Al estar hablando de salarios prestaciones, incentivos y otros conceptos análogos es importante remitirnos como complemento a la Ley del Seguro Social en su artículo 27, el cual señala lo siguiente: El salario base de cotización se integra con los pagos hechos en efectivo por cuota diaria, gratificaciones, percepciones, alimentación, habitación, primas, comisiones, prestaciones en especie y cualquiera otra cantidad o prestación que se entregue al trabajador por su trabajo. Se excluyen como integrantes del salario base de cotización, dada su naturaleza, los siguientes conceptos:

I. Los instrumentos de trabajo tales como herramientas, ropa y otros similares;

II. El ahorro, cuando se integre por un depósito de cantidad semanal, quincenal o mensual igual del trabajador y de la empresa; si se constituye en forma diversa o puede el trabajador retirarlo más de dos veces al año, integrará salario; tampoco se tomarán en cuenta las cantidades otorgadas por el patrón para fines sociales de carácter sindical;

III. Las aportaciones adicionales que el patrón convenga otorgar a favor de sus trabajadores por concepto de cuotas del seguro de retiro, cesantía en edad avanzada y vejez;

IV. Las cuotas que en términos de esta Ley le corresponde cubrir al patrón, las aportaciones al Instituto del Fondo Nacional de la Vivienda para los Trabajadores, y las participaciones en las utilidades de la empresa;

V. La alimentación y la habitación cuando se entreguen en forma onerosa a los trabajadores; se entiende que son onerosas estas prestaciones cuando el trabajador pague por cada una de ellas, como mínimo, el veinte por ciento del salario mínimo general diario que rija en el Distrito Federal;

VI. Las despensas en especie o en dinero, siempre y cuando su importe no rebase el cuarenta por ciento del salario mínimo general diario vigente en el Distrito Federal

VII. Los premios por asistencia y puntualidad, siempre que el importe de cada uno de estos conceptos no rebase el diez por ciento del salario base de cotización;

VIII. Las cantidades aportadas para fines sociales, considerándose como tales las entregadas para

constituir fondos de algún plan de pensiones establecido por el patrón o derivado de contratación colectiva. Los planes de pensiones serán sólo los que reúnan los requisitos que establezca la Comisión Nacional del Sistema de Ahorro para el Retiro, y

IX. El tiempo extraordinario dentro de los márgenes señalados en la Ley Federal del Trabajo.

Para que los conceptos mencionados en este precepto se excluyan como integrantes del salario base de cotización, deberán estar debidamente registrados en la contabilidad del patrón.

En los conceptos previstos en las fracciones VI, VII y IX cuando el importe de estas prestaciones rebase el porcentaje establecido, solamente se integrarán los excedentes al salario base de cotización. *Última Reforma DOF 28-05-2012.*

Consideraciones De La Propuesta De Reforma Laboral En Mexico

Algunas de las relevancias de la reforma laboral que contiene la iniciativa son: Trabajar y contratar gente por hora, medio tiempo, días de la semana, o meses del año; Empleo a prueba y contar con sueldo, prestaciones proporcionales y seguridad social para los jóvenes; Tipifica como delito la contratación de menores de 14 años fuera del círculo familiar; Modalidad de contratos con capacitación inicial obligatoria; Protege derechos de mujeres, menores de edad, discapacitados, jornaleros agrícolas y trabajadores domésticos; Licencia de paternidad, limita a un año los juicios individuales de salarios vencidos; Patrones con más de 50 empleados deben adecuar sus instalaciones para personas con discapacidad; Prohíbe exigir a las mujeres certificados de no embarazo para entrar a laborar, permanecer o ascender en el mismo; La mujer escogería como repartir las semanas de descanso antes y posterior al parto; Arbitraje para acabar con huelgas eternas en empresas de servicios públicos; Regula la subcontratación (outsourcing) mediante contratos por escrito y con responsabilidad solidaria entre empleadores; Define y castiga la subcontratación dolosa para evadir responsabilidades laborales o fiscales; Hace obligatorio el voto libre o directo y secreto para elegir a los líderes sindicales para no eternizar en sus puestos a dirigentes sindicales; Disponibilidad de información pública por internet de registros de sindicatos para transparencia de recursos.

Por otra parte, la Ley Federal del trabajo en su artículo 523, señala que la aplicación de las normas de trabajo compete, en sus respectivas jurisdicciones: I. A la Secretaría del Trabajo y Previsión Social; La Secretaría del Trabajo y Previsión Social se encarga de vigilar la observancia y aplicación de las disposiciones contenidas en el artículo 123 de la Constitución Política y de la Ley Federal del Trabajo y sus reglamentos. Entre sus ejes rectores de acción destacan: el fomento a la productividad del trabajo, la proyección de planes para impulsar la ocupación en el país, la promoción de medidas para la protección de los trabajadores, y la procuración del equilibrio entre los factores de la producción.

Los organismos que la integran son: Comisión Nacional de los Salarios Mínimos, Instituto del Fondo Nacional para el Consumo de los Trabajadores, Junta Federal de Conciliación y Arbitraje y Procuraduría de la Defensa del Trabajo. A continuación se presenta la tabla donde se contemplan los artículos 2, 5, 35, 39, 83 de la Ley Federal del Trabajo y artículo 123 de la Constitución Política de los Estados Unidos Mexicanos contra las modificaciones propuestas en la reforma laboral.

Artículo	Actual	Propuesta de Modificación
Artículo Constitucional 123	Toda persona tiene derecho al trabajo digno y socialmente útil; al efecto, se promoverán la creación de empleos y la organización social para el trabajo, conforme a la ley. El Congreso de la Unión, sin contravenir a las bases siguientes deberá expedir leyes sobre el trabajo, las cuales regirán: A. Entre los obreros, jornaleros, empleados domésticos, artesanos y de una manera general, todo contrato de trabajo: I. La duración de la jornada máxima será de ocho horas; II. La jornada máxima de trabajo nocturno será de 7 horas. Quedan prohibidas: las labores insalubres o peligrosas, el trabajo nocturno industrial y todo otro trabajo después de las diez de la noche de los menores de dieciséis años;	No

Artículo	Actual	Propuesta de Modificación
	<p>III. Queda prohibida la utilización del trabajo de los menores de catorce años. Los mayores de esta edad y menores de dieciséis tendrán como jornada máxima la de seis horas.</p> <p>IV. Por cada seis días de trabajo deberá disfrutar el operario de un día de descanso, cuando menos.</p> <p>V. Las mujeres durante el embarazo no realizarán trabajos que exijan un esfuerzo considerable y signifiquen un peligro para su salud en relación con la gestación;</p> <p>gozarán forzosamente de un descanso de seis semanas anteriores a la fecha fijada aproximadamente para el parto y seis semanas posteriores al mismo, debiendo percibir su salario íntegro y conservar su empleo y los derechos que hubieren adquirido por la relación de trabajo. En el periodo de lactancia tendrán dos descansos extraordinarios por día de media hora cada uno para alimentar a sus hijos;</p> <p>VI. Los salarios mínimos que deberán disfrutar los trabajadores serán generales o profesionales. Los primeros regirán en las áreas geográficas que se determinen;</p> <p>los segundos se aplicarán en ramas determinadas de la actividad económica o en profesiones, oficios o trabajos especiales.</p> <p>Los salarios mínimos generales deberán ser suficientes para satisfacer las necesidades normales de un jefe de familia, en el orden material, social XIII. Las empresas, cualquiera que sea su actividad, estarán obligadas a proporcionar a sus trabajadores, capacitación o adiestramiento para el trabajo. La ley reglamentaria determinará los sistemas, métodos y procedimientos conforme a los cuales los patrones deberán cumplir con dicha obligación;</p> <p>XIV. Los empresarios serán responsables de los accidentes del trabajo y de las enfermedades profesionales de los trabajadores, sufridas con motivo o en ejercicio de la profesión o trabajo que ejecuten; por lo tanto, los patronos deberán pagar la indemnización correspondiente, según que haya traído como consecuencia la muerte o simplemente incapacidad temporal o permanente para trabajar, de acuerdo con lo que las leyes determinen. Esta responsabilidad subsistirá aún en el caso de que el patrono contrate el trabajo por un intermediario;</p> <p>XV. El patrón estará obligado a observar, de acuerdo con la naturaleza de su negociación, los preceptos legales sobre higiene y seguridad en las instalaciones de su establecimiento, y a adoptar las medidas adecuadas para prevenir accidentes en el uso de las máquinas, instrumentos y materiales de trabajo, así como a organizar de tal manera éste, que resulte la mayor garantía para la salud y la vida de los trabajadores, y del producto de la concepción, cuando se trate de mujeres embarazadas. Las leyes contendrán, al efecto, las sanciones procedentes en cada caso.</p>	
Art. 2 LFT	<p>- El trabajo es un derecho y un deber sociales. No es artículo de comercio, exige respeto para las libertades y dignidad de quien lo presta y debe efectuarse en condiciones que aseguren la vida, la salud y un nivel económico decoroso para el trabajador y su familia.</p> <p>No podrán establecerse distinciones entre los trabajadores por motivo de raza, sexo, edad, credo religioso, doctrina política o condición social.</p> <p>Asimismo, es de interés social promover y vigilar la capacitación y el adiestramiento de los trabajadores.</p>	Incorporar la noción de trabajo decente que promueve la Organización Internacional del Trabajo.
Art. 5 LFT	<p>Las disposiciones de esta Ley son de orden público por lo que no producirá efecto legal, ni impedirá el goce y el ejercicio de los derechos, sea escrita o verbal, la estipulación que establezca:</p> <p>I. Trabajos para niños menores de catorce años;</p> <p>II. Una jornada mayor que la permitida por esta Ley;</p> <p>III. Una jornada inhumana por lo notoriamente excesiva, dada la índole del trabajo, a juicio de la Junta de Conciliación y Arbitraje;</p> <p>IV. Horas extraordinarias de trabajo para los menores de dieciséis años</p>	<p>Tipificar como delito el trabajo de menores de 14 años fuera del círculo familiar, para lo cual se otorgan facultades a las autoridades, a efecto de que puedan ordenar el cese inmediato de las labores de aquéllos, además de establecer la obligación de resarcir las diferencias salariales, en caso de que percibieran ingresos menores a los de otros trabajadores que realicen idénticas actividades.</p> <p>De igual manera, con el propósito de fortalecer las medidas de protección y vigilancia a favor de los</p>

Artículo	Actual	Propuesta de Modificación
	<p>V. Un salario inferior al mínimo;</p> <p>VI. Un salario que no sea remunerador, a juicio de la Junta de Conciliación y Arbitraje;</p> <p>VII. Un plazo mayor de una semana para el pago de los salarios a los obreros;</p> <p>VIII. Un lugar de recreo, fonda, cantina, café, taberna o tienda, para efectuar el pago de los salarios, siempre que no se trate de trabajadores de esos establecimientos;</p> <p>IX. La obligación directa o indirecta para obtener artículos de consumo en tienda o lugar determinado;</p> <p>X. La facultad del patrón de retener el salario por concepto de multa;</p> <p>XI. Un salario menor que el que se pague a otro trabajador en la misma empresa o establecimiento por trabajo de igual eficiencia, en la misma clase de trabajo o igual jornada, por consideración de edad, sexo o nacionalidad;</p>	<p>menores, se propone un nuevo esquema para detallar con mayor precisión, los tipos de actividades que no podrán realizar. La inclusión de estos supuestos se apoya en el análisis e identificación de las tareas que potencialmente resultan peligrosas e insalubres.</p> <p>En cuanto a los trabajadores del campo, en el artículo 5, fracción VII, se señala que no produce ningún efecto legal la estipulación que establezca un plazo mayor de una semana para el pago de los salarios a dichos trabajadores, así como a los obreros, como lo dice la ley en vigor</p>
Art. 35 LFT	<p>Las relaciones de trabajo pueden ser para obra o tiempo determinado o por tiempo Indeterminado. A falta de estipulaciones expresas, la relación será por tiempo indeterminado.</p>	<p>Nuevas modalidades de contratación en periodos de prueba para trabajadores de nuevo ingreso, capacitación inicial y trabajos de temporada. Indicando que las relaciones de trabajo pueden ser para obra o tiempo determinado, por temporada, de capacitación inicial o por tiempo indeterminado; manteniéndose el mandato de la ley en vigor, en el sentido de que a falta de estipulación expresa, la relación será por tiempo indeterminado.</p> <p>- Regular el llamado 'outsourcing' o subcontratación de personal con el propósito de garantizar el cumplimiento de obligaciones de seguridad social y salud a cargo del patrón.</p> <p>- Regular el pago por hora, estableciéndose que para el cálculo del salario en esta modalidad se deberá considerar como pago mínimo el de una jornada de trabajo completa.</p> <p>- El pago de tres meses de indemnización y salarios vencidos al trabajador que haya sido despedido y cuyo patrón no compruebe las causas de rescisión en un juicio laboral.</p> <p>- Obligación para hacer públicos los estatutos de los sindicatos en la página de internet de la Secretaría del Trabajo.</p>
Art. 39 LFT	<p>Si vencido el término que se hubiese fijado subsiste la materia del trabajo, la relación quedará prorrogada por todo el tiempo que perdure dicha circunstancia.</p>	<p>Se adiciona la ley con los artículos 39-A a 39-F, regulándose en el primero el denominado período de prueba, el cual debe hacerse constar por escrito y no podrá exceder de treinta días, salvo tratándose de trabajadores para puestos de dirección o gerenciales y demás personas que ejerzan funciones de administración en la empresa o para desempeñar labores técnicas o profesionales, casos en los cuales dicho período podrá extenderse hasta ciento ochenta días. En ambos casos el período de que se trate es improrrogable; debiendo cubrirse al trabajador el salario de la categoría o puesto que desempeñe. De no acreditar competencia el trabajador, se dará por terminada la relación de trabajo, sin responsabilidad para el patrón, pagándose al trabajador las prestaciones devengadas a esa fecha.</p>
Art . 83 LFT	<p>El salario puede fijarse por unidad de tiempo, por unidad de obra, por comisión, a precio alzado o de cualquier otra manera.</p> <p>Cuando el salario se fije por unidad de obra, además de especificarse la naturaleza de ésta, se hará constar la cantidad y calidad del material, el estado de la herramienta y útiles que el patrón, en su caso, proporcione para ejecutar la obra, y el tiempo por el que los pondrá a disposición del trabajador, sin que pueda exigir cantidad alguna por concepto del desgaste natural que sufra la herramienta como consecuencia del trabajo.</p>	<p>Se le adiciona: "Tratándose de salario por unidad de tiempo, el trabajador y el patrón podrán convenir el pago por cada hora de prestación del servicio, siempre y cuando no se exceda la jornada máxima legal en esta Ley".</p>

CONCLUSIONES

De acuerdo a la investigación de los distintos conceptos y con la experiencia propia en el ámbito laboral, cada día son mas los empleadores que introducen en el cálculo de las nóminas diversos conceptos utilizados en los planes de previsión social para no generar más carga fiscal de impuesto sobre la renta a través de estrategias fiscales y que por una parte benefician al trabajador al recibir de esta forma se le incrementa el sueldo; pero por otra parte, se va perdiendo la esencia de la previsión social al estar atento el patrón al cuidado de no exceder los límites para poder considerar como erogación fiscal en su contabilidad las prestaciones citadas. Bajo la óptica de los distintos señalamientos que hacen referencia a la previsión social, pareciera que se está saliendo de su esencia original de la protección social y como puede observarse, no ha sido muy afortunada la definición, y ello obedece a que la previsión social como una de las modalidades de la protección social no puede apartarse del ámbito que le dio origen ni de la etapa a la cual se integró: la seguridad social.

Debería ser estos momentos en que se sigue discutiendo la propuesta a la reforma laboral en México para lograr una armonización entre las diversas leyes y la propia Ley Federal del Trabajo. De igual forma, derivado de la naturaleza laboral de la previsión social, se considera que la Ley Federal del Trabajo debe incorporar la definición de Previsión Social y acotar conceptos análogos que generan incertidumbre. Se concluye además que este concepto tan relevante y de naturaleza laboral, que la Ley del Impuesto Sobre la Renta no es el ordenamiento jurídico competente para definir el concepto de previsión social; ya que éste ordenamiento conlleva en esencia totalmente fiscal y/o tributario para gravar el ingreso tanto para el empleador como para el trabajador cuando excedan los límites señalados en la misma. El incremento de las “prestaciones de previsión social” en el ámbito fiscal afirma el lento camino para las nuevas generaciones en la regulación de lo “social”. Por bien intencionados que sean los intereses de naturaleza fiscal respecto de estas prestaciones, no pueden salirse de su campo original en perjuicio de la reducción de espacios en el terreno de la “protección social”. Efectivamente, las deducciones para el empleador están enfocadas a este tipo de prestaciones, intensificándose su uso con las nuevas condiciones y modalidades de contratación, que a mediano plazo de no ser parte de una reforma estructural se resumiría en una pérdida de derechos del trabajador.

EXPERIENCIA MEMORABLE DE COMPRA EN TIENDAS MUEBLERAS DE LA FRONTERA TIJUANA, B.C. – SAN DIEGO, CA.

Lucila Villa Pérez, Universidad Tecnológica de Tijuana
Santiago González Velásquez, Universidad Tecnológica de Tijuana
Marcela Patricia Ahumada Toscano, Universidad Tecnológica de Tijuana

RESUMEN

Esta investigación tiene como finalidad explicar y conocer como se crea la experiencia memorable de compra en los consumidores de la frontera Tijuana – San Diego en las tiendas departamentales muebleras: Coppel, Elektra y Muebles Dico, en la ciudad de Tijuana, B.C., así como en la tienda Ikea en la ciudad de San Diego, Ca. Para este trabajo se consultaron a los teóricos y teorías que definen el concepto de experiencia memorable de compra, de tal manera que se pudiera categorizar como una herramienta competitiva del Merchandising dentro de las tiendas departamentales muebleras. Se utilizó una metodología no experimental cuantitativa y de tipo transeccional descriptivo. De este último se manejó la técnica de encuestas aplicadas a los clientes de cada una de las empresas mencionadas, entrevista a profundidad con los gerentes de las tiendas ubicadas en Tijuana, B.C., y la técnica de observación participante dentro de los establecimientos. Todo esto con la finalidad de identificar como se genera la experiencia memorable que favorezca la fidelización de los clientes en estas tiendas.

PALABRAS CLAVE: Experiencia memorable de compra, merchandising, tiendas muebleras, fidelización.

MEMORABLE SHOPPING EXPERIENCE IN FURNITURE STORES OF TIJUANA – SAN DIEGO BORDER.

ABSTRACT

This research aims to explain and learn how to create memorable shopping experience in to consumers in the border of Tijuana – San Diego in furniture department stores: Coppel, Elektra and Muebles Dico in Tijuana BC; well as in the Ikea store in San Diego Ca. For this work were consulted theorists and theories that define the concept of memorable shopping experience, so that it could be categorized as a competitive tool in the merchandising department stores furniture. It was made through a quantitative non-experimental methodology and transactional descriptive type. This last technique is handling the surveys of customers of each of the companies mentioned, depth interviews with managers of stores in Tijuana B.C., and participant observation technique within establishments. All this in order to identify as generating memorable experience that encourages customer loyalty in these stores.

JEL: M31

KEYWORDS: Memorable shopping experience, merchandising, department store furniture, loyalty.

INTRODUCCION

En los últimos años, los acelerados cambios generaron un nuevo escenario. La oferta disponible y la capacidad de producción para la gran mayoría de las categorías de productos creció exponencialmente; donde antes había sólo unos cuantos fabricantes, hoy hay cientos; las comunicaciones y el transporte han evolucionado, las fronteras geográficas y las barreras físicas son cada vez más tenues, las diferencias culturales entre los pueblos se hacen más homogéneas. El marketing tradicional comenzó a sufrir la ausencia de herramientas, el uso de las cuatro "P" de McCarthy es insuficiente, el enfoque de las economías a escala, la diversificación y extensión de líneas ya no bastan para vender y retener clientes en este nuevo y complejo entorno, ni aún el liderazgo de precios y calidad son suficientes para asegurar el éxito. (Basile, 2008)

La función básica del *merchandising* consiste de exhibir los productos de la manera correcta, de acuerdo a estándares internacionales, con el fin de hacerlos visibles y facilitar su venta. No obstante el sector del autoservicio se ha dado a la tarea de ofrecer un valor agregado al comprador ya que se ha comprobado que la decisión de compra se toma en el punto de venta creando una experiencia memorable de compra en el cliente, por lo cual este canal es muy importante para cerrar el ciclo de marketing. (Carrano, 2009) Carrano (2009) señala que en el proceso de venta en las tiendas departamentales y de autoservicio el *merchandising* se ve imbuido en un sinfín de estímulos sensoriales que lo vuelven cada vez más interactivo, más participativo en el acto de compra.

En la actualidad se observa la tendencia de generar experiencias de compra agradables que estén estrechamente vinculadas a las emociones del consumidor y a su estilo de vida. Ahora se sabe que el consumidor no compra productos, compra experiencias que le ayudan a disfrutar más. Uno de los ejemplos emblemáticos en la región Tijuana- San Diego, de experiencias memorables de compra, es la tienda departamental mueblera Ikea. Ella ha venido a revolucionar el tradicional concepto de mueblerías por un formato de compra autoservicio: funcional, innovador y vanguardista. Además de posicionarse como una opción de compra que ofrece experiencias memorables y singulares creando vínculos de fidelización a la marca. Bajo este tenor la presente investigación se tiene como objetivo general identificar las experiencias memorables de compra que tienen los compradores en empresas muebleras: Ikea, Coppel, Elektra y Dico, y cómo esta experiencia puede contribuir a la fidelización de la marca. También pretende de manera específica 1) conocer las estrategias de *merchandising* de las empresas estudiadas y 2) observar la reacción de los consumidores ante las estrategias de *merchandising*.

El resultado de esta investigación será el de demostrar que puede haber mayor competitividad entre las empresas muebleras de Tijuana, B.C., y desarrollar mejoras con la aplicación de herramientas del *merchandising*, lo que conduciría inevitablemente a un proceso de fidelización con la tienda de parte del consumidor final. Bajo la influencia de este escenario, la prioridad básica de este trabajo se traduce en conocer las herramientas del *merchandising* que permite “generar experiencias para conquistar emociones y fidelizar clientes”. Es así como nacen las nuevas tendencias del *merchandising* que fijan la atención en el diseño del punto de venta, la atmósfera y el ambiente; estos elementos son los encargados de resaltar la percepción del producto y del servicio, generando la imagen del punto de venta y convirtiendo al consumidor en un cliente fiel. (Basile, 2008)

REVISION LITERARIA

¿Qué es el *merchandising*? El *merchandising* se define como toda acción destinada a aproximar el producto al consumidor en el punto de venta, con el fin de conseguir una mayor rotación del producto. (Enciclopedia de marketing y ventas, 2011)

El *merchandising* está estrechamente ligado al análisis, estudio y sistematización de los supermercados y su manera de influir en la comunidad, sus hábitos de compra y la consecuencia de todo ello. Macías (2000) informa que el *merchandising* son todos los factores que hacen vender o fijar el sentido de la compra en el punto de venta.

Sin embargo, existe otro tipo de comunicación fuera del punto de venta, que también es propia del *merchandising*: toda aquella que se realiza a través de elementos, debido al uso de estos, pero sin intencionalidad del usuario de efectuar una acción de comunicación. De esta manera, esta actividad es una acción de comunicación que se realiza con esa intencionalidad en el punto de venta y que se efectúa sin intencionalidad fuera de él. (Macías, 2000). Para efectos de esta investigación utilizaremos el concepto de la Enciclopedia de Marketing y ventas (2011) que delimita la denominación de *merchandising* al punto de venta. Por tanto el *merchandising* es una actividad de comunicación que se realiza en el punto de venta mediante elementos confeccionados con ese fin específico y que fuera del punto de venta, se lleva a cabo mediante elementos creados con otra finalidad y sin intencionalidad específica de comunicar comercialmente por parte de quien exhibe esos elementos. (Enciclopedia de marketing y ventas, 2011) De estas definiciones podemos distinguir algunas especificidades que permiten acotar aún más la definición.

En la actualidad el concepto ha evolucionado y se ha transformado en un conjunto de herramientas interdisciplinarias e innovadoras que permiten al cliente interactuar y relacionarse con el producto de una manera más directa, afectiva y por tanto íntima. Dichas herramientas van desde el clásico exhibidor dentro de la tienda departamental a la conformación de escenarios que simulan realidades para distintos perfiles de consumidor o nichos de mercado, y representaciones teatralizadas donde el factor humano hace la diferencia en términos de estrategias de promoción.

Elementos Potenciadores Del Merchandising

Garrido (2011) argumenta que, a pesar que el *merchandising* realiza una buena exposición del producto utilizando una serie de elementos que mejoren su exhibición, inherente a él existen toda una serie de procesos que son de vital importancia y que, sin ellos, el *merchandising* perdería una gran parte de efectividad:

- Una buena elección en la ubicación del local, puesto que el perfil del cliente de la zona donde se ubique deberá estar en armonía con los productos ofertados.
- Un buen diseño del punto de venta para optimizarlo y evitar las zonas muertas.
- Una buena gestión de compras, para poder tener siempre todos aquellos productos que necesitan nuestros clientes, sin tener por ello que colmar de mercancía nuestros anaqueles.
- Un buen trabajo de almacenaje de los productos para evitar mermas y tener controladas nuestras existencias.
- Una eficaz gestión administrativa para saber en todo momento la rentabilidad de la tienda.

- Una mezcla estudiada de los productos en el punto de venta, para despertar motivaciones de compra entre los clientes o nichos de mercado.
- Una buena estrategia de promociones, para conseguir que nuestros clientes no caigan en el aburrimiento.

Garrido (2011) comenta que cuando las empresas combinan todos estos elementos del *merchandising*, se optimizará el negocio y se conseguirá un mayor rendimiento. La cantidad y variedad de elementos que se usan o pueden usarse en acciones de *merchandising* no solo es muy grande, sino que también abarca un espectro que sobrepasa los límites de una técnica de comunicación y se extiende a actividades que normalmente se podrían encuadrar en otros contextos, de comunicación o no, tales como promoción, construcción, relaciones públicas, decoración etc. En su libro Comunicaciones de Marketing, Oscar Pedro Billorou (1991) menciona las siguientes características del *merchandising* como imprescindibles en los puntos de venta:

- Elementos de comunicación dentro del punto de venta como los carteles, las cenefas, los colgantes y móviles, los salientes, afiches y pósters por mencionar algunos elementos publicitarios; además de *displays* corpóreos o exhibidores de productos, espejos, ceniceros y material relativo al local así como la lista de precios de los productos ofrecidos.
- Elementos de prueba de producto que generen una experiencia agradable y comprobable del funcionamiento óptimo de la mercancía, como frascos con vaporizador para pruebas de productos, dosificadores, probadores, expendedores de cualquier tipo.
- Posiciones atractivas de la mercancía en el punto de venta que permita a los clientes identificar los bienes de temporada, o los más vendidos, y que permitan identificar las zonas calientes y las zonas frías del local, las áreas más concurridas o que generan más tránsito, esto con la finalidad de optimizar todos los espacios interiores de la tienda.
- La distribución del local que sea atractiva para hacer la visita al negocio una real experiencia memorable, los elementos a utilizar son los propios de la construcción, la decoración y el equipamiento del local de ventas. Los elementos de comunicación utilizables son, en caso necesario los que puedan proveer de adecuada señalización dentro del local, así como también instruir sobre modalidades de compra, finalización, estacionamiento, entregas, horarios, etc.

Por su parte, Diamond (1999) plantea que existe un tipo de *merchandising* denominado visual y se define como la presentación de una tienda y de su mercancía de forma que atraigan la atención de los clientes potenciales por medio del sentido de la vista y que los motiven para que compren. La tarea del *merchandising* visual es lograr los mejores efectos visuales posibles, requiriendo de una combinación de habilidades. Desde luego se necesita creatividad pero también un sentido de orden, cumpliendo con los principios del diseño y disciplina personal para obedecer las instrucciones.

El *merchandising* visual se ocupa principalmente de los aspectos creativos de su especialidad y de presentar la mercancía en una atmósfera que maximice las ventas a través de coordinar todos los componentes del aparador y de los interiores, así como producir los *displays* que realzarán la imagen de la tienda y la distinguirán de sus competidores. (Jay, 1999) . Una vez determinados las herramientas y utilería que se usará, se examinan los principios fundamentales del diseño, la conceptualización del color, la iluminación, que al mismo tiempo que alumbra produce atractivos efectos, y los anuncios que

complementan el escenario. El producto terminado habrá de captar la atención de los posibles compradores y transformarlos en clientes.

Cervera (2008) señala que hay dos nuevas estrategias y herramientas que apoyan al punto de venta para hacer efectiva la decisión de compra: el *Retailtainment* y el *Marketing Relationship Magnament*. El *Retailtainment* consiste en obtener un vínculo estrecho con la marca a partir de eventos que entretengan al comprador, con el objetivo de que éste visite de manera frecuente la tienda, y compre el producto por volver a vivir esta clase de vivencias. Las actividades de entretenimiento se pueden llevar a cabo tanto por el detallista como por el fabricante. “Va desde una sala de estar en donde puedan relajarse entre cada compra hasta verdaderos carnavales. La experiencia que consigues envuelve al consumidor en un factor sorpresa y lo predispone a querer más de tu marca, lo cual se traduce en una compra”. Destaca Chemor directora de *Ogilvy Action*. (Cervera, 2008) El Marketing Relacional involucra un conocimiento profundo del cliente, utilizando el poder de la marca para transmitir beneficios de autoexpresión, el poder de las personas para conocer y establecer vinculaciones y relaciones valoradas por el cliente. Va más allá, de la simple estrategia centrada en el producto, sus atributos y beneficios y se concentra ahora en la organización enfocada en el cliente, en la cultura organizacional necesaria para vivir todos los días con criterio comercial y teniendo en consideración el único punto de vista indiscutiblemente válido: el cliente. Kotler y Armstrong (2008) explican que un factor clave que se debe conocer en el punto de venta es el comportamiento del consumidor final, las empresas deben conocer tanto la teoría como la práctica del comportamiento de compra del consumidor; pues este comportamiento se ve afectado por factores culturales, sociales, personales y psicológicos. Es tarea del mercadólogo identificar el tipo de influencia que ejercen estos factores para crear las estrategias de *merchandising* correctas.

Experiencia Memorable

Emanuel Medina (2010) en su artículo experiencias memorables acota: “Todo el sector del *marketing* tiende a orientarse a proporcionar experiencias emocionales y no solo productos tangibles o materiales”. Ahí se explica: la exposición diaria del público a centenares de impactos comerciales propicia que las marcas busquen nuevas formas de cohesión emocional para con sus consumidores. Existe desde hace varios años un área determinada, el *experiential marketing*, que no solo motiva a realizar la compra sino que además; crea una identificación personal con la marca, genera lazos importantes que quedan como resultado a largo plazo, rentabilidad y fidelidad de marca.

Medina (2010) cita a Fernando Valdés Tena & Co, el cual comenta: “el arte de crear una vivencia memorable, gratificante y significativa, cuya importancia radica en que el resultado esperado sea la conexión emocional con un consumidor / cliente para la marca, producto, causa o idea a comunicar”. Cabe destacar que este tipo de estrategia no es fácil de llevar a cabo pues no solo basta con tratar de involucrar al cliente para que pruebe, sienta o perciba cierto producto o marca. La idea es crear, en realidad un ambiente cercano o igual al contexto que cada anunciante requiere. Para ello Medina (2010) nos brinda un panorama en el cual acota: “para no perderse en esta estrategia se necesita conectar de manera holística los sentidos con las marcas, utilizando técnicas de *merchandising* que ya se conocen. Las experiencias solo ocurren como respuesta a una estimulación, se desarrollan con base en algo específico y siempre referirán a ello”. Con este marco de referencia, se realiza este estudio sobre la situación actual de las empresas muebleras Muebles Dico, Elektra y Coppel en la ciudad de Tijuana y la compañía Ikea en la ciudad de San Diego, para conocer las estrategias de *merchandising* que utilizan cada una de ellas y si es que dichas estrategias generan la fidelización a la marca respectiva. Se definió la siguiente hipótesis: La experiencia memorable de compra, como factor primordial de *merchandising* vivencial, favorece la fidelidad de los clientes en tiendas departamentales muebleras: Ikea, Elektra, Coppel y Dico.

METODOLOGIA

El diseño de esta investigación constará de elementos y procedimientos cuantitativos, será no experimental, ya que no manipula reacciones, fenómenos u objetos. Será de tipo descriptivo transeccional porque recolectará datos de los que realizará interpretaciones, análisis y pronósticos en un momento determinado.

Muestra Y Herramientas De Recolección De Datos

Para conocer el grado de experiencia memorable que tienen los clientes de la ciudad de Tijuana al hacer sus compras en las empresas muebleras de la frontera Tijuana – San Diego, se determinó la muestra de acuerdo con la siguiente información: se cuenta con un universo de 470,203 familias en Tijuana, Baja California. Dato recabado de la página oficial de INEGI (2010). Se dividió el universo en una tabla de porcentaje de nivel socioeconómico de la página electrónica de AMAI y se tomó solo las clases C+, C, D+ Y D, que representan el 84.55%. Teniendo como universo final 397,322 familias en Tijuana, Baja California.

Tabla 1: Porcentaje de niveles económicos en México.

Clase social	Porcentaje
A/B	7.5%
C+	13.6%
C-	18.8%
D+	32.6%
D-	19.5%
E	8%

La clase social alta o A/B tiene un porcentaje de 7.5%, la clase media superior o C+ tiene un porcentaje de 13.6%, la clase media inferior o C- tiene un porcentaje de 18.8%, la clase baja superior tiene un porcentaje de 32.6%, la clase baja inferior o D- tiene un porcentaje de 19.5%, la clase denominada autoconstrucción o E tiene un porcentaje de 8%. Fuente AMAI 2012.

Una vez que se obtuvo el dato del universo se procedió a determinar la muestra. Según Fisher y Espejo (2004) cuando el universo es menor a 500, 000 elementos, se debe utilizar la muestra en poblaciones finitas. Fórmula para Poblaciones finitas:

$$N = \frac{z^2 N p q}{e^2 (N-1) + z^2 p q} \quad (1)$$

En donde:

z= nivel de confianza

n= universo o población

p= probabilidad a favor

q= probabilidad en contra

e= error de estimación (precisión de los resultados)

N= número de elementos (tamaño del universo)

Sustitución de la fórmula:

n= ¿?

e= 5%

z= 1.96 (al cuadrado = 3.84)

p= 50%

q= 50%

N= 397, 322

$N = \frac{(3.84) (397,322) (.50) (.50)}{(.05)^2 (397,322 - 1) + 3.84 (.50) (.50)} = \frac{381,429.12}{994.26} = 383.63$

Total de encuestas a realizar = 383

Las encuestas se hicieron a clientes seleccionados de forma aleatoria de las empresas a investigar, Elektra, Coppel y Muebles Dico en la ciudad de Tijuana. La encuesta se orientó a identificar:

- El motivo de compra de los clientes.
- Cuál fue el impulso de compra que orilló a elegir ese lugar para la adquisición de sus muebles.
- La frecuencia de compra de los clientes.
- El grado de posicionamiento de las tiendas muebleras
- El grado de satisfacción de los clientes con relación al servicio brindado por los asesores en el punto de venta.
- Si la señalética de la compañía es adecuada para facilitar la localización.
- El grado de satisfacción después de la compra.

Para conocer la experiencia de compra de los clientes de la ciudad de Tijuana con respecto a la tienda Ikea, se utilizó una muestra a juicio identificando a personas que compraron en Ikea durante el año 2011 y 2012, a las cuales se les aplicó una encuesta vía internet, haciendo uso de las redes sociales (*Facebook*), la encuesta se adjuntó dentro la red social. El total de encuestas realizadas fue a 97 clientes y/o compradores de la tienda Ikea. La encuesta tuvo la misma orientación que la que se aplicó de forma presencial. Se determinó una tercera muestra a juicio para complementar la información, en donde se identificó a las personas encargadas de la gerencia de las tiendas Elektra, Coppel y Muebles Dico, a quienes se les hizo una entrevista a profundidad para identificar los siguientes puntos:

- Conocer las estrategias de *merchandising* que utilizan en el punto de venta.
- Saber la periodicidad o frecuencia con la que cambian sus estrategias de *merchandising*.
- Conocer qué tipo de herramientas visuales *Point of Purchase* de *merchandising* utilizan.
- Conocer el tipo de señalética que manejan dentro del punto de venta y sus alrededores.
- Tener un panorama general de la infraestructura del lugar (iluminación, humedad, ventilación, alturas, espacio, colores, tipo de suelo y acomodo).

El último método para recolectar información que se utilizó fue la observación directa que consiste en observar el establecimiento a detalle, teniendo como guía una hoja de revisión, la cual contiene los parámetros que ayudaron a evaluar la situación. Para este método se tomaron como muestra las mismas sucursales en donde se encuestaron a los clientes/ consumidores de las tiendas, Coppel Boulevard 2000, (Coppel, 2010) Elektra sucursal Brisas y Muebles Dico sucursales Macro Plaza y Plaza Monarca (Muebles Dico, 2012), todas ellas ubicadas en Tijuana, Baja California. La guía de observación que se utilizó busco identificar lo siguiente:

- Características físicas de la empresa.
- Accesibilidad al establecimiento.
- Servicio al cliente.
- Aspecto del lugar.

- Tipos de herramientas de *merchandising* utilizadas en punto de venta.
- Señalética dentro del punto de venta.
- Distribución y acomodo del lugar del punto de venta.

RESULTADOS

Resultados generales de las tiendas Elektra, Coppel y Muebles Dico

Con base en la información procesada, la muestra de las personas encuestadas durante la visita a las tiendas Elektra, Coppel y Muebles Dico mostró lo siguientes resultados:

El 51% de los clientes que visitan estas tiendas son hombres y 49% mujeres El 72% de los clientes son casados o se encuentran en unión libre, mientras el 20% son solteros, el resto no respondió. La zona donde viven con mayor audiencia es la Mesa con un 61% y en segundo lugar la zona de la Presa siendo el lado Este de la Ciudad el que más concurre a esta tienda. Lo que les resulto más atractivo para ir a esa tienda fue con un 34% la línea de crédito, con un 28% el servicio, con un 20% la calidad de los productos y con un 18% el precio. Los medios que más influyeron para asistir a esta tienda fue con un 65% los anuncios televisivos y con un 27% los espectaculares, el 8% mencionó que medios electrónicos.

El 61% de los clientes en el momento de la compra se sintieron relajados y confiados mientras el 33% se encontró alegre y emocionado en el momento de la compra y solo el 6% se sintió presionado y aturrido. La apariencia del lugar tuvo una evaluación de un 47% como limpia, un 28% como muy limpia y un 25% como desordenada. En el acomodo de la mercancía el 53% menciono que se sintió poco atraído, el 45% le atrajo mucho y el 2% nada. Un 80% de los clientes les fue fácil localizar el producto que buscaba, mientras el otro 20% no. El 68% de los clientes mencionó que la exhibición de los productos en la tienda le ayudaron mucho a imaginar cómo se vería el mueble en su casa, el 28% menciono que el acomodo le ayudó poco, mientras el 4% restante menciono que nada.

El 87% de los clientes mencionan que si se les permitió tocar, ver y probar su producto antes de adquirirlo, mientras el 13% restante comenta que no. El 41% de los clientes nos dice que ha comprado en esa tienda de 1 a 2 muebles, el 33% de 3 a 4, el 13% de 5 a 6 y el 9% de 4 a 5, el 4% fue la primera vez que visitó alguna de esas mueblerías. Al recordar su experiencia de compra, lo que más recuerdan los clientes con más agrado es el trato con el vendedor, el poder tocar, medir y probar su producto antes de la compra y la confianza que le brindaron los vendedores de la tienda. Al recordar la experiencia de compra, lo que más recuerdan los clientes como desagradado es, la escasa publicidad, el acomodo de los productos y el no haber libre acceso a todos los espacios de venta. Las tres principales variables por las que se motivaron a regresar fueron: el servicio, la novedad en sus mercancías y el acomodo de las vitrinas y escaparates.

Resultados generales de la tienda Ikea

El 42% de los clientes de la tienda son hombres y el 58% mujeres. El 36% de los clientes son casados o se encuentran en unión libre, mientras el 36% son solteros. La zona donde viven se encuentra dividida en un 26% la Presa, 25% la Mesa, 21% Otay, 14% playas y por último 14% en zona Centro. Siendo esta la tienda con la mayor variante de zonas donde viven sus clientes. Lo que les resultó más atractivo para ir a esa tienda fue con un 48% la calidad, 30% el precio, 13% el servicio y solo el 9% la línea de crédito. Los medios que más influyeron para asistir a esta tienda fue con un 43% los anuncios televisivos y con un 13% los espectaculares y con un 21% medios impresos y por ultimo 23% internet.

El 73% de los clientes en el momento de la compra se sintieron relajados y confiados mientras el 27% se encontró alegre y emocionado en el momento de la compra. La apariencia del lugar tuvo una evaluación

de un 58% como limpia, un 42% como muy limpia. En el acomodo de la mercancía el 73% se sintió atraído, mientras el 27% poco. Un 84% de los clientes les fue fácil localizar el producto que buscaba, mientras el otro 16% no. En la forma en cómo se encontraba acomodado el producto, ayudo a imaginar a el cliente como se vería en su lugar donde lo utilizará, el 61% mencionó que mucho, y el 30% mencionó que poco, el resto no respondió. El 83% de los clientes mencionan que si se les permitió tocar, ver y probar su producto antes de adquirirlo, mientras el 17% restante comenta que no. El 38% de los clientes nos dice que ha comprado en esa tienda de 3 a 4, el 29% de 1 a 2, el 22% de 5 a 6, y el 11% de 4 a 5. Siendo esta la tienda con mayor frecuencia de compra por parte de sus clientes. Al recordar su experiencia de compra, lo que más recuerdan los clientes con más agrado es el acomodo de la mercancía, en segundo la oportunidad de poder tocar, medir y probar su producto antes de la compra y por último poder pasear por la tienda. Al recordar la experiencia de compra, lo que más recuerdan los clientes como desagrado es, poca información por parte de los vendedores. Las tres principales variables por las que se motivaron a regresar fueron: el servicio, la novedad en sus mercancías y el acomodo de las vitrinas y escaparates.

Resultados De Entrevistas A Profundidad A Gerentes De Elektra, Coppel Y Muebles Dico

En general las respuestas se agruparon para presentarse de la siguiente manera: Las estrategias de *merchandising* que se utilizan en el punto de venta son: la ambientación y escenificación de algún espacio del hogar, se integran carteles, posters y adornos que no son del producto; pero que realzan la temática vertida en el punto de venta. Estas estrategias se actualizan según la temporada, en promedio cada cuatro meses se cambia la imagen y acomodo de los productos. Los instrumentos de comunicación Punto de Venta que se utilizan, son los carteles horizontales por los pasillos y espacios libres del punto de venta, cenefas con precios y catálogo de productos agregados para incluir en la decoración del hogar.

La señalética que se utiliza en los lugares varía de acuerdo al acomodo de la mercancía, pero en todas las tiendas están bien identificados los departamentos con sus mercancías, así como los requerimientos legales. Además el punto de venta cuenta con la iluminación general de las lámparas que iluminan toda la tienda, y a su vez algunos cuentan con lámparas individuales que son parte de la decoración y ambientación del lugar. Muchas veces las lámparas son productos también a la venta al público. Las tiendas utilizan escaparates para atraer a los clientes y apoyar la venta, éstos son realizados de acuerdo al área dónde se encuentra la tienda, pues la segmentación del mercado en aspectos geográficos muestra un tipo de cliente diferente en los diferentes puntos de la ciudad.

Resultados de la observación directa

Se comprobó el uso de las estrategias de *merchandising* en las tiendas, los escaparates en todas sus tonalidades son los atractivos de las tiendas, así como la señalética y el decorado adecuado de las tiendas son un punto de interés para los clientes. Se pudo observar una afluencia muy grande de clientes en las tiendas Elektra y Coppel, pues éstas tiendas se caracterizan por vender a crédito la mercancía y los clientes hacen sus pagos de forma semanal o quincenal, cabe señalar que la caja que recauda dicho pago, se encuentra al final de la tienda obligando a los visitantes a recorrer el negocio casi en su totalidad. El acomodo de la mercancía inspira al cliente a la compra, pues se eligen decorados adecuados para los tipos de muebles que las compañías promocionan.

CONCLUSIONES

Los objetivos de esta investigación se cumplieron al: Identificar experiencias memorables de compra, en empresas muebleras: Ikea, Coppel, Elektra y Dico, a través de una encuesta aplicada a los clientes de estas tiendas, con las preguntas clave dentro de la encuesta donde se les pregunta cómo se sintieron en el momento de la compra en el cual encontramos que el promedio de las cuatro empresas es de 67.25% los

cuales se sienten relajados y confiados a la hora de adquirir sus productos, además que el servicio es de las prioridades para los clientes, el cual es importante para hacer regresar al cliente y cómo estas variables contribuyen a la fidelización de la marca. Se examinaron las estrategias de *merchandising* de las empresas estudiadas, a través de una entrevista a profundidad, en las cuales encontramos que las empresas Coppel, Elektra y Muebles Dico, cuentan con estrategias de *merchandising* visual y que estas están diseñadas en una matriz la cual se encarga de dar el material promocional del punto de venta a las demás sucursales a nivel nacional. Conocer la reacción de los consumidores ante las estrategias de *merchandising*, para lo cual se generaron preguntas dentro de la encuesta y resultó que los consumidores son atraídos por los escenarios y formas en cómo está organizado el lugar, y cabe destacar que estas empresas aunque cuentan con una experiencia memorable de compra, no la desarrollan conscientemente y plenamente ya que como se mencionó en el marco teórico, para implementar la experiencia memorable de compra deben fusionarse las herramientas del *merchandising* como la visual, el *Retailtainment* y el CRM, y estas empresas solo implementan una o dos pero no se encuentran ligadas entre sí.

La hipótesis planteada como “la experiencia memorable de compra como factor primordial de *merchandising* vivencial, favorece la fidelidad de los clientes en tiendas departamentales muebleras: Ikea, Elektra, Coppel y Dico” se comprobó gracias a la encuesta aplicada a los clientes de las empresas, una de las preguntas de esta encuesta plantea: ¿Cuántos muebles ha comprado en esta tienda?, lo que deseábamos conocer a través de esta pregunta es la frecuencia con la que los clientes de las empresas, regresan a comprar productos en dichas sucursales, y así conocer la fidelidad que tienen con la empresa de parte de los clientes. Los resultados fueron el 41% de los clientes nos dice que ha comprado en esa tienda de 1 a 2 muebles, el 33% de 3 a 4, el 13% de 5 a 6 y el 9% de 4 a 5, el 4% fue la primera vez que visitó alguna de esas mueblerías.

LA GESTIÓN DEL CONOCIMIENTO COMO ELEMENTO DE COMPETITIVIDAD EN LA INDUSTRIA MANUFACTURERA EN AGUASCALIENTES

Luis Aguilera Enríquez, Universidad Autónoma de Aguascalientes,
Cristyan Ahmed de Guadalupe Sandoval Robles, Universidad Antonio de Nebrija
José de Jesús Torres Ramírez, Universidad Antonio de Nebrija
R. Rodrigo Rodríguez Camacho, Universidad Autónoma de Aguascalientes

RESUMEN

La investigación se realizó vía encuesta a los gerentes de pequeñas empresas en el Estado de Aguascalientes, la muestra consistió en 159 empresas. Para el análisis de los datos se utilizó el análisis factorial y de regresión. Los resultados permiten identificar la magnitud de la influencia de la gestión del conocimiento, la actividad innovadora, los esfuerzos sobre responsabilidad social, la eficiencia productiva y los mecanismos de control financiero. Una de las principales contribuciones se da al identificar a la innovación en la gestión empresarial como elemento sustantivo para incrementar la competitividad empresarial. En segundo término se identificó a la gestión del conocimiento como factor que potencializa la mejora competitiva.

PALABRAS CLAVES: Innovación, Competitividad, Gestión del Conocimiento

KNOWLEDGE MANAGEMENT AND COMPETITIVENESS IN MANUFACTURING EN AGUASCALIENTES

ABSTRACT

The research was conducted via survey of managers of small businesses in the State of Aguascalientes, the sample consisted of 159 companies. For the analysis of the data was used factor analysis and regression. The results allow to identify the influence of knowledge management, innovation activity, social responsibility efforts, production efficiency and financial control mechanisms. One of the main contributions was identify innovation in business management as an essential element for increasing business competitiveness. Second was identified knowledge management as a factor that potentiates the competitive improvement.

KEY WORDS: Innovation, Competitiveness, Knowledge Management

INTRODUCCIÓN

Aguascalientes, con poco más de 1 millón de habitantes, se ubican en el lugar número 28 en cuanto a población a nivel nacional, con una tasa de crecimiento media anual de 2.1 %. En cuanto a aspectos económicos la proporción de la población de 14 años y más en edad disponible para la actividad económica es de 57.4%, (por debajo de la media nacional). En el presente trabajo de investigación se analizaron empresas de manufactura (PYMES) en Aguascalientes, asumiendo su importancia por los empleos generados, el número de empresas y la magnitud de actividad económica.

Tabla 1: Principales Ramas Económicas y su importancia en Aguascalientes

Rama económica	Lugar nacional
Fabricación de equipo de comunicación	2
Fabricación de maquinaria y equipo para el comercio y los servicios	2
Fabricación de componentes electrónicos	3
Fabricación de automóviles y camiones	5
Autotransporte de carga especializado	5
Confección de prendas de vestir	8
Fabricación de partes para vehículos automotores	10
Fabricación de productos de plástico	13

Fuente: Elaboración propia con datos de (INEGI, 2009)

Cuando se evalúa la situación competitiva de las empresas, surge la necesidad de analizar el entorno económico, aunque según González (2009) no siempre se le da la importancia correspondiente; primero porque es el resultado de la interacción de muchas variables, tanto de orden interno a la empresa y de aquellas que están presentes en el entorno empresarial. Cuervo (2004) sostiene que la creación de riqueza y el dinamismo de un país se ubican sobre la competitividad de sus empresas, lo que da pie a que los investigadores en ciencias económico- administrativas profundicen al respecto. En este sentido se realiza la presente investigación, con el objetivo de identificar la magnitud de la influencia de la gestión del conocimiento, la actividad innovadora, los esfuerzos sobre responsabilidad social, la eficiencia productiva y los mecanismos de control financiero. Aguascalientes es uno de los Estados más pequeños y su Producto Interno Bruto neto siempre debe ser valorado a la luz de la cantidad de habitantes.

Discusión Teórica

Martelo, Barroso, y Cepeda (2011) sugieren que cada vez más empresas entienden el valor para el cliente como un factor clave a la hora de buscar nuevas formas de lograr y mantener una ventaja competitiva. Debido a que crear valor conlleva la capacidad para implantar combinaciones de recursos que permitan desarrollar competencias y conocimiento, y que sean capaces de incrementar la eficiencia alcanzada en el uso de los recursos presentes en el sistema. Ello significa que en esencia el trabajo estratégico de los directivos es entender el entorno competitivo, (Dess & Lumpkin, 2003), (Bateman & Snell, 2004), y (Hill & Gareth, 2009) entre otros citan a (Porter, 1980), (Porter, 2008) como uno de los principales exponentes del análisis de las fuerzas competitivas, el punto de vista de Porter es que existen cinco fuerzas que determinan las consecuencias de rentabilidad a largo plazo de un sector industrial o país, la idea subyacente es que la empresa debe evaluar sus objetivos y recursos frente a éstas cinco fuerzas que rigen la competencia industrial. Aunque Porter no hace referencia a competitividad específica para empresas.

En primer lugar hay que reconocer que existen una fuerte relación entre la estrategia adoptada por la empresa y el entorno empresarial donde desarrolla sus actividades siguiendo la idea de

Markides (1999), para lo cual definirá cuáles son las características internas de la empresa que podrán ser utilizadas para la generación de ventajas competitivas. La responsabilidad social se ha presentado como una teoría ideológica donde en lo individual, grupal y organizacional existe una relación de correspondencia entre las actividades y la forma de proceder con respecto al medio ambiente y a la sociedad. Según (Pierick & Beekman, 2004) Responsabilidad Social es la configuración, en una empresa, de los principios de responsabilidad social, los procesos, las políticas, programas y resultados observables que se relacionan con el entorno social. Aunque a veces los esfuerzos se centran en la responsabilidad social a través de la caridad, la sostenibilidad, el cuidado del medio ambiente o impulso y mantenimiento de la paz social. Tales esfuerzos no implican la asignación de liderazgo empresarial, pero son elementos positivos para la relación que se establece entre empresarios, las instituciones de gobierno y la propia comunidad donde se realizan las actividades económicas. (Sandoval, 2011) Manteniendo la atención en los tres grupos básicos a considerar en la Responsabilidad Social, Economía, Sociedad y Medio Ambiente (ECODES, 2003). Según esta definición, ser socialmente responsable va más allá de cumplir estrictamente la legislación en los países en donde opera la empresa. Se trata de invertir más y mejor en aspectos tales como: el desarrollo del capital humano, la protección medioambiental o el fomento de las sociedades donde la empresa realiza sus actividades.

Significa aprovechar las oportunidades que esta visión ofrece para mejorar la competitividad e, incluso, identificar nuevas oportunidades de negocio. Autores como Huerta & Navas (2006), señalan que la entrada de una empresa hacia nuevas líneas de actividad, a través del desarrollo de procesos de negocios internos o adquisición, ocasiona cambios en su estructura administrativa, sistemas y otros procesos directivos. Según Orero (2006) el gerente con mayor potencial para hacer que su empresa sea eficiente y perdure en el tiempo fija su atención en:

- Mayor impulso a la formación, no sólo con una orientación tecnológica de los recursos humanos, sino también de gestión económica y empresarial.
- Una mayor intensificación de la colaboración y de la coordinación entre las diversas instituciones que impulsan el desarrollo del conocimiento en las nuevas tecnologías de información.

- Adecuar rápidamente las instituciones de asesoramiento e información para el desarrollo de las actividades gerenciales.
- Un sistema de gestión de calidad que sea proactivo y sea inclusivo, es decir la calidad se produce desde la entrada de la primera materia prima.
- Mantener un nivel de compromiso por parte del responsable de mantenimiento de equipos, involucrándolo en los logros de la organización y haciéndolo participe de los inconvenientes por demoras en la operación.

Zahra & Covin (1994), fueron pioneros al analizar la relación existente entre la innovación tecnológica y los resultados empresariales, identificando conceptos como la estrategia tecnológica, el liderazgo tecnológico, los recursos tecnológicos y las inversiones realizadas como factores que determinan los resultados empresariales. Por su parte Arbussa, Bikfalvi, y Valls (2004), señalan la generación de patentes como elemento diferenciador en la manera en que cada empresa asume una posición estratégica con respecto a la innovación, por considerarla como una estrategia de protección frente a competidores y posibles entrantes al sector y consiste en el desarrollo por parte de las empresas de un tipo de conocimiento tácito, de contexto específico, para dificultar su transmisión, y mantener así su ventaja competitiva. Según la investigación realizada por Weinzimmer, Nystrom, y Freeman (1998) una de las variables más comunes para identificar el comportamiento de la variable crecimiento está relacionada con el aumento en ventas. Debido más a un concepto de verificabilidad y practicidad en su medición. Para tal efecto se utilizan también elementos que provienen del análisis financiero como son:

- Flujos de efectivo.
- Tasa de Retorno de inversión
- Tasa de rotación de inventarios.
- Índices de aumento de actividad productiva.

La vía más usual para alcanzar el objetivo del crecimiento según Blázquez *et al* (2006) es la de tratar de obtener la mayor rentabilidad posible de los recursos internos de la empresa, a través del aumento de la productividad. Estas mejoras unidas a un mayor esfuerzo comercial conducen a un crecimiento de la propia empresa; en este caso el crecimiento se denomina interno u orgánico. Por otro lado, existe la posibilidad de alcanzar un mayor tamaño de la empresa a través de fusiones, concentraciones, absorciones y acuerdos de cooperación o alianzas con terceras empresas. En este caso se habla de crecimiento externo. Sin embargo persiste la dificultad de encontrar una línea de pensamiento donde confluyan la mayoría de los conceptos y de donde se pueda establecer una teoría clara que delimite los alcances y las relaciones que puedan existir entre cada variable involucrada.

METODOLOGÍA

La presente investigación es de tipo correlacional y se realizó en la ciudad de Aguascalientes con una muestra de 159 PYMES manufactureras (la ubicación de las empresas surgió de diferentes fuentes como el SIEM de la Secretaría de Economía, el listado de empresas ubicadas en los diferentes parques industriales y la información que se obtuvo de la CANACO y CANACINTRA en Aguascalientes), a las cuales se les aplicó un cuestionario validado mediante alfa de Cronbach (0.89) con 70 reactivos (88% en escala de Likert siendo 1 totalmente en desacuerdo y 5 corresponde a totalmente de acuerdo) y las restantes en preguntas dicotómicas. Las variables a medir son las actividades de responsabilidad social, la percepción de competitividad, la posición financiera (vía indicadores), el posicionamiento estratégico y la actividad innovadora. Primero se obtiene la correlación entre las variables, luego se utilizan los métodos de regresión (lineal y curvilínea) y el análisis factorial recomendado por Vences (1999) y Arribas (2004). La intención es determinar las características de influencia y relación entre las variables.

HIPÓTESIS

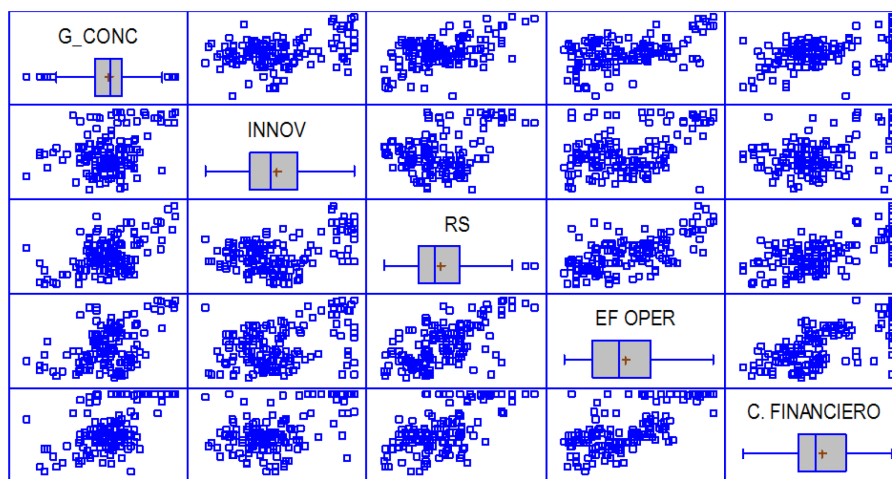

H₁: Incrementar los esfuerzos de Innovación tiene un impacto positivo en la Competitividad.

H₂: Incrementar los esfuerzos de Gestión del Conocimiento tiene un impacto positivo en la Competitividad.

RESULTADOS

La obtención de información vía encuesta requiere de cumplir algunos supuestos estadísticos como la normalidad y un elevado índice del alfa de Cronbach tal como recomiendan Pimienta (2000), Rodríguez (2006) y Malhotra (2008). De manera que el instrumento obtuvo un alfa de Cronbach de 0.89 (Oviedo & Campo, 2005) y las pruebas de normalidad cumplieron con el criterio (K-S) Kolmogórov-Smirnov. Falta señalar que las respuestas obtenidas fueron normalizadas utilizando el algoritmo de sustracción de la media poblacional y dividiéndolas entre la desviación standard (Malhotra, 2008). Con ello se logra obtener valores que carecen de dimensión y su interpretación se simplifica, en el caso de que se deseara evaluarlas en términos de los resultados de la encuesta se deberá regresarlas a la puntuación de 1 a 5. En primer término se calcularon las correlaciones entre las variables para confirmar que exista relación entre ellas. Los resultados expresados en el gráfico 2 permiten identificar que el mínimo de relación entre variables está dado por 0.40 para las variables innovación y gestión del conocimiento. Siendo todas significativas a 0.05

Gráfico 2: Correlación entre variables

Fuente: Elaboración propia usando Statgraphics ver. 16.1

Después de realizar el análisis de correlación se procedió a realizar el análisis de componentes principales donde Pérez y Medrano (2010) describen ampliamente la utilidad del análisis factorial desde el punto de vista de simplificar las cargas factoriales como elementos para posteriormente definir la importancia dada a las variables. En este estudio resultó que la mayor carga factorial correspondió al concepto de involucramiento en las actividades de responsabilidad social llevadas a cabo por la empresa. De la misma forma el menor valor correspondió a la expectativa de los propios gerentes sobre los posibles beneficios de llevar a cabo dichas acciones.

Tabla 3: Origen de Lineamientos / Descripción

	Carga Factorial				
Gestión de Conocimiento	0.015	0.067	0.183	0.859	0.096
	0.455	0.596	0.188	0.421	0.091
	0.031	0.176	0.126	0.858	0.003
	0.690	0.249	0.168	0.421	0.005
Innovación	0.945	0.173	0.145	0.012	0.051
	0.935	0.159	0.206	0.069	0.071
	0.877	0.163	0.280	0.143	0.066
Responsabilidad Social	0.228	0.591	0.146	0.381	0.374
	0.428	0.699	0.333	0.053	0.107
	0.077	0.609	0.339	0.116	0.464
	0.136	0.033	0.011	0.045	0.872
Eficiencia Productiva	0.258	0.532	0.603	0.213	0.047
	0.212	0.221	0.866	0.081	0.083

	0.081	0.253	0.720	0.377	0.242
Control Financiero	0.314	0.631	0.292	0.312	0.145
	0.367	0.778	0.343	0.023	0.039

Fuente: Elaboración propia usando Statgraphics ver. 16.1

Con la magnitud de las cargas factoriales y siguiendo los procedimientos realizados por De la Garza (1999), Aguilera et al (2011a) y Aguilera, González, y Rodríguez (2011b) se definieron las cargas porcentuales que expresan la importancia otorgada a cada uno de los factores. Se utilizó el método de componentes principales (1 sólo factor vía autovalores), con un KMO (Kaiser-Meyer-Olkin) de =0.914 y una varianza total explicada del 81%

Gráfico 3: Transformación de cargas factoriales a peso porcentual

Fuente: Elaboración propia usando Statgraphics ver. 16.1

Al haber realizado la interpretación del peso porcentual otorgado a las variables, se procedió a determinar la relación vía regresión curvilínea, puesto que una aproximación lineal no permite obtener conclusiones estadísticamente significativas del comportamiento de las variables.

Gráfico 4: Percepción de Competitividad vs Acciones de Gestión del Conocimiento

Fuente: Elaboración propia usando Statgraphics ver. 16.1

En la gráfica anterior se muestran dos zonas de comportamiento de la variable competitividad, en la zona baja se aprecia que aunque se realicen un número significativo de acciones relacionadas con la gestión del conocimiento, ello no impacta significativamente en el incremento de competitividad. Pero al acumular consistentemente un mayor número de acciones se logra el incremento de competitividad (zona alta) deseable por el gerente de empresa. Mientras que al realizar el mismo procedimiento para la variable innovación se observa un comportamiento similar, lo cual confirma la idea de que las acciones sobre esta variable se reflejan a mediano y largo plazo. La mejor curva que representa el comportamiento de las variables se dio entre Competitividad e Innovación con un R^2 de 0.69. En este sentido es destacable que a las demás variables los esfuerzos sobre responsabilidad social, la eficiencia productiva y los mecanismos de control financiero también se les aplicaron la misma metodología pero a pesar de mostrar un comportamiento similar, sus resultados de ajuste del modelo fueron inferiores a los encontrados para la variable innovación. Con ello se obtiene evidencia empírica de la importancia de la innovación hacia el mejoramiento competitivo.

Gráfico 5: Innovación vs Competitividad

Fuente: Elaboración propia usando Statgraphics ver. 16.1

Al analizar las hipótesis de la investigación se encontró la siguiente evidencia empírica para cada una de las hipótesis planteadas:

Hipótesis		Resultado
H₁:	Incrementar los esfuerzos de Innovación tiene un impacto positivo en la Competitividad.	NO RECHAZAR Existe una zona en donde la acumulación de acciones de innovación favorece a la competitividad
H₂:	Incrementar los esfuerzos de Gestión del Conocimiento tiene un impacto positivo en la Competitividad.	RECHAZAR Si bien existe una zona en donde la acumulación de acciones de gestión del conocimiento incrementa la posición competitiva, no es estadísticamente satisfactoria.

CONCLUSIONES

Las empresas necesitan identificar los elementos que favorecen la mejora competitiva donde Aguilera et al (2011b) señalan que no es un proceso simple, sino más bien un proceso acumulativo de experiencia y análisis de su posicionamiento estratégico. Así el mejoramiento competitivo sigue la premisa señalada por Toh & Tan (1998) de que el reconocimiento de las capacidades de la propia empresa es la base para la formulación de estrategias tendientes a incrementar los esfuerzos por identificar oportunidades de innovación, situación similar para la variable de gestión del conocimiento. Por lo que los gerentes de empresa necesitan afinar como señala Andrews (1998) sus habilidades para detectar cambio en el entorno competitivo y contrastarlos contra sus verdaderas capacidades (Prahalad & Hamel, 1990) y (Álvarez, 2003). Si bien es necesario tomar en cuenta las recomendaciones vertidas en este documento, Mukherji & Mukherji (2010) afirman que deben existir un mínimo de capacidades presentes en la empresa para facilitar la implementación de mejoras en cualquier departamento. Okunnu, Oyedijo, y Olateju (2010) y Perdomo (2003) señalan la necesidad de ubicar en primera instancia la realidad empresarial dentro del contexto de las acciones realizadas por las empresas competidoras, puesto que el tamaño y estructura empresarial determina las posibilidades de acción. Por lo que si bien la innovación es un camino accesible, Kaplinsky y Santos (2005) así como Claver, Quer, & Molina (2005) relacionan las metas de la empresa con sus capacidades humanas para realizar innovaciones. De no existir un nivel adecuado de habilidades en el personal como indica Suk Park (2003), se volverá virtualmente imposible imponer una nueva estrategia tendiente a mejorar e innovar en la propia gestión empresarial.

LA ARMONIZACIÓN CONTABLE HACIA LA TRANSPARENCIA Y RENDICIÓN DE CUENTAS EN MÉXICO

Esther Eduvigis Corral Quintero, Universidad Autónoma de Baja California

Loreto María Bravo Zanoguera, Universidad Autónoma de Baja California

Plácido Valenciana Moreno, Universidad Autónoma de Baja California

Sósima Carrillo, Universidad Autónoma de Baja California

RESUMEN

El presente artículo deriva de una investigación descriptiva de tipo documental, en la que se estudió la armonización contable que tiene en proceso de implementación el gobierno de México, la cual tiene como objetivo que las entidades públicas generen información financiera, presupuestal y programática confiable que transparente las acciones del gobierno permitiendo la rendición de cuentas en tiempo real, así como que en base a esta información se evalúe la asignación de presupuestos basados en resultados. Al momento, el gobierno mexicano tiene un avance en promedio del 70%, quedando pendiente además de terminar el proceso de implementación, el desarrollar los mecanismos necesarios para dar seguimiento al cumplimiento de los objetivos planteados.

PALABRAS CLAVE: Armonización contable, entidades públicas, rendición de cuentas, información financiera.

ACCOUNTING HARMONIZATION TO TRANSPARENCY AND ACCOUNTABILITY IN MEXICO

ABSTRACT

This article derives from a descriptive of documentary, which was studied accounting harmonization which is being implemented by the Government of México, which aims to generate public entities financial, budgetary and programmatic transparent reliable government actions accountability allowing real-time, and that based on this information to evaluate the allocation of results-based budgeting. At the moment, México have an advance of 70% on average, also pending completion of the implementation process, developing mechanisms to monitor compliance of the objectives.

KEYWORDS: Accounting harmonization, public entities, accountability, financial information.

INTRODUCCIÓN

La información financiera es utilizada en general para la toma de decisiones de cualquier organismo sea público o privado. Ésta es obtenida de los sistemas contables implementados y es regulada por organismos especializados para que pueda ser utilizada y usada con confiabilidad y oportunidad. Las Normas de información financiera (NIF), son emitidas por el Consejo Mexicano de Normas de Información financiera (CINIF), representan lineamientos y normas que regulan la elaboración y presentación de la información financiera. Las NIF pretenden la armonización de las normas utilizadas por los diferentes sectores de la economía, siendo el objetivo de la armonización de la normatividad contable generar información financiera comparable, transparente y de alta calidad, sobre el desempeño

de las entidades económicas. Desde su creación el CINIF estableció dentro de sus objetivos hacer convergente la normatividad contable del sector gubernamental en México, en el 2009 en Londres en la cumbre de la profesión contable, se asume el compromiso de establecer normas contables para el sector público. De acuerdo a las NIF los objetivos de la información financiera, dependen de las necesidades del usuario, y éstas a su vez de la naturaleza de las actividades que realiza la organización.

La información financiera generalmente son los estados financieros en los cuales reflejan la situación financiera (sus recursos y la fuente de dichos recursos), los resultados que se obtuvieron por la actividad realizada y cualquier declaración que sea necesaria para interpretar de forma adecuada el desempeño que obtuvo la entidad de que se trate. El sector público no está exento de requerir información financiera ya que ésta “es necesaria para mantener la disciplina fiscal, tomar decisiones sobre la asignación de recursos, optimizar la eficiencia operativa e incrementar la transparencia sobre el uso del erario público.” (Vargas, 2010) En los últimos años, se ha hecho evidente la necesidad de que la información financiera sea un medio para el rendimiento de cuentas a través de la transparencia de la misma, especialmente en el sector gubernamental, razón por la cual los gobiernos de todos los países han dispuesto diversas reglamentaciones para dar cumplimiento a los reclamos de la sociedad.

México, en atención a estos requerimientos y a los organismos internacionales, ha establecido la estrategia de la “Armonización Contable”, con la cual pretende homogeneizar la información financiera y presupuestal que es generada en los tres niveles de gobierno: federal, estatal y municipal. El presente análisis tiene como fin evaluar si la estrategia de la Armonización contable es viable y que avances se han tenido hasta el momento en su implementación y en todo caso, cuales han sido los obstáculos que se les han presentado y como los han ido solucionando.

REVISIÓN LITERARIA

De los conceptos

Para entender de que trata la Armonización contable, se hace necesario se clarifiquen algunos conceptos tales como transparencia y rendición de cuentas, sector público y fiscalización, tomando en consideración lo señalado por la Secretaría de Hacienda y Crédito Público (SHCP) y la Ley de contabilidad. Armonización Contable: “Se trata del proceso de homogeneización y modernización de los sistemas de información contable para los tres ámbitos de gobierno, donde se contemplan marcos jurídicos similares, principios y normas contables comunes, sistemas de administración financiera, registro contable (incluyendo la descripción completa y estandarizada del patrimonio) y modelos de información de cuentas comparables (comparables) para controlar, evaluar y fiscalizar las cuentas públicas de manera eficaz y eficiente”. (SHCP, 2012). De acuerdo con la Ley de contabilidad, “Armonización es la revisión, restructuración y compatibilización de los modelos contables vigentes a nivel nacional, a partir de la adecuación y fortalecimiento de las disposiciones jurídicas que las rigen, de los procedimientos para el registro de las operaciones, de la información que deben generar los sistemas de contabilidad gubernamental, y de las características y contenido de los principales informes de rendición de cuentas”. Fiscalización: “Acción de vigilar a detalle el buen uso del patrimonio público. La revisión de la aplicación de recursos y programas públicos comprueba que los montos lleguen al destino programado y que las acciones de gobierno se cumplan conforme a lo legalmente establecido”. (SHCP, 2012)

Rendición de Cuentas: “Consiste en informar y explicar a los ciudadanos las acciones realizadas por el gobierno de manera transparente y clara para dar a conocer sus estructuras y funcionamiento, y por consecuencia, ser sujeto de la opinión pública. Es una tarea obligada y permanente, con actores claramente identificados que llevan a cabo la vigilancia, el control y la sanción sobre los contenidos sustantivos del ejercicio gubernamental, en todas sus facetas, en un entorno legal y democrático explícito y abierto, que identifica con claridad las obligaciones que cada servidor público debe cumplir”. (SHCP,

2012) Sector Público Federal: “Es el conjunto de órganos administrativos mediante los cuales el Estado cumple o hace cumplir la política y voluntad expresada en las leyes fundamentales del país. Incluye todos los órganos administrativos de los poderes legislativo, ejecutivo y judicial federales y organismos públicos autónomos. Comprende por lo mismo al Sector Central y al Sector Paraestatal de control presupuestario directo e indirecto, excluye la administración de los gobiernos locales”. (SHCP, 2012)

El sector público en México está constituido por el Poder Legislativo, Poder Ejecutivo, Poder judicial y organismos públicos autónomos, instituciones, empresas y personas que realizan alguna actividad económica en nombre del Estado y que se encuentran representadas por el mismo, es decir, que abarca todas aquellas actividades que el Estado posee o controla (Artículos 40 y 73 constitucional).

Transparencia: es el acto que consiste en abrir la información gubernamental al público, al escrutinio de la sociedad. La transparencia no implica un acto de rendir cuentas a una persona en específico, sino la práctica democrática de colocar la información gubernamental en la vitrina pública, para que la gente pueda revisarla, analizarla y en su caso, usarla como mecanismo de sanción. (Ugalde, 2002)

Transparencia: Según la Organización para la Cooperación y el Desarrollo Económicos (OCDE), se refiere a un entorno en el que los objetivos nacionales, el marco institucional, legal y económico, las decisiones de política y su justificación, los datos e información relacionada con las políticas monetarias y financieras, y la forma en que las agencias rinden cuentas, se proporcionan al público de una manera comprensible, accesible y oportuna. (SHCP, 2012)

De La Armonización Contable

La información financiera del sector público; de acuerdo con estudios realizados por diversos autores a petición del Banco Mundial; es necesaria para “mantener la disciplina fiscal, tomar decisiones sobre la asignación de recursos, optimizar la eficiencia operativa e incrementar la transparencia sobre el uso del erario público” (Vargas 2010). La información financiera es considerada como una herramienta útil que al ser utilizada y analizada de manera adecuada debe permitir eficientar la calidad y aplicación del gasto público, siendo entonces necesario que sea comprensible, comparable, oportuna, completa y confiable.

Para efectos de la Ley de contabilidad, la información financiera esta integrada por “la información presupuestaria y contable expresada en unidades monetarias, sobre las transacciones que realiza un ente público y los eventos económicos identificables y cuantificables que lo afectan, la cual puede representarse por reportes, informes, estados y notas que expresan su situación financiera, los resultados e su operación y los cambios en su patrimonio”.

En términos generales, la información financiera pública se puede clasificar en información de índole presupuestaria y de índole contable. La diferencia fundamental entre ambas se encuentra en que la información financiera presupuestaria se rige por la parte legal del presupuesto público, mientras que la contabilidad financiera da forma a la situación económica al registrar y presentar los resultados de los hechos realizados. La reforma de armonización contable en México, debe ser comprendida como la forma en la que el gobierno pretende; por una parte, modernizar y uniformar las políticas y criterios de registro y presentación de información presupuestaria y contable del sector público; y por otra parte, que la información financiera cumpla con los atributos ya mencionados para que cumpla también con la generación de una adecuada toma de decisiones y cumplir con los requisitos de transparencia y rendición de cuentas. Al contar con un sistema de información financiera confiable, puede ser utilizado como parte de lo que se conoce como la base del presupuesto por resultados y la evaluación de las actividades realizadas como información del desempeño. La Armonización contable pretende generar grandes beneficios; sin embargo, el proceso de implementación no ha terminado y se tiene que considerar una adecuada retroalimentación que permita hacer los ajustes oportunos que den los resultados esperados.

Proceso De Implementación De La Armonización Contable

A efecto de cumplir con la obligación de dar cuenta y razón de los actos de gobierno, se publicó en el 2002 en el Diario Oficial de la Federación, la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental, esta Ley tiene como finalidad proveer lo necesario para garantizar el acceso de toda persona a la información en posesión de los Poderes de la Unión, los órganos constitucionales autónomos o con autonomía legal, y cualquier otra entidad federal.

En mayo 2008 se publicó en el Diario Oficial de la Federación, la aprobación por parte del Congreso de la Unión de la modificación a la fracción XXVIII del Artículo 73 Constitucional, otorgando facultades al Poder Legislativo para expedir leyes que regulen la práctica contable en los tres órdenes de gobierno, estableciendo con ello, las bases jurídicas para la armonización contable y de sus cuentas públicas.

Con base en lo anterior, el 1 de enero del 2009 entró en vigor la Ley General de Contabilidad Gubernamental (Ley de contabilidad), la cual, contempla como principal objetivo “establecer los criterios generales que regirán la contabilidad gubernamental y la emisión de información financiera de los entes públicos para lograr su adecuada armonización”.

A efectos de que el proceso de armonización se diera de la mejor forma posible, en la propia Ley de contabilidad establece en su artículo segundo transitorio la instalación de un Consejo Nacional de Armonización Contable (CONAC), que será el órgano de coordinación para la armonización de la contabilidad gubernamental en todos los niveles de gobierno. De acuerdo con lo publicado en la Ley de contabilidad, ésta y el Consejo se “erigen en el pilar fundamental de la armonización contable y la emisión de información financiera, con la finalidad de contar con información homogénea de las finanzas públicas, que sea factible de ser comparada y analizada bajo criterios comunes, facilitando el escrutinio público y las tareas de fiscalización”. La Ley de Contabilidad en términos generales señala que:

- Facilitará a los entes públicos el registro y la fiscalización de los activos, pasivos, ingresos y gastos y, en general, permitirá medir la eficacia, economía y eficiencia del gasto e ingresos públicos y al establecer en la misma la obligación de publicar su información financiera.
- Es de observancia obligatoria para los poderes Ejecutivo, Legislativo y Judicial de la Federación, entidades federativas; los ayuntamientos de los municipios; los órganos político-administrativos de las demarcaciones territoriales del Distrito Federal; las entidades de la administración pública paraestatal, ya sean federales, estatales o municipales y los órganos autónomos federales y estatales.
- Los gobiernos estatales se coordinarán con los municipales para que éstos armonicen su contabilidad con base a lo dispuesto en esta Ley.
- Los entes públicos aplicarán la contabilidad gubernamental para facilitar el registro y la fiscalización de los activos, pasivos, ingresos y gastos y, en general, contribuir a medir la eficacia, economía y eficiencia del gasto e ingresos públicos, la administración de la deuda pública, incluyendo las obligaciones contingentes y el patrimonio del Estado.
- La contabilidad gubernamental determinará la valuación del patrimonio del Estado y su expresión en los estados financieros.

Para darle forma a lo establecido en la Ley de contabilidad, se publicó también el Marco Conceptual de Contabilidad Gubernamental (MCCG), siendo éste “la base del Sistema de Contabilidad Gubernamental (SCG) para los entes públicos, constituyéndose en el referente teórico que define, delimita, interrelaciona

e integra de forma lógico-deductiva sus objetivos y fundamentos. Además, establece los criterios necesarios para el desarrollo de normas, valuación, contabilización, obtención y presentación de información contable y presupuestaria, en forma clara, oportuna, confiable y comparable, para satisfacer las necesidades de los usuarios”.

Parte importante del MCCG son los “Postulados básicos de contabilidad gubernamental”, considerándose éstos como los elementos fundamentales que configuran el SCG y tiene la finalidad de uniformar los criterios, métodos y procedimientos de la práctica contable. En los artículos transitorios de la Ley de contabilidad se señalan como principales momentos de cumplimiento los siguientes: Inicio de la vigencia fue el primero de enero de 2009 para todas las entidades de gobierno. La implementación fue y será de manera paulatina de la siguiente forma: La Federación y las entidades federativas, comprendiendo las dependencias constituidas en los poderes Ejecutivo, Legislativo y Judicial de cada nivel de gobierno, tienen los siguientes momentos regulados:

- Al 31 de diciembre de 2010, deberán cumplir con la emisión del plan de cuentas, postulados básicos, reglas de registro y valoración del patrimonio, catálogos de cuentas y manuales de contabilidad.
- Al 31 de diciembre de 2011, deberán tener realizados los registros contables con base acumulativa y en apego a postulados básicos de contabilidad gubernamental armonizados. Los libros de diario, mayor e inventarios y balances, los catálogos de cuentas y manuales de contabilidad y emitir información contable, presupuestaria y programática.
- Al 31 de diciembre de 2012, deberán contar con los registros contables del patrimonio y su valuación, generar indicadores de resultados sobre cumplimiento de metas y publicar información contable, presupuestaria y programática.

Los ayuntamientos de los municipios emitirán información periódica y elaborarán sus cuentas públicas a más tardar el 31 de diciembre de 2012. En lo relativo a la Federación, las entidades y los órganos autónomos, la armonización contable, debería estar funcionando en tiempo real a partir del 31 de diciembre de 2011. Las entidades paraestatales del gobierno federal, las entidades y los órganos autónomos de las entidades federativas, los ayuntamientos de los municipios y los órganos político-administrativos del Distrito Federal deberán estar funcionando en tiempo real al 31 de diciembre de 2012. Aspecto importante a considerar en la Armonización contable, es lo relativo a los inventarios de bienes muebles e inmuebles de la federación y entidades federativas, debiendo estar integrados al 31 de diciembre de 2011. En octubre de 2012, se publicó la última reforma a la Ley de contabilidad, la cual comprende:

- Reglas para armonizar la información financiera del ciclo hacendario, relativa a la programación, presupuesto, ejercicio, seguimiento, evaluación y rendición de cuentas de los recursos públicos.
- La SHCP y las Secretarías de finanzas o sus equivalentes de los gobiernos locales, facilitarán el acceso a la información financieros en sus páginas de Internet.
- Los municipios menores a 25 mil habitantes, serán auxiliados en la integración de su información financiera así como en la difusión de la misma.
- Señala rubros específicos de información que deben incluir los entes públicos en sus leyes de ingresos y presupuestos de egresos, entre otros.

METODOLOGÍA

El presente trabajo corresponde a una investigación descriptiva de tipo documental ya que lo que se pretendió identificar son los principales pasos que se siguieron en la implementación de la Armonización contable en el caso de México, así como aquellos pasos que aún están en proceso. También, se pretendió identificar de qué manera se cumple con la Ley de transparencia y rendimiento de cuentas.

Los pasos que se siguieron son:

Primero.- Se dio lectura a documentación básica, así como leyes y reglamentos establecidos para la implementación de la Armonización contable en México.

Segundo.- Se analizó la información recabada identificando los períodos que correspondieron a la implementación de la Armonización contable en México y la forma en que se le dio seguimiento a cada uno de éstos pasos y procedimientos.

Tercero.- Se dio lectura y se analizaron los informes emitidos por la CONAC, en los cuales se da a conocer la situación que guarda la Armonización contable en México.

Cuarto.- Se investigó en dependencias de gobierno la forma en que se ha dado el proceso de implementación de la Armonización contable en México.

Quinto.- Se emitieron resultados y conclusiones.

RESULTADOS

Del análisis realizado se obtuvieron los siguientes resultados: La armonización contable en México surge como una estrategia para dar cumplimiento a la transparencia y rendimiento de cuentas que tienen los gobiernos con sus gobernados a través de la obligación de publicar los informes financieros y presupuestales que surjan de la contabilidad en tiempo real. Pretende homogeneizar los procedimientos contables y la información financiera que emana de ésta en todos los niveles de gobierno: federal, estatal y municipal; para permitir la toma de decisiones asertiva considerando la confianza, oportunidad y comparabilidad que se puede gestar de esta homogeneización.

De acuerdo con información publicada por la CONAC, al 31 de diciembre de 2011 se cumplió con lo establecido para la Federación y entidades federativas, relativo a la implementación de los procedimientos contables de registro y publicación de información. Lo anterior está avalado por las publicaciones en las páginas de Internet de los gobiernos de diversas entidades federativas. Queda pendiente lo relativo a los municipios con menos de 25 mil habitantes, ya que no cuentan con recursos suficientes para establecer un Sistema de contabilidad como el requerido, razón por la cual se dio la modificación a la Ley de contabilidad y se les estuvo otorgando recursos financieros por parte de la Federación. También queda pendiente el diseño e implementación de un Sistema de contabilidad uniforme, el cual será proporcionado sin costo. Se diseñó un modelo de evaluación que deberá concluir a más tardar el 30 de noviembre del año en curso. El Secretario Técnico del CONAC pondrá a disposición de los entes públicos un aplicativo para recoger e integrar la base de datos del diagnóstico, la evaluación, así como para integrar el inventario de recomendaciones y compromisos, incluido sus plazos de ejecución y los criterios de seguimiento.

El Secretario Técnico del CONAC presentará un informe con los resultados en la Primera Sesión del CONAC del año 2013. En cuanto a la capacitación de los procesos que conlleva la armonización contable, al 2012 se generaron apoyos para que todos los participantes en la misma estén debidamente capacitados. De entrevista a dependencias de gobierno, la información ha fluido y se han establecido los mecanismos normados y pertinentes, sin embargo no se dio un proceso de sensibilización a través de una adecuada capacitación que les permitiera participar de forma más asertiva en todo este proceso.

CONCLUSIONES

En términos generales, se concluye que la armonización contable:

Primero.- Permitirá que se de la homogeneización en la información financiera en la Federación y las entidades federativas en los tiempos establecidos.

Segundo.- Para el caso de los municipios con menos de 25 mil habitantes, deberán ser analizadas con mayor profundidad sus problemáticas para determinar si es necesario el diferimiento del cumplimiento de las fechas establecidas.

Tercero.- Se tiene un avance en promedio del 70% en las entidades federativas y dependencias a nivel federal, han quedado rezagados en este proceso los municipios.

Tercero.- En el caso del seguimiento, es necesario poner especial énfasis en el método de diagnóstico para tener información que permita tomar decisiones asertivas.

RESUMEN

Las pequeñas y medianas empresas (PyMES) en el país son una fuente de empleos así como de generación de riqueza, uno de los problemas importantes en el control de la información con respecto al desarrollo y consolidación de estas PyMES es en general la falta de agrupación de las misma por el giro económico en que cada una se desarrolla y además de no contar con información general para este control, por lo que la presente investigación propone el desarrollo de una metodología que generará un inventario de negocios de PyMES en la ciudad de Agua Prieta, en el estado de Sonora, México donde se sectorizará la toma de una serie de encuestas donde se recabará la información necesaria para iniciar este inventario, esta información se recabará de la aplicación de encuestas y entrevistas a los propietarios o encargados de los negocios, buscando demostrar que la información generada podría ser considerada para la definición de estrategias en beneficio de las PyMES preferentemente en relación a su creación y/o consolidación. El aporte importante de esta investigación es que los organismos educativos como el Instituto Tecnológico de Agua Prieta, los organismos gubernamentales como Desarrollo Económico de Agua Prieta, asociaciones civiles como APSON Visión 20-30 y las camaras de comercio como CANACINTRA Agua Prieta, busquen permanentemente el desarrollo y progreso de las PyMES de este municipio. Se busca proporcionar estrategias para la toma de decisiones para el municipio de Agua Prieta y en las dependencias mencionadas, en relación a generación y/o consolidación de PyMES, siendo su principal aportación la generación de empleo, a través de las empresas de tipo microempresarial.

PALABRAS CLAVES: SMEs, business inventory, shared strategy, education sector, government, industry.

STRATEGY THE EDUCATION, BUSINESS AND GOVERNMENT, FOR THE GENERATION AND CONSOLIDATION OF SMALL AND MEDIUM ENTERPRISES IN THE MUNICIPALITY OF AGUA PRIETA, SONORA MEXICO

ABSTRACT

Small and medium enterprises (SMEs) in the country are a source of employment and wealth generation, one of the major problems in the control of information regarding the development and consolidation of these SMEs is generally a lack of clustering the same for the economic turnaround that each develops and besides having no overview for this control, so this research proposes the development of Businesses, seeking to demonstrate that the information generated could be considered for the definition of strategies

for the benefit of SMEs preferably in relation to the creation and / or consolidation. The major contribution of this research is that educational agencies and the Technological Institute of Agua Prieta, government agencies such as Economic Development Agua Prieta, civil associations as Apson Vision 20-30 and the chambers of commerce as CANACINTRA Agua Prieta, looking permanently development and progress of SMEs in this country it seeks to provide strategies for making decisions for the town of Agua Prieta and the offices mentioned in relation to generation and/or consolidation of SMEs, whose main contribution to employment generation through micro-enterprise type companies.

INTRODUCCION

Es evidente que en México en las últimas décadas, el entorno macroeconómico de crisis recurrentes, ha significado que se le asigne la máxima prioridad al restablecimiento de las condiciones de estabilidad financiera, en detrimento, pese a su importancia, de las cuestiones relacionadas con la política regional. El desarrollo no se da en lo abstracto, sino que se manifiesta visiblemente en las regiones, donde del análisis de las mismas y de la identificación y comprensión de los impactos, obtenemos un mejor entendimiento de las condiciones necesarias y de las limitantes presentes para alcanzar el nivel de desarrollo deseado, dadas estas condiciones se puede definir que “Una unidad económica de producción y decisión que, mediante la organización y coordinación de una serie de factores (capital y trabajo), persigue obtener un beneficio produciendo y comercializando productos o prestando servicios en el mercado” (Andersen, 1999). Por lo que de manera muy general todas las pequeñas y medianas empresas (PyMES) comparten casi siempre las mismas características, por lo tanto, se podría decir, que estas son las características generales con las que cuentan las PyMES (Méndez, 1996).

Es importante que los recursos necesarios para que estas empresas de pequeño y mediano tamaño operen sea proporcionado por una o dos personas que establecen una sociedad. Para México, nuestro Estado y la localidad, no hay duda alguna que las PyMES son un eslabón fundamental, indispensable para el desarrollo. Contamos con una importante base de Micro, Pequeñas y Medianas empresas, claramente más sólida que muchos otros países del mundo, debemos aprovecharla para hacer de eso una fortaleza que haga competitivo al país, que se convierta en una ventaja real para atraer nuevas inversiones y fortalecer la presencia de productos mexicanos tanto dentro como fuera de nuestra nación y podemos pretender que en Agua Prieta se apoye en mayor medida al crecimiento y/o consolidación de PyMES de diversos giros, para fortalecer la economía local y regional. Es una tarea de Instituciones de Educación Superior, empresarios, las Cámaras, así como de la sociedad en su conjunto, exigir que el gobierno establezca y ejecute políticas públicas que sienten condiciones adecuadas para alentar la competitividad de las empresas, especialmente de las PyMES. La confianza en las autoridades responsables es fundamental para que las políticas públicas den lugar a mayores inversiones privadas. Es indispensable apoyarlas para seguir creciendo pero sobre todo para fortalecerse, tecnificarse e integrarse de mejor manera en el aparato productivo nacional. Nuestra aportación es la realización de un inventario de negocios en conjunto con otras entidades de la localidad, que sirva como información confiable para determinar estrategias municipales en pro de la creación y consolidación de las PyMES.

Como se muestra en la tabla 1, tenemos la clasificación que se tomara como base en el diseño de los mecanismos de recolección de información para generar el inventario de negocios, la parte de tamaño como micro, pequeña y mediana empresa, dependiendo de el número de trabajadores y monto de ventas, permitirá una mejor clasificación de las empresas por giro económico.

Tabla 1: Nueva Clasificación de Micro, Pequeñas y Medianas Empresas a partir del 30 de junio de 2009 por Secretaría de Economía.

Tamaño	Sector	Número de trabajadores	Monto de ventas anuales (mdp)	Tope máximo combinado*
Micro	Todas	Hasta 10	Hasta \$4	4.6
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	93
	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	235
	Servicios	Desde 51 hasta 100		
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

Clasificación utilizada para determinar el tamaño de las empresas de acuerdo a su número de empleados y sus ventas.

REVISION LITERARIA

La tendencia de la economía global trae como consecuencia grandes oportunidades de negocios no solo para las grandes corporaciones sino también para las pequeñas empresas que actualmente han cambiando la imagen tradicional que se tenía de ellas de negocios domésticos al considerar como sus mas grandes desafíos el crecimiento de grandes comercios, el avance de las tecnologías de la información y telecomunicaciones y la misma globalización (Longenecker,2001).

Para identificar la importancia de la PyMES en México, analizaremos en principio su significado, el autor define PyMES como: “Una Unidad Económica de Producción y Decisiones que, mediante la Organización y coordinación de una serie de Factores (Capital y Trabajo), persigue obtener un beneficio produciendo y comercializando productos o prestando servicios en el mercado” (Arthur Anderson,1999). En la actualidad el 99.8% de las empresas mexicanas son Micro, pequeñas y medianas, de este monto el 90% son microempresas, la totalidad de MIPYMES dan empleo al 70% de la población económicamente activa ya que “el nuevo orden económico resulta de la acción de miles de empresas -la mayoría pequeñas- que tratan nuevas ideas, nuevos productos, nuevos servicios, nuevos procesos en un mercado cambiante” (Varela R, 2008). Agua Prieta cuenta con una población aproximada de 80,000 habitantes de los cuales cerca de 35,000 personas conforman la población económicamente activa. Por lo que una tarea de las Instituciones de Educación Superior, empresarios, las cámaras de comercio, así como de la sociedad en su conjunto, es exigir que el gobierno establezca y ejecute políticas públicas que sienten condiciones adecuadas para alentar la competitividad de las empresas, especialmente de las PyMES. La confianza en las autoridades responsables es fundamental para que las políticas públicas den lugar a mayores inversiones privadas. Es indispensable apoyarlas para seguir creciendo pero sobre todo para fortalecerse, tecnificarse e integrarse de mejor manera en el aparato productivo nacional.

La realización de un inventario de negocios liderado por el Instituto Tecnológico de Agua Prieta en conjunto con otras entidades de la localidad, busca generar información confiable para determinar estrategias municipales en pro de la creación y consolidación de las PyMES. La ubicación de Agua Prieta al noroeste del estado de Sonora, su ubicación fronteriza, con una gran riqueza cultural y posición cerca de un comercio emergente como lo es el de Estados Unidos de America, representa un espacio de privilegio para el trabajo y la exportación de productos, abriendo una posibilidad para la creación de PyMES con giros económicos tanto de servicios como de productos. Destacandose el estado de Sonora cómo semillero de líderes, de hombres y mujeres emprendedoras, independientes, forjados en una autonomía.

DEMOGRAFÍA

El comportamiento de la población según los censos de 1980, 1990 y las cifras del censo de población y vivienda 2000 elaborados por el INEGI, presenta lo siguiente:

Tabla 2: Población y tasa de crecimiento de Agua Prieta, Sonora

Población			Tasa de Crecimiento %)	
1980	1990	2000	1990-1980	1990-2000
34,380	39,120	61,944	1.3	4.74

Fuente: INEGI Censo General de Población y Vivienda 1980-1990 y 2000

Aspectos Demográficos

La población económicamente activa (P.E.A.) del Municipio es de 23,353 habitantes, de los cuales 23,144 tienen ocupación y 209 se encuentran desocupados. De las personas ocupadas 955 se dedican al sector primario, 10,182 al sector secundario, 11,266 al terciario, 741 no especifican actividad y 19,788 habitantes son económicamente inactivos. En este municipio son relevantes la Agricultura, la Ganadería, la Apicultura, la Explotación Forestal en baja escala y la Industria, básicamente Maquiladora. En 1997 la infraestructura turística, constaba de 10 hoteles y moteles con 316 habitaciones. Actualmente existen 14 establecimientos que ofrecen 455 habitaciones. La localización geográfica de Agua Prieta es un punto clave para el desarrollo de la industria maquiladora, lo cual le permite tener acceso rápido a los estados del sureste y de la costa del pacífico de la Unión Americana. Se encuentra a 322 Km. de la ciudad de Phoenix, capital de Arizona y a 377 Km. De Hermosillo, capital del estado de Sonora. Al este de Agua Prieta se encuentra Ciudad Juárez, Chihuahua que a su vez es frontera con la ciudad del Paso, Texas centros urbanos que en los últimos años han tenido un crecimiento económico de primer orden. Para el logro del objetivo planteado para el desarrollo regional, las estrategias regionales que marcarán la acción del gobierno estatal son:

- Impulso a la incubación de empresas
- Reconversión y diversificación productiva.
- Incremento en la competitividad.
- Reactivación de las actividades y economías regionales.
- Especialización selectiva en áreas con ventajas competitivas.
- Desarrollo de encadenamientos productivos, especialmente en las actividades primarias.
- Impulso, transferencia y difusión de la investigación y de la tecnología.
- Programas de inversión y financiamiento a las actividades productivas.
- Impulso a las actividades turísticas.
- Vinculación y capacitación educativa para actividad económica.

Las Instituciones de educación superior como lo es el Instituto Tecnología de Agua Prieta, saben del compromiso que se tiene en contribuir con su parte al logro de metas y objetivos en beneficio de la comunidad, regios y país.

Agua Prieta es un lugar atractivo para la inversión, cuenta con:

- Suficiente terreno plano
- 2 parques industriales funcionando
- Gas natural
- Mano de obra calificada
- Somos el municipio más cercano a las principales carreteras de México y EU
- Facilidades en los trámites de exportación y el puerto de entrada a la ciudad de Douglas, Arizona.
- El cruce fronterizo es uno de los más ágiles, tan solo de 15 a 20 minutos en ambos países.
- Estadísticas de INEGI, comprueban que el 96.3 % de la población cuenta con educación básica, lo que asegura mano de obra calificada.
- El 94 % del municipio cuenta con infraestructura en Agua y Drenaje.

- Nuestro Índice mensual de rotación de personal es el mas bajo, entre 3.0% a 3.5% comparado con
- Municipios aledaños con un estimado del 5.1% mensual.
- El municipio de Agua Prieta produce 258 Megawatts, casi 10% mas de lo que se produce en Hermosillo, y tiene en proyecto una planta generadora de luz, que produciría cerca de 500 Megawatts más.

Tabla 3: Características de Agua Prieta

Población	110,000 habitantes
Agencias Aduanales	8 oficinas
Compañías de transporte de carga	6 compañías
Compañías de auto transporte	6 compañías
Puerto de altura	600 Km.
Altitud	1,402 metros sobre el nivel del mar
Derechohabientes del IMSS	18,000 personas
Economía manufacturera	208 unidades, 9,225 empleados
Economía comercio	790 unidades, 1990 empleados
Inversión en vivienda (Infonavit)	10, 660 m.n.
Alumnos inscritos	13,578
Maquiladoras	30 industrias

Fuente: www.ceesonora.org.mx Como se muestran en la tabla 3 Agua Prieta cuenta con todas las características relevantes para ser un gran centro de comercio así como de generación de PyMES, ya que el terreno es suficiente y los servicios de comunicación y transporte son relevantes.

Entre los principales aspectos que inciden en la economía de Agua Prieta, están su cercanía con los Estados Unidos de Norteamérica y con ello, su importancia en el contexto internacional. La globalización de la economía ha ocasionado un importante tránsito de mercancías y personas con la economía más poderosa del mundo. Esta debe ser una de las principales motivaciones para hacer de Agua Prieta, una ciudad fronteriza moderna, conectada y comunicada. Se cuenta con tres carreteras que dan acceso a la ciudad con el resto del estado, se cuenta también con transporte ferroviario de carga y una pista local para la aviación menor, principalmente. La principal actividad industrial son las maquiladoras, cuyos giros principales son: prendas de vestir, muebles de madera, electrónica, material y equipo para hospitales, deportivos, componentes para computadoras, para radio comunicación y de televisión, entre otros.

METODOLOGÍA

La articulación y/o unión de esfuerzos de los actores socioeconómicos locales para abatir los rezagos de los ámbitos territoriales mejoraría las condiciones de la localidad (Rodríguez 1996). Pudiendo incentivar el desarrollo de las localidades, potenciar sus competencias para atraer recursos financieros a su localidad y con ello generaría las condiciones para crear esos tan ansiados emprendimientos económicos, generadores de empleo en la localidad y frenar la migración de la población económicamente activa de su lugar de origen. Las limitaciones u obstáculos se presentan con más frecuencia en algunos de los casos, es poco el apoyo de las empresas o negocios a encuestar así como algunas instituciones gubernamentales o no gubernamentales a las que compete el tema.

La metodología utilizada para el desarrollo de la investigación es darle seguimiento y actualización de datos derivados del inventario de negocios, con entrevistas a los propietarios o encargados de los negocios, para recabar información relevante o actualización de la misma, que sirviera para la definición de estrategias en su propio beneficio, preferentemente en relación a su creación y/o consolidación, las encuestas que se aplicaron fueron diseñadas en base a las necesidades de información de los organismos involucrados en este proyecto, que son: Instituto Tecnológico de Agua Prieta, Desarrollo Económico de Agua Prieta, APSON Visión 20-30 y CANACINTRA Agua Prieta, quienes están en búsqueda permanente del desarrollo y progreso de este municipio. Su aplicación se hizo a través de un despliegue de encuestadores capacitados para tal fin, dicho mecanismo fue llevado a cabo en el transcurso de ocho semanas. Para el análisis e interpretación de la información, se desarrolló una

plataforma informática que nos permitió generar de manera ordenada y confiable los resultados obtenidos del inventario de negocios, que será de utilidad para definir estrategias de mejora en relación a las PyMES, que serán presentadas al gobierno municipal para su análisis y evaluación para su pronta adopción. A la par se generará un catálogo de negocios de PyMES locales, para logara mayos difusión de estos negocios en esta ciudad y la región.

RESULTADOS

La aplicación del inventario de negocios generó información de primera mano, si bien no en su totalidad, pero de la obtenida se pudieron formular estrategias de solución que permitirán su fortalecimiento y/o desarrollo local y regional. El compromiso que asuma la parte gubernamental, así como las diferentes cámaras y otras organizaciones, será determinante en el éxito de este proyecto. Del análisis de la información se visualiza que las PyMES necesitan avocarse a la búsqueda de procesos de mejoramiento continuo de su capacidad de gestión de los factores de producción. Por ende, también, el mejoramiento de la [productividad](#) y la competitividad, para convertir a las empresas en organizaciones innovadoras, emprendedoras, modernas, flexibles y de talla internacional. Se espera obtener como resultado de esta investigación:

- Identificar las oportunidades de mercado para la creación de PyMES con nuevos giros.
- Definir al menos dos estrategias de consolidación para las PyMES al municipio.
- Difundir el catálogo de negocios de Agua Prieta, en búsqueda de posibles inversionistas.

Por lo que con la información obtenida de esta investigación se pretende:

- Identificar las oportunidades de mercado para la creación de PyMES con nuevos giros.
- Definir al menos dos estrategias de consolidación para las PyMES al municipio.
- Difundir el catálogo de negocios de Agua Prieta, en búsqueda de posibles inversionistas.

Figura 1: Empresas Incluidas en el Inventario de Negocios (2011-2012), por porcentaje de giro empresarial.

En la figura 1 se muestra la información de los resultados obtenidos del inventario de negocios aplicados por el Instituto Tecnológico de Agua Prieta y los organismos involucrados en el municipio, donde se indica por colores los giros empresariales de cada una de las PyMES que se encuentran dentro de la muestra que se encuestó, por ejemplo: 15.3 % de abarrotes, 1.8% de ferreterías, 7.4 % de restaurantes, etc.

CONCLUSIONES

Dados los resultados de la aplicación del mecanismo de recolección de información, se concluye que mediante el análisis de los datos se generó el inventario de negocios de las PyMES en la ciudad de Agua Prieta, además se determinó: la cantidad de pequeñas y medianas empresas en el municipio, y sus características, se realizó la agrupación de las PyMES por actividad económica o giro. Se observa que las empresas necesitan dedicar tiempo en la búsqueda de procesos de mejoramiento continuo de su capacidad de gestión, y de los factores de producción. Por lo tanto, mejorar la [productividad](#) y la competitividad, para convertir a las PyMES en organizaciones innovadoras, emprendedoras, modernas, flexibles y de talla internacional, que se apeguen a los planes y programas que las autoridades municipales propongan en sus planes de desarrollo económico y de las cámaras de comercio locales, buscando disminuir el riesgo de fracaso en sus primeros años de operación, por lo que existen dos rubros principales que deben ser gestionados por las dependencias correspondientes que son: 1) la comercialización de productos y/o servicios 2) capitalización y fortalecimiento de sus planes operativos. El inventario de negocios realizado, ilustra como se pueden generar diversas estrategias viables para el desarrollo regional en el renglón de PyMES en Agua Prieta, Sonora, como son:

- 1) Incubación de empresas para asesoría y estructuración de planes de negocios, en el Centro de Incubación e Innovación Empresarial del Instituto Tecnológico de Agua Prieta.
- 2) Canalización a diferentes fuentes de recursos federales, estatales o municipales para cubrir sus necesidades referentes a infraestructura y capacitación principalmente.

Las estrategias concretas planteadas con anterioridad darán pauta a coadyuvar el fortalecimiento y permanencia de PyMES en el municipio de Agua Prieta. Dependerá de las instituciones locales y estatales involucradas, hacer un análisis para impulsar estas propuestas que contribuyen a la permanencia, consolidación y crecimiento de este tipo de organizaciones, buscando además que la mayoría de ellas en lo posible exporten productos y/o servicios, tomado como ventaja competitiva la ubicación geográfica del municipio de Agua Prieta.

RESUMEN

El presente trabajo es el resultado de una investigación realizada para conocer la forma en que las microempresas comerciales de Mexicali, Baja California, aplican el control presupuestal en la toma de decisiones sobre la operación de la empresa. El diseño utilizado fue descriptivo transversal, para el cual se siguió un proceso riguroso y formulado de una manera lógica, permitiendo con ello la adquisición del conocimiento del objeto de investigación al obtener datos precisos sobre el tipo de información financiera que elaboran, entre los cuales se encuentran los presupuestos, así como el uso que se les da y la manera en cómo las personas a cargo de este tipo de empresas toman decisiones para el desarrollo de su operación. Para ello se aplicó un cuestionario sobre una muestra de ochenta microempresas de tipo comercial. Los datos obtenidos se analizaron con el apoyo del programa estadístico SSPS, interpretando los resultados obtenidos. En función al estudio realizado se observó que las microempresas elaboran de una manera incipiente los presupuestos así como el control y seguimiento que se les da, en virtud de que la información que elaboran es aquella que les sirve de base para cumplir con sus obligaciones fiscales. En cuanto a la forma de tomar las decisiones estas se realizan principalmente de manera empírica.

PALABRAS CLAVE: Control presupuestal, toma de decisiones y microempresas.

BUDGETARY CONTROL IN MICRO BUSINESS

ABSTRACT

This work is the result of an investigation to find out how commercial micro Mexicali, Baja California, budgetary control applied in making decisions about the operation of the company. The design was descriptive cross, for which followed a rigorous process and formulated in a logical manner, thereby allowing the acquisition of knowledge of the research object to obtain accurate data on the type of financial information produced, among which budgets are, and the use given to them and the way how people in charge of these businesses make decisions for the development of its operation. We applied a questionnaire on a sample of eighty commercial microenterprises. The data were analyzed using the SSPS statistical program support, interpreting the results. According to the study it was observed that micro incipiently developed a budget as well as control and monitoring that are given, under the information they produce is one that serves as a basis to meet their tax obligations. As for how these decisions are mainly empirically.

KEYWORDS: Budgetary control, decision making and micro business.

INTRODUCCIÓN

Las microempresas son de gran importancia en nuestro país ya que representan el 92% de las empresas que existen en México de acuerdo con las estadísticas del Sistema de Información Empresarial Mexicano (SIEM). Esta clase de empresas constituyen la principal fuente de generación de empleo en el país y tiene una alta participación en el Producto Interno Bruto. Al igual que en el resto del territorio mexicano estas empresas contribuyen en gran medida a la economía del Estado de Baja California ya que representan el 81% de las empresas existentes.

Sin embargo debido al tamaño de estas empresas, el poco capital con el que cuentan y la falta de conocimientos de sus propietarios en cuestiones de planeación y administración de sus recursos, les trae como consecuencia que se les presenten algunos problemas como lo son: la falta de control de inventarios, control inadecuado de créditos, liquidez y bajo volumen de ventas, los cuales si no son tratados a tiempo ponen en riesgo a la operación de la empresa al no contar con el efectivo suficiente y por tanto no cumplir en tiempo con sus compromisos de bancos y acreedores o bien un inadecuado financiamiento, una sobre inversión en activo fijo, existencias de inventarios inmovilizadas y obsoletas, irregularidades en los cobros, pagos imprevistos, cálculos equivocados de los ingresos, costos o utilidades así como los gastos excesivos en que incurren los propietarios de estas empresas por un mal manejo y control de sus recursos.

Por ello es importante que las empresas sobre todo aquellos de tamaño y estructuras limitadas tengan un adecuado control sobre sus recursos a través de la elaboración oportuna de su información financiera, de donde surgen los presupuestos de cada una de las áreas que integran a la empresa, estableciendo a su vez un adecuado control presupuestal, de tal forma que se pueda disminuir el riesgo de sus operaciones, proteger y cuidar los recursos con los que cuentan así como evaluar la eficiencia de la misma en cuanto al manejo de sus bienes. El objetivo general de esta investigación es conocer la forma en que las microempresas comerciales de Mexicali, Baja California, aplican el control presupuestal en la toma de decisiones sobre la operación de la empresa.

REVISIÓN LITERARIA

Concepto Y Características De Las Microempresas

En esta investigación se estudian empresas que pertenecen al sector comercial, entendiendo como empresas comerciales a aquellas que se dedican a adquirir cierta clase de bienes o productos, con el objeto de venderlos posteriormente en el mismo estado físico en que fueron adquiridos, aumentando al precio de costo o adquisición un porcentaje denominado “margen de utilidad” (Rodríguez, 2010). Una vez conocido el concepto de empresa comercial se determinó lo que para esta investigación se utilizará como definición de microempresa comercial, siendo ésta la que se encuentra establecida en la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa, que fue publicada en el

Diario Oficial de la Federación publicado el 30 de diciembre del 2009 ya que la clasificación que se hace de este tipo de empresas en dicho documento es la oficial de acuerdo a la Secretaría de Economía, dicha clasificación es por estratos y se basa en el número de empleados de la empresa. Esta ley establece como microempresas del sector comercio, a aquellas que se encuentren constituidas con 1 a 10 empleados y se dediquen al comercio. Por tanto, una microempresa comercial es la que se dedica a adquirir cierta clase de bienes o productos, con el objeto de venderlos posteriormente en el mismo estado físico en que fueron adquiridos, aumentando al precio de costo o adquisición, un porcentaje denominado “margen de utilidad” y que cuente con 1 a 10 empleados.

Características Generales Y Funcionales De Las Microempresas.

Meggison&Byrd (2006) señalan que las microempresas poseen ciertas características generales que las hacen diferentes al resto de las empresas a través de las cuales pueden ser fácilmente reconocidas. Entre estas características se encuentran las siguientes:

1. Sirven a un mercado limitado o dentro de un mercado más amplio a un número reducido de clientes.
2. El tamaño de estas empresas corresponde al programa de producción de cada una de ellas y a la capacidad de los empresarios para administrarlas.
3. Fabrican productos, con tendencias a cierta especialización y usan procesos sencillos de fabricación.
4. Disponen de medios financieros limitados.
5. Sus equipos de producción y su maquinaria son sencillos.
6. Cuentan con personal reducido.
7. Utilizan materias primas locales de fácil acceso, no siempre conservables, o bien productos semiterminados.
8. Los empresarios tienen a su cargo las ventas de los productos, o las supervisan personalmente.
9. Sus sistemas de contabilidad y de control son elementales.
10. Cuentan con una estructura organizacional muy sencilla.

Principales Problemas Que Enfrentan Las Microempresas

Las microempresas presentan una gran variedad de problemas como lo son: ventas insuficientes, debilidad competitiva, mal servicio, mala atención al público, precios altos o calidad mala, activos fijos excesivos, mala ubicación, descontrol de inventarios, problemas de impuestos y falta de financiamiento adecuado y oportuno. Anzola (2010) refiere que la mayor parte de sus problemas se derivan de la falta de administración de sus empresas, ya que se constituyen sin planeación, sus dueños y personal son ajenos a la administración del giro del negocio, utilizan técnicas y procedimientos obsoletos, casi siempre operan con una constante falta de recursos, su compras las realizan con mucha frecuencia a través de intermediarios, no conocen de los apoyos financieros y fiscales que en raras ocasiones les ofrecen las instituciones financieras y las leyes fiscales, y padecen la ausencia de asesoría especializada.

Regularmente estas empresas tienen problemas de carencia de efectivo por falta de una planeación financiera adecuada y el exceso en inversión de cuentas por cobrar de clientes, ya sea por créditos amplios o por atraso en su cobranza, o bien la combinación de ambos. Otros problemas que enfrentan son las deficiencias en las negociaciones de los financiamientos a corto plazo y el exceso en inversión de inventarios originada por una planeación deficiente o por inversiones muy diversificadas, las cuales no producen rendimientos normales, así como la falta de una rotación adecuada y generación de inversiones obsoletas (Barragán, 2009). Asimismo Belasteguigoitia (2009) refiere que las microempresas por su tamaño tienen ventajas, tal como su facilidad administrativa, pero, por su mismo tamaño tienen desventajas, tales como razones de tipo económico, viven al día de sus ingresos, por lo tanto se les dificulta crecer, y estas mismas razones ponen en peligro su existencia. Todo esto resultado de una administración empírica por parte del dueño, que afecta el rendimiento general de la empresa.

La mayoría de los negocios nuevos cometen al menos dos errores importantes:

- a) No hacen una adecuada estimación de las necesidades de capital de trabajo.
- b) Frecuentemente hacen una provisión demasiado cuidadosa de capital fijo.

Otro de los problemas de carácter financiero para las microempresas es que en la mayoría de los casos las empresas no evalúan si lo que necesitan es dinero o capital, estos conceptos no forman parte de su

lenguaje cotidiano y en algunas ocasiones obtienen préstamos que no necesitan, por ello es que las empresas requieren elaborar presupuestos y establecer la forma en cómo deben de darles seguimiento. (Villegas & Ortega, 2009) Es importante que exista en toda empresa una buena relación de los activos circulantes con los pasivos circulantes y cuidar su liquidez, la cual es necesaria para cumplir con sus compromisos (Moreno, 2009). Por ello Gómez, Rodríguez & Alcaraz (2009) señalan la importancia de que las personas que se encuentran a cargo de este tipo de empresas dediquen buena parte de su tiempo a la administración eficiente del capital de trabajo (activos y pasivos circulantes) con el propósito de maximizar el valor de su empresa.

Control Presupuestal

Un presupuesto es una técnica de planeación y predeterminación de cifras sobre bases estadísticas y apreciaciones de hechos y fenómenos aleatorios, en este sentido se considera al presupuesto como una herramienta de la administración. Siendo definido por Burbano (2011) como una estimación programada, en forma sistemática, de las condiciones de operación y de los resultados a obtener por un organismo, en un período determinado. Los objetivos de los presupuestos son de previsión, planeación, organización, coordinación o integración, dirección, control; es decir, comprenden o están en todas las etapas del proceso administrativo. Los presupuestos están ligados al tipo de empresa, a sus objetivos, organización y necesidades; su contenido y forma varían de una entidad a otra, principalmente en el grado de análisis requerido, por lo cual es indispensable el conocimiento amplio de las empresas, objetivos y necesidades en que se hayan de aplicar. La preparación del presupuesto se basa en el principio de que todas las transacciones de la entidad están íntimamente relacionadas, de tal forma que si una determinada parte del plan pudiera ser tomada como punto de partida, el resto del mismo podría ser establecido con un grado razonable de seguridad y certeza, permitiendo a la gerencia tomar decisiones adecuadas.

Cárdenas & Nápoles (2008) refieren que al momento de la elaboración del presupuesto se debe designar a una persona como director la cual actuara como coordinador de todos los departamentos que intervienen en la ejecución del plan. La sincronización de las diferentes actividades se hará elaborando un calendario, en que se precisen las fechas en que cada departamento deberá tener disponible la información necesaria, para que las demás secciones puedan desarrollar sus estimaciones. De esta manera será necesario también que toda la información obtenida y las estimaciones realizadas sean enviadas al director del presupuesto, centralizándose en él la programación de actividades. Del Río (2009) señala que el control presupuestal es un instrumento en el que se basan las empresas para dirigir todas sus operaciones, lo anterior se logra a través de la comparación sistemática del conjunto de previsiones establecidas para cada uno de sus departamentos, con los datos históricos que refleja la contabilidad durante el mismo periodo.

El control presupuestal indica la coordinación de las actividades de los diversos departamentos de la organización, por medio de la estructuración de un plan, cuyas partes forman un conjunto coherente e indivisible, en el que la omisión de cualquiera de sus secciones afectaría el logro de los objetivos deseados. Se puede decir que control presupuestal tiene como reflejo el conjunto de presupuestos parciales, correspondientes a cada una de las diferentes actividades de una entidad. Otro de los requisitos que deben tomarse en cuenta para la integración del control presupuestal, es la fijación del lapso que comprenden las estimaciones. La determinación de este periodo opera en función de diversos factores, tales como: estabilidad o inestabilidad de las operaciones de la empresa, el periodo del proceso productivo y las tendencias del mercado, entre otros.

METODOLOGÍA

La investigación que se presenta en este trabajo fue realizada en las microempresas comerciales de Mexicali, B. C. con el objetivo de conocer la forma en que las microempresas comerciales de Mexicali, Baja California, aplican el control presupuestal en la toma de decisiones sobre la operación de la empresa.

La metodología seguida para su desarrollo se efectuó en dos etapas, en la primera parte se llevó a cabo la revisión y análisis de bibliografía en libros, revistas, periódicos y documentos electrónicos relacionados con el tema de estudio. En la segunda parte se realizó un estudio de campo, mediante la aplicación de un cuestionario a las personas a cargo de la administración y funcionamiento de este tipo de empresas.

Para determinar el universo, tamaño de la población, muestra y sujetos de este estudio, se tomó como marco muestral la información proporcionada por el Sistema Empresarial Mexicano, el cual cuenta con un registro de empresas, clasificadas de acuerdo a su entidad, municipio, tamaño y sector, además de ser el padrón más completo y actualizado que existe hasta este momento. En el municipio de Mexicali existen actualmente 1498 microempresas comerciales ubicadas en la zona urbana registradas en este padrón, lo cual representa al universo y población de esta investigación. Una vez determinada la población de estudio se llevó a cabo el cálculo del tamaño de la muestra, utilizando para ello una fórmula para poblaciones finitas. Considerando un nivel de confianza de 90% y un error estimado de 5%, la muestra para este estudio es de:

$$n = \frac{Z^2 p q N}{NE^2 + Z^2 p q} \quad n = \frac{(1.645)^2 (.08)(0.92)(1498)}{(1498)(.05)^2 + (1.645)^2 (.08)(0.92)} = 75.72$$

Lo anterior significa que la muestra corresponde a 76 microempresas comerciales ubicadas a las cuales se debe aplicar el instrumento de medición. Sin embargo, se determinó finalmente aplicar el instrumento de medición a 80 microempresas comerciales. Calculado el tamaño de la muestra se determinaron los elementos muestrales para la aplicación del instrumento de medición.

Sujetos

La selección de los sujetos de la muestra se basó en el padrón proporcionado por el SIEM, del cual fueron tomadas para este estudio las microempresas dedicadas a la actividad comercial, aplicando un cuestionario a los propietarios, administradores, contadores y encargados que operan estas empresas ya que son estos quienes tienen el conocimiento y la experiencia de las operaciones, recursos, información y la forma en que se toman las decisiones sobre su funcionamiento. Para determinar cuáles serían las microempresas en donde se aplicarían los cuestionarios, y que todas tuvieran la misma probabilidad de ser elegidos, se utilizó un proceso sistemático de elementos muestrales, el cual consiste en tomar el número total de la población de estudio, en este caso las 1498 microempresas comerciales, y el número de empresas resultado del tamaño de la muestra, es decir las 80 microempresas, obteniendo con ello un intervalo, el cual nos sirve para poder determinar las empresas a encuestar. Para conocer este intervalo se utilizó la siguiente fórmula:

$$K = N/n$$

Donde:

$$K = 1498/80$$

K= Intervalo

$$K = 18.72 \text{ redondeado } 19$$

N= Población

n= Muestra

Una vez conocido el intervalo el siguiente paso fue seleccionar a la primera empresa a encuestar y a partir de ésta aplicar el intervalo determinado con la fórmula anterior.

Instrumentos

Para la realización de esta investigación se diseñó un instrumento de medición, en la modalidad de cuestionario con preguntas de opción múltiple en su mayoría, a excepción de las preguntas de identificación e información general. Se determinó la utilización de un cuestionario por ser éste un instrumento de apoyo que permite recolectar datos de un gran número de individuos, en este caso las personas a cargo de las microempresas comerciales de la zona urbana de Mexicali. El cuestionario consta de un conjunto de 22 preguntas relacionadas con las variables a medir.

El cuestionario se estructuró en cuatro apartados: identificación e información general, información financiera, administración de sus recursos financieros y problemas que enfrentan este tipo de empresas, para lograr un mejor orden, relación y análisis de las respuestas. Una vez obtenida la información se observó la frecuencia de cada respuesta, las cuales fueron clasificadas por categorías y se señaló el número de frecuencias de mención utilizando como apoyo el programa estadístico SPSS.

RESULTADOS

En este capítulo se presentan los principales resultados de la aplicación del cuestionario aplicado en 80 microempresas comerciales de Mexicali.

Figura 1: Información financiera que elaboran, usos y periodicidad

Fuente: Elaboración propia con datos de los resultados

Respecto a la información financiera se encontró que principalmente en este tipo de empresas se elaboran los reportes de ventas de manera mensual, así como la elaboración de los reportes bancarios con la misma periodicidad y los reportes de inventarios. Se puede observar que este tipo de información no ofrece elementos suficientes para llevar a cabo una toma de decisiones adecuada sobre la situación financiera de la empresa y sus operaciones. Esta información coincide con lo mencionado en el marco teórico de esta investigación, donde se señala que la contabilidad la mayoría de las veces es llevada de manera superficial y no se elaboran estados financieros detallados, por lo que existe una falta de control en esta área.

Figura 2: Señale los usos que le da a esta información financiera

Fuente: Elaboración propia con datos de los resultados

Una vez que se conoció el tipo de información que principalmente elaboran estas empresas, es importante conocer el uso que le dan a esta, resultando que el 69% de las personas encuestadas la utilizan para llevar a cabo la determinación de sus impuestos y elaborar sus respectivas declaraciones, no así para analizar la situación financiera de su empresa, ya que sólo el 11% respondió utilizarla para ese fin; el 13% elabora la información para la obtención de créditos, ya que es un requisito en el caso de las instituciones bancarias para determinar si se otorga o no el crédito, 4% la utiliza para comparar contra sus presupuestos y el 3% para evaluar la gestión del administrador.

Figura 3: Señale los presupuestos que elaboran

Fuente: Elaboración propia con datos de los resultados

El 70% de las personas encuestadas no elaboran ningún tipo de presupuestos sobre las operaciones de sus empresas, sólo el 10% elabora el presupuesto de ventas, 7% el presupuesto general, 5% el de compras, 3% el de egresos, 2% el de otros ingresos y productos y el 1% únicamente prepara el presupuesto de flujos de efectivo. Como podemos observar, son las ventas el aspecto más importante que resulta de interés para analizarlo a través de un presupuesto, sin tomar en cuenta los gastos que llevan consigo estas ventas y que en ocasiones pueden ser mayores a ellas.

Figura 4: Información para proyectar sus ventas

Fuente: Elaboración propia con datos de los resultados

En relación a como proyectan sus ventas las personas que se encuentran administrando este tipo de empresas, se observó que la mayoría de ellas lo hacen con base a la experiencia, siendo el 55% del total de las empresas encuestadas quienes las proyectan en esa forma. El 29% lo hacen tomando en cuenta las ventas de años anteriores y sólo el 10% en base a las tendencias del mercado. Es de llamar la atención que sólo el 1% tome en consideración a la inflación para proyectar sus ventas, pues si bien ésta ha tenido un comportamiento estable en los últimos años, es un factor que no debe de dejarse de lado al momento de hacer proyecciones, ya que el poder adquisitivo se ve afectado por el transcurso del tiempo.

Figura 5: Cómo controla sus flujos de efectivo

Fuente: Elaboración propia con datos de los resultados

En cuanto al control de los flujos de efectivo generados por la operación diaria de la empresa se tiene que el 60% no tiene un control del efectivo o lo hace mediante otros controles; sólo un 25% de las personas encuestadas lleva a cabo la elaboración de reportes periódicos de entradas y salidas de efectivo. Esta es una herramienta financiera que ayuda a tener un mejor conocimiento sobre la forma en que se está aplicando el efectivo generado y las fuentes que lo están generando; de esta manera se puede determinar si se está administrando bien o no el activo más líquido de la empresa y evitar con ello problemas de liquidez. En tanto el 8% lo hace a través de sus estados financieros y el 7% en base a sus presupuestos.

Figura 6: Información para determinar sus volúmenes de compras

Fuente: Elaboración propia con datos de los resultados

En lo que se refiere a los volúmenes de compra, se encontró que el 34% los determina tomando como base a las ventas que se generan, el 22% lo hace a través de los saldos de los inventarios, en tanto que el 19% los determina en relación a la temporada de ventas y un 15% en base a las ofertas que le hacen los proveedores (lo cual puede generar un exceso en sus inventarios), 9% a través de otros mecanismos y el 1% en relación a sus flujos de efectivo.

En el caso de la información en base a la cual se determina la periodicidad con que se compra y el momento en que éstas deben ser realizadas, se detectó que el 32% lo hace tomando en cuenta las cuentas por pagar, determinando lo que se debe a sus proveedores y acreedores y la fecha en que se cubrirán; el 20% lo hace en base a sus flujos de efectivo. En la mayoría de los casos, que representan al 44% de los encuestados, resultó que utilizan otro tipo de información para determinar el momento de comprar, o bien no se basan en ningún tipo de información.

Figura 7: Información para determinar la periodicidad y el momento de sus compras

Fuente: Elaboración propia con datos de los resultados

Figura 8: Mecanismos que utiliza para el control de sus inventarios y periodicidad

Fuente: Elaboración propia con datos de los resultados

Respecto a la forma en que controlan los inventarios las personas que administran a este tipo de empresas, se encontró que el 57% efectúa inventarios físicos para su control con diferente periodicidad, siendo mensuales los que se realizan con mayor frecuencia. Por otra parte, el 20% de los encuestados señalaron los reportes de venta mensual como el medio utilizado para tener un control de sus inventarios y el 13% no aplica ningún mecanismo para su control, situación que puede provocar que se realicen compras que no sean necesarias, excesos en los inventarios e incluso que se lleven a cabo hurtos sin que estos puedan ser detectados. Todas estas situaciones tienen repercusiones en la liquidez de la empresa. Un 10% lo hace a través de tarjetas de almacén y sistemas de cómputo.

CONCLUSIONES

En función a la investigación realizada se puede concluir que el control presupuestal resulta de vital importancia en las microempresas, debido a que gracias a su utilización le permite a las personas a cargo de su operación, medir el desempeño de su empresa con la finalidad de corregir desviaciones encontradas, así como permitirle determinar las acciones correctivas. Sin embargo la mayoría de las microempresas comerciales no utilizan los presupuestos como una herramienta de planeación y control, o bien lo hacen de manera incipiente. De acuerdo a lo investigado se realizan las siguientes recomendaciones:

La empresa debe elaborar presupuestos que le permitan principalmente administrar su efectivo, que es la base de la operación de toda empresa. Dando un seguimiento al comportamiento de las diferentes áreas y recursos con que cuenta la empresa, como son sus: inventarios, cuentas por cobrar y cuentas por pagar, principalmente debido a que forman parte del capital de trabajo de la empresa el cual es de vital importancia para el desarrollo de las empresas.

Asimismo se debe controlar a través de los presupuestos previamente elaborados las entradas y las salidas de efectivo del período, con la finalidad de evitar incumplimiento en los compromisos de pago a corto plazo, lo recomendable es que sea mensual y si es posible realizarlo de manera semanal.

Aunado a lo anterior, los microempresarios, deben de tener especial cuidado con las adquisiciones de inventarios, los cuales representan inversiones a corto plazo que son las que más les afectan, por lo que se les sugiere que traten de evitar inversiones innecesarias en este rubro, ya que esto conlleva a costos elevados, a través de un control adecuado del presupuesto de adquisiciones de sus productos.

Analizar periódicamente los costos y gastos en los que se incurren, con la finalidad de reducir aquellos que sean innecesarios.

Poner atención a los presupuestos de inversiones en activos fijos, para analizar los periodos en los cuales se va a recuperar dicha inversión y los rendimientos que puede generar, así como la forma en la cual se llevarán a cabo las amortizaciones cuidando no afectar la liquidez de la empresa.

APLICACIÓN DEL DIAMANTE DE COMPETITIVIDAD DE PORTER EN LA INDUSTRIA DE CARNE DE CERDO EN EL ESTADO DE SONORA

María Teresa González Barajas, Universidad Estatal de Sonora
Antonio Emmanuel Pérez Brito, Universidad Autónoma de Yucatán
Luis Antonio Zaragoza Joya, Universidad Tecnológica de Cancún
Gustavo César Hermosillo Anduaga, Universidad Estatal de Sonora

RESUMEN

Las principales actividades económicas en Sonora son: ganadería, minería, pesca y agricultura. Recientemente la industria maquiladora y de producción de alimentos han tenido auge en el estado. Las ciudades más importantes en el sector económico son: Hermosillo, Ciudad Obregón, Nogales, Guaymas, Navojoa, San Luis Río Colorado, Agua Prieta, Caborca y Puerto Peñasco, entre las ciudades culturales destacan: Álamos, Arizpe, Ures, Magdalena de Kino, el Centro Histórico de Hermosillo y los pueblos aledaños al Río Sonora. Dado el estatus fitosanitario que mantiene Sonora y la alta calidad de los productos cárnicos de cerdo, la producción ha mantenido el alza, con un promedio de 217 mil toneladas, lo cual posiciona a este Estado como uno de los principales productores, a la par con Jalisco. En promedio el crecimiento ha sido de 1% en los últimos años, gracias a la calidad, inocuidad y presentación, ha permitido que este producto se abra paso entre los mercados asiáticos, principalmente Japón. El valor de las exportaciones de carne de puerco en el Estado durante el 2011, se incrementó en 89 millones de dólares más con respecto al obtenido en el 2005, presentando un crecimiento de 9.2% dentro del periodo referido. (Diario la Tribuna, 2012).

PALABRAS CLAVE: Actividad económica, carne de cerdo, valor de las exportaciones

APPLICATION OF THE PORTER'S COMPETITIVENESS DIAMOND IN THE PORK INDUSTRY IN THE STATE OF SONORA

ABSTRACT

The main economic activities in Sonora are: farming, mining, fishing and agriculture. Recently the maquiladora industry and food production have been booming in the state. Major cities in the economic sector are: Hermosillo, Ciudad Obregon, Nogales, Guaymas, Navojoa, San Luis Río Colorado, Agua Prieta, Caborca and Puerto Peñasco, amongst cultural cities are: Los Alamos, Arizpe, Ures, Magdalena de Kino, Hermosillo's Historical Center and surrounding villages to Río Sonora¹. Given the phytosanitary status maintained by Sonora and the high quality pork products, production has remained the rise, with an average of 217 000 tonnes, which positions the state as one of the leading producers, along with Jalisco. The average growth was 1% in recent years, thanks to the quality, safety and presentation, has allowed this product to break through Asian markets, especially Japan. The value of exports of pork in the State during 2011, increased by \$ 89 million more compared to that obtained in 2005, a growth of 9.2% in the aforementioned period. (Daily Tribune, 2012).

KEY WORDS: Economic activity, pork meat, export value

INTRODUCCIÓN

La porcicultura en el mundo, es una actividad sumamente importante, dado que en los últimos 20 años ha logrado sostener un crecimiento económico altamente significativo. En 1990, esta actividad económica contabilizaba a nivel mundial 860 millones de animales, para el 2000, (diez años después) la población alcanzo a 910 millones de cabezas y para el 2008 la población superó los 965 millones de cabezas. La producción de cerdos crece en el mundo y el consumo también. Actualmente, los principales países productores de cerdo en el mundo son: China, con una piara cercana a los 600 millones de cabezas, mismos que representan un poco más del 50% de la producción mundial, en segundo lugar se encuentra la unión Europea (UE) con la más alta eficiencia productiva y mayor consumidor de cerdo por habitante, después esta Estados Unidos de Norte América (EU) y finalmente Brasil, entre los de mayor producción y crecimiento. La carne de cerdo en México, todavía no goza plenamente de ser apreciada como una excelente comida, de variadas y exquisitas combinaciones como sucede en otras partes del mundo. En rigor, no existen razones para que la carne de cerdo no se consuma más y a mayor velocidad. Su precio es competitivo y su manejo sanitario es tan eficiente como el de las otras carnes, tal situación ha permitido mantener niveles progresivos de exportación de canales y cortes especiales a países sumamente exigentes en sus normas sanitarias, como son: Japón, Corea del Sur, Rusia y otros, los Estados que se distinguen por ser los principales productores son: Jalisco, Sonora, Guanajuato y Yucatán. (Meraz, 2011).

Perfil Del País

México. Los Estados Unidos Mexicanos nombre oficial de México, cuenta con una superficie territorial de 1.964.375 km² y se encuentra situado en el hemisferio norte del Continente Americano en América del Norte. La economía de México es 12va más grande del mundo en términos nominales y del 11 por paridad de poder adquisitivo, según el Banco Mundial, en el 2011 registró un PIB total de 1, 683 trillones de dólares, el cual está compuesto de la siguiente forma: Agricultura 3.8%, industria 34.2 %, servicios 62 %; con un ingreso per cápita de 14,800.00 dólares.

Perfil Del Estado, Sonora

El Estado de Sonora está situado en el noroeste de México, en América del Norte. Sus costas son bañadas por el Mar de Cortés o Golfo de California. Sonora se encuentra así vinculado a la denominada «Cuenca del Pacífico», que ofrece amplias posibilidades de desarrollo económico y múltiples retos y oportunidades de aprovechamiento sustentable de sus recursos naturales. Sus fronteras con los estados estadounidenses de Arizona y Nuevo México permiten múltiples conexiones económicas, culturales y políticas con los Estados Unidos de América. Sonora es el cuarto estado con menor tasa de analfabetismo, el grado promedio de escolaridad de la población es de 15 años lo que equivale a poco más de la secundaria concluida, es decir, en Sonora 3 de cada 100 personas de 15 años y más no saben leer ni escribir, en este aspecto la media nacional son 7 de cada 100 personas. Además, la entidad cuenta con diversas instituciones públicas y privadas. En la actualidad se encuentra en el lugar 29 a nivel nacional en capacitación para el trabajo.

Análisis De La Industria A Nivel Internacional

La producción porcina mundial en el año 2012 presenta un alza de 924,000 toneladas a 104,4 millones de toneladas, desde la última revisión. China, la UE y los Estados Unidos de América (EE.UU.) representan la mayor parte del crecimiento. Las exportaciones se incrementan de 440,000 toneladas a 7,0 millones de toneladas, con una mayor demanda de los principales países importadores para EE.UU., se prevé una mayor producción y exportación, mientras que sus importaciones se reducen ligeramente. La producción Mundial muestra un alza para todos los productores importantes. China está prevista de 320,000 toneladas a 51,6 millones de toneladas. El Gobierno apoya también al fomentar la expansión y la mejora

genética porcina. Los brotes de enfermedades son menos frecuentes debido al clima favorable y los esfuerzos de vacunación. La Unión Europea (UE) sube de 135,000 toneladas a 22,6 millones de toneladas, mejora la eficiencia en la cría porcina, reestructuración de la industria. Los Estados Unidos pronostican de 96.000 toneladas a 10,6 millones de toneladas debido al aumento de la producción de cerdos de peso ligeramente más pesados.

Análisis De La Industria A Nivel Nacional

En México la porcicultura empezó con la llegada de los españoles, pero la práctica intensiva de esta actividad surgió en los años 70's, cuando se empezó a urbanizar el país, así como también, con el inicio de las exportaciones de tecnología norteamericana para la producción industrial de estas especies, generando un mayor rendimiento en la producción de la carne con menores costos en alimentación, así como también ahorro del tiempo invertido. Estos cambios propiciaron que la porcicultura se convirtiera en la actividad más dinámica del sector agropecuario, siendo el producto cárnico de mayor consumo entre los mexicanos, llegando a constituirse esta actividad en la más avanzada de América Latina desde el punto de vista tecnológico. A pesar de los adelantos tecnológicos y productivos alcanzados por la porcicultura desde la década de los 70's hasta mediados de los 80's, no se pudo modificar el esquema de producción porcícola del país, ya que actualmente las granjas porcícolas se encuentran divididas en tres estratos de producción: Explotaciones altamente tecnificadas o integradas, granjas semitecnificadas y explotaciones de traspatio. Tanto las importaciones como la producción de carne de cerdo se han aumentado en México porque existe una mayor demanda por parte de los consumidores sobre todo desde 1995, ya que los ingresos han mejorado, de tal manera que ahora los consumidores buscan cortes de mayor calidad y más caros, por otra parte otro factor que ha contribuido al crecimiento de la industria es que las plantas mexicanas han desarrollado su capacidad de sacrificio, no solo con el fin de satisfacer la demanda nacional, sino para incrementar sus exportaciones principalmente hacia el mercado japonés.

Generalidades De La Carne De Cerdo

En los últimos años se han obtenido importantes avances en la aplicación de un esquema integral de vacunación porcícola, lo que conlleva a que se reduzca el impacto negativo que tienen las enfermedades sobre la economía de las granjas porcícolas. No obstante la mejora de los esquemas de inspección, en 2007 se detectó en México la enfermedad de circovirus porcino (PCV2), la que no existía en el país y que previsiblemente fue internada mediante la importación de ganado (pie de cría, para engorda o para sacrificio directo). Lo anterior conllevó al establecimiento de una alerta sanitaria para reducir la propagación del virus y para la definición de acciones para su control. Dentro de las acciones autorizadas bajo el análisis de especialistas y autoridades se encuentra la autorización para la importación de vacuna y el trabajo de la Productora Nacional de Biológicos Veterinarios para la producción de la vacuna en el país, a fin de reducir su costo y beneficiar a los poricultores de México, lo cual conllevó a la mejora de la productividad en las granjas. Fiebre Porcina Clásica (FPC) Con la declaratoria como libres de FPC de los estados que conforman la región Centro-Occidente, se obtuvo un importante avance ya que se logró la erradicación de esta enfermedad en una de las zonas de mayor producción porcícola del país y en la que se ubican una gran cantidad de pequeñas granjas y de explotaciones de traspatio.

Una vez establecida la declaratoria de libertad de los estados de esta región, se han iniciado los trámites para su reconocimiento internacional y que ello facilite la concurrencia de productos obtenidos en esta zona, a los mercados del exterior. Enfermedad de Aujeszky (E.A.) En el último trienio del 2008 se obtuvieron avances importantes en la erradicación de esta enfermedad, habiendo sido declarados como libres 9 estados del país (Aguascalientes, Guerrero, Nuevo León, Puebla, San Luis Potosí, Tamaulipas, Tlaxcala, Veracruz y Zacatecas). Al finalizar el año 2008 se contaba con 18 estados libres de E.A., 4 en fase de erradicación y 10 en fase de escasa prevalencia.

Estado Del Clúster

1.- El Profesor Porter indica que debe existir masa crítica de compañías locales o subsidiarias de compañías foráneas que han pasado la prueba de mercado. De acuerdo a las cuatro precondiciones para la activación y desarrollo del clúster, herramienta del Profesor Michael Porter, se cumple de manera general con ellas, por lo que se afirma que si bien dicho clúster se ubica en la fase de crecimiento, se visualiza su potencial desarrollo en el Estado de Sonora, México. Lo anterior, dado que Sonora es el primer Estado que implementa y crea la Comisión para la Certificación del Cerdo Seguro, el cual incluye un posicionamiento satelital de la granja mediante sistemas de información geográfica (SIG), para facilitar la rastreabilidad de los animales que entran y salen de la granja y de los insumos que se emplean para saber si se reduce o se elimina el uso de antibióticos en las diversas etapas, de destete, desarrollo, crecimiento y finalización del cerdo. Así mismo, Sonora ostenta el primer lugar en tecnificación de granjas porcícolas,

con tecnología avanzada, calidad genética y certificación sanitaria, lo que coloca a la actividad como el sistema productivo más dinámico, debido a que cuenta con tecnología de punta para su proceso de producción. Por otro lado, el Estado de Sonora se encuentra libre de fiebre porcina clásica y además por el acuerdo de asociación económica con Japón celebrado el 17 de Septiembre del 2004 y que entró en vigor en Abril del 2005, con lo cual se reducirán los aranceles de un 4.3% a un 2.2%, así mismo, Japón permitirá importaciones de 80,000 toneladas, mismas que al 2004 fueron de 38,000, lo que provocará una reducción en los precios de los cortes de cerdo, dando lugar a un incremento en ventas y un desarrollo de la actividad, lo que hace suponer que puede ser una fuente viable de inversión y generadora de empleos. El estado de Sonora tiene un alto potencial de crecimiento en lo que se refiere a la porcicultura en todas sus etapas, desde la producción en granjas, pasando por las plantas de sacrificio y proceso y terminando con la comercialización principalmente la exportación, ya que reúne todos los recursos para lograrlo, como por ejemplo: el estado ha sido declarado libre de fiebre porcina clásica y además posee tanto mano de obra calificada como profesionistas e investigadores del área.

2. El Profesor Porter indica que deben existir algunas ventajas significativas específicas del clúster en el diamante que son de importancia particular para el clúster (demanda única, talento especializado, ubicación favorable, un marco regulatorio confiable y apropiado importante para el clúster)

- La región del clúster identificado se caracteriza por tener las condiciones de los factores muy favorables.
- Cuenta con certificado de calidad cárnica, TIF, además de la certificación y verificación agroalimentaria.
- Posicionamiento satelital de la granja de cerdos mediante sistemas de información geográfica, denominados “Sonora Cerdo Seguro”.
- Existe un marco regulatorio apropiado: Ley de Desarrollo Rural Sustentable, Ley de Inversiones Extranjeras y las nuevas regulaciones en materia arancelaria, Normas Mexicanas, Secretaría de Comercio y Fomento Industrial, Secretaría de Economía. Confederación de Porcicultores Mexicanos, A.C. Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación.
- El clúster cuenta con una ubicación estratégica hacia dentro y fuera del país.

3. El Profesor Porter indica que debe existir la presencia de una compañía multinacional de clase mundial en el clúster con inversión importante en el país-región y un compromiso de crecimiento.

- Varias empresas pertenecientes al clúster porcícola de Sonora exportan bajo su propia marca.

- El Grupo Kowi es la franquicia sonorense del clúster que destaca por su cortes finos, a nivel nacional e internacional. Cuenta con cobertura nacional con 7 sucursales y 19 tiendas, tiene presencia en los principales autoservicios y empacadoras a nivel nacional. Exporta a Japón, EE.UU. y Corea.
- El Grupo Valmo, exporta a Japón a través de una compañía taiwanesa. Entre sus planes está el establecer una alianza estratégica con una compañía japonesa para expandirse en los mercados de Asia e incursionar en Estados Unidos.
- El Grupo SASA exporta sus cortes a través de la comercializadora Carnes Ricco, SASA es una planta Tipo Inspección Federal (T.I.F. 57) , certificada en SQF 2000 y por alcanzar altos estándares de calidad, sanidad e higiene

4. De igual manera se sugiere encontrar la fortaleza en la relación entre clúster o clústeres.

- Existe relación con clúster agroalimenticio.
- Hay participantes del clúster unidos en asociaciones como La Confederación de Porcicultores Mexicanos, el Consejo Nacional Agropecuario, el Consejo Coordinador Empresarial, la Organización Iberoamericana de Porcicultores, entre otros.

Análisis De Porter

A continuación se desarrollará un análisis para el clúster de la carne de cerdo en el estado de Sonora, utilizando las herramientas sugeridas por el Dr. Porter, además de un análisis FODA.

Análisis FODA

Fortalezas	Debilidades
a) Alta calidad de las materias primas b) Favorable ubicación geográfica c) Capacidad instalada disponible d) Capacidad de respuesta e) Dominio del idioma ingles f) Área libre de fiebre porcina clásica	a) Escasa información de mercados b) Lentitud de inspección en los retenes c) Alto costo financiero para apoyar al crecimiento de las empresas d) Alto costo de peaje que encarece costos de transporte e) Mal servicio ferroviario f) Deficiencia en los servicios que prestan algunos parques industriales g) Política fiscal impositiva que afecta a la pequeña y mediana empresa h) Escasa vinculación entre centros de inv. universidades y empresas i) Carencia de un modelo estratégico de exportación
Amenazas a) Variaciones en los precios internacionales b) Cambios bruscos en la demanda c) Inflación e inestabilidad en las políticas financieras que afectan los costos d) Aumento de trabas y burocratismo e) Creciente competencia debido a la apertura de mercados	Oportunidades a) Facilidades a la inversión extranjera b) Elevada disposición y oportunidades para asociarse con empresas mexicanas exportadoras c) Sobreoferta de trabajadores calificados d) Buena respuesta de los productores locales hacia la apertura comercial e) Existencia de infraestructura y personal calificado para la investigación sobre la industria alimentaria f) Existencia de un acuerdo de asociación económica con Japón
Cadena de valor	
Cadena de Valor: Actividades de soporte Infraestructura. Instalaciones construidas bajo ciertas especificaciones técnicas. Sistemas de alimentaciones automatizadas o semi automatizados para mejorar la conversión alimenticia, reducir costos e inseminación artificial Equipo de abastecimiento de alimentos y cuidado a los cerdos. Administración de Recursos Humanos. Capacitación para el cuidado y atención de las granjas de cerdo. Asistencia técnica en tratamiento y conservación de carnes y sanidad. Desarrollo de Tecnología. Técnicas de reproducción	

Mejora genética.
 Técnicas de nutrición y alimentación animal.
 Aplicaciones en la mejora y control de la salud animal.
 Aprovechamiento de residuos y subproductos.
 Técnicas de bioconservación en el envasado y embalaje de productos cárnicos.
 El 60% de las granjas tecnificado, 20% semi-tecnificado y 20% traspatio.
 Adquisición.
 Transporte.
 Maquinaria.
 Vacunas y medicamentos.
 Alta dependencia de importación de maquinaria para la industria de la carne de cerdo.

ACTIVIDADES DE VALOR

Logística Interna	Operaciones	Logística Externa	Marketing y Ventas	Servicios post venta
Pie de cría.	Sacrificio.	Refrigeración	Promoción de las medidas sanitarias.	No hay información disponible.
Alimento.	Procesamiento.	Conservación	Campañas de publicidad por empresa.	
Medicinas y vacunas.	Empaque.	Distribución nacional.	Congresos para replicar mejores prácticas en la industria pecuaria (desarrollo sustentable del sector, mejora de políticas agroalimentarias del país).	
Transporte para carga y descarga de animales.	Continua modernización del proceso operativo (alta tecnificación en los procesos).	Distribución internacional.	Páginas de internet por cada empresa.

Hallazgos

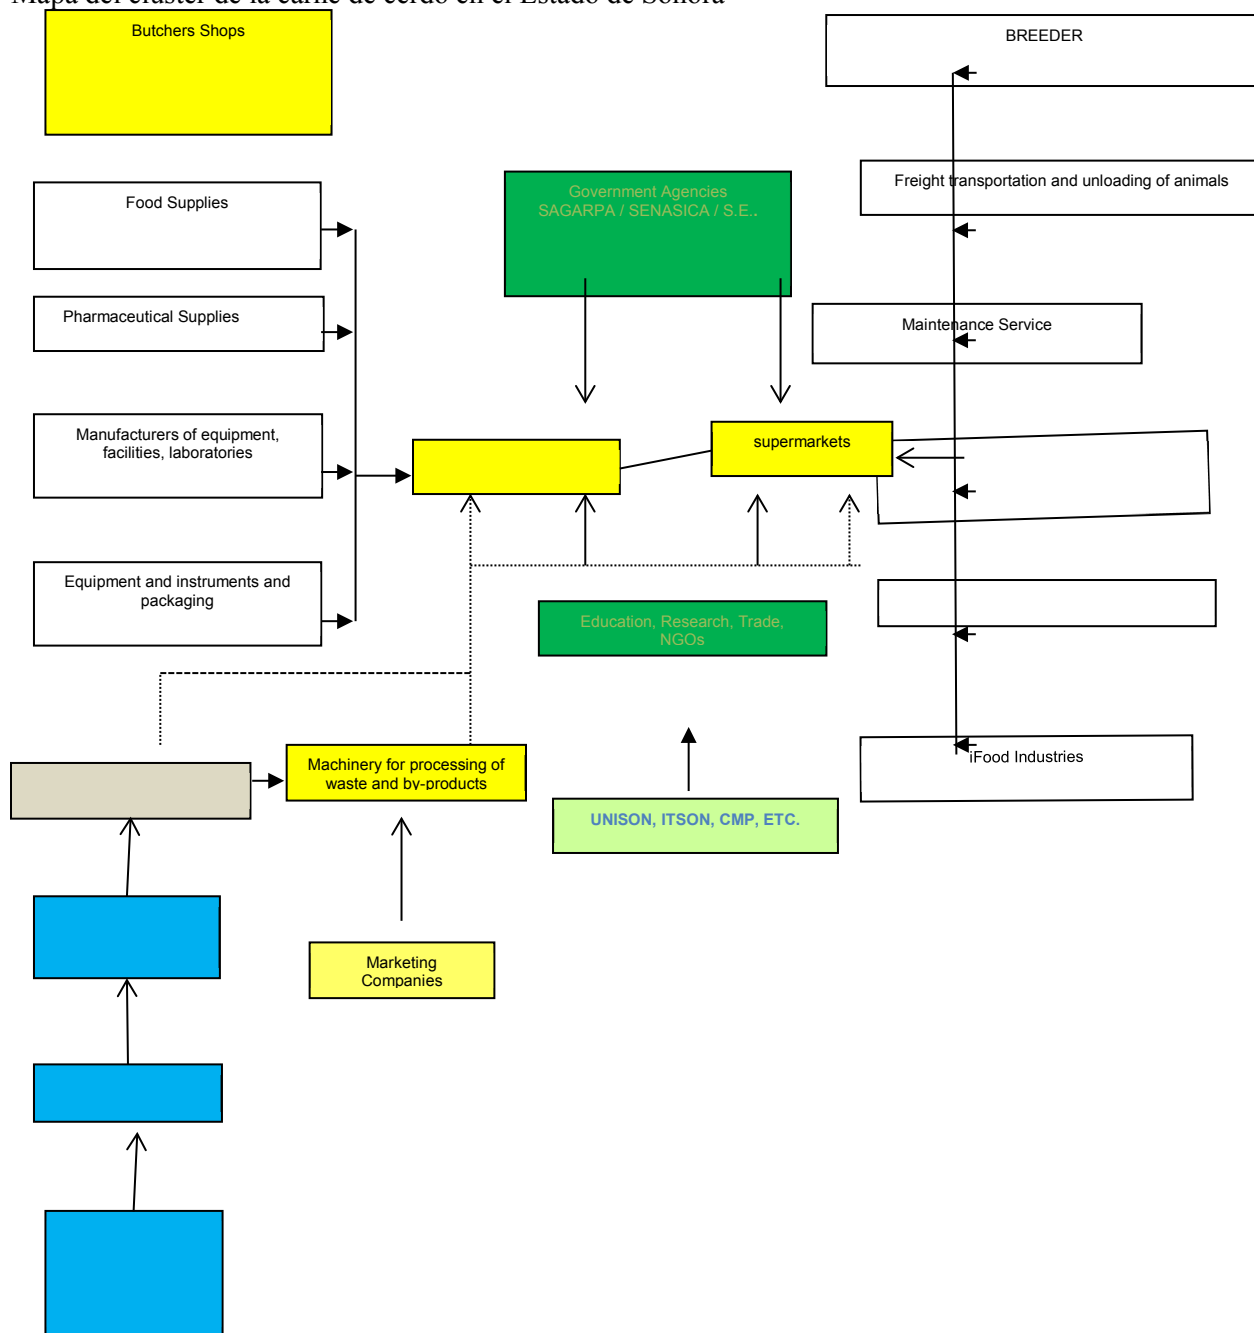

A pesar de los aranceles, cuotas y salvaguardas impuestas en los principales mercados importadores como Rusia y Japón, las exportaciones mundiales de carne continuarán creciendo. Se pronostica un incremento en el consumo, producción y exportación mundial de las carnes en general. Los factores que influirán en este comportamiento son: la liberación del comercio, el mejoramiento de la eficiencia productiva, un desarrollo económico y el crecimiento de la población; por otra parte, las preferencias de productos selectos (vísceras, ciertos cortes orgánicos libres de hormonas, etc.) han creado oportunidades para los exportadores, además el comercio mundial de carne de cerdo está creciendo más rápido para los cortes especiales que para los canales, de ahí que los proveedores están enfocándose en conocer de una manera más eficiente las necesidades específicas de los mercados.

CONCLUSIONES

El estado de Sonora cuenta con una serie de características favorables para la comercialización de la carne de cerdo como lo son: Adecuada ubicación geográfica, alta calidad de materia prima, área libre de fiebre porcina clásica, empacadoras con una capacidad instalada disponible y capacidad de respuesta, además existen facilidades a la inversión extranjera, disposición y oportunidades para asociarse con empresas mexicanas exportadoras, sobreoferta de trabajadores calificados, buena respuesta de los productores locales hacia la apertura comercial, así como también posee infraestructura y personal calificado para la investigación sobre la industria alimentaria y un Acuerdo de Asociación Económica con Japón.

Sin embargo existen factores que afectan indiscutiblemente el desarrollo de esta industria, como lo son: las variaciones en los precios internacionales, los cambios bruscos en la demanda, la inflación e inestabilidad en las políticas financieras que afectan los costos, aumento en trabas y burocratismo, una creciente competencia debido a la apertura de mercados, también hay escasa información de mercados, apertura constante de los contenedores en los puntos de inspección instalados en las carreteras del estado, alto costo financiero para apoyar el crecimiento de las empresas, vinculación reducida entre centros de investigación, universidades y empresas y algo muy importante carece de un modelo estratégico de comercialización.

Mapa del clúster de la carne de cerdo en el Estado de Sonora

Fuente: Propia

Por otro lado, se señala la importancia de fortalecer la estrategia de integración vertical, reuniendo un mayor número de granjas, para poder ampliar las plantas de sacrificio y proceso, con lo cual se garantizará contar siempre con materia prima y sobretodo se conseguirá disminuir los costos de producción y contrarrestar las fluctuaciones en los precios de mercado. Así mismo, es recomendable complementar la estrategia de eficiencia operativa con la búsqueda de una ventaja competitiva sustentable y basada en la innovación; así como la investigación de nuevos nichos de mercado, incluso podríamos sugerir que hay un abundante campo todavía por explorarse en lo que se refiere a la exportación de carne de cerdo al mercado japonés proveniente del Estado de Sonora, dado el alto potencial de crecimiento de

dicho producto, derivado de que las condiciones tanto sanitarias, de infraestructura y recursos son favorables, así como también de la puesta en marcha del Acuerdo de Asociación Económica entre México y Japón firmado en el 2004.

RECOMENDACIONES

Derivado de los hallazgos encontrados anteriormente surge la necesidad de desarrollar un modelo estratégico para la comercialización de carne de cerdo al mercado japonés, pero debido a que la competencia cada vez es más fuerte, este modelo debe estar basado fundamentalmente en algunas estrategias que se plantean a continuación: Promover en mayor grado las alianzas estratégicas tanto con empresas nacionales como extranjeras para aprovechar el conocimiento y la experiencia de las últimas. Promoción intensa de los productos mexicanos, haciendo énfasis en la calidad de la materia prima y en la variedad de los productos. Fomentar una política que contribuya a hacer más eficiente el proceso de inspección en los retenes. Buscar información en los centros de investigación y universidades para mejorar las técnicas de producción y de este modo hacer frente a la competencia global. Las investigaciones futuras pudieran enfocarse en mejorar las técnicas de producción e identificación de nichos alternativos de mercado, por ejemplo, el de la carne de cerdo orgánica; de esta forma se estaría en posibilidad de desarrollar ventajas competitivas para hacer frente a la competencia global. Establecer un proceso de integración vertical hacia atrás. Continuar observando rigurosamente las normas establecidas por el gobierno para evitar brotes de enfermedades porcinas y establecer la mejora continua en las medidas de seguridad. Establecer lazos a largo plazo con los clientes.

UN ANÁLISIS ECONÓMICO DEL TURISMO Y SUS IMPACTOS EN LOS SERVICIOS DE LOS ECOSISTEMAS COSTEROS EN BAJA CALIFORNIA SUR

José Urciaga García, Universidad Autónoma de Baja California Sur
Judith Juárez Mancilla, Universidad Autónoma de Baja California Sur
Plácido Roberto Cruz Chávez, Universidad Autónoma de Baja California Sur
Claudia Lauterio Martínez, Universidad Autónoma de Baja California Sur

RESUMEN

Los cambios del uso de suelo y en el paisaje en la zona costera como resultado del crecimiento del turismo afectan la capacidad de los recursos naturales para proveer servicios ecosistémicos, poniendo en peligro la sustentabilidad del sistema global. Destacan los ecosistemas marinos y costeros como proveedores de servicios, especialmente sensibles a factores directos e indirectos promotores del cambio global como la modificación del hábitat, introducción de especies invasivas, sobreexplotación y cambio climático. La gestión apropiada ha sido un reto permanente debido a la complejidad de los ecosistemas marinos y costeros, las dificultades de gestión se agudizan por el crecimiento comercial, urbano y turístico en la costa. El crecimiento de los asentamientos humanos como consecuencia de los desarrollos inmobiliarios y megaproyectos de turismo han provocado cambios significativos de los ecosistemas marinos y costeros y requieren de atención prioritaria para mitigar los efectos antropogénicos. El estudio es una primera aproximación a la caracterización de la interacción entre turismo, ecosistemas costeros y su valor económico en Baja California Sur.

PALABRAS CLAVE: uso de suelo, servicios ecosistémicos, turismo, Baja California Sur.

ECONOMIC ANALYSIS OF TOURISM AND IMPACTS ON COASTAL ECOSYSTEM SERVICES IN BAJA CALIFORNIA SUR.

ABSTRACT

Changes in land use from coastal areas affects the ability of natural resources to provide ecosystem services, disturbing the sustainability of the global system. Marine and coastal ecosystems as major providers of services are especially sensitive to the direct and indirect promoters of global change, habitat modification, introduction of invasive species, over-exploitation and climate change. Management of coastal areas has been a challenge due to the complexity of the ecosystems; difficulties are exacerbated by business growth, urban and tourism in coastline. The expansion of human settlements as a result of housing development and tourism megaprojects has produced significant changes in environmental services and requires priority attention to mitigate anthropogenic effects. This study is a first approach to characterization of interaction between tourism, coastal and marine ecosystems and their value in Baja California Sur.

KEYWORDS: land use, ecosystem services, tourism, Baja California Sur.

JEP: L80, L83, Q57, R14, R52, Y91.

INTRODUCCION

El sector turístico es el de mayor impacto en el crecimiento económico en Baja California Sur (B.C.S.). Lo anterior provoca cambios profundos en el aprovechamiento de los servicios que proveen los ecosistemas costeros y marinos de la región. Los cambios se generan como resultado de los polos turísticos e inmobiliarios y la creciente urbanización que modifican el uso del suelo, el paisaje y los servicios ecosistémicos, ocasionado por la presión servicios de las zonas costeras.

La inversión extranjera directa es el motor del crecimiento del sector turístico, con poco más de 1,120 empresas que participan activamente en los mercados B.C.S., especialmente en los mercados laborales e inmobiliarios y servicios colaterales (hoteles, viajes y otros servicios recreativos, financieros, seguros y de alquiler), lo que se refleja es un dinámico sector de bienes raíces asociado al turismo. Lo anterior tiene importantes efectos socioeconómicos y ambientales en la zona costera por el cambio el uso del suelo, modificaciones en el paisaje costero y cambios en las actividades económicas tradicionales en los recursos naturales. En la regulación de los mercados de suelo destaca el tema de los derechos de propiedad. Derechos muchas veces no definidos sobre bienes públicos y con implicaciones importantes en el uso del los recursos por los diferentes actores involucrados (Urciaga, 2012).

REVISION DE LITERATURA

Los servicios de los ecosistemas consisten en los beneficios sociales que otorga su funcionamiento y que frecuentemente se encuentran disponibles de manera gratuita para los beneficiarios directos (Kline, 2007), representan los beneficios directos e indirectos que la población humana deriva del funcionamiento de los ecosistemas (Costanza et al., 1997). Muchos de los servicios ecosistémicos tienen características de bienes públicos globales o locales y los mercados no se han estructurado para establecer mecanismos de asignación eficiente en función del sistema de precios.

Existen varias tipologías de servicios ecosistémicos todas ellas se orientan a establecer atributos que puedan ser claramente cuantificables para evitar su doble contabilidad. Se destacan atributos que se incorporen a la función de utilidad de los agentes que mejore su satisfacción o se incluyan como insumos o bienes intermedios en la función de producción de las empresas. Las diversas propuestas presentan algunos problemas. Daily (1997) definió claramente aquellos servicios que se derivan de las funciones y procesos de los ecosistemas que tienen relevancia desde la perspectiva ecológica, en contraste a la poca precisión de los servicios de soporte para el desarrollo cultural e intelectual. Una clasificación muy generalizada es la que emplea el reporte de La Evaluación de los Ecosistemas del Milenio (MEA, 2005), estudio que utiliza cuatro grandes grupos de los servicios ecosistémicos: de base, de aprovisionamiento, de regulación y culturales. Existen otros servicios ecosistémicos como los culturales en los que el bienestar social puede derivarse del mundo natural, incluye servicios que se fundamentan en los valores pasivos y de no uso de los servicios ecológicos en que los derechos de propiedad y los mercados están indefinidos y se regulan con mecanismos alternativos al mercado como la reglas informales que establecen las comunidades sobre usos y costumbres (Hooper *et al.*, 2005).

METODOLOGIA

Para analizar los cambios ocurridos en los servicios de los ecosistemas que provee el capital natural y su valoración económica, se utiliza un sistema de información geográfica (SIG) que permite cuantificar los cambios ocurridos en la zona costera a través del tiempo, para luego modelar su valor económico mediante información de precios del suelo y con ayuda de modelos econométricos. El SIG nos permite digitalizar el área de estudio a nivel estatal y de ciertas áreas de interés (Buceo recreativo-Isla de Espíritu Santo y Turismo de aventura en El Sargento La Ventana).

Para el nivel de La Península de B.C.S se utilizó la carta topográfica 1: 50,000 como mapa base, a través de la digitalización del contorno (O'Neill et al, 1996). A este mapa base se le adiciono la capa de la Serie III, Uso de suelo y tipo vegetación de [Instituto Nacional de Estadística y Geografía](#) (INEGI) 2002. Se utilizaron imágenes de satélite, para revisar que las unidades que obtenidas en la capa de la Serie III correspondieran a las que se podían visualizar en la imagen de satélite.

Se realizó una verificación bibliográfica de la información proporcionada por instituciones gubernamentales como: Comisión Nacional Forestal (CONAFOR), Instituto Nacional de Ecología (INE), INEGI, Comisión Nacional para el Conocimiento y Uso de la Biodiversidad (CONABIO), para supervisar que las unidades reportadas en la serie III correspondieran al tipo de vegetación y tipo de uso de suelo actual y proyectado para la zona. Se basó en la clasificación, en ecosistema, formación y tipo de vegetación y uso del suelo generado por CONAFOR y UMAFOR 303. Se utilizaron datos del Gobierno de Baja California Sur, contenidos en el documento público denominado Plan De Desarrollo Urbano, con la finalidad de conocer como el Gobierno realizará el desarrollo de la zona costera y que áreas se proyectan para uso, transformación y desarrollo.

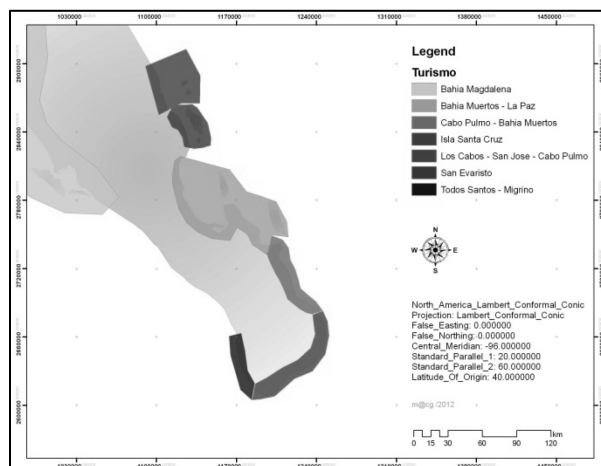

Para valorar económicamente los cambios en los servicios de los ecosistemas se recolectaron datos mediante encuestas a los actores y usuarios que incluyeron información sobre: lugar de origen, días de estancia en La Paz, costo del servicio, inclusiones en el servicio, número de sitios de buceo visitados, especies observadas en mayor cantidad, así como opinión acerca de la calidad del servicio. Se obtuvieron los promedios (\pm Desv. Est.) para los costos del servicio de buceo, , con el fin de observar si existieron diferencias en los ingresos dependiendo de la nacionalidad y los costos pagados dependiendo de la nacionalidad, se hicieron los análisis en el programa Evviews.

Para el caso de la valoración económica de los cambios ocurridos en la región El Sargento La Ventana por el turismo de aventura, se utilizaron los SIG ILWIS y ArcMap 9.2 para el reconocimiento en fotografías aéreas escala 1:75000 (Chuvieco, 1990) y planos catastrales. Además, se realizó la consulta con expertos pertenecientes al sector inmobiliario, de las cuales se obtuvieron los valores comerciales y especulativos de referencia. En las oficinas de Catastro Municipal se identificaron los valores oficiales del suelo, en materia de recaudación del impuesto predial, con ellos se realizaron los polígonos que permiten valorar económicamente los cambios ocurridos.

RESULTADOS

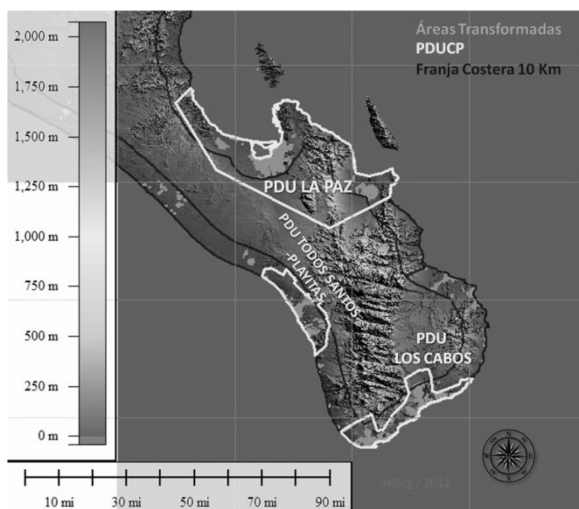

De la investigación realizada se obtuvo que el turismo atrae a Baja California Sur (B.C.S.) a poco más de dos millones de visitantes al año, con mayoría de visitantes extranjeros, registra una ocupación hotelera promedio cercana al 60%, una estancia media de tres días, con un componente estacional en el período de invierno y durante los torneos de pesca deportiva. La oferta hotelera se sitúa en poco más de 300 establecimientos de desarrollo hotelero que cuentan con poco más de 20 mil habitaciones de todas las categorías, además de los tiempos compartidos y 9 marinas que brindan resguardo al turismo náutico. La derrama económica anual del sector del turismo comporta alrededor de 60 mil millones de pesos. Se identificaron las zonas con mayor importancia turística en B.C.S. (Figura 1). Entre las cuales se destacan: Los Cabos, San José del Cabo, La Paz, Todos Santos, Buenavista, El Sargento y La Ventana, por ser las áreas de mayor afluencia turística en B.C.S., los cambios en los servicios ecosistémicos de recreación y provisión ocurridos por el crecimiento del turismo.

Figura 1: Areas de mayor afluencia turística en B.C.S.

Zonas con mayor afluencia de turismo, realizado en base a los servicios ecosistémicos marinos y costeros. Fuente: María de los Ángeles Covarrubias, 2012.

Figura 2: Zonas impactadas por la actividad turística en el Estado de B.C.S.

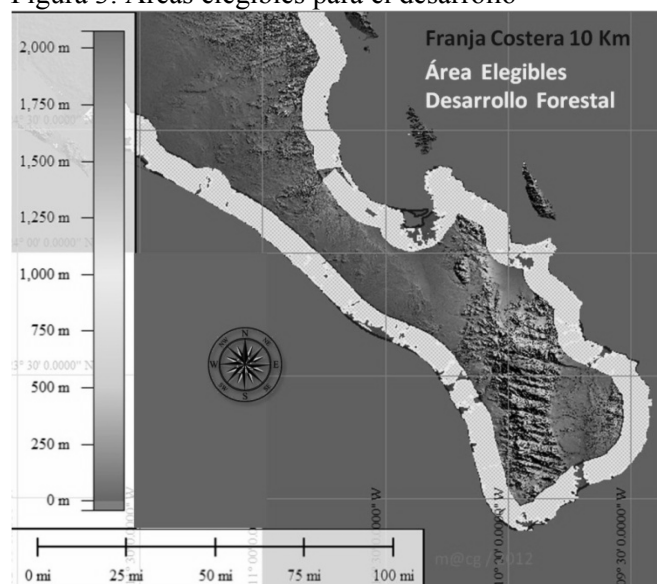

Se trazo la franja costera de diez kilómetros puesto que es el área con mayor interés para el desarrollo del turismo así como también es clave para el correcto funcionamiento de los ecosistemas costeros y marinos. Se muestran también las áreas de mayor transformación en el Estado y se identifican las regiones donde el PDU (Plan de Desarrollo Urbano Centro de Población) se realizará. Fuente: María de los Ángeles Covarrubias, 2012.

Los servicios ecosistémicos de mayor relevancia identificados en B.C.S. son: i) refugio de especies; ii) belleza escénica; iii) producción de alimentos; iv) recreación; v) culturales; y vi) recursos genéticos. Cada uno vinculado a funciones ecológicas y a usuarios específicos. Como lo es la actividad turística, que se basa en el uso y aprovechamiento de los ecosistemas costeros y marinos, generando un ingreso importante para el Estado, sin embargo el impacto de dicha actividad tiene efectos irreversibles en el sistema costero, causando la transformación de áreas claves para el adecuado funcionamiento de los ecosistemas (Figura 2).

Para la franja costera del municipio de La Paz (Figura 3), se tiene contemplado una superficie de 464,728 hectáreas las cuales representa el 78 % y para el municipio de Los Cabos contempla una superficie de

134,304 hectáreas que representa el 22 % respectivamente, en total se tiene que para los dos municipios se tiene comprendida una superficie de 599,031.30 hectáreas (Tabla 1).

Figura 3: Áreas elegibles para el desarrollo

Franja de diez kilómetros de mayor atracción para el turismo, debido a la importancia los servicios ecosistémicos presentes, dentro de los que destaca el servicio de recreación y cultural. Destacando que mayor amenaza presenta. Fuente: María de los Ángeles Covarrubias, 2012.

Lo anterior parcialmente explica el rápido crecimiento del mercado inmobiliario y el incremento de asentamientos turísticos, provocando cambios en servicios que proveen los ecosistemas presentes.

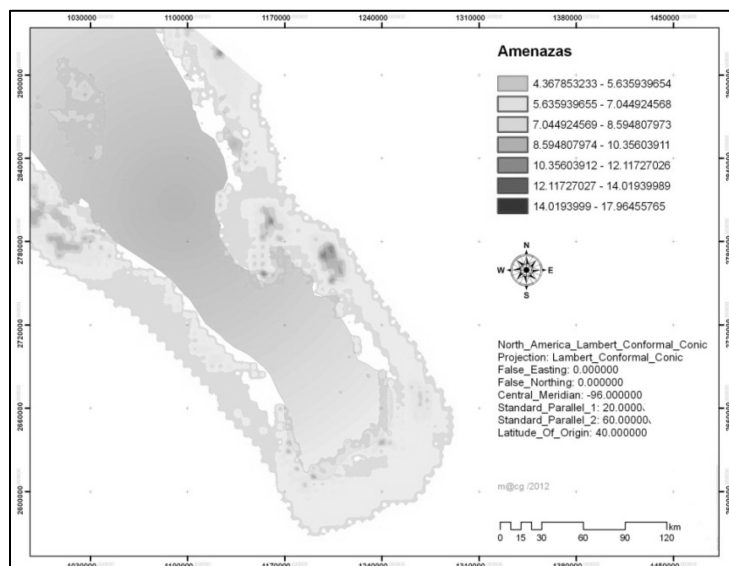

Tabla 1: Áreas elegibles de Desarrollo Forestal, para B.C.S. en el 2012.

NOM. MPIO	AREA	HECTAREAS	HA.	%
La Paz	23,790.126	2.38	464,728	78
	8,852,091.586	885.21		
	2,221,601,368.868	222,160.14		
	2,416,799,177.487	241,679.92		
Los Cabos	1,343,026,922.208	134,302.69	134,304	22
	6,794.362	0.68		
	2,836.017	0.28		
Total		599,031.30	599031	100

En esta tabla se presentan el área a desarrollar para B.C.S que comprende la franja costera de 10 km. Fuente: María de los Ángeles Covarrubias, 2012.

El crecimiento en la inversión turística, afecta infraestructura y equipamiento trae problemas para B.C.S, ya que repercute en el correcto uso de los servicios ecosistémicos brindados por la región. El incremento turístico provoca un incremento en la demanda de bienes y servicios ecosistémicos marinos, provocando amenazas para los hábitats de las principales especies. Entre las acciones que generan las principales amenazas se encuentran sobre-explotación de los recursos pesqueros, puesto que la falta de esquemas que guíen al uso, gestión y aprovechamiento sustentable ha causado amenazas en las especies presentes en el litoral (Figura 4). Esto ha provocado que los sitios de crianza de especies marinas y el número de las especies disminuya, afectando su ciclo de vida y por ende el ciclo del servicio brindado.

Figura 4: Zona marina con mayor índice de amenaza.

Se presenta el área marina más afectada a causa del turismo y el uso no sustentable del servicio ecosistémicos Fuente: María de los Ángeles Covarrubias, 2012.

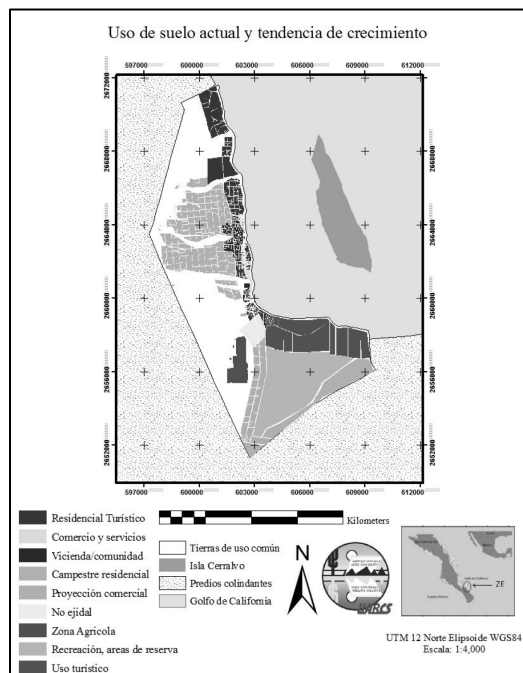

Servicios Ecosistémicos Y Su Valor Económico Complejo Insular Espíritu Santo, B.C.S., México: El Buceo Recreativo En Caso De Estudio.

El costo total que los turistas pagaron en esta zona por los servicios de buceo en el complejo insular Espíritu Santo el promedio fue de \$2,440.00 (dos mil cuatrocientos cuarenta pesos 00/100 M.N.) ($\pm \$3057.44$), el costo mínimo correspondió a \$1,500.00, mientras que el máximo fue de \$11,543.00. Los visitantes que pagaron entre \$1,500.00 a \$2,000.00 (mil quinientos a dos mil pesos 00/100 M.N) por el servicio de buceo fue de un 40%, un 22% pagaron entre \$2,001.00 y \$3,000.00 (dos mil uno y tres mil pesos 00/100) y el resto pagaron de entre \$3,001.00 a \$11,000.00 (tres mil uno y once mil pesos 00/100) por el servicio. Así mismo dependiendo de la nacionalidad de origen varió el costo promedio que los turistas pagaron por los servicios de buceo, los turistas europeos fueron los que pagaron más por los servicios de buceo con un costo de \$9,316.00 (nueve mil trescientos diez y seis pesos 00/100 M.N.; $\pm \$1,996.00$), seguido de los turistas de otras nacionalidades que pagaron \$5,724.00 M.N. (cinco mil setecientos veinticuatro pesos 00/100 M.N.; $\pm \$1,600.00$), los mexicanos, estadounidenses y canadienses pagaron entre \$2,000.00 (dos mil pesos 00/100 M.N.) y \$2,700.00 (dos mil setecientos pesos 00/100 M.N.) por los servicios de buceo.

Cambios En Uso Del Suelo Por El Turismo De Aventura En El Sargento Y La Ventana, B.C.S.

Es posible presentar una aproximación al valor económico de los cambios ocurridos en El Sargento La Ventana por el turismo de aventura. Primero se identifican los distintos usos de suelo ya que la demanda del mercado inmobiliario y el intercambio de los derechos de propiedad sobre los predios va de la mano con las modificaciones en los servicios ecosistémicos del turismo y recreación, generando una proyección de crecimiento basada en el mercado mencionado (Figura 5). Las áreas prioritarias para el desarrollo son de tipo: residencial turístico, proyección comercial, uso turístico, campestre residencial, recreación y áreas verdes ocupando un 55.5% del total del ejido. Un 39% de las tierras de uso común, las cuales no tienen hasta el momento del análisis, alguna proyección determinada y el resto se distribuye entre vivienda/comunidad, comercio/servicios y zona agrícola.

Figura 5: Expectativas de crecimiento en El Sargento y La Ventana.

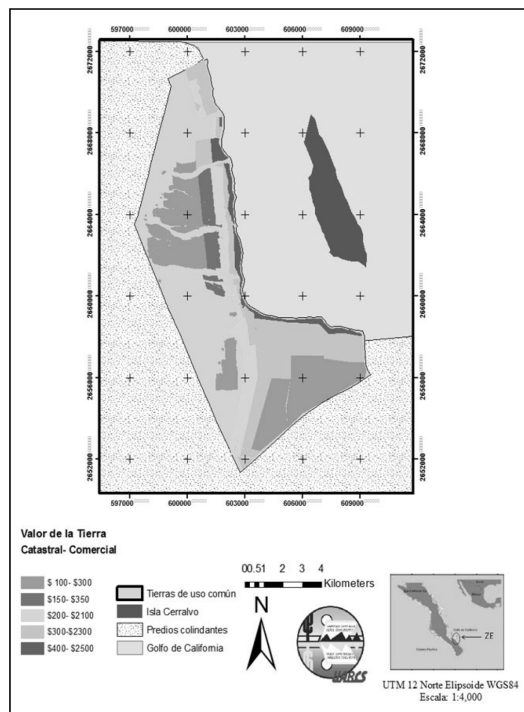

Se presentan la ubicación de los predios en la región y el destino para cada uno de ellos Fuente: Claudia Lauterio, 2011.

Valor Económico Del Suelo En El Sargento Y La Ventana, B.C.S.

El valor comercial para este análisis es el más importante, ya que identifica cuales son los predios en la región de estudio de mayor interés para el mercado turístico, representados por aquellos predios con acceso a playa. Obteniendo que de un 80% de dichos predios cuyo principal destino es para uso turístico (residencial y hotelero) el 35% se estima en un precio de \$2,500 pesos m^2 , considerando su cercanía al mar, el acceso a los servicios y urbanización. En cuanto aquellos predios orientados al sector servicios y comercial los cuales representan un 25 %, se estiman en un valor de \$2,300 pesos m^2 , valor que se basa en el desarrollo y crecimiento del sector servicios (restaurantes, comercios, tiendas) para la región.

El resto de los predios, representado por el 40% está orientado al uso residencial turístico sin frente de playa y ausencia de servicios valuados en un rango de 2000 a 100 pesos. Sin embargo, la ausencia de regulación en el mercado inmobiliario carece de una evaluación previa que certifique el precio real, considerando las variables ambientales y sociales existentes, por parte de se reconoce también el comportamiento de los ejidatarios al no considerar estos precios, intercambiando predios por otro tipo de bienes, causando así cambios en el ordenamiento y transferencia de los predios.

Figura 6: Valoración económica de la zona de estudio

La figura identifica la valoración otorgada a cada uno de los predios con respecto a su cercanía al mar y acceso a los servicios.

CONCLUSION

En México y en el caso particular de Baja California Sur, el turismo masivo se articula a modo de una red cuyo vértice lo ocupan algunas localidades de su territorio ligadas, preferentemente con el extranjero. Entre las acciones que generan las principales amenazas se encuentran la sobreexplotación de los recursos naturales, el deterioro ambiental y la falta de esquemas que guíen el uso, gestión y aprovechamiento sustentable de los servicios de los ecosistemas. Es frecuente que los servicios ecosistémicos y el paisajes costeros se degraden como resultado de establecer obras de infraestructura turística y asentamientos humanos en playas, dunas, esteros y lagunas costeras. Por ello, el uso intensivo de los ecosistemas costeros y marinos por el turismo no se puede explotar sin control dado el evidente nivel actual de degradación de los servicios ecosistémicos.

El desarrollo futuro de la actividad turística está condicionado a la aplicación de criterios de desarrollo sustentable y especialmente de planificación económica con instrumentos de planes de desarrollo urbano y de ordenamiento ecológico marino y terrestre. Aprovechar responsablemente la demanda turística actual que valora de manera importante el patrimonio natural y cultural implica no degradar los servicios ecosistémicos. Esta perspectiva incorpora nuevas áreas de oportunidad para desarrollar la empresa dedicada al turismo de naturaleza, oportunidades complementarias que pueden mejorar la cohesión social. Existen muchas actividades de turismo responsable como la observación de ecosistemas, ballenas, tortugas, aves, observación geológica y de fósiles, entre otras, actividades de mínimo impacto sobre el ambiente una vez que se establece su uso ordenado y se siguen las indicaciones derivadas de los Programas de Manejo respectivos.

El complejo insular Espíritu Santo es uno de los principales atractivos turísticos de La Bahía de La Paz, siendo esta isla visitada para un sinnúmero de actividades tal como se mencionó en los antecedentes y de esta manera deberían de existir esfuerzos enfocados a integrar la información de estudios sociales como el

presente con estudios biológicos que ya se realizan de manera consistente en las islas. Esta isla trae recursos a una parte importante de las empresas turísticas de buceo de la bahía en los meses de temporada alta que son los meses de junio a septiembre en donde las condiciones climatológicas permiten la actividad del buceo recreativo, sin embargo, las demás actividades como el kayakismo y la pesca son de importancia relevante en otras épocas del año; así mismo las actividades de caminata y camping se pueden realizar los demás meses del año en los cuales no hay otras actividades debido a las condiciones climatológicas. El Sargento y La Ventana demuestran que el desarrollo inmobiliario es el sector más dinámico en la región. La construcción de casas habitación de tipo especulativo “spec house” son habitadas durante la temporada invernal y originan problemas en lo que respecta al uso y goce de la propiedad, así como en el ámbito legal, afectando el estatus de tenencia de la tierra, lo cual genera efectos negativos en el sector social, por la intervención del régimen ejidal y la figura legal de propiedad para el caso de extranjeros. Las características naturales de la zona, la ausencia de regulación en el uso de suelo, aunado a la popularidad que adquieren las actividades turísticas, atraen constantemente a un elevado número de turistas, brindándoles comodidad y servicios suficientes para establecerse en la zona como un lugar de segunda residencia. Dicho fenómeno ha promovido el crecimiento turístico desde 1993 a la fecha, como consecuencia de la reforma de 1992 al artículo 27 Constitucional, en donde por primera vez se otorgó el dominio pleno a los ejidos en las áreas de uso común.

Los resultados de ésta reforma para El Sargento y La Ventana en particular han sido interesantes ya que continúa incrementándose el uso de suelo para fines turísticos, motivado principalmente a causa del auge del mercado inmobiliario, resultado de los mecanismos de incorporación de suelo ejidal al desarrollo, en los cuales participan los sectores no populares de la población. En todos los casos, resulta notoria la poca participación de las instituciones públicas y gubernamentales en el desarrollo urbano, obteniendo así el predominio del libre mercado del suelo en el cual los gobiernos municipales son facilitadores.

INTERACCIÓN EN EL SISTEMA REGIONAL DE INNOVACIÓN: ESTUDIO EMPÍRICO DE LA COLABORACIÓN Y COOPERACIÓN PARA LA INNOVACIÓN EN EL CONTEXTO DE REGIÓN LAGUNERA DE COAHUILA

María del Carmen Armenteros Acosta, Universidad Autónoma De Coahuila

Manuel Medina Elizondo, Universidad Autónoma De Coahuila

Víctor Manuel Molina Morejón, Universidad Autónoma De Coahuila

Gabriela Reyna García, Universidad Autónoma De Coahuila

RESUMEN

Los estudios regionales de la innovación realizados por la OCDE y BID en el contexto de América Latina, permiten sustentar la necesidad de la medición de la dinámica de la innovación como proceso interactivo, como fenómeno complejo y sistémico, que implica medir, además de los insumos y resultados, las relaciones de colaboración y cooperación entre los agentes de los Sistemas Regionales de Innovación (SRI). El objetivo del trabajo es describir las actividades de innovación, las interacciones de colaboración y de cooperación que se dan dentro del SRI, a nivel de Región Lagunera de Coahuila, en Micro, Pequeñas y Medianas Empresas (PYME). La indagación empírica se realizó mediante entrevista estructurada, con una muestra aleatoria de 114 unidades, con un error inferior a ± 5 puntos y un nivel de confianza del 95%. El procesamiento fue con estadísticos descriptivos y contrastaciones no paramétricas utilizando SPSS. Resultados: Identificación de las actividades de innovación en diferentes modalidades; análisis de los esfuerzos y capacidades de las MIPYME para gestionar la innovación; caracterización de la colaboración y cooperación, que resultó ser mayor con agentes de la cadenas industriales, a pesar de los requerimientos externos, tecnológicos y financieros, de las MIPYME para la innovación.

PALABRAS CLAVE: innovación, Sistema Regional de Innovación, colaboración y cooperación.

INTERACTION WITHIN A REGIONAL INNOVATION SYSTEM: EMPIRICAL STUDY OF INNOVATION, COLLABORATION AND COOPERATION IN THE CONTEXT OF THE LAGUNA REGION OF COAHUILA

ABSTRACT

Regional studies of innovation undertaken by the OECD and IDB in the Latin American context, substantiate the need for measuring the dynamics of innovation as an interactive process, as a complex and systemic phenomenon, which involves measuring, additionally to inputs and results, partnerships and cooperation between staff of Regional Innovation Systems (NIS). The objective of this project is to describe the activities of innovation, collaborative interactions and cooperation that occur within the SRI, Laguna district level of Coahuila, in Micro, Small and Medium Enterprises (SMEs). The empirical research was conducted through structured interviews with a random sample of 114 units, with an error of less than ± 5 points and a confidence level of 95%. The information processing was done through descriptive statistics and nonparametric contrasting using SPSS. Results: Identification of innovation activities in different ways, analysis of efforts and capacities of MSMEs to manage innovation;

collaborative characterization and cooperation, which was stronger with agents of the industrial chains, despite technological and financial external requirements, of MSMEs for innovation.

KEYWORDS: Innovation, Regional System of Innovation, collaboration and cooperation.

INTRODUCCIÓN

La innovación como factor estratégico de la competitividad en el tránsito a la sociedad del conocimiento, está estrechamente ligada al territorio y al ámbito local. El concepto de sistema regional de innovación (SRI), es una aproximación teórica relativamente nueva en el ámbito del desarrollo regional, que tiene sus antecedentes, a fines de los años ochenta y principios de los noventa del siglo pasado, en los trabajos que consideraban el concepto de sistema de innovación como el núcleo de los mecanismos de desarrollo económico, asociados a la corriente estructuralista-evolucionista de la doctrina económica, que rompían con la visión neoclásica de la economía.

La importancia de los estudios de innovación desde la dimensión regional, radica en que “dicho concepto se basa en la idea de que el proceso de innovación y el aprendizaje son eminentemente social, dado que implica interacción de las empresas, las agencias de promoción de la innovación, y las instituciones académicas y los centros de investigación” (Llisterri, J, et al, 2011). Es decir la región es un sistema dinámico de actores que interactúan entre sí.

Si a ello agregamos, que en México las mediciones de la innovación se han realizado, a través de las encuestas nacionales (2002, 2006 y 2012), que no reflejan la problemática regional, y que los indicadores utilizados en su mayoría responde al enfoque planteado en el Manual de Oslo (OCDE, 1999,2005) orientado a indicadores de input y output intermedios a nivel macro. Trabajos empíricos realizados en México, sobre la vinculación academia en el sector industrial (Torres, 2009); el análisis estratégico del desarrollo de las MIPYME a nivel nacional y estatal (FAEDPYME, 2009, Medina et al, 2011), la cooperación interempresarial de las PYME a nivel sectorial (Araiza, Z; Velarde, E y Zarate, A. (2010) muestran por un lado que las relaciones entre las empresas y los actores sociales está relacionada con la intensidad de la actividad innovadora y el tamaño de las empresas; y por otro constatan que son las PYME las que presentan más necesidad de aprovechar las potencialidades externas.

Los aspectos indagados no profundizan sobre los vínculos en cuanto a las diferentes modalidades de la colaboración y cooperación, y su reflejo en la complementariedad científica y tecnológica existente en los proyectos concertados entre los agentes de los sistemas de innovación a nivel regional (estados y municipios) Lo expuesto justifica la necesidad de la investigación orientada a caracterizar el SRI de Coahuila y la colaboración y cooperación que genera, por su incidencia a través de la innovación en los resultados económicos, en la que se enmarca el presente trabajo. Su objetivo es describir las actividades de innovación, las interacciones de colaboración y de cooperación que se dan dentro del SRI, a nivel de Región Lagunera de Coahuila, en Micro, Pequeñas y Medianas Empresas (MIPYME). Los resultados ofrecerán una información valiosa para las políticas empresariales y estatales de innovación en el Estado.

El desarrollo del trabajo se estructura en tres partes: referentes teórico –metodológicos mediante la revisión de la literatura, la metodología utilizada en el estudio empírico, y el análisis de los resultados en cuanto a tipología, esfuerzos, capacidades, colaboración y cooperación en la gestión de la innovación, en las MIPYME de la Región Lagunera, como uno de los componentes del SRI de Coahuila.

REVISIÓN DE LITERATURA

Como hemos expresado en trabajos anteriores, el concepto de innovación ha tenido su evolución desde el enfoque empresario individual, pasando por su asociación a la Investigación y Desarrollo (I&D), hasta el

enfoque de sistema (Armenteros, et al, 2012 b). Como apunta M. Alborno (2009) es un concepto polisémico, amplio, pero en el campo de las políticas públicas “entraña el propósito de mejorar la posición competitiva de las empresas, mediante la incorporación de nuevas tecnologías y conocimientos de distinto tipo. El proceso de innovación consiste así en una serie de actividades no solamente científicas y tecnológicas, sino también organizacionales, financieras y comerciales; acciones que, en potencia, transforman las fases productiva y comercial de las empresas”.

“Los sistemas de innovación pueden ser considerados como conjuntos de diferentes instituciones y actores sociales que, tanto por acción individual como por sus interrelaciones, contribuyen a la creación, desarrollo y difusión de las nuevas prácticas productivas. Este concepto concibe a las innovaciones como un proceso social e interactivo en el marco de un entorno social específico y sistémico” (Alborno, 2009). Es decir, la región es un sistema dinámico de actores que interactúan entre sí promoviendo la innovación como fuente generadora de la competitividad.

Realmente, al decir de Alborno (2009), los elementos del SIR pueden articularse como círculos virtuosos que promueven procesos de aprendizaje e innovación, o configurar círculos viciosos que tienen la capacidad de bloquear el proceso de innovación. De ahí, se genera una interrogante general para la investigación: ¿En el Estado de Coahuila se ha creado una capacidad innovadora resultado de la interacción virtuosa de los actores que conforman el SRI? Existen diversos enfoques y tipología para el estudio de los SRI y no consenso en cuanto a los componentes clave. Los estudios sobre las tipologías de los SRI han sido criticados por el énfasis en la identificación de los componentes principales de los sistemas de innovación, lo cual pone de manifiesto, según Edquist (2001), problemas en el conocimiento real de los determinantes, dificultades para definir en términos cuantitativos algunos procesos de aprendizaje, lagunas teóricas sobre el papel del estado, poco rigor académico en algunas de las variables seleccionadas, entre otras. Teniendo en cuenta que el propósito es medir la colaboración y cooperación para la innovación, se asume la teoría de los sistemas de innovación - basada en un concepto holístico— que plantea la creación de sinergias debido a la interacción entre sus agentes, que, a su vez, generan un proceso de aprendizaje colectivo, y la cooperación aparece como uno de sus mecanismos.

El nivel de desarrollo del SRI en los países en desarrollo, entre los que incluye a los latinoamericanos, que según Albuquerque (2002) son inmaduros, caracterizados por una infraestructura científica relativamente poco desarrollada, empresas autóctonas sin actividad tecnológica significativa, una participación importante de las empresas transnacionales en sectores clave de la economía y, por último, un fuerte desequilibrio en la localización de los recursos económicos y tecnológicos. Un antecedente importante de la investigación, por su relevancia para el continente de América Latina son los estudios realizados por el Banco de Desarrollo Interamericano (BID) a partir de las funciones y agentes relevantes de los SRI. A los efectos de la investigación que se presenta, resulta importante la afirmación de Llisterri et al (2011), al reconocer en la literatura que los factores de interacción entre los agentes en los SRI constituyen uno de los factores principales para impulsar la innovación dada la creación de sinergias creada en la interacción de los actores.

Aun cuando el estudio de la cooperación y sus efectos no ha sido objeto de investigación muy difundido, es preciso mencionar como antecedentes: la innovación reconocida como una actividad de cooperación realizada en colaboración con otras empresas, universidades o centros de investigación y desarrollo (Tomlinson, 2000); las propuestas de indicadores para medir las interacciones dentro de los sistemas regionales y clúster (Tsipouri (2000); las evaluaciones sobre políticas de fomento a la cooperación innovadora con apoyo públicos y en innovaciones tecnológicas, sobre todo España (Heijs 2001, 2002, 2004 a,b; Barañano 2003, 2006).

En los estudios realizados de interacción dentro de los SRI, se distingue la identificación de las modalidades de colaboración y cooperación y sus dos tipologías: con agentes de la cadena productiva o

las fuerzas competitivas del sector industrial (vertical) y con agentes de las estructuras científicas y tecnológicas y de gobierno (institucional). (Buesa et al, 2003; Heijs et al, 2004a; Surroca & Santamaria, 2006). Para cada uno de ellos el fines diferentes mientras la alianza horizontal está vinculada de manera directa a la posición en el mercado, economías de escala; la alianza vertical genera complementariedad científica-tecnológica, coste – financiación y fuentes alternativas de financiamiento a la innovación. A los efectos de la investigación utilizaremos la colaboración y cooperación como dos niveles diferentes de intensidad de las interacciones.

El SRI de Coahuila está agrupado junto con 12 estados que representan el 43 % a nivel federal, dentro de una misma tipología, lo que nos permitiría decir que representa la media del país, que se caracteriza por presentar una alta especialización industrial caracterizada por el predominio de la manufactura de bajo contenido tecnológico, un bajo peso del sector servicios en su estructura productiva y una infraestructura de ciencia y tecnología comparativamente débil. Excluyendo el DF que resulta una aglomeración por si misma, dada la gran concentración de empresas de alta tecnología del país, alta densidad de población y de empresas por unidad de territorio y una fuerte infraestructura de ciencia y tecnología es el clúster integrado por los estados de Baja California, Chihuahua, Morelos y Tamaulipas, el que presenta una mejor situación con respecto al caso de estudio, por el elevado porcentaje de empresas de alta tecnología y una alta proporción de empresas de tamaño medio y grande. Crespi, G. y D'Este, P. (2011).

METODOLOGÍA

La metodología de la investigación utilizada consiste en una revisión documental presentada en la revisión de la literatura. La selección de la muestra se fundamenta en el muestreo estratificado, los criterios de tamaño según la cantidad empleados y el sector. Dentro de cada sector se utilizó el muestreo aleatorio simple. En el presente estudio el procedimiento en la afijación final no fue proporcional por lo que se utilizaron factores de elevación para la obtención de los datos agregados. Del total de la muestra de 114 MIPYME, se tomaron 54 (50,9%), todas ellas clasificadas como innovadoras, que será la sub-muestra sometida a estudio dado el objetivo específico de describir las características de la innovación y las interacciones mediante colaboración y cooperación de la actividad innovadora y sus efectos en los resultados empresariales en esta investigación. El método utilizado fue de entrevistas estructuradas, mediante la utilización de dos instrumentos; ambos validados en investigaciones precedentes, fueron: Encuesta de Análisis del Desarrollo

Estratégico de las MIPYME 2012, Bloque IV y el cuestionario sobre colaboración y cooperación en torno a los proyectos de I+D, del Instituto Análisis Industrial y Financiero (IAIF/FECYT) de la Universidad Complutense de Madrid (Heijs et al, 2004b). Las entrevistas se realizaron de julio a octubre del 2012. El procesamiento fue con estadígrafos descriptivos y contrastaciones, utilizando SPSS. Para la contrastación de variables cualitativas mediante estadística no paramétrica, se siguieron los siguientes pasos: plantear hipótesis, establecer nivel de significancia, seleccionar como estadígrafo la prueba H de Kruskal-Wallis, calcular e interpretar el valor obtenido.

RESULTADOS Y DISCUSIÓN

Comportamiento De La Innovación

Dentro de las MIPYME innovadoras, la innovación se comporta en cuanto a la modalidad (tipo de innovación según resultados) y la importancia asignada, de la siguiente forma: Predominan las innovaciones en productos según las frecuencias, con 92,5 % en cambios y mejoras, y 66% en comercialización de nuevos productos. Concuerta con que el 53,7% declaran que lanzan un nuevo o mejorado producto en menos de un año y el 24,1% entre 2 y 3 años. La baja de la comercialización de nuevos productos podría estar asociado a la baja actividad e inversiones en desarrollo tecnológico (16,7%

no realizan y 66,7% por debajo del 10% de las ventas) e innovación (22.2 % no realizan y 55.6% por debajo del 10% de las ventas). Sin embargo según la media la importancia en una escala Likert es 2,78 y 2,69 las dos modalidades de innovación de productos.

Las innovaciones en cambio y mejora de procesos y adquisiciones de nuevos equipos tienen un 84,9%, lo cual puede ser explicado por el enfoque a las operaciones en particular en micro y pequeñas y por las exigencias de la certificación de calidad sobre todo en el sector industrial, aunque es un área de oportunidad ya que el 61,1% no tiene ningún tipo de certificación. Llama la atención que el 57,4% declaran que introducen nuevo o mejorado proceso en menos de un año y el 27,8 % entre 2 y 3 años. Las innovaciones del sistema de gestión tienen los valores más bajos, por cambio o mejoras en dirección y gestión (54.7%), en compras y aprovisionamiento (54,7%) y en comercio y ventas (67,9%). Según la media de la importancia en una escala Likert la innovación en gestión tiene valores similares a los restantes modalidades con 271, 2,68 y 2,73.

Tabla No. 3: Los Tipos De Innovación Tienen Diferencias Significativas Según El Tamaño De Las Empresas

Resultados Innovadores	Chi-Cuadrado	Gl	Sig. Asintót.
Mejoras En Productos/Servicios	,009	2	,996
Comercialización De Nuevos Productos /Servicios	2,723	2	,256
Mejoras En Los Procesos De Producción/Servicios	1,856	2	,395
Adquisición De Nuevos Bienes Y Equipos	3,833	2	,147
Mejoras En Dirección Y Gestión	8,364	2	,015**
Mejoras En Compras Y Aprovisionamientos	7,328	2	,026**
Mejoras En Comercial /Ventas	3,550	2	,170

Nivel De Significación 0.01 ***0.05 **0.1* No existen diferencias significativas entre el nivel de innovación según el tamaño de las empresas, excepto en mejoras y compras y aprovisionamiento que puede estar relacionada con su volumen; y en las mejoras de la dirección y gestión que es más característico de empresas de mayor tamaño y de mayor antigüedad.

Interacciones De Apoyo A La Innovación.

Con respecto a las alianzas o acuerdos con las fuerzas competitivas del mercado o en otros términos con los agentes del sector (colaboración vertical), se manifiesta por un lado: que en los dos últimos dos años (2011-2012) se han establecido alianzas o acuerdos de colaboración con otras empresas en diversas áreas: comercialización 59.3%, compras y abastecimientos 46,3%, logística 51,9% y en menores niveles, la producción y la Investigación y Desarrollo (I+D) en un 33,3%. Por otro lado, con respecto a la colaboración para el desarrollo tecnológico e innovación, obtiene valores altos con clientes en un 59,3%, con proveedores en 42,6%, competidores intersectoriales 48,2% e intersectoriales 30,2%. Si al alto % de colaboración del cliente, agregamos que estos participan en un 44,5% con sus ideas sobre todo al inicio y durante los proyectos de innovación de productos, se corrobora que la relación con el cliente es un motor del proceso de innovación; es decir, la proximidad y conocimiento del cliente son factores claves en la innovación de las PYME (Baraño, 2003). El SRI además de la colaboración vertical, comprende la colaboración institucional con agentes sociales, sobre todo instituciones públicas y/o privadas vinculadas a la actividad de I +D y que pueden contribuir a la complementariedad científico y tecnológica que requiere la innovación en las empresas y al costo-financiación, así como instancias de gobierno, sobre todo en cuanto al financiamiento. Los datos muestran que las interacciones a través de las diferentes modalidades de la adquisición y transferencia de conocimientos entre las empresas y los agentes sociales del SRI, tiene un nivel bajo-medio en la región.

Análisis mediante contrastaciones de variables: En este apartado nos interesa determinar en primer lugar si la colaboración y la cooperación tienen efectos sobre los resultados de innovación de las empresas, y al mismo tiempo si el comportamiento de los diferentes tipos de innovación tiene efecto sobre los resultados empresariales. Asumimos las posturas de Surroca Aguilar et al (2006) de que las empresas innovadoras

obtienen resultados empresariales superiores; y que la capacidad de colaborar y cooperar influyen de manera directa en las innovaciones, pero de manera indirecta en los resultados empresariales. Lo cual puede explicar porque aun los empresarios no le otorgan importancia práctica a la colaboración y cooperación. La contrastación de variables se realizó a través de la Prueba de Kruskal-Wallis en las siguientes hipótesis:

H1 La colaboración y cooperación vertical tiene un efecto positivo sobre los resultados innovadores.

H2 La colaboración y cooperación institucional tiene un efecto positivo sobre los resultados innovadores.

H3 Los resultados innovadores de las empresas tienen un efecto positivo sobre los resultados económicos empresariales.

CONCLUSIONES

Primero. Las MIPYME innovadoras por sus resultados de la región Lagunera de Coahuila tienen un lento dinamismo en el proceso de innovación medido por la frecuencia de lanzamiento de nuevos productos y procesos, el bajo alcance de novedad, los pocos proyectos de innovación, la no planeación de acciones de innovación, lo permite inferir que la innovación es esporádica y no una actividad sistemática, lo cual provoca resultados efímeros que no aseguran la competitividad sostenible.

Segundo. En los proyectos desarrollados, las interacciones con agentes del entorno se orientan hacia las llamadas fuerzas competitivas del sector industrial como competidores y clientes y es casi ausente la colaboración y la cooperación institucional con gobierno y sobre todo, con las universidades y centros de investigación. En el caso de las universidades se puede explicar por el alcance o nivel de novedad la innovación, el origen aislado y no planeado de la misma, donde no se requiere de complementos en conocimientos científicos ni tecnológicos. Sin embargo, los datos, información y el conocimiento están distribuidos en diferentes áreas funcionales de la organización, por lo que se requiere para el éxito la gestión de los proyectos de innovación que se desarrolle, la comunicación fluida y la integración al menos entre investigación y desarrollo, ingeniería, calidad, producción, marketing y finanzas (Morcillo Ortega, P., 1997; Nieto, 2003, Barañano 2003), como sustento para la propuesta de alternativas para la toma de decisiones, así como la alineación a los objetivos estratégicos.

Tercero. Se confirma que a pesar de que en el contexto mexicano y en particular en el sistema regional de innovación de Coahuila son escasas las interacciones entre agentes, en el caso de las empresas que tienen formalizadas o realizan actividades de I+D+i, se da colaboración en torno a los proyectos de investigación e innovación con universidades o con gobierno en busca de apoyo financiero. Es preciso resaltar que los proyectos de la innovación, independientemente de su carácter tecnológico o no tecnológico, influyen progresivamente en la creación de un auténtico cambio hacia la cultura innovativa empresarial, basada en la confianza, colaboración, alineación, integración, alianzas, compromiso, trabajo en grupo y proyectos cooperados. De ahí, que la medición precise diferenciar la colaboración y cooperación a través de los tipos de proyectos contratados o cooperados.

PERSPECTIVAS DEL TURISMO: CASO MÉXICO

Plácido Roberto Cruz Chávez, Universidad Autónoma de Baja California Sur

Judith Juárez Mancilla, Universidad Autónoma de Baja California Sur

José Urciaga García, Universidad Autónoma de Baja California Sur

Francisco Isaías Ruiz Ceseña, Universidad Autónoma de Baja California Sur

RESUMEN

El sector turístico a nivel mundial ha tenido un comportamiento creciente en movilidad de turistas. En México también se ha observado un patrón similar, pero con algunas disminuciones de afluencia turística por factores externos económicos y de salud pública. El objetivo de este trabajo fue analizar los principales factores del turismo en México así como identificar las causas que han motivado ciertas tendencias a la baja. Los resultados permitieron encontrar la aportación que tiene el este sector para atraer turistas, generar empleos y de incrementar el gasto del turista.

PALABRAS CLAVE: Turismo, desarrollo y gasto.

TOURISM OUTLOOK: MEXICO CASE

ABSTRACT

The global tourism industry has been growing in mobility behavior of tourists. Mexico also has seen a similar pattern, but with some tourist inflow decreases by external economic factors and public health. The aim of this study was to analyze the main factors of tourism in Mexico and to identify the causes that have led to some downward trends. The results allowed to see the contribution that this sector is to attract tourists, create jobs and increase tourist spending.

KEYWORDS: Tourism, development and spending.

INTRODUCCIÓN

Gracias a la diversidad de oferta turística en México, le ha permitido consolidarse con el transcurso de los años, pues ha tenido la oportunidad de emplear diferentes espacios y entornos que lo hacen atractivo. Entre la diversidad de espacios y entornos podemos encontrar diferentes prácticas de turismo, como el turismo de sol y playa donde sobresalen destinos como Cancún, Los Cabos, Puerto Vallarta, Nayarit, Acapulco, entre otros; el turismo arqueológico, ampliamente sobresaliente al sureste y en regiones al interior del país. También, existe el turismo cultural donde los visitantes pueden apreciar desde espacios coloniales hasta contemporáneos; el turismo alternativo y que Estados como Veracruz, Chiapas y Baja California Sur han adoptado en sus actividades turísticas (Benseny, 2007).

Desde luego hay que mencionar al turismo de cruceros, que en los últimos años se ha fortalecido debido a la promoción de la Secretaría de Turismo (SECTUR) e instancias de gobierno local. También hemos visto otro tipo de prácticas de turismo como el de negocios, deportivo, de salud, ecoturismo que han sido promovidas y más adelante comentaremos. Para la SECTUR desde hace dos décadas, el sector se ha consolidado como una de las fuentes generadoras de divisas de México, un sector que aporta más del 8.0% al Producto Interno Bruto (PIB). Además ha sido una fuente importante de financiamiento del déficit de cuenta corriente de la economía mexicana, pues en varios periodos su saldo en la Balanza Turística ha sido positivo (SECTUR, 2001). Con lo antes expuesto, el objetivo de este trabajo fue analizar

los principales factores del turismo en México así como identificar las causas que han motivado ciertas tendencias a la baja. Eso permitirá reconocer las oportunidades y fortalezas del sector, y así enfocar un políticas públicas que motiven su desarrollo.

REVISIÓN DE LITERATURA

Todo este avance del sector turístico en México se llega a fortalecer más desde la década de 1970, cuando se elabora el primer Plan Nacional de Desarrollo Turístico en consecuencia para poder subsanar las deficiencias en materia económica que tenía el país (Benseny, 2007). Recordemos que la industria mexicana en su momento no tenía la fortaleza para poder competir con exportaciones de bienes. De tal manera que había que buscar la forma de reactivar la economía mexicana con otras actividades productivas poco utilizadas entre ellas, el turismo. A esto se le incorporó la participación del Fondo Nacional de Fomento al Turismo (FONATUR) al identificar y desarrollar los Centros Integralmente Planeados (CIP) y permitir que algunos destinos turísticos se desarrollaran.

Este plan consistía en propiciar la inversión promoviendo la inversión, a partir de planes maestros y donde los inversionistas y desarrolladores cuenten con espacios y lotes para la edificación de sus hoteles, condominios, villas, residencias, por mencionar algunos (FONATUR, 2011). Los primeros centros turísticos que fueron desarrollados por FONATUR fueron Cancún e Ixtapa en 1974, Los Cabos y Loreto en 1976 y Huatulco en 1984. Y de la cual el plan propuesto del turismo en dichos destinos, estaba enfocado a un desarrollo ordenado, considerando los aspectos ambientales y el desarrollo urbano en cada localidad (Juarez, et al, 2012). Estas acciones de gobierno federal además de las decisiones de gobierno estatal, fueron conduciendo a que el sector turístico fuera teniendo avances importantes en algunas variables, hasta posicionarse entre los destinos turísticos más importantes del mundo.

En este sentido, iremos analizando cada una de las principales variables turísticas para México así como vincularlos con algunos hechos históricos que influyeron en su evolución. Uno de ellos y que impactó en la llegada de turistas en los últimos años a México fue en el 2009, con la recesión económica internacional encabezado por países casualmente desarrollados y el surgimiento del nuevo virus de la influenza humana nombrado por las autoridades federales en México como H1N1. A nivel mundial los focos rojos en materia turística estuvieron alerta, sobre todo en el continente Americano. Lo anterior ocasionó que en el 2009 disminuyera el número de visitantes internacionales, y en consecuencia su derrama económica. Y por si fuera poco el consumo turístico de residentes del México también se vio mermado.

METODOLOGÍA

Para identificar las condiciones del sector turístico en México desde la década de los 80's se procedió a utilizar las principales fuentes estadísticas de organismos formales en México y a nivel internacional. Algunos de ellos, la Organización Mundial del Turismo (OMT), la Secretaría de Turismo (SECTUR) y el Instituto Nacional de Estadística y Geografía en México. De los cuales se obtuvieron las principales variables, para agruparlas y elaborar tablas que permitieran identificar su comportamiento desde la década de 1980 al año 2009. Siendo un periodo de gran interés para observar la evolución y repercusiones que ha tenido el sector con externalidades a nivel mundial.

RESULTADOS

Se puede apreciar en la Tabla 1, que después de una clara recuperación en captación de turistas internacionales al país del 2007 (21,370,000 millones de visitantes) al 2008 (22,637,000 visitantes) con un crecimiento del 5.9%, en el 2009 hay una disminución clara a 21,454 millones de visitantes. Incluso al 2008 se había alcanzado un crecimiento en llegadas de turistas internacionales a la zona fronteriza con el

11.0% y en turismo receptivo o al interior de la República también registró un aumento del 2.6%. Estas cifras son importantes, porque permiten ratificar la importancia del sector turístico en México, pues actualmente ocupa el octavo lugar de arribos de turistas entre los destinos a nivel internacional que es importante (Acevedo, et al., 2008; Altés, 2008), así mismo, el segundo lugar a nivel de América Latina, después de Estados Unidos (Acevedo, et al., 2008).

Tabla 1: Visitantes internacionales a México, 1980 a 2010 (Variación porcentual)

Año	Turistas internacionales a México			Excursionistas internacionales a México		
	Total	Turismo receptivo	Turismo fronterizo	Total	Fronterizos	Pasajeros en crucero
1980 – 1985	-0.9	1.5	-2.0	-0.5	-1.7	440.6
1985 -1990	33.6	52.0	24.7	24.1	24.3	15.3
1990 – 1995	17.9	21.8	15.6	0.4	-0.8	90.5
1995 – 1996	5.7	15.4	-0.4	5.8	5.3	26.2
1996 – 1997	-9.6	9.0	-23.0	6.6	6.7	5.2
1997 – 1998	0.2	-0.2	0.6	3.1	3.2	-0.3
1998 – 1999	-1.8	4.5	-8.2	6.6	5.7	35.7
1999- 2000	8.4	3.7	13.8	5.2	4.9	13.7
2000 – 2001	-4.0	-4.2	-3.9	-4.9	-5.5	9.7
2001 – 2002	-0.7	-2.6	1.3	-0.5	-2.3	35.0
2002 – 2003	-5.1	4.8	-15.0	-8.5	-8.8	-3.1
2003- 2004	10.5	11.6	9.1	6.7	5.0	30.5
2004 – 2005	6.3	8.5	3.5	3.3	3.3	3.3
2005 – 2006	-2.6	0.6	-6.8	-6.0	-6.3	-2.8
2006 – 2007	0.1	2.8	-3.8	-7.3	-8.4	4.6
2007 – 2008	5.9	2.6	11.0	-2.8	-2.5	-5.6
2008 – 2009	-5.2	-11.4	3.6	-5.9	-5.4	-11.5
2009 – 2010	4.4	n.d.	n.d.	n.d.	n.d.	n.d.

La tabla muestra la trayectoria de los visitantes internacionales a México, considerando la clasificación de turistas totales. Y que estos a su vez se dividen en los que visitan la zona fronteriza tanto norte como sur del país. Además también son considerados los visitantes que acuden al centro y el resto de las ciudades del México, sin considerar el fronterizo. Elaboración propia basado en INEGI (2010) y la Organización Mundial del Turismo (2011).

Pero del periodo de 2008 al 2009 se presentó una baja de llega de turistas internacionales al país del 5.2% en promedio, pasando de 22,637 a 21, 454 millones de visitantes. La cual tuvo mayor impacto al interior del país presentándose una disminución del turismo receptivo de -11.4% que representan 1,518 millones de visitantes. Y esto tiene que ver con el mayor impacto registrado en los aeropuertos internacionales. Así mismo, también apreciamos en la Tabla 1 que disminuyó la afluencia de excursionistas internacionales – quienes son visitantes que no pernoctan en un alojamiento colectivo o privado – y que en total disminuyó 5.9% impactando en 4,090 millones de turistas menos, y desde luego la crisis económica y el virus de la influenza también repercutió en los cruceros registrando una baja del 11.5%. A pesar de ello, según Altés (2008) afirma que México está entre los primeros destinos de cruceros a nivel mundial y que en la primera década del año 2000 ha ocupado el 60% del mercado.

Pero lamentablemente, especifica Altés que con el incremento de navíos y el tamaño de estos se están presentando problemas ambientales y de aglomeración. Ante ello, la polémica se ha incrementado sobre las medidas de mitigación y control del ambiente. Ante este hecho y posterior a las medidas de higiene y seguridad implementadas en cada Estado de México y en los principales aeropuertos del país, el Gobierno Federal tuvo que implementar acciones para reactivar el sector turístico, apoyando a las actividades turísticas y otros sectores afectados por la contingencia sanitaria (SECTUR, 2011). Sin embargo, para la Organización Mundial del Turismo [OMT] en un documento donde analiza las tendencias del turismo, se comenta que después de las crisis económica y de salud del 2009, a México le cuesta trabajo llegar a la normalidad. Esto debido a que toman fuerza los aspectos de violencia y tráfico de drogas, afectando al turismo, pues indican que para los turistas es frecuentemente difícil distinguir de las regiones (Estados) con violencia y sin violencia en un país (World Tourism Organization Network, 2010).

Gasto De Los Visitantes Internacionales A México

Además también se identificó que desde 1980 hemos visto el aumento de llegadas de visitantes internacionales a México, lo cual también se ha reflejado en el incremento en el gasto durante su estancia. Según la Tabla 2 ilustra que desde los últimos 25 años el gasto total de los visitantes internacionales es creciente, pasando de 2,065 millones de dólares (mdd) en 1980 hasta 10,817 mdd en el 2008. Sin embargo, en el año 2009 se presenta una caída en los gastos y alcanzar una cantidad inferior de 9,221 mdd. Este comportamiento fue debido a una combinación entre la crisis económica y al contingencia viral H1N1, y ante la cual al caer la afluencia turística total, su tasa de crecimiento del 2008 al 2009 bajó -14.8 puntos porcentuales. Por su parte el gasto del turismo al interior, registró una caída del -14.7 % y el turismo fronterizo -14.8%. En su caso, el gasto para los excursionistas internacionales a México tanto los fronterizos como los de crucero, disminuyó considerablemente. Incluso desde el 2007 al 2009 ha tenido variaciones porcentuales negativas, por ejemplo en el 2007 el gasto de excursionistas fronterizos fue de 2,024 mdd y en el 2008 bajó a 1,994 mdd, registrando una variación porcentual de -1.5.

Del periodo de 2008 a 2009 mostró también en esta categoría de excursionistas una mayor disminución, con -19.7 puntos porcentuales que significó pasar de un gasto de 1,994 mdd a 1,601 mdd. En relación al comportamiento del gasto de excursionistas internacionales a México que son pasajeros en cruceros, encontramos un comportamiento irregular, pero con una clara disminución en los últimos años. Tan solo del 2007 al 2008 se registró una disminución de 2.0%, pero aún fue mayor de 2008 a 2009 con -5.3 puntos porcentuales, registrando un gasto en el 2009 de los excursionistas por 453 millones de dólares.

La importancia que reviste el gasto de los visitantes internacionales recae principalmente en los turistas internacionales quienes tienen mayor gasto en nuestro país mayor al 70% del total desde el año 1980. Y los excursionistas han registrado cada vez menos del 30% del gasto en México. Considerando el turismo internacional, el que tiene un mayor gasto es el turismo receptivo con más del 80% y en los últimos cinco años esta clasificación ha alcanzado el 94%. Por su parte el turismo fronterizo con el transcurso de los años ha perdido participación porcentual, pues en 1980 abarcaba el 19% y en el 2009 ocupa el 6.0%. Vale la pena mencionar que el gasto de los turistas por crucero ha sido en aumento desde 1980 (con el 1.0%), hasta el 2009 ocupando el 22.0% del total de excursionistas internacionales.

Tabla 2: Gasto total de visitantes internacionales a México, 1980 a 2009 (Millones de dólares)

AÑO	Total	Turismo receptivo
1980	2 065	1 671
1985	2 020	1 720
1990	3 934	3 401
1995	4 688	4 051
1996	5 110	4 470
1997	5 531	5 086
1998	5 633	5 135
1999	5 506	5 062
2000	6 435	5 816
2001	6 538	5 941
2002	6 725	6 084
2003	7 252	6 680
2004	8 382	7 784
2005	9 146	8 502
2006	9 559	8 955
2007	10 340	9 717
2008	10 817	10 116
2009 P/	9 221	8 624

Esta Figura muestra la tendencia del turismo total en México desde 1980 al 2009. Donde se aprecia un constante crecimiento sobre todo desde el año 2000. Pero también se identifica la clara disminución del turismo en el año 2009, derivado de crisis económica mundial y el estado de emergencia de salud denominada H1N1 por parte del Gobierno Mexicano. Elaboración propia basado en INEGI, 2010 y la Organización Mundial del Turismo, 2011.

Establecimientos Y Número De Cuartos De Hospedaje

Una forma de conocer y evaluar el desempeño del sector turístico son las inversiones realizadas en el número de establecimientos de hospedaje y el número de cuartos-habitación disponibles según la categoría. Esto es relevante porque en ella vemos reflejado la promoción de inversiones turísticas y que desde luego generan empleos, independientemente de la categoría de establecimiento que se trate. Al respecto Altés (2008) comenta que el turismo favorece la participación de México en la economía global y le permite enfrentar desafíos que se presentan en cada una de las regiones, que bien pueden ser desde problemas de pobreza, desempleo, otras.

Por eso no es de extrañar, como algunos Estados de la República Mexicana han procurado incentivar al turismo y el número de hoteles ha sido en aumento. Las estadísticas muestran que en México en 1980 había 7,837 establecimientos de hospedaje hasta llegar a alcanzar 16,526 establecimientos (Tabla 3). En dicho periodo se registraron dos tasas de crecimiento mayores que fueron del 2000/2001 (8.7 %) y de 2002/2003 (7.7%), además de 1980 al 2009 se tiene como crecimiento promedio anual de establecimientos en México de 2.61% - según lo indica la media geométrica de la Tabla 3.

Cabe señalar que por categoría turística identificamos que aquellos considerados como hoteles de cinco estrellas tuvieron la mayor tasa de crecimiento promedio anual de 1980 a 2009, con el 4.82 por ciento, según su media geométrica. Durante este intervalo de tiempo aquellos hoteles clasificados como cinco y cuatro estrellas tuvieron dos periodos de mayor crecimiento que fueron de 2000/2001 y de 2004/2005 superiores al 10%. Así mismo, es importante destacar que mientras las categorías más altas de hoteles tienen tasas de crecimiento más altas desde 1980 a 2009, los establecimientos sin categoría, de una y dos estrellas tienen tasas inferiores y negativas. Esto tiene que ver con la mayor promoción a la inversión por las autoridades, de ahí que muchos polos turísticos como Cancún, Puerto Vallarta y Los Cabos han ocupado terreno e importancia de hoteles de gran turismo, los cuales tienen que ver con los esfuerzos de planificación e inversión pública realizados por el gobierno federal.

Tabla 3: Comparativo de número de establecimientos de hospedaje y cuartos disponibles por categoría a nivel nacional, 1980 a 2009

Año	Total	Cinco estrellas a/	Cuatro estrellas	Tres estrellas	Dos estrellas	Una estrella	Sin categoría b/
Año 1980							
Establecimientos	7 837	266	556	1 262	1 677	4 076	n.d.
Cuartos	237 315	28 031	29 694	47 511	46 085	85 994	n.d.
Año 1990							
Establecimientos	7 984	199	395	775	1 185	1 027	4 403
Cuartos	333 547	49 496	44 827	43 433	44 875	32 896	118 020
Año 2000							
Establecimientos	10 320	460	961	1 727	1 708	1 959	3 505
Cuartos	421 850	86 574	82 322	76 858	54 069	48 380	73 647
Año 2009/p							
Establecimientos	16 526	1 041	1 714	2 849	2 208	2 555	6 159
Cuartos	621 946	164 771	120 842	104 544	59 957	52 969	118 863
Media Geométrica, anual							
Año 1980 a 2009/p							
Establecimientos	2.61	4.82	3.96	2.85	0.95	-1.60	1.78
Cuartos	3.38	6.30	4.96	2.76	0.91	-1.66	0.04

La Tabla ilustra la trayectoria del número de establecimientos y cuartos disponibles para los turistas nacionales o internacionales desde 1980 al 2009. Indicando la clasificación por tipo de hotel según su calidad y servicios proporcionados. Donde el de mayor calidad son los de cinco estrellas y el de menor calidad y servicios son los de una estrella y sin categoría. Así mismo, muestra al crecimiento en el periodo de 1980 al 2009. De los cuales los establecimientos de hospedaje y cuartos que mas han crecido son los de cuatro estrellas y tres estrellas. Elaboración propia basado en el Anuario Estadístico de los Estados Unidos Mexicanos, SECTUR e INEGI, varios años.

Recordemos que esta planificación turística se inició desde hace más de dos décadas a través del Fondo Nacional de Fomento al Turismo con la finalidad de tener Centros Integralmente Planeados (CIP), lo cual sirvió para algunos de ellos crecieran de manera exponencial. Por lo que al impulsarse entre por la iniciativa pública entre 1974 y 1984 (Altés, 2008) a Cancún, Los Cabos, Loreto, Ixtapa y Huatulco les facilitó el crecimiento. En estos centros turísticos han dado señales de consolidación y con hoteles de gran clase y categoría, con las típicas dificultades de disminución de turistas en algunos periodos. Incluso vemos que posterior a este impulso de estos cinco destinos turísticos, FONATUR fue agregando otros más, entre ellos Sinaloa, Nayarit y Cozumel y que hasta la fecha vemos en la base de datos del Fondo, que se tiene el seguimiento de dichos destinos (FONATUR, 2011).

Esta consolidación de establecimientos de hospedaje lo podemos apreciar en la Tabla 4 y desde 1980 al 2009 el porcentaje de hoteles en la categoría de cinco y cuatro estrellas ha sido ascendente. En 1980 había 266 hoteles de cinco estrellas y que representaba el 3.4% a nivel nacional, para el año 2000 había 460 establecimientos que lo posicionaba en 4.5%. Para el 2009 se incremento el número de establecimientos y porcentaje a nivel nacional en 1,041 (6.3%). Lo mismo sucedió con los hoteles clasificados de cuatro estrellas, cuyo porcentaje a nivel nacional aumentó de 7.1% en 1980 a 10.4% en el 2009, con 1,714 establecimientos. Lo contrario ocurrió con los establecimientos clasificados de una y dos estrellas, que desde 1980 al 2009 han perdido participación porcentual respecto al total a nivel nacional. Pues en 1980 entre las dos clasificaciones antes mencionadas ocupaban el 73.4% (Tabla 4), en 1990 27.7% y en 2009 se llegó su participación a 28.8%. Lo que permite deducir dos cosas, quizá muchos de los establecimientos de hospedaje fueron avanzando y mejorando sus servicios, facilitando avanzar a una categoría más alta. O en su caso, que al mercado se fueron incorporando inversionistas con una aportación a capital superior, y permitiendo acceder a una clasificación mayor. Situación que a México país le permite tener una mejor oferta de los servicios de hospedaje no solo nacional sino a nivel internacional.

Figura 2: Porcentaje de establecimientos de hospedaje en servicio según categoría turística, 1980 a 2009

AÑO	Cinco estrellas	Cuatro estrellas	Tres estrellas	Dos estrellas	Una estrella	Sin categoría
1980	3.4%	7.1%	16.1%	21.4%	52.0%	0.0%
1990	2.5%	4.9%	9.7%	14.8%	12.9%	55.1%
2000	4.5%	9.3%	16.7%	16.6%	19.0%	34.0%
2009	6.3%	10.4%	17.2%	13.4%	15.5%	37.3%

La tabla muestra la composición de los establecimientos de hospedaje según su clasificación por estrellas, las cuales indican la calidad de los servicios proporcionados. Se observa que a nivel nacional en México que en todos los tipos de hoteles ha sido ascendente desde 1980 al 2009. La clasificación muestra que cada vez los destinos turísticos han fomentado más la incorporación de hoteles con un mayor nivel de calidad. Es decir, disminuyen los de menor calidad (Una estrella y sin categoría) y van aumentando los de mayor calidad (Cuatro y cinco estrellas). Elaboración propia basado en Anuario Estadístico de los Estados Unidos Mexicanos, SECTUR, INEGI, Varios años.

Por otra parte, en relación a la oferta existente encontramos que el número de cuartos disponibles a nivel nacional también tuvo tasas de crecimiento constantes, en promedio 3.38% promedio anual desde 1980 al 2009 (Tabla 2 y Figura 3). En 1980 la oferta turística nacional era de 237,315 cuartos, en el 2000 había 421,850, y en 2009 se alcanzaron 621,946 cuartos. Es importante mencionar que la oferta de cuartos por categoría

Figura 3: Distribución porcentual de cuartos disponibles según la categoría turística, 1980 a 2009.

	Cinco estrellas	Cuatro estrellas	Tres estrellas	Dos estrellas	Una estrella	Sin categoría
1980	11.8%	12.5%	20.0%	19.4%	36.2%	
1990	14.8%	13.4%	13.0%	13.5%	9.9%	35.4%
2000	20.5%	19.5%	18.2%	12.8%	11.5%	17.5%
2009	26.5%	19.4%	16.8%	9.6%	8.5%	19.1%

La Tabla muestra la composición de los cuartos disponibles según la categoría asignada desde cinco estrellas (categoría de mayor calidad) hasta sin categoría (categoría de menor calidad). Se observa que desde 1980 prevalecían cuartos con menor nivel de calidad. Para el año 2009

nos encontramos con una mayor proporción de cuartos clasificados con mayor calidad. Lo cual es indicativo de unas mayores participaciones de inversionistas internacionales y locales, que ofrecen mayor diversidad de hoteles enfocados a mejorar el sector turístico. Elaborado Anuario Estadístico de los Estados Unidos Mexicanos, SECTUR, INEGI, Varios años.

CONCLUSIONES

Constatamos que México tiene potencial para crecer aun más en términos de afluencia turística. Esto debido a riqueza en los diferentes destinos turísticos, el aumento en número de hoteles, cuartos y servicios en general. Ante ello, tiene diferentes retos, como generar una mayor planeación y difusión como destino turístico, además de propiciar una mayor seguridad a los visitantes. Por tanto, este tema abre un abanico de oportunidades para seguir aportando en el tema y analizando estrategias que mejoren la posición de México como destino turístico a nivel mundial.

LA REFORMA LABORAL EN MÉXICO

Gilberto Enrique Bustamante Valenzuela, Universidad Autónoma de Baja California

RESUMEN

En este artículo se analiza de manera objetiva la reforma laboral sindical propuesta al Congreso de la Unión por el Presidente Felipe de Jesús Calderón Hinojosa. En las últimas cuatro décadas, los cambios en la legislación laboral han sido escasos, lo que hace aun más trascendentes los cambios que se pretenden introducir. La transparencia sindical es uno de los temas torales en dicha reforma legislativa. El análisis de los cambios propuestos por el ejecutivo en el ámbito sindical se hace necesario a fin de establecer en que forma se afecta o beneficia a los agremiados. Los cambios pueden considerarse como positivos o negativos dependiendo del punto de vista o interés subjetivo que se tenga, pero conviene hacer un análisis totalmente objetivo y considerar solo aquello que es favorable para las fuerzas laboral y capitalista.

PALABRAS CLAVES: Laboral, trabajo, ley y sindicato.

LABOR REFORM IN MEXICO

ABSTRACT

In this article is analyzed in an objective way the labor reform proposed to the Congress of the Union by the President Felipe de Jesus Calderon Hinojosa. In the last four decades, the changes in the labor legislation have been scanty, which makes more transcendent the changes that try to introduce. The union transparency is one of the top topics in the above mentioned legislative reform. The analysis of the changes proposed by the executive in the union matters it becomes necessary in order to establish if this is a benefit or concerns to the members of the union. The changes can be considered to be positives or negatives depending on the point of view or subjective interest that is had, but it suits to make a totally objective analysis and consider only that one that it is favorable for the labor and capitalist forces.

INTRODUCCIÓN

En las dos últimas décadas México ha tenido grandes cambios en los ámbitos político, económico, social, cultural, laboral. Todo cambio ha reclamado adecuaciones a las reglamentaciones aplicables, pero el ámbito laboral se ha quedado rezagado al no operar cambios sustanciales en la regulación de las relaciones obrero-patronales. La Ley Federal del Trabajo en vigor data de 1970, y su entrada en vigor causó revuelo en los círculos laborales y se estimó aplicable para las circunstancias económicas reinantes en esa época. Hoy esas circunstancias han revolucionado pero no la ley laboral, haciéndose por lo tanto necesario el adecuar el marco normativo a la situación económica actual. Ha sido motivo de amplia controversia entre políticos y en la sociedad, y desde luego también entre los juristas, la formulación de una iniciativa de reforma a la legislación laboral propuesta por el Presidente de la Republica en turno. Y de todos los aspectos controvertidos toma especial relevancia el concerniente a la transparencia sindical, tema este que es ineludible tocar al ser la figura de la transparencia del manejo de recursos y de información un cambio que se ha venido aplicando a la mayoría de los ámbitos, salvo este de los sindicatos. Es importante dilucidar sus efectos y conveniencias para el futuro de México.

Con motivo de los cambios que se pretenden introducir en la Ley Federal del Trabajo se han dado múltiples discusiones entre grupos antagonistas e incluso dentro de grupos afines. Esto ha originado opiniones a favor y en sentido contrario a los cambios. Asimismo la literatura que se ha creado ha fijado esas dos posiciones contrarias únicamente, sin que exista una posición ecléctica en su parte total puesto que la transparencia sindical es un punto que algunos no desean sea aprobado por razón de que verán afectados sus intereses, dando con ello una serie de argumentos que a los ojos de sus detractores no son válidos y si por el contrario pretenden establecer los suyos.

RESULTADOS

La propuesta de reforma laboral presentada al Congreso de la Unión por el Presidente de la Republica pretende introducir diversos cambios en la Ley Federal del Trabajo entre los que destacan los relativos a la transparencia sindical. Este tema cobra suma importancia por motivo de que existen en México un gran número de sindicatos que son manejados por líderes que no tienen obligación legal alguna de transparentar el uso que hacen de los recursos que reciben de los patrones, y que en muchos de esos sindicatos son los gobiernos federal y estatales y municipales los que les aportan dinero, convirtiéndose entonces en un asunto de interés general porque implica dinero que proviene del erario público.

En la Tabla 1 se transcribe el texto actual de los artículos de la Ley Federal del Trabajo que se pretenden reformar y que se encuentran dentro del capítulo II del Título Séptimo que se refiere relativo a los sindicatos, así como el texto propuesto para esos artículos:

Tabla 1: Comparativo de Reformas Propuestas.

TEXTO ACTUAL	TEXTO PROPUESTO
Artículo 357.- Los trabajadores y los patrones tienen el derecho de constituir sindicatos, sin necesidad de autorización previa.	Artículo 357.- Los trabajadores y los patrones tienen el derecho de constituir sindicatos, sin necesidad de autorización previa. <u>Cualquier injerencia indebida será sancionada en los términos que disponga la ley.</u>
Artículo 361.- Los sindicatos de patrones pueden ser:	Artículo 361.- Los sindicatos de patrones pueden ser:

En caso de disolución, si no hay disposición expresa en los estatutos, aquéllos pasarán al patrimonio de la federación a la que pertenezca y a falta de ésta, a la confederación a la cual estén agremiados, y a falta de ambas, al Instituto Mexicano del Seguro Social.</u></p> <p><u>Si los estatutos determinan que los bienes se repartirán entre los agremiados, se entiende por éstos a quienes estén en activo hasta un año antes de la disolución.</u></p> <p><u>La representación del sindicato subsistirá para el solo efecto de entrega, reparto, liquidación o venta de los bienes, sin embargo podrá revocarse si así lo determina la mayoría de los agremiados con derecho a reparto.</u></p>
---	--

Se observa en la Tabla 1 que las reformas propuestas por el presidente en lo atinente a los sindicatos tienen que ver, además de la transparencia en el manejo de los recursos económicos, con temas que también atañen a la vida y funcionamiento de esas organizaciones de trabajadores. En la propuesta de modificación del artículo 357 se debe considerar que la constitución de sindicatos normalmente se debe llevar a cabo sin injerencia de personas extrañas y se trata de eliminar el que su creación sea manipulada ya sea por el patrón o personas que tengan un interés distinto al laboral.

En los tipos de sindicatos de patrones que menciona la reforma al artículo 351 se agrega una clasificación más que es la correspondiente a los sindicatos industriales para abarcar a aquellos patronos que se dediquen a la misma rama industrial en una o distintas entidades federativas. Se propone agregar también el artículo 364 bis para establecer que en el registro de los sindicatos se deberán observar los principios de legalidad, transparencia, certeza, gratuidad, inmediatez, imparcialidad y respeto a la libertad, autonomía y democracia sindical. Pero lo importante sería destacar en que forma se cumplen esos principios, pues de antemano y en un marco de legalidad deben existir, pero en la práctica pueden tergiversarse o ignorarse dando con ello lugar a vicios sindicales.

Asimismo se pretende que al solicitar el registro de un sindicato ante la Secretaría del Trabajo y Previsión Social en los casos de competencia federal y en las Juntas de Conciliación y Arbitraje en los de competencia local, deben acompañarse documentales “bajo protesta de decir verdad”. La redacción es equívoca ya que se va a manifestar bajo protesta de decir verdad que se están exhibiendo los documentos requeridos, cuando en realidad la protesta debe ser relativa a la veracidad del contenido de esos documentos que se exhiban para obtener el registro.

Se elimina también la obligación de que los documentos sean autorizados por Secretario General, el de Organización y el de Actas, para quedar en el sentido de que deben estar autorizados por las personas facultadas en los estatutos. Esta reforma propuesta resulta innecesaria ya que actualmente la parte final del artículo 365 establecía que debían ser autorizadas por aquellas personas, salvo lo dispuesto en los estatutos, con lo que se da opción a que sean autorizadas por cualesquier otra persona facultada para ello. Continuando con ese mismo artículo 365 se propone que no sea un motivo de desechamiento de la solicitud de registro la falta de uno de los documentos necesarios para obtenerlo, ya que actualmente así ocurre cuando no se cumple con ello, pero la reforma otorga al solicitante del registro el derecho a ser requerido para que exhiba el documento omitido en un plazo de treinta días, pasados los cuales sin que se hubiera subsanado la omisión entonces si se desechará la solicitud.

Se propone también adicional un artículo denominado 365 bis a través del cual en aras del derecho constitucional de acceso a la información, se haga pública por las autoridades la información sobre registro de sindicatos y documentación relativa este acto. Asimismo es plausible que adecuándose a los avances tecnológicos se proponga la publicación de los estatutos vía internet, dándose a conocer como mínimo información que identifique plenamente al sindicato, la cual deberá ser actualizada cuando menos cada tres meses. En la reforma propuesta del artículo 366 se hace la distinción muy importante respecto del término que se tiene para requerir a la autoridad ante la que se solicitó el registro para que resuelva al respecto, ya que actualmente son sesenta días, pero no se especifica si se trata de días naturales o hábiles. Ahora bien, la regla general ha sido en el sentido de que esos días deben entenderse hábiles, lo que resulta en que ese término de sesenta días se convierte aproximadamente en noventa o cien días al no considerarse en su cómputo sábados y domingos o días festivos.

En la reforma se propone que el cómputo de esos sesenta días sea naturales. Otro artículo que se propone reformar es el 371 que se refiere al contenido de los estatutos de los sindicatos en lo que refiere la fracción IX que actualmente dispone respecto del procedimiento para la elección de la directiva y número de sus miembros, aumentándose ahora que la elección deberá ser mediante voto libre, directo y secreto. Este tema ha desatado gran controversia pues de manera consistente se ha usado que al elegir un sindicato se hace mediante el nombramiento de delegados que son elegidos por los trabajadores a fin de que externen su voluntad en una sesión en la que se lleva a cabo la elección. Esto deja la voluntad de los trabajadores supeditada al arbitrio del delegado que designen, quien votara en la forma que mejor convenga a sus intereses y no de los trabajadores que representa. Es por ello que ahora se propone que el voto sea emitido directamente por el trabajador sin ningún intermediario que pueda tergiversar su voluntad, y secreto para evitar cualquier represalia por parte de aquellos que resulten ganadores y en contra de los que no votaron a su favor, así como también libre, sin presión, sin coacción alguna. En la fracción XIII del artículo en comento, se propone por el ejecutivo federal que en los estatutos se establezcan sanciones a los directivos sindicales cuando no cumplan en tiempo con la presentación de cuentas, y la fijación de instancias y procedimientos internos que aseguren la resolución de controversias entre los agremiados, con motivo de la gestión de los fondos sindicales. Nuevamente esta reforma causa controversia en este apartado al dar lugar a que cualquier agremiado pueda elevar algún procedimiento que tenga como objeto dirimir alguna controversia respecto del manejo de los fondos sindicales.

Actualmente los directivos sindicales tienen de conformidad con el artículo 373 de la Ley Federal del Trabajo, la obligación de rendir a la asamblea cada seis meses, por lo menos, cuenta completa y detallada de la administración del patrimonio sindical. Con la reforma se propone que además esa rendición de cuentas incluya información relativa a la situación de los ingresos por cuotas sindicales y otros bienes, así

como su destino, con la obligación además de entregar un resumen de esta información, a cada uno de los trabajadores sindicalizados, dentro de los diez días siguientes de cada periodo, a más de que en sindicatos con más de 150 miembros, los resultados de la administración del patrimonio sindical deberán ser dictaminados anualmente por un auditor externo y los resultados.

Así también cualquier trabajador tendrá el derecho de solicitar información a la directiva, sobre la administración del patrimonio del sindicato, así como de iniciar los procedimientos jurídicos que se requieran para obtener dicha información y en caso de estimar la existencia de irregularidades tomar las acciones que resulten, sin que en ningún caso sus derechos sindicales se vean afectados. Esta es la parte que se ha considerado más controversial de toda la reforma laboral, ya que los intereses en juego en un sindicato suman cantidades estratosféricas que son manejadas por los directivos sindicales a su antojo y sin obligación de dar una explicación detallada a los agremiados de su manejo, así como tampoco existe el derecho de estos últimos de pedir cuentas e iniciar acciones legales para obtener la información y pedir castigo cuando se estime que existe una irregularidad.

Los partidos políticos, que son actores directos en la aprobación o desaprobación de la reforma laboral, han externado sus puntos de vista de manera muy distinta, unos a favor y otros en contra, por motivo de que muchos de los recursos que se manejan en los sindicatos se menciona que son destinados a financiar campañas políticas, y el hecho de que los directivos tengan que rendir cuentas pormenorizadas da lugar a que no puedan distraerse recursos para objeto distinto a aquellos estrictamente sindicales, así como en caso de que ocurriese, se verían expuestos a acciones de tipo legal en el ámbito penal o civil, además de la destitución de sus cargos. Por cuanto hace a las obligaciones sindicales, la reforma al artículo 377 de la ley laboral propone que la información que deben proporcionar los sindicatos pueden hacerlo a través de medios electrónicos, situación esta que desde luego es acorde con la modernización tecnológica.

Para finalizar, la reforma que se formula al artículo 380 de la legislación laboral pretende regular de una manera más amplia el manejo del patrimonio sindical en caso de disolución del sindicato, situación que debe estar establecida en los estatutos de la propia unión sindical, pero que en caso de no ser así se aplicarán las reglas contenidas en ese mismo artículo. Lo conveniente es que si el patrimonio del sindicato fue creado por los agremiados, entonces sea a estos a quien regrese ese patrimonio.

CONCLUSIONES

La reforma laboral propuesta por el ejecutivo federal mexicano es adecuada para que el país pueda participar en un mundo globalizado como lo demanda la situación económica actual. Los cambios implican una dinámica que debe abarcar todos los aspectos de la vida de un país incluyéndose en esto las leyes. No se puede sostener la idea de seguir regulando las relaciones laborales y sindicales con base en criterios legislativos de hace más de cuarenta años. Los sindicatos han sido de gran influencia en la vida política y económica de México, lo que hace aun mas relevante el hecho de que se proponga regular su funcionamiento adecuándolo a los principios de transparencia y de acceso a la información que han sido una bandera del gobierno como apertura hacia los ciudadanos y en este caso hacia los agremiados de un sindicato. Han llegado a ser sumamente poderosos económica y políticamente, y sus líderes, en algunos casos, se han enriquecido sin que ninguno de los agremiados tenga derecho a cuestionarles su actuar o el manejo del patrimonio sindical, por ello es que la reforma se ve afectada en su aprobación por aquellos que ven sus intereses personales en peligro al tener que rendir cuentas sobre aquello que legalmente corresponde a los trabajadores y más cuando proviene del erario público.

RESUMEN

Este trabajo es parte de una investigación que se encuentra en desarrollo la cual tiene como objetivo diseñar un modelo de administración financiera para la competitividad de las pequeñas empresas comerciales en Mexicali, B.C., analizando para ello la relación que existe entre la aplicación de la administración financiera en este tipo de empresas y el efecto que tiene en su competitividad, que son las variables del cual parte este modelo. El diseño de investigación es descriptivo, no experimental, transversal. Utilizando como instrumento de medición un cuestionario el cual fue sometido a pruebas estadísticas a través del alfa de Cronbach para determinar su confiabilidad y poner a prueba la hipótesis de este estudio. El número de encuestas analizadas para la presentación de este trabajo fue de sesenta pequeñas empresas comerciales. En este avance se presentan los principales resultados obtenidos hasta el momento sobre las encuestas que han sido aplicadas sobre las dimensiones de la variable de administración financiera como son información financiera, obtención y control de recursos, así como el riesgo. Asimismo los resultados que se refieren a las dimensiones de la variable de competitividad como son el mercado, precio y rentabilidad. Estableciendo con ello los elementos que deben integrar al modelo planteado y lograr que estas empresas logren una mayor permanencia en el mercado e incrementen su competitividad.

PALABRAS CLAVE: Administración financiera, competitividad y pequeñas empresas.

ELEMENTS OF A FINANCIAL MANAGEMENT MODEL FOR SMALL BUSINESS ENTERPRISES

ABSTRACT

This work is part of an investigation that is under development which aims to design a model of financial management for the competitiveness of small business enterprises in Mexicali, BC, including by examining the relationship between the application of financial management in these businesses and the effect on their competitiveness, which are the variables which part this model. The research design is descriptive, not experimental, cross. Using as a questionnaire measuring instrument which was tested statistics through Cronbach's alpha to determine their reliability and to test the hypothesis of this study. The number of surveys analyzed for the presentation of this work was sixty small business enterprises. In this development presents the main results obtained so far on the surveys that have been applied to the variable dimensions of financial management such as financial information, procurement and control of resources and risk. Also the results relating to the dimensions of the variable such as the competitive market price and profitability. Thereby establishing the elements to be included in the proposed model and make these companies achieve greater permanence in the market and increase their competitiveness.

KEYWORDS: Financial management, competitiveness and small businesses.

INTRODUCCIÓN

Las pequeñas empresas tienen un importante papel en el desarrollo y crecimiento económico de en México y el mundo, asimismo en el Estado de Baja California y el municipio de Mexicali, que es el lugar donde se está desarrollando este trabajo de investigación. Por tanto los problemas que se presentan en este tipo de empresas repercute desfavorablemente en los indicadores macroeconómicos y sociales del País de que se trate, por lo cual es necesario llevar a cabo acciones que coadyuven a su permanencia, atendiendo a sus necesidades y los cambios que se dan en su entorno, de tal forma que puedan reaccionar con rapidez y ajustarse con facilidad y prontitud a estos. Asimismo, se debe analizar la forma en que se toman las decisiones al interior de estas empresas midiendo el impacto que pueden tener en las distintas áreas que la integran, poniendo especial interés en las modificaciones que puede tener en su capacidad de inversión, producción, solvencia, liquidez y la rentabilidad, en virtud de que los cambios en estos indicadores repercuten en aspectos relacionados con el poder mantener un precio competitivo y participar en nuevos mercados. De acuerdo con el Sistema de Información Empresarial Mexicano (SIEM, 2012), actualmente el segmento de la micro y pequeña empresa representan casi el 98% de las unidades económicas existentes en México. Por su gran volumen estas empresas son parte fundamental en la economía del país convirtiéndose en potenciales desarrolladoras de empleo y generadoras de ingresos, siendo un medio para avanzar hacia una mejor calidad de vida de los empresarios y mejorar la competitividad del país.

Objetivo

El objetivo de esta investigación es desarrollar un modelo de administración financiera el cual pueda contribuir al desempeño de las pequeñas empresas comerciales de Baja California, de tal manera que permita el incremento del nivel competitivo a través de una mejor administración de sus recursos financieros. De este objetivo se derivan los siguientes objetivos específicos:

- Realizar un diagnóstico sobre la administración de los recursos financieros de las pequeñas empresas.
- Proponer y/o complementar elementos que debe contener el modelo de administración financiera.
- Elaborar un modelo de administración financiera de acuerdo a las necesidades de las pequeñas empresas.
- Diseñar un programa de capacitación para la implementación del modelo en las pequeñas empresas.

Planteamiento del Problema

El aspecto financiero es básicamente el soporte que valida la lógica en las empresas en virtud de que cualquier negocio requiere tener una estabilidad financiera para poder seguir operando. Asimismo la toma de decisiones financieras impacta el desarrollo de todas las áreas que integran a la empresa, por ello es vital que las empresas tengan una adecuada administración financiera de sus recursos.

Mercado (2007) refiere que más del 90% del fracaso de las pequeñas empresas es debido a su mala administración, dentro de la cual las finanzas ocupan un lugar importante. Así, tanto la operación financiera como su administración son factores muy importantes en la operación diaria y en la toma de decisiones del pequeño empresario, que garantizan el éxito de la empresa en una economía de crecimiento y desarrollo continuo. En este sentido Anzola (2010) señala que la importancia del aspecto financiero para estas empresas corresponde a que está directamente relacionado al capital disponible con que cuenta por lo menos para su operación normal y con el cual la empresa comenzará a desarrollarse. Ante esta situación se tiene que analizar la manera de cómo podría el empresario tener una mejor administración

financiera de sus recursos y cuál es la información financiera que requiere para tomar mejores decisiones sobre su funcionamiento, así como de las herramientas que puede aplicar ante los problemas que con mayor frecuencia se le presentan en su negocio. En base a esta información es que surge el planteamiento del problema de investigación, el cual es poder conocer y determinar ¿Qué elementos debe contener el modelo de administración financiera que permita a las pequeñas empresas en Mexicali, B.C. incrementar su nivel competitivo a través de una mejor administración de sus recursos financieros?

Hipótesis

La falta de un modelo de administración financiera afecta la competitividad de las pequeñas empresas comerciales.

REVISIÓN LITERARIA

Pequeñas Empresas Comerciales

El objeto de estudio de esta investigación son las pequeñas empresas dedicadas al comercio. Rodríguez (2010) define a las empresas comerciales como aquellas que se dedican a adquirir cierta clase de bienes o productos, con el objeto de venderlos posteriormente en el mismo estado físico en que fueron adquiridos, aumentando al precio de costo o adquisición un porcentaje denominado “margen de utilidad”. Para definir lo que para este estudio se entenderá como pequeña empresa comercial, se atendió a lo establecido en la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa, publicada en el Diario Oficial de la Federación el 30 de diciembre del 2009, en virtud de que la clasificación que se hace sobre las empresas es la oficial de acuerdo a la Secretaría de Economía, la cual se encuentra establecida por estratos y se basa en el número de empleados que posee la empresa. Esta ley establece que una pequeña empresa del sector comercio es aquella que se encuentra constituida de 11 a 30 empleados.

En atención a lo señalado anteriormente una pequeña empresa comercial es la que se dedica a adquirir cierta clase de bienes o productos, con la finalidad de venderlos posteriormente en el mismo estado físico en que se adquirieron, aumentando al precio de costo o adquisición, un porcentaje denominado “margen de utilidad” y que tenga de 11 a 30 empleados. De acuerdo al SIEM (2012) las pequeñas empresas de comercio son de gran importancia en nuestro país representando el 32.96% de las empresas que existen a nivel nacional, en el Estado de Baja California estas empresas constituyen el 36.48% y en Mexicali estas representan el 39.89%.

Características Generales Y Funcionales De Las Pequeñas Empresas

Barragán (2009) señala que las pequeñas empresas poseen ciertas características generales que las hacen diferentes al resto de las empresas y a través de las cuales pueden ser fácilmente reconocidas. Entre estas características se encuentran las siguientes:

- a. Administración independiente, usualmente dirigida y operada por el propio dueño.
- b. Los empresarios tienen a su cargo las ventas de los productos, o las supervisan personalmente.
- c. El número de personal tiene un límite inferior y otro superior. En México oscila entre 11 y 50.
- d. Incidencia no significativa en el mercado debido a que el área de operaciones es relativamente pequeña y principalmente local.
- e. Escasa especialización en el trabajo tanto en el aspecto productivo como en el administrativo.

Actividad no intensiva en capital y este es proporcionado por una o dos personas que establecen una sociedad.

- f. Limitados recursos financieros, en la mayoría de estas empresas el capital de la empresa es suministrado por el propio dueño.
- g. Sus sistemas de contabilidad y de control son elementales.
- h. Cuentan con una estructura organizacional muy sencilla.
- i. En cuanto a tecnología utilizan aquella que se relaciona con el mercado al que abastece o bien tienen una escasa información tecnológica.
- j. La solución de problemas se hace mediante procedimientos de carácter informal y se resuelven conforme se hayan presentado.

Principales Problemas Generales Que Enfrentan Las Pequeñas Empresas.

Los principales problemas que enfrentan las pequeñas empresas son muy similares a los que se tienen en las microempresas a un cuando tienen un mayor número de empleados y una estructura más grande, entre estos se encuentran:

- 1.- La falta de experiencia administrativa.
- 2.- No tienen estímulos fiscales.
- 3.- Competencia desleal del comercio informal.
- 4.- La carencia de una estructura administrativa.
- 5.- Falta de financiamiento y experiencia en la actividad económica que desarrollan.
- 6.- Ausencia de controles internos y planeación de sus actividades.
- 7.- La negligencia y el fraude.

Como se puede observar la mayor parte de sus problemas se derivan de la falta de administración, ya que se constituyen sin planeación, sus dueños y personal son ajenos a la administración del giro del negocio, utilizan técnicas y procedimientos obsoletos, la información financiera que utilizan es muy elemental, casi siempre operan con una constante falta de recursos, sus compras las realizan con mucha frecuencia a través de intermediarios, no conocen de los apoyos financieros y fiscales que en raras ocasiones les ofrecen las instituciones financieras y las leyes fiscales, y padecen la ausencia de asesoría especializada.

Importancia De La Administración Financiera

La administración financiera busca un eficiente manejo de los recursos principalmente del efectivo así como de su rentabilidad. Sus objetivos son la generación de recursos y su eficiencia a través del control de estos, buscando con ello permanecer en operación y maximizar las utilidades de la empresa (Moreno, 2009). Una implementación adecuada de la administración financiera es vital para que las pequeñas empresas puedan alcanzar competitividad, rentabilidad y desarrollo, generar mayores empleos y ampliar su mercado, de lo contrario no podrán desarrollarse y corren el riesgo de no sobrevivir. Por tanto este tipo de administración debe realizarse a través de una adecuada planeación, organización, control y dirección de los recursos financieros con que cuenta la empresa.

Perdomo (2008) refiere que la administración financiera tiene que ver con la obtención de los recursos, pero también con su buen manejo. La clave consiste en cómo se definen y distribuyen las tareas, cómo se definen los vínculos administrativos entre las unidades y qué prácticas se establecen. Asimismo señala que las pequeñas empresas como parte de la dirección financiera deben considerar la planeación financiera y las finanzas a corto plazo y también el financiamiento a largo plazo. Para toda empresa es fundamental la disponibilidad de financiamiento a corto plazo para su funcionamiento. Una administración efectiva de estos financiamientos es vital para mantener un buen el capital de trabajo. Esparza, García, Duréndez & Guillamón (2010) han estudiado la variable de administración financiera través de las dimensiones de financiación, endeudamiento, rentabilidad, crecimiento y utilización de

información contable y financiera. García, Serrano & Blasco M. (2005) han medido la competitividad de las micro y pequeñas empresas a través de las dimensiones de competitividad, capacidad innovadora y productividad.

Competitividad

La competitividad es una de las variables mas estudiadas en las pequeñas empresas, la cual es definida como la capacidad que tiene una empresa o país de obtener rentabilidad en el mercado en relación a sus competidores (Gudziol, 1999). Esta se establece en función de la existencia de competidores; consiste en la capacidad de un sector para mantener y aumentar su participación en el mercado, en términos de volumen y/o de ingresos (Chauca, 2000). Corona (2002) define a la competitividad como una variable multifactorial: formación profesional, habilidades administrativas, financieras, laborales y productivas, la gestión, la innovación y el desarrollo tecnológico.

Rubio & Aragón (2002) refieren que la competitividad puede interpretarse como la creación y sostenimiento de un desempeño superior. Por lo cual para que una empresa pueda alcanzar el éxito competitivo dependerá de su capacidad para, rivalizando con otras, conseguir una posición competitiva favorable, mantener y aumentar su posición en el mercado y obtener unos resultados superiores sin necesidad de recurrir a una remuneración anormalmente baja de los factores de producción. En relación a la competitividad este trabajo de investigación busca que las pequeñas empresas puedan tomar decisiones financieras más eficientes que influyan positivamente en su desarrollo, incrementando su competitividad en el mercado; a través de la administración financiera. Autores como Rubio & Aragón (2002) identifican a las variables Formación del gerente, posición tecnológica, calidad del producto, capacidades de marketing, formación de personal, innovación y rentabilidad económica como los factores del éxito competitivo de las pequeñas empresas. En este sentido Calvo, García & Madrid (2004) establecen que las variables para medir los efectos económicos y financieros de las pequeñas empresas son el crecimiento económico, eficiencia, riesgo y rentabilidad.

Otros autores han medido a la competitividad a través de los siguientes indicadores: Chauca (2000) estilo de dirección, tipo de organización, producción, finanzas, tecnología y mercadotecnia. Bonales & Sánchez (2003) calidad, precio, rentabilidad, tecnología, capacitación y canales de distribución. Domínguez, Hernández & Toledo (2004) rentabilidad, prestigio de la empresa y satisfacción del propietario con el negocio. Chávez (2004) calidad, canales de distribución, precio, utilidad servicios y tecnología. Hernández (2006) recursos tecnológicos, recursos humanos, recursos organizacionales y la relación costo-beneficio. Existe una inclinación en la literatura hacia la utilización de indicadores cuantitativos para la medición de la variable de competitividad a través de estándares financieros siendo el indicador más utilizado el de la rentabilidad económica.

Variables E Indicadores

Una vez realizada la revisión literaria para analizar la forma en que otros autores han estudiado al objeto de investigación, se determinaron las variables, sus dimensiones e indicadores. Asimismo se analizó la forma en cómo han sido medidas estas variables por otros investigadores. Para esta investigación se ha establecido como variable independiente a la administración financiera y la competitividad como variable dependiente, en virtud de que el enunciado de la hipótesis establece que la administración financiera afecta a la competitividad de las pequeñas empresas comerciales. Se determinó que las dimensiones de la variable de administración financiera serían los recursos financieros y el riesgo. Asimismo se establecieron los indicadores para la dimensión de los recursos financieros siendo estos la información financiera, el periodo con que se elabora la información, la obtención de los recursos financieros y el control de los recursos. Para la dimensión del riesgo se establecieron como indicadores la autonomía financiera, el porcentaje de gastos sobre los ingresos de operación, el costo de los recursos ajenos y la

capacidad de deuda. En cuanto a la variable de competitividad se establecieron las dimensiones de mercado, precio y rentabilidad. Estableciendo como indicadores para la dimensión de mercado el tipo de mercado que atiende este tipo de empresas. En relación a la dimensión de precio se determinó el indicador de establecimiento de precios y por último para la dimensión de rentabilidad se establecieron los indicadores de rentabilidad económica, el margen de ingresos sobre los ingresos de operación, los recursos generados sobre los recursos de operación y la determinación de las utilidades.

METODOLOGÍA

La investigación que se está desarrollando es no experimental, con un diseño de tipo transeccional o transversal correlacional. Esta investigación es no experimental en virtud de que no existe una manipulación de las variables, lo cual es una de las características de este tipo de investigación de acuerdo a lo establecido por Hernández, Fernández & Baptista (2006) que definen a la investigación no experimental como cualquier investigación en la que resulta imposible manipular variables o asignar aleatoriamente a los sujetos o las condiciones. Señalando que en un estudio no experimental se observan situaciones ya existentes, no provocadas intencionalmente por el investigador. Asimismo el diseño es de una investigación transeccional o transversal, es decir, los datos se recolectaron en un solo momento, es decir en un tiempo único, con el propósito de describir las variables y posteriormente analizar su interrelación. El diseño es de tipo transeccional correlacional en el sentido de que se busca describir y medir las relaciones entre las variables existentes. En esta investigación las variables a medir son la administración financiera y la competitividad. La metodología empleada para el desarrollo de esta investigación se efectuó en dos etapas, en la primera parte se llevó a cabo la revisión y análisis de bibliografía en libros, revistas, periódicos y documentos electrónicos relacionados con el tema de estudio. En la segunda parte se realizó un estudio de campo, mediante la aplicación de un cuestionario a las personas a cargo de la administración y funcionamiento de las pequeñas empresas comerciales.

Instrumentos: El instrumento de medición que se elaboró para medir las variables es un cuestionario con 59 ítems. Lo constituyen en su mayoría preguntas cerradas con respuestas de opción múltiple. Sin embargo aparecen algunas preguntas abiertas como son los datos generales y otras relacionadas con los montos de los ingresos, deudas, utilidades y tasas de interés. Una vez elaborado el cuestionario se revisó por expertos en el área de finanzas y contabilidad, para determinar si los ítems eran adecuados para obtener resultados confiables. Posteriormente se modificaron aquellos ítems a los cuales se le hicieron observaciones, las cuales fueron de forma y no de contenido. Los cuestionarios se aplicaron a los gerentes o dueños de las empresas. Los informantes son personas relacionadas con el tema de investigación conocedoras y con amplia experiencia en la actividad que desempeñan, lo que proporcione validez y confiabilidad a los datos recabados.

Confiabilidad: Se determinó la confiabilidad del instrumento de medición a través del Alfa de Cronbach. Arrojando un resultado de 0.779 para los ítems que miden la administración financiera y de 0.736 para aquellos que miden la competitividad.

Población y muestra: En esta investigación son los empresarios de las pequeñas empresas comerciales los que integran la población. Para determinar el tamaño de la población, muestra y sujetos de este estudio, se tomó como marco muestral la información proporcionada por el SIEM 2012, el cual cuenta con un registro de empresas, clasificadas de acuerdo a su entidad, municipio, tamaño y sector, además de ser el padrón más completo y actualizado que existe hasta este momento sobre este tipo de empresas. De acuerdo con la información del padrón del SIEM en el municipio de Mexicali existen actualmente 413 pequeñas empresas comerciales ubicadas en la zona urbana, las cuales representan la población de esta investigación. Una vez determinada la población y realizado el piloteo del instrumento de medición y establecida su confiabilidad y validez, se procedió a determinar el tamaño de la muestra.

El tipo de muestreo es probabilístico, aleatorio por reemplazo. El muestreo probabilístico se refiere a que cuando se extrae una muestra todos los elementos del marco muestral cuentan con probabilidad de selección distinta a cero. Es decir, todos los elementos de la población tienen la misma posibilidad de ser escogidos. Las muestras probabilísticas son esenciales en los diseños de investigación transeccionales cuantitativos, a través de encuestas, donde se busca hacer estimaciones de las variables de la población y se analizan con pruebas estadísticas, donde se presupone que la muestra es probabilística. Así los elementos muestrales tendrán valores muy parecidos a los de la población, de tal manera que las mediciones del subgrupo pueden dar estimados precisos del conjunto mayor.

Para determinar el tamaño de la muestra se utilizó la fórmula de poblaciones finitas, en virtud que se conoce el número total de pequeñas empresas comerciales registradas en Mexicali, B.C., en el padrón del SIEM 2012. De acuerdo al padrón de información la población de este estudio es de 413 empresas, se consideró un margen de error del .05, un grado de confiabilidad del 95% y una proporción esperada de 0.50. Por lo tanto el tamaño de la muestra para esta investigación es de 200 pequeñas comerciales ubicadas en Mexicali, B.C.

Descripción de la muestra: El instrumento del cuestionario se aplica a las pequeñas empresas ubicadas en la zona urbana dedicadas a la actividad comercial, a los propietarios, administradores, contadores o encargados que operan estas empresas ya que son estos quienes tienen el conocimiento y la experiencia de las operaciones, recursos, información y conocen la forma en que se toman las decisiones sobre su funcionamiento. El género de los empresarios no importa y los rangos de edades serán de los 18 a los 70 años.

RESULTADOS

A continuación se presentan los principales resultados preliminares obtenidos de la aplicación del instrumento de medición a las primeras sesenta pequeñas empresas. Analizando algunas dimensiones referentes a la administración financiera y competitividad.

Figura 1: Mercado en el que participa

Fuente: Elaboración propia con datos de los resultados

Las pequeñas empresas del sector comercial en Mexicali tienen su potencial de ventas a nivel local representando el 87% de su mercado, debido principalmente a que no cuentan con una estructura financiera sólida.

Figura 2: Elaboración de Estados Financieros

Fuente: Elaboración propia con datos de los resultados

En el caso de los tipos de estados financieros que se elaboran, se encontró que el 48% de las empresas encuestadas elaboran el balance general y un 38% el estado de resultados. Siendo que el estado financiero que más información puede brindar sobre cómo están siendo manejados los recursos de la empresa es el estado de cambios en la posición financiera. El resultado obtenido es el reflejo de que la mayor parte de esta información se utiliza sólo para efectos del cumplimiento de las obligaciones fiscales de este tipo de empresas.

Figura 3: Periodicidad de la información financiera

Fuente: Elaboración propia con datos de los resultados

En cuanto a la periodicidad de la elaboración de la información que se genera de las operaciones de la empresa se encontró que es mensualmente como ésta se elabora siendo el caso del 87% de las empresas encuestadas, debido a que tienen que presentar sus declaraciones de impuestos de manera mensual.

Figura 4: Usos de la información financiera en las pequeñas empresas

Fuente: Elaboración propia con datos de los resultados

El 34% de estas empresas utilizan principalmente la información que se elabora como resultado de sus operaciones para conocer como se encuentra su situación financiera y un 30% para llevar a cabo el cumplimiento de la declaración de impuestos.

Figura 5: Herramientas financieras utilizadas

Fuente: Elaboración propia con datos de los resultados

En cuanto al tipo de herramientas que se utilizan para analizar la información que producen este tipo de empresas se encontró que es en base a la aplicación de razones financieras en un 15%, a través del control de presupuestos y reportes de inventarios en un 13% respectivamente y en un 12% en base a estadísticos como determinan la situación financiera de la empresa, sin embargo es bajo el porcentaje de las empresas que utilizan estas herramientas. Las pequeñas empresas para el logro de sus objetivos se apoyan poco en el ambiente externo como lo es los indicadores económicos.

Figura 6: Posee créditos bancarios

Fuente: Elaboración propia con datos de los resultados

El 68.25% de las empresas utiliza créditos bancarios para su operación en tanto el 31.75% no los utiliza, en virtud de que utilizan a sus proveedores como su fuente de financiamiento.

Figura 7: Tipo de crédito bancario que utilizan

Fuente: Elaboración propia con datos de los resultados

La fuente de financiamiento principal en un son los proveedores seguido por préstamos personales y créditos bancarios, su principal aplicación en un 32% es para créditos refaccionarios, es decir, para la adquisición de activos fijos seguido en un 25% para cubrir el capital de trabajo de la empresa y en un 18% respectivamente para restructuración de pasivos u otros.

Figura 8: Bases para el precio de venta

Fuente: Elaboración propia con datos de los resultados

En cuanto a la forma en cómo determinan sus precios de venta se encontró que es en un 47% principalmente el costo y el margen de utilidad lo que lo determina, sin considerar los precios del mercado o sus puntos de equilibrio. En virtud de que solo el 27% toma en consideración los precios de la competencia.

Figura 9: Control de Efectivo

Fuente: Elaboración propia con datos de los resultados

En cuanto al control de efectivo este se realiza principalmente a través de los reportes periódicos que se realizan de entradas y salidas de efectivo en un 62%. Siendo así estos deberían realizarse con una periodicidad más corta para poder detectar cualquier anomalía en tiempo, solo el 26% lo controla a través de los estados financieros.

Figura 10: Información para determinar el precio de venta

Fuente: Elaboración propia con datos de los resultados

En relación a la forma en cómo establecen los precios de venta se tiene que el 55.56% lo hace analizando sus costos y el margen de utilidad, en tanto que el 33.33% lo hace tomando como referencia a los precios de la competencia.

Figura 11: Cómo considera la autonomía financiera de la empresa

Fuente: Elaboración propia con datos de los resultados

El 74.6% considera que a su empresa totalmente autónoma en tanto que el 14.29% depende de terceros para su funcionamiento y el 11.11% considera a su autonomía con restricciones.

CONCLUSIONES

Algunas herramientas de la administración financiera son utilizadas en la pequeña empresa comercial de Mexicali, B.C., sin embargo es bajo el porcentaje de empresas que aplican la administración financiera, el aplicar parcialmente elementos de la administración financiera, provoca no controlar los recursos financieros, afectando la rentabilidad y competitividad de las pequeñas empresas. Razones financieras, presupuestos y control de efectivo no tienen una periodicidad constante en su aplicación, ni parámetro u objetivo de comparación. No se consideran indicadores económicos ni se realiza el análisis del entorno, para determinar y cumplir los objetivos de las empresas.

Para determinar el precio de venta se toma como base el costo del producto adicionando el margen de utilidad deseado, sin determinar punto de equilibrio ni considerar el precio de la competencia, esta práctica no es adecuada, ya que el mercado es el que establece los precios, por lo que se debe determinar el punto de equilibrio y controlar los costos. En cuanto a los recursos generados por la operación de las empresas, es necesario buscar formas de obtener mayores recursos, para tener autonomía financiera y no poner en riesgo a la empresa. Elaboración de estados financieros, periodicidad de los mismos, presupuestos, control de efectivo y análisis del entorno, son elementos o variables que debe considerar el modelo de administración financiera. Asimismo determinación de punto de equilibrio, control de costos y generar mayores recursos propios, son elementos a considerar dentro del modelo financiero. Para que el pequeño empresario sobreviva y crezca, es necesario que sea competitivo, y esto implica que trabaje con un método y aplique modelos que le aseguren el logro de los objetivos de la empresa.

Francisco Canibe Cruz, Universidad Autónoma de Coahuila
Martín Jaramillo Rosales, Universidad Autónoma de Coahuila

RESUMEN

Las Micro, Pequeñas y Medianas Empresas (MPYMES) constituyen un elemento decisivo en el tejido empresarial, generan empleos, y constituyen una fuente de riqueza inagotable para las regiones y las naciones. Tienen desventajas como la falta de profesionalización en su gestión, y ventajas, sobre todo asociadas a su capacidad de flexibilidad. Se sigue requiriendo de estudios que deriven en políticas y acciones para contribuir a su desarrollo estratégico. La Red FAEDPYME viene desarrollando estudios en esta dirección, en el marco de lo cual esta contribución se propuso como objetivo: Analizar la situación de las MPyMES de Torreón, sus fortalezas y debilidades, así como, realizar comparaciones con los estudios previos en el Estado de Coahuila e Iberoamérica. La metodología aplicada determinó una muestra estratificada en población finita conformada por 113 MIPYMES de una población de 2480. El cuestionario y la estructura de la base de datos en SPSS fueron proporcionados por la Red mencionada y se realizaron análisis descriptivos, ANOVA y Pruebas de hipótesis. Los resultados se analizan y concluyen en cuatro dimensiones: Caracterización de las empresas, expectativas y clima empresarial; Estrategia y Organización; Tecnologías e Innovación; e Indicadores de rendimiento.

PALABRAS CLAVES: micro pequeñas y medianas empresas, desarrollo estratégico, clima empresarial, estrategia y organización, tecnología e innovación.

STRATEGIC ANALYSIS FOR MICRO, SMALL AND MEDIUM ENTERPRISES (MSME): AN EMPIRICAL STUDY IN TORREÓN, COAHUILA, MEXICO.

ABSTRACT

The Micro, Small and Medium Enterprises (MSMEs) are a critical element in the business. They create jobs and provide a source of employment for the regions and nations. Have disadvantages as their lack of professionalism in its management and associated advantages especially its capacity for flexibility. Study is still required to advise their policies and actions to strategic development. The Red FAEDPYME been developing studies in this direction. Analyze the situation of this enterprises in Torreón, their strengths and weaknesses, and make comparisons with studies in the State of Coahuila and Iberoamérica is the purpose of this paper. Dimensions: Characterization and perception of the business environment, strategy and organization, technology, innovation and performance indicators. The methodology determined in a stratified finite population comprised 113 in a population of 2480. The questionnaire and the structure of the database in SPSS were provided by FAEDPYMES. Methodology include descriptive analyzes, ANOVA and hypothesis testing. The results are analyzed and concluded in four dimensions:

Characterization of companies, expectations and business climate, Strategy and Organization, Technology and Innovation, and Performance Indicators.

JEL: M00

KEYWORDS: micro small and medium sized enterprises, strategic development, business climate, strategy and organization, technology and innovation

INTRODUCCION

Las MPYME constituyen un foco central de las investigaciones en los últimos años, debido entre otros factores, a su gran capacidad para la generación de empleos y la generación de riqueza. Sin embargo siguen necesitadas de estudios sistemáticos para revelar sus problemáticas y generar estrategias para facilitar la toma de decisiones tanto al interior de las mismas, como a nivel de programas o políticas acertadas y oportunas. (FAEDPYME, 2011) A partir de las orientaciones de FAEDPYMES para continuar en el 2012, la investigación que lidera en este espacio de conocimientos hace varios años, y derivada de la cual, se han generado informes a nivel de estados, de países y de Iberoamérica; la Facultad de Contaduría y Administración, Universidad Autónoma de Coahuila, Unidad Torreón, creó un grupo de investigación formado por Doctores en Ciencias (Catedráticos-Investigadores), y estudiantes del Doctorado y la Maestría en Administración y Alta Dirección, para desarrollar estas investigaciones en armonía con otros proyectos de investigación en curso.

Desde el mes de julio se está aplicando la encuesta en siete municipios representativos del Estado de Coahuila, y conjuntamente se contempla el seguimiento de tres Proyectos de Investigación, con enfoques especializados y una adecuada combinación de técnicas cuantitativas y cualitativas, para revelar con más profundidad, cuestiones relacionadas con: El Modelo de Negocios, Los procesos de Innovación, Gestión Tecnológica, y el Emprendedurismo femenino; en el contexto de las MiPYMEs Coahuilenses y de la Comarca Lagunera. Estos proyectos de investigación que desarrollamos, pretenden a más largo plazo, aportar metodología y resultados en lo concerniente a estudios comparativos regionales, con énfasis en la innovación, un Modelo de Diagnóstico Integral y propuestas de Innovación en el Modelo de Negocio de las PYME, así como un Perfil de la Mujer Emprendedora. En el camino, este resultado de investigación parcial, se enfoca al análisis desarrollado con el procesamiento de la encuesta facilitada por FAEDPYME, para la ciudad de Torreón.

El objetivo es: Analizar la situación de las MPyMES de Torreón, sus fortalezas y debilidades, así como, realizar comparaciones con los estudios en el Estado de Coahuila e Iberoamérica, en lo concerniente a la percepción del clima empresarial, su estrategia y organización, tecnologías, innovación e indicadores de rendimiento.

REVISIÓN LITERARIA

Para definir el éxito y la competitividad empresarial se encuentran muchas y diversas posturas en la literatura científica. (Rubio Bañón & Aragón Sánchez, 2002). La competitividad empresarial para las PyMES veracruzanas fue estudiada, entendiendo la competitividad empresarial o éxito competitivo de una empresa como “la capacidad para, rivalizando con otras empresas, conseguir alcanzar una posición competitiva favorable que permita obtener un desempeño superior al de sus competidores”. Se establecieron las siguientes hipótesis: “H1: El éxito competitivo de las PYME se ve influido positivamente por las capacidades financieras de la empresa”, “H2: El éxito competitivo de las PYME se ve influido positivamente por la posición tecnológica de la empresa”, “H3: El éxito competitivo de las PYME se ve influido positivamente por el desarrollo de innovaciones”, “H4: El éxito competitivo de las PYME se ve influido positivamente por las capacidades de Marketing”, “H5: El éxito competitivo de las

PYME se ve influido positivamente por la calidad del producto o servicio”, “H6: El éxito competitivo de las PYME se ve influido positivamente por la aplicación de políticas de Recursos Humanos”, “H7: El éxito competitivo de las PYME se ve influido positivamente por el nivel de formación del máximo responsable o gerente”, “H8: El éxito competitivo de las PYME se ve influido positivamente por las tecnologías de la información y la comunicación en la empresa”. (Aragón Sánchez & Rubio Bañón, 2005). Como resultado de la labor que viene desarrollando FAEDPYMES se han obtenido varios Informes. En lo fundamental el Marco teórico se desarrolla por tanto en los mismos. (Análisis Estratégico para el Desarrollo de la Pequeña y Mediana Empres. Estado de Veracruz.), (Universidad Autónoma de Coahuila y FAEDPYMES, 2011), (Análisis Estratégico para el Desarrollo de la MPYME en Iberoamérica. Informe MPYME Iberoamérica. 2009. FAEDPYME.) Al interior del análisis de las dimensiones y variables de este estudio se exponen aspectos específicos extraídos de estos informes u otros referentes teóricos expuestos a consideración.

En el Informe de FAEDPYME Iberoamérica 2009, se plantea la clasificación de los factores competitivos en dos grandes grupos: externos (el entorno de actuación de la empresa) e internos (propias de cada empresa); y que por lo tanto se analiza por un lado, la percepción del entorno empresarial; y por otro, una serie de factores relacionados con la estrategia organizativa y los recursos internos: la cooperación entre empresas, los recursos humanos, la innovación y la tecnología, la calidad, las tecnologías de información y comunicación; y los recursos financieros. (Análisis Estratégico para el Desarrollo de la MPYME en Iberoamérica. Informe MPYME Iberoamérica. 2009. FAEDPYME.)

METODOLOGÍA

La metodología empleada, en lo fundamental, encuesta, estructura de base de datos en SPSS, estadísticos para el análisis, ha sido desarrollada en el marco de los estudios realizados por FAEDPYMES. (FAEDPYME. Fundación para el Análisis Estratégico y Desarrollo de la Pequeña y Mediana Empresa.) Para la definición de la muestra el tamaño de la empresa se ha definido en función del número de empleados generándose tres grupos: microempresas (de 6 a 10 trabajadores), empresas pequeñas (de 11 a 50 trabajadores) y empresas medianas (de 51 a 250 trabajadores). La distribución de la población y la muestra seleccionada se muestran en las Tablas 1 y 2. El cuestionario incluye preguntas cuantitativas y cualitativas, por lo que el tamaño de la muestra asume como criterio de calidad, generalmente aceptado, el control sobre el error máximo a priori en la estimación de la proporción de respuesta a una pregunta dicotómica (frecuencia relativa de respuesta para un ítem de una cuestión con dos posibles contestaciones). El diseño general de la muestra se fundamenta en los principios del muestreo estratificado en poblaciones finitas. La estratificación se ha realizado considerando los 19 sectores determinados en la encuesta utilizada, realizando una agregación con los sectores más representativos (industria, construcción, comercio y servicio) y los tres tamaños anteriormente descritos.

De ahí que: *Margen de error 8%, Nivel de confianza 92%, Universo “población” N = 2480 empresas Nivel de heterogeneidad es del 44%.*

El tamaño de la muestra obtenido es de $n = 113$, el cual representa un 4.56% de cobertura en la población total. La afijación final se realiza de forma proporcional al tamaño de los estratos. En la Tabla 1 puede observarse la distribución de la población y en la Tabla 2, el de la muestra. El número de empresas de la población, para los sectores y tamaños especificados, se ha obtenido de la estadística “Unidades económicas que operaron en 2011 del sector privado y paraestatal” del Censo económico 2012 elaborado por el INEGI. Todas las tablas han sido elaboradas por los autores de este trabajo por lo que no se hará ninguna especificación al respecto.

Tabla 1: Distribución de la Población de Empresas.

Población		industria	construcción	comercio	servicios	total
micro	de 6 hasta 10	89	128	902	697	1816
pequeña	de 11 hasta 50	99	119	150	162	530
mediana	de 51 hasta 250	47	12	56	19	134
total		235	259	1108	878	2480

esta tabla muestra la distribución de la población. la cantidad total es de 2480 empresas, donde un 73.22% son micro empresas

La Tabla 1 muestra un total de empresas que se eleva a 2,480 de las que son microempresas un 73.22%, pequeñas empresas un 21.37% y medianas empresas un 5.4%. De esta forma el total de encuestas que fueron muestreadas se elevó a 113. La Tabla 2 muestra la composición final de la muestra. El Sector de Industria tiene el mayor número de empresas en correspondencia con su predominancia en el entramado económico de la región. Las coberturas alcanzadas en función de los agregados por grandes sectores (Industria, Construcción, Comercio y Servicios) y por tamaños (microempresas, pequeñas y medianas) se muestran en la Tabla 3.

Tabla 2. Distribución de la Muestra de Empresas

MUESTRA		INDUSTRIA	CONSTRUCCIÓN	COMERCIO	SERVICIOS	TOTAL
Micro	de 6 hasta 10	17	0	22	17	56
Pequeña	de 11 hasta 50	17	5	8	10	40
Mediana	de 51 hasta 250	8	2	2	5	17
TOTAL		42	7	32	32	113

En la Tabla 2 se observa que el sector industria es el que muestra la concentración más alta con un 37.17% y la micro con un 49.55%

En cuanto a la distribución por sectores y tamaños, la industria tiene mayor cobertura con un 17.87% y la mediana con 12.69 %

RESULTADOS

Caracterización de las empresas, expectativas y clima empresarial: El control mayoritario de las empresas es familiar con un 77.9 %, y el 60.4 % están constituidas en forma societaria. Edad del gerente, mayor porcentaje 48.7 %, edad media de 47 años. Son hombres el 84. 1% de los gerentes y 62.8 % tiene estudios universitarios. Nunca han exportado el 79.4. El comportamiento de estas variables es similar a los estudios previos realizados en el Estado de Coahuila y en Iberoamérica. Diferencias en la exportación, un mayor porcentaje en el estudio iberoamericano. Las empresas torreónenses tienen mucho por hacer en pos de la internacionalización. Se relacionó el Nivel de Formación del Gerente de las Empresas con el tamaño de las empresas la antigüedad y el sector, Nivel significancia de Chi-cuadrado (χ^2) (* $p < 0.05$ y ** $p < 0.10$). Existe relación con el Tamaño, pero no con la antigüedad ni el sector en el que se desempeñan.

Estrategia y organización: Sobre la evolución del empleo, según el tamaño de las empresas hay tendencia creciente de la ocupación entre 2011 y 2012. En las micro y pequeñas empresas es más homogéneo y generalizado. Las micro tienen un crecimiento “relativo” más intenso (tasa media anual 14.28%). El crecimiento del empleo por sectores muestra resultados muy dispares, ya que crecieron el Comercio y la Industria y decrecieron la Construcción y los Servicios. El clima empresarial se percibe igual o en mejoría con respecto al 2011. Se percibe alta competitividad. Los factores que se perciben como más decisivos: Facilidad para que entren nuevas empresas y Poder de Negociación de los Clientes. Influyen menos: Poder de Negociación de los proveedores y Facilidad para crear productos sustitutos.

La Planeación Estratégica muestra un mejor comportamiento en este estudio que el realizado hace 5 años para el Estado de Coahuila (prácticamente lo duplica) y también supera el resultado obtenido en el estudio más reciente para Iberoamérica. Valdría la pena profundizar en futuras investigaciones sobre este aspecto. La planeación a corto plazo es similar a los otros estudios. Se generó un proceso estadístico por medio de tablas de contingencia para poder comprobar si impactan en su relación los factores estudiados con la comprobación de la prueba de hipótesis, Nivel significancia de Chi-cuadrado (χ^2) (* $p < 0.05$ y ** $p < 0.10$). Se demuestra relación entre la planificación estratégica formal con el tamaño de la empresa y la antigüedad, pero no con el sector.

Tecnología e innovación: Predomina el Tipo B (que adquieren su tecnología), seguido del Tipo C (Realizan pocas inversiones). Un 38.7% de las empresas son del tipo D (declaran que la competencia tiene mejor tecnología que la de ellos). Solo un 12.6% son del Tipo (ellos desarrollan internamente su propia tecnología). En el análisis por sectores la Industria destaca con un 37.83 % al asegurar que tienen una posición tecnológica fuerte. En cuanto al uso de las Tecnologías de Información y Comunicación, se observan en general altos porcentajes, destaca el correo y la banca electrónicas, la compra y venta por Internet, el trámite de impuestos. Ciertas pruebas estadísticas que hicimos durante la investigación nos sugieren que no necesariamente un alto uso de estas tecnologías demuestra mejoras en el desempeño empresarial. Este constituye un interesante espacio de investigación para trabajos que desarrollaremos en el futuro inmediato.

Indicadores de rendimiento: La información contable es alterada por diferentes motivos. Estos estudios utilizan la percepción de los empresarios en relación con su posición competitiva. Pruebas de hipótesis comprobaron que los empresarios no tienen diferencias significativas en la forma en que los empresarios valoran su desempeño con respecto a los competidores. Solo el factor de que la empresa dispone de procesos internos más eficientes tuvo diferencias entre sus medias, con una significancia estadística de (0.015). Por límites de espacio en esta ponencia no se incluyeron otros análisis de la perspectiva económico-financiera que serán presentadas en otras contribuciones.

LA CALIDAD Y LA EVALUACIÓN COMO ESTRATEGIA DE MEJORA Y CAMBIO EN LA SOCIEDAD DEL CONOCIMIENTO: ANÁLISIS DE CASOS EN INSTITUCIONES DE EDUCACIÓN SUPERIOR EN EUROPA, AMÉRICA DEL NORTE Y AMÉRICA LATINA

Maritza Rengifo Millán, Université De Montréal

RESUMEN

Como respuesta a las transformaciones y demandas sociales, políticas y económicas, que han afectado a los países del mundo en las últimas décadas, nace la preocupación por “la calidad, la evaluación institucional y los procesos de mejora continua en el ambiente universitario”, como un tema de creciente interés que obliga a las instituciones de educación superior a replantear su figura institucional, su rol académico y por ende, a enfrentar nuevos desafíos y cambios en el sistema de educación superior.

PALABRAS CLAVE: Calidad, evaluación institucional, procesos de mejora, cambios, educación superior.

QUALITY AND EVALUATION AS A STRATEGY FOR IMPROVEMENT AND CHANGE IN THE KNOWLEDGE SOCIETY: CASE STUDIES IN HIGHER EDUCATION INSTITUTIONS IN EUROPE, NORTH AMERICA AND LATIN AMERICA

ABSTRACT

In response to social, political and economic changes and demands that have affected countries in the world in recent decades, the concern for "quality, institutional assessment and continuous improvement processes in the university" is born as a topic of growing interest requiring higher education institutions to rethink their institutional figure, his academic role and thus to meet new challenges and changes in the higher education system.

KEY WORDS: Quality, institutional assessment, process improvement, change, higher education.

INTRODUCCIÓN

La preocupación por mejorar la calidad en las instituciones de educación superior (IES) ha tenido lugar, por el papel que ella desempeña en el desarrollo social, cultural y económico, que se ha vuelto cada vez más significativo en el contexto de presente mundo globalizado. Es por ello que las IES, están dedicando grandes esfuerzos a planificar, medir y mejorar su calidad. Esta preocupación por la calidad surge entonces desde distintos ámbitos. Es así como los gobiernos requieren información calificada para enfrentar las crisis financieras y económicas, de tal forma que se requiere distribuir los recursos públicos disponibles y velar por su utilización eficaz y eficiente. Las demandas de movilidad obligan a dar cuenta de la calidad de la formación, no sólo en el ámbito local sino también de manera confiable, más allá de las fronteras nacionales. En este sentido, se plantea la necesidad de información para la toma de decisiones, en un contexto caracterizado por asimetrías significativas, lo cual demanda que las universidades den cuenta de la calidad de la formación en distintos programas e instituciones.

A su vez, la sociedad actual exige que se asegure que la oferta educacional es pertinente, desarrollando las competencias requeridas para la formación de capital humano capaz de integrarse en múltiples niveles a una sociedad, denominada del conocimiento. Con el propósito de exponer algunos de los principales desarrollos de los procesos calidad en el sistema de educación superior en un marco global, el presente documento muestra una síntesis de un avance de investigación con una revisión teórica- empírica en el que se incluirá las concepciones de calidad, los mecanismos aplicados al aseguramiento de la calidad en la enseñanza superior y finalmente se muestra una clasificación y análisis comparativo de los procesos de aseguramiento de la calidad en la enseñanza superior usados en los diferentes países de Europa, América del Norte y América Latina. Para terminar se presentan algunas reflexiones a manera de conclusiones.

REVISIÓN DE LITERATURA

La calidad en la educación es una cualidad que se atribuye a las instituciones para hacer un juicio a partir de un diagnóstico que determina la situación real de un curso, un programa, una institución o de sistema educativo. Al respecto varios autores (Woodhouse 2006, El Khawas 1.998, Thune, 1.998) muestran, que si bien los factores que afectan el desarrollo de la educación superior varían de un país a otro, existe un alto grado de coincidencia, determinando como antecedentes comunes aspectos asociados al crecimiento y diversificación de la educación superior, la introducción de elementos de competencia, la lógica del mercado en el sector y la necesidad de responder a los requerimientos de la globalización.

Muchas de las definiciones referidas a calidad de autores como Harvey y Green (1993) y Harvey y Newton (2007) y de la UNESCO según Vlăsceanu *et al.*, (2004) respecto a la calidad en la educación superior se han dado en función de concepciones como el prestigio, la pertinencia, la excelencia. Estas concepciones están ligadas a la evaluación para identificar estándares, criterios, cualidades y requisitos, los cuales pueden variar según el contexto, las orientaciones y necesidades sociales preponderantes en un momento determinado. Para ilustrar estas concepciones se presenta la tabla 1 en la que se incluyen las características del sistema en la educación superior.

En este panorama de la era del conocimiento como lo indican Agasisti (2009), Mintrom (2008) y los estudios de la Organización para la Cooperación y el desarrollo Económico (OCDE) en los últimos 10 años, se forja en el mundo, los perfiles de instituciones de educación superior en un contexto de competencia nacional e internacional en materia de recursos, investigadores y estudiantes. A partir de la conjugación de varios factores internos y externos en las universidades, se ha hecho evidente la necesidad de establecer mecanismos que aseguren los procesos de calidad, que den garantía pública acerca del cumplimiento de los objetivos declarados. La UNESCO recapitula el aseguramiento como un proceso integrador que incluye distintos actores tendientes a mejorar y promover la calidad de la educación superior. Los mecanismos para el aseguramiento son dispositivos que apuntan al control, la garantía y la promoción de la calidad, los cuales pueden ser públicos y privados. Algunos de estos mecanismos son: la auditoria académica, el licenciamiento, la evaluación institucional, la acreditación.

METODOLOGÍA

El objetivo de la investigación implicaba recoger información y desarrollar una reflexión y análisis documental de la literatura científica sobre la temática escogida con una propuesta metodológica enmarcada en una perspectiva teórica. El marco de análisis corresponde a IES de países de Europa, América del Norte y América Latina.

RESULTADOS

Aplicando la metodología ya explicada se elabora la tabla 2 para la comparación y análisis de los modelos de calidad de sus diferentes IES, así como los criterios y mecanismos evaluativos utilizados en los procesos de evaluación institucional y de programas académicos estudiados durante el análisis de

literatura. En la tabla 3. Se incluye un análisis comparativo del foco de control, los mecanismos y estrategias utilizadas en las IES de los diferentes países de Europa, América del Norte y América Latina.

Tabla 1: Concepciones de Calidad y características aplicables a la Educación superior

CONCEPCIONES DE CALIDAD	CARACTERÍSTICAS APLICABLES A UN SISTEMA DE EDUCACIÓN SUPERIOR
Calidad como coherencia interna de la institución (ajuste a los propósitos)	Se contrasta el sistema de indicadores con la misión y los fines de la institución.
Calidad como relación costo-beneficio. Valor por su dinero. Da origen al binomio calidad-eficiencia.	Se contrasta el sistema de indicadores con los recursos físicos, humanos y tecnológicos invertidos en la institución
Calidad como pertinencia. Da origen al binomio calidad y pertinencia. (Contribución, transformación.)	Se contrasta el sistema de indicadores con la relevancia que tiene la institución con respecto a las necesidades sociales.
Calidad como excelencia (concepto tradicional). Alude un objeto intangible, pero que los académicos identifican plenamente.	Se contrasta el sistema de indicadores con un ideal de resultados óptimos.
Calidad como el rendir cuentas- (accountability). Da origen a sistema de seguimiento y aseguramiento. (Conformidad con las normas).	Se contrasta el sistema de indicadores con una normatividad y estándares previamente establecidos por un organismo interno o externo, de evaluación.

En esta tabla se exponen las principales concepciones de la calidad y las características aplicables a cada concepción en el sistema de educación superior. Corresponde a una elaboración propia de la autora, a partir de Harvey y Green (1993), Harvey y Newton (2007) Unesco, Vlăsceanu et al (2004) y el glosario de RIACES.

Tabla 2: Comparación de los procesos de aseguramiento en las instituciones de educación superior

Europa	América del Norte	América Latina
<p>El modelo general de la evaluación de la calidad utilizado en muchas de las IES en Europa es:</p> <ul style="list-style-type: none"> . La auto-evaluación de la unidad académica. . Las visitas de campo por expertos externos. . Los informes públicos de evaluación externa. <p>.Europa posee tasas de matriculación y criterios estándar bastante similares a los de Norteamérica (EEUU y Canadá).</p> <p>. Las IES presentan un alto grado de calidad tanto en las instituciones como en los programas académicos</p>	<p>.Estados Unidos tiene una larga tradición acreditativa de más de cien años. Sus universidades tienen como objetivo el otorgamiento de la calidad complementado con la revisión.</p> <p>.Dos terceras partes de los sistemas públicos de educación requieren de una evaluación formal de la calidad a nivel de pregrado.</p> <p>.La evaluación se realiza a través de agencias de control de calidad gubernamental o independiente.</p> <p>.En Canadá, no hay acreditación oficial post-secundario o mecanismos de educación que los reconocen legalmente. Sin embargo hay asociaciones profesionales que acreditan los programas</p> <p>.En Estados Unidos, se presta mucha atención a la acreditación institucional mientras que Canadá se centra en los programas tanto en términos de acreditación como de revisión.</p>	<p>.América Latina está entre las regiones pioneras en el campo del aseguramiento de la calidad, considerando que con excepción de Estados Unidos, se trata de procesos relativamente jóvenes. En efecto, ya durante la década de los noventa, al menos Chile, Colombia y Argentina y México contaban con procesos en diversas etapas de avance y consolidación.</p> <p>. Con relación a los propósitos de los mecanismos de aseguramiento de la calidad: En la mayoría de los países de América Latina, el fin principal es dar garantía pública de la calidad, mediante la instalación de mecanismos de acreditación de carreras de pregrado y en algunos casos, también de posgrado.</p> <p>. El organismo responsable de establecer estos criterios puede variar, pero en general, en todos los casos participan en dicha definición los principales actores (académicos, asociaciones profesionales, empleadores o sector productivo).</p>

En esta tabla la autora muestra una comparación de los procesos de aseguramiento de las IES según estudios de casos de algunos de los países de Europa, América del Norte y América del Sur. Se identifican las principales características avances y mecanismos de aseguramiento de calidad utilizados en las instituciones educativas de educación superior en los casos estudiados.

Tabla 3: Clasificación y análisis comparativo del foco de control, mecanismos y estrategias evaluativas de las instituciones de educación superior.

1º. Países que se distinguen por el desarrollo de estrategias y autorregulaciones y accountability: Donde los sistemas de educación superior están sometidos a “procesos informados y periódicos orientados a ajustar el desempeño del sistema, las instituciones, los programas o procedimientos a las expectativas – estándares, normas – definidas por el regulador a la luz de una evaluación formativa. Las instituciones son esencialmente autónomas, pero operan en un marco que les exige dar cuenta pública de su gestión. Entre estos países se destacan Estados Unidos, con mayor uso de incentivos de mercado, y una regulación estatal relativamente liviana; y Holanda, Bélgica, Canadá, Australia, Nueva Zelandia y el Reino Unido, donde los respectivos gobiernos nacionales son actores centrales en la orientación del sistema.

2º. Países cuyos gobiernos han iniciado un proceso de descentralización: Se han desarrollado algunos aspectos en esta dirección con la cooperación de las instituciones de educación superior. El ejemplo más claro lo constituyen los países escandinavos, caracterizados por un alto grado de centralización, donde decisiones como los sistemas de admisión, el currículo u otros aspectos se adoptan a nivel gubernamental, pero que se encuentran en transición gradual hacia la autonomía institucional y un mayor compromiso con la autorregulación.

3º. Países en que sus gobiernos han anunciado cambios de política orientados hacia el desarrollo de estrategias de evaluación, planificación estratégica o mayor autonomía institucional: Aquí se muestran los países de Europa oriental, enfrentados a la necesidad de modificar drásticamente sus estrategias de gestión pero sin contar con los recursos humanos, materiales o institucionales que les permiten avanzar en la dirección deseada. También se incluye en esta categoría a los países de América Latina y Centroamérica, donde la masificación de la educación superior, asociada en muchos casos a un descenso de la calidad, la burocratización de las instituciones públicas y las bajas remuneraciones de los académicos, unidos al peso de las asociaciones estudiantiles y académicas hace necesario introducir cambios importantes en la gestión del sistema. Se destacan los sistemas de evaluación y acreditación, sobre todo en Chile, Colombia, Argentina, México y Brasil.

4º. Países que se caracterizan por un alto grado de control y planificación centralizados: situación que se da en su mayoría de Europa central: Francia, Italia o Austria. A pesar de la larga tradición centralizada de estos países sobre todo en los europeos, se aprecia también una cierta tendencia a una mayor autorregulación y se están iniciando procesos de descentralización en ámbitos específicos.

Esta tabla muestra una clasificación de las IES en los diferentes países en los que se logran distinguir el desarrollo de mecanismos y estrategias de calidad y evaluación y principales tendencias. Corresponde a un análisis de estudio de Sanyal Bikas (1995) para la Unesco sobre la planificación y mecanismos evaluativos.

CONCLUSIONES

Actualmente diversos países de Europa está desarrollando procesos de acreditación que les permitan dar garantía pública de la calidad a la formación de la enseñanza superior en el contexto de movilidad definida para la Unión Europea. En síntesis, hay un claro desarrollo hacia mecanismos que combinan el reconocimiento de que la calidad es responsabilidad de las instituciones de educación superior, con la conciencia de que no es posible dejar la calidad sin un proceso de verificación externa que dé cuenta pública de los resultados obtenidos. Por otro lado Estados Unidos está modificando sus procesos de acreditación institucional hacia una mirada más cercana a la auditoría, basando sus procesos de evaluación y acreditación en la verificación de los propósitos institucionales. En América latina la tendencia es el desarrollo de sistemas integrados de aseguramiento de la calidad, que van en un proceso progresivo en que la mayoría de los sistemas inician su operación con la evaluación y/o acreditación de programas o carreras. Sin embargo, en el proceso se observa la necesidad de ampliar las funciones desarrolladas, y se van agregando mecanismos de control de calidad, licenciamiento o autorización inicial de funcionamiento, o de verificación de existencia de unas condiciones mínimas de operación.

TENDENCIAS DEL SECTOR HOTELERO INTERNACIONAL

María Soledad Ramírez Flores, Universidad Michoacana de San Nicolás de Hidalgo
Fabricio Guzmán Bedolla, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En la actualidad el sector hotelero Mexicano se encuentra ante un escenario muy competitivo a nivel mundial, sin embargo ha presentado una evolución dinámica, donde cada día son más frecuentes las aperturas de hoteles. El presente trabajo describe las tendencias más importantes que ha experimentado el sector hotelero a nivel internacional frente a los retos y oportunidades del entorno económico global. En base a lo anterior se analizan las estrategias que el sector ha realizado por medio de fusiones y adquisiciones del propio sector, la implementación de nuevas formulas de crecimiento a escala internacional, algunas de ellas son: franquicias, contratos, etc., lo anterior es de vital importancia para generar avances tecnológicos, gestión de recursos, comercialización, por último pero no menos importante la internacionalización de sector.

PALABRAS CLAVE: Sector Hotelero, Estrategias, Marketing.

TRENDS IN THE INTERNATIONAL HOTEL INDUSTRY

ABSTRACT

Nowadays the Mexican hotel industry is facing a very competitive scenario globally, however presented a dynamic evolution, where are every day more the frequent hotel openings. This paper describes the key trends experienced by the international hotel industry face the challenges and opportunities of the global economic environment. Based on the above analyzes the strategies that the industry has done through mergers and acquisitions in the sector itself, the implementation of new formulas for growth internationally, some of which are franchises, contracts, etc., This is vital to generate technological advances, resource management, marketing, last but not least, the internationalization of the sector.

INTRODUCCIÓN

Por varias décadas, el turismo ha tenido un continuo crecimiento y desarrollo hasta convertirse en uno de los sectores económicos que progresan con gran rapidez en el mundo. Es considerado motor de progreso social en diversos países, capaz de atenuar la pobreza y la desigualdad mediante la creación de empresas y nuevos puestos de trabajo. Además, se considera una actividad multidimensional que permite ampliar oportunidades de progreso, distribución del ingreso y uso sustentable de los recursos naturales y culturales (OMT, 2004). El sector hotelero es la base del turismo, la dinámica de las grandes corporaciones se entiende mas por la rentabilidad que promete a los accionistas que por la búsqueda de satisfacción del consumidor (el turista). Las condiciones que habían hecho de la actividad hotelera una profesión individual o familiar hasta principios del siglo XX, se modificaron irreversiblemente con las cadenas internacionales hacia la mitad del mismo siglo, para reconfigurar el comportamiento comercial, laboral y de servicios al huésped. Durante siglos, la hotelería conservó claramente la misma característica: estaba constituida por pequeños negocios independientes dirigidos en familia (Perrin, 1986, pp. 145-146).

El siglo XIX y el inicio del siglo XX estuvieron caracterizados por la hotelería europea, la segunda mitad de este último siglo fue de la hotelería norteamericana y sus formas, que han modelado de manera clara la hotelería como el turismo de la época moderna. En la presente investigación se analiza la evolución de la industria y cómo ésta evolución ha hecho frente a los retos y oportunidades del entorno global, también se reflexiona acerca de la concentración del sector, su flexibilidad y su especialización.

El conocimiento de la estructura del sector hotelero es crucial tanto para el diseño de políticas de las autoridades correspondientes como para definir estrategias empresariales sobre la fijación de precios o los gastos en publicidad y marketing. El objetivo de este artículo es analizar la estructura actual del sector hotelero y su evolución, dando las pautas de su trayectoria futura e identificando las fortalezas y debilidades, para de ésta forma poder crear sinergias eficientes, lo anterior es de vital importancia debido a que el sector exige considerables avances tanto en el servicio como en la infraestructura.

Determinar el tamaño del sector hotelero a nivel mundial y sus principales características es una tarea compleja, al no existir homogeneidad internacional en las propias características de los establecimientos, siempre se han registrado diferencias tanto en tamaño de los establecimientos, cómo en sus servicios.

De acuerdo la Organización Mundial del Turismo (OMT), de 1980 a 2007 la capacidad mundial de alojamiento, expresada en número de camas, ha aumentado 78%, al pasar, a una tasa anual media del 3.5, de 16 millones a casi 29 millones de plazas. Para el 2005 se estima que había 15.4 millones de habitaciones en hoteles y establecimientos asimilados en escala mundial, tres millones más que en 1999 gracias fundamentalmente al rápido crecimiento en el Sudeste Asiático.

REVISIÓN LITERARIA

La Estructura Del Mercado Hotelero

De acuerdo con Stabler y Sinclair (1997) establecen las características de los factores económicos fundamentales que conforman el sector hotelero:

1. El sector está sujeto al mantenimiento de una capacidad fija de alojamiento que entraña problemas de rigidez en la oferta frente a la oscilación en la demanda, como consecuencia, los altos costos fijos conducen a los operadores a intentar mantener elevadas tasas de ocupación mediante diferenciaciones de productos y segmentaciones de mercados.
2. Zhao (1994), establece que algunas formas de alojamiento pueden explotar economías de escala no sólo con sus establecimientos sino también con la gestión de camas en hoteles pertenecientes a terceros. Lo anterior arroja la integración económica horizontal entre empresas da lugar a una reducción de costos fijos y a la creación de barreras a la entrada que posibilitan un incremento en las tasas de ocupación alcanzando nuevos segmentos de mercado.
3. Las grandes corporaciones hoteleras, tienden a agruparse en grandes áreas urbanas, los hoteles vacacionales es más probable que sean independientes y se ubiquen de forma dispersa. En este sentido el sector de alojamiento ofrece productos diversificados y se comporta como competencia monopolística, constituyendo la accesibilidad y la complementariedad sus principales rasgos característicos.
4. El escenario que emerge del alojamiento vacacionales es el de un sector fragmentado, dominado numéricamente por los negocios de pequeños y medianos, aunque no sea así en términos del valor total de las transacciones del mercado, como resultado de las relativamente bajas barreras de entrada y de la naturaleza de su actividad de servicios intensiva en recursos humanos.

Repercusión de la recesión económica de principios de los noventa

El conjunto de los factores externos surgidos en el marco de la crisis económica influyó en el desarrollo e la industria hotelera internacional en la década siguiente, obligando a los agentes a tratar de proteger sus cuotas de mercado ante la significación de los niveles de competencia en todos los segmentos de mercado.

Efecto de la globalización en la industria hotelera

El dinamismo que presenta el entorno internacional turístico está impulsado tanto por factores internos, las nuevas tendencias de la demanda y las formulas innovadoras de gestión, como por factores externos destacando el concepto de sostenibilidad, la globalización o el desarrollo de nuevas tecnologías adaptadas a la actividad turística que condicionan a la forma en la que se manifiestan la producción y el consumo turístico mundial (Poon, 2003). La modalidad en la cual las cadenas hoteleras se enlazan con sus operadores nacionales o extranjeros ha tenido cambios desde la década de los ochenta; así la franquicia de servicios, como reservas, programas de marketing o asistencia técnica es uno de los modelos más utilizados, aunque las alianzas estratégicas, los contratos de gestión y los acuerdos técnicos también constituyen estrategias de crecimiento ampliamente utilizadas por la industria hotelera.

Las principales características que rodean las diferentes modalidades de expansión de la industria hotelera mundial, los factores que la inducen a su utilización y las principales ventajas que se derivan de su uso. Crecimiento contractual: franquicia, el contrato de gestión Alianzas estratégicas y coinversiones Fusiones y adquisicionesEl branding se manifiesta en las empresas turísticas para responder a diferentes necesidades; mantener el crecimiento de la compañía en un mercado competitivo, unificar o racionalizar una cadena hotelera inconsistente, alcanzar nuevos nichos de mercado y, sobre todo, conseguir lealtad de marca. En última instancia, Slattery (1991) considera los factores cruciales para definir el nivel de implantación de una marca y la eficiencia de su estrategia depende de tres factores: el grado de desarrollo de mercado hotelero en el país, el impacto de las mayoristas y centrales de reservas y la calidad de la gestión hotelera. Aunado a lo anterior se cuenta con grandes tendencias como la aparición de grandes cadenas internacionales y tendencias marcadas por el turismo.

Actualmente, la presencia de las cadenas internacionales en el sistema turístico global tiene un significado simbólico y de imagen. Y no resulta casual que algunos nombres de la hotelería internacional, como Hilton e Intercontinental, hayan servido en la guerra fría a la política de contención comunista durante ese periodo de confrontación política de bloques (Moreno, 1971; Jiménez, 1993). Sus operaciones alcanzan el funcionamiento del sistema en todas las escalas posibles: mundial, regional, nacional y local. La presencia de esas cadenas tiene influencia en los destinos no solo por la recepción de visitantes y su percepción, sino por la conformación de patrones de funcionamiento turístico que son relevantes como impacto en las comunidades receptoras. La dinámica comercial del negocio hotelero a escala internacional es un aspecto relevante de su evolución. Desde los años sesenta (Jiménez, 1993), son frecuentes las fusiones, adquisiciones y otras formas de alianza comercial (como coinversiones). Las estrategias asociadas a esa dinámica obedecen no solo al mercado propiamente turístico, sino también a las condiciones propias del entorno internacional en términos de estabilidad económica y financiera de los países receptores. Las estrategias individuales de las empresas en términos comerciales y financieros del negocio son, a su vez, una función de la capacidad económica y política del país donde reportan impuestos y del marco jurídico específico que les ofrece su actuación, y protección. Es así que el marco regulatorio puede suponer beneficios para las empresas que se acogen a la política económica, fiscal e incluso militar del país en cuestión. Es de consignarse el posible efecto que se tiene en el juicio de satisfacción de los destinos derivado de la distinción del cliente y el beneficiario final de las acciones de la cadena. La OMT reconoce (OMT, 2002a, p. 47) que actualmente, existen dos tipos de personas en la hotelería: a) los hoteleros, y b)

las personas de negocios en el sector hotelero. El primero, el hotelero, orienta sus estrategias de desempeño hacia la satisfacción del cliente, el turista, mientras que el segundo, la persona de negocios en el sector hotelero, adopta decisiones con base principalmente en consideraciones financieras inmediatas, centrándose en la rentabilidad del capital, esto es, en el interés del inversionista, y ello puede tener implicaciones para el desarrollo de los lugares donde se asientan (es decir, los destinos).

El turismo tiene hoy en día una indiscutible relevancia como motor de desarrollo económico y social, generando empleo y riqueza por su fuerte capacidad de arrastre sobre otras actividades productivas. La importancia del turismo sigue una tendencia creciente, como se deduce de las previsiones de la Organización Mundial de Turismo, que vaticina un incremento del turismo en el mundo a índices entre el 5% y el 7% anual, con una previsión en 2020 de 1.600 millones de turistas frente a los 760 millones actuales. El sector hotelero se encuentra dentro de un proceso de transformación en el que su capacidad para innovar y adaptarse a las nuevas condiciones y exigencias del mercado se convierte en uno de los valores y objetivos fundamentales de la organización hotelera. Esta transformación es empujada por tendencias propias del sector turismo en general y otras más específicas del sector hotelero.

La incorporación de innovaciones tecnológicas

El progreso tecnológico ha impulsado al menos dos de las tendencias actuales de la industria hotelera mundial. En primer lugar, la concentración de la industria para la consecución de economías de escala y mayores posibilidades de captación de inversiones. En segundo lugar, la creciente aplicación de las tecnologías a los servicios de alojamiento estimula la comentada deslocalización empresarial. El uso de flujos de datos transfronterizos hace más fácil establecer en el extranjero filiales de servicios que se mantengan unidas a su empresa matriz de forma interactiva mediante sistemas de comunicación y computarización transnacionales (UNCTAD, 1999).

El futuro del turismo viene condicionado por la evolución de las tendencias económicas y sociales que están produciendo progresivos cambios en los hábitos y estilos de vida. La rentabilidad y supervivencia de la industria turística depende de la capacidad de adaptarse y anticiparse al nuevo contexto en el que se va encontrar este sector en el futuro próximo. En este sentido, los principales cambios sociales y sus efectos en el sector turístico han sido analizados e identificados por la European Travel Commission.

Demografía: El número de personas dentro de la tercera edad tiende a crecer de forma rápida, con lo que cada vez habrá más ancianos viajeros, la oferta turística tendrá que adaptarse a las demandas de este colectivo entre las que cabe considerar medios de transporte más cómodos e infraestructuras, instalaciones y servicios adecuados.

Salud: La importancia concedida por la sociedad al cuidado de la salud seguirá aumentando. Esta tendencia afectará, por un lado, a la selección de destinos turísticos, evitando aquellos percibidos como poco saludables.

Cultura y estudios: El aumento de los niveles medios de cultura y estudios impulsarán el desarrollo de un papel más importante de los elementos culturales, históricos y artísticos en las demandas turísticas.

Tiempo de ocio: Las crecientes presiones en la vida cotidiana de la sociedad moderna estimularán la necesidad de relax y al mismo tiempo conducirán a un recorte de los tiempos de ocio, las tradicionales vacaciones de larga duración serán remplazadas por un mayor número de viajes de menor duración.

Turistas experimentados: El turista es un cliente cada vez más sofisticado y más consciente de sus necesidades y derechos, el turista tiene una perspectiva más crítica en cuanto a la calidad y a la relación calidad-precio.

Tecnologías de la información: Internet continuará su fuerte penetración dentro del negocio turístico, incrementándose su utilización tanto como canal de información y marketing como herramienta para la comercialización de productos y servicios turísticos.

Transporte: la progresiva disponibilidad de trenes de alta velocidad y líneas aéreas de bajo coste está cambiando los flujos turísticos clásicos, muchos destinos se beneficiarán de acceso fácil y a un coste razonable que posibilitará las estancias cortas, lo que conllevará que, para evitar la congestión de las carreteras, disminuya el transporte privado, en especial en temporada alta.

Sostenibilidad: la creciente conciencia medioambiental en el ámbito social y empresarial impulsará la demanda de destinos sostenibles, aumentando la importancia de la componente regional de los destinos y la necesidad de mejores políticas de gestión de tales destinos.

Seguridad: el terrorismo, la contaminación, las guerras y los desastres naturales son un factor cada vez más importante en la elección de destinos turísticos.

METODOLOGÍA

Esta investigación se distingue por ser meramente documental para hacer una recopilación de la información existente sobre el sector hotelero a nivel mundial, y elaborar un marco contextual lo suficientemente representativo, por lo tanto la población será la serie de datos e investigación que se localicen respecto al tema. Los datos serán extraídos principalmente de la Organización Mundial de Turismo y de organismos gubernamentales de los países más representativos.

RESULTADOS DE LA INVESTIGACIÓN

Se han analizado las tendencias más significativas que está experimentando la industria hotelera a nivel mundial desde hace más de dos décadas: su acelerado proceso de concentración por medio de fusiones y adquisiciones. El empleo de estos métodos por parte de empresas ha convertido a la industria de alojamiento en escala mundial en el sector más competitivo y ha incrementado su habilidad para atraer inversiones. Cabe mencionar que en un sector tan fragmentado como el hotelero las respuestas de la industria a los cambios en el mercado se manifiestan de forma aislada en función tanto de la intensidad de las presiones competitivas, con la capacidad organizativa de las diferentes unidades, constituyendo las multinacionales hoteleras estadounidenses sus principales protagonistas. Sin embargo, la cada vez más estrecha interdependencia de los comportamientos sectoriales en el ámbito local y el dinamismo que presenta la industria en el mundial, están provocando que dichos factores actúen directamente en la evolución y desarrollo de la industria hotelera mexicana en el cambio de milenio y requiere de ella una reestructuración en sus modos de competir, dada la modificación y evolución de las premisas hasta ahora establecidas. Dentro del sector hotelero específicamente, y guardando una estrecha relación con las tendencias generales observadas en el sector turismo en general, las tendencias a las que se enfrenta el sector son fundamentalmente las siguientes:

Uso del Internet

Las grandes oportunidades de Internet como herramienta de marketing se basan en la accesibilidad a un número ilimitado de potenciales clientes en mercados dispersos territorialmente y a su capacidad de transmisión de información, todo ello con un coste relativamente bajo frente a las fórmulas tradicionales de marketing. El actual alto grado de disponibilidad de la tecnología en todos los ámbitos induce la necesidad de incorporar nuevas tecnologías en los establecimientos hoteleros (los clientes exigen en los hoteles los mismos sistemas y avances de los que disfrutaban habitualmente en sus casas o trabajos).

Los movimientos turísticos tienden a repartirse más homogéneamente a lo largo de los doce meses del año, lo cual contrasta con la situación tradicional en la que existían marcadas puntas de ocupación en ciertos periodos.

En estrecha relación con la tendencia a la desestacionalización de la demanda, se observa una caída progresiva de los tiempos medios de estancia de los turistas en los establecimientos hoteleros. Las aerolíneas de bajo coste han aumentado paulatinamente sus operaciones en España, llegando en el año 2005 a transportar el 31,1% del total de los pasajeros que entran en España. Si bien la disponibilidad de este nuevo medio de transporte ha influido indudablemente en el crecimiento de la entrada de turistas en España, también ha impulsado las inversiones inmobiliarias de turistas extranjeros en España, lo cual está restando demanda hacia el sector hotelero.

Búsqueda de la diferenciación

La primera respuesta de gran parte del sector ha sido la entrada en una dinámica de guerra de precios para atraer clientes y conseguir sus objetivos de niveles de ocupación. Sin embargo, esta situación no beneficia en absoluto al sector y no se considera sostenible en el tiempo, por lo que la opción competitiva más adecuada en este contexto es la diferenciación de productos y servicios, generando propuestas de valor añadido atractivas para el cliente. Esta estrategia viene avalada por los resultados de un estudio del Cornell Center for Hospitality Research, que demuestra, en base a datos obtenidos entre los años 2001 a 2003 sobre unos 6.000 hoteles, que los que aplican políticas agresivas de reducción de precios, consiguen mayores niveles de ocupación, pero no mayores ingresos por habitación, lo que en definitiva indica la rentabilidad del negocio.

Externalización de servicios: El cambio cultural de los clientes, la creciente competencia y otros aspectos que conforman el entorno de continuo cambio que sufre el sector, hace que las empresas hoteleras se centren con mayor empeño en sus competencias básicas, aquellas que les aportan mayor valor añadido. Muchos hoteleros han mostrado un marcado interés por la estrategia de externalización, movidos por la creencia de que en ella pueden encontrar una vía rápida y sin elevados riesgos para mejorar su competitividad. La concentración de los esfuerzos en las áreas que se consideran competencias nucleares del negocio es una tendencia cada vez más visible en este sector. Esta tendencia hacia la externalización se observa más comúnmente en procesos como la limpieza, la restauración o los sistemas de información, aunque son muy diferentes las causas que originan esas decisiones.

Especialización: La fragmentación que se viene observando en las motivaciones de la demanda tiene su reflejo en la diversificación de los destinos turísticos. Los hoteles han de ser capaces, cada vez más, de adaptarse a esta nueva situación, ofreciendo servicios especializados y diferenciados, a la vez que son capaces de satisfacer a diversos segmentos de demanda. Prueba de ello son las tendencias identificadas en un informe publicado por PricewaterhouseCoopers en junio de 2006, en el que se observa una creciente y profunda segmentación del mercado hotelero, con la aparición de nuevas oportunidades de negocio y nuevos tipos de clientes, además de una mejor definición y mayor segmentación de las nuevas marcas hoteleras.

Nuevas tecnologías: Las empresas hoteleras lideran la introducción y aplicación de las tecnologías dentro del sector turístico en general, ya que es donde se aplican con mayor intensidad, llegando ya a ser un requisito mínimo para los clientes. Su papel principal es el de mejorar la gestión interna del hotel con la correspondiente mejora de la eficiencia y productividad. Destacan por ser utilizadas de forma más generalizada las soluciones avanzadas de telefonía, los call center y los servicios personalizados por medio de plataformas de comunicación centralizadas. Pero a éstas habría que añadir otras herramientas aparecidas en entornos poco o nada relacionados con el sector hotelero que se han sabido adaptar adecuadamente: es el caso de Internet, el diseño de redes de comunicación o los servicios hotspots

(puntos de acceso inalámbrico). Paralelamente, se aprecia una incursión de las tecnologías orientadas a la sostenibilidad, que tiene su reflejo en iniciativas como las certificaciones en normas medioambientales (ISO 14001) de Fuerte Hoteles o la instalación de paneles térmicos para el ahorro energético de HUSA Princesa. Los clientes demandan mayores esfuerzos y acciones por un desarrollo sostenible, y por otro, los turoperadores negocian sus contratos favoreciendo a los establecimientos que respetan más el entorno.

Capital humano

Quizá no como una tendencia nueva pero sí como un aspecto fundamental dentro del sector hotelero cabe mencionar la importancia de las personas y su influencia en cada una de las tendencias anteriores. Se debe recalcar de manera especial la dependencia que mantienen las empresas hoteleras con los departamentos de recursos humanos y cómo éstos son los principales responsables de lograr unos índices satisfactorios de calidad en el servicio. Las capacidades de las personas en los hoteles normalmente constituyen un activo que se ha ido acumulando de forma lenta, por lo que se ha convertido en un aspecto básico para lograr ventajas competitivas sostenibles. Aumentar los conocimientos y las capacidades de las personas a través de la formación adecuada y fomentar su compromiso y satisfacción con el hotel es más que una necesidad para las empresas de este sector, y más todavía cuando el grueso del personal empleado responde a un perfil de baja cualificación.

MUJERES EMPRENDEDORAS: SIMILITUDES Y DIFERENCIAS ENTRE LAS CIUDADES DE TORREÓN Y SALTILLO, COAHUILA

Liliana Angélica Guerrero Ramos, Universidad Autónoma de Coahuila
Elizabeth Lourdes Gómez Gutiérrez, Universidad Autónoma de Coahuila
María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila

RESUMEN

El enfoque de género constituye una construcción social que implica romper tradiciones de discriminación social hacia la mujer y la construcción de espacios para su realización plena, en el entorno personal y social. En este sentido, en las últimas décadas han tomado los estudios sobre la violencia y en menor medida los referidos al empoderamiento económico. Por ello, la investigación tiene como objetivo: Contrastar el perfil de las mujeres emprendedoras de las ciudades de Torreón y Saltillo, en Coahuila, México. Las dimensiones analizadas fueron: Emprendedoras- Características Demográficas, Entorno y Organización, Indicadores o Desempeño Económico e Indicadores o Aspectos Motivacionales y Sociales. La indagación empírica abarcó una muestra de 66 y 29 mujeres emprendedoras de las MIPYME en Torreón y Saltillo, Coahuila, respectivamente. Entre los resultados de la comparación de los perfiles de las mujeres emprendedoras en ambas ciudades, procesados en SPSS, se evidencia un predominio de la conjunción de motivos para emprender un negocio (Necesidad y oportunidad), mayor concentración en los sectores de comercio y servicios, y más del 75 % de las mujeres con dependientes económicos. Sin embargo, en Saltillo el promedio de edad y estudios universitarios (40 años y 48%) es menor que en Torreón (47 años y 68%).

PALABRAS CLAVES: enfoque de género, emprendedurismo, empoderamiento económico.

WOMEN ENTREPRENEURS: SIMILARITIES AND DIFFERENCES BETWEEN CITIES OF TORREON AND SALTILLO, COAHUILA."

ABSTRACT

The gender perspective is a social construction which involves breaking traditions of social discrimination against women and creating opportunities for fulfillment in personal and social environment. Thus, in recent decades have made studies on violence and to a lesser extent those relating to economic empowerment. Therefore, the research aims: To compare the profile of women entrepreneurs in the cities of Torreon and Saltillo, Coahuila, Mexico. The dimensions were analyzed: Entrepreneurs- Demographic Characteristics, Environment and Organization, and Economic Performance Indicators or Indicators or motivational and social aspects. The empirical research among a sample of 66 and 29 women entrepreneurs of MSMEs in Torreon and Saltillo, Coahuila, respectively. Among the results of the comparison of the profiles of women entrepreneurs in both cities, processed in SPSS, a preponderance of evidence is a combination of reasons for starting a business (Need and opportunity), greater focus on trade and services sectors, and over 75% of women with dependents. However, the average age Saltillo and university studies (40 and 48%) is lower than in Torreon (47 and 68%).

KEY WORDS: gender, entrepreneurship, economic empowerment.

JEL CODE: L 38

INTRODUCCION

Este estudio es continuidad de la investigación que ya fue aceptada para publicar en el 2012 con la construcción de un perfil de la mujer emprendedora en Torreón, Coahuila, México. (Guerrero Ramos, L. 2013). Pretende sistematizar y actualizar este perfil de modo comparativo con la ciudad de Saltillo, capital del Estado de Coahuila. Por ello los objetivos que se proponen son los siguientes:

- 1- Determinar las características fundamentales sociodemográficas de las emprendedoras en estudio.
- 2- Identificar relaciones de estas emprendedoras con el entorno.
- 3- Analizar los factores relacionados con la empresa, características propias de la organización creada, las formas de propiedad, estrategias administrativas, objetivos empresariales y resultados.

Los resultados aquí obtenidos revelan aspectos que no eran conocidos sobre las emprendedoras en Torreón y en Saltillo, por lo que los mismos se muestran en lo adelante, en la siguiente estructura: una Revisión literaria para mostrar los antecedentes bibliográficos más significativos localizados, la metodología empleada, la caracterización obtenida en las siguientes dimensiones de análisis: la emprendedora (individuo), “el entorno”, los estudios enfocados a nivel de la “organización”, y finalmente el “proceso” de creación de la empresa; las Conclusiones, Limitaciones y Referencias Bibliográficas.

REVISIÓN LITERARIA

En las últimas décadas se observa un incremento de la atención hacia los problemas de la mujer y en los esfuerzos para mejorar la situación de discriminación sufrida durante siglos. En particular nos ocupan los estudios dirigidos a la participación de las mujeres en las actividades productivas, concretamente su papel como emprendedora de nuevos negocios. En México, en noviembre del 2003, se efectuó el Primer Encuentro Nacional de Mujeres Empresarias, organizado por el Instituto Nacional de las Mujeres (INMUJERES). En ese marco se aplicó un cuestionario a 178 mujeres provenientes de todas las zonas del país, aunque con predominio de la zona centro (64.6%). Algunos de los resultados de este estudio revelan: la mayoría de las empresas (41 %) en el sector servicios, seguidas por el comercio (27 %); predominio de las microempresarias (55 %), cuatro de cada cinco empresas creadas por mujeres fueron fundadas por ellas mismas, solo un 13.9 % fue heredada de los padres; el motivo predominante para emprender es por necesidad (42 %). La mayoría de las empresarias declaró ser socia de su empresa (55 %) sobre todo con socios familiares, mientras que un 45 % son propietarias únicas de su empresa.

(Instituto Nacional de las Mujeres. México.) En España, por ejemplo, las Cámaras de Comercio, la Fundación INCYDE y el Instituto de la Mujer, con el apoyo del Fondo Social Europeo, parten de que catorce de cada cien mujeres ocupadas (en un trabajo remunerado) ha creado su propio puesto de trabajo, su propio negocio, para hacer un profundo análisis de los obstáculos que enfrentan las mujeres a la hora de crear sus empresas, su perfil, las diferencias de género y las políticas de apoyo. (Cámaras de Comercio. Fundación INCYDE. Servicio de Estudios., 2007 Un interesante estudio de la investigadora Lidia Heller, publicado por la CEPAL, examina las continuidades y transformaciones en la participación de la mujer latinoamericana en actividades productivas, en un sentido amplio: se incluyen pequeñas y medianas empresas (PYME) y micro emprendimientos. Entre las conclusiones de su estudio se destaca que la información presentada confirma que las tasas de participación de mujeres en el mercado laboral se han incrementado durante la última década en la mayoría de los países de la región, sin embargo persiste la segregación por género en ocupaciones de baja productividad. Ellas siguen concentradas mayoritariamente, en áreas de la economía informal, como el trabajo doméstico, trabajo familiar no remunerado, ocupaciones que ofrecen un empleo precario, de baja calidad, irregular o sin remuneración, por lo cual tienen escaso o nulo acceso a la seguridad social o a la protección social. Es aún muy escasa la proporción de mujeres empleadoras en la mayoría de los países de la región.

(Heller, 2010) Otras investigaciones han estado encaminadas a identificar características y competencias de las mujeres empresarias en un afán por construir perfiles en distintos contextos y atendiendo a diferentes variables. Así por ejemplo, un estudio en México señala las siguientes características y competencias asociadas: Compromiso (Estrategia empresarial orientada a la organización y relaciones más que a las innovaciones tecnológicas y tendencia a buscar más la cooperación que la competencia), Participación (Trabajo en equipo), Intuición (Visión), Creatividad (Capacidad de planificación y Flexibilidad), Adaptabilidad (Capacidad para balancear tareas y actividades), Reflexión (determinación en la toma de decisiones), Actitud oportuna (Facilidad para la comunicación interpersonal), Independencia (Liderazgo), Trabajadora (Negociación y comunicación efectiva y Búsqueda de la eficacia y la eficiencia), Seguridad en si misma e independencia (Gran capacidad para delegar autoridad y tolerancia a la frustración). (Romo Rojas, Suárez Salazar, & Llamas Batres, 2007)

Un perfil de mujeres emprendedoras en Argentina se centra en determinar para mujeres exitosas el grado de existencia de las siguientes características personales: autoeficacia, foco de control, necesidad de logro, así como la presencia y grado de participación de mentores en el desarrollo personal y profesionales; y variables culturales. (Rábago, D'Annunzio, & Monserrat). En Chile, plantean que la experiencia, la propiedad y el tipo de emprendimiento que poseen actualmente (capaz de explicar un 21,93 % del perfil) pone de manifiesto la existencia de mujeres con alta experiencia en labores de emprendimiento; las características sociodemográficas (capaz de explicar un 13,69% del perfil) presenta a las mujeres con alto nivel socioeconómico y educacional sobre 30 años de edad y casadas, participando activamente en emprendimientos; educación, edad y jefatura de las emprendedoras (capaz de explicar un 11,59 % del perfil) muestra dos perfiles opuestos; y la educación, región y afiliación a grupos y sociedades (capaz de explicar un 9,93 % del perfil) también muestra dos perfiles antagónicos.

(Pizarro S., Amorós E., Guerra G., & Leguina R., 2009) En México, en noviembre del 2003, se efectuó el Primer Encuentro Nacional de Mujeres Empresarias, organizado por el Instituto Nacional de las Mujeres (INMUJERES). En ese marco se aplicó un cuestionario a 178 mujeres provenientes de todas las zonas del país, aunque con predominio de la zona centro (64.6%). Algunos de los resultados de este estudio revelan: la mayoría de las empresas (41 %) en el sector servicios, seguidas por el comercio (27 %); predominio de las microempresarias (55 %), cuatro de cada cinco empresas creadas por mujeres fueron fundadas por ellas mismas, solo un 13.9 % fue heredada de los padres; el motivo predominante para emprender es por necesidad (42 %). La mayoría de las empresarias declaró ser socia de su empresa (55 %) sobre todo con socios familiares, mientras que un 45 % son propietarias únicas de su empresa. (Instituto Nacional de las Mujeres. México.) Ese estudio refiere el Perfil de la Mujer Empresaria en México construido por Gina Zabłudovski. (Zabłudovski, 1993). Al referirse al incremento de la participación de la mujer en los puestos directivos, esta autora plantea que en la década de los 90, se observó un avance significativo en la presencia de mujeres como funcionarias del sector privado y público, ya que éste aumentó del 14.8 % en 1991, a 19,6 en 1995, y a 24.6 % en el año 2000. (Zabłudovski, Las mujeres en los cargos de dirección en México.)

METODOLOGÍA

Este es por esencia un estudio exploratorio y descriptivo, que utiliza fundamentalmente el método cuantitativo. El análisis documental de estudios previos constituye la base para analizar y sistematizar los precedentes de esta investigación, en los aspectos teórico y metodológico. Para la investigación empírica, mediante la recolección de información y su posterior análisis, se hicieron algunas adaptaciones a un Cuestionario validado en una tesis doctoral defendida en ESADE, titulada: "Factores que influyen en las nuevas empresas creadas por mujeres", el que se muestra en el Anexo 1. (Valencia Silva) Como guía para las características de las emprendedoras ("female entrepreneurship") se utilizó el mismo método que Valencia Silva, quien se apoya en el Modelo de creación de empresas de GarTner en las dimensiones: "la

emprendedora (individuo)”, “el entorno”, los estudios enfocados a nivel de la “organización”, y finalmente el “proceso” de creación de la empresa. (Valencia Silva M. M.)

Se aplicó el cuestionario en forma de entrevista a 66 empresarias en Torreón y 29 en Saltillo, tratando de tener representatividad de los sectores industrial, comercial y de servicios. Para el procesamiento y obtención de gráficos univariados se utilizó el Excell. Posteriormente se exportó esta base de datos al software IBM SPSS Statistics 19, a fin de recategorizar los datos y realizar otros análisis estadísticos. En particular para el análisis de Resultados, de los 15 indicadores que califican en “éxito” o que afectan los resultados de las nuevas empresas creadas por mujeres emprendedoras, se utilizó el método de regresiones lineales para las variables continuas – familia, resultados de las empresas y objetivos empresariales. Para las variables dicotómicas – plan de empresa, experiencia profesional e instituciones externas-- se usaron los métodos no-paramétricos de Kolgomorov-Smirnov, la cual es una prueba de bondad de ajuste y sirve para contrastar la hipótesis nula de que la distribución de una variable se ajusta a una determinada distribución teórica de probabilidad.

RESULTADOS Y DISCUSION

Los resultados se muestran en el extenso en las cuatro dimensiones establecidas por el Modelo de Gartner: la emprendedora (para el que se establece la comparación entre las ciudades de Saltillo y Torreón, el entorno, la organización y el proceso de creación de la empresa. La Tabla 1 muestra la comparación del comportamiento de las características observadas en la dimensión Emprendedora, en las dos ciudades objeto de análisis, Saltillo y Torreón.

Tabla 1: Resumen del perfil de las Mujeres Emprendedoras en Saltillo y Torreón, Coahuila, México. Dimensión EMPRENDEDORA.

CARACTERISTICA	SALTILLO	TORREON
EDAD PROMEDIO	Promedio de edad – 40	Promedio de edad – 47 77 % de 31 a 55, 33 % de 40 a 47 años
EDUCACION	69 % de 31 a 55, 14 % de 24 a 31 años, 14% más de 55. 48 % tiene estudios universitarios, superando los niveles de comportamiento de los países de altos ingresos.	68 % tiene estudios universitarios, superando los niveles de comportamiento de los países de altos ingresos.
MOTIVACIONES	Predomina en un 41 % la conjunción de motivos, seguido de la Oportunidad (31 %)	Predomina en un 47 % la conjunción de motivos, seguido de la Necesidad (27 %)
SECTOR DE SUS EMPRESAS	Comercio (39 %), Servicios (25 %), 36 % (Industria)	Servicios (41 %), Comercio (33 %)
DEPENDIENTES ECONÓMICOS	El 76 % de las mujeres emprendedoras tienen dependientes económicos. (Hijos menores o mayores de edad)	El 77 % de las mujeres emprendedoras tienen dependientes económicos. (Hijos o familiares)

Esta Tabla comparativa del emprendedurismo femenino entre las ciudades que se analizan, destaca diferencias en el promedio de edad, la educación, y similitudes en las Motivaciones para emprender un negocio y los dependientes económicos.

CONCLUSIONES

No hay estudios recientes en México para definir ni sistematizar un perfil de la mujer emprendedora. Los antecedentes encontrados establecieron en 1993 un perfil a partir de un cuestionario aplicado a 178 mujeres emprendedoras, mayoritariamente del centro de México, que asistieron al primer Encuentro de Mujeres Emprendedoras. Los resultados mostrados en esta ponencia fueron obtenidos de dos muestras intencionadas en las ciudades de Torreón y Saltillo. Este trabajo partió de breves modificaciones al cuestionario validado en una tesis doctoral defendida en ESADE, que replica la metodología de Gartner, y se obtienen valiosos resultados en aras de construir de manera más sistematizada, un perfil de la mujer emprendedora en Coahuila, México.

Limitaciones

Para buscar generalizaciones se requiere ampliar las muestras de forma probabilística por sectores, abarcando otras ciudades del estado, lo que continuaremos realizando como parte del proyecto de investigación que estamos desarrollando. No obstante los resultados aquí expuestos son de gran utilidad, ya que Saltillo es la capital del estado y Torreón una de sus ciudades de mayor desarrollo. Por otra parte se corrobora un comportamiento, en general coincidente con otros estudios previos analizados.

LA ORIENTACIÓN AL MERCADO APLICADA EN EMPRESAS COMERCIALES DEL VALLE DE SAN QUINTÍN. B.C.

Fanny Yumayra Reyes Aceves, UABC-FINSQ

Lizzette Velasco Aulcy, UABC-FINSQ

Luis Alberto Morales Zamorano, UABC-FINSQ

RESUMEN

En este trabajo se observan las prácticas de Orientación al Mercado que llevan a cabo las empresas comerciales de la región de San Quintín en específico las llamadas comúnmente "supermercados". Por medio de entrevistas con clientes de los supermercados y microempresarios de la región de recabó información cualitativa. En esta región la mayoría de los microempresarios tienen una administración empírica y lo que se investigó es si ellos sin saberlo han aplicado técnicas de orientación al mercado. Se buscó conocer si la aplicación de las microempresas a la orientación al mercado de manera empírica es lo que las ha ayudado. Sin embargo se cree que ahora que la región está en desarrollo una administración empírica ya no será suficiente y los microempresarios deberán esforzarse mucho más para lograr tener relaciones a largo plazo y de fidelidad con sus clientes lo que los llevara a consolidarse como microempresarios exitosos.

PALABRAS CLAVE: Orientación al mercado, ventaja competitiva, Mercadotecnia.

MARKET ORIENTATION APPLIED IN BUSINESS ENTERPRISES OF SAN QUINTÍN VALLEY. B.C.

ABSTRAC

In this paper we observe the practices of market orientation conducting commercial enterprises in the region of San Quintín specific commonly calls "markets". Qualitative information was obtained using the interview technique, applied to supermarket customers and micro entrepreneurs of the locality. In this region most microentrepreneurs have an empirical administration and an investigation does not know if they have applied these techniques of market orientation and this is what has led them to stay. However, now that the region is developing empirical administration will no longer suffice and microentrepreneurs need to do much more to achieve having long-term loyalty with your customers to take them to emerge as successful entrepreneurs.

INTRODUCCIÓN

Las empresas comerciales de zonas rurales no han mostrado interés por realizar sus prácticas de negocios con Orientación al Mercado (OM), lo que las ubica en una situación grave. Muchas personas han decidido optar por establecer un negocio en la región ya sea porque han notado una falta de oferta de productos en su localidad o por la necesidad de obtener un ingreso para su familia. El problema es que en la mayoría de los casos estos negocios se han desarrollado de manera cien por ciento empírica, es decir, los microempresarios no tienen una formación administrativa y muchas veces no consideran que el cliente

sea lo más importante para que su negocio prospere. Actualmente han estado llegando algunos comercios nuevos de cadenas nacionales, los cuales han provocado cambios en las rutinas de compra de las familias de la región. Esto es únicamente un llamado de atención para todos aquellos comerciantes que no se han preocupado por cubrir las necesidades de sus clientes, desde brindarles un servicio agradable y de excelente calidad. Esta investigación analiza información cualitativa, obtenida de una serie de entrevistas, tanto de los microempresarios como de los clientes para saber que opinan ambos y comparar los resultados de sus respuestas. De este modo se pretende demostrar que la orientación al mercado es un arma que crea una fuerte ventaja competitiva para cualquier negocio.

REVISION DE LITERATURA

La teoría de orientación al mercado ha sido descrita por varios autores. Para esta investigación tomaremos como referencia los aportes descritos por Slater & Narver (1995) quienes afirman que la orientación al mercado es un enfoque que da respuesta a tres procesos: a) Tomar continuamente información de los clientes, sus necesidades y deseos así como las capacidades de la competencia para cubrir dichas necesidades y deseos, b) comunicar la información obtenida a todos los integrantes de la empresa y c) coordinar esfuerzos de la compañía para generar una oferta que sea atractiva y represente un valor agregado a los clientes potenciales. Durante mucho tiempo, los académicos han puesto su atención en lo importante que es, aumentar el grado de orientación al mercado de las empresas para así poder obtener una ventaja competitiva que les genere mayores resultados económicos (Armario, 2003). Actualmente ante la globalización y los cambios en el ambiente externo altamente competitivo las organizaciones se han visto en la necesidad de orientarse al mercado y buscar clientes para elevar su rentabilidad y lograr obtener una ventaja competitiva que pueda permanecer durante años (Valenzuela & Torres, 2008).

En la investigación realizada por Kumar, Jones, Venkatesan, & Leone (2011), se examinó la naturaleza evolutiva de una relación de mercado del rendimiento de orientación de negocio. Ellos evaluaron los efectos de la OM (durante 9 años) en un número considerable de empresas y se demostró que las empresas orientadas al mercado tuvieron un efecto positivo en las ventas tanto a corto como a largo plazo. La importancia del concepto de la OM en el marketing es en la actualidad incuestionable. Sanzo, Santos, Vazquez & Alvarez (2003), han revisado en los últimos años las áreas más importantes de investigación de mercadotecnia y opinan que la OM está por encima de las demás en cuanto a su importancia para la empresa. Es por ello que el empresario debe considerar que “la orientación al mercado es un objetivo de toda la organización, superando con ello un enfoque exclusivamente funcional, vinculado al departamento de marketing, y adquiriendo una dimensión estratégica” (Bello, Polo & Vázquez, 1999, p. 190).

Refiriéndonos a la ventaja competitiva, Porter (2006) aseguró que una empresa tiene ventajas competitivas sobre la competencia cuando su rentabilidad está por encima de la rentabilidad media de las actividades según el sector en el que se encuentra. Porter (2006) menciona que, para que algo se considere como ventaja competitiva, ésta debe ser realmente efectiva, debe ser difícil de imitar, única, posible de mantener, superior a la competencia y que se pueda utilizar ante los distintos cambios que pueden suscitarse en el entorno. En el caso de San Quintín es muy fácil identificar cuáles son los mercados a los que más acuden las familias locales y por lo tanto se asume que ellos son quienes mantienen mayores grados de rentabilidad en la región.

METODOLOGIA

Esta investigación se realizó en el Valle de San Quintín. Éste lugar se encuentra en el Estado de Baja California. San Quintín está localizado dentro del área del municipio de Ensenada, a 78 km del sur de la cabecera Municipal. En este lugar predominan algunas de las actividades primarias como lo es la agricultura, ganadería y acuacultura. Sin embargo, en el Valle de San Quintín existen muchos tipos de negocios del área comercial. Ésta investigación se centra en los supermercados que están ubicados desde

el Poblado de Camalú hasta el Ejido el Papalote, quedando estos dentro del Valle de San Quintín. Como se mencionó anteriormente, las empresas seleccionadas fueron supermercados, siendo estas empresas comerciales de venta al por menor. Como características para su selección como parte de la muestra fue considerado que se encuentran registrados como supermercados y que estos tengan al menos 3 empleados. En cuanto a los clientes se seleccionaron amas de casa con años de experiencia en el tema de las compras en supermercados. Se realizó una extensa búsqueda de información respecto a la Orientación al Mercado y la Competitividad. Para poder explicar ambos constructos se buscaron distintas definiciones utilizadas desde las más antiguas hasta las creadas últimamente. Lo anterior fue con el fin de analizar la evolución de ambos conceptos y conocer la influencia de la orientación al mercado sobre la competitividad de los negocios. Para realizar las entrevistas se elaboraron dos guías de entrevista, una para los empresarios y otra para los clientes. Ambas guías de entrevista contenían quince preguntas abiertas. El objetivo era conocer los puntos de vista de los entrevistados y se les dio la oportunidad de opinar libremente. Se buscó con ello tener información sobre los posibles cambios que se presentan tanto para el empresario como para el cliente con motivo de la llegada de nuevos supermercados. Las respuestas de los entrevistados fueron en su mayoría cualitativas y esto se clasificó y se concentró en un cuadro de elaboración propia para su interpretación.

RESULTADOS

Con esta investigación se identificaron las técnicas utilizadas por los microempresarios para que sus negocios crezcan. También se identificaron los motivos por los cuales los clientes siguen realizando sus compras en los negocios tradicionales y cuáles son los motivos por los que algunos de los residentes del Valle de San Quintín ya han modificado sus hábitos de compra acudiendo a los supermercados nuevos. Con la investigación se logró conocer el punto de vista tanto de los empresarios como de los clientes y con la información obtenida se hicieron comparaciones para determinar si los microempresarios realmente conocen a sus clientes o si solo creen conocerlos. En las entrevistas con expertos de la región por parte de los microempresarios se puede resaltar que ellos están muy seguros de la fidelidad de sus clientes por la relación de años que existe entre cliente-empresario.

Ellos consideran que su mayor fortaleza es esa. Además, están convencidos de que los clientes tienen mayor libertad de opinar debido a la una relación que existe entre ellos y sus clientes. Los microempresarios también consideran que cuentan con todos los productos que las personas de la comunidad necesitan comprar; consideran que las promociones que brindan a sus clientes son suficientes y creen que sus empleados tratan muy bien a sus clientes. Sin embargo, por parte de los clientes se notó que ellos han encontrado algunos beneficios en los nuevos supermercados y algunos han decidido no dejar de ir a su viejo supermercado pero también compran algunas cosas en los supermercados nuevos. De la información recabada se puede comentar que en los nuevos supermercados existen productos diferentes que los otros no tienen. Los nuevos supermercados cuentan con mayores descuentos en productos, preguntan periódicamente que productos necesitan comprar los clientes, cuentan con espacios adecuados para estacionamiento, las presentaciones de algunos productos son mas prácticas y novedosas (como las carnes) y los clientes consideran que si hay variaciones en los precios.

CONCLUSIONES

Con las entrevistas realizadas se pudo observar que los microempresarios y los clientes tienen puntos de vista muy diferentes de los negocios comerciales. Los microempresarios no deben confiarse solo en las buenas relaciones que tienen con sus clientes. También deben pensar en agregar valor a sus productos mediante el buen servicio al cliente. Algunas sugerencias de los clientes entrevistados son: los supermercados tradicionales ya no cuentan con espacios suficientes, en su momento fueron construidos para una población más pequeña y no tienen instalaciones suficientes para atender a la demanda actual. Los clientes consideran que durante muchos años ellos han comprado productos en supermercados que no regresan nada a la comunidad, que no ofrecen servicios adicionales y además de que no se preocupan por lo que sus clientes necesitan. Las personas de San Quintín han opinado que si a la región llega un

supermercado amplio, con diversidad de productos y buenos precios ellos dejarían de comprar donde lo hacen actualmente porque no se sienten comprometidos a seguir haciendo sus compras en el mismo lugar. Esto nos dice que no existe una fidelidad de los clientes y que si estos acuden al mismo lugar es porque no hay uno que cubra las expectativas de los clientes.

San Quintín es un lugar en desarrollo, hasta el momento la mayoría de los comercios son creados y manejados por personas de la misma comunidad pero ya en estos momentos existen algunas cadenas de supermercados nacionales llegando a la región y se pronostica la llegada de muchos más. Por el momento los empresarios deberían comenzar a preocuparse por conocer muy bien las necesidades de sus clientes, deben saber lo que los clientes buscan y sobre todo deben ofrecer un valor agregado a sus productos. Sin duda es un reto como micropresarios salir de su zona de confort y dejar de hacer las cosas como las ha hecho durante muchos años, pero deben comprender que es necesario innovar para sobrevivir y comenzar por la aplicación de técnicas de marketing con orientación al mercado sin duda ayudará a generar una fuerte ventaja competitiva frente a su competencia presente y futura.

IMPACTO DE LA DIVULGACIÓN DE INFORMACIÓN FINANCIERA EN INTERNET DE LAS EMPRESAS EN AMÉRICA LATINA

Marcela de Guadalupe Pelayo Velázquez, Universidad de Guadalajara

Yolanda Fuentes Callén, Universidad de Zaragoza

Beatriz Cuéllar Fernández, Universidad de Zaragoza

Myriam Arias Uribe, Universidad de Guadalajara

RESUMEN

En el actual contexto económico, la divulgación de información que dé cuenta de las actividades de las empresas ha tomado gran importancia dentro del mundo empresarial, de tal manera que diversos autores han evidenciado en sus estudios empíricos que una adecuada política de transparencia informativa se relaciona positivamente con la reputación de la empresa, ejerciendo una influencia significativa sobre su valoración. El objetivo que se plantea en este trabajo es analizar las prácticas divulgadas on-line de información tanto financiera como no financiera mediante la aplicación de un índice de divulgación en internet, utilizando como población objeto de estudio las empresas latinoamericanas no financieras que cotizan en un mercado secundario organizado. Los resultados obtenidos hasta la fecha parecen poner de manifiesto en términos generales que el nivel de divulgación es menor en los países emergentes que en los países desarrollados.

PALABRAS CLAVE: Divulgación, transparencia, gobierno corporativo, responsabilidad social, mercados emergentes

IMPACT OF DISCLOSURE OF FINANCIAL INFORMATION IN LATIN-AMERICAN COMPANIES

ABSTRACT

In the current economic environment, disclosure of financial information has become important, several authors have evidenced in their empirical research that an appropriate transparency policy of information is positively related with firm reputation. The main purpose of this work is to analyze the disclosure of information on-line through the development of an index of disclosure, considering non financial public Latin American companies. Results confirm the level of disclosure is lower in emerging capital markets than in developed capital markets.

JEL: M10, M14

KEYWORDS: Disclosure, transparency, corporate government, social responsibility, emerging markets.

INTRODUCCIÓN

En un mercado globalizado como el actual, se hace cada vez más necesario suministrar e intercambiar información empresarial, lo que ocasiona que las empresas se relacionen con un mayor número de agentes económicos, tales como sus propietarios, inversionistas, clientes, acreedores financieros y el mismo Estado. La información financiera de una empresa que cotiza en Bolsa adquiere atención especial porque incrementa el número de propietarios, y por tanto usuarios de la información. En este contexto, “una sociedad que recurre a los mercados de valores como fuente de financiación busca recursos financieros

provenientes de inversores individuales e institucionales”, por tanto, las empresas deben ganar y mantener la confianza de los inversores (Tua *et al.* 2003:55). Por consiguiente, la transparencia en la información es importante no únicamente porque incrementa la eficiencia en la asignación de recursos, sino porque puede ayudar a asegurar que los beneficios del crecimiento sean distribuidos y no capturados por la alta dirección (Bellver y Kaufmann, 2005), constituyendo además un eje rector del buen funcionamiento de los mercados nacionales e internacionales.

Lo anterior supone la necesidad de tener un conocimiento de la empresa bajo distintos aspectos financieros y no financieros. Por tal motivo, el Internet se ha convertido en una herramienta fundamental para el desarrollo empresarial de las organizaciones y en los últimos años las empresas están utilizando intensivamente Internet como medio de comunicación con los distintos grupos de interés para la revelación y divulgación de información tanto financiera como no financiera. De acuerdo con lo anterior, el principal objetivo de nuestro estudio es examinar las prácticas de divulgación de información por parte de las empresas pertenecientes a los diferentes países latinoamericanos seleccionados. Como medida del tipo y cantidad de información divulgada por la compañía a través de su página Web desarrollamos un Índice de Divulgación en Internet (IDI). Por otro lado, analizaremos la relación existente entre el índice de divulgación de Internet (IDI) y las características propias de las empresas, tales como la rentabilidad, sector y tamaño, entre otras. El trabajo se estructura cuatro apartados. En el primero de ellos se realiza una revisión bibliográfica en relación con la divulgación en Internet. En el apartado dos se manifiestan las hipótesis planteadas. En el apartado tres encontramos la metodología y por último, el apartado con los resultados y conclusiones.

REVISIÓN LITERARIA

La evolución de Internet ha creado nuevas vías para la divulgación de información corporativa, ya que disminuye el tiempo e incrementa la eficiencia en los costes de la divulgación de información. El beneficio también es importante para los usuarios de la información financiera (socios, inversores potenciales, etc), quienes mitigan substancialmente los costes de obtener dicha información (Patten, 2002). Cada empresa tiene diferentes políticas y prácticas para la divulgación de informes financieros en Internet, suponiendo un problema la falta de regulación sobre los contenidos a divulgar y el formato o modelo de presentación de los informes digitales periódicos (Westarpt y Boss, 1998). Estudios como los de Jones *et al.* (1999); Isenmann y Lenz (2001); y Mendes da Silva y Christensen (2004) han evaluado recientemente esta problemática. En América Latina, los informes financieros y ambientales disponibles todavía son dominados por las publicaciones impresas, pero hay una fuerte tendencia en el uso de Internet. Sin embargo su uso en la mayoría de las páginas Web corporativas se limita a los recursos y contenidos más básicos como la dirección de contacto para los inversores, listas de correos, noticias destacadas, etc. Así, la opción de enriquecer la relación con el inversor a través de conferencias o presentaciones en formato audio y video y la participación en línea en las Juntas de Accionistas, es rara vez encontrada (Deller *et al.* 1999). Estudios previos se han centrado en identificar la influencia de las características específicas de la compañía, tales como el tamaño, rentabilidad y desarrollo en el nivel y la naturaleza de la divulgación corporativa (Hossain *et al.* 1995; Chen *et al.* 2002; o Debreceny *et al.* 2005, entre otros). Sin embargo, la influencia de estos determinantes específicos sobre los efectos de la divulgación ha recibido poca atención en el mercado de capitales.

Tamaño De La Firma y Divulgación

De entre las características analizadas, el tamaño de la compañía es la que arroja una evidencia mayor respecto a su asociación con el nivel de divulgación de la empresa. En este sentido, Atiase (1985) concluye que el tamaño de la empresa es un indicador de la riqueza de la divulgación de información debido a que las grandes firmas reciben más cobertura que las pequeñas. Así son numerosos los estudios que han evidenciado una asociación significativa entre divulgación y tamaño (Ashbaugh, *et al.* 1999; Craven y Marston, 1999; Brennan y Kelly, 2000; Ettredge *et al.* 2002; Marston y Poley, 2004; Bonsón y Escobar, 2004; Debreceny *et al.* 2005) entre otros.

H1: La cantidad de información divulgada en la web de la compañía está positivamente relacionada con su tamaño.

Sector De La Empresa

Asimismo, se muestra una relativa semejanza en la información facilitada dentro de determinados sectores de actividad tales como el sector de tecnologías y comunicación, farmacéuticas y energía, gas y agua. (Debreceny *et al.* 2005; Oyelere *et al.* 2003; Bonsón y Escobar, 2004; Olea de Cárdenas, 2004; Xiao *et al.* 2004).

H2: El sector en que la empresa opera está asociado con el nivel de información proporcionada a través de Internet.

Rentabilidad: Sin embargo, para características como el apalancamiento, rentabilidad, estructura de propiedad de la compañía, la asociación no es tan clara (Ashbaugh *et al.* 1999 y Brennan y Kelly, 2000). Generalmente se acepta que las empresas con beneficios presentan un mayor nivel de divulgación de información. De manera contraria, Chen *et al.* (2002) demuestran que la divulgación de los estados financieros es más común en las empresas que reportan pérdidas.

H3: La rentabilidad de una empresa esta asociada con la divulgación de información financiera en el Internet.

Endeudamiento: Mientras algunos estudios revelan una relación positiva entre divulgación de información voluntaria y nivel de endeudamiento de la empresas (Mitchell *et al.* 1995 y Hossain *et al.* 1995), un gran número de trabajos evidencian una ausencia de relación o una asociación significativa pero de signo contrario a lo esperado (Chow y Wong-Boren, 1987; McKinnon y Dalimunthe, 1993; Hossain *et al.* 1994; Ho y Wong, 2001; Ferguson *et al.* 2002).

H4: El endeudamiento de una empresa está asociado con la divulgación de información financiera en el Internet.²

Localización geográfica: Debido a las peculiaridades que se derivan de la economía de cada país, la localización geográfica de la empresa es una de las variables consideradas tradicionalmente para explicar la información suministrada por cada una de las empresas (Gray, 1988; Craven y Otsmani, 1999; Gray *et al.* 1995). Aunque este estudio se refiere a las empresas latinoamericanas, éstas compiten en un mercado global, con importantes diferencias culturales entre los países (Hofstede, 1991, 2001) por lo tanto, se puede argumentar que la información proporcionada por las sociedades en forma voluntaria en Internet depende de la cultura de los países.

H5: La localización geográfica de las empresas está asociada con el nivel de información proporcionada a través de Internet.

METODOLOGÍA

Muestra

Con la finalidad de contrastar las hipótesis señaladas se ha utilizado una muestra que está constituida por empresas que cotizan en los mercados más desarrollados de Latinoamérica. Concretamente los países seleccionados son Argentina, Brasil, Chile y México. Para la selección de las empresas utilizamos la lista de empresas cotizadas centrándonos en aquellas que pertenecen al índice más representativo de dichos mercados. Posteriormente se retiraron las compañías pertenecientes al sector financiero y de seguros, quedando una muestra final de 135 empresas. Se ha seleccionado esta muestra por tratarse de un conjunto de grandes compañías, las más significativas de los mercados bursátiles de los países de la muestra. Su estudio nos permitirá obtener conclusiones sobre el conjunto de las empresas más significativas y con mayores incentivos para llevar a cabo una política de divulgación voluntaria de información. Por último, los datos financieros necesarios para realizar el análisis fueron obtenidos de la base de datos

Economática.

ELABORACIÓN DE ÍNDICE DE DIVULGACIÓN EN INTERNET (IDI) Con el fin de elaborar el Índice de divulgación para el estudio, se han tomado como punto de partida diversos trabajos que analizan la cantidad de información proporcionada por las empresas corporativas en sus páginas web tales como, Deller *et al.* 1999; Pirchegger y Wagenhofer, 1999; Ettredge *et al.* 2001 y 2002; Gandía, 2002; Larran y Giner, 2002; Bonsón y Escobar, 2004; Marston y Polei, 2004; Mendes-da-Silva y Christensen, 2004; Xiao *et al.* 2004; Spanos, 2006 y Andrikopoulos y Diakidis, 2007; entre otros.

La metodología utilizada en la mayoría de trabajos sobre divulgación consiste en la elaboración de índices de información o transparencia que permitan cuantificar la cantidad de información que proporcionan las empresas a través de Internet. Ello conlleva la identificación de aquellas variables que componen el índice, es decir, los contenidos informativos que van a ser analizados y evaluados, para, una vez definidas las variables, decidir la formulación que ha de adoptar dicho índice y los valores que podrán tomar las variables. Por lo tanto, la elaboración de índices constituye una de las ramas del análisis de contenido, constituyendo una de las técnicas básicas para el estudio de la información suministrada por las compañías (Ortiz y Clavel, 2006), así como para evaluar la transparencia informativa de las empresas en determinados sectores y países (García-Meca y Martínez, 2004; Bonsón y Escobar, 2004).

La mayoría de los índices utilizados en la literatura empírica de divulgación consideran el alcance o cobertura como un indicador de calidad de la divulgación. Por tanto, para definir el índice de este estudio nos hemos decantado por el Índice de alcance, y hemos agrupado en tres bloques aquellas cuestiones que consideramos relevantes para que cualquier usuario potencial de las páginas web pueda formarse una opinión fundada acerca de la información proporcionada por las empresas a través de las mismas, esto es, Información contable y financiera (ICF), Gobierno corporativo y Responsabilidad Social (GCYRS) y Información de contacto, navegabilidad, diseño y accesibilidad de la página Web (INDA). En este estudio, se ha optado por variables dicotómicas para los ítems determinados.

Las empresas de Brasil tienen en promedio un índice mayor de divulgación de información, tanto en total como en gobierno corporativo y accesibilidad. México tiene un promedio superior en divulgación de información contable y financiera, sin embargo presenta un resultado inferior en gobierno corporativo con relación a los demás países al igual que las empresas chilenas. En el caso de Argentina tiene una calificación buena tanto en IDI, GCYRS e INDA.

Tabla 1: Promedios de IDI por sector industrial y país

PAIS	SECTOR	IDI TOTAL	ICF	GCRYRS	INDA
México	Industrias básicas	56.57	90	24.44	68.88
	Bienes de consumo	54.63	78	30.95	64.88
	Energía
	Información, tecnología
Brasil	Industrias básicas	72.37	79	56.29	87.03
	Bienes de consumo	69.23	79	51.79	82.69
	Energía	78.04	75	68.33	92.70
	Información, tecnología
Argentina	Industrias básicas	51.35	57	40.00	61.11
	Bienes de consumo	58.55	63	44.44	72.22
	Energía	60.81	65	60.00	58.33
	Información, tecnología,
Chile	Industrias básicas	51.08	59	39.33	59.16
	Bienes de consumo	52.31	63	38.09	61.30
	Energía	52.97	74	34.66	58.33
	Información, tecnología,	54.05	50	33.33	83.33

Modelo Explicativo Propuesto

Para realizar el contraste conjunto de las hipótesis planteadas realizamos un análisis de regresión múltiple. Se ha empleado este método para evaluar la dependencia global de la variable Índice de Divulgación en Internet (*IDI*), Índice de Información Contable y Financiera (*ICF*), Índice de Gobierno Corporativo y Responsabilidad Social (*IGCRS*), Índice de Navegación, Diseño y accesibilidad (*INDA*) a un conjunto de variables independientes. Basándonos en la evidencia previa, la relación entre la variable dependiente y nuestro conjunto de variables independientes que representan el Tamaño (*InSIZE*), la Rentabilidad (*ROE*), el sector (*SECT*) y el país de origen de la empresa (*PAIS*) queda definida de la siguiente manera:

$$IDI_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SECT_i + \delta_5 PAIS_i + \xi \quad (1)$$

$$ICF_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SECT_i + \delta_5 PAIS_i + \xi \quad (2)$$

$$IGCRS_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SECT_i + \delta_5 PAIS_i + \xi \quad (3)$$

$$INDA_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SECT_i + \delta_5 PAIS_i + \xi \quad (4)$$

RESULTADOS

La estimación de las regresiones la realizamos por *Mínimos Cuadrados Ordinarios*. Se contrasta la hipótesis de homoscedasticidad por medio de la prueba de White, así mismo se verifica que no se presenta multicolinealidad perfecta. Los resultados derivados de la estimación del modelo 1 propuesto aparecen reflejados en la **tabla 2**. La significatividad global de dicho modelo (R^2 ajustado) es del 16.7%, por lo que se puede decir que las variables *InSIZE*, *ROA*, *END*, *SEC* y *PAIS* explican casi el 18% de la varianza de la variable dependiente *IDI*. En relación a los valores del estadístico “*t*”, de las cinco variables seleccionadas en el modelo, sólo las variables *InSIZE* y *PAIS* muestran un efecto significativo.

Tabla 2: Resultados de la estimación de la ecuación 1

$IDI_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SEC_i + \delta_5 PAIS_i + \xi$					
Variable dependiente		Variables independientes	Coefficiente	T-stat	Sig.
IDI	H1	InSIZE	2.353	2.167	-0.033
	H2	ROE	-0.014	-0.113	0.910
	H3	END	-0.037	-0.429	0.669
	H4	SECT	3.637	1.841	0.069
	H5	PAIS	-3.201	-2.571	0.012
R ² = 0.167	R ² ajust= 0.123	F=3.802	P= 0.003		

En la **tabla 3** presentamos los resultados derivados de la estimación de la ecuación (2) en la que la variable dependiente es el Índice de Contenido Financiero (*ICF*). Se observa que la significatividad global de dicho modelo es del 29%, sin embargo solo la variable país tiene un efecto significativo en la divulgación de información financiera.

Tabla 3: Resultados de la estimación de la ecuación 2

$ICF_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SEC_i + \delta_5 PAIS_i + \xi$					
Variable dependiente		Variables independientes	Coefficiente	T-stat	Sig.
ICF	H1	InSIZE	1.886	1.401	0.164
	H2	ROE	0.144	0.951	0.344
	H3	END	-0.146	-1.355	0.179
	H4	SECT	0.753	0.307	0.755
	H5	PAIS	-7.859	-5.092	0.000
R ² = 0.290	R ² ajust= 0.253	F=7.766	P= 0.000		

En la **tabla 4** presentamos los resultados derivados de la estimación de la ecuación (3) en la que la variable dependiente es el Índice de Gobierno Corporativo y Responsabilidad Social (*GCYRS*). La significatividad global obtenida en el modelo es del 7.5% encontrando que las variables no son estadísticamente significativas.

Tabla 4: Resultados de la estimación de la ecuación 3

$GCYRS_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SEC_i + \delta_5 PAIS_i + \xi$					
Variable dependiente		Variables independientes	Coefficiente	T-stat	Sig.
GCYRS	H1	InSIZE	1.442	0.958	0.341
	H2	ROE	0.030	0.175	0.861
	H3	END	0.025	0.208	0.831
	H4	SECT	5.908	2.156	0.034
	H5	PAIS	0.773	0.448	0.655
R ² = 0.075	R ² ajust= 0.062	F=1.533	P= 0.187		

Los resultados de la ecuación 4 se presentan en la tabla 5. La variable dependiente Índice de Navegación, Diseño y accesibilidad (*INDA*) es explicada en un 19.5% por las variables independientes, de las cuales el tamaño y el país son significativas y tienen un impacto positivo en la divulgación.

Tabla 5: Resultados de la estimación de la ecuación 4

$INDA_i = \delta_0 + \delta_1 InSIZE_i + \delta_2 ROE_i + \delta_3 END_i + \delta_4 SEC_i + \delta_5 PAIS_i + \xi$					
Variable dependiente		Variables independientes	Coefficiente	T-stat	Sig.
INDA	H1	InSIZE	3.882	2.787	0.006
	H2	ROE	-0.199	-1.275	0.206
	H3	END	-0.025	-0.222	0.825
	H4	SECT	3.203	1.263	0.210
	H5	PAIS	-4.287	-2.683	0.009
R ² = 0.195	R ² ajust= 0.153	F=4.613	P= 0.001		

Con el fin de analizar el impacto que tiene la divulgación de información en internet en la percepción del inversionista, se consideró la siguiente ecuación:

$$MV_i = \delta_0 + \delta_1 IDI_i + \delta_2 ICF_i + \delta_3 GCYRS_i + \delta_4 INDA_i + \xi \quad (5)$$

En donde se considera como variable dependiente el valor de mercado de la empresa (MV) medido por el precio de la acción al 31 de marzo de 2012. Como variables explicativas consideramos los índices propuestos anteriormente: IDI, ICF, GCYRS e INDA.

Los resultados se presentan en la **tabla 6**. La variable dependiente valor de mercado (MV) es explicada en un 13.3% por las variables IDI, ICF, GCYRS e INDA. Las variables que presentan un impacto significativo en la percepción del inversionista son IDI y GCYRS.

Tabla 6: Resultados de la estimación de la ecuación 5

$MV_i = \delta_0 + \delta_1 IDI_i + \delta_2 ICF_i + \delta_3 GCYRS_i + \delta_4 INDA_i + \xi$				
Variable dependiente	Variables independientes	Coefficiente	T-stat	Sig.
MV	IDI	0.484	2.721	-0.008
	ICF	-0.141	-1.816	0.073
	GCYRS	0.196	2.721	0.008
	INDA	-0.097	-0.829	0.409
R ² =0.133	R ² ajust= 0.107	F=4.977	P=0.003	

CONCLUSIONES

Las empresas pertenecientes a los mercados emergentes empiezan a utilizar sus páginas web para distribuir información contable y al mismo tiempo revelar información voluntaria de carácter empresarial. Lo anterior no sólo por razones de imagen sino también para satisfacer las crecientes demandas de información por parte de los inversores, mejorando tanto la cantidad como la calidad de la información suministrada. Una limitación potencial de este estudio que utiliza un índice de divulgación para investigar el nivel del mismo en las empresas es que los resultados son únicamente válidos en el grado que el índice de divulgación utilizado sea el apropiado, puesto que la selección de los aspectos incluidos en el Índice de Divulgación de Internet (*IDI*) propuesto y la clasificación del mismo, inevitablemente implica subjetividad y aunque hemos tratado de reducirla no puede eliminarse por completo.

Además, podemos mencionar que otra limitación en la investigación es que la muestra no fue seleccionada al azar. Debido a la dificultad de reunir datos en los países emergentes nos hemos abocado a seleccionar las empresas que cotizan en la bolsa de valores de los países seleccionados y concretamente, las que pertenecen a los índices bursátiles de mayor capitalización. Podemos asumir que los resultados obtenidos se deben a que las empresas seleccionadas son empresas de características similares ya que todas cotizan en bolsa y son de gran tamaño, por lo que en futuros trabajos analizaremos en profundidad cada uno de los países con empresas más dispares, teniendo en cuenta variables como cotizadas o no cotizadas, grandes y pequeñas, las firmas de auditoría, etc.

METODOLOGÍA PARA LA IMPLEMENTACIÓN DE LA NORMA OHSAS 18001 EN PYMES

Carlos Alberto González Camargo, Universidad Jorge Tadeo Lozano

Germán Darío Perea Robayo, Unión Temporal Corporación Calidad - Universidad Jorge Tadeo Lozano

RESUMEN

Las pequeñas empresas generalmente no cuentan con los recursos económicos para pagar una consultoría en el área de la seguridad industrial. Esto implica que el manejo de la seguridad al interior de la organización se convierta en un problema para el empresario o en una oportunidad de mejoramiento. En este trabajo se presenta una metodología de apoyo para garantizar la implementación de la norma OHSAS 18001 en los pequeños negocios. El primer paso fue realizar un diagnóstico a partir de una línea base conformada por indicadores de gestión organizacional. Posteriormente se diseñó una ruta de consultoría para llegar a la certificación. Conforme a los resultados del diagnóstico la empresa conoce sus debilidades y elabora un plan de construcción de los documentos e implementación de acciones de mejora. Los resultados obtenidos a partir de esta metodología, muestran que el 80% de las empresas lograron obtener la certificación OHSAS 18001 utilizando este procedimiento.

METHODOLOGY FOR THE IMPLEMENTATION OF OHSAS 18001 IN SMES

ABSTRACT

Small businesses generally do not have the money to pay a consultant in the area of industrial safety. This implies that the management of security within the organization to become a problem for the employer or an opportunity for improvement. This paper presents a methodology of support to ensure the implementation of OHSAS 18001 in small businesses. The first step was to make a diagnosis from a baseline consisting of organizational performance indicators. Subsequently consulting designed a route to reach certification. According to the diagnostic results the company knows their weaknesses and develop a plan of construction documents and implementing improvement actions. The results obtained from this methodology show that 80% of companies achieved OHSAS 18001 certification using this procedure.

INTRODUCCIÓN

Las pequeñas empresas generalmente no cuentan con los recursos económicos para pagar una consultoría en el área de la seguridad industrial. Esto implica que el manejo de la seguridad al interior de la organización se convierta en un problema para el empresario o en una oportunidad de mejoramiento. En este trabajo se presenta una metodología de apoyo para garantizar la implementación de la norma OHSAS 18001 en los pequeños negocios. El primer paso fue realizar un diagnóstico a partir de una línea base conformada por indicadores de gestión organizacional. Posteriormente se diseñó una ruta de consultoría para llegar a la certificación. Conforme a los resultados del diagnóstico la empresa conoce sus debilidades y elabora un plan de construcción de los documentos e implementación de acciones de mejora. Los

resultados obtenidos a partir de esta metodología, muestran que el 87% de las empresas lograron obtener la certificación OHSAS 18001 utilizando este procedimiento.

Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se plantean los argumentos que sustentan la construcción de la línea base y las herramientas para el mejoramiento empresarial. Posteriormente se presenta la metodología utilizada, en donde se describe como se seleccionó la muestra, el procedimiento para la elaboración del diagnóstico y la implementación de la norma OHSAS 18001. Posteriormente se presentan los resultados de la investigación. Finalmente, las conclusiones y limitaciones.

REVISIÓN DE LITERATURA

En el mundo los profesionales de diferentes áreas se han interesado por diseñar metodologías que les permitan elevar su competitividad. En el tema de la implementación de la norma OHSAS 18001 existen empresas dedicadas a la consultoría e implementación de la norma. La norma OHSAS 18001 se deriva de la ISO 9001 en la parte de seguridad industrial (Ziebell, 1999). Redinger y Levine (1998) analizaron la administración de programas de seguridad y salud ocupacional en 22 instituciones entre públicas y privadas. Walker y Smith (2002), describen en su artículo que fallar no es una opción, por lo cual los sistemas de seguridad deben estar contruidos de la mejor manera. Rash (1995) expone que el costo de minimizar el riesgo en las organizaciones es mucho menor al costo que se debería pagar por un accidente, esto aumenta las ganancias (Koelsch, 2000). En el 2003 los empleadores gastaron 50.8 billones de dólares en gastos médicos de los trabajadores (Hansen, 2006). Dyjack et al. (1998), Markey (1999), Uzumeri (1997), Levine (1997) y Mansdorf (1996), comparan la norma ISO 9001 y la OHSAS 18001 en términos de complementariedad y similitud, concluyendo que si se implementa la primera, la segunda es más rápida de documentar. También argumentan que puede darse una estandarización para la implementación en cualquier empresa. Beohm (1998) ha abordado el problema de la seguridad industrial desde el diseño de la maquinaria, de tal manera que se minimice el riesgo de accidente.

Redinger y Levine (1998) diseñaron una metodología para comparar los sistemas de seguridad industrial en el mundo y dedujeron que siguen patrones parecidos conectados a los procesos gerenciales en las organizaciones, lo cual respalda la generalización de una metodología como la planteada en este trabajo. Oktem et al. (2004) argumentan que una empresa que sea sostenible implementa normas de seguridad y salud ocupacional, además esto se relaciona con su éxito en el mercado (Strasser, 2003).

Loebbaka (2008) concluye en su artículo que se necesita no solo implementar la norma, sino que funcione en la realidad, lo que llama Bennett (2002) efectividad, tema que estudia también Fulwiler (2006). Gerhardsson (1998) argumenta que una empresa certificada se hace visible ante el mundo. Dessoiff (2001) explica que la implementación de normas de seguridad industrial disminuyen los riesgos de problemas ergonómicos en los trabajadores. Morris (2003) explica que en estos programas es conveniente la intervención de profesionales de la salud como terapeutas y enfermeras. Según Madsen (2000) la seguridad debe ir vinculada al producto como la calidad, es intrínseca a éste y no una característica aparte. Milliman, et al. (2005) presentan un estudio de caso sobre un proyecto piloto de implementación de la seguridad de una empresa en Estados Unidos, concluyendo sobre la importancia del impacto. Este trabajo muestra como se puede realizar masivamente la implementación en empresas micro, pequeñas y medianas siguiendo la metodología aquí desarrollada. Este estudio se podrá replicar en otras empresas brindando seguridad en el trabajo a las personas.

METODOLOGÍA

La muestra de empresas en las cuales se desarrolló este proyecto para el componente Salud Ocupacional y Seguridad Industrial corresponde a 125 empresas. Estos negocios se encuentran ubicados en Colombia en

ocho ciudades del país (Ver Tabla 1). Las zonas del proyecto corresponden a aquellas en las que Ecopetrol S.A. tiene operaciones de extracción, transporte o refinamiento de petróleo, pues este fue el criterio empleado para seleccionarlás. El 25,6% de las empresas del proyecto se retiraron del mismo durante los primeros 4 meses de ejecución principalmente porque no tenían la capacidad organizacional o un negocio sobre el cual implementar el sistema de gestión de seguridad industrial y salud ocupacional (14 empresas correspondientes al 14,4% del total de empresas). Otro grupo importante de empresas fue retirado del proyecto por el equipo ejecutor pues no pagaron el valor de su inscripción en el mismo (14 empresas correspondientes al 11,2% del total de empresas).

Tabla 1: Distribución de la muestra por ciudades inicio-fin del proyecto. Elaboración propia.

CIUDAD	Yopal	Magdalena Medio*	Orito	Cúcuta	Tibú	Barrancabermeja	Cartagena	Villavicencio	Neiva	Total
EMPRESAS INICIARON	15	16	13	16	13	13	12	12	15	125
EMPRESAS FINALIZARON	14	11	6	12	9	9	8	9	15	93

* Corresponde a poblaciones ubicadas en la rívera del Río Magdalena en los estados de Santander, Bolívar y Antioquia. (Yondó, Cantagallo, Vereda El Centro – Barrancabermeja, Puerto Berrio, Sabana de Torres, Puerto Nare)

La muestra de empresas del proyecto estuvo conformada por 42,55% microempresas, 44,68 pequeñas empresas y 12,77% medianas empresas, de acuerdo con la clasificación legal que utiliza Colombia para determinar el tamaño de la empresa. En la tabla 2 se observan los promedios de empleados y activos de las empresas por cada zona. Al calcular la relación entre el número de trabajadores totales de las empresas que hicieron parte del proyecto, 2.077 empleados en total, con el número de habitantes del municipio, se observa que el proyecto tiene mayor relevancia para las zonas de Yopal y Magdalena Medio.

Tabla 2: Información de las empresas de la muestra. Elaboración propia

Zona Proyecto	Número de habitantes	Número de empresas proyecto	Número Promedio de Empleados	Activos promedio en dólares	% de empleados de las empresas con relación al número de habitantes
YOPAL	114.043	14	34,00	845.372	0,4174%
MAGDALENA MEDIO	67.798	11	10,50	170.084	0,1704%
TIBÚ	34.733	9	5,46	83.176	0,1415%
BARRANCABERMEJA	190.058	9	15,46	841.134	0,0732%
ORITO	40.558	6	4,38	90.796	0,0649%
NEIVA	335.578	15	11,88	735.706	0,0531%
VILLAVICENCIO	367.445	9	19,92	231.022	0,0488%
CARTAGENA	828.226	8	31,69	925.920	0,0306%
CÚCUTA	482.490	12	11,00	317.797	0,0274%
PROMEDIOS TOTAL	273.437	10,33	16,03	471.223	0,1141%

Esta tabla muestra el número de habitantes en la ciudad, el número de empresas vinculadas en el proyecto, el número de empleados en las empresas de la muestra y el porcentaje de empleados de las empresas con relación al número de habitantes.

En la gráfica 1 se observa la distribución de las empresas por su actividad económica, destacando que la organización de las actividades económicas del proyecto corresponde a la utilizada por Ecopetrol S.A. para clasificar a sus proveedores locales. Todas las empresas de la muestra son prestadoras de servicios y la actividad con mayor relevancia es la construcción de obras civiles. Teniendo en cuenta que las empresas de la muestra emplean una gran cantidad de mano de obra no calificada y que los niveles de riesgo industrial de estas actividades son elevados, la ejecución de este proyecto resulta muy relevante para garantizar la salud ocupacional de los trabajadores.

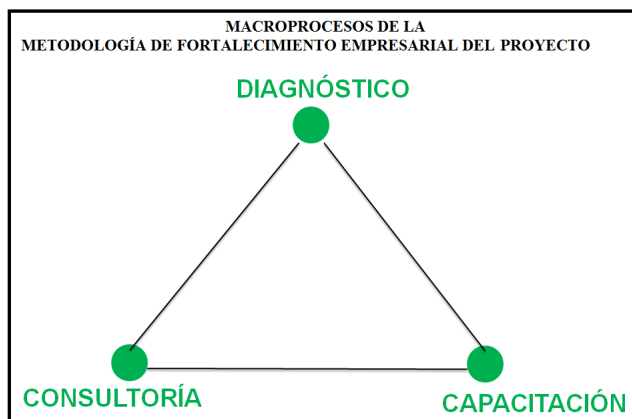

Gráfico 1: Actividades económicas de la muestra de empresas. Elaboración propia

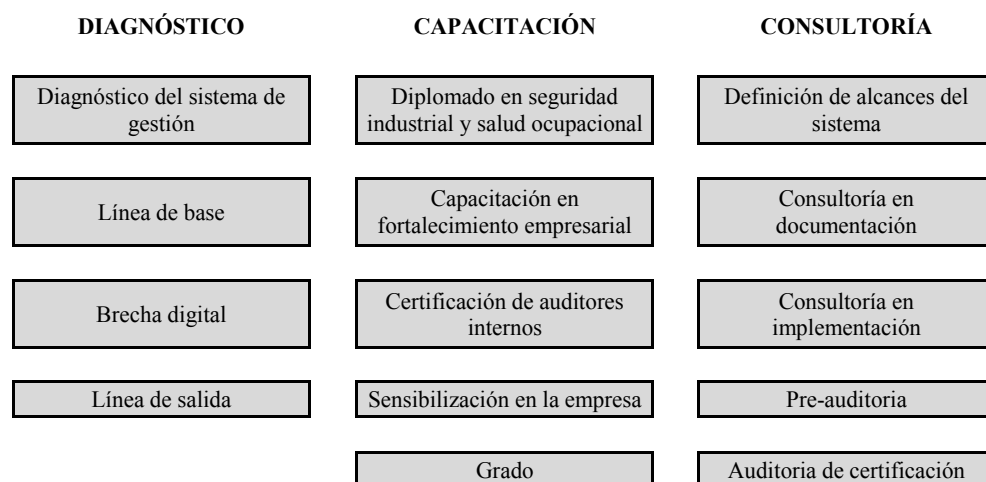

Este gráfico muestra la distribución de las empresas de la muestra según la actividad económica.

El proceso metodológico de intervención y trabajo con las empresas fue ejecutado en cada zona por un equipo de dos profesionales. El líder del equipo fue un experto con más de cinco años en implementación de sistemas de gestión de salud ocupacional y seguridad industrial. El profesional de campo, radicado en la zona, fue un especialista con por lo menos un año de experiencia en procesos de certificación de empresas en calidad. Este equipo contaba con el soporte y liderazgo del equipo directivo del proyecto, conformado por el gerente del componente, el coordinador académico del proyecto y el director del proyecto.

Diagrama 1: Organización de actividades del proyecto por macroprocesos. Creación Propia

Este diagrama muestra la organización de las actividades ejecutadas durante el proyecto.

En el proyecto las actividades se organizaron en tres grandes procesos:

1. Diagnóstico para determinar cuál es el estado del sistema de gestión de la empresa, sus recursos y su punto de partida en seguridad industrial y salud ocupacional.
2. Capacitación para llevar conocimiento técnico a la empresa y desarrollar competencias específicas en salud ocupacional y seguridad industrial en sus trabajadores
3. Consultoría para asegurar que el sistema de gestión en seguridad industrial y salud ocupacional es implementado en la empresa de acuerdo a los estándares que exige la norma OHSAS 18001.

El diagnóstico del sistema de gestión fue realizado por el equipo consultor de la Corporación Calidad con metodología propia de esta organización bajo el modelo de excelencia en la gestión que ha venido desarrollando durante 20 años de administración del premio nacional de la Excelencia en la Gestión Empresarial en Colombia.

Tabla 3: Dimensiones del diagnóstico del sistema de gestión. Tomado de Estudio del Nivel de Gestión de Mipymes en la Cadena de Abastecimiento de Bienes y Servicios de Ecopetrol, Enero 2012.

DIMENSIÓN	BREVE EXPLICACIÓN
Estrategia	Pensamiento organizacional, formulación estratégica, despliegue, alineamiento estrategia-estructura-cultura, entre otros.
Liderazgo	Estilo de liderazgo, cultura organizacional, ética y gobierno corporativo.
Personas	Desarrollo Integral de las personas, calidad de vida en el trabajo, entre otros.
Procesos	Gestión de la rutina, Relaciones con proveedores, entre otros.
Conocimiento e Información	Gestión de información, gestión del conocimiento.
Capacidad de Innovación	Estrategia de Innovación, Cultura de Innovación resultados de la innovación, entre otros.
Clientes y Mercados	Conocimiento de clientes y mercados, relaciones con los clientes, entre otros.
Resultados	Creación de valor para grupos sociales objetivo, competitividad, sostenibilidad.
Seguridad Industrial y salud ocupacional	Evalúa la estrategia manejo de la organización en seguridad para los trabajadores y condiciones laborales

Esta tabla muestra las ocho dimensiones que contempla el modelo más la dimensión de Seguridad Industrial y Salud Ocupacional desarrollada especialmente para este proyecto.

La metodología para medir la brecha digital es un desarrollo específico producto de la alianza Ecopetrol y Unión Temporal Corporación Calidad – Universidad Jorge Tadeo Lozano para realizar el diagnóstico correspondiente a las empresas participantes en los proyectos tanto del año 2010 como del 2011. La encuesta incluyó cinco aspectos o dimensiones: a) Hardware en uso, b) Software, c) Conectividad para la

operación de la empresa, d) Presencia y uso de internet, e) Procedimientos y personas para la gestión de TICs. Las preguntas acerca de hardware incluyeron desde el tipo de procesadores, capacidad de almacenamiento de información y la instalación de red interna hasta el uso de dispositivos como fotocopidora o scanner. En cuanto al software, el sondeo buscó determinar sistemas operativos, uso de antivirus, desarrollo de programas propios y uso de plataformas de trabajo. En cuanto a conectividad, se indagó tanto por la conexión mediante internet como por tecnologías de recolección de información en campo. Las cuestiones sobre el uso de internet y la presencia de la empresa en el mismo se orientaron a determinar si las empresas tenían páginas web, si se tenían plataformas de comercio electrónico, si utilizaban plataformas e-learning, entre otras prácticas. Finalmente, respecto a procedimientos y personas para el manejo de tecnología se indagó por la existencia de planes estratégicos de tecnología, responsables de este aspecto y relevancia del manejo de tecnología por parte de los trabajadores.

Para cada uno de los cinco aspectos o dimensiones establecidos, se determinó una escala de valoración (0–100%) que pretende medir el nivel que maneja cada empresa al momento de realizar la encuesta. El valor o calificación se establece siguiendo, para cada aspecto, o bien una tabla descriptiva o un cálculo relativo a lo disponible actualmente en el mercado. Se determinó como Nivel Digital al promedio de estas cinco mediciones particulares. A partir de la información recolectada en las empresas, para comparar contra los niveles de gestión observados, estadísticamente se establecieron seis rangos cualitativos para los niveles de manejo digital: Muy bajo (hasta 37,5%), Bajo (hasta 47,5%), Intermedio bajo (hasta 57,5%), Intermedio alto (hasta 67,5%), Alto (hasta 77,5%) y Muy alto (hasta 100%). Se establece como Brecha Digital la distancia que una empresa tiene para alcanzar el nivel Alto de manejo digital. El diplomado en seguridad industrial y salud ocupacional fue tomado por dos personas en promedio por cada una de las empresas participantes del proyecto y tuvo la estructura académica que la tabla 5. Una vez culminado el diplomado, se desarrolló una formación de 16 horas con los gerentes de las empresas en estrategia organizacional y creación de valor, pues se identificó dentro del diagnóstico de gestión que esta área requería refuerzo en las organizaciones. Igualmente al terminar el diagnóstico los estudiantes presentaron una evaluación para certificar sus conocimientos y habilidades como auditores internos este proceso tuvo una evaluación de conocimientos y el desarrollo de un caso.

Como primer paso de la consultoría cada empresa definió el alcance del sistema SISO¹ especificando los procesos organizacionales en que se centraría el sistema y por ende la certificación, teniendo en cuenta que el sistema debe operar sobre un negocio o actividad que esté desarrollando la empresa. Cada empresa definió cual sería dicha actividad o negocio. Igualmente definieron la organización certificadora que se encargaría de realizar la auditoría final.

Aquellas personas que en el macroproceso de capacitación se desempeñaron como estudiantes, en el macroproceso de consultoría toman el rol de trabajadores líderes y los profesores el rol de consultores. Los primeros esfuerzos de la consultoría se realizaron documentando los procesos relacionados con el alcance definido y la directriz de la alta dirección de la empresa respecto al sistema SISO. Cuando el grado de avance en el proceso de documentación fue mayor al 50% los consultores y trabajadores líderes procedieron a iniciar la implementación del sistema en las actividades generales de la empresa y específicamente en los negocios y actividades específicamente seleccionados. En este último proceso las empresas invirtieron importantes recursos económicos en mejorar su mobiliario de oficina, la señalización de sus instalaciones, el orden en sus bodegas y puntos de venta, los uniformes de sus trabajadores, la afiliación al sistema de riesgos profesionales y seguridad social del país y en realizar exámenes médicos a sus trabajadores, entre otros. Una vez culminada la consultoría de implementación un experto del equipo de trabajo del proyecto diferente al que había trabajado como consultor visitó la empresa para realizar una pre-auditoría que identifique las deficiencias menores y mayores del sistema, conocidas como *no*

¹ SISO, abreviatura de Salud Industrial y Salud Ocupacional

conformidades, y diera a la empresa recomendaciones para subsanarlas. Este proceso se efectuó en todas las empresas de la muestra.

RESULTADOS ALCANZADOS POR EL PROYECTO

- 64,8% de las empresas que iniciaron el proyecto (81 empresas) fueron certificadas bajo la norma OHSAS 18001.
- La eficiencia de la metodología es del 87%, ya que de las empresas que siguieron todo el proceso que son 93 se certificaron 81.
- 82 estudiantes del diplomado se certificaron como autores internos.
- 171 estudiantes graduados del diplomado en SISO.
- 1.640 trabajadores cubiertos en empresa con sistemas SISO.

CONCLUSIONES

Para que el sistema de gestión sea sostenible en las empresas, es indispensable que se convierta en parte de la cultura de la empresa, lo que significa que debe tener un decidido apoyo de la alta dirección y un grado de sensibilización fuerte por los trabajadores.

Para que una empresa logre con éxito la implementación del sistema de gestión en salud ocupacional y seguridad industrial requiere un grado mínimo de desarrollo organizacional que le permita contar con los recursos financieros necesarios para costear los gastos de implementación y capacitar al personal necesario. El costo promedio que tuvo cada una de las empresa para el proyecto fue de 11.305 dólares, para encontrar el valor que debería pagar una empresa para implementar el sistema a este valor es necesario sumarle los gastos de implementación que dependen del estado inicial de cada empresa.

El mayor factor de éxito del proyecto estuvo en la adecuada combinación de los macroprocesos de capacitación, consultoría y diagnóstico, pues de esta forma los empresarios lograron detectar sus brechas de gestión, entregaron el conocimiento a sus trabajadores para que disminuyeran las no conformidades y en equipo con los consultores implementaron adecuadamente el sistema.

El proceso de pre-auditoría desarrollado fue pieza esencial para la certificación del sistema, pues permitió a los empresarios tener una evaluación independiente previa a la certificación, que orientó los últimos esfuerzos de recursos para la implementación del sistema, asegurando un elevadísimo porcentaje de éxito en las auditorías de certificación. En el proceso de consultoría administrar la organización documental y la de implementación, favoreció la implementación del sistema de manera ostensible, pues la documentación de los procesos jugó el rol de proceso de planeación anterior a la implementación.

En las zonas donde el proyecto se desarrolló cuentan con pocos profesionales idóneos para administrar los sistemas de gestión de SISO de las organizaciones, de lo anterior se deduce que el esfuerzo que hicieron Ecopetrol S.A., La Corporación Calidad y la Universidad Jorge Tadeo Lozano por desarrollar los recursos humanos de estas importantes regiones de Colombia, contribuye notablemente a mejorar las condiciones de seguridad industrial de las empresas aumentando la productividad de las regiones.

LA CALIDAD DEL SERVICIO EN CAFETERIA, SEGÚN PERCEPCION DE USUARIOS

Isela Romero Castillo, Universidad Autónoma de Baja California
Virginia Guadalupe López Torres, Universidad Autónoma de Baja California

RESUMEN

La presente ponencia muestra los resultados de estudiar la percepción de los usuarios sobre la calidad de servicio de la cafetería de una universidad, a partir de la aplicación de un cuestionario diseñado con base a la escala SERVQUAL. Para lo cual se diseñó una investigación exploratoria considerando la población potencial de los distintos usuarios, definiendo estratos para garantizar la participación de todos en la muestra proporcionalmente a su tamaño. Los resultados por variables independientes y respecto a la calidad de servicio indican que para el 70% esta se define como excelente y buena, mientras para el 30% restante su percepción se divide entre mala y pésima.

PALABRAS CLAVE: Calidad del servicio, Cafetería, percepción, usuarios

SERVICE QUALITY IN CAFETERIA BY USER PERCEPTION

ABSTRACT

This paper shows the results of studying the perception of users on the service quality of a university cafeteria, from the application of a questionnaire designed based on the SERVQUAL scale. To which exploratory research was designed considering the potential population of different users, defining strata to ensure the participation of all in the sample in proportion to its size. The results for independent variables regarding the quality of service indicate that 70% is defined as excellent and good, while for the remaining 30% is divided between perception and awful bad.

JEL: M10

KEYWORDS: Quality of service, coffee shop, perception, users

INTRODUCCION

La calidad en el servicio es de gran importancia en todos los negocios, debido a que los clientes son más exigentes, están más informados, experimentan y disfrutan más de la variedad de productos y servicios que ofrecen el mercado de alimentos y bebidas (López, 2011). El sector servicios atraviesa por un periodo de cambio casi revolucionario en el que las formas establecidas de hacer negocios siguen cambiando de dirección. Continuamente se observa que los avances en el sector transforman la manera de vivir y de trabajar. Los innovadores lanzan con frecuencia nuevas formas de satisfacer las necesidades actuales (Lovelock, et al., 2011). En la actualidad, la calidad en el servicio al cliente es un indicador del buen desempeño de cualquier empresa, siendo un valor agregado necesario que se ofrece para poder destacar en el mercado actual. Cuando se brinda calidad en el servicio al cliente se puede obtener la lealtad al producto o servicio y posicionar a la empresa respecto a la competencia (Vera y Trujillo, 2009).

El sector restaurantero de México se ha convertido en el motor de la economía y en uno de los principales generadores de empleo, cuenta con más de 428 establecimientos, de los cuales el 96% son micro, pequeños y medianos negocios, además representa una vía para que muchos mexicanos desarrollen su espíritu empresarial e inicien un negocio (Secretaría de Economía, 2011).

Sin embargo, en algunos casos los establecimientos de venta de alimentos y bebidas preparadas suelen emerger en tiempo de crisis como negocios informales. De acuerdo con el Instituto Nacional de Estadística y Geografía (INEGI, 2000) el sector informal, está integrado por todas aquellas empresas no constituidas en sociedad que forman parte del sector de los hogares, dedicadas a la producción de bienes o servicios, con la finalidad primordial de generar empleo e ingreso para las personas involucradas.

Esto ha dado como resultado que en los últimos años se hayan inaugurado una cantidad importante de restaurantes en la ciudad de Ensenada. La mayoría sin un plan de negocio, sin un previo conocimiento de la industria restaurantera y sin contar con asesoría profesional que guíe a los propietarios a desarrollarse dentro del sector. Como consecuencia la falta de calidad en el servicio al cliente es una característica común. La Cámara Nacional de la Industria de Restaurantes y Alimentos Condimentados (CANIRAC, 2011) ha iniciado un programa de capacitación en Ensenada para mejorar la atención al cliente, porque considera que el objetivo general de todo negocio es lograr la satisfacción de los clientes.

La calidad en el servicio que ofrece la cafetería de la Universidad Autónoma de Baja California (UABC) Unidad Ensenada (UE), se desconoce, ya que no se ha realizado un estudio para valorarla. La cafetería ha pasado por varias fases desde su inicio. Con el crecimiento de la UABC-UE, tanto en alumnos, profesores, docentes y personal administrativo, la demanda del producto fue mayor. Es así como surge la necesidad de que se existiera una cafetería que diera abasto a la demanda solicitada. Entonces las autoridades de la universidad concesionaron el manejo de la cafetería por medio de licitaciones.

Actualmente el concesionario que opera la cafetería lo hace desde 2004. Sin embargo desde hace más de más de cuatro años, se escuchan comentarios del personal y alumnado sobre el servicio que presta la cafetería, señalando que no es bueno, que carece de calidad en cuanto a la imagen (instalaciones, mobiliario y ambiente), servicio al cliente (rapidez, amabilidad, cortesía y comunicación) y presentación en su menú (menú monótono, los platos a temperatura inadecuadas, texturas del producto, sabor y poca variedad-escasa). El espacio disponible para la cafetería es absorbido por el concesionario desde su construcción hasta el mobiliario y pagan una renta mensual de aproximadamente 18,000.00 (dieciocho mil pesos moneda nacional) por el uso de suelo, ya que la luz y el agua va incluido en su renta. Un porcentaje de la ventas de la cafetería es para el Sindicato Estatal de Trabajadores Universitario (en adelante SETU) (J. Serrano T., comunicación personal, 10 de septiembre, 2011).

La UABC-UE, cuenta con una población de 4,281, la cual está dividida entre estudiantes de licenciatura, estudiantes de posgrado, académicos (profesores e investigadores) y administrativos, todos ellos conforman la comunidad universitaria. En general se puede decir que la población universitaria se encuentra dividida en varios segmentos de mercado ya que varía tanto en los gustos como en las preferencias. La cafetería de la UABC-UE esta concesionada y funciona como una empresa prestadora de servicios de alimentos y bebidas, cómo tal depende de sus clientes para sobrevivir. El objetivo del presente trabajo consiste en analizar la calidad de servicio de la cafetería UABC-UE, desde la óptica cliente-proveedor. Es importante que la cafetería del la UABC-UE tenga conocimiento de la percepción, que tienen los consumidores universitarios acerca de la calidad en el servicio que ofrecen, con el fin de poder desarrollar e implementar nuevas ideas, estrategias e innovaciones en cuanto al servicio que prestan. El alcance de este proyecto consiste en conocer la percepción que tiene la comunidad universitaria en relación con la calidad en el servicio que ofrece la cafetería de la UABC-UE, por ello la investigación se define como exploratoria-descriptiva. Se utiliza la herramienta SERVQUAL para evaluar la percepción del consumidor con respecto a la calidad en el servicio.

REVISION LITERARIA

Duque (2005) comenta que La Real Academia Española define calidad como la propiedad o conjunto de propiedades inherentes a algo que permiten juzgar su valor. También cita a Juran (1990) para señalar que la calidad consiste en aquellas características de producto que se basan en las necesidades del cliente y que brindan satisfacción. El concepto de calidad puede ser tan confuso, debido en parte a que las personas consideran la calidad de acuerdo con diversos criterios basados en sus funciones dentro de la cadena de valor de producción comercialización. Los bienes y servicios producidos deben satisfacer las necesidades del cliente, de hecho, la existencia de las empresas depende de la satisfacción de las necesidades de sus clientes (Evans y Lindsay, 2008).

Camisón et. al., (2007) comentan que la calidad pueden organizarse en dos categorías: en calidad objetiva y calidad subjetiva. La primera se deriva de la comparación entre un estándar y un desempeño, referidos a características de calidad medibles cuantitativamente con métodos tecnológicos, describiendo los atributos del producto o de un proceso, independientemente de la persona que realiza la medición o adquiere el producto. Y la segunda se basa en la percepción y en los juicios de valor de las personas, y es medible cualitativamente estudiando la satisfacción del cliente y por lo mismo se dice que:

La calidad objetiva está implícita en los conceptos de calidad como excelencia, la calidad como conformidad con las especificaciones o basada en el producto, y la calidad como aptitud para el uso. La calidad subjetiva se desprende de la definición de calidad como satisfacción de las expectativas del cliente (Camisón et al., 2007:149).

La calidad del servicio es la base de la supervivencia de una empresa: la competencia y la existencia de clientes cada vez mejor informados son dos factores que contribuyen a esta concienciación. Estas observaciones, deben hacer comprender a las empresas lo interesante que resulta perseguir un servicio de calidad para diferenciarse de la competencia, obtener la fidelidad de los clientes para mantener y aumentar sus beneficios, pues los clientes satisfechos de hoy son los beneficios del mañana (Cerezo, 1997). Una empresa de servicio se puede diferenciar proporcionando una calidad consistente y superior a la de los competidores. Al igual que los fabricantes de productos, la mayoría de las industrias de servicios se han incorporado a la tendencia de la calidad orientada hacia el cliente. Por otro lado resulta más difícil de definir y valorar la calidad del servicio que la calidad de un producto. Un ejemplo claro que resulta difícil ponerse de acuerdo sobre la calidad de un corte de cabello que sobre la calidad de un secador de cabello (Kotler y Armstrong, 2008).

Kotler (2001), define el servicio como cualquier acto o desempeño que una parte puede ofrecer a otra y que es en esencia intangible, no dando origen a propiedad de algo. Con frecuencia los servicios desempeñan un papel importante en la economía global y bienestar de la comunidad. La calidad del servicio constituye para muchas organizaciones una cualidad que les permite diferenciarse y cautivar a sus clientes, adquiriendo relevancia como variable diferenciadora que incide sobre las decisiones de los consumidores y sobre los resultados de un negocio. Definido el concepto de calidad en el servicio, es necesario determinar de qué manera habrá de medirse en forma válida y fiable: medirlo, es un gran reto debido a la naturaleza e intangibilidad. Existen dos escalas que pueden ser utilizadas, estas son conocidas como SERVQUAL y SERVPERF.

Parasuraman, et al, (1985, 1988) en una investigación que llevaron a cabo, formulan un modelo conceptual de la calidad de servicio donde realizaron un primer estudio exploratorio aplicando a cuatro tipos de servicios como: banca, tarjetas de crédito, agente de seguros y servicios técnicos. Les permitió identificar diez elementos que determinara la calidad de servicio independientemente del tipo de servicio considerado. Estos elementos fueron los siguientes: Elementos tangibles, Fiabilidad, Capacidad de respuesta, Profesionalidad, Cortesía, Credibilidad, Seguridad, Accesibilidad, Comunicaciones,

Compresión del cliente. En la conceptualización de la calidad planteada por Parasuraman, Zeithaml y Bery (1988) se supone que los clientes comparan sus expectativas con sus percepciones para cada una de las dimensiones o criterios considerados clave en la experiencia de servicio: la tangibilidad, la fiabilidad, la capacidad de respuesta, la seguridad y la empatía. Este es un modelo incluye como herramienta de medición la escala SERVQUAL, el cual se elegirá este instrumento para llevar a cabo la medición de la calidad en el servicio de la cafetería UABC-UE. Como el estudio se enfoca a un establecimiento del tipo cafetería se considera pertinente definir restaurante, según Fernández (1997) es un establecimiento donde se ofrece un menú, se presta un servicio y atención de calidad dentro de una atmósfera agradable. El término se deriva de latín restaurare, que quiere decir recuperar o restaurar.

METODOLOGIA

Se diseñó una investigación con enfoque cuantitativo de tipo descriptivo, ya que se miden, evalúan o recolectan datos sobre diversos conceptos según lo mencionan Hernández, Fernández y Baptista (2006:102) “los estudios descriptivos únicamente pretenden medir o recoger información de manera independiente con base a los conceptos o las variables y no es el indicar cómo se relacionan dichas variables”. El diseño de la investigación es no experimental transeccional descriptivo ya que según Hernández Fernández y Baptista (2006:208) “es puramente descriptivo, sin manipular las variables y recolectar los datos en una sola exhibición, en un tiempo único, tomando una muestra representativa de la población y seleccionarla en forma aleatoria”, con el fin de evaluar la calidad en el servicio que percibe la comunidad universitaria con respecto a la cafetería UE.

En la página electrónica de la UABC, en la sección de la Coordinación de Servicios Estudiantiles y Gestión Escolar (CSEGE, 2012), se recabó información sobre la población estudiantil de la UE. Mientras al Departamento de Recursos Humanos UE, se le solicitó el número de personal tanto administrativo como académico, con ello se obtuvo la población objeto de estudio: población estudiantil: 3,425; personal administrativo y académico 856 (Departamento de Recursos Humanos, comunicación personal, febrero, 2012), ello totaliza una población total de $N = 4281$ sujetos de estudio, con ello como punto de partida se determinó el tamaño de la muestra, con base a un intervalo de confianza del 95%, un error del 8%, usando la fórmula de cálculo con base a proporciones, resultando $n = 438$, la cual se divide por estratos, cuyo desglose se ilustra en la tabla 1.

Tabla 1: Desglose de la muestra por estratos

Descripción	Población	Muestra
Alumnos de licenciatura	3148	143
Alumnos de posgrado	277	97
Académicos	710	124
Administrativos	146	74
Total	4281	438

La tabla muestra los datos poblacionales de los distintos estratos que conforman los sujetos de estudio, el cual fue la base para calcular la muestra a fin de tener representatividad. Se ilustra el tamaño de muestra calculado considerando 95% de intervalo de confianza y 8% de error. Fuente: Elaboración propia con base al muestreo por estratos.

La aplicación de la encuesta se realizó en forma aleatoria en forma personal para garantizar la información. El total de cuestionarios a aplicar no se cubrió debido a que los usuarios no accedieron, obteniendo una tasa de respuesta de 380 sujetos de estudio, que representa el 86.75% de la meta proyectada. El instrumento de medición está integrado en dos partes; la primera etapa incluye nueve preguntas demográficas con la intención de caracterizar a los sujetos de estudio; la segunda etapa presenta las preguntas del modelo SERVQUAL, está compuesta por 25 ítems a partir de las dimensiones: confiabilidad, amabilidad, servicio, instalaciones, y producto. Las primeras tres dimensiones se manejaron como los aspectos tangibles mientras que las últimas dos se manejaron como intangibles.

Antes de iniciar el trabajo de campo, se probó el cuestionario (piloto) con un pequeño grupo de la población, 30 personas. El resultado de alfa de Cronbach es de 0.963, que indica que el cuestionario es confiable. Por lo que se procedió a la aplicación del instrumento. Se ejecutó la información recabada de los encuestados en el programa Statistical Package for the Social Sciences (en adelante SPSS), en la versión 17.0 para Windows, el cual arrojó un alfa de Cronbach general de 0.985, lo que representa un grado de confiabilidad alto (Hernández, et. al, 2006).

RESULTADOS

En relación a los encuestados el 52.1% son de género masculino y el 47.9% femenino. La mayoría (62.37%) está en el rango de edad entre los 17 a 25 años; el 27.37% se ubica entre los años de 26 a 35 y los mayores de 36 representan el 10.25%. El principal mercado son los estudiantes que en conjunto alcanzan el 80.53%. Respecto al objetivo planteado de analizar la calidad de servicio de la cafetería UABC-UE, este se realizó desde las variables confiabilidad, amabilidad, producto, instalaciones y servicio. En relación a la variable confiabilidad el 39% de los sujetos de estudio la considera excelente y 42% buena. Pero el 19% tiene una opinión repartida que va desde regular a pésima. Es importante destacar que lo que se midió fue percepción, la cual está influenciada por la cultura del sujeto de estudio en cuanto al gusto por el tipo de comida, es decir perciben muy distinto alumnos de licenciatura y académicos, ello puede explicar los resultados.

La amabilidad al recibir atención en la cafetería en un factor relevante, de acuerdo con los resultados el 41% opina que es excelente y un 35% que es buena. Pero un 18% señala que es pésima, lo cual representa un área de oportunidad para los concesionarios a fin de poder mejorar la relación con sus clientes que redunde en mayores ventas. La variable amabilidad está muy ligada con la variable servicio, al menos los resultados parecieran estar alineados, el 34% opina que es excelente y para el 39% es bueno. Resalta un 9% que lo considera pésimo. Conocer la percepción a cerca de los productos que se expenden también es importante, al respecto se infiere que la población opina en un 37 % que son buenos, para el 36% son excelentes, pero un 10% los califica de malos a pésimos. Nuevamente esta percepción puede estar influenciada por los hábitos de consumo en relación al tipo de alimentos que gustan los clientes consumir. Al ser la mayoría de ellos estudiantes de licenciatura, cuyos gustos son más por los denominados alimentos chatarra que son mayoría en el menú puede explicar estos resultados.

La última variable estudiada son las instalaciones, el 37% las define como buenas y un 31% como excelentes, pero el 32% restante opina que son malas y pésimas. Considerando que el mobiliario es viejo e incomodo se entienden las diferencias de opinión. Con base en los resultados de cada variable independiente se determinó la calificación de la percepción respecto a la calidad del servicio de la cafetería UABC-UE, la cual es considerada como buena por el 30% y excelente por un 29%.

CONCLUSIONES

El estudio permitió identificar que la percepción que tienen los usuarios sobre la calidad del servicio que presta la cafetería UABC-UE es calificada de buena a excelente por el 60%, mientras el 40% restante la califica de pobre a pésima, situación que se debe al tipo de usuario o consumidor, dado que el establecimiento no tiene identificados nichos de mercado y ofrece en el menú una lista de opciones de platillos y productos reducida mayormente orientada al cliente joven (estudiante) y no al adulto (trabajador). Por lo que sería recomendable identificar los nichos de mercado, sus preferencias y atenderlas a fin de que el 100% de los comensales estén satisfechos.

EL CAMINO HACIA LA CERTIFICACIÓN DE LA CALIDAD DE LOS PROGRAMAS EDUCATIVOS EN LA EDUCACIÓN SUPERIOR EN MÉXICO: UNA EXPERIENCIA DEL POSGRADO EN DERECHO EN LA UNIVERSIDAD AUTÓNOMA DEL ESTADO DE MORELOS

Eduardo Oliva Gómez, Universidad Autónoma del Estado de Morelos

RESUMEN

En la presente investigación, empleando el método de caso, se hace la revisión de las acciones y estrategias adoptadas por la División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos (México) para lograr acreditar ante el Consejo Nacional de la Ciencia y la Tecnología a los programas educativos de maestría en derecho y de doctorado en derecho y globalización que se ofertan en dicha institución, como programas educativos de calidad y, con ello, ser inscritos en el padrón nacional de posgrados de calidad (PNPC) del CONACYT. La investigación tiene como objetivo el constatar si dichas acciones y estrategias empleadas para lograr la acreditación como programas educativos de calidad en México, pueden también ser considerados programas educativos de calidad a nivel internacional por ajustarse a las recomendaciones establecidas por la UNESCO en la Declaración Mundial sobre la Educación Superior en el Siglo XXI: Visión y Acción, la cual fue celebrada en París del 5 al 9 de octubre de 1998. El determinar si estos programas educativos cumplen con dichas recomendaciones, constituye un elemento fundamental para establecer el nivel de calidad que actualmente presentan los referidos programas en beneficio del conocimiento de la ciencia jurídica, y con ello, poder establecer la calidad y pertinencia del servicio educativo que desarrolla dicha institución en favor de la innovación, generación y difusión del conocimiento jurídico.

PALABRAS CLAVE: Educación superior, calidad, programas educativos.

THE ROAD TO QUALITY CERTIFICATION OF EDUCATIONAL PROGRAMS IN HIGHER EDUCATION IN MEXICO: AN EXPERIENCE OF GRADUATE IN LAW AT THE UNIVERSITY MORELOS STATE AUTONOMOUS.

ABSTRACT

In this investigation, making use of case method, actions and strategies adopted by the College Graduate belonging to UAEM's Law and Social Science faculty, to endorse before the National Science and Technology Council the Master in Law and PHD in Law and Globalization educational programs, which are offered in these institution as quality educational programs, and with this, being enrolled in the National Register of Quality Graduate belonging to CONACYT, are being reviewed. The objective of this investigation, is to confirm if the actions and strategies employed to endorse as quality educational programs in Mexico, could be considered as international quality educational programs too, for having responded to the recommendations established by UNESCO in the World Declaration on Higher Education for the XXI century: Vision and Action, which was celebrated in Paris from October 5th to 9th in 1998. Determining if these educational programs meet this recommendations is an essential element to establish the quality level which is currently presented by such programs, in the benefit of legal science

knowledge, and with this, being able to establish quality and pertinence of the educational service which is being developed by this institution, in pro of innovation, generation, and diffusion of legal knowledge.

KEYWORDS: Higher Education, quality, educational programs.

INTRODUCCIÓN

A partir de los últimos años de la década del siglo pasado, y desde luego en los que han transcurrido en este siglo, en la educación superior en México, así como en general la que se imparte en muchos otros países integrantes de la comunidad mundial, los programas educativos han sido motivo de estudio, análisis, revisión y evaluación, todo ello con el afán de determinar y certificar su calidad educativa.

La acción de establecer la calidad de un programa educativo y como consecuencia certificarlo como tal resulta interesante, compleja e incluso polémica puesto que todo programa educativo que se oferta en una institución educativa, presupone contar con amplia solvencia y por tanto gozar de calidad, no obstante esta presunción, es necesario reflexionar si en la realidad, los programas educativos que se imparten en México que corresponden al nivel de educación superior, son de calidad y con una adecuada eficiencia terminal. Hoy en día, la tendencia de la acreditación de calidad, es una de las evidentes manifestaciones del fenómeno de la globalización, el cual es claro no sólo forma parte de los procesos económicos, sino que también extiende su influencia a todos los ámbitos del desarrollo y conocimiento humano, como son el político, el social, el jurídico y, desde luego, el educativo.

Es del conocimiento de la sociedad en general, que en los diversos foros regionales y mundiales en materia educativa, se ha planteado la primordial necesidad que todo Estado debe enfrentar en el sentido de ampliar la cobertura educativa a todos los integrantes de su sociedad, el problema que se ha detectado y discutido es el cuantitativo, esto es, lograr hacer llegar la educación a todo el pueblo, sin discriminación alguna como requisito básico para sustentar una vida con democracia, en tal sentido los Estados se plantean metas, trabajos y estrategias para promover la “educación para todos.” En México, esta regla no ha sido la excepción, el Estado ha realizado trabajos de gran impacto a fin de lograr superar el problema cuantitativo de la Educación, sin embargo, de similar importancia resulta el problema cualitativo, esto es, el problema de ofertar una educación de calidad, una educación que busque en la formación de los estudiantes y, por tanto, de la sociedad en general, el nivel más óptimo posible de calidad.

En el contexto que se ha señalado, el presente trabajo de investigación tiene como objetivo principal llevar a cabo, por una parte, el estudio y revisión de las estrategias que en la educación superior en México y en específico en el caso objeto de estudio, se han implementado y se están llevando a cabo, a efecto de lograr que sus programas educativos de posgrado, logren alcanzar el nivel de calidad y, por otra parte, dicho estudio permitirá percatarse si las estrategias empleadas se ajustan a los elementos que en la UNESCO se han establecido de manera concreta para lograr el acceso a dicha calidad educativa.

REVISION LITERARIA

En la Conferencia Mundial sobre la Educación Superior celebrada por la UNESCO en París del 5 al 9 de octubre de 1998 (Para mayor información véase <http://www.unesco.org/education/educprog/wche/principal/system-s.html>), se emitió la “Declaración Mundial sobre la Educación Superior en el Siglo XXI: Visión y Acción” en la que se proclamó en su artículo décimo primero los aspectos que de calidad deben atenderse en la educación superior, se precisa que la “calidad de la enseñanza superior es un concepto pluridimensional que debería comprender todas sus funciones y actividades: enseñanza y programas académicos, investigación y becas, personal, estudiantes, edificios, instalaciones, equipamiento y servicios a la comunidad y al mundo universitario” se hace también la mención especial de que “para lograr y mantener la calidad nacional,

regional o internacional, ciertos elementos son especialmente importantes, principalmente la selección esmerada del personal y su perfeccionamiento constante, en particular mediante la promoción de planes de estudios adecuados para el perfeccionamiento del personal universitario, incluida la metodología del proceso pedagógico, y mediante la movilidad entre los países y los establecimientos de enseñanza superior y entre los establecimientos de educación superior y el mundo del trabajo, así como la movilidad de los estudiantes en cada país y entre los distintos países. Las nuevas tecnologías de la información constituyen un instrumento importante en este proceso debido a su impacto en la adquisición de conocimientos teóricos y prácticos.” Los propósitos de los estados participantes en la Conferencia Mundial sobre la Educación Superior en la que fue emitida en la “Declaración Mundial sobre la Educación Superior en el Siglo XXI: Visión y Acción” ponen de manifiesto su primordial preocupación por trabajar y atender los aspectos de la calidad de la educación superior a nivel mundial, estableciendo no solamente la premisa de que debe cuidarse y elevarse el nivel de calidad educativa, sino que aún más, se disponen de manera concreta cuales son los elementos que deben desarrollarse en las políticas educativas de los estados para lograr la efectiva calidad de la educación superior.

Esta preocupación mundial planteada por la UNESCO no queda olvidada en la Declaración Mundial emitida en el año de 1998, la atención sobre la calidad educativa sigue formando parte de la agenda mundial, tal es el caso que precisamente en los trabajos realizados en la “Conferencia Mundial de Educación Superior 2009: Las Nuevas Dinámicas de la Educación Superior y de la Investigación para el Cambio Social y el Desarrollo” (Para mayor información véase <http://www.unc.edu.ar/seccion/novedades/2009/julio/documento-de-la-conferencia-mundial-de-educacion>), celebrada en París del 5 al 8 de julio de 2009, se pone de manifiesto en el preámbulo de dichos trabajos, la fundamental importancia que hoy en día debe darse a la calidad en la educación superior, estableciéndose que “al tiempo que se expande el acceso, la educación superior debe perseguir las metas de la equidad, la pertinencia y la calidad simultáneamente...”

Sobre La Educación En México Como Un Derecho Fundamental.

Al hablar sobre la educación en México, resulta necesario precisar que, por mandato constitucional, la Educación en México no sólo es considerada como un derecho constitucional, sino que inclusive es considerado como un Derecho Humano. (En México, la Constitución Política para los Estados Unidos Mexicanos en junio de 2011, ha sido motivo de una reforma sustancial mediante la cual en su artículo primero se establece entre otras cosas que “En los Estados Unidos Mexicanos todas las personas gozarán de los derechos humanos reconocidos en esta Constitución y en los tratados internacionales de los que el Estado Mexicano sea parte, así como de las garantías para su protección, cuyo ejercicio no podrá restringirse ni suspenderse, salvo en los casos y bajo las condiciones que esta Constitución establece...” La reforma permite destacar que si bien no se habla en lo particular y de forma expresamente literal de la educación, lo cierto es que se establece la prioridad que en el sistema jurídico mexicano tienen los derechos humanos, y siendo desde luego, la educación indiscutiblemente un derecho humano de tipo fundamental reconocido como tal en el ámbito internacional por la UNESCO y demás organismos internacionales, luego entonces queda inmerso dentro de la protección constitucional en los términos que se describe. Para mayor información. Para mayor información véase <http://dof.gob.mx/index.php?year=2011&month=06&day=10>).

La Constitución Política para los Estados Unidos Mexicanos vigente desde el año de 1917 (Para mayor información véase <http://www.diputados.gob.mx/LeyesBiblio/pdf/1.pdf>), en su artículo tercero señala que: “todo individuo tiene derecho a recibir educación”, se dispone además que la educación que imparta el Estado será gratuita y que la educación preescolar, primaria y secundaria conforman la educación básica y que ésta y la media superior serán obligatorias. (Para mayor información véase http://dof.gob.mx/nota_detalle.php?codigo=5233070&fecha=09/02/2012).

En el mismo artículo, se establece que la educación que imparta el Estado tenderá a desarrollar armónicamente, todas las facultades del ser humano y fomentará en él, a la vez, el amor a la patria, el respeto a los derechos humanos y la conciencia de la solidaridad internacional, en la independencia y en la justicia, que además será laica; científica; además será democrática; nacional; y, contribuirá a la mejor convivencia humana. Sobre la educación superior se establece en el citado artículo tercero que “ las universidades y las demás instituciones de educación superior a las que la ley otorgue autonomía, tendrán la facultad y la responsabilidad de gobernarse a sí mismas; realizarán sus fines de educar, investigar y difundir la cultura de acuerdo con los principios de este artículo, respetando la libertad de cátedra e investigación y de libre examen y discusión de las ideas; determinarán sus planes y programas; fijarán los términos de ingreso, promoción y permanencia de su personal académico; y administrarán su patrimonio. Las relaciones laborales, tanto del personal académico como del administrativo...”

El Camino Hacia La Calidad De La Educación Superior En México.

Ahora bien, sobre los procesos de calidad de la Educación Superior en México, que constituye precisamente el motivo central del presente trabajo, en el año de 1970 fue creado el Consejo Nacional de Ciencia y Tecnología (CONACYT), (Para mayor información véase <http://www.conacyt.gob.mx/Acerca/Paginas/default.aspx>), por decreto del Congreso de la Unión, estableciendo que se trata de un organismo público de carácter descentralizado de la Administración Pública Federal, integrante del sector educativo, que goza de personalidad jurídica y patrimonio propio, y cuya responsabilidad primaria es elaborar políticas de Ciencia y Tecnología, teniendo como misión el impulsar y fortalecer las actividades de investigación científica, tecnológica y la innovación de calidad, así como el brindar asesoría al Ejecutivo Federal en dichos rubros, debiendo articular el Sistema Nacional de Ciencia y Tecnología para contribuir a que la sociedad mexicana enfrente con pertinencia sus principales retos y eleve su calidad de vida.

El Consejo Nacional de Ciencia y Tecnología, respecto al particular de los procesos de calidad de los programas educativos de posgrado que se imparten en las universidades e instituciones públicas de educación, ha implementado el Programa Nacional de Posgrados de Calidad (PNPC) el cual lo administra conjuntamente con la Secretaría de Educación Pública a través de la Subsecretaría de Educación Superior, estableciendo como misión de dicho programa “el fomentar la mejora continua y el aseguramiento de la calidad del posgrado nacional, que dé sustento al incremento de las capacidades científicas, tecnológicas, sociales, humanísticas, y de innovación del país”

En México, el hecho de que un programa educativo de posgrado obtenga la acreditación de calidad ante el PNPC de CONACYT, es muestra de que, habiendo pasado por todos los procesos de evaluación y desde luego satisfaciendo los alcances y parámetros respectivos, representa un reconocimiento público de sus características de excelencia educativa en beneficio no sólo de quien desarrolla sus estudios de posgrado, sino más aún, en beneficio de su entidad federativa y del Estado en general.

Un programa educativo de posgrado que pretende el ingreso al PNPC de CONACYT, debe satisfacer una serie de criterios que imponen una severa, estricta y muy rigurosa revisión: la estructura del programa educativo en el que se considera el plan de estudios y el proceso enseñanza – aprendizaje; otro criterio que es motivo de evaluación es el que se refiere a las características de los estudiantes que cursan sus estudios en este tipo de programas educativos, en los que se considera los requisitos de ingreso al programa educativo, la trayectoria escolar de los estudiantes, la movilidad e intercambio de estudiantes, los programas de tutorías y de becas; constituye un tercer criterio el relativo desde luego al personal académico en el que es evaluado el núcleo académico básico, así como las líneas de generación y/o aplicación del conocimiento en que ellos participan;

por otra parte es motivo de revisión el criterio que se refiere a la infraestructura y servicios, así como la implementación y uso de las tecnologías de la información y la comunicación; un criterio más es el referente a los resultados en los que se hace la evaluación sobre la trascendencia, cobertura, evolución del programa, seguimiento de egresados, la eficiencia terminal y la contribución al conocimiento; por último, se considera también la vinculación de la institución y del programa educativo con otros sectores de la sociedad; es también necesario destacar que todo programa educativo de posgrado que pretenda su ingreso al PNPC de CONACYT, debe contar de manera necesaria con un plan de mejoras en el que debe existir una adecuada congruencia entre los objetivos y las metas de dicho plan, así como el reconocimiento de las fortalezas y debilidades del programa. De manera paralela a la política instrumentada mediante las acciones concretas del CONACYT para el logro de entre otras metas, la calidad en la educación superior, en específico en los programas de posgrado que son precisamente sobre los que centra esta institución nacional sus esfuerzos y estrategias, “se puso en marcha en 1996 una política expresa mediante el Programa de Mejoramiento del Profesorado (PROMEP)”(Reséndiz Núñez, Daniel (2000), *Futuros de la Educación Superior en México*, 1ª. ed, Ed, Siglo XXI, México, p. 35.)

Este programa de Mejoramiento del Profesorado, que constituye una estrategia significativa implementada por el Estado Mexicano por conducto de la Secretaría de Educación Pública, toma como eje central para incrementar la calidad de la educación superior, la figura del profesorado, en virtud de considerar que de su actuación depende la efectividad y factibilidad de todas las demás acciones de apoyo en relación con la calidad, incluyendo en su función, no sólo la adopción de métodos y medios de enseñanza apropiados, sino también su participación en el diseño de los programas educativos y de su desarrollo como investigador.

“El Promep se propone simplemente implantar en nuestro medio los estándares que para el profesor de carrera han probado ser en todo el mundo la mejor garantía de calidad: formación académica completa en su especialidad, demostrado por haber obtenido el máximo grado (doctorado), aunque ésta no es condición suficiente, sino solamente necesaria. El Promep también busca que todo profesor de carrera, de acuerdo con los mismos estándares internacionales, distribuya su tiempo apropiadamente entre las cuatro actividades características de un profesor de educación superior: la docencia, la investigación, el tutelaje o asesoría a estudiantes para apoyarlos individualmente en el logro de altos niveles de aprendizaje, y el trabajo profesoral colegiado para atender colectivamente todos los asuntos relacionados con la conducción académica de los programas educativos de los que son responsables”((Reséndiz Núñez, Daniel (2000), *Futuros de la Educación Superior en México*, 1ª. ed, Ed, Siglo XXI, México, p. 35.)

La política implementada en la educación superior en México mediante las estrategias propuestas por el Promep, han sido aceptadas de buena manera por todas las universidades públicas del país, siendo el caso que en el año de 1997 se acordó que toda vacante en este tipo de instituciones educativas, sería cubierta con nuevas plazas sólo con el profesorado que contara con los elementos estándares dispuesto por el Promep. Las acciones implementadas en México tendientes a elevar el nivel de la calidad de la educación superior en México mediante las políticas propuestas por el CONACYT y mediante las respectivas del Promep, a la fecha siguen vigentes y en realidad puede aseverarse han contribuido con eficacia para impulsar los procesos de calidad planteados.

METODOLOGÍA

La investigación metodológicamente se encuentra delimitada al estudio de caso de los programas educativos de Maestría en Derecho y de Doctorado en Derecho y Globalización que se ofertan e imparten actualmente en la División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos, la cual forma parte de las Universidades Públicas que con plena autonomía operan en México.

La delimitación se ha hecho al estudio de caso referido por dos razones, la primera de ellas, por la necesidad metodológica de evitar la dispersión en la investigación y, en segundo término, por contar el suscrito con la experiencia personal en el proceso de certificación de calidad Nacional de dichos programas educativos, dado que me encuentro involucrado de manera directa en la creación y seguimiento de todas las acciones y estrategias que han sido necesarias para posicionar estos programas educativos en el Padrón Nacional de Posgrados de Calidad (PNPC) del Consejo Nacional de la Ciencia y Tecnología (CONACYT) en virtud de desempeñarme como decano de la citada División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos y, por mi calidad de investigador de Tiempo completo en dicha institución.

La investigación que se hace, se reitera, bajo el método de caso, expone por una parte las estrategias tomadas para el ingreso y permanencia de los referidos programas educativos al PNPC de CONACYT, por otra parte, dicha investigación pretende determinar y poner de manifiesto, si dichas estrategias y acciones adoptada por la División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos, se ajustan de manera coherente, suficiente y adecuadamente a los recomendaciones emitidas por la UNESCO en “Declaración Mundial sobre la Educación Superior en el Siglo XXI: Visión y Acción” pronunciada desde el año de 1998, para con ello poder emitir un juicio crítico por el cual se establezca si dichos programas educativos pueden ser considerados de calidad no solamente en el contexto nacional mediante la adecuada adopción de los lineamientos de calidad emitidos por el CONACYT, sino inclusive, si dicho programa adopta los criterios emitidos por la UNESCO para con ello ser considerado como un programa de calidad a nivel internacional.

RESULTADOS

El programa educativo de maestría en derecho ofertado por la División de Estudios Superiores de Posgrado en la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos, es un programa educativo que inicio su oferta educativa, en el año de 1991, siendo un programa de maestría de tipo profesionalizante que, tenía su orientación terminal en las áreas de derecho civil, derecho penal y, derecho social; dicho programa educativo operó sin modificación alguna desde su creación, 1992 y hasta el año de 2009, momento en el cual, las políticas educativas instrumentadas en la Universidad Autónoma del Estado de Morelos, con el fin de iniciar trabajos tendientes a la calidad de sus programas de posgrado, decidió dar por terminado dicho programa.

En dichas condiciones y con el afán desde luego de que continuara operando la División de Estudios Superiores de Posgrado de la referida Facultad de Derecho, se tomó la decisión de crear un nuevo programa educativo, el cual, teniendo como presunción el convertirse en un programa educativo de calidad, se diseñó atendiendo a los lineamientos y políticas educativas nacionales y de la propia universidad y cuidando dar cumplimiento a todas y cada una de las características que un programa educativo de posgrado debe de reunir para ser considerado de calidad y con ello lograr su ingreso al PNPC de CONACYT. El programa educativo una vez aprobado por el Consejo Universitario fue llevado a evaluación ante el referido órgano educativo federal, Consejo Nacional de la

Ciencia y Tecnología - CONACYT – el cual, una vez revisado y evaluada las características y constitución del programa educativo, lo aprobó como un programa nacional de posgrado de calidad, acreditación que se obtuvo en el mes de enero de 2010; ante la obtención satisfactoria del ingreso al PNPC de CONACYT del programa de maestría en derecho, la Facultad de Derecho y Ciencias Sociales y desde luego, el cuerpo de Profesores Investigadores de Tiempo Completo adscritos a la citada Facultad de Derecho, de plena conformidad y con el afán de contribuir con calidad a la formación del más alto nivel de los juristas del Estado de Morelos, y con el propósito de que los egresados de la maestría en derecho pudiesen continuar sus estudios hasta el grado de doctor, decidieron crear el programa educativo de

doctorado en derecho y globalización, el cual se creó adoptando todos los requerimientos que un programa doctoral debe observar para lograr su ingreso al PNPC de

CONACYT, siendo el caso que una vez aprobado por el Consejo Universitario, fue llevado a su evaluación ante el CONACYT para su ingreso al PNPC, logrando que en el mes de agosto de 2010 fuera evaluado y acreditado como un programa nacional de calidad. Una vez expuesto de forma genérica el ingreso de los programas educativos de la maestría en derecho y del doctorado en derecho y globalización ofertados por la División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos al CONACYT y acreditados ante el PNPC de CONACYT, metodológicamente es el momento oportuno para determinar si las estrategias y acciones emprendidas por la División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos, cumplen con las recomendaciones emitidas por la UNESCO en la “Declaración Mundial sobre la Educación Superior en el Siglo XXI: Visión y Acción” para poder considerar entonces, si dichos programas educativos podrían llegar a ser considerados como programas de calidad internacional.

Ha señalado la UNESCO en el artículo 11 de la referida Declaración Mundial sobre Educación Superior, que la evaluación de calidad de un programa educativo de nivel superior debe considerar que “a) La calidad de la enseñanza superior es un concepto pluridimensional que debería comprender todas sus funciones y actividades. Una autoevaluación interna y un examen externo realizados con transparencia por expertos independientes. Deberían crearse instancias nacionales independientes, y definirse normas comparativas de calidad, reconocidas en el plano internacional.

Con miras a tener en cuenta la diversidad y evitar la uniformidad, debería prestarse la atención debida a las particularidades de los contextos institucional, nacional y regional. Los protagonistas deben ser parte integrante del proceso de evaluación institucional; b) La calidad requiere también que la enseñanza superior esté caracterizada por su dimensión internacional: el intercambio de conocimientos, la creación de sistemas interactivos, la movilidad de profesores y estudiantes y los proyectos de investigación internacionales; y, c) Para lograr y mantener la calidad nacional, regional o internacional, ciertos elementos son especialmente importantes, principalmente la selección esmerada del personal y su perfeccionamiento constante, en particular mediante la promoción de planes de estudios adecuados para el perfeccionamiento del personal universitario, incluida la metodología del proceso pedagógico, y mediante la movilidad entre los países y los establecimientos de enseñanza y de educación superior y el mundo del trabajo, así como la movilidad de los estudiantes en cada país y entre los distintos países. Las nuevas tecnologías de la información constituyen un instrumento importante en este proceso debido a su impacto en la adquisición de conocimientos teóricos y prácticos.

Las recomendaciones emitidas por la UNESCO en la citada Declaración Mundial sobre Educación Superior han sido consideradas, observadas y cumplidas por los programas educativos de mérito, al respecto en principio debe destacarse que el programa educativo tanto de maestría en derecho como el del doctorado en derecho y globalización, han sido autoevaluados de forma interna y evaluados por un órgano externo independiente, que es el CONACYT.

Ambos programas educativos atienden las propuestas pedagógicas actuales y por tanto se centran en el aprendizaje por competencias (La expresión competencias es un término polisémico que puede entenderse como el desempeño o la actuación integral del sujeto, lo que implica conocimientos factuales o declarativos, habilidades, destrezas, actitudes y valores, dentro de un contexto ético. La competencia emerge de la intersección entre los conocimientos factuales y declarativos (saber conocer), habilidades y destrezas (saber hacer), y actitudes y valores (saber ser) Para mayor información véase Pimienta Prieto, Julio H. (2012), *Las competencias en la Docencia Universitaria*, 1ª. ed. Ed. Pearson, México, p. 2.), el primero de ellos es de tipo profesionalizante y el respectivo al doctorado en derecho y globalización es un

programa educativo por investigación; en ambos programas se consideran los aspectos de flexibilidad y movilidad estudiantil, en la actualidad son varios los estudiantes tanto de maestría como de doctorado que han salido ya a instituciones educativas de diversos países realizado estancias de investigación en universidades extranjeras, como son en España, Francia, Colombia, Chile, Uruguay, Costa Rica y Estados Unidos, sobre dichas acciones de movilidad es necesario también destacar que no sólo ha sido a cargo de los estudiantes, también el profesorado ha desarrollado estancias de investigación en el extranjero.

Por otra parte, el ingreso a los respectivos programas educativos implementan rigurosos requisitos, en los que se incluyen, además de un promedio mínimo en los estudios que anteceden y desde luego, el encontrarse titulados, la aprobación de un curso propedéutico y la aprobación de un examen general de conocimientos y de comprensión y redacción, así como de un examen psicopedagógico y, desde luego una entrevista individual con un comité de selección en que es evaluado el perfil del estudiante y su protocolo de investigación (para el programa educativo de la maestría en derecho); y sobre el programa de doctorado en derecho y globalización, todo aspirante debe acreditar un examen donde se evalúa la comprensión de texto y redacción de una legua extranjera, así como además de contar con el grado de maestro y un promedio mínimo, una entrevista ante el comité de selección en el que es evaluado de la misma forma, la calidad del protocolo de investigación, sobre el cual es importante precisar, la investigación debe desarrollarse bajo el contexto de la globalización y debe cumplir con todos los requisitos rigurosos que metodológicamente un protocolo de investigación para el ingreso a un doctorado debe de cubrir. Es conveniente anotar que el núcleo académico básico que participa en ambos programas educativos, deben ser doctores en derecho, así como contar con perfil

Promep, esto es, haber acreditado todos los requisitos que un Profesor Investigador de Tiempo Completo requiere para ser considerado como tal. Además, todos ellos son investigadores que dentro de su línea desarrollan trabajos de investigación, de innovación y generación de conocimientos, que publican libros y también se desarrollan dentro de la movilidad a diversas universidades en el extranjero, tanto con estancias de investigación, como con su participación como conferencistas y ponentes en congresos internacionales relacionados con su línea de investigación, aunado a esto, debe destacarse que se trata de investigadores que en lo que respecta a su actividad en la docencia, se encuentran ampliamente certificados pues se desempeñan tanto a nivel de la licenciatura, como de la maestría y del doctorado, lo que da garantía de su amplia experiencia en la docencia en los tres niveles de la educación superior en México. Los estudiantes de ambos programas educativos, al estar acreditados dichos programas ante el PNPC de CONACYT, obtienen una beca mensual que para el caso de la maestría en derecho se cuantifica en el equivalente a 4.5 salarios mínimos general vigente para el

Distrito Federal, por tanto, considerando que el salario mínimo diario vigente en el Distrito Federal asciende actualmente a la cantidad de \$62.33 que multiplicado por 30 días importa la cantidad mensual de \$1,869.90 luego entonces, la beca mensual que reciben los alumnos de la maestría en derecho corresponde a la cantidad de \$8,414.55 cantidad que en dólares americanos al tipo de cambio vigente en México corresponde aproximadamente a la cantidad de 650 USD; en el caso de los estudiantes del doctorado la beca mensual que reciben corresponde al importe de 6 salarios mínimos general vigente en el Distrito Federal, que asciende a la cantidad de \$11,219.40, esto es, aproximadamente 860 USD, beca que permite en dichas condiciones que los estudiantes sean de tiempo completo.

La División de Estudios Superiores de Posgrado desarrolla trabajos de vinculación con los sectores productivos tanto públicos como privados mediante la concertación y celebración de convenios académicos de colaboración que permiten que tanto estudiantes como docentes puedan desarrollarse en dichos espacios mediante su participación en Congresos, Coloquios, Diplomados y demás, así como para desarrollar trabajos de investigación y de publicación, esta vinculación no sólo se procura con instituciones nacionales, sino que se trabaja también con instituciones del extranjero como son en la actualidad, la firma de convenios con universidades extranjeras.

Se cuenta también con un programa de seguimiento de egresados que tiene como fin principal, el obtener la satisfacción del egresado en su vida profesional como producto de sus estudios de posgrado, así como el obtener también la satisfacción del empleador con el actuar de un egresado de un programa educativo de calidad. Es también importante señalar que ambos programas educativos son revisados constantemente y llevados a su actualización mediante reestructuras de los planes y programas de estudios, lo que permite estar vigentes tanto en los aspectos pedagógicos como en los relativos a las nuevas corrientes y doctrinas de los conocimientos jurídicos, además con dicha reestructuración se logra solventar las limitaciones y deficiencias que en la marcha se detectan en la operatividad del programa educativo.

Debe agregarse que las tecnologías de la información y de la comunicación se implementan en la labor educativa y por último cabe señalar que a pesar de que la Universidad Autónoma del Estado de Morelos trabaja con un presupuesto reducido, de manera constante se realizan obras de la infraestructura, de las instalaciones y de su equipamiento con el fin de mantener en buen estado las instalaciones.

En atención al estudio particular de las condiciones en que se ha desarrollado la División de Estudios Superiores de Posgrado, de las acciones y estrategias adoptadas y de que en su mayoría atienden a los requisitos, observaciones y recomendaciones emitidas por la UNESCO en la Declaración Mundial sobre Educación Superior, es correcto aseverar que los programas educativos de posgrado que se ofertan actualmente, maestría en derecho y doctorado en derecho y globalización, ambos pueden considerarse como programas de calidad no sólo en el ámbito nacional que ya se encuentran así certificados por el órgano evaluador competente, sino que también en el ámbito internacional pues se cumple de buena medida con dichas recomendaciones.

CONCLUSIONES

La División de Estudios Superiores de Posgrado de la Facultad de Derecho y Ciencias Sociales de la Universidad Autónoma del Estado de Morelos, está realizando un trabajo serio, con atención y dedicación para continuar formando parte del PNPC de CONACYT, no por el simple hecho de formar parte de los programas nacionales de calidad, sino que en realidad, porque ello impone en beneficio de los estudiantes, la existencia de un programa educativo que se avoca a cumplir con todos los requisitos necesarios para lograr la excelencia y la calidad educativa, lo que les garantiza, a estudiantes y comunidad en general, la formación de profesionistas que con una amplia solvencia en sus conocimientos, con grandes competencias para desarrollarse en los diversos espacios laborales que la sociedad reclama y con un alto grado de convicción de los deberes que como profesionales del derecho deben asumir en beneficio del desarrollo humano. La misión de la universidad hoy debe enfrentar nuevos retos, no se trata exclusivamente de formar profesionistas para la actividad laboral. “Si queremos que la escuela forme individuos con capacidad de pensar por sí mismos, de encontrar un sentido al mundo en que viven y a su propia vida, individuos que se desarrollen al máximo en sus capacidades, que cooperen con los otros, tenemos que adecuar la escuela a esos fines, para lo que necesita el cambio radical. Una reflexión sobre los fines de la educación es una reflexión sobre el destino del hombre” (Delval, Juan2004, *Los fines de la educación*, 9ª ed. Ed. Siglo XXI, México, p. 88).

Las recomendaciones de la UNESCO en la Declaración Mundial Sobre Educación Superior, constituyen una aportación significativa para poder determinar si un programa educativo es de calidad, dichas recomendaciones tienen reconocimiento universal y además unifican los criterios que para evaluar la calidad educativa de un programa deben de ser considerados, lo que impide juicios subjetivos y unilaterales que además de todo, se alejan a una voluntad internacional puesta de manifiesto por los estados signantes de dicha declaratoria. Los programas de maestría en derecho y doctorado en derecho y globalización que han sido motivo de estudio si logran adecuarse a tales recomendaciones en beneficio de una educación de calidad.

EVALUACIÓN DE LA COMPETITIVIDAD DE LOS RESTAURANTES DE COCINA INTERNACIONAL

María Magdalena García Ramírez, Universidad Autónoma de Baja California

Virginia Guadalupe López Torres, Universidad Autónoma de Baja California

RESUMEN

La presente ponencia estudia la competitividad de las empresas cuyo giro es la preparación y venta de alimentos en establecimientos denominados restaurantes. La competitividad se mide a través de un cuestionario diseñado a partir del mapa de competitividad del Banco Interamericano de Desarrollo en el cual se incluyen las variables aseguramiento de la calidad, recursos humanos, innovación, tecnologías de información y comunicación y contabilidad y finanzas. La investigación se realizó con restaurantes de cocina internacional de la ciudad de Ensenada, México. Los resultados indican que en promedio los objetos de estudio tienen un nivel de competitividad medio, presentando oportunidades de mejora en todas las variables, pero principalmente en recursos humanos, a fin de que el capital humano aporte a las empresas su conocimiento y experiencia a favor de su competitividad.

PALABRAS CLAVE: Competitividad, Restaurante.

ASSESSING THE COMPETITIVENESS IN INTERNATIONAL CUISINE RESTAURANTS

ABSTRACT

This work studies the competitiveness of the enterprises of preparation and sale of food, in the international cuisine known as restaurants. The competitiveness is measured by one questionnaire survey designed by the map of competitiveness from the IDB that includes QA, Human Resources, Innovation, Information and Communication Technology and Accountant and Finance. This Research was done with International Cuisine Restaurants of Ensenada, Mexico. The results indicate that in average, the subjects of this study have a half level of competitiveness, presenting opportunities of improvement in all variables but mainly in Human Resources, so that human capital contribute to the companies with their knowledge and experience for competitiveness.

JEL: M19

KEYWORDS: Competitiveness, restaurants

INTRODUCCIÓN

La Industria Restaurantera en México está representada por 345,000 establecimientos registrados formalmente en la Cámara Nacional de la Industria Restaurantera y de Alimentos Condimentados (CANIRAC), que opera en todo el país, de los cuales el 95% son micro, pequeñas y medianas empresas (CANIRAC, 2010). De acuerdo con CANIRAC (2010), lo que afecta a la industria restaurantera en México está conformado por diversos aspectos que a continuación se mencionan: leyes locales y federales para la reducción de consumo de tabaco con su entrada en vigor en el año 2008 (según estadísticas el 98% de los restaurantes a nivel nacional son locales no mayores a 150 metros cuadrados; lo que no permite tener áreas específicas para no fumadores y fumadores); la recesión económica mundial de 2009 que se reflejó en una disminución del 11.7% de las ventas; la emergencia sanitaria por la influenza AH1N1 de mayo de 2009 que ocasionó la caída de las ventas en un 60%. En ciudades como México, Cancún,

Cozumel, San Luis Potosí y Los Cabos la disminución fue del 90% y se estima que cerraron alrededor de 6,000 establecimientos; la inseguridad y el incremento de la delincuencia, con fuerte impacto en estados como Chihuahua, Baja California, Sinaloa, Guerrero, Nuevo León y Michoacán, que además de la baja de ventas, originó el cierre de restaurantes; la informalidad e ilegalidad toleradas, se estima que existen 700 mil puestos de comida en este rubro; aumentos en las cargas tributarias en los años 2009 y 2010 como el Impuesto Empresarial de Tasa Única (IETU) y el Impuesto a los Depósitos en Efectivo (IDE); por último, la deducibilidad de comidas de negocios en restaurantes de solo el 12.5%, cuando en los Estados Unidos de Norteamérica y Canadá se permite el 50% (CANIRAC, 2010).

A pesar del escenario adverso de los últimos años, la industria restaurantera en el país genera 850,000 empleos directos y 2.2 millones de empleos indirectos. Representa el 2.2% del Producto Interno Bruto (PIB) nacional con un valor estimado de \$140 mil millones de pesos y cerca del 23% del PIB Turístico (Instituto Nacional de Estadística y Geografía, 2009). Baja California (B.C.) en el área de gastronomía ofrece un calendario de eventos anual en donde existe una vasta riqueza gastronómica que rescata la cocina tradicional del estado. La comida del mar, los mariscos frescos preparados en todas las modalidades imaginables, el pan, el rompo de Tecate, la comida china de Mexicali, la ensalada César de Tijuana, el chorizo de abulón de Isla de Cedros, los tacos de pescado y las fiestas de la vendimia de Ensenada, en donde se elabora el 90% de los vinos reconocidos en el país (Gobierno del Estado de Baja California, 2011). Además, en el estado se preparan olivas curtidadas, aceite de oliva, mermeladas y quesos artesanales, son algunos de los productos de tradición dado que son maridajes; todos estos productos suelen acompañarse con las delicias del mar para dar origen a la cocina BajaMed, la cual es una síntesis de la cocina mediterránea con un colorido y picante toque de México, que se enriquece día a día con productos de los valles y costas de Baja California, como las verduras en miniatura, el mejillón, la langosta y el atún, todos productos con calidad de exportación.

En 2010 Ensenada contaba con 154 negocios registrados en el directorio de CANIRAC, 32 de ellos restaurantes de cocina internacional para los comensales del sector turismo. Por otra parte debe destacarse que al emprender un negocio en algunos casos, la toma de decisiones se realiza por medio de la intuición o por el deseo personal de crear una empresa como patrimonio familiar, pero no se hace algún estudio formal para determinar si ese negocio satisface realmente una necesidad social. Por este motivo, escasamente existen objetivos concretos de crecimiento a largo plazo. Esto es ejemplificado por la apertura de fondas, cenadurías y pequeños restaurantes que al poco tiempo de abrir, cierran afectando no sólo su propia economía, si no la de la sociedad de Ensenada, al dejar sin fuentes de empleo a los trabajadores que laboraban en ellas. En 2011 Ensenada vio cerrar tres restaurantes considerados de cocina internacional, uno de ellos tenía más de 25 años de servicio. Considerando estos antecedentes se define como objetivo de la investigación medir el nivel de competitividad de los restaurantes de cocina internacional en la ciudad de Ensenada, B.C. con base al de Mapa de Competitividad del Banco Interamericano de Desarrollo (BID), utilizando el directorio de CANIRAC 2010, para definir a los objetos de estudio. Teniendo en cuenta que un restaurante de cocina internacional es aquel que ofrece platillos en su menú de comidas elaboradas en las ciudades importantes alrededor del mundo.

REVISION LITERARIA

Para poder definir la competitividad es necesario determinar el nivel de análisis, como el espacio analítico en el cual agentes económicos se ubican de acuerdo a su nivel de agregación macro y micro (Lombana y Rozas, 2009). En el nivel macro se define a la competitividad cualitativamente a través de su rendimiento comercial, balanza de pagos, comportamiento de la tasa de cambio, entre otras medidas y cuantitativamente, a través de la actividad científica y tecnológica del país o los resultados de la investigación (Esser, Hillebrand, Messner y Meyer, 1996). El modelo conocido como competitividad sistémica se propuso como resultado de un debate dentro de la Organización para la Cooperación y el Desarrollo Económico (OCDE), el cual plantea cuatro niveles para explicar los elementos que permiten la

posibilidad de competir a las empresas en un determinado país. Estos niveles son: meta, macro, meso y micro (Esser, *et al*, 1996).

En nivel micro, son los sectores, empresas y productos en los que se evalúa la competitividad. Algunas formas de medir y definir la competitividad en este nivel, asumen la función de creación de bienestar (Garelli, 2007). La competitividad ha sido descrita por un gran número de autores, la mayoría coinciden en destacar la capacidad que tiene una empresa para generar ventajas competitivas de forma sustentable para producir bienes o servicios, siendo así capaz de actuar ante la rivalidad suscitada al relacionarse con otra empresa (Viedma, 1992; Álvarez y García, 1996).

La teoría de recursos y capacidades, de acuerdo con Grant (1996), es consistente con el enfoque propuesto en los trabajos de Roquebert, Phillips, Wesfall, (1996) y Camisón (2001); en donde se afirma que una empresa obtendrá éxito en los mercados al depender fundamentalmente de sus recursos y la forma en cómo los gestiona. De esta manera, es posible proponer que las ventajas competitivas de las empresas se basan en la gestión de sus recursos, sean estos tangibles, intangibles y humanos.

Los recursos tangibles están definidos por una adecuada gestión financiera (Álvarez y García, 1996). Además los recursos intangibles agrupan: recursos tecnológicos (Álvarez y García, 1996); innovación (Viedma, 1992; Donrrosoro *et al*, 2001); capacidades de marketing (Álvarez y García, 1996; Donrrosoro *et al*, 2001) y calidad (Camelo *et al*, 1999). En cuanto a los recursos humanos, estos se pueden agrupar en: políticas y procesos de dirección de recursos humanos (Yusuf, 1995; Camelo *et al*, 1999; Donrrosoro *et al*, 2001); capacidades directivas (Puig, 1996; Donrrosoro *et al*, 2001) y sistemas de información (Viedma, 1992; Donrrosoro *et al*, 2001). Según Rivas (1999), la competitividad se enfoca, no sólo en la producción y comercialización, sino que se centra en los aspectos conexos a ellas. Enfatizando que la competitividad es una característica interna al sistema empresa; y que una empresa se mantiene competitiva sólo si es capaz de adecuarse constantemente a las nuevas condiciones del entorno, el cual puede estar determinado por factores institucionales más que por la oferta y la demanda.

Existen muchos modelos para medir la competitividad, la propuesta del Mapa de Competitividad del BID está integrado por ocho áreas (variables), que son: planeación estratégica, aprovisionamiento, aseguramiento de la calidad, comercialización, contabilidad y finanzas, recursos humanos, gestión ambiental y sistemas de información (Saavedra, 2010). Este modelo se consideró como base para lograr el objetivo de la investigación, realizando una adecuación a las características del sector restaurantero. Seleccionado tres variables del mapa: aseguramiento de la calidad, recursos humanos, y contabilidad y finanzas; e incorporando las variables innovación y Tecnologías de la Información y Comunicación (TIC). La innovación se incorpora dada la necesidad de renovación de productos en el menú que deben realizar los restaurantes, y las TIC por su importancia para el control de las operaciones, y como herramienta de marketing al facilitar la comunicación con los clientes a través del uso de redes sociales.

METODOLOGÍA

La investigación se define como cuantitativa, por el uso de la recolección y el análisis de datos para contestar preguntas de investigación y probar hipótesis establecidas, se usa la estadística para establecer con exactitud patrones de comportamiento en la población (Hernández, Fernández y Baptista, 2003). El método utilizado se define como hipotético-deductivo, dado que parte de una hipótesis, un razonamiento previo sobre la competitividad en los restaurantes, el cual va a ser verificado, Pelekais (2007). Se trata de una investigación correlacional, siendo pertinente destacar que los estudios correlacionales pretenden medir el grado de relación que existe entre dos o más conceptos o variables, en un contexto en particular donde la utilidad y propósito principal de este tipo de estudios es conocer cómo se comporta una variable conociendo el comportamiento de otras variables relacionadas (Hernández *et al*, 2003).

Considerando el concepto anterior, se puede determinar que la presente investigación de acuerdo con su finalidad y alcance, es de tipo correlacional, porque busca determinar si el aseguramiento de la calidad, la capacitación y motivación de los recursos humanos, la innovación en procesos, producto, organización y mercadotecnia, las tecnologías de información y comunicación y la contabilidad y las finanzas (variables independientes) influyen en el éxito competitivo de los restaurantes de cocina internacional (variable dependiente). Lo anterior se traduce en que específicamente para este estudio, se buscó observar el grado de relación entre los valores obtenidos en las cinco variables señaladas y la competitividad.

La recolección de la información inicio en junio de 2012 y finalizó en agosto del mismo año. El trabajo de campo consistió en aplicar una encuesta a los gerentes generales o a los dueños de los restaurantes de cocina internacional de Ensenada. La población seleccionada fueron los restaurantes de cocina internacional de la ciudad de Ensenada B.C. Como la población $N=32$ en principio se pretendió realizar un estudio poblacional, sin embargo al acudir a los establecimientos se encontró lo siguiente: tres habían cerrado y doce no accedieron a responder el cuestionario, por lo tanto la investigación se realizó con muestreo no probabilístico de sujetos voluntarios, cuya muestra $n=17$, es decir representa el 53.12% de la población. El cuestionario se diseñó con 75 preguntas, se realizó un estudio piloto en tres restaurantes, se recibieron observaciones que permitieron mejorar el instrumento, al final el cuestionario incluyó 78 preguntas, divididas en cinco bloques, uno por variable. La fiabilidad del instrumento se calculó a través del coeficiente alpha de Cronbach obteniéndose un valor de 0,934 para todo el cuestionario. Los resultados de fiabilidad para cada uno de los bloques (preguntas por variable) con los cuales se miden las variables independientes se ilustran en la tabla 1.

Tabla 1: Variables y Alpha de Cronbach

Variable	Items	Alfa de Cronbach
Aseguramiento de la calidad	Preguntas 1-12	0.828
Innovación	Preguntas 13-33	0.806
Recursos Humanos	Preguntas 34-51	0.827
Tecnologías de Información y Comunicación	Preguntas 52-61	0.892
Contabilidad y Finanzas	Preguntas 62-78	0.759

La tabla muestra las variables independientes del instrumento utilizado, el número de preguntas para cada variable y el resultado de fiabilidad determinado con alfa de Cronbach. Fuente: Elaboración propia con datos de investigación de campo y apoyo de SPSS

Las variables anteriores se ubican en valores por arriba del 0.75, lo que significa que miden lo que deben medir. De acuerdo con Ruiz (1998) citado por Pelekais et al. (2007) las variables aseguramiento de calidad, innovación, recursos humanos, y TIC tienen un coeficiente de confiabilidad muy alto, mientras para la variable contabilidad y finanzas es alta.

RESULTADOS

Primeramente se describe al objeto de estudio, indicando que los restaurantes en promedio tienen 12 años de funcionamiento, con desviación estándar de 9.906 años. En relación al gerente que atendió a responder la encuesta la estadística ilustra que en promedio tiene 9.47 años laborando para la empresa con desviación estándar de 9.69 años. En la tabla 2 se ilustran los resultados obtenidos por cada restaurante en cada una de las variables independientes. Respecto a la variable aseguramiento de la calidad, la calificación promedio se ubica en 52.41 puntos, es decir se ubica en el nivel de calidad aceptable; el 47% de los establecimientos de acuerdo a su evaluación se ubica en el nivel de alta calidad; el 29% de ellos se ubican con calidad media, y se destaca que solo un establecimiento obtuvo 38 puntos que lo ubica en el nivel de baja calidad.

Tabla 2: Valoración de las prácticas de los restaurantes según variables

Restaurante	Calidad	Innovación	RH	TIC	Contabilidad y Finanzas
1	60	88	86	50	80
2	49	61	70	31	56
3	50	86	71	38	61
4	57	90	68	44	75
5	38	79	61	33	63
6	55	81	77	40	79
7	52	80	70	37	66
8	52	80	69	39	63
9	49	78	69	38	61
10	51	64	70	28	61
11	55	73	59	24	66
12	55	80	72	28	61
13	52	80	70	38	66
14	54	78	66	45	71
15	44	72	65	37	67
16	56	75	47	31	65
17	62	89	81	48	78
Promedio	52.4117647	78.4705882	68.8823529	37	67

La tabla muestra los valores resultantes de medir las variables independientes con el instrumento. Los cuadros sombreados con gris ilustran los valores más bajos. Fuente: Elaboración propia con datos de investigación de campo

Respecto al tema de innovación, la calificación promedio alcanzó los 78.47 puntos, lo que significa que en general los restaurantes son innovadores, el análisis particular de los resultados indica que cinco restaurantes (29%) fueron evaluados con un nivel alto de innovación, doce de ellos (70%) se ubican con un nivel medio. En relación a la variable recursos humanos la calificación promedio es de 68.88 puntos, es decir se ubica en un nivel medio el manejo del personal con propósitos de competitividad. Particularmente destacan tres (17.6%) restaurantes que fueron evaluados con un nivel alto en Recursos Humanos, trece (76.47%) están trabajando con un nivel medio y solo uno de los restaurantes está trabajando con un nivel bajo, por lo que se determina que la variable tiene un área de oportunidad en los restaurantes. En el caso de las TIC cuatro (23.52%) restaurantes fueron calificados con un nivel alto; diez (58.82%) están trabajando con un nivel medio y tres (17.64%) están trabajando con un nivel bajo.

Lo que representa un área de oportunidad para utilizar distintas herramientas de hardware, software y comunicación para facilitar tanto la atención de comensales como el control de tareas e inventarios en el restaurante. Por último los resultados de contabilidad y finanzas indican que cinco (29%) de los restaurantes poseen un nivel alto en el manejo de esta variable; doce (70.58%) están trabajando con un nivel medio. Por lo que se determina que esta variable se ubica en el nivel medio a alto en relación a su contribución con la competitividad del restaurante. La suma de los resultados de cada una de las variables arroja la puntuación de la competitividad de cada restaurante, la cual se valora de acuerdo con el baremo de intensidad descrito en la tabla 3.

Tabla 3: Baremo de intensidad de la competitividad

Rango de puntuaciones	Nivel de competitividad
78-154	Pobre
155-232	Bajo
233-310	Medio
311-382	Alto

La tabla muestra los rangos de puntuaciones de la competitividad de acuerdo con la escala utilizada y el número de preguntas que tiene el cuestionario, con base en dichos rangos se establece el baremo de interpretación del nivel de competitividad que poseen los restaurantes. Fuente: Elaboración propia con datos de investigación de campo y apoyo de SPSS.

La figura uno ilustra los resultados de la variable competitividad de los objetos de estudio, además incluye el nivel promedio, el cual se ubica en los 304 puntos, es decir los restaurantes tienen en promedio un nivel medio de competitividad. Ocho establecimientos tienen calificaciones por debajo del promedio, ello significa que tienen problemas de competitividad por lo que su operación se encuentra en riesgo.

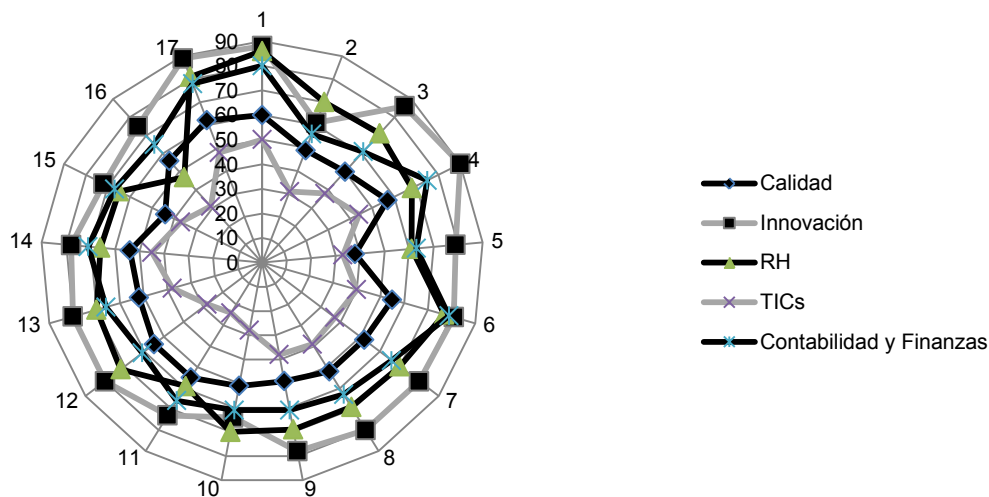

Figura 1: Nivel de competitividad en los restaurantes

La figura ilustra los resultados de competitividad medidos con el cuestionario de cada uno de los restaurantes, se omiten los nombres y en su lugar se presenta un número, que corresponde al presentado en la tabla 2. Fuente: Elaboración propia con apoyo del Excel.

La figura 2 ilustra los resultados de cada una de las variables respecto a la competitividad, el propósito de presentarla es para destacar que en apariencia la variable innovación es la que más contribuye al definir la posición competitiva del restaurante. Para comprobarlo se realiza un análisis de correlación.

Figura 2: Valoración de las variables de Competitividad en los restaurantes

La figura muestra los valores resultantes de medir las variables independientes con el instrumento. Destaca que la variable que menos impacta a la competitividad es la TIC y la que mayor impacta es la innovación. Fuente: Elaboración propia con datos de investigación de campo y apoyo de Excel

La tabla 4 ilustra los resultados de realizar el análisis de correlación a través del coeficiente Spearman Rho dado que las variables se midieron de forma indirecta y se uso una escala ordinal para su medición.

Tabla 4: Correlaciones entre variables

	Años de servicio	Calidad	Innovación	RH	TIC	Contabilidad y Finanzas	Competitividad
Años de servicio	1.000	-.198	.016	-.141	.254	.217	.002
Calidad	-.198	1.000	.569(*)	.305	.398	.629(**)	.619(**)
Innovación	.016	.569(*)	1.000	.549(*)	.709(**)	.526(*)	.867(**)
RH	-.141	.305	.549(*)	1.000	.406	.158	.565(*)
TIC	.254	.398	.709(**)	.406	1.000	.673(**)	.868(**)
Contabilidad y Finanzas	.217	.629(**)	.526(*)	.158	.673(**)	1.000	.740(**)

* La correlación es significativa al nivel 0,05 (bilateral). ** La correlación es significativa al nivel 0,01 (bilateral). La tabla muestra los resultados del análisis de correlación utilizando el coeficiente Spearman Rho entre las variables independientes y dependientes. Ilustrando que existe una relación lineal directa entre ellas. Fuente: Elaboración propia con datos de investigación de campo y apoyo de SPSS

Los resultados de la tabla 4 indican que la variable calidad se relaciona con las variables innovación y contabilidad y finanzas; la variable RH (recursos humanos) sólo se relaciona con la variable innovación; la variable TIC se relaciona con las variables innovación y contabilidad y finanzas; mientras la variable competitividad se relaciona con todas las variables independientes, pero en menor medida con la variable RH y en mayor medida con la variable TIC.

CONCLUSIONES

El presente estudio plantea que la competitividad en restaurantes se relaciona principalmente con cinco variables, las cuales son: innovación, recursos humanos, aseguramiento de la calidad, TIC y contabilidad y finanzas. La primera de ellas es muy importante para determinar la fidelidad del cliente, dado que se busca su asistencia continua para degustar platillos, lo cual al mismo tiempo no debe resultar monótono, por ello es preciso que los restaurantes de forma continua (por temporada) renueven su menú, a fin de ofrecer una amplia variedad a sus clientes. La variable recursos humanos pone de manifiesto la relevancia que tiene el capital humano en este sector, donde muchas veces se depende de un chef para mantener la calidad, presentación, sabor e inocuidad en los platillos. De ahí la relevancia de tener una adecuada gestión de los recursos humanos, donde se contemplen estrategias para su permanencia o suplencia en caso de que salgan de la empresa. Las TIC son otra variable de gran impacto en la competitividad, considerando el desarrollo y penetración de las redes sociales las empresas en general y en específico los restaurantes debieran incluirlas dentro de sus estrategias de mercadotecnia y publicidad. También se deben usar herramientas para tener un mejor control de inventarios dado que muchos insumos y materias primas son perecederos. Respecto a los resultados de valorar la competitividad puede inferirse que en general los restaurantes de cocina internacional de Ensenada, B.C. son competitivos, pero deben trabajar en las áreas de oportunidad que les presentan las variables a fin de consolidar su permanencia en el mercado.

LA GESTIÓN FINANCIERA COMO FACTOR DE COMPETITIVIDAD PARA LAS PYMES FAMILIARES EN LA INDUSTRIA TEXTIL EN YUCATÁN, MÉXICO

Martha Isabel Bojórquez Zapata, Universidad Autónoma de Yucatán

Antonio Emmanuel Pérez Brito, Universidad Autónoma de Yucatán

María Teresa González Barajas, Centro de Educación Superior del Estado de Sonora

RESUMEN

Este trabajo tiene como objetivo analizar las principales diferencias en la gestión financiera en las pymes familiares y no familiares de la industria textil del estado de Yucatán, considerando variables como: financiación, endeudamiento, rentabilidad, crecimiento, utilización de información contable y financiera, implementación de los sistemas de control de gestión (SCG) y rendimiento; como factores estratégicos y sostenibles de competitividad empresarial, considerando el marco de la Teoría de la Agencia (Fama, 1980), que identifica que las empresas familiares sufren menos los costes de la agencia porque la propiedad y la gestión están en poder de la familia; en la Teoría de la Jerarquía Financiera (Myers y Majluf, 1984; Holmes y Kent, 1991), que establece un orden al decidir por las fuentes de financiación a contratar; así como de la Teoría de la Contingencia, que se basa en el estudio de los sistemas de los SCG de las empresas y su rendimiento (Otley, 1980; Weill y Olson, 1989; Tiessen y Waterhouse, 1983; Chenhall, 2003). El estudio será cuantitativo, correlacional, a través del método de análisis de la varianza (ANOVA), no experimental, transversal, para la obtención de la información se aplicará un cuestionario que se diseñará específicamente para obtener la información a analizar.

PALABRAS CLAVE: Empresa familiar, gestión financiera, industria textil.

FINANCIAL MANAGEMENT AS A COMPETITIVE FACTOR FOR SMES FAMILY IN THE TEXTILE INDUSTRY IN YUCATAN, MEXICO

ABSTRACT

This paper's objective is to analyze the main differences in Financial Management in the family and nonfamily Small and Medium Enterprises (SME's) in the textile industry, considering variables such as: finance, debt, profitability, growth and use of accounting and financial information, implementation of the management control systems (MCS) and performance; as strategic and sustainable factors of business competitiveness, considering the agency theory for this purpose (Fama, 1980), which identifies that family enterprises have fewer agency costs because ownership and management are held by family members; in the financial hierarchy theory (Myers y Majluf, 1984; Holmes y Kent, 1991), which establishes a specific order to decide which funding sources will be hired, as well as the Contingency Theory which is based on the study of the SCG systems of the business and its performance. (Otley, 1980; Weill y Olson, 1989; Tiessen y Waterhouse, 1983; Chenhall, 2003). The study will be quantitative, correlational, using an analysis of variance (ANOVA), it is non-experimental, cross-sectional and in order to obtain information which will be analyzed, a questionnaire will be designed and applied.

KEYWORDS: Family business, financial management, Textile Industry.

INTRODUCCIÓN

Según Ruelas (2008) citado en Esparza, García-Pérez y Duréndez (2010), más del 95% de las empresas en América Latina son Pequeñas y Medianas Empresas (pymes), de las cuales señala Belausteguigoitia (2010), que nueve de cada diez pymes son familiares, sin embargo este mismo autor menciona que lamentablemente una de las características de las empresas familiares, es que suelen tener una vida más corta que las no familiares. Pero que la gran mayoría de las empresas sean pequeñas no significa que para ellas no sea importante crecer. La historia de las empresas grandes demuestra que éstas fueron pequeñas, pero sólo en un principio. Según la información del Instituto Nacional de Estadística y Geografía (INEGI, 2004), se estima que en México existían 2.84 millones de empresas, de las cuales el 99.7% son pymes que generan el 42% del Producto Interno Bruto (PIB) y 64% del empleo, esto muestra el gran potencial que tienen las pymes para contribuir al crecimiento económico. Posteriormente el censo del INEGI (2010), reportó que la contribución de las pymes al PIB ha disminuido al pasar del 42% al 34.7%. Esta misma fuente menciona que las pymes contribuyen fuertemente con la generación de empleo en el país, debido a que mantienen el 71.9% de los empleos de las empresas del sector productivo.

En Yucatán existían 24,496 empresas de las cuales el 0.51% se trataba de empresas grandes de tal forma que el 99.49% del total de empresas del estado estaba representada por las pymes según el Sistema Empresarial Mexicano (SIEM, 2008). Cifra que incrementó a 28,554 empresas al siguiente año (SIEM, 2009). Para el municipio de Mérida, con los datos reportados por el SIEM (2008) existían 18,842 empresas, de las cuales las pymes representaban el 99.23% de las empresas meridanas. Diversos estudios empíricos han demostrado que existen diferencias de gestión entre las empresas familiares y las no familiares, las cuales deben investigarse a profundidad (Daily y Dollinger, 1993; Gallo, Tápies y Cappuyns, 2004; Laitinen, 2008). La gestión financiera es un tópico muy importante dentro de las empresas familiares, ya que ésta se encuentra influenciada por los objetivos que la familia tiene en la empresa, originando un efecto importante en su competitividad y permanencia en el mercado. En este sentido, estudios previos han analizado la estructura financiera (Romano, Tanewski y Smyrniotis, 2000; la rentabilidad (Carney y Gedalovic, 2002; Anderson y Reeb, 2003), el crecimiento (Daily y Dollinger, 1993). La información contable como parte de la gestión financiera en las empresas familiares es esencial para que el gerente y su equipo de administración puedan tomar las decisiones más adecuadas en sus diferentes ámbitos de actuación. Diversos estudios indican que las empresas familiares utilizan en menor medida la información contable y financiera para la toma de decisiones comparado con las no familiares (Ho y Wong, 2001; Gallo, Tápies y Cappuyns, 2004; Collis y Farvis, 2002).

En cuanto a los sistemas de control de gestión (SCG), diversos estudios empíricos han demostrado que existen diferencias en la implementación de estos sistemas entre las empresas familiares y las no familiares (Daily y Dollinger, 1993; Kotey, 2005; Laitinen, 2008). El rendimiento de las empresas familiares, a través de la implementación y utilización de los SCG también juega un rol importante, en donde los SCG se convierten en herramientas prioritarias que los gerentes deberían adoptar para planear, presupuestar, analizar, medir y evaluar información útil para la adecuada toma de decisiones (Laitinen, 2008). Un informe elaborado por la Universidad Autónoma de Yucatán (UADY, 2011), señala que la crisis de la industria cordelera ha significado para Yucatán una disminución de la importancia del sector manufacturero en relación a otras actividades económicas. Así, la industria pasó de ocupar el 25% del PIB del estado de Yucatán en 1975, año en que aún tenía cierto peso la industria desfibadora y cordelera dedicada a la producción de cordel de henequén, a un 17% en 1980, a un 16% en 1985 y a un 14.2% en 2010. Es decir, que en 35 años la importancia de la producción industrial textil en la estructura económica global se ha reducido a la mitad. La importancia de la industria textil y del vestido en Yucatán se debe a su capacidad para generar empleos y ser una actividad que se presta al desarrollo de pequeños, medianos y micro empresarios. Así, en la industria textil y del vestido se ubicó en 2008 el 10.7% del total de las empresas manufactureras y representó el 24 por ciento del personal ocupado en la industria.

En ese subsector se otorgó el 29.8% de las remuneraciones totales de la industria y se obtuvo el 5% de la producción bruta total. En la industria del vestido se ubica uno de los sectores más fuertes vinculados a la pequeña y mediana industria y también al empleo de carácter informal y aleatorio, (INEGI, 2011).

El objetivo de este trabajo consiste en analizar las principales diferencias en la gestión financiera en las pymes familiares y no familiares de la industria textil del estado de Yucatán, tomando en consideración variables, tales como: financiación, endeudamiento, rentabilidad, crecimiento, utilización de información contable y financiera, implementación de los sistemas de control de gestión (SCG) y rendimiento, como factores estratégicos y sostenibles de competitividad empresarial. Para desarrollar este trabajo se realizará un estudio empírico de corte transversal del ejercicio 2011, con una muestra de 24 pymes de la industria textil yucateca, la cual estará integrada por pymes familiares y no familiares. Esta investigación se presenta organizada como sigue. En la sección de revisión de literatura se plantean los argumentos que sustentan los conceptos de gestión financiera, estructura financiera de las empresas familiares, fuentes de financiación, endeudamiento, rentabilidad, crecimiento, información contable y financiera y sistemas de control de gestión (SCG). Posteriormente se presenta la metodología que se aplicará, en donde se describe el procedimiento que se aplicará para la correlación de las variables con el fin de identificar su importancia en la competitividad en las pequeñas y medianas empresas (pymes) de la industria textil en el estado de Yucatán, México. Finalmente, se presentan los resultados esperados de la investigación, el alcance y las limitaciones.

REVISIÓN DE LITERATURA

Gestión Financiera

Burk y Lehnman (2004), señalan que la gestión financiera para las pequeñas y medianas empresas, puede resultar de interés para las mismas, dado que les pueden permitir permanecer y madurar dentro del tejido empresarial. La gestión financiera a largo plazo se ocupa, por consiguiente, de la realización de una planificación futura de la empresa buscando el modo de efectuar las inversiones adecuadas en activo fijo, de forma que se evite la infrautilización de éstas, controlando la rentabilidad generada por las mismas e intentando optimizarlas. Además, analiza la capacidad de la empresa para asumir deudas. Por otro lado, la gestión financiera a corto plazo se preocupa de la problemática relacionada con la financiación del activo circulante. Es decir, busca los fondos suficientes para hacer frente a las inversiones a corto plazo (existencias, deudores, tesorería), con el fin de que nunca se produzca ruptura en el ciclo de explotación, ya que el desfase posible entre cobros y pagos podría ocasionar flujos de caja negativos; de ahí la necesidad de disponer de recursos en tesorería. Hoy más que nunca la gestión financiera mantiene un protagonismo en la empresa y por eso se analizan cada una de sus variables: financiamiento, endeudamiento, rentabilidad, crecimiento, utilización de la información contable y financiera.

Estructura Financiera De Las Empresas Familiares

Según Myers y Majluf (1984), la estructura financiera en las empresas familiares indica la forma en que se financian los activos de la empresa y se compone primordialmente de las diversas fuentes de financiación tanto internas como externas. La teoría de la jerarquía de las preferencias financieras (Pecking Order), establece la existencia de un orden en la elección de fuentes de financiación a contratar. Según esta teoría, lo que determina la estructura financiera de las empresas es la intención de financiar nuevas inversiones: En primer lugar, de manera interna con fondos propios; seguida con deuda privada de bajo riesgo como la bancaria y, en último lugar, con emisión de acciones. Estudios como el de Holmes y Kent (1991) encuentran que los gerentes financieros tienen un orden de preferencia de fondos acorde con la Teoría Pecking Order. Ellos observan una jerarquía restringida para las pymes y confían más en la deuda a corto plazo, en virtud de que emitir capital accionario no es una buena opción ya que no puede estar disponible o no interesa al propietario por temor a perder el control de la empresa; por tanto, las

empresas menos rentables son las que dependen mayormente de la deuda a largo plazo con la consecuente dificultad a su acceso, debido a las mayores asimetrías de información.

El origen de esta preferencia está relacionado con el temor de la familia a perder el control de la empresa, cuando ésta no pueda liquidar la deuda o cuando entren nuevos inversionistas a formar parte del capital (Romano, Tanewsky y Smyrniotis, 2000; Mishra y McConaughy, 1999). Ward (2001), muestra como de los fracasos de las empresas familiares, 10% se debe generalmente a la falta de recursos financieros.

Romano, Tanewsky y Smyrniotis (2000), explican que la principal fuente de financiación de las pequeñas empresas familiares, cuando comienza el ciclo de vida de la empresa o se planifica su crecimiento, se basa en la utilización de préstamos externos de los miembros familiares. Gregory, Rutherford, Oswald y Gardiner (2005), indican en un estudio realizado con pequeñas y medianas empresas de los Estados Unidos, que las pequeñas empresas son forzadas a obtener financiamiento interno (personal o de familiares), a aceptar los altos costos de los fondos y a utilizar alternativas de financiación a corto plazo.

Rentabilidad

Existen diversos estudios en diferentes países que analizan la diferencia en la rentabilidad entre empresas familiares y no familiares. La teoría de la agencia dentro de la empresa familiar explica que este tipo de empresa sufre menos los costos de agencia porque la propiedad y la gestión están en poder de la familia, lo que origina mayor eficiencia en su rendimiento (Maury, 2006; Cabrera-Suárez, De Saá-Pérez y García, 2001). La rentabilidad es un aspecto primordial que las empresas deben considerar para mantenerse a largo plazo en los mercados competitivos. Mencionan que las empresas deberían ser más eficientes cuando existe una relación laboral entre propietarios y directivos, principalmente por los problemas de comportamiento oportunista del agente (gerente) respecto al principal (propietario) y los costos asociados con la supervisión del mismo. Por otra parte, Carney y Gedajlovic (2002), en un estudio realizado en Hong Kong con empresas familiares y no familiares notaron que las empresas controladas por la familia utilizan en forma más eficiente los recursos financieros, tienen mayor rentabilidad, mejor liquidez y distribuyen mayores dividendos que las no familiares.

Schulze, Lubatkin y Dino (2003), destacan que los beneficios generados en exceso por las empresas familiares son absorbidos por varias ineficiencias relacionadas con la familia. Kotey (2005), en un estudio realizado en Australia, comenta que las empresas familiares muestran mayores beneficios y márgenes netos, así como una mejor utilización de activos. En este sentido, Anderson y Reeb (2003) y Laitinen (2008), indican que las empresas familiares obtienen mayor rentabilidad que las no familiares.

Crecimiento

El crecimiento de las empresas familiares se ve influenciado principalmente por los objetivos, las metas del negocio y las prácticas de gestión que persigue el grupo familiar y también por los diferentes resultados que generan en su respectivo desarrollo. Este planteamiento se basa en la teoría de la agencia que sugiere que los gestores ajenos a la familia persiguen objetivos personales diferentes a los que mantienen los propietarios de la empresa, de tal forma, que los directivos pueden anteponer el objetivo de crecimiento sobre el de rentabilidad (Fama, 1980).

En el Reino Unido, Cromie, Dunn, Sproull y Chalmers (2001), señalaron que existe un conflicto de intereses entre la eficiencia del negocio y el interés de las familias en la empresa, lo que da como resultado una baja en su crecimiento. Las empresas familiares prefieren mantener el control de la empresa aun si esto afecta negativamente el propio crecimiento de la empresa (Gallo, Tápies y Cappuyns, 2004). Laitinen (2008), en un estudio realizado a empresas familiares y no familiares de Finlandia, indicó que las empresas familiares consiguen menores niveles de crecimiento comparado con las no familiares, debido a que el objetivo principal de la familia es mantener el control de la propiedad de la empresa.

Información Contable Y Financiera

La información contable y financiera en las empresas familiares como parte integrante de su gestión, juega un papel muy importante en la toma de decisiones. Ho y Wong (2001), explicaron que las empresas familiares son menos transparentes cuando proveen información financiera y son más reacias a proporcionar voluntariamente información contable y financiera. La información financiera en las empresas familiares puede ser más parcial que en las no familiares. Collis y Farvis (2002), encontraron en un estudio realizado a pequeñas empresas del Reino Unido, que la principal fuente de información contable y financiera es la relacionada con el flujo de efectivo, los bancos y la información contable tanto mensual como cuatrimestral. Tong (2008), mencionó que la información financiera emitida por las empresas familiares es de mejor calidad que las no familiares, debido al horizonte de inversión a largo plazo y a la imagen y supervisión que la familia tiene en la empresa.

Sistemas De Control De Gestión

La Teoría de la Contingencia desde la perspectiva de los SCG establece que el rendimiento empresarial se encuentra influenciado por diversas variables contingentes como la estrategia, la estructura, el tamaño, el entorno, la tecnología y las tareas individuales; así como por variables relacionadas con la gestión, la implementación, la estructura y el desarrollo del sistema de información, que influyen en el rendimiento del propio sistema de información, en cuanto a satisfacción, éxito, efectividad e innovación (Weill y Olson, 1989). Otley (1980), menciona que el propósito primordial de los SCG es que no sólo deben basarse en una forma de control como las medidas de rendimiento, sino en múltiples sistemas de control trabajando de manera conjunta. Tiessen y Waterhouse (1983), corroboran que la estructura de una organización depende de la tecnología y el entorno, y mencionan que la efectividad de los procesos de gestión son un factor contingente que afecta la estructura organizativa. En este sentido, Chenhall (2003), analiza la alineación de diferentes variables como las técnicas de control contables y su impacto en el rendimiento de las empresas.

Las pequeñas y medianas empresas en México: La actual estratificación de las empresas en México corresponde al pronunciamiento publicado en el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas el 30 de junio de 2009 en el Diario Oficial de la Federación. (Ver tabla 1).

Tabla 1: Estratificación de empresas

Estratificación				
Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)	Tope máximo combinado*
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	93
	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
Mediana	Comercio	Desde 31 hasta 100		
	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250	235
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

Fuente: Diario Oficial de la Federación 2009

Rodríguez y Zorrilla (2007), en un estudio sobre las pymes en España, Portugal y México señalan que las pymes tienen problemas en lo relativo al acceso al crédito bancario debido al alto grado de informalidad con el que operan. En definitiva el alcance y diseño de las regulaciones fomentan o restringen la actividad empresarial y con ello sus posibilidades de acceso al mercado de crédito, inversión, la productividad y el crecimiento. Los resultados de este trabajo arrojaron que en los tres países analizados, las pequeñas y medianas empresas juegan un papel crucial en sus economías, representando una proporción importante de las empresas, el empleo y la producción de los mismos, lo que las sitúa en un objetivo central de sus políticas de desarrollo. La autofinanciación constituye la principal fuente de financiación de sus

inversiones, producto de su mayor dificultad para acceder a los mercados crediticios. Las restricciones al crédito, junto la denominada informalidad y las dificultades para absorber nuevas tecnologías son los principales obstáculos para su desarrollo.

METODOLOGÍA

Considerando el tipo de fenómeno que se investigará, se empleará el enfoque cuantitativo, correlacional, no experimental, transversal y se realizará un análisis de correlación de las variables a través del modelo de Análisis de Varianza (anova). El trabajo de Investigación se realizará con información que se obtendrá de las pymes de la industria textil del estado de Yucatán, del ejercicio 2011. Se utilizará un cuestionario diseñado específicamente para recabar la información que se desea analizar para esta investigación, con un escalamiento tipo likert. Con base en los datos proporcionados por la Secretaría de Fomento Económico (SEFOE, 2010), la población queda conformada por 26 empresas pymes del sector textil, del estado de Yucatán, por lo tanto el tamaño de la muestra deberá de ser al menos 24 encuestados. La fórmula que se utilizará para obtener el tamaño de la muestra es la de estimación de intervalo de la proporción poblacional finita.

Modelo Estadístico Anova: El análisis de la Varianza (anova) se aplicará para contrastar la hipótesis de dependencia lineal entre la variable dependiente y las independientes, comparándose la varianza explicada por el modelo y la varianza residual. Para probar la significancia del modelo global se utilizará la hipótesis nula de que no existe relación entre las diversas variables independientes consideradas como grupo y la variable dependiente. Se llevará un análisis de correlación de pasos hacia atrás para la selección de las variables a incluir en el modelo final. Se utilizará un nivel de significancia de 5%. La bondad del ajuste se mide por el Coeficiente de Correlación Múltiple (R), que varía entre 0 y 1, mientras que el Coeficiente de determinación es R^2 y expresa la proporción de la varianza de la variable dependiente explicada. (Kazmier, 1998).

Medición de la confiabilidad: La confiabilidad se puede medir al aplicar un instrumento de medición dos o más veces a un mismo grupo de personas o aplicar dos o más instrumentos de medición a un mismo grupo en diferentes momentos. El método de mitades partidas requiere sólo una aplicación de la medición y compara puntuaciones de ambas partes que deben de estar muy correlacionadas. El coeficiente alfa de Cronbach requiere solamente una administración de medición para toda la población sin necesidad de dividirla. El método que se utilizará por las características de la investigación, será el coeficiente de cronbach.

Instrumento de medición: El método de escalamiento tipo Likert (Likert, 1976), consistirá en un conjunto de ítems presentados en forma de afirmaciones o juicios ante los cuales los sujetos elegirán uno de los cinco puntos de la escala. A cada punto se le asignará un valor numérico. Así, el sujeto obtendrá una puntuación total sumando las puntuaciones obtenidas en relación con todas las afirmaciones. Para la recolección de datos se deben realizar las siguientes actividades: seleccionar un instrumento o método de recolección, aplicar el instrumento seleccionado y preparar observaciones, registros y medición de los resultados obtenidos (Hernández, Fernández y Baptista, 2006). La medición definida por Stevens (2001), significa asignar números a objetos y eventos de acuerdo a reglas, y más propiamente cuando se evalúan comportamientos sociales se deben vincular conceptos abstractos con indicadores empíricos.

Medición de la validez: La validez del constructo se realizará con el procesamiento y análisis de datos de los ítems que integrarán cada variable del modelo, mediante el análisis de factor con el apoyo del paquete estadístico SPSS.

RESULTADOS ESPERADOS

Esta investigación pretende mostrar con la información obtenida de los cuestionarios que se aplicarán a los directivos o propietarios de las entidades, las principales diferencias en la gestión financiera en las pymes de la industria textil yucateca familiares y no familiares. De esta manera mostrar un panorama general de los diversos aspectos actuales que influyen en la competitividad de las pymes familiares de la industria textil en Yucatán y que sirvan de referencia para otros estudios, así como para otras empresas de diferentes sectores. Asimismo, deberá contribuir al enriquecimiento de la literatura existente relacionada con la investigación de la empresa familiar en el contexto mexicano en las pymes. Ya que de ésta manera, los gerentes podrán conocer y percibir la problemática que los aqueja. También, estos indicadores les servirán de orientación para que adopten mejores prácticas de gestión financiera y así permanezcan competitivamente en el mercado. De manera adicional, le permitirá a las instancias de gobierno mexicano informarse de la problemática de las empresas familiares y, en consecuencia, lograr el apoyo dentro de las políticas públicas para coadyuvarlas con mejores incentivos y políticas gubernamentales que les permitan estimular el desarrollo económico. Finalmente a las Instituciones de Educación Superior, les será de utilidad para que actualicen tanto sus programas de estudio como sus programas de vinculación sobre temas relacionados con la gestión financiera de las empresas familiares. Pero, sobre todo, para que continúen promoviendo la generación y aplicación innovadora del conocimiento a través de sus profesores investigadores, grupo y/o redes de investigación.

Alcance

La presente investigación permitirá analizar la gestión financiera en las pymes familiares de la industria textil en Yucatán como factor estratégico y sostenible en la competitividad empresarial para este sector.

Limitaciones

La aplicación total o parcial del contenido de esta investigación es responsabilidad única y absoluta de la población objeto de estudio, por lo que queda fuera de las manos del investigador comprobar el resultado final de su aplicación.

ANÁLISIS DE LA VARIACIÓN NATURAL DE LOS INDICADORES DE RENTABILIDAD EN LAS EMPRESAS DEL SECTOR CARBÓN EN COLOMBIA

Tomás José Fontalvo Herrera, Universidad de Cartagena

José Morelos Gómez, Universidad de Cartagena

Juan Carlos Vergara Schmalbach, Universidad de Cartagena

RESUMEN

En éste artículo de investigación se presentan los resultados del proyecto Análisis de comportamiento de los indicadores de rentabilidad por medio de la variación natural en las empresas del Sector Carbón en Colombia. En esta investigación se realiza inicialmente una descripción conceptual detallada relacionada con los indicadores rentabilidad, los gráficos de control, las causas comunes y causas asignables, la estabilidad de los procesos y la forma y uso de los gráficos de control, para analizar el comportamiento de los indicadores en los años 2006, 2008 y 2010. Lo anterior a través de una perspectiva cualitativa, descriptiva propositiva y cuantitativa. De la variación natural y los límites de control calculados se puede concluir que el sector presenta una variación natural estable para las empresas analizadas en el Sector en los años estudiados.

PALABRAS CLAVE: variación natural, límites de control, indicador, rentabilidad.

ABSTRACT

This research paper presents the results of the project Behavioral analysis of profitability indicators by means of natural variation in Coal Sector companies in Colombia. In this research, there is initially a detailed conceptual description related with profitability indicators, control charts, common causes and assignable causes, the processes stability and the form and use of control charts to analyze the behavior of indicators in the years 2006, 2008 and 2010. This, through a qualitative, proactive and quantitative descriptive perspective. Of natural variation and calculated control limits it can be concluded that the sector has a stable natural variation for the analyzed companies in the sector in the years studied.

KEYWORDS: Natural variation, control limits, indicator, profitability.

INTRODUCCIÓN

En éste artículo se desarrolló una metodología para analizar la Variación natural de los indicadores de rentabilidad del sector Carbón en Colombia por medio del concepto de gráfico de control por variables en las empresas del Sector, tomando para éste estudio aquellas empresas que presentaron sus estados financieros en la Superintendencia de Sociedades y la Cámara de Comercio de Colombia en los periodos 2006, 2008 y 2010. Para lo anterior se utilizaron los indicadores de rentabilidad con lo cual se evaluó el control del sector, mediante los gráficos de control detectando las modificaciones que se producen, de tal forma que se pudiera analizar el comportamiento de los indicadores financieros seleccionados.

REVISIÓN LITERARIA

Indicadores De Rentabilidad

Ortiz (2011) argumenta, que los indicadores de rentabilidad, denominados también de rendimiento, sirven para medir la efectividad de la administración de la empresa para controlar el costo y el gasto, y de esta manera convertir las ventas en utilidades; como se muestra en la Tabla 1, ec. (1), (2), (3) y (4).

Tabla 1: Indicadores de rentabilidad

Indicador	Ecuación
Margen bruto	$\frac{\text{utilidad bruta}}{\text{ingresos operacionales}} \times 100$ (1)
Margen operacional	$\frac{\text{utilidad operacional}}{\text{ingresos operacionales}} \times 100$ (2)
Margen neto	$\frac{\text{ganancias y pérdidas}}{\text{ingresos operacionales}} \times 100$ (3)
Utilidad operacional	$\frac{\text{margen de contribucion} - \text{costo fijo}}{\text{ingresos operacionales}} \times 100$ (4)

Esta Tabla muestra la relación para realizar el análisis de los indicadores de rentabilidad por medio de la variación en las empresas del Sector Carbón.

Gráficos X y R

De la Fuente (2008) señala, que el grafico X - R analiza la media muestral y el rango de una muestra predeterminada. Para determinar si un proceso está o no bajo control conviene utilizar los dos gráficos conjuntamente. Mateus, Sirvent y Sagasta (2006) indica, que para construir el grafico X se representa gráficamente los límites de control de la media. Para construir el gráfico R, representaremos gráficamente los rangos de las sucesivas muestras, siguiendo la filosofía general del diseño de los gráficos de control.

METODOLOGÍA

Esta es una investigación en donde se utilizó un análisis cualitativo, descriptivo propositivo y cuantitativo, soportada en los gráficos de control. Para contrastar si en tres periodos distintos se puede evidenciar la evolución de los indicadores de rentabilidad por medio de la variación natural en el sector analizado, para lo cual se estudiaron los rubros requeridos de las empresas del Sector Carbón en Colombia.

La población estuvo conformada por 31 empresas del Sector Carbón en Colombia que presentaron sus estados financieros entre el año 2006, 2008 y 2010. Se utilizaron los estados financieros de la Superintendencia de Sociedades (2008), y la Cámara de Comercio de las empresas seleccionadas, que proyectaron sus estados financieros del 2006, 2008 y 2010. Para calcular la variación natural de los indicadores estudiados, se calcularon los gráficos de control por medio de software SPSS statistics 19, aplicación con la cual se establecieron las medias, rangos y los límites de control.

RESULTADOS

Calculo De Los Gráficos De Control X Y R Para Los Indicadores De Rentabilidad De Las Empresas Del Sector Carbón En Colombia

Al analizar el Sector Carbón en Colombia se puede concluir que el sector posee una variación natural en los resultados asociados a sus indicadores; las organizaciones que hacen parte de la variación natural o estabilidad del sector, se presenta en la Tabla 1.

Tabla 1: Empresas que hacen parte de la variación natural del proceso durante los años 2006, 2008 y 2010

empresas	margen bruto	margen operacional	margen neto	utilidad operacional
comercializadora internacional norcarbon s a s	x	x		
drummond ltd	x	x

industria de carbon del valle del cauca s.a. inducarbon	x	x	x	
carboneras elizondo s.a		x	x	
carbones san fernando s.a.	x	x	x	x
explotaciones carboníferas s a		x		
coal union production compani s.a.		x	x	

Esta Tabla señala las empresas que hacen parte de la variación natural del proceso en el transcurso de los periodos estudiados.

CONCLUSIÓN

En el análisis de los indicadores de rentabilidad por medio de la variación natural de las empresas del Sector Carbón en Colombia desarrollado en ésta Investigación se utilizaron 31 empresas del Sector, de donde se pudo evidenciar a través del análisis estadístico que los indicadores seleccionados presentan estabilidad en sus resultados para el sector estudiado. En lo que respecta a los gráficos de control los valores estándar del proceso para el Margen Bruto es 269, rango de 116 y sus límites de control son L_{SCX0} es 387, L_{ICX0} es 150, L_{σ_0} es 297 y $L_{I\sigma_0}$ es 0, el Margen Operacional presenta una media de 589, rango 159 y sus límites de control son L_{SCX0} es 752, L_{ICX0} es 426, L_{σ_0} es 409 y $L_{I\sigma_0}$ es 0, el Margen Neto tiene una media 1422, rango de 2545 y sus límites de control son L_{SCX0} es 4026, L_{ICX0} es 6550, L_{σ_0} es -1182 y $L_{I\sigma_0}$ es 0 y la Utilidad Operacional tiene una media de 107602, rango de 531463 y sus límites de control son L_{SCX0} es 467173, L_{ICX0} es -251967, L_{σ_0} es 904504 y $L_{I\sigma_0}$ es 0.

Es importante mencionar que en éste artículo se presenta un método y un conjunto de herramientas específico que permite realizar un estudio en donde se determina la evolución y estandarización de los indicadores de rentabilidad en las empresas del Sector Carbón en Colombia. Además se presenta una

explicación clara de las medias y rangos resultante para el sector en el transcurso de los años estudiados. Es importante señalar que estudios similares, Fontalvo, Mendoza y Morelos (2011) y Fontalvo, Morelos y De la Hoz (2011), han demostrado que el indicador Razón Corriente, es sensible y muestra mejora significativas en el sector estudiado.

ANÁLISIS CUANTITATIVO DE PATENTES EN MÉXICO

José Pablo Alcázar-Zamacona, Universidad Popular Autónoma del Estado de Puebla

Karla Liliana Haro-Zea, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

La generación de patentes es un promotor de la innovación tecnológica y a su vez de la competitividad, por tanto resultan claves para el crecimiento y desarrollo económico de un país; dado que en una economía globalizada la competitividad es una condición básica de éxito. De ahí la importancia que, en este contexto, ha adquirido la protección de la propiedad intelectual. Este artículo pretende ilustrar el origen de la generación de patentes en México mediante un análisis de la relación que existe las patentes y diferentes indicadores. Para esto se utilizó un análisis de regresión lineal, con el cual se obtuvieron las variables más relacionadas con la solicitud de patentes en México. Finalmente, se llega a conclusiones de este estudio.

PALABRAS CLAVE: Patentes, inversión extranjera directa (IED), competitividad, I+D

QUANTITATIVE ANALYSIS OF PATENTS IN MEXICO

ABSTRACT

The patent generation is a technology innovation promoter and, at the same time, of the competitiveness, that is why they are keys for the growth and economical development of a country; as the competitiveness is a basic success ingredient in a globalized economy. This is where the intellectual property protection becomes very important. This article means to illustrate the origin of the patents generation in Mexico by analyzing the relationship between patents and different indicators. With the help of a linear regression analysis, we obtain the variables which contributed the most for the generation of patent applications in Mexico. Finally, some conclusions are presented.

KEYWORDS: Patents, foreign direct investment (FDI), competitiveness, R&D

INTRODUCCIÓN

La innovación es indispensable para la viabilidad y el éxito de la economía moderna, por ende resulta indispensable proteger la innovación. Desde el punto de vista económico, se ha demostrado claramente que las empresas que poseen unos conocimientos técnicos especializados y comercializan productos de marca y productos o procedimientos patentados se encuentran en una posición más competitiva para incrementar o mantener sus cuotas de mercado (Comisión Europea, 1997). En la actualidad, la economía globalizada se enfrenta a múltiples desafíos, tales como la necesidad permanente de una mejora en la competitividad internacional pues ésta representa una condición básica de éxito.

La patente ocupa un lugar privilegiado dentro del conjunto de medios de que se dispone para proteger la innovación. De acuerdo a la Real Academia Española una patente es el documento en que oficialmente se le reconoce a alguien una invención y los derechos que de ella se derivan (Diccionario de la Lengua Española, 2010); al respecto la Ley de Propiedad Industrial (2010) señala que serán patentables las invenciones que sean nuevas, resultado de una actividad inventiva y susceptibles de aplicación industrial. Cabe mencionar que son varios los medios que sirven como propulsores a estos inventos; muy diversas son las motivaciones de las cuales se apoyan las personas de cuyas mentes nacen; sin embargo, existen

algunos factores generadores comunes en los países líderes: cultura de progreso, disciplina, trabajo en equipo, visión común hacia el futuro. Estos y otros factores pueden ser enfocados en algunos aspectos específicos, como los siguientes: la inversión extranjera directa, la contribución de las universidades con posgrados y los centros de investigación.

Por otra parte la generación de patentes promueve la innovación tecnológica y a su vez la competitividad. Cabe destacar que “el reporte global de competitividad 2011-2012” define a la competitividad como el conjunto de instituciones, políticas y factores que determinan el nivel de productividad de un país (World Economic Forum, 2011), en este contexto, el reporte publicado por el World Economic Forum en enero del 2012 en su índice de competitividad encontramos que México está ubicado en el lugar 58, todavía muy lejos de los sitios importantes. Por otra parte para el ex-primer ministro del Reino Unido, Tony Blair, la innovación, la explotación de nuevas ideas, es absolutamente esencial para salvaguardar y otorgar trabajos de alta calidad, empresas exitosas, mejores productos y servicios para los consumidores, y mejores procesos además de más sanos para el medio ambiente... El desafío es crear las condiciones en las que todas las empresas ponen la innovación en el centro de sus estrategias futuras (Blair, 2003).

Los países que destacan por ser altamente competitivos y por ende generadores de patentes, invierten muchos recursos a la investigación y desarrollo así como a crear una infraestructura que permite que sus científicos y tecnólogos jueguen un papel muy importante a nivel internacional. En este contexto, es conveniente preguntarse de dónde surgen las patentes en México; por tanto el objetivo de este estudio es responder a esta pregunta mediante el análisis de las diferentes fuentes de información que permitan encontrar las relaciones entre ciertos factores de generación de patentes, particularmente en cinco entidades de la república: Distrito Federal, Nuevo León, Estado de México, Jalisco y Puebla. Posterior a la introducción realizaremos una revisión de la literatura existente tratando de reconocer lo que otros autores han encontrado como determinantes. En la siguiente sección describiremos la metodología para realizar un comparativo de los datos obtenidos durante la revisión. Finalmente concluimos resaltando los elementos que consideramos de más trascendencia y mayor aporte al trabajo.

Estado Del Arte

La construcción de relaciones del número de patentes por el valor del gasto en investigación y desarrollo. Para comparar la propensión a patentar entre empresas y universidades o entre departamentos universitarios, por parte de Henderson et al. (1998) y Wallmark (1998), parece indicar que debe existir una relación entre patentes e I+D universitarias. Esa apreciación es especialmente relevante a la hora de plantear un modelo de factores determinantes de las patentes universitarias, puesto que remite inmediatamente a la relación entre patentes e I+D empresariales, que cuenta con cierta tradición en la literatura especializada desde los trabajos de Griliches y su equipo en la década de 1980.

Modelos De Patentes Universitarias

En el caso de las universidades, Meyer-Krahmer y Schmoch (1998) detectan que tales oportunidades tecnológicas pueden encontrarse en campos fuertemente basados en la ciencia (biotecnología, medicina, tecnologías de la información y telecomunicaciones), donde la innovación tiende a seguir un proceso más secuencial, o en otras de particular aplicación industrial (ingeniería mecánica), aunque en este caso resulta difícil identificar sistemáticamente de cuáles se trata. Se puede asumir también que las unidades de investigación más grandes patentan más, simplemente porque cuentan con más personal dedicado a ello. En el caso de las empresas, se puede ver el empleo del número de empleados como variable de control en trabajos como el de Bound et al. (1984). En el caso de las universidades, Wallmark (1998) compara las solicitudes de patentes con el número de profesores de cada disciplina. Henderson et al. (1998) realizan un ejercicio semejante, aunque utilizan de nuevo el gasto en I+D como variable aproximativa de la dimensión de los departamentos. El tamaño, pues, parece que debe aparecer en el modelo propuesto, este

describe una serie de características personales de los inventores que pudieran estar relacionadas con aquéllas: edad, categoría universitaria y sexo. Detecta que la mayoría de inventores en la Chalmers University of Technology cuenta entre 30 y 35 años, si bien entre los profesores eméritos se da una especial propensión a patentar, y que hay muy pocas mujeres inventoras. Henderson et al. (1998) señalan tres factores que pueden influir en las patentes universitarias:

a) El marco legal, ya que el crecimiento que observan surge a raíz de que en 1980 y 1984 los grandes cambios de la ley federal –plasmados en el Acta Bayh-Dole– hicieron más fácil para las universidades el retener los derechos de propiedad derivados de la investigación financiada por fondos federales.

b) La creciente financiación empresarial de la investigación universitaria, probablemente como respuesta al interés creciente de las universidades por la investigación aplicada, que aumenta los recursos para estas actividades y por tanto contribuye al aumento de patentes.

c) El incremento sustancial de las entidades de interfaz de las universidades (como oficinas de transferencia de tecnología o fundaciones universidad-empresa), que fomentan la protección de los derechos de propiedad de la I+D como modo idóneo de incrementar la interacciones con las empresas. En el mismo tenor, Santoro y Chakrabarti (1999), identifican varios patrones para la construcción de las relaciones entre la industria y los centros universitarios de investigación, como la adquisición de conocimientos, tener acceso a las instalaciones universitarias, políticas universitarias flexibles con respecto a la propiedad intelectual, como son las patentes y licencias, entre otros.

Patentes Y Progreso Tecnológico 1971- 1993

José María Ortiz Villajos señala que el Producto Interno Bruto (PIB) es una medida del tamaño de una economía pero no dice casi nada sobre su nivel de desarrollo económico. De manera análoga la cifra de patentes totales da una primera idea de la cantidad de recursos dedicada por cada país a la inversión en tecnología, permite advertir cuáles son las grandes potencias en materia tecnológica, sin embargo, no indica el nivel de desarrollo tecnológico. En términos generales se puede decir que han habido tres grandes etapas en el crecimiento de la actividad inventiva o patentadora. La primera todo el siglo XIX y el primer tercio del siglo XX hasta la crisis del 29, la segunda desde el final de la Segunda Guerra Mundial hasta la crisis de los 70, la tercera de gran expansión comenzó a mediados de los 80 y todavía persiste. Al final de los dos primeros grandes periodos hubo sendas fuertes crisis, que coinciden con las dos grandes depresiones económicas del siglo XX y en estas las solicitudes de patentes son indicativas de la profunda conexión entre la tecnología y las variables económicas. Las cifras de patentes se ven afectadas por las fluctuaciones económicas internacionales de manera muy parecida a como lo hacen las cifras de inversión en capital, lo cual hace pensar que esta es la variable económica con la que más relacionada está la actividad patentadora (Ortiz, 1999).

Indicadores Relacionados Con La Generación De Patentes

Como se comentó en la introducción, el foro económico mundial colocó a México en el lugar 58 de la competitividad mundial. Al observar más a detalle los doce pilares en los que se basa este estudio, nos percatamos que en los rubros de educación superior y capacitación al igual que la innovación; nuestro país está colocado en los lugares 72 y 63, con calificaciones de 4.07 y 3.19 respectivamente, de un máximo de 6.0. Esto nos motivó a investigar dos cosas: (1) Cuántas instituciones de educación superior y de investigación generan patentes, y (2) Porqué no existe un mecanismo asociado a estas instituciones que generen resultados tangibles en cantidad y calidad que generen patentes y en su caso innovaciones.

De acuerdo con los datos presentados por el Consejo Nacional de Ciencia y Tecnología (CONACYT) en 2011; el Distrito Federal tiene 6,606 investigadores registrados en el Sistema Nacional de Investigadores

(SNI), seguidos del Estado de México (1,012), Jalisco (917), Morelos (862), Oaxaca (662), Querétaro (625), Nuevo León (591), Guanajuato (557), Baja California (524) y Michoacán (515); Puebla (197) está en el lugar 21. La Secretaría de Educación Pública (SEP), en su reporte de cifras del ciclo escolar 2010-20011, presenta los siguientes datos para el número de instituciones que ofrecieron estudios de posgrado: Distrito Federal (152), Estado de México (88), Nuevo León (54), Jalisco (60) y Puebla (75). El mismo reporte, da los siguiente datos para estudiantes de nivel doctorado: Distrito Federal (8,819), Estado de México (1,660), Nuevo León (1,069), Jalisco (963) y Puebla (1,290).

Según datos de la Secretaría de Economía, en nuestro país las entidades federativas motivo de este estudio recibieron de Inversión Extranjera Directa (IED) en millones de dólares durante el 2009, los siguientes montos: Distrito Federal (8,080), Estado de México (1,484), Nuevo León (898), Jalisco (570) y Puebla (60). Paralelamente, las que más solicitudes de patentes registraron, también en orden de mayor a menor fueron el Distrito Federal (321), Nuevo León (110), Estado de México (80), Jalisco (70), Puebla (43).

Señala el Instituto Mexicano de la Propiedad Industrial (IMPI) en su reporte 2010, que en materia de patentes se recibieron 14,576 solicitudes, las cuales mostraron un incremento del 2.06% con respecto al 2009. En el 2010, los residentes extranjeros presentaron un total de 13,625 (93.48%) solicitudes de patentes, mientras que los residentes nacionales ingresaron 951 solicitudes (6.52%), lo cual es muestra de la tendencia tradicional de los últimos años en este sentido, sin embargo de las solicitudes realizadas por nacionales sólo 118 fueron otorgadas. El IMPI (2011) también reporta un total de 178 solicitudes presentadas por universidades, dentro de las cuales, las que más presentaron fueron: El Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) con 47, la Universidad Nacional Autónoma de México (UNAM) con 31, el Instituto Politécnico Nacional (IPN) con 13, la Universidad Autónoma de Nuevo León (UANL) con 13, la Benemérita Universidad Autónoma de Puebla (BUAP) con 11 y la Universidad Autónoma Metropolitana (UAM) con 8.

METODOLOGÍA

Elegimos este tema como resultado del Reporte Anual de Competitividad publicado en 2010, donde México retrocede del lugar 60 al 66 y resulta evidente que muy poco o nada se está haciendo en materia de competitividad, luego entonces nos enfocamos al estudio del origen de la generación de patentes en México, dado que la propiedad intelectual juega un papel determinante en el crecimiento económico de los países y adicionalmente las patentes ofrecen una fuente de información con detalles únicos acerca de la actividad inventora. En este contexto, la investigación apunta hacia un análisis de las diferentes fuentes de información que permitan encontrar las relaciones entre ciertos factores de generación de patentes. Específicamente nos interesa saber:

- ¿En qué medida los integrantes del SNI, excluyendo a los clasificados en las áreas de ciencias sociales y humanidades, contribuyen en la generación de patentes? y si la carencia de ésta se debe a los criterios de evaluación existentes.
- Analizar si la generación de patentes está en función del monto de IED que reciben los Estados de la República.
- ¿Qué tanto generan en términos de patentes, las instituciones con posgrado y centros de investigación?

Para realizar esta investigación nos dimos a la tarea de recopilar información de diferentes fuentes como son: libros, revistas científicas, manuales, informes de organismos nacionales e internacionales, leyes aplicables, internet y otros medios de información. Una vez recopilada la información necesaria sobre el tema de patentes en México, procedimos a explorar y seleccionar dicha información, de tal forma que nos pudiera ofrecer directrices para la interpretación de indicadores en materia de patentes.

Por lo anterior seleccionamos para este estudio una muestra conformado por cinco entidades federativas, las cuales tienen más solicitud de patentes en México (Distrito Federal, Nuevo León, Edo. de México, Jalisco y Puebla), pues representan el 65.2% del total, información que obtuvimos del IMPI, a través de su informe anual 2009. Una vez seleccionada la muestra, se buscaron los informes anuales los cuales están estructurados con información general, actividades de registro y protección de la propiedad intelectual, actividades internacionales, administrativas y anexos. Con estos se determinaron la variable dependiente e independiente. Esto se realizó mediante la lectura y análisis de los reportes anuales correspondientes a 2009. Por tanto las variables aplicables a nuestra investigación son: variable dependiente; las patentes y las variables independientes son la IED, información obtenida de la Secretaría de Economía; instituciones con posgrado y los centros de investigación, registros obtenidos de la SEP; estudiantes de doctorado, también obtenidos de la SEP; integrantes del SNI, obtenidos del CONACYT, así como solicitudes de patentes ingresadas por universidades, obtenidos del IMPI.

Las variables independientes tuvieron una importancia relevante para el desarrollo de este estudio por lo que la descripción es elemental para este análisis, el cual se detalla a continuación. Mediante la verificación de los informes publicados por el IMPI, obtuvimos la cantidad de patentes solicitadas y otorgadas por estados, instituciones y centros de investigación. A través de la información obtenida de la Secretaría de Economía se identificaron la IED recibida por los Estados objeto de este estudio. En datos publicados por la SEP obtuvimos la cantidad de instituciones en los estados antes mencionados que ofrecen estudios de posgrado, al igual que el número de estudiantes de doctorado inscritos en dichas instituciones. Esto por la inclinación investigadora de los programas doctorales. Respecto a información sobre el padrón vigente del SNI y la cantidad de patentes registradas por sus integrantes, fue obtenida del CONACYT. Una vez habiendo obtenido todas las variables para el trabajo, se procedió a hacer un análisis estadístico de regresión lineal por medio del programa de computadora MINITAB 15, del cual se obtuvieron los valores p y R-Cuadrado, los cuales muestran si existe relación entre las variables. A continuación, en la sección de resultados, se muestran los valores de cada variable independiente, arrojados por el programa; con la ayuda de los cuales llegamos a las conclusiones, también mostradas en la sección correspondiente.

RESULTADOS

A continuación se presentan los resultados obtenidos por medio del MINITAB 16, presentando tantos las ecuaciones que describen la relación entre la variable dependiente y cada una de las variables independientes por separado, así como los valores p y el coeficiente de determinación o R-Cuadrado ajustado, que representa el porcentaje de variación de la variable dependiente con la variable independiente. Para esta prueba, se propone un nivel de significancia $\alpha=0.05$.

Patentes solicitadas vs. Investigadores en el SNI. Ecuación de regresión: $\text{Patentes} = 47.9 + 0.0412 \text{ SNIS}$. Valor p : constante = 0.045; investigadores = 0.003. R-Cuadrado ajustado = 94.9% De acuerdo a estos datos, los valores p son menores al nivel de significancia α y el R-Cuadrado ajustado es mayor al 90%, por lo tanto, se acepta esta relación como válida. Patentes solicitadas vs. IED (en millones de pesos) Ecuación de regresión: $\text{Patentes} = 50.7 + 0.0334 \text{ IED}$. Valor p : constante = 0.024; IED = 0.002. R-Cuadrado ajustado = 96.4% Los valores p son menores al nivel de significancia α y el R-Cuadrado ajustado es mayor al 90%, por lo tanto, se acepta esta relación como válida.

Patentes solicitadas vs. Instituciones con posgrado: Ecuación de regresión: $\text{Patentes} = -92.6 + 2.53 \text{ Inst.}$ Valor p : constante = 0.281; Inst. = 0.045. R-Cuadrado ajustado = 71.6% Solo el valor de p de las instituciones es mayor al nivel de significancia α y el R-Cuadrado ajustado es menor al 90%, por lo tanto, esta relación se rechaza.

Patentes solicitadas vs. Estudiantes de doctorado: Ecuación de regresión: $\text{Patentes} = 36.8 + 0.032 \text{ Estudiantes}$. Valor p: constante = 0.148; Estudiantes = 0.006. R-Cuadrado ajustado = 92.1% Solo el valor de p de los estudiantes es mayor al nivel de significancia \square y el R-Cuadrado ajustado es mayor al 90%, por lo tanto, *se acepta esta relación como válida*. Observando los resultados anteriores, se concluye que tres de las cuatro variables independientes tienen relación directa con la solicitud de patentes. Esto se puede determinar, porque en dichas variables (número de investigadores, IED y estudiantes de doctorado) el valor de R-Cuadrado ajustado es mayor al 90%, lo que indica una relación elevada entre las variables. Además el valor p es menor al nivel de significancia propuesto. *Patentes solicitadas vs. Investigadores en el SNI, IED y Estudiantes de doctorado* Ecuación de regresión: $\text{Patentes} = 57.7 + 0.057 \text{ SNIS} - 0.049 \text{ Estudiantes de doctorado} + 0.0446 \text{ IDE}$. R-Cuadrado ajustado = 90.5% El R-Cuadrado ajustado es mayor al 90%, por lo tanto, *se acepta esta relación como válida*.

CONCLUSIONES

El 85% de las patentes otorgadas por el IMPI han sido para titulares extranjeros; es decir, la protección legal no es suficiente para desarrollar conocimientos productivos. Existe, claramente, un problema de recursos, la poca inversión en conocimiento en el país (incluida educación, salud, servicios, etc.) limita la capacidad de generación de conocimiento productivo y limita la capacidad de absorción y adaptación de la tecnología. Diversos trabajos en las áreas de la innovación tecnológica demuestran que la adopción de tecnología tiene importantes costos, por lo que los países deben desarrollar su capacidad de absorber tecnología (no se obtiene por generación espontánea), lo que implica, necesariamente, invertir en I&D (Cohen y Levinthal, 1989; Griffith, Redding y Van Reenen, 2003).

En México en la última década el 95% de las solicitudes de patentes son generadas por extranjeros, por lo que hay una correlación positiva entre el crecimiento del PIB y la solicitud de patentes extranjeras, lo cual sugiere que la actividad económica mexicana está apoyada en la creciente inversión extranjera directa y por lo tanto las solicitudes hechas por mexicanos están negativamente correlacionadas con el crecimiento del PIB (Hernández y Díaz, 2007). Los parámetros de evaluación de los integrantes del SNI otorgan el mismo valor a un artículo de investigación que a la generación de patentes, razón por la cual los investigadores optan por enfocar los recursos y esfuerzos a la publicación de artículos científicos en lugar de generar patentes, sin dejar de lado que existe un 31.41% que corresponden a áreas de Humanidades y Ciencias Sociales, por tanto su trabajo de investigación, por la naturaleza propia de su área de estudios, no estará direccionado hacia la generación de patentes. Por las razones anteriores, consideramos necesario hacer un cambio en los parámetros de evaluación de los investigadores en el SNI, para impulsar sus esfuerzos hacia la producción de conocimiento encaminado a producir patentes.

En nuestra opinión lo que nuestro país necesita es empezar a ver el trabajo científico desde otra perspectiva. Dando menos peso a la generación de tecnología básica, impulsado la Ciencia y Tecnología generadora de productos comerciales que aporten recursos a México, que como primer paso sirvan para autofinanciar las investigaciones y a largo plazo logren ser una importante fuente de ingresos desde el exterior. Esto puede darse desde los trabajos de investigación realizados por los estudiantes de doctorado en diversas áreas, pudiendo manejarse como una política académica, el que cada estudiante de las áreas de ciencias e ingeniería, debe patentar para poder obtener el doctorado.

IMPLEMENTACION DE UN PROCESO DE DESARROLLO ORGANIZACIONAL EN UNA MICROEMPRESA

Laura Elena Woolfolk Gallego, Universidad Estatal de Sonora

Denisse Gómez Bañuelos, Universidad Estatal de Sonora

Adrialy Perez Gaxiola, Universidad Estatal de Sonora

RESUMEN

Las organizaciones y seres humanos son tan susceptibles a los tiempos cambiantes, su ascenso y caída, su éxito y fracaso, atestiguan toda su vulnerabilidad. El Desarrollo Organizacional, es una respuesta al cambio, una compleja estrategia educativa cuya finalidad es cambiar las creencias, actitudes, valores y estructura de las personas en las organizaciones, en tal forma que éstas puedan adaptarse mejor a nuevas tecnologías, mercados y retos, así como al ritmo vertiginoso del cambio mismo. Esta investigación representa un interés de aportar una contribución en los conceptos, ideas y aplicación de teorías del campo de Desarrollo Organizacional que son básicos para el estudio de los mismos y con la cual se pretende que sea una herramienta de consulta para que se tenga una visión general de cómo aplicar en una microempresa la valiosa herramienta del Desarrollo Organizacional.

PALABRAS CLAVES: Microempresa, Desarrollo Organizacional, Cambio Planeado, Cambio, Administración de la microempresa.

IMPLEMENTATION OF A PROCESS OF ORGANIZATIONAL DEVELOPMENT IN A MICROBUSINESS

ABSTRACT

Organizations and human beings are very susceptible to changing times, its rise and fall, success and failure, all attest their vulnerability. The Organizational Development, is a response to change, a complex educational strategy aimed at changing beliefs, attitudes, values and structure of people in organizations, then they can better adapt to new technologies, markets and challenges, and the rapid pace of change itself. This research represents an interest to bring a contribution in of those concepts, ideas and implementation of field theories of organizational development that are essential to study them and take as a reference tool to be taken an overview of how to apply a small business the valuable tool of Organizational Development.

INTRODUCCION

Este trabajo titulado “Implementación de un proceso de desarrollo organizacional en una microempresa de la localidad” tiene como objetivo general desarrollar y aplicar el proceso de desarrollo organizacional para el mejoramiento del clima organizacional y una clara dirección empresarial, y de esta forma asegurar la eficacia y eficiencia laboral. Los objetivos específicos de este análisis son:

- Efectuar un diagnóstico de la empresa, para poder definir su situación y necesidades de cambio identificando y evaluando los problemas que presenta.
- Elaborar estrategias de intervención. Para poder realizar un cambio planificado que ayude alcanzar los objetivos.

Se ha tomando como base a la aplicación de un proceso de Desarrollo Organizacional como herramienta efectiva para lograr cambios organizacionales. Se podrá determinar si:

- ¿Es posible rescatar a una microempresa ya cuando manifiesta síntomas de decadencia organizacional?
- ¿Es el Desarrollo Organizacional un proceso efectivo para lograr un cambio planeado dentro de la organización?
- ¿Es posible lograr el cambio de actitudes y valores del equipo humano para una coordinación de actividades con las cuales se llegue eficientemente al logro de los objetivos?

Actualmente, los retos que enfrentan las organizaciones contemporáneas, para lograr su permanencia y modernidad, se basan en unir conocimientos, habilidades y experiencias diversas para optimizar los esfuerzos y asegurar el éxito. Se percibe una nueva filosofía, en el manejo del cambio para las organizaciones de trabajo; necesitan para su realización exitosa, cambiar los valores, actitudes, creencias, conductas actuales, etc., en los individuos que conforman la organización y sensibilizarlos para cualquier proceso de cambio. En conclusión, se está haciendo necesario el uso del desarrollo organizacional para cambiar esas actitudes, valores, etc., y sentar las bases necesarias para lograr la excelencia, la calidad total que, en opinión de los expertos, les permita asegurar su competitividad. (Audirac Carlos, 2005)

Las microempresas en México son un motor de crecimiento económico y de empleo fundamental para el país ya que, de acuerdo a resultados del último censo económico del INEGI: De cada 100 empresas mexicanas, 96 son microempresas, contribuyen con el 40.6% del empleo y aportan el 15% del PIB. (México Emprende, 2012). A lo anterior se debe que el objeto de estudio de esta investigación es una microempresa dedicada al giro electromecánico realizando actividades tales como la construcción de líneas eléctricas de alta tensión, compra y venta de material eléctrico, construcción de subestaciones, equipamientos de pozos, alumbrado público e Instalación de Transformadores, ubicada en la ciudad de Hermosillo Sonora México, en la cual se llevarán a la práctica los términos y actividades del Desarrollo Organizacional esperando ver resultados positivos en un término a corto plazo debido a la urgencia de enfrentar los cambios drásticos a la forma actual de trabajo.

METODOLOGÍA Y NIVELES DE LA INVESTIGACIÓN

Se realizó en primera instancia una revisión teórica para poner al descubierto investigaciones previas con vínculos entre el Desarrollo Organizacional y la Administración de la Microempresa. Posteriormente el estudio se desarrolló en forma inductiva; utilizando metodologías de carácter cualitativo con el uso de herramientas cuantitativas. La metodología cualitativa se desarrolló por medio de entrevistas estructuradas dirigidas a informantes clave. Esta metodología brindó la posibilidad de medir la percepción y sensibilización de las personas hacia el tema bajo estudio. El uso de herramientas cuantitativas, se desarrollarán por medio de encuestas levantadas al personal que trabaja en la microempresa objeto de estudio. La investigación consta de tres niveles o apartados. El apartado uno, es teórico-analítico y tiene como objetivo discutir y describir diferentes conceptos que impactan al tema de investigación, tales como, la Importancia económica y social de las micros, pequeñas y medianas empresas en México, la

clasificación por tamaño y por giro de las micros, pequeñas y medianas empresas, el concepto de la Consultoría, los antecedentes y concepto de Desarrollo Organizacional, el Desarrollo Organizacional como ciencia de la conducta los beneficios y limitaciones de aplicar desarrollo organizacional en las organizaciones, el proceso de cambio en las organizaciones, el proceso de cambio planeado de Fernando Achilles de Faria Mello e Intervenciones estratégicas. El Apartado dos, es práctica-analítica ya que se realizó la aplicación de un modelo de cambio planeado basado en la propuesta de Fernando Achilles de Faria Mello. El apartado tres, constituye una sección interpretativa que tiene como finalidad exponer los resultados obtenidos en la segunda parte y plantear propuestas de acción resultantes de la investigación.

Modelo Administrativo Aplicado En La Investigación

Proceso De Cambio Planeado De Fernando Achilles De Faria Mello

El Desarrollo Organizacional es un proceso de cambio planeado en sistemas socio – técnicos abiertos, tendientes a aumentar la eficacia y la salud de la organización para asegurar el crecimiento mutuo de la empresa y sus empleados (Mello, 2002). El cambio planeado dentro de la concepción del desarrollo organizacional, puede subdividirse en etapas o fases de consultoría. Ver Figura 1

Aplicación Del Modelode Cambio Planeado De Fernando Achilles De Faria Mello

A continuación se detalla la aplicación del modelo de cambio planeado de Fernando Achilles de Faria Mello, a la microempresa objeto de estudio.

Contacto: En una reunión, con el gerente general y/o propietario se informó sobre los antecedentes de la problemática, explicó las situaciones fuera de control que se presentaron con el personal, tales situaciones como robos de material, desanimo laboral, obras inconclusas y mal terminadas, pérdida en el equipo de trabajo, pérdida de equipo mecánico por descuido de los empleados, exceso de rotación de personal, falta de liquidez para realizar obras, pocas o nulas posibilidades para financiar obras, altos costos operativos y administrativos sin ningún resultado favorable para la empresa. Las indudables expectativas del propietario son tener permanencia en el mercado, hacer crecer a la empresa, mejorar la calidad de vida de sus trabajadores y lograr que estos mismos sientan a la empresa como propia de ellos.

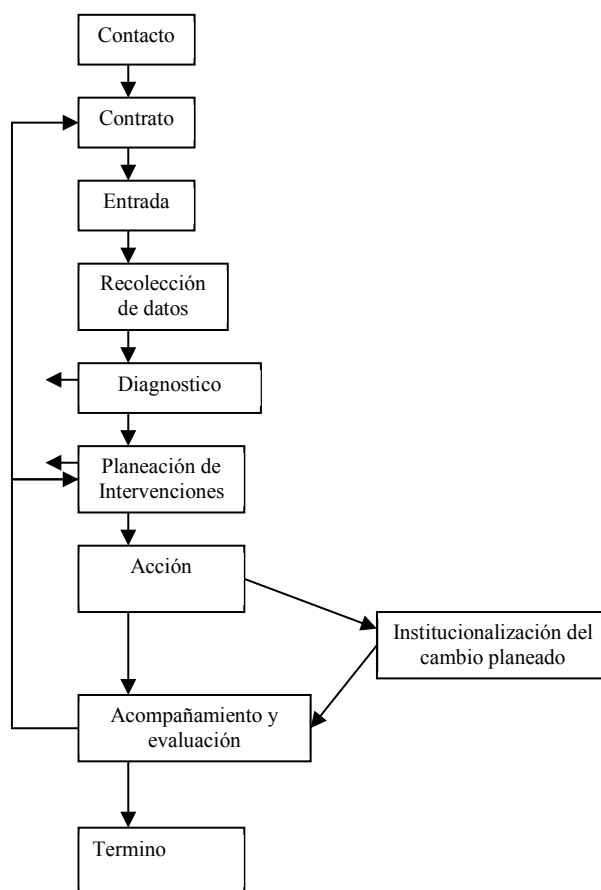

Contrato

Elaboración de un contrato de servicio con la microempresa objeto de estudio.

Recopilación De Datos Y Diagnostico.

En las observaciones que se realizaron dentro de la empresa se puede decir que si bien es cierto que el cambio se debe de efectuar de una forma paulatina para no causar incertidumbre y temor dentro de la empresa y que toda situación insatisfactoria es causal suficiente para trabajar de una forma distinta, es también cierto que el “cambio” no es nada sencillo sobre todo cuando se ha trabajado con bases no sólidas en la formación de una cultura laboral. Se realizaron entrevistas a los empleados de la empresa para realizar un diagnostico situacional. El formato para las entrevistas, tomado del diplomado de planeación estratégica impartido por Ing. Ricardo Valenzuela González, son 44 preguntas de opción múltiple con las opciones si, no ó parcialmente. Las respuestas a las interrogantes arrojaron los siguientes resultados: La empresa no tiene una misión clara. Tanto los puestos administrativos como operativos desconocen plenamente la dirección de la organización. No existe una estructura formal de la organización.

Figura 1: Proceso de desarrollo organizacional Fernando Achilles de Faria Mello

En esta figura se puede apreciar las secuencia que sigue el Modelo de Cambio Planeado utilizado en esta investigación

No hay formalización de puestos ni de funciones, lo cual lleva a cometer errores como duplicidad de funciones, desconocimiento de las responsabilidades, obligaciones y derechos que cada uno de los colaboradores tienen dentro de la organización. La comunicación es desmesuradamente informal lo cual facilita el incorrecto desarrollo de las actividades.

No hay sistema documentado con el cual se puedan controlar las actividades que se han realizado.

No se realizan inventarios de materiales ni de equipos de oficina.

No se realizan controles en formatos establecidos al momento de entrar y salir insumos al almacén.

No hay mantenimiento preventivo adecuado para el equipo y las instalaciones de las áreas de trabajo. Existe un exceso de rotación de personal.

Se presenta el ausentismo laboral. Hay incumplimiento con horarios de trabajo. No existe una formulación de objetivos ni a corto mediano o largo plazo. Los empleados desconocen los objetivos de su área lo que implícitamente trae cierto sentimiento de incertidumbre entre ellos. No hay un conocimiento y aprovechamiento de las fortalezas y oportunidades de la organización, ni un enfrentamiento y

disminución de las amenazas y debilidades de la misma. Existe demasiada “delegación de autoridad” entre los integrantes de la organización lo que se traduce a una “anarquía organizacional”

La empresa se enfrenta a una crisis financiera y la causa principal de esa crisis es el alto gasto operacional al que incurre la organización. Mala administración en la aplicación de presupuestos asignados para cada proyecto.

Planeación De Las Intervenciones

De acuerdo a los resultados del diagnóstico organizacional, y entrevistas se han propuesto una serie de intervenciones que paulatina pero constantemente se han implementado en la empresa. El reforzamiento positivo de las intervenciones siguientes tendrá como finalidad el aumento en la productividad de la empresa. Como punto de partida se diseñaron unos “gafete” personalizados a cada uno de los empleados lo cual ha servido para identificar al empleado y para que a su vez se pueda identificar como personal de la empresa cuando así le sea requerido. Se elaboraron formatos que contendrán datos personales que responderán los empleados, esto será para que la empresa pueda tener un expediente con los datos personales y profesionales de sus empleados. Posteriormente se propone la creación de la misión y visión de Herrajes y equipos de alta tensión, las cuales se colocarán decorativamente en lugares estratégicos dentro de la empresa para que en cualquier momento puedan darle lectura cualquiera de los empleados, clientes y/o visitantes de la empresa. Se han creado manuales de organización, con la descripción de cada uno de los puestos, los cuales se entregaron por duplicado, de cada uno de los puestos. Uno de ellos estarán en la pequeña biblioteca del gerente y el otro se le hará llegar a cada uno de los empleados para formalizar por escrito y estén conscientes de cada una de las actividades que desarrollaran y así evitar confusiones en cuanto a las obligaciones y responsabilidades.

Para evitar que la comunicación sea desmesuradamente informal al momento de programar el trabajo se crearon ordenes de trabajo y diagramas de flujo de obra donde se estandarizan las actividades y el tiempo en que se proyecta en que sea concluido el trabajo, esto ayuda a reducir otro problema referente a que no hay un control de las actividades que se están realizando. Al equipo móvil de trabajo se le efectuarán revisiones periódicas antes de cada salida de la ciudad y al momento de llegar de nuevo a la base de los puntos principales para así poder detectar y evitar al máximo fallas mecánicas importantes. El problema de rotación de personal se ha tratado de reducir teniendo por parte de la organización una concientización al momento de contratar personal y contratando personas que se acerquen más al perfil del puesto.

Para el ausentismo laboral existe un formato en donde se le hace unas preguntas al trabajador sobre sus razones de haber faltado a laborar. Para cumplir de una forma más correcta y ejercer un poco de presión para el cumplimiento del horario de trabajo a los trabajadores se instalará un reloj checador y se asignará quincenalmente tarjetas para registrar electrónicamente el horario a cada uno de ellos. Se ha efectuado un análisis FODA (fortalezas, oportunidades debilidades y amenazas), es una herramienta que permite conformar un cuadro de la situación actual de la empresa u organización, permitiendo de esta manera obtener un diagnóstico preciso que permita en función de ello tomar decisiones acordes con los objetivos y políticas formulados. Para el problema financiero se le sugiere a la gerencia que estudie la posibilidad de solicitar un préstamo financiero en alguna institución bancaria o algún programa gubernamental de apoyo a las PYMES para que así se pueda culminar con los proyectos que están pendientes e iniciar una nueva etapa laboral, en donde encaje una mejor administración del recurso financiero. Dentro de los apoyos económicos que la Secretaría de Economía proporciona a las MIPYMES destaca el Programa Nacional de Financiamiento a Microempresarios (PRONAFIM) con el objetivo de incentivar el autoempleo y de esta manera lograr que los microempresarios ingresen a las cadenas productivas del país. Dentro de estas intervenciones que se ofrecen es muy importante recalcar la gran disposición que tienen los integrantes de la microempresa objeto de estudio, en hacer mejor las cosas y la apertura mental ante la forma nueva de laborar.

CONCLUSIONES Y RECOMENDACIONES

CONCLUSIONES

Desarrollo organizacional es el estudio de la organización, sus procesos y sus relaciones con la gente que pertenece a la organización, estudia las áreas de conflicto potencial entre las personalidades de los empleos y las demandas de la organización sobre ellos. Es decir, si se conocen las causas que afectan tanto a los empleados como a los procesos de la organización entonces se puede trabajar sobre estas, eliminarlas y así poder llegar al cumplimiento de los objetivos. Por lo tanto, de acuerdo al análisis realizado se considera que los objetivos propuestos en este estudio han sido cubiertos, ya que se ha efectuado un diagnóstico de la empresa pudiéndose definir su situación y las necesidades de cambio, se identificaron y evaluaron los problemas que se habían estado presentando. Con esto se dió pauta a elaborar estrategias de intervención, para poder realizar un cambio planificado que ayudó a alcanzar los objetivos organizacionales. Por lo tanto y conforme al objetivo general, “la aplicación de un proceso de desarrollo organizacional para el mejoramiento del clima y una clara dirección empresarial, asegurando así la eficacia y la eficiencia laboral.” Se puede concluir que este fue alcanzado. Así mismo con lo anteriormente expresado se concluye: “*Que la aplicación de un proceso de Desarrollo Organizacional mejorará la eficacia y la eficiencia de una microempresa*”.

Recomendaciones

Se recomienda al propietario de la microempresa en estudio que labore basándose en las sugerencias y estrategias de intervención propuestas en el proceso de cambio planeado. Paralelo a lo anterior se recomienda: Que se cree un clima de receptividad para reconocer las realidades organizacionales, y de apertura para diagnosticar y solucionar problemas. Diagnosticar problemas y situaciones insatisfactorias. Establecer un clima de confianza, con el fin de que no haya manipulación entre el jefe y colaboradores. Que se desarrollen las potencialidades de los individuos, en las áreas de las tres competencias: técnica, administrativa e interpersonal. Que se desarrolle la capacidad de colaboración entre individuos y grupos, que conduce a la sinergia de esfuerzos y al trabajo - en equipo. Compatibilizar, viabilizar, armonizar e integrar las necesidades y objetivos de la empresa y de quienes forman la empresa. Estimular las emociones y sentimientos de las personas.

Siempre que el riesgo lo permita, poner los conflictos, fricciones y tensiones "sobre la mesa" y tratarlos de modo directo, racional y constructivo. Despertar o estimular la necesidad de establecer objetivos, metas y fines que, siempre que sea posible, estén cuantificados y bien calificados que orienten la programación de actividades y evaluación de los desempeños de sectores, grupos e individuos. Localizar las responsabilidades de solución y la toma de decisiones, lo mas próximo posible de las fuentes de información en el nivel adecuado al tipo de solución. Desarrollar la organización a través del desarrollo de los individuos. Compatibilizar y optimizar metas, recursos, estructuras, procedimientos y comportamientos. Perfeccionar el sistema y los procesos de información y comunicación. Identificar puntos de bloqueo o pérdida de energías y recursos de varios tipos: físicos, humanos, materiales, de información, etc.

El recurso humano de la empresa es un elemento más valioso para el éxito de la misma!!!

EL TURISMO EN SUSTICACAN, ZACATECAS

Ana Karen Fraire Ortiz, Universidad de Guadalajara

Reyna Beatriz Arreola Rodarte, Universidad de Guadalajara

Rosa Nelly Fraire Zamarripa, Instituto Tecnológico Superior Zacatecas Norte

Karen Yuridia Estupiñan Pérez, Instituto Tecnológico Superior Zacatecas Norte

RESUMEN

Actualmente la práctica del turismo en lugares pequeños ha ido ganando terreno frente a las preferencias de sol y playa, buscando lugares pequeños y tranquilos de contacto con la naturaleza, por ello es necesario crear productos innovadores y creativos capaces de satisfacer los gustos y preferencias de los turistas. Tal es el caso del municipio de Susticacán ubicado en la parte suroeste de la capital del estado de Zacatecas, que nos ofrece estar alejado del bullicio y cercanos a la tranquilidad que posee, incitando a disfrutar de la naturaleza, la cultura y la tradición de su pueblo. Es necesario trabajar en conjunto para poder pulir las riquezas de este pueblo y constituirlo como un lugar altamente turístico y obtener beneficios tanto los residentes como los turistas en materia económica y social. Es por esa razón que se ha decidido realizar esta investigación que apoye para definir ideas, que ayuden a generar ingresos que contribuyan al desarrollo económico de la región en el sector turístico.

PALABRAS CLAVES: lugares pequeños, creatividad, tranquilidad, cultura, tradición y pulir riquezas.

TOURISM IN SUSTICACÁN, ZACATECAS

ABSTRACT

Currently the practice of tourism in small places has been gaining ground against the preferences of sun and sand, looking for small and tranquil places of contact with the nature, so it is necessary to create innovative and creative products that will satisfy the tastes and preferences of the tourists. That is the case of the municipality of Susticacán located in the southwestern part of the state capital of Zacatecas, which offers us to be away from the bustle and close to the tranquility that pose prompting to enjoy the nature the culture and the tradition of the town. Is necessary to work together to polish the riches of this town and incorporate it as a highly touristic and obtain benefits for both for residents and for the tourists in the economic and social. Is for that reason that has decided to make this investigation that supports for defining ideas that help generate revenue to contribute to the economic development of the region in the tourism sector.

INTRODUCCIÓN

A través de un estudio sobre el municipio de Susticacán, se pretende realizar un diagnóstico en el que se recolecte información referente a los atractivos, tanto naturales como culturales con los que cuenta el municipio, y en base a ello realizar un plan estratégico en el que se establezcan estrategias para la organización, de producto, promoción y plaza los cuales son aspectos importantes para la venta del producto. De igual manera establecer el plan operativo para definir la manera en que se ejecutaran cada una de las actividades.

REVISIÓN LITERARIA

Este municipio cuenta con una gama amplia de atractivos turísticos, culturales, tradicionales, gastronómicos y artesanales que no son promovidos, por no tener la visión ni los conocimientos de los beneficios económicos que ofrece el turismo.

Estos hechos se relacionan con investigaciones realizadas sobre destinos turísticos para sensibilizar a la población local, respecto al rechazo que ésta tiene sobre el turismo. Como se menciona en el artículo publicado en el diario El País, titulado “Turistofobia”, el antropólogo Manuel Delgado apuntaba que turistas e inmigrantes “son vistos como nuevos en la ciudad (...) ese mismo factor es el que hace a ambos protagonistas potenciales de un mismo imaginario que advierte en el forastero la figura del bárbaro invasor al que hay que mantener aislado y vigilado”. En todo caso, añadía este antropólogo, “no es el turismo el que ha vaciado los centros históricos, sino la gestión de la ciudad como negocio”.

La población de Susticacán tiene contacto con los turistas de manera indirecta, dado a que no se cuenta con los servicios complementarios, como hospedaje, alimentación, y se tiene dificultad de transporte público, los cuales causan distintos efectos tanto en el turista como en los habitantes del lugar. Un artículo publicado por Agustín Santana Talavera, señala que: “Los impactos socioculturales son -impactos sobre la gente-, esto es, los efectos que sobre los residentes habituales y fijos de la comunidad anfitriona tienen las asociaciones directas e indirectas con los visitantes, a lo que habría que añadir los efectos de la actividad turística y los encuentros sobre los mismos individuos que practican el turismo y sus sociedades de origen.”

Los efectos mencionados por los autores señalados anteriormente se relacionan con el municipio, dado a que en Susticacán la población trata de mantener al turista aislado y vigilado, en lugar de acercarse para brindarle la información necesaria para su estancia en el lugar. De igual manera es cierto que en el turismo se tiene impactos sobre los residentes habituales y son dados a causa de las prácticas turísticas que se dan por las distintas sociedades que participan, mas sin embargo es importante educar al turista en cuanto al respeto de sus costumbres, de sus tradiciones y de su entorno, para que exista una mejor interacción tanto por parte del turista como de los anfitriones del lugar.

METODOLOGÍA

En este proyecto de investigación se pretende realizar un estudio de campo para definir el estado y la cuestión turística del municipio, al mismo tiempo se pretenderá llevar a cabo la investigación documental en recursos bibliográficos, aplicando las herramientas de metodológicas como son: la observación, las entrevistas, tanto a las autoridades como a los habitantes. Las cuales nos darán la oportunidad de conocer más de cerca las composiciones del sector turístico en Susticacán.

En base a lo anterior se pretenderá implementar estrategias que sirvan de apoyo para la realización de actividades que sirvan de impulso para el desarrollo del turismo en el municipio.

RESULTADOS

La población de Susticacán muestra que a pesar del fuerte potencial turístico este no es conocido incluso por la mayoría de los habitantes de la región, es decir, es un lugar escondido y aislado que guarda en su interior toda la magia dormida de un lugar que está esperando despertar y ofrecer al visitante la infinidad de riqueza turística que posee.

Sin embargo algunos habitantes han tenido la iniciativa de cooperar en las distintas actividades que se han realizado en el municipio, referentes al turismo, tales como; degustaciones gastronómicas, exposiciones

artesanales que los mismos habitantes están creando con materiales de la región, recorridos turísticos y otras prestaciones de servicios. Se espera que cada vez mas la gente esta demostrando el interés que se tiene para que exista mayor demanda turística en el municipio, con el fin de que les traiga crecimiento con el paso del tiempo.

CONCLUSIONES

De un análisis introductorio realizado a las autoridades y a la población en general, se concluyó que tanto autoridades locales como población del municipio no hacen nada para promover los atractivos turísticos con los que cuenta el municipio, por la razón del temor a ver trastocados sus valores locales, lo que origina que muy poca gente acuda a esta población, y que no exista una derrama económica que sería de gran beneficio a la población.

De igual manera se concluyó que tanto las autoridades y la comunidad aun teniendo los atractivos necesarios para atraer turismo de las regiones vecinas, no lo hacen y es a causa de la ignorancia o porque tienen valores culturales que se pueden ver perturbados por culturas distintas a la de ellos. Por razones anteriores, es de suma importancia hacerles ver a la población y a las autoridades mediante nuestra investigación, las bondades que ofrece el turismo y el gran desarrollo para el municipio y los beneficios que trae consigo para la comunidad en general. Claro está, sin quebrantar de sus costumbres y tradiciones

RELACIÓN DE CAUSALIDAD ENTRE EL ÍNDICE DE PRECIOS DEL PRODUCTOR Y EL ÍNDICE DE PRECIOS DEL CONSUMIDOR INCORPORANDO CAMBIOS ESTRUCTURALES: EL CASO DE LOS PAÍSES MIEMBROS DEL TLCAN

Mario Gómez Aguirre, Universidad Michoacana de San Nicolás de Hidalgo
José Carlos Rodríguez, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En este artículo se analiza la relación de causalidad entre los precios al productor y al consumidor para el caso de los países miembros del Tratado de Libre Comercio de América del Norte (TLCAN) durante el periodo 1957:01-2011:04. Para ello, se utilizan la prueba de raíz unitaria de Lee y Strazicich (2003) que permite cambios estructurales y la prueba de causalidad de Toda y Yamamoto (1994). Los resultados indican que la causalidad va de los precios del productor a los precios del consumidor y de estos últimos a los primeros para el caso de Estados Unidos, de los precios del productor a los del consumidor para México y de los precios del consumidor a los del productor para Canadá.

PALABRAS CLAVE: Precio; causalidad; raíz unitaria; TLCAN.

CAUSALITY RELATIONSHIP BETWEEN THE PRODUCER PRICE INDEX AND CONSUMER PRICE INDEX INCORPORATING STRUCTURAL CHANGES: THE CASE OF NAFTA COUNTRIES

ABSTRACT

This paper analyzes the causality relationship between producer prices and consumer prices in the case of the members of the Free Trade Agreement (NAFTA) countries for the period 1957:01-2011:04. In so doing, we apply the unit root test proposed by Lee and Strazicich (2003) that allows testing for structural changes and causality test of Toda and Yamamoto (1994). The results in this research suggest that causality runs from producer prices to consumer prices, and vice versa in the case of the USA, from producer prices to consumer prices in the case of Mexico, and from consumer prices to producer prices in the case of Canada.

KEYWORDS: Price; causality; unit root; NAFTA.

JEL: E31, E50, C32

INTRODUCCIÓN

Conocer la relación de causalidad entre el índice de precios del productor y del consumidor es de gran utilidad para los bancos centrales, ya que uno de los objetivos importantes es la estabilidad del poder adquisitivo de la moneda nacional, debido a que una inflación baja y predecible puede contribuir al ahorro, la inversión, al crecimiento de la actividad económica y a la creación de empleos. Actualmente, los bancos centrales cuentan con autonomía suficiente y su objetivo principal es la estabilidad de precios utilizando la política monetaria (Roa y Bukhari, 2011). En la literatura sobre la relación de

causalidad entre los precios del consumidor y productor existen dos mecanismos que explican la dirección de causalidad entre ellos, por el lado de la demanda y por el lado de la oferta, respectivamente. Por el lado de la oferta, las materias primas sirven como *inputs* para la producción de bienes intermedios, que a su vez, sirven como *inputs* para la producción de bienes finales (Akçay, 2011). De esta manera, el traspaso se da de los precios de las materias primas a los precios de los bienes intermedios y a los bienes finales, y finalmente, a los precios del consumidor (Rogers, 1998).

Por el lado de la demanda, la demanda de *inputs* entre usos en competencia es determinada por la demanda final de bienes y servicios (Akçay, 2011). De tal manera, que el costo de producción se ve reflejado en el costo de oportunidad de los recursos y bienes intermedios, que a su vez, es producto de la demanda de bienes y servicios finales (Caporale *et al.*, 2002). De esta manera, la relación de causalidad puede ir en un sentido u otro o en ambos. En términos econométricos, la estabilidad de los parámetros de un modelo de regresión es una de las hipótesis básicas en econometría, la cual es necesaria para la predicción y la inferencia econométrica. Cambio estructural o inestabilidad estructural ha sido interpretada comúnmente como cambios en los parámetros de un modelo de regresión (Maddala y Kim, 1998). La estabilidad de los parámetros es una de las hipótesis básicas en econometría, la cual es necesaria para la predicción y la inferencia econométrica. El objetivo de la presente investigación es analizar la relación de causalidad entre el índice de precios del productor y el índice de precios del consumidor para el caso de México, Estados Unidos y Canadá. Después de esta introducción el estudio consta de cuatro secciones. En la primera sección, se hace una breve descripción de los hallazgos empíricos sobre esta relación de causalidad, según los autores, más relevantes y recientes. En la segunda, se describe brevemente la metodología de la prueba de raíz unitaria de Lee y Strazicich (2003) y la prueba de causalidad de Toda y Yamamoto (1995). En la sección siguiente, se analizan los resultados obtenidos. Y se finaliza el estudio con una sección de conclusiones.

REVISIÓN LITERARIA

En esta sección se hace una breve descripción de los hallazgos empíricos sobre el tema. Para el caso de Estados Unidos existen varios estudios como: el de Colclough y Lange (1982) cuyos resultados indican que la causalidad va de los precios del consumidor a los del productor; el de Jones (1986) muestra evidencia de que existe una causalidad bidireccional en los precios. Caporale *et al.* (2002) analizan la relación de causalidad de los precios en los países del G7 para el periodo de enero de 1976 a abril de 1999. Ellos utilizan la prueba de causalidad de Toda y Yamamoto (1995) con un Vector Autorregresivos (VAR) de dos variables y encuentran una causalidad unidireccional, de los precios del productor a los precios al consumidor en Francia y Alemania, causalidad bidireccional para Italia, Japón, Reino Unido y Estados Unidos, y ninguna relación de causalidad para el caso de Canadá. Al utilizar un VAR con cinco variables, los resultados indican que la causalidad es unidireccional de los precios del productor a los precios del consumidor para todos los países.

Ghazali *et al.* (2008) analizan la relación de causalidad de los precios del productor y consumidor para el caso de Malasia durante el periodo de enero de 1986 a abril de 2007. Utilizando las pruebas de causalidad de Granger (1969) y Toda y Yamamoto (1995), sus resultados muestran evidencia de una relación de equilibrio de largo plazo entre los precios y una causalidad unidireccional, de los precios del productor a los precios del consumidor. Sidaoui *et al.* (2009) analizan la relación de causalidad entre el índice nacional de precios al productor y el índice nacional de precios al consumidor para el caso de México, durante el periodo de enero 2001 a junio de 2009. Utilizando pruebas de causalidad a la Granger, los resultados indican que al parecer la información de los precios del productor es útil para mejorar los pronósticos de la inflación de los precios del consumidor, ya que la causalidad va de los precios del productor a los precios del consumidor. Aviral y Muhammad (2010) analiza la relación de causalidad entre los precios del productor y consumidor para el caso de India. Estos autores encuentran evidencia de causalidad bidireccional entre los precios tanto en el corto como en el largo plazo. Por su

parte, Akcay (2011) examina la relación causal entre los índices de precios del consumidor y productor para cinco países europeos con datos mensuales ajustados estacionalmente, de agosto de 1995 a diciembre de 2007. Empleando la prueba de causalidad de Toda y Yamamoto (1995) sus resultados indican que hay causalidad del índice de precios del productor al índice de precios del consumidor para Finlandia y Francia, causalidad bidireccional en Alemania, y para el caso de Países Bajos y Suecia no existe ninguna relación causal estadísticamente significativa. Como se puede observar, la evidencia empírica muestra que la causalidad de los precios puede ir en uno u otro sentido o en ambos.

METODOLOGÍA

Para la realización de las pruebas de causalidad es necesario que las variables sean estacionarias para evitar resultados espurios en regresiones con series de tiempo no estacionarias. Para ello, se analiza la estacionariedad de las series a estudiar con la Lee y Strazicich (2003)- LS que permite dos cambios estructurales. Para de esta manera, no incurrir en la diferenciación de las series cuando no es necesario, ni correcto (Fernández, 1997 y Islam, 2001) puesto que las series pueden ser estacionarias al tomar en cuenta la tendencia determinística y los cambios estructurales existentes.

Por otra parte, existen varias pruebas de causalidad, entre ellas, la de Granger (1969), Sim (1972), Geweke *et al.* (1982) y la prueba de causalidad propuesta por Toda y Yamamoto (1995). En las primeras tres pruebas se requiere que las variables sean estacionarias, para evitar obtener resultados espurios en regresiones con series de tiempo no estacionarias y, conocer, el orden de integración de las series para la última prueba. En esta investigación se aplica la de Toda y Yamamoto.

Toda y Yamamoto (1995) proponen una aproximación para evaluar la relación de causalidad independientemente del orden de integración y/o del rango de cointegración en el sistema VAR estimado a través del sistema SUR (*seemingly unrelated regressions*), es decir, esta prueba es robusta respecto a las propiedades de integración y cointegración. El procedimiento utiliza la prueba estadística modificada Wald (MWald) para la restricción de los parámetros en el VAR (k), donde k es el orden de los rezagos del sistema. El estadístico MWald tiene una distribución asintótica Chi-cuadrada cuando el VAR (k+dmax) es estimado (donde dmax es el máximo orden de integración que se espera pueda ocurrir en el sistema). La prueba de causalidad de Toda y Yamamoto consiste en plantear el siguiente modelo:

$$IPC_t = a + \sum_{i=1}^k a_i IPC_{t-i} + \sum_{j=k+1}^{k+d \max} b_j IPC_{t-j} + \sum_{i=1}^k c_i IPP_{t-i} + \sum_{j=k+1}^{k+d \max} d_j IPP_{t-j} + e_{1t} \quad (1)$$

$$IPP_t = f + \sum_{i=1}^k g_i IPP_{t-i} + \sum_{j=k+1}^{k+d \max} h_j IPP_{t-j} + \sum_{i=1}^k m_i IPC_{t-i} + \sum_{j=k+1}^{k+d \max} n_j IPC_{t-j} + e_{2t} \quad (2)$$

Donde: e_{1t} y e_{2t} son los errores ruido blanco con media cero, varianza constante y no autocorrelación. La causalidad en el sentido de Granger va del índice nacional de precios al productor (IPP_t) al índice nacional de precios al consumidor (IPC_t) si $c_i \neq 0$, $\forall i$ en la ecuación 1. De igual forma, para la ecuación 2 la causalidad en el sentido de Granger va de IPC_t a IPP_t , si $m_i \neq 0$, $\forall i$.

RESULTADOS

Los datos del IPC y IPP para los tres países fueron tomados del *International Financial Statistics* del Fondo Monetario Internacional. La información es trimestral y está expresada en logaritmos naturales durante el periodo 1957:01-2011:04. Es importante comentar que se aplicaron las pruebas de raíz unitario Dickey-Fuller (DF) o Dickey-Fuller Aumentada (DFA) y la Phillips-Perron (PP), y los resultados indican que el índice de precios del productor y del consumidor para los tres países es de orden de integración 1, excepto el índice de precios del consumidor de Canadá, que tiene un orden de integración de 2 (por razones de espacio no fue incluido en el documentos). Sin embargo, es posible que estos resultados sean diferentes al incorporar cambios estructurales y, por consiguiente, mejorar la especificación de las pruebas de raíz unitaria. Para tomar en cuenta la posible presencia de cambios estructurales, se procedió a aplicar la prueba LS. A excepción del índice de precios del productor de Canadá, todas las series de precios de los tres países tienen raíz unitaria (Tabla 1). Los resultados de esta última prueba ratifican lo encontrado por la pruebas DF o DFA y PP, de que las series no son estacionarias en niveles, excepto los precios del productor de Canadá para el caso de la prueba LS. También, el índice de precios del consumidor de Canadá es posible que sea de orden de integración 2 de acuerdo con la prueba DFA. Entonces, el máximo orden de integración de las series sería de 2, información importante que debe ser tomada en cuenta para la aplicación de la prueba de causalidad de Toda y Yamamoto.

Tabla 1: Prueba secuencial de raíz unitaria LS

Variables	Tipo de Modelo	Cambios Estructurales	Estadístico LM	Rezagos
México				
IPP	Modelo C	1979:04/1988:04	-3.906	3
IPC	Modelo C	1975:01/1990:02	-4.462	8
Estados Unidos				
IPP	Modelo C	1972:04/1984:01	-3.625	1
IPC	Modelo C	1969:03/1983:01	-4.495	5
Canadá				
IPP	Modelo C	1972:03/1984:04	-5.188*	8
IPC	Modelo C	1967:03/1983:03	-4.518	8

Nota: los valores críticos para los niveles de significancia del 1% (***), 5% (**) y 10% (*) del estadístico LM son -5.82, -5.28 y -4.98 respectivamente para el Modelo C (Lee y Strazicich, 2003). Fuente: elaboración propia.

Una vez conocido el orden de integración de las series, los resultados de la prueba de causalidad se muestran en la Tabla 2. Para el caso de México la causalidad va de los precios del productor a los precios del consumidor. El resultado de esta causalidad de los precios en ambos sentidos para el caso de México, es similar a lo encontrado por Sidaoui *et al.* (2009), quienes argumentan que la causalidad va del IPP a PPC durante el periodo enero 2001 a junio 2009. Por su parte para Estados Unidos, existe una causalidad bidireccional, lo que indica que la información de los precios del productor es útil para mejorar los pronósticos de la inflación de los precios del consumidor, ya que la causalidad va de los precios del productor a los precios del consumidor, y también, que los precios del consumidor son de utilidad para mejorar los pronósticos de inflación de los precios del productor. Par al caso de Canadá la causalidad va de los precios del consumidor a los precios del productor.

Tabla 2: Resultados de la causalidad de Toda y Yamamoto

Hipótesis nula	México	Estados Unidos	Canadá
IPC no causa a IPP	10.141	21.919***	16.545***
IPP no causa a IPC	40.113***	20.876***	6.618

***, ** y * significativo al 1%, 5% y 10% respectivamente. Fuente: elaboración propia.

CONCLUSIONES

Conocer la relación de causalidad entre el IPC y IPP es de gran utilidad para los bancos centrales de los tres países, ya que uno de los objetivos importantes es la estabilidad del poder adquisitivo de la moneda nacional. En la literatura sobre la relación de causalidad entre IPC y IPP existen dos mecanismos que explican la dirección de causalidad entre ellos, por el lado de la demanda y por el lado de la oferta, respectivamente. En la presente investigación se analizó la relación de causalidad entre el IPC y el IPP para el caso de México, Estados Unidos y Canadá. Los resultados indican que todas las series de precios están integrados de orden 1, excepto el índice de precios del consumidor de Canadá que es de orden de integración 2. El análisis de la relación de causalidad muestra que la dirección va en ambos sentidos para Estados Unidos. La información de los precios del productor es útil para mejorar los pronósticos de la inflación de los precios del consumidor, y también, los precios del consumidor son de utilidad para mejorar los pronósticos de inflación de los precios del productor. Para el caso de México, los precios del productor causan a los del consumidor, este resultado coincide con los resultados presentados en el trabajo de Sidaoui *et al.*, (2009), para una muestra de enero 2001 a junio 2009. Para el caso de Canadá, la causalidad va de los precios del consumidor a los precios del productor.

ANALISIS DEL OUTSOURCING EN MEXICO

Lorena Alvarez Flores, UABC
Lizzette Velasco Aulcy, UABC
Rafael Espinoza Torres, UABC
Seidi Iliana Pérez Chavira, UABC

RESUMEN

El outsourcing es una figura en la cual se da una relación triangulada entre una empresa externa que contrata directamente empleados para que estos desarrollen las actividades o trabajos en la empresa usuaria o contratante que tiene una relación comercial con la empresa externa. El Sistema de Administración Tributaria ha emitido un criterio en el que establece que las personas físicas o morales que realicen o contraten servicios de outsourcing están incurriendo en una práctica indebida, a partir de este decreto se genera una incertidumbre por parte de las empresas mexicanas respecto a la legalidad de recurrir a los servicios de outsourcing. El presente estudio se enfoca a analizar el outsourcing en México, cuya pregunta de investigación es ¿el outsourcing es una figura legal en México? se realiza en Ensenada, Baja California México elaborándose como una investigación cualitativa en la cual se utilizaron fuentes primarias, secundarias y terciarias. Con el objetivo de generar una herramienta de consulta en la cual se describan las obligaciones fiscales de las empresas que ofrecen y contratan los servicios de outsourcing. Del análisis exploratorio practicado se obtiene como resultado que la Ley Federal del Trabajo, ni Ley del Seguro Social y tampoco Ley del Impuesto Sobre la Renta contemplan el término, sin embargo la figura se regula a través de un decreto emitido por el Poder Ejecutivo. Con lo que se da respuesta a la pregunta de investigación obteniendo como resultado que el outsourcing es una figura legal en México.

PALABRAS CLAVE: Outsourcing, figura legal, subcontratación, Tercerización.

ANALYSIS OF OUTSOURCING IN MEXICO.

ABSTRACT

Outsourcing is a figure through which there is a triangular relationship between an external company that contracts directly used to develop these activities or work in the user company or contractor who has a business relationship with the foreign company. The Tax Administration given a judgment which states that individuals or entities that perform or hire outsourcing services are incurring undue practice, this decree from uncertainty generated by Mexican companies regard so legal or illegal use of outsourcing services. This study focuses on analyzing the outsourcing in Mexico, whose research question is how outsourcing is a legal form in Mexico? takes place in the city of Ensenada, Baja California Mexico elaborated as a qualitative research in which we used primary sources, secondary and tertiary. In order to generate a query tool in describing the tax obligations and hire companies offering outsourcing services. Practiced exploratory analysis result is obtained that the Federal Labor Law, and Social Security Law Act and neither the Income Tax contemplate the term, however the figure is regulated through a decree issued by the Executive. Thus answers the research question and getting answer that outsourcing is a legal instrument in Mexico.

KEYWORDS: Outsourcing, legal figure, subcontracting.

INTRODUCCIÓN

En este mundo competitivo y global las empresas mantienen una búsqueda constante de nuevas estrategias que les permitan seguir en el mercado, una de las estrategias más utilizadas actualmente es la figura denominada “outsourcing”, en los países de Norteamérica, y por su traducción al español en Latinoamérica y la Unión Europea es conocida como “subcontratación” o “tercerización”. Esta estrategia les permite a las organizaciones reducir costos y contar con personal especializado; sin embargo como toda táctica competitiva conlleva ciertos riesgos como lo son: el no contar con un equipo especializado propio, desconocimiento del mercado del proveedor, y de los estándares de calidad. A pesar de las desventajas o riesgos la subcontratación continúa siendo una figura atractiva, ya que su tendencia va a la alza. Este trabajo de investigación se enfocara a realizar un análisis acerca de la legalidad del outsourcing, así como a indagar cual es el tratamiento fiscal que se recibe de acuerdo a las leyes mexicanas y definir si los trabajadores que prestan sus servicios bajo la modalidad del outsourcing ven alterados de alguna forma sus derechos laborales.

Problemática

México ha sufrido grandes transformaciones en el ámbito económico, social y político en las últimas décadas. El aspecto laboral y las relaciones de producción también están en plena evolución, una muestra de ello es la subcontratación laboral, tercerización u outsourcing, este servicio cada vez es más contratado por las empresas mexicanas. Consiste en delegar a otras empresas especializadas, la ejecución de una serie de servicios que anteriormente asumían en forma directa a través de sus propios empleados, con el objetivo de disminuir el costo generado por mano de obra. Lo que la subcontratación busca es disminuir costos y aumentar la eficacia, con el propósito de que la empresa beneficiaria se concentre en su objetivo primordial. Esta modalidad tiene una presencia importante en nuestro país, al menos 2.4 millones de trabajadores se encuentran desempeñando funciones bajo esta figura. Aproximadamente 500 empresas mexicanas reciben este tipo de servicio, aunque el mercado potencial supera las 5,000 firmas.

De acuerdo a cifras del Instituto Nacional de Estadística, Geografía e Informática (INEGI en adelante) conforme al censo 2009 en los 5 años anteriores se incrementó 58% el número de personas subcontratadas bajo esta modalidad de outsourcing. En este mismo periodo de tiempo se incrementó 8.6% del personal ocupado bajo esta modalidad y al 13.6%. En México el outsourcing se ha convertido en un tema polémico y de suma relevancia, sobre el que las autoridades fiscales y de seguridad social han puesto especial atención en las prestadoras de estos servicios, declarando una lucha constante contra las conductas de evasión, con la finalidad de evitar abusos, fraudes y simulaciones en contra de los trabajadores que se desempeñan bajo esta modalidad, señalando que buscan reducir la carga tributaria y las obligaciones fiscales, de acuerdo a lo manifestado en el comunicado de prensa 39/2008 publicado el 16 de junio del 2008 en página del Servicio de Administración Tributaria.

METODOLOGÍA

En este apartado se hará una breve descripción del proceso a partir del cual se realizó la investigación, identificando el método de análisis implementado y los instrumentos utilizados. El presente estudio es de carácter fiscal realizado a través de una investigación cualitativa, la cual de acuerdo a Hernández Sampieri (2006) es un proceso inductivo debido que es necesario explorar, describir y generar perspectivas, su enfoque se basa en métodos de recolección de datos no estandarizados. El estudio se realiza a la Legislación Federal Mexicana relacionada con la figura del outsourcing; en específico a la Ley Federal de Trabajo, Ley del Impuesto sobre la Renta y Ley Seguro Social, realizando el estudio en la ciudad de Ensenada, Baja California, México. La investigación inicia con la recolección de información a través de fuentes primarias, secundarias y terciarias siendo éstas de acuerdo a lo descrito por Hernández Sampieri (2006): Fuentes primarias; investigación bibliográfica o revisión de literatura que proporcionan

datos de primera mano, pues se trata de documentos que contienen los resultados de los estudios correspondientes, como libros, antologías, artículos, tesis, disertaciones, documentos oficiales, reportes de asociaciones, trabajos presentados en conferencias o seminarios, artículos periodísticos, testimonios, videocintas en diversos formatos, foros y páginas de internet, entre otros.

Las fuentes secundarias; son listas, compilaciones y resúmenes de referencias o fuentes primarias publicadas en un área de conocimiento en particular, las cuales comentan artículos, libros, tesis, disertaciones y otros documentos especializados. Los que pueden encontrarse disponibles físicamente o por internet. Fuentes terciarias; se trata de documentos donde se encuentran registradas las referencias a otros documentos de características diversas y que compendian nombres y títulos de revistas y otras publicaciones periódicas, así como nombres de boletines, conferencias y simposios, sitios web, empresas, asociaciones industriales, títulos de reportes con información gubernamental, catálogos de libros básicos que contienen referencias y datos bibliográficos y nombres de instituciones nacionales e internacionales al servicio de la investigación, siendo útiles para citar fuentes no documentales tales como organizaciones que realizan o financian estudios, miembros de asociaciones científicas, instituciones de educación superior, agencias informativas y dependencias de gobierno que afectan investigaciones.

Posterior al acopio de las fuentes, se seleccionó y valuó la información pertinente a la subcontratación, entre estas fuentes utilizadas se encuentran la Ley del Impuesto sobre la Renta, la Ley Federal del Trabajo, la Ley del Seguro Social. El paso siguiente fue efectuar un análisis descriptivo de las fuentes, el cual consintió en ordenar, organizar la información y estudiar la figura del outsourcing desde el aspecto jurídico, laboral y fiscal, con el fin de interpretar los temas desarrollados buscando un enfoque explicativo. Como resultado del análisis efectuado se identifican las semejanzas, o en su caso diferencias del tratamiento que concibe la Ley del Impuesto sobre la Renta, Ley Federal del Trabajo y Ley del Seguro Social respecto a la figura del outsourcing.

DISCUSIÓN DE RESULTADOS

Como resultado del análisis efectuado a la Legislación Mexicana pertinente a la subcontratación se encontró que el outsourcing no está contemplado como una figura regulada en la Ley del Impuesto sobre la Renta, la Ley Federal del Trabajo, la Ley del Seguro Social, sin embargo sí es aceptada la modalidad, originándose el derecho desde la Constitución Mexicana. Primeramente para respetar la supremacía de la Constitución Política de los Estados Unidos Mexicanos y tomando como punto de partida este ordenamiento es primordial recordar que a ninguna persona podrá impedirse que se dedique a la profesión, industria, comercio o trabajo que le acomode, siendo lícitos. Considerándose lícito todo lo que no contravenga ninguna ley. También la Constitución contempla el derecho a realizar un trabajo digno y socialmente útil. De acuerdo a lo descrito en el párrafo anterior la subcontratación es una figura lícita, debido a que no está tipificada en ley como un delito. Por otro lado en la Ley Federal de Trabajo se maneja el término de intermediario, el cual se podría confundir con el “outsourcing”; sin embargo son modalidades diferentes de contratación. Este ordenamiento estipula que un intermediario es la persona que contrata o interviene en la contratación de trabajadores que van a prestar servicios a un patrón, en la intermediación aunque existen tres personas, el intermediario sólo actúa como enlace entre empleado y patrón, sin embargo en la subcontratación la empresa externa contrata los servicios personales de empleados para ofrecer servicios a empresas usuarias sin trasladar su personalidad de patrón.

CONCLUSIONES

Los servicios de outsourcing se incorporan a la regulación mexicana a partir del decreto efectuado por el Presidente Felipe Calderón Hinojosa en abril del 2009, momento a partir del cual esta figura es completamente aceptada en México, ya que desde este momento se inicia a regular las empresas que ofrecen servicios subcontratados, tan es así que en este decreto se le imponen obligaciones a las empresas

que contraten servicios subcontratados y las que ofrezcan dichos servicios; estas obligaciones consisten en informar trimestralmente al Instituto Mexicano del Seguro Social sobre las operaciones subcontratadas en el mismo periodo. Con estas consideraciones se logra el objetivo de saber si el outsourcing es una figura legal aceptada en México, obteniendo la afirmación de ser plenamente legal prestar y contratar servicios subcontratados siempre que éstos se desempeñen con apego a lo establecido en los ordenamientos legales. En el aspecto laboral se concluye que los trabajadores que prestan servicios a través del outsourcing pueden estar tranquilos ya que tienen los derechos de cualquier otro empleado, como es el derecho a una retribución por sus servicios, a trabajar ocho horas si se trata de una jornada diurna, siete horas en el caso de la nocturna y siete y media para el caso de la jornada mixta; a recibir los instrumentos y herramientas necesarias para desarrollar su trabajo.

RESUMEN

Ante el devenir histórico que conlleva a una serie de procesos de avances tecnológicos sin precedentes en la historia de la humanidad, se ha considerando a la globalización como un modelo de dominación política, económica y cultural totalitaria, contribuyendo a la pérdida de la identidad cultural histórica patrimonial. Bajo este contexto, la educación tiene como principal objetivo contribuir a un retrato vívido y crítico que transmite las complejas realidades del entorno económico, social cultural y ecológico de la sierra de Zongolica (Tzan-Coliuh-Can), que significa "Lugar de la cabeza enmarañada" o "lugar de cabellos crespos" integrada por 14 municipios, de los cuales entre el 90% y el 100% de su población es indígena, hablante del idioma Náhuatl, los paisajes de esta tierra son de una extraordinaria belleza.

La importancia del itinerario turístico sostenible como un medio viable para transmitir valores y memorias a la nuevas generaciones, es por ello que la investigación busca detonar el desarrollo económico y social de la Sierra de Zongolica Veracruz, que revalore la memoria histórica regional, ya que a través de la investigación se fomentara el análisis, la reflexión y la creatividad para desarrollar gestiones turísticas sostenibles que permitan integrar conocimientos históricos que coadyuven al entorno ecológico de la región como parte de un itinerario integral, para promover el turismo nacional e internacional en la zona, que genere empleos, a través de la Propuesta Ecopedagogica para un Desarrollo Sostenible: Itinerario Ecoturístico, Histórico y Cultural en la Sierra de Zongolica, Veracruz, México.

PALABRAS CLAVE: Sostenible, Ecopedagogía, Cultural, Histórico, Ecoturismo, Zongolica

ECOPEDAGOGICA PROPOSAL FOR SUSTAINABLE DEVELOPMENT: ITINERARY ECOTOURISM, CULTURAL HISTORY AND THE SIERRA DE ZONGOLICA, VERACRUZ, MEXICO.

ABSTRACT

Given the historical progression that leads to a series of technological processes unprecedented in the history of mankind, has been considering globalization as a model of political, economic and cultural totalitarian, contributing to the loss of cultural identity, historical heritage. In this context, the main objective of education is to contribute to a lively and critical portrait that conveys the complex realities of the economic, social, cultural and ecological of the Sierra de Zongolica (Tzan-Coliuh-Can), which means "Place of the head tangled "or" place of curly hair "composed of 14 municipalities, of which between 90% and 100% of the population is indigenous Nahuatl language speaker, the landscapes of this land are of extraordinary beauty. The importance of sustainable tourist itinerary as a viable means for transmitting values and reports to the new generations, which is why the research seeks to trigger economic and social development of the Sierra de Zongolica Veracruz, which reassess regional historical

memory as a through research would encourage the analysis, reflection and creativity to develop sustainable tourism efforts to integrate historical knowledge that contribute to the ecological environment of the region as part of a comprehensive itinerary, to promote domestic and international tourism in the area, generating jobs through Ecopedagogica Proposal for Sustainable Development: Itinerary Ecotourism, Cultural History and the Sierra de Zongolica, Veracruz, Mexico.

JEL: I2, L8, Q2

KEYWORDS: Sustainable Eco-pedagogy, cultural, historical, Ecotourism, Zongolica.

INTRODUCCIÓN

El magno paisaje natural de la sierra de Zongolica refleja la proclividad de un paso inagotable de tradición y cultura de una herencia patrimonial construido por cada uno de sus habitantes a lo largo del tiempo, habitada por los Nonoalcas provenientes de la gran tula, dejando una herencia cultural que hasta el día de hoy los habitantes actuales hacen esfuerzo por preservarla como un Patrimonio que es mucho más que el conjunto de edificaciones y de espacios, es la organización de la comunidad misma, el calendario ritual y ceremonial, son las fiestas, las expresiones artísticas, los espacios de convivencia, es todo aquello que en conjunto configura lo que realmente puede calificarse, el ámbito vital. Lo cual implica un medio cultural, así como un ambiente sano que encuentra la armonía entre cultura y el medio ambiente. En el mundo contemporáneo se acentúan los rasgos más perniciosos de la globalización. En él, las ciudades y pueblos tienden a parecerse más cada día, sus habitantes adquieren bienes y hábitos de consumo cada vez más uniformes, pero también un elemento primordial que sirve para anclarnos en la realidad propia es remitirnos a nuestros rasgos identitarios: ese elemento es la cultura.

Hablando del estado de Veracruz, tan rico y diverso culturalmente, hay evidencias deprimentes del poder destructivo que tiene el progreso mal entendido en una gran parte de los poblados y ciudades con valor tradicional. Si bien, es cierto, la conciencia de preservar las tradiciones de las regiones con sus colores, sabores y el misticismo cada día gana terreno coadyuvando a la ecopedagogía para alcanzar un desarrollo sostenible al alcance de los habitantes menos favorecidos de nuestro estado. A pesar de tener los elementos naturales, culturales e históricos que enmarcan la Sierra de Zongolica hoy se encuentra olvidada totalmente por el turismo, desamparada de oportunidades de trabajo para sus ciudadanos aquí es, donde el peso histórico cultural local requiere ser ponderado y bien explicado, donde el patrimonio cultural entra contundentemente en juego para el crecimiento y desarrollo de cada una de las comunidades indígenas de esta gran sierra, explotando la belleza natural y toda costumbre cotidiana que genere espacios ecoturísticos sostenibles para crear los itinerarios que aprecien la historia, el valor al cuidado de la naturaleza, el valor de los trabajos artesanales, que permita contribuir a un cambio de mentalidad con el fin de desarrollar fuentes de empleo, colocando a la cultura en el centro para fortalecer la identidad local. Esta realidad inmediata está insertada de tradiciones, que pertenecen a un patrimonio histórico representado por el lugar donde se vive: es la casa, la calle, la iglesia, el Palacio Municipal, el mercado, la ropa tradicional, el parque, el panteón, el campo de cultivo, la naturaleza misma, la medicina tradicional, los mitos y leyendas, la fiesta patronal, es el pueblo la expresión más íntima y entrañable, la imagen más obvia de nuestra pertenencia cultural. Si esa imagen se fractura, se mancha y se deforma, la vida cultural en su conjunto se ve ultrajada.

Es por ello que la “Propuesta ecopedagógica para un desarrollo sostenible: Itinerario ecoturístico, histórico cultural en la Sierra de Zongolica, Veracruz México”, representa una revalorización de la identidad local-global cuyo objetivo es formar una cultura ecopedagógica que permita el desarrollo sostenible de la implementación de itinerarios histórico culturales como medio desarrollo económico que fortalezca la calidad de vida de los habitantes de los 14 municipios de la Sierra de Zongolica.

Ecopedagogía

Las Naciones Unidas han instituido la educación para un futuro sostenible (2005-2014) designada por la UNESCO como un órgano de promoción para el desarrollo. La ecopedagogía *“es la educación para la actuación responsable hacia el ambiente y, a la vez es una educación por el ambiente.”* (Gadotti Moacir, 2003). La ecopedagogía tiene sus antecedentes en Rosseau quien destaca la importancia de tres entornos o marcos que son: entorno físico o natural, el artificial o creado por el ser humano y el medio social, los que se ven implícitos en el concepto de ecoformación. Los aspectos que se ven representados transmiten valores de vida en la formación de las personas. También se puede expresar que la ecopedagogía conlleva una ecoformación que reúne la educación ambiental incluyente en el desarrollo sustentable. El objetivo de la ecopedagogía es enseñar a las personas a cuidar el entorno inmediato desarrollando una cultura ecológica y transmitiendo los valores que son parte de la identidad cultural a través de la participación social. Podemos apreciar que la ecopedagogía es *“la escuela ciudadana, gestora del conocimiento, no aleccionadora con un proyecto ecopedagógico, esto es, ético-político, una escuela innovadora, constructora de sentido y comprometida con el mundo”*. Se puede apreciar que la escuela propicia la formación de los valores *“Mujeres y hombres, seres históricos y sociales, nos volvemos capaces de comparar, de valorar, de intervenir, de escoger, de decidir”* [...] (P, 1990) Se concluye que la ecopedagogía es un medio de concientización para los ciudadanos con la finalidad de cuidar al medio ambiente, y de valorar la identidad cultural local-global que es un legado histórico a través de dicha educación, que permite una revalorización de la identidad cultural.

Sostenible

Hablar de sustentabilidad obliga a utilizar una definición más amplia y detallada que nos permita comprender el antecedente inmediato del término desarrollo sustentable. El concepto de sustentabilidad fue utilizado por primera vez en la Asamblea General de las Naciones Unidas en 1979, indicando que el desarrollo podía ser un proceso integral que incluyera dimensiones: culturales, éticas, políticas, sociales y ambientales, y no sólo económicas. Este término diseminado mundialmente mediante los informes del Worldwatch Institute en el decenio de los ochentas y particularmente por el informe “Nuestro futuro común”, emitido por la Comisión de las Naciones Unidas para el Medio Ambiente y el Desarrollo, en 1987. En la Cumbre de la tierra llevada a cabo en Río de Janeiro en el año de 1992, se sientan las bases del desarrollo sustentable. Ahí se estableció una propuesta que contiene recomendaciones a los gobiernos para la constitución de los marcos legales adecuados al concepto desarrollo sustentable, que se denominó agenda 21. Posteriormente en 1998 el concepto tiene una connotación ecológica, no se centra exclusivamente a cuestiones ambientales, implica también sostenibilidad económica y social.

El desarrollo sostenible deberá ofrecer un sistema ecológicamente sano, económicamente viable y socialmente justo. El concepto sostenible o sustentable proviene de un término anglosajón “sustainable development”, consagrado en el informe de la Primer Ministro de Noruega Gro Brundtland denominado “Nuestro Futuro Común”. Por lo tanto el desarrollo sustentable (o sostenible) es el desarrollo que satisface las necesidades de la generación presente, sin comprometer la capacidad de las generaciones futuras, para satisfacer sus propias necesidades.

Cabe destacar, [...] *“que el término sostenible en cuanto a la traducción en español presenta dificultad, conserva en toda su dimensión el verdadero y original sentido significado, dando lugar a dos términos. Uno, desarrollo sustentable, mayormente utilizado en Latinoamérica y sostenido por prestigiosos científicos como Cano, y el otro término es desarrollo sostenido, utilizado en España, defendido entre otros por Serrano Moreno y Martín Mateo”* (Carta de Itinerarios Culturales, 2008) De acuerdo con lo anterior, se puede expresar que el término es considerado como sinónimo y se utiliza indistintamente, sin embargo el concepto en español no logra revelar la total dimensión anglosajona, puesto que este tiene una visión dinámica, no estática que hace referencia a un proceso continuo que hay que mantener a lo largo

del tiempo, en cambio, el término español, tiene una connotación más estática de conservación. Es por ello, que se ha considerado el término anglosajón en la propuesta de investigación.

Itinerarios Historicos Culturales

Con respecto a uno de los conceptos importantes para estudiar, es el término itinerario cultural, *“Ofrece un marco privilegiado para una dinámica de comprensión mutua, de lectura plural, de historia y de una cultura de la paz. Se fundamenta en los movimientos de la población al encuentro y el diálogo, el cambio y la interfecundación de las culturas y del tiempo.”* (Carta de Itinerarios Culturales, 2008). De acuerdo con lo anterior, se puede señalar que el concepto de itinerario cultural refiere a un carácter acierto, dinámico y evocativo, que resume a un estudio local-global que permite el reconocimiento dentro del patrimonio, las dimensiones económicas, sociales, simbólicas y filosóficas que se relacionan con el medio natural en su diversidad. Otro de los aspectos a considerar en el término de *“itinerario cultural puede ser considerado como un tipo cultural y dinámico de paisaje cultural. La identificación se basa en puntos fuertes y de elementos tangibles, se establece en relación con el marco natural y la dimensión intangible [...]”* (Carta de Itinerarios Culturales, 2008).

El itinerario cultural se puede comprender más allá que una ruta turística que transmite la preservación de los monumentos históricos, calles, plazas, panteones, parques, iglesias, mercados e industrias que forman parte la memoria histórica local. Un itinerario cultural conecta e interrelaciona geografía y bienes patrimoniales muy diversos, formando un todo unitario. En los itinerarios culturales y en su entorno están presentes sus diversos paisajes naturales o culturales, que son uno más entre los componentes del itinerario. La protección y conservación de los itinerarios culturales sostenibles exigen un conocimiento profundo de las características históricas, naturales y culturales de su entorno. Las intervenciones que resulten necesarias deberán integrarse en ese contexto respetando sus rasgos definitorios, facilitando su lectura, y no distorsionando el paisaje tradicional, ya sea este natural, cultural o mixto.

Generalidades De La Sierra De Zongolica.

La Sierra de Zongolica (*Tzan-Coliuh-Can*), cuyo nombre significa *“Lugar de la cabeza enmarañada” o “lugar de cabellos crespos”*, región habitada principalmente por indígenas nahuas, se encuentra localizada en la región montañosa del centro del estado de Veracruz México dentro de la Sierra Madre Oriental, su clima es templado-húmedo-extremoso con una temperatura promedio anual de 17.4°C; su precipitación pluvial media anual es de 2,270.1 mm., la vegetación es de tipo bosque alto perennifolio y bosque tropical caducifolio, integrada con especies como: cedro, palo mulato, xochicuauilt, encino, oyamel, guarumbo una extensa variedad de árboles frutales como el jinicuil, tejocote, zapote blanco y negro, guayabos, chinene, durazno, pera, nísperos, naranja malta, nogal, diferentes tipos de plátano, chirimoya; su fauna cuenta con una gran variedad de animales silvestres, entre los que se encuentran:

ocelote, gato montés, temazate, tepezcuintle, conejo, tejón, mapache, ardilla, zorro, tlacuache, cacomixtle, reptiles, aves, peces y un sin fin de insectos. La Sierra de Zongolica está integrada por 14 municipios, Astacinga, Atlahuilco, Los Reyes, Magdalena, Mixtla de Altamirano, Rafael Delgado, San Andrés Tenejapan, Soledad Atzompan, Tehuipango, Tequila, Texhuacan, Tlaquilpa, Xoxocotla y Zongolica. Los habitantes de la Sierra de Zongolica se dedican principalmente a la Agricultura, siembran frijol, maíz, hortalizas para autoconsumo y venta regional, café, cultivan flores de temporada como el cempasúchil, moco de pavo, lirios, alcatraz, nube, gladiola, crisantemos entre otras. En cuanto a la ganadería solo para autoconsumo principalmente de ganado menor como cerdos, ovinos, caprinos y cría de aves de corral. Una actividad que ha repercutido fuertemente en la Sierra de Zongolica es la creación de cooperativas artesanales de muebles de madera por lo cual la deforestación de esta región llevo a ser muy importante aunque se ha venido revirtiendo con diversos programas de reforestación.

En general, la economía de la Sierra de Zongolica es precaria, la riqueza se encuentra distribuida solo en algunas familias, debido al caciquismo, al haber muy pocas fuentes de empleo sus habitantes se ven obligados a emigrar a las ciudades en busca de trabajo principalmente los jóvenes los cuales van perdiendo identidad cultural, la riqueza en tradiciones usos y costumbres de los 14 municipios que la integran es vasto en gastronomía, religión, artesanías, en una cotidianidad que se transmite de generación en generación, el rezago educativo en la Sierra de Zongolica está siendo combatido en todos los niveles por las autoridades gubernamentales federales y estatales que han incrementado la inversión en este rubro, tal es el caso de la Universidad Veracruzana con dos sedes la Universidad Intercultural ubicada en el municipio de Tequila inaugurada en el año 2004 y la Casa de la Universidad Veracruzana en Atlahuilco creada en 2008, de igual manera se creó en el año 2003 el Instituto Tecnológico Superior de Zongolica, en 2011 abrió un campus en Tehuipango y en Tequila, cabe señalar que es el único actualmente en México que opera totalmente en Nahuátl. En salud la proporción de médicos por cada mil habitantes de los 14 municipios que integran la Sierra de Zongolica es de 1.1 médicos por cada mil habitantes de un total de 176,606 habitantes (INEGI, 2011).

Tabla 1: Comparación de los Indicadores de desarrollo de los 14 Municipios de la Sierra de Zongolica.

Municipio	Grado de Marginación	Grado de Desarrollo Humano	Nivel de Desarrollo Social
Astacinga	Muy Alto	Medio Bajo	Muy Bajo
Atlahuilco	Muy Alto	Medio Bajo	Muy Bajo
Los Reyes	Muy Alto	Medio Bajo	Muy Bajo
Magdalena	Muy Alto	Medio Bajo	Muy Bajo
Mixtla de Altamirano	Muy Alto	Medio Bajo	Muy Bajo
Rafael Delgado	Alto	Medio	Muy Bajo
San Andrés Tenejapan	Muy Alto	Medio Bajo	Muy Bajo
Soledad Atzompa	Muy Alto	Medio Bajo	Muy Bajo
Tehuipango	Muy Alto	Medio Bajo	Muy Bajo
Tequila	Muy Alto	Medio Bajo	Muy Bajo
Texhuacan	Muy Alto	Medio Bajo	Muy Bajo
Tlaquilpa	Muy Alto	Medio Bajo	Muy Bajo
Xoxocotla	Muy Alto	Medio Bajo	Muy Bajo
Zongolica	Alto	Medio	Muy Bajo

Fuente INEGI 2012, diseño propio.

La tabla anterior muestra el rezago económico, social y humano que sufren los 14 municipios y sus comunidades de la Sierra de Zongolica, Veracruz México, entendiendo por marginación a el fenómeno vinculado a condiciones de pobreza material, que impiden al individuo o grupo a no tener acceso a un nivel medio equiparable de calidad de vida, en relación a la situación económica esta permanece estancada, sin crecimiento en ningún sector, con disminución de empleo, disminución de la demanda.

Propuesta De Itinerario Historico Cultural De La Sierra De Zongolica Veracruz Mexico.

La propuesta tiene como objetivo que las comunidades de la Sierra de Zongolica se beneficien con un itinerario que genere empleos, atrayendo turismo nacional e internacional que permita la reactivación de la economía en todos los ámbitos (ecoturismo, artesanales, gastronómicos y culturales).

Para ello se requiere promover una visión ecopedagógica que eduque a los ciudadanos con la finalidad de contribuir al cuidado del medio ambiente de la Sierra de Zongolica, para desarrollar oportunidades laborales a través del itinerario cultural y se deberá fundamentar en los criterios de sostenibilidad.

ASTACINGA: Proviene de las voces nahuas Azta-zin-can que significa “Lugar de las pequeñas garzas” Figura del lenguaje para indicar en el lugar de la blancura venerable.

Reseña Histórica: Durante la época prehispánica formó parte de los Nonoalcos llamados "Pinones", asentados en la región de Zongolica.

Fiestas, Danzas y Tradiciones : El 15 de agosto se lleva a cabo su fiesta titular en honor a la virgen de la Asunción.

Artesanías: La elaboración de jorongos de lana y chaquetas, los representan.

Gastronomía: Los platillos elaborados a base de quelites y de hongos en sus diversas presentaciones.

ATLAHUILCO: Es voz náhuatl Atl-tlauil-ko que significa “En el agua clara o iluminada” y es posiblemente reducción de Atlahimolco, sitio mítico referido en la migración nonoalca-chichimeca

Fiestas, Danzas y Tradiciones : Del 11 al 12 de noviembre se lleva a cabo la fiesta de carácter religioso en honor a San Martín Caballero, patrono del lugar. Durante la fiesta se ejecutan una serie de danzas como la de los Tocatines, Moros y Cristianos y a petición del mayordomo, los Xochicolohke (negritos o panaderos).

LOS REYES: Anteriormente Cozca-Tlán; del náhuatl que significa “Lugar de joyas o Collares”.

Fiestas Tradiciones y Danzas: Del 5 al 7 de enero se celebra la Fiesta de Los Santos Reyes.

MAGDALENA: Voz Náhuatl que significa. ”Lugar lleno de pilares”. En 1831 se le denominó Santa María Magdalena Tlamimilola que significa “Lugar de Altozano y cuesta pequeña.

Monumentos Históricos: El Palacio municipal y la iglesia son considerados monumentos históricos.

Fiestas Tradiciones y Danzas: El 21 y 22 de julio se celebran las fiestas religiosas en honor de Santa María Magdalena, patrona del pueblo. Los días 1 y 2 de noviembre se festeja a Todos los Santos y Fieles Difuntos, es tradicional que en esta fecha acuda la gente del pueblo al panteón a adornar con flor de cempoalsuchitl las tumbas donde descansan los restos de sus familiares fallecidos; además en sus viviendas instalan altares con ofrendas de pan de muertos, conejos, naranja, plátano, chayote cocido, chocolate y flor de cempoalsuchitl.

Artesanías: La artesanía típica consiste en la elaboración de prendas de vestir de lana, en pequeña escala, en telares de cintura.

Gastronomía: El municipio cuenta con platillos típicos como son: Mole con carne de guajolote, tamales de frijol, tamales de chile, xocotamales y atole de maíz.

Atractivo Natural: El atractivo turístico son las cavernas de Tzontecomoztok, que cuentan con una pequeña laguna en el interior.

MIXTLA DE ALTAMIRANO: Del náhuatl literal Mixtli, nube; tlan, (abundancial); significa “Lugar de nubes abundantes”, otros dicen que su significado más profundo es el de Mixkoatl, dios de pueblos cazadores recolectores, más conocido por chichimecas, indios bárbaros, o sea bravos y salvajes

Personaje Ilustre: Ignacio Manuel Altamirano 1834-1893, Abogado, publica poesía, cuento y novelas, entre las cuales destacan Clemencia, Navidad en las montañas y el Zarce.

Fiestas Tradiciones y Danzas: Entre los últimos días de febrero y los primeros días de marzo, se celebra el Carnaval mediante juegos populares. El 15 de agosto es la fiesta en honor a la Virgen de la Asunción, en la cabecera municipal. El 1 y 2 de noviembre rinde tributo a Todos los Santos. El 29 y 30 de

noviembre se lleva a cabo la fiesta titular en honor de San Andrés Apóstol, patrono del lugar, con danzas autóctonas y folklóricas, juegos pirotécnicos, actos religiosos, carreras de caballos y torneo de cintas.

Una de las tradiciones en sus bailables es el de Xochipitzahuak (flor menudita), consiste en el festejo que se realiza en la casa de la novia y donde se hacen honores para el pedimento de la joven a quien se pretende desposar.

Artesanías : Las fajas de hilo con colores vistosos, mangas y cotones de lana pura, tlacpiales (hilos que sirven de adorno para el cabello largo, de vistosos y variados colores), ollas de barro cocido, comales y algunos utensilios de cocina.

Gastronomía: El Xopocotamale, es un tamal elaborado de forma especial, para las mayordomías y casamientos, que contiene una hierba de conocimiento solo de los nativos.

El Tonilzint que es un caldo de frijoles tiernos, lo que proporciona un agradable y especial sabor, condimentado con hierba de olor.

Rafael Delgado: Se le denomina así en honor al gran escritor cordobés.

Fiestas, Danzas y Tradiciones: Del 22 de mayo al 4 de junio se lleva a cabo la fiesta religiosa en honor de San Juan, patrono del pueblo, con bailes populares, actos religiosos, juegos mecánicos, carreras de caballos y torneo de cintas y eventos deportivos. La última semana de mayo se celebra la Feria de la Flor, con bailes.

Música: La representativa es el "Xocotamal Sontsin", que se toca con instrumentos como el violín, guitarras y maracas.

Gastronomía: El mole con carne de pavo.

SAN ANDRES TENEJAPAN: Tenex-apan, es voz de origen náhuatl que significa “En el agua de la cal”.

Monumentos Históricos: Iglesia de San Andrés Apóstol y la Pirámide de Teopancahualco.

Fiestas Tradiciones y Danzas: El 2 de febrero es la fiesta religiosa en honor de la Virgen de la Candelaria. El 30 de noviembre se celebra la fiesta patronal de San Andrés, empieza con la víspera; en caso de ser entre semana se cambia al domingo próximo, realizándose juegos pirotécnicos, música, danzas de moros, pastorelas, procesiones y feria. El 12 de diciembre es la fiesta de la Virgen de Guadalupe, empieza la víspera, se celebra la octava con juegos pirotécnicos, música y danzas.

Gastronomía : Carnitas; tamales de frijol, de chile con carne; mole de guajolote; atole champurrado de cacao o de Yoloxochitl (flor de corazón), memelas o picadas.

Atractivos Naturales: Balneario, afluente que forma una gran represa de agua fría y cristalina, rodeado de un clima templado-húmedo y vegetación de tipo bosque caducifolio. En el restaurante del lugar, hay música para bailar, el atractivo son dos puentes colgantes y el Cerro Petlacala (bosque).

Soledad Atzompa: El nombre es náhuatl y significa “En los cabellos del agua”, tal vez en los arroyos que semejan una cabellera.

Fiestas Tradiciones y Danzas: El 2 de febrero se celebra la fiesta tradicional de la Candelaria, con danzas y procesiones.

Artesanías: Las fajas de hilo con colores vistosos, mangas y cotones de lana pura, tlacpiales (hilos que sirven de adorno para el cabello largo, de vistosos y variados colores).

Tehuipango: Tehui-pan-co. Es voz de origen Náhuatl que significa “En el paso transparente”.

Monumentos Históricos: Ruinas Arqueológicas.

Fiestas Tradiciones y Danzas: El 25 de julio se celebra la fiesta religiosa de Santiago Apóstol, con bailes populares, juegos pirotécnicos carrera de caballos o torneo de cintas

Artesanías: Existen talleres de costura que realizan prendas de vestir y cobijas con coloridos contrastantes

Gastronomía : Flor de Maguey, Barbacoa de Borrego y Mole.

TEQUILA: Te-qui-lan, en lengua náhuatl que significa "Lugar de las Verduras en las Tierras", pero también puede ser "Lugar de Tributos ó Fuerzas".

Reseña Histórica: Los dominadores de la triple alianza colocaron ahí un Tequihua (lugar en donde se reunían los tributos) para ejercer su autoridad y de ahí el nombre, Tequila fue en la época prehispánica y durante el siglo XVI, la cabecera de una confederación de pueblos que comprendía el territorio ocupado actualmente por los municipios de Tequila, Atlahuilco, Magdalena, San Andrés Tenexpa, Xoxocotla.

Fiestas, Danzas y Tradiciones: Se realizan festejos el 1º de enero con motivo del año nuevo; en marzo o abril la celebración de la semana santa; el 29 de junio fiesta religiosa en honor de San Pedro, patrono del lugar; el 12 de octubre día de la raza; noviembre 1 y 2 Todos Santos; en diciembre 12 la celebración en honor a la Virgen de Guadalupe y festividad de santo Cristo y de fin de año.

Artesanías: Tejido en telar de cintura.

Texhuacan: San Juan Teoizhuacán es voz de origen Náhuatl y lugar de las divinas hojas verdes de maíz. “Totomoxtle o Vástago del elote”. Teolt= Dios,ixtli= rostro, hua= dueño, can= lugar; “Lugar del dueño del rostro de Dios”.

Fiestas Tradiciones y Danzas: Del 22 al 24 de junio se celebra la fiesta religiosa en honor al santo patrón “San Juan Bautista” fiesta popular con diversas manifestaciones tradicionales que se indican 20 días antes, El 1 y 2 de noviembre se festeja a todos los santos y fieles difuntos.

Artesanías: La artesanía tradicional está representada por prendas de vestir y blusas de estambre, lana o manta elaborados en telas de conjetura confeccionadas a mano y bordadas con colores como mangas, chalecos, líos, fajas y tlaljkuailes.

Gastronomía: El platillo más representativo es el mole de guajolote, tamales de frijol con hojas de aguacate y la bebida típica es la Caxtila hecha de jugo de caña fermentada con la raíz de un arbusto que se llama Timbre.

Tlaquilpa: Voz de origen Náhuatl, que significa “Lugar de albañiles”.

Reseña Histórica: Pueblo muy antiguo, tributo a la Triple Alianza, antes de la conquista española.

Monumentos Históricos: La iglesia o templo católico parroquial.

Fiestas Tradiciones y Danzas: El 22 de julio se festeja la fiesta patronal de Santa María Magdalena,

empieza la víspera con bailes, juegos pirotécnicos, músicos y procesiones.

Artesanías : Las derivadas de la Lana del Borrego, ya que es la única materia prima con que se cuenta en el Municipio, algunas de ellas son bolsas, chalecos, líos, tlakpiales (para el cabello).

Gastronomía: La barbacoa de borrego con diversos aderezos, el mole y los tamales.

Xoxocotla: Xoxo-oco-tlan. Es voz de origen Náhuatl que significa “Lugar donde hay pinos verdes” o Xoxo “Lugar de ocotes viejos”.

Monumentos Históricos: El principal monumento histórico del municipio es una iglesia católica.

Fiestas Tradiciones y Danzas: 2 y 3 de mayo: fiesta religiosa en honor a la virgen de Juquila.

14 y 15 de mayo: fiesta religiosa en honor a San Isidro Labrador. 11 y 12 de diciembre: fiestas en honor a la Virgen de Guadalupe.

Artesanías: La lana es uno de los materiales utilizados para la elaboración de las cobijas y mangas, así como el uso del estambre para el mismo fin.

Gastronomía: Los platillos típicos del municipio son el mole y la barbacoa de borrego.

Zongolica: De Tzontli, cabellera y Coliuhqui, retorcida. “Cabellera retorcida.

Reseña Histórica: Durante la época prehispánica fue una población nonoalca. En el siglo XVI fue cabecera de los reyes, Tlaquilpa, Mixtla, Asctancinga, Tehuipango, Texhuacan, Tezonapa, Coetzala y Omealca.

Monumentos Históricos : 2 iglesias el Calvario fundada en 1526, y la Parroquia de San Francisco de Asís, zona arqueológica de Tecuapa que fue saqueada y casi no hay vestigios de una pirámide, ex haciendas de Tlanecpaquila, Coyametla y Porvenir, en este último ya solo quedan ruinas, el cristo del cerro Cinco flores.

Fiestas Tradiciones y Danzas : Fiestas: el 2 de marzo en la gran cueva de Tomachapa, curanderos y danzantes se reúnen para dar gracias a la madre tierra por los beneficios recibidos.

Artesanías: En los mercados se encuentran tejidos de lana tenidos con colores, vegetales, fajas de seda, ollas, comales, vasijas, etc.

Gastronomía : Guisado de Quelites: quelites blancos, chile y especias. Tepaya: frijol asado y molido, picante, hoja de aguacate y manteca de cerdo. Texmole: pollo, chile, masa, jitomate, epazote.

Atractivos Naturales: Se puede apreciar “El Boqueron”, puente natural de más de 25 metros de altura, cerca se encuentra el Popocalt en la congregación de Cutlaixco, donde el curso integro del río Coalt se suma para formar una cascada subterránea de más de 60 metros.

RECOMENDACIONES

La realidad, de la Sierra de Zongolica Veracruz, atraviesa por una crisis de desarrollo económico, por lo cual es necesaria la creación de nuevos y estables empleos que puedan impulsar a los habitantes hacia una mejor calidad de vida, el turismo es una alternativa viable y sostenible que permita el crecimiento dinámico de los diferentes atractivos históricos, culturales y naturales que se puedan ofertar en cada municipio, la llegada de turismo a esta región representa la oportunidad de crear un foco de desarrollo regional por medio del cual el turista conozca parte de la historia de nuestro país, fomentando los valores en la conservación y protección de los sitios históricos con los que cuentan los municipios de la Sierra de Zongolica que cuenta también con áreas naturales de extraordinaria belleza brindando espacios para

actividades propias del ecoturismo. Para finalizar, la investigación tiende a promover un desarrollo sostenible que vincule el turismo con el patrimonio histórico - cultural que nos permita establecer un itinerario que valore el pasado, educando a las personas para respetar las tradiciones, la naturaleza, valorar los hechos históricos que forman parte de la identidad local y su cultura misma promoviendo con operadores turísticos el Itinerario Histórico Cultural y cultural de la Sierra de Zongolica”.

EL MARKETING NOSTÁLGICO Y SU RELACIÓN CON EL CONSUMO DE PRODUCTOS DE MAÍZ EN LOS MIGRANTES MEXICANOS

Ramón Sebastián Acle Mena, Benemérita Universidad Autónoma de Puebla

Mario Antonio Burguete García, Universidad Tecnológica de Oriental

RESUMEN

La investigación se realizó dentro de un enfoque mercadológico para identificar la relación del marketing nostálgico y el consumo de productos de nostalgia. El objetivo general fue identificar la relación del marketing nostálgico y el consumo de productos de maíz en los migrantes mexicanos ubicados en los Ángeles California, USA. Los resultados que se presentan corresponden a una investigación empírica sobre el consumo por nostalgia, usando un enfoque cuantitativo, logrando la aplicación del modelo Nostalgic mix para determinar la relación entre el marketing nostálgico y el consumo por nostalgia de productos de maíz. Para la presente investigación se utilizaron de forma práctica los conceptos novedosos de marketing nostálgico, mercado de nostalgia y consumo por nostalgia.

PALABRAS CLAVES: Marketing nostálgico, productos de maíz y migración.

NOSTALGIA MARKETING AND ITS RELATIONSHIP WITH CORN CONSUMPTION OF MEXICAN MIGRANTS IN LOS ANGELES, CALIFORNIA.

ABSTRAC

The research was conducted within a marketing focus to identify the relationship of nostalgia marketing and the consumption of nostalgia products. The general objective was to identify the relationship of nostalgia marketing and the consumption of corn products of migrant workers located in Los Angeles, California, USA. The results that are presented correspond to an empirical research on nostalgia consumption, using a quantitative focus, achieving the application of the Nostalgic Mix model to determine the relationship between nostalgia marketing and nostalgia consumption of corn products. For this research, it was used in practical form novel concepts of nostalgia marketing, nostalgia market and nostalgia consumption.

KEY WORDS: Nostalgia marketing, corn products and migration.

INTRODUCCIÓN

El marketing hoy en día, es una de las ciencias más importantes para que las empresas puedan ser competitivas en los mercados nacionales e internacionales, esta ciencia se ha ido diversificando cada vez más, al grado de poderse aplicar en diferentes contextos como: marketing de servicios, marketing turístico, marketing político, marketing religioso, etcétera. Pero no se han encontrado muchos estudios que relacionen la aplicación de marketing nostálgico en el consumo de productos de nostalgia. La presente investigación se encuentra organizada de la siguiente forma. En la sección de revisión de literatura se describen los conceptos de marketing nostálgico que comprenden los términos siguientes:

producto, mercado y consumo de nostalgia; consumo de maíz y migración. Posteriormente se presenta en una tabla, el resumen técnico del diseño de la metodología empleada en la investigación. Consecutivamente se presentan los resultados de la investigación, y finalmente se presentan las conclusiones.

REVISION DE LITERATURA

Para presentar la revisión de la literatura se describirán a través de apartados, los siguientes conceptos: marketing nostálgico, consumo de maíz y migración.

Marketing nostálgico

Hoy en día el marketing es una herramienta fundamental para toda empresa que desee identificar necesidades y deseos, innovar, distribuir, fijar precios y promocionar bienes y servicios, y gracias a esto el consumidor se convencerá de comprarlos o no. El marketing es una función de negocios indispensable para toda empresa que desee perdurar en un mercado competitivo. El marketing presenta diferentes enfoques de aplicación, entre los más usuales están: industrial, turístico, internacional, social, político, etc. Es necesario mencionar que cada vez surgen nuevos enfoques de marketing. El marketing nostálgico es otro enfoque novedoso y especializado que se dirige a los migrantes y su satisfacción de necesidades y deseos a través de los productos de nostalgia.

El marketing nostálgico es el proceso social en el cual una empresa y sus consumidores cumplen sus objetivos. Se compone de la aplicación de dos enfoques: la orientación del mercado y la función del marketing. El primero incluye las actividades de una empresa dirigidas a satisfacer las necesidades y deseos de los migrantes a través del intercambio de bienes y servicios de nostalgia, y el segundo incluye la administración del marketing mix (Burguete & Acle, 2012).

Para poder comprender los términos antes mencionados: producto, mercado y consumo de nostalgia que conforman el concepto de marketing nostálgico, primero será necesario entender qué es la nostalgia.

La nostalgia es un sentimiento, estado de tristeza o melancolía que sufren los individuos cuando añoran o extrañan la pérdida de alguien o algo. Este concepto tiene una aplicación en diferentes contextos como: la tristeza o melancolía por familiares, amigos, compañeros, música, ropa, cine, juguetes, alimentos, etc. (Burguete & Acle, 2012). Producto de nostalgia según un estudio de la Comisión Económica para América Latina y el Caribe (CEPAL), se entiende como aquellas mercancías que integran “bienes y servicios que forman parte de los hábitos de consumo, cultura y tradición de los diferentes pueblos y naciones”, y parte de la idea de que en el caso de los grupos sociales que emigran al extranjero, tienden a extrañar, a rememorar ciertos productos que forman parte de su vida cotidiana, productos y servicios que difícilmente pueden encontrar en sus lugares de destino (CEPAL, 2003).

Para la presente investigación se entiende por producto de nostalgia a un bien o servicio diferenciado que se compone de una serie de costumbres, tradiciones, hábitos de consumo que formaban parte de su vida cotidiana en su lugar de origen y que satisface necesidades y deseos de los migrantes al recordar, añorar su cultura en otro destino (Burguete & Acle, 2012). Los productos de nostalgia abarcan diferentes bienes y servicios desde ropa, música, alimentos, muebles, regalos, artesanías, restaurantes, entrenamiento, etc. Entre los más demandados están los bienes de consumo (alimentos, bebidas y abarrotes). El mercado de nostalgia es el grupo de migrantes con necesidades y deseos específicos de productos de nostalgia, así como de dinero y voluntad para gastar. Dicho mercado se compone de productos de nostalgia que demandan millones de migrantes de primera y segunda generación y refleja buena parte de las tradiciones culturales de sus regiones de origen. (Burguete & Acle, 2012).

El consumo por nostalgia es: la acción y el efecto de los migrantes, por adquirir productos de nostalgia, que representaban una serie de costumbres, tradiciones, hábitos de consumo que formaban parte de su vida cotidiana en su lugar de origen y que satisface necesidades y deseos al recordar, añorar su cultura en otro destino (Burguete & Acle, 2012). Dicho consumo trata de una demanda permanente, no asociado a la moda sino a la cultura y al arraigo de los países de origen. Se considera que no es un mercado ni un deseo, se trata de una acción y efecto de adquirir productos de nostalgia por parte de los migrantes que activa la demanda en el mercado de nostalgia.

Por último es necesario mencionar el uso del modelo *Nostalgic mix* para medir el marketing nostálgico y su relación con el consumo de productos de nostalgia, por parte de los migrantes de cualquier país. El modelo *Nostalgic mix* se define como una abstracción de un sistema de relaciones entre el marketing mix, los migrantes y su consumo por nostalgia (Burguete & Acle, 2012). Este modelo presenta alcances y ventajas que a continuación se enumeran. Ver Figura 1.

1. Obtener un conocimiento y diagnóstico sobre el mercado de los migrantes.
2. Obtener un conocimiento y diagnóstico sobre el consumo por nostalgia.
3. Permite una medición cuantitativa del consumo por nostalgia.
4. Flexibilidad en cuanto a la selección de un modelo de *marketing mix*.
5. Flexibilidad en cuanto a la selección del mercado meta (migrantes).
6. Flexibilidad en cuanto a la selección del producto de nostalgia.

A manera de conclusión la nostalgia representa el sentimiento de melancolía que sufre el migrante en un lugar diferente al de su origen. Esto detona la adquisición de productos de nostalgia para satisfacer sus necesidades y deseos. Es necesario tomar en cuenta que la nostalgia es sufrida por cualquier migrante en un producto de nostalgia y lugar del mundo.

Productos De Maíz

La cocina y los alimentos han sido estudiados por disciplinas como la antropología y la sociología, dentro de los cuales destacan autores clásicos como Claude Lévi-Strauss, Marvin Harris y Jessica Kuper, con valiosas aportaciones que nos permiten reconocer la autenticidad que un grupo social refleja a través de su gastronomía y los elementos que invierten en dicho proceso como factor generador de identidad social, temporal y espacial. Pero es interesante mencionar que desde el contexto del marketing nostálgico y la influencia que ejerce en el consumo de alimentos de la cocina tradicional mexicana existen muy pocos estudios. La cocina y los alimentos representan el conjunto de las costumbres de un pueblo marcado siempre por un estilo y dichas costumbres forman sistemas y tales sistemas no existen en número limitado (Lévi- Strauss, 1977). Cuando se cocina, se repiten de manera invariable, una serie de recetas, fórmulas y técnicas culturales que impiden la arbitrariedad; es por lo tanto una forma cultural, el área práctica y teórica donde se reproducen los mitos, las tradiciones, los conceptos e identidad de una comunidad.

Figura 1: Modelo *Nostalgic Mix*.

En esta figura se muestra la representación gráfica del modelo Nostalgic Mix; este modelo permite medir el Marketing Nostálgico y su relación con el consumo de productos de nostalgia por parte de los migrantes. Así mismo presenta los siguientes alcances y ventajas: obtener un conocimiento y diagnóstico sobre el mercado de los migrantes, obtener un conocimiento y diagnóstico sobre el consumo por nostalgia, permite una medición cuantitativa del consumo por nostalgia, flexibilidad en cuanto a la selección de un modelo de marketing mix, flexibilidad en cuanto a la selección del mercado meta, flexibilidad en cuanto a la selección del producto de nostalgia. Fuente: (Burguete & Acle, 2012).

Los alimentos satisfacen directamente la necesidad fisiológica del hambre de los individuos y son portadores de mensajes y de significados simbólicos. La alimentación integra parámetros culturales propios del lugar donde habitan, como código o regla de prácticas y costumbres religiosas, ambientales y de carácter filosófico, económico o social de un determinado lugar. La cocina forma parte de un lenguaje que expresa una parte de lo que es la sociedad. Es así como la cocina y la alimentación están relacionadas con la historia, con lo que somos y a lo que pertenecemos, es decir con nuestra identidad. (Mintz, 2003).

La cocina mexicana es creación mestiza, resultado de la fusión de dos elementos principales: la cultura del maíz –como ingrediente principal en la dieta diaria de la cocina nativa prehispánica- y la elemental cocina española (Celis, 2003).

La base indispensable de esta cocina es la trilogía maíz-chile-frijol considerados el eje singular que representa la identidad cultural y agrupa la diversidad que caracteriza a la nación. Posteriormente la llegada de las culturas ibéricas con la influencia de otras culturas de oriente y del lejano oriente amplió la visión de influencias que, sin embargo, no logró alterar el patrón básico, sí complementarlo y enriquecerlo, que ha dado forma y sentido a esa cocina de consistencia popular a lo largo del tiempo.

España es, pues, la puerta de entrada de alimentos autóctonos de América, que no siempre fueron aceptados de inmediato. Tal es el caso del insustituible tomate que, al principio, solo se usaba como planta de ornato, conocida como “manzana del amor”; o del ahora mundialmente indispensable maíz utilizado únicamente como forraje para las aves domésticas; o el cacao que, transformado en chocolate, fue objeto de reglamentación estricta para su consumo (Celis, 2003). Algunos de estos productos absolutamente mexicanos arraigaron la gastronomía de otras culturas (García, 1965): tomate, chile, vainilla, maíz, chocolate, flor de Nochebuena. Es importante recordar que estos productos son originarios de México, que forman parte de nuestra identidad y que tienen una connotación mundial.

Existen diferentes rasgos que confieren a la comida tradicional mexicana con un carácter único, nacida en un suelo marcado por su generosa biodiversidad y por haber sido cuna de la agricultura que dio origen a las grandes civilizaciones mesoamericanas. La cocina popular mexicana y los rasgos tradicionales que la distinguen, forman parte de ese complejo sistema cultural entrelazado con concepciones cosmogónicas,

valores simbólicos y un carácter ceremonial y ritual omnipresentes a lo largo de la vida del individuo y de la comunidad. Nacimiento, bodas, siembras o cosechas y todo hecho que implique momentos trascendentes para la vida colectiva, son ocasiones para una buena comida en compañía de la familia y el grupo (De Maria, 2011). La historia de un pueblo renace diariamente en la cocina, con cada ingrediente utilizado, cada proceso de elaboración o la forma misma de servir el platillo se forja sentido de identidad, se provee una diferenciación simbólica que trasciende a través de las generaciones perpetuando rasgos puros y notables de los pueblos. Es una herencia de conocimientos y prácticas que forman parte del patrimonio cultural intangible, construido y enriquecido a través del tiempo, producto del legado social.

Algunos famosos conocedores de asuntos gastronómicos aseguran que la cocina mexicana se sitúa dentro de las tres más importantes del mundo, junto con la francesa y la China, aunque algunos también incluyan a la Italiana en este nivel (Celis, 2003). De todas las características de la cocina mexicana antes mencionadas, se logra que por primera vez el sistema alimentario de un país acceda al rango de patrimonio cultural de la humanidad. En un hecho sin precedentes el 16 de noviembre de 2010, la cocina tradicional mexicana fue declarada por la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO) patrimonio cultural de la humanidad. El histórico suceso tuvo lugar en Nairobi, Kenia, en el marco de la Quinta Reunión del Comité Intergubernamental para la Salvaguardia del Patrimonio Cultural inmaterial de ese organismo internacional, cuando la cocina mexicana fue inscrita en la lista representativa correspondiente. La UNESCO fundamenta de la siguiente manera su declaratoria:

“La cocina tradicional mexicana es un modelo cultural completo que comprende actividades agrarias, prácticas, rituales, conocimientos antiguos, técnicas culinarias, costumbres y modos de comportamiento comunitarios ancestrales. Esto ha llegado a ser posible gracias a la participación de la colectividad en toda la cadena alimentaria tradicional: desde la siembra y la recolección de las cosechas hasta la preparación culinaria y degustación de los manjares [...] El arte culinario mexicano es muy elaborado y está cargado de símbolos [...] Se pueden encontrar agrupaciones de cocineras y de otras personas practicantes de las tradiciones culinarias [...] Sus conocimientos y técnicas son una expresión de la identidad comunitaria y permiten fortalecer los vínculos sociales y consolidar el sentimiento de identidad en el ámbito nacional, regional y local” (UNESCO, 2010). Por lo que a manera de conclusión, el maíz y sus derivados son ingredientes básicos de la cocina de todos los mexicanos, sin distinciones étnicas, socioculturales o económicas y que es una cocina que predomina tanto en la vida cotidiana como en el calendario ritual, ceremonial y festivo de toda una nación y aún con una fuerte influencia cultural de consumo por los migrantes mexicanos en Estados Unidos.

Migración

El fenómeno de migración de México a Estados Unidos es de suma importancia, ya que presenta características económicas, políticas y culturales determinantes para ambos países. A continuación se comentará sobre dicha problemática. No hay dos países fronterizos en el mundo en que la migración sea más importante. México es la única nación cuya población emigrante se ha concentrado históricamente, casi en su totalidad, en un solo lugar, Estados Unidos, que es al mismo tiempo el país con el que comparte la frontera más dinámica del mundo. Para la relación bilateral asimétrica y crecientemente interdependiente, se trata del tema más importante, sensible y rezagado. Ninguna otra corriente de inmigración a Estados Unidos ha demostrado el impacto cultural de la mexicana ya que estos migrantes conservan sus vínculos culturales (Arizpe, 2007, pág. 89). Es necesario destacar que el fenómeno migratorio entre México y Estados Unidos se diferencia de otros flujos migratorios por tres factores principales: a) la historicidad, b) la masividad y c) la vecindad (Hernández, 1980).

a) El proceso migratorio mexicano se distingue por ser un proceso que tiene sus raíces a finales del siglo XIX, que se perpetuó y desarrolló de manera constante a lo largo del siglo XX y se proyectó pujante en el siglo XXI.

b) Es un proceso masivo que involucra a millones de individuos y a millones de familias y que se materializa entre países vecinos que comparten más de 3 mil kilómetros de frontera (Durand & Masey, 2003).

c) El proceso de vecindad es inevitable por la cercanía geográfica que presentan ambos países, característica única con respecto a otros casos migratorios. Es necesario mencionar que de esta vecindad se liga al antecedente histórico ya que los estados del Sudoeste norteamericano pertenecieron a México.

Gran parte de los migrantes mexicanos en Estados Unidos mantienen interrelaciones sociales, culturales, económicas y políticas en los dos países. Muchos de ellos son trabajadores temporales que participan en un circuito transnacional y mantienen abierta, de manera permanente, una puerta de comunicación e intercambio cultural en ambos países.

Sin embargo, a través de estos circuitos binacionales, giratorios y dinámicos se lleva a cabo una interacción constante de ideas, cultura, lenguaje, valores y formas de vida entre los dos países. Cabe señalar que este intercambio genera movimientos en el estilo de vida de los pobladores de ambos lados de la frontera, mismos que han sido estudiados y documentados tanto en Estados Unidos como en México, en sus aspectos sociológicos, demográficos, políticos, económicos, laborales, históricos, antropológicos y, sólo recientemente en sus aspectos mercadológicos.

En la actualidad la migración mexicana se encuentra concentrada principalmente en las ciudades de: Los Ángeles, San Antonio, Houston, Chicago y El Paso entre otras. Es por esta razón que la ciudad de Los Ángeles se tomó como referencia para la investigación, debido a la alta concentración de mexicanos, específicamente ubicados en el Este de esta ciudad donde se concentran actualmente 410,289 migrantes mexicanos (Census Bureau, 2006-2010). En síntesis se considera que la migración es un fenómeno que consiste en el desplazamiento de individuos que tiene lugar desde un lugar de origen hacia otro destino, implicando un cambio de residencia habitual. Y las causas sociales y económicas datan de varias décadas, originadas principalmente por las necesidades de trabajo y del empleo de mano de obra barata de un país poderoso económicamente y otro país emergente, como es el caso de México y Estados Unidos.

METODOLOGIA

Para abordar la presente investigación se desarrollaron los siguientes puntos: Planteamiento del problema. En México, existen pocos estudios documentales y de campo sobre la influencia del marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en Los Ángeles California. Por lo tanto, ¿Qué se requiere para darle solución a la problemática? La respuesta está en determinar la influencia del marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en Los Ángeles California. Pregunta general de investigación. ¿Cuál es la influencia que tiene el marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en Los Ángeles California? Objetivo General. Determinar la influencia del marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en Los Ángeles California.

Justificación. La presente investigación contribuirá con información teórica, práctica, social y de conveniencia. Por las siguientes razones: Se aporta una metodología específica y práctica llamada modelo *Nostalgic mix* para determinar la relación de la influencia del marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en el Este de Los Ángeles California. Además la investigación se considera original ya que no se han encontrado estudios sobre la relación de estas variables dentro del contexto del marketing nostálgico.

Variables: Las variables que se operacionalizaron para la investigación, fueron: el marketing nostálgico a través de la aplicación del modelo *Nostalgic mix* (producto, precio, plaza y promoción) como variables independientes. Y consumo de productos de maíz como variable dependiente. Hipótesis. La influencia del marketing nostálgico a través de las 4 P's (producto, precio, plaza y promoción) es directamente proporcional en el consumo de productos de maíz en los migrantes mexicanos en Los Ángeles California. A continuación se presenta un resumen técnico del diseño de la metodología empleada. Ver Tabla 1.

Tabla 1: Resumen técnico de la investigación.

Enfoque de la investigación	Cuantitativa
Tipo de investigación	Descriptiva, correlacional y transversal
Unidad de análisis	Migrantes mexicanos mayores de 20 años y menores de 80 años
Método de investigación	Deductivo, analítico y sintético
Técnica de investigación	Encuesta, entrevista y observación dirigida a migrantes mexicanos
Instrumento	Cuestionario, uso de la escala tipo Likert
Estrategia de aplicación	¿A quién?: migrantes mexicanos ¿Cuándo?: Abril del 2012 ¿Dónde?: restaurantes, supermercados, centros comerciales, barrios y otros, en el Este de los Ángeles.
Población objetivo	245 mil migrantes mexicanos entre 20 y 80 años (Census Bureau, 2006-2010).
Muestra de estudio	383 ajustado a 390 migrantes mexicanos fue el resultado del tamaño de la muestra. Utilizando los criterios de 95% de confiabilidad, 5% de margen de error, 50% de probabilidad a favor y 50% de probabilidad en contra
Técnicas/pruebas estadísticas utilizadas en el análisis de datos	Coefficiente de correlación de producto momento de Pearson, coeficiente de determinación y coeficiente de Alpha de Cronbach.
Programa estadístico utilizado	MINITAB y Excel

En esta tabla se muestra el resumen técnico del diseño de la metodología empleada para la investigación. El enfoque de la investigación fue cualitativo, con un tipo de investigación descriptiva, correlacional y transversal aplicado a migrantes mexicanos entre 20 y 80 años de edad, el método de investigación fue deductivo, analítico y sintético, a través de la encuesta, entrevista y observación como técnica de investigación, apoyandose en un cuestionario con el uso de escala tipo Likert como instrumento de medición. La encuesta y entrevista fueron aplicadas a una muestra de 390 migrantes en restaurantes, supermercados, barrios y otros sitios en el Este de los Angeles, California. Se utilizaron como técnicas de análisis de datos: coeficiente de correlación de producto momento de Pearson, coeficiente de determinación y coeficiente de Alpha de Cronbach. Fuente: (Burguete & Acle, 2012).

RESULTADOS

Los resultados de la investigación se exponen a continuación en la Tabla 2.

Tabla 2: Comprobación de hipótesis

Hipótesis	Resultados	Observaciones
H1. Producto determinada por: consumo, atributos del producto, aculturación y nostalgia, es una variable directamente proporcional del consumo de nostalgia de productos de maíz en los migrantes mexicanos en Los Angeles California	El coeficiente de correlación de producto momento de Pearson (r) fue de 0.763 El coeficiente de determinación fue de 0.582 o 58.2%	La hipótesis sometida a prueba, se considera que aporta evidencia a favor, aplicado en este contexto y una muestra particular de 390 migrantes mexicanos, utilizando las pruebas estadísticas: Coeficiente de correlación de producto momento de Pearson y el coeficiente de determinación
H2. Precio determinada por: poder adquisitivo y elasticidad de la demanda, es una variable directamente proporcional del consumo de nostalgia de productos de maíz en los migrantes mexicanos en Los Angeles California	El coeficiente de correlación de producto momento de Pearson (r) fue de 0.353 El coeficiente de determinación fue de 0.125 o 12.5%	La hipótesis sometida a prueba, se considera que aporta evidencia en contra, aplicado en este contexto y una muestra particular de 390 migrantes mexicanos, utilizando las pruebas estadísticas: Coeficiente de correlación de producto momento de Pearson y el coeficiente de determinación
H3. Plaza determinada por: disponibilidad de compra y comunicación, es una variable directamente proporcional del consumo de nostalgia de productos de maíz en los migrantes mexicanos en Los Angeles California	El coeficiente de correlación de producto momento de Pearson (r) fue de 0.643 El coeficiente de determinación fue de 0.413 o 41.3%	La hipótesis sometida a prueba, se considera que aporta evidencia a favor, aplicado en este contexto y una muestra particular de 390 migrantes mexicanos, utilizando las pruebas estadísticas: Coeficiente de correlación de producto momento de Pearson y el coeficiente de determinación
H4. Promoción determinada por: técnicas de promoción de ventas, comunicación y publicidad, es una variable directamente proporcional del consumo de nostalgia de productos de maíz en los migrantes mexicanos en Los Angeles California	El coeficiente de correlación de producto momento de Pearson (r) fue de 0.740 El coeficiente de determinación fue de 0.548 o 58.4%	La hipótesis sometida a prueba, se considera que aporta evidencia a favor, aplicado en este contexto y una muestra particular de 390 migrantes mexicanos, utilizando las pruebas estadísticas: Coeficiente de correlación de producto momento de Pearson y el coeficiente de determinación

En esta tabla se muestra la comprobación de las hipótesis. La hipótesis H1 Producto cuyos resultados fueron: en el coeficiente de correlación de producto momento de Pearson (r) de 0.763, y el coeficiente de determinación de 0.582 o 58.2%. Esta hipótesis aporta evidencia a favor. La hipótesis H2 Precio cuyos resultados fueron: en el coeficiente de correlación de producto momento de Pearson (r) de 0.353, y el coeficiente de determinación de 0.125 o 12.5%. Esta hipótesis aporta evidencia en contra. La hipótesis H3 Plaza cuyos resultados fueron: en el coeficiente de correlación de producto momento de Pearson (r) de 0.643, y el coeficiente de determinación de 0.643. Esta hipótesis aporta evidencia a favor. La hipótesis H4 Promoción cuyos resultados fueron: en el coeficiente de correlación de producto momento de Pearson (r) de 0.740, y el coeficiente de determinación de 0.548 o 58.4%. Esta hipótesis aporta evidencia a favor.

CONCLUSIONES

El objetivo general de la investigación se logró al determinar que los factores o variables independientes: producto, precio, plaza y promoción, influyen en forma directamente proporcional y positiva en el consumo de productos de maíz por los migrantes mexicanos en Los Angeles California, excepto la variable precio, que obtuvo una correlación baja de 0.353, cuya relación en este contexto fue diferente al de la teoría pudiendo dar a luz a una nueva teoría. La hipótesis general y las cuatro hipótesis de trabajo que se sometieron a prueba, dan evidencia a favor; excepto la hipótesis de trabajo sobre la variable precio. Sin embargo se refleja la influencia del marketing nostálgico en el consumo de los productos de maíz en un contexto particular. La presente investigación se justifica debido a que aporta información teórica y una metodología específica y práctica llamada modelo *Nostalgic mix* para determinar la relación de la influencia del marketing nostálgico en el consumo de productos de maíz en los migrantes mexicanos en Los Angeles California.

EL PAPEL DEL CAPITAL HUMANO EN LA GENERACIÓN DE VALOR EMPRESARIAL: VARIABLES DETERMINANTES

Juan Carlos Zapata Valencia, Universidad Pontificia Bolivariana
Santiago Gutiérrez Broncano, Universidad de Castilla la Mancha
Mercedes Rubio Andres, Universidad San pablo CEU

RESUMEN

A pesar de los adelantos teóricos que relacionan la ejecución del presupuesto de recursos humanos con la inversión en activos intangibles (Abeysekera & Guthrie, 2004; Becker, 1993; Gerhart & Becker, 1996) y el gran esfuerzo realizado por construir herramientas que permitan cuantificar el impacto que la participación y gestión de los recursos humanos tienen en el sistema de valor empresarial, pocos son los estudios que presentan evidencia empírica al respecto, en consideración de los diversos mecanismos organizacionales por los cuales se induce la creación de valor (O. García, 2003). El presente trabajo de investigación se enfoca en el área de recursos humanos; se analiza en primer lugar las variables influyentes en la rentabilidad de la inversión en recursos humanos utilizando el concepto de rentabilidad de la inversión en recursos humanos (Fitz-Enz, 2003); posteriormente y mediante un análisis de correlación paramétrica, se determina la relación que tiene la rentabilidad del recurso humano sobre la generación de valor empresarial medido en el flujo de caja. Se concluye que existe una relación directa entre los resultados de los indicadores de valor y la rentabilidad del recurso humano, haciendo necesario identificar las variables organizacionales que articulan el recurso humano y la rentabilidad empresarial.

PALABRAS CLAVE: rentabilidad de la inversión en capital humano, Capital humano, Control estratégico, Generación de valor, Calidad del trabajo.

THE ROLE OF HUMAN CAPITAL IN THE GENERATION OF CORPORATE VALUE

ABSTRACT

Despite the theoretical advances that relate the human resources budget execution with the investment in intangible assets (Abeysekera & Guthrie, 2004; Becker, 1993; Gerhart & Becker, 1996) and the great effort that was made to build tools that allow quantifying the impact that the participation and human resource management have in the business value system; few are the studies that present empirical advances in consideration of the diverse organizational mechanisms in which the creation of value is induced (O. García, 2003). The present research its focused in the human resource area; in the first place the influential variables on profitability in human resources is analyzed using the return of investment on human resources concept (Fitz-Enz, 2003), and subsequently by a parametric correlation analysis, it is determined the relation that profitability has in relation to the human resource rent on generating business value measured in cash flow. It is concluded that there is a direct relationship between the results of the indicators of value and profitability of human resources, having a necessity to identify the organizational variables that articulate the human resources and business profitability.

KEY WORDS: return on investment in human capital, human capital, strategic control, generation of value, work quality.

INTRODUCCIÓN

La dinámica de los negocios, las demandas y requerimientos de los mercados internacionales y las oportunidades de competitividad, hacen del siglo XXI un espacio temporal enriquecido por las virtudes de la aplicación del conocimiento y el entendimiento de los fenómenos empresariales mundiales. A su vez, la plataforma global brinda al recurso humano incalculables coyunturas y a la vez innumerables exigencias. La gestión organizacional no escapa a las encomiendas de la competitividad en el medio y se convierte en fuente de ventaja estratégica para la efectividad en el logro de los objetivos de desarrollo empresarial.

En el presente estudio se discuten las teorías estratégicas inherentes a la participación productiva del recurso humano desde diversos enfoques epistemológicos, así como el aporte de alternos campos del conocimiento, destacando los análisis y explicaciones económicas y su interrelación con la conducta humana en ambientes organizacionales. Adicionalmente, se incluyen en el debate las posibilidades de generar capital humano y su relación con la creación de valor para las empresas; acudiendo a premisas propias de la economía como la remuneración de los factores de producción o la capacitación y la formación como fuente de riqueza, así como la capacidad de agencia desde la teoría del desarrollo.

Por otra parte, es posible indagar teóricamente en el alcance de las prácticas de gestión humana como en la posibilidad de sus aplicaciones en la empresa. Se reconoce la necesidad de capacidades técnicas para dar lugar a la manifestación del fenómeno del trabajo, sin marginar como factor indispensable la voluntariedad del individuo al decidir en su participación y correspondiente aporte. Así, se referencia y analiza el alcance de corrientes novedosas en la gestión mundial como resulta el caso de la calidad del trabajo y su articulación con la competitividad en el empleo. Llevando el objetivo de la discusión hasta pretender identificar los factores determinantes del compromiso humano como medio efectivo de producción y a su vez de desarrollo personal. Se configuran en un modelo probabilístico aquellas variables necesarias para echar a funcionar un sistema productivo con parámetros vinculados a la voluntad individual de participar y construir valor perceptible por diferentes y diversos grupos de interés.

La Teoría Del Capital Humano

Los primeros años del presente siglo (XXI), estuvieron acompañados por sucesos que de una forma u otra marcaron un punto de inflexión en cuanto al pensamiento administrativo. La incorporación del fenómeno social en la administración no resulta novedosa a las organizaciones (Ferris, Hochwater, Buckley, Harrell-Cook, & Frink, 1999), al tiempo que es reconocible el valor que representa en la época actual, las diferentes formas en que son gestionadas las empresas. En particular una gestión enmarcada en las expectativas, no sólo de los propietarios, también, comienzan a influenciar las directrices de la dirección empresarial gran diversidad de intereses, dando lugar hoy en el sistema de valor a los tan mencionados grupos de interés. El capital humano se constituye y se manifiesta en los resultados provenientes de un conjuntos de conocimientos, habilidades, actitudes y experiencias de todos y cada uno de los trabajadores y su respectiva capacidad para actualizarlo, adaptarlo, compartirlo y hacerlo cada vez más productivo para la organización (Mathis & Jackson, 2008). Se convierte la empresa en el campo de acción de múltiples ciencias como consecuencia de un reclamo general y particular presentado por aquellos grupos que se ven impactados por las decisiones empresariales. Todo este comportamiento organizacional surge en respuesta a las necesidades de competitividad para representar valor empresarial, en la forma requerida para satisfacer y cumplir con las expectativas de cada uno de los actores involucrados.

Adicionalmente, la interdisciplinariedad en el ámbito organizacional permite a la gestión empresarial soportarse en diferentes posturas, todas ellas provenientes de los conocimientos y avances de diferentes ciencias (Schaper, 2004), se reconoce entonces la organización como un espacio social y en el alcance de sus objetivos un espacio de desarrollo (Sen, 2002). Al mismo tiempo, es de esperar que la intervención de una ciencia, se realice desde diferentes puntos de vista o desde las premisas ofrecidas por diferentes escuelas de pensamiento, la economía en este caso, no escapa a dichas expectativas, y en su participación

ha estado presente en cada fase del proceso evolutivo de la administración, probablemente realizando un papel determinante en la concepción del elemento humano en las empresas (Drucker, 1993). Un momento clave para el desarrollo administrativo, se desprende del instante mismo en que las posturas económicas comienzan a preocuparse por el rol que desempeña el recurso humano en los procesos de valor empresarial (Aradhana & Anuradha, 2005). Es así como en la década de los cincuenta, para cuando se asumía ya el elemento humano como factor de producción, se inicia un pensamiento económico diferente alrededor del concepto de recurso humano. Y fue justamente en 1961 cuando se pronuncia el concepto de capital humano fundamentado en las habilidades y conocimientos de las personas (T. W. Schultz, 1961), adquiriendo a la vez relevancia la discusión académica alrededor de estos fundamentos, en particular en la posibilidad de que sean asumidos como factores de capital y por lo tanto estar sujetos a mecanismos de inversión, en momentos en que ya se hacían evidentes las diferencias en los resultados macroeconómicos a partir de las decisiones de inversión en capital físico, en comparación con aquellas alternativas no convencionales como la educación y la capacitación.

Es posible que la intervención del elemento humano como forma de capital se haya demorado debido a la timidez de los investigadores, en especial los economistas quienes tardaron en explicar la participación de las personas en las cifras de crecimiento. Explicación que después de tres décadas, y luego de contar con una escuela de pensamiento en torno al tema “escuela económica de Chicago”, no ha logrado ser consolidada, toda vez que aun resulta en pregunta generalizada, precisamente a quienes están a cargo de la dirección de recursos humanos, “la medida por la que el factor trabajo contribuye en los resultados” (T. W. Schultz, 1961), sin hasta ahora recibir respuestas concretas o al menos satisfactorias. Theodore Schultz no fue para la época el único interesado en el tema; lo que inició con una concepción de enfoque de recursos en la década de los cincuenta (A. Delgado, 2005), se vio continuado con toda una escuela de pensamiento, que dio lugar a toda una teoría del capital humano (Becker, 1993), y que se vio materializada en premio nobel de economía en 1992.

Durante el periodo iniciado en los años setenta, alimentando la discusión y los avances en el tema, también se involucraron Jacob Mincer, Milton Friedman, Sherwin Rosen, bajo el amparo y el respaldo de la Universidad de Chicago, que a pesar de estar cimentada en principios económicos monetaristas y de desregulación de los mercados, sirvió de cuna para esta teoría, la cual se concentra en la defensa que la educación, el entrenamiento y el cuidado de la salud, son finalmente inversiones en capital y posibilidades de riqueza. Los conceptos mencionados con antelación, nos lleva a profundizar teóricamente en el tema, partiendo desde la fundamentación conceptual que da lugar a las diferencias entre gasto e inversión (Benefits & Compensation, 2005), de tal forma que permita dilucidar el recurso humano como forma de capital, aspecto que hace evidente posturas encontradas entre la economía y la disciplina contable, considerando que esta última continua siendo reconocida como aquella que hace posible tomar decisiones de inversión soportándose en información financiera objetiva. Y es precisamente, en el marco teórico financiero donde se define el gasto como “los costes de los bienes y servicios utilizados en el proceso de obtención del ingreso” (Meigs, Williams, Haka, & Bettner, 2000), y es aquí en donde se equiparan los costes de los activos fijos en función de la depreciación, el pago de los servicios públicos, los gastos de alquiler, con los salarios pagados a los trabajadores, en la medida que todos son necesarios para la realización de un negocio. Lo que probablemente escapa al análisis financiero y que trae a colación la teoría económica respecto del recurso humano, tiene que ver con la postura teórica contable que todo aquello que involucre un gasto representa una disminución en el patrimonio del propietario (O. García, 1999), lo que dejaría sin soporte conceptual la inversión en capital humano, asumiendo que bajo ninguna forma, el aporte humano puede materializarse en activo bajo la figura contable.

El anterior supuesto no resulta del todo cierto, teniendo en cuenta que para que se constituya un gasto, se hace necesario cumplir con dos características: la primera requiere que la adquisición implique un pago o una obligación de pago (Urías, 2006), aspecto que no es discutible, considerando que el salario o cualquier otra forma de pago ligada al recurso humano, como: primas, bonificaciones, incentivos,

programas de salud, entrenamientos, ciertamente implican una obligación de pago. Por otra parte, para que sea constituido el gasto, los bienes y servicios deben ser usados, en otras palabras deben ser consumidos, lo que haría del recurso humano un elemento depreciable o agotable, aspecto que en la practicidad empresarial resulta complejo de demostrar, teniendo en cuenta que este postulado, iría en contra del concepto de experiencia a través del aprendizaje organizacional, al tiempo que dejaría sin bases la sostenibilidad de las ventajas competitivas fundadas en la gestión del conocimiento (Garzón & Fisher, 2008). De igual manera, no atendería por completo el concepto contable de coste, en razón a que “este implica necesariamente una salida de valores, desconociendo por completo la obtención como contrapartida de valores adicionales, en función de otro u otros activos, sean estos materiales o inmateriales” (Ribaya, 1999). En otras palabras, el gasto está en función de lo que se consume, diferente de la concepción de inversión la cual no implica consumo, en cambio si un coste, dado que genera un pago y a la vez una adquisición.

METODOLOGÍA

Hipótesis

1. Existe una relación positiva entre la inversión en capital humano (medida a través del ROICH) y la generación de valor (medida a través el FCL operativo).
2. La calidad del trabajo potencia el impacto de la interacción entre los medios de producción (composición orgánica de capital) y el talento humano (composición técnica de capital) como factores influyentes en la inversión en capital humano (medida a través del ROICH).

Construcción del modelo de regresión: el modelo clásico de regresión múltiple lineal, especificación y estimación. El modelo de regresión múltiple se utiliza para evaluar la relación existente entre una variable dependiente y varias variables independientes. El modelo se puede expresar como sigue (Greene, 1988), (Canavos, 1988):

$$y_i = f(x_{i1}, x_{i2}, \dots, x_{ik}) + \epsilon_i = \beta_0 + \beta_1 x_{i1} + \beta_2 x_{i2} + \dots + \beta_k x_{ik} + \epsilon_i, \quad (i = 1, \dots, n.)$$

Donde:

y= variable dependiente o explicada

x_1, x_2, \dots, x_k = variables independientes o explicativas

i= indica las n observaciones muestrales

ϵ =perturbación aleatoria

Ecuación Formula del modelo de contribución

$$ROI_{CH} = \beta_1 + \beta_2 CT + \beta_3 COK + \beta_4 CTK + \mu_i$$

En dónde:

ROI_{CH} = ROI del capital humano

β_1 = Constante del modelo

CT = Calidad del trabajo (Incluye las siguientes variables: Satisfacción Laboral, Reconocimiento, Equidad, Participación, Seguridad y Confianza)

COK = Composición Orgánica de Capital

CTK = Composición técnica de capital. μ_i = Término de error

CONCLUSIÓN

Este aspecto resalta tanto en el análisis teórico, como en la contrastación empírica. Debido a la distribución de la estructura empresarial en Colombia, que como ya se ha venido mencionando, en su mayor porción destaca por ser intensiva en mano de obra, influyendo en el comportamiento de la composición técnica de capital, principalmente incrementando su nivel. Claro está, contemplando las condiciones económicas del país, resulta evidente que dicho comportamiento, en parte se debe al alto nivel de oferta de trabajo no cualificado, y a las condiciones de financiación de las empresas, por las cuales se ve restringido el acceso a las tecnologías que aportan posibilidades de mayor productividad.

Una vez realizada una revisión documental y contemplado los antecedentes investigativos en el marco del concepto de calidad del trabajo, es posible evidenciar la existencia de abundante evidencia que relaciona a los componentes de este concepto, en forma separada con la productividad empresarial. Adicionalmente, con el R^2 arrojado por la regresión en el primer modelo, se puede observar que las variables, calidad del trabajo, composición técnica de capital y composición orgánica de capital, en conjunto explican en un 41,43% la variabilidad de la rentabilidad de la inversión en capital humano.

Lo que es importante comprender a la luz de la teoría y a través de los resultados en el presente estudio, tiene que ver con la idea de acumulación y distribución del capital. Tal y como se observa en los resultados de la estimación de la rentabilidad del capital humano, y la dirección de las relaciones en las variables que lo impactan, se infiere que para obtener incrementos significativos en la rentabilidad, es pertinente incrementar la inversión en la porción orgánica de capital (los medios de producción o activos totales) y disminuir respectivamente la porción técnica (los salarios o talento). A mismo tiempo, el análisis requiere mayor profundidad, ya que lo que en realidad representa el resultado obtenido, es que se debe incrementar la porción orgánica, a expensas de la adquisición de tecnología para la producción y en contraste, aumentar las exigencias en la cualificación del personal, lo que va de acuerdo con la postura de composición técnica adoptada en este estudio, conduciendo a menor requerimiento de fuerza de trabajo no cualificado, y por tanto no implica la disminución de los salarios, en su lugar determina la eficiencia y la eficacia de la porción técnica.

FACTORES FINANCIEROS Y NO FINANCIEROS COMO DETERMINANTES DE LAS DECISIONES DE INVERSION

Mario Rene Chan Magaña, Universidad Tecnológica Regional del Sur

RESUMEN

En las últimas décadas, la forma de cómo se gestiona el valor para el accionista por parte de las empresas ha cambiado. Esta nueva economía ya no solo considera la creación de riquezas a través de activos físicos o tangibles, tales como planta, maquinaria, infraestructura, inventarios, efectivo, entre otros, sino que han cobrado relevancia los activos o recursos intangibles que posee la empresa. La tarea de los altos directivos en las empresas es tomar decisiones con base en factores financieros y de igual manera gestionar factores no financieros. La imagen de la marca, la participación del mercado, el nivel de satisfacción y fidelización de los clientes, y la calidad de los productos y servicios, constituyen, entre otros, las nuevas fuentes de creación de valor en una empresa, denominados Activos Intangibles. Con base en lo anterior, este trabajo de investigación pretende conocer y analizar cuales son los factores financieros y no financieros que consideran los empresarios de la industria de alimentos del estado de Yucatán al momento de tomar decisiones de inversión.

PALABRAS CLAVE: Decisión, inversión, intangibles.

DETERMINING FACTORS FINANCIAL AND NO FINANCIAL INVESTMENT DECISIONS.

ABSTRACT

In recent decades, the way about how to manage the shareholder value by companies has changed. This new economy not only considers the creation of wealth through physical or tangible assets such as plant, machinery, infrastructure, inventories, cash, etc., but has become important assets and intangible assets owned by the company. The task of senior managers in companies is to make decisions based on financial factors and likewise manage non-financial factors. The brand image, market share, the level of satisfaction and customer loyalty, and quality of products and services, are, among others, new sources of value creation in a company called Intangible Assets. Based on the above, this research aims to understand and analyze what are the financial and nonfinancial factors that food industry entrepreneurs of Yucatan State consider when making investment decisions.

KEYWORDS: Decision, investment, intangible.

INTRODUCCIÓN

En las últimas décadas, la forma de cómo se gestiona el valor para el accionista por parte de las empresas ha cambiado. Esta nueva economía ya no solo considera la creación de riquezas a través de activos físicos o tangibles, tales como planta, maquinaria, infraestructura, inventarios, efectivo, entre otros, sino que han cobrado relevancia los activos o recursos intangibles que posee la empresa. El recurso humano de una empresa, con sus aportes e ideas, constituye uno de los conductores más significativos en la creación de riqueza en la presente economía global, generando nuevas obligaciones y responsabilidades tanto para los inversionistas como para los ejecutivos corporativos. Así, hoy los inversionistas deben mejorar la forma en que valorizan las empresas donde tienen inversiones en acciones, mientras que los ejecutivos tienen la tarea de reportar a la comunidad financiera esta nueva forma de creación de valor.

El capital intelectual en general, la imagen de la marca, la participación del mercado, el nivel de satisfacción y fidelización de los clientes, y la calidad de los productos y servicios, constituyen, entre otros, las nuevas fuentes de creación de valor en una empresa, denominados Activos Intangibles. Según datos del 2008 por parte de la Secretaria de Desarrollo Industrial y Comercial (SEDEINCO) la industria de alimentos es uno de los sectores más prometedores en el mercado nacional en cuanto a su desarrollo. Las ramas alimenticias de mayor desarrollo en México son: Frutas y legumbres, productos cárnicos, salsas, sopas y preparaciones alimenticias, tequilas y otros aguardientes, cerveza y artículos de confitería.

Según la Secretaria de Fomento Económico (SEFOE) la industria de alimentos, con vista a la globalización, es una de las más importantes en el Estado de Yucatán, debido a su gran impacto en la generación de empleos en áreas rurales y su gran potencial para satisfacer la enorme demanda de los Estados Unidos y el resto del mundo. Importantes y reconocidos productos son hechos en Yucatán, como salsas de chile habanero, concentrado de frutas y condimentos. Estos son importantes y tradicionales productos gourmet con reconocimiento internacional que dan a éstos productos una calidad única en sabor y presentación. Con el objeto de elevar la competitividad en esta actividad económica, se considera necesario desarrollar una estrategia financiera integradora simple para la oportuna y eficiente toma de decisiones de inversión privada directa por los directivos financieros. Es decir, es imperioso realizar un análisis de cómo están tomando las decisiones de inversión en un sector clave de la entidad Yucateca, el de alimentos; considerando los modelos de valuación empresarial utilizados en la toma de decisiones de adquisiciones, fusiones y alianzas en las organizaciones. El objetivo general del estudio será determinar los factores financieros (ventas, utilidad de operación, utilidad neta, costos de financiamiento, fiscales, inversiones y no financieros (calidad del management, posicionamiento del mercado, calidad de los productos y servicios y cultura corporativa) de valor empresarial que explican en mayor medida las decisiones de inversión en empresas industriales de alimentos del estado de Yucatán.

METODOLOGÍA

Al comienzo de este trabajo se utilizó una investigación exploratoria para obtener una impresión más definida de los factores no financieros y de mayor relevancia usados en la realidad mexicana, que ayudarán a la formulación de la encuesta que se suministrará a los distintos tipos de empresas de la industria alimentaria de Yucatán. Previo al diseño del cuestionario, se entrevistó a diez ejecutivos pertenecientes a diferentes empresas de las mencionadas anteriormente.

Estas entrevistas permitieron una mayor comprensión de las preguntas incluidas en el cuestionario suministrado posteriormente, además de permitir efectuar las modificaciones concordantes a la realidad del ámbito empresarial del medio. Para la finalidad de este estudio, se utilizó una investigación concluyente de tipo descriptiva, la que tiene como objetivo principal describir el grado de importancia, asignado por los distintos empresarios objetos del estudio, a los factores financieros y no financieros en sus decisiones de inversión. El tamaño de la población de 97 empresas se determinó con el número total de unidades económicas del sector de industria de alimentos, publicadas por el Directorio Estadístico Nacional de Unidades Económicas (DENUE). Cabe mencionar que las empresas seleccionadas son de más de 30 empleados, dada la necesidad de que exista un área o departamento financiero dentro de esta clasificación. Se realizaron encuestas personales en las empresas seleccionadas a través de un muestreo probabilístico denominado aleatorio simple sin remplazo el cual consiste en que una vez seleccionada una empresa para encuestar, no puede volverse a seleccionar.

Respecto al tamaño de la muestra, su cuantía incide directamente en la disminución del error de estimación y por tanto en la representatividad de los resultados del análisis, por eso es que cuánto más elevado sea el tamaño de la muestra mejor. El tamaño de muestra se calculó a partir del padrón de empresas de alimentos en Yucatán (con una población de 97 empresas), se empleó un nivel de confianza del 95% y un margen de error del 5% por lo que se obtuvo un tamaño de muestra de 76 empresas y finalmente se lograron 52, ya que una de las limitantes fue que dentro del padrón estaban empresas que

habían suspendido sus operaciones y algunas de ellas no quisieron ser partícipes del estudio por la naturaleza de la información.

REVISIÓN LITERARIA

En la nueva economía, esta era del conocimiento, el término tradicional de activo intangible ha tomado un nuevo significado y se ha entrelazado con otros términos como activos invisibles, gestión del conocimiento, “knowledge management” y, finalmente, el más significativo, el “Capital Intelectual”. Stewart (1998) define el capital intelectual como “la suma de todo lo que saben las personas de la compañía que entrega una ventaja competitiva en el mercado.”. Edvinsson y Malone (1997), de la compañía de seguros sueca Skandia, lo definió como el “conocimiento que se puede convertir en valor”.

Según Valenzuela (2003) los indicadores financieros tradicionales tales como flujo de caja, utilidades, retornos sobre activos, etc., son conceptos que se pueden extraer de los estados contables de todas las compañías que lo poseen, sin importar la industria en que se encuentren. Por contraste, el reporte de los activos intangibles tiene como necesidad establecer indicadores no financieros a medida para cada sector, y en algunos casos en el mismo sector los indicadores no financieros varían de firma en firma. Lo anterior hace que la medición de los activos intangibles sea onerosa, y plantea un mayor grado de dificultad en establecer un estándar. Además, si a lo expuesto le sumamos que el reporte de indicadores no financieros es algo nuevo y desafía al reporte tradicional de indicadores financieros, la medición de activos intangibles puede incluso generar rechazo y desconfianza.

Según Kaplan y Norton (2002), una de las razones por la que las empresas utilizan modelos de medición de capital intelectual, es para identificarlo, ya que constituye el “capital oculto”, pues como señalan dichos autores, no se puede gestionar aquello que no se puede medir. De igual manera, Kaplan y Norton, propusieron un modelo de gestión empresarial, basado en la estrategia, cuyo funcionamiento exigía la definición de una serie de indicadores que permitieran la toma de decisiones. La idea fundamental que subyace en él, es que sólo puede gestionarse aquello que puede medirse. Este modelo presenta un conjunto equilibrado de indicadores que representan la visión y estrategia de la empresa desde cuatro puntos de vista. La perspectiva financiera, la perspectiva de los clientes, la perspectiva de los procesos internos y la perspectiva del aprendizaje y el crecimiento.

Para Saint-Onge (1996), referenciado por Alama (2008), el capital intelectual tiene tres componentes: *capital humano*, referido a las capacidades de los individuos para proveer soluciones a los clientes; *capital estructural*, que son las capacidades de la organización para satisfacer las necesidades del mercado; este capital, está compuesto a su vez de cuatro elementos: sistemas, estructura, estrategia y cultura. Y finalmente el *capital cliente*, que refleja la penetración, cobertura, lealtad y rentabilidad de los clientes. El modelo de Navegador de Skandia (Edvinsson, 1997) se aplicó a la compañía de seguros Skandia. Su autor, Edvinsson, plantea que en una empresa existe un conjunto de activos intangibles que no estarían reflejados en los estados contables emitidos por las compañías anualmente. Pero sí estarían presentes en las diferencias entre el valor libro de la empresa y el de mercado. Para Edvinsson, el valor de mercado de una compañía está constituido por dos componentes: el “capital financiero” de la compañía y el “capital intelectual”. El capital intelectual, a su vez, se divide en capital humano y capital estructural; el primero se refiere a las competencias y habilidades de los empleados de la organización, mientras que el segundo considera a los conocimientos explicitados por la organización.

Según el modelo Intellect (Euroforum, 1998), bajo la dirección del Doctor Eduardo Bueno Campos, dentro de la medición del capital intelectual se establecen tres bloques: capital humano, capital estructural y capital relacional, bloques conformados por elementos, que a su vez pueden ser medidos por una serie de indicadores. “Ernst and Young”, empresa de auditoría multinacional, a través de su centro de investigación “Cap Gemini”, realizó numerosos estudios relacionados con la importancia que poseen los activos intangibles en las empresas actualmente. Estos estudios, comprendieron la identificación, medición y gestión de los activos intangibles en las empresas modernas. El estudio señala que los

indicadores financieros comúnmente utilizados en las valorizaciones de empresas, tales como el flujo de caja, las utilidades, y ratios de precio / utilidad, siguen siendo medidas financieras importantes, pero que cuentan con un gran defecto en esta nueva economía, este es, que las medidas financieras son solo reflejo de transacciones ya realizadas.

RESULTADOS

Perfil De La Empresa.

Un poco más del 50% de las empresas encuestadas se encuentran actualmente en la etapa de sostenimiento, 27% en crecimiento y solo un 21% en etapa de cosecha, estas ultimas, son aquellas empresas que han superado las dos fases anteriores y que no requieren inversiones importantes, sino mas bien incrementar su flujo de efectivo.

Figura 1: Etapas de vida de la industria de alimentos de Yucatán

En esta figura están las tres principales etapas en la vida de una empresa: crecimiento, sostenimiento y cosecha. Fuente: Elaboración propia (2012).

Los tres principales motivos por el cual los empresarios de este sector decidieron invertir en la industria de alimentos en Yucatán son: la experiencia en el sector, la ubicación geográfica del Estado y el mercado potencial previsto. En la siguiente tabla se reflejan las características de los empresarios encuestados:

Ventas

Las ventas que dijeron registrar las compañías del sector de alimentos en Yucatán durante el año 2010 fueron para poco menos de la mitad por debajo de los \$20,000,000 contrastando con poco más de la tercera parte de éstas con ventas de más de \$100,000,000. Las empresas del sector alimentos venden sus productos en diversos mercados, algunas solo a un mercado, otras a más de uno, en general los resultados indican que el promedio de las ventas que corresponde al mercado municipal es el 54%, al mercado estatal 57%, al mercado nacional 53%, y al mercado extranjero 43%, la mitad de las empresas destina el 45% o menos de sus ventas al mercado municipal, 50% o menos al mercado estatal, 64% o menos al mercado nacional y 25% o menos al mercado extranjero. Poco más de la mitad de las empresas encuestadas (55.8%) afirmaron que el comportamiento en el volumen de sus ventas fue a la alza en el periodo 2008 – 2009 y dijeron que el principal factor que influyo en dicho comportamiento fue la experiencia en el sector seguido de la visualización de un mercado potencial y de la ventaja competitiva. En casi el mismo porcentaje que en el periodo anterior poco más de la mitad de las empresas del sector alimenticio (59.6%) dijeron que el volumen de sus ventas se fue a la alza durante el periodo 2009-2010, las principales razones que dijeron causaron dicho comportamiento fueron en primer lugar la experiencia en el sector seguido de la percepción del mercado potencial y la ventaja competitiva, coincidiendo de igual manera con el periodo anterior.

Más de la mitad de las compañías objeto de este estudio dijeron no haber realizado ventas de exportación en lo que va de este año para expandir su demanda y la tercera parte que si lo ha hecho. El principal país donde se exporta es Estados Unidos, los otros dos principales destinos son Cuba y países sudamericanos como Guatemala, Salvador y Brasil.

Figura 2: Número de empresas que han realizado exportaciones de productos

En esta figura se refleja el porcentaje de empresas que realiza exportación de sus productos y las que solo venden en el mercado nacional.

Utilidad de operación.

El comportamiento de la utilidad de operación para el periodo 2008-2009 se mantuvo igual para menos de la mitad de las empresas (42%) y fue a la alza para casi la mitad de estas (46%), los factores que mencionaron fueron los que repercutieron en dicho comportamiento son: aumento en ventas paralelamente con disminución en costos, eficiencia en el área de producción, eficiencia organizativa y aumento en costos de administración y venta.

Tabla 4: Comportamiento de la utilidad de operación del periodo 2008 – 2009

Utilidad neta.

Mediante la determinación de la utilidad neta y de la identificación de sus componentes, se mide el resultado de los logros (ingresos) y de los esfuerzos (costos y gastos) por una entidad durante un período determinado. Al igual que la utilidad de operación se refleja en el estado de resultados y es información confidencial por lo que las preguntas fueron de igual manera cualitativas para conocer la tendencia que reflejan en las empresas encuestadas. El comportamiento de la utilidad neta en el periodo 2008-2009 contrastó en poco menos de la mitad de las compañías ya que para algunas fue a la alza y para otras se mantuvo igual, los principales factores que repercutieron en la alza fueron: la disminución de intereses y costos financieros, disminución de costos fiscales en contra parte con aumento de costos de producción y venta y utilidad por venta de activos fijos como causantes de que se haya mantenido igual.

Tabla 6: Comportamiento de la utilidad neta del periodo 2008 – 2009.

		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
Válidos	A la alza	21	40.4	42.0	42.0
	Se mantuvo igual	20	38.5	40.0	82.0

Estructura financiera.

El porcentaje promedio que representa el activo circulante del activo total en estas compañías es del 45%, para la mitad de los encuestados el porcentaje es del 40% o menos, el porcentaje mínimo que mencionaron fue del 15% y el máximo del 95%. De igual manera el porcentaje promedio que representa el activo fijo del activo total en estas compañías es del 55%, para la mitad de los encuestados el porcentaje es del 60% o menos, el porcentaje mínimo que mencionaron fue del 5% y el máximo del 85%.

Fuentes y costos de financiamiento.

La principal fuente de financiamiento utilizada en el periodo 2008-2010 por la mitad de las empresas fueron los proveedores seguida de bancos comerciales y nuevas aportaciones de socios. El principal destino de los recursos fue el capital de trabajo para poco más de la mitad de las compañías. La estructura financiera durante el periodo estudiado respecto del activo total en términos porcentuales para Deuda Bancaria pasivo con costo financiero fue en promedio del 37% y para Capital Contable del 63%, y la mitad de las empresas reportaron que el porcentaje para Deuda Bancaria en el mismo periodo fue de 35.5% o menos; así mismo la mitad de las compañías mencionó que para Capital Contable fue de 64.5% o menos, en ambos casos el porcentaje mínimo fue de 0% y el máximo del 100%. La tasa de interés bancaria anual que en promedio pagaron por los créditos durante el periodo 2008-2010 fue del 40% sin embargo la mitad de las empresas dijo haber pagado 14.6% o menos para el mismo periodo. La tasa de rendimiento anual promedio exigida por los accionistas fue del 15% y la mitad de las compañías mencionó que fue del mismo porcentaje o menos.

Costos fiscales: La tasa promedio de impuesto federal que se pagó por la muestra de empresas estudiada fue del 24%, la mitad pagó el 23% o menos siendo la tasa mínima que se pagó del 2.5% y la tasa máxima del 64%. Por otra parte la tasa promedio de impuesto estatal que pagaron las empresas fue de 2.7% la mitad de estas pagó 2.2% o menos y la tasa mínima a este impuesto que dijeron pagar fue del 0% y la máxima del 15%.

Inversiones directas: Poco más de la mitad de las empresas dijeron que el comportamiento de las inversiones directas o activos totales en el periodo estudiado fue a la alza y muy pocas reportaron que el comportamiento haya sido a la baja; estas últimas dijeron que la principal razón por la cual consideran el comportamiento de las inversiones directas haya disminuido fue: falta de recursos financieros para invertir en activos.

Tabla 8: Comportamiento de las inversiones directas del periodo 2008 – 2010

		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
Válidos	A la alza	27	51.9	48.1	51.6
	Se mantuvo igual	20	38.5	32.7	90.4
	A la baja	05	9.6	19.2	100.
	Total	52	100.0	100.	0
Perdidos	Sistema	0	0.0		
Total		52	100.0		

En esta tabla se refleja el comportamiento de las inversiones directas de las empresas encuestadas para saber si hubo incremento, decremento o se mantuvieron sin cambios en el periodo 2008-2010. Fuente: Elaboración propia con software estadístico SPSS versión 17.0 (2011).

Las empresas que mencionaron que el comportamiento de las inversiones directas fue a la alza lo aplicaron en los siguientes rubros tres o más veces en el periodo: Actualización del Equipo de Producción, Actualización tecnológica, Innovación de Productos, Investigación y Desarrollo, Capital de Trabajo, Capacitación del Recurso Humano del Área de Producción y Capacitación del Recurso Humano del Área Directiva. La aplicación una vez en el periodo fue en el siguiente rubro: Nuevos Proyectos de Inversión. Ninguna vez se aplicó en el periodo en los siguientes rubros: Adquisición de terrenos y edificios, Instalación de nuevas sucursales, Adquisición de otras empresas, Fusión con otras empresas y Alianzas Estratégicas con otras Empresas.

Factores NO financieros.

Para poco más de la tercera parte de las compañías en el sector alimentos en Yucatán el principal factor no financiero que consideran cuando evalúan una potencial decisión de inversión directa es la calidad de los productos y servicios, por encima de la participación en el mercado, cultura corporativa y calidad del management. Por otra parte más de la cuarta parte de los encuestados dijeron que le asignan un porcentaje de ponderación de entre 20 y 39 por ciento a los factores no financieros durante el proceso de toma de decisiones.

Tabla 9: Rango de porcentaje de ponderación que le asignan las empresas encuestadas a los factores No financieros durante la toma de decisiones de inversión

		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
Válidos	Del 0% al 19%	04	7.7**	7.7	7.7
	Del 20% al 39%	15	28.8**	28.8	36.5
	Del 40% al 59%	08	15.4**	15.4	51.9
	Del 60% al 79%	13	25.0**	25.0	76.9
	Del 80% al 100%	12	23.1**	23.1	12
	Total	52	100.0**	100	100

***En esta tabla se refleja la ponderación obtenida acerca de la toma de decisiones con base en factores no financieros. Fuente: Elaboración propia con software estadístico SPSS versión 18.0 (2011)*

El comportamiento de las ventas es un factor financiero muy importante para los empresarios al momento de resolver una potencial decisión de inversión. En la siguiente tabla podemos observar como las ventas son lo más importante, seguido de la utilidad de operación, los costos fiscales, la estructura financiera y los costos de financiamiento.

Tabla 105: Grado de importancia que los inversionistas otorgan a los factores financieros

Factores Financieros	Nada importante	Poco importante	Medianamente importante	Importante	Muy importante
Comportamiento de las ventas	0%	0%	0%	15.40%	84.60%
Utilidad de operación	0%	1.90%	0%	53.80%	44.30%
Estructura financiera	0%	9.60%	9.60%	55.80%	25%
Costos de financiamiento	0%	9.60%	13.50%	51.90%	25%
Costos fiscales	0%	11.50%	19.20%	53.80%	15.50%

En esta tabla se refleja de manera ordinal la importancia asignada por los empresarios de la industria alimentaria a los factores financieros. Fuente: Elaboración propia con software estadístico SPSS versión 18.0 (2011)

En cuanto a los factores no financieros los directivos jerarquizaron la calidad de los productos y servicios como muy importante, seguido de la participación en el mercado, la calidad del management y por último la cultura corporativa de la organización.

Apoyos gubernamentales.

Más de las tres cuartas partes de las empresas encuestadas no obtuvieron apoyos orientados al fomento de la inversión en el periodo estudiado, las muy pocas empresas que dijeron haber recibido algún apoyo lo obtuvieron de la Secretaría de Agricultura; Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA) y les sirvió principalmente para capacitación, asistencia técnica y consultoría empresarial.

Figura 3: Empresas con apoyo para el fomento a la inversión en el periodo 2008-2010

En esta figura se refleja el comportamiento de los apoyos gubernamentales en la industria alimentaria de Yucatán por parte del gobierno estatal y federal. Fuente: Elaboración propia (2012).

Así mismo en lo que va del año la mayoría de las compañías no han solicitado apoyos gubernamentales principalmente por falta de promoción y desconocimiento, y las muy pocas que lo han solicitado lo han recibido de SAGARPA y su destino principal fue para apoyar en infraestructura. Las tres principales causas que se mencionaron contribuyeron a no solicitar apoyo a instancias gubernamentales fueron la falta de conocimiento y promoción de estos apoyos, trámites burocráticos y la no necesidad por contar con liquidez y por obtener recursos a través de sus corporativos.

Administración De Riesgos.

De acuerdo al diccionario de la Real Academia Española, "riesgo" significa "contingencia o proximidad de un daño". El riesgo de un negocio es la probabilidad de que una amenaza pueda afectar la capacidad de una organización para lograr sus estrategias y objetivos. Visto desde un contexto global, toda actividad empresarial, sin importar su tipo, se propone alcanzar uno o varios objetivos y/o fines, aunque todas enfrentan también el riesgo de no lograrlos o no alcanzarlos en la medida esperada. Ese riesgo general involucra riesgos de diferentes tipos a los que están expuestos, a través de las operaciones que realiza cualquier entidad, los recursos que se invierten para llevarlas a cabo.

Es responsabilidad de los directivos que tienen a su cargo la administración y operación de la empresa o entidad, el identificar los riesgos y establecer los controles internos necesarios para prevenirlos, detectarlos y corregirlos. La función de auditoría interna constituye una actividad de control que establece la administración de una entidad con el objeto de verificar que los demás controles internos establecidos por la misma, funcionen correcta y oportunamente. Los empresarios objeto de este estudio manifestaron que los tres principales aspectos que consideran que contribuyen a la problemática interior de sus empresas en cuanto a Administración de Riesgos son: control operativo interno, altos costos en materias primas y liquidez. Por otra parte la mayoría de las empresas del sector alimenticio adquieren primas de seguros al menos una vez al año, cuentan con programas de certificación, hacen dictamen de estados financieros, realizan auditoría interna al menos una vez al mes, invierten en programas de capacitación y de actualización tecnológica. Cerca de la mitad hacen dictamen voluntario del IMSS y no invierten en fondo de pensiones, la mayoría no cuenta con coberturas de tipo de cambio, tasa de interés, ni cuentan con un plan de recuperación de sistemas así como con futuro de insumos.

Maximización Del Valor De La Inversión (MVT).

La Maximización del Valor de la Inversión tiene un promedio en el conjunto de estas empresas de -1.33%, el valor mínimo es de -86.24% y el valor máximo es de 79%. Con estos resultados podemos darnos cuenta de que un alto porcentaje de las empresas objeto de la muestra está con un MVI prácticamente en punto de equilibrio, es decir, no existe una representatividad significativa en este concepto. Es por ello que el comportamiento de las inversiones de este sector no están en función del MVI, es decir, no están relacionados y ello se valida en la hipótesis 02. La tasa de rendimiento operativo

anual de los negocios de alimentos es menor o igual al 30% como lo muestra la siguiente prueba estadística al 95% de confianza.

CONCLUSIÓN

La principal inferencia de este estudio es que los aspectos no financieros sí son considerados por los empresarios encuestados al evaluar potenciales inversiones. De hecho, un 48.48% del total de los encuestados, sostiene que estos factores representan entre un 41 y un 60 por ciento de sus decisiones de inversión y, sorprendentemente, un 27.27% manifestó que los aspectos no financieros constituyen entre un 81% y 100% de importancia al momento de evaluar una posible toma de decisión para inversión.

Dentro de los factores no financieros más importantes destaca: la experiencia del management, la ejecución de la estrategia corporativa y la calidad de la estrategia corporativa, todas ellas forman parte de la dimensión de calidad del management. En el caso de los factores financieros tradicionales, como las ventas y la liquidez, fueron sorpresivamente desplazados por los tres aspectos mencionados anteriormente, pero no en forma significativa. Todo esto demuestra que los factores que no aparecen reportados en los estados contables, tienen una mayor relevancia para las decisiones de inversión de los encuestados y, que los factores financieros siguen considerados significativamente.

El hecho de que la experiencia del management haya sido el factor más importante en este estudio, justifica la relevancia que han adquirido en las empresas los métodos de gestión de activos intangibles, como el cuadro de mando integral (balance scorecard). Este factor también aparece en el primer lugar de los estudios extranjeros analizados al documentarnos sobre este tema. La regulación, cumplimiento de normas ambientales, la investigación y desarrollo, junto con la habilidad de atraer y retener a personas talentosas, fueron los factores no financieros con la menor importancia entre los encuestados. Esto se debe en parte a la poca inversión en I + D que se realiza en nuestro país.

Se están considerando más importantes los factores no financieros que los tradicionales, pero no hay un reporte formal y establecido en los estados contables. Para un mejor desempeño financiero, las empresas deben considerar estas nuevas fuentes de valor, gestionarlas e incorporarlas en los reportes que emiten. De no efectuarse lo anterior, significaría no proporcionar la información correcta que demandan los inversores, que podría generar opiniones erradas y distorsionadas sobre el verdadero valor de la compañía.

BIOETICA: UNA ORIENTACION HACIA LA RESPONSABILIDAD SOCIAL EMPRESARIAL DE LOS ESTUDIANTES LATINOAMERICANOS DE ESCUELAS DE NEGOCIOS

Mario René Chan Magaña, Universidad Tecnológica del Sur
Nery del Socorro Escalante May, Universidad Autónoma de Yucatán

RESUMEN

El objetivo principal de este estudio es validar el instrumento de medición desarrollado en López- Paláu y Rivera Cruz (2010) en Latinoamérica. Dicho estudio encontró que el razonamiento bioético puede aportar en el entendimiento y solución de muchos conflictos éticos en el ámbito de los negocios. La relación entre la responsabilidad social empresarial y el razonamiento bioético se examinó utilizando como marco conceptual el modelo multidimensional de las empresas propuesto por Carroll (1979) y los principios bioéticos propuestos por Beauchamp y Childress (1979). El estudio desarrolló una escala cuantitativa confiable para ambos constructos partiendo de una muestra de estudiantes puertorriqueños, la cual necesita ser examinada en otros contextos para verificar su validez y utilidad en el ámbito internacional. Los resultados obtenidos determinaron los principales principios bioéticos e identificaron las características que deben tener las empresas para ser consideradas exitosas, socialmente responsables y el efecto de los principios bioéticos para lograrlo.

PALABRAS CLAVES: Bioética, Responsabilidad Social Empresarial, Género.

BIOETHICS: A GUIDE TO SOCIAL RESPONSIBILITY OF STUDENTS AMERICAN BUSINESS SCHOOL

ABSTRACT

The main objective of this study is to validate the measuring instrument developed in Palau and Rivera Lopez-Cruz (2010) in Latin America. That study found that bioethical reasoning can contribute towards understanding and solving many ethical conflicts in the field of business. The relationship between corporate social responsibility and bioethical reasoning was examined using as a framework the multidimensional model proposed by Carroll companies (1979) and the bioethical principles proposed by Beauchamp and Childress (1979). The study developed a quantitative scale reliable for both constructs from a sample of Puerto Rican students, which needs to be examined in other contexts to verify its validity and usefulness in the international arena. The results identified major bioethical principles and identified the characteristics that companies must have to be considered successful, socially responsible and the effect of bioethical principles to achieve it.

KEYWORDS: Bioethics, Corporate Social Responsibility, Gender.

INTRODUCCION

Aunque las investigaciones sobre la ética en el área de los negocios han ido avanzando con el tiempo, todavía sigue habiendo la necesidad de desarrollar modelos teóricos capaces de explicar y predecir el comportamiento ético/no ético de los individuos, así como también la creación de instrumentos de medición cuantitativos confiables para dicho fin, teniendo en cuenta el contexto cultural. La complejidad de los conflictos éticos de la actualidad requiere que sean abordados desde una perspectiva interdisciplinaria para su posible solución. Los estudiantes de las escuelas de negocio necesitan herramientas nuevas y relevantes que les permitan afrontar los diversos conflictos éticos con los que se enfrentarán en su carrera profesional.

López Paláu y Rivera Cruz (2010) identificó un espacio común a nivel teórico entre la responsabilidad social empresarial y la bioética. Ello sugiere que la inclusión de la bioética podría enriquecer el currículo de las escuelas de negocio añadiendo una herramienta adicional para desarrollar la orientación hacia la responsabilidad social empresarial de los estudiantes y aportar en el entendimiento y solución de muchos conflictos éticos en el ámbito de los negocios. Los resultados del estudio, con una muestra de estudiantes puertorriqueños, sugieren que los futuros directivos de empresas no están comprometidos ni con las metas económicas de la organización ni con utilizar los recursos de la empresa para responder a las necesidades diversos actores sociales. Esto implica un gran reto para las escuelas de negocios donde se supone que se formen para ejercer sus profesiones. Parece ser que la exposición de los estudiantes al tema de la responsabilidad social empresarial esta siendo efectiva en la transmisión de conceptos teóricos, pero no así en la formación de valores personales lo suficientemente arraigados como para contrarrestar valores corporativos contrarios. Este estudio, al igual que el previo, utilizará como marco conceptual el modelo multidimensional de las empresas propuesto por Carroll (1979) y los principios bioéticos propuestos por Beauchamp y Childress (1979). Aunque el estudio anterior adelantó un paso al crear un instrumento de medición confiable para determinar la orientación hacia la responsabilidad social empresarial y el razonamiento bioético de los estudiantes de administración de empresas, el mismo debe ponerse a prueba en otros contextos para determinar su validez y utilidad en ambientes multiculturales.

Objetivos

En esa dirección, este estudio pretende examinar si la relación entre la responsabilidad social empresarial y el razonamiento bioético encontrada en el estudio de estudiantes puertorriqueños se sostiene en el contexto latinoamericano. Los objetivos específicos son:

1. Validar el instrumento de medición desarrollado por López Paláu y Rivera Cruz (2010) en Latinoamérica.
2. Determinar la importancia de los principios bioéticos en la definición de lo que constituye una empresa
3. Determinar la validez de las cuatro dimensiones del modelo de Carroll (1979) y su importancia relativa.
4. Calcular índices para medir la orientación hacia la responsabilidad social empresarial y cada una de las cuatro dimensiones teóricas.
5. Calcular índices de razonamiento bioético y determinar su efecto en los índices de las cuatro dimensiones de la empresa.

6. Determinar las características que deben tener las empresas para ser consideradas exitosas, socialmente responsables y el efecto de los principios bioéticos para lograrlo.

Marco Teorico

Van Rensselaer Potter utilizó el término por primera vez en 1970 en un artículo y en el 1971 publica el libro *Bioética: Puente hacia el futuro* en el cual se recogen varios de sus artículos. Desde entonces, muchos estudiosos han aportado nuevas concepciones, métodos y justificaciones (Santos y Vargas, 2006). No hay consenso en cuanto al dominio apropiado para la aplicación de la ética en temas biológicos. Algunos autores lo reducen a lo relacionado con el tratamiento médico y los avances tecnológicos, mientras que otros le otorgan un sentido más amplio incluyendo todo aquello que afecte a los organismos. El criterio ético fundamental que regula esta disciplina es el respeto al ser humano y su dignidad.

A pesar de que la responsabilidad social empresarial ha generado una extensa bibliografía en los círculos empresariales y académicos en los últimos años, sigue habiendo mucha confusión conceptual y terminológica. La RSE se ha convertido, en una especie de sombrilla gigante en el que tienen cabida multiplicidad de conceptos y estrategias. No obstante, más allá de la cuestión terminológica y de las diversas teorizaciones que van asociadas a la RSE, todas las partes coinciden en que es un nuevo paradigma de comportamiento de las grandes corporaciones, resultado de una adaptación empresarial a los cambios sociales surgidos en el marco de la globalización económica (Ramiro y Pulido, 2009).

Con esta nueva perspectiva, se pretende cambiar el esquema tradicional del negocio orientado exclusivamente hacia la maximización del valor de la empresa y dirigido únicamente a los accionistas (shareholders), por un modelo que toma en consideración a otras partes de la sociedad. La visión centrada en los accionistas plantea que la función de las empresas es proporcionar bienes y servicios que lleven a la maximización de los beneficios a corto plazo y no reconoce ninguna responsabilidad social más allá de la obligación de maximizar el valor para el accionista (Friedman, 1970; Heath y Norman, 2004). En contraste, la teoría de los grupos de interés (stakeholders) plantea que las empresas no pueden ignorar el contexto en el que operan puesto que están interconectadas a una red de relaciones con un gran número de individuos e instituciones denominadas grupos de interés o stakeholders (Freeman, 1984; Donaldson y Preston, 1995; Clarkson, 1995). Se rechaza la idea de que una corporación sólo es responsable ante sus accionistas argumentando que los intereses de otros grupos son también válidos y merecen ser atendidos.

RESULTADOS

Composición de la muestra

La muestra total consistió de 536 estudiantes, de los cuales el 56% es de la carrera de contaduría y el 44% restante del área administrativa. Poco más de la mitad son hombres (52%), mayoritariamente (71%) de nivel subgraduado y menor de 25 años (52%).

Índice de orientación hacia la responsabilidad empresarial

Los coeficientes de confiabilidad de este índice resultaron en valores entre 73 y 88. Esto refleja una confiabilidad aceptable para un estudio exploratorio, y la mayoría de ellos exceden el límite de .70 generalmente aceptado y defendido por Nunally and Bernstein (1994) como el mínimo deseable. El coeficiente de la dimensión económica resultó originalmente en 0.749, pero aumentaba a 0.751 si se eliminaba la premisa de maximizar la ganancia de los accionistas. De igual manera en la dimensión ética el coeficiente original fue de 0.732, pero aumentaba a 0.765 si se eliminaba la premisa de operar de

forma ética sin sacrificar las metas económicas lo que en efecto se hizo de los análisis subsiguientes. Ninguno de los otros coeficientes mejoraba significativamente con la eliminación de alguna premisa.

Tabla I : Dimensiones Teóricas de las Empresas

Dimensión económica	84.28**	Estándar 14.71	Cronbach 0.749**
Operar eficientemente	90.89	16.27	
Ser competitivas	88.93	18.06	
Producir riqueza	83.12	21.80	
Ser lucrativas	80.19	23.30	
Maximizar ganancia de los accionistas	78.15	23.69	
Dimensión legal	87.05**	14.14	0.802**
Cumplir con los contratos contraídos	88.57	18.33	
Cumplir con las leyes ambientales	88.35	20.84	
Contratar y compensar al personal según ley	88.30	19.04	
Producir bienes/servicios según estándares	87.72	18.14	
Pagar impuestos según ley	86.65	20.94	
Acatar las leyes regulatorias	82.71	22.14	
Dimensión ética	82.95**	15.94	0.732**
Actuar de acuerdo a las normas éticas	86.25	19.77	
Ser reconocida como una empresa ética	86.20	21.09	
Fomentar conductas éticas	85.16	21.48	
Operar de forma ética sin sacrificar metas económicas	79.13	26.86	
Operar de forma ética aunque se tengan que sacrificar las metas económicas	78.00	24.77	
Dimensión de libre discreción	78.80**	17.53	0.791**
Ser reconocida como una empresa socialmente responsable	87.58	19.15	
Mejorar la calidad de vida de la sociedad	82.38	22.01	
Mejorar la calidad de vida de su comunidad			
Circundante	80.51	23.16	
Ayudar a resolver problemas sociales	77.72	23.70	
Destinar parte de las ganancias a actividad Benéficas	65.83	29.57	
Dimensión de Razonamiento Bioético General	81.32**	17.72	0.752**
Actuar de forma justa en sus operaciones	89.06	18.80	
Evitar que sus operaciones causen cualquier tipo de daño a otros	85.92	21.04	
Establecer relaciones con entidades			
Basadas en respeto mutuo	78.02	25.61	
Beneficiar con sus operaciones a diversos Grupos	72.10	27.16	
Promedio Índice Orientación Social RSE	82.88	15.93	0.765

**Se presenta el promedio obtenido en las premisas que se utilizaron para definir las dimensiones de la empresa, según el modelo de Carroll (1979) y el razonamiento bioético. Se presentan, además, los coeficientes Chronbach's Alpha de cada una de las dimensiones teóricas.

Los promedios más altos se obtuvieron mayoritariamente en la dimensión económica y legal; esto implica que los participantes le otorgan mucha importancia al cumplimiento de la ley siempre y cuando se logren las metas económicas. Los participantes le otorgaron menos importancia a la dimensión de libre discreción (79%) y a la ética (83%). No obstante, es importante notar que los promedios de todas las dimensiones, el de la dimensión de razonamiento bioético y el índice de orientación hacia la responsabilidad social empresarial prácticamente igualan y sobrepasan el 80% de importancia. Este hallazgo es indicativo de que los participantes entienden que las empresas son organizaciones con múltiples funciones, todas importantes, y no un mero ente económico.

Análisis factorial

Antes de proceder al análisis factorial se determinó la adecuacidad del procedimiento mediante las pruebas Kaiser-Myer-Olkin y Bartlett's Test of Sphericity. La primera prueba arrojó un resultado de .924 y la segunda resultó con un nivel de significancia de .000, por lo que se concluyó que la muestra es muy adecuada para realizar el procedimiento. Se estableció el valor de .50 para incluir un elemento en un factor y un eigenvalue de 1.00 para retener el factor. Todos los coeficientes resultaron estar asociados significativamente a un solo factor y todos los factores tienen eigenvalues mayores de uno.

El procedimiento resultó en una solución de 5 factores, ligeramente diferente a los cinco identificados teóricamente. Los factores explican casi un 61% del fenómeno, lo cual es muy bueno en este tipo de estudios. Los coeficientes de confiabilidad de cada factor fluctuaron entre .73 y .88 los cuales reflejan una gran confiabilidad. El primer factor está compuesto por la mayoría de las premisas de la dimensión legal, dos bioéticas y dos éticas, y explica casi un 37% del fenómeno. Esto implica que los participantes reconocen la función legal de las empresas como una dimensión separada y, además, la más importante. Las premisas bioéticas incluidas en este factor le añaden mayor sentido a la dimensión legal, ya que se puede constatar que existe una relación entre ambos grupos lo que permite identificarlas como empresas apegadas a la legalidad y con sentido ético.

El segundo factor es el más híbrido. Incluye tres premisas sociales, dos éticas, dos legales y una económica. Parecería que los participantes visualizan la mejora en la solución de los problemas sociales a través del cumplimiento de las leyes, así como el ser percibida como empresas éticas y operar con apego a ese valor y de manera eficiente. El tercer factor incluye mayoritariamente premisas de la dimensión social junto a dos premisas bioéticas. Las sociales incluyen ayudar a resolver problemas sociales, destinar ganancias para actividades benéficas y mejorar la calidad de vida de la comunidad circundante. Parecería que los participantes visualizan la función social de las empresas como una manera de beneficiar con las operaciones de la misma a diversos grupos sociales con los cuales se tiene una relación de mutuo respeto.

El cuarto factor está compuesto de cuatro premisas estrictamente económicas relacionadas con ser efectivos en ese aspecto: maximizar la ganancia de los accionistas, ser lucrativos, producir riqueza y ser competitivos. Esto nos permite deducir que para los participantes es importante el actuar de manera eficiente y eficaz para la obtención de las ganancias de la empresa. El último factor incluye una premisa ética sola: operar de forma ética sin sacrificar las metas económicas. La obtención de ganancias es primordial en relación al actuar ético. En el momento que el actuar y operar éticamente afecte el aspecto económico de la empresa se dará mayor énfasis al logro de esta última.

Tabla 2: Resultados del análisis factorial

Premisas	Coficiente	Varianza	Coficiente
	alpha	de	cronbach's
Correlación			
Factor 1 – Dimensión Legal		36.77**	0.884

Operar de forma ética sin sacrificar			
las metas económicas	0.802		
TOTAL	60.99		

**Se validó la importancia de las dimensiones tomando como base la representatividad de cada una de ellas medida en función de la varianza.

Funciones de los directivos

La Tabla 3 presenta el promedio obtenido en las premisas relacionadas con las funciones de los directivos. El 50% de las funciones presentadas obtuvieron promedios sobre 80%, excepto el defender el derecho de la empresa a elegir y perseguir sus propios intereses, procurar del mejoramiento de los constituyentes de la empresa y grupos externos, respetar el derecho de diversos grupos (stakeholders) a elegir y procurar sus intereses, así como el resolver problemas sociales. La función más importante de las empresas se vincula con la pregunta anterior. Al ser la dimensión legal la más importante de las empresas, se puede apreciar de igual manera que la función de mayor importancia para los directivos es cumplir con

todas las leyes y normativas vigentes. La única premisa de razonamiento bioético incluida en las primeras cinco funciones es evitar daños a otros con sus acciones u omisiones. No obstante todas las demás premisas resultaron con porcentajes relativamente altos, lo que señala una vez más que el razonamiento bioético tiene cabida en el escenario empresarial.

Tabla 3: Funciones de los directivos

Premisas	Promedio	Desviación Estándar
Cumplir con todas las leyes y normativas vigentes	89.27**	16.85
Lograr las metas económicas de la organización	87.08**	19.23
Operar de forma ética	86.68**	19.94
Evitar daños a otros con sus acciones u omisiones	83.54**	21.59
Tomar decisiones justas	82.27**	27.66
Defender el derecho de la empresa a elegir y perseguir sus propios intereses	78.97**	22.97
Procurar del mejoramiento de los constituyentes de la empresa	78.37**	25.51
Procurar el mejoramiento de grupos externos a la empresa	73.43**	25.50
Respetar el derecho de diversos grupos (stakeholders) a elegir y procurar sus intereses	70.95**	28.79
Resolver problemas sociales	67.39**	29.95

**Se presentan las principales funciones de los directivos con base en el mayor porcentaje obtenido a través de los participantes.

Índices De Orientación Hacia Cada Dimensión De La Empresa

Índice De Orientación Económica

Se les solicitó a los participantes que expresaran su acuerdo en términos porcentuales con la premisa: las metas económicas de la empresa deben lograrse, sujeto a 13 condiciones tales como cumpliendo con la ley, respetando los derechos de otros, etcétera.

Tabla 4 : índice de orientación económica

Premisas	Promedio	Desviación Estándar
Respetando los derechos de los otros	87.33	21.11
Sin hacerle daño a otros	87.24	21.23
Siendo justos	87.23	20.76
Operando éticamente	84.86	24.15
Cumpliendo con todas las leyes aplicables	84.75	26.04
Haciendo algún bien social	79.05	24.26
Sin importar los medios para lograrlo	45.36	37.77
Aunque no se haga ningún bien social	34.24	33.00
Aunque algunos salgan lastimados	29.06	32.42
Aunque se cometan injusticias	21.55	29.97
Aunque se violen algunas leyes	21.42	30.39
Aunque implique acciones no éticas	21.18	27.66
Aunque se violenten los derechos de algunos	19.99	31.28
Promedio índice económico	54.10	12.90
Promedio índice bioético	79.54	17.68

Se reflejan los resultados obtenidos en la pregunta específica de la dimensión económica.

Todas las condiciones positivas recibieron porcentajes altos de acuerdo, y las condiciones negativas porcentajes bajos. Se calculó un índice de orientación sumando las respuestas a las condiciones negativas y restando las de las condiciones positivas. El resultado se convirtió a una escala porcentual. Mientras más alto el índice, más orientados están los participantes a conseguir las metas económicas de la empresa aunque ello suponga acciones ilegales o no éticas. Un índice equilibrado como el obtenido en los resultados refleja que los participantes favorecen conseguir las metas económicas de manera ecuánime con respecto al violentar los derechos de otros, cometer injusticias o actos no éticos, etc.

Dimensión Legal

Se les solicitó a los participantes que expresaran su acuerdo en términos porcentuales con la premisa: las empresas deben cumplir con todas las leyes, sujeto a 13 condiciones tales como: siempre, para evitar penalidades, para ser un buen ciudadano, etcétera. Las premisas relacionadas con condiciones un tanto negativas recibieron porcentajes bajos y las positivas, altos. se calculó el índice de orientación legal, el cual resultó relativamente alto y definitivamente más alto que el índice de orientación económica.

Las dos premisas que más acuerdos generaron es que las empresas deben de cumplir con las leyes para evitar penalidades y siempre se debe cumplir con la misma. Consistente con los resultados obtenidos en el análisis factorial, el cumplimiento de las leyes parece ser percibido como una forma de evitar daños.

Tabla 5: índice de orientación legal

Premisas	Promedio	Desviación	
		Estándar	
Para evitar penalidades	87.30		20.09
Siempre	85.59		22.47
Para evitar causar daños a otros	85.01	21.17	
Para defender los derechos de la empresa	84.69	20.50	
Porque es lo ético	83.10		24.21
Porque es lo justo	82.62		24.35
Para respetar los derechos de los otros	82.41		23.46
Para hacer bien a otros	81.02		23.72
Y en algunos casos autoimponerse estándares más altos	77.95		27.97
Para ser un buen ciudadano	77.76		27.13
Aunque se afecten las metas económicas	70.38	31.59	
*Porque resulta más económico que violarlas	70.10		32.79
Si no se afectan las metas económicas	59.83		35.65
Promedio índice legal	79.06	15.04	
Promedio índice bioético	83.39		17.40

Se reflejan los resultados obtenidos en la pregunta específica de la dimensión legal.

Resultó interesante que las tres premisas de menor acuerdo son las relacionadas con condiciones económicas. Por un lado, cumplir con las leyes, aun a expensas de no lograr las metas económicas, recibió un acuerdo moderadamente alto; pero cumplir con las leyes si no se afectan las metas económicas, recibió un muy débil desacuerdo. Esto refleja cierta duda en los participantes y una cierta propensión a violentar algunas leyes, si hubiera alguna consideración económica tal vez importante. Sin embargo, cumplir con las leyes porque es más económico cumplirlas que violarlas recibió un acuerdo moderado lo cual sugiere que la consideración económica es moderadamente importante para los participantes a la hora de cumplir con las leyes. Estos resultados sugieren que pudiera haber unas leyes particulares asociadas a unos costos económicos lo suficientemente altos como para que los participantes consideren violentar la ley. El índice bioético calculado en esta dimensión resultó alto el más alto de las cuatro dimensiones. Este resultado sugiere que los participantes utilizan el razonamiento bioético como base para el cumplimiento legal. Resultaron particularmente importantes las premisas de cumplir con la ley para evitar penalidades, evitar daños y respetar los derechos de otros, los cuales están relacionados con los principios de no maleficencia y de autonomía.

Dimensión ética

Se les solicitó a los participantes que expresaran su acuerdo en términos porcentuales con la premisa: las empresas deben actuar de forma ética, sujeto a 12 condiciones tales como: siempre, porque es lo justo, para mejorar la imagen de la empresa, etcétera. Al igual que en la pregunta anterior, las premisas relacionadas con condiciones un tanto negativas recibieron porcentajes bajos y las positivas, altos, excepto la premisa de mejorar la imagen de la empresa, que recibió un acuerdo bastante elevado, a pesar de que a juicio de las autoras esa no debería ser una razón para actuar éticamente, aun cuando es un valor

agregado deseable. Las tres premisas vinculadas a condiciones un tanto negativas, recibieron porcentajes de acuerdo desde moderadamente alto hasta un débil desacuerdo.

Actuar éticamente, pero no más de lo requerido por ley, recibió un débil apoyo, lo que nos da a entender que para muchos participantes su visión de la ética es estrictamente legalista. La última, comportarse éticamente sujeto a que no se afecten las metas económicas, recibió un débil desacuerdo sugiriendo que los participantes podrían actuar de forma no ética si las consecuencias económicas, a su juicio, lo ameritara.

Tabla 6 :índice de orientación ética

Premisas	Promedio	Desviación Estándar
Siempre	84.38	24.82
Para mejorar la imagen de la empresa	84.27	21.34
Para evitar causar daños a otros	81.30	24.79
Porque es lo justo	80.85	25.50
Para defender la autonomía de la empresa	80.61	24.05
Para respetar la autonomía y dignidad de los otros	80.10	24.79
Para hacerle bien a otros	79.96	24.52
Aunque implique más restricciones de las establecidas por la ley	73.34	30.49
Porque es una forma de aumentar las ganancias	70.93	29.47
Aunque se afecten las metas económicas	69.39	30.78
Pero no más de lo que se le requiere por ley	66.47	32.11
Si no se afectan las metas económicas	62.18	34.16
Promedio índice ética	76.15	15.94
Promedio índice bioético	80.65	19.32

Se reflejan los resultados obtenidos en la pregunta específica de la dimensión ética..

Siguiendo el procedimiento anterior, se calculó el índice de orientación ética, el cual resultó moderadamente alto. La premisa que más acuerdo generó es que se debe actuar de forma ética siempre. Al igual que con el cumplimiento de las leyes, el comportamiento ético parece ser percibido como una forma de evitar causar daños. El índice bioético calculado en esta dimensión también resultó alto. Este resultado sugiere que los participantes utilizan el razonamiento bioético como complemento del razonamiento ético. Este resultado es acorde con los anteriores respecto a la utilidad del razonamiento bioético en el mundo de los negocios.

Dimensión de Libre Discreción

La Tabla 7 muestra los resultados obtenidos en la pregunta específica de la dimensión de libre discreción o social. Se les solicitó a los participantes que expresaran su acuerdo en términos porcentuales con la premisa: las empresas deben ser socialmente responsables, sujeto a 13 condiciones tales como: siempre, porque es lo justo, para obtener mayores ganancias, etcétera. Las premisas relacionadas con condiciones un tanto negativas recibieron porcentajes más altos de los esperados. La premisa sobre mejorar la imagen obtuvo un acuerdo alto, la de obtener mayores ganancias, un acuerdo moderadamente alto y la de si no se afectan las metas económicas, un débil acuerdo. La premisa, aunque se afecten las metas económicas, recibió un acuerdo relativamente alto. Tomadas en conjunto, estos resultados sugieren que los participantes entienden que las empresas deben ser socialmente responsables, pero siempre y cuando su imagen no se distorsione y sus metas económicas no se vean afectadas, lo cual influiría en su actuación como empresa socialmente responsable.

Tabla 7 : índice de orientación social (libre discreción)

Premisas	Promedio	Desviación Estándar
Siempre	85.41	22.88
Para mejorar su imagen	83.01	23.09
Porque es lo ético	82.69	24.21
Para evitar causar daños a otros	82.47	23.42
Porque es lo justo	82.32	24.17
Para respetar los derechos de los otros	81.75	24.20
Para defender los derechos de la empresa	79.77	23.86
Para hacerle bien a otros	79.13	25.60
Porque es parte de sus funciones	78.12	25.83
Para ser un buen ciudadano	77.14	28.02
Para obtener mayores ganancias	76.92	28.08
Aunque se afecten las metas económicas	69.54	30.14
Si no se afectan las metas económicas	63.79	32.94
Promedio índice social	78.62	16.57
Promedio índice bioético	81.22	18.74

Se reflejan los resultados obtenidos en la pregunta específica de la dimensión social. Relación de los Índices

Tabla 8: Correlaciones y coeficientes de confiabilidad de los índices

	1	2	3	4	5	6	7	8	9	10
RSE										
Económico	-.364**									
Legal	.502**	-.512**								
Ético	.386**	-.481**	.684**							
Social	.522**	-.480**	.700**	.649**						
Bioético General	.838**	-.313**	.386**	.332**	.446**					
Bioético Económico	.376**	-.968**	.487**	.469**	.502**	.321**				
Bioético Legal	.512**	-.466**	.895**	.591**	.674**	.409**	.467**			
Bioético Ético	.524**	-.453**	.687**	.764**	.726**	.416**	.472**	.720**		
Bioético Social	.560**	-.410**	.659**	.555**	.889**	.461**	.444**	.693**	.763**	

***Se reflejan los resultados obtenidos en las correlaciones y coeficientes de confiabilidad de los índices.*

Todos los índices tienen una correlación inversa con el índice económico y positivo entre los demás. En términos generales, esto sugiere que cuanto más orientado se esté hacia las otras dimensiones de la empresa, o cuanto más presente esté el razonamiento bioético, menos orientado se estará hacia las metas económicas y viceversa. Las tres correlaciones más altas del índice económico fueron con los índices bioético – económico, legal y ético. Esto sugiere que cuanto más se consideren los principios bioéticos, las dimensiones legales y éticas de la empresa, menos orientado estará el individuo hacia las metas económicas. Dicho de otra forma, el razonamiento bioético, ético y legal ofrecen límites, o tal vez dirección, a la función económica de la empresa. Las correlaciones positivas más altas, sobre .80, se dieron entre el índice de responsabilidad social empresarial y el índice bioético general, económico y bioético económico, legal y bioético legal, y por ultimo entre el social y bioético social. Esto sugiere que el razonamiento bioético sirve como justificación para la función de responsabilidad social empresarial y para el cumplimiento de la ética, responsabilidad social y actuar de acuerdo con las leyes y normativas vigentes.

Comparación De Empresas Exitosas Y Socialmente Responsables

Se les solicitó a los participantes que, de un listado de 15 características, indicaran en términos porcentuales cuáles de estas eran necesarias para catalogar a una empresa como exitosa y como socialmente responsable. La Tabla 9 presenta los resultados a esta pregunta, incluyendo la diferencia en los promedios obtenidos y su nivel de significancia.

Tabla 9 : Características de empresas exitosas y socialmente responsables

Premisas	Empresa exitosa		Empresa socialmente responsable		Diferencia estándar	Sig.
	Promedio	Desviación estándar	Promedio	Desviación estándar		
Es competitiva	91.87	16.21	78.52	25.27	13.35	.000
Es eficiente	91.04	17.45	82.94	22.93	8.10	.638
Produce riqueza	89.09	19.38	72.73	28.19	16.36	.107
Es lucrativa	88.23	18.95	70.74	28.52	17.49	.000
Cumple con todas las leyes	85.72	20.67	87.23	21.10	- 1.51	.000
Maximiza la ganancia de los accionistas	84.43	23.36	69.42	29.20	15.01	.000
Estándares de excelencia	83.36	22.99	78.20	29.19	5.16	.000

No le causa daño a Otros	77.72	24.77	87.24	21.38	- 9.52	.710
Mejoramiento de sus Externos	76.78	24.40	85.92	20.36	- 9.14	.000

Se refleja en esta tabla las características que los participantes perciben para que una empresa sea exitosa y socialmente responsable.

Hubo diferencias significativas, al .000 de significancia en 10 premisas, al .050 en una premisa y cuatro en las cuales la diferencia no fue significativa. Esto sugiere que a los que, según los participantes, se requieren unas características para que la empresa sea exitosa y otras para ser socialmente responsable lo cual refleja que podrían ser metas mutuamente excluyentes. Lo más importante para que la empresa sea exitosa es que sea competitiva, eficiente, que produzca riqueza, que sea lucrativa y cumpla con todas las leyes. Todo parece indicar que los participantes definen el éxito de una empresa en términos económicos pero desarrollando operaciones apegadas a la ley. Las características menos importantes para que la empresa sea exitosa son que contribuya al mejoramiento de los grupos externos y de la sociedad, y que se autoimponga estándares éticos más allá de los requeridos por ley.

Esto reafirma que el éxito no se mide por la función social o el comportamiento ético de las empresas. Parece ser que basta con cumplir con la ley. Las características más importantes para ser una empresa socialmente responsable son: operar en forma ética, no causar daños a otros, cumplir con todas las leyes, ser justa en sus operaciones y actividades, contribuir al mejoramiento de los grupos externos. Cuatro de las cinco premisas de razonamiento bioético fueron seleccionadas como de las más necesarias para ser socialmente responsables y las dos premisas relativas al comportamiento ético.

Los participantes entienden la responsabilidad social de las empresas como aquel comportamiento ético sensible a las necesidades de los grupos de interés y el bienestar de la sociedad. Las menos necesarias son maximizar la ganancia de los accionistas, ser lucrativas, producir riqueza y ser competitivas. Parecería que los participantes perciben a las empresas socialmente responsables como organizaciones sin fines de lucro, un tanto incapaces de ser lucrativas o producir riqueza. La característica que no fueron identificadas contundentemente con una alternativa o la otra fue el ser eficiente, el no causar daño a otros, respetar los derechos de los constituyentes externos y el ser eficiente, las cuales identificaron como bastante necesaria para ambas premisas.

CONCLUSIONES

Se determinó la importancia de los principios bioéticos en la definición de lo que constituye una empresa. Los resultados demostraron que todos los principios bioéticos fueron relevantes e importantes. Se confirmó parcialmente la validez de las cuatro dimensiones del modelo de Carroll (1979) y su importancia relativa. Se obtuvieron índices de confiabilidad superiores a 0.70 en cada una de las dimensiones lo que hace fiable el instrumento de López y Rivera (2010).

La dimensión legal es la más importante de las empresas, se puede apreciar de igual manera que la función de mayor importancia para los directivos es cumplir con todas las leyes y normativas vigentes pero cuidando evitar daños a otros con sus acciones u omisiones, única premisa del razonamiento bioético. Se identificaron las características que deben tener las empresas para ser consideradas exitosas, socialmente responsables y el efecto de los principios bioéticos para lograrlo. Se encontró que el éxito de las empresas se define principalmente por variables económicas y las socialmente responsables por su sensibilidad social y ética. Los principios bioéticos resultaron más importantes para definir las empresas socialmente responsables que las exitosas. Todo estudio confronta ciertas limitaciones que deben ser informadas. Dado que la muestra no fue seleccionada aleatoriamente, los resultados no pueden, y no han sido, generalizados a la población. Como en todo cuestionario auto cumplimentado es posible que las respuestas ofrecidas por los participantes no necesariamente reflejen su sentir completamente.

Independientemente de los avances logrados en la investigación de la RSE aún quedan muchas preguntas por responder. Sigue siendo necesario elaborar instrumentos de medición validos y confiables. Dada la complejidad de los conflictos éticos de estos tiempos es necesario continuar haciendo estudios multidisciplinarios que provean nuevas y variadas perspectivas que permitan mejorar la formación de los futuros directivos y empresarios. Este estudio pretende ser un pequeño paso en esa dirección.

CULTURE PROSECUTOR IN MEXICO

Fidel Antonio Mendoza Shaw, Universidad Estatal De Sonora

RESUMEN

Durante las últimas décadas en México, la fuente principal de los ingresos provenían del petróleo, esta situación comienza a cambiar a partir de los años noventa con la disminución de estos ingresos, es por ello que ante esta situación el Estado procede a redimensionar sus fuentes de ingreso, recurriendo a mejorar la recaudación tributaria y por ende el fomentar una mayor y mejor Cultura Tributaria por parte de los ciudadanos. La conducta humana no está totalmente determinada genéticamente, sino que esta se puede modificar y educar transformando los aspectos indeseables en productivos y aceptables para el conjunto de la sociedad (Velarde, 2006:48-51). Es necesario el inducir la conducta del contribuyente, para lograr que este adopte la decisión de cumplir voluntariamente con sus obligaciones tributarias. Por ello es necesario profundizar la relación que debe darse entre el ciudadano y el Estado para que se desarrolle una cultura necesaria que incida en el ciudadano en concebir las responsabilidades tributarias como un deber primordial y en concordancia con los valores de una sociedad inspirados en la supremacía del bien común. Velarde (2006:46), menciona que desarrollar dicha cultura no es, sin embargo una tarea fácil, pues requiere de una convergencia de políticas de control con políticas de carácter educativo.

CULTURE PROSECUTOR IN MEXICO

ABSTRACT

During the last few decades in Mexico, source main income came from petroleum, this situation began to change from the early 1990s with the decline of these revenues, is why this situation the State proceeds to resize their sources of income, resorting to improve revenue tax and thus promoting a greater and better tax culture by citizens. Human behavior is not completely determined genetically, but this can be change and educate the undesirable aspects becoming productive and acceptable to the whole of society (Velarde, 2006: 48-51). It is necessary to induce the behaviour of the taxpayer, to achieve this the decision to voluntarily comply with their tax obligations. Therefore it is necessary to deepen the relationship that must be given between the citizen and the State for the development of a necessary culture affecting the citizen to devise the tax as a primary duty responsibilities and in accordance with the values of a society inspired by the supremacy of the common good.

KEYWORDS: Tax Culture, Mexico

INTRODUCCIÓN

Para generar el bienestar social que México necesita se debe de recaudar por arriba del 15% del Producto Interno Bruto (PIB). Las reformas fiscales que se han implementado en los últimos 40 años no han logrado superar el 10% de recaudación. Por ello se requiere que la parte de la población que debe pagar impuestos y no lo hace lo haga, y de esta manera se cubriría ese déficit del 5% del (PIB) que se plantea. La evasión reconocida en México de forma oficial en 1998 era de un 37% y para 1999 se reconoció un 45% Tapia, (2000:30). Al respecto, opina que la evasión en México es alarmante y que para acabar con el problema se requiere de voluntad política: “La autoridad sabe en dónde se encuentran los evasores fiscales. Por otra parte, resulta apremiante hacer el sistema tributario menos complicado, que sea cierto y seguro desde el punto de vista jurídico. Que rebase políticas sexenales, y que la educación tributaria se

inicie desde la educación primaria, para que se tome conciencia de que tenemos que contribuir al gasto público pagando nuestros impuestos”. La corriente de análisis de la evasión considera aspectos relacionados con el comportamiento del gobierno en el gasto como determinante de la disposición a pagar impuestos deriva de la idea del Estado como comunidad alentada por la confianza entre ciudadanos y quizá también por la confianza en el gobierno apuntada por uno de los hacendistas más destacados (Slemrod, 2003:877). De nada sirve el estar modificando leyes y reglamentos si los ciudadanos no tienen una Cultura Fiscal que propicie el cumplimiento consciente y voluntario de sus obligaciones.

Se debe consolidar el fomento de la Cultura Tributaria desde tempranas edades, donde cada estudiante tenga oportunidad de disertar acerca del compromiso que debe tener con el desarrollo del país y así poder corregir conductas arraigadas de evasión de impuestos que se han hecho presentes continuamente en un número significativo de individuos para escaparse de los deberes con el Estado. Se desea que los estudiantes entiendan la existencia de la cultura tributaria y sean agentes multiplicadores en sus hogares para el fortalecimiento y crecimiento del país.

DESARROLLO

Diep (1999:6), menciona que desde sus orígenes la obligación de tributar fue producto de la dominación, es decir, de la imposición del dominador sobre el dominado, así fuera en su carácter de gobernante, conquistador o simple opresor, siempre que se valiese de la fuerza en cualquiera de sus múltiples formas convencionales e históricas, incluyendo la magia y el dominio de la mujer sobre el hombre o de este sobre aquella, del mayor sobre el menor, del viejo sobre el joven o viceversa, del rico sobre el pobre, del sano sobre el enfermo, etc. La conducta humana no está totalmente determinada genéticamente, sino que esta se puede modificar y educar transformando los aspectos indeseables en productivos y aceptables para el conjunto de la sociedad (Velarde, 2006:48-51).

Es necesario el inducir la conducta del contribuyente, para lograr que este adopte la decisión de cumplir voluntariamente con sus obligaciones tributarias. Por ello es necesario profundizar la relación que debe darse entre el ciudadano y el Estado para que se desarrolle una cultura necesaria que incida en el ciudadano en concebir las responsabilidades tributarias como un deber primordial y en concordancia con los valores de una sociedad inspirados en la supremacía del bien común. Velarde (2006:46), menciona que desarrollar dicha cultura no es, sin embargo una tarea fácil, pues requiere de una convergencia de políticas de control con políticas de carácter educativo. La esencia del problema tributario, pues, no únicamente subsiste y se manifiesta plenamente vigente, aunque tamizada o matizada en el tiempo y en la ley, sino que sigue dolorosamente presente en sus manifestaciones y efectos, incluso secundarios o ajenos a la concepción clásica del impuesto como figura legislativa que recogiera en parte la vieja concepción universalista del tributo, de tal forma que no puede ser soslayada su presencia notoriamente fatal en el impacto puramente contributivo que asume en el presente (Diep, 1999:66).

La administración tributaria necesita alcanzar un control fiscal, para evitar la evasión, la elusión y la prescripción de los tributos, utilizando una cultura tributaria que eduque a la población sobre los conocimientos tributarios indispensables que generen nuevos comportamientos y que ayuden a tener una recta convivencia social. Si se logra un nuevo comportamiento en los contribuyentes, los mismos cumplirán voluntariamente los deberes formales, habrá correcto pago de los tributos, a su vez aumentarán los recursos que ingresan al fisco y ayudara a compensar los ingresos petroleros, el déficit fiscal, el gasto social, la deuda pública e inversión pública. El término evasión fiscal significa fuga, evasión, despacho de un negocio, evasor es el que se evade y evasivo de lo que sirve para eludir o evitar. Según Tapia (2000:80), es un fenómeno social y de moral pública que se ha dado en todos los tiempos, el cual ha tenido lugar tanto en países desarrollados como en países en vías de desarrollo donde también la evasión fiscal la tipifica como la ocultación o simulación de cuentas de ingresos o gastos con el fin de pagar

montos menores de impuestos. Señala que el mayor o menor grado de evasión y rechazo al pago de los impuestos depende de en primer orden de importancia a la Cultura Fiscal.

La Cultura Fiscal es el conjunto de valores que se manifiestan en el cumplimiento permanente de los deberes tributarios con base en la razón, la confianza y la afirmación de los valores de la ética personal, respecto a la ley, responsabilidad ciudadana y solidaridad social de los contribuyentes. Rivera y Sojo (2002:95), expresan que la Cultura Tributaria no se puede entender como el conjunto de conocimientos que tienen los ciudadanos sobre las obligaciones y responsabilidades contributivas sino, la forma en que construyen una imagen de los impuestos a partir de una combinación de información y experiencias sobre la acción y el desempeño del Estado. La cultura es transmitida de una generación a otra por la enseñanza de valores, conocimientos y otros factores que influyen en la conducta. El lenguaje es el principal medio de transmisión de la cultura Berger y Luckmann, (1972:185). Este proceso se da una vez objetivado y sedimentado un comportamiento. Cuando las instituciones son incorporadas al lenguaje, que también es una institución, se convierten en un cuerpo de conocimiento accesible en general y se puede incorporar a la tradición y a la cultura de la sociedad y de la organización. Schmolders (1970:330) dice que ha sido la actitud hacia los impuestos entendida esta como la construcción compleja formada a partir de las creencias de los individuos y al tratar la actitud hacia los impuestos, dice que hay una propensión cultural fiscal individual tendiente a tener una actitud de comportamiento irregular.

CONCLUSIÓN

A nivel mundial y en cada país, para que los Estados puedan cumplir con su obligación constitucional de velar por el bien común y proporcionar a la población los servicios básicos que ésta requiere, necesita de recursos que provienen principalmente de los tributos pagados por los contribuyentes en la modalidad de personas naturales o jurídicas. Los mexicanos tienen la obligación de contribuir con el gasto público de acuerdo con el artículo 31 párrafo primero fracción IV de la Constitución Política de los Estados Unidos Mexicanos que dice: “Son obligaciones de los mexicanos: contribuir para los gastos públicos, así de la Federación como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes fiscales”. Al hacer referencia a las personas naturales, Ruiz (2005:21) establece “se trata del individuo natural, persona biológicamente establecida”; así pues las personas las que conforman una entidad, organización, parroquia, municipio, estado, país. Pero más allá de la importancia de contar con personas, mejor aún es contar con ciudadanos y ciudadanas que desarrollan una Cultura Tributaria en función del beneficio personal y colectivo del país.

Desde la perspectiva de Pietro (2006:3) un ciudadano es: “un miembro de una comunidad política que goza de deberes y una serie de derechos para participar en una comunidad, a través de la acción autorregulada, inclusiva, pacífica y responsable, con el objetivo de optimizar el bienestar público”. Por consiguiente, para que una persona ejerza la ciudadanía debe respetar los derechos de los demás, contribuir al bien común, respetar los valores predominantes que incluyen el sentido de justicia y de equidad. Por su parte, en el diseño curricular del nivel de educación se menciona que los valores surgen por una crisis social que caracteriza la época actual. Por lo tanto, la educación en valores se presenta como una Competencia esencial para promover cambios significativos en la formación del ser humano para que sea capaz de desenvolverse en la sociedad actual.

En este mismo orden, la escuela como espacio de socialización del conocimiento juega un papel fundamental en la formación del ser humano considerándose la misma como un complemento del hogar en donde se le da gran importancia a los valores. No obstante, es necesario tener en cuenta que en oportunidades los contribuyentes, escasamente cumplen con esas obligaciones por diversas causas, entre las cuales se citan las expuestas por Ruiz (2005:18): “Desconocen la existencia de alguna obligación tributaria (sobre todo por parte de las pequeñas empresas). Otras veces, aun conociendo la existencia de tal o cual obligación tributaria, no saben cómo y/o cuando cumplir. Algunos empresarios no cuentan con los mecanismos de control o de registros mecanizados que algunas obligaciones tributarias requieren para que las puedan cumplir. En las ciudades o poblaciones del interior del

país, los contribuyentes carecen de asesoría pública (de parte de las administraciones tributarias para orientarles como cumplir con sus obligaciones), o carecen de asesoría privada.” De acuerdo con lo antes mencionado, puede que algunos profesionistas desconozcan sus obligaciones o al conocerlas olviden su deber de cancelarlas al Estado; sin duda, sea cual sea la situación, el comportamiento de los ciudadanos al cometer la evasión fiscal está relacionada con la escasa Cultura Tributaria y el cumplimiento de sus deberes. Así pues, a efecto de fortalecer la Cultura Tributaria, definida ésta por Díaz (2005:1) “como el conjunto de valores, creencias y actitudes compartidas por una sociedad respecto a la tributación y las leyes que la rigen”, la cual conduce al cumplimiento permanente de los deberes fiscales, se requiere que a población obtenga conocimiento sobre el tema y comprenda la importancia de sus responsabilidades tributarias. En función de lo planteado, conviene mencionar que la Cultura Tributaria se alimenta de información oportuna y de formación adecuada, las cuales deben conducir hacia la aceptación, derivada de la concienciación. Ésta es indispensable para lograr una recaudación firme y sostenible en el mediano y largo plazo, de manera que también sea posible cumplir los compromisos del Pacto Fiscal estipulado en las leyes y ordenanzas.

Considerando lo expresado, Rincones (2005:2) se refiere a que “los ejes centrales para la promoción de la Cultura Tributaria son la Información, la Formación y la Concienciación”, los cuales se articulan en torno a la razón como móvil deseable fundamental de la acción de tributar, y se incorporan en una estrategia de comunicación cuyo mensaje central pudiera ser “para que el Estado pueda cumplir con sus obligaciones, yo como ciudadano, debo asumir mi responsabilidad de pagar impuestos porque, al hacerlo, cumplo con el país”. En consecuencia, ese mensaje, información, formación y concienciación, lo más lógico es promoverlo desde la educación con el propósito de ir formando las generaciones de relevo con una Cultura Tributaria que los induzca voluntariamente a asumir actitudes de responsabilidad y compromiso ante el fisco por medio de la cancelación oportuna de los impuestos y así ir corrigiendo conductas indisciplinadas que tiene que ver con el cumplimiento de las responsabilidades como ciudadanos de un país. Al respecto Artigas (2005:3) refiere: “La generación de conciencia tributaria es un objetivo imprescindible en toda estrategia orientada a promover de manera sostenida el cumplimiento voluntario de las obligaciones tributarias y, en consecuencia, es una tarea que debe comenzarse desde la educación dado que los temas tributarios y aduaneros deben convertirse en un contenido incluido en la enseñanza escolar, ya que son elementos constitutivos de la ciudadanía y están en íntima relación con la incorporación de valores.” En otros términos, es importante recalcar que la Universidad es un espacio fundamental para desarrollar en los estudiantes actitudes de responsabilidad y compromiso frente al bien común, de allí lo fundamental de incorporar el tema de Cultura Tributaria dentro de la línea de acción educativa, como Competencia esencial para que su aplicación sea obligatoria en la estructura curricular del sistema universitario educativo; esto es abordar el fortalecimiento de los valores.

Esto permitiría asignar mayores recursos a la creación y el fomento de infraestructura productiva y social, a los sectores sociales en pobreza extrema, y a las funciones sociales que contribuyan al mejoramiento de los recursos humanos del país: salud, seguridad social, educación, infraestructura hidráulica y vivienda. Chávez (2002:14). Según Bruner (1988:138), la cultura es una riqueza, un capital social, que tiene su lógica. Si no se cultivo durante años, mejor aún durante siglos, no se puede ahora improvisar ni suponerla es un capital que hay que crearlo y lleva su tiempo. Pero se puede crear, sólo hay que saber cómo hacerlo. Estamos hoy en convivencia de una sociedad donde el poder se sustenta en el conocimiento y sobre estos hay que crear la nueva cultura tributaria. No hay otro camino. Conocimiento significa información completa, un riguroso análisis, planteamiento de todos los escenarios posibles. El autor, Moreno (1998:58) explica que: a la Cultura Tributaria se le alude al hablar de información o desinformación del contribuyente, cumplimiento voluntario o forzoso de sus obligaciones, evasión o fraude fiscal, y en general, cuando se mencionaban las circunstancias personales y sociales de quienes pagan los impuestos, y se habla así de países con un elevado grado de cultura tributaria. Pero como los valores éticos que sustenta una sociedad son parte de su cultura, resulta igualmente cierto que una sólida cultura impositiva presupone una conciencia tributaria de cierta solidez por parte de los contribuyentes.

Cabe considerar que la falta de Cultura Tributaria es la principal causa de la evasión y los ilícitos tributarios, dentro de la cual está inmersa la administración tributaria en general, trayendo como consecuencia el desmejoramiento, principalmente del sistema de recaudación tributaria, y los altos índices de evasión y fraude fiscal, así como el desconocimiento, por parte del ciudadano, del cumplimiento de los deberes formales establecidos en las distintas leyes que rigen los tributos. Por lo expresado, para lograr el aprendizaje en los estudiantes es importante la innovación, ser creativo, utilizar los recursos disponibles en el medio con el uso de una serie de estrategias que solo dependen de la capacidad e inventiva del docente; así pues, Cortázar (2003:1) propone tres estrategias capaces de potenciar el carácter educativo de las acciones de la administración tributaria y fomentar de esta manera una Cultura Tributaria; ellas consisten en: acciones de publicidad y difusión sobre los valores que deben motivar al ciudadano a cumplir con sus obligaciones tributarias; así mismo, hace mención de las acciones de formación en valores ciudadanos y educación tributaria en el medio escolar y por último, hace referencia a las acciones de formación de conciencia tributaria en colectividades específicas.

IMPORTANCIA ESTRATÉGICA DEL CAPITAL INTELECTUAL EN LA INDUSTRIA MANUFACTURERA DE LA REGIÓN SURESTE DEL ESTADO DE COAHUILA, MÉXICO

Yolanda Mejía de León, Universidad Autónoma de Coahuila
María de la Luz Rodríguez Garza, Universidad Autónoma de Coahuila
Alicia Hernández Bonilla, Universidad Autónoma de Coahuila

RESUMEN

Durante las crisis económicas que surgieron en México en el siglo pasado, los primeros gastos que se reducían eran sueldos, prestaciones e inversión en capacitación, provocando pérdida de eficiencia, desmotivación e inseguridad en el trabajo. Por lo cual se comienza a medir capacidades y conocimiento. En el siglo XXI las organizaciones enfrentan un sorprendente desafío obligándolas a evaluar en términos de conocimiento, considerando el capital intelectual como activos intangibles y factor principal que agrega valor a las empresas actuales. En la región de estudio, un alto porcentaje de empresas se encuentra en vías de desarrollo, dificultando la gestión del conocimiento y aplicación de nuevas tecnologías, falta de estrategias para fortalecer las relaciones con actores externos. Por consiguiente el objetivo de esta investigación es conocer las estrategias aplicadas para gestionar el conocimiento en la organización y la importancia de generar capital intelectual. En esta investigación se aplicó un cuestionario el cual está compuesto de tres bloques que se relacionan con los elementos del capital intelectual. Los resultados preliminares, nos indican falta de capacitación, tecnología adecuada, falta de experiencia en técnicas informáticas, recursos económicos para invertir en I+D, y poco conocimiento de los mercados internacionales.

PALABRAS CLAVE: Capital intelectual, gestión del conocimiento, innovación y tecnologías

STRATEGIC IMPORTANCE OF CAPITAL INTELLECTUAL IN MANUFACTURING OF SOUTHEAST REGION COAHUILA STATE, MEXICO

ABSTRACT

During the economic crisis that emerged in Mexico in the last century, the first expenses were reduced salaries, benefits and investment in training, causing loss of efficiency, motivation and job insecurity. Therefore it begins to measure skills and knowledge. In the XXI century organizations face a staggering challenge forcing them to assess in terms of knowledge, considering the intellectual capital and intangible assets main factor that adds value to existing businesses. In the study area, a high percentage of business is developing, making knowledge management and application of new technologies, lack of strategies to strengthen relations with external actors. Therefore, the purpose of this research is to understand the strategies used to manage knowledge in the organization and the importance of generating intellectual capital. In this research, a questionnaire which consists of three blocks that relate to the elements of intellectual capital. Preliminary results indicate a lack of training, appropriate technology, lack of experience in information technology, financial resources to invest in R & D, and little knowledge of international markets.

INTRODUCCIÓN

Los cambios percibidos por la economía mexicana durante dos décadas han llevado consigo transformaciones en la estructura económica; la apertura comercial ha intervenido sobre el patrón de la actividad económica en todo el territorio nacional, principalmente en la industria manufacturera; es en este sector donde se aprecian los cambios de la actividad económica, principalmente en los estados del norte y centro de México. Desde las microempresas hasta las grandes empresas han tenido que desafiar y competir en una economía dinámica y diferente que ha provocado que sus actividades cambien de manera radical, pues la influencia de las tecnologías de información y comunicación, la evolución y alcances del conocimiento y la globalización, han provocado que la competencia sea más agresiva, teniendo que generar estrategias ofensivas que les permitan mantenerse dentro del mercado, en el gusto del consumidor y que también las distinga de las demás.

Las organizaciones independientemente de su magnitud, siempre han estado constituidas por personas, anteriormente eran consideradas seres totalmente pasivos y apagados que sólo producían, ahora se catalogan entes activos, así como una herramienta poderosa con un cúmulo de conocimientos capaces de contribuir en la generación de información valiosa que impacta en la organización alcanzando sus objetivos. Hoy en día los conocimientos o bienes intelectuales son un factor de la producción y se han vuelto tarea sustancial de las organizaciones. En los escenarios presentes, las organizaciones más rentables serán las que con los recursos existentes mejor gestionan su principal activo: *el conocimiento*, para producir con mejor y mayor calidad en beneficio tanto del trabajador como de la empresa.

REVISIÓN LITERARIA

Hoy en día en el entorno global se suscitan cambios vertiginosos y las condiciones actuales cambian de un instante a otro, debido a la turbulencia de los mercados, a las innovaciones de bienes y/o servicios, a cambios tecnológicos, a la búsqueda de estrategias por parte de los competidores, a modificaciones en los gustos, deseos y necesidades de los consumidores, a las tendencias, modas, etc. Para que las empresas puedan sobrevivir en el mercado, tanto la innovación como los conocimientos son las herramienta que les proporcionarán ventajas competitivas sostenibles (CIDE, 2000, Serradel y Pérez, 2003).

Invariablemente las empresas consideraban que sus ventajas competitivas derivaban de estrategias como: *el liderazgo en precios bajos* (incremento de ventas y utilidades), *la diferenciación* (bienes con características o plus que los distinga de la competencia) o *la focalización* (atender a un mercado específico). Actualmente para las empresas una estrategia que no era apreciada, *es el conocimiento*, la importancia de este como recurso estratégico y elemento de ventaja competitiva sostenible presupone un cambio en la forma de concebir la gestión de las organizaciones. Bueno et al. (2003) señala: las bases tradicionales de la ventaja competitiva han comenzado a erosionarse.

Kaplan (1987) afirman que "el valor económico de una organización no es únicamente la suma de los valores de sus activos tangibles, sino que también incluye el valor de activos intangibles como el stock de productos innovadores, el conocimiento de procesos de producción flexibles y de alta calidad, el talento de su personal, la fidelidad del cliente, la confianza en los proveedores, etc.". Explica Bueno et al. (2001) que en el siglo XXI el conocimiento es el recurso estratégico máspreciado y valorado, denominándosele "Sociedad del Conocimiento" En este siglo las organizaciones se enfrentan a un sorprendente desafío: tomar en cuenta el valor de los conocimientos, habilidades, relaciones, y características del empleado. Ellos son los que les permiten diferenciarse y construir ventajas competitivas, denominándolo: *capital intelectual* y uno de los retos de las organizaciones es hacer que

este capital se traduzca en factores que produzcan beneficios tangibles. ¿Qué se entiende por capital intelectual? Para Brooking (1997) el capital intelectual “hace referencia a la combinación de activos inmateriales que permite funcionar a la Gestión del Capital intelectual ante el reto de la innovación en la sociedad del conocimiento. Según Edvinsson y Malone (1999), el Capital Intelectual hace referencia al valor resultante del conjunto de intangibles creados por la empresa.

Se define así como un capital intangible por su naturaleza, basado en el conocimiento o en el intelecto humano y desarrollado en la organización. Para Machado (2004), “el capital intelectual es la parte del proceso cognitivo en que la preponderancia la tienen las ideas más que las emociones, las ideas y la forma en que se manifiestan a definiciones y conceptos en sus diferentes grados de estructuración: estrategias, proyectos de calidad, enfoque de procesos” De acuerdo a Edvinsson y Malone (2004) citados arriba en el año 1999 la percepción en su nuevo concepto de capital intelectual se ve fortalecido por el trabajo que han desarrollado durante cinco años definiéndolo ahora así: “es la posesión de conocimientos, experiencia aplicada, tecnología organizacional, relaciones con clientes y destrezas profesionales que dan a la empresa una ventaja competitiva de mercado”

Abeysekera (2006) cita que el capital intelectual es el conocimiento transferido para producir activos de alto valor para incrementar el valor a la organización. Según Rivero (2009), el Capital Intelectual es el efecto de la combinación, es decir, la sinergia de todos los conocimientos que reúne una organización, toda la experiencia acumulada en sus integrantes, sus capacidades, destrezas, su motivación y compromiso, valores, etc., aplicados al trabajo. Todo lo que ha conseguido en términos de relaciones, procesos, descubrimientos, innovaciones, presencia en el mercado e influencia y reconocimiento en la sociedad. El capital intelectual incluye un conjunto de activos como son: los sistemas organizativos, marcas, bases de datos, patentes, relaciones con los clientes, etc. Estos activos, como señala Lev (2001), responden a procesos de creación de valor, de innovación o de base cognitiva de la I+D, de las prácticas y políticas organizativas o de dirección y de la función de las personas como poseedoras de conocimiento, a la vez que es consecuencia de determinada estrategia que pone en acción el conocimiento poseído en la organización Davenport, Prusak (1998).

El expresidente de la empresa Skandia, Bjorn Wolrath, citó que “La medición del Capital Intelectual y un informe bien equilibrado representan un hito importante en el paso de la era industrial a la economía del conocimiento ya que se tiene como resultado una descripción más sistemática de la capacidad y potencial de la compañía para transformar el Capital Intelectual en capital financiero.” Edvinsson, Malone (1998) Para Booth (1998), el Capital Intelectual tiene que ver con la habilidad de una empresa para desplegar sus recursos dentro de nuevos mercados, habilidad para transformar nuevas ideas en productos y servicios. “La dificultad real no es la clasificación, identificación y medición del capital intelectual, sino el entender como transferirlo y como el negocio puede usarlo para incrementarlo y más aún como hacer la liga ente la aceleración del mismo con la generación de valor de la empresa.” Las organizaciones del conocimiento abarcan tres elementos:

Capital humano: Para Chen, Zhu y Xie (2004) es la competencia de los trabajadores, sus conocimientos, habilidades de interrelación y sus valores.

Capital estructural: Seetharanam, Bin Zaini, Saravanan (2002) Es la capacidad de desarrollar continuamente todas las capacidades potenciales. Es lo que queda como parte de la empresa luego de que los trabajadores salen de ella como licencias, patentes, marcas, etc

Capital relacional: Sveiby (1997) citado por Martin (2004) lo define como la estructura externa que incluye relaciones con clientes y proveedores y abarca marcas, nombres, reputación e imagen de la compañía, es de vital importancia para ella.

Hoy en día los conocimientos o bienes intelectuales son un factor de la producción y se han vuelto tarea sustancial de las organizaciones. Los cambios que se dan en torno a las empresas mexicanas no son temporales, son fuerzas que impulsan a que la competencia se incremente y a que las formas tradicionales de administrar a una empresa se modifiquen, ahora contar con un conjunto de talentos, capacidades, habilidades, destrezas e ideas, o sea, “Capital intelectual” En los años 90 las empresas Mexicanas se han tenido que someter a un contexto más dinámico y competitivo diferente al que enfrentaban años anteriores. “Hoy más que nunca las firmas mexicanas buscan mejorar su posición competitiva y la forma en que lo busca es a través de lo que se conoce como cambio organizacional que puede ser de tres tipos: tecnológico, interno a la empresa y externo a la empresa.” Chávez, Mota, Alvarado (1999) En México 25 % de las empresas pueden considerarse flexibles y para ello reúnen dos requisitos: primero, contar con un programa formal de capacitación en el que se desarrollen habilidades y capacidades en el trabajador y segundo que buena parte de las actividades o tareas están descentralizadas, es decir, las realiza el trabajador en la línea de trabajo. Chávez, Mota, Alvarado (1999).

METODOLOGÍA

Con el objetivo de identificar los diferentes componentes del capital humano, relacional y la tecnológica, así como sus principales dimensiones, según la revisión de la literatura previa se diseñaron una serie de dimensiones y variables de base para la elaboración y recolección de información primaria por medio del cuestionario en una escala Likert 1-5, esta técnica utiliza una categorización continua de las actitudes graduada según la intensidad que debe ser indicada por el sujeto que responde. El cuestionario fue diseñado en 4 apartados, en el primer apartado del cuestionario se solicitan datos generales del ejecutivo a encuestar, se solicita información sobre el Perfil de la Organización, en los apartados siguientes involucran preguntas referentes a el Capital Humano, Capital tecnológico y Capital Relacional. Para identificar la población de estudio se ha seguido el criterio de seleccionar empresas donde los activos intangibles constituyen los activos más importantes, ya que las competencias distintivas de este tipo de empresas se basan en el conocimiento de los trabajadores, los modos de trabajar y las relaciones que mantienen con diversos agentes vinculados al negocio, principalmente clientes.

El estudio se aplicó a empresas Industriales Manufactureras de la Región Sureste del Estado de Coahuila, las cuales constituyeron una población de 760 empresas. El tamaño de muestra calculado fue de 63 empresas. Se considera una investigación social cuantitativa se basa en el paradigma explicativo, utilizando información cuantificable para describir o explicar los fenómenos que estudia, dichos fenómenos son situaciones existentes en la realidad, las cuales han sido provocadas por el investigador. Asimismo, realizamos la recopilación de datos en un solo momento, siendo entonces una investigación transversal. Debido a las características de nuestro estudio, el cuestionario es la herramienta de recopilación de datos más apropiada pues permite obtener información específica para la investigación. Para el procesamiento de los datos se utilizó el software SPSS ver 16.0, y se realizaron los siguientes estadísticos de Distribución de frecuencias en el apartado de perfil ejecutivo y el perfil de la organización, así como un análisis Factorial exploratorio de el Capital Humano, Capital tecnológico y el Capital relacional.

RESULTADOS

Se realizaron las medias del Perfil ejecutivo y del Perfil de la Organización, donde se concluyó que con respecto al Perfil ejecutivo, la mayoría de los empleados entrevistados son Hombres, con una edad promedio de entre 25 y 45 años de edad, de escolaridad Licenciatura y con antigüedad en la empresa de entre 3 y 10 años. En cuanto al perfil organizacional, se encontró que la mayoría de las empresas sujetas de estudio son de origen extranjero con una antigüedad de entre 11 y 15 años, y tamaño de empresas medianas. En este trabajo de Investigación se presentan los resultados obtenidos del análisis factorial exploratorio para los efectos del capital humano, capital tecnológico y capital relacional, así como su

interpretación. En los resultados preliminares, nos indican falta de capacitación, tecnología adecuada, falta de experiencia en técnicas informáticas, recursos económicos para invertir en I+D, y poco conocimiento de los mercados internacionales.

Tabla 1: Perfil Del Ejecutivo

	MEDIA
Genero	
Edad	2.57
Escolaridad	1.81
Años experiencia	1.67
Antigüedad en la empresa	2.24

La mayoría de las personas entrevistadas son del genero masculino, con una edad promedio de 25 a 45 años, y con una escolaridad de licenciatura, y su antigüedad en la empresa con un mínimo de 3 y un máximo de 10 años, en cuanto a su posición dentro de la Empresa se consideran en el nivel medio alto, o sea desde Supervisores hasta Gerente, lo que indica que las empresas de la industriales manufactureras tiene personal joven, pero con pocos años dentro de la empresa.

Tabla 2: PERFIL DE LA ORGANIZACIÓN

	MEDIA
Giro de la empresa	1
Origen del capital	1.86
Antigüedad de la empresa	3.14
Tamaño dela empresa	3.48

El giro de las empresas encuestadas son del industrial, y por su ubicación en el norte de México, la mayoría son de origen de capital extranjero teniendo con una antigüedad de 11 a 15 años, la mayoría de ellas son filiales de las grandes trasnacionales que existen en la Región Sureste del Estado de Coahuila, como lo son General Motor y Chrysler, por lo que el tamaño de las empresas estudiadas es mediana.

Tabla 3: Extraction Method Principal Capital Humano

Communalities		
	Initial	Extraction
P13	1,000	,759
P14	1,000	,767
P15	1,000	,734
P16	1,000	,648
P17	1,000	,770
P18	1,000	,791
P19	1,000	,802
P20	1,000	,817
P21	1,000	,682
P22	1,000	,698
P23	1,000	,834
P24	1,000	,798
P25	1,000	,716
P26	1,000	,846

Este factor (capital humano) indica que los trabajadores se encuentran debidamente capacitados con lo que respecta a seguridad industrial y ecología y están suficientemente capacitados para realizar su trabajo con eficiencia y además son expertos en sus labores a pesar de que en la empresas de manera general no se promueve su capacitación y las experiencias tanto positivas como negativas son mínimamente consideradas por las empresas para aplicar mejoras en beneficio de sus empleados y de ella..

CONCLUSIONES

Resulta necesario desarrollar metodologías que permitan medir y evaluar el conocimiento que crea valor en las organizaciones, si podemos medir el capital intelectual, estaremos en condiciones de evaluar sus antecedentes y consecuentemente su relación con los resultados. Si las empresas desean sobresalir, deben hacer énfasis en el desarrollo y potenciación de sus activos intangibles, ya que existen evidencias de que las empresas que actualmente gozan de ventajas competitivas en el mercado son las que han llevado

adelante una eficiente gestión de este activo. De acuerdo con el análisis realizado en este trabajo de investigación, se hace necesario y urgente que las empresas sujetas de estudio desarrollen cambios profundos y a la brevedad en su estilo de gestión, de forma que puedan mejorar su contribución a la sociedad y además, a la formación de capital intelectual que los fortalezca económica y administrativamente.

Tabla 4: Extraction Method Principal Capital Tecnológico

Communalities		
	Initial	Extraction
P27	1,000	,753
P28	1,000	,871
P29	1,000	,840
P30	1,000	,833
P31	1,000	,794
P32	1,000	,755
P33	1,000	,805

Respecto al factor (capital tecnológico) las empresas han desarrollado su tecnología en fechas recientes (3 años) señalando que han hecho inversión en lo que respecta a investigación y desarrollo y a sus empleados los están involucrando en la gestión del conocimiento lo cual se comprueba con su alto grado de competencia en técnicas informáticas obteniendo como resultado un alto grado de innovación tecnológica.

Tabla 5: Extraction Method Principal Capital Relacional

Communalities		
	Initial	Extraction

MODELACIÓN DE LA ESTRUCTURA AGROINDUSTRIAL DE PALMA DE ACEITE DEL DEPARTAMENTO DEL MAGDALENA, COLOMBIA

Jelibeth Paola Racedo Gutiérrez, Universidad del Magdalena

Delimiro Alberto Visbal Cadavid, Universidad del Magdalena

RESUMEN

Este trabajo se realiza con el fin de mejorar la productividad y competitividad de cadenas de abastecimiento agroindustriales con significativa importancia en la economía del departamento del Magdalena. Dentro de la investigación se analiza la agroindustria de palma de aceite, describiendo las interacciones entre los diferentes eslabones para identificar puntos de mejora dentro de las operaciones logísticas realizadas por las empresas. El punto de vista definido por el investigador fue desde el quehacer de las empresas extractoras debido a que estos agentes gestionan una asociación vertical con plantaciones propias y terceros que hacen mucho más compleja la planeación a nivel estratégico, táctico y operativo. Inicialmente, se realiza el análisis de los componentes de las cadenas de suministro que se representan mediante un modelo conceptual. Una vez culminado lo anterior, se identifica que el proceso de transporte es uno de los que presenta mayor dificultad al momento de cumplir con las programaciones realizadas por las empresas y para ello, se realizaron modelos matemáticos que permitieran obtener una planeación a corto plazo que además incluyera la programación de recursos necesarios para incorporar los requerimientos de infraestructura o equipos necesarios para acoplar elementos de sostenibilidad o logística ambiental en las operaciones logísticas “tradicionales”.

PALABRAS CLAVES: Modelación, sector agroindustrial, palma de aceite.

ABSTRACT

The propose of this work is to help improve productivity and competitiveness of agroindustrial supply chains with significant importance in the economy of the department of Magdalena. The research analyzes the oil palm agribusiness, describing the interactions between the different links to identify areas for improvement of business logistics operations. The view was defined by the researcher from the work of mining companies because these agents manage a vertical partnership with third parties and own plantations that make more complex the strategic, tactical and operational planning. Initially we analyze the components of supply chains that are represented by a conceptual model, identifying the transport process as one that presents greater difficulty meeting time schedules by companies and for this, mathematical models were performed in order to obtain a short-term scheduling that includes the requirements of infrastructure or equipment needed to attach elements of sustainability or environmental logistics in traditional logistics operations.

LAS CAPACIDADES DE LA EMPRESA PARA PERSONALIZAR SU PRODUCCIÓN Y RECONFIGURARSE DE FORMA INTERNA: ¿INFLUENCIAN SU DESEMPEÑO OPERATIVO Y SU VENTAJA COMPETITIVA PERCIBIDOS?

Aurora Irma Máynez-Guaderrama, Universidad Autónoma de Ciudad Juárez
Judith Cavazos-Arroyo, Universidad Popular Autónoma del Estado de Puebla
Vianey Torres-Arguelles, Universidad Autónoma de Ciudad Juárez
María Teresa Escobedo-Portillo, Universidad Autónoma de Ciudad Juárez

RESUMEN

Contar con las mejores capacidades permite que las empresas elijan e implementen eficientemente las actividades necesarias para producir y entregar bienes o servicios a sus clientes. Sin embargo, si el propósito es exceder el desempeño de los competidores, es necesario que las empresas desplieguen sus capacidades de forma superior. Este trabajo se enfoca en analizar el impacto de las capacidades operacionales de personalización masiva y de reconfiguración -dimensiones competitivas reconocidas como estratégicas-, ejercen sobre el desempeño operativo percibido de una entidad productiva, y el efecto de éste sobre la ventaja competitiva percibida. El diseño de investigación fue de tipo cuantitativo y la información empírica se examinó en dos etapas: la primera a través de un Análisis Factorial Confirmatorio (AFC), y la segunda mediante un Sistema de Ecuaciones Estructurales basado en Covarianzas (CBSEM). Los resultados confirman que: 1) existe una relación directa, positiva y significativa entre la capacidad de personalización masiva y el desempeño operativo percibido, 2) la capacidad de reconfiguración afecta positiva, directa y significativamente al desempeño operativo percibido, y 3) el desempeño operativo percibido influye de forma directa, positiva y significativa a la ventaja competitiva percibida.

PALABRAS CLAVE: capacidad de personalización masiva, capacidad de reconfiguración, desempeño operativo percibido, ventaja competitiva percibida, modelo de ecuaciones estructurales.

THE COMPANY'S CAPABILITIES TO CUSTOMIZE PRODUCTION AND RECONFIGURED INTERNALLY: DO THEY INFLUENCE PERCEIVED OPERATING PERFORMANCE AND COMPETITIVE ADVANTAGE?

ABSTRACT

Having the best capacities allows companies to efficiently choose and implement the necessary activities to produce and deliver goods and services to their clients. Nevertheless, if the purpose is to exceed competitor's performance, it's necessary for companies to deploy their capabilities in a superior manner. This work focuses on analyzing the impact of operational capacities of massive personalization and reconfiguration- competitive dimensions recognized as strategic- exert upon operative development perceived from a productive entity, and the effect of this on perceived competitive advantage. Research design was quantitative and the empirical information was examined in two stages: the first through a confirmatory factorial analysis (CFA) and the second through a system of structural equations based on covariance (SSEBC). Results confirm that: 1) There is a direct, positive and significative relationship

between the capacity of massive personalization and perceived operative performance, 2) the reconfiguration capacity affects positively, directly and significantly perceived operative development, and 3) perceived operative development influences perceived competitive advantage in a direct, positive and significative manner.

KEYWORDS: Mass Customization Capability, Reconfiguration Capability, Perceived Operational Performance, Perceived Competitive Advantage, Structural Equation Model.

INTRODUCCIÓN

La era post-industrial se ha caracterizado por una competencia global creciente, incrementos en la diversidad de los mercados, cambios en los requerimientos de los clientes, en la manufactura avanzada y en las tecnologías de la información; en el centro de dichos cambios se localizan los cada vez mayores, requerimientos individualizados de los clientes (Tu, Vonderembse, & Ragu-Nathan, 2001). Dado que los ambientes turbulentos crean discrepancias entre las capacidades operacionales existentes y las ideales, surge la necesidad de que la empresa reconfigure sus procesos productivos, a la par que mantiene la calidad de los artículos y la productividad del sistema (Pavlou & El Sawy, 2011; Zhang, Vonderembse, & Lim, 2003). Con base en tales antecedentes este trabajo se enfoca en analizar el impacto que las capacidades organizacionales de personalización masiva y de reconfiguración, -dimensiones competitivas reconocidas como estratégicas (Amit & Schoemaker, 1993; Silveira, Borenstein, & Fogliatto, 2001; Tu et al., 2001; Zhang et al., 2003)- tienen sobre el desempeño operativo percibido de una entidad productiva, y el efecto de éste sobre la ventaja competitiva percibida.

REVISIÓN DE LITERATURA

Capacidades

En esencia, una capacidad organizacional es una rutina o un grupo de rutinas que interactúan (Grant, 1991). Son procesos tangibles o intangibles basados en la información, específicos para cada empresa (Amit & Schoemaker, 1993), y se desarrollan con el paso del tiempo, conforme se dan interacciones complejas entre los recursos de la firma. Para algunos (Day, 1994): a) se trata de dotaciones complejas de habilidades y conocimiento acumulado; b) se ejercen a través de procesos organizacionales; c) facultan a las empresas para coordinar actividades y utilizar sus activos; y d) se manifiestan en actividades típicas del negocio como el desarrollo de nuevos productos, el llenado o requisitado de órdenes, y la entrega de artículos. En resumen, las capacidades son procesos dinámicos, específicos a la empresa y dependientes de su trayectoria; no se encuentran disponibles en el mercado, son difíciles de copiar y se acumulan como resultado de un proceso de aprendizaje continuo (Dávila, 2010).

Capacidad De Personalización Masiva

La competencia global ha estimulado que se incorpore la orientación de servicio al cliente dentro del contexto de la manufactura, forzando a los productores tanto a mantener bajos sus precios, como a producir bienes y servicios personalizados (Tu et al., 2001). Este concepto surgió a finales de los años ochenta, y se le considera como una alternativa de diferenciación para las empresas que participan en mercados altamente competitivos y segmentados (Silveira et al., 2001). La capacidad de personalización masiva se describe como un proceso a través del cual se aplican tecnología y métodos administrativos para producir artículos variados y personalizados a través de una respuesta rápida y flexible (Kotha, 1995). Otros (Silveira et al., 2001), indican que se refiere a la habilidad de producir bienes o servicios individualizados, a través de procesos flexibles, en altos volúmenes y a costos razonablemente bajos. La

personalización masiva se basa en la habilidad para simultáneamente dar respuesta a los clientes, lograr eficiencia de costos, y alcanzar altos volúmenes productivos (Tu et al., 2001).

Capacidad De Reconfiguración

Para Flynn, Wu y Melnyk (2010), la capacidad de reconfiguración se refiere a las habilidades, procesos y rutinas diferenciadas para llevar a cabo las transformaciones necesarias, a fin de restablecer el ajuste o reconfiguración entre la estrategia operativa y el ambiente del mercado. Indican que a consecuencia de lo anterior, se modifica la configuración de los recursos existentes y se generan nuevas estructuras, buscando la coincidencia con los cambios del entorno. Por su parte Teece et al. (1997), comentan que en ambientes rápidamente cambiantes resulta obvio el valor que se otorga a la habilidad organizacional de identificar las necesidades y reconfigurar los activos de la empresa. En la misma vertiente Swink y Hegarty (1998) señalan que la agilidad es la habilidad de moverse de un estado productivo a otro, con muy pocos costos o penalizaciones, y dicha habilidad involucra la capacidad de producir –con el mismo nivel de eficiencia– amplias variedades de productos individuales y volúmenes agregados.

La reconfiguración ha sido conectada con la apropiación, la oportunidad y la eficiencia, ya que los recursos existentes modifican su configuración en nuevas competencias operativas (Galunic & Rodan, 1998; Kogut & Zander, 1992; Zott, 2003). No obstante que en la literatura se manejan diferentes términos para esta capacidad –reconfiguración, flexibilidad en la mezcla, y agilidad, por citar algunos– éstos convergen alrededor de elementos comunes: la habilidad de la organización para cambiar –en respuesta a los cambios del entorno– su configuración de recursos y producir artículos variados, sin modificar significativamente los costos, y manteniendo un nivel similar de desempeño.

Capacidades, Desempeño Operativo Y Ventaja Competitiva

Los recursos se utilizan como insumos para diseñar e implementar estrategias competitivas (Molloy, Chadwick, Ployhart, & Golden, 2011), y en la actividad productiva se requiere que sus diferentes grupos cooperen y se coordinen (Grant, 1991). Los recursos en lo individual no pueden ser fuente de ventaja competitiva (Porter, 1991; Ray, Barney, & Muhanna, 2004), y son pocos los que por sí mismos pueden considerarse productivos (Grant, 1991). Además, el hecho de que una o varias firmas cuenten con recursos similares no garantiza que éstos se utilicen y combinen de forma similar: existe una heterogeneidad de estrategias empresariales derivadas de las distintas combinaciones de recursos y capacidades (Molloy et al., 2011). Por ello, para estar en capacidad de evaluar el potencial de creación de valor de los recursos, es necesario analizar la aportación creada por las estrategias empresariales implementadas con base precisamente en los mismos (Barney & Mackey, 2005).

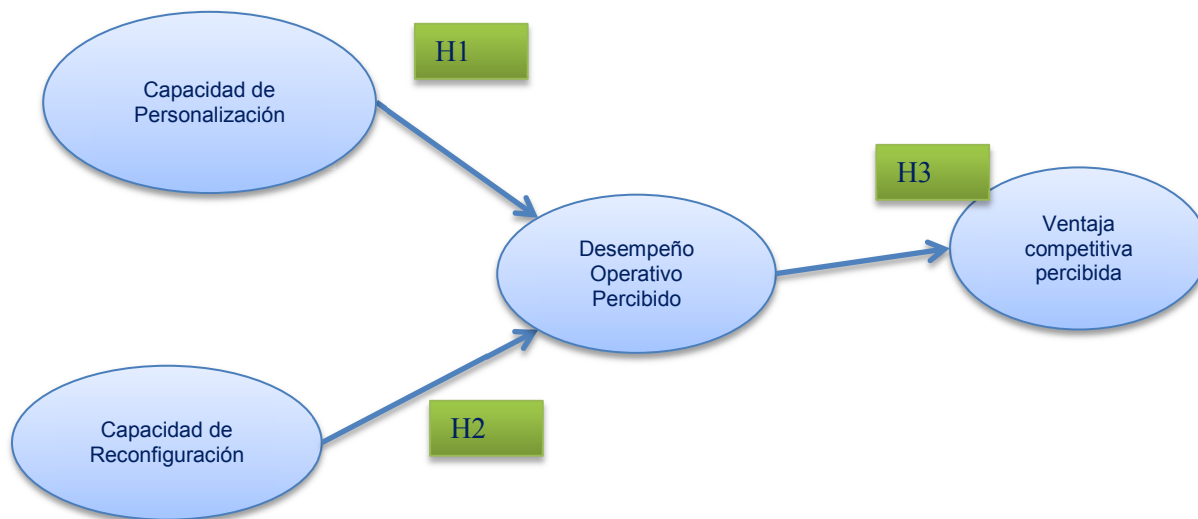

Con el paso del tiempo, y mediante las decisiones gerenciales deliberadas, las capacidades organizacionales se integran como parte del tejido de la empresa (Grewal & Slotegraaf, 2007; Wu, Melnyk, & Flynn, 2010); el conocimiento acumulado en la organización penetra y se combina en los conglomerados de rutinas que conforman el material genético de la firma (Ethiraj, Kale, Krishnan, & Singh, 2005). Al acumular conocimientos, actualizar las competencias a partir de los conocimientos disponibles, y desplegar dichas competencias a través de estrategias competitivas, las empresas obtienen ventaja competitiva de sus recursos (Ndofor, Sirmon, & He, 2011). Las capacidades organizacionales pueden contribuir a la ventaja competitiva, siempre y cuando sean inmunes a las amenazas de imitación, sustitución, disipación y apropiación presentes en el mercado; en la medida en que éstas sean capaces de lo anterior, serán fuentes de ventaja competitiva perdurable (Collis, 1994; Nath, Nachiappan, & Ramanathan, 2010). El modelo básico conceptual que guía la investigación se presenta en la Figura 1. Para este artículo se plantearon tres hipótesis:

H1: La capacidad de personalización es un predictor del desempeño operativo percibido.

H2: La capacidad de reconfiguración es un predictor del desempeño operativo percibido.

H3: El desempeño operativo percibido es un predictor de la ventaja competitiva percibida.

Figura 1: Modelo conceptual propuesto

En esta figura se muestra el modelo conceptual que guía la investigación mostrando las relaciones a probar entre los constructos revisados en la literatura. Las hipótesis son: H1: La capacidad de personalización es un predictor del desempeño operativo percibido, H2: La capacidad de reconfiguración es un predictor del desempeño operativo percibido y H3: El desempeño operativo percibido es un predictor de la ventaja competitiva percibida. Fuente: Elaboración propia.

MÉTODO

Se diseñó una investigación cuantitativa, de naturaleza empírica y de sección transversal. Para contrastar las hipótesis se utilizó un sistema de ecuaciones estructurales basado en covarianzas. El estudio se desarrolló en empresas de las industrias automotriz, cementera, médica, electrónica, y de telecomunicaciones, ubicadas en Ciudad Juárez, Chihuahua, y en la ciudad de Chihuahua, Chihuahua, México. El muestreo fue no probabilístico selectivo, y el perfil de sujetos incluyó gerentes, supervisores, analistas, ingenieros y técnicos. La técnica de recolección de información fue la encuesta, utilizando un cuestionario auto-administrado individual, aplicado durante mayo y junio del 2012. Se recibieron 264 cuestionarios, de los cuales 12 fueron desechados. El total utilizable fue 252 instrumentos. El instrumento incluyó 17 ítems con un formato tipo Likert (1932), con cinco puntos de asignación de respuesta.

Para el análisis estadístico de los datos se siguió el procedimiento de dos etapas recomendado por Anderson y Gerbing (1988): en la primera fase, a fin de evaluar las propiedades psicométricas del modelo de medida, se llevó a cabo un Análisis Factorial Confirmatorio (AFC) de primer orden, y en la segunda, se agregaron las relaciones estructurales propuestas entre las variables latentes, analizándose mediante un Sistema de Ecuaciones Estructurales basado en covarianzas –CBSEM-. Tanto el AFC como el CBSEM se estimaron con apoyo del software estadístico EQS 6.1., utilizándose el Método de Máxima Verosimilitud (ML) con la corrección estadística propuesta por Satorra y Bentler (1994) -estadísticos robustos-, ya que la condición de normalidad multivariante de los datos no fue satisfecha (Coeficiente normalizado de Mardia estimado = 34.0157).

ANÁLISIS DE RESULTADOS

Los resultados del AFC se presentan en las Tablas 1 y 2. Los distintos estadísticos sugieren que el modelo de medida tiene un buen ajuste, ya que los indicadores cumplen con los criterios de corte convencionales, siendo la excepción el estadístico χ^2 . Con respecto a dicho estadístico la literatura indica la dificultad implícita de utilizarlo como indicador único de la bondad de ajuste de un modelo SEM, ya que conforme crece el tamaño de muestra o el número de variables observables, sus valores resultantes se consideran de menor significancia (Hair Jr., Black, Babin, Anderson, & Tatham, 2006), e incluso se afirma que conforme el tamaño de muestra se incrementa, las probabilidades de rechazar un modelo también aumentan –sin importar si el modelo es falso o verdadero- (Bagozzi & Yi, 1988).

Tabla 1: Validez convergente e Indicadores de bondad de ajuste del modelo (AFC).

Variable latente	Ítem	Validez convergente					
		\square	IFC	AVE	\square estandarizada	Valor t (estad. robs)	\square s Promedio
Capacidad de personalización	Identificar necesidad del cliente	0.852	0.868	0.627	0.810**	13.307	0.783
	Producción de acuerdo a los deseos del cliente				0.902***	13.107	
	Producción a gran escala				0.838***	13.287	
Capacidad de reconfiguración	Ampliar variedad sin incrementar costos				0.580***	8.284	
	Producción sin grandes cambios	0.862	0.865	0.562	0.709***	10.003	0.748
	Construir en la misma planta y tiempo				0.815***	12.194	
	Manufacturar de forma productiva estable				0.775***	11.188	
	Cambiar combinación productos				0.750***	11.022	
Desempeño operativo percibido	Cambiar rápidamente la producción				0.692***	8.682	
	Cumplimiento especificaciones de calidad	0.864	0.867	0.568	0.670***	8.866	0.751
	Desempeño tiempo entrega				0.687***	10.914	
	Flexibilidad cambio mezcla				0.783***	13.960	
	Flexibilidad cambio volumen				0.835***	15.157	
Ventaja competitiva	Velocidad producción nuevos artículos				0.780***	14.665	
	Crecimiento de las ventas	0.848	0.816	0.597	0.798***	12.863	0.771
	Crecimiento e la empresa				0.714***	10.233	
	Productividad laboral				0.802***	13.460	
Indicadores de bondad de ajuste		BBNFI	BBNNFI	CFI	IFI	MFI	RMSEA
S- $\square\square\square$ (113gl) = 181.5534		0.887	0.944	0.954	0.954	0.873	0.049
p=0.00005							

*p<0.05, **p<0.01, ***p<0.001 En esta tabla se presenta la validez convergente y los indicadores de bondad de ajuste, los cuales muestran que en lo general existe un buen ajuste ya que los indicadores cumplen con los criterios convencionales. Fuente: Elaboración propia.

Tabla 2: Validez discriminante del modelo.

Constructo		Capacidad de personalización	Capacidad de reconfiguración	Desempeño operativo percibido	Ventaja competitiva percibida
Capacidad de personalización	de	0.627	[0.372-0.620]	[0.431-0.667]	[0.171-0.499]
Capacidad de reconfiguración	de	0.246	0.562	[0.452-0.688]	[0.302-0.570]
Desem. operat. percibido		0.301	0.325	0.568	[0.528-0.772]
Ventaja comp. perc.		0.112	0.190	0.423	0.597

En esta tabla se muestran los valores de los AVE en una de las diagonales, asimismo los intervalos de confianza y, debajo de la diagonal los cuadrados de los coeficientes de correlación entre los factores. Fuente: Elaboración propia.

En lo que a fiabilidad y validez convergente de los indicadores se refiere, los resultados del AFC indican que: 1) todas las relaciones de los ítems con sus factores hipotéticos son significativas, 2) la magnitud de sus cargas estandarizadas son mayores que el valor crítico de 0.50 (Bagozzi & Yi, 1988) y 3) el promedio de las cargas estandarizadas de cada factor fue superior a 0.70 (Hair Jr., Anderson, Tatham, & Black, 1999). De acuerdo al análisis realizado, todos los constructos superan el punto de corte. Con respecto a los índices de consistencia interna, las variables latentes muestran indicadores aceptables, ya que prácticamente todas superan los puntos de corte sugeridos -0.70 para el Alfa de Cronbach, y 0.60 en el caso del índice de fiabilidad compuesta (IFC) (Bagozzi & Yi, 1988).

Con respecto a la validez discriminante, se llevaron a cabo tres pruebas: test de la diferencia entre χ^2 , test del intervalo de confianza, y test de la varianza extraída. Los resultados de dichas pruebas indican la existencia de validez discriminante, ya que: 1) el test de diferencias de χ^2 señala que el modelo original planteado es mejor que el modelo alternativo; 2) ninguno de los intervalos de confianza, para $\pm 2 \lambda$, comprenden la unidad, y 3) los valores AVE de las variables latentes superan a los cuadrados de los coeficientes de correlación entre factores. A partir de lo anterior puede afirmarse que existe validez discriminante. Finalmente, y de acuerdo a los elementos disponibles para la validación conjunta de los resultados, es posible confirmar la fiabilidad, la validez convergente y la validez discriminante del modelo global de medida. Una vez establecida la fiabilidad y validez del modelo de medida se procedió a realizar la contrastación de las hipótesis a través del SEM correspondiente, empleando también estadísticos robustos (Satorra & Bentler, 1994). Los resultados se presentan, de forma sintética, en la Tabla 3 a continuación.

Tabla 3: Resultados del SEM para la contrastación de hipótesis

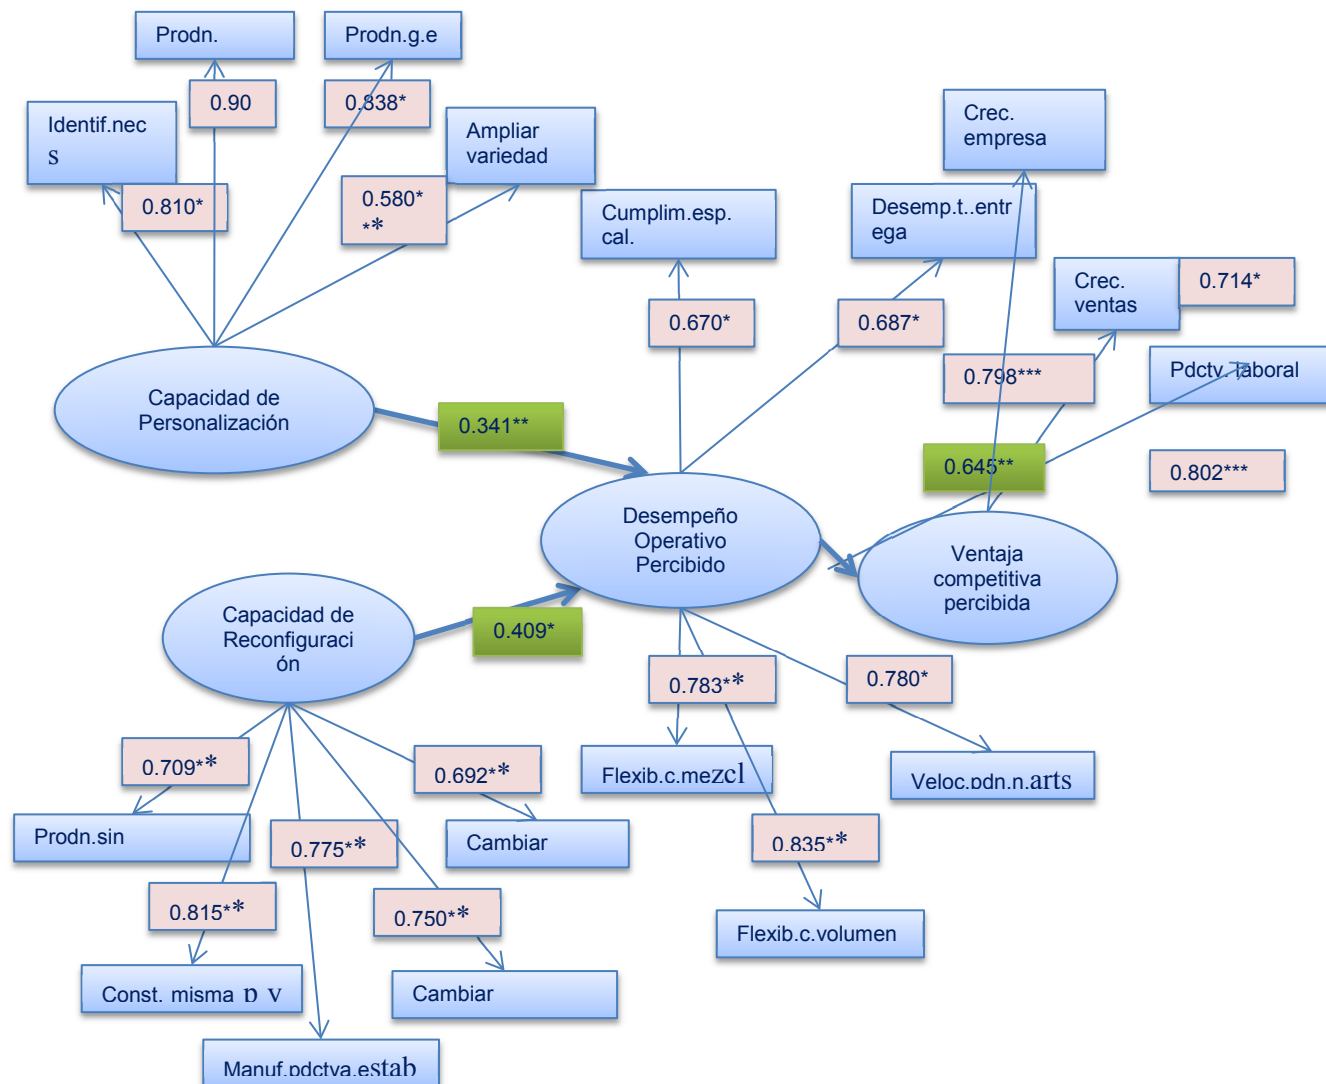

Hipótesis	Relación estructural propuesta			λ (estandarizada)	Valor t (robusto)	Resultado
H ₁	Capacidad de personalización → Desempeño Operativo Percibido			0.341***	4.379	No rechazada
H ₂	Capacidad de reconfiguración → Desempeño Operativo Percibido			0.409***	4.288	No rechazada
H ₃	Desempeño Operativo Percibido → Ventaja Competitiva Percibida			0.645***	7.928	No rechazada
Indicadores de bondad de ajuste:	BBNFI	BBNNFI	CFI	IFI	MFI	RMSEA
S-B χ^2 (115 gl) = 178.2462 p=0.00014	0.892	0.951	0.958	0.959	0.882	0.047

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$ Esta tabla muestra que no fue posible rechazar las tres hipótesis a probar, es decir todas las relaciones planteadas en el modelo estructural fueron significativas con un nivel $p < 0.001$. Prácticamente todos los indicadores de bondad de ajuste BBNFI, BBNNFI, CFI, IFI y MFI cubren el punto de corte del 0.90, mientras que los residuales (RMSEA) son pequeños, por lo que puede concluirse que la bondad de ajuste del modelo es adecuada. Fuente: Elaboración propia.

Como puede apreciarse, los estadísticos de bondad de ajuste del modelo estructural muestran un buen ajuste global: BBNFI=0.892; BBNNFI=0.951; CFI=0.958; IFI=0.959; MFI= 0.882 y RMSEA=0.047. Las tres hipótesis planteadas resultaron significativas a un nivel $p < 0.001$.

En la Figura 2 se presenta el modelo final contrastado, en el cual se incluyen los ítems de cada factor y sus respectivas cargas estandarizadas. Asimismo, se muestra gráficamente el valor de los *paths* estructurales estandarizados de las relaciones planteadas.

Figura 2: Modelo contrastado

En esta figura describe el modelo contrastado. Los estadísticos de bondad de ajuste del modelo estructural muestran un buen ajuste global a través del BBNFI, BBNNFI, CFI, IFI, MFI y RMSEA. Las tres hipótesis planteadas resultaron significativas a un nivel de $p < 0.001$. Fuente: Elaboración propia.

De acuerdo a la figura anterior, los resultados muestran que las tres relaciones planteadas entre los constructos del modelo son estadísticamente significativas. Tanto la *Capacidad de personalización* como la *Capacidad de Reconfiguración* influyen directa y significativamente sobre la *Desempeño Operativo Percibido*. De forma comparativa, la *Capacidad de Reconfiguración* ejerce una influencia ligeramente superior que la *Capacidad de Personalización*. En el caso de la relación entre la *Capacidad de Personalización* y el *Desempeño Operativo Percibido*, los resultados muestran una influencia directa, positiva y significativa con un valor *path* 0.341 (valor $t=4.379$) nivel $p < 0.001$; para la relación entre la *Capacidad de Reconfiguración* y el *Desempeño Operativo Percibido*, los valores resultantes son similares e indican un valor *path* 0.409 (valor $t=4.288$) con un nivel $p < 0.001$. Por su parte el *Desempeño*

Operativo Percibido influencia directa, positiva y significativamente a la *Ventaja Competitiva Percibida*, mostrando un valor *path* de 0.645 ($t=7.928$), también con un nivel $p<0.001$.

DISCUSIÓN Y CONCLUSIONES

No obstante que los académicos de la administración reconocen la importancia de las capacidades manufactureras para lograr ventajas competitivas, es raro que en sus trabajos se investiguen las capacidades a nivel de la planta, que es precisamente donde se utilizan (Peng et al., 2008). También indican que pocos estudios en la gestión de las operaciones conceptualizan y miden las capacidades de manufactura, y en consecuencia el grupo subyacente de rutinas que deriva en éstas, se encuentra subdesarrollado. La manufactura puede contribuir en el logro de la competitividad, creando una ventaja cuyas bases se localicen en hacer mejor las cosas, en tiempo y de forma correcta, rápida, económica y flexible (Slack, 1991); lo anterior tiene un claro impacto en las estrategias de operación en general, y es un buen punto de partida en la consideración de las prioridades competitivas. Además, la aplicación de la estrategia en la manufactura contribuye tanto al desempeño operacional (Meredith & Vineyard, 1993) como a la estrategia empresarial (Brown & Blackmond, 2005).

Con base en los resultados obtenidos en este trabajo, fue posible confirmar las relaciones teóricas propuestas. La investigación empírica desarrollada evidencia que tanto la capacidad de personalización como la de reconfiguración, inciden sobre el desempeño de las operaciones de la empresa y que mediadas por éste influyen a la ventaja competitiva percibida de la firma. Los recursos y capacidades se despliegan en las organizaciones a través de procesos. En el caso de la personalización masiva, se alcanza a través de la habilidad para traducir necesidades del cliente en productos y servicios diferenciados, a través de procesos de operación y tecnologías flexibles bajo el reto de mantener los costos controlados. El grado de libertad de los clientes en la especificación de las características del producto, afecta en gran medida la configuración de los suministros, la producción, la red de distribución, la arquitectura del producto y el desempeño de la organización (Salvador, Rungtusanatham, & Forza, 2004). Por otro lado, en lo relativo a la capacidad de reconfiguración se requiere de flexibilización y agilidad para reconfigurar capacidades, competencias y procesos operativos existentes, a fin de lograr un alto desempeño y con ello fortalecer la posición competitiva de la firma. En este sentido, las organizaciones tienen que estar dispuestas a renunciar a lo antiguo para permitir que la reconfiguración fortalezca el enfoque estratégico, tanto en la gestión como en el desarrollo de las relaciones de la cadena de suministro.

Resulta imposible definir una capacidad sin hacer referencia al desempeño, ya que ésta faculta para desarrollar una actividad de forma repetida y confiable; por tanto, un atributo particularmente importante en ella, es precisamente su grado de confiabilidad y replicabilidad, ya que de otra forma la empresa no podría afirmar que puede hacer o llevar a cabo una tarea determinada (Helfat & Winter, 2011). La comprensión de las relaciones existentes entre los recursos y las acciones, fortalece el entendimiento del porqué algunas empresas logran altos desempeños (Ndofo et al., 2011). Los resultados de este trabajo confirman que las capacidades de personalización masiva y reconfiguración impactan la variabilidad del desempeño operativo, y es precisamente por ese motivo que deben desarrollarse en los procesos organizacionales de la industria maquiladora de exportación. Sin embargo, si el propósito es exceder el desempeño de los competidores, es necesario que dichas capacidades se desplieguen de forma superior (Day, 1994) a fin de generar una ventaja competitiva. En este trabajo se analizó el impacto de dos capacidades operacionales reconocidas como estratégicas, sobre el desempeño operativo y la ventaja competitiva percibidos. Sin embargo, estudios futuros pueden entrelazar el desempeño de estas capacidades con otras, buscando comprender el impacto integral de éstas en conjunto sobre el desempeño, con el objeto de crear las barreras necesarias para mantener la ventaja competitiva de la organización.

ANALISIS COMPARATIVO DE LA PRODUCTIVIDAD Y RENTABILIDAD DE LAS ZONAS INDUSTRIALES FRANCA Y MAMONAL, COMO RESULTADO DE LA CERTIFICACION ISO: 9001 EN COLOMBIA

José Morelos Gómez, Universidad de Cartagena
Tomás José Fontalvo Herrera, Universidad de Cartagena
Juan Carlos Vergara Schmalbach, Universidad de Cartagena

RESUMEN

El presente artículo de investigación muestra los resultados obtenidos en el desarrollo del proyecto del análisis comparativo de la productividad y rentabilidad de las zonas industriales Franca y Mamonal como resultado de la certificación ISO: 9001 en Colombia. En la metodología utilizada se realizó una descripción detallada de los sistemas de gestión de calidad, indicadores de productividad y financieros al grupo de 25 empresas certificadas en calidad para los periodos 2006 y 2010 de los sectores industriales objeto de estudio. Seguidamente, se utilizó la técnica de análisis multivariante de datos, aplicando el método de clasificación y segmentación a través de análisis discriminante, que permitió explicar la pertenencia y discriminación de cada grupo de indicadores de productividad y financieros, que mejor discriminan en la funciones objetivos, obteniendo como resultado en el análisis comparativo de zonas Franca y Mamonal, que las empresas certificadas en calidad, inciden positivamente en el índices productividad y rentabilidad, razón utilidad bruta/valor agregado (IP1), margen bruto (MB) y Margen operacional (MO), respectivamente, en las empresas de las zonas objeto de estudio.

PALABRAS CLAVE: Productividad, Rentabilidad, Certificación, Análisis Discriminante,

ABSTRACT

This research paper presents the results of the project in the development of the comparative analysis of the productivity and profitability of industrial zones Franca and Mamonal as a result of the ISO: 9001 in Colombia. The methodology used was a detailed description of the quality management systems, productivity and financial indicators of the group of 25 companies certified in quality for the periods 2006 and 2010 industrial sectors studied. Next, we used multivariate analysis technique of data, using the method of classification and segmentation by discriminant analysis, which allowed discrimination explain membership and each group productivity and financial indicators that best discriminate on objective functions, resulting in the comparative analysis of Franca and Mamonal areas, that certified companies in quality, positive impact on the productivity and profitability ratios, value added/ gross profit ratio (IP1), gross margin (MB) and operating margin (OM), respectively in the companies studied areas.

KEY WORDS: Productivity, Profit, Certification, Discriminant Analysis.

INTRODUCCIÓN

Dada la importancia de la productividad para el incremento de la eficiencia y eficacia en las empresas, en el presente artículo de investigación se analiza la productividad y rentabilidad de las zonas Franca y Mamonal como resultado de la certificación en ISO: 9001.

Así mismo, se presentan la definición y conceptualización de los sistemas de gestión de calidad, las razones financieras y de productividad, los criterios para evaluar la incidencia de los sistemas de gestión de calidad, y la incidencia de éstos, en la productividad y el rendimiento financiero de las empresas de sector Industrial. Para evaluar el impacto de la certificación en calidad en los indicadores de productividad y la utilidad financiera, se desarrolló una metodología para el análisis de los datos, tomando para éste estudio aquellas empresas certificadas que presentaron sus estados financieros en la Superintendencia de Sociedades, para los periodos 2006 y 2010. Para la evaluación de los índices de productividad y financieros de las empresas del sector Industrial, se utilizó la técnica Multivariada del Análisis Discriminante (MDA). Finalmente, se presentan los resultados de la evaluación del impacto de la certificación en calidad y su incidencia en la productividad y utilidad financiera, y la verificación de supuestos a partir de las pruebas Saphiro & wilk y de Box, para la comprobación de normalidad e igualdad de matrices varianza-covarianza respectivamente, de las variables objeto de estudio.

REVISION LITERARIA

Análisis Económico Cartagena.

Una de las principales actividades económicas de Cartagena es la industria, la cual aporta aproximadamente 38% de la producción total de la ciudad y genera un 10% del total de puestos de trabajo (Arenas, 2009). La Encuesta Anual Manufacturera 2009 realizada por el DANE (2011), muestra que la ciudad generó 46.07% de la producción industrial, 40.54% del valor agregado y 23.35% del empleo que generó el sector industrial del Caribe colombiano, cifras que reflejan la relevancia de este sector a nivel regional. A nivel nacional, Cartagena es la cuarta ciudad de mayor producción industrial de Colombia, aportando el 6.7% de lo producido por la industria del país, en 2010 (Departamento Administrativo Nacional de Estadísticas, 2011). Su industria se caracteriza por ser altamente exportadora, especializada en los sectores petroquímico, químico y plástico; situación que ha llevado a que grandes multinacionales tengan su centro de producción y distribución en la ciudad, convirtiéndola en el principal fabricante de sustancias químicas del país, además de ser sede de la segunda refinería de petróleo más importante de Colombia después del Complejo Petrolero de Barrancabermeja (Arenas, 2009). Gran parte de la producción industrial de Cartagena se concentra en el complejo industrial de Mamonal, reconocida como la zona de desarrollo industrial y manufacturero más importante del Caribe colombiano (Pérez, 2005).

Análisis Económico Barranquilla.

La Zona Franca (área aduanera con régimen tributario especial) de Barranquilla constituye uno de las áreas geográficas de mayor desarrollo para la fabricación de bienes y prestación de servicios de la región, para el periodo enero-junio de 2010 movilizó cerca de 467.392 toneladas, reduciendo el valor total en un 5%, en donde el Territorio Aduanero Nacional (Colombia) sigue representando la mayoría de la mercancía total movilizada, con una participación del 63%. A pesar de lo anterior, Colombia muestra una disminución del 7% respecto al mismo periodo del 2009 (Cámara Comercio Barranquilla, 2010). Para este mismo año, Las exportaciones no tradicionales del departamento del Atlántico, decrecieron 3,6% y las importaciones se incrementaron 9,6%, esto debido principalmente a las ventas y compras externas del sector industrial, siendo Estados Unidos el principal país de exportación y de origen de las importaciones.

Análisis Productividad

De acuerdo con Berechet, Huerta, & San Miguel (2006), del Centro para la Competitividad de Navarra, señalan que el desarrollo económico de una organización o nación, y el bienestar de los individuos que la componen depende en gran medida de la capacidad de la misma, para incrementar su productividad, además de ser éste, el concepto más apropiado para la definición de competitividad.

En este sentido, la productividad permite fijar una relación entre la cantidad de bienes y servicios producidos y la cantidad de recursos utilizados (Instituto Nacional de Estadística, Geografía e Informática, 2003), transformándose en un factor crucial para la determinación del eficiente uso de los recursos

Indicadores Financieros.

Las razones o indicadores financieros son el producto de establecer resultados numéricos basados en relacionar dos cifras o cuentas bien sea del Balance General y/o del Estado de Pérdidas y Ganancias. Los resultados así obtenidos por si solos no tienen mayor significado; sólo cuando los relacionamos unos con otros y los comparamos con los de años anteriores o con los de empresas del mismo sector y a su vez el analista se preocupa por conocer a fondo la operación de la compañía, podemos obtener resultados más significativos y sacar conclusiones sobre la real situación financiera de una empresa, que en nuestro objeto de estudio son las empresas de la Zona industrial de Mamonal, (Vásquez, Guerra & Ahmed (2008). Certificación ISO 9000, la productividad y el desempeño financiero en las organizaciones

Evidencia empírica sugiere que las empresas pueden obtener beneficios internos como mejoramientos en la calidad y en la productividad de sus procesos, además de lograr un mejor desempeño financiero, mantener o ampliar su sector de mercado y en general incrementar su valor, gracias a la implementación de iniciativas de gestión de calidad como Total Quality Management (TQM), el Just-in-time Systems (JIT) o las normas de la serie ISO 9000 de sistemas de gestión de calidad (Corbett, Kirsch, & Montes-Sancho, 2005; Casadesús, Giménez, & Heras, 2001; Naveh & Marcus, 2004). Así mismo, Elmuti and Kathawala (1997) refiriéndose específicamente a la consecución de la certificación en ISO 9001 "Sistemas de la calidad. Un modelo de garantía de calidad para el diseño, el desarrollo, la producción, la instalación y los servicios"; que junto con la ISO 9002 son las únicas que prevén certificación del conjunto de normas de la serie ISO 9000 (Van Den Berghe, 1998); afirman que la aplicación de esta incrementa la productividad gracias al mejoramiento de la moral de los empleados.

METODOLOGÍA

Este artículo de investigación se enmarca dentro del tipo de investigación descriptivo y cuantitativo, basada en la técnica estadística de Análisis Discriminante Multivariado (DMA), para comparar en los dos periodos de análisis (años 2006 y 2010), la incidencia de la productividad en la rentabilidad para cada una de las zonas (Franca y Mamonal) de evaluación en Colombia. Para la realización de esta investigación, se utilizaron los indicadores de productividad y utilidad financiera tanto para la zona Franca, como para la zona Mamonal presentados a continuación, para hallar la estimación de los años evaluados, como se muestra en la tabla 1.

Tabla 1: Variables e indicadores utilizados para realizar el análisis de discriminante.

Variable	Indicadores Financieros y de Productividad
MB	Margen bruto
MO	Margen operacional
MN	Margen neto
IP1	Razón utilidad bruta/valor agregado
IP2	Razón utilidad operacional/valor agregado
IP3	Razón utilidad neta/valor agregado
IP4	Productividad del capital
IP5	Razón utilidad operativa/capital de trabajo
IP6	Razón utilidad neta/capital de trabajo

Esta tabla muestra la relación de variables e indicadores para realizar la evaluación de los indicadores de productividad y su incidencia en la utilidad financiera de las empresas certificadas en Zona Franca y Mamonal en Colombia. Fuente: Autores.

RESULTADOS

Para el análisis comparativo de la productividad y rentabilidad en las zonas industriales de análisis, se utilizaron todas las variables seleccionadas, margen bruto (MB), margen operacional (MO), margen neto (MN), razón utilidad bruta/valor agregado (IP1), razón utilidad operacional/valor agregado (IP2), razón utilidad neta/valor agregado (IP3), productividad del capital (IP4), razón utilidad operativa/capital de trabajo (IP5) y razón utilidad neta/capital de trabajo (IP6), siendo las variables que mejor discriminan los indicadores de productividad y financieros de las empresas certificadas de zona Franca y Mamonal, el MB, MO, MN, IP1, IP2, IP3, IP4, IP5 e IP6, constituyendo éstas funciones discriminantes, el resultado final del modelo que se muestra en las tablas 2 y 3 y las ecuaciones (1), (2) y (3), (4) de zonas Franca y Mamonal, respectivamente, los cuales muestran los indicadores que discriminan y la variabilidad del modelo.

Tabla 2: Coeficiente de la función de clasificación zona Franca- Barranquilla

	Año	
	2006	2010
MB	33,316	6,436
MO	134,080	7,241
MN	-228,332	1,171
IP1	-23,179	3,338
IP2	-25,087	157,916
IP3	189,938	-101,288
IP4	11,513	12,753
IP5	-116,673	-145,050
IP6	51,380	73,478
(Constante)	-9,300	-9,792

Esta tabla muestra los coeficientes de clasificación para el año 2006 y 2010.

Tabla 3: Coeficiente de la función de clasificación zona Mamonal-Cartagena

	Año	
	2006	2010
MB	79,279	70,541
MO	-45,868	-45,370
MN	9,478	-19,288
IP1	-41,162	-33,508
IP2	-24,235	-10,102
IP3	-14,755	-2,878
IP4	4,732	4,085
IP5	53,231	36,641
IP6	-38,020	-16,629
(Constante)	-9,717	-7,602

Esta tabla muestra los coeficientes de clasificación para el año 2006 y 2010.

Con base en los resultados de la tabla 2 y 3, se procedió a calcular la función discriminante de las empresas certificadas de zona Franca y Mamonal.

$$Z_{\text{franca}_{2006}} = \text{MB} (33,316) + \text{MO} (134,080) - \text{MN} (228,332) - \text{IP1} (23,179) - \text{IP2} (25,087) + \text{IP3} (189,938) + \text{IP4} (11,513) - \text{IP5} (116,673) + \text{IP6} (51,380) - 9,300. \quad (1)$$

$$Z_{\text{franca}_{2010}} = \text{MB} (6,436) + \text{MO} (7,241) + \text{MN} (1,171) + \text{IP1} (3,338) + \text{IP2} (157,916) - \text{IP3} (101,288) + \text{IP4} (12,753) - \text{IP5} (145,050) + \text{IP6} (73,478) - 9,792. \quad (2)$$

$$Z_{\text{mamonal}_{2006}} = \text{MB} (79,279) + \text{MO} (-45,868) + \text{MN} (9,487) + \text{IP1} (-41,162) + \text{IP2} (-24,235) + \text{IP3} (-14,755) + \text{IP4} (4,732) + \text{IP5} (53,231) + \text{IP6} (-38,020) - 9,717 \quad (3)$$

$$Z_{mamonal2010} = MB(70,541) + MO(-45,370) + MN(-19,288) + IP1(-33,508) + IP2(-10,102) + IP3(-2,878) + IP4(4,085) + IP5(36,641) + IP6(-16,629) - 7,602 \quad (4)$$

En relación con los resultados de los modelos, se tiene que la capacidad de clasificación del modelo fue muy buena, tanto para las empresas de zona Franca, como Mamonal, generando como resultado un error Tipo I 81,8 % y error Tipo II de 81,8 % con una efectividad de clasificación buena de 81,8 %, y un error Tipo I de 24% y un error Tipo II de 20% para una efectividad de clasificación de 78%, respectivamente, como se muestra en las tablas 4 y 5.

Tabla 4: Resultados de la clasificación zona Franca- Barranquilla

		Grupo de pertenencia pronosticado		Total
		Año	Año	
Original	Recuento	2006	2010	
		2006	9	25
	%	2010	2	25
		2006	81,8	100,0
		2010	18,2	100,0

Esta tabla muestra el resultado de la clasificación del modelo para los años 2006 y 2010.

Tabla 5: Resultados de la clasificación clasificación zona Mamonal-Cartagena

		Grupo de pertenencia pronosticado		Total
		Año	Año	
Original	Recuento	2006	2010	
		2006	19	25
	%	2010	5	25
		2006	76,0	100,0
		2010	20,0	100,0

Esta tabla muestra el resultado de la clasificación del modelo para los años 2006 y 2010.

Evaluación De Los Indicadores De Productividad Y Utilidad Financieras En Las Empresas Certificadas En ISO:9001 En Zonas Franca Y Mamonal En Colombia.

Con base en los resultados obtenidos, se analizan los estadísticos descriptivos como la Media y Desviación Típica, de los indicadores seleccionados de las empresas de zonas Franca y Mamonal, encontrando que existe una correlación de impacto e incidencia, entre la certificación en calidad y los indicadores de productividad, y estos últimos, a su vez inciden positivamente en los indicadores de utilidad financiera, como se observa en las variaciones crecientes de un periodo (2006) a otro (2010), en los indicadores, razón utilidad bruta/valor agregado (IP1), para zona Franca e igualmente en los indicadores, razón utilidad bruta/valor agregado (IP1), razón utilidad operacional/valor agregado(IP2), margen bruto (MB) y margen operacional (MO), para zona Mamonal, como se muestra en las tabla 6 y 7.

Tabla 6: Medias de los indicadores de productividad y utilidad financiera de zona Franca-Barranquilla.

Año	Indicador	Media	Desviación típica
2006	MB	,3886	,27599
	MO	,109	,06626
	MN	,0704	,0489
	IP1	,3297	,2497

	IP4	1,6688	,99145
	IP5	,0176	,19479
	IP6	,0002	,17596

Esta tabla muestra el resultado de las medias de los indicadores de productividad y utilidad financiera para los años 2006 y 2010.

CONCLUSIONES

Realizar el análisis comparativo de productividad y rentabilidad en las empresas certificadas en ISO: 9001 de zonas Franca y Mamonal en Colombia, permite la identificación de las variables que mayor incidencia tienen en la eficiencia de operativa y financiera de las organizaciones estudiadas. En este artículo, se elaboró un modelo para la evaluación de los indicadores financieros utilizando el Análisis Discriminante para las empresas de las zonas Franca y Mamonal.

En el Análisis Discriminante desarrollado en este artículo para la construcción del modelo se utilizaron 25 empresas de las zonas industriales de análisis, presentando los modelos buenas efectividades en las clasificaciones para cada zona correspondiente. En las muestras originales la precisión del modelo presentó para la zona Franca en año 2006 (81.8%) y para año 2010 (81.8%), con un promedio total de clasificación de 81.8%, y para la zona Mamonal en año 2006 (76%) y para año 2010 (80%), para un promedio total de clasificación de 78% de las empresas. Lo que demuestra la alta confiabilidad para predecir el comportamiento de los indicadores de productividad y utilidad financiera en el sector en el largo plazo. De las funciones discriminantes obtenida y de los estadísticos analizados. Se observó una buena predicción de los modelos; como resultado del análisis de la función discriminante y los estadísticos utilizados, se puede concluir que la certificación en calidad de las empresas del sector de Mamonal, incide positivamente en los índices de productividad, razón utilidad bruta/valor agregado (IP1), razón utilidad operacional/valor agregado (IP2) y estos últimos, a su vez, también inciden positivamente en las utilidades financieras margen bruto (MB) y margen operacional (MO).

COMPETITIVIDAD DE LAS MICROEMPRESAS EN CUENCA ECUADOR

Luis Tobar Pesántez, Universidad Politécnica Salesiana del Ecuador

RESUMEN

Cuenca, la tercera del Ecuador, Patrimonio Cultural de la Humanidad, calificada por la Asamblea Nacional como Ciudad Universitaria, elegida como una de las diez mejores ciudades para vivir en el mundo, cuenta con la mayor densidad de unidades productivas en el país; su gran mayoría son pequeños negocios, dichas unidades son las microempresas; sin embargo, dadas sus características, no generan los ingresos suficientes para constituirse en un aporte real para la economía de la región. Su limitada competitividad les ha impedido crecer; factores internos de su propia operación, como su débil gestión administrativa, problemas con el mercado, producción y financiamiento, así como factores del entorno, como la inseguridad y el clima político, constituyen elementos que dificultan su gestión. La presente investigación busca realizar un diagnóstico de sus áreas funcionales que posibiliten establecer estrategias de crecimiento a corto, mediano y largo plazo.

PALABRAS CLAVE: Cuenca, micro, pequeñas, medianas, empresas.

COMPETITIVENESS OF MICROENTERPRISES IN CUENCA, ECUADOR

ABSTRACT

Cuenca, the third most important city in Ecuador, World heritage trust site, described by the National Assembly as University City; chosen as one of the ten best cities to live in the world; has the highest density of production units in the country; most of them being small businesses, these units are microenterprises, however due to their characteristics they do not generate enough profit in order to become a real contribution to the economy of the region, its limited competitiveness has kept them from growing; internal factors of its own operations such as its weak administrative management, market problems, production and financing; as well as some environmental factors like insecurity, and the political climate are factors which hinder its management. This research seeks to diagnose its functional areas which will enable to establish growth strategies in the short, medium and long term.

JEL: L26

KEYWORDS: Cuenca, micro, small, medium, enterprices

INTRODUCCIÓN

La micro, pequeña y mediana empresa han tenido un impacto significativo en el desarrollo económico del Ecuador, es por ello que las microfinanzas conforman un sector reconocido por instituciones nacionales y organismos internacionales. La división de inteligencia de negocios (Economist Intelligence Unit), del Economist Group, empresa responsable de la publicación de la revista The Economist, en el estudio denominado “Microscopio global sobre el entorno de negocios para las microfinanzas 2011”(Unit Economist Intelligence, 2011), sitúa al Ecuador en el octavo puesto a nivel mundial. Sin embargo de la ubicación que tiene el país en el ámbito de las microfinanzas y a pesar de la importante presencia de las pequeñas unidades productivas, debemos considerar que la economía ecuatoriana es altamente concentrada, lo cual se ratifica con información del último censo económico realizado por el Instituto

Nacional de Estadística y Censos (INEC), en donde se destaca que el 1% de establecimientos comerciales concentra el 90% de la economía y el 92% del valor agregado del país. (Diario El Telégrafo, 2011).

A pesar de la concentración de la riqueza, Ecuador es un país emprendedor por excelencia; de acuerdo con datos del último censo económico de 2010, en el país existen 500.217 unidades productivas, en su mayoría pequeños emprendimientos que dan empleo a más de dos millones de ecuatorianos y generan ingresos por cerca de 146.000 millones de dólares. (Censos, 2010) Bajo estos parámetros, el Ecuador es uno de los países de Latinoamérica que registra una de las mayores densidades en cuanto al número de establecimientos: 381 por cada 10.000 habitantes, México lidera la clasificación con 458; detrás del número de emprendimientos ecuatorianos están Colombia con 350 y Perú con 319. (Diario El Universo, 2011) A nivel nacional, Cuenca es la ciudad ecuatoriana que cuenta con la mayor densidad de establecimientos, índice que llega a 538 por cada 10.000 habitantes, mayor al promedio que se registra en el país (INEC, www.inec.gob.ec, 2010), en donde la influencia de las microempresas es relevante, estas cubren el 94,9% del total de las unidades productivas; es decir, los talleres que cuentan con un estrato de 1 a 9 trabajadores, contribuyen con la generación del 44,2% de las plazas de trabajo y el 23,8% de los ingresos generados en la localidad, (Tobar, 2012) por lo tanto, es importante realizar un estudio sobre su competitividad.

REVISIÓN DE LITERATURA

No existe una clasificación universal sobre las microempresas, sus concepciones varían de un país a otro, incluso dentro de un mismo Estado existen diferentes criterios, como el número de trabajadores, volumen de ventas, volumen de activos, entre otros. La Unión Europea clasifica como microempresa a toda unidad económica con menos de diez trabajadores, así como aquellas que tienen un nivel de ventas anuales menor a dos millones de euros. En los Estados Unidos, la entidad Micro Enterprise Works considera microempresas a aquellas con menos de cinco trabajadores. A nivel centroamericano, el criterio más utilizado en la definición de micro y pequeña empresa es el número de trabajadores; en esta región existe consenso para considerar a toda empresa con menos de diez trabajadores como microempresa. (Gutiérrez, 2009). En el caso ecuatoriano, también existe cierta ambigüedad al respecto, citemos algunas fuentes:

Plan Nacional de Desarrollo 2007-2010

De acuerdo con lo señalado en el Plan Nacional de Desarrollo, preparado por la Comunidad Andina de Naciones, las empresas se clasifican considerando las siguientes variables: el número de empleados efectivos, el valor bruto de las ventas anuales y el valor de los activos totales. (Presidencia de la República, 2007), conforme se detalla a continuación.

Tabla 1: Clasificación de las micro, pequeñas, medianas y grandes empresas por el número de empleados, valor bruto en ventas anuales y valor de sus activos totales

Clasificación	Micro	Pequeñas	Medianas	Grandes
Número	1 – 9	Hasta 49	50 – 199	Mayor a 200
Ventas anuales	100.000	1'000.000	1'000.001 - 5'000.000	Mayor a 5'000.000
Activos totales	Menor a 100.000	100.001 - 750.000	750.001 - 4'000.000	Mayor a 4'000.000

Fuente: Proyecto de Ley PYMES y Proyecto de Estatuto Andino para las MIPYMES

Elaborado por: el autor

Superintendencia De Compañías Del Ecuador

Desde enero de 2011, las nuevas regulaciones de la Superintendencia de Compañías señalan que para efectos del registro y preparación de estados financieros, se califica como PYMES a las personas jurídicas que tengan activos inferiores a cuatro millones de dólares, registren un valor bruto de ventas anuales

inferior a cinco millones de dólares y tengan menos de 200 trabajadores; pero, no se establece una división clara entre micro, pequeñas y medianas empresas.(Compañías, 2010)

Reglamento Del Código De La Producción

El Reglamento del Código de la Producción define como actores de la economía social y solidaria a los microempresarios, pequeños y medianos empresarios, de manera similar al Plan de Desarrollo, a excepción del valor de los activos totales, sobre los que no se hace referencia. (Productividad, 2010) Además, en nuestro aparato productivo se identifica al sector denominado “artesanía”, que abarca a quienes se dedican, en forma individual o como asociaciones, cooperativas, gremios y uniones artesanales, a la producción de bienes o servicios y que transforman la materia prima con predominio de la labor manual, con o sin auxilio de máquinas, equipos y herramientas, siempre que no sobrepasen en sus activos fijos -excluyéndose los terrenos y edificios- el monto de 360 salarios mínimos vitales generales. (Registro Oficial N.466, 1986) En nuestra investigación consideramos la clasificación del Plan Nacional de Desarrollo y analizaremos exclusivamente a las microempresas.

METODOLOGÍA

Para efectos de esta investigación, se aplicó una encuesta con 44 preguntas cerradas (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2010), durante julio de 2011, en la ciudad de Cuenca. El instrumento fue aplicado a 342 microempresarios, con un nivel de confianza del 95%, con un error estimado del 5%, la muestra fue estratificada y clasificada por sectores y/o actividades. La información fue introducida en una base de datos, para posteriormente ser trabajada en el programa estadístico SPSS 19. Los resultados de la aplicación de la encuesta se clasificaron en cinco partes, cuatro de las cuales corresponden a las áreas funcionales de las organizaciones: administración, finanzas, mercado y producción, y uno referido al análisis del entorno en el que se desenvuelven las microempresas. Para cada ámbito se estableció un porcentaje similar de reactivos, respuestas a las que se establecieron ponderaciones en función del resultado de cada una de ellas, de 1 a 5 (1 la posición más crítica y 5 la posición ideal). Considerando que el 95% de la población encuestada estuvo conformado por los propietarios de los talleres, se aseguró la confiabilidad de la información recogida y consecuentemente los resultados obtenidos.

RESULTADOS

En general, el resultado global del análisis de la gestión de las microempresas no es el adecuado; una vez ponderados los resultados, llega al 45% de la situación establecida como ideal, con diferente desempeño en cada ámbito que lo detallamos a continuación:

Ámbito Administrativo

De los indicadores más relevantes en el ámbito administrativo, podemos rescatar que la permanencia en el mercado de las microempresas es de un promedio de 16 años, siendo la más antigua la fundada en 1926; el mayor porcentaje, el 44% de ellas, se introdujo en el mercado en la última década; sin embargo, a pesar de su relativa estabilidad, apenas el 28% cuenta con un local propio; un 23% de los encuestados tiene una estructura organizativa definida en sus negocios, ellos no disponen de equipos informáticos que les posibiliten un mejor control de sus actividades; el 76% no dispone ni siquiera de un computador; la informalidad de sus negocios alcanza el 93%, lo que les impide acceder a beneficios o programas gubernamentales y de organismos gremiales, ya que apenas un 12% pertenece a cámaras artesanales u otras asociaciones; tan solo el 40% de los microempresarios ha recibido capacitación; sin embargo, una de sus fortalezas radica en su predisposición al cambio, un 75% está dispuesto a recibir capacitación y

considera que las universidades locales serían una buena opción para ello. Como resultado tenemos que el desempeño administrativo de las microempresas llega a un 46%.

Ámbito financiero: En el análisis de los factores internos del ámbito financiero, buscamos conocer con qué grado de eficiencia manejan sus recursos, en este sentido se pudo establecer que si bien un 85% de los encuestados tiene una cuenta bancaria (ahorros), en su mayoría, el 54%, no tiene registros contables, lo que ha ocasionado que el 76% de los encuestados afirme desconocer la rentabilidad real de sus bienes y/o servicios ofrecidos. Por otra parte, si bien el 52% ha tenido acceso al crédito, este no ha sido obtenido en condiciones favorables, se refleja un apoyo de las cooperativas que los han calificado como sujetos de crédito al 64% de los beneficiarios; un 19% accedió a los bancos privados; un preocupante 11% recurrió a los agiotistas, con tasas de interés fuera de la ley y los consecuentes riesgos que ello significa; y apenas el 6% recurrió a la banca pública. Sobre este mismo tema, al consultarles sobre la tasa de interés con la que recibieron sus créditos, el 8% lo recibió a tasas entre 8 y 14 puntos, mientras que el 30%, a tasas que llegaron al 28%; sin embargo, la mayoría, un 62%, manifestó desconocer la tasa con la que fue concedida su operación crediticia. Como resultado tenemos que el desempeño financiero de las microempresas llega a un 46%.

Ámbito de mercado: El mercado se constituye en el sector de menor desempeño de las áreas funcionales de las microempresas con un 43%; entre los indicadores más relevantes se destacan la baja utilización de las tecnologías para promocionarse, apenas el 1,1% de los encuestados tiene página web (4 microempresarios dedicados a la joyería y una sala de belleza); el 24% dispone de internet, quienes no lo tienen respondieron mayoritariamente porque no lo necesitan. Al ser consultados respecto de la cartera de sus consumidores, esta es mayoritariamente local, con un 88%; el 9% nacional y tan solo el 3% destinado a la exportación. En la pregunta que indaga el por qué no exportan, el 70% señala que por desconocimiento, seguidos de capacidad insuficiente y precios no competitivos en porcentajes menores; el 22% de los encuestados manifiesta realizar estudios de mercado; a pesar de lo señalado, el 45% tiene planificado ampliar su negocio. *Ámbito de la producción* El ámbito de la producción se constituye en uno de los mejores puntuados con un 55%; comentemos los resultados por los indicadores más críticos; apenas un 27% de las microempresas cuenta con sistemas de control de calidad, su gran mayoría, no los posee y, más aún, desconocía de qué se trataba.

En cuanto a la implementación de sistemas de salud y seguridad ocupacional (que exige el código ecuatoriano), la respuesta también fue baja, tan solo el 34% conocía algo sobre el tema. Su área productiva es particular, por la mayor influencia de la mano de obra sobre la maquinaria, en donde el 65% realiza labores intensivas en mano de obra y en su mayoría considera que los equipos auxiliares para llevar adelante su labor se encuentran en buen estado; sin embargo, los costos representan un problema, no solo por su incremento, sino fundamentalmente por no haber innovado sus procesos productivos que les impide ser más eficientes, de ahí que su volumen de producción disminuyó en un 51% en el último año. Por otra parte, no tienen mayores problemas en el abastecimiento de materias primas, ya que en su mayoría son de origen nacional (un 79%) y además tienen las facilidades para llegar a sus proveedores.

El entorno: En general, el entorno en el que se desenvuelven estas unidades productivas no es el adecuado, si comparamos con los ámbitos anteriores, llega al 35% de lo establecido como entorno ideal; en cuanto al acceso a los servicios básicos, apenas el 5% lo califica como excelente y el 45% como bueno, el resto de microempresarios no son servidos adecuadamente por los gobiernos locales; un 76% de los encuestados señaló que no ha recibido ningún apoyo de organismos públicos ni privados. Al ser consultados sobre el desempeño general del país, se encuentran de cierta forma satisfechos en un 65%; su preocupación va orientada sobre todo a problemas con la seguridad interna, que afecta a sus talleres y que lo evidenciaron como uno de los problemas que más incide en sus negocios, esto consideran que va de la mano de clima político, que lo calificaron entre regular y malo en un 75%. En general, estos han sido los hallazgos más importantes.

CONCLUSIONES

Los resultados obtenidos dan muestra de la posición desfavorable de las microempresas ubicadas en la ciudad de Cuenca, lo cual determina que no sean competitivas y que a corto plazo no puedan tener un crecimiento y desarrollo adecuados si no se implementan acciones inmediatas, tanto en su manejo interno, cuanto en la influencia negativa que reciben de su entorno. Son evidentes los problemas en los ámbitos administrativos, financieros, de mercado y producción, motivados por aspectos internos de la organización. Su inadecuada dirección y la falta de capacitación limitan la innovación, lo que ha posibilitado que su portafolio de productos no se renueve y sigan ofreciendo artículos similares, con precios incrementados. El manejo financiero informal y la falta de utilización de las tecnologías para su gestión, impiden que los microempresarios tengan un conocimiento real de su situación en cuanto a costos y márgenes de rentabilidad, lo cual ha provocado que su acción, en una gran mayoría, les sirva únicamente para cubrir sus necesidades básicas y no les permita expandirse.

Mientras más vulnerable es la organización, su acceso al crédito no solo que se limita, sino que se produce en condiciones más desfavorables; las tasas de interés para el microcrédito, en general, son elevadas; la usura, a pesar de ser ilegal, está presente en la economía local. Los microempresarios no están preparados para hacer frente al mercado internacional a través de la exportación de sus productos, debido al desconocimiento de procesos, insuficiente capacidad instalada, falta de promoción, lo cual precisamente hace falta al país, por estar inmerso en una economía dolarizada que requiere del ingreso de divisas, para no depender exclusivamente del petróleo en el sostenimiento del modelo. El entorno no colabora adecuadamente en el desarrollo de estos sectores productivos, ya que el ambiente político y, sobre todo, la inseguridad les afectan ostensiblemente. En general, consideramos que para que este sector tenga un mayor impacto en la economía, mediante la utilización sistemas de planificación, se debe implementar, por parte del Estado, políticas tanto internas cuanto externas, que posibiliten el acceso a recursos financieros, con tasas competitivas, dentro de un ambiente político y social que promueva la confianza en todos los actores productivos.

EL CONSUMIDOR POSTMODERNO

Madeline Melchor Cardona, Universidad Autónoma de Occidente

Carmen Elisa Lerma Cruz, Universidad Autónoma de Occidente

RESUMEN

La postmodernidad, como modo de pensamiento, permea las prácticas de compra y consumo de la sociedad, siendo éste último orientado a lo novedoso, al culto por el desarrollo personal y al bienestar. Cambios en los valores de los individuos se traducen en cambios en las exigencias de los consumidores, que deben ser conocidas por las empresas para orientar sus estrategias. La presente investigación aporta en el conocimiento de las tendencias del consumidor postmoderno, entregando la caracterización de compra y consumo del segmento adulto joven universitario de la ciudad de Cali. Se trabajó bajo un enfoque de investigación mixto logrando dimensionar la magnitud de las preferencias, valores y razones de consumo, las cuales, mediante el análisis clúster, permitieron identificar cuatro perfiles de consumidores: sibarita, receptivos a la novedad y al disfrute del placer sensorial; armonizado, centrados en sus logros para escalar socialmente; disciplinado, con prácticas de consumo racionales y valoración por el deber y la responsabilidad; performer, ambicioso y dispuesto a asumir retos.

PALABRAS CLAVES: Consumo postmoderno, comportamiento del consumidor, segmentación de mercados.

POSTMODERN CONSUMER

ABSTRACT

Postmodernism is viewed as a useful term to interpret and explain present day consumption patterns where consumption is viewed as being hedonistic, self-affirming, and compensatory. This research studies the consumption of a young adult segment of the university city of Cali - Colombia; with the purpose of identify postmodern consumption characteristics. Cluster analysis identified four consumer profiles: sybarite: receptive to novelty and enjoyment of sensual pleasure; harmonized: focus on their achievements that allow social climbing; disciplined: rational consumption practices and valuation for duty and accountability; performer: ambitious and willing to take on challenges. The results help in the decision making of marketing and advertising for youth segment.

KEY WORDS: Consumer Postmodern, consumer behavior, market segmentation.

INTRODUCCIÓN

El consumo participa en la construcción simbólica de las identidades de los individuos postmodernos permitiéndoles la diferenciación individual y colectiva, por lo cual, el análisis del consumo no debe hacerse sólo desde su perspectiva económica, sino también desde su dimensión simbólica. El valor económico asociado a los productos, ha evolucionado desde las comodidades, bienes y servicios hacia las experiencias emocionales y de placer por lo cual la compra de un producto no está únicamente asociada a su funcionalidad, sino también al placer o satisfacción emocional que se deriva del consumo mismo, así, la motivación del comportamiento de compra no es solamente racional.

Los cambios en el consumo, impactan directamente en el enfoque que debe tomar el marketing y la publicidad observándose una tendencia hacia la satisfacción emocional más que en las funciones o

aspectos utilitarios de los productos. Sin embargo, la definición de las estrategias de marketing y publicidad deben partir de un conocimiento amplio y profundo de las tendencias del consumo, por lo cual se hace necesario conocer, que tanto de estas características postmodernistas, se observan en el consumidor colombiano.

El presente artículo muestra los resultados de una investigación que se enfocó en la caracterización del comportamiento de compra y consumo en uno de los segmentos de mercado que puede ser más afectado por las características postmodernas, como es el de los adultos jóvenes (que se encuentran entre los 18 y 25 años) y específicamente se desarrolla en la ciudad de Cali.

REVISIÓN LITERARIA

El valor económico asociado a los productos, ha evolucionado desde las comodidades, bienes y servicios hacia las experiencias emocionales y de placer por lo cual la compra de un producto no está únicamente asociada a su funcionalidad, sino también al placer o satisfacción emocional que se deriva del consumo mismo, así, la motivación del comportamiento de compra no es solamente racional. Lo anterior implica comprender que el consumo hace parte de los rituales de la vida cotidiana y es un acto cargado de significados culturales que vale la pena descifrar.

La postmodernidad surge con la pérdida de la confianza en los proyectos de transformación de las sociedades, entonces el futuro se sacrifica por un presente libre de compromisos, despreocupado y relativista (todo depende, todo vale). Se caracteriza por el rechazo a la adhesión a ideas de grandes proporciones, la aversión a comprometerse con un sentido único de la vida; por la subordinación de lo común a lo individual; proclama el predominio del sentimiento sobre la razón, pero evade el drama, la pasión y el furor. No se aferra a nada, ni siquiera a sus propios criterios. (Severiano, 2005, p.13).

El consumo postmoderno es una actividad que trasciende el uso o compra de productos y servicios, es más que un simple intercambio de valor comercial. Es una actividad individual y social, que le permite al individuo el disfrute de productos para satisfacer sus necesidades, sus deseos, pero también le aporta el sentido de pertenencia a un grupo determinado, o al menos pretender pertenecer. Además le proporciona elementos que aportan a su auto imagen en una sociedad que equipara el tener con el ser. Por lo tanto, el individuo entra en una compulsión por tener, comprar, renovar modelos de sus aparatos para seguir siendo reconocido y apreciado por el entorno y por si mismo.

Los consumidores postmodernos se apropian de los productos o servicios dependiendo de lo que éstos simbolicen para ellos, y es a partir de esos valores simbólicos otorgados que los sujetos interactúan y le dan sentido a sus relaciones, construyendo su identidad y sus diferencias. Se define entonces, el consumo simbólico (como otra característica del consumo postmoderno), que implica la importancia que el consumidor les otorga a los demás respecto a la valoración simbólica que le atribuye a los productos como instrumentos de interacción social. López (2007) considera que los individuos postmodernos eligen los objetos de consumo no por sus características utilitarias, sino por lo que ellos significan. Ahora éstos se convierten en satisfactores de necesidades psicológicas tales como bienestar, personalización, espontaneidad entre otras.

METODOLOGÍA

Se definió como población objetivo a los hombres y mujeres universitarios de estratos 3 al 5 residentes en la ciudad de Cali, en edades comprendidas entre los 18 y 25 años. La investigación fue de tipo cuantitativa transversal simple, para lo cual se diseñó un instrumento de medición estructurado. Se trabajó con una muestra de 389 estudiantes universitarios, lo que corresponde a un error del 4.8% y un nivel de confianza del 95%. El trabajo de campo se realizó durante los meses de abril a julio del año 2009.

RESULTADOS

La primera etapa del Análisis Clúster requiere la definición del número de clúster la cual se dio a partir del establecimiento de las mayores distancias entre ellos a partir de un rango de 4 a 6 grupos, encontrando que la unión de 4 clúster muestra una distribución un poco más equilibrada en su asignación de elementos de pertenencia. Adicionalmente, se puede analizar la distancia en las que se combinan los conglomerados, en donde se observa un cambio en la etapa 384 (4 clúster). En este sentido, estos análisis sugieren como agrupación adecuada el trabajar con 4 clúster. Posteriormente, se aplicó el algoritmo no jerárquico para K medias indicándole que formara 4 grupos a partir del criterio anterior.

Para la descripción de los grupos, inicialmente se analizan los centroides de cada clúster los cuales representan los valores promedios de las variables contenidas en cada uno de ellos. Los centroides permitieron describir cada conglomerado al asignarle un nombre o etiqueta. En el grupo 1 las puntuaciones más altas están en las variables de personalidad sociable y las afirmaciones “considero que merezco lo mejor y estoy dispuesto a dármelo”, “siento placer al comprar”, “me gusta lo novedoso o diferente”. Este grupo puede etiquetarse como Sibarita. En el grupo 2 es más alta la variable responsable y las afirmaciones “valoro mucho mi libertad”, “se interesa en el futuro”, “me preocupo mucho por mi bienestar físico y emocional”. Se le puede denominar a este grupo Armonizado.

En el grupo 3, las variables son: responsable; se interesa en el futuro; me preocupo por mi apariencia física; va a comprar solo cuando tiene que hacerlo, por lo cual se le llama: Disciplinado. El Grupo 4 muestra valores altos en: confiable, descomplicado, “valoro mucho mi libertad”; “considero que me merezco lo mejor y estoy dispuesto a dármelo”; “me intereso mucho en mi futuro”; “me gustaría diferenciarme de los demás tanto en mi forma de pensar como de actuar”; está centrado en su bienestar. A este grupo se le llama Performer. A partir del análisis psicográfico, se pueden definir los siguientes perfiles de los clúster:

Sibarita (C1): Abierto a experiencias nuevas, extrovertido, organizado, seguro y sociable. Considera la moda muy importante y una ayuda para definir su estilo. Se preocupa por la apariencia física, siente placer al comprar y considera que se merece lo mejor. La compra es para este grupo una forma placentera de utilizar su tiempo libre, sale de compras sin un propósito definido y considera que la mayoría de las veces compra por impulso. Valora la renovación de los modelos de los productos que usa, se preocupa por su bienestar físico y emocional. Le rinde culto a su cuerpo, le gusta lo novedoso y diferente y busca objetos de consumo que lo diferencien de los demás.

Los valores que rigen su vida son la honestidad y sinceridad. Le da importancia a la familia, a la belleza, al cuerpo, pareja, dinero, apariencia física, amor, felicidad y amistad. Siente confianza por sí mismo y por las entidades de salud, las instituciones financieras, las entidades sin ánimo de lucro, las empresas públicas, la Iglesia y el gobierno. En este grupo existe la mayor proporción de personas interesadas en realizarse una cirugía estética, teniendo como principales motivos el lucir mejor físicamente y para sentirse satisfecho consigo mismo lo cual se relaciona con su hiper-valoración al cuerpo y a la belleza.

Armonizado (C2): Alegre, descomplicado, organizado, prudente, responsable y sociable. Le gusta diferenciarse de los demás tanto en la forma de pensar como de actuar. Valora su libertad. Le interesa mucho su futuro, se preocupa por su bienestar físico y emocional. Le gusta lo novedoso y diferente. Los valores que rigen su vida son el amor, la tolerancia, la solidaridad. Le da importancia a la familia, futuro, deporte, salud, felicidad. Siente confianza por sí mismo y por las instituciones educativas, empresas privadas, los amigos, la policía, el ejército. Disciplinado (C3): Calmado, organizado, pasivo, poco sociable, seguro. Se preocupa por su apariencia física. Va a comprar sólo cuando tiene que hacerlo. Se interesa mucho en su futuro. Los valores que rigen su vida son el respeto, compromiso, responsabilidad y

justicia. Le da importancia a la familia, a la paz interior, al medio ambiente, al futuro, al trabajo y al amor. Siente confianza por las instituciones financieras, el gobierno, los amigos, la familia, la justicia, el ejército, la policía, la pareja, las organizaciones no gubernamentales.

Performer (C4): Abierto a experiencias nuevas, activo, ansioso, confiable, descomplicado, desorganizado, extrovertido, irresponsable, seguro, sociable. Le gusta diferenciarse de los demás tanto en su forma de actuar como de pensar. Valora mucho su libertad. Considera que merece lo mejor y está dispuesto a lograrlo. Va a comprar sólo cuando tiene que hacerlo. Se concentra en el presente, le interesa el futuro y se centra en su propio bienestar. Tiene desconfianza en las instituciones, considera que sus intereses van primero que los de los demás y está en búsqueda continua de placer. Los valores que rigen su vida son la fidelidad, perseverancia, lealtad y humildad. Le da importancia a la familia, salud, futuro. Siente confianza por si mismo y por los amigos, la familia y la pareja.

CONCLUSIONES

En su comportamiento de compra y consumo, los adultos jóvenes universitarios caleños, están insertados en la cultura narcisista propia de la posmodernidad siendo su mayor preocupación la realización individual y privada, teniendo una estrecha relación en su consumo con la expresión de la libertad, la conservación de la juventud, la búsqueda de la belleza y la buena figura, la felicidad y el éxito personal. Ellos exponen su gran valoración a los anteriores aspectos, planteando que se identifican fuertemente con afirmaciones como: “valoro mucho mi libertad”, “me gusta diferenciarme de los demás”, “me merezco lo mejor y estoy dispuesto a dármelo y “me gusta lo novedoso y diferente”.

Se identificaron en los entrevistados cuatro perfiles o clúster de consumidores, tomando como referencia la clasificación propuesta Hausel et al (2008), teniendo claro que los integrantes de la muestra se encuentran dentro de la gran categoría del consumo postmoderno, donde es claro que la compra y uso productos no está determinado por la funcionalidad básica de los productos, sino por los significados de los productos y marcas. Estos perfiles que corresponden a la agrupación de una serie de rasgos individuales, sociales y económicos desembocaron en los siguientes grupos.

Sibarita el cual está sustentado en las características del consumidor hedonista puro, abierto a lo nuevo, en busca de aventura, con una gran valoración hacia el placer sensorial, rinde culto al cuerpo y en el disfrute que puede obtener a través de él. La moda para este grupo es fundamental pues la actividad misma de la compra le proporciona placer, ama comprar por impulso, además de disfrutar de la novedad y el cambio. Su gran preocupación por la apariencia física y su culto al cuerpo le conducen a estar dispuesto a realizarse cirugías. Se define como sincero, extrovertido, organizado y seguro.

Segundo grupo, Armonizado: Se define como alegre, descomplicado, prudente y organizado, teniendo como valores el amor y la tolerancia, le preocupa su bienestar físico y emocional, por lo cual da gran importancia a la salud. Aunque disfruta comprar, está más dominado por el sentido de realidad. Evalúan la calidad, busca la correcta relación precio - beneficio y tiende a ser fiel a las marcas, aunque están abiertos a la novedad, son fieles a las marcas, pues consideran que las han elegido por convicción y ha elaborado buenas razones para cada elección. Tercero, Disciplinado: Se define como responsable, calmado y organizado, preocupado por su apariencia física. Es de los cuatro grupos el que tiene confianza en algunas instituciones, disfruta de sus actividades sociales y familiares. Le gusta compartir con su familia, tiene una mirada optimista del futuro y se ha trazado un plan de vida acorde con las expectativas del entorno, bajo los parámetros tradicionales.

Cuarto, Performer: se define como ansioso, desorganizado y extrovertido, con gran necesidad de diferenciarse de los demás. Para este conglomerado el uso de prendas de vestir de marca le aporta status, permitiéndole destacarse. El consumo de las marcas cumplen un doble papel: representan la posibilidad

de diferenciarse, pero también la opción de identificarse con un grupo de referencia al cual le agradaría pertenecer.

Sería de gran interés llevar a cabo un estudio lo suficientemente amplio, en términos de tamaño muestral y el cubrir un mayor espacio geográfico, que permitiera establecer modelaciones por medio de variables socioeconómicas. Quedan abiertos nuevos interrogantes con respecto al consumo y a la construcción de individualidad de las nuevas generaciones y también el profundizar desde una mirada ética, el ejercicio profesional del comunicador publicitario y el profesional en mercadeo en el marco de las características del consumo postmoderno.

ANÁLISIS DE LOS RIESGOS EN LA TOMA DE DECISIONES DE LA ALTA DIRECCIÓN A TRAVÉS DE LA AUDITORÍA DE GESTIÓN

Patricia Gutiérrez Moreno, Universidad de Guadalajara
Martin Miguel López García, Universidad de Guadalajara
Mtro. Ramiro Torres Torre, Universidad de Guadalajara

RESUMEN

El inevitable proceso de globalización al que los países subdesarrollados han tenido que ingresar y con ello enfrentarse a los cambios económicos internacionales, da la pauta para que el sistema económico del cual forman parte las empresas perfeccione la gestión de sus entidades. Por lo tanto reviste de suma importancia que las decisiones que tomen quienes dirigen a estas empresas sean efectivamente evaluadas, pero ¿hasta dónde los directivos consideran el riesgo de una decisión equivocada? El objetivo del presente es conocer los beneficios de la aplicación de la auditoría de gestión generando con ello la posibilidad de que esta sea considerada por los empresarios como una herramienta que a futuro podría ahorrarles decisiones costosas. La auditoría de gestión constituye una de las técnicas más avanzadas de la administración moderna, por lo que es necesario perfeccionar la actividad de auditoría para contribuir al proceso de perfeccionamiento empresarial en el logro de sus objetivos de eficiencia y competitividad. El trabajo es novedoso desde el punto de vista teórico, se logra un enfoque integrador del control interno, y su evaluación desde la óptica de la auditoría al desempeño de la gerencia de riesgos, lo que enriquece los procedimientos de auditoría vigentes, logrando sistematizarse en la práctica empresarial con resultados positivos.

PALABRAS CLAVE: Auditoría de Gestión, Programa Flexible, Evaluación.

MANAGEMENT AUDITING AND DECISION-MAKING RISK ANALYSIS

ABSTRACT

The inevitable process of globalization that developing countries have had to enter and thus face the international economic changes, sets the tone for the economic system of which the form part of the companies refine their management entities. Therefore it is of utmost importance for the decisions they make those who run these companies are effectively evaluated, but how far managers believe the risk of a wrong decision? The purpose of this is to know the benefits of implementing the audit thus generating the possibility that this will be considered by employers as a tool that could save future costly decisions. The audit is one of the advanced techniques of modern management, making it necessary to improve audit activity to contribute to business improvement process in achieving its goals of efficiency and competitiveness. The work is novel from theoretical point of view, is achieved by integrated approach to internal control, and evaluation from the viewpoint of the performance audit of risk management, which enriches the existing audit procedures, making systematized in the business practice with positive results.

KEYWORDS: Audit Management, Flexible Program, evaluation

INTRODUCCIÓN

Hablar de auditoría de gestión es adentrarse en un campo profesional completamente nuevo en México, algunos autores conciben a este campo como un área que comparan con la auditoría financiera, algunos

otros consideran que es una parte, un trabajo parcial dentro de lo que es la auditoría de los estados financieros incluso dentro de lo que es la bibliografía existente algunos consideran a la auditoría operativa como algo similar a la de gestión.

El término “auditoría operativa” fue usado por primera vez, por auditores internos progresistas en los años cincuenta, para describir el trabajo que estaban realizando para mejorar las operaciones que auditaban. El enfoque constructivo, las técnicas y los resultados positivos que caracterizan a la auditoría operativa, fueron usados por primera vez en la fabricación, comercialización y marketing, pero son igualmente aplicables a las actividades públicas, instituciones financieras, económicas, organizaciones de servicios y a cualquier organización de suficiente tamaño, para mantener una auditoría interna, como función separada o específica. Se caracteriza por el enfoque y la mentalidad del auditor, no por métodos distintos. Puede ser una ampliación de las normales actividades de auditoría interna, esto es: financieras, o de revisión de ciclos. Aplica las habilidades, conocimientos y técnicas de los auditores a los controles operativos específicos que existen en los negocios. El sentido común y una buena visión personal de las actividades del negocio, son los activos fundamentales de un buen auditor operativo, forma o tipo de auditoría que caracteriza bien las auditorías modernas.

La auditoría de gestión es la evaluación que realiza un auditor independiente de una empresa con el fin de emitir un informe profesional, vinculado a la evaluación de la economía y eficiencia de las operaciones de dicha empresa, la eficacia en el cumplimiento de los objetivos y el respeto por parte de la administración o dirección de la ética, la equidad y la ecología (Cardenas, 2008)

La gestión de la dirección comprende lo adecuado de las políticas, objetivos y metas propuestas, los medios para su implantación y los mecanismos del control interno que posibiliten el seguimiento de los resultados obtenidos. Esta conceptualización es una de las más completas. Existen diferentes definiciones, pero todas coinciden en señalar que el objetivo final de este tipo de auditoría, es asegurar la eficiencia de una organización para que pueda alcanzar los objetivos establecidos, así como examinar la calidad y aciertos de la gestión de su dirección. Sin embargo para llegar a la denominación actual y mayoritaria de auditoría de gestión, se ha transitado por los términos: auditoría operacional, auditoría de sistemas, auditoría de métodos y procedimientos y auditoría administrativa. Además de que a pesar de todos los intentos de definirla con precisión, no siempre hay claridad en la comprensión de lo que debe entenderse por auditoría de gestión, no se trata solamente de que se utilice el análisis de métodos, sistemas y procedimientos que pueden estar presentes también en otros tipos de auditorías, el objetivo fundamental, consistente en evaluar, el nivel de economía, eficiencia y eficacia en la gestión de la dirección con relación a los objetivos previstos en cada área auditada, para ayudar a la administración a mejorar los resultados.

En la auditoría de gestión, es necesario llegar con el análisis hasta las causas que generan los problemas o desviaciones y su efecto económico, pues no es suficiente conocerlos y dominarlos en la práctica, también es necesario saber que los origina, para incidir realmente con las recomendaciones en los resultados. La participación de los auditados es fundamental, ya que cuando se detecta un problema quienes mejor pueden encontrar la solución son ellos, y cuando se proponen la implementación de medidas correctivas ellos se sienten comprometidos a cumplirlas. Importante considerar que no se trata únicamente de encontrar desviaciones, también hay que identificar las oportunidades para mejorar los resultados. Por lo tanto se considera que la auditoría de gestión surge como una necesidad, en primer término, de cubrir todas las áreas de riesgo de una organización, sin limitarse sólo a las áreas administrativas o a las económico-financieras, aunque también existen otros factores que han influenciado en su evolución y desarrollo.

REVISIÓN DE LA LITERATURA

La gestión de la dirección comprende lo adecuado de las políticas, objetivos y metas propuestas, los medios para su implantación y los mecanismos del control interno que posibiliten el seguimiento de los resultados obtenidos. El Instituto Norteamericano de Contadores Públicos (AICPA) enumeran las ventajas que pueden derivarse de una auditoría de gestión:

- 1 *Identificación de objetivos, políticas y procedimientos aun no definidos;*
- 2 *Identificación de criterios para la medición del logro obtenido de la organización;*
- 3 *Evaluación independiente y objetiva de operaciones específicas;*
- 4 *Evaluación de cumplimiento de los objetivos, políticas y procedimientos;*
- 5 *Evaluación de la efectividad de los sistemas de control gerencial;*
- 6 *Evaluación de la confiabilidad y utilización de la información gerencial;*
- 7 *Identificación de áreas críticas o problemáticas y de las causas que las originan, etcétera.*

Proponer la auditoría de gestión como evaluación de riesgos de las decisiones de los directivos o la alta gerencia no es descabellado es una herramienta que podrá resultar económica una vez que se implementa que además posibilita la posibilidad de una metodología que será compleja. El contenido del informe de auditoría de gestión puede incluir los siguientes puntos:

1. Antecedentes de la entidad y motivo del informe;
2. Descripción de las áreas críticas auditadas;
3. Información sobre conocimiento del negocio y de la organización;
4. Objetivos y alcance de la auditoría;
5. Indicadores y normas de reconocimiento utilizados;
6. Evaluación de las seis “E” (economía, eficiencia, eficacia, ética, equidad y ecología);
7. Conclusiones y recomendaciones;
8. Opiniones de la administración.

Este tipo de auditoría puede ser ejecutada por auditores externos y por auditores internos. En opinión de los investigadores, coincidente con la de varios autores, el más indicado y que mayor eficiencia y efectividad puede lograr en su desarrollo en beneficio de la organización auditada es el auditor interno, este al encontrarse identificado con la cultura de la organización facilita la identificación de problemas así como de fortalezas de la misma. Es ineludible considerar que periódicamente la entidad solicite la aplicación de la auditoría de gestión por parte de auditores externos ya que estos fieles al principio de respetar la independencia de criterio podrán ser críticos objetivos, al señalar no las deficiencias sino las áreas críticas que pudieran descuidarse por la excesiva confianza que pudiera tener un auditor interno en el conocimiento de los procedimientos de la organización. Los riesgos afectan la habilidad de cada entidad para sobrevivir, competir con éxito dentro de su sector, mantener una posición financiera sólida y una positiva imagen pública, referida a la calidad de sus productos, servicios, empleados y medio ambiente. No existe ninguna forma práctica de reducir el riesgo a cero. De hecho el riesgo es inherente a los negocios. La dirección de las empresas debe determinar cuál es el nivel de riesgo que se considera aceptable y esforzarse para mantenerlo dentro de los límites fijados. La aceptación del riesgo es esencial para el progreso y a menudo los fracasos son una parte fundamental del aprendizaje. Aunque algunos riesgos no se pueden evitar, el intentar reconocerlos y controlarlos no debe limitar las oportunidades de emplear la creatividad. La administración riesgo surge por la necesidad de que las empresas determinen a que están expuestas, de los cuales un número de ellos no pueden ser transferidos a las entidades dedicadas a prestar servicios de seguros, requiriéndose la investigación de los riesgos como tal y seleccionar las herramientas a utilizar para enfrentarlo con eficacia. Tan sólo recientemente se ha considerado la creación de la gerencia de riesgos como una actividad de significativa importancia en la estructura organizativa de

la empresa, la cual es una actividad que puede contribuir de manera efectiva a garantizar el rendimiento del capital invertido en las empresas.

En México las entidades consideran que aumentar el número de departamentos dedicados a trabajos administrativos nos son necesarias, ya que todo lo que no se traduzca en ganancias monetarias no sirve, un próximo trabajo sería necesario para presentar estrategias que convenzan a los empresarios de la importancia de minimizar los riesgos de las decisiones y como poco a poco pueden estas evaluarse a tiempo disminuyendo el riesgo al mínimo tolerable por la organización. Un riesgo es la posibilidad de sufrir una pérdida. Para un proyecto específico puede ser un producto terminado con menor calidad, costos más elevados, retraso en la ejecución de una inversión o no alcanzar el objetivo o meta fijada. En otras palabras, un riesgo es un problema en espera de ocurrir. Algunas definiciones que se pueden dar del riesgo son:

- 1 Incertidumbre de que un suceso pueda ocurrir
- 2 Exposición a determinada eventualidad económica desfavorable
- 3 Acontecimiento futuro posible e incierto de naturaleza objetiva, cuya ocurrencia causa un daño concreto.
- 4 Grado de probabilidad de pérdida
- 5 Posibilidad de que un suceso ocurra y provoque pérdidas a una persona natural o jurídica, en sus personas o bienes.
- 6 Amenaza de contingencia dañosa.

Las empresas por el hecho de su existencia, puede estar sujeta a riesgos por:

- 1 Pérdida o daño de activo.
- 2 Pérdida por actos que ocasionen daños a terceros.
- 3 Mercado (cambios de precios, de la moda, la competencia).
- 4 Producción (mal funcionamiento de las maquinarias y equipos, problemas técnicos, fallas en el suministros de materias primas y materiales).
- 5 Financieros (atraso de cobros, retribución de los dueños, incumplimiento de la ganancia proyectada, variaciones del tipo de cambio, variaciones de la tasa de interés, préstamos denegados).
- 6 De personas (muerte, invalidez física, lesiones).
- 7 Políticas (guerra, crisis económicas).
- 8 De la naturaleza (terremotos, ciclones, tornados, sequías, plagas, inundaciones, rayos, truenos).

En un plano real de competencia empresarial diaria, y con el conocimiento del área pueden establecerse los objetivos que la administración de riesgos persigue:

A. Los que anticipan los acontecimientos.

- Identificación de los recursos materiales, humanos y financieros de la empresa.
- Identificación de los riesgos a que están expuestos los recursos de la empresa.
- Evaluación del posible impacto financiero de un accidente o un riesgo financiero, mediante evaluación y medición adecuada.
- Jerarquización de los riesgos identificados y evaluados.
- Elaboración de los programas de prevención.

B. Los que se refieren a las acciones durante los eventos

- Elaboración de manuales y procedimientos de acciones.
- Elaboración de planes de emergencia
- Selección de alternativas para contrarrestar los efectos del evento.

C. Los previstos para después de ocurrido los eventos

- Supervivencia de la empresa.
- Financiamiento para la normalización de la empresa.
- Recuperación de seguros, fianzas y otros contratos.

METODOLOGÍA

La administración de riesgos se puede desarrollar de variadas formas, es decir: mediante la organización de un área específica dentro de la empresa, la contratación de los servicios a una consultoría o una empresa de seguros. Lo más importante es que los empresarios sean conscientes de las amenazas de los riesgos puros específicos del giro de su empresa y tengan en cuenta las diferentes alternativas para neutralizarlos parcial o totalmente, para evitar caer en situaciones de retenciones involuntarias e inconscientes que pueden poner en peligro la subsistencia de la empresa. La estructura del área de la administración de riesgo debe considerar entre otras las actividades siguientes:

Identificación.

- Elaboración, manejo y control del inventario de bienes de importancia estratégica.
- Análisis de los riesgos financieros a que está expuesta la empresa.
- Análisis de nuevos proyectos (nuevas instalaciones, nuevos productos, nuevos mercados).
- Entrevistas con el personal de las áreas operativas.

Medición y Evaluación.

- Recopilación de valores (valor de edificios, maquinarias, existencias, producción, ventas, cuentas por cobrar, préstamos obtenidos, inversiones (incluyen las financieras), etc.
- Creación y mantenimiento de estadísticas y datos históricos de pérdidas por la ocurrencia de eventos.
- Estudios técnicos estadísticos y actuariales para pronósticos de pérdida y costos de los riesgos.
- Métodos cuantitativos de evaluación (cálculos de pérdidas máximas probables o posibles y otros).

A pesar de que los programas de auditoría pueden ser rígidos, flexibles y mixtos, en dependencia al grado de libertad que se le concede al auditor en su trabajo. Y como *“ninguna empresa es idéntica a otra, por lo que es lógico que los programas de auditoría de gestión, deban diseñarse teniendo en cuenta las condiciones específicas de cada entidad de acuerdo al alcance y los propios objetivos de auditoría que se persiguen”* (Ruiz, 2001). Se comparte el criterio de que la existencia de programas flexibles previamente elaborados produce un efecto importante en la relación costo- beneficio de la auditoría de gestión. Es tiempo de que los profesionales de la auditoría elaboren el programa de acuerdo con los requerimientos de la organización o dicho de otro modo “hacer trajes a la medida” en ese contexto se estará estableciendo una aun más nueva área de auditoría dentro de la metodología propuesta y es la propuesta de programas flexibles para la auditoría de gestión.

Teniendo en cuenta estos criterios, los programas de auditoría de gestión deben ser flexibles para dar frente a circunstancias no previstas o elementos no conocidos que exijan hacer variaciones o ampliaciones a los programas confeccionados inicialmente, además, la auditoría de gestión es profundamente analítica y los programas deben dejar margen para que el auditor despliegue su iniciativa y creatividad en busca de las evidencias y el desarrollo de los hallazgos. Partiendo de lo anterior, se presenta el programa flexible elaborado, cumpliendo las características mencionadas, para auditar la gestión de la gerencia de riesgos.

En la actualidad no se concibe una empresa que pueda sobrevivir sin una correcta planeación, la única certeza del futuro es su incertidumbre, los cambios suceden tan rápido que en algunas ocasiones apenas si conoces un cambio cuando ya te encuentras enfrentando el que sigue es decir un nuevo paradigma, la competencia por los mercados alcanza niveles insospechados y son imprevisibles los resultados y consecuencias de la revolución científico técnica, la innovación tecnológica es más estratégica que táctica, por lo tanto, la planeación estratégica se hace cada día más decisiva.

Al planear se definen los objetivos y se determinan los medios necesarios para alcanzarlos, por tanto, la planeación constituye quizás el elemento más importante dentro del ciclo de dirección. En esta fase de la dirección realiza pronósticos, auditoría de recursos, establece objetivos, traza estrategias, elabora planes de acciones y programas, fija políticas, procedimientos y normas de forma tal que se conjuguen todas las herramientas en un proceso armónico y coherente enfocado hacia las metas propuestas. El programa de auditoría de gestión se elabora para evaluar la calidad del sistema gerencial de las entidades en el proceso de identificar, analizar, evaluar, controlar y distribuir los riesgos que pueden repercutir en el cumplimiento de su misión, por tanto, se ha diseñado el programa y la ejecución de la auditoría siguiendo los pasos en las distintas etapas de la gestión de riesgos, abordándose los elementos y principios básicos contenidos en cada una de estas funciones, como serán:

- Comprobar si la administración efectúa una correcta planeación de sus operaciones, verificándose que se tracen objetivos y metas que guíen a la entidad al logro de sus objetivos generales.
- Evaluar el nivel de organización de la empresa y cómo se utiliza éste en busca de una mayor eficiencia económica.
- Evaluar el cumplimiento del control interno en la entidad, en especial, las relacionadas con el componente evaluación de riesgos.
- Detectar fallas en el proceso de administración de riesgos que afectan el cumplimiento de los objetivos y metas de la empresa y deban ser corregidas.

CONCLUSIONES

La persistencia actual de crisis financieras recurrentes han afectado a un gran número de empresas a nivel global, en México la vulnerabilidad de las organizaciones es un punto que no debe perderse de vista considerando que la mayoría de estas son pequeñas y medianas empresas las cuales requieren de una constante asesoría en la cuestión de riesgos apoyados en un eficiente sistema de control interno.

La auditoría de gestión puede considerarse como una técnica que la administración actual puede utilizar en bien de la misma organización, considerando que su objetivo es detectar y evaluar las causas que afectan la economía, eficiencia, eficacia así como el impacto que esta tiene en el medio ambiente empresarial.

No podrá dejarse de lado la importancia del control interno en el proceso de gestión, ya que este coloca a la organización como una entidad organizada y con una estructura que le permitirá tener permanencia. La gerencia de riesgos, debe ser evaluada mediante efectivos programas de auditoría de gestión; cómo el programa flexible propuesto, que representa beneficios. El programa de auditoría de gestión, constituye

una herramienta viable para evaluar la actuación de los directivos de las empresas, impactando en el mejoramiento de otros sectores de la entidad y en el desarrollo de la gestión de riesgos, competitiva; permitiendo ajustar el cumplimiento del componente: “Evaluación de riesgos”.

Por lo anteriormente expuesto se recomienda:

1. Que los cuerpos colegiados de las profesiones afines como son Licenciados en Contaduría y Licenciados en Administración, generen la capacitación de los profesionistas en el área así como la participación de las empresas para la capacitación del personal técnico de las mismas empresas a fin de lograr una efectiva aplicación de la gestión de riesgos.
2. Involucrar a las instancias pertinentes para que la aplicación y desarrollo de la herramienta se extienda a otros sectores de la economía.
3. Que los colegios de la profesión socialicen la aplicación de la auditoría de gestión ya que estos son los indicados para tal efecto y el logro del convencimiento de los empresarios.
4. Socializar por parte del Colegio de Contadores Públicos la metodología y aplicación de la auditoría de gestión de riesgos.
5. Iniciar con la propuesta de la reglamentación al respecto a fin de que se consideren sanciones las cuales aun no podrían presentarse en este documento pues tendría que ser material de otra propuesta en el futuro.

LAS NUEVAS TECNOLOGIAS, SU IMPACTO LABORAL Y TRANSFORMACIÓN DEL QUEHACER ACADÉMICO Y ADMINISTRATIVO: CASO FACULTAD DE MEDICINA, CAMPUS CIUDAD MENDOZA, VERACRUZ MÉXICO

Gabriela Bernardo Huerta, Universidad Veracruzana
Verónica Guadalupe Escamilla Centeno, Universidad Veracruzana
Mónica Karina González Rosas, Universidad Veracruzana
Adolfo Valdez Morales, Universidad Veracruzana

RESUMEN

La Universidad Veracruzana, Facultad de Medicina, Campus ciudad Mendoza, Veracruz se integra al MEIF (Modelo integral y flexible en el 2004) se destaca el paradigma hacia el aprendizaje de manera que el docente requiere de un perfil de competencias para el nivel de enseñanza superior. Es por ello, que la presente investigación tiene como objetivo analizar la importancia de las nuevas tecnologías en relación con su impacto laboral en la transformación del quehacer académico y administrativo que con lleva al desarrollo de las competencias didácticas y de autoaprendizaje que son parte del siglo XXI que facilitan el proceso de enseñanza-aprendizaje con el fin de formar a los estudiantes.

PALABRAS CLAVE: Universidad Veracruzana, Facultad de Medicina, competencias, tecnologías, impacto laboral, administrativo, didáctica y autoaprendizaje.

NEW TECHNOLOGIES, ITS IMPACT AND TRANSFORMATION OF LABOR AND ADMINISTRATIVE ACADEMIC WORK: CASE SCHOOL OF MEDICINE, CAMPUS MENDOZA CITY, VERACRUZ MEXICO.

ABSTRACT

Veracruzana University, School of Medicine, Campus Mendoza city, Veracruz joins the MEIF (comprehensive and flexible model in 2004) highlights the paradigm towards learning so that teaching requires a competency profile for the higher education level. Therefore, the present investigation analyze the importance of new technologies in relation to their work in transforming impact of academic and administrative that leads to the development of self-learning and teaching skills that are part of the century XXI facilitating the teaching-learning process in order to train students.

INTRODUCCIÓN

Desde finales del siglo XX se ha venido promoviendo tanto en Europa como en Latinoamérica un cambio de orientaciones curriculares y metodológicas en la formación universitaria. La Organización de las Naciones Unidas comprometida en transmitir una visión global de la educación destaca en el informe (Delors, 1996) los cuatro pilares: “*el aprender a conocer, el aprender a ser, el aprender a vivir juntos y el aprender hacer*” son ejes relevantes para la mejora de los sistemas educativos un enfoque diferente.

Para Ruíz Barrido, (2009) destaca la importancia del *paradigma* centrado en el estudiante estrechamente vinculado a la formación orientada a las competencias

El Modelo Educativo Integral y Flexible (MEIF) se integro en la Universidad Veracruzana a partir de 1999, en las cuatro regiones Xalapa, Poza Rica, Tuxpan y Orizaba. La Facultad de Medicina implemento el MEIF a partir del 2004 destacando los ejes teóricos, heurísticos y axiológicos que permean los programas educativos que promueven el aprendizaje de actitudes, habilidades y destrezas para su formación integral y significativa. Posteriormente en 2010, la Universidad Veracruzana implemento el Proyecto Aula tiene el objeto de promover una cultura institucional de innovación continúa en la práctica docente para consolidar el MEIF. El Proyecto Aula tiene un enfoque epistemológico sustentado en el pensamiento complejo, el desarrollo de competencias profesionales, la integración de la investigación y el uso de las tecnologías de la información y comunicación. Son aspectos claves que forman parte de la práctica educativa, es por ello que la presente investigación parte del siguiente cuestionamiento: ¿El uso de las tecnologías influyen en el quehacer educativo y administrativo en la Facultad de Medicina, Universidad Veracruzana, Campus Ciudad Mendoza?

El objetivo de la investigación parte de analizar la relevancia de las nuevas tecnologías en relación con su impacto laboral en la transformación del quehacer académico y administrativo que con lleva al desarrollo de las competencias profesionales de manera que en el estudio se abordara las competencias las docente en el Nivel Superior y se explicará la importancia de las tecnologías de la información en el Proyecto Aula. Posteriormente, se presentará la metodología utilizada en la estudio. Finalmente se presentará las conclusiones, recomendaciones y futuras líneas de investigación.

REVISIÓN DE LITERATURA

En la década de los noventa organismos internacionales como: la Organización de las Naciones Unidas para la Educación y Ciencia (UNESCO) y el Centro Regional para la Organización Superior en América Latina y el Caribe (CRESALC), sugirieron la adopción un nuevo rol del docente, de acuerdo a las demandas de una sociedad globalizada. *“asumir una visión y un nuevo paradigma para la formación de los estudiantes, basados en el aprendizaje a lo largo de toda la vida, la orientación prioritaria hacia el aprendizaje”* Para Zabalza (2003) el término de competencias docentes se caracterizan por ser complejas: combinan habilidades, principios y conciencia de las prácticas pedagógicas. Menciona las siguientes competencias: competencia planificadora competencia didáctica, competencia comunicativa que interviene las tecnologías, internet, multimedia, conferencia, plataformas, videoconferencias entre las más sobresalientes. Las TICS son utilizadas como una herramienta en el proceso de enseñanza –aprendizaje facilitan la interactividad del usuario y la interconexión. *“Se aduce que ayudan a la educación permanente, a las nuevas actitudes requeridas por la sociedad-red, al nuevo y actual concepto de ciudadanía y a la alfabetización informática entre otras cosas”*. (Medina & Barquero, 2012)

La integración de las TICS tiene como finalidad mejorar la calidad de la docencia universitaria y hacer posible nuevas modalidades de enseñanza-aprendizaje, sobre todo la enseñanza a distancia o semi presencial, pero requieren de competencias docentes. Es por ello que el proyecto aula integra las Tics como un elemento fundamental para insertar la plataforma Eminus y la biblioteca virtual, cuyas herramientas fortalecen el autoaprendizaje. El docente puede orientar el proceso de andamiaje con el estudiante para interactuar y propiciar el conocimiento de manera presencial y semipresencial a través de habilitar los espacios virtuales por medio de: foros, debates y sesiones de chat con la finalidad de retroalimentar los conocimientos. Cabe señalar, que son aspectos de las tecnologías que el docente debe integrar en el diseño instruccional. Finalmente la TICS no debe estar separadas del proceso de aprendizaje-enseñanza, ya que es parte de los retos que el docente debe implementar en la praxis con la finalidad de fomentar la construcción de los aprendizajes, ya que es en una realidad planetaria de la sociedad del conocimiento.

METODOLOGÍA

En esta investigación la población fue de 63 catedráticas de la Universidad Veracruzana, Facultad de Medicina. Selecciono a 30 docentes, que forman parte de la mitad, muestra representativa que tiene un nivel alto de confiabilidad. Fue un estudio exploratorio, descriptivo, explicativo y prospectivo que nos presento las necesidades reales de capacitación.

La formula siguiente nos presenta el grado de confiabilidad de la muestra:

$$n = \frac{Z^2 p q N}{N E^2 + Z^2 p q} \quad (1)$$

$$n = \frac{(0.95)^2(0.666)(0.333)(30)}{(30)(0.05)^2 + (0.95)^2(0.666)(0.333)} \quad (2)$$

$$n = \frac{6.00463935}{0.200904645} = 29.88806571476 \quad (3)$$

Muestra y Resultados

La muestra fue de 30 catedráticos que en su mayoría fueron hombres, la media de la edad fue de 53 años, y la media de antigüedad fue de 16 años, quienes contestaron el instrumento con la finalidad de analizar la importancia de las tecnologías de información en su práctica educativa. Los resultados que se presentaron nos permitieron desarrollar las siguientes tablas:

Tabla 1: Principales Indicadores del Instrumento con su Valor Porcentual Preferente

Integración de las tecnologías en la Planeación Didáctica	Participación en Proyecto Aula	Manejo de Multimedia	Uso de Plataforma Eminus
67%	60%	37%	83%

La tabla 1, describe los indicadores que integran el instrumento de investigación que muestra los resultados positivos con respecto al manejo de las tecnologías que tienen los docentes en el Periodo de agosto 2012-enero 2013.

Tabla 2: Las Necesidades de Capacitación en Cuanto a las Tecnologías de la Información

Curso de Multimedia	Biblioteca Virtual	Plataforma Eminus	Proyecto Aula	Sistema Tutorial	Sistema Registro de Calificaciones
40%	5%	15%	30%	5%	5%

De acuerdo con lo anterior la Tabla 2, muestra las necesidades reales de capacitación en relación con la Tabla 1, se presentan inconsistencias en sus respuestas.

CONCLUSION

La investigación presenta la necesidad de fortalecer las competencias docentes en relación a las tecnologías de la información por ser un aspecto medular en la enseñanza del nivel superior se requieren integrarlas para favorecer los aprendizajes y sustentar los conocimientos y competencias de los estudiantes para una adecuada inserción social y profesional que evite la brecha digital de manera que las

tecnologías sean parte de la transformación del quehacer académico y administrativo. El quehacer del docente conlleva al desarrollo de las competencias didácticas, de planeación, organización de diseño y de aplicación de tecnologías con el fin de fortalecer el proceso de aprendizaje. Un papel bastante complejo que tiene retos que demanda la sociedad. El docente debe ser consciente que las tecnologías están insertas en los planes y programas del MEIF como una herramienta indispensable para motivar y desarrollar el proceso de enseñanza-aprendizaje. Es por ello, que debe ser guía para el adecuado uso de las TICS.

Los resultados que presenta la investigación nos permite proponer las siguientes recomendaciones para la Universidad Veracruzana: Implementar un programa de capacitación interna para los maestros en el uso de la multimedia para el desarrollo de materiales didácticos. Integrar a los docentes en el proyecto aula con la finalidad de elaborar sus planeaciones didácticas en relación a las competencias y a la integración de las tecnologías de la información. Programar un curso permanente que capacite a los docentes en la plataforma EMINUS y de Biblioteca Virtual es una herramienta tecnológica que permite interactuar con los estudiantes y enriquece la dinámica grupal. Las actividades pueden ser presenciales y semipresenciales, son aspectos que fortalecen la construcción del conocimiento.

En primer lugar convendría estudiar los posibles nexos entre los estilos de aprendizaje y el e-learning. Con los recursos que proporciona las nuevas tecnologías haciendo uso de los recursos de la Universidad Veracruzana. En segundo lugar se podría diseñar materiales didácticos con la finalidad de capacitar a los docentes para el uso de las tecnologías de la información y periódicamente evaluar.

LA DECLARACIÓN PATRIMONIAL COMO HERRAMIENTA DE TRANSPARENCIA DEL FUNCIONARIO PÚBLICO

Ana Isabel Barocio Torres, Universidad De Guadalajara
Norma Yareli San Juan Vera, Instituto Politécnico Nacional
Sergio Sánchez Enríquez, Universidad De Guadalajara

RESUMEN

En los últimos años se ha conocido de distintos casos de enriquecimiento de los Servidores Públicos, en la república mexicana sin que hasta el momento alguno de ellos este consignado por alguno de los delitos tipificados en la ley para este caso. Estas situaciones y la no muy definida entrada en vigor de la Ley de Transparencia y Acceso a la Información Pública Gubernamental, dio origen al presente documento el objetivo es efectuar un análisis de ambas leyes, en relación con la declaración patrimonial y su seguimiento posterior a su presentación, lo que de por resultado propuestas de modificación o establecimiento de seguimiento según el resultado que se obtenga de dicho análisis. La ley de Transparencia y Acceso a la Información Pública Gubernamental requiere el compromiso de quienes se consideran sujetos obligados de esta, a que se efectúe en tiempo y forma, el gobierno mexicano ha realizado esfuerzos por que el acceso a la información se convierta en un derecho ciudadano.

PALABRAS CLAVE: Declaración Patrimonial, Funcionario Público, Transparencia.

FINANCIAL DISCLOSURE AS TOOL FOR FOR PUBLIC OFFICE TRANSPARENCY

ABSTRACT

In the last years it has been known in various cases of enrichment of Public Servants, in the Mexican republic without far one of them is inscribed for any of the offenses under the law to this case. These situations not very definite and entry into force of the Law of Transparency and Access to Public Government Information, gave rise to this document the goal is to make an analysis of both laws, in connection with the disclosure of assets and follow after its submission, that results in the proposed amendments or setting up according to the result obtained of this analysis. The Law of Transparency and Access to Public Government Information requires commitment of those who consider themselves obligated of this, to be made in a timely manner, the Mexican government has made efforts that access to information becomes a civil right.

JEL: K40, K49

KEYWORDS: Asset Declaration, Public Officials, Transparency

INTRODUCCIÓN

El antecedente del acceso a la información no es nuevo en México, ya que este inicia con la inquietud de contar con una regulación, sin embargo estas ideas no trascendieron. Actualmente es un concepto relativamente nuevo debido a que es hasta el 11 de junio de 2002 que fue publicada en el Diario Oficial de la Federación (DOF) la Ley Federal de Transparencia y Acceso a la Información Pública

Gubernamental (LFTAIPG) cuando en ese entonces era el presidente de los Estados Unidos Mexicanos el C. Vicente Fox Quesada. Es hasta después de 71 años de gobierno de un mismo partido (Partido Revolucionario Institucional, PRI) y la transición a una nueva ideología política (Partido Acción Nacional, PAN) se buscó un cambio de régimen, políticas y visión que el país llevaría a partir del 2000. Surge en la sociedad mexicana la inquietud, de contar con el acercamiento a lo que hacen las entidades públicas, quieren que se les informe, desean saber en qué se gasta, por lo que diversos sectores de la población se manifiestan exigiendo el tener el derecho de acceso a la información y es así como los ciudadanos comienzan con el planteamiento de las herramientas necesarias para tomar las decisiones sobre el gobierno que requieren, orientándolos a elegir una administración gubernamental que logrará una transparencia y rendición de cuentas como en sexenios anteriores no sucedía. Esta rendición de cuentas comienza en toda la estructura gubernamental y dependencias de gobierno que hasta entonces no se veían obligadas a hacer públicas sus acciones.

Una vez que inicia el interminable aun camino a la rendición de cuentas surge un término que cada vez cobra más presencia e importancia y que además juega un papel muy importante y es el de Servidor Público (SP), haciendo referencia a él debido a que se alude cada vez que se hace mención de algún servicio que tiene que proporcionar el municipio, el estado o la federación, y no es de extrañar que para muchos ciudadanos que habitan en este país hayan considerado echar un vistazo a la Constitución Política de los Estados Unidos Mexicanos, ya que en el Título Cuarto denominado “De las Responsabilidades de los Servidores Públicos y Patrimonial del Estado”, establece:

Para los efectos de las responsabilidades a que alude este Título se reputarán como servidores públicos a los representantes de elección popular, a los miembros del Poder Judicial Federal y del Poder Judicial del Distrito Federal, los funcionarios y empleados, y, en general, a toda persona que desempeñe un empleo, cargo o comisión de cualquier naturaleza en la Administración Pública Federal o en el Distrito Federal, así como a los servidores del Instituto Federal Electoral, quienes serán responsables por los actos u omisiones en que incurran en el desempeño de sus respectivas funciones (Camara de Diputados del H. Congreso de la Unión, 2012)

Por lo expuesto anteriormente es importante conocer que ser SP no significa tener un cargo público sino cumplir con una serie de obligaciones establecidas en las leyes como son la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos (LFRASP), la cual establece, entre otras cosas, las obligaciones que asumen una vez que ostentan la condición de SP, como lo son: *la legalidad, honradez, lealtad, imparcialidad, y eficiencia al desempeñar sus funciones, empleos, cargos y comisiones* (Camara de Diputados H. Congreso de la Unión Legislatura LXII, 2012) también describe el proceso a través del cual se llevará el registro patrimonial de los SP de la Administración Pública Federal.

El registro patrimonial del que se hace mención en LFRASP, deberá manejarse en un documento llamado Declaración Patrimonial (DP), la cual en términos jurídicos es *una manifestación bajo protesta de decir verdad de la información patrimonial que los servidores públicos de la Administración Pública Federal obligados a ello, presentan ante la Secretaría de la Función Pública*. (Secretaría de la Función Pública, s/f). Dicho documento debe ser presentado antes de que el SP, tome posesión de su cargo, y deberá actualizar la información contenida en el, en el mes de mayo de cada año siguiente a la toma de posesión del mismo y del año en el que finalice su gestión.

Por otro lado es importante hacer referencia a La Ley de Transparencia y Acceso a la Información Pública Gubernamental (LTAIPG), la cual juega un papel importante debido a que en ella se encuentra el fundamento de la garantía que tiene toda persona al acceso a la información, además de considerar la importancia que tiene la sociedad de poder contar con esta cada vez que la requiera.

REVISIÓN DE LITERATURA

La Revista Proceso publicó un artículo de Álvaro Delgado titulado “El PAN en el poder paga bien” el cual deja en entre dicho que algunos de los funcionarios públicos antes y después del sexenio encabezado por Felipe Calderón Hinojosa presidente de los Estados Unidos Mexicanos, tuvieron un aumento excesivo en el valor de sus nuevas propiedades, lo que desembocó en una exageración considerable de sus bienes, haciendo que mágicamente su riqueza se duplicara de la noche a la mañana.

Algunos de los más cercanos colaboradores de Felipe Calderón, miembros destacados del PAN, se cansaron de ser clasemedieros y decidieron aprovechar el sexenio para acrecentar sus patrimonios personales, en particular el inmobiliario. Sigilosamente empezaron a mudarse a casas más amplias, más confortables y con muchos más metros cuadrados de construcción, en zonas habitacionales de lujo de la Ciudad de México, como San Angel Inn, Bosques de las Lomas, Polanco, El Pedregal de San Ángel... Tienen un modelo a seguir: Germán Martínez, exsecretario de Estado, exdiputado, expresidente nacional de su partido y actual litigante de un bufete jurídico, vive en una residencia de más de 700 metros cuyo costo sobrepasa los 16 millones de pesos. Fabricante de pobres en su sexenio, Felipe Calderón es también productor de nuevos ricos del Partido Acción Nacional (PAN). (Delgado, 2012)

Conocido lo anterior se considera indispensable plantear los siguientes cuestionamientos:

- ¿Qué papel juega la Ley de Transparencia y Acceso a la Información Pública Gubernamental en los SP?;
- ¿Cumplen los SP, con lo establecido en la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos, respecto a la obligatoriedad de publicación de la declaración patrimonial y su actualización?;
- ¿Establece sanción para el SP al desacato de la ley?
- ¿Debería la LTAIPG establecer sanciones para el incumplimiento del ordenamiento en cuestión?
- ¿Establecen las leyes en cuestión alguna herramienta (auditoría) de comprobación de veracidad de lo incluido en dicha Declaración Patrimonial?

En los últimos años se ha conocido de distintos casos de enriquecimiento de los SP, sin que hasta el momento alguno de ellos este consignado por enriquecimiento ilícito o alguno de los delitos tipificados en la ley para este caso. Estas situaciones y la no muy definida entrada en vigor de la LTAIPG, dio origen al presente documento ya que se pretende hacer un análisis de ambas leyes, en relación con la declaración patrimonial y su seguimiento posterior a su presentación, lo que de por resultado propuestas de modificación o establecimiento de seguimiento según el resultado que se obtenga de dicho análisis.

En la actualidad el acceso a la información realmente se ha convertido en un tema de interés público, donde el gobierno mexicano ha realizado grandes esfuerzos por hacer de esto un derecho de cada ciudadano. En donde cada uno de los sujetos obligados a divulgar y dar a conocer la información que la ley le requiere, se compromete a que se haga en tiempo y forma. Entonces porque no toda la información de un SP, se hace pública. Existe una reglamentación en la que cierta información se encuentre protegida de ser publicada. Que sucede cuando un SP no acepta que se publique cierto tipo de información si se debe a la sociedad y es ella quién lo asigno a un cargo y es a quien le debe rendir cuentas.

Hablar de enriquecimiento ilícito por parte de SP, podría ser un tema demasiado amplio si se quisiera mencionar aquí la cantidad de delitos al respecto, por lo que el presente solo considerara el análisis de la LFRASP y de la LTAIPG en relación con la Declaración Patrimonial la cual será el objeto de estudio.

Conocer que la rendición de cuentas ha funcionado como un verdadero avance a la democracia en México, donde gobernantes y gobernados puedan confiar el uno del otro, o ¿aún existirán causas que impidan que se logre este fin a favor de la sociedad? Se puede definir que el fin de esta declaración patrimonial es *verificar la evolución del patrimonio de los servidores públicos y la congruencia entre sus ingresos lícitos y sus egresos*. (Secretaría de la Función Pública, s/f). Del cual el objetivo es parte de una obligación presente que los SP tienen.

METODOLOGÍA

El análisis aquí propuesto se llevará a cabo por el método descriptivo donde se estudiarán las características más importantes de la declaración patrimonial como herramienta de transparencia de los SP, Junto con el estudio de caso, como método de evaluación de transparencia en la información que un SP revela y hace pública. El estudio de caso como instrumento de investigación funcionará en el presente trabajo como ejemplo de la descripción del objeto de estudio de la transparencia en la DP, análisis de los antecedentes y el desarrollo que la problemática ha seguido. Como segundo punto ayudará al explicar la importancia que tiene el estudio de la DP como rendición de cuentas y fundamentará las posibles mejoras a la normatividad actual de México que regula. De acuerdo a las fuentes de información y al entorno en el que se efectúa el presente análisis se utiliza el método de investigación documental transversal, a la par del método comparativo de la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos y la Ley de Transparencia y Acceso a la Información Pública Gubernamental, con estudio de las partes que cada ley regula sobre la transparencia que deben tener los SP y las posibles discrepancias que pudiesen existir entre hacer pública la información según estas reglamentaciones. Para la presente investigación se realizará una cédula de comparación entre las legislaciones de estudio, en la cual:

Primera columna se hará un vaciado de la totalidad de los artículos de la LFRASP y la LTAIPG;

Segunda y tercera columnas respectivamente se colocará una “X” en caso de que el artículo no aplique o aplique con la DP.

Cuarta columna se colocará la clasificación a la que pertenezca, de los siguientes conceptos:

Reglamentación en general,

Obligaciones de presentar la DP.,

Tiempo de presentación de la DP.,

Formatos de presentación,

Sanciones de incumplimiento de la DP.,

Auditoría a la información presentada en la DP.,

Transparencia y publicación de la información de su DP.,

Realizada la tabla anterior se calcularán estadísticamente la totalidad de los artículos de las leyes antes citadas, los porcentajes que corresponderán a una muestra del universo, que servirán como herramienta de análisis del presente trabajo. Obteniendo información que ayude en la comparación de la legislación actual dando a conocer resultado que sustenten las propuestas de modificaciones a la reglamentación. Es la LFRASP quien en su artículo 8 fracción XV señala que *los servidores públicos tienen la obligación de presentar la DP en el plazo que la ley la solicita, así como comprometiéndose a que se transmitan datos verídicos con la información requerida* (Camara de Diputados H. Congreso de la Unión Legislatura LXII, 2012).

Para el estudio de caso, se realiza el análisis de proceso del contralmirante Martínez Pastelín, quien actualmente desempeña el puesto de jefe de ayudantes en la Secretaría de Marina (SEMAR), con antecedentes de acumulación de bienes, como lo fueron departamentos y vehículos de lujo.

RESULTADOS

En base a sus DP de los últimos 5 años títulos de propiedad de bienes inmuebles, registros vehiculares y declaraciones patrimoniales de Martínez Pastelín, demuestran compras realizadas por él o sus hermanos a partir de ingresos no aclarados por millones de pesos. Se realizó el análisis de las Declaraciones Patrimoniales del Servidor Público del 2005 al 2012. Arrojando los siguientes resultados:

Resultado 1: Un SP debe seguir ciertos principios, entre los cuales la honradez de una manera demuestra que durante el periodo en que un SP cumple sus funciones en el gobierno no debe obtener ningún beneficio o ganancia para su persona o un tercero, además de no aceptar resarcimientos o ayuda alguna de una persona que haga comprometer su criterio o función pública; es entonces donde la DP surge como una herramienta para corroborar la relación ingreso-gasto de un SP en una manera congruente.

Resultado 2: Los ingresos por su cargo público han tenido un aumento en un 186.68% durante el periodo de 2005 a 2010 última declaración patrimonial que el SP Francisco Gerardo Martínez Pastelín, permitió se hiciera pública.

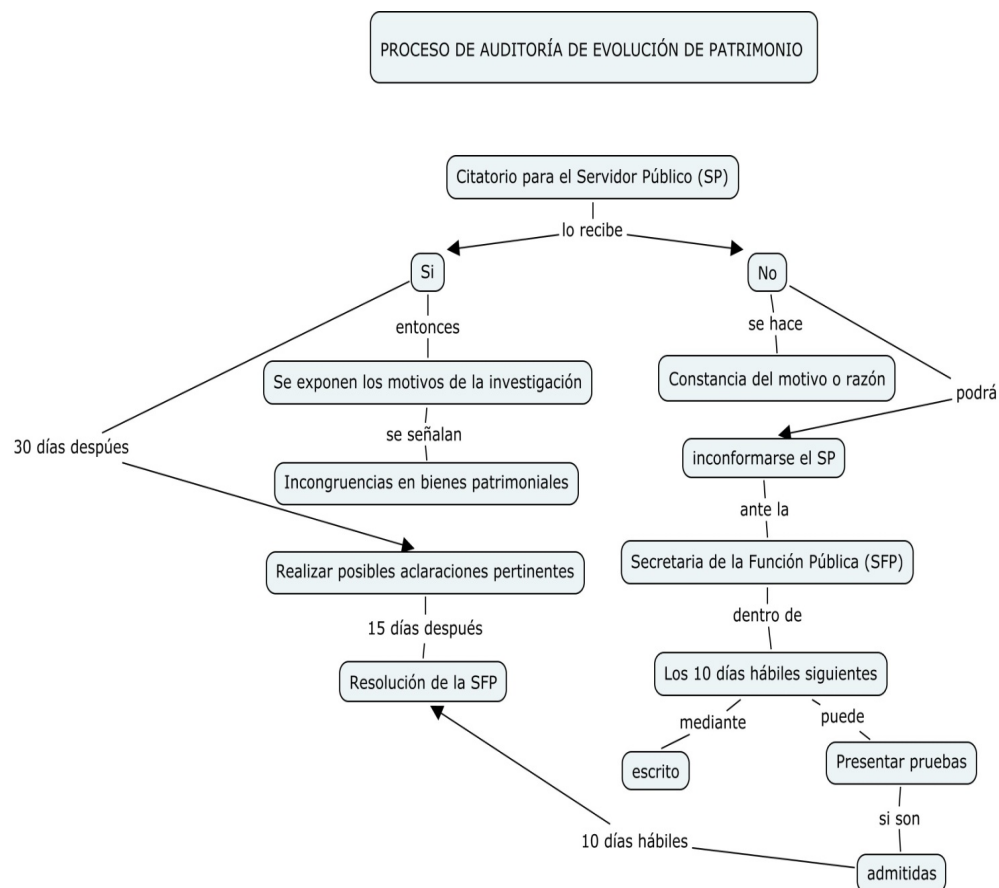

Resultado 3: Sus otros ingresos han tenido un aumento en un 579.13% del periodo comprendido de 2008 a 2010 el último año cuya información del SP, contenida en su DP se hizo pública.

Resultado 4: No obstante que se hizo la investigación documental de la DP del SP Francisco Gerardo Martínez Pastelín, de los años 2011 y 2012, la información no fue pública impidiendo que se pudiera comparar con datos de años anteriores.

RESULTADO 5: El análisis a sus bienes inmuebles de acuerdo a sus Declaraciones Patrimoniales del periodo 2009 y 2010, arroja que el 100% de ellos han sido por donaciones.

Resultado 6: Después del seguimiento documental que se ha realizado al caso, el proceso que la Procuraduría General de la República debió haber comenzado en la Unidad Especializada en Investigación de Delitos Cometidos por Servidores Públicos y contra la Administración de Justicia, adscrita a la Subprocuraduría de Delitos Federales.

TABLA 1: Proceso de Auditoría

Fuente: Propia

Se resuelve que el proceso no ha seguido el transcurso como el que la LFRASP señala en su artículo 42, por el contrario ha quedado como un caso sin consecuencias en la materia civil, ni un proceso legal que juzgue posibles delito o acto de corrupción por parte del SP. En base al análisis comparativo de la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos y la Ley de Transparencia y Acceso a la Información Pública Gubernamental se aportan los siguientes resultados:

Resultado 7: De la totalidad de los artículos de la LFRASP el 51% están relacionados a la Declaración Patrimonial.

Resultado 8: La comparación entre las sanciones de incumplimiento de la DP, y las obligaciones de presentación son de diferencia de un 11%, es decir que hay tres veces más sanciones por cada obligación relacionada a la DP en la LFRASP.

Resultado 9: Del total de los artículos relacionados a la DP (51%) en la LFRASP tan sólo el 12% se relaciona a la auditoría que la autoridad correspondiente puede realizar a la información presentada.

Resultado 10: Dentro de la LFRASP analizada los artículos relacionados a la transparencia y publicación de la información de la DP tuvo un porcentaje nulo.

Resultado 11: Del conjunto de la LTAIPG sólo el 14% son conceptos relacionados a la DP.

Resultado 12: Sólo un 2% de la muestra representa obligación de presentar la DP, tres veces menos comparado a la LFRASP.

CONCLUSIONES

A pesar de que un SP tiene la obligación de proporcionar información específica que la ley le señala como obligatoria, no toda la que esté en posesión estos sujetos es pública debido a que existe cierta sensibilidad de la información, esto quiere decir que el hecho de hacerla del conocimiento de la ciudadanía en general implica que se podría poner en peligro algún interés ya sea para el Estado ó para el particular que la proporciona, que pueden ser de carácter social, económico, político o jurídico, de acuerdo a la clasificación que la ley señala. Sin embargo, esto se ha convertido en un arma de la cual los SP hacen uso para poder protegerse de revelar a sus gobernados o a quienes les deben de prestar un servicio público, el derecho de conocer información sobre sus ingresos, adquisiciones de bienes ya sean muebles o inmuebles.

El costo de esta situación para un país hace reflejar que el avance a la democracia y la real apertura del acceso a la información se ve reducido, debido a que existen un número de clasificaciones o rubros en los cuales muchas situaciones que la ley no prevé son utilizadas como herramienta para proteger una supuesta intimidad de la cual tiene el derecho a ejercer, y que como en el estudio de caso planteado en esta investigación ha comprometido la veracidad que pudiera tener la información contenida en una DP.

En algunas situaciones, la privacidad de un SP se protege por no considerarse un tema de utilidad. No obstante lo que se exige no es conocer sobre su vida íntima, sino con el fin de evaluar su rendimiento y principios necesarios en su cargo. Logrando una verdadera evaluación objetiva del SP. Sin embargo mientras más alto sea el rango, más creen que deben de proteger sin lograr el objetivo principal del acceso a la información, no consiguiendo que el ciudadano pueda integrar su derecho.

Lo que la presente investigación hace reflejar es que a pesar de que ya está legislado el acceso a la información aún existen restricciones que no hace que este derecho sea completamente llevado a la práctica, lo que se recomienda a la autoridad competente es el reducir la privacidad, legislando de tal manera en que dentro de la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos existan los conceptos y/o casos específicos de Transparencia Y Publicación de la Declaración Patrimonial de un SP.

RENDICIÓN DE CUENTAS EN LA INCAUTACIÓN DE BIENES EN MÉXICO

Diego Soria Ortiz, Universidad Autónoma De Sinaloa
Mónica Marsela López García, Universidad De Guadalajara
Rigoberto Reyes Altamirano, Universidad De Guadalajara

RESUMEN

Desde que inicio el mandato del Lic. Felipe Calderón Hinojosa, como presidente de los Estados Unidos Mexicanos, uno de sus objetivos fue enfrentar a la delincuencia organizada de manera frontal, estableciendo distintos métodos para reducir la inseguridad, motivo de esto es la incautación de bienes que se hace a narcotraficantes en la mayoría de las detenciones, pero ¿cuál es el destino que estos tienen? El proceso se puede ejecutar de dos formas, una de ellas puede ser por parte de las autoridades administrativas federales y la otra mediante la Ley de Extinción del Dominio (LED), dictaminada por un juez, debido a la poca claridad en la información presentada al respecto es objetivo del presente documento efectuar el seguimiento de una incautación de bienes en su totalidad, en donde se haga la aplicación de la ley, se conozca que autoridades intervienen en dicho proceso, conocer la dictaminación correspondiente, así como la información que es presentada a la sociedad motivo del proceso. El resultado que se obtenga será utilizado para la propuesta ya sea de modificación de ley respectiva, propuestas de corrección a la forma operativa actual o corrección en las estructuras de los entes que intervienen en el proceso.

PALABRAS CLAVE: Incautación de bienes, transparencia, rendición de cuentas.

ACCOUNTABILITY IN THE SEIZURE OF PROPERTY IN MEXICO

ABSTRACT

Since beginning the mandate of Mr. Felipe Calderon Hinojosa, as President of the United Mexican States, one of its objectives was to confront organized crime head-on, setting different methods to reduce uncertainty, reason for this is the seizure of property that is done in most drug arrests, but what is the fate that they have? The process can be run in two ways; one of them can be by federal administrative authorities and the other by the Dominion Act Extinction (DAE), issued by a judge due to the lack of clarity in the information presented about purpose of this paper is a follow up seizure of property fully, where then the enforcement, known to authorities involved in the process, knowing the corresponding dictamination, and the information that is presented to society reason for the process. The result obtained will be used for the proposed modification either relevant law suggested corrections to the current operably structures or correction in the structures of the entities involved in the process.

JEL: H83, K14

KEYWORDS: Seizure of assets, transparency, accountability.

INTRODUCCIÓN

El Gobierno Federal ha establecido distintos métodos para reducir la inseguridad que el país ha experimentado a lo largo de los gobiernos. Las líneas del narcotráfico han tomado en la última década mayor fuerza debido a la corrupción de funcionarios públicos, lo que imposibilita la efectividad de estrategias para combatirlo, una de las principales herramientas que ha utilizado el poder de la República,

para detener al crimen organizado es la incautación de los bienes, producto del delito, que son utilizadas para desempeñar actividades ilícitas. Los cambios constantes en las acepciones de delincuencia han propiciado que se proporcione un concepto distinto que define a la delincuencia organizada como:

Cuando con el transcurso del tiempo la delincuencia "común", llega a tal extremo de "evolución" o "perfeccionamiento"; cuando rebasa los límites de control gubernamental; cuando establece líneas especiales de operación basadas en un sistema complejo, tipo empresarial, bien estructurado en su comisión; cuando persigue a través de determinadas acciones violentas la búsqueda del poder, ya sea político, económico o social, es cuando podemos decir, sin lugar a dudas, que estamos frente a un caso de delincuencia organizada.(Procuraduría General de la República, 2012)

Por lo que la actividad de los criminales en las células de narcotráfico son: controlar un territorio extenso, considerado como mercado de distribución para administrar sectores de consumo del material penado. Al incurrir en esta práctica ilegal, la Ley de Adquisiciones, Arrendamientos y Servicios del Sector Público (LAASSP) de acuerdo al Artículo 71 establece que:

La autoridad que conozca de la inconformidad la examinara y si encontrare motivo manifiesto de improcedencia, la desechara de plano(Legislatura, 2012)

Además es la misma autoridad quien tiene la obligación de hacer una investigación exhaustiva de la procedencia de los bienes, y en caso de encontrar anomalías, los bienes serán retenidos, caso contrario por falta de pruebas se procede a dejar sin efecto la ley. Ahora bien existen organismos para regular la transparencia que manejan los entes públicos en las actividades que realizan, como lo es el Instituto Federal de Acceso a la Información (IFAI), por medio del cual se dan a conocer las transacciones que el gobierno realiza en la materia. Cabe señalar que los organismos públicos deben ser transparentes en actividades ejecutorias de su índole, pero son ineficientes en materia de transparencia por falta de una adecuada regulación al respecto. En la sociedad contemporánea los ciudadanos tienen derecho a conocer el destino de los bienes al ser incautados, así como el fin que elige el gobierno para cada uno de ellos, otro aspecto relevante es el destino del recurso financiero obtenido por la venta de estos. La sociedad exige una rendición de cuentas confiable y veraz por parte del gobierno, sin burocratización, para la resolución de un derecho de petición para dar lugar al desarrollo de dichas ejecuciones, así como también dar a conocer el proceso referente de la situación legal de cada etapa de investigación.

Las medidas han sido tomadas y ejecutadas parcialmente, debido a que existen opiniones encontradas de la sociedad en relación con la supuesta existencia de burócratas coludidos con el narco, lo que hace ineficaz el cumplimiento de medidas establecidas por la autoridad en sus distintos niveles de Gobierno como lo son Municipales, Estatales y Federales. La incautación de bienes es la herramienta principal para retener y privar a los delincuentes de los bienes que tienen en su poder, mediante un proceso y averiguación por parte del Estado. El proceso se puede ejecutar de dos formas, una de ellas puede ser por parte de las autoridades administrativas federales y la otra mediante la Ley de Extinción del Dominio (LED), dictaminada por un juez. El tribunal es el encargado de definir en qué casos la autoridad administrativa puede hacer la incautación de bienes y el procedimiento que debe seguir para hacerlo mediante la función del Estado, siendo la Procuraduría General de la República (PGR) la que tiene la facultad de privar a los narcotraficantes del uso o goce de los bienes ilícitos, para cederlos a la Secretaría de Administración y Enajenación de Bienes (SAE). El resultado deseado es analizar y corregir la ineficacia de los organismos de divulgación de información al presentar de manera restringida los datos en las operaciones de incautación, además de la autorregulación en los organismos donde ellos se autoevalúan y de proponer métodos de regulación en las leyes vigentes. Ya que así lo marca la Ley de Transparencia y Acceso a la Información Pública Gubernamental (LFTAIPG). La democracia participativa se ha tornado como un dilema en los gobiernos desde épocas pasadas, donde efectivamente

no se logra concretar en su totalidad, según críticas sociales, los individuos al exigir el cumplimiento de la democracia, hacen referencia a la transparencia que conlleva la veracidad de los hechos.

Por otro lado el estado de derecho tiene como finalidad regular las relaciones entre los gobiernos y la sociedad gobernada, además de dirigir, calificar y controlar las actuaciones públicas donde el estado delimita el poder de influencia y ejerce los derechos al cual es acreedor y la sociedad respeta el poder facultado de la institución pero sabe ejercer lo que este compete. La transparencia está inmersa en el Estado de Derecho, para que puedan existir las regulaciones adecuadas para propiciar una rendición de cuentas efectiva, esta pretende comprender dos puntos que son la razón principal: el poder público y proteger los derechos del hombre(Cossio, 2008)

Los analistas suponen que de manera implícita y explícita la transparencia conlleva a la rendición de cuentas. La transparencia del estado y la privacidad del ciudadano constituyen dos caras de la misma moneda. Evocar el poder de la luz solar parece muy intuitivo y convincente. Sin embargo la evidencia empírica en que podría fundarse la supuesta identidad entre transparencia y rendición de cuentas no la demuestra. Este supuesto confunde lo normativo.

Con respecto a la transparencia las reflexiones conceptuales respectivas provienen de una investigación empírica realizada en los ámbitos nacional e internacional acerca de varias reformas a favor del derecho a la información pública. La investigación consiste en no utilizar herramientas prácticas para sus impactos en el comportamiento entre instituciones públicas y compararlos entre ellos. Pero el fin común entre ambas es de la divulgación de información acerca del órgano gubernamental.

Cuando se hace referencia al acceso público a la información acerca del desempeño del estado, los instrumentos generalmente siguen dos caminos principales: la difusión proactiva y la divulgación responsiva. La primera se refiere al acceso a un nivel mínimo de divulgación acerca de las funciones y desempeño. Mientras la divulgación responsiva se refiere a un compromiso institucional que responde a demandas ciudadanas específicas que solicitan cierta documentación que, por otra parte, generalmente no se difunde. (Fox, 2008)

Los organismos que son evaluados están obligados a presentar en internet la información para que sea divulgada de manera adecuada y sean transparentes en la rendición de cuentas. Cabe señalar que algunos no la presentan de tal manera. Además de que existe información que no ha sido revelada pero que se encuentra a disposición del público cuando este lo solicite de acuerdo con los requerimientos de la institución a la que se le requiera. Después de la cuestión de la disponibilidad vienen los programas sobre la confiabilidad de la nueva vertiente de evaluaciones externas, dichas evaluaciones son comisionadas por los mismos organismos y ellos determinan la metodología a utilizar para lograr la función, lo cual se traduce como la falta de divulgación de información por parte de los entes debido a que desempeñan actividades de índole sensible para su presentación. Las actividades de evaluación no se deben autoevaluar, sino que existe un consejo que se encarga de ellos llamado, Consejo Nacional para la Evaluación. Las agencias gubernamentales especializadas en ello, se encargan de inspeccionar, fiscalizar y verificar, reclamos de actores sociales o civiles externos a las instituciones. Algunas agencias solo se encargan de revelar la información dentro del mismo organismo en función de la estructura del organigrama corporativo, es decir, dejan la información recabada a disposición de la gerencia para que presente la información convenientemente y no le cause problemas.

Las comisiones gubernamentales de los derechos humanos cuyos impactos tangibles en término de rendición de cuentas no son medibles, dada la imprecisión en torno a la relación entre la frecuencia y las violaciones, la representatividad de quejas. La consistencia de las recomendaciones oficiales y la calidad de las respuestas institucionales. Una agencia a pesar de ser buena las actividades que le dan origen, tiene

deficiencias debido a la falta de planeación así como escasas de personal con conocimientos técnicos y específicos, el cual recurrentemente no presta la atención necesaria a los ciudadanos para que disfruten de los servicios que la misma les brinda, en consecuencia existen demasiadas quejas y denuncias por incumplimiento ciudadano. Se puede afirmar entonces que la transparencia es utilizada para evitar la corrupción y hacer efectiva la rendición de cuentas, mediante la intervención de dos partes una que reforma y la otra que fiscaliza, aunque en algunos casos la información suele ser manipulada por las sinergias que existen entre ambas partes y con mutuo consentimiento se da a conocer la información conveniente para los dos criterios. Por lo anteriormente expuesto y debido a la poca claridad en la información presentada al respecto es objetivo del presente documento efectuar el seguimiento de una incautación de bienes, en su totalidad, en donde se haga la aplicación de la ley, se conozca que autoridades intervienen en dicho proceso, conocer la dictaminación correspondiente, así como la información que es presentada a la sociedad motivo del proceso. El resultado que se obtenga será utilizado para la propuesta ya sea de modificación de ley respectiva, propuestas de corrección a la forma operativa actual o corrección en las estructuras de los entes que intervienen en el proceso.

MÉTODOS Y MATERIALES

Para dar elaboración al artículo es necesario señalar los métodos que se emplean para llegar al resultado. En primer término se emplean la investigación documental debido a la naturaleza de la investigación, además se utiliza el análisis de caso para analizar detalladamente la noticia que se selecciona, además se emplea la investigación descriptiva y comparativa, por último se utiliza el análisis de contenido para detallar el objeto de estudio que conviene. Para efecto de llevar a cabo el seguimiento aquí propuesto se ha seleccionado una nota informativa acerca de un caso en particular. En la que se hará un análisis de caso para dar un seguimiento aplicado de la LFTAIPG y de la LFAEBSP. La nota tiene el nombre de: "Revelan dialogo al parecer de juez y alcalde para repartir bienes incautados" que consiste en la presunta divulgación de una conversación entre dirigentes del gobierno de Zapopan, Jalisco, pero se señala a otra persona que participa en la conversación que es un candidato a la alcaldía, por parte del Partido Revolucionario Institucional (PRI), además señala que intervino un magistrado aun no identificado, por otra parte en la conversación involucran al entonces al jefe policial.

Mientras en la segunda conversación se dan instrucciones por parte del magistrado para hacer la privación de los bienes propiedad del Chapo Guzmán. Al exjefe policial fue detenido en el 2011 por manejar una camioneta blindada que había sido robada, donde resultó baleado junto con su hermano. (Terra, 2012) Es por ello que el gobierno mediante el análisis de la gran inseguridad que el país ha experimentado, implementa la transparencia como herramienta para rendir cuentas ante la sociedad por la facultad que a él concierne. Debido a que es de gran necesidad analizar la LFTAIPG y LFAEBSP ya que se encuentran grandes fallas para la manera de divulgar la información, además de que en algunos casos la incautación se hace errónea, de tal manera se hace una descripción y comprensión de las leyes señaladas.

El procedimiento requerido para estructurar el análisis de contenido del objeto de estudio, consta de varios etapas secuenciales, que son en primer lugar: seleccionar los artículos de la LFTAIPG que tengan relación con el objeto de estudio, dicho análisis se forma mediante la creación de un cuadro donde se establecen comparaciones entre lo que la ley obliga y los resultados del gobierno ante esto, en materia de transparencia, después se analizará la LFAEBSP en otra tabla y se retomarán los artículos correspondientes en materia de incautación, para ser analizados de acuerdo al proceso que las autoridades federales siguen al hacer un decomiso. Al final se creará una cédula informativa que en base a las dos anteriores leyes, emitirá un resultado de las evasiones del gobierno en las mismas, así como proporcionar una opinión objetiva del caso. El proceso mediante el cual se efectuara el estudio consiste en el diseño de una cedula en donde se analizan y determinan los artículos de la LFTAIPG que se pueden aplicar de acuerdo al objeto de estudio, además de explicar el contenido respectivamente. Esta estructura constará de cuatro columnas que a continuación se detallan:

Columna 1: En esta columna se plasman los artículos de la ley en cuestión.

Columna 2: En la siguiente se relacionara la aplicabilidad total de lo que el artículo rige, a manera que se establece en tres niveles de determinación, es decir, entre mayor relación contenga a la presentación de información se considera como total, si la relación es tenue se considera parcial, por último, en caso de reflejar información de nula trascendencia se considera como nulo.

Columna 3: En esta se establece el contenido del artículo que ha sido elegido para aplicarse de acuerdo a la incautación de bienes.

Columna 4: Por último en este apartado se explicará de manera breve la forma en la que algunas autoridades han presentado la información o actúan incongruentemente a manera que se retomará en el apartado de resultados.

Los criterios básicos para filtrar los artículos de esta ley, son en base a la referencia que estos presenten en la información, de acuerdo al cumplimiento y relación con la incautación de bienes, de tal manera se aplican los correspondientes, a medida que solo se describan los que están relacionados. En la siguiente cedula se describe la LFAEBSP donde se hace un análisis de contenido para aprobar los artículos que sean convenientes en el seguimiento del caso y que sean aplicables, el primer paso es aprobar los artículos correspondientes mediante la comprensión de todas las divisiones de esta ley, después se procede clasificarlos de acuerdo a las regulaciones que se establecen en la ley para determinar más adelante la amplitud o carencia que cada rubro controla y hace mención, con el fin de hacer especulaciones de las posibles fallas. Para su elaboración constará de cuatro columnas que se describen a continuación:

Columna 1: Se anotan todos los artículos correspondientes a esta ley para ser clasificados y aprobados, o de manera contraria serán desaprobados

Columna 2: En la siguiente se designa la clasificación de cada uno de acuerdo a lo establecido en la ley.

Columna 3: En esta serán plasmados los que sean aprobados, lo anterior haciendo uso de los índices de auditoría

Columna 4: En la cuarta y última columna al igual que en la anterior haciendo uso de los índices, se descartan los que no sean aplicables de acuerdo al objeto de estudio.

Una vez completado el proceso de comparación y análisis de las leyes en ambas tablas, se hace una cédula para señalar los actos omitidos del Gobierno al realizar la incautación de los bienes, mediante la supuesta corrupción entre algunos órganos burocráticos que dan servicio a la sociedad, para efecto de solucionar el problema que agrava y dificulta llevar a cabo dicha actividad, esta consta de dos partes: La primera de ellas será describir las ocasiones en que la autoridad incurre en la omisión de lo que establece la LFTAIPG, de tal manera que se proporcionará un resultado en la misma cedula, que dará opción a mejorar la técnica de llevar a cabo dicho proceso En la segunda parte se describirán de manera general las omisiones de la autoridad encargada de hacer el decomiso de acuerdo a lo que señala la LFAEBSP. Por último, el resultado final se asignará en la parte inferior del documento en la que de manera general se emitirá una opinión objetiva del análisis del caso, ya que se hace un señalamiento de posible corrupción en los órganos internos del gobierno. Esto con el fin de resolver paradigmas del caso.

RESULTADOS

Los resultados se presentan de acuerdo al análisis de cada tabla y gráfica complementaria elaborada, que contienen la razón de la investigación, además son necesarias para darle interpretación a la ley correspondiente. Por lo que dichos resultados se presentan mediante la numeración de cada uno en base a los criterios, de manera que se presentaran primero la información contenida en los cuadros y por último la información de las gráficas. Para dar comienzo a la presentación de resultados primero se interpretan los datos obtenidos en la LFTAIPG al realizar el análisis correspondiente

1. Del la totalidad de los 64 artículos de la ley, solamente son aplicables de acuerdo a nuestro objeto de estudio 3 de ellos que se sitúan en la primera columna de la tabla.
2. La falta de artículos relacionados en materia de transparencia son realmente insuficientes por lo que se imposibilita la efectividad de las autoridades al presentar información.
3. Debido a la carencia de los artículos las autoridades correspondientes incurren en omisiones a dicha ley.
4. De acuerdo a la tabla elaborada solamente se presentan los tres artículos seleccionados presentan información parcial sobre el tema que respecta a la incautación de bienes. Por lo que hacen referencia a la disposición general de la incautación de bienes y no están relacionados intrínsecamente.
5. La última columna refleja el actuar de las autoridades en la manera de presentar dichas disposiciones de la ley. En función al análisis de caso hecho previamente realizado, del caso seleccionado se interpreta que el gobierno realmente no presenta información suficiente para comprobar que realmente se es eficaz en la transparencia.
6. En la grafica elaborada de dicha ley se puede apreciar que solo el 4.69% son aplicados parcialmente y el resto 95.31% no se aplican por la discrepancia que existen en cuanto al enfoque seleccionado.

La tabla número 1 de la LFTAIPG refleja de acuerdo a su contenido, la falta de artículos en materia de transparencia relacionada con la incautación de bienes, además que son de aplicación general o parcial al proceso que conviene estudiar y de acuerdo al caso que se analiza, la aplicación de la transparencia no es visible ya que se habla de una posible repartición de bienes entre distintos poderes por la línea de la corrupción. En base a la tabla número 2, donde se analiza la LFAEBSP, se obtienen los siguientes resultados de la selección y clasificación de los artículos que pueden ser aplicados al caso seleccionado. Para presentar los resultados se asigna una letra del alfabeto para darle secuencia a la presentación de información.

- a) En la tabla correspondiente en la primer columna se conglomeran los artículos que pueden ser aplicados, siendo un total de 40 articulos aplicados
- b) equivalente al 44.44% el cual es una cifra importante en la aplicación de los mismos ya que pueden existir menos lagunas en dicha ley
- c) El porcentaje más elevado recolectado en las tablas y en gráficas, son los artículos que no aplicados de acuerdo a la desaprobación en la LFAEBSP siendo 53.33% que equivale a 48 artículos. Cifra que no es muy notoria con respecto a los aplicados.

- d) Mientras que el 2.22% son los que ya están derogados en la ley correspondiente por lo tanto restan la aplicación y el porcentaje es correspondiente solo a dos artículos, lo que hace la reducción de artículos, ya que se encuentran concentrados en algunos apartados correspondientes de cada artículo.
- e) De acuerdo a la gráfica 1 de los artículos aplicados se encuentra los siguientes porcentajes:
1. Disposiciones generales 2.22%
 2. De la administración de bienes 14.44%
 3. De la devolución de bienes en administración 3.33%
 4. De los procedimientos de enajenación 1.11%
 5. De la asignación y donación 2.22%
 6. De la venta 2.22%
 7. De Licitación pública 2.22%
 8. De la subasta 1.11%
 9. Del remate 2.22%
 10. De adjudicación directa 1.11%
 11. De la devolución de bienes 5.55%
 12. Del SAE 5.55%

Además en la gráfica número 2 se obtienen los artículos que no son desaprobados al caso, obteniéndose los siguientes resultados.

1. Disposiciones generales 2.22%
2. De la administración de bienes 6.66%
3. De la devolución de bienes en administración 3.33%
4. De los procedimientos de enajenación 2.22%
5. De la venta 4.44%
6. De Licitación pública 6.66%
7. De la subasta 2.22%
8. Del remate 12.22%
9. De la devolución de bienes 2.22%
10. Del SAE 11.11%

Una vez analizado los procedimientos de cada tabla y gráfico descrito en la actividad lo siguiente es la interpretación de la cédula, la cual brinda un informe general de las incurrencias de las autoridades en el proceso de incautar bienes, dado que se encuentran grandes disfuncionalidades en materia de transparencia y de incautación. En la primera parte de la cédula se concentran todas las omisiones que en base al caso seleccionado presentó el gobierno burocrático, que como son significativas y no se debería incurrir en ellas. A continuación se muestran algunas de las omisiones encontradas por parte de la autoridad en cuanto a la presentación de información.

En primer término no se informó al SAE de las actividades que se realizan, por lo que la transparencia se ve afectada por los organismos que supuestamente son corruptos, además a la sociedad no se le presenta la información completa de la incautación de bienes que fue realizada en el periodo, los montos de dinero encontrados en la propiedad no son revelados por lo que se puede interpretar como repartición de efectivo entre los encargados de la realización del decomiso, por otro lado las averiguaciones previas no son

presentadas. Las personas que conforman la sociedad tienen derecho de exigir a su gobierno la rendición de cuentas pero se ve afectada por indisposición de las autoridades al exigirla.

Por otra parte de acuerdo a la LFAEBSP la forma de administrar los bienes por parte de las autoridades correspondientes es totalmente errónea ya que estos mismos son los que se encargan de repartirlos para beneficio propio y no social como está establecido, por lo que se acusa de corrupción entre los órganos facultados para hacerlo. En el caso se hace mención a la intervención de las autoridades municipales las cuales no tienen la facultad ya que intervienen los poderes federales correspondientes para hacerlo, es posible que intervengan autoridades que no son facultadas para realizar dicha actividad pero debe existir un documento comprobatorio y elaborado con previa anticipación para tener el poder de hacerlo, el cual no se encuentra por lo que hace una omisión a la LFTAIPG.

En el último apartado de la cédula se provee una resolución parcial al caso que engloba aspectos de intervención de las autoridades correspondientes para hacer el decomiso, una administración adecuada de los bienes que están en averiguación, uso o goce correcto de los mismos, lo cual conlleva a que se presente la información a la sociedad que lo exige de lo que se destina a cada bien, es decir, presentar una rendición de cuentas de las actividades de las autoridades para evitar caer en corrupción, al mismo tiempo de ser presentada la información el gobierno está en actos de transparencia.

CONCLUSIÓN

El Gobierno a través del tiempo ha presenciado grandes cambios estructurales de manera interna y externa, debido al crecimiento de las necesidades de la población, la nueva reorganización se concentra en la burocracia ineludible, es decir, han cambiado de manera vertiginosa las actividades que realizan los funcionarios públicos, y de acuerdo a modelos estructuralistas cada actividad la han simplificado de manera que sigue un proceso sistemático para obtener atención Gubernamental. Los Gobiernos son representativos sociales y órganos de función, que establecen un correcto orden en la sociedad y satisfacen las demandas de los gobernados de manera democrática igualitaria, ante la sociedad civil.

El sistema de autoridad por parte del gobierno se ve severamente influenciado y afectado por la burocracia existente en el, ya que imposibilita la resolución de actos que están penados por la ley, debido a la ineficacia de los organismos, el tiempo de respuesta para cada acción se ve aplazado y de importancia mínima. Dentro de la misma entidad en base a la burocracia, la estructura es de suma importancia para la rendición de cuentas y transparencia, ya que depende de las autoridades funcionales para presentar información correctamente y dicha información debe ser aprobada para su divulgación en los distintos medios. Por ello el estado de derecho propone regular la participación entre el gobierno y la sociedad que es gobernada, por lo que se debe respetar el poder que ha sido otorgado a la autoridad y la facultad que tiene para hacer las actividades sobre la voluntad. Por otro lado la transparencia está inmersa en dicha facultad que el estado posee y que debe respetar para el cumplimiento con la sociedad.

Dentro de esto surgen dos vertientes donde se concentra el problema que enfrenta el gobierno al presentar información la primera es la burocracia ineludible en el organismo facultado, que está intrínsecamente relacionado con la funcionalidad del organismo, el personal que labora dentro del mismo y como base fundamental la estructura orgánica, dichos factores siguen un proceso sistemático ya que por la inadecuada funcionalidad de uno se dañan los siguientes. El personal que labora es de suma importancia debido a que debe ser adaptado al puesto y conocer la entidad para la que presta su servicio con el conocimiento previo puede exigir los derechos que a él convengan y uno de ellos es exigir información a la organización ya que se suele presentar transparencia interna, es decir, solo se rinde cuentas dentro de la organización. Por otra parte la falta de artículos relacionados con la transparencia en la incautación es realmente un grave problema. Debido a dicha escasez se originan grandes lagunas en el gobierno porque lo que no da un cumplimiento total a lo que se exige en la ley, además que solo lo hace de manera parcial

o manipulada por los medios encargados de divulgarlo. La LFTAIPG tiene como fin que la rendición de cuentas se presente adecuadamente, ya que la sociedad debe saber lo que su gobierno realiza y la manera en que lo hace, pero en primera instancia existe un gran problema que es la corrupción en algunos sectores de la autoridad, hecho que daña la transparencia. Por lo que es conveniente hacer una reforma a dicha ley para que pueda existir una congruencia entre gobierno y sociedad.

El problema de la burocracia se agrava constantemente por vínculos que existen entre las divisiones y no existen muchos remedios tangibles considerados que se puedan realizar para evadir o disminuir esta, por lo que es conveniente estudiar a fondo dicha ley para descubrir las grandes fallas que presenta en relación a decomiso de bienes. Con dicha reestructuración es posible lograr un cambio tanto al exterior como al interior del organismo, de tal manera que se establezca una democracia cooperativa entre el gobierno y sociedad para efecto de evitar la autorregulación.

GESTIÓN DE CERTIFICACIÓN DE CALIDAD COMO FACTOR DE COMPETITIVIDAD EN EL SECTOR INDUSTRIAL DE MANUFACTURA, EN LA REGIÓN TRANSFRONTERIZA CD. JUÁREZ, CHIHUAHUA, MÉXICO-EL PASO, TEXAS, USA

Francisco Bribiescas Silva, Universidad Autónoma de Ciudad Juárez
Ignacio Francisco Romero Magaña, Universidad Autónoma de Ciudad Juárez

RESUMEN

La competitividad en las organizaciones hoy en día se basa de una manera importante en la calidad de sus productos o servicios que ofrecen al consumidor final (el público en general). Es por eso que este trabajo se enfoca en la administración de las certificaciones de calidad especialmente en el sector de la Industria Manufacturera en la región Ciudad Juárez, Chihuahua, México-El Paso, Texas, USA. Las certificaciones que se analizarán son el ISO-9000 y TS-16949 que son las que se utilizan primordialmente en la Industria Automotriz. La investigación incluirá la revisión de la planeación estratégica, el liderazgo directivo en calidad, la participación del recurso humano, la educación en calidad del recurso humano, las compensaciones con enfoque de calidad, el enfoque al cliente, la documentación y evaluación del sistema de calidad y la falta de estrategias de planeación en las organizaciones. Se tomarán en cuenta las diferentes opiniones de expertos en la materia, en el uso de herramientas para incrementar la competitividad, por medio de la certificación del sistema de gestión de la calidad en las organizaciones. Se propone una estrategia que nos permita analizar en qué medida la adopción de un Sistema de Gestión de la Calidad tiene efecto sobre la capacidad competitiva y el rendimiento de dos empresas que serán comparadas en este trabajo. Se espera que los resultados de esta investigación muestren el comportamiento de los diferentes departamentos de la organización en lo que se refiere al uso de las certificaciones de calidad. Basados en los resultados se propondrá, si fuera necesario, el uso de algunas medidas que permitan la eficientización de los procesos de certificación, así como la implementación de un sistema de calidad que permita a la organización ser competitiva.

KEYWORDS: Certificaciones, competitividad, sector manufactura industrial

QUALITY MANAGEMENT CERTIFICATION AS A COMPETITIVE FACTOR IN THE INDUSTRIAL MANUFACTURING AREA IN THE JUÁREZ, CHIHUAHUA, MÉXICO-EL PASO, TEXAS USA REGION

ABSTRACT

Nowadays competitiveness in the organizations is based, in a significant way, in the quality of the products or services that they offer to the end customer. It is for this reason that this paper focuses in the management of quality certifications, especially in the Manufacturing Industry area in the region of the city of Juárez, Chihuahua, Mexico-El Paso, Texas, USA. The quality certifications that will be analyzed are ISO-9000 and TS-16949, which are the ones that are used primarily in the Automotive Industry. This research will include the revision of the strategic planning, the top management leadership in quality, the involvement of the human resource, the quality training of the human resource, the compensations focused on quality, the client focus, the documentation and evaluation of the quality system and the lack of planning strategies in the organizations. We will consider the different opinions of the experts in the field and in the use of quality tools to increase competitiveness by means of certification of the quality

management system in the organizations. We also propose a strategy that will let us analyze to what degree the adoption of a Quality Management System has an effect over the competitive capacity and the performance of two firms that will be compared in this paper. It is expected that the results of this research show the behavior of the different departments of the organization with respect to the use of quality certifications. Based on these results we will suggest, if it is necessary, the use of some measures that will permit the efficiency of the certification processes, as well as, the implementation of a quality system that will allow the organization to be competitive.

KEYWORDS: Certifications, competitiveness, industrial manufacturing area

INTRODUCCIÓN

Como en la mayor parte del mundo, en México la globalización ha generado no solo cambios en la economía, sino también en el comportamiento de los mercados. Al contar con los clientes con mayores opciones de compra se vuelven más selectivos y buscan obtener el mejor producto, con las mejores condiciones y el mejor trato. Las empresas manufactureras han adoptado una perspectiva global en sus actividades de manufactura basándose en los principios de producción flexible realizando alianzas para acceder a nuevos mercados, algunos factores identificados para definir los cambios en eficiencia y competitividad de las empresas de autopartes son:

- Calidad. El 100% de estas empresas cuenta con algún tipo de certificación de calidad como son ISO9000 y TS 16949 que es la certificación específica de la industria automotriz en Norteamérica.
- Sistemas JIT. El sistema tiene muchos matices y opera según las necesidades.
- Incremento en la escala de producción.
- La automatización de la producción e investigación y desarrollo tecnológico
- Capacitación de la mano de obra.

Este sector manufacturero ha evolucionado paralelamente a las necesidades del cliente porque sabe que el servicio al cliente, constituye una nueva forma de competitividad siendo la calidad en el servicio una variable crítica para poder competir en el mercado, esta se ha considerado como uno de los asuntos más importantes en el mundo de los negocios en la actualidad. El objetivo es cumplir los requerimientos del cliente y cerciorarse de que todos los procesos de la organización contribuyan a satisfacer sus necesidades. Si los clientes están satisfechos con el producto y los estándares de servicio obtenidos, el cliente regresará una y otra vez. Para ser competitivo en el mundo actual hay que brindar bienes y servicios de alta calidad. Ciudad Juárez es una de las localidades de mayor dinamismo económico en la frontera norte de México y es sin duda la ciudad de mayor actividad económica en el estado de Chihuahua. (Carrillo, Miker y Morales, 2001) Los problemas que enfrenta este sector de la industria superan en complejidad a otras ramas por la combinación de tres factores:

gran número de componentes, alto volumen de producción y altos estándares de calidad. La industria ha generado una variedad de estilos de organización para responder a esta complejidad, entre las que destacan tres elementos para la estructuración y simplificación de la cadena productiva: la Agrupación de componentes en sistemas, que se utiliza para clasificar a los componentes. Existen algunas investigaciones en las que se busca indicar e identificar cuáles son los factores que afectan la implementación y funcionamiento correcto de las estrategias de calidad. Tales investigaciones siguen una estructura sistemática y se busca realizar análisis y mediciones en las que se mencionan diferentes problemas tales como: La planeación estratégica, El liderazgo directivo en calidad, La participación del recurso humano, La educación en calidad del recurso humano, Las compensaciones con enfoque de calidad, El enfoque al cliente, La documentación y evaluación del sistema de calidad y La falta de estrategias de planeación. El contar con un sistema de calidad para cumplir los requerimientos del mercado y no como una herramienta que ayude a mejorar la productividad o competitividad tampoco es

una opción adecuada. Las experiencias de países como Brasil o Argentina, que cuentan con industrias que han hecho el esfuerzo de certificarse y que han caído ante la competencia, demuestran que la obtención de una certificación ISO 9000 no es el remedio. Esto ocurre porque la implementación de un sistema de calidad, se debe usar como una herramienta para minimizar los errores de producción.

El contar con procedimientos e instructivos de trabajo, con proveedores calificados, con un buen sistema de compra y con acciones correctivas, permite evitar la pérdida de materiales, tiempos muertos, multas por atrasos y otros costos que además, pueden impedir que los ejecutivos puedan conocer efectivamente, cual es su costo de producción. Lo que más dificulta el trabajo, una vez que se ha tomado la decisión de implementar un sistema de calidad, es definir lo que queremos hacer. Esto normalmente origina un exceso de documentos que crean trámites, formularios y firmas innecesarias que finalmente demeritan el sistema ante los usuarios, convirtiéndolos en los primeros en estar en contra del cambio.

Planteamiento Del Problema.

En la literatura sobre la importancia de un Sistema de Gestión de Calidad (SGC) se exponen problemas típicos y complejos tales como, una cultura laboral con bajo nivel de enfoque hacia el mejoramiento, las estrategias de planeación estratégica gerencial, las decisiones de no inversión en tecnología de punta e informática, etc., en donde se observa la ausencia relevante de tomar la certificación del SGC como un factor de competitividad en las organizaciones. Otro problema que se presenta es la falta de consenso entre autores y expertos sobre sus contenidos teóricos, lo que dificulta la selección de las metodologías para la implementación de una Certificación del SGC; por lo que hay que identificar las metodologías más apropiadas, realizar un rastreo de variables e integrar esos contenidos en una función de agregación que indique el valor o utilidad del plan. En la industria local de manufactura hay organizaciones que se están certificando en SGC con resultados operativos de eficiencia bajos, aunado a esto, la falta de información y documentación de fallas y causas-raíces ocurridas; lo que explicaría la práctica común de tomar decisiones sin considerar factores estratégicos y cualitativos dentro del desarrollo de SGC. Por ello, es necesario desarrollar un modelo de estrategias de SGC y evaluar sus efectos en una posición competitiva dentro del sector industrial, con una revisión y actualización de acuerdo a los avances tecnológicos dentro del ramo de la manufactura y evitar la incongruencia de una inversión con bajos resultados operativos.

Objetivos

Objetivo general

Diseñar una metodología más efectiva que la práctica generalizada para la obtención de una Certificación en el SGC en el sector de manufactura.

Objetivos específicos:

- Identificar los métricos de cada empresa.
- Evaluar los métricos de servicio al cliente.
- Evaluar los métricos de desempeño interno.
- Evaluar métricos de auditorías al sistema de calidad.
- Identificar la estrategia de calidad de la empresa.
- Hacer un comparativo de los sistemas de calidad y métricos de desempeño

Se pretende conocer el impacto que la administración de los sistemas de calidad tiene en el desempeño de las empresas mediante sus métricos, considerando los internos y externos. Además de analizar sus

estrategias de calidad que cada empresa ha definido con el fin de encontrar áreas de mejora y resaltar las estrategias que coadyuvan a obtener el éxito o fracaso de las empresas.

REVISIÓN DE LA LITERATURA

Impacto Competitivo de las Herramientas Para la Gestión de la Calidad: De acuerdo a (Heras, Marimon, & Casadesús, 2009) las empresas estudian las herramientas para la gestión de la calidad en la competitividad de las organizaciones, tomándose como referencia los modelos del ISO 9001:2008 y el modelo de autoevaluación EFQM (Fundación Europea para la Gestión de Calidad). Para tal efecto se analiza la información proveniente de un estudio empírico en el que participaron 107 evaluadores de modelos de gestión de la calidad. De los resultados obtenidos se observa que las organizaciones con sistemas de gestión de la calidad basados en la norma ISO 9001:2008 utilizan mayoritariamente herramientas de propósito general, diseñadas para el análisis de su situación y para extraer propuestas de mejora, lo que tiene un impacto relativamente positivo en su competitividad. Por otra parte, las organizaciones que adoptan el modelo EFQM utilizan herramientas más especializadas y focalizadas, lo que les lleva a una mejora notable en aspectos más concretos de su capacidad competitiva.

El enfoque hacia la gestión de la calidad que se toma como referencia puede condicionar el tipo de herramientas que se utilizan. También proponen que se debe continuar analizando el impacto del paradigma de la calidad en las organizaciones desde la perspectiva no solo de los directivos involucrados en su adopción, sino también desde la perspectiva de otros agentes involucrados

Gestión De Calidad En Documentos.

De acuerdo a (Pinto, 1998), la calidad es una filosofía, una manera de operar y se ha convertido en una obsesión colectiva del mundo desarrollado, eminentemente complejo, plural y dinámico. El documento trata de profundizar en el origen de procesos documentales, como gestores de los servicios de información donde se divide en entorno de la documentación en procesos, productos, servicio y valor, donde el usuario se convierte en el centro receptor del conjunto del servicio recibido, es por eso que se ven a los servicios de información con índices de operatividad y eficacia bajos y que toda la información de la gestión de calidad total no sea suficiente es por eso que en los sistemas de información la calidad es un problema de orientación de liderazgo de participación de los empleados y de formación y que en cualquier caso, la mejora de la calidad es un proceso sin fin, que debe llevarse paso a paso y del que no se pueden esperar resultados inmediatos.

Indicadores De Calidad.

Cualquier modelo se compone de características, atributos y métricas, conviene definir estos componentes para ubicarse en un marco específico. (Vallecillo 1997) describe una característica de calidad como un conjunto de propiedades mediante las cuales se evalúa y describe la calidad de un producto. Un indicador de una empresa es una medida cuantitativa que refleja la cantidad de calidad que posee dicha actividad. Por tanto, sirve no sólo para evaluar un determinado aspecto de la calidad del servicio, sino para realizar un seguimiento de dicha medida a lo largo del tiempo y poder compararla en diferentes periodos de tiempo, o entre diferentes centros de un mismo sector en el mismo periodo de tiempo. Para elegir los indicadores que se comparan en este documento los indicadores deben tener carácter sistemático, esto es, que la medición debe tener las mismas fases; normalizado, cualquier responsable de la medición deberá obtener siempre la misma medida, homogéneo, las unidades de medida deben ser siempre las mismas y continuas, es decir a lo largo del tiempo. El modelo de gestión debe presentar una visión de globalización y estar orientado al Cliente según la filosofía de Calidad Total, y a ser posible según principios basados en modelos de excelencia empresarial. Todos los sistemas de gestión tienen requisitos que inciden en la

planificación de los mismos. A continuación se presentan algunos puntos en los que se ve claramente el por qué necesitamos integrar los Sistemas de Gestión en un solo sistema certificable y finalmente, se expone una breve reflexión de cada uno de los escritos analizados. El sistema de gestión de calidad ha de implantarse con el fin de lograr que la empresa sea más competitiva a nivel global, dado que los clientes en el mundo actual son más exigentes y selectivos, y ya no importa sólo la calidad del producto.

También se deben considerar los costos de calidad, ya que “la identificación y cálculo de los gastos por concepto de calidad, constituyen un elemento para el análisis de la eficiencia y eficacia en el proceso de mejora continua, en la gestión de la calidad del servicio, como soporte representativo en la toma de decisiones por la dirección de la entidad”, por lo que, puede decirse que los costos de calidad pueden servir como indicadores para que la empresa tome decisiones que la lleven a una mejor estrategia que le permita mejorar su posición en el mercado.

Algunos autores como (Carrillo, 1989) describe uno de los mayores retos de la modernización en México es lograr alcanzar niveles de competencia internacional. Es común señalar que esto se logra no sólo produciendo más, sino sobre todo mejor; y con más calidad, no depende exclusivamente de los materiales utilizados o del método para organizar la producción, entre otros, sino del esfuerzo del propio trabajador. En este contexto, el factor humano cobra nuevamente mayor importancia para explicar el éxito o no, en el uso de tecnologías flexibles. El objetivo de mejoramiento de la calidad de los productos es, quizás, la estrategia central de las corporaciones para lograr mejores niveles de competitividad.

Es importante que se entiendan las ventajas que trae consigo la implementación de un sistema de calidad, así como una certificación por parte de ISO, además de saber que no solamente ayudará a la empresa en el logro de los objetivos, así como el aumento de la satisfacción al cliente, sino que si se lleva de manera adecuada el sistema de gestión de calidad, podría representar la reducción o eliminación de algunos costos, como lo menciona Melgoza (2006) “los dueños de las empresas... pueden pensar que el implementar un SGC (Sistema de Gestión de Calidad), y después certificarse, tiene un alto costo que no es recuperable, sin embargo no aprecian que en el trabajo cotidiano realizan una serie de gastos fijos para garantizar el cumplir con las especificaciones solicitadas por el cliente, así como otro tanto (muy significativo) para resolver las fallas que por falta de una adecuada metodología de trabajo se tienen en el trabajo cotidiano”. Las organizaciones deben tomar conciencia de que el no tener un SGC es en realidad más caro, hablando a largo plazo, que el gasto que representa la inversión en la certificación.

Mientras que para las grandes empresas el requisito de buscar una Gestión de Calidad en Certificación de ISO's es importante, algunos expertos encuentran que una certificación no influye significativamente en el desempeño de las organizaciones al no demostrarse su conexión con resultados de mejora reales como lo mencionan Martínez, (2009) y Terziovski (1997). Por otro lado otros expertos Sousa & Aspinwall (2010) ponen de manifiesto que para lograr una mejora en el sistema de calidad, es necesario monitorear todas las áreas de la organización, haciendo énfasis en la importancia de crear un sistema de medición del desempeño Salunke (2011) enfatiza la importancia que tiene el proceso de mejora continua en las organizaciones que ya han sido certificadas en ISO's, donde se pueden ver mejoras en la satisfacción del cliente hasta del 14% y un desempeño del 5.23% en competitividad, calidad, costos y productividad acorde a Naveh & Marcus (2005)

METODOLOGÍA

El objetivo de esta parte de la investigación es proponer una metodología, que nos permita analizar en qué medida la adopción de un Sistema de Gestión de la Calidad tiene efecto sobre la capacidad competitiva y el rendimiento de dos empresas que serán comparadas en este trabajo. Ambas empresas han adoptado el ISO 9001:2008 como su sistema de calidad, ya que la calidad se presenta hoy en día como un

sinónimo de buena Gestión Empresarial, lo que se traduce en productos y servicios competitivos. Esta parte está dividida en tres apartados:

Se dice que un producto o servicio es de Calidad, cuando cumple las Expectativas del Cliente, pero en la práctica, la Calidad es algo más; es lo que sitúa a una empresa por encima o por debajo de los competidores, y lo que hace que, a mediano o largo plazo, ésta progrese o caiga en la obsolescencia. Para el desarrollo de este proyecto se identificaron dos empresas: una dedicada al ramo automotriz y otra al de iluminación. La forma en que las empresas gestiona la calidad, en un entorno cada día más incierto tiene importancia estratégica.

A continuación se muestra la encuesta utilizada para efectos de este trabajo la cual está basada en los diferentes puntos de la norma ISO 9001:2008. Este cuestionario fue aplicado a los diferentes departamentos de las dos organizaciones elegidas para este análisis: Producción, Calidad, Ingeniería, Almacén e I&D. En una de las empresas se lograron obtener cinco encuestas mientras que en otra solamente obtuvimos cuatro. Esta encuesta fue enviada mediante correo electrónico aleatoriamente a los integrantes de los diferentes departamentos de las organizaciones. Como ya se mencionó el cuestionario que se elaboró para efectos de este análisis está basado en los puntos auditables de la norma ISO 9001:2008, los cuales se muestran a continuación: 4.0 Sistema de Gestión de la Calidad; 5.0 Responsabilidad de la dirección; 6.0 Gestión de los recursos; 7.0 Realización del producto; 8.0 Medición, análisis y mejora. Las preguntas del cuestionario están divididas de la siguiente manera:

Tabla 1: Listado de Preguntas y Clausulas de la Norma

Pregunta	Clausula de la Norma
5, 6, 7	Sistema de Gestión de la Calidad
1, 2, 3, 4, 9, 10	Responsabilidad de la Dirección
8, 14, 15, 16, 17, 20, 34, 35	Gestión de Recursos
22, 23, 24, 25, 26, 28, 38, 39, 40	Realización del Producto
27, 29, 30, 31, 32, 33, 36, 37	Medición análisis y mejora

La evaluación del cuestionario propuesto se evaluará de acuerdo a los siguientes criterios de calificación, empleando una escala de 0 al 4 con las siguientes descripciones: 0 Prácticamente no se realiza; 1 Se realiza parcialmente; 2 Se realiza generalmente; 3 Se realiza sistemáticamente y en casi todas las áreas; 4 Se realiza siempre y de forma total, y somos un ejemplo para el sector. Una vez aplicado el cuestionario se procede a la cuantificación de los puntos totales contando las (x) de cada columna, después serán multiplicadas por los puntos que se indican, se suma y obtiene el total de puntos. Al final se calcula el porcentaje dividiendo el total de puntos entre 1.6. Utilizando la siguiente tabla para vaciar los resultados.

Tabla 2: Tabla para Captura de Resultados de Encuesta

	0	1	2	3	4
Total de (X)	0*	1*	2*	3*	4*
Suma total de puntos obtenidos Resultado (ST/1.6)					(ST) %

Después de obtener los resultados finales se concluye de acuerdo a los siguientes rangos en porcentaje de valoración. Cada uno de ellos se describe detalladamente en los siguientes párrafos.

Menos de 40 por ciento: El sistema global de calidad con respecto al modelo ISO 9001:2008 no se cumple, se cumple en aspectos parciales o tiene una fidelidad muy baja con las actividades realmente

realizadas, y deben tomarse medidas correctoras urgentes y globales para implantar un sistema de calidad eficaz.

Entre 40 y 60 por ciento: El sistema global de calidad se cumple, pero con deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o tiene una fidelidad deficiente con las actividades realmente realizadas. Se deberán solucionar las deficiencias urgentemente, para que el sistema sea eficaz.

Entre 60 y 85 por ciento: El sistema global de calidad se cumple, pero con leves deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o respecto a la fidelidad con las actividades realmente realizadas. Se deberán solucionar las deficiencias a corto plazo, para que el sistema no deje de ser eficaz. Su tendencia hacia la Gestión de la Calidad es muy positiva. Les sugerimos analicen sus puntos sobresalientes y apliquen medidas similares a los temas con más baja puntuación.

Más de 85 por ciento: Su empresa se gestiona de acuerdo con el modelo ISO 9001:2008, y son ejemplo para otras empresas del sector.

RESULTADOS Y CONCLUSIONES

En esta parte se presentan y analizan los resultados obtenidos después de contabilizar las encuestas aplicadas en las dos empresas elegidas para el presente proyecto. El análisis se llevará a cabo de acuerdo a los rangos de valoración mencionados en la sección anterior.

RESULTADOS OBTENIDOS

Los resultados mostrados a continuación son mostrados primeramente por la empresa y sus respectivos departamentos. Seguidos de un gráfico de barras que nos permite ver de una manera más clara como se encuentra el sistema de gestión de calidad en general dentro de las plantas.

Tabla 3: Resultados de Empresa Ramo Iluminación Resultados departamento Calidad

	0	1	2	3	4
Total de (X)	0	3	11	21	5
	0*	1*	2*	3*	4*
Suma total de puntos obtenidos	0	3	22	63	20
Resultado (ST/1.6)					108 (ST) 67.5 %

Nota. En la evaluación de la encuesta realizada al departamento de calidad de la empresa dedicada al ramo de la iluminación se obtuvo un 67.5%, lo cual de acuerdo a los rangos de valoración significa que, el sistema de calidad se cumple, pero con leves deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o respecto a la fidelidad con las actividades realmente realizadas. Se deberán solucionar las deficiencias a corto plazo, para que el sistema no deje de ser eficaz. Su tendencia hacia la Gestión de la Calidad es muy positiva. Sugerimos analicen sus puntos sobresalientes y apliquen medidas similares a los temas con más baja puntuación.

Tabla 4: Resultados de Empresa Ramo Iluminación Resultados departamento Producción

	0	1	2	3	4
Total de (X)	2	5	12	21	0
	0*	1*	2*	3*	4*
Suma total de puntos obtenidos	0	5	24	63	0
Resultado (ST/1.6)					92 (ST) 57.5%

Tabla 5: Resultados de Empresa Ramo Iluminación Resultados departamento Ingeniería

	0	1	2	3	4
Total de (X)	5	11	9	14	1
	0*	1*	2*	3*	4*
	0	11	18	42	4
Suma total de puntos obtenidos					75 (ST)
Resultado (ST/1.6)					46.87 %

Nota. En la evaluación de las encuestas realizadas a los departamentos de Producción e Ingeniería (Tabla 4 y Tabla 5) se obtuvieron un 57.5% y un 46.87% respectivamente, lo cual significa que el sistema global de calidad se cumple, pero con deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o tiene una fidelidad deficiente con las actividades realmente realizadas. Se deberán solucionar las deficiencias urgentemente, para que el sistema sea eficaz.

Tabla 6: Resultados de Empresa Ramo Iluminación Resultados departamento Logística

	0	1	2	3	4
Total de (X)	10	22	7	0	0
	0*	1*	2*	3*	4*
	0	22	14	0	0
Suma total de puntos obtenidos					36 (ST)
Resultado (ST/1.6)					22.5 %

Nota. En la evaluación de la encuesta realizada al departamento de Logística se obtuvo un 22.5%, lo cual de acuerdo a los rangos de valoración significa que el sistema global de calidad con respecto al modelo ISO 9001:2008 no se cumple, se cumple en aspectos parciales o tiene una fidelidad muy baja con las actividades realmente realizadas, y deben tomarse medidas correctoras urgentes y globales para implantar un sistema de calidad eficaz.

Tabla 7: Resultados de Empresa Ramo Iluminación Resultados departamento I&D

	0	1	2	3	4
Total de (X)		1	5	21	13
	0*	1*	2*	3*	4*
		1	10	63	52
Suma total de puntos obtenidos					126 (ST)
Resultado (ST/1.6)					78.75 %

Nota. En la evaluación de la encuesta realizada al departamento de I&D se obtuvo un 78.75%, lo cual significa que el sistema global de calidad se cumple, pero con leves deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o respecto a la fidelidad con las actividades realmente realizadas. Se deberán solucionar las deficiencias a corto plazo, para que el sistema no deje de ser eficaz. Su tendencia hacia la Gestión de la Calidad es muy positiva. Les sugerimos analicen sus puntos sobresalientes y apliquen medidas similares a los temas con más baja puntuación.

Tabla 8: Resultados de Empresa Ramo Automotriz Resultados Departamento de Calidad

Total de (X)	0	0	1	11	28
	0*	1*	2*	3*	4*
	0	0	2	33	112
Suma total de puntos obtenidos					147 (ST)
Resultado (ST/1.6)					91.88 %

Nota. En la evaluación de la encuesta realizada al departamento de calidad de la empresa dedicada al ramo Automotriz se obtuvo un 91.88%, lo cual de acuerdo a los rangos de valoración significa que la empresa se gestiona de acuerdo con el modelo ISO 9001:2008, y son ejemplo para otras empresas del sector.

Suma total de puntos obtenidos	0	0	12	51	68
Resultado (ST/1.6)					131 (ST) 81.88 %

Nota. En la evaluación de las encuestas realizadas a los departamentos de Producción, Ingeniería y Logística (Tablas 9, 10 y 11 respectivamente) se obtuvieron los siguientes porcentajes 61.25%, 63.12% y 81.88%, los cuales se pueden interpretar de la siguiente manera ya que oscilan entre el 60 y el 85%. El sistema de calidad se cumple, pero con leves deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o respecto a la fidelidad con las actividades realmente realizadas. Se deberán solucionar las deficiencias a corto plazo, para que el sistema no deje de ser eficaz. Su tendencia hacia la Gestión de la Calidad es muy positiva. Se sugiere analizar sus puntos sobresalientes y apliquen medidas similares a los temas con más baja puntuación.

CONCLUSIONES

De la investigación realizada mediante una encuesta aplicada a los departamentos más representativos en dos organizaciones de diferentes ramos de la industria maquiladora, que han adoptado la gestión de la calidad según el estándar ISO 9001:2008. Se obtuvieron los siguientes resultados después de condensar las encuestas y analizar las preguntas por clausula de la norma ISO 9001.

Industria Iluminación

A continuación se muestra un gráfico de barras el cual nos permite apreciar de una manera más clara como se encuentra al interior de la organización el Sistema de Gestión de la Calidad.

Figura 1: Condesado de Encuestas Aplicadas en Industria de Iluminación

Como se puede observar en la Figura 1, la empresa del Ramo de la Iluminación requiere trabajar más en su Sistema de Gestión de la Calidad enfocándose principalmente en las clausulas 4.0 Sistema de Gestión de la Calidad, 5.0 Responsabilidad de la Dirección, 6.0 Gestión de los Recursos y 8.0 Medición, análisis y mejora. Ya que de acuerdo a los porcentajes obtenidos después de analizar el total de las encuestas se puede decir que: El sistema global de calidad con respecto al modelo ISO 9001:2008 no se cumple, se

cumple en aspectos parciales o tiene una fidelidad muy baja con las actividades realmente realizadas, y deben tomarse medidas correctoras urgentes y globales para implantar un sistema de calidad eficaz. Sin embargo se debe resaltar que el área en la que se muestra más fortaleza es en la correspondiente a la cláusula 7.0 Realización del Producto, ya que se obtuvo un 58.13% en la evaluación lo cual significa que en este aspecto el sistema de calidad se cumple, pero con deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o tiene una fidelidad deficiente con las actividades realmente realizadas. Se propone de una manera urgente aplicar un plan de acción, para que el sistema sea considerado eficaz.

Industria Automotriz

El siguiente gráfico de barras nos muestra el condensado de las encuestas aplicadas en la Industria dedicada al Ramo Automotriz.

Figura 2: Condesado de Encuestas Aplicadas en Industria Automotriz

Como se puede observar a diferencia de la industria dedicada a la Iluminación en este caso tenemos porcentajes significativamente más altos sin embargo también requieren trabajar más en su Sistema de Gestión de la Calidad. Ya que como muestra la Figura 2 las cláusulas 4.0 Sistemas de Gestión de la Calidad, 5.0 Responsabilidad de la Dirección y 6.0 Gestión de los Recursos están por debajo de un 40% en el rango de valoración de la encuesta utilizada para este análisis, lo cual significa que el sistema de calidad con respecto al modelo ISO 9001:2008 no se cumple, se cumple solo en aspectos parciales o tiene una fidelidad muy baja con las actividades realmente realizadas, y deben tomarse medidas correctoras urgentes para implantar un sistema de calidad eficaz. De igual manera se puede observar que en lo referente a la cláusula 8.0 Medición, Análisis y mejora (54.22%) el sistema de calidad se cumple, pero con deficiencias en cuanto a documentación o a la continuidad y sistemática de su cumplimiento, o tiene una fidelidad deficiente con las actividades realmente realizadas. Sin embargo es importante resaltar que su fortaleza se encuentra en lo referente a la cláusula 7.0 Realización del Producto, lo cual es bastante bueno ya que al dedicarse a la industria automotriz esto es de suma importancia y el porcentaje obtenido de 98.13% nos indica que la empresa se gestiona de acuerdo con el modelo ISO 9001:2008, y son ejemplo para otras empresas del sector.

PROPUESTA

Después de la revisión realizada a los resultados obtenidos para ambas empresas se propone para la empresa de Iluminación trabajar con mayor énfasis en su sistema de Gestión de la Calidad (Sistemas de Gestión de la Calidad, Responsabilidad de la Dirección, Gestión de los Recursos, Realización del Producto y Medición, Análisis y mejora). Esto puede ser mediante entrenamiento en la norma ISO

9001:2008 al personal de la organización, hacerles saber la importancia de dar seguimiento al sistema, una mayor difusión de las políticas y objetivos de Calidad que la organización ha designado así como la importancia de vivirlas y llevarlas a cabo en el trabajo diario. Siempre enfocándose en el cliente y la mejora continúa. En el caso de la Industria Automotriz se recomienda seguir el mismo énfasis aplicado a las actividades referentes a Realización del Producto ya que como se pudo observar su fortaleza está en lo referente a ese apartado de la Norma. De igual manera que en el caso de la otra empresa analizada se sugiere llevar a cabo un plan de entrenamiento y seguimiento al sistema de Gestión de la Calidad ya que se cumple pero con algunas deficiencias en cuanto a documentación y continuidad las cuales se deberán solucionar a corto plazo, para que el sistema sea eficaz. Se sugiere analicen sus puntos sobresalientes y apliquen medidas similares a los temas con más baja puntuación.

ANÁLISIS DE LA CALIDAD DE LOS SERVICIOS RECIBIDOS EN LAS INSTITUCIONES DE EDUCACIÓN SUPERIOR

Sonia Elizabeth Maldonado-Radillo, Universidad Autónoma de Baja California

Ana Ma. Guillén Jiménez, Universidad Autónoma de Baja California

Rafael Ernesto Carranza Prieto, Universidad Autónoma de Baja California

María Concepción Ramírez Barón, Universidad Autónoma de Baja California

RESUMEN

Este trabajo presenta una investigación de tipo descriptivo, transversal con diseño no experimental sobre la calidad del servicio ofrecido por una institución de educación superior. Su objetivo consiste en evaluar la calidad del servicio mediante la satisfacción de los estudiantes con experiencias asociadas al conocimiento recibido y al contexto en que se recibe; para alcanzarlo se trabajó con una muestra de 200 estudiantes de una universidad multicampus. En la recolección de los datos se utilizó un cuestionario integrado por 41 ítems distribuidos en seis variables (Proceso enseñanza-aprendizaje, Servicios, Condiciones de las aulas, Logros personales, TIC empleadas en el proceso y Actitud del profesorado); su confiabilidad fue determinada a través del alfa de Cronbach, obteniendo un índice de confiabilidad de 0.95. Los resultados obtenidos revelan que los estudiantes están bastante satisfechos con los servicios que ofrece la institución, ya que el resultado global de la satisfacción alcanza un promedio de 136.09; no obstante el puntaje promedio, se detectó un 1.5% de estudiantes que se encuentran poco satisfechos.

PALABRAS CLAVE: Satisfacción del estudiante, calidad del servicio, instituciones de educación superior

ANALYSIS OF SERVICE QUALITY RECEIVED FROM HIGHER EDUCATION INSTITUTIONS

ABSTRACT

This study presents a descriptive, transversal research with non-experimental design on the diagnosis of service quality of higher education institutions in the Northwest of Mexico. The aim is to evaluate service quality by the student satisfaction with the associated experiences to their received education and to the context it is received; in order to reach it the work was done with multi campus university students. To come up with the data it was used a template with 41 items distributed on 6 variables (Teaching-learning process, Services, Conditions of the classrooms, Reached results, TIC employees in process and Attitude of the Teachers); whose reliability was determined through the Cronbach alpha, obtaining a 0.95 index. The results obtained indicate that the students are satisfied with the services that the institution provides, given the global result of satisfaction it has been reached an average of 136.09; nevertheless in the average result it has been detected a 1.5% of students that find themselves dissatisfied.

INTRODUCCIÓN

El concepto de calidad en la educación superior ha evolucionado con el transcurso del tiempo. Hasta la década del 60 del siglo pasado, se presuponía la calidad basada en la tradición de la institución, en la exclusividad de los profesores, alumnos y recursos materiales; actualmente la situación es distinta porque el fenómeno de la globalización afectó sustancialmente esta concepción, ahora la sociedad está exigiendo una forma diferente de universidad, se exige que el conocimiento impartido sea aplicado a su entorno, que sea pertinente y genere un impacto positivo en éste (Águila, 2005).

Considerando que las instituciones de educación superior (IES) requieren de información sobre la calidad de los servicios académicos y administrativos que brindan y atendiendo al reto de la educación del siglo XXI: la búsqueda de la calidad, con el fin de establecer prioridades para orientar el mejoramiento interno de sus procesos educativos, se plantea el objetivo de este trabajo que consiste en evaluar la calidad del servicio ofrecido por una institución de educación superior mediante la satisfacción de los estudiantes con experiencias asociadas no solo al conocimiento recibido sino también al contexto en que se recibe. Para alcanzarlo se parte de una investigación empírica, no experimental y descriptiva, utilizando un instrumento de medición construido a partir del cuestionario empleado por Gentos y Vivas (2003).

El propósito del estudio es que una vez construido el instrumento pueda servir para describir los factores que, desde la percepción de los estudiantes, determinan la calidad de las instituciones de educación superior. La información obtenida será de gran utilidad para asegurar el mejoramiento continuo de la institución en donde se lleva a cabo el trabajo. La investigación se llevo a cabo en una institución pública de educación superior, tipificada como multicampus y temporalmente cubre el periodo 2012-1

REVISIÓN DE LA LITERATURA

La satisfacción de los estudiantes con respecto a la educación que reciben en las IES es un buen referente en la valoración de la calidad de estas instituciones (Gento y Vivas, 2003). Sin embargo, en la actualidad no existe una definición unánimemente aceptada sobre este término; de hecho, cada investigador elabora su propia concepción según el objetivo de su trabajo. Existen autores como los citados por De la Fuente (2010) que consideran a la satisfacción como un antecedente de la lealtad del estudiante y por tanto, sostienen que ambos conceptos se encuentran estrechamente relacionados. Otra postura, y que son mayoría, consideran que en las universidades la satisfacción del alumno está vinculada al proceso educativo y en consecuencia, ésta tiene que ver con la calidad de la enseñanza (Gento y Vivas, 2003). Estos autores conciben que desde la percepción del estudiantado es posible evaluar la calidad de las instituciones universitarias (González, 2003, Hernández, et al., 2010 y Casero, 2010).

La mayoría de los estudios que existen en la literatura académica respecto al sector de los servicios giran en torno a la relación entre la calidad de los servicios y la satisfacción. Pocos estudios se han llevado a cabo para investigar la relación entre la técnica y dimensiones funcionales de calidad y el nivel de satisfacción de los estudiantes universitarios. Casi en ninguno de ellos se ha estudiado la repercusión de factores como la atmósfera, la infraestructura, la honestidad de los expositores del conocimiento en la calidad de la percepción y satisfacción de los estudiantes (Zineldin, et al., 2012). En este trabajo se aborda la calidad del servicio entendida como la capacidad de la IES para satisfacer las necesidades de sus estudiantes con base en 6 variables. Este modelo se basa en el supuesto de que el proceso enseñanza-aprendizaje, los servicios, la actitud del profesorado, las tecnologías de la información y comunicación (TIC), los logros personales y las condiciones de las aulas generan una mayor satisfacción en los estudiantes.

METODOLOGÍA

Con la finalidad de alcanzar el objetivo propuesto, se realizó un estudio transversal caracterizado como descriptivo porque pretende especificar qué tan satisfechos están los estudiantes con la calidad de los servicios (Hernández et al., 2006). El universo de estudio se constituye por estudiantes de una universidad pública (multicampus) del estado de Baja California perteneciente a la región noroeste de la República Mexicana. La selección de los estudiantes se realizó a través de un muestreo por juicio, el cual se lleva a cabo a partir de criterios conceptuales definidos por el investigador (Mejía, 2000). Para la recolección de los datos se utilizó un cuestionario elaborado sobre la base del instrumento SEUE (Satisfacción de los Estudiantes Universitarios con la Educación) de Gento y Vivas (2003). Este instrumento se integra por 44 ítems distribuidos en ocho variables y cuya categoría de respuestas fue en escalamiento numérico de cinco valores, donde (1) corresponde a totalmente insatisfecho y (5) a totalmente satisfecho. La aplicación del instrumento se realizó en el transcurso del primer semestre 2012, la confiabilidad del instrumento se corroboró a través del α de Cronbach el cual fue de 0.95.

RESULTADOS

El análisis de los resultados reveló que los estudiantes de la institución se sienten bastante satisfechos con los servicios que se ofrecen. La satisfacción de los estudiantes se muestra en la Tabla 1, en donde se observa que únicamente 1.5% (equivalente a tres) de los estudiantes están poco satisfechos con los servicios que se ofrecen en la institución.

Tabla 1: Nivel de Satisfacción de los Estudiantes de todos los campus

	Frecuencia	Porcentaje
Poco Satisfecho	3	1.5
Satisfecho	69	34.7
Bastante Satisfecho	97	48.7
Totalmente Satisfecho	30	15.1
TOTAL	199	100.0

En esta tabla describen las diferentes categorías de la Satisfacción Global de los estudiantes expresada en porcentaje

También se analizó la satisfacción de los estudiantes por campus de procedencia resultando que los estudiantes del campus Mexicali presentan el mayor grado de satisfacción respecto a los otros dos campus (Ensenada y Tijuana); aunado a esto, el análisis reveló que los 3 estudiantes identificados como poco satisfechos pertenecen al campus Tijuana. Para corroborar lo anterior se trabajaron los estadísticos descriptivos, encontrando que el promedio de puntaje en esta evaluación fue de 136.09 (Tabla 2) y que, efectivamente, los estudiantes del campus Mexicali presentan la satisfacción más elevada ($\mu=146.39$) y la más baja ($\mu=130.44$) los estudiantes que proceden del campus Tijuana.

Tabla 2: Estadísticos Descriptivos de la Satisfacción del Estudiante por campus

Campus	Media	95% Intervalo de confianza		Mediana	Varianza	Desviación	Mínimo	Máximo	Rango
		Limite Inferior	Limite Superior			Estándar			
Ensenada	132.33	125.79	138.87	127.00	585.298	24.193	92	206	114
Tijuana	130.44	124.06	136.82	130.50	822.553	28.680	61	193	132
Mexicali	146.39	140.22	152.56	146.50	609.543	24.689	101	203	102
SATISFACCIÓN GLOBAL:	136.09	132.31	139.87	136.00	732.901	27.072	61	205	145

Esta tabla describe para los diferentes campus de la IES la media, la desviación típica, los límites de intervalo de confianza para la media al 95% y los valores máximo y mínimo. Ahí puede evidenciar que las medias guardan entre sí una relación más o menos equivalente;

comparativamente el promedio más alto ($\mu=146.39$) le corresponde al grupo de los estudiantes del campus Mexicali mientras que, el más bajo ($\mu=130.44$) al grupo de los estudiantes que proceden del campus Tijuana.

Adicionalmente se analizó el nivel de satisfacción de cada una de las variables del modelo; los hallazgos se explican en los siguientes párrafos de acuerdo a la insatisfacción o poca satisfacción con la intención de ubicar las debilidades de la institución en materia de los servicios ofertados. En el caso de los Servicios, el 11.0% de los estudiantes se manifiesta su insatisfacción o poca satisfacción respecto a los servicios ofertados que tienen relación con diversos aspectos académicos, tales como la asignación de becas, cursos intersemestrales, la vinculación con futuros centros de trabajo, la incorporación de nuevas tecnologías de la enseñanza, entre otros. Para el Proceso enseñanza-aprendizaje que únicamente el 2.0% de los estudiantes están poco satisfechos con éste, o cual significa que están satisfechos con forma en que la institución organiza este proceso. En relación a las Actitudes del profesorado el 8.0% de los estudiantes se encuentra poco satisfecho con respecto a la actitud y comportamiento del profesorado, en lo relativo a la asistencia a clase de los profesores, la orientación que reciben de éstos, la metodología de enseñanza aplicada, el sistema de evaluación y el nivel de exigencia.

En el caso de la variable de Logros personales, es poca la satisfacción al respecto puesto que solamente el 8.0% de los estudiantes se manifiesta en ese sentido; lo cual indica que el 92.0% están satisfechos con los conocimientos adquiridos, con las calificaciones obtenidas, con la información ciudadana alcanzada, con el dominio de técnicas y con el desarrollo personal. Sobre las Condiciones de las aulas, el 20.0% de los estudiantes asegura estar poco satisfecho con las condiciones presentan las aulas, eso significa que no están satisfechos en relación a aspectos tales como: la limpieza, la ventilación, los ruidos, la comodidad del mobiliario y las instalaciones sanitarias. Finalmente, respecto a la TIC empleadas en el proceso enseñanza-aprendizaje, el 10.5% de los estudiantes se encuentra totalmente insatisfecho o poco satisfecho con las TIC utilizadas y disponibles en la organización; esto es, existe cierto grado de insatisfacción el proceso de admisión, en el acceso a internet y al uso del correo electrónico, al acceso a computadores para realizar sus trabajos académicos.

CONCLUSIONES

El propósito fundamental de estudio consistió en evaluar la calidad del servicio ofrecido por una institución de educación superior mediante la satisfacción de los estudiantes con experiencias asociadas no solo al conocimiento recibido sino también al contexto en que se recibe. La conclusión principal de este trabajo es que los estudiantes están bastante satisfechos con los servicios que ofrece la institución. El resultado global de la satisfacción alcanza un promedio de 136.09; no obstante el puntaje promedio, se detectó un 1.5% de estudiantes que se encuentran poco satisfechos.

En relación a la satisfacción de los estudiantes por campus de procedencia, se encontró que los estudiantes del campus Mexicali presentan un mejor nivel de satisfacción ($\mu=146.39$) respecto a los otros dos campus y el campus Tijuana se ubica en el menor nivel de satisfacción ($\mu=130.44$).

Respecto al grado de satisfacción de las variables estudiadas, la variable que presenta el menor nivel de satisfacción es la vinculada a las TIC ya que el 21% los estudiantes se encuentran totalmente insatisfecho o poco satisfecho con las tecnologías de la información y comunicación empleadas durante el proceso de enseñanza-aprendizaje y que se encuentran disponibles dentro de la organización. La variable detectada con el mayor nivel de satisfacción es el Proceso enseñanza-aprendizaje que únicamente el 2.0% de los estudiantes están poco satisfechos con éste, o cual significa que el 98% están satisfechos con la organización de este proceso.

RESUMEN

El presente estudio es de tipo descriptivo, se clasifica metodológicamente como estudio de caso; por su propia naturaleza no se pretende hacer generalizaciones ni validar teorías, pero sí contribuir a ampliar, precisar y dinamizar la comprensión del fenómeno conceptualmente general y empíricamente común y particularizado; tiene como propósito describir las creencias, prácticas y usos que estudiantes y profesores del programa de Ingeniería Industrial de la Universidad del Magdalena tienen con respecto a la evaluación docente. Por medio de los resultados obtenidos se pretende caracterizar los diferentes enfoques o criterios que se tengan de la evaluación docente los cuales surgen de la propia experiencia estudiantil y docente. El estudio se realizará mediante un análisis correlacional. Este análisis permitirá establecer las diferentes perspectivas (creencias, criterios) de profesores y estudiantes de Ingeniería Industrial sobre la evaluación del desempeño docente.

UNIVERSITY OF MAGDALENA INDUSTRIAL EDUCATION PROGRAM FACULTY AND STUDENT PERCEPTIONS AND BELIEFS REGARDING TEACHER EVALUTIONS

ABSTRACT

This descriptive study is methodologically classified as a case study, by its own nature not intended make generalizations or validate theories, but if contribute to expanding, clarify and stimulate the General understanding of the phenomenon conceptually and empirically common and particularized; aims describe the beliefs, practices and usages that students and teachers of Industrial Engineering Program at the University of Magdalena have regarding teacher evaluation. By means of the results it seeks to characterize the different approaches or criteria to be taken of teacher evaluation which arise from the students and professors experience. The study will be performed through correlational analysis. This analysis will allow to establish the different perspectives (beliefs, criteria) of teachers and students of Industrial Engineering about teacher evaluation.

Fátima Martínez Hernández Instituto Tecnológico de Ciudad Juárez

Esther Enríquez Pérez Instituto Tecnológico de Ciudad Juárez

Elvira Mora Luján, Instituto Tecnológico de Ciudad Juárez

ABSTRACT

El presente trabajo es un estudio cuantitativo no experimental transeccional tipo correlacional – causal. Se analizan cambios ocurridos en las variables independientes (Calidad, Innovación, tecnología y financiamiento) en relación con la variable dependiente (Productividad). La muestra considerada para la investigación fueron 47 empresas proveedoras de la industria maquiladora de exportación, las cuales forman parte del catálogo de proveedores del Centro Nacional de empresas proveedoras “CENADEP” el cual consta de un total de 380 empresas Mipymes proveedoras de la industria maquiladora de exportación en Cd. Juárez. Para la investigación se aplicó un cuestionario tipo Liker el cual consto de 30 preguntas para medir las variables dependiente e independientes el cual se aplicó a través del CENADEP a las empresas seleccionadas, el cuestionario fue validado por expertos. La técnica aplicada fue el Coeficiente de correlación de PEARSON para evaluar la relación que guardan la variable dependiente con las variables independientes (calidad, innovación, tecnología y financiamiento) y así determinar el impacto de cada una de ellas en la productividad. Como resultado de la investigación se determinó que los factores Calidad, financiamiento y tecnología efectivamente tienen un impacto significativo en la productividad, no así la innovación que de acuerdo a los resultados del estudio no representa impacto alguno en la productividad en éste tipo de industria.

PALABRAS CLAVE: productividad, calidad, financiamiento, innovación y tecnología

INTRODUCCIÓN

Los factores que influyen en la productividad de las empresas mexicanas son múltiples; la presente investigación se centra en los que están ligados a la productividad de las empresas MIPYMES exportadoras localizadas en Ciudad Juárez, Chihuahua y que proveen insumos a la Industria Maquiladora de Exportación. El presente trabajo de investigación se desarrolla con el fin de evaluar la correlación que tiene la productividad con los factores considerados como parte importante de la productividad. Cabe mencionar que existen muchos otros factores relacionados a la productividad sin embargo para este trabajo se consideran solamente los siguientes: calidad, innovación, tecnología y financiamiento. El objetivo es proporcionar información relevante a las MIPYMES exportadoras de Ciudad Juárez los factores que les ayude a enfocarse en los factores que les ayudarán a elevar su productividad y por lo tanto a ser más competitivas.

REVISIÓN DE LITERATURA

Antecedentes históricos

La Organización para la Cooperación Económica Europea (OCEE) ofrece en 1950 una definición formal de la productividad como el cociente que se obtiene de dividir la producción entre uno de sus factores.

De 1950 a 1995 se mantenía dos factores en común: la economía y producción. A principios del siglo XXI, un tercer factor: el humano. En este sentido, Hamburger (2008, citado por Vilorio, 2010) señala que cualquier intento por mejorar la productividad debe comenzar por reconocer el valor y la importancia de las personas en la organización.

De acuerdo a Porter (1990), La productividad es un elemento muy importante para elevar el nivel de vida de una nación, lo anterior es una causa radical de la renta nacional per cápita. Una alta productividad no sólo genera altos niveles de renta, sino que además proporciona a los ciudadanos la oportunidad de disfrutar de más tiempo para ellos y sus familias en lugar de trabajar largas jornadas en las empresas.

El mismo autor menciona que las empresas de una nación deben mejorar considerablemente la productividad de los sectores existentes a través de la mejora de la calidad de los productos, la adición de características deseables, la mejora de la tecnología del producto o superación de la eficiencia de la producción. Debido a lo comentado anteriormente Porter, (1990) plantea que la productividad es un factor clave para elevar la competitividad de las MIPYMES mexicanas.

Por su parte García (1995), en relación a la productividad menciona que es "la conjugación de todos los factores que en ella participan y además éstos le permiten a las empresas continuar en el mercado". No se debe perder de vista que la productividad no depende de un solo factor como la producción, o sea, la simple productividad por hora-hombre u hora-máquina. La productividad tiene un alcance muy superior, pues abarca todas las actuaciones en todos los niveles de una organización y se extiende a la productividad total de una nación.

La Productividad comprende cuatro factores claves de éxito: Tecnología de punta, reducción permanente de costos de operación, mejoras en productividad por trabajador y programa de mantenimiento preventivo. De acuerdo a Volpentesta (2002), la productividad es el factor que define la competitividad y rentabilidad de las organizaciones y en lo particular a cada una de las empresas que en ella participan. Por ello es importante fomentar un enfoque integral que exprese la interrelación y la consecuente interacción de todos los aspectos que en las organizaciones generan productividad, con el objetivo de construir un marco de referencia que priorice una gestión general orientada hacia la productividad, pero que a su vez permita el estudio analítico de las cuestiones técnicas específicas que permitan maximizar la productividad total.

El primer factor y el más significativo de cualquier situación de productividad es la calidad: Comprende el análisis de cuatro factores: Implantación de Norma ISO-9000, materia prima de primera, inspección continua de calidad del producto terminado y empaque adecuado para proteger calidad del producto.

Volpentesta (2002) menciona que una parte importante de cualquier fase de la productividad es la calidad, ya que no representa ningún valor económico en el hecho de incrementar los niveles de producción, si dicho aumento está basado en una calidad inferior. Las empresas al medir la productividad, la producción a tomar en cuenta en esta medición deberá ser la de aquellos productos con aceptación de producción, esto es aquellos que están en condiciones de ser comercializados. Una organización está en posibilidad de lograr mejoras sustanciales en la productividad cuando la calidad es posible de ser identificada y de alguna manera, cuantificada dentro del proceso de medición de la productividad. El segundo factor que influye en la productividad es la tecnología, ya que la tecnología empleada en la dirección dentro del ámbito empresarial se expresa, entre otros muchos casos, a través de:

- 1) La consecución de un mayor volumen de bienes y servicios con menos recursos.
- 2) Un mejoramiento en la calidad de la operación y en los productos.
- 3) Mejora de nuevos procesos y métodos de producción.
- 4) Innovación de nuevas materia primas.
- 5) Automatización de los procesos fabriles.
- 6) Aumento de nuevos dispositivos de fabricación.
- 7) Reducción de los costos unitarios de los productos y por último,
- 8) Progreso en las condiciones de seguridad laboral (Volpentesta, 2002).

El tercer factor que interviene en aumento de la productividad es la innovación, ya que algunos de los nuevos aspectos económicos, entre los que se encuentran la gradual importancia que toman los factores "no precio" dentro de la lucha competitiva (servicios de preventa, venta u postventa, calidad de los productos y servicios, adecuarse a las exigencias de los clientes; la habilidad de diseño); la reducción de los ciclos de vida de los productos y de los ciclos de desarrollo de nuevos productos; la alta segmentación y personalización de los mercados; los procesos de comoditización de productos masivos así como marcados procesos de enfoque y marquismo. Todo lo anterior en su conjunto incide en el replanteo de los procesos innovativos implementados por las organizaciones empresariales (Volpentesta, 2002).

Finalmente el cuarto factor a considerar dentro de la presente investigación es el financiamiento ya que juega un papel muy importante en la productividad de las empresas, debido a que es un medio que ayuda a la empresa a financiar nuevas inversiones en mejoras dentro de la organización. Para que una administración arroje un aumento en la rentabilidad de la organización, debe operar con efectividad en todas las áreas, pues de lo contrario, es muy probable que estuviese desaprovechando el esfuerzo realizado por diversos sectores de la organización, o bien podría encontrarse ante una situación de equilibrio inestable que puede ser perjudicial en el mediano o largo plazo para la organización (Volpentesta, 2002). Los factores antes mencionados son los que han considerado como parte fundamental de la investigación ya que están presentes en la productividad y competitividad de las empresas.

Competitividad

En relación a la competitividad, Porter (1990), menciona que la ventaja que presenta un sector es consecuencia de la interacción autorreforzante de las ventajas en las diversas áreas que la componen. El sistema nacional que se tenga en el país es tan importante como las partes individuales de que se compone, o más. Dos elementos- la rivalidad doméstica y la concentración geográfica del sector tienen un poder especialmente grande para transformar el "diamante" en un sistema. La rivalidad doméstica porque fomenta el perfeccionamiento de todo el "diamante" nacional y la concentración geográfica porque eleva y magnifica las interacciones dentro del diamante. La existencia de empresas que compiten dentro del mismo sector genera rivalidad y eleva la notoriedad del sector. Debido a lo anterior se alienta la demanda primaria en el mercado interior. Y no sólo se incrementa la demanda interior, sino que la saturación se produce antes y da lugar a un esfuerzo más fuerte en aras de alcanzar los mercados internacionales.

La Micro, Pequeña Y Mediana Empresa

De acuerdo a la información publicada en el Diario Oficial de la Federación (2009) en relación al Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas se establece que: Las micro, pequeñas y medianas empresas son un elemento fundamental para el desarrollo económico de los países, tanto por su contribución al empleo, como por su aportación al producto interno bruto constituyendo, en el caso de México, más del 99% del total de las unidades económicas del país,

representando alrededor del 52% del producto interno bruto y contribuyendo a generar más del 70% de los empleos formales. Acuerdo por el que se establece la estratificación de las Micro Pequeñas y Medianas empresas. (p. 1)

Empresas exportadoras

En lo referente a empresas Maquiladoras el gobierno Federal publicó las modificaciones al siguiente: Decreto para el Fomento de la Industria Manufacturera, Maquiladora y de Servicios de Exportación (IMMEX, 2010), en el Capítulo I, en sus Disposiciones generales menciona lo siguiente en relación a empresas exportadoras:

Artículo 1º El presente decreto tiene por objeto fomentar y otorgar facilidades a las empresas manufactureras, maquiladoras y de servicios de exportación para realizar los procesos industriales o de servicios de mercancías de exportación y para la prestación de servicios de exportación. (p. 1)

Debido a las publicaciones antes mencionadas se establece que las condiciones están dadas para que las empresas MIPYMES participen en el segmento Industrial y de servicios que se define en párrafos anteriores ya que representa la puerta de entrada para explorar nuevos mercados Internacionales.

Maquiladora

De acuerdo al portal de la Asociación de Maquiladoras (2011), en el estado de Chihuahua se localizan 476 empresas de las cuales 322 están asentadas en Ciudad Juárez. Así mismo la AMAC (2011) muestra el porcentaje de empresas por sector. La mayor proporción lo representan las empresas de giro automotriz con un 29%, le siguen el sector eléctrico con un 18%, las empresas de plástico, metal y empaque reflejan un 9%, en el caso de la industria del sector eléctrico se presenta en un 7%, las de call center con un 3% y otras no definidas con un 20%, como se refleja en la figura 2.3 En lo que se relaciona a la cantidad de insumos consumidos por la industria maquiladora el material de compra nacional representa un porcentaje de apenas 3.4 % en comparación al material importado del extranjero por la misma industria.

Index – Cenadep

La Cultura De La Proveeduría Como Estrategia De Política Pública Para El Crecimiento Y Desarrollo Económico De México

De acuerdo a la información proporcionada por Aguirre, Palencia y González de la O (2012), a través del Centro Nacional de Desarrollo de empresas proveedoras, la Industria Maquiladora tiene su antecedente inmediato en México a mediados del año 1964, al ser suspendido el llamado Programa Bracero (Programa Nacional Fronterizo), constituido con el objetivo de: dar empleo permanente a los trabajadores temporales (braceros) que cruzaban la frontera para trabajar en los campos agrícolas de E.U. En el periodo del presidente López Portillo existían 585 maquiladoras en México.

Ya para el año 1983, Miguel de la Madrid expide el primer decreto para regular la operación de las maquiladoras en México. Sin embargo, en dicho desarrollo industrial el sector de exportación se encuentra desvinculado de la economía nacional en cuanto a la incorporación de insumos nacionales. En las cadenas de valor de los productos finales, ya que en términos absolutos sólo se incorpora un 3.4% de insumos mexicanos. Ante esta oportunidad, el Consejo Nacional de la Industria Maquiladora y Manufacturera del país llamada también la *Industria Global de México*, ha constituido desde el mes de febrero del año 2012, y después de más de 40 años de historia industrial el proyecto eje y rector nacional

de la proveeduría y las cadenas de valor por medio del Centro Nacional de Desarrollo de Empresas Proveedoras (INDEX-CENADEP) cuyo propósito fundamental está contenido en sus seis líneas de acción permanentes y que gravita en torno a diez objetivos específicos en áreas como la formación, certificación, estructuración, apoyo, evaluación y seguimiento de nuevos proveedores y de los ya existentes para la industria de exportación de México.

En INDEX NACIONAL se llevan a cabo actividades con base en normas internacionales, y esto posibilita que la industria maquiladora de exportación trabaje con estándares de calidad mundial, colocando con ello a México en la preferencia de Inversiones directas Internacionales. Con esta filosofía de avanzar y de contribuir como INDEX, se consolida el firme propósito de hacer del país altamente competitivo en el escenario internacional del comercio, con un crecimiento económico equitativo, incluyente y sostenido, capaz de reducir las diferencias económicas y sociales tanto internas como externas, y de brindar a cada habitante oportunidades de empleo e ingreso para una existencia digna, que permita a cada persona realizarse como tal y mejorar, de manera consistente, su nivel y calidad de vida.

METODOLOGÍA

La presente investigación se basó en el método cuantitativo ya que se recolectaron los datos utilizando análisis estadísticos para comprobar la hipótesis de que “La falta de un sistema de calidad, innovación, tecnología y financiamiento en las Micro, Pequeñas y Medianas Empresa exportadoras propician la baja productividad”. Se utilizó el diseño no experimental transversal o transeccional debido a que la evaluación se hizo en un tiempo dado y en un momento único, así mismo los datos se recolectaron por una sola ocasión a las empresas que se determinó como muestra. La muestra seleccionada fue por conveniencia a la población proporcionada por parte del Centro Nacional de Empresas Proveedoras. Por otra parte el estudio del análisis de los datos fue correlacional ya que se relacionó la variable dependiente con las variables independientes para ver la relación que guardaban entre ellas es decir el impacto que mostró la variable dependiente productividad con cada una de las variables independientes (calidad, tecnología, innovación y financiamiento).

Se utilizó el muestreo probabilístico por racimos ya que se enfocó solamente en las empresas MIPYMES. La población de referencia fueron las empresas MIPYMES exportadoras que proveen de insumos a la industria maquiladora en Ciudad Juárez. El total de la muestra para la presente investigación fueron un total de 47 empresas con las características antes mencionadas. El cuestionario aplicado a las empresas seleccionadas estuvo basado en el modelo tipo Likert el cual consta de 30 preguntas que se aplicaron a través del CENADEP a las empresas MIPYMES seleccionadas en particular a los directivos que estaban relacionados con la productividad de cada empresa para evaluar el grado de apreciación de cada una de las variables objeto del presente estudio. El coeficiente de correlación de Pearson fue la técnica que se utilizó para analizar la relación entre las variables y se calculó en base a las puntuaciones recolectadas por cada entrevista. La aplicación de la metodología utilizada en la presente investigación nos ayudó a proporcionar información de los factores que determinan la productividad de cada una de las empresas encuestadas. La encuesta se validó a través de expertos relacionados con el tema de la productividad solicitando que aportaran ideas u opiniones que enriquecieran el contenido de la encuesta y que esta fuera finalmente aplicada a las empresas seleccionadas.

RESULTADOS

De acuerdo a las correlaciones obtenidas mediante el uso de la técnica de Correlación Pearson para cada variable se obtuvieron los resultados siguientes. Los resultados obtenidos arrojan que efectivamente la productividad se ve afectada con un impacto significativo de las variables calidad, innovación tecnología y financiamiento. Sin embargo el resultado obtenido también demuestra que los diferentes factores no son

afectados de la misma forma. Lo anterior debe ser considerado por las empresas MIPYMES al momento de evaluar sus prioridades de estrategia de negocio y planes de producción.

Es preciso mencionar que en la encuesta se presentaron las siguientes situaciones, por ejemplo el cuestionario se validó solo a través de expertos, por otra parte se encontraron algunas preguntas sesgadas que pudieran haber afectado de alguna forma el resultado arrojando correlaciones bajas. Sin embargo el resultado obtenido demuestra que los factores considerados para la presente investigación efectivamente presentan un impacto significativo en la productividad de las empresas.

Tomando en consideración que se deben cumplir con las siguientes características $t^* > t(\infty / 2, u - 2)$, En base a lo anterior el factor de "Calidad" presento una correlación con respecto a la productividad de 0.4334, y un valor $t = 3.22$, por tanto se determina en base a los valores obtenidos que $t = 3.22 > 2.01$ por lo tanto se rechaza H_O y se comprueba que el factor de calidad aún y cuando presenta una correlación baja si tiene un impacto significativo en la productividad de acuerdo al estadístico de prueba realizado.

Para el caso del factor de "Innovación" presento una correlación con respecto a la productividad de 0.3079, y un valor $t = 2.17$, por tanto se determina en base a los valores obtenidos que $t = 2.17 > 2.01$ por lo tanto se rechaza H_O y se comprueba que el factor de innovación aún y cuando presenta una correlación sumamente baja con respecto a la productividad, en base a las pruebas estadísticas se comprueba que tiene impacto significativo en la productividad.

El factor de "Tecnología" presento una correlación con respecto a la productividad de 0.3154, y un valor $t = 2.22$, por tanto se determina en base a los valores obtenidos que $t = 2.22 > 2.01$ por lo tanto se rechaza H_O y se comprueba que el factor de tecnología aún y cuando presenta una correlación baja si tiene un impacto significativo en la productividad de acuerdo al estadístico de prueba realizado. Finalmente el factor de "Financiamiento" presento una correlación con respecto a la productividad de 0.3880, y un valor $t = 2.82$, por tanto se determina en base a los valores obtenidos que

$t = 2.82 > 2.01$ por lo tanto se rechaza H_O y se comprueba que el factor de financiamiento aún y cuando presenta una correlación baja este factor representa un impacto significativo en la productividad de acuerdo al estadístico de prueba realizado. Debido a lo anterior las empresas MIPYMES deben dar especial importancia a los factores antes mencionados para lograr el incremento de la productividad y así lograr que estas empresas sean altamente competitivas. Esto implica que los empresarios deben mejorar sus estrategias de negocio en el que tomen una especial importancia los factores antes mencionados.

CONCLUSIONES

Con base a los resultados obtenidos en el presente estudio se concluye que las empresas MIPYMES exportadoras de Ciudad Juárez deben enfocar sus esfuerzos en fortalecer los factores que influyen en la productividad. Ya que en base a los resultados obtenidos éstos les ayudara a lograr la competitividad que el mercado global requiere y así logren ganar cuota de mercado. Fortaleciendo estos factores las empresas aprovecharan el potencial que representa la industria maquiladora de exportación y logran aprovechar la oportunidad que representa el formar parte de la proveeduría para las empresas maquiladoras ya que lo anterior es un medio que les permitirá crecer, incrementar sus utilidades y lograr mejorar el nivel de vida de los empresarios y sus empleados. Lo anterior ayudará al logro de los objetivos fijados por las empresas y el gobierno mejorando la economía nacional.

LA INFLUENCIA DE LA ACTIVIDAD INNOVADORA EN LA ACTIVIDAD DE OPERACIÓN EN LA PYME DE AGUASCALIENTES PARA UNA MEJOR COMPETITIVIDAD EMPRESARIAL: UN ESTUDIO EMPIRICO

Luis Aguilera Enríquez, Universidad Autónoma de Aguascalientes
Martha González Adame, Universidad Autónoma de Aguascalientes
Octavio Hernández Castorena, Universidad Autónoma de Aguascalientes

RESUMEN

Con el presente trabajo de investigación, aplicado a la Pequeña y Mediana Empresa (PYME), del sector Industrial, se pretende explicar si existe una relación positiva entre la actividad innovadora en la actividad de operación en la Pyme de Aguascalientes para una mejor competitividad empresarial, para ello, se aplicó un instrumento de evaluación dirigido a los gerentes donde los resultados obtenidos se han analizado con apoyo del paquete estadístico EQS donde a través de ecuaciones estructurales se ha dado respuesta al objetivo planteado. En este sentido, se puede concluir que la actividad innovadora tiene una relación positiva con la actividad de operación y a su vez, esta relación muestra un impacto positivo en la Competitividad de la PYME de Aguascalientes. Para esta investigación se ha utilizado una muestra de 150 empresas las cuales contienen de 5 a 250 trabajadores.

PALABRAS CLAVES: Actividad Innovadora, Operaciones, Competitividad, Pyme.

THE INFLUENCE OF INNOVATIVE ACTIVITY IN OPERATING ACTIVITIES IN AGUASCALIENTES SMALL MEDIUM ENTERPRISES FOR A BETTER COMPETITIVENESS: AN EMPIRICAL STUDY

ABSTRACT

In this research, applied to the Small and Medium Enterprises (SMEs), Industrial sector, we intend to explain if there is a positive relationship between innovative activity in the trading activity in the SME of Aguascalientes for improved business competitiveness for this, we applied an assessment tool intended for managers where the results have been analyzed using the statistical package EQS support where through structural equations has responded to the objective. In this sense, it can be concluded that innovative activity has a positive relationship with operating activity and in turn, this relationship shows a positive impact on the competitiveness of SMEs in Aguascalientes. For this study we have used a sample of 150 companies which contain 5 to 250 employees.

KEYWORDS: Innovative Activity, Operations, Competitiveness, SME.

INTRODUCCION

En la actualidad, las empresas del sector industrial de la pequeña y mediana empresa (PYME), se enfrentan con mayor frecuencia a diversos retos en los cuales se dependen de elementos de importancia como lo son las operación internas y de la actividad innovadora que se tenga implementada por parte de

los gestores ya que la demanda de productos cada vez es mas exigente en materia de calidad y de rapidez en el suministro. Por ello, la PYME para poder sobrevivir tiene que contar con una actividad innovadora constante y eficiente en la fabricación de sus productos, y en el control de sus operaciones, y que esto permita a las organizaciones ser cada vez más competitivas (Boix y Galleto, 2007; Jaffe *et al.*, 2005; Aggeri, 1999). Es por ello, que el control de las operaciones internas en las empresas debe permitir que los responsables de la actividad operativa sean capaces de mejorar a través de la actividad innovativa tener una mejor competitividad de la capacidad productiva de la organización, lo cual es importante mejorar el nivel de innovación en las áreas importantes de las organizaciones (Boix y Galleto, 2007). Esto significa que si una empresa necesita ser cada vez más competitiva, debe ser consciente de que la innovación le va a demandar además de responsabilidad, atención y dedicación, un sistema de operaciones adecuado a la fabricación y demanda de productos de calidad (Vracking y Cozijnsen, 1993).

En este sentido, es importante mencionar que antes de cualquier implementación de innovación, se debe tener pleno conocimiento del flujo de proceso para que las operaciones de un sistema de trabajo estén además de identificadas, estén controladas y para ello también es relevante contar con apoyo de documentos de control administrativo, con la finalidad de que faciliten la integración de las actividades de innovación, sin importar lo complejo que pueda ser su aplicación al sistema productivo (Vracking y Cozijnsen, 1993). Por lo tanto, lo importante será que las operaciones estén listas para adoptar cualquier innovación, siempre y cuando tenga una influencia positiva en las operaciones productivas (Jaffe *et al.*, 2002). Asimismo, es importante también considerar que la innovación de cualquier operación interna de los procesos tengan una estrecha relación con la calidad y con el control de los procesos productivos en sentidos administrativos y operativos (Jaffe *et al.*, 2002; Brunnermeier y Cohen, 2003).

Respecto a la responsabilidad que tiene la organización que han implementado innovación en las operaciones, a los cuales se les ha integrado por ejemplo cualquier tipo de innovación tecnológica, es importante mencionar que los directivos deben de respetar las políticas de trabajo y la funcionabilidad de los procesos, por lo cual, la innovación en las operaciones debe ser acorde a las necesidades que tenga la empresa por controlar los índices de productividad, de ofrecer productos personalizados y de contar siempre con un proceso confiable en lo operativo y en lo administrativo (Jaffe *et al.*, 2002; Brunnermeier y Cohen, 2003). Así mismo, las organizaciones que realizan actividades de innovación en las operaciones, principalmente en la PYME, muestran una ventaja competitiva sustancial con respecto a las actividades de innovación que se realiza en aquellas empresas de menor potencial económico, y esto se ve reflejado en los productos que se producen en este tipo de organizaciones, por lo que a su vez, esto se aprecia en los bajos niveles de competitividad que registran la PYME (Boix y Galleto, 2007).

Por otro lado, la competitividad de las empresas industriales dependen del servicio que ofrezca y del tipo de productos que elabore. La mejoría y desempeño de la organización por lo tanto, se verá reflejado en factores relacionadas con todos los aspectos (tecnológico, organizativo, estructural) de la actividad empresarial, (Doyle, 1994; Kaplan and Norton, 1992; Oaklan, 1993; Browne *et al.*, 1997; Cho *et al.*, 2008). En este sentido, las estrategias competitivas, son igualmente aplicables a empresas de alta tecnología que a las pequeñas o medianas empresas. Esto significa que el valor agregado, mano de obra intensiva y los productos de alto nivel permite a las empresas ser competitivas (Cho *et al.*, 2008). Las empresas entonces, en sus estrategias de mejora en la competitividad, dan una importancia a la especialización en áreas específicas que se benefician con algún implemento de innovación (Rusten y Bryson 2007; Rusten *et al.* 2007).

Conforme al comportamiento y necesidades del mercado así como en el posicionamiento competitivo de las organizaciones (Sustar, 2004), se requiere de mayor compromiso, eficiencia y actitud por parte de los gestores, personal en general y áreas externas gubernamentales enfocadas en dar mayor crecimiento y competencia a las empresas dedicadas a la fabricación de partes y que requieren de contar con áreas de operación con buen nivel productivo y para lo cual, la flexibilidad de las operaciones es necesaria en las

empresas y así evitar poner en riesgo la competitividad de las empresas (Sustar, 2004; Nielsen, 1998; Tyson et al, 1994). Por lo tanto, la investigación realizada en el presente trabajo, presenta importantes resultados en los cuales refleja a través del tratamiento estadístico con apoyo del software EQS 6.1, los efectos positivos que tiene la actividad innovadora en la actividad operación en la Pyme de Aguascalientes para una mejor competitividad empresarial la cual ha trabajado con una muestra de 150 empresas del sector industrial a través de una encuesta personalizada con los gerentes de las organizaciones.

REVISIÓN DE LA LITERATURA

Para las empresas en general, la innovación como concepto, está vinculada a la creación y mejora de nuevos productos (Vracking & Cozijnsen, 1993), por ello, se considera que el crecimiento de las organizaciones está en su capacidad de innovar en cualquiera de sus áreas funcionales, sobre todo en las áreas operativas (Jiménez, 2006), por lo tanto, a esta actividad de innovación se refiere específicamente a mejorar las estrategias relacionadas con el proceso productivo y operativo para poder fabricar y comercializar, de manera competitiva, los nuevos productos que se generen en la organización. Asimismo, también innovar es contar con mejores sistemas operativos que estén estrechamente a su vez relacionados con la tecnología (Cilleruelo, 2005; Pavon y Hidalgo, 1997).

De acuerdo a Sherman Gee (1981), se considera que una operación, depende de una actividad operativa en la cual se plasma una idea, invención o reconocimiento a partir de una necesidad extraída de un estudio de mercado, y para lo cual se debe desarrollar un producto, técnica o servicio útil a los requerimientos de cliente (Pavon y Goodman, 1981). Asimismo, la Comisión Europea (1995), refiere que *“innovación es sinónimo de producir, asimilar y explotar con éxito una novedad, en las esferas económico y social, de forma que aporte soluciones inéditas a los problemas y permita así responder a las necesidades de las personas y de la sociedad”*. Respecto a la opinión de Machado (1997) refiere que *“la innovación es el acto frecuentemente repetido de aplicar cambios tecnológicos nuevos a la empresa, para lograr beneficios mayores, crecimientos, sostenibilidad y competitividad”*. Asimismo, la innovación es el resultado de un proceso de análisis y de estudios enfocados a mejorar alguna parte de las operaciones con fines productivos y de competencia (Velazquez, 2007; Fernandez, 1995).

En este sentido, toda innovación que se realiza en las operaciones parte de observar y tener registros de las actividades operativas, con la finalidad de que les permitan a las organizaciones, tomar decisiones de mejora e innovación en bien de tener un mejor control y eficiencia de sus operaciones (Fernandez, 1995). Desde luego que todo este trabajo de análisis, debe de tener como objetivo implementar acciones de mejora e innovación que impacten positivamente en las actividades operativas y administrativas de las empresas (Hirsch y Bijaoui, 1985; Teece, 1986). Por un lado, antes de adoptar algún tipo de innovación en las operaciones, se debe considerar el impacto que éste tendrá en el control ambiental interno de la Pyme, puesto que un proceso controlado productivamente, puede tener confiabilidad, (Jaffe y Palmer, 1997). Por lo tanto, además de la innovación en las operaciones, y como una forma de hacer más confiable el proceso, es importante también considerar la gestión de los residuos y los elementos auxiliares que se manejen dentro las operaciones productivas (Brunnemeier y Cohen, 2003). Por otro lado, es importante señalar que en la industria, específicamente en la Pyme, los registros que se obtienen por medio del control administrativo de las operaciones, permitirán a los directivos tomar mejores decisiones relacionadas con la mejora o innovación en las operaciones productivas (Khanna y Anton, 2002; Lee y Alm, 2004; De Motta, 2006). En este sentido, las organizaciones buscan siempre la oportunidad de innovar sus operaciones, por un lado compensar la inversión en tecnología y, por otro lado y con la importancia especial por lo que significa, reducir las cargas de trabajo, mejorar los procesos y sistemas de gestión y asegurar el abastecimiento de la materia prima, así como de los materiales auxiliares dentro del proceso a través de sistemas y métodos que hagan más efectivo y eficiente su manejo (Rennings y Zwick, 2002).

Actualmente, para los responsables de administrar las operaciones, innovar requiere no solo conocer los procesos de producción o la cadena de valor del producto, sino además tener un alto conocimiento en tecnología así como de innovaciones tecnológicas con la finalidad de poder darle mayor crecimiento y competitividad a la dinámica empresarial de la PYME industrial (Christensen y Rosenbloom, 1995; Christensen, 1997; Pavitt, 1998).

Es por ello, que es necesario resaltar que toda innovación en las operaciones, debe ser confiable; es decir, una operación productiva no puede ser impredecible ya que ello puede generar un ambiente de irregularidad y la calidad de los productos se pone en riesgo, pero más aun los programas de entrega de las mercancías a los clientes (Van de Kooy, 1983; Cozijnsen, 1989; Vrakking & Cozijnsen, 1993). En este sentido, toda actividad de innovación al aplicarse en las organizaciones, debe de innovar el total de los procesos o áreas funcionales como una medida de estandarización (Vrakking y Cozijnsen, 1993; Kickert, 1979; Saren, 1984). Esto significa que, es importante que toda implementación tecnológica y de la correcta aplicación en las operaciones de una mejora o una actividad de innovación deba tener la finalidad de evitar problemas de abastecimiento de materias primas y de administración de las operaciones productivas (Bessant y Grunt, 1986).

Es importante mencionar que las empresas dedicadas a la fabricación de partes, constantemente actualizan sus métodos y estrategias para ofrecer mejores servicios tanto dentro de las operaciones como en la dinámica de entregas a cliente incluyendo el servicio post-venta, (Cho et. al., 2008). Estas estrategias de trabajo para las pequeñas empresas incluyen la introducción de innovación, mejoras en la eficiencia de las operaciones, y en el aumento en la productividad (Cho et. al., 2008). Es por ello que las innovaciones tecnológicas en la industria son factores de competitividad, ya que afecta principalmente al costo de producción, la flexibilidad y administración de las operaciones (Sustar, 2004).

Finalmente, es importante resaltar que toda actividad de innovación que se integre en las operaciones en la Pyme, debe impactar en la mejora de los procesos y en el desarrollo de nuevos productos, teniendo en mente que la confiabilidad de las operaciones y en los productos permita que sean aceptados por los clientes. Esto quiere decir que para que el producto sea aceptado fácilmente en el mercado, todo el sistema productivo debe ser seguro, con innovación y confiable (Ozcelik y Taymaz, 2004). En este sentido, la actividad de innovación en productos y procesos, deben ser una prioridad y un reto para los gerentes (Zhao y Li, 1997; Wakelin, 1998). En este sentido se puede plantear ahora la hipótesis referente a la relación entre la actividad innovadora y las operaciones en la PYME industrial:

H₁: A mejor actividad innovadora, mejor nivel en las operaciones internas de la PYME.

Finalmente, en las operaciones internas de las empresas conduce a las organizaciones a obtener un mayor nivel de competitividad (Maldonado et al., 2012; Cho *et al.*, 2008; Gardiner et al., 2004), y para ello se plantea la siguiente hipótesis:

H₂: Las operaciones internas impactan positivamente en la Competitividad de la Pyme.

METODOLOGÍA

En la investigación, se analiza la actividad innovadora en la actividad de operación en la Pyme de Aguascalientes para una mejor competitividad empresarial. Para el desarrollo de este trabajo de investigación se tomó de referencia la base de datos que ofrece el Directorio Empresarial de Aguascalientes (SIEM, 2010) donde se menciona que en Aguascalientes, existen registradas 8661

empresas de las cuales 584 son PYME. El trabajo es de carácter empírico y se utilizó una muestra de 150 Pymes del sector Industrial en Aguascalientes a quienes se les aplicó un instrumento de medición tipo encuesta personalizada para los gerentes o responsables directos de las operaciones de este tipo de organizaciones. Para la preparación del instrumento de medición, se utilizaron 3 bloques los cuales se describen a continuación: Bloque de Actividad Innovadora con 23 ítems con escala likert 1-5 los cuales refieren desde total desacuerdo hasta total acuerdo. El segundo bloque de Operaciones se tomó en cuenta tres factores básicos: la automatización de los procesos compuesto por 6 ítems; la confiabilidad de los procesos de producción compuesto por 8 ítems; el control administrativo compuesto por 8 ítems y 4 ítems de desarrollo de personal de operaciones, adaptada de Machorro et al.

(2007). Y por último, para el tercer bloque, la medición de la escala de la competitividad se tomó en cuenta tres factores elementales: desempeño financiero compuesto por 6 ítems; la reducción de los costos de las compras compuesto por 6 ítems; y el uso de tecnología compuesto por 6 ítems, adaptada de Buckley *et al.* (1988) y Chang, et al., (2005). En este trabajo de investigación se realizó un Análisis Factorial Confirmatorio (AFC) con la finalidad de evaluar la fiabilidad y validez de las escalas de cada uno de los bloques. Así mismo, se utilizó un Modelo de Ecuaciones Estructurales (SEM), con el fin de comprobar si la estructura del Modelo está correctamente diseñado, y para ello, se utilizó el método de máxima verosimilitud en el software EQS versión 6.1; para ello, la fiabilidad se ha evaluado considerando el coeficiente α de Cronbach y del índice de fiabilidad compuesta (IFC) (Bagozzi and Yi, 1988).

En la Tabla 1 se observa que todos el valor del IFC superara el nivel recomendado de 0.7, lo cual facilita una evidencia de fiabilidad (Nunnally and Bernstein, 1994; Hair *et al.*, 1995) y permite presentar un modelo ajustado y para lo cual se han obtenido los siguientes datos: ($S-BX^2 = 4870.0469$; $df = 1322$; $p = 0.0000$; $NFI = 0.895$; $NNFI = 0.918$; $CFI = 0.921$; y $RMSEA = 0.079$), todos los ítems de los factores relacionados son significativos ($p < 0.05$), el tamaño de todas las cargas factoriales son superiores a 0.6 (Bagozzi and Yi, 1988) y el índice de la varianza extraída (IVE) de cada par de constructos es superior a 0.5 recomendado por Fornell and Larcker (1981).

En la Tabla 2 se presentan los resultados obtenidos que describen la validez discriminante a través de dos test. Primero, con un intervalo del 95% de confiabilidad, ninguno de los elementos individuales de los factores contiene el valor 1.0 (Anderson and Gerbing, 1988). Segundo, la varianza extraída entre cada par de constructos del modelo es superior que su IVE correspondiente (Fornell and Larcker, 1981). Por lo tanto, se puede concluir que este trabajo de investigación muestra en base al análisis de sus resultados estadísticos suficiente evidencia de fiabilidad y validez convergente además de discriminante.

RESULTADOS

Se realizó un SEM para comprobar la estructura del modelo conceptual y contrastar las hipótesis planteadas, utilizando los bloques contenidos en el instrumento de evaluación los cuales se describen de la siguiente manera: Primer bloque que constan de variables que miden la Actividad Innovadora, el segundo bloque con variables que miden las Operaciones y el último bloque, este está conformado por las variables relacionadas con la competitividad de la empresa. La validez nomológica del modelo fue analizada a través del desempeño del test de la Chi cuadrada, en el cual el modelo teórico fue comparado con la medición del modelo (Anderson and Gerbing, 1988; Hatcher, 1994).

Tabla 3: Resultados del SEM del Modelo Conceptual de Actividad Innovadora, Operaciones y Competitividad.

Hipotesis	Relacion Estructural	Coefficiente Estandarizado	Valor t Robusto	Medida de los FIT
<i>H₁: A mejor actividad innovadora, mejor nivel en las operaciones internas de la PYME</i>	Actividad Innovadora → Operaciones	0.418***	12.189	S-BX2 = 4803.7376; df = 1304; p = 0.0000; NFI = 0.897; NNFI = 0.918; CFI = 0.922; RMSEA = 0.078
<i>H₂: Las operaciones internas impactan positivamente en la Competitividad de la Pyme</i>	Operaciones → Competitividad	0.458***	12.947	

Las hipótesis planteadas en el presente trabajo de investigación muestran resultados favorables que permiten evidenciar resultados que a continuación se describen: Con respecto a la primera hipótesis **H₁**, los resultados obtenidos presentados en la Tabla 3 ($\beta = 0.418$, $p < 0.000$), indican que la la Actividad Innovadora tiene un impacto positivo en las Operaciones internas de las empresas Pyme. Y respecto a la segunda hipótesis **H₂** los resultados obtenidos ($\beta = 0.458$, $p < 0.000$), indican que la las Operaciones internas tienen un impacto positivo en la Competitividad de la Pyme.

CONCLUSIONES

Para la empresa PYME del sector industrial hoy en día, es importante considerar en sus estrategias de crecimiento, la mejora e innovación a sus productos, a la comercialización de los mismos, a la adquisición de equipos y maquinaria que tenga una relación directa con la fabricación de los productos que la empresa ofrece al mercado y mejorar tanto los sistemas de abastecimiento como las actividades de gestión administrativa entre el personal involucrado con las operaciones y el crecimiento de la empresa.

Por otro lado, este tipo de empresas son conscientes en varios sentidos de los riesgos que tiene la actividad de innovación en términos de costos e inversiones, de la necesidad de adoptar sistemas de innovación, en automático se involucren actividades de capacitación, ya que esto acarrea problemas de administración y de financiamiento. Ante esta situación, las empresas temen a los problemas económicos del entorno, a la falta de información por parte del comportamiento del mercado, a la falta de información y asesoría respecto a la innovación tecnológica y desde luego a la falta de capacitación en este sentido por parte del personal de la empresa y desde luego, a la desconfianza por parte de los servicios del outsourcing.

Respecto a las operaciones dentro de las empresas, la PYME muestra un especial interés por adoptar equipo automatizado que este controlado por software especializado que de confiabilidad a los procesos y a las necesidades de los clientes. Y al margen de que se tenga en la actualidad equipo mecánico ordinario, se ha tenido mucho interés por automatizarlo y por controlarlo por sistemas tecnológicos acordes a la capacidad de la empresa o a la naturaleza de los procesos productivos.

Con respecto a los sistemas administrativos, las operaciones de la empresa se ven fortalecidas por implementaciones de documentos que permiten un mejor control de registros y seguimientos tanto de la producción como de la productividad del sistema operativo. Esto también va a permitir que las empresas al tener controles administrativos, estén pensando en contar ya con un control de mantenimiento, un control de calidad por medio de sistemas estadísticos y control de la producción de manera más detallada. Y desde luego, que las empresas poco a poco tienen la ventaja de tener personal capacitado para estas funciones. En términos de competitividad, las empresas muestran resultados favorables en términos de controles financieros y de control de gastos que luego generan que las empresas tengan serios problemas para mantenerse en operaciones en el ambiente en que se desarrollan. Y en este sentido, las empresas muestran un especial interés por controlar aspectos importantes como control de gastos en el suministro de la materia prima, en el manejo del transporte, en los insumos de materiales auxiliares y en el manejo de los costos de las operaciones productivas. Finalmente, es importante señalar que las empresas del sector industrial en este trabajo de investigación, muestran un especial interés por desarrollar tecnología con la finalidad de mejorar sus productos y sus operaciones internas, y para ello, los gerentes son conscientes de que necesitan un equipo y maquinaria que tenga la capacidad de adaptación y de flexibilidad ante cualquier reto que se presente en el mercado y con las necesidades de los clientes.

MEDICIÓN DEL CLIMA LABORAL EN UNA EMPRESA METAL MECÁNICA

Sandra Patricia de la Garza Cienfuegos, Universidad Autónoma de Coahuila

Armandina Margarita Olloqui López, Universidad Autónoma de Coahuila

Laura Leticia Gaona Tamez, Universidad Autónoma de Coahuila

RESUMEN

El objetivo de esta investigación es poder vislumbrar el clima organizacional. Particularmente en los aspectos de liderazgo y motivación en una empresa metal mecánica en el municipio de Frontera, Coahuila. este tipo de clima puede impactar en el grupo operativo de la empresa. Para pasar de un clima autoritario paternalista a un clima más participativo. La mayor preocupación de los empresarios y gerentes dedicados al Marketing es encontrar las alternativas de motivación que lleven al éxito el clima laboral de los trabajadores. El problema principal es medir mediante un instrumento de clima laboral en qué medida influye el liderazgo y motivación con en la satisfacción laboral de los trabajadores. Así como la frecuencia. Media, moda, mediana, identificar las alternativas y niveles que determinan la Satisfacción y desempeño de los empleados de las empresas metal-mecánica. Podría plantearse en esta empresa en relación al aérea de producción un clima organizacional más participativo. Con respecto a las características de liderazgo y motivación que se les da a los empleados. En cuanto al área de producción es normal que no se labore en un ambiente de plena participación sin embargo se proponen cambios en la organización.

PALABRAS CLAVE: Clima laboral, Satisfacción, Motivación, Liderazgo.

SUMMARY

The objective of this research is to glimpse the organizational climate. Particular in the areas of leadership and motivation in metalworking company in the town of Frotera, Coahuila. This type of weather can impact the business operator group. To move from a paternalistic authoritarian climate to a more participatory environment. The major concern of employers and managers marketing is dedicated to finding alternatives that lead to success motivational climate of workers. The main problem is measured by an instrument to measured by an instrument to measure work climate influences leadership and motivation on job satisfaction of employees. As well as frequency. Mean, mode, median and identify alternatives to determine the satisfaction levels and employee performance of metalworking companies. Could arise in this company relative to air production more participatory organizational climate. Regarding the characteristics of leadership and motivation given to employees in the area of production is normal labore not in an environment of full participation but proposed changes in the organization.

KEYWORDS: work climate, satisfaction, motivation, leadership.

INTRODUCCIÓN

Hoy en día para las empresas en general les interesa saber si sus empleados se sienten dentro de un clima laboral satisfactorio, Abraham Lincoln nos menciona el líder paternalista, no se puede ayudar a los hombres haciendo permanentemente por ellos lo que ellos pueden hacer por si mismos. El trabajo en equipo motivación se encuentra el tipo de motivación que se desarrolla dentro del equipo : motivación externa (preferentemente económica), motivación intrínseca (preferentemente profesional), motivación trascendente (preferentemente personal) , estos tres géneros fueron concebidos por (Pérez López, Chinchilla Albiol, Rosanas Martí, & Navarro, 1998). (Llano, 2004) Finalmente, el mando requiere la

confianza en las personas sobre las que tengo autoridad. Es cierto, también en este punto que la confianza tributada a mis colaboradores depende en buena parte de la confianza en si mismo.

Planteamiento Del Problema

El problema principal es medir mediante un instrumento de clima laboral, si influye la relación de Jefe Inmediato (Líder) con en la satisfacción laboral de los trabajadores en una empresa Metal-Mecánica Identificar las alternativas de motivación en la relación laboral.

Objetivo General

Determinar el efecto que influye la relación de trabajo del jefe Inmediato con la satisfacción laboral de los trabajadores en la empresa metal mecánica. Determinar si existe correlación en el Jefe Inmediato con el clima laboral satisfactorio. Determinar si los trabajadores disfrutan el trato con su Jefe Inmediato.

Preguntas De Investigación

¿Existe correlación en el Jefe Inmediato con el clima laboral satisfactorio?

¿Efecto que influye la relación de trabajo del jefe con el clima laboral?

¿% de los trabajadores que disfrutan el trato con Jefe Inmediato de trabajo en la empresa?

Marco Contextual

Coahuila es el tercer estado más grande del país, se encuentra localizado en el noreste de México comparte frontera con estados unidos de Norteamérica de 512 kilómetros, su extensión territorial es de 151,571 km.² su población es de 2;748,391 según datos del Inegi 2010. de los cuales el 49.63% son Hombres y el 50.37% son mujeres con un PIB estatal de 36.3 % comercio, restaurantes y hoteles 20.4% y servicios 16.9%, Frontera cuenta con 75,215 habitantes.

REVISIÓN LITERARIA

(Chiang Vega, Martín Rodrigo, & Núñez Partido, 2010) Consideran la variabilidad encontrada en los grupos ocupacionales en relación a las necesidades de logro, poder, afiliación y satisfacción para aplicar intervenciones y estimular la motivación laboral. (López, 2008) en su ponencia ambiente laboral y factores que afectan el desempeño propone alternativas de motivación como :

Reconocimiento: Estrategia: crear un programa de incentivos a los empleados dentro de la compañía, por parte de los directivos, aplicándolo de forma mensual, ubicando las edades y estado civil de sus trabajadores para adaptarlo según sus distintas necesidades.

Disciplina: Estrategia: establecer un manual de reglas y procedimientos aplicable a los empleados en general de manera constante, que regule y conserve la atmósfera laboral en armonía, dentro de las instalaciones.

Comunicación: Estrategia: establecer un flujo constante de comunicación tanto verbal como escrita, ya sea por circulares, ó correos enviados por Internet, entre niveles organizacionales, por parte de la alta gerencia descendiendo hasta el nivel inferior subordinado, para eliminar malos entendidos.

Influencia del jefe inmediato: Estrategia: supervisar la ejecución de las tareas de forma permanente, de parte de los jefes, para brindar apoyo, y si se requiere transferir la experiencia profesional resultando de esta forma un trabajo de calidad.

Trabajo en equipo y relación con mi jefe: Estrategia: organizar grupos de trabajo por proyecto, para compartir conocimientos y experiencia profesional, y una vez concluido el proyecto, reorganizar al personal involucrado en ellos para realizar nuevas tareas en la compañía.

Cultura organizacional: Estrategia: elaborar un programa continuo de adiestramiento a través de una detección de necesidades, en áreas como integración de equipos de trabajo y relaciones humanas, así como seguridad industrial, retroalimentando en forma mensual los resultados obtenidos de cada curso realizado. De igual forma, integrar a dicho programa algunos externos que permitan involucrar a la empresa en acciones de beneficio social.

(Herzberg, 2008) nos hace ver que también existen factores motivacionales como la participación, cooperación, la base técnica de motivación práctica que significa “el enriquecimiento del trabajo”(Greene, 2011) la comunicación es una especie de guerra, y su campo de batalla, la reacia y defensiva mente de la gente en la que quieres influir, la meta es penetrar sus defensas y ocupar sus mente, Induciendo a la gente a llegar a las conclusiones que tú deseas y pensar que llegó a ellas por si sola. (Maslow, 2002) Esta jerarquía impone que para satisfacer una necesidad de un nivel superior, primero se debe satisfacer una necesidad inferior previa, finalmente a medida que ascendemos en la pirámide, nuestras necesidades cambian de objetivos y pasan a ser necesidades de falta o privación a ser necesidades de crecimiento o autorrealización.

Fisiológicas: son los deseos básicos de alimentación del vestido y del techo.

De seguridad: son aquellas que brindan estabilidad, protección, ausencia de aficiones, amenazas y enfermedades.

De asociación: son aquellas necesidades de amor, amistad y la integración a una sociedad. Sociabilidad de los individuos.

De estimación: son aquellas necesidades de logro, de autoestima y estima de reconocimientos hacia los demás.

De autorrealización: Se refiere a todos los niveles interpersonales de logro y crecimiento, se puede decir que es querer lo que se tiene y sentirse orgulloso de los logros.

Necesidades de Crecimiento

Necesidades de relación

Necesidades de existencia

Teorías de Contenido Motivacional

Maslow: Fisiológica, Seguridad, Sociales, Estima y Autorrealización.

Alderfer: Crecimiento, Relacionales y Existenciales

Herzberg: Higiénicos y Motivacionales

McClelland: Logro, Afiliación y Poder

Teorías del Proceso Motivacional

Vroom: Espectativas

Festinger: Equidad

La Teoría ERG de Alderfer, C. ([Alderfer, 1969](#)) (Existenceneeds, Relatedneeds, Growthneeds) resalta las necesidades existenciales, relacionales y de crecimiento como elementos motivacionales básicos; la diferencia básica con los planteamientos de Maslow es que para Alfred Adler, Las necesidades satisfechas no guardan necesariamente una relación jerárquica y no llevan a la satisfacción de otro tipo de necesidades sino a un aumento o intensificación de dicha necesidad.

Por su parte Herzberg, plantea la existencia de Factores Higiénicos y Motivacionales; los primeros de orden preventivo y constituido por las características de contexto en el trabajo cuya presencia no aumenta la satisfacción pero si no están presentes causan insatisfacción. Estas son las condiciones físicas y ambientales que rodean al sujeto cuando trabaja. Estos planteamientos se corroboran por diversos estudios sobre motivación y con los vinculados a la satisfacción laboral.

La teoría de la equidad o igualdad, planteada por (Festinger, 1979) señala que los empleados requieren percibir equidad o justicia en sus puestos de trabajo o empresa. Las personas tienden a comparar su actuación con las de otros y hacer juicios al respecto; la persona estará motivada en proporción con la justicia que percibe en las recompensas que recibe por una cantidad determinada de esfuerzo y en relación a la que otro recibe por lo que da. Un segundo grupo de teorías son las referidas al proceso motivacional cuyo énfasis se entra en los mecanismos por los que se logra la motivación. La teoría de las expectativas, representado por (Vroom & Manton, 2010) considera que la motivación opera en función con las expectativas que se tenga del resultado de su comportamiento y la valencia de las mismas.

METODOLOGIA

Es de carácter mixto cualitativa ya que se acudió a la información documental y cuantitativa donde las técnicas utilizadas fueron entrevistas, además la investigación presenta la aplicación de 25 encuestas a los trabajadores, y se complementa con fuentes de carácter documental que han investigado sobre este tema

RESULTADOS

¿Existe correlación en mi jefe se interesa por los sentimientos de los subordinados con Me siento orgulloso de hacer el trabajo que hago?

CONCLUSIÓN

En los datos encontrados de acuerdo al instrumento validado, se observa claramente en los histogramas que un 85% de los empleados encuentra satisfecho con el trabajo que realiza sin embargo existe correlación con el jefe inmediato en cuanto a si se interesa poco de los sentimientos ya que un buen líder se interesa y al proyectar atención en el proyecta la relación entre los compañeros de trabajo creando un clima laboral satisfactorio. En cuanto a si el jefe inmediato es competente lo valoran con un 80% pero no existe correlación por lo tanto no influye en el clima laboral de la empresa metal-mecánica.

PROPUESTA

Teniendo una excelente relación en los compañeros de trabajo y supervisores se recomienda a los directivos implementar recursos económicos motivacionales cuando exista una carga de trabajo extra.

IDENTIFICAR A LOS	DIAGNOSTICO	OBSERVACIÓN	PLAN ESTRATEGICO
INCORPORANTES			
Jefe Inmediato	Supervisar el trabajo laboral, establecer comunicación constante	Valorar esfuerzo, dedicación y empeño	Reconocimientos por mes.
Jefe Inmediato	Trabajo en equipo, establecer disciplina.	Involucrarlos en el plan de trabajo	Ofrecer premio de convivencia al mejor equipo
Directivos	Escuchar propuestas, e ideas de los empleados	Valorar ideas, propuestas y desempeño de los trabajadores	Analizar las mejores propuestas.
Directivos	Crear incentivos al merito laboral.	Valorar, puntualidad, asitencia, desempeño colaboración de trabajo en equipo,	Premios viajes, Reconocimientos, semestrales. Eventos convivios laborales y familiares.

EFICIENCIA DE LOS PROGRAMAS ACADÉMICOS DE UNA INSTITUCIÓN UNIVERSITARIA EN COLOMBIA

Rolando Escorcía Caballero, Universidad del Magdalena
Delimiro Alberto Visbal Cadavid, Universidad del Magdalena
Andrés Munive Hernández, Universidad del Magdalena

RESUMEN

La presente investigación de naturaleza cuantitativa es un estudio empírico cuyo propósito fundamental es determinar la eficiencia relativa de los Programas Académicos de una Universidad Colombiana, a partir de la técnica análisis envolvente de datos, DEA, con el propósito de determinar los índices de eficiencia técnica y de escala de los programas académicos en la Universidad del Magdalena, permitiendo identificar ineficiencias en el uso de los recursos y la definición de recomendaciones que conllevaran a generar propuestas para ser más eficientes. La facilidad con que DEA maneja múltiples entradas y salidas hace de esta técnica la opción más atractiva para medir la eficiencia relativa de las Instituciones de Educación Superior.

EFFICIENCY IN ACEDMIC PROGRAMS OF INSTITUCIÓN UNIVERSITARIA EN COLOMBIA

ABSTRACT

This research is an empirical study of quantitative nature whose fundamental purpose is determine the relative efficiency of the academic programs of a Colombian university, through the technique of Data Envelopment Analysis, DEA, in order to determine scores for technical efficiency and scale efficiency of academic programs at the University of Magdalena in Colombia, allowing to identify inefficiencies in the use of resources and make recommendations which will lead to generate proposals for improving efficiency. The facility with which DEA handles multiple inputs and outputs makes this technique the most attractive option for measuring the relative efficiency of the higher education institutions.

LA GUELAGUETZA DE ACERVO BIBLIOGRÁFICO PARA MUNICIPIOS MARGINADOS EN EL ESTADO DE OAXACA

Ana Luz Ramos Soto, Universidad Autónoma “Benito Juárez” de Oaxaca

RESUMEN

El proyecto tiene como objetivo general, dotar de acervos bibliográfico a municipios marginados del estado de Oaxaca, estos municipios son escogidos por que tienen un Índice de Desarrollo Humano bajo ya que uno de los indicadores que maneja este índice es la educación, estos municipios reportan el 55% de la población femenina analfabeta y el 2.5 promedio de escolaridad en el municipio, la metodología utilizada es a través de fechas determinadas durante el año, se realizan colectas de libros por los estudiantes de la Universidad Autónoma “Benito Juárez” de Oaxaca (UABJO), los cuales son de diferentes niveles: de preschool, primaria, secundaria, bachillerato y de nivel superior, una vez que son recibidos se pasan al hospital del libro siendo este, la dirección de servicios editoriales de la UABJO, donde estudiantes de servicio social a través del personal de dicha dirección los libros son restaurados para posteriormente formar el acervo para ser entregado, como resultados se han entregado dos acervos bibliográficos de 700 libros, a los municipios de: Yogana y San Pedro y San Pablo Ayutla uno de ellos ubicado en la Región de los Valles Centrales y otro en la Región de la Sierra Norte del Estado de Oaxaca.

PALABRAS CLAVE: Marginación, Educación, Municipios

THE BIBLIOGRAPHIC GUELAGUETZA FOR MARGINALIZED MUNICIPALITIES OF OAXACA

ABSTRACT

The project's overall objective is to provide bibliographic collections marginalized municipalities of the state of Oaxaca, these municipalities are chosen because they have a low Human Development Index as an indicator that handles this index is education, these municipalities report the 55% of the female population illiterate and 2.5 average education in the municipality, the methodology used by certain dates during the year, collections of books are made by students of the Universidad Autonomy "Benito Juarez" of Oaxaca (UABJO), which are of different levels: preschool, primary, secondary, and higher secondary school, once they are passed to the hospital received the book and this, the direction of the UABJO editorial services, where social service students through personal address books that are subsequently restored to form the stock to be delivered, and results have been given two library collections of 700 books, the municipalities of: Yogana and San Pedro and San Pablo Ayutla one located in the Central Valleys region and another in the Sierra Norte region of Oaxaca.

INTRODUCCIÓN

La Universidad Benito Juárez de Oaxaca a través de la Agencia de Desarrollo Integral UABJO-SEDESOL, realiza trabajos con las comunidades marginadas del Estado de Oaxaca, con la finalidad de

diseñar propuestas de política pública que contribuyan a elevar el IDH (Índice de Desarrollo Humano) de la población de los municipios con características de marginación y pobreza, por lo que el interés del cuerpo Académico de Investigadores de la Facultad de Contaduría y Administración denominado “Emprendedores”, conformado por la Dra. Ana Luz Ramos Soto, Dra. Rosa María Velázquez Sánchez; colaboran de forma conjunta con la L.C.E. Reyna Tello Pérez, LCC. Alexis Enríquez Vásquez y la Lic. María Margarita Gervacio Luna, para diseñar un proyecto sustentable que genere como resultado Acervos bibliográficos para las comunidades con altos niveles de marginación. La idea nace en el marco del “1er Congreso Internacional, Investigación, desarrollo sustentable, y entorno cultural, del área económico administrativa 2012” que tuvo como sede las instalaciones de la Universidad Autónoma Benito Juárez, llevándose a cabo los días 2 y 3 de marzo del presente año.

Descripción del problema. Uno de los principales problemas de México es la pobreza en la que vive una gran parte de su población, los retos más grandes que se contemplan es el combate a la marginación, desigualdad y falta de oportunidades. Algunos pueblos de Oaxaca, además sufren de privaciones como alimentación suficiente, servicios de salud básicos, y bajos niveles en educación. Oaxaca posee recursos naturales y una cultura milenaria que lo posiciona como una entidad competitiva, a nivel nacional e internacional, sin embargo; no se observa un equilibrio entre las condiciones de vida de la mayoría de la población y su riqueza natural. En el Estado de Oaxaca existen municipios de muy alto grado de marginación, entre los que destacan: Coicoyán de las Flores (2.77) y Santa María Apazco (1.92) en la Región Mixteca; Yogana (1.76) en la Región de Valles Centrales; San Pedro y San Pablo Ayutla (1.94) en la Sierra Norte; El Ciruelo (.88) en Pinotepa de Don Luis en la Región Costa; y Santa Cruz Acatepec (1.92) en la Región Cañada. (CONAPO,2010)

El Estado de Oaxaca se ha caracterizado por encontrarse en el grupo de alto grado de marginación dentro del contexto nacional desde 1970 teniendo un atraso de cuatro décadas de desarrollo económico, que se ve reflejado en su índice de pobreza, uno de los indicadores que permite romper el círculo de la pobreza es el acceso a la educación, en estos municipios encontramos que el 55% de la población femenina es analfabeta, y los varones poseen un promedio en general de escolaridad 2.5%, lo que crea la necesidad de impulsar una propuesta sustentable.(Ramos-Soto,2007)

Es importante mencionar que en el estado de Oaxaca habitan diferentes etnias indígenas, por tal motivo esta entidad es dueña de un mosaico cultural muy singular; en la comunidad “El ciruelo” en Pinotepa Nacional, gran parte de su población descende de la población negra traída durante la época de la Colonia desde África, es decir un grupo cultural ajeno a la cultura nativa de América, la realidad es que esta etnia es una de las más marginadas, “Hoy todavía se puede hablar de la ausencia de la cultura negra en el imaginario colectivo” (Jorge Alfonso Torres Romero e Isidro Ramírez López : 2008). “Es precisamente la invisibilidad de esta comunidad uno de los motivos de su marginación y vulnerabilidad social. Al no ser reconocidas como pueblo en la propia Constitución, son discriminadas y están fuera de los programas de apoyo comunitario gubernamental” (Céline Demol, Antropóloga, 2012). Por lo anterior, es necesario puntualizar en la necesidad de que esta comunidad cuente con acervo bibliográfico, el cual coadyuve a mejorar el nivel de educación de sus habitantes y el nivel de educación contribuya a evitar los actos de racismo ya sea por ignorancia o xenofobia. Con lo anterior se pretende impulsar programas en donde se haga conciencia a la población de este municipio que la lectura es un motor de equidad social y mostrar la importancia que esta tiene para el desarrollo humano.

Queda claro que dadas las condiciones de rezago en los indicadores de crecimiento económico en que vive la población de las comunidades que coinciden como la que sea tomado de referencia, existe la necesidad de dotar de material acervo bibliográfico para ser utilizado en pro de mejorar el grado de aprovechamiento y el aprendizaje, a futuro contribuir a que las nuevas generaciones de estudiantes continúen su formación educativa en grados superiores, y que estas generaciones sean el punto de partida para contrarrestar los indicadores de marginación en sus comunidades.

Justificación. De conformidad con lo que establece la Ley de Coordinación Fiscal Federal, en el marco del nuevo federalismo fiscal que se vive en México, los 570 Municipios que conforman el Estado de Oaxaca, reciben el Fondo de Aportaciones Federales para la Infraestructura Social Municipal, el cual se conoce normalmente como Ramo 33 Fondo III, el cual se debe destinar exclusivamente al financiamiento de obras, acciones sociales y a inversiones que beneficien directamente a sectores de su población que se encuentren en condiciones de rezago social y pobreza extrema en los siguientes rubros:

Ley de Coordinación Fiscal Federal.- “Art. 33... a) Fondo de Aportaciones para la Infraestructura Social Municipal: Infraestructura básica educativa...” (Ley de Coordinación Fiscal)

Teniendo como marco de referencia que existe el fundamento legal para que los Municipios inviertan los Recursos del Ramo 33 Fondo III en la creación de infraestructura básica educativa, se considera necesario desarrollar una campaña de capacitación dirigida a los Ayuntamientos de los 570 Municipios que conforman el Estado de Oaxaca, para que una parte de dichos recursos la destinen para:

1. Crear espacios físicos para la lectura en los niveles de: kínder, primaria, secundaria y preparatoria.
2. Dotar de bibliografía actualizada y suficiente a los espacios destinados a bibliotecas o salas de lectura.
3. Crear salas de medios audiovisuales y equiparlas, destinadas a la lectura para los diferentes niveles: primaria, secundaria, preparatoria, profesional.
4. Instrumentar mecanismos y estrategias para estimular la lectura entre los jóvenes.
5. Que esta propuesta se aplique no sólo a nivel Cabeceras Municipales sino también a nivel Agencias Municipales.

Por lo anteriormente expuesto, se considera viable la propuesta sustentable del equipo de trabajo “Red colecta Libros”, toda vez que los 570 Municipios del Estado de Oaxaca, cuentan con recursos para apoyar esta medida que va en beneficio de sus habitantes, de todos los niveles educativos.

METODOLOGÍA

Para la puesta en marcha de este modelo sustentable se ha avanzado en el diseño conceptual del mismo, por lo que al conseguir la victoria en la competencia, se estaría a la espera de fondos para dar inicio a la puesta en marcha del mismo. Se estima un máximo de seis meses para recibir, restaurar y entregar el acervo bibliográfico de acuerdo a fechas programadas

La evaluación del impacto que tendrá este proyecto sustentable en el Estado de Oaxaca, se presentará durante el “Segundo Congreso Internacional” organizado por la Facultad de Contaduría y Administración de la UABJO.

Actividades Planeadas:

1. Dar a conocer mediante una conferencia de prensa, el proyecto sustentable, “La Guelaguetza de acervo bibliográfico para municipios marginados del estado de Oaxaca, 2012”. Con el propósito de informar y crear conciencia en toda la sociedad Oaxaqueña de la importancia que tiene unirse a este proyecto para dotar de acervo bibliográfico a las comunidades que viven con altos índices de marginación, creando vínculos entre los miembros de la red, para que conjuntamente se logre el objetivo de este.

2. Poner en marcha el plan de medios: 1ra Etapa: Carteles, Folletos, spots en las estaciones de radio, revistas locales (Gente OK, El jolgorio cultural, publicaciones universitarias), paradas de autobús y medios de transporte; insertar nuestra página web en portales y paginas de gobierno, uso de redes sociales, Facebook, Twitter.
3. Organizar la primera “Mega colecta la carreta del libro”, aprovechando la conmemoración de las fiestas patrias en el Estado. (Zócalo capitalino) 16 de septiembre. Invitar al voluntariado del programa “Seguimos Leyendo”, para realizar una sesión de lectura en voz alta, para promover el espíritu de donación, y demostrar el abanico de posibilidades que surgen a través del hábito de la lectura, cuando se cuenta con acervo bibliográfico.
4. Crear el hospital del libro en las instalaciones de la UABJO, la Universidad Autónoma Benito Juárez de Oaxaca, destinará dentro de sus instalaciones un espacio físico, para acopiar, resguardar, y restaurar el material bibliográfico acopiado. A este espacio físico se le dará el nombre de “HOSPITAL DEL LIBRO”. Se pretende que la restauración se lleve a cabo por personal especializado en biblioteconomía adscrito a esta institución, junto con los jóvenes que realizan su servicio social, para fomentar la solidaridad a los grupos más vulnerables.
5. Iniciar con la segunda etapa del plan de medios que consiste en poner en marcha el proyecto en jardines, explanadas, zócalo capitalino, y foros al aire libre; para reforzar el proyecto, mediante la participación de los líderes de opinión se motivan el interés y participación en la donación de libros; además de promueven los valores culturales de solidaridad y cooperación. Además se pretende invitar a la comunidad de ciudadanos estadounidenses radicados en la ciudad de Oaxaca, para que asistan a estos eventos y se integren en nuestro modelo sustentable, se solidaricen, cooperen y formen parte de esta primera Guelaguetza de acervo bibliográfico.
6. Realizar un inventario físico y clasificar el material bibliográfico, e ir formando lotes para la distribución del acervo bibliográfico.
7. Iniciar la tercera etapa del plan de medios, se pretende elaborar un video institucional del modelo sustentable, con los avances que ha tenido el proyecto hasta ese momento, para difundirlo al inicio de funciones de cine, y en la televisora local, e incluso en pantallas de tv dispuestas en puntos estratégicos de la ciudad. Con vistas de incrementar la participación de toda la población oaxaqueña en la última “MEGA COLECTA AYUDA A LOS REYES MAGOS”.
8. Realizar la distribución de los lotes de libros que constituirán el Patrimonio Literario en las bibliotecas de las comunidades con bajo Índice de Desarrollo Humano. Esta entrega se planea llevar a cabo el día 6 de enero de 2013, ya que este día es muy importante dentro de la cultura de esas comunidades. El objetivo de entregarlos en esa fecha es recalcar que el patrimonio literario es un regalo de todos los hermanos oaxaqueños.

RESULTADOS

De acuerdo a los estudios realizados por la Agencia de Desarrollo Integral UABJO-SEDESOL, y al análisis Fortalezas, Oportunidades, Debilidades y Amenazas (FODA) elaborados para cada uno de los municipios a los cuales se les pretende dotar de acervo bibliográfico.

En el área de debilidades se identificaron:

- Bajo nivel de aprovechamiento.

- Carencia de material Bibliográfico.
- No hay continuidad de los estudiantes en los grados superiores.
- Carencia de biblioteca.

Dentro del análisis FODA, se detallan las siguientes fortalezas:

- El interés de los padres por la educación de sus hijos.
- El interés de los niños por la educación.
- El interés por parte de los docentes para realizar su actividad.
- El incremento en la matrícula escolar.

Tabla 1: Análisis FODA: Variable Educación

Fortalezas	Oportunidades
Incremento en la matrícula escolar. Capacitación del personal docente. Grado de estudios de los docentes. Interés por parte de los docentes para realizar su actividad. Apoyo con uniformes por parte del cabildo municipal. Interés de los padres por la educación de sus hijos. Interés de los niños por la educación.	El grueso de la población está en edad escolar. Actualización constante del personal docente. Infraestructura adecuada. Disponibilidad del cabildo municipal para implementar programa de alfabetización.
Debilidades Mala alimentación de los alumnos. Bajo nivel de aprovechamiento. Falta de mantenimiento a la infraestructura. Carencia de Acervo Bibliográfico. Carencia de mobiliario. Las aulas son multifuncionales. Carecen de áreas de recreo. Falta de servicios sanitarios. Becas insuficientes. No hay continuidad de los estudiantes en los grados superiores. La Telesecundaria carece de televisiones, de videos educativos y biblioteca. Existe la violencia intrafamiliar. Existe el abuso sexual. Maltrato físico a los alumnos por parte del personal docente La inequidad de género en los estudios. La falta de comunicación en el interior del municipio. Falta de seguimiento del proceso de alfabetización del sistema INEA.	Amenazas Falta de transporte para los alumnos inscritos en los planteles. Los problemas políticos afectan al proceso de enseñanza-aprendizaje. Inconformidad de los docentes por el ingreso percibido. Orografía del lugar. Difícil acceso a las poblaciones. El clima obstáculo a vencer, sobre todo para los niños y niñas que cursan el preescolar. Los derrumbes, ocasionados por el clima lluvioso, impiden el tránsito de los alumnos.

Fuente. Agencia Desarrollo Integral UABJO-SEDESOL

Del análisis FODA se detecta la necesidad específica de dotar de acervo bibliográfico a los municipios (unidad de análisis), existen diversas razones por las cuales los presupuestos municipales no le dan prioridad a la adquisición del acervo bibliográfico, puesto que las necesidades son muchas y el presupuesto no alcanza. Por otra parte los pobladores no cuentan con ingresos suficientes para adquirir libros, y obtener un mejor nivel educativo. La realidad es que los jefes /as de familia, apenas pueden cubrir alimentación de todos los integrantes, y la falta de oportunidades que caracteriza estas regiones hacen imposible que cuenten con acervo bibliográfico. Lo anterior se refleja en los índices de marginación que perduran a través del tiempo. La única forma de avanzar en el combate del rezago económico, es trabajando en iniciativas, de proyectos sustentables (que impulsen el hábito de la lectura), que creen redes donde se compartan los valores de solidaridad y cooperación, entre hermanos oaxaqueños y se promueva el apoyo entre los unos a los otros, compartiendo la misión de mejorar el entorno educativo de las futuras generaciones. La problemática expuesta puede erigirse como la oportunidad de brindar un proyecto sustentable alternativo de desarrollo en comunidades marginadas a gran escala.

CONCLUSIONES

Durante la exposición del presente proyecto sustentable, se ha señalado que México es un país que ha entrado a la modernidad económica bajo el signo de rezago educativo, particularmente en el Estado de

Oaxaca, existen 101 municipios con alto grado de marginación, y por esta razón se justifica la urgencia de superarlo. Por lo anteriormente mencionado es muy importante tener en cuenta que lo esencial es impulsar un desarrollo comunitario sustentable con la finalidad de que las comunidades puedan tomar el control de sus procesos y esto las ayude a tomar decisiones para salvaguardar sus propios valores culturales, todos los aspectos como son vivienda, salud, alimentación, etc., son indispensables para impulsar el desarrollo comunitario que por ende incrementaría la calidad de vida de estas comunidades; en este primer momento el proyecto solo se abocará en el aspecto de educación para proveer acervos bibliográficos, a seis comunidades con alto índice de marginación, la finalidad es integrar este proyecto con algunos programas educativos para despertar el interés de utilizar los libros, impulsar la lectura y fomentar la participación, para dar paso al detonante que altere la economía del saber, provea de conocimiento y movilice estos conocimientos adquiridos para contribuir en el crecimiento de la cultura de esos pueblos. Si bien es cierto el modelo sustentable que proponemos plantea la siguiente pregunta ¿Y será suficiente solo llevar los libros a estas comunidades? La respuesta más honesta es que:

El libro no le dirá a nadie qué hacer. Sin embargo si partimos del precepto de que “Leer es el resultado de la voluntad de conocer”(Patte Genevieve, 2008); tenemos ganada una de las primeras batallas, puesto que en estas comunidades marginadas, existe el deseo de saciar esa sed de aprender; para reafirmar esta idea tomo algunas líneas de la investigación de la C.D. Antropóloga Céline Demol durante el encuentro “Los Pueblos Negros en movimiento por su reconocimiento” celebrado del 21 al 23 de octubre de 2011, que tuvo sede en la comunidad de Charco Redondo Juquila, en el municipio de Tututepec de Melchor Ocampo, Oaxaca; en donde durante largas jornadas se intentó encontrar mecanismos para dar visibilidad a las poblaciones afro mexicanas de Oaxaca, fortalecer los procesos organizativos y locales, así como regionales, con el propósito de seguir dando pasos hacia el desarrollo social y económico.

Entonces queda claro que estos pueblos están consientes de la necesidad de un proyecto sustentable, que se aloje en el seno de la comunidad, y que propicie la alfabetización, mejores niveles educacionales, y que sea un indicador de equidad social, ahora bien es necesario mencionar que se hace énfasis en el pueblo afro mexicano “El ciruelo”, sin embargo esta actitud se comparte en las otras cinco comunidades que pretendemos beneficiar en un primer momento, y esto se argumenta basándonos en las áreas de oportunidad del análisis FODA presentado en el inicio del presente documento, es decir existe la voluntad de conocer. En teoría todos los ciudadanos deberíamos contar cerca de nuestros domicilios con una selección amplia y organizada de libros que pudiéramos consultar de manera gratuita, sin importar si es una comunidad urbana o rural, la realidad es que en las unidades de análisis no existe la biblioteca porque no hay acervo bibliográfico y si existe este no es suficiente. Sin embargo si existen actitudes favorables para desarrollo del hábito de la lectura, por que los padres de familia de esas unidades de análisis están interesados en contribuir en la mejora del entorno educativo de las generaciones en el presente y en el futuro. Existe un conocido refrán que dice “Sí alguien te pide un pescado, no se lo des enséñalo a pescar”, nuestro propósito es enseñarlos a pescar, para que ellos puedan proveerse en el mundo del conocimiento, y sean los agentes de cambio en esas comunidades marginadas. Pues ellos son quienes conocen perfectamente sus recursos tanto naturales, como culturales, y son ellos quienes a largo plazo se incluirán en proyectos sustentables; llenos de una conciencia del lugar que ocupan en este mundo global.

A manera de síntesis el “Desarrollo sustentable es la capacidad de la gente para organizarse, crear instancias en procesos colectivos, solidarios y participativos, frente al mundo moderno que nos ofrece cosas positivas y negativas”.(Toledo,2012), de ahí que surja el interés de este equipo de trabajo por dotar de acervo Bibliográfico a comunidades con altos índices de marginación para ofrecerles espacios de consulta, promoción a la lectura, expresión; los beneficiados con este proyecto van a ser personas más reflexivas, críticas y analíticas porque van a poseer una cultura de información que a su vez va a permitir impulsar el desarrollo sustentable de las comunidades. Como bien lo dice el premio nobel de literatura John Ernest Steinbeck., “*Por el grosor del polvo en los libros de una biblioteca pública, puede medirse la*

cultura de un pueblo”, entonces, hagámoslo posible, dotemos de acervo bibliográfico a esos municipios marginados.

THE ESTABLISHMENT OF BUSINESS TAX -RATE AND ITS IMPACT CONVENTIONS IN TO AVOID DOUBLE TAXATION OF WHICH IS PART MEXICO

This research analyzes the impact of the Business Flat Tax (IETU), has had, from its entry into force, in 2008, the Conventions for the Avoidance of Double Taxation (CEDT) that Mexico had concluded before cited year and those that were modified and entered into force, after its implementation in the country. To do this we are addressing four major guidelines: A. - The CEDT concluded before the entry into force of the flat tax and that did not change with its entry into force and remain in your text formally recognize IETU; B. - The CEDT concluded before the entry into force of the flat tax and modified with its entry into force and formally recognize the text to IETU, C. - The CEDT concluded after the entry into force of the flat tax and formally incorporate it into your text and D.- The CEDT concluded after the entry into force of the flat tax and not formally incorporated into the text.

PRESENTACIÓN

El objeto de estudio de la investigación es el IETU y su vinculación con los CEDT, en cuanto a su impacto legal y financiero. El campo de acción de nuestro trabajo, lo constituyen los CEDT que México ha celebrado después de la entrada en vigor del IETU en México, es decir, después del 1º de enero de 2008, así como los que se han modificado después de la fecha citada. Para ello estamos atendiendo a cuatro grandes directrices: A.- Los CEDT celebrados antes de la entrada en vigor del IETU y que no se modificaron con su entrada en vigor y permanecen sin reconocer formalmente en su texto al IETU; B.- Los CEDT celebrados antes de la entrada en vigor del IETU y que se modificaron con su entrada en vigor y reconocen formalmente en su texto al IETU; C.- Los CEDT celebrados después de la entrada en vigor del IETU y que lo incorporan formalmente en su texto y D.- Los CEDT celebrados después de la entrada en vigor del IETU y que no lo incorporan formalmente en su texto.

Antecedentes para la creación del IETU en México: Esta contribución entró en vigor el 1º de enero del 2008, según el Artículo Primero Transitorio de la Ley del IETU, publicada el 1º de octubre del 2007, DOF. Como justificante para su entrada en vigor se dijo por el Presidente de la República al enviar la iniciativa de creación de dicho tributo, lo siguiente:

“Para el diseño de la contribución empresarial a tasa única propuesta se consideraron los siguientes principios fundamentales: La simplificación de las contribuciones, que reduce los costos administrativos del sistema fiscal y promueve el cumplimiento de las obligaciones fiscales por parte de los contribuyentes. La flexibilidad del sistema impositivo, que le permite tener la capacidad de ajustarse rápida y adecuadamente a cambios en las condiciones económicas. La transparencia, pues se pretende que el sistema fiscal sea de

fácil y rápida identificación respecto a las obligaciones fiscales, reduciendo los costos asociados a su cumplimiento y control, tanto para los contribuyentes como para las autoridades. La equidad y proporcionalidad del sistema tributario, que establezca un trato fiscal semejante para contribuyentes que estén en iguales condiciones económicas y que tenga la virtud de gravar más a quien tenga mayor capacidad contributiva.

Como puede observarse, la finalidad directa de su implementación en México fue mejorar la recaudación impositiva, en virtud de que en el año 2007, representaba apenas el 9.5% en relación con el PIB, proyectando que el IETU incrementaría en 2009, un 1.8% del PIB. Según el documento de M. Victoria Espada, la proyección deseada se cumplió en virtud que sumando el 9.5% que se tenía, más el 1.8%, del IETU, representaría un 11.13% del PIB.

Los Elementos Esenciales Y Características Del IETU.

Para proceder a delimitar la problemática entre el IETU y los CEDT pasaremos a examinar algunos elementos esenciales del tributo.

El sujeto pasivo de gravamen: Lo constituyen las personas físicas y morales, así como los residentes en el extranjero con establecimiento permanente en el país. En cuanto a este último concepto, Luis Roberto Lara Ramos citando a McLees, John A, *et al*, reflexiona que cuando la ley del IETU se remite al concepto de Establecimiento Permanente de los tratados internacionales, “podría ocasionar que resurgiera un riesgo de que una empresa norteamericana creara un EP en México, cuando mantuviera en este país un inventario para su procesamiento por una maquiladora, ya que de acuerdo con el tratado fiscal firmado entre México y EUA, dicha maquiladora constituye un agente dependiente y, por lo tanto, un EP con base en el artículo 5, párrafo 5(b)”. Este riesgo fue considerado por el gobierno de México y con tal fin emitió el DECRETO por el que se otorgan diversos beneficios fiscales en materia de los impuestos sobre la renta y empresarial a tasa única, publicado en el DOF, el 5 de noviembre del 2007.

El hecho imponible: Conforme al artículo 1º, LIETU, lo constituyen los ingresos, por la enajenación de bienes, prestación de servicios independientes u otorgar el uso o goce temporal de bienes, que perciban personas físicas y morales residentes en territorio nacional o los residentes en el extranjero con establecimiento permanente en el país. Como puede advertirse, algunos de los ingresos que no se incluyeron en el hecho imponible del IETU, se refiere a los *ingresos provenientes de dividendos, intereses y premios derivados de loterías, rifas y sorteos.*

El Incremento Patrimonial: A Diferencia Del ISR Mexicano Que Grava El Incremento Patrimonial, El IETU, Sólo Tiene Como Hecho Generador Determinados Ingresos, Por Lo Que No Cualquier “Incremento Patrimonial” Formaría Parte Del Tributo. Hacemos Notar Que El Pleno De La SCJN En México, Bajo El Esquema Que Diseñó El Legislador Mexicano Incorpora Dos Elementos Que No Se Encuentran Comprendidos En El Referido Ordenamiento Legal: Los “Ingresos Brutos” Como Hecho Imponible Del Gravamen Y El Establecimiento De “Beneficios Tributarios” Como Base Gravable. Estos Elementos Novedosos Se Derivan Del Precedente Número XL/2010, Titulado: EMPRESARIAL A TASA ÚNICA. LOS ARTÍCULOS 3, 5 Y 6 DE LA LEY DEL IMPUESTO RELATIVO, AL NO PERMITIR LA DEDUCCIÓN DE SUELDOS Y SALARIOS, PARTICIPACIÓN DE LOS TRABAJADORES EN LAS UTILIDADES DE LAS EMPRESAS, APORTACIONES DE SEGURIDAD SOCIAL, GASTOS DE PREVISIÓN SOCIAL, INTERESES DERIVADOS DE OPERACIONES DE FINANCIAMIENTO O MUTUO CUANDO NO SE CONSIDEREN PARTE DEL PRECIO Y REGALÍAS QUE SE PAGUEN ENTRE PARTES RELACIONADAS, NO VIOLAN EL PRINCIPIO DE PROPORCIONALIDAD TRIBUTARIA (LEGISLACIÓN VIGENTE A PARTIR DEL 1 DE ENERO DE 2008). [TA]; 9a. Época; Pleno; S.J.F. Y Su Gaceta; XXXII, Agosto De 2010; Pág. 241.

Bajo nuestra consideración, con la interpretación que realiza el Pleno de la SCJN y bajo la estructura que el legislador en México le dio al IETU, al considerarlo como un impuesto a los “*ingresos brutos*” y con una base gravable sobre los “*beneficios tributarios*”, compromete seriamente la negociación entre México y USA, para que el segundo país mencionado, reconozca al IETU, formal y definitivamente, como un impuesto “*de naturaleza idéntica o análoga*” al ISR que contempla el CEDT. En el mismo tenor, Juan Carlos Roa Jacobo aduce: “*es mi opinión que el legislador nacional creó un impuesto que, aun cuando tiene puntos de contacto importantes, no puede reducirse a una reiteración del impuesto sobre la renta, por más que los sujetos obligados lo estén en razón de ciertos ingresos, derivados de la realización de determinadas actividades, o por el hecho de que la base parezca describir un concepto equivalente a la utilidad*”. Sobre la misma línea argumentativa, si a decir de Lara Ramos, “*las reglas norteamericanas (Reglas del Tesoro de EUA 1.901.2(b)(1)) establecen que un impuesto se considera como un impuesto sobre la renta solamente si se calcula con el objetivo de obtener una renta “neta”, como en el caso del IETU, se basa en “ingresos brutos”, en definitiva podría no considerarse como un impuesto idéntico o similar al ISR del CEDT con USA. No soslayamos que existen algunas opiniones de tratadistas en la materia que opinan que el IETU si puede considerarse un impuesto análogo al ISR, como es el caso de McLee, Reyes Freaner, González Bendiksen y Ocampo, así como José Manuel Miranda Santiago.*

La Base Grable: En términos del artículo 1, LIETU, se obtiene disminuyendo de los ingresos percibidos por las actividades gravadas por el IETU, las deducciones autorizadas. A dicha base se aplicará la tasa respectiva y se obtendrá el IETU a pagar. Este IETU a pagar podrá disminuir, una vez que apliquen los créditos que previenen los artículos 8 y 11, LIETU. En materia de deducciones, a diferencia de la mecánica del ISR que tiene regla general la deducción los gastos estrictamente indispensables para obtener el ingreso, el IETU no permite la deducción, entre otros conceptos de *sueldos y salarios, participación de los trabajadores en las utilidades de las empresas, aportaciones de seguridad social, gastos de previsión social, intereses derivados de operaciones de financiamiento o mutuo cuando no se consideren parte del precio y regalías que se paguen entre partes relacionadas*. (Véase la Jurisprudencia 164/2010, de la Segunda Sala de la SCJN en México, denominada: *Empresarial A Tasa Única*. Los Artículos 3, 5 Y 6 De La Ley Del Impuesto Relativo, Al No Permitir La Deducción De Diversos Conceptos, No Violan El Principio De Proporcionalidad Tributaria (Legislación Vigente A Partir Del 1 De Enero De 2008). [J]; 9a. Época; 2a. Sala; S.J.F. y su Gaceta; XXXII, Diciembre de 2010; Pág. 488).

La Posible Derogación Del Título II Y IV, Capítulos II Y III De La Ley Del ISR En México.

Según el Artículo Décimo Noveno de las disposiciones transitorias de la LIETU, que transcribimos enseguida, se preveía derogar de la LISR en México, el tratamiento fiscal de las personas morales y personas físicas actividades empresariales y servicios profesionales para regularlos en el IETU, lo que de entrada ameritaba avisar a los países firmantes de los CEDT con México de esta posibilidad. Destacamos que a través del documento denominado “El Impuesto Empresarial a Tasa Única (IETU): Un diagnóstico a tres años de su implementación”, la SHCP opinó que no era recomendable la derogación de los regímenes fiscales antes señalados. Algunas consideraciones para emitir esta opinión fueron las siguientes:

“En términos generales el IETU ha logrado recaudar más pero sin que necesariamente sean los mismos contribuyentes del ISR. El IETU ha logrado captar mayores ingresos y distribuir la carga de la recaudación entre más contribuyentes. Esto implica que de eliminarse el IETU, la distribución de pago de impuestos directos por nivel de ventas se concentraría aún más en aquellos contribuyentes que ya aportan la mayor parte de la recaudación de ISR. Es decir, la eliminación del IETU tendría como consecuencia incrementar la carga impositiva de las mismas empresas que ya contribuyen con la mayor parte de los impuestos directos.

...

Aunque el Congreso Federal Mexicano no emitió pronunciamiento expreso y formal sobre este estudio, tácitamente lo aceptó en el sentido de coexistir el ISR y el IETU, tomando en cuenta además que al mes de octubre de 2012, siguen vigentes los Títulos II y IV, capítulos II y III de la Ley del ISR mexicana.

El artículo 2, del Modelo de Convenio Tributario sobre la Renta y sobre el Patrimonio de la Organización para la Cooperación y el Desarrollo Económico (MOCDE).

Sobre este precepto tenemos las siguientes cuestiones a resaltar:

A.- El MOCDE, sólo incluye expresamente al ISR y el impuesto sobre el patrimonio y corresponderá a los estados contratantes en los CEDT, adicionar alguna otra contribución que consideren indispensables para las finalidades de dicho instrumento.

B.- Para los efectos del MOCDE, se considera ISR e impuesto sobre el patrimonio, el que grava la totalidad de la renta o cualquier parte de ésta, *incluidos los impuestos sobre las ganancias derivadas de la enajenación de la propiedad mobiliaria o inmobiliaria, los impuestos sobre los importes totales de los sueldos o salarios pagados por las empresas, así como los impuestos sobre las plusvalías latentes.*

C.- El MOCDE prevé aplicar, a los tributos de naturaleza idéntica o similar, que se establezcan con posterioridad a la firma del CEDT.

La Interpretación Del Artículo 2, MOCDE, ^{Bajo} Las Directrices De Sus Comentarios.

El Servicio de Administración Tributaria (SAT) en México, a través de la Regla 1.2.1.19., de la Segunda Resolución de Modificaciones a la Resolución Miscelánea Fiscal para 2012, publicada en el DOF, el 7 de junio 2012, fijó la naturaleza jurídica de los comentarios al MOCDE, de tal manera, que atendiendo a la referida porción normativa en materia de los CEDT: Los celebrados por México deben interpretarse conforme a los artículos 31, 32 y 33 de la Convención de Viena sobre el Derecho de los Tratados entre Estados y Organizaciones Internacionales (CVDT); La doctrina es coincidente en la necesidad de que “el tratado de los tratados”, como lo es la CVDT debe aplicar para interpretar a los CEDT, por ejemplo, Francisco Alfredo García Prats y Eugenio Grageda Nuñez. De tal manera que acudiendo a los comentarios al artículo 2 relativo a los impuestos comprendidos en el convenio, tenemos las siguientes directrices:

1.- Se pretende “*evitar la necesidad de firmar un nuevo convenio cada vez que se modifique la legislación interna de los Estados contratantes, así como garantizar que a cada Estado contratante se le notifiquen las modificaciones importantes de la legislación tributaria del otro Estado*”. (numeral 1 de los comentarios al artículo 2 del MOCDE)

2. Se prevé que “*los Estados contratantes son libres de restringir el ámbito de aplicación del Convenio a los impuestos ordinarios, de extenderlo a los extraordinarios, o incluso de establecer disposiciones especiales*”. (numeral 5 de los comentarios al artículo 2 del MOCDE).

3.- Se establece que “*Cada Estado se compromete a notificar al otro las modificaciones relevantes introducidas en su legislación tributaria, comunicándole, por ejemplo, información relativa a detalles de los impuestos nuevos y de otros que han sido sustituidos. Se anima a los Estados miembros a comunicar otras modificaciones importantes, tales como nuevas reglamentaciones o sentencias de los tribunales; muchos países ya observan esta práctica. Los Estados contratantes pueden extender sus exigencias de notificación hasta reflejar cualesquiera notificaciones importantes habidas en otras leyes con incidencia*

en sus obligaciones derivadas del convenio . . .” (numeral 5 de los comentarios al artículo 2 del MOCDE).

Los CEDT celebrados por México y su panorama antes y después de la entrada en vigor del IETU. En efecto, antes y después de la entrada en vigor del IETU, podemos identificar cuatro escenarios posibles en los CEDT: *A.- Los CEDT celebrados antes de la entrada en vigor del IETU y que no se modificaron con su entrada en vigor y permanecen sin reconocer formalmente en su texto al IETU; B.- Los CEDT celebrados antes de la entrada en vigor del IETU y que se modificaron con su entrada en vigor y reconocen formalmente en su texto al IETU; C.- Los CEDT celebrados después de la entrada en vigor del IETU y que lo incorporan formalmente en su texto y D.- Los CEDT celebrados después de la entrada en vigor del IETU y que no lo incorporan formalmente en su texto.* Bajo estas cuatro directrices examinamos algunos de los CEDT celebrados por México con otros países.

V.- el cedt que celebraron México y USA, como un instrumento jurídico celebrado antes de la entrada en vigor del IETU y cuyo texto no se modificó para reconocerlo expresamente. La importancia del análisis del referido instrumento internacional, en este trabajo obedece a que USA constituye en México, el 36.9% de la Inversión Extranjera Directa (IED), en el primer semestre del 2012. Además desde el año 2000 hasta el 2012, considerando una IED acumulada por país de origen, USA representa en México un 49.6%. Considerando las cifras anteriores, con la entrada en vigor del IETU en 2008, México decidió darle prioridad a la negociación con USA, con el fin de que el nuevo tributo se considerara como un impuesto “*de naturaleza idéntica o análoga*” al ISR pactado en el CEDT. Los resultados de la negociación los comentamos enseguida. Según el Comunicado de Prensa 115/2007, del 10 de diciembre de 2007, titulado el gobierno norteamericano reconoce la acreditación del impuesto empresarial a tasa única, la SHCP informó sustancialmente: “que el gobierno norteamericano, a través del Departamento del Tesoro y el Servicio de Rentas Internas (IRS, por sus siglas en inglés) ha anunciado que los contribuyentes norteamericanos podrán acreditar, contra el impuesto sobre la renta a su cargo en EUA, el Impuesto Empresarial a Tasa Única (IETU) que paguen en México sin que las autoridades fiscales de EUA impugnen dicho acreditamiento. El acreditamiento no será objetado en tanto las autoridades fiscales de EUA realizan un estudio (descrito más adelante) del IETU.

Es importante destacar que un crédito aplicado durante el periodo del estudio no podrá ser impugnado posteriormente por las autoridades fiscales americanas”. México no quiso correr el riesgo de que no se aceptara el acreditamiento del IETU en USA, como fue “El caso del Impuesto Regional Italiano sobre Actividades Productivas (IRAP), que es similar al IETU, es un ejemplo de cómo una modificación estructural a un sistema tributario puede generar la pérdida de acreditamiento como impuesto pagado en el extranjero. Italia tenía un impuesto local sobre la renta (ILOR) que gravaba el trabajo y posteriormente fue sustituido por el IRAP que grava también los otros factores de la producción, este cambio tuvo como consecuencia que los Estados Unidos de América determinara que el impuesto sólo sería acreditable de forma parcial”. Aunque como ya lo expresamos en esta investigación en los puntos 2.2.1 y 2.3.1., el criterio del Pleno de la SCJN en México y la estructura que el legislador mexicano le dio al IETU, lo aleja de ser considerado como un impuesto idéntico o análogo al ISR que contiene el CEDT celebrado con USA. A la fecha de la terminación del presente trabajo, USA no ha emitido un documento escrito en el que reconozca en forma definitiva que el IETU puede considerarse como un impuesto “*de naturaleza idéntica o análoga*” al ISR y por ello, la referida contribución no constituye parte del CEDT celebrado con México. Tampoco USA decidió modificar el CEDT celebrado con México para incorporar el IETU a su texto formal, lo que desde luego no es un requisito de validez, ya que bastaría que USA manifestara por escrito su conformidad, para que tuviera plena validez, de acuerdo con el artículo 2, del CEDT.

CEDT celebrados por México antes de la entrada en vigor del IETU y que después de su vigencia, fue reconocido como un impuesto comprendido en los CEDT. Ello lo informó la SHCP, en el boletín denominado “DOBLE TRIBUTACIÓN”, en el que se especifica que “Los países con los que México

tiene un Tratado para Evitar la Doble Tributación en vigor han aceptado al Impuesto Empresarial a Tasa Única (IETU) como un impuesto comprendido en dichos instrumentos. Estos países se enlistan a continuación”:

1. Alemania	13. Finlandia	
2. Australia	14. Francia	25. Polonia
3. Austria	15. Grecia	26. Portugal
4. Bélgica	16. Indonesia	27. Reino Unido
5. Brasil	17. Irlanda	28. Rep. Checa
6. Canadá	18. Israel	29. Rep. Eslovaca
7. Chile	19. Italia	30. Rumania
8. China	20. Japón	31. Rusia
9. Corea	21. Luxemburgo	32. Singapur
10. Dinamarca	22. Noruega	33. Suecia
11. Ecuador	23. Nueva Zelanda	34. Suiza
12. España	24. Países Bajos	

cedt celebrados por México antes de la entrada en vigor del ietu y que se modificaron después de ello, pero que no lo incorporaron formalmente a su texto, en virtud de que la reforma al protocolo de los cedt, obedeció a fines diversos. Los países que optaron y decidieron lo anterior, los analizamos enseguida. cedt celebrados con Austria, el gran ducado de Luxemburgo y Singapur, antes de la entrada en vigor del ietu y que se modificaron con posterioridad a su vigencia, pero que no lo incorporaron formalmente a su texto, ya que la finalidad de la reforma fue para el fortalecimiento de intercambio de información que se regula en el artículo 26, cedt. cedt celebrados por México antes de la entrada en vigor del ietu y que se modificaron después de ello, para incorporarlo formalmente a su texto.

Estos son los casos de los países bajos y de la gran Bretaña e Irlanda del Norte, que al modificar su protocolo, reforman el artículo 2, de los cedt, para reconocer como impuestos mexicanos o de México; el impuesto sobre la renta (ISR) y el impuesto empresarial a tasa única (IETU). Los textos están representados por: el protocolo que modifica el convenio entre los Estados Unidos Mexicanos y el Reino de los Países Bajos para evitar la doble imposición e impedir la evasión fiscal en materia de impuestos sobre la renta, con protocolo, firmado en La Haya el 27 de septiembre de 1993, publicado el 29 de diciembre del 2009, DOF y el protocolo entre el gobierno de los Estados Unidos Mexicanos y el gobierno del Reino Unido de la gran Bretaña e Irlanda del Norte que modifica el convenio para evitar la doble imposición e impedir la evasión fiscal en materia de impuestos sobre la renta y ganancias de capital, firmado en la ciudad de México el 2 de junio de 1994, publicado el 15 de abril de 2011, DOF.

cedt celebrados por México con posterioridad a la entrada en vigor del ietu y que incorporan dicho tributo formalmente al convenio. cedt con la República Federal de Alemania, Bahrein, Barbados, República de Hungría, República de Islandia, República de Panamá, Federación de Rusia, República de Sudáfrica, Consejo Federal Suizo y República Oriental del Uruguay, celebrados por México con posterioridad a la entrada en vigor del ietu y que lo incorpora formalmente al convenio. En todos los cedt antes mencionados, en su artículo 2, se reconocen como impuestos mexicanos o de México; el impuesto sobre la renta (ISR) y el impuesto empresarial a tasa única (IETU). Enseguida, en el esquema siguiente, presentamos los países y la fecha de publicación en el DOF.

Países firmantes	Publicación en el DOF	Considera o no el IETU como parte del CEDT
República Federal de Alemania	15 de diciembre 2009	SI
Bahréin	27 de abril de 2012	SI
Barbados	15 de enero de 2009	SI
República de Hungría	26 de diciembre de 2011	SI
República de Islandia	31 de diciembre de 2008	SI
República de Panamá	30 de diciembre de 2010	SI
Federación de Rusia	20 de mayo de 2008	SI
República de Sudáfrica	21 de julio de 2010	SI
Consejo Federal Suizo	22 de diciembre de 2010	SI
República Oriental del Uruguay	28 de diciembre de 2010	SI

cedt celebrado por México después de la entrada en vigor del IETU y que no lo incorporó formalmente a su texto. Este sería el caso del acuerdo entre el gobierno de los Estados Unidos Mexicanos y el gobierno de la República de la India para evitar la doble imposición y prevenir la evasión fiscal en materia de impuestos sobre la renta, publicado el 31 de marzo de 2010, DOF.

CONCLUSIONES

Primera: Que la finalidad directa de la implementación del IETU en México, fue mejorar la recaudación impositiva, en virtud de que en el año 2007, representaba apenas el 9.5% en relación con el PIB, proyectando que dicha contribución incrementaría en 2009, un 1.8% del PIB.

Segunda: Que el Pleno de la SCJN en México interpretando el ordenamiento que el legislador mexicano creó, incorpora dos elementos novedosos en la Ley del IETU, como son: los “ingresos brutos” como hecho imponible del gravamen y el establecimiento de “beneficios tributarios” como base gravable y que comprometen seriamente la negociación entre México y USA, para que el segundo país mencionado, reconozca al IETU, formal y definitivamente, como un impuesto “de naturaleza idéntica o análoga” al amparo del CEDT firmado entre ambas naciones.

Tercera: Que bajo el concepto de ingresos brutos del IETU, puede entrar en conflicto con el concepto de Renta Neta que maneja las Reglas del Tesoro de EUA 1.901.2(b)(1) y por ende, no autorizarse el acreditamiento del IETU en el referido país.

Cuarta: Que al tenor del artículo 2 de los comentarios al MOCDE, México procedió a dar aviso a los países con los que tenía un CEDT, para que se reconociera el IETU como un impuesto idéntico o similar al ISR contenido en dichos instrumentos internacionales y algunos países lo reconocieron sin modificar el texto de los CEDT y otros optaron por la vía formal, al modificar dichos convenios para incorporar al IETU como un impuesto mexicano amparado en los CEDT.

RESUMEN

Si bien, en cualquier tipo de empresa surge la necesidad de recurrir a una fuente de financiamiento externa para cubrir sus obligaciones empresariales, existe un fuerte impedimento por el que los empresarios no lo hacen: el desconocimiento de las posibles opciones existentes, pero principalmente el riesgo que le puede significar adquirir una deuda, aunado a la incertidumbre del buen uso que debiera darse a los recursos solicitados. En este trabajo se presenta la experiencia desarrollada para una microempresa, en donde a partir del diagnóstico, se detectaron las necesidades financieras con las cuales es factible alcanzar las estrategias de desarrollo planteadas a corto y mediano plazo para la empresa. Se identificaron, analizaron y seleccionaron las fuentes de financiamiento más adecuadas a dicho fin; detectando más de 70 programas de financiamiento entre los que se eligieron aquellos que cubrieran los requerimientos mínimos de acuerdo a las características particulares de la empresa en cuestión. Concluido lo anterior, se calculó el costo de financiamiento a los diferentes plazos ofrecidos por cada una de las fuentes seleccionadas y así, el empresario tuvo un punto de referencia que lo llevó a tomar la decisión y con ello, proceder a preparar la documentación necesaria.

PALABRAS CLAVE: fuentes de financiamiento, costo financiero, crédito financiero

ELECTION OF FUNDING SOURCES FOR A BUSINESS: AN EXPERIENCE

ABSTRACT

While in any type of business there is the need to appeal to external financing sources to meet their business obligations, there is a strong impediment for entrepreneurs who do not: ignorance regarding the possible existing solutions, but mainly the risk may mean acquiring a debt, coupled with the uncertainty of well used of the requested resources, This paper presents the experience developed for a small business, where from the diagnosis stage, where detected with financial needs which is feasible to achieve the development strategies raised within the short and medium term for the company. The most appropriate financing sources were identified, analyzed and selected for this purpose; detecting over more than 70 financing programs among them were chosen the ones that cover the minimum requirements according with the specific characteristics of the company in question. Concluded above, it was calculated the financing cost of the different terms offered by each one of the sources selected and thus, the entrepreneur had a benchmark that lead him to take a decision and with it, proceed to prepare the needed documentation.

INTRODUCCIÓN

Multiservicios industriales es una empresa dedicada a la elaboración y distribución de especialidades químicas para la industria alimentaria, embotelladora y pecuaria. Empresa que se encuentra en la etapa de desarrollo empresarial donde uno de los grandes desafíos es el crecimiento de su mercado, por lo que se ve en la necesidad de incrementar su capacidad productiva para satisfacer las demandas de sus clientes y atender nuevos nichos de mercado por lo que debe adquirir más activos que le faciliten la eficiencia de sus operaciones y distribución de sus productos, tal situación le obliga a buscar fuentes de financiamiento que le permitan invertir en su crecimiento. Aquí se presenta la metodología seguida para que la empresa pudiera cuantificar los requerimientos de capital y conocer las características de las diferentes fuentes de financiamiento, hasta determinar, con base en los resultados de cada etapa, la más adecuada de acuerdo a las necesidades de la empresa, para finalmente establecer las conclusiones.

REVISIÓN LITERARIA

De acuerdo a FUNDES (2006) el 43% de las PYMES fracasa por errores administrativos y 24% por errores financieros antes de cumplir un año al surgir dificultades en la presentación de la información financiera aunado a la informalidad, la demora en el pago de impuestos que le trae mayores gastos. Otras limitantes externas al crecimiento de las PYMES son los trámites gubernamentales, las políticas fiscales, la falta de conocimiento de los programas federales, el limitado acceso al financiamiento siendo este uno de los más grandes obstáculos y a la ineficacia de los programas gubernamentales. En lo referente a trámites gubernamentales y fiscalidad son procedimientos largos, burocráticos y variables que promueven la informalidad y como Pavón (2010) afirma las PYMES son vulnerables a un trato inadecuado y muchas veces corrupto desde los trámites para abrir una empresa y mantenerla dentro del orden legal.

Respecto al financiamiento, García (2007) y Campos (2006) coinciden en que el Sistema Financiero Mexicano es el conjunto de instituciones públicas y privadas a través de las cuales se llevan a cabo y se regulan actividades como: el otorgamiento y obtención de financiamientos, realización de inversiones con o sin riesgo, prestación de diferentes servicios bancarios que van de lo doméstico, hasta los que por disposiciones legales deban hacerse y que a su vez se puedan realizar en estas instituciones, emisión y colocación de instrumentos bursátiles y todas aquellas relacionadas a la actividad financiera como seguros, fianzas, arrendamientos financieros, compra y venta de divisas y metales preciosos, factoraje financiero entre otros. García (2007) describe los componentes más representativos del

SFM, agrupándolos en cuatro vertientes, aquellos relacionados a operaciones bancarias, a operaciones bursátiles, a las organizaciones que supervisan y regulan la actividad financiera en México y otras figuras financieras, cuyo propósito es la captación de recursos monetarios provenientes de inversionistas y ahorradores ya sean personas físicas y morales para después canalizarlos al financiamiento de aquellos que lo demanden. Por su parte, Haime (2004) y Hernández (2002) definen al financiamiento como la obtención de recursos financieros para que la empresa pueda llevar a cabo sus operaciones diarias, realización de nuevos proyectos, incremento de actividades o crecimiento a largo plazo que implique una inversión y Perdomo (2002) agrega que el “financiamiento es la obtención de recursos que requiere cualquier empresa para el desarrollo de sus operaciones cotidianas de manera eficiente”. Donde independientemente del destino de los recursos y los medios por los cuales se obtienen los recursos financieros para su operación y crecimiento, en lo interno o externo, a corto, mediano y largo plazo, se le conoce de acuerdo a Hernández (2002) como “fuentes de financiamiento”.

Al referirse a las fuentes de financiamiento de la empresa se incluye todas las instituciones, personas y empresas a las que se puede recurrir para obtener dichos recursos y dependiendo del tipo de empresa, giro y tamaño de la misma será la diversidad de las fuentes de financiamiento disponibles (Haime, 2004). Existen diversas fuentes a las que pueden recurrir las empresas, la clasificación habitual que se hace de ellas es de acuerdo con el origen de los recursos, las cuales se clasifican en internas y externas

(Hernández, 2002) también conocidas según Soriano & Pinto (2006) como fuentes de financiación propia o financiación ajena.

METODOLOGÍA

La metodología empleada en este trabajo está conformada de 6 etapas; el diagnóstico se basó en el análisis propuesto por Kaplan y Norton (2000) desde cuatro perspectivas que engloban a la organización: la de finanzas, clientes, proceso interno y aprendizaje y crecimiento. A partir de los resultados del diagnóstico, las necesidades percibidas por la empresa y los objetivos del negocio se establecieron y diseñaron las estrategias de desarrollo las cuales se llevaron a cabo siguiendo las acciones determinadas para el logro de las mismas. La siguiente etapa tuvo por objetivo conocer las necesidades financieras de la empresa para determinar el monto y tipo de crédito requerido. La identificación y análisis de las fuentes de financiamiento tuvo por objetivo detectar todas aquellos productos financieros factibles para la empresa en cuestión; dicha etapa se centró en la investigación documental, contrastando las alternativas financieras que brindan las diversas Instituciones del Sistema Financiero Mexicano. Por último, con base en el análisis y evaluación de las fuentes factibles de financiamiento, se determinó la más adecuada para la empresa en particular, proponiendo las estrategias para que el empresario tenga una base para decidir el curso a seguir y, en base a su decisión, recabar y organizar aquella documentación marcada como necesaria en la fuente de financiamiento elegida, con la finalidad de que la empresa tenga la oportunidad de ser candidato al financiamiento.

Figura 1: Etapas del proceso metodológico

En esta figura, se presentan las seis etapas seguidas para este trabajo, desde el diagnóstico hasta la selección de la fuente de financiamiento, de acuerdo al enfoque propuesto por Kaplan y Norton que engloban a la organización: la de finanzas, clientes, proceso interno y aprendizaje y crecimiento, para conocer la situación actual de la empresa a partir de la cual se diseñaron y desarrollaron las estrategias que pueden llevar a la empresa a alcanzar sus objetivos, para lo cual son necesarios recursos y dependiendo del monto, plantear recurrir a una fuente de financiamiento que debe ser seleccionada con las mejores condiciones para la empresa.

RESULTADOS

Tabla 1: Diagnóstico de la empresa

Perspectiva	Resultados
Financiera	1. Sus ventas no han tenido un incremento considerable en el último año. 2. Su margen de utilidad le permita hacer frente a sus gastos.
Clientes	1. Tiene identificado su nicho de mercado. 2. Solo hace negocios con empresas con capacidad de pago en un tiempo no mayor a 30 días.
Proceso interno	1. Carece de tecnología adecuada, la utilizada se encuentra casi en el término de su vida útil. 2. Maquinaria ensamblada por la empresa de manera artesanal. 3. No se cuenta con equipo y material de laboratorio adecuado
Aprendizaje y crecimiento	1. Carece de planes de capacitación y actualización. 2. No cuenta con un manual de organización. 3. Los colaboradores desconocen de manera completa sus funciones.

La tabla 1 es ejemplo de algunos de los elementos detectados en cada una de las perspectivas: en la financiera se establecieron dos, en la de clientes 10. En la perspectiva del proceso interno fue donde se plantearon más elementos, en total veinte, ya que se hace referencia a más de 35 productos, se analizaron procesos, clientes y competencia. Por último para el aprendizaje y crecimiento se establecieron 8 planteamientos. Es de mencionar que se establecieron en sentido positivo como: existen nichos de mercados al que puede incursionar, pero también negativo como: maquinaria ensamblada por la empresa de manera artesanal.

El resultado del diagnóstico se concentró en una tabla similar a la 1, de acuerdo a las cuatro perspectivas planteadas que fueron detectadas y analizadas a través de documentos históricos de la empresa, preguntas y observación directa en el área de trabajo

Con base en el diagnóstico, la empresa ha definido los objetivos actuales del negocio:

1. Incrementar su capacidad productiva para poder satisfacer las demandas de sus clientes y atender nuevos nichos de mercado.
2. Adquirir activos que faciliten la eficiencia de sus operaciones y distribución de sus productos.
3. Buscar fuentes de financiamiento que le permitan invertir en su crecimiento.

En atención al impacto de las necesidades en los objetivos del negocio y a los resultados de las relaciones anteriores, se establecieron dos tipos de estrategias: una estrategia externa que permita a la empresa identificar, analizar y seleccionar la fuente de financiamiento más adecuada, y una estrategia interna, que le permita a la empresa establecer registros de análisis de calidad de su materia prima, producto terminado y producto en proceso, elemento que tiene mayor relación con los demás que impactan directamente al cliente. Para lo anterior, se diseñó la matriz T de la figura 2, que presenta la relación de elementos.

Figura 2: Matriz de relación

X ₂		X	X
Diagnóstico Objetivos Empresa	X ₁	X	X
	Y ₁	Z ₁	Z ₂
	Y ₂	X	X
	Y ₃	X	X

Se presenta un diagrama matricial en T donde se establece la relación entre tres tipos de factores: (X) que son los elementos detectados en el diagnóstico con mayor relación entre sí: carece de tecnología adecuada, la utilizada se encuentra al término de su vida útil (equipo de pesaje, reactores y agitadores), carencia de equipo y material de laboratorio adecuado, falta de registros de M.P. y P.T y no se tiene un manual de organización; los elementos (Y) basados en Oportunidades, Debilidades y Amenazas, elegidos por ser los de mayor ponderación: impuestos, falta equipo de transporte, equipo de laboratorio insuficiente, necesidad de capacidad productiva, faltan reactores y adquisición de materias primas a menor costo y los Objetivos de la organización (Z).

Para determinar el tipo de financiamiento se definieron y cotizaron los activos a adquirir y así conocer el monto necesario, con ello y el destino de los recursos, se pudo determinar el tipo de financiamiento que deberá ser dirigido específicamente a incrementar y apoyar las actividades productivas de la empresa. Un primer paso para la selección de la o las fuentes de financiamiento fue analizar 10 instituciones crediticias y 75 programas a partir de lo cual se eliminaron todas las alternativas que no reunieron las condiciones mínimas requeridas para el caso en particular, como puede ser el monto mínimo requerido y el destino del crédito. En la tabla 2, se presenta la selección de los productos aplicables a las necesidades de la empresa extraída de una amplia gama de productos crediticios ofrecidos por el Sistema Financiero Mexicano.

Identificadas las fuentes de financiamiento que cumplen las condiciones mínimas requeridas, se analizó cada una de ellas, tomando en consideración: costo de financiamiento, monto máximo y mínimo que otorgan, tipo de crédito que manejan y sus condiciones, documentos que solicitan, políticas de renovación de los créditos (flexibilidad de reestructuración), flexibilidad que otorgan al vencimiento de cada pago y sus acciones, y los tiempos máximos para cada tipo de crédito.

Con base en lo anterior, se propuso analizar el costo de financiamiento de tres de los programas referidos en la tabla anterior, el resto, se descartó por lo siguiente: los intermediarios financieros con los cuales Nacional Financiera ofrece crédito, comprenden a las instituciones de la banca múltiple, sofoles y financieras ya consideradas en este análisis. En HSBC, el monto mínimo de ventas anuales solicitado para el monto requerido deberá ser superior a \$1, 500,000.00, HYRPYME que marca monto mínimo de ventas anuales superior a los \$2, 000,000.00. AFIRME, no tiene fondos, ni fecha de apertura de ventanilla.

Así, las instituciones y programas que se presentan como opción para este caso en particular son: Santander Serfin con crédito PYME, FOPRODE con financiamiento a proyectos productivos, y Fondo del futuro con el programa financiamiento a PYMES adelante. Esta información ayuda a conocer cuáles son las obligaciones y responsabilidades para la empresa al solicitar un financiamiento, la opción seleccionada es la ofrecida por Fondo del futuro a través de su financiamiento a PYMES teniendo como ventajas:

1. El monto otorgado cubre las necesidades financieras de la empresa.
2. El monto de las cuotas fijas de la amortización de pagos en cualquiera de los plazos expuestos puede ser cubierto con facilidad en base a las utilidades obtenidas por la empresa mensualmente, como referencia se tienen los datos de la utilidad mensual obtenida durante el mes Mayo 2010 al mes de Abril 2011.
3. La tasa de interés anual fija es del 8% a diferencia de las otras fuentes de financiamiento que parten desde el 8.5% hasta el 20% anual.
4. El interés es aplicado sobre saldos insolutos.
5. El tiempo máximo para el pago del crédito es de 60 meses sin penalización por pago anticipado.
6. El periodo de gracia adicional es hasta 6 meses.
7. Para montos menores a \$400,000.00 no es necesario un plan de negocios o estudio de factibilidad.
8. Flexibilidad en algunos documentos.
9. Asesoría directa y personal del centro de desarrollo empresarial CEDEVER para llenar la solicitud y realizar los trámites necesarios ante gobierno del estado.

Tabla 2: Fuentes de financiamiento aplicables a este caso en particular

institucion	nombre del credito	destino del credito	monto
nafin nacional financiera	programa crédito pyme	capital de trabajo o adquisición de activo fijo	dependiendo del intermediario financiero. el monto puede variar de 10 mil hasta 5 millones
hsbc	crédito a negocios	inventarios y equipamiento menor a las pymes de los sectores industria, comercio y servicios	desde \$10, 000 hasta \$400,000
santander serfin	crédito pyme	maquinaria y equipo para las pymes de los sectores industria, comercio y servicios	desde \$50,001 hasta \$ 400 mil pesos
hyrpyme (sofol)	financiamiento maquinaria y equipo	activo fijo para las pymes de los sectores industria, comercio y servicios	desde \$250 mil hasta \$3 millones de pesos
afirme	crédito pyme	activo fijo para las pymes de los sectores industria, comercio y servicios	desde \$100 mil pesos hasta \$3.4 millones
foprode financiera	financiamiento a proyectos productivos	equipamiento, infraestructura, capital de trabajo; industriales, comerciales o de servicios, infraestructura productiva para pymes	de \$25 mil a \$1 millón de pesos, sin rebasar el 70% del costo del concepto sujeto a financiamiento
fondo del futuro	financiamiento a pymes adelante	créditos de habilitación o avío y refaccionarios, para empresas en operación o que presenten proyectos viables y rentables económicamente, y fomenten la creación de nuevos empleos y generen la derrama económica en el estado	\$120,000.00 hasta \$500,000.00. tasa fija anual del 8% anual

CONCLUSIONES

Este trabajo permitió a la PYME en cuestión conocer en primer lugar el tipo de necesidad financiera que requiere, donde a partir de este conocimiento, pudo identificar, analizar y seleccionar los productos crediticios más adecuados que le permitan participar para la obtención de recursos económicos sin que ello le implique un riesgo financiero.

INNOVACIÓN DE LAS OPERACIONES LOGÍSTICAS EN LA EMPRESA REINDUSTRIAS

Diana Marcela Mosquera Cicero, Universidad Jorge Tadeo Lozano
Carlos Alberto González Camargo, Universidad Jorge Tadeo Lozano

RESUMEN

El siguiente es un estudio de caso de tipo cualitativo y cuantitativo que tiene como objetivo evaluar el mejoramiento de la empresa Reindustrias inversiones Artunduga S.A. a partir de la implementación de herramientas de aprovisionamiento, almacenamiento y servicio al cliente. La unidad de análisis se limita a la empresa. Para la realización de este ejercicio se midió una línea base que consideró indicadores de aprovisionamiento, almacenamiento, inventarios, transporte y distribución, servicio al cliente y costos logísticos. Posteriormente se realizó un diagnóstico donde se evidenciaron principalmente las falencias en el área de almacenamiento y aprovisionamiento. El método utilizado fue en principio la exploración y descripción de la forma cómo funcionaban los procesos en estas dos áreas de la empresa. Durante el desarrollo del estudio se implementaron herramientas de mejora para estas áreas y se evaluó si se logró un mejoramiento en el proceso logístico. Finalmente se realizó el análisis de resultados, contrastando la información final con la medición inicial. Este estudio confirma la utilidad de realizar mejoras como la planeación de las cantidades óptimas de pedido junto con el desarrollo de análisis de inventarios con el modelo ABC, el diseño de redistribución en planta, la paletización de la línea de lubricantes y la tecnología móvil GRPS-WAP y sistema SAG-XP, todo ello impactando la toma de decisiones y logrando el mejoramiento a nivel empresarial.

PALABRAS CLAVE: Aprovisionamiento, almacenamiento, mejoramiento continuo, logística.

LOGISTICS OPERATIONS INNOVATION IN THE COMPANY REINDUSTRIAS

ABSTRACT

The following case study is a qualitative and quantitative study aims to evaluate the improvement of the investment company Artunduga Reindustrias from implementing provisioning tools, storage and customer service. The unit of analysis is limited to the company. To perform this exercise was measured a baseline that considered indicators of procurement, warehousing, inventory, transportation, distribution, customer service and logistics costs. Diagnosis was subsequently performed which showed the flaws in the storage area and mainly supplies. The method used was in principle the exploration and description of the way the process worked and provisioning storage in the enterprise. During the course of the study were implemented improvement tools for this area and then evaluated whether improvement was achieved in the logistics process. Subsequently performed the analysis of results, contrasting the final information with the initial measurement. This study confirms the usefulness of improvements such as planning optimal order quantities along with the development of inventory analysis with the ABC model, the design of redistribution in plant palletizing line of lubricants, all for the taking decisions and achieve enterprise-wide improvement.

KEYWORDS: Procurement, storage, continuous improvement, logistics.

INTRODUCCION

Reindustrias Inversiones Artunduaga S.A. está ubicada en la ciudad de Neiva. Cuenta con una trayectoria de más de 40 años. Actualmente presta servicios de superserviteca, lavado, taller, distribución exclusiva para la zona de llantas Goodyear y lubricantes Shell. Es almacén de repuestos concesionario Hyundai y presta el servicio de alquiler de equipo petrolero. La empresa tiene un área aproximada de 2.300 m², los cuales se utilizan para el almacenamiento de llantas y lubricantes.

Esta empresa tiene un excelente desarrollo organizacional y una tendencia al crecimiento. A nivel estratégico se tienen metas bien definidas. Sin embargo, en aspectos como Gestión Logística y Responsabilidad Social, existen muchas posibilidades de mejora, ya que los procesos no están completamente definidos. Su operación estaba conformada por tres eslabones de la Cadena de Suministro: Aprovisionamiento, Almacenamiento e Inventarios y Servicio al cliente.

En el año 2010, se tenían altos costos en los procesos relacionados con la gestión de compras y almacenamiento, debido a las ineficiencias que a continuación se describirán. Por lo anterior, desde la Alta Dirección, se decide realizar un análisis general de la empresa tanto a nivel estratégico como operativo para que se efectúen las soluciones logísticas adecuadas para alcanzar nuevas ventajas competitivas alineadas con la estrategia. Una limitante era que el software de gestión utilizado en la empresa no cubría las necesidades de información de la compañía provocando unos procesos excesivamente manuales y duplicidades de tareas entre las áreas. Había mucha información que no se podía consultar en tiempo real y por ejemplo, para conocer el nivel de stock de determinados productos se tenía que ir al almacén e inspeccionarlo de manera visual. Se tomaban decisiones de compras sin ninguna base estadística o sistema de información sino que el encargado de compras gracias a su conocimiento del mercado realizaba las solicitudes de pedidos, es decir no existía una política de compras, esto provocaba la imposibilidad de realizar análisis sobre la rotación de productos tanto para comprar las cantidades correctas como para su disposición física en el almacén. Por ejemplo, si una referencia no rotaba, de todas maneras esta se pedía a criterio de la persona.

El principal objetivo de Reindustrias fue el de mejorar el nivel de servicio esperado. Es así como se decide capacitar al Jefe de Bodega con un curso en Estrategia competitiva de repuestos. Este incluyó una previa evaluación y análisis para la implementación del sistema de clasificación ABC de los productos, implementación de un sistema de información ERP, para el cálculo de las previsiones de demanda (SAG-XP), así como el uso de la tecnología móvil GRPS - WAP y hacer M-commerce estableciendo un contacto más directo y efectivo con el cliente brindándole la información que necesita en tiempo real, posibilitando la realización de ventas on line. Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se plantean los argumentos que sustentan la utilización de las herramientas Matriz DRP, distribución en planta, clasificación ABC, tercerización de la distribución. Posteriormente se presenta la metodología utilizada, en donde se describe el por qué se seleccionaron las herramientas y las razones de implementar la tecnología móvil WAP para la fuerza de ventas externa. Después de lo anterior se presentan los resultados de la investigación. Finalmente las conclusiones, limitaciones y futuras recomendaciones de investigación.

REVISIÓN DE LITERATURA

Para lograr un desempeño logístico óptimo se pueden mejorar las estrategias de aprovisionamiento con la medición del Trade Off, que es la medición de los tiempos de entrega de aprovisionamiento y la Evaluación de los proveedores en términos de calidad, confiabilidad, precio, etc. (Gómez, 1996; Del Rio, 2002; Heredia, 2007; Makridakis y Wheelwright, 1994; Montoya, 2002); en almacenamiento se deberían calcular cantidades óptimas de pedido (Muller, 2004; Ballou, 2004; Casanovas y Cuatrecasas, 2003; Sunil y Meindl, 2008; Soret, 2004; Presencia, 2004). Dentro de los principales costos de almacenamiento se

encuentran el manejo de inventarios, empaques, embalajes, costos financieros y stock averiado, entre otros (Mauleón, 2006). Algunos autores hacen énfasis en la importancia de disminuir inventarios, realizar clasificaciones según rotación de las mercancías y tratar de alcanzar el justo a tiempo, reduciendo las cantidades almacenadas de producto (Ballou, 2004; Carranza, 2005; Christopher, 2000; Casanovas y Cuatrecasas, 2003; Chase, Jacobs, y Aquilano, 2009; Durán, 2001; Martin, 1999; Sunil y Meindl, 2008; Soret, 2004). Otros autores sugieren el análisis de la distribución y análisis de entorno macro y micro para mejorar los negocios (Díaz, 1997; Newell, 2001; Serna, 1996; Serna, 1999).

En la actualidad el comercio electrónico es una gran oportunidad de negocio en el contexto global (Abuhamdiah, Kendall y Kendall, 2008; Carnaghan, Downer, Klassen, y Pittman, 2004; Chan, Al-Hawamdeh, 2002; Kolettis, 2001; Lo, 1999; Piturro, 1999; Weil, 2000; Willis, 2004). Algunos factores como la confiabilidad, la distribución, las distancias y la forma de pago afectan el crecimiento de los negocios electrónicos (Chen y McQueen, 2008; Sumanjeet, 2010; Duffy y Dale, 2002; Fryad Henari y Mahboob, 2008; Kabanda, y Brown, 2010; Subramani y Walden, 2001; Ratnasingam, 2005); los modelos electrónicos son accesibles a las pequeñas empresas (Lopez-Bassols y Vickery, 2001; Lopresti, 2007; MacGregor y Vrazalic, 2006; Plana, Cerpa y Bro, 2006).

METODOLOGIA

El ejercicio realizado es un estudio de tipo descriptivo, correlacional y explicativo, que permitirá inferir juicios sobre el impacto de la implementación de la matriz DRP, que busca planificar la distribución de los recursos. El DRP se dirige principalmente a mejorar la gestión del inventario de producto final y el control del transporte de productos en la cadena de distribución. Por otra parte el estudio del costo de un vehículo identifica y controla los costos asociados al uso de vehículos en el proceso de distribución. El estudio de la redistribución en planta y clasificación ABC permite mejorar la ubicación de los productos en el almacén. En cuanto al alcance, la investigación es de carácter mixto. En principio es cuantitativa por ser ya que se mide una línea base de entrada y en un segundo momento una línea base de salida, con indicadores verificables. También es de carácter cualitativo ya que se evidencian los problemas en la empresa por visita directa. La investigación es de tipo longitudinal porque los datos se recolectan en dos momentos en el tiempo. Finalmente todo el procedimiento termina en un tipo de investigación explicativa porque se comprobará la hipótesis de que a partir de la implementación de herramientas logísticas es posible lograr el mejoramiento empresarial. La hipótesis que se plantea es que el conocimiento de los costos logísticos de la organización y la implementación de las herramientas en los procesos de las diferentes áreas impactan en el nivel de servicio y por tanto en la rentabilidad de la organización.

Para la medición de la línea base se realizó un diagnóstico a la empresa. En éste se analizó un parámetro específico como es la gestión logística, en donde pudo observarse que se tienen niveles de gestión muy básicos así como las debilidades y áreas a mejorar en sus operaciones logísticas. En un segundo momento se evaluaron los indicadores de cada uno de los componentes de la cadena de suministro. Finalmente se identificaron los costos logísticos para implementar un plan de mejoramiento.

Este diagnóstico permitió conocer de manera más cercana la operación de la compañía y sus necesidades específicas concentradas en el aprovisionamiento y almacenamiento, factores que estaban afectando el servicio al cliente. Es así como se inicia un estudio para mejorar y controlar todas las actividades de almacenamiento desde la compra de los productos hasta su entrega final a los clientes. En este proceso se observó la capacidad real de almacenamiento de la bodega de repuestos analizando la redistribución en planta y análisis ABC donde se logró establecer el área interna óptima para controlar que los movimientos físicos de los productos se hicieran de manera eficiente y que los desplazamientos del personal requirieran mínimas distancias y un flujo con pocos retrocesos, logrando de esta manera hacer eficiente el uso del espacio y mejorando el nivel de servicio esperado. El almacenamiento de lubricantes se hacía en forma indiscriminada sin tener en cuenta que este tipo de producto viene en canecas, por lo cual tiene la

probabilidad de sufrir abolladuras. Además durante el transporte que el proveedor hacía también se presentaba este tipo de daños generándose pérdidas para los proveedores de Reindustrias por las devoluciones efectuadas por la empresa. Estas devoluciones correspondían al 2% de las ventas que en promedio sumaban 600 millones mensuales.

Tabla 1: Aspectos evaluados en la empresa Reindustrias Inversiones Artunduaga S.A.

ASPECTOS CONSIDERADOS PARA REALIZAR EL DIAGNÓSTICO

indicadores de aprovisionamiento	indicador de servicio al
1pedidos efectivos	cliente
2entregas a tiempo	10 entregas perfectas
3desabastecimiento	11 indicador de quejas de clientes
4nivel de intermediación	12 devoluciones
indicadores de almacenamiento	13 revisión de ordenes de compra
5capacidad utilizada	indicadores de inventario
6costo por metro cuadrado	14 índice de rotación de mercancías
indicadores de transporte y	15 índice de mercancía averiada
distribución	indicadores de costos
7incidencias de pedido	logísticos
8costo de transporte	16 costos logísticos totales
9seguridad industrial en el transporte	17 ventas perdidas

Esta tabla muestra los 17 aspectos evaluados en la empresa Reindustrias Inversiones Artunduaga S.A.- al realizar el diagnóstico de la situación logística.

En el almacén había un layout que no se había replanteado, se sabía que producto rotaba y cual no, y se sabía que tipos de referencia habían en existencia pero no se sabía dónde estaba ubicada físicamente, perdiéndose ventas por la dificultad de la ubicación física de las mercancías en el almacén. Además algunos productos de repuestos apilados sin estanterías no permitía tener un almacén con una filosofía FIFO (First In First Out), provocando una rotación inadecuada de los productos y por tanto que hubieran artículos sin rotación durante largos periodos en el almacén, aumentando considerablemente la presencia de artículos obsoletos. Se perdía en promedio un 2% mensual de las ventas. Una acción de mejora fue la de capacitar durante año y medio al Jefe de Bodega con un diplomado en Estrategia competitiva de repuestos. Esta incluyó una previa evaluación y análisis para la implementación del sistema de clasificación ABC de los productos y una adecuación de las estanterías para almacenar las referencias de repuestos que se apilaban sin ningún criterio.

En el área de servicio al cliente el grupo de vendedores externos, al momento de cubrir las diferentes zonas de venta y visitar sus principales clientes para realizar los pedidos durante su jornada laboral, lo hacían de manera manual y tardía, incumpliendo con las especificaciones de atención a los clientes que cada vez son más exigentes con la entrega oportuna de sus pedidos. Finalmente, La carencia de una visión global de los procesos logísticos por parte de la empresa estaba generando ineficiencias en todo el proceso. Para conocer la estructura de los costos logísticos de la empresa se calcularon los costos asociados a la labor de toda la cadena de suministro, como los costos de ordenar un pedido, costos de mantener inventario, costos de almacenar, distribuir y el costo del servicio al cliente. Conocer los costos logísticos y el impacto financiero permitió a la empresa desarrollar estrategias para la optimización de los mismos. Para esto se propuso una estructura de Plan de Mejoramiento Logístico que incluye: problema, actividad, descripción de la actividad, meta, indicador, cronograma, fuente de financiación y resultado. Para conocer la distribución de los costos logísticos de la organización se realizó el ejercicio de calcular los costos logísticos como se muestra en la figura 1.

Figura 1: Costos logísticos en la empresa Reindustrias Inversiones Artunduaga S.A.

Esta figura muestra la distribución de los costos logísticos en la empresa REINDUSTRIAS.

La estrategia de desarrollar la metodología de estimar cantidades óptimas de pedido e implementar un sistema de gestión de inventarios (SAG-XP) y de pasar de una toma de pedidos manual a usar tecnología móvil WAP para elaboración de pedidos por parte de la fuerza comercial externa, hace que se cumpla con la promesa de servicio.

RESULTADOS

La empresa identificó donde estaban los costos más altos de toda la operación. Fue así que para octubre Reindustrias Inversiones Artunduaga, reconoció que los costos logísticos se centraban principalmente en Aprovisionamiento con un 77% y Almacenamiento en un 14%, la empresa no estaba almacenando de manera adecuada los productos de repuestos, razón por la cual al momento de atender una venta del mostrador no se respondía de forma inmediata cuando el cliente solicitaba un producto, pues no se encontraba en inventario por lo cual no se podía cumplir con la promesa de servicio, esto implicaba costos más altos a los que comúnmente se manejaban por no ubicar el producto en el almacén. El procedimiento consistió en clasificar los productos, logrando demostrar la manera de cómo se pueden optimizar los recursos financieros en la mejora de sus procesos de compra y por ende la liberación de capital, mediante el desarrollo y análisis de inventarios con el modelo ABC, aplicado a la gestión de aprovisionamiento.

En este proyecto de mejora logística se recomendó a la empresa implementar las herramientas distribución en planta, y continuar con la implementación de la Matriz DRP, adicionalmente se motivó a la empresa a continuar realizando evaluación y clasificación de proveedores que les permita una evaluación más objetiva y proveedores más confiables. Posteriormente se examinaron los resultados obtenidos mediante la utilización de las herramientas. Por ejemplo, la herramienta de estimación de costos logísticos le proporcionó a la empresa la información necesaria para tomar decisiones como la tercerización del almacenamiento de llantas y lubricantes, ubicando centros de distribución en cinco departamentos. Así mismo se decidió sobre la tercerización de la distribución, para poder alinear la promesa de servicio ofrecida a los clientes, de acuerdo a la capacidad real tanto de la empresa como de sus proveedores. Por otro lado se retomó la información de los Indicadores de Inventarios y la información de la Matriz DRP para la línea de lubricantes, con el objetivo de pronosticar tendencias de comportamiento de la demanda. Esto permitió solicitar pedidos con anticipación de manera adecuada.

Los centros de distribución están ubicados en cinco estados que son Putumayo, Caquetá, Huila, Tolima y Cundinamarca. La forma de entrega es a través de la tercerización de la distribución con el fin de

disminuir los costos de transporte. Estos centros de distribución en realidad son proveedores en cada ciudad, cumpliéndole al cliente final con la promesa de servicio vendida por la empresa, con la calidad solicitada, en el tiempo pactado, las cantidades solicitadas, con la documentación legal y el precio acordado. La empresa desarrolló una importante mejora en el área de atención al cliente aumentando un 5% el nivel de las ventas. Esto se debió a la implementación de la tecnología WAP para toma de pedidos en línea por parte de la fuerza de ventas externa. Esta innovación es una de las ventajas competitivas desarrolladas por la empresa siendo un punto de diferenciación importante en el mercado al cual pertenece. La empresa en el año 2012 logró identificar las actividades que limitaban el eficiente desempeño del área de compras y almacenamiento es así como consideró inapropiado el software de gestión utilizado, por lo que se hizo necesario implementar un sistema de información ERP para el cálculo de las previsiones de demanda (SAG- XP), capaz de gestionar eficaz y eficientemente el flujo de información requerida con un módulo adicional de costos logísticos.

Actualmente se tiene establecida la política de compras. Para realizar un pedido se tiene en cuenta la cantidad que se va a vender, así como otros factores como el stock en el almacén, el plazo de entrega del proveedor, y las restricciones comerciales como la cantidad mínima o máxima por pedido. De esta forma se ha logrado planear las cantidades óptimas de pedido, y junto con el desarrollo de análisis de inventarios con el modelo ABC aplicado al proceso de aprovisionamiento, optimizar los recursos financieros. En el almacén actualmente se cubren todas las referencias antiguas y nuevas y se tienen únicamente los repuestos de las líneas que más rotan, lo que no se encuentra en el inventario se consigue a través de los distribuidores a nivel nacional. Para los pequeños productos sueltos sin paletizar se compraron 10 estanterías con separadores modulares garantizando el correcto almacenamiento, fluidez en los inventarios y cuidado de la mercancía. Se logró contabilizar en total 4.850 referencias, actualmente se tiene el 100% de los productos del almacén sistematizados y clasificados.

En la línea de llantas se están haciendo actualmente pedidos teniendo en cuenta el nivel de rotación del inventario teniendo como política de inventario contar con dos meses de producto debido a la variación de los precios. Anteriormente se tenían inventarios de referencias que no rotaban durante un año, hoy en día no superan los seis meses, optimizándose el 50% de los inventarios de llantas. La relación de colaboración entre proveedores permitió establecer un sistema de paletización para el almacenamiento de los lubricantes con el fin de eliminar o reducir las devoluciones por daño de la mercancía.

En el área de servicio al cliente se inició el plan piloto de implementación de proyectos de tecnología, evitando la pérdida de imagen, eficacia en las ventas, clientes no satisfechos y falta de competitividad en el mercado. Para optimizar el escenario mostrado se hizo necesario realizar una gran inversión implementando el uso de la tecnología móvil GRPS - WAP y hacer M- commerce cambiando la forma de hacer la labor de ventas, estableciendo un contacto más directo y efectivo con el cliente brindándole la información que necesita en tiempo real, accediendo a ellos mediante un dispositivo móvil o celular para hacer consultas de bases de datos y con una mayor rapidez y confiabilidad hacer la toma de pedidos y control de stock. Dentro de los resultados relevantes para la empresa se tiene la instalación de un software de gestión logística, disminución del stock medio de la línea de llantas en un 24,5%, mejora de los costos de los procesos logísticos en un 10%, aumento de la satisfacción del equipo humano gracias a tener procesos colaborativos claramente definidos, disponibilidad de información en tiempo real para la toma de decisiones, adecuado sistema de almacenamiento de los productos de lubricantes y organización de las estanterías del almacén. Mejorar el promedio de ventas de 37000 dólares mensuales a 58000 dólares mensuales. El crecimiento anual era del 17% hoy en día es del 34%. En la actualidad la empresa tiene ventas en cinco departamentos del país, lo cual demuestra su capacidad de apertura de nuevos mercados en algunos departamentos del sur de la región andina, como lo podemos observar en la Figura 2.

Figura 2: Regiones De Negocio De La Empresa REINDUSTRIAS En Colombia.

Esta figura muestra como el mayor porcentaje de ventas de REINDUSTRIAS INVERSIONES ARTUNDUAGA S.A. está en la región Andina, siendo que la ubicación principal se encuentra en el departamento del Huila.

CONCLUSIONES

Esta investigación se centró en la aplicación de las herramientas, distribución en planta, costos logísticos, matriz DRP, complementado con el desarrollo del modelo de análisis ABC para inventarios. El análisis realizado a REINDUSTRIAS, sirve como apoyo a la toma de decisiones sobre el tipo de herramientas que pueden implementar organizaciones con características similares para mejorar su nivel de servicio logístico, mejorando su competitividad y desempeño en el mercado. Al realizar la medición de salida se concluye que al haber implementado las herramientas de clasificación ABC, Matriz DRP y Cálculo de Costos Logísticos, se obtuvo el resultado de mejorar la rotación de los inventarios optimizándolos y de tercerizar la operación de distribución, permitiendo mayor flujo de dinero para la empresa. La implementación de tecnología WAP permite disponer de información en tiempo real para la toma de decisiones y cumplir así la promesa de servicio a los clientes.

La implementación de un software logístico ayuda a controlar la eficiencia de las operaciones logísticas y mejorar la calidad y capacidad de respuesta. La principal dificultad que se encontró fue la de no tener una cultura de medición para la recopilación de los indicadores de gestión logística de la línea base que permitan la toma de decisiones y realizar acciones de mejora continua. En estudios futuros se recomienda

a la empresa implementar la herramienta de Trade Off que proporcione información sobre el tiempo de respuesta efectivo para poder alinear la promesa de servicio ofrecida a los clientes, de acuerdo a la capacidad real tanto de la empresa como de sus proveedores. Especialmente destacable es la metodología de gestión del cambio utilizada por la alta dirección, elemento clave para el diseño e implementación del plan de mejora logístico.

PLAN ESTRATÉGICO PARA UN CENTRO DE PRODUCCIÓN ACUA-AGRÍCOLA SUSTENTABLE EN LA REGIÓN DEL SUR DE SONORA

Lizeth Alejandra González Martínez, Universidad Estatal de Sonora

Daniel Paredes Zempual, Universidad Estatal de Sonora

Martin Mariscal Lagarda, Universidad Estatal de Sonora

María Dolores Moreno Millanes, Instituto Tecnológico de Sonora

Rodolfo Valenzuela Reynaga, Instituto Tecnológico de Sonora

RESUMEN

Hoy en día las empresas deben contar con una planeación estratégica que les permita tener una visión, para el autor Steiner (2005) el plan estratégico es el proceso por el cual los miembros de una organización prevén su futuro y desarrollan los procedimientos para alcanzarlo. Por lo antes mencionado se realizó una investigación en un Centro de Producción Acua-Agrícola (CEPROAA) en el Sur del estado de Sonora México, donde mediante la aplicación de entrevistas, observación directa y diagnósticos se detectó la carencia de una planeación estratégica, de ahí surge la siguiente interrogante para contrarrestar dicha situación: ¿Es factible la implementación de un plan estratégico para un sistema de producción en el que se integre la actividad acuícola con la agrícola en la comunidad de Benito Juárez?. Para dar respuesta a la pregunta se realizó una planeación de donde se obtuvo una Misión, Visión, Valores, Organigrama, las fuerzas competitivas según Porter (2003), Análisis de la situación actual, Análisis PESTA, Diagnóstico de la organización, Cadena de valor, Análisis interno, externo y FODA, Balanced Scorecard (BSC) del autor Kaplan, y Norton (2010), Mapa de las 4 perspectivas, Mapa estratégico y las Guías de monitoreo y control.

PALABRAS CLAVE: Planeación estratégica, producción Acua-Agrícola sustentable y Sur de Sonora México.

STRATEGIC PLAN FOR A CENTER OF AQUA-AGRICULTURAL PRODUCTION SUSTAINABLE IN THE REGION OF THE SOUTH OF SONORA

ABSTRACT

Nowadays companies must have a strategic planning process that will allow them to have a clear vision, for Steiner (2005) the strategic plan is the process by which the members of an organization provide for their future and develop procedures to achieve it. Based upon the latter, an investigation was carried on at The Aqua-Agricultural Production Center (CEPROAA) in the Southern State of Sonora, Mexico. This research involved the application of interviews, direct observation and diagnostics and detected the lack of strategic planning, hence the following question arises to counteract such situation: Is it feasible to implement a strategic plan for the production system in which aquaculture is integrated with agriculture activities in the Benito Juarez community area? Planning took place in response to the question of where he obtained a mission, Vision, values, organization chart, the competitive forces according to Porter (2003), analysis of the current situation, Analysis (TAB), diagnosis of the Organization, chain value, internal, external analysis and (SWOT), Balanced Scorecard (BSC) of the Kaplan and Norton (2010) author, map of the 4 perspectives, strategy map, Gantt chart (activities) and Guides of monitoring and control.

JEL: M10, Q01, Q13, Q16.

KEYWORDS: *Strategic planning, Aqua-Agricultural, South of Sonora Mexico and sustainable production.*

INTRODUCCIÓN

Hoy en día en cuenta que los agronegocios se han convertido en motores de la economía en el siglo XXI, representando un 50% del comercio global, por lo que se considera como un conductor de desarrollo económico, mismos que estimulan a otros giros relacionadas con esta actividad. En la actualidad, los elementos administrativos claves de cualquier empresa u organización son los individuos, la estructura, la tecnología, el ambiente interno y externo, así como la información; los directivos requieren de ésta última como fundamento para enfrentarse y superar los cambios del entorno y sobre todo los que provoca la competencia y los que el fenómeno de la globalización implica. Los empresarios que no cuentan con la información necesaria para tomar decisiones adecuadas y oportunas, pondrán a su negocio en una posición de desventaja frente a sus competidores, además serán incapaces de resolver con bases sólidas la incertidumbre y los problemas de índole administrativa que se presenten, la información que se obtiene como resultado de aplicar coherentemente el proceso de planeación.

REVISIÓN LITERARIA

Argumentando dicha investigación Chiavenato, (2002) establece tres niveles de la planeación, los cuales consisten en planeación estratégica, táctica y operacional, así mismo Mercado, (2001) argumenta la misma clasificación. Por otro lado según Koontz y Weihrich (2005) la misión es la razón de ser de la organización, es a donde va encaminado el futuro de la misma, así mismo menciona que la visión es la imagen idealizada del futuro el cual está dirigida la organización, dónde se describe la razón por la cual existe la empresa, satisfaciendo las necesidades de los clientes con los productos y servicios que ofrece la empresa y por último según Hernández y Pulido (2002) argumentan que los valores son todas aquellas convicciones que tienen las personas y que conforman sus puntos de vista de lo que es y debe de ser importante, bueno, malo, correcto o equivocado. Según Mercado (2000), describe que los objetivos son fines o propósitos hacia los cuales se debe dirigir los esfuerzos de un grupo humano. Para Chiavenato (2002), las estrategias son la determinación de los objetivos básicos a largo plazo de una empresa y la adopción de los cursos de acción y la asignación de recursos necesarios para su cumplimiento. La planeación estratégica según Porter (2003) dice que todo planteamiento se resume en saber las fortalezas, oportunidades, debilidades y amenazas, este es el nivel fundamental y decisivo en el proceso de la planeación estratégica de una organización. Complementando el concepto según Kaplan & Norton (2010) propone establecer el Balance Scorecard (Tablero de control) y el mapa estratégico de la empresa que ayuda a los altos ejecutivos a medir los sistemas, debido a que afecta fuertemente al comportamiento de los gerentes y empleados.

METODOLOGÍA

Planteamiento Del Problema

Debido al interés de la Institución por buscar nuevas alternativas que incrementen la producción y rentabilidad del campo agrícola, así como coadyuvar con productores de las comunidades rurales para que diversifiquen sus actividades tradicionales de agricultura temporal, y en la búsqueda de promover el autoempleo y la producción de alimentos libres de agroquímicos (productos orgánicos), se cuestiona: ¿Es factible la implementación de un plan estratégico para un sistema de producción en el que se integre la actividad acuícola con la agrícola en la comunidad de Benito Juárez?. Para ello, con este proyecto se

cultivan de manera hidropónica productos hortícolas y acuícolas, empleando un sistema de recirculación con agua dulce para optimizar el empleo del agua, suelo y el espacio.

Justificación: Debido a que el propósito de este proyecto es desarrollar un cultivo integral entre la tilapia y el tomate, es necesario garantizar que la tilapia suministre los nutrientes necesarios para el crecimiento de las plantas, tiene que desarrollar eficientemente el proceso operativo del Centro de Producción, desde el cultivo de la tilapia, preparación del tanque, aclimatación y siembra, alimentación, etc. Siendo un objetivo del Centro, el compromiso social de promover la implementación de este tipo de sistemas de producción entre los habitantes de la región, para contribuir al autoempleo, a la producción y consumo de los cultivos altamente proteicos en beneficio de la salud y de la economía familiar, promoviendo el uso sustentable de los recursos naturales.

Objetivo: Diseñar un plan estratégico para un Centro de Producción Acua-Agrícola (CEPROAA), mediante la realización de un análisis interno y externo con la finalidad de implementarlo en la comunidad del Municipio de Benito Juárez.

Delimitaciones : Para este proyecto, se desarrolla un sistema de producción que se busca sea eficiente en el manejo del recurso agua, combinando la actividad acuícola con la agrícola para producir de manera integral tilapia negra (*Oreochromis niloticus*) con cultivos hidropónicos de tomate bola (*Lycopersicon esculentum*) en un sistema de recirculación de agua dulce. Implementándose en la Universidad Estatal de Sonora Unidad Académica Benito Juárez, sólo con recursos propios de la Institución y con apoyos Estatales, buscando otras fuentes de para la obtención de recursos Federales que se gestionan para su eficiente operación.

Sujeto

El presente trabajo de investigación se realizó en el Centro de producción Acua-Agrícola en la Universidad Estatal de Sonora, Unidad Académica Benito Juárez, en donde los integrantes del proyecto proporcionaron información requerida para la elaboración del plan estratégico, dicho proyecto productivo es desarrollado por maestros investigadores de la universidad.

Materiales: Para la realización de esta investigación, se requirieron de algunos materiales que ayudaron y apoyaron a lograr el desarrollo del modelo de planeación estratégica, como entrevistas abiertas con los integrantes del proyecto, asesoría de maestros del Instituto Tecnológico de Sonora y expertos en los temas abordados. Para la recopilación de información, se utilizaron cuestionarios de preguntas abiertas a los docentes involucrados, los cuales estuvieron enfocadas a las expectativas que tienen del proyecto, la panorámica futura de hacia dónde quieren llegar, la situación actual del mismo y el plan de acción a utilizar para iniciar operaciones, cabe mencionar que de las entrevistas abiertas, se obtuvo información sumamente importante, que ayudó a conocer más a éste proyecto productivo, otro método al que se recurrió fue al de observación, y consultas de fuentes directas como libros y páginas web cuyos autores y páginas se encuentran en la sección de bibliografía.

Procedimiento: Como inicio de la investigación se realizó una plática con el Coordinador general del proyecto y el Supervisor de producción para conocer la situación actual del Centro de Producción Acua-Agrícola, leer el proyecto, posteriormente se propuso el trabajo a desarrollar, el cual fue elaborar un modelo de Planeación.

Por último, se llevaron a cabo los pasos para desarrollar la planeación estratégica:

1. Se realizó una junta con los integrantes del proyecto para determinar la misión, visión y valores de la empresa.
2. Se realizó un diagnóstico interno y externo para el centro.
3. Se elaboró el diagnóstico de la organización.

4. Se realiza el Mapa de las cuatro Perspectivas del Centro de Producción Acua-Agrícola.
5. Se elaboró el Balanced Scorecard o tablero de control.
6. Se presenta a los integrantes la planeación estratégica desarrollada.

RESULTADOS

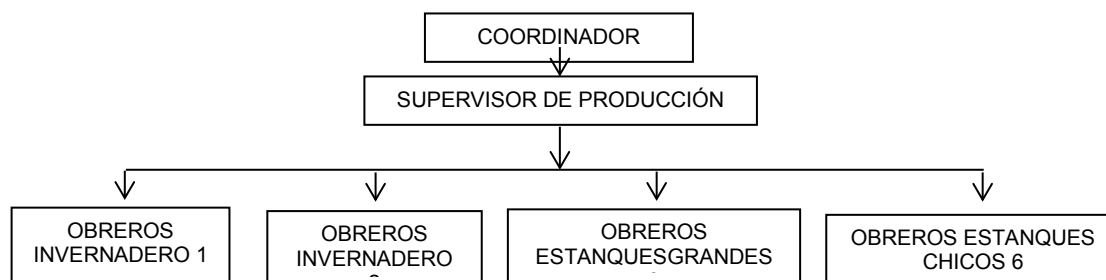

Misión: La Misión de (CEPROAA) es integrar el cultivo de manera hidropónica la actividad acuícola y hortícola, empleando un sistema de recirculación de agua, que a su vez optimice los recursos naturales con los que se cuenta, incrementando la productividad y promoviendo la implementación de este tipo de sistema de producción entre los habitantes de la región del Sur del Estado de Sonora.

Visión: La Visión del Centro de Producción Acua-Agrícola, es ser líder en la implementación de los sistemas de cultivo hidropónico, integrando la actividad acuícola y hortícola para la producción y comercialización de productos orgánicos, siendo un agente clave en la transformación de comunidades marginadas contribuyendo al autoempleo y autoconsumo en el Sur del Estado.

Valores:

- ☑ **Integridad:** Por la combinación de los sistemas de producción para la obtención de un producto sustentable.
- ☑ **Calidad:** Se realiza el proceso de cultivo mediante controles de inocuidad para la obtención de productos orgánicos.
- ☑ **Competitividad:** El cultivo hidropónico de los productos orgánicos de CEPROAA, por su naturaleza lo hacen competitivo con otros productores, debido a sus bajos costos.
- ☑ **Trabajo en equipo:** La colaboración y la comunicación eficiente de los integrantes del Centro de Producción Acua-Agrícola, hacen que el equipo de trabajo esté integrado para el cumplimiento de la misión y visión. *Fuente: Elaboración propia.*

Procesos		<ul style="list-style-type: none"> ☑ El flujo de los procesos en la organización es sencillo (Cadena de valor). ☑ El centro es pequeño y se pueden identificar posibles mejoras. 	<ul style="list-style-type: none"> ✖ Establecer procedimientos de trabajo en las diferentes funciones del centro. ✖ No hay algún financiamiento para implementar una tecnología que agilice los procesos del Centro.
		<ul style="list-style-type: none"> ☑ Buena comunicación y lealtad con los trabajadores. ☑ Experiencia en el ramo y 2 años operando en la universidad, aparte de contar con investigación ☑ Variedad en la producción acuícola y hortícola. ☑ El centro tiene una buena ubicación estratégica en la región sur de Sonora. 	<ul style="list-style-type: none"> ✖ No se cuenta con un programa de capacitación anual y falta consolidar la estructura organizacional. ✖ No hay instrumentos de medición de la productividad. ✖ No se ha documentado los procesos con manuales. ✖ La publicidad y promoción es nula al no contar con un plan de marketing. ✖ Formalizar los recursos humanos con la implementación de uniformes y gafetes de identificación.
Tecnología		<ul style="list-style-type: none"> ☑ Cuentan con tecnología en la comunicación como radios y celulares aparte de computadoras para desarrollar sus labores 	<ul style="list-style-type: none"> ✖ Falta de elaboración de redes sociales de comunicación con clientes que les faciliten las ventas. ✖ No se cuenta con la aplicación de la tecnología para automatizar los procesos.
Cadena de valor		<ul style="list-style-type: none"> ☑ Se tiene una cadena de valor bien definida y establecida del centro para enfocarse en las prioridades que vayan surgiendo en esas áreas. 	<ul style="list-style-type: none"> ✖ No se ha realizado una planeación estratégica en las diferentes áreas de la empresa. ✖ No se cuenta con una misión y visión clara en cuanto al futuro del Centro

En esta tabla se muestra el análisis interno que se realizó en el Centro de Producción Acua-Agrícola, donde se toman en cuenta los procesos, organización, tecnología y cadena de valor para determinar las fortalezas y debilidades que presenten. Fuente: Elaboración propia.

Tabla 3: Diagnóstico de análisis externo de “CEPROAA”. (P.E.S.T.A. y 5 Fuerzas Competitivas de Michael Porter.)

FORTALEZAS		DEBILIDADES
ANÁLISIS EXTERNO		ANÁLISIS PESTA
Político	<input checked="" type="checkbox"/> Apoyos por parte del gobierno federal y estatal para proyectos productivos.	<input checked="" type="checkbox"/> Poca información de apoyos federales para desarrollar proyectos productivos.
Económico	<input checked="" type="checkbox"/> El centro es estable por el presupuesto asignado.	<input checked="" type="checkbox"/> No ha adquirido un plan de financiamiento para inyectar dinero al Centro.
Social	<input checked="" type="checkbox"/> No se tiene deudas con bancos, proveedores, etc.	<input checked="" type="checkbox"/> Poco tiempo de estar operando en la región.
	<input checked="" type="checkbox"/> Valor agregado al introducir productos orgánicos.	<input checked="" type="checkbox"/> Se le ha dado poca publicidad en los productores y la sociedad.
Tecnológico	<input checked="" type="checkbox"/> Innovación al promover este tipo de sistemas de producción entre los productores de la región.	<input checked="" type="checkbox"/> No tienen tecnologías de información implementadas en la empresa.
Ambiental	<input checked="" type="checkbox"/> Si tiene alguna diferencia en cuanto a sus competidores por el sistema de hidroponía.	<input checked="" type="checkbox"/> Factores climatológicos.
	<input checked="" type="checkbox"/> Desarrollo de un proyecto sustentable.	<input checked="" type="checkbox"/> Plagas.
	<input checked="" type="checkbox"/> Producción de productos orgánicos.	
	<input checked="" type="checkbox"/> No necesita de grandes cantidades de agua y tierra para producir.	
FUERZAS COMPETITIVAS DE MICHAEL PORTER		
Rivalidad en la industria	<input checked="" type="checkbox"/> Hay muy pocos competidores en el mercado y se tienen identificados.	<input checked="" type="checkbox"/> No realizan periódicamente investigaciones de mercado y clientes.
Poder de los proveedores	<input checked="" type="checkbox"/> Existen instituciones bien definidas que proveen los insumos para el cultivo tanto de la tilapia como del tomate.	<input checked="" type="checkbox"/> El costo del equipo y mantenimiento del mismo.
		<input checked="" type="checkbox"/> Hay competencia con los productos.
Poder de los compradores	<input checked="" type="checkbox"/> El precio del producto en el mercado será accesible a los clientes, debido a bajos costos por la optimización de los recursos utilizados.	<input checked="" type="checkbox"/> La variedad de productos sustitutos en la tilapia y tomate.
		<input checked="" type="checkbox"/> Hay numerosos productores en la región en ambientes controlados y al aire libre.
Nuevos entrantes	<input checked="" type="checkbox"/> En la región no hay productores de cultivos de tilapia negra y tomate orgánico.	<input checked="" type="checkbox"/> Los competidores que existen en el mercado ofertan su producto a más bajo costo.
Productos sustitutos	<input checked="" type="checkbox"/> Los productos sustitutos no son de la calidad que tiene la tilapia negra y el tomate, debido a los agroquímicos que utilizan.	<input checked="" type="checkbox"/> Son competencia y afectan a las ventas como competidores.

En esta tabla se muestra el análisis externo que se realizó en el Centro de Producción Acua-Agrícola, donde se toman en cuenta los aspectos político, económico, social, tecnológico y ambiental, así como las variables que propone el autor Porter que son la rivalidad en la industria, poder de los proveedores, poder de los compradores, nuevos entrantes y productos sustitutos. Fuente: Elaboración propia.

En esta tabla se describe un tablero de control o Balanced Scorecard, que incluye un plan estratégico e indica los resultados de las acciones que se han tomado, y se complementan las medidas financieras con las medidas operacionales en satisfacción del cliente, procesos internos, y las innovaciones de la organización, así como la mejora de actividades propuestas que son los que dirigen la actuación futura. Elaboración propia.

CONCLUSIONES

A partir de este modelo de Planeación estratégica fue posible analizar el Centro de Producción Acua-Agrícola (CEPROAA), en forma general tanto sus aspectos internos como externos, identificando oportunidades y amenazas a las que el centro se encuentra expuesto. Así mismo, se analizaron las fortalezas y debilidades con las que actualmente cuenta, ya que también fueron parte esencial para determinar las estrategias planeadas. Este estudio le aporta al Centro, una manera práctica de identificar las debilidades, aprovechar al máximo sus oportunidades; así como explotar sus fortalezas y minimizar las amenazas; con la utilización de esta información, les permite crear las estrategias operativas y funcionales requeridas para consolidarse a futuro como una organización líder en la comercialización de productos marinos y hortícolas en el país. Por medio de la planeación estratégica utilizada como herramienta fundamental para el logro de los objetivos de la empresa, permitiéndole a ésta ubicar su mercado, conocer los principales competidores y creando cursos de acción para cumplir con las metas establecidas, se tiene como resultado en la investigación del proyecto realizado en el Centro, una propuesta de la misión, visión, valores, Organigrama y Plan estratégico. Lo anterior fue aceptado por los integrantes del Centro, lo que ayudará a que todos los integrantes laboren bajo el mismo objetivo para lograr una mayor productividad y poder iniciar operaciones formales en un corto plazo, ya que hoy en día se llevan actividades de investigación.

Para lograr el funcionamiento de una estrategia, la organización necesita adoptarla estructura correcta y llevar a cabo una planeación eficiente para realizar las funciones de la misión, realizando trabajo en equipo, para que los integrantes del proyecto, actuales y futuros mejoren su toma de decisiones y el esfuerzo en conjunto. Con lo antes mencionado se concluye, que si es factible la aplicación de un Plan Estratégico en el Centro de Producción Acua-Agrícola (CEPROAA), debido a que ayudará a tener una eficiente planeación, organización y control de las actividades y estrategias establecidas en el tablero de control propuesto en este proyecto.

Recomendaciones

- ☑ Se recomienda a los integrantes del CEPROAA, dar seguimiento a las fortalezas, aprovechando las oportunidades para combatir las debilidades y amenazas que puedan afectar a este proyecto, por otro lado, las estrategias expuestas en el tablero de control, son de gran importancia implementarlas para consolidar la estructura organizacional del Centro.
- ☑ También se considera importante buscar financiamiento y apoyo con instituciones gubernamentales para invertir en infraestructura, equipo e insumos, que ayuden a consolidar a la organización.
- ☑ Otra recomendación es llevar a cabo un Plan de Mercadotecnia que permita dar a conocer y posicionar a la empresa en el mercado, lo cual impacte en el incremento de las ventas.
- ☑ De igual manera se recomienda, llevar a cabo un análisis para determinar la viabilidad financiera del Centro de Producción Acua-Agrícola. Así mismo, la información obtenida será facilitada a personas que estén interesadas en el desarrollo de futuras investigaciones que apoyen a mejorar el desempeño del CEPROAA.
- ☑ Para finalizar, se recomienda de manera general aplicar el plan estratégico en su totalidad, ya que les facilitara el desempeño y establecería responsabilidades de cada uno de los miembros del Centro, pero lo más importante que será una pieza clave para iniciar operaciones en un corto plazo.

RESUMEN

El objetivo del presente trabajo consistió en aplicar la segunda fase de la metodología de flujos de conocimiento, propuesta por el Dr. Oscar Mario Rodríguez Elías, al proceso de acreditación de programas educativos de la Universidad Estatal de Sonora, teniendo como marco de referencia el documento de autoevaluación del Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C. y la experiencia de los responsables de integrar las carpetas de evidencias. Para desarrollar la segunda fase relacionada con el análisis de flujos de conocimiento, compuesta de cuatro etapas, se seleccionó de la primera fase, el modelado de procesos de la categoría de admisión de la variable estudiantes. Como uno de los resultados, se puede mencionar que la metodología permitió identificar con claridad al principal actor del proceso, que para este caso específico, fue el jefe de carrera quien fue el responsable de revisar, retroalimentar e integrar las evidencias en la carpeta de autoevaluación. No obstante que la metodología fue propuesta para el diseño de sistemas de administración de conocimiento, enfocado al mantenimiento de software, fue posible aplicarla en su segunda fase al proceso de acreditación.

PALABRAS CLAVE. Flujos de conocimiento, acreditación de programas educativos, sistemas de administración de conocimiento.

KNOWLEDGE FLOW METHODOLOGY APPLIED TO THE ACCREDITATION OF EDUCATIONAL PROGRAMS (SECOND PHASE)

ABSTRAC

The objective of this study was to carry out the second phase of the methodology of knowledge flows analysis, proposed by Dr. Oscar Elias Mario Rodriguez, to the process of accreditation of educational programs at the Universidad Estatal de Sonora. We take as reference the self-assessment document of the Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C and the experience of those responsible for integrating evidence folders. The second phase is related to the analysis of knowledge flows. As a result we conclude that the methodology clearly helped us identify the main actors in the process, which, in this specific case, was the head of career, who was responsible to review, give feedback and integrate the evidence on self-assessment folder. Although the methodology was proposed for the design of knowledge management systems, focused on software maintenance, it was possible to implement the second phase in the accreditation process.

JEL: I23

KEYWORDS: Knowledge flows, accreditation of educational programs, knowledge management systems.

INTRODUCCIÓN

Para asegurar la calidad de los programas educativos (PE) y rendir cuentas claras a la sociedad, las Instituciones de Educación Superior (IES) en México, han participado desde 1991 en procesos de evaluación diagnóstica a través de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES) y a partir de año 2000 en procesos de acreditación a través del Consejo para la Acreditación de la Educación Superior, A. C. (COPAES), (COPAES, 2012).

El Centro de Estudios Superiores del Estado de Sonora (CESUES), hoy Universidad Estatal de Sonora (UES) no ajeno a esta situación, inicia a mediados del año 2004 sus procesos de evaluación, con la visita del Comité de Ciencias Agropecuarias para la carrera de Licenciado en Acuicultura (LA) y el Comité de Ciencias Sociales y Administrativas para la carrera de Licenciando en Sistemas Computacionales Administrativos (LSCA), alcanzando en ambos programas, un nivel dos. Posteriormente las licenciaturas se someten al proceso de acreditación, logrando su reconocimiento como programas de buena calidad en 2006 y 2007 por la Asociación Nacional de Profesionales del Mar (ANPROMAR) para LA y por el Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C.

(CACECA) para LSCA. Sin embargo, tanto en el proceso de evaluación, como en el de acreditación, se presentaron diversas dificultades entre las que se pueden destacar la insuficiencia de evidencias para fundamentar los criterios, desubicación de documentos (normatividad, convocatorias, ponencias, oficios), poca claridad sobre el responsable inmediato de generar la información, falta de homogeneización de los formatos utilizados para el registro de actividades y departamentos sin sistemas de información o con limitaciones en sus aplicaciones, entre otros.

Para atender lo anterior se diseñó una propuesta de un sistema basado en conocimiento de indicadores académicos, no obstante y como resultado de un proyecto de investigación conjunto entre el UES y el Instituto Tecnológico de Hermosillo (ITH), y con base en la problemática presentada, se consideró oportuno fortalecer la propuesta inicial con un sustento en la metodología de Identificación de Flujos de Conocimiento (KoFI) por sus siglas en inglés. Aun cuando la metodología KoFI de Rodríguez (2007) se orienta a la obtención de información que apoye el diseño de sistemas de AC que dan soporte al flujo del conocimiento en el área de mantenimiento de software, su idea es que ésta se generalice a la solución de problemas específicos en áreas diferentes organizaciones, por lo cual el aporte del presente trabajo es aplicarla en su fase inicial en los procesos de acreditación de los programas educativos del UES.

El resto de este documento está estructurado de la siguiente manera: en primer lugar la sección de revisión literaria muestra información sobre la AC, el modelo de creación del conocimiento, el del ciclo del conocimiento y proceso de administración del conocimiento. En la sección de metodología se realiza una descripción general de la metodología KoFI y una específica de la segunda fase de la metodología que corresponde al análisis del flujo de conocimiento. En la sección de resultados se encuentran identificadas las cuatro etapas de la segunda fase que son: identificación de fuentes de conocimiento, identificación de tipos de conocimiento, identificación de flujos de conocimiento e identificación de problemas para la categoría de admisión de la variable estudiantes. En la sección de conclusiones se establecen éstas, las limitaciones del estudio, la contribución al cuerpo de la literatura e ideas para investigación futura. En la sección de referencias se enumeran los artículos, libros y documentos utilizados en la presente investigación y en la biografía se describe en forma breve el perfil de cada autor.

REVISIÓN LITERARIA

En la actualidad no existe un consenso sobre el concepto de Administración del Conocimiento (AC) (Serenko & Bontis, 2004). No obstante Dalkir (2005) identifica tres enfoques principales: el primero considerado a partir de las actividades del negocio, el segundo definido a través de la ciencia del conocimiento y el tercero desde las tecnologías y procesos, como un conjunto de actividades y sistemas tecnológicos para facilitar el flujo del conocimiento hacia las personas en el momento que lo requieran.

Partiendo del tercer enfoque la AC puede ser definida como una disciplina sistemática y un conjunto de propuestas que apoyan en el crecimiento y flujo del conocimiento (Rao, 2005). Debido a que esta perspectiva atiende a la aplicación de la metodología KoFI, se entenderá por AC a la disciplina que provee de métodos, técnicas y herramientas encaminadas a apoyar las actividades necesarias para facilitar el flujo del conocimiento hacia donde se requiere, con el fin de realizar de la mejor manera el trabajo para completar procesos específicos en una organización (Rodríguez, 2007).

Por lo anterior y para darle sentido a esta definición será necesario identificar ¿qué es conocimiento?, ¿qué constituye el flujo del conocimiento? y ¿cuáles son las actividades involucradas en el flujo del conocimiento que forman parte del proceso de la administración del conocimiento? Davenport y Prusak (2000) consideran que para entender el concepto de conocimiento es necesario entender que son los datos y la información. Los datos, son definidos como hechos simples que pueden agruparse para crear información, pero que por sí solos carecen de significado. La información por su parte es considerada como un conjunto de datos que tienen un significado y su objetivo es informar a quien los recibe, con el fin de tener un efecto en su juicio o en la forma en que percibe algo.

El conocimiento es concebido como una mezcla de experiencias, valores, información contextual y pericia que provee de un marco para evaluar e incorporar nuevas experiencias e información. Esto se origina y es aplicado en la mente de quienes conocen. En las organizaciones, este se da no sólo en documentos o repositorios, sino también en rutinas, procesos, prácticas o normas de la organización.

No todo el conocimiento puede ser fácilmente representado como información o datos, así como el que existe en forma de documentos o bases de datos, existe otro que se encuentra en la mente de las personas. El primero que puede ser expresado de manera formal, fácilmente comunicado es denominado como conocimiento explícito, mientras que el tácito es aquel conocimiento personal utilizado para realizar las tareas y para obtener un entendimiento del medio ambiente. (Nonaka & Takeuchi, 1995).

Organizacionalmente, la importancia del conocimiento reside en su aplicación (Alavi & Tiwana, 2002), por lo que el principal objetivo de una estrategia o sistema de AC debe enfocarse en facilitar y mejorar el flujo del conocimiento (Borghoff & Pareschi, 1998). Para explicarlo existen varios modelos propuestos y se identifican principalmente tres enfoques: el primero que atiende a la forma en que el conocimiento transita entre sus estados tácito y explícito, conocido como el proceso de creación de conocimiento de Nonaka y Takeuchi (1995); el segundo que considera al conocimiento como un recurso que da la capacidad de utilizar información con un fin práctico como la toma de decisiones, denominado ciclo del conocimiento de Choo (1999); y el tercero que se refiere a las actividades que componen el proceso de AC identificado como proceso de administración del conocimiento del cual existen una amplia variedad de modelos, (Dalkir, 2005; Holsapple & Joshi, 1999; Nissen, 2002; Qureshi et. al., 2004), tabla 1.

Peachey (2005) basado en el modelo de AC Alavi y Leidner (2001), ha identificado que el principal enfoque de la AC está relacionado con los sistemas de información y está dirigido hacia la transferencia de conocimiento en cuanto a: almacenamiento, recuperación, aplicación y la creación de conocimiento.

Tabla 1: Modelos del Proceso Administración del Conocimiento

Modelo	Etapas 1	Etapas 2	Etapas 3	Etapas 4	Etapas 5	Etapas 6	Etapas 7
Wiig, 1993	Construir	Capturar	Transferir	Aplicar			
McElroy, 2000	Producir	Integrar	Difundir	Aplicar			
Alavi y Leidner, 2001	Crear	Almacenar/ Recuperar	Transferir	Aplicar			
Dalkir, 2005	Capturar/ Crear	Valorar	Compartir/ Diseminar	Contextualizar	Adquirir/ Aplicar	Actualizar	
Ward y Aurum, 2004	Crear	Adquirir	Identificar	Adaptar	Organizar	Distribuir	Aplicar
Rodríguez, 2007	Crear/ Adquirir	Externalizar	Almacenar	Transferir/ Compartir	Internalizar Recuperar	Interpretar/ Filtrar	Aplicar

La tabla muestra varias propuestas de modelos para el proceso de AC, en ella se observan las diferencias con respecto a las etapas que proponen cada uno de los autores; también se incluye el modelo de Rodríguez (2007) que es el que se utiliza para el presente trabajo.

METODOLOGÍA

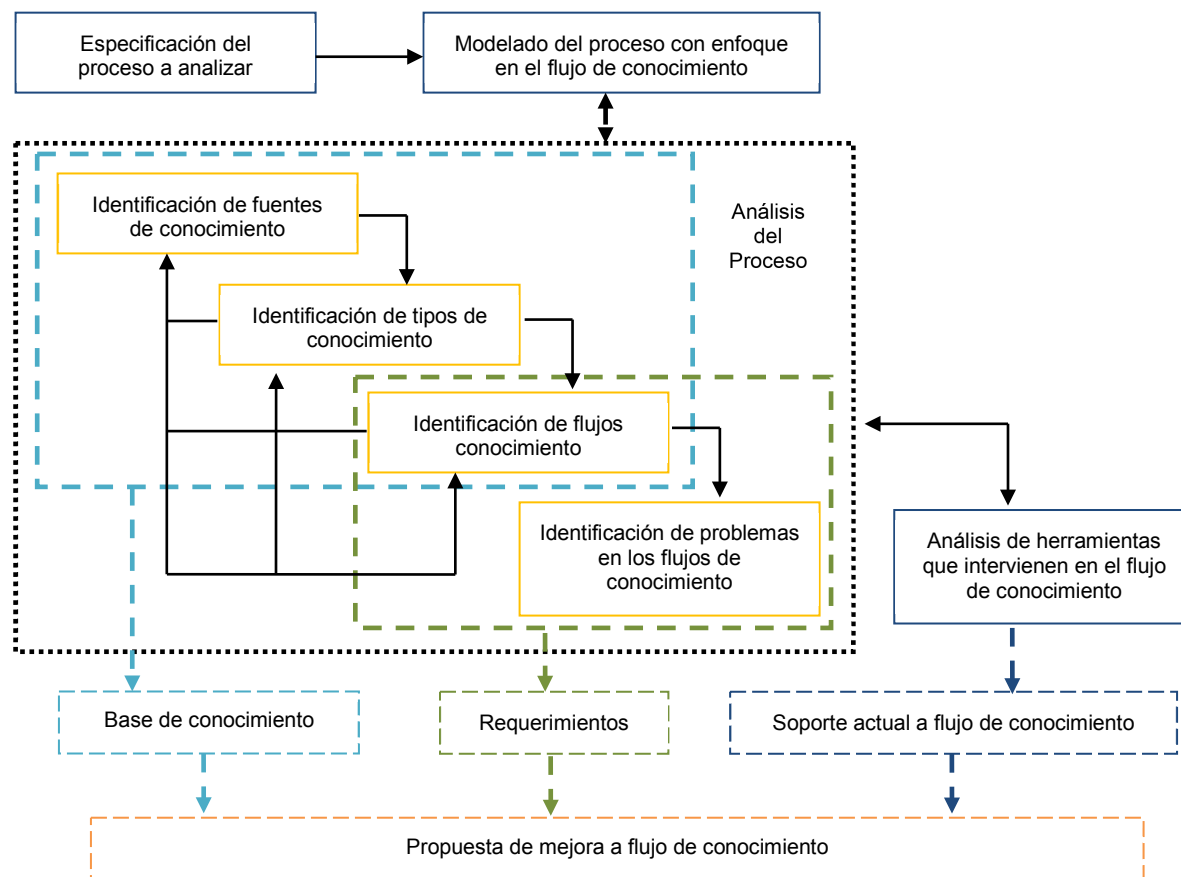

A continuación se realiza una breve descripción de la metodología KoFI, propuesta por Rodríguez (2007), que se aplicó al proceso de acreditación de programas educativos en su segunda fase, haciendo énfasis en esta última, la cual se presenta como una guía para identificar y entender los flujos de conocimiento en procesos organizacionales, utilizando un enfoque de ingeniería de procesos con orientación hacia la obtención de información, que apoye el diseño de sistemas de AC que dan soporte al flujo del conocimiento.

Fases de la Metodología KoFI

La metodología KoFI, se descompone en tres fases principales las cuales son descritas a continuación y son observables en la figura 1.

1. Modelado del proceso con enfoque en el flujo del conocimiento. La representación gráfica es una de las principales técnicas para el modelado de procesos. KoFI propone dos enfoques, uno con la adaptación de la técnica de Gráfica Rica (Checkland & Scholes, 1999; Monk & Howard, 1998), para la primera etapa del modelado que identifica los procesos de manera general y el otro mediante una adaptación del Metamodelo para Procesos de Ingeniería de Software (SPEM) por sus siglas en inglés (OMG, 2002), para la segunda etapa de modelado y en el análisis detallado del proceso.
2. Análisis del flujo de conocimiento. Se centra principalmente en los flujos de conocimiento siguiendo un proceso compuesto de cuatro etapas de identificación de: fuentes de conocimiento, tipos de conocimiento, flujos de conocimiento y problemas en el flujo de conocimiento.
3. Análisis de herramientas de soporte al flujo del conocimiento. La fase final de la metodología consiste en analizar el papel que juegan como habilitadoras del flujo del conocimiento, las herramientas que apoyan los procesos de trabajo, para lo cual se definió un Marco de Trabajo para el Análisis de Herramientas de AC, denominado (MAHAC), a partir de la revisión literaria de varios autores Borghoff y Pareschi (1998) y Alavi y Leidner (2001), por destacar algunos. MAHAC, integra una serie de pasos a seguir para identificar las características de las herramientas a estudiar, desde el punto de vista de su aporte al flujo del conocimiento durante el desarrollo del proceso, estos son: el dominio de aplicación de las herramientas, la estructura y formato del conocimiento manejado, las actividades, servicios o procesos de AC soportados y los aspectos técnicos que podrían ser considerados (Rodríguez, et.al., 2008).

Figura 1: Metodología KoFI propuesta por Rodríguez (2007)

La presente figura muestra una vista general de la metodología KoFI, utilizada en el proceso de acreditación de programas educativos de la UES, Unidad Académica Navojoa, destacando con líneas punteadas negras las cuatro etapas de la segunda fase.

Fases Dos De La Metodología Kofi

A continuación se describe la etapa tres, denominada identificación de flujos de conocimiento, la cual fue seleccionada por ser la más significativa de las cuatro etapas que integran la fase dos de la metodología KoFI.

Etapa Tres: Identificación De Flujos

La tercera etapa de la fase de análisis de la metodología KoFI se centra en identificar la manera en que los tipos y fuentes de conocimiento interactúan dentro de los distintos procesos y actividades que debe realizar y decisiones que debe tomar el grupo u organización que se estudia. Esto se hace con el fin de identificar el conocimiento requerido por dichas actividades, procesos o decisiones, así como las fuentes y mecanismos de que se valen los encargados de las mismas para obtener, guardar y compartir ese conocimiento. Para la identificación de los flujos de conocimiento, se identifica primero el conocimiento que es aplicado o requerido durante la realización de actividades, toma de decisiones, etc. Se identifican las fuentes donde este conocimiento puede ser obtenido, así como los mecanismos utilizados para localizar y recuperar esas fuentes. También, se identifica el conocimiento generado durante estas actividades o toma de decisiones, si éste conocimiento es almacenado en algún lugar, y de ser así, qué mecanismos se utilizan para estructurarlo, representarlo y almacenarlo. Para lo anterior se propone el uso

de un diagrama de secuencia. Los elementos que intervienen en un diagrama de secuencia se encuentran en la figura 2 y se describen a continuación:

1. Actores u Objetos: están ubicados en la parte superior del diagrama de secuencia y representan personas, sistemas o algún otro objeto que intervienen en la interacción.
2. Línea de Vida: se representa por una línea vertical punteada. Es una línea que desciende de un actor u objeto y muestra la duración de la vida de un objeto en el diagrama.
3. Cajas de Activación: es un rectángulo que desciende sobre la línea de vida. Indica el tiempo en que un actor u objeto interviene en el proceso (Kimmel, 2007).
4. Mensajes: cada mensaje entre objetos se representa con una expresión de mensaje sobre una línea con punta de flecha entre los objetos. El orden en el tiempo se organiza de arriba abajo.
5. Representación de retornos: un diagrama de secuencia podría mostrar el retorno de un mensaje con una línea punteada con la punta de flecha abierta, al final de una caja de activación.
6. Mensajes a “self” o “this”: se puede representar un mensaje que se envía un objeto a él mismo utilizando una caja de activación anidada (Larman, 2003).

Figura 2: Elementos de un Diagrama de Secuencia

RESULTADOS

La metodología KoFI, propuesta por Rodríguez (2007) y descrita en el apartado anterior fue aplicada al proceso de acreditación de programas educativos de la UES, Unidad Académica Navojoa, en su segunda fase correspondiente al análisis del flujo de conocimiento, que se centra principalmente en los flujos de conocimiento siguiendo un proceso compuesto de cuatro etapas de identificación de: fuentes de conocimiento, tipos de conocimiento, flujos de conocimiento y problemas en el flujo de conocimiento.

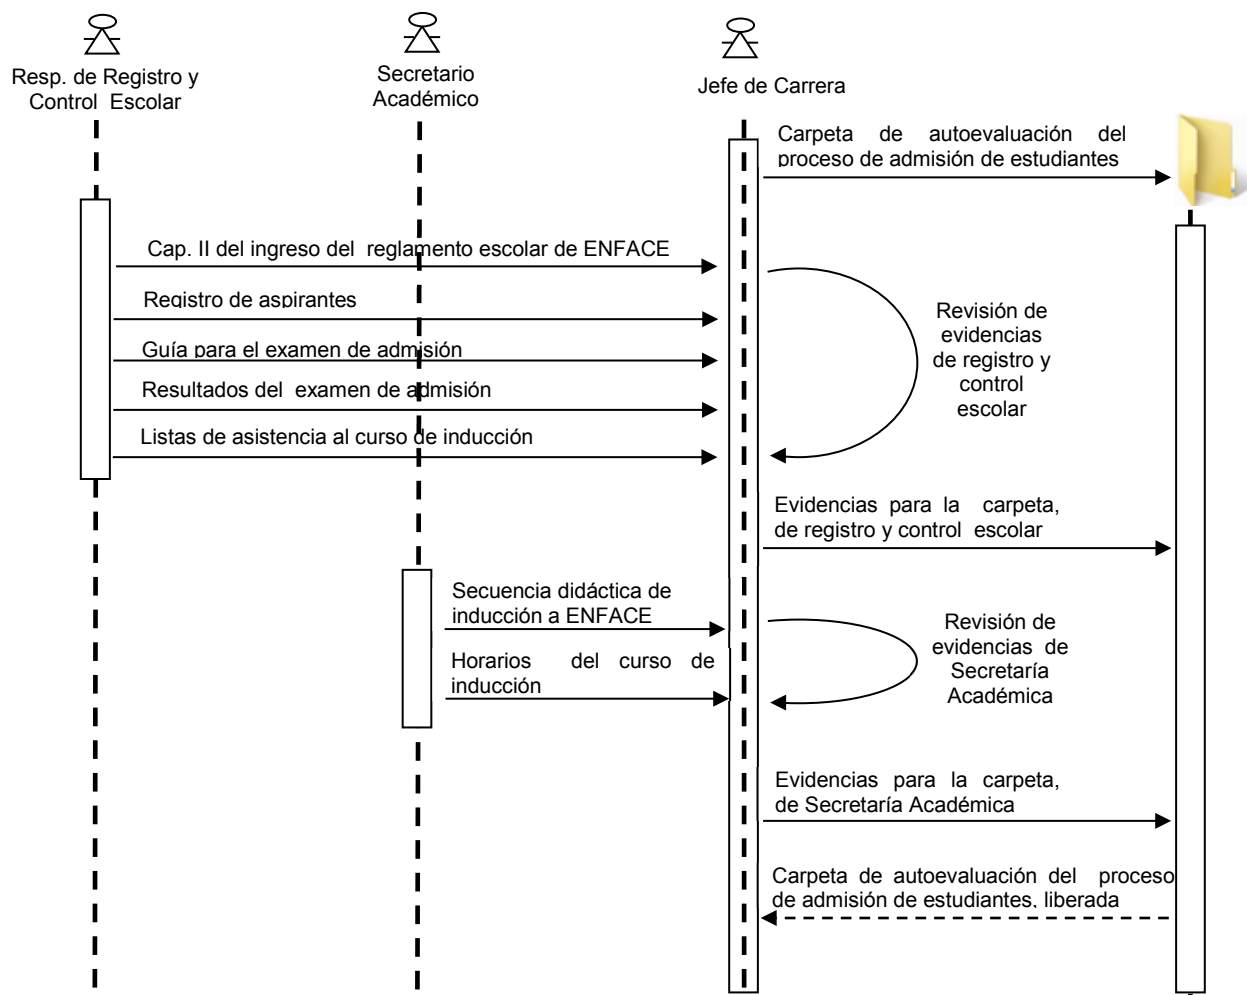

Para poder avanzar a la segunda fase, fueron fundamentales los modelados de procesos con enfoque en flujos de conocimiento desarrollados en la fase inicial, los cuales se representaron a través de la adaptación de la gráfica rica propuesta por Rodríguez (2007). Para el presente trabajo seleccionó únicamente el modelado de admisión de estudiantes como base para el desarrollo de las cuatro etapas de la segunda fase de la metodología KoFI, no obstante sólo se presenta la tercera etapa, que es la más significativa, correspondiente a la fase de identificación de los flujos de conocimiento.

Etapas Tres: Identificación De Flujos De Conocimiento

Para identificar la forma en que los tipos y fuentes de conocimiento interactúan dentro de los distintos procesos y actividades a realizar y las decisiones que tiene que tomar el grupo de estudio, se tomó como referencia el modelado procesos con enfoque en flujos de conocimiento de admisión de estudiantes desarrollado en la fase inicial y se identificó en primera instancia el conocimiento que es aplicado o requerido durante el desarrollo de las actividades y/o toma de decisiones; se identificaron las fuentes de donde ésta puede ser obtenida, los actores y si el conocimiento requería ser almacenado en algún lugar. Para representar lo anterior la metodología se utilizó un diagrama de secuencia, según se muestra en la figura 3; en la cual se puede identificar con claridad cómo el jefe de carrera tiene un rol fundamental, ya

que es quien revisa, retroalimenta e integra las evidencias en la carpeta de autoevaluación del proceso correspondiente.

Figura 3: Diagrama de Secuencia Aplicado al Proceso de Admisión de Estudiantes

En la figura anterior se representa el flujo de conocimiento que se genera dentro del proceso de admisión de estudiante, identificando a los actores principales, las fuentes de información, los flujos y el lugar de almacenamiento del conocimiento, en una acreditación de programas educativos.

CONCLUSIONES

1. La principal aportación de este trabajo fue aplicar la segunda fase de la metodología KoFI al proceso de acreditación de programas educativos de la UES, Unidad Académica Navojoa, consistente en el análisis de flujos de conocimiento; no obstante que esta fue desarrollada para el diseño de sistemas de AC con enfoque al mantenimiento de software.
2. La principal limitación encontrada por el grupo de trabajo en el desarrollo de este proyecto sigue siendo la falta de experiencia en la aplicación de la metodología, así como la escasa información que hay de casos similares.
3. La metodología KoFI provee un conjunto de metamodelos y formatos propios, así como también incorpora otros, tales como el diagrama de secuencia, que en conjunto facilitan el análisis detallado

de los flujos de conocimiento relacionados con los diferentes procesos, los cuales son la base para el desarrollo de la etapa tres correspondiente al análisis de herramientas de soporte al flujo del conocimiento.

4. Al concluir el desarrollo de la metodología en la UES, se espera que el marco metodológico que proporciona KoFI, pueda servir para apoyar los procesos de acreditación de otras IES, sustentados en la experiencia de aseguramiento de la calidad del UES y puedan desde el enfoque de flujos de conocimiento, proponer o mejorar sus estrategias o sistemas de AC.

INFLUENCIA DEL LIDERAZGO SOBRE EL CLIMA ORGANIZACIONAL EN PYMES; CASO CATERING GOURMET DE DURANGO, MÉXICO

María Brenda González Herrera, Universidad Juárez del Estado de Durango
Ernesto Geovani Figueroa González, Universidad Juárez del Estado de Durango
Rosa Carmin González Peyro, Universidad Juárez del Estado de Durango

RESUMEN

Para las Pequeñas y Medianas Empresas es necesario conocer el ambiente que perciben los trabajadores, con el fin de mejorar su administración y evitar enfrentarse a algunos de los problemas que las hacen vulnerables, como los altos índices de rotación de personal entre otros, ya que son el motor de la economía de México, y la productividad de las mismas depende directamente, en la mayoría de los casos, del personal que en ellas labora. Para el desarrollo de esta investigación se utilizó un inventario para medir clima organizacional, instrumento diseñado por Rodríguez, Álvarez, Sosa, De vos, Bonet y Van der Stuyft (2010), el cual nos permitió conocer la percepción de los empleados en cuanto al clima que ellos consideran que existe en la organización haciendo énfasis en el liderazgo. El tipo de estudio que se realizó es cuantitativo y de enfoque descriptivo, de tipo no experimental de corte transversal, aplicado en el total de la población de la organización. Los resultados demostraron que la mayoría de las dimensiones del clima organizacional se ven afectadas por la percepción de un mal liderazgo especialmente la dimensión de la motivación del empleado.

PALABRAS CLAVE: Clima organizacional, liderazgo, pymes.

LIDERSHIP STYLE AND ITS IMPACT ON SMEs ORGANIZATIONAL CLIMA: CASE OF GOURMET CATERING IN DURANGO, MEXICO

ABSTRACT

For Small and Medium Enterprises is necessary to know the environment perceived by workers to improve their management and avoid facing some of the problems that make them vulnerable, such as high turnover rates among others, as they are the engine of the economy of Mexico, and their productivity is directly dependent, in most cases, staff in these works. For the development of this research was used to measure organizational climate inventory, instrument designed by Rodríguez, Álvarez, Sosa, de Vos and Van der Stuyft Bonet (2010), which allowed us to study the perceptions of employees in climate that they believe exists in the organization with an emphasis on leadership. The type of study conducted approach is quantitative and descriptive, cross-sectional nonexperimental, applied to the total population of the organization. The results showed that most of the dimensions of organizational climate are affected by perception of poor leadership especially the dimension of employee motivation.

KEYWORDS: Organizational climate, leadership, SMEs.

INTRODUCCIÓN

Catering Gourmet de Durango, S.A. de C.V. es una organización dedicada al servicio de alimentos, proporcionados ya sea en restaurantes, comedores industriales o en banquetes para eventos, actualmente

cuenta con 60 trabajadores y 5 áreas de trabajo, en las que se realizan las actividades principales de la organización. Siendo una Pequeña y Mediana Empresa (se usará PyME) ha tenido que enfrentarse a los problemas de administración que las empresas de este tipo tienen desde su establecimiento, el hecho que de que sean los dueños quienes administren sin tener las bases necesarias, que el personal que se ocupa no tenga las características que requieren los puestos o que la economía del negocio no permita un rápido crecimiento, son solo algunos de estos problemas.

Mencionado lo anterior, la organización sobre la que se está realizando esta investigación, se enfrenta a un problema grave, desde su inicio, ha pasado por diversas personas en su administración, que implica diferentes estilos de liderazgo y por ende un clima organizacional cambiante, durante este proceso se ha considerado que la percepción de los empleados sobre el clima organizacional está directamente ligado con la persona que se encuentra como su supervisor directo. El problema podría radicar en que la gerencia ha optado en la mayoría de los casos por solucionar los problemas originados por la percepción de “mal liderazgo” despidiendo al personal que se oponga a este liderazgo, o bien, que lo aplique, sin darle solución de fondo a los métodos que se están empleando. Esta decisión de la gerencia provoca que haya una rotación fuerte de personal, sin embargo no es igual para todas las áreas de la empresa, por lo que el objetivo de esta investigación es determinar que estilo de liderazgo es el que mejor trabaja dentro de la organización, para poder capacitar a quienes tengan personal a su cargo para hacer del clima organizacional una motivante del trabajo. Como menciona Robbins (1991), “la sociedad influye sobre el clima organizacional, que se modificará a través del tiempo como resultado de la mayor cantidad de conocimientos, la diversidad de la fuerza de trabajo, los adelantos tecnológicos, la legislación laboral, las normas gubernamentales y el crecimiento de las organizaciones”, por lo que los elementos que influyen en el clima organizacional deben ir evolucionando junto con la sociedad.

Objetivo General

- Conocer si el estilo de liderazgo influye sobre el clima organizacional en Catering Gourmet de Durango, S.A. de C.V.

Objetivos Específicos

- Determinar los estilos de liderazgo percibido por los trabajadores dentro de la organización Catering Gourmet de Durango, S.A. de C.V.
- Conocer el clima organizacional percibido por los empleados de Catering Gourmet de Durango, S.A. de C.V.
- Proponer un estilo de liderazgo para la organización que mejore la percepción del clima organizacional de los trabajadores en Catering Gourmet de Durango, S.A. de C.V.

Pregunta De Investigación

¿De qué forma influye el liderazgo en el clima organizacional de Catering Gourmet de Durango, S.A. de C.V.?

Hipótesis

El estilo de liderazgo influye en la percepción que tienen los trabajadores del clima organizacional en Catering Gourmet de Durango, S.A. de C.V.

Alcances

Para determinar los alcances de la investigación para lograr los objetivos, se consideran el tamaño de la organización, el número de trabajadores y la importancia de la percepción de los empleados en cada área de la empresa. De acuerdo a lo anterior, y tomando en cuenta que la organización lleva a cabo sus actividades comerciales en diversas instalaciones, completamente separadas, para los efectos de esta investigación se van a considerar a todas las personas que forman parte de la organización y prestan sus servicios en alguna de las instalaciones parte de la empresa. La organización cuenta con instalaciones que incluyen: dos restaurantes, tres comedores industriales y personal de oficina, contando con 20 trabajadores en el área denominada Gaucho, 9 en Marea, 9 en Parrilla, 11 en Oficina y 11 en Masisa.

Limitaciones

La investigación solo se realizará en la empresa “Catering Gourmet de Durango, S.A. de C.V.”, en todos los establecimientos donde se llevan a cabo las actividades principales de la organización, por lo que no abarcará al resto de las pequeñas y medianas empresas del sector restaurantero del Estado. Dentro de la organización se considerará como limitante que la investigación no podrá ser realizada con personal que presta sus servicios a la organización, pero que no forman parte de la misma, sino que trabajan por eventos o por temporadas cortas, ya que al no ser personal permanente de la empresa pudiera no tener una percepción objetiva del liderazgo y clima organizacional de la empresa.

REVISION LITERARIA

Las PyMES en el mundo han sido consideradas como regeneradoras económicas en los países, un ejemplo es el que da Barrientos (2008), quien asegura que el potencial de la Unión Europea se debe al apoyo que se otorga a las PyMES, ya que se les considera un importante factor de creación de empleos, lo que permite obtener altos niveles de crecimiento y bienestar social. Las PyMES no solo tienen importancia para las economías nacionales por sus aportaciones a producción, sino porque tienen un alto grado de flexibilidad para adaptarse a los cambios que se vayan presentando con el tiempo, lo que impulsa el desarrollo económico y una mejor distribución de la riqueza. Es importante para lograr que las PyMES se desarrollen, llevar una adecuada administración, la empresa no podrá avanzar por sí misma, si no que necesita de la participación de todos sus integrantes, por lo que es importante conocer las estrategias administrativas y los componentes de la administración, entre los que, se encuentran los que, en este caso, serán en los que se centrará la investigación, los cuales son el clima organizacional y el liderazgo. La administración siempre ha sido ligada a los negocios, y es que es parte importante dentro de la organización, ya que permite coordinar los esfuerzos del conjunto de personas que la integran, permitiendo de esta manera lograr los objetivos de forma eficiente y eficaz.

Hernández (2002) dice que la administración “es la actividad humana encargada de organizar y dirigir el trabajo individual y colectivo efectivo en términos de objetivos predeterminados.” Del mismo modo para Koontz y Weihrich (2004) la administración es “el proceso de diseñar y mantener un ambiente en el que los individuos, trabajando en grupos de manera eficiente, alcancen objetivos seleccionados.” Una de las razones por las que es importante el estudio tanto del clima organizacional y cada uno de sus componentes, es lo que explican Blake y Mounton (citado por Aviña y Espinosa, 2004) denominada la rejilla administrativa, que está basada en dos polos, el primero es la importancia que da el administrador a la producción y el segundo la importancia que da a las personas. Este método se puede utilizar como un medio para la identificación de los estilos de liderazgo, ya que muestra el cómo se interesa el administrador por la producción o por las personas, Blake y Mounton señalan que hay cuatro estilos extremos dentro de esta rejilla, los cuales determinan el grado de preocupación de los administradores.

METODOLOGIA

Para esta investigación, se eligió el paradigma cuantitativo ya que busca las causas y los hechos de los fenómenos sociales, prestando poca atención a estados subjetivos, se puede obtener una medición controlada y penetrante, siempre se mantiene al margen de los datos como si fuera una perspectiva desde fuera. El desarrollo de la investigación será dentro de un método descriptivo de campo, con el que se pretende dar lugar a una propuesta de aplicación de un determinado estilo de liderazgo conveniente para la organización. El alcance que se determinó para esta investigación fueron todas las instalaciones en las que se realizan las actividades principales de la organización, que incluye a 60 trabajadores ubicados en 5 áreas de trabajo, a los cuales se les aplicará el instrumento detallado más adelante. El diseño de la investigación será de tipo no experimental, ya que las variables no serán manipuladas y sólo se observará su comportamiento. La investigación también será de corte transversal, por el hecho de recolectar los datos en un único momento en la población. Los datos serán recolectados en el total de la población existente en la organización al momento de realizar la investigación por medio de la aplicación de cuestionarios en las diversas áreas de trabajo que comprenden la empresa.

La información recolectada fue procesada por medio del software SPSS 2010, por lo que a los datos se les aplicó un proceso de estadística descriptiva, obteniendo un mejor manejo de los datos y representación de la información. De acuerdo a Rodríguez et. al. (2010) diseñadores del instrumento que se aplicará en esta investigación aseguran que “el instrumento ha sido diseñado, con el debido sustento técnico, después de la revisión de múltiples modelos, hasta llegar a integrarlo en una forma que cada institución pueda adecuarla a su propia realidad e interés de análisis. Para el análisis del clima organizacional por medio de este instrumento, se trabajará con cuatro dimensiones, y el diagnóstico se realiza por medio de la interpretación del conjunto de percepciones que tienen los trabajadores sobre estas cuatro variables.

Se utilizarán expresiones, afirmaciones o reflexiones, que serán relacionadas en una hoja de respuestas de acuerdo a la selección que haga el individuo, basándose en lo que a su juicio muestra los atributos de la organización en la que labora. Las respuestas en este caso serán únicamente de verdadero (V) o falso (F), cada categoría está compuesta por cinco preguntas, por lo que cada área a evaluar tendrá veinte preguntas. Para evaluar la puntuación obtenida, se reúnen las hojas de respuesta y se numeran correlativamente; a cada respuesta que coincide con el estándar se le asigna el valor de uno (1). Aquellas que no coinciden tendrán valor cero (0). En la hoja de conteo se van colocando los uno correspondientes a las respuestas que coinciden con la plantilla. Esta matriz contiene en las filas los números del 1 al 80, que son el número de reflexiones del instrumento; y en las columnas, cada casilla (C1,...Cn) representa el número de instrumentos aplicados. Se utilizan tantas columnas como tantos el número de participantes.

En la última columna de la matriz u hoja de conteo, se suma en forma horizontal todos los unos (1) que hubo en las casillas. Al total se le saca una media aritmética. Al final de las operaciones, se obtiene 80 promedios. El resultado siempre será uno (1) o fracción, considerándose adecuado cuando esta media sea de 0,60 o superior. Los promedios obtenidos en estos subconjuntos de respuestas se suman para obtener el valor de cada variable. El resultado de cada categoría será 5 o menos. Teniendo en cuenta que el mayor de los resultados de cada variable es de 5 puntos, se asume como nivel aceptable el valor medio 3. Cuando los valores se encuentran debajo de 3 se interpreta como que el clima no es satisfactorio. Para los efectos de este estudio, las 4 dimensiones sobre las que se trabajará son: liderazgo, motivación, reciprocidad o compromiso y participación

RESULTADOS

La percepción de los empleados es mayoritariamente positiva sobre la dirección que se ejerce en la empresa, sin embargo existen algunas que son en sentido contrario, suficientes para poner en relieve que aun hay circunstancias que los hacen diferir de la tendencia favorable. Aunque las respuestas negativas

no marcan una tendencia fuerte, el hecho de que se hayan dado implica que existen empleados que no están del todo conformes c Estímulo de la experiencia en esta categoría que se desprende de la dimensión de liderazgo, se busca la mejora constante con la incorporación de nuevos conocimientos e instrumentos técnicos, buscando siempre el desarrollo de las personas involucradas, la percepción de los empleados se reflejara en los resultados obtenidos en esta dimensión, los que marcan el sentir de los trabajadores en cuanto a los beneficios que obtienen por los conocimientos adquiridos. En lo que se refiere a la participación del “líder” en esta categoría, las respuestas están muy divididas entre los miembros de la organización, mientras algunos sienten que el superior no se mantiene pendiente de la calidad del trabajo, ni de la forma en que se realiza, la otra parte está satisfecha con el trabajo del superior en su área.

Una de las habilidades administrativas es la del trabajo en equipo, en la búsqueda de lograr objetivos comunes, con una participación organizada y un ambiente de apoyo mutuo. En esta dimensión que se desprende de la categoría de liderazgo, la percepción refleja la disposición que tienen los empleados para trabajar en equipo dentro de la organización. Sin embargo hay una parte de la población que siente que aún hay personas dentro de la organización que no trabajan a la par del resto y que solo son unos cuantos los que sacan adelante el trabajo y el logro de los objetivos. No hay organizaciones en las que no se dé el conflicto, las diferencias entre los trabajadores y sus intereses están en permanente competencia, dentro de esta categoría que forma parte de la dimensión de liderazgo, los resultados serán el reflejo del ambiente que generan dichos conflictos y su respuesta ante los mismos. La percepción general es que todos participan en la solución del problema, aunque no sean los responsables o no sientan que les corresponde darle solución, pero la mayoría cree que la participación de los demás en la solución de los conflictos es por ponerse en una posición que le dé una mejor imagen frente a los superiores.

CONCLUSIONES

De acuerdo a los resultados obtenidos después de lograr los objetivos, podemos confirmar la hipótesis en la que se afirma que el liderazgo crea influencia en la forma en que los trabajadores de Catering Gourmet de Durango, S.A. de C.V. perciben el clima organizacional dentro de la empresa. En este caso, es negativa la forma en que el liderazgo ejerce su influencia, ocasionando un clima organizacional desfavorable para la empresa y que por ende no permite la satisfacción completa de los trabajadores de la institución. Para una futura investigación, se podría considerar el hacer estudio de la influencia que ejerce el liderazgo en la percepción del clima organizacional en el resto de las PyMES del Estado de Durango, con el fin de conocer si en todas las organizaciones que abarcan este sector, se da el mismo fenómeno que se presentó en la organización investigada, es decir, si en todas las organizaciones corresponde un mal liderazgo a una mala percepción del clima organizacional, o bien, si existe un buen liderazgo que corresponda a una buena percepción del clima organizacional.

DIAGNÓSTICO DE LA INDUSTRIA DE JAIBA A PARTIR DE UN ESTUDIO DE LAS COMERCIALIZADORAS UBICADAS EN LA REGIÓN COSTERA DE BAHÍA DE KINO, SONORA

Luis Enrique Ibarra Morales, Universidad Estatal de Sonora

Erika Olivas Valdez, Universidad Estatal de Sonora

Emma Vanessa Casas Medina, Universidad Estatal de Sonora

RESUMEN

*La producción de jaiba (*Callinectes bellicosus*) desde la década de los 80's ha sido una actividad eficiente en la industria pesquera del Estado de Sonora; sin embargo, la falta de implementación de aspectos ambientales ha generado una problemática que ha llevado a que la pescadería se encuentre en su máximo sustentable; es decir no es recomendable incrementar el esfuerzo pesquero actual, por lo que la única vía de crecimiento en este sector, se dará a través de mejores prácticas en sus procesos de producción y comercialización de jaiba. Por ello, este estudio analizó la situación actual de esta Industria en el Estado de Sonora, procediendo a trabajar en varias etapas de diagnóstico; la primera en un estudio de campo donde se investigó la situación operativa de las comercializadoras de jaiba ubicadas en la Región Costera de Bahía de Kino; en materia de capacidad productiva, mercados, generación de empleo, proceso productivo, precios, proveedores y análisis de oferta. Para la obtención de información, se utilizó la entrevista a profundidad de tipo semi-estructurada como herramienta cualitativa; mientras que para el análisis y manejo de la información, se utilizó como marco de referencia, el modelo de las cinco fuerzas competitivas de Porter.*

PALABRAS CLAVES: Sustentable, producción, comercialización, jaiba.

INTRODUCCIÓN

A través del desarrollo de esta ponencia se puede apreciar un cumulo de información referente a la producción y comercialización de la Jaiba en el Estado de Sonora, México, específicamente, información obtenida por medio de una primera etapa de diagnóstico; un trabajo de campo donde se investigó la situación operativa de las comercializadoras de jaiba ubicadas en la Región Costera de Bahía de Kino, Sonora, en materia de capacidad productiva, mercados, generación de empleo, proceso productivo, precios, proveedores y análisis de la oferta. La selección de esta zona costera se justifica, debido principalmente a que en Bahía de Kino, se ubican 6 de las 22 empresas procesadoras de jaiba que existen en todo el Estado, lo que representa el 28% del total de las procesadoras.

De lo anterior, destaca que las empresas productoras cuentan con poder relativo en cuanto a la fijación de precios y que el grado de competencia es moderado. Otro aspecto importante a mencionar es, la disposición y conocimiento de las empresas hacia aspectos ambientales y de sustentabilidad. No obstante, los acuerdos tomados en materia ambiental o el cumplimiento de las normas de esta índole, no corresponde únicamente a ellas como empresas, sino al resto y conjunto de la comunidad, sobre todo a los pescadores de este producto pesquero.

REVISIÓN DE LA LITERATURA

Taxonómicamente las jaibas son animales que pertenecen al phylum Arthropoda, subphylum Crustacea, clase Malacostraca, orden Decapoda, suborden Pleocyemata, infraorden Brachyura y familia Portunidae

(Barnes, 1996). En la costa Pacífico de México, el género *Callinectes* agrupa a las especies de jaiba de importancia comercial de la zona y sostiene pesquerías importantes en los estados de Sinaloa, Sonora, Baja California y Baja California Sur. Las especies *Callinectes bellicosus* (jaiba café) y *Callinectes arcuatus* (jaiba azul) son las que generan prácticamente la totalidad de las capturas comerciales en Sonora y Sinaloa, ya que contribuyen con el 98% de la captura total (entre 65% la primera y 35% la segunda) y con una menor distribución y abundancia, la especie *Callinectes toxotes* (jaiba verde). (Hendrickx, 1993).

Estas especies tienen una longevidad natural de entre 2 a 3 años. Las tallas de los adultos van de 40 a 170 mm de ancho de caparazón (AC). El tamaño promedio para *C. bellicosus* es de aproximadamente 120 mm, mientras que para *C. arcuatus* es de 90 mm, y para *C. toxotes* es de 120 mm de AC. En estado adulto los machos son más abundantes que las hembras (en una relación de 2:1). Los machos son de mayor talla y peso que las hembras en aproximadamente un 20%. La *Callinectes bellicosus* sustenta la pesquería regional en la costa de Sonora y parte del norte de Sinaloa (Molina 1999, Hernández-Moreno 2000, Hudson-Weaver et al., 2001, Márquez-Farías 2001).

Es la más importante en términos de volumen de captura y genera el 95% de las capturas en Sonora (SAGARPA, 2010). Su pesquería constituye una actividad relativamente artesanal que inició hace aproximadamente veinte años como una actividad para consumo humano directo y en pequeño mercadeo (Molina y Montemayor 1998, Montemayor-López 2001, Pérez-Ríos 2001, Ramírez-Félix y Singh-Cabanillas 2003); las artes de pesca que se emplean son muy sencillas y de bajo costo; entre las más comunes están los aros, las físgas o sacadores, y las trampas o nasas del tipo Chesapeake o similares; siendo estas últimas las que conforman el sistema de pesca más utilizado en la pesquería artesanal de jaiba del norte del Golfo de California (González-Ramírez et al., 1996, Molina 1999).

Producción De Jaiba En Sonora

Con base a los datos extraídos del Anuario Estadístico de Pesca 2011, se pueden apreciar en la Tabla 1, los niveles de captura en vivo (kilogramos) y su valor en pesos de la captura de jaiba para los seis estados del país más representativos en esta pesquería, lo que para el Estado de Sonora representa ser el segundo estado con mayor captura de jaiba a nivel nacional, partiendo del hecho de que la captura a nivel nacional para el año en mención, representó 20, 262,000 kilogramos, solamente 732,236 kilogramos por arriba de la captura de los seis estados más representativos.

Tabla 1: Niveles de Captura y Valor en Pesos de la Pesquería de Jaiba.

Estado	Nivel de captura en kilogramos (peso vivo)	Valor en pesos de la captura	Porcentaje de representación
Campeche	1,533,661	\$16,116,914.00	7.86%
Sinaloa	6,074,377	\$67,596,304.00	31.11%
Sonora	4,048,378	\$43,585,931.00	20.74%
Tabasco	1,060,228	\$1,155,288.00	5.43%
Tamaulipas	3,281,704	\$32,739,034.00	16.81%
Veracruz	3,511,416	\$55,527,247.00	17.99%
Totales	19,529,764	\$216,720,718.00	100.00%

En la presente Tabla se muestran los niveles de captura y valor en pesos de la pesquería de jaiba al año 2011, en los seis estados más representativos del país. Fuente: Elaboración propia a partir de los datos obtenidos del anuario estadístico de La CONAPESCA, 2011.

Situación De Los Municipios Pesqueros De Jaiba En Sonora

De acuerdo a la investigación documental realizada hasta el momento, existen 22 plantas procesadoras de pescado y marisco, incluyendo la jaiba (Huato, 2005). Dichas plantas se distribuyen principalmente en seis Municipios Costeros; Hermosillo, Guaymas, Caborca, Empalme, Puerto Peñasco y Huatabampo. No obstante, existen otras comunidades con menor desarrollo pesquero, que también son reportadas como zonas costeras productoras de jaiba, como es el caso de San Luis Río Colorado y Etchojoa. En la Tabla 2,

se muestra la participación porcentual de los seis principales municipios de acuerdo al número de procesadoras instaladas en cada uno de ellos y respecto al número total de instaladas en todo el Estado de Sonora. Lo anterior, permite inferir sobre el hecho de que Hermosillo (Bahía de Kino) tiene mayor participación en este tópico, por lo que este criterio, fue uno de los tomados en cuenta para realizar este estudio en primera instancia en esta localidad, ya que en un futuro se pretende abarcar en el área de estudio al resto de zonas productoras en el Estado de Sonora.

Tabla 2: Participación de las Procesadoras de Jaiba en el Estado de Sonora.

Municipio	No. De plantas	% respecto al total en Sonora
Guaymas	5	22.7%
Hermosillo	6	28%
Huatabampo	4	18%
Navojoa	1	4.5%
Empalme	1	4.5%
Puerto Peñasco	5	22.7%
Total	22	100%

En esta Tabla se presentan los seis municipios más representativos en cuanto la captura y procesamiento de jaiba en el Estado de Sonora a partir del número de plantas procesadoras de jaiba instaladas en dichos municipios. Fuente: Construcción propia con base a información obtenida en el directorio de empresas comercializadoras de pescado y marisco del Estado de Sonora.

Las áreas costeras que se tendrían que visitar para los trabajos de campo, se mencionan en la Tabla 3, no obstante, para efectos de la primera etapa de estudio solo se visitó la localidad de Bahía de Kino, perteneciente al municipio de Hermosillo, Sonora, como se muestra a continuación. Las etapas restantes se conformarán a partir de las visitas de las zonas costeras de Puerto Peñasco y Caborca (Zona Norte), en un mismo periodo de tiempo, mientras que en otro bloque de visitas se recorrerán los campos pesqueros de Guaymas, Empalme y Huatabampo (Zona Sur).

Tabla 3: Comunidades y Campos Pesqueros del Estado de Sonora dedicadas a la Pesca de Jaiba.

Municipio	Campo Pesquero
Hermosillo	Bahía de Kino
Guaymas	Punta Lobos Yaquis
Caborca	Ejido Rodolfo Campodónico
Empalme	Las Guácimas
Puerto Peñasco	Puerto Peñasco
Huatabampo	Yavaros

La presente Tabla muestra las seis regiones más importantes dedicadas a la pesquería de jaiba en el Estado de Sonora. Fuente: Extraído de Huato Leobardo, (2005). Estudio Socio – Económico de la Pescadería de Jaiba en Sonora y Sinaloa.

Tabla 4: Niveles de Captura y Valor de Comercialización de la Jaiba en Bahía de Kino, Sonora.

Meses	Peso vivo (Kg)	Valor en pesos
Enero	12,232	\$188,046.80
Febrero	2,968	\$33,835.20
Junio	9,561	\$118,078.35
Julio	140,682	\$1,791,976.45
Agosto	396,481	\$4,771,587.80
Septiembre	273,692	\$3,233,127.31
Octubre	266,260	\$3,662,800.05
Noviembre	59,953	\$744,488.40
Diciembre	57,062	\$735,496.65

La presente Tabla detalla los niveles de captura y el valor comercial de la jaiba, en la región costera de Bahía de Kino, Municipio de Hermosillo, Sonora. Fuente: Elaboración propia, a partir de los datos extraídos del Anuario Estadístico de Pesca, 2011.

Para el caso específico de la región costera de Bahía de Kino, municipio de Hermosillo, Sonora, la situación de la pesquería de jaiba al año 2011, se detalla a continuación en la Tabla 4, por nivel de captura, valor en pesos y desglosado por cada mes del año, notándose significativamente que en los meses

de enero, febrero y junio los niveles son muy inferiores, ya que en estos meses, las condiciones climáticas para su captura no son aptas. Para el caso de los meses de marzo, abril y mayo, los cuales no aparecen en la Tabla 4, es debido a que es considerado el periodo de veda para la jaiba.

METODOLOGÍA

Para el desarrollo metodológico de este proyecto de investigación, primero fue necesaria una revisión de la literatura existente, sobre todo de fuentes de información oficial como SAGARPA, CONAPESCA, INEGI, FAO, Secretaría de Fomento Agropecuario y Pesquero, Secretaría de Economía, entre otras. También se obtuvo información de fuentes primarias, proveniente de entrevistas a profundidad con encargados de cuatro de las seis comercializadoras ubicadas en la Comunidad de Bahía de Kino, en Hermosillo, Sonora, México. Este estudio se considera de corte transversal, ya que la información analizada corresponde al periodo de captura y comercialización del ciclo productivo 2012. De igual forma, es una investigación de diseño no experimental, ya que la información se maneja de forma cuantitativa para una mejor interpretación, pero no se modifica los argumentos originales de las fuentes de información primaria. De acuerdo a las fuentes oficiales, la población de comercializadoras de jaiba en la localidad de estudio es de seis, de las cuales las cuatro comercializadoras con las que se logró establecer contacto para la aplicación de la entrevista a profundidad se enlistan en la Tabla 5.

Tabla 5: Empresas Comercializadoras de Jaiba en la Localidad de Bahía de Kino.

Empresa	Contacto	Industrialización	Mercado Final
Verónica Aguirre Martínez	Verónica Aguirre Martínez	Jaiba	Houston, Texas, USA.
ELELE, S.A. de C.V.	Germán Saracho Martínez	Jaiba	Miami, Florida, USA.
Pescadería El Carcanchón	Juan Carlos León Nieblas	Jaiba	Mochis, Sinaloa, México
Comercializadora Tamaulipas	Salvador Alejandro Ruiz Mallozi	Jaiba	Brownsville, Texas, USA.

En esta Tabla se muestran las cuatro comercializadoras que se contactaron en la región costera de Bahía de Kino del municipio de Hermosillo, Sonora. Fuente: Elaboración propia a partir del directorio de empresas comercializadoras de pescado y marisco del Estado de Sonora, así como información proporcionada directamente por los representantes de las Empresas Comercializadoras de Jaiba de esa localidad.

La metodología utilizada para la interpretación de los resultados obtenidos de las entrevistas que se aplicaron a cada uno de los encargados de las comercializadoras de jaiba de la región, fue a través de un análisis de la industria o del sector industrial de pesca, específicamente, la pesquería de jaiba, haciendo uso del análisis de las cinco fuerzas competitivas de Michael Porter, donde se analizó la capacidad y poder de negociación de los proveedores y de los compradores; la rivalidad interna existente en el mercado por el cual se compete; la amenaza de posibles comercializadoras entrantes al mercado y los productos sustitutos de la jaiba, tanto en la región como en el mercado donde se comercializa.

RESULTADOS

Con base en los datos proporcionados por las mismas comercializadoras, se realizó una estimación del porcentaje de captación de la producción de jaiba por parte de estas cuatro empresas, tal y como se muestra en la Figura 1; así como información referente a su integración con la población local, a través de la generación de empleos directos; apoyo al desarrollo productivo y sustentable de este sector pesquero; pero también un control o influencia en la fijación de precios para este crustáceo.

Partiendo de los resultados obtenidos de las entrevistas, se puede inferir que el sector está constituido prácticamente por cuatro empresas, las cuales dominan gran parte de la región, ejerciendo control en la fijación de los precios de la jaiba, de acuerdo a la demanda y producción en la temporada, lo que significa que existe un gran poder de negociación por parte de los compradores; asimismo, negocian cantidad y calidad en el producto; es decir, tamaño o talla que va directamente proporcional al peso de la jaiba.

Figura 1: Participación de las Comercializadoras en el Mercado de Jaiba.

En la presente Figura se muestra la participación que tiene cada una de las comercializadoras en el mercado de jaiba en la región costera de Bahía de Kino, Sonora, destacándose que el 100% es igual al total comprado por las cuatro comercializadoras. Fuente: Elaboración propia a partir de los resultados de las entrevistas realizadas.

Por otro lado, los proveedores del producto (pescadores de jaiba) se puede determinar que no tienen poder absoluto o el poder en caso de tenerlo es limitado, en cuanto a la negociación de los precios, tiempo de entrega y cantidades de producto para su compra. Este suceso está dado por los contratos de exclusividad con las comercializadoras en tanto que éstas le suministran insumos para llevar a cabo la actividad pesquera de la jaiba. En cuanto a la rivalidad existente en el mercado donde se compite es relativamente moderado, con tendencia a ser más fuerte en los meses de agosto a octubre, cuando la captura se dispara considerablemente y la demanda aumenta en el mercado. En ese sentido, los precios que se pagan por kilo de producto bajan, es cuando la rivalidad se inicia en las comercializadoras, negociando los precios, ya que esta estrategia está centrada en la competencia de precios, dando por resultado, precios inferiores a los costos de producción y captura suponiendo niveles inferiores de ganancias para los pescadores de jaiba. También se analizó la posible entrada o amenaza de ingreso de nuevas procesadoras y comercializadoras de jaiba en la región. En ese sentido, es importante señalar que, para ingresar a este sector industrial en la región objeto de estudio estará en función de las barreras de ingreso que las comercializadoras ya posicionadas en el mercado impongan o desarrollen estratégicamente, con la finalidad de frenar la posible adquisición de una posición en el mercado por otra empresa o comercializadora que intente o decida ingresar al sector.

Por último, la amenaza de los productos sustitutos. Cada una de las empresas está compitiendo en un sentido general y saben que las utilidades del sector serán reprimidas entre más atractivos sean los sustitutos, como productos que desempeñan la misma función. En este sector existen muchos productos marinos que cumplen y desempeñan la misma función, la cual es la de proveer una alimentación sana y nutritiva, como lo hace la jaiba en sus diferentes presentaciones, entre los cuales se puede mencionar al camarón; cangrejo; almeja; callo de hacha; ostión; entre otros, que también se produce y captura en tiempos diferentes que el ciclo productivo de la jaiba; sin embargo, los precios de comercialización son más altos por los costos que conlleva su captura.

CONCLUSIONES

Se concluye que a partir del análisis de las cinco fuerzas de Michael Porter y de las relaciones comunes que se dan entre las principales procesadoras y comercializadoras de jaiba de la región, que la industria pesquera de jaiba está conformada y dominada por cuatro empresas específicamente, las cuales tienen el poder de negociación sobre los proveedores y como compradores del producto; asimismo, la rivalidad existente entre ellas es de tal magnitud e intensidad que tienen la facilidad de imponer barreras de entrada a posibles competidores y/o empresas que quieran tener alguna participación en el mercado. Algunas de las barreras de ingreso más comunes implementadas por las empresas que participan activamente en el mercado de la jaiba, se encuentran la fijación de precios en la compra del producto; mayor y mejor distribución y comercialización; estandarización y automatización de los procesos productivos;

estableciendo mejores relaciones laborales y generando mayores oportunidades de empleos directos; apoyando con el suministro de implementos para la captura de la jaiba a los pescadores de la región; mayor incidencia e impacto en el desarrollo sustentable de la zona, entre otros factores, que son bien valorados por los habitantes de la región costera, ya que propicia al crecimiento económico, social y productivo de la misma región, con un claro compromiso de establecer condiciones regulatorias en materia de sustentabilidad y preservación de la especie (jaiba).

Por otra parte, es importante mencionar que la oportunidad de crecimiento y expansión de las empresas procesadoras y comercializadoras de jaiba de la región costera de Bahía de Kino, Sonora, es con alto potencial y con tendencia a crecer, ya que la demanda en el consumo del producto en los mercados estadounidenses cada vez es mayor por su alto contenido proteínico y nutricional. Es por ello, que es recomendable apoyar iniciativas que den cabida al diseño de estrategias óptimas para el buen manejo de la pesquería de jaiba en la región, que vayan específicamente encaminadas a la protección y preservación de la especie y de los pescadores que dependen de esta actividad pesquera. Asimismo, promover intensamente los productos derivados de la jaiba en los distintos mercados internacionales y nacionales, con la finalidad de incentivar a las empresas procesadoras y comercializadoras de jaiba a optimizar el proceso de industrialización, transporte, comercialización y presentación y empaque de los productos derivados de la jaiba, en sí, eficientar la dinámica de la pesquería de jaiba en la región costera de Bahía de Kino, Sonora.

RESUMEN

La situación por la que atraviesa la actividad camaronícola en el estado de Sonora, México, obliga a los productores a pensar en nuevas formas de producir el crustáceo. Los datos, conclusiones y recomendaciones que se presentan en este documento corresponden a una revisión de las estadísticas, situaciones y experiencias del estado de Sonora, pero por su naturaleza puede ser adaptado a diferentes áreas geográficas. Esta investigación expresa que hasta el año 2012 no se ha realizado ningún esfuerzo significativo por cultivar el crustáceo en un sistema tal, que permita el control de la producción y así llevarla a los niveles que se manejan en la industria de los países asiáticos, principalmente.

PALABRAS CLAVE: camaronicultura, cultivos intensivos, rentabilidad, desarrollo sustentable.

THE SHRIMP FARMING IN SONORA STATE, MEXICO: FROM AN ADMINISTRATIVE AND PRODUCTIVE POINT VIEW

ABSTRACT

The situation of the shrimp culture in Sonora, State of Mexico, requires producers to think of new ways to produce the crustacean. The data, conclusions and recommendations presented herein are for a revision of statistics, situations and experiences of the state of Sonora, but by its nature can be adapted to different geographic areas. This research found that until 2012 has not made any significant effort to cultivate the crustacean in such a system, which allows control of production and thus bring it to levels that are used in the industry of Asian countries mainly.

KEYWORDS: shrimp farming, intensive farming, profitability, sustainable development.

INTRODUCCIÓN

La camaronicultura es una actividad que cada vez alcanza mayor importancia a nivel nacional y sobre todo regional ya que Sonora aporta más del 62% de la producción nacional (81,000 TM). Esto hasta el año 2009, pero del 2010 al 2012 la productividad bajó a menos del 50% debido a la presencia del síndrome del virus de la mancha blanca (WSSV por sus siglas en inglés) (COSAES, 2012). En el estado de Sonora operan actualmente poco más de 25,000 has bajo el sistema conocido como semiintensivo, el cual por sus características, no se puede lograr el control adecuado sobre los factores ambientales y biológicos, lo que lo hace muy riesgoso (Whetstone *et al*, 2002). El objetivo de este trabajo es dar a conocer, cual es la situación por la que pasa la camaronicultura en Sonora, México, mediante la

investigación de las estadísticas, programas, estudios y datos que aportan información valiosa para la industria y que de una forma práctica son conjuntados, analizados y presentados en este documento.

REVISION LITERARIA

La idea tradicional para el cultivo de camarón en nuestro país es el uso de los sistemas conocidos como semiintensivos, donde se utilizan grandes extensiones de tierra, estanques de 5 a 10 has, recambios de agua de rutina del 15% diario, donde se espera que el clima sea apropiado para el cultivo y que las enfermedades o los vectores de estas se mantengan fuera de las instalaciones (Timmons *et al*, 2002; Whetstone *et al*, 2002). Algunos productores se han inclinado por la idea de reducir las densidades de siembra con el fin de mitigar el impacto ecológico que el cultivo ocasiona al medio ambiente, dentro y fuera del estanque, incluso existen reglamentos que lo establecen (SAGARPA, 2012). Esta medida puede ser justificada desde el punto de vista del sentido común, pero con una demanda en expansión y una población mundial en rápido crecimiento y la opinión de la mayoría de los conocedores del tema, que afirman que la acuicultura es la única actividad que va a poder ofrecer los productos del mar a la población demandante, es lógico pensar que la solución está en la intensificación de los sistemas de cultivo para incrementar la productividad. En este sentido es necesaria la investigación de técnicas de producción sobre bases científicas en el área de la nutrición y la prevención y control de enfermedades y además de una visión más amplia en el uso de otras técnicas o sistemas de cultivo.

METODOLOGIA

Para entender los retos a los que se enfrenta la camaronicultura del estado de Sonora, México, fue necesario hacer una revisión bibliográfica donde se habla de la historia de la actividad y de los éxitos, fracasos y sobre la evolución de las técnicas de cultivo. Como primera fase se realizó una indagación sobre los reportes estadísticos de los organismos gubernamentales, en los cuales se exponen aspectos tales como el número de hectáreas abiertas a cultivo, las producciones por zona, la tecnología utilizada, entre otros (CONAPESCA, 2011). A su vez la investigación se dirigió a indagar los avances y aportaciones científicas que se han realizado en los últimos años. Otro de los aspectos investigados y que se consideran de mayor importancia, son los resultados obtenidos en cuanto a producción y productividad del sector en los últimos 10 años, la cual se presenta en la Tabla 1.

De igual manera se expresan en este documento los puntos de vista de los productores y de las personas involucradas en la actividad, donde la información no esta publicada pero que es de suma importancia por la fuente de donde proviene, siendo esta útil para discutir muchos de los aspectos que se tratan aquí y que la cual se considera veraz y trascendental por el sentido y la preocupación que los productores tienen al respecto. A su vez se indagó al respecto de los esfuerzos que algunos investigadores están realizando en el desarrollo de tecnologías que ayuden a la camaronicultura a convertirse en una actividad sustentable, amigable con el ambiente, socialmente responsable y económicamente rentable.

RESULTADOS

En la tabla 1 se muestran las estadísticas generales de producción de camarón cultivado en el estado de Sonora, donde se puede observar que los últimos dos años ha disminuido a menos del 50%. Donde se tenía una expectativa de producir cerca de 93,000 TM solo se ha obtenido poco más de 40,000 TM (COSAES, 2012).

Tabla 1: Resultados de producción de camarón de cultivo en el estado de Sonora, México.

AÑO	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Hectáreas abiertas a cultivo	11,752	11,373	15,824	18,904	18,771	18,208	21,038	23,066	25,232	25,133
Producción (TM)	24,500	36,247	50,634	55,652	66,030	68,510	81,311	81,422	49,400	40,697
Productividad (TM/ha)	2.03	3.19	3.20	2.94	3.52	3.76	3.86	3.53	1.96	1.62

Producción de camarón de cultivo de los últimos 10 años en el estado de Sonora, México. El crecimiento en infraestructura es proporcional a las producciones obtenidas a través de los años, pero en los últimos dos hay un decremento de alrededor del 50% (Fuente: COSAES; información al 15 de Diciembre del 2011).

En los últimos 10 años en Sonora se han construido 13,381 hectáreas en el sistema semiintensivo (Whetstone *et al*, 2002). Estos sistemas se caracterizan por el poco control que se tiene sobre los aspectos de la calidad del agua y el control de muchas de las variables que influyen en la salud de los organismos en cultivo. Según una de las principales razones de los problemas que se tienen en la actualidad en la camaronicultura, son las malas prácticas de producción, donde los estanques son sembrados muy por encima de su capacidad de producción (Martínez-Córdoba *et al*, 2009; Páez-Osuna *et al*, 2003). Algunos productores expresan que se requieren hacer investigaciones importantes en el área de la nutrición y de la sanidad. Específicamente, en el área de nutrición se tiene un problema grave, puesto que la mayoría de la industria pecuaria utiliza alimentos balanceados con harina de pescado como fuente de proteínas de alta digestibilidad, lo que incrementa con esto el coste de los pienzos y por consiguiente los de la producción (Martínez-Córdoba *et al*, 2009).

Algunos otros se inclinan por la reducción de las densidades de siembra sacrificando los volúmenes de producción, solo que la demanda mundial del crustáceo obliga a la industria a seguir produciendo cada día mas (FAO, 2010), por lo que con estas acciones solo se hasta logrando el producir menos sin la seguridad que ofrecen los sistemas semiintensivos. En el ámbito de la nutrición se han hecho muy pocas mejoras o avances tecnológicos, puesto que se sigue dependiendo del insumo más caro económica como ecológicamente, como es la harina de pescado. Pero se ha buscado sustituir este insumo con harinas de origen vegetal y los resultados mas importantes los presentan Olmos *et al* (2011), con un ensayo llevado a cabo con *Litopenaeus vannamei*, en el que sustituyeron la harina de pescado en un 100% con harina de soya y sepas de probióticos bacterianos, con resultados muy alentadores y donde expresan que incluso esta formulación le brinda a los organismos una mejor repuesta inmune y resistencia a las condiciones adversas de la calidad del agua.

CONCLUSIONES

En la presente investigación se obtuvieron datos importantes en cuanto a la situación que guarda la camaronicultura en el estado de Sonora, México, principalmente a lo referente a las producciones que se han obtenido. Con la revisión de los resultados de producción, los boletines emitidos por los organismos gubernamentales y los resultados publicados en el sitio web de COSAES y CONAPESCA, se aprecia que la principal causa de las bajas producciones son las epizootias ocasionadas por virus, principalmente el virus de la mancha blanca (WSSV por sus siglas en inglés).

Observando y analizando la evolución que ha experimentado la camaronicultura en Sonora, podemos ver que en los últimos 10 años se han construido mas de 13,800 has, que representan 115% de incremento, pero es importante observar que no se ha hecho ninguna modificación sustancial a la metodología y sistema de cultivo empleado, ya que toda esta área se ha instalado con el sistema conocido como semiintensivo (COSAES, 2012). Una de las alternativas mas viables para hacer de la camaronicultura una actividad sustentable está el uso de los sistemas intensivos, los cuales utilizan estanques pequeños de 0.5 a 1.0 has, aireación mecánica del agua, probióticos y prebióticos para el suelo y agua, filtración del agua por debajo de los 50 micrones, densidades mayores a 150 organismos/m² y raciones de alimentación mas frecuentes. En estos sistemas se pueden lograr producciones 10 veces mayores que en los sistemas

semiintensivos (Whetstone *et al*, 2002). Esta alternativa no solo mejora las condiciones en las cuales se desarrollan los organismos en cultivo sino que permite tener un mejor control de los parámetros ambientales físicos, químicos y biológicos. Restaría hacer un análisis muy profundo en cuanto a los costes de operación de este sistema, pero se entiende que el ahorro de agua y tierra es verdaderamente sustancial, puesto que se requiere de aproximadamente el 10% de la tierra y de 6% del agua (Whetstone *et al*, 2002; Timmons *et al*, 2002). Con todo esto resta mencionar que la industria del cultivo del camarón no solo requiere de grandes inversiones, sino de un cambio en el sistema de producción que sea sustentable, amigable con el ambiente, socialmente responsable y económicamente rentable.

RETOS DE LA BANCA COLOMBIANA PARA MEJORAR LA PROFUNDIZACIÓN FINANCIERA

José Rodrigo Cática Barbosa, Universidad del Tolima

Mercedes Parra Álviz, Universidad del Tolima

Oscar Hernán López Montoya, Universidad del Tolima

RESUMEN

En el presente artículo se efectúa un acercamiento a la situación actual de la bancarización en el mundo y en especial en regiones como Latinoamérica y el Caribe. Igualmente se describen las razones básicas por las cuales la bancarización en el mundo no ha llegado a verdaderos niveles de bienestar para la población y se describen los grandes retos de la banca colombiana para mejorar el nivel de profundización financiera. El análisis central se desarrolla a partir de un recorrido por las estadísticas de bancarización o penetración financiera en Colombia, frente a algunos países y a la evaluación crítica de los mitos que sobre la banca se mencionan de manera constante en el ámbito nacional. Los resultados del estudio reflejan que más que mitos, es una realidad que los costos de los servicios en el sistema financiero son elevados y se convierten en una barrera para la inclusión financiera o para el acceso de la población a los productos y servicios de la banca, que la mala imagen de la banca se sustenta en las estadísticas de quejas que se registran en la superintendencia financiera; en las cuales la mala atención es el común en los distintos establecimientos financieros y que al sistema financiero le ha faltado interés por la alfabetización financiera de la población colombiana. Por último, se describen los retos que en aspectos tecnológicos, de eficiencia, de educación financiera, de cobertura, de estructura de costos y otros, debe enfrentar la banca colombiana para mejorar la profundización financiera.

PALABRAS CLAVE: Mitos, Profundización Financiera, Inversión Extranjera, Intermediación, Bienestar.

CHALLENGES OF THE COLOMBIAN BANKING SYSTEM IN ORDER TO IMPROVE THE FINANCIAL DEEPENING

SUMMARY

In the present article we make an approach to the current situation of the bancarization in the world, especially in regions such as LatinAmerica and the Caribbean. Equally, we describe the basic reasons for which the bancarization in the world hasn't reached true levels of welfare for the population and the big challenges of the Colombian banking system to improve the level of financial deepening. The central analysis is developed from a review of the bancarization statistics or financial deepening in Colombia versus some other countries and the critic evaluation of some banking system's myths that are mentioned constantly all over the nation. The result of the study reflects that more than myths, there is a reality that shows that the costs of the financial services are high and represent a barrier to the financial inclusion or to the access of people to the banking products and services, and also that the banking system's bad image is supported by the statistics of complaints that are registered by the Superintendencia Financiera in which the bad service is common in the financial institutions and that the financial system hasn't had any interest for the financial alphabetization of the Colombian citizens. Finally, we describe the challenges related to the technological aspects, efficiency, financial education, coverage, cost structure and others, which the Colombian banking system must face in order to improve the financial deepening.

KEY WORDS: myths, financial deepening, foreign investment, intermediation, welfare,

INTRODUCCIÓN

Uno de los sectores sobre los cuales recae la mayor cantidad de mitos en Colombia, es sin lugar a dudas el sector bancario. La mayoría de los colombianos bancarizados y no bancarizados tienen un mal concepto sobre la banca Colombiana y en especial sobre los servicios que esta presta. Según los resultados de la encuesta benchmark sobre los servicios de la banca, se logra establecer que la población en general tiene algún conocimiento básico de la banca. Sin embargo; únicamente el 14% de la población dice tener confianza del sector y el 47% de quienes verdaderamente poseen productos con el sector confían en el mismo. Esta situación se encuentra en contravía con las expectativas, conocimiento y confianza que refleja la banca en los mercados externos.

La banca Colombiana ha tomado una fuerza impresionante en las decisiones de los banqueros extranjeros como resultado de la solidez, la regulación y las proyecciones que este sector posee en Colombia. Esta confianza se ve reflejada en las grandes adquisiciones y en especial en la llegada de grandes inversionistas al país que han ido reacomodando la estructura de inversiones de este sector. Sin embargo, la desconfianza del cliente y de la población en general, le dejan a la banca un reto aún más difícil de cumplir, toda vez que ésta desconfianza se soporta en aspectos como elevados costos en los servicios, la calidad en la prestación de algunos servicios; los cuales se soportan en las estadísticas de quejas y reclamos del sector y en los bajos niveles de bancarización que persisten en el sector.

El presente artículo se estructura como sigue: se presenta una revisión de literatura en la que se describen aspectos básicos del estado actual de la profundización financiera en Colombia, se analizan los soportes al argumento de los elevados costos de los servicios de la banca, se relacionan conceptos de autoridades y analistas económicos en torno al sistema financiero y la banca en particular y se describen las estadísticas de información que fundamenta el reto actual de la Banca en Colombia. Seguidamente se describe la metodología para identificar los grandes retos de la Banca colombiana y posteriormente se muestran los resultados de la profundización financiera en Colombia, el análisis a los principales mitos de la banca colombiana, los niveles de penetración de la banca extranjera y se particulariza sobre las acciones estratégicas que deben ejecutar los bancos en Colombia para mejorar su imagen, confianza y los niveles de profundización.

REVISIÓN DE LITERATURA

Según el 3° Informe de evolución de las tarifas de los servicios financieros de la Dirección de Investigación y Desarrollo - Subdirección de Análisis e Información de la Superintendencia Financiera de Colombia (2012): “En los últimos años la información de los servicios financieros se ha venido constituyendo como un elemento estratégico respecto a las necesidades de los consumidores financieros y las políticas de inclusión al sistema financiero. Al respecto, el conocimiento de las tarifas es un aspecto básico para que los individuos participen activa y responsablemente en los procesos económicos y financieros de sus hogares. Un usuario que conoce sus derechos y obligaciones cuenta con información suficiente, oportuna y dispone de las herramientas adecuadas para la toma de decisiones”.

De la misma manera la Superfinanciera en su informe (Junio 2012) enfatiza: “Una de las políticas estructurales que permite mejorar la formalización de la actividad económica, el fortalecimiento del recaudo tributario y el financiamiento adecuado de los proyectos de inversión es el mejoramiento de la inclusión financiera. Igualmente, dicho mecanismo permite medir el alcance de las políticas públicas impulsadas por el Gobierno Nacional. En términos generales, la inclusión financiera puede medirse a través de cuatro ejes temáticos: *Acceso, Calidad, Uso y Bienestar*. El *acceso* está relacionado con la capacidad para acceder a los productos y servicios financieros, considerando posibles barreras de entrada (asimetrías de información, proximidad física, costos, entre otros). La *calidad* se materializa con los atributos de los productos y servicios financieros con el perfil de cada consumidor. El *bienestar* se

encuentra asociado con la cuantificación del efecto de los productos financieros y servicios sobre la calidad de vida de los habitantes y el impacto sobre la productividad de la sociedad. Finalmente, el indicador de *uso* considera aspectos relacionados con la regularidad de los servicios financieros, la frecuencia en la cual se brindan los productos, los plazos en los cuales se suscriben los servicios, entre otros. En este sentido, los servicios que provee el sector financiero deben ser ofrecidos de manera conveniente a los consumidores. Al respecto, para que el acceso sea adecuado debe estar acorde con unos lineamientos generales que permitan incrementar la disciplina de mercado, reducir la asimetría de información y contribuir a la educación del consumidor financiero. En este sentido, puede entenderse la inclusión financiera como el acceso universal y continuo de la población a productos y servicios financieros diversificados, satisfactorios, conforme a una estructura de negocio formal ajustado a riesgos, de tal manera que satisfaga el bienestar de los consumidores”.

De acuerdo a lo citado en por Cática y Parra (2012). “En el marco de la conferencia “Desarrollo Financiero en América Latina: logros y desafíos” y “Desarrollo Financiero en América Latina y el Caribe: la ruta hacia delante”, desarrollada el día 7 de Diciembre del año 2011, se divulgó el estudio sobre servicios financieros en América Latina realizado por la CAF, en el que se concluye que la baja bancarización que se refleja en América Latina es un gran impedimento para el desarrollo económico de la región”. Está claro que los pobres niveles de bancarización de la población limitan las posibilidades de fortalecer la dinámica de la economía. Menos población con acceso a los servicios financieros significa en muchos casos mayor número de personas que acuden a la informalidad, acrecentando las dificultades para salir de situaciones de estrechez económica de los no bancarizados.

Sin embargo, este problema no suele ser únicamente de Colombia, pues según informe del Banco Mundial, la profundización financiera en América latina y el Caribe; medida por el accesos a productos de captación de la población llega al 39%, mientras que en países con economías desarrolladas este indicador llega al 89% y el promedio de profundización en el mundo llega al 50%. Véase Figura 1.

Figura 1: Porcentaje de Población Adulta Con una Cuenta En Una Institución Financiera

Fuente: Banco Mundial

Estos resultados se dan como efecto de aspectos que la población considera son grandes obstáculos al momento de tener relación alguna con el sistema financiero. Y si se trata de tener una cuenta de ahorros, el informe del banco Mundial que está sustentado en el estudio de profundización financiera de *Global Findex*, explica que una de las razones de mayor peso está en la insuficiencia de recursos o de dinero para efectuar depósitos en los Bancos. Tal como lo afirma el director de investigaciones económicas de FELEBAN, Saza (20012), “el ingreso per cápita en Colombia aún es muy bajo y no permite un mayor grado de penetración, sobre todo si hablamos de ingresar a la banca. Esto se debe a que todavía hay mucha informalidad económica a nivel local, sobre todo con empresas que no están pagando ni impuestos, y mucho menos seguridad social”.

La principal razón para no acceder a una cuenta de ahorros; según el informe del Banco Mundial, representa un 30% frente al total de razones o argumentos para no poseer este tipo de producto, Véase Figura 2. Le sigue el elevado costo de los servicios financieros, tal como Cática y Parra (2012), lo describen: “La tasa de interés que reconocen los bancos por sus depósitos de ahorro, que no sobrepasan el 2% efectivo anual, ni siquiera reconocen el costo del dinero a través del tiempo (inflación de 3,5% efectivo anual según expectativas del BR). Pero el cobro (costo) por las operaciones que realizan los bancos si supera la tasa máxima de usura”.

Otro obstáculo o aspecto que incide en la baja penetración financiera, según el estudio, corresponde a la falta de confianza de la población en la banca. En Colombia, este aspecto es relevante, pues de acuerdo a las cifras de quejas de la *Superintendencia Financiera de Colombia*, relacionadas en el Diario la República del 17 de Octubre del año 2012, “al mes de agosto de 2012, del total de reclamos recibidos en todo el sistema financiero, el 70% corresponde al sector bancario, le sigue el sector asegurador con 10% y el régimen pensional de prima media con el 7%. El principal motivo de reclamo es la indebida atención al consumidor financiero, seguida por las fallas en liquidación y/o revisión, fallas en cajeros automáticos y el reporte de centrales de riesgo. Dichas quejas son un reflejo de cierto inconformismo, pero cabe resaltar que el volumen presentado ha disminuido en los últimos meses”

Figura 2: Principales Obstáculos En El Mundo Para Usar Cuentas Formales.

Fuente: Banco Mundial

Es evidente que los costos en los distintos servicios financieros que ofrece la banca colombiana son elevados y ello genera mayor desconfianza de la población hacia los establecimientos bancarios, tal como lo corrobora el informe del Banco mundial.

METODOLOGÍA

Para llegar a una definición de acciones estratégicas o retos de la banca para mejorar los niveles de profundización financiera en Colombia, basta con confrontar los denominados mitos de la banca con las realidades que en su mayoría logran corroborar que esos denominados mitos son en esencia una realidad que aún no quieren reconocer de manera abierta los bancos de la región y del mundo entero. Las distintas cifras que sustentan el costo de los servicios se comparan con tarifas de otros países de la región, desde lo cual se puede evidenciar la distancia de los costos de los servicios financieros en Colombia frente a los costos de los otros países con los cuales se efectúa esa comparación. Esta información de costos de los servicios, se enriquece con informes y cifras de la superintendencia financiera de Colombia, en los cuales se logra identificar deficiencias del sector en aspectos como: atención al público, quejas por liquidación de intereses, mala atención en los puntos de la banca y otros aspectos que de manera precisa llevan a

justificar los retos que deberá enfrentar la banca para no desfigurar la imagen de sector sólido, apetecido por los grandes inversionistas extranjeros y con grandes proyecciones.

RESULTADOS

El Costo De Los Servicios Financieros

Uno de los mitos sobre los cuales más se escucha hablar por parte de los Colombianos corresponde al elevado costo de las operaciones realizadas en la banca y que técnicamente se conoce como servicios financieros. Se le suele denominar “mito” como una forma de no aceptar de manera directa que efectivamente el costo de estos servicios castiga de manera significativa el bolsillo de los clientes de la banca. Difícilmente las cifras podrán seguirle dando el calificativo de mito al costo de los servicios financieros. La realidad corresponde a costos que superan a países de la región en operaciones de captación (ahorros) y colocación (tarjetas de crédito), por tomar solo algunos de los servicios que más se usan en Colombia. La figura 3 muestra el costo promedio de la cuota de manejo de tarjeta débito en algunos países del mundo. Se puede apreciar que el mayor costo en pesos colombianos (COP) lo tiene Colombia con \$8.308 frente a un costo de la banca Argentina por valor de \$1.55, según cálculos de ASOBANCARIA de acuerdo a información de las entidades reguladoras y bancos centrales de cada país.

Figura 3: Costo Servicios Financieros En El Mundo – Costo Cuota De Manejo Tarjeta Débito.

Fuente: Entidades reguladoras y bancos centrales de cada país – Cálculos Asobancaria

En el caso del costo de cada retiro dese la oficina en la cual el cliente posee su cuenta, Perú toma la delantera, pero Colombia se mantiene en uno de los más costosas. En promedio, efectuar un retiro en una de las oficinas de la banca Colombiana cuesta \$1.069 mientras que en México ese costo llega únicamente a \$439. Véase Figura 4.

Pero además, si el cliente posee una tarjeta de crédito, se encontrará con que la tarifa que se cobra por el manejo de la tarjeta difiere en costo de manera sustancial entre un país y otro. Es importante aclarar que este costo corresponde únicamente a la tarifa que se cobra de manera mensual por el manejo de la tarjeta. En él, no está involucrada la tasa de interés que debe pagar el tarjetahabiente por las operaciones de financiación que realice. En este servicio Colombia se destaca por el elevado costo que le carga al manejo de la tarjeta de crédito. Mientras un país como México cobra en promedio \$5.433, Colombia lo supera con la astronómica suma de \$17.210. Véase Figura 5.

La Mala Atención De La Banca

Este es un aspecto que ha marcado por años la imagen de los bancos colombianos. Los colombianos del común tienen un mal concepto de la banca, pero no necesariamente de su propio banco. Según la encuesta de Ipsos 2010 el 14% de la población bancarizada de Colombia posee una imagen desfavorable de la banca, mientras que el 10% de la población tiene mala imagen de su propio banco. Pero a nivel general, el 18% de las personas no confían en la banca y el 47% tiene una imagen favorable de la misma. Esa imagen que se tiene de los bancos está soportada en las distintas quejas que se reciben en la Superintendencia Financiera de Colombia y que en su mayoría corresponde precisamente a los establecimientos bancarios, las cuales sumaban al mes de Noviembre del año 2010 un total de 2.234 quejas, de las cuales el 71% corresponden a quejas sobre los bancos. Véase Figura 6.

Al discriminar de manera detallada el motivo de las quejas, se observa que en el mismo informe de la Superintendencia Financiera de Colombia el principal motivo corresponde a la indebida atención al consumidor. Este motivo corresponde al 32% de las quejas y corrobora la realidad de la mala atención de los establecimientos bancarios en Colombia. Ver Figura 7.

Figura 6: Quejas recibidas SFC por sector Noviembre 2010

Fuente: SFC

Figura 7. Quejas recibidas SFC De Acuerdo a Motivos Más Significativos Noviembre 2010

El Difícil Acceso A La Banca

El difícil acceso a la banca se ve reflejado, entre otras cosas, mediante los indicadores básicos de bancarización. Las tareas pendientes de la banca en este aspecto son de gran significado para lograr mejores indicadores. Pues el número de personas con al menos un producto financiero viene creciendo de manera lenta. Al primer trimestre del año 2012 se tenían alrededor de 19.9 millones de personas con al menos un producto financiero. Ver Figura 8.

Figura 8: Personas Con Al Menos Un Producto Financiero. 2011 -2012

Fuente: Asobancaria Cifras en Millones

La Mala Fama de La banca

Son muchos los aspectos sobre los cuales la población colombiana esgrime argumentos de la mala fama de los bancos. El primero de ellos corresponde al impuesto sobre las transacciones financieras que se creó en el año 1999 como un impuesto del 2 por mil destinado para reconstrucción del eje cafetero; sector de la geografía colombiana que fue sacudida por un terremoto de grandes proporciones. Este impuesto con el tiempo se convirtió en impuesto del cuatro por mil y en ocasión de la crisis financiera del año 2009 se destinó para financiar al FOGAFIN; Fondo de garantías de Instituciones Financieras.

Bajo este panorama, la gente piensa que con recursos del pueblo se salvó a la banca de la crisis que debieron enfrentar y que para muchos fue provocada por los mismos bancos. Son muchos los que piensan que las abreviaturas de Sociedad Anónima (S.A.) de los bancos, no son más que el fiel reflejo de lo que en la realidad son; es decir “Sin Alma”. En parte por los requisitos para acceder a los servicios, por las tarifas y desde luego por las ejecuciones que en casos de morosidad la banca debe realizar como acto ineludible de responsabilidad. En este sentido se debe reconocer que la banca desarrolla un papel de dinamizador de la economía en la medida en que canaliza recursos hacia unidades o actividades que requieren de apalancamiento para la ejecución de sus proyectos. Según cifras de la Superintendencia Financiera de Colombia, a la fecha (Octubre de 2012) la cartera de crédito llegó a la cifra de \$233.14 Billones, que significa un crecimiento real anual del 12,77%.

Los Retos

La banca Colombiana tiene hoy una participación de la inversión extranjera del 24,7%, es decir; los extranjeros son dueños del 24,7% de la Banca. Esta situación está muy distante de lo que se hubiese podido imaginar treinta años atrás. Curiosamente mientras los bancos europeos deben liquidar sus inversiones en nuestro país para soportar las exigencias de liquidez en su región, otros bancos del sur del continente llegan no solo para aprovechar las oportunidades de expansión sino para fortalecerse gracias a las expectativas de crecimiento. Los primeros bancos en llegar fueron el Banco Santander y el BBVA, luego llegó el Citibank y numerosos inversionistas de Canadá, Estados Unidos, Perú y Chile, también se interesaron en el sector financiero colombiano. Esto significa que de un total de activos que maneja la banca de \$295,3 billones de pesos, \$79,03 billones pertenecen a los jugadores internacionales. Detrás de estas cifras está el verdadero papel que deberá cumplir la banca colombiana con o sin recursos de los inversionistas foráneos. Estos aspectos se relacionan como sigue:

- Se deberá mejorar en los resultados integrales de la banca, es decir; deberán mejorarse los resultados para los inversionistas, pero desde luego para los clientes que son quienes soportan la actividad de

intermediación y son el componente básico de la función social de la banca como sistema dinamizador de la economía.

- Las inversiones deberán canalizarse para permitir que la banca llegue a zonas donde tiempo atrás no existían operaciones o relaciones con la población. Este tipo de vínculo en esas regiones se deberá dar en especial a través de la apertura de cuentas de ahorro más que por el mismo otorgamiento del crédito. Muestra de ello es el crecimiento de los Corresponsales No bancario, que hoy llegan a cerca de 23.269 con presencia en más de 400 municipios.
- Las tarifas deberán ser revaluadas y asignadas de acuerdo a una estructura de costos real y razonable para quienes suministran los recursos de efectivo al banco en calidad de cuentahabientes y para quienes acceden a los mismos en calidad de clientes de créditos de las distintas líneas o modalidades establecidas por el banco.
- Los recursos que han llegado al país a través de la inversión de bancos extranjeros, deberá verse reflejada en avances tecnológicos que permitan la disminución de los costos en las operaciones y en especial la rápida y eficiente atención que reduzca los niveles de quejas por la mala atención. Seguramente, con esta acción se podrá ir recuperando la confianza y borrando la mala imagen de los bancos en Colombia.
- Los bancos deberán promover la libre competencia y terminar de una vez por todas con la tasa máxima de usura, ya que en estas circunstancias es difícil incentivar la competencia y reducir el costo de las tarifas por la fuerza de la misma competencia.
- Se deben desarrollar alianzas estratégicas con el gobierno para facilitar el acceso al crédito a personas que nunca han tenido vínculo con la banca. Los programas de familias en acción, las líneas de crédito el Banco Agrario y el más reciente programa de financiación de 100.000 viviendas para los más pobres en Colombia, es muestra de que estas alianzas si se pueden estructurar y los beneficios están a la vista.
- Se deberá mejorar el nivel de alfabetismo financiero. Según análisis de entidades del sector; en especial del FOGAFÍN, el nivel de analfabetismo financiero de nuestra población llega al 95%. Se le debe enseñar a la gente a manejar los recursos propios, a ahorrar periódicamente, a programar su pensión, a prever situaciones futuras, a asegurar aspectos básicos de su economía y a conocer las distintas operaciones y movimientos que se desarrollan en el sistema financiero colombiano.

Solo con la materialización de estos aspectos se podrá lograr el bienestar de la población, el cual según la SFC se encuentra asociado con la cuantificación del efecto de los productos financieros y servicios sobre la calidad de vida de los habitantes y el impacto sobre la productividad de la sociedad.

CONCLUSIONES

- La información sobre los distintos aspectos que se relacionan con los servicios financieros se ha venido constituyendo como un elemento estratégico respecto a las necesidades de los consumidores financieros y las políticas de inclusión al sistema financiero.
- La formalización de la economía de un país requiere entre otras, de unos resultados de profundización financiera que beneficie a la población en general y garantice que más personas tengan vínculo directo con el sistema financiero.
- La inclusión financiera, que se debe medir a través de ejes fundamentales como el acceso a los servicios, la calidad del servicio, el uso de los servicios y el bienestar que estos generan a la población, presenta en Colombia grandes retos por las deficiencias que existen en estos ejes relacionados.
- El problema de la profundización financiera no es exclusivo de países como Colombia. Este es un fenómeno que se presenta en el mundo entero y en especial en países de América latina y el Caribe.
- La banca colombiana deberá aprovechar la llegada de los competidores extranjeros para hacer de las economías de escala una realidad en la disminución de los elevados costos en los servicios que presta.

- El desarrollo tecnológico de la banca deberá ser una prioridad para los próximos años. Este desarrollo se deberá ver reflejado en una mayor eficiencia en la prestación de servicios, con lo cual se deberá mejorar la mala imagen que persiste en cierto porcentaje de la población colombiana.
- Los principales retos de la banca colombiana se concentran en: el acceso a los servicios, la calidad del servicio, el uso de los servicios y el bienestar que estos deberán generar a la población colombiana.
- La profundización financiera es una responsabilidad de la banca que deberá estar interpretada como una necesidad dentro de las políticas del gobierno central, de tal manera que banca y estado logren un mayor acceso de la población a los servicios financieros y se garantice la plena responsabilidad social de los protagonistas.

CRISIS FINANCIERAS DE MÉXICO: UN ESTUDIO DE VARIABLES MONETARIAS (1990 – 2012)

Erika Olivas Valdez, Universidad Estatal de Sonora

RESUMEN

La economía mexicana durante las últimas décadas ha mostrado un comportamiento errático en la evolución de variables financieras, mientras que la aplicación de políticas monetarias no ha logrado controlar los efectos de los mercados financieros internacionales, ya que la globalización de estos mercados ha provocado una integración de las economías en este sentido, que más que garantizar beneficios, ha provocado inestabilidad en sus variables monetarias, principalmente en el comportamiento de su mercado de valores y en el valor internacional de su moneda. Por ello, a través de esta investigación de tipo documental, pero con el uso de una metodología cuantitativa (Vectores autoregresivos) se analizó la relación y efecto de las principales variables monetarias, utilizando series de datos mensuales durante 22 años (261 observaciones), donde se analiza el comportamiento del tipo de cambio (peso-dólar), del índice de precios y cotizaciones de la Bolsa Mexicana de Valores, el nivel de Reservas Internacionales de México, la Deuda Interna Mexicana y la Tasa de Interés en depósitos de ahorro, con el objetivo de describir los tipos de crisis financieras por las que ha pasado México durante estas dos décadas, además de realizar aportaciones en materia de política monetaria a manera de conclusión.

PALABRAS CLAVES: Crisis financieras, Vectores autoregresivos y Política monetaria.

MEXICO'S FINANCIAL CRISIS: A SURVEY OF MONETARY VARIABLES (1990-2012)

During the last decades Mexican economy has shown an erratic behavior in the evolution of financial variables, while the implementation of monetary policies hasn't been able to control the effects of the international financial markets since the globalization of these markets has led to an integration of these economies, rather than guaranty benefits has led to an instability in the monetary variables, mainly in the behavior of its stock market and the international value of its currency. Therefore, through this documentary investigation, but using a quantitative methodology (self-regressive vectors) the relation and effect of the main monetary variables has been analyzed, using series of monthly data for 22 years (261 observations), where it was analyzed the behavior of the exchange rate (peso-dollar), price index and market rates of the Mexican Stock Exchange, Mexico's international Levels of Reserve, Mexican Internal Debt and the interest rate in savings deposits, with the purpose of describing the types of financial crisis that Mexico has suffered during the last two decades, furthermore to make contributions related to monetary policies as a way of conclusion.

KEY WORDS: Financial crisis, Self-regressive vectors and Monetary policy.

INTRODUCCIÓN

El presente trabajo de investigación documental pero con el enfoque de una metodología cuantitativa, específicamente a través del uso de la técnica de Vectores Autorregresivos (a partir de este momento VAR), analiza la situación económica de México a través de la evolución de sus principales variables financieras y monetarias, con el objetivo de describir su efecto en el resto de las variables y asociando a

su vez con el sector productivo de esta economía. En la sección de revisión literaria, se describen los argumentos de autores que han realizado investigaciones recientes en torno a este tópico, para comparar dichos resultados con los generados por la presente investigación. También se hicieron una serie de analogías entre los acontecimientos de Estados Unidos, en cuanto al comportamiento de ciertas variables financieras o económicas y el mismo tipo de variables pero para el caso de México.

En la sección de Metodología se explican las etapas y pruebas a las cuales fueron sometidas las series de tiempo de las variables monetarias utilizadas para la construcción del modelo VAR de primer orden (1 rezago), así como técnicamente, que es lo que se esperaba de la herramienta llamada función impulso – respuesta y como habría que interpretarse. A través de la sección de resultados, se vierten las interpretaciones de los principales indicadores generados, tratando de vincular con la situación financiera actual, para finalmente hacer una serie de aportaciones en materia de política monetaria, encaminadas a enfrentar la crisis financiera Mundial iniciada desde mediados del 2008 por Estados Unidos y que ha afectado a todo el Mundo.

REVISIÓN LITERARIA

Uno de los argumentos más reiterativos en la bibliografía, tienen que ver con el hecho de que; El origen de la crisis se halla principalmente en el exceso de gasto y del endeudamiento por parte de los estadounidenses, estimulado por bajas tasas de interés (Zurita, 2009). Por lo que se puede decir, que el epicentro de esta crisis fue Estados Unidos, no obstante, sus efectos no fueron ajenos a los países latinoamericanos, sobre todo para México. Aparentemente la abundancia de liquidez promovida principalmente por las facilidades de crédito en los mercados internos y en el caso de los mercados externos por el exceso de liquidez financiado por países asiáticos, genero una situación de exceso de demanda ficticia de bienes inmuebles y activos financieros.

Desde mediados de 2005 y durante 2006 el alza en el costo del crédito comenzó a impactar en el mercado inmobiliario y el boom de los bienes y raíces comenzó a desinflarse. La cartera de los créditos subprime comenzó a crecer marcadamente. La baja de precios y las altas tasas de interés tuvieron como efecto que muchas personas cayeran en cartera vencida, en particular en el sector de los créditos hipotecarios llamados subprime (Zurita, 2009). La contracción en el nivel de actividad tuvo dos consecuencias de fundamental importancia para la economía real: la elevación en la tasa de desempleo y la caída en el ritmo de acumulación de capital físico y/o producción nacional (Albrieu, 2010). Sin embargo, el efecto indirecto tuvo repercusiones a nivel mundial, incluso en las economías sanas macroeconómicamente hablando, ya que la desconfianza en los mercados de valores de las economías desarrolladas y la caída en el financiamiento externo, provoco que la crisis se desplazara a todas las economías del orbe. Los países afectados han sido aquellos que dependen, en mayor proporción, de las exportaciones golpeadas por caídas en sus precios. También se ven perjudicadas aquellas naciones que deben financiar déficit mayor o que están lejos de manejar políticas económicas sanas. Infortunadamente, la mayoría de los países latinoamericanos cumplen con las tres condiciones, y es por esto que la región se ha visto fuertemente afectada (Lapper, 1998, citado por Herrera, 2010).

Para el caso de México, el choque externo ha sido directamente en la actividad económica real, vía contracción de exportaciones e importaciones, así como en la reducción de remesas, ya que los efectos de mayor impacto estuvieron asociados con la sincronizada y profunda caída en el volumen del comercio internacional (Zurita, 2009). De igual forma, la economías latinas, no han tenido la capacidad de las Asiáticas para hacer frente a las variaciones en el precio internacional del dólar, sin embargo, hay que analizar las tendencias de las variables monetarias para determinar si su efectos son de corto o largo plazo y por ende si la capacidad macroeconómica de México, garantizará una recuperación solida y no solamente coyuntural. Por ello, se procedió a analizar la situación y tendencia de las siguientes variables económicas para el caso de México: La tasa de crecimiento de la producción nacional, a través de la tasa

de crecimiento porcentual del PIB a precios de 2003; El cambio porcentual en el valor del IPC de la Bolsa Mexicana de Valores; La tasa de inflación y de interés, así como la de desempleo, desde el año 2003 a la fecha, tratando de identificar patrones y tendencias similares a las de Estados Unidos antes de la crisis del 2008. Por ejemplo, en el caso del crecimiento del PIB mexicano, se puede apreciar que el efecto de la crisis fue aparentemente coyuntural, ya que para mediados de 2010, la economía mostro signos de crecimiento, no obstante desde finales de 2011, las tasas de crecimiento volvieron a caer y el comportamiento errático durante el año 2012, deja ver que los efectos de la crisis aún no desaparecen.

Figura 1: Tasa de Crecimiento del PIB de México (1994 – 2012) y Variación de Existencias (2003-2012)

Fuente: Construcción propia a partir de información estadística del Banco de Información Económica del INEGI (BIE). La Tasa de crecimiento porcentual fue calculada respecto al trimestre del año anterior y de acuerdo a valores del PIB a precios de 2003. Los puntos de quiebre más claros corresponden a los periodos del segundo trimestre de 1995 y primer trimestre del año 2009. La grafica de la derecha muestra la variación de existencia y la línea horizontal representa el equilibrio de mercado: Oferta igual a demanda, por lo que valores por debajo de la línea representan una situación de exceso de demanda.

En el caso de México, se puede observa en la Figura 1, que desde el tercer trimestre del año 2010, se encuentra en una situación de desequilibrio económico, es decir, la demanda es mayor que la oferta, esto considerando la variación de existencias, que es equivalente al diferencial entre la oferta o producción de bienes generada anualmente menos la utilización de bienes y servicios (demanda de bienes).

A pesar de la claridad con la que se percibe una situación de exceso de demanda en la economía mexicana, no se puede afirmar que esta, al igual que en Estados Unidos sea por un exceso de consumo, ya que esta situación de desequilibrio, también pudo ser generada por una caída en el sistema productivo del país, es decir una disminución en la oferta.

Tratando de reforzar la idea de este análisis, se asoció el comportamiento de desempleo y variación de existencias con el nivel de inflación en México, ya que hay que recordar que en el caso de México, la inflación es determinada en gran medida por el tipo de cambio o valor del dólar estadounidense. Lo anterior, cambiaría el escenario, ya que desde finales del 2008, el valor del dólar frente al peso mexicano se ha estado apreciando, generándose una devaluación del peso. En el caso del mercado financiero mexicano, a través de su principal indicador; el índice de precios y cotizaciones, el cual es capaz de absorber y detectar los problemas económicos y transferirlos al comportamiento de este indicador, se observó (graficas se incorporarán en la versión completa) que en los periodos de las mayores crisis económica de México, el mercado financiero se contrajo y el precio de sus acciones cayó, así como el volumen de activos operados en esos periodos de inestabilidad económica. Si se utilizará el mercado de valores como un termómetro de las condiciones económicas y expectativas de los agentes económicos, se puede indicar que actualmente o por lo menos para mediados del año 2012, las expectativas de los inversionistas y agentes económicos que intervienen en este mercado accionario, son buenas o con tendencia alcista, que las tasas de crecimiento mensual del IPC respecto al mes anterior, son positivas.

METODOLOGIA

El desarrollo metodológico de esta investigación se dividió en tres etapas. La primera de ellas, radica en la selección de las principales variables que expliquen el comportamiento del mercado financiero mexicano, asegurándose previamente de la aplicación de pruebas estadísticas de estacionalidad y autocorrelación. Así como de la conversión o preparación de las variables que lo ameriten, para su incorporación en el modelo y aseguran con ello, una explicación estadísticamente significativa. Dentro de la primera etapa se seleccionaron las siguientes variables que se relacionan entre sí en el mercado financiero y que por ende pueden explicar su efecto hacia el mercado de bienes. Esas variables son: 1. Tasa de interés de ahorro, 2. Tipo de cambio (peso – dólar), 3. Deuda Interna del Gobierno Federal Mexicano, 4. Reservas internacionales y 5. Índice de precios y cotizaciones de la Bolsa Mexicana de Valores. Las series de tiempo pueden presentar problemas de estacionalidad o raíz unitaria, por lo que se deben aplicar pruebas estadísticas que detecten esta situación y lo que es mejor, corregir dicho fenómeno para garantizar la capacidad explicativa de las variables.

En el caso de que se las variables: Tipo de cambio, deuda interna y tasas de interés de ahorro, se detectó problemas de estacionalidad, por lo que se procedió a corregir las series para garantizar su capacidad explicativa dentro del modelo VAR, por lo que se generaron tres nuevas variables derivadas de la primeras, a través del calculo de su primera diferencia. Después de este procedimiento estadístico, se procedió de nuevo a aplicar la prueba de cointegración a dichas variables.

La segunda etapa, consistió en determinar el rezago óptimo del modelo, que en esta ocasión se determinó a partir de la aplicación de la prueba de Granger y que de acuerdo a la misma se determinó que un solo rezago es el óptimo. Por ello, el modelo VAR construido es de cinco bloques de vectores de ecuaciones. En una tercera etapa se procedió a analizar los resultados del modelo para poder hacer una serie de aportaciones en materia de política monetaria y asociando los mismos resultados con las expectativas de desarrollo económico en este panorama actual de crisis financiera mundial.

RESULTADOS

Los principales resultados de este proyecto de investigación, giran en torno a la información proporcionada por la técnica de función impulso – respuesta, al igual que las de causalidad de Granger, con las cuales se puede explicar mejor el efecto y magnitud que tienen cada una de las variables sobre el resto. La causalidad, como su nombre lo indica determina si una variable “causa” a otra, en este sentido el tipo de cambio, las reservas internacionales y la deuda interna, son las variables que muestran mayor grado de causalidad sobre el resto de las variables del modelo.

De acuerdo a los resultados arrojados por dicha función impulso – respuesta, (los cuales se muestran en la Figura 12 al final del documento) la deuda interna es capaz de generar incrementos en el tipo de cambio o devaluación en el peso respecto al dólar hasta en un 10%, con una duración de hasta de dos meses. Esta misma variable (deuda interna), tiene un efecto menor sobre las tasas de interés para ahorro (de casi el 5%), pero se mantiene su efecto en tiempo. Mientras que el caso de las reservas internacionales, se pueden incrementar casi en un 10% durante los primeros dos meses, después de un incremento porcentual de la deuda interna de acuerdo a los resultados del modelo.

El tipo de cambio, resultó ser una variable que causa incrementos en la variable de tasa de interés, lo que tiene sentido para la economía mexicana, ya que gran parte de las transacciones comerciales de este país se realizan en dólares y a su vez el costo relativo de las mercancías importadas (en dólares) determina de forma indirecta el costo del dinero o tasas de interés. No obstante, las tasas de interés no tienen la misma capacidad para fijar o impactar al resto de las variables analizadas, solamente en una pequeña medida se provocaría disminuciones en las tasas de interés en un muy corto plazo, ya que su efecto no se extendería por más de un mes. Finalmente, las reservas internacionales resultaron ser una variable con influencia sobre el tipo de cambio bancario. Ya que incrementos en las reservas internacionales, pueden llegar a

provocar una apreciación de la moneda mexicana o lo que es lo mismo, una disminución en el valor del dólar estadounidense.

CONCLUSIONES

La “deuda interna” resultó de acuerdo a este análisis la variable de mayor capacidad para causar efectos en el resto de las variables analizadas. Por ello, las instituciones encargadas de determinar el nivel de venta de cetes, que es el instrumento de deuda más importante del Gobierno Federal de México, deberán replantearse la posibilidad de una disminución en la venta de este instrumento o garantizar un nivel de oferta de cetes, que mantenga estables los niveles de deuda y a su vez, la estabilidad de las tasas de interés y el tipo de cambio. De igual forma, seguir fomentando la postura de ahorro nacional a través de incrementos en el nivel de reservas internacionales. En este caso, los esfuerzos de incrementar las reservas, no pueden depender de las expectativas de incrementos en los precios del petróleo, ya que esta es una variable exógena. No obstante el gobierno Federal si puede canalizar sus esfuerzos en aumentar de forma sustentable la producción de petróleo que de igual forma, impacta en incrementos en las reservas internacionales y lo que es mejor, en un excedente de recursos públicos que puede ser canalizados a los Estados de México y contribuir a un mayor crecimiento económico.

No obstante, de acuerdo a las tendencias mostradas a mediados del 2012 y siguiendo los resultados del modelo construido en esta investigación, en México podría revertirse esta estabilidad, si no se contienen los problemas de desempleo, si no se incrementa la capacidad productiva del país y se controla el endeudamiento interno. En este sentido, de las variables que se estudiaron en el modelo y que pueden ser controladas por las instituciones gubernamentales y monetarias como en el caso del Banco de México, deberán canalizar sus esfuerzos a controlar la deuda vía cetes y aumentar las reservas internacionales. Si es necesario intervenir en el control del tipo de cambio a través de subasta de dólares, pero al mismo tiempo fomentar la reactivación de la economía en coordinación con programas de política fiscal.

GENERACIÓN DE CAPITAL SOCIAL A PARTIR DE LA EFICACIA, LA CULTURA Y EL APRENDIZAJE ORGANIZACIONAL. UN ESTUDIO CORRELACIONAL

Nidia Estela Hernández Castro, Universidad Autónoma de Coahuila
Edna Isabel de la Garza Martínez, Universidad Autónoma de Coahuila
Astrid Irais Ortiz Lugo, Universidad Autónoma de Coahuila

RESUMEN

En este trabajo se examinan tres indicadores del constructo capital social: la cultura organizacional considerada como el resultado de las relaciones sociales construidas a lo largo de la vida de la organización, las cuales influyen en la orientación de la gestión humana y el comportamiento organizacional; el aprendizaje organizacional entendido como el proceso de adquisición de competencias, que permite al individuo crear su propia realidad y su futuro para el logro de objetivos; así como la eficacia, concretada como la capacidad que tiene una persona, grupo u organización de obtener el mejor resultado en función de los recursos que dispone. Lo anterior, con el propósito de identificar si estos indicadores tienen efecto en la generación de capital social. El estudio empírico fue de tipo descriptivo, transversal y correlacional en 32 trabajadores de una Pyme de la industria metal mecánica fabricante de estructuras metálicas en la región centro de Coahuila. Los hallazgos del estudio revelan correlaciones estadísticamente significativas en los tres indicadores, así como el potencial de capital social subyacente.

PALABRAS CLAVE: Capital Social, Eficacia, Cultura Organizacional, Aprendizaje Organizacional.

CAPITAL SOCIAL GENERATION FROM EFFECTIVENESS, ORGANIZATIONAL CULTURE AND LEARNING. A STUDY CORRELATIONAL

ABSTRACT

In this paper three indicators of social capital construct are examined: effectiveness, culture and learning organizational. The above, in order to identify whether these indicators have effect on the generation of social capital. The empirical study was descriptive, cross-sectional and correlational in 32 workers of SME metalworking industry manufacturer of metal structures in the central region of Coahuila. The findings of the study reveal statistically significant correlations in all three indicators, as well as the underlying social capital potential.

KEYWORDS: Social Capital, Effectiveness, Organizational Culture, Organizational Learning

INTRODUCCIÓN

El capital social se le considera como una capacidad que se encuentra en la red de relaciones de intercambio en curso que los individuos acumulan con el tiempo sin dejar de lado las normas y los valores (Coleman, 1988 y Putnam, 1995). Y como cualquier forma de capital, el capital social representa una fuente de valor potencial (Rodan y Galunic, 2004). La existencia de redes en la empresa reduce el tiempo y la inversión requeridos para obtener información (Kanter, 1988), promueve el aprendizaje

organizacional (Fisher y While, 2000), promueve la interacción entre las diferentes unidades de la empresa y la búsqueda de intereses comunes (Ghoshal y Nohria, 1993), y aumenta la eficacia de la empresa (Sandefur y Laumann, 1998; Cohen y Prusak, 2001).

El presente estudio tiene como objetivo identificar si los indicadores eficacia, cultura y aprendizaje organizacional de una empresa de la industria metalmecánica fabricante de estructuras metálicas en la región centro de Coahuila, tienen efecto en la generación de capital social. Los resultados obtenidos contribuyen a la literatura sobre eficacia, cultura y aprendizaje organizacional, así como sobre el capital social, pues ponen de manifiesto empíricamente la naturaleza del capital social, con el propósito de apoyar a las empresas a que se conozcan a sí mismas e identificar sus potencialidades respecto al valor del capital social. La investigación está organizada de la siguiente manera. En el apartado de revisión literaria, se desarrollan los fundamentos teóricos del capital social, eficacia, cultura y aprendizaje organizacional. El siguiente apartado recoge los aspectos metodológicos, finalmente se presentan los resultados y conclusiones desprendidas del trabajo de investigación, así como las futuras líneas de investigación.

REVISIÓN LITERARIA

El capital social es culturalmente construido, que se explica como una capacidad para trabajar mediante una red de relaciones de colaboración, caracterizadas por la ayuda mutua, confianza, costumbres, credibilidad y compromiso con ciertas creencias tras un objetivo compartido, sobre bases de equidad y lazos de reciprocidad que perduran en el tiempo (Arboleda et al, 2008). Todas las empresas poseen, capital social (Guía, 2000; Leana y Pil, 2006), definido en términos de distribución y contenido de las relaciones entre los grupos e individuos dentro la empresa (áreas, departamentos, trabajadores, directivos, etc.), que les permite actuar de forma más eficaz en las relaciones internas y con su entorno de trabajo inmediato. Las empresas cuya red interna esté altamente cohesionada podría disfrutar de ciertas ventajas en la coordinación y ejecución de actividades complejas que realizan los diferentes grupos e individuos que las conforma (Coleman, 1988, 1990). Para la empresa, como agente social colectivo, este capital es un activo privado del cual es propietario y por tanto, los beneficios derivados de su posesión influye directamente en su eficacia empresarial (Nahapiet y Ghoshal, 1998).

En ese sentido (Fernández y Sánchez, 1997) señalan que la eficacia organizacional hace referencia a los recursos empleados y los resultados obtenidos. Es una capacidad valorada por empresas, debido a que en la práctica todo lo que éstas hacen tiene como propósito alcanzar sus objetivos, sin incapacitar sus recursos. Y esto se da cuando se establece una relación de apoyo y solidaridad entre los trabajadores de una organización o empresa los cual permite generar capital social.(Blasco et al, 2010) mencionan que para una empresa, la utilización del capital social implicará un beneficio directo entre los recursos organizativos, aprovechamiento de sinergias entre sus componentes (grupos e individuos), mayor eficacia y eficiencia en la coordinación y control de las acciones colectivas internas. Dichos beneficios podrían reflejarse en términos de aumento de los resultados de la empresa, mejora del clima laboral, etc. En relación a esto (Echebarria, 2001) indica que el capital social sería una forma de cultura organizativa que fomenta la confianza y la cooperación entre los miembros de la organización, promoviendo relaciones más fluidas de intercambio y coordinación.

Por otro lado, y para este estudio se adopta a (García et al, 2006), quienes definen la cultura organizacional como el resultado de las relaciones sociales construidas a lo largo de la vida de la organización, en las que se destacan aspectos tangibles e intangibles que influyen en el direccionamiento de la gestión humana y del comportamiento organizacional. En ese sentido, lo importante del capital social para los individuos y los grupos que lo poseen es la potencialidad que les confiere y de la que carece el individuo aislado. Representa la capacidad de obtener beneficios a partir del aprovechamiento de redes sociales tanto verticales como horizontales. La existencia de estas redes promueve el aprendizaje

organizacional (Fisher y While, 2000) brindando ventajas adicionales a los individuos que tienen acceso a ellas, en comparación con las que obtendrían si actuaran individualmente y sin el apoyo de esas relaciones sociales (Flores y Rello, 2001). Ya que parte del proceso de aprendizaje organizacional se da en los individuos (como es el caso de esta empresa en estudio) que al interrelacionarse y acumularse pasan a formar parte del capital social. Y esto se logra cuando el conocimiento individual y vivencial se codifica y se logra socializar en una empresa, desarrollando capacidades y habilidades en las personas y en las organizaciones que les permite responder a las oportunidades y los desafíos que el nuevo entorno brinda (Chaparro, 2003). Se entiende aprendizaje organizacional individual como el proceso de adquisición de competencias que permite al individuo crear su propia realidad y su futuro, aprender es incorporar nuevas habilidades que posibilitan lograr objetivos, que hasta ahora se encontraban fuera del alcance (Senge, 2005). En resumen, considerando lo anteriormente expuesto el aprendizaje organizacional, ocurre cuando la cultura organizacional define procesos que facilitan el desarrollo de las destrezas basadas en aptitudes y características personales, constituyendo patrones de aprendizaje que dan origen a formas culturales mas fuertes que diferencian las formas de vida de la empresa (Cajiao y Arenas, 2003)

METODOLOGÍA

El estudio empírico se llevó a cabo en una empresa de la industria metalmecánica fabricante de estructuras metálicas en la región centro de Coahuila, la cual fue inaugurada en 1934 en la ciudad de Monclova, Coahuila como una empresa familiar perteneciente al ramo de la industria metalmecánica. En sus inicios se dedicó a la fabricación de estructuras metálicas sencillas como puertas y ventanas para viviendas, actualmente su giro es industrial y las estructuras que fabrica son tanques, tuberías y puertas para prisiones los cuales son distribuidos en el mercado nacional e internacional.

El estudio comprendió datos de corte transversal de enero a marzo del año 2012, recopilados mediante un cuestionario estructurado. El cuestionario fue entregado personalmente a los 32 trabajadores que representan el total de los empleados de la empresa en estudio y fue contestado en el momento para aclarar posibles dudas, con la finalidad de garantizar la confiabilidad de las respuestas. Para el análisis de los datos se utilizó el software estadístico SPSS (17.0). Se realizó un análisis de estadística descriptiva con la finalidad de describir cada uno de los indicadores del capital social y para verificar la asociación de los indicadores del cuestionario se utilizó el análisis de correlación de Spearman.

Concretamente todas las preguntas de los indicadores fueron medidas cuantitativamente mediante una escala tipo Likert de cinco puntos. La cultura organizativa se evaluó mediante cuatro ítems: conciencia de equipo, cohesión, orientación a la consecución de objetivos y coordinación para alcanzar los objetivos. El aprendizaje fue evaluado con cuatro ítems, en que los encuestados señalaron si tienen suficientes conocimientos para abordar con éxito su trabajo, preocupación por estar actualizados, oportunidades de formación y capacitación instrumental (idiomas, TICs, etc) y para la eficacia organizacional se pidió a los respondientes que señalaran en tres ítems si la empresa es eficaz y eficiente.

RESULTADOS

Las aportaciones de este estudio consisten en dar a conocer algunos aspectos de las relaciones sociales de los trabajadores de una empresa de la industria metal mecánica y su influencia en la consecución de los objetivos perseguidos por las organizaciones. Estas aportaciones y de acuerdo a la literatura se fundamentan en el concepto denominado capital social de las organizaciones, es decir en sus recursos humanos, que se plantea como el fundamento más importante en la competitividad de las empresas (Chamorro y Tato, 2005). 32 trabajadores respondieron las preguntas del cuestionario diseñado en una escala tipo Likert. El nivel de eficacia de las personas que configuran la empresa fue la primera variable a evaluar en la encuesta realizada, con un total de 4 afirmaciones. La Tabla 1, muestra que el 43.8% de los trabajadores calificó la eficacia con puntuaciones de 5 y 4 (totalmente y bastante de acuerdo) por lo que

se puede apreciar que una gran mayoría de los trabajadores perciben que se cumplen los objetivos establecidos y que los profesionales de la empresa son efectivos; sin embargo el 45.9% calificó con una puntuación de 3 (ni de acuerdo ni en desacuerdo), y sólo el 10.4% con puntuaciones de 2 y 1.

Tabla 1: Calificación de la Eficacia Organizacional.

Escala de Likert (n=32)		%
1	Totalmente en desacuerdo	1.0
2	Bastante en desacuerdo	9.4
3	Ni de acuerdo ni en desacuerdo	45.9
4	Bastante de acuerdo	37.5
5	Totalmente de acuerdo	6.3

Esta Tabla muestra el grado de acuerdo que los trabajadores otorgaron al indicador de eficiencia, en ella se aprecia que la mayoría presenta un grado de indiferencia, sin embargo otra gran parte sí percibe que la empresa es eficaz y eficiente.

La cultura organizacional fue medida en segunda instancia en la encuesta. En este indicador los datos revelan que la empresa evaluada está bien posicionada en conciencia de equipo con un 50% de aceptación, un 40% en el grado de cohesión, un 50% en orientación a la consecución de objetivos y un 41% en la coordinación de objetivos. Es general, un 46.1% de los trabajadores calificó a la cultura organizacional con puntuaciones de 5 y 4 (totalmente y bastante de acuerdo), el 30.2% con una puntuación de 3, y el 23.8% con puntuaciones de 2 y 1 (Tabla 2). Por lo que se puede decir que en esta empresa existe una buena cultura organizacional que ayuda a promover la creación de capital social y bienes socioemocionales, además de considerársele como una fuente de ventaja competitiva (Robinson y Siles, 2003; Gregory et al., 2009).

Tabla 2: Calificación de la Cultura Organizacional

Escala de Likert (n=32)		%
1	Totalmente en desacuerdo	3.2
2	Bastante en desacuerdo	20.6
3	Ni de acuerdo ni en desacuerdo	30.2
4	Bastante de acuerdo	37.3
5	Totalmente de acuerdo	8.8

Esta Tabla presenta el grado de acuerdo que los trabajadores otorgaron al indicador de cultura organizacional, en la que se observa que la percepción generalizada es de que en la empresa existe una buena cultura organizacional.

Y para el aprendizaje organizacional, el 73.9% la calificó con puntuaciones de 5 y 4 (totalmente y bastante de acuerdo), el 15.0% con una puntuación de 3, y el 13.1% con puntuaciones de 2 y 1 (Tabla 3). Por los resultados obtenidos, se aprecia que en la empresa existen buenas actitudes para desarrollar y fomentar el aprendizaje organizacional, las cuales son armas estratégicas al servicio de las organizaciones (Garzón y Fischer, 2010).

Tabla 3: Calificación del Aprendizaje Organizacional.

Escala de Likert (n=32)		%
1	Totalmente en desacuerdo	2.4
2	Bastante en desacuerdo	10.7
3	Ni de acuerdo ni en desacuerdo	15.0
4	Bastante de acuerdo	58.9
5	Totalmente de acuerdo	15.0

Esta Tabla presenta el grado de acuerdo que los trabajadores otorgaron al indicador de aprendizaje organizacional, en la que se observa que la percepción generalizada es de que en la empresa existe buenos procesos para que se de el aprendizaje organizacional.

Por último en la Tabla 6 se presenta un análisis de correlación de Spearman entre los indicadores estudiados, en ella se muestra las magnitudes de correlación estadísticamente significativas a un nivel de 0.01. Todos los indicadores muestran magnitudes de correlación moderada.

Tabla 6: Correlación Significativa de los Indicadores Eficacia, Cultura y Aprendizaje Organizacional.

	Indicador	Cultura organizacional	Aprendizaje organizacional	Eficacia
Spearman's rho	Cultura organizacional	1		
	Aprendizaje organizacional	.658**	1	
	Eficacia organizacional	.779**	.668**	1

** La correlación es significativa al nivel 0.01 (bilateral). La tabla presenta los valores de correlación Rho de Spearman entre los indicadores del capital social. Se aprecia que la correlación más fuerte se da entre la cultura organizacional y la eficacia.

Con los datos anteriores se puede decir que a mediana cultura organizacional, probablemente mediano aprendizaje y eficacia organizacional; y a mediano aprendizaje organizacional, probablemente mediana eficacia organizacional.

CONCLUSIONES

El estudio correlacional realizado nos confirma que los indicadores del capital social: eficacia, cultura y aprendizaje organizacional están significativamente correlacionados. Una vez reconocido el valor de la noción capital social como componente de los indicadores estudiados, se analiza su trascendencia. A nivel indicador, una empresa que cultive las relaciones sociales, es decir, que tenga una buena cultura organizacional, provoca que los trabajadores de su empresa perciban un ambiente propicio para el aprendizaje que redunde en la eficacia organizacional. Con respecto al aprendizaje organizacional los resultados sugieren que los trabajadores al tener más capacidades laborales permitirán obtener mejores resultados para que la empresa sea más eficaz y eficiente. Por lo que se puede concluir que dichos indicadores tienen efecto en la generación de capital social en la empresa de estudio.

Se propone que la eficacia de las empresas está directamente asociada a que se desarrolle cotidianamente las siguientes prácticas de la cultura organizacional: Capacidad para fomentar la cohesión entre los trabajadores, capacidad para orientarse a la consecución de los objetivos organizacionales, capacidad de coordinación para alcanzar los objetivos organizacionales y motivación e incentivación para que los profesionales de la empresa sean efectivos. Lo anterior, abre un frente de investigación en el que los indicadores: eficiencia, cultura y aprendizaje organizacional, identificados y detallados deben ser sujetos a prueba en otras poblaciones y contextos para acumular evidencia de su contribución a la generación de capital social en nuestras empresas.

LA CONTABILIDAD MEDIO AMBIENTAL Y LOS IMPUESTOS AMBIENTALES APLICADOS EN LAS PYMES: CASO EMPRESAS AGRÍCOLAS DEL VALLE DE AUTLÁN JALISCO, MÉXICO

Martha Sheila Gómez González, Universidad de Guadalajara
Mónica Araceli Reyes Rodríguez, Universidad de Guadalajara

RESUMEN

En la actualidad las empresas son valoradas desde el aspecto financiero, sin embargo, existe la necesidad de medir el impacto al medio ambiente en que se desempeñan. En general las empresas realizan costos y gastos que permanecen ocultos, la contabilidad ambiental permite contrarrestar sus efectos con el medioambiente, conocer y evaluar su actuación ambiental. Desde la perspectiva agroecológica y partiendo de la noción de sustentabilidad surge el cuestionamiento de las prácticas agrícolas que se desarrollan en regiones particulares, como es el caso de las pequeñas y medianas empresas establecidas en el Valle de Autlán, Jalisco, México, siendo innegable la importancia que tiene el sector agrícola dentro de las economías nacionales y territoriales y de forma paralela la conservación del medio ambiente, de ahí la importancia de realizar un diagnóstico que permita determinar los costos destinados al daño y cuidado del medio ambiente y los beneficios fiscales aplicables a las empresas que sean socialmente responsables.

PALABRAS CLAVE: Contabilidad Ambiental, Impuestos ambientales, Actividades Agrícolas.

INTRODUCCIÓN

Cuando en 1972 los problemas ambientales fueron expuestos a la opinión pública y marcados como una prioridad a resolver por parte del Poder Público, en la Conferencia sobre el Hombre y el Medio Ambiente, conocida como la Conferencia de Estocolmo, el estudio tanto del medio ambiente en sí mismo como de sus recursos naturales fue imparable. Las ciencias sociales empezaron una tarea investigadora desde sus diversas disciplinas; diversos mecanismos e instrumentos jurídicos han sido propuestos para llevar a cabo los objetivos y fines de las políticas ambientales, siendo obligado un trabajo multidisciplinario que pueda ofrecer resultados y soluciones viables a la problemática ambiental (Figueroa, 2000).

En las últimas décadas la preocupación por la destrucción de los hábitats y la degradación de los recursos naturales, la contaminación, la sobre-explotación de los recursos naturales y la protección del medio ambiente ha venido a disminuir la calidad del medio ambiente, obligando a los Estados a prestar especial atención, siendo el vínculo entre desarrollo, política económica y medio ambiente. Es preocupación de los gobiernos, de organizaciones civiles y de la sociedad en su conjunto, la reparación de daños ambientales para procurar su preservación, y que la sociedad pueda seguir siendo beneficiada con la utilización de estos recursos. En la siguiente investigación tiene como objetivo medir el impacto al medio ambiente en que se desempeñan las pequeñas y medianas empresas agrícolas establecidas en el Valle de Autlán, Jalisco, México, mediante la aplicación de la contabilidad medio ambiental y de los impuestos ambientales.

REVISIÓN LITERARIA

Con base a la Comisión Mundial para el Medio Ambiente y el Desarrollo, establecida por las Naciones Unidas en 1983, una de las preocupaciones más importantes de nuestro tiempo es la calidad del entorno

como es el aire, el agua, la tierra y su biodiversidad: las empresas deben producir bienes sin perder de vista el medio ambiente, esto implica pasar de un desarrollo basado en el crecimiento económico a uno en donde se establecen estrechas vinculaciones entre aspectos económicos, sociales y ambientales, capaz de aprovechar las oportunidades que supone avanzar simultáneamente en estos tres ámbitos, sin que el avance de uno signifique ir en deterioro del otro (Division for Sustainable Development, 2009). En los últimos años se ha presentado una sensibilidad especial respecto al tema del cuidado del entorno natural y el ambiente; todo esto como consecuencia de los problemas generados por los desechos de las industrias en su proceso productivo, y que desde el siglo pasado, ha provocado innumerables pérdidas naturales y grandes riesgos a la salud y calidad de vida en la población (Reinosa, 2009).

La información contable debe reflejar la realidad económica y ésta se ve afectada por los impactos en el medio ambiente, los cuales deberán tasarse para dar una información útil para la toma de decisiones. (Pahlem, 1997). La contabilidad está sufriendo una continua transformación para poder satisfacer estas nuevas exigencias del entorno empresarial, que demanda a la organización un desempeño respetuoso con el medio ambiente (De la Rosa, 2005) Referente a la problemática medio ambiental que tiene la región, esta obedece a las explotaciones agrícolas que se dan a consecuencia de este tipo de este tipo de cultivos. El Valle de Autlán es un área importante para el análisis de la agricultura principalmente por dos razones: La agricultura es una actividad central en la economía regional y ha sido uno de los factores más significativos de cambio ambiental en el último medio siglo en la región, debido a la deforestación, tecnologías agrícolas mal utilizadas, uso excesivo de agroquímicos, pesticidas, contaminación por materia orgánica, desechos industriales, contaminación atmosférica por quemas agrícolas y el uso intensivo de maquinaria agrícola. (Jardel, 2000). Este impacto ambiental se presenta de forma indirecta por las actividades agrícolas debido a una falta de cultura ambiental y en un problema de salud pública.

(Gómez, 2012) Su efecto acumulado reviste ya la gravedad suficiente como para que el hombre no sólo haya tomado conciencia del problema, sino que además trate de buscar soluciones concretas. La sociedad actual reclama la implicación de todos los agentes económicos en la adopción de las medidas que eviten un mayor deterioro del medio ambiente. Entre ellos se encuentran las empresas, sus gestores y los profesionales de la contabilidad. La contabilidad ha seguido, con respecto a la cuestión ecológica, la misma senda que la economía establecida: el impacto medioambiental de las actividades productivas permanece fuera de los cálculos de las empresas que no lo incorporan a su función de producción de bienes y servicios, y queda como un problema macroeconómico a resolver por el conjunto de la sociedad. De ahí la necesidad en la actualidad de buscar alternativas para lograr internalizar las externalidades empresariales y su reflejo en la información contable (Pelegrin, Reyes, & Campos, 2010).

La contabilidad tiene un importante lugar en el proceso de mejorar la gestión ambiental, debido a que constituye la base para la toma de decisiones gerenciales, y lo que es importante ayuda a definir y medir el éxito de las acciones emprendidas por las organizaciones (Gray, Bebbinton, & Walters, 1999). En la actualidad las empresas comienzan a considerar la variable ambiental en su proceso de toma de decisiones, implantando medidas que prevengan el impacto ambiental de sus actividades o que corrijan los daños generados. De este modo, la empresa está soportando un coste derivado de su interacción con el medio ambiente, lo que se denomina coste medio-ambiental (Bonilla, 2000).

Contabilidad Ambiental

La Contabilidad Ambiental hace su aparición en la década de los sesenta, en año 1972 el informe Meadows a las Naciones Unidas, planteó el problema al crecimiento y con ello se iniciaron medidas políticas y económicas, tanto a nivel micro como a nivel macro y conjuntamente las primeras reflexiones respecto a la participación de la contabilidad en la problemática ambiental (Quinche, 2008). Desde entonces y hasta la fecha se han ido incorporando diferentes disciplinas del conocimiento, adaptándose

cada una a las necesidades de cuidado y defensa del medio ambiente, y en varios años autores han generado diferentes conceptos de contabilidad ambiental:

Tabla 1: Conceptos de contabilidad ambiental

Autor	Año	Concepto
Ensunchó 1995		mezcla entre la contabilidad del balance social y la contabilidad del recurso humano, con perspectiva económica, pero equilibrando los recursos sociales en el interior y exterior de la empresa
Carlos Larrinaga	1997	identificar y medir la contribución social de la empresa, incluyendo las externalidades.
Ludevid y Echavarría	1999	sistemas e instrumentos útiles para medir, evaluar y comunicar la actuación ambiental de la empresa.
Gray y Bebbington	2007	emitir información contable de las actividades medioambientales en una empresa.
Mogollón y Vergara	2007	información financiera y no financiera destinada a integrar políticas económica-ambientales para construir una empresa sostenible.
Luisa Fronti y Mariano Moneva	2008	proveer información de aspectos medioambientales en la empresa.
Carlos Larrinaga	2009	brinda información de tipo cuantitativa asociada a activos, pasivos y contingencias medioambientales.
Antonio Llull Gilet	2010	información del recurso ambiental de manera tal que pueda ser percibida por clientes y competidores.
Pablo Alian Lamorú Torres	2011	información sobre el impacto financiero de aspectos medioambientales a través de las cuentas auditadas, y de la actuación medioambiental de la empresa, relacionadas con activos, pasivos, capital, gastos, ingresos e inversiones medioambientales
Monzerrat Vera	2012	información cuantitativa de ciertos eventos económicos y medioambientales identificables y cuantificables con objeto de evidenciar la acción de la empresa a favor del medio ambiente y facilitar la toma de <u>Decisiones</u>

La Tabla 1 muestra los diferentes conceptos de contabilidad ambiental desde varios autores.

Por lo que se concluye a la contabilidad ambiental como el sistema de información que permite determinar el costo beneficio de la actuación de la empresa con respecto al medio ambiente. La actuación ambiental se define como los resultados de la gestión que la empresa realiza de sus aspectos ambientales. (Ludevid, 1999) Términos empleados en la Contabilidad Ambiental

Actividades ambientales: Tienen como objetivo principal prevenir, reducir o reparar el daño al medio ambiente.

Activos ambientales: Aquellos bienes que son incorporados al patrimonio de la entidad de forma duradera con la finalidad de reducir o controlar el impacto ambiental.

Pasivos ambientales: Son estimados y no se conoce con claridad al reclamante, ya que puede ser cualquier persona que se vea afectada por las actividades de la entidad.

Capital natural: Es muy difícil asignarle un valor a los recursos naturales, los cuales no tienen precio en el mercado

Costos y Gastos relacionados con medidas ambientales: Son los gastos de las actividades medioambientales realizadas de las operaciones de la empresa, así como los derivados de los compromisos medioambientales de la misma (Ablan y Méndez, 2004; Déniz, 2007). Algunas partidas de *Gastos Relacionados con medidas ambientales:*

De inversión de capital en partidas ambientales.

De investigación y desarrollo para medidas ambientales.

De administración y planeación ambiental.

De monitoreo del cumplimiento de las regulaciones ambientales.

De restauración al medio ambiente.

De personal dedicados a actividades medioambientales.

La amortización de activos medioambientales.

Los gastos financieros derivados de la adquisición de activos medioambientales.

Impuestos Ambientales

Los tributos con fines de protección ambiental se han incorporado en la mayoría de los ordenamientos jurídico-fiscales de países con una sólida política y legislación ambiental. En las últimas dos décadas, la mayoría de los países europeos de la OCDE introdujeron nuevos impuestos y modificaron algunos existentes con el fin de alcanzar objetivos ambientales. Este tipo de impuestos fueron llamados en su conjunto impuestos ambientales o impuestos verdes, por su doble objetivo de generar recaudación a partir de lo que la sociedad considera males ambientales, en contraposición a recaudar a partir de tasar bienes, y de modificar las señales económicas que reciben individuos y empresas sobre los costos ambientales de sus acciones. Las reformas fiscales ambientales en los países miembros de la OCDE se han caracterizado por ser neutrales en la recaudación. En términos generales, su instrumentación consiste en la introducción de nuevos cargos o impuestos ambientales y la eliminación o disminución de otros impuestos. En algunos casos a cambio de la creación de impuestos ambientales se han disminuido impuestos sobre la renta o sobre el trabajo. En otros países estos recursos se canalizan a la inversión en ahorro energético o a la disminución de impuestos que afectan a la industria.

La recaudación en éstos países por concepto de impuestos ambientales oscila entre el 1 y el 4.5% del PIB y su mayor proporción se encuentra en los impuestos a combustibles para transporte e impuestos sobre vehículos. El diseño y aplicación de impuestos ambientales se ha expandido en los últimos quince años en los países miembros de la OCDE. En los años setenta los instrumentos económicos se utilizaban de manera ocasional, los casos más significativos son los sistemas de gestión del agua en Francia y Holanda. A continuación se presenta la evolución de los impuestos ambientales en los países miembros de la OCDE, dividida en tres fases:

Primera Fase

FINLANDIA: Creó por primera vez un impuesto al carbón, disminuyó además el impuesto sobre la renta y las contribuciones al seguro social.

NORUEGA: En 1991 se instituyó un impuesto al CO₂, que se amplía progresivamente hasta cubrir el 64% de las emisiones de este gas. Como medida complementaria, se aplicó una disminución al impuesto sobre la renta.

SUECIA: Se realizó una reforma fiscal ambiental en 1991. Los impuestos al CO₂, al azufre y a los NO_x se traducen en una reducción significativa del impuesto sobre la renta.

DINAMARCA: En 1992 se aprobaron impuestos al carbón en los combustibles, (1995-2002) y otros impuestos verdes, Todos ellos con destino específico

PAÍSES BAJOS: En 1998 se emitió el “Decreto General de Protección Ambiental” donde algunos cargos se convirtieron en impuestos con destino específico a excepción del cobro del agua. Entre los años 1992 - 2001 se llevó a cabo la Reforma Fiscal Ambiental. En 1996 se aplicó un impuesto energético a los pequeños usuarios y otros impuestos verdes; a cambio se redujo el impuesto sobre la renta y las contribuciones al seguro social.

Segunda Fase

FRANCIA: En 1999 se inició la reforma fiscal ambiental que sustituye derechos por impuestos con destino específico (excepto derechos de uso de agua). Se decretaron impuestos de energía a la industria, mismos que fueron rechazados por el Congreso en el 2000. El futuro de la reforma fiscal ambiental en Francia es incierto.

ALEMANIA: Inició su reforma fiscal ambiental en 1999; incrementó los impuestos a combustibles minerales, fósiles y electricidad y redujo las contribuciones al seguro social.

ITALIA.: Su reforma fiscal ambiental abarca de 1999 al año 2005. Se reestructuraron los impuestos a los minerales y combustibles fósiles. Se incrementaron los impuestos a la gasolina, diesel, carbón, aceites, gas y actualmente está en proceso una reducción a los impuestos al trabajo.

REINO UNIDO: En 1997 se estableció un impuesto a los combustibles para el transporte que ha tenido un incremento real del 3-6%. En abril de 2001 se decretó un pago de cargos por concepto de cambio climático (uso comercial de la energía). Actualmente existe otro impuesto relacionado con el medio ambiente que es el impuesto a basureros (1996). Se redujo la contribución de los trabajadores al seguro social.

Tercera Fase

En Europa se discute la creación de un impuesto al CO₂. En 1991 la propuesta fue rechazada por el Consejo de la Unión Europea. En 1997 se hizo un nuevo intento para determinar tasas mínimas de impuestos. En esta iniciativa se establece la inclusión de todos los productos energéticos, por lo que se eliminan las exenciones y, además, como consecuencia de esto, en algunos países se elevaría la tasa mínima de la carga fiscal. Durante el año 2000 se presentó un documento que propone la comercialización de emisiones. En el 2001 se habla de “inducir a la cooperación” pero hasta la fecha no se han logrado acuerdos. El presidente de Francia, Nicolás Sarkozy, reforzó su pedido de que se establezca un impuesto al dióxido de carbono (CO₂) a nivel de la Unión Europea y se impongan aranceles punitivos para proteger el clima.

Ventajas De Los Impuestos Ambientales

Costo efectividad (eficiencia estática) Los impuestos, derechos o cargos permiten alcanzar los objetivos planteados de la manera menos costosa (más costo-efectiva). En términos técnicos, esto se logra al igualar el cargo o impuesto con los costos marginales de abatimiento. De igual manera, es posible alcanzar los objetivos mediante

Ajuste automático: Los niveles de emisión se ajustan automáticamente al impuesto (o precio): aquellos que contaminan disminuyen sus emisiones hasta que el costo marginal de abatir iguala el impuesto. Por encima de este punto, es más económico pagar el impuesto que abatir.

Internalización de externalidades: Aquellos que contaminan son quienes deben pagar los impuestos, cargos y permisos a fin de que sus decisiones particulares consideren los costos generados. De esta manera, se apropian del daño que generan para el resto de la sociedad.

Generación de beneficios ambientales y económicos: Por un lado, los impuestos ambientales generan ingresos que pueden tener un destino específico para la conservación o el mantenimiento de los recursos naturales, al tiempo que inciden en el comportamiento y crean incentivos para disminuir el impacto negativo sobre el entorno ambiental.

Integración del aspecto ambiental en las políticas sectoriales: Dado que la política fiscal permea al conjunto de la economía, mediante el cobro de impuestos ambientales se incorporan automáticamente a todos los sectores los costos que generan aquellos que contaminan.

Instrumentos Económicos En México

En México, la Ley General del Equilibrio Ecológico y la Protección al Medio Ambiente faculta a La Federación, los Estados y el Distrito Federal, en el ámbito de sus respectivas competencias a diseñar, desarrollar y aplicar instrumentos económicos que incentiven el cumplimiento de los objetivos de la política ambiental. (Artículo 21) En el Artículo 22 de esta ley se señala que los instrumentos económicos son los mecanismos normativos y administrativos de carácter fiscal, financiero o de mercado, mediante los cuales las personas asumen los beneficios y costos ambientales que generen sus actividades económicas, incentivándolas a realizar acciones que favorezcan el ambiente. Se consideran instrumentos económicos de carácter fiscal, los estímulos fiscales que incentiven el cumplimiento de los objetivos de la política ambiental. En ningún caso, estos instrumentos se establecerán con fines exclusivamente recaudatorios. En la legislación mexicana existen tres opciones claras de instrumentos fiscales que se deben utilizar para alcanzar objetivos ambientales: derechos, impuestos y aprovechamientos, siendo el instrumento más importante los impuestos.

Impuestos: conforme a lo establecido en el Código Fiscal de la Federación en su Artículo 2º, son las contribuciones establecidas en la Ley que deben pagar las personas físicas y morales que se encuentren en la situación jurídica o de hecho prevista por la misma y que son distintas de las señaladas en las fracciones II, III y IV (Aportaciones de seguridad social, Contribuciones de mejoras, y Derechos). En esta definición se señala que es indispensable el cumplimiento con el Principio de Legalidad, es decir, deben estar establecidos en una ley, como se señala en la fracción IV del Artículo 31 de la Constitución Política de los Estados Unidos Mexicanos que a la letra dice:

“Artículo 31: Son obligaciones de los mexicanos: ... IV. Contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes.” Continuando con lo que señala el Artículo 2º del Código citado, es importante señalar las siguientes contribuciones:

Derechos: como lo indica la fracción IV del Código Fiscal de la Federación, son las contribuciones establecidas en Ley por el uso o aprovechamiento de los bienes del dominio público de la Nación, así como por recibir servicios que presta el Estado en sus funciones de derecho público. En este caso, la contribución se vincula a dos supuestos: al uso o aprovechamiento de un bien, o a una prestación que da el Estado. En el caso del cobro de derechos, lo que se persigue es que el uso, aprovechamiento o explotación de los recursos naturales se pague, es decir, que con esta medida se controle la demanda del recurso para su conservación o se pague por la contaminación y deterioro que se hace del mismo para poder invertirlo en su cuidado y regeneración. Los derechos se encuentran contemplados en la Ley Federal de Derechos en los Títulos I y II. Los derechos establecidos en el Título II están dirigidos al

hecho generador que es el uso y aprovechamiento de bienes de dominio público. Entre este tipo de derechos se encuentra el de la Zona Federal Marítimo Terrestre, y el cobro por el uso y aprovechamiento de los elementos marinos en áreas naturales protegidas. Es importante señalar que en Título II se establecen los costos que hay que pagar por el uso de estos bienes públicos. Para poder establecer estos costos es necesaria la valuación económica. Actualmente, no existe una metodología establecida por Ley para hacer este tipo de valuación que pueda determinar el costo real que, a su vez, refleje al deterioro de estos bienes por el uso que hacemos del mismo.

Aprovechamientos: El artículo 3° del mismo Código se establece que “*son aprovechamientos los ingresos que percibe el Estado por funciones de derecho público distintos de las contribuciones, de los ingresos derivados de financiamientos y de los que obtengan los organismos descentralizados y las empresas de participación estatal.*” La Ley de Ingresos de la Federación en su Artículo 1 señala una lista de aprovechamientos entre los cuales se encuentran: multas, indemnizaciones, reintegros, cuotas compensatorias.

Beneficios Fiscales

A continuación se presentan algunos beneficios fiscales referentes al cuidado del medio ambiente que se encuentran en la legislación fiscal mexicana, entre los cuales se pueden citar los siguientes:

Ley del Impuesto sobre la Renta: El Impuesto sobre la Renta es el principal tributo que se recauda en México, el cual están obligado a pagarlo las personas físicas y morales que residan en México o en el extranjero respecto de los ingresos que obtengan, en la mayoría de los casos sin importar dónde se encuentre la fuente de riqueza de donde provengan. En su generalidad, este impuesto se determina sobre las utilidades que se obtienen, las cuales se determinan restando al total de los ingresos que la Ley considera acumulables para efectos de pago las deducciones que la misma autoriza. El Artículo 40 de esta Ley señala que tratándose de activos fijos el porcentaje máximo autorizado para la deducción de inversiones en el caso de maquinaria y equipo para la generación de energía proveniente de fuentes renovables es del 100%, como lo es aquella que por su naturaleza o mediante un aprovechamiento adecuado se consideran inagotables, tales como la energía solar en todas sus formas; la energía eólica; la energía hidráulica tanto cinética como potencial, de cualquier cuerpo de agua natural o artificial; la energía de los océanos en sus distintas formas; la energía geotérmica, y la energía proveniente de la biomasa o de los residuos. Para el caso de maquinaria y equipo 100% en la conversión a consumo de gas natural y para prevenir y controlar la contaminación ambiental en cumplimiento de las disposiciones legales respectivas, según lo establece el Artículo 41 de la misma.

El Título III denominado Régimen de las Personas Morales con fines no lucrativos señala quienes no son contribuyentes del Impuesto sobre la Renta, es decir, que no deben pagar el mismo, entre las cuales se encuentran las siguientes:

Artículo 95. Para los efectos de esta Ley, se consideran personas morales con fines no lucrativos, además de las señaladas en el artículo 102 de la misma, las siguientes: XIX. Las sociedades o asociaciones civiles, organizadas sin fines de lucro que se constituyan y funcionen en forma exclusiva para la realización de actividades de investigación o preservación de la flora o fauna silvestre, terrestre o acuática, dentro de las áreas geográficas definidas que señale el Servicio de Administración Tributaria mediante reglas de carácter general, así como aquellas que se constituyan y funcionen en forma exclusiva para promover entre la población la prevención y control de la contaminación del agua, del aire y del suelo, la protección al ambiente y la preservación y restauración del equilibrio ecológico.

Ley Del Impuesto Especial Sobre Producción Y Servicios

Tratándose del uso de productos que dañen el medio ambiente, el Artículo 1º de la Ley del Impuesto Especial sobre producción y servicio señala que están obligadas al pago de éste impuesto las personas físicas y las morales que realicen la enajenación de gasolinas, diesel para uso automotriz de bajo azufre, diesel de uso automotriz de alto azufre, diesel para uso industrial (de bajo y de alto azufre), y diesel para uso de vehículos marinos.

Ley Federal de Derechos: La Ley Federal de derechos tiene por objeto establecer el monto que se debe pagar por el uso o aprovechamiento bienes del dominio público de la Nación, así como por recibir servicios que presta el Estado en sus funciones de derecho público, excepto cuando se presten por organismos descentralizados u órganos desconcentrados y en este último caso, cuando se trate de contraprestaciones que no se encuentren previstas en la misma. No es la excepción, que esta ley contemple cuotas que se deben cubrir cuando se trate de actividades relacionadas con la materia ambiental. En la Tabla 1 que se presenta a continuación se muestran algunas de las actividades de impacto ambiental que contempla la Ley Federal de Derechos, las cuales se encuentran obligadas al pago del mismo:

Tabla 2: Pago de Derechos

Artículo	Concepto
191-A	Por el otorgamiento de concesiones, permisos y autorizaciones, para pesca o actividades acuícolas
194-C	Por el otorgamiento de permisos, prórrogas, sustituciones, transferencias o concesiones para el uso o aprovechamiento de elementos y recursos naturales dentro de las áreas naturales protegidas, y para colecta de material parental de especies amenazadas o en peligro de extinción
194-H	Se pagará el derecho de impacto ambiental de obras o actividades cuya evaluación corresponda al Gobierno Federal, por la recepción, evaluación y, en su caso, el otorgamiento de la resolución del informe preventivo
194-K	Por la recepción, evaluación y dictamen del programa de manejo forestal y, en su caso, la autorización o refrendo de la autorización de aprovechamiento de recursos forestales de especies maderables de clima templado y frío.
194-L	Por la recepción, evaluación y dictamen del programa de manejo forestal y, en su caso, la autorización o refrendo de la autorización de aprovechamiento de recursos forestales, de especies maderables de clima árido y semiárido
194-M	Por la recepción, evaluación y dictamen de los estudios técnicos justificativos y, en su caso, la autorización de cambio de uso de suelo en terrenos forestales, se pagará el derecho de cambio de uso de suelo de terrenos forestales
194-O	Por el otorgamiento de la licencia ambiental única para la prevención y control de la contaminación de la atmósfera, a las fuentes fijas de jurisdicción federal que emitan olores, gases o partículas sólidas o líquidas a la atmósfera
194-P	Por los servicios de verificación y certificación de equipos de medición de contaminantes de vehículos automotores en circulación en centros autorizados, se pagará el derecho de prevención y control de la contaminación
194-Q	Por el servicio de certificación y verificación de emisiones contaminantes de vehículos automotores nuevos
194-T-1	Por la recepción, estudio de la solicitud y, en su caso, autorización por primera vez para importar y exportar residuos peligrosos
194-T-6	Por la recepción, análisis y, en su caso, aprobación de la propuesta de remediación de pasivo ambiental, y de emergencia ambiental.
196	Por el aprovechamiento de la vegetación arbórea de bosques nacionales en terrenos pertenecientes al Gobierno Federal
197-A	Por la explotación de la vegetación arbórea en los cauces y zona federal de los ríos
198	Por el uso o aprovechamiento de los elementos naturales marinos e insulares sujetos al régimen de dominio público de la Federación existentes dentro de las Áreas Naturales Protegidas competencia de la Federación
199-B	Por el aprovechamiento de los recursos pesqueros
222	Están obligadas al pago del derecho sobre agua, las personas físicas y las morales que usen, exploten o aprovechen aguas nacionales, bien sea de hecho o al amparo de títulos de asignación, concesión, autorización o permiso, otorgados por el Gobierno Federal, de acuerdo con la zona de disponibilidad de agua en que se efectúe su extracción
223	Por la explotación, uso o aprovechamiento de aguas nacionales de fuentes superficiales o extraídas del subsuelo, para la generación hidroeléctrica,
238	Por el aprovechamiento extractivo de ejemplares de fauna silvestre, en predios federales y zonas federales
238-A	Cuando el aprovechamiento de una especie esté vedada por las disposiciones en vigor, se pagará el derecho de aprovechamiento...
276	Por el uso o aprovechamiento de bienes del dominio público de la Nación como cuerpos receptores de las descargas de aguas residuales, quienes descarguen en forma permanente, intermitente o fortuita aguas residuales en ríos, cuencas, cauces, vasos, aguas marinas y demás depósitos o corrientes de agua, así como los que descarguen aguas residuales en los suelos o las infiltren en terrenos que sean bienes nacionales o que puedan contaminar el subsuelo o los acuíferos

La Tabla 2 presenta las actividades en materia ambiental por las cuales se debe realizar un pago de derechos conforme a la Ley Federal de Derechos 2012.

Como se puede observar, varias de las actividades señaladas en la Ley Federal de Derechos y por las cuales se cobran los mismos, se refieren a situaciones que de forma directa o indirecta afectan el medio ambiente.

METODOLOGÍA

De acuerdo con el método de investigación utilizado, la presente investigación es de caso práctico, pues se enfoca a un problema real respecto del análisis y evaluación de la actuación ambiental de las pequeñas empresas agrícolas del valle de Autlán. El objetivo principal de este estudio reflejar en los Estados Financieros los costos ambientales y los beneficios fiscales de las empresas antes señaladas. Para desarrollar las secuencias operativas de la investigación, se ejecutaron los siguientes pasos:

- Recopilación del material bibliográfico, histórico, legal pertinente a los objetivos y fundamentos teóricos del estudio y a la selección de información.
- Definición de los aspectos metodológicos pertinentes al desarrollo del estudio.
- Aplicación de encuestas y adecuación de las cuentas contables del catálogo de cuentas de las empresas a fin de medir su actuación ambiental.
- Análisis y presentación de los resultados.

RESULTADOS

Los avances que se tienen hasta el momento son: Se ha elaborado una encuesta misma que se ha aplicado a evaluar a las pequeñas empresas agrícolas del Valle de Autlán, mediante la aplicación de una encuesta que permita conocer los costos ambientales y sus erogaciones en activos ambientales.

Algunas de las variables que se han considerado en la encuesta son:

Producto que cultiva

Superficie del terreno cultivado

Número de personas que laboran en la empresa en las labores propias de la agricultura

Si se realiza la inocuidad alimentaria en la producción

Técnica de producción utilizada

Tratamientos químicos

Control de inspección e higiene

Certificación

Costo de la producción por hectárea

Costo de Inversiones en activos efectuadas

Maquinaria utilizada

Rendimiento de la producción

A la fecha el avance de aplicación de las encuestas es del 40%, pretendiendo terminar con la aplicación en el mes de Enero de 2013 y a partir de ello tabular los resultados.

CONCLUSIONES

En las páginas anteriores se ha dado a conocer un concepto, una visión empresarial, un modelo de negocios que, en la práctica, se aleja por completo de la tradición administrativa mexicana de las ganancias por las ganancias mismas, sin consideraciones muchas veces de tipo ético, alimenticio, ecológico, de protección al medio ambiente, como deberían ser todas las acciones que emanen de la actividad humana. A partir de los resultados de esta investigación se pretende diseñar e implementar un Sistema de Contabilidad Ambiental a fin de llevar a cabo acciones concretas con respecto al cuidado del medio ambiente, a través de la identificación de los Activos Ambientales y los Costos y Gastos Ambientales lo cuales se muestren en sus Estados Financieros, lo anterior a efecto de medir el impacto ambiental y a través de los resultados influir para resarcir algún daño ambiental, o para cubrir demandas externas por cualquier daño generado y que lo refleje la propia contabilidad. De igual manera se pretende que a partir de estos resultados se implemente un sistema de renovación de maquinaria y equipo e inversiones que ayuden a contrarrestar el daño al medio ambiente o bien para cuidar el medio ambiente y obtener los beneficios fiscales como son la deducción en el Impuesto Sobre la Renta y en el Impuesto Empresarial a Tasa Única sobre dichas erogaciones.

LA RELACIÓN ENTRE LA INNOVACIÓN, LAS TICS Y LA CALIDAD: UNA PERSPECTIVA DE LA PYME IBEROAMERICANA

Gonzalo Maldonado Guzmán, Universidad Autónoma de Aguascalientes

Juan Ernesto Mojica Peñalba, Universidad de Panamá

Víctor Manuel Molina Morejón, Universidad Autónoma de Coahuila

RESUMEN

El nuevo ambiente de los negocios exige a las organizaciones, un replanteamiento en sus estrategias empresariales, para adecuarlas al nuevo entorno empresarial que demanda un mercado cada vez más globalizado y competitivo. Así, la innovación y las tecnologías de la información y comunicación (TICs) surgen como dos elementos esenciales que deben ser incorporados en el diseño e implementación de las estrategias empresariales, y son dos factores que permiten mejorar la calidad de las empresas, principalmente de las Pymes. En este sentido, este estudio con una muestra de 1970 empresas de 21 países de Iberoamérica analiza la relación existente entre la innovación, las TICs y la calidad de las Pymes de 21 países de Iberoamérica. Los resultados obtenidos muestran, por un lado, que la innovación ejerce un efecto positivo significativo en la calidad de las empresas y, por el otro lado, las TICs también ejercen un efecto positivo significativo en la calidad de las Pymes.

PALABRAS CLAVE: Innovación, TICs, Calidad, Pyme.

THE RELATIONSHIP BETWEEN INNOVATION, ICT AND QUALITY: A PERSPECTIVE OF THE IBERO-AMERICAN SMES

ABSTRACT

New business environment requires a rethink on their business strategies, organizations, to adapt them to the new business environment that demands an increasingly globalised and competitive market. Thus, information and communications technology (ICT) emerge as two essential elements that should be incorporated into the design and implementation of business strategies, and are two factors that allow to improve the quality of the companies, mainly SMEs. In this sense, this study with a sample of 1970 companies from 21 countries of Ibero-America analyzes the relationship between innovation, ICT and the quality of SMEs in 21 countries of Latin America. On the one hand, the results show that innovation exerts a significant positive effect on the quality of the companies and, on the other hand, ICTs also exert a significant positive effect on the quality of SMEs.

KEYWORDS: SMEs, innovation, ICT, quality.

INTRODUCCIÓN

La innovación es una estrategia empresarial elemental hoy en día para la mayoría de los negocios, y diversos investigadores y académicos la definen comúnmente como la adopción de nuevos conceptos o comportamientos en las organizaciones (Shwu-Ing & Chiao-Ling, 2011). Asimismo, la innovación también puede ser considerada como el desarrollo o creación de nuevos productos, nuevos servicios, nueva tecnología y nuevos sistemas de gestión empresarial (Shwu-Ing & Chiao-Ling, 2011), los cuales pueden generar efectos positivos significativos tanto en el desempeño de las organizaciones Como en el mejoramiento del ambiente de los negocios que permita la supervivencia y crecimiento de las empresas

(Bir, Schacht & Kaufmann, 1988). Por otro lado, el uso de las tecnologías de la información y comunicación (TICs) en las organizaciones, principalmente en las pequeñas y medianas empresas (Pymes), facilita el desarrollo e implementación de actividades de calidad tanto al interior como al exterior de las empresas (Siu, Lai, Keshwar & Teeroovengadum, 2011). Por lo tanto, existen diversos trabajos publicados en la actual literatura que han aportado suficiente evidencia empírica que demuestra que existe una estrecha relación positiva significativa entre el uso de las TICs y la calidad. En este sentido se hace necesaria la realización de más estudios que permitan analizar con mayor detalle la relación existente entre las TICs y la calidad en las organizaciones, sobre todo en las Pymes, tanto en empresas de servicios como en la industria manufacturera nacional como internacional (Siu *et al.*, 2011). Por lo tanto, la principal contribución de este trabajo de investigación es el análisis de la relación existente entre la innovación, las TICs y la calidad en las Pymes manufactureras y de servicios en 21 países de Iberoamérica, mediante una muestra de 1983 empresas.

REVISIÓN DE LA LITERATURA

El desarrollo del modelo teórico de la investigación describe la relación existente entre la innovación, las TICs y la calidad de las Pymes. En este sentido, en las siguientes secciones se intentará clarificar los distintos componentes del modelo, a fin de sustentar los planteamientos y resultados obtenidos.

Innovación Y Calidad

La actual literatura considera que la innovación es un componente esencial en el diseño e implementación de estrategias empresariales, y puede considerarse como la aplicación de nuevas ideas para desarrollar o modificar productos, servicios, procesos o sistemas de gestión (Robbins, 1996), o bien también puede considerarse como cualquier forma o método diferente de hacer las cosas (Porter, 1990). Por lo tanto, las organizaciones, principalmente las pequeñas y medianas empresas (Pymes), tienen que realizar continuamente actividades de innovación para mantener e incrementar sus ventajas competitivas (Wernerfelt, 1984; Berry & Parasuraman, 1991). Adicionalmente, Freeman (1997) consideró que la innovación es el esfuerzo que realizan las empresas a través del uso de la tecnología y de los sistemas de información para desarrollar, producir y comercializar los nuevos productos que requiere tanto la industria como los clientes y consumidores.

Tushman y Nadler (1986) llegaron a la conclusión de que la innovación puede ser concebida como la creación de nuevos productos, servicios o procesos de producción. Por su parte, Frankle (1990) concluyó en su estudio que la innovación es la modificación o invención de ideas, que permiten mejorar y desarrollar continuamente los productos y servicios que demandan los clientes y consumidores. Por un lado, la relación entre la innovación y la calidad también puede encontrarse tanto en las metas como en los resultados de las actividades de la organización, puesto que por ejemplo los nuevos productos resultados de la investigación y desarrollo, el incremento del valor en la cadena de suministro y la modernización de los sistemas y formas de trabajo, son algunas de las áreas más importantes en las cuales se comúnmente se realizan mayores actividades de innovación en las empresas (Shwu-Ing & Chiao-Ling, 2011). Por tal motivo, Ahmed y Zairi (2000) consideraron que la relación entre la innovación y la calidad se manifiesta en: La calidad de los productos y/o servicios. Calidad en los procesos de operación Y Calidad en los sistemas de gestión Con base en los argumentos presentados anteriormente, en estos momentos se puede establecer la siguiente hipótesis:

H1: La innovación tiene efectos positivos significativos en la calidad

TICs y Calidad Mucho se ha escrito en la literatura acerca del uso y aplicación de las tecnologías de la información y comunicación (TICs), como un factor fundamental que permite incrementar

significativamente la gestión de la calidad de la organización. Sin embargo, también se ha expuesto en la literatura la problemática existente en las TICs y los probables éxitos de la calidad, como es el caso de los estudios realizados por Sobkowiak y LeBleu (1996) y Pearson y Hagmann (1996). De igual manera, con la excepción de algunos pocos estudios, la mayoría de los trabajos publicados en la literatura que relacionan las TICs y la calidad han sido descriptivos, y solamente han presentado los resultados de cómo el uso de las TICs incrementa el nivel de calidad (Ang *et al.*, 2000).

Recientemente en la literatura diversos investigadores y académicos han llegado a la conclusión de que la aplicación de las TICs en las diversas áreas de la organización, genera un crecimiento y expansión de la calidad (Siu *et al.*, 2011). Una posible explicación de esta conclusión puede encontrarse en el estudio de Mensching y Adams (1998), quienes consideraron que un incremento significativo en la inversión de todo tipo de TICs en la empresa, es uno de los factores más importantes que permiten un incremento significativo en la calidad de toda la organización. Asimismo, en un estudio presentado con anterioridad por Murray (1991), este investigador llegó a la conclusión de que diversos investigadores y académicos estaban considerando cada vez más a las TICs, tanto para la medición como para entender y mejorar el nivel de calidad de las organizaciones. Con base en los argumentos presentados anteriormente, en estos momentos se puede establecer la siguiente hipótesis:

H2: Las TICs tienen efectos positivos significativos en la calidad

METODOLOGÍA

El artículo incluye una revisión extensa de los trabajos de diferentes autores sobre el tema en cuestión así como también el análisis e interpretación de las respuestas de las 1970 Pymes encuestadas en 21 países de Iberoamérica en el año 2009. Esto último se organizó en tres partes a saber: una referente a las *Actividades de Innovación* que han realizado las Pymes en los dos últimos años; una segunda parte referente a las *Tecnologías de la Información y Comunicación y los cambios en los sistemas de gestión*; y la otra, tiene que ver con los *cambios en los sistemas de gestión de la Calidad*.

Variables

Variable Dependiente: Para la medición de la calidad, se utilizaron tres preguntas que fueron medidas con una escala tipo Likert de cinco puntos, con 1 = totalmente en desacuerdo a 5 = totalmente de acuerdo como límites, y fueron adaptadas de García (2007). La Tabla 1 muestra con mayor detalle las preguntas utilizadas para la medición de la calidad. Las preguntas utilizadas para medir la Calidad tienen la formulación: En comparación con sus competidores clave, su empresa se diferencia porque: Ofrece productos de mayor calidad. Dispone de procesos internos más eficientes. Cuenta con clientes más satisfechos

Variables Independientes y de Control: Para medir las actividades de innovación se pidió a los gerentes de las 1970 Pymes Iberoamericanas encuestadas, que contestaran si en la organización se habían realizado innovaciones en los dos años anteriores a la aplicación de la encuesta (1 = Sí y 2 = No), en productos/servicios, procesos y sistemas de gestión, y para las empresas que contestaron que sí habían realizado actividades de innovación, se les solicitó que evaluarán el grado de importancia de dichas innovaciones (1 = Poco importante a 5 = Muy importante, como límites), ya que el enfoque subjetivo de percepción de la innovación por parte del gerente resulta el método más apropiado para el caso de las Pymes (Hughes, 2001; García, Martínez, Maldonado *et al.*, 2009). Las preguntas utilizadas en la encuesta para medir las actividades de innovación tiene la formulación: ¿Ha realizado algún cambio o mejora en sus productos, procesos o sistemas de gestión en los últimos 2 años? En caso afirmativo indique el grado de importancia de estos cambios para su empresa y debe seleccionar si los cambios son en Productos o Servicios; Proceso; Sistemas de gestión Por otro lado, para medir el grado de utilización de las TICs se

pidió a los gerentes y/o propietarios de las 1970 Pymes Iberoamericanas encuestadas, que indicaran si en su empresa disponían o no (1 = Sí y 0 = No) de los siguientes seis elementos: ¿Dispone de correo electrónico (E-mail)?; ¿Dispone de página WEB?; ¿Realiza compras electrónicas usando Internet?; ¿Utiliza banca electrónica?; ¿Realiza mercadotecnia utilizando Internet?; ¿Tiene Internet corporativo? A partir de las respuestas obtenidas se construyó la variable TICs a través de la suma de las preguntas afirmativas, teniendo por tanto una variable nominal con valor de 0 a 6. Esta forma de configurar la variable puede verse en García (2007) y García, Martínez, Maldonado *et al.* (2009).

RESULTADOS

Para verificar tanto la relación existente entre la innovación, las TICs y la calidad de las Pyme y comprobar las hipótesis de investigación planteadas, se realizó un análisis de regresión lineal por medio del MCO a través de los dos siguientes modelos:

$$\text{Modelo 1: } \text{Calidad}_i = b_0 + b_1 \cdot \text{Innovación}_i + b_2 \cdot \text{Tamaño} + b_3 \cdot \text{Edad} + \varepsilon_i$$

$$\text{Modelo 2: } \text{Calidad}_i = b_0 + b_1 \cdot \text{TICs}_i + b_2 \cdot \text{Tamaño} + b_3 \cdot \text{Edad} + \varepsilon_i$$

Donde, *Calidad_i* corresponde a la media de las tres variables utilizadas para su medición. *Innovación_i* indica el grado de importancia de la innovación en productos/servicios, procesos y sistemas de gestión. *TICs_i* corresponden a su grado de utilización en la empresa. *Tamaño*, número medio de empleados, y *Edad*, años de existencia de la empresa. Estimamos un modelo para la variable innovación y otro modelo para la variable TICs. Observamos en ambos modelos que las variables independientes tienen un factor de la inflación de la varianza (VIF) cercano a 1, por lo que descartamos la presencia de multicolinealidad.

La Relación entre la Innovación y la Calidad es ($n = 1970$). Los resultados muestran que una mayor utilización de la innovación en el seno de las Pymes influye positivamente y de forma muy significativa en la calidad (coeficiente estandarizado = 0.190 y $p < 0.05$) por lo que se confirma la primera hipótesis planteada. Sin embargo, el tamaño y la edad no afectan al grado calidad de la Pyme, al no resultar variables significativas estadísticamente. La validez del modelo se contrasta a través del R^2 ajustado que resultó de 0.092 y un valor de la F de 5.596 ($p < 0.05$). Las variables independientes tienen un factor de la inflación de la varianza (VIF) cercano a 1 (1.058), por lo que descartamos la presencia de multicolinealidad.

La Relación entre las TICs y la Calidad es ($n = 1970$). Se demuestra que una mayor utilización de las TICs en el seno de las organizaciones influye positivamente y de forma muy significativa en la actividad innovadora de la Pyme (coeficiente estandarizado = 0.135 y $p < 0.05$) por lo que se confirma la segunda hipótesis de trabajo planteada. Sin embargo, el tamaño y la edad no afectan al grado de innovación de la Pyme, al no resultar variables significativas estadísticamente. La validez del modelo se contrasta a través del R^2 ajustado que resultó de 0.084 y un valor de la F de 4.647 ($p < 0.05$). Las variables independientes tienen un factor de la inflación de la varianza (VIF) cercano a 1 (1.055), por lo que descartamos la presencia de multicolinealidad.

CONCLUSIONES

Los resultados obtenidos en este estudio permiten concluir que la innovación tiene una estrecha relación y un impacto positivo significativo en la calidad de las actividades de la organización, por lo cual si los gerentes de las Pymes quieren mejorar el nivel de calidad de la empresa, entonces será necesario que inicialmente adopten e implementen actividades de innovación, porque ello les permitirá incrementar significativamente su nivel de calidad. Asimismo, también se puede concluir que las TICs tienen una estrecha relación y un efecto positivo significativo en la calidad de las actividades de las Pymes. En este sentido, la innovación en productos o servicios, procesos y sistemas de gestión juegan un papel

fundamental en las organizaciones, no únicamente como una estrategia empresarial sino también como un elemento básico que facilita e incide en el mejoramiento de la calidad de los productos, procesos y sistemas de gestión. De igual manera, la adopción e implementación de las TICs generan diversos beneficios en la organización, entre ellos el mejoramiento de la calidad de las actividades desarrolladas por las Pymes, lo que conlleva que los gerentes tienen que poner más atención en el uso de las TICs que posee el negocio. Por lo tanto, los gerentes de las Pymes deberán en todo momento de desarrollar e implementar diversos cursos de capacitación para el personal sobre las TICs en la organización

EL SUCESOR, FIGURA CLAVE EN EL ÉXITO DE LA EMPRESA FAMILIAR

Laura Leticia Gaona Tamez, Universidad Autónoma de Coahuila,
Sandra Patricia de la Garza Cienfuegos, Universidad Autónoma de Coahuila,
Rosa Hilda Hernández Sandoval, Universidad Autónoma de Coahuila

RESUMEN

La presente investigación denominada: “El Sucesor, Figura Clave en el Éxito de la Empresa Familiar”, identifica los elementos estratégicos que integran la figura de: familia, fundador, y sucesor quienes tienen la facultad de tomar decisiones, así mismo, se aborda el plan de sucesión. El fundador de la empresa familiar es el tomador de decisiones por excelencia y éste con el tiempo, debe proyectar un plan de sucesión de tal forma que pueda identificar a quien elegir y preparar como su sucesor, capacitándolo en el cargo que va a heredar cuando el primero no se encuentre y el segundo tenga la posibilidad de lograr el desarrollo y crecimiento de la empresa familiar. El desafío de las empresas familiares es conseguir la continuidad de su misión a través de las generaciones. Este ideal tiene fuertes implicancias económicas y sociales para la comunidad, ya que son fuentes de creación de riqueza y de empleo. (Dodero, 2005). El empresario ó fundador generalmente busca la subsistencia y desarrollo de la empresa como de la familia. Con el fin de lograr la continuidad se requiere identificar al sucesor ideal que reúna los requisitos del fundador y las necesidades de la empresa familiar. Algunos fundadores trabajan hasta el día de su muerte y nunca planean su retiro dejando problemas familiares sin desearlo. Es uno de los temas más importantes, delicados y costosos, lamentablemente se le brinda poca atención, porque no se dedica el tiempo adecuado ni el momento para preparar al sucesor que va a ocupar el lugar del fundador.

PALABRAS CLAVE: Sucesor, Fundador y Empresas Familiares.

THE SUCCESSOR, KEY FIGURE IN THE SUCCESS OF THE COMPANY HOUSEHOLD

ABSTRACT

This research called "The Successor, a key figure in the Family Business Success", identifies the strategic elements that make up the figure of: family, founder and successor who have the power to make decisions, also, addresses the succession plan. The founder of the family business is the ultimate decision maker and he eventually must project a succession plan so that you can identify who choose and prepare his successor, enabling the position he will inherit when the is not first and second have the possibility of achieving the development and growth of the family business. The challenge of family businesses is to get the continuity of its mission through the generations. This ideal has strong economic and social implications for the community, as they are sources of wealth creation and employment. (Dodero, 2005). The founder or entrepreneur usually seek survival and development of the company like family. In order to ensure continuity is required to identify the ideal successor qualifying the founder and the needs of the family business. Some founders work until the day of his death and never leaving your retirement plan unwillingly family problems. It is one of the most important, delicate and expensive, unfortunately gives little attention, because it is dedicated adequate time nor the time to prepare a successor who will take the place of the founder.

KEYWORDS: Successor, Founder and Family Businesses.

INTRODUCCIÓN

La problemática que viven las empresas familiares están muy lejos de ser una empresa ideal, ya que la dirección recae en una sola persona, aunque delegue facultades siempre estará rehén de sus propias decisiones, se eligieron a algunas empresas familiares con el fin de llevar a cabo esta investigación.

Antecedentes

En la familia es donde los humanos aprenden a vivir en armonía y a socializar, se comparten intereses comunes, se apoyan mutuamente, desarrollan sentimientos, afectos, hábitos valores y costumbres, en una familia sólidamente establecida se encuentran las condiciones necesarias para la realización de sus integrantes, se considera la institución más antigua que constituye la comprensión y el funcionamiento de una sociedad y por medio de ella se prepara a los individuos para que cumplan el papel social que corresponde como ser humano, en el seno de la familia es donde nace y aprende el comportamiento moral, en la familia se encuentran todos los elementos necesarios para un desarrollo pleno. (Krebs, 2006)

Las empresas familiares son las organizaciones económicas más antiguas de la historia de la humanidad. Su origen más remoto está inscrito en el seno de la familia, ya que los procesos productivos, distributivos y asignativos fueron originalmente una actividad familiar, desde que nuestros ancestros comenzaron a canjear un producto por otro, o cuando la esposa e hijos ayudaban a recoger las cosechas. Ese intercambio es originado en el seno de la familia y ha trascendido en el tiempo hacia otras esferas sociales, dando así el camino para un desarrollo cada vez mayor de las empresas familiares hasta nuestros días.

Importancia Y Justificación Del Estudio

En Monclova, Coahuila, se identifica una cantidad significativa de empresas familiares y se busca no solo la permanencia sino el desarrollo y continuidad. La Secretaría de Economía (2008) indica la cantidad total de PYMES consideradas como empresas familiares, que se localizan en el Estado de Coahuila clasificadas por tipo de sector y tamaño.

Definición Del Problema

Cuando ya está el fundador terminando su ciclo laboral o su ciclo vital y se debe preparar para elegir adecuadamente el posible candidato de la sucesión. (Contreras, 2007). En el momento que se proyecta la sucesión el fundador se encuentra con diversas opciones como son: ventajas, desventajas, alternativas, inconvenientes, y oportunidades. (Leach, 1993). La sucesión es la última prueba de una empresa familiar, el paso de la primera a la segunda generación es de las más difíciles, las estadísticas demuestran que es conveniente que se realice mientras el fundador esta activo.

Objetivo General

Elaborar un modelo de capacitación para la sucesión exitosa y poder tomar la decisión de elegir al sucesor en una empresa familiar.

Objetivos Específicos De La Investigación

La capacitación del sucesor en valores familiares.

La capacitación del sucesor en aspectos económicos, administrativos y tecnológicos.

Marco Teórico

Con el análisis de la literatura se hace posible llegar a una definición de los temas de investigación, y a partir de ello se construye el modelo que identifica los valores que posee una empresa familiar. Dicho modelo permitirá la continuidad de la empresa familiar, ya que depende en gran manera del estilo de educar a los sucesores, esos valores son: de actitud y de relación entre el fundador y el sucesor; la formación desde temprana edad asegura la continuidad sin sobresaltos cuando el fundador salga de la empresa y el sucesor tome las riendas del negocio como si el primero estuviera.

Empresa Familiar

Las empresas familiares en México, como en otros países son y serán motivo de estudio en un sin número de aspectos y características, por ello se debe analizar cómo nacieron las empresas, cómo están estructuradas, de qué tamaño son, cómo funcionan, son temas verdaderamente apasionantes (Ríos, 2007). La empresa familiar es una realidad que responde a una necesidad del ser humano y que nunca desaparecerá, porque nace en la familia y es beneficiada, pero tanto la familia como la empresa evolucionan de acuerdo a etapas, ciclos de vida y retos. Alrededor del 80% de las empresas en México, son controladas por familias con la característica principal de transmitir su experiencia de generación tras generación, éstas administran, planean en base a su experiencia sobre el mercado, como bien es cierto las empresas o negocios familiares sean competitivos o no, carecen de infraestructura. (Baquero y Buen Rostro, 2006) esto depende de las culturas, costumbres, en la cual influyen una gran cantidad de factores con el fin de formar una institución. (Contreras, 2007)

Las empresas familiares actualmente viven una problemática económica, esto aunado a una pobre legislación que se está viviendo en este país, como son excesos de cargas fiscales, legales y de seguridad social. Así como otro de los aspectos más críticos es la gestión de la empresa familiar. Las empresas familiares desempeñan un papel muy importante, son escuelas donde las personas aprenden, se desarrollan y adquieren un papel activo en la sociedad.

Empresas Familiares En Monclova, Coahuila.

Al efectuar un análisis a la estadística se infiere la suma de las pequeñas y medianas empresas que constituyen 1,916 de un total de 10,338 empresas. (Tabla 1, anexos) de las cuales 189 de estas pertenecen al municipio de Monclova, Coahuila. (Tabla 2, anexos) y forman parte del sector económico de esta investigación. (Secretaría de Economía, 2008)

Fundador De Empresa Familiar.

Generalmente las empresas familiares inician con el fundador para atender una necesidad del mercado, quien ve en dicha necesidad una oportunidad de empezar un negocio, el fundador inicia la empresa familiar en forma modesta, por carecer de suficientes recursos, en esta primera etapa la empresa depende totalmente del fundador para sobrevivir, este ciclo es cuando la mayoría de los negocios pequeños mueren. Los fundadores están tan ocupados en sus empresas que ven solo las necesidades y los problemas de la empresa familiar, olvidándose de las necesidad, desarrollo y capacitación del sucesor. Es un proceso de toda la vida la formación del futuro sucesor, el fundador debe involucrar a sus hijos en sus empresas de acuerdo a su capacidad y edad desde que los hijos tienen conciencia, los padres deben transmitir los valores integrales, prepararlos con responsabilidad para el futuro de la empresa familiar. (Leach, 1993)

Futuro Sucesor de Empresa Familiar: El crecimiento genera más complejidad, demanda la necesidad de nuevos líderes capaces de sacar adelante la empresa familiar al enfrentar nuevos retos para el futuro sucesor, se requiere contar con los elementos de: preparación, experiencia, liderazgo y valores integrales,

cuando el sucesor no tiene el talento que se requiere se tendrá un costo, considerando que la empresa familiar perderá competitividad. (Leach, 2003) El sucesor debe dedicar tiempo suficiente en aprender la historia de la empresa familiar, concentrarse en las cuestiones estratégicas, en hechos fundamentales y bases para la toma de ciertas decisiones. (Aronoff y Ward, 2000). Es imprescindible planear su entrenamiento y formación dentro de la empresa y en los primeros años aprender tanto como sea posible y desarrollar un plan estructurado y que represente una experiencia de aprendizaje significativo en el contexto del plan. (Leach, 1993)

Preparación del sucesor: La continuidad de la empresa familiar depende de educar adecuadamente a los sucesores, inculcando valores y actitudes. La relación entre el padre y el hijo, es el mejor sistema de educación, ejemplo de promover la transmisión de los valores empresariales y de ilusionar e involucrar para su futura incorporación en la empresa familiar. Las empresas familiares tienen un trayecto y una experiencia muy arraigada, no obstante cuando llegan nuevas generaciones con otras ideas, algunos acuerdos a veces dejan de ser respetados. (Baqueiro, 2006) Por esta razón es indispensable contar con el protocolo familiar para respetar los acuerdos establecidos cuando ya no se encuentre el fundador, y la visión de beneficiar el entorno general de la empresa familiar. Etapa en que el sucesor es el protagonista, ya identificado como candidato debe recibir formación de acuerdo a las necesidades de la empresa, adquirir experiencia en otras empresas para conocer a profundidad la empresa familiar, relacionarse con el personal, saber que muy pronto será el sucesor ó líder de la empresa, la experiencia ayuda a identificar si es capaz de afrontar el reto ó decidir desistir. (Guinjoan y Llauradó, 2000)

Características para Identificar al sucesor: Para el sucesor es esencial cultivar estas habilidades: Liderazgo, aceptación del cargo, formación, involucrarse en la empresa, adquirir experiencia fuera de la empresa, involucrar a todos en sus objetivos, comunicación, planeación, organización, solución de problemas y toma de decisiones. El futuro sucesor debe prepararse para un puesto que aún no existe y que se crea en una época que nadie puede prever con seguridad. Debido a que las empresas cambian con tanta rapidez, los sucesores no solo deben prepararse para administrar la empresa familiar sino también para la rehabilitación estratégica y continuidad durante su gestión. (Aronoff y Ward, 2000) Una vez definido el perfil deseado del sucesor que será capaz de enfrentar las necesidades de la empresa y cumplir con las exigencias de la familia, se establecerán las reglas que se aplicarán para seleccionar al futuro sucesor, deben estar escritas como evidencia que existen, así como criterios que ayudan a planificar cada etapa del proceso. (Guinjoan y Llauradó, 2000)

El sucesor capacidad de Liderazgo: El líder debe ser visionario, motivador, comunicador, capaz de identificar las oportunidades donde otros no la ven, y vigilante del cumplimiento de la estrategia; pero a la vez, debe reconocer cuando requiere de apoyo y soporte, tanto del consejo administrativo de los accionistas, expertos internos y externos a su empresa y del resto de sus colaboradores (Calleros, 2008) De acuerdo a Leach (2003) “existe una regla de oro donde establece que antes de ingresar a la empresa familiar el sucesor debe dedicar tiempo para trabajar en otros ámbitos de empresas, para adquirir experiencia.” Esto ayuda a consolidar su confianza y habilidades, obteniendo una perspectiva adicional a su identidad, para triunfar con sus propios méritos, su experiencia proporciona tranquilidad al demostrar que puede competir y ganar cualidades requeridas, que es más que llevar el apellido del fundador, adquirir una experiencia amplia de cómo opera otras empresas del mismo ramo lo capacita para transformar su visión, organización y estructura para la supervivencia de la empresa.

Candidato a la dirección

Cuando se le preguntó al fundador de Bimbo porque eligió al más pequeño como sucesor dijo: “es una persona con una mente privilegiada y ha resultado ser un excelente y oportuno director del grupo, desde pequeño era palpable, su orden e inteligencia, tenía ocho ó nueve años cuando hacía sus programas de trabajo para el día, disponía las horas para arreglarse, jugar, leer y para mi sorpresa dejaba un espacio de

su tiempo para a pensar” y este al elegir su carrera profesional dijo: “sé papá que tengo una responsabilidad contigo y con el negocio que construiste, me prepararé para cumplir” esto fue una alegría para un padre y un valor para nuestra empresa. (Cherem, 2008) Que conmovedora experiencia hasta el octavo hijo resultó ser el sucesor en una empresa tan importante. No es saludable que intente criar a los hijos para que sean sus dobles, ellos han crecido en ambientes diferentes, tienen otro nivel de formación, distintas aspiraciones, se han unido a una empresa muy diferente a la que su padre estableció o se incorporó. El objetivo es orientar y compartir sus experiencias, esto puede ayudar al sucesor a crecer de acuerdo con sus propias aptitudes y preferencias. “El proceso de adquisición de virtudes humanas es un proceso lento, en el que se avanza gracias a la sucesiva repetición de los actos propios de cada virtud, es conveniente que a los sucesores se les presenten múltiples oportunidades para ejercitarlos, por su parte los predecesores deben tener paciencia convencidos de que cuando los esfuerzos son honestos e inteligentes los resultados siempre llegan.” (Gallo, 1998) De esto se concluye que para la formación del sucesor, el fundador debe dedicar tiempo y esfuerzo.

METODOLOGÍA

Como estrategia metodológica, se aplica el método cualitativo para obtener información de los personajes entrevistados, se extrajo la muestra de la población tipo no probabilístico. El instrumento de medición tipo cuestionario con técnica de la pregunta, se optó por el método de Robert Stake, obteniendo una muestra no probabilística en este caso es una muestra pequeña pero en profundidad de ocho fundadores entrevistados para conocer aspectos como: entorno familiar, la empresa, si cuenta con estrategia fiscal, tiene identificado al sucesor y un plan de sucesión, para posteriormente alimentar el programa SPSS en la que se obtiene el balance de percepciones para conocer resultados obtenidos representados en gráfica y así comparar la investigación realizada con una empresa ideal.

RESULTADOS

Las variables teóricas claves que se utilizan para comparar con las variables operativas y así identificar que tan lejos ó cerca esta la realidad del fenómeno de la sucesión en el momento de elegir al sucesor. Las variables operativas que superan expectativas son: experiencia relevante, delegar responsabilidad, elementos de éxito y valores familiares, como se muestra en la figura 1.

Estas cuatro variables operativas superaron las expectativas de la empresa ideal es decir que estas cumplen con el modelo de la empresa ideal. Variables operativas que no superaron expectativas son: características del sucesor, recursos tecnológicos, calidad del bien ó servicio, unidad familiar, administración financiera y visión estratégica. Estas variables se encuentran por debajo de las expectativas de una empresa ideal, es decir que no cumplen con el modelo ideal como se puede observar en la figura 1 y figura 1 complemento. Las variables teóricas aplicadas en la investigación concuerdan con las variables operativas.

Figura1: Balance General, Investigación vs. Empresa familiar ideal

Nota: En la gráfica se logra percibir que tan lejos están los resultados obtenidos de la investigación de las Empresas Familiares que se entrevistaron con respecto a una Empresa Familiar Ideal. Si esta por debajo de 0 o valor negativo, quiere decir que no cumple ese aspecto con respecto a una Empresa Familiar Ideal, si esta por arriba de 0 o valor positivo, quiere decir que ese aspecto si cumplió o superó el resultado con respecto a una Empresa Familiar Ideal.

*Si los scores son negativos, se muestra que hay claramente áreas para realizar mejoras en cada uno de los criterios.

1

Figura1: complemento: Balance General, Investigación vs. Empresa familiar ideal

Nota: En la gráfica se logra percibir que tan lejos están los resultados obtenidos de la investigación de las Empresas Familiares que se entrevistaron con respecto a una Empresa Familiar Ideal. Si esta por debajo de 0 o valor negativo, quiere decir que no cumple ese aspecto con respecto a una Empresa Familiar Ideal, si esta por arriba de 0 o valor positivo, quiere decir que ese aspecto si cumplió o superó el resultado con respecto a una Empresa Familiar Ideal.

*Si los scores son negativos, se muestra que hay claramente áreas para realizar mejoras en cada uno de los criterios.

2

De los ocho fundadores que se entrevistaron se identificó una deficiencia muy marcada en las empresas familiares, comparada con la empresa ideal, solo cuatro de veinticinco variables superaron las expectativas de la empresa ideal, esto se identifica en el balance de percepciones donde se extrae la muestra obteniendo como indicador el reporte de resultados (tabla 3 anexos), se logra percibir que tan lejos están los resultados obtenidos de la investigación de las empresas familiares que se entrevistaron con respecto a una empresa familiar ideal. Estadísticamente solo se cumple con 16%.

CONCLUSIONES

Se identifica que hay una gran inestabilidad en la sociedad para las generaciones futuras. Por falta de integración en el núcleo familiar, porque los fundadores no dedican tiempo suficiente a sus futuros sucesores pues se encuentran demasiado ocupados, algunos fundadores se lamentan porque fueron exitosos en sus empresas no siendo así en la familia, por eso fundadores dediquen tiempo a sus futuros sucesores. Si los fundadores de las empresas familiares modernas dan prioridad a preparar adecuadamente a sus sucesores para el liderazgo, se logrará no solo la estabilidad sino la continuidad y éxito, cumpliendo así con los deseos del fundador de dejar huella.

ANEXOS

Tabla 1: Estadísticas de la Entidad de Coahuila por sector y tamaño de empresa.

Tamaño de la empresa		Sector Productivo			Total
		Industria	Comercial	Servicios	10,338
Coahuila	Micro	719	4,714	2,742	8,175
	Pequeñas	480	564	476	1,520
	Medianas	176	172	48	396
	Grandes	119	63	65	247
	Totales	1,494	5,513	3,331	10,338

La presente tabla es proporcionada por la Secretaría de Economía (2008), muestra que existen 10,338 empresas en el estado de Coahuila. Estas están divididas en los siguientes sectores: industrial 1,494, comercial 5,513 y de servicios 3,331. A su vez también muestra la división por tamaño de empresa en cada sector. Es decir, cuantas micros, pequeñas, medianas y grandes empresas hay por sector.

Tabla 2: Estadísticas de la Ciudad de Monclova por sector y tamaño de empresa.

Tamaño de la empresa		Sector Productivo			Total
		Industria	Comercial	Servicios	502
	Micro	99	114	79	292
	Pequeñas	90	32	25	147
	Medianas	23	15	4	42
	Grandes	7	8	6	21
	Totales	219	169	114	502

La presente tabla es proporcionada por la Secretaría de Economía (2008), muestra que existen 502 empresas en el municipio de Monclova, Coahuila. Estas están divididas en los siguientes sectores: industrial 219, comercial 169 y de servicios 114. A su vez también muestra la división por tamaño de empresa en cada sector. Es decir, cuantas micros, pequeñas, medianas y grandes empresas hay por sector.

Tabla 3: Reporte de resultados de entrevista a empresarios

LA COOPERACIÓN INTEREMPRESARIAL Y SU RELACIÓN CON EL DESARROLLO DE LAS CAPACIDADES TECNOLÓGICAS EN LAS PYMES DE LA INDUSTRIA METALMECÁNICA DE LA REGIÓN CENTRO DE COAHUILA, EN MÉXICO

Zóchitl Araiza Garza, Universidad Autónoma de Coahuila
Elvira Velarde López, Universidad Autónoma de Coahuila
Maricela Chávez Rangel, Universidad Autónoma de Coahuila

RESUMEN

En la actualidad, la naturaleza interactiva del proceso del cambio tecnológico promueve la cooperación entre empresas, las cuales deciden colaborar llevando a cabo diversos tipos de cooperación, mismos que inciden en el desarrollo de sus capacidades tecnológicas. Este trabajo pretende responder a las interrogantes ¿Cuál es el nivel de desarrollo de las capacidades tecnológicas alcanzado por las empresas que cooperan y las empresas que no cooperan? ¿Cuál es la relación que existe entre los tipos de cooperación interempresarial y el desarrollo de las capacidades tecnológicas en las pequeñas y medianas empresas (PyMES) de la industria metalmecánica de la región centro del estado de Coahuila en México?. La metodología utilizada consistió en obtener información cuantitativa mediante un cuestionario estructurado aplicado a 50 PyMES del sector y región mencionados, los datos obtenidos fueron analizados posteriormente a través del software estadístico SPSS, aplicando Cross Tabs y Coeficiente de Correlación de Spearman. Entre los resultados más relevantes se encontró que a un nivel de confianza del 99 % existe una relación positiva de 0.794 entre la cooperación interempresarial y las capacidades tecnológicas. El análisis también arrojó correlaciones positivas entre los tipos de cooperación interempresarial y los diferentes tipos de capacidades tecnológicas.

PALABRAS CLAVE: Cooperación Interempresarial, Capacidades Tecnológicas, Pymes Industria Metalmecánica.

THE RELATIONSHIP BETWEEN INTERCOMPANY COOPERATION AND THE DEVELOPMENT OF TECHNOLOGICAL CAPABILITIES IN SMES OF THE METALWORKING INDUSTRY OF THE CENTRAL REGION OF COAHUILA, MEXICO

ABSTRACT

At the present time, the interactive nature in the process of technological change is promoting cooperation between enterprises, which decide to collaborate performing various types of cooperation, affecting the development of their technological capabilities. This paper aims to answer the questions: Which is the level of development of technological capabilities achieved by cooperating firms and firms that do not cooperate? Which is the relationship between the types of intercompany cooperation and the development of technological capabilities in small and medium enterprises (SMEs) of the metalworking industry in the central region of the state of Coahuila in Mexico? The used methodology was to obtain quantitative information through a structured questionnaire applied to 50 SMEs of the mentioned sector and region, the data were further analyzed by SPSS software, using Cross Tabs and Spearman correlation coefficient. Among the most relevant results, it was found at a confidence level of 99%, that

there is a positive relationship of .794 between inter-firm cooperation and technological capabilities. The analysis also showed positive correlations between the types of intercompany cooperation and the different types of technological capabilities.

KEYWORDS: Intercompany cooperation, technological capabilities, metalworking industry SME.

INTRODUCCIÓN

De acuerdo con la OECD (1996), derivado de la naturaleza interactiva del proceso del cambio tecnológico las firmas desarrollan vínculos que les ayudan a repartir los costos y riesgos asociados con los procesos de innovación, ganar acceso a nuevos conocimientos, adquirir componentes tecnológicos claves y compartir activos en la manufactura, la comercialización y la distribución. Estos vínculos o formas de asociación y cooperación pueden tener diferentes esquemas, siendo uno de ellos la formación de redes de pequeñas y medianas empresas que colaboran entre sí y se encuentran articuladas a una gran empresa. En el Municipio de Monclova, principal localidad de la región centro del Estado de Coahuila, se ubica Altos Hornos de México, S.A. de C.V. (AHMSA), la fundidora de acero más importante del país y motor del desarrollo de la región, a la cual se encuentran articuladas las pequeñas y medianas empresas (PyMES) de la industria metalmecánica, ya que en la cadena productiva se vinculan tanto hacia adelante, como hacia atrás. En estudios recientes efectuados en las Pymes de la industria metalmecánica de la región centro del estado de Coahuila (Velarde y Araiza, 2011) presentan evidencia con respecto a que las capacidades tecnológicas de vinculación son las que han sido menos desarrolladas por estas empresas, lo cual se deriva en una imperiosa necesidad de continuar efectuando estudios en torno al desarrollo de las capacidades tecnológicas. De lo anteriormente expuesto se derivan las siguientes preguntas en relación a las PyMES de la industria metalmecánica de la región centro del estado de Coahuila: ¿Cuál es el nivel de desarrollo de las capacidades tecnológicas alcanzado por las empresas que cooperan y las empresas que no cooperan? ¿Cuál es la relación que existe entre los tipos de cooperación interempresarial y el desarrollo de las capacidades tecnológicas?

REVISIÓN LITERARIA

El presente estudio se encuentra sustentado con la teoría del costo de transacción y la teoría de recursos y capacidades; bajo la primera perspectiva se ubica a la cooperación interempresarial como una alternativa de modalidad intermedia entendida según Williamson (1991) como formas híbridas o intermedias de organización. Bajo la segunda perspectiva, de acuerdo a Barney (1991) la teoría de recursos y capacidades asume que los recursos estratégicos que controlan las firmas dentro de una industria o grupo pueden ser heterogéneos y que los recursos y capacidades de la firma son fortalezas que pueden ser usadas para diseñar e implementar estrategias con el fin de mejorar su eficiencia y efectividad lo cual les hará más competitiva; por su parte Gulati (1998) sugiere que al cooperar, las empresas seleccionan a sus socios en función de la interdependencia existente entre los recursos poseídos por cada uno de ellos. Basado en lo anterior, en este estudio se considera que las empresas cooperan entre sí como una estrategia para lograr ventajas competitivas en función de los recursos necesitados y poseídos con la intención de desarrollar sus capacidades tecnológicas.

La Cooperación Interempresarial

Dada la gran variedad de esquemas existentes en la asociación y cooperación de pequeñas empresas ésta ha sido abordada por diversos autores y organizaciones, aportando diverso instrumental analítico desde los famosos distritos industriales, pasando por los sistemas regionales de innovación hasta la actual posición dominante de los clusters y el uso de alianzas estratégicas, para efecto de este estudio se

adoptará la definición de cooperación interempresarial de Araiza y Velarde (2008, p. 3) elaborada a partir del trabajo que realizaron para fundamentar el estudio del proceso dinámico de la cooperación interempresarial “se define a la cooperación interempresarial como la interacción de las Pymes independientes con un propósito específico, que les permiten intercambiar recursos que mutuamente las benefician.”.

Diversos autores han tipificado la cooperación entre las pequeñas empresas, en este estudio se utiliza la tipología que Araiza *et al.* (2010) construyeron y confirmaron empíricamente, la cual está basada en los esquemas clasificatorios de los tipos de cooperación empresarial de López y Lugones (1998), Escribá, Sánchez y Sánchez (2003) y Madero y Quijano (2006). Los tipos considerados en esa tipología son cuatro y están basados en las necesidades de la empresa que determinan el objetivo de la cooperación: cooperación para producir, cooperación para innovar, cooperación para mercado y cooperación para administrar y son definidos como sigue:

- *Cooperación para producir*: como vínculos de colaboración que se establecen para la obtención de economías de escala, disminuir costos y mejorar la calidad y productividad de las PyMES.
- *Cooperación para innovar*: como los vínculos de colaboración que se establecen entre las PyMES para disminuir riesgos, costos y tiempo principalmente asociados a propiciar y desarrollar su potencial innovador.
- *Cooperación para mercado*: vínculos de colaboración que se establecen entre las PyMES para la búsqueda y acceso a mercados; difusión, promoción y distribución de sus productos; obtención de economías de escala para acceder a mercados y reducción de costos.
- *Cooperación para administrar*: vínculos de colaboración que se establecen entre las PyMES para desarrollar la capacidad empresarial y tener conocimientos prácticos de gestión y acceso a información sobre instrumentos de crédito y financiamiento e incentivo fiscales así como efectuar el entrenamiento de trabajadores.

Las Capacidades Tecnológicas

Las capacidades representan el conocimiento específico de la empresa, adquiridas a través de habilidades y experiencia individuales acumuladas a través del tiempo (Morrison, Pietrobelli y Rabellotti, 2008). Se han generado diferentes enfoques en el estudio para la determinación de los tipos de capacidades tecnológicas iniciando con la taxonomía desarrollada por Lall (1992), la cual incluye capacidades de inversión, producción y vinculación; aunque estas capacidades pueden estar interrelacionadas, en parte se superponen y son fuertemente interdependientes (Morrison et al. 2008).

Con base en el marco elaborado por Lall (1992), Bell y Pavitt (1995) desarrollaron un marco analítico de las Capacidades Tecnológicas Industriales, haciendo una distinción en el grado de innovación de las capacidades tecnológicas: nivel básico, nivel intermedio y avanzado. Velarde y Araiza (2011) trabajaron con una adaptación a la matriz de Bell y Pavitt (1995), donde en lugar de incluir la clasificación de las funciones de soporte, se deriva directamente en las capacidades de vinculación y las de fabricación y adaptación de maquinaria y equipo, habiendo trabajado con los siguientes conceptos, que de igual manera son utilizados en el presente estudio:

- *Capacidades de inversión*: habilidades e información necesaria para identificar proyectos de inversión viables, para localizar y comprar apropiadas tecnologías, para el diseño e ingeniería de la planta y para la dirección y ejecución del proyecto (Biggs et al., 1995).
- *Capacidades de producción*: habilidades y conocimiento necesario para la operación y mejoramiento de la planta o equipo adquirido por la firma (Biggs et al., 1995; Romijn, 1999).

- *Capacidades de vinculación*: conocimiento, habilidades y experiencia necesarios para el intercambio de información, tecnología y destrezas con otras empresas e instituciones (Bell y Pavitt, 1995).
- *Capacidades de fabricación y adaptación de maquinaria y equipo*: conocimiento, habilidades y experiencia necesarios para mejorar y modificar la tecnología existente y para la creación de nueva tecnología (Bell y Pavitt, 1995).

Derivada de la revisión bibliográfica efectuada para el presente estudio se plantean las siguientes hipótesis:

H₁: Las PyMES de la industria metalmecánica de la región centro del Estado de Coahuila que cooperan desarrollan mayores niveles de capacidades tecnológicas que las que no lo hacen.

H₂: Existe relación entre la cooperación interempresarial y las capacidades tecnológicas desarrolladas por las PyMES de la industria metalmecánica de la región centro del Estado de Coahuila.

METODOLOGÍA

La estrategia metodológica, se basó en un estudio secuencial de dos fases con método mixto, en la primera fase se realizó una exploración cualitativa acerca de los tipos de cooperación interempresarial y de las capacidades tecnológicas, y en la segunda, se realizaron las encuestas (año 2007) entrevistando cara a cara a los empresarios de las 50 empresas que conformaron la muestra por conveniencia de una población de 153 empresas. Los datos cuantitativos obtenidos, se procesaron a través del paquete estadístico SPSS para medir, en base al grado de importancia otorgado por los empresarios (escala de 1 a 5, de menor a mayor), la cooperación interempresarial y las capacidades tecnológicas desarrolladas por las empresas. Para establecer si existe o no asociación entre las variables en estudio (cooperan o no las empresas y capacidades tecnológicas) primero se obtuvieron los niveles de desarrollo de las capacidades tecnológicas de las empresas, para lo cual se determinaron tres rangos de acuerdo al número de actividades llevadas a cabo por las firmas objeto de estudio: alto, medio y bajo, establecidos con puntos de corte a la misma distancia numérica unos de otros, para en segundo lugar, aplicar la técnica de *Cross Tabs* utilizando el estadístico coeficiente de contingencia. Enseguida para medir la relación entre la cooperación interempresarial y el desarrollo de las capacidades tecnológicas de las empresas se determinó el coeficiente *Rho de Spearman* para finalmente, efectuar las conclusiones y recomendaciones del estudio y definir las líneas futuras de investigación.

RESULTADOS

Para comprobar la H₁: *Las PyMES de la industria metalmecánica de la región centro del Estado de Coahuila que cooperan desarrollan mayores niveles de capacidades tecnológicas que las que no lo hacen*, se aplicó la técnica de *Cross Tabs* para establecer la asociación entre las empresas que si cooperan y las que no lo hacen con su nivel de desarrollo alcanzado para cada tipo de capacidades tecnológicas. Los resultados encontrados no muestran valores estadísticamente significativos a un nivel de confianza del 95% entre las empresas que cooperan o las que no lo hacen respecto al nivel de desarrollo de sus capacidades tecnológicas, excepto en las capacidades de vinculación, donde se encontró un coeficiente de contingencia de .538 con valores significativos a un nivel de confianza del 99%. Lo anteriormente expuesto permite aceptar parcialmente la H₁ ya que, sólo existe evidencia estadísticamente significativa para hacerlo en el caso de las capacidades de vinculación; este estudio no arroja evidencia suficiente para asegurar que exista una asociación entre las empresas que cooperan y las que no lo hacen con los niveles de desarrollo de las capacidades de inversión, las capacidades de producción así como las capacidades de fabricación y adaptación de maquinaria y equipo. Los resultados sobre las actividades de cooperación interempresarial

fueron reportados y discutidos por Araiza *et al.* (2010), por lo que en este estudio tan solo se retoman para, con base en los mismos, analizar en el siguiente apartado la relación de esta tipología de cooperación con el desarrollo alcanzado en los diferentes tipos de capacidades tecnológicas.

Para comprobar la H₂: *Existe relación entre la cooperación interempresarial y las capacidades tecnológicas desarrolladas por las PyMES de la industria metalmecánica de la región centro del Estado de Coahuila*, se aplicó el coeficiente de correlación *Rho de Spearman*, los resultados encontrados muestran una correlación positiva alta (.794) y estadísticamente significativa a un nivel de confianza del 99% entre las capacidades tecnológicas y la cooperación interempresarial, lo cual confirma que a mayor cooperación entre las pequeñas empresas, mayor será el desarrollo de sus capacidades tecnológicas lo cual permite confirmar la H₂.

CONCLUSIONES

El presente trabajo de investigación se realiza en una muestra por conveniencia de pequeñas y medianas empresas de la industria metalmecánica de la región centro del estado de Coahuila, por tanto los resultados encontrados, se limitan a las empresas antes mencionadas. Lo encontrado sugiere que aún y cuando las capacidades de vinculación son las menos desarrolladas en las empresas del sector en estudio, las empresas que cooperan logran desarrollar niveles más altos de capacidades que las que no lo hacen, por tanto, la cooperación entre empresas puede ser utilizada como una estrategia que permite desarrollar las capacidades tecnológicas, haciendo a las empresas cada vez más competitivas. Los hallazgos muestran una correlación positiva alta y estadísticamente significativa, entre las capacidades tecnológicas y la cooperación interempresarial, lo cual confirma que a mayor cooperación entre las pequeñas empresas, mayor será el desarrollo de sus capacidades tecnológicas. De manera específica se encontró también, que en todos los casos, existe una correlación positiva, estadísticamente significativa, que permite afirmar que cada uno de los tipos de cooperación realizados por las empresas (para producir, para innovar, para mercado y para administrar), se relacionan con cada uno de los tipos de desarrollo de las capacidades tecnológicas (de inversión, de producción, de vinculación y de fabricación y adaptación de maquinaria y equipo) lo cual permite confirmar lo encontrado en la literatura en el sentido de que a mayor cooperación, mayor desarrollo de las capacidades tecnológicas.

FACTORES DE CAPITAL HUMANO Y CALIDAD DEL SERVICIO POSTVENTA EN EL SECTOR COMERCIO AUTOMOTRIZ EN BAJA CALIFORNIA

Raúl González Núñez, Universidad Autónoma de Baja California

Marcela Reyes Pazos, Universidad Autónoma de Baja California

RESUMEN

La presente investigación, pretende analizar los factores del capital humano que determinan la calidad del servicio posventa de las pymes del sector comercio automotriz. Es importante caracterizar el talento humano desde la perspectiva del trabajador, además de analizar el entorno donde se involucra, el ambiente interno, la cultura organizacional y el estilo de la administración donde se desempeña. El desarrollo de la investigación está basado en un diseño mixto, investigación cualitativa y también la aplicación de dos cuestionarios, el primero enfocado a conocer las características del trabajador y el segundo se basa en conocer la percepción de los clientes que solicitan el servicio posventa. Se analizan las principales teorías e investigaciones de autores enfocados al capital humano, donde se hace un énfasis especial en el modelo de capital humano del investigador Idalberto Chiavenato. Es necesario señalar que es un estudio descriptivo, correlacional, donde, se busca conocer qué factores del talento humano son importantes en las personas para ofrecer un servicio con calidad y que cumplan con las expectativas de los clientes, utilizando el instrumento SERVQUAL. El estudio se desarrolla en las agencias de autos nuevos del estado de Baja California, principalmente en las ciudades de Mexicali, Tijuana y Ensenada.

PALABRAS CLAVE: gestión del talento humano, calidad, servicio postventa, pymes, y capacitación.

INTRODUCCION

La investigación es con un enfoque de diseño de investigación mixto, (investigación cualitativa y cuantitativa). El planteamiento del problema es conocer si existe relación entre los factores del capital humano y la calidad del servicio postventa de las pymes del sector comercio en el área automotriz de Baja California. La variable independiente es el capital humano, las dimensiones son talento humano y contexto. Según Idalberto Chiavenato, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante y el contexto es el ambiente interno adecuado para que los talentos florezcan y crezcan. El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración. Los indicadores de talento humano son: 1.1) Conocimientos, 1.2) Habilidades, 1.3) Actitudes, 1.4) Valores. Los indicadores de contexto son: 2.1) Cultura Organizacional, 2.2) Diseño Organizacional, 2.3) Estilo de la administración.

La variable dependiente es la calidad del servicio. Ruiz V. (1996) menciona que según Parasuraman, Zeithaml y Berry (1988) definen a la calidad del servicio como un juicio global del consumidor, relativo a la superioridad del servicio, que resulta de la comparación realizada por los clientes entre las expectativas sobre el servicio que van a recibir y las percepciones de la actuación de las organizaciones prestadoras del servicio y Gronroos (1994). Las dimensiones de la percepción de la calidad del servicio, son las del modelo SERVQUAL: elementos tangibles, la fiabilidad, capacidad de respuesta, seguridad, y empatía. Se limita al área de servicio de las 37 agencias automotrices del estado de Baja California, México, durante el periodo 2012.

REVISION LITERARIA

CAPITAL HUMANO

Chiavenato (2009), refiere que hablar del recurso humano en las empresas, implica saber que representa realmente el capital humano. Es por eso que entender que significa capital humano es indispensable para el presente trabajo de investigación. “El término capital humano apareció por primera vez en *Investment in human capital*, un artículo del premio nobel en economía Theodore W. Shultz publicado en 1961 en la *American Economic Review*. Desde entonces, los economistas han cargado muchos términos la maleta actual del capital humano. La mayoría coinciden en que el capital humano comprende habilidades, experiencia y conocimientos. Algunos, como el economista Gary Becker (otro premio nobel), añaden personalidad, experiencia, reputación y credenciales. Y todavía otros, como el consultor de gestión Richard Crawford, equiparan al capital con sus propietarios señalando que el capital humano consiste en personas hábiles e instruidas.” (Davenport, 2000).

Según el Profesor Idalberto Chiavenato 2009, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante. Y el Contexto; Es el ambiente interno adecuado para que los talentos florezcan y crezcan. El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración. Las funciones de recursos humanos en la actualidad son estratégicamente desarrolladas en las empresas exitosas. El término de capital humano se refiere a la suma de los conocimientos que poseen los empleados y que le dan una ventaja competitiva a la organización. La importancia de las actividades de recursos humanos se hace evidente cuando se toma conciencia de que los seres humanos constituyen un elemento común a toda organización, en todos los casos son hombre y mujeres quienes crean y ponen en práctica las estrategias e innovaciones de sus organizaciones. Debemos tener muy en cuenta que los recursos materiales hacen las cosas posibles, pero las personas las convierten en realidades. Es esencial considerar que el tamaño de los departamentos de capital humano varía dependiendo en gran medida de las dimensiones de la empresa.

Rodríguez (2005), menciona la importancia de las pequeñas y medianas empresas en la actualidad, ya que proporcionan la mayor parte de los empleos en el país. También ofrecen el campo experimental para generar, con frecuencia, los nuevos productos, ideas, técnicas y formas de hacer las cosas.

Careaga Viliaesid J.A. (2008), explica que existen tres aspectos donde la pequeña y mediana cumplen una función definida dentro del desarrollo general de un país, específicamente en el proceso de industrialización.

- a) Llenar los huecos de la producción.
- b) Crear y fortalecer una clase empresarial.
- c) Proporcionar mayor número de empleos.

La generación de empleos para una población creciente es uno de los más grandes problemas del Estado Mexicano. El incremento de la productividad en el campo y el cambio de estructuras en las actividades, que son las características esenciales del proceso de desarrollo, establecen una fuerte presión demográfica sobre las áreas urbanas, parte de esta población encuentra acomodo en los servicios pero requiere de la industria una aportación significativa en este aspecto. Hablando de Administración de persona, representa un gran problema, la realidad es que existe una actitud muy pasiva en el manejo del personal. El estudio indicó que en reclutamiento, selección, contratación y capacitación se aplican soluciones informales. Sobre la Ley de capacitación hay gran escepticismo. La falta de conocimientos técnicos sobre

administración da lugar a unas consecuencias considerablemente más graves en este tipo de empresas que en las grandes.

Anzola (2010) menciona las principales características de las pequeñas empresas, En la Administración: El dueño, debido a las múltiples actividades que desempeña, tiene todo el control y la responsabilidad. Mientras que los miembros de la familia ocupan los puestos principales. Es común que en pequeñas empresas no se sepan deslindar los asuntos familiares de los empresariales, lo cual provoca muchos conflictos dentro de esta. Los elementos que se cuentan como inicio de la pequeña empresa normalmente son por herencia familiar, por la compra de una empresa en operaciones, emprender un nuevo negocio o la fusión con otra empresa. En ninguno de estos casos, el pequeño empresario realiza estudios de factibilidad, producción, investigaciones de mercado ni económicas, sino principalmente en presentimientos y suerte. Existen dos razones que determinan el éxito al inicio de operaciones de las pequeñas empresas: 1) La habilidad y capacidad que desarrolla el empresario para emprender su negocio, guiado principalmente por su corazón. 2) El deseo inmenso que manifiesta de tener su propia empresa.

Aquí el compromiso, el espíritu de emprender y la inventiva son elementos que siempre están presentes. En el área de Recursos Humanos, el empresario en pequeñas empresas es conservador y empírico, toda la dirección de su empresa la basa en el conocimiento derivado de su experiencia acumulada, rechaza cualquier intromisión en sus actividades y no se apoya de ninguna técnica que fundamente sus decisiones de planeación y control, especialmente de carácter cuantitativo. En esta área los candidatos son buscados donde sea, y al encontrarse, se les pone a trabajar de inmediato y la manera en que reciben su entrenamiento es sobre la marcha y bajo supervisión del dueño o de la persona que este asigne.

Ferrell (2008), explica que es difícil definir a la pequeña empresa, ya que la pequeñez es relativa. La define como una compañía de operación y propiedades independientes, que no domina el área de su competencia ni emplea a más de 500 personas. Menciona también que sin importar como se defina a las pequeñas empresas, un hecho está claro: son vitales para la solidez de la economía estadounidense, ya que más del 99% de las compañías estadounidenses las cuales brindan empleo al 53% de los trabajadores del sector privado. Además, son en gran parte la fuente de la creación de empleos e innovación. Las pequeñas empresas, también brindan oportunidades de éxito empresarial a mujeres y miembros de grupos minoritarios. De acuerdo a Albizu (2001), es importante señalar la aceptada relación entre el entorno y la estructura de la empresa, que nos lleva también a la necesidad de relacionar el diseño de la organización y el comportamiento de las personas en la empresa. Una de las principales responsabilidades del departamento de recursos humanos en cualquier organización, es la aportación de nuevas estrategias a la estructura organizacional. También menciona que se debe analizar al recurso humano y la relación con la cultura de una organización, junto con los procesos que lo alimentan, siendo una de las partes más importantes del proceso de análisis interno previo a la formulación estratégica, dada la gran responsabilidad que tienen estos elementos de la empresa en la generación y mantenimiento de la ventaja competitiva que le permita sobrevivir y alcanzar sus objetivos.

De acuerdo a Casado (2003), El servicio debería estructurarse en función de las necesidades de sus clientes internos, de acuerdo con una serie de criterios y políticas del departamento de Recursos Humanos, conectados con la estrategia del negocio y las necesidades del entorno. Para ello, hay que conocer y gestionar los resultados del área de Recursos Humanos, así como los mecanismos de gestión interna, esto se debe medir a través de indicadores que permitan valorar la excelencia del servicio y mejorar las prestaciones. Para lo cual es menester contemplar al menos lo relacionado con:

- Clientes: Miden la calidad del servicio y la satisfacción del usuario o cliente interno.
- Resultados: Miden la actividad y eficiencia interna.
- Organización: miden la evolución y capacidad de mejora.

Es importante señalar que los indicadores señalados anteriormente, deben emanar de los objetivos que aparezcan en el cuadro de mandos de la empresa.

CALIDAD EN EL SERVICIO

En relación al origen de la palabra calidad, Maqueda, J (1995) menciona lo siguiente: en todos los idiomas expuestos, la etimología de los términos cualidad y calidad nos remonta al latín del adjetivo relativo e interrogativo *qualis* (*qualitas-qualitatem*) como término imprecador (<cuál>, <tal como>, <de qué clase>; el modo de ser correspondía rigurosamente a *talis*) que demanda la esencia, contenido o características de las personas y de las cosas. En las primeras civilizaciones de la humanidad se hacía referencia a la calidad, Miranda, F.J. (2007) expresa que la preocupación del ser humano por la calidad se remonta a la antigua Babilonia. Así queda constancia en el código de Hammurabi (1752 AC) que “si un albañil construye una casa para un hombre, y su trabajo no es fuerte y la casa se derrumba matando al dueño, el albañil será condenado a muerte” Se ha considerado que los principales teóricos que propiciaron el desarrollo del movimiento hacia la calidad son: Deming, Juran, Ishikawa y Crosby, quienes desplegaron sus teorías a partir del mejoramiento del control de la calidad y del trabajo en equipo para lograr un alto nivel de productividad. Anda C. (2004)

Irónicamente, uno de los líderes de la revolución industrial, Henry Ford, desarrollo a principios del siglo XX muchos de los fundamentos de la gestión de la calidad total. Cuando en 1982 los ejecutivos de Ford visitaron Japón, para estudiar las practicas de administración japonesas, cuenta la historia que un ejecutivo japonés hacia tantas referencias <<al libro>> que el personal de Ford descubrió que se trataba de la traducción al japonés de <<My Life and Work>> escrita por Henry Ford y Samuel Crowther en 1926. <<El libro>> se había convertido en una especie de Biblia industrial en Japón, mientras que la empresa Ford se había alejado de sus principios. Miranda F. (2007) En función de los modelos y normas disponibles y de sus características propias, cada organización puede adoptar un determinado sistema de gestión de la calidad, esto es, un conjunto estructurado de instrumentos complementarios (normas, modelo de gestión de la calidad, herramientas, códigos éticos, cartas de servicios, sistemas de auditoria y certificación, etc.), que le permitan gestionar la calidad de la mejor manera posible.

Carro J.C. (2008) Se necesita que cada organización defina los conceptos que darán estructura a la filosofía que apoyara a la organización en la búsqueda del mejoramiento. Podemos elegir entre varias opciones. Existen filosofías orientadas principalmente al usuario como es la planteada por Ishikawa; orientadas al producto, como es la propuesta por Crosby; o para obtener evidencia estadística de los procesos como propone Deming. Anda C. (2004) Hoy en día el tema de calidad del servicio tiene bastante importancia en las organizaciones, satisfacer las necesidades y gustos del cliente no es tarea fácil. Sin embargo las organizaciones apuestan por cumplir con los requerimientos que exige el cliente, con la finalidad de lograr la fidelidad del consumidor hacia la empresa. El servicio es el conjunto de prestaciones que el cliente espera (además del producto o del servicio básico) como consecuencia del precio, la imagen y la reputación del mismo. Para ofrecer un buen servicio hace falta algo mas que la amabilidad y gentileza, aunque estas condiciones son imprescindibles en la atención al cliente. Vértice (2008) Los bienes y servicios de alta calidad proporcionan a una empresa una ventaja sobre la competencia. La alta calidad reduce los costos que resultan de devoluciones, reproceso y mermas; incrementa la productividad, utilidades y otras medidas del éxito. Algo muy importantes es que la alta calidad genera clientes satisfechos, quienes recompensan a la organización con un patrocinio continuo y publicidad verbal favorable. Evans, R. (2008)

Cuando un cliente valora la calidad de un servicio, no disocia todos sus componentes, sino que la juzga como un todo. Lo que prevalece, por tanto, es la impresión de conjunto y no el éxito relativo de una u otra acción específica. Vértice (2008) Las personas cambian constantemente de gustos, preferencias y exigencias, entonces las organizaciones deben de identificar las necesidades puntualizadas que requiere el

cliente para poder cubrir sus peticiones. El empleado que otorga el servicio, debe hacer buen uso de su comunicación verbal, y no verbal.

Evaluacion De La Calidad Y El Modelo Servqual.

Las evaluaciones a través de las percepciones de los clientes, consumidores, usuarios o pacientes en la actualidad, son de uso muy frecuente, por parte de organizaciones, tanto privadas como públicas, de muy diversos sectores, incluido el ámbito sanitario. Los índices de calidad y de satisfacción, conforme el demandante es el juez final e inapelable de la gestión, constituyen uno de los principales activos sobre los cuales se basan las posibilidades de sostener la rentabilidad y el crecimiento de las empresas, o la confianza del ciudadano en los servicios que se le ofrecen. Lo que revelen las evaluaciones a través de las percepciones, ha de determinar en muy buena medida la capacidad competitiva de las empresas. Botero, M. (2006) Los requisitos de competitividad y universalidad del mercado actual han convertido a los sistemas de gestión de la calidad en algo, además de recomendable, obligatorio, ya que aporta un punto de fiabilidad y seguridad indudable a los clientes. De esta situación no está exento el ámbito de la Inteligencia Empresarial, donde la realización de servicios y productos de calidad.

Carro J.R. (2008) Existen múltiples normas, estándares y sistemas de calidad, dependiendo estos de la industria, del sector, de la región y el país. Como ejemplos de modelos de gestión de la calidad aplicables a las organizaciones en general se pueden mencionar: el Modelo EFQM de Excelencia, el Cuadro de Mando Integral (Balanced Scorecard) (una herramienta más que modelo), el Modelo SERVQUAL, el Marco Común de Evaluación (Common Assessment Framework), la estrategia Seis'Sigma (m-as nna estrategia para corregir defectos), las normas BS (del Reino Unido), las normas ISO, entre otros. Carro J.R. (2008) El modelo servqual propuesto por Parasuraman, Zeithaml y Berry, en los años ochentas en Estados Unidos, mide la calidad del servicio en las organizaciones comparando la diferencia entre las expectativas, es decir lo que el cliente espera recibir del servicio y las percepciones, se refiere a lo que el cliente percibe al momento de tomar el servicio.

Setó (2004) expresa que una primera versión de la escala servqual incorporó diez dimensiones, incluyendo 97 ítems, también investigaciones posteriores, aplicando la escala en diferentes tipos de servicios, indicaron la necesidad de eliminar algunos de los ítems y varias de las dimensiones propuestas en un primer momento, obteniendo como resultado una escala modificada que contiene 22 ítems agrupados en cinco dimensiones: fiabilidad, tangibilidad, capacidad de respuesta, seguridad y empatía.

Ruiz de Maya (2006) hace referencia a la definición de cada una de las dimensiones propuestas por Parasuraman, Zeithaml y Berry. La fiabilidad es la capacidad para prestar el servicio prometido de forma fiable y cuidadosa, la tangibilidad o elementos tangibles es la apariencia de las instalaciones físicas, equipos, personal y material de comunicación, la capacidad de respuesta es la disposición y voluntad para ayudar a los usuarios a proporcionar un servicio rápido, la seguridad son los conocimientos y atención mostrados por los empleados y sus habilidades para inspirar credibilidad y confianza, y la empatía es la atención individualizada que prestan las organizaciones a sus consumidores.

De la Antonia (2009) manifiesta que el modelo distingue dos zonas: en la parte superior recogen aspectos relacionados con el cliente o usuario, el cual en función de sus necesidades personales, sus experiencias previas y las informaciones que ha recibido, se forma unas expectativas sobre el servicio que va a recibir. La parte inferior corresponde al servicio que va a recibir e incluye fenómenos relativos al proveedor del servicio, concretamente se expone como las percepciones de los directivos sobre las expectativas del cliente guían las decisiones que tiene que tomar la organización sobre las especificaciones de la calidad de los servicios en el momento de su comunicación y entrega.

Capital Humano Y Calidad En El Servicio

El servicio es brindado por los integrantes de la organización, hacia el cliente. El servicio es intangible, no se puede tocar, sin embargo es perceptible, se percibe a través de los sentidos del ser humano, el cliente distingue si esta recibiendo un servicio de calidad por parte de la persona que brinda el servicio, ya sea el empleado o el directivo, o si no recibió un buen servicio. Todos los signos, verbales o no, que acompañan el servicio, tienen un papel fundamental en este sentido: mirar al cliente a la cara, cederle el paso, expresar con una sonrisa el placer que nos produce verlo, llamarlo por su nombre, son otras de las ventajas para ofrecer un servicio de calidad que tenga por objeto la conquista del cliente. Vértice (2008)

El servicio indudablemente, depende de la persona que lo está brindando, es decir, del capital humano de la organización. Los miembros de la organización, son elementos clave para que el servicio sea todo un éxito. En el área de atención a clientes, es importante contar con personal capacitado y calificado, que pueda dar una buena percepción del servicio a los consumidores.

Con demasiada frecuencia, en la búsqueda afanosa por conseguir la satisfacción de los clientes olvidamos a los empleados. En realidad, la satisfacción que puedan sentir los empleados para con la empresa esta en relación directa con la de los clientes. De ahí que la lección que deben aprender las empresas de servicios es que si quieren que las necesidades de sus clientes estén primero, entonces, no pueden relegar las de sus empleados en último lugar. Las encuestas para los empleados, realizadas trimestralmente, proporcionan una medida interna de la calidad de los servicios en lo que respecta al estado de animo y la actitud de los empleados, así como a los obstáculos que perciben para brindar servicios de calidad.

Hoffman (2002) Alcalde (2010) enuncia que se estima más del 20% de los clientes que se retraen de adquirir un producto o servicio lo hace por fallos en la información o atención por parte de las personas encargadas de atender y motivar a los compradores. Ante esta circunstancia es necesario que la atención al cliente sea de la mas alta calidad con la información concreta y precisa de modo que la persona que recibe la información no solo tenga una idea de un producto, sino también de la calidad del capital humano y técnico con el que va a establecer una relación comercial. Blanco (2005) manifiesta que para el cumplimiento de los estándares de calidad en la prestación del servicio, desde el proceso de selección de las personas, se deben reconocer los aspectos relacionados con sus cualidades. La norma ISO9001, versión 2000 plantea las siguientes estrategias a considerar para lograrlo:

1. Identificar las competencias que requiere el personal para desarrollar adecuadamente las actividades que afectan la calidad.
2. Capacitar y brindar entrenamiento al personal para satisfacer esas necesidades.
3. Evaluar la efectividad de la capacitación y entrenamiento.
4. Asegurar que los empleados sean conscientes de la relevancia e importancia de sus actividades y como estas contribuyen para el cumplimiento de los objetivos de calidad.
5. Mantener registros adecuados de educación, experiencia, entrenamiento y habilidades.

Los negocios de menor escala, son más capaces de proveer un servicio de calidad a sus clientes cuando las capacidades humanas les permiten responder de mejor manera a las necesidades de los clientes, pero es importante reconocer que el capital humano por si mismo no produce riqueza, ésta se logra cuando la estructura social y el proceso organizacional articula al capital humano y otros recursos para producir y distribuir bienes y servicios que demanda el mercado, por ello es muy importante referirse al capital organizacional. Martin, M.M. (2006) Existen criterios y preferencias por parte de los usuarios que determinan cuando un servicio es de calidad y cuando no. A pesar de que estas determinantes podrían ser momentáneas, lo que hace que los resultados de la investigación no se puedan generalizar en el tiempo, las mismas muestran una tendencia que orienta a la gestión de recursos humanos, específicamente la de

los procesos de selección, capacitación y evaluación, hacia una gestión por competencias. Guerra, M.K. (2010)

METODOLOGIA

Se propone un diseño mixto, investigación cualitativa, y la aplicación de un cuestionario a través de investigación cuantitativa y finalmente que se realice una profundización y evaluación de los resultados a través de investigación cualitativa. Es un estudio descriptivo, correlacional.

RESULTADOS

La investigación se limita a las 37 agencias automotrices del estado de Baja California, México, durante el periodo 2012. Las unidades de análisis son los trabajadores del departamento de servicio y los clientes que acuden al departamento de servicio. El promedio de trabajadores de cada agencia en el área de servicio es de 15 a 20. Los resultados esperados son conocer las características del talento humano del personal que trabaja en el departamento de servicio de las pymes del sector comercio en el área automotriz de Baja California no se encuentran identificadas claramente, las características del contexto del departamento de servicio del sector comercio en el área automotriz de Baja California no son las adecuadas para desarrollar las actividades, identificar la percepción de la calidad del servicio posventa por parte de los clientes, comparar la relación entre los factores del capital humano y la calidad del servicio posventa.

CONCLUSIONES

En la práctica se pretende que ésta investigación sirva de apoyo a las organizaciones en el área de servicio postventa, con el fin de aportar información relevante a los líderes para la toma de decisiones. Como aporte a la metodología, se espera que el instrumento sea válido y confiable, para que sirva de apoyo en la medición de las variables como los factores de capital humano y la calidad del servicio.

MODELO DE NEGOCIO DE LAS MIPYME: UN ANÁLISIS DESDE LA PERCEPCIÓN DE DIRECTIVOS DE LA COMARCA LAGUNERA

Víctor Manuel Molina Morejón, Universidad Autónoma de Coahuila
María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila
Oscar Plascencia Ávila, Universidad Autónoma de Coahuila
José Daniel Barquero Cabrero, Business School ESERP
Homero Martínez Cabrera, Universidad Autónoma de Coahuila

RESUMEN

La micro, pequeña y mediana empresa (MIPYME) ha sido en los últimos años el centro de atención de numerosos trabajos de investigación, no obstante, aún siguen necesitadas de fundamentos estratégicos, operativos y de alianzas que, de forma continua, le brinden oportunidades para mejorar su competitividad. Este Laboratorio Empresarial realiza estudios regionales dentro del Estado de Coahuila, entre ellos el auto - diagnóstico del modelo de negocio y la definición de estrategias de cambio, diseña estrategias cooperativas de innovación ofreciendo un sitio de conexión virtual entre la empresa y universidad. El objetivo del trabajo es mostrar los resultados alcanzados en el diseño y validación del modelo de negocio para las MIPYME. La metodología contempla un estudio documental y validación con método de expertos del modelo de negocio diseñado, así como la indagación empírica, mediante una encuesta a directivos de 48 MIPYME de la Comarca Lagunera. Los resultados evidencian similitud entre la percepción sobre funcionamiento de la empresa y el Modelo de Negocios diseñado, las relaciones positivas entre cada componente y sus elementos; las contrastaciones significativas entre las variables de propuesta de valor y resultados económicos. La evaluación realizada permite definir estrategias para mejorar el desempeño económico y social de las MIPYME

PALABRAS CLAVE: Modelo de negocio, estrategias de cambio, competitividad, estudios regionales, cooperación.

SMEs BUISNESS MODEL: AN ANALYSIS FROM THE PERCEPTION OF MANAGERS OF THE LAGUNA REGION

ABSTRACT

The micro, small and medium enterprises (SMEs) has in recent years been the focus of numerous research projects, however, are still in need of strategic foundations, and operational alliances, continuously, will provide opportunities for improve their competitiveness. The Business Lab regional studies performed within the State of Coahuila, including self - diagnostics business model and the definition of strategies for change, innovation design cooperative strategies site offering a virtual connection between the company and university. The objective of this work is to show the results achieved in the design and validation of the business model for SMEs. The methodology includes a desk study and expert validation method designed business model and empirical inquiry, through a survey of 48 SME managers in the Laguna Region. The results show the perceived similarity between running the business and business model designed, positive relationships between each component and its elements to tests between variables significant value proposition and economic performance. The evaluation to define strategies to improve the economic and social performance of SMEs.

KEYWORDS: Business model, strategies change, competitiveness, regional studies, cooperation.

JEL: O41

INTRODUCCIÓN

Un elemento importante pero generalmente poco manejado en las MIPYME es el relacionado con el Modelo de Negocios, muchas veces enmascarado o confundido dentro de los Planes de Negocio o dentro de los Sistemas de Emprendedores. En el año 2010, al dirigir a su público a través de su web la pregunta: “¿Su empresa cuenta con un modelo de negocio establecido por escrito?” ([Michavila](#), 2010) detecta que el 77 por ciento de los participantes respondieron negativamente, lo cual no nos sorprende pero no deja de ser alarmante. Básicamente un modelo de negocios nos indica de qué se trata nuestro negocio, en que se diferencia de los competidores y cómo va a generar ingresos mediante sus ventajas competitivas.

REVISIÓN DE LA LITERATURA

Modelos De Negocios

Existen muchas definiciones de modelo de negocio: Algunas van en la línea de “una narración de cómo funciona la empresa”, otras hablan de actividades y cadena de valor, las más recientes se centran en elecciones o respuestas a preguntas claves. Habitualmente el trabajo sobre modelos de negocio se basa en conceptualizaciones estáticas de sus elementos y de las interrelaciones entre estos y con el exterior. No se pueden olvidar aspectos dinámicos que resultan decisivos para el desarrollo y el éxito final de nuevos modelos (Matarranz, A. 2011). La esencia de un modelo de negocio de éxito es un diseño lógico, que abarque todos y cada uno de los límites de la empresa. Un modelo de negocio de éxito es aquel que garantiza creación de valor para todas las partes implicadas al tiempo que mantiene el foco en la empresa. (Zott, Ch. & Amit, R.). Para (Osterwalder y Pigneur 2010), un modelo de negocio describe el fundamento lógico de cómo una organización crea, entrega y captura valor. Su enfoque ha popularizado una representación de los modelos de negocio a través del Modelo de Negocio de Canvas: Segmentos de Clientes, Propuesta de Valor, Canales, Relaciones con Clientes, Corrientes de Ingresos, Recursos Clave, Estructura de Costes, Actividades Clave, Alianzas Clave.

Sin embargo, es importante recalcar que (Puhakainen y Malinen 2009) aseguran que los modelos negocio estáticos pueden ser peligrosos. Los modelos de negocio existentes pueden y deben ser adaptados al contexto estratégico de la PYME como un proceso dinámico y continuo, en lugar de la creación de un artefacto, dicho proceso debe producir varias sub estructuras en lugar de un modelo estático. Los autores y expertos consultados coinciden en que el conjunto de los MN analizados adolecen de una serie de aspectos que limitan o impiden una adecuada aplicación en nuestro entorno de MIPYME mexicana; estas limitaciones son: La generalidad de los modelos estudiados no están diseñados para las MIPYME; la mayoría no tienen un enfoque prospectivo sino que trabajan analizando el pasado; las preguntas que se formulan adolecen de profundidad, alcance, cantidad y calidad; no ofrecen alternativas de solución, sólo se enfocan al diagnóstico; son modelos estáticos; no existe un “coach” que le auxilie a hacer su autoevaluación; no existe una versión montada sobre una plataforma on line que le permita hacer su autoevaluación en el momento y el lugar que desee; no consideran las alianzas con los agentes del entorno como importantes y por tanto no hay presencia de la relación universidad-empresa en sus preguntas y concepciones; la gestión por competencias no aparece reflejada y es una de las claves actuales para el proceso innovador. La generalidad de la información que aparece en la literatura científica como referencia y en la web son sobre el Modelo de Negocio de Canvas lo que hace que la mayoría de la divulgación gire sólo en torno a este Modelo.

Dados estos antecedentes, los autores coinciden en que se debe diseñar un Modelo de Negocio propio para nuestra región que incluya una propuesta innovadora al asociarlo con los Modelos de Calidad.

METODOLOGIA

Los componentes del modelo de negocio seleccionados se obtuvieron a partir de una amplia consulta de modelos de competitividad y de calidad, (IMCO, 2011), (IFCT, 2011), (EFQM, 2010), (FUNDIBEQ, 2011), (Gutiérrez, 2011), (Jennings y Beaver, 1997), tanto de referencias mexicanas como internacionales. Se consultaron además los criterios y opiniones de empresarios exitosos de nuestra región, así como de académicos, en calidad de expertos (30 en total), a partir de todo esto se alcanza una adecuada validez de constructo y contenido. Para comprobar la concordancia de los expertos entre los componentes y sus 28 variables se empleó el Test Exacto de Fischer dado que para frecuencias mínimas esperadas inferiores a 3 se debe aplicar éste en lugar de Spearman o Yates. Ya para la prueba de campo la investigación es correlacional en cuanto a que busca entender el efecto de una serie de variables independientes en los resultados y permanencia del funcionamiento y competitividad de las PYME. El procesamiento de datos se realizó con estadígrafos descriptivos y la contrastación de variables cualitativas mediante estadística no paramétrica por medio de la prueba de Kruskal-Wallis; previamente se comprobó la aleatoriedad de la muestra por la Prueba de Rachas y la normalidad de las variables por el estadístico de contraste Prueba de Kolmogorov-Smirnov, para una muestra.

RESULTADOS

Atendiendo a la validez de contenido y de constructo del MN -a través de los expertos- se incorporan como Componentes del Modelo de Negocio: Propuesta de Valor, Relaciones con Clientes, Alianzas, Ejecución de la Propuesta de Valor y Resultados y se comprueba la Hipótesis H_1 “*Las respuestas de los expertos acerca de la asociación componente-elemento es homogénea*”. Se comprueba además en la prueba de campo la Hipótesis H_2 . *La introducción de nuevos y mejorados productos y servicios tiene un efecto positivo con los resultados empresariales*. Tabla 1.

Tabla 1: Innovación VS Resultados empresariales.

	E22 VENTAS	E27 SATISFACCION DE CLIENTES	E9 RETENCION DE CLIENTES	E23 FACTURACION	E24 UTILIDADES
Chi-cuadrado	2,784	3,953	1,614	4,608	4,784
gl	2	2	2	2	2
Sig. asintótica	,249	,139	,446	,100	,091 *

*Elaboración propia por medio del SPSS para pruebas no paramétricas. Estadísticos de contraste: Prueba de Kruskal-Wallis para tres elementos. Variable de agrupación E1 Innovación. Precizando un valor de la significación con $\alpha = 5\%$, $P > 0,05$ (**) y $\alpha = 10\%$, $P > 0,10$ (*)*

Por extensión podemos concluir que según el grado de introducción de nuevos y mejorados productos o servicios que tengan las empresas estudiadas, estos tendrán significación con el nivel de las ventas, la satisfacción, la retención de clientes y la facturación, pero no así con las utilidades. O sea, en la medida que la empresa introduce nuevos y mejorados productos hay un efecto positivo sobre los resultados empresariales, según la percepción de sus empresarios exceptuando en las utilidades. Por tanto se cumple la Hipótesis H_2 para 4 de los 5 Elementos.

Figura 1: Opinión de los empresarios en porcentaje respecto a en qué reside la diferencia de su negocio con la competencia.

Elaboración propia a partir de las respuestas de los 48 empresarios, independientemente del tamaño de la empresa y el sector

Es lamentable el poco uso de las TICs en estas MIPYME de la Región Lagunera, así como el no tener

CONCLUSIONES

Hemos querido en esta primera presentación de resultados del Modelo de Negocio partir de las respuestas más generales, sin diferenciarlas por sector y tamaño para en función de estas generalidades ir conformando posteriormente determinadas estrategias que luego se puedan ir particularizando por sectores y tamaños. Entendemos que es un adecuado enfoque el trabajar de lo general a lo particular.

El modelo de negocio se caracteriza por una solución innovadora al combinar los principios de los Modelos de Calidad con los Modelos de Negocio auxiliados por un SI creando un procedimiento original que permite no sólo diagnosticar la situación de la PYME sino que se le brindan alternativas estratégicas y se le ofrece al apoyo mediante “coaching” por parte de alumnos y profesores de nuestra Facultad.

En muchos casos de innovación la clave no está tanto en el propio producto como en un nuevo modelo de negocio que lo sustente. La entrevista directa al empresario (o al este acceder a nuestra web) logra que él exponga cómo hace o percibe su labor de dirección y cómo él aprecia que está su empresa en relación a los parámetros que parecen ser comunes en las organizaciones, mismos que nuestro Modelo de Negocio los tiene establecidos, siendo este el punto de referencia que empleamos para calificar el grado de similitud que existe entre la percepción del empresario y nuestro Modelo.

Es por ello que afirmamos que el nuestro es una guía para evaluar el Modelo de Negocios de una PYME bajo los conceptos y premisas de los Modelos de Calidad. Evidentemente que la percepción que el empresario nos brinda con sus respuestas puede estar alejada de su realidad tangible y es por ello que se debe pasar a un segundo nivel donde se logre contrastar de manera objetiva qué tanta distancia hay entre su percepción y la realidad, esto último es tema de continuación de esta actividad científica y el foco central del trabajo de Laboratorio Empresarial que estamos diseñando. Afirmamos –de manera general– que se detectan fallos en aspectos claves para la estabilidad de las empresas que vienen relacionadas con problemas en la cartera de clientes, manifestada por bajos resultados en la selección y crecimiento de estos, el no tener aún definido segmentos de clientes que se sientan atraídos por su empresa ocasiona que no se pueda definir una estrategia de actuación hacia ellos y por tanto sea difícil que se puedan convertir en clientes fijos. Se observan bajas alianzas verticales y casi nulas en las institucionales: las alianzas con proveedores y clientes son la clave de los negocios de éxito, insuficientes alianzas impedirán incursionar

en nuevos escenarios, disminuir riesgos y eliminar competidores así como alcanzar economías de escala. Se detectan además problemas con la calidad y un bajo trabajo en equipo, a todo se une que la planeación se realiza con generalidad para períodos de un año o sea, sólo planeación operativa y ausente la planeación estratégica y táctica.

La pobre estrategia financiera da como resultado que ella no tenga correspondencia con las utilidades. No se considera el tema de protección ambiental como prioritario ni tampoco el uso de las TICs y mucho menos de la Investigación e Innovación, aunque generalmente todos los empresarios plantean su positiva introducción de nuevos y mejorados productos y servicios, todo hace pensar que existen errores conceptuales en lo que realmente es la innovación. Actualmente se brinda un Servicio científico técnico permanente de la universidad para el diagnóstico, con enfoque de administración estratégica, del Modelo de Negocios de las PYME, on line o presencial, que identifica las áreas de oportunidad que contribuyen a incrementar de forma sostenible su competitividad y fomentar la cultura de la innovación y la cooperación, mediante el diseño de una Aplicación Web, que se programó en un ambiente cliente servidor, con un desarrollo en plataforma ejecutada sobre php y MySQL, con acceso controlado y alojada en el sitio de internet de la Facultad de Contaduría y Administración de la Universidad Autónoma de Coahuila, Unidad Torreón en México.

Es importante puntualizar el interés del equipo de investigadores del Laboratorio Empresarial, de incorporar al modelo un enfoque dinámico, considerando que las capacidades dinámicas en los modelos de negocios, “se representan como la piedra angular de la competitividad y la capacidad de adaptación de los conductores y la innovación en las empresas” (Eisenhardt y Martin, 2011). Por ello, el enfoque futuro del Modelo de Negocio de las PYME de la Comarca Lagunera apunta hacia un modelo dinámico. La innovación de un modelo dinámico, apropiado permitirá a las PYME como señala (Teece, Pisano y Shuen 2011), la capacidad de integrar, construir y reconfigurar competencias internas y externas para hacer frente rápidamente a los cambios del entorno.

PERCEPCIÓN ESTUDIANTIL DE LA CALIDAD DEL SERVICIO EDUCATIVO EN EL BACHILLERATO

Oscar Reyes Sánchez, Universidad Autónoma de Baja California
Marcela Reyes Pazos, Universidad Autónoma de Baja California
Jesús Aurelio Veyna Roacho, Colegio de Bachilleres de Baja California

RESUMEN

El Objetivo General de esta investigación es analizar las dimensiones clave relacionandas con la percepción de los alumnos de la calidad del servicio educativo en la Educación Media Superior. Del examen conjunto de las diferentes partes del objeto de estudio y de la evidencia empírica se obtienen conclusiones relevantes que pueden contribuir a diseñar e implementar líneas de mejora en las actuales estrategias de calidad en el nivel de educación pre-universitaria. Se ajustaron los conocimientos previos como la adaptación de la escala SERVQUAL y SERVQUALing. Se utilizó el método estadístico multivariable: regresión múltiple y reducción factorial, complementado con pruebas de validez y fiabilidad, apoyado en el software SPSS. Una de las aportaciones más importantes de esta investigación es adaptar un instrumento cuantitativo con el fin de apoyar a la planeación estratégica institucional del Colegio de Bachilleres y la mejora continua del servicio educativo medio superior.

PALABRAS CLAVE: Servqual, Servqualing, satisfacción del cliente.

STUDENT PERCEPTION OF SERVICE QUALITY EDUCATION IN THE HIGH SCHOOL

ABSTRACT

The general objective of this research is to analyze the key dimensions relacionandas with student perceptions of the quality of education in School Education. After examining all the different parts of the object of study and the empirical evidence obtained relevant conclusions that can help design and implement areas for improvement in current quality strategies in the level of pre-university education. Were adjusted prior knowledge and adaptation of the SERVQUAL scale and SERVQUALing. We used multivariate statistical method: multiple regression and factor reduction, supplemented with evidence of validity and reliability, supported by SPSS software. One of the most important contributions of this research is to adapt a quantitative instrument to support institutional strategic planning of the College of Bachelors and continuous improvement of the higher average educational service.

JEL:123

KEYWORDS: Servqual, Servqualing, Customer satisfaction.

INTRODUCCION

Uno de los enfoques que ha emprendido el sector educativo para hacer frente a los inminentes cambios que le exige la sociedad, es la adopción de modelos de gestión de comprobado éxito en el sector empresarial. Modelos de sistemas de gestión como ISO 9000, y el premio Malcolm Baldrige, así como los requerimientos gubernamentales específicos del sector universitario, plantean la medición de la calidad del servicio como herramienta de soporte al control y a la toma de decisiones. Con la Evaluación de la calidad del servicio se busca contribuir al desarrollo de un sistema de gestión de la calidad en una

organización. La calidad del servicio, en términos generales, es el resultado de comparar lo que el cliente espera de un servicio con lo que recibe.

En este trabajo de investigación se partirá de un instrumento de medición una versión modificada del SERVQUAL, se realizarán las modificaciones pertinentes que lleven a conocer la percepción de la calidad de los servicios por parte de los estudiantes. El SERVQUAL de referencia presenta 22 variables para evaluar las expectativas y 22 para las percepciones, agrupadas en cinco (05) dimensiones: Elementos Tangibles, Confiabilidad, Capacidad de Respuesta, Seguridad y Empatía. Se modificarán de acuerdo a las condiciones sociales, económicas y culturales mexicanas en particular de Baja California.

Primero se establecerán los métodos y materiales a utilizar, luego se presentaran los resultados que se pretenden lograr en la investigación, fundamentado en el análisis de fiabilidad, y determinar las dimensiones de la calidad del servicio educativo universitario. Se discutirá la determinación de la validez del instrumento de evaluación y la determinación de la Importancia relativa de los factores previamente establecidos. Finalmente, se presentará el Modelo SERVQUAL modificado y propuesto para el Plantel Mexicali del Colegio de Bachilleres de Baja California. En este modelo propuesto, se plantea una visión global del proceso de medición de la calidad del servicio e incluirá el mejoramiento continuo de dicho proceso. El cambio de paradigma hacia un reto a la calidad, la rendición de cuentas, la excelencia educativa, y los avances sucedidos últimamente a nivel mundial, liderados por la globalización y el Internet, han traído como consecuencia diversidad de oportunidades de estudio en los diferentes niveles educativos. Las características políticas, económicas y sociales actuales demandan mayores exigencias de aquellos especialistas que diseñan y planifican las actividades de formación educativa

Planteamiento del problema: ¿Qué relación existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los estudiantes de bachillerato del plantel Mexicali del COBACH de B.C. durante el periodo escolar 2012-1? Según Mejías, Reyes y Maneiro (2006), Mejías (2006), Reyes y Reyes (2012), Reyes (2012) las dimensiones de la calidad del servicio se dividen en: Elementos Tangibles, Confiabilidad, Capacidad de Respuesta, Seguridad y Empatía y presentan 22 indicadores básicos traducidos y adaptados a la educación superior. Definición según Parasuraman (1988): Las percepciones de calidad de los clientes están influenciadas por una serie de diversas diferencias que ocurren en el lado de quien ofrece el servicio, y proponen la necesidad de examinar la naturaleza de la asociación entre la calidad del servicio percibida por el cliente y sus determinantes.

Justificación. Hoy en día el trabajo del administrador en las organizaciones está directamente relacionado con los conceptos de calidad. La teoría de Parasuraman, mide la calidad del servicio, con el instrumento Servqual, y el Servqualing propuesto por Mejías, adapta este instrumento al sector educativo, denominado Servqualing. El servqual de Parasuraman ha sido aplicado en empresas internacionales y nacionales, y el servqualing de Mejías, implementado en instituciones latinoamericanas de educación superior, mostrando bastante aceptabilidad en su utilización en la medición de la calidad del servicio educativo en Latinoamérica. Según Deming (1993 citado en Evans y Lindsay, 2000) la calidad debe dirigirse a las necesidades del consumidor, tanto presentes como futuras, y se determina por las interrelaciones entre los factores como el producto, usuario, y servicio. En el proceso administrativo de la empresa, en la etapa de control, se compara lo real con lo planeado. El control de calidad total tiene como propósito el cumplimiento de los requisitos propuestos por el consumidor, la prevención de la comisión de errores que reduzcan la calidad del producto, la intención de fabricar productos sin defectos y, reducir al mínimo el costo del incumplimiento relacionado con la calidad. Las empresas extranjeras y nacionales han alcanzado avances trascendentales en su ejercicio después de haber implantado un sistema de gestión de calidad total, ofreciendo productos y servicios de mejor calidad. En México, la calidad se ha difundido muy rápido de manera efectiva, al principio en la industria, y después en los sectores educativos, servicios y gobierno. Esta investigación es importante en la actualidad por que toca el concepto de la calidad del

servicio percibido por el cliente como una de las estrategias que utiliza actualmente la administración para mejorar la producción de servicios en las empresas gubernamentales, privadas, sin fin o con fin de lucro, con ello mantenerse y en lo posible liderar el mercado de servicios. Otro aspecto importante que se destaca en este estudio es el estudiar la percepción de la calidad del servicio, al ser un elemento más complicado para su medición que la calidad del producto, es doblemente abstracto, por un lado el servicio como tal es etéreo se produce sólo en el momento en que existe la interacción cliente – proveedor, y por otro se trabaja con las percepciones que entran en el terreno de la subjetividad del cliente, pero ha sido demostrado el hecho de ser confiable medir las percepciones con instrumentos como la escala de actitudes hacia el servicio llamada escala Likert o la escala de Diferencial Semántico. Se destaca un aspecto más, en el terreno de la Administración Educativa y en particular la educación media superior pública el tema resulta relevante y novedoso en los últimos años, como se expone en la revisión de la literatura, no es un acción cotidiana medir la percepción de la calidad del servicio educativo de sus clientes (estudiantes).

Con esta investigación se pretende hacer un aporte en lo teórico al adaptar la escala servqual y servqualing a la medición de la percepción de la calidad del servicio educativo de bachillerato desde la perspectiva del estudiante, y en particular la creación de conceptos (obtención de dimensiones latentes, subyacentes o empíricas) en el área de la Administración de los Servicios ad-hoc al contexto del servicio educativo prestado en el plantel Mexicali, del COBACH de B.C. Esta investigación presenta como un aporte sustancial un instrumento de investigación “escala de Likert” generado a partir del servqual y el servqualing, en el cual se revelan nuevas dimensiones latentes en la percepción del servicio educativo del nivel medio superior de los estudiantes investigados, haciendo este instrumento un referente pertinente para la realidad institucional del COBACH. El instrumento presenta confiabilidad y validez para ser utilizado en contextos similares. Hasta ahora no se ha realizado la medición de la percepción de la calidad desde la perspectiva de los alumnos en el nivel educativo medio superior desde la perspectiva del servqual, por lo tanto resulta interesante analizar la percepción que tienen los estudiantes de bachillerato y su utilidad en el desarrollo y en la planeación estratégica institucional.

La escala de medición de calidad de servicio educativo del nivel medio superior, obtenida en esta investigación, puede ser útil como herramienta de apoyo en la administración de la calidad de los servicios educativos de nivel medio superior. La presente investigación puede resultar de utilidad a los programas de Posgrado en Administración y Educación así como fuente bibliográfica y modelo de la utilización de técnicas de medición de la percepción de la calidad del servicio en general y la aplicación de los métodos estadísticos multivariantes como el coeficiente de fiabilidad alfa de Cronbach y el Análisis Factorial (Reducción de factores) para el estudio de variables latentes o empíricas, las cuales son muy particulares a cada organización educativa, aunque se confirman cada una de las afirmaciones que miden la percepción de la calidad del servicio educativo, las dimensiones empíricas varían en cada caso particular, al estar vinculadas a la cultura organizacional, a la cultura de los sujetos y a la cultura propia de cada localidad geográfica. Objetivo general de investigación: Analizar la relación que existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los estudiantes de bachillerato del COBACH de B.C. durante el periodo escolar 2012-1. Alcance del estudio: La presente investigación se delimita al estudio de caso del universo del plantel Mexicali del COBACH utilizando muestras a conveniencia del investigador por lo que los resultados obtenidos serán de carácter descriptivo correlacional cuya aplicación a otros contextos será mediante el uso de analogías y no con el rigor científico de paradigma epistemológico cuantitativo. Hipótesis general: La percepción de la calidad del servicio educativo está relacionada con la importancia atribuida a las dimensiones que integran la calidad del mismo de los estudiantes del COBACH durante el periodo escolar 2012-1.

REVISIÓN DE LITERATURA

Se parte de los conceptos de las categorías usadas por Parasuraman et al. (1988,1991), y Mejías (2006): Dimensión Elementos tangibles: Apariencia de las instalaciones Físicas, Equipos, Personal y Materiales de Comunicación. Dimensión Empatía: Atención individualizada que Ofrece la Institución a los Estudiantes. Dimensión Seguridad: Conocimientos y atención Mostrados por el Personal de la Institución y sus Habilidades para inspirar Credibilidad y Confianza. Dimensión Confiabilidad: Habilidad para ejecutar el Servicio Prometido de Forma Fiable y Cuidadosa. Dimensión Capacidad de Respuesta: Disposición y Voluntad del Personal de la Institución para ayudar al Estudiante y Proporcionar el Servicio. Variables subyacentes: Los indicadores del instrumento que mide la percepción de la calidad del servicio, se organizan en dimensiones diferentes a las teóricas, de acuerdo a la cultura educativa universitaria propia, particular, diferente que la hace distintiva de otras organizaciones, pero también se presentan los casos en los que se confirman las dimensiones teóricas, su importancia radica en identificar con precisión la percepción para atender las necesidades de los alumnos y de la organización educativa.

METODOLOGÍA

La presente investigación se delimita al estudio de caso del universo del plantel Mexicali del COBACH, se manejaron muestras a conveniencia del investigador por lo que los resultados obtenidos son de carácter descriptivo y descriptivo correlacional cuya aplicación a otros contextos será mediante el uso de analogías y no con el rigor científico de paradigma epistemológico cuantitativo. El estudio de caso, se inicia con el paradigma epistemológico cuantitativo, Hipotético Deductivo. Universo. La población total de estudiantes es de 1185 en el turno matutino y el vespertino. Muestra. Se obtuvieron 400 encuestas del total de la población, dado las condiciones del estudio se utilizó un muestreo de tipo no probabilístico por conveniencia del investigador. Descripción del instrumento de medición. Se utilizó un instrumento de medición cuantitativa “Tipo escala de Likert”, versión modificada del SERVQUAL, el SERVQUALing que contempla cinco dimensiones: Elementos Tangibles, Confiabilidad, Capacidad de Respuesta y Seguridad y Empatía. Se obtuvo una confiabilidad del instrumento de 0.955 de coeficiente alfa de Cronbach.

RESULTADOS

Se obtuvieron resultados confiables en la definición de la relación entre las percepciones de los estudiantes de bachillerato de la calidad del servicio educativo universitario recibido y la importancia atribuida a las dimensiones que integran la calidad del mismo, en el Plantel Mexicali, del Colegio de Bachilleres de Baja California, durante el periodo escolar 2012-1. Una vez obtenido el procesamiento de los resultados, por medio de las medidas estadísticas se detectaron los puntos de mejora para el Plantel, con el fin de contribuir al incremento en la calidad del servicio, y lograr un mejoramiento en el nivel de satisfacción de los estudiantes. Se obtuvieron las dimensiones latentes de la percepción de la calidad del servicio, utilizando la técnica de estadística multivariable de análisis factorial, reducción de factores, apoyados en el modelo de regresión múltiple, análisis de componentes principales y con la técnica de rotación VARIMAX. Se obtuvieron dos dimensiones latentes que son Empatía Eficiente y Apariencia y Eficacia. El Valor del determinante estadístico es de 0.000, excelente dato para realizar el análisis de factores. El estadístico KMO arrojó un valor de 0,954, lo que quiere decir que hay factores que relacionan a los datos y que puede utilizarse el análisis de factores. El valor arrojado para las prueba de Bartlett fue de 5712.882, con un nivel de significación de 0.000, por lo que fue una evidencia de que el modelo de factores era adecuado para explicar los datos.

Se presentan los estadísticos descriptivos de la *percepción de la calidad de servicio en general* y la media por cada una de las dimensiones. El punto de mejora prioritario se observa en la dimensión de Confiabilidad: La Habilidad para ejecutar el servicio prometido de forma fiable y cuidadosa, la media general de esta dimensión es 3.3, no está ni de acuerdo ni en desacuerdo. Ver tabla 1.

La media general de dimensión *elementos tangibles* por redondeo se encuentra en el nivel de acuerdo con la calidad en esta dimensión, el indicador prioritario de mejora es el de la afirmación 4: Los elementos materiales (folletos, reportes y similares) son visualmente atractivos, con una media de 3.3, no está ni de acuerdo ni en desacuerdo. Ver tabla 2. La media general de la dimensión *confiabilidad* por redondeo se encuentra en 3.3, ni de acuerdo ni en desacuerdo con la calidad en esta dimensión, los indicadores prioritarios de mejora son las afirmaciones 5, cuando el personal de la institución promete hacer algo en cierto tiempo, lo hace; 6, Cuando tiene un problema, en la institución muestran interés en solucionarlo; 7, El personal de la institución realiza bien el servicio desde la primera vez; y 9, El personal de la institución mantiene sus expedientes sin errores; se perciben en el nivel de ni acuerdo ni en desacuerdo. Ver tabla 3. La media general de la dimensión *capacidad de respuesta* por redondeo se encuentra en el nivel de acuerdo con la calidad en esta dimensión, los indicadores prioritarios de mejora son las afirmaciones 11, El personal de la institución le ofrece un servicio puntual y 13, El personal de la institución se encuentra disponible para atenderle, están en el nivel de ni acuerdo ni en desacuerdo. Ver tabla 4. La media general de la dimensión *seguridad* por redondeo se encuentra en el nivel de acuerdo con la calidad en esta dimensión, los indicadores prioritarios de mejora son las afirmaciones 14 El comportamiento del personal de la institución le inspira confianza y 16 El personal de la institución es amable con usted; al no estar ni de acuerdo ni en desacuerdo con ellas, Ver tabla 5.

La media general de la dimensión *empatía* por redondeo se encuentra en el nivel de acuerdo con la calidad en esta dimensión, los indicadores prioritarios de mejora son las afirmaciones 18, El personal de la institución le da una atención individualizada y 22, El personal de la institución comprende las necesidades de sus estudiantes. Ver tabla 6. Esta tabla presenta los coeficientes de correlación de la media general de la percepción de la calidad de servicio educativo en el nivel medio superior con cada una de las dimensiones teóricas (Elementos tangibles, confiabilidad, capacidad de respuesta, seguridad y empatía). Ver tabla 7. Esta tabla presenta las afirmaciones (indicadores) pertenecientes a cada dimensión latente: *Empatía eficiente y Apariencia y Eficacia*. El total de las 22 afirmaciones, en teoría se encuentran distribuidas en cinco dimensiones teóricas, en el caso de los alumnos bajo estudio, han agrupado los indicadores en sólo dos dimensiones según su percepción. Ver tabla 8.

La media general de la *percepción de la calidad del servicio educativo del nivel medio superior* es de 3.5, por redondeo aritmético sube a 4, significa que se está de acuerdo con la calidad del servicio educativo recibido. En la dimensión latente de Empatía Eficiente se tiene una medición de 3.5, están de acuerdo con la atención individualizada y la eficiencia en el servicio, en la dimensión latente de Apariencia y Eficacia la medición es de 3.5, de acuerdo con los aspectos visuales de las instalaciones, material gráfico de comunicación y la apariencia alineada del personal. Ver tabla 9. Se muestra un alto coeficiente de correlación r de Pearson superior a 0.90 en cada una de las dimensiones latentes con la media general de la percepción de la calidad del servicio educativo en el nivel medio superior. Ver tabla 10.

Tabla 1: Estadísticos Descriptivos

	N	Mínimo	Máximo	Media	Desv. típ.
Elementos Tangibles	400	1.75	5.00	3.7981	.65156

N válido (según lista)	400					

Esta tabla presenta las estadísticas descriptivas generales y por cada una de las dimensiones latentes.

Tabla 10: Correlación entre las dimensiones latentes y media general.

Dimensión	r de Pearson	Significancia-2 colas Porcentaje de p Valor
Empatía eficiente	0.968	0.000
Apariencia y eficacia	0.959	0.000

Se muestra el coeficiente de correlación r de Pearson de cada una de las dimensiones latentes con la media general de la percepción de la calidad del servicio educativo en el nivel medio superior.

CONCLUSIONES Y RECOMENDACIONES

Se confirmó la hipótesis general “La percepción de la calidad del servicio educativo está relacionada con la importancia atribuida a las dimensiones que integran la calidad del mismo de los estudiantes del COBACH durante el periodo escolar 2012-1”. Se obtuvieron las dimensiones latentes: Empatía Eficiente tiene una medición de 3.5, los alumnos están de acuerdo con la atención individualizada y la eficiencia en el servicio y una segunda dimensión latente de Apariencia y Eficacia con una medición es de 3.5, de acuerdo con los aspectos visuales de las instalaciones, material gráfico de comunicación y la apariencia alineada del personal. Ambas con un alto coeficiente de correlación de Pearson de más de 0.90, $p = 0.000$. El instrumento utilizado resultó útil, válido y confiable para medir la percepción de la calidad del servicio educativo del nivel medio superior y puede utilizarse en instituciones con condiciones similares. Se sugiere aplicar el instrumento de investigación aquí utilizado en otras instituciones similares dentro del contexto nacional y reafirmar su validez y confiabilidad.

LAS INSTITUCIONES MICROFINANCIERAS EN LA INCLUSIÓN DE LAS REGIONES DE OAXACA

Rosa María Velázquez-Sánchez, Universidad Autónoma Benito Juárez. Oaxaca

Omar Raúl Solana Vásquez, Universidad Autónoma Benito Juárez. Oaxaca

Arcely Galán López, Universidad Autónoma Benito Juárez. Oaxaca

RESUMEN

El Estado de Oaxaca es conocido por sus atractivos turísticos, su mosaico cultural y geográfico, en contraste son evidentes la pobreza y la marginación. En Oaxaca se localizan 570 municipios de los 2445 que integran la república mexicana y se distribuyen en siete regiones. La inclusión financiera es considerado un indicador de desarrollo económico, sin embargo, de acuerdo al reporte de la (CNBV, Reporte de Inclusión Financiera, 2010), Oaxaca destaca por su bajo índice de inclusión financiera. Aunado a lo anterior y a pesar de la aprobación de las Leyes de Ahorro y Crédito Popular (2001) y que Regula las Cooperativas de Ahorro y Crédito (2009), no existía información y control de las IMF (cajas y organismos de ahorro y crédito popular), no se conocía la forma en que participaban en la inclusión financiera y no se contaba con información de los servicios que proporcionaban. Se planteó ubicar las IMF y analizar la contribución de los servicios que prestan en los indicadores de inclusión financiera. Se aplicó una entrevista semi-estructurada a 325 administradores. Los datos obtenidos permitieron hacer una primera caracterización y mapeo de las Instituciones y un análisis de los servicios que ofrecen. Se probó que en seis regiones, las IMF contribuyen con sus servicios a los indicadores de inclusión financiera y desarrollo.

PALABRAS CLAVE: Microfinanzas, inclusión financiera, regiones económicas

THE MICRO FINANCE SECTOR IN FINANCE INCLUSION IN OAXACA REGIONS

ABSTRACT

Oaxaca state is known by its touristic attractive, its culture and geographic variety, as contrast its evident the poverty and the lack of services. In Oaxaca there are located 570 districts of 2445 in all Mexico and they are distributed in seven regions. The finance inclusion is considered as a fact of economic development, however, according to CNBV report (Report of finance inclusion, 2010), Oaxaca stands out by its very low fact of finance inclusion. Also and although of the approval of savings and popular credits laws (2001) that judge the savings and credit cooperatives (2009), there was no information and control of the IMF (banks, savings companies and popular credit), there was as they participate in the finance inclusion was not known and there wasn't information about their services. We propose to locate the IMF and analyze the contribution of their services in the finance inclusion. It applied a half-structured interview to 325 managers. We obtained facts allowed to do a first distinguish and mapping of the IMF and analysis of their services. It was proved in six regions. The IMF's contributes with their services to upgrade the facts of finance inclusion and development.

INTRODUCCIÓN

Uno de los indicadores importantes para considerar que un país o región es económicamente desarrollado, es el grado de inclusión financiera de sus habitantes con respecto al acceso a instituciones, productos y servicios financieros, dicho indicador es el que determina a nivel regional y local el grado de atención a los usuarios de los servicios financieros. De acuerdo a un artículo publicado en la revista de Ejecutivos de Finanzas del IMEF (2009). La inclusión financiera puede ser definida como el nivel de inclusión o exclusión en la cual todas las personas con edad laboral tienen acceso y gozan de un conjunto de servicios financieros de calidad, que cubran los servicios de pagos, ahorros, créditos, fondos para el retiro y seguros, regulados a través de un sistema de protección al usuario y fomentados por medio de una educación financiera. En México todavía son muchas las personas que están alejadas del sistema financiero debido a una falta de cultura financiera, debido a la distancia que existe entre su residencia y los lugares que ofrecen dichos servicios y productos, o bien a los costos que requieren cubrir para acceder a estas alternativas, el estado de Oaxaca se destaca por contar con un grupo significativo de personas sin acceso a los servicios financieros de la banca formal. Lo destacable es la falta de interés que ha mostrado la banca formal para atender a este sector de la sociedad.

El estado de Oaxaca es considerado como un mercado poco atendido por servicios financieros, porque sólo el 6% de los 570 municipios que lo conforman cuentan con servicios bancarios, en comparación con la media nacional de 64% de los municipios con una sucursal bancaria es mínima la presencia de la banca tradicional. Sin embargo, de acuerdo a (Consultores, 2011), en el territorio oaxaqueño se localizan aproximadamente 300 instituciones microfinancieras, distribuidas en un territorio con más de 2.4 millones de habitantes adultos (INEGI, 2011). Desafortunadamente en los últimos años más de 25,000 ahorradores han sufrido los efectos de la falta de regulación y supervisión con el daño directo a sus recursos por desfalco o fraude.

A pesar de las condiciones en las que operan la mayoría de instituciones microfinancieras en el territorio oaxaqueño, todavía representan la única opción de acceso a servicios financieros para muchas familias. Por tales razones resultó importante analizar las condiciones de los servicios microfinancieros y su participación en la inclusión financiera en el Estado de Oaxaca. Por lo que se planteo la interrogante a resolver. ¿Cuál es la importancia de las instituciones microfinancieras en la inclusión financiera en las regiones del Estado de Oaxaca? El **objetivo** general de esta investigación fue analizar la contribución de los servicios que prestan las IMF en los indicadores de inclusión financiera en las ocho regiones del Estado de Oaxaca.

REVISIÓN DE LITERATURA

Para la Comisión Nacional Bancaria y de Valores (CNBV), inclusión financiera significa tener acceso a un conjunto de productos y servicios financieros, los cuales incluyen crédito, ahorro, seguros, sistemas de pago y pensiones, así como educación financiera y protección al consumidor. De acuerdo a dicha definición lo ideal sería el acceso de la mayoría de personas, sin embargo, existe un sector caracterizado por escasos recursos, habitar en localidades marginadas y a cuyos habitantes no llegan los servicios financieros. Por lo que una alta inclusión financiera significa que todos los actores que en ella participan ganan. Lo anterior resume la importancia de la inclusión financiera en las actividades económicas de la región, pero también en su desarrollo. El nivel de rezago en México a la accesibilidad a servicios financieros es importante si se compara con la de países desarrollados. Mientras que en México se cuenta con 7.6 sucursales financieras por cada cien mil habitantes en España cuentan con 95.9 sucursales. La consecuencia directa de la inclusión financiera se observa en los niveles de ahorro y en el crédito, pues mientras en México el 37% de los hogares registran algún tipo de ahorro y el 26% manejan un crédito, en España el 92% de los hogares ahorran y el 77% cuentan con créditos.

De acuerdo a (Hernández-Romero, 2006), en términos generales se concibe a las microfinanzas como, un tipo de financiamiento a pequeña escala, pero con la característica de que es para familias pobres, por lo que aludiendo al termino de finanzas son las que tienen que ver, no solo con el acceso u obtención del crédito, sino con el uso y manejo del financiamiento tanto de los que proveen como de los que reciben. El concepto convencional de microfinanzas es que se trata de un instrumento diseñado para otorgar, a las familias más pobres, pequeños préstamos (microcrédito), para apoyarlos económicamente para realizar actividades productivas (negocios-autoempleo).

Esta definición considera solamente la visión de los actores (instituciones), a quienes se dedican exclusivamente a brindar microcréditos y no a los que reciben el servicio. En otras definiciones revisadas se consideran otros servicios (Otero M. y., 1998), como el ahorro que menciona Guilli citado por (Cuesta-Sanz, 1999); seguros y transferencias de remesas en algunos casos (Gentil, 1997). En su concepción más amplia las microfinanzas deben considerar un enfoque holístico como lo plantean (Weinmann, 1999) y (Valdez, 2004), ellos mencionan que las microfinanzas en la actualidad representan diversos servicios ligados a las telecomunicaciones, la educación e incluso la salud, y se presentan como un mecanismos de desarrollo económico regional con la meta de combatir la pobreza y de inducir al desarrollo microempresarial.

Y como sostiene (Otero P. , 2004), las microfinanzas no son finanzas pequeñas, sino otro tipo de proyecto, son finanzas que no pueden ser sometidas a las reglas estandarizadas del sistema bancario. Sin embargo, en la mayoría de las definiciones no se considera la percepción de los actores, es decir los usuarios del financiamiento. Se han desarrollado metodologías como las de las microfinanzas solidarias, para tratar de incluir a los usuarios, pero hay pocos casos que promuevan verdaderos procesos solidarios y de desarrollo del potencial humano a través de microfinanciamiento.

De acuerdo a (Pro-Crédito, 2009), las instituciones microfinancieras no constituyen una figura jurídica en sí misma, si no la que agrupan distintas figuras que tienen en común el uso de metodologías diseñadas para ofrecer servicios financieros a la microempresa y menciona que las figuras jurídicas más comunes son: SOFOM (Sociedades Financieras de Objeto Múltiple), S.A. DE C.V.; A.C. (Asociación Civil); I.A.P. (Instituciones de Ahorro y Préstamo) y SOFIPO (Sociedades Financieras Popular). De acuerdo a (Esquivel Martínez, 2009), hasta el 2009 a nivel nacional en el sector microfinanciero se observó un crecimiento exponencial de la figura jurídica de la SOFOM (Sociedades Financieras de Objeto Múltiple), figura jurídica con la cual se apoyó la creación de nuevas empresas y se impulsó la transformación de organizaciones de la sociedad civil. Debido al apoyo hacia el tipo de organización SOFOM algunas de las Asociaciones Civiles e Instituciones de Asistencia Privada se transformaron en SOFOMES.

A pesar de que (Pro-Crédito, 2009) solo considera las figuras de SOFOM, A.C., I.A.P. Y SOFIPO, en la realidad se encuentran operando otros modelos de instituciones microfinancieras, entre ellas la figura de Sociedad Cooperativa de Ahorro y Préstamo (SOCAP), la cual es la más frecuente en el caso del estado de Oaxaca, lo que denota la falta de información actualizada del sector y las condiciones en las que operan, también la falta de supervisión de sus actividades.

En otros países latinoamericanos como Argentina (Bukstein, 2004), se han realizado estudios para analizar la participación de las entidades microfinancieras como factor de inclusión para la población atendida por las mismas. En los resultados de la autora se observa un análisis de los servicios que ofrecen y la importancia que representa para los usuarios. Sin embargo, ese estudio difiere en las condiciones de la población que analizó, solo habitantes de Buenos Aires e incluyo un cuestionario de opinión de los usuarios. En Nicaragua (Bastiaensen & Marchenti, 2010), al analizar la cadena de valor en empresas rurales en el país centroamericano, encontraron que los servicios que

prestan contribuyen en la creación e impulso de microempresas, sin embargo, no compararon la contribución de las mismas como parámetro de inclusión financiera.

(Serrano, 2009), analiza al sector microfinanciero colombiano desde la perspectiva del desarrollo, en su estudio compara la participación de las instituciones microfinancieras en relación a la banca tradicional que en Colombia se encuentra incursionando en servicios microfinancieros. En su estudio encuentra que son los microcréditos los que permiten que dichas instituciones participen en la inclusión financiera, principalmente de microempresarios.

En México (Cornejo & Galicia, 2011), presentaron como resultado de su investigación el análisis de los servicios que reciben los microempresarios de las microfinancieras y la impresión que tienen de los mismos y concluyeron que para los entrevistados representó la única forma de acceder al crédito, principalmente por el tipo de metodología empleada por la institución en la que se les facilita con la figura de microcrédito. Como se puede observar en los estudios revisados y que anteceden a esta investigación, no existe una línea de investigación que aborde desde la perspectiva de la inclusión financiera, el estudio de las instituciones microfinancieras y su contribución. Debido a la falta de información y de investigación formal en el tema y porque para un Estado como Oaxaca que en su territorio cuenta con más de 2.4 millones de habitantes adultos (INEGI, 2011). Con una población pobre (Cuesta-Sanz, 1999). Y en comparación con la media nacional de 64% sólo el 6% de los 570 municipios cuentan con una sucursal bancaria, resulta la importancia de conocer la participación que los servicios que prestan las instituciones microfinancieras en la inclusión financiera de sus habitantes.

METODOLOGÍA

Para esta investigación se tomaron en cuenta las condiciones del estado de Oaxaca. En las que se localizaron las instituciones microfinancieras que se incluyeron en este análisis. Con una población pobre (INEGI, Estadísticas Básicas de Economía en el Estado de Oaxaca, 2011), con índices de inclusión financiera por debajo del índice nacional (Pro-Crédito, 2009), en un universo de IMFs con diversas figuras jurídicas y distribuidas en el entramado del multicultural y complejo territorio oaxaqueño. Originalmente se contemplo la realización de un censo para que con los resultados se integrara un sistema de instituciones microfinancieras del Estado de Oaxaca. El censo incluía a un universo de aproximadamente trescientas instituciones microfinancieras, las cuales eran la referencia de (Consultores, 2011), esta primer etapa se encuentra en proceso de georeferenciación.

Muestra

Durante el recorrido para recolectar la información, se encontró que el sector muestra una dinámica de transformación. Los datos considerados por (Consultores, 2011), no coincidían con la realidad del sector. Situación que obligo a modificar la estrategia de localización original y se reestructuraron las rutas y recorridos para aplicar las entrevistas. El número final de instituciones incluidas en la encuesta fue de 325. La entrevista se realizó a gerentes o administradores de la institución microfinanciera. Los participantes fueron 325. Se incluyeron aspectos de localización, figura jurídica, características de organización, número de usuarios atendidos, cobertura de servicio (inclusión financiera en la región) y servicios prestados. La aplicación de la encuesta se realizó en las regiones de Valles Centrales, Istmo, Costa, Cañada, Tuxtepec, Mixteca y Sierra.

Tabla 1: Entrevistas por región a instituciones microfinancieras

Región	Microfinancieras	Porcentaje
Cañada	24	7,38%
Costa	43	13,23%
Istmo	28	8,62%
Mixteca	67	20,62%
Papaloapam	31	9,64%
Sierra	12	3,69%
Valles Centrales	120	36,92%
Total	325	100%

En esta tabla se muestra el resumen de los datos de las instituciones localizadas durante la encuesta realizada en el estado de Oaxaca. Fuente. Elaboración propia.

RESULTADOS

Los resultados mostraron que las instituciones microfinancieras incluidas en la encuesta, prestan diferentes paquetes de servicios microfinancieros a la población. Entre los servicios que prestan también incluyen servicios no financieros. Sin embargo, lo más sobresaliente es que los servicios que prestan en su mayoría no se encuentran autorizados por la (CNBV, Ley de ahorro y crédito popular, 2009), pero *si contribuyen en la inclusión financiera* de los habitantes de la región porque permite el acceso al por lo menos un servicio financiero para los adultos que las habitan.

Como se puede observar en la Tabla 2 la figura de SOCAP representa un 77.85% de la población distribuida en las siete regiones del Estado. También se encontró las figuras de SOFOM, SOFIPO, SOFINCO Y SOFOL, la cuales en conjunto con las SOCAP representan el 92% de IMFs. Se localizaron otras figuras como los denominados microbancos, uniones de crédito, asociaciones civiles, sociedades financieras y hasta casas de empeño ofreciendo servicios de préstamo y/o ahorro. Las SOCAP prestan un menú de servicios (préstamo, ahorro, remesas y microseguros) y son las instituciones microfinancieras con más cobertura de sus servicios a poblaciones alejadas y a pobladores con escasos recursos, principalmente mujeres y personas de la tercera edad. A pesar de que la SOCAP es la figura más representativa y que se caracteriza por ser la más viable para la regulación, los resultados indican que la mayoría de las instituciones microfinancieras localizadas en las regiones del estado de Oaxaca, ofrecen una variedad de servicios financieros que permiten considerar su participación en la inclusión financiera, pero algunos de los servicios que prestan no son los permitidos de acuerdo a su figura jurídica.

La falta de regulación y de supervisión de las operaciones de las instituciones microfinancieras pone entre dicho la relevancia de su participación como una alternativa de inclusión financiera porque actúan fuera de la ley y ponen en riesgo el patrimonio de los usuarios de sus servicios, por lo que habría que considerar que tan importante es que proporcionen un servicio en relación con el riesgo que ocasionan para el usuario del mismo. En términos de inclusión financiera y con respecto a la forma de operar de las IMFs en las regiones oaxaqueñas, un primer aspecto es el que representan los adultos que como socios participan en las mismas y que por consiguiente son usuarios de por lo menos un servicio microfinanciero.

De acuerdo a la Comisión Nacional Bancaria y de Valores, la inclusión financiera puede considerar el acceso de los adultos a por lo menos un servicio microfinanciero. Entre los indicadores establecidos por la misma CNBV se encuentra la presencia de un cajero para cada 10,000 habitantes o el acceso de a por lo menos un servicio de un porcentaje importante de la población. Los resultados mostraron que los servicios que prestan las instituciones microfinancieras involucran a un porcentaje importante de la población adulta, principalmente mujeres y a pesar de que muchos de los servicios prestados, no se encuentran regulados, son la única alternativa de observar inclusión

financiera. Un criterio que no especifica la CNBV es la participación de la población como socios y en este tipo de instituciones es el primer acercamiento a servicio. Como se observa en la tabla 3 las IMFs tienen como principales sujetos de inclusión financiera a sus socios, pero además proporcionan servicios de préstamo y ahorro a quince mil clientes en promedio por sucursal. También se observó que la cobertura de sus servicios es por lo menos en el área en la que se localiza la sucursal, pero también en la inmediata, la cual cubren a través de promotores, los cuales proporcionan al menos el servicio de crédito a los habitantes, por lo que se propone esta información como indicador de inclusión financiera regional.

Tabla 3: Número de Socios de las Instituciones Microfinancieras

Valles centrales	SOCAP	15537	19027	12.70%	15.55%
	SOFIPO	2000		1.63%	
	SOFOM	1490		1.22%	
Mixteca	SOCAP	20014	22779	16.35%	18.61%
	SOFOM	2765		2.26%	
	SOCAP	52044		42.53%	
Istmo	SOFOM	5900		4.82%	
	Unión de crédito	150	62894	0.12%	51.39%
	Banco	4800		3.92%	
Papaloapam	SOCAP	80	3580	0.07%	2.93%
	SOFOM	3500		2.86%	
Cañada	SOCAP	5376	7876	4.39%	6.44%
	SOFOM	2500		2.04%	
Sierra Sur	SOFIPO	2800		2.29%	
	SOCAP	3420	6220	2.79%	5.08%
	Total	122376		100.00%	

En esta Tabla se puede observar el comportamiento en el número de socios que participan en las instituciones microfinancieras y su importancia como sujetos a inclusión financiera. Fuente: Elaboración propia con base a los resultados observados

CONCLUSIONES

Los resultados obtenidos en esta investigación permiten responder a la pregunta de investigación. Las instituciones microfinancieras localizadas en las siete regiones del estado de Oaxaca, si participan con los servicios que prestan en la inclusión financiera de los habitantes que no cuentan con servicios bancarios. La inclusión financiera se manifiesta en términos de los servicios que las IMFs ponen al alcance de la población marginada por el sistema bancario tradicional y que permiten el acceso a por lo menos un servicio financiero a la población adulta.

Este resultado inicial propone considerar el indicador de acceso a servicios microfinancieros de la IMFS como indicador de inclusión financiera y así valorar con objetividad la participación de este tipo de instituciones en el desarrollo regional. La entrevista permitió obtener resultados cualitativos, los cuales permiten concluir que el sector microfinanciero en el estado de Oaxaca se escapa a una definición general. Se encuentra en una situación de vulnerabilidad por la falta de regulación, solo tres de las 325 instituciones se encuentran reguladas, y por la falta de supervisión, en su caso, por las autoridades municipales. La falta de regulación y supervisión no permite valor la participación de los servicios que prestan en la inclusión financiera.

La cobertura de los servicios prestados, incluidos los no regulados, representa el 100% para poblaciones marginadas, en términos de que los habitantes adultos por lo menos tengan acceso a un servicio, sin embargo, en muchas de las poblaciones la población adulta son mujeres. Lo que arroja resultados importantes para los índices de inclusión financiera en la que los informes oficiales sitúan al estado. Los servicios prestados por las instituciones microfinancieras se dirigen principalmente a proporcionar créditos, pero muchos de las instituciones incluidas en esta investigación no manifestaron contar con una metodología concreta, los entrevistados manifestaron que cada usuario requiere un trato particular, es decir debido a la población, no se pueden agrupar paquetes de servicios, lo que permite visualizar otros temas de investigación para analizar y diseñar

una metodología y estudiar el impacto de los servicios microfinancieros en la sustentabilidad de las comunidades.

Limitaciones

Las limitaciones importantes son los resultados preliminares que se presentan, falta definir los indicadores de inclusión financiera para este sector, generar índices de inclusión financiera para las regiones, pendientes para el siguiente avance de esta investigación.

LAS REDES DE CONOCIMIENTO: CASO MICROEMPRESA DEDICADA AL CULTIVO DE LANGOSTA LOCALIZADA EN PUEBLA, MÉXICO

María Antonieta Monserrat Vera Muñoz, Benemérita: Universidad Autónoma de Puebla

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

Gerardo Serafín Vera Muñoz, Benemérita Universidad Autónoma de Puebla

RESUMEN

El objetivo de este trabajo es indagar el papel que han desempeñado las redes sociales respecto a la transferencia de conocimientos en una micro empresa familiar dedicada al cultivo de langosta australiana. Para ello, se parte de que las redes sociales son un factor indispensable de la actividad empresarial, y que es a través de éstas como se puede tener acceso a diferentes recursos, entre otros a diferentes conocimientos: tecnológicos, administrativos y empresariales, que de otra forma no sería posible Basaldúa (2005). Asimismo, para llevar a cabo el estudio, se retoma el concepto de redes de conocimiento propuesto por Casas (2003), quien señala, que estas redes se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico y de mejoramiento de procesos productivos. Dentro de los resultados obtenidos, se encontró que las relaciones informales, específicamente las establecidas con Instituciones de Gobierno, Instituciones de Educación superior (IES), amigos, empresarios, proveedores son las que más contribuyen a la adquisición y mejoramiento de conocimientos tecnológicos, administrativos y empresariales. Siendo el aspecto clave en la construcción de las redes la confianza, la reciprocidad y la regularidad. La metodológica utilizada está fundada en el estudio de caso en una empresa dedicada al cultivo de langosta australiana.

PALABRAS CLAVE: redes de conocimiento, cultivo de langosta.

KNOWLEDGE NETWORKS: MICRO CASE LOBSTER CULTIVATION LOCATED IN PUEBLA, MEXICO

ABSTRACT

The objective of this work is to investigate the role played by social networks regarding knowledge transfer in a micro family business dedicated to growing Australian lobster. For this, it is assumed that social networks are an indispensable part of doing business, and it is through them as you can have access to different resources, including different knowledge: technological, administrative and business that otherwise would not be possible Basaldúa (2005). Also to carry out the study, takes the concept of knowledge networks proposed by Casas (2003), who notes that these networks are built through exchanges among a set of actors who have common interests in the development or application of knowledge scientific, technological or technical for a specific purpose, be it scientific, technological development and improvement of production processes. Among the results, we found that informal relationships, specifically those established government institutions, higher education institutions (HEIs), friends, employers, providers are the main contributors to the acquisition and improvement of technological, administrative and business. Being the key aspect in building networks of trust, reciprocity and regularity. The methodology used is based on the case study in a company dedicated to Australian lobster grows.

KEYWORDS: knowledge networks, lobster culture.

INTRODUCCIÓN

El objetivo de este trabajo es indagar el papel que han desempeñado las redes sociales respecto a la transferencia de conocimientos en una micro empresa familiar dedicada al cultivo de langosta australiana. Para ello, se parte de que las redes sociales son un factor indispensable de la actividad empresarial, y que es a través de éstas como se puede tener acceso a diferentes recursos, entre otros a diferentes conocimientos: tecnológicos, administrativos y empresariales, que de otra forma no sería posible Basaldúa (2005). Asimismo, para llevar a cabo el estudio, se retoma el concepto de redes de conocimiento propuesto por Casas (2003), quien señala, que estas redes se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico y de mejoramiento de procesos productivos. El trabajo se estructura de la siguiente forma; Marco de referencia, el cual contiene el concepto de redes las redes sociales en México y los modelos de redes entre otros puntos. La metodología enfocada estudio de caso. Posteriormente se presentan generalidades del cultivo de langosta y algunos aspectos del mercado, continuando con el estudio caso en donde se describen, diferentes aspectos de la empresa como sus orígenes, estructura de operación producción, mercado y resultado del análisis del caso de estudio finalizando con las conclusiones y bibliografía.

REVISIÓN DE LA LITERATURA

El marco de literatura se integra por las aportaciones de diferentes autores que abordan el tema de redes de conocimiento y que consideran para esta investigación.

Definiciones De Las Redes De Conocimiento

Lara (2006; citado por Anunziata y Macchiarola 2010) explica las redes de conocimiento como individuos, grupos o instituciones, asociados con un fin en común: "...las redes de conocimiento son asociaciones entre individuos, grupos o instituciones que tienen una agenda común en torno a intereses diversos tales como: dar solución a problemas, compartir recursos e infraestructura, propiciar la cooperación, la solidaridad social, como así también el intercambio de información y conocimientos y la transferencia de tecnología". Casas (2001; citado por Prada, 2005) menciona que, estas redes implican desde redes profesionales, hasta redes de entretenimiento, pero también abarcan la transmisión de conocimientos o innovaciones que dan lugar a la formación de espacios regionales de conocimiento. De acuerdo a Moreno (2004), el objetivo de las redes de conocimiento es dar una respuesta adecuada a los nuevos desafíos que presenta la sociedad del conocimiento. Para fines de esta investigación se define a las redes de conocimiento como el conjunto de individuos, empresas, asociaciones y agentes de conexión que colaboran para la generación del conocimiento mediante el intercambio de información y la transferencia de tecnología con fines de innovación.

Elementos Que Integran Las Redes Del Conocimiento

Las redes de conocimiento, están integradas por el elemento humano, así como por factores tecnológicos y sociales. Prada (2005) hace énfasis en cuatro elementos necesarios para la creación de Redes de Conocimiento, entre los cuales menciona: 1) Comunidades y equipos expertos: los equipos tienen tareas, las comunidades se mueven por los intereses de los participantes y el experto cualifica y filtra la información: 2) Comunidades de conocimiento: comunidades de cooperación. El trabajo colaborativo

produce mejores resultados que el trabajo individual: 3) El conocimiento, como la relación entre el sujeto y el objeto: 4) Conocimiento e innovación: plataforma base en la productividad.

Formación De Redes De Conocimiento

Casas (2001) menciona que en un principio las fuentes que contribuyen al desarrollo de innovación, tenían su centro de atención en las empresas, porque se pensaba que los factores de las mismas, contribuían de manera directa en los procesos de aprendizaje en los sectores industriales. “Sin embargo a nivel internacional se conoce más que los conocimientos producidos en el ámbito de las universidades y los centros de investigación públicos constituyen un importante insumo para los procesos de innovación en las empresas...Así mismo hemos observado la transferencia de flujos de conocimiento, entre distintos actores e instituciones, que están dando lugar a la construcción de redes incipientes a las que hemos denominado redes de conocimiento”. Las redes se construyen con las relaciones que se van creando entre los diferentes actores involucrados en una relación (Granovetter, 1973). Continuando con Granovetter (op cit), la idea básica es que los individuos son actores intencionales, con motivaciones sociales y económicas, cuyas acciones están influenciadas por una red de relaciones en las cuales están insertos. Así los actores y las relaciones que mantienen entre ellos, forman una red social, siendo un aspecto clave la posición que cada actor ocupa en ella, lo que forma la estructura social de la red, la cual a su vez, implica oportunidades y restricciones para los actores. Además, de los aspectos considerados sobre las redes de conocimiento, Casas (2003), señala que en el análisis de redes es necesario tomar en cuenta las siguientes dimensiones: 1) el contexto institucional de la colaboración entre los sectores público y privado; 2) la estructura o morfología de las redes; 3) la génesis, desarrollo y dinámica de las redes; 4) el contenido y/o los insumos que se intercambian y, 5) los resultados de las redes y del intercambio de conocimientos. Estas dimensiones incluyen un conjunto amplio de características, que se sintetizan en el Cuadro 1.

Modelos Para El Desarrollo De Las Redes De Conocimiento

En la era del conocimiento y la información, la mayoría de los trabajos se realiza de manera colaborativa, mediante el trabajo en grupo, con la finalidad de obtener el mejor resultado posible con la aportación de diversos puntos de vista, por lo cual se hace necesaria la existencia de modelos que permitan desarrollar redes de conocimiento de acuerdo a las necesidades del grupo de trabajo.

Lara (2007) muestra cinco modelos de redes de conocimiento, los cuales brindan alternativas de interacción diferentes para la creación de conocimiento: 1. Modelo del ágora. Establece el espacio en el cual investigadores y destinatarios de proyecto establecen mecanismos de interacción y desarrollo, el espacio puede ser físico o virtual (recordemos que las TIC's permiten romper las barreras del tiempo y del espacio). Este tipo de modelo presenta una auto-organización y una autorregulación, lo cual disminuye la jerarquía organizacional. 2. Modelo de Agregación. Éste modelo está centrado en la satisfacción del cliente, para lo cual se hace uso de un agente de enlace entre el grupo de investigación y el usuario de la información, lo cual agrega un valor de la demanda y permite un control jerarquizado. 3.

Cuadro 1: Dimensiones para el análisis de las redes sociales

Contexto institucional	Estructura o morfología de las redes (Integrantes)	Dinámica: direccionalidad, duración, frecuencia comunicación y alcance	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
Presencia de Instituciones de Educación Superior (IES), centros públicos de investigación, asociaciones empresariales, instituciones mixtas público-privadas.	Noción de red: los nodos representan a los actores y las áreas que conectan los nodos representan las relaciones entre los actores. Las redes involucran flujos de información entre varios de los nodos de la red. Las redes son el elemento crítico de la formación de mercados, mediante su contribución al aprendizaje. El desarrollo de la red es un proceso evolutivo detonado por la innovación, en el que el aprendizaje es el aspecto central de la red.	Direccionalidad, durabilidad, intensidad y frecuencia. Dinámica formal o informal. Dinámica horizontal y vertical. Los procesos de comunicación. El alcance espacial o territorial.	Sobre la idea de conocimiento: tácito y codificado; intercambio de conocimiento. Flujos e insumos de conocimiento: endógeno y exógeno. Tipos de conocimiento: científico, tecnológico, empresarial. Fuentes: acceso a fuerza de trabajo altamente capacitada, universidades locales e internacionales, competidores, alianzas, incentivos gubernamentales, prensa y artículos sobre comercio, eventos locales e internacionales. Canales para cruzar fronteras: contratación de nuevo personal, publicaciones, reuniones, modos informales de comunicación, movilidad de personas entre organizaciones. Extensión de fronteras: relaciones personales informales.	Innovaciones radicales o incrementales. Generación de capacidades en las empresas. Generación de conocimiento. Resultados sociales, económicos y/o políticos. Creación de redes de conocimiento.

Fuente: elaboración propia con datos de Casas (2003). El cuadro muestra características que permiten identificar la existencia de las redes sociales o de conocimiento

Modelo de Cadenas de valor. Éste modelo requiere de un agente integrador, el cual se encuentre en contacto con un grupo de investigadores innovadores, el cual se encarga del diseño, producción y distribución de productos o servicios. Creando soluciones de acuerdo a las problemáticas planteadas por los solicitantes. En cada etapa del proceso se añade valor, puesto que cada proyecto es ajustado a las necesidades del cliente. En este modelo se tiende un control jerárquico elevado. 4. Modelo de Alianza. Se da entre comunidades con la finalidad de obtener un bien común, por lo tanto se sustentan principalmente de las relaciones entre los colaboradores (individuos, comunidades u organizaciones). Con este modelo se busca con alto nivel de integración con el mínimo nivel jerárquico. 5. Modelo de Red distributiva. Este modelo integra a las demás redes, propone la distribución del conocimiento entre las mismas. Ésta se transfiere mediante el uso de un sistema de gestión de conocimiento en las redes de alta velocidad.

Dinámicas De Redes De Conocimiento

Un aspecto más sobre el que es necesario abundar, es naturaleza formal o informal de las relaciones que conforman la red. Las redes formales, según Birley (citado en Levanti, 2001: 1046), se componen de los bancos, las agencias locales o nacionales, así como las cámaras y otras representaciones oficiales. Las redes informales se refieren a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios. Para Tapia y Tapia (2010), existen dos tipos de relaciones en las redes: a) Las redes formales.-Se componen de las instituciones bancarias, las agencias locales o nacionales, las incubadoras y otras representaciones oficiales. b) Las redes informales.- Se refiere a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios, esta red informal de acuerdo a autores como Vera (2007), juega un papel fundamental en los procesos de creación de una empresa y son la primera fuente de ayuda del emprendedor.

Además, las redes informales están sustentadas en un clima de confianza y de cordialidad; estas redes tienen tres características: a) Primera - confianza construida en el pasado de sus miembros: b) Segunda - confianza generada a partir del acompañamiento y sostenimiento en el proceso de desarrollo de sus

miembros: c) Tercera - confianza a partir de la identificación entre sus integrantes quienes comparten intereses y valores comunes. Lomnitz (1975), señala que la confianza es la base de la reciprocidad, y la reciprocidad es posible cuando hay igualdad de carencias; en el caso de los empresarios, estas carencias pueden ser de conocimientos, de tipo económico, de materiales, de maquinaria, etcétera.

En las redes se puede observar la existencia de relaciones; a) verticales; b) horizontales. Lo anterior permite comprender el papel de los actores así como la distribución de poder dentro de la red. Por lo tanto es posible afirmar que dependiendo del tipo de red las relaciones verticales o las horizontales adquirirán mayor importancia y por lo tanto las formas de distribución del poder serán diferentes (Casas, 2003).

Las Redes De Conocimiento en Las MIPyME

En la actualidad las Micro, pequeñas y medianas empresas (MIPYME), tienen una sólida opción tanto para la creación de empleos y producción de artículos diversos, para responder a los requerimientos de la globalización. Dentro del desarrollo día a día de las MIPYME se puede identificar la importancia que para ellas tienen las redes de conocimiento, es decir, aquellos vínculos tanto formales como informales que se van construyendo entre la empresa y un conjunto de agentes como proveedores, clientes, instituciones de gobierno, por mencionar algunas. Estas redes sirven de acceso a diferentes recursos y conocimientos (Tapia y Tapia, 2010). Un primer intento para proponer un marco de referencia que tome en cuenta la importancia que tiene las redes sociales en el proceso de consolidación de las MIPYME ha sido el de Vera (2007; citado por Tapia y Tapia, 2010). En el marco de referencia mencionado, que es una adaptación de lo que ya con anterioridad habían propuesto Sharma, Chrisman y Chua, en la dimensión denominada: Administración en General y Cambio y Evolución Organizacional, se hace mención de la importancia que la construcción de las redes sociales tiene para el crecimiento y la consolidación, así como en el desarrollo del modelo de una MIPYME.

Uno de los aspectos que llama poderosamente la atención en el desempeño de las MIPYMES (Micro, Pequeñas y Medianas empresas) en general –también en el caso de las grandes empresas - son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa –vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Estas redes tal y como lo señala Basaldúa (2005) son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil.

METODOLOGÍA

El trabajo se desarrolló a través de una investigación cualitativa, bajo el método del estudio de casos. El diseño incluyó trabajo de campo, que se realizó a través de una guía de entrevista, llevando a cabo entrevistas a profundidad con la directora de la empresa de langostinos, así como a través de la observación directa en la empresa. Se optó por estudio de caso debido a que existen cifras oficiales únicamente de dos estados de la república mexicana en los que se desarrolla el cultivo de langosta, Puebla no aparece y las empresas localizadas en Tamaulipas y Morelos son de dimensiones diferentes a la empresa poblana que es micro empresa en Tamaulipas es una empresa mediana y en Morelos empresas pequeñas. De acuerdo con el proyecto que se desarrolla su enfoque es a microempresas y deben estar localizadas en Puebla, México. En estas condiciones es igualmente complejo construir un marco muestral que liste a las unidades de la población objetivo y que permita la asignación de probabilidades de selección a cada una de dichas unidades. Por supuesto se carece de una lista de empresas dedicadas al cultivo de langosta en términos de que dicha lista permita seleccionar e identificar a cada unidad de la población objetivo, así el marco muestral se construyó con los datos que el investigador obtuvo; por lo que, queda conformado de la siguiente manera, considerando las cifras oficiales de producción anual por estado ver Cuadro 2:

Cuadro 2: Determinación de la muestra

Unidad de análisis	Toneladas producidas en el año 2010	Tamaño de empresas
Empresas de Tamaulipas	0.7	Medinas
Empresas de Morelos	0.5	Pequeñas
Empresas de Puebla	No Disponible	Micro

Esta tabla muestra la población estudiada y el tamaño de la muestra del objeto de estudio

Cuadro 3: Bitácora de investigación de campo

Conceptos	Instrumento	fecha
Identificación de la empresa	Página electrónica de SAGARPA Puebla	25 de abril 2012
Localización de la empresa	Directorio de RENDRUS SAGARPA Puebla	9 de mayo 2012
Contacto con el personal de la empresa	Vía telefónica	20 de junio 2012
Plática previa con la empresaria fijación de fecha para la visita	Vía telefónica	30 de julio 2012
Visita a la empresa	Guía de entrevista para la obtención de información	12 de septiembre 2012

Esta tabla muestra la bitácora que apoyó la investigación de campo.

Generalidades de la actividad de cultivo de langosta y el mercado

La langosta de agua dulce es un crustáceo astácido, y comercialmente se conoce como "red claw" o "crayfish". En México, se introdujo con fines comerciales y de investigación a principios de los 90's, y se establecieron algunas UPA's de producción en los estados de Morelos y Tamaulipas. A pesar del buen precio en el mercado, rápido crecimiento, poca agresividad, esta especie se considera altamente invasora con alto impacto a la biodiversidad del país. Actualmente, se reportan poblaciones en el medio natural en los estados de Tamaulipas (Reserva de la Biosfera "El Cielo") y Morelos ocasionando impactos adversos en los ecosistemas. Por lo cual, se recomienda realizar un análisis de riesgo antes de implementar el cultivo, así como obtener un resolutive de impacto ambiental favorable para la misma, con la finalidad de asegurar el bienestar de los ecosistemas aledaños, la sustentabilidad del cultivo y la mitigación de impactos a la biodiversidad del país. Entidades con cultivo en México: Tamaulipas y Morelos.

Mercado Del Producto: Nacional

Puntos de ventas: Pie de granja, restaurantes, mercados locales, pescaderías y tiendas de autoservicio (Diario Oficial de la Federación 6 de junio 2012) ver Grafica 1 y 2.

Grafica 1: Estadística De Producción

Fuente: Subdelegaciones-CONAPESCA (1999-2008). Se observa una baja en la producción en los últimos años

Grafica 2:

Fuente: Subdelegaciones-CONAPESCA (2007-2010). En la grafica se presenta la producción nacional acuícola y Puebla o figura.

Como se puede apreciar Puebla no está considerada en los datos oficiales que reflejan la producción de langosta, lo cual presenta una gran área de oportunidad para la empresa caso de estudio.

El Estudio De Caso

Orígenes.: Es una empresa (granja) que está localizada en el Municipio de Tepeojuma, Puebla. Sus inicios se remontan al año de 2006, con la elaboración de un proyecto que después de consultar varias alternativas la Sra. Sonia decide elaborarlo para producir y comercializar **langosta australiana** (*Cherax Quadricarinatus*). El proyecto lo inscribe en el Centro de Incubación de Empresas Base Tecnológica (CIEBT) de la Universidad Tecnológica de Puebla. Lo que le genera como beneficio recibir Capital Semilla fondo PYME, por Parte de la Secretaria de Economía en el mismo año 2006. En 2007 la señora Sonia decide comprar 4 hectáreas de terreno, con inversión propia, para instalar la empresa, con lo que se inicia la construcción de la granja, en ese mismo año recibe apoyo del programa Alianza para el campo para la terminar la construcción de los estanques y la adquisición de 4000 hembras y 2000 machos reproductores. 2008 Es el año en que inicia operaciones la granja propiedad de la Sra.

Sonia con la producción y comercialización de langosta australiana. En el mismo año 2008, se recibió apoyo financiero para activos productivos, condicionado a que se transformara la forma de constitución de la granja para ser una sociedad y se constituye como Langostinos Tepeojuma, S.P.R de R. L. con siete socios. Y actualmente también se produce y comercializa tilapia además de la langosta. En un inicio la granja solo tenía 3 estanques, en el año 2009 el jefe de gobierno de Izucar de Matamoros, Puebla se pone en contacto con la señora Sonia para invitarla a participar en La Red Nacional de Desarrollo Sustentable (RENDRUS) 2009 estatal, resultando ganadora, para participar en RENDRUS Nacional en Pachuca, Hidalgo. Lo que le permite recibir un nuevo apoyo financiero para construir el laboratorio y el restaurante.

Estructura y operación de la empresa.: Como ya se señaló la granja inicio operaciones en el año de 2008 con 7 socios, actualmente dirige la empresa la Sra. Sonia hay un gerente de producción y una gerencia de mercadotecnia y ventas, pero realmente trabajan en la empresa: la Sra. Sonia, un empleado de tiempo completo y dos hijos de la Sra. El empleado que labora toda la semana apoya en labores de mantenimiento de la granja, producción de langosta y tilapia, el restaurante funciona únicamente sábados y personas que asisten, la hija se desempeña como mesera y para las labores de cocina se contrata a una persona más. La venta del producto al consumidor se realiza a pie de granja a hoteles y ocasionalmente a restaurantes y en forma directa en el restaurante al consumidor final. También se venden juveniles de engorda y reproductores. Los empleados de la empresa (granja), tienen estudios de primaria.

Resumiendo; en la granja de manera formal existen 3 niveles jerárquicos, el de dirección, el de gerencias y el de los empleados. Por otra parte, de forma práctica existen únicamente 2 niveles jerárquicos el de dirección y el de los empleados de la granja. La granja es una microempresa que atiende un mercado local, nacional e internacional.

Proceso de producción, productos y mercado.: El proceso de producción se inicia con la recepción. de las langostas reproductoras, como segundo paso hay que climatizarlas, para propiciar la reproducción de juveniles, posteriormente se separan las hembras y se presenta la eclosión. Respecto a los juveniles hay que cuidar la calidad del agua y alimentarlos. Después de la eclosión se desarrolla la cría, engorda, cosecha clasificación, empaque y venta. El tiempo de reproducción y crecimiento de las langostas es de año y medio y la engorda de 7 a 9 meses. En el laboratorio las langostas se seleccionan por talla y se protegen de la luz, son animales muy sanos y generalmente mueren por stress. En los meses de noviembre y diciembre en el mismo laboratorio se preparan los animales para la reproducción.

La granja para su funcionamiento necesita contar con permisos de Impacto Ambiental y de la Comisión Nacional del Agua (CONAGUA). El insumo principal para la reproducción de la langosta además de los estanques es el agua, que a la granja llega de manantial. La Sra. Sonia recibió capacitación en dirección de empresas, administración, contabilidad, planes de negocios y respecto al manejo de su producto; contando con el apoyo del Instituto Poblano para la Productividad y Competitividad Empresarial en su programa financiamiento para aceleradora de Negocios. Para poderse involucrar en el manejo de la empresa llegando a dominar el tema y ella dar capacitación conjuntamente con una bióloga quien da asesoría a la granja y monitorea la calidad del agua. La capacitación se organiza en cursos con duración de 4 horas, desde hace tres años. Concretando las langostas se venden, cocinadas en el restaurante de la granja, langostas juveniles y langostas reproductoras de acuerdo a la capacidad de producción de la granja que es de 1.5 toneladas por año. El mercado atendido inicialmente era local

actualmente es Nacional, en el que se ofertan Juveniles, Reproductoras, venta en el restaurante de la granja y capacitación que se imparte en el mismo restaurante con un costo de \$ 900.00 por persona con una duración de 4 horas incluyendo la comida. Internacionalmente la granja tiene clientes en Guatemala a quienes abastece de juveniles y reproductoras. Actualmente uno de los tres estanques se utiliza para la reproducción de tilapia. A la tilapia es necesario hacerle una revisión semanal de su estado general. La granja se encuentra localizada en 4 hectáreas y su capacidad instalada comprende 3 estanques de 1000 metros cuadrados cada uno, un laboratorio y el restaurante con una pequeña alberca zona de juegos infantiles. La Sra. Sonia comenta: en la granja no hay servicio de luz, teléfono e internet, el lugar queda muy cerca de la carretera y para que pueda tener más visitantes hay que hacer un camino pero no sé si los vecinos lo permitan, apenas hace año y medio se construyó el nuevo camino por donde ahora se puede llegar a la granja. Los apoyos económicos y de capacitación recibidos de: SEMARNAT, CONAGUA Y SAGAPI han sido determinantes para el funcionamiento de la granja. Y respecto a RENDRUS lo que me aportó al participar con el proyecto fue publicidad.

No hay agrupaciones empresariales para empresas como la granja que yo dirijo y en Puebla y lugares cercanos no tengo competencia. En un futuro: Aproximadamente para 1.5 años, hay un convenio firmado para trabajar como franquicia. Con el apoyo de la empresa Fher and Fher. Se tiene contemplado aumentar la reproducción de tilapia. Mejorar la producción de la langosta en el laboratorio y convertir la granja en un lugar eco turístico.

Análisis de los resultados.: Considerando los datos que reflejan la situación de la empresa estudio de caso, se puede referir, que la granja ha establecido relaciones que le han permitido adquirir conocimientos principalmente con instituciones de gobierno. Retomando a Saexenian (1990; citado por Álvarez ,2007; Lara, 2006; citado por Anunziata y Macchiarola 2010 Casas 2001; citado por Prada, 2004; Tapia y Tapia, 2010): la empresa ha establecido colaboración, dentro de un grupo de individuos con una

agenda común para transmitir conocimientos, facilitando dar respuesta a desafíos y ayudarse a realizar actividades resultado de las relaciones formales o informales entre los actores que integran la red. Y como lo señala Basaldúa (2005; citado por Vera y Vera, 2011) son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa – vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil. La red construida por la empresa presenta de forma muy marcada el intercambio de conocimientos, experiencias y acciones entre los diferentes actores que participan notándose fuertemente la presencia por supuesto de la empresa además de la del gobierno. La empresa inicio a construir la red al participar en el año 2006 en el concurso organizado por el CIEBET, a partir de ahí se fueron generando diferentes relaciones que le han facilitado adquirir conocimientos de manera más pronta y aplicarlos en beneficio de la empresa. Como es la capacitación recibida que con posterioridad convirtió a la directora de la empresa en capacitadora generando una fuente adicional de ingresos. El gobierno a través de los diferentes organismos al ir estableciendo lazos con la empresa, está logrando metas y estadísticas en materia de sus actividades de apoyo y desarrollo de empresas. Finalmente se retoma a Casas (2003) Cuadro 1 para presentar resultados pero, señalando el intercambio con los diferentes actores que participan en la red, ver cuadro 4 y 5.

Cuadro 4: Resultados del análisis de la red de conocimiento para la Granja de langostas

Contexto institucional	Estructura o morfología de las redes	Dinámica: origen, desarrollo y trayectorias de las redes	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
DSe observa la presencia de instituciones de gobierno: y la presencia de una institución de educación superior.	La red se integra por la granja y las instituciones de gobierno principalmente, además de la UTP y otros actores como lo son clientes y proveedores. Creándose lazos entre los actores que han facilitado intercambio de conocimiento y logro de metas que no presentan costo financiero, se centran principalmente en la confianza y buena voluntad.	La red inicia con el vínculo establecido con la UTP, siguiendo la integración de otros actores, principalmente con instituciones de gobierno que apoyan a las empresas como SECOFI y SAGARPA. El vínculo con la UTP se ya no sigue pero fue el que dio pie a que la empresa iniciara con operaciones y con la red. Con las instituciones de gobierno sigue el intercambio de forma esporádica en cuanto al intercambio de apoyos para la granja y cumplimiento de metas para las instituciones de gobierno.	Los insumos que circulan o se intercambian son principalmente apoyos financieros entre la empresa y las instituciones de gobierno seguido de la capacitación y gestión.	Los resultados obtenidos de la red son mejoras en la infraestructura, lo que ha permitido ampliar el giro de la empresa y tener amplios planes a futuro. Y capacitación que está convirtiendo al personal de la empresa en expertos en el giro.

Fuente: elaboración propia con datos de Casas (2003). En el cuadro se observan los resultados de la investigación de campo desde el considerando la propuesta de Casas, 2003.

El intercambio de conocimientos entre los integrantes de la red han sido precisos; experiencias empresariales y para el acceso a apoyos financieros.

CONCLUSIONES

Cuadro 5: Análisis de resultados de la red de la granja reproductora de langostas con los diferentes actores que integran la red.

Estructura o morfología de las redes (Integrantes)	Dinámica: direccionalidad, duración, frecuencia comunicación y alcance	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
Instituciones de Educación Superior IES	Contactos personales del personal directivo de la empresa. Se observa una direccionalidad de ambas partes, una durabilidad que tiene su origen después de la formación de la empresa.	Información con respecto a diferentes apoyos financieros. Acceso a recursos , en este caso sobre infraestructura necesaria para que la empresa inicie y mantenga su actividad.	Generación de conocimiento sobre aspectos productivos. Información sobre tecnología.
Empresarios	Contactos personales del personal directivo de la empresa. Se observa una direccionalidad de ambas partes, una durabilidad que tiene su origen después de la formación de la empresa. Construcción de la relación por interés de ambas partes. El inicio de la relación coincide con el inicio de las operaciones de la empresa.	Información con respecto a diferentes apoyos financieros. Acceso a recursos , en este caso sobre infraestructura necesaria para que la empresa inicie y mantenga su actividad.	Generación de conocimiento sobre prácticas empresariales.
Proveedores	Contacto personal del de los directivos de la empresa. Construcción de la relación por interés de ambas partes. Se observa un intercambio frecuente de información y conocimientos sobre las características de calidad de los insumos y productos. Y al igual que la relación anterior, el inicio de la relación coincide con el inicio de las operaciones de la empresa.	Conocimientos , específicamente respecto a la tecnología e insumos. Acceso a recursos , en este caso a materias primas y maquinaria.	Maquinaria acorde a las necesidades y exigencias de los productos solicitados por los clientes, así como insumos.
Clientes y usuarios	Contactos personales y página web. Por interés de ambas partes hay un intercambio cotidiano de información y este vínculo ha existido desde que inició operaciones la empresa.	Información sobre gustos y preferencias de sus clientes.	Productos que cumplen con las exigencias de los clientes.
Asociaciones empresariales	No Aplica	No Aplica	No Aplica
Administración Municipal	Es una relación que surge como resultado de los contactos personales de la persona que dirige la empresa a través de diferentes programas estatales y regionales Se trata de una relación que surge por interés de ambas partes, pero en la que se observan intercambios esporádicos y que al igual que las otras relaciones surge después del inicio de la empresa.	Beneficios financieros.	Disposición de efectivo para la estructura de la empresa. Disposición de mejores flujos de efectivo.
Admon. Estatal	Es una relación que surge como resultado de los contactos personales de la persona que dirige la empresa. Se trata de una relación que surge por interés de ambas partes, pero en la que se observan intercambios esporádicos y que al igual que las otras relaciones surge después del inicio de la empresa.	Beneficios financieros.	Disposición de efectivo para la estructura de la empresa. Disposición de mejores flujos de efectivo.

Fuente: elaboración propia con datos del trabajo de campo, septiembre 2012. En el cuadro se los vínculos existentes entre los diferentes actores que participan en la red a la que pertenece la empresa caso de estudio.

La red iniciada por la empresa estudio caso se inicia con la presentación del proyecto ante la UTP y ha generado intercambio de conocimientos de conocimientos, como son experiencias empresariales información sobre el cultivo de la langosta cuyos resultados han sido benéficos para los involucrados en la red. Los resultados referidos se presentan desde diferentes ópticas para los involucrados con la red: para las instituciones educativas y de gobierno representan alcanzar sus metas y sus estadísticas, para la empresa mantenerse en el mercado y para la directora de la empresa contar con una capacitación de tal nivel que se ha convertido en capacitadora. Sin embargo en términos generales para la empresa, la red ha sido un detonante para la permanencia crecimiento y desarrollo de la empresa, teniendo como punto medular la confianza y la reciprocidad en el intercambio de experiencias, conocimientos y beneficios. Vislumbrando un futuro prometedor para la empresa con un mercado local y regional sin competencia.

Lográndose reafirmar lo que autores que abordan el tema de redes conocimiento señalan en cuanto a la facilidad y rapidez para la transmisión de conocimientos, la existencia de confianza y reciprocidad a través de los vínculos que se construyen entre los diferentes actores que participan en la red.

Por otra parte, es necesario apuntar, que en el caso de esta empresa de dulces típicos su demanda es muy probable que vaya en aumento, y que cada vez haya más posibilidades para colocar sus productos en mercados más atractivos, tanto nacionales como internacionales, siempre y cuando puedan cumplir con la exigencias de calidad y volumen que estos mercados demandan.

VALIDEZ DE CONTENIDO DE UN INSTRUMENTO DE MEDICIÓN DE LA COMPETITIVIDAD DE LAS PYMES VITIVINÍCOLAS DEL VALLE DE GUADALUPE, B.C., MÉXICO

Lino Meraz Ruiz, Universidad Autónoma de Baja California

Sonia Elizabeth Maldonado-Radillo, Universidad Autónoma de Baja California

RESUMEN

Utilizando el modelo propuesto por Lawshe (1975) modificado por Tristán (2008), en este trabajo se presenta un examen empírico de la validez de contenido de un instrumento de medición de la competitividad de las pequeñas y medianas empresas vitivinícolas ubicadas en la Ruta del Vino del Valle de Guadalupe, en Baja California, a través de una Entrevista Conductual Estructura (ECE), en la que se evaluaron de forma separada todos los ítems que contiene el instrumento a partir de las valoraciones de un panel de 8 expertos, atendiendo a la escala donde 1) es Esencial, 2) Útil pero no esencial, y 3) No importante, con una Razón de Validez de Contenido (CVR) igual o mayor a 0.58. Se encontró que el valor mayor de validez de contenido de los ítems fue de 1.00 y el menor de 0.13. En sumatoria, el Índice global de la Validez del Contenido (IVC) mediante el Modelo de Lawshe modificado fue de 0.78 considerado aceptable

PALABRAS CLAVES: Validez de contenido, Modelo de Lawshe, Empresas vitivinícolas

VALIDATION PROCESS OF COMPETITIVENESS SURVEY FOR WINE MAKING SMEs IN THE GUADALUPE VALLEY, B.C. MEXICO

ABSTRACT

By using the model, proposed by Lawshe (1975) and modified with Tristan (2008), it is presented in this work an empirical examination of content validity obtained in this instrument of measurement in competitiveness with small and medium wine industry located in the wine route of Valle de Guadalupe, Baja California, across a Structured Behavioral Interviews (SBI); in which it has been evaluated in a separate form all the items that the instrument contains from the evaluations of an 8 experts' panels, attending the scale where 1) is Essential, 2) Useful but not essential, and 3) With not importance, with a Content Validity Ratio (CVR) equal or bigger than 0.58. It has been observed that the mayor value of content vality in the items was 1.00 and the minor was 0.13. In summary, the Content Validity Index (CVI) by means of the model, modified by Lawshe, was of 0.78 considered acceptable.

KEY WORDS: Content validity, Model of Lawshe, Wine industry

INTRODUCCIÓN

La industria vitivinícola en México tiene una larga trayectoria histórica, prueba de ello ha sido la gran calidad en sus productos, lo cual ha despertado el interés y reconocimiento de los mercados internacionales, que han ido cambiando la imagen rústica de los vinos nacionales (Larousse de los vinos, 2008). Baja California (BC) es una entidad federativa del noroeste de México cuya actividad emblemática es la vitivinicultura la que es cualitativamente signficante en términos de la alta calidad en

sus vinos; no obstante, debido a los obstáculos mencionados requiere fortalecer su competitividad tanto en el mercado interior como exterior (Sánchez, 2006). En esta región se elaboran alrededor del 90% de los vinos de mesa producidos en México. En este Estado, las principales zonas de producción de uva industrial son el Valle de Guadalupe y el Valle de San Vicente, localizados en el municipio de Ensenada; ambos concentran el 90% de la superficie cultivada que es de 3 100 hectáreas. Las principales variedades cultivadas son: Sauvignon Blanc, Cabernet Sauvignon, Chenin Blanc y Thompson (Armenta, 2004).

No obstante el gran potencial de la industria vitivinícola de BC para producir vino de alta calidad, los apoyos institucionales y/o públicos que se otorgan al sector vitivinícola son poco favorecedores de la competitividad por lo que es imprescindible que se establezcan propuestas en donde se planteen estudios más profundos sobre el análisis de los factores que afectan la competitividad, de tal forma que éstos redunden en el diseño de estrategias de negocio que permitan el buen posicionamiento de esta industria (Maldonado, Alcántar y López, 2008). Además de ello, la existencia de cambios en la economía mundial caracterizados por procesos de globalización, así como de avances científicos y tecnológicos, y de demanda de productos de mayor calidad, ha ocasionado que los patrones de producción, comercio e inversión, se encuentren en un proceso de cambio, obligando a los empresarios y directivos de las empresas a ser más competitivos para lograr obtener un lugar en los mercados globales (Chávez, 2004).

A pesar de la relevancia del tema y la importancia que tiene el sector vitivinícola en el país, existe un enorme vacío de información al respecto. Con la intención de aportar elementos que contribuyan a fortalecer el conocimiento del sector en la región, se desarrolla el presente estudio cuyo objetivo consiste en determinar la validez de contenido, a través del Modelo Lawshe (1975) modificado por Tristán (2008), de un instrumento construido para medir la competitividad de las pequeñas y medianas empresas (Pymes) vitivinícolas de la Ruta del Vino del Valle de Guadalupe localizada en Ensenada, B.C., México.

El propósito del estudio estriba en que una vez construido el instrumento de medición pueda servir identificar la posible asociación entre la competitividad de las Pymes vitivinícolas y las variables cooperativismo interempresarial, tecnologías de la información y comunicación y la oferta de actividades enoturísticas, lo cual proporcionará elementos que favorecerán la implementación de estrategias que permitan a los empresarios impulsar el desarrollo de sus negocios. La investigación se llevó a cabo aplicando una entrevista conductual estructurada a un grupo de ocho expertos con conocimiento previo en el área los cuales evaluaron de manera individual todos los ítems que integran el instrumento.

METODOLOGÍA

Este trabajo se caracteriza por ser de tipo descriptivo con un diseño no experimental que presenta los resultados de un estudio empírico independiente a través de una entrevista conductual. Para obtener evidencia de que la definición semántica está correctamente representada en los ítems formulados se llevó a cabo la especificación del índice cuantitativo de la validez de contenido del instrumento mediante el Modelo de Lawshe (1975) modificado por Tristán (2008). Se trabajó con 8 expertos, cuatro en la parte metodológica y cuatro en el sector vitivinícola a quienes se les pidió que evaluaran por separado los ítems de un cuestionario de acuerdo a su relevancia definida como la importancia del ítem para la determinación de la competitividad de las pequeñas y medianas empresas vitivinícolas geográficamente ubicadas en la Ruta del Vino del Valle de Guadalupe en BC, con base en la siguiente escala: 1) Esencial, 2) Útil pero no esencial, y 3) No importante. El instrumento sometido a la validación quedó integrado por 77 ítems distribuidos en tres variables fundamentales (Cooperativismo interempresarial, Uso de tecnologías de la información y comunicación y Oferta de actividades de enoturismo) cuya técnica de escalamiento es de tipo Likert de cinco categorías de respuesta, presentándose de la siguiente manera: 1=Nada importante, 2=Poco importante, 3=Nada importante, 4=Muy importante, y 5=Totalmente importante.

La información recabada de los expertos se analizó a través de una hoja de cálculo de Microsoft Excel 2010 ® y se determinó la razón de validez de contenido (*CVR* y *CVR'*) para cada uno de los ítems mediante las ecuaciones descritas en el Modelo de Lawshe modificado (Tristán, 2008) y el Índice de Validez de Contenido (*CVI*) para el instrumento global.

Figura 1: Cálculo del Índice de Validez de Contenido

$$CVI = \frac{\sum_{i=1}^M CVR_i}{M}$$

$CVR_i =$ Razón de Validez de Contenido de los ítems aceptables de acuerdo con el criterio de Lawshe
 $M =$ Total de ítems aceptables en la prueba

Ecuación empleada para el cálculo de validez global del instrumento

RESULTADOS

Con base en el acuerdo de los expertos, se determinó la razón de validez de contenido (*CVR* y *CVR'*) teniendo en cuenta el criterio modificado de Lawshe (Tristán, 2008), los ítems aceptables son aquellos cuya *CVR'* sea mayor a 0.58 (Heredia, Sánchez y Vargas, 2012). Los resultados se exhiben en la Tabla 1 y 2 en donde los ítems con un *CVR'* menores a 0.58 se muestran sombreados. En éstas se puede apreciar que los ítems 20, 26, 35, 38, 42, 43, 44, 60 y 61 fueron valorados con el puntaje máximo de validez del cuestionario (1.00); por el contrario los ítems 9, 12, 13, 21, 23, 24, 30, 33, 36, 45, 55, 56, 58 y 75 calificaron por debajo del valor aceptable (0.58) y por tanto serán eliminados del cuestionario.

Tabla 1: Razón de Validez de Contenido (Método Lawshe)

Variables	Indicadores	Ítem	Esencial	Útil pero no esencial	No importante	CVR	CVR'
Cooperativismo interempresarial	Necesidad de cooperación	1	5	2	1	0.25	0.63
		2	7	1	0	0.75	0.88
		3	7	1	0	0.75	0.88

	Barreras	24	4	2	2	0.00	0.50
		25	5	2	1	0.25	0.63

En esta tabla se describe la Razón de Validez de Contenido CVR y CVR' de los ítems que integran la variable Cooperativismo interempresarial. Este contenido forma parte de la Tabla 2

CONCLUSIONES

Este estudio consistió en un examen empírico de tipo descriptivo con un diseño no experimental de la validez de contenido de un cuestionario, mediante el Modelo de Lawshe (1975) modificado por Tristán (2008), referente a la competitividad de las pequeñas y medianas empresas vitivinícolas de la Ruta del Vino del Valle de Guadalupe, basado en las opiniones de un panel de expertos. Con base en la determinación de la Razón de Validez de Contenido se descartan 14 ítems reduciendo con esto el cuestionario a solamente 63 ítems, distribuidos en tres variables. La variable Cooperativismo interempresarial se compone de 19 ítems, la variable Uso de Tecnologías de la información y Comunicación con 26 ítems y la variable Oferta de actividades enoturísticas quedo únicamente con 18 ítems. El Índice de Validez de Contenido (validez global) del instrumento fue de 0.78, lo que puede considerarse un resultado más que satisfactorio. Quedaría pendiente la aplicación de la prueba piloto para la determinación de la validez de constructo y la confiabilidad.

ESTUDIO DE LOS DE AMBIENTES DE APRENDIZAJE EN LAS PEQUEÑAS Y MEDIANAS EMPRESAS COMO DETONANTE DE ESTRATEGIAS QUE IMPULSEN LA COMPETITIVIDAD

Ma. de los Angeles Monterde Valenzuela, Universidad Estatal de Sonora
Alonso Bustamante López, Universidad Estatal de Sonora

RESUMEN

América Latina vive un crecimiento explosivo dadas las oportunidades y amenazas que la globalización le ha traído. Las empresas pequeñas y medianas requieren tener capacitación continua para responder con eficiencia a las demandas del entorno. Existen pocos y limitados espacios físicos dentro de estas empresas, en las que se pregona que lo más valioso que tienen es el recurso humano. La construcción de ambientes de aprendizaje se enfrenta a obstáculos que actualmente frenan el desarrollo de una amplia región latinoamericana. Los ambientes de aprendizaje siguen siendo tradicionales. Entonces ¿cómo es que siendo lo más valioso para la empresa, están en un posible abandono, sin inversión ni expectativas y expuestos a la obsolescencia galopante? La empresa del siglo XXI es proactiva, basa su éxito en las personas que trabajan todos los días en los diversos procesos que satisfacen necesidades de los clientes internos y externos de las empresas; generando valor agregado producido en sus mentes. La construcción de nuevos y mejores ambientes de aprendizaje incide directamente en la proyección de la competitividad hacia mejores niveles; transformando verdaderamente a la sociedad que reclama mejores respuestas a sus crecientes necesidades.

PALABRAS CLAVE: Aprendizaje, empresa, competitividad, desarrollo, valor agregado.

THE STUDY OF LEARNING ENVIRONMENTS IN SMALL BUSINESS STRATEGIES AS A TRIGGER TO BOOST COMPETITIVENESS

ABSTRACT

Latin America is experiencing explosive growth due to opportunities and threats brought by globalization. SMEs need to have ongoing training to face effectively environmental demands. There are found few and limited learning places on these companies, where it is argued that human resources is the most valuable thing. The creation learning environments faces obstacles that currently stop development of a big Latin-American zone. Learning environments are still being traditional, then how all these environments are in an expected failure, with no investment, expectations and exposed to an imminent obsolescence being the most valuable thing in a company?. XXI century companies are proactive. Their success is based in the added value created in people's formation working everyday on internal or external customer service processes. The new and improved learning environment created will fall directly on the projection of better competitiveness levels, transforming significantly society that claims for better answers to their growing needs.

KEYWORDS: Learning, enterprise competitiveness, development, value-added.

Marco Teorico

La empresa es la única fuente de riqueza que tiene cualquier economía. Tiene una doble naturaleza. Es depositaria del conocimiento y es una institución gobernadora de intereses conflictivos. Los cambios que

presentan las empresas son producto de las acciones concretas de los seres humanos.

Recientemente, la formación del recurso humano enfrenta nuevos retos, que implican desde cambiar el concepto de recurso humano por el de capital humano o formación del equipo humano; hasta transformar su propia gestión a una más eficiente, humana y de bajo costo que invariablemente genere valor empresarial. Con ello, la función de RRHH confronta dos alternativas; comprometerse con la transformación organizacional o extinguirse.

El principal motivo para cambiar la gestión del RRHH es realinearla como función administrativa y volverla estratégica bajo un liderazgo efectivo que implique:

- a) Alinearse a la visión estratégica empresarial
- b) Articular una visión clara y redefinir lo que debiera ser la gestión del equipo humano competitivo.
- c) Enfocar la gestión del talento humano hacia los procesos empresariales, y éstos hacia la satisfacción del cliente interno y externo

Barnard (1968), destaca que la empresa está conformada por dos tipos de organización que son complementarios: la formal y la informal. También entiende por organización formal a la cooperación entre los hombres que es consciente, deliberada y dotada de un propósito. Habría que incluir entonces, que para llegar a ser una organización formal es necesario invertir tiempo y esfuerzo en formar a su gente. La inversión en capacitación es importante, pues si la empresa cuenta con trabajadores no calificados, esto puede traer como consecuencia bajos rendimientos de productividad, posible desperdicio de materiales, averías en maquinaria y equipos (Lazonik, 1993). Una empresa invertirá en el desarrollo de sus colaboradores, siempre; con el fin de que la organización despliegue y fortalezca sus estrategias de producto y de procesos (Porter, 1990). Sin embargo, la estrategia de inversión en capacitación no es suficiente para apoyar la generación de aprendizaje dentro de una empresa; requiere además de estructura social y cultural. Las prácticas de producción como la capacitación en el puesto de trabajo, la rotación de puestos, la organización de equipos de trabajo, el buzón de sugerencias, son vistas como un medio que permite que los trabajadores interactúen y compartan sus conocimientos y experiencias; promuevan la baja rotación de los trabajadores, permitiendo la conformación de mercados internos de trabajo, en el cual se ofrecen y demandan servicios completos con valor agregado.

La innovación en las empresas es esencialmente una cuestión de aprender a organizar la fusión y creación de conocimientos. En suma es un proceso de aprendizaje, el cual fomenta la invención, y ésta a su vez revoluciona el proceso productivo (Thomson, 1993^a). La habilidad de una empresa de utilizar de manera eficiente tanto sus competencias internas (aprendizaje tecnológico y modos de construcción de conocimiento), como sus competencias externas (el uso del conocimiento externo a través del establecimiento de redes de relaciones sociales que la empresa establece con otras instituciones: proveedores, usuarios, universidades, centros de investigación, etc), le permite ofrecer mejores productos y servicios. El modelo japonés de gestión administrativa llamado de las 5 “S”, se refiere al mantenimiento integral de la empresa, no solo de la maquinaria, equipo e infraestructura; sino del mantenimiento del entorno de trabajo por parte de todos. También se ha llamado “housekeeping que significa “ser amos de casa también en el trabajo”

Seiri	Clasificación y descarte
Seiton	Organización
Seiso	Limpieza
Seiketsu	Higiene y visualización
Shitsuke	Disciplina y compromiso

La aplicación de estas herramientas de trabajo dan resultados sencillos y efectivos, reflejados en calidad, eliminación de tiempos muertos, y reducción de costos.

METODOLOGIA

Para el desarrollo de este estudio, se formó un equipo de investigación colaborativa formado por consultores empresariales y académicos de instituciones de educación superior, enfocados al estudio de la situación empresarial de Hermosillo, Sonora, México.

Objetivo: Conocer la percepción del trabajador sobre el ambiente de aprendizaje en el que desarrolla conocimientos, habilidades, actitudes y valores utilizados en su desempeño laboral y proyectado en los resultados empresariales.

Muestra: Se tomó una muestra del 30%, del padrón de empresas de la Cámara Nacional de la Industria de la Transformación de Hermosillo (CANACINTRA), correspondiente a 600 empresas pequeñas y medianas. A continuación se aprecian los datos relevantes.

Figura 1: Clasificación de las empresas estudiadas.

Fuente: Elaboración propia

Figura 2: Estimación de colaboradores.

Fuente: Elaboración propia.

El 49% de los encuestados, manifestó una inadecuada distribución del aire acondicionado, los equipos de aire hacen bastante ruido, y en algunas áreas no hay ventilación adecuada, resultando que el trabajador siempre desea terminar su jornada e irse.

Figura 3: Percepción de los colaboradores respecto al clima físico.

Fuente: Elaboración propia

Figura 4: Percepción de los colaboradores respecto al ruido/lugar de trabajo.

Fuente: Elaboración propia.

Figura 5: Percepción de los colaboradores respecto a la iluminación de su área de trabajo.

Fuente: Elaboración propia.

Se mencionó además que las áreas de trabajo para innovación, son insuficientes ó no existen. Así como la apertura y/o disposición de voluntad de la dirección para ideas nuevas ó mejoras sustantivas al proceso de trabajo individual.

Figura 6: Empresas e Innovación.

Fuente. Elaboración propia

Respecto al punto de higiene, el 77% opina que es bueno, El 42% de los trabajadores observa que en las empresas no existen áreas de descanso/esparcimiento/interacción y que solo un 8% de los lugares de trabajo cuentan con comedor para los empleados en excelentes condiciones.

Figura 7: Percepción de los colaboradores respecto a la higiene de su área de trabajo.

Percepción de la Higiene por sus colaboradores

Figura 8: Gráfico de empresas con tecnología para el desarrollo.

Empresas con tecnología para el desarrollo

■ si ■ no ■ en construcción

Fuente: Elaboración propia.

Figura 9: Espacio destinado para la formación de capital humano.

¿Tiene espacio destinado para la formación del capital humano?

■ si ■ no

Fuente: Elaboración propia.

La totalidad de los encuestados dijo tener un dispositivo móvil de uso personal, el cual está en uso constantemente. Algunos supervisores suelen quejarse de esta situación; ya que consideran a la tecnología móvil un fuerte distractor de la jornada de trabajo que se traduce en una fuga de tiempos y producción de errores.

Figura 10: Censo de capacitación 2011

Cursos de capacitación tomados por el personal de las empresas estudiadas durante 2011

Fuente: Elaboración propia.

Figura 11: Espacios de esparcimiento y convivencia para colaboradores de las empresas objeto de estudio.

Empresas con espacio de esparcimiento y convivencia para colaboradores

Fuente: Elaboración propia.

CONCLUSIÓN

Los resultados de este estudio arrojaron que aproximadamente 80% de los trabajadores no está motivado para aprender porque las condiciones físicas no permiten el desarrollo adecuado de las actividades de aprendizaje programadas para lograr un óptimo desempeño laboral. Solo un 20% dijo estar motivado. En general el encuestado dice tener la siguiente problemática: Interrupción constante de su trabajo por ruido, temperaturas extremas o no reguladas; considerando que el clima de la ciudad es excesivamente cálido, exceso de personas en su área de trabajo o espacio reducido, pobre infraestructura que promueva el trabajo colaborativo. El 85% de las personas encuestadas mencionó que los aspectos como: instalaciones, apariencia de su lugar de trabajo, color, luz, audio, entre otros, influyen en gran medida en el ambiente de trabajo y que consideran muy importante.

Los resultados nos indican la urgencia de implementar medidas correctivas en las organizaciones, con el fin de promover y desarrollar el talento humano; y con ello iniciar un verdadero proceso de transformación empresarial. Indudablemente, el punto de partida será trabajar con los líderes o directivos de ellas para despertar la conciencia primeramente, y luego implementar herramientas de gestión administrativa como pueden ser las Cinco “S” para modelarles a los colaboradores una nueva forma de trabajo de alta eficiencia, que sobre todo les provea, seguridad laboral, bienestar integral y desarrollo humano. En este sentido, la gestión de la administración de empresas debe continuar atendiendo las necesidades urgentes de la comunidad empresarial y coadyuvando con ello a mejorar su competitividad. LAS MARCAS COLECTIVAS, UNA ESTRATEGIA ADMINISTRATIVA PARA EL EXITO COMERCIAL DE LAS ARTESANIAS: CASO "LA CATRINA DE CAPULA, MICHOACÁN"

Fabricio Guzmán Bedolla, Universidad Michoacana De San Nicolás De Hidalgo
María Soledad Ramírez Flores, Universidad Michoacana De San Nicolás De Hidalgo

RESUMEN

En este artículo estudiaremos el caso particular de la artesanía denominada "La catrina de barro" que se elabora en el municipio de Capula en el estado de Michoacán de Ocampo en México, y el impacto positivo que ha tenido el instituir marcas colectivas entre los diferentes artesanos, productores y comercializadores que ha coadyuvado a un mejor conocimiento y comercialización en los mercados tanto nacionales como internacionales de estas piezas, así mismo ha ayudado a la conservación de esta milenaria tradición de la elaboración de piezas de barro en la citada comunidad.

El estudio es una comparación de la comercialización de este producto, antes y después de la introducción de marcas colectivas como estrategia administrativa para su posicionamiento, permanencia y desarrollo. Tratando de demostrar con ello el impacto positivo y la correlación entre la implementación de esta estrategia y el éxito del producto.

PALABRAS CLAVES: Artesanía, éxito comercial, estrategia administrativa, marca colectiva.

COLLECTIVE BRANDS, A MANAGEMENT STRATEGY FOR THE COMMERCIAL SUCCESS OF CRAFTS: CASE "CATRINA CAPULA, MICHOACÁN"

ABSTRACT

In this article we study the case of the clay hand-craft called "La Catrina de Barro", which is made in Capula Michoacán, México, and the positive impact that it has had to institute collective brands among the different craftsmen, producers and sellers and its contribution to a better knowledge and national and international commercialization of these pieces. It has also helped the conservation of a millenarian tradition to produce mud pieces in the community. This study is a comparison of the commercialization of such product, before and after the introduction of collective brands as an administrative strategy for its positioning, permanency and development. We will try to demonstrate the positive impact and the correlation between the implementation of this strategy and the success of this product.

KEYWORD: Hand-crafts, commercial success, administrative strategy, collective brands.

INTRODUCCIÓN

Las artesanías, en cualquier lugar, expresan realmente los valores de la sociedad y la singularidad cultural de una nación. Mientras que en todo el mundo occidental industrial los artículos producidos en masa sustituyen a las artesanías, en México miles de artesanos perpetúan las tradiciones que aprendieron de sus antepasados. Esto refleja no sólo un profundo aprecio por la tradición, pero también la necesidad de crear "objetos mexicanos" que se ajustan a las necesidades cotidianas, y que permiten la supervivencia durante periodos de dificultades económicas. En México, todavía es más razonable regatear mercado diario al aire

libre el precio de una olla de barro hecha a mano, que comprar una olla de acero inoxidable en un supermercado urbano.

La agencia de gobierno, El Fondo Nacional de Artesanías (FONART), promueve la supervivencia de las artes regionales con temas tales como “El arte popular es patrimonio cultural de México. Es y seguirá siendo, un gran éxito mientras la demanda de los locales y los turistas se cumplan, porque la mayoría de los productos de esta industria artesanal están destinadas al mercado local.

Esta creatividad exuberante a menudo desdibuja la línea ya difusa frontera entre la artesanía y el arte fino. La práctica repetitiva de toda la vida de hacer formas, diseños y patrones tradicionales profundiza la habilidad del artesano y le permite dar rienda suelta a sus fuerzas creativas.

Para esta paleta increíblemente amplia de habilidades artísticas tradicionales, México cuenta con una gama igualmente variada de fuentes: el componente precolombino, la de años de colonización con fertilización cruzada, las fiable tradiciones que siguen perseverando de los distintos grupos étnicos a nivel regional, y la influencia constante de la cultura mestiza predominante que quiere conectarse a la sociedad moderna. Por un lado, intenta celosamente proteger el patrimonio nacional y por otro es incapaz de escapar de la amenaza siempre presente de la normalización global y la producción en masa. (Kernecker, 2005)

Michoacán, estado de gran riqueza en recursos naturales, tradiciones culturales, manifestaciones artísticas; gente con tendencias a conservar las costumbres a través del cambio enriquecido con nuevos conocimientos y experiencias.

En el ramo artesanal importantes son sus manifestaciones artísticas del cobre martillado, las lacas incrustadas, la madera tallada, las fibras naturales, los textiles y la alfarería; artesanías que reflejan la riqueza de los recursos importantes con los que cuenta el estado.

La artesanía es una actividad de gran tradición en nuestro país y en nuestro estado, que absorbe una gran cantidad de mano de obra especializada y que produce artículos únicos por su belleza y calidad artística, ampliamente demandados en el exterior.

Dentro de las artesanías, la alfarería ocupa un lugar destacado desde tiempos inmemorables, la frágil permanencia de la cerámica constituye uno de los mejores testimonios de culturas antiguas ya desaparecidas.

La alfarería de Capula..., Michoacán, al igual que otras manufacturas del estado y del país, están viviendo una de las crisis más profundas. Sin embargo, las diferentes localidades artesanales de la entidad cuentan con recursos endógenos (materia prima, recursos humanos, cultura, etc.) importantes para hacer de esta actividad la punta de lanza para iniciar la recuperación económica artesanal. (Duarte Duarte & Yeverino Juárez, 2007)

De lo anterior se deriva la importancia de hacer un estudio que demuestre que el uso de las estrategias administrativas, más específicamente las alianzas estratégicas enfocadas a la construcción de marcas colectivas, pueden ser una gran oportunidad para el crecimiento y desarrollo de tan marginal actividad.

REVISION DE LA LITERATURA

Al hacer una revisión de la literatura administrativa, vemos que hoy en día es muy común el término de administración estratégica.

Así pues Fred R. David la define como el arte y la ciencia de formular, implementar y evaluar decisiones multifuncionales que le permitan a una organización lograr sus objetivos. Como la misma definición implica, la administración estratégica se enfoca en integrar la administración, el marketing, las finanzas y la contabilidad, la producción y las operaciones, las actividades de investigación y desarrollo, así como los sistemas computarizados de información para lograr el éxito de la organización. (David, 2008)

Una empresa logra la competitividad estratégica cuando tiene éxito en formular e implementar una estrategia que crea valor. Una estrategia es un conjunto de compromisos y acciones, integrados y coordinados, diseñados para explotar las competencias centrales y lograr una ventaja competitiva. Cuando las empresas se deciden por una estrategia deben elegir de entre distintas alternativas. En ese sentido, la estrategia que elige una empresa indica lo que pretende hacer y lo que no tiene intención de hacer. (Hitt, Ireland, & Hoskisson, 2008)

La administración estratégica puede considerarse un sinónimo de planeación estratégica, y pese a que este término se acuñó en la década de 1950 y fue de uso común desde mediados de la década de 1960 hasta mediados de la siguiente. En aquella época se creía que la planeación estratégica era la respuesta a todos los problemas. En ese entonces, la mayor parte del mundo corporativo de Estados Unidos estaba “obsesionado” con la planeación estratégica. Sin embargo después de ese auge, durante la década de 1980 el concepto dejó de usarse luego de que diversos modelos de planeación no reportaron los altos rendimientos que se esperaba. Con todo, la década de 1990 trajo consigo un resurgimiento de la planeación estratégica, y en la actualidad el proceso se practica de manera amplia en el mundo empresarial. (David, 2008)

Entonces una de las principales responsabilidades de los gerentes es posicionar sus organizaciones hacia el éxito con el establecimiento de metas y estrategias que puedan mantener competitiva a la organización. (Daft, 2011)

Se concluye entonces que es de suma importancia que cualquier empresa independientemente de su giro, tamaño, industria, posicionamiento, etc., debe de tomar en cuenta la administración y sus estrategias para garantizar el crecimiento y la permanencia en los mercados, cada día más exigentes.

Por otra parte es importante, para el estudio de este caso en particular, conceptualizar lo que es una marca colectiva para tratar de establecer su importancia como estrategia administrativa en el éxito comercial de las artesanías mexicanas, particularmente en el caso de “La Catrina de Barro” de Capula, Michoacán. Según el Instituto Mexicano de la Propiedad Industrial (IMPI), Marca colectiva es la marca de una asociación o sociedad de productores, fabricantes, comerciantes o prestadores de servicios, legalmente constituidos, para distinguir en el mercado los productos o servicios de sus miembros, respecto de los productos o servicios de terceros que no formen parte de esas asociaciones o sociedades.

Artículo 96 de la Ley de la Propiedad Industrial.- Las asociaciones o sociedades de productores, fabricantes, comerciantes, prestadores de servicios, legalmente constituidos, podrán solicitar el registro de marca colectiva para distinguir, en el mercado, los productos o servicios de sus miembros respecto de los productos o servicios de terceros.

Artículo 98 de la Ley de la Propiedad Industrial.- La marca colectiva no podrá ser transmitida a terceras personas y su uso quedará reservado a los miembros de la asociación. (CÁMARA DE DIPUTADOS DEL H. CONGRESO DE LA UNIÓN, 2012)

¿Qué garantías ofrece una Marca Colectiva?

Certifica la autenticidad y calidad del producto artesanal.

Preserva y rescata la producción de las artesanías y las técnicas empleadas para su elaboración, atendiendo a su calidad, representatividad, tradición, valor cultural, intencionalidad simbólica y diseño. Fomenta y promueve la calidad de las artesanías como medio para desarrollar una actividad económica, así como para la comercialización de los productos en el extranjero.

¿Qué beneficios ofrece la Marca Colectiva?

Protege las artesanías de posibles copias en toda la República Mexicana y en el resto del mundo a través de los derechos legales que le confiere el registro de la marca.

Usa el símbolo MR, para notificar al mundo el registro de Marca.

La Marca Colectiva desalienta a los “piratas” a copiarla, ya que cuenta con elementos legales para defender sus derechos.

Protege la prioridad del registro de la “Marca Colectiva” en otras naciones.

Permite restringir la importación de bienes que utilizan marcas “piratas”.

Garantiza el producto con la Marca. (Casa de las Artesanías del Estado de Michoacán de Ocampo, 2012)

Michoacán es el estado número uno en el establecimiento de marcas colectivas de ahí la importancia de analizar este caso, ejemplo para otras artesanías en otras regiones del país.

Aunado al registro de las marcas colectivas, existe también la figura de “denominación de origen” que estas particulares piezas también poseen.

Artículo 156 Ley de la Propiedad Industrial.- Se entiende por denominación de origen, el nombre de una región geográfica del país que sirva para designar un producto originario de la misma, y cuya calidad o característica se deban exclusivamente al medio geográfico, comprendido en éste los factores naturales y los humanos.

Artículo 157 Ley de la Propiedad Industrial.- La protección que esta Ley concede a las denominaciones de origen se inicia con la declaración que al efecto emita el Instituto. El uso ilegal de la misma será sancionado, incluyendo los casos en que venga acompañada de indicaciones tales como “género”, “tipo”, “manera”, “imitación”, u otras similares que creen confusión en el consumidor o impliquen competencia desleal.

Artículo 158 Ley de la Propiedad Industrial.- La declaración de protección de una denominación de origen, se hará de oficio o a petición de quien demuestre tener interés jurídico. Para los efectos de este artículo se considera que tienen interés jurídico:

- I.- Las personas físicas o morales que directamente se dediquen a la extracción, producción o elaboración del producto o los productos que se pretendan amparar con la denominación de origen;
- II.- Las cámaras o asociaciones de fabricantes o productores, y
- III.- Las dependencias o entidades del gobierno federal y de los gobiernos de las entidades de la Federación. (CÁMARA DE DIPUTADOS DEL H. CONGRESO DE LA UNIÓN, 2012)

Alfarería Tradicional de Capula, Michoacán

El trabajo del barro, que crea formas bellas y útiles, se practica desde hace miles de años en las comunidades del estado de Michoacán y el paso del tiempo al contrario de muchas tradiciones cerámicas no ha afectado en absoluto la riqueza de nuestra tradición alfarera. Cada región del estado guarda coincidencias en algunos procedimientos de las técnicas, sin embargo, cada una de ellas imprime rasgos característicos de su comunidad y medio geográfico, como es el caso de la comunidad de Capula, que a lo largo de los años, ha adquirido gran reconocimiento no solo en el interior del estado sino a nivel nacional, por su diversidad en producción alfarera.

La Alfarería Tradicional de Capula es muy característica y se puede distinguir fácilmente de la alfarería de otras regiones porque sus diseños son casi siempre abstracciones de flores y hojas pintadas con color blanco, un fondo café oscuro y verde, utilizando pinceles de pelo de cola de ardilla.

Esta alfarería requiere de dos quemas para alcanzar su acabado: una para cocer, la otra para vidriar o esmaltar y darle así a la pieza impermeabilidad y brillo. Se decora en crudo con engobes coloreados a base de pigmentos y óxidos minerales y su terminado se conoce como vidriado.

En la actualidad para la creación de estas piezas, se siguen utilizando los hornos tradicionales hechos por los propios artesanos con adobes y leña para la quema, trabajan con dos tipos de tierra, una bofa arenosa de color blanco y la otra maciza de color roja que se caracteriza por su elasticidad. El proceso de elaboración implica varias quemas, se utilizan moldes y un ocote para alisar la pieza y cubrir las fisuras que quedan al unir las partes que la integran.

En la comunidad de Capula podremos encontrar una gran diversidad de utensilios tradicionales dentro de la cocina mexicana, como son ollas y cazuelas de diferentes dimensiones, comales, platones y platos; jarros de diferentes formas y tamaños, vajillas y juegos de agua, además de macetas para uso decorativo.

A partir de los años 80's además de producir loza para uso domestico, los artesanos comenzaron a trabajar la escultura con las ya muy conocidas Catrinas y Calaveras de barro.

La producción de las Catrinas de Barro es, una alternativa artesanal de los alfareros de Capula. Son esculturas trabajadas con la técnica del pastillaje. Se prepara el barro y se modela, según cada artífice, a mano, con torno primitivo y/o con torno alfarero; se alisa el barro con tepalcates y se bruñe con piedra de río; con la técnica de *pastillaje* se aplican flores, hojas y guías y otros elementos decorativos sobre la pieza. Quienes utilizan engobes los diluyen en agua y aplican sobre la pieza terminada. Se queman en horno circular, cocidas al natural o vidriadas; algunas son pintadas con engobes de colores y otras decoradas en frío con pinturas acrílicas o vinílicas. (Casa de las Artesanías del Estado de Michoacán de Ocampo, 2012)

Capula se localiza al Oeste de Morelia, a 17.5 kilómetros por la carretera federal No. 15 Morelia-Guadalajara.

Su nombre proviene de las palabras náhuatl “capulín” y “an”, que significa “lugar de capulines”.

Lugar donde la tradición guarda celosamente las técnicas antiguas de la fusión indígena y española para la elaboración de su alfarería, artesanía de la población con una experiencia y habilidades únicas.

El 12 de junio de 1863 deja de ser Municipio y pasa a ser Tenencia de la ciudad de Morelia.

A la Tenencia la integran las comunidades de Capula, El Correo, Iratzio, Joyitas, Las Trojes, San Bernabé y Buenavista.

Una de las actividades principales de la población es la elaboración de artesanías, de donde depende gran parte de la economía de sus habitantes.

Capula es el único pueblo del estado que cuenta con Región de Origen para tres tipos de artesanía de barro, la alfarería punteada, Catrinas de barro, loza tradicional.

En materia turística los principales atractivos de Capula son las artesanías de barro cocido en hornos dos veces. La primera a más de 1,200 °C, y luego de colocársele la “greta” (material mineral para vidriar el barro) se cuece nuevamente a 1,800°C.

El pueblo cuenta con talleres de exhibición, donde sus artesanos trabajan el barro con un deleite y dedicación que dan como resultado una de las riquezas artesanales para el estado.

Los orígenes de la alfarería en Capula datan del año 1550, cuando el fraile Vasco de Quiroga trajo el oficio del barro, y debido a que se cuenta con la materia prima en las cercanías del lugar, este oficio ha crecido constantemente y se conserva hasta nuestros días.

Existen diferentes técnicas de elaboración de piezas de barro. Una de ellas es la tradicional, donde se utiliza el horno de leña, que no es tan resistente a las altas temperaturas y como tal resulta más económica; la siguiente es donde de utiliza un horno de alta temperatura a base de gas, lo cual hace que las piezas tengan una mayor resistencia y un acabado más fino y su precio es más elevado.

Capula es reconocida a nivel internacional, por el arte que se refleja en cada una de las piezas que han sido presentadas en muestras y concursos.

Aunque Capula no es pródiga en belleza urbana en comparación con otros sitios, la intensa actividad artesanal que en ella se desarrolla la llena de vida durante todo el año. Más aún, para revestir su fiesta patronal, los alfareros organizan desde hace muchos años un concurso artesanal, donde premian el mejor trabajo; dichoso aquel que gana el premio, porque sus piezas serán bien vendidas y tendrá el reconocimiento del gremio.

Finalmente, otro de los sitios importantes de conocer en Capula es la Casa Taller del pintor y escultor Juan Torres, creador de las famosas “Catrinas”, peculiar expresión popular de nuestra muy mexicana concepción de la muerte.

LAS CATRINAS LLEGARON PARA QUEDARSE EN CAPULA

El jefe de tenencia de Capula, José Luis de la Cruz Neri, aseguró que actualmente debe haber unos 200 talleres de Catrinas en esta localidad, que es una actividad que ha cobrado arraigo desde que fueron introducidas en 1980 por el escultor Juan Torres.

“La mayoría de la comunidad de Capula se dedica a trabajar las Catrinas, aunque también hay alfarería tradicional, casi todos prefieren estas piezas que son reconocidas en el mercado nacional e internacional”.

Indicó que actualmente existen tres marcas colectivas, lo que les ha permitido tener una mejor comercialización, siendo la Catrina la que ha mantenido la economía del lugar y ha reducido la migración hasta en un 50 por ciento menos por año.

“La Catrina llegó para quedarse en Capula, la primera familia es la de Alvaro de la Cruz, con todos sus hijos, todavía no tiene nietos pero se va a transmitir esto, la Catrina será el símbolo de Capula por muchos años”. (xhenhuaro)

En el año de 2007, trece ramas artesanales de Michoacán, México recibieron el reconocimiento del Instituto Mexicano de Propiedad Industrial (IMPI), como marca colectiva Región de Origen, (Casa de las Artesanías del Estado de Michoacán de Ocampo, 2012).

Señaló que se trata de los diablitos de Ocumicho; las piñas de barro originarias de San José de Gracia; las ollas de Zipiajo; los rebozos de Aranza; la cantera de Morelia y la alfarería tradicional de Capula.

También, las catrinas de barro de Capula; los huanengos y las ollas de Cocucho, la alfarería de Zinapécuaro; los muebles artesanales de Cuanajo y los bordados de Terecuato, al cobre de Santa Clara; a las guitarras de Paracho; a la pasta de caña de maíz y al maque.

Se señala también que la marca colectiva ofrece ventajas, como el dar una imagen unificada al producto en el mercado, estandarizar el proceso de producción y la adquisición de insumos.

Además, constituye una herramienta que permite al gobierno llevar un control de los apoyos otorgados a los micros, pequeños y medianos empresarios.

Con estos 13 reconocimientos se benefician a unos dos mil artesanos y se protegen unos cinco mil empleos generados a raíz de la producción de artesanías. (Casa de las Artesanías del Estado de Michoacán de Ocampo, 2012)

Son este tipo de protección y estrategia administrativa lo que ha logrado posicionar a muchos de los productos michoacanos, en mercados internacionales, tales como el Aguacate, la Charanda, El queso Cotija, el cual en 2006 ganó un premio internacional en un concurso en Cremona, Italia, como el mejor queso extranjero.

LAS MARCAS COLECTIVAS EN EL EXTRANJERO

Fuera de México las cosas no son diferentes, el registro de marcas colectivas y de la denominación de origen se ha usado en todo el mundo y en distintos momentos uno de los más antiguos acepciones fue en el Convenio de París o CUP; es un tratado internacional multilateral administrado por la Organización Mundial de la Propiedad Intelectual (en adelante OMPI) en cuyo texto inicial de 1883 no contenía disposiciones sobre indicaciones de procedencia o denominaciones de origen. Fue en la revisión de Washington de 1911 que se introdujeron las indicaciones de procedencia y en la revisión de La Haya de 1925 se incluyeron las denominaciones de origen.

Dentro de la protección de propiedad industrial, el CUP protege las indicaciones de procedencia y denominaciones de origen a través de la competencia desleal, esto es, de manera indirecta por medio de las indicaciones falsas de procedencia. Es así que, en el artículo 10, inciso 1), del citado tratado se establece la obligación de los países miembros de tomar medidas concretas, como el embargo en la frontera o en el interior del país y la prohibición de importación para impedir y/o prohibir el comercio de productos utilizando una indicación falsa de procedencia.

La prohibición abarca el uso de indicaciones falsas directas (nombre de un lugar determinado) e indirectas tales como el uso de adjetivos, imágenes, figuras o símbolos que denotan una falsa procedencia, así como su uso en publicidad o literatura comercial. En México; las disposiciones del convenio de París se aplican a todas las figuras de propiedad industrial, es decir, a las invenciones, diseños industriales, modelos de

utilidad, las marcas de fábrica o de comercio, los nombres comerciales, las indicaciones de procedencia e incluye disposiciones relativas a la competencia desleal.

Para el caso de México se publica un acta en la Sección Primera el Diario Oficial de la Federación, el sábado 11 de julio de 1964, la anterior Acta de Revisión fue aprobada por la H. Cámara de Senadores del Congreso de la Unión el día veintiséis del mes de diciembre del año de mil novecientos sesenta y dos, según decreto publicado en el "Diario Oficial" de la Federación del día treinta y uno del mismo mes y año.

Que fue aceptada por Presidente de la República el día diecinueve del mes de diciembre del año de mil novecientos sesenta y tres, habiéndose efectuado el depósito del Instrumento de Adhesión respectivo ante el Gobierno de la Confederación Suiza, el día veintiuno del mes de febrero del presente año (DOF, 1964) y que le da respaldo y lo agremia a los países que participaron de este convenio y se agregaron posteriormente con el fin de cumplir y hacer cumplir lo que en este se estipula.

México refleja en su legislación nacional todas las disposiciones del Convenio de París, protegiendo todas las figuras de propiedad industrial y observando los principios a que dicho Convenio hace referencia.

El IMPI en cumplimiento a las obligaciones derivadas del Convenio da seguimiento, entre otras, a las disposiciones del artículo 6o sobre la protección de emblemas de Estado, siglas, punzones oficiales de Estado y de organismos internacionales, otorgando o negando protección al emblema en cuestión.

La Asamblea de la Unión de París se reúne anualmente y el IMPI participa activamente. En dichas reuniones se anuncia la adhesión de nuevos países, se aceptan Estados u otras organizaciones en calidad de observadores o se nombran cargos de presidente o vicepresidente de la Asamblea. Asimismo se tratan cuestiones sobre el mantenimiento y desarrollo de la Unión y la aplicación del Convenio de París y en su caso, cuestiones sobre análisis y adopción de propuestas de modificación. (IMPI, 2009)

Y en otros países también se implementan las marcas colectivas y de denominación de origen para su mejor comercialización y presencia en los mercados internacionales por ejemplo 40 % de los consumidores están dispuestos a pagar 10% más en la Unión Europea por productos respaldados con una marca de denominación de origen. Fuente: Comisión Europea 2003.

En China su durazno en cuanto se vende con Indicaciones Geográficas (IG) o denominación de origen sube de 1.5 A 4.5 Yuanes. Fuente: Symposium de IG'S. OMPI. Beijing, 2007.

Desde que sus vinos tienen IG; en Australia han pasado de exportar 5000 cajas al Reino Unido en 1986 al millón de cajas en 1994.

Fuente: Symposium de IG'S. OMPI. Mérida, 2003.

Al igual que en otros lugares del mundo en México y en el caso particular de Michoacán y de "Las Catrinas de Barro" de la comunidad de Capula este tipo de medidas administrativas y legales de impacto internacional han hecho mella en la comercialización de tan apreciados artículos y por consecuencia en la elaboración, desarrollo y divulgación de las mismas.

Aunque es algo complicado cuantificar numéricamente la dimensión del beneficio comercial después de la implementación de la marca colectiva de denominación de origen; sin embargo es a todas luces claro el beneficio e impacto positivo de haber llevado a cabo tal medida y una de las formas más palpables de este beneficio se refleja en la migración de los pobladores de esta comunidad.

Michoacán es uno de los estados con mayor migración hacia los Estados Unidos de Norteamérica y la

población de Capula era un claro ejemplo de ello, pero luego de la implementación y registro de tres marcas colectivas de denominación de origen para las artesanías de este lugar, este fenómeno migratorio se vio reducido considerablemente, como lo pone de manifiesto el jefe de tenencia de Capula, José Luis de la Cruz Neri.

Por lo que luego de concluir el beneficio tanto comercial como social que tuvo esta comunidad después del registro de sus marcas es inminente la recomendación a otras industrias marginadas en cualquier comunidad del Estado de Michoacán y en general de México como una oportunidad de crecimiento y desarrollo; tanto de sus productos como de sus poblaciones.

MÉTODO PARA DETERMINAR LAS VARIABLES DE INVESTIGACIÓN Y SU JERARQUÍA ACORDE AL GRADO EN QUE INCIDEN EN LA COMPETITIVIDAD INTERNACIONAL DE LAS EMPRESAS PORCÍCOLAS DEL CENTRO OCCIDENTE DE MÉXICO

Oscar Hugo Pedraza Rendón, UMSNH

Iván Paz Prado, UMSNH

RESUMEN

En este artículo se sugiere un método que ayude a determinar las variables más relevantes que inciden en la competitividad internacional de las empresas porcícolas del centro occidente de México. La metodología utilizada para elaborar el presente documento es no experimental transversal descriptiva, en la que se aplicó el método causal correlacional deductivo, al ir de lo general a lo particular, es decir se partió de la competitividad en sus aspectos generales para entrar a cuestiones más específicas como la aplicación de la competitividad en el giro específico de la producción y comercialización de productos cárnicos de cerdo y sus derivados, a través del análisis de los participantes y "stakeholders" (tenedores de interés) de la cadena de valor porcícola y las variables que se originan debido a su interacción para crear una oferta de valor atractiva para el mercado internacional (concretamente el mercado chino); es importante mencionar que la investigación es de carácter mixto al obtener datos cualitativos a través de entrevistas con empresarios sobresalientes de la región mencionada que participan a lo largo de la cadena de valor porcícola y datos cuantitativos obtenidos mediante información documental en fuentes primarias o secundarias. Los resultados de dichas entrevistas y la información obtenida se procesaron con un enfoque sistémico y nos arrojan los elementos suficientes para utilizar el método de frecuencias de variables y el método de jerarquización analítica de Thomas Saaty, para identificar en orden de importancia las variables que más inciden para ser competitivos en el mercado internacional. Lo anterior cobra relevancia dada la ventana de oportunidad que se visualiza por la apertura comercial vigente con diversas naciones y los nuevos acuerdos o tratados que se están consolidando con otras naciones para comercializar cárnicos de cerdo, como es el caso de la República Popular China.

PALABRAS CLAVE: Competitividad / Enfoque sistémico/ Ventaja competitiva/ Stakeholders / Cadena de valor / Creación y entrega de valor / China / Frecuencia de variables / Método de Jerarquización analítica de variables.

METHOD TO IDENTIFY THE VARIABLES AND THEIR HIERARCHY ACORDING TO THE INCIDENTAL DEGREE TO DETERMINE THE INTERNACIONAL COMPETITIVENESS LEVEL IN INTERNATIONAL PRODUCTION AND PORK TRADING IN MEXICO.

ABSTRACT

This article suggests a useful method to determinate the most important variables that affect the international competitiveness of pork production and trader companies, located in Mexico. The methodology used in the investigation is non experimental, transversal descriptive; causal correlational and deductive, because it describes issues of competitiveness in general and focuses on issues of competitiveness in production and pork trading, the analysis of the participants and "stakeholders"

(interest holders) of the pork value chain and the different variables that are involved and interact to create an attractive value proposition for the international market (especially the Chinese market), it is important to mention that the research is also mixed because we used qualitative data obtained in interviews with outstanding entrepreneurs of the center of the country (Mexico) involved along the value chain and quantitative data obtained from documentary information in primary or secondary sources. The results of these interviews and information research were processed with a systemic approach using the method of variable frequencies and the method of Thomas Saaty's analytical hierarchy, in order to identify which variables are involved and which ones are the most influent to be competitive in the international market. This research gets particularly relevancy, given the window of opportunity that is displayed by the current trade liberalization with various nations and new agreements or treaties that are being consolidated between Mexico and other nations to sell pork, as the case of the Republic of China.

KEY WORDS: Competitiveness / Systemic Focus / Competitive Advantage / Stakeholder / Chain value / Creating and value delivering / China / Frequencies of variables / Variables / Analytical hierarchy method.

INTRODUCCIÓN

El problema que se resuelve en el presente artículo obedece a la necesidad que tienen las empresas del centro occidente de México, por conocer que tan competitivas son para participar con éxito en el mercado internacional de cárnicos de cerdo, por lo que se determinará la competitividad desde dos enfoques, el primero es la capacidad funcional, entendida como el conjunto de capacidades que bajo un modelo de negocio rentable les permite participar en la cadena de valor del sector porcícola de manera sustentable; el segundo enfoque es la capacidad exportadora, entendida como el conjunto de capacidades que le permita no solo competir con éxito en el mercado nacional sino que les sea posible hacerlo internacionalmente, como ya lo han hecho en otras regiones geográficas del país como el noroeste y el sureste de México.

Marco Teórico

Para la elaboración del presente artículo se consideraron conceptos detallados por los autores clásicos más relevantes en distintas teorías, como bases para entender la competitividad en el comercio entre empresas de diferentes países, siendo los más relevantes: la teoría de la ventaja absoluta (A. Smith) , la ganancia global y la teoría de la ventaja comparativa (D. Ricardo), la teoría de la Deuda recíproca (S. Mill); así como las teorías y autores neoclásicos en comercio internacional como la teoría del equilibrio y el comercio internacional (Javons y Walras), la teoría de las proporciones de factores en el comercio (E. Heckscher y B. Ohlin) , la teoría de los rangos de productos traslapados y la demanda representativa (S. Burnestam Linder), la teoría del ciclo del producto (R.Vernon).

Además consideramos que es muy importante para comprender la competitividad de las empresas en el plano internacional actual, incursionar en lo que se conoce como la teoría del comercio internacional estratégico bajo un enfoque sistémico, que complementa los trabajos previos y profundiza sus análisis a nivel de firma en un entorno donde cada vez se aceleran las ventanas temporales de oportunidad, dado el incremento de competidores que a la vez aceleran sus procesos para mantener o elevar su nivel competitivo, para ello se partirá de los trabajos de: competitividad de las naciones (M. Porter), las imperfecciones que presentan los mercados internacionales (P. Krugman) y la competitividad de las empresas (M. Porter). Debido a que el objetivo de esta investigación no es explicar si México es competitivo en cierta actividad como país, sino que se pretende saber es si las empresas Mexicanas (de cierta región geográfica) pueden ser competitivas o no a la luz de encontrar las variables y en qué medida la interacción de esas variables inciden en ello tomaremos como parte central del marco teórico el trabajo

de competitividad empresarial de M. Porter ya que es la persona que más ha aportado recientemente a este enfoque, entendiendo por competitividad la capacidad de una empresa de generar una ventaja competitiva que le permita generar rentabilidad y subsistir en el tiempo.

Jesús Peral hace un cruce importante del enfoque de ventaja competitiva de Porter con el de competitividad por innovación de Shumpeter en el modelo de análisis de la aparición de una ventaja competitiva destacando que para comprender si la ventaja competitiva se genera endógena o exógenamente se debe considerar el entorno nacional, el entorno de la industria en particular de que se trate y las capacidades y recursos de las empresas para encontrar que variables son las que inciden en encontrar y sostener una ventaja competitiva durante un espectro de tiempo que le permita ser lo suficientemente rentable para que sea atractivo participar en el mercado elegido (Peral, 2011). Por ello también se consideró los trabajos de la teoría del enfoque sistémico (E. Goldratt) entendiendo la empresa como parte integral de un sistema que presenta restricciones y recursos escasos para lograr sus objetivos, la teoría de los “stakeholders” o tenedores de interés (R. E. Freeman) como impulsores u opositores al éxito de un proyecto determinado por diversos actores que desean que la firma tenga éxito o fracase según sus intereses particulares. Al final cerraremos este trabajo con el método analítico de jerarquización (T. Saaty) para establecer las jerarquías entre las variables que inciden en la competitividad de las empresas en un contexto internacional.

El Entorno Porcícola

Acorde a cifras publicadas en el reporte “Perspectivas alimentarias, análisis de los mercados mundiales” de la FAO en el mundo se presenta un escenario deficitario de producción de alimentos, en 2010 el comercio mundial de carne de cerdo se mantuvo en el orden de los 102 millones de toneladas. **China**, fue un importador importante en 2008, ya que aunque su producción comienza a recuperarse y ha reducido su volumen de importaciones en los últimos años de todos modos será un importador de alto nivel situado por encima de las 450,000 toneladas manteniéndose junto con Japón y Rusia entre los tres países de mayor volumen de importación. Para México y el resto del mundo, el mercado asiático (China, Corea y Japón) actualmente ofrece grandes posibilidades, ya que aunque China es el productor mundial número uno del mundo según las Estadísticas alimentarias de la USDA 2009, sin embargo presenta un déficit alimentario por su alto consumo per cápita, teniendo una fuerte necesidad de importar carne de cerdo acorde a las cifras de la FAO lo que lo hace una oportunidad muy atractiva para los productores mexicanos.

Relevancia Social

En México, la porcicultura ocupa el tercer lugar en importancia por su aportación a la producción total de cárnicos (contrario a lo que sucede en el resto del mundo donde el consumo de puerco se encuentra en primer lugar contra el pollo, la res y otros cárnicos). La relevancia de esta actividad reside en dos cuestiones principalmente: proporciona un conjunto de productos importantes en la dieta de los mexicanos y requiere indirectamente de vastas superficies agrícolas y da lugar a una amplia y compleja cadena productiva, desde la producción de granos, la elaboración de alimentos balanceados, fármacos, biológicos veterinarios, la operación de rastros, obradores (despiezado) hasta la de industrialización de la carne (embutidos y derivados) y otros subproductos (grasas, cuero, huesos, composta y/o pezuñas).

Relevancia Económica

Para el 2010 el mercado global de carne fresca osciló alrededor de los 102 millones de toneladas, y presenta una tasa media de crecimiento anual de 1.9% debido al aumento de los ingresos disponibles y las preferencias cambiantes del consumidor los cuales son factores clave que están moldeando el crecimiento en el mundo de las carnes frescas. Se espera que Asia abra grandes oportunidades para obtener ganancias en este mercado. En particular las tendencias naturales, orgánicas y bajas en grasa están impulsando este

sector. El constante crecimiento de la demanda del consumidor por las carnes precocinadas, y productos cárnicos de fácil preparación está reforzando la demanda por carnes procesadas. La globalización de las tendencias, el fuerte crecimiento económico, y la recuperación de grandes mercados de las enfermedades que afectan al sector, aumentarán el comercio mundial de carne en el futuro próximo.

Esto último lo podemos inferir si analizamos las tasas de crecimiento poblacional siguiente: población mundial 2010: 6790'062,216 de habitantes con una tasa de crecimiento anual 1.17% = 79,580,822 y China: Población 1330'000,000 con una tasa de 0.6% = 7'980,000. Si se cruzan los datos demográficos (publicados en el U.S. Census Bureau International Database, disponible en: <http://www.census.gov>) con el consumo per cápita mundial de 14.22 kg por persona/año y el consumo per cápita de China de 33.7 kg por persona/año, se obtendrá una proyección aproximada de las necesidades de carne de cerdo para los próximos años calculándose un déficit considerable en los próximos años de 1'131,639 toneladas a nivel mundial y un déficit en el país asiático de 270,930 toneladas. Estas tendencias indican que si se aprovecha la oportunidad de un mercado de tendencia creciente y de gran tamaño, se logrará tener un impacto positivo en la economía de la región centro occidente del país (Michoacán, Jalisco y Guanajuato) ya que la porcicultura es una de las actividades económicas preponderantes de la zona, debido a que según datos de SAGARPA (2009) la producción de cerdo en pie en Michoacán, Guanajuato y Jalisco representa el 33% del total nacional.

La Heterogeneidad Y Complejidad De La Cadena De Valor Porcícola Mexicano

Las empresas porcícolas en México se pueden catalogar acorde a su nivel de desarrollo tecnológico en empresas tecnificadas, semi tecnificadas y no tecnificadas; esto es muy relevante ya que va de la mano el nivel de productividad y eficiencia que se puede lograr con el nivel de desarrollo tecnológico. Tal es el caso de la actividad agrícola en donde se requieren procesos de investigación y desarrollo para generar alimentos balanceados (hechos en base a granos como el sorgo, trigo, maíz) que reduzcan las enfermedades e incrementen la conversión de los animales en carne rica en nutrientes y baja en grasas. O en la actividad pecuaria, donde la producción de carne de cerdo se ve afectada por el desarrollo de las líneas genéticas del cerdo donde se controla principalmente la velocidad natural de crecimiento del cerdo y la “estampa” del animal (forma del cerdo, musculatura, color, tamaño, pezuñas, forma de orejas, entre otros) acorde a los gustos y preferencias de presentación del producto para los compradores de carne de cerdo en canal y/o en pie, o bien la proporción de carne magra y grasa que genera el animal, en la que actualmente se ha logrado reducir esta última haciendo de la carne de cerdo un producto más sano y libre de acelerantes de crecimiento dañinos al ser humano en comparación con otros tipos de carne.

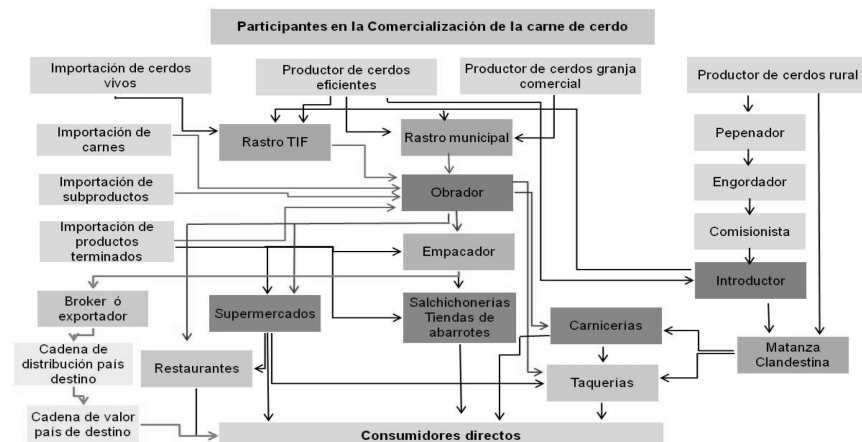

Otra cuestión tecnológica tiene que ver con las prácticas de control sanitario y de conversión de los insumos en kilogramos de carne de cerdo en pie al repartir equitativamente el alimento a toda la población de animales (sobre todo en el proceso de engorda), en donde los avances tecnológicos hacen una significativa diferencia para mantener un volumen poblacional equilibrado en cantidad de cabezas de ganado como en el ritmo de crecimiento desde la fase de “maternidad”, la fase de “destete” y la de “engorda”. En este tipo de empresas un colaborador relevante suele ser las empresas dedicadas a la farmacéutica veterinaria y los cuidados médicos de los animales (en los que la investigación, desarrollo e innovación de productos es la constante), las cuales suministran y aplican los productos que requieren los animales para prevenir y remediar enfermedades que pueden ser catastróficas para la actividad pecuaria si no se atienden en tiempo. En lo referente a la actividad de matanza se presentan diferencias relevantes acorde al nivel de desarrollo tecnológico en dos tipos de rastro, los rastros que cuentan con certificaciones que garantizan la higiene y cuidado en el manejo del ganado, la matanza y la limpieza de las canales de cerdo (desechando las partes del cerdo que no se pueden utilizar y/o comercializar, y que suelen ser muy pocas) y los rastros en donde no se tiene una certificación y el manejo del producto no cuenta con los estándares debidos mermando la calidad del producto y poniendo en riesgo a los consumidores finales. En las empresas enfocadas a agregar valor a través de la transformación, conocidas en el país como

obradores, cuyo fin principal es convertir la carne de cerdo “en canal” en una gran variedad de subproductos (cortes específicos de carne de cerdo) y/o embutidos, manteca (grasa de cerdo) y/o pieles (ya sea para consumo o para fabricación de otros productos).

En esta actividad el desarrollo tecnológico fincado en el conocimiento del equipo humano de trabajo, es realmente la base de la competitividad, ya sea por el conocimiento de fórmulas y procedimientos; la destreza que debe tener la mano de obra en los procesos de separación de la piel del cerdo (destacando que es una industria que es intensiva tanto en mano de obra como en capital), la separación de las partes cortando de diferente formas las piezas que conforman al animal o efectuando cortes específicos de dichas partes para entregarlos a los siguientes eslabones en la cadena de valor; o bien por el control que se debe de llevar para garantizar la inocuidad del producto y su vida de anaquel a través de cadenas de frío eficientes que permitan una temperatura baja y estable hasta llegar a las manos del consumidor final. También es relevante mencionar que en la competitividad de las empresas incide favorable o desfavorablemente el grado de inversión en bienes de capital que hace la firma debido a que las inversiones en maquinaria y equipo especializado como ya se mencionó son altas (para desarrollar los diferentes procesos se requiere de rampas, tinas, motores y cámaras de refrigeración, bandas y cadenas de transportación, trituradoras, cortadoras, inyectoras, embutidoras y empacadoras entre otros).

Es evidente que a mayor inversión en equipos mayor diversificación de productos y eficiencia productiva, elevando así la competitividad de las empresas mediante una oferta de valor más amplia y de mejor calidad que otros competidores. Teniendo el producto, las empresas deben hacer un esfuerzo importante por introducir sus productos en el canal tradicional de distribuidores de productos alimenticios (mayoristas y/o detallistas) o en el canal de autoservicio enfrentando fuertes barreras de introducción principalmente derivadas de “cargar” el canal en los puntos de venta con el cliente de forma eficiente y constante y los esfuerzos de promotoría en el punto de contacto con el consumidor final arropados con campañas publicitarias para ganar la preferencia con los clientes. Podemos decir que en lo referente a las cuestiones internas de las empresas se deben hacer esfuerzos importantes en cada una de las diferentes actividades que van aportando valor a los productos derivados del cerdo en términos de desarrollo genético, desarrollo medio veterinario y farmacéutico, desarrollo en control sanitario, desarrollo alimenticio, infraestructura y equipo para cría, engorda, matanza, despiece y empaque, aseguramiento de la calidad e inocuidad en la fabricación de alimentos y distribución, comercialización mediante mercadotecnia y promotoría directa, pero además deben vigilar y aprovechar un sistema entramado complejo y heterogéneo de relaciones y empresas que componen la cadena de valor porcícola conformada por elementos (empresas participantes) de diferentes niveles de desarrollo tecnológico y tamaño que ofrecen una enorme diversidad de satisfactores para otros participantes del sistema de valor y/o para el consumidor final.

Figura 2: Participantes de la Cadena de valor internacional porcícola.

En esta figura se mapean los diferentes participantes en la cadena de valor de producción y comercialización internacional de cárnicos de cerdo. Fuente elaboración propia.

Pero este sistema está inmerso y/o relacionado con más elementos : los “stakeholders” o tenedores de interés, que son todas aquellas empresas participantes, instituciones, organismos y/o personas a quien le interesa que funcione o que no funcione el sistema ya que afecta o favorece con sus resultados a sus propios intereses, sean estos económicos, políticos o sociales. Si además consideramos la comercialización de cárnicos de cerdo en el extranjero este sistema se vuelve aún más complejo ya que se debe considerar la logística, amplitud y longitud a lo largo de los canales de comercialización existentes en el mercado del país en el que se desea participar (incluyendo las barreras, ventajas y desventajas que se puedan encontrar para cumplir con sus objetivos).

Por lo tanto si se quiere analizar la competitividad de los participantes no basta contemplar las cuestiones internas de la empresa, es fundamental considerar las interacciones que existen entre los distintos participantes de la cadena de valor y los “stakeholders” relacionados con este sistema de valor para detectar a los impulsores y restrictores de la actividad. La presente investigación consideró y analizó la interacción de los “stakeholders” siguientes: Accionistas de las empresas del sector porcícola, empleados y ejecutivos clave de las empresas, clientes y/o consumidores, proveedores, competidores, organismos empresariales, instituciones académicas, instituciones de investigación e innovación, el estado y la comunidad local.

La Competitividad De Las Empresas Porcícolas, Identificación Y Jerarquización De Variables.

Todo lo anterior presenta el reto de determinar como empresario, que variables son las más relevantes para poder incrementar la competitividad de su empresa, en donde se observa si bien es cierto un mercado interno con cierto crecimiento, también se observa un fuerte incremento en la rivalidad entre competidores que obliga a observar nuevas oportunidades en el entorno internacional. Para analizar la competitividad un sector tan heterogéneo y complejo como el de las empresas porcícolas nos enfrentamos entonces a tres retos: El primero, encontrar las variables que inciden en mayor o menor medida en la competitividad. El segundo, encontrar de esas variables cuáles son las que se consideran con mayor frecuencia en estudios de competitividad a nivel de firma o empresa. Y el tercero jerarquizarlas mediante un método que permita establecer un nivel de relevancia, pese a la heterogeneidad de los participantes en el sector, y considerando las capacidades que tienen las empresas para competir con éxito en dos arenas distintas: el mercado nacional (en el que se encuentran en la región participantes relevantes del mercado de cárnicos) y el mercado internacional (que se visualiza como una oportunidad interesante por lo ya comentado previamente).

Método De Identificación Por Frecuencia De Variables

Para resolver el primer reto de identificar las variables que se han estudiado en materia de competitividad se consideraron estudios de diversas instituciones, organismos y/o empresas en los que han tratado de desglosar sus componentes desde distintas perspectivas ya que determinar el grado de competitividad de una empresa no resulta fácil por ser el resultado de una interacción de elementos y procesos que además resultan cambiantes. Por ello consideramos que aplicar un enfoque sistémico que nos permita entenderlo como un conjunto de elementos que recibe ciertos insumos del entorno, los procesa y entrega como sistema, un resultado determinado (en este caso orientado a resolver una necesidad en el consumidor o usuario final) es lo más acertado. Para poder mapear las variables que inciden en la competitividad tomamos una tabla de frecuencia de variables (Bonales, 2003) en la que se tomaron esfuerzos por identificar variables de competitividad realizados por instituciones, empresas, personas y organismos entre los que se encuentran: la OCDE, el MTI, Carlos Wagner, Henry Mintzberg, la Unión Europea, el INCAE, Julio Segura, Alejandro Serralde, el INEGI, Agropecuaria Andalucía, Alfonso Cebreros, Sergio Hernández, Bancomext, Michael Porter, Miller, Alejandro Lerma, ENAP, Thomas Peters, Maidique y Patch. Con ello podemos identificar las principales variables que existen en materia de competitividad y se está en posición para enfrentar el segundo reto; para enfrentarlo se elaboró una matriz de frecuencia de variables en la que se identificó el número de menciones que cada variable obtuvo en las investigaciones y estudios mencionados en la tabla anterior.

Tabla 2: Lista de variables y su correspondiente frecuencia de mención por orden alfabético.

Administración 1, agricultura 1, alianzas internacionales 1, ambiente 1, aranceles 1, autonomía 2, benchmarking 2, calidad 10, calidad de vida 2, canales de distribución 9, capacitación 8, capital 1, clientes 3, compromiso 1, comunicación 2, consumo de energía 1, control estatal de la industria 1, corrupción gubernamental 1, costo 3, costo de capital 1, costo de vida 1, costo beneficio 1, cultura 2, desarrollo del mercado 2, desarrollo financiero 2, desempeño corporativo 1, desempleo 2, descentralización 2, deuda nacional 1, diferenciación 2, diversificación 1, educación 1, eficiencia empresarial 2, eficiencia del gobierno 1, empleo 2, enfoque 1, especialización del producto 2, estabilidad política y social 1, estrategia de mercado 1, estructura comercial 2, estructura financiera 1, estructura simplificada 2, exportaciones 1, financiamiento 3, fuerza de la investigación 1, gastos de gobierno 2, gobierno 2, hostilidad sindical 1, imagen administrativa 2, importaciones 2, inflación 1, infraestructura 4, innovación 4, inseguridad pública 1, insumos 2, internacionalización 2, inversión extranjera 1, inversión nacional 3, investigación y desarrollo 2, liderazgo 1, mano de obra 1, marco jurídico institucional 1, mercado 2, mercado de capitales 1, mercadotecnia 1, monopolios 1, organización 3, participación de mercado 1, patentes 1, perfil del empresario 1, población 2, política fiscal 2, precio 8, preferencia de los consumidores 2, prestaciones 1, procesos productivos 2, producción 2, producción de energía 1, productividad 5, producto vendible 1, productos 3, promoción 2, pronósticos económicos 1, proteccionismo 2, proveedores 1, recursos humanos 2, recursos naturales 2, relaciones con el gobierno 1, rentabilidad 2, reserva de divisas 1, riesgo 1, salarios 2, servicios 4, tasas de interés 2, tecnología 8 y valores 2.
--

Para resolver el tercer reto, consistente en jerarquizar las variables más relevantes en materia de competitividad internacional, se consideraron diferentes metodologías sin embargo se eligió una que nos permitiera tener la flexibilidad suficiente para considerar distintos enfoques, dado que se decidió enfocar los puntos críticos de los diferentes participantes en la cadena de valor desde dos perspectivas o enfoques: la capacidad funcional y la capacidad exportadora (ya que puede cambiar drásticamente la relevancia de una variable si se considera participar únicamente en el mercado interno o si se desea además exportar sus productos al extranjero). Se decidió utilizar el método del Thomas L. Saaty dado que es un método simple, flexible, de fácil e intuitiva comprensión y posee una versión generalizada (el Proceso Analítico en Red - ANP) que permite tomar en cuenta posibles efectos de interdependencias, lo cual le viene muy bien a nuestra investigación y cuya metodología se describe a continuación.

Método De Jerarquización Analítica De Saaty

Se trata de un procedimiento de comparación por pares de los criterios que parte de una matriz cuadrada en la cual el número de filas y columnas está definido por el número de criterios a ponderar. Así se establece una matriz de comparación entre pares de criterios, comparando la importancia de cada uno de ellos con los demás, posteriormente se establece el vector principal, el cual establece los pesos (w_j) que a

su vez proporciona una medida cuantitativa de la consistencia de los juicios de valor entre pares de factores (SAATY, 1980:17).

El procedimiento es el siguiente: Primero se determina la pregunta de investigación que delimita el problema estudiado y clarificar los objetivos que se persiguen con este análisis. Posteriormente se determina la importancia relativa de cada objetivo (o enfoque), y se determina la escala que servirá para evaluar a cada variable en comparación con las otras. Después se evalúa cada alternativa o variable en relación con las demás, para ello se anota en una matriz de doble entrada la calificación de la variable en cada fila, en relación a la variable de la columna correspondiente, así, es preciso primero, completar toda la matriz (Hay que repetir esta evaluación “por pares” con cada variable).

A continuación se elabora un segundo tipo de matriz de cálculo en la que se procede a pasar las calificaciones (las cuales se anotan en el ángulo inferior izquierdo de la matriz) y se introduce en el ángulo superior-derecho el número recíproco del valor de la celda correspondiente al ángulo inferior-izquierdo. Teniendo completa la matriz se debe sumar cada columna para obtener un marginal de columna y se procede a generar una nueva matriz mediante la división de cada celda entre el marginal de su columna. Por último, se le da una evaluación jerárquica a cada enfoque o perspectiva y se procede a calcular la media geométrica de los pesos para cada línea y hacer un ponderado del resultado final. (Para mayor claridad se pueden apreciar los cálculos de la aplicación del método de Saaty en el anexo B del presente artículo en el apartado “Matrices” y en apartado “Relevancia global de las alternativas”).

Aplicación Del Método De Jerarquización Analítica De Saaty En La Competitividad De Las Empresas Porcícolas Del Centro Occidente De México.

El primer paso fue tomar la pregunta que delimitara el problema en cuestión, la cual quedo redactada de la manera siguiente: Determinar con un enfoque sistémico ¿Cuáles son las variables que mejor definen el nivel de competitividad de las empresas porcícolas considerando su interrelación para exportar con éxito al mercado internacional dentro del marco del sistema agroalimentario?

Una vez establecida la pregunta se determinaron los objetivos a perseguir con la aplicación de este método, siendo los siguientes:

Objetivo general: Entender qué variables son más relevantes y cuál es su orden jerárquico para determinar la competitividad de las empresas porcicultoras de la región centro occidente al exportar sus productos.

Objetivos secundarios: (en los que se determinan los enfoques o perspectivas a considerar al momento de jerarquizar cada variable respecto de las demás): Considerar para este análisis de variables que inciden en la competitividad dos perspectivas: la capacidad funcional de la firma (Competitividad administrativa financiera/Competitividad del capital humano / Competitividad productiva / Competitividad comercial) y la capacidad exportadora de la firma para participar con éxito en el mercado internacional.

Y se estableció la escala de evaluación quedando de la siguiente manera:

Una vez determinados los objetivos y la escala, se procedió a calificar cada una de las alternativas o variables especificadas en la matriz de jerarquización de variables elaborada con anterioridad en la que se evalúa acorde al nivel de relevancia que tiene cada variable respecto a las demás considerando para ésta primera evaluación la perspectiva de “la capacidad funcional” de la empresa. Las evaluaciones se anotaron en la matriz de doble entrada siguientes:

Tabla 3: Escala de evaluación

Calificación	Definición	Explicación
1	Igual importancia	Dos actividades contribuyen igualmente a un objetivo
3	Ligera importancia de una sobre otra	Existe evidencia y un criterio lógico para mostrar la importancia de una alternativa sobre otra pero no es concluyente
5	Esencial o fuerte importancia de una sobre otra	Existe evidencia y un criterio lógico para mostrar la importancia de una alternativa sobre otra
7	Importancia demostrada	Existe evidencia concluyente para mostrar la importancia de una alternativa sobre otra
9	Importancia absoluta	La evidencia a favor de una alternativa sobre otra es el orden de afirmación más alto posible
2,4,6,8	Valores intermedios entre dos calificaciones	Existe compromiso en la asignación de dos valores

Tabla 4: Relevancia acorde a la capacidad funcional.

Objetivo 1: Capacidad funcional de la firma			
Calidad	Alternativa	Calif	Calif
Precio		9	
Tecnología		3	
Capacitación del capital humano		1	
Canales de distribución y logística		3	
Comunicación		1	
Calidad	Alternativa	Calif	Calif
Tecnología	Capacitación del capital humano	5	
Tecnología	Canales de distribución y logística	3	
Tecnología	Comunicación	1	
Calidad	Alternativa	Calif	Calif
Canales de distribución y logística	Comunicación	1	

Se repitió nuevamente la evaluación de cada alternativa o variable respecto a las demás pero ahora bajo el segundo enfoque: “Capacidad exportadora” y se anoto en las matrices siguientes: Y se realizó la jerarquización de los enfoques para determinar con la misma escala de evaluación en qué medida la capacidad funcional es más relevante respecto de la capacidad exportadora de las empresa para ser competitivo (cabe destacar que la evaluación solo indica el nivel de relevancia respecto de la anterior, no nos indica que si se debe de preferir una sobre la otra ya que ambas son requisito para participar con éxito en el mercado internacional independientemente del país que se elija). La evaluación del nivel de relevancia de la capacidad funcional respecto a la capacidad exportadora se determinó en la matriz siguiente:

Tabla 5: Relevancia acorde a la capacidad exportadora.

Calidad	Alternativa	Calif	Calif
Precio		9	
Tecnología		5	
Capacitación del capital humano		5	
Canales de distribución y logística		3	
Comunicación		3	
Calidad	Alternativa	Calif	Calif
Tecnología	Capacitación del capital humano	5	
Tecnología	Canales de distribución y logística	2	
Tecnología	Comunicación	2	
Calidad	Alternativa	Calif	Calif
Canales de distribución y logística	Comunicación	1	

Tabla 6: Ponderación de objetivos.

Ponderación de Objetivos (o perspectivas):		
	Alternativa	Calif
O1.- Capacidad funcional de la firma	O2.- Capacidad exportadora de la firma	7

Es decir, existe evidencia concluyente para afirmar que la relevancia de la capacidad funcional es mayor que la relevancia de la capacidad exportadora, lo cual no indica que una substituya o elimine a la otra, simplemente que tiene mayor relevancia para determinar la competitividad de una empresa. Teniendo hecha la comparación por pares (tanto de las variables como de las perspectivas) se procedió a elaborar las matrices de números recíprocos para calcular el promedio geométrico correspondiente.

Figura 2: Ejemplo de matriz de números recíprocos y cálculo de promedio geométrico.

En esta figura se detallan los pasos para construir una matriz de números recíprocos y se hace el cálculo de el promedio geométrico. El promedio o media geométrica de una cantidad determinada de números (n números) es la raíz n -ésima del producto de dichos números, por ejemplo si se toman los números 1, 3 y 9 su media aritmética será la raíz cúbica de $1 \times 3 \times 9$, es decir la raíz cúbica de 27 será el promedio aritmético el cuál es igual a 3 en este ejemplo.

Fuente elaboración propia.

Para fines de nuestra investigación se calcularon tres matrices de números recíprocos y promedios geométricos para determinar la competitividad de las empresas porcícolas en China tiene un mayor peso específico la capacidad funcional o la capacidad exportadora y en qué medida, lo cual se observa a continuación:

Tabla 7: Matriz de capacidad funcional de la firma.

						Promedio geométrico	%	
1.0	9.0	3.0	1.0	3.0	1.0	81.00	2.41	35.1%
0.1	1.0	1.0	1.0	1.0	1.0	0.11	0.64	9.4%
0.3	1.0	1.0	5.0	3.0	1.0	= 5.00 =	1.38	= 20.1%
1.0	1.0	0.2	1.0	3.0	1.0	0.60	0.90	13.2%
0.3	1.0	0.3	0.3	1.0	1.0	0.04	0.52	7.5%
1.0	1.0	1.0	1.0	1.0	1.0	1.00	1.00	14.6%
							6.85	100%

Tabla 8: Matriz de capacidad exportadora de la firma

							%	
							Promedio geométrico	%
1.0	9.0	5.0	5.0	3.0	3.0	2025.00	3.68	43.6%
0.1	1.0	3.0	3.0	3.0	2.0	6.00	1.25	14.8%
0.3	1.0	1.0	5.0	2.0	2.0	= 6.67	= 1.27	= 15.1%
1.0	1.0	0.2	1.0	1.0	1.0	0.20	0.72	8.6%
0.3	1.0	0.3	0.3	1.0	1.0	0.04	0.52	6.1%
1.0	1.0	1.0	1.0	1.0	1.0	1.00	1.00	11.8%
							8.44	100%

Tabla 8: Matriz de relevancia de los objetivos.

					Promedio geométrico	%
1	7		7		2.6	87.5%
0.1	1	=	0.142857143	=	0.4	12.5%
					3.0	100%

Con las matrices del cálculo de promedios geométricos se elabora la matriz de relevancia global de las alternativas (variables), la cual nos permite cruzar los dos enfoques que se utilizaros (el de la “capacidad funcional” y el de la “capacidad exportadora” de las empresas) para determinar de manera global el grado de relevancia de cada variable considerando el peso específico que tiene un enfoque sobre otro, pero respetando la ponderación que se le dio a cada variable respecto a las demás. La matriz final quedó conformada de la siguiente manera:

Tabla 9: Matriz de resultados: Relevancia global de las variables.

35.1%	43.6%		36.20%	A1	Calidad
9.4%	14.8%		10.07%	A2	Precio
20.1%	15.1%		19.50%	A3	Tecnología
13.2%	8.6%	X	12.60%	A4	Capacitación del capital humano
7.5%	6.1%		7.37%	A5	Canales de distribución y logística
14.6%	11.8%		14.25%	A6	Comunicación
			100.00%		

CONCLUSIONES

Por lo tanto los resultados indican que considerando la frecuencia de menciones de las variables que inciden en competitividad, la capacidad funcional y la capacidad exportadora de las empresas del centro occidente de México que producen y comercializan productos cárnicos de cerdo, podemos afirmar que las variables calidad; tecnología; comunicación y vinculación con la cadena de valor; capacitación de su capital humano; precio y los canales de distribución y logística son las variables que inciden en mayor medida en la competitividad internacional de las empresas; y que acorde a la interrelación de dichas variables, el nivel de relevancia para incidir en la competitividad está determinado, a través del método de jerarquización analítica en red, en ese mismo orden.

RECONOCIMIENTOS.

Agradecemos a los directivos y funcionarios del Instituto de Investigaciones Económicas y Empresariales por el apoyo y participación para la realización del presente documento de investigación; a los directivos de Porcinos Farmer por la vinculación con los empresarios del sector en la región centro occidente de México; a los empresarios porcícolas de dicha región y sus representantes, por la confianza y apertura en la información brindada, en especial a Grupo DELTA por las imágenes que nos compartieron de su archivo particular y a los directivos de la Asociación de Porcicultores de Santa Ana Pacueco y La Piedad por su valiosa colaboración para desarrollar el presente artículo el cual esperamos le sea interesante y útil.

BIOGRAFÍA

El Dr. Oscar Hugo Pedraza Rendón es Doctor en Ciencias con Especialidad en Ciencias de la Administración. Es miembro del Sistema Nacional de Investigadores de México y profesor investigador del Instituto de Investigaciones Económicas y Empresariales de la Universidad Michoacana. Se le puede contactar en el Edificio ININEE, Cd. Universitaria, CP 58030 Col. Juárez, Morelia Michoacán México. Correo electrónico ohprend@hotmail.com

El MBA Iván Paz Prado es doctorante en Negocios Internacionales en el ININEE de México. Es profesor de las cátedras de Inteligencia de Mercados Internacionales, Inversión Extranjera y Riesgo País en el Tecnológico de Monterrey. Es propietario e investigador del Instituto Para la Capacitación Investigación e Innovación AC. Se le puede contactar en el Edificio ININEE, Cd. Universitaria, CP 58030 Col. Juárez, Morelia Michoacán México. Correo electrónico pazivan@yahoo.com y/o dirección@ipcii.com.mx

EL LIDERAZGO: ¿UN CONCEPTO DE COYUNTURA O UN NUEVO PILAR PARA LAS ORGANIZACIONES?

Jorge Acosta, Universidad de Santiago de Chile

RESUMEN

En los últimos años se ha observado un aumento significativo en el número de publicaciones que refieren la temática: 'liderazgo en la empresa', incluso muchas de ellas lo asimilan al concepto de gerencia, lo que se traduce en que la noción de autoridad, como mecanismo formal de influencia, pareciera estar en retirada. Sin embargo, la evidencia disponible no permite sostener que este conjunto de estudios hayan redundado en avances significativos (de orden cualitativo) en torno a la temática; más bien puede interpretarse como una tendencia a simplificar y operacionalizar el concepto, de manera que las empresas los asimilen principalmente como una competencia a desarrollar o fortalecer, entendiendo que a partir de él es posible crear valor y propiciar el desarrollo de quienes lo practiquen. En este contexto, surgen interrogantes que llevan a sostener que las empresas, en tanto su organización, desafíos y nuevos paradigmas, se han hecho parte de escenarios donde se vuelve una necesidad creer más en los empleados, donde se les considera un recurso crítico para competir; a lo que debe añadirse que la configuración del mercado del trabajo se ha modificado, principalmente desde la perspectiva de composición y acceso; las estructuras consideran menos niveles jerárquicos y ha aumentado la descentralización. En síntesis, son diversos los elementos que inducen a mirar el liderazgo como una suerte de llave maestra, la que contribuiría a resolver, entre otras, las problemáticas de competitividad y viabilidad que las empresas enfrentan a diario. El liderazgo no es más importante ahora que antes, pero al cambiar la condición de realidad que enfrentan las empresas, parece ser que éste se ha vuelto la tabla de salvación de la gestión empresarial.

PALABRAS CLAVE: organización, gerencia, liderazgo.

LEADERSHIP: A KEY CONCEPT OR A NEW FOUNDATION FOR ORGANIZATIONS

SUMMARY

In recent years there has been a significant increase in the number of publications related to the theme: "Leadership in the Company", even many of them assimilate this term with the management concept. It appears to be that the notion of authority, as a formal mechanism of influence seems to be in retreat. However, the available evidence does not give room to argue that this set of studies had resulted in significant progress – qualitatively speaking – on the subject. It can be interpreted as a tendency to simplify and make the concept operational, so that companies assimilate it mainly as a competency to be developed or strengthened, knowing that from this concept it is possible to create value and foster the development of those who practice it. Within this context, some questions arise that tend to lead these firms to argue in relation to its organization, new challenges and paradigms. Firms have become part of scenarios where it becomes a necessity to believe more in their employees, where they are considered a critical resource to complete. It should also be considered that the configuration of the labor market has changed, mainly from the composition and access perspective; structures considered less hierarchical levels and increased decentralization. In short, there are different elements that lead to look at leadership as a kind of skeleton key that would help to resolve – among others – the issues of competitiveness and viability that businesses face daily among other issues. Leadership is not more important now than

before, but since the condition of reality has changed for companies, it seems to be that this concept has become the last resource for the business management.

Las Organizaciones

Suele aceptarse que las organizaciones son grupos de personas que articulan esfuerzos para alcanzar objetivos o propósitos que les son comunes, de hecho, en español, el concepto- organización- se define como la *“asociación de personas regulada por un conjunto de normas en función de determinados fines”* (www.rae.es). A lo largo de los años y acompañado por importantes cambios en la concepción y consideración de elementos disciplinarios, diversos autores han abordado la temática organizacional. Así por ejemplo, Etkin (2000) postula que el concepto se concibe a la luz de dos enfoques posibles: lo normativo y lo descriptivo; siendo el primero el que entiende a la organización desde el deber ser, es decir, en cuanto a lo que se espera de ella y a lo que haya sido predeterminado.

El segundo enfoque versa sobre el ser propiamente tal, o sea, apunta al entendimiento de ellas desde lo evidente, a partir lo que es observable. Esta distinción es importante, sobre todo cuando estudiamos las Organizaciones usando para ello, el parámetro de la teoría, lo cual indefectiblemente nos provocará disonancia, por la distancia existente entre realidad y teoría. En palabras de Hall (1983) las organizaciones son *“una colectividad con unos límites relativamente identificables, un orden normativo, rangos de autoridad, sistemas de comunicación y sistemas de pertenencia coordinados; esta colectividad existe de manera relativamente continua en un medio y se embarca en actividades que están relacionadas, por lo general, con un conjunto de objetivos”*. La orientación de Hall recoge los elementos proporcionados por importantes teóricos de la administración, tal es el caso de Simon(1979) quien destaca aspectos como: las comunicaciones, las relaciones (o interrelaciones entre personas, la necesidad del colectivo), la información, los objetivos y las acciones (lo dinámico, lo mutable). Antes, Waldo (1961) refirió el concepto sobre la base de sostener que *“la organización puede ser definida como la estructura de las interrelaciones personales autoritarias y habituales de un sistema administrativo...”*, en definitiva, es dable sostener que las organizaciones son, finalmente, un colectivo creado para conseguir un resultado (o satisfacer una expectativa que individualmente no es posible alcanzar), capaces de dinamizar en la medida que en su interior se generen relaciones de influencia y acciones derivadas de las decisiones que adopta a partir de la información disponible.

Las organizaciones no son una construcción moderna, en estricto sentido, la administración tampoco lo es. Junto con la emergencia de las primeras civilizaciones y por tanto, con la necesidad de estructurar relaciones colectivas, surgieron éstas, con características, fines y naturaleza, que en la práctica no resultan ser demasiado distantes de los que tenemos hoy. La decisión de formar comunidades fue, posiblemente, la primera decisión organizativa adoptada; y a partir de ella, se desarrollaron la serie de acciones que desencadenaron en la formalización de los estudios disciplinarios que hoy conocemos y que se imparten en miles de escuelas de administración y negocios surgidas a lo largo y ancho del mundo, desde la creación de el *Aula do Comercio* de Lisboa, en el siglo XVIII.

La esencia de la complejidad organizacional o paradigma de la complejidad, tal cual postula Etkin (2005) radica, fundamentalmente, en que su unidad básica de análisis son las personas, y por tanto, lo complejo deriva del entramado de relaciones que entre ellas se generan, fenómeno que a su vez es impulsado por una serie de elementos del entorno, los que introducen mayores grados de incertidumbre. La complejidad de la organización que conduce a la creación de incertidumbre, se manifiesta entre otras razones, porque transfiere al sistema organizacional desafíos, exigencias y problemáticas que provocan su desequilibrio

haciendo que ésta desarrolle una serie de acciones tendientes a normalizar el sistema, asegurando su viabilidad., algo parecido a lo denominado homeostasis dinámica (Katz y Kahn,1979); en el mismo sentido, una organización puede verse afectada escasamente de los vaivenes de su medioambiente en el que existe, o simplemente colapsar, si su equilibrio es precario.

Parece ser que lo complejo es atractivo, quizá porque ofrece a la disciplina administrativa un fecundo espacio para el desarrollo de tesis y postulados, sin embargo, la complejidad no es un fenómeno moderno, tampoco es patrimonialmente organizativo, es en esencia, el resultado de las relaciones que generan las personas, dado un entorno o situación específica y condicionado por las capacidades de cada uno de ellos para reconocer, capturar y procesar los estímulos que ofrece el ambiente. Cabe precisar que el ambiente no es necesariamente más desarrollado que el que conocieron las generaciones anteriores, probablemente antes y ahora el común denominador es la incertidumbre y la variabilidad; sin embargo, no es posible omitir el hecho fundamental que hoy disponemos de un mayor volumen de medios para canalizar información y para acceder a ella. En otras palabras, la diferencia no radica en la disponibilidad, sino en la capacidad de reconocerla e internalizarla.

En términos más concretos, las organizaciones han sido tratadas en un primer lugar, en la teoría, principalmente bajo una concepción de sistema cerrado, lo que originó un enfoque claramente mecanicista con claras similitudes con las máquinas, sobresaliendo el concepto de burocracia de Weber, “hizo notar que la burocracia rutiniza los procesos de administración exactamente como la mecanización rutiniza la producción” (Morgan, 1990) Y en segundo lugar, la organización como sistema abierto, concepto que en gran medida, es el que prevalece en la actualidad. Ello ha permitido explicar la capacidad adaptativa de las organizaciones a su medio ambiente, su desarrollo, efectividad y supervivencia. Aún cuando, se afirma que los enfoques mecanicistas se encuentran en retirada, la realidad muestra que siguen vigentes, quizás no con la relevancia de las primeras décadas del siglo XX, pero en muchos casos demostrando productividad, lo cual, nos debe hacer pensar, que estos enfoques en cierta medida han ido adaptándose a los tiempos, tal es el caso del concepto de burocracia profesional, acuñado por Mintzberg, que ha evolucionado hacia una mayor descentralización y autonomía de sus empleados entre otros aspectos.(Morgan,1990)

¿En Que Ha Cambiado La Organización?

El fenómeno de la globalización ha provocado una serie de transformaciones tanto en lo económico, social, cultural, demográfico, tecnológico y político, los que han repercutido en la forma de resolver más eficientemente los problemas y las demandas a las organizaciones. En este sentido, la variabilidad y complejidad de los ambientes, aún cuando siempre han existido, condicionaron a las organizaciones a introducir modificaciones tanto estructurales como funcionales, las cuales, tienen un significativo impacto en los empleados. La estabilidad laboral ha dado paso a la inestabilidad, lo que ha generado el manejo de políticas que faciliten la movilidad laboral, agregando a ello el aumento significativo de los niveles de educación de la población y en consecuencia de los empleados, que sumado al crecimiento del sector terciario de las economías, ha ido generando un empleado diferente, más profesional, flexible, adaptativo y con tendencia a la polivalencia. Por otra parte, el aumento de los tamaños de los mercados ha facilitado que las organizaciones no sólo tienen mayores oportunidades para colocar productos si no que también se ha potenciado la competencia, la que conlleva a un manejo más estricto de los costos y a una mayor descentralización, concientes que los mercados y clientes requieren de servicios de mayor calidad y en menor tiempo. Todo lo anterior nos indica, que en cierta forma, las organizaciones han empezado a creer en sus empleados como una verdadera fuente de ventaja competitiva. De ello dan fe la teoría de recursos y capacidades, el enfoque de competencias, la gestión del conocimiento, y conceptos como capital relacional y manejo de redes sociales.

Gerencia Y Liderazgo

Las organizaciones entendidas como sistemas sociales abiertos, se distinguen de otros sistemas por el accionar de sus componentes humanos en interrelación, pero direccionada por objetivos. De aquí se desprende la necesidad de que las organizaciones, deban velar para que este accionar, otorgue confiabilidad en que se realice el trabajo esperado de conformidad a los objetivos. Tal como lo expresaron Katz y Kahn (1979) las organizaciones deben preocuparse de reducir la variabilidad, inestabilidad y espontaneidad de los actos humanos individuales, de esta forma, en las organizaciones aparece lo que se denomina la jerarquía de la autoridad, al respecto Johansen (2002) explica que las organizaciones para convertirse en un sistema ordenado, evitando el caos y la destrucción, deberán conducirse como un sistema predecible, lo que significa mantener su complejidad bajo control.

Dicho lo anterior, la autoridad “es la que proporciona a la organización su estructura formal, distinguiendo el comportamiento de los empleados como miembros de organizaciones, de su comportamiento fuera de las mismas”. (Simon, 1979). De esta forma, se está asimilando autoridad con cargo o posición lo que comúnmente viene en llamarse “autoridad formal” la que será aprovechada por la persona mientras ocupe el cargo o posición. Sin embargo, es menester mencionar, que la autoridad tiene dos caras, la ya nombrada “formal” y la “informal”, que se relaciona con el énfasis que imprime la persona que detenta la autoridad “formal”, es decir, generar confianza, credibilidad y respeto, estamos hablando que la legitimidad de la “autoridad formal” se logra mediante la “autoridad informal”. Lo importante de la distinción anterior, es que la “autoridad formal” requiere legitimación, sobre todo, que quienes desempeñan los cargos de autoridad, están sujetos a temporalidad, rotan con cierta facilidad, lo que involucra la obtención de resultados en forma apresurada, de esta forma, la legitimidad tiende a facilitar que la persona ocupante del cargo sea aceptado y por consecuencia, su personal, tenderá a ser más diligente y proclive a esforzarse en el cumplimiento de sus deberes.

Demás está decir que cuando nos referimos a la autoridad, estamos mencionando a los gerentes dentro de las organizaciones, que son los que se distinguen generalmente por ejercer la autoridad esforzándose, unos más otros menos por otorgar a la organización de la estabilidad y equilibrio necesario, pues es en este contexto, donde las organizaciones son capaces de crecer, desarrollarse y ser viables en el tiempo, “el ejercicio de poder basado en la autoridad formal, no legitimada, está condenada a la larga al fracaso...se estaría despilfarrando el enorme potencial de los empleados”. (Gil’ Adí, 2004)

En las organizaciones existen líderes que no son gerentes o bien, gerentes que no tienen subordinados. No cabe dudas que estos conceptos son diferentes, pero “el grado de solapamiento es un punto en torno al cual existen marcados desacuerdos” (Yukl, 1989). De acuerdo con Zaleznik (1992), los gerentes son distintos de los líderes. Los objetivos de los gerentes surgen de las necesidades por sobre los deseos, son excelentes haciendo desaparecer conflictos entre individuos, calman a las partes mientras aseguran que los negocios se realicen. En cambio los líderes adoptan actitudes personales respecto de los objetivos, buscan oportunidades y recompensas potenciales, inspiran a los subordinados e impulsan procesos creativos con su propia energía. Bennis & Nanus (1985) afirman que los gerentes son gente que hace las cosas correctamente y los líderes gente que hacen las cosas correctas.

La distinción esencial según Yukl (1990) parece ser que los líderes influyen en el compromiso, mientras los gerentes simplemente cumplen con responsabilidades de sus posiciones y ejercen autoridad. Una adecuada diferenciación entre estos dos conceptos se encuentra en Davis (1967) cuando establece que “el liderazgo es una parte de la gerencia, pero no es toda ella... el liderazgo es la habilidad de convencer a otros para que busquen con entusiasmo el logro de objetivos definidos. Es el factor humano el que une a un grupo y lo motiva hacia los objetivos. Las actividades de la gerencia como la planificación, la organización y la toma de decisiones no son efectivas hasta que el líder estimula el poder de la motivación en las personas y las dirige hacia los objetivos”.

Sin entrar a discutir si los conceptos de liderazgo son distintos a los de gerencia o son sinónimos, lo que interesa es precisar que hoy las organizaciones necesitan perfilarse en forma efectiva, en la resolución de los impactos de la globalización, incluyendo el mercado, la tecnología, la información, las formas de gestionar empleados mucho más capacitados que antes-flexibles, asertivos, creativos y con necesidades más complejas- esto es lo gravitante en cuanto a la labor gerencial, de suerte tal, que hoy se requieren gerentes que tengan la voluntad de ejercitar la autoridad y también el liderazgo, pues debemos reconocer, que en contextos o situaciones de normalidad se torna difícil aplicar el liderazgo, ello facilita más el uso de la autoridad. Como contrapartida, el uso del liderazgo se relaciona con la creatividad, transformación y cambios, por tanto, este proceso genera inestabilidad y ansiedad en los empleados, pero, al igual que el uso de la autoridad formal, este será un ejercicio en un tiempo limitado, los empleados no son líderes todo el tiempo, asumen el compromiso de acuerdo a la oportunidad y voluntad, el liderazgo no es un cargo.

Consideraciones Finales

En resumen, lo que he intentado explicar es que el concepto de liderazgo no es una moda, pero tampoco es un factor nuevo mediante el cual se pueda sustentar hoy en día la organización, me da la impresión que no hemos hecho el suficiente esfuerzo de reflexionar adecuadamente sobre la importancia del concepto de autoridad y asociarlo al liderazgo. Parece ser mas fácil recurrir al liderazgo como un factor que logra adhesiones y compromiso de los empleados y por tanto, distanciarlo de la autoridad pensando que ésta sólo garantiza adhesiones en términos ya pactados de antemano, derechos y sanciones, pero esto refiere a la autoridad formal y ¿qué hay de la autoridad informal?. Ella es la que permite generar credibilidad, pasión y confianza de parte de los subordinados hacia quien detenta la autoridad formal.

El liderazgo se relaciona con las transformaciones, innovaciones y los cambios, esto es, la incertidumbre que enfrentan las organizaciones en forma recurrente, lo que obliga a actuar a quien está ejerciendo el rol de líder sin mucha información o experiencia anterior, para lo cual, usando la autoridad informal, involucrará a otros en el proceso, los convencerá, para caminar juntos en el proceso que disminuirá la tensión y torne en equilibrio la situación enfrentada. Una vez que la situación se ha resuelto, es decir ha bajado la tensión y la ansiedad, se hace necesario administrar un contexto estable, dado que los seres humanos no soportamos por mucho tiempo los estados de desequilibrio, esto significa volver al uso de la autoridad. El liderazgo y la autoridad son temporales y por tanto dependen de la mayor o menor estabilidad de las situaciones que enfrenten las organizaciones, ambos son necesarios, no olvidando la importancia de la autoridad en lo relativo a mantener el equilibrio del sistema social.

DUALIDAD EN EL CRECIMIENTO ECONOMICO DE CHINA

Adriana Patricia Soto Aguilar, Benemérita Universidad Autónoma de Puebla.
Elías Sosa Sánchez, Benemérita Universidad Autónoma de Puebla.

RESUMEN

En este trabajo de investigación analizo el papel que juegan los índices de contaminación de la República Popular de China, y su política económica-social, visto en varias perspectivas de análisis comercial, los problemas y desafíos que se enfrenta este país con más de 1340 millones de habitantes y el 21% de la población mundial además de ser referente comercial para nuestro país, México.

El análisis se basa en los informes redactados por el propio gobierno chino y en documentos y datos oficiales pertenecientes a Naciones Unidas.

INTRODUCCIÓN

Un pueblo que aún carece de los productos de primera necesidad esta disfrutando de relativa productividad, el sistema “socialista” también contamina. La pobreza y desigualdad en China es acompañada con altos índices de contaminación esto se debe a que no hay una política de crecimiento equitativo entre zonas rurales y urbanas, según las estadísticas más recientes del Ministerio Chino de construcción han aumentado la demanda de vivienda a pesar de la sobrepoblación con la que cuentan, sin embargo los nuevos conceptos como la vivienda ecológica han sido aceptados por los consumidores de manera muy lenta a lo esperado (Sr. YNG Shen Presidente de la Asociación de Bienes Inmuebles de China prevé para décadas futuras que la superficie de vivienda por familia en las ciudades y poblados llegará entre 90 y 120 metros cuadrados per cápita). (Shen, 2003).

El crecimiento que ha tenido China ha traído una reducción de la pobreza en los últimos 25 años, mismos en se han incrementado sus contaminantes emitidos al mundo global (Jiang Fan,). Esto se debe a la sobrepoblación que tiene dicho país, y problemas de salud al nacer, quien a pesar de tener políticas rígidas en cuanto al control de su población -política del hijo único, que indica que cada familia solo puede tener un hijo, las mujeres son obligadas a abortar (principalmente si el producto es de sexo femenino) si es que ya tienen un hijo aunado al cobro de grandes multas violando el derecho de las mujeres, a decidir sobre su maternidad- independientemente de la firma el protocolo para eliminación de todas las formas de discriminación.

A pesar de sus altos índices poblacionales las actitudes sociales, prácticas y creencias religiosas para excluir a las mujeres suelen ser comunes y arraigadas a normas culturales y de estatus, tal parece que China en el nuevo milenio sigue contaminada de ideas retrógradas como en México y en algunas zonas de América Latina, en materia de equidad de género, debido a que en este país si bien existen mujeres trabajando en la directiva de una empresa son muy pocas el número de empresarias, solo hay que analizar los directorios empresariales por lo que su desigualdad social no le ha permitido tener prácticas justas en laboral y materia ambiental (Soto, 2012).

Sin embargo, de ser un país con altos índices económicos y comerciales, que hoy nos asombran, existe un estancamiento social, donde sus usos y costumbres pertenecen a las tradiciones de los siglos pasados, sin percatarse del daño ecológico que generan al planeta al enviar productos con baja calidad.

Este fenómeno hace que la población china emigre a otras partes del mundo para tener libertad en sus decisiones. Como puede observarse existen graves deficiencias en materia de derechos civiles, “Lo malo de ser hijo único, algo que ocurre en toda China-explica un alumno de secundaria-, es que todo gira alrededor de las calificaciones. Si no sacas buenas notas, no eres buen chico” (Bennett 2004), sin embargo a pesar de este fenómeno la demanda de bienes materiales comida, vestido, alimento y demás producción macroeconómica va en aumento, debido a la sobrepoblación que sufre China, aunado a esto crecen los índices de contaminantes.

En los setenta las campañas de concientización emprendidas por el gobierno Chino redujeron la tasa de fertilidad de 5.9 a 2.9 niños por familia, sin embargo los problemas de sobreproducción para la década de los ochenta y noventa aun prevalecían de forma constante hoy en día con más de 300 millones de habitantes se sigue padeciendo una relación crítica entre población y sobre explotación de recursos no solo los demandantes en su territorio sino los que proceden de otras latitudes del planeta, situación ya planteada desde el punto de vista económico bajo la óptica Malthusiana. (Soto, 2012).

Tan solo entre 1990 y 2009 se multiplico el uso de la energía petrolera, 189% en el uso de gas natural, 375% en el consumo de electricidad. China presenta en el 2009, 4 millones de toneladas con residuo de cromo y demás químicos contaminantes, como el monóxido de carbono, que se emiten diariamente en su producción. (Fan, 2009).

Las recientes políticas del gobierno Central de China han disminuido los índices de pobreza solo en áreas urbanas, estas han incrementado exponencialmente los índices de contaminantes, mientras que en las zonas marginas dicha contaminación se convierte en alta vulnerabilidad a través de los desastres naturales o por la contaminación misma que ha generado el crecimiento económico acelerado, por ejemplo la región de Jiangxi rica en recursos naturales como el cobre, tungsteno, oro, minas de hierro y carbón, además plata, uranio, su extracción esta cerca de los sembradíos de arroz, te negro que son vendidos y distribuidos al mundo, lo mismo sucede en la provincia de Henan una de las más pobladas con un crecimiento del 10% anual dada la apertura al exterior produce carbón, aluminio, oro y vidrio además del sector textil, metalúrgico y *alimentario*, nos encontramos con una mezcla de sectores y por lo tanto de contaminantes. (Xinhua, 2011).

Hay que señalar que esta parte de la población china presenta también elevados índices de pobreza y por lo tanto de condiciones insalubres y de desnutrición, ante tal panorama el gobierno Chino pretende restringir y castigar las especulaciones relacionadas con productos de primera necesidad.

La República Popular de China que es el principal comercializador de tecnología refleja su avance y supremacía económica en el comercio ilegal agrediendo las marcas y patentes así como los derechos de autoría y regalías sin embargo, si bien es cierto que el mundo capitalista ha sido víctima de la contaminación que generan las actividades económicas, China ha sido catalogado por los científicos en materia ambiental como uno de los principales países contaminantes del planeta, además de ser precursor del calentamiento global la fomenta el consumismo internacional de sus productos de mala calidad a precios bajos.

Aunado a su producción nacional, en materia de comercio exterior China presenta 14 productos en la lista de mercancías con alto grado de toxicidad, entre los que se destacan juguetes para uso en infantes menores a los tres años, otros productos relacionados con el uso diario como lo son los detergentes, pilas de níquel cadmio (Agencia Ambiental; China). Caso destacado por la Administración Estatal de Protección Ambiental en China es la compañía de Fundición de Metales no ferrosos de Huixian causante de contaminación por plomo. Retomando los productos de uso diario se encuentra la marca dentífrica china EXCEL AND MR COOL prohibida por la República Dominicana, durante el 2007. (Xinhua, 2011).

El problema no es el producto en si sino sus componentes altamente contaminantes difíciles de tratar que se diluye por todo el planeta. En materia de costos ambientales estos son incalculables y poco visualizados por los países importadores entre los que destaca México con cifras deficitarias en materia comercial con China. (Soto, 2012).

Entre más producción y demanda internacional mayor es el índice de contaminantes que no solo se queda en sus aguas y territorio se diseminan por todo el planeta a través de las rutas comerciales avaladas por tratados internacionales y logística mundial. Lo mismo sucede en sus productos agrícolas de los cuales nuevamente México esta presente, no hay normas de regulación fitosanitaria y de transparencia internacional en la producción de sus alimentos que nos demuestren a los países importadores de sus productos, la calidad de sus alimentos, para lo cual es necesaria la participación activa de las autoridades de cada país importador en materia de salud para canalizar y tratar los casos de productos contaminados.

El Foco de atención esta puesto desde años atrás sin tener políticas claras y políticas actualizadas de prevención ambiental por parte de los agentes importadores quienes deberían retomar el caso sabiendo de los escasos controles de calidad y de la negligencia en materia de seguridad en la producción de mercancías.

Esto sin dejar de lado los productos falsos que incluyen a los fármacos adulterados, como es el caso del fármaco xinfu antibiótico de pobre calidad y de bajos niveles de esterilización. O el caso Zheng Xiaoyu ex Director de la Administración Estatal de Alimentos y Medicamentos (AEAM) quien obtuvo beneficios de ocho compañías farmacéuticas valorados en más de cinco millones de yuanes unos 650.000 dólares americanos a cambio de aprobar medicamentos durante su mandato en el 2006 (China Business News, 2007).

Los sobornos y regalos de este funcionario eran provenientes de las compañías farmacéuticas de Hainan Kongliyuan Grup por aprobar 277 medicamentos, de las cuales 100 fueron aprobadas en el transcurso de solo un año. Sin embargo en materia de corrupción el caso no es aislado más de 30 personas están involucradas en el caso incluyendo a otros funcionarios como Cao Wenzhuang ex Director del Departamento de Registro de Medicamentos de la AEAM. (Xinhua, 2007)

En dicho caso las autoridades chinas solo han manifestado su interés en fortalecer la supervisión de sus funcionarios en materia de salud. Sin embargo queda claro las prácticas de corrupción y abuso del poder golpean también al gobierno chino.

El caso de Zheng quedo manifestado a nivel local al ser expulsado del Partido Comunista de China (PPCH), tras ser investigado por la Comisión Central de Control Disciplinario del PCCH y transferido a la Fiscalía Popular Suprema. El caso termino con la sentencia de solo 15 años de presión y la pregunta es ¿y el daño a la sociedad internacional donde queda?????. A este sonado caso de corte internacional se le une el del Subdirector de la Administración Municipal de Alimentos y Medicamentos de Quqihar Xun Fubo, de la provincia nororiental de Heilongjiang por aprobar medicamentos falsos uno de ellos es el armillarisin A inyectable causando la muerte de 11 pacientes después de sufrir alteraciones renales, en Guangdong. (Xinhua, 2007)

Es lamentable que china un país rico en recursos laborales descuide la salud misma de sus trabajadores al permitir trabajar con altos índices de contaminación ya su sola sobrepoblación laboral ha originado un exceso en la demanda del empleo y una reducción del salario medio, situación que se ha trasladado al ámbito mundial, lo cual se ha traducido en un obstáculo para el desarrollo del resto de los países en marcados por la globalización.

Otro caso en el cual no hay que dejar de mencionar es la contaminación económica del comercio informal, el cual a permitido solo el “aliviar las presiones y reajustes en el mercado laboral de nuestro país”, producto de la restructuración económica, aceleración del modelo globalizador y la competencia desleal de los mercados con los cuales México se han firmado tratados comerciales.

Las empresas mexicanas hoy en día amenazan con disminuir el mercado laboral gracias al mercado informal no solo por la violencia que vive el país, a la par las políticas económicas de los últimos gobiernos que no han podido absorber a los crecientes desempleados que entran al mercado laboral. México vive una alta rotación del trabajador poco calificado, la economía informal en nuestro país ha crecido de forma exponencial y no esta restringida a las diferentes zonas del territorio mexicano, al contrario se expande a lo largo y ancho del país.

Mientras que el mercado informal, promovido por los ciudadanos chinos emigrantes en nuestro país, esta ganando terreno hasta convertirse en una fuente constante de creación de empleos en algunos casos mejor remunerados que el comercio formal, pero al margen de la ley y con un alto grado de inseguridad, insalubre, inestabilidad laboral, salarial y social (Organización Internacional del trabajo, 2011).

Situación que hace más vulnerable los derechos humanos sin dejar de lado el mercado laboral infantil, y los excesos de sobre explotación laboral en aras de aumentar los elevados índices de productividad que exige el mercado del trabajo, la interrogante es ¿el modelo de empleo informal es ya una constante o es parte de un fenómeno pasajero en el marco de la globalización y que papel juega el estado neoliberal en torno al compromiso social y laboral? Y ¿por que los gobiernos han fomentado o por lo menos tolerado el creciente fenómeno del mercado informal y la subcontratación –contratos basura ó firma en hoja en blanco?.

Los contratos basura no requieren de antigüedad, los acuerdos salariales quedan poco claros o bien están remunerados por debajo de los promedios mínimos establecidos, los pagos salariales no siempre son a tiempo al contrario en algunas ocasiones con pagos rezagados por meses, horarios no específicos y nulo seguro al desempleo y lo más importante donde quedan las regulaciones en materia ambiental.

El fenómeno del comercio informal también ataca a la propia economía china y el resto del mundo puesto que un gran número de trabajadores rurales emigran a las urbes chinas en busca de mejores oportunidades de vida, sin embargo la mayoría de ellos tienen bajos niveles de educación, por lo cual en su propio país se ha fomentado la corrupción y el abaratar el mercado laboral. En sí la Republica Popular de China es un laboratorio social de lo que sucede en gran parte del mundo en términos económicos, comerciales, laborales y por que no también los sociales y ambientales, dada la penetración e impacto que tiene en el comercio mundial.

Por ejemplo dentro de los diez puntos que deben atacar las autoridades chinas y demás naciones que busquen un mundo mejor, está el aumento de precios de la canasta básica, los cuidados al sector salud están como puntos pendientes dentro de la agenda gubernamental y que decir de la corrupción gubernamental a la cual ya dedicamos varias líneas en párrafos anteriores, esto sin dejar de mencionar la brecha entre ricos y pobres ciudadanos de raza amarilla, quienes sufren por crisis en vivienda, aunado a altos costos de educación, desempleo y seguridad alimentaria además del tema que hoy nos atañe sus altos índices de contaminación ambiental exportados a todo el planeta sin asumir los correspondientes costos ambientales.

REVISION LITERARIA

El análisis se basa en los informes redactados por el Gobierno Chino y en documentos y datos oficiales pertenecientes a Naciones Unidas.

METODOLOGIA

El presente trabajo de investigación retomó los índices de contaminación de dos localidades representativas, China, en términos de producción y contaminación:... así como los índices de natalidad y crecimiento económico.

RESULTADOS

Al aumentar la población, producción y economía en China, se aumentan los índices de contaminación y devastación de los recursos naturales, controlar la población en china solo es un parte del problema ya que China no solo produce para abastecer la demanda nacional su política de comercio exterior es en base a la demanda mundial, sin dejar de lado los casos de corrupción líneas arriba mencionados.

CONCLUSIONES

Los países deberían tener y fomentar políticas de control de natalidad con una perspectiva no solo nacional sino global, los recursos del planeta no son solo de cada nación son parte del patrimonio de la biodiversidad del mundo, por lo tanto los gobiernos deben trabajar multidisciplinariamente en base a una red de población mundial la solución no esta en buscar más recursos o sustituirlos sino en administrar los recursos cada vez más limitados ó escasos. Solo para reflexionar en promedio una persona produce aproximadamente 200 kilogramos de basura en menos de un año si esto lo multiplicamos por la población mundial las cifras se vuelven exponenciales.

IMPLICACIONES ECONÓMICO-SOCIALES DEL MICROFINANCIAMIENTO PARA LOS MICRO Y PEQUEÑOS NEGOCIOS DEL SECTOR TERCIARIO DEL ESTADO DE COAHUILA

Rosalva D. Vásquez Mireles, Universidad Autónoma de Coahuila
Yolanda Mejía de León, Universidad Autónoma de Coahuila
Baltazar Rodríguez Villanueva, Universidad Autónoma de Coahuila

RESÚMEN

En la actualidad el financiamiento es uno de los principales problemas que enfrentan las micro y pequeñas empresas en el país y es de vital importancia su atención si tomamos en cuenta, que la economía mexicana al igual que la de otras partes del mundo, tiene sustentada su economía en ellas. El objetivo de la presente investigación es conocer las implicaciones y el impulso que se logra cuando los microempresarios gozan de apoyos financieros. El estudio se realizó en el sector terciario, localizados en la región sureste y el impacto reflejado en su calidad de vida. El estudio analiza 8 variables relacionadas con su trascendencia económica y social en relación con la problemática detectada en estudios anteriores; educación, vivienda, salud, ingreso, ocupación, permanencia, ahorro y desarrollo del negocio. El método de estudio abordado es el mixto, inicia como investigación documental y concluye con un estudio de campo, se aplicaron 100 encuestas a los dueños o responsables que habían gozado de un apoyo económico. El diseño de la investigación es no experimental y de corte transversal. Es decir no se manipularan de forma intencional las variables independientes, y solo se observaran los fenómenos tal y como se presentan en su contexto natural.

PALABRAS CLAVES: Microcréditos, impacto económico social, calidad de vida

SOCIAL ECONOMIC IMPLICATIONS OF MICROFINANCE FOR MICRO AND SMALL COMERCIAL BUSSINES OF THE STATE OF COAHUILA

ABSTRACT

Currently funding is one of the main problems faced by micro and small enterprises in the country and is vital attention if we consider that the mexican economy like other parts of the world have supported their economy therein. The objective of this research is to understand the implications and imposed that is achieved when microentrepreneurs enjoy financial support. The study was conducted in the tertiary sector, located in the southeast region and reflected the impact on their quality of life. The study examines eight variables related to its economic and social importance in relation to the problems detected in previous studies, education, housing, health, income, occupation, residence, savings levels and business development. The study method addressed is mixed as documentary research begins and ends with a field study, 100 surveys were applied to the owners or managers who had enjoyed economic support. The research design is not experimental and cross-cutting. That is not intentionally to manipulate the independent variables, and only observe phenomena as presented in its natural context.

JEL: G, G3

KEYWORDS: Microcredit, social economic impact, quality of life

INTRODUCCIÓN

El financiamiento es uno de los principales problemas que enfrentan las Micro y pequeñas empresas en el país y es de vital importancia su atención si tomamos en cuenta que la economía mexicana al igual que la de otras partes del mundo tiene sustentada su economía en ellas. Los datos presentados por el INEGI en el 2009, indican que el 95.2% de estos establecimientos estaban catalogadas como microempresas, el 4.3% como pequeños negocios, 0.3 % medianas y solo el 0.20 % empresas grandes.

Las aportaciones al producto interno bruto de estos negocios no dejan de ser importantes, no obstante que en la última década se ha reducido su participación de 54 al 34% esta información es dada a conocer en abril del 2012 por la firma internacional de Salles, Sainz Grant-Thornton; Sus estudios indican que la falta de liquidez es uno de los problemas más fuertes que enfrenta, y que esto ha ocasionado que salgan del mercado rápidamente un 80% de ellos en un lapso menor a cinco años.

No obstante, estos negocios son una respuesta a la falta de empleo que enfrenta el país, el volumen de ocupación que generan agrupa al 57%. Por lo que sigue siendo un sector de suma participación en la economía. Para ello, las estrategias implementadas por la Secretaría de Economía en los últimos años, han puesto especial atención, través de sus diferentes programas como el Programa Nacional de Financiamiento al Microempresario (PRONAFIM), el Fondo Nacional de Apoyo para Empresas de Solidaridad (FONAES) y el Fondo de Microfinanciamiento a Mujeres Rurales (FOMMUR). Estos programas conforman una estrategia orientada a promover las iniciativas productivas de la población de bajos ingresos y están diseñados de tal forma que atienden a la población susceptible de apoyo de manera diferenciada.

EL FONAES ha ido evolucionando hacia el cobro de tasas de interés de mercado a excepción de los programas que operan bajo un esquema diferente y de aquellos apoyos que explícitamente se diseñan como no recuperables.

EL FOMMUR y el PRONAFIM, se caracterizan porque para su operación se auxilian de organismos intermediarios, apoyando proyectos mediante los cuales se busca aprovechar una alternativa de autoempleo y con una alta velocidad de recuperación de los recursos, bajos requerimientos de capital y generación rápida de ingresos.

En la actualidad las empresas que reciben un crédito o microcrédito no sobrepasan al 70%. Estas empresas aprovechan tasas de interés blandas los créditos son principalmente para capital de trabajo, y menos del 2% de los apoyos son empleados para investigación y desarrollo. Esta situación repercute en la carencia de innovaciones en sus procesos utilización de tecnologías de información pues carecen de la capacitación y herramientas necesarias, para aprovechar las políticas implementadas por las diferentes instituciones y organizaciones con las que pueden trabajar los factores señalados, que son importantes para la expansión empresarial, la internacionalización o el emprendimiento formal.

El restante 30% de las micro y pequeñas empresas que no reciben un microcrédito por su informalidad son un reto para la academia y las diferentes organizaciones públicas y privadas que estudian a las MIPYMES del país; Conocer como sobreviven y que estrategias implementar para atender este grupo de empresas que pueden generar un cambio social es el desafío a vencer.

Esta investigación está estructurada como sigue: Se desarrolla el sustento teórico; enseguida se describe el proceso metodológico para alcanzar los objetivos señalados, posteriormente se presentan los resultados de la investigación y finalmente, se presentan las conclusiones-limitaciones y futuras líneas de investigación.

REVISIÓN DE LITERATURA

Los microcréditos son pequeños préstamos que se dan a personas que no cuentan con los requisitos indispensables para que un banco le otorgue el préstamo. El microcrédito es una herramienta utilizada en los países en desarrollo para promover instalar y fortalecer nuevas iniciativas de negocio de personas carentes de recursos económicos que buscan financiamiento para un proyecto o emprendimiento los cuales necesitan que la tasa de interés sea muy baja para poder instalarse.

Se debe tomar en cuenta también que las microfinanzas son los servicios financieros hechos a personas en situación de pobreza, microempresas o clientes de bajos ingresos. Entre las definiciones de microcrédito está la desarrollada en la Conferencia Internacional sobre microcrédito en Washington, D.C, 2-4 de febrero de 1997 (Cumbre de Microcrédito 1997), que define al microcrédito como un programa de concesión de pequeños créditos a los más necesitados de entre los pobres para que éstos puedan poner en marcha pequeños negocios que generen ingresos con los que mejoren su nivel de vida y calidad de vida de sus habitantes.

Otra definición de las microfinanzas (Garzón, 1996) es la intermediación financiera a nivel local, es decir, se incluye no sólo los créditos sino los ahorros, los depósitos y otros servicios financieros. Es un procedimiento basado en instituciones locales que recogen recursos y los reasignan localmente.

Las microfinanzas además, se refieren a la provisión de servicios financieros como préstamos, ahorro, seguros o transferencias a hogares con bajos ingresos. La mayoría de las instituciones del sector se han dedicado al microcrédito (Mena, 2005).

No se conoce con exactitud los orígenes de las microfinanzas pero la creación del Banco Grameen por el Dr. Muhammad Yunus en Bangladesh en 1976 marcó un hito en el desarrollo de éstas, y ha llevado a varias organizaciones a tomar este hecho como el origen del concepto de microfinanzas (FAO, 2000). Actualmente, las microfinanzas y por lo tanto el microcrédito, son estrategias claves para el desarrollo y combate de la pobreza, existiendo evidencia que las señala como un instrumento eficaz para reducir la pobreza.

El microcrédito es la concesión de crédito productivo a microemprendedores y personas cuyo acceso a fuentes regulares es inexistente o restringido. En sus inicios se les daba preferencia a las mujeres para impulsar una mejora en las condiciones económicas y de calidad de vida de sus familias (Druschel et al, 2001).

Los microcréditos a menudo tienen un impacto negativo, llevándolo a más deuda (Mosley y Hulme, 1998), en el estudio realizado por Morduch (2000) se encontró que éstos no llegan a los más pobres y muchos de los beneficios pronosticados no se cumplen.

Algunos especialistas apuntaron que en la actualidad solo el 1% de los programas son financieramente viable (Morduch, 2000), sin contar problemas políticos, poca penetración de mercado y fraudes continuos como ha ocurrido a las cajas populares en México.

METODOLOGÍA

El objetivo de la presente investigación es conocer las implicaciones y el impulso que se logra cuando los microempresarios gozan de apoyo financiero. El estudio se realizó al sector terciario que es el que aporta el mayor porcentaje al PIB 60.6 % (INEGI 2008), a los negocios de la región sureste de Coahuila para conocer el impacto en su calidad y nivel de vida después de obtener un microcrédito.

El estudio analiza 8 variables relacionadas con su trascendencia económica y social en relación con la problemática detectada en estudios anteriores sobre; educación, vivienda, salud, ocupación, permanencia del negocio y desarrollo del negocio.

El método de estudio abordado es el mixto, inicia como investigación documental y concluye con estudio de campo, se aplicaron 108 cuestionarios a los dueños o responsables que habían gozado de un apoyo económico. El diseño de la investigación es no experimental y de corte transversal. Es decir no se manipulan de forma intencional las variables independientes, y solo se observan los fenómenos tal y como se presentan en su contexto natural.

Al inicio de la investigación se había programado un muestreo simple ya que se contaba con los listados de los beneficiarios del programa oportunidades del gobierno del Estado de Coahuila lo que no fue posible ya que al pasar a los domicilios las personas ya no se encontraban en esas direcciones.

Por lo tanto, se siguió la estrategia de diseño de muestra no probabilística a través del muestreo dirigido que selecciona sujetos típicos, o sea, aquello que hubieran gozado del beneficio de un microcrédito. Conscientes de que era la única forma de recopilar la información cuantitativa recurrimos a él no obstante de que no se pueda estimar con precisión el error estándar y el límite del nivel de confianza.

Diseño del instrumento. Una vez revisada la literatura y de acuerdo con el objetivo de la investigación, se procedió al diseño del instrumento de observación que mediante entrevista directa con los dueños del negocio de preferencia los propietarios se realizó el levantamiento de la información. El cuestionario consta de 10 módulos con preguntas cerradas, abiertas y de opción múltiple. Es importante señalar que el instrumento se enriqueció con la experiencia de autores como (Arias, Patlán 2008), quien realizó estudio “Las repercusiones económicas, familiar y psicológicas del micro financiamiento en Cuernavaca, México”

Para el levantamiento de la información se capacitó a tres personas, que aplicaron los cuestionarios logrando recabarse 108 de estos, los que en una primera depuración se excluyeron 10 por contener inconsistencias al cruzar la información, quedando una muestra de 98 cuestionarios efectivos. La técnica de selección fue incluyente, se aplicó indistintamente a quienes habían recibido un microcrédito o crédito y que tenían disposición de aceptar la entrevista.

En el procesamiento de la información se utilizó el Excel. Se aplicaron fundamentalmente dos tipos de criterios; uno relativo a los ponderados que se usaron para verificar los resultados y otro para conocer los hallazgos con relación a los objetivos.

El contexto de para la investigación es el Estado de Coahuila entre sus características tenemos que comparte frontera de 512 kilómetros con el estado de Texas y dos puntos de cruce fronterizo, Piedras Negras y Ciudad Acuña, con Eagle Pass y Del Río, Texas, respectivamente. Su Población total en el 2010 ((Instituto Nacional de Estadística, Geografía, e Informática), fue de 2'748,391 habitantes, 2.4% del total nacional; de los cuales el 50.0% corresponde a hombres e igual a mujeres, distribuida en 4,211 localidades. La tasa de crecimiento promedio anual de la población fue del 1.7 por ciento.

En base a la Encuesta Nacional de Ocupación y Empleo (INEGI Tercer Trimestre de 2008), Coahuila cuenta con una población ocupada de 1'057,124 personas. El 4.8% de ésta participa en el sector agrícola, el 33.7% en la actividad industrial y el 60.6% en el sector servicios.

De acuerdo con los indicadores macroeconómicos regionales y de coyuntura (INEGI 2006), Coahuila ocupa el noveno lugar en aportación al PIB Nacional con un 3.3%, por encima de estados como Sonora y Tamaulipas. Aporta más que los estados de Nayarit, Querétaro y Zacatecas juntos. Por otra parte y según

la Secretaría de Fomento Económico del Gobierno del Estado, en Coahuila se produce 1 de cada 4 vehículos y cuenta con potencial para desarrollar actividades vinculadas a la industria de las Tecnologías de Información.

Es considerada la Ateneas de México por la diversidad de instituciones educativas de nivel superior que cuenta entre ellas podemos señalar ; El Instituto Tecnológico de Saltillo, La Universidad Tecnológica así como el ITESUM Campus Saltillo, La Universidad Iberoamericana, La Universidad Agrónoma Antonio Narro y La Universidad Autónoma del Noreste y la de mayor cobertura que es la Universidad Autónoma de Coahuila la cual agrupa a más de 34,000 alumnos en los niveles medio básico, y superior.

RESULTADOS

Los resultados se presentan solamente para los negocios que habían gozado de algún financiamiento encontrándose que el 63% provenía del sector privado, 23% público y el 14% mixto, y que él 79% lo habían obtenido por primera vez.

Para fines de análisis se presentan los impactos en nivel de vida y para ello se presenta en la Figura 1, que refleja en cada caso el número de coincidencias en cada indicador. Particularmente se puede observar en la Tabla: 1, El nivel de estudios de los empresarios, el 27% tienen una formación a nivel de licenciatura, con formación media superior el 63 % y solamente el 10% con nivel primaria. Agrupando los datos de los dos niveles superiores tenemos una población habilitada con conocimientos y habilidades que bien pudieran emplearse formalmente la carencia de empleo buscan alternativas para obtener ingresos, esta escases de puestos de trabajo fijos a ocasionado el aglutinamiento en el sector terciario ofreciendo servicio a la población, el autoempleo, es una de las consecuencia de las crisis economicas recurrentes a nivel internacional y que afectan a la economía nacional y local. Tambien impacta en el ensanchamiento de la economía informal que en la ultima década se ha duplicado con el establecimiento de pequeños negocios o bien changaros como se le llamo durante la administración Foxista que carecen de constitución legal.

Es importante señalar que el 81% de los microempresarios son nativos del Estado de Coahuila y el restante 19% son de otras partes de la República Mexicana en particular de Nuevo Leon, Veracruz, Tabasco y San Luis Potosí, su inmigración se debe a lo atractivo de las actividades economicas que se desarrollan en relación al sector automotriz, del que quisieran formar parte directamente o bien como proveedores y auxiliares, otro factor de atracción es la cercania con la frontera norte.

Analizando el comportamiento de los ahorradores tenemos que el 57 % de los negocios dedicaron parte de sus utilidades a proveer recursos para el futuro. Este segmento de microempresarios ahorradores, lo realizaron con miras a fortalecer su negocio, diversificarlo o bien adquirir tecnologías como herramientas de apoyo administrativo, carentes en este tipo de negocios ello de acuerdo a estudios realizados con anterioridad sobre el uso de las TIC's.(Vásquez,Mejía 2010). El restante 43% indican que los excedentes obtenidos los dedicaron a subsistir como familia y que no pueden indicar con certeza que parte dedicaron al negocio.

La solvencia obtenida en razon de las ventas ya que reportan con los dividendos ocasionados por el fue para la adquisición de materiales y suministros, los que ya no recurrieron a créditos institucionales o, a proveedores esta situación se observa en el 20% de los microempresarios los que podemos ubicar en una situación solvente que les permite disuálizar un mejor futuro con mayor confianza en si mismos para invertir o hacer crecer su negocio en estudios afines se tiene que el 25 % de las microempresas contribuyen a la generación de nuevos productos.

Los reembolsos de los créditos adquiridos en virtud de que estamos hablando de fuente de recursos privadas y no oficial se presentó de la siguiente forma, 43 personas señalaron muy pocos problemas para el reintegro el 29 no tuvieron problema alguno y 26 personas indicaron fuertes contrariedades al momento de los pagos pero sin llegar a solicitar otro crédito adicional para su liquidación.

En la Tabla: 2 se observa el comportamiento de 37 microempresas visitadas en el mes de septiembre de este año el objetivo de medir típicamente los aspectos señalados y los hallazgos siguen la misma tendencia encontrada en la muestra analizada de 107 negocios en el 2011, la generación de empleo el desarrollo de nuevos productos y servicios y, lo más importante después de haber obtenido

Tabla 1: Incidencia En Aspectos Relacionados Con Nivel De Vida.

INDICADORES	Características					
	Primaria	Secundaria	Bachillerato	Bachillerato Técnico	Universidad	
Nivel de estudio de los microempresarios	0	10	8	53	27	
Nivel de ahorro después del microcrédito		0 - 500	501 - 1000	Más de 1000	No lo cuantifico	
Tipos de dificultades que le impidieron liquidar el microcrédito	Imprevistos	16	19	24	39	No. problema 39
		Falta de Liquidez	Por el Importe	Fracaso de Actividad	Otras deudas	
Problemas al momento de rembolsar el crédito	10	13	5	6	24	
Capacidad para realizar compras sin solicitar crédito.	Ha aumentado mucho	NO	SI	POCOS	MUCHOS	No Aplica
		29	11	43	15	
Capacidad para negociar con los bancos	8	Ha aumentado poco	Es igual	Ha bajado poco	Ha bajado mucho	0
		19	11	3	4	
Negociación con proveedores		Ha aumentado	Es igual	Ha disminuido	No Aplica	
		23	48	21	5	
Confianza para el futuro en relación a su negocio.		Ha aumentado	Es Igual	Ha disminuido	No Aplica	
		12	63	18	4	
		39	47	10	2	

Fuente: Elaboración propia 2011.

en financiamiento a través del microcrédito se observan incrementos importantes en sus ventas.

Referente a los indicadores de calidad de vida, podemos observar en la figura 3 como los empresarios afirman que mejoraron su estatus familiar y social, mejoraron aspectos de vivienda, educación y salud ocupacional.

Tabla 2: Impactos Economicos Del Microcrédito

Generación de empleos	7	19%
Incremento en ventas	14	38%
Desarrollo de nuevos productos/servicios.	9	24%
Ampliación de mercados o sucursales	6	16%
No contesto	1	3%
Total	37	100%

Fuente: Elaboración propia 2012

Tabla 3: Impacto en la calidad de vida

Indicadores	No. Personas que reportaron cambios			
	Mucho	Poco	Igual	Nada
Calidad de vida	65	14	11	9
Vivienda	59	13	15	10
Educación	6	8	0	8
Salud ocupacional	27	20	0	0

Fuente: Elaboración propia 2011

Analizando particularmente cada indicador tenemos que 65 entrevistados aseguran que su vida tuvo cambios importantes en calidad de vida, ya que parte de los ingresos obtenidos los dedicaron a mejoras en el negocio y como consecuencia mejoraron sus viviendas, que es donde generalmente se encuentra ubicado el negocio, otra pequeña proporción del ingreso obtenido es para financiar los gastos educativos propios y de la familia; no obstante se presentan 7 casos que le atribuyen al microcrédito, el que su vida había empeorado pues sus compromisos aumentaron y no tenían forma de liquidarlos.

A nivel general podemos observar en la Figura 1, el impacto general agrupado en tres aspectos, desde la percepción de materiales, Psicológica y Ambos

Figura 1: Aspectos generales favorecidos

Fuente: Elaboración propia 2011.

La Figura 1, refleja que 56 de los entrevistados tuvieron cambios favorables en ambos aspectos, materiales-psicológicos, no obstante hubo quienes se definieron solo por lo material 26 de ellos y 15 por lo psicológicos.

CONCLUSIONES

En los últimos años el cambio de paradigma de que el microcrédito era autorizado mayormente a mujeres da un giro, el 64% de ellos se otorgaron a los hombres, los que contaban con una formación profesional sólida y en un rango de edad de entre los 38 a 45 años. Edad en la que las empresas optan por separarlos de la vida laboral formal por los altos costos que les representan.

Las personas que obtuvieron un microcrédito cambiaron su mentalidad, obtuvieron seguridad económica y generaron autoempleo y en el 40% de los casos dieron ocupación a terceros o al propio cónyuge, se encontró que ambos laboraban en el negocio familiar (30 % de los casos).

El 33 % tienen proyectos para hacer crecer el negocio a través del ahorro y de constituirse formalmente para conseguir un financiamiento mayor.

Se determina que el microcrédito si influye positivamente en el ciclo de vida del negocio y en el nivel de vida de los beneficiados, la solvencia económica y la liquidez que son un problema general de los micro y pequeños negocios del sector terciario, les permite seguir trabajando el negocio, asimismo se detecta que el microcrédito incide en la cultura del ahorro pues el número de personas que lo practican se incrementó, lo que permite la madurez y longevidad de las empresas, alargar el ciclo de vida del negocio permite mejoras, diversificarlo ser competitivo y responder a las necesidades del mercado.

Es importante señalar que el origen de los microcréditos otorgados proviene en un 62% del sector privado a través de las uniones de crédito y sociedades de crédito los que se encuentran regulados y de otras fuentes, como cajas solidarias y populares las que carecen de legislación y regulación.

Por todo lo antes expuesto se hace necesario trabajar en conjunto, academia, gobiernos y microempresas para apoyar al 30 % de los negocios que nunca han podido obtener un microcrédito y que demanda atención y asesoría para poder aplicar a los apoyos financieros existentes y aprovechar las oportunidades que las diversas fuentes de financiamiento ofrecen a través de diversos programas a los emprendedores y sobre todo a los más vulnerables, a los pobres que no pueden acceder por carecer de solvencia y conocimiento.

Limitaciones

Al aplicar el instrumento de medición nos encontramos con una negatividad muy marcada por los entrevistados, en primer instancia pensaban que íbamos a cobrarles el microcrédito y se resistían a dar información. En segundo orden pensaban que los estaban fiscalizando. Esto lo constatamos accidentalmente cuando teníamos que regresar buscando a la persona correcta para la entrevista. No obstante de que los encuestadores portaban carta de presentación de la institución en donde se explicaba ampliamente el objetivo del cuestionario.

Al procesar la información se detectó que algunos microempresarios no contestaban algunas preguntas argumentando no tener información por lo que la base de las figuras varió al momento de graficar los datos.

Futuras Líneas De Investigación

Es preciso señalar que los resultados de esta investigación abren la oportunidad para trabajar en nuevas líneas de investigación, como serían la medición del impacto en aspectos de productividad, competitividad, de la toma de decisiones y de las mejoras psicológicas de los beneficiados con los microcréditos.

AGRADECIMIENTOS

Agradecemos sinceramente a los árbitros del Comité Científico y a los editores del IBFR por sus comentarios para mejorar los resultados de la presente investigación.

ANÁLISIS ESTRATÉGICO DE LAS INCUBADORAS DE BASE TECNOLÓGICA EN BAJA CALIFORNIA

Norma Leticia Vizcarra Vizcarra, Universidad Tecnológica de Tijuana
Virginia Guadalupe López Torres, Universidad Autónoma de Baja California
Santiago González Velásquez, Universidad Tecnológica de Tijuana

RESUMEN

El presente trabajo se realizó con el fin de identificar los factores que impactan el desarrollo y enfoque tecnológico de las incubadoras de empresas en Baja California. Mediante el producto obtenido, se pretende apoyar la creación y progreso de este sector. Para tal efecto, se realizó una investigación de tipo mixto en la que se consultaron diversas fuentes de información relacionadas con el tema. Se analizó la información obtenida mediante matrices estratégicas y se valoraron los datos a través de pruebas estadísticas. Los resultados determinan la importancia de considerar ciertos elementos internos y del entorno que prevalecen en el estado. Describiendo la falta de preferencia sobre incubadoras clasificadas en tecnología alta e intermedia.

PALABRAS CLAVE: Incubadoras de empresas en Baja California, análisis estratégico, base tecnológica.

ABSTRACT

This study was conducted to identify the factors that impact the development and technological approach to business incubators in Baja California. Using the obtained product is intended to support the creation and development of this sector. To make this possible, we conducted a mixed research where we consult from various sources of information related to the topic. The information obtained was analyzed by strategic matrices and data evaluated by statistical tests. The results indicate the importance of considering internal elements and environment prevailing in the state. Describing the lack of preference for incubators classified into high and intermediate technology.

KEYWORDS: Business Incubators in Baja California, strategic analysis, technology base.

INTRODUCCIÓN

En la actualidad, el constante monitoreo del ambiente externo en el que se desarrolla una organización, se considera una actividad indispensable para lograr su permanencia y competitividad. Debido esto a que la información que emana de dicho proceso, permite realizar un análisis sobre los factores que ponen de manifiesto las oportunidades y amenazas existentes. Al igual, el descubrir las competencias centrales que favorecen la obtención de una ventaja diferencial y por ende la competitividad estratégica de la empresa u organización, otorga elementos para tomar decisiones que apoyen el cumplimiento de los objetivos trazados (David., 2003) . El análisis referido es aplicable a todo tipo de organismo que formen parte del sistema productivo, tal es el caso de las incubadoras de empresas que son el tema central del presente trabajo. Al respecto, Elizondo (2007) menciona que las incubadoras de empresas surgieron inicialmente en Europa y Estados Unidos (en adelante EE.UU.). Durante la década de los años '50. Se identificó en EE.UU la primera incubadora de base tecnológica que fue Silicon Valley en California, con la participación de Stanford University. La Comisión Europea ha implementado también programas regionales de acciones innovadoras. En febrero del 2005 implementaron tres temas estratégicos en los que

participaron 114 de las 156 regiones que la forman. Siendo estos: agrupamiento (*clustering*), incubadoras y empresas semillas (*spin-off*). Iniciativas desarrolladas con el fin de apoyar proyectos tecnológicos y de investigación mediante nuevos servicios tecnológicos para las empresa (Política Regional-Inforegio, 2011). México no es la excepción y ha promovido el desarrollo de incubadoras de empresas con el fin de impulsar la economía nacional, ya que el crecimiento del país ha sido insuficiente en los últimos años para combatir el rezago financiero y el impacto social que esto implica, situación que el gobierno (Poder Ejecutivo Federal, 2007) contempla en el Plan Nacional de Desarrollo (PND), el cual incluye en el Eje 2. “Economía competitiva y generadora de empleos”, acciones que permitan mejorar la calidad de vida de los mexicanos mediante el impulso al crecimiento sostenido y generación de empleos formales. Para este fin se determinó la inversión en capital físico que ayude a minimizar riesgos en nuevos proyectos y facilitar la disponibilidad de recursos para su realización.

En base a lo anterior, el Poder Ejecutivo Federal (2007) describe como estrategia para potenciar la productividad y competitividad el impulsar procesos de investigación científica e innovación tecnológica, enfocado esto a la promoción de proyectos productivos de emprendedores y MIPYMES en crecimiento, consolidando así los esquemas de apoyo en una sola instancia quien se encarga de distribuir y controlar los recursos en programas como el de incubadoras de empresas. De acuerdo a lo mencionado, en México se creó un Sistema Nacional de Incubadoras de Empresa (SNIE) que depende de la Secretaría de Economía (SE), quien regula y controla el apoyo y buen funcionamiento de las incubadoras. Para poder integrarse a dicho sistema se requiere contar con un modelo de incubación reconocido, en la actualidad se tienen cinco modelos de incubación tradicional, seis de tecnología intermedia y tres de alta tecnología.

En Baja California (B.C.) existen once incubadoras registradas en el SNIE. Teniendo como marco la urgente necesidad en el estado para crear fuentes de empleo, el presente trabajo busca analizar los elementos que impactan el nivel de competitividad de las incubadoras en B.C. de acuerdo a la función para la cual fueron creadas. A la luz de algunas herramientas de planeación estratégica, se analizan elementos externos e internos que afectan el desarrollo de las incubadoras en dicha entidad, identificando la preferencia que en base al tipo de tecnología prevalece en las incubaciones. Dicho énfasis se debe al interés que demuestran los organismos de apoyo sobre este tipo de emprendimientos. Para llevar a cabo el estudio mencionado, se desarrollaron cinco fases: La primera introduce al lector en el tema, la siguiente conceptualiza las variables de estudio, la fase posterior define el método utilizado, en la cuarta se muestran los resultados y la última describe las conclusiones.

REVISIÓN LITERARIA

El análisis estratégico de cualquier organización, identifica los principales elementos que interfieren en el éxito o fracaso de una empresa u organización. Involucra también la elaboración de matrices que mediante la clasificación y asignación de valores a cada elemento identificado, destaca las puntos más importantes que se deben aprovechar o solventar (David., 2003) . El análisis externo del ambiente organizacional permite conocer aspectos importantes sobre los participantes y fuerzas externas que influyen en la capacidad para desarrollar y mantener transacciones exitosas. Al estudiar los factores del macro entorno, se analizan las fuerzas: demográficas, económicas, naturales, tecnológicas, políticas y culturales. Mientras que en el micro-ambiente, que son fuerzas que influyen en la capacidad de satisfacer a los clientes, se estudia a: proveedores, intermediarios, clientes, competencia y grupos de interés (Philip Kotler & Gary Armstrong., 2003). Otro punto a considerar en el análisis referido es el pensamiento estratégico, el cual se encuentra asociado a la coordinación de razonamientos creativos que permite una empresa u organismo cumplir sus objetivos mediante la previsión de futuros desafíos. Las partes que forman éste son: misión, visión, valores, filosofía y estrategias de la empresa (Emprendedor.com, 2010).

Analizar la parte interna de la empresa u organización permite identificar sus fortalezas con el fin de aprovecharlas y sus debilidades para realizar los cambios pertinentes en base a una toma de decisiones

informada. Las fuerzas internas clave varían según sus áreas funcionales y para identificarlas se requiere definir las fortalezas de una empresa que la competencia no puede igualar fácilmente, siendo estas las competencias distintivas (David, 2008). Debido a que el análisis estratégico se realiza a incubadoras de empresas, es importante considerar la definición de (Muñoz & Tognato, 2006) quienes identifican la incubación de empresas como una vía para estimular el desarrollo económico de una comunidad a través de dar soporte a proyectos de innovadores para que estos progresen.

Al definir las incubadoras de empresas (Calderón, 2006) las muestra como organizaciones que normalmente están relacionadas con las universidades y ocasionalmente al gobierno, cuya finalidad es la creación de empresas a través de la disposición de estrategias, mecanismos y en general de recursos humanos y financieros que les permita desarrollarse. Una de las clasificaciones más comunes cuando se trata de incubadoras de empresas es por el grado de tecnología. Aludiendo a esta él (Tecnológico de Monterrey, 2008) las categoriza como: Incubadoras de base tecnológica o alta tecnología a las que en su función está el apoyar la creación de empresas de sectores especializados como: Tecnologías de la información y comunicación (TIC's), microelectrónica, biotecnología, etc. Mientras que al referirse a Incubadoras de Tecnología Intermedia, se enfoca a las que otorgan apoyo a empresas con infraestructura y mecanismos de operación semi-especializados así como procesos semi-desarrollados. En cambio, describe a las Incubadoras tradicionales como sociales, con requerimientos tecnológicos básicos.

METODOLOGÍA

Mediante una investigación de tipo mixto se realizó el presente trabajo, desarrollando primero un estudio cualitativo – exploratorio, en el cual se consultaron diversas fuentes secundarias de información. Datos que se analizaron utilizando herramientas estratégicas como lo son las matrices: PEST, EFE, EFI y FODA. El siguiente paso fue, entrevistar a tres representantes de incubadoras ubicadas en la entidad (dos de tecnología tradicional y uno de tecnología intermedia) con el fin de conocer su opinión sobre los factores considerados de mayor relevancia dentro de las matrices realizadas. Se analizaron factores que impactan al desarrollo de las incubadoras generando la Matriz Cuantitativa de la Planeación Estratégica (MCPE), mediante la cual se definieron dos estrategias

Se realizó una investigación de tipo cuantitativa, en la que se analizaron datos estadísticos generados por el Sistema Nacional de Incubadoras de Empresas con el fin de comprobar la preferencia en la zona norte de México sobre el tipo de incubadoras de base tecnológica. Las preguntas de investigación fueron: ¿Los factores del entorno impactan el desarrollo de las incubadoras en Baja California? ¿Existe preferencia sobre el tipo de incubación de base tecnológica en la zona norte de México? Por el tipo de información, la primera pregunta fue contestada mediante una investigación de tipo cualitativa y la segunda pregunta fue analizada en forma cuantitativa, formulando para ella dos hipótesis y realizándose un análisis de varianza de un factor para responderlas, siendo estas:

Hi: existe preferencia por la incubadora de base tecnológica en la región norte de México

Ho: no existe preferencia por la incubación de base tecnológica en la zona norte de México

RESULTADOS

Dentro del análisis PEST, al estudiar el ambiente político en México se encontró que el Gobierno de B.C. ha implementado programas de apoyo para las: Micro, Pequeñas y Medianas Empresas (MIPYME's) debido a que en el estado el 99% de las empresas son micro, pequeñas y medianas y dan empleo a 68% del personal ocupado (Fondo PYME, 2012). Estos programas otorgan financiamientos canalizados vía incubadoras de empresas y organismos de apoyo, Centros de Atención Empresarial y El Programa de Impulso al Desarrollo de Proveedores regionales del Gobierno del Estado con el fin de capacitar y brindar

asistencia técnica a fabricantes y distribuidores regionales, fortalecer la cadena productiva del sector público, generar nuevas oportunidades de negocio para las MIPYMES de B.C. y sustituir importaciones (Secretaría de Desarrollo Económico del Estado de B.C., 2011).

Otra política que apoya las actividades de las incubadoras de empresas es la del Modelo Económico para la Inversión, el Empleo y la Competitividad en B.C., la cual desarrolla este en cuatro estrategias programas anticíclicos y empleo, retención y promoción de la inversión, fomento de MIPYMES y empleo (cultura emprendedora, formalización y asistencia, acceso financiero y encadenamientos productivos), inventivos a la competitividad y la innovación (Fondo mixto B.C., estímulos a la innovación, PROSOFT, AVANCE, LFCBC y agenda de desregulación (GE de BC, 2012).

En relación al ambiente económico es pertinente señalar que el aumento sostenido de los bienes y servicios de la economía nacional afecta en forma negativa al desarrollo de un país, es por esto que se inicia por analizar la inflación en México que de acuerdo a cifras del Banco de México e INEGI, se presentan a Abril del 2012. El Índice Nacional de Precios al Consumidor (INPC) refleja como índice general un 3.41 anual (Banco de México, 2012). A la vez se puede apreciar que en B.C. se encuentran datos generados por INEGI de julio del 2010 a julio del 2011 en donde el INPC es del 3%, presentando Mexicali un 1.51% y un 2.20 Tijuana (Gobierno del Estado de Baja California, 2011).

En cuanto al desempleo, según datos publicados por INEGI (2012), del 2010-2011, B.C. ocupa el segundo lugar a nivel nacional con un porcentaje del 5.83 en el 2010 y 6.63 en el 2011, significando esto un incremento de 0.80% que ha repercutido en el ámbito económico y social del estado, factor que influye en las políticas y estrategias implementadas por el gobierno del estado para apoyar los emprendimientos que generen empleos. Al desarrollar la Matriz de Evaluación de los Factores Externos (Matriz EFE) se consideraron las cinco oportunidades y amenazas más relevantes para el éxito de las incubadoras de la entidad. Este análisis determina una puntuación ponderada total de 2.55, que se considera un valor promedio partiendo de que cuatro es el peso más alto para una organización. Situación que nos habla de la conveniencia de manejar una buena estrategia para aprovechar las oportunidades existentes y enfrentar las amenazas.

En la Matriz de evaluación de los factores internos de las incubadoras (Matriz EFI) se identificaron algunas debilidades y fortalezas al analizar la situación del sector de las incubadoras de B.C. de acuerdo al sistema que manejan, los recursos que perciben en base al tipo de tecnología que promueven y elementos competitivos que determinan su manejo interno. Situación descrita en la matriz EFI, (apreciando un puntaje ponderado de 3.11 que es más alto que el promedio, sin dejar de considerar la importancia de utilizar las fortalezas para solventar debilidades de las incubadoras. Para complementar este estudio, se analizó el pensamiento estratégico de la SE, encontrándolo enfocado al apoyo de la economía a través del fortalecimiento y creación de empresas.

En el análisis FODA se tomaron en cuenta los factores más importantes de las dos matrices anteriores analizando estos de acuerdo a estrategias para minimizar debilidades y amenazas mediante el aprovechamiento de oportunidades que potencialicen sus fortalezas. La Matriz Cuantitativa de la Planeación Estratégica, (MCPE) ver (tabla 1), concentra los análisis efectuados dentro de las matrices estratégicas: PEST, EFE, EFI y FODA.

Tabla 1: MCPE para las Incubadoras de Empresas de B.C.

Alternativas Estratégicas MCPE	Alianzas con IES/ transferencia de tecnología y conocimientos			Enfoques mixtos en tipo de Incubadoras (tecnología: mayor apoyo financiero)	
Factores Clave	Pond./2	PA	PTA	PA	PTA
Oportunidades					
FC1 Programa de apoyo a incubadoras incluido en el PND	.07	4	.28	4	.28

FC3. Infraestructura y equipo	.05	4	.20	2	.10
FC4. Modelos reconocidos.	.04	--	--	--	--
FC5. Procesos de innovación alcanzado	.03	4	.12	3	.09
Debilidades					
FC1. Falta de proyectos tecnológicos.	.07	4	.28	3	.21
FC2. Periodos cortos de incubación	.04	--	--	--	--
FC3. Falta de plan normativo que alinee el pensamiento estratégico	.04	--	--	--	--
FC4. Falta de sistemas de transferencia Universidad-Incubadora	.08	4	.32	1	.08
.FC5. Procesos lentos de financiamiento para incubandos	.05	3	.15	3	.15
	1.00		3.14		2.26

La Tabla MCPE muestra la comparación entre dos estrategias que pueden considerarse para las incubadoras en Baja California, la primera estrategia denominada Alianzas con IES y la segunda estrategia utilizando Enfoques mixtos en tipo de incubadoras. Se muestra una síntesis del análisis FODA que se hizo para las incubadoras de Baja California, combinando la información que resultó del análisis PEST, EFE y EF1, resultado como estrategia con mejor ponderación la primera: Alianzas con IES. Fuente: elaboración propia

Abreviaturas utilizadas en la tabla:

FC= Factor, PA = Grado de atractivo, PTA = Puntuación total del grado de atractivo
Escala sobre el grado de atractivo:

1= no atractiva, 2= poco atractiva, 3= razonablemente atractiva, 4= muy atractiva

El análisis MPEC realizado en base a estudios previos, enfoca la conveniencia de implementar una estrategia de alianza con los centros de investigación o IES. Esto con el fin de lograr que se transfiera tecnología y conocimiento a los proyectos incubados. Solventando así algunas de las debilidades de las incubadoras tradicionales y de base tecnológica y aprovechando recursos existentes en estos centros, mismos que según estudios descritos, respaldan en forma especial a las incubadoras que acogen proyectos de tecnología media y alta. Con el fin de identificar la preferencia sobre el tipo de incubadoras que existen en la zona fronteriza, se realizó una prueba estadística tomando información publicada por el Sistema Nacional de Incubadoras de Empresas. Haciendo con esto una tabla comparativa (tabla 2) y utilizando estos datos para realizar un análisis de varianza de un factor (tabla 3).

Tabla 2: Clasificación de incubadoras por tipo de tecnología

Tipo de Incubadora	Incubadoras en BC	Incubadoras en Sonora	Incubadoras en Chihuahua	Incubadoras en Coahuila	Incubadoras en Nuevo León	Incubadoras en Tamaulipas	Total
Tradicional	11	7	4	5	6	5	38
Tecnología intermedia	1	14	13	10	10	9	57
Alta tecnología	0	1	1	0	2	0	4

Se muestra cierta preferencia sobre el tipo de incubadoras de base tecnológica en la región norte de México. Ho: $\mu_1=\mu_2=\mu_3=\mu_4\ldots 6$ Hi: Diferencia de un μ mínimo. El estado de Sonora quién registra el mayor número de éstas. Baja California tiene 11 incubadoras de tipo tradicional y sólo 1 de tecnología intermedia, no existen incubadoras de alta tecnología en éste estado. Fuente: elaboración propia con la datos de Sistema Nacional de Incubadoras de Empresas, en Fondo PYME (2012)

Tabla 3: Análisis de varianza de un factor.

ANALISIS DE VARIANZA						
Origen de las variaciones	Suma de cuadrados	Grados de libertad	Promedio de los cuadros	F	Probabilidad	Valor crítico para F
Entre grupos	21.1666667	5	4.2333333	0.14137291	0.97899591	3.10587524
Dentro de los grupos	359.333333	12	29.9444444			
Total	380.5	17				

Frecuencia = .14137 Probabilidad = .9789 > .05 se rechaza Ho y se acepta Hi Valor crítico = 3.105 Fuente: elaboración propia.

De acuerdo a los resultados que arroja el análisis anterior, se muestra que en la parte norte de México, se apoya principalmente a proyectos de base tecnológica. Situación en la que Baja California no compite a pesar de tener la influencia de EE.UU y estar dentro de la zona analizada, ya que solo cuenta con una incubadora de tecnología intermedia y ninguna de alta tecnología.

CONCLUSIONES

El resultado de la investigación exploratoria efectuada inicio con una pesquisa en diversas fuentes secundarias. Información respaldada por fuentes primarias a través de entrevistas a representantes de tres incubadoras de empresas en las que se analizaron y seleccionaron los elementos más relevantes ver tablas. Se concluye que los factores del entorno si impactan el desarrollo de las incubadoras en Baja California. Esto debido a diversas situaciones identificadas, tales como: el grado de importancia de las MIPYME en el estado, tasas de desempleo, población flotante (emigrantes) y otros factores analizados que hacen de Baja California una región con características distintivas. Aunado esto al lento proceso de financiamiento y una gran competencia para los nuevos proyectos, se puede deducir la necesidad de innovación y competitividad para las empresas de nueva creación. Esto se vería apoyado si se incrementa el nivel de tecnología, proceso de adjudicación a esta y facilidades para su transferencia. Si estos factores no se dan, difícilmente se alcanzara un nivel similar en la preferencia de incubadoras de base tecnológica como el logrado por otros estados de la zona norte de México.

De acuerdo a lo anterior y en base a la puntuación obtenida en resultados generados por el análisis de matrices (concentrado en la Matriz Cuantitativa de la Planeación Estratégica, (MCPE) y reafirmado en entrevista a tres representantes de incubadoras ubicadas en el estado de Baja California) se cree conveniente el crear alianzas con Instituciones de Educación Superior (IES) que transfieran tecnología y conocimiento. Así como enfoques mixtos en el tipo de Incubadoras (tradicional y tecnológica) debido esto al soporte en competitividad que esto otorga a las empresas y al grado de prioridad que da el gobierno a este tipo de proyectos, lo que se traduce en apoyo financiero para ellos y solidez hacia su emprendimiento. El probar la dicha conveniencia sería objeto de un estudio subsecuente.

Se considera también de importancia dentro de este análisis, el alinear el pensamiento estratégico de la SE, con el SNIE y las Incubadoras de empresas. Esto con el fin de garantizar un proceso acorde a la razón de ser de estos organismos y vincular las estrategias en forma coordinada y funcional. Se aprecia conveniente a la vez el publicar la misión, visión, filosofía, valores y plan estratégico de la SE, con el fin de extender el compromiso a la planeación normativa de estas unidades. Según la prueba estadística efectuada, si existe preferencia por las incubadoras de base tecnológica en la región norte de México, rechazando con esto la hipótesis nula H_0 y aceptando la hipótesis de investigación H_1 . Más no sucede lo mismo en el estado de Baja California. Este punto, reafirma lo tratado en los párrafos anteriores sobre la importancia de considerar los factores que forman parte del entorno externo e interno de cada incubadora y del sector al que pertenece con el fin de propiciar cierta preferencia en cuanto al tipo de proyectos a emprender y el éxito de la promoción que se dé a estos.

EL POSGRADO DE CALIDAD Y SU PRESUPUESTO BASADO EN BENEFICIOS ECONOMICOS

Oscar Guzmán Vargas, Universidad de Guadalajara

RESUMEN

El presente trabajo tiene como finalidad identificar la viabilidad de la incorporación de un programa de posgrado en la modalidad a distancia en la Universidad de Guadalajara (U de G), lo relevante es que es la primera vez que se propone el posgrado en línea realizado por la U de G. en un Centro Universitario Regional, ya que está dentro del Centro Universitario de la Costa Sur, visto desde la parte del presupuesto y sin disminuir la calidad de la educación presencial, y sí privilegiando las ventajas que se tendrán en la modalidad a distancia. La investigación sobre la mejora de la calidad en el sistema superior por medio de la propuesta de los estudios de posgrado a distancia (Maestría en Administración y Gestión Regional), así también se identificaron las principales actividades que se plasman en la propuesta y que permitirá contar con el capital humano adecuado y actualizado para esta modalidad, así como la infraestructura necesaria y los costos involucrados que deberán manejarse para poder definir colegiaturas y márgenes de operación.

Palabras clave: posgrado, educación a distancia y presupuesto

THE POSTGRADUATE'S QUALITY AND ITS BUDGET BASED ON ECONOMIC BENEFITS

ABSTRACT

The purpose of the present study is to identify the viability of the incorporation of a program of postgraduate course in the e-learning modality in the University of Guadalajara (OR of G), the prominent thing is that is the first time that the postgraduate course in line carried out is proposed by the OR of G. in a Regional university, since is inside the university of the South Coast, seen from the part of the budget and without diminishing the quality of the eyewitness education, and privileging the advantages that will have in the distance modality. The investigation handle the improvement of the quality in the upper system through the proposal of the studies of postgraduate course to distance (Mastery in Administration and Regional Management), thus also the main activities were identified that are expressed in the proposal and that will permit to include the adequate human capital and brought up to date for this modality, as well as the necessary infrastructure and the costs involved that should be handled to be able Defining college scholarships and margins of operation.

KEYWORDS: Master degree, Distance education and Budgets..

INTRODUCCIÓN

La Maestría en Administración y Gestión Regional inició sus actividades en el Centro Universitario de la Costa Sur de la Universidad de Guadalajara en agosto de 2005. No obstante las alentadoras cifras de demanda constante que han permitido al programa permanecer a lo largo de 7 años en un mercado cuya oferta educativa cada día es mayor y que ha venido atendiendo a un mercado laboral que requiere mayores habilidades, conocimientos y actitudes, así como otras competencias antes no consideradas; las tendencias del sistema educativo nacional, las necesidades del entorno y las propias perspectivas institucionales, exigen revisar y adecuar los programas de posgrado que actualmente ofrece el Centro Universitario de la Costa Sur a fin de cumplir con las características de flexibilidad, pertinencia y tutoría

que permitan responder a las necesidades socioeconómicas, además de optimizar la infraestructura física y académica del propio Centro Universitario. En este contexto, la propuesta de ofertar la Maestría en Administración y Gestión Regional en la modalidad a distancia plantea las siguientes ventajas:

- Disponibilidad de tiempos flexibles para estudiantes y profesores.
- Mayor acercamiento a estudiantes por tiempo de asesoramiento.
- Disponibilidad de un portal accesible y dedicado.
- Ahorro en los gastos de traslado.

De esta manera, el estudiante, además de contar con las bases que le permitan conocer y aplicar la Teoría General de la Administración a la solución de problemas, tiene la posibilidad de aplicarlas en su medio laboral de inmediato a fin de dominar las técnicas que la Administración propone en funciones y actividades específicas. En este sentido, el presente programa de Maestría en Administración y Gestión Regional sostiene un equilibrio entre teoría y práctica, al habilitar al estudiante para iniciar trabajos terminales de grado para la aplicación innovadora del conocimiento, lo cual estará soportado en líneas de investigación a cargo de cuerpos académicos y un programa de tutorías que acompañará el desarrollo de los estudiantes.

METODOLOGIA

En esta investigación se realizó una búsqueda documental que nos ayudara a encontrar los beneficios que se obtienen teniendo un posgrado de calidad, viendo el aspecto financiero como el principal fenómeno a localizar, ya que el posgrado al cual nos referimos en esta investigación es autofinanciable y es a base de el pago de la matrícula que cada semestre se lleva a cabo.

RESULTADOS

Utilizando la metodología mencionada anteriormente los encontramos dentro del Contexto internacional que en los albores de este siglo se observa una demanda de educación superior sin precedentes acompañada de una gran diversificación de la misma y una mayor toma de conciencia de la importancia fundamental que este tipo de educación reviste para el desarrollo sociocultural y económico y para la construcción del futuro, de cara al cual las nuevas generaciones deberán estar preparadas con nuevas competencias y conocimientos e ideas (Méndez, 2006). La educación superior debe hacer frente a retos que suponen las nuevas oportunidades que abren las tecnologías de información, que dan apertura a un contexto mundial de comercialización de bienes y servicios, y comprende “todo tipo de estudios de formación para la investigación en el posgrado, impartidos por una universidad u otros establecimientos que estén acreditados por las autoridades competentes del Estado como centros de enseñanza superior” (Besabe, 2007).

Contexto nacional

El nuevo entorno de la sociedad con conocimiento de los bienes y servicios, brinda oportunidades extraordinarias para innovaciones orientadas al desarrollo de nuevas modalidades educativas adecuadas a las condiciones sociales, económicas y culturales de los distintos grupos de población, y con niveles más elevados de aprendizaje, dentro de una concepción de educación integral que abarque la formación de profesionales en el ámbito del estudio de las organizaciones. Las instituciones educativas pueden adquirir nuevas capacidades para trascender sus fronteras tradicionales. Las redes de comunicación, que se diversifican y amplían en la nueva sociedad del conocimiento permiten establecer nuevos vínculos y

fortalecer los existentes entre instituciones educativas, culturales y laborales. La evolución de la sociedad mexicana en las últimas décadas obedece a múltiples razones como el incremento demográfico, la elevación de los niveles de educación de la población, profundos cambios económicos, intereses y valores emergentes, nuevas formas de asociación y organización social, cambios tecnológicos e internacionalización (UAEM, 2009).

Contexto Institucional

El plan de desarrollo institucional 2030 de la U de G define los rumbos que tomará la universidad de acuerdo con la misión que tienen encomendada y conforme a los principios de calidad y humanismo propuestos como sustento en la actual administración. El plan de Desarrollo Institucional perfila a la institución como un centro generador y reproductor de conocimiento mediante la aplicación de un modelo educativo innovador enfocado en el estudiante y centrado en el aprendizaje, apoyado tanto en las mejores técnicas pedagógicas y en las tecnologías de la información y la comunicación, con las cualidades de calidad, movilidad y flexibilidad, como en el trabajo en red colaborativo y colegiado. Para ello, el Centro Universitario que posee la libertad académica, atributo que permite el debate permanente de las ideas en un espacio abierto a la creatividad y en el que se materializan el libre pensamiento y la libertad de investigación y educación.

Beneficios De Los Posgrados De Calidad

La calidad: del proceso de educación, es un concepto de múltiples diferencias por la visión, dimensión e interpretación que del mismo se realice, en particular la calidad del posgrado comprende un conjunto de estándares nacionales e internacionales, que conjugan la excelencia académica y la pertinencia social en su acepción más amplia, y que engloban un grupo de variables en las cuales se incluye desde los estudiantes, la infraestructura (aseguramiento didáctico, material y administrativo), los profesores y tutores, el currículo, hasta la pertinencia social e impacto de los programas que se desarrollen.

El concepto de calidad es complejo, en su integración todo es necesario en función de abarcar una visión global, con un enfoque sistémico que incorpore al hombre como un participante que opera sobre el sistema y evoluciona junto con él, ya que el mejoramiento continuo y la evaluación de la calidad son tareas complejas que involucran a muchos actores. (Profesores, tutores, evaluadores, estudiantes, directivos). La sociedad de este mundo globalizado ha incrementado sus exigencias a las instituciones de educación superior, no basta con que sean guardianes y trasmisoras del conocimiento universal, lo que la sociedad necesita es que ese conocimiento sea aplicable al entorno en que se desarrollan, que sea pertinente en función de satisfacer las demandas y que al aplicarse se produzca el impacto, el cambio necesario hacia el desarrollo. En particular en nuestros países subdesarrollados, además se precisa que todo el proceso sea sostenible para las condiciones en que se realiza.

Todos estos requerimientos se aglutinan como un sistema en el concepto de calidad, al cual tienen que suscribirse las universidades, como un reto a su desarrollo y una oportunidad para alcanzar la excelencia. Para fomentar la matrícula de posgrado por medio de los recursos extraordinarios que otorga el CONACYT en su sistema de becas, así como ingresar al Programa Nacional de Posgrados de Calidad (PNPC) el problema latente es la ausencia de aspirantes a programas de Posgrado debido a la alta demanda de becas que estudiantes requiere, para esto se tiene un programa específico por parte del CONACYT de Becas para Estudio de Posgrado. Algo que afecta al ingreso a continuar con los estudios a egresados de Licenciatura es el tiempo de los aspirantes, ya que en muchas ocasiones no son compatibles los horarios laborales con los de la Institución Educativa, a esto existen requisitos para poder acceder a los financiamientos que otorga el CONACYT aspirantes a beca de posgrado en el país.

Se cuenta con diferentes apoyos dependiendo el nivel de estudios al que desea ingresar, que son

especialidad, maestría y doctorado, como requisito obligatorio es contar con un mínimo de promedio de 8 así como una serie de requisitos, para acceder a estos beneficios.

El contexto internacional se mueve en inciertos escenarios de tipo económico, social, cultural, científico tecnológico, demográfico y ambiental, en medio del cual, nuestro país tiene una gran fortaleza por el estado que se ha alcanzado en la Educación Superior, con más graduados universitarios en los últimos 50 años y junto con la COMEPO - Consejo Mexicano de Estudios de Posgrado tener un sistema nacional de posgrado, que muy pocos países tienen. El sistema de educación superior dentro del nivel de posgrado en México ha alcanzado niveles que exhiben la formación de más de 1 mil doctores y más de 127 mil masters por año, en la actualidad existen más de 14000 programas diferentes según la ANUIES, una gran cantidad de los cuales tiene categorías superiores de acreditación como lo marcan los que se encuentran dentro del Padrón Nacional de Programas de Calidad.

En estos momentos, en que se deben de tomar una serie de medidas económicas para garantizar el futuro socio económico del país, la educación superior tiene que jugar un rol fundamental en la elevación de la calidad de los profesionales, la orientación de graduados universitarios hacia las áreas económicas y sociales con mayores demandas de profesionales, la mayor pertinencia e impacto de los programas de formación y superación, así como mayor eficiencia y sostenibilidad en la superación profesional y científica permanente de nuestros profesionales. Se deben desarrollar nuevas estrategias que desde la gestión de la educación a nivel posgrado que permitan una mayor respuesta a los retos actuales de la Educación Superior. Dentro de la estadística que nos muestra la Universidad Virtual de la Universidad de Guadalajara no muestra en el seguimiento escolar de nivel de maestría se observa una eficiencia terminal del 76% al corte de esta investigación y en el seguimiento escolar de nivel de Doctorado se observa una eficiencia terminal del 84% al corte de esta investigación. El director general del CONACYT dijo que de la población total del país, que según cifras del INEGI asciende a 112 millones de personas, sólo 12 millones cuentan con una licenciatura y menos de un millón han estudiado un posgrado.

“Una proporción todavía baja de personas altamente calificadas para los desafíos del presente y el futuro de un desarrollo nacional más equitativo y sustentable.”

De acuerdo con estimaciones del CONACYT, en el mejor de los casos, dijo, sólo ingresa al posgrado el 20 por ciento de los jóvenes que concluye una licenciatura. El funcionario señaló que del total de la matrícula nacional de posgrado, que es de 178 mil estudiantes, casi el 19 por ciento cuenta con una beca del CONACYT para realizar sus estudios. En los momentos en que la humanidad ha alcanzado los 7000 millones de habitantes, el contexto internacional se mueve en inciertos escenarios de tipo económico, social, cultural, científico tecnológico, demográfico y ambiental, que en décadas anteriores no estaban presentes con la intensidad y volúmenes con que se presentan en el momento actual, “...es la realidad de este mundo: un sistema globalizado e insostenible de explotación y saqueo de todos los pueblos del mundo...” (Castro 2003, p: 1Homenaje a Martí.). Esta situación se traduce al interior de los países de la América Latina en una constante crisis económica y política, deterioro de los sistemas nacionales de salud y educación, incremento de la pobreza, las epidemias, analfabetismo, invasión cultural, etc. Como resultado de la globalización neoliberal en contubernio con los gobiernos “democráticos.” Frente a los numerosos desafíos, la educación constituye un instrumento indispensable para que la humanidad pueda progresar hacia los ideales de paz, libertad y justicia social. UNESCO, 2009.

Las Instituciones de Educación Superior (IES) no deben permanecer pasivas ante estos retos, estando obligadas a formular nuevas políticas y estrategias en la formación del profesional, el postgrado, la extensión, la elevación de la calidad, que respondan a las exigencias que se derivan del contexto nacional e internacional. La Universidad debe asumir, por sobre todo, su función fundamental como productora de conocimientos, y responsabilizada con la educación a nivel posgrado; y como se encuentra ante una situación competitiva, es imprescindible en nuestros países subdesarrollados responder con mayor

calidad, pertinencia, eficiencia y sostenibilidad ante estos retos contemporáneos.

En estos momentos, en que se impone tomar una serie de medidas económicas para garantizar el futuro socio económico del país, la educación superior, tiene que jugar un rol fundamental en la elevación de la calidad de los profesionales, la orientación de graduados universitarios hacia las áreas económicas y sociales con mayores demandas de profesionales, la mayor pertinencia e impacto de los programas de formación y superación, así como mayor eficiencia y sostenibilidad en la superación profesional y científica permanente de nuestros profesionales. Se precisa entonces, diseñar y desarrollar nuevas estrategias que desde la gestión de la educación superior a nivel posgrado permitan una mayor respuesta a los retos actuales de calidad, pertinencia, eficiencia y sostenibilidad que tienen que afrontar las Instituciones de Educación Superior.

Estrategias para incrementar la calidad en el posgrado: Cuando se toman en consideración estrategias como guía, amplía la proyección hacia el territorio de los programas de posgrado que se desarrollan en función de alcanzar una mayor pertinencia:

1. Identificación de los problemas regionales socio económicos priorizados del territorio que se precisan solucionar.
2. Determinación de las necesidades de formación y desarrollo, tanto de los territorios como de las instituciones de educación superior, en función de la solución novedosa de los problemas identificados, con visión a corto, mediano y largo plazo.
3. Inserción de la enseñanza de posgrado (estudiantes y profesores) en los principales programas territoriales de desarrollo, vinculados al área de conocimientos que abarca el Programa de posgrado.
4. Garantizar desde el posgrado la reorientación de los profesionales de los territorios, hacia los perfiles ocupacionales con mayor demanda.

Gestión Y Calidad: Comparación Entre Programas De Posgrado Regulares Y Los Del CONACYT.

Actualmente existen fondos públicos para programas regulares, y programas de posgrado de financiamiento CONACYT (becas). La comparación que vamos a realizar se basa en información que publican los programas en sus Informes de Labores del 2010 realizado con indicadores de gestión del Marco de referencia para la evaluación y seguimiento de programas de posgrado del CONACYT. Se presentan las diferencias entre los programas regulares, los programas de financiamiento CONACYT y los mixtos, poniendo en evidencia los beneficios de este último tipo de gestión como modelo adecuado para poder implementar en el Centro Universitario de la Costa Sur en la Maestría en Administración y Gestión Regional. La COMEPO constituido por programas de maestría y Doctorado, crece y se consolida en el contexto de las unidades académicas base y colaboradoras, produciendo aún más presión sobre los fondos federales y estatales para fortalecer el financiamiento y se dio su crecimiento por la crisis económica mundial. Actualmente se toma conciencia de que el posgrado en la Universidad de Guadalajara no puede crecer al ritmo que el país requiere, ni a la velocidad y con la calidad que la generación de nuevos profesores desean para consolidar la investigación.

La Universidad de Guadalajara comienza a visualizar que la única forma de responder al país, con las opciones de posgrado que éste demanda, es a través de ser recibidos en línea y de mecanismos alternos de generación de fondos por su naturaleza que requiere autofinanciamiento. La posibilidad de crear programas con fuentes de financiamiento federal motivo a la creación de maestrías profesionales.

Nacen así distinciones entre los mecanismos de financiamiento para los programas de posgrado. Los

programas tradicionales con financiamiento estatal y recursos propios son denominados *regulares*. Los programas nuevos, con fuentes de financiamiento federal por medio del CONACYT.

Programas De Posgrado De Financiamiento CONACYT

Los programas de posgrado con financiamiento por medio de las becas del CONACYT perciben un pago mensual distinto respecto de los programas regulares, o reciben fondos externos provenientes de instituciones u organismos nacionales o internacionales, públicos o privados. Estos fondos no ingresan a la cuenta única de la Universidad, sino que son administrados por los programas individualmente para garantizar su sostenibilidad. La Universidad de Guadalajara les aporta además, en mayor o menor grado, recursos adicionales de diversa índole (recursos humanos, infraestructura, gastos fijos, etc.), para facilitar su funcionamiento. Los programas de posgrado con financiamiento CONACYT tienen una especial forma de gestión, derivada de su financiamiento. Un estudiante de estos programas podría tener que pagar el doble o hasta 3.5 veces lo que pagaría en un programa de posgrado regular, con un mínimo y máximo costo del crédito normado por el Consejo General Universitario. Además de cubrir los costos operativos propios de sus programas de posgrado, éstos están llamados por la normativa establecida para su funcionamiento por el Consejo General Universitario a proporcionar una fuente de apoyo económico como un todo. Con la figura de programas de financiamiento CONACYT, la Universidad delega en sus programas de posgrado la responsabilidad de generar los fondos para su sostenibilidad.

La oferta de programas regulares es aproximadamente solo el 80% de la oferta académica de posgrados en la actualidad modalidad de autofinanciables. Tanto es así que muchas veces se tiende a confundir, en el contexto universitario, los términos de grado profesional con la fuente de financiamiento CONACYT, lo cual no es del todo cierto. Es importante aclarar que existen posgrados de financiamiento CONACYT de alta demanda, lo cual permite que dichos programas puedan generar los fondos necesarios para su sostenibilidad. Este es el caso de los Programas de Posgrado en Especialidades Médicas y del caso de los Programas de Posgrado en Administración de Empresas, en Mercadotecnia, en Negocios, etc.

Existen una mayoría de casos de posgrados de financiamiento CONACYT de mediana o baja demanda, lo cual no permite que estos tengan una matrícula numerosa e ingresos suficientes para cubrir sus costos de operación. Vale la pena resaltar la gran heterogeneidad en tamaño de los posgrados de financiamiento CONACYT. Unos, los grandes, tal vez 3 o 4 de ellos, pueden considerarse casi autosuficientes. Otros, la gran mayoría, son programas de muy escasos recursos, los cuales han de recurrir a fondos de sus unidades académicas propias para cubrir el pago de profesores y la compra de materiales básicos para su subsistencia. Con sus ingresos propios difícilmente cubren su apoyo secretarial, y el pago de un porcentaje bajo de sus docentes. Preocupa la falta de coherencia entre la visión universitaria de que estos programas viven en la opulencia, y su realidad: la carestía de recursos con la cual deben existir. Preocupa además la percepción, también casi generalizada, de que estos programas no son de la misma calidad que los programas regulares. Es esta última percepción que motiva al análisis comparativo entre los diferentes tipos de posgrados que se presenta a continuación.

Los posgrados de financiamiento CONACYT dependen en mayor medida de contar con un número adecuado de estudiantes que los posgrados regulares. De hecho, la sostenibilidad de estos dependen de los ingresos por pago de matrícula, lo cual hace que la modalidad con la cual son impartidos se deba ajustar a las características de la población meta. Esto se refleja no solo en la diversidad de medios para su divulgación (presentado más adelante) sino que ha causado que se utilice una diversidad mucho mayor de diseños curriculares en adición al semestral, el cual es tradicional en la Universidad de Guadalajara. Existen un número creciente de posgrados de financiamiento CONACYT.

CONCLUSIONES

La educación superior a nivel de posgrado actualmente, tiene un importante reto en la necesaria elevación de la calidad de los profesionales, la orientación de graduados universitarios hacia las áreas económicas y sociales con mayores demandas de profesionales, la mayor pertinencia e impacto de los programas de formación y superación, así como mayor eficiencia y sostenibilidad en la superación profesional y científica permanente de nuestros profesionales, aprovechando los sistemas de información y comunicación con contenidos actualizados y que pueden ser consultados en tiempo real y con un grado de confiabilidad considerable. La instrumentación de un grupo de nuevas estrategias desde la gestión de recursos extraordinarios que otorgan para el nivel de posgrado pueden permitir una mayor respuesta a los retos actuales de calidad, pertinencia, eficiencia y sostenibilidad que tienen que afrontar las Instituciones de Educación Superior, y pueden utilizar las herramientas informáticas que se encuentran al alcance de todos. El análisis comparativo entre los diferentes tipos de posgrados según los datos reportados en el Informe de Labores 2010, evidencian paridad en muchísimos de los criterios de calidad reflejados por el Informe de Labores el cual se inspira en el Marco de referencia para la

Evaluación y Seguimiento de los Programas de Posgrado. Los programas regulares pareciera que viven en una zona de mayor confort que los adormece en algunos aspectos importantes como: la adecuación de su oferta académica a las necesidades de la población profesional de utilizar la totalidad del año en su formación, la diversidad de medios de divulgación existentes para la atracción de los mejores candidatos, la necesidad de capacitación continua de sus docentes, y más sorprendentemente, la necesidad de divulgar sus resultados de investigación. Los posgrados de financiamiento CONACYT, por otro lado, han sido más débiles en buscar atraer estudiantes extranjeros para enriquecer sus experiencias en el aula y tener un mayor impacto mundial. El descubrimiento más interesante de la investigación en la gestión de los programas de posgrado mixtos, los cuales administran programas regulares y de financiamiento CONACYT, en su seno, sobre los programas homogéneos.

Estos programas muestran: mayor agresividad en el uso de medios de divulgación para la atracción de la población estudiantil, mayor conciencia de parte de sus docentes para involucrarse en actividades de formación continua y lo más importante, mayor efectividad para divulgar sus resultados de investigación e involucrar a los estudiantes en esta divulgación. La COMEPO ve con muy buenos ojos estos resultados, los cuales sirven para disminuir muchas de las percepciones universitarias de que los programas de financiamiento CONACYT, que carecen de motivaciones académicas. Estudios longitudinales y a mayor profundidad son necesarios para obtener conclusiones más certeras, sin embargo, el análisis comparativo nos invita a la reflexión y nos permite conocer más la gestión de nuestros programas de posgrado.

Las universidades públicas como la Universidad de Guadalajara, son organizaciones forzadas a cambiar, acorde a las exigencias de la sociedad y de los organismos reguladores actuales. El diseño y creación de programas educativos de posgrado que impulsen el desarrollo de la investigación local, regional y estatal, la formación de recurso humano de alto nivel y la resolución de problemáticas de las organizaciones locales, favorecen el desarrollo de la sociedad. La universidad pública requiere contar con programas de posgrado en la oferta educativa que coadyuven en el cumplimiento de sus funciones sustantivas (generación y aplicación de nuevos conocimientos a través de la investigación); sin embargo, se requiere que estos programas y su operación se realice con el pleno conocimiento de sus principales responsables, respecto a lo que es necesario hacer para el aseguramiento de la calidad.

Respecto a la evaluación, ésta es un asunto inmerso en los procesos institucionales y de los programas educativos relacionados con la prospección, la planeación, la gestión y la toma de decisiones orientadas a mejorar la calidad del servicio educativo, en este caso, el posgrado. A lo largo de su historia, la U de G ha creado programas educativos de nivel posgrado conforme las necesidades de la sociedad; sin embargo se reconoce que no se ha logrado transitar hacia la consolidación de éstos, ya que son diversos los factores

que lo limitan (profesores habilitados en el campo de interés, presupuesto de operación escaso, infraestructura insuficiente, entre otros). La universidad pública considera que el programa de doctorado en ciencias administrativas representa un modelo a seguir, para el diseño de creación de nuevos programas de posgrado de calidad que contribuyan a la atención de la demanda del estado y su impacto en el desarrollo local.

ESTRATEGIAS PARA EL MEJORAMIENTO DE LA CADENA DE SUMINISTRO PARA EL MODELO SCOR

Tomás José Fontalvo Herrera, Universidad de Cartagena
José Morelos Gómez, Universidad de Cartagena

RESUMEN

En este artículo de investigación se presentan los resultados obtenidos durante el desarrollo del proyecto Estrategias para el mejoramiento de la cadena de suministro para el modelo SCOR, en una empresa comercializadora de productos farmacéuticos en la ciudad de Cartagena, inicialmente se realizó una descripción detallada de los modelos de operación para la cadena de suministro basada en la estructura del Modelo SCOR, la estrategia benchmarking y los avances tecnológicos y el uso del lean manufacturing para implementar la eficacia en todos los procesos de la empresa, lo que permitió desde una perspectiva descriptiva, argumentativa, propositiva y cuantitativa, identificar las fallas que se presentaban en cada una de las actividades ejecutadas y plantear una propuesta de Plan de Mejoramiento para la Cadena de Suministro eliminando las actividades que no aportaban valor, con el fin de generar beneficios tangibles para el cliente.

PALABRAS CLAVES: cadena de suministro, modelo SCOR, mapa de procesos, benchmarking, lean manufacturing, cliente.

ABSTRACT

This research paper presents the results obtained during the development of the project Strategies for improving the supply chain for the SCOR model, in a marketer of pharmaceuticals in the city of Cartagena, initially there is a detailed description of operating models for supply chain based on SCOR Model framework, benchmarking strategy and technological advances, and the applications to implement lean manufacturing efficiency in all business processes, which allowed from a descriptive, argumentative, proactive and quantitative perspective to identify failures presented in each of the activities performed and a proposal for the Supply chain improvement plan, eliminating activities that didn't provide value, in order to generate tangible benefits for the customer.

KEYWORDS: supply chain, SCOR Model, Processes Map, benchmarking, lean manufacturing, customer.

INTRODUCCIÓN

En este artículo, se presenta la definición y conceptualización de las estructuras operativas y modelos de gestión, así como un plan de mejoramiento, como resultado de la implementación del modelo SCOR en una empresa comercializadora de productos farmacéuticos en la ciudad de Cartagena. La metodología utilizada en el transcurso del proyecto fue la propuesta por el Supply Chain Operations Reference Model (SCOR Model), ideado por el Consejo Mundial para la Cadena De Suministro.

Revisión Teórica

A continuación se realiza una revisión teórica, la construcción y aplicación del modelo SCOR en una empresa de distribución de productos farmacéuticos en Cartagena; y se presenta el plan de mejoramiento. Para lo anterior se utilizó el benchmarking, el sistema lean manufacturing y el uso adecuado de los avances tecnológicos y la estandarización de sus procesos articulando el modelo SCOR.

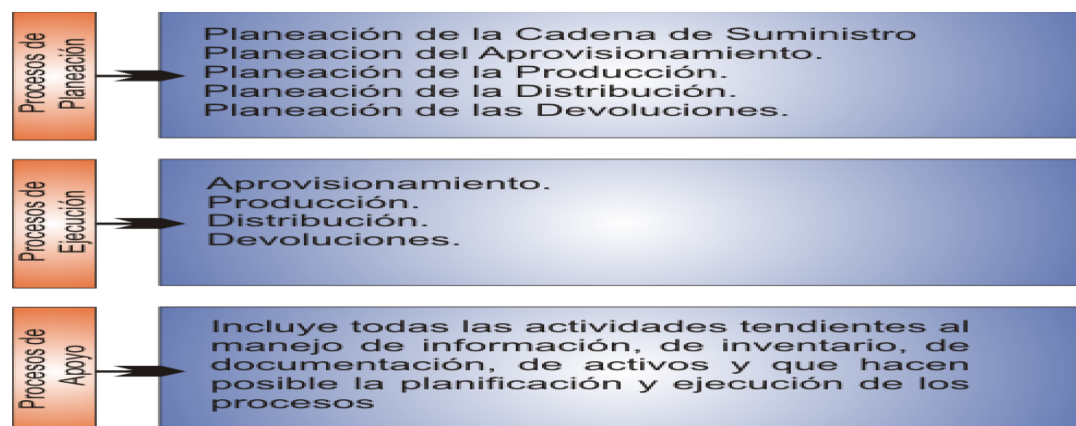

El Modelo De Operaciones Para La Cadena De Suministro (SCOR Model).

El Supply Chain Operations Reference Model (SCOR Model), es un modelo ideado por el Consejo Mundial de la Cadena de Suministro (Supply Chain Council), El Modelo de Referencia de Operaciones para la Cadena de Suministro es un modelo desarrollado para describir todas las actividades que una empresa ejecuta mediante fases para satisfacer la demanda de los clientes, el modelo se organiza teniendo en cuenta los cinco procesos básicos que se llevan a cabo en la empresa: Planeación, Aprovisionamiento, Producción, Distribución y Devoluciones (Supply Chain Council, 2006). El modelo SCOR no utiliza métodos matemáticos ni experimentos de ensayo y error, su aporte se basa en que utiliza una terminología estandarizada y el uso de KPI's para comparar e identificar diferentes alternativas y estrategias para el desarrollo de la SC (Calderón y Larios, 2005).

Estructura del modelo SCOR.

Para el análisis de Cadenas de suministro el modelo SCOR tiene en cuenta a los proveedores de los proveedores hasta los clientes de los clientes, considerando la cadena de suministro en su sentido amplio, identifica para toda empresa cinco procesos básicos: planificación, aprovisionamiento, fabricación, distribución y devoluciones. Adicionalmente el SCOR plantea una clasificación la cual denomina “Tipos de Procesos” y en la que están incluidos los cinco procesos mencionados anteriormente (Poluha, 2007), dividiéndolos en tres clases de procesos: 1) *De planeación* 2) *De ejecución* 3) *De apoyo*. La Figura 1 representa la forma de clasificación de los procesos planteada por el modelo SCOR.

Figura 1: Clasificación de los procesos en el modelo SCOR.

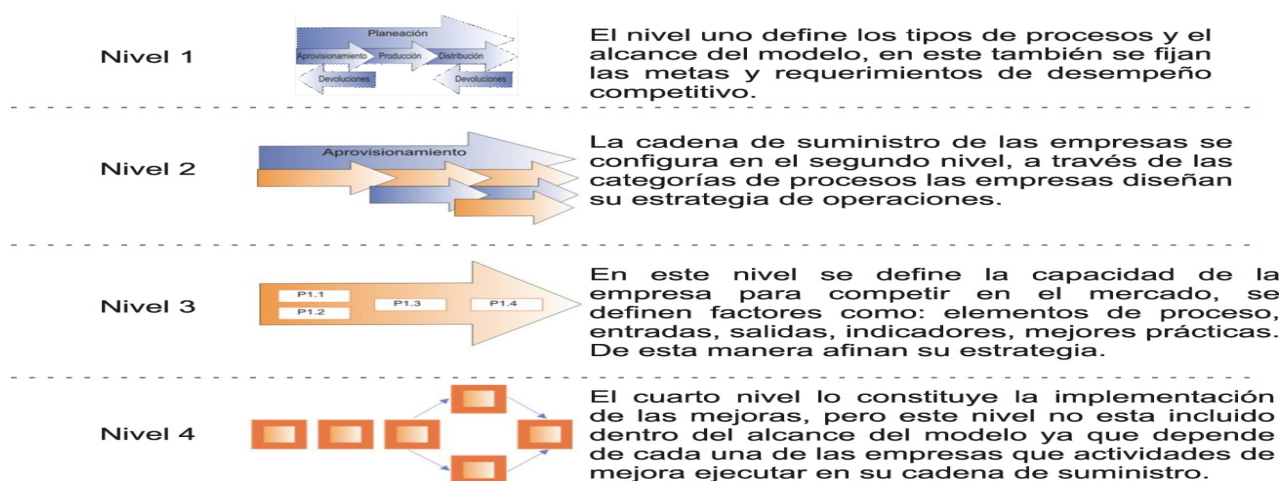

Fuente: Elaborado por los Autores

De la misma forma el modelo SCOR plantea que la demanda se puede satisfacer de cuatro formas diferentes: 1) Contra Stock, 2) Contra Pedido, 3) Contra Proyecto 4) Distribución a minoristas. Para el proceso de Devoluciones el Modelo SCOR también define tres formas en las cuales se puede presentar: 1) Devoluciones de productos defectuosos, 2) Devoluciones de productos para reparación general y 3) Devoluciones de productos en exceso.

Desarrollo Del Modelo SCOR Y Mapa De Procesos Estándar.

El modelo SCOR se desarrolla en tres fases para el análisis de los procesos de la cadena, en la Figura 2 se explica la forma como se implementa el Modelo en cualquier empresa.

Figura 2: Fases de desarrollo y aplicación del modelo SCOR.

Fuente: Elaborado por los Autores.

METODOLOGÍA

Para el desarrollo de esta Investigación se analizó la problemática desde una perspectiva descriptiva, argumentativa, propositiva y cuantitativa con el apoyo del Modelo SCOR, se estableció el plan de mejoramiento de la cadena de suministro de la empresa comercializadora de productos farmacéuticos. Así mismo, a través de la investigación se estableció una metodología y criterios con el fin de realizar un análisis y argumentación para proponer una estructura operativa y explícita asociada al objeto de estudio y establecer de esta forma uno planes de mejoramiento pertinentes, tomando los parámetros, variables y restricciones del caso. La información requerida para la investigación se recogió mediante entrevistas no estructuradas a los trabajadores y directivos de las diferentes empresas. Una vez desarrolladas fases del Modelo se procedió a analizar y a detectar las fallas que se presentan en la Cadena de Suministro presentando el modelo de referencia SCOR y las estrategias para al plan de mejoramiento de la Cadena de Suministro.

RESULTADOS

El Benchmarking Y Las Mejores Prácticas.

Las mejores prácticas utilizadas para la administración de la cadena de suministro para éste proyecto fueron la: gestión colaborativa e integración de proveedores, uso de tecnologías y software de gestión (EDI, CAM, CAD), justo a tiempo, comunicación integrada y alineamiento estratégico. El Modelo SCOR facilitó establecer mejores prácticas para la empresa comercializadora de productos farmacéuticos de la ciudad de Cartagena teniendo en cuenta que los procesos ejecutados se modelaron considerando el estándar referenciado.

El sistema “lean manufacturing”.

La estrategia lean manufacturing (producción ajustada), es un término acuñado a principios de los años noventa por empresas japonesas, ésta estrategia consiste en ejecutar los procesos minimizando los recursos necesarios, los desperdicios y maximizando el valor de los productos. Esta estrategia identifica varios tipos de desperdicios (De Arbuló, 2007). Según la estrategia lean manufacturing el desperdicio con mayor impacto en las operaciones de la empresa comercializadora de productos farmacéuticos de Cartagena es la sobreproducción. Dentro de los beneficios obtenidos en la empresa por la utilización del

lean manufacturing se encontraron: reducción del lead time, la reducción de los inventarios, aumento de la productividad, disminución del uso de espacios y la disminución de los costos y no la calidad.

Uso De Avances Tecnológicos.

Los directivos de la empresa comercializadora de productos farmacéuticos de Cartagena deben mantenerse al tanto de los últimos avances en materia tecnológica para la gestión de la cadena de suministro. Cuando la tecnología de la empresa es eficaz, los beneficios son enormes (Slone, Dittman & Mentzer, 2010). Por lo que se propuso en ésta investigación el uso de tecnologías de información, software especializado e internet en la gestión de la cadena de suministro con lo que se buscó aumentar la velocidad de los procesos, reducir costos y flexibilizar el funcionamiento total de la cadena.

CONCLUSIÓN

Con la realización del plan de mejoramiento de la empresa comercializadora de productos farmacéuticos utilizando el modelo SCOR, se tuvieron en cuenta herramientas como el benchmarking que facilitó la identificación de las mejores formas de llevar a cabo los procesos desarrollados por las otras empresas, identificando de esta manera como aumentar la calidad de los productos y disminuyendo los costos.

En la creación del plan de mejoramiento de la empresa también se utilizó el sistema lean manufacturing generando como resultado que el desperdicio con mayor impacto en las operaciones de la empresa comercializadora de productos farmacéuticos de Cartagena es la sobreproducción, si se logra eliminar la sobreproducción los demás desperdicios se identificarían con mayor facilidad, reduciendo de esta manera el lead time, los inventarios, se disminuyen espacios, costo pero no la calidad y se aumenta la productividad. Para lograr que la empresa obtenga grandes beneficios debe hacer un adecuado uso de los avances tecnológicos y estandarizar sus procesos, para gestionar la cadena de suministro diseñada sobre el modelo SCOR.

RESUMEN

La asignatura de Liderazgo que se imparte en los programas de la Facultad de Ciencias Económicas y Administrativas de la Universidad Autónoma de Occidente tiene como objetivo principal, que los estudiantes estén en la capacidad de reconocer sus habilidades, conocimientos y valores relacionados con el liderazgo, que les permitan no solo identificar las posibles dimensiones del mismo, sino las estrategias competitivas para reconocer el contexto social en el que habitan y se desenvuelven. Para lograrlo, es necesario que los estudiantes desarrollen un proyecto integrador durante el periodo académico, en el cual aplican los temas abordados en clase y ponen en práctica las habilidades que de manera innata o aprendida se tienen de líder; como son la capacidad de influir, de tomar decisiones, de comunicar, entre otras. Dicho proyecto se puede trabajar desde varios frentes, a nivel organizacional o a nivel social, como es el caso de los proyectos fruto de esta propuesta, en el que los estudiantes trabajan con poblaciones vulnerables como jóvenes deportistas de escasos recursos, niños huérfanos, madres cabeza de familia, jóvenes drogodependientes, jóvenes dedicadas a la prostitución, jóvenes de escasos recursos que cursan bachillerato, jóvenes adolescentes en embarazo y niños que padecen enfermedades de alto riesgo.

PALABRAS CLAVES: Liderazgo, influencia, intervención social, aprendizaje.

THE LEADERSHIP LIKE REVITALIZING AXIS OF THE SOCIAL EQUITY

ABSTRACT

The subject of Leadership that is given in the programs of the Faculty of Economic and Administrative Sciences of the Universidad Autónoma de Occidente has as principal aim that the students are in the aptitude to recognize his skills, knowledge and values related to the leadership, which the possible dimensions of the same one should allow him not to identify only, but the competitive strategies to recognize the social context in which they live and are unrolled. To achieve it, it is necessary that the students develop an of integration project during the academic period, in which they apply the topics approached in class and put into practice the skills that in an innate or learned way are had of leader; since they are the aptitude to influence, of taking decisions, of reporting, between others. One can work the above mentioned project from several fronts, to level organizacional or at the social level, since it is the case of the projects product of this offer, at that the students are employed with vulnerable populations like young sportsmen of scanty resources, orphan children, mothers head of household, drugdependent young men or women, young women dedicated to the prostitution, young women of scanty resources who deal baccalaureate, teen young women in pregnancy and children who suffer diseases of high risk.

KEYWORDS: leadership, influence, social intervention, learning.

INTRODUCCIÓN

Actualmente la gestión del talento humano deja de lado su rol operativo para constituirse en un área estratégica, que privilegia la participación de los colaboradores en los procesos de toma de decisiones organizacionales; planteando así la necesidad en las empresas de potencializar su talento humano, a través del desarrollo de diversas habilidades, en especial las del liderazgo, que corresponde según Lussier y Achua (2002), al proceso en el cual influyen líderes sobre seguidores y viceversa, para lograr los objetivos de una organización a través del cambio.

Dadas las características del actual entorno, es imprescindible que el liderazgo se ejerza desde los diferentes niveles administrativos, pues la rápida y efectiva toma de decisiones depende del empoderamiento de los colaboradores y su capacidad para liderar procesos desde sus asignaciones de trabajo; consideraciones que han evolucionado desde las teorías clásicas del liderazgo hasta la aparición de nuevos paradigmas basados en la capacidad del líder para interpretar el entorno y encauzar los esfuerzos de las personas a su cargo, en la consecución de los objetivos de la organización.

Para lograrlo, es imprescindible que desde el aula, se potencien las habilidades del liderazgo, a través de procesos de formación aprendizaje autónomos, que le permitan al estudiante, adquirir no solo el bagaje conceptual sino también la experiencia, a partir de la puesta en práctica de la teoría impartida. Este trabajo entonces muestra los procesos investigativos de mayor impacto desarrollados en el aula, en la forma de proyectos de intervención en comunidades vulnerables, realizados por los estudiantes que cursan la asignatura de liderazgo, ofrecida por el Departamento de Ciencias Administrativas de la Facultad de Ciencias Económicas y Administrativas de la Universidad Autónoma de Occidente de Cali, Colombia.

Para llegar a los resultados de las intervenciones de mayor impacto, fue necesario realizar un análisis de los proyectos desarrollados por los estudiantes desde el periodo 2006-3 al 2012-1, seguidamente contrastar los resultados obtenidos en los proyectos versus los objetivos de la asignatura de liderazgo, considerando el impacto de éstos tanto en la población objetivo como en los estudiantes proyectistas, para finalmente seleccionar los proyectos exitosos según los beneficios obtenidos por todos los participantes.

REVISIÓN LITERARIA

Dado que esta investigación está enmarcada dentro del contexto del liderazgo, el marco teórico se desarrollará teniendo en cuenta que el liderazgo como tal, constituye un aspecto determinante no solo del crecimiento y sostenibilidad de las empresas en el largo plazo, sino también como dinamizador de los procesos de cambio sociales.

El Líder Y El Liderazgo

Existen varias definiciones de liderazgo, sin embargo, no existen acuerdos respecto a la acepción más idónea; así que se utilizará la definición dada por Robert Lussier y Christopher Achua (2002), que define el liderazgo “como el proceso en el cual influyen líderes sobre seguidores y viceversa, para lograr los objetivos de una organización a través del cambio”. En cuanto al papel del líder y sus funciones, se encuentra que el líder es una persona que puede ser administrador o subordinado, quien cuenta con la habilidad de influir sobre los demás; y que debe desempeñar una serie de funciones en busca del logro de los objetivos en forma mancomunada con su equipo de trabajo. A partir de esa capacidad de influenciar del líder, Henry Mintzberg (2002) plantea que éste debe ejercer 10 papeles, los cuales se clasifican en funciones interpersonales, informativas y decisionales. Dentro de las funciones interpersonales (Lussier, 2002) se encuentran la función de representación, que es cuando el líder actúa en nombre de la organización o del área que dirige en diferentes actividades como firmar documentos, recibir clientes, asistir a reuniones, presidir ceremonias, entre otras. La función de líder, que consiste en desempeñar

labores administrativas para operar en forma eficaz la unidad que el líder tiene a su cargo, entre las que están: escuchar, entrenar, instruir, capacitar y evaluar el desempeño; y la función de enlace, que se refiere a que el líder se relaciona con personas externas a la organización a través por ejemplo de la conformación de comisiones con personas de otras organizaciones, la asistencia a reuniones de asociaciones gremiales y reuniones que pretenden establecer o fortalecer relaciones.

Las funciones informativas (Lussier, 2002) abarcan la función de monitoreo, que se da cuando el líder obtiene información a través de la lectura de periódicos, revistas y comunicados; de la asistencia a reuniones internas y externas y de las visitas a los negocios de la competencia; todo esto con el fin de identificar oportunidades y amenazas existentes en el entorno. La función de difusión, en la cual el líder informa a su personal acerca de estrategias, políticas y cambios que suceden en la empresa, lo cual puede hacerlo en forma oral (correo de voz, reuniones grupales) y/o en forma escrita a través del correo electrónico y memorandos; y la función de portavoz, que consiste en dar informes a personas externas de la organización, como son responder cartas, rendir cuentas al gobierno y a las entidades reguladoras.

Por su parte, entre las funciones decisionales (Lussier, 2002) se encuentran la función de emprendedor, que consiste en que con base en la información obtenida al desarrollar la función de monitoreo, el líder coloca en marcha estrategias de innovación como crear y/o mejorar los productos y los procesos, adquirir nuevos equipos, etc. La función de manejo de dificultades, es cuando el líder realiza acciones correctivas durante las crisis o situaciones conflictivas como huelgas, daños de maquinaria, demora en la entrega de los productos y cumplimiento de programas sin margen de tiempo. La función de asignación de recursos implica programar y realizar actividades presupuestarias así como autorizar la utilización de diversos recursos (administración del tiempo, aumento salarial, utilización de materiales y equipos); y la función de negociador, que implica realizar actividades de negociación como: acordar el aumento salarial, negociar con sindicatos, con clientes y proveedores.

Primeras Teorías Del Liderazgo

Para abordar el tema del liderazgo es necesario previamente referirse a las teorías que han posibilitado los desarrollos en esta temática. En primera instancia, surge la teoría de rasgos (Lussier, 2002) que partió del supuesto de que el líder nace, no se hace. Ésta surgió en los años 30 y 40 y buscaba identificar un conjunto de rasgos comunes a todos los líderes exitosos, por tal razón los investigadores analizaron rasgos físicos y psicológicos, niveles de energía, apariencia, agresividad, independencia, poder de persuasión y dominio. Los que cumplían con la lista de rasgos eran promovidos a posiciones de liderazgo; fue así como esta teoría dio origen a la investigación llamada “el método del gran hombre o de la gran persona” (Hughes, Ginnett, Curphy, 2007), en el que se clasificaron los rasgos dentro de alguna de las dimensiones de emocionalidad, empatía, ajuste, escrupulosidad y apertura a la experiencia. Algunos de los rasgos estudiados fueron el dominio, la gran energía, la confianza en sí mismo, el locus de control, la estabilidad, la integridad, la inteligencia, la flexibilidad y la sensibilidad hacia los demás.

A medida que pasó el tiempo esa teoría fue invalidada, pues como su planteamiento base era que el líder nacía y no se hacía, se encontró que muchas de las personas que tenían esos rasgos no eran líderes, sin querer decir con lo anterior que no ser líder es desventajoso, por el contrario el ser seguidor es fundamental, pues son éstos los que le ayudan al líder a lograr los objetivos. Así que aparece la teoría del comportamiento (Lussier, 2002) o teoría universal que surgió en la década de los 50, en la cual las investigaciones pasaron de concentrarse en la teoría de rasgos a comportamientos que desempeña el líder en el trabajo, es decir en identificar acciones concretas de los líderes, tratando de explicar los estilos distintivos de los líderes eficaces o de definir la naturaleza de su labor. En cientos de estudios se examinó la relación entre el comportamiento del líder y las medidas de efectividad en el liderazgo; sin embargo no hubo acuerdo sobre cual era el mejor estilo de liderazgo para cualquier situación.

Ésta tampoco fue validada, porque no había comportamientos únicos que identificaran al líder, es decir había personas que tenían esos comportamientos y no eran líderes; surge entonces en la década de los 60, la teoría situacional o por contingencia (Lussier, 2002), cuyo pionero fue el señor Fred Fiedler, quien en 1965 publicó en Harvard Business Review este interesante enfoque del liderazgo, que consistía en cambiar la situación de una organización para acomodarse al estilo del líder, en vez de cambiar para acomodarse a la situación de ésta. En este modelo, el éxito del liderazgo lo determinan primordialmente: el grado en que esta estructurada la tarea, el grado de posición de poder que tiene el líder y el tipo de relación que existe entre el líder y los seguidores.

Este trabajo de Fiedler ayuda a destruir los mitos de la existencia de un único mejor estilo de liderazgo y que los líderes nacen, no se hacen; además apoya la idea de que casi todos los gerentes de una organización pueden ser líderes exitosos si se les coloca en una situación apropiada al estilo de liderazgo de esa persona. De acuerdo a lo anterior entonces, se concluye que el liderazgo está en función del líder como tal, o sea el estilo de liderazgo individual, los seguidores y la situación. Es por esta razón que se encuentran gerentes que son muy exitosos en algunas compañías pero fracasan en otras, pues es necesario colocar al líder en la situación apropiada a su estilo de liderazgo.

Teorías Del Liderazgo Relacionadas Con El Cambio Organizacional

El entorno actual se caracteriza por ser cambiante, dinámico y sobre todo muy competitivo, lo que hace que los dirigentes de las organizaciones sean cada vez menos jefes y más líderes, trabajando en equipo, empoderando a su personal para que tome las mejores decisiones y siendo proactivos al cambio, en busca de adoptar estrategias acordes con las exigencias del entorno, pretendiendo además no solo el crecimiento de la organización sino el bienestar de las personas que la integran. Esto conlleva a repensar el rol del líder, haciendo especial énfasis en sus características como persona; y es así como surgen teorías del liderazgo que se basan en otro paradigma: servir en lugar de mandar.

El liderazgo carismático por ejemplo, se basa en el carisma, que procede de la voz griega charisma que significa “don abundante concedido por Dios a una criatura” (Lussier, 2002). Así que es ese don de saber llegar a las personas y es de suponer que todas las personas cuentan con ello, sin embargo no es tan fácil encontrar este rasgo en alguien, pues implica saber comunicarse, interactuar y colocarse en los zapatos del otro. El líder carismático entonces se define como la persona que lidera, y es capaz de inspirar confianza en el otro, es por esto que generan fuertes niveles de resistencia en un momento determinado, ya que las demás personas los aman o los odian fervorosamente.

Ejemplos de este tipo de líderes: Juan Pablo II, Luis Carlos Galán, Jorge Eliécer Gaitán, cuyos seguidores se identificaban personalmente con ellos, generando emociones muy fuertes, que logran identificación personal y son poseedores de un gran poder de convencimiento. Algunos plantean que el liderazgo carismático surge gracias a las cualidades del líder; otros que puede surgir cuando se presentan crisis en la sociedad y hay quienes consideran que éste no depende de las cualidades del líder ni de la presencia de una crisis únicamente, sino que se trata de un fenómeno provocado por interacciones entre estos dos aspectos; planteamiento que tiene cada vez mayor aceptación. Entre las características de los líderes carismáticos (Yukl, 2008), se encuentran: visión de futuro; formas expresivas de comunicarse; asumen riesgos personales y hacen autosacrificios; comunican altas expectativas; capacidad para inspirar confianza; dan ejemplos con conductas coherentes con la visión; gestionan las impresiones que tienen los seguidores del líder; crean una identificación con el grupo o la organización; y delegan poder a sus seguidores. El liderazgo transformacional (Lussier, 2002) por su parte, consiste en que el líder más que destacarse por sus atributos personales, es quien genera cambios en la organización, haciendo que sus seguidores se comprometan con el logro de los objetivos organizacionales, dejando de lado su interés personal egoísta. Los líderes transformacionales se conciben como agentes de cambio; son visionarios y confían en su intuición; corren riesgos, pero no de manera irresponsable; son capaces de articular un

conjunto de valores medulares que guían su comportamiento; poseen capacidades cognitivas excepcionales y analizan las situaciones minuciosamente antes de actuar; creen en la gente y muestran sensibilidad a sus necesidades; y son flexibles y están abiertos a aprender de la experiencia

Respecto al liderazgo transaccional, se tiene que es un líder que busca mantener la estabilidad en lugar de promover el cambio en una organización, mediante intercambios económicos y sociales regulares con los que consiguen objetivos específicos tanto para los líderes como para los seguidores (Lussier, 2005). El líder transaccional establece convenios contractuales con los seguidores a cambio de cumplir con determinados objetivos o realizar ciertas tareas, o sea que ofrece beneficios tangibles (dinero) e intangibles (reconocimiento) que satisfacen las necesidades y las expectativas de los seguidores. Vale la pena mencionar que los buenos líderes manifiestan tanto habilidades de liderazgo transaccional como transformacional en las situaciones que así lo exigen.

En cuanto al liderazgo estratégico se refiere, Lussier (2002) plantea que los buenos líderes estratégicos serán los que supervisen de continuo el entorno para asegurar una correspondencia en términos de competitividad entre sus estrategias y el ambiente; así que la función del liderazgo estratégico es realizar en forma efectiva la planeación estratégica. A raíz de que se presentan en las organizaciones muchas falencias relacionadas con la ausencia de valores, es decir que las personas actualmente piensan que se logran los objetivos a partir del perjuicio de los demás, aparecen dos tipos de liderazgo: el de apoyo y el de servicio (Lussier, 2005). El liderazgo de apoyo es un estilo de liderazgo enfocado en el empleado, que confiere autoridad a los seguidores para que tomen decisiones y ejerzan control sobre su trabajo. En este tipo, la relación entre líderes y seguidores es colaborativa, en un ambiente de respaldo recíproco para alcanzar las metas organizacionales. Los valores del liderazgo de apoyo son: marcada orientación al trabajo en equipo; empoderamiento de los seguidores; sentimiento de una relación entre iguales; y compensación justa y equitativa acorde al desempeño.

El liderazgo de servicio es un estilo de liderazgo que trasciende el interés personal para resolver las necesidades de los demás, ayudándolos a crecer profesional y emocionalmente. Este estilo opera bajo la premisa de que todos tenemos un deber moral unos con otros; así que se percibe como una oportunidad de servir a los niveles básicos y no como de dirigir desde la cima. Las guías de este tipo de liderazgo son: ayudar a descubrir el potencial de los seguidores; confianza mutua; interés colectivo por encima del individual; y escucha atenta a las necesidades de los seguidores. Por lo anterior, es que se dice que se cuentan con tan pocos líderes en las organizaciones, pues generalmente en posiciones de autoridad, el interés se centra en dirigir a los demás, más que en dimensionar dicho rol a partir de una actitud de servicio frente a los colaboradores, anteponiendo sus necesidades a las propias.

METODOLOGÍA

Esta investigación se desarrolló utilizando los procedimientos asociados a la investigación de tipo bibliográfica, pues era necesario documentar a partir de fuentes, principalmente secundarias, las teorías y conceptos relacionados con el liderazgo, que permitieron a los estudiantes realizar los procesos de intervención con las poblaciones beneficiarias. También se hizo uso de los procedimientos de la investigación descriptiva y exploratoria, pues era necesario conocer directamente de las personas beneficiarias de los proyectos su situación particular, a través de encuentros presenciales, para indagar acerca de sus expectativas y necesidades; y poder así plantear actividades de intervención que permitieran contribuir a la mejora de la calidad de vida de esas personas y de sus familias.

Métodos A Utilizar

El método de observación: advierte sobre cómo se presentan los hechos; en este caso, consiste en la observación de las características de la población a ser intervenida. El método inductivo: como proceso

del conocimiento, se inicia por la observación de la realidad actual que está enmarcada por la situación real, de las personas que participan en los diferentes proyectos. El método de análisis: es parte de la interpretación de la situación actual, de las personas participantes en los proyectos y de la contribución que se hace para mejorar su calidad de vida a través de las actividades desarrolladas por los estudiantes.

Proceso Metodológico

La metodología utilizada para el desarrollo de los proyectos con poblaciones vulnerables contiene cuatro fases principales:

1. El establecimiento de las reglas de juego referentes al universo de poblaciones vulnerables con las que se pudieran trabajar, determinando la frecuencia de interacción, así como los criterios de escogencia.
2. El monitoreo del desempeño de los equipos de trabajo, referente a la consecución de la población beneficiaria y la orientación en las actividades a desarrollar.
3. La revisión de avances, que contienen las actividades desarrolladas con la población beneficiaria en el período académico, realizando la retroalimentación pertinente en relación directa con los objetivos de la asignatura.
4. La presentación de los proyectos finales, que abarcan las actividades desarrolladas en su totalidad, así como los aprendizajes de los proyectistas y el testimonio de algunas personas beneficiarias de los proyectos.

RESULTADOS

Los resultados obtenidos en estos proyectos de intervención con poblaciones vulnerables, corresponden a las diferentes actividades que desarrollan los estudiantes que cursan la asignatura de liderazgo en el transcurso del período académico.

Población: Niños Y Jóvenes De Escasos Recursos (Fundación O Escuela)

Algunas de las actividades desarrolladas, especialmente con niños que cursan educación primaria consistieron en la realización de jornadas de capacitación acerca de comprensión lectora y escritora, reforzando el aprendizaje ofrecido por la institución que los acoge. También se desarrollaron jornadas lúdicas y de integración, que permitieron reforzar valores como el respeto hacia el otro y así dinamizar el trabajo en equipo. En cuanto al manejo del medio ambiente se realizaron jornadas consistentes en capacitaciones acerca de los procesos de reciclaje y compostaje, que permitieron sensibilizar tanto a los niños como a sus padres, respecto de la importancia de adoptar este tipo de prácticas para el futuro de la humanidad. Como un aporte al bienestar integral de los niños y jóvenes se llevaron a cabo jornadas saludables, como valoración por médicos y odontólogos, aportando a la detección temprana de posibles enfermedades. En el caso de los jóvenes se ejecutaron charlas referentes a la orientación profesional y a los aspectos a tener en cuenta al elaborar una hoja de vida, buscar empleo, hablar en público y presentar una entrevista de trabajo, que permitió a éstos conocer sus fortalezas y acercarse a las primeras experiencias, cuando se incursiona al mundo laboral.

Así mismo, se desarrollaron capacitaciones sobre el proceso de selección de personal, donde los jóvenes identificaron los requerimientos de las empresas, y resolvieron test de personalidad que les permitió conocer un poco más acerca de sí mismos, y generar planes de acción conducentes a superar muchas de sus debilidades.

Población: Jóvenes Deportistas

Al trabajar con estos jóvenes de escasos recursos, a través de jornadas competitivas se desarrolló su espíritu de lucha y la importancia de la perseverancia y la disciplina para el logro de los objetivos.

Se dieron también charlas educativas enfocadas a reforzar la confianza en sí mismos, a través de su participación activa en la reflexión sobre el liderazgo, la motivación, el trabajo en equipo, la tolerancia y el apoyo mutuo. Se realizaron capacitaciones acerca de esfuerzo volitivo y desarrollo cognitivo; identificando a través de diversos tests, su capacidad deportiva y esfuerzo físico. Complementando las actividades y con el ánimo de diversificar en estos procesos de intervención, se llevaron a cabo festivales, rifas y jornadas de donación que permitieron dotar a los jóvenes de implementos deportivos como uniformes, petos y guayos. Igualmente se puso en contacto a los jóvenes con algunos deportistas profesionales, quienes les ofrecieron testimonios de sus procesos, permitiéndoles saber lo que significa y representa el deporte para algunos de sus referentes.

Población: Jóvenes En Embarazo Y Madres Cabeza De Familia

El proceso de intervención con las jóvenes en embarazo (adolescentes) consistió especialmente en brindarles charlas acerca de la educación sexual y reproductiva y de la importancia de planificar, así como los problemas de un embarazo precoz, que les permitió sensibilizarse acerca de su situación particular. Se les realizaron también capacitaciones referentes al cuidado y control prenatal, identificando las etapas del embarazo (concepción, gestación, parto y lactancia) y los cuidados a tener durante las mismas, como estrategias de prevención y autocuidado. Por su parte, el trabajo con las madres cabeza de familia se centró en ofrecerles charlas de motivación y de ideas de negocio, que les permitió aumentar la confianza en sí mismas y la convicción de que se puede salir adelante, a pesar de las dificultades. Entre las capacitaciones se encuentran elaboración de chocolates, postres, collares, aretes, pulseras y sandalias en fique, permitiéndoles conocer otras alternativas de generación de ingresos.

CONCLUSIONES

Los proyectos con poblaciones vulnerables permiten conocer, resaltar y poner en práctica las habilidades que de manera innata o aprendida se tienen de líder; como son la capacidad de influir, de tomar decisiones, de comunicar, de empatizar, entre otras. El liderazgo juega un papel muy importante en toda clase de equipo y cualquier persona puede lograr ser un líder, si así lo quiere; reconociendo que cada persona tiene un estilo diferente, que es efectivo dependiendo de la situación en la que se encuentre y de las características de sus seguidores. Los equipos que desarrollan los proyectos reconocen como factores determinantes del éxito, el interés que se debe colocar a las actividades a realizar, la importancia de asumir y delegar responsabilidades admitiendo los errores, el respeto y la colaboración mutua entre los integrantes. Los logros más destacables de este tipo de proyectos es que a través de las actividades realizadas se puede sensibilizar a la población beneficiaria acerca de su valía y de la importancia de la labor que llevan a cabo, llámese un deporte, las actividades de recuperación de las drogas, los productos que elaboran, entre otras. Algunas de las enseñanzas que se pueden extraer al desarrollar los proyectos, es que a pesar de que las personas beneficiadas se desenvuelven en un ambiente hostil y lleno de dificultades, el cual conocen, son ejemplos de vida, pues quieren salir adelante por su propia cuenta, ser alguien en la vida, ayudar a sus familias y sentirse orgullosos de lo que son y de lo que transmiten.

Los proyectos sociales contribuyen de manera significativa al crecimiento intelectual y emocional de la población objetivo, pues obliga a quienes los lideran a pensar cómo satisfacer las necesidades que presentan, a concientizar a las personas del común a aportar un granito de arena para que este país salga adelante, pero sobre todo a ayudar de forma desinteresada a estas personas que tanto lo necesitan.

La realización de este tipo de proyectos es realmente gratificante, porque se interactúa desde muchos ámbitos con personas de otra condición social, lo que permite mayor conciencia y sensibilización acerca de la realidad que vive el país. Al inicio de los proyectos, se piensa en cumplir con lo exigido, pero a medida que pasa el tiempo, se siente la necesidad de ir más allá y cuando se hace, recibe de los beneficiados lecciones de vida sin pedir nada a cambio, como: reír y disfrutar de las cosas que se tienen y no sufrir por lo que no se tiene, expresiones de afecto, gratitud y reconocimiento, pero sobre todo la satisfacción de haber hecho algo por quienes más lo necesitan.

A través de las actividades realizadas se aprendió a valorar cada labor, cada una de las oportunidades que la vida ofrece y que la falta de recursos no es una limitante para realizar lo que verdaderamente se quiere. “No hay mejor camino para lograr el éxito en cualquier idea o proyecto que la humildad”, pues permite reconocer que sin importar la posición en la que se esté, el otro es un individuo que al igual que uno, necesita, siente y tiene expectativas. Si esta premisa la aplicaran todas las personas, las organizaciones y el mundo serían diferentes. “Lograr que las personas beneficiarias de los proyectos se comprometan asistiendo a las actividades, sin importar como este el clima, lluvioso o muy caluroso, poder apreciar sus caras de felicidad al entrar al espacio donde éstas se realizan, escuchar sus comentarios de agradecimiento, es mucho más gratificante que una calificación de cinco en cualquier asignatura”.

OPTIMIZACION MULTI OBJETIVO EN UNA CADENA DE SUMINISTRO UTILIZANDO ANALISIS ENVOLVENTE DE DATOS (DEA) MULTI OBJECTIVE OPTIMIZATION IN A SUPPLY CHAIN USING DATA ENVELOPMENT ANALYSIS (DEA)

Adel Mendoza Mendoza, Universidad del Atlántico

RESUMEN

En este artículo se presenta un modelo de una Cadena de Suministro que pretende reducir los costos de una empresa y el tiempo de espera entre los diferentes actores de la cadena, utilizando para ello el análisis envoltante de datos siendo esta técnica novedosa en la solución de problemas de optimización multiobjetivo. Se pretende que la aplicación de este modelo se convierta en una herramienta importante para garantizar a los directivos de empresas tomar las mejores decisiones.

PALABRAS CLAVES: cadena de suministro, optimización multiobjetivo, análisis envoltante de datos.

JEL: C02, C61, C67.

ABSTRACT

This article presents a model of a supply chain that aims to reduce the costs of a company and the time between the different actors in the chain, using data envelopment analysis being this novel technique in solving problems multiobjective optimization. It is intended that the application of this model to become an important tool to ensure business managers make the best decision.

KEYWORDS: supply chain, multi-objective optimization, data envelopment analysis.

JEL: C02, C61, C67.

INTRODUCCIÓN

El concepto de la cadena de suministro surgió debido a que proporciona soluciones al problema de la duplicación de esfuerzos y la capacidad de respuesta de las compañías [1] por lo cual la gestión de la cadena de suministro ha generado mucho interés en los últimos años. Factores como la globalización han marcado una pauta importante en desarrollo y la evolución de los estudios y aplicación de la cadena de suministro, pues cada día se exige más a las empresas crear relaciones estrechas con sus proveedores, sobre todo si se tiene en cuenta que los costos derivados de una mala coordinación pueden ser extremadamente altos. Como resultado de esta globalización del comercio internacional, los factores de producción de abastecimiento y de consumo de los destinos de todo el mundo está aumentando la interdependencia entre productores y mayoristas de cadenas de suministro internacionales [2]. Razón por la cual la naturaleza dinámica de las cadenas de suministro requiere a los gerentes de las compañías adaptar sus estrategias de la cadena de suministro con el fin de seguir siendo competitivos [3]. Una eficiente interacción entre los diferentes actores de la cadena de suministro y la planeación de un modelo estratégico que permita visionar los diferentes eslabones de la cadena es una importante herramienta para garantizar la disminución del tiempo y contribuir con las máximas utilidades en la compañía.

Marco Teorico

Gestión De La Cadena De Suministro

El concepto de trabajar con proveedores y clientes es tan antiguo como el comercio mismo, pero la idea moderna de una "cadena de suministro" es bastante reciente, en algún momento de principios de los años 80, los conceptos de transporte, distribución y gestión de materiales comenzaron a unirse en un solo término: la gestión de la cadena de suministro. El término apareció por primera vez, aparentemente en forma impresa en 1982, y se atribuye a Keith Oliver [4]. Hoy en día no solo la efectividad de las plantas de producción acarrea ventaja competitiva para la empresa, sino también la unión de todos los actores que influyen en el proceso hasta la entrega final del producto, porque una cadena de suministro comienza con los proveedores y finaliza con el consumo del producto por parte del cliente.

La noción de gestión de la cadena de suministro tal como se utiliza en la investigación de varios autores está relacionada con la globalización de la producción y la inclinación por los fabricantes para abastecerse de insumos alrededor del mundo, lo que requiere la gestión de formas eficiente la regulación de los flujos globales de las entradas o salidas [2]. La Gestión de la Cadena de Suministro no es otra cosa que el sistema de gestión que establece y controla como tal toda la cadena de suministro de una compañía, este sistema no debe ser el tradicional autoritario, sino que debe ser un sistema que contemple a todos los componentes de la cadena en toda su magnitud y gestione la misma en todo su conjunto, consiguiendo así la integración de todos los componentes de la misma [5]. Así mismo se menciona que una eficiente Gestión de la Cadena de Suministro es un factor clave para que las compañías logren alcanzar altos niveles de competitividad mediante la integración de todos los actores de la cadena de suministro [6].

Por lo cual una eficiente interacción entre los diferentes actores de la cadena de suministro y la planeación de un modelo estratégico que permita visionar los diferentes eslabones de la cadena es una importante herramienta para garantizar la disminución del tiempo y contribuir con las máximas utilidades en la compañía. Las cadenas de suministro suelen ser de alta complejidad, debido a la gran cantidad de datos, variables de decisión, interrelaciones complejas entre las variables y las limitaciones del sistema pueden llegar a presentar muchos desafíos para la gestión de tomar decisiones empresariales sólidas [7].

Optimización Multiobjetivo

Los problemas de Optimización Multiobjetivo, a diferencia de los de optimización sencilla, incluyen un conjunto de k funciones objetivo, un conjunto de m restricciones y un conjunto de n variables de decisión [8]. Las funciones objetivo y las restricciones son funciones de las variables de decisión. Mientras que en los problemas de optimización monoobjetivo se busca encontrar un vector de decisión n -dimensional que optimice una función, en la optimización multiobjetivo se intenta encontrar un vector que optimice una función vectorial, cuyos elementos representan las distintas funciones objetivo [9].

Análisis Envolvente De Datos (DEA)

La metodología Data Envelopment Analysis es una técnica que utiliza herramientas de programación lineal para comparar unidades de producción que utilizan el mismo grupo de recursos y producen el mismo grupo de productos, generando la frontera eficiente e indicadores relativos de eficiencia dentro de la población de unidades de producción estudiadas. Se ha empleado con éxito para evaluar el rendimiento relativo de un conjunto de empresas, que por lo general se llaman Unidades de Toma de Decisiones (DMU), que utilizan los mismos insumos para producir los mismos resultados. [10]. Esta metodología fue propuesta inicialmente por Charnes, Cooper y Rhodes en 1978, cuando formularon el primer modelo DEA (modelo CCR), en base a los conceptos originalmente planteados por Farrell en 1957.

Modelo De Cadena De Suministro

Se pretende diseñar un modelo que permita ir un paso adelante en la investigación de cadenas de suministro que busquen la minimización de los costos de producción y del lead time (LT), que se define como la variabilidad del tiempo que toma una orden desde se expide hasta que se recibe [11], por medio de la utilización de el Análisis Envolvente de Datos (DEA). La planificación de una cadena de suministro se ocupa de la coordinación y la integración de todas las actividades clave del negocio llevadas a cabo por una empresa, desde la adquisición de materias primas hasta la distribución de los productos finales para el cliente [12], por lo anterior se propone un modelo de cadena de suministro el cual se encuentra compuesto de dos tipos de materia prima, las cuales pueden ser suministradas por tres tipos de proveedores diferentes, éstos pueden o no encontrarse en el país de producción. Así mismo, el modelo planteado consta de hasta tres plantas de procesamiento de producto, tres centros de distribución y finalmente tres mercados. Para los transportes de materia prima, y de los productos desde los diferentes eslabones de la cadena se establecen dos tipos de transporte. Para el modelo propuesto las funciones objetivos a optimizar y restricciones son:

Funciones Objetivos

Función Objetivo 1: Minimización de costos

Función Objetivo 2: Minimización del *Lead Time* de plantas

Función Objetivo 3: Minimización del *Lead Time* de centros de distribución

Función Objetivo 4: Minimización del *Lead Time* de mercados

Función Objetivo 5: Minimización Varianza del *Lead Time* del Proveedor a la Planta de Producción

Función Objetivo 6: Minimización de la Varianza del Lead Time de la Planta de Producción al Centro de Distribución

Función Objetivo 7: Minimización de la Varianza del *Lead Time* del Centro de Distribución al Mercado

Restricciones

Capacidad de los proveedores

Capacidad de las plantas

Capacidad de los centros de distribución

Balance de Plantas de Producción

Balance de Centros de Distribución

Número de plantas a instalar

Número de centros de distribución a instalar

Lead Time del Proveedor a la Planta de Producción

Lead Time de la Planta al Centro de Distribución

Lead Time del Centro de Distribución al mercado

RESULTADOS

Aplicación Del Análisis Envolvente De Datos (DEA)

El Análisis Envolvente Datos (DEA) es generalmente utilizado para evaluar la eficiencia relativa entre las empresas públicas o privadas. La mayoría de los modelos DEA son establecidos por maximizar la eficiencia individual de cada empresa, aunque algunos estudios han señalado la relación interesante entre el problema de programación lineal multiobjetivo (MOLP) y la metodología DEA [13]. A continuación explicamos la aplicación de la metodología DEA a nuestro problema.

Modelo DEA CCR

En DEA la eficiencia técnica de cada una de las unidades se define como el cociente entre la suma ponderada de los Outputs y la suma ponderada de los Inputs. Si $Y_o = (y_{1o}, y_{2o}, y_{3o}, \dots, y_{so})$ y $X_o = (x_{1o}, x_{2o}, x_{3o}, \dots, x_{so})$ representa respectivamente, las cantidades de salidas y entradas de la DMU₀, la unidad que está siendo evaluada, la medida escalar de la eficiencia de la DMU₀ puede ser obtenida como la solución óptima del siguiente modelo conceptual.

$$\text{Max } \theta = \frac{\sum_{r=1}^s u_{ro} y_{ro}}{\sum_{i=1}^m v_{io} x_{io}}$$

sujeto a:

$$\frac{\sum_{r=1}^s u_{rj} y_{rj}}{\sum_{i=1}^m v_{ij} x_{ij}} \leq 1 \quad j = 1, 2, \dots, n$$

$$u_{rj}, v_{ij} \geq 0 \quad r = 1, \dots, s \quad i = 1, \dots, m$$

Se consideran n DMUs ($j=1,2,\dots,n$) cada una de las cuales utiliza los mismos Inputs, en diferentes cantidades, para obtener los mismos Outputs, en diferentes cantidades, u_{ro} y v_{io} es el conjunto de los pesos más favorables para la DMU₀ en el sentido de maximizar la razón anterior. Para la aplicación del Análisis Envolvente de Datos a nuestro problema lo primero que se hace es generar una población inicial de manera aleatoria y se hace una selección de los NO dominados para generar una nueva solución.

Variables Consideradas En El Estudio

Para cada solución generada los Inputs son los valores de las diferentes variables de decisión mientras que los Outputs se definen como la función inversa de cada una de las funciones objetivos, ya que todas estas son de minimización, aquellas soluciones que obtengan una eficiencia del 100% son las que conforman el conjunto Pareto de soluciones óptimas.

Tabla 1: Variables de Entrada y de Salida

Variables de Entrada (Inputs)	Variables de Salida (Outputs)
$Y_{be }, Y_{ce }, Z_{fabg}^1, Z_{ebcg}^2, Z_{ecdg}^3$	$(F.O_1)^{-1}, (F.O_2)^{-1}, (F.O_3)^{-1}$
$X_{abfe}, X_{af}^T, W_{fe}, O_{be}^T, O_{bce}$	$(F.O_4)^{-1}, (F.O_5)^{-1}$
$S_{ce}, S_{cde}, S_{ce}^T, N_b, N_c, N_d$	$(F.O_6)^{-1}, (F.O_7)^{-1}$

RESULTADOS

A continuación se muestran los resultados obtenidos con la aplicación del Análisis Envolvente de Datos

Tabla 2: Resultados de la solución del Modelo con Análisis Envolvente de Datos

Función Objetivo	Sol. 1	Sol. 2	Sol. 3	Sol. 4	Sol. 5	Sol. 6
Costos	1053398682	1122326591	993738711	1076506662	1001284385	11451786916

L.T. Centros Dist	1471.44	1507.70	1427.91	1391.39	1512.39	1422.31
L.T. Mercados	1451.99	1544.84	1557.92	1494.21	1520.77	1532.42
Var.L.T.Plantas	12005.04	3153.15	7491.54	12806.32	4339.78	4344.70
Var.L.T. C.Dist	11582.69	24142.80	9039.49	5281.11	2425.77	8942.63
Var.L.T. Mercad.	6589.27	6603.16	5721.47	12054.19	8488.74	6669.86

CONCLUSIONES.

- La optimización multi-objetivo de cadenas de suministro permite lograr estructuras más balanceadas logrando una mejor interacción y mejores utilidades entre cada uno de los miembros de la cadena.
- El modelo matemático desarrollado es bastante realista sin embargo al tratarse de un modelo estratégico no se tuvieron en cuenta las políticas de inventario las cuáles pueden incidir en los costos totales.
- El modelo desarrollado se puede correr con una configuración preestablecida, es decir previamente definir cuantas plantas de producción y centros de distribución se van a abrir.
- La utilización de técnicas avanzadas de optimización, como el análisis envolvente de datos, permiten obtener soluciones eficientes, teniendo en cuenta la mayoría de las variables que de una u otra forma afectan los indicadores de las cadenas logísticas de distribución.

LA GESTION DE LA RESPONSABILIDAD SOCIAL ORGANIZACIONAL, IMPACTADA POR LA GUÍA TÉCNICA COLOMBIANA GTC180: CASO APLICADO PYME DEL SECTOR SERVICIOS EN LA CIUDAD DE CALI, COLOMBIA

María Eugenia Torres Valdivieso, Universidad Autónoma de Occidente

Ángela María Jiménez Torres, Universidad Autónoma de Occidente

RESUMEN

La experiencia investigativa se desarrolló con la integración de los elementos estratégicos organizacionales, para dimensionar en torno al ciclo de gestión con enfoque socialmente responsable, su aplicabilidad en Pyme del sector servicios de la ciudad de Cali, Colombia. Por tanto, la práctica se enmarcó en lo establecido por la Guía Técnica Colombiana -GTC 180, pues se adoptaron los lineamientos y el enfoque en el ciclo PVHA, con el propósito de impactar los sistemas de gestión organizacional. A partir de esta percepción, y con la participación de sus directivos se pudo presentar propuestas estratégicas de mejoramiento, encaminadas al fortalecimiento del direccionamiento estratégico: misión, visión; así como a la verificación de acciones para implementar los programas de responsabilidad social. De esta manera, se aprecia la Responsabilidad Social como un actor integral para la gestión organizacional, la cual contribuye en la sostenibilidad de la Pyme.

PALABRAS CLAVES: Pymes, gestión organizacional, responsabilidad social, direccionamiento estratégico, programas de mejoramiento, gestión del cambio, riesgos asociados a un enfoque de gestión socialmente responsable, orientación hacia el desarrollo sostenible, consideraciones legales frente a la Guía Técnica Colombiana.

THE SOCIAL ORGANIZATIONAL RESPONSABILIDAD'S STEP, IMPACTED FOR THE TECHNICAL COLOMBIAN GUIDE GTC180: APPLIED CASE SMES OF THE SECTOR SERVICES AT CALI'S CITY, COLOMBIA

ABSTRACT

The investigating experience developed with the integration of the strategic organizational elements, to dimension about the cycle of step with socially responsible focus, his applicability in SMEs' of the sector services of Cali's city, Colombia. Therefore, practice was delimited in what's established for The Technical Colombian guide - GTC 180, because adopted him guidelines and the focus in the cycle PVHA, in order to have impact on the systems of organizational step. As from this perception, and you could encounter strategic proposals of improvement with his executives' participation, led to the strengthening of the strategic addressing: Mission, vision; that way I eat the verification of actions to implement the programs of social responsibility. This way, the Social Responsibility like an integral actor for the organizational step appraises itself, which contributes in the SMEs' sostenibilidad.

KEYWORDS: *SMEs*, organizational step, social responsibility, strategic addressing, programs of improvement, step of the change, correlated risks a focus of socially responsible step, orientation toward the sustainable development, legal considerations in front of The Technical Colombian guide

INTRODUCCIÓN

La Responsabilidad Social, es un compromiso voluntario de las empresas para así contribuir al desarrollo económico sostenible de una sociedad al adoptar una actitud activa frente a los impactos que han de ser generados en el bienestar y la calidad de vida de las personas y la comunidad. Es importante reiterar que las acciones en responsabilidad social empresarial (RSE), ha sido fuertemente influenciada por la globalización exigiéndole a las empresas fundamentar sus actividades del día a día en aumentar el valor de los activos intangibles: reputación, credibilidad, confianza y transparencia. Lo anterior es ratificado por la Asociación Nacional de instituciones Financieras- ANIF (2010), en su informe sobre las Pymes, al expresar que “la crisis de la confianza creada por la falta de transparencia de algunas Corporaciones Internacionales, han promovido que la sociedad exija códigos de ética y de buen gobierno”.

El tema de responsabilidad social empresarial ha tomado fuerza en Colombia, y más aún desde que en el año 2008, se estableció la Guía Técnica Colombiana - GTC 180, como herramienta de contribución a la gestión organizacional, por su enfoque en el ciclo PVHA. En nuestro país, son pocas las organizaciones que, han recurrido a la implementación de esta normatividad. Es por ello, que para los líderes de la empresa del sector servicios intervenida, decidieron integrar paralelamente a las acciones de recertificación organizacional que se adelantaban, tales como: ISO 9001/2000, ISO 14001 y la OHSAS14001 y el Código de Buen Gobierno Corporativo, el poder aplicar el ciclo de gestión con enfoque socialmente responsable; pues de esta manera, se contaría con propuestas integrales de mejoramiento frente a la responsabilidad social. Actuar con responsabilidad social trae a las Pymes beneficios a través de generar acciones hacia el interior de la organización; cuando realiza operaciones responsables con empleados y el ambiente laboral; como: forjar la participación, fomentar los procesos de desarrollo (formación, entrenamiento y capacitación), planes de beneficios extensivos a su familia, etc.

Igualmente generar acciones hacia el exterior de la organización al disponer mecanismos de dialogo y relaciones con sus grupos de interés en procura del bien común para ellos, el medio ambiente y la sociedad. En este punto, es importante destacar que el desarrollo de la investigación giro en torno a tres fases secuenciales. La primera conlleva a la identificación de aspectos significativos para el enfoque estratégico de Guía Técnica Colombiana, a través de entrevistas a los directivos de cada área, fue así como se trabajaron los lineamientos establecidos por la guía en mención, además los fundamentos de la responsabilidad social, se reflejaron en la misión, visión, valores, políticas, objetivos organizacionales, igualmente en los parámetros para identificar las partes interesadas, o stakeholders.

La segunda estableció las acciones que enmarcan el ciclo de gestión con un enfoque socialmente responsable con el propósito de constatar y desarrollar los diez pasos del PHVA. Finalmente a partir de los hallazgos en los lineamientos y las acciones del ciclo, se presentaron diferentes propuestas de mejoramiento en responsabilidad social, entre ellas se escogió una que es relevante y prioritaria, es decir la variable: comunicación estratégica; pues con ella la Pyme se encontrara en capacidad de difundir internamente y externamente todas las acciones concretas que realiza anualmente en el ámbito de la responsabilidad social con sus partes interesadas o stakeholders.

REVISION DE LITERATURA

En la actualidad se escucha hablar a las empresas acerca de que deben ser responsables socialmente, ya que de no ser así traería muchos problemas al interior, al medio ambiente, y a la sociedad en general. Dando un vistazo histórico a esta temática se presenta un recuento de su evolución expresado por Torres

(2011), la responsabilidad social empresarial “ha pasado del discurso filosófico en los años sesenta a una forma de gestión empresarial, a partir de los años setenta, posteriormente a una integración del discurso socialmente responsable a la gestión de las partes interesadas o los stakeholders para los años ochenta. Pero a partir de los años noventa, deja de verse como fenómeno aislado y se evidencia como un proceso transversal a las diferentes áreas de la organización, es decir a convertirse en estrategia corporativa”.

Es importante recordar que en el desarrollo de América Latina, ha existido una larga historia de acciones filantrópicas, como en la década de los años 80, que se fomentó la constitución del Centro de Promoción de la Responsabilidad Social con recursos nacionales y aportes de cooperación internacional tales como el Instituto Ethos, el cual por medio de conocimientos, intercambio de experiencias y a través de herramientas, ayuda a las empresas a examinar sus prácticas de gestión y profundizan su compromiso con la responsabilidad social empresarial como en el desarrollo sostenible. El Instituto Argentino de Responsabilidad Social quienes promueven la responsabilidad social para estimular el desarrollo sustentable trabajando conjuntamente con empresas a través de redes de información, intercambio de experiencias y colaboración recíproca; y el Centro Colombiano de Responsabilidad Social, que a través de investigación, promoción y divulgación busca agregar valor a las empresas y optimizar la gestión de las mismas, entre otros. Guía Técnica Colombiana GTC 180 (2008) establece que la responsabilidad social se constituye en un enfoque de gestión, el cual integra todos los aspectos organizacionales. Como tal, se espera que ella fortalezca los sistemas de gestión, en términos de confiabilidad, transparencia y creación de valor para todas las partes interesadas (stakeholders).

Además provee los criterios mínimos para realizar los procesos voluntarios de verificación y auditoría ética y social, mejorando sistemáticamente el desempeño social de las organizaciones; pues las recomendaciones dadas se identifican, se entienden, se gestionan e interrelacionan entre sí como un todo, de manera integral, eficiente y eficaz, en el logro de los objetivos. Esta concepción, a su vez, muestra la nueva conciencia de los múltiples factores que determinan la sostenibilidad de las organizaciones en las dimensiones económica, ambiental y social. Por lo tanto, guía sugiere adoptar el enfoque ya clásico del PHVA, como el ciclo natural de gestión, lo que permite, de manera más fácil, integrar el enfoque de responsabilidad social a todos los sistemas de gestión vigentes en cualquier organización. Más concretamente, esta guía sugiere seguir un derrotero de diez pasos a lo largo del PHVA, tanto en su componente conceptual, como en su componente práctico de gestión.

Para una empresa los diferentes sistemas de gestión (calidad, ambiental, seguridad e higiene ocupacional, entre otros) pueden integrarse conjuntamente con un enfoque socialmente responsable, dentro de un sistema de gestión único: utilizando elementos comunes e interactuando con aquellos que no lo son, lo que puede facilitar la planificación, la asignación de recursos, el establecimiento de objetivos complementarios y la evaluación de la eficacia y la eficiencia global de la organización.

Como la responsabilidad social bajo los lineamientos de la Guía Técnica Colombiana GTC 180; por tratarse de un enfoque relativamente nuevo en el medio colombiano, no se encontraron estudios previamente que la hayan abordado, con este enfoque y menos aún en el sector de servicios. Sin embargo en la revisión literaria se distinguen diversos estudios sobre la aplicación de la responsabilidad social en empresas colombianas (Hoyos, 2011; Sanín y Redondo, 2008; Rincón y Díaz, 2009; entre otros). La Fundación Universitaria Los Libertadores, en su Facultad de ciencias Administrativas, han trabajado la responsabilidad social empresarial y la competitividad de las Pymes exportadoras colombianas (2009). Todos los estudios indicados, han aportado en su debido tiempo aspectos prácticos a las organizaciones que intervinieron. Otros estudios regionales consultados fueron el estudio realizado a nivel nacional: grupo empresarial COOMEVA, entidad esta que enmarca la responsabilidad social como un elemento esencial del Movimiento Cooperativo: mutualidad, solidaridad, responsabilidad y equidad. A través de tres dimensiones: la económica donde las empresas deben ser sostenibles. El medio ambiente, visionado como la conciencia y participación en la búsqueda de soluciones a los problemas ambientales. Finalmente

la dimensión social, es decir el fundamento de las cooperativas; pues se centran en las personas y su bienestar, siendo esto último una alternativa para el desarrollo social.

METODOLOGIA

La investigación es de corte cualitativo a partir de los planteamientos de Bonilla, (1998) quien indica que este tipo de investigación se caracteriza por “hacer una aproximación global de las situaciones sociales para explorarlas, describirlas y comprenderlas de manera inductiva”. Además se enmarca en lo exploratorio y descriptivo, pues se parte de una temática poco estudiada y los resultados fueron pertinentes para la Pyme intervenida. Es de esta manera que Kotler, (2003) establece la investigación exploratoria como “la que busca obtener información preliminar que ayude a definir problemas”. En consecuencia, lograr la responsabilidad social empresarial, teniendo como fundamento la gestión organizacional planteada en la Guía Técnica Colombiana GTC 180, significa de una parte, adentrarse en reconocer los lineamientos significativos de su enfoque estratégico, sin desaprovechar la indagación pertinente existente frente a la responsabilidad social: misión, visión, valores, políticas y objetivos organizacionales, las acciones a trabajar para identificar las partes interesadas o stakeholders.

Fue en esta fase donde con la activa participación de los once directivos de las áreas de la Pyme: gerencia; mercadeo y ventas; administrativa; nómina y facturación; gestión del recurso humano; contratación, financiera; compras; servicio al cliente; bienestar social y finalmente el área de informática, se realizó el diagnóstico el correspondiente estado de la empresa frente a los seis lineamientos estratégicos determinados en la Guía en mención, a saber: gestión organizacional, análisis del entorno, gestión del cambio, riesgos asociados a un enfoque de gestión socialmente responsable, orientación hacia el desarrollo sostenible y consideraciones legales. Los resultados implicaron presentar una propuesta de modificación a la misión y visión organizacional incluyendo en ellas elementos claves de la responsabilidad social. Posteriormente con la aplicación sistemática del ciclo de gestión con enfoque socialmente responsable, se permitió identificar los diez pasos del PVHA, que deben ser tenidos en cuenta para una correcta implementación de las acciones en responsabilidad social para una empresa. Finalmente a partir de las deducciones encontradas, se pudo presentar propuestas de mejoramiento a la gestión organizacional y de esta forma poder organizar programas coherentes en materia de responsabilidad social.

RESULTADOS

Por ser la Guía Técnica Colombiana GTC 180, el parámetro de comparación a continuación se presenta la tabla 1, en donde se relacionan los lineamientos de la guía frente a los hallazgos más relevantes encontrados; es decir en donde existe un mayor impacto en el sector.

Concordante con los resultados presentados en la tabla 1, se propusieron acciones de mejoramiento para trabajar en las siguientes actividades: *integrar los fundamentos* de la responsabilidad social desde los lineamientos estratégicos (misión y visión); *crear una herramienta de difusión* de las acciones que se realizan en la Pyme anualmente; *efectuar gestiones propias* para poderse adherir al pacto global, (pero una vez se certifique en todos los sistemas de gestión organizacional); *indagar ampliamente* y profundamente sobre la orientación del sector servicios para poder efectuar proyecciones globales y no puntuales como en la actualidad se realiza con sus clientes. Es decir contar con información para realizar un ejercicio de prospectiva: *ampliar el marco de proveedores* pues en algunas ocasiones no se responde oportunamente a los clientes sobre las necesidades de suministro de personal en misión.

Tabla1: Lineamientos de la Guía Técnica vs Hallazgos encontrados

LINEAMIENTOS	HALLAZGOS
<p>Gestión Organizacional: Se entiende como la orientación estratégica de las organizaciones socialmente responsables, la cual se refleja en los lineamientos de direccionamiento y las prácticas organizacionales que deben estar adecuadas a los valores y principios éticos. Por lo tanto se encuentran alineados a la gestión organizacional en el ámbito interno y externo para generar su transformación.</p> <p>Análisis del Entorno: La responsabilidad social supone la capacidad de la organización para responder adecuadamente a su entorno. Esto implica comprender la situación actual y perspectivas generales y particulares del sector en el cual se desempeña la organización.</p> <p>Gestión del cambio: Otro reto que deberían considerarse es la resistencia al cambio, en la cultura dentro de las organizaciones, cuando se comienza un proceso de responsabilidad social. Los medios básicos con los que se cuenta para una comunicación dinámica, transparente y sin ambigüedades, además de facilitar el cambio efectivo de información permanente, son toma de conciencia y enfoques de entrenamiento.</p> <p>Riesgos asociados a un enfoque de gestión socialmente responsable: Es importante hacer un ejercicio gerencial de identificar, valorar y gestionar los riesgos asociados a la implementación de un enfoque integral y estratégico de responsabilidad social. Un enfoque de responsabilidad social debe estar en concordancia con una gestión integral del riesgo en la organizaciones y adicionalmente, debe considerar los riesgos propios, es decir, aquellos inherentes a su formulación e implementación.</p> <p>Orientación hacia el desarrollo sostenible: El desarrollo sostenible debería constituirse en un objetivo estratégico de las organizaciones que quieran ser socialmente responsables. Este enfoque busca garantizar el equilibrio entre el crecimiento económico, la elevación de la calidad de vida y el bienestar social, protegiendo los recursos naturales en que se sustentan estos procesos y asegurando los derechos de las futuras generaciones a un ambiente sano.</p> <p>Consideraciones legales: Los aspectos legales constituyen los acuerdos básicos que la sociedad pide a sus ciudadanos, los cuales suponen a su vez unos principios éticos que lo soportan, como son la justicia, la equidad, la confianza, y el bien común. Esos principios, a su vez, se basan en la dignidad inalienable de las personas, fundamento del estado social de derecho y de los derechos fundamentales (personales, familiares, sociales y culturales) que éste garantiza a los ciudadanos.</p>	<p>Para la Pyme intervenida ha sido importante el tener establecido un código de ética para el comportamiento de sus colaboradores, a pesar de no disponer de un programa formal de responsabilidad social. Es por ello que es relevante disponer de estrategias de comunicación para socializar actividades llevadas a cabo en materia de responsabilidad social por lo cual, es pertinente hacer énfasis en la creación de esta herramienta de difusión.</p> <p>Dentro de la misión y visión, no se ha establecido fundamentos de la responsabilidad social, pero en el código de ética ha definido sus principios y valores corporativos para así realizar un proceso de seguimiento al desarrollo y aplicación de los valores en el trabajo diario de los colaboradores.</p> <p>La Pyme no se encuentran adheridas al pacto global; además en el ámbito interno se verifica la aceptabilidad y aplicabilidad de los principios y valores, a través de procesos de consenso entre los integrantes de la organización; pero en el ámbito externo se han identificado sus Stakeholders.</p> <p>A partir de las acciones en gestión organizacional se han identificado las oportunidades y amenazas que le afectan; dentro de las oportunidades se resaltan condiciones crediticias favorables para los inversionistas. Pero las particularidades del sector no las integra a las decisiones organizacionales porque sus líderes no participan en las mesas sectoriales.</p> <p>La Pyme se encuentra en un proceso de reestructuración, realiza los procesos de certificación: calidad, salud ocupacional, medio ambiental. En materia de responsabilidad social está en proceso de diálogo con sus partes interesadas; Cabe resaltar que hoy en día las empresas están participando en los sistema de gestión organizacional, donde sus colaboradores son partícipes, generando así comportamientos de compromiso de sus colaboradores.</p> <p>En la Pyme se notan falencias en la determinación de cláusulas de alineación de RSE para sus proveedores, por otro lado no se ha adoptado realizar la presentación de triple cuenta de resultados, los DDHH se han tenido en cuenta en los sistemas de auditoría/control interno, y se aseguran que sus colaboradores reciban los contratos de trabajo antes de empezar a trabajar y que estos mismos sean entendidos por ellos. Proporciona información de factores sociodemográficos de la fuerza laboral para reforzar programas de desarrollo personal; y por último se han llevado a cabo proyectos sociales de modo que beneficien a las minorías.</p> <p>La empresa han optado por implementar medidas en el comportamiento de los colaboradores de la organización en momentos donde se presente conflictos al interior de la organización delegando a líderes de procesos: jefes, gestión humana para la solución de conflictos. Igualmente han tomado medidas de gestión y funcionamiento que estimen convenientes en riesgos asociados a la reputación, comercio justo, competencia leal, ética en los negocios, mercadeo responsable, relaciones con la comunidad, viabilidad operacional y la calidad de vida laboral con el fin de identificar estas acciones y si es necesario tomar medidas correctivas y de mejora.</p> <p>La Pyme se preocupa por participar en foros que hablen sobre el medio ambiente y de igual forma interactúa con diferentes grupos sociales en la búsqueda de soluciones sostenibles en el sector que opera; se analiza la cadena de proveedores en el mapa de riesgos, oportunidad e impactos. No tienen establecidos indicadores de gestión concordantes con el informe de sostenibilidad</p> <p>Esta empresa en su código de ética identifica los principios y valores. Igualmente ha adoptado medidas y planes de acción para respetar la dignidad humana y derechos humanos frente a la calidad de vida laboral desarrollada.</p>

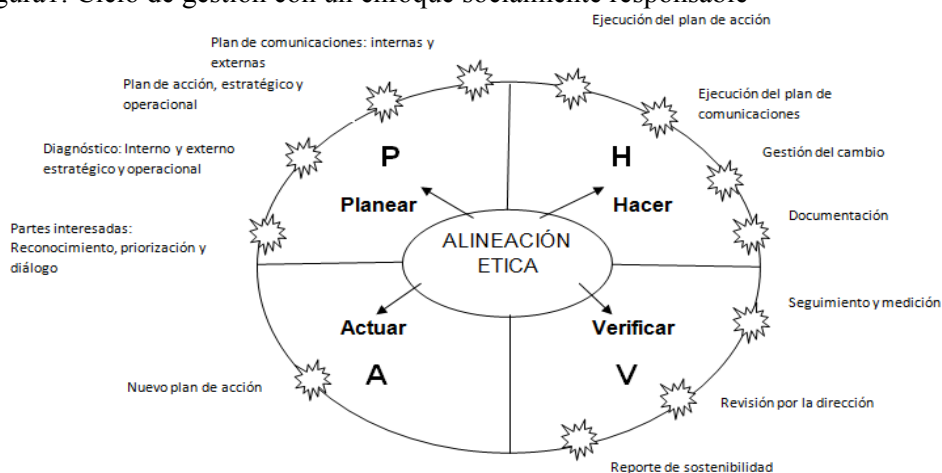

Fuente: elaboración propio, soportada en los lineamientos de la guía Técnica Colombiana GTC 180.

A continuación se presenta la propuesta presentada sobre el mejoramiento de la misión, y visión organizacional, en donde en ellas se integran los elementos favorables a la responsabilidad social, la tabla 2 se indican dicha propuesta.

Tabla 2: propuesta de misión y visión organizacional, con aspectos sobre la responsabilidad social. Fuente: elaboración propia, con base en indagaciones organizacionales y sugerencias de los directivos de las áreas de la Pymes.

Como la segunda fase de la investigación fue la aplicación del ciclo PHVA de gestión con un enfoque socialmente responsable, para cada una de las restantes cuatro falencias detectadas en la tabla 1: lineamientos de la Guía Técnica vs Hallazgos encontrados. Se les aplicó a cada una de las falencias los diez pasos que conforman el ciclo de gestión con un enfoque socialmente responsable. La figura 1, detalla cada uno de los diez pasos que integra los pasos correspondientes al ciclo en mención. Además fue necesario para una mayor comprensión, presentar una descripción de referencia para cada una de las acciones (planear, hacer, verificar y actuar), las cuales se deben realizar para poder obtener resultados. A continuación se detallan: Planear (P). Consiste en establecer la manera, camino o el método para alcanzar las metas propuestas; este componente a su vez lo integran las partes interesadas, el diagnóstico, plan de acción y plan de comunicaciones. Donde las partes interesadas: de las organizaciones deben buscar relaciones que ambos se benefician, además tener en cuenta las expectativas, para así realizar los procesos de diálogo. El diagnóstico, tanto interno como externo se debe realizar para poder formalizar una planeación estratégica y operativa socialmente responsable, pues así se crea valor. El plan de acción, hace referencia a lo que la empresa quiere realizar tanto en su componente estratégico como operacional de la organización con sus partes interesadas para así dar cumplimiento al objetivo enmarcado por la organización. Plan de comunicaciones, en el cual se hace referencia a lo que pretende comunicar la organización a las partes interesadas tanto internas como externas para dar cumplimiento al objetivo de la organización.

Figura1: Ciclo de gestión con un enfoque socialmente responsable

Fuente: Guía técnica Colombiana GTC 180 p. 8

Hacer (H). Es la manera en cómo se van a efectuar las tareas ya planeadas. Este componente a su vez lo integra la ejecución del plan de acción, ejecución plan de comunicaciones, gestión del cambio, y documentación. *Ejecución plan de acción*, en donde se utiliza un cronograma de actividades, en el cual se desglosa cada tarea haciendo referencia al día que se ejecutará cada actividad y el responsable del cumplimiento de ella. *Ejecución plan de comunicaciones*, en este paso se utiliza un cronograma de actividades, en el cual se desglosa la tarea a realizar pero se indica además el medio de comunicación a utilizar en su difusión, siendo necesario indicar la posible fecha de cumplimiento como el nombre del responsable de ello. *Gestión del cambio*. Este paso es de impacto, pues en él se indica el cambio de una situación actual a una situación deseada. Generalmente en este paso se proponen desarrollar nuevas

tecnologías o aspectos de cambio en el sistema cultural, por ser compleja esta acción es necesaria una sensibilización previa por las personas para no generar mayores costos en la implementación. *Documentación.* Por tratarse de evidenciar las acciones en el hacer, es necesario que los procedimientos se encuentren definidos claramente con el propósito de verificar el cumplimiento, es decir evidenciar lo planeado frente al cumplimiento. Para ello, se pueden presentar informes consolidados de lo cumplido o de los ítems que deben ser modificados.

Tabla 3: aplicación del ciclo PHVA, para crear estrategias de comunicación.

ETAPAS	COMPONENTES	APLICACIÓN
Planear	Partes interesadas	Las partes interesadas a nivel externo las conforman las empresas y los proveedores a quienes se pretende difundir las estrategias de comunicación, a nivel interno son los trabajadores propios de la empresa como de los trabajadores en misión, quienes contribuyen al desarrollo de la responsabilidad social.
	Diagnostico	Se detectaron falencias al no tener conocimiento sobre la satisfacción del personal en misión en las diferentes organizaciones que lo requieren, en el aspecto de las oportunidades se encontró avances en las acciones de responsabilidad social, como la instauración del código de ética. En las fortalezas se encontró convenios empresariales, ofertas de valor agregado y el respaldo de las cajas de compensación para fortalecer programas al personal. Por ultimo dentro de las amenazas se detectaron modificación a la normatividad legal exigida por el gobierno. Demora en la oportuna consecución del personal solicitado.
	Plan de acción	El plan estratégico dirigido a las partes interesadas externas se cubrirá con reuniones informativas a través de desayunos de trabajo en las diferentes ciudades, además se presentaran informes trimestrales sobre los impactos que han tenido en responsabilidad social y el plan de acción operacional va dirigido a las partes interesadas al interior de la Pyme, se realizarán jornadas recreativas por medio de capacitaciones, para darle a conocer los impactos que trae el incursionar, todo ello se complementara con una encuesta de satisfacción del personal
	Plan de comunicaciones	A nivel externo con las empresas a través de los informes que estos presenten sobre los avances que ha tenido al incursionar en responsabilidad social empresarial, serán difundidos en medios de comunicación como prensa, blogs en internet, pagina web, televisión en canales regionales para que la comunidad tenga conocimiento de los que realiza la empresa. A nivel interno con los trabajadores propios y en misión se enviarán informes, boletines a través de internet, correos electrónicos para que estos conozcan los avances.

Verificar (V). Se compara la ejecución es decir el hacer, con el resultado obtenido con la meta planificada. Este componente a su vez lo integra el seguimiento y medición, revisión por la dirección, y reporte de sostenibilidad. *Seguimiento y medición,* para su cumplimiento se deben establecer métodos de manera que se pueda dar seguimiento de lo que se ha cumplido e igualmente de esta manera detectar falencias y tomar medidas correctivas. *Revisión por la dirección,* la alta dirección debe evaluar oportunidades de mejora y la necesidad de efectuar cambios si los cree conveniente para la organización, de acuerdo a sus políticas y objetivos para mejorar sus resultados. *Reporte de sostenibilidad,* En él se debe proporcionar información que responda a las necesidades de las partes interesadas, también debe incluir quejas, sugerencias, reclamaciones por parte de los stakeholders. Debe incluir la política de responsabilidad social y las razones por las cuales la organización está comprometida con este enfoque. *Actuar (A):* En esta etapa es donde se detectan desvíos y se procederá actuar de modo que el problema no se vuelva a presentar. Este componente a su vez lo integra *el nuevo plan de acción,* el cual parte de los resultados al seguimiento y medición del impacto, al igual que las decisiones tomadas por la dirección, la

organización periódicamente debe revisar y realizar ajuste a los planes de acción propuestos. Como un ejemplo se presenta las acciones realizadas para la falencia: crear una herramienta de difusión de las acciones que realiza la Pyme anualmente, ver tabla 3.

Tabla 3 continua

ETAPAS	COMPONENTES	APLICACIÓN
	Ejecución del plan de acción	En un cronograma de actividades se detalla cada una de las tareas a realizar para el cumplimiento del plan de acción tanto estratégico como operacional, con su respectiva fecha y responsable del cumplimiento de la tarea.
	Ejecución del plan de comunicaciones	Igualmente en un cronograma de actividades se detalla cada una de las tareas para el cumplimiento del plan de comunicación, teniendo en cuenta el detalle de los medios de comunicación requeridos para divulgar las estrategias de comunicación
	Gestión del Cambio	Realizar esquemas de trabajo tanto a nivel operacional como de responsabilidad social para así mantener el recurso operacional y a su vez enfocarse en la retribución de procesos fructíferos al ejecutar la responsabilidad social. Igualmente incentivar a los directivos del área a proyectar dentro de los diferentes niveles organizacionales en mensaje de responsabilidad social como un concepto de sostenibilidad del negocio a los trabajadores.
Hacer	Documentación	Implementar políticas de declaración de la responsabilidad social, igualmente documentar los avances que se han dado con los procesos de diálogo en las partes interesadas; como también realizar reportes de sostenibilidad
	Seguimiento y medición	Para dar cumplimiento al objetivo se deben realizar procesos de seguimiento y medición a través de indicadores, encuestas que midan la satisfacción de las partes interesadas al implantar las estrategias de comunicación.
	Revisión por la dirección	La gerencia debe revisar el cumplimiento de esta estrategia y documentar de igual manera los avances encontrados y las falencias para tomar medidas correctivas y de mejoramiento.
Verificar	Reporte de sostenibilidad	En él se detalla las acciones realizadas en inversiones frente a las dimensiones de la responsabilidad social: económica, medio ambiental y social de la Pyme e igualmente los indicadores cumplidos anualmente en este tema tan relevante a la empresa.
Actuar	Nuevo plan de acción	Una vez ejecutado el plan de acción propuesto para la difusión de la comunicación, se debe verificar su cumplimiento y si no se ha cumplido o ha presentado problemas se debe implementar un nuevo plan de acción con las respectivas mejoras a realizar

Fuente: elaboración propia baso en los pasos del ciclo de gestión

CONCLUSIONES

La Pyme en busca de mejorar constantemente su servicio ha efectuado acciones de recertificación de la gestión de calidad ISO 90001:2008, igualmente en frente a la ISO 14001, y OHSAS 18001, pues en el año 2009 se les otorgó su certificación, es por ello que paralelamente los lineamientos estratégicos de la Guía Técnica Colombiana GTC 180 se pudieron implementar con facilidad, llevando esto a un mejoramiento continuo de ella. Además abonar terreno para profundizar en acciones sobre la responsabilidad social, entre ellas el poderse adherir al pacto global y realizar un informe de sostenibilidad aprovechando los indicadores del GRI.

Vale la pena resaltar que el ciclo de gestión con un enfoque socialmente responsable, propuesto por la guía técnica Colombiana (GTC 180), permitió de manera fácil integrar dicho enfoque a las falencias detectadas. Además se puede utilizar como una herramienta de difusión al aplicar los diez pasos del ciclo de gestión y de esta forma la Pyme pueda establecer acciones o programas en materia de responsabilidad social. Como los clientes son un grupo de interés fundamental para la Pyme el ciclo de gestión con

enfoque socialmente responsable, contribuyó a la actualización, seguimiento y control del proceso de servicio al cliente llevado a cabo.; pues así se obtuvo información más real de los clientes, de su satisfacción para poder realizar acciones al trabajar clientes potenciales. Además el disponer de una misión, visión, principios y valores coherentes con los fundamentos de la responsabilidad social proporcionan lineamientos para llevar a cabo un proceso de seguimiento al desarrollo y aplicación de los programas en responsabilidad social que se implemente en el trabajo del día a día.

FACTORES CLAVES QUE INFLUYEN EN EL PROCESO DE SUCESIÓN EN LAS EMPRESAS FAMILIARES DEL SECTOR TEXTIL EN TIJUANA, B.C., MÉXICO

Maria Virginia Flores Ortiz, Universidad Autónoma de Baja California

Alfonso Vega López, Universidad Autónoma de Baja California

RESUMEN

El presente trabajo contempla una investigación sobre las empresas familiares del sector textil en Tijuana, B.C. México, abordando el tema de los factores claves que influyen en el proceso de la sucesión. Las empresas familiares constituyen el grueso de las pequeñas y medianas empresas que aportan tanto en empleo e ingresos en la economía mexicana. El objetivo del presente trabajo es conocer el mecanismo de sucesión de los propietarios de empresas familiares del sector textil en la ciudad de Tijuana, B.C. Muchas de las empresas familiares no cuentan con planes de sucesión y desconocen la utilidad de los mismos para el futuro de sus empresas, sin embargo, el dueño desea que uno de sus familiares directos asuma la dirección de la empresa cuando se retire. Asimismo, el nombrar a un sucesor puede generar conflictos familiares. Para lograr los resultados se han realizado 43 encuestas representativas a los propietarios afiliados al padrón de la Cámara Nacional de la Industria de Transformación (CANACINTRA) delegación Tijuana, en Baja California.

Palabras claves: empresa familiar, proceso de sucesión, sector textil.

KEY FACTORS AFFECTING SUCCESSION PROCESS IN FAMILY FIRMS IN THE TEXTILE SECTOR IN TIJUANA, BAJA CALIFORNIA, MEXICO

ABSTRACT

This work includes research on family businesses in the textile sector in Tijuana, Baja California, Mexico, addressing the issue of the key factors that influence the succession process. Family businesses constitute the majority of small and medium enterprises that provide both employment and income in the Mexican economy. The aim of this study was to determine the mechanism of succession of owners of family businesses in the textile sector in the city of Tijuana, Baja California. Many family businesses have no succession plans and unaware of their usefulness for the future of their companies, however, the owner would like one of their family members assume the management of the company when he retires. Also, name a successor can generate family conflicts. To achieve the results have been conducted 43 surveys to the owners, members of The National Chamber of the Transformation Industry (CANACINTRA, by its acronym in Spanish) Delegation Tijuana.

Keywords: family business, succession process, textile sector.

INTRODUCCIÓN

Las empresas familiares son organizaciones económicas que se forman para generar empleo e ingresos para sostener la familia, casi siempre son empresas micro y pequeñas desde la perspectiva de generación de empleo. Sin embargo, muchas tienden a crecer y tener éxito en base a una planificación de largo plazo,

al adecuado ambiente familiar, a la responsabilidad social, a la calidad de la producción, a la innovación y a la competitividad de la empresa.

Las empresas familiares exitosas son aquellas que logran el balance entre la empresa y la familia. Su éxito se atribuye principalmente a dos factores: el compromiso de los miembros de la familia y su visión a largo plazo. Por tratarse del patrimonio familiar los encargados de su administración tienen muy claro que este debe perdurar por generaciones, y por tanto, sus acciones y estrategias están orientadas a buscar el crecimiento sostenido. (Shum, 2008)

Los factores claves para alcanzar la competitividad en una empresa familiar son las estrategias competitivas ya que son una parte fundamental, debido a que los mercados son cada vez más competitivos y exigentes. En el mundo global, las organizaciones empresariales han encontrado que la velocidad en la que crece la competencia es cada vez mayor, asumir conscientemente esta situación permite que las empresas establezcan planes e iniciativas que produzcan resultados y mejoramientos competitivos.

Asimismo, las estrategias competitivas pueden tomarse como un enfoque sistemático hacia una responsabilidad mayor y cada vez más importante de la estrategia general de la empresa familiar, es decir, relacionar a la empresa con su entorno estableciendo su posición, de tal manera que garantice su éxito continuo y la proteja de cualquier contingencia que se pueda presentar. La implementación o no de una estrategia competitiva puede determinar en el futuro el nivel de competitividad de la misma y su desempeño en el mercado. No obstante, para la implementación de esta estrategia se debe contar con el apoyo de los propietarios de la empresa y tener la accesibilidad y disponibilidad del personal para lograr las metas que persigue la empresa familiar.

Definir al futuro sucesor en la empresa familiar es determinante para garantizar la continuidad de la empresa; tiene que actuarse bajo la lógica empresarial, lo cual no siempre coincide con los privilegios de la lógica familiar. La dirección de la empresa basada en jerarquías familiares, puede afectar a la empresa e impedir su crecimiento e incluso su mantenimiento en el tiempo. Por ello, el propietario debe tener un plan de sucesión que garantice el futuro y la expansión de la empresa en un ambiente cada más competitivo.

El fenómeno de la sucesión se inicia desde el punto de vista práctico, desde el momento de la concepción de los hijos fundadores, por lo regular es un proceso largo que, si se planifica, durará de 10 a 15 años y pasará por varias etapas. (Belausteguigoitia, 2012)

El objetivo del presente trabajo de investigación es determinar los factores claves para alcanzar la competitividad que influyen en el proceso de sucesión en las empresas familiares del sector textil

REVISIÓN LITERARIA

La empresa familiar y sus características

Existe una gran cantidad de definiciones de la empresa familiar, Belausteguigoitia (2012), la define como una organización controlada y operada por los miembros de la familia. Asimismo (Amarjen, 2009) la define como aquella en la que la propiedad y gestión de la empresa están en las mismas manos, y cuya actividad de desarrolla con una clara vocación de expansión y continuidad por parte de los mismos miembros de la empresa. Una empresa familiar es aquella empresa en la que el capital y, en su caso, la gestión y/o el gobierno están en manos de una o más familias, que tienen la capacidad de ejercer sobre ella una influencia suficiente para controlarla, y cuya visión estratégica incluye el propósito de darle continuidad en manos de la siguiente generación familiar. (Sánchez-Crespo, 2006).

De acuerdo a Eddy (1996) las principales características que presentan las empresas familiares son: la familia tiene cierta propiedad o propiedades, la familia tiene un alto control dentro de la dirección de la empresa y hacer negocios es el principal ideal de la familia. Para Rosenblatt et. al (1985), las empresas familiares son cualquier negocio en el cual la mayoría de la propiedad y del control se encuentran en manos de una familia y en el que, dos o más miembros familiares están implicados en los negocios de la empresa. Los autores como Donnelley (1964), indica que las empresas familiares son aquéllas que se identifican con al menos dos generaciones de la familia y donde ese vínculo conlleva a una influencia en la compañía de los intereses y objetivos de la familia.

La definición de empresa familiar puede abarcar multitud de características, sin embargo pueden distinguirse tres rasgos que deben estar presentes cuando se hace referencia a este tipo de organizaciones: a) la transferencia del negocio a través de distintas generaciones; b) la propiedad y dirección mayoritariamente en manos de una familia; c) la implicación de dicha familia en todo lo concerniente a la firma. Esta caracterización de la empresa familiar permite diferenciar con las otras formas de organización de las demás empresas. En primer lugar, habría que mencionar la existencia de varios subsistemas que engloban a un sistema común que es la empresa. Aquí se incluye el subsistema empresa, el subsistema familia y el subsistema propiedad y, la forma en que éstos, en la medida en que estén presentes en la compañía, van a influir en la firma de una u otra manera.

El modelo de los tres círculos (Davis y Tagiuri, 1982), es uno de los que han sido más empleados para describir distintas situaciones actuales y futuras de las empresas familiares. En este modelo cada círculo representa un grupo de personas, con características particulares en relación a la empresa familiar; las intersecciones de los círculos constituyen los grupos de personas que poseen dos o tres de las características identificadas por el modelo. Según coincidan -en mayor o menor grado- los tres círculos, es decir, cuando estas se superpongan como atraídas por una fuerza centrípeta (algo que suele ocurrir en primera y segunda generación) o se distancien como separados por una fuerza centrífuga, (como acostumbra a pasar en empresas familiares de gran tamaño) se estará frente a distintos tipos de empresas familiares, con características muy diferentes: por el número de protagonistas que en ellas trabajan o con ellas tienen relación, por los distintos roles que desempeñan y sus diferentes intereses, así como por el contenido de las relaciones y actitudes que entre unas y otras personas se dan.

Sobre este tema son muy importantes los estudios realizados por Davis y Tagiuri (1982) con el "Modelo de los tres círculos", el cual ha sido objeto de mención en trabajos posteriores (Leach, 1993; Gersick y Davis, 1997). Otra característica que destaca en estas empresas es la cultura, o dicho en otras palabras, los valores, actitudes y creencias propias de una familia que mayoritariamente dirige y controla la empresa en cuestión. Por último, hay que considerar otro aspecto significativo que es la visión a largo plazo que este tipo de negocios plantea y que es fruto de numerosas disparidades con las empresas no familiares. Estudios como los realizados por Daily y Dollinger (1993) o Donckels y Fröhlich (1991) demuestran esa afinidad a la continuidad a lo largo de las generaciones, la cual implica uno de los problemas más importantes tratados a través de los años como es la sucesión, puesto que aun existiendo esa visión a largo plazo muchas empresas no logran superar el cambio de generación.

Una vez conocidos los rasgos más distintivos de este tipo de negocios, a continuación se analizarán los retos que debe afrontar el gerente-propietario de una empresa familiar comenzando, en primer lugar, con una de las particularidades de estos negocios, la confluencia de varios subsistemas que interactúan en un sistema común, lo cual conduce hacia uno de los conflictos que deben hacer frente como es la confusión de los patrimonios, familiar y empresarial.

Proceso de Sucesión en la Empresa Familiar

De acuerdo con Belausteguigoitia (2012), el proceso de sucesión es muy complejo, en el cual participa una gran cantidad de actores. Por lo general, es un proceso largo que, si se planifica durará de 10 a 15 años y pasará por varias etapas. En ocasiones las situaciones imprevistas originan que este proceso sea más corto, como en el caso del fallecimiento de los dueños y directores o las desavenencias entre familiares e incluso la ruptura de las relaciones entre ellos.

La construcción de un plan de sucesión puede ser definida de diferentes maneras, se puede iniciar con la definición operacional y sus propósitos. Se define la planeación de la sucesión como un proceso estructurado en el cual se involucran la identificación y preparación del sucesor, para asignarle un rol dentro de la organización, esto ocurre cuando el perfil es cubierto. (Garman & Tyler, 2004). Por lo tanto Lo que da el carácter de empresa familiar a una organización es el hecho de considerar a la empresa como un logro personal que el fundador desea trasladar a la familia y perpetuar a través del tiempo (Gallo, 2008)

Es en este momento donde se deben de tomar en cuenta los factores claves para alcanzar la competitividad en una empresa familiar como estrategias competitivas que influyen en el proceso de sucesión de las empresas familiares tales como: actitudes de los propietarios en donde el estilo de liderazgo, el consejo de familia y perfil del sucesor; así como los conflictos intergrupales intervienen el contexto familiar, planificación del proceso de sucesión y el desarrollo de personal, siendo estos factores claves en el proceso de sucesión.

METODOLOGÍA

Para el presente trabajo se eligió una muestra de 43 propietarios de las empresas familiares del sector textil afiliados al padrón de la Cámara Nacional de la Industria de Transformación (CANACINTRA) delegación Tijuana, en Baja California.

A los propietarios se les aplicó un cuestionario titulado conformado con 75 preguntas relacionadas al tema de estudio. Una vez recopilada la información de los cuestionarios se procedió a la elaboración de una base de datos en SPSS y posteriormente se procedió a la captura de la información para luego realizar el respectivo análisis para su interpretación.

Se utilizó una escala de medición con una escala de lickert. Se elaboraron los cuadros y gráficos que nos permite un análisis de la situación actual de la sucesión en las empresas del sector textil. Con dicha información se pretende saber si el gerente propietario ha postergado o desechado la idea de realizar un plan de sucesión familiar.

Objetivo General

Determinar los factores claves que influyen en el proceso de sucesión de las empresas familiares del Sector Textil en Tijuana, B.C., México

Objetivos específicos

Determinar si las actitudes de los propietarios es un factor clave en el proceso de sucesión a través del estilo de liderazgo, consejo de familia y el perfil del propietario en las empresas familiares del sector textil.

Determinar si los conflictos intergrupales de los propietarios es un factor clave en el proceso de sucesión, contexto familiar y el desarrollo del personal en las empresas familiares del Sector Textil

Determinación de la Muestra

Para el presente trabajo se eligió una muestra de 43 propietarios de empresas familiares del sector textil de la Cámara Nacional de la Industria de Transformación (CANACINTRA) delegación Tijuana, en Baja California.

Factores que se consideraron en el cálculo de la muestra:

- La población se considera con características homogéneas.
- Se cuenta con una población finita, ya que el número de empresas familiares es conocido.
- Fórmula empleada para el cálculo de la muestra:

$$n = \frac{\partial^2 pq}{e^2(N-1)\partial^2 pq} \quad (1)$$

Tabla 1: Total de empresas según CANACINTRA, Marzo 2011

	Poblacion	Muestra
Total de empresas fabricantes de prendas de vestir	43	33

Esta tabla muestra que el total de las empresas encuestas si cuenta con un nivel de confiabilidad

Validación del Instrumento

A los propietarios se les aplicó un cuestionario conformado con 75 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis de la sucesión en las empresas familiares, así como de las estrategias de competitividad. Con dicha información, se pretende saber si el propietario ha postergado o desechado la idea de realizar un plan de sucesión familiar y si cuenta con estrategias competitivas en su empresa. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.).

Tabla 2: Análisis factorial confirmatorio.

Variable	Dimensión	Alfa Normal	Alfa Estandar
Competitividad sistémica	Competitividad	0.70	0.70
	Tecnología	0.60	0.60
	Rentabilidad	0.70	0.70
Conflictos intergrupales	Proceso de sucesión	0.80	0.80
	Contexto familiar	0.80	0.80
	Desarrollo de personal	0.80	0.80
Actitudes propietarios	Consejo de familia	0.80	0.80
	Estilos de liderazgo	0.80	0.90
	Formación del propietario	0.80	0.80
Clima organizacional	Gestión	0.70	0.80
	Supervisión	0.90	0.90
	Esfuerzo	0.90	0.90

Esta tabla muestra los resultados del análisis confirmatorio efectuado para validar el instrumento de medición utilizado en la investigación.

Tabla 3: Análisis de Fiabilidad

Alfa de Cronbach	No. de elementos
.736	43

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .736, un grado de confiabilidad aceptable (ya que esta por arriba 0.60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2012)

RESULTADOS

Situación actual de las empresas familiares del sector textil.

En Tijuana, B.C. las empresas familiares del sector textil actualmente se encuentran en proceso alto de desarrollo, dado que los propietarios de la empresas manifiestan en un que han aumentado sus ventas y tienen compromisos adquiridos en mediano plazo para seguir abasteciendo a sus clientes potenciales.

Tabla 4: Apreciación del propietario sobre el proceso de desarrollo.

Opinión de los propietarios	Porcentaje
Alto desarrollo	40%
Mediano desarrollo	25%
Bajo desarrollo	20%
Ningún desarrollo	15%
Total	100%

Esta tabla presenta los resultados de la apreciación del propietario en cuanto a que el proceso de desarrollo de las empresas familiares del sector textil es alto.

Los propietarios de las empresas familiares manifiestan que se ha presentado un incremento en las ventas de un 50% al contar con un mayor número de clientes dando como resultado el que se tengan compromisos a mediano plazo para seguir abasteciendo a sus clientes.

Tabla 5: Incremento en las ventas de las empresas familiares del sector textil.

Opinión de los propietarios	Porcentaje
Ventas	50%
Distribución	25%
Exportación	15%
Otros	10%
Total	100%

Esta tabla presenta los resultados del incremento de las ventas de las empresas familiares del sector textil.

El proceso de desarrollo se refleja en la inversión de tecnología para maquinas de coser industriales y sistemas automatizados de control de calidad para corregir en línea cualquier defecto que presente la tela, con la finalidad de hacer más eficientes los procesos de producción a futuro y cumplir con los compromisos adquiridos con los clientes potenciales.

Participación de la familia en la administración del negocio y su continuidad después del fundador.

Es muy limitada la participación de la familia política en la administración de la empresa familiar, sólo esta se realiza en un 35% de las empresas encuestadas siendo la mayor participación de los yernos o

algunos primos que trabajan más como empleados familiares, ocupando puestos como: jefes de los departamentos de ventas, producción y compra de materias primas.

Tabla 6: Inversión realizada por los propietarios de las empresas del sector textil.

Opinión de los propietarios	Porcentaje
Tecnología	30%
Materia Prima	25%
Capacitación	20%
Diseños de moda	25%
Total	100%

Esta tabla presenta los resultados de la inversión que están realizando los propietarios de las empresas del sector textil, reflejándose está en la tecnología para hacer más eficientes los procesos de producción a futuro.

Tabla 7: Participación de la familia política en la administración del negocio.

Opinión de los propietarios	Porcentaje
Totalmente de acuerdo	35%
Medianamente de acuerdo	0%
Parcialmente en desacuerdo	0%
Totalmente en desacuerdo	65%
Total	100%

Esta tabla presenta el resultado de la participación de la familia política en las empresas del sector textil, siendo muy baja la participación en la administración del negocio.

La participación de la familia en las empresas de este sector está concentrada principalmente en la esposa (o), representando el 55 % de las compañías encuestadas, seguido por los hijos (as), ocupando los puestos claves como: la Gerencia General, Contabilidad, Finanzas y Recursos Humanos.

Tabla 8: Participación de la familia en la administración del negocio.

Opinión de los propietarios	Porcentaje
Esposa (o)	55%
Hija (o)	25%
Nieta (a)	15%
Hermana (o)	5%
Total	100%

Esta tabla presenta el resultado de la participación de la familia en las empresas familiares del sector textil, siendo la esposa (o) la de mayor participación en la administración del negocio.

En la administración de la empresa familiar existe el deseo de algún hijo(a) de participar en la continuidad y el desarrollo de la empresa cuando el propietario se retire o fallezca, siendo un 55% el que espera quedarse al frente del negocio familiar cuando el propietario se retire.

Tabla 9: Deseo de algún miembro de la familia de participar en la administración del negocio.

Opinión de los propietarios	Porcentaje
Esposa (o)	25%
Hija (o)	55%
Hermano (a)	15%
Otros(as)	5%
Total	100%

Esta tabla presenta el resultado del deseo de algún miembro de la familia en participar en la administración del negocio después de que el propietario se retire o fallezca.

De acuerdo a las encuestas realizadas el 70% de los propietarios de las empresas familiares si ha pensado en que si fallece, alguno de sus hijos puede dirigir el negocio; solo que estos no llevan a cabo un plan de sucesión familiar o no cuentan con ningún documento que refleje la decisión de cuál de sus hijos llegado el momento puede ser el sucesor o el que dirija el negocio.

Tabla 10: El propietario ha pensado que alguno de sus hijos puede dirigir el negocio.

Opinión de los propietarios	Porcentaje
Totalmente de acuerdo	70%
Medianamente de acuerdo	0%
Parcialmente en desacuerdo	0%
Totalmente en desacuerdo	30%
Total	100%

Esta tabla presenta el resultado de lo que piensa el propietario acerca de que si alguno de sus hijos puede dirigir el negocio.

Asimismo, el 53% de propietarios considera que si hoy fallece, la empresa tendrá problemas en su operación ya que no está designado un sucesor de manera oficial y en lo que se designa a uno la empresa puede paralizarse, estancarse en su desarrollo o incluso llegar a la quiebra.

Tabla 11: La empresa tendrá problemas en su operación al fallecer el propietario.

Opinión de los propietarios	Porcentaje
Totalmente de acuerdo	53%
Medianamente de acuerdo	0%
Parcialmente en desacuerdo	0%
Totalmente en desacuerdo	47%

Esta tabla representa el resultado de que si la empresa tendrá problemas en su operación al fallecer el propietario.

Sucesión y conflictos en la familia.

Los conflictos en la familia derivados por la rivalidad existente entre sus miembros no afecta al 61% de los encuestados, lo que garantiza que el futuro de la empresa; en este caso ya depende de las decisiones del propietario al designar el sucesor de la empresa.

Llama la atención que el 70% de los propietarios de las empresas familiares todavía no tiene definido la distribución de bienes entre sus hijos o esposa, lo que indica que no existe un testamento; lo cual resulta alarmante ya que esto indica que a futuro existirán problemas legales por determinar quien es el sucesor en la empresa y como se realizará la distribución de los bienes.

Tabla 12: Rivalidad entre los miembros de la familia.

Opinión de los propietarios	Porcentaje
Totalmente de acuerdo	39%
Medianamente de acuerdo	0%
Parcialmente en desacuerdo	0%
Totalmente en desacuerdo	61%

Esta tabla presenta el resultado obtenido acerca de que si existe rivalidad entre los miembros de la familia y si los conflictos derivados de esta situación afectan a la empresa.

De acuerdo con los resultados obtenidos se corrobora que si el propietario toma la decisión de nombrar un sucesor no generaría conflictos familiares en el 54% de los encuestados. Sin embargo, un considerable 46% de los propietarios creen que al nombrar un sucesor tendrán conflictos por las rivalidades que existen entre los miembros de la familia y sus hijos, e incluso el temor inherente a que si al nombrar al sucesor la compañía fracase o que exista una ruptura entre la familia y esto lleve a que la empresa no crezca o incluso que se vaya a la quiebra. Por tanto, muchos de los propietarios de las empresas familiares del sector textil posponen la realización de un plan de sucesión motivadas a la consecuencia de una posible desintegración familiar por conflictos en la empresa.

Tabla 13: Conflictos al nombrar al sucesor

Opinión de los propietarios	Porcentaje
Totalmente de acuerdo	46%
Medianamente de acuerdo	0%
Parcialmente en desacuerdo	0%
Totalmente en desacuerdo	54%

Esta tabla presenta el resultado obtenido acerca de si se general conflictos entre los miembros de la familia al nombrar al sucesor.

Tabla 14: Correlaciones Bivariadas (Matriz de Pearson) de las variables independientes

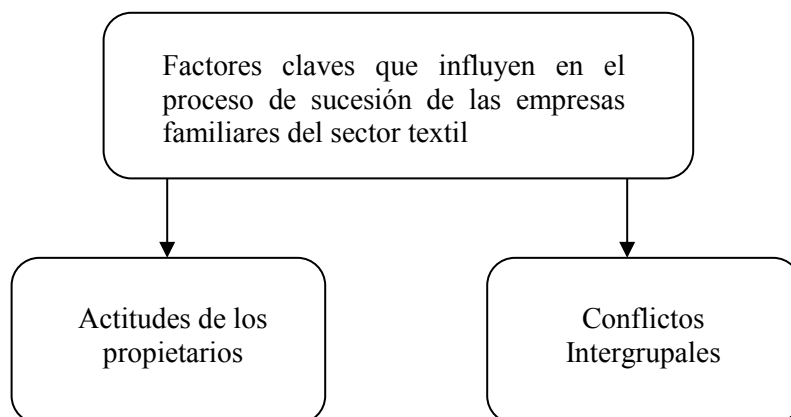

Correlación entre Variables	Correlación
Formación Propietarios - Estilos de Liderazgo	.690**
Formación Propietarios – Proceso de Sucesión	.745**

En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que dentro de la variable de Actitudes de los propietarios las dimensiones de formación de los propietarios incide en el estilo de liderazgo en un .0.690 en las variables de actitudes de los propietarios y conflictos intergrupales las dimensiones de Formación del Propietario incide en el Proceso de sucesión en un 0.745, dando como resultado que estas dos variables sean factores claves que influyen en el proceso de sucesión de las empresas familiares del sector textil.

***La correlación es significativa en el nivel 0.01*

** La correlación es significativa en el nivel 0.05*

El hallazgo fundamental de este estudio indica que los factores claves que influyen en el proceso de sucesión de las empresas familiares del Sector Textil en Tijuana, B.C., México son las actitudes de los propietarios en cuanto al consejo familiar, el estilo de liderazgo que ejerce el propietario de la empresa y la formación que tenga este, así como los conflictos intergrupales que se presentan en el proceso de sucesión, el contexto familiar y el desarrollo del personal que labora en la empresa. Por lo anterior, en este esquema tienen mayor importancia los conflictos intergrupales y las actitudes de los propietarios, por lo cual se propone el siguiente esquema:

El siguiente esquema muestra los factores que influyen en el proceso de sucesión de las empresas familiares del sector textil en Tijuana B.C., México siendo las actitudes de los propietarios y los conflictos intergrupales los que inciden de manera directa. Fuente: Elaboración propia Flores V. y Vega A. (2012)

CONCLUSIONES

Las empresas familiares del sector textil en la ciudad de Tijuana, B.C., se encuentran en un proceso de desarrollo, a pesar de las condiciones económicas del país, y de la actual crisis económica. Sin embargo, muchos dueños de estas empresas no tienen definido sobre la continuidad del sucesor en la empresa, no tienen preparado al sucesor para el liderazgo. Los empresarios son conscientes de los problemas que va enfrentar la empresa si fallecen, incluso consideran que podrían cerrar y quebrar debido a la falta de un plan de sucesión familiar.

Además, la falta de involucramiento y preparación al futuro sucesor se verifica en la escasa participación de la familia política en la administración del negocio. No obstante, el propietario considera que no tendrá conflictos familiares al momento de designar un sucesor ya sea este un hijo (a) para el manejo de la empresa. La rivalidad alguna entre los hijos (as) del dueño con otros miembros de la familia es controlable, siempre en cuando que el sucesor sea elegido cuando esté en vida, bajo un plan de sucesión y el diálogo al interior de la familia.

Los propietarios de las empresas familiares deben procurar que los miembros de sus familias se acerquen lo más posible a sus empresas para que las conozcan y evalúen si desean participar o no dentro de ellas. La continuidad de la empresa familiar está basada en su buen funcionamiento, y éste va depender básicamente de la capacidad de anticiparse y responder a los cambios. En el proceso de planeación de la empresa familiar es muy importante que participen tanto los miembros de la familia como los principales directivos de la empresa.

Otro factor importante es la profesionalización de la empresa familiar que está relacionado con la optimización de las áreas del negocio, lo cual tiene que ver con la preparación y especialización en las tareas de la empresa, considerando que algún miembro de la familia se prepare para que más adelante en cuando ya no esté el propietario, asuma responsablemente la organización y gerencia de la empresa familiar. Se trata de responder a los retos futuros de un mercado competitivo, cuyos objetivos empresariales tendrán que apuntar a una consolidación del negocio.

Y tomar en cuenta que el hallazgo fundamental de esta investigación indica que los factores claves que influyen en el proceso de sucesión de las empresas familiares del Sector Textil en Tijuana, B.C., México

son las actitudes de los propietarios en cuanto al consejo familiar, el estilo de liderazgo que ejerce el propietario de la empresa y la formación que tenga este, así como los conflictos intergrupales que se presentan en el proceso de sucesión, el contexto familiar y el desarrollo del personal que labora en la empresa.

LA RELACIÓN DEL PROFESOR TUTOR UNIVERSITARIO – ALUMNO Y LOS ESTILOS DE VIDA Y CONDUCTAS DE RIESGO, EN LOS ESTUDIANTES DE LA UNIDAD ACADÉMICA HERMOSILLO DE LA UNIVERSIDAD ESTATAL DE SONORA, (UES)

Norma Lorena Arenas Mozqueda, Universidad Estatal De Sonora

Elsa Isabel Montaña Martínez, Universidad Estatal De Sonora

Ana Bolena Sotelo Medina, Universidad Estatal De Sonora

RESUMEN

Una de las funciones de los Profesores Tutores es observar lo que afecta a los estudiantes, y en este caso, nos ocupan los hábitos que puedan afectar de manera temprana a nuestros universitarios, mostrándose en las diferentes conductas de riesgo, como son: los comportamientos relacionados con los hábitos de alimentación, el consumo de tabaco, alcohol, de drogas, la actividad física, el manejo de tiempo libre, los accidentes, la actividad sexual, el autocuidado, el sueño, manejo del stress, entre otros. Por lo que el profesor tutor precisa de identificar para prevenir y no para canalizar y corregir acciones de riesgo en el alumnado.

PALABRAS CLAVES: Docentes, tutores, estudiantes, enseñanza aprendizaje, conductas formación profesional.

THE RELATION SHIP BETWEEN UNIVERSITY PROFESSORS AND STUDENTS, REGARDING LIFE STYLES AND BEHAVIOR RISKS OF ACADEMIANS AT THE UNIVERSIDAD ESTATAL DE SONORA (UES) LOCATED IN HERMOSILLO

ABSTRACT

One of the tutors teacher functions is to observe closely what affects students behaviors. In this particular case, we care about those life habits which influence in an early stage of studies our scholars. Some habits affect directly our students in different risk behaviors actions, such as: eating habits behaviors, tobacco, alcohol, drugs, physical activities, hobbies and leisure management, accidents, sexual habits behaviors, selfcare, sleep habits, stress etc. Tutors Professors needs to be alert and be able to identify the right moment for intervention, as well as preventing and control measures of risk behaviors as a preventive actions not as a correctives ones.

KEYWORDS: Teachers, tutors, students, teaching and learning, behavior training.

INTRODUCCIÓN

Para una mejor comprensión de este trabajo, es necesario entender que los estilos de vida son el conjunto de actitudes y comportamientos que adoptan y desarrollan las personas en forma individual y colectiva para satisfacer sus necesidades como seres humanos; lo que conlleva a desarrollar hábitos que se encuentran entre los factores de riesgo para la salud en la población en general.

Además, ante la globalización que ha traído cambios acelerados ha venido a modificar las formas de vida en los ámbitos psicológicos y físicos, con el desarrollo de nuevos hábitos, aunado a que los adolescentes responden a diferentes riesgos, a un deseo de independencia y autonomía, sentirse atraído a lo desconocido, a lo prohibido y no aceptado por la mayoría de los adultos, empujándolos a experimentar conductas de riesgo; es decir, se les presenta la ocasión de desafiar y de comprobar su dominio sobre su cuerpo y su conducta. Situación a la cual no están exentos los estudiantes de la Unidad Académica Hermosillo, de la Universidad Estatal de Sonora (UES) que son el tema de interés de esta investigación.

Específicamente, los estilos de vida saludables incluyen conductas de salud, patrones de conducta, creencias, conocimientos, hábitos y acciones de las personas para mantener, restablecer o mejorar su salud. Son producto de condicionantes personales, económicos, ambientales y sociales, que emergen no sólo del presente, sino también de la historia personal del sujeto. Se refieren a formas cotidianas de vivir que se aplican para las distintas esferas o áreas de funcionamiento del campo vital de una persona, satisfaciendo adecuadamente las propias necesidades y optimizando su calidad de vida. (Dura Ros, s.f).

El profesor tutor debe de saber cuando es el momento de intervenir para evitar y controlar conductas de riesgo de manera preventiva, por lo que deben de tener los conocimientos básicos que le permitan identificar anticipadamente situaciones de riesgo de los estudiantes; partiendo de que es mejor la prevención que la corrección.

ANTECEDENTES

El término “Tutor” proviene del latín “Tutor” que significa: el que representa a..., el que vela por..., el que tiene encomendado bajo su responsabilidad a otra persona; quien tutela a alguien.

En sus orígenes, la universidad medieval buscaba, en coherencia con su tiempo histórico, la transmisión del conocimiento o saber absoluto, el respeto a la verdad y el desarrollo del espíritu de estudio. Como arquetipo de universidad docente, el papel de profesor era guiar, orientar, autorizar la conducta moral, social e intelectual de sus alumnos en la búsqueda del conocimiento, como vía para el crecimiento personal, en un marco de relación personal estrecha (Rodríguez, 2004)

El enfoque tutorial de apoyo al estudiante en el nivel de licenciatura es de reciente aparición, surge en algunas instituciones de educación superior mexicanas, con la finalidad de resolver problemas que tienen relación con la deserción, abandono de los estudios, rezago y baja eficiencia terminal, principalmente. El sistema tutorial en el nivel de licenciatura se inicio en la Universidad Nacional Autónoma de México (UNAM) dentro del Sistema de Universidad Abierta (SUA), en dos modalidades distintas: individual y grupal. En la primera se atienden las dudas surgidas en el proceso de estudio particular del alumno y en la grupal se favorece la interacción de los estudiantes con el tutor para la solución de problemas de aprendizaje o para la construcción de conocimientos.

Programa que fue introducido por la Universidad Estatal de Sonora, desde el año 2004 con base a los lineamientos propuestos por la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) con el fin mejorar el acceso y la adaptación de los estudiantes, la orientación durante los estudios y la ayuda en la integración laboral, así como mejorar la atención brindada a los estudiantes y buscar un seguimiento más personalizado. Los cambios que se producen requieren de nuevas necesidades de formación como: el fenómeno de la globalización, los cambios de la sociedad de la información, la revolución tecnológica en las comunicaciones, la configuración del trabajo basado en la gestión del conocimiento, el nuevo marco organizativo del trabajo con rápida caducidad; son varias las tendencias que hacen importante la orientación y la tutoría sean inherentes a la función docente y que además son indicadores de calidad.

PLANTEAMIENTO DEL PROBLEMA

Para llevar a cabo el estudio se decidió partir de universitarios con un desempeño académico bajo o reprobatorio en algunas de sus asignaturas; con el objetivo de conocer o identificar el origen de su desempeño como estudiantes, la relación entre resultados académicos y estilos de vida, y desarrollo integral de su persona. Cabe aclarar que el 90% de los estudiantes de la muestra son alumnos irregulares por las siguientes situaciones: reprobación, rezago y/o convalidación de estudios por provenir de otras instituciones de educación superior.

MARCO TEORICO

La sociedad actual globalizada y de información, se caracteriza por ser principalmente una sociedad de consumo. El avance de la ciencia y la tecnología ha hecho a este mundo más complejo, generando la apariencia de un mundo “libre” con un gran abanico de posibilidades desde la comida, diversión, profesión, trabajo, la elección de pareja y de familia, construyendo así estilos de vida que justifican y reproducen el tipo de economía, política y cultura de estas sociedades. Ante esta diversidad de opciones hoy más que nunca es necesario enseñar a pensar y a sentir de manera más crítica, creativa y ética a los adolescentes y jóvenes. Estos estilos de vida implican para los adolescentes (como etapa de transición al mundo adulto) un gran peso en la toma de decisiones. Su capacidad de elegir acertadamente supone la habilidad de valorar opciones de manera intencional y consciente, permitiéndoles a los adolescentes construir estilos de vida más saludables.

Como lo señala Krauskopf (s/f), la mirada que actualmente tenemos los adultos de los adolescentes, los identifica como una población problemática, que a menudo queda estigmatizada, esto puede ser una situación riesgosa que puede facilitar en los mismos una identidad negativa. La valoración social del mundo adulto (maestros, padres de familia...) contribuye significativamente a la construcción de la identidad de los adolescentes cuya necesidad de ser reconocidos como personas puede llevar a tener conductas problemáticas por el temor de “no ser nadie”.

El reto para la familia y la escuela como primordiales socializadoras de los jóvenes junto con el grupo de iguales, ante los vertiginosos cambios sociales es la construcción de propuestas que respondan al desafío de crear opciones adecuadas a este sector “vulnerable” socialmente, para pasar de una visión de un sector problemático y de exclusión social a un sector positivo y desarrollador hacia su bienestar personal, familiar, profesional y social.

La vulnerabilidad sociocultural de la etapa de la adolescencia se asocia al concepto de “conductas de riesgo”. El riesgo implica la probabilidad de que la presencia de uno o más características o elementos nocivos incrementa la aparición de consecuencias adversas para la salud, el proyecto de vida o la sobrevivencia personal o la de otros (Krauskopf, s/f).

La mayoría de las investigaciones a nivel nacional e internacional Palacios, Bravo, Andrade (2007), Acero, Escobar, castellano (2007) y Gómez (2000) considera como las siguientes conductas de riesgo para los adolescentes: 1. Consumo de drogas legales (alcohol y tabaco) e ilegales, 2. Accidentes automovilísticos (exceso de velocidad), 3. Propensión a la violencia y conductas antisociales, 4. Embarazos no deseados, enfermedades de transmisión sexual (sida) y la promiscuidad sexual y 5. La depresión, el estrés y el suicidio.

Las conductas agrupadas bajo el nombre de riesgo, pueden ser diferentes entre sí, pero su función psicológica en los adolescentes suele ser similar. Con ella los adolescentes pretenden expresar el rechazo a las normas convencionales, su independencia ante el control paterno, alcanzar un rol prestigioso con el grupo de amigos, que en algunas ocasiones expresa una adaptación pasiva a una sociedad de consumo,

que define a las personas por el “tener” (cosas, poder, relaciones) más que en el “ser” una mejor persona humana, moldeando a través de los medios masivos de información (TV, Internet...) estilos de vida no saludables.

La Organización Mundial de la Salud, define a la salud: como un estado completo de bienestar físico, psíquico y social, y no únicamente como ausencia de enfermedad o discapacidad (Álvarez y Bisquerra, 1998). Si reflexionamos sobre esta conceptualización podemos observar que la salud no es exclusividad del sector médico, sino que incluye a otros contextos sociales entre los que podemos destacar a la familia y a la escuela como promotores de salud en los niños y adolescentes.

Existen múltiples variables que explican este fenómeno de riesgo, pero la mayoría de los investigadores coinciden que las variables más relevantes son las “psicosociales” incluyéndose en espacios sociales, familiares, escolares y del grupo de amigos. En todos estos espacios encontramos factores que incrementan la experimentación conductas de riesgo: 1. en lo social se destaca la accesibilidad y la aceptación del consumo de sustancias de manera formal (legales) e informal (actitudes y valores favorables al consumo), 2. en la familia se observan, relaciones afectivas pobres, una mala comunicación caracterizándose como familias disfuncionales y problemáticas, que en general, coexiste con un consumo paterno de drogas, 3. en la escuela se identifica con variables como, la reprobación escolar y la insatisfacción con la institución y 4. a nivel individual se caracteriza por una baja autoestima, la necesidad urgente de aprobación social, un alto nivel de búsqueda para experimentar nuevas sensaciones, que en ocasiones puede llevar a realizar conductas antisociales. Feldman (2006), indica que este nivel la incongruencia entre sus necesidades interiores y el mundo que los rodea puede llevar a los jóvenes a un vacío existencial, a un sin sentido de la vida. (Gómez, 2000).

Si bien en nuestras sociedades resulta aceptable cierto grado de experimentación del alcohol y del tabaco, a partir de la adolescencia, con variaciones de un contexto sociocultural u otro, la mayoría de los jóvenes al llegar a la vida adulta adoptan pautas de consumo aceptables, y no llegan a presentar problemáticas de consumo. Sin embargo es alarmante que por distintas razones, haya un número mayor de adolescentes y jóvenes que se adhieren a patrones de consumo y de situaciones de riesgo (violencia, fracaso escolar, depresión, sexualidad irresponsable, entre otros).

La familia y la escuela deben promover estilos de vida saludables. Educando hacia un enfoque de prevención de riesgos, el cual asume que a mayor conocimiento sobre los eventos negativos, mayor posibilidad de actuar sobre ellos, con la intención de evitarlos cambiando las condiciones que exponen al individuo o grupo a adquirir la enfermedad o daño. La colaboración familia y escuela deben impulsar junto con el estado políticas y programas de calidad para los adolescentes y jóvenes que promuevan zonas de protección (apoyo familiar, permanencia en el sistema educativo, trabajo, acceso a los servicios de salud) que permitan el desarrollo de una identidad positiva de los adolescentes como agentes de cambio hacia una sociedad más democrática.

Los programas sociales dirigidos a jóvenes deben disminuir la vulnerabilidad y el daño (zonas de riesgo) al que se encuentran expuestos; con una detección precoz de la población en riesgo, elaborando programas para estilos de vida saludable, como procesos formativos a incorporarse como temas transversales en los proyectos educativos formales y no formales incorporando a los propios jóvenes a las propuestas y ejecución de los programas de educación para la salud, escolares o gubernamentales. Integrando a adultos (padres y maestros) capacitados y convencidos hacia la creación de redes de apoyo comunitarias. (Álvarez y Bisquerra, 1989)

METODOLOGIA

La metodología de investigación que se utilizó en este proyecto es cualitativa, aunque también se vale de algunas herramientas de análisis cuantitativo para lograr una proximidad al problema a investigar. Para tener una primer acercamiento e identificar los estilos de vida y riesgo de los estudiantes de la Unidad Académica Hermosillo de la UES, se diseñó una encuesta que arrojara la opinión de los estudiantes sobre la conducta y hábitos en los siguientes aspectos: cuidado y prevención de la salud, relaciones interpersonales, adicciones y conductas de riesgo.

La encuesta se aplicó a un grupo de 19 estudiantes del semestre 2012-1 que cursaban la asignatura de Aprendizaje y Gestión del Conocimiento, es importante mencionar que el grupo analizado tenía las siguientes características: 1.a totalidad de los estudiantes son alumnos que por diversas razones presentan un rezago respecto a sus compañeros, 2.aproximadamente el 70% son alumnos que cursan por segunda y hasta por tercera ocasión la asignatura, es decir son alumnos irregulares, 3.un 20% cursaban la asignatura a destiempo porque se cambiaron de plan de estudios o se habían dado de baja de manera temporal en la carrera y 4.un 10% son estudiantes de nuevo ingreso a la institución y no les revalidaron la materia. En términos generales son alumnos en su mayoría de bajo desempeño académico, algunos de ellos que están iniciando por tercera ocasión una carrera universitaria sin concluir las anteriores.

ANÁLISIS DE DATOS

De los 19 encuestados 13 son varones y 6 mujeres. El 32% de la muestra pertenecían al programa educativo de Licenciado en Administración de Empresas Turísticas (LAET) el 21% son de Licenciados en Comercio Internacional (LCI) y 11% son de la carrera de Ingeniero en Geociencias (IG), y el resto pertenecían a otros programas educativos como Licenciados en Entrenamiento Deportivo e Ingeniería Ambiental Industrial. (Figuras 1 y 2)

Figura 1: Sexo de los encuestados, Masculino 32% y Femenino 68%.

Figura 2. Alumnos por Programa Educativo.

El 84% de los encuestados son jóvenes cuyas edades oscila entre los 19 y 24 años, un 11% tienen de 25 a 30 años. En lo referente a las relaciones interpersonales se detectó que aproximadamente el 70% de los encuestados tienen una buena relación con sus compañeros y sus profesores y el restante 30% lleva una relación normal. Pese a lo anterior 63 % de los estudiantes refieren la existencia de pocos enfrentamientos entre alumnos y profesores y 74% entre estudiantes.

Cuando se les preguntó quién debe encargarse de resolver los conflictos 53% expresó que estudiantes y profesores. Un 32% dijo que cada grupo se hiciera cargo de sus problemas entre estudiantes y profesores

y sólo un 5% dijo que era responsabilidad de los docentes. Con lo anterior, podemos inferir que los estudiantes les queda claro lo importante que es su participación para las buenas relaciones interpersonales, la resolución de conflictos y un 47% destacó la importancia de hablar, de comunicarse. Un 16% mencionó que se pueden hacer actividades de convivencia. (Figuras 3)

Figura 3. Insiste en que lo atienda si un compañero trata de imponer su criterio

Como sabemos, para que en una sociedad impere la justicia, el orden y la adecuada convivencia de quienes la integran es necesario que se respeten las normas tanto sociales como legislativas, en este sentido la percepción de los estudiantes pone de manifiesto un área de oportunidad importante, expresando que se van ha respetar en la medida que los profesores y autoridades sean el ejemplo en su quehacer diario y dándole importancia; así como sancionando a quien no las acate. Los resultado de esta encuesta arrojó datos un tanto preocupante; debido a que únicamente un 5% de los encuestados dijo que en la institución había mucho respeto de las normas, 37% dijo que era poco, 47% regular y 11% nada. (Figuras 4 y 5)

Figura 4. Enfrentamiento entre el Profesor y el Alumno

Figura 5. Relación entre profesores y alumnos es normal.

Ante la pregunta de que persona ha recibido violencia el 58% de los alumnos no contestaron la pregunta, un 16% recibe violencia de su familia, 11 % amigos, 5% de padres u otros y 5% no recibe violencia. Seguida de la pregunta, como reaccionan ante la violencia respondieron: 47% hablando , 16% haciendo actividades de convivencia y el 11% relacionarse entre las personas , 5% platicas de valores, 5% saliendo de la rutina, 5% cambiando la cultura en casa y 11% no contesto. Se puede observar como estas preguntas tienen una relación mientras en la primera que cuestiona si han recibido violencia el 58% repospondio que no, pero ante la pregunta de como reaccionan ante la violencia solo un 11% no respondió; es decir; un 47% que tal vez no respondió sinceramente la primer cuestionamiento que sería un aspecto a estudiar para futuras investigaciones; considerando algún otro método donde se pueda sensibilizar a los estudiantes de la importancia de comunicar los problemas que le afecta para buscar soluciones en beneficios de ellos mismos. (Figuras 6 y 7)

Figura 6. El porcentaje más alto no contesto esta pregunta.

Figura 7. Los conflictos se resuelven hablando.

En lo referente a la auto estima la percepción de los encuestados es buena 48%, muy buena 42% y sólo un 5% declaró que era mala. En lo relacionado al manejo del estrés un 32% expresó que no lo controlan como quisieran y el 21% dijo que lo controlaban siempre y un 42% que casi siempre. Se pudo detectar que el 74% de los estudiantes siente en algún momento estrés que les pudiera estar afectando, no se debe de dejar de lado que son estudiantes con algún rezago académico.

Las horas de sueño que tiene los estudiantes no son suficientes, sólo 21% duerme 7 horas diarias y el 70% solo a veces. No se preguntó en la encuesta pero de manera directa con frecuencia los alumnos expresaban que por las noches o salían con amistades o pasaban mucho tiempo en las redes sociales por internet.

En lo relacionado al cuidado de la salud se pudo inferir que entra dentro de los intereses de nuestros estudiantes ya que un 37% hace ejercicio o realiza algún deporte de manera rutinaria y 27% algunas veces. (Figura 8)

Figura 8 .La mayoría realiza algún deporte o ejercicio.

Al parecer el autocuidado es más por imagen que por salud ya que sólo un 11% va al doctor de manera frecuente por prevención y sólo el 16% va al odontólogo de manera preventiva. En lo que se refiere a si examinan su cuerpo, sólo 31% de los estudiantes lo hace en busca de cambios físicos. En lo que se refiere a situaciones de riesgo al parecer las relaciones sexuales no son una de ellos, ya que sólo un 10% corre el riesgo de mantener relaciones a veces con preservativo, el 53% siempre lo usa y un 21% practica la abstinencia.

En lo que respecta a los vicios, en particular el cigarrillo, tal parece que el consumo de tabaco no es un gran problema para los encuestados ya que el 74% no fuma, el 21% consume de uno a tres cigarrillos al día y únicamente 5% consume más de ocho. En este sentido, sigue siendo importante las campañas antitabaco porque lo que en un tiempo se consume de manera moderada se puede convertir en una adicción.

El 100% de los encuestados declaró que no consumen drogas de ningún tipo, pero no por ello están libres de riesgo porque conviven frecuentemente con personas que si las consumen. Un 21% dijo que 2 ó 3 de sus compañeros usan drogas, 10% expresó que más de 4 personas allegadas a él lo hacen y 11% dijo que casi todos sus compañeros las consumen. Los datos anteriores constituyen un foco rojo que debe atender de manera inmediata pues esos compañeros y allegados o son estudiantes de la institución o están en un círculo de influencia muy cercano a nuestros alumnos. El consumo de cerveza es otro signo de alerta, ya que 37% beben en las fiestas, 32% los fines de semana. Al igual que las drogas el consumo frecuente de bebidas con alcohol puede generar una adicción.

Los hábitos alimenticios como bien sabemos que se transmiten desde los núcleos familiares, es decir, de padres a hijos y éstos están influidos por varios factores, entre los que destacan: el lugar geográfico, el clima, la disponibilidad de la región, las costumbres y experiencias, y desde luego, también tiene que ver la capacidad de adquisición, la forma de selección y preparación de los alimentos y la forma de consumir, es decir, los horarios, la compañía, etc. Por lo tanto, los hábitos alimenticios es un conjunto de costumbres que determinan el comportamiento de los estudiantes en relación con los alimentos y la alimentación. Al hacerle la pregunta a los estudiantes, si consumen entre comidas alimentos saludables el 37% contestaron que algunas veces, y el 10% que nunca, el 11% muchas veces y el 5% no contestó, percibimos que son muy pocos los que entre comidas consumen alimentos saludables.

En lo que se refiere si están pasados de peso, contestaron el 5% que si de 9 a 15 kilos y el 37% respondieron que de 5 a 8 kilos, y el 58% contestó que no. Nos damos cuenta que casi la mitad de los entrevistados está pasado de peso, lo cual es preocupante y debemos de implementar estrategias mediante nutriólogos para reducir este porcentaje. Encontramos que los estudiantes en su mayoría no consumen la cantidad recomendada de agua natural al día, porque sólo el 37% asegura consumir agua de manera regular durante el día. Sin embargo, los resultados arrojaron, que el consumo de gaseosas es alrededor del 80%. Los alumnos encuestados, en este rubro, respondieron de manera alarmante al consumo de comidas rápidas y comida chatarra, siendo aproximadamente entre un 70% y 80% que de manera constante se alimenta de forma no saludable. Lo anterior, se ve reflejado en nuestra encuesta que nos indicaron que existe sobrepeso en nuestra comunidad estudiantil.

CONCLUSIÓN Y SUGERENCIAS

Los resultados son una aproximación de las conductas de riesgo y salud de los estudiantes de la Unidad Académica Hermosillo de la UES que tienen como principal característica el rezago académico; lo que permitirá en futuras indagaciones replantear las herramientas a utilizar, con el objetivo de tener un mayor acercamiento con los estudiantes, para que comuniquen realmente cual es su situación, debido a que en algunos de los casos denota la abstención de ellos ante las preguntas planteadas. No obstante, los resultados en este primer acercamiento se concluyó lo siguiente:

Resulta fundamental que se impartan cursos o alguna asignatura de formación integral que promueva entre los estudiantes la salud física y mental, pero más de manera preventiva que remedial. Motivo por el cual, se requiere un Programa Institucional de Tutorías con más efectividad que cobertura o simulación en la cual se apoye a los alumnos “problema” sin descuidar a los buenos estudiantes que requieren impulso para potenciar sus cualidades.

Es muy importante que los puestos directivos sean ocupados por personal sensible a las necesidades académicas y humanas de alumnos y profesores que a las del sistema administrativo. Es necesario, incorporar más a los estudiantes en actividades sustantivas de la institución que le beneficien de manera directa para no sólo atenderlo, sino también contribuir a su responsabilidad personal y social.

Se recomienda ampliar los servicios de salud física y mental acordes al crecimiento de la población estudiantil. Es preciso, vincularse de manera efectiva con otras instituciones de salud o educación públicas para que se mejore la atención integral del alumno sin necesidad de que sea más costoso. Se deben desarrollar programas de servicio social encaminados a incidir positivamente en la sociedad que finalmente beneficia a nuestros estudiantes, pues es el ambiente en el cual habitan.

Incorporar en el Programa Institucional de Tutorías un sistema incluyente y participativo en el cual se involucren de manera más activa profesores, estudiantes, empleados y padres de familia.

Realizar diagnósticos específicos de las problemáticas de mayor impacto de nuestros estudiantes con la finalidad de establecer indicadores y metas que a corto y mediano plazo que controlen o erradiquen alguna problemática: ejemplo el uso de drogas, alcoholismo, enfermedades de transmisión sexual.

Utilizar una bases de datos en la cual se de seguimiento a cada uno de nuestros estudiantes. Y finalmente, podemos decir que es de suma importancia, solicitar más recursos estatales y federales para fortalecer la atención a los estudiantes por medio del Programas Institucional de Tutorías.

VISIÓN DE LA CALIDAD Y EL RIESGO EN HOSPITALES CON PROGRAMAS DE FORMACIÓN MÉDICA EN COLOMBIA

José Alexander Carreño Dueñas, Universidad del Rosario

RESUMEN

Esta Investigación analizó la tendencia que tuvieron los resultados de los indicadores de tasa de infecciones intrahospitalarias y de mortalidad hospitalaria desde el año 2006 hasta el 2010. Se establecieron las diferencias de estos resultados entre Hospitales, con y sin programas de formación en medicina, tantos públicos como privados en más de 110 Instituciones de salud de 11 ciudades de Colombia.

Se evidenció el impacto de la promulgación de la ley 30 de 1992, sobre el número de programas de medicina, que fue incrementado considerablemente en la última década. Esta situación llevó a considerar dos cosas: primero que el número de Instituciones de práctica en el país podría ser insuficiente ante la gran cantidad de nuevos estudiantes de medicina, con algún grado de hacinamiento en los sitios de práctica y segundo que esa situación podría tener algún efecto sobre la calidad de la atención en salud, especialmente sobre el resultado de los indicadores planteados.

Con los resultados obtenidos se lograron evidenciar importantes deficiencias técnicas en el reporte obligatorio de la información por parte de los Hospitales, en donde solo un 10% de estos cumplieron con el reporte completo de los indicadores desde el año 2006; así mismo se encontró que se registra solamente un 65% del total de la información que debería estar publicada para la consulta de la ciudadanía. Para el análisis estadístico de los datos, se utilizó el Ji al cuadrado de tendencias, que no arrojó diferencias estadísticamente significativas de los indicadores en los periodos analizados entre los tipos de Hospitales; pero sí evidenció diferencias entre la suma de mínimos cuadrados de dos de los indicadores. Sin embargo se requieren estudios adicionales controlados para establecer diferencias en los resultados de la calidad en salud.

PALABRAS CLAVES: Indicadores de calidad en salud, Infecciones intra hospitalarias, mortalidad intra hospitalaria, Hospitales de enseñanza

RISK AND QUALITY HEALTH IN TEACHING HOSPITALS IN COLOMBIA

ABSTRACT

This study described the results of the indicators of nosocomial infections and mortality from 2006 to 2010 and established differences between teaching and nonteaching hospital both public and private in 11 cities in Colombia. This study found that the number of medical schools increased considerably in the last decade due to the Law 30 of 1992 and perhaps the number of institutions practice may be insufficient to the new students. Of the other hand this effect may have some impact over quality of care and outcome indicators measured. Additionally this study, showed important technical deficiencies in mandatory reporting of information by the hospitals, because only 10% of them reported the totally of the indicators since 2006, and only 65% of total information that should be published.

The statistical analysis of the data, (the chi-square trend), not showed no statistically significant differences in the indicators in the periods analyzed between institutions, but they showed differences between the total least squares two of the indicators. Moreover it's necessary further researches for establish real differences between teaching Hospitals

KEYWORDS Quality of health, teaching and nonteaching hospitals, nosocomial infections, mortality.

INTRODUCCIÓN

Siempre ha existido un extenso debate entre los profesionales de la salud y la comunidad en general acerca de si los resultados de calidad en salud son más favorables en Hospitales con programas de formación en medicina frente a los que no tienen programas. Algunos estudios han mostrado resultados a favor de unos y en contra de otros.

El Hospital Universitario se define como un escenario académico, científico – técnico que tiene como fundamento esencial la construcción de conocimiento sobre la enfermedad, generar un pensamiento crítico frente al saber técnico existente y servir de escenario para la práctica y formación de futuros profesionales de la salud (Eslava 2002). Así mismo un Hospital Universitario necesita adecuarse estructural y funcionalmente para permitir una mayor y mejor organización para la docencia de la medicina y la investigación clínica. Necesita además una adecuada relación de los servicios asistenciales y las unidades docentes así como con las áreas de facturación y cartera (Millan 2008). Los hospitales Universitarios gozan de amplia reputación en la opinión pública de los Estados Unidos, consistente en que estos por lo general proveen una atención médica de mayor calidad (Boscarino 1992). Sin embargo el costo de la atención en estas instituciones puede ser mayor en comparación a los que no lo son (Coleman and Dobson 1998; Sloan 1999; Whittle et al. 1998).

Desde un punto de vista público y profesional, se puede entender que las características de los hospitales universitarios se especializan en el tratamiento de enfermedades complejas y de muy escasa presentación, así como de pacientes complicados; esto gracias a la provisión de servicios especializados, tecnología avanzada y la conducción de investigación biomédica (Neely 1998). Algunos servicios como cirugía especializada y trasplantes de medula ósea se aplican predominantemente en hospitales universitarios. (Levin y Cols 2000); así mismo se atienden patologías muy complejas y sofisticadas, lo que obliga a que la atención médica tenga un enfoque multidisciplinario. Esta condición facilita un aumento de los costos frente a la atención ofrecida en un Hospital no Universitario. (Kupersmith 2005) Otras misiones distintivas de los Hospitales universitarios incluyen la educación médica y el entrenamiento, innovaciones en la terapia clínica y tratamiento para pacientes con recursos bajos particularmente en los hospitales docentes públicos. (Blumenthal y Cols, 1997). Sin embargo a pesar de la reputación de ser altamente especializados en el cuidado y el tratamiento, en la práctica ofertan servicios que en su mayoría son rutinarios como manejo de falla cardíaca, neumonía y accidentes cerebro vasculares (Association of American Medical Collages 1998).

En una revisión sistemática que incluyó 132 estudios desde 1971 hasta 2005 no evidenció que la salud de los pacientes se afectara por la presencia de estudiantes de medicina; sin embargo las diferencias encontradas en algunas enfermedades específicas no pudieron ser excluidas y es probable que si existieran pequeñas diferencias entre los resultados (Papanikolaou, 2006). En otra revisión de la literatura que incluyó 23 estudios de 1989 a 2004, comparó la calidad de la atención en salud entre Hospitales Universitarios y no Universitarios en Estados Unidos y encontró que los primeros tuvieron mejores resultados en calidad que los no Universitarios, basados en indicadores de mortalidad. (Kupersmith 2005). Otro estudio realizado en el año 2000 determinó la asociación de la calidad en salud y la mortalidad por infarto agudo de miocardio en pacientes que eran usuarios del servicio de Medicare; logró demostrar una asociación con una mejor calidad de la atención y con una reducción de la mortalidad en los hospitales Universitarios (Allison, 2000). En West Suffolk y Southern Norfolk (Inglaterra), mediante un estudio se evaluó la satisfacción de los pacientes en cinco Instituciones de práctica médica asistencial, utilizando la

aplicación de una encuesta validada, dirigida a 240 pacientes después de la consulta médica. La satisfacción se evaluó con y sin presencia de estudiantes de medicina de la Universidad de Cambridge. Los resultados arrojaron que la satisfacción no se ve afectada por la presencia de estudiantes durante la consulta; en tanto que los pacientes apoyan la presencia de los estudiantes siempre y cuando se les informe y se les permita decidir mediante un consentimiento informado la aceptación o no de su presencia en la consulta (Benson, 2005). Otra revisión sistemática que incluyó veinte estudios realizado entre 1985 y 2001, encontró en algunos de estos, resultados más favorables para los Hospitales Universitarios en servicios de pediatría y cuidado intensivo neonatal; sin embargo esta revisión concluyó que muchos de los estudios fueron realizados con base en estudios observacionales y no mediante estudios de intervención, debido a esto pueden haber restricciones propias de esta clase de estudios y pueden tener limitaciones con respecto a variables que no se pueden modificar. (Ayanian 2002)

Otras revisiones sistemáticas que han evaluado la calidad de la atención entre estos Hospitales han encontrado que para condiciones comunes particularmente en pacientes ancianos, los Universitarios ofrecen mejor calidad de atención frente a los que no los son (Cunningham 1999). Otro estudio realizado en el año 1998 mediante una revisión clínica en cuatro estados de Norte América comparó los resultados de la calidad en salud de dos patologías frecuentes (insuficiencia cardíaca congestiva y neumonía) entre estos Hospitales y encontró mejores resultados en los Universitarios en términos de disminución de la tasa de mortalidad (Ayanian, 1998). Para el año 2011 en la lista de los mejores 45 Hospitales de América Latina, el 20% de ellos fueron Hospitales Universitarios (América Economía 2011)

Contrariamente otros estudios sugieren que los Hospitales Universitarios pueden ofrecer una menor calidad en la atención frente a los que no lo son; particularmente por la presencia sustancial del personal en entrenamiento y un rol menos importante de los médicos tratantes que podría resultar en una atención más fragmentada y en un menor cuidado del paciente para lo cual otros estudios plantean que se requiere ajustar los programas de formación médica (Battles JB 2001, Halbach JL 2005). Otros estudios que también reportaron empeoramiento de la calidad en Hospitales Universitarios fueron especialmente en áreas de cuidado de enfermería, cuidado intensivo pediátrico y servicios quirúrgicos (Pollack 1994, Sloan 1999, Volpp KG 2003). Otro estudio consideró que en los Hospitales Universitarios ciertos equipos de salud pueden llegar a requerir una mayor formación para evitar una menor calidad en la atención. (Flin R 2004) y otros estudios en cuanto al impacto sobre las tasas de mortalidad, no encontraron diferencias a corto plazo en ninguno de los Hospitales (Schultz, Whittle 1998).

Otros estudios han tratado de determinar si existe alguna asociación entre los estudiantes de medicina en formación y la ocurrencia de eventos adversos por la falta de formación y experiencia, pero en realidad ninguno de esos estudios demostraron tal asociación; los eventos que ocurren en los pacientes son generalmente el resultado de una atención deficiente que no solamente es debida por la presencia de estudiantes. (TA Brennan 2004), (Aron DC 2002) Incluso algunos estudios plantean que la dotación no controlada de nuevas tecnologías son las que tiene una mayor asociación con los eventos adversos que los mismos estudiantes (Koppel R 2005, Adams KA 2005).

La calidad en salud ha sido definida como “la obtención de los mayores beneficios con menores riesgos para el paciente en función de los recursos disponibles y de los valores sociales imperantes” (Donabedian A. 1980). Suñol R. (2008) la define como: “La medida en que los servicios de salud, tanto los enfocados a los individuos como a las poblaciones, mejoran la probabilidad de unos resultados de salud favorables y son pertinentes al conocimiento actual profesional. La Organización Panamericana de la Salud (OPS), por su parte, la define: “Conjunto de características de un bien o servicio que logran satisfacer las necesidades y expectativas del usuario o cliente” (1999). Espigares (2002), considera la calidad en salud como la relación que debe existir entre la satisfacción de las necesidades y expectativas de los pacientes y el menor gasto de recursos.

Medir la calidad en salud es un tema complejo y por lo cual se utilizan indicadores que son medidas cuantitativas de la ocurrencia de eventos expresados en porcentajes (Espigares 2002). La medición de la calidad en la atención médica ha llevado a evaluar muchos indicadores que permiten establecer diferencias entre hospitales; algunos de ellos son: la mortalidad intra hospitalaria que aparece como uno de los indicadores que más ha sido comparado; otros ampliamente utilizados son también: tasa de infecciones intrahospitalarias, tasa de eventos adversos, tasa de resistencia bacteriana, porcentaje de satisfacción, entre otros. En Colombia la calidad de la educación que reciben los estudiantes se evalúa mediante el registro calificado, la acreditación de programas y de instituciones, el registro calificado de especialidades médicas y los exámenes de calidad de la educación superior (ECAES) y el establecimiento de estándares de calidad superior para las facultades de medicina y Hospitales universitarios es con la acreditación.

Colombia de acuerdo a su población tiene una sobre oferta de Escuelas y de estudiantes de medicina, para el 2011 había 58 facultades (1 facultad por cada 810,000 habitantes) y más de 6500 estudiantes. (Gaviria, 2006). Pero con una limitación importante de Hospitales, centros de práctica y Docentes. De acuerdo a la información publicada por el Ministerio de Salud, actualmente en Colombia del total de las Instituciones prestadoras de servicios de salud habilitadas, el 89% de ellas son de naturaleza privada y de las 10,025 Instituciones que prestan servicios de salud en todo el país, tan solo 22 se encuentran acreditadas (0,2%) y de esa cifra 11 Hospitales tienen programas de formación en medicina.

Ante esta situación es necesario establecer si la calidad de educación que reciben los estudiantes es la más adecuada y si esta condición tiene algún impacto sobre la calidad de la atención del paciente, especialmente en dos indicadores: infección intra Hospitalaria definida por el Ministerio de Salud de Colombia como el proceso contraído en un centro hospitalario que se manifiesta durante o después de 48 horas de la internación y que no estaba presente ni incubándose en el momento del ingreso. Una infección adquirida en el hospital puede ponerse de manifiesto luego del alta del paciente. Según las estadísticas de la OMS una media del 8,7% de los pacientes de un hospital presentan infecciones nosocomiales. La mortalidad Hospitalaria definida como el número total de pacientes hospitalizados que fallecen después de 48 horas del ingreso dentro del total de pacientes hospitalizados. Este indicador ha sido utilizado dentro de los sistemas de salud para evaluar resultados relacionados con la atención en salud brindada durante la hospitalización del paciente y detectar problemas de calidad en la atención. Se encuentra directamente relacionado con características como el nivel de complejidad, niveles socio culturales y perfil epidemiológico de la población usuaria y por esta razón requiere de ajustes de riesgo sensibles.

METODOLOGÍA

Se seleccionaron los Hospitales más importantes de segundo y tercer nivel de complejidad, públicos y privados de once ciudades principales de Colombia, posteriormente se obtuvo la información registrada en el sistema de información para la calidad de la atención en salud del Ministerio de salud y protección (<http://201.234.78.38/ocs/public/informacion/Default.aspx>) de los indicadores de infección intra Hospitalaria y mortalidad reportados semestralmente por las Instituciones desde el año 2006 al 2010. Una vez obtenida la información, se clasificaron los Hospitales según su naturaleza pública o privada y se estableció el tipo de convenio docente asistencial que tenían con las Universidades. Los datos se tabularon y fueron analizados con epi-info y SPSS, se realizaron los siguientes cálculos: descripción de variables, suma de mínimos cuadrados (LMS) para los diferentes periodos, *ji* al cuadrado de tendencias, para establecer diferencias estadísticamente significativas entre los periodos observados.

RESULTADOS

Se realizó un análisis de la tendencia de los indicadores de Mortalidad Hospitalaria mayor a 48 horas y tasa de infecciones intra hospitalarias desde el año 2006 al 2010; El total de Hospitales incluidos fueron

112 y se escogieron principalmente por las siguientes condiciones: nivel de atención o complejidad (solo se incluyeron niveles II y III) y tamaño de la institución > a 100 camas. En total se incluyeron 112 Hospitales, de estos 83 (26%) fueron públicos y 29 (74%) privados con y sin programas de formación en medicina, encontrando que todos los Hospitales Públicos tuvieron programas de formación en medicina. De acuerdo a la distribución según las actividades docentes, el 62% de todas las instituciones tenían convenios docente asistenciales con programas de medicina y y de estas Instituciones privadas 43 (51%) eran docentes. (Tabla 1)

Para el indicador de infección intrahospitalaria, de las 112 Instituciones escogidas tan sólo 10 de Ellas reportaron la totalidad de los 8 periodos, lo que equivale a un 9% de cumplimiento, 4 Instituciones en Bogotá, 4 en Medellín, 1 en Barranquilla y 1 en Manizales. De los 896 datos esperados de los resultados de los indicadores (112 Instituciones, multiplicado por 8 periodos) tan solo se obtuvieron 595 datos; lo que equivale al 64,4% de reporte. El resultado de los 8 periodos de estudio no mostró una tendencia definida de este indicador a la mejoría o al empeoramiento (Figura 1). El resultado más bajo de tasa de infecciones fue obtenido por las Instituciones privadas sin convenios docentes 1.62 (IC 95% 1.32 – 2.02) en contraste con las Instituciones privadas con convenios docentes 2.3 (IC 95% 2.25 – 2.63) y las Publicas 2.2 (IC 95% 1.98 – 2.41) (Tabla 2)

Para el indicador de Mortalidad Intrahospitalaria, de 111 Instituciones, nuevamente 11 reportaron la totalidad de los 8 indicadores, un cumplimiento del 10%. De los 888 datos esperados, tan solo se obtuvieron el 65% de los datos (577 datos). El resultado de los 8 periodos de estudio no mostró una tendencia definida de este indicador a la mejoría o al empeoramiento (Figura 2) La mayor tasa de mortalidad correspondió a los Hospitales Públicos docentes que fue de 20.14 (IC 95% 21.61 – 20.62), mientras que la menor tasa se observó en las Hospitales docentes privados con 16.33 (IC 95% 15.27 – 17.24). (Tabla 3)

DISCUSIÓN

Puede decirse que las condiciones para la formación de estudiantes de medicina en Colombia no son las ideales debido a situaciones de saturación y hacinamiento, porque existe una limitación importante en la cantidad de escenarios para realizar las prácticas, debido a una sobre oferta de escuelas de medicina, ya que se considera que 58 Escuelas de medicina en Colombia son demasiadas de acuerdo a la población del país, 1 escuela por cada 810,000; teniendo en cuenta que en otros países de la cantidad es menor siendo de aproximadamente de 1 escuela por cada 2 millones de habitantes; por ejemplo Argentina tiene 24, Chile 10, México que tiene una población de mas de cien millones de habitantes tiene 55; en Europa países como España con una población un poco menor que la de Colombia tiene 31, Alemania con casi el doble de la población tiene 37. Brasil 87, Estados Unidos 154 (Database of Medical School 2011)

La formación de estudiantes de medicina es predominantemente privada, se encuentra que el 74% de las escuelas de medicina son privadas y en cuanto a la calidad de educación de estos programas sólo 18 se encuentran acreditados (30%). Es evidente que Colombia requiere una modificación a la regulación actual frente a la cantidad de Escuelas de Medicina que implique estudios de necesidad por regiones y que limite la creación de nuevas Escuelas de Medicina. Así mismo es necesario realizar una distribución mas equitativa del número de profesionales en las regiones geográficas; porque se observa una mayor concentración en las zonas centrales urbanas, mientras que las zonas rurales se encuentran menos cubiertas; mas sin embargo esta inadecuada distribución de profesionales, se produzca quizás por la inseguridad debida a los conflictos armados en esas zonas que vive el país.

La gran mayoría de Hospitales que tienen programas de formación en medicina, no cuentan con la categoría de ser Universitarios y tal como se ha establecido por la normatividad, para poder obtener esta

categoría deberán acreditar sus programas de formación y esto implica inversiones de recursos adicionales que se desconoce realmente si estarán dispuestos a asumirlos y esto puede conducir una crisis en cuanto a la cantidad de escenarios de formación académica para el 2016, ya que para ese año será el plazo máximo para que los Hospitales que cuentan con programas de formación en medicina se acrediten y obtengan la categoría de Universitarios; de lo contrario no podrán seguir recibiendo estudiantes. De acuerdo al marco normativo vigente la educación de estudiantes de medicina podría enfrentarse a la falta de escenarios adecuados para la docencia y de mantenerse la tendencia actual podría existir una mayor concentración de estudiantes en la región central y costa atlántica. Este aumento con la oferta de médicos graduados, probablemente el mercado laboral no podrá absorber.

En la actualidad no existe un consenso sobre la cantidad adecuada de médicos necesarios para atender las necesidades de salud en un país; sólo se toma en cuenta un parámetro básico de cálculo establecido por la Organización Panamericana de la Salud (OPS) de 10 médicos por cada 10000 habitantes, desconociendo si esta relación tiene aplicación práctica para cada país o por el contrario obedece a una recomendación de carácter internacional. Datos del Ministerio de la Protección Social - Cendex en el informe sobre los Recursos Humanos en Salud en Colombia, balances, competencias y Prospectiva Tercera Edición 2009 reportaron un censo de médicos de 70,079; que de acuerdo al parámetro de la OPS existiría una sobre oferta de mas de 25,600 médicos, situación que puede empeorarse de no tomar medidas correctivas. Adicionalmente el número de médicos graduados cada año es demasiado frente a las necesidades del país; en los últimos cinco años en promedio se están graduando aproximadamente mas de 3,500 médicos por año.

En cuanto a la información en salud, a pesar que normativamente está establecido que el envío de la información de los resultados de los indicadores en salud por parte de los Hospitales debía ser semestral y obligatorio; se encontró que este reporte no se está realizando adecuadamente al encontrarse tan solo un 65% del total de los datos que deberían estar registrados y tampoco se está cumpliendo con la periodicidad establecida. Esto refleja una inadecuada cultura de reportar la información y el incumpliendo con uno de los principios normativos del sistema de información para la calidad como lo es el de validez y confiabilidad. Tan solo un 10% de los Hospitales reportaron la totalidad de los resultados.

Por otra parte el análisis estadístico de la tendencia de los indicadores de infecciones intrahospitalarias y mortalidad hospitalaria fue estadísticamente significativo en establecer ausencia de variabilidad en los resultados de los periodos analizados; lo que lleva a inferir que los resultados de estos indicadores, independientemente del tipo de Institución, no presentan tendencias ni a la mejoría ni al empeoramiento. La ausencia de variabilidad de estos indicadores desde el año 2006 al año 2010; por consiguiente lleva a pensar que no se está cumpliendo con otro de los principios normativos del sistema de información para la calidad como lo es el de eficiencia, porque no hay evidencia hacia el mejoramiento en los resultados.

Para el indicador de infecciones intrahospitalarias se desconoce si los Hospitales están utilizando la metodología propuesta por el ministerio de la protección para la captura y el respectivo cálculo, ya que puede considerarse que de acuerdo a los resultados encontrados de este indicador los resultados fueron mucho menores a los reportados por otros Hospitales a nivel mundial. Una posible explicación de este hallazgo podría ser que este indicador está siendo mal medido, si en el denominador se están agregando todos los pacientes con estancias inferiores a 48 horas. Los resultados de tasa de infecciones intra hospitalarias en Hospitales con prácticas docentes públicas o privadas presentaron una tasa un 42% mayor que las instituciones sin prácticas docentes ($p < 0,05$); con lo que puede llevar a plantear que los pacientes que asisten a Instituciones con convenios docente asistenciales pueden tener una mayor probabilidad de contraer algún tipo de infección intrahospitalaria. Esta situación contrasta con lo planteado por muchos estudios en el sentido que en los Hospitales Universitarios se atienden patologías más complejas y de difícil manejo. Mas sin embargo también podría plantearse que en los Hospitales con prácticas docentes

no se estén llevando a cabo los mejores controles para prevenir las infecciones nosocomiales dada la gran cantidad de estudiantes alrededor de un mismo paciente.

El promedio general del indicador de infecciones intrahospitalarias de todas las instituciones fue de 2.04 (IC 95% 1.32 – 2.63) esto contrasta con la prevalencia encontrada en varios estudios: en Holanda en 2009 llamado PREZIES que recolectó información de 26,937 pacientes hospitalizados en donde la tasa de infecciones intra hospitalarias fue 7.2% (IC 95% 1.4 - 16.5) (Van der Kooi, 2009). Otro estudio realizado en Serbia en el año 2009 entre 764 pacientes estudiados, la tasa de infecciones intra hospitalarias fue de 6.2% (IC 95% 5.6 – 6.8) (Ilic & Marković-Denić, 2009). Igualmente un estudio prospectivo de 5 años realizado en Cuba desde 2000 hasta el 2004, analizó la información de 93,684 pacientes que egresaron de un Hospital de tercer nivel de atención, encontrando que 2,979 pacientes presentaron algún tipo de infección intra hospitalaria, que corresponde a una incidencia acumulada de 3.1% por cada 100 pacientes egresados. (Suárez, 2009) Los datos del National Nosocomial Infections Surveillance (NNIS) de 1992 a 2004 realizado en Estados Unidos mostraron que entre un 5 a 10% de los pacientes hospitalizados presentaron al menos 1 episodio de infección intra hospitalaria durante su estancia. Podemos observar que los datos de estos estudios mencionados, presentan cifras más elevadas de las que están siendo reportadas por los Hospitales en Colombia; lo que lleva a preguntarse por una parte: si el indicador de infecciones intra hospitalarias estará siendo bien calculado o por el contrario los resultados obtenidos de este indicador son tan buenos que superan a los de los países desarrollados.

El resultado promedio de la mortalidad evidencia que los Hospitales Públicos Docentes tuvieron en promedio una tasa de mortalidad 24% mayor que las Hospitales docentes privados. Este resultado podría contrastarse con lo encontrado en el estudio de Allison en el 2000 en donde se evidenciaron mejores resultados sobre patologías cardíacas en hospitales Universitarios; así mismo puede existir una explicación del comportamiento de este indicador en el sentido que los pacientes que asisten a hospitales públicos son personas de bajos recursos y con bajas condiciones de vida y así mismo como se ha mencionado los hospitales con prácticas docentes ofrecen una atención con enfoque multidisciplinario e incluso con tecnologías de última generación que podrían favorecer la sobrevivencia de los pacientes; pero el factor de confusión se da en el sentido que los Hospitales públicos atienden en su mayoría a pacientes de escasos recursos. Puede decirse que los resultados del indicador de mortalidad intra hospitalaria pueden estar siendo afectados por condiciones de inequidad social, tal como fue establecido por un estudio realizado en Brasil en donde se encontró una asociación estadísticamente significativa del nivel socio económico con la mortalidad general y con enfermedades circulatorias y causas externas (Carneiro de Oliveira, 2010). En este caso se plantea que las prácticas docentes carecerían de algún impacto sobre la mortalidad hospitalaria y que los resultados podrían obedecer más a condiciones socio económicas.

CONCLUSIONES

Se considera que las Instituciones con programas de formación en medicina en Colombia deberán fortalecerse en el sentido de garantizar y adecuar escenarios para atender la gran demanda de nuevos estudiantes de medicina. En este sentido se hace un llamado al Gobierno en ejercer un control sobre la calidad y validez de la información de la calidad en salud que se está siendo registrada, que de acuerdo a lo encontrado, los resultados no se relacionan con estándares internacionales y la comunidad en general no se está beneficiando y tampoco puede tomar decisiones basadas en estos resultados y determinar la demanda real de médicos que el país necesita y en ese sentido reevaluar la cantidad existente de programas de medicina.

Los Hospitales también deben ser conscientes que el objetivo principal de la medición de los indicadores es para lograr un mejoramiento y ninguno de los indicadores medidos mostró alguna tendencia hacia ello, se hace un llamado especial a reevaluar y plantear los planes de mejoramiento para el logro de este

objetivo. Es necesario incluir la cultura de la medición en los planes de estudio de los programas de formación médica de pregrado, tendiente mejorar la calidad y la validez de la información en salud.

LIMITACIONES

Con la información en salud obtenida de estos Indicadores podría ser limitado un adecuado análisis de estos datos y una evaluación apropiada de la gestión de la calidad de la atención en salud que se está prestando en los Hospitales. La información registrada podría limitar las decisiones de los usuarios para elegir libremente con base a la calidad de los servicios donde pueden ser mejor atendidos y esta situación va en contra vía de lo establecido por la normatividad vigente.

Tabla 1 Distribución de los Hospitales según su condición y por cada ciudad

CIUDAD	Hospital Público Docente	Hospital Privado Docente	Hospital Público no Docente	Hospital Privado no Docente
Bogotá	8	12	0	11
Medellín	3	9	0	3
Cali	3	4	0	5
Barranquilla		2	0	11
Cartagena	2	2	0	4
Bucaramanga	3	4	0	2
Pereira	4	1	0	2
Neiva	1	1	0	1
Manizales	1	3	0	1
Tunja	1	1	0	2
Popayán	3	1	0	1
TOTAL	29	40	0	43

Distribución de Hospitales según naturaleza pública o privada y docente o no docente

Figura 1 Tendencia del indicador de infecciones intrahospitalarias por tipo de hospital

Los Hospitales privados no docentes tuvieron una menor tasa de infecciones intra Hospitalarias en la mayoría de los periodos, frente a los Hospitales Docentes.

Figura 2 Tendencia del indicador de mortalidad intrahospitalaria

Los Hospitales privados no docentes tuvieron en promedio una menor tasa de mortalidad intra Hospitalaria, frente a los Hospitales públicos Docentes

Tabla 2 Resultados de Índice de infecciones intrahospitalaria por tipo de Hospital acumulado 2006-2010

ESTADISTICO	PRIVADO DOCENTE	PRIVADO NO DOCENTE	PÚBLICO DOCENTE
Suma de mínimos cuadrados (LMS)	2.3	1.62	2.2
Ji al cuadrado	0.008	0.018	0.005
P	0.9271	0.89439	0.94232

El análisis del indicador de Infección intrahospitalaria evidencia para los tres tipos de Instituciones con una significancia estadística ($p < 0.005$) que en los últimos cuatro años este indicador ha permanecido estable y no muestra tendencia al aumento o la disminución. El resultado de este indicador evidencia además que las instituciones que tienen convenios docentes ya sean públicas o privadas, presentaron en promedio una tasa de infección Intrahospitalaria un 42% mayor que las Instituciones no docentes.

Tabla 3 Resultados indicador de mortalidad intrahospitalaria por tipo de Hospital acumulado 2006-2010

INDICADOR	PRIVADA DOCENTE	PRIVADO NO DOCENTE	PÚBLICO DOCENTE
Suma de mínimos cuadrados (LMS)	16.33	18.5	20.14
Ji al cuadrado	0.015	0.018	0.038
valor de p	0.90377	0.89332	0.84532

El análisis del indicador de tasa de mortalidad intrahospitalaria evidencia ausencia en la variabilidad de los resultados en los últimos 4 años, con una significancia estadística de Ji al cuadrado de tendencia ($p < 0.05$), que refleja una estabilidad en el comportamiento de este indicador.

ANALISIS DE LA ESTRUCTURA FINANCIERA DE LAS EMPRESAS DEL SECTOR TURISMO, TEXTIL, LITOGRAFICO, METALMECANICO Y QUIMICO EN COLOMBIA 2000 - 2009

Alberto Elias Muñoz Santiago, Fundación Universidad del Norte
Maria Royo Burbano, Fundacion Universidad Del Norte

Las empresas no solo tienen que desempeñarse adecuadamente en el sector económico en el que se desarrollan, también tienen que hacerlo en la vertiente financiera de su actividad, esto quiere decir que deben tomar adecuadas decisiones de inversión y de financiación que puedan darle una ventaja frente a sus competidores. (BREALEY, MYERS, & MARCUS, 2007)

La decisión de inversión comienza con la identificación de las oportunidades de inversión, normalmente relacionadas con los proyectos de inversión de capital. A la decisión de inversión también se le denomina decisión de presupuesto de capital. El alcance de estas decisiones inicialmente estaba enfocado únicamente a las inversiones en activos fijos. Hoy en día, estas decisiones incluyen las inversiones en activos inmateriales, como por ejemplo Investigación & Desarrollo, en publicidad y marketing de nuevos productos o la adquisición de patentes y marcas registradas. (BREALEY, MYERS, & MARCUS, 2007) En lo que a inversión se refiere, la decisión trascendental que se toma en una empresa es la referente a la determinación de su tamaño, es decir, del volumen total de activos que se utilizarán para mantener una operación eficiente, que igualmente sea rentable y genere valor agregado para los accionistas.

Las decisiones de inversión se encuentran relacionados con aspectos tan importantes como:

- El volumen de activos fijos que se desea mantener: Planta Física
- El plazo que se le concederá a los clientes para las ventas a crédito
- El crecimiento de la empresa que va relacionado con: Expectativas de crecimiento de la economía y del sector industrial en el que se desenvuelve, la reinversión de las utilidades y la rentabilidad futura que ofrece la empresa
- La proporción que maneja la empresa entre activos fijos y corrientes
- La adquisición de activos fijos a través de medios de financiación como Leasing

Estas decisiones llevan a la determinación del capital de trabajo neto operativo que requiere la empresa para su operación. (GARCIA S., 2009) Aquí empieza a desplegarse la segunda decisión crítica de la empresa: La decisión de financiación.

La decisión de financiación consiste en conseguir los recursos financieros que las empresas necesitan para desarrollar las inversiones y realizar sus operaciones. Cuando una empresa necesita recursos puede hacerlo a través de acciones con las que compromete beneficios futuros, o la devolución del dinero invertido más una tasa de interés determinada. En el primer caso, los inversores recibirían acciones y se convertirían en accionistas de una parte de la empresa. A los inversores, en este caso, se les denominan Inversores de Capital Social. En el segundo caso, los inversores son prestamistas, es decir Inversores de Deuda. A la decisión de optar por entre financiar la deuda o el capital social se le denomina decisión sobre la estructura de capital. Para la decisión de Financiación es trascendental la determinación de la estructura financiera, que se define como la proporción entre pasivos y patrimonio que se utiliza para financiar sus activos. Esta decisión tiene dos aspectos importantes:

- Utilidades: Mientras mayor sea la proporción de deuda con respecto al patrimonio, mayor será también la cantidad de intereses a pagarse y por tanto habrá una mayor presión sobre las

- utilidades operativas, en la medida en que una disminución de éstas podría implicar incapacidad para atender el pago de intereses.
- Costo de Capital: Es el costo que la empresa le implica poseer activos, y se calcula como el costo promedio ponderado de las diferentes fuentes que la empresa utiliza para financiarlos. Es la rentabilidad mínima que deben producir los activos de la empresa. (GARCIA S., 2009)

La estructura de capital de una compañía es un elemento importante que puede impactar el valor de la misma. Obtener la relación deuda / patrimonio óptima es una tarea que en cada momento debe ser evaluada por los departamentos financieros de las empresas y por sus administradores. Es cierto que no existe una teoría única que ayude a definir los criterios para obtener la mejor estructura de capital, si existe un amplio consenso acerca de que el valor de una empresa si puede variar como consecuencia de endeudamiento por el efecto fiscal que genera y sus costos directos e indirectos. Dicho nivel de deuda debe analizarse en contexto, teniendo en cuenta no sólo las condiciones internas de la empresa y sus necesidades de caja, sino el mercado en el cual opera, su planeación estratégica y el ciclo de vida de la empresa y la industria, para poder contar a futuro con la flexibilidad financiera suficiente para tener un crecimiento sostenible. (BANCA DE INVERSION BANCOLOMBIA, 2011)

Del análisis de los cinco sectores se obtuvieron las siguientes conclusiones

- La estructura financiera de las empresas está correlacionada con el tamaño de la misma. A mayor tamaño mayor acceso a fuentes de financiación externa.
- Las empresas del mismo sector y del mismo tamaño tienden a tener la misma estructura financiera en cuanto a participación entre pasivo y patrimonio.
- La condición del sector tiende a afectar el acceso de las empresas (independiente de su tamaño) a las fuentes de financiación externas.
- Las empresas ubicadas en la ciudad de Bogotá tienen mayor acceso a las fuentes de financiación externas que las ubicadas en Medellín, Cali y Barranquilla.
- Las empresas del sector turismo, independientes de su tamaño o su ciudad de ubicación son las más intensivas en el uso de fuentes de financiación internas, especialmente el capital social.

ANÁLISIS DEL IMPACTO DE LA FINANCIACIÓN CON BONOS EN COLOMBIA EN EL SECTOR EMPRESARIAL EN LOS AÑOS 2006 AL 2010

Alberto Muñoz Santiago, Fundación Universidad del Norte

Jaime Delgado, Fundacion Universidad Del Norte

Mariana Paramo, Fundacion Universidad Del Norte

Alejandro Duque, Fundacion Universidad Del Norte

El impacto de la financiación con bonos en la economía Colombiana fue positivo en el periodo 2006 al 2010, desde la perspectiva que permitió dinamizar renglones diversos de la economía y entre ellos las empresas, sobre todo aquellas que están mejor preparadas en sus aspectos financieros y administrativos, lo que les permitió realizar procesos de emisión de bonos y negociarlos con intereses cómodos y atractivos. Sin embargo, tienen que entrelazarse una serie de factores y circunstancias entre las variables económicas para que este efecto en conjunto sea positivo (PIB, inflación, crecimiento económico, etc.), es decir, la economía en conjunto debe armonizar.

☐ Es más económico endeudarse con bonos y así financiarse a 10 o 15 años que prestarle a una entidad financiera en Colombia (Diferencias significativas).

☐ El Sector Financiero ante la creciente emisión de bonos ha bajado gradualmente las tasas de intereses y subido un poco la de los CDTs, pues éstos han bajado notablemente. Lo que implica que el financiamiento de bonos si funciona

La importancia de la financiación con bonos radica en que le permite a una empresa obtener recursos a un costo competitivo, a través de un endeudamiento que en Colombia supera en algunos casos los cinco años y en la gran mayoría los diez años, lo que trae como consecuencia que una empresa, pueda utilizar todos sus recursos apoyados por el empréstito de muchos inversionistas (compradores de los bonos).

Llama la atención que este fenómeno de los bonos, ha generado desequilibrios en las colocaciones de las entidades y bancos del sector financiero, ya que muchas empresas optan por lanzarse al mercado de valores con resultados muy integrales, sobre todo porque la tendencia de crecimiento del Mercado de Valores en Colombia así lo expresa.

En países como Colombia, se debe buscar el dinamismo de la economía apoyado en modelos como el de la financiación con bonos, puesto que muchas Pymes por ejemplo, no están en condiciones de emitir bonos, pero si urge, que las tasas de interés del sector bancario sean más competitivas, los trámites no sean excesivos y logren una armonía para todos los elementos de la economía.

A pesar de que el Sector Financiero en Colombia es mediano, pero sólido, se ha visto afectado negativamente por el crecimiento de la emisión de acciones por ciertas empresas.

Un problema paralelo es que el Banco de la República y su junta directiva son normalmente criticados por sus baches en las decisiones de política monetaria, ello amerita que debe tener en cuenta el auge de la financiación con bonos en el caso de las empresas, pues sus políticas también han de afectar este tipo de actividades.

Luego, en el 2011, la política macroeconómica apenas está tomando el rumbo que necesitaba, es decir en Colombia se debe sostener la actividad económica proporcionando a los agentes financieros la liquidez y los créditos indispensables para consumir, invertir y producir.

En la actualidad se están gestando cambios en los modelos de emisión de bonos, en especial por parte de las empresas organizadas que buscan financiar sus proyectos, ya que éste es un mecanismo válido que cada vez más adquiere relevancia e importancia.

El lunar negro lo constituyen las Pymes, pues casi ninguna está en la capacidad de emitir bonos y normalmente poseen alto grado de iliquidez y aunque son las que más utilizan el Sector Financiero privado, deberían apostarle gradualmente a esa posibilidad. Es indudable que las Pymes, pelean con espadas de papel, ante las grandes empresas del país, ello significa que las empresas rivalizan entre sí por la preferencia de los consumidores, por las ventas, pero no son iguales las condiciones.

La economía Colombiana ha sido muy variable y poco constante en crecimiento económico, PIB, facilidades financieras, políticas monetarias en los últimos 10 años, sin embargo en el periodo de 2006 al 2010, se han gestado cambios negativos y positivos para la economía derivadas de las mismas aristas mencionadas anteriormente, uno de esos problemas es la forma en que se financian las empresas y el contexto del sistema financiero para ayudarles, de hecho, se han presentado conjeturas respecto de la ineficiencia del Estado en colaborar con el desarrollo económico de las empresas, una política fiscal y tributaria que vuelve a las empresas grandes, medianas y pequeñas ilíquidas, genera la búsqueda de nuevas alternativas de financiamiento en las mismas,

Hay que tener en cuenta que el sistema financiero privado y público en Colombia, regularmente cierra las puertas (praxis) a los nuevos proyectos tanto en empresas grandes como pequeñas, es decir niega nuevas posibilidades de negocios o expansión de las empresas cuando no se les respalda con créditos de fácil acceso y bajas tasas, pues muchas veces las vuelven inviables al no conseguir recursos, afectando gran parte del crecimiento económico y otras variables conjuntas a la situación antes planteada.

En consecuencia, el impacto de financiarse con bonos para una empresa puede ser positivo o negativo y dependerá muy seguramente de la conjugación de muchas variables, como por ejemplo, el tipo de empresa que lo emite, la confianza y seguridad de la misma, el contexto de la producción y las múltiples variables de la macro y microeconomía.

En consecuencia el artículo abordó el análisis del impacto de financiarse con bonos por parte de las empresas y como ello repercute en la economía Colombiana, se tomó como espacio temporal del análisis los años 2006 al 2010.

EL PROGRAMA BRIGADAS UNIVERSITARIAS EMPRESARIALES EN LA FACULTAD DE CONTADURÍA Y ADMINISTRACIÓN, EN LA FORMACIÓN INTEGRAL DEL LICENCIADO EN ADMINISTRACIÓN

Minerva Parra Uscanga, Universidad Veracruzana
Lorena Hernández Trejo, Universidad Veracruzana
Suzel Gómez Jiménez, Universidad Veracruzana
Jorge Rafael Olvera Carrascosa, Universidad Veracruzana
María Eugenia Senties Santos, Universidad Veracruzana

RESUMEN

En la Facultad de Contaduría y Administración de la Universidad Veracruzana en la Zona de Xalapa Veracruz, México se imparten cuatro programas académicos los cuales son: Administración, Contaduría, Sistemas Computacionales Administrativos y Gestión y Dirección de Negocios. La Universidad Veracruzana ha operado desde 2006 a la fecha una estrategia de vinculación con el sector productivo denominado Brigadas Universitarias Empresariales. En la Facultad se implementa este programa de vinculación a partir de febrero de 2008. Dicho programa tiene como objetivo acercar a los estudiantes a las empresas con la finalidad de realizar trabajos que impacten en la productividad y desarrollo de éstas; asimismo, los estudiantes pueden conocer problemas reales en las empresas y participar activamente en su solución. La presente investigación tiene como objetivo, en una primera fase, identificar el impacto del programa Brigadas Universitarias en la Empresa (BUE) en la formación integral de los estudiantes del programa educativo de Licenciatura en Administración, en virtud del que el Modelo Educativo de la Universidad Veracruzana lo señala como parte de la formación de los estudiantes, ya que esta actividad les permite, principalmente, determinar sus fortalezas y oportunidades de mejora, así como su impacto en el perfil de egreso.

PALABRAS CLAVE: Brigadas, vinculación, empresas y estudiantes.

THE UNIVERSITY'S BUSINESS BRIGADES PROGRAM AT THE ACCOUNTING AND MANAGEMENT FACULTY, RELATED TO THE INTEGRAL FORMATION OF THE STUDENT IN MANAGEMENT.

ABSTRACT

In the Accounting and Management Faculty at Universidad Veracruzana in Xalapa, Veracruz Campus there are four academic programs to be taught: Administration, Accounting, Administrative Computing Systems and, Management Business Direction. The Universidad Veracruzana has operated since 2006 to date a strategy of linkage with the productive sector named University's Business Brigades Program. The Faculty has implemented this program of outreach since February 2008. This programme aims to build

JEL: I23,M10, Y1

KEY WORDS: Brigades, bonding, companies and students.

INTRODUCCIÓN

La Veracruzana y el Modelo Integral De Educación Flexible (MEIF)

El objetivo del Modelo Educativo Institucional, busca formar estudiantes que den respuestas y soluciones a la problemática que estamos viviendo, ofreciéndoles mejores opciones imaginativas e innovadoras de enseñanza aprendizaje, relacionadas con la adquisición de las habilidades básicas que lo formen para un mejor desempeño personal y profesional aún después de culminados los estudios.

El Modelo integra experiencias educativas con un enfoque para la vida dentro y fuera del aula, de tal manera que los estudiantes se involucren en procesos de enseñanza aprendizaje más profundos y significativos. Además, considera la recreación, el arte y el deporte como parte de las actividades de la formación integral con reconocimiento académico.

Formación integral:

Existe congruencia y una relación estrecha entre los fines de la formación integral y los ejes integradores que marca el modelo; ya que los primeros, establecen los requisitos que se debe cubrir para la formación integral de los estudiantes, y lo segundos, se refieren a la forma en que van a conseguirse esos fines a través de un modelo integral flexible.

Formación intelectual:

Fomenta el pensamiento lógico, crítico y creativo necesario para el desarrollo de conocimientos. Desarrolla la habilidad para razonar, analizar, argumentar, inducir, deducir y otras, que le permiten la generación y adquisición de nuevos conocimientos y la solución de problemas.

Formación humana:

Desarrolla actitudes y la integración de valores que influyen en el crecimiento personal y social del ser humano como individuo.

Formación social:

Fortalece los valores y las actitudes que le permiten al sujeto relacionarse y convivir con otros.

Formación profesional:

Genera conocimientos, habilidades y actitudes encaminados al saber hacer de la profesión.

La flexibilidad curricular, le da al estudiante la oportunidad de decidir sobre su formación integral, dándole la oportunidad de elegir conforme a sus tiempos, intereses profesionales y características personales, los contenidos o experiencias educativas que quiere cursar.

Además, este tipo de organización académica que adopta un criterio de créditos académicos dentro de un currículum, le facilita al estudiante la movilidad entre facultades e instituciones del país y del extranjero.

La transversalidad significa, en este modelo, que todos los programas, de los cursos y experiencias educativas, en los planes de estudio de cada dependencia, están encaminados al logro de los cuatro fines propuestos por medio de los ejes y los cursos del área básica general.

Licenciatura en Administración

La presente investigación centra su objetivo en los estudiantes de la Licenciatura en Administración en la Universidad Veracruzana en el campus Xalapa, siendo el objetivo general de dicha licenciatura Formar profesionales competentes en la administración con conocimientos sólidos que le permitan tener una visión general para responder a los retos y expectativas de los organismos sociales, con habilidades para aplicar metodologías y técnicas que promuevan el desarrollo y con una actitud crítica y creativa en el contexto de sus valores individuales, profesionales y de la sociedad.

Se puede considerar que la administración como disciplina, conlleva la integración de diversos conocimientos relacionados con la conducta humana, tanto individual como grupal y social. Es un campo de conocimientos muy amplio, lo cual ha provocado la especialización igual que en otras profesiones, para ser expertos en la propuesta de solución de los problemas de su especialidad. Por lo tanto, el administrador debe conocer técnicas de diagnóstico que le permitan identificar y evaluar oportunidades y amenazas, problemas y soluciones, para proponer alternativas mediante decisiones oportunas y correctas que generen el estado ideal, para guiar a los elementos que intervienen, dirigiéndolos hasta encontrar la solución óptima.

El trabajo del administrador profesional se nutre de la teoría, de las técnicas y prácticas administrativas y de la experiencia personal, las empresas modernas necesitan directivos que coordinen, innoven, introduzcan iniciativas, creen equipos y tomen decisiones en el marco complejo y dinámico en el que se desarrolla su actividad, es por esto que resulta indispensable durante su formación el acercamiento con estrategias de vinculación que le permitan fortalecer las áreas principales de su formación.

Vinculación

Las IES deben participar activamente en el estudio y comprensión de los entornos social, económico, político, cultural y ambiental en el que se encuentran ubicadas, con el firme compromiso de poner a disposición de la sociedad en general, los conocimientos, experiencias, resultados de investigación y servicios que ésta requiere para su desarrollo social, económico, científico y tecnológico.

Bajo este esquema nace el concepto de vinculación, que de acuerdo a Gould Giacomo (1997), debe entenderse como el conjunto comprensivo de procesos y prácticas planeadas, sistematizadas y continuamente evaluadas, donde los elementos académicos y administrativos de una IES se relacionan internamente entre unos y otros, y externamente con otras personas y organizaciones, con el propósito de desarrollar y realizar acciones y proyectos de beneficio mutuo que, 1) provean de servicios profesionales a colaboradores, especialmente a empresas; 2) conecten la educación superior con el mundo del trabajo, para poder así aprovechar al máximo la vinculación como herramienta educativa, de formación de recursos humanos y de actualización curricular; 3) fomenten en la investigación y desarrollo de la *base* científica y tecnológica de la IES; y 4) aumenten la competitividad de las empresas colaboradoras.

Por mencionar algunas acciones, en el ámbito académico, la vinculación contempla: innovación curricular, actualización del personal académico, desarrollo de casos piloto, apoyo financiero para tesis, material didáctico e innovación en programas de educación continua y a distancia; en el área de investigación: intercambio de información sobre avances científicos en las estructuras ocupacionales y apoyos para investigación en empresas con desarrollo de normalización de funciones productivas; y en el campo de la difusión: acceso a bases de datos, publicaciones conjuntas, organización conjunta de seminarios, talleres y conferencias y convenios de cooperación para el uso de medio de difusión.

En la Universidad Veracruzana la línea estratégica de Fomento a la Vinculación Académica fue creada con la finalidad de promover e impulsar la cultura de vinculación en la comunidad universitaria, con el fin de que generar un mayor impacto en la formación integral de los estudiantes y en el quehacer de los académicos; es decir, institucionalmente, se lleva a cabo desde las entidades académicas y dependencias de la Universidad, con la participación activa de docentes, investigadores, estudiantes, personal administrativo y funcionarios.

Para su implementación se promueve la planeación, gestión, organización, sistematización, evaluación y difusión de la vinculación, a partir de dos programas ejes articulados: a) Programa de Fomento a la Vinculación de Estudiantes: mediante prácticas de vinculación en escenarios reales de la sociedad derivadas de sus experiencias educativas, servicio social, experiencia recepcional o actividades extracurriculares bajo el enfoque de aprendizaje-servicio; y b) Programa de Fomento a la Vinculación de Académicos que eleva la pertinencia de los programas educativos y apoya las tareas de investigación.

La sistematización y evaluación de la vinculación se centra en el diseño y operación de una red de comunicación mediante una herramienta tecnológica en red. Su finalidad es propiciar la comunicación e interacción entre la comunidad universitaria, así como facilitar el diálogo sistemático y permanente entre nuestra casa de estudios y los diferentes sectores de la sociedad. Esta herramienta se denomina Sistema de Información para la Vinculación Universitaria (SIVU).

Brigadas Universitarias

La Universidad Veracruzana en su programa de trabajo 2009-2013 contempla en el eje 3 el fortalecimiento de la vinculación tanto en el ámbito institucional como en el entorno social y productivo, con la finalidad de contribuir a la formación integral de los estudiantes universitarios. Por lo anteriormente expuesto, la Dirección de Vinculación General empezó a operar el programa de Brigadas Universitarias en la Empresa (BUE), consistente en la realización de prácticas profesionales por parte de los estudiantes, actividades que desarrollan bajo la supervisión de un tutor académico, en apoyo de los sectores productivos; tomando como referente los saberes que se trabajan en las diversas experiencias educativas que conforman los planes de estudio de las licenciaturas de Administración.

El referido programa inicia en una primera fase a través del área de vinculación institucional en el año 2006, en un esfuerzo de coordinar actividades con los sectores: social y productivo.

Como se señaló líneas arriba, (Guía para coordinadores BUE 2006) “el programa se apoya en la participación de estudiantes asesorados por académicos expertos en diversas disciplinas, mediante su inserción en instituciones y/o empresas del sector productivo, con la finalidad de articular su formación profesional con el contexto real, buscando incidir en el crecimiento de dicho sector como agentes impulsores del desarrollo de Veracruz”

En el año 2008, se retoman con mayor énfasis los trabajos de vinculación a través de la Facultad de Contaduría y Administración región Xalapa y el programa de Brigadas Universitarias en la Empresa toma mayor auge, y es cuando los estudiantes de esta facultad se inserten en los diferentes ámbitos de desempeño en las empresas; de esta manera, se establece una alianza en la que el joven cumple una práctica profesional, bajo la condicionante de que el producto final tenga un impacto para la empresa receptora del servicio, así como en los ámbitos social y económico.

REVISIÓN DE LITERATURA

En la literatura de la metodología de la investigación, Hernández Sampieri (2010) y la estadística, Murray (2009) se distinguen diferentes métodos para la obtención de la muestra, en esta investigación se ha considerado la muestra probabilística, en la que nos señala que todos los elementos de la población tienen la misma posibilidad de ser escogidos, esta selección será de acuerdo a las características de la población, ya que esto nos ayuda a determinar el tamaño de dicha muestra. En este proceso de selección se consideró a los estudiantes de la Licenciatura en Administración que han participado en BUE.

METODOLOGÍA

De una matrícula de 1,067 estudiantes correspondiente a la Licenciatura en Administración, se determinó que solo el 65.6% (700) habían participado en una BUE, por lo que se calculó una muestra de 96, determinándose de la siguiente forma:

$$n = \frac{N Z^2 p q}{e^2 (N-1) + Z^2 p q}$$

n= Muestra
N= Población
Z= Grado de confianza
p= Probabilidad a favor
q= Probabilidad en contra
e= Nivel de estimación de error

$$n = \frac{(700)(1.48)^2 (.5)(.5)}{(.07)^2 (700 - 1) + (1.48)^2 (.5)(.5)} = 96$$

Se elaboró un instrumento de investigación que consta de 7 preguntas de opción múltiple y 4 dicotómicas, el cual se aplicó a la muestra en las instalaciones de la Facultad de Contaduría y Administración, campus Xalapa.

RESULTADOS

En un estudio realizado a 96 alumnos de la Licenciatura en Administración, relativo a las Brigadas Universitarias Empresariales, o también conocidas como BUE, en las cuales el 94% dijo haber tenido participación en el proceso de vinculación, así mismo el 98% dijo haber desarrollado un trabajo que estuviese acorde a la licenciatura en curso, misma razón por la cual la mayor parte de los encuestados (86%) consideró que dicha actividad tuvo como consecuencia el fortalecimiento de su perfil profesional al poder llevar lo aprendido en las aulas a la aplicación exterior.

El 22% de los alumnos consideró que durante el desarrollo de la actividad tuvieron la oportunidad de reforzar ciertas habilidades como el trabajo en equipo principalmente, seguido por el 19% que dijo haberse fortalecido más en la toma de decisiones; teniendo como consecuencia la afirmación de los conocimientos en el área de administración y recursos humanos en su gran mayoría. En sentido contrario, el 26% de los alumnos admitió que el área que más le ha costado reforzar es el área financiera, seguido por el 24% que tuvo mayor dificultad al enfrentarse al área contable de la empresa.

Al término de las BUE, el 82% de los alumnos consideró que no encontró ninguna desventaja al participar en ellas, mientras que el 18% admitió el no tener ninguna ventaja del programa, siendo las principales razones por la carga excesiva de trabajo, falta de formas de financiamiento y/o recursos para el traslado, falta de tiempo, o bien, los empresarios con los que trabajaron no tenían el suficiente tiempo para proporcionarles información.

1.- ¿Has participado en el proceso de vinculación BUE?

2.- ¿Desarrollaste un trabajo acorde a tu profesión?

3.- ¿Consideras que participar en dicha vinculación fortaleció tu formación profesional?

4.- ¿Qué habilidades o ventajas adquiriste a partir de la vinculación?

5.- ¿Cuál de las siguientes áreas del conocimiento consideras que se vieron reforzadas?

6.- ¿En qué áreas del conocimiento tuviste dificultad y consideras que debes reforzar?

7.- ¿Consideras que existe alguna desventaja al participar en la vinculación?

8.- En caso de ser afirmativa la respuesta anterior, menciona dos desventajas que consideres

9.- ¿Tuviste apoyo del empresario al solicitarle información?

10.- ¿Qué ventajas crees que el empresario obtendrá gracias al trabajo realizado por ustedes?

11.- ¿Qué áreas de oportunidad detectas en este proceso de vinculación?

CONCLUSIONES

La sociedad demanda que las universidades demuestren los beneficios que proveen a la comunidad, convirtiendo a sus estudiantes en profesionales comprometidos con el desarrollo estatal y nacional; por lo que la Facultad de Contaduría y Administración de la Universidad Veracruzana realiza esta actividad a través del Sistema Universitario de Mejora Empresarial (SUME).

Como se aprecia en los resultados, esta vinculación a través de Brigadas Universitarias Empresarial ha favorecido a los estudiantes de la licenciatura en administración, puesto que les ha permitido aplicar los conocimientos adquiridos en el aula en un escenario real, ya sea del sector público o del empresarial.

DIAGNÓSTICO DEL NIVEL DE ESTRÉS LABORAL Y SU RELACIÓN CON EL APOYO SOCIAL PERCIBIDO EN TRABAJADORES DE LA SALUD MEXICANOS

Blanca Rosa García Rivera, Universidad Autónoma de Baja California
Sonia Elizabeth Maldonado Radillo, Universidad Autónoma de Baja California
María Concepción Ramírez Barón, Universidad Autónoma de Baja California
Maricruz Lozano Ramírez, Universidad Autónoma de Baja California

RESUMEN

Este trabajo presenta una investigación de tipo descriptivo, correlacional, transversal con diseño no experimental sobre el diagnóstico del estrés laboral utilizando la escala de Demanda-Control de Karasek (1979) en una muestra de trabajadores de la salud del Hospital General de Ensenada, B.C. Su objetivo consiste en describir el nivel de estrés laboral de los trabajadores y ver si existen diferencias entre el sexo y el nivel de estrés detectado. Para alcanzarlo, se trabajó con una muestra de 146 trabajadores de la salud. La técnica para la recolección de los datos fue el cuestionario Demanda-Control con un total de 29 reactivos con escala de Likert. Los resultados obtenidos indican que el nivel de estrés, en promedio, es alto; además, revelan que no existen diferencias significativas entre el nivel de estrés de los hombres y de las mujeres, asimismo, se observa alta correlación significativa entre el nivel de estrés y el apoyo social percibido.

JEL-M12

KEYWORDS: estrés Laboral, Estrés psicosocial, apoyo social, modelo de Karasek, trabajadores de la salud

INTRODUCCIÓN

Debido a las características particulares de las instituciones de salud en México, en el personal de enfermería en general se han observado mayores consumos de alcohol, tabaco y café como respuesta a los estresores que enfrentan en su empleo. Asimismo y por la misma causa, su expectativa de vida en general es menor, existe un mayor índice de suicidios y patologías psiquiátricas entre ellos debido a su contacto diario con la muerte, los conflictos con los médicos que enfrentan, la preparación inadecuada, la falta de apoyo, el nivel de satisfacción que perciben, entre otros (Gray-Tof y Anderson, 1981; Sutherland y Cooper, 1990; Healy y McKay, 1999, 2000). Es por lo tanto, de suma importancia el estudio del estrés laboral en el personal de enfermería y su relación con otras variables que inciden en su aumento.

El estrés laboral ha sido un tema de gran interés en el mundo académico y en la investigación debido a la gran importancia que tiene por los padecimientos que genera, los altos costos que representa para las organizaciones y la alta incidencia de empleados que lo padecen. Debido a que los hospitales públicos en México presentan características que propician sucesos estresantes que se identifican directamente con el entorno laboral como las altas cargas de trabajo, las condiciones laborales, el gran número de pacientes que manejan, la falta de recursos suficientes, cambio en los hábitos de sueño o alimentación debido a jornadas mixtas o nocturnas, el contenido del trabajo y la tarea, la estructura organizacional, las fuentes de estrés extralaborales, las condiciones físicas del entorno laboral y el rol organizacional del trabajador de la salud entre otros. También se observa que el diseño de la organización, la dirección del trabajo, y el entorno socio-laboral, que tienen este tipo de instituciones de salud públicas son propicias para causar daños físicos, psicológicos o sociales a los empleados por su alta demanda de esfuerzo físico y mental al que son continuamente sometidos.

Aunque existen numerosos estudios que han analizado el Estrés laboral principalmente en Hospitales y en ambientes donde los servidores públicos manifiestan síntomas claros de estarlo padeciendo, el ambiente de los hospitales públicos mexicanos caracterizado por poco apoyo social desde los mandos superiores hacia sus subordinados y mayor apoyo desde sus compañeros, así como la mentalidad lúdica que se le asigna al trabajo desde el enfoque latino- americano, hacen que este estudio cobre gran importancia para caracterizar si estos factores tienen influencia en el estrés que desarrollan los empleados y cómo se relaciona con las diferencias individuales que presentan los empleados de la muestra (Lazarus y Cohen, 1977; De Longis, Folkman y Lazarus, 1988; Cooper, 1998; Dunham, 2001; Karasek, 1979; Karasek y Theorell, 1990; Siegrist, 1996, 1998, 2002; Siegrist y Peater, 1996; y Stansfeld y Marmot, 2002) entre otros.

Esta investigación se compone de cuatro partes: primero, se presenta una breve semblanza bibliográfica para conocer los principales modelos, teorías y hallazgos más sobresalientes sobre el tema de estudio. En segundo lugar, se presenta el método de trabajo, que incluye la descripción de la muestra, el instrumento y las pruebas realizadas a éste. Como tercer punto se presentan los resultados más sobresalientes que dan paso al diagnóstico objeto de este estudio y se analizan las diferencias individuales para detectar características que tengan relación con los niveles de estrés presentados. Por último, se presenta en la discusión un análisis de los hallazgos más sobresalientes en esta investigación que tienen similitud con otros estudios realizados, así como áreas de oportunidad futuras y limitaciones de este trabajo.

Breve Estudio Bibliográfico

En las definiciones del estrés Laboral se observa que en general, la mayor parte de autores lo clasifican como una enfermedad que perjudica la producción, al afectar la salud física y mental de los trabajadores cuando las exigencias del trabajo no igualan las capacidades, los recursos o necesidades del trabajador. Asimismo, cuando el individuo percibe sus condiciones como una amenaza que desborda sus recursos. (Calabrese, 2006; Lazarus y Folkman, 1986; Karasek, 1981).

Desde los años cincuenta, el estrés empezó a cobrar gran importancia por las respuestas fisiológicas que generaba en el organismo. Precursores como Seyle (1956) observaron la gran importancia que el estrés representaba en la sintomatología del paciente.

Posteriormente, una gran cantidad de investigadores se interesaron en estudiar las diferentes relaciones del estrés con su entorno (Kaplan, 1983; Engel, 1985; Martin, 1989; Paterson y Neufeld, 1989; Sutherland y Cooper, 1990; Avison y Gotlib, 1994; Quick, 1997; Kessler, 1983; Pearlin, 1983; Lester, Nebel y Baum, 1994; Lester, 1994, entre otros).

Estudios sobre Estrés Laboral

Guerrero, (2003) realizó un estudio sobre los roles laborales y su impacto en el estrés en el trabajo, en el cual analiza el momento de trabajo y el momento de no-trabajo. Las dimensiones que analiza son los conocimientos y habilidades del individuo, sus condiciones de género, sus expectativas ocupacionales, su estilo de vida, sus valores y patrones de crianza, su vulnerabilidad al estrés, sus estrategias de afrontamiento, las oportunidades de empleo, la diversidad de roles, el tiempo disponible para atenderlos, la naturaleza y disponibilidad de apoyo social. En su estudio encontró que el apoyo social juega un rol de gran importancia en el desarrollo del estrés.

Del Pino, (2010) realizó un estudio diferencial del estrés laboral en una actividad predominantemente masculina, encontrando que los agentes adversos y estrategias de afrontamiento fueron de gran importancia para prevenir el estrés. Fernández (2010) en su investigación sobre la influencia de los

factores estresantes en el rendimiento laboral encontró que el estrés tiene un gran impacto en la disminución en el rendimiento de una muestra de choferes de colectivos urbanos.

Posteriormente, Leal (2011) en su estudio presenta una asociación entre el estrés en el trabajo y las exigencias laborales según el tipo de contrato en un centro de trabajo dedicado a la fabricación de autopartes, encontrando gran relación del estrés con los empleados sindicalizados (obreros). Asimismo, Calabrese (2006) menciona que las dificultades para balancear la vida familiar tienen efectos en el estrés laboral que presentan los empleados al presentar falta de interés, ausentismo, errores médicos como mala praxis y problemas legales en los profesionales de la salud. Gamero (2010) presenta la evaluación que se realizó para cuantificar el comportamiento de los asalariados frente a las ausencias laborales. Las estimaciones calcularon que el estrés laboral contribuye a jornadas laborales perdidas que representan el 0.11% del PIB en España.

En un estudio realizado en Holanda, Schaufeli (1999) observa que las políticas gubernamentales y corporativas en ese país se están enfocando más a reducir los riesgos psicosociales y del estrés laboral debido a los altos costos que estos representan. Bueno y Santamaría (2008) en su estudio sobre un grupo de enfermeras en servicios de oncología observaron que las acciones que realizan las enfermeras para manejar el estrés laboral a nivel individual incluyen identificación de factores estresantes, entrenamiento en habilidades de comportamiento, cognitivas y de comunicación, y programas de recreación. A nivel grupal se identificó el trabajo en equipo y la comunicación de sentimientos.

Juárez (2007) determinó en su estudio que la tensión laboral según el modelo de Karasek y la inseguridad en el empleo se asocian significativamente con indicadores cardiovasculares, tales como la tensión arterial (TA) y los síntomas cardiovasculares (SC), considerando factores tradicionales de riesgo cardiovascular (edad, índice de masa corporal, consumo de tabaco y alcohol, entre otros) en una muestra de 109 enfermeras de un hospital de México durante el julio del 2004 donde aplicaron el JCQ.

Martín y Peiró (2007) encontraron a través de un análisis de regresión jerárquica múltiple que en aquellas situaciones caracterizadas por altos recursos se obtiene una relación positiva entre las demandas del puesto y la innovación del trabajador.

En este análisis, se observa que aunque se ha prestado una gran atención a las características físicas del contexto y a la tarea, cada vez más se ve la necesidad de incluir otras variables en el análisis del estrés: diferencias individuales, variabilidad en las expectativas y en los niveles de tolerancia, variabilidad entre las respuestas individuales al mismo estresor, entre otras.

MÉTODO

Diseño del estudio

Este trabajo presenta una investigación de tipo descriptivo, correlacional, transversal con diseño no experimental sobre el diagnóstico del estrés laboral utilizando la escala de Demanda-Control de Karasek (1979). La población de estudio son los profesionales de la salud del Hospital General en Ensenada Baja California. Su objetivo consiste en describir el nivel de estrés laboral en una muestra de trabajadores de la salud de dicha institución y ver si existen diferencias entre el sexo y el nivel de estrés detectado. Para alcanzarlo se trabajó con una muestra de 146 trabajadores. Para la recolección de los datos se utilizó el cuestionario Contenido del Trabajo de Karasek (1997) con un total de 29 reactivos con escala de Likert.; su confiabilidad fue determinada a través del alfa de Cronbach, obteniendo un índice de 0.75.

Diseño del Instrumento:

Para medir el estrés psicosocial (las demandas, el control sobre el trabajo y el apoyo social) se utilizó la versión del cuestionario Contenido del Trabajo de Karasek (1997) el cual consta de 29 ítems. El cuestionario consta de 9 ítems sobre demandas, 10 ítems de control sobre el trabajo y 10 ítems de apoyo social. Maneja 4 opciones de respuesta: totalmente de acuerdo, de acuerdo, en desacuerdo, totalmente en desacuerdo.

RESULTADOS

En el tratamiento estadístico de la información se utilizó el paquete *Statistical Package for the Social Sciences* (SPSS) ® para obtener, estadísticos descriptivos, las correlaciones Spearman, la fiabilidad del instrumento y la prueba *t-student*.

Para determinar el nivel de estrés se empleó el baremo de intensidad mostrado en la Tabla YY; este baremo se construyó en función del número de ítems medidos en escala ordinal, en donde cada pregunta tiene cuatro alternativas (1 al 4) y considerando que solo existe una alternativa de respuesta para cada ítem.

Tabla YY: Baremo de Intensidad para la determinación del Nivel de Estrés

Rango			Nivel
0	→	29	Muy bajo
30	→	58	Bajo
59	→	87	Alto
88	→	116	Muy alto

La plantilla se integró por 29 ítems, en donde cada ítem tiene 4 alternativas (1 al 4) de respuesta (Likert), cada respondiente debe seleccionar sólo una respuesta para cada ítem, por tanto el valor máximo por cuestionario es 116, con base en esto, se establecieron los intervalos de puntuaciones indicados en este baremo, haciendo una partición equitativa de dicho rango. Fuente: Elaboración propia

Con la finalidad de determinar la existencia de diferencias de género en la variable nivel de estrés en la muestra de trabajadores de la salud, se ha utilizado la prueba t de diferencias de medias para muestras independientes.

Antes de pasar a la determinación de las diferencias entre el nivel de estrés y el sexo de los trabajadores, se comprobó el cumplimiento de los requisitos para la aplicación de las pruebas paramétricas, recurriendo para ello a la identificación de la normalidad de los datos a través de la aplicación de la prueba de Kolmogorov-Smirnov. La hipótesis estadística (H_0) fue “la el nivel de estrés puede modelarse con una distribución normal”.

La Tabla TT muestra que el nivel p para la prueba de Kolmogorov-Smirnov es no significativo (esto es, $p > 0.05$) por tanto no es posible rechazar la hipótesis, lo cual indica que los datos siguen una distribución normal.

Tabla TT: Pruebas de normalidad

	Kolmogorov-Smirnov ^a			Shapiro-Wilk		
	Estadístico	gl	Sig.	Estadístico	gl	Sig.
ESTRES	.078	146	.029	.985	146	.121

a. Corrección de la significación de Lilliefors

Dado lo anterior para determinar las diferencias entre la variable estrés y el sexo de los trabajadores se aplicó la prueba *t-student* cuyos resultados se presentan en los siguientes párrafos. Previo se determinaron los indicadores estadísticos; en la Tabla WW muestra para hombres y mujeres: la media, varianza, desviación estándar, máximo, mínimo, límite inferior y superior, mínimo y máximo.

Determinación del nivel de estrés global

El nivel de estrés se determinó comparando el puntaje obtenido contra el baremo de intensidad (Tabla YY) construido para tal fin. El análisis reveló que el promedio de puntaje en esta evaluación fue de 59.47 por tanto el nivel de estrés que existe entre los trabajadores de la salud es alto. Además se observa que el nivel de estrés es muy semejante entre hombres y mujeres (Tabla WW).

Determinación del nivel de estrés por categorías

También se analizó el nivel de estrés por categorías encontrando que el 58.5% de las mujeres tienen un nivel alto de estrés mientras que el 56.8% de los hombre presenta este nivel (Tabla JJ).

Tabla JJ. Estrés en cuatro categorías

Sexo	Nivel	Frecuencia	Porcentaje
Femenino	Bajo	44	41.5
	Alto	62	58.5
	TOTAL	106	100.0
Masculino	Bajo	16	43.2
	Alto	21	56.8
	TOTAL	37	100.0

En esta tabla se presentan los niveles de estrés por categoría según el sexo de los trabajadores. En ella se observa que las mujeres poseen un mayor nivel de estrés con relación a sus compañeros hombres.

Determinación de diferencias entre el sexo de los trabajadores y su nivel de estrés

De acuerdo con los datos presentados en la Tabla RR, la prueba U de Mann-Whitney presenta un valor de U de 1953.00 con una significancia asociada de .971 la cual es mayor respecto al umbral de significancia establecido de 0.05; de donde se concluye que no existen diferencias significativas entre el nivel de estrés de los hombres y de las mujeres.

Tabla RR: Prueba de U Mann-Whitney

	Nivel de Estrés en los trabajadores de la salud
Mann-Whitney U	1953.000
Wilcoxon W	2656.000
Z	-.037
Significancia asintótica	.971
La tabla nos muestra el valor de U tiene un valor p asociado de 0.971 mayor al nivel de significancia de 0.05 por tanto el nivel de estrés entre hombres y mujeres no es distinto	

Determinación de la correlación entre las variables Control-Exigencias del Trabajo-Apoyo Social

Para valorar la asociación entre las variables Control-Exigencia de Trabajo-Apoyo Social se decidió calcular el coeficiente rho de Spearman. Este coeficiente es una medida de asociación lineal que utiliza los rangos, números de orden, de cada grupo de sujetos y compara dichos rangos (Martínez, et al, 2009). De los resultados obtenido (Tabla PP) se concluye que la correlación entre la variable dependiente (Nivel de estrés) y las variables Apoyo Social y Control es entre moderada y fuerte mientras que con la variable Exigencia de trabajo es débil de acuerdo a lo señalado por Martínez, et al. (2009). Además, se encontró que las correlaciones entre las variables independientes son débiles en el caso de Apoyo Social y Control ($r=.300$); y, nulas entre las exigencias de trabajo y las variables Control y Apoyo Social ($r=.038$ y $r=-0.44$).

Tabla PP. Correlaciones

			ESTRES	CONTROL	EXIGENCIAS DEL TRABAJO	APOYO SOCIAL
Rho de Spearman	ESTRES	Coeficiente de correlación	1.000	.700**	.410**	.762**
		Sig. (bilateral)	.	.000	.000	.000
	CONTROL	Coeficiente de correlación	.700**	1	.038	.300**
		Sig. (bilateral)	.000		.645	.000
	EXIGENCIA	Coeficiente de correlación	.410**	.038	1	-.044
	S DEL TRABAJO	Sig. (bilateral)	.000	.645		.595
	APOYO SOCIAL	Coeficiente de correlación	.762**	.300**	-.044	1
		Sig. (bilateral)	.000	.000	.595	.

** . La correlación es significativa al nivel 0,01 (bilateral).
 * . La correlación es significativa al nivel 0,05 (bilateral).

La determinación de la correlación entre las variables que integran la transparencia de los subsistemas se realizó a través del cálculo del coeficiente rho de Spearman y su interpretación se basó en la Tabla XX.

Tabla XX. Valores para la interpretación del Coeficiente de Spearman

RANGO			RELACIÓN
0.00	a	0.25	Nula o escasa
0.26	a	0.50	Débil
0.51	a	0.75	Entre moderada y fuerte
0.76	a	1.00	Entre fuerte y perfecta

Fuente: Martínez, et al. (2009)

DISCUSIÓN

En esta investigación se pudo observar que el nivel de estrés que existe entre los trabajadores de la salud encuestados es alto. Además se observa que el nivel de estrés es muy semejante entre hombres y mujeres. Asimismo, se pudo observar que el apoyo social tiene una alta correlación con el estrés. Al igual que en estudios previos como el de Pérez, López, y Díaz (2001), la falta de apoyo social ha sido una variable que manifiesta ser de gran importancia para el control y reducción del estrés en esta profesión.

La Escala de Estrés utilizada ha resultado un instrumento válido y fiable para la medida de la frecuencia de las fuentes de estrés en enfermería que aparecen en el trabajo en el ámbito hospitalario.

Los estadísticos descriptivos de los ítems en nuestra muestra son similares a los de la muestra original de los autores del instrumento. También para ellos, el apoyo social ha sido asociado al nivel de estrés que presenta la muestra.

Oportunidades de estudios futuros

Se recomienda realizar un estudio posterior con muestras más amplias de varios hospitales, y con muestras de ámbitos diferentes al hospitalario, así como incluir medidas de intensidad de los estresores, de respuesta al estrés, de estrategias de afrontamiento y diferencias individuales.

EL CLUSTER FORESTAL COMO ESTRATEGIA DE INNOVACIÓN PARA UNA EMPRESA COMUNITARIA EXITOSA

Francisco Javier Castro Sánchez, Universidad Michoacana de San Nicolás de Hidalgo

Oscar Hugo Pedraza Rendón, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

El presente trabajo tiene el propósito de analizar el proceso que tuvo la evolución para crear un cluster forestal en la comunidad indígena de Nuevo San Juan Parangaricutiro, ubicada en el Estado de Michoacán, México, lo que hoy se reconoce como una Empresa Forestal Comunitaria modelo a nivel internacional, en la que se ha logrado la integración de varias empresas exitosas que tienen en la innovación del aprovechamiento del recurso forestal y organización comunitaria el sustento de un desarrollo sustentable con impacto en lo social, económico y ambiental.

PALABRAS CLAVE: Cluster, innovación, recurso forestal.

AS THE FOREST CLUSTER INNOVATION STRATEGY FOR A SUCCESSFUL COMMUNITY ENTERPRISE

ABSTRACT

This paper aims to analyze the evolution process was to create a forest cluster in the indigenous community of Nuevo San Juan Parangaricutiro, located in the State of Michoacan, Mexico, which is now recognized as a model Community Forest Enterprise international level, which has been the integration of several successful companies that have innovation in exploiting the forests and the livelihoods of community organization sustainable development with impact on the social, economic and environmental.

JEL: M15

KEYWORDS: Cluster, innovation, forest resource.

INTRODUCCIÓN

En México, el impulso para la creación de cadenas productivas y *clusters* en el sector forestal ha sido una estrategia que no ha sido dimensionada en el valor que tiene sus contribuciones en las empresas forestales y por consecuencia en los habitantes de este tipo de zonas, ¿será por lo incierto del proceso organizacional?, ¿por los niveles de conflicto existentes en el entorno? o ¿por ser un proceso que demanda condiciones endógenas de los interesados? Al respecto, es importante destacar los procesos y logros de empresas forestales comunitarias en las que el *cluster* ha sido una estrategia innovadora en su organización con impactos favorables en lo social, económico y ambiental.

El logro de algunas comunidades forestales para generar un entorno favorable para los *clusters* contrasta con las condiciones no propicias para fomentar el impulso de empresas forestales que contribuyan en desarrollo de ejidos y comunidades que habitan zonas forestales. Es de mencionar que en México existen indicadores que derivan conclusiones de que aún hay mucho por hacer, construir y fortalecer para el impulso de estrategias que contribuyan en la creación y mejoramiento de empresas forestales que se demanda por diversos sectores sociales, por ejemplo en el Programa Estratégico Forestal para México

2025, eje rector que aporta acciones prioritarias hacia un desarrollo sustentable en el país, señala que en las áreas forestales habitan 12 millones de personas afectadas en su mayoría por la pobreza extrema y la migración, precisando que estos mexicanos no han sido apoyados en forma consistente para aprovechar racionalmente sus recursos (Atlas Forestal de la Semarnap, 1999, citado por la SEMARNAT-CONAFOR, 2001:15-16).

Las condiciones que conforman el sector forestal tienen elementos particulares que deben ser analizados conforme a su entorno, ya que, además de lo referido en el párrafo anterior, el hecho de que aproximadamente el 80% de la superficie forestal se encuentra en posesión de ejidos y comunidades (INE-SEMARNAT, 2010), determina la necesidad de contemplar estrategias institucionales congruentes a dicho entorno, y tener en claro que lo que pueda funcionar o ser aplicable en algún espacio del área geográfica forestal no necesariamente será factible en otro.

En tal sentido, asumiendo que existen ejemplos de *cluster* de empresas forestales que deben ser replicadas en lo que sea posible, si se toma como punto de partida que su definición esta dada como la agrupación de empresas y su correspondiente especialización en determinadas actividades productivas para favorecer ventajas competitivas (Porter, 1990, citado por Mitxeo, Idigoras, & Vicente, 2004:56), es de hacer referencia que bajo este enfoque, en la Comunidad Indígena de Nuevo San Juan Parangaricutiro (CINSJP), ubicada en el Estado de Michoacán, México, se ha constituido una empresa forestal exitosa que ha logrado impulsar procesos innovadores en el aprovechamiento, industrialización y comercialización de su recurso forestal con primacías en su quehacer (Barton y Merino, 2004, citados por Castro, 2012:34).

Al respecto y de acuerdo a las condiciones en las que ha sido instituida esta empresa surgen reflexiones en cuanto a ¿qué elementos del *cluster* han formado parte de la evolución de dicha empresa?, lo cual permite orientar líneas de análisis que son el propósito del presente trabajo en cuanto a que se pretende establecer el proceso que dio origen al modelo de *cluster* de empresas forestales en la comunidad, analizando su contribución y mejora de su competitividad.

REVISIÓN LITERARIA

En los años noventas se hacia referencia de que entre las empresas miembros de un *cluster*, la competencia se produce como consecuencia de la capacidad innovadora de las empresas; es decir, la competencia derivada de la creación de nuevos productos, el desarrollo de nuevas tecnologías, la detección de nuevas necesidades, las nuevas formas de organización y gestión, entre otras. No obstante, esta necesidad de mantener un equilibrio entre competencia y cooperación, es considerada a su vez, como uno de los principales inconvenientes de este tipo de agrupaciones, ya que la existencia de desequilibrios constantes provocaría reacciones que podrían romper el funcionamiento del *cluster* (Dei Ottati, 1996:90).

La definición de este concepto fue extendido por la aportación de Michael Porter en 1990 con su libro “*The Competitive Advantage of Nations*”, quien lo define como la concentración de empresas, instituciones y demás agentes, relacionados entre sí por un mercado o producto, en una zona geográfica relativamente definida, de modo de conformar en sí misma un polo de conocimiento especializado con ventajas competitivas (Porter, 2007:72).

Es de mencionar que existen análisis que expresan su coincidencia con otros términos, tales como el de Distrito Industrial, Sistemas Productivos Locales, *Milieux*, *Microcluster* o *Redes de Empresas*, entre los cuales, a pesar de sus diferencias se comparten las dimensiones básicas siguientes: la territorial, la sectorial y la cooperativa (Vila, Ferro y Rodríguez, 200, citados por Mitxeo, Idigoras, & Vicente, 2004:56-57).

Siendo que no es el propósito del presente trabajo profundizar en dicha variedad terminológica y conceptual, el término contiene aspectos que comprende la integración de empresas, en este caso forestales, que contribuyen en el valor agregado de productos pertenecientes a un campo específico, con características comunes y complementarias entre sí. Con base a estos aspectos y tomando como caso la CINSJP, el presente trabajo ha orientado elementos de análisis a partir de la evolución que han tenido las condiciones de elementos desagregados para la creación y fortalecimiento de cadenas productivas que actualmente han dado sustento al *cluster* de una empresa forestal.

¿En que momentos se debe impulsar la creación de un *cluster*?, ¿Cuáles son las razones que orientan esa necesidad?, ¿Es aplicado exclusivamente a un entorno de empresas formalmente ya establecidas o puede darse en otras condiciones?, al respecto pueden darse diversas referencias, pero de alguna manera los objetivos que se pretenden lograr mediante la estrategia de los *clusters* orientan la reflexión de las respuestas que puedan darse al respecto. En ese sentido, por ejemplo, algunos de los objetivos que se pretenden son (Michel Porter, 1990, citado por Luciano, 2010:36):

- a) Aumento de la productividad
- b) Impulso a la innovación
- c) Estimulo nuevas empresas
- d) Reducción de comportamientos oportunistas
- e) Aumento de la presión de coordinación

Lo anterior lleva a tener la idea de que no existen elementos que tengan que servir como modelo para poder generar un proceso que permita identificar, definir, describir y/o hacer operativo un *cluster*, de tal manera que los agentes interesados son quienes establecen el entorno que sustenta el proceso para su creación y mejora.

METODOLOGÍA

El proceso desarrollado para el presente trabajo ha sido tanto inductivo como interpretativo. Para tal efecto se ha partido de un fenómeno de erupción de un volcán sucedido en la comunidad indígena de Nuevo San Juan Parangaricutiro, a partir de lo cual se modificó tanto su estructura socioeconómica como la dinámica de su tejido social. Estableciéndose condiciones que dieron génesis a un exitoso vínculo social-ambiental desde los años setentas del siglo pasado hasta nuestros días. La información obtenida ha sido generada tanto de observaciones efectuadas en la comunidad como de datos disponibles en documentos de investigación y publicaciones relacionadas a esta comunidad.

Es de mencionar que fueron definidos escenarios del proceso de evolución de las actividades productivas desarrolladas en la comunidad, y efectuada una identificación-relación de las variables que han formado parte del vínculo entre los habitantes locales y el recurso forestal para crear las empresas que forman parte del *cluster* forestal generado en la comunidad.

RESULTADOS

Para la conformación de las empresas forestales en la comunidad se orientaron estrategias de trabajo que integraron procesos de transformación y aprovechamiento de los recursos forestales con sustento en el vínculo innovador existente entre los comuneros, el recurso forestal y la industria; de tal manera que, para establecer una relación entre los elementos teóricos que aporta Michael Porter en su definición de *cluster* con la evolución que ha tenido el modelo de trabajo que ha existido entre la comunidad y el recurso forestal, fue necesario identificar las condiciones y agentes que han formado parte de este proceso y que han sido ejes de análisis en investigaciones llevadas a cabo por Silvia Bofill (2002; 2002^a; 2005); Claudio Garibay (2005; 2007); David Barton y Leticia Merino (2004); y Francisco Javier Castro (2012), así como por García & Rojas (1999) en los que pueden ser identificados los escenarios siguientes:

Figura 1: Actividades de los habitantes locales

En esta figura se muestran dos de las principales actividades de los habitantes de la comunidad en torno al año de 1943. Dichas actividades fueron realizadas de manera intensiva antes de la erupción del volcán. Dichas actividades fueron principalmente la agricultura para autoconsumo, y las actividades forestales, que se desarrollaban en el bosque para la obtención de leña, frutos y madera que usaban en diversos instrumentos domésticos y de labranza. Fuente: Elaboración propia.

- a) Primer escenario (Figura 1). Definido antes del año de 1943, en que hizo erupción el volcán Parícutín. Periodo en el que las principales actividades de los habitantes locales estuvieron destinadas hacia la agricultura. Al bosque se recurría solo para obtener madera con fines domésticos, de alimentación y actividades pecuarias.
- b) Segundo escenario (Figura 2). Periodo posterior al año de 1943, en el que la actividad agrícola fue abandonada por no tener tierras aptas. Sus actividades estaban destinadas a emigrar a Estados Unidos con apoyo de programas gubernamentales y ser guías de turistas en la propia comunidad, así mismo desarrollaron actividades para la obtención de resina, pero como paralelamente fue generada demanda de madera por el impulso dado a la construcción de las vías ferroviarias, se dio como resultado un modelo empresarial en el que la estructura de trabajo ubicó a los comuneros como empleados y vendedores de madera en pie, es decir aún sin derribarse. La tecnología, la inversión y los patrones tenían características exógenas, los habitantes locales fueron empleados que aportaron su mano de obra en el derribo y maniobras de extracción y flete de trozas de madera. No existían beneficios derivados del valor agregado de los productos forestales ni del dilema que generaba la sobre-explotación del recurso forestal fue motivo de preocupación.

Figura2: Elementos presentes en las actividades posteriores al año 1943

En la figura se hace referencia a los elementos que formaron parte de las actividades de los habitantes locales después de que dio lugar la erupción del Volcán Parícutín en el año de 1943. La actividad agrícola ya no fue prioritaria debido a que con el impulso dado a la introducción del ferrocarril se dio el fenómeno de que la demanda de madera se incremento y se requirió de bastante mano de obra de habitantes de la región. Lo que marco este escenario fue que las acciones estaban determinadas por elementos exógenos a la región. Funte: Elaboración propia.

Tercer escenario (Figura 3). Contexto que marca una orientación definitiva, generada a mediados de los años setentas y se extiende hasta los tiempos actuales en razón a la diversificación de empresas creadas y el impulso de mejoras. Periodo en el que se identifican elementos que permitieron impulsar un *cluster* forestal con base en procesos de innovación social, ambiental e industrial que modificó el modelo de trabajo anterior sustancialmente al pasar de lo exógeno a lo endógeno. El modelo consistió en el establecimiento de un estrecho vínculo social-forestal como cimiento para la génesis del sistema empresarial forestal comunitario y la incorporación de innovaciones industriales en los que se privilegio a los habitantes locales y al medio ambiente por encima del aspecto económico. La evolución de las innovaciones incorporadas pueden ser observadas en las ilustraciones siguientes, en las que se da referencia de los elementos de cluster empresarial.

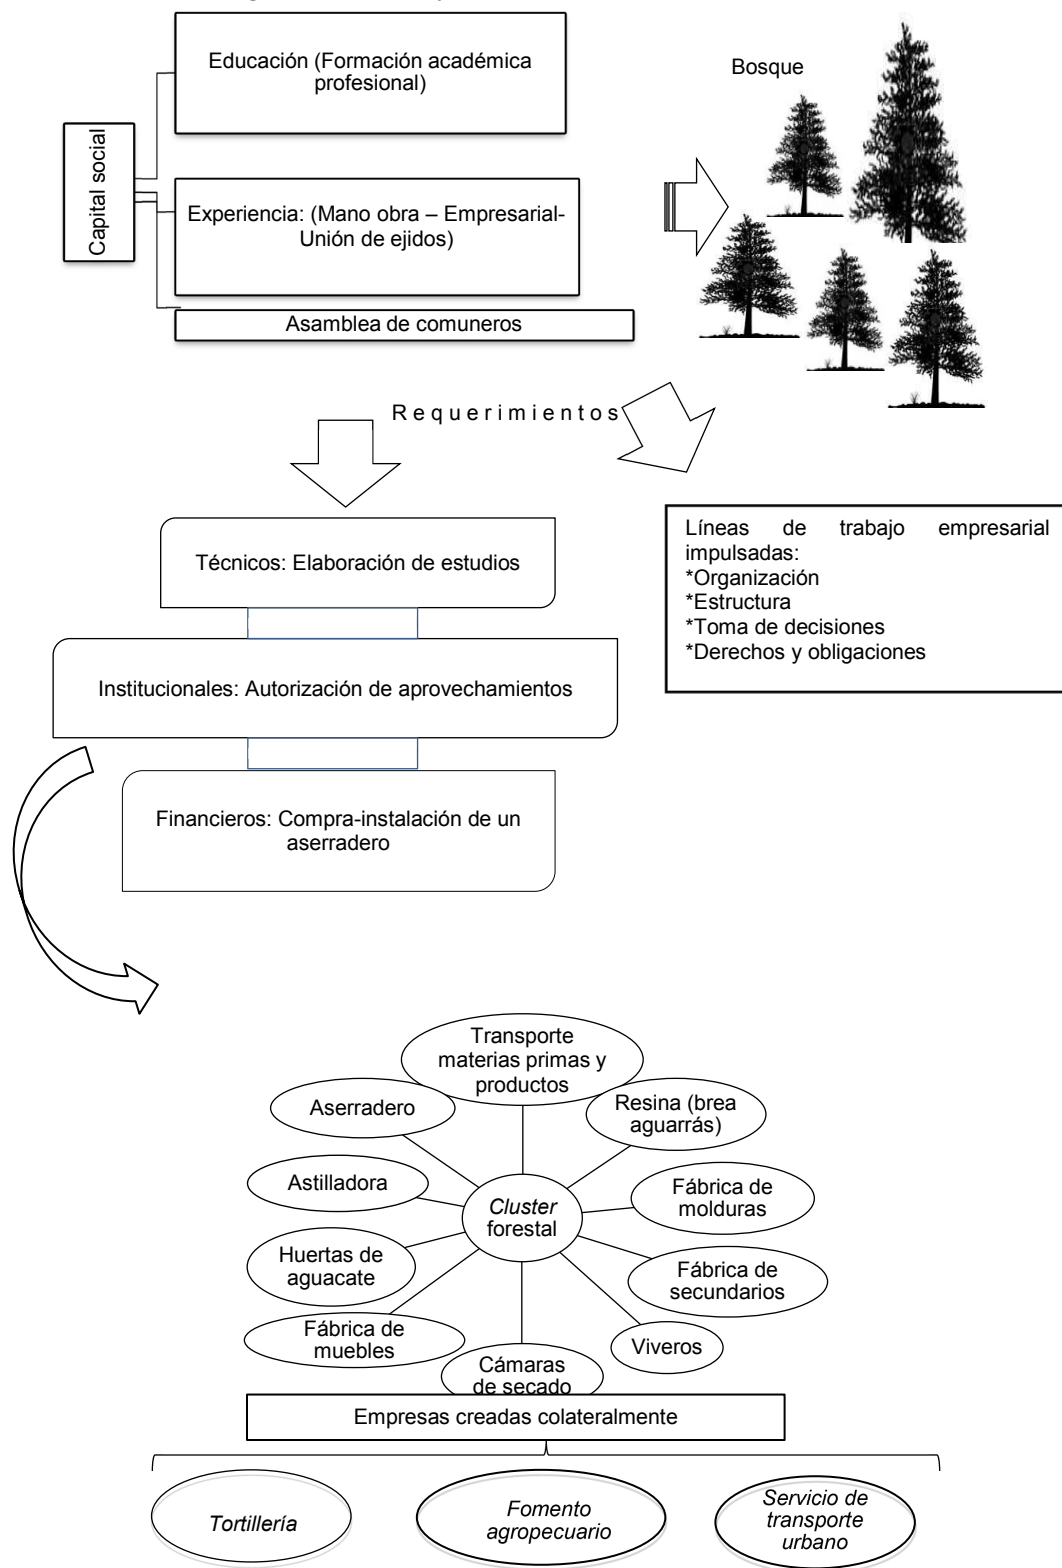

CONCLUSIONES.

En el proceso de desarrollo que ha tenido la CINSJP, se detecta el hecho de que se tuvo como punto de partida una dinámica de actividades productivas y de relaciones sociales diferentes a como se encuentran establecidas en la actualidad. Es de mencionar la condición de que el recurso forestal ha sido un elemento central en este proceso, ya que su aportación ha pasado de cubrir necesidades mínimas a ser un eje concentrador de empresas que generan empleo, ingresos, bienestar social y conservación ambiental.

En la comunidad existió una estructura social que no tenía incidencia en las actividades productivas de los habitantes locales más allá de atender principalmente tradiciones inherentes a su cultura, y que su vínculo con sus recursos naturales estaba limitado mayormente a trabajar la tierra para obtener algunos de los alimentos que formaban parte de su dieta. En ese contexto su vínculo con los recursos forestales no representaba mayor esfuerzo ni aportación a las demandas de sus principales necesidades, que en esos tiempos, es decir antes de la erupción del volcán Parícutín, se circunscribían a los alimentos, vestido y vivienda principalmente.

Conforme transcurrió el tiempo, y en virtud de factores como la demanda de madera, empleo e ingresos por su aprovechamiento, los habitantes locales orientaron sus actividades y mano de obra en los procesos de abastecimiento e industrialización del recurso forestal, de ella cabe resaltar las características exógenas de esta actividad productiva. Condición que llevó a los comuneros, a analizar los elementos que estaban en el escenario y detectar que no estaban obteniendo los beneficios esperados, además de que su recurso forestal estaba siendo explotado irracionalmente.

Se identifica el interés de los comuneros por establecer acciones innovadoras tendientes a integrar un equilibrio entre los habitantes, el medio ambiente y la industria, otorgando prioridad a los aspectos sociales y ambientales por encima de los económicos, sin perder el sentido de generar características de competitividad de su industria forestal en torno a las condiciones en que se encuentran las demás comunidades de su entorno regional.

Figura 3: Génesis y evolución de un *cluster* forestal

En la figura anterior se hace referencia a los elementos que conformaron las bases para el impulso del vínculo social-forestal: la educación, la experiencia y la autoridad representada en la Asamblea de Comuneros, así como el bosque. A partir de ello lo que se orientaron líneas de trabajo y la atención de requerimientos para impulsar el aprovechamiento forestal como: la elaboración de estudios técnicos, el apoyo institucional de las dependencias de gobierno y los recursos económicos. Lo cual, al paso del tiempo permitió la creación de un cluster por la diversificación empresarial forestal de manera vertical y horizontal. Fuente: Elaboración propia.

Por las condiciones de competitividad sustentadas en las innovaciones incorporadas en el sistema productivo de la empresa forestal, es de resaltar la importancia del papel que ha tenido: el vínculo social-ambiental a partir de la dinámica de su gobernanza, la demanda de productos forestales y las condiciones para la disponibilidad de fuentes de abastecimiento; y, la integración industrial vertical-horizontal del sistema productivo.

Tomando de manera literal la definición que le da Michael Porter al término *cluster*, es de mencionar que las condiciones actuales en las que funciona la empresa forestal en la CINSJP comprende los elementos tanto de integración de empresas como el hecho de que se ha buscado y logrado obtener ventajas competitivas en el sector en el que se desempeña, que en este caso es el forestal.

A la forma de trabajo en este *cluster* forestal se le deben de añadir otro tipos de elementos que no necesariamente son “empresas” vistas como negocios, pero si es de resaltar el papel que en este proceso han tenido diversas instancias gubernamentales y académicas en el transcurso del tiempo así como el peso específico que ha tenido de manera endógena la organización y toma de decisiones que orientan los comuneros a través de la Asamblea de Comuneros, la cual se ha erigido como una forma de gobernanza eficiente.

Interesante en este proceso de evolución han sido las ventajas competitivas en los resultados económicos, ya que se ha logrado establecer un círculo de relación entre elementos que contribuyen en el abastecimiento y procesos de transformación, así como en la formación de capital humano que lo sustentan en la calidad de la materia prima, industrialización, productos y precio de venta, disminución de los costos de la materia prima, innovación tecnológica, capacitación y formación profesional, y generación de sus propios directivos y empleados, además de que:

- a) Se obtienen mejores resultados que las empresas ubicadas en forma dispersa en otras áreas forestales.
- b) La estructura de organización aporta beneficios en términos de que ellos mismos forman parte de las decisiones, son empleados y obtienen beneficios tanto económicos como de apoyo a la conservación y aprovechamiento de su recurso forestal.
- c) Existe un estrecho vínculo con instancias oficiales para atender lo relacionado a la normatividad, innovación y apoyo financiero que contribuya a mejorar su competitividad.
- d) Los productos que se obtienen, además de abastecer a otras áreas y empresas que aportan valor agregado, tienen niveles elevados de competitividad en precio y establecimiento de sistemas de comercialización más eficientes.

Derivado del análisis efectuado en el presente trabajo es de recomendar la revisión y mejora de equipos, maquinaria, capacitación y mercados que respondan a la innovación y competitividad que se demanda en los tiempos actuales. Además, no menos relevante, están varios aspectos innovadores que deben ser orientados para que el *cluster* forestal contribuya no solo en lo local sino también en lo regional, como por ejemplo:

- a) Ser un eje en torno al cual se generen sinergias para contribuir en el impulso de desarrollo de otras comunidades que se encuentran en bajas condiciones del vínculo social-ambiental-industrial,
- b) Generar un centro de capacitación en el que personas de otros lugares similares reciban una formación técnico-empresarial,

- c) Establecer un vínculo formal permanente con instituciones de investigación que permita visualizar líneas de trabajo orientadas a fortalecer el *cluster* forestal con una visión de sustentabilidad,
- d) Vincularse con otras comunidades con *cluster* forestales exitosos, locales, nacionales o internacionales, que fomente y contribuya a la búsqueda y logros de fuentes financieras para la capacitación, actualización de equipo y procesos, diversificación de mercados, desarrollo de líneas de investigación tecnológicas de la madera y del recurso forestal, para ser más competitivos en el ramo.

PROCESO DE MEDICIÓN EN LAS ACTIVIDADES DE INVESTIGACIÓN

Alma Delia Inda, Universidad Autónoma de Baja California
Gloria Muñoz del Real, Universidad Autónoma de Baja California

RESUMEN

El Proceso de Medición en las actividades de investigación permite estructurar de manera eficaz el procesamiento, análisis, y recolección de información sobre nuestras variables en estudio. Este proceso permite asociar las variables e identificar la fuerza de interrelación entre las mismas. A través de la investigación cuantitativa se determina el grado de asociación de las variables para realizar una inferencia con datos concretos y reales tomados de una muestra. En el proceso de medición se deben conocer los tipos de escalas paramétricas y no paramétricas que la estadística toma como apoyo para manipular las herramientas de cálculo y a la vez brindar una interpretación de los datos recolectados. Así mismo el instrumento de medición debe estar acorde a la teoría científica que interprete el fenómeno en estudio.

PALABRAS CLAVE: Proceso de Medición, tipos de escalas, instrumento de medición, variables, pruebas estadísticas.

MEASUREMENT PROCESS RESEARCH ACTIVITIES

ABSTRACT

The measurement process in the research activities allows to effectively structure the processing, analysis, and data collection of our variables being studied. This process allows the association of variables and identifies the interrelation between them. The degree of association of the variables in quantitative research is determined to develop an inference with concrete and real data taken from a sample. In the measuring process, the type of parametric and non parametric scales that statistics take as a support to manipulate the calculus tools and at the same time offer the interpretation of collected data, has to be known. In the same way, the measurement instrument has to be in accordance to the scientific theory that interprets the event being studied.

JEL: C01, C05

KEY WORDS: The measurement process, type of scales, instrument of measurement, variables, statistical tests.

INTRODUCCIÓN

El proceso de medición en la investigación es de vital importancia, el valor de la investigación no depende de la confirmación de la hipótesis formulada o del logro del objetivo, sino de los esfuerzos desplegados para medir indicadores validos, fieles y precisos (Giroux, Tremblay, 2002). La interacción entre el investigador, el instrumento de medida y el objeto de estudio, con las diferentes categorías, técnicas o niveles de medición, conducen hacia la estadística y a las diferentes pruebas que son fundamentales para: analizar, estructurar y mostrar un resultado en la investigación.

Una visión entre el comportamiento de dichos elementos son objeto de reflexión en el proceso de medición en la investigación; éstos, tienden a ser fundamentales para identificar las características del

proceso de la medición, de tal forma que entre las variables se llegue a la detección de los instrumentos a utilizar para la recopilación de datos, y así calcular las pruebas estadísticas mas acordes al tipo de investigación a realizar. No solo se trata de registrar las mediciones; es necesario que estas midan lo que se supone deben medir, que den siempre la misma lectura de la realidad y que esta lectura sea suficientemente matizada (Giroux et al, 2002), este proceso trata de describir alguna clase de fenómeno causa-efecto a través de un modelo de pruebas estadísticas descriptivas. El analizar el modelo a utilizar, se convierte en el punto de partida para detectar el rumbo a la investigación. El objetivo que se busca en este trabajo es reflexionar acerca de la importancia y la función del proceso de Medición en la Investigación Científica enfocada a las ciencias Administrativas; esto es la ocupación en el quehacer de la investigación entorno a la Administración.

DESARROLLO

CONCEPTUALIZACION DE LA MEDICIÓN

Comencemos por una sencilla pregunta, ¿Qué es medir?, según refiere Hernández, Fernández, Baptista (2006) a Stevens, 1951, medir significa “asignar numerales, números y otros símbolos a propiedades empíricas conforme a ciertas reglas”. En la definición de Stevens existen tres elementos que se deben explicar; numerales, asignación y reglas; los primeros se utilizan para etiquetar objetos o personas, solo para identificar a la unidad, pero si deseamos hacer descripciones estadísticas, explicar un suceso o predecirlo entonces hablaremos de valores cuantitativos, es decir, los numerales se convertirán en números para realizar las operaciones matemáticas. El segundo elemento de asignación se refiere al mapeo, el cual pretende agrupar mediante la asignación de un número a figuras o elementos semejantes en grupos, para lograr de esta manera una identificación sencilla de los conjuntos, el tercer elemento denominado la regla, son los componentes más significativos de la medición, esta asignación debe contener una relación empírica con la realidad, es decir, la creación de una frase o una oración que cuente con un valor en número que agrupe las acciones o definiciones de un objeto en particular.

Para obtener una mejor clarificación del concepto, sería importante conocer algunas definiciones de varios autores, los cuales se presentan en la Tabla No. 1.

Tabla No. 1 Conceptos básicos de Medición.

AUTOR	OBRA	AÑO	CONCEPTO
Mohammad Namakforoosh	Metodología de la Investigación	2010	La medición es el proceso mediante el cual se prueben las hipótesis y las teorías.
Hernández, Fernández, Baptista	Metodología de la Investigación	2006.	Proceso que vincula conceptos abstractos con indicadores empíricos.
Luis Arturo Rivas Tovar	¿Cómo hacer una tesis de maestría?	2006.	Una medición es una guía o norma que se usa como referente para medir algo.
Mario Bunge	La investigación científica, su estrategia y su filosofía.	2002	Lo que puede observarse directa o indirectamente son algunos rasgos de alguna cosa concreta. Para ser precisa, la observación tiene que ser cuantitativa, porque los objetos concretos tienen propiedades cuantitativas, aunque no sea más porque existen en determinadas cantidades y en el espacio-tiempo. La observación cuantitativa es la medición. Siempre que se atribuyen números a ciertos rasgos sobre la base de la observación se están practicando mediciones.

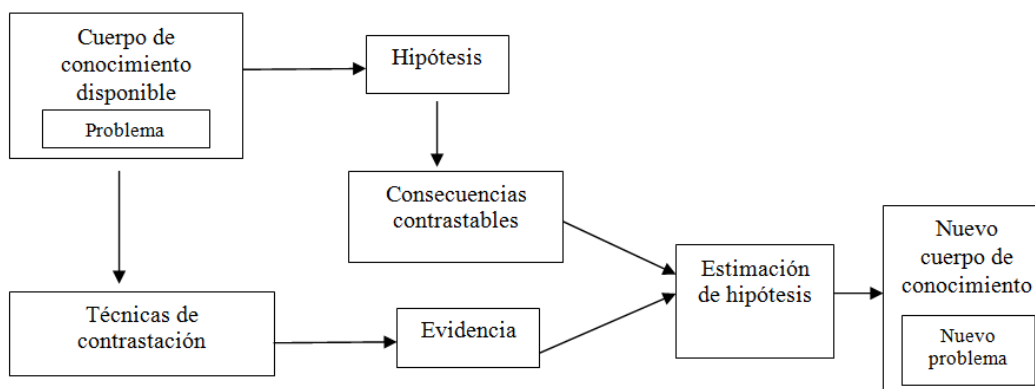

Fuente: Creación propia.

Una vez definidos los términos y conceptos que integran la medición, tendríamos que preguntarnos ¿Que es el conocimiento científico y el conocimiento ordinario?; para Bunge (2002), el inicio de toda investigación se encuentra en el conocimiento ordinario, es decir, se ha obtenido mediante el método de la ciencia y puede volver a someterse a prueba, enriquecerse y, llegado el caso, superarse mediante el mismo método. A medida que progresa, la investigación corrige o hasta rechaza porciones del acervo del

conocimiento ordinario. De tal forma que será necesario que la investigación científica se rija a través de reglas para poder operar dentro de la investigación. El enfoque científico está constituido, por el método científico y por el objetivo de la ciencia.

El proceso de la investigación científica se retroalimenta constantemente, el planteamiento del problema y la hipótesis se contrastan y se evidencian con la información recopilada en la investigación, con el único propósito de generar un nuevo conocimiento; este proceso se aprecia gráficamente en la Figura No. 1 denominado ciclo de investigación.

Figura No. 1 Un ciclo de investigación

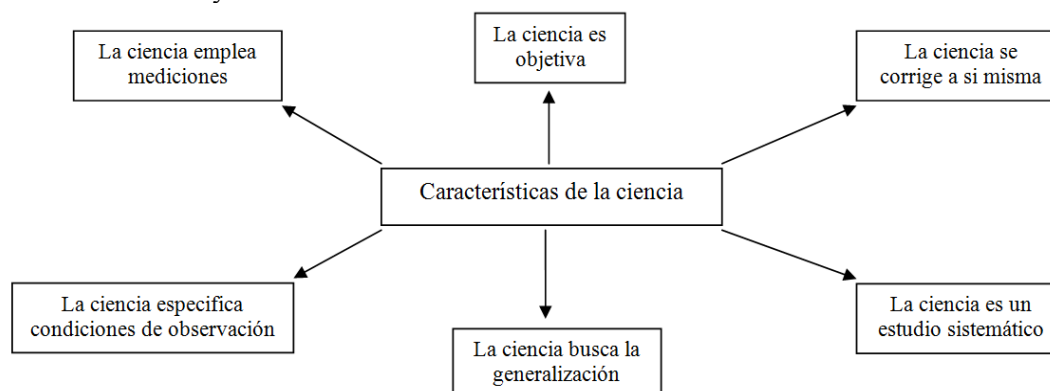

Fuente: Bunge (2002) "La investigación científica, su estrategia y su filosofía"

Cuando se afirma alguna situación que no tiene apoyo cuantitativo y metodológico, se dice que la ciencia es subjetiva, en vista de que interviene el gusto, sentimiento y educación de quien efectuó esa afirmación. Pero el Método busca corregirse a sí mismo, realizara un estudio sistemático para indagar la generalización y la delimitación específica de las condiciones observables, estas características nos conducen a la ciencia objetiva, donde se emplean las mediciones como una herramienta cuantitativa. La administración por ser una ciencia o disciplina del área social deberá aplicar el método científico para la generación de un nuevo conocimiento, es decir, la objetividad que otorga el método a las opiniones vertidas en relación a una investigación se aplicara a las diferentes disciplinas del conocimiento.

En la polémica conceptual para definir a la Administración como una ciencia; Namakforoosh en su obra refiere a Enrique Gutiérrez López, quien plasma en su manuscrito denominado "La Ciencia y Administración" de su curso de Metodología Avanzada de Investigación del programa de Doctorado, F.C.Y.A.U.N.A.M. 1983, las características que delimitan el concepto de una ciencia mostrado en la Figura No. 2.

Figura No. 2 “La ciencia y Administración”

Fuente: Namakforoosh (2010) “Metodología de la Investigación”

Una vez contextualizada la Administración como una ciencia podemos aplicar los procedimientos de medición, los cuales se consideran como una guía o norma que se usa como referente para medir algo (Rivas, 2006); la medición debe ser considerada a través de reglas, clases de medición, como clases de propiedades y técnicas de medición (Bunge 2002). Según Russell (1938) define a la medición de magnitudes como “cualquier método por medio del cual se establece una correspondencia única y recíproca entre todas o algunas de las magnitudes de un tipo y todos o algunos de los números integrales, racionales y reales”. La asignación de números debe tener relación lógica matemática con los objetos de estudio que se pretendan probar. Los eventos en la vida cotidiana que son observables deben identificarse a través de esta relación lógica matemática y así lograr relacionar las situaciones para que sean sometidas a pruebas de medición.

Ahora bien ¿Por qué se debe medir en la investigación?. La medición es parte de nuestras vidas, según refiere Hernández et al. Se debe prestar especial atención a todo lo que nos rodea, a través de las situaciones en la vida cotidiana y sin planearlo utilizamos la medición. Bunge, (2002) Aclara los conceptos que integran la medición en base a la definición de la misma: “La explicación más corriente de la medición, al tomar como centro la construcción de escalas de medición y el manejo de los instrumentos, puede ignorar la riqueza conceptual de los procedimientos de medición. Por el contrario, la medición propiamente dicha es un eslabón de una cadena mas bien larga de operaciones conceptuales y empíricas”, en este contexto se explica la cadena de medición en la Tabla No. 2 denominada Cadena de Medición de Bunge.

Tabla No.2 Cadena de Medición de Bunge

ESLABÓN	DEFINICIÓN
<i>Concepción</i>	Clara del mensurandum y del objetivo de la medición con la ayuda de una teoría
<i>Objetificación</i>	Del mensurandum por medio de enunciados de leyes
<i>Concepción</i>	Una escala de medición ideal (con un cero y una unidad si es métrica)
<i>Realización</i>	De una <i>escala material</i> que refleje la escala conceptual
<i>Proyección</i>	Del equipo, basada en teoría relevantes
<i>Construcción</i>	Del equipo (frecuentemente con la ayuda de la tecnología, basada en fragmentos de ciencia pura)

Fuente: Mario Bunge (2002) “La investigación científica, su estrategia y su filosofía”

En conclusión se podría definir a la medición como “La *Normalización* de las lecturas con la ayuda de la teoría basado en una *Sistematización* de datos para la *Búsqueda* de errores sistemáticos con el apoyo del *Cómputo* de los valores “exactos” (medio) y de esta manera calcular el error estándar.

CARACTERÍSTICAS DE LA MEDICIÓN

Dentro de las características de la medición se encuentran las operaciones matemáticas y estadísticas que se utilizan en las escalas de medición; Namakforoosh (2010), define una escala como un instrumento de medición; un velocímetro es una escala así como lo es también una regla. En el mismo sentido Rivas (2006), refiere a Coleman (1973) definiendo escala como cualquier serie de ítems arreglado de un modo progresivo de acuerdo al valor o magnitud que toman para su cuantificación.

Para manejar la escala de medición debemos estar sujetos a ciertos criterios para su construcción, en tal efecto Heinemann (2003), describe cuales son esos criterios en la construcción de escalas; como primer criterio, menciona que todos los valores de una variable han de estar situados lógicamente al mismo nivel, segundo criterio, los valores de una variable han de excluirse recíprocamente, tercer criterio, los valores de una variable han de ser inequívocos; es decir, todos (personas, encuestas, entrevistador, observador, codificador) tienen que clasificar los mismos hechos de la misma manera, cuarto y último criterio, los valores de una variable han de ser posible y completos. A continuación se presenta la Tabla No. 3 que identifican y definen según varios autores los conceptos de cada escala:

Tabla No. 3 Definiciones de Escalas de Medición

ESCALAS PARAMÉTRICAS	ESCALA NOMINAL	NAMAKFOROOSH, 2010.	Es una escala que implica un nivel mínimo de medición, porque los datos que contiene son solamente números de ocurrencia en cada clase o en cada categoría de la variable. por lo tanto los números asociados a los objetos no tienen significancia
		Rivas, 2006	Es una escala utiliza números o letras, se asigna a los sujetos de investigación, son etiquetas que permiten clasificarlos. Es la más simple de las escalas. Identifica sujetos de investigación mediante el nombre.
		Heinemann, 2003.	Este tipo de escala tan solo determinan si los hechos existen o no.
		Giroux & Remblay, 2004.	Escala de medición que permite distinguir las diversas formas de una variable asignándoles una etiqueta (un nombre) arbitraria.
		Namakforoosh, 2010.	Tienen las características de la escala nominal además de un indicador de orden. En este nivel de medición no solo se clasifica sino también se exhibe una forma de relación.
ESCALAS NO PARAMÉTRICAS	ESCALA ORDINAL	Rivas, 2006	La escala ordinal implica un orden jerárquico entre los valores del ítem descrito. Es decir, aquí si existe diferencia entre la magnitud e importancia de los valores que se asignan.
		Heinemann, 2003.	Las escalas ordinales sitúan los valores en una gradación, determinan las diferencias adoptando la forma "mayor"- "menor" o "con frecuencia"- "raras veces"- "nunca".
		Giroux & Remblay, 2004.	Escala de medición que permite distinguir entre las diversas formas de una variable, ordenándolas de una manera no arbitraria.
		Namakforoosh, 2010.	Estas tienen las características de la escala nominal y ordinal, y además incorporan el concepto de igualdad de intervalo. Con este tipo de escala se puede medir la diferencia, esta se caracteriza como una unidad de medición común y constante que asigna números reales a todos los pares de objetos en una serie ordenada.
		Rivas, 2006	Escala mas precisa que las anteriores, y da detalles no solo del orden, sino de la distancia entre cada valor. Es una escala que distingue los objetos de acuerdo a las magnitudes en unidades de intervalos iguales.
ESCALAS NO PARAMÉTRICAS	ESCALA INTERVALAR	Heinemann, 2003.	Establecen ya de antemano grandes intervalos entre los valores. Los intervalos son del mismo tamaño. Sin embargo no aparece fijado un punto cero.
		Giroux & Remblay, 2004.	No define.
		Namakforoosh, 2010.	Estas escalas incluyen todas las características anteriores, mas el concepto de cero absoluto u origen a propiedades tales como las dimensiones físicas: peso, estatura y distancia, que tienen cero natural y que son medibles con escalas naturales.
		Rivas, 2006	Es una escala que permite medir, en términos absolutos, donde el cero si es considerado y representa la ausencia de un atributo.
		Heinemann, 2003.	Define a este tipo de escala como cociente o proporción como una escala fraccionada con un punto cero.
ESCALAS NO PARAMÉTRICAS	ESCALA DE RAZÓN	Giroux & Remblay, 2004.	Define a este tipo de escala como escala de proporciones como escala de medición cuantitativa que atribuyen un valor numérico (incluido el cero absoluto) no arbitrario a las diversas formas de una variable.

Fuente: Creación Propia.

La Tabla anterior identifica las escalas de medición Paramétricas y No Paramétricas, donde las primeras se integran de escalas de Intervalo y Razón, mientras que las segundas se refieren a las escalas nominales y ordinales, las Paramétricas siguen patrones de estadística rigurosa y las No Paramétricas siguen un orden detallado. Las operaciones matemáticas realizadas a las pruebas de medición, permiten determinar una validez, confiabilidad y practicabilidad de la medición.

Lo anterior descrito nos conlleva a determinar las diferencias de las escalas:

- a) Si tienen un punto cero,
- b) Si los valores que se comprueban poseen gradaciones,
- c) Si se han establecido intervalos entre los valores

Tabla 4. Diferencias entre escalas de Medición

ESCALA	PUNTO CERO	INTERVALO	GRADACIÓN	EJEMPLOS.
Nominal	NO	NO	NO	Tipo de deporte, sexo.
Ordinal	NO	NO	SI	Intensidad de sentimientos, estratificación.
Intervalo	NO	SI	SI	Temperatura en grados, coeficiente de inteligencia.
Cociente o Proporción	SI	SI	SI	Ingresos, tiempos, fuerza.

Fuente: Klaus Heinemann (2003)

Una vez identificados los niveles y características de la medición, se podrá realizar a detalle el instrumento mas acorde al tipo de investigación, para ello, se debe introducir a la búsqueda de los tipos de instrumentos, ya sea utilizando alguno ya creado o bien se decida a construir un instrumento propio.

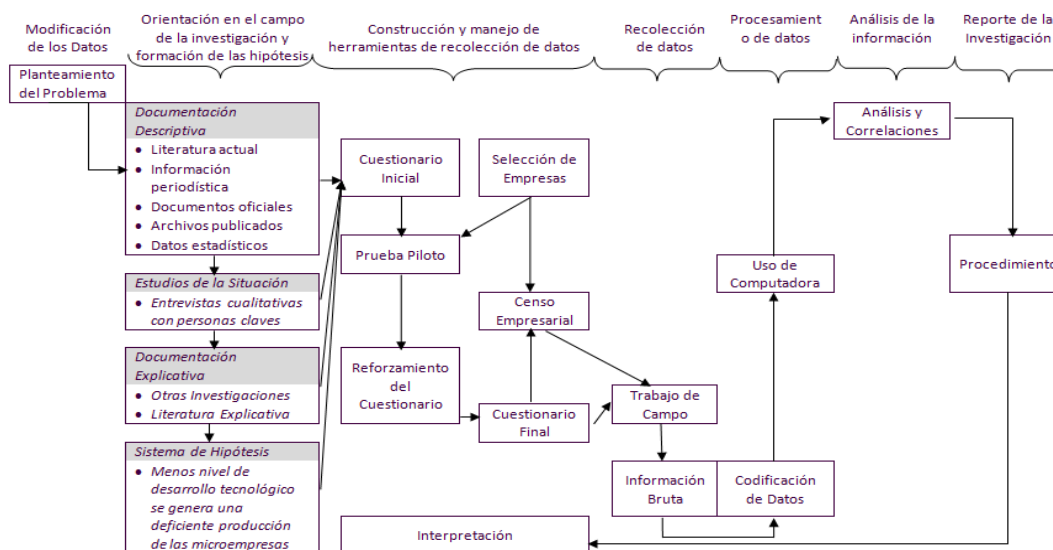

INSTRUMENTO DE MEDICIÓN

Michel Sérurier (2007) menciona que “El instrumento de medición se elabora conforme a la teoría científica que interpreta el fenómeno. Es decir, la determinación del instrumento está profundamente vinculada a la comprensión del mismo fenómeno que se pretende medir. Los instrumentos de medición deben indicar correctamente lo que se desea medir, de manera comprensible y logrando el entendimiento de los creadores, ejecutores y destinatarios del mismo, la psicología menciona que el proceso de evaluación de un instrumento de medición debe considerar tres características principales; la Validez, la Confiabilidad y la Factibilidad; la Validez se refiere al grado en que la prueba mide la realidad de lo que se desea medir, la Confiabilidad nos habla de la exactitud o precisión de los procedimientos de medición y la Factibilidad indica cuales son los factores que determinan la posibilidad de realización, tales como: factores económicos, conveniencias y el grado de interpretación del instrumento de medición.

Los proyectos de investigación abarcan desde la estructura teórica del proceso de investigación, hasta el diseño de las etapas que se pretenden medir en el estudio. En este contexto se inserta la matriz de congruencia. Herramienta que brinda la oportunidad de resumir el tiempo dedicado a la investigación, su utilidad permite organizar las etapas del proceso de investigación estableciendo congruencia entre cada una de las partes involucradas en dicho procedimiento. Rivas establece que la matriz metodológica es definida como “el instrumento científico que permite hacer congruente y coherente el proceso de la medición de las variables independientes y dependientes, creando un marco de comparación racional y ordenada para la construcción de un cuestionario”.

Existen diferentes formas de diseño de una matriz metodológica, las cuales cuentan con elementos tales como: (1) descripción conceptual de cada variable (2) definición operacional de cada variable, (3) descripción de dimensiones asociadas a cada variable, (4) especificación de los indicadores asociados a cada dimensión, (5) determinación de los ítems o preguntas asociadas a cada indicador, (6) especificar el tipo de escala para cada ítem e (7) indicar la variación de cada escala (Rivas, 2006). En este sentido, debemos considerar la necesidad de aplicar una metodología para la construcción de la Matriz de Congruencia, ver Figura No. 3 “Diagrama de la Metodología Utilizada en la Construcción de la Matriz de Congruencia”

Figura No. 3 “Diagrama Construcción de la Matriz de Congruencia”

Fuente: Oscar Hugo Pedraza Rendón, Vasco de Quiroga, de la UMSNH

Finalmente, el análisis del ejemplo presentado permitirá adaptar la matriz a su investigación particular y comprobar su eficacia para avanzar en sus trabajos de investigación. Un ejemplo de matriz de congruencia, se presentara a continuación en la Tabla No. 4

Tabla No. 4 “Variable Servicio Civil de Carrera”

VARIABLE	DIMENSIÓN	DEFINICIÓN	INDICADOR	ITEM	AMPLITUD ÍNDICE	ESCALA
Dependiente e Independiente	1. Objetivo del Servicio Profesional de Carrera	La finalidad del Servicio Civil de Carrera será contribuir a la mejoría en la calidad de los servicios gubernamentales, mediante una eficiente selección, contratación, inducción, concientización, capacitación, desarrollo, promoción, permanencia productiva y retiro digno de todo servidor Público de Carrera (Haro 2000).	*Grado y cobertura del conocimiento del Objetivo. *Grado de Comprensión. *Percepción del cumplimiento. *Mejores prácticas.	El cuestionario se aplicará por dependencia y se iniciará asentando el objetivo del servicio profesional de carrera de cada dependencia. CUESTIONARIO 1.-Conocía el objetivo con antelación. 2.-El objetivo es claro: <i>ENTREVISTA A EXPERTOS</i> 1. ¿El objetivo del SPC es lo suficientemente claro para la comprensión de los funcionarios públicos en general?	Si No 1. Acuerdo total. 2. Acuerdo 3. Parcialmente 4. Desacuerdo. 5. Desacuerdo Total	5 1 5 4 3 2 1
				CUESTIONARIO 3.El objetivo se cumple <i>ENTREVISTA A EXPERTOS</i> 2. ¿Considera usted que el objetivo del SPC se cumple en las dependencias que lo operan? 3. En su opinión cuál sería la dependencia que mejor cumple con los objetivos del SPC?	1. Acuerdo total. 2. Acuerdo 3. Parcialmente 4. Desacuerdo. 5. Desacuerdo Total Libre	5 4 3 2 1 No aplica

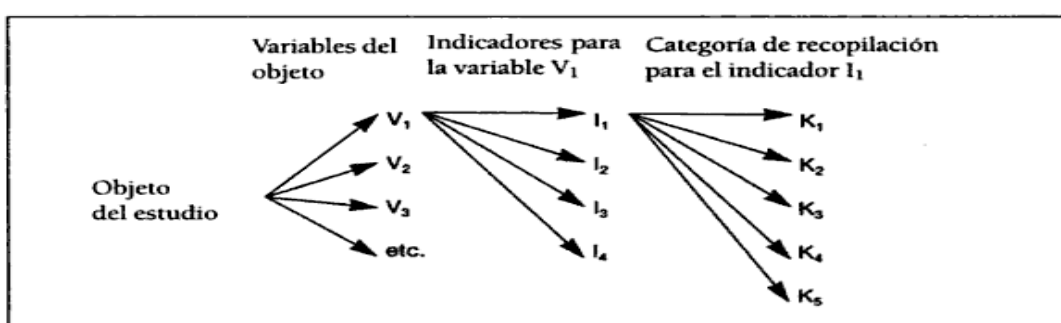

Fuente: Rivas 2006, “Como hacer una tesis de Maestría”

Como se aprecia en cuadro anterior, es indispensable identificar las variables para operar las dimensiones y a su vez definir las conceptualmente así como operacionalmente mediante la literatura, debido a que estas llevan a formar los indicadores que serán objeto específico para elaborar nuestro ítem (cuestionario), mismo que se identifica con el índice de amplitud para establecer la escala de medición.

Las variables según Levine (2006), son las características de los objetos o de los individuos. Todas las variables deben de tener una definición operacional, es decir, un significado universalmente aceptado que sea claro para todos aquellos que estén relacionados con el análisis; Estas variables se pueden dividir en variable dependiente e independientes: Una *variable dependiente* es aquella cuyos valores dependen de los que tome otra variable independiente; Una *variable independiente* es aquella que es manipulada por el investigador en un experimento con el objeto de estudiar cómo incide sobre la expresión de la variable dependiente.

Toro y Parra (2006), establecen que las variables están compuestas por *dimensiones*. Las dimensiones a su vez se dividen en *indicadores*. Las variables en su definición normal y operacional tendrán características y comportamientos según el problema tratado y el área en la cual participa, por consiguiente la construcción de un instrumento de medición se representa en la Figura No. 4.

Figura No. 4 Proceso de Interpretación del Desarrollo del Instrumento de Medición

Fuente: Klaus Heinemann (2003)

Una de las herramientas más utilizadas para recopilar datos y realizar pruebas estadísticas lo son la entrevista y la encuesta. Heinemann, (2003) define a la entrevista como “*El instrumento que consiste en conseguir, mediante preguntas formuladas en el contexto de la investigación o mediante otro tipo de estímulos, por ejemplo visuales, que las personas objeto de estudio emitan informaciones que sean útiles para resolver la pregunta central de la investigación. Pueden definirse la entrevista como un test de estímulo-reacción.*” En este contexto se puede decir que este instrumento de medición cuenta con ventajas significativas en comparación de otros instrumentos.

Los datos obtenidos a través de la entrevista y/o cuestionario deben ser sometidos al proceso de la interpretación mediante las pruebas estadísticas. Los autores Levine, Krehbiel, Berenson (2006) definen, para este proceso a la estadística como: “*La rama de las matemáticas que examina las formas de procesar y analizar datos. La estadística ofrece los procedimientos para recolectar y transformar los datos de manera que sean útiles a quienes toman decisiones en los negocios*”, por su parte Robert R. Pagano (2007) indica que las estadísticas son “*El número calculado a partir de los datos de la muestra. Así, el promedio de un conjunto de datos obtenidos a partir de la muestra sería una estadística*”. Lo que significa que las estadísticas buscan medir las características de una población específica en una situación concreta.

PRUEBAS ESTADÍSTICAS SEGÚN EL TIPO DE ESTADÍSTICA

La aplicación de la estadística puede darse en varios niveles, la división de la estadística se encuentra entre la estadística descriptiva y la inferencial, Alvarado, Obagi (2008), definen a la estadística descriptiva como “*El conjunto de técnicas para analizar, describir e interpretar los datos recolectados sobre un fenómeno de interés, con el fin de tomar decisiones, obtener conclusiones o plantear hipótesis*”.

Por otro lado la estadística inferencial es definida por Tomás-Sábado (2010) como “*El análisis que se apoya en el cálculo de la probabilidad, que a partir de los datos obtenidos de una muestra, trata de sacar conclusiones acerca de las características de una población*”. En la Tabla No. 5 se identifican las divisiones que contiene la ciencia estadística:

Tabla No. 5 Divisiones de la Estadística

PRIMERA DIVISION DE LA ESTADISTICA	DESCRIPTIVA	Describe en fma literal, numérica y gráficamente los fenómenos colectivos.
SEGUNDA DIVISION DE LA ESTADISTICA	INFERENCIA ESTADISTICA PURA	Infiere y obtiene resultados de la Estadística Descriptiva para analizarlos e interpretarlos
	ESTADISTICA APLICADA	Estudia los métodos, técnicas, procedimientos, principios, teorías, leyes, sin pensar en su probable aplicación
		Estudia los mismos aspectos, pero en función de su aplicación a otras disciplinas científicas.

Fuente: Sexto Prieto Contador

En el proceso de medición para la investigación científica, el investigador debe tener en claro las divisiones de la estadística, porque este dará una consistencia a la necesidad de su investigación, es decir, es indispensable conocer que la herramienta de la estadística descriptiva tiene, según sus variable no paramétricas señaladas en la literatura, los niveles, métodos y técnicas que se utilizan en esta área. Conocer las pruebas estadísticas a nivel descriptivo ayuda, por consiguiente a la señalización precisa de la variable utilizada en cuanto a identificar la escala de la variable o asociación de la misma, para ello, se muestra a continuación en la Tabla No. 6 un panorama de los métodos o técnicas estadísticas en materia descriptiva.

Tabla No. 6 Pruebas Estadísticas descriptivas mas frecuentes de acuerdo a la escala de medición de la variable en estudio.

TIPO DE DESCRIPCIÓN		ESCALA DE LA VARIABLE O ASOCIACIÓN	MÉTODO O TÉCNICA ESTADÍSTICA
Variables Individuales		Categóricas (nominal y ordinal)	- Frecuencias, proporciones o porcentajes representados por gráficos de barras, pastel o pictogramas.
Variables individuales		Númericas (intervalo y razón)	- Distribución de frecuencias en clases. - Frecuencias acumuladas - Percentiles
Asociación variables	entre	Categóricas con categóricas	- Medidas de tendencia central, dispersión, curtosis y oblicuidad - Tabla de contingencias - Gráficos de barras
Asociación variables	entre	Categóricas con numérica	- Pruebas de Kendall, de Kramer, de Spearman
Asociación variables	entre	Númerica con numérica	- Tablas con clasificación categórica, con promedios y desviaciones o error estándar en cada entrada - Gráfico de puntos - Coeficiente de Correlación - Recta de regresión

Fuente: Ing. Byron Humberto González (2004), <http://www.byrong.tk> byrong@sofihome.net

Así mismo se debe hermanar para el proceso de medición las pruebas estadísticas utilizadas en materia inferencial, ubicando nuevamente el tipo de variable paramétrica en una escala o asociación en donde es medida, conocer las pruebas, métodos o técnicas ayuda al investigador a precisar aunque con un margen de error sus resultados en la investigación, por consiguiente se muestra en el cuadro No. 7 según el tipo de variable, escala de asociación las pruebas estadísticas que se deben calcular.

Tabla No. 7 Pruebas Estadísticas inferenciales mas frecuentes de acuerdo a la escala de medición de la variable en estudio.

TIPO DE DESCRIPCIÓN	ESCALA DE LA VARIABLE O ASOCIACIÓN	MÉTODO O TÉCNICA ESTADÍSTICA
Variables Individuales	Nominales	- Prueba Z para una proporción poblacional - Prueba X^2 para varias proporciones en una sola población
Variables individuales	Ordinales	- Intervalos de confianza para proporciones - Prueba del signo o binomial para la mediana poblacional
Asociación entre variables	Muestras grandes con distribución normal	- intervalos de confianza para proporciones - Prueba de "t" para un promedio poblacional
Asociación entre variables	Muestras pequeñas sin distribución normal	- Intervalo de confianza para el promedio - Prueba del signo o binomial ara la mediana poblacional - Intervalo de confianza para el promedio

Fuente: Ing. Byron Humberto González (2004), <http://www.byrong.tk> byrong@softhome.net

La claridad en el proceso de investigación ayuda al investigador a identificar rápidamente los métodos que debe utilizar para manejar la información recopilada a través de sus instrumentos de medición, cada prueba estadística debe ser ampliada tanto el investigador considere necesario para mostrar sus conclusiones en la investigación.

CONCLUSIONES

Las técnicas de investigaciones científicas son variadas y tienen distintos propósitos, todas resultan inútiles si no se comprende la metodología para desarrollarla. El marco teórico permita identificar y establecer las variables así como la determinación de la relación entre dos o más variables. Para lograr el éxito de una investigación es necesario que además de la identificación de variables, la correcta formulación de la hipótesis, la estrategia para probar dichas hipótesis, se requiere que los instrumentos con los que se van a medir dichas variables sean adecuados y permitan obtener información de calidad cuando se apliquen. De ahí la importancia de elaborar un buen instrumento de medición que reúna ciertas cualidades como: validez, confiabilidad, objetividad, amplitud, practicabilidad y adecuación. Si el instrumento que se aplica para recolectar los datos reúne estas cualidades se considera que es confiable, por lo tanto el investigador podrá aproximarse, al valor real de las variables y reducir el margen de error. Sera necesario conocer las características de las variables de investigación para establecer el nivel de medición que se utilizará para la recolección de los datos, el cual puede ser: nominal, ordinal, de intervalo y de razón, (Giroux et al, 2004).

Las asociaciones de las variables dependientes e independientes son determinantes para medir las actividades de la investigación; éstas identifican el proceso medición, infieren las causas y efectos para llegar a la generalización de forma objetiva a las inferencias que de ellas se realicen. El éxito en el desarrollo de una investigación depende en gran medida, de la calidad de los instrumentos con los se medirán las variables de la investigación. Identificar el instrumento que es utilizado en la recopilación de los datos lleva un proceso minucioso, debido a que, depende de la identificación de las variables, las cuales a su vez darán la ampliación hacia las dimensiones que serán sujetas en la investigación; estas son conceptualizadas operacionalmente para detectar el indicador lo suficientemente concreto en su definición, y este a su vez lleve de la mano el crear los tipos de preguntas que son utilizadas para la recopilación de información dirigido hacia los sujetos de estudio, expresando así la amplitud jerárquica y la escala; por lo tanto se puede afirmar que este es un proceso destacablemente delicado en cuestión del procesamiento que se le de a los datos obtenidos. Es decir, un trabajo de campo riguroso en la investigación cuantitativa.

AULA DE MEDIOS CON APOYO DE LAS TECNOLOGÍAS DE LA INFORMACIÓN Y COMUNICACIÓN

Lourdes Leticia Chávez Álvarez, Universidad Autónoma de Baja California
Esteban Pérez Flores, Universidad Autónoma de Baja California
Lorenzo Omar Martínez González, Universidad Autónoma de Baja California
Alejandro Vargas Acosta, Universidad Autónoma de Baja California

RESUMEN

El presente proyecto de mejora dentro de la Facultad de Derecho Mexicali se desarrollará con el apoyo de las tecnologías de la información y comunicación (TIC) logrando la implementación y equipamiento de una aula interactiva de medios la cual servirá como material de apoyo a los docentes y alumnos donde el pizarrón electrónico tendrá el objetivo primordial de involucrarlos con las nuevas tecnologías y a la vez sirva de ayuda para su desempeño académico. El pizarrón electrónico servirá para elaborar materiales didácticos, exponer temas de clase, fomentar la comunicación entre los alumnos y profesores; ayudando a realizar presentaciones académicas. Se capacitará a docentes y alumnos con la finalidad de concientizar el uso y manejo adecuado de este tipo de herramientas tecnológicas para obtener mayores resultados académicos y aprovechamiento de los recursos materiales que proporciona la institución educativa. Las tecnologías de información nos brindan grandes beneficios y un mejor desenvolvimiento dentro de las aulas; estas se vuelven más interactivas tanto para el docente como para el alumno aumentando las oportunidades de participación y discusión.

MEDIA ROOM WITH SUPPORT OF INFORMATION TECHNOLOGY AND COMMUNICATION

ABSTRACT

This improvement project in Mexicali Law School will be developed with the support of information technology and communication (ICT) equipment and managing the implementation of an interactive classroom media which serve as support material for teachers and whiteboard where students will engage the primary objective of the new technologies and also serves as a support for their academic performance. The electronic whiteboard will help develop training materials, exposing class issues, foster communication between students and teachers, helping academic presentations. It will train teachers and students in order to raise awareness on proper use and handling of such technological tools for higher academic results and use of material resources the school provides. Information technologies provide us with great benefits and a better development in the classroom, they become more interactive for both the teacher and the students enhancing opportunities for participation and discussion

PROPUESTA DE HERRAMIENTAS ALTERNATIVAS UTILEZ EN LA PLANEACIÓN ESTRATEGICA: ESTUDIO DE CASO NEGOCIO DE SERVICIOS Y SU UBICACION

ABSTRACT

ALTERNATIVE TOOLS PROPOSED IN STRATEGIC PLANNING: BUSINESS LOCATION CASE STUDY

This research focused on measuring perceived characteristics needed by experts, in the context of locational methods used by companies before they started operation, using new approaches in strategic planning management: fuzzy logic. Several detailed procedures have been depicted to operate with fuzzy techniques, which may be applied to empirical research by a wide range of researchers in this field. This empirical study showed that fuzzy logic is an attractive method to increase the value of the information collected from experts' evaluations in locational field, by improving the final decision. The implemented procedure overcomes the disadvantages of the research focused on the third-person approach, and minimizes the categorization and interaction bias derived from the relationship between verbal and numerical labels. Results illustrate the advantages of this method as a tool to improve strategic planning management through this important task "companies location".

INTRODUCCIÓN

Las organizaciones actuales se enfrentan continuamente a cambios en el entorno, el cual se vuelve cada vez más competitivo, donde la globalización ha pasado de ser un concepto a ser una realidad (Chingping & Montri, 2005). Es ahora común ver a empresas internacionales por competir por un mercado globalizado. Esto provoca que la planeación estratégica ocupe un lugar cada vez más importante para las empresas. Dentro de las dediciones estratégicas a las que se enfrentan las organizaciones, están aquellas relacionadas con la localización de instalaciones (Gonzalez S., Flores R., & Flores R., 2000). Este aspecto resulta fundamental ya que implica inversiones de largo plazo, impacta en numerosas operaciones e involucra además otras decisiones logísticas. Al considerar esta planeación se hace evidente que no solo se deben considerar las condiciones actuales, sino que también se deben tomar en cuenta los posibles cambios en el entorno. Para determinar la ubicación de una empresa existen varios métodos locacionales que implican la utilización de técnicas sencillas hasta modelos complejos.

El modelo locacional que se propone dentro de este trabajo pretende aplicar lógica difusa a las evaluaciones emitidas por los expertos respecto a los factores básicos locacionales que tiene cada ubicación disponible para ubicar el negocio, esto con la finalidad de obtener datos precisos para la ubicación final. Una vez que se tienen las ponderaciones normalizadas estas servirán para aplicarla al modelo de centro de gravedad y así proponer la ubicación que sea la más óptima para establecer

físicamente el negocio, para este trabajo se utilizó un negocio de comida. La finalidad es proporcionar un modelo práctico.

El artículo se divide de la siguiente forma, en la sección uno se hace una introducción al trabajo empírico, en la sección dos se discuten los fundamentos teóricos y metodológicos del trabajo, la sección tres presenta el caso empírico, la sección cuatro se analizan los resultados la sección y por último en la sección cinco muestra las conclusiones.

FUNDAMENTOS TEORICOS Y METODOLOGICOS

La decisión de localización a menudo depende del tipo de negocio. En las decisiones de localización industrial, la estrategia usual es minimizar los costos, mientras que en las organizaciones de venta al menudeo o servicios profesionales, la estrategia se enfoca en maximizar el ingreso (Heizer & Render, 2004). El objetivo de la estrategia de localización es maximizar el beneficio de la ubicación para la empresa.

Los elementos teóricos y particulares que servirán de guía durante el proceso de investigación serán los siguientes:

Métodos de Localización

Típicamente las decisiones que implican una planeación estratégica a largo plazo incluyen la ubicación de instalaciones. Para que estas estrategias sean exitosas es necesario considerar no solo las condiciones actuales, sino además posibles cambios futuros, tal como acciones tomadas por los competidores para mejorar su posición competitiva (Ghosh & Craig, 1983). Se debe notar también que las decisiones de localización muchas veces implican inversiones considerables para las empresas, además de que comprometen la viabilidad de las operaciones en ciertas áreas geográficas. Usualmente los tomadores de decisión se basan en reportes de mercadotecnia, en análisis demográficos o en otros instrumentos similares para la elección de los sitios adecuados para las nuevas instalaciones. Estos instrumentos frecuentemente reflejan un estado pasado de la situación, por lo que muchas veces no representan la realidad de manera precisa. Los factores que se consideran en estas herramientas son tan variados como: tamaño, imagen, nivel de servicio, presencia de la compañía, distancia hacia puntos de demanda, flujos vehiculares, etc. Todos estos factores implican una gran cantidad de información para el tomador de decisión configuración al sistema completo de la cadena de suministros (Ballou, 2004).

a. Métodos de Selección primaria

Son métodos primarios, que se caracterizan por ser subjetivos y de rápida discriminación, generalmente están basados en la experiencia de quien los utiliza, son sencillos y de fácil aplicación. Los más comunes son los siguientes (Pedraza, 1996):

b. Métodos de Selección secundaria

Son técnicas que requieren análisis más profundos y que generalmente utilizan a los métodos de selección primarios como insumo para sus aplicaciones, en este apartado se presentan los métodos factibles de utilizar en la realidad.

b.1 Método del Centro de Gravedad

Este método se usa frecuentemente para analizar el costo de transporte como factor de localización. Se utiliza para la localización de plantas industriales o almacenes de distribución, respecto a puntos de origen, de los cuales reciben productos o materiales, y estos a su vez los envían a otras ubicaciones de destino. Con este enfoque el problema a solucionar es entonces encontrar una localización central que

minimice el costo total de transporte, que en este método se supone es proporcional a la distancia recorrida y al volumen o peso de los materiales transportados hacia o desde la planta, por lo que (D.J, 1994):

$$CTT = \sum C_i V_i D_i \quad (1)$$

Donde:

C_i = Es el costo unitarios de transporte que corresponde al punto i

V_i = Es el volumen o peso de los materiales transportados desde o hacia i

D_i = Es la distancia entre el punto i y el lugar donde se encuentra la planta

El cálculo del costo total de transporte requiere de la estimación de las cantidades a transportar entre cada punto y la instalación en un periodo determinado. El producto $C_i V_i$ es el peso o importancia que cada punto i , tienen en el sitio a considerar.

Se ubican sobre el mapa o plano los puntos de interés y se determina el centro de gravedad con las siguientes expresiones:

$$X^* = \frac{\sum_{i=1}^n C_i V_i X_i}{\sum_{i=1}^n C_i V_i} \quad Y^* = \frac{\sum_{i=1}^n C_i V_i Y_i}{\sum_{i=1}^n C_i V_i} \quad (2)$$

Fundamentos de Lógica Difusa (Zadeh, 1978)

La lógica difusa permite representar de forma matemática conceptos o conjuntos imprecisos, tales como días fríos, meses calurosos, personas altas, salarios, alimentos con mucho condimento, valoraciones de negocios, etc. Posteriormente a ellos, otros grandes pensadores como David Hume o Kant apoyaban esta idea manteniendo que el razonamiento venía dado por las observaciones de las que somos testigos a lo largo de nuestra vida y la detección de algunos principios contradictorios en la lógica clásica. Tras la publicación de Lotfi A. Zadeh (L, 1965), se comenzó rápidamente a usar la lógica difusa en distintas aplicaciones prácticas, llegando a su máximo auge a principios de los años 90, y continuando éste hasta la época actual.

Elementos básicos

La lógica borrosa es un tipo de lógica que reconoce más que simples valores verdaderos o falsos. Con lógica borrosa, las proposiciones pueden ser representadas con grados de veracidad o falsedad. Por ejemplo, la sentencia "hoy es un día soleado" puede ser 100% verdad si el sol está en su esplendor, 80% de verdad si hay algunas pocas nubes, 50% de verdad si esta nublado y 0% si el cielo está totalmente cubierto (Pérez C & Vernon, 2007).

b. Variables lingüísticas

La Teoría de Conjuntos Difusos puede utilizarse para representar expresiones lingüísticas que se utilizan para describir conjuntos o algoritmos. Los Conjuntos Difusos son capaces de captar por sí mismos la vaguedad lingüística de palabras y frases comúnmente aceptadas, como "gato pardo" o "ligero cambio". La habilidad humana de comunicarse mediante definiciones vagas o inciertas es un atributo importante de la inteligencia.

Una Variable Lingüística es aquella variable cuyos valores son palabras o sentencias que van a enmarcarse en un lenguaje predeterminado. Para estas variables lingüísticas se utilizará un nombre y un valor lingüístico sobre un Universo de Discurso. Además, podrán dar lugar a sentencias generadas por reglas sintácticas, a las que se les podrá dar un significado mediante distintas reglas semánticas.

D. Sistemas controladores fuzzy y Reglas de inferencia

E.

Aunque la lógica difusa puede operar de muchas maneras y razonamientos, con tolerancia en los valores o con diferentes operadores la mayoría de los sistemas fuzzy difieren en la forma de operar y hacer cálculos con los números fuzzificados. La lógica difusa provee la forma de crear reglas que expliquen de qué forma o de qué manera las variables lingüísticas están relacionadas. Cada enunciado de una regla tiene un antecedente y un consecuente relacionados y que consiste en proposiciones fuzzy que se convierte o se usan como enunciados que unen a las variables lingüísticas con operadores de y / o ver figura 1.

Muchas de esas reglas se basan en (Corporation);

Figura no. 1: Procesamiento general de un sistema difuso mediante la Técnica de Mandani

SI proposición fuzzy antecedente ENTONCES proposición fuzzy consecuente

Fuente : FisPro : An open source portable software for fuzzy inference systems fispro (FisPro, 2010)

Un sistema de inferencia difuso contendrá un conjunto de reglas de descripción lingüística (Technology, 2006). En el caso más general los antecedentes y consecuentes de estas reglas incluirán proposiciones difusas compuestas, es decir, combinarán múltiples entradas y salidas. Este tipo de sistema se denomina sistema MISO ("multiple input single output") (Sodiya, Onashoga, & Oladunjoye, 2007).

Y de forma general los enunciados son de la forma

SI entrada 1 es X 1 Y entrada 2 es X 2 Y ... entrada n es X n entonces Y r

La *defuzzificación* convierte un valor fuzzy a un valor natural. Este proceso es un tanto complejo ya que un conjunto difuso no se puede traducir directamente a un valor natural. Los sistemas físicos requieren valores discretos y es aquí donde la defuzzificación tiene su importancia.

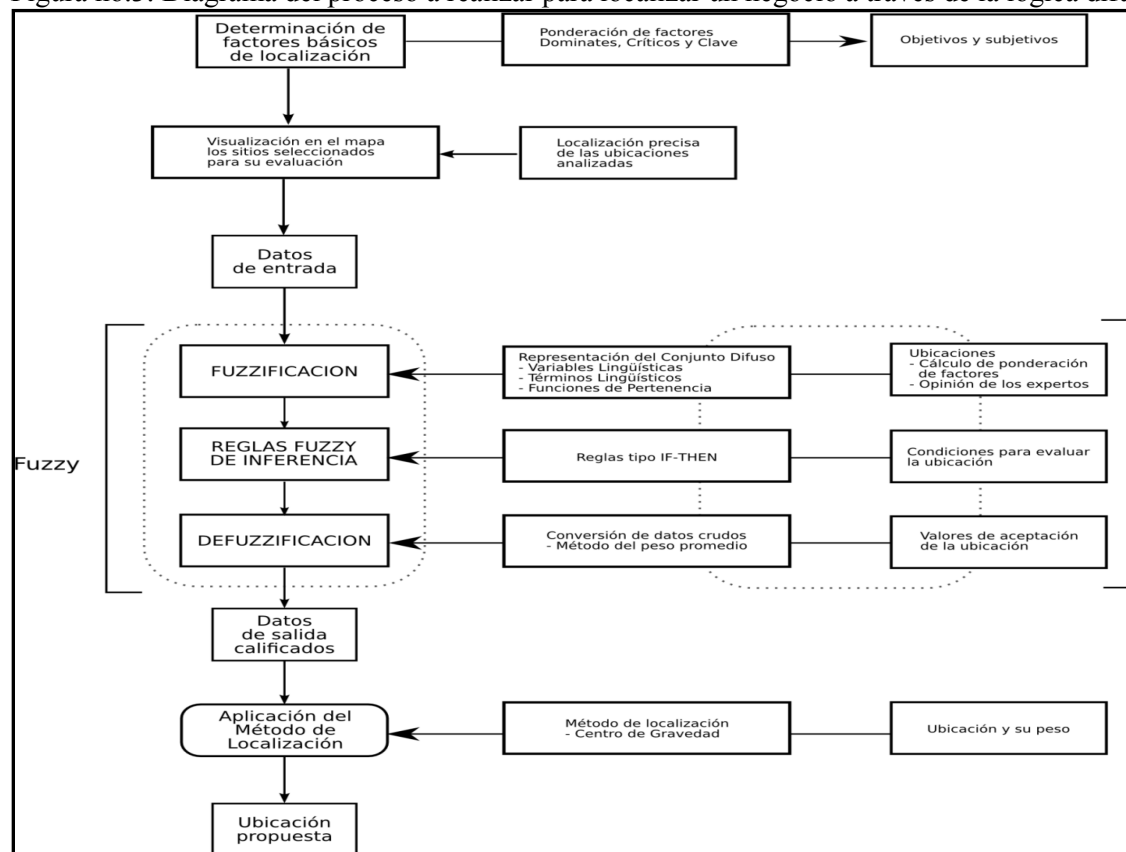

CASO EMPÍRICO: PROPUESTA DEL USO DE LÓGICA DIFUSA UTILIZADA COMO HERRAMIENTA DE LOCALIZACIÓN

La localización de un negocio con características específicas puede parecer ser un desafío desalentador para el inversionista principiante o el analista experimentado. Pero, es más eficiente si se sigue un procedimiento lógico, sistemático. Cuando se adopta tal acercamiento, las oportunidades de encontrar una localización que maximice la capacidad del negocio, tanto en costo como rentabilidad, se verán aumentados según los objetivos trazados. En este apartado se presenta el modelo propuesto así como se toca el detalle del desarrollo del mismo.

El modelo propuesto fue dividido en 6 fases con la finalidad de realizar un proceso ordenado, en la fase 1 se Determinación de Factores básicos de localización y Ponderación de los factores básicos de localización, la fase 2 se identifica en el mapa los sitios probables para la ubicación, en la fase 3 se aplica la difusividad a las ponderaciones dadas por los expertos sobre cada factor locacional de cada localidad Fuzzy (Software Matlab 6.5), la fase 5 se aplica un método de localización secundaria (centro de gravedad) por último en la fase 5 y 6 se analizan y evalúan los resultados finales.

El proceso llevado a cabo durante la aplicación al caso práctico se puede resumir en la figura 3

Figura no.3: Diagrama del proceso a realizar para localizar un negocio a través de la lógica difusa.

Fuente: Elaboración Propia

Fase 1. Determinación de los factores de localización a evaluar por parte de los expertos

Tabla no.1. Tabla de Factores Básicos Locacionales determinados para la instalación del negocio.

TIPO FACTOR	FACTOR LOCACIONAL SELECCIONADO	DETALLE DEL FACTOR	CUALIDAD
Factores Dominantes	Mercado	Zona con promedio de ingresos por casa habitación de ingreso de 10,000 pesos mensuales	Objetiva
		Cercanía a Centros Comerciales y/o Zona Financiera	Objetiva
	Fuentes de materia Prima	Centros de abastecimientos de calidad y precios competitivos (según mercado)	Subjetivo
	Mano de Obra	En un rango de 18 a 40 Con aspiración a salarios mensuales de 4000 a 12000	Objetiva Subjetiva
Factores Críticos	Infraestructura de la localidad (agua, luz, energía y gas)	Terreno deberá contar con los servicios de Agua, Luz y Gas	Objetiva

Factores Clave	<i>Accesos y visibilidad</i>	<i>Alta visibilidad y excelente vías de acceso</i>	<i>Subjetiva Objetiva</i>
-----------------------	------------------------------	--	-------------------------------

Fuente; Elaboración propia

Fase 2. Ubicación en el mapa de los terrenos disponibles para aplicarle la valorización de los factores básico locacionales por parte de los expertos.

Fase 3. Aplicación de difusividad a las ponderaciones dadas por los expertos sobre cada factor locacional de cada localidad **Fuzzy (Software Matlab 6.5)** para mayor detalle ver anexo 1.

$$z^* = \frac{\sum \mu_c(\bar{z})\bar{z}}{\sum \mu_c(\bar{z})} \quad \text{Fórmula utilizada para la determinación del peso final por localidad, obteniendo una}$$

valuación final por localidad;

Tabla no.2. Tabla de Pesos obtenidos por localidad

Localidad A	Localidad B	Localidad C	Localidad D	Localidad E	Localidad F
0.865	0.787	0.5305	0.867	0.7545	0.867

Fuente; Elaboración propia

Fase 4. Aplicación del Método de Localización. El modelo a desarrollar es el siguiente:

Término en X:

Término en Y:

$$X = \sum_{n=1}^i \frac{CF_i X}{CF_i} \quad Y = \sum_{n=1}^i \frac{CF_i Y}{CF_i}$$

Los detalles del cálculo se encuentran en el anexo 1.

Fase 5. Análisis de los resultados obtenidos del método de localización se contrastan con la cercanía de las ubicaciones disponibles para la obtener la ubicación final

Para evaluar los resultados obtenidos es importante visualizar los parámetros de importancia que debería tener la ubicación ideal

Los parámetros para ideales para ubicar el negocio serán:

Tabla no.3. Parámetros determinados para determinar que ubicación es conveniente

Optimo	Regular	No Aceptable
85 en adelante	De 70 a 85	Menor a 70

Fuente; Elaboración propia de acuerdo a opinión de expertos.

Grafica no 1. Determinación del grado de conveniencia de las ubicaciones candidatas respecto a la ubicación obtenida con el método de centro de gravedad.

Fuente: Elaboración propia con base en los resultados Software Matlab 6.5

La ubicación obtenida mediante el Método de Centro de Gravedad queda en un punto en el mapa relativamente cercano a las localidades C y D con ponderaciones de 0.5305 y 0.867. Para lo cual analizaremos la conveniencia de estos sitios de acuerdo con las ponderaciones dadas por los expertos. Resultando en lo siguiente:

Fase 6. Evaluación y Resultados finales

De acuerdo a la gráfica 1 se observa que la localidad C cae en definitiva en el rango de lo no aceptable por lo tanto no se toma en cuenta como sitio potencial para la ubicación de la franquicia, no así la localidad D. Sé que determinan μ para conocer qué proporción guarde este sitio respecto a las características deseadas por los expertos y así conocer si realmente será el lugar óptimo. Y se obtiene lo siguiente:

$1\mu = .40$ Optimo

$1\mu = 1$ Regular

DISCUSIÓN DE RESULTADOS

Se puede observar que este sitio cuenta con un .40 dentro de las características requeridas en el parámetro de lo óptimo y un 1 dentro de los parámetros de lo regular, esto quiere decir que la localidad D es aceptable para considerarse para la ubicación del negocio.

Aun que existieron otras 2 localidades con casi la misma puntuación F y A, con este método se puede apreciar visual y cuantitativamente la ubicación óptima del sitio ya que reúne todas las características solicitadas por los expertos para localizar el negocio.

Esto no quiere decir que las otras localidades no sean igual de buenas aun que salieron con ponderaciones igual de altas. Ya en una situación real pudiera afectar la dedición del sitio final, aspectos de tipo económicos, legales (respecto al terreno) etc.

El método cumple con evaluar cada sitio con todas las apreciaciones, requerimientos y conocimientos de los expertos dados a cada ubicación, la dedición final queda en mano del inversionista.

CONCLUSIONES

- Existen herramientas matemáticas como la lógica difusa que permite operar datos que se encuentran dentro de la incertidumbre y que dan como resultados valores equilibrados y muy cercanos a la realidad y que, al mismo tiempo, nos ahorran la aplicación de análisis numéricos más complejos. Y que por medio del caso práctico analizado se puede concluir que la lógica difusa es una opción para hacer más precisa y enriquecido el proceso de localización de negocios.
- Como se logró comprobar, al tener datos diversos emitidos por los estudios y evaluaciones de los expertos en base a variables localizacionales de las ubicaciones propuestas para la instalación del negocio en muchas de las ocasiones no son coincidentes debido a los métodos y perspectivas del análisis de cada uno de los expertos al analizar las ubicaciones y en consecuencia se tienen factores de variación entre los resultados emitidos. Según nuestro caso práctico la localidad ideal para ubicar el negocio franquiciado sería la C.

Estas técnicas de análisis difuso no sustituyen o desplazan a otras técnicas convencionales, estadísticas o de otro tipo. Las técnicas de análisis difuso complementan y potencializan a las técnicas existentes y pueden aportar nuevas formas de acercarse a la valoración de factores localizacionales o de otro tipo en la planeación estratégica de nuevos negocios.

COMPETENCIAS GERENCIALES DE LA INDUSTRIA DE MUEBLES.

Maria del Carmen Domínguez Ríos, Universidad Nacional Autónoma de México
Michele Alexandra Corona Domínguez, Benemérita Universidad Autónoma de Puebla

RESUMEN

La investigación presenta los resultados de una encuesta aplicada a trece empresas del sector de muebles localizadas en México con el objetivo de identificar las competencias gerenciales de estas empresas. El marco teórico se refiere a la teoría de recursos y capacidades, dicha teoría considera que la competitividad de la empresa se genera al interior de la misma y de esta manera se generan ventajas competitivas sustentables que le permitan afrontar la competencia y participar en el mercado. Parte de estas capacidades se sustentan en la gerencia y en su forma de dirigir la organización y su capacidad estratégica. Se trata de una investigación de tipo descriptivo, puesto que se caracterizan los aspectos más relevantes de los gerentes del sector mueblero de la ciudad de Puebla que les han permitido permanecer en el mercado. Se pretende describir aquellos aspectos distintivos y particulares de los gerentes.

PALABRAS CLAVES: Pyme, competencias gerenciales, competitividad, muebles

MANAGEMENT SKILLS OF FURNITURE INDUSTRY

ABSTRACT

This research present the results of twelve manufacturing furniture firms in the city of Puebla, seeking to identify the managerial skills possessed for the conduct of their businesses. The theoretical framework is based on the theory of resources and capabilities, which, considers that the competitiveness of the company is in within and thus generate sustainable competitive advantages that allow it to cope with increasing competition and impact on the market successfully. Some of these capabilities are based on management and the conduct of the organization and its strategic capacity.

INTRODUCCIÓN

En el modelo de Ansoff (1995), las competencias de gestión general se describen por cuatro componentes principales: perfil de los directivos, características del clima de la organización, competencia de la organización para resolver problemas y habilidad global de la organización.

El perfil de los directivos se determina, en primer lugar, en medición de las habilidades de liderazgo. Además, su contribución a las competencias de gestión depende de la influencia que pueda ejercer sobre la organización (posición de poder). En segundo lugar, el perfil directivo está integrado por la llamada mentalidad del directivo, constituida por cuatro variables: a) su conocimiento del entorno interno y externo; b) su perspectiva temporal, que revela la confianza relativa en los resultados o en las perspectivas; c) su propensión al riesgo, que mide la percepción de los factores decisivos para el éxito, y d) el sistema de valores, normas y objetivos que motivan y condicionan decisivamente de su aceptación y apoyo o su rechazo a las respuestas estratégicas que diseñe la dirección general de la empresa.

Dichas notas, constituyen factores decisivos en la mentalidad o cultura de la organización, y consiguientemente en la aceptación y apoyo o rechazo de la empresa a las respuestas estratégicas diseñadas. El clima de la organización se integra, con otros elementos clave, junto con la cultura organizativa, las recompensas e incentivos para la actividad estratégica, y la estructura de poder de la organización integrada por la distribución interna del poder y el compromiso hacia los respectivos centros de poder.

El tercer componente clave es la competencia de la organización para resolver problemas.

Los factores determinantes de esta competencia son los siguientes:

La estructura de la organización, la red de autoridad y de responsabilidad.

El grado de consistencia entre la estructura organizativa implantada y el nivel de turbulencia del entorno constituye un área crítica para la eficacia directiva.

El diseño organizativo, es decir, un amplio rango de decisiones sobre la definición de puestos de trabajo, los roles individuales e interpersonales, la organización del trabajo, y sus respectivas libertades y restricciones.

Los sistemas y procesos que posibilitan el funcionamiento de la estructura. Una amplia gama de sistemas y procesos de planificación, ejecución, control e información merecen aquí en detallado estudio.

El intercambio de conocimientos sobre el medio ambiente interno y externo.

Las tecnologías de resolución de problemas de dirección general.

Por último, las competencias directivas reciben la influencia de la capacidad global de la organización. En este sentido, la hipótesis de Ansoff (1985) puede enunciarse en los términos siguientes:

[...] las empresas estratégicamente estables operan con más eficacia cuando la habilidad de la dirección general es mínima y la responsabilidad es compartida de forma descentralizada por la dirección media y los supervisores. Pero, cuando se presenta una irregularidad estratégica la dirección general se convierte en el cuello de botella que determina la velocidad de la respuesta (Ansoff, 1985: 34).

El comportamiento futuro de la empresa estará dado, por la combinación de la mentalidad de los directivos y el clima de la organización, que son los elementos software de las competencias directivas. Los subconjuntos de hardware, que deciden la habilidad de la organización para actuar eficazmente, están formados por la calidad de los directivos (talento, conocimientos, cualidades), junto con la competencia y las habilidades propias de la organización.

La frecuencia y velocidad de las irregularidades del entorno y, necesariamente, del comportamiento estratégico de la empresa, obligaran a su dirección a centrar los esfuerzos tanto en el diseño de las nuevas estrategias como en el desarrollo de las competencias de gestión que requieran.

Estudios empíricos muestran que hay diferencias entre los directivos de las décadas de los ochenta y noventa, estas se muestran principalmente en la actitud hacia el liderazgo; los primeros mas autoritarios y basados en el poder del cargo, eran poco propensos al liderazgo participativo y trabajo en equipo y flexibilidad, en cuanto a aceptar sugerencias y reconocer capacidades en sus subordinados. Agregando a esto, el reconocimiento de la cultura como elemento diferenciador de la competitividad.

Modelo gerencial para la gestión de competencias

Las empresas han desarrollado algunas características que deben cumplir los equipos gerenciales para una buena gestión por competencias; en esencia se están exigiendo capacidades de:

- a. Expansión de la estrategia del negocio: orientación al negocio, logro y autoconfianza.

- b. Servicio con valor agregado: orientación al cliente y conciencia de costos.
- c. Gestión del talento: desarrollo de personas, dirección de otros con enfoque participativo y liderazgo.
- d. Gestión estratégica: visión, innovación, administración de proyectos y gestión del cambio.
- e. Fundamentación: flexibilidad, aprendizaje organizacional, trabajo en equipo, pensamiento complejo y creatividad.

Competencias gerenciales

1. Competencia en la comunicación. Capacidad de transmitir e intercambiar eficazmente información para entenderse con los demás. Comunicación informal. Promueve una comunicación en dos sentidos: retroalimentar, escuchar e interactuar. Está al tanto de lo que siente el otro. Relaciones interpersonales consistentes con la gente.

Comunicación formal. Informa a las personas sobre los hechos y actividades, los mantiene al corriente. Presentaciones en público. Escritos claros concisos y eficaces mediante recursos informáticos.

Negociación con eficacia de las funciones y recursos a favor del equipo. Buenas relaciones e influencia en los superiores. Acción decisiva y justa al manejar a los subordinados problemáticos.

2. Competencia para la planeación y administración. Comprende las tareas y acciones a realizar, determinar la manera de efectuarlas, asignar los recursos que permitan llevarlas a cabo, y supervisar la evolución para asegurar que se cumplan. Incluye:

Recopilación de análisis de información y resolución de problemas. Supervisión de la información y su empleo para identificar síntomas, problemas y soluciones, que permitan tomar decisiones oportunas. Se corren riesgos calculados y se anticipan consecuencias.

Planeación y organización de proyectos. Se diseñan planes y programas para lograr los objetivos con eficacia. Se establecen prioridades para las tareas y se delega la responsabilidad. Se definen, obtienen y organizan los recursos necesarios para cumplir la tarea.

Administración del tiempo. Se manejan varios asuntos y proyectos a la vez, pero sin tratar de abarcar demasiado. Se supervisa y atiende un programa o se modifica de ser necesario. Se trabaja con eficacia bajo presión de tiempo.

Presupuesto y administración financiera. Se conocen y manejan presupuestos, flujos de efectivo, informes financieros y anuales y se emplea esta información para tomar decisiones. Se llevan registros financieros precisos y completos. Se crean directrices presupuestales para los demás y se trabaja según las directrices señaladas.

3. Competencia del trabajo en equipo. Llevar a cabo tareas con grupos pequeños de personas responsables en conjunto y cuya labor es interdependiente.

Planeación en equipos. Formulación de objetivos claros que motiven a los integrantes del equipo a lograrlos. Los empleados que formaran el equipo se escogen de manera adecuada. Se definen las responsabilidades del equipo en su conjunto y se asignan tareas y responsabilidades individualmente.

Creación de un entorno de apoyo. Se genera un ambiente de reconocimiento, valoración y recompensa al trabajo en equipo. Se ayuda al equipo identificando y consiguiendo los recursos que necesita para la conclusión de sus objetivos. Se interviene como entrenador, asesor y mentor, participando con paciencia con los integrantes del equipo en su proceso de aprendizaje.

Manejo de las dinámicas de equipo. Se deben reconocer las fortalezas y debilidades de los integrantes del equipo y utilizar y potenciar aquellas para que logren sus objetivos en conjunto. Se hacen públicos los conflictos y las discrepancias, sirviéndose de esta estrategia para mejorar el desempeño. El reconocimiento se comparte con los demás.

5. Competencia en acción estratégica. Significa conocer el sector en que se trabaja y el momento en que los cambios en la industria generan amenazas y oportunidades significativas, es mantenerse informado sobre las acciones de los competidores y los socios estratégicos. Se analizan las tendencias generales en la industria y sus repercusiones a futuro.

Comprender la organización. Supone entender los intereses de los participantes. Es conocer las fortalezas y limitaciones de diversas estrategias de negocios. Es entender las diferentes competencias de la organización.

Adoptar acciones estratégicas. Es asignar prioridades y tomar decisiones que guarden congruencia con la misión y los objetivos estratégicos de la empresa y la implementación de la estrategia.

6. Competencia para la globalización. Realizar la labor administrativa de una organización recurriendo a recursos humanos, financieros de información y materiales de diversos países y sirviendo a mercados que abarcan diversas culturas.

7.

Conocimiento y comprensión culturales. Mantenerse informado de las tendencias y los sucesos políticos, sociales y económicos que suceden alrededor del mundo. Supone reconocer el impacto de los acontecimientos mundiales en la organización. Exige entender, leer y hablar con fluidez más de un idioma.

Apertura y sensibilidad culturales. Hay que reconocer la naturaleza de las diferencias nacionales. Étnicas y culturales, y estar abierto a examinar estas disimilitudes con sinceridad y objetividad. Significa ser sensible a los signos culturales y ser capaz de adaptarse con rapidez a las situaciones novedosas. Supone ajustar de manera adecuada el propio comportamiento cuando se interactúa con personas con diversas antecedentes nacionales, étnicos y culturales.

Competencia en el manejo de personal. *Responsabilizarse* de la propia vida dentro y fuera del trabajo. Incluye:

Integridad y comportamiento ético. Normas personales claras que sirvan de fundamento para mantener un sentido de integridad y conducta ética. Significa poseer la disposición para aceptar los errores. Es aceptar la responsabilidad por las acciones propias.

Dinamismo y capacidad de resistencia. Esto exige buscar la responsabilidad, ser ambicioso y estar motivado para lograr los objetivos. Es trabajar duro para que las cosas se concentren. Significa perseverar ante los obstáculos y recuperarse de los fracasos.

Equilibrio en el trabajo y la vida personal. Significa encontrar un equilibrio razonable entre las actividades laborales y personales de modo que no se descuide ningún aspecto de la vida. Es cuidarse, mental y físicamente y servirse de escapes constructivos para dejar sacar la frustración y reducir la tensión. Significa evaluar y establecer objetivos propios en relación con la vida y el trabajo.

Conocerse a sí mismo y desarrollarse. Es contar con objetivos personales y profesionales claros. Supone emplear las fortalezas para obtener ventajas y al mismo tiempo buscar mejorar y compensar los puntos débiles. Es analizar y aprender de las experiencias laborales y de la vida.

METODOLOGÍA

Tamaño de la muestra

Se seleccionaron doce empresas de forma aleatoria, tomando como criterio la existencia de una estructura organizacional con áreas funcionales bien definidas.

Tipo de estudio: descriptivo

Se considera como una investigación de tipo descriptivo, puesto que se trata de detallar las características o rasgos más relevantes de los gerentes del sector mueblero de la ciudad de Puebla habilidades y capacidades que les han permitido mantenerse en el mercado. Se pretende describir aquellos aspectos distintivos y particulares de los gerentes.

Diseño de la investigación

Se elaboraron dos instrumentos, uno dirigido a los gerentes y otro a los empleados como medio de validación con las personas que integraban su grupo de trabajo con el objetivo de conocer el perfil de competencias del gerente de la pymr del sector mueblero de la ciudad de Puebla,

Tabla 1: Perfil gerencial de la PYME de la industria de Muebles.

Competencias	Promedio	
Años de experiencia directiva en el sector (1)	8	
Formación académica(2)		Alta
Manejo de otro idioma (3)	3.5	
Competencia en la comunicación	6.6	
Comunicación informal		7.0
Comunicación formal	6.2	
Negociación		6.5
Competencia para la planeación y administración	6.9	
Recopilación y análisis de información y resolución de problemas	6.8	
Planeación y organización de proyectos		6.7
Administración del tiempo		6.7
Presupuesto y administración financiera		7.0
Competencia en el trabajo en equipo		6.3
Planeación en equipos		6.2
Creación de un entorno de apoyo	6.6	
Manejo de las dinámicas de equipo		6.5
Competencia en la acción estratégica		6.8
Entender la industria		7.0
Comprender la organización		7.0
Adoptar acciones estratégicas		6.5
Competencia para la globalización		6.2
Conocimientos y comprensión culturales	5.5	
Apertura y sensibilidad culturales	7.0	
Competencia en el manejo de personal		6.1
Integridad y comportamiento ético		6.0
Dinamismo y capacidad de resistencia		6.5
Equilibrio entre los asuntos de trabajo y vida personal	5.5	
Conocerse a sí mismo y desarrollarse		6.5

(1) Promedio de los años de experiencia directiva en el sector manufacturero de los gerentes entrevistados.

(2) Evaluación de los gerentes en una escala baja a alta, siendo baja sin estudios profesionales, media profesional universitario, y alta profesional con estudios de especialización, maestría, doctorado, diplomados, etcétera.

(3) Evaluación de la gerencia en una escala de 1 a 7, siendo 1 deficiente y 7 excelente. Las excepciones a esta escala se señalan en cada ítem.

Fuente: Elaboración propia con base en trabajo de campo julio 2012 industria de muebles.

CONCLUSIONES

El perfil mostró una calificación alta en los gerentes respecto a las competencias investigadas. Los gerentes en su mayoría poseen una visión local y global de su organización.

La mayoría de los gerentes mostraron una actitud de liderazgo participativo.

A pesar de que en todas las empresas se aplica la planeación, parece que este ejercicio es utilizado con poca frecuencia para la determinación de riesgos y anticipación de consecuencias. Las pyme de la industria de muebles cuentan con una planeación estratégica para visualizar oportunidades y amenazas próximas.

Todas estas organizaciones están enfocadas hacia el trabajo en equipo, pero en el 30% de ellas no se cuenta con objetivos claros y definidos para estos grupos de trabajo; no cuentan en un 20% con ningún parámetro definido para la elección de los miembros de los equipos, ni con indicadores que evalúe el desempeño de los mismos, además en el 25% de ellas cuentan con algún mecanismo de motivación y reconocimiento para el logro de sus objetivos. Cabe notar que a los equipos de trabajo se les brindan todos los recursos necesarios para el desarrollo de la labor, y solo a un 32% se les motivan y se les reconoce su desempeño, por lo general con incentivos monetarios.

Todos los gerentes demostraron un conocimiento aceptable acerca del sector en el que se encuentra su empresa respecto a la industria; además de contar con un amplio conocimiento de su empresa y de los procesos que en ella se llevan a cabo, aspecto que las hace más flexibles y adaptables a las nuevas exigencias del entorno.

Las empresas del sector mueblero de la ciudad de Puebla, aunque cuentan con procesos eficientes para el cumplimiento de altos estándares de calidad y de producción a bajo costo, solo en 2 de ellas se cuenta con una alta capacidad de producción que les permita abarcar mercados internacionales que satisfagan las necesidades de consumo masivo que se demanda en esos mercados.

Los gerentes del sector mueblero logran un equilibrio entre la vida laboral y la personal. La ética es la guía de todas las decisiones que se toman al interior de la organización. Cuando no se concreta algún proyecto o se presenta alguna dificultad, los gerentes reaccionan con calma y tratan de aprender de los errores cometidos para no volver a cometerlos en situaciones futuras.

Estos gerentes son personas que generalmente practican un deporte o realizan actividades constructivas para dejar salir la frustración y reducir la tensión.

El objetivo principal de la labor gerencial de las empresas del sector mueblero de la ciudad de Puebla es la maximización de la rentabilidad, motivo por el cual la organización está orientada hacia la optimización de la cadena productiva, dejando pendientes aspectos relevantes como el bienestar laboral; sin embargo, se le otorga gran importancia a la responsabilidad social.

Jesús Osorio Calderón, Universidad Autónoma de Nuevo León

RESUMEN

su divulgación, así como en la reflexión teórica que se esbozará. Dentro de las modalidades educativas es muy importante citar los enfoques y sus implicaciones; tal es el caso del enfoque centrado en el aprendizaje.

PALABRAS CLAVE: Educación, Evaluación, Aprendizaje.

EVALUATION PROCESS INTEGRAL, RESPONSIBLE AND RESPECTFUL

ABSTRACT

This paper is based on the relevance of educational participation, experience and its dissemination as well as theoretical reflection that will be outlined.

Among the types of education is very important quote approaches and their implications, as in the case of learning-centered approach.

JEL: 12, I20, I21, N3, N36

KEYWORDS: Education, Evaluation, Learning

INTRODUCCIÒN

El Proceso de Enseñanza- Aprendizaje es algo vivo, algo dinámico que constantemente se debe estar revisando, actualizando y mejorándose, en el mundo actual como lo conocemos encontramos múltiples avances tecnológicos que no existían el siglo pasado, y muy probablemente hoy no existen artefactos que usaran las nuevas generaciones y que definitivamente el entorno de nuestros hijos irá cambiando, por ello y ante esta vertiginosa modalidad de cambio debemos seguir preparándonos, cuestionando y estar a la vanguardia en materia educativa, ya que la educación que recibimos influye directamente el la cosmovisión que tengamos del mundo y de la forma de actuar de la sociedad en general.

REVISIÒN DE LITERARATURA

El enfoque centrado en el aprendizaje implica un nuevo modo de pensar y desarrollar la práctica docente. Hace ya algunos años que se planteó la diferencia entre la enseñanza de contenidos curriculares que transmitían los docentes como parte de su actividad profesional y el aprendizaje que adquirirían los estudiantes a partir de una relación vertical y de enculturación institucional. El resultado de esta manera de realizar la docencia parece conducir a un aprendizaje memorístico, con contenidos a veces aislados y no siempre relevantes para la vida y la resolución de problemas reales de los alumnos.

Por su parte, el enfoque centrado en el aprendizaje reconoce la capacidad del sujeto de aprender considerando sus experiencias y conocimientos previos, así como los que se le ofrecen por la vía institucional y por los medios tecnológicos. La premisa de la que se parte es que el estudiante logra de manera efectiva el aprendizaje cuando lo que se le enseña se relaciona con situaciones de la vida real, de ahí que tenga que involucrarse plenamente en el diseño de la estrategia de aprendizaje.

De esta manera, se considera como centro el aprendizaje del estudiante; por lo que se requiere buscar formas diferenciadas de trabajo orientadas a favorecer el aprendizaje autónomo, así como el uso de estrategias de estudio que posibiliten su formación a lo largo de la vida. Es decir, menos centrado en la transmisión de conocimientos academicistas, y más orientado a la gestión del proceso de aprendizaje.

El núcleo de esta postura se ilustra con la afirmación: “el aprendizaje, el pensamiento y el conocimiento son relaciones entre las personas en actividad, y se generan a partir de un mundo estructurado social y culturalmente” (Lave y Wenger, 1991). Entre las premisas que dan cuenta de la vinculación del conocimiento con los contextos en que se construye, se distingue que: No puede esperarse que los participantes en comunidades situadas desarrollen conocimientos abstractos fuera de los significados de la práctica.

METODOLOGÍA

En este trabajo se hace uso del análisis reflexivo con la intencionalidad de compartir con el lector el ejercicio reflexivo, analítico y hermenéutico que el espíritu humano a través de la palabra puede hacer gala para su expresión, así mismo se pretende sembrar la inquietud en el lector para su posterior profundización.

RESULTADOS, TEMATICA

Una visión limitada obstaculiza la posibilidad de aplicación del conocimiento que se origina de manera situada hacia otros contextos, de esta manera nuestra mente debe funcionar como un paracaídas, es decir abierto para ejercer su función brillante, por ello debe verse también el proceso evaluativo en la educación como una oportunidad de crecimiento, esta también debe actualizarse, enriquecerse y verse como un proceso necesario para el armónico progreso educativo y social, debemos de cambiar la creencia de que evaluar es solo para detectar fallas, más bien debe verse como parte de un proceso de aprendizaje en fases finales, pero al fin aprendizaje, al cambiar la concepción que se tiene de la evaluación se puede dar un giro positivo en el entorno educativo y coadyuvar a la mejora de la sociedad.

La Educación tiene una gran relevancia en los humanos, ya que adquirimos con el paso del tiempo conocimientos, pero estos sólo se impregnan en nosotros si tienen una relevancia, es decir si para cada uno de nosotros son significativos y útiles en nuestra vida cotidiana, así mismo la enseñanza de los docentes debe ser valiosa, significativa para los tiempos actuales, pertinentes para que sea eficiente y atractiva para los estudiantes, está inmersa en una política de bienestar y es un brazo ejecutor del plan nacional que debe preocuparse por la ciudadanía y su bienestar colectivo.

El foro de Dakar de hace diez años mencionaba que un país sin educación es el que enfrenta retos más fuertes, ya que no tiene un rumbo educativo cierto, y sus recursos humanos no son competitivos en la aldea global, esto trae consigo pobreza, explotación, problemas de salud pública, desesperanza, suicidios a la alza y problemas de paz social entre otras situaciones que pueden disminuir considerablemente con educación de calidad al pueblo.

En numerosos países la exclusión de una gran parte de la población viene propiciada por sus dificultades para acceder a los códigos de la modernidad, es decir, al conjunto de conocimientos y destrezas necesarios no sólo para su integración en la sociedad productiva, sino también para participar en la vida pública. Estos conocimientos y destrezas abarcan también el espíritu crítico, la capacidad para descifrar

los mensajes de los medios de comunicación y para trabajar en equipo; para lograrlo, la educación debe transmitir esos códigos culturales básicos de la modernidad.

Otro aspecto decisivo para contribuir al desarrollo humano es el logro por los sistemas educativos de actitudes favorables como la responsabilidad, la autoestima, el respeto hacia los demás, la curiosidad, la inclinación al trabajo en equipo y el liderazgo, actitudes decisivas para un cambio de mentalidad y para una inclinación favorable hacia el desarrollo.

La exigencia de que hombres y mujeres reciban un tratamiento igual en educación o la existencia de políticas compensatorias destinadas a promover mayores niveles de educación para las mujeres, no sólo constituyen un mecanismo de justicia social sino también vienen respaldadas por pruebas convincentes de los beneficios generales que aportan, tanto a las mujeres como a los hombres.

El tema posee relevancia en el sentido de que la calidad de vida por la que se lucha hoy en día, puede darse de mejor manera con aspectos integrales, es decir uno de los puntos fundamentales es el educativo, trabajo que debe ser pieza clave para el progreso social, al tratar entonces este para lograr un soporte estructural de capital intelectual que otorgue al país una ventaja competitiva frente a la exigente realidad que vivimos, es entonces que podremos competir de mejor manera con el extranjero, con conocimiento, ciencia y tecnología para nuestro propio bienestar y el de los demás.

Vivimos en una época de enormes transformaciones sociales, debidas en gran medida al desarrollo científico-técnico. La sociedad del conocimiento, como es definida actualmente, se caracteriza por el papel que juegan la ciencia y la tecnología en el desarrollo socio-económico, hasta el punto de considerarse que están abocadas a sustituir al factor capital en las relaciones de producción, por constituir el principal recurso productor de riqueza. Un país que desee ser verdaderamente independiente debe garantizar a todos sus ciudadanos la oportunidad de adquirir conocimientos sobre la ciencia y la tecnología, debe fomentar la capacidad de dar a ambas un uso apropiado y de desarrollarlas para satisfacer necesidades colectivas.

La educación es, por lo tanto, un factor decisivo para la socialización de los jóvenes para la transmisión de los valores relacionados con la ciudadanía, la democracia, la solidaridad y la tolerancia. Constituye también un elemento vital para facilitar la participación activa de todos los ciudadanos en la sociedad y para la integración en el interior de cada país de los excluidos de los beneficios del desarrollo. La educación conduce a la creatividad individual y mejora la participación en la vida social, económica, cultural y política de la sociedad.

La educación debe preparar a las generaciones futuras para hacer frente a los problemas que plantean los progresos de la ciencia y la tecnología y para determinar qué aplicaciones serán beneficiosas y cuáles pueden ser nocivas. Asimismo, debe propiciar una «alfabetización científica» de toda la población, con el fin de formar ciudadanas y ciudadanos críticos y capaces de examinar la naturaleza de la ciencia y la tecnología como actividades humanas encaminadas al desarrollo individual y colectivo.

Por último, habría que señalar que la educación, además de su valor económico, constituye un derecho social, por lo que no se deben olvidar las dificultades y los logros que han supuesto su universalización y consagración como tal derecho. En la actualidad debe responder a nuevas exigencias y a retos renovados, ya que no basta con asegurar un cierto nivel de educación a todos los ciudadanos, ni su consideración como un proceso que termina a cierta edad. Hoy los poderes públicos deben potenciar una educación que dure toda la vida, ya que ninguna nación puede aspirar a la competitividad sin aprovechar el potencial del recurso más valioso: su capital humano.

Todo proceso educativo debe contemplar aspectos contemporáneos de evaluación, es decir ir más allá de lo que el examen revela en el aula, se debe complementar con diversas evidencias de portafolio, tareas,

resolución de casos, investigaciones, proyectos entre otros, pero sin duda debemos evaluar el impacto social de los egresados de alguna profesión o curso, idear un instrumento de seguimiento, ver de alguna manera como ha avanzado y modificado su vida el proceso de enseñanza aprendizaje y se puede cruzar entonces el aspecto humanístico y económico para ver la efectividad, bondad o deficiencia del programa educativo.

Hay que innovar en el campo de la evaluación educativa, ver este proceso como algo necesario, humano, perfectible y reconocer en el evaluado a una persona con sentimientos, emociones, sueños y esperanzas, digno de respeto y consideración, la evaluación debe sobrepasar los aspectos del mero proceso, debe convertirse en enseñanza, en pilar educativo y en un momento agradable al espíritu humano incansable y dinámico.

La constante revisión de los procesos es pertinente y necesario, ya que el entorno es cambiante y muy dinámico, en la práctica docente es un compromiso el ser innovador, pues cada alumno es distinto, único y con una historia propia, por ello se debe de generar nuevas formas de impartir la clase, usando múltiples herramientas como lo son documentos electrónicos, computadoras, proyectores, internet, entre otros y cada cambio en ello representa un ajuste en la evaluación.

La actitud es también algo a renovar, pues el hombre al ser un ente vivo y en contacto con el medio ambiente, está en posibilidad de aprender y poner en práctica nuevos métodos, formas y de cambiar su propia cosmovisión de la vida y del ámbito educativo.

Hoy en día en los distintos niveles de educación se ve reflejado alguna influencia externa al plan que lleva el docente del manejo de clase, en distintas fases podemos ver que el docente presenta cuestionamientos lógicos al plan realizado y se ve en la necesidad de aprobar lo que se ha hecho o bien refutar ciertos puntos y re-virar el rumbo, y parte de ello es gracias a que está más informado y puede unir elementos conceptuales para plasmarlo en una praxis educativa que aporte conocimiento útil y pertinente a los estudiantes.

Por otro lado los estudiantes que tienen acceso a un mundo de información gracias a varias fuentes tecnológicas que hace 20 años no estaban tan desarrolladas como hoy y que la economía de mercado ha permitido que educandos de clase media puedan tener acceso a computadoras e Internet en sus casas las 24 horas del día los 365 días del año, ha revolucionado la forma de ver el mundo, ha propiciado avances y retrocesos en la cultura de los jóvenes y esto impone un nuevo reto a la sociedad, pues el docente debe estar informado y tener tiempo para investigar qué información es válida y cual es paja sin fondo y sustento, ya que mucha de la información electrónica no es de fiar y el actor del binomio enseñanza-aprendizaje que es el enseñante tiene que enseñar correctamente, en tiempo, en forma y en contenido, algo que se escribe tan fácil, pero que al ejercerse conlleva grandes esfuerzos y preparación continua, un reto importante para el docente.

La psicología aporta su conocimiento a la educación y muestra lo complejo del fenómeno a estudiar, pues pensemos:

¿Cómo aprendemos?

¿De qué depende la velocidad del aprendizaje?

¿Cómo medimos el aprendizaje?

¿Cuál es la manera correcta de enseñar?

¿Cuál es la manera correcta de aprender?

Es difícil y complejo responder estas preguntas, sin embargo un punto de vista de cada cuestionamiento será mencionando aquí, ya que no se sabe con certeza si todos aprendemos de la misma manera, de la misma fuente y si a una velocidad igual, si estas preguntas no han tenido respuesta exacta, ahora bien pasemos a las otras, el aprendizaje más que medirse se estima, pues ¿cómo mediremos algo que no vemos?, pero si cuantificamos en estimaciones con cuestionarios, con pruebas o instrumentos de

evaluación, o bien observaremos por un tanto tiempo determinado el comportamiento de una persona a través de su vida y de enfrentar distintas situaciones y analizar como las resuelve.

En nuestra escuela a través del ejercicio docente se ha observado a estudiantes que aprenden mejor escuchando y otros viendo, pero también hay los que hacen las cosas, los que además de esto cuestionan, practican y vinculan lo visto en el salón de clase a la vida cotidiana, cada uno es especial, es diferente, único e irrepetible, por ello el resultado del análisis reflexivo es por el momento como una fotografía, valida como un registro que da información, pero lo mas importante es que se convierte en una película, es decir en fotografía en movimiento, esto al seguir estudiando, generando nuevo conocimiento, incluyendo otros análisis reflexivos que animen al lector a pensar, a cuestionarse y a sostener intercambio de ideas con algunos colegas y con la sociedad en general.

CONCLUSIONES

En materia de educación debemos ir mas allá, es decir debemos pensar en la implementación de un sistema soportado en medios tecnológicos que nos permitan ver la carta de registro escolar, para en ella tener un seguimiento al alumno a través de sus diferentes niveles educativos, así mismo analizar su desarrollo profesional para saber si el impacto social en materia educativa esta siendo adecuado a las expectativas propuestas, ver a través de cuestionarios la estimación de grados de felicidad y contrastarlo con índices de desarrollo humano, tal vez esto suene muy ambicioso para el caso de un país como México que esta en vías de desarrollo y que cuya sociedad es muy compleja, pues cada región y cada entidad tiene rasgos muy particulares, el Norte del país presenta polos importantes de desarrollo como lo son Monterrey, Saltillo, Chihuahua entre otros y existen en contraste entidades con mayor índice de pobreza y rezago educativo como Guerrero, Oaxaca y Michoacán, sin embargo la propuesta debe comentarse y precisamente se debe poner atención en lugares con rezago educativo, para que el nivel de progreso social se eleve en cada entidad, fortalecer programas de gobierno y estimular al desarrollo de una política Pública que transforme en acciones la retorica de progreso y educación para todos, que realmente se puedan ver aterrizadas las frases dichas sobre ese dinamismo y progreso, pues si se establecen los mecanismos de instrumentación y se le da un seguimiento a ello, seguramente el país podrá estar mejor y exportemos talento a otros países y no solo mano de obra, la meta para los Mexicanos es desarrollar el talento humano y generar “Mente-factura” y no sólo Manufactura, para ello se deben tomar acciones que coadyuven al progreso.

Por ende la evaluación sigue en constante movimiento, adaptándose a los retos actuales y generando para nuevos procesos, formas pertinentes para su evaluación, tal es el caso de la evaluación en procesos mediados por tecnología educativa, esto debe servir para hacer ese comparativo entre lo obtenido y lo esperado y ver que esa brecha sea menor, la evaluación es un proceso dinámico, coadyuvante de la mejora y una oportunidad de aprender. Hay que procesar en nuestras mentes el hecho de que hoy en día lo único constante es el cambio y entonces generar un cambio en nosotros mismos.

LA ACCIÓN TUTORIAL EN LA FORMACIÓN DEL ESTUDIANTE UNIVERSITARIO NICOLAITA

Zoila Margarita García Ríos, Universidad Michoacana de San Nicolás de Hidalgo

María del Henar Pérez Herrero, Universidad de Oviedo

RESUMEN

La Acción Tutorial en la formación académica del estudiante universitario Nicolaita, es un aspecto que nos interesa compartir, una vez que se ha realizado un trabajo de investigación con la participación de 116 estudiantes, de una población de 1088 sujetos, que respondieron a un cuestionario de 96 ítems de preguntas de respuesta cerrada (90) y de respuesta abierta (6). Los criterios que se tuvieron en cuenta para incluir a los sujetos en el estudio fueron: tener formalmente asignado un tutor o tutora al menos durante un ciclo escolar y haber participado en actividades de tutoría, tales como entrevistas personalizadas o reuniones grupales con su tutor o tutora, o actividades promovidas por el programa de tutoría.

JEL: I23, I21

PLABRAS CLAVE: Tutoría, Acción Tutorial, Formación Académica

INTRODUCCIÓN

La adopción de un nuevo paradigma en la enseñanza superior sitúa al estudiante en el centro del proceso de enseñanza-aprendizaje, y lo erige en protagonista del mismo y, por tanto con la responsabilidad de gestionar los conocimientos que le llegan por diferentes vías, hasta convertirlos en aprendizaje significativo y funcional. El protagonismo que adquiere el estudiante relega a un segundo plano al profesor, que se convierte en un guía, un facilitador de los recursos y de los escenarios para que el estudiante desarrolle todo su potencial cognitivo, pero también afectivo, emocional, social; en definitiva, para alcanzar el desarrollo integral del mismo.

En este contexto son muchas las necesidades a las que el sistema universitario ha de dar respuesta (García Nieto, 2008). Algunas de estas necesidades se refieren a la masificación de las aulas en algunas titulaciones, la complejidad de la propia institución, la apertura y diversificación del curriculum, el índice de fracaso académico, el nivel de madurez y autonomía que se requiere del estudiante, etc.

Todos estos cambios, apuntan a la necesidad de que el estudiante universitario cuente con los servicios y recursos apropiados para que su tiempo en la universidad sea un tiempo fructífero a nivel académico, pero también a nivel personal, de manera que se logre el objetivo que aparece recogido en el Informe Delors (1996), el desarrollo integral de la persona.

Y es aquí donde la tutoría adquiere un papel protagonista para armonizar todo el proceso, asesorando, guiando y apoyando al estudiante, sirviéndole de guía y humanizando las relaciones interpersonales en la universidad. En este sentido, García Nieto (2010) considera que desde la función orientadora y tutorial es preciso transmitir valores, suscitar actitudes, desarrollar criterios, perfeccionar y depurar estilos y modos de comportamiento, y esto implica que no sea posible separar la información de la formación.

ANTECEDENTES

En la actualidad en México la orientación universitaria y la tutoría se han convertido en una práctica muy extendida, así vemos que ha sido el tema central de debate de muchos de los congresos celebrados en los últimos años en el mundo universitario mexicano, considerada en todos ellos como un aspecto clave a tener en cuenta en la educación universitaria. A nivel nacional las Instituciones de Educación Superior (IES) mexicanas, están viendo surgir procesos de acreditación e iniciativas de evaluación como medios importantes en la búsqueda de calidad educativa. México, como muchos otros países, está empeñado en la mejora continua de la calidad de su sistema de educación superior para ser capaz de competir en un mundo globalizado y cambiante que presenta numerosos desafíos. Por ello, la organización que agrupa a las Instituciones de Educación Superior (IES) como la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), han impulsado a sus instituciones a llevar a cabo procesos de auto-estudio institucional y evaluación de programas académicos (ANUIES, 1979).

La tutoría universitaria es un elemento importante a considerar cuando se habla de calidad en la educación superior, y en la Universidad Nacional Autónoma de México, se considera fundamental para resolver algunos de los problemas que más inciden en su sistema universitario, la deserción, el abandono de los estudios, el rezago y la baja eficiencia terminal, principalmente (ANUIES, 2000).

La Universidad Michoacana de San Nicolás de Hidalgo (Nicolaita) en el año 2000, establece el Programa Institucional de Acción Tutorial (UMSNH. 2009), con el objeto de definir las directrices, objetivos, servicios y mecanismos de evaluación de los Planes de Acción Tutorial de cada unidad Académica, para apoyar a los alumnos en su formación integral a través de la atención y seguimiento personalizado de los docentes, los cuales, además de orientar e informar sobre la organización y procedimientos institucionales, atenderán los aspectos cognoscitivos y afectivos del aprendizaje para que el estudiante desarrolle los conocimientos básicos o disciplinarios, técnicos, científicos, sociales y culturales que demande su formación y adquiera habilidades y destrezas que le permitan concluir sus estudios o continuar con otro nivel formativo y redefinir o confirmar actitudes, aptitudes y valores que lo determinan como sujeto social.

La Facultad de Arquitectura, en el curso 2001-2002 inicia una experiencia relacionada con la tutoría de sus estudiantes que parte de una evaluación de las necesidades, del resultado de dicha evaluación, se detectan las necesidades siguientes:

- Orientación para la optimización de habilidades docentes.
- Apoyo a la innovación en la oferta de enseñanza –aprendizaje.
- Asesoría para la profesionalización de los contenidos, de acuerdo a la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), y de los procesos de enseñanza.
- Ayuda para diseñar y desarrollar un sistema de tutoría para el aprendizaje.

En definitiva, el papel de los docentes universitarios en la actualidad implica una forma diferente de enseñar y de individualizar la enseñanza que requiere el diseño de procesos diferentes, nuevos escenarios y ritmos de trabajo que promuevan y faciliten la formación intelectual de estudiante y la adquisición de competencias propias de la profesión que va a desempeñar en el futuro, pero también su desarrollo personal y social. En base a los resultados obtenidos en la evaluación mencionada, se diseña un Programa de Tutoría para la Facultad de Arquitectura de la UMSNH dirigido a los estudiantes Nicolitas, con los siguientes objetivos:

1. Fortalecer la atención del estudiante durante su proceso de formación profesional.

2. Involucrar más activamente a los docentes en el apoyo de plan de vida y carrera del alumnado.
3. Ayudar a mejorar el rendimiento académico e incrementar la probabilidad de éxito en sus resultados.
4. Promover el desarrollo de métodos de estudio y el auto aprendizaje.
5. Retroalimentar el sistema de enseñanza - aprendizaje.
6. Propiciar la permanencia de los estudiantes en su elección profesional.
7. Propiciar el aumento del índice de eficiencia terminal.
8. Estimular el interés del alumno por su propia carrera.
9. Elevar la calidad del proceso educativo.
10. Propiciar la formación integral del estudiante.
11. Hacer responsable al estudiante de su propia formación.

Las dos figuras con mayor grado de implicación en la interacción tutorial son: el tutor, docente que realiza esta actividad complementaria; y el tutorado, estudiante que es beneficiario de este servicio. Por ello, es fundamental conocer cómo están viviendo el proceso y cómo perciben los efectos del programa de tutoría.

DISEÑO Y DESARROLLO METODOLÓGICO

Objetivo general:

El objetivo del trabajo que se presenta es obtener información acerca de la percepción que tienen los estudiantes de nivel superior sobre el impacto que la tutoría institucionalizada tiene en el desarrollo integral y humano del estudiante, en los distintos ámbitos que guían la intervención orientadora: escolar, académico-profesional y, de desarrollo personal y social del alumnado.

Metodología.

Dadas las características del objeto de estudio, que no permite controlar los efectos directos e indirectos de unas variables sobre otras, se ha optado por una metodología de investigación no experimental o ex post- facto (Bernardo y Calderero, 2000).

Muestra.

A partir de una población de 1088 estudiantes Nicolaitas, se ha seleccionado una muestra representativa de 116 sujetos. Los criterios que se tuvieron en cuenta para incluir a los sujetos en el estudio fueron: tener formalmente asignado un tutor o tutora al menos durante un ciclo escolar y haber participado en actividades de tutoría, tales como entrevistas personalizadas o reuniones grupales con su tutor o tutora, o actividades promovidas por el programa de tutoría.

La mayoría de las personas que han participado en nuestra investigación han sido varones (74%), con edades comprendidas entre los 18 y los 23 años (84%), están cursando el tercer semestre de la Licenciatura de Arquitectura (39%), seguidos por los estudiantes que cursan el décimo semestre (25%) o están en el primero (13%) o en el segundo semestre (14%). Esta dispersión nos ha permitido obtener la visión tanto de los estudiantes que empiezan, como de aquellos que ya están finalizando sus estudios. Han elegido esta carrera por vocación (94%), y todos (100%) han participado del programa de tutoría, generalmente grupal (77%), durante un semestre (58%). Son estudiantes mayoritariamente solteros (91%), que viven con sus padres u otros familiares (39%) o con otros estudiantes (27%), ya que proceden de la región de Morelia (25%) y Pátzcuaro (32%). La mayoría no realiza ninguna actividad remunerada (76%) y no tiene dependientes económicos (68%).

Los estudiantes de la muestra respondieron a un cuestionario elaborado para esta investigación que consta de 96 ítems; (90) preguntas de respuesta cerrada tipo Likert, (ordenadas conforme a la escala: 1- Totalmente de acuerdo; 2-De acuerdo; 3- En desacuerdo y 4-Totalmente en desacuerdo), para obtener datos cuantitativos y (6) preguntas de respuesta abierta que permitieran a los estudiantes expresar

libremente sus opiniones. Presentaremos los resultados correspondientes a los ítems 62 al 86, que serán descritos con detalle más adelante, y que fueron contestados por 104 sujetos. Para determinar la calidad de la medición (McMillan y Schumacher; 2005: 215), nos cercioramos de que el instrumento construido contara con los requisitos de validez, confiabilidad, y objetividad (Hernández et al., 2007). Los datos cuantitativos obtenidos han sido procesados y analizados con el paquete estadístico para Ciencias Sociales “Statistical Package for Social Sciences” (IBM-SPSS-19.0), que nos ha permitido realizar análisis descriptivos básicos (frecuencias, porcentajes) y obtener sus respectivas representaciones gráficas, y análisis de contingencia.

Dimensiones y Variables de Estudio.

Las variables analizadas en el trabajo global se agruparon en cuatro dimensiones: Dimensión I: Características socio-demográficas de la muestra; Dimensión II: Información que reciben los estudiantes a través de la actividad tutorial; Dimensión III: Percepción de la formación adquirida por el estudiante a través de la acción tutorial; Dimensión IV: Valoración de los estudiantes de la actividad tutorial. En este Trabajo solo abordaremos la dimensión III, en esta dimensión se estudió la percepción del estudiante Nicolaita sobre el impacto de la acción tutorial en un eje de influencia (Tabla 1).

Tabla 1: Dimensión III y variables correspondientes

DIMENSIÓN III. Percepción de la formación adquirida por el estudiante a través de la actividad tutorial.

Incluye las variables: Sentirse parte de la institución; aprovechar los programas y servicios que ofrece la institución; Participar en actividades deportivas, culturales y recreativas de la institución; Integrarse al grupo-clase o a diversos grupos académicos; valorar las consecuencias de la propia decisión vocacional; Reconocer la importancia de construir un proyecto de vida; Mejorar habilidades para trabajar en equipo o en grupos de trabajo académico; reconocer las propias fortalezas y debilidades como estudiante; mejorar el aprovechamiento académico; desarrollar o mejorar hábitos de estudio y estrategias para aprender; aprovechar fuentes de información de utilidad para el desarrollo profesional; comunicar ideas de forma clara y segura; comunicar sentimientos de forma constructiva; ser responsable con los compromisos académicos; desarrollar una actitud ética en la formación profesional; capacidad de relacionarse y resolver conflictos con los demás; argumentar y defender los propios intereses; tomar decisiones de manera independiente y fundamentada; planear las actividades escolares; definir con claridad metas para el propio proyecto de vida; desarrollar valores y actitudes favorables para mantenerse sano(a) física y mentalmente; adaptarse al ambiente de la institución.

DIMENSIÓN III. Percepción de la formación adquirida por el estudiante a través de la actividad tutorial.

Incluye las variables: Sentirse parte de la institución; aprovechar los programas y servicios que ofrece la institución; Participar en actividades deportivas, culturales y recreativas de la institución; Integrarse al grupo-clase o a diversos grupos académicos; valorar las consecuencias de la propia decisión vocacional; Reconocer la importancia de construir un proyecto de vida; Mejorar habilidades para trabajar en equipo o en grupos de trabajo académico; reconocer las propias fortalezas y debilidades como estudiante; mejorar el aprovechamiento académico; desarrollar o mejorar hábitos de estudio y estrategias para aprender; aprovechar fuentes de información de utilidad para el desarrollo profesional; comunicar ideas de forma clara y segura; comunicar sentimientos de forma constructiva; ser responsable con los compromisos académicos; desarrollar una actitud ética en la formación profesional; capacidad de relacionarse y resolver conflictos con los demás; argumentar y defender los propios intereses; tomar decisiones de manera independiente y fundamentada; planear las actividades escolares; definir con claridad metas para el propio proyecto de vida; desarrollar valores y actitudes favorables para mantenerse sano(a) física y mentalmente; adaptarse al ambiente de la institución.

RESULTADOS

La mayoría de estudiantes Nicolaitas encuestados, manifiestan que las actividades de tutoría ha tenido un efecto positivo en su formación tanto a nivel académico como personal, facilitando el aprovechamiento de los recursos y servicios de la institución y la integración activa en la vida universitaria. Así, el 77,9 % de los alumnos encuestados percibe que, le ha apoyado en su formación para sentirse parte de la institución.

Sin embargo, el 22,1% están en desacuerdo con la afirmación. Este porcentaje que representa a casi la cuarta parte de los sujetos del estudio, ha de ser tenido en cuenta, pues significa que una parte de los estudiantes no están percibiendo los efectos positivos que ha de tener la tutoría en su formación. Una variable que acumula un importante porcentaje de respuestas positivas es la que tiene que ver con los efectos que ha tenido la tutoría en el compromiso de los estudiantes con su formación profesional (83,7% de acuerdo). También encontramos un alto porcentaje de acuerdo en otras variables relacionadas con el desarrollo profesional del estudiante: Valorar las consecuencias de la propia decisión vocacional (72,4% de acuerdo); Desarrollar una actitud ética en mi formación profesional (76,2% de acuerdo); Definir con claridad metas para el propio proyecto de vida (77,7% de acuerdo). Asimismo, los estudiantes están en su mayoría de acuerdo, con puntuaciones superiores al 70%, en que la tutoría ha sido beneficiosa para su formación en las estrategias y habilidades que han de desarrollar y aplicar a su trabajo universitario, como las habilidades para trabajar en equipo (77,1% de acuerdo), los hábitos de estudio y estrategias para aprender (72,9% de acuerdo), saber comunicar las ideas de forma clara y segura (71,4%), planear las actividades escolares (73,1% de acuerdo).

Es importante destacar que la participación en las actividades de tutoría tiene efectos positivos, o al menos así lo percibe la mayoría de los estudiantes, en su formación como personas, Ser responsable en las diferentes situaciones vitales que se presenten (79,8% de acuerdo). No obstante, hemos de mencionar aquellas variables donde los porcentajes de desacuerdo superan el 25% y que están relacionados con temas que atañen al desarrollo integral de la persona. En este sentido, algunas variables que podrían ser analizadas de forma más detenida serían: Desarrollar valores y actitudes favorables para mantenerme sano(a) física y mentalmente (31,1% de desacuerdo), Tomar decisiones de manera independiente y fundamentada (30,8% de desacuerdo). Es decir, más de la cuarta parte de los sujetos del estudio no perciben que la tutoría haya mejorado su formación en estos temas, que son importantes si queremos lograr que la persona desarrolle todas sus capacidades de forma armoniosa.

EVALUACIÓN DE LA INDUSTRIA MAQUILADORA SECTOR ELECTRÓNICO, BAJO UN ENFOQUE SUSTENTABLE COMPETITIVO

María Esther Ibarra Estrada, Instituto Tecnológico de Tijuana
Sofía Elba Vázquez Herrera, Universidad Popular Autónoma del Estado de Puebla
Ramón Valdivia Alcalá, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

La presente investigación tiene como objetivo evaluar una muestra de la industria maquiladora del sector electrónico en Tijuana Baja California, México, bajo un enfoque de sustentabilidad competitiva. Tomando como referencia para su evaluación el modelo PER, Agenda 21, la norma ISO 14001 y el modelo de Competitividad Sistémica. Aplicando como instrumento metodológico, un cuestionario dirigido a los directivos de alto nivel de estas industrias. Los resultados obtenidos muestran, que las industrias analizadas bajo el enfoque de competitividad, cumplen con los estándares internacionales de productividad, sin embargo en cuanto al enfoque sustentable, los resultados nos reflejan que gran parte de estas industrias cuentan con certificaciones de protección al medio ambiente utilizando tecnologías sustentables en algunos de sus procesos. Se concluye que es de gran importancia para el establecimiento de estas industrias en zonas metropolitanas, que cuenten con políticas y metas ambientales vinculadas a la competitividad, que impulsen el desarrollo económico de la región.

PALABRAS CLAVES: Evaluación, Industria Maquiladora, Sector Electrónico, enfoque Sustentable Competitivo.

EVALUATION OF THE MAQUILADORA INDUSTRY ELECTRONICS SECTOR, UNDER A COMPETITIVE SUSTAINABLE APPROACH

ABSTRACT

This research aims to evaluate a sample of industry maquiladora in Tijuana Baja California, Mexico electronic sector, with a focus on competitive sustainability. Taking as a reference for its assessment model PER, Agenda 21, the ISO 14001 standard and the model of systemic competitiveness. Applying as a methodological instrument, a questionnaire addressed to the managers of high level of these industries. The results show, that industries analyzed under the focus of competitiveness, comply with international standards of productivity, however as to the sustainable approach, the results show us that most of these industries have certificates of protection for the environment using sustainable technologies in some of its processes. We conclude that it is of great importance for the establishment of these industries in metropolitan areas, which have policies and environmental goals linked to competitiveness, encouraging the economic development of the region.

KEYWORDS: Maquiladora industry, electronic sector, competitive sustainable approach.

INTRODUCCIÓN

Esta investigación surge a partir de la importancia de la instalación de industria maquiladora en México y en particular del sector electrónico en la ciudad de Tijuana Baja California, como impulsor de desarrollo económico en la región de la frontera norte del país, destacando por tener fuertes vínculos con países como Estados Unidos, Canadá y algunos países asiáticos como Corea, China y Japón entre otros, así mismo cuenta con el mayor número de empresas maquiladoras de este sector (122)* en el país, y el primer lugar en cuanto a la generación de empleos maquiladores y el tercer lugar en cuanto a la derrama en sueldos, salarios y prestaciones pagadas por este tipo de empresas.

Esta industria debido a sus características específicas, origina una importante demanda de recursos naturales y de servicios públicos, lo que se traduce en una gran presión ambiental**. Tomando en cuenta por otra parte, que estas industrias son evaluadas de acuerdo a factores establecidos bajo modelos aplicables de manera general, para todos los sectores productivos, lo que resulta en una evaluación parcial, para esta industria y aún en menor medida para el sector electrónico.

Sobre la base de las consideraciones anteriores, esta investigación tiene como propósito evaluar al sector electrónico de la industria maquiladora, bajo un enfoque de sustentabilidad competitiva, con el objetivo de distinguir los avances y tecnologías sustentables implementadas en los procesos productivos de estas industrias fortaleciendo su competitividad internacional y favoreciendo el desarrollo de la región.

REVISIÓN DE LITERATURA

La industria Electrónica en el Estado de Baja California, se ha convertido en una de las regiones más importantes del Norte y Latinoamérica, para la manufactura de productos electrónicos, con 203 industrias maquiladoras (ver gráfica 1), principalmente de origen asiático y estadounidense estadísticas de la Secretaría de Economía de Baja California (2009). Algunos de los productos electrónicos manufacturados en Baja California son: tableros de circuitos impresos, televisores, teléfonos celulares, computadoras, radar marino de ondas sonoras, microchips y semiconductores, en compañías de clase mundial, manufacturando más de 19 millones de televisores de alta tecnología por año -LCD, Plasma, HD, LED-, empleando más de 94 mil personas. Contando la región con importantes firmas mundiales establecidas, que realizan principalmente operaciones de manufactura, distinguiéndose corporativos como: Toyota, LG Electronics, Honeywell, Delphi, Hyundai, Matsushita, Mitsubishi, Samsung, Sanyo, Sony, Thomson, Sharp, Cardinal Health, Emerson, Kenworth, Lockheed Martin, Kyocera, Panasonic, Skyworks, Smiths, Tyco, entre otras más.

La industria electrónica en el estado de Baja California ha mostrado una dinámica de crecimiento industrial sin precedentes en los últimos años. Que ha implicado cambios fundamentales en la educación, en lo social y en las áreas de servicios tanto públicos como privados de la región.

*Fuente: datos estadísticos de SEDECO y la Industria Maquiladora, 2010.

**Fuente: Carrillo, "El medio ambiente y la maquila en México" CEPAL, 2005.

Por otra parte, Baja California ocupa el primer lugar a escala nacional en número de empresas maquiladoras dedicadas a la electrónica, el indicador de empleo constituye también el primer lugar entre los estados de la frontera norte, comprendida por Baja California, Sonora, Coahuila, Chihuahua, Nuevo León y Tamaulipas. Donde la participación de la industria electrónica se encuentra concentrada principalmente en los municipios de Tijuana, con un 60.5%; Mexicali, con un 21.6%; Tecate con 10.8% y Ensenada y Rosarito con el 7%.

Figura1: Industrias Maquiladoras del sector electrónico de Baja California

Fuente: Secretaría de Economía, del Gobierno del Estado de Baja California (2008).

Al analizar al personal ocupado que labora en la industria electrónica de maquila por municipio, encontramos que Tijuana abarca al 69% del personal ocupado y Mexicali constituye el 21%, lo que engloba al 90% de la ocupación laboral del sector maquilador de la industria electrónica.

Figura 2: Generación de empleo de la IME, en Baja California

Fuente: Secretaría de Economía, (2008).

En la ciudad de Tijuana B.C., el establecimiento de industrias maquiladoras del sector electrónico, han tenido un fuerte impulso a partir de la década de 1980, esto debido las ventajas competitivas que representa el establecimiento de estas empresas en la zona fronteriza con Estados Unidos, adicional a la calidad de mano de obra y de la iniciativa del gobierno para atraer capitales extranjeros, que creen empleo y desarrollo en la región. Con inversiones de 1,129 miles de millones de dólares; casi el doble de otros sectores tradicionales como el textil y vestido, automotriz y químico .

Enfoque de Competitividad

Michael Porter, (1990), define a la competitividad como: *“La competitividad de una nación depende de la capacidad de su industria para innovar y mejorar. Las compañías ganan ventaja sobre los mejores competidores del mundo, debido a la presión y al reto. Se benefician de tener fuertes rivales nacionales, agresivos proveedores con base en su país y clientes exigentes”*.

Desarrollo Sustentable

El desarrollo sustentable no es únicamente un concepto de eficiencia en el uso de los recursos sino también de equidad (Díaz, 2007), con una doble implicación en este sentido:

Equidad intrageneracional. La satisfacción de las necesidades de la generación actual es premisa imprescindible para alcanzar el desarrollo sustentable global, independientemente de la localización geográfica. Ello requiere solución a los problemas de pobreza en los países en vías de desarrollo y, por lo tanto, la redistribución geográfica de la riqueza y el progreso.

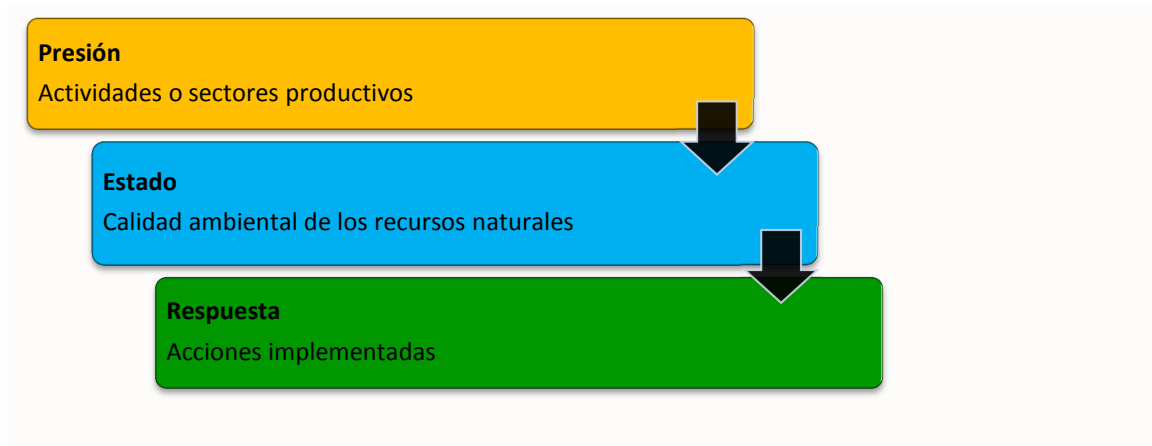

Equidad intergeneracional. El desarrollo sustentable es un concepto dinámico y, por ello, el legado de recursos para la siguiente generación ha de ser, al menos, igual que el disponible para la generación actual. Esta segunda cuestión nos conduce a reflexionar sobre el horizonte temporal que se tiene en cuenta.

En México, en 1988 con la Ley General de equilibrio Ecológico y Protección al Ambiente, donde se concibe al desarrollo sustentable, como; “El proceso evaluable mediante indicadores de carácter ambiental, político y social que tiende a mejorar la calidad de vida y la productividad de las personas” que se fundamenta en medidas apropiadas de preservación del equilibrio ecológico, protección al ambiente y aprovechamiento de los recursos naturales, de manera que no se comprometa la satisfacción de las necesidades de las generaciones futuras”, (Nebel y Wrigth, 1999).

Modelo de evaluación de Sustentabilidad: PER

El Modelo PER identifica tres aspectos básicos: las presiones que recibe el ambiente, la situación del estrato ambiental afectado y la respuesta de la sociedad. La figura siguiente muestra el modelo P-E-R de manera gráfica.

Figura 3: Modelo PER

METODOLOGÍA

La gestión del desarrollo sustentable y el cuidado del medio ambiente son cruciales para el éxito de todas las empresas públicas y privadas. Particularmente las organizaciones industriales deben definir adecuadamente los indicadores para evaluar su capacidad de sustentabilidad en sus actividades productivas para cumplir con las expectativas de los grupos de interés para lograr su competitividad dentro de los mercados internacionales, aplicando las políticas y normas establecidas internacionalmente bajo el modelo PER, basados en el equilibrio del medio ambiente y el bienestar de las personas, así como la adopción de ISO 14001 y auditorías en conjunto con las reglamentaciones establecidas por las leyes mexicanas por medio de las dependencias federales, estatales y locales de SEMARNAT/Profepa para evaluar su desempeño y determinar indicadores de innovación y desarrollo en el uso de tecnologías sustentables. Basado en la aplicación de un Sistema de Gestión del Medio Ambiente (SGA), puede reducir costos, mejorar la eficiencia y dar una ventaja competitiva a las empresas.

Esta investigación tiene un enfoque cualitativo y su alcance es un caso de estudio de la industria maquiladora del sector electrónico de carácter exploratorio, con el objetivo de evaluar a las industrias maquiladoras específicamente de la ciudad de Tijuana Baja California, bajo un enfoque de competitividad y desarrollo sustentable. Mediante un análisis asociado a las estrategias de organización de estas industrias, que se vincula con su estructura, capacidad, tecnología de innovación, proveedores certificados y número de personal empleado así como la relevancia del cuidado al medio ambiente mediante prácticas de desarrollo sustentable en sus actividades productivas.

Se diseñó como instrumento un cuestionario, construido con un total de 117 ítems, los cuales fueron seleccionados y analizados de manera rigurosa, por su relevancia y adecuación para la industria maquiladora del sector electrónico de acuerdo a los estándares internacionales. Para aplicarse a la muestra seleccionada de diez industrias de clase mundial más representativas en tamaño y empleados en la localidad.

RESULTADOS

De acuerdo al análisis de los factores del modelo PER, implementado en el desarrollo de esta investigación se obtuvieron los resultados que a continuación se presentan:

Figura 4: Análisis de Desarrollo Sustentable, Factor Económico

Análisis de Desarrollo Sustentable Factor Económico

Figura 5: Análisis de Desarrollo Sustentable, Factor Social

Figura 6: Análisis de Desarrollo sustentable, Factor Ambiental

CONCLUSIONES

Las conclusiones que arroja esta investigación, de acuerdo a los factores que se evaluaron, se presentan a continuación:

Factor Económico

Los hallazgos presentan de manera contundente que las industrias de clase mundial, del sector electrónico cuentan con políticas y metas ambientales, vinculadas al desarrollo económico, bajo esquemas de aseguramiento de la calidad, con las certificaciones de ISO 14001, auditoría ambiental, establecidas por la Profepa y la introducción de tecnologías limpias para sus procesos productivos, del mismo modo fomentan el uso sustentable de los materiales y servicios.

Factor Social

Los hallazgos mostraron que las industrias de clase mundial, establecen políticas de valores, acordes con la misión y visión de las empresas, fomentan el desarrollo de los empleados, y su participación en la comunidad, generando un ambiente de bienestar laboral.

Factor Ambiental

Se concluye que el establecimiento de estas industrias del sector electrónico, son generadoras de contaminación y de residuos peligrosos, sin embargo los hallazgos también nos arrojan que estas industrias están preocupadas por el medio ambiente, manteniendo monitoreos y controles estrictos de sus materiales y desechos contaminantes, así como del retorno de los mismos al país de origen. Se encontró también que aplican medidas de reciclaje y de sistemas de tratamiento de aguas residuales, así como

políticas de sustentabilidad ambiental. Lo que coincide con los indicadores propuestos por esta investigación.

RESUMEN

El objetivo de este trabajo consiste en analizar la producción científica de revistas arbitradas, en un Centro de Investigación Científica y de Educación Superior de Ensenada Baja California (CICESE) de 1973 a 2011. El análisis se basa en el número de artículos por año del personal académico, por departamento, por investigador, además las revistas en las que publican y el idioma que utilizan de cuatro divisiones académicas que lo integran: Biología Experimental y Aplicada, Ciencias de la Tierra, Física Aplicada y Oceanología. Es un análisis cuantitativo, utilizando la herramienta de Microsoft Excel 2010. Esta información se obtuvo directamente de la base de datos de la productividad académica que se encuentra en el portal de Estudios de Posgrado del CICESE. Se revisó 3,148 artículos arbitrados, en 832 revistas donde publicaron.

PALABRAS CLAVE: Producción científica, artículos en revistas arbitradas y CICESE

SUMMARY

The aim of this paper is to analyze the scientific production of refereed journals, in a Center for Scientific Research and Higher Education of Ensenada (CICESE) from 1973 to 2011. The analysis is based on the number of articles per year of academic staff, by department, by investigator, and the journals that publish and language using four academic divisions that comprise: Experimental and Applied Biology, Earth Sciences, Applied Physics and Oceanography. It is a quantitative analysis, using the Microsoft Excel 2010. This information was obtained directly from the database of academic productivity found in the portal CICESE Graduate Studies. 3,148 refereed articles published in 832 journals where reviewed.

KEYWORDS: Production scientific, articles in refereed journals and CICESE

INTRODUCCIÓN

Uno de los 27 centros creado por decreto presidencial el 18 de septiembre de 1973 es el Centro de Investigación Científica y de Educación Superior de Ensenada (en adelante CICESE) como parte del Sistema de Centros Públicos de Investigación del Consejo Nacional de Ciencia y Tecnología (CONACYT) para realizar investigación científica básica y aplicada, inicialmente en los campos de la geofísica, oceanografía física, física e instrumentación principalmente orientadas a la solución de problemas nacionales y en particular a los regionales de la península de Baja California, así como en las áreas de las actividades docentes, a nivel de maestría y doctorado. A continuación en la tabla 1 se presentan las 30 diferentes formas en que le ha llaman al Centro de Investigación Científica y de Educación Superior de Ensenada.

Tabla 1.- Formas de nombrar al CICESE, dentro de la base de datos de ISI Web of Knowledge.

Objetivo general:

Analizar la producción científica de artículos arbitrados, del personal académico del CICESE en el periodo de 1973 a 2011, por autor, por año, por idioma y por revista.

Objetivos específicos:

Analizar el número de artículos por año que publica el personal académico, de las divisiones de Biología Experimental y Aplicada, Ciencias de la Tierra, Física Aplicada y Oceanología.

Determinar el número de artículos por investigador, de las divisiones de Biología Experimental y Aplicada, Ciencias de la Tierra, Física Aplicada y Oceanología.

Identificar las revistas en las que publican las divisiones de Biología Experimental y Aplicada, Ciencias de la Tierra, Física Aplicada y Oceanología.

Identificar el idioma en que publican las divisiones académicas de: Biología Experimental y Aplicada, Ciencias de la Tierra, Física Aplicada y Oceanología.

Objeto de estudio

Los artículos arbitrados que publicaron los investigadores de las cuatro divisiones del centro, Biología Experimental y Aplicada (DBEA), Ciencias de la Tierra (CT), Física Aplicada (FA) y Oceanología (OC).

METODOLOGÍA

Es una investigación cuantitativa, descriptiva. El proceso para llevar a cabo esta investigación se obtuvo principalmente de la base de datos de la página de Estudios de Posgrado del CICESE, de allí se extrajeron los datos de las cuatro divisiones del centro, Biología Experimental y Aplicada (DBEA), Ciencias de la Tierra (CT), Física Aplicada (FA) y Oceanología (OC), para este estudio de caso se investigó la producción desde el inicio de cada división. Se capturaron 3,148 artículos, 832 revistas en las que ellos publican. Para este trabajo de investigación se tomaron datos a partir de 5 artículos publicados por autor, y las revistas que tuvieron más de 5 artículos publicados por alguno de los investigadores del centro, esto con el fin de agilizar la selección y ordenar la producción por año, por investigador y por idioma.

OPINION DE EMPLEADORES

Juan Cortes Botello, Universidad Autonoma de Baja California
Gonzalo Llamas Bañuelos, Universidad Autonoma de Baja California

RESUMEN

La globalización, la sociedad del conocimiento y de la información, así como los cambios científico-tecnológicos han modificado sustancialmente el mundo laboral. Hoy en día la creación de riqueza depende de la aplicación del conocimiento especializado en el trabajo, lo cual coloca a las diferentes instituciones de educación en el reto de modificar sus estructuras, procesos y formas de organizar el trabajo académico en función de las necesidades que se derivan de ese nuevo ordenamiento de la producción laboral de los bienes y servicios y por ende del conocimiento.

Lo anterior plantea a las IES y a los egresados nuevas relaciones y formas de trabajo en el campo profesional, incluso a nivel de políticas públicas los gobiernos están impulsando reformas laborales que habrán de influenciar el quehacer de las instituciones educativas. Por ello se establece la exigencia de formar al egresado en un ámbito que le permita adquirir nuevas competencias, conocimientos, habilidades y actitudes, para integrarse y mantenerse en los mercados laborales imperantes y en los emergentes.

Ante estas demandas y exigencias, la educación universitaria adquiere gran importancia por el impacto que tiene al desarrollar la capacidad de la fuerza laboral, el nivel de productividad nacional y la competitividad internacional.

Por lo anterior es que los estudios de opinión de empleadores sobre el desempeño profesional de los egresados ofrecen información valiosa para apoyar la acreditación y la actualización permanente de los planes y programas de estudio de acuerdo a las necesidades de la sociedad y del mercado laboral. Por lo dicho anteriormente se presentan los resultados del estudio de “OPINION DE EMPLEADORES” de los egresados de las carreras de LA Facultad de Ciencias Administrativas de la UABC.

PALABRAS CLAVE: Globalización del Conocimiento, Modificación de Curriculum, Mercados Laborales, Estudio de empleadores, Colectividad competitiva y Velocidad e Intensidad de Innovación.

INTRODUCCION

El sistema de educación superior mexicano se enfrenta a problemas como son, la demanda creciente de servicios por parte de la sociedad y a la crítica acerca de la falta de congruencia entre los procesos educativos, las necesidades sociales y las exigencias del mercado laboral. Estos problemas plantean a las IES y en particular a la FCA y a la UABC nuevas relaciones y formas de trabajo en el campo profesional. La información sobre estas nuevas exigencias constituye uno de los insumos más importantes de los estudios de empleadores para la UABC y la FCA, los empleadores se han convertido en los informantes calificados, capaces de identificar e informar sobre las necesidades de capacitación de los recursos humanos en función de las demandas del mercado de trabajo y del sector productivo.

A través de la opinión de los empleadores es posible detectar las necesidades en cuanto a conocimientos, habilidades, actitudes y valores que ellos requieren de los egresados en este sentido se toma al mercado de trabajo como un sistema de información.

A la fecha la mayoría de las instituciones de educación superior tanto públicas como privadas del país han realizado estudios de egresados y de empleadores, a partir de éstos, han logrado aproximarse y conocer el mundo laboral de sus egresados y el grado de satisfacción de la formación profesional recibida y sobre su desempeño profesional.

El contar con estudios de este tipo se ha convertido además en uno de los indicadores a evaluar por parte de organismos externos a las IES, como son los Comités de Pares y los organismos acreditadores, además se ha convertido también en un instrumento que incide en la obtención de recursos otorgados por el gobierno federal.

Es por lo anterior que la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California realizó la investigación “OPINION DE EMPLEADORES” cuyo objetivo es conocer la evaluación que hacen las organizaciones respecto a los egresados de la FCA con el objetivo es asegurar y mejorar la calidad de los programas de estudio de licenciatura de la Facultad de Ciencias Administrativas de la UABC, para que esté acorde con las normas establecidas por los organismos acreditadores reconocidos por el Consejo para la Acreditación de la Educación Superior (COPAES), así mismo, para que la pertinencia de los programas formales, de educación continua y de vinculación se evalúen desde la perspectiva de los empleadores. El estudio comprendió a las carreras de Contabilidad, Negocios Internacionales, Administración de Empresas y de Informática.

JUSTIFICACION

Los cambios económicos, sociales, científicos, tecnológicos plantean a la exigencia de formar al egresado en un ámbito que le permita adquirir nuevas competencias, conocimientos, habilidades y actitudes, más amplias y globales, para integrarse y mantenerse en los actuales y futuros mercados laborales. Por lo anterior se reconoce la necesidad de realizar una investigación sobre la opinión que los empleadores tienen acerca de sus colaboradores formados académicamente en la Facultad de Ciencias Administrativas de la UABC y espera que los resultados de la investigación contribuyan a dar respuestas a algunas de las interrogantes institucionales, como son: ¿Hacia dónde se dirige la construcción del conocimiento de las carreras objeto de este estudio?, ¿Cuáles son las tendencias y perspectivas futuras de las carreras que se ofertan en la FCA, desde el punto de vista del mercado laboral? y ¿Cómo construir e incorporar un currículo pertinente a las carreras de la FCA? . Con la dinámica tan cambiante de la sociedad, se obliga a las Instituciones de Educación Superior (IES) a estar en permanente observancia y alerta de la pertinencia en la calidad de la educación que imparten, así como de las carreras que ofertan para no verse desfasadas por los nuevos requerimientos de los sectores productivos y sociales, de su región, de su país y del ámbito externo el cual cada vez juega un papel más importante en la construcción de las diferentes políticas públicas de las naciones. Es por ello que estudios como el que nos ocupa deben constituirse en programas de investigación institucionales por parte de las IES, así como ya lo es de la UABC y de la FCA. Este tipo de estudios se constituyen arrojan información para la mejora y actualización permanente de los planes y programas de estudio, para la definición de políticas de desarrollo institucional en los niveles estatal, regional y nacional, para la ampliación de la oferta educativa, para conocer el desempeño de sus egresados y tener así una vía de aproximación a la realidad de los campos profesionales, para realizar ejercicios de reflexión y autoevaluación con la finalidad de redefinir el rumbo y visión institucional y, finalmente, lograr con esto una mayor vinculación y pertinencia social.

OBJETIVO PRINCIPAL

El objetivo principal que se planteó en esta investigación fue la de evaluar la correlación del perfil profesional del egresado de la FCA de acuerdo a las funciones, actividades y tareas que el ejercicio profesional les exige a los egresados de la FCA, así como también las habilidades y actitudes que poseen los egresados de la FCA en relación a lo que demanda el mercado de trabajo.

Para alcanzar el objetivo principal se definieron cuatro objetivos particulares:

Caracterizar las competencias profesionales del egresado de la FCA en función de la opinión de los empleadores;

Medir la satisfacción de los empleadores respecto al cumplimiento del desempeño profesional del egresado de la FCA;

Determinar la pertinencia del currículo con las necesidades de los empleadores e;

Identificar las competencias más demandadas del perfil del egresado de la FCA y aquellas que deben mejorarse según las exigencias del campo profesional.

Los objetivos específicos del estudio son:

1. Apoyar el diseño y revisión de planes y programas de estudio
2. Conocer el desempeño profesional del egresado
3. Consolidar la línea de investigación de empleadores.
4. Conocer las exigencias formativas que el empleador exige del egresado de la FCA.
5. Conocer la opinión de los empleadores sobre los criterios y valoraciones que utilizan en el proceso de selección y contratación de los egresados de nuestra Facultad.

METODOLOGÍA

Estudio fue descriptivo. Se analizaron las opiniones de 243 empleadores seleccionados aleatoriamente partir de los directorios empresariales de la ciudad de Mexicali.

Directorio de CANACO

Directorio de CANACINTRA

Directorio de la Industria de la Construcción, y

Directorio de la Industria de la Maquiladora.

Métodos y técnicas

La metodología empleada en el presente estudio incluyó el cuestionario “Opinión de Empleadores” el cuál fue diseñado por la ANUIES y la UABC, lo único que se hizo fue ajustarlo a las necesidades de la FCA.

El cuestionario consta de 26 preguntas y es de opción múltiple.

Los pasos que se siguieron para realizar la investigación fueron:

- 2.1 Integración del directorio de empleadores
- 2.2 Identificación de la población.
- 2.3 Diseño del cuestionario
- 2.4 Elaboración de la muestra
- 2.5 Aplicación del cuestionario
- 2.6 Diseño de sistema de base de datos
- 2.7 Captura de datos
- 2.8 Interpretación y presentación de resultados en gráficas.

DESCRIPCION DE RESULTADOS

La encuesta fue respondida por mujeres (53.3%) y por hombres (46.7%).

La mayor parte de las empresas que contestaron la encuesta son del sector privado (92.6%). El giro económico que mayor participación tuvieron en la encuesta fue la de comercio, restaurantes y hoteles (34.9%). Por el tamaño de la empresa las que más participaron fueron las pequeñas (33.7%). Por origen o

procedencia del capital las empresas de mayor participación son las nacionales (74.1%). Las empresas que manifestaron la mayor frecuencia en relación a la cantidad de contadores que tenían dentro de ella, el (32.5%) manifestó tener un solo contador. La mayor parte de los contadores se encuentran laborando como personal de base (76.3%). El 22.2% de la empresas tienen sólo un Administrador de Empresas. El 87.6% de los LAES laboran como personal de base. De las empresas que manifestaron tener laborando a Lic. en Negocios Internacionales la frecuencia más alta se ubico en 15.7% de las que tenían únicamente al un LNI laborando. El 81.7% de los LNI laboran como personal de base. El 26.6% de las empresas que tienen como personal a los egresados de Lic. en Informática, sólo tienen un egresado de LI. El 69.7% de los LI se encuentran trabajando como personal de base. Respecto a las perspectivas de empleo para los egresados de la FCA la empresas en su mayoría manifestaron que se mantendrá igual: Contadores (64%); LAES (55.7%); LNI (57.4%) y LI (57.7%). El medio que más utilizan las empresas para contratar a los profesionistas es el de avisos a través de los medios de comunicación (44.2%). Al momento de seleccionar a su personal profesional las empresas consideran de mucha importancia el desempeño del egresado en la entrevista (69%); seguido por la buena presentación (58.6%) y por el dominio o nivel de conocimientos para el puesto que pretende ocupar (50.4%). Las empresas objeto de la investigación manifestaron en su mayoría tener preferencias para contratar a egresados de la UABC (83.8%). Lo que respecta a la evaluación al desempeño profesional del egresado las frecuencias más significativas se dieron de la siguiente manera: con el calificativo de buena; Contadores (51.2%); LAES (56.6%); LNI (49.6%) y LI (57%). La evaluación que le dan al nivel de responsabilidad del egresado en el caso de las cuatro carreras objeto del estudio las frecuencias más altas se ubicaron en el indicador de mucha responsabilidad. LAES (70.7%); LNI (69.3%); Contadores (67.5%) y LI (64.1%). Los egresados de las cuatro carreras fueron calificados con el indicador de mucho en la característica de habilidad para trabajar en equipo: LAES (64.7%); LI 57.2%); LNI (55.4%) y CP (52.5%). En lo que respecta a la capacidad de integrarse al medio laboral también fue el indicador de mucho el mejor evaluado para las cuatro carreras. LAES (57.5%); LNI (57.4%); CP (56%); y LI (49%).

En lo que se refiere a la evaluación sobre la disposición para el cambio las frecuencias más altas para el indicador de muchos la obtuvieron las carreras de LAES (54.5%) y LNI (52.5%). Las empresas consideraron que las carreras con mayor creatividad son: LAES (52.7%) y LNI (51.5%). Por lo que se refiere al pensamiento crítico y propositivo que ven en los egresados, todas las carreras sujetas al estudio tuvieron sus más altas frecuencias en el indicador de mucho. En cuanto a la actitud emprendedora los egresados obtuvieron las frecuencias mayores en el indicador de mucho. En lo referente a la capacidad de liderazgo de igual modo que en los casos anteriores las cuatro carreras tuvieron sus mayores frecuencias en el indicador de mucho. Las empresas consideran que hay mucha disciplina, honestidad, lealtad, y solidaridad en los egresados de la FCA. En lo referente a las habilidades y competencias que las organizaciones observan en los egresados de la FCA los resultados son los siguientes: Con el indicador de mucha habilidad administrativa fueron calificados en el siguiente orden de importancia los egresados de LAES; LNI y CP, en lo referente a la habilidad de comunicación las cuatro carreras tuvieron sus más altas frecuencias en el indicador de mucho; en la habilidad de manejo de grupos los egresados de LAES, LNI y CP son los que obtuvieron las frecuencias mayores en el indicador de mucho; en la habilidad de innovación los egresados mejor calificados son los LAES seguidos por los de LI y en tercer lugar los de LNI; en lo que respecta a la habilidad de organización y coordinación los que fueron calificados con el indicador de mucho fueron los LAES, CP y LI; respecto a la habilidad de planeación las cuatro carreras tienen su más altas frecuencias en el indicador de mucho; En la habilidad de capacidad de análisis las egresados mejor evaluados con el indicador de mucho son los de CP, LAES y LNI respectivamente; en cuanto a la habilidad de dirección solo los LAES tuvieron la frecuencia mayor en el indicador de muchos; respecto a la habilidad de supervisión los egresados que alcanzaron las calificaciones más altas en el indicador de mucho son en estricto orden de importancia los LAES, CP y LNI; En lo referente a la habilidad de generar y aplicar nuevos conocimientos los egresados de las cuatro carreras alcanzaron sus mayores frecuencias en el indicador de muchos, los LAES, LI, CP y LNI respectivamente; en la habilidad de manejo de herramientas informáticas los egresados de las carreras objeto del presente estudio fueron

calificados bajo el indicador de mucha habilidad en el siguiente orden LI, LNI, LAES y CP; en cuanto a la solución de problemas obtuvieron las más altas frecuencias en el indicador de mucho los egresados de LAES, LI, CP y LNI en estricto orden de importancia; y por último en la habilidad de dominar otros idiomas solo los egresados de LNI y CP fueron calificados con las frecuencias mayores en el indicador de mucho. En la capacitación de sus cuadros las empresas recurren más a la organización de cursos internos (47.6%). Los tópicos considerados más prioritarios en la actualización de sus cuadros son: administrativos (27.7%); el manejo de nuevas tecnologías (24.3%) y aspectos contables y fiscales (17.9%).

En lo que se refiere a la modalidad de capacitación que las empresas privilegian se tiene los siguientes resultados: curso-taller de fines de semana (25.9%); curso-taller entre semana (24.6%) y conferencias (22%). En cuanto a las características que la UABC y la FCA deben considerar al momento de preparar al estudiante se tiene lo siguiente: En el indicador de Mucho muy importante la característica más sobresaliente es la de preparar al estudiante para la competencia laboral (38.5%); bajo el indicador de muy importante la característica sobresaliente es la de preparar al estudiante para que tenga la aptitud de trabajar en equipo (22.3%); en el indicador de importante destaca la característica de aptitud para trabajar en equipo (22.3%) y en el indicador medianamente importante sobresale la misma característica que en los dos últimos indicadores. En cuanto a las características que la UABC y la FCA deben de considerar para enfrentar con éxito el futuro las recomendaciones son las siguientes:

Con el indicador de Mucho muy importante destaca la característica de impartir una educación de calidad (32.1%); en el indicador de Muy importante sobresale la misma anterior característica con un 25.4% y en el indicador Medianamente importante sobresale la recomendación de que la UABC y la FCA asuman un compromiso con el desarrollo regional y nacional (21.1%). En cuanto a los servicios que más solicitan a la UABC sobresalen dos la recepción de estudiantes para prácticas profesionales y para prestar servicio social, con el 45.1% y 42.1 respectivamente. La calificación que dan las empresas a los servicios que han solicitado a la UABC los consideran como buenos un 59.1% y como excelentes un 34.1%. Por último las áreas en que las organizaciones consideran que la UABC y la FCA deben ampliar y diversificar la cobertura de servicios destacan las siguientes: la elaboración y presentación de proyectos (22.4%) y participación de estudiantes en empresas (21.1%).

CONCLUSIONES

Los egresados de la FCA laboran en su mayoría como personal de base y las empresas consideran que para el 2012 mantendrán la misma cantidad de profesionistas de la contabilidad, de administradores, de negocios internacionales y de licenciados en informática. La modalidad de mayor uso por parte de las empresas para contratar al su personal son los avisos en los medios de comunicación. Los indicadores que mayor peso tienen en la contratación del personal son: el desenvolvimiento del egresado al momento de la entrevista, una buena presentación y el nivel de conocimiento que posee. Las empresas dan preferencia a los egresados de la UABC a la hora de la contratación. El desempeño laboral de los egresados de la FCA fue catalogado por la gran mayoría de las empresas como bueno. De acuerdo al apartado de actitudes y valores de los egresados de la FCA las organizaciones calificaron con el indicador de MUCHO los aspectos de responsabilidad en el trabajo, integración al medio laboral, pensamiento crítico y propositivo, actitud emprendedora, capacidad de liderazgo, disciplina, lealtad, honestidad, solidaridad, disposición para el cambio y creatividad. En lo referente a las habilidades en el desempeño profesional, de igual manera las empresas evaluaron muy bien a los egresados de la FCA con el indicador de MUCHO y de aceptable en las habilidades administrativas, de comunicación, de manejo de grupos, en innovación, organización y coordinación, planeación, análisis, dirección, supervisión, generación y aplicación de nuevos conocimientos, manejo de herramientas informáticas, solución de problemas y en el dominio de otros idiomas. La mayor parte de las empresas capacitan a sus trabajadores mediante cursos internos en la misma empresa, por otro lado consideran que la prioridad en la actualización debe ser en aspectos administrativos. Para llevar a cabo la capacitación las empresas prefieren los cursos de fines de semana.

Las recomendaciones que hacen las empresas para que tanto la UABC como la FCA preparen mejor a sus estudiantes consideran que se debe enfatizar en preparar al estudiante para competir laboralmente y para que asuma una aptitud para trabajar en equipo. En las recomendaciones que las empresas hacen a la UABC y a la FCA para enfrentar con éxito el futuro destaca la siguiente: impartir una educación de calidad. Por último en el aspecto de la vinculación se nota que la UABC y la FCA participan mayormente en la modalidad de estudiantes en prácticas profesionales y estudiantes en servicio social, por lo que en las otras modalidades de vinculación se participa muy poco.

MERCADO LABORAL Y EMPLEABILIDAD DE LOS EGRESADOS DE LAS CIENCIAS ADMINISTRATIVAS

Gonzalo Llamas Bañuelos, Universidad Autonoma de Baja California

Juan Cortes Botello, Universidad Autonoma de Baja California

RESUMEN

Uno de los principales desafíos que enfrentan las universidades en la actualidad, es la necesidad de contar con más espacios para la gran cantidad de jóvenes que egresan del nivel medio superior que les permita alcanzar a nivel nacional, el 30% de la matrícula como se lo han propuesto. Asimismo, lo anterior va de la mano con el importante reto de ofrecer licenciaturas e ingenierías acordes a las necesidades productivas del país, así como a las expectativas personales de los alumnos, que les permitan incorporarse rápidamente al mercado de trabajo y que al mismo tiempo, les otorguen conocimientos actualizados y rápidamente aplicables. En ese marco, el presente trabajo busca en buena medida tratar de determinar, con base a la percepción de los egresados de la Facultad de Ciencias Administrativas (FCA), si los conocimientos obtenidos por los estudiantes en su paso por la universidad les han representado una ventaja en el mercado laboral y al mismo tiempo, si esto les ha implicado una mejora en sus condiciones laborales, ya sea en términos salariales y posiciones al interior de las empresas. En general, los datos revisados en este breve trabajo documentan que los estudiantes a pesar de haber aprendido una cantidad importante de elementos teóricos durante el transcurso de su carrera, están bastante satisfechos con su paso por la universidad.

PALABRAS CLAVES: Mercado Laboral, seguimiento de egresados, empleabilidad y conocimientos académicos

INTRODUCCION

Desde hace varios años se ha venido fortaleciendo a nivel internacional la tendencia de evaluación de la actividad universitaria, como una forma de rendición de cuentas a la sociedad y a los gobiernos. En ese contexto de evaluación, el seguimiento de egresados es un asunto de vital importancia para las universidades, ya que el desempeño profesional y personal de los egresados permite establecer indicadores con respecto a la calidad y eficiencia de las instituciones de educación superior. Sin embargo, no todas las universidades cuentan con programas sistemáticos de seguimiento de egresados. Hoy en día, las instituciones de educación superior deben analizar minuciosamente la inserción de los egresados en el mercado laboral para mejorar su oferta de enseñanza y formación. Las condiciones económicas fundamentales han cambiado radicalmente, y los esquemas de organización laboral exigen la existencia de un enlace más sólido entre las habilidades formativas y profesionales.

Una de las principales tareas de las universidades en México, está dada por la provisión de educación superior de calidad, acorde a las necesidades de los propios estudiantes, del mercado de trabajo y de la sociedad en general. En ese sentido, esta educación de calidad en buena medida puede vislumbrarse a través de la percepción con la que cuentan los usuarios del servicio respecto a la educación recibida.

Así pues, en la actualidad es de vital importancia la revisión permanente de los planes y programas de estudios, en virtud del entorno tan cambiante que incide de forma importante en las instituciones de educación superior a nivel mundial. Es aquí, donde la revisión de los planes y programas de estudio se justifica ampliamente para evitar la obsolescencia de los conocimientos que se imparten en las aulas y por ello, se ha venido trabajando en la revisión sistemática de las necesidades que han sido señaladas por los egresados.

Por otro lado, la estructura del mercado laboral es una instancia que ha sido afectada de manera profunda por la globalización económica y por el desarrollo de las tecnologías de la información y la comunicación (TICS), de tal manera que como institución educativa, la UABC requiere de hacer acopio de todos esos conocimientos, actitudes, habilidades y destrezas que está demandando el mercado laboral.

El breve trabajo que aquí se presenta pretende recoger las opiniones de los egresados en términos del empleo actual que desarrollan, así como las razones que influyeron en los empleadores para otorgarles un puesto de trabajo. En general se pretende conocer el entorno laboral en el cual se desenvuelven actualmente así como su grado de satisfacción con los servicios recibidos por la Facultad de Ciencias Administrativas (FCA), el contenido de las asignaturas cursadas y su grado de aplicación en el trabajo. También se rescatan algunas opiniones de los egresados sobre su formación recibida, su opinión sobre la institución, la organización académica y el desempeño institucional, además del grado de satisfacción con la UABC y con la carrera cursada.

MARCO REFERENCIAL.

En la actualidad, las universidades necesitan asegurar capacidades y servicios profesionales que no terminen con la obtención de un título sino que tomen también en cuenta la necesidad del aprendizaje permanente. Los últimos años han indicado que existen tres tendencias principales que afectan a los requisitos exigidos a los empleados altamente calificados. La primera es la necesidad de estar cada vez mejor educados y capacitados, un factor que muchos consideran el impulsor clave del crecimiento económico global. La segunda tendencia se relaciona con el término “la sociedad de la información”(1), que fue ideado no sólo para reconocer el alcance cada vez mayor de la tecnología avanzada y los sectores con un alto nivel de conocimientos en la economía, sino también destaca que la organización laboral está cambiando como consecuencia de la creciente importancia de los conocimientos. La tercera tendencia consiste en los cambios permanentes del mercado laboral.

El término mercado laboral transitorio indica la tendencia de la sociedad moderna de desdibujar los límites entre el trabajo, el tiempo libre, la educación y la asistencia. Esto ha generado una mayor movilidad y flexibilidad (2). Las trayectorias profesionales de la vida y del trabajo ya no son estandarizadas, y como resultado, la “empleabilidad” ha llegado a ser un tema clave. Resulta que los grupos de interés de la universidad, la educación superior, la formación vocacional y el mercado laboral tienen una necesidad vital de la documentación apropiada para evaluar el escenario cambiante, sobre todo en el área de la inserción al mercado laboral de los recién egresados.

El periodo de transición entre la universidad y el empleo es reconocido como crucial para el futuro desarrollo profesional. En los últimos años, las universidades e instituciones de educación superior en todo el mundo han empezado a enfocarse en el aseguramiento de calidad para satisfacer las necesidades tanto de sus estudiantes como de la sociedad con respecto al mercado laboral. Por lo tanto, el conocimiento bien establecido de las fuerzas y las debilidades de sus programas de estudio es esencial para la gestión de la calidad. Al mismo tiempo, se exige cada vez más a las instituciones de educación superior que se responsabilicen de su trabajo. Por consiguiente, se mide el éxito de las universidades basado principalmente en el resultado de sus estudiantes con respecto a su situación laboral y su compromiso social. En ese marco, los estudios de seguimiento de egresados constituyen una manera de realizar esta medición.

Las concepciones teóricas que fundamentan el trabajo de los egresados de cualquier institución de educación superior en el país, aluden a teorías que son producto de estudios perfilados en diversas perspectivas. La Teoría del Capital Humano, (“Capital formation by education”: Jour. Pol. Econ. No. 68, 1960) por ejemplo, sentó las bases para el estudio económico sobre egresados. Este paradigma se inscribe en el campo de las relaciones entre el mundo de la educación y el mundo del trabajo. Relaciones muy

complejas, que ha producido un vasto cuerpo teórico en el que se han fundamentado las ciencias de la Educación. Es importante destacar que esta teoría tiene limitaciones para explicar el conjunto de relaciones entre educación y trabajo; y, asimismo, es importante reconocer la contribución de perspectivas emergentes que buscan cubrir dicha insuficiencia explicativa.

Estos nuevos enfoques proporcionan una explicación diferente acerca del papel que juega la educación en la ocupación y el ingreso. En resumen, la principal aportación de las llamadas interpretaciones emergentes, (Carnoy, Paris. 1977) tales como las teorías de la fila, (Lyons) de la devaluación de los certificados (Dore, London, 1976) y del bien posicional, (Izquierdo, 1992) es que pueden ayudar a explicar el cuadro de relaciones entre educación e ingresos a partir de la estratificación de clases, de sexo y de razas. Asimismo, se incluye en este conjunto de explicaciones emergentes, la idea de que la institución escolar de la que proceden los profesionistas es una variable importante para la incorporación de éstos en el mundo del trabajo, (Pesacador, 1984) desde la perspectiva de los empleadores, esto se convierte en un proceso de “señalización” institucional. Por lo que corresponde a movilidad social, (Boudon, 1984) ésta ha sido concebida como el hecho de que los individuos adquieran en la sociedad, posiciones diferentes de aquéllas de su familia de origen, por lo que fundamentalmente se busca comparar la ocupación de los hijos con la de sus padres, aunque en algunos estudios intervienen también variables tales como los niveles de apertura relativa en las estructuras educativa y ocupacional, así como el estatus atribuido a las ocupaciones según sus contextos culturales.

METODOLOGIA

El procedimiento que se siguió para localizar a los egresados de las distintas carreras fue a través de un padrón de egresados que tiene la Facultad de Ciencias Administrativas. El contacto se realizó vía correo electrónico, por teléfono y una gran mayoría en los centros de trabajo. Una vez localizados se procedió a aplicarles la encuesta y posteriormente, los cuestionarios se concentraron y se revisaron de forma individual para determinar si estaban debidamente contestados.

Una vez aplicados los instrumentos, se digitalizó y sistematizó la información de los mismos. Cabe destacar que se capturaron 343 encuestas correspondientes a estudiantes egresados de los programas de las licenciaturas en Contaduría Pública, Administración de Empresas, Informática y Negocios Internacionales. El siguiente paso fue obtener la distribución de frecuencias de cada una de las variables contenidas en el instrumento.

El instrumento fue diseñado para capturar la información precisa objeto de este estudio e incluyó un total de 46 preguntas distribuidas en las siguientes temáticas: i) Aspectos socio demográficos; ii) Formación Académica; iii) Trayectoria y ubicación en el mercado laboral; iv) Desempeño profesional; v) Opinión sobre formación profesional; vi) Opinión sobre la formación recibida; vii) Recomendaciones para mejorar el perfil de formación profesional; viii) Opinión sobre la institución; ix) Opinión sobre la organización académica y desempeño institucional; x) Opinión sobre la organización institucional; xi) Satisfacción con la UABC y la carrera cursada

Por otro lado, cabe destacar que los sujetos encuestados fueron los egresados de las licenciaturas en Contaduría, Administración de Empresas, Negocios Internacionales e Informática, de las generaciones que abarcan el periodo 2000 al 2011.

Serie Estadística De Egresados Del 2000 Al 2011

AÑO	C.P.	L.A.E	L.I	L.N.I

RESULTADOS

No hay duda que las opiniones de los egresados son de vital importancia para la reestructuración de planes y programas de estudios; cabe destacar que, aun cuando estas opiniones sean parciales, son importantes ya que como complemento se requeriría la opinión de expertos docentes y por supuesto la opinión de los empleadores. Así pues, de acuerdo a los datos del análisis, se encuentra que el 46.7% de los egresados opina que buena parte de sus horas de clase, estuvieron dominadas por la formación teórica. En tanto que el 53.7% expresa que se le dio medio énfasis a la enseñanza metodológica. El 48.2% documenta un énfasis medio a la enseñanza de las matemáticas y estadística. La opinión sobre la enseñanza de técnicas fue con un énfasis medio de acuerdo con el 45.4% de las entrevistados, mientras que para el 43.9% la formación en prácticas de laboratorio, trabajo de campo y talleres fue con medio énfasis.

Cabe destacar que el análisis previo no discrimina por carrera, es decir, los valores de la gráfica hacen referencia a las respuestas de los 343 estudiantes entrevistados, sin distinguir en si estos son administradores o contadores, por ejemplo. Con esto queremos decir, que existe la posibilidad de que los estudiantes de la carrera de Informática Administrativa puedan haber recibido una mayor enseñanza de matemáticas y estadística, así como prácticas de laboratorio, de campo y talleres, comparados con los alumnos de Administración o Negocios Internacionales.

La gráfica siguiente, muestra el grado de satisfacción de los estudiantes en varios indicadores. Así por ejemplo, el 85.1% de los egresados se encuentran satisfechos con la aplicación de los conocimientos adquiridos en la licenciatura, mientras que el 81.7% se encuentra satisfecho con la posibilidad de realizar ideas propias en su centro de trabajo. En el mismo tenor, un 83.2% está satisfecho con el reconocimiento profesional que han alcanzado y la posibilidad de trabajar y coordinar equipos de trabajo.

Otro de los aspectos evaluados está dado por la posibilidad de responder a problemas que se presentan en el lugar de trabajo, y se documenta con un 86.8%. Este es quizás el punto crucial de un profesionista que es contratado para dar respuesta inmediata a problemas detectados. El 85% se encuentra también satisfecho con el trabajo que desarrolla y además se siente satisfecho con el ambiente laboral que prevalece en la organización. Con respecto al salario el 79.7% se encuentra satisfecho, y también respecto a la forma de responder a problemas de relevancia social y de sentirse también útil y aportar con algo de provecho para la sociedad. En general se puede observar la existencia de un alto grado de satisfacción con los aspectos evaluados que van desde su estado de ánimo, actitud personal y sus percepciones económicas.

Ahora bien, tratando de analizar la importancia de la carrera escogida desde la perspectiva del estudiante, en la gráfica siguiente se observa que en buena medida uno de los factores que más ha influido en la obtención de un empleo para los egresados, está dada por la coincidencia de la licenciatura con las necesidades de la empresa y del mercado. Habría que agregar además, el reconocimiento de la comunidad local respecto al prestigio de la institución, sin dejar de lado, la variable de experiencia previa de los egresados.

Uno de los elementos interesantes en la gráfica previa, está dado por el hecho de que se a los estudiantes universitarios se les hace hincapié en la obtención de calificaciones elevadas, así como la adquisición de habilidades en un segundo, e incluso en un tercer, idioma. Sin embargo, de acuerdo a los valores obtenidos del cuestionario, se observa que en base a las respuestas de los alumnos egresados el dominio de otros idiomas no es tan relevante (5.2%), lo mismo sucede con el promedio de calificaciones (3.9%).

Debido al proceso de crisis económica reciente, se observa a nivel mundial y nacional, una tendencia a elevadas tasas de desempleo, tasas que son incluso mayores para la población joven. En ese sentido, la educación debería aportar elementos de capacitación para que los desempleados adquieran nuevos conocimientos una vez que la economía regrese al rumbo de crecimiento y que los egresados, obtengan elementos acordes a lo que demanda el mercado laboral. En ese sentido, de los estudiantes encuestados que se encuentran laborando, en el 80.1% de los casos se manifiesta que existe coincidencia entre su actividad laboral y los estudios realizados en la universidad, es decir, se observa la presencia de congruencia entre las asignaturas cursadas y el ejercicio profesional. Son muy pocas las personas que manifestaron una nula coincidencia entre lo que estudiaron y su actividad actual como se observa en el gráfico siguiente; esto entonces, demuestra la necesidad de seguir mejorando los planes y programas de estudio, acordes a las necesidades del mercado y a las nuevas tendencias económicas.

e, en lo que respecta a la percepción de los egresados respecto a la calidad educativa institución, la respuesta es bastante positiva, ya que la mayoría de los entrevistados la considera alta y muy alta; si estos dos valores se agregan, se alcanza un 90.6% de opiniones favorables de la UABC. Aunado a esta percepción existen indicadores de calidad objetivos que la colocan como una de las mejores instituciones públicas a nivel regional y nacional.

Un rasgo característico en la Facultad de Ciencias Administrativas, es el hecho de que la mayoría de los estudiantes son mujeres, quienes a su vez obtienen los mejores promedios y se hacen acreedores al merito escolar que cada semestre se otorga a los estudiantes mas sobresalientes de las distintas carreras que ofrece esta unidad académica. Asimismo, aproximadamente dos terceras partes de los estudiantes son solteros, con un promedio de edad de 28 años y una mínima de 22 y una máxima de 60. Dos terceras partes de estos egresados tenían empleo antes de concluir sus estudios profesionales, lo que en buena medida documenta que las carreras del área de ciencias administrativas tiene una inserción laboral importante. Para los que no tenían empleo cuando concluyeron sus estudios, les llevo menos de seis meses en conseguirlo, y el periodo de tiempo entre el egreso de la licenciatura y el estar empleado es el resultado, además de la fragilidad del mercado de trabajo, de la falta de experiencia.

El medio a través del cual se enteraron de una vacante fue el periódico y las bolsas de trabajo. Actualmente un porcentaje de alrededor del 80% tiene trabajo como empleado y es mínimo el porcentaje de egresados que es propietario de algún negocio. Los puestos que desempeñan van desde directores generales, empleados profesionales, supervisores, analistas especializados hasta gerentes de área. En su mayoría tienen una contratación por tiempo indeterminado con lo cual se deduce que son personas que trabajan de tiempo completo en alguna organización privada o pública y son muy pocos los que son empleados por obra determinada.

Un alto porcentaje de los egresados trabajan en el sector privado y son mínimos los casos de ex alumnos que laboran en el sector público; las actividades que realizan tienen mediana coincidencia con lo que estudiaron y son muy pocos casos en los cuales el perfil de egreso coincide con su trabajo actual. Esto puede deberse a la crisis que estamos padeciendo y ante la carencia de empleos bien remunerados, por lo que es bastante probable que se inserten en el mercado laboral aun cuando las funciones que desempeñan en los trabajos no correspondan al perfil de egreso. Las actividades específicas que desarrollan son coordinaciones, actividades de administración, atención a clientes y ventas dentro de lo más destacado.

En su mayoría los egresados han tenido de 2 a 3 empleos -y en algunos casos hasta 4-, antes de terminar su carrera, lo que les ha permitido mejorar su nivel de ingresos una vez que han finalizado sus estudios. Una razón importante por la cual no trabajan actualmente es porque no han encontrado empleo y siguen buscando, otra porque están a punto de incorporarse a un empleo y otra, porque decidieron seguir estudiando.

La posición jerárquica que actualmente ocupan, los mantienen satisfechos y se encuentran también ante la posibilidad de responder a problemas de relevancia social y de hacer algo de provecho para la sociedad. La formación recibida lo ha estimulado para estar informado mediante la lectura de medios escritos y manifiesta que su formación en parte, ha contribuido a ser más participativo en asuntos de interés público y que lo ha motivado para promover iniciativas benéficas para la colectividad.

Las recomendaciones que hacen los egresados para mejorar el plan de estudios son entre otras cosas, que los contenidos teóricos se mantengan igual e inclusive que se amplíen, así mismo que los contenidos metodológicos y los contenidos técnicos se amplíen y que se deben extender los contenidos profesionales así como la enseñanza de las matemáticas y la estadística.

El sentido de pertenencia es muy alto de tal forma que está dispuesto a aconsejar y recomendar a un familiar o amigo para que estudie en la UABC, por el reconocimiento social regional y nacional que tiene la institución. Los egresados hacen una evaluación de los docentes manifestando que tenían un amplio conocimiento de la materia, que eran claras sus exposiciones y que la atención fuera de clase era buena, además de claridad en los enfoques teóricos metodológicos, así como objetividad en la evolución de los trabajos escritos y exámenes.

Lo anterior, representaron características necesarias para motivar y ascender a nuevos conocimientos ya que esto les permitía a ellos motivarse para participar en clase. Al realizar una evaluación sobre la organización académica y el desempeño institucional, argumentan como bastante adecuados los cursos y seminarios, así como un estímulo al trabajo entre profesor y alumno. La orientación y conducción de los trabajos por parte de los docentes es buena, así como la atención recibida por parte del mismo.

CONCLUSIONES

Un rasgo característico en la facultad es que la mayoría de los estudiantes son mujeres, quienes obtienen los mejores promedios y se hacen acreedores al mérito escolar que cada semestre se otorga a los estudiantes más sobresalientes de las distintas carreras que ofrece esta unidad académica.

Aproximadamente dos terceras partes de los estudiantes son solteros, con un promedio de edad de 28 años y una mínima de 22 y una máxima de 60. Dos terceras partes de estos egresados tenían empleo antes de concluir sus estudios profesionales. Esto demuestra que las carreras del área de las ciencias administrativas tienen una inserción laboral importante, ya que mucho antes de concluir su carrera ya tienen empleo. Para los que no tenían empleo cuando concluyeron sus estudios les llevo menos de seis meses en conseguirlo. Y una razón por la cual no eran contratados es la falta de experiencia.

Las recomendaciones que hacen los egresados para mejorar el plan de estudios son: Que los contenidos teóricos se mantengan igual e inclusive que se amplíen, así mismo que los contenidos metodológicos y los contenidos técnicos se amplíen y que se deben ampliar los contenidos profesionales así como la enseñanza de las matemáticas y la estadística. La percepción que tienen los egresados sobre la calidad de la UABC varía de alta a muy alta y los porcentajes de no aprobación de este concepto son muy bajos.

El sentido de pertenencia es muy alto de tal forma que esta dispuesto a aconsejara y recomendar a un pariente o amigo para que estudie en la UABC, por el reconocimiento social regional y nacional que tiene la institución. Los egresados hacen una evaluación de los docentes manifestando que tenían un amplio conocimiento de la materia, que eran claras sus exposiciones y que la tensión fuera de clase era buena, que existía claridad en los enfoques teóricos meteorológicos, así como objetividad en la evolución de los trabajos escritos y exámenes.

RECOMENDACIONES

Realizar una campaña permanente en los centros de trabajo en donde laboran los egresados a fin invitarlos a titularse y que aprovechen las distintas opciones que existen para ello para que cumplan con ese requisito.

Fortalecer la bolsa de trabajo hacia las instancias correspondientes que requieran estudiantes y egresados para trabajar ya sea en el sector público o privado de la región.

Elaborar un programa de difusión interna para que los estudiantes y egresados se enteren de las ofertas de empleo que requiere el mercado de trabajo de la localidad.

Colocar a estudiantes y egresados de acuerdo con los perfiles en centros de trabajo en donde apliquen al 100% los conocimientos adquiridos en las aulas universitarias, para que haya congruencia entre el plan de estudios y la práctica profesional.

Incrementar la practica de algunas asignaturas dependiendo de la naturaleza de las mismas
Agilizar los trámites administrativos para evitar demoras en estudiantes y egresados que disponen de tiempo limitado.

Abrir programas semi escolarizados y ofrecer programas de licenciatura y posgrados en línea (virtuales) para satisfacer la demanda de muchas personas que no cuentan con el tiempo necesario para asistir a un programa formal.

Agilizar el proceso de titulación y que haya talleres de orientación acerca de los tramites que deben realizar
