligatorio para contribuir a satisfacer el gasto público. El Artículo 31 refiere:

“Son obligaciones de los mexicanos:

IV. Contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes”.

Este ordenamiento establece por mandato legal el otorgar una prestación pecuniaria al gobierno para el cumplimiento de sus funciones, ya sea con impuestos, derechos y/o aprovechamientos de acuerdo al Código Fiscal de la Federación. En el caso que nos ocupa, se comentará sobre uno de los primeros. Este poder tributario, es irrenunciable de parte del Estado, puesto que estaría en juego su existencia al no tener el sustento económico conveniente, necesario y suficiente. De igual forma, dicha potestad es permanente, puesto que, mientras exista, el Estado requerirá de recursos económicos y por ende la necesidad de allegarse de los mismos.

Actualmente, la legislación fiscal mexicana es muy amplia debido a que existen varios impuestos. Por citar algunos: el Impuesto Sobre la Renta, Impuesto al Valor Agregado, Impuesto Empresarial a Tasa Única, Impuesto Especial Sobre Productos y Servicios, que gravan ya sea la utilidad obtenida en un período determinado, el consumo y la enajenación de bienes y servicios especiales. Además se encuentran los Impuestos Generales de Importación y Exportación, cuando se internan o se extraen mercancías de México.

Desafortunadamente, en la aplicación de los mismos, se presentan casos que gravan la misma fuente de ingresos, la utilidad o el consumo de un mismo bien ocasionando en algunos casos una doble imposición, trasgrediendo de esta forma la economía del contribuyente.

Si bien a través de su política comercial el Estado Mexicano ha buscado mecanismos con diferentes tratados internacionales con varios países evitar la doble tributación, la doble imposición se presenta no sólo con relaciones comerciales con el exterior, sino también domésticamente.

Para Arrioja (2000), en lo que respecta a la doble tributación menciona los siguientes supuestos:

- 1) Cuando un mismo sujeto activo establece más de un gravamen sobre el mismo objeto;
- 2) Cuando dos o más sujetos activos establecen más de un tributo sobre el mismo objeto;
- 3) Cuando dos o más sujetos activos establecen dos o más gravámenes cada uno de ellos sobre el mismo objeto; y
- 4) Cuando se acumulen impuesto sobre impuesto para gravar doblemente determinados actos de consumo necesario. (p. 261)

Base Gravable Del IVA En La Importación De Bienes.

Para el caso que nos ocupa, tomaremos el supuesto número cuatro, en el que señala doble imposición al cobrar un impuesto sobre otro impuesto en un acto de consumo. El ejemplo que se aborda en el desarrollo de este bosquejo es sobre la Base Gravable del IVA en la Importación de Mercancías.

La Actual Ley del Impuesto al Valor Agregado establece en su Art. 1º que las personas físicas y morales que realicen las actividades de enajenación de bienes, presten servicios independientes, uso o gozo

temporal de bienes o que importen bienes o servicios, están obligados al pago de dicho impuesto. En su Art. 27, este ordenamiento instituye la base del impuesto en las importaciones, la cual considera el valor que se utilice para los fines del Impuesto General de Importación (IGI) adicionado con el monto de este último gravamen y de los demás que se tengan que pagar con motivo de la importación.

¿Es Inconstitucional esta doble imposición? ¿Vulnera la capacidad contributiva? ¿La determinación de la base gravable del IVA en la importación respeta los principios tributarios constitucionales? Estos son algunos de los cuestionamientos necesarios formular en la aplicación de dicho Artículo, ya que el gobierno mexicano a través de la política comercial puede establecer gravámenes para evitar la introducción de mercancías a este país y proteger la producción doméstica o bien, así como allegarse de recursos para el desarrollo de sus funciones. Sin embargo, la aplicación de un impuesto sobre otro impuesto se torna totalmente confuso.

De acuerdo a la Ley del Impuesto al Valor Agregado, su aplicación es sobre la importación de bienes más no sobre el impuesto causado por dicha introducción de mercancías. Para mejor entendimiento, presentamos el siguiente ejemplo de aplicación del Artículo 27 de la ley en cita. En el caso de importación de mercancías Silva (2007) menciona que debe sumarse al valor en aduana el impuesto general de importación y de los otros impuestos que deban pagarse por la importación, Es decir, se paga impuesto sobre otro impuesto, como se ilustra en la tabla 1:

Tabla 1

Valor en aduana		\$ 100,000.00
Impuesto General de Importación	18%	\$ 18,000.00
Derecho de Trámite Aduanero	.008 al millar	\$ 800.00
Impuesto al Valor Agregado	11%	
	Base Gravable IVA	\$ 118,800.00
	Total de IVA	\$ 13,068.00

Esta tabla muestra cómo se calcula el IVA en la importación de bienes en México.

A partir de este caso, la base gravable incluye el Impuesto General de Importación, a la cual se le aplica la tasa del Impuesto al valor Agregado del 11%, incrementando con ello la cantidad a pagar por la operación. Como podemos ver, la determinación de la base gravable del Impuesto al valor Agregado en la importación de mercancías es un acto de doble imposición tributaria, en virtud de que dicha base gravable incluye además del valor en aduana del bien, el Derecho de Trámite Aduanero, el Impuesto General de Importación y, en algunos casos, las Cuotas Compensatorias; presentándose con ello una doble imposición, puesto que el IVA se está aplicando sobre otros tipos de gravámenes y no solamente sobre el valor del bien tangible importado.

Esta doble imposición vulnera la capacidad contributiva del sujeto pasivo, ya que al presentarse un desembolso mayor por una doble imposición transgrede su economía. Los principios constitucionales para la creación de contribuciones se encuentran plasmados en el citado Art. 31 de la Constitución Política de los Estados Unidos Mexicanos, al establecer que los mexicanos deberán de contribuir de manera equitativa y proporcional, entendiéndose por el primero en un trato tributario igual de los iguales y desigual de los desiguales teniendo en cuenta su capacidad económica, tal como lo menciona Arrijoja (2000), "... la igualdad ante la misma ley tributaria de todos los sujetos pasivos de un mismo tributo; los que, en tales condiciones, deben recibir un tratamiento idéntico en lo concerniente a hipótesis de causación, acumulación de ingresos gravables, deducciones permitidas, plazos de pago, etc.; debiendo únicamente variar las tarifas tributarias aplicables de acuerdo con la capacidad económica de cada contribuyente.

En lo que respecta al principio de proporcionalidad, La Suprema Corte de Justicia de la Nación, establece mediante jurisprudencia lo siguiente:

“Éste radica, medularmente, en que los sujetos deben contribuir al gasto público en función de su respectiva capacidad contributiva, debiendo aportar una parte adecuada de sus ingresos, utilidades, rendimientos, o la manifestación de riqueza gravada. Conforme a este principio los gravámenes deben fijarse de acuerdo con la capacidad económica de cada sujeto pasivo, de manera que las personas que obtengan ingresos elevados tributen cualitativamente superior a los medianos y reducidos recursos.

Para que un gravamen sea proporcional debe existir congruencia entre el mismo y la capacidad contributiva de los causantes; entendida ésta como la potencialidad real de contribuir al gasto público que el legislador atribuye al sujeto pasivo del impuesto en el tributo de que se trate, tomando en consideración que todos los supuestos de las contribuciones tienen una naturaleza económica en la forma de una situación o de un movimiento de riqueza y las consecuencias tributarias son medidas en función de esa riqueza. La capacidad contributiva se vincula con la persona que tiene que soportar la carga del tributo, o sea, aquella que finalmente, según las diversas características de cada contribución, ve disminuido su patrimonio al pagar una cantidad específica por concepto de gravámenes, sea en su calidad de sujeto pasivo o como destinatario de los mismos. De ahí que, para que un gravamen sea proporcional, debe existir congruencia entre el impuesto creado por el Estado y la capacidad contributiva de los causantes, en la medida en que deben pagar más quien tenga una mayor capacidad contributiva y menos el que tenga en menor proporción”.

Analizando lo anterior, y retomando el caso de importación de bienes tanto de personas físicas o morales, al importar bienes tangibles es de entenderse que se aplicará el Impuesto General de Importación de acuerdo a la Ley en materia, así como el Impuesto al Valor Agregado; sin embargo, que la Ley del Impuesto antes citado en la determinación de su Base Gravable en la Importación incluya el Impuesto General de Importación es un acto de doble imposición y por ende afecta la economía del sujeto pasivo, puesto que su aplicación no es nada más sobre el valor del bien importado sino también un impuesto sobre otro impuesto.

Atendiendo a los comentarios anteriores, concluimos que la doble tributación es el resultado de una mala política fiscal en México, ya que desafortunadamente no se aplican correctamente los principios constitucionales en la Determinación de la Base Gravable del Impuesto al Valor Agregado en la importación de bienes tangibles.

Por lo tanto, es necesario que el poder legislativo establezca de manera objetiva la imposición tributaria para evitar muchas controversias y juicios que son producto de la diferente percepción de las partes, garantizando la proporcionalidad en la aplicación y recaudación de los impuestos.

LAS CARACTERÍSTICAS DE LAS EMPRESAS COMO FACTORES DETERMINANTES EN SU LOCALIZACIÓN

Manuel A. Espitia Escuer, Universidad de Zaragoza

Lucía I. García Cebrián, Universidad de Zaragoza

Antonio Muñoz Porcar, Universidad de Zaragoza

RESUMEN

La localización de la actividad económica ha sido analizada desde un variado rango de perspectivas. Éstas pueden agruparse en dos grandes tipologías: aquellos trabajos que ponen el acento en los factores del territorio que condicionan esa localización; y aquellos trabajos que ponen el foco sobre las características de las empresas. Este último enfoque podría ser catalogado como un enfoque “interno”, como contraposición al enfoque “externo” más propio de otras disciplinas científicas como la Geografía Económica. Este trabajo utiliza la segunda de las aproximaciones teóricas y tomando como factores de localización las características de las empresas, analiza como estas características influyen en la decisión de localización. Para ello, utiliza datos secundarios de empresas y sobre ellos aplica el modelo clásico de localización propuesto por McFadden. Los resultados obtenidos confirman que las características de las empresas afectan a su localización.

INTRODUCCIÓN

La importancia económica de la decisión de localización es muy elevada (Geroski, 1995), y la mera observación de los datos que proporciona el Instituto Nacional de Estadística, a través del Directorio Central de Empresas, así lo demuestran. A título de ejemplo, en 1999 había en Aragón 78.476 empresas y en el año 2007, 92.162, es decir, 13.686 empresas más. También con las estadísticas del Instituto Aragonés de Seguridad y Salud Laboral, el número de nuevos centros de trabajo abiertos entre los años 1999 y 2005 fue de 81.459. Los datos anteriores son un reflejo de la importancia cualitativa de la decisión de crear una nueva empresa o la apertura de un nuevo centro de trabajo. De forma indisoluble a la decisión de crear una nueva empresa o un nuevo centro de trabajo, está la decisión de dónde localizarlo. Esa pregunta se ha hecho en este período una serie de veces y por lo tanto, se han tomado decisiones de localización en Aragón ese número de veces.

Esta decisión sobre localización va precedida de un proceso de análisis por parte de las empresas de forma que de ella se derive alguna fuente de ventaja competitiva que pueda transformarse en un desempeño más alto: mayor nivel del resultado obtenido o mayor valor para la empresa.

Íntimamente relacionado con lo anterior son las cuestiones relativas a los factores relevantes para la decisión, tanto referentes a las empresas como al territorio: influencia sobre los ingresos y gastos de una posible ubicación, necesidad de situarse cerca de una red de transportes y comunicaciones, de una ciudad importante, etc. La literatura existente en materia de localización empresarial distingue dos aproximaciones para profundizar en el análisis de estos factores:

- a) Aquellos trabajos que ponen el acento en los factores de la empresa y en la decisión de localización.
- b) Aquellos trabajos que ponen el acento en los factores del territorio, más propio de disciplinas como la Geografía Económica.

En este trabajo se va a utilizar la primera aproximación con el objetivo de obtener evidencia empírica de ella. El objetivo por lo tanto es profundizar en el estudio del comportamiento locacional de las empresas en función de las características que presentan en el momento de su constitución. Esas características suponen uno de los principales problemas de la investigación debido a su escasez. Este trabajo se

estructura de la siguiente forma: se comienza con una revisión de la literatura en la que se repasan los diversos enfoques de los aspectos de la localización, vistos desde la óptica de la Economía de la Empresa. El apartado tercero del capítulo se centra en la muestra utilizada y en la metodología aplicada. Se continúa con los resultados obtenidos. El trabajo termina con un apartado dedicado a las conclusiones.

MUESTRA Y METODOLOGÍA.

Descripción de la muestra:. Con el fin de alcanzar los objetivos presentados en la introducción del trabajo, es decir, determinar si las características de las empresas que se introducen en un determinado territorio afectan a la elección de su localización, se han utilizado 7.405 empresas creadas en Aragón durante los años 1995-2006. Los datos se han obtenido de la base de datos SABI, que contiene más de 1.000.000 de datos de empresas de España y Portugal. La elección de esta muestra de empresas de Aragón, responde a que todas tienen como característica común que han elegido un lugar en el que realizar su actividad.

Variables Utilizadas: Las variables utilizadas en el modelo responden a las características de las empresas en el momento de su constitución o creación. Este hecho condiciona de forma considerable la disponibilidad de estos datos. En el momento de constituirse una empresa, sólo se dispone de datos relativos al sector en el que va a desarrollar su actividad, a la cifra de capital con el que se constituye y al nivel del endeudamiento. Además de los datos anteriores, se ha añadido al estudio, el tamaño de la empresa medido a través de dos variables: la inversión y el número de empleados. Por lo tanto, las variables independientes del modelo son las siguientes:

- a) Tamaño de la empresa. Se mide con la inversión efectuada y con el número de trabajadores. Como la inversión puede materializarse en más de un período, el dato se ha tomado en el año $n+1$, siendo n el año de constitución de la empresa. El dato que se utiliza corresponde a la cifra de Inmovilizado del año posterior a su constitución. Respecto al número de trabajadores, también se ha utilizado como dato el correspondiente al período posterior al de constitución, ya que se entiende que es entonces cuando ha concluido el período de inversión y se ha adaptado la necesidad de trabajadores a la inversión realizada. Con la inclusión de estas dos variables se pretende, por lo tanto analizar, si importa el tamaño de la empresa a la hora de elegir el emplazamiento.
- b) Sector de Actividad. Esta variable se introduce como variable de control. Se han utilizado variables Dummy que recogen el sector al que pertenece la empresa.
- c) Cifra de capital social suscrito. Esta variable se introduce como una medida del compromiso que el empresario adquiere con el proyecto. Se parte del hecho de que los empresarios aportarán una cifra de capital mayor que el mínimo legal cuanto mayor sea su compromiso.
- d) Endeudamiento. El endeudamiento se calcula como pasivo total menos fondos propios y recoge las deudas totales que tiene la empresa, tanto con coste explícito como con coste implícito, y tanto a largo como a corto plazo. Con la introducción de esta variable se intenta recoger el acceso de las empresas al mercado de capitales y comprobar si las empresas localizadas en municipios más pequeños tienen una tasa de endeudamiento menor.
- e) Fecha de constitución. Esta variable se introduce como variable de control del efecto temporal con el fin de que recoja los efectos de las variaciones macroeconómicas que afectan a todas las empresas en la misma medida. Se han utilizado variables Dummy que recogen el año en que se produce la constitución de la empresa.

La variable dependiente utilizada de acuerdo con el modelo (McFaden, 1974) es la Comarca. Existen 33 comarcas en Aragón y el estudio se ha realizado tomando como base la comarca de D. C. Zaragoza.

El análisis del efecto de las variables que caracterizan a la empresa que se constituye, sobre la decisión de localizarse en una comarca determinada, se plantea de acuerdo a un modelo donde la variable dependiente

es la variable Comarca y las variables independientes o regresoras corresponden a las cuatro variables previamente presentadas.

La Metodología que se utiliza para estudiar el impacto de un conjunto de características de empresa sobre la probabilidad de ser elegida alguna de las alternativas de localización por una empresa para instalarse, es el modelo Logit Multinomial propuesto por McFadden (1974). Bajo el supuesto de que una empresa está considerando la posibilidad de ubicar sus instalaciones en la Comunidad Aragonesa, el beneficio esperado será una variable aleatoria compuesta por un componente determinístico que toma la forma de una combinación lineal de variables ($Z'_{ij}\beta$) donde Z'_{ij} es un vector de las características de la alternativa j que son observables y β es un vector de coeficientes que miden la influencia de esas características en el beneficio esperado, y un componente estocástico ε_{ij} . Por lo tanto, el beneficio esperado derivado de su elección será: $\pi_{ij} = Z'_{ij}\beta + \varepsilon_{ij}$. Suponiendo que la empresa i tiene como objetivo la maximización del beneficio, la elección de la alternativa j se producirá según el siguiente principio: $\pi_{ij} > \pi_{ik}, k \neq j$.

Sea Y_i una variable aleatoria que indica la alternativa realmente elegida. Así, la probabilidad de que una empresa i se localice en la alternativa j es $P(Y_i = j) = P(\pi_{ij} > \pi_{ik}, k \neq j)$. Asumiendo que el componente estocástico ε_{ij} se distribuye según una distribución Gumbel, o valor extremo tipo I, independiente e idéntica (es decir con la misma varianza), se puede confirmar que

$$P(Y_i = j) = \frac{e^{Z'_{ij}\beta}}{1 + \sum_{j=1}^J e^{Z'_{ij}\beta}}$$

En principio las variables explicativas incluyen tanto aspectos de la empresa o establecimiento instalado, como del territorio. En términos matemáticos $Z_{ij} = (W_i; X_{ij})$. Cuando las variables son características de las empresas ($Z_{ij} = W_i$), la expresión anterior es conocida como Modelo Logístico Multinomial:

$$P(Y_i = j) = \frac{e^{W_i'\beta_j}}{1 + \sum_{j=1}^J e^{W_i'\beta_j}}$$

Cuando las variables se refieren a atributos o características de territorio, el modelo se denomina Logit Condicional, que se utiliza para los casos en los que las variables explicativas utilizadas se refieren a atributos de las distintas alternativas y no de los individuos:

$$P(Y_i = j) = \frac{e^{X_{ij}'\beta}}{1 + \sum_{j=1}^J e^{X_{ij}'\beta}}$$

La principal limitación del modelo es de tipo computacional. En el caso de que el número de alternativas sea muy elevado, es difícil calcular las funciones de probabilidad. El paquete estadístico Stata limita las alternativas a 50 y el Limdept a 150. La agregación territorial elimina estos problemas, pero limita la posibilidad de realizar análisis a un nivel de mayor desagregación (a nivel municipal, por ejemplo). En este caso se utiliza el paquete estadístico SPSS, versión 14.0. Como medidas de la bondad del ajuste se utiliza un test estadístico que compara el valor de máxima verosimilitud del modelo estudiado con el que tendría si los coeficientes de las variables explicativas fueran nulos. Este test se distribuye según una Chi-cuadrado, con tantos grados de libertad como variables se introducen en el modelo. Además se calcula el R^2 de Nagelkerke.

CONCLUSIONES

En este trabajo se han estudiado los factores de localización, desde el punto de vista de la empresa, que han condicionado la decisión de localización. En primer lugar, hay que destacar el hecho de la dificultad

de la realización de estos análisis debido a la ausencia de datos empresariales disponibles antes de tomar la decisión de localización.

Para la realización de estos análisis, se ha utilizado una regresión logística que nos confirma varios puntos. En este trabajo se ha optado por analizar cómo el tamaño, medido por la inversión y por el número de empleados, el sector en el que realiza la actividad, cifra de capital y la deuda afectan a estas decisiones. El hecho de que las empresas de nueva creación más inversoras tengan preferencia por situarse en comarcas distintas a la Delimitación Comarcal de Zaragoza, supone una confirmación de las deseconomías de aglomeración en la localización empresarial.

Los elevados costes iniciales, especialmente el referente a la necesidad de suelo industrial, han hecho que las empresas prefieran situarse fuera de Zaragoza. Por el contrario, si se mide el tamaño a través del número de empleados, los resultados son contradictorios y no se pueden aportar conclusiones firmes. La introducción de una variable nueva que elimine esta contradicción (intensidad de capital por empleado), confirma los resultados de la variable inversión. Aún así, parece claro que las empresas con mayor número de empleados prefieren situarse en las comarcas más pequeñas de la Comunidad Autónoma. Las características de la muestra condicionan de manera clara este resultado. La concentración de la actividad económica en la capital condiciona de manera notable los resultados, junto con el hecho de que en la mayoría de las comarcas las empresas con forma jurídica societaria son las únicas que aparecen ya que la mayoría de las pequeñas empresas que sí existen en estos territorios no aparecen en la muestra, quedando únicamente las más grandes.

La variable cifra de capital no arroja resultados significativos mientras que la variable relativa al endeudamiento sí que lo hace. La mala distribución geográfica del mercado de capitales por el territorio aragonés condiciona de forma significativa el acceso al mercado de capitales por parte de las empresas. En la mayoría de las comarcas la presencia de entidades financieras es escasa, lo que no facilita la competencia entre ellas. No proporciona mejores posibilidades para las empresas de acceder a capitales. Otro dato que justificaría este hecho es la presencia de asimetrías de información entre los agentes que intervienen en este tipo de operaciones: la escasa densidad de población empresarial en las comarcas aragonesas con respecto a Zaragoza hace que el conocimiento por parte de las entidades financieras de la realidad empresarial, sea mucho mayor en estas comarcas que en la capital, esto frena el acceso al mercado de capitales por parte del prestatario.

CUANTIFICACIÓN DEL RIESGO OPERATIVO EN LA UTILIZACIÓN DE SISTEMAS DE INFORMACIÓN, UNA APROXIMACIÓN

Julio Cesar Millan Solarte, Universidad del Valle
Sandra Cristina Riascos Erazo, Universidad del Valle

ABSTRACT

Las organizaciones del siglo XXI han optimizado la eficiencia y eficacia de sus procesos administrativos mediante la utilización de sistemas de información, si bien es cierto que la utilización de esta herramienta ha proporcionado grandes ventajas competitivas a las organizaciones, también ha desencadenado una serie de riesgos de tipo operativo que han minimizado su objetivo de apoyar al logro de las metas organizacionales y en algunos casos se han identificado pérdidas considerables. El presente artículo pretende ilustrar los resultados de un proceso investigativo en relación a la contextualización del riesgo operativo en la utilización de sistemas de información de carácter organizacional y su respectiva cuantificación de tal manera que facilite su posterior gestión.

INTRODUCCION

Los sistemas de información se han convertido para algunas organizaciones en una herramienta imprescindible para lograr el éxito empresarial, entre las diversas utilidades se encuentra el apoyo a la construcción de estrategias corporativas, la toma de decisiones y la ejecución de operaciones transaccionales. Así como los sistemas de información han generado grandes ganancias a muchas organizaciones llevándolas a constituirse en empresas competitivas, también se han presentado diversos casos donde las fallas presentadas en el momento de su operación han implicado enormes pérdidas para las organizaciones, especialmente de carácter financiero.

Las dificultades que se pueden presentar en la operación de los sistemas de información pueden ocasionar impactos considerables en las organizaciones, en forma general, los peligros en la operación de los sistemas de información que apoyan a las empresas se catalogan como Riesgo Operativo. La empresa KPMG que apoya la gestión diversos riesgos, menciona que el riesgo operativo resulta de “peligros escondidos” que pueden causar pérdidas debido a fallas en los procesos, en la tecnología, en la actuación de la gente, y también, debido a la ocurrencia de eventos extremos externos. Actualmente, las entidades financieras y las empresas del sector real están en una etapa de cambios que ha incrementado el riesgo operativo. Reestructuraciones internas, fusiones y adquisiciones, cambios en los sistemas tecnológicos y la complejidad en las transacciones, crean mayores exposiciones al riesgo operativo. La forma en que se manejen estos riesgos está bajo creciente escrutinio tanto por los accionistas, como por los reguladores y por el mercado en general, que buscan por igual, mayor certidumbre en los resultados.

El objetivo de este artículo es presentar los resultados de una investigación realizada sobre el riesgo operativo que implica en la utilización de los sistemas de información y cómo se puede gestionarlo de tal manera que atenúe las implicaciones que haya desencadenado el riesgo operativo identificado. A continuación se ilustra la definición y las características del riesgo operativo, algunos ejemplos del riesgo operativo en los sistemas de información y finalmente, una aproximación de cuantificación del riesgo operativo que facilite su posterior gestión.

RIESGO OPERATIVO EN LA UTILIZACIÓN DE SISTEMAS DE INFORMACIÓN

Los sistemas de información se constituyen en un conjunto de partes orientadas a la transformación de datos en información que apoye la toma de decisiones de la alta gerencia de las organizaciones, es imprescindible aclarar que los sistemas de información modernos incluyen dos aspectos importantes como son: la tecnología y el usuario. El nivel de exposición al riesgo en los sistemas de información es considerable, entre los principales riesgos se encuentran: jurídicos, administrativos, operativos. Especialmente el riesgo operativo se encuentra asociado a los usuarios y la tecnología.

De acuerdo con el grupo de trabajo del Comité de Basilea del Banco Internacional de pagos (Bank for International Settlements (BIS) es el banco central de bancos centrales con sede en Basilea (Suiza). Es una organización internacional que fomenta la cooperación financiera y monetaria internacional y sirve de banco para los bancos centrales.), se entiende por riesgo operativo a la posibilidad de ocurrencia de pérdidas financieras por deficiencias o fallas en los procesos internos, en la tecnología de información, en las personas o por ocurrencia de eventos externos adversos. Esta definición incluye el riesgo legal, pero excluye el riesgo estratégico y el de reputación. Esto significa que el riesgo operativo se refiere a las pérdidas que pueden causar factores como usuarios, procesos de operación interna, tecnologías y factores externos, estos, se convierten entonces en fuentes de riesgo, si se analizan al interior de una organización tales agentes afectarían de la siguiente forma el desempeño de la organización:

Usuarios: Es la posibilidad de pérdidas financieras asociadas con incompetencia, negligencia, error humano, sabotaje, fraude, robo, paros, apropiación de información confidencial, lavado de dinero, inapropiadas relaciones interpersonales y ambiente laboral desfavorable, falta de especificaciones claras en los términos de contratación del personal, entre otros factores. En el contexto de los sistemas de información, los usuarios pueden ocasionar riesgos de carácter operativo, dado que el procesamiento de la información depende de la parametrización y operación que le proporcione el usuario responsable del sistema. En este sentido, la capacitación y concientización del usuario es de suma importancia para que el sistema pueda cumplir su objetivo propuesto.

Procesos De Operación Internos

Existe aquí la posibilidad de pérdidas financieras relacionadas con el diseño inadecuado de los procesos, o la carencia de los mismos, que pueda ocasionar la ejecución deficiente de las operaciones y servicios o la suspensión de los mismos. Algunos de los eventos dentro de esta categoría pueden ser los riesgos asociados a las fallas en los modelos utilizados (procesos de valuación erróneos (De Lara (2003) pag.206), errores en las transacciones, evaluación inadecuada de contratos, operaciones y servicios, errores en la información contable, insuficiencia de recursos para el volumen de operaciones realizadas, inadecuada documentación de transacciones efectuadas, incumplimiento en los plazos y presupuestos planeados.

Los sistemas de información obedecen a las reglas y procesos para los cuales fueron creados, es decir, un sistema de información contable seguirá los lineamientos de la organización, por ejemplo que ciertas ventas que cumplan con algunas condiciones dadas por la dirección no se les realice el cálculo de IVA, es importante resaltar que el riesgo operativo fue desencadenado por políticas y procedimientos internos de la empresa.

Tecnologías : Probabilidad de pérdidas financieras derivadas del uso de inadecuados sistemas de información y tecnología (Da Costa Lewis (2004) pag.2), que pueden afectar el desarrollo de las operaciones y servicios que presta la institución, al atentar contra la confidencialidad, integridad, disponibilidad y oportunidad de la información. Las tecnologías que soportan el funcionamiento de los sistemas de información están constituidas por los equipos de cómputo, las redes de comunicación y demás hardware; la disponibilidad de estos elementos se constituye en un foco de riesgo especialmente operativo.

Factores Externos: Es la posibilidad de pérdidas derivadas de la ocurrencia de eventos ajenos al control de la empresa que pueden alterar el desarrollo de sus actividades, esta alteración puede afectar los procesos internos, personas y tecnología de información. Entre otros factores, se pueden considerar los riesgos que implican las contingencias legales, las fallas en los servicios públicos, la ocurrencia de desastres naturales, atentados y actos delictivos, fallas en servicios críticos provistos por terceros. Por otra parte, es importante mencionar los sistemas de información en línea, es decir utilizando la tecnología que suministra internet que también han sido objeto de riesgos operacionales especialmente en los ataques de la denegación del servicio lo cual ha propiciado grandes pérdidas para las organizaciones implicadas. Applegate, Austin y McFarlan (2004) presentan un estudio sobre estos ataques ocurridos en el año 2000 a diversas empresas en línea (tabla 1).

Tabla 1 Advertencia sobre los ataques de denegación de servicio de febrero del año 2000

Fecha	Empresa atacada	Resultado del ataque
7 de febrero	Yahoo!	Pico de sobrecarga en el tráfico que duró 3 horas.
		La disponibilidad de la red cayó del 98% al 0%.
		El ataque partió de 50 lugares diferentes, y se calcula que se realizó a mediados de un día laborable.
8 de febrero	Buy.com	Las acciones bajaron un 3.2% en una semana en que el Nasdaq subió casi un 3%.
		El ataque tuvo lugar durante una hora de la Oferta Pública Inicial (IPO) de la empresa.
		A finales de la semana, las acciones habían bajado más del 20% respecto al precio IPO.
9 de febrero	eBay	Las acciones bajaron el 7.3% en una semana en que el Nasdaq subió casi un 3%.
	CNN.com	Servicio interrumpido
	E*Trade	Fue atacada durante las horas de mayor actividad.
18 de febrero	ZDNet	Las acciones bajaron un 7,6% en una semana en que el Nasdaq subió casi un 3%.
	FBI	Servicio Interrumpido
	Nacional	Servicio interrumpido
24 de febrero	Discount Brokers	Fue atacada durante las horas de mayor actividad.
	Group	Los operadores accidentalmente desconfiguraron el sitio mientras intentaban defenderlo del ataque.

Por otra parte, Carr (2005) ilustra casos como los de la capitalización bursátil de Oxford Health Plans bajó casi 3.000 millones de dólares en un solo día, después de anunciar que algunos problemas en el *software* habían conducido a graves errores en la facturación y el procesamiento de las pólizas. Las dificultades de Nike en la instalación de los programas de la cadena de suministro le costaron una suma estimada en 400 millones de dólares. Las demoras en el desarrollo de un nuevo sistema de procesamiento de los pedidos representaron para el fabricante de herramientas Snap-on una reducción del 40% en sus ganancias. Una aplicación errónea de un sistema ERP contribuyó a la bancarrota de FoxMeyer Drug. Un nuevo sistema logística de nueve millones de dólares instalado por W. W. Grainger calculó mal el inventario, causando unas pérdidas de 23 millones de dólares. Cigna perdió el 6% de las cuentas de asistencia sanitaria, después de la instalación defectuosa de un sistema de gestión de la relación con el cliente. El muy alabado sistema de pronóstico en «tiempo real» de Cisco Systems no logró predecir una inminente caída libre en la demanda de servidores de red, lo cual condujo a una depreciación del inventario de 2.500 millones de dólares y al despido de 8.500 trabajadores. Incluso el desorden operativo que siguió a la fusión de

Southern Pacific y Union Pacific se puede atribuir a la incapacidad total de las empresas para coordinar sus sistemas de información. En forma general, se puede mencionar que grandes empresas han tenido que soportar grandes pérdidas por riesgos de carácter operativo en función de los sistemas de información, aunque es importante resaltar que esto ha sucedido al inicio del proceso de inclusión de las tecnologías de la información y las comunicaciones en los procesos administrativos de las organizaciones.

Administración Del Riesgo Operativo

Es importante que las organizaciones establezcan un proceso de administración del riesgo operacional que le permita controlar los efectos del riesgo mediante la implementación de mecanismos como instalación de controles y cuantificación de los riesgos posibles, como lo menciona el estándar internacional COBIT (Objetivos de Control de Tecnologías de la Información). La administración del riesgo establece que se debe identificar el riesgo, cuantificarlo y gestionarlo como puntos básicos para la adecuada mitigación del impacto del riesgo especialmente operativo, a continuación se establecen algunos aspectos importantes en cada uno de estos puntos:

Identificación Del Riesgo Operativo

Una adecuada identificación del riesgo operativo incluye los siguientes pasos:

- Identificación de cada uno de los procesos en la organización (Un proceso se entiende como aquel que comprende una secuencia de tareas repetitivas o recurrentes en las cuales puede presentarse riesgo operativo)
- Detalle de las actividades específicas que se desarrollan en cada uno de los procesos identificados
- Identificar los riesgos operativos que se pueden presentar en cada etapa.
- Identificar los controles que existen o deben existir para reducir o eliminar los riesgos operativos detectados.

Gestión Del Riesgo Operativo

La administración del riesgo concebida en el estándar COBIT menciona que la planeación y organización de las tecnologías de la información deben evaluar y administrar el riesgo enfocándose en la elaboración de un marco de trabajo de administración de riesgos el cual está integrado en los marcos gerenciales de riesgo operacional, evaluación de riesgos, mitigación del riesgo y comunicación de riesgos residuales.

De igual forma, en el contexto de entregar y dar soporte a las tecnologías de la información, el COBIT propone los siguientes objetivos de control en relación al control del riesgo operativo:

OBJETIVO DE CONTROL	CONSISTE EN:
Administrar los servicios de terceros	Este proceso se logra por medio de una clara definición de roles, responsabilidades y expectativas en los acuerdos con los terceros, así como con la revisión y monitoreo de la efectividad y cumplimiento de dichos acuerdos. Una efectiva administración de los servicios de terceros minimiza los riesgos del negocio asociados con proveedores que no se desempeñan de forma adecuada.
Administrar el desempeño y la capacidad	Este proceso incluye el pronóstico de las necesidades futuras, basadas en los requerimientos de carga de trabajo, almacenamiento y contingencias. Este proceso brinda la seguridad de que los recursos de información que soportan los requerimientos del negocio están disponibles de manera continua.
Garantizar la continuidad del servicio	La necesidad de brindar continuidad en los servicios de TI requiere desarrollar, mantener y probar planes de continuidad de TI, almacenar respaldos fuera de las instalaciones y entrenar de forma periódica sobre los planes de continuidad. Un proceso efectivo de continuidad de servicios, minimiza la probabilidad y el impacto de interrupciones mayores en los servicios de TI, sobre funciones y procesos claves del negocio.
Garantizar la seguridad de los sistemas	Este proceso incluye el establecimiento y mantenimiento de roles y responsabilidades de seguridad, políticas, estándares y procedimientos de TI. La administración de la seguridad también incluye realizar monitoreos de seguridad y pruebas periódicas así como realizar acciones correctivas sobre las debilidades o incidentes de seguridad identificados. Una efectiva administración de la seguridad protege todos los activos de TI para minimizar el impacto en el negocio causado por vulnerabilidades o incidentes de seguridad.
Educar y entrenar a los usuarios	Un programa efectivo de entrenamiento incrementa el uso efectivo de la tecnología al disminuir los errores, incrementando la productividad y el cumplimiento de los controles clave tales como las medidas de seguridad de los usuarios.

Cuantificación Del Riesgo Operativo

Según las recomendaciones suministradas por el COBIT, se debe identificar y asignar costos de tecnologías de la información, es decir, el registro completo y preciso de los costos de TI, un sistema equitativo para asignación acordado con los usuarios de negocio, y un sistema para reportar oportunamente el uso de TI y los costos asignados. Las organizaciones requieren cuantificar el riesgo operativo que puede llegar a ocurrir por motivos de la operatividad de los sistemas de información, para lo cual se debe seguir un proceso que implica: la medición cuantitativa y su aproximación de cuantificación.

Medición Cuantitativa del Riesgo Operativo: Para lograr acercarse a la probabilidad de medir el riesgo operativo es necesario modelar el grado de severidad de la pérdida esperada, asumiendo que los factores de riesgo son estables. De Lara (2003) indica que en el estudio del riesgo de mercado (Se entiende por riesgo de mercado la pérdida que puede presentar un portafolio, un activo o un título en particular, originada por cambios y/o movimientos adversos en los factores de riesgo que afectan su precio o valor final; lo cual puede significar una disminución del patrimonio que puede afectar la viabilidad financiera de la Firma y la percepción que tiene el mercado sobre su estabilidad), es posible determinar algunos factores de riesgo operativo los cuales deben ser entendidos en términos de su histograma de frecuencias y por tanto de su distribución de probabilidad, el analista de riesgos debe inferir cual es la curva de distribución de probabilidad más adecuada, al respecto existen dos tipos de distribución de probabilidad a utilizar:

- Distribuciones empíricas: Utilizan la distribución de frecuencias con base en datos históricos reales.
- Distribuciones paramétricas: Utilizan una distribución de probabilidad ya establecida, tales como la distribución exponencial, de Poisson, Beta, binomial o de Weibull, las cuales contienen fuertes supuestos matemáticos en el comportamiento de los factores de riesgo. Estas distribuciones deben ser consideradas si los datos se aproximan a alguna de ellas, y sobre todo, la experiencia debe sugerir la aplicación de alguna en particular, de acuerdo con el problema específico de que se trate.

Aproximación a la Cuantificación del Riesgo Operativo: Como se puede notar el uso de herramientas estadísticas es indispensable al momento de cuantificar el impacto y severidad del riesgo operativo presente en cada uno de los factores antes descritos al interior de una organización, a manera de ejemplo, considere la situación en una entidad financiera donde se desea establecer la relación existente entre las fallas en el sistema (caída) y los errores serios ocurridos en las transacciones realizadas, con el fin de determinar si estos últimos son ocasionados cuando el sistema se ha caído. Los datos recolectados sobre tales eventos en un periodo de tiempo determinado se han clasificado así:

Mes	Falla del Sistema	Error Serio en transacción	Mes	Falla del Sistema	Error Serio en transacción
31/01/2005	No	No	31/07/2007	Si	No
28/02/2005	No	Si	31/08/2007	No	No
31/03/2005	No	No	30/09/2007	Si	Si
30/04/2005	No	Si	31/10/2007	No	Si
31/05/2005	No	Si	30/11/2007	Si	No
30/06/2005	Si	No	31/12/2007	No	No
31/07/2005	No	No	31/01/2008	No	Si
31/08/2005	No	Si	29/02/2008	Si	Si
30/09/2005	Si	No	31/03/2008	Si	No
31/10/2005	No	Si	30/04/2008	Si	Si
30/11/2005	Si	Si	31/05/2008	No	No
31/12/2005	Si	No	30/06/2008	Si	No
31/01/2006	Si	Si	31/07/2008	No	No
28/02/2006	No	No	31/08/2008	Si	Si
31/03/2006	No	Si	30/09/2008	Si	No
30/04/2006	No	No	31/10/2008	Si	Si
31/05/2006	No	No	30/11/2008	Si	No
30/06/2006	No	Si	31/12/2008	Si	No
31/07/2006	Si	No	31/01/2009	Si	Si
31/08/2006	Si	Si	28/02/2009	Si	No
30/09/2006	No	Si	31/03/2009	No	No
31/10/2006	Si	Si	30/04/2009	No	Si
30/11/2006	Si	No	31/05/2009	No	Si
31/12/2006	No	Si	30/06/2009	Si	Si
31/01/2007	Si	Si	31/07/2009	No	Si
28/02/2007	Si	Si	31/08/2009	Si	Si
31/03/2007	No	No	30/09/2009	No	No
30/04/2007	Si	Si	31/10/2009	Si	No
31/05/2007	Si	Si	30/11/2009	No	Si
30/06/2007	No	Si	31/12/2009	No	No

Como se observa en primera instancia no puede determinarse la correlación o no entre los dos eventos, esto es, no se puede decir si la ocurrencia de un evento origina la aparición del otro, lo cierto es que ambos son fuentes de riesgo operativo y conocer la incidencia conjunta ayudaría a determinar el impacto que tienen sobre el desempeño de la organización y el efecto en términos financieros sobre los resultados de la misma. El tratamiento aquí exige entonces la utilización de técnicas probabilísticas, que determinen lo anteriormente expuesto, a partir de la información anterior puede asignarse el número 1 al caso en que se presente fallo en el sistema, error en la transacción, lo que significa la ocurrencia de ambos al mismo tiempo, y asignar el numero cero cuando no se presentan fallos. La tabla reclasificada seria:

Mes	Ambos Fallos	Falla del Sistema	Error Serio en transacción
31/01/2005	0	0	0
28/02/2005	0	0	1
31/03/2005	0	0	0
30/04/2005	0	0	1
31/05/2005	0	0	1
30/06/2005	0	1	0
31/07/2005	0	0	0
31/08/2005	0	0	1
30/09/2005	0	1	0
31/10/2005	0	0	1
30/11/2005	1	1	1
31/12/2005	0	1	0
31/01/2006	1	1	1
28/02/2006	0	0	0
31/03/2006	0	0	1
30/04/2006	0	0	0
31/05/2006	0	0	0
30/06/2006	0	0	1
31/07/2006	0	1	0
31/08/2006	1	1	1
30/09/2006	0	0	1
31/10/2006	1	1	1
30/11/2006	0	1	0
31/12/2006	0	0	1
31/01/2007	1	1	1
28/02/2007	1	1	1
31/03/2007	0	0	0
30/04/2007	1	1	1
31/05/2007	1	1	1
30/06/2007	0	0	1

Mes	Ambos Fallos	Falla del Sistema	Error Serio en transacción
31/07/2007	0	1	0
31/08/2007	0	0	0
30/09/2007	1	1	1
31/10/2007	0	0	1
30/11/2007	0	1	0
31/12/2007	0	0	0
31/01/2008	0	0	1
29/02/2008	1	1	1
31/03/2008	0	1	0
30/04/2008	1	1	1
31/05/2008	0	0	0
30/06/2008	0	1	0
31/07/2008	0	0	0
31/08/2008	1	1	1
30/09/2008	0	1	0
31/10/2008	1	1	1
30/11/2008	0	1	0
31/12/2008	0	1	0
31/01/2009	1	1	1
28/02/2009	0	1	0
31/03/2009	0	0	0
30/04/2009	0	0	1
31/05/2009	0	0	1
30/06/2009	1	1	1
31/07/2009	0	0	1
31/08/2009	1	1	1
30/09/2009	0	0	0
31/10/2009	0	1	0
30/11/2009	0	0	1
31/12/2009	0	0	0

Con la información así analizada puede obtenerse entonces la probabilidad de cada evento y la probabilidad conjunta así:

- Probabilidad de error serio en transacción = $32/60 = 0,53$
- Probabilidad de falla del sistema = $30/60 = 0,50$
- Probabilidad de falla del sistema y de error serio en transacción = $16/60 = 0,27$

Con la información anterior podríamos obtener igualmente que

- Probabilidad de error serio en transacción dada una falla del sistema = $0,27 / 0,50 = 0,54$.

Dado que esta última es aproximadamente igual a la probabilidad de que se presente error serio en transacción (0.53), por las propiedades de la probabilidad condicional se llega a la conclusión de que la falla del sistema y el error serio en transacción son eventos independientes. Por otra parte, es importante mencionar que existen mecanismos como el estándar COBIT que facilita la mitigación de los riesgos operativos que afectan la correcta operatividad de los sistemas de

información en las organizaciones. El estándar COBIT proporciona controles que se deben instalar en los procesos administrativos de tal manera que el riesgo operativo se minimice en lo posible.

CONCLUSIONES

El interés de las organizaciones por incursionar en el ámbito de las tecnologías de la información y las comunicaciones a través de la inclusión de los sistemas de información a sus procesos administrativos ha implicado en algunos casos dificultades de índole operativo, propiciando experiencias desagradables para las empresas. El riesgo operativo es una de las dificultades que deben considerar las empresas del siglo XXI y establecer un plan de control que les permita mitigar el impacto que este tipo de riesgo puede llegar a afectar al contexto financiero de la organización.

En el proceso de identificación y cuantificación del riesgo operativo es necesario tener un adecuado conocimiento de los procesos que realiza la organización y emplear mecanismos de seguimiento de fallas originados en los mismos, con el fin de obtener estadísticas de ocurrencia y focalización.

Las herramientas probabilísticas en su variada gama son mecanismos útiles al momento de cuantificar el efecto del riesgo asociado al desempeño organizacional, la probabilidad condicional y las redes bayesianas son un claro ejemplo de ello.

IMPORTANCIA DE UN PLAN DE CAPACITACIÓN EN LA EMPRESA

Raúl González Núñez, Universidad Autónoma de Baja California, México.

Manuel Alejandro Ibarra Cisneros, Universidad Autónoma de Baja California, México.

Cynthia Danitza Paredes Picos, Universidad Autónoma de Baja California, México.

INTRODUCCION

El motivo de impartir capacitación es el mejorar ciertas áreas de necesidad con las que cuente un departamento o área de trabajo. Toda capacitación parte de una necesidad, por lo cual se tiene que estudiar para así poder detectar la necesidad a cubrir. Es obligación de la empresa (patrón) proporcionar capacitación a sus empleados, tal como está estipulado en Ley Federal del Trabajo, en su artículo 153. Cada empresa es diferente y por lo tanto tiene diferentes necesidades, las cuales se les debe de dar la importancia que merece. En la actualidad muchas empresas consideran un gasto el impartir capacitación, sin conocer los grandes beneficios que ésta obtendrá al impartir un curso. Muchas veces el desconocer toda la gama de beneficios y áreas de oportunidad que un curso de capacitación trae consigo lleva a las empresas a creer que no es necesario brindar capacitación a sus empleados. En esta investigación, nuestro interés de probarle a la empresa Pilkington de México, específicamente a su área de ventas llamada: LOF de México, es que al impartir un plan de capacitación ésta verá reflejados los beneficios del curso ya que se verá impactada por el desempeño de sus colaboradores, con el fin de buscar y motivar al alcance de los objetivos organizacionales como personales, no podemos dejar pasar la estabilidad y desarrollo de los empleados, ya que sin ellos, la empresa no funcionaría en su totalidad.

Explicare en el desarrollo de esta investigación que es la capacitación, que es un plan, como realizar la detección de necesidades de capacitación, cuales son los beneficios para la empresa como para el trabajador, el fundamento legal, así como el procedimiento para la elaboración de un plan de capacitación, entre otros. También presentaré mi propuesta sobre el Plan de Capacitación elaborado después de la detección de necesidades que se realizó en el departamento de ventas de la empresa. Esto, con el fin de proporcionar a la empresa una alternativa para mejorar el departamento en esas áreas con debilidad, las cuales tienen solución solo que la empresa y los colaboradores estén dispuestos a crecer por la organización y personalmente.

JUSTIFICACIÓN

Esta investigación realizada sobre el Plan de Capacitación en la empresa Pilkington de México, es muy importante ya que se darán a conocer los beneficios que se tiene al llevar a cabo al plan, el cual muchas veces las empresas desconocen los beneficios de éste, olvidando que es de gran utilidad para la misma organización el dar la debida importancia a las necesidades con las que cuenta actualmente sus empleados. Es importante cuidar el desarrollo y la estabilidad de los mismos colaboradores de la empresa ya que gracias a ellos la empresa funciona tal cual, y llevando a cabo este plan de capacitación, podremos obtener un gran impacto en el desempeño del personal, trayendo grandes beneficios a la organización tanto en el ámbito de calidad, productividad como en el personal. Por ello, es que esta investigación se realiza, con el fin de que la empresa conozca los grandes beneficios que arroja el llevar a cabo un plan de capacitación, teniendo como objetivo el desarrollo óptimo de la misma empresa y el cumplimiento de los objetivos organizacionales, así como el bienestar de los colaboradores de la empresa. Reconocer la importancia del elemento humano dentro de la organización y crear el sentido de pertenencia para así lograr un impacto considerable en el desempeño del personal. Teniendo como consecuencia resultados favorables para la organización.

Capacitación se refiere a la acción destinada a incrementar las aptitudes y los conocimientos del trabajador con el propósito de prepararlo para desempeñar eficientemente una unidad de trabajo específico e impersonal. En términos generales se entiende que es aquella enseñanza intencional que se imparte fuera del sistema formal de educación. Otro concepto de capacitación es el citado por el autor *Idalberto Chiavenato*, el cual dice: “Es un proceso educativo a corto plazo, aplicado de manera sistemática y organizada, mediante el cual las personas aprenden conocimientos, actitudes y habilidades, en función de objetivos definidos. El entrenamiento implica la transmisión de conocimientos específicos relativos al trabajo, actitudes frente a aspectos de la organización, de la tarea y del ambiente, y desarrollo de habilidades. Cualquier tarea, ya sea compleja o sencilla, implica necesariamente estos tres aspectos.” 2

OBJETIVOS

Dentro del proceso de la elaboración de un plan de capacitación es imprescindible el análisis de estas necesidades. El objetivo de este diagnóstico de necesidades de capacitación (DNC) es el recoger y evaluar información para encontrar lo que se está haciendo ahora y lo que debe hacerse ahora (o en el futuro).

El Diagnostico de Necesidades de Capacitación (DNC), pretende alcanzar los objetivos específicos siguientes:

- Determinar las situaciones problemáticas de una empresa, clasificar los síntomas que se presentan e investigar las causas que los originaron.
- Reunir la información necesaria para precisar la situación idónea en que la institución debe funcionar (determinar lo que debería hacerse en la empresa).
- Determinar el potencial de Recursos Humanos.
- Determinar la situación en la que la empresa y sus colaboradores realmente cumplen sus funciones (determinar lo que en realidad se hace).
- Realizar un análisis comparativo entre lo que debería hacerse o suceder y lo que en realidad se hace o sucede, precisando las diferencias.
- Clasificar las necesidades detectadas en: financieras, materiales, tecnológicas y de los recursos humanos.
- Determinar si las necesidades de los recursos humanos pueden satisfacerse con cursos de capacitación.
- Definir y describir quienes necesitan capacitación, en que áreas y cuando.
- Determinar el número de participantes para cada proyecto, curso o programa.
- Describir detalladamente las actividades de capacitación que se van a realizar.

Beneficios para la organización

Al llevar a cabo el plan de capacitación, se obtienen beneficios para la organización, los cuales se mencionan a continuación:

- Conduce a una mayor rentabilidad y actitudes más positivas
- Mejora el conocimiento del puesto a todos los niveles
- Conlleva a maximizar los resultados
- Ayuda al personal a identificarse con los objetivos de la organización
- Crea mejor imagen
- Incrementa la productividad y calidad en el trabajo

Realmente son beneficios muy importantes que a todas las organizaciones les interesa obtener, ya que al igual que los anteriores, también el plan de capacitación contribuye en gran manera a la formación de líderes dentro de la organización, e incrementa la productividad y la calidad del trabajo.

CONCLUSIONES

En esta investigación realizada sobre el Plan de Capacitación en la empresa Pilkington de México, el objetivo general es el demostrar, la importancia que tiene el aplicar un programa de capacitación, y el conocer los beneficios que éste trae consigo, tanto para la empresa como para el colaborador. Al igual que el conocer el impacto en el desempeño del personal al ser capacitado.

Para realizar esta investigación se planteó la siguiente hipótesis:

“A mejor capacitación, mejor será el desempeño de los empleados” del área de ventas de la empresa Pilkington de México. Profesores de Negocios y Administración de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California, México.

HACIA LA RESPONSABILIDAD GLOBAL A TRAVÉS DEL CONOCIMIENTO APLICADO E INTERDISCIPLINAR

Geyson Jahir Roncancio Marín, Universidad Nacional de Colombia sede Manizales

Eduardo Gómez Restrepo, Corporación PINE

Andrés Felipe Alejandro, Corporación PINE

Edna Lorena Gomez Osorio, Universidad Nacional de Colombia sede Manizales

RESUMEN

En el “Congreso Latinoamericano De Estudiantes De Ingeniería Química” que se llevó a cabo en la Ciudad de San Salvador, El Salvador (2009) se presentó el curso taller “Formulación de proyectos sostenibles de ingeniería socialmente responsable, de la idea a la empresa- del laboratorio a la industria” con una duración de 9 horas con el cual se capacitó a sus asistentes y como resultados se obtuvo un total de 25 proyectos de ingeniería con alto impacto sobre la sociedad y sobre la economía a nivel latinoamericano. Se pudo identificar, la necesidad de un enfoque claro de los grupos de investigación en la solución de problemas reales sociales a través de las ciencias ingenieriles y la necesidad que hay en las carreras técnicas de ser educados en materia de emprendimiento con base tecnológico y de responsabilidad social empresarial e industrial. A raíz de esta problemática, se realizó una revisión bibliográfica en Colombia y en Iberoamérica con el fin de identificar una de las ramas de las ciencias que más aportan bienestar, sostenibilidad, tecnología, desarrollo económico y social a la humanidad; se encontró que es la biotecnología. Posteriormente se planteó como un proyecto el Congreso Iberoamericano De Biotecnología 2010 en el marco del año internacional de la biodiversidad 2010 y del bicentenario de la independencia en Iberoamérica, con un objetivo principal, el uso sostenible de la biodiversidad y el papel de la ciencia a través del conocimiento aplicado en el desarrollo social, así como la creación de un escenario ideal para los emprendedores, para el fortalecimiento de la relación Universidad-Industria y para la Transferencia de conocimiento.

REDUCCIÓN DE COSTOS EN LOS CENTRO DE DISTRIBUCION DE LA EMPRESA MABE, A TRAVÉS DE LA PLANEACIÓN AGREGADA

Emma Vanessa Casas Medina, Centro de Estudios Superiores del Estado de Sonora

Marco López Sánchez, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

Ante la premisa de mejora continua y reducciones de costos la empresas han decidido implementar metodologías que le permitan estar posicionadas en el mercado, una de ellas es la empresa MABE, ubicada en la Cd. de Guadalajara, Jal. Ha decidido aplicar en el área de distribución, sección de montacarga, la planeación agregada con sus variables para la contratación o despido de personal y eficientar sus recursos.

INTRODUCCION

El presenta trabajo se realizó en la empresa MABE, con ubicación de su Centro de Distribución en la Cd. de Guadalajara, Jalisco, cuyo principal giro es la fabricación de muebles de cocina siendo la empresa líder en el mercado mexicano, a su vez ha adoptado una “*visión continental*”, la cual consiste en expandir sus fronteras a lo largo y ancho del continente americano.

Actualmente, cuenta con plantas y oficinas de operaciones comerciales en Canadá, Venezuela, Colombia, Ecuador, Argentina y Brasil. Pero además, como producto de una sólida alianza firmada en 1987 con GE, Mabe exporta sus productos a Estados Unidos y logra tener presencia en muchos otros mercados del mundo. Entre las principales marcas que se manejan son: mabe, Iomabe, GE, Easy y IEM.

Para la cumplir con sus compromisos adquiridos, responder a la confianza de los clientes, se analiza la reducción de costos en los centros de distribución, en este caso con la metodología de la Planeación Agregada en su área de montacarga.

Marco Teórico

La palabra agregada significa que la planeación se lleva a cabo *grosso modo* para satisfacer la demanda total de los productos que comparten los mismos recursos de una instalación (una maquina, operador, etc.), o pudiera simplemente requerir varias toneladas de varillas, sin detallar la demanda en los diferentes productos dentro de la línea de varilla (varias medida). Adicionalmente, el plan pudiera requerir de ciertos números de empleados, ignorando las diferencias en habilidades (operadores, técnicos, etc.) (CHASE, JACOBS, AQUILANO, 2009).

Para usar la planeación agregada es necesario:

Agrupar a los productos en familias y encontrarlas en productos representativos para todos los productos de la familia y definir el número de empleos necesarios para producir una unidad de este producto agregado. En esencia, se desea un plan que satisfaga la demanda para la línea de producto agregado, generalmente estos planes son elaborados por los gerentes de operaciones divisionales con variables de empleo –despido, contrataciones, vacaciones, tiempos extras, inventarios servicios generales modificaciones de instalaciones y contrato de suministro de materiales

Estrategias de planeación agregada: (CHASE, JACOBS, AQUILANO, 2009)

1. Estrategias puras. Variaciones los niveles de fuerza de trabajo. Variación en los niveles de inventarios, subcontratación o tiempo extra.⁹
2. Estrategias mixtas o combinadas. Combinación de las estrategias puras.

Utilizando estrategias puras se puede realizar varios planes:

Plan 1 Variación del tamaño de la fuerza de trabajo. La demanda se puede cubrir con exactitud si se varía el tamaño de la fuerza de trabajo. El plan consiste en la contratación, según sea necesario. La tasa de producción será igual a la demanda.

Plan 2. Cambio de los niveles de inventario. Esto se utiliza cuando se desea evitar las contrataciones y despido, lo más común es que se elija un nivel de producción igual a su demanda promedio y cubra las variaciones de la demanda mediante un inventario.

Plan 3. Subcontratación. Es probable que la empresa prefiera producir una cantidad e igual a sus capacidades actuales y cubrir el resto de la demanda por medio de la subcontratación.

Modelación de planeación agregada.

Se ha desarrollado esfuerzos por formular el problema de planeación agregada como un modelo de programación lineal:

Suposiciones fundamentales en estos modelos: son los costos lineales, variables reales (Las variables pueden ser enteras, no lineales, etc., por lo cual el problema solo se ajusta a un modelo de programación lineal).

Función del objetivo del modelo: (CHASE, JACOBS, AQUILANO, 2009)

Naturalmente, el propósito del modelo es encontrar una solución que haga que los costos totales sean mínimos, así que la función objetivo tendría la siguiente forma:

$$\text{Min } \sum_{t=1}^T (C_c \cdot H_t + C_D \cdot Q_t + C_I \cdot I_t + C_F \cdot F_t + C_p \cdot k \cdot W_t + C_x \cdot X_t + C_N \cdot N_t + C_s \cdot S_t) \quad (1)$$

Restricciones mínimas:

- Inventario:

$$I_t - F_t = (I_{t-1} - F_{t-1}) + P_t + S_t - D_t \quad (2)$$

- Fuerza de trabajo

$$W_t = W_{t-1} + H_t - Q_t \quad (3)$$

- Niveles de producción.

$$P_t = k \cdot W_t + X_t - N_t \quad (4)$$

Donde los Parámetros de Modelo son los siguientes:

C_c : Costo unitario de contratación.

C_p : Costo unitario de despido.

- C_i : Costo unitario de inventario por periodo.
 C_f : Costo unitario de faltante por periodo.
 C_p : Costo unitario de producción en tiempo normal.

 C_x : Costo adicional de producción en tiempo extra.
 C_n : Costo unitario de producción inactiva.
 C_s : Costo unitario de producción por subcontratación.

 k : Número de unidades producidas por unidad de fuerza de trabajo por periodo normal.

 D_t : Demanda pronosticada en el tiempo t .

Donde las Variables de Decisión son las siguientes:

- W_t : Nivel de fuerza de trabajo en el periodo t .
 P_t : Nivel de producción interno en el periodo t .
 I_t : Nivel de inventario positivo en el periodo t .
 F_t : Nivel e inventario negativo (faltante) en el periodo t .
 H_t : Cantidad de fuerza de trabajo contratada en el periodo t .
 Q_t : Cantidad de fuerza de trabajo despedida en el periodo t .
 X_t : Nivel de producción de tiempo extra en el periodo t .
 N_t : Inactividad, en unidades de producción en el periodo t .
 S_t : Nivel de producción vía subcontratación en el periodo t .

Caso De Aplicación

Cada año en los Centros de Distribución de la compañía, se estima la plantilla de montacarguista requerida para la correcta operación de sus operaciones, para tal efecto se revisan los pronósticos de ventas del año siguiente y se determina la cantidad de personal por mes que se tendrán que contratar y despedir de forma fija y variable para cumplir con la demanda.

La fuerza matriz de un Centro de Distribución es el operador de montacargas con el que se moverán los diferentes productos a los andenes de carga y descarga que el centro de distribución de Guadalajara operará para el 2010, de acuerdo a su zonas e influencia en la venta de la compañía; por tal motivo este ejercicio se enfocará a calcular esta plantilla de manera que no tenga impactos económicos altos y se pueda tener cubierto el proceso en todo momento.

OCTUBRE	30	41754	4	55080	-0.97	0	4	55080	41754	728	21832	0	0	21,832
NOVIEMBRE	23	48306	4	42228	0.58	1	5	52785	48306	842	25258	800	0	26,058
DICIEMBRE	23	50482	5	52785	-0.22	0	5	52785	50482	880	26396	0	0	26,396

Producción promedio:

35935

Costo Total 239,516.20

CONCLUSION

Al aplicar esta metodología de la planeación agregada con su variables mixtas, en la referencia a los costos marca que la mejor opción para la operación del CDR Guadalajara de MABE, en su plantilla de montacarguistas es *manejar la variación de fuerza de trabajo y contratar y despedir según sea la demanda pronosticada de mes, con un costo de \$239,516 pesos anuales*. Por lo tanto se estima ahorra un 24% del presupuesto anual para este concepto, representando un gran ahorro a la empresa

COMPETITIVIDAD DEL SECTOR DEL MUEBLE Y LA MADERA: EL CASO DE TIJUANA- ROSARITO, B. C., MÉXICO

Alfonso Vega López, Universidad Autónoma de Baja California, México
María Virginia Flores Ortiz, Universidad Autónoma de Baja California, México
Blanca Rosa Rivera García, Universidad Autónoma de Baja California, México
Eduardo Ahumada Tello, Universidad Autónoma de Baja California, México

RESUMEN

El objetivo de la investigación fue el determinar las causas que han provocado la pérdida de competitividad del sector del Mueble y la Madera de la región de Tijuana-Rosarito, B.C. y a partir de ellas proponer estrategias que les permita recuperarla. La importancia de la investigación está basada en los valores técnicos, económicos y sociales, desde el punto de vista técnico se propone estrategias para la gestión integrada del sector. El valor económico se expresa por la disminución de los costos debido al reordenamiento del sistema de empresas de la industria de la región. El valor social se destaca por los beneficios a la comunidad y permite la generación de conocimientos y habilidades de nuevas prácticas empresariales validas para el contexto de México y en particular de Baja California. Con un total de 20 empresas encuestadas a las cuales se les aplicó un cuestionario para determinar el nivel micro, meso, meta y macro para identificar la competitividad sistémica y proponer estrategias de competitividad del sector. Al momento de procesar y analizarse la información se utilizó el programa estadístico SPSS 15.0 for Windows Evaluation Version.

Palabras claves: competitividad sistémica, estrategias de competitividad, sector del mueble

INTRODUCCIÓN

El presente trabajo es el resultado de un proyecto de investigación aplicado a veinte empresas del sector del Mueble y la Madera, de la región de Tijuana – Rosarito, B.C. El concepto de "competitividad sistémica" constituye un marco de referencia para los países tanto industrializados como en desarrollo. (Meyer, 1994).

Las empresas industriales de los países desarrollados y de los países en vías de desarrollo se ven hoy ante la necesidad imperiosa de incrementar su competitividad. Semejante desafío proviene de una competencia cada vez más dura, una "carrera" por adoptar y adaptar modelos de producción "japoneses" y un cambio tecnológico acelerado.

Y en esa carrera están enfrascadas todas las empresas, ya que hasta las posiciones hegemónicas se tornan cada vez más vulnerables. Los esfuerzos más importantes para elevar la competitividad deben efectuarse a nivel de empresa. Las empresas se hacen competitivas al cumplirse dos requisitos fundamentales: primero, estar sometidas a una presión de competencia que las obligue a desplegar esfuerzos sostenidos por mejorar sus productos y su eficiencia productiva; segundo, estar insertas en redes articuladas dentro de las cuales los esfuerzos de cada empresa se vean apoyados por toda una serie de servicios e instituciones. Ambos requisitos están condicionados a su vez por factores situados en el nivel macro (contexto macroeconómico y político-administrativo) y en el nivel meso.

Los países fuertes en materia de innovación y competitividad van desarrollando grupos regionales de comercio e integración cuyo resultado es la formación de sistemas interconectados en que las industrias colaboran de un modo intensivo sobre la base de la división del trabajo. El regionalismo abierto permite

ensayar el uso de nuevas tecnologías en un extenso mercado doméstico antes de lanzarse a la conquista de segmentos de mercado mundial. El regionalismo puede conducir a la formación de bloques regionales o de agrupamientos.

REVISIÓN LITERARIA

Competitividad

Es un hecho inevitable que en esta época que casi en cualquier parte del mundo y en México, la clave del éxito reside en ser competitivos, entendiendo por éxito que la sociedad pueda obtener los satisfactores materiales y los emocionales que permitan vivir con calidad. Los satisfactores pueden ser muchos y muy variados, así como las expectativas de cada individuo con respecto al nivel de éstos, sin embargo en todos los casos se requiere que las organizaciones dedicadas a generar dichos satisfactores sean competitivas. Ser competitivos significa poder operar con ventajas respecto a otras organizaciones que buscan los mismos recursos y mercados en donde los consumidores demandan cada vez más calidad, precio, tiempo de respuesta y respeto a la ecología.

Las organizaciones competitivas serán la base para que la economía de un país sea fuerte y sólida. Todo se puede lograr si un país cuenta con población competente, lo cual significa gente capaz de crear e innovar, que cuente con las facultades necesarias para desarrollar y operar sistemas tanto tecnológicos como organizacionales que generen satisfactores de óptima calidad.” (Cantu, 2001).

Entendemos por competitividad a la capacidad de una organización pública o privada, lucrativa o no, de mantener sistemáticamente ventajas que le permitan alcanzar, sostener y mejorar una determinada posición en el entorno socioeconómico.” La ventaja de una organización estaría en su habilidad, recursos, conocimientos y atributos de los que dispone dicha organización, los mismos de los que carecen sus competidores o que estos tienen en menor medida que hace posible la obtención de los rendimientos superiores a los de aquellos.

Competitividad es un término que se utiliza con frecuencia pero que rara vez se define. En realidad no hay consenso sobre el concepto de competitividad. Competitividad es una traducción libre de lo que en inglés es “*Competitiveness*”, que quiere decir: “justa, rivalidad”, y que deriva de la competencia. Económicamente, es la creación y mantenimiento de un mercado en el que participan numerosas empresas y donde se determina el precio conforme a la ley de la oferta y la demanda”. (Chauca, 2000)

La competitividad, como disciplina de estudio y análisis heurístico, es un concepto desarrollado recientemente aunque su aplicación práctica es antigua y universal. Existen diversos enfoques de análisis (sistémico basados en el mercado, basados en la tecnología y en la innovación, entre otros) y diversos marcos de aplicación (nacional, regional, sectorial, empresarial e individual).

Asimismo la competitividad aparece como una mezcla de: a) Una visión del mundo contemporáneo, sumergido en valores sociales, que acepta diversas combinaciones de organización y mercado. b) Conceptos de distintas vertientes teóricas que, al reunirse, sobrepasan el alcance de otros conceptos utilizados en teorías como la del comercio internacional. c) Vida práctica, donde se lucha ferozmente por mercados y donde no hay regulaciones internacionales tan civilizadas que permitan a los agentes experimentar los valores sociales propuestos por el modelo. (Chauca, 2000)

La actitud para competir debe de llevar implícito querer competir y tener la capacidad para hacerlo. Esta capacidad requiere de una preparación para hacer frente a la competencia y a las acciones que realizan las demás empresas que intervienen en la lucha por conseguir o reafirmar posiciones en los diferentes mercados. Las características de las empresas competitividad empresas que triunfan ya que han sabido

adaptarse, transformarse rápidamente bajo el rigor de los tiempos, que han sabido encontrar en las soluciones posibles, el hilo de la supervivencia, es decir de la vida. (Fauvet, 1985). El principal problema, en la actualidad, de las empresas, es que subestiman generalmente la información y el conocimiento, sin pensar que son recursos estratégicos y esenciales para la adaptación de los negocios en un entorno competitivo.

Cuando se hace referencia al concepto de competitividad, se refieren de una manera global y duradera de la empresa y no sólo la competitividad de uno de sus productos o servicios en particular, ya que una empresa puede tener un producto muy competitivo y ser globalmente ineficiente. Al referir una competitividad duradera se hace con la mira hacia el futuro, es decir basándose en el hecho de que si quieres ser competitivo se tiene que ir a la vanguardia en todos sentidos, y al decir en todos los sentidos también incluye el plano ético y moral.

Construcción de Competitividad Sistémica.

El concepto de competitividad sistémica busca capturar ambas partes que determinan el éxito del desarrollo industrial, la parte política y la parte económica. El significado de competitividad sistémica es un patrón en el que el estado y los actores sociales crean las condiciones necesarias para desarrollar competitividad sistémica. El concepto distingue cuatro niveles: Los ingredientes claves para el éxito del desarrollo industrial son:

En el *Nivel Meta*: Primero, Desarrollar- Orientar a los valores culturales compartidos en una larga parte de la sociedad. Segundo, Hacer un consenso de la necesidad del desarrollo industrial y de la integración competitiva hacia el mercado global. Tercero, La habilidad de los actores sociales para que conjuntamente formulen visiones, estrategias e implementen políticas.

En el *Nivel Macro*: Un predecible y estable marco macroeconómico, que incluya una realista política de tasa de intercambio y una política general de comercio al extranjero que estimule a la industria local.

En el *Nivel Meso*: Generar políticas específicas y tener instituciones que permitan a las industrias alcanzar sus objetivos y a su medio ambiente que creen ventajas competitivas. (Institutos tecnológicos, centros de entrenamiento, finanzas para la exportación, etc.). Por otra parte, es el mundo local y regional de las industrias lo que permite incentivar la competitividad, para fortalecer el medio ambiente de los negocios.

En el *Nivel Micro*: Incremento de las capacidades y fortalezas que logren las empresas, ya no es suficiente incrementar su eficiencia a través de la automatización, ni crear redes informáticas, ahora es necesario realizar profundas transformaciones en la producción, comercialización y proveeduría.

METODOLOGÍA

La metodología aplicada para llevar a cabo el proyecto de investigación, consistió en la aplicación aleatoria de un cuestionario a una muestra de 30 empresas, 21 de Tijuana pertenecientes al cluster del mueble de Canacintra, Delegación Tijuana, B.C; y 9 de Rosarito afiliadas a la Asociación de Fabricantes de Muebles y Accesorios de Rosarito, A.C. (AFAMARO,A.C.), de las cuales 15 se dedican a la fabricación de muebles, 8 a la fabricación de productos de madera, 4 empresas a ambas actividades y 3 empresas con otros giros que se encuentran en el cluster pero que por su actividad relacionada a la industria del mueble y la madera.

Cabe mencionar que el cuestionario que se aplicó se fue elaborado conforme a la teoría de la construcción de competitividad sistémica. El cuestionario consta de 95 preguntas, el rubro de datos generales contiene 8 preguntas; los reactivos del 9 al 12 se refieren al nivel meta, del 13 al 17 al nivel

macro, del 18 al 26 al nivel meso, (miden las ventajas comparativas) y del 27 al 95 al nivel micro (miden ventajas competitivas). Para la identificación de las estrategias se realizó un análisis FODA que es la sigla (Fortaleza, Oportunidades, Debilidades y Amenazas). El Análisis FODA se enfoca en los factores claves para el éxito de su negocio, debe resaltar las fortalezas y las debilidades diferenciales internas al compararlo de manera objetiva y realista con la competencia y con las oportunidades y amenazas claves del entorno.

En este proyecto de investigación se aplicaron varios modelos y herramientas administrativas para lograr desarrollar estrategias, que permita aumentar la competitividad en el sector del mueble y la madera de la región Tijuana, Rosarito, B.C. El problema es: la baja competitividad que están presentando las empresas pertenecientes a esta rama de actividad, frente a la competencia, principalmente de Estados Unidos, Canadá, China y otros países.

Esta investigación se elaboró conforme a la construcción de estadística descriptiva, la cual consistió en la elaboración y aplicación del cuestionario para después hacer la investigación de campo, posteriormente para la captura y procesamiento de la información se utilizó el software SPSS 15.0 for Windows.

Objetivos de la investigación

El objetivo general es proponer alternativas estratégicas que faciliten alcanzar altos niveles de desempeño en la industria del mueble y la madera en los municipios de Tijuana y Playas de Rosarito lo cual contribuirá a recuperar su competitividad.

Objetivos específicos:

3. Analizar las causas que han provocado la pérdida de competitividad de la industria del mueble.
4. Proponer estrategias que permitan mejorar la competitividad de la industria del mueble

Hipótesis de la investigación

Si se establecen opciones estratégicas coherentes, integradas y contextualizadas, se facilitará incrementar los niveles de competitividad de la industria del mueble objeto de este estudio.

RESULTADOS

Tabla 1. Habilidad el gobierno para formular estrategias y políticas de competitividad

Opinión de los propietarios	Porcentaje (Nivel Meta)
Buena	17%
Regular	37%
Mala	33%
Pésima	13%
Total	100%

En la tabla se observa que la habilidad del gobierno para formular estrategias y políticas de competitividad local o regional es deficiente. Ya que solo el 75% de las empresas de la prueba piloto estableció que su desempeño es bueno y un 83% de regular a pésimo.

Tabla 2. Marco legal para hacer negocios en México

Opinión de los propietarios	Porcentaje	(Nivel Macro)
Buena	13%	
Regular	37%	
Mala	10%	
Pésima	40%	
Total	100%	

En la tabla se observa que el marco legal par hacer negocios en México tiene que reformarse ya que un 87% de las empresas consideran que es de regular a pésimo para la inversión en este sector.

Tabla 3. Infraestructura de la región en términos de vialidades

Opinión de los propietarios	Porcentaje	(Meso)
Adecuada	17%	
Regular	40%	
Inadecuada	43%	
Total	100%	

En la tabla se observa que las empresas encuestadas opinaron que la infraestructura en la región le parece regular e inadecuada para la operación óptima de la empresa, representando el 83%.

Tabla 4. Participación en el mercado del sector del mueble y la madera.

Opinión de los propietarios	Porcentaje	(Micro)
Aumentó	17%	
Se mantuvo	28%	
Disminuyó	55%	
Total	100%	

En la tabla se observa que más de la mitad de las empresas encuestadas disminuyó su participación en el mercado y sólo un 17% menciona que aumento su participación.

Tabla 5. Factores de ventaja competitiva

Opinión de los propietarios	Porcentaje	(Micro)
Precio	36%	
Calidad	36%	
Servicio	11%	
Diseño	11%	
Otros	6%	
Total	100%	

En la tabla se observa que la ventaja más importante para competir por parte de las empresas del sector es el precio y la calidad de sus productos.

Tabla 6. Problemas más frecuentes para cumplir un pedido

Opinión de los propietarios	Porcentaje	(micro)
Tiempo de entrega	53%	
Falta de materia prima	18%	
Baja Calidad	4%	
Entregas incompletas	7%	
Otros	18%	
Total	100%	

En la tabla se observa que el problema más frecuente que se tiene para cumplir un pedido es el tiempo de entrega.

Tabla 7. Capacitación en las empresas

Opinión de los propietarios	Porcentaje	(micro)
Al inicio de la contratación	60%	
En forma permanente	5%	
Por programa	10%	
Por requerimientos específicos	20%	
Total	100%	

En la tabla se observa que no existe capacitación en forma permanente a los empleados. El 5% de las empresas encuestadas no opinó al respecto.

Tabla 8. Maquinaria y equipo con que cuenta la empresa

Opinión de los propietarios	Porcentaje	(Micro)
Moderna	50%	
De vanguardia	20%	
Obsoleta	20%	
Otros	20%	
Total	100%	

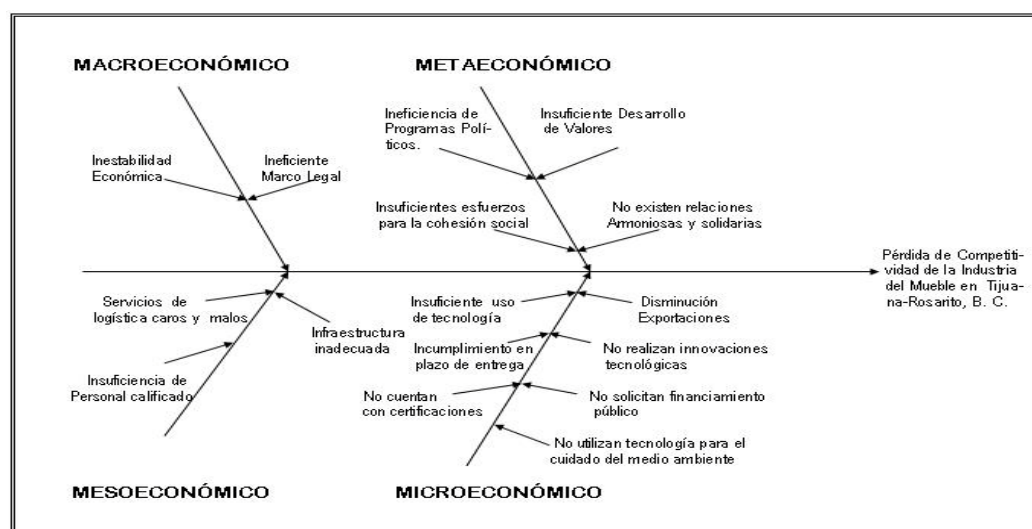

En la tabla se observa que la maquinaria y equipo con la que cuentan las empresas encuestadas es moderna. El 10% de las empresas encuestada no opinó.

Tabla 9. Principales fuentes de financiamiento

Opinión de los propietarios	Porcentaje	(micro)
Proveedores	46%	
Banca comercial	29%	
Socios	13%	
Familiares	8%	
Clientes	4%	
Total	100%	

Como se observa en tabla la mayoría de las empresas se financia a través de sus propios proveedores, seguido de la banca comercial

Figura 1. Diagrama Causa-efecto: principales causas que provocan la pérdida de competitividad.

En la Figura se muestra el diagrama en el cual se reflejan por nivel del modelo de competitividad sistémica, las principales causas que de acuerdo con la investigación realizada han provocado la pérdida de competitividad del sector.

En las siguientes figuras se muestran las relaciones entre variables de acuerdo a los resultados encontrados en la investigación:

Figura 2. Actitud de competidores y proveedores en términos de cooperación y aprendizaje conjunto.

Actitud de competidores y proveedores en terminos de cooperacion y aprendizaje conjunto				
Producción	Excelente o Buena	Regular	Mala o Pésima	Total
Aumentó o se Mantuvo	7, 87.5%	1, 12.5%	0, 0%	8, 100.00%
(%)	46.7%	14.3%	0.0%	
Disminuyó	8, 42.1%	6, 31.6%	5, 26.3%	19, 100.00%
(%)	53.3%	85.7%	100.0%	
Total	15	7	0	27
	100.00%	100.00%	100.00%	100.00%

Fuente: Elaboración propia a partir de cuestionario.

En la Figura 2 se muestra que las empresas que lograron mantener o incrementar la producción 87,5% considera que la actitud en torno a la cooperación y aprendizaje entre actores es excelente o buena, mientras que para las empresas que disminuyeron su producción este porcentaje disminuye a 42.1%.

Figura 3. Habilidad del gobierno, las empresas y la sociedad para formular estrategias y políticas de competitividad

Habilidad del gobierno, las empresas y la sociedad para formular estrategias y políticas de competitividad				
Producción	Excelente o Buena	Regular	Mala o Pésima	Total
Aumentó o se Mantuvo	1, 12.5%	7, 87.5%	0, 0%	8, 28.6%
(%)	16.7%	46.7%	0.0%	
Disminuyó	5, 25%	8, 40%	7, 35%	20, 71.4%
(%)	83.3%	53.3%	100.0%	
Total	6	15	7	28
	100.00%	100.00%	100.00%	100.00%

Fuente: Elaboración propia a partir de cuestionario.

En la Figura 3 se muestra que de las 8 empresas de un total de 28 que incrementaron su producción, sólo una (16.7%) considera que la habilidad de la sociedad e su conjunto para formular estrategias y políticas de competitividad es excelente o buena, mientras que de las 20 que disminuyó su producción, 5 (25%) cayeron en esta categoría, es sorprendente que el porcentaje sea mayor entre las empresas que disminuyeron su producción, que entre las que la aumentaron o mantuvieron.

Figura 4. La Infraestructura de la región en términos de vialidades, alumbrados

Producción	La Infraestructura de la región en términos de vialidades, alumbrados		
	Adecuada	Inadecuada	Total
Aumentó o se Mantuvo (%)	2, 25% 13.3%	6, 75% 46.2%	8, 28.6%
Disminuyó (%)	13, 65% 86.7%	7, 35% 53.8%	20, 71.4%
Total	15 100.00%	13 100.00%	28 100.00%

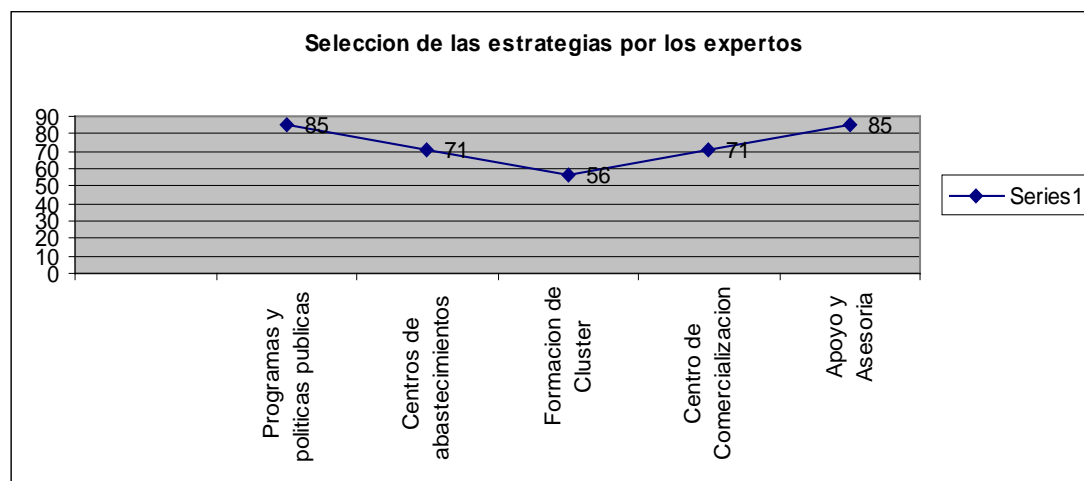

Fuente: Elaboración propia a partir de cuestionario.

En la Figura 4 de las 8 empresas que mantuvieron o incrementaron su producción, 6 de ellas (75%) considera que la infraestructura en la región es inadecuada; mientras que de las 20 que disminuyó su producción, 7 consideran que la infraestructura es inadecuada (35%). Se puede inferir que en la medida que las empresas incrementan su producción, la infraestructura regional se convierte en un cuello de botella al afectarles quizás sus operaciones de logística.

Opciones estratégicas propuestas

- Formulación de políticas y programas gubernamentales federales y estatales de apoyo al sector.
- Asesoría de los centros educativos y de investigación al sector.
- Creación de un centro de abastecimiento de materias primas e insumos en común.
- Creación de un centro de comercialización en común de sus productos.
- Creación y fortalecimiento del cluster de mueble y la madera.

Figura 5. Validación de las opciones estratégicas por el grupo de expertos

Como se observa en la figura, prácticamente todas las opciones estratégicas fueron bien evaluadas por el grupo de expertos, destacando con un 85% las opciones de formulación de programas y políticas públicas y la de apoyo y asesoría de los centros educativos y de investigación; en segundo lugar con un 71% fueron calificadas las opciones de creación de los centros de abastecimiento de materias primas y el de comercialización en común de los productos y por último la estrategia de formación y fortalecimiento del cluster fue evaluada con un 56% por el grupo de expertos.

CONCLUSIONES

En el nivel meta. No existen relaciones armoniosas y solidarias entre los actores, proveedores y competidores para cooperar y aprender conjuntamente. El desarrollo de la sociedad en la región, en términos de orientación a valores como la honestidad, puntualidad, empeño, disciplina y esfuerzo es calificada como incipiente. El gobierno, la empresa y la sociedad, no han sido capaces de formular políticas y estrategias efectivas para incrementar la competitividad de la industria del mueble. Asimismo, los esfuerzos realizados hasta el momento para lograr la cohesión social, no han dado los resultados esperados.

En el nivel macro. El marco legal para hacer negocios es muy malo y la estabilidad macroeconómica en términos de nivel de precios, crecimiento económico y empleo es muy desfavorable.

En el nivel meso. La infraestructura, los servicios de apoyo y de logística de la región son inadecuados. No existe suficiente personal con experiencia laboral y calificación para el trabajo, no reciben asesoría y apoyo de centros educativos y de investigación que les permitan ser más eficientes.

En el nivel micro. Las exportaciones del sector han disminuido considerablemente a partir del 2007, la mayoría de las empresas estudiadas no cuentan con automatización de sus procesos productivos, muy pocas realizan actividades de diseño e innovación de sus productos y un gran porcentaje no cuenta con indicadores para medir la eficiencia de la producción.

Las empresas sujetas de estudio venden sus productos principalmente a mayoristas y directamente al consumidor, su principal ventaja competitiva es la calidad y el precio. El control de inventarios es el sistema más utilizado para la administración de sus compras y el criterio principal para la evaluación de sus proveedores es la entrega oportuna de los insumos.

La mayor parte considera que su estructura financiera no es saludable, los proveedores son su principal fuente de financiamiento y prácticamente no solicitan crédito a las instituciones financieras gubernamentales y el destino fundamental del financiamiento es la compra de materias primas y maquinaria y equipo.

En el análisis que se realizó para determinar *relaciones entre variables* y como inciden en la productividad de las empresas, encontramos muy pocas relaciones, debido a que la muestra es muy pequeña sólo 30 empresas, a continuación se dan algunos ejemplos:

- Se encontró que en el *nivel meta* del modelo de competitividad sistémica la pregunta 9 del cuestionario que trata sobre las actitudes de sus competidores y proveedores en términos de cooperación y aprendizaje conjunto, las empresas que lograron mantener o incrementar la producción, consideran que la actitud en torno a la cooperación y aprendizaje entre competidores y proveedores es excelente o buena, asimismo, las empresas que disminuyeron su producción también la califican de excelente o buena, por lo tanto se infiere que independientemente de que aumente o disminuya la producción las empresas opinan que la cooperación y el aprendizaje es bueno o excelente.
- La relación entre la habilidad del gobierno, las empresas y la sociedad para formular estrategias y políticas de competitividad y el aumento de la producción, se encontró que la mayoría de las empresas que disminuyó su producción califican esta habilidad como regular, mala o pésima, de lo cual se infiere que a medida las políticas y estrategias para el sector no han sido efectivas.
- En el *nivel meso* que corresponde a la intervención del gobierno para corregir fallas del mercado, la relación entre la variable de infraestructura y el nivel de producción de las organizaciones, se detectó que las empresas que mantuvieron o incrementaron su producción, consideran que la infraestructura es inadecuada. Por lo tanto, se puede inferir que a medida que las empresas aumentan su producción, la infraestructura se convierte en un obstáculo para sus operaciones de logística.

RECOMENDACIONES

En base al análisis de la información recabada por la encuesta, a las entrevistas sostenidas con los dirigentes empresariales, académicos, funcionarios gubernamentales y la propia experiencia del investigador, recomendamos las siguientes medidas para recuperar la competitividad de la industria del mueble de la región Tijuana-Rosario, B.C.

Opciones estratégicas:

- Formulación de políticas y programas gubernamentales federales y estatales de apoyo a la industria del mueble.
- Asesoría de los centros educativos y de investigación al sector.
- Creación de un centro de abastecimiento de materias primas e insumos en común
- Creación de un centro para la comercialización en común de los productos.
- Creación y/o fortalecimiento del cluster del mueble

A juicio del investigador también se debe incluir como opción, la creación por parte de los empresarios de un *centro de diseño e innovación*, el cual les permitirá generar una ventaja competitiva en estos rubros.

Se recomienda realizar un seguimiento y evaluación de las estrategias que se hayan implementado en la práctica, con el fin de evaluar su efectividad para recuperar la competitividad del sector y corroborar de alguna manera si coinciden con la evaluación de estrategias realizadas por el grupo de expertos. Esto se convierte en una gran oportunidad para un segundo estudio.

EL PAPEL DE LAS UNIVERSIDADES ECONÓMICO-ADMINISTRATIVAS Y SU CREDIBILIDAD ACADÉMICA EN EL DESARROLLO EMPRESARIAL Y ECONÓMICO DE SU REGIÓN

Francisco Meza Hernández, Universidad Autónoma de Baja California

Santiago Pérez Alcalá, Universidad Autónoma de Baja California

Gloria Muñoz Del Real, Universidad Autónoma de Baja California

RESUMEN

La presente investigación pretende demostrar que las acciones educativas son propias del quehacer empresarial y que la participación activa de estas con la colaboración de su alumnado, maestros y coordinadores académicos, generan en la economía regional un impacto importante y trascendente que deberá ser considerado dentro del actuar académico. Ejemplo de esto, lo es el Programa de Investigación, Asistencia y Docencia a la Micro y Pequeña Empresa (PIADMYPE) donde se establecen como objetivos: Brindar asesoría profesional para el desarrollo de las micro y pequeñas empresas, formar capital humano emprendedor, constituirse como un modelo de enseñanza-aprendizaje de formación empresarial, desarrollar investigación sobre microempresas, gestión de asistencia social para el micro empresario y su familia, así como gestión de apoyo económico ante programas gubernamentales, que contribuyan a la generación de empleos y crecimiento empresarial. La Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California, contribuye al crecimiento económico de la región mediante la implementación de este programa.

INTRODUCCIÓN

El inicio de este trabajo surge de la necesidad imperante que los gobiernos federales y estatales deben enfrentar a la problemática de la comunidad empresarial y económica. De esta manera surge el establecimiento de acuerdos sobre la implementación de programas que fomenten la empresarialidad en la población informal de bajos recursos. El acercamiento, pretende que a través de las instituciones de educación superior (UES) se otorguen asesorías de formalización y capacitación que fomenten el crecimiento empresarial, para lograr la permanencia y estabilidad de las Micro y Pequeñas Empresas a través del acceso a apoyos económicos y financiamientos.

El objetivo fundamental de toda Universidad Económico-Administrativa es impulsar el desarrollo de la comunidad a la cual pertenece; y apoyar al progreso de su país. La economía, la actividad empresarial, el sector político y el bienestar social son sectores altamente impactados por el papel que desempeñan las Universidades; Ante este reto, queda claro que las micro y pequeñas empresas contribuyen ampliamente en el desarrollo y progreso económico del cualquier nación, ya que son generadoras de empleos y seguridad social. Las Universidad Económico-Administrativa buscan proveer servicios e información para el desarrollo empresarial, formar capital humano, desarrollar el espíritu emprendedor, constituir un modelo de enseñanza-aprendizaje, formación empresarial para estudiantes y empresarios, desarrollar investigación sobre microempresas, potenciar políticas e infraestructura pública en apoyo al sector empresarial. Debido a la importancia que implica el cumplir con estos objetivos, será prioridad de las universidades ejecutar investigaciones que fortalezcan la toma de decisiones del actuar empresarial. Esta investigación emana como respuesta inmediata a las necesidades empresariales, y presenta acciones que fortalecen al desarrollo empresarial. Al ejercer acciones educativas orientadas al progreso, y basadas en resultados favorables y desfavorables, se logra fortalecer la credibilidad que la comunidad empresarial deposite en el actuar educativo de estas instituciones. En esta exploración se obtuvieron estadísticas de

microempresarios informales, que fueron asesorados y formalizados en la constitución de su empresa. Lo cual genera bienestar legal y rectitud empresarial. De igual manera, estas microempresas pueden ser sujetas de crédito ante instituciones privadas, acceder a financiamientos gubernamentales, solicitar apoyos económicos de programas establecidos por los gobiernos, encontrar nuevos mercados y contribuir al gasto público.

REVISIÓN LITERARIA

Los principales actores que participan e intervienen en la educación superior, son las unidades de Educación Superior (UES); Gobierno; y la Sociedad. Estos actores intervienen entre sí en el contexto del mercado educativo y mercado laboral, esto lo define Alejandro Mungaray Lagarda, Giovanna Valenti Nigrini (1997) en su obra denominada “Políticas Públicas y Educación Superior” publicada por la *Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES)*, pag 91, de tal manera que las Universidades deberán formar un vínculo estrecho entre educación y ámbito empresarial. Esto debido a que las empresas se encuentran insertas en un ambiente adverso, lo que les impulsa a actuar de manera eficiente y eficaz en su entorno empresarial.

Las PYMES son responsables del 50% del Producto Interno Bruto (PIB) y del 70% de los empleos formales en México, de estas únicamente el 4% logra obtener un crédito para apoyar su financiamiento y por ende generar desarrollo. Esto en su mayoría debido a que las instituciones financieras están autorizadas a realizar préstamos a empresas registradas ante la Secretaría de Hacienda. Lo anterior, fue afirmado por Rodrigo Martínez (2010) en su artículo “Sólo 4% de las PYMES Recibe Crédito por Falta de Formalidad Fiscal” publica en el *International business times*. Durante una conferencia de prensa, el director de área de negocio de PYMES de BBVA Bancomer, Rafael Frías, comentó que de los 4 millones de empresas que se encuentran operando en México, sólo 1 millón está registrado ante el fisco; Aunado a este problema se encuentra la inconsistencia de estas empresas a llevar registros contable y elaboración de estados financieros lo que genera una baja fuente de información para ser consideradas como sujetos de crédito. Es un hecho que los financiamientos vigorizan el desarrollo económico de las empresas, las cuales al fortalecerse permean de crecimiento económico a la localidad a la que pertenecen.

Francisco Alburquerque (2004) en su libro; “Desarrollo económico local y descentralización en América Latina” publicado en la revista de CEPAL a la memoria de Gabriel Aghón describe perfectamente lo que se debe considerar como desarrollo local estableciendo que este desarrollo viene a destacar fundamentalmente los valores territoriales, de identidad, diversidad y flexibilidad que han existido en el pasado en las formas de producción no basadas tan sólo en la gran industria, sino en las características generales y locales de un territorio determinado. La importancia que destaca las culturas, costumbres, idiomas y estilos de vida de cada región, se encuentran estrechamente relacionadas con las formas de generar negocio en cada población.

La provisión de financiamiento eficiente y efectivo ha sido reconocida como factor clave (Hall, 1989) para asegurar que aquellas firmas con potencial de crecimiento puedan expandirse y ser más competitivas; En general, Keasey y McGuiness (1990) establece que existe evidencia de una asociación positiva entre financiamiento y desempeño de la firma, Por lo tanto es posible suponer que la imposibilidad de financiamiento inhibe el crecimiento.

De esta manera surge el concepto de desarrollo localizado, en México desde 1989 se pensó en fortalecer a las PYMES con apoyos económicos, pero fue después del colapso financiero de 1994 que se presentó la oportunidad de afianzar este tipo de empresas donde la reestructuración de Nafin y Bancomext inicio con la preocupación por destinar un poco más del 98% de sus apoyos a las PYMES, para tratar de elevar su calidad, su productividad y su nivel competitivo; Esta transformación coincidió con una revaloración a nivel nacional de la importancia de las PYMES como sujetos de crédito y de canalización de apoyos para

elevar y favorecer el empleo en México esto lo plasmo Alicia Payan (2003) en su libro “Regionalización y globalización: la nueva institucionalidad”. pag 303, al fortalecer las empresas no se puede negar el vínculo estrecho que se encuentra entre la formalidad y el mercado.

Las prácticas comerciales prevalecientes en el mercado posibilitan el abuso de la posición dominante que poseen algunos compradores y proveedores de las PYMES, así como la existencia de prácticas de competencia desleal de las empresas del “sector informal”. Con lo cual se limitan las posibilidades de crecimiento de las PYMES. Julia Evelin Martinez y Elcira Beltran de Vieytez (2002), en su obra “desafíos y oportunidades de las PYMES Salvadoreñas”, pag. 39. Su planteamiento toma fuerza en nuestro país debido a que mientras más empresas informales persisten, la posibilidad de lograr una permanencia empresarial y una seguridad social en los empleados se ve amenazada. La formalización de las empresas se encuentra establecida en leyes Mexicanas para que estas al igual que los ciudadanos contribuyan al gasto público plasmado en el art. 31 fracc. IV de la Constitución Política de los Estados Unidos Mexicanos, menciona que es obligación de los mexicanos contribuir al gasto público de la entidad donde se viva de forma equitativa según la ley lo disponga.

METODOLOGÍA

En la búsqueda de estrategias que apoyen la visión institucional de las Universidades de Educación Superior (UES), se implementaron una serie de acciones debidamente planeadas que proporcionen resultados conjuntamente entre la Facultad de Ciencias Administrativas (FCA) de la Universidad Autónoma de Baja California (UABC) y la Secretaria de Desarrollo Económico (SEDECO) del Gobierno del Estado de Baja California. El propósito inicial de esta investigación es presentar el procedimiento que genera una base de datos confiable, con la participación de autoridades universitarias y gubernamentales, lo cual permite asegurar el desarrollo del presente trabajo.

Acuerdos Y Convenios Realizados

La Secretaria de Desarrollo Económico del Gobierno del Estado de Baja California, es quien inicio el primer acercamiento con la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California, representada por el Sub-secretario de la SEDECO y el Director de la FCA. En dichas reuniones se establecieron acuerdos de trabajo colaborativo y de cooperación donde participaron: Académicos, Estudiantes y Autoridades de la Secretaria, para establecer actividades a favor de la población informal de bajos recursos.

En el convenio se formalizaron los acuerdos donde la Unidad Académica: proporciono capital humano conformado por un grupo profesional de estudiantes y académicos, los cuales fueron capacitados en cuestión de requisitos y trámites de constitución de empresas y aplicación de asistencia empresarial, lo que reforzó su aprendizaje profesional. Se realizaron pláticas con Autoridades Fiscales del Orden Federal y Estatal, para recibir apoyo mutuo en la atención a los microempresarios. De igual manera se solicito el apoyo con las Autoridades Municipales, para atender a los microempresarios informales de bajos recursos mediante los líderes vecinales, a los que se les impartió pláticas de trámites, asesoría, constitución de empresas y capacitación en áreas básicas detectadas mediante diagnostico empresarial realizado por los estudiantes, que permite al microempresario permanencia y crecimiento empresarial.

En el convenio se formalizaron los acuerdos donde la Secretaria de Desarrollo Económico: En función de las actividades realizadas por la Unidad Académica, otorgo apoyos económicos y gestión de seguridad social a los microempresarios formalizados según los procedimientos y tramites que la SEDECO instrumento para tal efecto, y que la Unidad Académica apoyo para cumplir con los requisitos establecidos. Asimismo la SEDECO se comprometió a respetar la confidencialidad y credibilidad de la información que la Unidad Académica obtuvo de los microempresarios.

Diseño Y Registro Del Programa De Servicio Social De La FCA

La primer actividad de la FCA, comprendió la planeación, diseño y elaboración de un programa de servicio social, que involucro a estudiantes de servicio social obligatorio de primera y segunda etapa. Dicho programa se definió en funciones de conformidad al perfil profesional de cada estudiante para estimular su formación profesional. De igual manera en el programa se plasmaron los propósitos que se pretenden cumplir con los microempresarios y los beneficios que representan para la Institución Educativa, El Gobierno, Microempresarios y Sociedad. Dicho programa se denominó como “Programa de Investigación, Asistencia y Docencia a la Micro y Pequeña Empresa (PIADMYPE) aprobado por la Universidad Autónoma de Baja California.

Difusión del programa de servicio social con estudiantes: Para llevar a cabo este programa se requirió que el estudiante haya tenido pleno conocimiento de las actividades a realizar como: metas, objetivos, compromisos a adquirir, nivel de responsabilidad, profesionalismo, trato, actitud, sensibilidad, atención y seguimiento para los microempresarios. Por lo que fue de suma importancia para los académicos, seleccionar a los mejores estudiantes que contemplaran los requisitos para participar en este programa. Dicha actividad se reforzó mediante pláticas previamente programas con los estudiantes.

Pláticas Y Acuerdos Con Autoridades Fiscales Federales Y Estatales

Las acciones llevadas a cabo por la FCA y SEDECO debieron ser fortalecidas con la participación activa de las autoridades federales y estatales, puesto que se busco generar conciencia de la importancia que representa la colaboración de la Unidad Académica, al fomentar la cultura de la legalidad y formalización de los microempresarios informales. De lo cual se desprende, que es indispensable contar con el apoyo de las autoridades para coordinar actividades en pro de los microempresarios en cuestiones referentes a: trámites, requisitos, control y atención. Por lo cual la FCA presento el programa PIADMYPE ante las autoridades fiscales y estatales, obteniendo como respuesta favorable: el colaborar activamente en apoyo a las acciones de la FCA

Pláticas Y Acuerdos Con Autoridades Municipales Y Presidentes Vecinales

Para lograr la difusión del programa de apoyo para microempresarios informales de bajos recursos, se realizaron pláticas con autoridades municipales, y se contó con la colaboración y participación del Desarrollo Social Municipal (DESOM) del XIX Ayuntamiento de Mexicali, estableciendo como población objetivo de este programa: los sectores con población de bajos recursos. Se realizaron pláticas con los presidentes vecinales convocados por las autoridades municipales en sus propios centros de Desarrollo Social, para que los académicos expusieran de manera general el programa. Posteriormente los académicos agendaron las fechas, lugar y hora donde se impartieron las pláticas a los microempresarios informales en coordinación con los presidentes vecinales. La calendarización de las pláticas fueron difundidas por cada presidente vecinal de acuerdo a sus funciones y aéreas de trabajo.

Determinación de la Población Objetivo: La población objetivo determinada en los acuerdos y convenio realizados entre FCA y SEDECO se establece en Pequeñas y Medianas Empresas con giros diversos que no excedan los 2, 000,000.00 (dos millones de pesos de ingresos al año) y que se encuentren en la clasificación de empresarios de bajos recursos establecidos por el Instituto Nacional de Estadística y Geografía (INEGI) de México.

Capacitación A Estudiantes

Los estudiantes constituyen la parte fundamental para conocer la problemática que afrontan los microempresarios, su nivel educativo, su capacidad económica y operativa. Por lo cual es indispensable que los estudiantes estén debidamente capacitados para asesorar, formalizar y capacitar a los microempresarios. Los académicos del área de negocios planearon e impartieron cursos para los estudiantes respecto a: Diagnostico empresarial, requisitos y tramites para formalizar empresas, régimen fiscal de los microempresarios, áreas básicas de finanzas, costos, administración y mercadotecnia, gestión de apoyos económicos y financiamientos. Lo cual permitió que los estudiantes brindaran una asistencia empresarial integral y vincular a los estudiantes en ambientes reales que fortalezcan su formación profesional.

Asistencia empresarial, formalización, asesoría y gestión de apoyos económicos a microempresarios

Una vez que los microempresarios informales recibieron la información de parte de los presidentes vecinales, acudieron a las instalaciones de la FCA el día y lugar acordado para recibir toda la información necesaria que les permitió decidir en: regularizar su situación legal y fiscal, recibir asesoría en gestión de apoyos económicos y seguridad social. Estas acciones se llevaron a cabo con el propósito de otorgar a los microempresarios herramientas básicas que les permitan administrar, controlar y ampliar sus expectativas empresariales, en un marco de legalidad con visión empresarial, fomentando su participación activa en la economía del país.

Muestra: La muestra determinada se obtuvo de la participación de 10 Facultades y 2 Escuelas de la Universidad Autónoma de Baja California en el Estado. Se contabilizaron un total de 7,462 microempresarios convocados, este universo fue determinado por el Centro de Investigación, Asistencia y Docencia a la Micro y Pequeña Empresa (CIADMYPE) de la UABC. La muestra investigada por parte de la FCA fue de 1,340 microempresarios convocados, con un nivel de aceptación de .72, representado por 960 microempresarios.

RESULTADOS

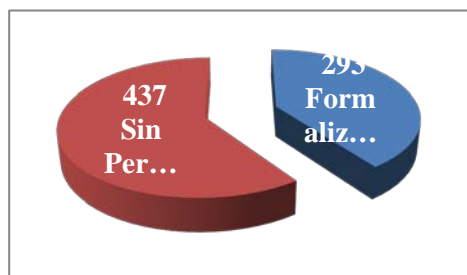

Esta investigación arroja que del universo de la población objetivo delimitada para la FCA en 1340 microempresas, todas fueron visitadas y convocadas para asistir a pláticas informativas del programa PIADMYPE, a pesar de realizar re-convocaciones y ofrecer horarios cómodos de asistencia, solo acudieron 960, lo que represento casi un 0.72 del universo, los motivos de la inasistencia del 0.28 se debieron a causas diversas de los cuales destacan; problemas familiares, compromisos empresariales, entre otros.

De los 960 microempresarios que recibieron la plática de capacitación del programa solo 730 cumplieron con los requisitos del programa y aceptaron la asistencia empresarial; el casi 0.24 restante de los microempresarios no asistidos se debió a que no contaban con el perfil y los requerimientos previamente establecidos por el programa PIADMYPE en función de los requerimientos de la SEDECO. De estos 730 microempresarios asistidos solo 293 fueron capacitados, formalizados e incorporados al seguro popular (asistencia social), lo que represento el 0.40 de los 730 microempresas asistidas.

Las microempresas no formalizadas, es decir el 0.60 restante de las 730 empresas asistidas, decidieron no participar en el programa por diversas circunstancias de las cuales destacan las siguientes; El monto de apoyo fue considerado como insuficiente para sanear los requerimientos de crecimiento establecidos por el programa, consideraban que las condiciones económicas del país no eran favorables para la permanencias y desarrollo de su empresa, plantearon además, que las regulaciones fiscales y

empresariales que actualmente imponen todos los órdenes de gobierno, forman una barrera difícil de cumplir.

Figura 1: PYMES Formalizadas bajo el programa PIADMYPE

Las empresas que aceptaron la formalización se les otorgó información respecto a los siguientes temas: régimen fiscal al que pertenecen según su actividad e ingresos anuales, obligaciones fiscales y, los requisitos y trámites fiscales que deben realizar y cumplir. En la fase de capacitación se les brindó lo siguiente: conocimientos en las áreas básicas de finanzas, costos, administración y mercadotecnia, además se les gestionó su incorporación al seguro popular conocido como asistencia social. Por último recibieron asistencia en la gestión por parte de los estudiantes y coordinador académico en la obtención de apoyos económicos por cumplir con los objetivos del programa PIADMYPE.

Estas acciones representaron un total de \$1'327,000.00 de pesos en apoyos económicos, invertidos en bienes y servicios productivos para el crecimiento de las microempresas formalizadas y capacitadas en el programa, y acceso a asistencia social incluyendo los familiares de los microempresarios.

Los microempresarios obtuvieron y aplicaron beneficios inmediatos en la formalización. Esto consistió en la aceptación de la asistencia empresarial gratuita, atención y apoyo personalizado por parte de las UES, obtención y aplicación de recursos para invertir o reactivar sus micro empresas, contar con seguridad social para el microempresario y su familia. Todo esto representó para el microempresario seguridad jurídica por la formalización de la empresa y la inserción en el entorno empresarial con visión de crecimiento, expansión y permanencia a corto mediano y largo plazo.

CONCLUSIONES Y RECOMENDACIONES

Con los resultados obtenidos después de un periodo de 12 meses de investigación, se concluye que la participación estrecha únicamente entre microempresarios y Universidades Económico-Administrativas con programas de apoyo empresarial como el PIADMYPE de la FCA, generan un ambiente de confianza en el microempresario para formalizarse, recibir asesoría y encaminar su negocio a la legalidad, en búsqueda del crecimiento y desarrollo empresarial. Esto provoca que el actuar académico de las Universidades Económico-Administrativo logren por parte de los microempresarios un mejor nivel de credibilidad que el resto de las instancias correspondientes.

La intervención directa de las unidades académicas de educación, fortalecen el apropiamiento de los empresarios hacia sus empresas y descubren que la formalización, les aporta: seguridad jurídica, conocer su marco de regulación fiscal, la forma y montos de para contribuir al gasto público bajo las bondades fiscales en las que el Gobierno estimula a los microempresarios. Logrando con esto, que el microempresario se proponga formal y libremente a ampliar su rango y ruta de operación empresarial.

De esta manera se recomienda que la asistencia con calidad, la transferencia de aprendizaje, la formalización del empleo con cobertura de seguridad social, el reforzamiento de la asistencia mediante el

acompañamiento por medio de estudiantes y la cultura de la legalidad, fortalece la economía de las microempresas y del país al que pertenecen. Estas acciones se recomiendan ampliamente ser ejecutadas por las Universidades Económico-Administrativas las cuales se verán favorecidas en sus modelos educativos al implementar programas con perfil PIADMYPE.

La asesoría, la capacitación, el acompañamiento, el apoyo económico y la seguridad social son aspectos indispensables a considerar en programas de desarrollo empresarial con gran soporte de aceptación y confianza por parte de los microempresarios. Estos aspectos conforman un paquete integral que actúa como detonante en el crecimiento y permanencia de los negocios. Estos programas, al ser aplicados o implementados por Universidades Económico-Administrativas, refuerzan sus programas educativos, logrando en la comunidad empresarial: Credibilidad en los profesionales dedicados a la investigación y desarrollo empresarial.

Por último podemos concluir que los alumnos que participan en este tipo de programas fortalecen su formación profesional al enfrentarse en ámbitos reales empresariales. Asimismo, los conocimientos teóricos-prácticos que adquieren en las aulas se aplican directamente en la participación activa de este programa. Con este programa se fomenta el espíritu y la cultura empresarialidad en los estudiantes.

Con la aplicación de cualquier programa que tenga efectos de credibilidad implementado por Unidades Económico-Administrativas apoyan los propósitos y estrategias de los gobiernos para: el progreso del país.

REFERENCIA

Por primera vez en el año de 2009 se crea el programa PIADMYPE con el propósito de brindar asesoría, asistencia empresarial, formalización, seguimiento, gestión de apoyos económicos y seguridad social (asistencia social) a las micro empresas. Existen antecedentes de programas similares implantados en el Estado de Baja California, México a través de la Universidad Autónoma de Baja California, mas sin embargo estos programas solo buscaron en su momento realizar investigaciones con fines estadísticos y no de desarrollo económico empresarial.

RESUMEN

El presente trabajo determina el nivel de autoestima de estudiantes indígenas de nuevo ingreso del Centro de Estudios Superiores del Estado de Sonora, Unidad Académica Navojoa para el período escolar 2008-2009 del modelo educativo Enfocado en el Aprendizaje y las Competencias del Estudiante, apoyado por el Programa Institucional de Tutorías y el Programa de Estudiantes Indígenas, con el fin de propiciar en los jóvenes conductas positivas de adaptación y permanencia a la vida universitaria. El diseño de la investigación se fundamentó en un estudio no experimental de tipo transversal, utilizando como instrumentos de apoyo el Inventario de Autoestima de Coopersmith y el Cuestionario de Apoyo Social, soportados en la plataforma de distribución libre MOODLE y aplicados a 95 estudiantes de un universo de 148, quienes fueron seleccionados mediante un muestreo intencional no probabilístico. Los principales resultados demuestran que el nivel de autoestima es bajo antes de que los estudiantes tomen el taller de habilidades sociales y mejora significativamente al término de este, al lograr incrementar el nivel de autoestima.

PALABRAS CLAVE: autoestima, habilidades sociales, indígenas, ENFACE

ABSTRAC

This study determines the level of self-esteem of indigenous students newly admitted in the Centro de Estudios Superiores del Estado de Sonora, Navojoa Academic Unit for the period 2008-2009 school educational model Focus on Learning and Skills Student, supported by the Institutional Program Tutorials and Indigenous Student Program, in order to promote positive behaviors in student and permanence adjustment to college life. The research design was based on a non-experimental cross-sectional, using as instruments to support the Coopersmith Self-Esteem Inventory and the Social Support Questionnaire, supported on free distribution platform MOODLE and applied to 95 students from a universe of 148, who were selected through a non-probability purposive sampling. The main results show that the self-esteem is low before the students take the workshop of social skills and significantly improves the end of this, to achieve increased self-esteem.

KEYWORDS: Self-esteem, Social Skills, Indigenous, ENFACE

INTRODUCCIÓN

A partir de 2007 se implementa en el Centro de Estudios Superiores del Estado de Sonora (CESUES) el modelo educativo ENFACE, que por sus siglas significa: Enfocado en el Aprendizaje y las Competencias del Estudiante; se organiza en torno a tres ejes fundamentales y estrechamente articulados: el enfoque

centrado en el estudiante y el aprendizaje, el enfoque educativo basado en competencias profesionales y la flexibilidad curricular y académico administrativa (CESUES, 2006).

Transcurrido el primer año de operaciones, se decide que el ciclo escolar 2008-2009 iniciaría con un reforzamiento para estudiantes de nuevo ingreso, al transformar el curso propedéutico del ciclo anterior, en uno que se ajustara a los parámetros que el nuevo modelo requería, además se complementó con un taller de Habilidades Sociales, como una acción afirmativa del Programa Institucional de Tutorías (PIT) y el Programa de Apoyo a Estudiantes Indígenas (PAEI) para desarrollar un conjunto de hábitos, adquisiciones y conductas positivas, que permitan al estudiante adaptarse, ser autónomo e integrarse a la vida universitaria y a una sociedad de acuerdo con sus capacidades.

Cabe destacar que al menos el 50% de nuestros estudiantes proviene de comunidades indígenas y llegan al CESUES Unidad Académica Navojoa (UAN), con serios problemas de autoestima, marcados por su origen socioeconómico y un clima cultural y familiar muy diferente al de la ciudad; con este bagaje cursaron su educación básica y media superior, desarrollando un conjunto de capacidades, habilidades y hábitos frecuentemente insuficientes para el trabajo en el nivel universitario, que requerirán ser diagnosticados y atendidos a fin de que logren superar las creencias que les impedirían concluir sus estudios exitosamente. Es en este momento donde la función tutorial adquiere un papel fundamental (Fresan, 2010).

METODOLOGÍA

Con el propósito de determinar el nivel de autoestima de los estudiantes indígenas de nuevo ingreso del CESUES UAN, período escolar 2008-2009, se realizó una investigación que consistió en un estudio no experimental de tipo transversal mediante el cual se recolectaron datos en un sólo momento, en un tiempo único y su propósito fue describir variables y analizar su incidencia e interrelación en un momento dado (Hernández et al, 1999), en el cual una condición estuvo presente de antemano y se buscó conocer y tipificar las características psicométricas específicas del Inventario de Autoestima de Coopersmith.

Participantes

De una población total de 148 alumnos que ingresaron al CESUES UAN, en el período escolar 2008-2 en sus cuatro programas educativos, se seleccionó a través de un muestreo intencional no probabilístico a 95 considerando los siguientes criterios: de inclusión, alumnos que se inscribieran a la institución en el ciclo escolar 2008-2 en nivel de licenciatura, alumnos que pertenezcan a alguna comunidad indígena, hablen el dialecto de su comunidad o que den a conocer sus usos y costumbres; y de exclusión, alumnos que se inscribieron a la institución en el ciclo escolar 2008-2 y que no formen parte de alguna etnia, alumnos que se inscriban a la institución y que no cubran los tiempos que requiere el calendario escolar para formar parte de este grupo.

Instrumento

Se evaluó como aspecto importante la autoestima. Para medirla se utilizó el Inventario de Autoestima de Coopersmith, conformado por 50 reactivos tipo dicotómico con opciones de respuesta: “igual que yo”, donde existe coincidencia y “diferente a mí”, donde no se esté de acuerdo con la pregunta. Éstos, estudian cuatro factores con cuatro dimensiones primordiales, su contenido conceptual se definen en al área: hogar-padres, autoestima social, escolar-académica y autoestima general. El instrumento aplicado cuenta con una confiabilidad de 0.79 con una varianza explicada del 0.793

Procedimiento

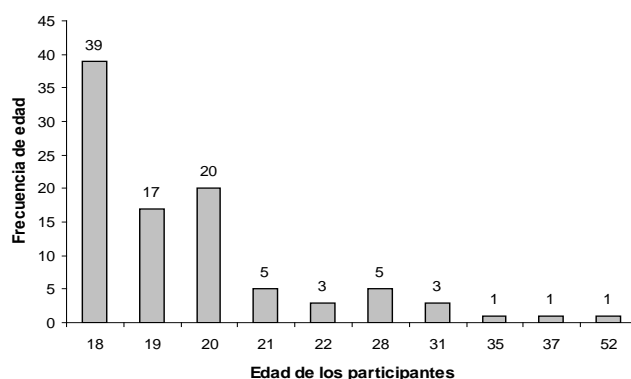

Para el desarrollo de este estudio se seleccionaron a 95 estudiantes, una vez ubicados, se llevó a cabo la aplicación del instrumento, el cual fue contestado antes de impartir la primera sesión del taller de habilidades sociales y una vez concluido el mismo, a fin de evaluar los resultados obtenidos, se efectuó en el área del centro de cómputo, apoyados por la plataforma MOODLE, en una sola sesión, para el pre-test y el post-test. Finalmente se integró la base de datos para posteriormente realizar los análisis de confiabilidad y descriptivos, en el paquete SPSS versión 11 (Hulli et al, 1997).

RESULTADOS

Análisis General

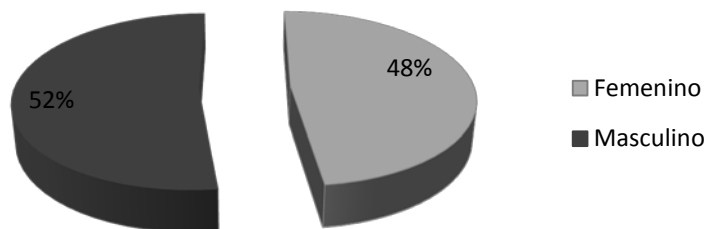

En este estudio participaron 95 estudiantes que asistieron a recibir el taller de habilidades sociales en CESUES, UAN. Las edades se encontraban entre 18 y 52 años. En la figura 1 se muestra la frecuencia de cada una de las edades de los participantes.

Figura 1. Frecuencia de Edad de los Participantes

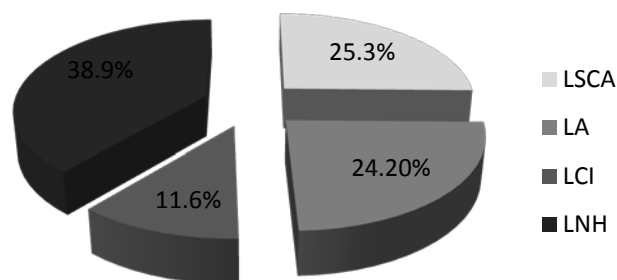

De acuerdo a la variable de género, se encontró que el 48% corresponde al sexo femenino y el 52% al sexo masculino (figura 2).

Figura 2. Porcentaje de género de los participantes

En la figura 3 podemos observar el porcentaje que representa cada programa educativo, en cuanto a la solicitud de cada participante.

Figura 3. Carreras Seleccionadas de los Participantes

Nivel de autoestima

La calificación se obtiene de la sumatoria de las respuestas dadas multiplicadas por dos y la interpretación de los resultados se realiza de acuerdo con los siguientes criterios.

Los criterios que determinan los niveles de autoestima son los siguientes: de 0-11 puntos bajo; 12-27 puntos medio; 28-35 puntos elevado. En la tabla 1 podemos observar los resultados que se obtuvieron de este análisis por programa educativo en el pre-test y en el post-test.

Programa Educativo	Pre-test	Post-test
LSCA	18 (medio)	27 (medio)
LA	6 (bajo)	11 (bajo)
LCI	7 (bajo)	24 (medio)
LNH	19 (medio)	35 (alto)

Tabla 1. Nivel de autoestima de los estudiantes de cada programa educativo (CESUES - UAN período 2008-2)

CONCLUSIONES

En el presente estudio, el análisis pre-test mostró una marcada diferencia en el nivel de autoestima de los estudiantes entre los programas educativos, siendo los menores el de LA con 6 puntos y LCI con 7, en tanto que LSCA y LNH alcanzaron un nivel medio con 18 y 19 puntos respectivamente.

Se considera que el taller de habilidades sociales tuvo un impacto positivo la autoestima de los estudiantes que ingresaron a cursar una carrera profesional en nuestra institución. Esto debido a que una vez aplicado el post-test en dos de los programas educativos el nivel de autoestima se elevó al siguiente nivel y en el resto se logró un avance muy significativo en la escala de valores definida por el instrumento aplicado (tabla 1).

La razón de porque los avances en LA y LSCA no son tan evidentes entre el pre-test y el post-test, como en los otros dos programas, se debe a que en éstos la mayoría de los estudiantes viven en alguna comunidad rural, tanto más en LA que en LSCA. Mientras que en LNH y LCI la mayor parte vive en la ciudad y por ende en contextos de desarrollo diferentes.

Debido a lo anterior se demuestra que con este taller se mejora el nivel de autoestima lo cual es fundamental para propiciar conductas positivas en los estudiantes de nuevo ingreso y sentar las bases para su adaptación y permanencia a la vida universitaria.

RESUMEN

La presente investigación aborda el tema de la jubilación, el cual en fechas recientes ha sido preocupación de muchos países debido al incremento de la esperanza de vida de la población mundial. El objetivo del presente estudio es analizar las ventajas y desventajas de las actuales opciones de pensión económica que tiene un trabajador mexicano cuando llega a la edad de jubilación estipulada por las leyes vigentes en el país. El propósito de esta investigación es brindar información clara y específica a las personas interesadas en este tema, para que estén en posibilidad de elegir una opción de jubilación que les brinde mayores ventajas. Se detallan los requisitos que se deben cumplir para tramitar la jubilación. A través de un estudio comparativo se analizan las actuales opciones de jubilación: la derivada de la reforma a la Ley del Seguro Social de 1973 y la que se desprende de la modificación realizada en 1997 a la misma Ley. Esta investigación es de corte cualitativo. Es un estudio de tipo descriptivo documental. Los hallazgos de esta investigación permitieron identificar el régimen de pensiones que más conviene al trabajador, para que siga disfrutando del nivel de vida que tenía cuando estaba económicamente activo.

INTRODUCCIÓN

El incremento de la esperanza de vida de la población mundial ha impactado la estructura económica de los países al haber crecido el número de personas que solicitan el pago de una pensión por jubilación. Según la Organización Mundial de la Salud (OMS), “la esperanza media de vida al nacer se ha incrementado en términos mundiales en cerca de 20 años, pasando entre 1950-1955 y 2002 de 46,5 a 65,2 años” (OMS, 2003). En México el Consejo Nacional de Población (CONAPO) ha señalado que la esperanza de vida “aumentó 14.8 años entre 1970 y 2010 ubicándose actualmente en un promedio de 75.4 años (77.8 para las mujeres y 73.1 para los hombres)” (SEGOB, 2010). Lo anterior pone de manifiesto la creciente demanda del pago de pensiones por jubilación, una problemática a la que se enfrentan muchos gobiernos y México no es la excepción. Según datos del Instituto Nacional de Estadística, Geografía e Informática (INEGI) en 1990 el número de casos de prestaciones económicas otorgadas por el Instituto Mexicano del Seguro Social fue de 312.814, mientras que para el año 2006 fue de 1,051,341, lo que representa un incremento de 336% (INEGI, 2007).

En Julio de 1997 entró en vigor en México el nuevo sistema de pensiones, surgiendo la incertidumbre en los trabajadores que fueron inscritos con anterioridad a la entrada en vigor de la nueva ley, quienes pensaron que se trastornarían sus derechos, sobre todo los de aquellos que en breve solicitarían su pensión. Sin embargo el Artículo tercero transitorio de la Ley del Seguro Social (LSS), publicado el 21 de Diciembre de 1995 y cuya entrada en vigor fue el 1ro. de Julio de 1997 dejaba vigentes algunos derechos de la ley anterior. En el citado artículo se estableció que los asegurados inscritos con anterioridad a la fecha de entrada en vigor de la ley de 1997, al cumplir los supuestos legales para disfrutar cualquiera de las pensiones, podrán decidir pensionarse conforme a lo establecido en la ley de 1973 o en la ley actual, por lo que se entiende que las semanas de cotización inician desde que se inscribió el trabajador.

El estudio y evaluación de los sistemas de pensiones, según la LSS de 1973 y la LSS vigente de 1997, se vuelve necesario para identificar las ventajas y desventajas que cada uno de los sistemas ofrece, por lo que el propósito de esta investigación es brindar información clara y específica a las personas interesadas en este tema, para que estén en posibilidad de elegir una opción de jubilación que les brinde mayores ventajas.

REVISIÓN LITERARIA

El sistema de pensiones es un tema que siempre ha provocado polémica por el impacto que este tiene en los trabajadores y en las finanzas públicas, particularmente a partir de la modificación al anterior sistema de pensiones (1973) que fue sustituido por un nuevo sistema vigente a partir del 1ro. de julio de 1997. Algunos autores que han abordado este tema han sido Beristain Iturbide (2000), Ayala Espino (2001), Gutiérrez Arriola (2002), Guillen Romo (2005) y Cordera Campos y Cabrera Adame (2007), entre otros. A decir de Guillen Romo (2005), en el sistema público de pensiones mexicano coexisten diversos planes de seguridad social ofrecidos por instituciones como el Instituto Mexicano del Seguro Social (IMSS), el Instituto de Seguridad y Servicios Sociales de los Trabajadores del Estados (ISSSTE) el Instituto de Seguridad Social para las Fuerzas Armadas de México (ISSFAM), así también en el caso de empresas paraestatales como Petróleos Mexicanos (PEMEX) Y Comisión Federal de Electricidad (CFE) la existencia de sistemas de pensiones específicos. El autor hace la precisión que existe una baja cobertura de los sistemas públicos de pensiones y señala a la corrupción gubernamental como causante, por la desconfianza que genera entre los trabajadores.

Según Beristain Iturbide (2000), los sistemas de pensiones son de gran importancia para todos los países, pues constituyen los pilares básicos para la seguridad social de cada país. Su importancia tiene su origen en la necesidad de garantizar que cada trabajador al final de su vida laboral tenga garantizado el bienestar social con las mismas características que tenía cuando desarrollaba su actividad económica. Sin embargo en la década de los 90 del Siglo XX se presentó un fenómeno provocado por el aumento de la esperanza de vida de la población, el cual dio como resultado un adelgazamiento en la base de la pirámide poblacional y un ensanchamiento en los niveles superiores, con el consecuente riesgo de un derrumbamiento del sistema de seguridad y la incertidumbre en cuanto al bienestar futuro de aquellas personas que actualmente realizan sus aportaciones. A decir de Ayala Espino (2001), este fenómeno se conoce con el nombre de *crisis del envejecimiento*. El citado autor coincide con Berestain (2000) al señalar que este fenómeno representa un riesgo para la sustentabilidad financiera del sistema de pensiones mexicano actual. Con el propósito de proteger a los trabajadores en mayo de 1996 entró en vigor la Ley de los Sistemas de Ahorro para el Retiro (SAR), a fin de que los trabajadores tuvieran una cuenta individual de ahorro para el retiro, y que este se acumulara durante su vida económicamente activa, señalando como administrador de esta cuenta a las Administradoras de Fondo para el Retiro (AFORES).

Lo anterior, con apego a las normas establecidas en la Constitución Política de los Estados Unidos Mexicanos, para la prestación de estos servicios de administración, artículo 123 fracción XXIX apartado A fracción XI apartado B fracción XIII apartado B, de esta manera "cada trabajador tendrá su propia cuenta individual para el retiro, será de su propiedad y se integrará con las aportaciones que actualmente hacen los trabajadores, los patrones y el gobierno" (Ayala Espino; 2001:522). Al respecto Gutiérrez Arriola (2002:106), señala que "las nuevas generaciones de jubilados bajo este sistema se espera en aproximadamente en 25 años; sus beneficios consistirán en los saldos acumulados en las cuentas individuales para el retiro (las cuentas de la AFORE más las del INFONAVIT), o la pensión mínima garantizada PMG) que será igual al salario mínimo de la ciudad de México indizado al INPC". De esta manera cuando los trabajadores cumplan 65 años de edad y se jubilen podrán escoger "entre una opción de retiro gradual de fondos programados hasta agotar su fondo o la entrega del dinero a una compañía de seguros que le garantice una renta mensual vitalicia" (Gutiérrez Arriola; 2002:106). La citada autora

hace la precisión que en el caso de los trabajadores que cotizaron antes de 1997, estos tendrán tres opciones al momento de jubilarse: “ a) disponer de su cuenta individual; b) recibir la pensión mínima de un salario mínimo real que el gobierno garantiza (si cotizaron durante 25 años como mínimo) o c) que le apliquen las reglas del IMSS previas a la reforma” (Gutiérrez Arriola; 2002:106).

Al referirse al nuevo sistema de pensiones para el retiro Cordera Campos y Cabrera Adame (2007:299) hacen la precisión que los rendimientos esperados para los trabajadores dependen de una regulación eficaz, la cual se vuelve necesaria para evitar caer en una crisis que pudiera producir un aumento en el costo fiscal inclusive superior al que se daba en el sistema anterior. En concordancia con el autor anterior Ayala Espino (2001:529) señala que existen algunas problemáticas en relación al cambio del sistema de pensiones, principalmente cuestiona “la capacidad efectiva del estado para supervisar y regular un mercado tan grande y tan vulnerable en términos de probables pérdidas de capital para los ahorradores por inversiones riesgosas.” Lo que supone la necesidad de una regulación eficaz de los sistemas de pensiones.

La necesidad de una sustentabilidad financiera a la que se refiere el autor anterior no es de data reciente, pues la Ley del Seguro Social (LSS) de 1973 ya contemplaba el Seguro de invalidez, vejez, cesantía en edad avanzada y muerte y desde entonces era uno de los ramos de seguro de mayor trascendencia del Instituto Mexicano del Seguro Social (IMSS), por la cantidad de recursos que maneja y el impacto social que tiene, sin embargo el ramo presentaba un serio y evidente problema de inviabilidad financiera, esta problemática hizo imprescindible el cambio en el sistema de pensiones, a fin de garantizar pensiones con la debida sustentabilidad financiera, haciéndolas inmunes a los efectos de la inflación y al mismo tiempo utilizando los recursos provisionales como ahorro interno disponible.

Los principales cambios en los requisitos para la obtención de pensiones por cesantía en edad avanzada y por vejez los encontramos en el número de cotizaciones semanales requeridas para tener derecho a cualquiera de las pensiones en mención, las que pasaron de ser de 500 según la ley anterior a 1250 conforme al artículo 154, segundo párrafo de la nueva Ley del Seguro Social. Otro cambio es que en este nuevo esquema cuando se solicita la pensión por Cesantía en edad avanzada ya no hay porcentajes de pensión entre 60 y 64 años, pues una vez acreditado el derecho, la pensión se calcula de acuerdo a los fondos reunidos en la cuenta individual, según se establece en el artículo 194, primer párrafo de la LSS. De igual manera en el nuevo régimen para calcular ambas pensiones ya no es necesario determinar el salario diario calculando un promedio de las últimas 250 semanas de cotización, como se establece en el artículo 80 de la Ley de los Sistemas de Ahorro para el Retiro en vigor.

Al término del presente apartado resulta conveniente reflexionar sobre los beneficios que aporta este trabajo en relación a las publicaciones revisadas, las cuales realizan un análisis de los regímenes de pensiones de 1973 y 1997 de manera independiente, en tanto que en éste trabajo se realiza un análisis comparativo de las mismas y con base en él se presentan recomendaciones que pueden ser orientadoras para quienes se encuentren en estos supuestos, de ahí su importancia.

METODOLOGÍA.

Esta investigación es de corte cualitativo. Es un estudio de tipo descriptivo documental, a través del cual se analizan las actuales opciones de jubilación. Los sujetos de estudio en esta indagatoria son la Ley del Seguro Social de 1973 y la Ley del Seguro Social de 1997.

Para la realización de esta indagatoria, en primera instancia se revisaron algunas publicaciones de autores que han abordado el tema materia de este estudio. Asimismo se revisaron las leyes que regulan las actuales opciones de jubilación: la derivada de la reforma a la Ley del Seguro Social de 1973 y la que se

desprende de la modificación realizada en 1997 a la misma Ley. Se identificaron los principales cambios en los requisitos para la obtención de pensiones por cesantía en edad avanzada y por vejez en el nuevo sistema de pensiones. Se señalaron las ventajas y desventajas de los regímenes de pensiones por cesantía y vejez en la Ley del Seguro Social de 1973 y 1997. Finalmente se plantearon algunas conclusiones con base en los hallazgos de este estudio.

RESULTADOS

En el régimen de pensiones actual se identificaron las siguientes ventajas:

1. Para determinar la pensión del trabajador ya no se considera el promedio del sueldo de los últimos 5 años, sino que se toma en cuenta las aportaciones realizadas por el trabajador, el patrón y el estado durante toda la vida laboral del trabajador.
2. El monto de las aportaciones realizadas a la cuenta individual del trabajador puede verse incrementado por los rendimientos obtenidos a través de las inversiones realizadas por la Administradora de Fondos.

En el régimen de pensiones de 1973 se identificaron las siguientes ventajas:

1. Las personas que se inscribieron en el seguro social antes de la entrada en vigor del nuevo régimen de pensiones pueden elegir pensionarse con el régimen anterior y tendrán derecho a retirar en una sola exhibición lo acumulado al 30 de Junio de 1997 por concepto de INFONAVIT y de SAR, así como lo reunido en el ramo de retiro, del seguro de Retiro, cesantía en edad avanzada y vejez del nuevo régimen incluyendo los rendimientos que se hayan generado.
2. A diferencia del régimen de 1973, que contemplaba una pensión vitalicia otorgada por el IMSS y respaldada por el gobierno federal para los trabajadores jubilados y para el cónyuge e hijos menores de 18 años, el régimen actual no prevé un pago vitalicio, sino únicamente el pago de las cantidades ahorradas y depositadas en la cuenta individual del trabajador administrada por una sociedad de inversión especializada en fondos para el retiro (SIEFORE).

En el régimen de pensiones actual se identificaron las siguientes desventajas:

1. Actualmente ningún trabajador tiene en su cuenta individual el monto necesario para contratar una pensión vitalicia, partiendo de que se necesita tener acumulado un monto equivalente al salario del trabajador elevado al número de años que se espera vivir después de haberse retirado.
2. Con el nuevo régimen sólo se tendrá derecho a la pensión mínima mensual que otorga el Gobierno Federal y su monto mensual será el equivalente a un salario mínimo general para el Distrito Federal.
3. La incertidumbre económica actual a nivel mundial puede impactar las utilidades producto de inversiones realizadas por las administradoras de las cuentas individuales de los trabajadores.

En el régimen de pensiones de 1973 se identificaron las siguientes desventajas:

1. El monto de la pensión era calculado de acuerdo a los últimos cinco años de cotización del trabajador, lo que implicaba que no se le reconocieran la mayoría de las aportaciones realizadas
2. El monto de la pensión era fijo según las cotizaciones realizadas en los últimos cinco años, mientras que en el régimen actual el monto se considera según el total ahorrado en la cuenta individual, a mayor ahorro, mayor pensión.

CONCLUSIONES

PRIMERA. Es mejor jubilarse de acuerdo a la ley de 1973, ya que el monto de la pensión podría ser elevado si en los últimos cinco años el trabajador cotizó un salario alto. Aunado a lo anterior, el reunir 500 semanas de cotización es más accesible para el trabajador que reunir 1250 semanas en el nuevo régimen.

SEGUNDA. Si no se tiene derecho a jubilación a través de la Ley del Seguro Social de 1973, la estrategia a seguir es realizar aportaciones voluntarias a la cuenta individual. Con base en los datos obtenidos en esta indagatoria y las conclusiones antes presentadas, se recomienda que el trabajador no permita ser registrado con un salario de cotización menor al que efectivamente devenga, pues esto le afecta directamente en el monto acumulado de su cuenta individual para su pensión.

MARATON DE CONOCIMIENTOS Y CASOS PRACTICOS EN ADMINISTRACION COMO PARTE INTEGRAL EN EL DESARROLLO Y FORMACION DEL ESTUDIANTE. ANFECA (ASOCIACION NACIONAL DE FACULTADES Y ESCUELAS DE CONTADURIA Y ADMINISTRACION)

Raúl González Núñez, Universidad Autónoma de Baja California, México
Adelaida Figueroa Villanueva, Universidad Autónoma de Baja California, México
Santiago Pérez Alcalá, Universidad Autónoma de Baja California, México

INTRODUCCION

Actualmente la Facultad de Ciencias Administrativas, de la Universidad Autónoma de Baja California, reafirma su interés de formar integralmente a sus estudiantes a través de competencias entre diferentes Universidades a nivel Regional y Nacional. Organizadas por ANFECA (Asociación Nacional de Facultades y Escuelas de Contaduría y Administración). Es importante señalar que estas experiencias formativas pueden ampliar el horizonte profesional y su desarrollo como estudiante y sobre todo como ser humano. Esto implica el desarrollo de varias estrategias, que incluyen el fomento del trabajo en equipo, la búsqueda de información y el sentido de responsabilidad. Es importante señalar que la esencia del de el hombre y en su caso de un estudiante, no se alcanza en su ámbito individual, sino sólo a través del desarrollo armónico de sus conocimientos, habilidades y actitudes. Además de lo mencionado, es importante señalar y enfatizar en el instrumento llamado Benchmarking el cual lo podemos definir como un proceso continuo, donde se toman como referentes a empresas líderes y en este caso de estudio podemos hacer referencia a las mejores Universidades a nivel nacional e internacional.

Quienes hacen Benchmarking determinan primero en que aspectos necesitan crecer y luego detectan la empresa que mejores prácticas realiza en ese área. Luego investigan a la Compañía y aplican esas prácticas en su organización. El Benchmarking estudia a las empresas y utiliza sus mejores prácticas como un estándar comparativo al cual llegar o bien superar. En le caso de los estudiantes de la Facultad de Ciencias Administrativas, son el resultado de un proceso de selección bien estructurado y en condiciones de medirse intelectualmente con otros participantes estudiantes de otras Universidad, con el fin de lograr de una mejor forma su formación e integración en su carrera profesional.

El maratón de conocimientos es una competencia de información y habilidades, acerca de un área específica, (Administración, Finanzas, Mercadotecnia, Fiscal e Informática). Su principal propósito es impulsar y motivar entre los mismos alumnos el estudio exhaustivo en una disciplina en particular de las mencionadas. Es importante mencionar que los estudiantes desarrollan una dinámica de estudio continuo con sus mismos compañeros, además de mantener una comunicación más estrecha con sus profesores. Además de representar un verdadero desafío, el maratón de conocimientos, permite desarrollar habilidades que ayudarán a una formación integral durante el tiempo de preparación al evento regional, que servirá de base a los dos mejores equipos para participar a nivel nacional. Es importante señalar, que la formación integral es una práctica educativa, centrada en la persona y en sus relaciones con otros y con su medio.

Nuestra Facultad de Ciencias Administrativas, ha participado durante los últimos 3 años de manera consecutiva, registrando por cada una de las diferentes áreas mencionadas a un equipo participante (éste año se registraron dos equipos por área de conocimiento), además de un maestro asesor por cada uno de los equipos, aquí es donde realmente se enfatiza en la preparación y cuidado del estudiante, debido a que es supervisado y guiado por un profesor en todo momento de la preparación para dicho evento regional o nacional. Otro aspecto relevante es la elaboración de reactivos para los eventos, aquí es donde la Coordinación nacional de las academias de ANFECA elabora los bancos de reactivos, para cada una de las áreas de conocimiento, para el Maratón Nacional. Sin embargo, deja en libertad a las diferentes regiones para que elaboren sus propias bases de reactivos, como se maneja actualmente.

El aspecto motivacional es de vital importancia, lo cual se cubre otorgando reconocimientos a todos los maestros asesores participantes, así como a los estudiantes que integran los diferentes equipos. Los premios adicionales quedan a juicio y posibilidad de la institución sede.

COMO LOGRAR QUE EL IMPUESTO EMPRESARIAL A TASA ÚNICA NO IMPACTE NEGATIVAMENTE LAS FINANZAS DE LAS MAQUILADORAS EN MÉXICO

Jessica Lizbeth Cisneros Martínez, Universidad Autónoma del Estado de Baja California

Cruz Elda Macías Terán, Universidad Autónoma del Estado de Baja California

Leonel Rosiles López, Universidad Autónoma del Estado de Baja California

Sósima Carrillo, Universidad Autónoma del Estado de Baja California

ABSTRACT

El presente trabajo fue realizado conforme a la normatividad mexicana. El objetivo de este estudio es identificar la afectación financiera que tuvo la entrada en vigor del Impuesto Empresarial a Tasa Única en el sector maquilador. Se realizó un estudio descriptivo de tipo documental, a través del cual se llevó a cabo un análisis de la ley del Impuesto Empresarial a Tasa Única, así como un comparativo con el Impuesto Sobre la Renta, ya que ambas coexisten y se relacionan al momento de pagar los tributos. Se plantearon y ejemplificaron con cifras reales aspectos como el impacto financiero de dichos impuestos en una maquiladora de la localidad, la forma de calcular los impuestos así como la afectación en la base gravable al no considerar como deducibles todos los conceptos o bien la repercusión de considerarlos como créditos fiscales. Con base en el análisis realizado se presentan en este estudio, algunas conclusiones y recomendaciones para que los contribuyentes que establecen maquiladoras en México debido a la globalización o al intercambio comercial entre países no vean mermada su liquidez financiera.

INTRODUCCIÓN

En México, lo que se conoce hoy día como el impuesto empresarial a tasa única (IETU) nace el 20 de Junio de 2007 a través de un paquete de iniciativas de reformas fiscales presentadas por el Ejecutivo Federal al Congreso de la Unión para su análisis, discusión y aprobación. En ese paquete de iniciativas el IETU nació o fue denominado como Contribución Empresarial a Tasa Única (CETU). Su conceptualización teórica se muestra desde la óptica de los efectos económicos. La iniciativa señala que la CETU hoy IETU está conceptualizada como un impuesto “equivalente a gravar la retribución a los factores de la producción de la empresa” (Calderón, 2007).

Debido a que en México ya existe el Impuesto sobre la Renta (ISR), el IETU se propone como el gravamen mínimo a pagar respecto del ISR propio y retenido, ya que únicamente se pagaría por el excedente entre el ISR y el IETU. Según la iniciativa de ley antes citada “la contribución empresarial a tasa única es un gravamen que tiene una base gravable más amplia que el impuesto sobre la renta, por lo cual dicha contribución se propone, gravará a quienes hoy no pagan el ISR, lo que hace más equitativa la tributación” (Calderón, 2007).

Cuando en la exposición de motivos de la citada iniciativa de ley se habla de aumentar la base tributaria, se tienen en cuenta dos significados: uno es el aumentar el número de contribuyentes, y el segundo es el aumentar la base sobre la cual se calcula el impuesto. Al analizar la iniciativa de ley en comento, resulta claro que este impuesto, por sí solo, no aumenta el número de contribuyentes, sino que amplía la base sobre la cual se calcula el impuesto. Este aumento de la base del impuesto puede tener repercusiones positivas o negativas, dependiendo de la particularidad de cada caso; sin embargo, lo que no debe perderse de vista es la necesidad de aumentar el número de contribuyentes, cosa que este nuevo impuesto, por sí solo, no logra, pues como se demuestra en este trabajo, el efecto real de este impuesto es asignar el costo de la informalidad a los contribuyentes cautivos. Alestablecerse el IETU con base en flujos de

efectivo la autoridad pretende que el IETU sea un impuesto de control al gravar los ingresos efectivamente cobrados y las deducciones pagadas, sin embargo, debido a que se trata de una base mas amplia que la del impuesto sobre la renta, se limitan algunas deducciones, como son los intereses, las regalías entre partes relacionadas, prestaciones de previsión social, el costo de lo vendido entre otras. Además como es sabido los contribuyentes cuentan con una serie de créditos y beneficios fiscales que se pueden aplicar contra el IETU, tanto en pagos provisionales como en la declaración anual. Por lo que cabe mencionar que con un sistema de acreditamientos, se elimina el efecto de la no deducibilidad, tal es el caso de los sueldos y salarios gravados y de las aportaciones de seguridad social al quedar únicamente gravados los ingresos exentos que se paguen a los trabajadores.

También al establecerse un sistema de pagos provisionales mensuales, pero con el procedimiento similar al de la declaración del ejercicio, se provocarán cargas administrativas en las empresas, ya que mes a mes, se tendrán que ir determinando los ingresos efectivamente cobrados y las deducciones efectivamente pagadas, en forma acumulativa, así como los acreditamientos. De tal suerte, es necesario que analicemos el efecto negativo que pudiera tener en el contribuyente el que este impuesto se aplique sobre bases distintas al ISR, ya que cuando este considera ingresos nominales para el cálculo, el IETU parte de una base de devengado según el criterio normativo de las Normas de Información Financiera.

Sin soslayar la importancia de los distintos sectores productivos en México, en el presente estudio analizamos el impacto del IETU en la industria maquiladora. La principal problemática que enfrentó este sector a la entrada en vigor del IETU, fue el impacto negativo en sus finanzas; la liquidez de la empresa se vio aumentada al recibir las remesas para pago de gastos por parte de la empresa matriz, dando como resultado una mayor base sujeta al pago del IETU, la cual se obtuvo como diferencial de la remesa y los gastos efectivamente pagados. Por lo antes expuesto el presente estudio se plantea como objetivo identificar la afectación financiera que tuvo la entrada en vigor del Impuesto Empresarial a Tasa Única en el sector maquilador.

REVISIÓN LITERARIA

El aumento en la base del IETU puede tener repercusiones positivas para lograr una mayor recaudación en el país, pero sigue agravándose la carga tributaria para el contribuyente al tener vigentes ambos impuestos, es por eso que mediante el mismo Decreto Ley del IETU se le instruye a la Secretaria de Hacienda y Crédito Publico de México para que efectué un estudio sobre la conveniencia de derogar el Título II y los capítulos II y III del Título IV de la Ley del ISR.

Algunos autores que han abordado el tema de la aplicación del IETU en México han sido: Domínguez (2009), Sánchez Miranda (2009) y , entre otros. Según Sánchez Miranda (2009) el sistema tributario mexicano tenía como base principal dos impuestos: ISR e IVA, lo cual había provocado una mayor recaudación por parte de las autoridades hacendarias: sin embargo, de acuerdo a la exposición de motivos en la que se propuso al IETU como un nuevo impuesto se justificaba su creación argumentando la elusión y evasión fiscal, así como la informalidad que incidía en una menor recaudación tributaria. Por lo anterior, lo que se buscó fue cerrar espacios a través de reglas y controles complejos que evitaran dichas prácticas.

Con la entrada en vigor del IETU, Domínguez (2009) precisa que uno de los aspectos importantes a considerar es la diferencia en las bases entre el impuesto ya existente ISR y el de nueva creación IETU, lo cual viene también a afectar la liquidez de la empresa, Por la diferencia en la base entre un impuesto y otro. Pérez Fernández (2009), Considera el IETU como uno de los impuestos de los cuales el Gobierno Federal pretende obtener la mayor recaudación. Este impuesto grava en forma directa a empresas o personas con actividad empresarial y no contempla exceptuar del pago de impuesto a ningún tipo de

empresas independientemente del ramo o actividad a que se dediquen, situación que marca una de las principales diferencias con la LISR.

De acuerdo al artículo 1ro. de la Ley del IETU, este nuevo impuesto, grava a las personas físicas y personas morales por los ingresos, por enajenación de bienes, prestaciones de servicios independientes, el otorgamiento del uso o goce temporal de bienes, con base a la generación de flujos de efectivo, determinando una base por el método de diferencia, entre ingresos menos deducciones, determinándose una base gravable que se multiplicará a una tasa del 17.5%. En el artículo 5 de la Ley en comento se señalan las deducciones que pueden realizar los contribuyentes del IETU, las cuales pueden ser entre otras: la adquisición de bienes, de servicios, o el arrendamiento temporal de bienes utilizados para realizar las actividades empresariales, o los gastos realizados en la producción comercialización o distribución de los bienes producidos por la empresa cuando estos den origen a ingresos por los que se deba pagar el Impuesto Empresarial a Tasa Única. De acuerdo con los artículos 8vo, 10mo y 11vo, de la Ley del IETU los contribuyentes podrán acreditar contra el impuesto empresarial a tasa única del ejercicio calculado, los siguientes cuatro tipos de créditos: Acreditamiento del IETU por deducciones superiores a los ingresos del ejercicio, acreditamiento por salarios y cuotas patronales, acreditamiento del ISR propio y acreditamiento por las inversiones realizadas entre 1997 y 2008. Así como otros acreditamientos previstos por el Decreto de beneficios fiscales en materia de ISR e IETU.

Tras haber realizado la presente revisión literaria, se hace conciencia que esta investigación resulta importante pues a diferencia de las publicaciones revisadas, las cuales se enfocan al ámbito de legalidad, la presente investigación aporta estrategias que pueden resultar de mucha utilidad para quienes se desarrollan o pretenden desarrollarse en el sector maquilador en México.

METODOLOGÍA

La investigación que se presenta es de corte cualitativo, es un estudio descriptivo de tipo documental. Los sujetos de estudio en esta investigación fueron la ley del Impuesto Empresarial a Tasa Única y la Ley del Impuesto Sobre la Renta, ya que ambas coexisten y se relacionan al momento de pagar los tributos en México. El procedimiento aplicado en esta indagatoria comenzó con la revisión de publicaciones sobre el tema de estudio. Posteriormente se analizó la normatividad que regula el IETU en México. Con base en la revisión literaria se pudo identificar el marco referencial y jurídico del tema tratado en esta investigación. Se llevó a cabo un análisis de la ley del Impuesto Empresarial a Tasa Única, así como un comparativo con el Impuesto Sobre la Renta, ya que ambas coexisten y se relacionan al momento de pagar los tributos en México. Posteriormente se plantearon y ejemplificaron con cifras reales aspectos como el impacto financiero de dichos impuestos en una maquiladora de Mexicali, Baja California. Se ejemplificó también la forma de calcular los impuestos, así como el efecto en la base gravable, al no considerar como deducibles todos los conceptos o bien la repercusión de considerarlos como créditos fiscales. El análisis realizado permitió elaborar conclusiones generalizables sobre la afectación financiera del IETU en las empresas maquiladoras.

RESULTADOS

A continuación se plantean y ejemplifican con cifras reales aspectos como el impacto financiero del ISR y del IETU en una maquiladora de la ciudad de Mexicali, Baja California, que para efectos de este trabajo denominaremos Compañía maquiladora Exportaciones de Mexicali, S. A. de C.V. La compañía realizó durante el mes de enero de 2009 las operaciones siguientes

Tabla 1 Cálculo Del Impuesto Sobre La Renta 2009

CONCEPTO	ENERO
Ingresos nominales de meses anteriores	
Ingresos nominales mensuales	269,201,897.02
Total Ingresos nominales acumulados	269,201,897.02
Coefficiente de utilidad	0.0065
Base Gravable	1,749,812.33
Tasa	28%
Utilidad Fiscal Estimada	489,947.45
Pagos provisionales del ISR pagados con anterioridad en el mismo ejercicio	0
ISR a cargo	489,947.45

En esta tabla se muestra el cálculo de pagos provisionales de ISR de Enero

Tabla 2: Cálculo del IETU 2009.

CONCEPTO	ENERO
Suma de Ingresos cobrados de meses anteriores del ejercicio	
Ingresos cobrados del periodo	133,609,740.96
Total de ingresos percibidos	133,609,740.96
Suma de deducciones autorizadas efectivamente pagadas meses anteriores	98,520,439.39
Deducciones autorizadas del periodo efectivamente pagadas	
Total de deducciones autorizadas efectivamente pagadas	98,520,439.39
Base gravable del IETU	35,089,301.57
Tasa del IETU 2009	17%
IETU mensual determinado	5,965,181.27
Menos: Acreditamientos	
Crédito fiscal (deducciones superiores a los ingresos)	
Acreditamiento por salarios y aportaciones de seguridad social	327,349.50
Crédito fiscal por inversiones de 1998 a 2007	70,510.87
Otros créditos fiscales decreto del 05 de Noviembre 2007	274,865.10
ISR propio del mes de que se trate (pagado)	489,947.45
ISR retenido del mismo periodo por el que se efectúa el pago provisional	0
IETU a pagar	4,802,508.34
Pagos provisionales del IETU pagados con anterioridad en el mismo ejercicio	
IETU a cargo	4,802,508.34

En esta tabla se muestra el cálculo de pagos provisionales de IETU de Enero

Se hace la precisión que para la determinación de los créditos fiscales de la tabla 2 se realizaron determinados cálculos, siendo el resultado del acreditamiento por sueldos gravados y aportaciones de seguridad social de enero 2009 \$ 327,349.50; el importe del crédito correspondiente por inversiones adquiridas del primero de enero de 1998 al 31 de diciembre de 2007 fue de \$ 70,510.87; el acreditamiento opcional del cinco de noviembre de 2007 para inventarios al 31 de diciembre del mismo año fue de \$ 274,865.10

CONCLUSIONES

Tras haber realizado la presente investigación se plantean las siguientes conclusiones: Primera. El diferencial de la remesa y los gastos efectivamente pagados no representa un ingreso que debe gravarse ya que no tuvo su origen en un proceso de compra venta entre la matriz extranjera y la maquiladora Segunda. Se confirma la importancia de la buena planeación financiera para lograr una mayor competitividad de las empresas mexicanas, ya que el IETU es una realidad Tercera. Es necesario que la empresa realice proyecciones futuras de los flujos de efectivo que impactarán al IETU y al ISR y así evitar una alta carga tributaria que merme posteriormente la solvencia y liquidez de la empresa .

Cuarta. El hecho de no poder acreditar en ejercicios posteriores los saldos a favor provocados por créditos fiscales, debido a que la empresa esta generando pérdidas o bien debido a que el crédito fiscal es superior al impuesto mensual determinado, va en detrimento del derecho de las empresas y de todo contribuyente de aplicar las deducciones a las cuales por ley tendría derecho al cumplir con todos los requisitos de deducibilidad que se enmarcan en la Ley del ISR. Quinta. Es importante para las empresas el seguir redoblando esfuerzos al realizar proyecciones de flujos de efectivo de manera continua, evitando así altos pagos de impuestos.

De las conclusiones anteriores se desprenden las siguientes recomendaciones para lograr que el Impuesto Empresarial a Tasa Única no impacte negativamente en las finanzas de las maquiladoras en México: 1) que se realice una buena planeación financiera en la empresa considerando el aspecto fiscal, con estrictos controles internos; 2) que se conozca la normatividad mexicana en materia tributaria, 3) que reciban el asesoramiento de especialistas en materia fiscal, y 4) que el monto de las remesas recibidas de la empresa matriz extranjera sean igual al monto de las erogaciones efectivamente pagadas en el mes, para evitar el pago de IETU producido por el excedente de la remesa..

RELACIÓN LÍDER-SEGUIDOR EN LAS ORGANIZACIONES EDUCATIVAS

Elizabeth Castro, Universidad del Zulia
Caterina Clemenza, Universidad del Zulia
Euclides Torres, Universidad del Zulia
Rubén Araujo, Universidad del Zulia

RESUMEN

El presente estudio tuvo como objetivo analizar la relación líder-seguidor en las instituciones educativas. El tipo de investigación es descriptivo de campo y el diseño es no experimental, transversal. La población estuvo conformada por docentes que laboran en la primera y segunda etapa de las Escuelas Básicas del sector número 4 del Municipio Maracaibo-Estado Zulia. Para la recolección de la información se utilizó la técnica de la encuesta y para tal efecto se aplicaron tres cuestionarios de preguntas cerradas. Los resultados determinaron que el estilo de liderazgo de los directores de las instituciones educativas es transaccional con tendencia hacia una dirección por excepción pasiva y 80% de los docentes como seguidores presentan un estilo pasivo y pragmático, de pensamiento acrítico dependiente. Como principal conclusión se establece que modelos de dirección transaccional generan modelo de seguidores pasivos, lo cual, afecta el desarrollo exitoso de los objetivos organizacionales.

PALABRAS CLAVE: Liderazgo, seguidores, estilos de seguidores

LA IMPORTANCIA DE PARTICIPAR EN ACTIVIDADES CULTURALES Y DEPORTIVOS

María Alicia Cervantes Avalos, Cuciénega Universidad De Guadalajara

INTRODUCCIÓN

El hombre aprende en ocasiones más significativamente de los momentos críticos que de éxitos, cuando este reflexiona sobre los hechos que lo llevaron al fracaso, problematiza y trata de buscar soluciones hasta que encuentra la mejor y la aplica. Consciente del acontecer que se da en nuestra casa de estudio se pretende dar a conocer inquietudes que surgieron de la observación realizada en el centro Universitario de la Ciénega T/M calendario “A” del 2009 en uno de los eventos deportivos y culturales realizados en esa Institución, donde se pudo constatar la escasa asistencia del alumnado, a los eventos culturales y deportivos. Toda vez que en el 2004 se tuvo un primer trabajo de investigación misma que sigue latente y preocupante por ello se planteo la siguiente Interrogante que dio la pauta para preguntarse “¿Por qué es escasa la participación de alumnos del Centro Universitario de la Ciénega en eventos culturales y deportivos organizados en la sede la Barca? tomando como referencia el periodo 2009 al 2010. La enseñanza va más allá de los contenidos programáticos ya que ello implica comprender todo lo que le rodea al alumno, conlleva ir acumulando experiencias bien sea de manera teórica o práctica, en la medida que docentes y personal administrativo involucren al educando en el entorno cultural y deportivo en esa medida van adquirir conocimientos o van a saber cosas nuevas y desconocidas para ellos, propiciando con ello el interés cada vez mayor por participar en eventos culturales y deportivos.

La tarea principal del maestro es enseñar, transmitir información e instrucción, pero también proporciona los recursos metodológicos para que las nuevas generaciones puedan interpretar la realidad circundante mediante la reflexión, el análisis de lo observado, su valoración, la detección de los problemas que la realidad entraña y las posibles soluciones de la vida, el maestro señala senderos, da camino, modifica conductas, hace conciencia y deja huellas trascendentes y positivas para toda la vida. Es ahí donde nos toca poner la mirada en los eventos de índole cultural y deportivo para no ser un simple profesor que solo llena horas, pasa lista, dicta resúmenes, recomienda lecturas, deja tareas y trabajos. Ya que un buen proceso enseñanza aprendizaje permite adaptarse al entorno, responder a los cambios y a las acciones que dichos cambios producen.

JUSTIFICACION

Todo trabajo de investigación requiere de sustentos y bases sólidas para fundamentar su objeto de estudio. Por ello es necesario hacer referencia del contenido que se desprende de la Ley Orgánica de la Universidad de Guadalajara capítulo primero de su personalidad y autonomía “art. 2. la Universidad de Guadalajara se rige por lo dispuesto en el artículo 3ro. Constitucional y demás relativos de la Constitución política de los Estados Unidos Mexicanos; la particular del estado de Jalisco; la legislación federal y estatal aplicables; la presente ley; y las normas que la misma deriven. Art. 6 Fracción III Realizar los programas de docencia, investigación y difusión de la cultura, de acuerdo con los principios y orientaciones previstas en el art. 3ro. De la constitución que dice:

“Formar y actualizar profesionistas, graduados y demás recursos humanos que requiera el desarrollo socioeconómico de la región en la que se encuentra; organizar, realizar, impulsar y difundir la investigación científica, tecnológica y humanista, así como rescatar, conservar y acrecentar la cultura.

“Preparar los profesionistas que demanda el sector social, gubernamental y productivo de esta región de Jalisco e incidir en su desarrollo económico y cultural” (Plan Institucional de Desarrollo visión 2000 2010). En esta sociedad global marcada por las inequidades, en donde el valor del conocimiento se

incrementa cada día y existe una creciente demanda por mayores niveles de educación. La investigación debe ser la fuente que nutra de conocimientos nuevos a la sociedad, al académico y al estudiante. La Universidad, a través de la ciencia y la tecnología, debe encontrar y poner en práctica con mayor agilidad nuevas soluciones para los problemas de ayer, de hoy y de mañana. Motivo por lo cual es preocupante tener una problemática de índole cultural y deportiva y la escasa participación a este tipo de eventos, por ello se tendrá los ojos puestos en esa línea de investigación.

OBJETIVO GENERAL

Obtener la información necesaria para conocer por qué es escasa la participación de alumnos del Cuciénega Sede la Barca T/M en eventos culturales y deportivos

OBJETIVOS PARTICULARES

- 1.- Conocer el número y tipo de eventos culturales y deportivos realizados en el Cuciénega
- 2.- Contar con el programa y cronograma de actividades para conocer el tipo y cantidad de eventos realizados en el Cuci del 2009 al 2010
- 3.- Obtener los registros de asistencia de alumnos a los eventos culturales y deportivos para calcular el porcentaje promedio
- 4.- Generar listado de indicadores que ayudará a identificar variables para la realización del instrumento de recopilación de información
- 5.- Detectar importancia que le daría el alumno al asistir a los eventos culturales y deportivos
- 6.- Recabar planes y proyectos de trabajo del periodo 2009 a enero 2010 para saber que instancias intervinieron y cuál es su proceso de organización

RESUMEN

A lo largo de la existencia se pasa gran parte del tiempo buscando culpables de los hechos que acontecen y que afectan a la población y la reputación de las personas, pero que hay de esa responsabilidad y compromiso que se tiene para con la sociedad, la institución, la empresa y la familia, para ello toda las personas en sus diferentes áreas del quehacer cotidiano debe sensibilizarse adaptarse al medio y actuar en beneficio de la ciudadanía en este caso la población estudiantil logra con ello cumplir con los objetivos y exigencias que nos pide el medio. La inquietud por un mundo mejor y más próspero para todas las personas ha sido una constante que se ha ido repitiendo a lo largo de la historia, el contemplar a la humanidad con un sentido global hace sentir una gran responsabilidad de lo que suceda al otro lado del planeta. Por otra parte la dimensión cultural de la persona también es un componente muy importante para su desarrollo y realización plena.

Sin duda la comunidad universitaria ha ingresado al nuevo milenio con una actitud diferente, más innovadora y consciente de los retos actuales y futuros que habrán de enfrentar como país, estado, municipio, institución y como individuos. Nuestra Institución está llamada a ser algo más que formadora de las futuras generaciones, los desafíos se han multiplicado y es mayor su compromiso, a través de diversas actividades, participa en la cruzada por un mundo mejor, más educado, y más justo. Se piensa y trabaja para lograr la sociedad que se requiere, no para mantener la que ya se tiene.

HIPOTESIS

- 1.- Continuamente se cambia de puesto al Coordinador de Extensión Universitaria por eso no se cuenta con programas y proyectos completos.
- 2.- No existen registros confiables que proporcionen información fidedigna. Acerca de los eventos culturales y deportivos realizados durante el periodo a estudiar
- 3.- A pesar de que no hay registros confiables podemos afirmar que la asistencia ha sido escasa
- 4.- Presentación de eventos que no son del interés del alumno

MARCO REFERENCIAL Y METODOLÓGICO

La investigación se realizará con un universo enmarcado en educación superior en el Centro Universitario de la Ciénega con alumnos del T/M sede la Barca, basada en el método hipotético deductivo por la razón de que se van a aplicar entrevistas y encuestas a 300 alumnos, docentes y personal administrativo, del Centro Universitario de la Ciénega Sede la Barca. Dando paso al método interpretativo donde las encuestas y entrevistas servirán de apoyo para obtener e interpretar y justificar el porque de la importancia de asistencia a los eventos culturales y deportivos y dar cumplimiento así con lo establecido en la Constitución Política de los Estados Unidos Mexicanos, la Ley Orgánica de la Universidad de Guadalajara y el Plan Institucional de Desarrollo 2000-2010 documentos donde se sustenta la participación a los eventos culturales y deportivos de nuestro Centro Universitario.

CONCLUSIONES Y RESULTADOS

La investigación no es producto de la casualidad es producto de la responsabilidad que cada uno de nosotros debemos de poseer, ahora corresponde introducir al alumno en su quehacer cotidiano como parte fundamental de su formación, ya sea en cualquiera de los equipos o talleres siguientes: Equipo de fútbol, básquet, voleibol femenino y varonil, taekwondo, ajedrez, montañismo, banda de guerra, escolta, taller de danza moderna, taller de música. Los beneficios que traerá consigo son los siguientes:

- a) A nuestro Rector General ayudará a cumplir con los fines, atribuciones y funciones de la UdG establecidas en la Ley Orgánica de la Universidad, misión, objetivos, estrategias y sus metas, que serán el reflejo de su lucha y capacidad, para crear estudiantes activos.
- b) A las autoridades del Centro Universitario ayudará a dar cumplimiento de sus objetivos, estrategias y metas en lo establecido en el Plan Institucional de Desarrollo 2000-2010, favorecerá en la vinculación con otras Instituciones y además mayor prestigio e imagen.
- c) Al pueblo en general en la conservación y fomento de las tradiciones y la cultura tendientes a preservarla por generaciones, así mismo, incrementar el ingreso de estudiantes o matrícula en la Sede la Barca
- d) Al docente quien es parte fundamental en la formación del estudiante se sensibilizará para que participe en la preservación y difusión de la cultura, contribuyendo en las actividades organizadas por nuestro Centro Universitario ya que con ello cumple también con lo que establece la Ley orgánica de la Universidad de Guadalajara en el capítulo II del personal académico y administrativo, art. 14 y 17 fracción I, II y III
- e) Al objeto de estudio y motivo de investigación que son los alumnos este programa beneficiará el hecho de que se tenga una participación activa ya que al asistir a los eventos evitará que se caiga en vicios o

drogas, evitaría la delincuencia, violencia intrafamiliar que tarde o temprano contribuyen para que nuestra salud este en óptimas condiciones logrando una formación plena y satisfactoria, Se propiciará en el alumno el espíritu de participación en las actividades escolares o extraescolares propuesto en la ley orgánica de la Universidad de Guadalajara, Capítulo III de los alumnos, art. 21 Derechos y obligaciones. Fracción V “Realizar actividades en beneficio de la Institución, fracción VI, Estudiar y cumplir con las demás actividades escolares o extraescolares derivadas de la ley orgánica de la Universidad” (Ley Orgánica de la Universidad de Guadalajara segunda edición 2003)

El hecho de haber orientado el trabajo hacia la escasa asistencia del alumno en eventos culturales y deportivos del Cuciénega T/M periodo 2009 a 20010 organizados por esta Institución, es mas que nada para que el alumno se sensibilice y aprenda a considerar a la escuela como una oportunidad para saber mas cosas sobre el mundo que le rodea, ya que el aprendizaje social es la base de la identidad personal o individual de uno mismo y para con los demás, la asociación con otras personas es una meta y que el hecho de alcanzarla sirve para reforzar la conducta que se orienta a la convivencia con otros.

Cada ser humano percibe diferencias de constitución biológicas las cuales se caracterizan como vigorosos, pasivos, hipersensibles, alertas o soñolientos, y estos tienen expectativas tamizadas por criterios personales mismos que se vieron reflejados en el primer diagnóstico obtenido de alumnos del Centro Universitario de la Ciénega T/M, aplicado en el 2004 y del cuál se obtuvo lo siguiente: Eventos carentes de interés. Falta de difusión previa a la realización del evento Cuando se pregunta en las oficinas sobre la programación de eventos se desconoce de los mismos Un maestro no otorga el permiso de salida a los alumnos Los eventos se realizan en horarios no accesibles No se respeta hora del evento, no se sabe la continuidad de los eventos Los aspectos anteriores son algunos de los factores determinantes a analizar y considerarlo como un nuevo estudio que aportará elementos teóricos y metodológicos que permitan a docentes, alumnos, directivos, tutores y todo el personal una comprensión objetiva del problema.

Invitando al alumno a ir más allá del salón de clases y que se fomente en él la cultura bien sea expresada en la música, danza, literatura, artes manuales, teatro, dibujo, pintura, fotografía, donde se atienda la legítima necesidad humana de libertad de expresión. Entre otras propiciando la integración de algún equipo deportivo. Por ello es necesario lograr la sensibilidad de todos lo que intervienen en la formación del estudiantado para fomentar y rescatar nuestras tradiciones, fortalecimiento de nuestra identidad, la cultura universal, mismas que se establecen en el plan Institucional de desarrollo dentro de la visión que se espera del 2004 al 2010 el actuar nos lleva a cumplir con los objetivos que persigue el Cuciénega, por lo cual debe ser un ejemplo a seguir para que surjan nuevos espacios o se fortalezcan los existentes donde sea posible apoyar las manifestaciones, de cultura no oficial y ¿contra cultura? que serán el semillero de formas nuevas de crear, de pensar y de ser.

LA ADMINISTRACIÓN APLICADA EN UN MODELO DE DESARROLLO DEL CAPITAL HUMANO

Oscar Alessandro Mallen Ramos, Universidad Autónoma de Coahuila
Clara Patricia Buentello Martínez, Universidad Autónoma de Coahuila
Nemecio Lorenzo Valenzuela Salazar, Universidad Autónoma de Coahuila

RESUMEN

Las condiciones actuales en las que las organizaciones están poniendo de relieve la importancia que implica el correcto y apropiado uso del recurso humano dentro de las mismas con el fin de buscar las ventajas competitivas que mantengan nuestra organización dentro del mercado globalizado al que han sido expuestas, mas sin embargo actualmente la selección de las herramientas de preparación de nuestros recurso humano juega el papel más importante y clave dentro la estrategia de negocio. El desarrollo de un correcto Modelo de Capital Humano se ha convertido en la mejor herramienta de la actualidad. Las Organizaciones mediante estos Modelos correctamente aplicados a creado un proceso de reciprocidad Empleado –Empresa propiciando un vínculo de ganar-ganar y en consecución, en el cumplimiento de los planes estratégicos de la organización a la vez que vemos materializadas nuestras necesidades como humanos. El presente trabajo presenta el modelo utilizado en una empresa manufacturera de clase mundial del ramo automotriz, siendo la base del mismo el modelo de Sistema Rassiní de Dirección por Calidad Total siendo a su vez el Premio Nacional de Calidad la base el anterior.

INTRODUCCIÓN

Ante los sucesos que hoy en día estamos presenciando es imperativo el plantearnos la siguiente pregunta: ¿Vivimos en una época de cambios, o vivimos un cambio de época? Las profundas transformación que acompañan a la acelerada introducción del mercado global en nuestro entorno de vida sin duda alguna nos hace preguntarnos que es lo que estamos viviendo, hacia donde nos dirigimos y cuál es nuestro destino en este entorno cambiante que avanza a pasos agigantados sin darnos tregua alguna, el entorno contemporáneo sin duda alguna se caracteriza por profundos y vertiginosos cambios en todos los ámbitos que nos rodean, aspectos culturales, religiosos, sociológicos, socioeconómicos y de conocimiento han propiciado un cambio en la perspectiva de cada uno de nosotros, esencialmente las nuevas tecnologías de la información y la comunicación (NTIC) han definido el rumbo de nuestra nueva era, el proceso de globalización de las economías han cambiado las formas de la competencia empresarial, las cuales están dominadas actualmente por los activos intangibles y por personas, personas que o bien componen estos activos o mejor aun los utilizan en pro de la competitividad. Por dicha razón actualmente la administración y el desarrollo del Recurso Humano en las empresas se han convertido en un componente estratégico.

Quizás suena como una paradoja el mencionar que en esta “nueva era” los nuevos retos y desafíos de las organizaciones las han empujado a regresar a las bases de la competitividad y la sustentabilidad mediante la creación de nuevos modelos de Desarrollo del Capital Humano, convirtiendo estos sin duda alguna en una de las principales fuentes de ventajas competitiva sostenible en las empresas. Con este enfoque la administración del Recurso Humano y su gestión se ha convertido en el fundamento de la competitividad moderna, demostrando que el recurso humano marca la diferencia en el funcionamiento de las organizaciones. Las organizaciones de clase mundial y con un enfoque globalizado, fomentan el desarrollo de su personal que la integra y reconocen que su única ventaja tanto interna como externa es la de construir una organización en pro del desarrollo socio-económico de sus empleados, esto lo realizan sin duda alguna creando una organización en aprendizaje permanente, realizando cambios en los sistemas

de gestión de proceso, calidad, servicios, estructurales, ambientales de aprendizaje de calidad de vida, claro está todo esto enfocado en mantener un liderazgo claro y una visión compartida. SANLUIS RASSINI en México a entendido esto y a emprendido un sistema de Dirección por la Calidad Total en cual está enfocado entre otros aspecto al correcto desarrollo de su personal en todos los niveles de la Organización, con un objetivo claro y entendido, el crear la ventaja competitiva que requiere nuestro entorno.

Perfil De La Organización

Rassini Piedras Negras está ubicado en la ciudad de Piedras Negras, Coahuila, México; localizada en esta ciudad fronteriza al noreste del estado de Coahuila, somos una empresa dedicada al Diseño y fabricación de componentes para suspensiones automotrices, tales como muelles parabólicas, muelles multihojas, barras de torsión y resortes. Es el diseñador y Fabricante de muelles para vehículos ligeros más grande del mundo. Ha obtenido diversos galardones de sus clientes: "Q1" de Ford; "Yushu Shoh", "Quality Master", "Most Improved Supplier" y "Cero Defectos" de Nissan; "Achievement of Quality Target" de Nummi; Certificate of Quality Achievement" de Toyota y el "Gold Award" de Chrysler. Y por 9 años consecutivos obtuvo el premio "Proveedor del Año" de General Motors, posicionándose en un selecto grupo de 20 empresas internacionales de una base total de 3,700 proveedores que tiene la armadora a escala mundial, en obtener dicho reconocimiento permanentemente.

Cuenta con la certificación internacional ISO/TS-16949, ISO-14001 y Certificado como Industria Limpia, otorgado por la Secretaría de Medio Ambiente y Recursos Naturales a través de la Procuraduría Federal de Protección al Ambiente (PROFEPA-MEXICO). El Sistema Rassini de Dirección por Calidad Total (SRDCT) ¹ responde a la convicción del Grupo Directivo de adoptar nuevos esquemas administrativos para mantener la competitividad de las empresas en el largo plazo y contribuir de esta manera al logro de su Visión. El SRDCT ha integrado los requerimientos de la norma ISO/TS-16949 y está sustentado en los siguientes puntos: Calidad Total, Mejora Continua, Liderazgo, Enfoque Sistémico, Conocimiento, Alianzas e Impacto Social. Es en específico en El SRDCT donde la organización ha plasmado la Administración del Recurso Humano con el firme propósito de propiciar el desarrollo humano y la alineación estratégica de los sistemas que lo integran, y esto lo ha realizado al implementar lo que se denomina: "Administración y Desarrollo del Capital Humano".

La Administración del capital humano produce grandes impactos en las personas y las organizaciones. La manera de tratar a las personas, buscarlas en el mercado, integrarlas y orientarlas, hacerlas trabajar, desarrollarlas, recompensarlas, o monitorearlas y controlarlas, en otras palabras administrarlas en la organización es un aspecto muy importante en la competitividad organizacional, según lo escrito por Gary Dessler (1996)², el cual afirma que los procesos básicos de la Administración del Capital Humano son 5 los cuales son:

Proceso de provisión de Capital Humano.

Objetivo: Quien ira a trabajar en la organización

Proceso de aplicación del capital humano

Objetivo: Que harán las personas en la organización.

Proceso de Mantenimiento del capital humano.

Objetivo: Como mantener a las personas trabajando en la organización

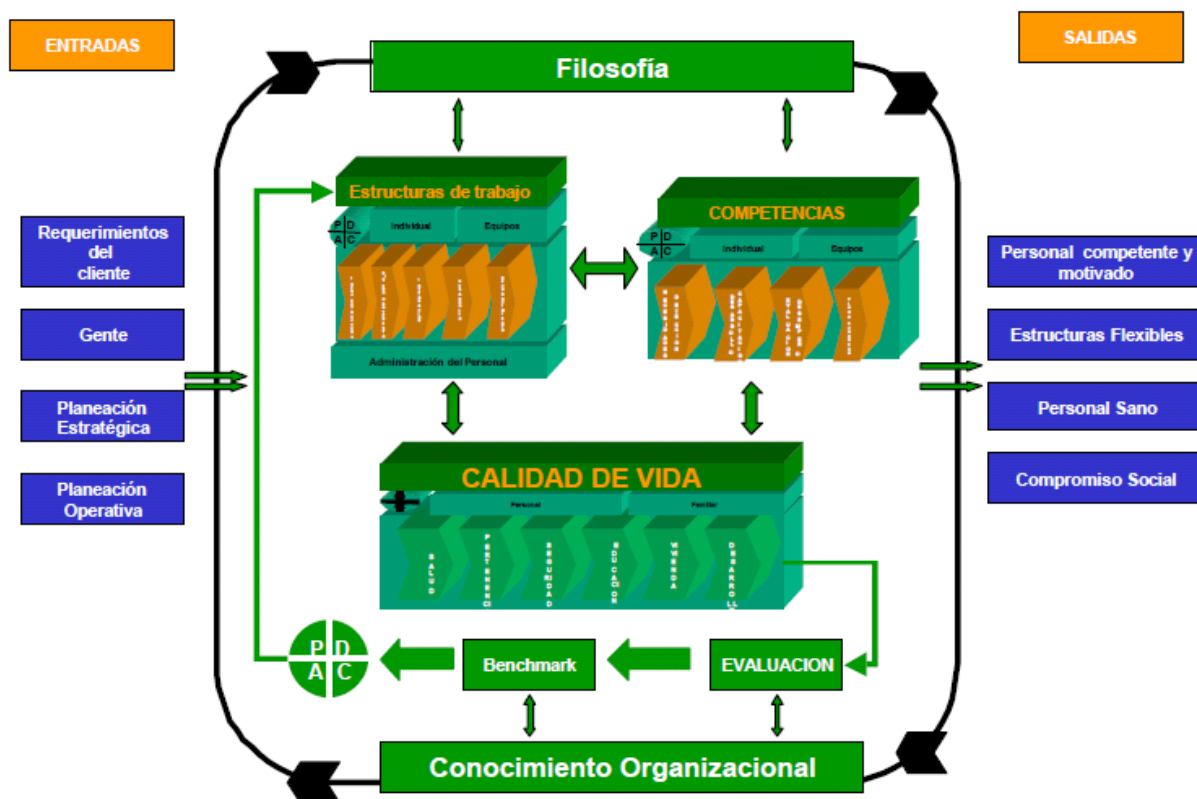

Proceso del Desarrollo del Capital Humano

Objetivo: Como preparar y desarrollar a las personas

Proceso de Seguimiento y Control del Capital Humano

Objetivo: Como saber quiénes son y que hacen las personas

Provisión, aplicación, mantenimiento, desarrollo y seguimiento del capital humano con cinco procesos interrelacionados estrechamente e interdependientes. Cualquier cambio producido en uno de ellos influye en los otros, lo cual originaría nuevos cambios en los demás y generara adaptaciones y ajustes en todo el sistema. Constituyen un proceso global y dinámico en el cual el capital humano es captado y atraído, empleado, mantenido, empleado, desarrollado y controlado por las organizaciones. El siguiente esquema presenta de manera general como se integra este modelo de Capital Humano y la relación que mantiene con cada uno de los focos de interés de la organización. (Ver Esquema No. 1)

Esquema No.1 “Administración Y Desarrollo Del Capital Humano”

El propósito del esquema es el propiciar el desarrollo del personal tanto en su vida laboral como personal, alineado esto a las estrategias del negocio; de manera tal que garanticen el desarrollo de la organización y generen ventajas competitivas así como una mejor calidad de vida para el personal y la comunidad. El modelo del Sistema de Administración y Desarrollo del capital humano, integra los principales procesos y mecanismos a través de los cuales logramos hacer cumplir nuestro propósito, tal como se observa en el modelo son:

- Estructuras de Trabajo
- Competencia
- Calidad de vida

CONCLUSIONES

El entorno contemporáneo se caracteriza por una gran rapidez de cambio en las tecnologías, una economía mundial globalizada que permite conseguir la presencia de los productos o servicios en el mayor número de mercados posible y en un corto plazo de tiempo, un incremento de la cultura económica del consumidor o cliente que exige cada vez mayores niveles de excelencia al producto o servicio, y la incorporación de activos intangibles (como el conocimiento y la información) como elementos que mayor valor añaden al producto o servicio. En la práctica empresarial tradicional los activos materiales y financieros o la tecnología eran considerados la base del éxito y del valor de la empresa, sin embargo, estos elementos no suponen ya una ventaja competitiva para las mismas.

En las empresas de hoy los recursos humanos se convierten en el principal activo a los cuales debe atraer, desarrollar, motivar, conservar y proteger; y su correcta gestión deviene en un requisito indispensable para la competitividad organizacional. El enfoque moderno de Dirección de Recursos Humanos concibe al capital humano como una fuente de ventaja competitiva sostenible. Los nuevos modelos de gestión de este activo intangible perciben a los recursos humanos como una inversión y no como un costo.

RECOMENDACIONES

Las empresas actuales deben modificar los patrones clásicos de la organización del trabajo e incorporar en su oferta de productos o servicios cada vez mayor nivel de factores intangibles, teniendo en cuenta que el capital humano es importante como base generadora y potenciadora de las capacidades distintivas de las organizaciones. Debemos diseñar estrategias que fomenten de manera constante y continua el desarrollo social de las personal, esto mediante el impulso al talento, al aprendizaje, la creatividad y la innovación, la calidad en el seno de las organizaciones. Promover la comunicación, el liderazgo y el trabajo en equipo en aras de multiplicar el efecto de generar ventajas competitivas a través de los recursos humanos. Si logramos esto estaremos contribuyendo en gran medida al desarrollo social de las personas mediante la correcta aplicación de la Administración de la calidad total.

MODELOS PEDAGÓGICOS EL CASO: PROGRAMA DE POSTGRADO DE MAESTRÍA EN ADMINISTRACIÓN FACULTAD DE CIENCIAS DE LA ADMINISTRACIÓN UNIVERSIDAD DEL VALLE

Benjamín Betancourt Guerrero, Universidad Del Valle

Iris María Vélez Osorio, Universidad Del Valle

RESUMEN

El objetivo principal del presente artículo es describir el modelo pedagógico del programa académico de Maestría en Administración de la Facultad de Ciencias de la Administración de la Universidad del Valle, Colombia; que se desarrolla desde hace 45 años (creada en 1964) y tiene como meta la formación de gerentes capaces de liderar y gestionar organizaciones inmersas en entornos globales, competitivos y dinámicos, manteniendo siempre al ser humano como eje fundamental y razón última de todas las organizaciones sociales; de éste modo formar ejecutivos en procesos de investigación y de profundización del conocimiento, orientados a la solución de problemas teóricos, disciplinarios, interdisciplinarios o profesionales en el campo de la Administración de Empresas. Es así como la Maestría de Administración se constituye en la base para la creación y desarrollo del Doctorado en Administración dentro de la Facultad de Ciencias de la Administración. Los ejes que estructuran el modelo pedagógico de la Maestría que permitieron la Acreditación en alta Calidad (2008) de la Maestría son: clases magistrales, participación activa, interacción con la academia internacional y el sentido humano. Por tanto, los elementos temáticos que alimentan el modelo pedagógico de la Maestría en Administración corresponden a un fuerte componente teórico en administración, gestión y áreas humanas sumado el énfasis en investigación que permite a los profesionales egresados desempeñarse como investigadores, consultores y asesores de las ciencias administrativas. Se pretende entonces describir el modelo pedagógico de la Maestría en Administración para la consideración de la comunidad académica comprometida con la formación y el desarrollo social y económico a partir de la formación superior.

PALABRAS CLAVE: Educación, Modelos Pedagógicos, Maestría en Administración.

INTRODUCCIÓN

El programa de Maestría en Administración de la Universidad del Valle, responde a un compromiso institucional de la Universidad del Valle con la región y su sociedad. La tarea inmediata del programa de Maestría en Administración de Empresas es cumplir con su misión, la cual está apoyada en los principios y valores definidos por la Universidad del Valle: el respeto y el interés colectivo, la libertad de enseñanza, la investigación y la difusión del pensamiento en el ámbito del pluralismo ideológico y diversidad cultural que ha hecho posible la promoción de la crítica y el debate público, la integralidad en la formación, el compromiso con la paz, la democracia, la defensa del interés público, el ejercicio de los derechos humanos, la promoción de los deberes civiles y el desarrollo de la civilidad.

FUNDAMENTOS TEÓRICOS

La Educación definida como un proceso de socialización, de asimilación de los nuevos miembros de una sociedad a las reglas, valores, saberes y prácticas denota un aspecto ético indisoluble, pues permite seleccionar lo que es digno de ser aprendido, practicado y transmitido de una sociedad a otra. Por tanto al hablar de la educación, no es posible desconocer su carácter axiológico, pues la educación se convierte en

el campo donde los humanos se preguntan por su condición. De ésta forma el campo educativo permite la mirada crítica sobre los valores y prácticas que la sociedad construye y valida. Por lo anterior todo modelo educativo es la imagen del tipo de sociedad donde se desarrolla, al igual que el modelo educativo es la base para reproducir los valores sociales, culturales, políticos, religiosos, éticos. En consecuencia el modelo educativo y el modelo de sociedad se correlacionan y ambos son el producto del pensamiento. No obstante, hay que tener presente que la educación actúa sobre un sujeto que es pluridimensional, por tanto la educación no es una simple forma de adiestramiento, por el contrario se funda en la libertad del hombre. Ahora bien, cuando se habla de educación en administración, se hace referencia al estudio y conocimiento de la administración; conocimiento que se ha concebido, durante largo tiempo como un conocimiento práctico, concreto, útil al administrador deseoso de realizar eficazmente su tarea; concepción reduccionista del conocimiento administrativo que considera (reduce) la administración al arte de administrar bien. Sin embargo, la idea de un conocimiento amplio, complejo, desinteresado, teórico, “científico” en suma, de la administración ha aparecido más recientemente (últimas décadas del Siglo XX) y la ruptura epistemológica que ella supone en relación con esa actitud anterior.

Así, la administración se presenta en nuestros días como un conjunto de discursos fragmentados, estratificados en el tiempo y yuxtapuestos en el espacio, más bien que reunidos en un proyecto global y articulados en torno a una problemática coherente, hasta el punto de que cabe legítimamente preguntarse que autoriza a hablar de una ciencia en singular, y también, simplemente, de ciencia. No es fácil, en efecto, captar lo que hay a priori de común entre el discurso de los juristas sobre el Estado y sobre las normas jurídicas de la empresa, el de los funcionarios sobre la práctica diaria, medición de los procesos, el de los sociólogos acerca de la burocracia, los teóricos de la estrategia, la mejora continua, el de los economistas sobre mercados o aún el de los empresarios sobre las técnicas decisorias – los antropólogos sobre la cultura organizacional– discursos que, no obstante, representan, cada uno a su manera, una parte del saber acerca de los fenómenos administrativos. ¿Es posible descubrir, entre sus respectivos enunciados, un mínimo de vínculos que permitan afirmar que pertenecen a una misma clase de conocimientos y dan cuerpo a la hipótesis de la unidad de la Administración?. En todo caso, la Administración aparece hoy como una nueva disciplina que reclama su autonomía y reivindica el estatus de ciencia social de pleno derecho.

Antecedentes 45 Años 1964 – 2009

Es indudable que la educación en administración en Colombia ha tenido un vertiginoso desarrollo en los últimos 25 años. Ha sido grande y numerosa la forma en que se han ido creando programas de administración en pre y posgrado, no solamente en las grandes capitales, sino aún en ciudades intermedias que supuestamente demandarían en menor grado, este tipo de profesionales. Naturalmente, a nivel de los programas de posgrado, y en particular las maestrías en administración lo han hecho con menor velocidad en razón a las particulares exigencias en investigación y profesorado de éste tipo de programas. Entre las razones para éste importante desarrollo están, de un lado el rápido crecimiento del conocimiento en las diferentes áreas de las disciplinas administrativas cuyo progreso, a nivel de los países desarrollados, ha generado una transferencia de dichos conocimientos en nuestros países. En segundo lugar, los impulsos al desarrollo económico y social de países como Colombia, en los cuales, su aparato productivo e institucional ha crecido enormemente y por lo tanto la demanda de profesionales en todas las áreas se ha incrementado significativamente lo cual ha llevado a que haya crecido de manera vertiginosa la oferta de programas administrativos.

El Programa de Maestría se creó con el nombre de Magíster en Administración Industrial en el año de 1964, con la asesoría del Georgia Institute Technology de los Estados Unidos (Instituto Tecnológico de Georgia), como respuesta a la iniciativa de lo más selecto de la dirigencia vallecaucana de la época que consideraron fundamental mejorar los conocimientos y habilidades gerenciales de los directivos empresariales del momento, partiendo de un profundo respeto por el ser humano a la vez que se buscaba

la formación de líderes con un compromiso social de desarrollo para con la región y el país. Con éste sello que imprimieron gestores de éste importante programa, se conserva en la actualidad la Maestría en Administración contribuyendo de manera significativa a que nuestro departamento cuente con la posibilidad de formar dirigentes empresariales preparados para afrontar con eficiencia y competitividad las exigencias del mundo global. Además de contar con la asesoría del Instituto tecnológico de Georgia, contó con la Fundaciones Ford y Rockefeller; desde sus inicios se distinguió de los MBA norteamericanos, puesto que se inspiró en una filosofía diferente derivada de los postulados de Roderick O'Connor y Peter Drucker, quienes visitaron el programa en calidad de profesores invitados. Éste direccionamiento se podría sintetizar en que se provee al alumno una formación integral para entender y gobernar el "Estratégico Capital Humano" de las empresas.

En las décadas siguientes, el programa continuó su contribución a la formación de cuadros organizacionales matizando la filosofía del currículo del programa y fortaleciendo su orientación académica, incorporando concepciones asociadas a la efectividad empresarial, sin dejar de lado el componente humanista que es una de sus más fuertes ventajas frente a las demás orientaciones académicas de los otros programas ofrecidos en el país.

El Estado Actual De La Formación En El Área Del Conocimiento

Frente a la multiplicidad de los discursos que reclaman para sí a la Administración, podríamos sentirnos tentados a abandonar la búsqueda de un ilusorio principio de unidad ligándonos entre sí, y aceptar la idea de que no hay una ciencia administrativa sino tantas disciplinas (por ello se habla de ciencias de la administración, en la Universidad del Valle la Facultad se llama: "Facultad de Ciencias de la Administración") como discursos distintos en el dominio mal circunscrito de los estudios administrativos. No obstante, vemos poco a poco emerger, sobre la base de éstos conocimientos heterogéneos, una disciplina que se constituye en ruptura por referencia a ellos, pero sin borrar todas las ideas, todas las nociones, todos los conocimientos que ellos traen consigo. La Administración aparece en ésta perspectiva como una "ciencia social todavía en gestación, cuyo objeto no es una realidad ya existente, lista para ser estudiada, sino que pide ser reconstruida a la luz de una problemática teórica específica, y que, para responder a los criterios de la cientificidad, debe al mismo tiempo superar un cierto número de obstáculos epistemológicos y forjar los instrumentos de análisis adecuados" (Chevalier, 1983).

En la actualidad la Universidad del Valle ofrece el programa de pregrado en Administración de Empresas y la Maestría en Administración, los cuales tiene una trayectoria académica de muchos años y están suficientemente probados en su efectividad para satisfacer unas demandas específicas de la comunidad. Con la gran cantidad de egresados (Al cierre de 2008, la estadística registra algo de 1.000 graduados) que desde 1964 han formado la Maestría en Administración, puede dar testimonio de su contribución al desarrollo de la región y el país. Un aspecto importante de las características del estado actual de la formación en administración en la Universidad del Valle, es que el desarrollo de la Facultad cuyo origen se fundamentó en el programa de la maestría, ha venido consolidándose a través de importantes avances en el desarrollo del conocimiento y la investigación en las disciplinas administrativas. Y a decir verdad, se han constituido en una masa crítica de profesores e investigadores que han contribuido y contribuyen de manera significativa, al desarrollo del conocimiento administrativo tanto en la universidad como a nivel nacional e internacional.

El programa de pregrado en Administración de Empresas tiene por objetivo formar profesionales en el ámbito de la Administración. El programa de Maestría se orienta más a la fundamentación conceptual, y al fortalecimiento de la formación y la investigación en las temáticas propias del saber administrativo. Así, el conjunto de programa de formación universitaria y de postgrado de la Facultad de Ciencias de la Administración, proporciona un abanico de opciones de formación académica, dirigidas a diferentes públicos con demandas educativas claramente diferenciadas.

Con respecto al estado actual de la formación en el área de conocimiento, se identifican a nivel mundial dos ejes en torno a los cuales gira la enseñanza de la Administración: el enfoque clásico anglosajón, donde la formación está vinculada a una construcción teórico-práctica de la Administración, y el enfoque francés, que aunque también incluye una construcción teórico-práctica, se basa más en un enfoque crítico, de fundamentación conceptual de diversas disciplinas y con una visión humanista, en la Maestría en Administración se estudian ambas perspectivas.

Características de la Formación: La formación en la maestría debe propender por proveer a sus egresados con los conocimientos, las capacidades, las competencias y los instrumentos técnicos necesarios que le permitan enfrentarse a situaciones no estructuradas en el ámbito empresarial y en su contexto, de tal manera que le permita buscar alternativas de solución a los problemas que enfrentan condicionados por las cambiantes necesidades de orden social, económico y empresarial en un ambiente global más competitivo. En este sentido, el proceso formativo en la maestría contiene propuestas y alternativas pedagógicas y académicas para la enseñanza y la investigación que le permiten contribuir de manera eficaz a la formación de profesionales capaces de enfrentar cada vez nuevos retos gerenciales o del contexto en que se desenvuelven.

OBJETIVOS DE INVESTIGACIÓN

Describir el modelo pedagógico del programa académico de la Maestría en Administración y tiene como propósito la formación de gerentes capaces de liderar y gestionar organizaciones inmersas en entornos globales, competitivos y dinámicos, manteniendo siempre al ser humano como eje fundamental y razón última de todas las organizaciones sociales.

METODOLOGÍA

En la presente investigación se utiliza la metodología analítica correlacional, es decir, se descompone el objeto de estudio partiendo de lo más complejo a lo más simple, para luego recomponer un sistema conjunto. En éste caso se trata del Modelo Pedagógico de la Maestría en Administración, es descriptiva porque se caracteriza el modelo pedagógico y se explica su aporte al desarrollo social y económico del país.

ANÁLISIS DE DATOS

La Maestría en Administración está dirigida a un grupo de profesionales provenientes de diferentes disciplinas que buscan complementar su formación o profesionalizarla en los campos de la administración y la gerencia. Estos profesionales experimentan un proceso de transformación real en su formación y en su estructura profesional que les permite tener un desempeño más eficiente y más competitivo en los roles administrativos que por circunstancias de su vida profesional deben o han debido afrontar aún sin tener ninguna formación específica del campo.

Por la Maestría han estado algo más de 2.000 participantes y se han graduado un poco más de 1.000 estudiantes (2008), la Maestría cuenta con tres versiones:

- 1) 1964 – 1984 Magíster en Administración Industrial, 20 cohortes
- 2) 1984 – 2004 Maestría en Administración de Empresas, 25 cohortes
- 3) 2004 a la fecha 10 cohortes

Hoy en el 2009 en los distintos módulos, cursos, semestres y en tesis están matriculados 400 estudiantes.

De ésta manera, la Maestría es un proceso muy formativo, que provee ciertas capacidades, que fundamentan en el saber administrativo y que genera una visión estratégica de liderazgo efectivo en sus egresados. Por ello el programa ha sido siempre una excelente alternativa de formación para diversos profesionales.

Principios Pedagógicos

La formación de administradores en la Universidad del Valle se orienta con base a tres tipos de principios básicos: uno que tiene como referente teorías cognitivas del aprendizaje (Edward Chace Tolman, Principios de la conducta propositiva, 1.959), otro cuyos referentes teóricos suelen asociarse con una filosofía humanística del aprendizaje (Carl Roger, On Becoming a Person, Houghton Mifflin, 1.961) y un tercero asociado a la teoría conocida como de modelado, imitación o aprendizaje social (Albert Bandura, Principles of Behaviour Modification, Nueva York: Halt, Rinehart y Winston, 1.969).

Principios básicos de la teoría cognitiva (Peñaloza, 2004):

- El alumno debe tener la posibilidad de examinar a fondo las características esenciales de un problema objeto de aprendizaje.
- Un objeto de conocimiento debe estar adecuadamente organizado para que el alumno pueda, en todo momento, tener visión de conjunto.
- La comprensión de un objeto de aprendizaje, su aplicación a la resolución de problemas abstractos y concretos, el análisis, la síntesis y la emisión de juicios de valor sobre ese objeto de conocimiento hacen que el aprendizaje sea más duradero y significativo.
- La capacidad de pensar en forma divergente (generación de ideas de soluciones ingeniosas) complementa la capacidad de pensar en forma convergente (identificación de ideas y soluciones lógicas).
- Se dice que la persona ha apropiado un objeto de conocimiento cuando ha sufrido un cambio significativo en su estructura cognitiva, en su motivación, en su identidad cultural y en sus habilidades.

Principios básicos de la teoría humanística:

- a. La persona en su totalidad, se involucra en el proceso de aprendizaje
- b. El alumno tiene iniciativa y motivación suficiente para abordar el aprendizaje de un objeto de conocimiento.
- c. El alumno tiene la suficiente capacidad para evaluar su propio progreso en el proceso de aprendizaje.
- d. La motivación y la personalidad del alumno están directamente relacionadas con sus posibilidades de abordar exitosamente la apropiación de un objeto de conocimiento.

Principios básicos de la teoría social:

- El aprendizaje es, en cierta medida, cultural y social.
- El ámbito dentro del cual se da el aprendizaje influye decididamente en la forma como el alumno se enfrenta a un objeto de conocimiento (competencia o cooperación, autoritarismo o democracia, individualismo o integración social).
- El alumno puede regular, en alguna medida, su propia conducta, mediante la representación mental de las consecuencias que esa misma conducta puede generar.

METODOLOGÍA DEL PROGRAMA

El programa de Maestría en Administración plantea el Seminario Alemán como método de enseñanza, que consta de exposición por parte del estudiante, ampliación o profundización del tema a través de clase magistral y ensayos escritos. Esta metodología ayuda al desarrollo de competencias para el trabajo en grupo, la comunicación tanto oral como escrita y competencias investigativas. Que son objetivos primordiales dentro de la política curricular de la Universidad del Valle.

El Seminario Alemán es un método que exige una participación muy activa por parte de los estudiantes. Consiste en que previa entrega de los materiales para su lectura, se asigna la responsabilidad de la presentación de los mismos en clase, por pequeños grupos o de manera individual.

Los estudiantes deben además, elaborar individualmente un informe de lectura para cada sesión. Las discusiones en el salón de clase son orientadas permanentemente por el profesor, para guiar y profundizar algunos conceptos que estén pendientes y en una segunda parte de la sesión, se retoma el debate, el profesor recoge la discusión y hace que los estudiantes reflexionen sobre su propia experiencia profesional y laboral a partir de la lectura y comprensión de los materiales entregados. El hecho de que las sesiones de clase sean de 4 horas, facilita la utilización del seminario Alemán como método pedagógico predominante.

Esta metodología, deriva de experiencias de aprendizaje metodológico y formación docente a través de los seminarios que los profesores hicieron a finales de los años 90 dirigidos por el Padre Alfonso Borrero, de la Universidad Javeriana. Se trata de un “saber hacer” que se encuentra prácticamente interiorizado por parte de los profesores de tiempo completo vinculados a la Maestría, en la mayoría de los casos, pero también se encuentra explícito en los programas que se le entregan a los estudiantes, en el capítulo correspondiente a la metodología mediante la cual se va a impartir el curso.

Esta metodología ha sido efectiva y ha tenido una amplia aceptación por parte de los alumnos, por las siguientes características:

Autonomía Intelectual y Aprendizaje Autodirigido: ésta metodología fomenta el aprendizaje y la autonomía intelectual de los estudiantes. Es de resaltar que casi en todos los cursos los estudiantes deben realizar trabajos escritos, análisis de textos, protocolos de lecturas, trabajos de casos sobre sus propias organizaciones o sobre organizaciones que ellos conozcan o en las cuales hayan intervenido.

Procesos de Tutoría y Orientación Individualizada: En cuanto al sistema de tutorías y orientación individualizada a los estudiantes, el programa pertenece a una unidad académica donde existen más de 52 profesores de tiempo completo, que en virtud del Reglamento Profesorado tiene obligatoriedad de dedicar un horario permanente de atención a los estudiantes. Todos los días están disponibles, no solamente de manera personal en sus oficinas sino a través de los medios electrónicos y de otros disponibles, como el fax, el teléfono y el correo electrónico a través de los cuales los alumnos puedan interactuar con los docentes.

MODELO PEDAGÓGICO

Para la Maestría en Administración de la Universidad del Valle, el ser humano es el eje fundamental y la razón última de todas las organizaciones sociales. Por ello la comprensión del ser humano desde un enfoque pluridimensional y el entender la responsabilidad social de las organizaciones, es el objetivo rector de la Maestría. Para ello el programa ha hecho una aprehensión rigurosa de las ciencias humanas, pues esta reflexión permite comprender desde una visión más integral las distintas facetas del ser humano y la forma como él se relaciona con el medio y con sus semejantes. En la medida en que el estudiante de la Maestría comprende a los otros, logra dimensionarse permitiéndole desarrollar competencias de liderazgo y trabajo en equipo.

De igual forma y siguiendo los lineamientos del Proyecto Institucional de la Universidad del Valle

de la necesidad identificada en la sociedad de generar nuevos conocimientos se hace una apuesta para formar un maestro capaz de desarrollar investigación, que a partir de los problemas pueda generar alternativas de solución en el campo administrativo y empresarial. Por ello dentro del currículo se ha dedicado para el componente de investigación un porcentaje importante, donde el estudiante adquiera los conocimientos necesarios para desarrollar investigación y nuevos conocimientos.

Con éstos elementos la educación en la Maestría en Administración pretende formar a un maestro que pueda desempeñarse como directivo y gerente porque habrán obtenido una sólida formación teórica y metodológica en las áreas de la administración y porque habrán desarrollado una alta capacidad reflexiva que les permitirá analizar y tomar decisiones que resuelva lo mejor posible los diferentes problemas del mundo empresarial. De igual forma, desempeñarse como profesionales investigadores, consultores y asesores de las Ciencias Administrativas porque habrán desarrollado capacidad de análisis y de investigación en el área de gestión y de la Administración de Empresas.

Por lo anterior, la pedagogía como metodología de la educación, ha sido orientada en su mayoría de acuerdo a los planes de curso a una pedagogía guiada por un enfoque de Doble acción o de Estructuración Coactiva, donde el sujeto es transformado, en última instancia, desde el exterior en forma preestablecida, pero se requiere que el estudiante ejecute una acción propia orientada. Consagra como protagonistas principal-no único-al educador (equipos de diseño), que aparece oculto, apareciendo como actor principal el propio estudiante (Peñaloza, 2004). De éste modo se puede caracterizar el modelo pedagógico desde un enfoque predominante de enseñanza que se identifica por:

El profesor es el principal agente pues hace que nos interese por:

- La formación académica de los profesores
- La experiencia docente y profesional
- La carrera profesional realizada y la categoría alcanzada
- Los reconocimientos y méritos obtenidos, el liderazgo alcanzado
- La reputación ganada como docente y personas
- La producción intelectual que tiene: los textos didácticos, los ensayos, artículos y libros de investigación escritos; las revistas publicadas con su aporte

Se preocupan por los contenidos impartidos:

7. El grado de calidad, rigor, vigencia y actualidad de los mismos
8. El pleno dominio de los contenidos académicos por el profesor
9. El cubrimiento de los temas del programa
10. Motivación, el estímulo

En cuanto a los métodos y procedimientos se enfatiza en:

- El grupo de clase
- Los métodos de exposición
- Las prácticas de laboratorio
- Los seminarios dictados por el profesor
- Las conferencias
- Las ilustraciones
- Las ejemplificaciones y la toma de notas
- Estimulación de los métodos directivos en el aula de clase

Medios, recursos y bibliografía básica:

- d. El espacio se distribuye en función de la actuación del profesor
 - e. Tablero y Marcador son los medios de más uso
 - f. Las ayudas audiovisuales, los libros y los insumos en general, incluso el acceso a talleres, a servicios de biblioteca, centros de documentación casi siempre están al mejor servicio del profesor
- Tiempo
4. Se invierte en la presentación de los temas por el profesor
 5. En cubrir los contenidos y el programa del curso
 6. En realizar las actividades presenciales de enseñanza en el salón de clase o en el laboratorio

RESULTADOS

Contribución Académica Y Social Del Programa

La Maestría en Administración de la Universidad del Valle se diferencia de manera significativa de los programas tradicionales de maestría en Colombia cuya mayoría tiene su fuente original en los MBA de Estados Unidos con las respectivas variantes adecuadas a la realidad de nuestro país. Desde sus inicios, la Maestría ha tenido como rasgo distintivo el considerar que en los estudios de administración y en el tratamiento de las disciplinas administrativas, el ser humano es un elemento central en el desarrollo de las organizaciones, es el recurso más preciado y por lo tanto la enseñanza y la investigación en administración debe asignarle una especial importancia. Adicionalmente ha sido tradición de la Facultad y del Programa dar mucho énfasis y prelación en la formación a los fundamentos conceptuales, teóricos y prácticos relacionados con las ciencias humanas que soportan y contribuyen al conocimiento administrativo. Esto, indudablemente, ha sido la impronta y la característica diferenciadora del programa y son justamente éstas características las que han hecho de la Maestría en Administración de la Universidad del Valle, un programa con un carácter diferente a los de los MBA tradicionales, lo que le ha merecido el reconocimiento de sectores empresariales y académicos del país y la región como un programa de sólida formación en las teorías administrativas y en las ciencias humanas que la soportan y la alimentan, de un carácter marcadamente humanista y de un enfoque de formación de dirigentes y líderes con visión estratégica, no solamente para el desarrollo de las organizaciones, sino también para la contribución de éstas al desarrollo de la región y el país.

Es así como los egresados de la Maestría poseen una sólida formación en administración, una visión de liderazgo y estrategia, un conocimiento del entorno competitivo de la empresa y las herramientas técnicas para la gestión eficiente de las organizaciones. Por esto, nuestros egresados se pueden desempeñar en una amplia variedad de cargos de dirección administrativa en organizaciones tanto privadas como públicas, asumir responsabilidades de direccionamiento estratégico, desarrollar actividades docentes e investigativas en el área y asumir la conducción de áreas organizacionales tales como: mercadeo, finanzas, recursos humanos, gestión empresarial y gestión de proyectos. Igualmente los egresados tendrán una sólida formación en valores éticos y morales de responsabilidad, rectitud, honestidad, compromiso, dedicación y trabajo, que les permitirá desempeñarse como gerentes y directores con un alto sentido de responsabilidad social.

Las consideraciones anteriores y muchas otras que podrían hacerse, permiten afirmar que la Maestría en Administración ofrece a sus estudiantes una excelente formación que les permite, no solamente, estar debidamente fundamentados con los conocimientos necesarios para el ejercicio de su función profesional, sino que los dota además de una visión de pensamiento estratégico junto con las modernas técnicas de gestión empresarial.

De ésta manera la Maestría en Administración contribuye significativamente al progreso y al desarrollo social y económico de la región y el país. Pero ha contribuido y sigue contribuyendo también de manera significativa al desarrollo del conocimiento administrativo, vinculando, cada vez más, a los estudiantes en las líneas de investigación de los grupos que posee la Facultad de Ciencias de la Administración.

Finalmente, sin lugar a dudas, existe un amplio reconocimiento en los medios académicos y empresariales sobre la calidad de la maestría. Esto se materializó recientemente cuando en diciembre del año 2005 la Maestría recibió el Premio de la AUIP (Asociación Universitaria Iberoamericana de Posgrado) a la calidad del Posgrado y el Doctorado en Iberoamérica. El Premio es un reconocimiento a la calidad de los programas de formación avanzada que ofrecen las instituciones asociadas al sistema AUIP. El Premio pretende potenciar los esfuerzos institucionales que se están haciendo para mejorar la oferta académica y de paso estimular su mejoramiento cualitativo, también tiene el propósito de promover en las instituciones asociadas los requisitos mínimos de calidad que aseguren un adecuado nivel de competitividad, reconocer públicamente los logros alcanzados por los programas, premiar a aquellas instituciones o programas que demuestren interés en permanecer activos aplicando una estrategia de mejoramiento continuo, facilitar los procesos de autoevaluación y de evaluación externa y divulgar las estrategias institucionales exitosas en pos de la calidad de sus programas de formación avanzada.

Por lo anterior, se puede afirmar que las características distintivas del programa de Maestría en Administración de la Universidad del Valle son las siguientes:

- α) Una sólida estructura formativa que se fundamenta en la conceptualización esencial de las disciplinas administrativas, constituyéndose en la base conceptual que le permitirá al egresado enfrentar la complejidad del mundo organizacional contemporáneo.
- β) Una formación en el pensamiento y la visión estratégica de liderazgo como forma de enfrentar los retos en la dirección de las organizaciones.
- χ) Desarrollo de las habilidades y competencias necesarias para administrar las organizaciones y para generar propuestas que permitan su desarrollo e inserción en un mundo globalizado.
- δ) Un modelo de formación que enfatiza el papel protagónico del estudiante como principal artífice de su formación centrando su interés en el aprendizaje.

CONCLUSIONES

El programa de la Maestría en Administración como parte integrante de la Universidad del Valle, ha adoptado la idea de una educación integral, donde el concepto de formación y de integralidad son ejes fundamentales del desarrollo del proceso pedagógico. Por tanto, la formación integral entendida como “el desarrollo de las potencialidades del ser humano, el cometido fundamental del quehacer institucional consistiría en que sus egresados sean conscientes del tiempo y del espacio en que viven, del contexto social y cultural” (kjkas, uiou). Por ello un programa académico del nivel de Maestría, es decir, el cual implica una profundización del conocimiento para la solución de problemas disciplinarios o profesionales debe no sólo formar, sino dotar a la persona de instrumentos básicos que la habilitan como investigador en un área específica y propender por generar espacios donde se posibilite la reflexión crítica que le permita y donde se conciba a un sujeto educable, capaz de liderar y gestionar organizaciones inmersas en entornos globales, competitivos y dinámicos, manteniendo siempre al ser humano como eje fundamental y razón última de todas las organizaciones sociales.

En el diseño curricular de la Maestría en Administración durante sus 45 años se ha privilegiado el componente formativo, es decir, que la Maestría ha hecho una apuesta para formar gerentes con enfoque de las ciencias humanas, que conozca la lógica de cómo funciona la organización desde las ciencias humanas utilizando la psicología, la sociología, la lingüística, el psicoanálisis entre otras. Actualmente la

Maestría cuenta con un énfasis gerencial hacia tres competencias básicas: Liderazgo, Trabajo en Equipo y Entendimiento Estratégico. Su objetivo, formar profesionales, investigadores, consultores y asesores capaces de proponer soluciones a los problemas administrativos y de gestión que enfrentan las empresas Latinoamericanas y en particular colombianas.

Trabaja como Consultora Empresarial, y se encuentra vinculada en el Grupo de Investigación Previsión y Pensamiento Estratégico, Categoría A – Colciencias Cali, 2009.

EL CONTROL INTERNO COMO AGENTE PRINCIPAL PARA LA OPERACIÓN DE LAS MICROEMPRESAS

Sagrario del Carmen Guzmán Rizo, Universidad Autónoma del Estado de Baja California

Ana Cecilia Bustamante Valenzuela, Universidad Autónoma del Estado de Baja California

Sósima Carrillo, Universidad Autónoma del Estado de Baja California

Jessica Lizbeth Cisneros Martínez, Universidad Autónoma del Estado de Baja California

RESUMEN

Mucho se ha hablado acerca del control interno, pero más que conocer su simple definición, el presente estudio pretende identificar si entre las causas de fracaso de las microempresas, se encuentra la incorrecta implementación de un control interno o bien la ausencia del mismo. Esta investigación se realizó en las organizaciones del Estado de Mexicali, Baja California, en donde se examinó el impacto que tendría el que una empresa inicie operaciones sin trazar los procesos administrativos necesarios para lograr sus objetivos. Surge así la necesidad de conocer los tipos de controles internos que aplican los propietarios de las microempresas dentro de las organizaciones, así como identificar la asesoría a la que se recurre en busca de apoyo sea fiscal, contable, financiera y otras. Hoy día este tema no es visto por los microempresarios con la importancia que posee en la vida de la organización, ya que aparentemente solo son manuales sin ingerencia alguna en la dirección de la empresa sin embargo el control interno contribuye al éxito o fracaso de las organizaciones. El método de investigación aplicando para el presente estudio es el documental, debido a que se tiene el antecedente de que otras personas ya han abordado el tema.

INTRODUCCIÓN

Las microempresas son de gran importancia en nuestro país ya que representan el 92% de las empresas que existen en México de acuerdo con las estadísticas del Sistema de Información Empresarial Mexicano (SIEM). Esta clase de empresas constituyen la principal fuente de generación de empleo en el país. Al igual que en el resto del territorio mexicano estas empresas contribuyen en gran medida a la economía del Estado de Baja California ya que representan el 81% de las empresas existentes. (www.siem.gob.mx).

Sin embargo debido al tamaño de estas empresas, el poco capital con el que cuentan y la falta de conocimientos de sus propietarios en cuestiones de planeación y administración de sus recursos, les trae como consecuencia que se les presenten algunos problemas como lo son: la falta de control de inventarios, control inadecuado de créditos, liquidez y bajo volumen de ventas, los cuales si no son tratados con sumo cuidado ponen en riesgo a la operación de la empresa al no contar con el efectivo suficiente y por tanto no cumplir en tiempo con sus compromisos de bancos y acreedores o bien un inadecuado financiamiento, una sobre inversión en activo fijo, existencias de inventarios inmovilizadas y obsoletas, irregularidades en los cobros, pagos imprevistos, cálculos equivocados de los ingresos, costos o utilidades así como los gastos excesivos en que incurren los propietarios de estas empresas por un mal manejo y control de sus recursos.

Por ello es importante que las empresas sobre todo aquellos de tamaño y estructuras limitadas tengan un adecuado control interno, logrando con ello disminuir riesgo en sus operaciones, proteger y cuidar los recursos con los que cuentan así como evaluar la eficiencia de la misma en cuanto al manejo de sus bienes.

Hipótesis: La implementación del control interno es un factor clave para que las microempresas logren seguir con sus operaciones y lograr sus objetivos.

MARCO TEÓRICO

Microempresa

La Ley para el Desarrollo de la competitividad de la Micro, Pequeña y Mediana Empresa, que fue publicada en el Diario Oficial de la Federación publicado el 30 de diciembre del 2002, contiene una clasificación de empresas la cual esta validada por la Secretaría de Economía, dividida por estratos y basada en el número de empleados de la empresa.

Estableciendo como microempresas del sector comercio, a aquellas empresas que se encuentren constituidas de 1 a 10 empleados y se dediquen al comercio.

Por tanto una microempresa comercial es la que se dedica a adquirir cierta clase de bienes o productos, con el objeto de venderlos posteriormente en el mismo estado físico en que fueron adquiridos, aumentando al precio de costo o adquisición, un porcentaje denominado “margen de utilidad” y que posee de 1 a 10 empleados.

Características generales de las microempresas (Principales Problemas)

Sobre inversión en inventarios: existe en una empresa cuando los materiales, productos en proceso o productos terminados están fuera de proporción por compras o producción no equilibradas o bien por la falta de coordinación de las funciones de compra, producción y ventas.

a) causas:

- 1) deseos de ensanchar la empresa
- 2) compras excesivas por aprovechamiento de precios bajos en el mercado
- 3) compras excesivas para no perder la reputación mercantil
- 4) actuación fraudulenta de funcionarios de la empresa, para obtener comisiones de los proveedores.

Existe cuando la empresa ha seguido una política sobre liberal en la concesión de créditos, o bien, cuando las cobranzas han sido deficientes.

a) causas:

- 1) ventas a crédito en exceso
- 2) actuaciones fraudulentas de funcionarios
- 3) política deficiente en materia de cobranzas

Sobre inversión en los activos fijos: existen cuando la inversión de tales activos no guarda proporción con los demás valores del balance o cuando una empresa adquiere una gran cantidad de activos en poco tiempo.

a) causas:

- 1) adquisición liberal de activos fijos
- 2) con el fin de eliminar el elemento humano
- 3) tratar de reducir los costos de producción

ofrecer mejores ventajas que el competidor

Insuficiencia de capital: existe cuando uno o más activos de una empresa esta fuera de proporción.

a) causas:

- 1) por aumento en las operaciones de la empresa
- 2) por aumento en el pasivo fijo
- 3) por operar financieramente con mas recursos de los innecesariamente necesarios

- 4) por una mala organización de la empresa

Insuficiencia de utilidades: esto ocurre cuando las utilidades son inferiores con el capital invertido.

- a) causas:

- 1) mala administración de la empresa
- 2) sobre inversión en inventarios
- 3) sobre inversión en cuentas y documentos por cobrar de clientes
- 4) sobre inversión en activos fijos
- 5) insuficiencia de capital
- 6) deficiencia en las ventas
- 7) exceso en el costo de ventas
- 8) exceso en los gastos de venta, administración y financieros

El control interno es una herramienta o bien un sistema mediante la cual la administración puede garantizar el desarrollo ordenada y eficiente de todas las operaciones y actividades realizadas por la empresa.

Una de las características mas importantes que se dan en este tipo de empresas es la falta de formalidad, es por la falta de una organización adecuada, Falta de manuales de procedimientos y de políticas que sean conocidas por todos los miembros de la empresa. El control interno es una parte muy importante que debe quedar clara en la empresa y que todos deben de tener presente para una buena operación sin riesgos.

La operación de la empresa representa un ciclo en el cual si algunos de sus elementos o procesos no están controlados empezara a fallar y repercutirá en el resto de los elementos o procesos, ocasionando con ello serios problemas que pueden llevar hasta el cierre de sus operaciones de manera anticipada.

METODOLOGÍA

Al momento de elegir al objeto de estudio es necesario delimitarlo de tal forma que el estudio del mismo pueda ser llevado con mayor profundidad, permitiendo así que los resultados que se obtengan con la investigación sean más precisos y concretos; como el objeto de estudio de esta investigación, el cual pudo haber sido delimitado a un giro comercial en particular.

Llevar a cabo un estudio general para conocer que cantidad o fuentes de información existen sobre el objeto que se desea estudiar o bien las características que de este son de interés, de tal manera que se pueda desde un inicio determinar los recursos y el tiempo con que cuenta para llevar a cabo la investigación y decidir si la misma es viable o no.

No perder de vista los objetivos que se plantearon al inicio de la investigación, así como la interrogante sobre la cual gira el desarrollo de la misma, ya que durante el desarrollo de la investigación se obtiene tal cantidad de información que en ocasiones no se tiene el tiempo de depurarla y se sigue avanzando hasta percatarse de que no era de gran ayuda o bien no se esta trabajando en la dirección correcta para lograr los objetivos planteados en un inicio.

Elegir con sumo cuidado el instrumento de medición a través del cual se someterá a prueba la hipótesis planteada, y sí de la aplicación de dicho instrumento se obtendrá la información necesaria para responder las interrogantes y problemática que dieron origen a la investigación.

PROPUESTA

En base a los resultados obtenidos en base a la información recabada ,se detectó que las microempresas comerciales presentan varios problemas, sin embargo el objetivo de esta investigación esta enfocado a los

problemas de tipo organizacional siendo a falta de control interno una de las principales causas de fracaso, para ello se presenta una propuesta tomando , con el fin de minimizar está problemática.

Es importante de que tomen conciencia los empresarios que la entidad es un ente que tienen varias etapas y que si hacemos caso miso a cualquiera de ellas podemos dañar la vida o desarrollo de dicha organización.

Es necesario que mucho antes de abrir una empresa, los accionistas realicen una adecuada planeación , esto conlleva a que se inicie con una visión, misión, objetivo, adecuados al giro y tamaño de la empresa que se desea abrir.

Se realice además un adecuado organigrama, así como manuales de procedimientos, para que cuando la empresa abra las puertas al público en general, cada miembro de la entidad conozca perfectamente sus labores y estas estén bien delimitadas, para evitar doble trabajo.

Es necesario que la empresa tenga el sistema de computo adecuado para los fines que persigue, es decir dependiendo del inventario se debe de adecuar un sistema para el stock, así como un adecuado paquete contable, que haga que la información fluya de manera correcta y rápida.

Además será importante que la entidad cuente con formatos internos adecuados, como por ejemplo, vales de caja, reposición de caja, ordenes de compra, en estas ultimas delimitando el monto a autorizar y quienes son las personas autorizadas para firmarlas.

El realizar actividades periódicas de supervisión, como inventarios aleatorios y esporádicos al inventario, arqueos de caja.

Es muy importante que los microempresarios se den tiempo para llevar a cabo estas recomendaciones, pues si bien es cierto que en la mayor parte de los casos son los mismos propietarios quienes se encuentran a cargo de todas las operaciones del negocio, ellos necesitan dedicar tiempo para el análisis de su operaciones, y el correcto manejo de las mismas, lo cual les permitirá mejorar el manejo de su empresa y las decisiones que sobre esta se tomen; al principio tal vez sea algo complicado para ellos, pero con la práctica diaria será más fácil y éste esfuerzo se verá recompensado en el largo plazo con un mejor manejo de sus recursos económicos y materiales los cuales repercuten en el buen funcionamiento del resto de las operaciones.

Una simple aplicación de operaciones básicas y un análisis e interpretación por sencillos que estos parezcan, ayudarán en gran parte a estas personas a entender mejor su empresa y efectuar los cambios que sean necesarios para corregir aquello que no este funcionando de manera adecuada; todo esto servirá como base para una mejor toma de decisiones y dejar de hacerlas solo en forma intuitiva. Al complementar la experiencia con la información analizada e interpretada, el microempresario podrá detectar, minimizar o bien eliminar el efecto de los problemas de organización, lo cual le dará una contundente ventaja competitiva ante sus competidores.

CONCLUSIÓN

En base a la información recabada y la experiencia podemos señalar que la gran mayoría de las microempresas que inician operaciones lo realizan de una manera empírica en la cual no tienen la noción ni el estudio necesario acerca del trabajo que conlleva una entidad de esta índole.

Por tanto los empresarios antes de iniciar la operación de su negocio no llevan acabo una adecuada planeación de las actividades que se realizarán, los controles con los cuales deben de cuidar cada

operación que se realizara, así como la elaboración de manuales de procedimientos, mucho menos realizan la elaboración de un organigrama documento importante para el conocimiento de las jerarquías dentro de una empresa.

Es importante destacar entonces, que por más pequeña que sea una entidad existen ciertos aspectos que no deben ser omitidos

Otro punto importante es el que los microempresarios no aplican herramientas financieras que realmente les puedan arrojar información importante sobre la liquidez, rotación de inventarios, rendimiento sobre las ventas y su capital, nivel de endeudamiento, capacidad de pago, si no que siguen basando principalmente en su experiencia y en las ventas para tomar decisiones. Desgraciadamente el microempresario, piensa que el invertir en tiempo y dinero en la planeación, organizar en departamentos la empresa, y determinar manuales y formatos necesarios para la operación normal de una empresa es un gasto y no una inversión.

Estas empresas han logrado subsistir por su experiencia en el giro que manejan, sin embargo los principales problemas que enfrentan son en parte consecuencia de la ausencia de información financiera y su análisis. Asimismo al no estar afiliadas a ninguna institución u organismo que las ayude, las hace perder la oportunidad de capacitarse y actualizarse.

En la actualidad con el aumento de la competencia y el establecimiento de grandes compañías, no basta la experiencia para permanecer en el mercado y poder crecer, así como tampoco el elaborar información a la cual no se le analice financieramente, si no también el tener una empresa bien organizada y con controles interno fuertes y concretos; estas empresas deben de capacitarse en todas sus áreas.

RECOMENDACIONES

El haber llevado a cabo el desarrollo de esta investigación deja una serie de experiencias y conocimiento sobre la forma en que las microempresas inician sus operaciones, la previa planeación que se estudia para el inicio de las operaciones, los manuales, los formatos que sin duda alguna son de muchísima ayuda para el nuevo emprendedor de un pequeño negocio.

Los microempresarios deben buscar la capacitación en cada una de las áreas que conforman a la empresa, dando prioridad a aquellas que requieren de atención inmediata, esto les permitirá estar en mejores condiciones de enfrentar sus problemas y a la competencia; esto lo pueden lograr afiliándose a algún organismo gubernamental en los cuales pueden recibir asesoría gratuita y actualizarse en diferentes aspectos.

Los propietarios de este tipo de empresas deben preocuparse por tener una empresa capacitada y competente, buscar estar más informados y tomar decisiones basadas en la información que es resultado de la operación de su empresa y no tanto en forma empírica, estableciendo controles de todas las actividades y operaciones que se realizan dentro de la misma.

Asimismo se debe buscar asesoría a fin de que se elaboren manuales de organización y de puestos para que cada una de las personas que trabajan en la empresa conozcan claramente cuales son sus actividades y funciones, así como las responsabilidades que conllevan.

Por otra parte es recomendable llevar a cabo la elaboración de formatos tales como entradas de almacén, vales, reposiciones de caja chica, ordenes de compra, vales, etc, de la misma manera la elaboración de manuales de organización y procedimientos.

Instituciones educativas

Impulsar más las áreas de investigación, lo cual ayuda a formar estudiantes con mayor conocimiento, experiencia y responsabilidad, al llevar a cabo proyectos en donde se trabaje de manera independiente, ya son ellos quienes planean todo un programa de trabajo, investigan, cuestionan, se plantean diversas situaciones y establecen los medios necesarios para lograr su fin y evaluar sus resultados.

Apoyar los estudios relacionados con las microempresas, ya que estas requieren de ayuda en todas sus áreas y son estas las que dan empleo a la mayor parte de la población, por lo que si logran crecer y ser competitivas, estas estarán en posibilidades de brindar mejores oportunidades de desarrollo a las personas que en ellas laboren.

Gobierno

Dar una mayor difusión a los programas de ayuda por parte del gobierno, ya que si bien estos están encaminados a apoyar el crecimiento de estas empresas, no llegan a la mayoría de ellas por que existe un desconocimiento de la existencia de los mismos por parte de los microempresarios.

Llevar a cabo visitas a este tipo de empresas para conocer de primera fuente los problemas que padecen estas empresas y se creen los programas de ayuda para dar solución a los mismos, que no solo se le de difusión a los programas de tipo económico, si no también a los que están dirigidos a brindar una asesoría integral a las microempresas ya que son estas quienes conforman la mayoría de las empresas existentes y que generan una gran cantidad de empleos, contribuyendo en gran medida a la economía nacional, regional y local.

Futuros investigadores

Es necesario aplicar otros estudios que permitan a estas empresas tener un mejor desempeño, en cuanto al área financiera se necesita el desarrollo de un modelo matemático sencillo que les permita de una manera fácil generar la información de las operaciones de su empresa para tomar mejores decisiones y no llevarlas a cabo solamente de manera empírica.

PRODUCCIÓN ARTESANAL Y DESARROLLO LOCAL

Rosario Cota Yáñez, Universidad de Guadalajara
Sonia Carrillo Llanos, Universidad de Guadalajara

RESUMEN

El objetivo es analizar la producción de equipales en Zacoalco de Torres a través del caso de la cooperativa Corporación de Equipales S.C. de R.L. en términos del sistema productivo local bajo el contexto de la innovación, su cooperación y competencia con la finalidad de conocer su dinámica.

Zacoalco de Torres se encuentra enclavado en una zona eminentemente rural, con grandes extensiones de cultivo y escasas industrias en su interior. Este municipio se especializa fundamentalmente, “en la producción del equipal, un mueble característico de la región centro-occidente del país. Para hacer una reconstrucción de la dinámica en la producción de equipales en Zacoalco de Torres, se trató de buscar los hallazgos que permitan analizar esta actividad económica en un espacio rural que muestra una tradición histórica en los equipales, y una diversificación de actividades, asimismo tratando de compaginar la actividad primaria (agricultura y ganadería) con la artesanía, a la luz de un sistema productivo local, para lo cual se plantean los siguientes objetivos. Analizar el proceso del sistema productivo local de los equipales en Zacoalco de Torres.

Hipótesis de la investigación

Para poder mantenerse en la producción de equipales y asegurar la supervivencia e incremento de su participación en el mercado, la estrategia de los productores de la cooperativa Corporación de Equipales S.C. de R.L en Zacoalco de Torres es generar una ventaja competitiva a través de la implementación de procesos de innovación así como fortalecer la acción conjunta, para mejorar su capacidad competitiva.

LA ESTRUCTURA METODOLÓGICA

Para describir y comprender las transformaciones del sistema productivo local e innovación en la producción de equipales en Zacoalco de Torres se elaboró una formulación teórico-metodológica que contribuirá a facilitar su comprensión. Se realizó trabajo de campo utilizando la metodología cualitativa con entrevistas semi-estructuradas a diversos actores del sistema artesanal de equipales, entre ellos artesanos, intermediarios y comerciantes, con la finalidad de captar y analizar la complejidad del sistema artesanal y sus potes

POTENCIAL EXPORTADOR DE QUINTANA ROO: SECTOR FORESTAL

Abelardo Castillo Galeana, Universidad del Caribe

Rosiluz Ceballos Povedano, Universidad del Caribe

Enrique Corona Sandoval, Universidad del Caribe

RESUMEN

En este trabajo se analiza el potencial exportador de Quintana Roo, que se divide en cinco sectores económicos estratégicos: Forestal, Agronegocios, Manufactura, Pesca y Acuicultura y Turismo.

Se centra en el sector forestal ya que históricamente el estado basaba su producción en actividades propias como la extracción de chicle y la comercialización de maderas finas. A partir de los setenta se inicia la diversificación económica del estado con políticas de desarrollo turístico, así la industria forestal quedó en el olvido, perdiendo eficiencia en grandes extensiones de tierras, población rural y elaboración de políticas públicas y planes de desarrollo que articulen la producción forestal dentro de un marco de sustentabilidad. Quintana Roo, se ubica en la península de Yucatán, en el sureste mexicano, el 94 % de su territorio está dedicado a la actividad forestal y aporta el 1.4 % del PIB estatal, cuenta con costas del Mar Caribe lo cual le proporciona una ventaja comercial, convirtiéndolo en un espacio forestal potencial. El estudio explora las principales variables del sector y su potencial, evaluando la producción estatal y la demanda internacional, con base en fuentes secundarias oficiales y de organismos internacionales.

PALABRAS CLAVE: Potencial Exportador, Sector Forestal, Competitividad, Plan de desarrollo.

ABSTRACT

This paper examines the export potential of Quintana Roo, which is divided into five strategic economic sectors: Forestry, Agribusiness, Manufacturing, Fisheries and Aquaculture and Tourism. It focuses on the forestry sector since historically the state based its own production activities such as removing gum and marketing of fine wood. From the seventies began economic diversification of the state with tourism development policies and the forest industry was forgotten, losing efficiency in large tracts of land, rural and public policy and development plans that link the production forest within a framework of sustainability. Quintana Roo, is located in the Yucatan peninsula in southeastern Mexico, 94% of its land is devoted to forestry and contributes 1.4% of state GDP, has the Caribbean Sea coast which provides a commercial advantage, making it a potential forest area. The study explores the main variables of the sector and its potential, evaluating the state production and international demand, based on secondary sources and official international organizations.

KEYWORDS: Potential Exporter, Forest Sector, Competitiveness, Development Plan

INTRODUCCIÓN

El sector forestal de Quintana Roo es parte de la historia e identidad del mismo, desde los inicios del desarrollo de la entidad a estado y desde la creación del territorio federal; este sirvió como base de una estrategia para evitar el contrabando de las maderas a través de la colonia inglesa hoy el País de Belice, pasando por historia de los chicleros y madereros hasta hoy contribuyendo a preservar la belleza escénica del estado.

El documento plantea un análisis del potencial exportador del estado de Quintana Roo, estado que forma parte de la región de la península de Yucatán y cuyo dinamismo económico ha proliferado las últimas

cuatro décadas, se propone hacer el estudio del sector forestal ya que históricamente el estado basaba su producción en actividades propias como la extracción de chicle y la comercialización de maderas finas.

Primeramente, se revisará al sector forestal tomando como referencia su desarrollo en el estado y su situación actual como actividad económica importante para el mismo. En un segundo orden, estudiar su potencial tanto en el mercado local como en el internacional, considerando las políticas públicas y planes de desarrollo estatal que impulsen este potencial y hagan productivas grandes extensiones de tierra y población rural que proporcionen una ventaja competitiva dentro de un marco de sustentabilidad.

Con la división internacional del trabajo se están haciendo más profundas las diferencias entre países, a México le corresponde muy poco de la riqueza mundial obtenida bajo este sistema de producción actual y concentra el 69.0% de su producción en el sector servicios. En el país se observa la concentración en un sector y también una concentración geográfica pues ocho entidades del país generan el 62.5% de la riqueza nacional. Para conseguir un desarrollo integral es importante que éste se planee desde las regiones y que su crecimiento económico y contribución al bienestar sea equilibrado. Cada estado debe contribuir al crecimiento general del país y que logre a través de su autosuficiencia económica un empuje hacia las áreas que lo rodean.

Bassols, 1976, observa que Quintana Roo, “es una de las regiones de reserva del México contemporáneo”, y propone una planeación adecuada de su desarrollo en todos los ámbitos, esto se reflejaría en beneficio de los habitantes de la región y de ciudadanos de otras áreas del país. La planificación no ha sido lo que se esperaba, reflejo de esto es la baja contribución del estado a la riqueza nacional. Según el INEGI, para 2001 el Distrito Federal era quien más contribuía y resulta que Quintana Roo está entre los 10 estados que menos aportan a la riqueza nacional con el 1.4% del producto. La actividad económica más importante en el estado es la desarrollada en comercio, restaurantes y hoteles (turismo) que representa el 54.0% del PIB estatal, se ve una ausencia de participación del sector industrial 1.2% y un aporte muy bajo en el sector agrícola, con el 0.3% a pesar de las riquezas naturales. Puede observarse claramente que el turismo es muy importante para el estado pero no es suficiente, para el año 2002 los ingresos propios del estado fueron solamente el 9.9% del total de los ingresos, el resto fue de participación federal.

El estado se ubica en la península de Yucatán y de acuerdo a sus límites, es una zona de gran potencial de comunicación y tránsito de mercancías y personas, así como un fuerte espacio para incentivar la inversión el comercio y el turismo. Limita al Norte con el Estado de Yucatán y el Golfo de México; al este con el Mar Caribe, 950 kilómetros de beneficio; al Sur con la Bahía de Chetumal, Belice y Guatemala; al Oeste con los estados de Campeche y Yucatán; abarca una superficie aproximada de 50,843 km² dividido en nueve municipios. El 25% de este territorio está formado por áreas naturales protegidas (ANP). En la parte Norte del estado, se encuentran los municipios de Benito Juárez, Cozumel, Isla Mujeres, Tulum y Solidaridad; en el centro, José María Morelos y Felipe Carrillo Puerto y en el sur Othón Pompeyo Blanco. La población total del estado según el censo de población y vivienda 2000, es de 874,936 habitantes, concentrándose el 63% en el norte de la entidad.

Quintana Roo lleva pocos años de actividad económica ésta comienza formalmente en 1902 ya que anteriormente era considerada una zona difícil de penetrar, los colonizadores no se interesaron pues no contaba con metales preciosos que extraer, no había mano de obra nativa solo era usado como refugio, la región permanecía casi deshabitada; así, después de la guerra de castas (1847 – 1901), comienza la dispersión de la población yucateca empezándose a poblar el estado, también llegaron habitantes de la comarca lagunera, de Michoacán y Jalisco en el occidente y de Chiapas y Veracruz, por nombrar algunos lugares.

Fue entonces, hasta el siglo XX que se fundaron campamentos para la explotación del chicle y la madera aunque desde el siglo XIX se dedicaban a la exportación de productos forestales, conforme fue avanzando el siglo los habitantes diversificaron las actividades, así en el sur predominaba el libre comercio, en el centro caracterizado por las comunidades mayas prevaleció la producción de auto-subsistencia, y fue en el norte que se empezó a gestar el desarrollo turístico con fuertes inversiones. En 1974 cuando se funda como estado, sólo algunos puntos del territorio contaban con población significativa como son: Cozumel, Isla Mujeres, Carrillo Puerto y Chetumal. Entre las actividades principales que se llevaban a cabo por subregión se encuentran:

En el Norte: Industria, Fuentes de Energía, Pesca y Turismo

En el Centro: forestal,

En el Sur: Pesca, Industria, ganadería y forestal

Hoy día el 45.3% de la población ocupada se dedica a los servicios; uno de los grandes problemas que presenta este estado, es la concentración de la actividad en un sector, además de tener un desequilibrio poblacional y un crecimiento acelerado del mismo, concentrado solo en la zona norte, ocasionando a su vez problemas de provisión de servicios básicos y por último que a través de los últimos 30 años transcurridos la actividad económica no se ha encausado de acuerdo a la aptitud de cada zona presentando un aislamiento productivo y concentrándose sólo en una zona de desarrollo.

La problemática a nivel nacional, radica en la incapacidad del sector para capitalizar el potencial natural de los ecosistemas forestales como fuente de desarrollo económico y social en el campo, además refleja impactos negativos en la economía nacional con la fuerte salida de divisas, la pérdida de empleos en sector rural y una presión adicional para la deforestación de los bosques por el cambio de uso de suelo hacia otras actividades productivas. (Consejo Civil Mexicano para la Silvicultura Sostenible, 2009). La actividad forestal en México muestra una Balanza Comercial deficitaria desde hace más de 15 años, incluyendo el total de la cadena comercial, esto se debe a : a) el rápido crecimiento de la demanda de productos forestales, b) la caída de la producción nacional maderable y no maderable, y c) la pérdida de competitividad económica de los productores nacionales. (Consejo Civil Mexicano para la Silvicultura Sostenible, 2009).

La mayor parte de los problemas se relacionan con la repoblación de los bosques situados en lugares templados y tropicales, y los procedimientos de ordenación y de silvicultura correspondientes. En la Península de Yucatán, que contiene la mayor parte de las especies tropicales de maderas preciosas (caoba y cedro) en bosques que abarcan más de 5 millones de hectáreas, los problemas siguen la dinámica nacional, además de no utilizar su posición estratégica histórica haciendo un uso eficiente de sus selvas. (FAO, Misión de la silvicultura en México)

De aquí la importancia de estudiar el potencial económico de un estado que fue creado como reserva y saber lo qué ha pasado con las actividades económicas. Quintana Roo posee un incalculable valor de sus recursos, tanto naturales como materiales, es una región de atracción de capitales que no genera la riqueza potencial y no ha logrado niveles de bienestar adecuados para todos los habitantes de la zona. El desarrollo económico de los últimos 30 años del estado es la prueba fehaciente de cómo el hombre cambia el medio natural transformándolo para poder subsistir y proporcione los medios adecuados para cubrir sus necesidades.

METODOLOGÍA.

El desarrollo de este documento esta basado en una investigación exploratoria considerando fuentes secundarias oficiales y de organismos internacionales. En cuanto a la determinación del potencial de exportación está basado en la metodología del Plan estratégico de Desarrollo usado por el ITESM para la

elaboración del Plan 2025, elaborado para el estado de Quintana Roo y del Programa de Desarrollo Forestal 2005-2011 emitido por el Comité de Planeación para el Desarrollo del Estado de Quintana Roo (COPLADE).

MARCO TEÓRICO

El concepto de potencial exportador es examinado a través de una nación y de su estructura empresarial, en una economía como la mexicana al país le corresponde el manejo de factores económicos estructurales que permitan el proceso de exportación de las empresas de particulares y logren una mejor ventaja respecto de su venta en el interior del país. Sustentada en la idea de la ventaja comparativa todos los países, incluidos los más pobres, tienen activos: humanos, industriales, naturales y financieros, que pueden emplear para producir bienes y servicios para sus mercados internos o para competir en el exterior.

La economía nos enseña que podemos beneficiarnos cuando esas mercancías y servicios se comercializan. Dicho de otra manera, el principio de la ventaja comparativa significa que los países prosperan, en primer lugar, aprovechando sus activos para concentrarse en lo que pueden producir mejor, y después intercambiando estos productos por los productos que otros países producen mejor; de esta manera se establece el vínculo comercial entre los diferentes países. Entre los factores que permiten que un país logre una ventaja comparativa en su exportación están instrumentos de política fiscal y monetaria restrictivas, apertura de la economía, privatización de paraestatales y desregulación económica y financiera (Zapata 2005).

La exportación se considera como el envío o venta de productos fuera del país de origen o como el costo de estos productos adoptados en el extranjero. La importancia de la exportación radica en su influencia en el crecimiento económico así como en la integración de un país en la economía mundial. El potencial es definido como la capacidad que se tiene para ofrecer y cumplir objetivos.

Es un sistema dual entre las posibilidades de producción de un país y el envío fuera de él. El concepto también puede ser revisado a través de la reglamentación y legislación de comercio exterior y en los códigos de aduana. Samuelson y Northous la determinan como una exportación de bienes y servicios que se producen dentro de un país y están a la venta en el extranjero.

Sobre la definición de diferentes autores el potencial económico de un país es tomado como una función de producción de las necesidades empresariales e incluso del consumo. Se relaciona con la realización de productos internos y el análisis de mercados externos. Por lo tanto se analiza el potencial de exportación en el marco de las posibilidades de integración al mundo. Así el potencial económico estará dividido en potencial: agrícola, industrial, de otros sectores, del mercado interno y de exportación.

El hecho de poder exportar da una característica de igualdad entre países y motiva a la participación de la economía mundial en el actual proceso de globalización. Ofrece un crecimiento del mercado interno. Según M. Seifullaeva y V. Kapitsyn el potencial de exportación de una región está basado en sus recursos, materias primas y el estado de la economía. Que proporciona desarrollo científico, tecnológico, social, industrial y cultural y permite alcanzar alto nivel de vida para la población.

V. Mikhaylovskiy, considera el potencial de exportación de un territorio como el aumento de la eficiencia de la actividad económica extranjera, debe ser descrito como un sistema de elementos cuantitativos y de calidad alta que caracterizan a una región y la colocan en una posición determinada en los mercados mundiales de productos y ayuda a conseguir la máxima rentabilidad de su moneda.

En general el potencial económico externo está determinado por la competitividad en el mercado mundial de los bienes y servicios producidos por una región y las posibilidades de utilización de recursos tecnológicos, de trabajo, integrales, naturales y la cooperación y operación con otros territorios o naciones. En todos los casos se trata de tomar ventaja competitiva en la escala mundial de la economía. T. Golikova considera al potencial como el índice de determinación que ubica a un país en la división internacional de trabajo y en la especialización de su actividad económica.

En México se considera potencial exportador la capacidad de exportar de una empresa y es una fase del plan estratégico de desarrollo de los estados, incluye: conocimiento del mercado y experiencia internacional, motivaciones y expectativas, barreras de entrada, capacidad para la internacionalización, adaptabilidad de los precios/productos al mercado exterior, implicación de la dirección en el proceso de internacionalización y grado de equilibrio entre aptitud y actitud.

El potencial de producción como factor de formación de todo el potencial de exportación cubre el proceso de las industrias extractivas y también la producción de fuentes de materias primas, en el marco del sector agrícola. En el potencial de producción el aumento de la competitividad de los productos se representa, por la combinación de inversiones en nuevas tecnologías y equipos, desarrollando base científica y realizando avances científicos directamente en la producción y el nivel adecuado de cualificación ofrece posibilidades de crecimiento de nuevos productos altamente tecnológicos y científicos, la modernización de la producción. Por parte del Estado, compete el ambiente legislativo y estructural teniendo el factor institucional como determinante del desarrollo de la política económica que asegure políticas de comercio exterior y monetaria.

Otro factor determinante es el componente informativo sobre estrategias de demanda y equilibrio de oferta y conquista de nichos de mercado a nivel mundial. El último es el medio ambiente de la formación de capital humano, de la salud física, cultural y de alta nivel educativo, las competencias profesionales de los trabajadores, sobre el trabajo.

RESULTADOS

Quintana Roo cuenta con 9 municipios, en 2008 mediante una reforma al artículo 127 de la Constitución Política del Estado Libre y soberano de Quintana Roo se formó el noveno municipio (Tulum).

- municipio de Othon P. Blanco: Su cabecera es la ciudad de Chetumal, que es también la capital del estado. Recibe su nombre en honor de Othón P. Blanco, quién encabezó la colonización de la región y fundó la ciudad de Chetumal.
- Municipio de Benito Juárez: Su cabecera es la ciudad de Cancún, famoso destino turístico internacional. Cancún tiene 526.000 habitantes, lo que la convierte en la ciudad más poblada de Quintana Roo, y está formada por Alfredo V. Bonfil, Puerto Morelos, Valle Verde Central, Vallarta, Joaquín Zetina Gasca, Leona Vicario, Los Tres Reyes, El Milagro y Avante. Algunas zonas de Cancún, principalmente las del norte de la ciudad, se encuentran dentro del territorio de Isla Mujeres.
- Municipio de Solidaridad: El municipio se formó el 28 de julio de 1993 por decreto del Congreso del Estado durante el gobierno de Mario Villanueva Madrid. Su cabecera es la ciudad de Playa del Carmen. El 13 de marzo de 2008 fue segregado de su territorio el nuevo Municipio de Tulum, por lo cual su extensión territorial y población se encuentra en proceso de ajuste.
- Municipio de Felipe Carrillo Puerto: Se encuentra localizado en el centro del estado y su cabecera es la ciudad de Felipe Carrillo Puerto, anteriormente conocida como Santa Cruz de Bravo y Chan Santa Cruz.

- Municipio de Lázaro Cárdenas: El municipio está situado al extremo norte del estado y su cabecera es la población de Kantunilkín.
- Municipio Cozumel: Cozumel (Cuzamil en idioma maya yucateco: Isla de las Golondrinas) está formado por la isla homónima, la tercera más grande y la segunda más poblada del país, y dos enclaves continentales. Se ubica al sureste del estado, en el Mar Caribe, a unos cincuenta kilómetros de Cancún.
- Municipio de José María Morelos: Su superficie es de 6.739 km². Las principales actividades económicas son la agricultura y la silvicultura. Sus ciudades más importantes son José María Morelos, Dziuché y Sabán.
- Municipio de Isla Mujeres: El municipio está constituido por la Isla Mujeres y un sector continental.
- Municipio de Tulum: El Municipio de Tulum fue creado el 13 de marzo de 2008 con territorio del municipio de Solidaridad. Se localiza en la zona centro-norte del estado, en la llamada Riviera Maya, y su cabecera es la ciudad de Tulum.

Su flora varía de acuerdo con el clima, de selva baja a selva alta. La riqueza silvícola es una de las fuentes de ingreso del estado, ya que la entidad produce maderas preciosas de óptima calidad como son: caoba, cedro rojo, primavera, palo rosa y roble; estas especies constituyen dos terceras partes de la superficie arbolada del estado. Otras especies menores son: el ébano, el huizache y el huanacaxtle. De las especies no maderables, la más importante es el chicozapote, árbol del que se extrae la resina para fabricar el chicle, el cual es exportado en su totalidad.

El Estado cuenta con tres millones 686 mil 700 hectáreas de selvas tropicales, de las cuales 737 mil cuentan con permisos de aprovechamiento. Las selvas de importancia para el aprovechamiento forestal, se encuentran principalmente en el centro y en el sur. El Estado también cuenta con 215 mil hectáreas bajo manejo certificado con “Sello Verde”. La producción agropecuaria y forestal ha perdido importancia frente al sector servicios, que actualmente contribuye con más del 90% al PIB de Quintana Roo. Cancún es un mercado importante para productos finales de madera, pero los lazos de suministro con los productores forestales del Estado son débiles. Hoy en día Cancún compra del sur de Quintana Roo principalmente postes y pasto para los techos de construcciones de uso turístico. Chetumal y Felipe Carrillo Puerto consumen pocos productos forestales.

En el Estado se producen unos 31 mil metros cúbicos anuales de maderas ligeras, básicamente de cuatro especies: sacchahah, chacah, negrito y amapola. Los ejidos venden casi un 70% de este volumen como madera rolliza (unos 8 mil 500 metros cúbicos anuales). El resto (alrededor de 800 mil pies tabla por año) es comercializado como madera aserrada por los ejidos que cuentan con aserradero. En Quintana Roo se producen unos 14 mil metros cúbicos anuales de maderas medianas y pesadas, en particular tzalam y chechén. En cantidades menores, se producen pucté, catalox y chaktekok. Los ejidos con aserradero venden dichas maderas en tabla. Los que no tienen aserradero las negocian en rollo con aserraderos locales que las procesan y venden a su vez en tabla al mercado regional o nacional. Quintana Roo es el segundo Estado productor de maderas pesadas aserradas tropicales en la República, solamente superado por Campeche.

También se ha venido dando una reducción de la superficie forestal estatal, debido principalmente al avance de la frontera agropecuaria, los incendios forestales y fenómenos naturales como los huracanes. La falta de monitoreo de los recursos ha ocasionado un incremento de la sobreexplotación de maderas preciosas y clandestinaje, lo que también deteriora el ecosistema. El aprovechamiento forestal basa su potencialidad a largo plazo en la existencia de una reserva forestal estratégica, que los propios dueños del recurso han reconocido y definido como los terrenos que habrán de destinar al aprovechamiento forestal como actividad productiva básica. En el sector forestal, el aprovechamiento maderable sigue siendo el

renglón más importante en la economía de 12 mil ejidatarios y pequeños propietarios del Estado. El aprovechamiento de los productos no maderables se ha mantenido constante en los últimos años en donde destaca el aprovechamiento de huano con cerca de un millón de piezas, que afortunadamente la actividad turística del Estado a estimulado con la constante confección de palapas. La producción de chicle ha sentado bases para su reactivación manteniendo una producción constante de 380 toneladas en los últimos cuatro años, mediante la organización de productores y del interés de empresas internacionales en la compra del producto con estándares de calidad.

El PIB estatal del sector primario ocupa el segundo lugar en importancia y aporta el 2.23 % del PIB silvícola nacional. Durante mucho tiempo la economía estatal se sustentó en la explotación de maderas preciosas como el cedro y la caoba y la explotación de la resina del chicozapote para la fabricación de chicle. La explotación sin control provocó serios problemas de deforestación, por lo cual se instituyó un programa para regular la explotación de maderas preciosas y promover el aprovechamiento de otras especies comunes tropicales y apoyar los programas de reforestación. El volumen de la producción forestal actual es de aproximadamente 50 mil m³ en rollo de los cuales el 20 % son de maderas preciosas, la producción anual de chicle es alrededor de 300 toneladas. La principal producción forestal se realiza en los municipios de Felipe Carrillo Puerto, Othón P. Blanco, Lázaro Cárdenas y José María Morelos.

CONCLUSIONES Y LIMITACIONES

En el potencial de exportación es inherente los sujetos económicos de todos los niveles, como una empresa, industria o tipo de la actividad, en la región dentro de un país, la economía nacional, grupo de varios países que van a hacer realidad el potencial de desarrollo del comercio exterior, sobre todo, a la exportación. Que el potencial de exportación del país se compone de exportación potenciales de las distintas industrias.

Que el potencial de exportación de la industria consta de los potenciales de exportación de las empresas individuales. La exportación potencial está relacionada con la competitividad de los productos, destinados al mercado mundial. Teniendo en cuenta, que en una nación la competitividad se sostiene en tres niveles: país, la industria y empresa. Por lo tanto, el concepto de competitividad está correlacionado con la comprensión moderna del potencial exportador de un país.

En el marco del estado de Quintana Roo, se han estado haciendo planes de desarrollo estratégicos como el Plan Gran Visión 2000-2025 Quintana Roo (con avances al 2005) elaborado por el Instituto Tecnológico de Estudios Superiores de Monterrey y el sector privado y el Plan de Desarrollo del 2005-2011 (actualizado a Junio 2008) este último emitido por el gobierno de Félix González Canto. En estos planes se contemplan un análisis de los diferentes sectores económicos del estado, identificando las debilidades de estos en cuanto a su desarrollo, como lo menciona el plan gran visión 2000-2025 referenciando al sector forestal:

- Reducción de la superficie forestal
- Sobreexplotación
- Problemas en la organización ejidal
- Extracción con tecnología obsoleta y con serios problemas de control de calidad
- Industria primaria obsoleta y con serios problemas de control de calidad
- Competencia de precios con Campeche, Guatemala y Belice
- Carencia de eslabonamiento productivo con la industria secundaria
- Comercialización deficiente.
- Deterioro de Ecosistemas

Así mismo, presenta el análisis FODAdonde se puede destacar (Plan Gran Visión 2000-2025 Quintana Roo Avances al 2005):

Fuerzas

- Riqueza de recursos forestales en diversas extensiones.
- México ocupa el cuarto lugar en biodiversidad.
- Buena calidad en la producción de madera aserrada.
- Buena planeación técnica de la extracción de madera en rollo.
- Posición geográfica respecto al mercado demandante más grande del mundo.

Oportunidades

- Mercados de sello verde.
- Mercados de servicios ambientales.
- Existencia de apoyos nacionales e internacionales a programas forestales.
- Producción de casas prefabricadas.
- Posibilidad de expansión de la industria del mueble.

Debilidades

- Carencia de información sobre los recursos forestales del estado (no hay un catastro forestal).
- Las comunidades perciben que cualquier actividad rinde más que el manejo forestal.
- Falta de un ordenamiento ecológico territorial que limite el aumento de la frontera agropecuaria.
- Deterioro y extinción de los ecosistemas forestales.
- Planes de manejo no adecuados a las condiciones reales, incompletos (centrados en una sola especie) y con poca participación local.
- Servicios de asistencia técnica forestal deficientes e insuficientes.
- Ejidos fragmentados y con problemas de organización lo que impide un manejo sustentable de los recursos.
- Infraestructura insuficiente especialmente en comunicaciones y transporte.
- Planta industrial inadecuada, obsoleta y costosa.
- Escasez de equipo adecuado para la competitividad de la industria
- Problemas de control de calidad.
- Falta de integración vertical (eslabonamiento productivo entre la industria primaria y secundaria) y horizontal (dentro de la misma industria primaria) en la industria forestal.

Amenazas

- Incendios forestales.
- Fenómenos naturales como ciclones y huracanes.
- Desplazamiento de productos nacionales por importados.
- Sustitución de productos de madera por productos plásticos.
- Migración y abandono de la actividad forestal por la pérdida de empleos.
- Aumento del contrabando de la madera

Dentro del mismo plan gran visión 2000-2025 se enlista una serie de estrategias y líneas de acción que contribuirán a la visión de desarrollo de este sector.

Por otro lado, en el Pla de Desarrollo 2005-2011, enmarca el aspecto de las estrategias de desarrollo para este sector mencionando: “En la comercialización de los productos maderables y no maderables, se han incorporado técnicas para darle valor agregado a los productos forestales y la diversificación de las actividades de las comunidades en el ecoturismo, la agroforestería y el aprovechamiento de los productos secundarios.”

Asimismo, En el Plan Gran Visión 2000-2025 de Quintana Roo se presenta una investigación de la tendencia del sector forestal y su potencial exportador que se puede tomar en cuenta para aplicarlo al mismo, el cual podemos citar:

“A nivel mundial existen dos grandes tendencias en la producción forestal. La primera se refiere a un incremento de la producción originada en plantaciones forestales, con una mayor participación del aprovechamiento maderable mundial. La segunda se refiere a una mayor importancia de los productos no maderables y los servicios ambientales, debido a una mayor diversificación de la producción forestal y a la agregación de valor a productos tradicionales y no tradicionales. Esta última tendencia es confirmada por una disminución del consumo de productos forestales tradicionales en los Estados Unidos para los siguientes 50 años, acompañado a su vez por un incremento en el consumo de nuevos productos forestales y otros productos secundarios como la celulosa y el papel. A su vez, los clusters forestales de países como Suecia, Finlandia, Alemania, Chile se han enfocado en producir productos de alto valor agregado provenientes de madera sólida, productos maderables procesados y la pulpa/papel.

Otra tendencia que se ha dado en todo el mundo durante los últimos 100 años es el surgimiento de grandes clusters forestales. La base de estos clusters ha sido el desarrollo del estado forestal, seguido por un procesamiento industrial y el establecimiento de otras industrias claves para el soporte del cluster. La existencia de facilidades para la educación y la investigación y desarrollo han sido también piezas claves en la consolidación de los mismos. Ahora la sostenibilidad de la producción maderera de los bosques se está convirtiendo tanto en una ventaja de comercialización, así como una potencial tarifa para la entrada, por lo tanto la certificación forestal es un tema que también está cobrando gran importancia.”

Una vez revisado y analizados ambos planes de desarrollo existentes a la fecha, se detecta que estos giran principalmente alrededor del sector Turismo, por ser el que genera mayor ingreso al estado y de mayor participación en el PIB estatal, el cual no se puede determinar que sea un error de los mismos, sino que las políticas públicas del estado y las acciones desarrolladas por los gobiernos que ha tenido en su historia el estado de Quintana Roo se han direccionados solamente al desarrollo del Turismo dejando aun lado los otros sectores económicos del mismo y en este sentido del documento al sector forestal, recordando que fue este último el que dio origen al desarrollo de Quintana Roo.

Es importante tomar en cuenta que si las políticas de desarrollo continúan como hasta ahora se han llevado a cabo en el estado, se presentarán las siguientes consecuencias tarde o temprano:

- Problemas de precios, calidad y desabasto de productos forestales.
- Sobreexplotación y agotamiento de los recursos forestales.
- Reducción de la superficie forestal.
- Cambio de actividad económica hacia otras más rentables.
- Migración a ciudades y desempleo.
- Inestabilidad social dentro del ejido.

En el estado hay indicadores que apuntan a que existe una caída en la producción forestal y una insatisfacción creciente del mercado interno de productos forestales, lo cual alienta la tala clandestina, hace crecer el déficit de la balanza comercial, y provoca un estancamiento en la productividad y la competitividad.

Tomando como base lo comentado en los párrafos anteriores, es importante que los trabajos ya realizados y avanzados principalmente en los planes de desarrollo mencionados tengan aplicación inmediata y un seguimiento profesional y acorde a la problemática detectada y a las sugerencias enlistadas. Los puntos a resaltar en este documento de investigación exploratoria son:

- Contemplar al sector económico de manera individual para un desarrollo en el mercado local, generando su crecimiento con apoyos y políticas que contribuyan a la calidad necesaria de los productos forestales.
- Generar asistencia técnica y profesional a los propietarios de áreas forestales para levantar la productividad de este sector con calidad y responsabilidad sustentable, evitando la migración a los otros municipios principalmente al norte del estado y el desempleo, así como, la inestabilidad social de los ejidos.
- Considerar al sector forestal como un eslabón de la cadena de suministros de los otros sectores y principalmente al sector turismo, así evitar que los prestadores de servicios turísticos y las grandes cadenas hoteleras recurran a la importación de recursos forestales.
- Implementar políticas publicas que contribuyan al desarrollo del sector forestal considerando totalmente las tendencias mundiales del sector para la generación de su potencial exportador, aprovechando las riquezas de las áreas forestales del estado y su ubicación geográfica dentro de la República Mexicana.

LIMITACIONES

El análisis realizado se centra en la planeación estratégica del estado de Quintana Roo, dejando para futuros trabajos el análisis económico y de mercados del sector forestal. La falta de elementos, fuentes de información y complejidades inherentes al tema plantean la conformación de un nuevo estudio en esa dirección.

RENTABILIDAD COOPERATIVISTA: LA PESCA EN EL CARIBE MEXICANO

Rosiluz Ceballos Povedano, Universidad del Caribe

Martha Basurto Origel, Instituto Nacional de Pesca

Abelardo Castillo Galeana, Universidad del Caribe

RESUMEN

En el Caribe Mexicano son escasas las organizaciones pesqueras que evalúan la eficiencia en su producción porque los registros de la información contable y financiera necesarios en la evaluación se llevan a cabo sólo por razones fiscales e institucionales. Los registros existentes están basados, primordialmente, en costos básicos a comprobar de aportaciones públicas, pues la conformación de su capital es social y como tal contiene participación pública y de los socios. La información que se presenta en este documento corresponde al estado de Quintana Roo, ubicado en la península de Yucatán, México. Se presentan medidas de rentabilidad en el trabajo cooperativista, a través del trabajo en las organizaciones pesqueras, hecho con levantamiento de cuestionarios, entrevistas a pescadores y a directivos pesqueros. La finalidad es proporcionar información relevante en la toma de decisiones al interior de las cooperativas, en la asignación de recursos públicos y en la mejora del uso de las reservas.

PALABRAS CLAVE: Rentabilidad Económica, Cooperativas, Pesca, Costo Beneficio.

ABSTRACT

In the Mexican Caribbean fishing organizations that evaluate the efficiency of their production are few because necessary information accounting and financial records in the evaluation carried out only by tax and institutional reasons. Existing records are based, primarily, on basic costs to check of public contributions, since the formation of its capital is social and as such contains public participation and partners. Information presented in this document corresponds to the State of Quintana Roo, located in the Yucatan Peninsula, Mexico. Profitability measures are presented in the cooperative, working on work in fishing organizations, done with lifting of questionnaires, interviews fishermen and fishery managers. The purpose is to provide relevant information in decision making within the cooperatives, in the allocation of public resources and improving the use of reservations.

KEYWORDS: Economic profitability, Cooperative, fishing, Cost Benefit.

INTRODUCCIÓN

La pesca es una actividad prioritaria en el estado de Quintana Roo, aún cuando en los últimos años conviva con el turismo que genera más recursos, su significado además de económico es marcadamente social ya que forma parte de su identidad y origen, las razones se dan de manera natural ya que el estado se ubica en el litoral del Golfo y Caribe y posee 860 Km de litoral y 264 mil hectáreas de bahías, esteros y lagunas de los más de 10,000 km, que hay en México.

Con estos recursos dentro del sector pesquero nacional la captura de langosta ocupa el trigésimo quinto lugar de captura por volumen y en términos de valor se ubica en el séptimo lugar, lo que representa un valor importante en el sector (SAGARPA-CONAPESCA, 2004). Las especies de langosta más explotada son: la langosta roja y la langosta espinosa del Caribe.

El área de producción de la langosta roja se ubica principalmente sobre el Mar de Cortés, siendo el estado de Baja California Sur el principal productor con 1,300 toneladas; en segundo lugar se encuentra Yucatán

con una producción de 350 toneladas; Quintana Roo se ubica en el tercer lugar, con 263 toneladas; en la cuarta posición se ubica el estado de Baja California con una producción de 222 toneladas (CONAPESCA, 2005); estas cuatro entidades generan el 93% de la producción total nacional.

Es a partir de 1992, que la producción de langosta comienza a descender en Quintana Roo a consecuencia de la sobreexplotación y pesca furtiva generando producciones de 152 toneladas anuales, tendencia negativa si se compara con la producción de 1989 cuando se consiguieron 384 toneladas. En los últimos años la producción de langosta se ha estabilizado manteniendo un total de producción cercano a las 250 toneladas anuales.

El estado se encuentra dividido en tres zonas de captura, la zona norte que abarca las cooperativas de Pescadores de Holbox, Vanguardia del Mar, Chiquilá, Cabo Catoche, Isla Blanca, Patria y Progreso, Por la justicia Social, Caribe, Pescadores de la Laguna Makax, Horizontes Marinos y la de Puerto Juárez; la zona centro abarca las cooperativas de Cozumel, Pescadores de Tulum, Vigía Chico, José María Azcorra y Puerto Morelos; y la zona sur que incluye las cooperativas de Andrés Quintana Roo, Pescadores del Banco Chinchorro y los Langosteros del Caribe.

La producción por zona es de: 27.8 % en el norte, 57.5 % en el centro; lo que representa más de la mitad de la producción total del estado y 14.7% en el sur. El 47% de la producción corresponde a langosta viva, el 42% a cola de langosta refrigerada o fresca, el 10% a cola de langosta congelada y menos del uno por ciento representa la langosta entera congelada o fresca.

En México la captura de la langosta está reservada a cooperativas pesqueras y ya que es el producto pesquero de más valor y su producción natural se encuentra en descenso, se hace necesario hacer de la actividad pesquera una actividad realmente rentable por lo que en este trabajo se tiene como objetivo principal medir la rentabilidad que generan las cooperativas pesqueras de Quintana Roo. Para conseguir lo anterior se demuestra con instrumentos financieros el margen de utilidad que genera cada cooperativa a través de sus embarcaciones particulares.

La producción de langosta a nivel estatal, ocupa el tercer lugar en volumen de captura, y el primero en términos de valor, lo que ejemplifica la importancia de langosta en el sector y la necesidad de medir el rendimiento en la unidades de producción con el propósito de generar estrategias de mejora en su proceso de producción.

La práctica de la actividad pesquera en sociedades cooperativas de producción puede mejorar la vida de los pescadores, si éstos trabajan con entusiasmo y visión de mejorar a partir de su propio trabajo y esfuerzo. Organizados pueden satisfacer necesidades económicas, imposibles de manera individual o demasiado caras.

“Trabajar en colectivo significa construir un sujeto social que organice el trabajo y tome decisiones sobre cómo, cuánto y cuándo producir, así como distribuir los ingresos. Significa reconocer intereses grupales y objetivos comunes que pueden alcanzarse mediante la acción conjunta; y pasar de un nivel individual de decisiones a un ámbito colectivo que limita la libertad individual en aras de un bien común”, (González, 1992).

Las cooperativas de producción se distinguen por su criterio de identidad ya que los propietarios y trabajadores son los mismos y preserva la solidaridad que el capital descompone en una empresa como tal y establece vínculos de cooperación y de trabajo colectivo. (Paas, 1992). El sector social de la pesca integrado en sociedades cooperativas de producción pesquera representa el 52% de los pescadores de nuestro país.

REVISIÓN LITERARIA

El 3 de agosto de 1994 se publica en el diario oficial de la federación la nueva ley de Sociedades Cooperativas, que la definen como: una forma de organización social integrada por personas físicas con base en intereses comunes y en los principios de solidaridad, esfuerzo propio y ayuda mutua, con el propósito de satisfacer necesidades individuales y colectivas a través de la realización de actividades económicas de producción, distribución y consumo de bienes y servicios.

Los principios del Cooperativismo son: Adhesión voluntaria y abierta, gestión democrática por parte de los socios, participación económica de los socios, autonomía e independencia, educación, formación e información. En México las cooperativas se han visto supeditadas al control del gobierno federal ya que con la ley de 1934 el interesado debía pertenecer a la clase trabajadora volviéndose instrumentos políticos y disminuyendo su importancia como verdaderas empresas productivas.

Las cooperativas, a diferencia de las compañías anónimas, son una sociedad de personas, no de capitales. De los tipos existentes los pescadores se agrupan en *Cooperativas de Producción de Bienes y Servicios* que consisten en agrupaciones de personas de un mismo oficio o con un fin común, que por medios propios producen ciertos artículos vendiéndolos directamente y distribuyéndose entre ellos las ganancias. Este tipo de cooperativas tienen como meta principal la producción de bienes o prestación de servicios.

Las Cooperativas de Producción Pesquera, son uniones de personas dedicadas a esta actividad, que suman sus esfuerzos para mejorar sus condiciones de producción, potenciando el alcance de su trabajo; su capital de está formado por el capital social de la organización y puede tener financiamiento interno y externo.

El financiamiento interno proviene de: aportaciones de capital, éstas integran el capital social de la empresa y sus incrementos depende de la asamblea general. Estas aportaciones pueden ser de capital, bienes, derechos y dinero o industriales, trabajo personal, esta última forma parte del Patrimonio Social. También se proviene de certificados de aportación excedente, por reinversión de utilidades, por revaloración de los activos y por conversión del fondo de reservas en capital social. (Porras, 8, 1997)

El financiamiento externo es considerado como “una debilidad estructural para la captación de recursos de capital” y es a partir de 1994 que se consideran donaciones, además de créditos, apoyo gubernamental y créditos de aportación para capital de riesgos. (Porras, 8, 1997)

Los objetivos de éstas pueden ser económicos o sociales, por ejemplo en lo económico: mejorar la calidad de vida de los asociados o distribución equitativa de los excedentes, con el fin de garantizar la igualdad entre todos los integrantes. En lo social: cambiar el beneficio individualista y con fines de lucro por la apropiación colectiva de lo producido con fines sociales, valorando al trabajador, combatiendo la división del trabajo y la acumulación del capital, (Guilarte, 2009).

Para que funcione la cooperativa como empresa económica y social, debe obtener beneficios que surgen de la diferencia entre el costo real de un producto y el precio en el que se vende. Como la idea de lucro no cabe en una cooperativa, estos rendimientos deben entregarse a los socios, quienes los originaron con sus aportaciones y trabajo. La distribución de rendimientos en las cooperativas de productores se realiza de acuerdo con el trabajo realizado por cada socio, en la producción de bienes o prestación de servicios, considerando el tiempo, la cantidad y calidad de su trabajo (Guilarte, 2009).

En su funcionamiento las cooperativas han ido desarrollando capacidades empresariales, sobre todo por las dificultades económicas que hay restringido el financiamiento y la derrama de recursos gubernamentales. Antes de 1994 el financiamiento externo provenía en su mayoría del Estado a través de

instituciones y fideicomisos públicos que en la actualidad han desaparecido, por ejemplo BANPESCA, hoy sólo cuentan con recursos propios y créditos bancarios.

La mayoría de las cooperativas pesqueras han enfrentado procesos de conflicto y división. Y es importante que las propias cooperativas y organizaciones de cooperativas se preocupen para que tales fenómenos no ocurran. En este sentido deben cuidarse: la distribución equitativa de las cargas y oportunidades de trabajo; el brindar información constante a los socios acerca de las actividades que se realizan y los problemas que se enfrentan; la transparencia en el manejo de los recursos, así como la fijación de remuneraciones adecuadas a técnicos y directivos para estimular su interés en la buena marcha de las cooperativas, (FAO, 2009).

Para que las aportaciones de capital sean obtenidas las cooperativas deben probar su rentabilidad, más aún cuando el financiamiento público ha disminuido, por lo que se define el concepto de capital y el de rentabilidad. La rentabilidad puede verse como una medida de cómo una compañía invierte fondos para generar ingresos.

El Capital desde el punto de vista económico se entiende como el conjunto de bienes producidos que sirven para producir otros bienes. Según la forma que adopta, puede ser una suma de dinero invertida con la intención de aumentarla, un patrimonio de bienes y valores, o un conjunto de medios de producción. En todos los casos, el capital tiene como función producir un excedente: interés. La teoría del capital analiza los mecanismos de la formación y movimiento de capitales.

La rentabilidad económica o de la inversión es una medida, referida a un determinado periodo de tiempo, del rendimiento de los activos de una empresa con independencia de la financiación de los mismos. De aquí que, según la opinión más extendida, la rentabilidad económica sea considerada como una medida de la capacidad de los activos de una empresa para generar valor con independencia de cómo han sido financiados, lo que permite la comparación de la rentabilidad entre empresas sin que la diferencia en las distintas estructuras financieras, puesta de manifiesto en el pago de intereses, afecte al valor de la rentabilidad.

La rentabilidad económica es un indicador básico para juzgar la eficiencia en la gestión empresarial, pues es precisamente el comportamiento de los activos, con independencia de su origen, el que determina con carácter general que una empresa sea o no rentable en términos económicos. Además, el no tener en cuenta la forma en que han sido financiados los activos permitirá determinar si una empresa no rentable lo es por problemas en el desarrollo de su actividad económica o por una deficiente política de financiación. (Ballesta, 2002)

La rentabilidad financiera o de los fondos propios, es una medida, referida a un determinado periodo de tiempo, del rendimiento obtenido por esos capitales propios, generalmente con independencia de la distribución del resultado. La rentabilidad financiera puede considerarse así una medida de rentabilidad más cercana a los accionistas o propietarios que la rentabilidad económica. La rentabilidad financiera es, por ello, un concepto de rentabilidad final que al contemplar la estructura financiera de la empresa (en el concepto de resultado y en el de inversión), viene determinada tanto por los factores incluidos en la rentabilidad económica como por la estructura financiera consecuencia de las decisiones de financiación. (Ballesta, 2002)

La rentabilidad es una relación entre los recursos necesarios y el beneficio económico que deriva de ellos, en la economía, la rentabilidad financiera es considerada como el retorno que recibe un accionista en una empresa por participar económicamente de la misma La rentabilidad suele expresarse en un porcentaje de relación.

Además del aspecto económico y financiero, también existe la llamada rentabilidad social. Ésta, como contrapartida de la económica, considera que un Estado o institución gubernamental (pero también en casos empresas privadas) deben rendir más beneficios que pérdidas a la sociedad en la que se encuentran inmersos. (Ballesta, 2002).

La pesca en México puede ser una actividad rentable, en la actualidad reporta un beneficio social independiente del financiero y el económico ya que es una fuente de empleo importante en las organizaciones cooperativas en zonas con litoral. En el aspecto social también puede mejorar el ingreso de los pobladores, incrementar las obras de infraestructura del lugar en donde se desarrolle y generar planes de largo plazo en el entorno. Todo esto debido al carácter social de tales organizaciones y a que no consideran la máxima ganancia su principal objetivo. El reto es desarrollar las capacidades empresariales de las cooperativas y hacerlas rentables.

En este trabajo se desarrolla un análisis de rentabilidad, calculado con base en diversos indicadores económicos, se usan los ingresos y egresos que generaron las cooperativas a lo largo de un año, lo que nos permite obtener la tasa de ganancia o utilidad que cada cooperativa genera con base en los datos que proporcionaron para la realización del proyecto. (Acosta, 2007).

METODOLOGÍA

Para el manejo de los datos se segmentó la información por cooperativa y embarcaciones encontrándose información de siete cooperativas. La cooperativa Holbox, con una embarcación; la Vanguardia también con una embarcación, Cabo Catoche con 10 embarcaciones; Por la Justicia Social, que cuenta con nueve embarcaciones; Puerto Morelos con dos embarcaciones; Pescadores de Cozumel cuenta con ocho embarcaciones y la cooperativa de Banco Chinchorro con una embarcación.

La información, se obtuvo mediante la aplicación de un instrumento a través de entrevistas realizadas a los pescadores, socios de las cooperativas mencionadas, esta información revela la información económica de las cooperativas, sus ingresos y egresos con los cuales se puede realizar el análisis correspondiente. Este instrumento se elaboró por el Instituto Nacional de Pesca y su aplicación estuvo a cargo tanto por el instituto como por la Universidad del Caribe.

Los datos recabados describen como primer punto las cooperativas que son objetos de estudio, sus embarcaciones, datos del dueño de la embarcación; el motor que utiliza, los caballos de fuerza y tiempos según modelo; la zona marítima en donde realiza su captura, repartición de las ganancias; los costos que generan al realizar mantenimiento y reparaciones o ajustes mayores.

Dentro de la encuesta se realizó un estudio socioeconómico de los pescadores dividido por cooperativas y embarcaciones, se obtuvieron datos como los cargos que desempeña cada pescador en la embarcación, si cuenta con familiares en el sector de la pesca, la edad en que inició en la pesca, el tiempo que tiene viviendo en la zona, si la casa en la que viven es particular y si es de material, si cuenta con vehículo propio, así como, descendencia que se dedica a la pesca. Estos datos serán analizados y presentados en otros espacios académicos ya que la investigación en muy extensa.

También se encuentran datos socioeconómicos de cada miembro de la familia del pescador. Se detallan así mismo los instrumentos con los que cuentan las embarcaciones y sus costos, como winchs, neveras, GPS, compresor, baterías, tanques, entre otros instrumentos, nos otorga también el costo del instrumento, el año de adquisición, la duración del instrumento, y el costo de mantenimiento anual. Los pescadores de cada cooperativa registran los datos después de cada viaje tanto de costos como de producción. Los viajes se refieren al traslado del pescador desde su lugar de residencia hacia el campamento de pesca que le corresponde, según temporada de obtención del recurso.

Los gastos que genera cada embarcación se registran generando información detallada sobre cada una, es decir el arte de pesca que desarrolla, la forma en la cual capturan a las langostas, los meses en los que se realiza cada arte, el tiempo de traslado por cada viaje, y el tiempo que dura cada jornada de trabajo, también nos ofrece la cantidad en litros que consume cada embarcación para su traslado y los costos de hielo, de rellenado del tanque de combustible, de alimentación de los pescadores por cada viaje realizado y el costo que generan los campamentos que implementan las cooperativas, los lugares en donde los colocan, el mantenimiento, el costo anual por traslados, los víveres y el mantenimiento general.

Para la obtención de la Tasa de Ganancia se utilizó la siguiente fórmula (González P. L., 1992):

$$TG = \frac{(Vi - Ci)}{Ci} \quad (1)$$

Dónde:

TG = Tasa de Ganancia
Vi = Valor de la Producción (beneficio bruto)
Ci = Egresos

El valor de la producción (**Vi**) se calculó multiplicando, en primera instancia, el número de viajes de cada embarcación por el producto de cada traslado, obteniendo la cantidad de producto total anual, ver tabla 1. Después esta cantidad se multiplicó por el promedio del precio de venta de las diferentes presentaciones de producto (langosta viva, entera y cola).

Tabla 1: Producción Total

Producción total en pesos			
SCPP	Viajes	Captura	Producto Total
Holbox	17	0.00	0.00
Vanguardia	38	0	0
Cabo catoche	475	1,116.85	316,440.83
Por la justicia social	0	8,199.80	2,323,276.67
Pto. Morelos	0	0.00	0.00
Pescadores de cozumel	0	0.00	0.00
Banco chinchorro	0	0.00	0.00

En esta tabla se observa el cálculo del producto total de langosta que fue hecho con la multiplicación de los viajes hechos por embarcación y la captura que se obtuvo.

El cálculo de los egresos se realizó con la sumatoria de los gastos de las embarcaciones como la del combustible, se multiplicó el consumo de combustible total por el promedio del precio de venta del combustible Premium que fue de \$9.15, se le añadió el costo anual de mantenimiento de las embarcaciones y sus instrumentos, el costo total anual de comida y hielo que utilizan en cada viaje, el costo del mantenimiento de los motores, así como el costo anual de los campamentos que emplean, y los gastos administrativos.

Se tuvieron que segmentar los costos, en primer término se determinó el consumo total del combustible al año, el cual se obtuvo con la multiplicación del número de viajes de cada embarcación por el combustible en litros que emplea la embarcación en cada traslado; una vez obtenido el total de litros de la embarcación se multiplicó por el promedio del precio del combustible en el año de estudio, en este caso se utilizó combustible Premium que no cuanta con subsidio para su consumo; el resultado es el costo total en pesos del consumo del combustible por un año de cada embarcación.

Posteriormente para encontrar el costo anual total del hielo que se ocupa en cada traslado es necesario multiplicar el número de viajes de la embarcación por el costo del uso de hielo utilizado en cada viaje. De la misma manera para encontrar el costo anual total de la comida que se utiliza en cada traslado, es necesario multiplicar el número de viajes de la embarcación por el costo del consumo de alimentos en cada viaje. Todos los costos se describen en la tabla 2.

El costo de los campamentos se obtuvieron con la sumatoria de los costos de traslado, víveres y mantenimiento; para obtener el costo total anual del traslado es necesario multiplicar el número de traslados anuales por el costo que produce cada uno; el costo anual total de los víveres se obtiene por la multiplicación del total de los viajes anuales por el costo de alimentos que se emplean en cada viaje.

Tabla 2: Costos Anuales

SCPP	Costos Anuales									
	Viajes al año	Gasolina viaje promedio	Precio Gasolina Viaje	Hielo viaje \$	Costo de Comida	Gasolina Viaje	Hielo gasto por año	Comida por año	Mantenimiento por año	Total
Holbox	0	50.00	457.50	0.00	0.00	0.00	0.00	0.00	-	507.50
Vanguardia	0	40.00	366.00	0.00	100.00	0.00	0.00	0.00	-	506.00
Cabo catoche	248	371.08	3,395.41	260.00	857.50	83,387.76	6,875.00	21,677.50	153,568.00	270,640.26
Por la justicia social	513	492.08	4,502.56	213.00	230.00	246,610.04	10,787.00	11,420.00	0.00	274,767.68
Puerto Morelos	0	60.00	549.00	156.00	0.00	0.00	0.00	0.00	-	765.00
Pescadores de Cozumel	0	201.67	1,845.25	8.00	0.00	0.00	0.00	0.00	159,040.00	161,094.92
Banco chinchorro	0	45.00	411.75	0.00	0.00	0.00	0.00	0.00	13,110.00	13,566.75

En esta tabla se muestra como primero se obtienen los costos por viaje y luego se anualizan para poder obtener los resultados finales.

El mantenimiento total es la sumatoria de los gastos que se emplean en las reparaciones o mantenimiento de los campamentos en el periodo de un año. El objetivo de esta relación es encontrar la utilidad que se obtiene; es decir la ganancia obtenida por cada peso que se invierte en la producción de langosta.

La obtención de la Relación Costo / Beneficio se encuentra dada por la siguiente ecuación (Armando Rucoba García, X):

$$C/B = \frac{Vi}{Ci} \quad (2)$$

Dónde:

C/B = Relación Costo / Beneficio
Vi = Valor de la Producción (beneficio bruto)
Ci = Egresos

Para la obtención del valor de la producción se multiplicó la cantidad de producto obtenido en el año por el promedio del precio de venta de las diferentes presentaciones de producto (langosta viva, entera y cola), como puede observarse en la tabla 3. Para la obtención de los Egresos fue necesaria la sumatoria de todos los gastos que las embarcaciones incurrieran como el combustible, mantenimiento, comida, hielo, campamentos, todos los gastos operativos, así como, los gastos administrativos.

Tabla 3: Precio promedio de la langosta, según presentación de venta.

Presentación del Producto	Precio
Viva	300.00
Entera	200.00
Cola	350.00
Precio Promedio	283.33

El precio de la langosta se promedió entre las tres diferentes presentaciones para poder homogeneizar la información y calcular la producción total del producto.

El objetivo de esta relación es encontrar la utilidad que se obtiene; es decir la ganancia obtenida por cada peso que se invierte en la producción de langosta. Sin embargo la diferencia entre esta relación y la de tasa de ganancia incurre en que en esta ecuación el resultado incluye el peso invertido más la utilidad generada.

Como parte de los instrumentos financieros para medir la rentabilidad se proyectó calcular la Tasa Interna de Retorno (TIR) de las Sociedades Cooperativas Pesqueras sin embargo sólo se pudo obtener para una sola cooperativa. La razón es que la información de los estados financieros que se tiene es muy variante, por lo que no se podrían considerar sus activos fijos como la inversión inicial y por otro lado, faltarían los flujos de efectivo, también los saldos del concepto de bancos de los balances generales no se sabe que tan confiables sean y si están conciliados con las cuentas bancarias.

La TIR es una medida porcentual que sirve para medir y comparar si la inversión que se realiza es rentable, es decir, si conviene mas invertir en un proyecto o si es mejor invertirlo en algún instrumento económico. Para encontrarla es necesario contar con la siguiente información:

- La inversión inicial
- Los Ingresos netos de los 5 años posteriores a la inversión

Lo primero que se realizó fue establecer los precios a un año base para evitar la disparidad entre costos, lo que se hizo fue establecer el año al que se convertirán todos los costos una vez determinado el año base; se usó el Índice Nacional de Precios al Consumidor (INPC) como índice de deflactación con el cual se establece la relación existente entre los precios de los años a comparar, una vez obtenidos los índices de los años se realiza la siguiente operación:

$$\left(\frac{INPC}{INPC \text{ año base}} \right) * 100 \quad (3)$$

Esto nos creará la relación existente entre cada año y el año base, para convertir cada gasto al año base es necesario aplicar la siguiente fórmula:

$$Costo \text{ actualizado} = \left(\frac{Costo}{Indice \text{ del año base}} \right) * 100 \quad (4)$$

Como segundo paso es necesario encontrar los ingresos netos de las unidades productivas, es decir, realizar la sustracción de los costos totales a los ingresos totales, para la obtención de los costos se generó el supuesto que todos los gastos fuesen iguales y se modificó el precio del combustible que utilizan, ya que se tenía la información de los ingresos que generaban mas no de los costos; una vez obtenidos dichos datos se ingresaron al programa Excel para facilitar su y mediante la fórmula de TIR los resultados por cada unidad de producción.

Los datos recabados solo se pudieron aplicar en la Cooperativa de Por la Justicia Social que se encuentra en el municipio de Isla Mujeres, ya que se encontró información económica de cinco años con lo cual se pudo comenzar a elaborar el trabajo, posteriormente en esta cooperativa se pidió información sobre la inversión en lancha y motor, así como, el año de adquisición, para el correcto control de la información se estableció el parámetro de que solo se utilizarían las unidades productivas que tuviesen la información de los dos aspectos lancha y motor, las unidades productivas que obtuvieron dicha información fueron seis, como segundo paso se observó, que cumplieran con la información económica necesaria de cinco años para ello solo tres unidades productivas cumplieron con el requisito por lo cual a estas fue a las que se les aplicó el estudio.

RESULTADOS

Los resultados obtenidos sobre la rentabilidad de las cooperativas pesqueras para el estado de Quintana Roo, se reducen a siete cooperativas a las cuales se les calculó la utilidad y la relación costos beneficio, con esta información se evaluará la conveniencia de llevar a cabo la actividad productiva del producto en el que se desarrolla de manera actual. En la tabla 4 puede apreciarse la tasa de ganancia o utilidad de las siete cooperativas sujetas de estudio.

Tabla 4: Utilidad Cooperativista

SCPP	Ingresos	Costos	Utilidad	Tasa de ganancia
Holbox	0.00	507.50	-507.50	-1
Vanguardia	0.00	506.00	-506.00	-1
Cabo catoche	316,440.83	270,640.26	45,800.57	0.169230458
Por la justicia social	2,323,276.67	274,767.68	2,048,508.98	7.455421826
Puerto Morelos	0.00	765.00	-765.00	-1
Pescadores de Cozumel	0.00	161,094.92	-161,094.92	-1

La tabla 4 muestra como sólo dos de las siete cooperativas sujetas de estudio presentan utilidades y un margen de ganancias positivo, éste cálculo aún no contempla la inversión.

Para poder calcular la rentabilidad financiera con la información disponible se calculó la relación costos beneficio de llevar a cabo la actividad económica. En la tabla 5 puede observarse que la tendencia es la misma que en el cálculo anterior aunque muestra con más exactitud el porcentaje de ganancia sobre la inversión.

Tabla 5: Relación Costos/Beneficio, cooperativista

SCPP	INGRESOS	COSTOS	Relación C/B
Holbox	0.00	507.50	0.00
Vanguardia	0.00	506.00	0.00
Cabo catoche	316,440.83	270,640.26	1.16
Por la justicia social	2,323,276.67	274,767.68	8.45
Puerto Morelos	0.00	765.00	0.00
Pescadores de Cozumel	0.00	161,094.92	0.00
Banco chinchorro	0.00	13,566.75	0.00

La tabla 5 muestra la relación Costo/Beneficio de la práctica de la actividad pesquera en Quintana Roo, México, para las siete unidades sujetas de estudio. Puede observarse cómo la cooperativa con mayores ingresos es la denominada Por la Justicia Social con un margen mucho mayor que las demás.

Aún cuando se ha expresado la inconveniencia de contar con datos dispersos sobre las unidades de producción estudiadas, se presenta el cálculo de la Tasa Interna de Retorno de la Inversión para la cooperativa Por la Justicia Social, quien fue quien proporcionó datos, el resultado nos arroja que la pesca al llevarse de manera ordenada resulta en una actividad rentable.

Los cálculos en este caso fueron hechos para embarcaciones individuales pertenecientes a una misma cooperativa, así que la interpretación se hace, primero de manera individual para posteriormente unir los resultados y la conveniencia de los pescadores de pertenecer a una cooperativa.

Tabla 6: Rentabilidad Cooperativista, Por la Justicia Social

Embarcación	Alain	Jonathan	Virginia
Costo inicial de un negocio	-39,749.01	-5029.61	-7755.05
Ingresos netos del primer año	-6,875.00	2,897.92	-556.67
Ingresos netos del segundo año	60,328.67	258,373.33	79,464.33
Ingresos netos del tercer año	140,127.43	288,246.21	71,935.40
Ingresos netos del cuarto año	94,551.17	414,646.46	61,067.33
Ingresos netos del quinto año	245,698.00	316,164.58	148,522.00
TIR	104%	703%	267%

Las embarcaciones comienzan a recuperar su inversión a partir del primer año, la embarcación Jonathan es la que logra una recuperación mayor de la inversión hecha.

CONCLUSIONES

A raíz de la nueva ley de cooperativas y la dinámica económica que han seguido los diferentes gobiernos desde entonces los pescadores organizados en cooperativas debe de fomentar la rentabilidad económica y financiera de sus organizaciones ya que el presupuesto público y los subsidios que antes les otorgaban ahora son hechos a manera de inversión financiera. El hecho de unirse en personas y no en capitales les permite buscar también una rentabilidad social con el sólo hecho de desarrollar la actividad, generando empleo para aquellos que por tradición la practican y derraman sus recursos sobre sus familias.

Es necesaria una modernización en el manejo de sus finanzas que permita el cálculo de su rendimiento y la obtención de financiamiento por parte de fuentes externas. De las siete unidades de estudio solamente dos presentaron de manera constante información para ser analizada y una la suficiente para el cálculo del rendimiento de la inversión, lo cual muestra una necesidad apremiante en el estado, el registro de información contable y financiera. Esto facilita la transparencia de información y el uso de los recursos.

Las cooperativas Cabo Catoche y Por la Justicia Social presentaron ingresos más altos que las otras cinco unidades de estudio y casi la misma proporción en costos lo que da como resultado que la segunda tenga una tasa de ganancia superior a las 7 unidades, habla de una actividad productiva. Para ver no sólo su productividad sino también su rentabilidad se calculó la relación costo beneficio.

Nuevamente la cooperativa Por la Justicia Social presentó una relación positiva y mayor a las demás con 8.45 unidades lo que significa que la actividad es rentable sobre la inversión que se realiza con los rendimientos que se obtienen. Las demás organizaciones pesqueras no concluyeron la aportación de datos para su cálculo o resultaron no ser lo suficientemente productivas. Con el trabajo de campo que se ha realizado puede comentarse que algunas de las razones de esta cooperativa y de su buen desempeño se debe a que las decisiones son tomadas según marca la ley y se desempeña con el voto de todos sus socios, así como de la aportación de su trabajo, capital; así como de fuentes de financiamiento externo.

Para constatar este hecho la Tasa Interna de Retorno, que se hizo de manera individual por embarcación muestra que el beneficio en conjunto como cooperativa es mayor para cada uno de los socios que si se compara de manera individual, además de que el margen de utilidad tan alto es posible por el trabajo colaborativo y la distribución de las ganancias entre los socios.

Es necesario la implementación de un registro de información homogéneo y sistematizado para todas las cooperativas de extraen langosta, con el fin de buscar asociaciones con el sector privado que permita un desarrollo eficiente de la actividad, sobre todo en una economía globalizada como lo es el estado de Quintana Roo y con la tendencia de financiar diversas actividades diferentes a las agrícolas.

La finalidad es que la actividad pesquera sea rentable por lo que se debe hacer un ejercicio de por embarcación y por cooperativa para permitir y regular la práctica en virtud de que el recurso ha disminuido en los últimos años y el espacio se comparte con la actividad turística, posiblemente sean menos quienes se dediquen a pesca pero con mejores ingresos y niveles de vida.

FORMACIÓN Y CONSOLIDACIÓN DEL CENTRO DE INVESTIGACIÓN EN CIENCIAS ADMINISTRATIVAS

Luis Ramón Moreno Moreno, Universidad Autónoma del Estado de Baja California

Gonzalo Llamas Bañuelos, Universidad Autónoma del Estado de Baja California

Hilario de la Torre Pérez, Universidad Autónoma del Estado de Baja California

RESUMEN

El presente trabajo presenta la importancia que reviste para la Facultad de Ciencias Administrativas (CIFCA), Campus Mexicali, la creación del Centro de Investigación, ya que se demuestra que es necesario incentivar la conformación de espacios de discusión e investigación con los distintos sectores de la región, el sector social, empresarial y público en general. En ese sentido, el Centro de Investigación conjuntará los esfuerzos aislados de los investigadores de la Facultad, de los investigadores en formación o en proceso, así como de aquellos profesores que deseen incorporarse en actividades de investigación a través de la conformación de grupos de investigación y de espacios para la discusión de temas y proyectos de investigación, de la formación de redes de investigación con otras Facultades, Escuelas e Institutos, al interior de la Universidad (UABC),

PALABRAS CLAVES: Centro de Investigación, Espacios de discusión e investigación, conjuntar esfuerzos aislados, redes de investigación.

ABSTRACT

This work presents the importance for the Faculty of Administrative Sciences (CIFCA), Campus Mexicali, the creation of the Centre for research, as it shows that it is necessary to encourage the creation of spaces for discussion and research with the various sectors of the region, the social, business and public sector in general. In that sense, the Research Center together isolated researchers faculty researchers in training or process, as well as those teachers who wish to join in research activities for the creation of spaces for discussion of issues and research, networking with other faculties, schools and institutes, research within the University (UABC).

KEYWORDS: Centre for research, discussion areas and research projects and research groups, bring together asilados efforts, research networking efforts.

EL COMERCIO ELECTRÓNICO Y SUS EFECTOS EN EL IMPUESTO AL VALOR AGREGADO EN MÉXICO

Hilario de la Torre Pérez, Universidad Autónoma del Estado de Baja California
Luis Ramón Moreno Moreno, Universidad Autónoma del Estado de Baja California
Gonzalo Llamas Bañuelos, Universidad Autónoma del Estado de Baja California

RESUMEN

México ha firmado convenios con diversos países para evitar una doble tributación, bajo los parámetros y condiciones que en los mismos se establecen. El comercio electrónico cada día tiene mayor presencia en las economías de los países con alta tecnología, quienes intervienen en este proceso de comercialización, tanto en servicios como en compra-venta de bienes; realizan operaciones que generan una relación tributaria y por ende la obligación de pagar o retener una contribución. Nuestro trabajo de investigación consiste en investigar el concepto de fuente del ingreso como base de la relación tributaria del hecho generador de la causación tributaria, así como de la residencia del sujeto en dicha relación tributaria, en el comercio electrónico. Nuestro trabajo se enfoca principalmente al análisis de las disposiciones legales aplicables al Impuesto al Valor Agregado. Así como sus efectos en aquellos países con los que se haya celebrado acuerdos, convenios o tratados en materia tributaria.

PALABRAS CLAVE: Comercio Electrónico, impuesto al Valor Agregado, Convenios Para Evitar la Doble Tributación.

ABSTRACT

Mexico has signed agreements with several countries to avoid double taxation, under the parameters and conditions as are laid down. E-commerce every day has increased presence in the economies of countries with high technology, those involved in the marketing process, both as regards services and sale of property, conducting operations that generate a tributary relationship and hence the obligation to pay or withhold a contribution. Our research work is to investigate the concept of sources of income as tax base the relationship of causation event for taxation as well as the residence of the subject in the tributary relationship in electronic commerce. Our work focuses primarily to the analysis of the laws applicable to the Value Added Tax. And its effects on those countries with which it has concluded agreements, agreements or tax treaties.

KEYWORDS: Electronic Commerce, Value Added Tax, Convention for the Avoidance of Double Taxation

BIOGRAFIA

Luis Ramón Moreno Moreno, Gonzalo Llamas Bañuelos y Hilario de la Torre Pérez son Profesores-Investigadores de la facultad de Ciencias Administrativas de la UABC se les puede escribir a, normarsiul@gmail.com, gonzalo_llamas@uabc.mx, hilario_torre@uabc.mx

APRENDIZAJE Y FINANCIAMIENTO DE LA MICROEMPRESA QUE OPERA EN LA ECONOMÍA INFORMAL: UN ANÁLISIS PRELIMINAR

Gonzalo Llamas Bañuelos, Universidad Autónoma del Estado de Baja California
Luis Ramón Moreno Moreno, Universidad Autónoma del Estado de Baja California
Hilario de la Torre Pérez, Universidad Autónoma del Estado de Baja California

RESUMEN

El presente trabajo muestra los principales hallazgos obtenidos de la aplicación de la encuesta denominada aprendizaje y Financiamiento a la microempresa que opera en la economía informal de la ciudad de Mexicali, Baja California durante el 2009. Se presentan los resultados parciales de una investigación efectuada a 295 microempresas que trabajan informalmente, sin embargo, son generadoras de empleo familiar y su contribución al ingreso es de vital importancia. También, es necesario agregar que se hace un examen exhaustivo del tiempo en el que los microempresarios aprenden la nueva actividad a la cual se acaban de incorporar, asimismo se analiza la problemática que enfrentan ante la carencia de crédito ante una estructura administrativa informal, poseen bajos niveles de acceso a los mercados formales y son mayoritariamente empresas de tipo familiar y presentan una nula integración a los mercados externos a pesar de que se vive en una región fronteriza bastante dinámica. Además de lo anterior, se estudian las actividades anteriores de estos microempresarios, la escolaridad asociada a la habilidad para desarrollar nuevos negocios.

PALABRAS CLAVE: Aprendizaje, Financiamiento Perfil administrativo y Mexicali, empleo.

ABSTRACT

This paper shows the main findings from the implementation of the survey called learning and Financing for micro operating in the informal economy of the city of Mexicali, Baja California in 2009. We present partial results of an investigation to 295 micro working informally, however, generate employment and contribution to family income is vital. It is also necessary to add that an exhaustive review of the time in which microentrepreneurs to learn a new activity which have just joined also discusses the problems they face in the absence of credit to an informal administrative structure, have low levels of access to formal markets and are mostly family enterprises and have a no integration to foreign markets even though we live in a very dynamic border region. Besides the above, we study the past activities of these efforts, the school associated with the ability to develop new business.

KEYWORDS: Learning Funding Profile administrative and Mexicali, employment.

UN NUEVO SISTEMA DE ADMINISTRACIÓN DE TALENTOS, DESPROVISTO DEL CONCEPTO DE AUTORIDAD

Juan Nicolás Montoya Monsalve, Universidad Nacional De Colombia Sede Manizales

Santiago Gutiérrez Broncano, Universidad Rey Juan Carlos Madrid

RESUMEN

El objetivo de este trabajo es sensibilizar, concientizar un nuevo concepto organizacional desprovisto del concepto de autoridad formal, de cara a las exigencias de un contexto convulsionado del Siglo XXI, en el que están inmersas. Y donde permanentemente se requiere, alta velocidad de respuesta en todos los órdenes, nuevos conocimientos y destrezas, rompimiento de esquemas preestablecidos, alta capacidad de innovación, esquivar las trampas de un esquema burocrático y permitir que anteriores estructuras organizativas se reformen y den nacimiento a nuevas unidades. Lo cual implica, por supuesto, nuevas formas de comportamiento, con modalidades de trabajo en equipo con acento en los sistemas de autoplaneamiento y autocontrol; en un reconocimiento de la desformalización de la unidad de mando para promover la innovación, los desarrollos de los individuos, inspirados en la sociedad del conocimiento. Esto mediante una discusión teórica de sus elementos componentes, su transversalidad en el proceso administrativo, y su efecto en el desarrollo proactivo de los objetivos. Su desarrollo descriptivo, permite en forma gradual, abordar la teoría administrativa alrededor del concepto autoridad y su incidencia en el devenir de las organizaciones.

ABSTRACT

The objective of this work is to sensitize, to inform and to a new organizational concept lacking the concept of formal authority, of face to the demands of a convulsed context of the XXI Century, in which are. And where permanently it is required, high answer speed in all the orders, new knowledge and dexterities, break of preset outlines, high innovation capacity, to avoid the traps of a bureaucratic outline and to allow that previous organizational structures are reformed and give birth to new units. That which implies, of course, new behavior forms, with work modalities in team with accent in the autoplanning systems and autocontrol; in a recognition of the desformalización of the control unit to promote the innovation, the developments of the individuals, inspired by the society of the knowledge. This by means of a theoretical discussion of their component elements, their across in the administrative process, and their effect in the development of the objectives. Its descriptive development, allows in gradual form, to approach the administrative theory around the concept authority and its incidence in becoming of the organizations.

INCOMPATIBILIDAD CONTABLE ENTRE LA NORMATIVA Y LA REALIDAD EMPRESARIAL. CONTRASTACIÓN FUNDAMENTADA

Valentín Molina Moreno, Universidad de Castilla-La Mancha

Daniel Olaya, Universidad de Castilla-La Mancha

Ignacio Ruiz Guerra, Fundación Caja Rural de Toledo Universidad de Castilla-La Mancha

RESUMEN

Tras las modificaciones de los planteamientos y normativas de los planes contables, existen una serie de deficiencias que en este estudio comparativo de las normativas internacionales y el PGC-07 de España. La normatividad está relacionada con el pensamiento de lo realmente necesario para el ordenamiento contable de las empresas, pero, en la sociedad en la que vivimos, el cercano momento a la “aldea global” en el que habitamos con un marcado carácter de apertura a nuevos mercados y con decisiones estratégicas cada vez con un mayor riesgo, teniendo que tener claro de qué manera está organizada la institución para evitar situaciones inesperadas de carencia de recursos por un mal control de los mismos. Es por ello que en este estudio, a través de la comparativa de las normativas contables internacionales más importantes, y la correcta elección de las estrategias adecuadas para el desarrollo de los acuerdos empresariales provocan una serie de incompatibilidades entre el desarrollo normal de la actividad empresarial y la nueva normativa dedicada al control de las cuentas económicas de las empresas. A través de los fundamentos del nuevo PGC-07 de España y comparándolo con el sistema estadounidense, latinoamericano y de los principales países europeos, se muestran las carencias que tiene el nuevo PGC y las determinaciones que necesita una empresa para que su departamento financiero pueda tomar las decisiones más acertadas en el desarrollo de la estrategia tomada por los estamentos de primera línea, la alta gerencia.

PALABRAS CLAVE: Incompatibilidad, aldea global, contabilidad, estrategia, decisiones.

AVANCES HACIA LA CALIDAD EDUCATIVA MEDIANTE LOS PROGRAMAS DE FORTALECIMIENTO INSTITUCIONAL: FACTORES CLAVES DE ÉXITO DE LA FACULTAD DE ADMINISTRACIÓN Y CONTADURÍA

Nemecio Lorenzo Valenzuela Salazar, Universidad Autónoma de Coahuila

Julián Martínez Espinosa, Universidad Autónoma de Coahuila

Clara Buentello Martínez, Universidad Autónoma de Coahuila

Enrique Javier Cuellar Arizpe, Universidad Autónoma de Coahuila

Lilia Alanís Gómez, Universidad Autónoma de Coahuila

Victor Manuel Perez Rodriguez, Universidad Autónoma De Coahuila

Ignacio Rodríguez de la Rosa, Universidad Autónoma De Coahuila

RESUMEN

Este trabajo presenta los resultados obtenidos en la Facultad de Administración y Contaduría perteneciente a la Universidad Autónoma de Coahuila, mediante un proceso estratégico involucrando procesos de evaluación y acreditación así como proyectos institucionales. Se pretende reconocer los esfuerzos en los factores claves de éxito de dicha Facultad que están relacionados con la calidad educativa que comprende la capacidad y competitividad académica así como la innovación educativa. Contar con una oferta de calidad educativa requiere hoy más que nunca una planeación que integre diferentes estrategias, políticas, objetivos, metas y programas que fortalezcan a la institución educativa. Así fue como la Facultad de Administración y Contaduría inicio su proceso de transformación hacia los retos del siglo XXI.

PALABRAS CLAVES: Factores claves de éxito, Procesos, acreditación.

INTRODUCCION

El inicio de un proceso estratégico representa la oportunidad que tenemos como universitarios para aportar nuestros conocimientos y experiencias educativas que permitan alcanzar una calidad educativa basada en la Capacidad, competitividad e innovación académica. Refiriendo el concepto de calidad en la educación, para Diane Green la calidad es el logro de la misión y metas (efectividad institucional), de manera que una institución que establece claramente su misión y propósitos y consigue el cumplimiento de las metas que se ha puesto es una institución de calidad (Green, 1994)⁵. Para Bogue y Saunders, la calidad considerada desde el punto de vista de fidelidad al diseño de un programa académico es la “conformidad con las especificaciones de la misión y el logro de metas, dentro de estándares de integridad y responsabilidad aceptados públicamente” (Bogue and Saunders, 1992).

REVISION LITERARIA

Antecedentes

En el marco del Programa Nacional de Educación 2001–2006, el impulso a la formulación de Programas Integrales de Fortalecimiento Institucional (PIFI) constituyó el principal instrumento de política de la Secretaría de Educación Pública para inducir el cambio en un amplio segmento del sistema público de educación superior. Con esta investigación de tipo descriptivo se pretende dar una perspectiva de los avances obtenidos al 2009 mediante los Programas de Fortalecimiento Institucional (PIFI). En el año

2001 nuestra Facultad inició los procesos estratégicos mediante el Programa Integral de Fortalecimiento Institucional (PIFI) mismo que tendría una relación conjunta con el Programa de Desarrollo Institucional de nuestra Universidad (PDI). Iniciamos nuestro proceso con la asistencia de nuestro primer curso de capacitación para entender como funcionaria dicho programa además de diagnosticar la situación actual de ese momento de nuestra Facultad. Entendimos que deberíamos trabajar en un proyecto que integrara los factores importantes para poder tener una oferta de buena calidad y que son: 1.- La Capacidad Académica 2.- La Competitividad Académica 3.- La Innovación Educativa. En este artículo se detallan los avances obtenidos a la fecha de estos factores que estamos seguros permitirán a nuestra Dependencia de Enseñanza Superior (DES) mejorar su oferta de calidad.

METODOLOGIA

El objetivo fundamental de este estudio consiste en determinar los avances de nuestra facultad ¿Cuáles son impactos de la capacidad académica. Competitividad académica e innovación educativa como factores claves que miden el desempeño de nuestra oferta educativa? ¿Cual es la correlación entre ellos que nos permita determinar su incidencia tanto en la Capacidad y Competitividad así como la Innovación educativa?

Nuestras Hipótesis buscaran determinar primero que si hay un efecto positivo en estos tres factores con el desempeño de la facultad y segundo que existe una correlación importante entre los tres factores claves de éxito con el impacto positivo de dicha facultad.

RESULTADOS

Para alcanzar el éxito existen diversos factores institucionales que deben considerarse y uno de estos factores es definir la estrategia idónea que debe seguirse. Tomando en cuenta la importancia de esta decisión la Facultad decide considerar los procesos de evaluación y acreditación así como los proyectos institucionales, para definir la estrategia que debe llevarse a cabo. La estrategia que se decide seguir se basa en la calidad educativa considerando la capacidad, competitividad académica y la innovación educativa.

Capacidad Académica

Se cuenta con una evolución académica aceptable es decir se ha incrementado el número de profesor de tiempo completo, su habilitación como posibles perfiles deseables al contar con cuando menos una maestría así como 13 profesores de tiempo completo de un total de 39 profesores de una institución de 450 alumnos, se cuenta con un Cuerpo Académico CA en formación aun falta mejorar este renglón. Estableceremos políticas y estrategias que impulsen la adscripción al Sistema Nacional de Investigadores (SIN) de nuestros profesores con el perfil mínimo deseable.

Competitividad Académica

Como resultado del desempeño de nuestra DES del periodo de 2002 al 2009 se logro acreditar y evaluar los 2 programas educativos (PE) así mismo se trabaja en mejorar el indicador de la eficiencia terminal que involucra las tasas de titulación, tasa de egresados y los estudiantes que obtienen empleo en los primeros seis meses después. Es indudable que necesitamos enfocar nuestros esfuerzos en estos rubros a fin de asegurar la oferta de nuestra calidad educativa

Innovación Educativa

La innovación educativa incide de manera favorable en la mejora continua de la calidad educativa de los programas educativos, en el desempeño de los estudiantes así como en el funcionamiento académico de la institución, debe considerarse como una estrategia que mejora la capacidad y competitividad académica y la gestión. Se inicio un proceso de actualización tutorial para disminuir la deserción escolar, se implemento el ingles como segundo idioma y actualmente se están rediseñando nuestros programas con una mejorar la flexibilidad curricular.

CONCLUSIONES

Con la llegada del Programa Integral del Fortalecimiento Institucional (PIFI) en el año 2000 las Instituciones de Enseñanza Superior (IES) y todas sus dependencias (Facultades y/o Escuelas) se vieron involucradas en los procesos de mejora a fin de incrementar su oferta de calidad mediante la capacidad, competitividad e innovación Académica. Para alcanzar el éxito existen diversos factores institucionales que deben considerarse y uno de estos factores es definir la estrategia idónea que debe seguirse.

Las acciones orientadas a solucionar problemas de la institución o a consolidar sus fortalezas. Representan los medios para alcanzar objetivos y cumplir con las metas-compromiso logrando con ello una mejor consistencia en nuestra planeación estratégica. Por lo que se han establecido políticas que son congruentes con la institución con el propósito de cerrar brechas de la calidad tanto al interior como exterior de la DES. En cada Programa de Fortalecimiento de la Dependencia de Educación Superior los proyectos, metas compromiso se relacionan con las fortalezas y problemas identificados en la autoevaluación y a las políticas de la DES nos permitirán seguir encausando las estrategias y acciones para seguir mejorando.

Para alcanzar el éxito existen diversos factores institucionales que deben considerarse y uno de estos factores es definir la estrategia idónea que debe seguirse. Tomando en cuenta la importancia de esta decisión la Facultad decide considerar los procesos de evaluación y acreditación así como los proyectos institucionales, para definir la estrategia que debe llevarse a cabo. La estrategia que se decide seguir se basa en la calidad educativa considerando la capacidad, competitividad académica y la innovación educativa.

Capacidad Académica

Se cuenta con una evolución académica aceptable es decir se ha incrementado el número de profesor de tiempo completo, su habilitación como posibles perfiles deseables al contar con cuando menos una maestría así como 13 profesores de tiempo completo de un total de 39 profesores de una institución de 450 alumnos, se cuenta con un Cuerpo Académico CA en formación aun falta mejorar este renglón. Estableceremos políticas y estrategias que impulsen la adscripción al Sistema Nacional de Investigadores (SIN) de nuestros profesores con el perfil mínimo deseable.

Competitividad Académica

Como resultado del desempeño de nuestra DES del periodo de 2002 al 2009 se logro acreditar y evaluar los 2 programas educativos (PE) así mismo se trabaja en mejorar el indicador de la eficiencia terminal que involucra las tasas de titulación, tasa de egresados y los estudiantes que obtienen empleo en los primeros seis meses después.

Es indudable que necesitamos enfocar nuestros esfuerzos en estos rubros a fin de asegurar la oferta de nuestra calidad educativa

Innovación Educativa

La innovación educativa incide de manera favorable en la mejora continua de la calidad educativa de los programas educativos, en el desempeño de los estudiantes así como en el funcionamiento académico de la institución, debe considerarse como una estrategia que mejora la capacidad y competitividad académica y la gestión.

Se inicio un proceso de actualización tutorial para disminuir la deserción escolar, se implemento el ingles como segundo idioma y actualmente se están rediseñando nuestros programas con una mejorar la flexibilidad curricular.

RANCHOS TURISTICOS COMO ALTERNATIVA PARA EL DESARROLLO SUSTENTABLE DEL TURISMO GERONTOLÓGICO EN EL ESTADO DE SONORA

José Ramiro Hernández Marín, Centro de Estudios Superiores del Estado de Sonora

Liliana Andalón Martínez, Centro de Estudios Superiores del Estado de Sonora

María de los Ángeles Romo Rodríguez, Centro de Estudios Superiores del Estado de Sonora

María Eugenia Trujillo, Centro de Estudios Superiores del Estado de Sonora

Denisse Gómez Bañuelos, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

En las dos últimas décadas, la situación de la ganadería nacional se ha recrudecido cada vez más. Los principales problemas que han originado esta problemática son las condiciones climatológicas adversas, como es el caso de la sequía; falta de flujo crediticio al campo; baja rentabilidad de las empresas; escaso mercado; precios bajos de los productos pecuarios, sanidad y la intromisión de carne importada y de contrabando. Esto se traduce en pérdida de fuentes de empleo y abandono de la actividad. La sequía ha sido un problema constante y recurrente, principalmente en los estados del norte del país, entre los que se encuentran el estado de Sonora, donde ha afectado no sólo a la ganadería sino a muchas otras actividades entre las que se encuentra la agricultura. La debacle de estas actividades agropecuarias, manifiestan un insuficiente ingreso para solventar las necesidades de las familias rurales; siendo en esta forma que surge la inquietud de diversificar la unidad de producción y poder ofertar productos y servicios turísticos. Constituyéndose de esta forma los llamados “Ranchos Turísticos”, lugares ubicados en el campo y que ofrecen por lo general actividades de avistamiento de aves de la región, senderismo, identificación y conocimiento de la flora y fauna del lugar, safari fotográfico, pesca deportiva, paseos a caballo, ordeña, entre otros más. Asimismo, tenemos a un segmento de mercado poco atendido pero muy significativo en cuanto a gasto y estadía promedio, ya que tiene una considerable representatividad al incrementar los indicadores del sector turístico, nos referimos al turismo gerontológico, que es aquel que realizan las personas de la tercera edad o también conocidos como adultos mayores o en plenitud. Segmento cuyos gustos y preferencias encajan perfectamente en las actividades que ofertan los ranchos turísticos, ya que esto implica una oportunidad para permanecer activo, expresar la creatividad y mejorar su calidad de vida. El turismo gerontológico esta conformado por personas que tienen conciencia de los daños que sufre nuestro planeta, y de la importancia de proteger a la naturaleza y a sus comunidades, para evitar escenarios que sean causa de la pérdida de las cualidades atractivas y para que la actividad pueda ser sustentable y beneficiosa.

ANÁLISIS DE LAS ESTRATEGIAS COMPETITIVAS DEL SECTOR TURÍSTICO-HOTELERO DE LA CIUDAD DE CARTAGENA DE INDIAS

Lourdes Meriño Stand, Fundación Universitaria Tecnológico Comfenalco

Jorge Del Rio Cortina, Fundación Universitaria Tecnológico Comfenalco

RESUMEN

El presente trabajo presenta una aproximación al estudio de las estrategias de gestión definidas por las empresas del sector turístico hotelero de la ciudad de Cartagena, para explotar los elementos que componen su potencial competitivo; para ello se utiliza el enfoque de Capacidades internas y estrategia, por medio de la aplicación de una herramienta de análisis que permite identificar el comportamiento de los procesos de gestión y posicionamiento existentes, tanto a nivel de empresas de manera individual, como a nivel sectorial, estableciendo un enfoque comparativo gráfico y estadístico, que permitió, por una parte, identificar las principales variables que influyen en el potencial competitivo de las empresas más representativas del sector, al tiempo, que fue posible establecer la visión conjunta del sector frente a las variables analizadas

Juan David Sepúlveda, Fundación Universitaria Tecnológico Comfenalco

Pablo Herrea Capdevilla, Fundación Universitaria Tecnológico Comfenalco

ABSTRACT

El objetivo de este trabajo es analizar las tendencias de las líneas de investigación a nivel local, nacional e internacional que desarrollan los grupos de investigación de los Programas de Administración de Empresas con la ayuda de la metodología de Vigilancia Tecnológica para ello revisaremos las salidas de los GroupLac de la plataforma de Colciencias para el caso local y nacional, así como la identificación de los resultados de investigación a nivel internacional en plataforma universitarias. con base en dichos insumos se procesara la información a través del software de inteligencia artificial Matlab y Ntsys con el objeto de definir la pertinencia de las líneas y establecer las políticas y estrategias para alcanzar los niveles de maduración de cada una de las vecindades con respecto a las temáticas que están siendo abordadas en la actualidad. Para la realización de esta investigación se toma como base el modelo de vigilancia tecnológica planteado por Angulo (Angulo et al, 2006) que se basa en la búsqueda de la información técnica, su almacenamiento, su posterior procesamiento, luego la construcción de la matriz de intersecciones, la construcción de un mapa tecnológico donde se estará visualizando los resultados obtenidos para la correspondiente interpretación y posterior toma de decisiones.

PALABRAS CLAVES: Líneas de investigación, vigilancia tecnológica, tendencias, grupos de investigación.

Emmanuel Garcia Uribe, Universidad Autónoma de Ciudad Juárez

ABSTRACT

Dentro del área de fabricación de plásticos se encuentra operando tecnologías de alto nivel o de punta, y comúnmente se observan avances relativamente inefectivos, lo que a su vez ocasiona que esas tecnologías que fueron adaptadas no se operen con la efectividad que se esperaba, lo que constituye un problema administrativo y de planeación. Por ello, el artículo que se presenta, tiene el objetivo principal de analizar los factores y variables actuales que ayuden en la optimización de la productividad en el manejo funcional y operativo del herramental utilizado en máquinas de inyección de plásticos, tales como moldes y troqueles asignados en estas máquinas, desarrollando una ruta o metodología operacional y práctica en la logística y planeación. Se hace un planteamiento del problema, al igual que cuestionamientos claves y se exponen los objetivos. Posteriormente se expone un análisis de la información teórica en el estado de arte para la determinación de factores y variables que deben de considerarse en una propuesta de mayor capacidad de explicación. Se aportarán recomendaciones y fundamentos claves para investigaciones futuras.

INTRODUCCION

La competencia en los sectores productivos se está desarrollando con mucha fuerza y con un futuro pujante e impredecible; para enfrentarla, se han planteado nuevos tipos de estrategias operativas dentro del ámbito de la manufactura, que las llevaron a ser más eficientes, rápidas y flexibles, (Prahalad & Hamel, 1990) Entre las innovaciones que se generaron, se encontraban los sistemas de Administración Estratégica; Modelos de Control de Calidad; Nuevas Estrategias de Manufactura y formas organizacionales más ágiles y flexibles, incluyendo metodologías y el uso de herramientas dentro de los conceptos de manufactura esbelta y Seis Sigma.

Actualmente hay una difusión amplia de literatura que explica y analiza las diferentes aplicaciones de esta técnica para una mejor optimización de la productividad, con el enfoque principal de la mejora de los procesos de producción en equipo de inyección de plástico, y principalmente en la funcionalidad y logística en las operaciones de los moldes y troqueles, hay las estadísticas y datos empíricos que indican la existencia de problemas que afectan la productividad, implantando soluciones inefectivas en el área de manufactura. Por lo anterior se busca un análisis los factores, variables y metodologías para formular una propuesta ruta para una mejor planeación estructura y algunas relaciones entre sí, desde una perspectiva de efectividad.

REVISION LITERARIA

Durante la actual década se exponen problemas típicos y complejos dentro del sector de manufactura, aunado a la crisis económica global, que afectó a la mayoría de las industrias, incluyendo la del sector de plásticos, forzándose a desarrollar estrategias de competitividad cada vez más agresivas para contrarrestar la fuerza de precios establecida por el mercado global, una etapa en donde los hábitos del consumidor han

cambiado intensamente, en donde también se observa una cultura laboral con bajo nivel de enfoque hacia el mejoramiento, las estrategias de planeación estratégica gerencial, la falta de modelos de producción, las decisiones de no inversión en tecnología de punta e informática, etc.,

Otro problema que se presenta dentro del sector de manufactura, es la falta de consenso entre autores y expertos sobre sus contenidos teóricos, lo que dificulta la selección de las metodologías y herramientas para tener un desempeño superior dentro de sus procesos. Dentro del sector de plásticos, existe una apertura de capacidades intelectuales y técnicas dentro del proceso de diseño, reparación e innovación en herramientas como troqueles y moldes para maquinaria de alta tecnología en inyección de plásticos, es decir existe un conocimiento básico en el aspecto técnico derivado de buenas y malas experiencias prácticas, que a través de los últimos 10 años se han invertido en aspectos de capacitación, su avance no es del todo satisfactorio, hay un remanente en crear escuelas técnicas de alto nivel para dejar a un lado la interdependencia de países con alto desarrollo y avance en estos términos, lo cual conlleva a generar costos muy altos en mantener una funcionalidad estable en estos herramientas

FACTORES DE COMPORTAMIENTO Y DE RESULTADOS IMPORTANTES

Hay múltiples fuentes de literatura, logrando identificar tendencias tecnológicas, fuerzas laborales globales, factores críticos de éxito y variables importantes que afectan a la funcionalidad e implementación de las mejores metodologías o estrategias en los procesos de manufactura durante esta década y la siguiente, por lo que se inicia un planteamiento de indicadores clave para futuras investigaciones en EM (St. John, 2001). Una descripción de los factores claves y sus efectos, se debe de considerar para el desarrollo de una propuesta que optimice los procesos de producción. La evidencia empírica ha demostrado que la estructura y cultura laboral han ejercido influencia en el comportamiento organizacional.

METODOLOGIA

Se describen los planes y actividades para la validación de una propuesta técnico-administrativa enfocada a la planificación de los procesos dentro de la industria de la producción de plásticos. Para ello se realizaron encuestas en industrias locales, escuelas técnicas y sector público dedicado al desarrollo industrial en Ciudad Juárez. Para delimitar el área de estudio se trabajaron exclusivamente con empresas ubicadas en esta frontera de México. Con el fin de obtener una descripción de los factores claves para optimizar la producción de esta industria, la encuesta fue dirigida a los gerentes de producción de las empresas de plástico.

RESULTADOS

Los resultados obtenidos sugieren que esta rama industrial para ser competitiva en cuanto a calidad y precio debe procurar la producción a escala. Lo anterior implica una correcta aplicación y administración de sus factores (tecnológicos, humanos e insumos). Buscando la eficiencia técnica de estos factores y procesos de producción, el administrador enfrenta el reto encontrar un óptimo proceso de moldeo. Uno de los factores, que de acuerdo a la información obtenida sugiere ser de los más importantes en el proceso de producción, es el correcto manejo de los moldes, así como su mantenimiento. La formación y capacitación de recursos humanos en el mantenimiento y reparación de moldes, parece ser costosa para las empresas debido a la baja oferta de entrenamiento en esta área.

CONCLUSIONES

En lo que corresponde a recomendaciones, es urgente investigar si la planeación lleva directamente a la preparación del personal o a la contratación de personal más calificado, que es la vía para formular y

desplegar los proyectos derivados de los planes. Por lo que se sugiere una propuesta técnicoadministrativa para la optimización de la productividad en la funcionalidad de moldes y troqueles. También es una oportunidad coleccionar más información extendiendo esta investigación a otras industrias y con un cuestionario más amplio. Parecería que la industria de plásticos en esta zona fronteriza, aún cuando esté en constante cambio y dinamismo para cada vez ser más rentables y competitivos en la calidad de los productos está generando avances importantes.

El Capital Humano no llevará a la fundación de la Creación de valor. Sin menospreciar que los nuevos paradigmas entre ellos la inversión de la Tecnología, Innovación y Desarrollo juegan un papel preponderante para el desarrollo de nuevos productos acorde a la flexibilidad y agilidad de los mercados mundiales, por lo que también la cultura corporativa en México debe estar a tono con las corporaciones de clase mundial.

EL SECTOR AGROPECUARIO EN ARGENTINA: UNA REVISIÓN DE SU PROBLEMÁTICA ACTUAL

Marisa Daniela Goytia, Universidad Nacional de Rosario
Silvina Beatriz Marcolini, Universidad Nacional de Rosario

RESUMEN

El sector agrícola-ganadero ha sido en el siglo pasado el pilar del crecimiento económico de nuestro país, soportando no sólo cambios climáticos, de precios, etc. sino también los embates de medidas económicas tomadas por los distintos gobiernos de turno. El desarrollo agropecuario, es también el origen del crecimiento operado en el sector industrial y fundamentalmente en la agroindustria, o sea aquellos que necesitan como materia prima productos primarios. La producción agropecuaria ha contribuido crecientemente a la generación de ganancias por diversas causas, entre las que mencionamos: el incremento de la demanda mundial, producto de las mayores necesidades alimentarias ante el aumento de la población y del mayor uso industrial (biocombustibles), por un lado y la movilización de la cadena productiva que hacia delante y hacia atrás tiene como protagonista al sector por el otro, hecho que tienden a hacer difuso el límite entre las actividades primarias y las secundarias. Argentina abarca un territorio muy diversificado entre sus provincias desde varios aspectos: geográfico, social, demográfico y económico entre otros. Su territorio está compuesto por montañas, llanuras y mesetas, con una desigual distribución de la población a lo largo de toda su extensión y con redes de comunicación más o menos fluidas de acuerdo a dicha distribución. La riqueza tradicional de la república, radica en su región pampeana, cuya fertilidad hacen posible la agricultura, siendo ideal para el cultivo de cereales y oleaginosas, con los que no sólo se abastece al mercado interno sino que se genera una fuerte suma de divisas por la exportación de sus excedentes. Esta situación hace de nuestro país un oasis natural. Sin embargo esas bondades naturales no se ven reflejadas en políticas económicas, financieras y sociales que las acompañen y permitan aprovechar dichas ventajas y potenciar el desarrollo y crecimiento del sector agropecuario y sus industrias derivadas.

INTRODUCCION

La actividad agropecuaria es aquella que consiste en la producción de bienes económicos a partir de la combinación del esfuerzo del hombre y la naturaleza, para favorecer la actividad biológica de plantas y animales (reproducción, mejoramiento, crecimiento). En este concepto se identifica claramente la característica fundamental que diferencia a esta actividad del resto de las productivas, ya que se trata de bienes a los que la naturaleza les aporta la capacidad de tener conformaciones genéticas que le permiten autogenerar su crecimiento y/o reproducirse. En estos casos el esfuerzo del hombre aparece para lograr que dicho cambio genético se convierta en eficiente. Lo expuesto evidencia la ubicación de estas empresas dentro del sector primario de la economía como productoras de bienes en los que interviene la naturaleza. Si bien el hecho de generar vida es el factor más importante, al momento de analizarlas económica o financieramente aparecen otras características que también son propias y distintivas de la actividad. Siguiendo a Regina Durán (2009): mencionamos la dependencia del clima, el suelo como factor de producción, el crecimiento vegetativo, la inmovilización de capital y la dificultad o imposibilidad de almacenamiento por tiempo prolongado, entre otras. El sector agrícola-ganadero ha sido en el siglo pasado el pilar del crecimiento económico de nuestro país, soportando no sólo cambios climáticos, de precios, etc. sino también los embates de medidas económicas tomadas por los distintos gobiernos de turno. El desarrollo agropecuario, es también el origen del crecimiento operado en el sector industrial y fundamentalmente en la agroindustria, o sea aquellos que necesitan como materia prima productos primarios.

En otro orden, el agro cumple un papel fundamental como integrador de nuestra geografía, tiene efectos estructurantes sobre el territorio y sus regiones, al ocupar espacios, impulsar el desarrollo regional, favorecer nuevos emprendimientos, retener a la población residente en sus lugares de origen y generar empleo en el interior del país. Siguiendo a Regina Durán, en la empresa agropecuaria argentina, nos encontramos con que buena parte de la actividad agropecuaria en la región pampeana se lleva a cabo por Pequeñas y Medianas Empresas (PyMEs) y diversos estudios efectuados sobre las empresas agropecuarias y su evolución histórica, dejan en evidencia que casi un tercio de ellas son familiares. Este tipo de estructura genera ventajas tales como: gran flexibilidad para dar respuestas rápidas a cambios del entorno, capacidad para resolver problemas sin trámites burocráticos, estructuras simples y de bajo costo, una relación directa entre los propietarios y el personal; pero también se caracteriza por presentar limitaciones como: no dan importancia a mínimos aspectos formales de los procedimientos administrativos, lo cual dificulta o diluye el control, se observa una marcada reticencia a la delegación de decisiones operativas, existe confusión entre la caja de la empresa y las finanzas de sus propietarios y no disponen de una variada gama de opciones para el financiamiento, debiendo soportar costos financieros significativos. El objetivo del presente trabajo es analizar la incidencia del sector agrícola dentro de la actividad agropecuaria y particularmente de la provincia de Santa Fe en el contexto nacional.

METODOLOGIA

La idea que impulsó este trabajo es la percepción generalizada del sector agropecuario en nuestro país que siente que, a pesar de constituirse en el principal sustento del desarrollo regional y pilar fundamental de la economía nacional, la situación individual del pequeño y mediano productor agropecuario se va deteriorando año tras año en términos reales. El objetivo del presente es demostrar, en términos numéricos, estos dos extremos de la historia, la difícil situación por la que atraviesa el sector en nuestro país y su ubicación y grado de participación en el desarrollo económico nacional. Para ello, se realizó un relevamiento de datos que abarca los años 1988, 2002 y 2008 obtenidos de los censos nacionales agropecuarios efectuados en dichos períodos, al mismo tiempo que una revisión bibliográfica que nos sirva de marco a nuestro propósito. Hemos trabajado sobre información oficial vertida tanto por el Ministerio de Economía de la Nación, como por el Instituto Nacional de Estadística y Censos. Investigamos en forma comparativa a fin de determinar las variaciones producidas a través del tiempo, en variables tales como cantidad de establecimientos, cantidad de hectáreas sembradas, establecimientos agropecuarios con límites definidos o no; con el fin de establecer su incidencia en el sector agropecuario nacional. La comparación en valores absolutos de los resultados de los mencionados censos intenta demostrar el doble propósito dicotómico expresado anteriormente, el deterioro de las condiciones económicas y comerciales del sector y su papel trascendente en el desarrollo económico, social y financiero de la nación.

EL SECTOR AGROPECUARIO EN ARGENTINA

Incidencia en el Producto Bruto Interno

La producción agropecuaria ha contribuido crecientemente a la generación de ganancias por diversas causas, entre las que mencionamos: el incremento de la demanda mundial, producto de las mayores necesidades alimentarias ante el aumento de la población y del mayor uso industrial (biocombustibles), por un lado y la movilización de la cadena productiva que hacia adelante y hacia atrás tiene como protagonista al sector por el otro, hecho que tienden a hacer difuso el límite entre las actividades primarias y las secundarias.

Si bien el productor primario es el primer eslabón en la cadena agroalimentaria, no opera solo, desarrolla su actividad dentro de un sistema que denominamos “sistema agroalimentario”. Es lo que Garrido

Fernández denomina eslabonamientos productivos como cadenas agroalimentarias, “un conjunto complejo de actividades que engloba a: 1) las industrias que venden al sector agropecuario; 2) el sector agropecuario; 3) las industrias transformadoras de los productos procedentes, tanto las de primera como las de segunda transformación y 4) el sector de distribución, que pone a disposición del consumidor los diversos alimentos generados como consecuencia del normal funcionamiento de cualquiera de los sectores anteriores”.

El aporte de la actividad agropecuaria al producto bruto interno en nuestro país es del 4,6 %, si se mide únicamente el sector primario de la economía, según lo revela una investigación coordinada por el Instituto Interamericano de Cooperación para la Agricultura del año 2002, pero si se analiza a la actividad de una manera ampliada, esto es con sus encadenamientos hacia delante y hacia atrás contribuye a la economía siete veces más de lo que refleja el porcentaje. Según la Publicación: Análisis Económico Nro. 4 (2005) del Ministerio de Economía y Producción de nuestro país la participación de la agricultura en el producto bruto interno del año 2004 es del 6 % mientras que la industria genera un 25 % y el sector servicios un 56 %. Tanto dentro del sector industria como del sector servicios existen empresas que se relacionan con la producción primaria.

Por su parte, el sector agropecuario más la agroindustria representó en promedio el 11,2 % del PBI y el 54,5 % de las exportaciones en los últimos diez años. No obstante, fue uno de los pilares más importantes de la recuperación de la economía argentina, explicando entre el 2001 y 2004 el 21,5 % del incremento del producto y el 64,6 % del aumento de las exportaciones.

Estas cifras, aunque no corresponden a los últimos años ponen de manifiesto lo expresado al inicio, cuando afirmamos la importancia que el sector agropecuario tiene en la economía nacional y a través de ésta la incidencia en el desarrollo social de la población. La consideración simplificada del sector es un elemento que en muchos casos se traduce negativamente con consecuencias diferentes sobre el mismo, entre las que mencionamos:

- Escaso financiamiento a la investigación agropecuaria, a la capacitación y educación de los profesionales y productores.
- Concentración de población en las ciudades con el consiguiente crecimiento de inversión pública en servicios urbanos.
- Tendencia a enfocar los recursos nacionales en la ciudad.
- Mayor flujo de inversión privada hacia las ciudades como resultado de la inversión pública.
- Bajo financiamiento en infraestructura rural.
- Bajo apoyo político.

Esta situación se ve agravada por la alta presión tributaria que soporta el productor agropecuario, intensificada en el último tiempo con el aumento porcentual de los derechos de exportación, establecidos por el Gobierno Nacional en el marco de su política económico fiscal, principalmente para la comercialización de cereales y oleaginosas. Los porcentajes vigentes se presentan a continuación:

Derechos de Exportación

Producto	Derecho de Exportación
Soja	35 %
Girasol	32 %
Maíz	25 %
Trigo	28%

Buena parte de los ingresos producto de la alta imposición fiscal que sufre el sector, permite financiar el déficit económico social que sufre nuestro país.

Logística en la circulación de granos

Argentina abarca un territorio muy diversificado entre sus provincias desde varios aspectos: geográfico, social, demográfico y económico entre otros. Su territorio está compuesto por montañas, llanuras y mesetas, con una desigual distribución de la población a lo largo de toda su extensión y con redes de comunicación más o menos fluidas de acuerdo a dicha distribución. La riqueza tradicional de la república, radica en su región pampeana, cuya fertilidad hacen posible la agricultura, siendo ideal para el cultivo de cereales y oleaginosas, con los que no sólo se abastece al mercado interno sino que se genera una fuerte suma de divisas por la exportación de sus excedentes. Pero, no basta con que un país tenga una muy buena producción, es necesario que ésta pueda ser transportada tanto internamente como al exterior, ampliando los mercados de posibles consumidores.

El almirante Storni, definió a la Argentina como un “país isla”, ya que en él se visualiza un marcado aislamiento geográfico, debido al cual nuestro país se estructura sobre los puertos. Se da así lugar a una organización en forma de abanico con cabecera en Capital Federal y la región conformada básicamente por el predominio del área metropolitana de Buenos Aires, más la zona San Lorenzo-Rosario-La Plata. Debido a su privilegiada posición geográfica, esta zona se convierte de alguna manera en la región núcleo del país.

Cuenta con una red ferroviaria que la comunica con todos los países vecinos: con Bolivia y Chile, a través de la línea Belgrano S.A., y, con Uruguay, Brasil y Paraguay por la línea Mesopotámico S.A. Estas a su vez se combinan con una amplia red ferroviaria compuesta por líneas provinciales, que a través de sistemas troncales de gran magnitud, cubren la totalidad del territorio. Entre los proyectos que integran la lista de grandes emprendimientos circulatorios (hidrovía Paraguay-Paraná, puente Buenos Aires-Colonia, etc.) se cuenta con un corredor ferroviario interoceánico; la importancia del funcionamiento del mismo radica en que vincula el océano Pacífico con el Atlántico, con un bajo costo en los fletes, una menor contaminación y el consiguiente descongestionamiento de rutas y puentes internacionales ya sobrecargados.

La obsolescencia de gran parte de la infraestructura y del material rodante ferroviario hacia mitad del siglo XX, malas administraciones y escasas inversiones para su mantenimiento y reparación, fueron disminuyendo su eficiencia. El trazado de la red vial (generalmente paralela a la red ferroviaria), el incremento del parque de camiones y su mayor capacidad de maniobra fueron otros factores que incidieron negativamente en el ferrocarril y en su participación en el transporte nacional de cargas. Existe un total de 215.471 km de carreteras, nacionales y provinciales y se visualizan algunas rutas transnacionales que son de gran importancia para la vinculación con los países que conforman el Mercosur. La actual cadena de logística, incluye a su vez una red portuaria y fluvial, compuesta por 3.100 km de vías navegables. El barco es uno de los medios más apropiados y económicos para el traslado de mercaderías de gran volumen. Más del 90% del comercio exterior de Argentina, se realiza por vía marítima. Entre los puertos más importantes encontramos Buenos Aires, Rosario, Paraná, La Plata, Quequén y Bahía Blanca. Entre los inconvenientes que presenta este medio podemos mencionar, las tarifas que se cobran en Argentina por tonelada movida que son casi el doble de las que se cobran en países limítrofes; la escasa profundidad (calado) de sus ríos y la infraestructura de los puertos fluviales. Los barcos de mayor calado sólo pueden entrar hasta el puerto de Rosario o el de Santa Fe (generalmente para la carga de cereales) pero por el poco calado del río no pueden salir con la carga completa y muchas veces se debe perfeccionar en el puerto de Quequén o de Bahía Blanca. La Argentina no dispone de un puerto de aguas profundas (con más de 45 pies) para recibir navíos de gran calado. Uno de los proyectos relacionados con el comercio internacional y principalmente con el Mercosur, es la denominada "hidrovía

Paraguay-Paraná" y, no es el único ya que también existe el de la hidrovía del Alto Paraná que nos comunica con Brasil, y consiste en posibilitar una navegación fluida desde Puerto Cáceres (localidad Brasileña localizada a orillas de las nacientes del río Paraguay) hasta el río de la Plata, con un recorrido de 3.442 km. Por otro lado, la red de transporte aéreo coincide en general con el trazado de las redes viales y ferroviarias. Desde Buenos Aires se abren en abanico hacia todos los puntos cardinales del país. El sistema de transporte argentino se ve favorecido por la extensa planicie chacopampeana, de gran nivelación, que ha facilitado el tendido de las rutas; ríos navegables, un gran desarrollo de costas y una extensa fachada marítima; y los abundantes recursos energéticos que abastecen de combustibles a los transportes. Sin embargo, muestra también aspectos negativos como: Infraestructura y tecnología obsoletas y sin inversiones; alto consumo energético por la elevada participación del transporte automotor frente al ferroviario o marítimo; contaminación ambiental en las ciudades por saturación del tráfico y la falta de coordinación entre los distintos modos de transporte.

Censo agropecuario nacional 2008

Durante el año 2008 se llevó a cabo en la República Argentina un Censo Nacional Agropecuario, a través de un formulario que debía ser remitido por Internet. El objetivo de este formulario era conocer algunos datos económicos correspondientes a las Explotaciones Agropecuarias (EAP) y debía ser respondido en forma personal por el productor o un informante calificado. La unidad estadística del CNA 2008, era la Explotación Agropecuaria (EAP). Esta es la unidad de organización de la producción, con una superficie no menor a 500 m², dentro de los límites de una misma provincia que, independientemente del número de parcelas (terrenos no contiguos) que la integren, reúnen las siguientes condiciones:

1. Produce bienes agrícolas, pecuarios o forestales destinados al mercado.
2. Tiene una dirección que asume la gestión y los riesgos de la actividad productiva.
3. Utiliza en todas las parcelas que la integran, los mismos medios de producción de uso durable y parte de la misma mano de obra.

Se solicitó información a los EAP sobre: ingresos y egresos, remuneraciones, pagos a contratistas de mano de obra, servicios de maquinaria, valor total del gasto en materia prima e insumos utilizado para la producción del bien.

A la fecha, contamos con datos provisorios, relativos a la cobertura territorial y al número y superficie de las Explotaciones Agropecuarias (EAPs) censadas y algunas variables relevantes del formulario, siempre por jurisdicciones. Se sigue trabajando con la incorporación de explotaciones no censadas por la no presentación espontánea de sus titulares y productores intimados ya, para que cumplan con la misma. El informe preparado por el INDEC (2009; pág. 1), señala que los datos correspondientes a los censos agropecuarios 1988, 2002 son definitivos; mientras que los del 2008 sólo se presentan a título orientativo. Esta aclaración es de suma importancia ya que, estamos trabajando en los dos primeros casos con datos definitivos mientras que, en el último caso, con datos provisorios, lo que no permite una comparación adecuada de cifras.

LA PROVINCIA DE SANTA FE

Estructura del sector agrícola

Por su ubicación geográfica, Rosario y Santa Fe se perfilan como centro estratégico de la conexión bioceánica que unirá el Estado de Río Grande Do Sul (Brasil), sobre el océano Atlántico, con la región de Valparaíso (Chile), sobre el océano Pacífico. Esta región constituye un punto neurálgico de comunicación entre los países integrantes del MERCOSUR; siendo, además, un paso obligado de las rutas comerciales y centros de prestación de servicios.

La Provincia de Santa Fe cuenta con una superficie de 133.007 km² y una población de 3.000.701 habitantes según censo del año 2001. Es una extensa llanura que se encuentra ubicada en una región privilegiada, con una infraestructura ideal, en un punto central de los grandes corredores terrestres, aéreos y fluviales que se vinculan a los principales países del MERCOSUR. Una red vial que supera los 5.000 kilómetros y se comunica a través de rutas nacionales con Bolivia, Chile y Paraguay. Cuenta además con una red ferroviaria que distribuye en toda la región central y sur de la provincia acercando la producción a los puertos –frente fluvial de más de 700 km. de costa que realzan a la provincia.

La economía es diversificada, se encuentra en una zona apta para la agricultura y la ganadería; contando a su vez con una zona industrial muy desarrollada y una de las cuencas lecheras más importantes a nivel nacional. La actividad industrial está muy relacionada al sector agropecuario, acercando valor agregado a sus productos; adquieren importancia la industria aceitera para la exportación, la industria láctea y la frigorífica, teniendo también importancia la industria química, de maquinarias agrícolas y otras metálicas.

Santa Fe constituye un área productiva de relevancia, representando el 8,4 % del PBI nacional. Un 17 % lo aporta el sector agrícola-ganadero, un 34 % el sector industrial y de la construcción, mientras que el sector de servicios lo hace con un 49 %. Ocupa el primer lugar como productora de aceites vegetales, productos lácteos, harinas proteicas y frutillas. En el año 2002 las industrias aceiteras radicadas en la provincia molieron el 70% del aceite producido en el país.

Trabajaremos con datos censales de los años 1988, 2002 y 2008, siempre teniendo en cuenta que los dos primeros son datos definitivos y el 2008 no sólo son datos provisorios, sino que en principio no sería factible su comparación ya que no están censados todos los establecimientos.

Según datos relevados del censo año 2002, la Provincia de Santa Fe poseía 28.103 establecimientos agropecuarios los que representan el 8,43% de los establecimientos agropecuarios con y sin límites definidos del país. Dichas EAPs sumaban una superficie de 11.251.653 hectáreas que, a su vez, representaban el 6,4% de la superficie agropecuaria del país. (Cuadro I).

A partir de la información se desprende el alto predominio que tienen en la Provincia de Santa Fe los establecimientos chicos, ya que el 39,7% de las EAPs de la Provincia tienen menos de 100 ha y ocupan tan solo el 4,7% de la superficie censada provincial. Las explotaciones de menos de 1.000 has. suman el 92,1% de las EAPs provinciales y solamente alcanzan a acumular el 46% de la superficie total censada.

Por lo que podemos apreciar existe una gran cantidad de establecimientos con menos de 1.000 has. que representan el 92.10 % de las EAPS, frente a las grandes empresas capaces de actuar individualmente. Nos encontramos entonces en presencia de pequeños y medianos productores que necesitan de una contención territorial, para responder a la creciente competencia.

Por otra parte el censo del año 2008 revela que la Provincia de Santa Fe posee 26.836 establecimientos agropecuarios, esto es el 9,7 % del total de las EAPs con y sin límites definidos del país. Si bien el porcentaje aumenta respecto a lo obtenido en el año 2002, las cifras en valores absolutos muestran una acentuada disminución de la cantidad de establecimientos tanto a nivel provincial como nacional. En efecto, si nos concentramos en las provincias en las que se ha censado más del 95 % de su superficie, lo que significa que la variación respecto a los datos que serán definitivos no puede ser muy significativa, vemos una gran disminución de la cantidad de establecimientos, que incluso aparece marcada más fuertemente en las restantes provincias que en Santa Fe.

Cuadro I: Cantidad total de EAPs y superficie con límites definidos, en los CNA de 1988, 2002 y 2008(*) por provincia y total del país.

Fuente: INDEC

Estos resultados son reveladores de la cada vez más difícil situación del productor agropecuario pequeño, con escasas posibilidades de maniobra dentro de su negocio y sin políticas de gobierno que lo protejan o lo ayuden a su mantenimiento, frente a los grandes productores nacionales y de otros países, que se van apoderando de las economías de las distintas regiones. Una de las consecuencias directas de lo antes dicho, es el proceso de sojización por el que atraviesa nuestro país. En base a información relevada del Ministerio de Agricultura Ganadería Pesca y Alimentos de la Nación, advertimos que desde la campaña 97/98 hasta la campaña 06/07, se ha producido a nivel nacional un incremento de la superficie sembrada de trigo y soja; en detrimento de la superficie sembrada de girasol y algodón, manteniéndose constante el maíz. Actualmente la soja representa el 50% de la superficie bajo cultivo y de la producción.

Los datos obtenidos de superficie sembrada a nivel provincia de Santa Fe no reflejan el mismo panorama, disminuye el maíz, el girasol y el algodón; manteniéndose constante la superficie sembrada de trigo; observándose un incremento del 34% en la superficie destinada a la soja.

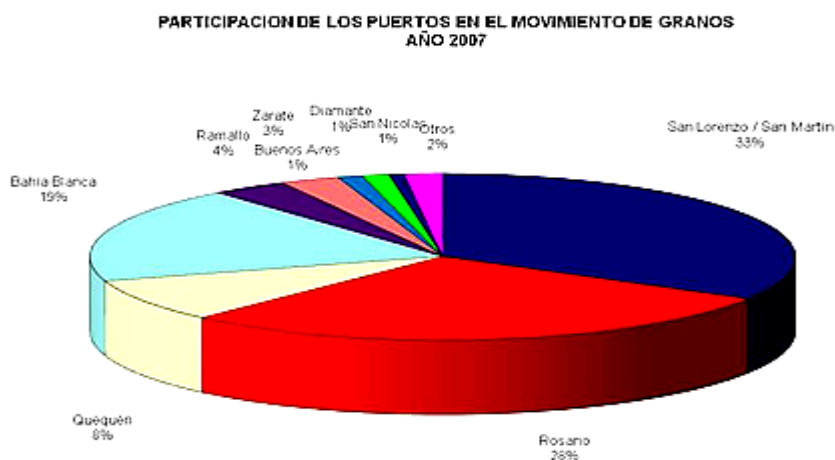

La producción de soja a nivel nacional creció en mayor proporción que a nivel provincial. Esto tiene su correlato en que no solamente se sustituyeron tierras que antes tenían un destino diferente a la producción de la oleaginosa, sino que se incorporaron regiones que hasta el momento eran consideradas marginales o no aptas para su cultivo. El cultivo de granos en general, principalmente de maíz, trigo, girasol y soja, propios de la región pampeana central, se expandió hacia las zonas perimetrales de esa región y también a zonas extrapampeanas, como el NEA y el NOA, según datos del Ministerio. Además el grano soja tiene características que lo hacen preferible a los pequeños productores, entre las que mencionamos su bajo costo, menores riesgos y alta rentabilidad en comparación con los demás.

Resumiendo, la producción de cereales y oleaginosas muestra un crecimiento del 114 % entre la campaña 1990-91 y 2004-05. En este período el volumen producido en granos se multiplica pasando de 39 millones a 84 millones de toneladas. Sin embargo, el comportamiento de cada uno de ellos dentro de lo que se considera cereales y oleaginosas ha sido diferente. Dentro de las oleaginosas, la producción de soja presenta un incremento del 253 %, mientras que el girasol muestra una disminución del 10 %. En cuanto a los cereales, tanto el trigo como el maíz reflejan incrementos en su producción, pero en porcentajes diferentes, del 45 % para el primero y del 154 % para el segundo.

Zona ROSAFE

Según conceptos vertidos por la Cámara Española de Comercio de la República Argentina, se denomina zona Rosafé, desde el punto de vista granario a la zona que produce y tritura granos que son exportados por unidades de embarque ubicadas en la margen derecha del río Paraná en una franja que va desde Puerto San Martín (40 km. al norte de Rosario), hasta Villa Constitución (40 km. al sur), dentro de la provincia de Santa Fe.

Esta zona es la más importante del país en lo referido a la exportación de granos y subproductos, llegando a representar entre el 65% y el 70% de la exportación física total, siendo mayor en término de valores monetarios. Así lo demuestra el gráfico que representa la participación de los distintos puertos que componen la costa Argentina en el movimiento de granos para el año 2007 según información suministrada por el Consejo Portuario Argentino.

Fuente Consejo Portuario Argentino

Dentro de los productos granarios el más importante es la soja, que ha pasado a ser, como ya expresamos en el punto anterior, el producto de mayor trascendencia económica a nivel país, con exportaciones por más de 2.200 millones de dólares. El primer productor a nivel mundial, es EE.UU. con poco más de 49 millones. El segundo lugar corresponde a Brasil con casi 25 millones de toneladas, el tercero a China con alrededor de 13 millones y el cuarto a Argentina con una cifra récord de 11,5 millones. Gran parte de la producción sojera argentina tiene su epicentro en la zona Rosafé, siendo también procesada en su mayor parte en instalaciones aceiteras de las inmediaciones de Rosario. Argentina tiene una capacidad de trituración de semillas oleaginosas de poco más de 19 millones de toneladas anuales. Más de la mitad de esa capacidad se concentra en la provincia de Santa Fe y, en cuanto a procesamiento de soja, se localiza en la misma más del 75%. La producción de oleaginosas llega a alrededor de 15,5 millones de toneladas.

Argentina consume muy poco de su producción de soja. La mayor parte (95%) es exportada ya sea como poroto, harina (pellets) o aceite.

Desde los puertos de la zona Rosafé se embarca, gran parte de los envíos granarios al exterior (65 a 70 %), pero esta cifra es mayor todavía en lo referido a la producción sojera, llegando al 85% aproximadamente. Los embarques se realizan desde una docena de unidades privadas, de gran eficiencia, que en los últimos 14 años hicieron que el costo de elevación bajara de 7,5 dólares por tonelada a 2,0/2,5 dólares que es lo que se cobra actualmente.

El hecho de ser la zona Rosafé un importante lugar de concentración de mercadería disponible, a diferencia de otras zonas de Argentina o Brasil, permite tomar el precio del mercado disponible de la Bolsa de Comercio de Rosario como una referencia válida en las negociaciones.

Sirve también para la confección de un Índice contra el cual se cierran operaciones del tipo “cash settlement” en un mercado de futuros. A este respecto, el Índice Soja Rosafé se ha convertido en el primer instrumento granario en el mundo de ese tipo, teniendo un sinnúmero de ventajas en relación al sistema tradicional con entrega.

Se suma a ello su estratégica ubicación como “puerta” de salida e ingreso de mercaderías desde y hacia las poblaciones ubicadas en las inmediaciones de la hidrovía Paraguay-Paraná. En su largo recorrido atraviesa zonas económicamente importantes por sus actuales y potenciales producciones. Tal es el caso del cultivo de soja en Mato Grosso y Mato Grosso do Sul, que con los estados vecinos tiene una producción de la oleaginosa que se acerca a los 10 millones de toneladas. También es importante la participación de Bolivia que tiene salida a la Hidrovía a través del canal Tamengo, como así también la participación de Paraguay. Los cultivos de maíz y demás granos, frutas, maderas y otros vegetales tienen un futuro promisorio.

Atiende tráfico de graneles agrícolas, fertilizantes, aceites vegetales, productos siderúrgicos, azúcar y frutas, presentando buenas posibilidades para el desarrollo de nuevos tráfico tales como minerales, automóviles y contenedores entre otros. Por ser una ciudad de conexión internacional, su puerto se encuentra muy desarrollado, garantizando seguridad, eficiencia y menor costo operativo para los servicios de importación y exportación, a través de la infraestructura instalada y la fluidez de comunicaciones con el resto del país. Este es uno de los motivos que facilita el acceso a un mercado de 200 millones de consumidores que existe en el Mercosur.

CONCLUSIONES

Sobre fines del año 2002 Argentina culmina una de las peores crisis de su historia cayendo su PBI un 18,4%, a valores constantes, desde el inicio de la recesión. El Sector Agropecuario y Agroindustrial, sin embargo con su comportamiento inverso, atemperaron parcialmente la caída general de la actividad económica, traccionada principalmente por la expansión de la agricultura de siembra directa, de la mano del complejo oleaginoso y el boom de la soja transgénica. Los datos recopilados en el presente

demuestran la importancia del sector agropecuario en la economía nacional. Si bien existe una dependencia respecto al factor precio, ya que los valores de comercialización de la producción son sensibles a las modificaciones internacionales; la incorporación de valor agregado a través de nuevas tecnologías que generan incrementos en el volumen productivo, sumado a la utilización de mayores superficies aptas para los cultivos agrícolas y la creciente demanda de alimentos a nivel mundial, favorecieron el crecimiento del sector en nuestro país.

El modelo agrario vigente tiende a favorecer a los grandes productores en detrimento de los pequeños y medianos. Los datos obtenidos del censo agropecuario 2008 evidencian esta situación. Este modelo provocó el desplazamiento del cultivo del maíz a favor de la soja, a partir de una serie de factores productivos y de precios que determinan una mayor rentabilidad de la misma frente al maíz. Los datos expresados en el presente trabajo ponen de manifiesto el crecimiento porcentual de producción de ambos cultivos aunque en valores muy disímiles. A partir de dichas cifras también cobran sentido los análisis realizados desde el aspecto ambiental e independientemente de los socioeconómicos, cuando se mencionan como posibles consecuencias: la erosión y degradación de los suelos, dándose este proceso con mayor intensidad en aquellas tierras bajo agricultura continua con secuelas tales como, la caída de la productividad física por hectárea; la contaminación de las napas de agua y la intoxicación de seres humanos y de otras especies por el exceso de fertilizantes, herbicidas y otros.

Se produce así para el productor agropecuario una dicotomía entre la responsabilidad social de cuidar el medio ambiente y mantener la sustentabilidad de los suelos frente a la mayor rentabilidad y menores riesgos del cultivo soja. El pequeño y mediano productor inmerso en éste modelo no tiene hoy capacidad económica y financiera para decidir un cambio de estrategia en pos del cuidado del suelo y se ve obligado a producir sin medir las consecuencias. Es muy difícil revertir dicha situación sin un modelo político y económico que los contemple y los incluya. Por otra parte la soja se ha transformado en la fuente más importante de ingresos fiscales a través del elevado porcentaje de derechos de exportación que la grava, posibilitando al Estado la financiación de los programas sociales que ha implementado a fin de mitigar las consecuencias de la grave crisis socio-económica por la que atraviesa el país.

El sector y buena parte de la industria reclaman desde hace tiempo un nuevo modelo agrario, en el que se incentive la diversificación de producción y se de un tratamiento diferenciado al pequeño y mediano productor respecto de los grandes a fin de promover el desarrollo regional. Interesa por otro lado la suma de valor agregado a través de la incorporación de la mayor cantidad de etapas posibles como parte del crecimiento local. Si bien nuestro país tiene una ubicación estratégica excepcional para la producción y comercialización de sus granos favorecido por las condiciones naturales y geográficas, y cuenta con una red fluvial, portuaria, ferroviaria y terrestre de logística avanzada es necesario seguir invirtiendo para lograr su culminación en algunos casos, ya que hay obras proyectadas y no terminadas, su mantenimiento en otras y su reparación en muchas otras. La provincia de Santa Fe inmersa en este contexto nacional y dueña de un conjunto de tierras fértiles, una amplia región costera, puerta de acceso al comercio internacional, ve caer día a día el número de establecimientos agropecuarios pequeños y es testigo del éxodo de la población rural hacia zonas urbanas.

CULTURA ORGANIZACIONAL Y LOS SISTEMAS DE CONTROL DE GESTIÓN COMO ESTRATEGIA EMPRESARIAL DE LAS PYME'S

Jesús Salvador Vivanco Florido, Universidad Autónoma de Aguascalientes,

María del Carmen Martínez Serna, Universidad A. de Aguascalientes

Gonzalo Maldonado Guzmán, Universidad A. de Aguascalientes

ABSTRACT

Con el propósito de identificar una alternativa de mejora del desempeño de las Pymes, propiciando su subsistencia, en la presente investigación analizamos la influencia de la Cultura Organizacional en la adopción de los Sistemas de Control de Gestión como estrategia empresarial, por lo que se considera que es necesario realizar un estudio del tipo de Cultura Organizacional adoptado en el seno de las Pymes para implementar los Sistemas de Control de Gestión con éxito. Piña et.al (2008), adicionalmente, se tomo el modelo de Cultura Organizacional desarrollado por Cameron y Quinn(1999), con el propósito de identificar el tipo de cultura adoptado por las Pymes objeto de estudio. El estudio se realizó con la aplicación de 400 encuestas a los diferentes sectores del estado de Aguascalientes, como son el metalmecánico, construcción, servicio, comercio, mueble, textil, etc. Durante los meses de septiembre a diciembre de 2008, se aplicaron análisis de Anovas y Regresión Lineal, para identificar la significancia de la relación de variables dependientes (Sistemas de Control de Gestión) e independientes (Tipología de Cultura Organizacional). Los resultados nos arrojan una alta significancia entre las variables Cultura Organizacional y Sistemas de Control de Gestión lo que nos indica que si influye la existencia de la Cultura Organizacional para la implementación de los sistemas de control de gestión como medida estratégica empresarial y de subsistencia, destacando la tipología Adhocrática por su apertura al cambio, para facilitar la adopción de los sistemas de control de gestión como practica empresarial.

INTRODUCCION.

La Globalización, la competencia, el desarrollo tecnológico y la turbulencia económica que se vive actualmente, hacen que las Pequeñas y medianas empresas tiendan a desaparecer en el período critico de dos años por lo que los Sistemas de Control de Gestión, representan una oportunidad para mejorar el desempeño de las organizaciones propiciando la oportunidad de supervivencia de las Pyme's.

La adopción de los Sistemas de Control de Gestión en una organización es una estrategia que requiere un estudio del tipo de Cultura adoptado en el seno de la organización para ver la posibilidad de su adopción con éxito, Piña et.al (2008), y opinan que los sistemas de Gestión de Información como elemento de los Sistemas de Control de Gestión, son elementos clave para la administración y manejo de la información y esto soporta la toma de decisiones y contribuye a mejorar el desempeño de todos en la empresa.

REVISION LITERARIA

Los Sistemas de Control de Gestión, reúnen y utilizan información para evaluar el rendimiento de diferentes recursos de la organización tales como Recursos humanos, Físicos y Financieros y a toda la organización como estrategia Organizacional y reúne información, para motivar al personal y evaluar su desempeño, Anthony(2007), Horngren et.al(2005) .

El control de la Gestión, se relaciona con la asignación de recursos, coordinación, motivación y evaluación del rendimiento, Simons (1995), Kelligher et.al (2006), Eccles RG. (1991). La practica de Control de gestión, y el diseño de los sistemas de Control de Gestión se elabora sobre un número académico de disciplinas, el control de la gestión, involucra, medidas extensivas y requiere contribuciones de contabilidad gerencial y segundo involucra decisiones de asignación de recursos, y requiere

aportaciones de la gerencia económica, y tercero involucra comunicación y motivación que requiere aportaciones sobre el comportamiento organizacional en psicología social. Maciariello et.al (1994),

CULTURA ORGANIZACIONAL

El modelo de Cultura Organizacional tomado para este estudio, es el desarrollado por Cameron y Quinn (1999) con el propósito de identificar el tipo de cultura adoptado por las Pyme's objeto de estudio. Estos autores se basan en el "Competing Values Framework" propuesto por Quinn (1988), para crear lo que denominan "Instrumento para la valoración de la cultura organizacional (Organizational Culture Assessment Instrument, OCAI)", el cual distingue cuatro tipos de culturas, clan, adhocracia, mercado y jerarquía.

HIPOTESIS.

H1. A mayor Cultura Organizacional con apertura a cambios mayor facilidad de adopción de los Sistemas de Control de Gestión.

La administración se debe identificar con un tipo de cultura que propicie cambios sustentables en el tiempo, para adoptar los modelos de GI (Gestión de Información), con éxito. Piña et.al (2008)

H2.- A mayor Cultura con tipología Adhocrática en las Pyme's, mayor implementación de Sistemas de Control de Gestión.

METODOLOGIA

Con el propósito de validar las hipótesis propuestas se llevó a cabo una investigación empírica en las Pymes del Estado de Aguascalientes. A través de un "*Panel Empresarial*", en el que participaron responsables de las dependencias gubernamentales vinculadas a las Pymes, gestores de instituciones financieras y empresarios de las Pymes. En esta primera fase los resultados obtenidos, permitieron conocer mejor de la situación del sector y apoyaron la correcta definición de la fase cualitativa.

DISEÑO DE LA MUESTRA

El procedimiento que se utilizó en este trabajo para obtener el marco de referencia, consistió en la obtención del Directorio Empresarial 2008 del Sistema de Información Empresarial de México (SIEM) del Estado de Aguascalientes (8,661 empresas). Para efectos de este estudio, se trabajó únicamente con aquellas empresas que tuvieran entre 5 y 250 trabajadores (MiPymes), con lo cual el directorio empresarial definitivo quedó con un total de 1,342 empresas. La muestra original es de 500 empresas y ésta se seleccionó por medio de un muestreo aleatorio simple con un error máximo del 4% y un nivel de confiabilidad del 96%. Los datos reunidos y tabulados se obtuvieron por medio de entrevistas personales. Las entrevistas con los gerentes se aplicaron de Septiembre a Diciembre de 2008.

De igual manera, la encuesta se diseñó para que fuera contestada por los gestores de las Pymes, y fue aplicada por medio de una entrevista personal a cada una de las 500 empresas seleccionadas, de las cuales se recibieron 408, y de ellas 8 fueron eliminadas por no reunir con los requisitos establecidos, quedando un total de 400 encuestas validadas. De esta manera, se ha tenido una tasa de respuesta del 80%. La encuesta recolectó la información sobre las características de las empresas, las actividades de innovación en los dos años anteriores, las barreras a la innovación y el rendimiento

METODOLOGIA DE ANALISIS

La metodología empleada en el análisis de los resultados de la presente investigación, fue la aplicación de tablas de contingencia y aplicación de ANOVAS para medir la relación del tipo de Cultura

Organizacional adoptado y el grado de adopción de los Sistemas de Control de Gestión, habiéndose realizado el estudio, por tamaño de empresa, (pequeña y median), por edad, (joven o madura) y por sector económico, los resultados alcanzados en la investigación se muestran en la sección de resultados y conclusiones,

ENCUESTA

La encuesta se realizó en el año 2008, en el Estado de Aguascalientes a las Pyme's de los diferentes sectores empresariales del Estado,

1: Servicio, 2: Comercio, 3: Textil y Confección, 4: Mueble, 5: Agroindustrial, 6: Metal-Mecánica., 7: Construcción, 8: TICs.

Es importante señalar que no es función de la presente investigación, juzgar la situación de un sector en particular, sino ofrecer una visión integral de la empresa, en cuanto a apoyos financieros solicitados que ponga de manifiesto, la necesidad de los apoyos financieros, con el propósito de que sirva de referencia para, en su caso, puedan adoptarse las medidas oportunas para potenciar las virtudes y ajustar los desequilibrios

RESULTADOS OBTENIDOS.

De los Sistemas de Control de Gestión, el mas utilizado, es la Implantación de Controles de Calidad, valorada en 3.39 por los empresarios de las Pymes de Aguascalientes, en una escala de 1= Nada Importante y 5 = muy Importante,(Cuadro No.1), a este Sistema de Control de Gestión, le sigue el Análisis de Estados Financieros con 3.37 y en tercer lugar está El Control Presupuestal con 3.20, es comprensible que el Sistema de Control de Calidad sea el mas empleado por las Pyme's, ya que este Sistema de Control de Gestión, es requerido por todo tipo de empresas no importando el giro de estas pues la calidad es requisito de operación de cualquier tipo de empresa.

Cuadro No.1 Sistemas de Control de Gestión

	Media
• Implantación de controles de Calidad	3.39
• Análisis de Estados Financieros	3.37
• Control Presupuestal	3.20
• Implantación de Contabilidad de Costos	3.12
• Planeación Estratégica	3.11
• Auditoría Interna	2.93
• Sistemas de Información Gerenciales –ERP-Cuadro de Mando	2.41

En una escala de 1=Nada Importante a 5= Muy Importante
Esta tabla presenta las medias de utilización de las diferentes prácticas de los Sistemas de Control de Gestión.

Comprobacion de las Hipotesis Planteadas

Para demostrar las hipótesis planteadas, a continuación se presentan, (Cuadro No.2) los resultados obtenidos de las aplicaciones de ANOVAS y REGRESION LINEAL considerando como variables dependientes la adopción de los sistemas de Control de Gestión y como variables independientes la adopción de las diferentes tipologías de la Cultura Organizacional en donde se puede ver que la tipología de Cultura Organizacional Adhocrática muestra mayor significancia en su relación con la adopción de los sistemas de control de gestión, resaltando la implantación de Contabilidad de Costos, el Control Presupuestal, el Análisis de Estados Financieros y la Planeación Estratégica con una significancia en su relación entre las variables dependientes con las independientes inferior a .001 lo que lo hace una relación muy significativa, seguido de la tipología de la cultura Jerárquica, que muestra también alta significancia

entre las variables; de estos análisis podemos desprender que la adopción de la cultura organizacional favorece la implantación de los Sistemas de Control de Gestión resaltando la adopción de la tipología Adhocrática como medio mas significativo de adopción los Sistemas de Control de Gestión como quedo demostrado en los análisis presentados.

Cuadro No. 2 Sistemas de Control de Gestión significancia por Tipología de Cultura Organizacional.

	Cultura Clan	Cultura Adhocrática	Cultura Mercado	Cultura Jerárquica
• Sistemas de Información Gerenciales –ERP-Cuadro de Mando.	.009***	.242	.213	.132
• Implantación de Contabilidad De Costos.	.015**	.000***	.002***	.008***
• Control Presupuestal	.047**	.000***	.010**	.009***
• Análisis de Estados Financieros	.010**	.000***	.001***	.009***
• Planeación Estratégica	.027**	.001***	.107	.005***
• Auditoría Interna	.374	.102	.144	.190
• Implantación de Controles de Calidad.	.161	.036**	.073	.171

Diferencias estadísticas significativas: (*): p<0.1; (**):p<0.05; (***):p<0.01

Esta tabla muestra el nivel de significancia de la relación de variables entre las tipologías de Cultura Organizacional Y los Sistemas de Control de Gestión.

CONCLUSIONES

La adopción de la Cultura Organizacional y en especial la tipología Adhocrática, facilita la implementación de los Sistemas de Control de Gestión en las Pyme's, dado sus características de apertura al cambio y en virtud de que considera a la empresa como una entidad dinámica y emprendedora en la que se apuesta a las nuevas ideas y acepta los riesgos y esto incrementa su posibilidad de permanencia en el mercado dado que los sistemas de control de gestión, permiten la medición de la ejecución de los diferentes factores que se desarrollan en la actividad empresarial como son la Implementación de la Contabilidad de Costos, el establecimiento del Control Presupuestal, el Análisis de los Estados Financieros y la Planeación Estratégica que son sistemas de información que permiten monitorear el desarrollo de la actividad empresarial vigilando si se alcanzan los objetivos planteados . De acuerdo a los resultados estadísticos presentados se puede concluir, que la Cultura Organizacional es un factor clave para adoptar los Sistemas de Control de Gestión como se puede apreciar en le nivel de significancia entre variables que en la mayoría de los Sistemas de control de Gestión, es del orden de .000 lo cual indica una alta relación entre variables confirmando las hipótesis planteadas de la dependencia de la existencia de la cultura organizacional para implementar en el ceno de las Pymes los sistemas de control de Gestión.

CAPITAL HUMANO: FACTOR CRITICO EN LAS PyMES QUE DESARROLLAN ALTA TECNOLOGIA

Blanca Lida Márquez Miramontes, Universidad Autónoma de Ciudad Juárez

ABSTRACT

El Capital Humano es un activo intangible clave en el desarrollo de las organizaciones que desarrollan tecnologías de alto nivel, ya que el Recurso Humano que agrega valor a las organizaciones mediante sus habilidades y capacitación es capaz de sostener las estrategias de diferenciación que le dan ventajas competitivas a las organizaciones.

INTRODUCCION

El Capital Humano es un activo intangible integrante del Capital Intelectual, que junto con el Capital Relacional y el Capital Estructural agrega valor a la organización. Estos elementos no se pueden tocar, pero si se pueden identificar y clasificar adecuadamente, según Sveiby (1997) el Capital Intelectual es una fuente importante de riqueza en las organizaciones, este requiere que se le preste una atención especial a la gestión eficaz del mismo.

Este estudio está centrado en el CH, activos centrado en el individuo, como le llama Brooking (1996: 28) comprende la pericia colectiva, la capacidad creativa, la habilidad para resolver problemas, el liderazgo y la capacidad empresarial y de gestión encarnados en los empleados de la organización. Los activos centrados en el individuo son aquellas cualificaciones que conforman al hombre y que hacen que sea lo que es. Es importante reflexionar sobre la importancia de las personas en la organización, ya que no existe ningún negocio que pueda funcionar sin un mínimo de una persona. Para Stewart (1997:135), no es necesario demostrar el valor económico que tiene el capital humano ya que los buenos resultados operacionales en las empresas lo dicen todo. Es el conocimiento que posee cada individuo el que hace funcionar a las organizaciones. Este conocimiento que le hace acreedor de un Capital llamado Humano (en adelante CH). A medida que el individuo incrementa sus conocimientos incrementará el CH de la empresa. (Belly, 2004).

La Teoría del Capital Humano fue desarrollada por Gary Becker en 1964, esta teoría define al CH como el conjunto de las capacidades productivas que un individuo adquiere por acumulación de conocimientos generales o específicos, de *savoir-faire*. La noción de capital expresa la idea de un *stock* inmaterial imputado a una persona que puede ser acumulado y usarse. Es una opción individual, una inversión. Se evalúa por la diferencia entre los conocimientos iniciales y los que va adquiriendo con el paso del tiempo. El individuo hace, así, una valoración entre trabajar y continuar una formación que le permita, en el futuro, percibir salarios más elevados que los actuales. Como todas las inversiones, el individuo ha de hacer frente a la ley de los rendimientos decrecientes, y al carácter irreversible de estos gastos. La Teoría del CH distingue dos formas posibles de formación:

- La formación general adquirida en el sistema educativo formativo. Por su parte, la firma no está, en modo alguno, obligada a sufragar los costos de formación de una persona, susceptible de hacer prevalecer esa formación en otra empresa dispuesta a mejorar la remuneración, lo que podría incitarla a abandonar la firma. El acuerdo entre el trabajador y la firma consiste entonces en la compra, por parte de la firma, de la « fuerza de trabajo » de un lado, y la compra de formación del trabajador, por otro.
- La formación específica adquirida en el seno de una unidad de producción o de servicio, permite desarrollar al trabajador su productividad dentro de la empresa. Durante el periodo de formación, el salario recibido por el trabajador es inferior al que hubiera podido recibir fuera de la empresa. Esta diferencia se valora por su contribución a la formación específica, pero permanece superior a

su productividad en valor, libre de los costos económicos de la formación. Esta diferencia expresa la contribución de la firma a esta formación.

A pesar de estas definiciones, el concepto de CH sigue siendo un concepto difícilmente interpretable, utilizado con ligereza. Así, en los modelos de crecimiento endógeno se asimila a un stock de conocimientos, valorizado económicamente, e incorporado a los individuos medido por el salario.

Sin embargo, hay quienes afirman que el conocimiento no se mide más que por su contribución monetaria, y no porque pueda aportar a un proceso de acumulación y de conocimiento. La teoría del CH niega, así, el carácter colectivo del proceso de acumulación de conocimiento, haciendo del individuo un ser que maximiza sus rentas futuras optando entre trabajar y formarse. Según Edvisson y Malone el Capital Humano son las capacidades individuales, los conocimientos, las destrezas y la experiencia de los empleados y directivos de la organización.

La administración del CH abarca todas las funciones y responsabilidades dirigidas a atraer, contratar, desarrollar y retener los recursos de la gente, esenciales para el éxito y la eficiente operación de la organización, de tal manera que es importante que cuente con la preparación y especialización necesaria y en caso de no tenerla, se requiere de capacitación acorde a las funciones que realizará dentro de la empresa.

El CH tiene una estrecha relación con el Capital Relacional y el Capital Estructural, los tres elementos que integran el Capital Intelectual están vinculados en la organización, aunque en la realidad estas relaciones se dan de manera simultánea, el peso en las correspondencias entre ellos cambia de acuerdo a la dirección que se tome.

El CH surge y evoluciona a partir de varios elementos preexistentes pertenecientes al mismo y de otros como la integración de nuevas tecnologías, los que integran el capital estructural, los que integran el capital relacional, a partir de los que surgen de las relaciones que mantiene la organización con agentes de su entorno. El Capital Estructural de la organización surge y evoluciona a partir de los elementos preexistentes pertenecientes al mismo (Dierick y Cool, 1989; Grant, 1991) y de otros elementos como los que integran el CH y de los que integran el Capital Relacional.

Como se observa el CH tiene es factor crítico en el desarrollo del resto de los elementos ya que las tareas organizacionales requieren del elemento humano, sistemas y de las relaciones con el mercado, estos valiosos activos intangibles que tienen las empresas tienen su origen en los conocimientos, habilidades, valores y actitudes de las personas que forman parte del núcleo estable de la empresa comprenden todos aquellos conocimientos tácitos o explícitos que generan valor económico para la empresa.

De tal manera que los conocimientos que generan valor son la clave del éxito de las empresas que compiten en el contexto económico, político, social y tecnológico del presente, y su papel en el futuro será con toda seguridad cada vez más relevante.

CH en las Organizaciones.

Este capital es clave en el desarrollo de las Pymes de alta tecnología, en concreto de las empresas de Metalmecánica. Este sector de la industria está concentrado en su mayoría en la frontera norte (Vera-Cruz, Dutrenit y Gil, 2002), y se distinguen por ser proveedores de la Industria Maquiladora de Exportación, al que proveen de herramental y partes para el producto. Aunque en su mayoría son negocios familiares, sus propietarios han tratado de desarrollar estas organizaciones de manera permanente, tuvieron su mayor crecimiento en los años 90's a la par con la industria maquiladora, y aunque hace más de medio siglo de que surgen en la frontera norte de México, su desarrollo no ha sido significativo, pues en su gran mayoría se identifican empresas micro, pequeñas y medianas (ver Tabla 1.1) de acuerdo al número de empleos generados, con estructura organizacional familiar, tecnología no innovadora, tampoco se da mucha importancia a cuestiones de certificación de proceso, siendo esto posiblemente consecuencia de que los encargados de dirigir dichas empresas tengan poco interés en generar cambios al interior de la organización, y

menos aun en la preparación, capacitación y desarrollo de su elemento humano.

Los activos tangibles de las empresas varían, desde aquellos que cuentan con activos en maquinaria y equipo de alrededor de 10,000 dólares hasta aquellos con inversiones de alrededor de 2, 000,000 dólares. Muchas de estos establecimientos tienen una antigüedad de 10 a 15 años, no más de cinco talleres son los que tienen una antigüedad de más de 20. En el caso de los activos intangibles, no se tienen plenamente identificados y la falta de conocimiento de los activos contenidos en las empresas, resta competitividad a las organizaciones.

Tabla 1: Clasificación de empresas industriales de acuerdo al número de empleados

Estrato	Industria	Comercio	Servicios
Micro	Hasta 30	Hasta 5	Hasta 20
Pequeña	De 31 a 100	De 6 a 20	De 21 a 50
Mediana	De 101 a 500	De 21 a 100	De 51 a 100
Grande	Más de 500	Más de 100	Más de 100

Para que las empresas sean competitivas requieren una estrategia de diferenciación que según Porter (1980) le da a la empresa habilidades y recursos necesarios mediante una fuerte habilidad en la comercialización e ingeniería de producto, instinto creativo, fuerte capacidad en la investigación empresarial de liderazgo tecnológico y de calidad, larga tradición en el sector industrial o una combinación de habilidades únicas derivadas de otros negocios, fuerte cooperación de los canales de distribución (CR para Malone).

Lo anterior se alcanza mediante requisitos organizacionales comunes, tales como: Fuerte coordinación entre las funciones de investigación y desarrollo del producto; mediciones e incentivos subjetivos en lugar de medidas cuantitativas; fuerte motivación para allegarse de trabajadores altamente capaces, científicos o gente creativa (CH), que aporte conocimiento a la organización.

Sin embargo, se entiende que estos y muchos más factores en el medioambiente de la empresa son inciertos; pero si se tratan de forma concreta le darán certeza, los gobiernos pueden ayudar a que las empresas tomen riesgos con menos variables, ayudando a que enfoquen su habilidad para innovar y permanecer competitivas. El problema está en cómo convertir el conocimiento en un recurso tangible o concreto bajo la ley y cómo tratar inteligencia competitiva (Erickson y Rothberg, 2000), como hacer que ese conocimiento genere nuevo conocimiento.

METODOLOGIA

Es importante el estudio del desarrollo del CH en las organizaciones y su importancia en el trabajo diferenciado, así como la importancia que este adquiere al dar ventajas competitivas a las empresas que manejan y desarrollan tecnologías de alto nivel. La evaluación de este criterio se hace considerando los procedimientos de reclutamiento, selección e incorporación de las personas; el proceso de formación, el nivel de capacitación con fuerzas propias y el proceso de aprendizaje en la empresa; así como la evaluación del desempeño y el reconocimiento de las personas. Se incluyen los siguientes criterios e indicadores de evaluación:

Reclutamiento, selección e incorporación: considerado como el proceso mediante el cual se obtienen datos de las competencias básicas y generales que poseen determinadas personas y de su disposición para trabajar en la empresa, se elige una que, según el conjunto de sus competencias, resulta idónea, se contrata, comienza a trabajar y completa su preparación para integrarse y actuar adecuadamente en un puesto de trabajo, en un clima laboral y en un entorno determinado.

Formación: considerado como el proceso de incremento de los conocimientos, habilidades y competencias del personal vinculado a las necesidades presentes y futuras de la empresa y a las exigencias de los perfiles

de los puestos; se realiza mediante la ejecución de planes con acciones de superación personalizada elaborados a partir de la determinación de las necesidades de aprendizaje del personal y de la empresa.

Evaluación del desempeño y reconocimiento: se considera la evaluación del desempeño como el proceso de valoración, estimación o apreciación integrada de la conducta observable ante los diferentes problemas o dificultades que se presentan al trabajador para cumplir los objetivos y tareas que le plantea la organización; y de los hechos y resultados concretos del cumplimiento de las funciones del puesto de trabajo que ocupa; en la integración de estos elementos se evidencian las competencias profesionales y los valores que las sustentan; la evaluación del desempeño implica el reconocimiento de lo que en ella se evidencie.

Una vez definidos el problema de estudio y los parámetros de CH pertinentes, se consideraron las especificaciones Hernández, Fernández y Baptista (2007) para determinar el tipo de investigación a seguir. Se utilizan cuatro criterios para la clasificación del estudio: de acuerdo con el periodo en que se capta la información, con la evolución del fenómeno estudiado, con la comparación de las poblaciones y con la interferencia del fenómeno estudiado.

Bajo este criterio, el presente estudio se define como una investigación de campo con enfoque mixto cualitativo y cuantitativo además de considerarse un trabajo prospectivo ya que toda la información se obtiene para los fines específicos del proyecto; transversal al medir las variables en un solo momento sin pretender evaluar su evolución, descriptiva al buscar asociaciones entre variables dentro de una misma población y observacional (no experimental) ya que no es posible modificar ninguno de los factores que intervienen en el proceso descrito.

Para comprobar científicamente este análisis, se creó y aplicó un instrumento de medición entre varias organizaciones de maquinados industriales mediante encuestas aplicadas entre enero y diciembre de 2008. Una vez obtenida esta información, se aplicó el análisis del indicador *Alpha Cronbach* para validar dicho instrumento. La validez del instrumento de medición, dio paso a la obtención de información aplicando la técnica estadística *Structural Equation Model* de donde se obtienen los resultados finales.

La encuesta se compone de 3 partes, una para datos generales y otra para el elemento del CH, así como de 3 preguntas abiertas en donde se identificaron comentarios.

- Datos generales. En donde se recaban datos como el nombre de la empresa, origen del capital, número de socios, etc.
- Indicadores de Capital Humano. En este apartado se tienen 28 indicadores dado que es en donde se recoge información de las tecnologías que se emplean y la forma en que se administran.
- Preguntas abiertas relacionadas con el tipo de clientes al que atienden y la competencia y posicionamiento en el mercado.

La recopilación de la información se llevó a cabo mediante la aplicación de la encuesta con preguntas cerradas tipo likert, a los gerentes de la industria de maquinados industriales. El instrumento se aplicó en dos partes, en la primera se aplicó una prueba piloto a 5 empresas, en las que se sometió a prueba no solo el instrumento sino las condiciones de aplicación y los procedimientos involucrados, de esta manera se analizó si las instrucciones se comprendían y que los ítems funcionaran de manera adecuada, también se evaluó el lenguaje y la redacción como lo recomiendan Hernández, Fernández y Baptista (2007:306). Mediante esta primera aplicación se le hicieron modificaciones de redacción y número de ítems a la encuesta.

La segunda fue la aplicación formal del instrumento a 15 empresas, a las que primero se les contactó por teléfono para la presentación y cita de recolección de los datos.

Validación de la encuesta. La encuesta definitiva se validó mediante el coeficiente de confiabilidad *Alpha de Cronbach*, en donde se obtuvo un índice alto de .9644, siendo una elevada confiabilidad (Hernández, Fernández y Baptista, 2007:439).

La información se pondero de la siguiente manera:

Tabla 2. Ponderación de Capital Humano

Capital Humano				
28	5	140		100%
28	4	112		80%
28	3	84		60%
28	2	56		40%
28	1	28		20%

Fuente: Elaboración propia

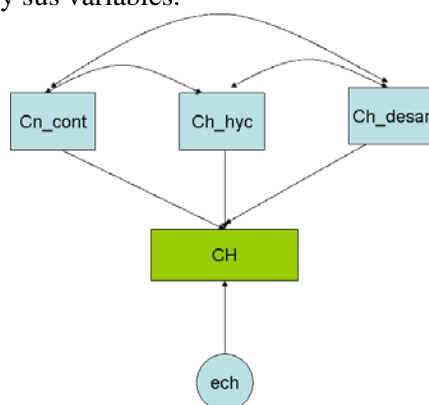

La escala likert está dada por los valores de: 1, totalmente desacuerdo; 2, desacuerdo; 3, ni de acuerdo ni desacuerdo; 4, de acuerdo y 5, totalmente de acuerdo.

Los valores de la columna de total representan los puntos totales que puede tener una empresa en cada una de las respuestas.

Los 28 indicadores están representados en 3 variables que intentan explicar al CH como son: Contrataciones (Ch_cont), Habilidades y capacitación (Ch_hyc) y Desarrollo (Ch_desar).

El *path diagram* propuesto por medio de ecuaciones estructurales está representado en la figura 1 el siguiente:

Figura 1: CH y sus variables.

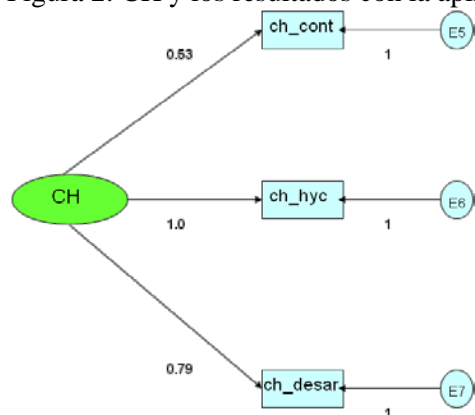

Elaboración propia

En el se representa la correlación que existe entre las cuatro variables así como la explicación que se espera de ellas en un 100% hacia el CH, el que también es explicado por un error o variable latente llamado (ech).

RESULTADOS

Una vez que se analizan los datos mediante el software AMOS 17.0 para modelado por ecuaciones estructurales, se obtiene que las variables que explican al CH no se correlacionan entre sí, pero explican en su totalidad al CH como se muestra en la Figura 2 de acuerdo al ajuste del modelo.

Figura 2: CH y los resultados con la aplicación del modelado por ecuaciones estructurales

Como se observa existen diferencias entre lo propuesto y lo obtenido;

- Las variables no se correlacionan entre si
- Cada variable cuenta con su error latente (errores del 1 al 3)
- Los pesos explicativos de las variables son altos, con excepción de la variable de patentes (ch_cont).

Los índices de ajuste son:

Tabla 3. Índices de ajuste del modelo

Model	RMR	GFI	AGFI	PGFI
Default model	,001	1,000	1,000	,167
Saturated model	,000	1,000		
Independence model	,271	,581	,162	,290

Los índices que evalúan la bondad de ajuste del modelo son:

- Good Fitness Index (GFI) cuyo resultado de buen ajuste debe tender a 1
- Root Mean Square Residual (RMR) el que debe tender a 0

Como se observa en la tabla el GFI muestra un ajuste perfecto, mientras que el RMR tiene un valor muy próximo a cero, por lo que el modelo de medición de CH ajusta muy bien, lo que indica de refleja de manera aproximada la realidad en las empresas de metalmecánica respecto al CH con que cuentan.

CONCLUSIONES

En la actualidad la localización y desarrollo CH permite el éxito de las empresas, siendo este generador de ventajas competitivas ya que es base para la riqueza producto del conocimiento. En ese sentido se ha constatado, que el uso del conocimiento se ha intensificando. “El conocimiento por sí solo no genera ninguna ventaja competitiva, ya que esta surge a través del uso que la empresa haga del mismo, fundamentalmente aquellas aplicaciones al campo de la innovación”.

Las organizaciones tienen potencial para proporcionar conocimiento que agregue valor, esto se comprobó en el caso de las empresas con tecnologías de alto nivel, ya que contratan personal poco especializado y sin estudios y dentro de la organización le dan las habilidades y capacitación que requiere, de esta forma condicionan la calidad en el servicio que ofrece la empresa así como el grado en que utiliza el recurso inmaterial para fabricar bienes o servicios.

Esto permite la argumentar que el trabajo diferenciado es la base de la competitividad y de él depende de la capacidad para innovar y mejorar, además de la productividad y de la eficiencia productiva de las organizaciones. Sin embargo, en el análisis de resultados se hace manifiesto el poco peso explicativo que la

variable contratación tiene en el CH de estas organizaciones, caso contrario sería si estas empresas emplearan personal con estudios de ingeniería y experiencia en desarrollo tecnológico, estas organizaciones estarían a la par que sus homólogas europeas (Empresas de Máquina-Herramienta), las que tienen un alto índice en cuanto a desarrollo de tecnologías.

ANALISIS DE UNA COBERTURA ACCIONARIA MEDIANTE CONTRATOS DE FUTUROS IPSA (MERCADO DE VALORES DE CHILE)

Octavio Muñoz Fuentealba, Universidad Católica De La Santísima Concepción

RESUMEN

En términos generales el mundo ha sufrido cambios en su estructura durante el último siglo. La globalización, hace un mundo más conectado pudiendo saber una noticia a segundos de que esta haya ocurrido. En el mundo de las finanzas ha corrido el mismo riesgo, debido a que los dineros viajan de un lugar a otro como quien toma un avión y viaja cientos de kilómetros con algún destino en particular. Es por esto que debido a que los dineros viajan de un lugar a otro estos deben conseguir un hotel, un seguro y moneda local, que permita comprar todo tipo de artículos que se necesitan para tener una buena estadía. Mediante una cobertura de portafolios se realizan a diario cientos de coberturas para ofrecer una rentabilidad esperada y lograr proteger montos de inversión, aunque como característica principal ofrece una volatilidad alta, vale decir, altos retornos, así como también altas pérdidas. En Chile desde 1990 se puede utilizar este tipo de estrategia financiera, para este fin se compra y venden futuros del principal índice accionario IPSA, siendo este índice el mas representativo de la bolsa local tomando las 40 principales firmas del país, las cuales ingresan a este índice debido a que son las que mas transacciones se realizaron durante el año anterior. Aunque estos contratos en términos generales no tienen movimientos, pensando en el poco conocimiento del tema a nivel país, se pueden realizar protecciones accionarios por un periodo de 3 meses. Este trabajo tiene como objetivo analizar con brevedad el tipo de cobertura realizado por un periodo en el mercado local con una cartera accionaria compuesta por 5 acciones mediante la utilización de derivados financieros disponibles en Chile, además verificar el comportamiento que tendrá una estrategia de protección accionaria mediante la selección de un portafolio una fecha determinada, calculando el número de contratos que teóricamente se requieren para proteger dicha cartera. Se evalúa la protección luego de transcurrido un tiempo: 1 mes, 2 meses, 3 meses, etc., comparando el valor de mercado de la cartera con o sin protección.

INTRODUCCION

Marco Conceptual

Podemos analizar que cualquier tipo de inversión de que quiera realizar esta dado por el tipo de riesgo que se quiera tomar asociado a el retorno que se quiera obtener de acuerdo al el fin que tenga el inversionista y la aversión al riesgo que este tenga.

Desde la inclusión de la teoría de carteras de inversión de Markowitz (1952) que en general analizo el riesgo asociado a la correlación con el mercado, tomando en cuenta la volatilidad que esta tenga en el corto plazo y el retorno esperado en el largo plazo. La volatilidad entonces debemos tomarla como un factor riesgo y la cartera en pos de la aversión al riesgo de cada inversionista.

Como gran innovación en el ámbito de las finanzas fue la aparición de los derivados financieros hace 20 años en Chile, los famosos futuros y opciones, que sin duda existen hace varias décadas su plenitud de mercado la podemos encontrar en los años 70 a nivel mundial.

Un contrato de futuro es un acuerdo entre un comprador y vendedor donde se estipulan las condiciones de precio, cantidad y calidad que deberán tener los activos sobre los cuales se llevará a cabo una transacción fijada para una fecha posterior.

Este tipo de transacciones son usadas por quienes desean especular, tomando posiciones riesgosas, ya sea comprando o vendiendo contratos y por aquellos inversionistas que desean protegerse frente a variaciones de precios de activos subyacentes, mediante operaciones en el mercado de futuros, cuyos resultados sean contrarios a los obtenidos en los mercados de contado.

El objetivo de la protección es compensar las variaciones negativas de precios en los mercados de contados con las variaciones positiva de precios de los mercados a futuros, considerando las expectativas de precios de los administradores de carteras, lo que implica cambiar el riesgo del mercado spot por el riesgo de mercado de la base. Mas formalmente y usando la notación utilizada por Hull (1993)

Base = Precio spot activo a proteger – precio futuro contrato, Sea:

S_t = Precio spot en t ; F_t = Precio futuro en t ; B_t = Valor de la base en t

Para dos instancias $t=1$ y $t=2$ se tiene:

$B_1 = S_1 - F_1$; $B_2 = S_2 - F_2$

Utilidad Spot = $S_2 - S_1$

Utilidad futuros = $F_2 - F_1$

Utilidad total = $B_2 - B_1$

Si para proteger el valor de una cartera (posición larga en spot) se toma una posición corta en futuros de índice accionario, entonces el valor total que toma la inversión será:

$S_2 + (F_2 - F_1) = F_1 + B_2$

El riesgo de la base es en general pequeño comparado con el riesgo de las posiciones spot y futuros, lo cual es explicado por el argumento de arbitraje que relaciona los precios asociados a dichas posiciones. El riesgo de la base surge por la incertidumbre de la tasa de interés y por eventuales excesos puntuales de oferta y demanda o por problemas de almacenaje en el caso de commodities.

- Correlación: La base entre el índice bursátil y el portafolio no permanece constante, ya que sus valores fluctúan sólo “similarmente”
- Tiempo: Si no se cumplen las expectativas y los contratos a futuros expiran “antes” de la baja en el precio de las acciones. Esta situación va depender de la forma de replicar el índice bursátil a través de la cartera, para lo cual se debe analizar los movimientos, cálculos y composición del índice
- Incertidumbre en relación a la fecha de compra o venta de los instrumentos financieros
- El inadecuado monitoreo de la cobertura, ya que se puede requerir que los contratos sean cerrados antes de su expiración

COBERTURA DE UNA CARTERA ACCIONARIA EN CHILE CONTRATO DE FUTURO DE INDICE IPSA

Índice de precio selectivo de acciones (IPSA), está compuesto por las 40 acciones más transadas en la bolsa de comercio de Santiago, cada acción está ponderada dentro del índice en función de su patrimonio bursátil. El índice se ajusta trimestralmente en función de la presencia bursátil (nº de transacciones) y su rotación.

Los vencimientos corresponden a todos los meses del año. La fecha de vencimiento será el antepenúltimo día bursátil de cada mes. Estos contratos de futuros se negociarán bajo el sistema de telepregón. La cotización en el telepregón y la información de precios será en puntos del índice. Cada punto del índice se valorizará en \$2.000 (3,7 dólares aproximadamente) El precio de cierre corresponderá al precio promedio ponderado por el número de contratos negociados en las últimas 10 transacciones., de no existir se fijará el precio del día anterior y así sucesivamente.

El margen equivale a 1,5 UF (35 dólares) por cada contrato como valor fijo, el cual podrá ser modificado de acuerdo a los condiciones de mercado.

La liquidación anticipada corresponde la operación de signo contrario realizado con el mismo operador o corredor. La liquidación a la fecha de vencimiento se realiza sólo en forma financiera, comparando el precio al cual se encuentran valorizados los contratos con el valor promedio del IPSA al día de vencimiento.

COBERTURA USANDO FUTUROS IPSA (*HEDGE*)

Mostraremos una estrategia de cobertura (hedge) para una cartera compuesta por 5 Acciones, una que replica la ponderación del índice IPSA, para 2 trimestres (2009-1).

INDICE DE PRECIO SELECTIVO DE ACCIONES (IPSA)

Esta cartera está compuesta por las 40 acciones más transadas en el último período. Este índice se ajuste trimestralmente en función de dos variables rotación y participación al momento de realizar la cobertura su composición era la siguiente:

COBERTURA DE UNA CARTERA QUE REPLICA EL IPSA

ACCIONES SELECCIONADAS

Todas las acciones seleccionadas en este trabajo pertenecen al Inter-10 ya que son las 10 sociedades que tranzando ADRS y perteneciendo al IPSA presentan los mayores montos transados ponderados en la bolsa de comercio de Santiago.

Además se considera solo transacciones efectuadas en el sistema Telepregon con condición de liquidación contado normal y se excluyen las transacciones de acciones sin derecho a beneficio de capital.

CCU

Se selecciono la acción CCU ya que es la compañía diversificada de bebidas con mayor participación en el mercado Chileno. CCU consta de 4.911 accionistas común total de 318.502.880 numero de acciones suscritas pagadas.

Suma	0,320838
Promedio	0,002971
Varianza	0,004582

	Betas	Ponderación
CCU	0,34377628	0,2

SANTANDER

Seleccionamos Banco Santander Chile ya que es el mayor banco en Chile. Al cierre del 2008 contaba con \$21.137.134 millones de pesos en activos, colocaciones netas de provisiones por \$14.319.370 y depósitos por \$12.706.023 millones. A esa misma fecha contaba con 477 sucursales, 9.169 empleados y 1.958 cajeros automáticos.

CONCLUSIONES FINALES DE LA COBERTURA

El mercado de activos financieros en Chile presenta un muy bajo desarrollo, por motivos de baja liquidez de los activos subyacentes, el rol del banco central es clave en el desarrollo del mercado pudiendo repercutir las decisiones tomadas por ellos dada la poca profundidad del mercado, un ejemplo de esto es la tasa de encaje, la tasa de referencia, el mercado cambiario, etc.

En nuestro caso dada las condiciones de inestabilidad del mercado en el momento de la ejecución de la cobertura, enfocamos nuestra atención en efectuar una cobertura de futuros de IPSA con una estrategia de

venta, esto además potenciado a que el mercado financiero global se encontraba en una profunda crisis y todos los analistas apuntaban a una disminución en el mercado, por lo que optamos por este tipo de cobertura.

Los resultados fueron bastante negativos dado a todos los factores mencionados anteriormente, por la poca profundidad que tiene el mercado Chileno y cualquier noticia apuntaba a un crecimiento del mercado, dato inverso a lo que se estaba planteando anteriormente, además cabe destacar que las empresas que elegimos de distintos mercados fueron aumentando su valor mediante las expectativas del mercado, apoyando nuestra negatividad en el resultado. Si bien es cierto obtuvimos una ganancia total de \$837.571 representando solo el 3.3% de el monto total invertido inicialmente la cobertura no fue optima, ya que en este caso se obtuvieron ganancias, pero debemos analizar el movimiento contrario, en que efectivamente se hubiese perdido.

OLEOTURISMO EN ESPAÑA: POTENCIALIDAD DE ÉXITO INTERNACIONAL EN ESCENARIOS ACTUALES

José Manuel Quesada, Universidad de Granada

Valentín Molina Moreno, Universidad de Granada

Ignacio Ruiz Guerra, “Fundación Caja Rural de Toledo” Universidad de Castilla-La Mancha

ABSTRACT

Durante los últimos años se ha generado un movimiento por el cual la sociedad que busca el ocio o descanso alejado de su lugar habitual de residencia necesita de algo más, aparte del sobradamente explotado y conocido recurso del sol y playa. En la actualidad, los turistas que pernoctan fuera de su lugar de residencia tienen un espíritu más inquieto que hace unos años, son las mismas personas, mayoritariamente, pero ahora cuentan con un sueldo per cápita superior, y tienen otro tipo de inquietudes, como es el visitar un lugar nuevo, o no tan nuevo, y conocer todo aquello que conforma esa realidad, no sólo el clima es lo importante, sino también las características que componen esa realidad que se visita.

El Oleoturismo es una nueva alternativa surgida al amparo de la importancia de un tipo de cultivo mayoritario en la zona mediterránea, y del que España es máxima productora a nivel mundial. Aunque el Aceite de Oliva es un producto que supone, apenas, el 5% del mercado internacional de grasas vegetales, para países como España, Italia, Grecia, Marruecos, Túnez, es un producto fundamental en su dieta, y en su economía. El Aceite de Oliva es un producto agroalimentario, que por sus características trasciende lo meramente alimenticio, y así visto, puede crearse en torno a él una industria dedicada al Turismo para, de manera simultánea, explicar el verdadero significado del Aceite de Oliva a los potenciales consumidores y crear un nuevo canal de comercialización al acercar a los clientes al punto de producción.

El estudio trata de mostrar el impacto previo que tiene este tipo de práctica a través de un trabajo de investigación en el que con una muestra de 15 países se facilitan datos primarios sobre las tendencias del Turismo en la actualidad y el grado de aceptación que tendría esta industria a través del sector oleícola español. Esta estrategia es una herramienta más para la diversificación económica del medio rural en España.

Palabras clave: Oleoturismo, estrategia, medio rural, Aceite de Oliva, comercialización.

INTRODUCCIÓN

El turismo es un fenómeno de alcance mundial, pues entraña efectos directos e indirectos, y suele traer ventajas y desventajas. En efecto, puede aportar grandes beneficios económicos y sociales a un país, una región o una localidad, dinamizando intercambios entre múltiples ramas de actividad y favoreciendo el encuentro entre personas de diferentes características sociales, culturales y económicas.

Sin embargo, el turismo implica también efectos negativos y consecuencias no deseables, como la degradación medioambiental, la pérdida de la identidad cultural y tensiones entre turistas y la población residente. Ello significa que el turismo incurre en impactos que afectarán a: la sociedad, la comunidad local, los hogares, las empresas o los individuos.

El reconocimiento de los impactos negativos del modelo de crecimiento de la industria turística, condujo a cuestionar ese modelo, por su carácter insostenible. Al dejar de lado los aspectos socioculturales y ambientales obligó a replantear las relaciones entre turismo, sociedad y desarrollo.

En la misma Declaración de San José en el año 2004 se afirma que:

“Somos conscientes de que el turismo puede ser una fuente de oportunidades pero también una amenaza para la cohesión social de nuestros pueblos, su cultura y su hábitat natural. Por ello, propiciamos la autogestión del turismo, de modo que nuestras comunidades asuman el protagonismo que les corresponde en su planificación, operación, supervisión y desarrollo”

(Declaración de San José, 2004)

En la actualidad, los turistas están dispuestos a pagar, a los operadores turísticos, para que les ayuden a encontrar experiencias óptimas dentro de un tiempo disponible limitado. Así, el turista del siglo XXI busca estímulos emocionales y desea comprar, fundamentalmente, sentimientos (Opaschowski, 2001).

La importancia de la actividad turística como actividad económica ha experimentado un importante crecimiento en las últimas décadas. Sin embargo, la ciencia que soporta el turismo está en desarrollo, por lo que sus conceptos aún no están totalmente definidos (Frechtling, 2002).

Así, entre las principales definiciones de “producto turístico” podemos destacar la que lo conceptúa como amalgama de diferentes bienes y servicios ofrecidos como experiencia de actividad al turista (Gilbert, 1990); la que lo hace como un conjunto de atributos tangibles e intangibles, ensamblados por el turista, que tiene una organización de servicio como centro de referencia, pero que no es únicamente gestionado por ella; que explota recursos turísticos como atrayentes, soportados con la infraestructura necesaria, y brinda servicios que permiten el desarrollo de actividades turísticas, todo lo cual confluye en un espacio local determinado, que es ofertado en el mercado turístico y consumido en el lugar de prestación del servicio, generando flujos turísticos en búsqueda de experiencias y aprendizajes (González, 2006); y la que lo entiende como el que tiene su principal insumo en el atractivo, en torno al cual giran una serie de elementos que permiten que se desarrolle la actividad turística en un espacio determinado, es decir, como el conjunto de atractivos, equipamientos, servicios, infraestructuras y organizaciones que satisfacen una necesidad o deseo de los consumidores (Middleton, 1994).

ANÁLISIS DAFO DEL TURISMO CULTURAL

A continuación se describen a través de un análisis DAFO los aspectos positivos y negativos potenciales que se derivan de la actividad turística, para los diferentes actores que participan directamente en la misma, o que indirectamente se ven afectados por sus efectos. Se distinguen los efectos positivos y negativos, sean éstos económicos, sociales, culturales o ambientales bien sean:

- Debilidades
- Amenazas
- Fortalezas
- Oportunidades

El turismo como fenómeno económico incide en diversas esferas de la economía, dinamizando las políticas de fomento de negocios, estimulando la demanda de bienes y servicios de una vasta gama de actividades locales, lo cual significa generación de riqueza, ingresos e impuestos. A su vez, el consumo turístico entraña fluctuaciones de la demanda, inflación de precios, especulación de todo tipo y fuga de los beneficios.

DEBILIDADES

- Fluctuaciones de la demanda turística: la caída de la demanda afecta a la actividad económica en general.
- Inflación local: aumento de los precios de la mano de obra, los alimentos y los bienes, lo cual significa una pérdida del poder adquisitivo de los hogares residentes.
- Especulación derivada de la demanda turística por terrenos.
- Costes de oportunidad debidos a la asignación de recursos al turismo (naturales, sociales y culturales), en lugar de destinarlos a usos alternativos para los hogares residentes.
- Distorsión o debilitamiento de actividades tradicionales que se ven privadas del capital humano necesario para su desarrollo.
- Conflicto de intereses entre la población residente y los turistas que deben compartir o competir por recursos y servicios públicos.
- Incremento de gastos locales en mantenimiento de infraestructura, limpieza, seguridad ciudadana y atención sanitaria en temporada de mayor afluencia turística.

AMENAZAS

- Deterioro de sitios históricos y monumentos arqueológicos por el tráfico peatonal y la polución.
- Daños causados a obras de arte por el excesivo tráfico humano.
- Saturación y deterioro de algunos destinos turísticos debido a la poca diversificación de la oferta nacional, regional o local.
- Mercantilización de las manifestaciones culturales locales, despojándolas de su verdadera significación y autenticidad, bajo presiones de touroperadores para satisfacer a su clientela.
- Saqueo o tráfico ilegal de piezas arqueológicas y obras de arte.
- Cambios irreversibles en la forma de vida, los valores culturales y patrones de consumo de la comunidad local, al adoptar comportamientos imitativos de los turistas (aculturación).
- Desplazamiento de las comunidades nativas o de la población residente de su hábitat originario, debido a la expropiación o a la venta de sus tierras, bajo presiones de autoridades locales o nacionales, a favor de promotores inmobiliarios.

FORTALEZAS

- Preservación, restauración y rehabilitación de edificios, sitios, monumentos y obras históricas.
- Revitalización de formas de arte tradicional: música, danza, pintura, escultura, teatro, literatura, etc.
- Reactivación y desarrollo de tradiciones locales: artesanía, celebraciones religiosas, gastronomía y folclore.
- Rescate de lenguas y dialectos vernáculos y de la cultura oral.
- Valoración de conocimientos colectivos tradicionales y tecnologías aplicados a la producción, la alimentación y la salud.
- Fortalecimiento del patrimonio histórico, la identidad cultural y la estima colectiva que potencian el atractivo turístico del destino.
- Creación de museos y centros de exposición de interés cultural.
- Enriquecimiento del intercambio intercultural entre visitantes y residentes, gracias a experiencias basadas en el respeto mutuo, la tolerancia y la comprensión.
- Beneficios indirectos obtenidos por los pobladores locales gracias al acceso a instalaciones, equipamiento y actividades culturales fomentadas por el turismo.
- Adopción y aplicación de normas y reglamentos restringiendo el número de visitantes para prevenir daños de sitios arqueológicos, monumentos históricos y obras de arte (capacidad de acogida).

OPORTUNIDADES

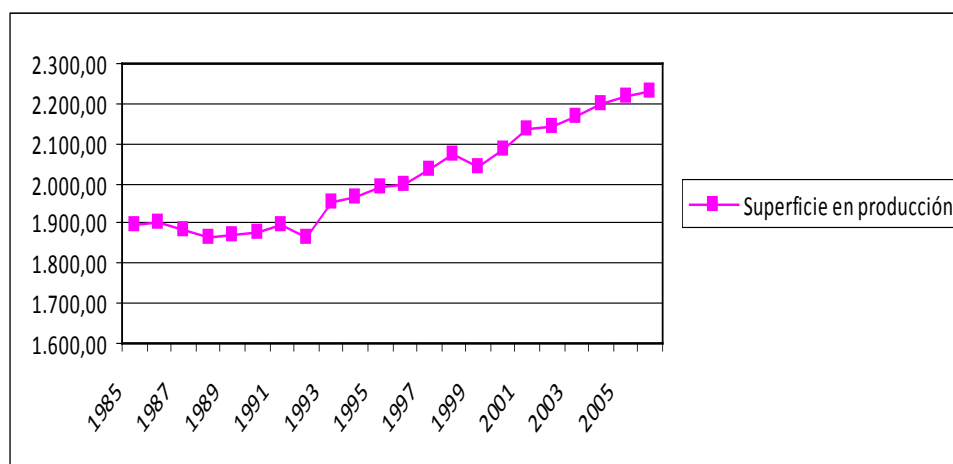

- Contribución al crecimiento del Producto Interno Bruto del país atribuible a los gastos por consumo de servicios turísticos, según la diversidad y frecuencia del consumo de los mismos.
- Incremento de la inversión pública en infraestructura vial, servicios básicos, recreativos y culturales.
- Recaudación de impuestos locales a los servicios, inversiones, ingresos y dividendos turísticos.
- Estímulo a la creación de nuevos negocios y desarrollo del espíritu empresarial, especialmente de las PyMES y los negocios familiares que incrementan la demanda de bienes locales.
- Fuente de beneficios directos para las empresas prestadoras de servicios turísticos.
- Reinversión de beneficios en la ampliación de los negocios o en otros sectores.
- Beneficios indirectos obtenidos por las empresas proveedoras de bienes y servicios de apoyo a los establecimientos turísticos.
- Contribución a la mejora del equilibrio regional gracias a la diversificación económica, la distribución de la población y los ingresos en el territorio nacional.

POTENCIALIDAD DEL OLEOTURISMO

El territorio y el turista son los factores clave que determinan la oferta y la demanda del turismo del aceite de oliva. Con respecto al territorio, no debemos olvidar que España forma, junto a Italia, Grecia, Francia y Portugal, el núcleo de los países de la Vieja Europa, tradicionalmente productores de aceite de oliva.

Los últimos datos publicados en el Anuario de Estadística Agroalimentaria (2007), establecen la superficie total dedicada al cultivo de aceituna de almazara en España en 2.319,9 mil hectáreas para 2006. En 1985, la superficie destinada al cultivo de olivar de aceitunas de almazara se situaba en 1.929,10 mil hectáreas de terreno, lo que supone un importante incremento de la superficie destinada a este fin, como se puede observar en la Figura..... *Evolución de la superficie en producción.*

Gráfico 9.- Evolución de la superficie en producción.

Fuente: Anuarios de Estadística Agroalimentaria 2008.

Este incremento de la superficie en producción destinada al cultivo del olivar, pone de manifiesto la importancia de esta actividad agrícola sobre la economía de muchas regiones, y supone además una importante base sobre la que se sostiene el equilibrio ecológico de un gran número de comarcas españolas. El aumento registrado de la superficie en producción del olivo a lo largo de la historia, se ha

producido como consecuencia de la sustitución llevada a cabo por el hombre, de la vegetación natural de tipo mediterráneo por este tipo de cultivos.

Arcas (1999) señala que tanto el clima como el suelo juegan un papel importante en la actividad agraria, limitando las producciones a obtener, así como la calidad de las mismas y la época de salida al mercado. Y, aunque el progreso técnico permite actuar sobre estas variables, el nivel de incertidumbre y riesgo que incorporan a la actividad agraria en general, y a la olivarera en particular, es elevado.

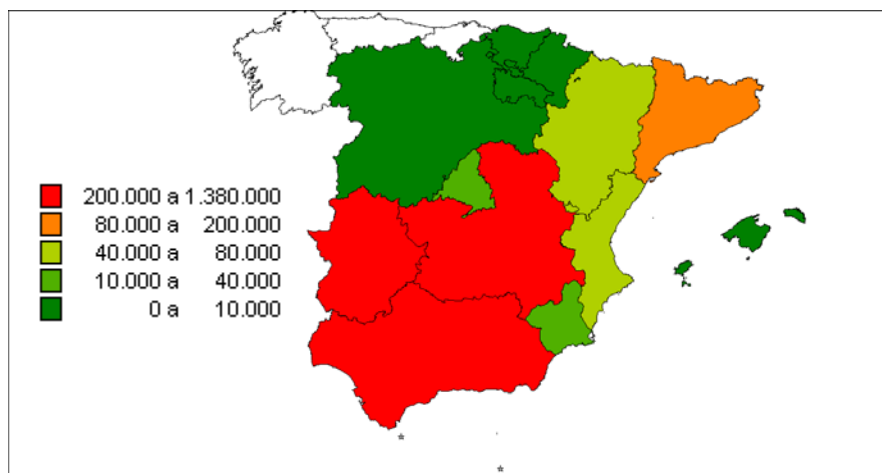

Como ya señalaron Alonso, A. M. y Guzmán, G (1999) el olivar no está formado únicamente por los olivos, sino que siempre tiene una serie de recursos asociados a él como el suelo, el agua, otras plantas y los animales que habitan en los mismos.

Cuadro. Distribución de la superficie olivarera por Comunidad Autónoma. 2007

Comunidades Autónomas	Total	
	Hectáreas	%
Andalucía	1.515.320	60,38
Extremadura	255.310	10,17
Castilla-La Mancha	397.173	15,83
Cataluña	116.112	4,63
Comunidad Valenciana	91.701	3,65
Aragón	57.346	2,28
Resto	76.715	3,06
TOTAL	2.509.677	100

Fuente: elaboración propia a partir de la Encuesta sobre Superficies y Rendimientos de Cultivos (ESYRCE)

Mapa 2.- Superficie de olivar (Has.) en España por Comunidades Autónomas.

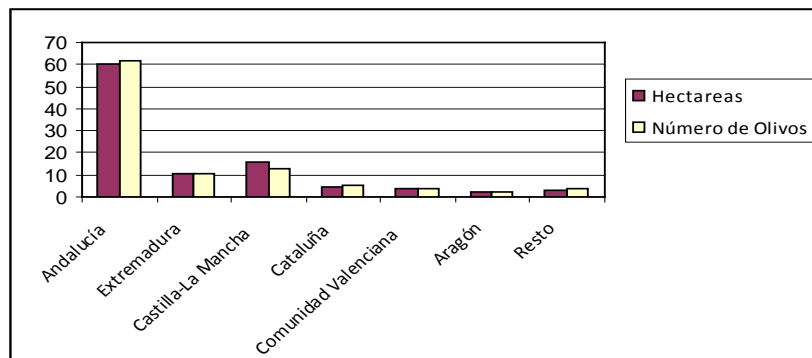

Fuente: Elaboración propia.

De acuerdo con la Encuesta sobre Superficies y Rendimientos de Cultivos (ESYRCE), se puede afirmar que, Andalucía, es la Comunidad Autónoma líder tanto en superficie como en número de olivos. La figura Superficie y número de olivos por Comunidades Autónomas representa los resultados comparados sobre el porcentaje de olivos y superficie destinada al cultivo del olivar distribuido por los porcentajes de cada

una de las Comunidades Autónomas, y expresadas ambas variables con respecto al total de lo que en la campaña de 2008/2009 estaba dedicado en España al sector oleícola.

Gráfico 8.- Superficie y número de olivos por Comunidades Autónomas.

Fuente: Encuesta sobre Superficies y Rendimientos de Cultivos (ESYRCE) 2007.

El medio rural es una parte integral de la experiencia oleoturística, ya que el destino incluye paisajes, clima, ... Un paisaje rural implica también un estilo de vida que refleja una determinada cultura y que contribuye a crear una imagen turística (Aybar, 2004). El producto cultural incluye características tales como el alojamiento con carácter rural local, los restaurantes y los pueblos oleícolas tradicionales.

Aún está poco desarrollado el Oleoturismo en España y son escasos los estudios que existen al respecto, siendo además los que existen, meramente descriptivos de las experiencias vividas por los primeros oleoturistas de este turismo incipiente (AEMO, 2005). Ante esta situación, el objetivo del trabajo que aquí se plantea pretende hacer un estudio preliminar para conocer el grado de disposición de los consumidores a la hora de decidir si realizar o no oleoturismo, y concretar los factores que los potenciales turistas considerarían más importantes.

METODOLOGÍA

El total de cuestionarios válidos ha sido de 704, de los que han surgido en algunas respuestas una pérdida de datos de como máximo 34 datos perdidos en los que algunas preguntas no han sido respondidas.

También hay 10 cuestionarios de la primera prueba piloto utilizados en un primer momento para auditar la validez de las preguntas y las respuestas que se podían obtener, y así ocurrió con una segunda prueba piloto de 5 cuestionarios en los que se habían realizado ya modificaciones y que necesitó de una nueva redacción y comprobación de validez del lenguaje.

Finalmente se realizó este tercer examen sobre el estado del cuestionario, quedando pues validado por una tercera prueba, llegando finalmente a recoger un total de 727 cuestionarios, de los que, como ya se ha dicho, han sido válidos con las últimas modificaciones 704, y en los cuales se han encontrado en varias ocasiones “pérdida de datos” en algunas respuestas que no han sido respondidas, bien por descuido de los encuestados, o por decisión propia de los individuos al no entender la cuestión, o directamente, porque no tenían opinión al respecto.

Del total de cuestionarios un 55,8% han sido mujeres y el resto, un 44,2% hombres.

Las edades están comprendidas entre los 17 años y los 60 años de edad.

El período de recogida de datos ha sido desde el mes de junio al mes de septiembre de 2009 a través de 2 vías:

- directa: trabajo de campo realizado en los campus de las universidades seleccionadas, a través de profesores de universidad conocedores del método y pertenecientes a la titulación de Empresariales o Económicas.
- indirecta: a través del envío masivo de los cuestionarios por correo electrónico de profesores que han prestado colaboración en la realización del estudio, y pertenecientes a las universidades que han participado.

El procesamiento de datos ha sido a través del programa SPSS versión 15 para Windows, y se han introducido todos los datos correspondientes a las variables de 25 preguntas, de las que el estudio ha tenido en consideración 15 como las más significativas para este trabajo.

Cuando no es posible estudiar todos los individuos que componen la población, normalmente por tener ésta un tamaño muy grande, se debe tomar la información de una parte de la población que sea representativa de la misma, a esta parte se denomina muestra. Hay diversas razones por las que se debe tomar una muestra de la población:

- por el tiempo que necesitaría estudiar todos los individuos
- también puede ser inviable el estudio de toda la población por cuestiones económicas
- además si se estudiara toda la población, al utilizar un mayor número de individuos, se pueden acumular un mayor número de errores

Para la obtención de la muestra se debe contar con un marco o lista de individuos de la población a partir de la cual se pueden extraer las unidades que componen la muestra. El procedimiento de selección de la muestra se denomina muestreo y hay diversas técnicas de muestreo, siendo las más importantes: muestreo aleatorio simple, muestreo estratificado, muestreo por conglomerados, etc.

Otro aspecto importante del muestreo es la determinación del número de individuos que componen la muestra, denominado tamaño muestral (n). Éste depende del tipo de muestreo utilizado, del tamaño de la población, del parámetro que se desea estimar, del error máximo aceptable y del nivel de confianza que se fije. Así por ejemplo si se desea estimar la proporción p de individuos que presentan cierta característica en una población de tamaño N , para determinar el tamaño muestral (n) necesario en un muestreo aleatorio simple se puede utilizar la expresión

$$n = \frac{n_{\infty}}{1 + \frac{n_{\infty}}{N}}$$

donde $n_{\infty} = \frac{k^2 p(1-p)}{e^2}$, que corresponde al tamaño muestral necesario si la población, fuera infinita, e es el error máximo admitido en la estimación del parámetro (normalmente un valor entre 0.01 y 0.1, es decir entre un 1% y un 10%) y k un valor determinado a partir del nivel de confianza fijado y que en el caso de una muestra suficientemente grande se puede suponer igual a $Z_{\alpha/2}$ (si se toma un nivel de confianza del 95% este valor es $Z_{\alpha/2} = 1.96$).

Se limitó el estudio a un segmento de población universitaria, pertenecientes a facultades de Económicas, o Empresariales de países tales como:

- Colombia
 - o Universidad Pontificia Javeriana

- Universidad Cooperativa de Colombia
 - Universidad de Ibagué
- Costa Rica
 - Universidad de Costa Rica
- España
 - Universidad de Granada
 - Universidad de Castilla-La Mancha (Toledo)
 - Universidad de Zaragoza
 - Universidad de La Rioja
- Estados Unidos
 - Iowa
 - Mineápolis
- Francia
 - Universidad de St. Etienne en Roanne
- Hungría
 - Universidad de Nyireghaza
- México
 - Universidad del Caribe
 - Universidad Ciudad del Carmen
 - Universidad Anáhuac
 - Universidad Puebla

Dada la amplitud del segmento de población dentro de las universidades y las personas que desarrollan estudios superiores, el mínimo de edad se estableció en 18 años y el límite superior de edad era indeterminado, pues aunque mayoritariamente la población estudiantil se mantiene en unos rangos mayoritarios con un límite aproximado de 25 años como niveles superiores, pero en la actualidad es muy sencillo encontrar personas de mediana edad, (por encima de los 35 años) realizando estudios universitarios por primera vez, como segunda titulación, bien sea para desarrollo y mejora de su situación profesional, o como una decisión de mejora personal.

Esta selección de la población para la muestra del estudio también supone una serie de cambios en el desarrollo del estudio, pues se modifican las escalas de valorización, teniendo en cuenta las escalas de evaluación de los estudiantes a través de las notas en los procesos de evaluación de las asignaturas de las que se examinan, como una forma más sencilla y comprensible para la población que realiza el estudio.

La muestra recogida han sido 704 individuos pertenecientes al ámbito universitario, con edades comprendidas, en teoría, entre los 17 años en adelante, pues los estudiantes de primero de los diferentes grados, pueden perfectamente llegar con esos 17 años, cumpliendo en los días anteriores al 31 de diciembre de ese mismo año los 18.

El máximo de edad no está determinado, fundamentalmente, porque en los diversos campus existe una cantidad variable de alumnos que han accedido a los estudios de Grado por las pruebas de acceso para mayores de 25 años, y personas que, teniendo ya una titulación media o superior pretenden obtener una nueva titulación de Grado o de Postgrado.

La población universitaria en España, según el profesor de la Universidad de Barcelona, Dr. D. Jesús de Miguel, en la ponencia que impartió en Toledo en el XIX Congreso ACEDE, los estudiantes universitarios se dividen de la siguiente manera según género:

Estudiantes universitarias españolas: 54,3 %

Estudiantes universitarios españoles: 45,7 %

De otro lado, y siguiendo con la investigación llega el punto en el que la confiabilidad tiene que ser probada a través de la ciencia exacta matemática, por la que comprendemos que un conjunto en el que (p) es igual a (q) se comprende que ambos son iguales a 50:

$$P=Q=50$$

Confiabilidad = 95,5 %

Margen = +/- 5 %

Alumnos matriculados en educación universitaria en España:

	Nº alumnos	Porcentaje
Mujeres	758.484	54,3%
Hombres	638.123	45,7%
Total	1.396.607	100%

Fuente: Estudio Espacio Europeo de Educación Superior, Jesús M. de Miguel (2009).

Del mismo modo, la encuesta ha sido realizada a personas de diferente sexo aunque según las estadísticas de los observatorios del Espacio Europeo de Educación Superior es posible saber que la población femenina universitaria tiene una presencia porcentual superior a la población masculina universitaria, por lo que teniendo en cuenta las estadísticas y porcentajes del último estudio del observatorio del Espacio Europeo de Educación Superior utilizado en el desarrollo del proceso de Bolonia para la adaptación de la Universidad en España al Espacio Europeo.

El estado civil, en cambio, no se ha considerado una variable significativa como para tenerla en cuenta en este estudio.

El conocimiento que puedan tener tanto chicos como chicas sobre el Aceite de Oliva puede resultar muy similar, por la edad, por la formación, pero la variable que sí puede tener algún tipo de correlación es la variable del lugar de residencia, si es un municipio grande o pequeño, si tiene cultivos alrededor o no, etc.

EVIDENCIA EMPÍRICA

El total de cuestionarios válidos como ha sido mencionado anteriormente ha sido de 704, de los que han surgido en algunas respuestas una pérdida de datos de como máximo 13 cuestionarios en los que algunas preguntas no han sido respondidas. También hay que contar con los 10 cuestionarios de la prueba piloto utilizados en un primer momento para auditar la validez de las preguntas y las respuestas que se podían obtener, y así ocurrió con una segunda prueba de 5 cuestionarios en los que se habían realizado ya modificaciones y que necesitó de un nuevo repaso y comprobación de validez del lenguaje. Finalmente se realizó este tercer examen sobre el estado del cuestionario, quedando pues validado por una tercera prueba, llegando finalmente a recoger un total de 727 cuestionarios, de los que, como ya se ha dicho, han sido válidos con las últimas modificaciones 704.

Las pruebas piloto se les ha realizado a profesores universitarios con grado de doctor, por lo que sus opiniones y sugerencias han sido tenidas en cuenta para el buen término del estudio entre los que están el profesor José Manuel Quesada, profesor de la Universidad de Granada, el profesor Víctor Vicente Fernández, profesor de la Universidad Complutense, así como investigadores del área de Sociología y Contabilidad de la Universidad de Castilla-La Mancha en su campus de Toledo.

De esta manera las pruebas piloto han seguido un margen de mejora importante por la revisión por parte de investigadores especializados en materia sociológica y estadística para filtrar, previamente a su puesta en práctica las posibles carencias o redundancias que pudiera tener el estudio a llevar a cabo.

También se han recibido comentarios y sugerencias desde la Universidad de Zaragoza, y de la Universidad Cooperativa de Colombia por parte del director del Instituto de Economía Social y Cooperativismo de Colombia don Juan Fernando Álvarez. Estas sugerencias, unidas a la labor de los directores de la tesis ha redundado en la creación de un cuestionario mucho más amplio y pleno de información para favorecer que la información que se iba a obtener a través de ellos, iba a ser de buena calidad expositiva y sobre todo con información cualitativa y cuantitativa importantes.

En cuanto a la cantidad de cuestionarios recogidos, la muestra necesitaba al menos de 400 documentos, cantidad que ha sido ampliado y casi duplicado, en busca de una demostración más fiable de los resultados del estudio, y de esta manera que el mismo, pueda servir de adalid de la defensa, difusión y promoción de un sector que, socialmente hablando, ha perdido su plena significación y valoración entre los individuos que formamos esta sociedad del siglo XXI, por lo que se hace necesario recuperarlo desde todos los puntos de vista y atributos que tiene el Aceite de Oliva. La recogida de datos primarios directamente a los estudiantes universitarios a través de cuestionario, realizada como se ha explicado en el apartado Muestra de este estudio marca la determinación de una muestra de población universitaria, formada por estudiantes universitarios, por Personal de Administración y Servicios (PAS), Personal Docente e Investigador (PDI), por lo que los rangos de edad han sido amplios pero pudiendo diferenciar claramente que los mayoritarios son aquellos que están en las edades de acceso a la universidad.

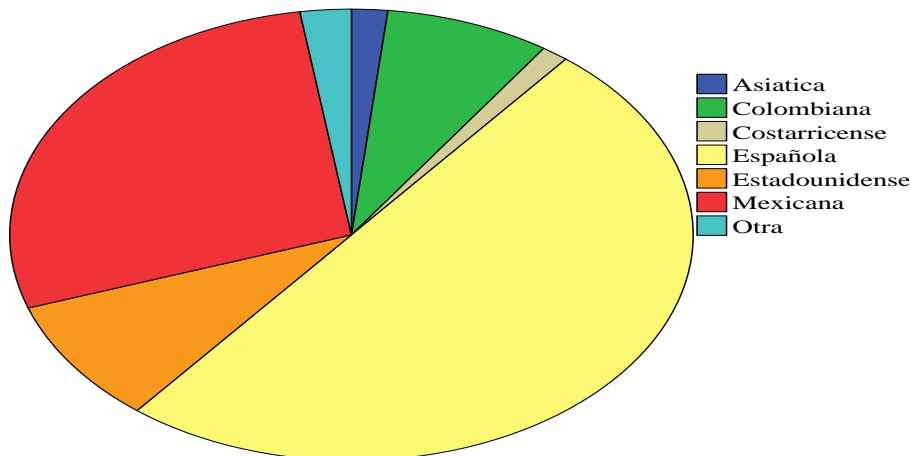

Los porcentajes mayoritarios se recogen entre los 17 y los 44 años, con una población muestral del 94,3%, el porcentaje de individuos entrevistados cuya edad está comprendida entre los 45 y los 60 años es prácticamente insignificante 3,9%. También queda un 1,8% de datos perdidos en la encuesta que no quedaron recogidos a la hora de realizar las encuestas.

Ya que el grupo ha quedado enmarcado en los rangos, o segmentos, de edad, la diferenciación de género también se hacía imprescindible para poder constatar cuál de los 2 géneros conoce con mayor profundidad el sector del Aceite de Oliva, en este caso, para comprobar si el porcentaje muestral correspondía con la realidad, y por lo tanto, podía resultar un estudio fiable, se tuvo en cuenta el Estudio del Espacio Europeo de Educación Superior realizado para el denominado como “Proceso de Bolonia” y que ha recogido todas las variables que caracterizan al sistema universitario de España (De Miguel: 2008). La tabla muestral de este estudio recoge la opinión de un 55,8% de mujeres y un 43,8% de hombres, lo que corresponde muy fehacientemente con los porcentajes del Estudio del Espacio Europeo en el que el sociólogo Jesús de Miguel demuestra que la población estudiantil en la universidad española está formada por un 45,7% de estudiantes hombres y un 54,3% de estudiantes mujeres.

		Frecuencia	%
Válidos	Hombre	308	43,8
	Mujer	393	55,8
	Total	701	99,6
Perdidos	Sistema	3	0,4
Total		704	100,0

Fuente: Elaboración propia

La muestra como se expresó en el desarrollo del estudio se realizó de manera que pudieran sacarse una serie de conclusiones que tuvieran validez trascendiendo las fronteras españolas, por lo que contando con la colaboración de las redes de investigación en las que se colabora desde la Cátedra de Estudios Cooperativos el estudio logró recoger un importante porcentaje de cuestionarios de fuera de España.

Fuente: Elaboración propia

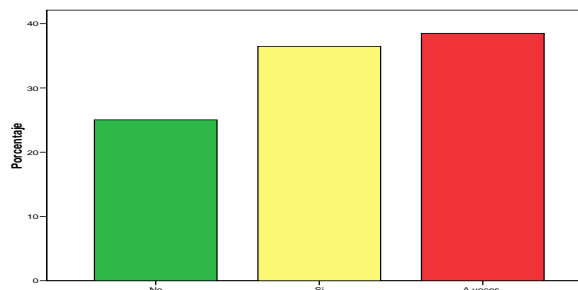

De este modo se han agrupado en cierta manera por procedencia y por similitud, es el caso de la población asiática en la que hay coreanos y chinos y para poder obtener un porcentaje más significativo fueron unidos en un único ítem, con una representación en la muestra del 1,7%. Por otro lado la población Latinoamericana cuenta con representación colombiana, costarricense, mexicana con un porcentaje conjunto del 36,9%, unido con la población estadounidense de la que el estudio cuenta con una representación del 8,9%. Otras nacionalidades agrupadas corresponden a los cuestionarios recibidos por individuos de la Unión Europea, los cuales representan el 2,4% de la muestra de cuestionarios.

NACIONALIDADES		Frecuencia	%
Válidos	Asiática	12	1,7
	Colombiana	55	7,8
	Costarricense	9	1,3
	Española	352	50,0
	Estadounidense	63	8,9
	Mexicana	196	27,8
	Otra	17	2,4
Total		704	100,0

Del Análisis Descriptivo realizado a la muestra de cuestionarios recogidos también se le ha dado mayor importancia a la población española, no sólo por la facilidad de obtención de datos, sino porque la incidencia del Aceite de Oliva en países Transatlánticos es inferior a la que se puede tener en España. Así la incidencia de las opiniones serán más variadas, pero teniendo en cuenta que el porcentaje de producción mayoritario está en España, como se ha indicado en el capítulo de Producción de este estudio, es más fácil obtener información sobre este producto en España que fuera de sus fronteras, pero eso no quita importancia a que conozcan el producto, y del mismo modo conozcan sus características.

De la muestra se saca como conclusión que el 73,6% admite que cocina, si no habitualmente, sí afirman hacerlo de manera esporádica, (A veces).

¿Cocinas?		Frecuencia	%

De estas tablas de datos se sacan conclusiones tales como que el Aceite de Oliva es el más consumido o conocido de manera mayoritaria por parte de los encuestados, lo que hace extrapolar que el Aceite de Oliva, aunque porcentualmente por consumo sea una de las grasas vegetales que, como se ha dicho en los capítulos anteriores, sólo supone el 4% del consumo mundial, en este caso se puede decir que es el Aceite con unos valores de conocimiento y consumo más alto por parte de la población seleccionada en la muestra con un porcentaje como consumidores de Aceite de Oliva, al menos alguna vez en su vida es de 91,3%, frente a otras grasas vegetales mayoritarias en Latinoamérica, en Asia como el aceite de coco, de palma, o de girasol y semillas, cuyos porcentajes de consumo no superan el 62,9% del aceite de girasol, seguido del 26,4% del aceite de almendras, o el 20,3% del aceite de coco. Los minoritarios son el aceite de semillas con apenas un 8,8% y el aceite de palma con un 8,1%.

De estas tablas de datos se sacan conclusiones tales como que el Aceite de Oliva es el más consumido o conocido de manera mayoritaria por parte de los encuestados, lo que hace extrapolar que el Aceite de Oliva, aunque porcentualmente por consumo sea una de las grasas vegetales que, como se ha dicho en los capítulos anteriores, sólo supone el 4% del consumo mundial, en este caso se puede decir que es el Aceite con unos valores de conocimiento y consumo más alto por parte de la población seleccionada en la muestra. muestra con un porcentaje como consumidores de Aceite de Oliva, al menos alguna vez en su vida es de 91,3%, frente a otras grasas vegetales mayoritarias en Latinoamérica, en Asia como el aceite de coco, de palma, o de girasol y semillas, cuyos porcentajes de consumo no superan el 62,9% del aceite de girasol, seguido del 26,4% del aceite de almendras, o el 20,3% del aceite de coco. Los minoritarios son el aceite de semillas con apenas un 8,8% y el aceite de palma con un 8,1%.

La siguiente cuestión, muy interesante también para este estudio, es la frecuencia del consumo del Aceite de Oliva por parte de las personas participantes en el estudio, teniendo como datos perdidos un 0,1% que resulta insignificante. De las respuestas obtenidas se puede obtener como datos más llamativos que sólo un 6,1% de la población no consume Nunca, Aceite de Oliva. Por lo que se deduce que, de alguna manera, se concluye que un 93,8% consume en algún momento Aceite de Oliva, del que un 43,2% lo consume de manera diaria.

Gráfico. Frecuencia consumo de Aceite de Oliva

Los individuos que han participado en el estudio dan una imagen de conocimiento y habitual consumo de Aceite de Oliva, con un porcentaje acumulado del 94%, del mismo modo que opinan que el Aceite de Oliva no sólo tiene usos para alimentación, sino que tiene otros varios usos, y a los que a continuación han podido dar un valor numérico sobre la relación que tiene el Aceite de Oliva, o mejor dicho, grado de representatividad del Aceite de Oliva en los diferentes atributos que se han estudiado en el presente trabajo.

Una vez que el estudio, a través de los datos obtenidos con el cuestionario, ha entrado en materia oleícola hemos de ir a las preguntas en las que directamente se trataba de medir en qué medida la sociedad conoce el Aceite de Oliva, teniendo en cuenta que se han expresado diversas variables a medir, como son:

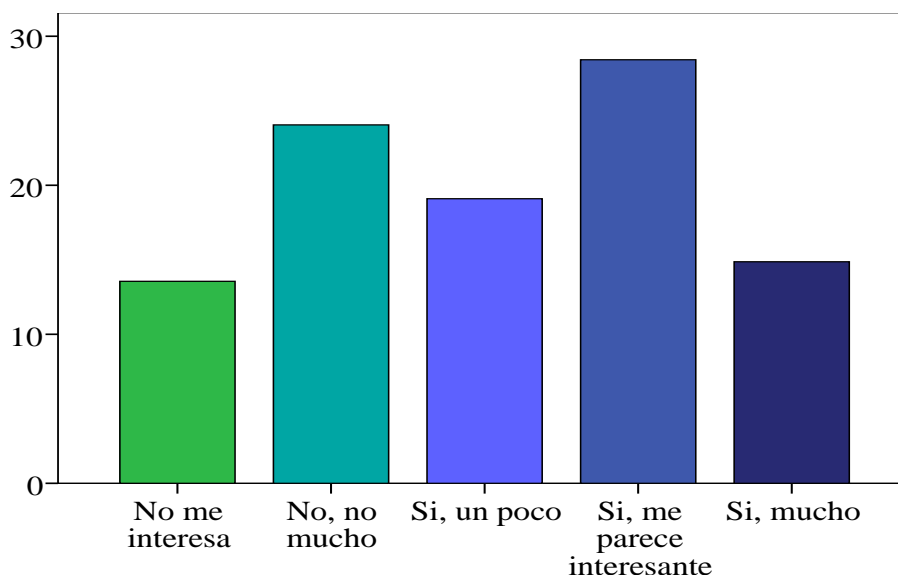

- Las primeras para saber si conocen el Aceite de Oliva

- Las siguientes para averiguar si conociendo el Aceite de Oliva en términos generales, conocen las diferentes calidades que reconoce el Consejo Oleícola Internacional (Virgen Extra, Virgen, Oliva, Orujo, Lampante, etc).

Ante esta cuestión la respuesta ha sido verdaderamente una extracción de un estudio de mercado, pues se ha provisto con este trabajo de una primera impresión sobre la que poder basar un modelo de explotación turística de manera innovadora, con un producto de calidad que está en auge, que tiene múltiples aplicaciones, y sobre todo, es conocido en todo el planeta de forma general, por lo que la única tarea es centrar y localizar cuáles son las lagunas de conocimiento que tiene la sociedad, sobre el Aceite de Oliva, y plantear la explotación de manera formativa e integral para todos los segmentos de la población.

Los resultados son esclarecedores, pues más de un 60% piensa que puede ser interesante el viajar y aprovechar para conocer algo diferente, algo que no es habitual ver: el proceso de producción del Aceite de Oliva. Del total de 704 individuos que respondieron a la encuesta, 276 no estaban dispuestos a conocer el proceso de producción del Aceite de Oliva. En cambio los que respondieron que Sí les parecía interesante fueron 195, junto a los 131 que piensan que les atrae un poco la idea, y los 102 individuos que responden que les interesa mucho la posibilidad de conocer el proceso productivo.

Gráfico. Poder de atracción turística del Aceite de Oliva

Esto no quiere decir que cualquier persona que esté dispuesta a conocer algo nuevo, que se desplace, está interesada en pagar un precio de entrada si con ello puede conseguir aprender algo más. Es por ello que las últimas preguntas giraban en torno a este tema. La disposición de los individuos de la muestra del estudio fue mayoritariamente que no están dispuestos a pagar por conocer mediante visita el proceso de producción del Aceite de Oliva. Por lo tanto, la estrategia de poner en valor el Oleoturismo tiene un hándicap, pero es intrínseco a la población en general, la cultura no es un bien indispensable en las vidas de la mayoría de las personas, por lo que no están dispuestas a pagar por ello. En cambio se puede optar por otra estrategia como es la apertura de las instalaciones de las almazaras, y tenerlas preparadas para hacer viables las visitas, para poderlo tener preparado para los momentos en que sean visitadas, aunque no sea un flujo continuo de visitas. Esta opción llevaría aparejado el que una parte de la almazara estuviera destinada a comercio, en el que los productos pudieran ser adquiridos directamente por los visitantes.

Tras el análisis realizado a cada una de las variables que habían representado los diferentes ámbitos constitutivos de los atributos intangibles del Aceite de Oliva y su representatividad en todos y cada uno de ellos, a través de valores cuantitativos expresados por los individuos pertenecientes a la muestra de población quedaba la comparación entre diferentes variables de manera bidimensional, y en primer lugar, era necesario comprobar si había diferencias de opinión entre todos los ámbitos relacionados con la representatividad del Aceite de Oliva o bien el estudio llegaba a término por obtener “Hipótesis nula” al no existir diferencias en las opiniones. Se realizó una “Prueba de Friedman”, prueba no paramétrica, para las muestras relacionadas entre el individuo y las opiniones que ha expresado en la pregunta nº 17 del cuestionario. En este punto las hipótesis son las siguientes:

- H0: No hay diferencias de opinión entre los ámbitos (Hipótesis Nula).
- H1: Existen diferencias entre los ámbitos.

El programa SPSS nos determina para la prueba de Friedman en base a la siguiente tabla de datos:

Tabla. Estadísticos de contraste (a)

N	596
Chi-cuadrado	2343,864
gl	9
Sig. asintót.	,000

a) *Prueba de Friedman*

El valor de Chi-cuadrado para la prueba de Friedman en la pregunta nº 17 del cuestionario es de: 2343,864. Y la determinación de la existencia de diferencias entre los ámbitos o no, nos la facilita el valor “Sig. Asintomática” que también es conocida como p de Pearson, o p-valor, siendo de la siguiente manera:

“Si p-valor es inferior a alpha entonces se rechaza H0 (la hipótesis nula)”

Alpha es lo que se conoce como nivel de significación al que se hace el contraste, cuyo valor más habitual es de 0,05. Por lo tanto, si p-valor en la tabla anterior tiene un valor de 0,000, es inferior a 0,05 se rechaza H0, “Existen diferencias de opinión entre los ámbitos”.

A partir del momento en el que se ha demostrado estadísticamente que existen esas diferencias de opinión, el siguiente paso es interesarse por cuáles son los ámbitos que tienen esas diferencias y cuáles no las tienen.

El paso dado a continuación ha sido una prueba no paramétrica para dos muestras relacionadas e ir comparando, de esta manera, cada uno de los ámbitos con los demás a través del método denominado: “Prueba de los rangos con signo de Wilcoxon”.

- H0: No hay diferencias de opinión entre los dos ámbitos.
- H1: Existen diferencias de opinión.

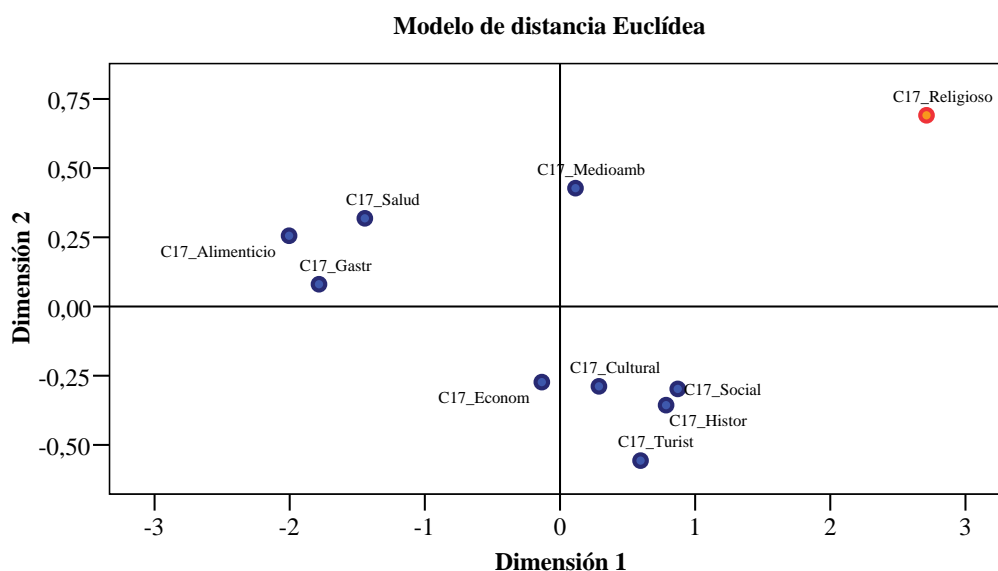

Por la interpretación de la tabla en la que tras visualizar los rangos asignados y procesado con los valores de los estadísticos (Z) y el p-valor, se rechazará H0 como en la cuestión anterior cuando p-valor sea menor que el nivel de significación al que se le hace el contraste, es decir 0,05. Casi todos los valores de la tabla de la prueba de Wilcoxon son de 0,000 por lo que al ser inferiores a 0,05 marcan que hay diferencias de opinión, siendo los siguientes ámbitos entre los que no hay diferencias significativas de opinión con unos valores por encima de 0,05 y son los siguientes:

- Económico y Medioambiental = 0,099

- Cultural y Medioambiental = 0,622
- Histórico y Turístico = 0,136
- Histórico y Social = 0,103

A partir de estas mediciones el estudio pasó a una visión multidimensional para conocer las distancias que existían, a través de gráfico, entre cada uno de los ámbitos en cuanto a la representatividad del Aceite de Oliva en cada uno de los ámbitos.

Gráfico. Escalamiento multidimensional

En este gráfico de

escalamiento multidimensional se pueden observar los puntos más alejados que existen unos de otros, y del mismo modo, los que se encuentran más próximos y pueden formar un grupo por proximidad. En este caso el más alejado y que aparece en un color diferente es el ámbito Religioso, lo que significa una mayor diferencia. Por otro lado los ámbitos Turístico e Histórico están próximos y a su vez Histórico está próximo también al ámbito Social, pero el Social y el Turístico ya se encuentran más alejados entre sí.

La opinión sobre los ámbitos Gastronómico, Alimenticio y Salud está muy próxima, pudiendo formar un grupo por proximidad, como se afirmaba anteriormente, aunque la distancia que existe entre estos puntos es lo suficientemente grande como para no asumir una igualdad significativa entre las opiniones, aunque por el gráfico así lo parezcan a través de la prueba de Wilcoxon se determina que no son significativamente iguales.

A continuación aparece una Matriz de Disimilaridades, entre las que se puede observar cómo existe una diagonal 0,000 que significa "idéntica opinión", así los valores más altos a 0,000 indican una mayor distancia entre los ámbitos.

	Religioso	Alimenticio	Medioambiental	Turístico	Gastronómico
Religioso	0,000	174,748	117,550	113,631	168,816

Turístico	0,591	0,511	0,539	0,334	0,573
Gastronómico	0,273	0,399	0,266	0,499	0,257
Social	1,000	0,553	0,554	0,309	0,606
Económico	0,553	1,000	0,550	0,426	0,515
Histórico	0,554	0,550	1,000	0,312	0,643
Salud	0,309	0,426	0,312	1,000	0,388
Cultural	0,606	0,515	0,643	0,388	1,000

La pregunta del cuestionario presentado que también ha sido analizada, de los más de 700 individuos pertenecientes a la muestra designada como significativa para el estudio plasmado en este trabajo, refiere que, en esta pregunta en particular, de los 704 cuestionarios recibidos como válidamente respondidos, tienen una validez y una corrección de respuesta un total de 578 cuestionarios, lo que supone un 82,1% del total de los cuestionarios recibidos en cualquiera de las vías: por email, directo, etc.

La pregunta era la siguiente:

“Valore dentro de estos tipos de turismo, el valor que le da usted al aceite de oliva como atractivo turístico o recurso turístico principal. En una escala de 1 a 10. Marque con una X en la casilla que corresponda”.

Los tipos de Turismo que se pusieron a disposición de los individuos que respondieron el cuestionario fueron los siguientes:

- Turismo de Sol y Playa
- Turismo Cultural
- Turismo de Negocios
- Turismo Religioso
- Turismo Industrial
- Turismo de Aventura
- Turismo Rural
- Turismo de Salud y Balnearios
- Agroturismo

En este caso la pregunta es diferente a las otras 2 preguntas analizadas, y es que es un tipo de pregunta semi-abierta, pues incluye, en el conjunto de respuestas posibles la posibilidad de incluir otros tipos de respuesta, es decir, otros tipos de Turismo en los que el Aceite de Oliva suponga un atractivo turístico o recurso turístico principal, aparte de los 9 tipos de turismo, o conceptos de modalidad turística presentados en el listado anterior.

Del análisis descriptivo de los datos respondidos en esta cuestión se puede decir que las medias aritméticas tienen una puntuación mucho más baja que en las cuestiones anteriores. Todas las puntuaciones se concentran en una franja de 3 puntos, es decir, desde los 3,14 puntos de media aritmética que ha recibido el ámbito de Turismo Religioso hasta los 6,33 puntos de media aritmética que ha recibido el ámbito del Agroturismo.

La desviación típica de cada uno de los tipos de turismo por los que han recibido puntuación se mueve igualmente en torno a 3 puntos, teniendo un máximo de 3,165 puntos, y un mínimo de 2,780 puntos.

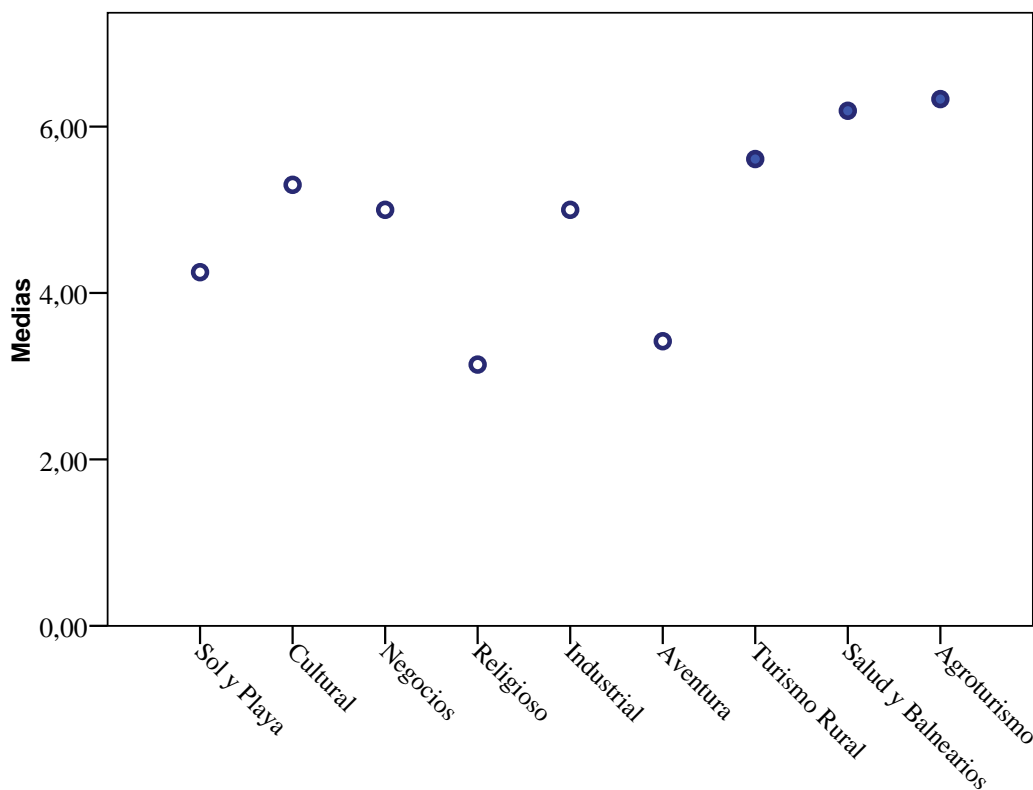

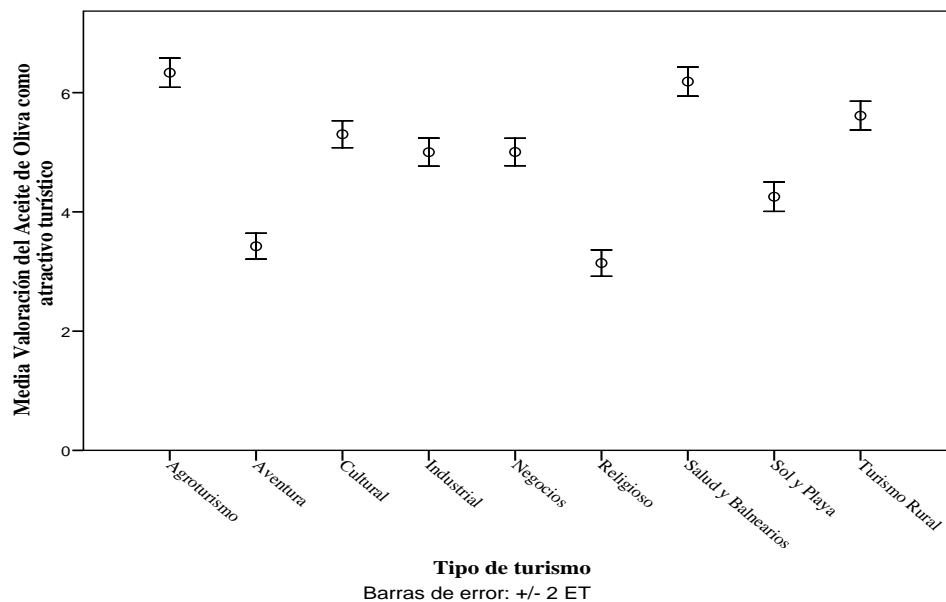

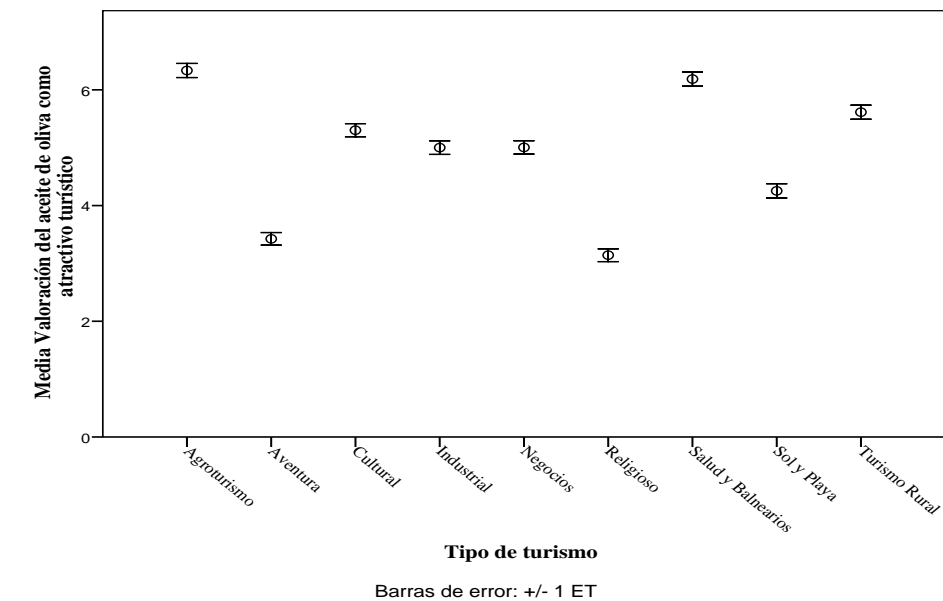

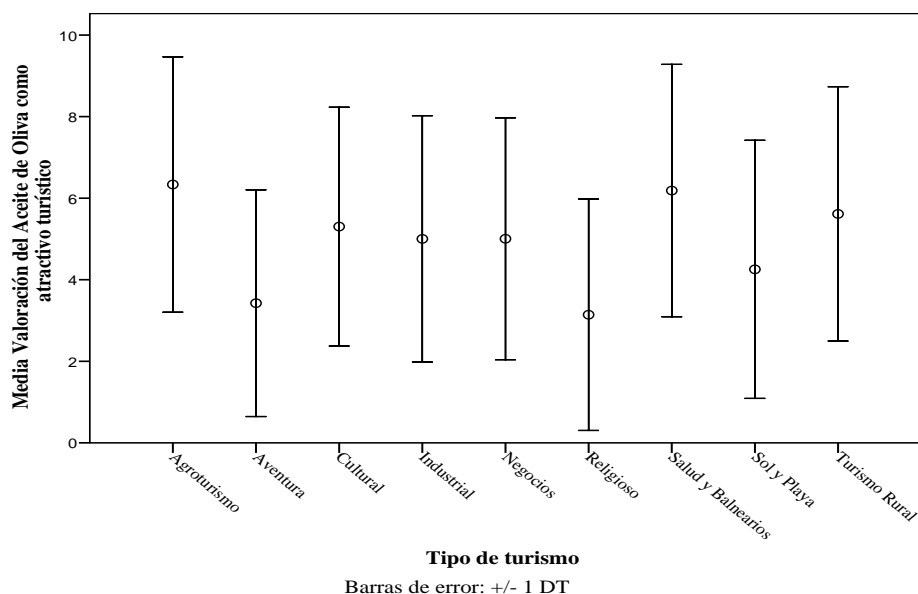

Tabla. Estadísticos descriptivos

	N	Media	Desv. típ.
Sol y Playa	661	4,25	3,165
Cultural	671	5,30	2,928
Negocios	662	5,00	2,966
Religioso	656	3,14	2,838
Industrial	660	5,00	3,020
Aventura	653	3,42	2,780
Turismo Rural	663	5,61	3,118
Salud y Balnearios	640	6,19	3,094
Agroturismo	655	6,33	3,132
N válido (según lista)	578		

Son los tipos de Turismo Rural, Salud y Balnearios y Agroturismo los que destacan en sus puntuaciones frente al resto de prácticas turísticas posibles presentadas entre el abanico de posibilidades. Del mismo modo, tras haber comprobado los resultados de las otras preguntas, sorprende que, el tipo de Turismo Cultural tenga un valor tan cercano a los tipos de turismo más destacados con 5,30 puntos de Media Aritmética junto con el tipo de turismo de Negocios e Industrial que han recibido 5,00 puntos de Media

Aritmética ambos. El de valor más bajo recibido es el referido al Turismo Religioso pese al valor simbólico y el concepto de sacralidad que siempre ha guardado el Aceite de Oliva para las 3 grandes religiones monoteístas occidentales.

Tras el análisis realizado a cada una de las variables que representaba los diferentes resultados de la importancia que le designan los individuos de la muestra al Aceite de Oliva respecto a cada uno de los tipos de turismo o modalidades turísticas que se han presentado a través del cuestionario. Con los resultados obtenidos se puede admitir que, todos aquellos que han participado en el cuestionario no han terminado de comprender la intención interrogativa de este punto, pues el grueso de las votaciones está en un punto intermedio, se nota una clara predisposición a dar una visión positiva ante una variable que no terminan de comprender. La representatividad en todos y cada uno de ellos, a través de valores cuantitativos expresados por los individuos pertenecientes a la muestra de población quedaba la comparación entre diferentes variables de manera bidimensional, siendo necesario comprobar si había diferencias de opinión entre todos los ámbitos relacionados con la representatividad aquí medida. A través de los gráficos anteriores se puede decir que son tan grandes las diferencias en los resultados obtenidos dentro de cada una de las modalidades turísticas, que realmente no consideran realmente importante, a la vista de los resultados, no obtiene altas puntuaciones, el Aceite de Oliva como un atractivo o recurso turístico principal.

RANGOS

	Rango promedio
C22 Sol y Playa	4,38
C22 Cultural	5,32
C22 Negocios	5,04
C22 Religioso	3,37
C22 Industrial	5,13
C22 Aventura	3,49
C22 Turismo Rural	5,59
C22 Salud y Balnearios	6,31
C22 Agroturismo	6,37

El programa SPSS nos determina para la prueba de Friedman en base a la siguiente tabla de datos:

Estadísticos de contraste (a)

N	578
Chi-cuadrado	910,766
gl	8
Sig. asintót.	0,000

a) Prueba de Friedman

El valor de Chi-cuadrado esta pregunta del cuestionario es de 910,766 y el p-valor es 0,000 que al ser inferior al valor alpha, supone que existen diferencias de opinión y se rechaza la Hipótesis Nula.

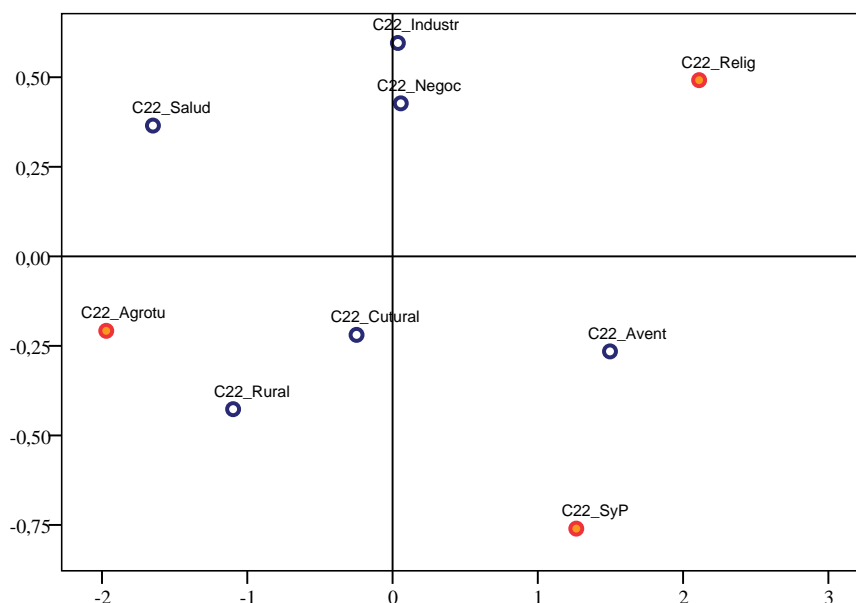

A continuación y gracias a la prueba de Wilcoxon se realiza la comprobación de los rangos que indican las relaciones de variables que están próximas entre sí, y por lo tanto no tienen una alta significación por ser muy similares en la apreciación de los resultados obtenidos con los cuestionarios. Estos son:

- Industrial y Negocios = 0,772
- Agroturismo y Salud = 0,354

En el gráfico que a continuación se recoge queda patente la alta dispersión en los criterios de puntuación para la cuestión nº 22, que nos da sobre todo una pauta a seguir en las potenciales recomendaciones de futuro que puede implementar consigo este Trabajo de Investigación.

Configuración de estímulos derivada

Modelo de distancia Euclídea

CONCLUSIONES

La práctica del Oleoturismo, ha emergido como un área similar a la práctica Enoturística, que ha caracterizado el núcleo de la innovación turística en España en los últimos años, pero que adquiere dentro del turismo industrial rural una alta potencialidad, si nos referimos como tal al Turismo Cooperativo, pues un porcentaje muy alto de las almazaras dedicadas a la producción del Aceite de Oliva son cooperativas situadas en el medio rural, y cada vez más, es visto como una parte importante dentro del turismo industrial en la mayoría de los países europeos sobre todo Francia y Holanda, precursores de este tipo de turismo industrial que se ha extendido por toda la UE.

Por lo tanto inmersos en el proceso de implantación del Oleoturismo tienen que irse repitiendo estudios por los que éste sea reconocido por los potenciales clientes, dando los primeros pasos para el desarrollo del oleoturismo.

Es un complemento perfecto para otros recursos y atractivos turísticos. Si tenemos en cuenta que los turistas buscan algo más, conocimiento de nuevas experiencias en sus viajes tenemos un amplio espectro de población que puede acudir a conocer un proceso, que, a pesar de los años y de la tecnología mantiene la misma consistencia en sus procesos productivos.

Otros recursos y atractivos, tanto culturales como paisajísticos, en esta modalidad de turismo serán verdaderamente los núcleos de atracción para los turistas, pero el valor añadido lo pondrá la almazara que da una experiencia nueva, innovadora para los clientes con un producto milenariamente cotidiano, pero exponencialmente desconocido.

Los resultados nos muestran que los potenciales clientes actuales y futuros, al no conocer en toda su dimensión el significado de los procesos de producción del Aceite de Oliva no encuentran mucho atractivo como para visitar un lugar, únicamente porque allí se produce el Aceite de Oliva, en cambio sí se puede decir que el estudio deja abiertas posibilidades de consecución de resultados positivos una vez puesto en marcha.

Los procesos productivos de las almazaras, la posibilidad de incrementar el conocimiento sobre el Aceite de Oliva así como realizar otro tipo de actividades emergen como elementos determinantes en las intenciones de realizar la práctica del Oleoturismo.

Las barreras que suelen considerarse un freno para la realización de este tipo de viajes turísticos cooperativa de patrimonio en un recurso turístico tomado desde el punto de vista de la industria del turismo, de acuerdo con Dietrich Soye (Capel, 1996):

- Barreras cognitivas: no tiene valores estéticos, no es interesante, no es elegante.
- Barreras económicas: es más rentable vender la maquinaria como chatarra, para enajenar el área, o dedicar el edificio a otras ocupaciones.
- Legales o administrativas de los obstáculos: poco claro en las competiciones de las actuaciones a realizar.
- Las barreras físicas: la distancia de algunas instalaciones con respecto a los tradicionales rutas turísticas.

Esta tematización de la oferta turística de lugares dentro de las nuevas tendencias del turismo rural en el camino hacia la diferenciación y la especialización. Sin perder la autenticidad y la originalidad de lo que ya existe (instalaciones, para ser capaces de hacer, etc), es necesario facilitar a la actividad de los valores que lo hacen diferente y que ya son demandados por el "turista cultural".

De la situación actual, con un potencial, construidos y que ofrecen una constante aplicación y promoción, el desarrollo de este tipo de turismo tendría que reunir otros itinerarios y rutas turísticas de cooperación que se complemente la oferta ya descrita.

En este sentido, la intercooperación de las cooperativas de otras regiones que se desarrollan actividades culturales y de ocio vinculados al producto y al territorio que permitan articular una oferta más diversa en virtud de la misma exposición. Igualmente, la integración de la oferta en otros circuitos turísticos y la integración de otras actividades que harán posible llegar a un público numeroso y diverso.

CATEGORÍAS CONTABLES EN LA LEY PENAL DEL AMBIENTE VENEZOLANA

Doris C. Reinoso Pulido, Universidad Nacional Experimental (UNESUR)

RESUMEN

La crisis ambiental representa uno de los problemas más graves que enfrenta la sociedad, lo cual ha determinado el surgimiento de un sistema normativo proteccionista de ambiente. En los países en vías de desarrollo, las industrias se preocupan por cumplir escasamente la normativa ambiental nacional. El objetivo del presente trabajo es establecer los aspectos contables presentes en la Ley Penal del Ambiente en Venezuela. Se realizó un análisis documental estableciendo las categorías contables presentes. Tres conclusiones destacan de la investigación: La crisis ambiental requiere respuestas concretas del sector empresarial que incluya los aspectos contables que hasta hoy se consideran superficialmente; la legislación ambiental establece responsabilidades para las empresas, y su cumplimiento requiere mejorar los procesos productivos y el reconocimiento de obligaciones, todo ello susceptible de ser registrado en la contabilidad y expresado en los informes financieros; y las principales categorías ambientales son políticas y estrategias, activos, pasivos, costos, gastos, estados financieros y políticas contables.

LA CRISIS FINANCIERA 2008-2009 Y SUS EFECTOS EN LAS PYMES SONORENSES

Jesus Agustin Rivera Peralta, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

Como es de todos bien conocido la situación financiera global, y su derrumbe en los mercados financieros internacionales afectó de manera brutal a todos tipo de empresas, desde los gigantescos corporativos Norteamericanos y Canadienses, así mismo a los Europeos, por lo tanto las empresas Latinoamericanas no han sido la excepción, y por lo tanto las ubicadas en la región que nos ocupa(Sonora), también han sufrido el efecto dominó de esta crisis financiera de la que estamos hablando y analizando en estos momentos; Las Pymes(Pequeñas y Medianas Empresas).

INTRODUCCION

Definición: La OIT(Organización Internacional del Trabajo), en su Informe sobre fomento de las Pequeñas y Medianas Empresas, presentado en la 72° reunión de la Conferencia Internacional del Trabajo, realizada en Ginebra en 1986, define de manera amplia a las Pequeñas y Medianas Empresas pues considera como tales, tanto a empresas modernas, con no más de cincuenta trabajadores, como a empresas familiares en la cual laboran tres o cuatro de sus miembros, inclusive a los trabajadores autónomos del sector no estructurado de la economía (informales).

Por todo lo anterior se desprende la importancia de dicho tipo de empresa, las cuales han venido a fortalecer los mecanismos de desarrollo en todos los países, y sus áreas de oportunidad locales, así mismo podemos decir que las Pymes, vienen a solucionar un problema social y económico de los países en general.

Pero en el periodo pasado del 2008-2009, las empresas en el mundo sufrieron un colapso financiero, derivado de los fraudes y malos manejos de las cuentas de ahorro de los ciudadanos de países con economías muy fuertes, y de los distintos sistemas bancarios y financieros mundiales, que hicieron que las economías mundiales, ya casi 100% globalizadas, colapsaran, llevándose a las economías menores junto a ellos. El caso de México y de Sonora no ha sido distinto, ni ajeno a este hecho, y si diversos corporativos Mexicanos se vieron ante una fuerte crisis financiera, imagínese usted a una Pymes, que no cuentan con mucho capital, y el apoyo viene básicamente de las fuentes de financiamiento de los gobiernos, apoyos del extranjero en algunos casos, de la voraz banca privada.

Debo reconocer que así mismo la banca privada, ha tenido mucho que ver en el desarrollo de las Pymes, y por supuesto el Gobierno en general, desde los Ayuntamientos, Estados y el Gobierno Federal, por supuesto, ya que sin ellos en los momentos más difíciles, han apoyado el establecimiento y desarrollo de las mismas.

Además en un país como México que cuenta con 5.5 millones de Pymes, que dan empleo a 26 millones de personas, según Miguel Huller, director general de Consumo de Banorte, las Pymes requieren de los siguientes servicios y créditos:

1. Tipos de crédito
2. Los principales créditos que se pueden obtener con las instituciones bancarias son:
3. Descuento de documentos

4. Préstamo con garantía colateral
5. Crédito comercial irrevocable
6. Préstamo prendario

Crédito simple

1. Préstamo de habilitación o avío
2. Préstamo refaccionario
3. Crédito hipotecario
4. Descuento de documentos, entre otros.

Así mismo la economía y las fuentes de trabajo se contrajeron drásticamente en el 2008 en un 6.1% y un 8.3% en el 2009, según cifras y datos de la OCDE, Organización para la Cooperación y el Desarrollo Económico.

Sonora y en general México, tienen un papel primordial en la economía de Latinoamérica, ya que aquí se producen productos para la industria Textil, Aeronáutica, Aeroespacial, Ganadera, Agrícola y de Computación entre otras más. Y muchas de las empresas que sustentan la producción son Pymes y Micro pymes, que con el esfuerzo de unos cuantos empleados y el apoyo financiero de los bancos y gobierno sobreviven, y hago la aclaración de que en este periodo del 2008-2009, cerraron muchos de estos negocios, por la falta de estos apoyos financieros, que son de vital importancia para ellos, ya que no cuentan con recursos propios para sufragar sus gastos de operación.

Existen micro Pymes que tienen proyectos con mucha viabilidad y factibilidad financiera y de operación, pero por falta de capital semilla, para el arranque se ven limitadas y no pueden arrancar sus operaciones, y se ven limitadas en su desarrollo y consolidación en un futuro cercano.

UNA PROPUESTA DE MODELO EDUCATIVO PARA ZONAS RURALES

Graciela Vidal Carvajal, Universidad Pedro de Valdivia

ABSTRACT

This research concerns to the education which is provided to children and youngsters in public schools within rural areas in Chile. The case of a small rural town north from Santiago, which not long ago was considered the poorest town of the whole region, is analyzed. Today it is plenty of opportunities for economic growth, due to its touristic potential, productive areas and untraditional exports. The hypothesis is that education system must be well synchronized with the pace of changes, the times and the real necessities. There are key propositions concerning the curricula, quality, strengthening labor skills, motivation and sustainable development.

KEY WORDS: educación, currículo, competencias laborales, emprendimiento, cambio.

INTRODUCCION

El presente trabajo se enmarca en un diagnóstico de la realidad educacional chilena en las escuelas públicas rurales, con el fin de sugerir o proponer una educación de calidad, creativa y acorde a la dinámica de los tiempos actuales, orientado al desarrollo de competencias laborales, técnicas, actitudinales, básicas y orientadas a fomentar el emprendimiento a fin de promover igualdad de oportunidades y formación de ciudadanos preparados para participar del desarrollo sostenible rural del país, en el siglo XXI. Existe en Chile, en la educación básica y media pública, 3 tipos de niveles de escuelas: a) Municipalizadas, * b) Subvencionadas,* y c) *Particular subvencionado. Cabe destacar, además, que en Educación Básica y Media se da, en variados establecimientos, la “selección” por rendimiento académico, lo que se transforma en un elemento discriminatorio al momento de asegurar el derecho a la educación en las escuelas particular subvencionadas .

Entre los años 1992 al 2004, sólo el 83,5% de niños y niñas logró egresar de Enseñanza básica, mientras que el 77,8% de alumnos y alumnas, completó la Enseñanza Media en Chile. En las zonas rurales, la deserción es aún mayor y los hombres desertan más que las mujeres. Se supone que las causas son económicas, de lejanía, distancias, de adaptación a las condiciones escolares, también se da esta deserción en la Educación de Adultos, por las mismas razones, además del miedo a iniciar nuevamente o retomar los estudios que por desuso han quedado en el olvido.

Los varones salen a trabajar fuera de su hogar y no se auto exigen para salir adelante con sus estudios, no se motivan y no tienen expectativas en relación al conocimiento, no así las mujeres jefas de hogar, que se dan cuenta de la importancia de aprender y de apoyar a sus hijos. En las regiones extremas de Chile, tanto en el sur como en el norte, la situación es aún más notoria, tanto por su despoblamiento como por su lejanía con las urbes.

En este trabajo, se muestra a modo de ejemplo, el caso de una zona ubicada en la cuarta región de Chile a 480 km de la capital, en una comuna llamada Monte Patria, que es 100% rural y cuya gente vive del agro y, actualmente, está motivada por terminar sus estudios básicos y medios, ya que esta comuna se está desarrollando turísticamente, por su gran potencial en cuanto a paisajes, construcción autóctona, riqueza arqueológica (petroglifos) y las opciones que hay para desarrollar diversos tipos de turismo y exportaciones de productos hortofrutícolas, entre otros.

El análisis muestra la realidad de esta comuna y en base a ello, se plantea una propuesta modelo que, como desafío y plan piloto para las escuelas rurales de la zona, podrían considerar las autoridades educacionales de la Región, además de crear expectativas en los profesores a fin de tener factores de impacto en el rendimiento de los estudiantes que requieren de un clima escolar con múltiples variables como: motivar, incentivar, trabajar la diversidad de intereses en el currículo escolar en forma autónoma a los profesores, capacitación para producir un cambio en la metodología, liderazgo, desarrollo creativo para que en el desarrollo enseñanza-aprendizaje de los alumnos, aprovechen la gran oportunidad de tener gente con expectativas de crecer económicamente, de tener terrenos a la mano para desarrollar diferentes tipos de competencias y por sobre todo, fomentar al emprendimiento sustentable y así, ser capaces de dar respuesta, con su enseñanza, a los requerimientos de los y las estudiantes de las escuelas públicas rurales, no sólo de Monte Patria, sino de todas las comunas rurales del país y con ello, evitar el éxodo o desdoblamiento de las zonas campesinas.

Lo anteriormente expuesto, producirá un gran impacto en los alumnos al egresar y en la comunidad toda ya que tendrán ventajas diferenciadoras con sólidas bases de los contenidos adquiridos, para adaptarse a las exigencias del campo laboral y ayudar al desarrollo, crecimiento sostenido y económico de apartadas comunidades rurales.

DATOS Y METODOLOGIA

El Departamento Educacional Municipal, DEM de Monte Patria, cumpliendo su rol fundamental y considerando que está localizado en una comuna rural, en conjunto y con la participación de sus Establecimientos Educacionales, cumple cabalmente con lo establecido en la Ley n° 19.410 y pone a disposición de la comunidad, su Plan Anual de Desarrollo Educativo Municipal (PADEM); instrumento de Planificación Estratégica que se nutre y obedece a los objetivos del Plan de Desarrollo Comunal (PLADECO) y de los Proyectos Educativos Institucionales (PEI).

Contexto Comunal: Actualmente, pese a la sostenida disminución de matrícula, el Sistema Comunal de Educación se ha visto fortalecido, dado el incremento de los recursos para la Educación Municipal que aporta el Estado; mediante las diversas Leyes que permiten la subvención escolar regular y preferencial.

CARACTERISTICAS EDUCACIONALES

- Analfabetismo:** la tasa de analfabetismo registra una cifra significativa que alcanza al 12,3% de su población comunal.
- Escolaridad:** la Comuna de Monte Patria registra una tasa de escolaridad media de 6,6 años de estudios.
- Educación Superior (CFT y Universidades) :** No se registra Instituciones de Educación Superior en la Comuna. (Posterior a este estudio, se pretende hacer un estudio de mercado, para ver factibilidad de crear un CFT), cuyas carreras sean de acuerdo a reales necesidades comunales.

Tabla N°1

Niveles de Enseñanza	Capacidad Instalada	Matricula	% disponible
Pre-básica – básica – media – adultos	8.255 alumnos	4.858	41,15%

Esta tabla muestra la proporción de matriculas en relación a la capacidad física
Fuente: Elaboración propia

Los establecimientos Educacionales de la Comuna, en general, tienen excedente de capacidad instalada para atender a los estudiantes, con excepción de aquellos que presentan déficit de infraestructura para incorporarse a la modalidad de Jornada Escolar Completa. La disminución de matrícula por migración a otras Comunas y por la baja tasa de natalidad, permite tener una capacidad instalada que puede atender toda la demanda educativa en todos sus niveles de enseñanza. Producto de ello y en busca de encontrar estrategias que permitan mejorar los indicadores de logros, el Colegio “Republica de Chile” de Monte Patria, ingresó a la modalidad de Jornada Escolar Completa Diurna, JECD a partir del 1 de marzo del año 2009.-

- a) **matrícula:** la matrícula comunal del sector municipal, ha sufrido una disminución debido a la baja tasa de natalidad y de la oferta educativa del sector particular subvencionado, quién ha restado matrícula. En la actualidad la matrícula que se registra alcanza a 5.274 alumnos y alumnas.
- b) **Asistencia media:** la asistencia media promedio es de 4.858 alumnos/as que asisten regularmente a clases.
- c) **Proyección de matrícula y asistencia media:** Sistemáticamente ha sido un tema preocupante, dado que, sobre la base de los antecedentes demográficos de natalidad, se ha producido una disminución de matrícula y de asistencia media en los años anteriores, lo cual debiese revertirse a partir del año 2009, en que las curvas de aumento de población en edad escolar aumenten levemente.

RENDIMIENTOS SIMCE, SNED, PSU

CALIDAD DE VIDA DE LOS ALUMNOS.

- a) **Constitución Grupo Familiar:** en su mayoría los alumnos/as provienen de hogares bien constituidos.
- b) **Escolaridad Padres:** Los padres de los alumnos/as registran como nivel de escolaridad, la Educación Básica Incompleta.

- c) **Ingreso Familiar:** El promedio de ingreso económico familiar de los estudiantes de la Comuna de Monte Patria alcanza a la cifra de \$196.522.appx. U\$D 380
- d) **Otros:** Se puede considerar en este ámbito el aumento de la población flotante, producto del trabajo temporero estacionario; el cual, dada la diversidad de los cultivos agrícolas está a punto de consolidarse como un trabajo anual, por la rotación de la cosecha de especies tales como: uva de mesa, cítricos, paltas, hortalizas, nueces, mandarinas. Existe además un leve aumento de la población, en el rubro turístico, área relevante y de desarrollo para esta comuna.

IDENTIFICACION Y PLANTEAMIENTO DEL PROBLEMA

Dada la información recogida mediante entrevistas e investigación de campo, se presenta el siguiente análisis FODA:

A partir de este FODA, se puede concluir que una de las fortalezas relevantes de la educación pública municipal de Monte Patria, se sustenta en ofrecer en los distintos momentos de su formación, la entrega a sus educandos de una variada gama de programas, proyectos y acciones educativas que posibilitan el desarrollo pedagógico y el conocimiento

En cuanto a las debilidades, varias de ellas tienen el carácter de estructural, lo que significa que su superación se hace cada vez más compleja y difícil, siendo necesario un trabajo colaborativo muy eficiente y eficaz a nivel de cada comunidad escolar, es decir debe existir un trabajo planificado, coordinado, ejecutado y evaluado a partir de la participación de todos los sectores educativos: Directivos y Técnicos, Profesores, Co docentes, Alumnos y Familia.

Se extraña, la poca o nula importancia que se le en los programas de enseñanza –aprendizaje a las competencias laborales, y el fomento del emprendimiento tanto en niños, adolescentes como en la enseñanza de adultos.-

La amenaza que constituye el crecimiento del sector particular subvencionado y la disminución sostenida de la matrícula de la educación municipalizada, puede ser abordada a través del mejoramiento de la calidad del proceso de enseñanza y aprendizaje con un adecuado nivel de convivencia escolar y clima organizacional, mejoras en la infraestructura educacional; sumados a la participación de la familia en la concreción de Proyecto Educativo de cada Establecimiento para la Jornada Escolar Completa y postulando a los proyectos pedagógicos de ésta y el mejoramiento de las prácticas pedagógicas orientadas al campo laboral.-

Tabla N° 4 ANALISIS FODA

FORTALEZAS	DEBILIDADES
<p>Existe infraestructura necesaria Existe equipamiento suficiente, moderno y funcional Hay preocupación por mejorar la educación</p> <p>Comunidad comprometida</p> <p>Programas sociales del Municipio, en apoyo de los alumnos más necesitados, SIGAF Proyecto de integración escolar para educación prebásica, básica y media Hay apoyo municipal para las actividades intercomunales Existe una visión de mejoras en la comunidad educacional Capacitación y perfeccionamiento docente Existencia de muchos niños Profesorado dispuesto a superarse profesionalmente e incorporar a su quehacer educativo nuevas alternativas de enseñanza.</p> <p>Profesores respetuosos y gran capacidad de cumplimiento hacia la jerarquía educacional, como también hacia los apoderados, alumnos y sus pares.</p>	<p>Escuelas muy dispersas No todos los niños, se incorporan a la modalidad JECD No existe un diseño curricular, acorde a las reales necesidades de la comuna No hay un acuerdo común, en la misión y visión educacional Muy pocas alternativas de oferta educativa</p> <p>PEI, sin variación</p> <p>Gente adulta, con muy poca o nula escolaridad</p> <p>Pocos profesionales residentes</p> <p>Éxodo de la gente joven Muchas mujeres jefas de hogar Docente carecen de un profesional técnico-pedagógico que se refleje en el aula (gran dominio del marco curricular, programas de estudio, Aprendizajes esperados, indicadores a evaluar, variedad de actividades, interrelación de los diferentes sectores curriculares). (Conocimiento y aplicación del Marco de la buena enseñanza), (estructuración de la clase) Necesidad de una real y activa articulación entre niveles (Párvulos y primer ciclo, octavos años E.G.B y primero E.M.) y un trabajo pedagógico integrador y holístico entre subsectores.</p>
OPORTUNIDADES	AMENAZAS
<p>Participación de la Asociación de Municipios Rurales del Norte Chico, por el mejoramiento de la educación Programa de mejoramiento para escuelas vulnerables, SECREDOC, 4ª región, financiado por FNDR Comuna en pleno desarrollo Gran potencial agrario Desarrollo de la comuna como destino agro-ecoturístico, PLADETUR Afianzamiento de la Reforma Educacional, MINEDUC □ Apoyo en constante interacción de los diferentes departamentos existentes del municipio, área de finanzas, Secplan, Salud, Dideco, Obras, Jurídica, Control, Fomento Productivo.</p>	<p>Mucho trabajo de temporada, tanto del agro como los crianceros Búsqueda de otras alternativas de educación, en comunas vecinas Lejanía geográfica, desde la capital regional Comuna en vías de desarrollo Camino aún sin pavimentar, hacen más dificultoso el traslado de los niños Poca oferta de trabajo contractual La creación de nuevos planteles educacionales particulares subvencionados que sin cuestionar la calidad del servicio entregado, económicamente ha significado una gran disminución de ingresos para la educación municipal, aumentando de año en año.</p>

Esta tabla resume la evaluación de los factores, que constituyen el análisis interno y externo.-

Fuente: Elaboración propia

Los bajos resultados académicos de los alumnos en la prueba SIMCE, en relación a los promedios Comunales, Provinciales y Regionales, constituyen un problema complejo, que puede ser abordado desde la perspectiva del fortalecimiento del apoyo técnico de la DEM a los Establecimientos Educacionales, como así mismo instalar un sistema de monitoreo del rendimiento escolar, implementando un modelo de evaluación pedagógico que incorpore variadas técnicas y evaluaciones prácticas en terreno

y/o en la sala de clases , en torno a la medición y seguimiento del aprendizaje escolar, además monitorear a los/las propios profesores para que realicen sus autoevaluaciones, las evaluaciones de los estudiantes a los profesores y del directivo a los profesores) y posteriormente, aplicar las acciones correctivas a fin de tener una mejora continua.

También se observa, que las condiciones socio-económicas de los alumnos del sector municipalizado son precarias, especialmente en cuanto a su entorno social y autoestima. Ello implica por una parte que la escuela se constituye en muchos casos, en un segundo hogar que satisface necesidades vitales, pero por otra parte no logra niveles de aprendizaje satisfactorios. Por estos motivos los programas de apoyo académico, de formación extraescolar, de formación docente, deben ser sostenidos y fortalecidos, además, deben ser motivantes y orientarse a competencias de emprendimiento donde participen padres, apoderados, estudiantes y desarrollarlas según reales necesidades locales

En lo referente a la disminución progresiva de la matrícula se debe analizar cuidadosamente las “causas” que influyen en el retiro sostenido de alumnos durante el año escolar. Para ello deberá existir una política en trabajo en conjunto entre la Dirección de cada Establecimiento Educacional, y los organismos Municipales Asociados a la Dirección de Educación, como son Desarrollo Comunitario y Dirección de Salud; con el propósito de identificar los casos críticos y generar instancias de intervención psicosocial y pedagógica que permitan retener al estudiante en el sistema de educación municipal.

CRITERIOS ORIENTADORES PARA UNA EDUCACION RURAL DE CALIDAD, ORIENTADA AL FOMENTO DEL EMPRENDIMIENTO

El sentido multifacético del concepto de “calidad” de la educación recibe distintos significados y énfasis según si se asocia al concepto de educación como factor de desarrollo humano, reconocido en la Declaración Internacional de Derechos Humanos, o si se le asocia a la noción de capital humano al servicio del crecimiento económico.

Desde la perspectiva de la educación como derecho humano, se reconoce que la educación debe formar personas conscientes de sus derechos y responsabilidades, capaces de razonar, discurrir, convivir y optar por valores que promuevan el desarrollo de su entorno familiar, del país y del mundo. Se considera que la educación debe preparar para la participación civil y social dentro de la democracia.

Desde la perspectiva de la educación como factor de desarrollo de capital humano, se reconoce su importancia para el desarrollo económico de un país y la inserción laboral de las personas. Sin embargo, es preocupante que los riesgos de un excesivo énfasis en la inserción del mercado, puedan provocar en el sentido de estrechar la experiencia educativa y reproducir inequidades sociales.

Se concuerda que la crisis actual de la educación deriva del carácter inseparable de su calidad con respecto a la equidad. Un sistema educativo no puede juzgarse sólo según el modo en que cumple sus objetivos de aprendizaje. Su calidad también debe juzgarse según el prisma de la equidad. En efecto, en sociedades como la chilena y latinoamericanas, la calidad se relaciona a la vez, con la superación de los condicionantes del contexto. De este modo, no sólo es necesario conocer qué establecimientos tienen mejores resultados de aprendizaje sino también, qué instituciones logran compensar el déficit de entrada de los alumnos o cuáles agregan más valor a la realidad inicial de los estudiantes.

Los parámetros para definir la calidad no son unívocos. No obstante, los ámbitos que comprende una educación de calidad han sido objeto de acuerdos internacionales: desarrollo personal de los educandos, educadores competentes a cargo de los procesos de enseñanza-aprendizaje, currículo actualizado y relevante, y sistemas de administración efectivos provistos de suficientes recursos (UNESCO, 2005).

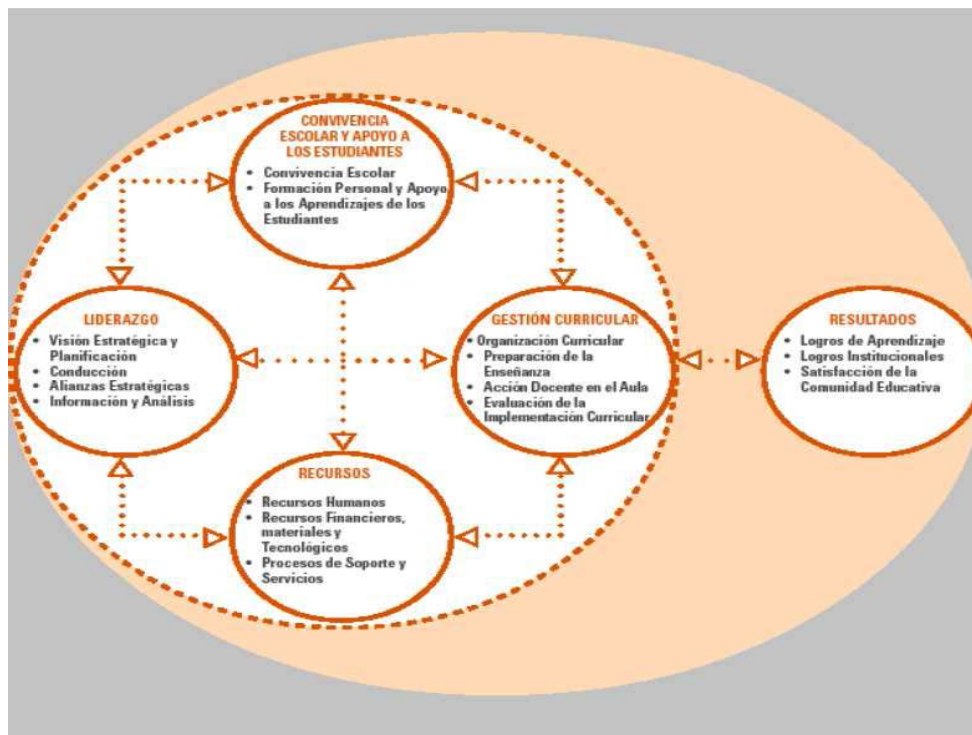

A partir de lo anterior, los criterios orientadores para determinar y evaluar políticas referidas a una educación rural de calidad, debe considerarse los que se mencionan a continuación:

- **Equidad** en las condiciones de educación y reconocimiento de la diversidad derivada de situaciones biológicas, psicológicas, sociales, económicas y culturales.
- **Formación** para el ejercicio de los derechos humanos, la participación ciudadana y el desarrollo de la democracia.
- **Oportunidades** educacionales que permitan el crecimiento y desarrollo cultural, social y económico del país.
- **Eficiencia** en la promoción de movilidad social a través de la educación rural
- Un **aprendizaje sólido**, pertinente al desarrollo personal y a la inserción en el mundo del trabajo y la sociedad del conocimiento.
- **Preparación**, en competencias básicas para la globalización y movilidad geográfica cultural.

PROPUESTA DE UN MODELO DE CALIDAD EN LA GESTIÓN EDUCACIONAL, APLICADA A ZONAS RURALES

Una visión general de las diferentes formas de concebir y analizar el concepto de calidad en educación y éste a su vez, idealmente, replicarlo en la gestión de la educación pública en Monte Patria; se muestra en la siguiente figura.

Figura N° 1

Esta figura, identifica las relaciones de interacción e interdependencia entre las variables que concurren a un modelo de calidad en la educación.-

Fuente: Material docente disponible en internet

ESPECIFICACIONES del MODELO

Liderazgo

Los Directivos de las diversas escuelas, deben lograr motivar y dirigir hacia las metas, apoyando la práctica de valores y acciones concretas a corto, mediano y largo plazo.

ORIENTACION HACIA EL USUARIO

Necesita saber sobre el conocimiento y habilidades del establecimiento, para detectar y satisfacer las expectativas de la comunidad educativa.

Participacion

Tiene la necesidad de crear un ambiente que privilegie la participación de los distintos actores, canales, cooperación y trabajo en equipo, para el mejoramiento de los procesos.

Mejoramiento Continuo

Procesos en permanente revisión de las prácticas de gestión, la incorporación de ajustes y evaluación de sus resultados.

Responsabilidad Pública

Promover el análisis para conocer la manera en que la escuela cumple con sus responsabilidades sociales, promueve, apoya y desarrolla una buena práctica ciudadana.

Resultados U Orientacion

El desarrollo de la enseñanza, promueve la calidad de vida y conocimientos de los estudiantes, razón por la que se puede evaluar el cumplimiento de los objetivos propuestos, durante la planificación. Todo resultado muestra el nivel de eficiencia, eficacia y efectividad, en el desempeño de los procesos educacionales.

RELACION ESTADO -SOCIEDAD

La educación requiere el desarrollo de un proceso de enseñanza aprendizaje de calidad, mediante una pedagogía de clara conducción de estrategias en la institución escolar, para realizar una transmisión cultural y desarrollar las competencias personales y preparar a los alumnos, en los comportamientos socialmente necesarios. Para ello, es importante considerar la relación profesor – alumno, tiempo dedicado al aprendizaje, estructura de dirección y gestión, metodologías o didácticas de la enseñanza; el empleo de las tecnologías actuales y la comunicación. Sin embargo, para que las escuelas puedan desarrollar el proceso educativo de calidad, es esencialmente necesario que dichos factores, formen parte del ámbito de decisiones, de las mismas escuelas.

Los procesos de enseñanza y sus metodologías, requieren de la asignación de recursos, sin los cuales no es posible obtener buenos aprendizajes, ya que la enseñanza de habilidades y conocimientos, necesitan de textos, laboratorios, material de trabajo, material didáctico, equipos, etc. Así mismo, se ha investigado que el tiempo dedicado a las tareas académicas, constituye el factor individual más importante que contribuye al logro del buen resultado de la enseñanza aprendizaje de los alumnos, por lo cual, un buen liderazgo de las escuelas, debiera motivar a los alumnos al estudio y, a los profesores, a dedicar más

tiempo a la enseñanza de los contenidos y a avanzar en la innovación, respecto de la tradicional enseñanza expositiva o verbalista, donde el profesor, es sólo una fuente de conocimiento.

Es importante que los profesores, posean conocimientos sólidos en las disciplinas, en el saber hacer y tengan capacidad crítica sobre su desempeño, para producir buenos aprendizajes sobre contenidos de calidad y así, lograr pertinencia para el contexto social, los intereses y expectativas individuales.

La formación, perfeccionamiento y la actualización, son opciones necesarias para lograr esta profesionalización del trabajo docente. Adicionalmente, un activo liderazgo y gestión de equipo ejercido por un Director/a con una visión comprensiva y prospectiva de la educación, es un componente importante, para lograr tener una escuela que trabaje con calidad. En la medida en que los procesos de descentralización del sistema educacional han posibilitado una mayor participación local, también la familia toma un papel preponderante en la educación de calidad, tanto como el apoyo desde el hogar, como la participación en la escuela; ello lleva a una mayor identidad de los alumnos con su escuela, con sus tierras, con su localidad y a la creación de un clima académicamente favorable al aprendizaje y al fomento del emprendimiento.

CONCLUSION

La existencia de una educación pública municipal de calidad es un bien necesario e imprescindible para la equidad social y el bienestar de una comunidad.- Se hace necesario reconocer el rol insustituible de los municipios en la definición de las reglas del juego de la educación pública (leyes, programas, sueldos, evaluaciones, etcétera). Eso supone iniciar un camino que permita avanzar en mayores grados de descentralización. El primer paso, sin duda, es que el Ministerio de Educación incorpore de manera mucho más decidida a la Asociación Chilena de Municipalidades rurales y urbanas, en toda negociación que tenga que ver con educación municipal. Esto no sólo busca incorporar la visión y experiencia de quienes administran la educación día a día, sino que también evitar que el Estado central establezca beneficios para el mundo docente sin determinar claramente las fuentes de financiamiento de los mismos. Para lograr lo anterior debe existir un primer reconocimiento por parte del Gobierno sobre la capacidad de gestión e innovación existente a nivel local. Más allá de generalizaciones y descalificaciones, es un hecho que la mayoría de los alcaldes ha demostrado con acciones concretas la relevancia que le asignan a una educación de calidad. Esta capacidad municipal también se evidencia a través de propuestas innovadoras en la gestión escolar, en las prácticas educativas y al fomento del emprendimiento, desde los primeros años. Mediante alianzas con entidades académicas, empresas y organizaciones sin fines de lucro, son muchos los liceos y escuelas municipales que están alcanzando resultados notables, no obstante su exiguuo financiamiento y las dificultades sociales y familiares de gran parte de su alumnado. Reconocer estas buenas prácticas, premiarlas, sistematizarlas, difundirlas y masificarlas debiera ser parte del rol de apoyo y promotor del Ministerio de Educación.

Una manera concreta de hacer esto es multiplicar la existencia de fondos concursables que premien o incentiven estas innovaciones. Algo así como un capital de riesgo o semilla para la innovación en calidad de la gestión y enseñanza municipal. Otro punto fundamental para avanzar en una descentralización seria y responsable (sobre todo esto último) es construir un sistema de evaluación y fiscalización centrado fundamentalmente en los resultados, más que uno fundado en el micro control administrativo de procesos. Este punto supone una reingeniería al sistema de supervisión.

LA FRANQUICIA EN LA MIPYME COMO ESTRATEGIA DE SOBREVIVENCA PARA EL EMPRENDEDOR EN ÉPOCAS DE CRISIS, CASO BENITO JUÁREZ, QUINTANA ROO

Francisco José May Hernández, Universidad del Caribe

RESUMEN

Hoy día, en innumerables países, muchas empresas que operan como MiPyMe bajo el sistema de libre comercio y venta directa a los clientes, realizan sus operaciones con el formato conocido como franquicia. El impacto que esta fórmula tiene y sigue teniendo en la economía de muchos países, es tal que la generación de programas para impulsar el sector no es cosa menor. El presente trabajo pretende mostrar una panorámica del impacto que en el Municipio Benito Juárez, Quintana Roo, México, ha tenido esta estrategia de expansión interna y externa, en el índice de sobrevivencia de las MiPyMe y del formato de Franquicia en cuanto a su recurrencia especialmente en épocas de crisis por parte del emprendedor de la zona; además de la aportación en la economía, en su PIB, y el futuro que se vislumbra con base a lo acontecido al día de hoy.

SITUACION DE LA MICRO PEQUEÑA Y MEDIANA EMPRESA EXPORTADORA DE HERMOSILLO, SONORA, MEXICO

Natalia Guadalupe Romero Vivar, Centro De Estudios Superiores Del Estado De Sonora

RESUMEN

El presente documento se encuentra sustentado en una investigación bibliográfica y de campo con el fin de conocer problemática de las exportaciones de la Micro Pequeña y Mediana empresa del sector alimentos procesados en el municipio de Hermosillo Sonora en México, el cual se encuentra ubicado en la frontera noroeste con Estados Unidos, específicamente el estado de Arizona. Se consultaron fuentes bibliográficas especializadas en el tema, se llevo a cabo una investigación de campo, la cual contribuye a dar respuesta a la serie de cuestionamientos que se les hicieron a los empresarios que tienen actividad exportadora.

INTRODUCCION

El universo utilizado para la aplicación de las encuestas fue tomado del padrón de empresas exportadoras del Consejo para la Promoción Económica del Gobierno del Estado de Sonora, en el cual 27 de las registradas se dedican a la producción de productos procesados. La muestra a investigar es de 20 empresas, de las cuales se eligió estratificadamente cada una de ellas por ser distintos los productos que estas elaboran y así obtener una muestra representativa para la aplicación del cuestionario. En el desarrollo de la investigación, se detecta la falta de capacitación en materia de comercio exterior de la Micro, Pequeña, y Mediana Empresa, específicamente en materia de regulaciones no arancelarias, como el envasado, etiquetado de la mercancía, así como también la necesidad de asistencia técnica.

Introducción

En México la creación de las Micro Pequeñas y Medianas empresas se ha ido desarrollando conforme el gobierno federal ha cambiado sus leyes y ha reformado sus bases jurídicas para dar la oportunidad a nuevas entidades económicas de participar en la generación de empleos y bienestar social en la comunidad mexicana.

El gobierno de México a través de diversos esquemas de desarrollo ha creado instrumentos de apoyo para estas nuevas empresas, generando escenarios que contribuyen a la protección y fomento de su participación en la economía nacional. En el Diario oficial de la Federación, publicado el 18 de febrero del 2005, se describe que la participación de la micro, pequeña y mediana empresa en el desarrollo de la economía del país es fundamental, ya que constituyen más del 90 por ciento de las empresas establecidas y generan el 42 por ciento del producto interno bruto y el 64 por ciento del empleo; uno de los principales factores para incrementar la competitividad de las empresas, es el impulso de la inversión productiva y el fomento al acceso del financiamiento en general y al crédito en particular.

Por este motivo, la Federación en el año 2005 asignó recursos para el apoyo a la micro, pequeña y mediana empresa, mismos que se considerarán subsidios y se destinan a las actividades consideradas como prioritarias y de interés general con criterios de objetividad, equidad, transparencia, selectividad y temporalidad, para contribuir al desarrollo de la competitividad de las empresas.

Existen reglamentos para fomentar el desarrollo de la competitividad de estas empresas, en los que se consideran sus actividades para el desarrollo del fomento de su competitividad, mismo que debe contribuir a la creación, organización y desarrollo de mecanismos económicos para apoyar o estimular la

creación, viabilidad, productividad, competitividad y sustentabilidad de las Micro Pequeñas y Medianas empresas, así como el incremento de su participación en los mercados, con el fin de fomentar el empleo y el bienestar social y económico.

El establecimiento de una empresa, por pequeña que esta sea, permite a los mexicanos concebir expectativas de un mejor futuro sin necesidad de buscar alternativas en otros lugares. En su gran mayoría los micros, pequeños y medianos negocios han nacido de iniciativas espontáneas para resolver las necesidades inmediatas de las familias. Si el nacimiento de estos negocios se diera contando con la adecuada información y una mejor formación empresarial, la capacidad generadora de valor podría verse incrementada de manera considerable, favoreciendo al mayor crecimiento del país.

La tendencia mundial de la globalización ejerce inercias al interior de los países, estos se ven obligados a incrementar su actividad económica diversificándola y motivándola a especializar sus actividades; el resultado de esto ha provocado que en México se gesten nuevas oportunidades para las Micro, Pequeñas y Medianas Empresas.

Toda esta actividad de cambio a nivel mundial, provoca una tendencia en la que se hace necesario romper con el mito de que la exportación está reservada únicamente para grandes empresas en tanto en México como en el resto del mundo, en realidad exportar depende de la competitividad y no del tamaño de una empresa, el logro de esta actividad está en manos de la convicción del empresario y de la preparación eficaz en todos los aspectos para llevar acabo el negocio.

La Micro pequeña y Mediana Empresa debe analizar internamente su capacidad para determinar su grado de competencia y poder participar en mercados internacionales; las empresas tienen posibilidades de triunfar en mercados extranjeros con propuestas de productos o servicios que satisfagan las necesidades del mercado al cual se dirijan.

La participación de la Micro, Pequeña y Mediana empresa en el sector exportador es un importante detonador de su actividad, ya que provee de oportunidades de expansión, mejores salarios, diversificación de los riesgos y los mercados. Abastece tanto el mercado nacional en pequeñas cantidades como el internacional, dirigiéndose a segmentos de mercado específicos y por lo general pequeños, todo esto depende de su capacidad productiva.

En el presente documento se pretende conocer cual es la Problemática que enfrentan las Micro Pequeñas y Medianas empresas exportadoras del sector alimentos procesados en el municipio de Hermosillo Sonora, México.

Para la elaboración de la investigación se tomaron en cuenta las actividades del proceso de exportación de empresas dedicadas a la elaboración y venta al extranjero de productos pertenecientes a un solo sector, el de los alimentos procesados del municipio de Hermosillo, Sonora, México.

REVISION LITERARIA

El Consejo para la Promoción Económica del Gobierno del Estado de Sonora (COPRESON), da a conocer en su página de Internet que la participación de la industria en el Estado de Sonora ha incrementado y su impacto en la economía regional es palpable ya que el estado de Sonora mantiene repuntes en la actividad comercial a nivel nacional e internacional concentrándose en la pesca y la agricultura, mientras que la industria de alimentos procesados tiene una mínima participación.

En el municipio de Hermosillo existen 26 empresas del sector industrial dedicadas a la exportación de alimentos procesados; por lo que es importante detonar el crecimiento de este sector, conduciendo a los empresarios para participar en nuevos mercados.

Es necesario conocer cual es la realidad a la que se enfrenta la Micro, Pequeña y Mediana Empresa exportadora de este sector al momento de realizar sus exportaciones, ya que como se ha mencionado anteriormente no repunta la actividad productiva en comparación con otros sectores productivos.

El nuevo entorno económico y los patrones de operación de la competencia internacional exigen a las empresas en general incluyendo a las pequeñas y medianas (PYMES) en particular, incluir en su funcionamiento sistemas productivos más eficientes en su conjunto, que conformen un entorno propicio para la competitividad.

En México la creación de las PYMES se ha ido desarrollando conforme el Gobierno Federal ha cambiado sus leyes y ha reformado sus bases jurídicas para dar la oportunidad a nuevas entidades económicas de participar en la generación de empleos, y bienestar social en la comunidad mexicana.

Existen reglamentos para fomentar el desarrollo de la competitividad de estas empresas, en los que se consideran sus actividades para el desarrollo del fomento de su competitividad, mismos que debe contribuir a la creación, organización, y desarrollo de mecanismos económicos para apoyar o estimular la creación, viabilidad, productividad, competitividad y sustentabilidad de las MIPYMES, así como el incremento de su participación en los mercados, con el fin de fomentar el empleo y el bienestar social y económico.

Desarrollo de la Industria Alimentaria en México

La actividad del sector alimentos procesados depende directamente de la producción de sectores primarios como la agricultura, ganadería y pesca entre otros, en la tabla 6 se observan productos producidos en el estado, que actualmente se están exportando a otros países; el exportador sonoreense tiene la oportunidad de darle un valor agregado a los productos, al procesarlos tiene la oportunidad de venderlos a mayor precio y así obtener un beneficio económico.

La industria alimentaria en México tiene la oportunidad de incrementar su participación en las exportaciones, dadas las condiciones de los mercados internacionales, ya que desde el punto de vista económico todos los países necesitan abastecer su mercado interno, proveyéndole productos de origen tanto nacional como extranjero. Partiendo de esto, es necesario saber ¿Por que es importante para la Micro Pequeña y Mediana empresa participar en mercados internacionales?

Para aumentar ventas de exportación, Obtener utilidades mas elevadas, Mantenerse o crecer en el mercado, Lograr mayor y mejor utilización de la capacidad instalada, Reducir la dependencia o riesgo de un solo mercado tradicional o de un mercado extranjero ocasional, Extender la vida del producto, Obtener nuevos conocimientos y experiencia, que a su vez retroalimenten a la empresa, Aprovechar las ventajas de los TLC's , Salvar el patrimonio de la empresa.

METODOLOGIA

Para el desarrollo de la investigación se decidió elaborar un instrumento que detectara cada uno de los problemas derivados de la actividad exportadora a los que se enfrenta la Micro Pequeña y Mediana empresa de Hermosillo; se realizó un estudio descriptivo, el cual busca definir perfiles de la empresa y determinar su actividad exportadora. Se recolectaron datos cuantitativos y cualitativos que permiten dar

soporte a los datos obtenidos de la aplicación del instrumento (Cuestionario), en el cual se especifican actividades relacionadas con el comercio exterior.

El Universo tomado en cuenta para el desarrollo de la investigación, fueron aquellas empresas que se dedican a la exportación de alimentos procesados del municipio de Hermosillo, registrados ante el Consejo para la Promoción Económica del Estado de Sonora. El universo total es de 26 empresas, mismas que elaboran distintos alimentos procesados, por lo que es un universo heterogéneo, situación que se considera elimina el margen de error que se pudiera generar, para efectos estadísticos.

RESULTADOS

Exportar no es una capacidad exclusiva de las empresas de gran tamaño, las exportaciones han sido un importante catalizador para el crecimiento y la modernización de la economía mexicana, convirtiéndose en el componente más dinámico de la actividad productiva del país en la última década, por lo tanto la Micro Pequeña y Mediana tiene una gran oportunidad para ampliar su mercado y diversificar su actividad productiva.

Existen empresas que han tenido problemas en el desarrollo del despacho aduanero de sus mercancías, los más recurrentes en el proceso son:

- A) Etiqueta del producto
- B) Material de empaque
- C) Contenido Nutricional (se especifica en la etiqueta del producto).

El perfil de estas empresas indica que es necesaria la formación en temas relacionados con la comercialización de los alimentos procesados, éste tipo de errores provocan que el embarque sea detenido en la aduana.

Se ha mencionado que exportar no es un proceso fácil, que conlleva un largo y difícil proceso para poder participar en el exterior. Una de las principales causas que limitan la participación de la MIPYME, es la falta de formación en materia de comercio exterior, siendo una de las debilidades que presenta la empresa dedicada a la producción de alimentos procesados, el 40% del universo lo define así, esto trae como consecuencia la detención de los embarques de exportación y el retraso en sus revisiones, provocando la llegada tardía de los alimentos a su destino final.

Para planear la exportación de los productos, los empresarios elaboran como primer instrumento planes de negocio, estos se sustentan en metodologías que aseguran la viabilidad de los proyectos; sin embargo, la sugerencia de terceras personas es el segundo elemento mas utilizado, en este caso se considera un riesgo ya que no existe un procedimiento real para planear el envío de alimentos al extranjero bajo este esquema. El plan de exportación es la tercera opción de los empresarios, su implementación es confiable, ya que prevee cada uno de los pasos para realizar la exportación, confirmando la viabilidad de producto y del mercado.

La empresa exportadora debe analizar las alternativas que existen para vender en el extranjero; realizar la venta directamente en el mercado de destino, dadas las condiciones de la industria alimentaria en Hermosillo (poca producción, moderadas exportaciones) es la primera opción que toma en cuenta la MIPYME, el hecho que se lleve a cabo de esta manera no significa que sea la mas conveniente, ya que por lo general los alimentos se comercializan en pequeñas tiendas ubicadas en los asentamientos latinos y en especifico de Mexicanos del mercado Anglosajon.

Por lo general la MIPYME vende sus productos por medio de comercializadores y en menor cantidad Brockers; ya que facilita la detección de los posibles compradores de sus productos; el universo

encuestado accede a ferias y exposiciones como primera estrategia para la colocación de los alimentos procesados en el país de destino y agentes como segunda opción.

La presencia de un comercializador para las empresas Hermosillenses, representa el éxito de las ventas en el exterior, es importante hacer mención que de acuerdo al desarrollo del mercado extranjero el vendedor utilizará el intermediario mas eficiente para la venta de sus productos, según lo marca también el flujo de los canales de distribución.

Es importante delimitar que para recuperar el monto de las exportaciones, los empresarios recurren a transferencias electrónicas, esta situación se refleja en función de que la mayoría de las ventas se hace de manera directa, ante esta situación, el empresario debe ser mas cuidadoso en el planteamiento de la forma de pago en la negociación, ya que para utilizar este esquema de pago las partes deben tener un nivel de confianza elevado; por lo general, este esquema se utiliza cuando las partes han mantenido una relación comercial de largo plazo.

Esta forma de pago genera inseguridad para el vendedor ya que solo existe el contrato de compraventa como medio para la acreditación del pago de la mercancía, esto no significa que no tenga peso sino que hay otras maneras mas seguras para recuperar el monto de las ventas; tal es el caso de la segunda forma de pago elegida por los encuestados, la Carta de Crédito, este esquema ofrece al comprador y vendedor seguridad en el envío y pago de las mercancías ya que existen documentos que amparan a ambas partes, plazos de pago e intervienen instituciones financieras que acreditan oportunamente los pagos de la compra venta. Otra forma de pago es el pagaré, de igual manera la relación entre comprador y vendedor debe representar un nivel de confianza medio, y por último los cheques, ante este esquema ambas partes deben mantener un alto nivel de confianza.

La poca participación de la MIPYME en mercados extranjeros se ve condicionada a la necesidad de financiamiento para mejorar su capacidad productiva o inyectar liquidez, con el fin de eficientar los esquemas de producción

RESUMEN

El objetivo de la investigación es conocer y analizar el grado de satisfacción de los estudiantes y profesores con respecto al proceso educativo y las condiciones que brinda la Universidad para el desarrollo del mismo; con la finalidad de proponer estrategias de mejora que contribuyan a fortalecer la calidad académica. Se aplicó un instrumento de recolección de datos elaborado por Gesto, con 93 reactivos a un total de 324 estudiantes de la Licenciatura en Mercadotecnia, durante el periodo Julio – Diciembre 2009. Se obtuvo en lo general un grado de satisfacción del 62.8 % confirmando la hipótesis del estudio. Se genera el grado de satisfacción para cada variable vinculada. A partir de un análisis de los resultados del estudio, se utiliza la herramienta análisis FODA para determinar las principales fortalezas y debilidades del programa educativo, así como la oportunidades y amenazas del entorno externo. Así mismo se determina la ventaja competitiva del programa educativo de Mercadotecnia UAEH

DURACION DEL PROCESO ADMINISTRATIVO EN EL DICTAMEN DE INVALIDEZ EN LOS ASEGURADOS DEL IMSS DE CIUDAD JUAREZ CHIHUAHUA MEXICO

Clara Marisela González Macías, Instituto Mexicano del Seguro Social
Luis Flores Padilla, Universidad Autónoma de Ciudad Juárez
Juana Trejo Franco, Universidad Autónoma de Ciudad Juárez
Carmen Patricia Jiménez Terrazas, Universidad Autónoma de Ciudad Juárez

ABSTRACT

El subsidio por invalidez es una de las prestaciones a que tiene derecho el asegurado y se encuentra prevista en el artículo 119 de la Ley del Seguro Social, la declaración de invalidez debe ser realizada por el Instituto Mexicano del Seguro Social y las prestaciones a que tiene derecho el asegurado son la pensión temporal o definitiva. En el 2005 se presentaron 889 dictámenes en el Estado de Chihuahua, de los cuales 305 corresponden a Ciudad Juárez. El propósito del presente estudio es identificar los factores que ocasionan demora en el proceso y aumento en los días de incapacidad previa al dictamen. Estudio descriptivo, se realiza en Medicina del Trabajo con el Formato ST-4 e información del expediente clínico en primer y segundo nivel, análisis estadístico SPSS 12.0. Los resultados presentan un promedio de 166 días de incapacidad previa, 20.72% de oportunidad en segundo nivel y 15.22% en tercer nivel, la contra referencia se encontró documentada en 50.69%, el tiempo de entrega de expedientes presentó un promedio de 17.5 días, del total de los casos estudiados, 45% se presentó con estudio médico integral completo en la primera cita y 95.14% en la segunda cita de Salud en el Trabajo.

LA SEGURIDAD LABORAL COMO ESTRATEGIA DE NEGOCIO EN LAS EMPRESAS MAQUILADORAS DE LA FRONTERA NORTE DE MÉXICO

Juana Trejo Franco, Universidad Autónoma de Ciudad Juárez

Luis Flores Padilla, Universidad Autónoma de Ciudad Juárez

Carmen Patricia Jiménez Terrazas, Universidad Autónoma de Ciudad Juárez

ABSTRACT

Las investigaciones sobre seguridad laboral en la Industria Maquiladora de Exportación (IME) en México, se realizan desde la década de los 70's en temas como condiciones laborales y de salud en los operadores, estadísticas disponibles, accidentes y riesgos de trabajo en muestras específicas, entre otros. El presente estudio describe la visión sobre la seguridad laboral de la alta dirección en la IME. El diseño de investigación es descriptivo y cualitativo. La muestra incluye a las maquiladoras de Ciudad Juárez con el reconocimiento de "empresa segura" otorgado por la Secretaría del Trabajo y Previsión Social (STPS). El diseño muestral fue de casos que no podíamos dejar fuera (Hernández et. al., 2006). Para la recolección de información primaria se usaron varios métodos: entrevista individual estructurada y no estructurada, observación y grupo focal. Los resultados revelan un cambio de concepción de la seguridad en el trabajo, de ser un requisito por la instancia gubernamental correspondiente a convertirse en una estrategia de negocio. Se incluyen además, conclusiones, limitaciones, implicaciones y recomendaciones para futuras investigaciones.
