*Barreras de logística y canales de distribución:* Las barreras que tienen que ver con la distribución son varias en esta revisión de investigaciones, los autores que detectan algún obstáculo para exportar que se ubique dentro de los canales distribución son: Da Silva & Da Rocha (2001), Ahmed et al (2004), Tesfom et al. (2006), Pérez & Camarero (2007), Liargovas y Skandalis (2008), Rutihinda (2008), Pinho & Martins (2010) y Al Hyari et al. (2012). Dentro de los problemas en las canales de distribución el que mayor se presentó fue de logística, es decir, el de solventar los altos costos de transportación y seguros, para Da Silva & Da Rocha (2001); Rutihinda (2008) y Al Hyari et al. (2012), es preciso además señalar que en los estudios de Da Silva & Da Rocha los ex-exportadores consideran esta barrera como un problema importante. Este par de autores mencionan también que los altos costos pueden presentarse por la infraestructura obsoleta y los requisitos burocráticos en los puertos de otros países que hacen que las empresas busquen mejorar los costos de transportación. Liargovas y Skandalis (2008) encontraron en su estudio que la falta de un sistema de distribución es un problema igualmente para las empresas, en el caso Tesfom et al. (2006) la barrera detectada fue hacer llegar los productos al mercado meta, para Pérez & Camarero (2007) encontrar un distribuidor fiable, o bien, llevar de forma continua los suministros a los mercados internacionales representa una barrera trascendental para Ahmed et al (2004). Por último, en los estudios de Pinho & Martins (2010) el control de la distribución en el mercado meta de igual forma representa una barrera substancial, pues según Johanson & Weidersheim (1975) las empresas entre más se adentran en los mercados internacionales mayor control tienen de las operaciones que realizan.

### Principales problemas para las empresas que no exportan

Smith et al. (2006) indican que las empresas no exportadoras que han explorado las posibilidades de hacerlo perciben mayores obstáculos a la exportación que las firmas que ya lo hacen, ya que las organizaciones no exportadoras están expuestas a diversas barreras, que les impide iniciar las operaciones de exportación. En este trabajo los principales obstáculos que se observaron para las empresas no exportadoras fueron: barreras gubernamentales, barreras de financiamiento y el conocimiento. En el caso de las barreras gubernamentales Ahmed et al (2004) detectaron en sus estudios la falta de ayuda para superar problemas a la exportación, Okpara & Koumbiadis (2009) la falta de asistencia por parte del gobierno y los incentivos inadecuados para la exportación (Da Silva & Da Rocha, 2001). Esta falta de ayuda y/o asistencia para que las empresas exporten es fundamental pues muchas veces las empresas no exportan porque no encuentran atractivos incentivos y apoyos para hacerlo (Al Hyari et al. 2012).

En cuanto a las barreras por la falta de financiamiento Okpara & Koumbiadis (2009) y Al Hyari et al. (2012) mencionan que para las empresas no exportadoras la falta de financiamiento es una barrera primordial pues limita la habilidad para actuar en los mercados internacionales. El conocimiento de exportación para la elección del método de entrada al país extranjero, la elección del país, y el reconocimiento de las oportunidades potenciales representan los elementos principales en el proceso de internacionalización (Reid, 1981), sin embargo la falta de conocimiento también fue otra barrera importante en las empresas no exportadoras, ya que en los estudios de Okpara & Koumbiadis (2009) y Pinho & Martins (2010) fueron de los principales obstáculos, y en ese sentido Johanson y Vahlne (1977) indican que la falta de conocimiento es un fuerte desmoralizador para la internacionalización de las empresas.

### **CONCLUSIONES**

Las barreras que se detectaron en este trabajo en las empresas exportadoras tienen que ver con la competencia, barreras gubernamentales en el propio país y barreras de los canales de distribución. Para competir en el comercio internacional es necesario que las empresas adapten los productos y servicios a las necesidades del mercado extranjero (Julian & Ahmed, 2005) e institucionalicen las operaciones internacionales de la empresa (Cavusgil & Zou, 1994). Las barreras gubernamentales se pueden superar con adecuados programas de asistencia a la exportación desarrollados por los gobiernos locales para cada etapa del proceso de internacionalización de las empresas (Bilkey & Tesar, 1977), de igual forma con incentivos atractivos y reduciendo los trámites burocráticos y complejos, esto con la finalidad de que las empresas se interesen más en la actividad de exportación. En el caso de los canales de distribución es necesario que las empresas busquen otras alternativas para transportar sus productos y con ello rebajar costos (Pinho & Martins, 2010), además de obtener mayor información acerca de posibles distribuidores.

Por lo que respecta a las empresas que no tienen la actividad de exportación, hay que mencionar que en esta revisión sólo Ahmed et al (2004), Okpara & Koumbiadis (2009), Pinho & Martins (2010), Al Hyari et al. (2012) investigaron las barreras a no exportadores, por tanto se considera que los trabajos examinados no son suficientes para hacer un buen análisis de las principales barreras a la exportación de las empresas no exportadoras, asimismo no se encontró algún estudio en que el instrumento de medición aplicado fuera especialmente para empresas no exportadoras, pues los ítems no hacían distinción entre empresas exportadoras y no exportadoras, por tanto se considera necesario hacer investigaciones exclusivamente de empresas no exportadoras para determinar la gravedad de las barreras a la exportación percibidas con el fin de identificar la raíz de estos obstáculos para que les ayude a eliminar o minimizarlos durante las primeras etapas del proceso de internacionalización y provoque el éxito en sus futuro esfuerzos en el comercio internacional (Smith, et al., 2006).

# ESTUDIO DIAGNOSTICO DE APLICACIÓN DE LA ADMINISTRACION ESTRATEGICA EN PYMES DEL SECTOR TURISTICO DE CAMPECHE, MEXICO

Román Alberto Quijano García, Universidad Autónoma de Campeche

Luis Alfredo Arguelles Ma, Universidad Autónoma de Campeche

José Alonzo Sahuí Maldonado, Universidad Autónoma de Campeche

Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco

## RESUMEN

*Los ejes rectores del Plan Estatal de Desarrollo 2009-2015 tienen como objetivo posicionar a la ciudad de Campeche como destino turístico, mediante programas de apoyo y promoción que repunten este sector para convertirlo en una fuente importante de ingresos y empleo para la entidad. Las pymes turísticas de Campeche, deben afrontar el reto de ser organizaciones globales y diagnosticar su situación actual en el mercado para fijar sus objetivos empresariales de largo plazo. Esta investigación tiene como objetivo central identificar la percepción del líder de las pymes respecto al desarrollo e implementación de estrategias como elementos de la administración estratégica, identificada por la teoría, como un factor que contribuye a la ventaja competitiva entre las organizaciones. El estudio es de tipo descriptivo porque se mide o recoge información sobre las variables que participan en el problema sujeto a análisis, con diseño no experimental transversal ya que se recolectaron datos en un solo momento en su contexto natural, mediante entrevistas a los líderes de las pymes. Los resultados señalan el escaso conocimiento de los propietarios respecto a la administración estratégica y los posibles beneficios como herramienta de posicionamiento y permanencia en el mercado.*

**JEL:** M15

**PALABRAS CLAVE:** Administración, Planeación, Ventaja competitiva.

## DIAGNOSTIC STUDY ABOUT THE STRATEGIC MANAGEMENT APPLICATION IN TOURISTIC SMEs IN CAMPECHE, MEXICO

### ABSTRACT

*The principal axis of the 2009 – 2015 State Development Plan has as objective to position the Campeche city as tourist destination, through support and promotion programs that highlights this sector to convert it into an important income and employment source for the country. The touristic Small and Medium Enterprises (SMEs) in Campeche, must face the challenge of being global organizations and diagnose their current situation in the market to set their long – term business objectives. This study has as main objective to identify the SMEs leader's perception about the development and implementation of strategies as elements of strategic management, identified by theory, as a factor that contributes to competitive advantage among the organizations. The study's type is descriptive because it measures or recollects information about the variables that participate in the studied problem, with non - experimental transversal design because the data was recollected in one single moment in its natural context, through interviews with the SMEs leaders. The results show a lack of knowledge from the owners about strategic management and its possible benefits as a tool of positioning and permanence in the market.*

**JEL:** M15

**KEY WORDS:** Management, Planning, Competitive Advantage.

## INTRODUCCIÓN

### Antecedentes

La globalización demanda servicios turísticos para usuarios cada vez más exigentes y que buscan prestadores de servicios de calidad que logren preservar la identidad maya y colonial de la región y que distinguen al sureste de México, por lo tanto, es prioritario que la comunidad cuente con organizaciones ubicadas en su contexto real en el ámbito administrativo y financiero evaluando el grado de conocimiento que tienen los socios o líderes de las pymes respecto a herramientas administrativas de planeación y de análisis de información financiera lo que permitirá a estas organizaciones: a) evaluar su posición en el mercado, b) identificar fortalezas y debilidades, c) permanecer en el mercado y d) conocer el grado de vinculación que tienen con el plan sectorial de turismo y su aportación al mismo.

### Planteamiento del Problema

En el marco del plan estatal de desarrollo 2009-2015 específicamente en el apartado 2.2 del eje rector 2, se definen las políticas para la actividad turística del estado de Campeche, y considera que este sector ha ido forjando una ruta ascendente como actividad económica, situándose hoy como factor central para lograr mayores oportunidades de empleo para la población. Las pymes turísticas de Campeche, deben afrontar el reto y diagnosticar su situación actual para hacerle frente a los compromisos que los llevarán al crecimiento económico. El sector turístico requiere pymes que conozcan su situación financiera, nivel de capacidad instalada e infraestructura acorde a la demanda de los visitantes tanto nacionales como extranjeros que exigen calidad en servicios de hotelería, restaurantero, agencias de viajes y promotores de recorridos turísticos. La contribución a la economía de los países por las pymes es reconocida a nivel internacional ya que son fuente generadora de empleos, lo que las convierte en organizaciones indispensables para el desarrollo de su economía, sin embargo también es sabido la elevada tasa de mortalidad que enfrentan derivada de la escasa aplicación de herramientas administrativas y métodos de análisis de información financiera que les permitan formular planeaciones de largo plazo y enfrentar los problemas del mercado al que pertenecen (Méndez, 2007).

### Objetivos

Todo líder de empresa desea crearla, verla crecer, desarrollarse en forma sostenida y permanecer en el mercado. El presente estudio pretende alcanzar los siguientes objetivos:

- a. Determinar la percepción del líder respecto a la administración estratégica y su implementación en pymes turísticas de la ciudad de Campeche.
- b. Identificar los procedimientos de diseño, implementación y evaluación de estrategias desarrolladas por las pymes del sector turístico de la ciudad de Campeche.
- c. Identificar las estrategias implementadas para la permanencia y desarrollo dentro del sector de las empresas bajo estudio.

## REVISION DE LA LITERATURA

Las pymes aseguran para sí mismas mayor éxito y supervivencia, gracias a sus ventajas muy particulares como: a) sus necesidades de capital son mínimas (pueden iniciar y desarrollar un negocio), b) se adaptan con facilidad a los cambios, c) un empresario posee totalmente el capital de la empresa, d) la organización de la empresa puede cambiar con facilidad conforme a los cambios en el mercado, e) por su tamaño, los procedimientos administrativos pueden cambiar y adaptarse a las circunstancias, f) brindan una mejor atención al cliente, la cual muchas veces es personalizada y g) tienen facilidad para establecerse en diversas regiones del país, con lo cual contribuyen al desarrollo local y regional, sin embargo enfrentan problemas de diversa índole como: a) el tipo de organización generalmente es familiar, b) el dueño es quien proporciona el capital, c) su administración es empírica, d) su infraestructura atiende a la demanda y no a la planeación, e) enfrentan problemas de financiamiento, f) mantienen altos costos de operación (Méndez, 2007).

*Competitividad De Las PYMES:* En el caso de México, así como de la mayoría de los países de América Latina, es importante tomar en cuenta el papel que las pymes han jugado como impulsoras del desarrollo económico y social, en una encuesta aplicada en 1991 por el Instituto Mexicano de la Mediana y Pequeña Empresa, los empresarios mexicanos identificaron a los siguientes como los principales problemas de las pymes (Bensusán, 1996): a) falta de estímulo y excesiva carga impositiva, b) ausencia de financiamiento adecuado y puntual, c) control de precios, d) falta de mano de obra técnicamente capacitada para todos los niveles, e) burocratismo, f) inconsistencia gubernamental en los programas de apoyo y falta de credibilidad en los mismos, g) excesiva inspección gubernamental y h) duplicidad de dependencias oficiales vinculadas a las pymes. La necesidad de contar con pymes competitivas no es una preocupación local sino que se ha detectado en diferentes países y no excluye al sector turístico tal como lo señalan Rodríguez y Guisado (2002), en el estudio realizado sobre competitividad y análisis estratégico del turismo en Galicia, España conscientes de que el turismo es capaz de dinamizar la economía del país, lo que se refleja con su contribución al PIB, y sugieren la necesidad de redefinir las estrategias colectivas para maximizar sus ventajas comparativas y poder transformarlas en ventajas competitivas, teniendo como objetivo central la sostenibilidad de la actividad en el tiempo.

Por su parte, Lillo, Ramón y Sevilla (2007), analizaron el capital humano como factor estratégico para la competitividad del sector turístico, pues aporta valores intangibles pero diferenciadores que se convierten en ventajas competitivas. Estos autores establecen que el personal que colabora en las pymes turísticas debe contar con una educación derivada de políticas que eleven la calidad de los servicios capacitando al recurso humano con el que se cuenta, y no al que se desearía tener.

*Administración estratégica:* El proceso de administración estratégica comprende cinco etapas: establecimiento de la dirección organizacional, diagnóstico, la formulación de estrategias, su implantación y evaluación de los resultados (Hill y Jones, 2009). Dentro de la dirección organizacional, está como primer componente la declaración de la misión, la declaración de algún estado futuro deseado conocido como la visión, además de los valores clave que la organización se compromete a respetar y el establecimiento de las principales metas. El segundo proceso comprende la realización de un análisis del ambiente externo e interno de la organización, la formulación de estrategias tiene como base el establecimiento de la dirección organizacional y el diagnóstico interno y externo y comprende el desarrollo de objetivos a largo plazo y estrategias alternativas que le permitan a la organización tener una ventaja competitiva en el mercado.

La implantación exige que se comunique a todo el personal los objetivos anuales trazados, las políticas de la organización y mantener motivado al recurso humano para que acepte estas medidas y reconocer los beneficios que arrojan. Finalmente, el evaluar una estrategia consiste en comparar los resultados esperados de su aplicación con los realmente alcanzados, es necesario estar conscientes que éste es un

proceso constante y que requiere procesos continuos de supervisión y medición que permitan la aplicación de medidas correctivas (Fred, 2003).

*Administración estratégica en pymes turísticas:* La proyección y planificación estratégica en la industria turística, ha sido objeto de análisis pues una adecuada planificación debe influir en quienes toman, implementan y son gestores de decisiones en la industria turística, tal como lo plantea Aliú (2011), al estudiar el caso de Albania (en un contexto internacional), proponiendo el uso de un modelo híbrido donde intervienen actores públicos y privados en forma equitativa, asumiendo un rol efectivo al crear estrategias, determinar planes y crear modelos. Fernández (2011), apunta la necesidad de analizar la legalidad de la accesibilidad de todos los actores involucrados en los procesos de planificación y que estos sean incluyentes y respetuosos de todos aquellos que participan en la actividad turística ya sean agentes internos o externos. Olali (1990) citado por Aliú (2011), señala que al desarrollarse la planificación turística se presentan diversos obstáculos y que afectan generalmente los proyectos de los países en desarrollo reflejándose sus efectos a nivel nacional y local.

En el ámbito latinoamericano (Argentina), Popovich y Toselli (2006), evalúan una modalidad de planificación estratégica participativa mediante un modelo de desarrollo turístico de largo plazo que comprende los aspectos de la realidad social local como la cultura, la política, el nivel de economía, la ecología y la inclusión de la opinión de los actores locales. En Brasil se planificó un circuito turístico basado en las características históricas y culturales de la región utilizando elementos de administración estratégica desarrollando entrevistas, obtención de información documental y bibliográfica, además de crear matrices previo análisis del ambiente interno y externo (Gandara, Mendes, Moital, Santos, Souza y Goulart, 2012). En Cuba se implementó un modelo teórico que utilizó los aspectos esenciales de la metodología de inventarios turísticos, alcanzando una propuesta integral; donde se potenciaron los aspectos medioambientales, sociales y recursos turísticos susceptibles de uso (Díaz, Vázquez, Fernández y Blanco 2009). En el caso de México Rodríguez y Pulido (2010), evaluaron los factores condicionantes de la sostenibilidad como una dimensión estratégica del desarrollo turístico aplicando el método delphi, obtuvieron como resultado que la sostenibilidad es un factor clave para que cualquier destino turístico del país sea competitivo, identificaron que la visión económica, los intereses personales y políticos son los factores que condicionan el modelo turístico mexicano.

*El diseño de estrategias en pymes:* La administración y la planeación prospectiva, la planeación estratégica y la logística engloban las necesidades de dirección estratégica de las organizaciones y la falta de una de ellas provoca inestabilidad en las mismas, Sánchez (2003) desarrolló una investigación exploratoria sobre estos elementos en una muestra de 29 empresas del sector alimentos de Bogotá Colombia y recomienda la implementación de apoyo a la labor gerencial para reducir los niveles de angustia y estrés, lo que afecta la capacidad de organización y la racionalización de la gestión de negocios. Velásquez (2004), señala la importancia de la estrategia, de la estructura y de las formas de asociación como fuentes de ventajas competitivas en las pymes colombianas, que adolecen como en otras regiones de Latinoamérica de prácticas empresariales competitivas. Como estrategia efectiva para el desarrollo de las pymes, Lozano (2010), sugiere el uso de modelos de asociatividad como facilitadores en la obtención de recursos financieros. Por su parte Castellanos (2003), analizó las estrategias que incrementen el valor de los productos y servicios ofrecidos por las pymes colombianas y que se reflejen en el binomio conocimiento-valor, considerando conceptos relacionados con la innovación como actividad integradora en una empresa competitiva.

*Importancia económica del sector:* El Plan Nacional de Desarrollo 2006-2012 (PND.2007), establece estrategias para la transformación económica de México, cimentado en 5 ejes estratégicos, y, particularmente el número 4, Economía Competitiva y Generadora de Empleos, señala como finalidad de la política económica lograr un crecimiento sostenido más acelerado, y generar empleos formales, que permitan mejorar la calidad de vida de todos los mexicanos. Dentro del Eje Estratégico 4, se encuentra el

apartado 2.8 Turismo, actividad que tiene varias características, que lo convierten en una prioridad nacional, dada su importancia como factor de desarrollo y motor de crecimiento. Resaltan en orden de importancia: a) elevada productividad y empleo bien remunerado, y b) se desenvuelve en regiones de menor desarrollo económico. El papel del sector, como detonante del desarrollo local, implica generar infraestructura y servicios, debe incluir aquellos orientados a dotar de capacidades a la población local, consolidando una mejoría en el bienestar social, que les permita ser partícipes del proceso de desarrollo.

Las estrategias establecidas para lograr convertir a México, en un país líder en el sector turismo y aumentar en un 35% el número de visitantes internacionales, son: a) hacer del turismo una prioridad nacional, para generar inversiones, empleos y combatir la pobreza, en las zonas con atractivos turísticos competitivos, b) mejorar sustancialmente la competitividad y diversificación de la oferta turística nacional, garantizando un desarrollo turístico sustentable y el ordenamiento territorial integral, c) desarrollar programas para promover la calidad de los servicios turísticos, la satisfacción y seguridad del turista, d) actualizar y fortalecer el marco normativo del sector turismo, e) fortalecer los mercados existentes, y desarrollar nuevos mercados y f) asegurar un desarrollo turístico integral (PND, 2007)

Al cierre del año 2012 la contribución al PIB del sector turístico fue de 5.4% al igual que el sector comercio y por debajo del sector agropecuario que aportó el 7.2% (INEGI, 2013).

## METODOLOGIA

Esta investigación es de tipo descriptiva porque se mide o recoge información sobre las variables que participan en el problema sujeto a estudio como la administración estratégica y el diseño de estrategias empresariales. El diseño es no experimental transversal ya que se recolectarán datos en un solo momento en su contexto natural, mediante entrevistas a los líderes; teniendo como propósito el describir variables y analizar su incidencia. El método utilizado para la recolección de información cualitativa y cuantitativa es a través de trabajo de campo y la técnica empleada es la entrevista (Hernández, Fernández y Baptista, 2006).

*Sujetos en el estudio:* El estudio se desarrolló tomando como población las pymes turísticas del sector restaurantero de la ciudad de Campeche y que aceptaron participar en el mismo. Se eligió como población las empresas de este sector al considerar dos aspectos: a) generan empleo para individuos que en su mayoría no tienen estudios con nivel profesional que les permita acceder a otras actividades, y b) por su contribución a la economía del estado. Las empresas identificadas con esta especialidad fueron 25, según el directorio de socios de Comerciantes Unidos para el Desarrollo de la Industria Restaurantera (CUDIR), adscrita a la Cámara Nacional de Comercio y Servicios Turísticos Delegación Campeche al día 31 de octubre de 2012.

*Instrumento:* Se administraron formatos de entrevista semi-estructurada diseñada por Brockhaus (2004), a los 25 propietarios de las empresas para la obtención de información cualitativa, seleccionando aquellos ítems relativos a la administración estratégica que se tienen implementados en la organización para el logro de objetivos y la permanencia en el mercado. Este instrumento se vincula con el objetivo central de esta investigación al contribuir a la identificación de las estrategias y herramientas de administración que desarrollan las empresas familiares sujetas de estudio para alcanzar sus objetivos de largo plazo.

*Confiabilidad del instrumento:* Se desarrolló una prueba piloto con el fin de comprobar la correcta comprensión de las preguntas planteadas y evitar desvíos en los objetivos propuestos, así como adaptar a la población de estudio el instrumento antes citado. Se administró el instrumento al 10% de la población inicialmente contemplada obteniéndose un alfa de Cronbach de .834 por lo que se le consideró confiable. Posteriormente, a la administración del cuestionario se estableció la confiabilidad del mismo al obtener un alfa de Cronbach de .816 parámetros que se considera aceptable (Hernández, Fernández y Baptista, 2006).

### Procedimiento Para Recolección y Análisis de Datos

Las entrevistas se desarrollaron de forma personal con los líderes de las empresas con duración de una hora por cada una. El análisis de la información comprendió la construcción de sentido a partir de los datos cualitativos, que comienza con un fraccionamiento del universo de análisis en subconjuntos ordenados por temas, para luego estructurarlo en categorías que reflejen una visión total de la situación, conocido como análisis taxonómico (Spradley, 1979, 1980 citado por Bonilla y Rodríguez, 1997). El análisis de los datos cualitativos siguió el esquema antes planteado, y se realizó un análisis de contenido general, consistente en codificar los datos de los cuestionarios en categorías y sub categorías, definidas operacionalmente y calculando las frecuencias de los fenómenos involucrados en ellas (Goetz y Le Compte, 1988) empleando las frecuencias para preguntas dicotómicas o numéricas y para las variables de cadena la interpretación de acuerdo a cada uno de los elementos de cada categoría (Rodríguez, Gil y García, 1999). Se procedió a realizar el análisis de contenido en las respuestas de las entrevistas para identificar la frecuencia de ideas y las palabras clave que expresen lo mismo convirtiéndose entonces en “frases testimonio” (Savall, 2003); para ello se identificó la frecuencia de mención de cada frase testimonio en cada una de las empresas.

### RESULTADOS

Para conservar la confidencialidad de la información, se asignó una clave a cada empresa formada por un número del 1 al 25. Las 25 empresas aceptaron participar en el estudio. Los resultados del cuestionario señalan que todos los entrevistados afirman estar involucrados al 100% en las empresas, desempeñándose como directores generales, y de acuerdo a la frecuencia de respuestas (75%), tener entre 5 y 15 años de experiencia en el sector. Respecto a su estado civil el 88% están casados, el rango de edad del líder, con la frecuencia más alta fue el establecido entre 45 y 55 años. El 90% de los propietarios tiene la licenciatura como el nivel más alto de estudios y han iniciado un promedio de 3 empresas. Con el objetivo de tener una idea más clara de la percepción que tienen los propietarios de las empresas respecto a la administración estratégica como herramienta de planeación y el diseño de estrategias, se desarrolló un análisis cualitativo para evaluar dicha percepción y se asignó un puntaje para obtener un Índice de Percepción de la Administración Estratégica (IPAE). De la sección de preguntas abiertas del instrumento se seleccionaron los comentarios más representativos de entre todas las respuestas, considerándose como “frases testimonio”, como sugieren Besson y Haddadj (2002) desarrollando los siguientes pasos y cuyos resultados se muestran en la tabla 6:

- a) Identificar la frecuencia de mención de cada frase testimonio en cada una de las 25 empresas participantes. Para ello se asignaron puntajes de acuerdo a los siguientes parámetros, tabla 6:

Tabla 6: Escala cualitativa asignada al porcentaje de frecuencia de respuesta

Rango porcentual	Rango sobre 25 empresas	Escala cualitativa asignada según frecuencia de mención	Escala cuantitativa tipo Likert
más del 90% de las empresas	24 o más empresas	Siempre	6
81% a 90% de las empresas	21 a 23	muy frecuentemente	5
61% a 80% de las empresas	16 a 20	Frecuentemente	4
41% a 60% de las empresas	11 a 15	varias veces	3
21% a 40% de las empresas	6 a 10	algunas veces	2
1% a 20% de las empresas	1 a 5	rara vez	1

*Escala cualitativa asignada según la frecuencia de mención Fuente: Elaboración propia*

- b) Se obtuvo la suma de la frecuencia de cada una de las frases testimonio, por empresa.

- c) El puntaje máximo que podía tener cualquier empresa fue de 102 (6 puntos máximo por 17 items).
- d) Se dividió el número obtenido en el inciso “b” entre 102 y el resultado se multiplicó por 100, para obtener un “índice de percepción de la administración estratégica” (IPAE). A mayor IPAE, significa que el propietario tiene un mejor conocimiento de la administración estratégica, tabla 7.

Tabla 7: Índice de percepción de la Administración Estratégica (IPAE)

Reactivos	1	2	3	4	5	6	7	8	9	10	11	12	13

Algunos líderes de las empresas participantes señalaron que llegaron a ser propietarios por heredar el negocio familiar o bien contar con un capital propio para invertir y tener la iniciativa para ello; y que su principal razón para iniciar la empresa es contar con un patrimonio propio para sí mismos en el caso de los solteros y para la familia en el caso de los casados. Su plan primario era crecer como empresa pero sin tener un plan estratégico por escrito para lograrlo. Al momento de realizar la entrevista la mayoría de los propietarios se desempeñan como propietarios en el caso de los que están registrados como personas físicas con actividad empresarial y gerentes generales los que están al frente de los constituidos como sociedades mercantiles. La forma de organización que predomina es el tipo vertical. De las fortalezas mencionadas la que obtuvo mayor frecuencia de respuestas fue cuidar en todo momento la calidad del

servicio ofrecido por parte del recurso humano (85%), muy por encima de la calidad en la preparación de los alimentos. Respecto a las estrategias diseñadas y que tienen implementadas señalan que mantener e incluso reducir los costos de producción del servicio es la prioritaria y constantemente evaluada, así como cuidar la imagen e infraestructura del área donde se atiende a los comensales para fomentar el crecimiento empresarial seguida del adecuado mantenimiento e inversión en equipos.

El financiarse a través de líneas de crédito de los proveedores señalan que les ha permitido crecer en cuanto al capital de trabajo y que para los casos de adquisiciones de equipo de transporte han acudido al arrendamiento financiero; en este caso igual algunos mencionan no tener estrategias para el financiamiento de su actividad (10%); igualmente manifestaron que no hay disponibilidad de capital en la localidad para iniciar un negocio, pues el financiamiento es escaso y los bancos han limitado el crédito para este sector; por lo tanto es necesario iniciar con capital propio. Al cuestionarse los conocimientos que tienen los propietarios de las organizaciones sobre la administración estratégica, 10, manifiestan no conocerla, seguidos por aquéllos que dicen haber escuchado sobre la misma (5), pero no la aplican y 10 señalan no tener tiempo para estudiar ese tipo de información, por lo tanto como resultado general el 40% de los participantes comentaron que no aplican la administración estratégica en grado alguno y sólo cuatro organizaciones señalan aplicarla aunque no de forma documentada por lo tanto no proporcionar algún elemento de comprobación, pero son aquellos propietarios que tienen estudios de posgrado en el área administrativa. La mayor parte de las empresas dicen no conocer o que no existen organismos que brinden asesoría empresarial sin considerar los organismos gubernamentales, seguidos de los que reconocen la existencia de individuos o grupos en la comunidad que pueden ayudarles a evaluar sus ideas empresariales.

## CONCLUSIONES

### Discusión de Resultados

Del análisis de la información obtenida de la aplicación del instrumento a los líderes de las pymes, y su comparación con los resultados obtenidos por diversos investigadores considerados en el marco teórico de este estudio, se encontró que existen empresas del sector restaurantero donde el 90% de los propietarios han alcanzado una licenciatura como nivel máximo de estudios, pero, no aplican la administración estratégica en sus empresas, lo que puede originarse de la percepción de que los costos y la inversión en tiempo que implica su implementación es alta, lo que refuerza la propuesta de Lillo, Ramón y Sevilla (2007) y Sánchez (2003), respecto la necesidad de una mayor educación en administración y planeación al personal que colabora en la prestación de servicios en el sector turístico, tanto gerencial como operativo.

De acuerdo al grado de estudios manifestado no se esperaba que la percepción respecto a la administración estratégica como ventaja competitiva sea prácticamente nulo y no se pudieran realizar comparaciones con aquellas empresas que si la tuvieran implantada como lo refiere Fred (2003), lo anterior se reflejó en el bajo índice de percepción de la administración como herramienta útil en las pymes. Las empresas estudiadas no siguen una metodología respecto a estrategias para fomentar el crecimiento empresarial y el financiamiento de sus actividades de acuerdo a la metodología sugerida por Hill y Jones (2009). Tienen identificada una o dos fortalezas de sus propias organizaciones, pero no se percibe un interés en la formulación, implementación y evaluación de estrategias para el logro de metas y objetivos lo que podría generar inestabilidad en el largo plazo (Sánchez, 2003). Consideran que uno de sus mayores logros empresariales es permanecer en el sector sin definir las condiciones de su permanencia, la cual puede irse debilitando dada la situación financiera actual, lo que se reflejaría en la sostenibilidad económica de estas organizaciones (Castellanos, 2003)

## CONCLUSIONES

Los resultados obtenidos permiten identificar las principales características de la población de estudio respecto a la aplicación de la administración estratégica, el diseño de estrategias y su implementación, concluyéndose que: De acuerdo al primer objetivo de la investigación, relativo a la percepción del líder de las pymes del sector turístico restaurantero respecto a la administración estratégica se señala que tienen nociones sobre la misma pero no la aplican dentro de sus organizaciones, como una ventaja competitiva de largo plazo, inicialmente por el tiempo y costo de su implementación y por falta de conocimiento real de las beneficios empresariales que pudieran lograr para sus organizaciones; lo que se refuerza con los valores obtenidos con el Índice de percepción estratégica desarrollado a partir de las respuestas del instrumento. Respecto al diseño, implementación y desarrollo de estrategias empresariales es notable que no tengan un plan de negocios escrito, o lo estén desarrollando actualmente, por lo que no cuentan con metas, objetivos y valores definidos, así como tampoco han diseñado su misión y visión, como parte de un proyecto de administración estratégica, lo que permite señalar que su planeación se circunscribe solo al corto plazo. La forma en que fomentan y permanecen en el mercado tiene una base empírica ya que: a) no han elaborado algún estudio que les permita un conocimiento real de sus debilidades y fortalezas, para aprovechar las oportunidades del sector y del mercado en conjunto, b) permanecen en el sector, pero no manifiestan tener un plan metodológicamente desarrollado y por escrito, con estrategias para incrementar su presencia y c) las estrategias de fomento y financiamiento son pocas, careciendo de una metodología de investigación de mercados que les permitan evaluar los costos financieros de la fuente de financiamiento elegida. El estudio muestra un panorama descriptivo sobre la problemática evaluada, sin embargo futuras líneas de investigación podrían estar enfocadas a identificar qué factores inciden para que no se implemente la administración estratégica. Otro aspecto importante de evaluar, es si la situación es similar en otros estados de la República Mexicana, que desarrollen esta actividad y poder replicar este estudio para analizar las diferencias en los niveles de las variables estudiadas y los diversos factores involucrados, por lo que realizar un trabajo interinstitucional podría generar un estudio importante respecto a esta problemática.

# LOS GRANDES CORPORATIVOS DE LA FRACCIÓN MONTERREY: ORIGENES HISTÓRICOS (1890-1982)

Beatriz Pérez Sánchez, Universidad Juárez Autónoma de Tabasco

Ana Bertha Vidal Focil, Universidad Juárez Autónoma de Tabasco

Luis Manuel Hernández Govea, Universidad Juárez Autónoma de Tabasco

## RESUMEN

*La investigación: los grandes corporativos de la fracción Monterrey (1982-2010) tiene como objetivo general, conocer la composición y el poder económico, así como el papel de los grandes corporativos de la fracción Monterrey en el crecimiento y desarrollo del capitalismo en México, a través del análisis de las características y estrategias competitivas que les han permitido ser empresas líderes y ubicar la élite empresarial que la comanda. Es necesario aclarar que en la investigación se usa indistintamente corporación, conglomerado, corporativo y grupos empresariales, en tanto se han seleccionado 11 empresas o grupos por su poder económico y que se encuentran en el listado de las 100 empresas económicas más poderosas de México y que en conjunto denominamos la Fracción Monterrey por tener su origen y matrices en dicho lugar, y cuyos empresarios conforman una elite económica parcial referida a la así denominada Fracción. En la muestra se han seleccionado a Cementos Mexicanos (Cemex), Fomento Económico Mexicano, S.A (Femsa), Grupo Ladrillera Monterrey, S.A. (Grupo Lamosa), Vitro, Copamex, Imsa, Alfa, Cydsa, Maseca, Villacero y Xignux. Los avances de esta investigación se sitúan en conocer los orígenes históricos de la muestra 1890-1982.*

**PALABRAS CLAVE:** Corporativos, grupos económicos, periodos de la historia, adquisiciones, asociaciones.

## LARGE CORPORATIONS OF THE FRACTION MONTERREY: HISTORICAL ORIGINS (1890-1982)

### ABSTRACT

*Research: large corporations of the fraction Monterrey (1982-2010) aims to general knowledge of the composition and economic power, and the role of large corporations in Monterrey fraction of the growth and development of capitalism in Mexico through the analysis of the characteristics and competitive strategies that have enabled them to be business leaders and business elite locate the commands. To be sure, in research corporation used interchangeably, conglomerate, corporate and business groups, while 11 companies have been selected or groups for their economic power and that are in the list of the 100 most powerful economic and Mexico Fraction together called Monterrey and matrices have originated in that place, and whose entrepreneurs form a partial economic elite referred to the so-called Fraction. In the sample were selected to Cementos Mexicanos (Cemex), Fomento Economico Mexicano SA (FEMSA), Group Ladrillera Monterrey, SA (Lamosa Group), Vitro, Copamex, Imsa, Alfa, Cydsa, Maseca, and Xignux Villacero. The progress of this research lie in knowing the historical origins of the sample from 1890 to 1982.*

**JEL:** L60, M21

**KEYWORDS:** Corporate, economic groups, periods of history, acquisitions, partnerships

## INTRODUCCIÓN

La naturaleza específica, los problemas y contribuciones de las empresas productivas al sistema capitalista, sólo pueden ser comprendidos en toda profundidad si se les estudia a nivel evolutivo y sobre todo atendiendo las circunstancias históricas, a las estrategias económicas y políticas y a las características regionales y nacionales que constituyen su marco de acción, así como los vínculos de los grupos mexicanos con el capital extranjero. La explicación de todo fenómeno económico debe cumplir con una exigencia de historicidad, por ende la investigación sobre los grandes corporativos de la fracción Monterrey parte del enfoque del devenir histórico, en el que prevalece el análisis de los orígenes y evolución de estas empresas. En este trabajo predomina la crónica y las descripciones; así como establece planteamientos analíticos, reúne acontecimientos de la vida nacional y local, con la guía de un orden cronológico. Es necesario recordar que el desarrollo capitalista de México, ha sido un capitalismo tardío, es decir dependiente, y se asocia un oligopolio precoz que al desarrollarse a partir de una base de acumulación débil y poco diversificada pero en un contexto internacional capitalista constituido, agudiza las contradicciones propias de todo desarrollo capitalista, sin dejar de reproducir las asociadas al retraso histórico (Cordera y Ruíz, 1979/1980). Por ello, para establecer los orígenes de las grandes empresas o corporativos, se debe conocer la experiencia histórica, tratar de vincular la reflexión acerca de la relación entre nuevas maneras de organización económica y procesos generales de modernización, es decir, se trata de analizar la relación entre la creación de empresas modernas y el despegue de una economía de tipo capitalista.

## REVISIÓN LITERARIA

No hay un marco único al cual referirse para abordar el estudio de las grandes empresas industriales de México. No obstante existe un acelerado desarrollo de enfoques en varias ciencias. En la investigación se utiliza el enfoque operativo de Celso Garrido (2000) que se basa en cuatro grandes temas de la corriente heterodoxa para el análisis de la empresa: 1) La teoría de la empresa con base en los costos de transacción; 2) el capitalismo de los directores; 3) la teoría evolucionista; y 4) la nueva competencia. El enfoque operativo de Garrido señala que para dar respuesta a las necesidades analíticas que presentan los estudios e investigaciones que se emprendan al respecto sobre las grandes empresas en la región deben considerar los comportamientos económicos observables de las empresas, en lo que se refiere a sus características y situación actual en comparación con la situación que tenían durante la industrialización por sustitución de importaciones. Aspectos que se aplican en torno a la historia de los corporativos y su comportamiento empresarial. Dentro de esta aproximación dinámica e histórica los grandes corporativos son concebidos como organizaciones jerárquicas complejas que evolucionan a partir de factores y condiciones propias. Sin embargo, operan también en ambientes de selección diversos, estos ambientes se definen de una parte por el entorno regional, institucional y político nacional y por condiciones de las industrias y sectores donde concurren las empresas. Por ello se consideraron varios enfoques: 1) el enfoque regional que considera que el origen regional es un factor importante en las prácticas económicas y políticas de los empresarios mexicanos (Derossi, 1971); 2) el enfoque del origen histórico, que da mayor peso al origen histórico y a las condiciones de surgimiento para establecer la configuración definitiva, las prácticas económicas y políticas predominantes y los patrones de desarrollo de los grupos (Concheiro, Fragoso y Gutiérrez, 1979); 3) el enfoque de las estrategias corporativas y organizacionales, que atiende a la cambiante estructura organizativa de las grandes corporaciones modernas y su tendencia a adoptar estructuras de administración y morfologías corporativas más complejas (Cordero, Santín y Tirado, 1983).

## METODOLOGÍA

En términos históricos se planteó buscar una periodización de las grandes empresas. Se relacionó la evolución de los grupos empresariales con las cambiantes condiciones económicas internas e

internacionales que tuvieron lugar en México en lo general, y en Monterrey en particular durante el siglo XX. En el presente avance de investigación se aborda *brevemente* la participación empresarial en diferentes periodos de la historia del desarrollo económico de México: el porfiriato, la época revolucionaria, el periodo de reconstrucción nacional y los modelos de desarrollo implementados por el Estado hasta llegar a 1982 a fin de ir identificando el surgimiento y formación de las grandes empresas y posteriormente de los grandes corporativos de la Fracción Monterrey. Los métodos que se utilizaron fueron: el método histórico, el método analítico y el método comparativo.

## RESULTADOS

### El Porfiriato: Surgimiento de Grandes Empresas

El capital y el capitalismo como sistema productivo fueron los que tendieron a imponer su hegemonía a la política económica que caracterizó al porfiriato. Una política que intentó saturar amplios espacios del Estado-nación que se afirmaba. Porfirio Díaz propició, en estrecha alianza con el inversionista extranjero que traía recursos, tecnología, fuerza de trabajo especializada y una forma de organización empresarial que echó raíces en el país. La legislación agraria de la reforma liberal de 1856-1857, había empezado el proceso al transferir a manos privadas vastas propiedades eclesiásticas y corporativas, la enajenación de los terrenos baldíos por el Estado y por medios privados, la de las tierras comunales de los indios (Carr, 1973). La acumulación de capital de la burguesía porfiriana provino, fundamentalmente, del gran comercio legal e ilegal, del agio practicado por los grandes comerciantes, del acaparamiento de las propiedades urbanas y rurales, de las actividades agrícolas y ganaderas en gran escala y de la agroindustria. Gracias al aislamiento geográfico en relación al centro político de la nación, su relación con la economía fronteriza de Texas y la construcción del poder regional del gobernador de Nuevo León (y de Coahuila, estado que anexo en 1856) Santiago Vidaurri, favorecieron el surgimiento de un grupo de familias cuyas enormes fortunas se invirtieron en la esfera industrial (Collado, 2000).

Las empresas seleccionadas como objeto de estudio y que surgieron en esta etapa, son las que se enumeran: 1.- La Compañía Manufacturera de Ladrillos de Monterrey fundada en 1890 es el origen del Grupo Lamosa, la empresa fue establecida por un grupo de accionistas de ascendencia norteamericana. 2.- El 16 de diciembre de 1890, Isaac Garza y J.M. Schneider pidieron al Estado una concesión para la creación de una fábrica de vidrio y de “cerveza de exportación”. El 20 de diciembre obtuvieron exención de impuestos por 7 años. La Fábrica de Cerveza y Hielo Cuauhtémoc comenzó a operar a finales de 1891 y es el origen de Femsa. 3.- El 20 de octubre de 1899 se constituyó la Fábrica de Vidrios y Cristales de Monterrey, S.A., la planta fue instalada para manufacturar todo tipo de productos de vidrio y cristal entre los que debían sobresalir, al menos inicialmente, las botellas. Cervecería Cuauhtémoc, que utilizaba envases importados, iba a resultar su primer y principal comprador. 4.- Cementos Hidalgo S. A. fundada en 1906, es el origen de Cemex. Esta empresa fue creada en Gómez Palacio el 3 de febrero de 1906, pero comenzó a operar en diciembre de 1907 en San Nicolás Hidalgo, Nuevo León, a unos cuarenta kilómetros al norte de Monterrey. Aunque gestada desde la comarca lagunera, la planta fue construida en las cercanías de Monterrey por la gran riqueza de los yacimientos bien ubicados, por otro lado respecto a la red ferroviaria. El cemento era un producto de reciente aplicación a escala internacional. Aunque con antecedentes en la primera mitad del XIX, este material —en versión Pórtland- fue incorporado masivamente a las labores de edificación a fines de siglo. En ese momento la revolución del concreto llegó a México. Por lo tanto, la cementera encontraba un mercado en expansión ilimitado (Cerutti, 1992).

### Época Revolucionaria: Paralización Empresarial

De acuerdo con Basave (2001) la violencia, inestabilidad política y destrucción física que prevaleció durante la revolución frenó el proceso de inversión de los grupos empresariales y con escasas excepciones prácticamente se canceló toda nueva inversión entre 1910 y la primera mitad de los años veinte. La lucha

armada influyó poderosamente en el deterioro de la economía en su conjunto, la producción en los sectores minero y agropecuario decreció en más de 40% y el sector industrial lo hizo en 25% (Hernández, 1985). No obstante, la revolución encontró a la burguesía regiomontana con el poder y solidez socioeconómica suficiente como para capear los problemas que desató la propia revolución.

En 1912 Cementos Hidalgo suspendió la producción, la falta de energía eléctrica, vías de comunicación y recursos humanos previene que la compañía continúe su distribución de cemento. El 14 de octubre de 1914 Cementos Hidalgo fue confiscada. Ese mismo año las fuerzas de Pablo González tomaron la ciudad y la Fábrica de Cerveza y Hielo Cuauhtémoc fue incautada, aunque en noviembre de ese mismo año cesó la incautación ante las presiones diplomáticas inglesas, estadounidenses y alemanas que permitieron recuperar las instalaciones. Posteriormente fueron asaltadas entre marzo y mediados de 1915 en varias ocasiones por grupos revolucionarios de distinta filiación. A pesar de que hacia 1916 cesaron los asedios directos, la planta no reinició su producción. En 1919 con un ambiente político y económico difícil, reinicia la producción parcial en su planta. Es hasta comienzos de 1921 que reinicia su producción total, después de siete años, cuando se da el funcionamiento de los ferrocarriles, el aprovisionamiento de combustibles y el acceso al consumo interior (Cerutti, 2000) La empresa Vidriera Monterrey, S.A., enfrentó diversas dificultades para seguir operando, es hasta finales de 1915, que la vidriera comenzó a funcionar nuevamente en muy pequeña escala con una sola unidad productiva

### Empresas Surgidas en los Años Veinte

El periodo posrevolucionario de 1921 a 1930 fue de esfuerzos institucionales para convertir el país de minero, petrolero y agropecuario, en un país en proceso de industrialización. No obstante, que la mayoría de los sectores económicos permanecieron estancados, algunos sectores manufactureros tradicionales como alimentos y textiles, así como la producción de hierro, acero y cemento mostraron una rápida recuperación (Hansen, 1978). La recuperación de mediados de los años veinte sugiere que algunos empresarios de Monterrey lograron consolidarse financieramente e iniciar una primera etapa de expansión, así como fundar nuevas empresas como se observa en la siguiente Tabla:

Tabla 1: Empresas y plantas surgidas en los veinte

No.	Empresa	Fundación	PRODUCTOS	GRUPO ACTUAL
1	Cementos Portland Monterrey	1920	Cemento	CEMEX
2	Fábricas Monterrey S.A. de C.V.	1921	Corcholatas y envases metálicos.	FEMSA
3	Fábrica Abastecedora de Bolsas	1928	Papel y Cartón	COPAMEX
4	Planta de Malta.	1928	Materia prima	FEMSA
5	Planta de Gas Carbónico	1929	Materia prima	FEMSA

Fuente: Páginas Web de las empresas.

### Los Años Treinta: la Tendencia a la Integración Industrial

En términos económicos los empresarios regiomontanos recibieron apoyo del Estado; cabe señalar que a fines de 1927 el gobernador Aarón Sáenz expidió una nueva legislación para fomento de la industria, ampliando los estímulos y garantías ofrecidos en tiempos de Bernardo Reyes, la *Ley sobre Protección a la Industria*, favorable al capital y al específico desarrollo industrial. Este ordenamiento declara el fomento industrial como de “*utilidad pública*” Las franquicias se otorgaban no sólo a industrias nuevas sino también a aquellas que ampliaban su tamaño, capital o número de trabajadores. Se concedían hasta por veinte años, eximiendo el 75% de los impuestos estatales y municipales.

En 1934 una nueva legislación también los favoreció, la *Ley sobre Franquicias a la Constitución de Nuevas Sociedades Anónimas*. Esta Ley beneficiaba exclusivamente a las sociedades industriales o las que fomentaran la industria en Nuevo León y eximía del pago del 75% de los derechos de inscripción (en el Registro Público de la Propiedad) a los inmuebles en que se montara la fábrica o el organismo de

fomento industrial. El caso más conocido y popular fue Cervecería Cuauhtémoc, que desde 1921 comenzó a transformar sus departamentos internos en empresas autónomas, como se observa en la siguiente Tabla:

Tabla 2: Empresas Integradas en los Treinta

Grupo Cervecería Cuauhtémoc	Empresas	Año de Fundación	Grupo actual: FEMSA
	Compañía Comercial Distribuidora	1930	
	Troqueles y Esmaltes	1930

Gracias a esta legislación, se influenciaron: 1) la tendencia a la integración industrial; 2) la puesta en marcha de plantas productivas en diferentes lugares del país y en algunos casos en el exterior. A esta integración industrial se le conoció, como *empresas-madre*, posteriormente *holding* intensificaron su *ciclo de adaptación* al nuevo régimen político, superando la crisis del 1929 y comenzaron a usufructuar el aparato de protección, subsidios, concesiones, créditos y consumo dirigido que permitía un Estado dedicado a estimular la industrialización de México (Cerutti, 2000). En este contexto en 1931 se fusionaron Cementos Hidalgo y Cementos Portland Monterrey y formaron Cementos Mexicanos, S. A., (CEMEX). En 1936 nace Industrias Monterrey, S. A. (IMSA), con una planta de galvanizado, además de la producción de ropa y madera. (Clariond, 2003).

#### Los Años Cuarenta y Cincuenta: la Sustitución de Importaciones y el Desarrollo Estabilizador

Entre 1940 y 1980 se dio en México un nuevo modelo económico la *sustitución de importaciones* que se caracterizó por el proteccionismo económico y la participación estatal en un considerable número de ramas de la economía. No obstante, la industria nacional no logró instaurar un crecimiento hacia dentro, por consiguiente el modelo entró en crisis. Empezó a surgir una nueva forma de acumulación cuyo eje pasó de ser el comercio exterior a ser la producción de bienes de consumo, el modelo se conoció como el *desarrollo estabilizador* cuyo pilar fue el crecimiento de la producción estatal (Basañez, 1991). Las empresas seleccionadas continuaron su expansión y consolidación:

Tabla 3: Empresas de la Muestra Creadas y/o Adquiridas en los Cuarenta y Cincuenta

No.	Empresa	Año/Fundación	Productos	GRUPO ACTUAL
1	Almacenes y Silos	1940	Almacenaje	FEMSA

### Los Sesenta: Maduración Industrial y Financiera

En este periodo las grandes corporaciones transnacionales fincaron sus sucursales en nuestro país. Sin embargo, la concentración en México se dio mucho antes que se emprendiera la estrategia de las grandes corporaciones transnacionales. Según Cordero, Santín y Tirado (1983) en 1965 menos de 1% de los establecimientos industriales controlaba 64% de la producción, 66% del capital invertido y 34% del empleo dentro del sector industrial (extractivo y manufacturero). Cien de las empresas industriales más grandes concentraban más de 30% de la producción nacional industrial en el sector, y las 300 más grandes 72%. No obstante, que el nivel de concentración ya era muy alto cuando México se convirtió en un país capitalista, hacia finales del siglo XIX y en el transcurso de los periodos del desarrollo capitalista pre-revolucionario y posrevolucionario los procesos de concentración y centralización de capital se aceleraron y retroalimentaron entre sí, se dio una estrecha relación entre los procesos de concentración y la transnacionalización. La evolución de las empresas de la muestra, señala incremento de la producción, innovaciones y adquisiciones.

Tabla 4: Empresas y Plantas Fundadas en los Años Sesenta

No.	Empresa	Año de Fundación	Productos	GRUPO ACTUAL

### Los Setenta: la Formación de los Grupos Industriales

En México el proceso de industrialización y la política proteccionista del Estado orientada a impulsar la sustitución de importaciones conllevó a la formación de *grupos del sector privado nacional*. El Estado contribuyó a incentivar la reestructuración a través de estímulos fiscales que se formalizaron en la **Ley de Sociedades de Fomento** promulgada en junio de 1973. Las dos facultades (subsidios fiscales) que otorgaba el decreto eran: a) compensar utilidades de empresas del grupo con pérdidas de otras cumpliendo con el requisito de que las utilidades sobrantes fueran reinvertidas. Si estas utilidades eran reinvertidas en un plazo no mayor de 30 días, entonces quedaban exentas 100% del pago de los impuestos respectivos; b) comprar acciones de empresas, invertir capital en ellas y venderlas posteriormente por medio de la Bolsa de Valores, quedando exentas totalmente de los impuestos respectivos” (Basave, 1996).

Se alentó así, la creación de las mayores “empresas tenedoras”, es decir empresas controladoras (holding) que consolidaron resultados económicos financieros y fiscales. La empresa “holding” tiene diferentes funciones que podríamos resumir en términos generales en tres: 1) permitir el control de las acciones de otra u otras empresas; 2) controlar el aspecto operacional o de coordinación de las actividades empresariales; y 3) resolver los problemas de la acción empresarial (Cordero, 1983).

En el proceso de centralización de capital que desplegaron los grandes corporativos, los objetivos fueron distintos, en algunos casos para alcanzar una mejor integración de sus procesos productivos, en otros para aumentar su control oligopólico en sus respectivos mercados lo que llevó a la compra de empresas competidoras de gran tamaño, y en varios más con el objeto de diversificarse y participar en industrias intensivas en trabajo, buscando elevar la tasa de ganancia grupal de aquellas empresas que participan tradicionalmente en industrias intensivas de capital. A continuación se observa la integración de un corporativo:

Fuente: elaborado a partir de la información que presenta Salvador Cordero y Rafael Santín en Los Grupos Industriales: una nueva organización económica en México, El Colegio de México, 1977, e información de las páginas Web de las empresas.

Este grupo tiene un peso importante en campos clave de la economía mexicana: minería, siderurgia, papel, medios de comunicación y turismo. En 1974 ALFA se constituye a partir de tres empresas: 1) Hojalata y Lámina (Acero); 2) Empaques de Cartón titán (empaques); y 3) Draco (minería) además de una participación minoritaria en Televisa (Televisión).

## CONCLUSIONES

La estrategia corporativa de la fracción Monterrey vista en conjunto ha variado considerablemente en el transcurso del tiempo: a) En el orden productivo, algunas grandes industrias pesadas de Monterrey engendraron desde muy pronto cadenas industriales, que vincularon industrias complementarias, la Fundidora de Fierro y Acero de Monterrey (1910) y el Grupo Cuauhtémoc (1890). b) Los vínculos con las instituciones bancarias y financieras comenzaron desde una etapa muy temprana a fin de respaldar el financiamiento de los nuevos proyectos y adquisiciones: el Banco Mercantil de Monterrey, creado en 1899, reunió recursos de los intereses más importantes de la familia industrial en la región. Las limitaciones y dificultades para importar materia prima y bienes manufacturados durante la segunda Guerra Mundial aceleraron en gran medida la sustitución de importaciones e intensificaron este proceso de internalización para reducir costos de transacción. En dicho contexto se creó Hojalata y Lámina, S.A. (Hylsa) con el objetivo de suministrar la materia prima para producir corcholatas de las botellas usadas para la Cervecería Cuauhtémoc.

Hasta los años cincuenta, la expansión estuvo impulsada por la necesidad de reducir costos de transacción y subsanar las limitaciones de un mercado interno dependiente y desintegrado. La industrialización de Monterrey, se encausó desde el principio hacia una integración vertical. Se mantiene como el mecanismo más importante de expansión la integración vertical y horizontal mediante la expansión de las plantas y el establecimiento de nuevas instalaciones. Las adquisiciones y las asociaciones con capital extranjero, a fin de diversificar los riesgos y elevar el potencial de ganancias, se volvieron los mecanismos de expansión más importantes, a partir de la década de los sesenta. El crecimiento por medio de las asociaciones, las adquisiciones y fusiones, llevó a un control oligopólico del mercado interno.

La consolidación de la fracción Monterrey en el marco protegido del modelo de sustitución de importaciones se explica en el periodo comprendido entre 1940 e inicios de los años setenta, debido al proceso de expansión de los mercados mexicanos, a la política proteccionista gubernamental, a la coincidencia con el impresionante crecimiento de la economía estadounidense de posguerra y a la estabilidad política impuesta por el Estado, una larga etapa que ofreció promisorias ventajas de inversión para los mayores capitales privados, tanto nacionales como extranjeros. La fracción Monterrey en diferentes etapas históricas, se ha beneficiado de las políticas económicas, los incentivos y subsidios de todo tipo, en virtud de su poder económico y el acceso que tal poder les da a las agencias del Estado. La independencia económica de los grupos de Monterrey se diluyó gradualmente en los años setenta. Durante la estrategia de sustitución de importaciones la fracción Monterrey dependió del proteccionismo y de transferencias de todo tipo: reducciones y exenciones de impuestos, crédito público, subsidios a la electricidad, el transporte y otros bienes públicos.

Entre 1960 y 1980 los vínculos con el capital extranjero adquirieron una mayor importancia para la expansión y la modernización tecnológica de los grandes grupos mexicanos. Los vínculos con el capital extranjero ocasionaron reajustes en la fracción Monterrey y cambios en las estrategias de las corporaciones. La centralización del capital se detecta de 1974 a 1982, una centralización diferenciada, una industrial (1974-1979) que se trató de una estrategia de integración vertical y horizontal; y una bancaria (1974-1982) que produjo un proceso de reposicionamiento de capitales. Finalmente cabe señalar que es en entre 1970 y la crisis de 1982 que se constituyó en Monterrey, en términos formales, un importante número de conglomerados o corporativos.

# EL SISTEMA DE MADRID, PARA EL REGISTRO INTERNACIONAL DE MARCAS; UNA OPORTUNIDAD PARA LAS MIPYMES MEXICANAS

Fabrizio Guzmán Bedolla, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*En el presente artículo se pretende concluir, listar y analizar las ventajas que pueden adquirir las micro, pequeñas y medianas empresas en México para la comercialización internacional de sus productos y servicios, con la entrada en vigor del protocolo concerniente al Arreglo de Madrid, que refiere al registro internacional de Marcas; y al cual México se adhirió el pasado 19 de noviembre de 2012 y que conforme a las disposiciones del protocolo, éste entró en vigor en México el 19 de febrero de 2013. Con ello, las empresas, independientemente de su tamaño, con domicilio o establecimiento industrial o comercial efectivo y real en México, podrán proteger sus marcas hasta en 89 países a la vez, mediante la presentación de una única solicitud en un sólo idioma oficial pudiendo ser el español, francés o inglés. De esta forma, el Protocolo será una importante herramienta de protección internacional de las marcas, al simplificar los trámites y reducir costos frente a un procedimiento independiente en cada país. Es de suma importancia adelantarnos a decir que en esta lista de 89 países adheridos al Arreglo de Madrid, se encuentran los principales socios comerciales de México por lo que resulta de suma importancia para las micros, pequeñas y medianas empresas aprovechar las virtudes del protocolo y visualizarlo como una importante oportunidad para el establecimiento de sus productos y servicios en los mercados internacionales.*

**PALABRAS CLAVE:** Comercialización Internacional; Micro, pequeñas y medianas empresas mexicanas; Arreglo de Madrid.

## MADRID SYSTEM FOR THE INTERNATIONAL REGISTRATION OF TRADEMARKS, AN OPPORTUNITY FOR MEXICAN SMES

### ABSTRACT

*This article is intended to conclude, list and analyze the advantages they can gain the micro, small and medium enterprises in Mexico for the international marketing of its products and services, with the entry into force of the Protocol Relating to the Madrid Agreement, which refers the International Registration of Trademarks, and to which Mexico joined on 19 November 2012 and that under the provisions of the protocol, it entered into force in Mexico on February 19, 2013. With this, companies, regardless of size, established or effective industrial or commercial establishment in Mexico and real, may protect their brands up to 89 countries at a time, by filing one application in one official language may be Spanish, French or English. Thus, the Protocol will be an important tool for international trademark protection, to simplify procedures and reduce costs compared to a separate process in each country. It is very important to anticipate that this list of 89 countries adhering to the Madrid, are the main trading partners of Mexico so it is of utmost importance to micro, small and medium enterprises to leverage the virtues of the protocol and view as an important opportunity for the development of its products and services in international markets.*

**JEL:** M10, M31, N40

**KEYWORD:** International marketing; micro, small and medium Mexican enterprises; the Madrid Agreement

## INTRODUCCIÓN

Este trabajo está enfocado en las micro, pequeñas y medianas empresas mexicanas y el beneficio que pueden obtener con la entrada en vigor del protocolo concerniente al arreglo de Madrid que refiere al registro internacional de Marcas. Se enfoca en este tipo de empresas porque constituyen uno de los pilares más importantes en la economía del país y éstas afectan de manera directa o indirecta a su estructura social. Más del 95% de las empresas en Latinoamérica son micro y pequeñas, en todos los sectores de la economía, y su crecimiento y desarrollo sostenido puede asegurar un cambio radical en cualquier país, con un potencial para aumentar realmente su riqueza. (Anzola, 2006) En el caso de México según la Secretaría de Economía las pequeñas y medianas empresas en suma representan el 99 por ciento de los negocios que existen en el país, y además generan cerca del 80 por ciento de los empleos, lo cual es una cantidad bastante considerable aunque en PIB no tenga las mismas proporciones.

Pero la importancia en el estudio de las micro, pequeñas y medianas empresas no solo radica en la representatividad nacional o de América Latina; sino irónicamente, en la poca atención que se le ha puesto a este sector por suponer que la complejidad en la administración y su estudio es en las grandes empresas, los estudios de caso van enfocados a las grandes firmas transnacionales que dan cátedra de sus procesos administrativos, pero la realidad es otra, son también complejas y no menos importantes los casos de estudio de las pequeñas empresas; Curran & Blackburn (2001), incluso dicen que las empresas más pequeñas son más difíciles de estudiar que las grandes empresas.

Donde las actividades carecen de estructuras claras y registros de procedimientos, medir tiene más dificultad y las propuestas son más difíciles de probar. Mientras en las grandes empresas los investigadores pueden acudir a archivos e información en manuales y en computadoras que indiquen cómo se han tomado decisiones, lo cual puede apoyar o compararse con lo que aseguren los empleados y gerentes, y reconciliar diferencias, en las pequeñas empresas, los investigadores con mayor frecuencia deben trabajar con la información disponible, generar explicaciones con mayor sesgo, lo cual requiere de mayores exigencias para obtener mejores resultados.

El tamaño, ya sea medido en términos de empleados, de rendimiento económico, de tamaño de mercado o cualquier otro criterio, no es un criterio suficientemente robusto para permitir que las PE sean aisladas y analizadas como poseedoras de una especificidad económica y/o social (Burrows & Curran, 1989). Así pues dada la importancia de este sector empresarial, se deriva la necesidad de la búsqueda de oportunidades para el mismo y es en la propiedad industrial en donde se vislumbran muchas posibilidades, es en el registro de marcas donde se observa una oportunidad para el posicionamiento y reconocimiento de los productos y servicios de estas empresas para iniciar con la competencia por los mercados internacionales y más específicamente, es con la entrada en vigor del protocolo concerniente al arreglo de Madrid que refiere al registro internacional de Marcas que se gesta la pauta para empezar a introducir a este abandonado sector al comercio global.

## REVISIÓN DE LA LITERATURA

### La Pequeña Empresa Mexicana

Es difícil conceptualizar de manera exacta el término de pequeña empresa; ya que sus características y clasificación varían entre países, e inclusive en un mismo país, varía entre autores. Por ejemplo para Pierre Yves Barriere son “Aquellas en las cuales la propiedad del capital se identifica con la dirección efectiva y responde a unos criterios dimensionales ligados a unas características de conducta y poder económico”.

“Aquella que posee el dueño en plena libertad, manejada autónomamente y que no es dominante en la rama en que opera” Asociación de Empresas Pequeñas (SBA) Sin embargo para este artículo asumiremos los lineamientos de la Secretaría de Economía en México y cuando nos estemos refiriendo a la pequeña empresa, se estará considerando a la micro empresa, la pequeña y también a la mediana empresa que poseen características similares con sus muy particulares diferencias.

*Las microempresas:* Las microempresas son todos aquellos negocios que tienen menos de 10 trabajadores, generan anualmente ventas hasta por 4 millones de pesos y representan el 95 por ciento del total de las empresas y el 40 por ciento del empleo en el país; además, producen el 15 por ciento del Producto Interno Bruto. De acuerdo al último Censo Económico publicado por el Instituto Nacional de Estadística y Geografía (INEGI), del universo de unidades económicas en México: a) el 95.2% son microempresas, b) generan el 45.6% del empleo, y c) contribuyen con 15% del valor agregado de la economía. (SECRETARÍA DE ECONOMÍA, 2012)

*Las pequeñas Empresas:* Las pequeñas empresas son aquellos negocios dedicados al comercio, que tiene entre 11 y 30 trabajadores o generan ventas anuales superiores a los 4 millones y hasta 100 millones de pesos. Son entidades independientes, creadas para ser rentables, cuyo objetivo es dedicarse a la producción, transformación y/o prestación de servicios para satisfacer determinadas necesidades y deseos existentes en la sociedad. Representan más del 3 por ciento del total de las empresas y casi el 15 por ciento del empleo en el país, asimismo producen más del 14 por ciento del Producto Interno Bruto. (SECRETARÍA DE ECONOMÍA, 2012)

*Las medianas Empresas;* Las medianas empresas son los negocios dedicados al comercio que tiene desde 31 hasta 100 trabajadores, y generan anualmente ventas que van desde los 100 millones y pueden superar hasta 250 millones de pesos. Son unidades económicas con la oportunidad de desarrollar su competitividad en base a la mejora de su organización y procesos, así como de mejorar sus habilidades empresariales. Entre sus características también posee un nivel de complejidad en materia de coordinación y control e incorpora personas que puedan asumir funciones de coordinación, control y decisión; lo que implica redefinir el punto de equilibrio y aumentar simultáneamente el grado de compromiso de la empresa. Representan casi el 1 por ciento de las empresas del país y casi el 17 por ciento del empleo; además generan más del 22 por ciento del Producto Interno Bruto. (SECRETARÍA DE ECONOMÍA, 2012)

*La estratificación de las mipymes:* La Secretaria de Gobernación a través de la secretaria de Economía y por medio del Diario Oficial de la Federación publica un acuerdo en el que se estratifica a las MIPYMES mexicanas bajo las siguientes consideraciones:

Tabla 1: Estratificación de las MIPYMES elaboración propia con base en: (DOF, 2009) En esta tabla se muestra como se estratifican las MiPymes mexicanas para su uso práctico; dividiéndoles en tamaño y sector y delimitando el número de trabajadores y monto de las ventas anuales.

### La propiedad intelectual

**DEFINICIÓN:** Por derecho intelectual, se entiende el conjunto de normas que regulan las prerrogativas y beneficios que las leyes reconocen y establecen a favor de los autores y de sus causahabientes por la creación de obras artísticas, científicas, industriales y comerciales. (Rangel Medina, 1998) Abarca un rango muy extenso de creaciones, desde poesía, música, trabajos literarios y otras obras artísticas, fórmulas, ya sean químicas, cosméticas o de la industria alimenticia, procesos de manufactura y diseños (por señalar algunos) hasta marcas, nombres comerciales, secretos industriales y otras de naturaleza análoga. Los derechos sobre estas creaciones pueden ser materia de “apropiación”, es decir, una persona puede excluir a otras de la utilización de una obra o invención (producto o proceso productivo) y lograr

una situación que le reporta (o puede reportarle) una retribución pecuniaria. (Pérez Miranda, 1994) La exclusión de terceros sobre la utilización de una obra o invención se logra a través del registro o inscripción ante los organismos gubernamentales competentes y culmina con el reconocimiento jurídico de que los derechos sólo podrán ser explotados por sus creadores o por aquéllos expresamente autorizados por ellos, por un período determinado de tiempo. La propiedad intelectual se divide en dos grandes temas:

Tabla 1: Estratificación de las MiPymes

Tamaño	Sector	Estratificación		Rango de monto de ventas anuales (mdp)			
		Rango de número de trabajadores					
Micro Pequeña	Todas	Hasta 10		Hasta \$4			
	Comercio	Desde 30	11	hasta	Desde \$100	\$4.01	hasta
Mediana	Industria y Servicios	Desde 50	11	hasta	Desde \$100	\$4.01	hasta
	Comercio	Desde 100	31	hasta			
	Servicios	Desde 100	51	hasta	Desde \$100.01 hasta \$250		
	Industria	Desde 250	51	hasta	Desde \$100.01 hasta \$250		

- a) Derechos de autor; y
- b) Propiedad industrial.

Este último, a su vez, se divide en dos áreas:

1. La protección sobre signos distintivos, particularmente marcas que distinguen a los fabricantes, vendedores o prestadores de servicios, y las indicaciones geográficas que distinguen el origen de ciertos bienes con características atribuibles a dicho origen;
2. La tutela a la innovación, diseño y creación de tecnología. El fin último de la protección de la propiedad industrial es el desarrollo de nueva tecnología, a través de la investigación. (Narváez Tijerina, 2008)

### La Protección Sobre Signos Distintivos

**MARCAS:** El propósito fundamental de las marcas es el de informar a los consumidores potenciales el origen y la calidad de los productos o servicios que se ofrecen, ya que frecuentemente los consumidores hacen sus compras basándose en marcas que ya conocen directamente, o por medio de la publicidad, lo que puede representar una ventaja competitiva para los fabricantes o prestadores de servicios. De ahí la importancia que tiene la protección de una marca a través de su registro. Una marca puede ser más que un nombre o un logotipo. Es posible que incluya otros aspectos que aunque no sean funcionales distinguen un producto o servicio o tiendan a promoverlo en el mercado. Un ejemplo de lo anterior lo constituyen las formas, letras, números o colores.

La Ley de Propiedad Industrial define el concepto de marca como “todo signo visible que distinga productos o servicios de otros de su misma especie o clase en el mercado” (Ley de Propiedad Industrial, 2012) Consideramos que la anterior definición es muy general, por lo que a efecto de tener un concepto más amplio, incluiremos la definición del primer párrafo del artículo 15 del Acuerdo TRIPS: Podrá constituir una marca de fábrica o de comercio cualquier signo o combinación de signos que sean capaces de distinguir los bienes o servicios de una empresa de los de otras empresas. Tales signos podrán registrarse como marcas de fábrica o de comercio, en particular las palabras, incluidos los nombres de persona, las letras, los números, los elementos figurativos y las combinaciones de colores, así como

cualquier combinación de estos signos. Cuando los signos no sean intrínsecamente capaces de distinguir los bienes o servicios pertinentes, los Miembros podrán supeditar la posibilidad de registro de los mismos al carácter distintivo que hayan adquirido mediante su uso. Los Miembros podrán exigir como condición para el registro que los signos sean perceptibles visualmente.

Uno de los requisitos más importantes para el registro de una marca es su carácter distintivo. Una vez obtenido el registro se obtiene el derecho de ostentar las siglas “MR”, el símbolo ® o bien la leyenda “Marca Registrada” para hacer público el derecho de exclusividad. Esta exclusividad tiene una vigencia de diez años, pudiéndose renovar por períodos iguales; es efectiva en todo el territorio nacional, aún cuando en algunos lugares la marca sea desconocida para los consumidores; se limita a los productos o servicios amparados y subsiste en tanto el titular de la marca la use, ya que la marca responde a la práctica comercial, es decir, al uso que de ella se haga, lo que implica que el abandono constituye una causa de caducidad.

Los tipos de marca que reconoce la ley se enuncian en el artículo 89 de la misma. En cada país existe legislación referente a la protección de la propiedad industrial; y forma de llevar a cabo el trámite para el registro de la marca puede ser diferente en los distintos países; por lo que surge la necesidad de una homologación en los trámites así como el reconocimiento global de la protección industrial; en ese sentido anteriormente y actualmente, se puede registrar una marca en los distintos países e iniciar el trámite necesario en los países donde se desea proteger una marca. La marca internacional según la Oficina Española de Patentes y Marcas es la que se encuadra en un sistema de registro de marcas para países que están integrados en el Sistema de Madrid, y comprende dos tratados internacionales, el Arreglo de Madrid y el Protocolo de Madrid. No es una marca que sea registrable en todo el mundo, sino únicamente en los países integrados en el Sistema de Madrid que en la actualidad son 89, ya sea formando parte del Arreglo, del Protocolo o de los dos.

#### El Protocolo Concerniente al Arreglo de Madrid, Que Refiere al Registro Internacional de Marcas y la Adhesión de México

El Sistema de Madrid para el Registro Internacional de Marcas (el Sistema de Madrid), establecido en 1891, se rige en virtud del Arreglo de Madrid (1891) y del Protocolo de Madrid (1989), y está administrado por la Oficina Internacional de la OMPI, con sede en Ginebra, Suiza. El Sistema de Madrid ofrece al propietario de una marca la posibilidad de protegerla en varios países (Miembros de la Unión de Madrid) mediante la presentación de una solicitud única directamente en su propia oficina de marcas nacional o regional. El registro internacional de una marca tiene los mismos efectos que una solicitud de registro o el registro de una marca efectuado en cada uno de los países designados por el solicitante. Si la oficina de marcas de un país designado no deniega la protección en un plazo determinado, la marca goza de la misma protección que si hubiera sido registrada por esa oficina. El Sistema de Madrid también simplifica en gran medida la gestión posterior de la marca, ya que con un solo trámite administrativo se pueden inscribir cambios ulteriores o renovar el registro. También facilita la designación posterior de otros países.

México se unió el pasado lunes 19 de noviembre de 2012 al denominado Protocolo al Arreglo de Madrid para el Registro Internacional de Marcas (Sistema de Madrid), que ofrece a los propietarios de marcas un mecanismo asequible, simplificado y de fácil utilización para la protección y gestión de su cartera de marcas en el plano internacional. Se depositó el instrumento de adhesión de México a dicho protocolo, en Ginebra, Suiza. El Director General de la Organización Mundial de la Propiedad Intelectual (OMPI) El Dr. Gurry felicitó a México por esta decisión y señaló que México es el tercer país en la región de América Latina que se une al Sistema de Madrid para el registro de marcas. “Su adhesión al Protocolo de Madrid ayudará a las empresas en México que buscan expandir sus mercados en el extranjero. También ayudará a la OMPI en la consecución de su objetivo de transformar el Sistema de Madrid en un sistema con un alcance verdaderamente global”.

Por su parte, el Secretario de Economía, Bruno Ferrari, dijo que los titulares de las marcas en México se beneficiarán enormemente del Protocolo de Madrid. Señaló que “México tiene el mayor valor de las exportaciones de América Latina, el 80% de las cuales son productos manufacturados y es el tercer exportador mundial de alta tecnología con respecto a su PIB, y 11° exportador mundial. México es una economía del G-20 con un volumen comercial de más de 700 mil millones de dólares en 2011. Esto aumentó 20% entre 2008 y 2011, a pesar de la crisis económica global”. En este marco, el Protocolo de Madrid es un componente lógico que reforzará las políticas comerciales en expansión implementadas por el gobierno mexicano. México se convierte en el cuarto país que habla hispana en el Sistema de Madrid; con ello, el número total de miembros del sistema internacional de marcas asciende a 89. A su vez, el idioma Español se introdujo como un idioma de trabajo del Sistema de Madrid en 2004, facilitando el camino para la expansión y consolidación del Sistema de Madrid en la región de América Latina.

El sistema de Madrid es atractivo tanto para las grandes empresas, como para las pequeñas y medianas, las cuales son los principales usuarios del sistema. En el 2011 se alcanzó la mayor cifra hasta la fecha de solicitudes internacionales de registro de marcas en virtud del sistema de Madrid, con 42,270 solicitudes, un 6.5% más que en 2010. Más aún, de enero a octubre de 2012 el número de solicitudes internacionales incrementó en 4.4%, comparado con el mismo periodo del año pasado. Con el Sistema de Madrid, administrado por la OMPI, el propietario de una marca puede protegerla en hasta 88 países, además de la Unión Europea, con las marcas comunitarias, mediante la presentación de una única solicitud en idioma español, francés o inglés, abonando un conjunto de tasas en una única divisa (francos suizos).

Las marcas son un componente clave de la estrategia comercial de las empresas, en la medida en que permiten identificar, promover y comercializar bajo licencia productos o servicios en el mercado y diferenciarlos de los de la competencia, así como afianzar la clientela. Las marcas simbolizan la promesa de calidad de un producto y en el actual mercado mundial, caracterizado cada vez más por las transacciones electrónicas, suelen ser el único medio por el que los clientes reconocen los productos y servicios de una empresa. La protección de la marca es un medio de impedir que competidores desleales se aprovechen de la buena reputación de una empresa mediante la utilización de signos distintivos parecidos para comercializar productos o servicios similares o de calidad inferior. El sistema internacional de marcas se rige por dos tratados, a saber, el Arreglo de Madrid relativo al Registro Internacional de Marcas (1891) y el Protocolo concerniente al Arreglo de Madrid relativo al Registro Internacional de Marcas (1989). Ventajas de registrar una marca

*El registro de una marca:* de productos y/o de servicios conlleva una infinidad de ventajas, sin embargo a continuación mencionaré únicamente las que en lo personal considero las principales:

*Derecho al uso exclusivo:* Si bien no existe en la Ley una obligación para registrar las marcas, si se establece que el derecho a su uso en forma exclusivo únicamente lo brinda su registro.

*Ejercicio de acciones legales:* En caso de no tener mi marca registrada, me veré imposibilitado a ejercer cualquier acción legal en contra de personas que la estén imitando o usando.

*Seguridad de no invadir derechos de terceros:* Cuando utilizo una marca que no está registrada, no puedo tener conocimiento si estoy invadiendo derechos de terceras personas, pues desconozco si existen marcas idénticas o similares en grado de confusión a la marca que yo uso.

*Elevar valor en la empresa:* Las marcas son bienes muebles, intangibles, pero que como tales pueden ser sujetas a un avalúo por parte de un perito.

*Posibilidad de licenciar o franquiciar la marca:* En caso de que el titular no tenga o no desee gastar recursos en la expansión de su marca, puede perfectamente ya sea conceder licencias o franquicias para que, a cambio de regalías, sea un tercero quien use la marca, ya sea en todo el país o en territorios previamente designados.

*El demostrar ser una empresa formal:* Cuando vemos en el mercado un producto cuya marca no está registrada nos da un poco de desconfianza, pues demuestra la falta de preocupación de sus titulares por tener la exclusividad en el uso de su marca, lo cual pudiera llegar a causar confusión en el público consumidor. Si un productor se preocupa por registrar su marca quiere decir que se preocupa también por el hecho de que sus consumidores no confundan sus productos con otros similares (Ramírez Esteves, 2010) Además que certifica la autenticidad y calidad del producto. Fomenta al reconocimiento comercial

en otros países Fomenta y promueve la calidad como medio para desarrollar una actividad económica, así como para la comercialización de los productos en el extranjero.

# FACTORES QUE AFECTAN EL CRECIMIENTO DE LAS MIPYMES EN MÉXICO

María Guadalupe Durazo Bringas, Universidad Estatal de Sonora

Bertha Guadalupe Ojeda García, Universidad Estatal de Sonora

## RESUMEN

*En el presente documento se mostrará que existen algunos elementos que afectan el crecimiento de las micro, pequeñas y medianas empresas (mipymes) en México; describiendo el proceso de creación de las mipymes, desde la tramitología que deben cumplir para su conformación, hasta los apoyos y financiamientos que pueden recibir una vez que estén funcionando. Posteriormente, se explicarán las principales dificultades que enfrentan y cuáles son los factores que las provocan; buscando definir qué acciones se deberían tomar para impulsar su crecimiento y lograr que puedan pasar al siguiente nivel: de micro empresas a pequeñas, de pequeñas a medianas y de medianas a grandes.*

**PALABRAS CLAVE:** Mipymes, trámites, financiamiento

## FACTORS WHICH AFFECTING THE GROWTH OF MICRO AND SMEs IN MEXICO

### ABSTRACT

*The present document will enlist several elements that are considered to be the main aspects that affect the development of the micro, small and medium-sized enterprises (Micro and SMEs) in Mexico. This will be done, by describing the creation process of the Micro and SMEs, from the paper work and formats for its conformation, until the financial support provided by the government once they start working. Further on, it will be stated the main difficulties that they encounter and which factors cause it. Doing this in order to be able to define which actions should be taken to impulse the development and growth of these ones, and achieve that they move into the next level: micro to small, small to medium-sized, and medium-sized to large.*

**JEL:** D00, M00

**KEYWORDS:** Mipymes, procedures, funding

## INTRODUCCIÓN

Las micro, pequeñas y medianas empresas en la República mexicana, presentan problemas para su desarrollo y su posicionamiento, debido principalmente a que carecen de sistemas de planeación, organización, administración y controles eficientes, a pesar de que pueden aspirar a apoyos gubernamentales y privados. Este trabajo tiene como finalidad examinar los factores que afectan el crecimiento de las mipymes en México, a través de un análisis cuantitativo de las estadísticas obtenidas de la encuesta Nacional de Micronegocios ENAMIN 2010, que servirá como base para profundizar en el tema, por medio de una investigación de campo, que se realizará posteriormente.

## REVISIÓN LITERARIA

Según la Secretaría de Hacienda y Crédito Público (1984), una empresa es: *“la reunión de los diversos factores de la producción como son: naturaleza, capital, trabajo y organización, con el objeto de alcanzar determinados fines para obtener ganancias”*. Por otro lado, para Gitman y McDaniel (2009), una pequeña empresa es aquella que *“es administrada de manera independiente, es propiedad de una persona o de un grupo pequeño de inversionistas, tiene sede local y no es una compañía que domine en su industria”*.

En México, las mipymes han ayudado a descentralizar la actividad económica, de tal modo que algunos pueblos logren una urbanización, que de otra manera no sería posible. Las mipymes son eminentemente familiares, de ellas se sostienen muchas de las familias mexicanas; en la actualidad, el 99.8% de las empresas son mipymes, de ellas el 90% son microempresas que dan empleo al 72% de la población económicamente activa y generan el 52% del PIB del país (Cervantes, 2010; Secretaría de Economía, 2013). En el país, la Secretaría de Economía clasifica a las micro, pequeñas y medianas empresas por el número de empleados que tienen y las estratifica según su actividad productiva: *Micro Empresa* es aquella ubicada en el Sector Industrial, de Comercio y de Servicios, que tiene de 1 a 10 empleados; un rango de ventas anuales de hasta 4 millones de pesos (mdp) y un tope máximo combinado de 4.6 mdp. *Pequeña Empresa* es aquella que tiene de 11 a 30 empleados, si es del sector comercio y de 11 hasta 50 empleados, cuando se trata del sector industrial y de servicios; con un rango de ventas anuales de 4.01 a 100 mdp. *Mediana Empresa* es aquella que cuenta con 31 a 100 empleados, si se encuentra en el sector Comercio, de 51 a 100 empleados que se dedican a otorgar servicios y de 51 a 250 que se dedican a la Industria, que tienen un rango de ventas anuales desde 100.01 hasta 250 mdp (Diario Oficial de la Federación, 2009). Cabe destacar que, en el país existen una gran cantidad de trámites para abrir una mipyme, pero estos varían según la entidad federativa, así como el costo y el tiempo que tardan en realizar toda la tramitología.

### Dificultades Que Enfrentan las Mipymes en México

Las micro, pequeñas y medianas empresas son una respuesta a las necesidades de empleo en el país, pero debido a su apertura, en muchos de los casos, sin planeación, sin formación profesional y/o empresarial, sin conocimientos técnicos, sin el capital necesario y suficiente, y por su creación “por intuición” (la mayoría de las veces), ha ocasionado que el 65% de las nuevas empresas cierren los primeros dos años de su creación, el 50% quiebren el primer año y el 30% en el segundo; al décimo año de su fundación solo sobrevive el 10%, es decir, en México, de cada 100 empresas nuevas, sólo el 10% tienen posibilidades de consolidarse en el mercado formal al décimo año de operación. De las 130 mil empresas que fallan en los dos primeros años, el 66% fue ocasionado por falta de capacitación adecuada y oportuna. (Rivas, 2010; Morales, s.f.).

### Apoyo Y Financiamiento Para las Mipymes

Para que las mipymes subsistan, crezcan y sean sólidas, requieren de mucho apoyo en todos los aspectos, ya sea de capacitación, orientación, fuentes de financiamiento, entre otros. En México, la Secretaría de Economía, a través de la Subsecretaría para la Pequeña y Mediana Empresa es la encargada de otorgarles apoyos por segmentos: a nuevos emprendedores, microempresas, desarrollo de pequeñas y medianas empresas, impulso a empresas gacelas (aquellas que presentan una tasa de crecimiento superior a las del promedio del sector al que pertenecen) y desarrollo de las cadenas productivas de las empresas tractoras (grandes empresas impulsoras del crecimiento y desarrollo económico a nivel macro). Por otra parte, durante los últimos 12 años, se crearon 253 Centros México Emprende, éstos otorgan servicios y apoyos públicos y/o privados para emprendedores y empresas, de manera integral, de acuerdo a su tamaño y potencial en su solo lugar. (Naranjo, 2012).

Es importante señalar que el 12 de enero del 2013, se creó en México, el Instituto Nacional del Emprendedor (INADEM), mediante un decreto del Ejecutivo, que tiene la encomienda de apoyar a los emprendedores mexicanos, para crear nuevas empresas y dar herramientas a las pymes con la finalidad de que sean más productivas. En México, casi todas las instituciones que ofrecen financiamiento requieren de una garantía hipotecaria, los pequeños y medianos empresarios deben ser cuidadosos con esto, para no hipotecar su patrimonio con tal de conseguir un crédito y quedarse más endeudados, sin posibilidad de crecimiento; ya que los empresarios que necesitan un crédito para una empresa existente, deben asegurarse de que el crédito que van a obtener va a ser para invertirlo en aspectos que impacten directamente en el aumento de las ventas de su negocio. El monto del crédito no debe sobrepasar el 10% del capital de la empresa, ya que un crédito mayor puede poner en riesgo la liquidez de la misma. Deben tomar en cuenta al momento de requerir un crédito, cuál es el que necesitan de acuerdo a la etapa en la que se encuentra el negocio, tienen que conocer cada tipo de crédito a los que pueden aspirar, para ello, se enumeran siete formas en las que pueden obtener financiamiento y cuál es el adecuado según el nivel en que se encuentre el proyecto.

## METODOLOGÍA

El proceso de apertura y consolidación de una mipyme conlleva varios pasos: una vez que se tiene la idea del negocio, se debe decidir si éste, se registrará como persona física o persona moral, después se debe cumplir con una serie de trámites con los que la mipyme quedará legalmente constituida. Para que la empresa se fortalezca, el dueño puede buscar apoyos a través de bancos, asociaciones y/o dependencias de gobierno encaminadas para ello. En esta investigación se identificó y organizó información, para su posterior análisis y presentación, es decir, fue un manejo de información, que después se examinó a profundidad para describir algunas variables y presentar los resultados de manera pertinente.

## RESULTADOS

En esta sección se presentan algunas características de las microempresas en México, las cuales fueron tomadas y analizadas a partir de datos de la Encuesta Nacional de Micronegocios ENAMIN 2010; cabe mencionar que, como indica Cervantes (2010), el 99.8% de las empresas son mipymes, de ellas el 90% son microempresas que generan empleo para el 70% de la población económicamente activa. Se clasifican en cinco sectores: Manufactura, a la cual pertenecen un 15.11% de las empresas; el Comercio, cuyo porcentaje es el más alto, con un 41.73% de ellas; la Construcción, a la que le corresponde un 5.90% de las mismas; también hay un alto porcentaje de microempresas que pertenecen al sector Servicio (33.41%), y el sector más pequeño es el del Transporte, con un 3.85% de los micronegocios. es decir, la mayor parte de las microempresas son Comercios o del sector Servicios y en menor porcentaje se encuentra la Construcción y el Transporte (INEGI, 2010).

Referente al financiamiento inicial y su principal fuente se encontró que de las microempresas que sí requirieron de financiamiento, el 53.23%, invirtieron ahorros propios; el 14.38% de ellas obtuvieron préstamo de amigos o parientes; un 11.11% no especificó la fuente de su financiamiento; el 4.15% de los micronegocios utilizó el dinero de la liquidación del empleo anterior; además adquirieron crédito de sus proveedores sólo el 1.49% y únicamente un 0.49% consiguió su capital de algún programa de gobierno (INEGI, 2010). Los principales problemas a los que se enfrentan los micronegocios, que son: la disminución de las ventas, (reportada por el 27.63% de ellos), la competencia excesiva, que lo mencionó el 16.78%, el aumento de precios en insumos y/o mercancías, según el 10.20%; y en menor proporción, la falta de crédito o financiamiento, señalado por el 3.21%; que el negocio es menos rentable de los esperado, , indicado por el 1.72%; y problemas con los clientes, especificado por el 3.33%; por último, el 13.29%, hizo referencia a que tenía problemas, pero sin especificar de qué tipo. Además, el 23.86 %, indicó que no tenía problemas (INEGI, 2010).

Con respecto al nivel académico de los microempresarios; el 20.22% no completó la primaria; una parte de ellos (el 24.03%), cuenta con primaria completa; alrededor de la tercera parte tiene secundaria completa, resultando que 3/4 partes de ellos, cuentan con educación básica o menos, es decir, son personas que han estudiado primaria y/o secundaria, sin embargo, muchos de ellos no la han completado; el 10.94% cuenta con estudios de educación media superior y sólo el 14.10% cursaron estudios de educación superior.

## CONCLUSIONES

A partir de los resultados se puede concluir que la mayoría de los microempresarios (el 84.78%), además de ser los propietarios, son los únicos trabajadores del negocio, es decir, sólo tienen la capacidad de autoemplearse, sin generar más empleos; se puede observar que la mayor parte de las microempresas se dedican al sector Comercio o de Servicios y en menor proporción se encuentra la Construcción y el Transporte. Por otro lado, más de la mitad inició el negocio utilizando sus ahorros personales; casi el 40% no tuvo necesidad de buscar financiamiento después de iniciado el negocio; además de que lo menos representativo es utilizar crédito de proveedores o de algún programa de gobierno como fuente de financiamiento. De los principales problemas que se presentan en las microempresas, se encuentran: la disminución de las ventas, la competencia excesiva y el aumento en los precios de los insumos.

El motivo principal para empezar con el negocio fue para completar el gasto familiar. Además casi las ¾ partes de los microempresarios cuentan, únicamente con educación básica y sólo el 14.10% cuentan con educación superior. En México, el 65% de la mipymes, son de carácter familiar, administradas en más del 85% por personas que no alcanzaron un título de licenciatura, 74.93% de sus empleados tiene un nivel de escolaridad entre primaria y secundaria; mientras que únicamente el 10.94% ha logrado un bachillerato o equivalente técnico. Alrededor del 85% de ellas no instrumenta controles de calidad; además, el 50% no aplica técnicas de mejora en calidad o productividad; sólo el 24% dispone de una patente o licencia (en el sector de manufactura es de 39%). Únicamente el 35% de ellas aplica algún tipo de mecanismo para conocer las preferencias o satisfacción del cliente. Todos estos problemas se deben a la falta de preparación académica y/o capacitación adecuada de los microempresarios, factores que han influido considerablemente en el crecimiento de las mipymes del país.

Para que las mipymes puedan solventar los problemas antes mencionados, se fortalezcan, crezcan, generen empleos y mantengan los ya existentes, se recomienda que, las empresas del mismo ramo y/o complementarias, se agrupen en empresas integradoras (figura ya existente en el país, pero poco conocida por los micro, pequeños y medianos empresarios), de tal manera que puedan gestionar financiamientos; comprar materias primas e insumos de forma conjunta; vender de manera consolidada la producción de sus agremiadas; prestar servicios calificados a las mismas; realizar gestiones y promociones, para modernizar y ampliar la participación de sus integradas; todo esto con el fin de elevar la competitividad de sus asociados, para intensificar el crecimiento económico de México.

# MEDICIÓN DE CAPITAL INTELECTUAL EN INSTITUCIONES DE EDUCACIÓN SUPERIOR

Patricia Mercado Salgado, Universidad Autónoma del Estado de México  
María del Rosario Demuner Flores, Universidad Autónoma del Estado de México  
Rosa María Nava Rogel, Universidad Autónoma del Estado de México

## RESUMEN

*La ausencia de mecanismos de diagnóstico de capital intelectual en Instituciones de Educación Superior (IES) limita su gestión y el diseño de estrategias que permitan su potencialización; motivo que da origen a la presente investigación cuyo objetivo es aportar un cuestionario que permita realizar un diagnóstico del capital humano, capital estructural y capital relacional en el contexto de IES mexicanas, para posteriormente emitir una caracterización del mismo y aportar estrategias de gestión. El análisis factorial exploratorio de los resultados obtenidos en una muestra no probabilística a quien se aplicó el cuestionario, revela una robusta calidad métrica.*

**PALABRAS CLAVE:** Capital intelectual, Capital estructural, Capital relacional, Instituciones de Educación Superior.

## ABSTRACT

*The absence of mechanisms for diagnosing intellectual capital in Higher Education Institutions limits its management and design strategies to its potentiation; reason giving rise to the present study aimed to provide a questionnaire to diagnose the human capital, structural capital and relational capital in the context of Mexican Universities, later issuing a characterization and provide management strategies. Exploratory factor analysis of the results of a nonrandom sample who applied the questionnaire, reveals a robust quality metric.*

**JEL:** M1 - Business Administration; M12 - Personnel Management; M14 - Corporate Culture; Social Responsibility.

**KEYWORDS:** Intellectual Capital, Structural Capital, Relational Capital, Higher Education Institutions.

## INTRODUCCIÓN

El capital intelectual (CI) es considerado fuente duradera de ventaja competitiva. Cuando éste se potencializa en una Institución de Educación Superior impulsa la competitividad (Schleicher, 2006; Salomón, 2007) y el desarrollo regional (Reyes, 2006). Estas instituciones deben desarrollar mecanismos eficaces que permitan identificar, valorar y gestionar su capital intelectual ya que son responsables de la formación de profesionistas de alto nivel y de la generación de investigación que conlleven a incrementar los niveles de competitividad y bienestar para la población de un país (Barro, 2001; Bueno et al., 2002; Schleicher, 2006; Salomón, 2007). Sin embargo, la literatura científica no aporta evidencia suficiente. Los estudios de CI existentes se enfocan al sector empresarial -a la medición de sus intangibles- y respecto a estudios en IES, éstos se dan en otros contextos –principalmente, el europeo-.

## REVISIÓN LITERARIA

La inquietud por medir el capital intelectual se inició en las empresas, con la finalidad de aportar ideas precisas del valor de este intangible y su efecto en el impacto económico (Lev, 2004) que además le

permitiera a la empresa analizar su desempeño para diseñar estrategias de mejora. La metodología usada consistió en primer lugar en ubicar las dimensiones o composición del capital intelectual, en segundo lugar la medición se llevó a cabo a partir de información interna considerando una serie de indicadores generados con información de la empresa; así surgieron modelos propuestos por los clásicos del capital intelectual: Brooking, 1996; Edvinsson y Malone, 1997; Kaplan y Norton, 1997; Roos et al., 1997; Sveiby, 1997; Stewart, 1998; Bueno, 2003.

En cuanto a la recopilación de la información, se detecta: a partir de recabarla mediante cuestionarios con la intención de encontrar un grado de interrelación de sus componentes o dimensiones, con lo cual se confirma la pertenencia a un modelo como el de: Bontis, 1998; Youndt y Snell, 2004; Jardón y Martos, 2009; y a partir de información interna y externa para identificar su valor en libros, valor de mercado, valor de ingresos con técnicas como son: Q de Tobin, Índice M/B variante de la Q de Tobin, FiMIAM (Rodov y Leliaert, 2002), modelo econométrico (Nevado y López, 2004), Analogical stock market valuation (Cabeller y Moya 1997); Goodwill (Rodríguez et al., 2007), método del factor tecnológico (Khoury, 1998), Intangibles Scoreboard (Baruch, 2001).

En la medición del CI en las IES, se identifican los estudios de: Bueno, *et al.*, 2002; del Valle, 2002; Leitner, 2004; Fazlagic, 2005; Rivero, Balagué y Vega, 2005; Ramírez, Lorduy y Rojas, 2007; Laurenti, 2008; Sánchez y Castrillo, 2009; Bezhani, 2010; Giustina & Giusepina, 2010; realizan importantes aportaciones en cuanto al modelo, dimensiones e indicadores de medición, sólo que su enfoque se dirige a contextos diferentes al mexicano. En México se detectan algunos estudios en IES como los de: Funes, 2007; Bustos, 2008; Topete y Bustos, 2008 que refieren reportes y análisis muy interesantes, pero cuyo fin no es hacer propuestas metodológicas específicas que conlleven a la evaluación del capital intelectual. Nava (2010) realizó un estudio comparativo de los indicadores propuestos por los modelos clásicos de CI a partir de una serie de indicadores (fuentes secundarias), en parte, debido a la falta de información.

Existe literatura abundante sobre la clasificación del CI; así Brooking (1997) lo clasifica en activos de propiedad intelectual y centrados en el individuo, activos de mercado y activos de infraestructura; Sveiby (1997) en competencias de las personas, estructura externa y estructura interna; Edvinsson y Malone (1998) en capital humano y capital estructural; Kaplan y Norton (2004) en perspectiva de aprendizaje y crecimiento, perspectiva del cliente y perspectiva financiera y de procesos internos; Bueno et al., (2002) en capital humano, capital negocio y social, y capital organizativo y tecnológico. Por su parte el modelo de Euroforum llamado “Intelect” originalmente se diseñó para entornos empresariales; sin embargo, sus definiciones sirvieron de base para otros estudios de capital intelectual en IES como el de UNELLEZ (del Valle, 2002) y el Mapa del Conocimiento (Bueno, *et al.*, 2002). Partiendo de este modelo se considera como integrantes del CI el capital humano, capital relacional y el capital estructural.

El capital humano (CH) es el valor del conocimiento y competencias de los empleados de una organización. Para Edvinsson y Malone (1998) pioneros en la investigación del CI, el CH está representado por las destrezas e inventiva como parte de las capacidades de los miembros de la organización. Bueno *et al.* (2002) y Ramírez *et al.* (2007) consideran que el CH es el conjunto de conocimientos explícitos y tácitos adquiridos mediante procesos de educación, socialización, reciclaje y actualización propios de su actividad. Para el medioambiente de las IES, el CH es el conjunto de conocimientos adquiridos por la comunidad universitaria a partir de sus habilidades y competencias, apoyado en la capacitación y actualización académica, así como el trabajo en equipo; puede generarse y transmitirse parte del conocimiento adquirido a otros miembros de la comunidad si existe satisfacción, pertenencia, un adecuado liderazgo y estabilidad emocional (Euroforum, 1998).

El capital relacional (CR) se enfoca al valor que todas las relaciones externas tienen para una empresa; incorpora las relaciones con competidores, accionistas, *stakeholders* y otros agentes del entorno (Euroforum, 1998:39; Ordoñez de Pablos, 2003). El CR se constituye del conjunto de relaciones con

instituciones económicas y políticas desarrolladas y conservadas por la universidad (Ramírez *et al.*, 2007) otras instituciones (Sánchez y Elena, 2006; Ramírez, *et al.*, 2007), redes de trabajo con alumnos y empresas ya que a través de los vínculos formados con ambos, es posible exportar e importar conocimiento y la difusión del CI dentro y fuera de la propia institución (del Valle, 2002). Para las IES, el CR Incluye las relaciones inter e intra institucionales que permiten la difusión y retroalimentación del conocimiento con profesores-investigadores, alumnos, ex alumnos, capacitadores, evaluadores y organismos públicos y privados que realizan convenios y proyectos con la universidad (Euroforum, 1998).

Capital estructural (CE) se relaciona con el conocimiento que ha sido capturado e institucionalizado dentro de la estructura, el proceso y la cultura de una organización. Hace referencia a la tecnología de información, de producto, de proceso, de organización, de propiedad intelectual (Sukhdev, Singh y Kansal, 2011). Es el conocimiento explícito relacionado con procesos internos de disseminación, comunicación y administración del conocimiento técnico y científico (Ramírez *et al.* (2007) que la institución consigue explicitar, sistematizar e internalizar, incluyendo las estructuras de las que depende la eficacia y eficiencia interna (Euroforum, 1998) y que considera la estructura organizacional, patentes, marcas y todo lo demás que sostiene la productividad (Edvinsson y Malone, 1998). Para las IES, el CE agrupa los procesos internos, formas de comunicación y en general toda la estructura física y organizacional que permite una eficiente y efectiva administración y transmisión del conocimiento (Euroforum, 1998).

## METODOLOGÍA

Las IES son organizaciones basadas en el conocimiento, en donde los actores principales son alumnos, profesores y personal de administración. Tanto los profesores como el personal de administración (mandos medios) tienen funciones enfocadas a la formación de personal calificado; los profesores además de esta tarea, incluyen en sus programas de trabajo actividades de investigación, gestión, vinculación, entre otras funciones. Tanto profesores como mandos medios reciben capacitación que les permite desarrollar mejor sus actividades. Su desempeño es evaluado a través de mecanismos ex profeso. Los recursos materiales que requieren, a veces son obtenidos por medio de estímulos a su participación en proyectos de investigación que tienen financiamiento externo. Realizan actividades de vinculación derivadas de la firma de convenios que las IES firman con el sector empresarial y/o gubernamental.

En este contexto con el fin de medir el capital intelectual que poseen los profesores de tiempo completo, medio tiempo y personal directivo (mandos medios) de las IES, el objetivo de esta investigación es aportar el diseño de un cuestionario que integre el capital humano, capital estructural y el capital relacional. El cuestionario se desarrolló mediante la revisión de los modelos de Edvinson y Malone, 1997, Roos, et al, 1997, Bueno, et al., 2002 y de artículos científicos con evidencias empíricas (Bontis, 1998; Youndt y Snell, 2004; Huang y Wu, 2010; Jardón y Martos, 2009) con la intención de identificar los componentes del capital intelectual. Con las definiciones conceptuales se identificaron palabras o frases clave que permitieron la generación de ítems.

El cuestionario tiene como propósito el diagnóstico; su objetivo es la identificación de deficiencias o fortalezas de la presencia del capital intelectual (capital humano, capital relacional y capital estructural) en IES. Es autoadministrado, está integrado de tres dimensiones y 45 ítems, cada dimensión posee 15 ítems y se contestan en escala de diferencial semántico, del 1 (inadecuado) a 10 (adecuado). Bajas puntuaciones, refleja poco capital intelectual. El cuestionario se aplicó a una muestra de 155 personas (profesores de tiempo completo, medio tiempo y mandos medios) de diferentes organismos académicos de la UAEMex. Los resultados obtenidos reflejan que se trata de una encuesta con validez de constructo, pues como lo señala Morales (2011), a mayores diferencias entre los sujetos que componen la muestra, las correlaciones entre las variables serán mayores y el resultado del análisis factorial será más claro. Se calculó la correlación de Pearson entre el puntaje de cada ítem y el puntaje total del constructo al que

pertenece el ítem. De acuerdo al criterio establecido por Nunally y Bernstein (1994) y Sierra (2001), se consideran aceptables correlaciones superiores a .30.

## RESULTADOS

Se obtuvo la confiabilidad por cada constructo y por cada ítem, con la finalidad de detectar si al eliminar uno de éstos, la confiabilidad del constructo se incrementa. En sí, los tres constructos obtuvieron confiabilidades superiores a .9, con lo cual puede decirse que se trata de un cuestionario apto para estudios descriptivos. Por otro lado, no resulta representativo eliminar reactivo alguno para mejorar la escala, pues aunque en algunos casos el coeficiente Apha de Cronbach de los reactivos es menor al de la escala, la diferencia es minúscula. Una vez que se conoció la calidad métrica de los reactivos y de las escalas (capital humano, capital estructural y capital relacional), se realizó un análisis factorial exploratorio, con la finalidad de identificar cómo tienden a agruparse los ítems, examinando que el contenido conceptual de cada uno de estos pertenezcan al mismo factor (o constructo). Para ello, en primer lugar se aplicó la prueba de adecuación Kaisen-Meyer-Olkin ( $KMO=0.915$ ) y la prueba de esfericidad de Bartlett ( $p \leq .000$ ); los valores obtenidos indican que los datos se adecuan al modelo propuesto y que las variables iniciales están correlacionadas, es decir, que la matriz de datos es apropiada para aplicar un análisis factorial exploratorio.

La solución inicial mediante el método de extracción de análisis de componentes principales y rotación Varimax, arrojó siete factores que explican 71.63% de la varianza. De éstos, conforme al criterio de Morales (2011), los componentes 1, 2 y 3 aparecieron sólidamente definidos con más de siete reactivos con pesos mayores a 0.5; los componentes 4 y 5 con al menos cuatro reactivos con pesos entre .501 y 763; los componentes 6 y 7 no se pueden aceptar, pues sólo un reactivo cayó en cada uno de estos (CE29 y CR32, respectivamente). Sin embargo, y por el criterio de lógica conceptual, el reactivo CE29 se integra al factor 1 por tener carga mayor a .50 (.550). Siguiendo este mismo criterio, se eliminaron cuatro reactivos: CR32, CR33, CE30 y CR43. Finalmente, la tabla 1, nos muestra los factores resultantes en cada variable, así como los reactivos que integran cada factor. El siguiente paso consiste en realizar en un futuro muy próximo un análisis factorial confirmatorio para proseguir con el fin principal de esta investigación: mediar el capital intelectual en IES.

Tabla No 1: Confiabilidad (Alpha de Cronbach) de los Factores Resultantes (N=155)

VARIABLE	FACTOR SECUNDARIO	REACTIVOS	ALPHA POR FACTOR
Capital Humano	Facilitadores del desarrollo	CH13, CH10, CH11, CH15, CH09, CH12, CH08, CE25, CH14, CE27, CE28, CR31, CE22, CE29	.958
	Aptitudes y capacidades	CH04, CH05, CH07, CH02, CH03, CH01, CH06	.927
Capital estructural	Sistemas de gestión	CE23, CE21, CR38, CE24	.809
	TIC's	CE16, CE18, CE17, CE20, CE19	.757
Capital relacional		CR40, CR45, CR35, CE26, CR39, CR44, CR41, CR34, CR36, CR42, CR37	.943

## CONCLUSIONES

La revisión de la literatura nos ha llevado a detectar tres dimensiones que identifican el capital intelectual, esto es el capital humano, el capital estructural y el capital relacional. La valuación del capital intelectual en las IES, conduce a establecer estrategias que permitan realizar una mejor gestión de él, en pro de la eficiencia de la institución y de personal docente y administrativo. El cuestionario cuenta con calidades métricas para describir el capital intelectual en instituciones de educación superior. Queda pendiente replicar el estudio en varias muestras para confirmar si los análisis factoriales se replican de manera similar. El siguiente paso será realizar el análisis factorial confirmatorio para proseguir con el objetivo general de la investigación: medir el capital intelectual.

Luis Alfredo Argüelles Ma, Universidad Autónoma de Campeche

## RESUMEN

*El programa de Verano de la Investigación Científica, creado por la Academia Mexicana de Ciencias en México se ha constituido como un instrumento para el fomento de las actividades de investigación. El objetivo del estudio, es el análisis del interés que puedan percibir una muestra de estudiantes que participaron en el programa de verano científico 2012 hacia las actividades de investigación y desarrollo tecnológico. El diseño del estudio fue no experimental, descriptivo transeccional. El instrumento empleado para la recolección de datos fue un cuestionario de elaboración propia diseñado para la medición del constructo denominado "interés por la formación temprana en actividades de investigación" constituido de 5 variables y 7 dimensiones. De manera general los resultados permiten concluir que sí existe un interés del alumno por el desarrollo de actividades de investigación, y no percibe limitantes personales para realizarlas, sin embargo los resultados señalan que los conocimientos y la experiencia adquirida no son suficientes y que la institución y los profesores debieran promover mayores apoyos para estas actividades.*

**PALABRAS CLAVE:** Formación, Investigación, Capital Humano Motivation and limits in training research through the scientific summer program. A study in a sample of college students

## MOTIVATION AND LIMITS IN TRAINING RESEARCH THROUGH THE SCIENTIFIC SUMMER PROGRAM. A STUDY IN A SAMPLE OF COLLEGE STUDENTS

### ABSTRACT

*The summer program scientific research, created by the Mexican Academy of Sciences in Mexico has been established as an instrument for the promotion of research activities. The objective of the study is the analysis of the research and technological development interest that can be achieved for a sample of students who participated in the 2012 activities of summer's program. The design of the study was non-experimental transeccional descriptive. The instrument used for the collection of data was an author's questionnaire designed to measure the construct called "interest in early training in research activities" constituted of 5 variables and 7 dimensions. The results allowed to concluded that the student is highly interested in the development of research activities, and not perceived personal limitations to perform it, however the results also indicate that knowledge and experience are not enough and that the institution and teachers should promote these activities with greater support.*

## INTRODUCCIÓN

La Organización para la Cooperación y el Desarrollo Económico (OCDE) plantea que hace 50 años, el objetivo de la educación giraba en torno a la alfabetización, sin embargo, hacia finales del siglo pasado, se remarcó la importancia ya no sólo de la alfabetización, sino la imperante necesidad de evolucionar a una alfabetización científica como objetivo primordial de los sistemas educativos. Las universidades públicas y privadas tienen el gran compromiso de incrementar la alfabetización científica, no sólo para la formación de los científicos, sino también para fomentar los conocimientos básicos, las aptitudes prácticas y el espíritu crítico de los niños, los jóvenes y los adultos, (Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura [UNESCO], 2006, p.1).

### Planteamiento del Problema y Su Importancia

Las políticas educativas y de fomento a la ciencia y la tecnología en México, han ido evolucionando y mejorando las estrategias para alcanzar el desarrollo económico a pesar de que México aún no logra superar el 0.5% del P.I.B. en actividades de ciencia y tecnología (CONACYT, 2012). Es necesario remarcar que la problemática de fomento a las actividades científicas y tecnológicas no solo se circunscribe a la escasa inversión en el rubro, sino al recurso humano que se hace todavía más escaso. Sobre este punto en particular, se hace necesario reflexionar sobre el hecho de que la población en el país habilitada en México para la investigación científica y tecnológica está envejeciendo, por lo que, para llevar a cabo el cambio generacional en el desarrollo científico y tecnológico, es prioritario fomentar entre los estudiantes de todos los niveles educativos el interés por la ciencia y la tecnología, ya que es un proceso costoso y de largo plazo (CONACYT, 2010).

Sobre esta problemática, hay tres vertientes principales que deben ser consideradas. La primera debe centrar la estrategia en la generación de programas orientados a comenzar una verdadera vocación de los jóvenes hacia las actividades científicas y tecnológicas que permitan contar con el factor humano requerido. La segunda vertiente debe considerar los sistemas de jubilación y retiro que permita condiciones dignas de jubilación para dar cabida a los jóvenes egresados en los espacios académicos (Bensunsán y Ahumada, 2006). Por último se considera que la mirada del sector productivo hacia la ciencia, debe dejar el rol pasivo que lo ha caracterizado para seguir evolucionando con base en el conocimiento que genera, y como principal fuente de captación de recursos humanos de alto nivel, que le permitan ser competitivo en la economía del conocimiento.

Este estudio ha centrado su atención en la primera de las estrategias, pues en México la Academia Mexicana de Ciencias (AMC, 2012) ha generado desde 1991 el programa de verano científico cuyo objetivo central es fomentar el interés de los estudiantes de licenciatura por la actividad científica en cualquiera de sus áreas. Este programa consiste en facilitar las condiciones, a través de un apoyo financiero, para que los estudiantes realicen estancias de investigación de dos a tres meses de duración en los más prestigiados centros e instituciones de investigación del país, bajo la supervisión y guía de investigadores en activo, quienes los introducen en el mundo de la ciencia al permitirles participar en algún proyecto de investigación. El objetivo del estudio, es el análisis del programa de verano científico, el cual ha incrementado su participación de manera importante en los últimos 6 años (AMC, 2012), pero sobre el cual se desconoce el verdadero interés que ha generado hacia las actividades de investigación y desarrollo tecnológico en los estudiantes que participan en el mismo.

## REVISIÓN LITERARIA

### La formación en investigación de estudiantes universitarios

Rojas (2010) señala que uno de los mayores problemas para las Instituciones de Educación Superior (IES) en México en la construcción de la ciencia, es la formación nuevos investigadores. Las IES han enfrentado el tema de diversas maneras, una de las más importantes ha sido el enfoque de formación y fomento de la actitud científica en los estudiantes, en donde se presupone una renovación de las prácticas pedagógicas en la universidad y un perfil docente-investigador. Las investigaciones llevadas a cabo por Gerrard, Nokes, Robertson y Salm, (2004), Neumann (1994) y Zamorski, (2002), han explorado las experiencias de los estudiantes al participar en el trabajo de campo en una investigación, muestran que los alumnos valoran la enseñanza de investigación guiada pero al mismo tiempo se sienten excluidos en el proceso de investigación.

## MATERIAL Y MÉTODOS

### Diseño del Estudio

El diseño del estudio fue no experimental, descriptivo transeccional (Kerlinger y Lee, 2002) en virtud de que en este primer acercamiento se pretendió un diagnóstico de la percepción de los estudiantes que participaron en el programa de verano científico, para determinar el interés y motivaciones percibidas para su posible desarrollo como investigador, cursar estudios de posgrado y las limitantes que observan para el desempeño de actividades de investigación y/o desarrollo tecnológico.

### Población de Estudio

La población bajo estudio estuvo conformado por todos los estudiantes de la Universidad Juárez Autónoma de Tabasco que participaron en el programa de Verano de la Investigación Científica 2012 (UJAT, 2013). El estudio se planteo como un censo, sin embargo se tuvo un 17% de pérdida de datos por cuestionarios sin contestar o contestados parcialmente, por lo que la muestra comprendió el 83% del total de la población bajo estudio. En la tabla 1 se presenta la proporción de estudiantes participantes por división académica y programa de licenciatura.

Tabla 1: Población bajo estudio por división académica

División Académica y sus Programas de Licenciatura	Total de Participantes en el Verano Científico 2012	Total de Participantes en la Encuesta 2012	Datos Perdidos
División Académica de Educación y Artes	61	57	4
División Académica de Informática y Sistemas	21	17	4
División Académica de Ciencias Agropecuarias	19	16	3
División Académica de Ciencias Básicas	22	21	1
División Académica de Ciencias Biológicas	47	36	11
División Académica de Ciencias Económico Administrativas	12	10	2
División Académica de Ciencias de la Salud	63	53	10
División Académica de Ciencias Sociales y Humanidades	31	27	4
División Académica de Ingeniería y Arquitectura	32	26	6
División Académica Multidisciplinaria de los Ríos	33	17	16
División Académica Multidisciplinaria de Comalcalco	9	9	0
<b>TOTAL GENERAL</b>	<b>350</b>	<b>289</b>	<b>61</b>

*Nota: Esta tabla presenta la distribución por división académica de los estudiantes que participaron en el XXI verano de la investigación científica, los estudiantes encuestados y el número de encuestas perdidas.*

### Instrumento de Recolección de Datos

El instrumento empleado para la recolección de datos fue un cuestionario de elaboración propia diseñado para la medición del constructo denominado “interés por la formación temprana en actividades de investigación” constituido de 5 variables y 7 dimensiones. Para la elaboración del cuestionario se realizó una amplia verificación de la literatura existente sobre esta problemática (Ponce, et al, 2002; Ponce, et al., 2005; Castillo, 2007; Rosas, 2008; Rojas, 2010; Amador y López, 2011, Pontes, et. al., 2011) y posteriormente se empleó la técnica de vagabundeo (Rodríguez, Gil y García, 1999) con estudiantes destacados, para determinar si los constructos que se definían estaban relacionados a su posible interés en la formación en actividades de investigación.

El cuestionario estuvo conformado de 24 preguntas y se estructuró en una escala tipo Lkert, con cinco opciones de respuesta: Totalmente en desacuerdo =1, En desacuerdo =2, Ni de acuerdo ni en desacuerdo = 3, De acuerdo = 4, Totalmente de acuerdo =5. Adicionalmente se integraron variables socio demográficas como: la edad, género, estado civil; variables relativas a la institución como: división académica, programa de licenciatura, y por último, dos preguntas dicotómicas, la primera que cuestionaba sobre si además de los estudios trabajaba, para poder determinar si la saturación de actividades estaba relacionada al interés del estudiante por la investigación, y la segunda al final de los reactivos de escala, que cuestionaba de manera directa su interés por el desarrollo de actividades de investigación como actividad laboral. En la construcción del cuestionario y sus reactivos se tuvo presente la delimitación semántica del reactivo y los aspectos de redacción y comprensión. Posteriormente, fueron sometidos a análisis estadísticos con el software SPSS ver 17.0, para determinar su validez discriminante, su distribución factorial, y su contribución a la consistencia interna de la escala. Se empleó el Coeficiente Alpha de Cronbach para determinar la confiabilidad final del cuestionario, que reporta un valor de .862, y el análisis factorial exploratorio para determinar la validez del mismo, el cual registra para sus siete factores cargas superiores a .40 y se explica el 29% de la varianza, valores que se consideran aceptables (Milton, 2010, Martínez, 2005).

### Recolección y Análisis de Datos

El cuestionario fue entregado personalmente a los estudiantes en sobre cerrado, con la finalidad de garantizar la confidencialidad de las respuestas. La etapa de aplicación se obtuvo durante los tres meses posteriores a la estancia de investigación realizada durante los meses de junio, julio y agosto del 2012, en las diferentes sedes nacionales e internacionales que recibieron a dichos estudiantes. Para el análisis estadístico de resultados se empleó el programa estadístico Statistic Package for Social Science SPSS Versión 17.0 para Windows. Se realizó un análisis de estadística descriptiva y de frecuencias con la finalidad de describir el fenómeno bajo estudio en cada una de las dimensiones y en general.

#### Resultados

### Estadística Descriptiva

El número de alumnos participantes en la muestra fue de 290, de los cuales, el 33.4% son hombres y el 66.6% mujeres, el rango de edad fluctúa entre 20 a 31 años, siendo el rango de 20 a 22 años el de mayor porcentaje con el 60.9%. Con relación al estado civil, el 96.5% son solteros, y el 16.8% de la población bajo estudio trabaja además de la realización de sus estudios. El cuestionario fue estructurado en cinco variables y siete dimensiones sobre las cuales se realizó el análisis de frecuencias identificando los cuartiles de la distribución para establecer las 4 categorías de análisis por cada una de las dimensiones. Los valores que corresponden a las variables de competencias para la investigación, condiciones para la investigación, titulación por tesis y estudios de posgrado se presentan en la tabla 2.

Tabla 2: Distribución de frecuencias de las dimensiones de las variables: competencias para la investigación, condiciones para la investigación, titulación por tesis y estudios de posgrado, del cuestionario para medir el Interés en la Formación Temprana en Investigación (escala 4 – 20)

Variable	Dimensión	Categorías de Análisis	Percentil	Valores	%
Competencias para la investigación	Conocimientos y habilidades para la investigación	No discierne conocimientos, hábitos y actitudes necesarias para el desarrollo de actividades de investigación	25	Valores $\leq 18$	41.9
		Conoce poco los conocimientos hábitos y actitudes necesarias para el desarrollo de actividades de investigación	50	19	39.4
		Reconoce los principales conocimientos hábitos y actitudes necesarias para el desarrollo de actividades de investigación	75	19	.0
		Reconoce los conocimientos hábitos y actitudes necesarias para el desarrollo de actividades de investigación	100	20	18.7
Condiciones para la investigación.	El investigador como ente motivador.	El profesor investigador no motiva a la realización de actividades de investigación	25	Valores $\leq 13$	29.4
		El profesor investigador motiva poco a la realización de actividades de investigación	50	14 < 15	21.5
		El profesor investigador motiva moderadamente a la realización de actividades de investigación	75	16 < 18	31.5
		El profesor investigador motiva a la realización de actividades de investigación	100	Valores $\geq 19$	17.6
	La organización como promotor y proveedor de condiciones para el desarrollo de actividades de investigación.	Se percibe que la Institución no promociona y dispone de apoyos e infraestructura para la realización de actividades de investigación por parte de los estudiantes	25	Valores $\leq 15$	36.0
		Se percibe que la Institución poco promociona y dispone de apoyos e infraestructura para la realización de actividades de investigación por parte de los estudiantes	50	16 < 17	28.7
		Se percibe que la Institución de manera moderada promociona y dispone de apoyos e infraestructura para la realización de actividades de investigación por parte de los estudiantes	75	18	15.6
		Se percibe que la Institución promociona y dispone de apoyos e infraestructura para la realización de actividades de investigación por parte de los estudiantes	100	Valores $\geq 19$	19.7
Titulación por Tesis.	Interés de titulación mediante un trabajo recepcional de investigación	La titulación por tesis no es la primera opción del estudiante universitario	25	Valores $\leq 16$	27.3
		La titulación por tesis pocas veces es la primera opción del estudiante universitario	50	17 < 18	12.1
		La titulación por tesis frecuentemente es la primera opción del estudiante universitario	75	19 < 20	47.1
		La titulación por tesis muy frecuentemente es la primera opción del estudiante universitario	100	S/E	.0
Estudios de Posgrado.	Interés por los estudios de posgrado.	El posgrado no se percibe como una opción que permitiría desarrollar mayores conocimientos y habilidades tanto profesionales como científicas	25	Valores $\leq 18$	32.9
		El posgrado poco se percibe como una opción que permitiría desarrollar mayores conocimientos y habilidades tanto profesionales como científicas	50	19	19.4
		El posgrado se percibe de manera moderada como una opción que permitiría desarrollar mayores conocimientos y habilidades tanto profesionales como científicas	75	20	47.8
		El posgrado se percibe como una opción que permitiría desarrollar mayores conocimientos y habilidades tanto profesionales como científicas	100	S/E	.0
		El posgrado se percibe como una opción que permitiría desarrollar mayores conocimientos y habilidades tanto profesionales como científicas			

*Nota: Esta tabla contiene el análisis de frecuencias por cuartiles de las variables competencias para la investigación, condiciones para la investigación, titulación por tesis y estudios de posgrado, del cuestionario para medir el Interés en la Formación Temprana en Investigación y cuyas sumatoria de sus reactivos se encuentran en un rango de 4 a 20 para cada dimensión.*

La tabla 2 permite observar que el 41% de los estudiantes encuestados no percibe de manera clara cuales son conocimientos, hábitos y actitudes necesarias para el desarrollo de actividades de investigación, lo cual deja entrever que no tienen una configuración clara del rol del profesional en investigación. La variable que se destaca en sus dos dimensiones por los altos porcentajes negativos es la de condiciones para la investigación, ya que tanto la percepción de la dimensión de la organización como promotor y proveedor de condiciones para el desarrollo de actividades de investigación (36%) y, la dimensión del profesor investigador como ente motivador (29%), reportaron valores relativamente elevados en el primer cuartil, y sumando los dos primeros cuartiles en ambos casos, rebasa el 50% de la población bajo estudio. El resultado de la variable titulación por tesis no fue el que se esperó al principio, ya que al participar en el programa de verano científico, se asume que se tiene un interés primario por las actividades de investigación, y como ya se mencionó, los programas comprometen al estudiante a la entrega de un

trabajo recepcional que como los resultados señalan no siempre la tesis es la primera opción, pues el 27% de la población no lo considera de esa forma. En cuanto a los estudios de posgrado, los estudiantes no lo visualizan necesariamente como una opción que permita mejorar sus capacidades científicas y tecnológicas, lo resultados indican que los estudiantes ven el posgrado como una oportunidad de desarrollo profesional pero no necesariamente enfocado a la investigación.

Para finalizar en el análisis de frecuencia y los cuartiles de la distribución, se contempló a la variable: limitantes a la investigación, en virtud de que sus dimensiones contemplan una escala diferente (Tabla 3)

Tabla 3.- Distribución de frecuencias de las dimensiones de las variable limitantes a la investigación, del cuestionario para medir el Interés en la Formación Temprana en Investigación (escala 2 – 10)

Variable	Dimensión	Categorías de Análisis	Percentil	Valores	%
Limitantes a la investigación	Limitantes sobre conocimientos necesarios para el desarrollo de investigación	El estudiante no percibe como limitantes sus conocimientos para el desarrollo de actividades de investigación	25	Valores $\leq 4$	25.3
		El estudiante poco percibe como limitantes sus conocimientos para el desarrollo de actividades de investigación	50	$5 < 6$	26.0
		El estudiante de manera moderada percibe como limitantes sus conocimientos para el desarrollo de actividades de investigación	75	$7 < 8$	31.5
		El estudiante percibe como limitantes sus conocimientos para el desarrollo de actividades de investigación	100	Valores $\geq 9$	17.3
	Limitantes personales para el desarrollo de investigación (inversos)	El estudiante no percibe limitantes personales como necesarias para el desarrollo de actividades de investigación	25	Valores $= 2$	68.2
		El estudiante percibe pocas limitantes personales como necesarias para el desarrollo de actividades de investigación	50	2	
		El estudiante percibe algunas limitantes personales como necesarias para el desarrollo de actividades de investigación	75	$3 < 4$	20.4
		El estudiante percibe limitantes personales como necesarias para el desarrollo de actividades de investigación	100	Valores $\geq 5$	11.4

*Nota: Esta tabla contiene el análisis de frecuencias por cuartiles de la variable limitantes a la investigación, del cuestionario para medir el Interés en la Formación Temprana en Investigación y cuyas sumatoria de sus reactivos se encuentran en un rango de 2 a 10 para cada dimensión.*

Los resultados señalan de manera determinante que el 68% de la población encuestada no percibe una limitante personal, aún teniendo en consideración que el 16.8% de la población encuestada trabaja, sin embargo, las limitantes se perciben en los conocimientos y experiencia necesarios para el desarrollo de actividades de investigación que es donde se centran los programas de formación temprana en investigación. Por último para finalizar el análisis descriptivo del cuestionario, en la tabla 4 se presenta un desglose de los principales valores descriptivos de cada una de las dimensiones bajo estudio.

Tabla 4: Estadísticos Descriptivos para las Dimensiones del cuestionario para medir el Interés en la Formación Temprana en Investigación (Rango de valores 4-20, 2-10)

Variable	Dimensiones	N	Mínimo	Máximo	Media	Desv. típ.
Competencias para la investigación	Conocimientos y habilidades para la investigación	289	4	20	18.11	2.523
Condiciones para la investigación.	El investigador como ente motivador	289	4	20	14.93	3.572
	La organización como promotor y proveedor de la investigación	289	4	20	16.09	2.867
Titulación por Tesis.	Interés de titulación mediante un trabajo recepcional de investigación	289	4	20	17.54	2.677
Estudios de Posgrado.	Interés por los estudios de posgrado	289	4	20	18.51	2.479
	Limitantes sobre conocimiento para el desarrollo de investigación	289	2	10	6.28	2.213
Limitantes a la investigación	Limitantes personales para el desarrollo de investigación (inversos)	289	2	10	2.86	1.596

*Nota: Esta tabla presenta los descriptivos generales de las variables y dimensiones del cuestionario para medir el interés en la formación temprana en investigación.*

Se observa que para las 5 dimensiones con el mismo rango de valores (4-20) la media más alta la reporta el interés por los estudios de posgrado y la más baja el investigador como ente motivador, que también se reporta como la dimensión más dispersa al tener el mayor valor de la desviación típica (3.572).

Con relación a las limitantes a la investigación, la media de las limitantes personales de acuerdo a su escala señala que de manera general no se perciben limitantes personales, pero no así como las limitantes sobre conocimientos y experiencia que reporta una media relativamente alta con respecto a su escala y una mayor dispersión de datos.

## CONCLUSIONES

De manera general se concluye que si existe un interés del alumno por el desarrollo de actividades de investigación, y no percibe limitantes personales como la edad, sin embargo no ha configurado con claridad las competencias requeridas para el desempeñarse como un profesional en el ámbito del desarrollo científico y tecnológico. Entre las principales limitantes que se perfilan como importantes desde la perspectiva del estudiante, está el apoyo que recibe tanto de la institución como de los propios profesores que se considera no brindan ese ejemplo motivador que los influya en el desempeño de actividades de investigación. Cabe mencionar que las diversas disciplinas que fueron consideradas tienen requerimientos muy diferentes para las actividades de investigación y sin embargo los resultados son homogéneos en señalar que la organización requiere dar mayor difusión y seguimiento a los programas de investigación para los estudiantes, así como brindar la infraestructura necesaria para su desarrollo.

También se puede concluir que los resultados que se presentan sobre las limitantes de conocimiento y experiencia percibida se reflejan en el interés que puede tener un estudiante para la realización de un trabajo de investigación como puede ser la tesis, pues a pesar de que la estancia de verano les permite conocer con mayor cercanía las actividades de investigación, no se percibe como suficiente para desarrollar un trabajo final que involucre todo el proceso, como lo puede ser el desarrollo de la tesis.

En cuanto a los estudios de posgrado se concluye de manera general que no se perciben necesariamente como un elemento que permita el desarrollo de las capacidades de investigación sino como parte del desarrollo profesional. Hay que destacar que en México se pueden tener dos tipos de posgrados, los de enfoque profesional y los de investigación (CONACYT, 2013), en donde los primeros no necesariamente fomentan las competencias para la investigación y el desarrollo tecnológico como lo pueden ser los de orientación en investigación. La UJAT, ha logrado consolidar el programa de Verano de la Investigación Científica como parte de las actividades de formación temprana en investigación, pero aún queda pendiente comenzar a centrar su mirada en proyectos que también permitan al estudiante el desarrollo de las competencias y actitudes requeridas para realizarlas.

El programa ha permitido al alumno desarrollar su capacidad de valorar la calidad de otras instituciones y sus habilidades científicas al trabajar con profesores investigadores expertos en diversas áreas del conocimiento. Sin embargo, es necesario, ante la demanda cada vez mayor y la pertinencia de enfocar este interés, conocer cómo ha impactado el programa en el interés científico de los alumnos que han decidido participar con el objetivo de poder diseñar estrategias que permitan optimizar los esfuerzos que se han realizado para dar impulso al programa y fomentar el interés del estudiante por el desarrollo de las actividades relacionadas al desarrollo de ciencia y tecnología en el país.

# EL NEGOCIO DEL CARBONO Y EL MECANISMO PARA UN DESARROLLO LIMPIO

Mario Luis Perossa, Universidad Maimónides

## RESUMEN

*Los mercados de carbono surgieron como consecuencia de los resultados producidos por las Naciones Unidas en la lucha contra los efectos producidos por el Cambio Climático. Resulta clave el trabajo llevado a cabo por la Convención Marco de Naciones Unidas para el Cambio Climático (CMNUCC) que a través del Protocolo de Kyoto (PK) fomentó la creación de mecanismos de mercado del estilo de los property right de Coase. Estos “derechos de propiedad” son los instrumentos denominados Derechos de Emisión, para los países objeto de reducción y Certificados de Reducción de Emisiones para aquellos generados en países que no están sujetos a reducción de emisiones. Para aquellos países que están sujetos a reducción de emisiones y superen las metas fijadas están obligados a cumplir el objetivo mediante la aplicación de mecanismos de flexibilización que significan adquirir derechos de emisión a una empresa que no los utilice o certificados por reducciones realizadas en terceros países firmantes del PK. En el trabajo se analizan los inventarios de las emisiones de gases de efecto invernadero de los países comprometidos a efectuar reducciones e identificados en el Anexo A del PK (Protocolo de Kyoto), la relación del aumento de dichos gases con respecto al crecimiento del PBI y los precios observados en los mercados para los instrumentos surgidos por el mismo, durante lapsos de tiempo similares.*

**PALABRAS CLAVE:** Protocolo de Kyoto, Mecanismo de Desarrollo Limpio, Certificado de Reducción de Emisiones, Inventario de Emisiones

## THE GREENHOUSE GASES BUSINESS AND THE CLEAN DEVELOPMENT MECHANISM

### ABSTRACT

*Carbon markets emerged as a consequence of efforts carried out by the United Nations in its developments aimed at combating the effects of climate change. The United Nations Framework Convention for Climate Change through the Kyoto Protocol (KP) is a key part of this effort as it encouraged the creation of market mechanisms similar to Coase's "property right". These "property rights" are the instruments denominated emission rights to countries subject to reduction and emissions reduction certificates to those generated in non Annex A countries. Those countries subject to reductions and that exceed fixed emission targets are forced to meet that target by applying flexibilization mechanisms, that means buying certificates of reduction in third countries signatories of KP. In this paper I analyze the emission inventories of greenhouse gases in the countries involved in Annex A of the KP, the ratio of increase in these gases with respect to GDP growth and the observed prices in the markets for this newly created scheme.*

**JEL:** Q27- Q34 - Q51 - Q56

**KEYWORDS:** Kyoto Protocol, Clean Development Mechanism, Certified Emission Reduction, Emission Inventory

## INTRODUCCIÓN

El Cambio Climático es el resultado no deseado del proceso de industrialización de los países más avanzados debido principalmente a la matriz energética de base fósil, y se refiere principalmente a “un cambio atribuido directa o indirectamente a la actividad humana que altera la composición de la atmósfera mundial y que se suma a la variabilidad natural del clima observada durante períodos de tiempo comparables (Convención Marco de Naciones Unidas sobre Cambio Climático (CMNUCC), artículo 1.2, definiciones.)” , y está directamente relacionado con el desequilibrio producido en el ambiente por la relación de los diferentes gases que lo componen. Entre ellos están los Gases de Efecto Invernadero (GEI), que son “aquellos componentes gaseosos de la atmósfera, tanto naturales como antropógenos, que absorben y reemiten radiación solar (Ib Ídem, artículo 1.5, definiciones).” Desde mediados de la década del setenta, los gases de efecto invernadero (GEI) han comenzado a estar presentes en la atmósfera de una forma tal que sobrepasaron los límites que la regeneración misma del planeta permite, comenzando de esta forma el proceso conocido como Cambio Climático. La ONU, a través de la Conferencia Marco de Naciones Unidas para el Cambio Climático (CMNUCC), intenta poner límites a la emisión de estos GEI para propender a un desarrollo sostenible “que satisface las necesidades del presente sin comprometer la capacidad de las futuras generaciones para satisfacer las propias (Brundtland, Gro “Nuestro Futuro Común”, Comisión Mundial sobre el Medio Ambiente y Desarrollo, ONU, 1987.)”.

Es dentro de este esquema que se firma en Japón el Protocolo de Kyoto (PK), como un mecanismo de mercado que intenta acotar las emisiones de GEI de los países industrializados y algunos con economías en transición. En el mismo PK se brindan mecanismos de flexibilización para que los países obligados puedan efectuar esas reducciones donde sean económicamente más eficientes. En 1997 se firmó en Japón el Protocolo de Kyoto, donde los países firmantes incluidos en el Anexo A (países desarrollados) se comprometieron en un futuro a reducir sus emisiones en promedio en un 5.2 % con respecto al nivel de 1990; recién en 2005 y con la entrada de Rusia se pudo ratificar el acuerdo pues el mismo requería de la firma de por lo menos el 55 % de los países (objetivo cumplido con creces) y reunir también el 55 % de las emisiones para la entrada en vigor del PK.

El principal compromiso asumido por los países firmantes es el de reducir sus emisiones de GEI (gases de efecto invernadero)-, para el lapso de tiempo conocido como “Primer Período de Compromiso” que abarca desde el 2008 hasta el 2012. Luego se planteó la continuación de Kyoto a través de nuevos período de compromisos con posturas diversas, haciendo complejas las negociaciones por la negativa de los EEUU de participar activamente en el mismo, la posición de Japón y la situación de China e India, por otra parte otros países involucrados plantearon cambios en la estructura y distribución de derechos y responsabilidades. El PK considera que si un país que se encuentra obligado a cumplir con las metas de reducción asumidas en el Compromiso no puede realizar las mismas por sí mismo, pueda acudir a alguno de los tres mecanismos denominados de flexibilización siguientes:

Comercio de Derechos de Emisión: compra de derechos de emisión *European Allowance Units (EUA)* a otros países integrantes del Anexo A, y a quien le sobran derechos de emisión, por ejemplo los países del este europeo;

Implementación Conjunta: a través de la realización planes de reducción de emisiones en otros países integrantes del Anexo A y de esta manera obtener certificados por reducciones;

Mecanismo para un Desarrollo Limpio (MDL): como tercera posibilidad, una empresa o país Anexo A puede realizar inversiones en países No Anexo A con transferencia de tecnología limpia que resulte en menores emisiones comprobables y por las cuales luego de certificarlas por una tercera parte independiente se puedan recibir Certificados de Reducciones de Emisión (CER).

El negocio se mostró prometedor en sus inicios para los países Latinoamericanos debidos principalmente a las matrices energéticas sucias en carbono –posibilidad de realizar proyectos energéticos-, de captura de metano en los depósitos de residuos sólidos urbanos –principalmente en las grandes urbes- y desarrollos forestales en zonas selváticas y boscosas que fueron invadidas por el hombre. Un sector importante en América Latina poco explotado se relaciona con la reducción y control de las emisiones de gases invernaderos en la industria agrícola-ganadera. Para participar, las empresas radicadas en países No Anexo A deben desarrollar proyectos de MDL.

### El Mecanismo Para un Desarrollo Limpio (MDL)

El Mecanismo para un Desarrollo Limpio es uno de los tres mecanismos de flexibilización con que cuentan los países incluidos en el ANEXO A del Protocolo de Kyoto para poder cumplir con los compromisos asumidos de reducción de emisiones de gases de efecto invernadero. Este mecanismo de flexibilización es el único que tiene en cuenta a países en vías de desarrollo, el mismo consiste básicamente en reducción de emisiones de una industria existente por introducción de mecanismos nuevos (transferencia de tecnología), más aporte de capital que redunde en cumplir con dos objetivos que involucra a las partes: acceso a tecnología limpia por parte del país huésped del proyecto, y menores emisiones que se convierten en bonos de carbono para el desarrollador del proyecto.

Para poder transformar reducciones de emisión en bonos, es necesario desarrollar una serie de pasos en el orden nacional e internacional, que significan la aprobación del proyecto, el monitoreo de las reducciones, la verificación de las mismas para luego recién solicitar la emisión de los mismos. Este proceso consta de varios actores involucrados, procedimientos a desarrollar y pautas a cumplir. En un primer momento era necesaria la participación de una empresa o país Anexo A para realizar el proyecto, hoy en día una empresa radicada en un país No Anexo A puede por sí realizar las reducciones, certificarlas, obtener y luego vender los Certificados de Reducción de Emisiones (CER) al mejor postor.

### Partes Involucradas

Instancia Nacional:

Proponentes del proyecto: puede ser una persona física, empresa privada o pública, también puede incluir como contraparte a un representante de un país Anexo A, pero esto no es obligatorio.

Oficina Nacional para el MDL: Se trata de la oficina del país donde se desarrolla el MDL, tiene la responsabilidad de evaluar el proyecto en cuestión.

Instancia Internacional:

Junta Ejecutiva del MDL: organismo máximo del MDL, está formada por 10 miembros titulares y 10 miembros alternos que representan a los países Anexo A y No Anexo A. Está por debajo de la autoridad de la Conferencia de las Partes.

Entidades operacionales designadas: son las encargadas de realizar la verificación o certificación de los proyectos. Deben estar acreditados en un registro especial habilitado especialmente por la JE-MDL.

Terceras partes interesadas: La información del proyecto debe estar publicada en la página Web de la UNFCCC, para que los *stakeholders* puedan expresar sus comentarios.

*Broker*: son los intermediarios que durante el ciclo del proyecto compran y venden los CER's (certificados de reducción de emisión).

Consultores: también denominados desarrolladores de proyectos MDL, son los encargados del diseño del PDD (establecer la línea de base y el plan de monitoreo), además de interactuar con las entidades operacionales que realizan la validación, verificación y certificación del proyecto como así también de la búsqueda de comprador para los certificados de reducción de emisiones que dicho proyecto genera.

Compradores de CER's: se refiere a las empresas que deben cumplimentar el PK, como también los gobiernos o los fondos de carbono creados al efecto.

Estudios jurídicos: que se encargan del asesoramiento y elaboración de los acuerdos de compra-venta de certificados de reducción de emisiones.

### Etapas del proyecto

Instancia Nacional:

Presentación del proyecto según la versión que esté en vigencia en la página Web de la UNFCCC, donde debe fundamentarse la contribución que el proyecto realiza al desarrollo sustentable. La presentación se hace ante la Oficina Nacional de MDL.

Cuando la Oficina Nacional de MDL considera que el proyecto contribuye al Desarrollo Sustentable, entonces emite una carta de aprobación del proyecto en el orden nacional, para que la Entidad Operacional Designada (elegida por el proponente entre aquellas registradas en la JE-MDL) pida el registro del proyecto en la JE-MDL.

Instancia Internacional:

Validación: la EOD reúne el PDD y la carta de aprobación del proyecto por la Oficina Nacional de MDL. Previo al pedido de registro ante la JE-MDL, la EOD controla que la metodología para establecer la línea de base y el plan de monitoreo se encuentren entre las metodologías aceptadas. En caso contrario deberá pedirse a la JE-MDL que evalúe las metodologías propuestas para su aprobación, previo al pedido de registro.

Registro: una vez concluido el paso anterior, la JE-MDL procederá al registro del proyecto ya en instancia internacional, a partir de allí se abren varias etapas que corresponden específicamente al plan de reducción de emisiones en la industria correspondiente.

Monitoreo: el proponente del proyecto es quien deberá monitorear las reducciones que efectivamente se van realizando en un todo de acuerdo al plan de monitoreo oportunamente presentado y aceptado.

Verificación y Certificación: la EOD es la entidad encargada de la verificación y certificación de la veracidad de la cantidad de reducción de emisiones verdaderamente conseguidas por el proyecto.

Expedición de los CER's: la JE-MDL expedirá la cantidad de CER's resultantes de la certificación realizada por la EOD.

Esto significa una oportunidad para países como los nuestros, que por su condición de países huéspedes para proyectos MDL, pueden ofrecer planes de reducción o captura de GEI, logrando de esta forma CER's que los países industrializados necesitan para cumplir con sus compromisos de reducción. Estos CER's significan para las empresas y los países un ingreso genuino de divisas, transformándose poco a poco en una nueva industria de servicios de descontaminación. En el trabajo se muestra la evolución de

los precios desde el inicio del 2008 –año de inicio formal de cumplimiento del Protocolo- hasta fines de 2012, tanto de los certificados de reducción provenientes de proyectos de MDL como de los permisos de emisión entregados por los gobiernos. Es posible observar una brusca caída de precios de ambos instrumentos desde el 2010 hasta la actualidad.

La hipótesis del trabajo propuesto afirma que el descenso en los precios está determinada principalmente por la recesión ocasionada a partir de la crisis *subprime* que afectó la economía mundial reduciendo la producción de los demandantes de certificados, los cuales redujeron sus expectativas de crecimiento y disminuyeron sus stocks como consecuencia de una demanda decreciente, satisfaciendo sus necesidades de certificados con las operaciones de compra pactadas años anteriores sin necesidad de incrementar en forma adicional la demanda. Esto sumado a los avances técnicos y tecnológicos que permiten contar con sistemas productivos de mayor eficiencia y la elaboración de productos más amigables con el medio ambiente, también colaboran con la baja del precio. Los países comprometidos cuentan con un escenario base que resulta de los inventarios de emisiones del año 1990, a partir de esa pauta modificada por los niveles de reducción o aumento permitido, es que las empresas de dichos países deben complementar –vía EUA o CER- las emisiones adicionales.

## REVISIÓN LITERARIA

El problema del calentamiento global provocado por el cambio climático se encuentra directamente relacionado con el crecimiento logrado por los países industrializados, por lo cual guarda una estrecha relación entre crecimiento económico y emisión de gases de efecto invernadero. Siguiendo este razonamiento es que la CMNUCC preparó un mecanismo apoyado en la doctrina económica que analiza las externalidades producidas (Coase, 1960; Pigou, 1920) como una vía de moderación y transformación tecnológica de las empresas con objeto de reducir las emisiones y propender a una economía más limpia en carbono. La doctrina económica observa dos posibles soluciones al tema:

### A) El Teorema del Costo Social:

Ronald Coase recibió el premio Nobel en 1991 por sus estudios sobre las externalidades que se producen cuando una empresa en su proceso de producción perjudica a otra, u otras, provocando lo que se conoce como costo social. Denomina “derechos de apropiación” (*property rights*) a quien tiene la posibilidad legal de apropiarse del uso de ciertos bienes públicos en beneficio propio. En el mismo enuncia que si “los derechos de apropiación están claramente establecidos, sea cual sea la asignación inicial de esos derechos se producirá una distribución cuyo resultado será el de máxima eficiencia” (Trabajo publicado originalmente en *The Journal of Law and Economics* (octubre 1960), pp. 1-44. Esta traducción se basa en dicha publicación y cuenta con la debida autorización. Versión disponible en <http://www.eumed.net>).

### b) El impuesto de Pigou:

Otra forma de internalizar las consecuencias no deseadas es la imposición de un tributo por las externalidades que deberían volver de alguna forma hacia quienes deben soportarlas, esta es la idea básica que la literatura económica conoce como el “impuesto de Pigou”, aunque en este caso es necesario reconocer a los afectados pues el impuesto debe volver hacia ellos, sea a través de obras que eviten o soluciones el problema causado, o en forma de compensación por el daño recibido. Resulta evidente que los “derechos de apropiación” descriptos por Coase, no son otra cosa que los diversos “bonos de carbono” y/o “derechos de emisión” previstos en el PK y los acuerdos de Marrakech, que permiten volcar determinadas cantidades de GEI en la atmósfera de un modo controlado, dejando en manos del mercado la forma más eficiente de lograrlo. Como resultante, emerge un mercado específico de comercialización de los productos previstos en los documentos antes mencionados y que será objeto de análisis en los párrafos siguientes.

## METODOLOGÍA

La metodología empleada en este trabajo consistió en la recolección de datos relacionados con los inventarios de emisiones de gases de efecto invernadero y del PBI obrantes en el sitio oficial del Banco Mundial (Disponible en <http://datos.bancomundial.org/> (Fecha de captura: 13/02/2013)). De los datos de los países incluidos en los datos del Banco Mundial se seleccionaron solamente a aquellos países que integran la lista de los países que asumieron el compromiso de reducción –tanto para los gases de efecto invernadero como para el PBI, construyendo una tabla que relaciona las emisiones de 1990 ajustadas por la reducción/aumento, por la incidencia de cada uno de ellos. De esta forma se partió del escenario base acordado en Kyoto formalizando un inventario correspondiente a los países bajo estudio. Luego, y aplicando la incidencia del escenario base de cada uno de ellos, se reconstruyeron los inventarios correspondientes a los años 2000 a 2011. En aquellos casos que no existe información en determinados años, se optó por hacer una aproximación lineal entre ambas puntas.

La unidad que se considera se relaciona con el efecto calórico que ocasiona una tonelada de dióxido de carbono (CO<sub>2</sub> equivalente). Por ejemplo, una tonelada de metano equivale a 21 toneladas de dióxido de carbono, por lo cual quien captura y quema una tonelada de gas metano certifica el equivalente a 21 toneladas de CO<sub>2</sub>. En el caso del crecimiento económico de los países bajo observación se trabajó con el PBI a precios corrientes, estimando el producto del conjunto de países de acuerdo a la incidencia de cada uno de ellos indicado Anexo A, obteniendo de esta forma un producto promedio ponderado de los países emisores. Para la recolección de los datos sobre los precios de los CER y los EUA, se tomaron en consideración a aquellos que provienen del sitio de SendeCO<sub>2</sub> (Disponible en [http://www.sendeco2.com/es/precio\\_co2.asp?ssidi=1](http://www.sendeco2.com/es/precio_co2.asp?ssidi=1) (fecha de captura: 13/02/2013)), ya que pudo obtener la lista completa de valores para el período determinado entre 2008 y 2012.

Figura 1: Comportamiento del Precios de los EUA Y CER, Entre 2007 Y 2012

*En la figura se muestra la evolución del precio de los permisos de emisión (European Units allowance) en color celeste y la evolución de los certificados de reducción de emisiones en color naranja. Durante los primeros seis meses del año 2007 es posible observar la volatilidad de los precios de ambos productos debido a la inexperiencia del mercado, que luego impulsa los valores hacia abajo. Los precios se mantienen relativamente estables a un valor de quince euros hasta mediados del 2010 cuando comienzan una caída que en el caso de los CER aún no encontró su piso, aunque están cotizando en el orden de los veinte centavos de euros.*

## RESULTADOS

Los datos del Banco Mundial contienen una periodicidad anual, pero en el caso de los inventarios de GEI los distribuye en forma separada en: informe sobre emisiones de dióxido de carbono, Informe sobre informe sobre emisiones de gas metano (producido básicamente por la descomposición de los residuos sólidos urbanos) y otros gases de efecto invernadero, como los hidrofluorocarbonos (HFC), perfluorocarbonos (PFC) y hexafluoruro de azufre (SF<sub>6</sub>). Todos medidos en toneladas métricas de equivalente de CO<sub>2</sub>. En el caso del informe sobre emisiones de dióxido de carbono del Banco Mundial no

incluye el inventario del año 2011, el cual fue estimado a partir del inventario del año anterior incrementado por la tasa de crecimiento del PBI; el informe correspondiente al gas metano faltan los datos de los años 2001 a 2004 inclusive, 2006, 2007 2009 y 2011. Los restantes gases se encuentran en el informe sobre “otros gases de efecto invernadero” y los entre el año 2000 y el año 2011 se cuenta con datos de los años 2000, 2005, 2008 y 2010; los años faltantes fueron completados mediante aproximaciones lineales proporcionales.

Tabla N° 1: Relación Pbi-Gei

Año	PBI	GEI
2000	1	1
2001	0,9251978	0,99740901
2002	0,93121445	1,00425675
2003	1,05891126	1,03734976
2004	1,17884293	1,06860688
2005	1,19015387	1,07897327
2006	1,19738171	1,09711394
2007	1,28681	1,10860739
2008	1,39867886	1,11263608
2009	1,34693641	1,07422668
2010	1,40996688	1,11202755
2011	1,52261783	1,14052982

Figura N° 2 : Relación Pbi-Gei

La tabla PBI-GEI muestra el crecimiento de la economía de los países incluidos en el Anexo A del Protocolo de Kyoto. Es un PBI formado por los respectivos productos de los países ponderados por su participación asumida en la Convención Marco. Se puede observar que a partir de 2003 el nivel de producto aumenta más que el incremento de los GEI, lo cual está indicando la efectividad en la mejora de los sistemas productivos utilizados por los países industrializados. La misma relación es posible observarla en la tabla situada a la izquierda de la figura, donde figuran los datos incluidos en la figura.

Contrariamente a lo supuesto, el crecimiento de la subregión Países del Anexo A, tuvo un crecimiento continuo durante la mayor parte de la crisis, solamente en el año 2008 (de 2008 a 2009) muestra una recesión en su producto combinado; efecto que se observa también en la cantidad de emisiones producidas. Por su parte, para los precios de los productos principales de Kyoto, los Derechos de Emisión y los Certificados de Reducción de Emisiones, se tienen precios de mercado recién a partir de fines de 2007 a fines de 2012, Para realizar una comparación homogénea se tomaron los precios a cierre de cada año desde 2007 hasta 2012, quedando como sigue:

Tabla N° 2: Precios Productos de Kyoto

	EUA	CER
2007	1	1
2008	0,64130435	0,774156
2009	0,55652174	0,67636787
2010	0,60130435	0,70372526
2011	0,27173913	0,22118743

Figura N° 3: Precios Productos de Kyoto

La tabla N° 4 indica la relación existente entre los precios de los derechos europeos de emisión, denominados *European Allowance Units (EUA)* y los *Certificados de Reducción de Emisiones*. En primer lugar se observa un mercado paralelismo entre ambos instrumentos entre los años 2008 y 2010 en una franja de valor entre los € 14 y € 15. A partir de allí los precios en los mercados han tenido una marcada tendencia a la baja, llegando en términos nominales a un valor de € 0,15/0,20 los CER, su nivel más bajo desde el lanzamiento efectivo del PK.

No queda demostrada la hipótesis inicial postulada que la crisis mundial iniciada por los préstamos *subprime* hayan sensiblemente el precio de los CER en los mercados mundiales, solamente en el peor momento de la crisis (reflejado en el año 2008) cayó el PBI combinado y consecuentemente las emisiones de los gases de efecto invernadero. Otro dato interesante es el mantenimiento del precio durante la crisis y la posterior caída a partir del 2010. Una línea de investigación a seguir es el análisis de los proyectos presentados que comenzaron a generar CER desde esa fecha hasta el presente, con especial cuidado el análisis de China, el país con más cantidad de proyectos MDL presentados que representan al mayor proveedor de servicios de reducción a nivel mundial.

## CONCLUSIONES

Los mercados de carbono comenzaron a buen ritmo impulsado por las empresas y los fondos de carbono de los países europeos y el Japón, ya que les resultaba más conveniente reducir emisiones en economías más atrasadas y de esta forma evitar –o trasladar por un breve tiempo– inversiones cuantiosas para mejorar la tecnología y hacer amigables con el medio ambiente sus sistemas productivos. Entre los principales actores han aparecido discrepancias relacionadas con los derechos y obligaciones de los participantes, lo cual hace complejo el sostenimiento del actual sistema tal cual se encuentra planteado actualmente.

Tabla N° 3: Evolución de las Variables Estudiadas      Figura N° 4: Representación Gráfica de las Variables.

	PBI	GEI	EUA	CER
2007	1	1	1	1
2008	1,0869	1,0036	0,6413	0,7741
2009	1,0467	0,9689	0,5565	0,6763
2010	1,0957	1,0030	0,6013	0,7037
2011	1,1832	1,0287	0,2717	0,2211

La tabla N° 3 relaciona el desempeño de las variables involucradas en el estudio, si bien existen datos del P.B.I. y de los G.E.I. anteriores a 2007 –y de hecho fueron analizados–; en este apartado se comenzó a partir de dicho año porque recién a partir de 2007 se obtienen los datos de las cuatro variables involucradas: P.B.I. (Producto Bruto Interno), G.E.I. (Gases de Efecto Invernadero), E.U.A. (European Units Allowance) y C.E.R. (Certificado de Reducción de Emisiones). El desempeño observado en la tabla N° 3 se encuentra representado en la figura N° 4, donde es fácilmente observable como a pesar de aumentar el P.B.I. y la emisión de G.E.I., los precios de los certificados caen a precios cercanos a cero.

Pareciera ser que los precios se van a estancar en niveles insuficientes para desarrollar con ímpetu nuevos proyectos, por lo que debería consensuarse la participación de otros grandes emisores como los son los EEUU. Sin un consenso internacional fuerte y el compromiso de los grandes participantes, parece ser que el espíritu de Kyoto va perdiendo energía en la medida que no se llegue a nuevos acuerdos internacionales. El caso de los grandes emisores –por caso China, que cuando mejora su relación con el ambiente genera CER– debe estar en la agenda, ya que las principales potencias productoras del mundo no deberían ser consideradas como economías en desarrollo, pues solo consiguen deprimir los precios y dirigir las inversiones hacia los lugares desarrollados, incluso aquellos canales pensados para potencias emergentes.

## ANALIZANDO EL IMPACTO DE TWITTER EN CINÉPOLIS: UNA PROPUESTA DE MODELO

Juan Carlos Montes de Oca, Universidad Autónoma del Estado de México  
María del Rosario Demuner Flores, Universidad Autónoma del Estado de México  
Rodrigo Sandoval-Almazán, Universidad Autónoma del Estado de México

### RESUMEN

*Las empresas han adoptado plataformas de redes sociales para sus negocios pero se ha medido poco su impacto y estrategia. ¿Se trata únicamente de utilizar un canal de comunicación para hacer llegar sus promociones? ¿Se han adoptado nuevas formas de mercadotecnia con el uso de la social media? Para responder estas preguntas, hemos analizado las redes sociales usando Twitter para el caso de la empresa Cinépolis a través de un modelo teórico. Este trabajo describe ese modelo teórico y cómo llegamos a su construcción. Hemos organizado el contenido de la investigación de la siguiente forma: La primera sección describe el problema y el uso de las redes sociales virtuales, la segunda sección se refiere a la revisión de literatura e investigaciones previas en torno al uso de las redes sociales a nivel empresarial. La sección tres describe la metodología que hemos seguido para llegar al modelo, mientras la cuarta sección describe el modelo de análisis propuesto. La quinta sección presenta las conclusiones e investigaciones futuras.*

**PALABRAS CLAVE:** Redes sociales, Twitter, Cinépolis, Social Media, MKTwitter

## ANALYZING THE IMPACT OF TWITTER ON CINEPOLIS: A PROPOSED MODEL

### ABSTRACT

*Companies have adopted social networking platforms for their businesses but has little impact measured and strategy. Is there only to use a communication channel to get their promotions? Have taken new forms of marketing using social media? To answer these questions, we analyzed the social networks using twitter for the business case Cinépolis through a theoretical model. This paper describes the theoretical model and how we built it. We have organized the research content as follows: The first section describes the problem and the use of social networking, the second section deals with the literature review and previous research. Section three describes the methodology, while the fourth section describes the analysis model. The fifth section presents the conclusions and future research.*

**JEL:** M150, M190

### INTRODUCCION

Para Manuel Castells (2009): “La unidad de proceso productivo no es la empresa, sino el proyecto empresarial, representado por una red” (p.60). La práctica empresarial se ha transformado en una empresa en red, flexible, que comparte información y conocimiento para desarrollar más ventajas competitivas. Las viejas compañías que se encuentran en la mira de la nueva economía (Sandoval & Mendoza, 2010) son las compañías disqueras que cada vez venden más a través de medios digitales – teléfonos celulares y computadoras – o bien los medios de comunicación – prensa en especial – ven mermados sus ingresos

por el alto impacto que tienen los medios electrónicos – Internet – para transmitir, comentar y discutir información al minuto. De esta forma la empresa es solamente un punto de partida de una gran red de contactos, interacciones y múltiples redes y nodos que se integran entre sí. La hipermediación, donde miles o millones de clientes potenciales pueden acceder a productos alrededor del mundo, permite que los costos de publicidad y de cobranza disminuyan e incluso se pulvericen (Carr, 2000). Las empresas por su parte están cambiando su enfoque de comunicación y promoción, potenciando canales alternativos a la publicidad masiva tradicional, pues se están dando cuenta que los costes son mucho más bajos y la efectividad es más alta. Esto ocurre porque los trabajadores de las empresas han cambiado su forma de trabajo alentados por el uso de la tecnología de información y comunicación (Vázquez y Mández, 2009), estos empleados que están “conectados” o enlazados con otros de diferentes compañías, son los que mueven al mundo empresarial. Sus “relaciones interpersonales” crecen y se reproducen a través de las redes sociales, dado que hoy se pueden comunicar diariamente con sus proveedores, sus clientes y sus amigos o familiares, que a su vez recomiendan para que tengan otros contactos.

La Asociación Mexicana de Internet (AMIPCI) revela en su séptimo estudio sobre los hábitos de los internautas en México (2011) que acceder a las redes sociales se convirtió en la 4ª actividad online de los internautas mexicanos con un 61% del total y es la principal actividad de entretenimiento. 6 de cada 10 internautas mexicanos utilizan redes sociales; además el 60% lo hacen diariamente. La red más utilizada es Facebook teniendo el 39% mientras que Twitter ocupa la tercer posición con un 20%. Mientras que para Watson (2007) los grupos de interés más destacados y los de crecimiento más rápido son generalmente los políticos, los divertidos, o las grandes causas que están aprovechando el poder de las redes sociales para difundir sus ideas.

Si bien Twitter por definición es un servicio de microblogging, tiene características propias de los servicios de redes sociales como Facebook. Al igual que Facebook, posee una API abierta a cualquier desarrollador que quiera conectar su aplicación o sitio web con el servicio. La clave de Twitter son pequeños pedazos de información llamados Tweets. Cada Tweet o mensaje corto tiene 140 caracteres de longitud. (Twitter, 2011) Las estadísticas de Twitter muestran que existen más de 100,000,000 usuarios registrados y 460,000 nuevos registros diarios (Twitter, 2011) lo que nos hace suponer que en muy poco tiempo, alcanzará las cifras de usuarios registrados en Facebook que son de 800,000,000. (Facebook, 2011) En cuestión de publicidad y mercadotecnia, el 40% de los usuarios aceptan de buena forma la publicidad dentro de las redes sociales. (AMIPCI, 2011)

Esta nueva tendencia empresarial es el resultado de cambios sociales más profundos y estructurales que están ocurriendo en todo el mundo y que han sido producto de una tendencia social cada vez más profunda. Burson-Masteller (2011) publica una investigación en la revista Fortune que abarca a las 100 empresas más destacadas del mundo. A nivel regional, las empresas estadounidenses son las que hacen mayor uso de Twitter (72%), seguidas por las europeas (71%), las latinoamericanas (67%) y finalmente las asiáticas (40%). Para realizar el estudio se analizó el uso que las empresas hacen de Facebook, Twitter, YouTube y blogs corporativos. Los resultados indican que el 65% de las empresas de Fortune 100 hacen uso de cuentas en Twitter, 54% tiene páginas de admiradores en Facebook, 50% en canales de YouTube y 33% cuenta con un blog corporativo.

De acuerdo a cada plataforma, el uso de Facebook es menos intensivo en las empresas: 69% de las corporaciones estadounidenses tienen páginas de admirador, 52% de las europeas, 40% de las asiáticas y 33% de las latinoamericanas. En cuanto a YouTube, la lista se encuentra encabezada por las empresas estadounidenses: 59% tiene un canal en esta plataforma. Le siguen las empresas europeas (52%), las asiáticas (35%) y las latinoamericanas (33%). Respecto de los blogs corporativos el 50% de las corporaciones que tienen un blog se encuentran en el continente asiático, 34 son estadounidenses, 33% se ubican en Latinoamérica y 25% en Europa (Burson-Masteller, 2011).

Un estudio de la empresa Manpower revela que empresas como: Procter & Gamble, IBM, Nestlé, Best Buy y Capgemini, entre otras, están utilizando redes sociales para impulsar el rendimiento de la empresa y ampliar los objetivos corporativos, obteniendo múltiples beneficios como: mayor productividad y colaboración, eficiente gestión del conocimiento e innovación; también sugiere el manejo de la contratación, la alineación y compromiso de los empleados. El estudio de Manpower señala que el 54% de las empresas de Fortune 100 utilizan Twitter para comunicarse con los clientes y el 29% cuentan con una “página de fan” en Facebook (Manpower, 2012).

Burson-Marsteller (2009), sostiene que más de la mitad de las empresas de la lista Fortune 100 poseen cuentas en Twitter y de esas, dos tercios las utilizan para tareas de mejora de la productividad, como el servicio al cliente. En cambio, Deloitte (2009), menciona que el 23% de las empresas ya utilizan las redes sociales como ayuda a la hora de contratar. En México, de acuerdo a la encuesta aplicada a nivel mundial de Grupo Regus Business Track 2011, indica que el 52% de las Pymes hacen uso de las redes sociales, por arriba de la media mundial (40%) y 33% dedican presupuesto para esta actividad. En cambio, más de un cuarto de las empresas en todo el mundo (27%) han destinado parte del presupuesto de mercadotecnia, a las actividades en las redes sociales. (Regus, 2011). Este mismo estudio menciona que 12% de los encuestados en México usan las redes sociales para mantenerse en contacto con sus clientes, más que el promedio (58%). Y el 52% declaró que la principal utilidad de las redes sociales era la gestión y la conexión a grupos de clientes.

En México, el 63% de las grandes empresas usan las redes sociales para encontrar información útil y 56% usan principalmente las redes sociales para organizar, conectar y administrar grupos de clientes. En el segmento de empresas de tecnologías de información y comunicación (TIC), 22% han encontrado nuevos clientes a través de redes sociales más que la media mundial (40%). Un 11% más en el sector de las TIC que la media (27%) ha dedicado también parte del presupuesto a las redes sociales (Regus, 2011). Estos ejemplos demuestran el uso de las redes sociales en las empresas. Sin embargo, a pesar de esta evidencia, no conocemos con precisión el nivel de uso y las ventajas que han traído las redes sociales en la operación, costos y administración de las empresas. Por lo tanto, esta investigación busca aportar un primer esfuerzo en esta dirección que ayude a una mejor comprensión de este fenómeno. Para analizar el uso de las redes sociales virtuales se eligió como caso de estudio la empresa mexicana de servicios de entretenimiento cinematográfico: Cinépolis, cuya cuenta oficial en Twitter es @Cinepolis, que al día 30 de enero de 2012 tenía 285,956 seguidores; sigue a 22,574 personas, ha enviado 11,669 tweets, y contiene 3,824 listas.

## REVISION DE LA LITERATURA

Para iniciar esta investigación es necesario partir del concepto Web 2.0, que ha tenido varias interpretaciones y enfoques, por ejemplo desde el punto de vista económico, que se caracteriza por el uso del contenido generado por el cliente y el ingreso generado por el llamado: long tail (la suma de ventas pequeñas) (Anderson, 2008). Desde el punto de vista social, el Web 2.0 es visto como un canal de dos vías, donde los usuarios tienen la oportunidad de leer y escribir. Trata sobre las personas y las relaciones que ellos crean a través del uso del software (Wamelen y Kool, 2008). Mientras que desde la perspectiva tecnológica es una combinación de antiguos frameworks y lenguajes de programación, los cuales ya habían probado su valor y robustez de lenguajes como Javascript, CSS, XML y otras técnicas se combinan para crear y enriquecer la experiencia del usuario (Valerio (2010). Finalmente, el concepto más integral es el que propone Wilson (2011) quien define la web 2.0 a partir de una revisión de conceptos y de diversas teorías de la siguiente forma: “Web 2.0 refers to the second generation of the Web, wherein interoperable, user-centered web applications and services promote social connectedness, media and information sharing, user-created content, and collaboration among individuals and organizations”.

Posteriormente, una vez que entendemos que estamos trabajando dentro del marco de Web 2.0 un concepto más que se vincula directamente es la comprensión de las redes sociales que usan esta plataforma de tecnología para mejorar su conectividad, para definir las redes sociales en Internet, Valadés (2011) destaca que se trata de un servicio basado en Internet que permite a los individuos construir un perfil público o semi-público dentro de un sistema delimitado, articular una lista de otros usuarios con los que comparten una conexión, ver y explorar su lista de conexiones y de aquellas realizadas por otros usuarios dentro del sistema. Tim O'Reilly (2011) define a las redes sociales de la siguiente manera: “Social media are internet-based applications designed for use, development and diffusion through social interaction. Social media build on many of the same concepts and technologies of Web 2.0” (p. 65)

Existen muchos recursos que componen la Web 2.0, estos pueden clasificarse de acuerdo a su propósito: Redes sociales virtuales, Blogs, Wikis, podcast, foros, streaming de video, etc. (Laudon, 2010). Twitter por su parte se encuentra clasificado en las categorías de Microblog y Redes Sociales y es considerado un microblog, porque solo puede enviar 140 caracteres por mensaje. El microblogging es una práctica de comunicación relativamente nueva en donde las personas comparten información mediante mensajes cortos y en tiempo real (Castro, 2010).

En relación con Twitter, existen varios estudios acerca de los usos que se le están dando en el ámbito empresarial. Sandoval-Almazán et.al. (2012) precisa que Twitter es utilizado por las pequeñas empresas para realizar una vigilancia a sus competidores, buscar personal, generar nuevas ideas de productos y compartir información. Cobos (2010) sostiene que la clave para obtener y generar información en Twitter no solamente se limita a lograr un gran número de seguidores, sino de seguir a las personas adecuadas, ya que los usuarios de esta red producen una gran cantidad de información. Durán (2010) afirma que la tendencia en el uso de redes sociales es que se conviertan en herramientas dinámicas y corporativas, reemplazando incluso el uso de correos electrónicos.

Otra investigación sobre el uso del Twitter, revela que una de cada tres personas realiza un comentario sobre una empresa o algún producto (Jansen, Zhang, Sobel y Cowdury, 2009). Cuando la empresa involucrada da respuesta a ese comentario, se genera un proceso de participación entre empresa-clientes, por lo que esta herramienta se constituye como una poderosa fuerza de ventas. Qualman (2009) propone que la tendencia de mercadotecnia: “boca a boca”, sea conocida como la tendencia de ventas socialnomics, que usa las redes sociales para potencializar la recomendación personal entre los contactos y que fomente las ventas al interior de las redes personales y empresariales. Utilizando su potencial tanto para presionar a las compañías a ofrecer un mejor servicio u ofrecer sus productos a través de estas redes.

Martínez y Aldrich (2011) analizan el efecto de las redes sociales en las actividades empresariales, llegando a la conclusión de que el efecto dependerá de la intención por la que se generan las redes sociales, la tecnología con la que cuentan las empresas y el intercambio de información que están dispuestas a desarrollar hacia dentro y fuera de la organización. Miller, Besser y Sattler-Weber (2010) explican que el uso de redes sociales en las pequeñas y medianas empresas tienen un proceso gradual, ya que primero se crean, luego se retienen, después se extienden y por último se levantan en el uso de redes sociales. La rapidez del proceso depende de la apertura que tengan para informar y comunicarse. McDonnell y Shiri (2011) confirman esta tendencia, revelando además que el uso de las redes sociales tiene una evolución, comenzando con una simple navegación, llegando a obtener información para finalmente alcanzar una colaboración.

Abdul-Aziz y Wong (2011) van más allá, al investigar el efecto de las redes sociales para generar redes empresariales, constituyendo alianzas estratégicas para fortalecerse. Pedraza (2010) menciona que antes de comenzar a utilizar cualquier tipo de comunicación corporativa en una Red Social, se debe resolver un aspecto fundamental que es el de los objetivos que se pretenden alcanzar mediante su uso. Respecto al uso de las Redes Sociales como herramienta de marketing, Uribe (2010) menciona que las empresas la están

comenzando a utilizar pero todavía no está claro el uso específico, Castelló (2010) por su parte dice que las redes sociales se configuran como la herramienta del mundo del Internet más idónea para aquellas estrategias empresariales centradas en la orientación hacia el cliente. Kotler (2003) destaca la necesidad de que las empresas adecuen muchas de las estrategias de la vieja economía a la nueva forma de hacer negocios, ya que con la adopción de la Web en los negocios se transformarán todos los conceptos del cliente acerca de comodidad, rapidez, precio, información sobre productos y servicios.

La comunicación con los clientes y la publicidad son las principales, pero no las únicas formas que tienen las empresas para aprovechar las redes sociales como herramienta de marketing puesto que éstas pueden proveer de datos de comportamiento natural de los usuarios. Así, los perfiles y datos desde ellas pueden ser recolectados a través de técnicas automáticas o por medio de datos proporcionados directamente por la compañía, permitiendo a los investigadores explorar a gran escala patrones de amistad, uso y otros indicadores visibles (Hogan, 2008). Al respecto Clemons (2009) afirma que una de las formas más comunes del uso del Internet y las redes sociales como herramienta de marketing por parte de las empresas es la de realizar publicidad online. Uribe (2010) recopila algunos otros usos de las redes sociales en aspectos tan diversos de marketing como la construcción de reputación de marca y relaciones con los clientes, el branding o manejo de marca, para comunicarse con sus clientes y seguidores, para comercializar productos del mundo real en mundos virtuales, para la investigación y la medición de la satisfacción del cliente. En suma, los avances en la investigación de redes sociales tanto en su conceptualización como en su métrica apuntan a varios caminos de investigación. Este trabajo pretende impulsar uno de esos caminos aportando un modelo que pueda ayudar en esta medición.

## METODOLOGÍA

La investigación en Internet ha cambiado la forma de recolección de datos, procesamiento de la información, validación de datos y análisis de los mismos (Palvia et.al., 2004). La velocidad con que se actualizan los sitios web y la capacidad tecnológica para cambiarlos ha hecho más complicado aún el estudio en este campo (Estalella y Ardevol, 2011). Las redes sociales no son la excepción. Además de ser un fenómeno novedoso y poco estudiado, estas redes contienen datos, cifras en distintas modalidades – seguidores, siguiendo, tuits, posts, etc – que pueden ser explorados en forma integral o por separado (Sandoval-Almazán et.al., 2012). Esta investigación se enfoca en la red social de Twitter dentro de una empresa de entretenimiento. Para lo cual se hizo una investigación descriptiva, donde recolectamos los datos y los analizamos a partir de un modelo teórico.

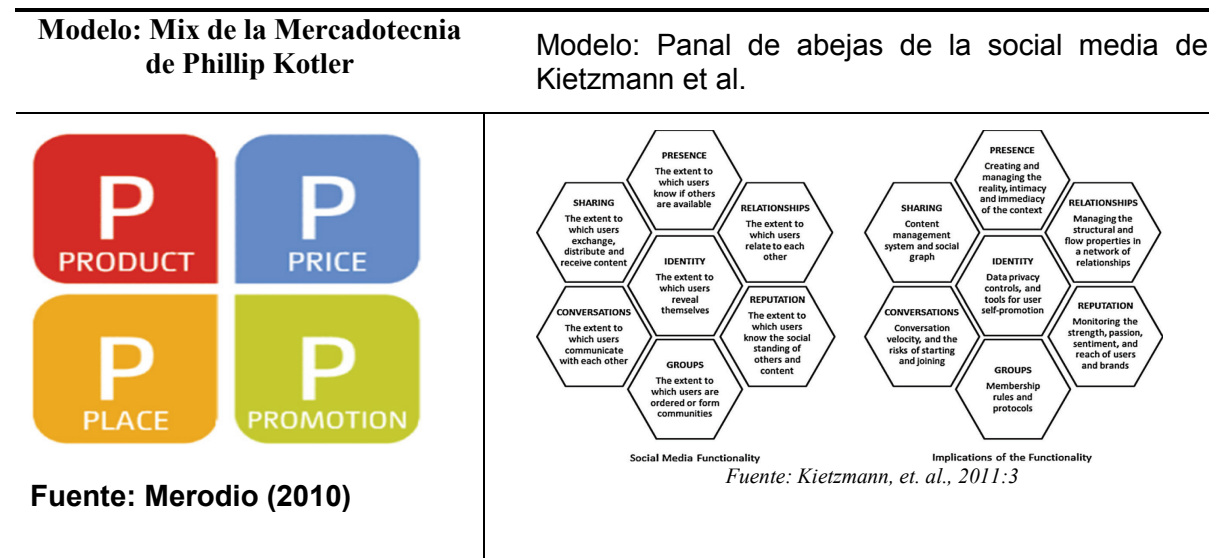

La investigación se llevó a cabo en dos fases: una primera etapa fue la recolección de los datos de la plataforma de redes sociales y una segunda fase fue el análisis de estos datos a partir de un modelo. Esta ponencia presenta los resultados de la segunda fase. El método que se siguió para esta fase fue: hacer una revisión teórica de los modelos para analizar redes sociales en las empresas, posteriormente seleccionar el modelo que fuera más cercano al caso de estudio, en este caso servicios de entretenimiento, aplicar los datos al modelo elegido y proceder al análisis para obtener las conclusiones.

En esta segunda fase se seleccionaron dos modelos (Fig. 1) de investigación para analizar los datos recabados: el primero fue el llamado Mix de la Mercadotecnia: modelo acuñado por Phillip Kotler que incluye y vincula los conceptos de Producto, Precio, Plaza y Promoción. Pero con la entrada de los canales 2.0 y el Marketing en Redes Sociales estás 4P han sido desplazadas por las 4C que son Cliente, Comunicación o Contexto, Costo y Conveniencia. El segundo modelo fue Panal de Abejas o modelo de siete bloques funcionales de la social media: propuesto por Kietzmann et al. (2011) conformado por 7 bloques de construcción (Identidad, Conversaciones, Intercambio, Presencia, Relaciones, Reputación y Grupos) que ayudan a comprender las necesidades de participación de la audiencia de los medios sociales. Ambos modelos son explicados en párrafos siguientes. Sin embargo, al hacer el análisis de los datos bajo estos dos modelos no se encontró una coincidencia satisfactoria en los resultados, por ello se procedió a

construir un modelo bajo la revisión de literatura previa, la experiencia de los investigadores en el tema y que se acercara mucho más a los datos y la realidad empresarial. Este resultado se muestra en la siguiente sección.

Figura 1: Modelos de mercadotecnia

*Mix de la Mercadotecnia (4 P's):* Modelo acuñado por Phillip Kotler (2003) que propone los conceptos de Producto, Precio, Plaza y Promoción; significa que un producto para tener éxito debía crearse, definirle un precio, ponerlo a la venta en el mercado y promocionarlo, evidentemente todo hecho de una manera eficaz. Cada categoría mantiene ciertas estrategias que a continuación se describen:

*Estrategias de producto:* Comprende actividades propias relativas a la unidad física, su empaque, garantía, servicio posterior a la venta, marca, imagen de la compañía, valor, entre otros.

*Estrategias de distribución plaza:* Refiere a todas las actividades de negocios involucradas en el almacenamiento y transporte de materias primas o productos terminados con el fin de cerciorarse que los productos lleguen en condiciones de uso a los lugares designados en el momento preciso.

*Estrategias de promoción:* Consiste en fomentar intercambios mutuamente satisfactorios con los mercados meta mediante la información, educación, persuasión, y recuerdo de los beneficios de una compañía o producto.

*Estrategias de precios:* Involucra actividades relacionadas con la determinación de un precio competitivo, que integre una ganancia para la empresa y un atractivo para el cliente.

*Mix de la Mercadotecnia (4 C's):* Con la entrada de los canales 2.0 y el Marketing en Redes Sociales estas 4P's han sido desplazadas por las 4C's:

*Estrategias de cliente:* Involucra actividades hacia producir lo que se vende, no vender lo que se produce. Los productos y la tecnología se cristalizan sólo si tienen relevancia para el mercado.

*Estrategia de comunicación:* Incluye actividades encaminadas a lograr una retroalimentación donde la comunicación permisiva, directa y bilateral.

*Estrategia de costo:* Actividades dirigidas a la valoración de componentes adicionales que afectan al consumidor como son un desgaste, tiempo invertido, costo psicológico, emocional, etc.

*Estrategia de conveniencia:* Considera el cómo llegar al cliente, independientemente de dónde se encuentre.

Panal de Abejas de la social media. También llamado modelo de siete bloques funcionales de la social media: Modelo propuesto por Kietzmann et al. (2011) conformado por 7 bloques de construcción que permite diferenciar las necesidades de cada usuario de acuerdo a la red social a la que se suscribe. Algunas organizaciones construyen sus propios contenedores sociales en donde tratan de vincular los siete bloques funcionales en torno a sus marcas.

*Identidad:* Atiende la necesidad de los usuarios por tener una identificación plena en la red social; incluye información tal como edad, género, profesión, ubicación, etc.

*Conversaciones:* Representa la medida en que los usuarios se comunican con otros a través de las redes sociales. Por ejemplo, Twitter se orienta más a las conversaciones que a la identidad.

*Intercambio:* Representa el grado en que los usuarios intercambian, distribuyen y reciben el contenido; al socializar se pretende intercambiar. Por ejemplo, Youtube, Flickr son utilizadas para compartir videos e imágenes respectivamente.

*Presencia:* Este bloque representa la medida en que los usuarios pueden conocer si otros usuarios están accesibles. Foursquare es el mejor ejemplo de cumplimiento a esta necesidad.

*Relaciones:* Representa el grado en el que los usuarios buscan relacionarse con otros usuarios. En algunos casos se busca una relación formal, regulada y estructurada como es el caso de LinkedIn.

*Reputación:* Es la medida en la que los usuarios identifican la posición de los demás. Puede ser medido en número de seguidores, número de menciones, etc.

*Grupos:* Representa la medida a la que los usuarios pueden formar las comunidades y las sub-comunidades. Ejemplo claro es Facebook al tener la capacidad de formar grupos con características en común y objetivos muy fijos.

Una vez estudiados los modelos se procedió a realizar una comparación de ellos. En la tabla 1, se puede observar el Mix de la mercadotecnia: 4P's y su evolución a 4C's, en donde la diferencia radica en que las 4C's ubican al cliente como principal pilar de la mercadotecnia, busca escuchar sus necesidades; mientras que el primer modelo genera productos sin saber las necesidades reales de los clientes. Ambos manipulan la publicidad, promoción, lealtad de marca y estudio de mercado. El modelo Panal de abejas, se centra en describir lo que los usuarios buscan al pertenecer a determinada red social. Centrada en satisfacer las necesidades de los clientes / usuarios. Sin embargo, rubros como la publicidad, la promoción y el estudio de mercado no son contemplados bajo la relación empresa-cliente.

### Propuesta de Modelo

Después de estudiar de manera teórica los dos modelos anteriores, y mediante un análisis de contenido con todos los Tweets objeto de estudio, se realizó la categorización en el bloque funcional correspondiente de acuerdo a cada modelo descrito. El resultado de estos análisis no fue completamente satisfactorio, ya que existieron mensajes que no pudieron ser categorizados en los rubros correspondientes, y se tendría que acudir a la Teoría Fundamentada (Glaser y Strauss, 1967) cuya esencia se traduce en desarrollar teoría que está enraizada en información sistemáticamente recogida y analizada – y que al ser un hallazgo de la investigación en el modelo estudiado, se pondría como complemento del mismo; esto debería ocurrir en ambos modelos estudiados. Se detectaron categorías diferentes que se decidió por realizar la propuesta de un modelo que las incluyera.

**Modelo de Ocho Estrategias de Social Media**, cuyas estrategias son:

*Atención al cliente:* Considera actividades tendientes a brindar una atención personalizada a los seguidores de las redes sociales.

*Atracción de seguidores:* Busca incrementar explícitamente el número de clientes potenciales en la red social.

*Presencia de marca / Lealtad:* Genera un posicionamiento o fuerza de la marca en la mente de los seguidores.

*Estudio de mercado:* La estrategia busca explorar los nichos de mercado, se obtiene información de seguidores, competidores y aliados.

*Colaboración:* Estrategia que difunde noticias del giro, busca generar trabajo en equipo, anuncia vacantes y mantiene un contacto con clientes, proveedores, colaboradores y entidades del medio. También se encarga de la labor social.

*Promociones:* Incluye acciones que incentivan la compra (promociones) específicamente para los seguidores de las redes sociales, lo que generará un “buzz” (marketing de boca en boca). Se manejan trivias, ofertas, concursos, promociones especiales.

*Publicidad:* Los seguidores están interesados en el tipo de información que la empresa ofrece, el tipo de producto que vende, las últimas noticias, los nuevos productos / servicios, eventos, lanzamientos, etc.

*Vinculación 2.0:* Las estrategias de marketing en la social media deben conjuntarse de manera integral, de tal forma que lo que se publique en una RSV, tenga coherencia y continuidad en las demás. Hemos revisado en apartados anteriores, que existen diferentes herramientas web 2.0 y cada una de ellas cumple

con propósitos específicos. Por ello, esta estrategia impulsa los clics de los seguidores hacia los demás recursos de la empresa en internet. Por ejemplo creando vínculos hacia la web, el blog, alguna otra red social, el correo electrónico, etc.

## CONCLUSIONES

No todas las Redes Sociales son iguales y deben manejarse de la misma forma, ya que a través del modelo de Kietzmann et al. (2011) de siete bloques funcionales nos dimos cuenta que cada una cumple expectativas de diferentes necesidades entre sus usuarios. Tampoco es posible utilizar modelos de mercadotecnia tradicional en la social media, ya que como se demostró en el análisis de la mezcla de la mercadotecnia, hoy existen prácticas que antes no figuraban, como bien lo apunta Kotler (2003): “Una porción cada vez mayor del marketing moderno está pasando del mercado al ciberespacio”. Las empresas de servicios en México han comenzado a utilizar las redes sociales para relacionarse con sus clientes, especialmente el caso estudiado permitió corroborar el uso de Twitter para vincularse con las propuestas, necesidades y expectativas de sus clientes; esto es, la empresa está realizando una estrategia de mercadotecnia para influir en su participación de mercado.

La ausencia de un modelo de análisis de usos y estrategias comerciales que pudiera adaptarse al caso de estudio, motivó esta investigación para formular una propuesta de modelo que aborda ocho categorías que condujeron a identificar las tácticas de Cinépolis en Twitter. Los resultados revelan que las Redes sociales se usan como nuevo canal de comunicación con el consumidor -principio que se mantuvo consistente en los tres modelos de análisis. Con esto se demuestra cómo las redes sociales virtuales permiten nuevas formas de estrategias empresariales, generando grandes cambios en la forma de marketing. Sin embargo, este estudio solamente tiene los resultados de una sola empresa en un tiempo determinado. Por lo tanto, no se pueden generalizar estas conclusiones a toda las empresas de entretenimiento o bien, a las empresas de servicio en México.

# UN ENFOQUE FRACTAL CON TÉCNICA WAVELET: ESTIMACION DEL COEFICIENTE DE HURST DE LOS ÍNDICES ACCIONARIOS DE LOS PRÓXIMOS PAÍSES INTEGRANTES DEL BRIC

Stephanie Rendón de la Torre, Universidad Nacional Autónoma de México

## RESUMEN

*En esta investigación se utilizan wavelets en la estimación del coeficiente de Hurst de los índices accionarios más importantes de cuatro países emergentes considerados como los próximos integrantes del grupo de economías BRIC: México, Corea del Sur, Turquía e Indonesia. Los objetivos son determinar: si existe o no comportamiento persistente de largo plazo en los mencionados índices, si bajo esta perspectiva debe considerárseles mercados emergentes o mercados maduros, evaluar sus características no lineales y fractales (si las hay), determinar si es posible estimar tendencias del comportamiento futuro de estos mercados con wavelets, conocer las aplicaciones de los resultados obtenidos, valorar la efectividad del método utilizado, delinear las posibilidades que existen para el estudio del análisis fractal, y finalmente proponer una línea de investigación viable que sea más concordante con la crítica al comportamiento aleatorio de precios y rendimientos de la Hipótesis de Mercado Eficiente.*

**PALABRAS CLAVE:** Wavelet, análisis fractal, coeficiente de Hurst, persistencia, mercado emergente.

## A FRACTAL APPROACH WITH WAVELET TECHNIQUE: HURST EXPONENT ESTIMATION OF STOCK MARKETS OF THE NEXT NEW BRIC COUNTRIES

### ABSTRACT

*This work uses wavelets in determining Hurst's coefficient of the most important stock indices of four emerging markets known as the next new economies that will compound the BRIC group: Mexico, North Korea, Turkey and Indonesia. The objectives are: to determine whether or not persistence behavior in the long run exists for these indices; if under this perspective they should be considered as emerging markets or mature markets, to assess the non-linear and fractal characteristics (if found), to verify if it is possible to estimate future tendencies using wavelet techniques, to assess the results and to find new possibilities for financial fractal analysis and to seek other alternatives under this investigation research line. Finally, this work proposes a research field more viable and in accordance with the criticism to the random walk and to the Efficient Market Hypothesis approach of markets.*

**JEL:** C58, G14, C02, C46

**KEYWORDS:** Wavelet, fractal analysis, Hurst exponent, persistence, emerging market

## INTRODUCCIÓN

El grupo de los once países que integrarán el nuevo grupo de países BRIC, según el banco de inversiones Goldman Sachs y su Presidente del Consejo de manejo de activos, el reconocido economista Jim O'Neill

(2005, 2011) son: Irán, Indonesia, México, Corea del Sur, Filipinas, Turquía, Nigeria, Vietnam, Pakistán, Egipto y Bangladesh. De acuerdo al entorno financiero global, hay otras fuentes que mencionan a estos países como futuros mercados emergentes fuertes, tales como banco BBVA, HSBC, Fidelity y en general la comunidad financiera. Para inicios del año 2011, la suma de los PIB de: Corea del Sur, México, Turquía e Indonesia suman el 73% del total de la suma de los PIB en conjunto de los 11 países mencionados; se determinó el coeficiente de Hurst de los índices accionarios más importantes de estos cuatro mercados emergentes mencionados: Para México se analizó el índice accionario IPC desde 1996- a agosto 2012, para Corea del Sur se analizó el índice KOSPI desde 1996- a agosto 2012, para Indonesia el JCI, desde 1996- a agosto 2012, y finalmente para Turquía se analizó el XU100, desde 1996- a agosto 2012. Las observaciones analizadas corresponden a precios diarios de cierres de mercado oficiales obtenidas de la plataforma de Bloomberg.

La finalidad de esta investigación es determinar si se encuentra comportamiento fractal y persistente en el largo plazo a partir de la técnica con wavelets como método de estimación del coeficiente de Hurst, es decir, evaluar si es posible realizar estimaciones y pronósticos del comportamiento futuro de los mencionados índices, cuyas economías cada vez son más importantes en el ámbito global y que en un futuro formarían parte del grupo de los BRIC, y si bajo esta perspectiva debe considerárseles mercados emergentes o mercados maduros, evaluar las características no lineales y fractales (si las hay), determinar si es posible estimar tendencias del comportamiento futuro de estos mercados con wavelets, conocer las aplicaciones de los resultados obtenidos, valorar la efectividad del método utilizado, bajo la lupa de esta investigación delinear las posibilidades que existen para el estudio del análisis fractal, así como encontrar alternativas a seguir en este planteamiento de investigación. El documento se divide de la siguiente forma: la segunda sección trata sobre la revisión literaria. La tercera sección describe la metodología empleada, la cuarta sección contiene los resultados, la quinta sección presenta las conclusiones, y la última sección presenta referencias.

## REVISIÓN LITERARIA

### Estudios Previos: Hipótesis de Mercados Eficientes

Hasta los años de los ochenta se creía que los mercados financieros eran impredecibles y totalmente aleatorios de acuerdo a la Hipótesis de los Mercados Eficientes (HME). En las últimas décadas, las teorías del caos han tenido un dramático impacto en el modelaje y el entendimiento de muchas disciplinas y cada vez se pone más atención en los conceptos tales como dimensión fractal, sistemas dinámicos no lineales, teorías caóticas, etc. Las siguientes características indican que los mercados de capitales son sistemas dinámicos no lineales, que no muestran distribuciones gaussianas y que no son descritas por la

HME (Peters, 1991): Existen correlaciones a largo plazo y patrones (efecto de memoria de largo plazo en los mercados); puntos críticos (erráticos) en los mercados bajo ciertas condiciones y a ciertos momentos; series de tiempo financieras que, en pequeños incrementos de tiempo, se verán de la misma forma y tendrán la misma estructura estadística (estructura fractal); entre más adelante en el tiempo analicemos, los pronósticos serán menos confiables (dependencia sensible a las condiciones iniciales); existen grandes cambios en los precios, y son mucho más frecuentes de lo que establece la teoría gaussiana; las observaciones reales son de naturaleza leptocúrtica, y las distribuciones de los cambios de precios no son normales. Diversos autores e investigadores de todo el mundo están encontrando evidencia de no linealidad y de memoria de largo plazo en los mercados utilizando técnicas de análisis fractal y de teorías del caos: Meese y Rose (1991), Peters (1991, 1994), Mandelbrot (1970), Chorafas (1994), Bayraktar, E., Poor, H., Sircar, K., (2004), Greene y Fielitz (1977), Cajueiro, D. O., Tabak, B. M. (2004), Anderson y Bollerslev (1997) así como Dacorogna, Olsen, Müller, Richardson y Pictet (2001) demuestran que han encontrado dependencia y persistencia de largo plazo así como distribuciones de colas pesadas en series de tiempo financieras en sus investigaciones, de hecho encontraron que la presencia de la dependencia a

largo plazo puede ser cuantificada por el exponente de Hurst y también prueban en otro estudio que el escalamiento de los incrementos de la varianza de un exponente  $H=0.50$  lleva a una equivocación en el intento de pronóstico de tendencia, y esto realmente cuestiona la validez de los modelos de valuación existentes.

### Wavelets

Una señal puede ser expresada como la suma infinita de senos y cosenos. A esto se le conoce como expansión de Fourier. La gran desventaja de la expansión de Fourier es que este tipo de análisis sólo tiene resolución en la frecuencia pero no en el dominio del tiempo, es decir, que aunque podamos determinar todas las frecuencias presentes en una señal no sabemos dónde se presentan éstas. En las últimas décadas se han estado investigando soluciones que podrían representar una señal en los dominios del tiempo y frecuencia al mismo momento de ocurrencia. El análisis por wavelets es probablemente la solución más reciente para esta problemática; el estudio de wavelets no tiene más de unos 30 años de investigación.

El enfoque de wavelets es utilizado en diversos tipos de análisis, entre otros: el análisis de señales, compresión de señales, métodos de elementos finitos, ecuaciones diferenciales, ecuaciones integrales, entre otras. También tiene aplicaciones en geofísica, biología, medicina y finanzas. Para efectos de esta investigación se mostrará la aplicación de ecuaciones wavelets en series de tiempo financieras. El análisis de Fourier sólo puede utilizarse para analizar series de tiempo del tipo estacionarias; para series no estacionarias (como las series de tiempo financieras) se aplica el análisis por wavelets.

Una wavelet es una función de estructura especial; generalmente una wavelet consiste en dos funciones, una de filtro de bajo paso y otra de filtro de alto paso. La función wavelet calcula las diferencias entre una predicción y el valor actual. Son similares a las transformadas de Fourier (que se representan por series de funciones seno y coseno) y son funciones que tienen movimientos oscilatorios (“wave = ola”) y que decaen a cierto número de desvanecimientos (“let = dejar, caer”) y estas dos características son las que hacen ideales a estas funciones para usarse como filtros que descomponen una señal en diferentes niveles de resolución (Mallat 1989). Las principales características de las wavelets que son útiles para el análisis econométrico en finanzas son que: a) Pueden ser usadas en el análisis de series no estacionarias.

b) Permiten localizar en el tiempo fenómenos específicos. c) Permiten obtener una buena aproximación de la señal original. Hay otras dos características que hacen posible la construcción de las wavelets y son la admisibilidad y la regularidad. La admisibilidad se refiere al término de “wave” que consiste en que la transformada de Fourier de una función decaiga a la 0 frecuencia, es decir el valor promedio en el dominio del tiempo debe ser 0, y es por eso que la función oscila. La regularidad hace referencia al desvanecimiento “let”, porque la función wavelet se suaviza en el dominio del tiempo y frecuencia y tendrá N momentos de decaimiento. Una función wavelet, oscila y se desvanece a N número de aproximaciones. La idea principal con el enfoque de poder representar tiempo y frecuencia de forma conjunta, tiene que ver con cortar la señal en partes y luego analizar esas partes por separado para obtener más información de los componentes de las frecuencias.

Cómo cortar la señal es el punto crucial para el análisis de transformadas wavelets, ya que existe el principio de incertidumbre de Heisenberg (1949), que en términos de procesamiento de señales establece que es imposible saber la frecuencia y el tiempo exactos de ocurrencia de la frecuencia en una señal, es decir, una señal no puede ser representada como un punto en el espacio de tiempo-frecuencia. Para cortar la señal tomando en cuenta el principio de incertidumbre mencionado, se utiliza la transformada wavelet, que usa una ventana modulada totalmente escalable; esta ventana se desplaza a lo largo de la señal y para cada posición se calcula el espectro. Este mismo proceso se repite muchas veces con una ventana más pequeña para cada ciclo. El resultado es un conjunto de representaciones de la señal de tiempo-frecuencia, todas con distinta resolución. El análisis de wavelets es como hacer un zoom de una fotografía (Valens

2004) en el que se tiene la foto del todo (escala larga), y se puede hacer un zoom a una pequeña sección para ver los detalles (pequeña escala). Ramsey, Usikov y Zaslavsky (1995) encontraron que hay evidencia clara de no-aleatoriedad en el índice S&P 500 por el periodo de años desde 1928-1990 utilizando wavelets para examinar dicho índice en diferentes escalas de tiempo; ellos concluyen que hay un cierto grado de estructuración en el índice, es decir, encontraron ciertos patrones posibles sólo a ciertas escalas, pero que revelan que el uso de wavelets es una buena herramienta que puede evidenciar pronósticos en las series de tiempo. El análisis por wavelets ha sido empleado para la estimación del coeficiente de Hurst por sus propiedades efectivas; la invarianza de escala y las propiedades de los procesos autosimilares pueden ser examinados eficientemente vía wavelets. Abry y Veitch (1998) diseñaron un estimador eficiente de  $H$  que llamaron Abry-Veitch DWM, utilizando las transformadas de Daubechies. Bayraktar, Poor y Sircar (2004) desarrollaron una metodología utilizando wavelets en la que estimaron el coeficiente de  $H$  del S&P 500 y encontraron que en ciertos periodos el índice resultó más persistente que en otros. Kaplan I. (2004) realizó un estudio utilizando funciones wavelets de Haar y Daubechies  $D_4$ , y análisis R/S sobre la determinación de  $H$  sobre acciones de la compañía americana IBM.

### Coeficiente de Hurst

El exponente o coeficiente de Hurst es un estimador numérico de la persistencia de una serie de tiempo; es un cuantificador del grado de las propiedades de memoria de largo plazo de un conjunto de observaciones. La razón por la que el exponente de Hurst es un estimado y no una medida definitiva es porque el algoritmo opera bajo la premisa de que las series de tiempo son fractales, lo cual no es enteramente cierto para todas las series de tiempo financieras ya que son fractales y también aleatorias, dependiendo del momento. Lo que hace valioso el uso del exponente de Hurst en el análisis financiero es que brinda una forma de clasificar las series temporales en términos de su predicción; da una medida de si los datos constituyen o no un paseo aleatorio (un movimiento browniano) o bien, para saber si existen patrones subyacentes que no son reconocibles a simple vista.

Cuando  $H=0.50$ , resulta un evento aleatorio puro ya que la serie presenta movimiento browniano tradicional; si  $H<0.50$  se trata de un evento con un comportamiento anti persistente o de reversión a la media, es decir si el movimiento anterior fue hacia una dirección, es probable que el siguiente movimiento será en dirección opuesta; si  $H>0.50$  indica un comportamiento persistente, muy posiblemente de naturaleza fractal y caótica, y por lo tanto con memoria de largo plazo. El valor de  $H>0.50$  implica que las observaciones no son independientes, sino que cada evento tiene una memoria de largo plazo. El pasado determina el presente; los eventos están interconectados. Esta es una aseveración interesante, se trata de proponer una correlación matemática entre el impacto del presente sobre el futuro.

Qian y Rasheed (2004) realizaron una investigación donde analizan por periodos de 4 años el comportamiento de los coeficientes obtenidos del coeficiente de  $H$  desde 1930-2004 del índice Dow Jones y encontraron, mediante el uso de redes neuronales, que en los periodos donde el coeficiente de  $H$  es más elevado, es más fácil predecir su tendencia que en los periodos donde  $H$  es más cercano a valores de 0.50. Hay autores que observan que los mercados emergentes presentan coeficientes de  $H$  por encima de 0.50, y los mercados maduros tienden a tener valores muy cercanos o iguales 0.50; Kwon y Oh (2012) realizan un análisis de varios mercados emergentes; Gursakal, Aydin, Gursakal y Tuzunturk (2009) realizan un estudio del coeficiente de  $H$  del índice Istanbul Stock Exchange y determinan que este mercado emergente presenta comportamiento fractal y persistente; Cajueiro y Tabak (2004) realizan un estudio de estimación del coeficiente de  $H$  a varios índices de mercados emergentes y encuentran que con el tiempo se están volviendo menos persistentes, a medida que el mercado se vuelve maduro.

¿Porqué aplicar análisis wavelets a los índices más importantes de los mercados emergentes, los que posiblemente próximamente serán llamados nuevos BRICS (Según Goldman & Sachs, Jim O'Neill (2011) y muchos otros analistas financieros? Porque se trata de mercados no maduros y hay diversos

autores (algunos ya se mencionaron líneas arriba) que soportan la teoría de que los mercados no maduros (emergentes) presentan coeficientes de H mayores de 0.50 (en general), y que al contrario los mercados maduros revelan (en general) conductas más cercanas a la aleatoriedad y son más difíciles de predecir, y posiblemente esto se deba a que los operadores de mercados maduros persiguen la estabilización del mercado, si un índice se va hacia arriba, los operadores querrán llevarlo en sentido contrario y viceversa, para realizar utilidades. De manera contraria, los mercados emergentes presentan el llamado “efecto manada”, que genera patrones de persistencia en el mercado y es común que existan operadores que persiguen la especulación en estos mercados, luego entonces el análisis del coeficiente de H podría aplicarse a la construcción de portafolios y gestión de riesgos.

## METODOLOGÍA

El programa que se utilizó para el cálculo del coeficiente de Hurst mediante la técnica de wavelets es BENOIT 1.2. El análisis wavelet que realiza el programa BENOIT 1.2 permite estimar el exponente de H y la dimensión fractal; analiza variaciones en la potencia al descomponer una serie de tiempo en un espacio de tiempo-frecuencia para determinar tanto los modos dominantes de la variabilidad y el modo en que éstos varían con el tiempo. Las wavelets permiten a las series de tiempo ser vistas en múltiples resoluciones. Cada resolución refleja una diferente frecuencia. Esta técnica toma los promedios y los diferenciales de una señal, los descompone y los transforma en un espectro.

Los algoritmos de wavelets trabajan sobre series de tiempo con valores que correspondan a potencias de dos (por ej. 4, 64, 128, 256...). Cada paso de la transformación de wavelet produce dos grupos nuevos valores: un grupo de promedios y un grupo de diferencias (con diferencias me refiero a los coeficientes de wavelets). Cada paso produce un grupo de promedios y coeficientes que son la mitad de tamaño del tamaño de los datos que la originaron. Por ejemplo: en una serie de tiempo que contiene 256 elementos, el primer paso producirá 128 promedios y 128 coeficientes. Los promedios entonces, se vuelven el dato inicial del siguiente paso (por ej. 128 promedios resultan en un nuevo grupo de 64 promedios y 64 coeficientes). Esto continúa hasta que queda un promedio y un coeficiente.

En esta investigación se utilizaron 4096 observaciones (1996-agosto de 2012) en cada serie de tiempo, es decir que  $n=4096$ , porque es la potencia resultante de elevar el 2 a su doceava potencia:  $2^{(12)}$ . Si se hubieran querido tomar más observaciones habrían tenido que ser  $n=8192$ , o bien  $2^{(13)}$  y en algunos índices, por ejemplo el de México (IPC) no existe tal número de observaciones de cierres de precio diarios, es por eso que para hacer el análisis sobre el mismo número de datos en cada serie de tiempo se utilizaron 4096 observaciones. El promedio y la diferencia de las series de tiempo se hacen sobre una ventana de valores. La mayoría de los algoritmos de wavelets calculan cada nuevo promedio y diferencia utilizando esta ventana sobre los datos iniciales. La potencia del coeficiente espectral de dos generado por la función wavelet refleja el cambio en la serie de tiempo a varias resoluciones.

El primer coeficiente refleja los cambios de más altas frecuencias. Cada coeficiente siguiente refleja menos cambios a frecuencias más bajas. La representación de una función wavelet arroja una expresión de multi-resolución de una señal con localización en el tiempo y en la frecuencia. Una función  $X(t)$  es descompuesta en una familia de funciones, llamadas wavelets. Las wavelets “padre” se integran a uno y se usan para representar una escala muy larga de componentes suavizadores de la señal, y generan los coeficientes de escalamiento y actúan como filtros de paso bajo. Las wavelets “madre” se integran a cero, representan las desviaciones de los componentes suavizados y actúan como filtros de alto paso. Cada wavelet está dada por el escalamiento y traslación de una función generadora, llamada “madre wavelet”, la cual oscila, tiene energía finita y media de cero (Ciftlikli, Gezer, 2010). La siguiente es la wavelet “padre”:

$$\Phi_{J,k} = 2^{-(J/2)} \Phi \left( \frac{t - (2^J)k}{2^J} \right) \quad \dots(1)$$

La siguiente es la wavelet "madre":

$$\Psi_{j,k} = 2^{-(j/2)} \Psi \left( \frac{t - (2^j)k}{2^j} \right), j = 1, \dots, J$$

$$\int \Psi(t) dt = 0$$

...(2)

$S$  = parámetro de escalamiento a la escala diádica  $2^j$ . Dada esta familia de funciones base, definimos la secuencia de los coeficientes que representan las proyecciones de la función observada en la base propuesta:

$$S_{J,k} = \int f(t) \Phi_{J,k}$$

...(3)

$$d_{j,k} = \int f(t) \Psi_{j,k}; j = 1, \dots, J \quad \dots(4)$$

Donde  $S_{J,k}$  son los coeficientes para la wavelet "padre" en su máxima escala, ( $2^J$ ), conocidos como coeficientes de suavización, y  $d_{j,k}$  son los coeficientes detallados obtenidos de la "madre" en todas las escalas desde la 1 a la  $J$  (máxima). Dados los coeficientes, la función  $f(t)$  se representa:

$$f(t) = \sum_k S_{J,k} \Phi_{J,k}(t) + \sum_k d_{J,k} \Psi_{J,k}(t) + \dots$$

$$\dots + \sum_k d_{j,k} \Psi_{j,k}(t) \dots + \sum_k d_{1,k} \Psi_{1,k}(t) \quad \dots(5)$$

La estimación del coeficiente de Hurst por el método de wavelet es mucho más acertada que otras metodologías (Preciado, Morris 2008) que sobreestiman la persistencia y no se comportan bien al examinar la persistencia en periodos cortos de tiempo. Para confirmar la validez de esta prueba se realizó una segunda estimación de  $H$  con el método de rango escalado: R/S diseñado por Mandelbrot (1970). El análisis R/S permite analizar sistemas dinámicos no lineales, que mantienen procesos de memoria larga, como es el caso de las series de tiempo financieras, y facilita el reconocimiento de las series como fractales. Previo a correr el análisis R/S, se filtraron los datos de las series de tiempo de los índices, para eliminar trazos de ruido blanco que pudieran distorsionar el resultado del coeficiente de  $H$  (se utilizó una herramienta que utiliza técnicas de wavelets para este filtrado), realizada con el software BENOIT 1.2. Después, se determinaron los coeficientes de  $H$  por periodos consecutivos de 4 años en todas las series para analizar brevemente el cambio de la potencia de  $H$  a través del tiempo en cada serie y para verificar cómo es que estos mercados emergentes van o no volviéndose más eficientes, o si en algún punto dejan de tener características fractales, y de si la persistencia es constante o no.

## RESULTADOS

Se realizó el análisis por wavelets de los mercados en comento para determinar el coeficiente de Hurst y se obtuvieron los siguientes resultados; (ver Tabla 1)

Tabla 1: Resultados Obtenidos de Cada Índice Accionario (Determinación de Coeficiente de Hurst y Dimensión Fractal)

Índice	Periodo	H obtenido por wavelets	DF	Observaciones originales	Puntos analizados	H obtenido por método R/S
IPC	1996-2012	0.613	1.387	4096	4096	0.572
KOSPI	1996-2012	0.573	1.427	4096	4096	0.565
XU100	1996-2012	0.604	1.396	4096	4096	0.569
JCI	1995-2012	0.615	1.385	4096	4096	0.595

De acuerdo a los resultados obtenidos en la Tabla 1, los cuatro índices presentan indicios de comportamiento fractal y una memoria de largo plazo. Los coeficientes  $H$  obtenidos mediante wavelets en todos los casos resultan mayores a 0.50, es decir, que hay un comportamiento persistente de las series de tiempo. Lo interesante es que en todos los casos se obtuvo un comportamiento persistente, siendo los índices más persistentes el de Indonesia con  $H=0.615$  y el de México  $H=0.613$ , con dimensiones fractales de 1.385 y 1.387, respectivamente. Fuente: Elaboración propia.

Para confirmar la persistencia se realizó una segunda estimación de los coeficientes de  $H$  con el método de rango escalado R/S y se filtraron los datos de las series de tiempo de los índices, para eliminar trazos de ruido blanco que pudieran distorsionar el resultado de  $H$ . En todas las series de tiempo estudiadas de Indonesia y México se obtuvo la mayor persistencia, igual que con el análisis fractal que emplea wavelets. Algunos autores como Peters (1991) o Díaz Mata (2006) mencionan que hay mayor o menor nivel de persistencia dependiendo de qué tanto el coeficiente de  $H$  se aproxime a 1. En el caso estudiado se observó, que en el índice de Indonesia hay una probabilidad del 57.2% (con wavelets) y de 59.5% (con R/S) de que si el último movimiento por cierto periodo, fue alcista, el siguiente también lo sea. En el IPC, se observó que hay una probabilidad del 61.3% (Wavelets) y 57.2% (R/S), en el KOSPI una probabilidad del 57.3% (wavelets), y 56.5% (R/S), y del XU100 del 60.4% (Wavelets) y del 56.9% (R/S) de que si el último movimiento fue alcista el siguiente también lo sea. Se obtuvo que los coeficientes de  $H$  estimados vía el método R/S resultaron ser menores que los estimados vía método wavelet; sin embargo, todos los resultados obtenidos dieron cifras por encima de 0.50, confirmando así la persistencia en todas las series. Con este análisis se obtuvo que la serie más persistente fue la del índice JCI.

Tabla 2: Coeficientes de Hurst Obtenidos con Wavelets Por Ciclos de Cuatro Años

Coeficientes de Hurst obtenidos (wavelets)				
Periodo en años	XU100	IPC	KOSPI	JCI
2009-2012	0.671	0.594	0.637	0.648
2005-2008	0.541	0.574	0.519	0.542
2000-2004	0.578	0.631	0.497	0.650
1996-1999	0.726		0.619	0.565
1994-1999		0.657		
1992-1995	0.704		0.627	0.830
1988-1991	0.728		0.618	0.826
inicio-1987			0.707	0.737

De acuerdo con Peters (1994) quien encontró ciclos de cuatro años para el S&P 500 y para el Dow Jones, se analizaron los coeficientes de  $H$  de cada índice por intervalos consecutivos de cuatro años para verificar qué tanto los índices se han vuelto más o menos persistentes con el tiempo. Fuente: elaboración propia

En la Tabla 2, se observa que en el XU100 (índice de Turquía) la persistencia más alta fue en el periodo de 1988-1991 donde  $H=0.728$ , o bien hay 72.8% de probabilidad de que si el último movimiento fue hacia cierta dirección el siguiente también lo sea. Para el IPC (México) el nivel más alto se registra en el periodo de 1994-1999 donde  $H=0.657$ ; o bien hay un 65.7% de probabilidad de que si el movimiento anterior fue hacia cierta dirección el que sigue también lo sea en esa dirección.

En el índice coreano se observa el nivel de persistencia más alto en el periodo inicial de su existencia con  $H=0.707$ ; es decir con un 70.7% de probabilidad de persistencia, y va disminuyendo conforme pasan los años hasta llegar a un 51.9% en el periodo de 2005-2008, y luego aumentar a un 63.7% en 2009-2012; y para el índice JCI de Indonesia sorprendentemente el nivel de persistencia fue altísimo en el periodo de

1988-1995 donde  $H=0.826$  y  $H=0.830$ , respectivamente, es decir, mas del 80% de probabilidad de que si el último movimiento fue alcista el siguiente también lo sea; y este mercado resulta ser el que más memoria a largo plazo registra, y también se puede apreciar que conforme transcurren los años  $H$  va disminuyendo. Una conclusión observable es que la persistencia no es constante, y forzosamente tendría que ver con periodos y ciclos dentro de las series de tiempo.

Al mencionar que se observó que la persistencia no es constante, se refiere a que la persistencia no es infinita y que tiene cierto periodo de duración, es decir, hay momentos en los que la persistencia es mayor que en otros. En el caso del KOSPI hay un caso de antipersistencia en el periodo de 2000-2004  $H=0.497$ . En todos los índices se observa una disminución de la fuerza de la persistencia a lo largo de los años; pero para el periodo de 2009-2012, el valor de  $H$  se incrementa de nuevo (en el caso del IPC y del XU100). En el JCI el valor de  $H$  es más variable, comienza con  $H=0.737$ , luego se incrementa a  $H=0.826$ , luego  $H=0.830$ , y después disminuye en el periodo de 1996-1999 hasta  $H=0.565$ , luego aumenta a  $H=0.65$ , y después vuelve a disminuir. Se observa una tendencia genérica de persistencia alta, seguida de otra tendencia de persistencia débil, y finalmente, la persistencia vuelve a aumentar; es decir, se observa la presencia de ciclos fractales.

## CONCLUSIONES

¿Porqué aplicar análisis fractal (determinación de coeficiente de  $H$  mediante wavelets) a los índices más importantes de los mercados emergentes, los llamados nuevos BRICS? Hay muchos trabajos de autores (algunos mencionados en esta investigación) que opinan que los mercados emergentes, resultan más persistentes, es decir guardan más memoria de largo plazo que los maduros. El análisis fractal ofrece una vía alterna de interpretación del comportamiento de las series de tiempo de los mercados y estos resultados se pueden aplicar en el diseño de portafolios y de gestión del riesgo. Los mercados emergentes son mercados que poseen gran potencial y que hay que tener en la mira y que para efectos del análisis fractal al ser inmaduros llegan a ser muy persistentes y por lo tanto hay un mayor grado de predicción que en otro tipo de mercados.

Podemos afirmar que se detectó comportamiento fractal y de memoria de largo plazo, porque se obtuvieron coeficientes de  $H$  mayores a 0.50 en los análisis realizados. En todas las secciones analizadas de las serie de precios de cierre diarios de los índices de: México, IPC desde 1996- a agosto 2012, Corea del Sur el índice KOSPI, Indonesia, el índice JCI, y Turquía el XU100 se obtuvieron  $H>0.50$ .

El análisis por medio de wavelets es confiable y para confirmar que la prueba con wavelets que se realizó sobre las series de tiempo de los índices fue válida, se aplicó un segundo análisis fractal con la metodología R/S (de rango escalado) y se filtraron las observaciones para retirar ruido blanco que pudiera distorsionar el estimado de  $H$ , es decir, eliminar todos aquellos datos que pudieran distorsionar el resultado. Los resultados obtenidos fueron coeficientes de  $H>0.50$  en todos los casos, lo que confirma que la técnica de estimación de coeficiente de  $H$  por medio de wavelets es efectiva.

En cuanto a la fuerza de la fractalidad de las series, los resultados de los coeficientes de  $H$  obtenidos con wavelets de estos mercados emergentes varían entre 0.573 y 0.615; como se mencionó en esta investigación se habla en la literatura financiera de que los mercados emergentes son más persistentes que los maduros y a medida que va transcurriendo el tiempo estos mercados se vuelven maduros y dejan de serlo (no es objeto de esta investigación la comprobación de dicha teoría), sin embargo, se observó en los resultados de la Tabla 2 que en todos los índices estudiados, la persistencia ha disminuido a través del tiempo, es decir, la fuerza de la memoria de largo plazo ha disminuido, sin llegar a ser aleatoria aún. Estos mercados se están poco a poco volviendo maduros (bajo la perspectiva del análisis fractal) porque a través del tiempo sus coeficientes de  $H$  están aproximándose a 0.50. Una conclusión observable que resulta es que la persistencia no es constante, es variable, y forzosamente tendría que ver con periodos y ciclos

dentro de las series de tiempo. La detección de esos ciclos, (saber cuándo termina uno y empieza otro, es otra pregunta de investigación que se abre a partir del presente trabajo).

El pasado determina el presente; los eventos están interconectados. Esta es una aseveración interesante, se trata de proponer una correlación matemática entre el impacto del presente sobre el futuro. Una aplicación de estos resultados sería en la construcción de portafolios y coberturas. Por ejemplo: un portafolio que consista en índices o acciones que comparten un determinado valor de  $H$  y analizar sus retornos. Si un índice en particular muestra que su coeficiente  $H$  disminuye frente a un determinado valor, la posición que se tiene en ese índice o acción debería evaluarse si debería cerrarse o viceversa. El análisis fractal podría coadyuvar en el análisis bursátil de tendencias, de gestión de riesgos y de diseño de portafolios. El planteamiento de una Hipótesis de Mercado Fractal como la que plantea Peters (1994) es una hipótesis muy interesante y a la fecha poco explorada. La HME debe ser replanteada y es precisamente la naturaleza fractal de las cosas, del mundo, del universo mismo, la que obliga a replantear este sendero como una alternativa de investigación y a continuar la búsqueda en la experimentación y la construcción de modelos que verdaderamente se apegue a los hechos reales y no únicamente a las teorías, y éste trabajo habrá sido exitoso si es que estimula la investigación de estos u otros mercados y de esta línea de investigación. La propuesta es encontrar nuevos modelos que sean más acordes con la crítica al comportamiento aleatorio de precios y rendimientos y reconocer la existencia de la naturaleza fractal en los mercados.

# POTENCIAL RECAUDATORIO Y FORTALECIMIENTO DE LA AUTONOMIA FINANCIERA DE LOS GOBIERNOS ESTATALES EN MEXICO

Manuel Díaz Flores, Universidad Autónoma de Aguascalientes  
Roberto González Acolt, Universidad Autónoma de Aguascalientes

## RESUMEN

*El presente trabajo forma parte de un proyecto de investigación más amplio que revisa diversos aspectos del Sistema Nacional de Coordinación Fiscal desde la perspectiva de las fuentes de ingresos de las Entidades Federativas y sus Municipios de México. El objetivo es medir el potencial que cada una de las entidades federativas tiene en la recaudación de impuestos considerando que es una de las fuentes de ingresos más importantes. La medición se hace considerando que metodológicamente es correcto tomar como base de la recaudación que las entidades federativas hacen de los dos impuestos más importantes el Impuesto al Valor Agregado (IVA) y el Impuesto sobre la Renta (ISR) aunque este ingreso no se quede en su localidad. Con la finalidad de analizar su comportamiento regional se toma la clasificación de las regiones de México que hace el Instituto Nacional de Estadística Geografía e Informática (INEGI). Las relaciones y diferencias entre las diversas regiones se hacen a través de un Modelo de Regresión Lineal. Los resultados muestran que existe en México un mapa regional de potencial recaudatorio sumamente desigual que tiene en su base el escaso desempeño recaudatorio de la mayoría de las entidades federativas. Lo anterior plantea importantes desafíos a un nuevo diseño de un Sistema Nacional de Coordinación Fiscal que pretenda combinar la equidad con la responsabilidad fiscal de las 32 entidades federativas. Así también, los resultados que aquí se presentan plantean la interrogante sobre la posibilidad de concebir la descentralización fiscal más por regiones que de manera individual.*

**PALABRAS CLAVES:** potencial recaudatorio, descentralización fiscal, autonomía financiera.

## COLLECTION POTENTIAL AND STRENGTHENING FINANCIAL OF MEXICAN STATES

### ABSTRACT

*This paper is part of a larger research project which reviews various aspects of the National System of Fiscal Coordination for improving the revenues of the States and their Municipalities in Mexico. The aim is to measure the collection potential of the 32 Mexican States by considering these taxes is the most important source of their revenues. The methodological assumption is that the state administrative cooperation in the collection of the two most important federal taxes, the value added tax (VAT) and Income Tax (ISR), reflects the collection potential although only one part of these funds raised can stay in their territory. In order to analyze their behavior it has taken the regional classification that was made by the National Institute of Statistics, Geography and Informatics (INEGI). The relationships and differences between regions were made through a Linear Regression Model. The results show that in Mexico there is a regional map of highly unequal revenue potential due to low collection of the most part of States. These results pose important challenges to a new design of a National System of Fiscal Coordination for combining equity with fiscal responsibility of the States. Additionally, the results presented here raise the question about the possibility of designing fiscal decentralization by region rather than for each State individually.*

**KEYWORDS:** Taxes, collection potential, fiscal decentralization, financial autonomy.

## INTRODUCCION

La debilidad de los ingresos propios de los gobiernos estatales y municipales ha sido un tema que ha estado presente en la agenda nacional en materia de relaciones fiscales intergubernamentales y finanzas públicas en México. Diversos estudios han mostrado que existe un alto grado de dependencia financiera respecto de los recursos federales ya que de cada peso que se recauda la federación se queda en promedio con 80 centavos, los estados con 16 y los municipios con 4 centavos. La finalidad es contrastar entre ingresos que provienen de la federación y aquellos que se recaudan en los propios territorios de las diversas localidades del país. Como se podrá constatar son más importantes aquellas que están vinculadas con los recursos federales lo cual se explica por el alto grado de dependencia que se ha ido profundizando a medida que se incrementan estos fondos federales. Sin embargo, también es importante tomar en consideración que estos recursos, aún cuando se clasifican como federales, se generan en cada uno de los territorios de los diversos Estados del país que conforman la Federación.

En este trabajo se muestra la dinámica recaudatoria de cada uno de los 32 Estados, así como su desempeño a nivel de las 5 regiones en las que se divide el país. La recaudación está referida solamente a los dos impuestos más importantes: el Impuesto Sobre la Renta (ISR) de Personas Físicas y Morales y el Impuesto al Valor Agregado (IVA) los cuales en conjunto representaron alrededor del 85% de la contribución impositiva total en el país de acuerdo a la Ley de Ingresos de la Federación para el Ejercicio Fiscal 2011. Como bien se sabe, esta recaudación se lleva a cabo mediante un Convenio de Adhesión al Sistema Nacional de Coordinación Fiscal y otro más de Colaboración Administrativa en Materia Fiscal entre cada Estado y la Federación. Estos instrumentos permiten que los Estados se conviertan en Agencias Recaudadoras del Gobierno Federal a cambio de incentivos económicos.

Con este ejercicio queda de manifiesto la importancia de tomar en cuenta esta diversidad de capacidad contributiva de las regiones y estados en la implementación de medidas orientadas a una descentralización fiscal de este Sistema Nacional de Coordinación Fiscal tan concentrado. Avanzar hacia un federalismo fiscal subsidiario, cooperativo pero responsable implica clarificar el esfuerzo fiscal que cada región y estado hacen, por lo que deberá ser compensado para que el sistema federal en su conjunto funcione sobre bases y mecanismos más transparentes en la captación y asignación de recursos. Con esta finalidad se implementó un modelo econométrico que da cuenta de las principales tendencias de la recaudación federal a nivel regional y estatal, tomando como punto de comparación el estado de Aguascalientes y la región Centro Occidente. La hipótesis de trabajo considera que la contribución de estos dos impuestos ISR e IVA, dependen del dinamismo del Producto Interno Bruto Estatal y Regional.

De ahí que los estados y regiones con economías más dinámicas, aportarán mayores recursos a la federación y en cambio las que se encuentran en una situación contraria serán aquellas que están subsidiadas por las que tienen un mayor desempeño económico. Lo anterior, implica no solamente un problema de equidad en la asignación de los recursos y responsabilidades fiscales, sino la necesidad de diseñar un federalismo fiscal capaz de promover los equilibrios regionales que se requieren en todo el territorio nacional. Sin embargo, esta última parte queda solamente sugerida ya que estos resultados son solamente elementos a tomar en cuenta en una propuesta más amplia que retome la problemática específica de cada una de las regiones.

## REVISION LITERARIA

Se parte de la revisión que autores clásicos hacen sobre el federalismo fiscal, sobre todo aspectos que están referidos a la problemática que implica la descentralización fiscal (Oates 1972). En México, uno de los trabajos pioneros sobre la descentralización fiscal de las haciendas municipales de nuestro país es (Cabrero 1996) en el cual se hace un estudio comparativo del desempeño de las finanzas públicas de 6

municipios urbanos de México y se plantea la necesidad de modernizar su gestión hacendaria para obtener mejores resultados en espera de políticas más profundas que modifiquen las relaciones hacendarias intergubernamentales. Existe una serie de trabajos que de alguna manera establecen el marco general ya que abordan los aspectos centrales que es necesario transformar de manera profunda y que forman parte de las debilidades del Sistema Nacional de Coordinación Fiscal (Giugale-Webb (2000). En este sentido Astudillo (1999) muestra que el total de recursos que el gobierno central transfiere a estados y municipios equivale a la mitad de la recaudación nacional de los dos impuestos más dinámicos que son el al Valor Agregado (IVA) y el Impuesto Sobre la Renta (ISR).

Sampere (1998) propone que los estados y municipios se queden gradualmente con una parte de la recaudación del Impuesto Sobre la Renta de Personas Físicas por ser un impuesto que tiene menos movilidad y de acuerdo a la teoría del federalismo fiscal más factible de administrar por estos ámbitos de gobierno. Díaz (2003) diseña algunos escenarios en donde el Sistema Nacional de Coordinación Fiscal va cediendo recursos a los estados y los municipios dejando parte de la recaudación por concepto del IVA e ISR en los gobiernos locales, promoviendo así una mayor responsabilidad fiscal y fuentes de ingresos más robustas, además de transparentes y más sencillas de actualizar. Sin embargo, para la instrumentación de estas propuestas se requiere un trabajo más sistemático y diferenciado sobre la modernización de las instituciones, normas, recursos humanos y sistemas administrativos con que cuenta los municipios para hacer frente de manera exitosa a estos retos. Cabrero y Orihuela (2002) presenta ya un análisis de las finanzas en municipios urbanos de México mediante una clasificación de acuerdo a su población y en esta muestra, aunque más reveladora de lo que pasa en las grandes ciudades, se advierte que estos Ayuntamientos tienen mejores estructuras financieras y por tanto haciendas más fortalecidas en contraste con las pequeñas ciudades o municipios rurales que tienen mayores rezagos. En este contexto se circunscribe el presente trabajo el cual retoma parte de esta metodología de Cabrero y Orihuela y con una muestra más amplia presenta un diagnóstico de las tendencias financieras que los municipios de México han tenido recientemente.

## METODOLOGIA

A continuación se muestra la clasificación regional realizada por el INEGI en la cual se agrupan las 32 Entidades Federativas de México.

*Región 1: Centro-Occidente:* Aguascalientes, Colima, Guanajuato, Jalisco, Michoacán, Nayarit, Querétaro, San Luis Potosí y Zacatecas

*Región 2: Centro:* Distrito Federal, Hidalgo, México, Morelos, Puebla y Tlaxcala.

*Región 3: Noreste:* Coahuila, Durango, Nuevo León y Tamaulipas.

*Región 4: Noroeste:* Baja California, Baja California Sur, Chihuahua, Sinaloa y Sonora.

*Región 5: Sur-Sureste:* Campeche, Chiapas, Guerrero, Oaxaca, Quintana Roo, Tabasco, Veracruz y Yucatán

La hipótesis de trabajo en los ejercicios de regresión lineal realizados considera que las entidades federativas y/o regiones que tienen un mejor desempeño en la recaudación de estos dos impuestos en su territorio, serían aquellas con mayor viabilidad para hacer frente a un proceso de descentralización fiscal en el país. En cambio, las que muestran un bajo desempeño en este tipo de recaudación no tendrían posibilidad de asumir las responsabilidades tributarias que implica este proceso debido a su bajo dinamismo económico en su territorio. Para llevar a cabo este ejercicio se tomaron los datos de la recaudación del ISR y el IVA, en el periodo 1993-2006 y se deflataron las cifras con el Deflactor

Implicito del PIBE por Entidad Federativa, de tal forma que las regresiones se corrieron tomando en cuenta los valores reales y también en logaritmos para calcular las tasas de crecimiento de la recaudación.

## RESULTADOS

El Distrito Federal ocupa el primer lugar en recaudación con un 18.5% de incremento anual promedio durante el periodo considerado en contraste con el estado de Nayarit que se ubica en el último lugar con un 12.5% de incremento promedio anual en su recaudación federal total. En este ejercicio se tomó el Estado de Aguascalientes como punto de comparación y se observa que en la recaudación de impuestos ocupó el lugar 18 de las 32 entidades federativas, muestra un menor dinamismo recaudatorio en ISR que compensa con el IVA que le permite subir 5 lugares. Lo anterior contrasta con los recursos federales que recibe de la federación a través del Fondo General de Participaciones en donde ocupa el lugar 26, con un incremento del 13.2% promedio anual durante el periodo.

Esta información presenta un mapa de la generación y recolección de los impuestos en México así como la redistribución de los recursos en el Sistema Federal Mexicano. Por tanto, las entidades que aparecen en los primeros lugares son las que aportan mayores recursos para el Fondo General de Participaciones federales aunque no siempre son las beneficiarias de lo recaudado dado que hay otras que son subsidiadas o salen favorecidas por el sistema de distribución establecido. El reto es la implementación de incentivos que premien a las más dinámicas su esfuerzo fiscal y promuevan la actividad económica en las zonas más rezagadas. Implica también importantes desafíos a la descentralización fiscal, ya que si consideramos el Estado de Aguascalientes como un punto medio, 14 entidades federativas tendrían bajas posibilidades de ser exitosas en un esquema descentralizado dado su nivel de recaudación federal. Aunque el diseño de esta política tendría que tomar en cuenta que la recaudación del IVA es la que muestra más dinamismo pero hay menos entidades en el rango, 13 incluyendo el estado de Aguascalientes y en cambio en el ISR serían 20 las que muestran ventajas en la recaudación de este impuesto. Por otra parte, es precisamente este impuesto el que tiene mayor viabilidad de cobrarse en los territorios por su baja movilidad, sin embargo es el que presenta un menor dinamismo. Esto podría complicar todavía más un esquema de descentralización fiscal.

## CONCLUSIONES

La debilidad de los ingresos propios de los estados está relacionada con el bajo potencial recaudatorio de los impuestos estatales ya que de acuerdo al diseño del Sistema Nacional de Coordinación Fiscal la Federación tiene la potestad tributaria para recaudar los de mayor potencial. En el caso de los municipios el Impuesto a la Propiedad Inmobiliaria es una fuente de recursos importante. Sin embargo, ante la gran diversidad municipal, solamente los municipios metropolitanos y algunos urbanos medios han podido ejercer esta facultad. La recaudación federal del ISR y el IVA muestran un mapa nacional del desempeño que cada economía estatal tiene, sin embargo el gran reto es abordar el tema de la descentralización fiscal para fortalecer los ingresos propios de las entidades federativas desde un punto de vista regional y no de manera individual. Ya que un federalismo fiscal con una base tan desigual como el Mexicano siempre tendrá problemas en el momento de empatar la responsabilidad fiscal con la equidad.

## RESUMEN

*A través de la globalización, las organizaciones han tenido que enfrentar su supervivencia, independientemente del giro, tamaño y naturaleza de las mismas, afrontando una serie de retos y cambios de diferente índole. El Clima Organizacional es un tema de gran relevancia para las instituciones que buscan continuamente mejorar el ambiente de su organización, para así alcanzar un aumento en la productividad, ser competitivas y tener éxito, sin perder de vista el capital humano.*

*El objetivo de este estudio corresponde a la fundamentación teórica de un proyecto de investigación, cuyo propósito es identificar los factores que determinan un clima organizacional en las pequeñas empresas de la industria metal – mecánica. La metodología utilizada es de carácter documental efectuada mediante una revisión literaria analizando contenidos de artículos de revistas científicas, investigaciones, libros de texto, tesis de maestría y doctorales, así como de las teorías relacionadas, que permita identificar indicadores de clima organizacional. Los resultados en la presente investigación, muestran que son múltiples los factores involucrados en el clima organizacional, y para poder medirlos el instrumento a utilizar es el Modelo de Weisbord, el cual se adapta a las características de las Pequeñas empresas en la industria metal-mecánica de Monclova, Coahuila, México. Para darle continuidad a la investigación se está trabajando en la aplicación del cuestionario a los trabajadores.*

**PALABRAS CLAVE:** Clima organizacional, Cultura organizacional, Desarrollo Organizacional

## ORGANIZATIONAL CLIMATE FACTORS OF SMALL BUSINESS

### ABSTRACT

*Through globalization, organizations have faced their survival, regardless of the rotation, size and nature of them, facing a series of challenges and changes of various kinds. The organizational climate is a big issue for institutions seeking to continually improve the environment of your organization in order to achieve an increase in productivity, be competitive and successful, without losing sight of the human capital. The objective of this study is the theoretical fundamentation of a research project whose purpose is identifies the factors that determine an organizational climate for small businesses in the metal – mechanical industry. The methodology used is documentary made by a literature review analyzing contents of journal articles, research, books, dissertations and doctoral as well as related theories, to identify indicators of organizational climate. The results in this investigation, which found multiple factors involved in the organizational environment, and to measure the instrument to use is the Weisbord Model, which adapts to the characteristics of small businesses in the metal-mechanics of Monclova, Coahuila, Mexico. To give continuity to the research they are working on the questionnaire to workers.*

**KEYWORDS:** Organizational Climate, Organizational Culture, Organizational Development

## INTRODUCCIÓN

El Clima Organizacional se refiere a la percepción del entorno laboral de la organización, desde el punto de vista de sus trabajadores. A través de él se ve el impacto que las políticas y la toma de decisiones tienen en el personal que labora en la empresa. Al ser el capital humano un elemento de gran importancia para incrementar la productividad y por lo tanto ser competitivos, es vital identificar los factores que determinan el clima organizacional. El análisis del clima organizacional es común en las grandes empresas, principalmente en países desarrollados, ya que influye en un eficaz desempeño de la organización y dada la importancia que las pequeñas empresas tienen en el desarrollo económico en particular de la región, la presente investigación se centra en la identificación de los factores del clima organizacional en las pequeñas empresas de la industria metal-mecánica. En la primera parte, se incluye la revisión literaria efectuada, para continuar con la metodología a seguir y por último las referencias y datos biográficos de las autoras.

## REVISIÓN LITERARIA

Litwin y Stringer (1968) fueron los primeros autores en conceptualizar el clima organizativo bajo la perspectiva perceptual. Para ellos, el clima es un conjunto de propiedades del entorno de trabajo que son susceptibles de ser medidas percibidas directa o indirectamente por los trabajadores que vive y trabaja en dicho entorno y que influye en su comportamiento y motivación. La teoría de Litwin y Stringer (1968) intenta explicar importantes aspectos de la conducta de los individuos que trabajan en una organización utilizando los conceptos como motivación y clima. Los autores tratan de describir los determinantes situacionales y ambientales que más influyen sobre la conducta y percepción del individuo, según menciona Acosta y Venegas (2010).

Las definiciones de clima organizacional se describen en función de los modelos y métodos de medición adoptados por los autores e investigadores que se han ocupado del tema. De acuerdo con una revisión bibliográfica de la definición de clima organizacional que hacen autores como Francis Cornell (1955), Argyris (1957), McGregor (1960), Forehand y Gilmer (1964), McClelland y Atkinson (1968), Litwin y Stringer (1968), Campbell, et al. (1972), Schneider y Hall (1975), Gibson, et al. (1984), estos autores son estudiados y referenciados por Álvarez (1992) entre otros, surgen algunas conclusiones acerca del concepto de clima organizacional, el cual se refiere principalmente a las actitudes, valores, normas y sentimientos que los sujetos perciben que existen o conciernen a la institución en la cual participan... El clima organizacional es un efecto de la interacción de los motivos íntimos del individuo, de los incentivos que le provee la organización y de las expectativas despertadas en la relación... está integrado por las características que describen a esa organización y que la diferencian de otras... e influyen sobre el comportamiento de la gente involucrada en esa organización (Álvarez, 1992, pp. 27-30). Mientras, Isaksen & Ekvall, (2007) definen el Clima Organizacional, como patrones recurrentes de los comportamientos, actitudes y sentimientos que caracterizan la vida en la organización.

Para Goncalves (2002), un elemento fundamental del clima organizacional son las percepciones que el trabajador tiene de las estructuras y los procesos que ocurren en el medio laboral. Estas percepciones dependen de las actividades, interacciones y otra serie de experiencias que cada miembro tenga con la empresa. Al respecto, Toro (2001) plantea que la percepción es tan relativa que puede ser vista de manera diferente por la gerencia, por el sindicato, por los empleados y aun por los clientes. Incluso, dentro de la misma empresa la percepción varía según el área funcional, la antigüedad, el nivel educativo y el sexo. Moreno (1998) reporta que en investigaciones actuales hechas por Halpin y Crofts, Litwin y Stringer, y Schneider y Bartlett, estos autores señalan algunas propiedades del clima organizacional que se pueden resumir en: percepción de satisfacción de necesidades personales (desde las fisiológicas hasta las de realización), percepción de atmósfera de apoyo con jefes y compañeros, percepción sobre que los jefes saben dirigir, estructura de la organización (reglas, reglamentos, papeleo y restricciones), autonomía, y recompensas adecuadas y equitativas.

La formación del clima es uno de los aspectos más importantes para su comprensión, así mismo DeStefano, et al (2005) menciona que los enfoques planteados para explicar este aspecto del clima se estructuran a partir de la taxonomía utilizada para clasificar las definiciones sobre el clima.

- a) Enfoque estructural. El clima organizacional se describe como el conjunto de características permanentes que definen a una organización, la distinguen de otra, e influyen en el comportamiento de las personas que la conforman.
- b) Enfoque subjetivo o perceptual. El clima es un proceso psicológico que describe las condiciones de la organización. Son las características de los individuos las que determinan las percepciones del clima.
- c) Enfoque interactivo. Se refiere a la interacción de los individuos como respuesta dada a las situaciones objetivas y compartidas de la organización.

El clima organizacional es el medio ambiente en el que se desarrollan las actividades cotidianas de los trabajadores y directivos. Influye en la satisfacción y por lo tanto en la productividad. Está relacionado con los comportamientos de las personas, con su manera de trabajar, con su interacción con la empresa, con el equipo que utilizan y con las actividades que le corresponden a cada uno. La cultura y políticas que se proporcionan a los trabajadores por parte de los directivos es lo que propicia un terreno adecuado para un buen clima organizacional, así como su mejora constante. Mientras que un "buen clima" se orienta hacia los objetivos generales, un "mal clima" destruye el ambiente de trabajo ocasionando situaciones de conflicto y de bajo rendimiento.

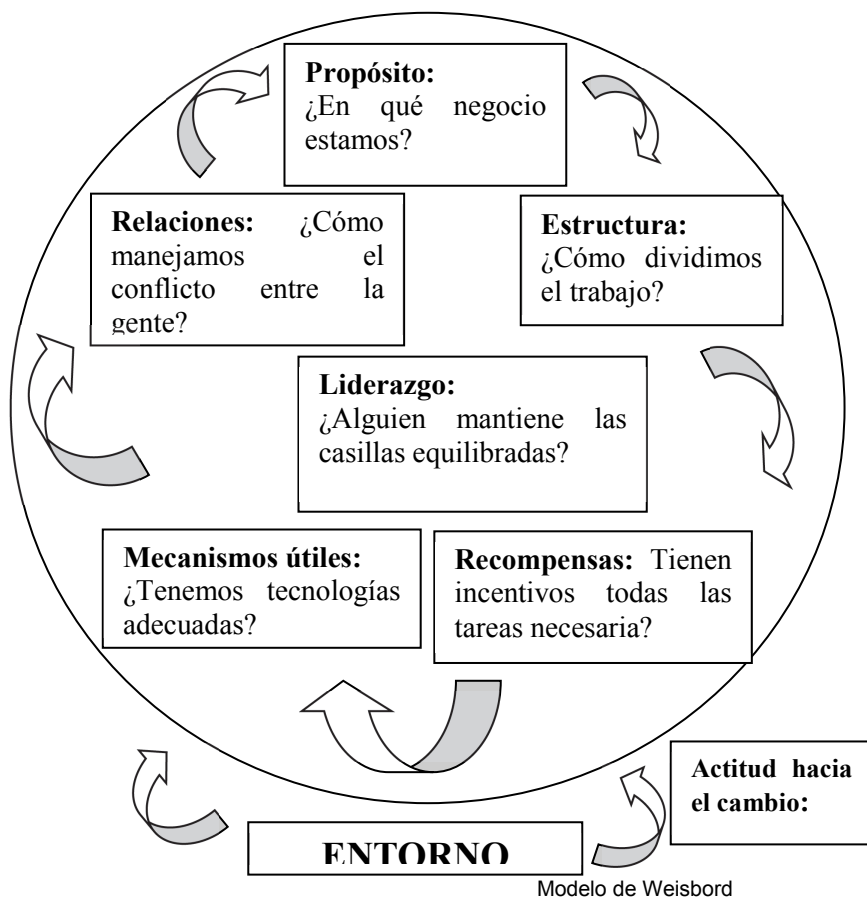

#### Medición del Clima Organizacional

Existen diversas orientaciones que se desprenden de la investigación acerca del clima organizacional. Uno de los modelos más conocidos resultantes de numerosas investigaciones de sus autores y utilizados para diagnóstico y análisis es el de la teoría del clima organizacional de Likert, basada en tres tipos de variables: a) Variables causales, llamadas también variables independientes son las que están orientadas a indicar el sentido en el que una organización evoluciona y obtiene resultados. Dentro de estas variables se encuentran la estructura de la organización y su administración, reglas, decisiones, competencia y actitudes. Si las variables independientes se modifican, hacen que se modifiquen las otras variables. b) Variables intermediarias que reflejan el estado interno y la salud de la empresa y constituyen los procesos organizacionales de una empresa; son los comportamientos manifestados por los individuos: motivaciones, actitudes, rendimiento, eficacia de la comunicación y toma de decisiones, y c) Variables finales, denominadas también dependientes y reflejan los resultados obtenidos por la organización, entre ellas están la productividad, los gastos de la empresa, las ganancias y las pérdidas.

La combinación de estas variables determina dos clases de clima organizacional que parte de un sistema autoritario a uno participativo (Brunet, 1987). Por el contrario, la teoría del clima organizacional de (Litwin y Stringer 1968) postula la existencia de seis dimensiones que explican el clima existente en una determinada empresa; éstas son: conformidad, responsabilidad, normas de excelencia, recompensa, claridad organizacional y calor y apoyo. Weisbord (1976), describe su modelo como una pantalla radar, con señales luminosas que nos hablan de los puntos sobresalientes de la organización y de sus aspectos buenos y malos. El Modelo organizacional de seis casillas de Weisbord, es la base del cuestionario, el cual mide siete variables: Propósitos, Estructura, Relaciones, Recompensas, Liderazgo, Mecanismos útiles y Actitud hacia el cambio. Las seis primeras áreas son del modelo de Weisbord, mientras que la última se añadió para darle al consultor/facilitador ideas sobre la disposición al cambio. Un aspecto clave a tener en cuenta es la brecha situada entre las dimensiones formales de la organización, como es el organigrama y sus políticas informales, como el modo en que se ejerce realmente la autoridad. Cuanto

más ancha sea la brecha, tanto más probable es que la organización este funcionando de manera eficaz.

## METODOLOGÍA

La metodología para esta fase del proyecto de investigación, consistió en hacer una revisión literaria sobre el tema. El diseño metodológico correspondiente para la segunda fase del estudio incluye: tipo de investigación es de campo, transversal, descriptivo; la empresa objeto de estudio pertenece a la categoría de industria metal mecánica y la muestra se calculará con la fórmula correspondiente y se seleccionará de manera aleatoria (los sujetos de la muestra será personal administrativo y, en su mayoría, operativo).

Después de revisar y analizar los cuestionarios y/o escalas ya validadas para medir clima organizacional de Litwin y Stringer, de Likert y de Weisbord, se decidió usar el Modelo de Weisbord, siendo que los ítems de adoptan a las características de la empresas de la industria metal-mecánica de Monclova, Coahuila. La siguiente fase estará conformada por los resultados y la interpretación de los mismos, después de tratarlos con el paquete estadístico SSPS versión 17.0, obteniendo el Coeficiente de contingencia interna de Cronbach y los Coeficientes de contingencia de Kendal.

# OBSERVATORIO DE LA PRODUCTIVIDAD PARA LAS PYMES EN CARTAGENA DE INDIAS

Víctor Manuel Quesada Ibarguen, Universidad de Cartagena

Juan Carlos Vergara Schmalbach, Universidad de Cartagena

## RESUMEN

*La mejora de la productividad ha de ser una constante en las organizaciones que aspiran a tornarse o conservarse competitivas; por tal razón debe someterse a constante monitoreo, y referenciarse ante aquellas de mejores prácticas. El presente artículo toma elementos de la investigación DISEÑO DE UN OBSERVATORIO DE LA PRODUCTIVIDAD PARA LAS PYMES MANUFACTURERAS DE LA CIUDAD DE CARTAGENA DE INDIAS, para proponerlo como una estructura de interfaz que dinamice las relaciones Universidad – Empresa, mediante la implementación de un centro de desarrollo tecnológico que interactúe con las Pymes manufactureras de Cartagena adelantando periódicamente mediciones de productividad y socializando los resultados entre las firmas afiliadas al observatorio, de manera que les sirva de referenciación competitiva, base para el mejoramiento. Todo ello en el marco de lo que se ha dado en llamar la tercera misión de la universidad, que en la actualidad se promueve ampliamente.*

**PALABRAS CLAVE:** Observatorio, Productividad, Estructura de interfaz.

## INTRODUCCIÓN

En sus inicios, la universidad centraba su actuar en la función de docencia, con poco desarrollo de actividades de investigación (1). Después de aproximadamente dos siglos de estancamiento la universidad inició un proceso de transformación, conservando algunos rasgos de su precursor medieval, pero incorporando metodologías de investigación científica desarrolladas por las sociedades académicas (1). Este proceso de transformación, que algunos autores denominaron “revolución académica”, supuso, en términos generales, la consolidación de la investigación como misión universitaria y el desarrollo de nuevos esquemas de organización y gestión al interior de la institución; es lo que caracteriza la universidad clásica. Hacia la década de 1970, se presenta un cambio significativo en la percepción social del papel de la universidad. Del esquema basado en la financiación pública de la investigación académica y regulado por el principio de autonomía universitaria, se pasó a un modelo más direccionado, fundamentado en una mayor orientación de las actividades de investigación hacia las necesidades del entorno del cual recibe apoyo financiero. Este cambio de enfoque supuso una nueva forma de relación de la universidad con su entorno, y se ha denominado la “segunda revolución académica”; en este contexto surge la “tercera misión” de las universidades, que abarca todas aquellas actividades relacionadas con la generación, uso, aplicación y explotación, fuera del ámbito académico, del conocimiento y de otras capacidades que disponen las universidades (2).

Esta nueva misión trae consigo cambios en el proceso de producción del conocimiento, los que han sido denominados modo 1 y modo 2 (3), distinguiéndolos en que, mientras en el Modo 1 la producción de conocimiento obedece a las normas cognitivas que rigen cada disciplina, en el Modo 2 el conocimiento se genera en el contexto de la aplicación, es decir, atendiendo a las necesidades explícitas de algún agente externo, bien sea la industria, el gobierno o la sociedad en general.

Este último, implica para la universidad unas transformaciones organizativas orientadas a facilitar la producción de conocimiento en el contexto de la aplicación. Se requiere de formas organizativas mucho más flexibles centradas directamente en el grupo de investigación, el cual puede tener un carácter multidisciplinar o transdisciplinar, y según los objetivos perseguidos un horizonte temporal definido (1).

El cumplimiento de la “tercera misión” convierte a la universidad en un actor decisivo en los procesos sociales y de desarrollo económico, a través de una vinculación mucho más estrecha con los diferentes agentes de su entorno. Los estamentos institucionales que antes operaban de manera aislada logran interactuar estrechamente, estimulando la emergencia de nuevos tipos de universidad que integran propósitos académicos, económicos y sociales en una visión compatible. Este nuevo tipo de universidad ha sido distinguido con las denominaciones de “universidad de servicios” (4), “universidad empresarial” (5) o “universidad emprendedora” (6). El desarrollo de esta tercera misión ha girado fundamentalmente en torno a la gestión de los procesos de transferencia de conocimiento en las universidades y, en particular, a la institucionalización de las relaciones con el sector productivo, lo que ha tenido su mayor auge en países del “primer mundo”, pero que en la actualidad se le hace eco en países en vías de desarrollo como Colombia, en donde el tema ya hace parte de la agenda del ministerio de educación y de la consejería presidencial para la competitividad y la productividad.

La institucionalización de esta tercera misión ha llevado a la puesta en escena de programas para el fomento de las relaciones universidad-empresa, partiendo del programa Alvey lanzado en el Reino Unido a comienzos de la década de 1980 como iniciativa para fomentar la relación empresa-universidad en el área de Tecnología de la información (7), que sirvió como ejemplo para la consolidación de muchas oficinas de transferencia de conocimientos en Europa y otras latitudes. En América Latina, la evolución de las misiones no ha sido totalmente exacta a la hasta ahora planteada. A diferencia de lo ocurrido en el mundo desarrollado, el Movimiento de Reforma Universitaria constituye quizá la primera y única “revolución académica” Latinoamericana, en contra de los modelos “a la europea” impuestos, la cual dio origen a una “idea original de universidad” que aún tiene derivaciones importantes (8). Como resultado de este movimiento la universidad latinoamericana se autodefinió como una entidad de democratización y de reforma social, guiada por las actividades de enseñanza, investigación y “extensión”, ésta última, entendida como la colaboración directa con los sectores de la población menos favorecidos, a través de la difusión cultural y la asistencia técnica (la extensión universitaria y la vinculación de la docencia con la investigación, fueron dos puntos fundamentales de la reforma). Esto indica que la universidad latinoamericana viene, desde su primera y única revolución académica, con su “tercera misión”; no obstante, como se anotara, por estos tiempos se inclina por una transformación o ampliación de la tercera misión, buscando ponerla a tono con las tendencias del mundo desarrollado.

Aunque en América Latina, sólo hasta hace algunos años se exterioriza el tema de las relaciones universidad-sector productivo, es de destacar que durante la década de 1960 se generó en esta región un debate ideológico en torno a la ciencia, la tecnología y la sociedad que, en alguna medida, intentó legitimar la vinculación de la universidad con el sector productivo. El resultado más explícito y pragmático de este debate lo constituye el “Triángulo de Sábado”. Este enfoque destacaba la necesidad de insertar la ciencia y la tecnología como motores del desarrollo nacional a partir de la acción coordinada de tres elementos fundamentales: el gobierno, la estructura productiva y la infraestructura científico-tecnológica. Sin embargo, las relaciones universidad-empresa-estado no se desarrollaron como cabía esperar, en parte debido a la no consolidación de la investigación como función sustantiva de la universidad y porque las características del entorno no le fueron propicias (1).

### Estructuras de Interfaz (EDI)

Para que en un país o una región tenga sentido hablar de un sistema de innovación, es necesario tomar en cuenta las relaciones entre los agentes que lo integran. Tomando en cuenta la dificultad que estas relaciones encarnan, se crean estructuras e instrumentos con el propósito de facilitar dichas relaciones.

Una EDI tiene como objetivos la sensibilización de los elementos de determinados entornos y a sus organizaciones en aspectos relacionados con la innovación, para tenerlos en cuenta en las decisiones generales de los mismos, promover y facilitar las relaciones entre los elementos de los entornos de su área de influencia con otros entornos, mediante la facilitación de los contactos bilaterales y otras acciones, y

propiciar el establecimiento de marcos de cooperación ordenados, transparentes y equilibrados entre los elementos de un determinado entorno o entre los elementos de entornos diferentes (9).

Por lo general, las EDI desempeñan su función de interfaz enmarcadas en sus objetivos y atendiendo al contexto y modo en que han sido concebidas. Las EDI se pueden clasificar atendiendo a dos criterios: su proximidad a cada uno de los entornos y, el entorno sobre cuyos elementos desarrolla una labor de dinamización. Así, en el *entorno científico* suele contarse con Fundaciones Universidad- Empresa, Oficinas de Transferencia de Resultados de Investigación y, Unidades de Interfaz Especializadas del Entorno Científico. En el *entorno tecnológico*, Centros Técnicos de Formación y Asesoramiento, Centros de Servicios Técnicos, Consultores Tecnológicos e, Institutos Tecnológicos. En el *entorno productivo*, Centros Empresas Innovación, Parques Tecnológicos y, Unidades de Interfaz Empresariales y, finalmente, en el *entorno financiero*, Entidades de Capital Riesgo y Unidades de Interfaz de las Administraciones. Lo que caracteriza a cada una de estas estructuras es si su objetivo principal es de interfaz, y el ámbito en el cual ejerce su efecto dinamizador. Las hay que realizan tareas de interfaz exclusivamente, como las Oficinas de Transferencia de Resultados de Investigación y las unidades de interfaz especializadas del entorno científico cuyo ámbito dinamizador, en ambos casos, es la universidad.

La EDI propia de la universidad, denominada Estructura de Interfaz Universitaria (EDIU) tiene, como misión genérica, fomentar y facilitar las relaciones de los investigadores con las empresas y otros agentes del Sistema de Innovación, para poner en valor, en las empresas y en la sociedad, los conocimientos y capacidades del Centro Público de Investigación (CPI) y transferir al entorno socioeconómico los resultados de investigación (9) (Castro & Fernández de Lucio, Estructuras de Interfaz, 2010); puede formar parte de la institución o ser constituida como un ente aparte (una empresa, fundación u otra figura). La EDIU puede operar en torno a tres líneas estratégicas básicas, aunque no exclusivas: Intermediación, mediante la cual proporciona soporte técnico y económico en la gestión de proyectos de I+D de los científicos con empresas, participando activamente en ellos. Dinamización, esto es, fomentar un cambio de cultura en el personal científico del organismo, de forma que el número de investigadores de la institución en actividades de cooperación y transferencia vaya aumentando paulatinamente, tratando de reducir las diversas barreras mediante sus servicios de información, asesoramiento y gestión. Comercialización, es decir, realizar acciones específicas para lograr la explotación y venta de las tecnologías generadas en el organismo. Las EDIU gestionan diversos aspectos de las relaciones ciencia-industria, dentro o fuera de las instituciones a las que prestan sus servicios. Los ámbitos básicos que se gestionan en una EDIU son los que se relacionan a continuación:

Contratos de I+D, ayudas públicas para actividades en colaboración, evaluación y protección de resultados de la investigación, licencias de títulos de propiedad o conocimientos, creación de empresas de base tecnológica a partir de resultados científicos o de capacidades de la universidad y, formación continua y prácticas de alumnos en las empresas. Algunas, por su naturaleza, gestionan sólo parte de estos instrumentos. En este marco de referencia se circunscribe el observatorio de la productividad de las PYMES de Cartagena.

#### El Papel del Observatorio de la Productividad Como EDIU

Los observatorios de la actividad ya sea económica, política o científica en un país o región han surgido de la preocupación social por el análisis y seguimiento que la sociedad desea hacerle a un determinado sector de la actividad humana. Se pueden citar entre éstos: Observatorio nacional de las telecomunicaciones y la sociedad de la información (ONTSI), de España; el Foro Económico Mundial; la Fundación Observatorio PyME, de Argentina; observatorio de multinacionales en América latina (OMAL), y muchos más. En Colombia, y en especial en lo referente a productividad y Competitividad, se cuenta con la Red Colombiana de Centros de Productividad, integrada por las entidades o centros de desarrollo tecnológico en diferentes ciudades, y coordinada por el Centro Nacional de Productividad

(CNP). Además existen: El Observatorio de la Productividad y Competitividad para Bogotá y Cundinamarca; el Observatorio de Competitividad de la cámara de comercio de Bogotá; Observatorio de competitividad del Ministerio de Comercio Exterior;

Observatorio colombiano de ciencia y tecnología; Observatorio Económico para la PyME colombiana; conformado por la universidad EAN, ACOPI, CINSET y el DANE, además del DANE que por su misión misma es un observatorio de toda actividad de la sociedad colombiana. Cartagena de Indias, que se ha consolidado como la primera ciudad industrial del Caribe Colombiano, con una actividad económica dinamizada por la industria petroquímica y manufacturera, el movimiento portuario, el comercio, el turismo y la industria de la construcción, cuenta con un observatorio del mercado laboral y el Observatorio del Caribe Colombiano, los que, de alguna manera, cubren los requerimientos de información de sus correspondientes ámbitos; sin embargo, en materia de la actividad industrial propiamente dicha, no se cuenta con un ente a través del cual se puedan realizar estudios e informes del más alto nivel científico respecto al comportamiento de la productividad del sector real de la economía, que sirva de pauta para el diseño y aplicación de políticas tendientes al logro de la competitividad tan necesaria en el mundo globalizado en el que se desenvuelve su industria.

Con el mejoramiento de la productividad se puede influir en las organizaciones, para que éstas sean más competitivas y alcancen el objetivo de agregar valor, en un mundo que cada vez se vuelve más globalizado (10). Por ello, la creación e implementación del Observatorio de la Productividad, en la ciudad de Cartagena de Indias, tiene como finalidad realizar mediciones y seguimiento a la actividad productiva de las empresas del sector manufacturero y, a partir de los resultados, brindar asesorías y capacitaciones que vayan encaminadas a contribuir al mejoramiento de la productividad. Dentro de este marco ha de considerarse la importancia y el beneficio significativo, que esta implementación traería a una ciudad cuya actividad industrial se muestra cada día más promisorio para el crecimiento y desarrollo de la Región Caribe Colombiana, y en particular a las empresas manufactureras allí establecidas, mediante el permanente aporte a la innovación y desarrollo tecnológico. Para el desarrollo de sus propósitos, el observatorio de la productividad, como EDIU, llevará a cabo las siguientes acciones:

Actividades de información, comunicación y promoción, mediante las cuales el Observatorio pone en conocimiento de sus clientes internos (investigadores) o externos (empresas) aquellas informaciones que pueden tener interés o relevancia en la interacción (convocatorias de ayudas públicas, normativa sobre la gestión de la propiedad industrial e intelectual de la Institución, incentivos, posibilidades de relaciones contractuales con empresas, ofertas tecnológicas de interés de las empresas, canalización de demandas tecnológicas de éstas hacia los investigadores, etc.) y establece mecanismos para fomentar la participación de los investigadores y empresas en el proceso.

Actividades de relación: el personal del Observatorio deberá disponer, con el tiempo, de un capital relacional importante (las instituciones y personas del Sistema de Innovación nacional/regional a las que conoce y con las que se relaciona), y ofrecer, tanto a las empresas como a los investigadores, los contactos correspondientes, o utilizarlos para encauzar mejor una oferta o propuesta concreta de una demanda tecnológica empresarial.

Actividades de asesoramiento: en las primeras experiencias con cada uno de los instrumentos de interacción con las empresas, los investigadores pueden requerir de un asesoramiento técnico especializado.

Actividades de gestión: todos los aspectos relacionados con la transferencia de tecnología conllevan la gestión administrativa y económica, que será desempeñada en el mismo Observatorio.

Actividades de formación del personal y participación en redes: para un mejor desempeño de sus actividades, el personal del Observatorio debe formarse continuamente, dado que su ámbito de actividad evoluciona muy rápidamente, y también debe participar en redes de unidades similares para conocer mejores prácticas.

Los observatorios o centros de productividad y competitividad nacionales funcionan como entes que contribuyen a mejorar la productividad de las empresas por medio del desarrollo tecnológico y empresarial. Todo esto se logra poniendo a disposición de las empresas una serie de servicios que ayudan a realizar este objetivo. Estos servicios propician el aprendizaje y adiestramiento de las empresas que quieren ser más productivas y competitivas. Se puede decir que se convierte en un verdadero sistema de gestión empresarial e innovación que busca agregar valor a las organizaciones.

Estudio de la Corporación Calidad (11), señala que las características que debe poseer un Observatorio de la Productividad son las siguientes:

- Estar diseñado y estructurado sobre un modelo conceptual eficaz, completo y adecuado, acorde a la función que desempeña y a los objetivos deseados.
- Dependiendo del enfoque de sus servicios, determinar la formación del personal y la infraestructura del centro.
- El objetivo principal es transferir o divulgar los conocimientos a través de los servicios prestados.
- Enfocar sus servicios a la investigación e innovación.
- Su finalidad es fortalecer la productividad y competitividad de un sector en común a través de sus servicios, especialmente de investigación, desarrollo tecnológico e innovación.
- Poseer propósitos precisos, razonables y viables complementados con la razón de ser de lo que se pretende monitorear, como sus estructuras, procesos y variables.
- Generar un sistema de información, revistas o publicaciones confiables y útiles, que puedan ser utilizados tanto por las empresas e instituciones como por la comunidad del sector.

Desde un enfoque conceptual, se establece que el Observatorio de la Productividad estará constituido por un equipo de trabajo multidisciplinario cuyo objetivo será impulsar el desarrollo tecnológico y la innovación del sector manufacturero de la ciudad de Cartagena de Indias, a través de investigaciones aplicadas a la productividad para generar con ello herramientas que contribuyan a la toma de decisiones. Buscará coordinar los esfuerzos de innovación e investigación para el mejoramiento de la productividad de las empresas; para esto obtendrá estadísticas e información actualizada que permitan alcanzar dicho objetivo. Avanzando en el tiempo el observatorio, mediante el ofrecimiento de sus servicios, permitirá que los empresarios, trabajadores y comunidad en general adquieran bases para desarrollar una cultura de investigación, aseguramiento de la calidad y desarrollo tecnológico (12).

El enfoque metodológico indica que para la creación del observatorio, un elemento importante a tener en cuenta es el sistema de medición que se va a utilizar, por ello se tendrán en cuenta indicadores estándares de medición de productividad para el análisis y comparación del desempeño de las firmas del sector manufacturero de Cartagena de Indias; además se utilizarán instrumentos que se puedan aplicar a diferentes tipos de análisis. En cuanto al funcionamiento interno se trabajará inicialmente en un proceso de capacitación del personal que le permita familiarizarse con los indicadores de productividad y las herramientas informáticas requeridas para el procesamiento de la información.

Respecto a la formación empresarial, se ofrecerán capacitaciones estratégicas fundamentadas en las exigencias del medio globalizado actual y a las necesidades de las empresas del sector, además se idearán estrategias para fortalecer el desarrollo científico y tecnológico que inciden sobre la productividad, buscando con ello reforzar el progreso de la innovación. La metodología estará basada en los estudios

realizados por centros e instituciones nacionales, además de organismos mundiales como IMD (Institute for Management Development) y WEF (World Economic Forum) que ofrecen las herramientas y estándares de medición. Se utilizará el sistema de medición de la productividad de valor agregado (13). De esta medición surge una serie de indicadores que desagregan la productividad lograda por una empresa. El enfoque temático del Observatorio de la Productividad estará basado en una estrategia que se concretará en la adhesión colectiva de los factores de Productividad. En otras palabras, el Observatorio de la Productividad no puede generar exclusión sino, por el contrario, agrupar todos los factores de productividad, facilitando al mismo tiempo la integración entre los sectores. Hay que tener en cuenta que es en este aspecto donde se encuentra el mayor desafío: lograr vincular al mayor número de empresas al observatorio por medio de la temática que éste pueda desarrollar.

Dentro de la temática que desarrollará el Observatorio se encuentran:

*Desempeño económico:* Que hace referencia a la producción de indicadores que evaluarán la productividad de las empresas.

Producción periódica de indicadores y evaluación de éstos a través del tiempo.

Producción periódica de indicadores de un mismo sector manufacturero y análisis de los resultados en comparación con las empresas líderes en desarrollo tecnológico de dicho sector manufacturero.

*Capacidad gerencial:* Que busca potenciar la planeación estratégica, incluyendo la prospectiva tecnológica.

*Ciencia y tecnología:* Donde buscará realizar investigaciones y proyectos que generen un desarrollo tecnológico e innovación.

*Recursos humanos:* Trata de la formación de recursos humanos en gestión y en estrategias de productividad.

*Mejoramiento del proceso productivo:* Dentro de la temática a desarrollar es importante tener en cuenta el mejoramiento del proceso productivo el cual se ve reflejado primeramente en un aumento de la eficiencia y la **productividad laboral**, lo cual conlleva a que se presenten las siguientes mejoras:

- Desarrollo de competencias y habilidades.
- Construcción de confianza.
- Claridad en el patrón del desarrollo.
- Concertación.
- Desarrollo de métodos y tecnologías.
- Proactividad de los miembros de la organización.

#### El Enfoque Funcional de los Observatorios de Productividad en Colombia

Basados en el documento “Oferta de conocimiento útil para la competitividad. Portafolio de productos de los centros tecnológicos de Colombia” (2007) de la Corporación Calidad, se agruparon una serie de servicios con el fin de determinar cuáles son los más comunes ofrecidos por los centros de desarrollo tecnológico. De este análisis se concluye que “Investigación, desarrollo tecnológico e innovación” es el servicio más ofrecido por este tipo de centros, seguido de los servicios de capacitación y de información y documentación. Por ende, en la proyección o diseño de un Observatorio de Productividad se deberá tener en cuenta las siguientes funciones:

Formulación, gestión y ejecución de proyectos de desarrollo tecnológico e innovación en el sector manufacturero de la ciudad de Cartagena de Indias.

Generar programas de capacitación a través de seminarios y cursos de temas de competitividad.

Implantar servicios de información y documentación actualizada y oportuna para la toma de decisiones.

Difundir conocimiento a través de las publicaciones de los resultados de investigaciones.

Orientación de investigaciones sobre planes de mejora de la productividad de los procesos productivos de las organizaciones del sector.

Medición y monitoreo de la productividad de las empresas del sector.

Contribución al fortalecimiento de la cultura de productividad en las empresas del sector manufacturero de Cartagena de Indias.

## CONCLUSIONES

Las universidades en las distintas etapas de su desarrollo han distintas etapas han estado pendientes de la revisión de su misión. Así, mientras el interés de la universidad medieval se centró en la enseñanza como misión fundamental, con el correr del tiempo se reclamó la investigación como misión paralela y quizá simbiótica a la de enseñanza. Esto caracterizó a la universidad clásica. En esta etapa, la investigación obedecía exclusivamente a los intereses de la academia y se regulaba por la autonomía universitaria, sin que ello fuera óbice para eludir cualquier responsabilidad en aportar su concurso para el progreso de la ciencia y la tecnología en beneficio de los pueblos. Las tensiones en las que se desenvuelven las relaciones de la universidad con su entorno, conducen a que aquella reoriente su papel como ente investigador y centre su atención en el contexto productivo; surge la llamada tercera misión con unos mecanismos de interacción bien definidos, en lo que se ha dado en denominar relaciones universidad – Empresa – Estado. Entre estos mecanismos surge como figura protagónica, la EDIU.

Para Latinoamérica, ésta ha constituido una manera distinta de apreciar lo que para las universidades de la región constituía la función sustantiva de Extensión o Proyección social. El diseño de un Observatorio de la Productividad, desde el punto de vista conceptual es una EDIU especializada en investigación y desarrollo tecnológico, orientado a la mejora de la productividad de las empresas, lo cual logrará a través de sus servicios, como asesorías y capacitaciones, y la medición, seguimiento de los procesos productivos, con lo que se espera lograr el mejoramiento continuo de la productividad para el logro de la competitividad regional y la rentabilidad empresarial.

# ESTUDIO DE PERCEPCIÓN SOBRE SERVICIOS FUNERARIOS EN LA REGIÓN COSTA SUR: MUNICIPIO DE AUTLÁN DE NAVARRO, JALISCO, MÉXICO

Cesar Amador Díaz Pelayo, Universidad de Guadalajara Sur

Roberto González Monroy, Universidad de Guadalajara Sur

Claudia Leticia Preciado Ortiz, Universidad de Guadalajara

## RESUMEN

*Las empresas funerarias son establecimientos destinados a atender las necesidades asociadas con la muerte del ser humano en lo que respecta a los servicios de previsión, venta de ataúdes, traslado y arreglo de fallecidos, entre otros. En la actualidad los servicios funerarios incluyen, además de la previsión, asesoría jurídica y religiosa, orientación psicológica durante el proceso de muerte y duelo, entre otras posibilidades. Esta nueva filosofía de asesoría y logística integral hacen que queden atrás los esquemas tradicionales, redundando en el fortalecimiento de áreas de la empresa que se interrelacionan, como son la administrativa y comercial, las cuales sirven de apoyo al área de servicios. Esta última realiza dentro de sus variadas actividades la preparación del fallecido que tienen como fin dar una apariencia natural y que amortigüe en parte el dolor de la familia. Por lo anterior establecido, se desarrolló esta investigación que da a conocer el grado de percepción hacia los servicios funerarios de manera anticipada o bajo un esquema de previsión. Así como los factores que motivan o rechazan la compra por tratarse de un servicio no buscado. Con la finalidad de que las empresas de la Región Costa Sur de Jalisco desarrollen estrategias de mercadotecnia adecuadas al mercado regional.*

**PALABRAS CLAVE:** Servicios funerarias, percepción, previsión.

## PERCEPTION STUDY ON FUNERAL SERVICES IN THE REGION SOUTH COAST

### ABSTRACT

*The funeral establishments are designed to meet the needs associated with the death of man in relation to welfare services, sale of coffins, transfer and settlement of deceased, among others. Today funeral services include, in addition to the forecast, legal and religious counseling during the process of death and mourning, among other possibilities. This new philosophy of integrated logistics advice and make traditional patterns left behind, resulting in strengthening the business areas that are interrelated, as are the administrative and commercial, which serve to support the service area. The latter performs its various activities within the preparation of the deceased that are intended to give a natural appearance and that absorbs some of the pain of the family. Therefore established, developed this research discloses the level of perception towards funeral services in advance or under a pension scheme. And the factors that motivate or reject the purchase because it is an unintended service. In order for companies of the South Coast Region of Jalisco develop appropriate marketing strategies to the regional market.*

**KEYWORDS:** Funeral services, perception, foresight

## INTRODUCCION

Las empresas funerarias o empresas mortuorias son establecimientos destinados a atender las necesidades asociadas con la muerte del ser humano en lo que respecta a los servicios de previsión, venta de ataúdes, traslado y arreglo de fallecidos, velación, exequias, inhumación y/o cremación, que por lo general y siguiendo con las costumbres y tradiciones, son residencias remodeladas y adaptadas para este fin, en las que se presta atención permanente las veinticuatro horas de todos días del año. Los servicios funerarios, que inicialmente surgieron como empresas netamente familiares y organizaciones que se encargaban meramente de vender el ataúd, ofrecer un lote de terreno o una bóveda en un cementerio para el destino final del fallecido, hoy revelan un sector dinámico y de gran crecimiento.

En la actualidad los servicios funerarios incluyen, además de la previsión, asesoría jurídica y religiosa, orientación psicológica durante el proceso de muerte y duelo, entre otras posibilidades. Esta nueva filosofía de asesoría y logística integral hacen que queden atrás los esquemas tradicionales, redundando en el fortalecimiento de áreas de la empresa que se interrelacionan, como son la administrativa y comercial, las cuales sirven de apoyo al área de servicios. Esta última realiza dentro de sus variadas actividades la preparación del fallecido, con técnicas tanatoprácticas que tienen como fin dar una apariencia natural y que amortigüe en parte el dolor de la familia.

La misma dinámica del sector obligó a crear salas de velación y parques cementerios clasificados por categorías, según la capacidad de pago de quien solicita el servicio, por lo que la tradición de velar al fallecido en las salas de las casas quedó atrás en las ciudades capitales y en las ciudades medias, a excepción de algunos lugares rurales donde la práctica de vigilia en el domicilio se mantiene con tendencia a desaparecer. Por lo anterior establecido, se hace necesario un estudio de mercado que revele la percepción del individuo (Solomón, 1999), a este tipo de fenómenos. Para que se contrasten los resultados y se generen estrategias de mercadotecnia para la venta de este servicio. Que por sus características, se clasifica como servicio no buscado (Fischer, 2010).

Las tradiciones y costumbres son muy arraigadas en sectores rurales y en términos generales en puntos clave o ciertos estratos sociales, aún en las grandes ciudades. Asimismo, al ser un servicio no buscado no se tiene la cultura de la previsión. Enfrentado las familias que pierden seres queridos múltiples conflictos económicos, de procedimiento e incluso legales. En la Región Costa Sur encontramos mercados evolucionados y tradicionales (Díaz, 2010), y la empresas deben mezclar sus estrategias para atacar a ambos mercados. A este esquema se le conoce como Blended marketing, es decir, emplear formatos tradicionales y evolucionados. Por ello, se requiere realizar un estudio de tipo exploratorio (Schiffman & Kanunk (2005), que nos proporcionen un estado de la percepción de aceptación o rechazo a este tipo de servicios. El objetivo del presente estudio es conocer el grado de percepción hacia los servicios funerarios de manera anticipada o bajo un esquema de previsión. Así como los factores que motivan o rechazan la compra del servicio, por tratarse de un servicio no buscado.

## REVISIÓN LITERARIA

Para entender los cambios y evoluciones del consumidor la literatura científica nos ofrece diversas teorías, entre ellas el estudio del comportamiento del consumidor que según Arellano (2002), es aquella actividad interna o externa del individuo o grupo de individuos dirigida a la satisfacción de sus necesidades mediante la adquisición de bienes o servicios, se habla de un comportamiento dirigido de manera específica a la satisfacción de necesidades mediante el uso de bienes o servicios o de actividades externas (búsqueda de un producto, compra física y el transporte del mismo) y actividades internas (el deseo de un producto, lealtad de marca, influencia psicológica producida por la publicidad). Rivas & Grande (2008) señalan que la conducta de los consumidores pueden depender, en mayor o menor medida, de un grupo de variables de naturaleza externa, que un investigador, estudioso o pragmático del marketing

no puede dejar de contemplar si se quiere llegar a extender la compra y consumo de cualquier bien o servicio”. Debido a que la conducta de los consumidores es el resultado de la interacción compleja de factores culturales, religiosos, sociales y psicológicos; y a pesar de que los mercadólogos no pueden influir en muchos de estos factores, se busca establecer la utilidad de dichos factores en la identificación y comprensión de la conducta de los consumidores a quienes la mercadotecnia intenta influenciar, en los momentos de decisión de compra (Sahui, 2008).

### Factores Que Originan E Influyen en el Comportamiento de Consumo

Desde la teoría del comportamiento del consumidor se establecen dos tipos de factores que influyen en el comportamiento de consumo: factores internos y factores externos Stanton (2009), mismos que se componen de diversos elementos. Solomón (1999) argumenta que existen factores vinculados al individuo que originan o influyen los hábitos de consumo y son considerados internos (individuales): 1) motivación, 2) percepción, 3) personalidad 3) experiencia y aprendizaje. Para fines del estudio solo se analizará el componente interno percepción por la implicación y efecto que genera en el consumidor y la variable poder adquisitivo para el pago de servicios de previsión, sin que esto le reste importancia a los elementos: motivación, personalidad, experiencia y aprendizaje. Schiffman & Kanunk (2005) definen la percepción como el proceso mediante el cual un individuo selecciona, organiza e interpreta los estímulos para formarse una imagen significativa y coherente del mundo. Está compuesta a su vez por la sensación, que es la respuesta inmediata ante un estímulo, el umbral absoluto, que es el nivel más bajo en que un individuo experimenta una sensación y el umbral diferencial, que hace que un consumidor distinga dos estímulos. Este componente permite entonces percibir la sensación de la inseguridad y temor al momento de ser persuadido por las empresas de servicios funerarios.

Existen también en el campo de estudio del consumidor otros factores asociados a las decisiones de compra de los servicios funerarios como los son los factores externos. Mismos que influyen en el comportamiento del consumidor y estos son: el entorno económico, el entorno político y legal, lacultura y subculturaylos grupos sociales de referencia, mismos que son clasificados como no controlables por las empresas (Solomón, 1999). Pero que deben ser investigados para entender como impactan al individuo, de manera negativa o positiva. Los factores de procedencia y poder adquisitivo se puede clasificar dentro de dicho rubro y bajo dos etiquetas: en lo económico y lo social. Sin embargo, por el tipo de estudio y el tratamiento de los datos se enfocará al económico. Sin dejar fuera otros aspectos externos citados por Staton (2005) como: la familia, la influencia personal y las determinantes situacionales, sobre todo esta última que también tiene una relación estrecha con el fenómeno abordado.

La tasa de mortalidad es una variable que da el número medio anual de muertes durante un año por cada 1000 habitantes, también conocida como tasa bruta de mortalidad. La tasa de mortalidad, a pesar de ser sólo un indicador aproximado de la situación de mortalidad en un país, indica con precisión el impacto actual de mortalidad en el crecimiento de la población. Este indicador es significativamente afectado por la distribución por edades. La mayoría de los países eventualmente mostrarán un aumento en la tasa de mortalidad general, a pesar del continuo descenso de la mortalidad en todas las edades, a medida que una disminución en la tasa de fecundidad resulta en un envejecimiento de la población (Indexmundi, 2012).

Tabla 1: Tasa de Mortalidad en México Del 2000 al 2011

2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011

## METODOLOGÍA

Tratándose de un estudio empírico de tipo exploratorio en municipios de la Región Costa Sur del Estado de Jalisco. Se empleo una muestra no probabilística a conveniencia (Malhotra, 2008) conformada por 100 habitantes del municipio de Autlán de Navarro, Jalisco. Las características de inclusión de los individuos a estudiar fueron: rango de edad de 25 a 40 años (por considerarse un servicio de previsión), de clase media hacia arriba, ambos géneros y diversas ocupaciones. El instrumento que midió las dimensiones fue la encuesta, bajo un formato tipo Likert ordinal de cinco puntos, donde 5=totalmente de acuerdo a 1=totalmente en desacuerdo. A la cual se le aplico la prueba de fiabilidad Alfa de Conbrach a una prueba piloto de 24 encuestas, siendo su resultado: 0.898. Lo cual indica que el instrumento es fiable, toda vez que el valor se acerca a 1(Malhotra, 2008).

Para el tratamiento de los datos y la contrastación de la pregunta de investigación e hipótesis se utilizaron frecuencias como una herramienta útil para la toma de decisiones en base a la organización de la información recolectada, esto es debido a que se pueden generar tablas, histogramas, polígonos, todos en base a la frecuencia de los datos, que ayudan a analizar de manera objetiva la información. De igual forma se utilizó la correlación como un estadístico clave para resumir la fuerza de asociación entre dos variables métricas —de intervalo o de razón— (Malhotra, 2008). El nivel de significancia utilizado en esta investigación es  $\alpha=0,05$ . Se presenta el análisis de todos los ítems del instrumento aplicado fungiendo cada una de ellos como variable dependientes y utilizándose como variable independiente el elemento demográfico de procedencia.

## RESULTADOS

La industria funeraria en México ha cobrado importancia durante la última década, pero su desarrollo continúa siendo lento en virtud del rechazo a este tipo de servicios por características socioculturales por parte del consumidor, sobre todo en poblaciones pequeñas. Además algunas de estas empresas no han evolucionado la prestación de sus servicios, continúan siendo reactivas y no proactivas ante la evolución del propio consumidor. En relación al tamaño de la población, existen pocas empresas dedicadas a proporcionar este tipo de servicios. En las ciudades más pobladas del país es posible encontrar sólo dos o tres agencias establecidas, en tanto que el resto de los servicios es otorgado por pequeños establecimientos locales—micro empresas o negocios familiares—. Es importante conocer primero en el análisis de este tema los aspectos sociodemográficos de los encuestados para conocer la composición del

segmento de mercado, los cuales reflejan el estado de percepción–aceptación o rechazo– al fenómeno estudiado. Al analizar los resultados se observa que del total de encuestados, un 21.2% corresponde al grupo comprendido del rango de 25 a 30 años, el 33.3% al de 31 a 40 años, el 34.3% al comprendido 41 a 50 años, y el 11.1% a más de 50 años de edad. El mayor porcentaje relativo corresponde al 34.3%, personas que tienen entre 41 a 50 años de edad, es decir, a un segmento de población madura (Tabla 3).

Tabla 3: Edad

		Frecuencia	Porcentaje válido
Válidos	25 a 30	21	21.2
	31 a 40	33	33.3
	41 a 50	34	34.3

## CONCLUSIONES

Un tema tan sensible como la muerte representa para muchas empresas un nicho de marketing que, con inteligencia y cuidado genera buenos resultados. La muerte y todo lo que con ella se relaciona no resulta una preocupación muy atractiva para nadie. Mucho más complicado se hace entonces tratar este asunto como un negocio. Ante la necesidad de despedir a un ser querido, el ritual del funeral se concibe como un momento íntimo, familiar y muy personal. Por lo general, la ceremonia se desarrolla sobre un ambiente de nostalgia y profunda tristeza. Esta pena es la que implica que, para muchos, la posible muerte de un cercano sea un tema del que no se quiere saber hasta que suceda. Se puede decir que existe una ignorancia voluntaria del consumidor en este sector, por lo que tiene un gran desconocimiento sobre las prestaciones

y productos. Este hecho se convierte en la principal característica del mercado de servicios funerarios y condiciona fuertemente su demanda. Como conclusión del presente estudio se puede señalar que el 92% de las personas encuestadas considera una buena oportunidad contar con empresas que ofrecen servicios funerarios integrales a su alcance y que conocen más de dos alternativas de empresas funerarias en su lugar de su residencia, además de considerar importante contar con servicios funerarios con empresas serias y legalmente constituidas para la aceptación de la compra.

Los porcentajes con mayor peso son de consumidores que provienen de zonas metropolitanas como origen y la valuación de posibilidades es menor, así como el conocimiento de varias alternativas, cuando el consumidor a pesar de vivir en Autlán de Navarro, Jalisco, proviene de un medio sub rural o rural. El 70% de las personas encuestadas no tienen un plan de previsión paracasos extraordinarios en materia de servicios funerarios y rechaza para compra el servicio por factores socioculturales –temor a la muerte, falta de costumbre a la previsión, factores religiosos–. Asimismo, mientras más edad se tenga menos previsión hay al respecto y el adulto mayor considera que es responsabilidad de los familiares jóvenes el pago de los mismos, es decir, el segmento adulto mayor rechaza la compra. Son los rangos de edad más jóvenes quienes son sensibles al tema y aceptan la posibilidad de compra de éste tipo de servicios. En general el temor al evento –la muerte– refleja un rechazo a los servicios funerarios por el segmento encuestado y es básicamente un factor sociocultural quien lo origina.

En contraste el consumidor considera importante tener un plan de previsión para casos extraordinarios en materia de servicios funerarios y contar con un recurso financiero destinado a la compra de servicios de forma anticipada –pero es por el factor inseguridad que se vive en el país y la región–, sólo el 40% cuenta con el recurso necesario para enfrentar los costos imprevistos, en caso de su muerte o de algún familiar, es decir, cuenta con el poder adquisitivo. Por otra parte, solamente un 43% conoce los planes y programas de financiamiento de servicios funerarios para evitar problemas a futuro en caso de su muerte o de algún familiar, pero impera una vez más el factor de rechazo por el tipo de empresa.

# LA EVALUACION DEL DESEMPEÑO Y SU IMPACTO EN LA RETRIBUCION DEL PERSONAL EN LAS MAQUILADORAS EN MEXICALI BAJA CALIFORNIA

Mónica Fernanda Aranibar Gutiérrez, Universidad Autónoma del Estado de Baja California

## RESUMEN

*El propósito de esta ponencia consiste en analizar hasta qué punto y de qué manera las maquiladoras en Mexicali, Baja California están adoptando sistemas de evaluación del desempeño con un carácter formal que incidan en la toma de decisiones en torno a la retribución del personal. Las empresas son organizaciones que tienen su principal activos en los recursos humanos y dependen de su desempeño para alcanzar sus objetivos y sus metas que garanticen su subsistencia y su competitividad. La gestión exitosa de los recursos humanos debe alcanzarse a través de mecanismos que permitan desarrollar todo el potencial humano, el cual no es posible sin la implementación de sistemas de evaluación del desempeño. En el caso de las maquiladoras en Mexicali, Baja California, se están adoptando sistemas de evaluación del desempeño con un carácter formal y están incidiendo de manera determinante en la toma de decisiones para la retribución del personal. Por lo que es muy válido preguntarse ¿Hasta qué punto y de qué manera las maquiladoras en Mexicali están adoptando sistemas de evaluación del desempeño que impacten en la retribución del personal?*

**PALABRAS CLAVES:** Evaluación Del Desempeño, Impacto, Retribución De Personal, Maquiladoras

## PERFORMANCE EVALUATION AND ITS IMPACT STAFF REMUNERATION IN THE MAQUILADORAS IN MEXICALI BAJA CALIFORNIA

### ABSTRACT

*The purpose of this paper is to analyze to what extent and how the maquiladoras in Mexicali, Baja California are adopting performance appraisal systems to formalize that affect decisions about staff remuneration. Companies are organizations that have their main asset in human resources and depend on their performance in reaching its objectives and goals to ensure their survival and competitiveness. The successful management of human resources should be achieved through mechanisms to develop the full human potential, which is not possible without the implementation of performance appraisal systems. In the case of the maquiladoras in Mexicali, Baja California, are adopting performance evaluation systems with a formal, and are influencing a decisive influence on the decision-making for the remuneration of staff. So it is very valid to ask what extent and how the maquiladoras in Mexicali are adopting performance evaluation systems that impact on staff remuneration?*

**KEYWORDS:** Performance evaluation, impact, staff remuneration, maquiladoras

### INTRODUCCION

La evaluación del desempeño que aquí abordamos es un tema que, a pesar de que no es nuevo, ha tenido en las últimas décadas un mayor impulso debido a que las organizaciones tienen el imperativo de adaptarse a los nuevos retos postmodernos y a la competitividad económica. Estas organizaciones han encontrado en la evaluación del desempeño una herramienta que les permite tomar decisiones estratégicas en el área de los Recursos humanos ya sea para promover y potenciar el capital humano, o para la capacitación y desarrollo profesional, y no menos importante para los incentivos o despidos.

En el área de la planeación estratégica y de la administración de personal la evaluación del desempeño es un recurso muy importante. Esta evaluación puede ser formal o informal. Aquí nos vamos a referir a los sistemas de evaluaciones formales que se utilizan en las empresas para valorar a su personal. Más específicamente nos centraremos en las maquiladoras en Mexicali. Nos preguntamos acerca del impacto que tiene la evaluación del desempeño en la retribución de personal. Este trabajo está estructurado de la siguiente manera. En una primera parte que corresponde a la revisión de la literatura en la que se abordan los conceptos básicos como evaluación del desempeño y retribución, sus características, su tipología y sus métodos. En una segunda parte se presenta la metodología utilizada, en donde describe el método que las maquiladoras en Mexicali están utilizando para la evaluación del desempeño de su personal y el impacto que tiene para la retribución. Enseguida se presentan los resultados de la investigación. Finalmente, se abordan las conclusiones.

## REVISION DE LA LITERATURA

Con la formación de las organizaciones se fue desarrollando la evaluación del desempeño. Después de la industrialización y con el desarrollo de la gestión se fue desarrollando el concepto de evaluación del desempeño. La competencia en el mercado en términos condujo a las empresas, entre otras cosas a centrarse en la eficiencia de los trabajadores, en su capacidad y en su dedicación. El objetivo de las empresas fue la de tener trabajadores suficientemente capacitados, motivados, comprometidos y con un nivel óptimo de rendimiento. Sin embargo, fue hasta después de la segunda Guerra mundial cuando se formalizó la evaluación del desempeño como un método para valorar al personal de una compañía. De este modo, las evaluaciones del desempeño formales cobraron relevancia y se divulgaron entre muchas organizaciones, generando al mismo tiempo estudios relativos al tema (Schiel, y Orozco, p. 119).

Sobre la evaluación del desempeño se ha investigado ampliamente. Hasta antes de la década de 1980, la mayoría de los estudios teóricos se orientaban al sistema de calificación dentro de la organización y a su modernización. Estas acciones fueron un gran avance para reducir el caos que había en los sistemas de evaluación del desempeño del empleado (Feldman, 1981). Por cierto, los métodos y los sistemas de calificación entre los empleados, con el paso del tiempo cobraron gran relevancia y recibieron una gran aceptación y valoración de parte de los gerentes. Las investigaciones más recientes sobre la evaluación del desempeño enfatizan la capacitación, así como los planes de desarrollo y crecimiento de los empleados. Uno de los beneficios principales de un programa de evaluación es contar con una base sólida para mejorar el desempeño. Empresas como Best Buy y EDS han rediseñado sus sistemas de evaluación del desempeño para enfocarse más en el desarrollo y aprendizaje de los empleados. Con la creación de este sistema total, EDS espera cambiar la función del gerente, de “juez” a “coach” (Bohlander y Scott 2008. “ p. 350) La evaluación del desempeño de un empleado permite tomar decisiones administrativas racionales basadas a nivel de cada empleado y de todo el personal.

También brinda información básica para evaluar su eficacia, los elementos que integran el sistema de evaluación así como los procesos y políticas de reclutamiento, programas de formación, reglas de selección, estrategias de promoción, y la asignación de recompensa que utiliza el departamento de recursos humanos (Landy, Zedeck, Cleveland, 1983). Una buena evaluación proporciona las bases para darle seguimiento al comportamiento de los empleados. Puede ser el vehículo, en el plano del asesoramiento, para aumentar el compromiso, la motivación y la satisfacción del trabajador. Además

permite a la empresa u organización comunicarle al empleado acerca de sus competencias, sus tasas de crecimiento y sus potencialidades. Los expertos en su mayoría coinciden en que una buena medición del desempeño y retroalimentación pueden jugar un papel importante entre las necesidades del individuo y las necesidades de la organización (Landy, Zedeck, Cleveland, 1983)."

La evaluación del desempeño, también es conocida como "*Revisión del desempeño, calificación del personal, evaluación de méritos, valoración del desempeño, evaluación de empleados y valoración de empleados*" (Ivancevich, 2004, p. 260) Sin embargo, cada uno de estos conceptos tienen una connotación, que habría que precisar e incluso diferenciar, por ejemplo, Prieto, (1992) hace una diferencia entre evaluación y valoración del desempeño. Considera, que el termino valoración tiene que ver con el reconocimiento, estima o aprecio a los méritos de un trabajador en su puesto o área de trabajo lo que le permitiría eventualmente ser ascendido o compensado por el sistema de retribuciones de la empresa a la que pertenece. Mientras que la evaluación estaría más orientada a procesos de selección de personal.

A pesar de sus diferencias, en algunos ocasiones valoración y evaluación es usada como sinónimos, por ejemplo (Porret, 2010) "La 'evaluación o valoración' es una función que, formal o informalmente, siempre se ejercita en todos los niveles de la jerarquía organizacional de la empresa al objeto de lograr una perfección y mejora de la actividad de cada individuo inserto en ella, mediante la observación de su conducta en su puesto de trabajo o unidad en que se halle destinado" (p. 207).

Independientemente, de los matices, enfoques o perspectiva en el concepto o en las definiciones de evaluación del desempeño, ésta tiene que ver con un método formal que mide el rendimiento de un empleado por el director o superior inmediato de la compañía a la que pertenece. La medición se da en términos, cualitativos, cuantitativos, de tiempo, de costo y de comportamiento. La evaluación del desempeño es estratégica para la planeación del Departamento de los Recursos humanos, es una de las herramientas de la gestión de recursos humanos que se utilizan para evaluar el desempeño laboral de los empleados (Dessler, 2011; Mondy et al. 2002, y Tompkins, 1995) ya que permite, valorar al trabajador en términos de su productividad y desempeño. La evaluación del desempeño permite tomar decisiones en términos de incentivos, retribuciones, ascenso, remociones o de despidos. Aunque se puede evaluar al equipo, la evaluación suele centrarse en el empleado considerado de manera individual: "La Evaluación del desempeño (ED) es un sistema formal de revisión y evaluación del desempeño laboral individual o de equipos. Aunque la evaluación del desempeño de equipos es fundamental cuando éstos existen en una organización, el enfoque de la ED en la mayoría de las empresas se centra en el empleado. Sin importar el énfasis, un sistema de evaluación eficaz evalúa los logros e inicia planes de desarrollo, metas y objetivos." R. Wayne Mondy y Noe, Robert m. (2005: p. 251).

Suele ser definida como una apreciación sistemática, así para Chiavenato, (2000) la evaluación del desempeño es una apreciación sistemática del desempeño de cada persona en el cargo o del potencial de desarrollo futuro. Lo que indica que la evaluación del desempeño también tiene que ver con el futuro y el potencial del trabajador. Para Rodríguez, (2004) la evaluación del desempeño consiste en valorar la eficacia con la que el ocupante de un puesto lo ejecuta en un periodo determinado de tiempo. Resulta destacado delimitar el periodo evaluado. Lo que sin duda, es considerado por los especialistas en lo que tiene que ver con la contribución integral a la organización, Según Werther y Davis (2008), la evaluación del desempeño constituye el proceso por el cual se estima el rendimiento global del empleado; su contribución total a la organización. La evaluación del desempeño también está vinculada con el proceso de selección de permanencia y aporta elementos para la toma de decisiones en lo que se refiere a ascensos o traslados: "La evaluación del desempeño es la periódica y evaluación sistemática de los trabajadores en los términos del desempeño, aptitudes, capacidades y otras cualidades que son necesarias para realizar con éxito su trabajo. Es un esfuerzo sistemático por parte de la administración y tiene una vinculación directa con la inducción, selección, formación, etc. de los empleados. En él se identifican las áreas donde los empleados necesitan entrenamiento y provee datos para determinar ascensos, traslados, etc. "

(Deshpande, 2008 p, 72) Las evaluaciones del desempeño deben contribuir a la mejora del comportamiento organizacional así como a la toma de decisiones de promoción, incentivos y de capacitación que favorezcan tanto el bienestar de los trabajadores como la supervivencia y consolidación de las organizaciones.

Básicamente, la evaluación del desempeño consiste en una revisión sistemática, periódica y formal de los resultados de trabajo efectuados ordinariamente de manera conjunta entre jefe y colaborador dependiendo del tipo de evaluación que se elija. Su principal valor consiste en que se considera como un instrumento para que los jefes inmediatos de todos los niveles mantengan una comunicación sistemática con sus colaboradores, respecto de la forma en que se van cumpliendo los objetivos y metas de trabajos previamente establecidos. La evaluación del desempeño, también, puede concebirse como un “Proceso que realiza un supervisor a un subordinado que es diseñado para ayudar a los empleados a entender sus funciones, objetivos, expectativas y éxito en el desempeño.” (Bohlander G. y Scott S. 2008: 348) Podría parecer que la evaluación del desempeño tendría una función muy limitada pero no es así ya que aporta beneficios muy amplios tanto al individuo como a la organización.

Desde el punto de vista del desarrollo individual, la evaluación genera la retroalimentación básica para mejorar el desempeño. También, representa uno de los criterios que constituyen las bases del sistema de compensaciones, como sería el “pago por desempeño. La evaluación del desempeño de los empleados que cumplen con propósitos múltiples en el área de Recursos humanos de las empresas está siendo cada vez asociada con la retribución (pago por desempeño), “La tendencia de moda en la mayoría de las organizaciones es hacer partícipe a todos los trabajadores del éxito de la compañía. La retribución por desempeño está adquiriendo cada vez más importancia en las empresas españolas”. (Vázquez, P. 25).

Esta tendencia es positiva porque, finalmente, se trata de hacer más justicia a los que invierten en realizar un mayor y mejor trabajo en las empresas. De este modo, otros criterios para la retribución que tradicionalmente han sido tomados en cuenta como sería la antigüedad están siendo desplazados por evaluación del desempeño para la toma de decisiones en lo que se refiere a los incrementos salariales y en general sobre la retribución, “La evaluación del desempeño está en el corazón de muchos de estos planes, pues la evaluación de cada empleado se hace necesaria para adoptar las decisiones sobre retribución”. (Vázquez, P. 25). La retribución es un concepto que tiene varias acepciones. Según, la Real Academia de la Lengua Española, el término *retribución*, proviene del lat. *retributio*, *-ōnis* y significa: Recompensa o pago de algo. Se trata de un pago por un servicio o trabajo realizado.

Aplicado a una empresa, según, Porret, (2010) podemos definirla como: ‘aquella compensación económica efectuada por una empresa que percibe directamente el trabajador por el esfuerzo realizado, física y/o intelectualmente, cualesquiera que sean los factores tenidos en cuenta, los sistemas utilizados para su cálculo y la modalidad de pagar que se emplee’ (p. 306). La retribución tiene una influencia muy importante en todo el comportamiento organizacional ya que ya sea en su aspecto de eficacia y calidad o como en lo que tiene que ver con la productividad, además de ser una herramienta directiva. Una política retributiva o salarial debe tener el objetivo: atraer y mantener en el trabajo a los empleados más capacitados y eficaces; compensarles en función del trabajo que se les exige; permitirles satisfacer sus necesidades económicas, familiares y de carácter social (Porret, 2010, 309). Esto nos indica la importancia de la evaluación del desempeño ya desde la selección del personal y sobre todo en lo que se refiere a su permanencia y a su retribución.

La retribución puede estar sujeta a mecanismos y métodos tradicionales basados en la antigüedad o a criterios más novedosos como sería la evaluación del desempeño. La utilización de los primeros se relaciona con niveles de innovación mientras que los segundos están negativamente vinculados con la innovación (Gómez-Mejía y Welbourne, 1988; Laursen y Foss, 2003). Los incentivos ordinariamente se dan a tres niveles: individual, de grupo y empresa (Gómez-Mejía y Saura, 1996; Gómez-Mejía *et al.*,

2004). Se identifica en la literatura que la retribución basada en el rendimiento de los individuos, resulta imprescindible para incrementar y reconocer el esfuerzo de los individuos y de este modo motivar la creatividad (Sarin y Mahajan, 2001). No obstante, que pueden generar fricciones entre los trabajadores debido a la competencia que se genera (Larrazza, 2004); también puede provocar sentimientos de inequidad interna en los empleados que trabajan de forma agregada ya que pueden no sentirse valorados ni retribuidos. Por eso es importante implementar políticas de retribución a nivel de grupo. Además se constituyen en factores de motivación y refuerzan el trabajo en equipo (Díaz y Gómez-Mejía, 1997; Laursen y Foss, 2003; Chang *et al.*, 2007).

Las empresas innovadoras han de retribuir tanto rendimientos tangibles como intangibles (Sastre y Aguilar, 2003). Hay que destacar que cuando los individuos y grupos asocian la evaluación del rendimiento con la recompensa, la retribución es más motivadora y deriva en mayores resultados de innovación (Cheng y Mohd, 2010). Respecto a lo que sería una estructura retributiva en una empresa se pueden identificar las siguientes: La estructura salarial, que tiene que ver con la percepciones económicas del trabajador ya sea en dinero o en especie por la prestación de un servicio; Retribución fija, que se encuentra basada en un salario fijo; Criterios para el establecimiento de un sistema retributivo, dentro de los que destacamos la retribución basada en el desempeño; retribución variable, que son percepciones no garantizadas sujeta al rendimiento individual o de grupo; Principales sistemas de incentivos entre los que destacan los sistemas de destajo y otros sistemas (Taylor, yorck, Gantt etc.); compensaciones extra salariales, que tienden a compensar o indemnizar gastos del trabajador; Pagos en especie; Pagos a la carta, pacto de empleados claves para la empresa sobre condiciones económicas y sócales.

De lo anterior, destacaremos la Retribución basada en el desempeño, “Está basada en las contribuciones que hace un empleado a la organización [...] Basar la retribución en el desempeño proporciona una respuesta operativa que elimina todo rastro de duda de cuestiones como a qué persona incrementar el sueldo y en qué proporción” (Porret, 2010, p. 323). Se trata de premiar a los empleados que tengan una aportación o productividad cuantitativa o cualitativamente relevante para la empresa (cfr. Porret, 2010, 321-355). Actualmente, hay algunas prácticas recientes que tiene que ver las remuneraciones variables y que según las conclusiones de Shiel y Orozco, 2011, se puede decir, entre otras cosas que: Están dirigidas al personal y su rendimiento; procura un aumento de la productividad, mejora de la competitividad y en especial de las rentabilidades, compartiendo beneficios entre empleados y empresas; deben en consecuencia procurar su autofinanciación; no es la herramienta que por excelencia se le deba utilizar para resolver problemas de actitudes no deseadas; resulta indispensable establecer indicadores de gestión, estándares o “targets” que impliquen una mejora en el sistema organizacional; una correcta, apropiada y oportuna aplicación implica resultados positivos para las partes.

Hay muchas formas de retribución, entre los cuales destacamos los incentivos entre los cuales podemos mencionar: Las comisiones sobre la venta, que sería una forma de retribución variable y tiene que ver con el margen de venta o servicio de la empresa; Las primas de producción, las cuales pueden estar directamente o indirectamente asociadas a la proporción de la producción; Bono por desempeño ya sea para directivos o empleados profesionales; Opción de compra de acciones, que pretende mejorar el salario y la participación de la empresa; Participación en beneficios, es una forma de retribución en función de los resultados de la empresa; Mejora de la productividad (gain sharing), que pretende incentivar el trabajo y la ganancia en equipos; Retribución por objetivos (goal sharing (p. 165). Pero, serán las políticas implementadas en una empresa las que indicaran en que forma la evaluación del desempeño impactaran a las compensaciones (retribuciones). Generalmente pueden incidir y aplicarse de la siguiente forma: Impacto sobre el salario; Aplicación de premios periódicos; Aplicación de pagos en especie; Aplicación de remuneraciones variables (Shiel y Orozco, 2011, p. 170).

## METODOLOGIA

La metodología que emplearemos para la realización de este proyecto de investigación es descriptiva y explicativa. Como técnicas de investigación se realizara la revisión de la literatura que nos permitirá describir las características de un sistema de evaluación del desempeño así como el debate actual al respecto. Se realizaran un estudio empírico incluyendo una serie de *entrevistas* que nos permitirán obtener los elementos para establecer el impacto de la evaluación del desempeño en la retribución y la rotación del personal en las maquiladoras en Mexicali.

Ámbito de aplicación

Tabla 1: Determinación de la Muestra

poblacion	tipo de muestreo	universo	muestra minima	muestra maxima	medio de recopilacion de informacion
gerentes de rr. hh.	probabilístico aleatorio	base de muestra 138	97.40 62.41	101.72	cuestionario

Cabe mencionar que la base de muestra se tomó partiendo de la información proporcionado por la Secretaria de Desarrollo Económico (SEDECO), Instituto Nacional de Estadística y Geografía (INEGI) y Asociación de Maquiladoras de Mexicali (AMMAC) donde se determinó que se encuentran establecidas en Mexicali 209 maquiladoras de las cuales 138 cuentan con departamento de Recursos Humanos. Se aplicó la siguiente fórmula para una población finita, es decir conocemos el total de la población y deseamos saber cuántos del total tendremos que estudiar:

$$n = \frac{N * Z_a^2 * p * q}{d^2 * (N - 1) + Z_a^2 * p * q}$$

Donde para el cálculo de la *muestra máxima* tenemos:

N = Total de la población

$Z_a^2 = 1.96^2$  (si la seguridad es del 95%)

p = proporción esperada (en este caso 5% = 0.05)

q = 1 – p (en este caso 1-0.05 = 0.95)

d = precisión (en este caso deseamos un 5%).

Dando como resultado una muestra de **101.72**

*Determinación de la muestra mínima:* Se realizó el ejercicio donde se tomó en cuenta del cuestionario aplicado como prueba piloto, el ítem Sexo: (1) Masculino, (2) Femenino donde de 13 cuestionarios aplicados 9 contestaron Masculino y 4 Femenino representando un porcentaje de .69 y .31 respectivamente. Se aplicó la misma fórmula anterior donde p=.69 y q=.31 dando como resultado una muestra mínima de **97.40** También se aplicó la misma fórmula considerando el ítem Formal (1), Informal (2)- perteneciente a la variable independiente: *Sistema de Evaluación del Desempeño*-donde de 13 cuestionarios aplicados 12 contestaron Formal y 1 Informal representando un porcentaje de .92 y .08 respectivamente. Donde p=.92 y q= .08 dando como resultado una muestra mínima de **62.41**

$$n = \frac{N * Z_{\alpha}^2 * p * q}{d^2 * (N - 1) + Z_{\alpha}^2 * p * q}$$

Tabla 2: Técnicas de Recolección de la Información

tecnicas	instrumento de recoleccion de datos	instrumento de registro de datos
Encuesta	Cuestionario	papel y lápiz, formato electrónico grabadora de audio, cámara de video y fotografía (en el caso que fuera necesario)

## RESULTADOS

Considerando que hasta el momento llevamos aplicados **30** cuestionarios de una muestra máxima de 101.72 maquiladoras hemos obtenido que el 90% de los encuestados contestaron que el sistema de evaluación del desempeño que adopta la empresa es formal y que el propósito de la evaluación que se realiza en la misma tiene que ver con decisiones sobre retribución y distribución de recompensas. Además ante la pregunta ¿En qué porcentaje considera el resultado de la evaluación del desempeño para tomar decisiones sobre retribución? El 90% de los encuestados contestaron que más de un 50% de los resultados de la evaluación del desempeño son considerados a la hora de tomar decisiones sobre retribución.

## CONCLUSIONES

La conclusión que se deduce del estudio realizado, es que las maquiladoras en Mexicali, B.C. están adoptando sistemas de evaluación del desempeño con un carácter formal que incide en la toma de decisiones en torno a la retribución de personal. Ahora cabe preguntarse de que manera las maquiladoras de Mexicali, B.C. están adoptando sistemas de evaluación del desempeño de carácter formal que resulte efectivo a la hora de tomar decisiones sobre retribución del personal, de tal forma de que estos se encuentren satisfechos con las prestaciones que perciben. Limitaciones Dentro de las limitaciones de este trabajo cabe mencionar, que el estudio realizado se basó sobre 30 maquiladoras de Mexicali, B.C. de un total de 101.72 maquiladoras que representan la muestra máxima de la investigación.

## RESUMEN

*En las últimas décadas, muchos países han desarrollado iniciativas para ampliar la oferta de servicios financieros regulados a capas de la población tradicionalmente desatendidas por el sistema financiero formal. Los esfuerzos por incrementar el acceso a servicios financieros para amplios grupos poblacionales excluidos de ellos se han multiplicado a nivel mundial. Hay un creciente interés por construir sistemas financieros incluyentes. La inclusión financiera crea oportunidades mejores y más equitativas para que las personas mejoren su nivel de vida. Además, fomenta la justicia económica y permite a todos los ciudadanos contribuir a una sociedad y economía productiva. El proyecto de investigación aquí presentado busca en primera instancia conocer el nivel de inclusión financiera de la población adulta correspondiente a los estratos socioeconómicos más bajos (D, D+ y E) de la Ciudad de Autlán de Navarro, Jalisco, así como las barreras de acceso a los productos y servicios ofrecidos por las instituciones del Sector de Ahorro y Crédito Popular, de manera que permita tener un panorama sobre cuál es la participación que se tiene y qué es lo que está impidiendo que las personas se integren al sistema financiero.*

**PALABRAS CLAVE:** Inclusión financiera, barreras de acceso, población adulta, estrato social.

## FINANCIAL INCLUSION LEVEL ACCESS TO AND BARRIERS OF ADULT POPULATION OF AUTLAN DE NAVARRO, JALISCO

### ABSTRACT

*In recent decades, many countries have developed initiatives to expand the supply of regulated financial services sectors of the population traditionally underserved by the formal financial system. Efforts to increase access to financial services for large population groups excluded from them have increased worldwide. There is growing interest in building inclusive financial systems. Financial inclusion creates better and more equal opportunities for people to improve their living standards. It also promotes economic justice and enables all citizens to contribute to a productive society and economy. The research project presented here seeks first to know the level of financial inclusion of the adult population corresponding to the lower socioeconomic strata (D, D + and E) of the City of Autlan de Navarro, Jalisco, and access barriers to products and services offered by institutions Sector Savings and Loan, a way that allows having an overview of what involvement you have and what is preventing people to integrate into the financial system.*

**JEL:** G10, G14, G21, M3.

**KEYWORDS:** Financial inclusion, access barriers, adult population, social stratum.

## INTRODUCCIÓN

En la actualidad, los servicios financieros cumplen un rol importante en la economía ya que permiten movilizar el ahorro y canalizarlo hacia la inversión (Gurley y Shaw, 1995), logrando a partir de la especialización reducir costos de información (Akerlof, 1970; Stiglitz y Weiss, 1981) y facilitar las transacciones al tiempo que mediante la diversificación permiten reducir los riesgos y aumentar los retornos. En un modelo de crecimiento endógeno, Greenwood y Jovanovic (1990) muestran que una mejor asignación de recursos y riesgos derivados de una mayor profundidad financiera genera crecimiento económico. El acceso a los servicios financieros provee de liquidez y permite a los agentes suavizar su consumo en el tiempo, mejorando de esta manera su bienestar económico.

No obstante, la provisión de liquidez por parte de los intermediarios financieros hace que los mismos sean proclives a corridas y crisis financieras. Estas crisis causan importantes costos en términos de bienestar económico (Anastasi et al., 2010). La bancarización y/o inclusión financiera es una actividad que ha estado presente en la sociedad desde hace mucho tiempo, en los últimos años ha cobrado importancia para países en vías de desarrollo como el nuestro. En México, los esfuerzos de ampliación de la oferta de servicios financieros involucran una amplia gama de proveedores. Por un lado, se encuentran los bancos comerciales y los recientemente nombrados “bancos de nicho”, así como las compañías de crédito llamadas Sociedades financieras de Objeto Limitado/Múltiple (Sofoles y Sofomes) y por el otro lado se encuentran los intermediarios financieros no bancarios que, en los últimos años, se han dado a conocer como el Sector de Ahorro y Crédito Popular. La presente investigación pretende conocer el nivel de bancarización (inclusión financiera) de la población adulta correspondiente al estrato social D+, D y E (AMAI, 1998), que va desde el segmento de la población de clase media hasta el segmento más bajo de la misma, de la ciudad de Autlán de Navarro, Jalisco siendo una ciudad tradicional y relativamente pequeña, de igual forma identificar las barreras de acceso que tienen a los productos y servicios financieros que se ofrecen por las Sociedades de ahorro y crédito popular.

## REVISIÓN LITERARIA

La Comisión Nacional Bancaria y de Valores (2010), define la inclusión financiera como la oferta, el acceso y uso de una gama de productos y servicios financieros por parte de la población, en especial la de menores ingresos o marginada, bajo una regulación apropiada que cuida los intereses de los usuarios del sistema y fomenta sus capacidades económicas y financieras. El acceso es el primer componente de Inclusión financiera definido como la infraestructura financiera o canales de distribución que existen en determinada región. Lo que permite analizar si la infraestructura disponible para la oferta de servicios financieros es suficiente para atender la demanda existente en un territorio en cuestión. Los indicadores de acceso pueden ser geográficos o demográficos. Los primeros señalan el número de puntos de acceso por km<sup>2</sup>, mientras que los segundos explican el número de puntos de acceso por cada 10,000 adultos (CNBV, 2010). Para los reportes de inclusión financiera y su medición la CNBV se utiliza el término adultos en lugar de población debido a que el universo es limitado a las personas que pueden legalmente utilizar servicios financieros y que tienen necesidades financieras relacionadas con ciertos puntos que las atienden. Si bien en México, la mayoría de edad comienza a los 18 años, se implementa el criterio internacional utilizado en la base de datos “World Development Indicators (WDI)” del Banco Mundial de 15 años.

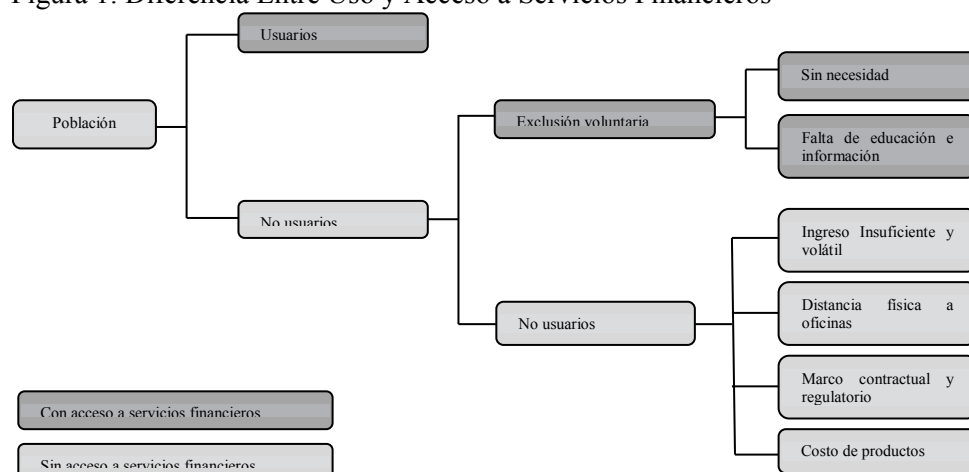

### Condiciones Necesarias Para La Bancarización

Morales & Yáñez (2006), en su artículo “La bancarización en Chile. Concepto y Medición”, establecen tres condiciones necesarias para que se dé la bancarización: una estabilidad macroeconómica, un marco institucional adecuado y una supervisión efectiva.

*Barreras a la inclusión financiera:* Las barreras afectan directamente el acceso que tiene la población a productos y servicios financieros y, por ende, su uso. La identificación de las barreras ofrece la posibilidad de detectar con mayor facilidad las políticas públicas que maximicen el impacto en la inclusión financiera. El desarrollo de indicadores específicos, que permitan medir el impacto de cada barrera, contribuirá al desarrollo de un marco regulatorio que propicie nuevos modelos de negocio e innovación de productos y servicios financieros (CNBV, 2010). Los indicadores desarrollados hasta el momento, basados en el número de cuentas o el porcentaje de la población que utiliza determinado servicio, brindan información respecto al uso de productos; así mismo, indicadores como el número de sucursales o terminales punto de venta (TPVs) se enfocan en el acceso geográfico; sin embargo, ignoran otras barreras como son el marco contractual y la falta de educación financiera, entre otras (CNBV, 2010). Las barreras al acceso pueden existir tanto por el lado de la oferta como por el lado de la demanda. La figura 1 presenta una clasificación del Banco Mundial que permite distinguir las posibles razones por las cuales, voluntaria o involuntariamente, las personas no cuentan con servicios financieros. Esta clasificación provee un marco para la identificación de las diferentes barreras y facilita el desarrollo de indicadores para cada una de ellas.

Figura 1: Diferencia Entre Uso y Acceso a Servicios Financieros

Fuente: Comisión Nacional Bancaria y de Valores (CNBV). Segundo Informe de Inclusión Financiera, 2010. Extraído el 23 de mayo de 2012 desde: <http://www.cnbv.gob.mx/Prensa/Paginas/inclusionfinanciera.aspx>.

*Exclusión financiera:* Es importante distinguir entre la población que tiene acceso, pero no demanda servicios financieros, y la población que sí demanda servicios, pero no tiene acceso. Estos dos grupos no son constantes con el curso del tiempo: con el desarrollo de la economía y de la tecnología podría reducirse la proporción de la población que se autoexcluye voluntariamente ya que, en un mundo más interconectado, participar en el mercado implicará una mayor participación dentro del sistema de pagos y, por lo tanto, en el sistema financiero formal. La exclusión voluntaria puede darse por varias razones (Figura 2).

Figura 2: Exclusión Financiera Voluntaria (Autoexclusión)

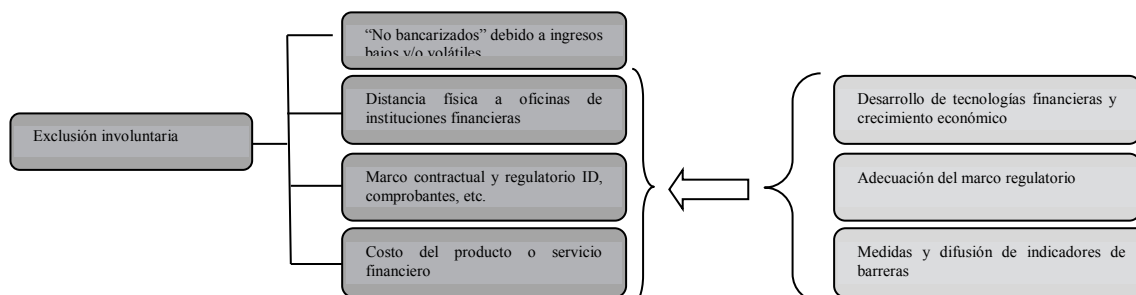

Fuente: Comisión Nacional Bancaria y de Valores (CNBV). Segundo Informe de Inclusión Financiera, 2010. Extraído el 23 de mayo de 2012 desde: <http://www.cnbv.gob.mx/Prensa/Paginas/inclusionfinanciera.aspx>.

A priori, el segmento de la población que señala no necesitar servicios financieros parece no relevante, ya que de alguna manera se presupone la existencia de algún acceso indirecto; sin embargo, debe considerarse que pueden existir individuos que declaren no necesitar servicios financieros por falta de información, educación financiera, e inclusive por falta de marketing en este segmento (“lack of targeting”). Existen otras razones para la exclusión voluntaria, por ejemplo: creencias religiosas, factores culturales y la falta de confianza en el sistema financiero; esta última puede originarse ya sea por experiencia propia, o bien, por la de algún familiar o amigo (CNBV, 2010).

Entre los grupos excluidos involuntariamente, pueden distinguirse diferentes causas que impiden el acceso a servicios financieros (Figura 3). La barrera de ingreso insuficiente se refiere al grupo que no tiene servicios financieros debido a un nivel bajo de ingresos, o bien, cuyos ingresos presentan una alta volatilidad. La proporción de la población excluida por esta causa puede variar con los ciclos de crecimiento económico: si mejoran las condiciones de la economía, los costos de proveer servicios financieros se reducen, al mismo tiempo que se incrementan los ingresos de los segmentos bajos de la población. Otro grupo que sufre de exclusión financiera involuntaria es aquel conformado por los individuos que se localizan a gran distancia de una oficina bancaria ya que, tanto el tiempo de traslado como el costo del transporte se reflejan en costos elevados que les impiden el acceso a los servicios financieros (CNBV, 2010). Una barrera importante tiene que ver con los costos asociados al mantenimiento de una cuenta bancaria; así como a servicios específicos, tales como: retirar dinero, utilizar un cheque, usar una tarjeta de débito, etc. Se considera en una categoría a la población de hogares o empresas que son excluidos por razones de precio o producto; es decir, cuando existen costos elevados para mantener una cuenta, o bien, por la falta de productos adaptados a las necesidades de este segmento de la población. Existen otras barreras, como son todas aquellas relacionadas con el marco contractual; dichas barreras se refieren a los requisitos de documentación que se solicitan a los hogares y a las empresas para: abrir una cuenta, pedir un préstamo, etc.

Figura 3: Exclusión Financiera Involuntaria

Fuente: Comisión Nacional Bancaria y de Valores (CNBV). Segundo Informe de Inclusión Financiera, 2010. Extraído el 23 de mayo de 2012 desde: <http://www.cnbv.gob.mx/Prensa/Paginas/inclusionfinanciera.aspx>.

### Importancia de la Inclusión Financiera

En el Informe oficial del Proyecto de Inclusión Financiera en 2020 del Centro para la Inclusión Financiera en ACCION International (2009), se presenta que la inclusión financiera es una importante meta nacional por un sinnúmero de razones. Tiene el potencial de hacer una valiosa contribución a la economía mexicana y reducir al mismo tiempo la desigualdad social. De manera más fundamental, los servicios financieros mejoran la calidad de vida y la productividad económica de los hogares de bajos ingresos y las pequeñas empresas/microempresas que logran un acceso a dichos servicios. Estos hogares y empresas se benefician de siete maneras diferentes, aunque relacionadas. Las cuales son: facilitan las transacciones económicas, administran recursos día a día, mejora la calidad de vida, protege contra la vulnerabilidad,

promueve las inversiones para incrementar la productividad, mejora los bienes y construye una ciudadanía económica. Lograr una inclusión financiera integral daría a millones de mexicanos las herramientas financieras para administrar mejor su vida y actividades económicas. También es posible que la inclusión integral pueda ayudar a reducir los gastos de programas gubernamentales paliativos.

*Sociedades Cooperativas de Ahorro y Préstamo:* Pertenecen a las organizaciones y auxiliares del crédito dentro del sistema financiero mexicano y son aquellas sociedades constituidas y organizadas conforme a la Ley General de Sociedades Cooperativas que, independientemente del nombre comercial, razón o denominación social que adopten, tengan por objeto realizar operaciones de ahorro y préstamo con sus Socios, y quienes forman parte del sistema financiero mexicano con el carácter de integrantes del sector social sin ánimo especulativo y reconociendo que no son intermediarios financieros con fines de lucro (CNBV, 2012). El objetivo es consolidar un sector de Sociedades Cooperativas de Ahorro y Préstamo (SCAP), que cuente en su totalidad con un registro y para el caso de aquellas con activos superiores a 2.5 millones de UDIS con la autorización de la CNBV, las cuales como parte del sector social del sistema financiero mexicano contribuyan a la inclusión financiera de la población de las comunidades en las que operan a fin de hacerles llegar productos y servicios financieros de calidad que ayuden a sus socios a mejorar su situación económica, y coadyuvar con el Gobierno Federal para la difusión, entrega y administración de los programas de apoyos que éste promueva a fin de que los mismos lleguen de forma integral a sus beneficiarios incrementando el efecto positivo con el cual sean implementados. (SCAP, 2012).

La siguiente tabla muestra los principales indicadores de las dos Sociedades Cooperativas de Ahorro y Crédito Popular que se encuentran en el municipio de Autlán de Navarro, Jalisco; mismas que ya realizaron la inscripción de su autorización en el Registro Público de Comercio.

Tabla 1: Sociedades Cooperativas de Ahorro y Préstamo en la Cd. de Autlán de Navarro, Jalisco

Clave	Nombre	Número de Socios	Número de Sucursales	Activo Total (miles de pesos)
29006	Caja Popular Cristóbal Colón	Sep. 2011 34,713	Sep. 2011 11	Sep. 2011 825,146
29031	Caja SMG	18,436	4	569,037

## RESULTADOS

A continuación se analizan los resultados obtenidos para el presente estudio y poder medir el nivel de inclusión financiera, así como las barreras de acceso de la población adulta correspondiente a los estratos sociales D+, D y E de Autlán de Navarro, Jalisco, México en el sector de ahorro y crédito popular.

Primeramente es conveniente conocer el perfil socio demográfico de las personas encuestadas, en la tabla 3 podemos observar que de los 380 encuestados un 58.9% corresponde al sexo femenino y el 41.1% al masculino. En lo referente a edad (Tabla 4) y tomando en cuenta el criterio internacional utilizado en la base de datos “World Development Indicators (WDI)” del Banco Mundial donde se define que la mayoría de edad es a partir de los 15 años (CNVB, 2010), se establecieron rangos de edad, donde se observa que el 43.2% se encuentra en el rango de 15 a 25 años, seguido por el rango de entre 26 y 35 años con un 21.1%, el 14.7% para el rango entre 36 y 45 años, un 12.4% para el rango entre 46 y 55 años y finalmente un 8.7% para las personas con más de 56 años.

Tabla 3: Sexo

		Frecuencia	Porcentaje válido
Válidos	Femenino	224	58.9
	Masculino	156	41.1
	Total	380	100.0

Tabla 4: Edad

	Frecuencia	Porcentaje válido
De 15 a 25 años	164	43.2
De 26 a 35 años	80	21.1
De 36 a 45 años	56	14.7
De 46 a 55 años	47	12.4
De 56 años en adelante	33	8.7
Total	380	100.0

*Fuente: elaboración propia basada en los datos proporcionados por el programa estadístico SPSS*

En cuanto al nivel de escolaridad (Tabla 5) de las personas encuestadas los resultados muestran que un 29.2% tiene licenciatura, un 25.5% preparatoria, el 21.3% secundaria, un 16.8% primaria, 2.9% sin estudios pero sabe leer y escribir, 2.9% no sabe leer y escribir, un 1.1% posgrado y el 0.3% carrera técnica.

Tabla 5: Nivel de escolaridad

	Frecuencia	Porcentaje válido
No sabe leer ni escribir	11	2.9
Sin estudios pero sabe leer y escribir	11	2.9
Primaria	64	16.8
Secundaria	81	21.3
Preparatoria	97	25.5
Licenciatura	111	29.2
Posgrado	4	1.1
Carrera Técnica	1	.3
Total	380	100.0

*Fuente: elaboración propia basada en los datos proporcionados por el programa estadístico SPSS*

En lo referente a ocupación (Tabla 6) el 37.9% respondió ser empleado, 19.2% ama de casa, 18.4% estudiante, 16.6% comerciante, 2.1% profesor, 2.1% agricultor, 2.1% otra profesión y un 1.6% pensionado. El 2.1% restante contestaron estar desempleados o propietarios de un taxi.

Según el Informe oficial del Proyecto de Inclusión Financiera en 2020 del Centro para la Inclusión Financiera en ACCION International (2009), el tamaño de una localidad, la participación del sector

informal y los ingresos son elementos clave para determinar si un hogar tendrá acceso a algún servicio financiero. Los pobres tienen mayor probabilidad de ser excluidos del sistema financiero, al igual que los trabajadores del sector informal. Los trabajadores informales tienen menos acceso que sus contrapartes formales provenientes de localidades de todos los tamaños, y el acceso de los trabajadores rurales está rezagado con respecto a los trabajadores urbanos.

Tabla 6: Ocupación

	Frecuencia	Porcentaje válido
Ama de casa	73	19.2
Profesor	8	2.1
Empleado	144	37.9
Comerciante	63	16.6

Tabla 7: Ingreso Mensual

	Frecuencia	Porcentaje válido
\$6,800 a \$11,599	68	17.9
\$2,700 a \$6,799	131	34.5
\$0 a \$2,699	181	47.6
Total	380	100.0

*Fuente: elaboración propia basada en los datos proporcionados por el programa estadístico SPSS*

Entre estas tres poblaciones desatendidas, el uso varía según el producto. En términos de ahorros, los hogares rurales, pobres e informales están levemente más excluidos del sector financiero que el resto del país. No obstante, en términos de seguros de vida y crédito, estos tres grupos están considerablemente rezagados con respecto al resto del país. Las tasas de penetración también muestran que estos tres grupos demográficos dependen más de las remesas que otros grupos. En este caso la variable de filtro es el ingreso, mediante el cual se definió el estrato social D+, D y E, en la tabla 18 se observa que 47.6% (181 personas) corresponde al estrato social E con un salario de \$0 a \$2,699.00. Un 34.5% (131 personas encuestadas) están dentro del estrato D y el 17.9% (68 personas) restante dentro del estrato D+ (Tabla 7).

Tabla 8: Pertenece a Alguna Institución Financiera del Sector de Ahorro y Crédito Popular

	Frecuencia	Porcentaje válido

La inclusión financiera crea oportunidades mejores y más equitativas para que las personas mejoren su nivel de vida. Además, fomenta la justicia económica y permite a todos los ciudadanos contribuir a una sociedad y economía productivas. México tiene la necesidad y el potencial para una inclusión integral. Se estima que el 45% de todos los hogares no utilizan ningún servicio financiero, una cifra que refleja el importante y reciente avance y un serio desafío para el futuro. Una cantidad mucho mayor de familias cuentan únicamente con una inclusión parcial en el sistema financiero al utilizar uno o dos servicios de manera limitada y con baja calidad (Acción Internacional, 2012).

Tabla 9: Ingreso Mensual \* Pertenece a Alguna Institución Financiera Del Sector de Ahorro y Crédito Popular

		Pertenece a alguna institución financiera del Sector de Ahorro y Crédito Popular			Total

En la tabla 8 podemos observar que de las 380 personas encuestadas 163 personas (42.9%), afirmaron ser socios de alguna institución financiera del Sector de Ahorro y Crédito Popular, mientras que el 57.1% (217 personas) no pertenecen a ninguna institución financiera de este Sector. Así mismo, en la tabla 9 se aprecia que de las 217 personas que no están dentro del sistema financiero 118 tienen los ingresos más bajos representando el 31.1%, seguido por 74 dentro del estrato económico siguiente. Las tres primeras razones (tabla 10) que mencionaron son el ingreso bajo que tienen (46.1% equivalente a 100 personas), la segunda es que mencionaron no necesitarlo (19.4%, 42 personas) y la tercera razón es por considerar elevados los costos de mantener una cuenta (8.8%, 19 personas). El resto de las razones son: con un 8.3% desconocimiento de los servicios y productos ofrecidos y por ende los beneficios, 4.1% menciona que la ubicación de la empresa está muy lejos, 4.1% no cuenta con los documentos necesarios, 3.2% prefieren manejar efectivo, 2.8% desconfianza, 2.3% consideran que el horario es inflexible y el 0.5% restante mal servicio.

Tabla 10: Marque la Razón Principal Por la Que No es Socio de Alguna Sociedad de Ahorro y Crédito Popular

	Frecuencia	Porcentaje válido
Ingresos bajos	100	46.1
Ubicación de la empresa está muy lejos	9	4.1
Desconoce los productos y servicios ofrecidos y por ende los beneficios	18	8.3
No cuenta con los documentos necesarios	9	4.1
Los costos de mantener una cuenta son altos	19	8.8
Desconfianza	6	2.8
Preferencia por manejar efectivo	7	3.2

La tabla 11 muestra que de las 163 personas que si son socias de alguna institución financiera del sector de ahorro y crédito popular, 33.7% tienen entre 6 y 10 años en la institución, 29.4% tienen entre 1 y 5 años, 16.6% entre 11 y 15 años, 8% menos de un año y el 10.4% restante más de 16 años como socia de la institución. En relación al tipo de ahorro que tienen el 87.7% mencionó el ahorro ordinario, un 0.6% corriente, 3.1% dinámico, 0.6% de los tres tipos de ahorro, 1.2% ordinario y corriente y el 6.7% desconoce (Tabla 12). Al cuestionar a los entrevistados si conocían los beneficios de cada uno de los diferentes tipos de ahorro, se obtuvo que el 59.5% contestó afirmativamente, mientras que el 40.5% los desconoce (Tabla 13).

Tabla 11: ¿Cuántos años tiene como socio de la institución?

Frecuencia	Porcentaje válido
------------	-------------------

Menos de 1 año	13	8.0
De 1 a 5 años	48	29.4

La inclusión financiera implica encontrar mecanismos que permitan a los hogares tomar ventaja de los servicios financieros ofrecidos por la banca formal. Los principales servicios financieros a los que puede acceder la población son depósitos, créditos y seguros. Hay también otros servicios como la posibilidad de hacer giros o transferencias, o recibir remesas y cambiar moneda extranjera, que en algunos contextos cobran especial relevancia (Maldonado, 2011). Referente al producto más utilizado el resultado muestra que es el ahorro con el 57.1% y un 41.7% para el crédito. Un 1.2% respondió utilizar ambos de igual forma (Tabla 14). De acuerdo al ingreso mensual, la tabla 14 muestra que de los 93 encuestados que mencionaron que era el ahorro, 51 son del estrato más bajo, 26 del estrato de \$2,700 a \$6,799 y 16 de \$6,800 a \$11,599. Mientras que de los 68 que contestaron que era el crédito el más utilizado, 26 personas son del estrato más alto (\$6,800 a \$11,599), 30 del segundo estrato económico y solamente 12 del más bajo.

El acceso a servicios financieros formales por parte de las familias pobres, suele ser, en el mejor de los casos, limitado. Entonces, cuando se presentan emergencias o eventos inesperados, estos hogares deben recurrir a préstamos informales, otorgados, por lo general, por amigos, parientes y prestamistas, entre otros. La tabla 18 muestra que de las 163 personas encuestadas que son socias en algún institución financiera de ahorro y crédito popular, el 66.3% (108 personas) ha solicitado un préstamo, mientras que el 33.7% restante nunca ha solicitado. De las personas que han solicitado préstamo, 36 tienen un ingreso de \$6,800 a \$11,599, 44 entre \$2,700 a \$6,799 y 28 el más bajo.

## CONCLUSIONES

Tradicionalmente, los hogares pobres en América Latina y el Caribe han tenido escaso o nulo acceso a los servicios financieros formales. Sin embargo, la evidencia demuestra que los hogares pobres sí ahorran y se endeudan. Si bien suelen utilizar estrategias informales, ello refleja una demanda efectiva por servicios financieros. Según Maldonado (2011) y la Comisión Nacional Bancaria y de Valores (2010), existe una serie de factores tanto desde la demanda como desde la oferta que limita el acceso de los pobres al

sistema financiero formal. En el lado de la demanda, se destacan no tener ingresos suficientes; altos costos de transacción y de manejo; excesiva documentación y trámites; desconocimiento y falta de confianza en el sistema financiero. En el lado de la oferta, el acceso a servicios financieros formales, como el crédito, se ve limitado por la falta de cobertura y por la escasez de servicios especialmente adaptados a las necesidades de este tipo de hogares.

Tabla 18. ¿Ha Solicitado Algún Préstamo? \* Ingreso Mensual

			Ingreso Mensual			Total
Ha solicitado algún préstamo?	Si		\$6,800 a \$11,599	\$2,700 a \$6,799	\$0 a \$2,699	\$6,800 a \$11,599
		Recuento	36	44	28	108
		% del total	22.1%	27.0%	17.2%	66.3%
	No	Recuento	7	13	35	55
		% del total	4.3%	8.0%	21.5%	33.7%
		Total	Recuento	43	57	63
	% del total	26.4%	35.0%	38.7%	100.0%	

Fuente: elaboración propia basada en los datos proporcionados por el programa estadístico SPSS

Frente a ello, los hogares pobres recurren a estrategias tradicionales e informales como ahorrar en alcancías, en materiales de construcción, en efectivo en la casa, en animales, en joyas o invirtiendo en sus negocios. Forman también clubes de ahorro, grupos de autoayuda y cadenas o tandas. No obstante, estas estrategias se caracterizan por ser de alto riesgo o de baja liquidez. Derivado de lo anterior, uno de los principales retos de las instituciones financieras consiste, entonces, en diseñar productos y servicios financieros adecuados a las necesidades de estos usuarios, que reduzcan los costos de transacción en términos de trámites y requisitos, y acerquen efectivamente los servicios a estas poblaciones. Además, se requiere un esfuerzo en el tema de educación financiera que reduzca de forma transparente y efectiva las dudas e incertidumbres acerca del funcionamiento del sector financiero y el uso de sus servicios. De tal manera que no solamente pierdan el miedo hacia el sector financiero, sino que reconozcan las ventajas que pueden obtener de él.

La inclusión financiera es importante en los estratos más pobres de la población por qué gran parte de los hogares en condición de pobreza genera sus ingresos a partir de actividades económicas informales, inestables o que pueden ser afectadas por factores impredecibles o no controlables, que los obliga a vivir con flujos irregulares o estacionales de ingreso y, por tanto, de consumo. Frente a la informalidad en la que se desenvuelven los hogares pobres, facilitar su acceso a los mercados financieros y con esto a otros mercados, significa convertirlos en ciudadanos económicos. Desafortunadamente, este acceso es aún, en el mejor de los casos, limitado y en general nulo para la población pobre. Del lado de la oferta las instituciones deben tener: Productos y servicios adecuados al usuario, impulsando el análisis de las necesidades de la población, incentivando el diseño de productos y servicios financieros adecuados y promoviendo el desarrollo de un entorno competitivo. Así como tener proximidad al usuario, incentivando el establecimiento de puntos de acceso eficientes, que aseguren su sostenibilidad y consolidación. También tiene que proveer tecnologías de servicios financieros adecuadas para este sector de la población, en términos de costos, acceso y facilidad de uso, lo que puede llevar a revisar incluso el marco regulatorio de las entidades financieras, para ver la manera en que se podrían reducir los obstáculos encontrados por las entidades para ofrecer estos productos especializados. En el caso de las Instituciones del Sector de Ahorro y Crédito Popular, ser intermediarios financieros consolidados, seguros y estables; apegándose a la legislación y regulación adecuada y mediante su cumplimiento.

Del lado de la demanda, las instituciones deben asegurar la defensa y protección del usuario mediante mecanismos efectivos y transparentes, además de comportamientos financieros personales responsables que fortalezcan el entendimiento general del sistema financiero, educar sobre el uso adecuado de los productos y servicios financieros e implementar estrategias estructuradas de educación financiera.

María Teresa González Barajas, Universidad Estatal de Sonora

Gustavo César Hermosillo Anduaga, Universidad Estatal de Sonora

## RESUMEN

*Este trabajo tiene como objetivo analizar e identificar factores que permitan lograr estrategias para impulsar la competitividad de los productores de carne de ganado bovino en el estado de Yucatán, México. Para este efecto, se realizará un estudio empírico basándose principalmente en estudios realizados sobre estrategias (Porter, 1996)) y competitividad (Perea y Rivas, 2007). Esto les permitirá diseñar estrategias para competir en un mercado globalizado, que está siendo afectado por el descenso sostenido de los precios de la carne de ganado bovino en el mercado mundial y la fuerte competencia por el incremento en el consumo de la carne de ave originado por los cambios en los hábitos alimenticios principalmente, así como por el descuido de la producción nacional y la pérdida de espacios que han sido aprovechados para la producción de alimentos sustitutos. El estudio será de tipo cuantitativo, correlacional, no experimental, transversal y para la obtención de la información se aplicará un cuestionario que se diseñará específicamente para obtener la información que se pretenda analizar.*

**PALABRAS CLAVE:** Estrategia, competitividad, análisis estratégico

## ANALYSIS AND STRATEGIES TO BOOST THE COMPETITIVENESS OF THE BOVINE MEAT PRODUCERS IN YUCATAN, MEXICO

### ABSTRACT

*This paper's objective is to analyze and identify the competitive strategies for bovine meat producers in the state of Yucatan, México. To this effect, there will be an empirical study based primarily on studies of strategies (Porter, 1996)) and competitiveness (Perea and Rivas, 2007). This will allow them to design strategies to compete in a globalized market which is being affected by the sustained decline in prices of bovine cattle meat in the world's market and strong competition for the increase in consumption of poultry caused mainly by changes in eating habits, as well as the neglect of domestic production and the loss of spaces that have been utilized for the production of food substitutes. The study is quantitative, correlational, non-experimental, and cross-sectional and in order to obtain and analyze information a questionnaire will be specifically designed and applied.*

**JEL:** M00

**KEYWORDS:** Strategy, competitiveness, strategic analysis

## INTRODUCCIÓN

En este trabajo se discute el papel de la estrategia como impulsor de la competitividad para los productores de carne de ganado bovino en el municipio de Tizimín, Yucatán. En 1996, Porter, señaló que numerosas actividades como crear, producir, vender y entregar un producto o servicio son unidades básicas de la ventaja competitiva. En 2008, Collis y Rukstad, mencionaron que cualquier declaración de

estrategia debería iniciar con una definición de fines que la estrategia está diseñada a alcanzar. “Sí no sabes dónde estás yendo, cualquier carretera tomarás”. La ventaja competitiva es la esencia de la estrategia. Esto definirá todos los medios importantes a través de los cuales alcanzarás el objetivo establecido. La carne es un elemento importante en la alimentación del hombre y, en el contexto dietético mundial su nivel de consumo es considerado como un indicador de vida de la población. (Organización para la Cooperación y el Desarrollo Económico, OCDE, 2009).

El mayor productor de carne vacuna en el mundo es Estados Unidos con un volumen que supera los 11 millones de toneladas métricas por año. A éste le siguen la Unión Europea, Brasil y China, con una producción entre 6 y 8 millones de toneladas. La producción en Argentina, Australia, México, India, Rusia y Canadá se ubica entre 1 y 2 millones de toneladas métricas anuales (Secretaría de Agricultura, Ganadería, Pesca y Alimentos de Argentina, 2009). En 2006, González, señaló que la actividad ganadera en México se realiza a lo largo de todo el país; afirmó que el 56% del territorio nacional está dedicado a la ganadería, aproximadamente 110 millones de hectáreas. Según la Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA, 2007), la cría de ganado se desarrolla en cuatro grandes zonas: la árida y semiárida, el trópico húmedo, la templada y el trópico subhúmedo.

El Sistema de Cuentas Nacionales de México elaborado por el Instituto Nacional de Estadística y Geografía (INEGI, 2010), señaló que en el estado de Yucatán el sector agropecuario y pesquero representan el 6.7% del Producto Interno Bruto total de dicha entidad. En información obtenida de la Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA, 2007), se mencionó que ésta se integra de los siguientes productos: ganado bovino, ovino, equino, porcino, aves de corral, guajolotes y abejas. Con base en el XIII censo general de población y vivienda 2010 efectuado por el Instituto Nacional de Estadística y Geografía (INEGI) informó que los ingresos por persona de la población son bajos, pues del total de la población ocupada, 14,111 personas perciben un sueldo entre uno y dos salarios mínimos y sólo 3,210 personas perciben más de cinco salarios mínimos, éstos últimos debido a que laboran en la ciudad de Mérida y en algunas otras localidades del estado de Quintana Roo. Por tal razón el municipio de Tizimín está catalogado como de extrema marginación.

Según el Instituto Nacional de Estadística y Geografía (INEGI, 2010), los ingresos de la población ocupada por sector se integraron de la siguiente manera: 8,205 personas obtienen ingresos del sector primario, de los cuales el 70% proviene de la ganadería bovina, siendo la actividad económica más importante del municipio, 4,114 del sector secundario y 8,695 del terciario, el cual se ha saturado y cada vez proporciona menos ingresos a quienes se dedican a estas actividades. La desorganización de los productores de ganado bovino de la región, el desempleo originado por la escasa oportunidad para los pobladores en el campo que trae como consecuencia la migración de la mano de obra hacia otras regiones, la indiferencia de los representantes de las agrupaciones, el aprovechamiento que realizan intermediarios valiéndose de la poca preparación de los productores del municipio de Tizimín, la falta de capacitación y tecnología en sus unidades de producción, así como los limitados recursos financieros con los que cuentan dichas unidades, son parte de los principales problemas a los que se enfrenta este municipio. Este estudio tendrá como objetivo identificar los factores que permitan lograr estrategias de diferenciación para impulsar la competitividad de los productores de carne de ganado bovino en el municipio de Tizimín, Yucatán, México.

## REVISIÓN DE LITERATURA

### Competitividad

En 2002, Rueda y Simón, señalaron que las empresas que han logrado sobrevivir han recurrido a la competitividad como elemento fundamental. En 1995, Porter, señaló que su modelo del diamante de la ventaja nacional, pretende ofrecer una respuesta adecuada a la pregunta de por qué las empresas ubicadas

en determinadas naciones tienen éxito a escala internacional en segmentos e industrias diferentes. En las conclusiones sobre su estudio de la ventaja competitiva de las naciones señaló que el éxito de una nación se debe a sus ventajas competitivas y no a las comparativas que ostenta. En 1991, Grant, consideró que existen otros factores aparte de los propuestos por Porter para llegar a perfeccionar o mantener la ventaja competitiva, como son la tecnología, las capacidades y las relaciones con clientes, entre otros.

En 1996, Bradenburger y Nalebuff, señalaron que también es necesario considerar un factor muy importante tal y como lo son aquellos que provocan que el cliente valore más el producto de la empresa teniendo el producto de los complementadores, que teniendo únicamente el producto de la empresa. Este complementador puede ser también un competidor con el tiempo. Después de analizar 65 variables, Perea y Rivas (2007), concluyeron en su estudio sobre la competitividad en la industria cafetalera que, siete se citan con mayor frecuencia, las cuáles son:

Capacidad de producción

Innovación

Calidad

Mercadotecnia (a la que se integran variables como participación en el mercado, logística externa y lealtad a la marca)

Organización.

Capacitación de la mano de obra

Recursos financieros

**Capacidad de Producción:** La capacidad de producción está determinada por el tamaño de la planta, por el número y habilidad de sus trabajadores, por el abasto de materiales, por la capacidad técnica del equipo y por la variedad de productos fabricados. Gaither y Frazier, (2000), señalan, que la capacidad de producción es la tasa máxima de producción de una organización, es decir, el nivel más elevado de volumen de producción que puede mantener una planta dentro del marco de un programa realista de trabajo, tomando en cuenta el tiempo normal y suponiendo una disponibilidad de insumos suficiente para operar la máquina y el equipo instalado. **Innovación:** Según Schroeder, (1992), a la innovación se le debe considerar como un impulso al mercado, fabricando lo que se puede vender; impulso a la tecnología, vendiendo lo que se puede hacer, e interfuncional, buscando la cooperación entre las diferentes áreas involucradas. Los pasos por seguir en un proceso de innovación se centran en la generación de la idea, selección del producto, diseño preliminar del prototipo, construcción del prototipo, pruebas y diseño definitivo del producto. **Calidad:** Gaither y Frazier, (2000), afirman que la calidad de un producto o servicio es el grado de percepción del cliente, en que dicho bien cumple con sus expectativas; asimismo, señalan que la calidad se determina por el desempeño del producto, características atractivas para el cliente, confiabilidad, capacidad de reparación, durabilidad, apariencia, seguridad y servicio.

**Mercadotecnia:** Jeffrey y Caron, (2002), señalaron con relación a las estrategias de crecimiento: el marketing, identifica nuevos clientes potenciales, propone oportunidades de productos, diseña campañas publicitarias y promocionales, organiza canales de distribución y crea políticas de precios y servicios de atención al cliente que ayudan a posicionar los productos de la compañía para los grupos de clientes adecuados. **Participación en el mercado:** Para Stanton, Etzel y Walter, (1996), la participación en el mercado es la proporción de ventas totales de un producto durante un determinado período en un mercado específico capturado por una compañía. De igual forma, también se puede considerar como la parte

potencial del mercado que una compañía piensa alcanzar sobre el volumen de ventas que todas las empresas que venden un producto durante determinado período pueden esperar vender bajo condiciones ideales.

*Logística externa:* Díez de Castro, (2001), afirma que la logística externa está relacionada con las actividades de recepción del producto terminado, almacenamiento y distribución, que consiste en hacer llegar el producto a su mercado meta. Es el proceso de transferir la propiedad del fabricante al consumidor final e incluir actividades como promover el producto, almacenarlo y correr parte del riesgo financiero durante el proceso de distribución. Las instituciones que pueden intervenir en el proceso de distribución son los bancos, las compañías de seguros, compañías de almacenamiento y transportistas.

*Lealtad a la marca:* La lealtad de los clientes según Hill y Jones ,(1996), está en función de la habilidad de la empresa para satisfacer sus necesidades; para lograrlo será necesario concentrarse con liderazgo en el cliente, estructurar actitudes del trabajador y mecanismos para llevar a los clientes a la organización, así como satisfacer sus necesidades a través de la personalización del servicio y tiempo de respuesta.

*Organización:* Es evidente la dificultad para convencer a la gente del cambio cuando se ha acostumbrado a cierta forma de vida que le permite resolver cómoda o incómodamente sus problemas. Todo cambio implica incertidumbre y pocas personas están dispuestas al riesgo aun con la promesa de cambios favorables, (Kotter y Schlesinger, 1979).

*Capacitación de la mano de obra:* Según Mendoza, (1998), los procedimientos para la determinación de necesidades de capacitación se clasifican en manifiestas y cubiertas. Las primeras son previsibles y se presentan cuando hay nuevos ingresos, promociones, transferencias, cambios de equipos y herramientas, cambios de procedimientos, de políticas, incrementos de estándares y metas más elevadas. Las necesidades de capacitación encubiertas o no previsibles presentan dificultades para su determinación como actitudes del personal, estilos de liderazgo, clima de la organización, factores motivacionales, costumbres, prejuicios y cultura de trabajadores y directivos.

*Recursos Financieros:* Menciona Gitman, (1986), que los recursos financieros tienen como función mantener la solvencia de la empresa en el suministro de flujos de efectivo necesarios para satisfacer las obligaciones y adquirir los activos y circulantes necesarios para lograr los objetivos de la compañía. Para disponer de recursos financieros es necesaria la medición en las empresas del riesgo, rendimiento, valor del dinero en el tiempo, apalancamiento operativo y financiero. En 1990, Birley y Westhead, señalaron que el mantenimiento de buenos estándares financieros, a través de una adecuada gestión financiera es uno de los principales factores resaltados como necesarios para alcanzar el éxito competitivo. En este sentido, es necesario realizar con cautela la planificación a corto plazo, implantar y controlar sistemas de contabilidad de costos, prestar una especial atención a las entidades de crédito, establecer presupuestos anuales, realizar análisis de la situación económico-financiera e intentar en la medida de lo posible, utilizar fuentes de financiamiento propias. Para desarrollar lo anteriormente mencionado Bantel y Jackson, (1989) comentan que el nivel de educación al ser un reflejo de los conocimientos y habilidades poseídos, se relaciona de forma positiva con la capacidad del directivo para realizar elecciones estratégicas de acuerdo con las exigencias del entorno, con su propensión a generar e implantar soluciones creativas a los problemas de la entidad e incluso con el mayor nivel de productividad, (Norburn y Birley, 1988).

*Rentabilidad:* Las empresas tienen muchos objetivos, pero para Sallenave, (1994), se pueden reducir a tres: rentabilidad, crecimiento y supervivencia. Hasta los años setenta se ponía énfasis a la rentabilidad, en los setenta y ochenta se buscaba el crecimiento; actualmente, se busca la supervivencia porque ésta supone las anteriores. Sin la rentabilidad y crecimiento no hay supervivencia.

### Estrategias

La base del crecimiento y permanencia de las empresas radica en el diseño de estrategias que la hagan competitiva y esto se logra con un proceso de planeación y control que involucra desde al dueño o propietarios hasta la última de las áreas de responsabilidad para lo cual es importante el establecer objetivos y metas por área, de tal forma que embonen con la dirección que la administración se fije.

Para lograr comprender el comportamiento de las empresas locales en entornos desarrollados en materia de competitividad lo importante es conocer las fuerzas que la mueven, (Dussel, Piore y Ruiz ,1997).

El posicionamiento estratégico intenta alcanzar una ventaja competitiva sustentable pero preservando lo distintivo de una compañía. Esto significa desarrollar actividades diferentes a la de los competidores, o desarrollar actividades similares pero de diferente manera (Porter, 1996). El primer elemento de la declaración de la estrategia es el que la mayoría de las compañías tiene, de una manera o de otra, esto es el objetivo estratégico. El segundo elemento es el alcance, el cual abarca tres dimensiones: los clientes o la oferta, localización geográfica y la integración vertical. El tercer elemento es definir la ventaja competitiva, darle esa ventaja competitiva sustentable es la esencia de la estrategia, (Collins y Rukstad, 2008).

### Estrategias de Diferenciación

El objetivo de una estrategia genérica de diferenciación consiste en lograr una ventaja competitiva al crear un bien o servicio que sea percibido por los clientes como exclusivo de una manera importante; sin embargo, los clientes pagan un precio superior porque consideran que las cualidades diferenciales del producto valen la pena y porque el precio se ha determinado en el mercado, según Hofer y Schendel (1978). Para Mintzberg (1988), las estrategias de diferenciación se explican por el diseño (perfeccionar las características del producto y el diseño), la calidad (requiere de fiabilidad, duración y funcionamiento del producto en relación con el precio), el suministro (promover un conjunto de productos básicos que satisfagan las necesidades de los consumidores dentro de un segmento) y la no diferenciación del producto (sin base para diferenciar, o seguir una estrategia de copiar lo ya existente).

La diferenciación puede ofrecerse en la indiferenciación de productos debido a que el consumidor puede elegir entre varios oferentes atraído solamente por el servicio, como en el caso de algunas gasolineras que ofrecen valor agregado en su producto por el mismo precio señalan Samuelson y Nordhaus (2006).

En cambio para Dickson y Ginter (1987), la diferenciación está referida a la posición de la firma dentro del mercado o segmento del mercado con relación a su producto, servicio, imagen, características que influyen en el consumidor para su selección. La diferenciación puede ser tangible o intangible. Autores como Thompson y Strickland (2005), consideran que la diferenciación en los productos se puede lograr desde distintos ángulos: un sabor especial, características múltiples, tiendas de descuento, eficiencia en el servicio, disponibilidad de partes de repuesto, diseños de ingeniería y ejecución, prestigio y distinción, productos confiables, manufactura de calidad, tecnología de liderazgo, amplio rango de servicios, líneas completas de productos, productos exclusivos en imagen y reputación.

### Diagnóstico Estratégico

Un diagnóstico estratégico que comprende dos áreas fundamentales: Un análisis externo, que trata principalmente de las condiciones del macrosistema o medio ambiente, que afectan o pueden llegar a afectar a la empresa. Este análisis puede enfocarse a dos variables principales; oportunidades y amenazas. Un análisis entorno, que trata de las condiciones de la empresa, que afectan o pueden afectar a esta. Tal análisis se enfoca a dos variables principales; fortalezas y debilidades. (Rodríguez ,1999)

*Cadena de Valor:* En 2007, Hansen y Birkinshaw, establecieron, que la cadena de valor es una herramienta importante para examinar en forma sistemática, las actividades, que desempeña la empresa

en el diseño, producción, mercadotecnia, entrega y apoyo de sus productos y como interactúan. Divide a la empresa en sus actividades estratégicas relevantes para comprender el comportamiento de los costos y las fuentes de diferenciaciones existentes y potenciales. La cadena de valor permite clasificar aquellas actividades distintas física y tecnológicamente que desempeña la empresa, y cuya agrupación se origina al aplicar los criterios generales siguientes: Actividades Primarias.- Son las actividades de valor implicadas en la creación física del producto, su venta y transferencia al comprador, así como asistencia posterior a la venta. Esta se divide en cinco categorías genéricas: logística interna, operaciones, logística externa, mercadotecnia y ventas y servicio. Actividades de Apoyo.- Son las actividades que sustentan a las actividades primarias y se apoyan entre sí, proporcionando insumos comprados, tecnología, recursos humanos y varias funciones (infraestructura) de toda la empresa.

### El Modelo de las Cinco Fuerzas

La fuerza competitiva más fuerte o las fuerzas determinan la rentabilidad de una industria y convierten la formulación de la estrategia en lo más importante. Las cinco fuerzas competitivas son: La amenaza de nuevos competidores: Nuevos competidores en una industria traen nuevas capacidades y deseos de ganar un mercado, compartir presiones de precios, costos, y la tasa de inversión necesaria para competir. El poder de los proveedores: proveedores poderosos capturan más valor por ellos mismos por cargar precios más elevados, limitar la calidad o servicios, o cambiar costos a la industria participante. El poder de los compradores: Compradores poderosos, el otro lado de los proveedores poderosos, pueden capturar más valor al forzar los precios hacia abajo, demandar mejor calidad o más servicio y generalmente jugar con los participantes de la industria uno contra otro, todo ello a expensas de la rentabilidad de la industria.

La amenaza de sustitutos: Un sustituto desempeña la misma o una función similar como un producto industrial por otro medio. Rivalidad entre competidores existentes: La rivalidad entre competidores existentes toma muchas formas familiares, incluyendo descuentos de precios, nueva introducción de productos, campañas de publicidad y mejoras de servicio, (Porter, 2008).

## **METODOLOGÍA**

Considerando el tipo de fenómeno que se investigará, al alcance será cuantitativo, descriptivo, el diseño será no experimental, transversal y se realizará un análisis de correlación de las variables a través del modelo de Análisis de Varianza (ANOVA). El trabajo de Investigación se realizará con información que se obtendrá de los productores de carne de ganado bovino del municipio de Tizimín, Yucatán, México, durante la producción del año 2012. Se utilizará un cuestionario diseñado específicamente para recabar la información que se desea analizar para esta investigación, con un escalamiento tipo likert.

### Modelo Estadístico ANOVA

El análisis de la Varianza (ANOVA) se aplicará para contrastar la hipótesis de dependencia lineal entre la variable dependiente y las independientes, comparándose la varianza explicada por el modelo y la varianza residual. Para probar la significancia del modelo global se utilizará la hipótesis nula de que no existe relación entre las diversas variables independientes consideradas como grupo y la variable dependiente. Se llevará un análisis de correlación de pasos hacia atrás para la selección de las variables a incluir en el modelo final. Se utilizará un nivel de significancia de 5%. La bondad del ajuste se mide por el Coeficiente de Correlación Múltiple (R), que varía entre 0 y 1, mientras que el Coeficiente de determinación es  $R^2$  y expresa la proporción de la varianza de la variable dependiente explicada. (Kazmier, 1998).

*Hipótesis General:* Las estrategias de diferenciación en los productores de carne de ganado bovino del municipio de Tizimín, Yucatán, México, se explican por la capacidad de producción, innovación, calidad, mercadotecnia, organización, capacitación de la mano de obra, recursos financieros y rentabilidad.

*Instrumento de medición:* El método de escalamiento tipo Likert (Likert, 1976, cita en Summers p. 182-193), consistirá en un conjunto de ítems presentados en forma de afirmaciones o juicios ante los cuales los sujetos elegirán uno de los cinco puntos de la escala. A cada punto se le asignará un valor numérico. Así el sujeto obtendrá una puntuación total sumando las puntuaciones obtenidas en relación con todas las afirmaciones. Para la recolección de datos se deben realizar las siguientes actividades: seleccionar un instrumento o método de recolección, aplicar el instrumento seleccionado y preparar observaciones, registros y medición de los resultados obtenidos (Hernández et al 2006, p.344). La medición definida por Stevens (2001), significa asignar números a objetos y eventos de acuerdo a reglas, y más propiamente cuando se evalúan comportamientos sociales se deben vincular Conceptos abstractos con indicadores empíricos. (Hernández et al. 2006, p.345).

*Medición de la validez:* Un instrumento de medición debe cumplir con dos requisitos: validez y confiabilidad. La validez se refiere al grado en que un instrumento mide realmente lo que se pretende medir y las evidencias que se presenten pueden estar relacionadas con el contenido, es decir, la medición efectivamente representa el concepto medido; con el criterio, cuando se compara con un criterio externo estándar bajo el cual se juzga; y con el constructo. Wiersma (1999) (Cita Hernández et al. 2006, p.347). la validez del constructo establece y especifica la relación entre el marco teórico y la variable definida. Correlaciona y analiza cuidadosamente su relación e interpreta la evidencia empírica de acuerdo con el nivel en el que clarifica la validez de su medición. (Carmines y Zeller, 1998). La validez del constructo se realizará con el procesamiento y análisis de datos de los ítems que integran cada variable del modelo, mediante el análisis de factor con el apoyo del paquete estadístico SPSS.

*Medición de la Confiabilidad:* El método a utilizar por las características de la investigación será el Coeficiente Alfa de Cronbach que requiere solo una administración del instrumento de medición a toda la población de productores de carne de ganado bovino del municipio de Tizimín, Yucatán, México.

## RESULTADOS ESPERADOS

Con este estudio se pretende impulsar al sector ganadero que es en México uno de los principales pilares que sostienen a la economía a nivel nacional. En Tizimín, Yucatán, México, esta actividad es fuente de generación de empleo y de riqueza de un número importante de familias en la zona oriente del Estado, así mismo tiene un alto porcentaje de participación en el Producto Interno Bruto del estado. Por lo que, de la estabilidad sostenida de los ambientes competitivos se originarán las condiciones en este sector que faciliten la creación de valor, lo cual les generará un rédito constante que permitirá el desarrollo económico de la región. Es de vital importancia proyectar el sector ganadero de la región dentro de un ambiente de competitividad, con información necesaria y proporcionándoles herramientas para la toma de decisiones y para la implementación de estrategias de diferenciación de una manera adecuada y a tiempo con el movimiento del entorno internacional en el que debe de desarrollarse con el fin de crear prosperidad y al mismo tiempo satisfacer las necesidades particulares de la región. Por lo que el desarrollo de estrategias de diferenciación será vital para el fortalecimiento y la mejora en esta actividad, así como para la identificación y aplicación de sus ventajas competitivas.

*Alcance:* La presente investigación permitirá analizar estrategias de diferenciación en los productores de carne de ganado bovino en Yucatán que permitan elevar la competitividad para este sector.

### Limitaciones

La aplicación total o parcial del contenido de esta investigación es responsabilidad única y absoluta de la población objeto de estudio, por lo que queda fuera de las manos del investigador comprobar el resultado final de su aplicación.

# HERRAMIENTA WORKFLOW PARA EN DISEÑO Y ANÁLISIS DE PROCESOS Y ACTIVIDADES EN LAS ORGANIZACIONES

Arley Julián Gutiérrez Barrera, Universidad Industrial de Santander  
David Alejandro Cuadros Crispín, Universidad Industrial de Santander  
Jaime Octavio Abarracín Ferreira, Universidad Industrial de Santander

## RESUMEN

Este trabajo resume las características de una solución tecnológica (software) para el diseño y el análisis de procesos del negocio en las organizaciones que necesitan identificar procesos costosos e ineficientes, de forma tal, que puedan rediseñar un nuevo flujo de actividades que cambie el paradigma de su funcionamiento hacia un sistema rentable, eficiente y sostenible.

**PALABRAS CLAVE:** Costos, reingeniería, organización, procesos, Workflow

## ABSTRACT

This paper summarizes the characteristics of a technological solution (software) for the design and analysis of business processes in organizations that need identify costly and inefficient processes, so they can redesign a new flow of activities that change the paradigm operation to a profitable, efficient and sustainable system

**KEYWORDS:** Costs, reengineering, organization, processes, Workflow.

## INTRODUCCIÓN

Uno de los principales problemas de las organizaciones es la definición de estructuras administrativas y de producción que sean rentables y eficientes; para tales fines estas mismas invierten en estudios que les permitan crear un marco administrativo y productivo que muestre con mayor certeza que dicho camino a seguir es el adecuado para lograr su objetivo (Stair & Reynorlids, 1999). Desde 1930, Nordsieck y Henning en Alemania y Chapple y Sayles en los Estados Unidos, ya habían empezado el trabajo y el estudio de los sistemas *Workflow*, al mismo tiempo que empezaban a descubrir, vislumbrar y describir lo que podrían ser las ventajas de estas herramientas.

Más aun, para Nordsieck, lo más importante era que los sistemas de información tenían que ir orientados hacia la estructuración de procesos que fueran eficientes para las organizaciones y definía claramente otros objetivos: “El foco de la automatización de procesos, es reducir la complejidad de la relación del usuario con el sistema, controlando el flujo de la información y buscando la eficiencia total en la organización” (Borbon & Villarreal, 2005). Actualmente los sistemas *Workflow* se aplican en variedad de campos, extendiéndose a la coordinación y gerencia de procesos, manejo y control de documentación, automatización de datos de flujo de información empresarial, y otros, buscando ahora enfocarse en la interrelación entre aplicaciones existentes en la organización.

Para tales fines, las organizaciones han dispuesto una cantidad de software que le permita, por un lado, diagramar y visualizar gráficamente las estructuras de la organización mediante una nomenclatura definida y globalmente aceptada, como UML o BPMN, a través de software para fines generales, como

*Bizzagi* o *Visio*; y por otro lado, el uso de hojas de cálculo y software a la medida de cada organización, para el cálculo de tiempos y costos de los procesos (Excel, SAP etc.).

Aquí estamos en frente de dos problemas, el primero es la estructuración de procesos que sean eficientes en términos de tiempo y costos. De nada sirve tener herramientas que nos permitan estructurarlo, si la base cognitiva de quien lo realiza no tiene la concepción correcta de que los procesos y las actividades deben ir de acuerdo a un trazado secuencial, por medio de tareas repartidas en roles específicos evitando funciones múltiples para cada persona y actividades innecesarias en cada proceso. Este tema ha sido estudiado y existe una base de conocimiento supremamente amplia que permite definir estructuras coherentes. Ahora, lo que aún falta es crear una herramienta computacional que nos permita gráficamente definir dichas estructuras y que ésta misma calcule el tiempo y costo de cada proceso, es decir, unifique las ya existentes herramientas para graficar procesos definiendo una nomenclatura específica, con un algoritmo que calcule los tiempos y costos de los procesos. Aunque existen herramientas *Workflow* para fines generales, en este trabajo nos hemos centrado en los sistemas *Workflow* para el diseño y análisis de procesos.

### Herramientas *Workflow* y su Papel en la Construcción de Estructuras Organizativas

Los sistemas *Workflow* se empezaron a explotar a comienzos de 1985 cuando se vio totalmente necesario para las empresas implementar un sistema de procesos coherente y eficiente. El internet fue otro elemento catalizador del uso de los sistemas *Workflow*, ya que los procesos distribuidos entre lugares distantes necesitaban ser rediseñados para poder llevar un mejor control de los mismos. Las metodologías de administración de procesos cambiaron notablemente a partir de los años 90 y se configuraron tres características básicas en estos elementos: Optimizar notablemente el desarrollo de los procesos, innovar el proceso del negocio y reajustar el proceso del mismo.

Es ésta la base sobre la cual se estructuraron los objetivos de este trabajo. De nada sirve una herramienta *Workflow* si sólo se enfoca en la diagramación y la estética de la representación de procesos bajo una notación, que aunque por ser universalmente conocida, adolece de formas de representación exclusivas e inherentes al diseño de procesos y actividades, al mismo tiempo que no facilita o resalta los principales focos de estudio de los procesos: eficiencia, tiempo y costo. Las organizaciones definen su estructura o procesos del negocio a partir de sus recursos, mercado y posibilidades. Cada actividad dentro del proceso está asociada con una persona o una aplicación informática. Las reglas se crean para determinar el progreso a través de las actividades de flujo de trabajo y facilitan controles para cada actividad. Algunos sistemas *Workflow* permiten cambios dinámicos en el proceso de negocio de las personas seleccionadas con autorización administrativa.

### Aspectos de Reingeniería Para la Construcción de *Workflow*

La reingeniería nos da una visión de las organizaciones en función de las necesidades del cliente, lo que permite rediseñar los procesos para llegar a excelentes resultados en términos de economía y eficiencia. Tales mejoras se ven reflejadas para los clientes de la misma, quienes son los principales beneficiados. Los cambios de paradigmas administrativos en las organizaciones han sido un cambio rápido en estos tiempos: los pagos electrónicos acabaron, o intentan acabar, con interminables filas en las instituciones bancarias; las transferencias por internet entre cuentas; el voto electrónico; las encuestas por internet; cambios de línea en telefonía celular y muchos otros son casos en los que la reingeniería ha tenido un papel fundamental en la mejora de procesos, que como decíamos, son reflejados en los usuarios. Pero no es tan fácil, la reingeniería choca con el actual modelo de negocio, lo mueve, lo cambia y reestructura. Uno de los principales problemas de la aplicabilidad es la resistencia al cambio por parte

de quienes vienen desempeñándose con las viejas formas de desarrollar procesos: reingeniería es “Voltear la página anterior e iniciar una en blanco”.

La reingeniería estudia el proceso y lo transforma, desde su inicio hasta la terminación del producto. Más que el proceso, el análisis de cada una de las actividades que interviene en el mismo, es el eje fundamental de la reingeniería; si alguna falla, el proceso también. Por consiguiente, las empresas u organizaciones tienen que empezar a hacer un análisis de su estructura actual y de cómo los procesos se realizan bajo ésta. De dicho análisis se fijan unos cambios de paradigmas: se deben combinar los roles para minimizar costos y evitar errores, transformar la estructura de la organización de departamentos a equipos de procesos y convertir las tareas que son lineales a tareas simultáneas.

Se construye un sistema de apoyo de tal forma que se puedan concentrar en una sola persona la mayoría de los pasos de un proceso, mas cuando no sea posible, se debe estructurar un equipo de trabajo para la realización de éste. Por otra parte, se eliminan los trabajadores con tareas individuales y se desarrollan trabajadores con diferentes habilidades, capaces de desempeñar varias labores e inclusive intercambiar puestos manteniendo la misma habilidad, con capacitación y entrenamiento. Las promociones o remuneraciones dejan de basarse en un principio de antigüedad, se empiezan a diseñar objetivos y metas para que los beneficios sean acorde al rendimiento laboral, de esta forma se crean incentivos, sin fomentar así un ambiente competitivo extremo. Las tecnologías de la información son una herramienta esencial, ya que permiten rediseñar los procesos. El poder de la tecnología reside en que permite romper reglas y crear nuevas maneras de trabajar (Monterroso, 2012).

La comunidad en general reconoce que las tecnologías de información tienen un papel importante en la reestructuración de organizaciones y gestión de procesos. Como consecuencia, las empresas se enfocan en llevar a cabo aspectos para el apoyo adecuado de un sistema de información que administre y automatice sus procesos. La demanda que las herramientas de manejo de flujos de trabajo tuvieron a mediados de los años 90, está firmemente asociada con aspectos claves de reingeniería de procesos de negocio, que en ese momento estaban en boga. Desde los años 90, el ambiente para tecnología de automatización de procesos en flujos de trabajo ha cambiado rápidamente. El surgimiento de tecnologías basadas en XML, el desarrollo Internet, las arquitecturas de sistemas basados en componentes reutilizables y los mercados que exigen mayor flexibilidad y adaptabilidad de sus aplicaciones, hacen necesario herramientas de tecnología Workflow evolutivas, que cambien requerimientos funcionales y técnicos para los sistemas de automatización de procesos.

### Herramienta: Workflow Para Reingeniería

La ingeniería de sistemas, concebida desde el enfoque de la optimización del uso de la información para la toma de decisiones, tiene en una tarea importante referente al tema aquí discutido: gestión del conocimiento. Ingenieros, quienes practican las ciencias de lo artificial (Simon, 2006) tienen la labor imperativa de crear elementos útiles para el mundo. Tales elementos creados de forma artificial, aunque llevan desde su misma creación la propiedad de obsolescencia (¿Cuál elemento artificial no?) tienen el fin de *disponerse* al mundo (Vargas Guillen, 2006) para su uso, bajo unas premisas de diseño y economía que sustituyan de algún grado una función del hombre, o más bien, una que el hombre no había sido capaz de delegar a su propia creación. Es en este sentido, el de la optimización y la economía, que se ha desarrollado un elemento software para la creación de diagramas de flujos de trabajo (workflows) que facilite, primero que todo, la identificación de las actividades de las organizaciones y calcule el costo en tiempo y dinero de los procesos y sus respectivas actividades en diferentes áreas; y segundo una fácil diagramación de nuevos métodos que sustituyan los anteriores, con el fin de crear procesos eficientes y con objetivos claros en los procesos de la organización o de un área específica de ésta.

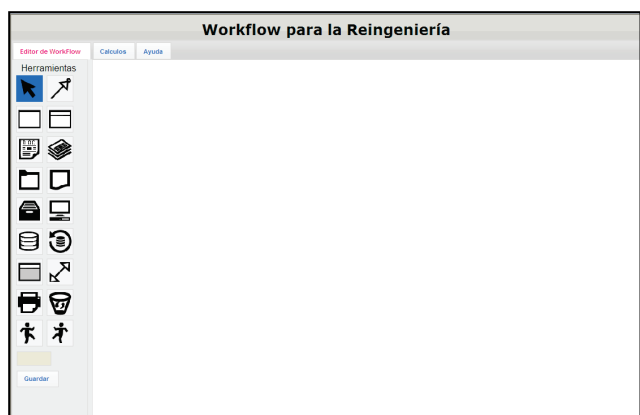

## Notación

Para empezar, el primer problema a resolver en la definición de estructuras organizacionales eficientes es la representación del conocimiento. Dicha tarea se asume bajo las premisas de virtualización de la información, es decir, sacarlas de su estado actual (la mente) y plasmarlas sobre un elemento virtual (informes, libros, web) (Lévy, 1999). En la tarea de definir procesos gráficamente es muy común el uso de notaciones existentes, claro está que el uso de estas nomenclaturas facilita la creación de diagramas para un conjunto general de personas con conocimientos específicos. Más aún, en este trabajo, definimos una nueva notación que no obedece a ninguna ya creada como *UML* o *BPMN*, sino que la herramienta define su propia nomenclatura a partir de conceptos claros de reingeniería y bajo criterios de diseño, estética y el uso de metáforas como la representación de ideas. Para tal notación se construyeron o diseñaron unos elementos gráficos básicos para el diseño de procesos.

## Funcionamiento De La Herramienta

*Workflow para la reingeniería*: es una herramienta creada bajo la tecnología SVG y HTML5 y diseñada para ser usada en un ambiente web, es decir, a través una dirección web, lo que facilita la portabilidad de los trabajos. En esta herramienta el usuario encontrará una barra de opciones o herramientas con elementos a dibujar en el lienzo, ubicado en la parte derecha (Figura 1).

Figura 2: Pantallazo Principal de la Aplicación

El software, por medio del arrastre de elementos desde la barra de herramientas, permite definir gráficamente los flujos de procesos. Una vez definidos, procedemos a completar los tiempos de operación y traslado de cada una de las actividades de los procesos. Al final, éste da un resumen de los costos en tiempo y dinero según la asignación salarial de cada rol. Para ilustrar la aplicación se hace una pequeña simulación del proceso de ventas en el departamento *ventas* (Figura 2). En dicha Figura se observa que entre cada una de las actividades debe haber un producto como resultado de la ejecución de la misma. En este caso, el *vendedor* emite la factura de venta, la cual sirve como orden de salida para que el *despachador* entregue los elementos comprados.

Figura 3: Proceso de Venta y Despacho

Luego, la misma aplicación genera una tabla en donde hace un análisis del proceso. Lo anterior se evidencia en la Figura 3. Es aquí en donde radica la principal diferencia con otras herramientas Workflow: a partir del análisis de los procesos se pueden identificar fallas, sobrecostos, procesos redundantes y lineales, saltos extensos de un departamento a otro, tiempos de espera demasiado largos, enormes costos por minuto en el desarrollo de una o varias tareas dentro del proceso, etc.

Figura 4: Análisis del Proceso

**Editor de WorkFlow**   **Calculos**   **Ayuda**

**Definición de nómina**

Rol	Nómina por Año(\$)
Vendedor	10000000
Despachador	10000000

**Calcular**

**Tabla de Costeo**

Rol	Año(\$)	Min(\$)	Tact	Cact	Ttras	Ctras
Vendedor	10000000	80.13	10:00	48078	00:30	2403.9
Despachador	10000000	80.13	01:50	8814.3	00:00	0

**Tabla de Totales**

	Variables	Medición
1.	Nro de actividades	2
2.	Nro de roles	2
3.	Nro de elementos	1
4.	Tiempo diario gastado en saltos	00:30
5.	Tiempo diario de actividad	11:50
6.	Tiempo total de proceso	01:00
7.	Costo diario de los saltos	2403.9
8.	Costo diario de actividad	56892.3
9.	Costo total diario de transacción	59296.2

## CONCLUSIONES

*En la actualidad, las organizaciones ven en las tecnologías de la información y la comunicación la posibilidad de crecer en la industria y convertirse en instituciones competitivas en el mercado. El uso de nuevas herramientas que faciliten la tarea diaria y mejoren la eficiencia de los procesos, ahorrando tiempo y dinero, es clave en la consecución de metas de sostenibilidad y crecimiento. Los procesos en las organizaciones, como parte fundamental de su funcionamiento, han sido a lo largo de la historia objeto de estudio para muchos industriales e ingenieros, quienes ven en la eficacia de estos la clave para el rendimiento económico de las empresas.*

*La ingeniería, y más aun la ingeniería de sistemas, son parte fundamental en la meta de conseguir que la información sea útil en la toma de decisiones por quienes dirigen las organizaciones. Aunque la reingeniería no es bien vista por algunos industriales, este trabajo hace énfasis en que rediseñar los procesos en las organizaciones se puede convertir en un hito en el funcionamiento de las mismas. El uso de nuevas tecnologías facilita claramente la construcción de nuevos elementos computacionales que se pueden implementar tecnológicamente de forma fácil y en poco tiempo. Para este trabajo se utilizó solamente HTML, javascript y SVG, se dejaron de lado el uso de imágenes JPG y PNG. Las aplicaciones web son la mejor opción a la hora de crear aplicaciones de fácil publicación, sólo falta con una actualización en el servidor para que todos los clientes vean los cambios.*

# CONTRIBUCIÓN DE LAS MICROEMPRESAS AL DESARROLLO SUSTENTABLE EN CIUDADES TURÍSTICAS

Miguel Angel Olivares Urbina, Universidad del Caribe  
Abelardo Castillo Galeana, Universidad del Caribe

## RESUMEN

En este artículo investigamos el impacto de variables de necesidades básicas humanas que contribuyen al desarrollo sustentable en un enfoque social por las microempresas establecidas en ciudades turísticas en comparación con las que nacieron integralmente planeadas. El trabajo contempla las tres principales ciudades turísticas del Estado de Quintana Roo que son Cancún, Playa del Carmen y Cozumel. Con la metodología estadística utilizada permitió crear un índice de madurez de la microempresa mediante el análisis estadístico. Adicionalmente se diseñó un cuestionario para aplicar a los propietarios de las microempresas, dicho instrumento permitió obtener información que identificó a la unidad económica. Los resultados del análisis estadístico nos indica que el índice de desarrollo sustentable de las microempresas de centros integralmente planeados es menor que el de ciudades turísticas que no se encuentran en estos centros.

**PALABRAS CLAVES:** Microempresas, Desarrollo Sustentable, Ciudades Turísticas e Índice de Madurez

## MICROENTERPRISE'S CONTRIBUTION TO SUSTAINABLE DEVELOPMENT IN TOURIST CITIES

### ABSTRACT

*In this paper we investigate the impact of basic human needs variables that contribute to sustainable development in a social approach by microenterprises established tourist cities compared with those born fully planned. The work includes the three major tourist cities of the State of Quintana Roo are Cancun, Playa del Carmen and Cozumel. With the statistical methodology used allowed to create a maturity index of microenterprise through statistical analysis. Additionally, a questionnaire was designed to apply to owners of microenterprises, the instrument yielded information that identified the economic unit. The results of the statistical analysis indicates that the rate of sustainable development of micro integrally planned center is less than the resort towns that are not in these centers.*

**JEL:** O10

**KEYWORDS:** Microenterprise, Sustainable Development, Tourism And Cities Index Maturity

## INTRODUCCIÓN

El presente estudio establece la contribución que la microempresa (establecida en ciudades turísticas) tiene en el desarrollo sustentable mediante la medición de lo que los microempresarios invierten en los elementos básicos del bienestar social, su resultado aportará el sustento científico a cualquier estrategia que pretenda apoyar a la microempresa de ciudades turísticas en su tránsito a su madurez empresarial, y contribuir al desarrollo sustentable, concientizando del impacto y la importancia que la microempresa tiene en el desarrollo local en ciudades con actividad económica turística mediante el análisis comparativo entre las microempresas de las ciudades turísticas de Cancún, Playa del Carmen y Cozumel dentro del

contexto del desarrollo sustentable en el enfoque social, mediante índices de desarrollo sustentable de la microempresa e índices de madurez administrativa que permitan el análisis de los elementos del bienestar social que las microempresas generan en el desarrollo de sus operaciones y establecer en qué medida las microempresas de los centros integralmente planeados contribuyen con el desarrollo sustentable en su enfoque social en comparación de las empresas turísticas que no se encuentran en un Centro Integralmente Planeado (CIP).

## REVISIÓN LITERARIA

El estudio permitirá comparar a través de herramienta de medición de la microempresa y su impacto en el bienestar social de las personas en las tres ciudades y generar argumentos para que se considere a la microempresa como elemento fundamental para el desarrollo sustentable de la región de actividad económica turística. Así como, ubicación del tema, de la problemática, de los marcos conceptual y teórico, y la relación con otras investigaciones que se hayan realizado sobre el mismo tema. La microempresa requiere de una gran atención del gobierno ya que aun cuando representa la proporción más pequeña en la participación del 15% PIB de México, su importancia en la participación de la economía gira alrededor del bienestar social que brinda a las personas que trabajan en ella.

De las unidades económicas clasificadas por su tamaño las denominadas microempresas representan el 95.01% del total 3,735,347 empresas del sector privado que operan en México; en el Estado de Quintana Roo su proporción es de 91.60% con un total de 35,516 microempresas, de las 38,770 que desarrollan sus actividades en el estado (INEGI, 2010), aun cuando la proporción de las microempresas es significativa en todo el mundo, los estudios sobre temáticas específicas para el análisis de sus actividades características y operaciones son pocas o en su defecto se pierden entre las realizadas para las unidades económicas de mayor dimensión denominadas pequeñas y medianas empresas (Pyme), de este segmento existe un creciente número de textos y materiales académicos que abordan las temáticas diversas que pretenden explicar su funcionamiento, operación, éxito, crecimiento, como se financian, características de sus dirigentes; entre otras. El Consorcio de universidades mexicanas (CUMEX) en el 2009 realizó el primer congreso de la Micro, pequeña y mediana empresa (Mipyme) en México en el estado de Hidalgo en donde se abordaron todos los temas mencionados, generando claridad de la ruta que están tomando las investigaciones nacionales e internacionales para el estudio de las unidades económicas (Mipyme) con mayor participación por clasificación de tamaños en todos los países, aun ahí, las temáticas específicas sobre las microempresas fueron limitadas; investigadores del tema de pymes reconocen en diversos documentos la falta de investigaciones específicas para la microempresas (Sánchez, 2009), (Obando, Rojas, & Zeballos, 2008), (Garrigosa, 2004).

Debido al número tan elevado de microempresas que operan en las economías de los países, es necesaria una atención especializada, que evite que las leyes, políticas, programas y acciones orientados a su creación, supervivencia y éxito, no se pierdan en el mar de la burocracia administrativa sin que se obtengan resultados substanciales, existen programas de apoyo variados, son dos los problemas que dificultan el éxito de los programas del gobierno mexicano, el primero está relacionado con los requisitos inalcanzables para la mayoría de las microempresas y el segundo se relaciona con el desconocimiento de la existencia de los programas de apoyo. El CIPI en el 2003, en su primer informe señala que de 15 programas federales de apoyo específico para la Mipyme, existe un 87.35% de desconocimiento de los estatales 96.65% y de los municipales un 99.23% (CIPI, Observatorio de la Pyme en México Resultados por sector de actividad, 2003), la secretaria de economía por medio de diversas instituciones coloca a disposición de los empresarios programas de apoyo de diversos tipos, esto no es suficiente, dado el número elevado de microempresas, y su alto índice de mortandad, (Martín, 2008) en su libro Indicadores del fracaso de las empresas Mexicanas, comenta que de las empresas analizadas una de cada cuatro quebraron al paso de 4 años, otros autores como Kirchoff B. y Phillip B. estiman que alrededor del 60% de las nuevas pequeñas empresas fracasan en sus primeros seis años de actividades (Krichoff & Phillip,

1989) y el 10% más fallecen para su octavo año (Case, 1995), Amar V. (2001) comenta que de las empresas que sobreviven a sus primeros años de actividades no presentan crecimiento; esto también es un factor de alto riesgo para que los inversionistas dirijan su atención a proyectos más seguros.

Otro factor que limita la atención en las microempresas es la complejidad de sus problemáticas (Contreras, R.; López, A.; 2009), el INEGI en el 2004 genera un análisis de los problemas más representativos de la microempresa entre los que resaltan, falta de clientes, falta de crédito, bajas ganancias, competencia, problemas con las autoridades, cartera vencida y conflictos con los clientes (INEGI, 2004). Lo antes mencionado disminuye el interés por parte de los gobiernos para generar programas de apoyo centrados en la microempresa y sus problemáticas; la secretaria de economía en su programa “Sistema de Fomento Empresarial”, muestra la composición de la estructura empresarial mexicana en el 2008 - 2009 e informa que la participación de la microempresa en el PIB del país es del 15%, siendo la que menos contribuye de las unidades económicas clasificadas por su tamaños (México emprende, 2010). Los puntos considerados con antelación sólo son aspectos económicos, sin considerar el aporte que tiene la microempresa en el desarrollo de las regiones, (Arias & Patlán, 2009) establece la importancia de las microempresas en el fomento a la calidad de vida de las personas que tienen su propio negocio, su investigación se centra en el bienestar generado en el microempresario por tener su propio negocio, por lo que se pretende establecer si en las regiones turísticas planificadas contribuye en mayor medida con el desarrollo sustentable de las regiones en donde se establecen.

El reconocimiento del bienestar que genera la microempresa está limitado a valores económicos o a los análisis de los emprendimientos familiares, es necesario establecer la contribución de la microempresa en el desarrollo sustentable de las ciudades turísticas, comparando las que nacieron integralmente planeadas para identificar si este hecho ha generado mayores beneficios a las personas que emprenden y las que trabajan en ellas; al cubrir sus necesidades básicas humanas: alimentación, vivienda, salud, vestido, identificadas en el “informe Brundtland” (Díaz & Escárcega, 2009), como elementos generadores de desarrollo sustentable en su enfoque social. Con lo anterior se pretende fortalecer a las microempresas, en puntos específicos derivados de su madurez como empresa, y su impacto en el bienestar social, las cuales serán evaluadas con un instrumento propuesto a coadyuvar con los microempresarios a construir estrategias que colaboren con crecimiento y permanencia en la región turística en la que se desarrolla.

## METODOLOGÍA

La presente investigación es de tipo no experimental, de carácter transversal en la cual se tomarán datos de tiempo causal y se explicará como la madurez de la microempresa le permite contribuir en el desarrollo sustentable en mayor proporción en cada una de las tres ciudades seleccionadas, Cancún, Playa del Carmen y Cozumel, para posteriormente comparar los resultados obtenidos. Se realizará una investigación correlacional transversal con enfoque cuantitativo, que establece los conceptos necesarios para crear un índice de madurez de la microempresa mediante un análisis estadístico y correlacionarlo con un indicador de desarrollo sustentable resultado de los principales elementos del bienestar social para compararlos por grupos de ciudad y establecer si existen evidencias de una participación mayor en el desarrollo sustentable de las microempresas que se establecen en los denominados centros integralmente planeados que las de los grupos que se centran en otras regiones turísticas.

Las microempresas que se encuentren en un CIP contribuyen más en el desarrollo sustentable. La hipótesis busca demostrar si las microempresas establecidas en CIP tiene una correlación con el grado de participación en los elementos básicos del desarrollo sustentable (Bienestar Social). En Quintana Roo se estableció la metodología estadística que permitiera obtener indicadores para la comprobación de la hipótesis que se dividió en tres fases: la primera consta de la construcción de la variable índice de madurez administrativa, la cual será el resultado de once indicadores con los cuales se obtendrán mediante un instrumento de levantamiento de información a los microempresarios para identificar como

desarrollan sus actividades con base al proceso administrativo y los elementos de competitividad; para lo que se realiza una búsqueda bibliográfica con diversos autores para seleccionar los indicadores más eficientes en lenguaje sencillo que ayuden al microempresario a establecer un nivel de madurez administrativa en la que se encuentra su empresa con la finalidad de cuantificarlo por medio de una escala de Likert la cual está valorada del uno al cinco en donde el cinco es el valor más alto que podrán alcanzar las empresas en cada indicador, son once los indicadores que más utilizan los autores para hablar de administración de empresas y su buen funcionamiento por lo que el indicador general se construirá de la sumatoria de los resultados de los indicadores independientes en donde el máximo y mínimo alcanzado por una microempresa podrá ser desde 55 hasta 11 puntos.

Los indicadores son: planeación (p), organización(o), control (c), dirección (d), clientes (i), proveedores (r), competidores (d), tecnología (t), especialización (e), financiamiento (f) y misión (m); para la selección de los elementos anteriores se consideraron los análisis previos realizados por Albuquerque, Lozano & López, (2009) quienes hacen una crítica al discurso administrativo que presentan los textos que hablan de las Pyme, las clasifican en tres temáticas; a) la administración en general de las Pyme, b) temáticas específicas c) y consejos a los dueños; diversos autores al interior de sus textos consideran importante al proceso administrativo para el desarrollo de una Pyme, (Anzola, 2002), (Mercado, 2004) (Ceballos, 2008), (Rodríguez, 2002), (Soto & Simon, 2004), por esta razón el primer grupo de variables consideradas pertenecen a los elementos del proceso administrativo, y los subsecuentes son variables a los elementos externos e internos que generan datos de referentes a su posición en el mercado en el que se desarrollan clientes, proveedores, competidores, tecnología especialización, financiamientos que también son considerados por los autores que hablan de Mipyme, por último la misión la cual es altamente considerada por Rodríguez, (2001) quien se focaliza en la planeación estratégica y los elementos considerados para la consolidar las empresas. El indicador de madurez administrativa se establece de la siguiente forma:

$$IMA_x = p_x + o_x + c_x + d_x + i_x + r_x + s_x + t_x + e_x + f_x + m_x \quad (1)$$

El cual se correlacionó junto con otras variables de igual importancia que serán explicadas en próximos párrafos. La segunda fase del modelo establece mediante una distribución de los gastos que realiza el propietario de la microempresa, dividiéndose en dos grande rubros (la familia y el negocio), al ejercer sus gastos o direccionar su inversiones a rubros específicos, estableciendo las características de las microempresas, en donde se identifica la forma en la que los gastos familiares son mezclados con gastos empresariales dificultando unas finanzas sanas en la microempresa, (De Leon Campero, 2002), (Vázquez de Francisco & Gonzalez, 2010). El instrumento de levantamiento de información hace una clara división de las inversiones realizadas por el dueño entre la familia y la empresa, generando los datos necesarios para realizar un análisis de entropía de todos los elementos que explican el impacto de la microempresa en el desarrollo sustentable, que se obtienen de las corrientes del desarrollo sustentable los cuales en esencia básica son los generadores del bienestar de las personas que colaboran en una microempresa y que aseguran su permanencia mediante una distribución eficiente, la cual será resultado secundario de la comprobación de la hipótesis” (Olivares, 2011).

Para la construcción del IDSM, se consideraron los elementos del bienestar social siguientes: alimento, vivienda, educación, salud, recreación. Del mismo modo los elementos básicos considerados para la actividad empresarial: crédito, renta, inversión, mejoras ambientales, gastos operativos y nómina. El IDSM se construye de la siguiente forma:

$$IDSM = \frac{p\mu_i}{\sigma_j^2} \quad (2)$$

En donde el valor ponderado de la empresa esta generado por:

$$p\mu_i = \alpha_i(\mu\alpha) + \beta_i(\mu\beta) + \rho_i(\mu\rho) + \delta_i(\mu\delta) + \varepsilon_i(\mu\varepsilon) + \phi_i(\mu\phi) + \gamma_i(\mu\gamma) + \eta_i(\mu\eta) + \iota_i(\mu\iota) + \varphi_i(\mu\varphi) + \kappa_i(\mu\kappa) \quad (3)$$

El valor ponderado de la empresa es el resultado de multiplicar todo los elementos por sus medias obtenidas del total de encuestas levantadas. Esta fórmula se aplica para cada elemento para alimentar los datos para obtener el valor ponderado de la empresa, con la aplicación de la media se ganara significancia en el impacto de cada elemento y se podrá ponderar un resultado de la suma de todos los elementos. (Se establece que el valor ponderado deberá ser dividido por la varianza para visualizar con mayor eficiencia el impacto del indicador porque cuando tienda a cero se elevará el grado de significancia de el IDSM). Las medias para la ponderación se obtienen de sumar todos los resultados obtenidos de una variable entre el número de encuestas, la idea básica para este análisis se toma de un modelo multinomial de Marqués (2009, pág. 113). Ejemplo para la media de Alimento se representa:

$$\mu\alpha = \frac{\sum_{i=1}^n \alpha_i}{n} \quad (4)$$

Se calcula la varianza de los elementos de cada empresa para generar un grado de certeza de IDSM

$$\sigma_j^2 = \sum (x_j - \mu_x)^2 \quad (5)$$

Fórmula larga de varianza de la empresa:

$$\sigma_j^2 = (\alpha - \mu_\alpha)^2 + (\beta - \mu_\beta)^2 + (\rho - \mu_\rho)^2 + (\delta - \mu_\delta)^2 + (\varepsilon - \mu_\varepsilon)^2 + (\phi - \mu_\phi)^2 + (\gamma - \mu_\gamma)^2 + (\eta - \mu_\eta)^2 + (\iota - \mu_\iota)^2 + (\varphi - \mu_\varphi)^2 + (\kappa - \mu_\kappa)^2 \quad (6)$$

Con las fórmulas antes descritas se obtiene los datos necesarios para conformar el cálculo del IDSM, (Walpole & Myers, 1992) utilizados en la tesis doctoral contribucion de la micro empresas” (Olivares, 2011). Como tercera fase se presenta el modelo necesario para la comprobación de la hipótesis de la investigación, mediante análisis de datos cuantitativos que se realiza con herramientas estadísticas para elaborar las inferencias que ayudarán a estimar los parámetros de los datos para la prueba de la hipótesis, en base a la muestra analizada:

Hipótesis principal (es)

H1: El IDSM de las microempresas de CIP es mayor que el de las ciudades turísticas que no se encuentran en un CIP.

H0: El IDSM de las microempresas de CIP es menor que el de las ciudades turísticas que no se encuentran en un CIP.

Hipótesis Secundaria, esta pretende demostrar que la cultura organizacional a nivel microempresarial si es un conductor a la mejoría del desarrollo sustentable en un enfoque social; en comparación con México (esta es una hipótesis de tipo causal).

H1: Mayor madurez de la microempresa mayor contribución en los elementos del IDSM de las microempresas de CIP

H0: Mayor madurez de la microempresa menor contribución en los elementos del IDSM de las microempresas de CIP

El modelo se explica de la siguiente manera:

Dependiente: Indicador de desarrollo sustentable de la microempresa IDSM.

Independiente: Índice de madurez del la microempresa administrativa (IMA)

Años de vida del negocio(A)

Escolaridad del dueño (ED)

Años de vida en el ramo del dueño (AR)

No. de empleados (NE)

Por medio de un análisis de varianza se pretende explicar la variable dependiente que denominaremos Y el cual es IDSM, explicado en función de IMA, A, ED, AR Y NE.

$$IDSM = f(IMA, A, ED, AR, NE) \quad (7)$$

Para lo que se diseña la siguiente ecuación, de un modelo de regresión múltiple con variables independientes donde para estimar los valores de  $\beta_n$  son los coeficientes de las variables para explicar IDSM (Render, Stair, & Michael, 2006, págs. 128-131):

$$IDSM = \beta_0 + \beta_{IMA} IMA + \beta_A A + \beta_{ED} ED + \beta_{AR} AR + \beta_{NE} NE + \varepsilon \quad (8)$$

Fórmula original para estimar los coeficientes con datos de una muestra.

$$\hat{y} = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n \quad (9)$$

En donde:

$\hat{y}$  = valor predicho para y

$\beta_0$  = origen

$\beta_1$  = coeficiente de muestra estimada.

$x_1$  = variable independiente

Por medio de programas estadísticos se establecerán las correlaciones de cada una de las variables con IDSM y se establecerán hipótesis para cada variable con la finalidad de verificar la significación de la asociación por variable. Con este modelo de tres pasos se establece el resultado de la hipótesis general y se establece la importancia de la microempresa por su contribución en el desarrollo sustentable. En Julio del 2010 con los resultados de censo económico de 2009 y con una nueva herramienta de información proporcionada por el Instituto Nacional de Estadística y Geografía (INEGI) el directorio estadístico nacional de unidades económicas (DENUE) se identifican y se georeferencian las unidades económicas identificadas como microempresa en el Estado de Quintana Roo en específico los municipios Benito Juárez, Solidaridad y Cozumel lugar en donde se encuentran las ciudades seleccionadas siendo un total de 29,934 microempresas el universo analizar. Para calcular la muestra se considera utilizar una fórmula para cálculo de la muestra de una población, se considero la investigación desarrollada sobre “La muestra simple aleatoria”, (Monrroy, 2010)

$$n = \frac{z^2 pqN}{NE^2 + z^2 pq} \quad (10)$$

Un nivel de confianza del 95%, se considera como grado máximo de variabilidad positiva y como grado máximo de variable negativa a 0.5, el error máximo considerado es del 5% y se utiliza la siguiente fórmula (Walpole & Myers, 1992, págs. 203-215):

$Z=95\%$  y se calcula de 1.96 con las funciones de Excel

$n$ = tamaños de la muestra de empresas a encuestar;

$z$ = Nivel de confianza del 95% y se calcula mediante las funciones del programa Excel su resultados es 1.96 de nivel de confianza;

$p$ = 0.5 grado máximo de variabilidad positiva;

$q$ = 0.5 grado máximo de variabilidad negativa;

$E$ = error máximo 5%

La muestra calculada es de 379 microempresas para el levantamiento de información. El muestreo se estratificó debido a que se cuentan una población con tres ciudades predominantes, Cancún, Playa del Carmen y Cozumel en donde la participación no es homogénea, por lo que se utilizará la fórmula de estratificación debido a que “la estratificación aumenta la precisión de la muestra e implica el uso deliberado de diferentes tamaños de muestra para cada estrato, a fin de lograr reducir la varianza de cada unidad de la media muestral (kish, 1995). En su libro de muestro, Kish afirma que en un número determinado de elementos muestrales  $n=\sum nh$ , la varianza de la media maestral de  $\hat{y}$  puede reducirse al mínimo, si el tamaño de la muestra para cada estrato es proporcional a la desviación estándar dentro del estrato; la fórmula en donde de obtiene un factor de estratificación:

$$ksh = \frac{n}{N} \quad (11)$$

Como se cuenta con los datos se puede concluir que el factor para estratificar es el siguiente:

$$ksh = \frac{379}{29,934}$$

Por lo tanto el  $ksh$  será igual a, 0.01266

Tabla 1: Distribución Estratificada

Ciudad o Municipio	Número de Microempresas	Muestra estratificada de microempresas $ksh$ 0.01266
Benito Juárez	20,546	260
Cozumel	3,509	45
Solidaridad/Playa del Carmen	5,879	74
<b>Total Microempresas</b>	<b>29,934</b>	<b>379</b>

*En esta tabla se muestra el resultado de la muestra estratificada de las microempresas por ciudad turística, de acuerdo al resultado del factos  $ksh$ .*

## RECOLECCIÓN DE DATOS

Se diseñó un cuestionario para los dueños de la microempresas, debido a que no existen en las instituciones de datos estadísticos información específica sobre los elementos del bienestar social y administrativos. Se abordaron temas como el bienestar social, el tiempo de vida de la empresa, las finanzas, la planeación, la mercadotecnia y las personas que colaboran en estas unidades económicas. El instrumento que se elaboró consta de cinco secciones, distribuidas de la siguiente manera:

- Datos generales de la microempresa y del emprendedor.- Permite obtener la información necesaria para identificar la unidad económica, dadas las características por sector, se podrán generar conclusiones por sector, años de operación, edad y escolaridad del propietario.

b) Datos de los familiares del emprendedor y su relación con la microempresa.- Los datos familiares solicitados en la sección dos del instrumento, se requieren para identificar el grado de participación de la familia en la microempresa y la dependencia económica en gastos básicos por integrante familiar, sufragados por la microempresa.

c) Distribución de la inversión de la microempresa en su operación y en la familia.- Se obtendrá la información necesaria para identificar el porcentaje de inversión de las microempresas en el gasto de las familias y de operación. Esta información servirá para explicar el grado de contribución de la microempresa en el bienestar de las personas que trabajan en ella; principalmente la del emprendedor, en rubros de alimentación, vivienda, educación, salud y recreación;

d) Datos del personal de la microempresa remunerado y no remunerado.- se aborda el número de empleados; su condición salarial; si es familiar; su sexo; el mayor nivel escolar; los ingresos que percibe si es el caso; la antigüedad en el trabajo; el número de dependientes que tiene y si cuenta con beneficios sociales.

f) Herramientas administrativas utilizadas por la microempresa para su operación.- recompila la información de los once elementos que una empresa debe de evaluar para establecer su grado de madurez administrativa, estos se componen por los elementos de proceso administrativo y los de la competitividad, identificados por los Porterianos.

## RESULTADOS Y CONCLUSIONES

El análisis estadístico utilizado para la comprobación de hipótesis nos indica que El Índice de Desarrollo Sustentable de las microempresas de CIP es menor que el de las ciudades turísticas que no se encuentran en un Centro Integralmente Planeado, dado que el resultado del estadístico acepta la hipótesis nula; podemos establecer que los resultados del impacto de las microempresas al desarrollo sustentable de la región en centros integralmente planeados son similares a los de ciudades turísticas con nacimiento no planificados. Por lo se concluye que la planeación de una ciudad turística **no incentiva el desarrollo sustentable generado por las microempresas**, del mismo modo, **no favorecerá al desarrollo de la microempresa**, ya que los resultados también son coincidentes en el índice de madurez administrativa de las empresas, para los dos indicadores no se presentan diferencias significativas en sus promedios de resultado estratificado por ciudad. Lo anterior lo podemos observar claramente en las figuras 1 y 2, ya que en ellas se muestran los resultados de los promedios de los índices graficados por ciudad, se puede observar claramente la débil diferencia entre ciudades, mismas que no llegan a un punto porcentual entre las más altas y las más bajas.

Figura 1: IDSM

En esta figura se muestra la representación gráfica de los resultados obtenidos del análisis estadístico aplicado para obtener el IDSM

Figura 2: IMAM

En esta figura se muestra la representación gráfica de los resultados obtenidos del análisis estadístico aplicado para obtener el IMAM

El resultado es contundente ya que las diferencias entre la ciudad de Playa del Carmen con mejor resultado (21.8) y la de menor resultado Cozumel (20.97) no llega a un punto porcentual en su Índice de Madurez Administrativa, el comportamiento del IDSM es diferenciado ya que la resultante con un mayor índice es la ciudad de Cozumel (31.01) y la menor con (30.26) es la ciudad de Cancún, al observar que no existe diferencia significativa entre las microempresas de una ciudad CIP y una de nacimiento causal, se pueden establecer a partir de que los CIP no están logrando que sus microempresas sean el motor que contribuya al desarrollo sustentable bajo el enfoque social, por lo que una estrategia de planificación como la dada en la ciudad de Cancún no es recomendable para fortalecer a las microempresas de las que se espere una mayor contribución del desarrollo sustentable.

# DIAGNOSTICO SOCIOECONOMICO DE LA REGION SUR COSTERA DE SONORA, CASO DE ESTUDIO PESQUERIA DE JAIBA

Emma Vanessa Casas Medina, Universidad Estatal de Sonora

Luis Enrique Ibarra Morales, Universidad Estatal de Sonora

Erika Olivas Valdez, Universidad Estatal de Sonora

## RESUMEN

*El presente trabajo forma parte del proyecto de investigación “Desarrollo de un modelo estratégico para la caracterización de la industria de la Jaiba en Sonora, a través de la diversificación de su oferta de mercado”, cuyo objetivo es diseñar una propuesta de la cadena de suministro eficiente de la Industria jaibera en la zona costera sonorense. Para este caso, se analizó la situación socio económica de la región sur costera, específicamente los municipios de Guaymas, Empalme y Huatabampo, con el objetivo de analizar la situación actual de las familias que se dedican a esta profesión, mediante una revisión bibliográfica, tomando como referencia la información proporcionada por CONEVAL, entrevistas semi estructuradas a las comercializadoras y encuestas los pescadores de la entidad.*

**PALABRAS CLAVES:** Jaiba, análisis socioeconómico y pobreza

## INTRODUCCIÓN

Sonora es un estado que cuenta con una situación geográfica privilegiada, puesto que se encuentra rodeada por el mar, desierto y las montañas. El sector pesquero y acuícola es una de las actividades con mayor importancia dentro del Estado. La producción de jaiba se encuentra en un proceso de mejora continua, esto es debido a que se han implementado normas que regulen la explotación de esta especie, por lo tanto en temporadas bajas, la producción de jaiba es escasa y debido a esto los pescadores buscan diversas fuentes de ingresos que les permita subsistir dignamente, en este sentido trabajan en la rama de la construcción, en la recolección de hortalizas, y en la pesca de alguna otra especie. Sin embargo, esta actividad no ha sido suficiente para cubrir sus necesidades básicas como son alimentos, capacidades y patrimonio de una manera digna para ellos y sus familias, es por eso que en este trabajo se presentan la situación que viven los pescadores dedicados a esta actividad, mediante indicadores de pobreza, pobreza extrema, ingresos, etc. El objetivo de la investigación es identificar la situación socioeconómica de los pescadores que se dedican a la captura de la Jaiba en la zona costera sur del Estado de Sonora, específicamente en los municipios de Guaymas, Empalme y Huatabampo, mediante el estudio de desigualdad y distribución del ingreso.

## ANTECEDENTES

De acuerdo con la metodología para medir la pobreza por ingresos que utiliza CONEVAL (2010) se definen tres niveles: La pobreza alimentaria, capacidad y la de patrimonio.

Tabla 1: la Pobreza Alimentaria en Municipios Urbanos de Sonora, 2010

Municipio	Población	P Alimentaria	P Cap.	P. Patrimonio
Sonora-Urbana	2,428,118	354,571	595,227	1,222,424
Empalme	51,348	10,091	15,560	27,330
Guaymas	138,089	19,782	34,490	73,497
Huatabampo	72,811	10,431	22,063	38,753

Fuente: Camberos y Huescas (2010).

El municipio urbano con mayor problema en pobreza alimentaria e independientemente de su tamaño poblacional es Empalme, con 51,348 personas y una proporción respecto de su población por el 19.65%, nivel muy por arriba del que presenta la entidad de 14.6%; por su parte el municipio con mayor intensidad y déficit en ingresos Huatabampo, pero la evidencia a su favor es que sus niveles de pobreza no son alarmantes en el tipo alimentario. La pobreza por capacidades afecta a una cuarta parte (24.5%) de la población urbana de Sonora, representando a 595,227 individuos con un déficit medio en sus ingresos por el orden de 28%, recursos con los cuales dicha población podrían dejar de serlo (Camberos y Huescas, 2010). El indicador de pobreza patrimonial refleja la necesidad de vivienda y su costo como satisfactor esencial en la entidad, refleja que los tres municipios presentan un serio problema de pobreza con un 53.22 y un índice de intensidad promedio 36.34%. Para sustentar lo anterior, otro tipo de análisis es la dispersión de estos tres municipios pero de acuerdo al ingreso promedio de su población e índice Gini, el cual mide la el grado de desigualdad entre la población, por la forma en que se distribuye el ingreso, es decir a menos índice Gini existe menor desigualdad. Como se muestra en el Grafico 2.

Gráfico 2: Dispersión de los Municipios Costeros de Sonora, de Acuerdo a su Ingreso Promedio E Índice De Gíni

Fuente: CONEVAL, 2012 (citado en Olivas et al, 2012). En el eje horizontal se graficó el valor del índice de gini, mientras que el eje vertical el valor del ingreso promedio mensual.

De nuevo, resalta el caso de Huatabampo, donde el índice de Gini es menor a pesar de que sus ingresos promedio están por debajo de la media nacional y además tiene mayor porcentaje de pobreza.

## METODOLOGÍA

La investigación es de tipo cualitativa con alcance descriptivo, donde en una primera etapa se realizó búsqueda documental consultando bases de datos como Inegi, Coneval, Conapo, entre otras, y una segunda etapa se aplicaron encuestas semi estructuradas a 22 pescadores de la zona costera sur del

Estado de Sonora, específicamente en los municipios de Guaymas, Empalme y Huatabampo (en específico la localidad de Yávaros), eligiendo la muestra por conveniencia.

## RESULTADOS

La edad promedio de los pescadores encuestados en la zona sur de Sonora es de cuarenta años, y las edades varían entre los dieciocho y sesenta y tres años. El rango de edad donde encuentran más pescadores fue entre los cuarenta y ocho a los cincuenta y siete años, con lo que se puede apreciar que el 57.14% de los pescadores son hombres mayores a los cuarenta y ocho años.. El estado civil de los encuestados señala que 68% por ciento de los encuestados es casado, por lo que podemos concluir que tienen responsabilidades familiares muy importantes y con mucha necesidad de seguir aportando económicamente a su familia. En materia de escolaridad de los encuestados, se identificó que el grado máximo de estudios es el nivel de educación media superior tanto para los pescadores como para sus parejas. Es interesante notar que el 81.8% de los encuestados contestaron cuentan con una propiedad propia pagada, lo cual indica que existe seguridad entre los encuestados en materia de vivienda.

De las cuales 73 % de las casas son de ladrillo, el 14% de block y el 14% son de madera o lámina de cartón. En relación al equipamiento de las casa habitación de los pescadores dedicados a esta actividad, prevalece en la mayoría de las viviendas cuentan con tanque de gas, regadera y lavabo, pero es importante mencionar que la minoría solo cuenta con calefacción, aire acondicionado, calentador de agua, con bomba de agua, con bomba de agua y con fregadero. El 91% de los entrevistados cuentan televisión, grabadora, refrigerador, plancha eléctrica, pero es importante mencionar que 27% cuenta con lavadora, aspiradora, microondas, exprimidor de jugos, videocasetera o dvd, y estéreo.

En materia de servicios, el 68% de los encuestados mencionaron tener el servicio de agua por medio de entubación, pero un importante 27% tiene el servicio por llave pública y en el caso de un encuestado menciona que tiene que recurrir al suministro de agua con pipa. El 50% de los pescadores de jaiba de la zona sur de Sonora cuentan con drenaje público y el otro 50% cuentan drenaje particular (fosas). Para la recolección de la basura se utiliza carro recolector, solamente un encuestado contesto que él llevaba la basura al basurero público. En Materia de servicios médicos, el 78% de los encuestados mencionaron que cuentan con el servicio popular, pero expresaron que no cubre muchas de las necesidades básicas de atención médica que se requieren y solo el 22% cuentan con otro servicio. Los medios de transporte que se utilizan, el 36% de manifestaron contar con un automóvil propio, el 23% utilizaban motocicleta o bicicletas y sólo el 14% utilizaba transporte público. Es importante mencionar que los lugares donde habitan los pescadores de jaiba son lugares donde no se ocupa trasladarse a grandes distancias ya que son poblaciones muy pequeñas.

## CONCLUSIONES

De acuerdo a los resultados de este trabajo, la situación socioeconómica que viven los pescadores de la región costera sur del Estado de Sonora presenta una serie de necesidades que faltan por cubrir en la mayoría de los rubros expuestos. Desde el nivel educativo, donde los pescadores ni sus conyugues no cuentan con un nivel alto de estudios. Donde los ingresos que son menores al ingreso promedio nacional, no les alcanzan para cubrir sus necesidades alimentarias, de capacidades y mucho menos de patrimonio. Así mismo, invita a la generación de nuevas líneas de investigación con nuevas propuestas de desarrollo como es el caso de generación de valor en los procesos de captura, industrialización y comercialización con una mayor remuneración a los pescadores, que le permitan cumplir con sus necesidades básicas.

## RESUMEN

*La hipótesis de mercado eficiente afirma que los cambios en los precios de un activo financiero siguen una caminata aleatoria y dependen de la información que se incorpora al mercado de manera instantánea, por tanto no son predecibles; por otro lado la hipótesis de mercado fractal sostiene que los precios dependen del manejo que le da cada inversor a la información según su horizonte de inversión, produciendo un comportamiento caótico en los mercados. Este trabajo busca probar la existencia de comportamiento caótico en las principales series bursátiles de Colombia usando el coeficiente de Hurst, cuya estimación puede ser afectada por autocorrelaciones, por tal motivo, la primera parte de la metodología se centra en eliminar las autocorrelaciones mediante filtros del tipo ARIMA y GARCH, mientras que la segunda parte corresponde a la detección del comportamiento caótico mediante el cálculo del coeficiente de Hurst. Los resultados revelan que los activos financieros colombianos, muestran persistencia apoyando así la hipótesis de mercado fractal.*

## LONG-TERM MEMORY EVALUATION IN COLOMBIAN MARKET SHARE BY HURST COEFFICIENT

### ABSTRACT

*The Efficient market hypothesis states that financial asset returns follow a random walk and depend on the information made available to the market instantly, therefore they can not be predicted, on the other hand, the Fractal market hypothesis says that prices depend of each behavior investor and his investment horizon, producing a chaotic behavior in the markets. This paper testing the existence of chaotic behavior in major financial series Colombian stock market using the Hurst coefficient, whose estimation can be affected by autocorrelation, therefore, the first part of the methodology focuses on removing the autocorrelations by ARIMA and GARCH filters, while the second part corresponds to the detection of behavior by calculating the Hurst coefficient. The results reveal that the Colombian financial assets are persistent.*

## INTRODUCCIÓN

Bachelier (1900) en su tesis doctoral, analiza por primera vez el comportamiento de mercados financieros buscando movimiento browniano en los cambios de precios. De igual forma, autores como Cowles & Jones (1937), Alexander (1961) y Fama (1970), plantearon la hipótesis del mercado eficiente, la cual ha sido testada desde entonces en diferentes mercados bursátiles a nivel mundial, encontrándose que algunos de sus supuestos (distribución normal, independencia, homocedasticidad y no autocorrelación) no se cumplen en las series empíricas. En consecuencia, Box & Jenkins (1970) propusieron modelos lineales con términos autorregresivos y de medias móviles (ARMA), los cuales corrigen la autocorrelación, mientras que Engle (1982) y Bollerslev (1986), identificaron modelos de heterocedasticidad autorregresiva ARCH y modelos generalizados GARCH, respectivamente.

Los ajustes autorregresivos, modelan de forma lineal la correlación serial de corto plazo, pero no la de largo plazo. Grau Carles (1996) afirma que los modelos lineales no pueden reproducir completamente la dinámica del sistema económico ya que sólo representan un número limitado de comportamientos. Por tal razón a partir del trabajo de Lorenz (1963), Takens (1981), Mandelbrot (1982) y otros, se inicia la búsqueda de comportamiento no lineal y dependiente de las condiciones iniciales en las series de tiempo. En los años 80, la teoría del caos es testada con resultados importantes en las series económicas y financieras. Como resultado, Peters (1994) propone la Hipótesis del mercado fractal que se caracteriza por ineficiencia, memoria de largo plazo y determinismo global. En contraste con el mercado eficiente, el mercado fractal permite hacer predicciones al menos en el corto plazo, pues según Lorenz (1963) en el largo plazo la dependencia de las condiciones iniciales hace que el sistema sea inestable. Buscando indicios de comportamiento caótico en los cambios de los precios financieros, Lipka & Los (2003), encuentran mediante el coeficiente de Hurst (H) que las series bursátiles europeas presentan dependencias de largo plazo de tipo antipersistente; sin embargo, a pesar de que los retornos no siguen procesos de ruido blanco, los autores concluyen que por ser antipersistentes se revierten rápidamente a la media, sin generar rendimientos muy altos, y en ese sentido son mercados eficientes.

Ese mismo año, Kyaw, Los, & Zong (2003) realizan un estudio con los índices bursátiles de Latinoamérica, encontrando persistencia en casi todas las series, excepto para Colombia que era antipersistente en el período de 1998 a 2001; los autores afirman que los mercados persistentes podrían presentar largos períodos de calma que dan la impresión de predictibilidad, pero no es suficiente para obtener rendimientos extraordinarios, además concluyen que ni los modelos usados actualmente, ni el coeficiente de Hurst describen totalmente el mercado, y sugieren calcular este coeficiente para subperíodos, buscando un estudio de mayor precisión. Dos años más tarde, Los & Yu (2005), analizan el mercado Chino, antes y después de las intervenciones del gobierno, y concluyen que el mercado es moderadamente persistente, pero esta tendencia disminuye después de las desregulaciones en este mercado. También Di Matteo, Aste, & Dacorogna (2005), calculan el coeficiente de Hurst (H) para veintiocho países del mundo con el propósito de clasificarlos, encontrando que los mercados emergentes presentan persistencia, los mercados medianos tienen aleatoriedad y los mercados desarrollados muestran antipersistencia. El propósito de este trabajo es probar la existencia de comportamiento caótico en el mercado bursátil colombiano durante la última década, lo cual abriría la posibilidad de configurar modelos que puedan predecir el comportamiento futuro de los rendimientos. Para este propósito estiman los coeficientes de Hurst, luego de filtrar las series mediante modelos ARIMA-GARCH.

### Datos

El índice de la Bolsa de Valores de Colombia (IGBC) representa el comportamiento promedio de los precios de las acciones en el mercado. Se toman los precios de cierre de los principales activos bursátiles, los cuales representan aproximadamente el 60% de la composición del índice. Se omiten los días en los que la Bolsa no operó y los que presentan valores nulos. Las series se analizan en el periodo total, y en

subperiodos iguales de 525 (índice) y 510 (demás activos) datos, con el fin de observar la evolución de la eficiencia del mercado bursátil a través del tiempo.

*Esta tabla presenta los Activos seleccionados, sus nemotécnicos oficiales, el número de datos, y el periodo de estudio. Fuente: Elaboración Propia a partir de datos suministrados por la Bolsa de Valores de Colombia.*

Se toma como variable la rentabilidad continua de cada activo, dado que los modelos autorregresivos se construyen con series estacionarias, tomando los retornos que estén dentro del intervalo  $\pm 3.5$  veces las desviaciones típicas de las series de acuerdo a Gimeno (2000). Al estimar las estadísticas básicas para las diferentes series se encuentra que: todas las series presentan medias positivas estadísticamente significativas en los años 2001 a 2006; el IGBC muestra asimetría negativa durante todo el periodo y significativa hasta el año 2006 a pesar de que los valores extremos han sido eliminados; las series son leptocúrticas y la significancia del estadístico Jarque-Bera rechaza la hipótesis de que los retornos siguen una distribución Normal, lo cual según Espinosa (2008), es indicio de que las series han sido generadas por procesos no lineales. Por otro lado la prueba de Dickey y Fuller Aumentada (DFA) rechaza la hipótesis de que las series de retornos tienen una raíz unitaria; mientras que el intervalo de Bartlett y el estadístico de Ljung & Box (1978) muestran que las series presentan autocorrelación, siendo mayor en el primer rezago y en el subperiodo de 2008 a 2010.

## METODOLOGÍA

Según Fama (1965), en un mercado eficiente la información está libremente disponible para todos los participantes, quienes intentan predecir los valores futuros de los activos del mercado. Esta competencia lleva a que en todo momento los precios actuales reflejen la información disponible. Si el mercado es eficiente, los precios solo cambian cuando se incorporan noticias no anticipadas, imposibilitando la predicción del comportamiento futuro del mercado, debido a que la información nueva que pueda producirse ya se ha incorporado en el precio del activo. A diferencia de la Hipótesis de mercado eficiente, la hipótesis de mercado fractal no se basa en la nueva información que ingresa al mercado, sino en el uso que le da cada inversor de acuerdo a su horizonte temporal. Por tanto la información que ingresa al mercado depende del horizonte temporal de los inversores; según Peters (1994), un mercado fractal es ineficiente, tiene memoria, ciclos de mercado y tantos equilibrios como horizontes temporales de inversión hayan en el mercado; por lo tanto un mercado aparentemente aleatorio en realidad es determinista a largo plazo y a nivel global. La primera parte de este trabajo consiste en eliminar la autocorrelación encontrada por el intervalo de Bartlett y el estadístico LB mediante el ajuste de modelos ARIMA y GARCH, siguiendo la metodología de Box-Jenkins. En tanto que la segunda parte se enfoca en la búsqueda de indicios de comportamiento caótico mediante el Coeficiente de Hurst. A continuación se detalla la metodología planteada por Hurst (1951).

### Coeficiente de Hurst (H)

Se estima a partir del análisis del rango re-escalado (R/S), definido por Hurst y popularizado como herramienta estadística por Mandelbrot & Ness (1968). El coeficiente de Hurst (H) mide el nivel de

persistencia de una serie; si la serie es persistente las tendencias se mantienen generando un  $H > 0,5$ ; mientras que cuando la serie es antipersistente las tendencias se revierten y  $H < 0,5$ ; pero si la serie es aleatoria genera un  $H = 0,5$ . Este coeficiente detecta memoria a largo plazo, evidenciando comportamiento no lineal y es calculado a través de la ley de potencia  $R/S(\tau) = (a * \tau)^H$ , donde  $a$  es una constante,  $\tau$  es el número de observaciones,  $H$  es el coeficiente de Hurst, y  $R/S(\tau)$  es el rango re-escalado. Siguiendo la metodología usada por Pérez (2008), para calcular el coeficiente de Hurst de la serie temporal  $\{x_t\}$ , donde  $t = 1, 2, 3 \dots N$ ; se divide la serie en vectores  $\bar{r}_j$  de tamaño  $\tau_i = N/2i$ , donde  $i$  es un entero positivo y  $j = 1, 2, 3 \dots i$ . Para un valor de  $\tau$ , se hallan los valores promedio ( $M_j$ ) y las desviaciones estándar ( $S_j$ ) de cada vector.

$$M_j = \sum_{t=1+[(j-1)*\tau]}^{j*\tau} \left[ \frac{x_t}{\tau-1} \right] \quad (1)$$

$$S_j = \sqrt{\frac{1}{\tau-1} \sum_{t=1+[(j-1)*\tau]}^{j*\tau} (x_t - M_j)^2} \quad (2)$$

Con el promedio  $M_j$  se transforman los datos originales, en una nueva serie que representa la diferencia acumulada respecto a la media

$$V_j = \sum_{t=1+[(j-1)*\tau]}^{j*\tau} (x_t - M_j) \quad (3)$$

Para cada  $j$ , el rango ( $R_j$ ) se calcula como la diferencia entre el valor máximo y el valor mínimo de  $V_j$ . Luego se compara  $R_j$  con la desviación estándar hallada inicialmente. Matemáticamente, se expresa así  $[R/S]_j = R_j/S_j$ . El valor promedio de todos los  $[R/S]_j$  con tamaño de muestra  $\tau_i$ , es igual al valor  $[R/S]_i$  el cual es logaritmicamente proporcional a  $\tau_i$ , siguiendo la expresión  $\log(R/S) = H \log(\tau) + b$ .

## RESULTADOS

### Filtros ARIMA-GARCH

En base a la autocorrelación identificada y a la metodología Box-Jenkins, se ajustan los modelos ARIMA mostrados en la tabla 2.

Tabla 2: Modelos ARIMA- GARCH (p, q)

\*Los modelos GARCH incluyen todos los términos p y q anteriores al del ajuste presentado. \*\*Las series en que no se identifican rezagos autocorrelacionados, no es necesario usar la metodología ARIMA; para estimar los modelos GARCH la regresión se hace respecto a la media. La tabla presenta los modelos ARIMA-GARCH estimados para cada activo y subperiodo siguiendo la metodología de Box-Jenkins. Fuente: Elaboración Propia, usando el software eviews 6.

Para cada serie de residuos de los modelos ARIMA seleccionados se evalúa nuevamente la autocorrelación encontrándose que no es significativa en los primeros diez rezagos, sin embargo, el test ARCH rechaza la hipótesis nula de que las series son homocedásticas, identificando autocorrelaciones en la varianza, lo cual hace necesario ajustar un modelo GARCH para cada activo (Ver tabla 2), siguiendo la metodología ARIMA con los residuos al cuadrado. Finalmente, los modelos seleccionados permiten generar una serie de residuos sin autocorrelaciones significativas en sus primeros diez rezagos, que pudieran afectar la pruebas del coeficiente de Hurst; estas series de residuos representan al sistema original, de tal forma que si éste fuera aleatorio, los residuos seguirían un proceso ruido blanco, pero si fuera caótico, los residuos mostrarían dependencias no lineales, sensibilidad a las condiciones iniciales y memoria de largo plazo.

### Coeficiente de Hurst

Para medir el nivel de persistencia en las series estudiadas, se calcula el coeficiente de Hurst, usando el código MATLAB desarrollado por Pérez (2008). Como criterio de decisión, si  $H > 0.5$ , la serie es persistente, lo cual es indicio de que no es un proceso de ruido blanco y que los datos son dependientes; si  $H < 0.5$  la serie es anti-persistente; pero si es igual a 0.5 la serie es ruido blanco.

Fuente: Elaboración Propia.

Todas las series producen coeficientes de Hurst mayores a 0.5, es decir son persistentes, y posiblemente caóticas, excepto las series de los periodos totales de CEMARGOS y Bancolombia, que muestran aleatoriedad y antipersistencia, respectivamente.

## CONCLUSIONES

Con este trabajo se concluye que las series bursátiles de Colombia no son normales y presentan dependencias tanto de corto plazo como de largo plazo, identificadas mediante análisis de autocorrelación y el coeficiente de Hurst, respectivamente. Además se observa que el comportamiento de las series no puede ser explicado únicamente por modelos lineales ARIMA-GARCH, sino que se requiere la búsqueda de modelos no lineales que se ajusten al comportamiento caótico evidenciado por el coeficiente de Hurst en la mayoría de las series; esto con el propósito de predecir el mercado.

### RESUMEN

*Turismo rural: se define por la integración de elementos de la comunidad al proyecto. En realidad el turismo rural o sustentable se ofrece sin incluir a la comunidad, en esta investigación se realizó un diagnóstico al proyecto turismo rural “Don Bonifacio” localizado en San Jerónimo Otila, Coixtlahuaca, Oaxaca, con las categorías identificadas por (Martínez Luna, 2004) para definir la sustentabilidad desde la perspectiva de comunidad. La literatura disponible maneja diversas definiciones de sustentable, pero no es clara la definición y no existe la incorporación de lo comunitario. Se planteó la pregunta de investigación. ¿Cuáles son los elementos de comunidad que integran los proyectos de turismo rural? El objetivo fue analizar los elementos de sustentabilidad desde la perspectiva de la comunidad en un proyecto de turismo rural. Se entrevistó al informante clave y con lista de cotejo se observaron las categorías: cultura propia, adecuación, tecnología propia y normas comunitarias, operacionalizadas por (Velázquez-Sánchez & Solana-Vásquez, 2013). Los resultados mostraron la ausencia de indicadores de las categorías de la sustentabilidad comunitaria en el proyecto analizado. No cubre con los parámetros establecidos por la (SECTUR, 2005), se concluyó que existe la denominación equívoca de turismo rural a proyectos que no cumplen con el concepto.*

**PALABRAS CLAVE:** Turismo rural, Sustentabilidad, Comunalidad.

## COMMUNITY SUSTAINABILITY ELEMENTS IN THE RURAL TOURISM

### ABSTRACT

*Rural tourism: It is defined by the integration of community elements to the project. In fact, sustainable or rural tourism is offered excluding the community, in this research it was made a diagnosis to the project rural tourism “Don Bonifacio” located in San Jeronimo Otila, Coixtlahuaca, Oaxaca, with the categories identified by (Martínez Luna, 2004) to define the sustainability from the community perspective. Available literature manages many definitions of sustainable, but the definition is unclear and there is no incorporation of community. It raised the research question. What are the elements of community that makes up the rural tourism projects? Objective was analyze the sustainability elements from the community perspective in a rural tourism project. Key informant was interviewed and with a checklist category was observed: own culture, adequacy, own technology and community rules, operationalized by (Velázquez-Sánchez & Solana-Vásquez, 2013). The results showed the indicators absence of the sustainability community categories in the analyzed project. It does not cover with the established parameters by (SECTUR, 2005), it concluded that there is the denomination misleading of rural tourism to projects that do not comply with the concept.*

**KEY WORDS:** Rural Tourism, Sustainability, Community

## INTRODUCCIÓN

Hoy en día existen muchos proyectos de turismo rural y que además de esto dicen ser de desarrollo sustentable pero, ¿en verdad éstos cubren con los requisitos de turismo rural y sustentabilidad? Uno de estos casos se encuentra en el proyecto turismo rural “Don Bonifacio” ubicado en la comunidad de San Jerónimo Otlá, Coixtlahuaca, Oaxaca. Se analizó este proyecto con base en una lista de cotejo incluyendo variables como: tradiciones, lengua, costumbres y otras dimensiones de la cosmovisión, datos sociodemográficos y con los conocimientos que los administradores del lugar tienen de este concepto. Al final se obtuvieron como conclusión un mal manejo del concepto turismo rural siendo una consecuencia la exclusión de la comunidad y el enfoque sostenible, atendiendo así solo intereses económicos siendo esta una problemática observada ya en diversos proyectos de este tipo.

## REVISIÓN LITERARIA

La definición de turismo rural es: “Los viajes que tienen como fin realizar actividades de convivencia e interacción con una comunidad rural, en todas aquellas expresiones sociales, culturales y productivas cotidianas de la misma” (SECTUR, 2008), mientras que desde el punto de vista del Instituto Nacional de Turismo Rural A.C. lo define como “tal tipo de turismo que debe ser agrario, comprende el ecoturismo, el turismo gastronómico, el deportivo, de aventura, religioso, histórico y antropológico entre otros. Empero no debe ser confundido con el llamado turismo social que, de manera discriminatoria, lo definen como dirigido a los ‘pobres’ ” (INTUR). Por otra parte la propuesta del concepto de DESARROLLO SUSTENTABLE tuvo su antecedente en el análisis realizado por el Club de Roma, organización que fue fundada en 1968, en el que se pretendía considerar al mundo “como un sistema y analizarse como un todo” (Margolin, 2005, pág. 115). El análisis anterior resultó en el primero de los informes realizados por el Club de Roma, conocido como Los límites al crecimiento (Meadow, 1974).

En este documento se señaló claramente la existencia de un gran problema en el sistema, el cuál podía ser desarrollado y reformulado a lo largo del tiempo, por lo que se indicó la necesidad de encontrar un equilibrio generalizado y de establecer límites al crecimiento de la población, al desarrollo económico y a los problemas ambientales (García Parra, 2010). Después de las iniciativas del Club de Roma, se desarrollaron estudios y análisis que permitirían continuar con la formulación de lo que después se definiría como un modelo de DESARROLLO SUSTENTABLE. De estos análisis posteriores hace énfasis la labor desarrollada por la Comisión Mundial para el Medio Ambiente y el Desarrollo, apoyada por las Naciones Unidas y dirigida por la primera ministra noruega Gro Brundtland. El trabajo desarrollado por la Comisión resultó en la publicación del reporte Nuestro Futuro Común, también conocido como el Informe Brundtland (Brundtland, 1987). La importancia de este reporte radica en el establecimiento formal del concepto de desarrollo sustentable, definido como “aquel desarrollo que satisface las necesidades actuales sin comprometer a las futuras generaciones” (Brundtland, 1987).

La definición del concepto derivó de la premisa de que los problemas ambientales críticos globales son el resultado de una enorme pobreza y de los patrones excesivos de producción y consumo. Como anteriormente se comentó, el concepto formulado en el Reporte Brundtland adoptó diversos enfoques, siendo el más común que el desarrollo sustentable se centra únicamente en el medio ambiente. De esta manera, posterior a la Cumbre de la Tierra, celebrada en 1992, la idea original sufrió una modificación, de aquella centrada en la preservación del medio ambiente y el consumo prudente de los recursos naturales no renovables, hacia la idea de “tres pilares”, unificados con el objeto de buscar un crecimiento económico favorable, la justicia social y la preservación del medio ambiente.

## METODOLOGÍA

En esta investigación se visitó, observó y analizó las condiciones de turismo rural de la comunidad de San Jerónimo Otlá en estado de Oaxaca. En la comunidad se localizaron tres cooperativas que ofertan turismo rural, estas encargadas de actividades como: renta de cabañas, caminata, senderismo, zona para acampar, renta de cuatrimotos, viajes en globo aerostático. Se incluyó un análisis en el manejo de la denominación de turismo rural, en esta comunidad con una población total de 90 habitantes (INEGI, 2010), La cual se clasifica una comunidad en ámbito rural, con un grado alto de marginación en el catálogo de población de la Secretaría de Desarrollo Social (SEDESOL, 2010). La entrevista que se aplicó para identificar las variables de sustentabilidad y del tipo de turismo que ofrece y se desarrolla, así como su administración municipal y lo que oferta la comunidad como producto turístico. Las tres cooperativas son empresas familiares, en esta primera etapa se encuentra la observación hecha en la comunidad.

### Muestra

Durante el recorrido en la comunidad para observar y recolectar la información, se encontró que la comunidad a pesar de encontrarse a corta distancia de la carretera federal, no cuenta con una fácil accesibilidad, aunado a eso la falta de servicios necesarios como una clínica de salud o una tienda de abastecimiento rural, está situado en un lugar benéfico para los fines recreativos que se pretenden realizar, pero los recursos que ofertan y las actividades de sustentabilidad en una comunidad de turismo rural no concuerda con la realidad ya que para denominarse turismo Rural se debe aplicar ciertas características según la SECTUR quienes dan la clasificación del turismo.

El número final de las encuestas realizadas fueron dos: la primera de Administración Municipal aplicada al representante municipal de la comunidad y la segunda de Turismo y Comunalidad (*Velázquez-Sánchez & Solana-Vásquez, 2013*), al dueño de una cooperativa de oferta de turismo rural. La entrevista se realizó al dueño y líder de una de las tres cooperativas del lugar, el participante de la entrevista de turismo y Comunalidad, por los problemas del lugar solo se tuvo acceso a esta persona. Se incluyeron aspectos de localización, población, características de organización, ofertas de recreación, cobertura de servicio (electricidad, drenaje, agua potable, médicos u otros). La encuesta fue hecha en la comunidad de San Jerónimo Otlá perteneciente al municipio de San Juan Bautista Coixtlahuaca, región de la Mixteca Alta en el estado de Oaxaca, México.

TABLA 1: Tabla de las Variables en la Comunidad

VARIABLE	INDICADORES
Cultura Propia	Extinción de la lengua materna Falta de vestimenta propia 2 fiestas al año (religiosas).
Adecuación	
Tecnología Propia	No cuentan con ello.
Normas Comunitarias	Organización con base a usos y costumbres. Comité de seguridad.

*En esta tabla se muestra los datos recopilados en la encuesta realizada en San Jerónimo Otlá en el estado de Oaxaca. Fuente: Elaboración propia.*

El diagnóstico se realizó en la comunidad de San Jerónimo Otlá durante el día 8 del mes de enero del 2013. Se realizaron las entrevistas con personas que radican en la comunidad, al igual la observación fue de vital importancia para ayudar a identificar los elementos que son sustentables, así como las características más importantes que le brindan la denominación de Turismo rural a esta comunidad y el concepto que esta misma tiene del concepto antes mencionado. La localidad tiene una nueva propuesta

de oferta turística, ofreciendo más confort para los turistas viajeros así como, el turista que busca tranquilidad con los mismos servicios que puede tener en su casa, en un contexto natural y rural. Con la hoja de cotejo se observó que el tipo de turismo que manejan no es rural porque no cumple los parámetros para poderse denominar así, a pesar de que el turismo se realiza en un espacio geográfico rural.

## RESULTADOS

Los resultados mostraron que la localidad de San Jerónimo Otlá tiene grandes elementos naturales que la hacen atractivo para ser un lugar de recreación, estancia y confort, el proyecto ya está estructurado; las cabañas que ofertan se denomina así porque la misma cooperativa la denomina de esta forma pero, en si son un tipo de departamentos dado el diseño, que cuenta con todos los servicios, y la característica cambiante sería el contexto y el lugar ubicado en la zona más alta entre el estado de Puebla y Oaxaca ofreciendo una vista panorámica del paisaje natural característico del lugar.

En cuanto a cultura propia no es una oferta muy rica a diferencia de otras comunidades del estado de Oaxaca, los habitantes de la comunidad son descendientes de la etnia mixteca pero por el fenómeno migratorio las personas que habitaban el lugar se trasladan en busca de mejorar su calidad de vida y poco a poco las personas que se quedan van perdiendo la identidad (vestimenta, danza, gastronomía, y lengua materna, etc.) ya que no hay a quien transmitirla. En cuanto a fiestas, costumbres y tradiciones, procuran conservarlas, estas son de carácter religioso siendo de mayor peso estando así más arraigadas, pero que su vez con el transcurrir de los años han sufrido el deterioro adoptando así otras costumbres, originadas por la misma transculturización ocasionada por los emigrantes que al regresan en temporada vacacional o fiestas importantes va modificando las actividades, ideología y comportamiento de la comunidad.

En la comunidad de acuerdo con los términos de Comunalidad (Díaz) para ser sustentable debería ponerse en práctica la participación de todos los habitantes de la comunidad, ya que toda comunidad debe estar de acuerdo e integrarse al proyecto turístico y que los organizadores o líderes de éste integren a toda la comunidad, procurando el desarrollo en conjunto con los habitantes del lugar, buscando el bien común, dejando aún lado los intereses personales o de algún grupo en específico atendiendo de esta manera a las problemáticas con las que cuenta la zona.

## CONCLUSIONES

Podemos concluir entonces de esta manera el manejo del concepto de Turismo rural, la definición más apropiada sería denominarlo Turismo Alternativo. De la misma forma podemos decir que hace falta que el gobierno (más claramente la Secretaría de Turismo) el atender la falta de distintos servicios y darles la denominación correcta y exacta.

Y como último, mencionar el buscar la participación de la comunidad en este tipo de proyectos para que no sea solamente el recurso para una cooperativa que termina siendo simplemente una empresa familiar.

# INFLUENCIA DEL COMPORTAMIENTO DEL LÍDER EN EL DESARROLLO DE LOS RECURSOS HUMANOS

Jorge Hernández Palomino, Instituto Tecnológico de Ciudad Juárez

José de Jesús Espinoza, Instituto Tecnológico de Ciudad Juárez

Manuel Aguilar Arellano, Instituto Tecnológico de Ciudad Juárez

## RESUMEN

*Esta investigación analiza con un diseño cuantitativo correlacional la influencia del comportamiento del líder en el desarrollo de los recursos humanos en las pyme de México. Para realizar el análisis, se utilizó el Modelo de Liderazgo Orientado al apoyo y crecimiento. Para la prueba de las hipótesis se realizó el análisis factorial utilizando componentes principales y rotación varimax con la intención de indagar sobre la estructura subyacente a los ítems de la escala. Posteriormente, un análisis de regresión fue llevado a cabo para establecer la fuerza de las relaciones entre el comportamiento del líder y el apoyo al crecimiento de los recursos humanos. Los resultados de este estudio sugieren que el impacto del comportamiento del líder en desarrollar a los empleados es reducido cuando las empresas enfrentan altos niveles de incertidumbre. El presente estudio provee apoyo empírico para la hipótesis de investigación, de cómo el comportamiento del líder tiene un efecto directo en el desarrollo de los recursos humanos en las empresas. Las implicaciones prácticas de los resultados son sujetas a discusión. Las futuras investigaciones podrán analizar las percepciones de los empleados respecto a la incertidumbre, analizando el contexto organizacional y las características individuales que son asociadas con la incertidumbre. Otras investigaciones pueden realizarse en diferentes tiempos y otro tipo de industrias y poder replicar el presente estudio. Son presentadas para este propósito las limitaciones del presente estudio.*

**PALABRAS CLAVE:** Liderazgo, comportamiento organizacional, recursos humanos

INFLUENCE OF LEADERSHIP BEHAVIOR IN THE HUMAN RESOURCES DEVELOPMENT

## ABSTRACT

*This research analyzes with a quantitative correlational design the influence of leadership behavior in the human resources development in SME companies in Mexico. To perform the analysis, the supportive/growth oriented leadership model of Song was used. To test the hypothesis factor analysis applying Varymax rotation with the intention to investigate the underlying structure of the scale items. Subsequently, a regression analysis was conducted to establish the strength of the relationship between leader's supportive behaviors and the human resources growth. The results of this study suggest that the impact of leader behavior in developing employees is reduced, when firms face high levels of uncertainty. This study provides empirical support for the research hypotheses, about how the leader's behavior has a direct effect on the human resources development in organizations. The practical implications of the results are subject to discussion. Future research may examine employees' perceptions about uncertainty, analyzing the organizational context and individual characteristics that are associated with uncertainty. Further inquiries can be made at different times and other industries and to replicate this study. Study limitations are also presented.*

## INTRODUCCIÓN

El estudio del medio ambiente organizacional ha sido un tema importante en la teoría organizacional y en la administración estratégica, considerando que las organizaciones son influenciadas y algunas veces restringidas por los factores del medio ambiente (Dess y Rasheed, 1991). La incertidumbre en el medio ambiente organizacional tiene una gran influencia en los miembros de la organización porque las organizaciones están completamente ligadas a las condiciones existentes en sus empresas. En particular, considerando que las pymes enfrentan medio ambientes más competitivos de lo que eran previamente, lidiar adecuadamente con entornos organizacionales complejos y turbulentos se ha convertido en una de las mayores responsabilidades para los líderes de las pymes. Por ejemplo, la incertidumbre organizacional siempre acompaña al cambio organizacional y dicho cambio podría tener influencia entre la interacción entre líderes y seguidores. Algunas veces, la incertidumbre organizacional no solo representa un reto, sino que es clave para lograr cambios sustanciales y para ello se espera que el líder sea capaz de iniciar de forma efectiva el cambio organizacional (Lalonde, 2004).

En entornos dinámicos como las pymes, en la que los recursos son escasos, los líderes necesitan evaluar las situaciones cambiantes y adoptar planes relevantes. A este respecto, resulta significativo examinar qué roles juega el líder durante tiempos de incertidumbre organizacional. La incertidumbre organizacional no siempre ejerce una influencia negativa en el comportamiento de los líderes. Las situaciones inciertas generalmente representan para los líderes oportunidades positivas para demostrar su liderazgo (De Hoogh, 2004). Dependiendo de la situación, los líderes pueden incrementar la efectividad en la organización o el desempeño en tiempos de incertidumbre. Por otra parte, el rol tradicional del líder es capacitar, motivar, educar y desarrollar continuamente a los seguidores en orden de mejorar la efectividad organizacional (Van Wart, 2003). La mayoría de los estudios de liderazgo bajo condiciones de incertidumbre se han interesado en el comportamiento apropiado de liderazgo para hacer frente a la incertidumbre organizacional y la influencia efectiva de los líderes sobre los subordinados bajo tales condiciones; sin embargo, los medio ambientes inciertos probablemente conduzcan a situaciones difíciles, lo cual podría influenciar negativamente los comportamientos de liderazgo.

Particularmente, en el desarrollo de los recursos humanos bajo condiciones de incertidumbre organizacional, el rol del líder es crucial porque se asume que los miembros de una organización tienen dificultad para desarrollar su trabajo en medio ambientes cambiantes sin la dirección y guía del líder (Schein, 1985). El propósito de esta investigación es, examinar si los comportamientos de liderazgo asociados con el desarrollo de los recursos humanos son influenciados por el nivel de incertidumbre de las pymes del Estado de Chihuahua, México. Esta investigación se presenta organizada como sigue. En la sección de revisión literaria, una discusión de la literatura relevante es presentada. En este apartado se clarifica el rol de líder, el desarrollo de los recursos humanos y el comportamiento del líder bajo condiciones de incertidumbre. Se presenta el liderazgo orientado al apoyo del crecimiento de los empleados de las pymes y el liderazgo orientado a las metas. Se presenta y justifica la metodología utilizada para determinar la influencia del comportamiento del líder en el desarrollo de los recursos humanos. Los resultados obtenidos se presentan realizando las pruebas estadísticas y su significancia estadística. El apartado de conclusiones presenta la discusión crítica de los resultados obtenidos, las limitaciones del estudio y las recomendaciones para futuras investigaciones.

## REVISIÓN DE LITERATURA

El impacto de los comportamientos de liderazgo sobre el desarrollo de los recursos humanos, es influenciado por el nivel de incertidumbre del medio ambiente organizacional. Diferentes autores entre

los que destaca Bass (1990), subrayan que los seguidores tienen una mayor disposición a seguir a los líderes y son afectados de forma diferente dependiendo del estilo de liderazgo en tiempos de incertidumbre. Adicionalmente, los seguidores tienden a sobre estimar la responsabilidad de los líderes en los resultados de la organización bajo condiciones de incertidumbre (Meindl, Ehrlich y Dukerich, 1985).

Por consiguiente, la presencia de condiciones inciertas puede llevar a los líderes a no estar a la altura de aspectos críticos de liderazgo, considerando las creencias de los seguidores y las expectativas sobre el desempeño del grupo o unidad durante el tiempo de incertidumbre. Para un desarrollo positivo de los empleados en medio ambientes inestables, los líderes necesitan mantener informados a los empleados sobre varios tipos de información externa referente a los clientes, cambio en el medio ambiente y desarrollos en tecnología (Mintzberg, 1973). Es decir, el rol del líder es transferir información entre el medio ambiente organizacional y los miembros internos de la organización para procesar e integrar la información de varias maneras. Generalmente, el liderazgo es definido de diferentes maneras, dependiendo del enfoque, del objetivo o el propósito. Es decir, los estudios de liderazgo han examinado los rasgos y comportamientos de los líderes (Pawar y Eastman, 1997; Dvir, Avolio y Shamir, 2002); las reacciones de los seguidores hacia los líderes (Bass y Yammarino, 1988; Liden y Maslin, 1998).

Otros han examinado las tácticas que los líderes y seguidores utilizan para influenciarse unos a otros (Klein y House, 1995; Druskat y Wheeler, 2003); los factores situacionales que afectan el estilo de liderazgo (House y Dressler, 1974). Considerando los estudios mencionados, generalmente se utiliza la palabra líder para designar a quien destaca en una área, en una empresa, en una comunidad (Hernández, Gallarzo y Espinoza, 2011). Para que un líder pueda conseguir las metas y los objetivos de cualquier proyecto, lo primero que debe hacer, es cultivar las características que le garanticen una empatía entre él y sus seguidores (Hernández et. al, 2011).

Desafortunadamente, los estudios de liderazgo bajo situaciones de incertidumbre tienen diferentes características de los estudios generales de liderazgo, considerando que las condiciones de incertidumbre tienen efecto en el comportamiento de las personas y en factores psicológicos (Pillai y Meindl, 1998). Adicionalmente, los estudios realizados parecen concordar en que los líderes no tienen tiempo para hacer frente a la incertidumbre de forma exitosa (Nunamaker, 1989; Stephens, 2005), tales incertidumbres probablemente son para impactar el estilo y comportamiento de los líderes. No obstante, los estudios de liderazgo que se enfocan en situaciones de incertidumbre no pueden ser desligados de los estudios generales de liderazgo en los que los factores de incertidumbre más externos tales como las turbulencias económicas, la volatilidad del mercado podrían considerarse como factores situacionales en los enfoques de liderazgo (Carter, 1990). Sobre la base de la definición de liderazgo (Hernández, et al. 2011), por lo tanto, el rol del líder bajo situaciones de incertidumbre puede ser definido como la influencia que los líderes tienen de todos los procesos para evaluar a los otros líderes para hacer frente a la incertidumbre organizacional. El rol de los líderes para desarrollar a los empleados ha sido vital, considerando que su discreción y responsabilidad tiende a incrementarse bajo condiciones de cambio e incertidumbre.

Por ejemplo, Druskat y Wheeler (2003), identifican el comportamiento de liderazgo efectivo para la solución de la incertidumbre organizacional: construcción social y reconocimiento político a través de la relación con el equipo y los miembros de la organización persuadiendo a los empleados a atender las necesidades de la organización y ajustar las prioridades para apoyar las metas organizacionales en tiempos de incertidumbre. Por lo tanto, resulta adecuado examinar los comportamientos del líder para desarrollar los recursos humanos en tiempos de incertidumbre.

Para los líderes, desarrollar las capacidades y habilidades de los empleados tradicionalmente, ha sido considerado como una función importante dentro de las diferentes funciones del liderazgo (Van Wart, 2005). Dicha función, es reconocida como el estilo de liderazgo de apoyo. El liderazgo de apoyo incluye consideraciones individuales en los que el líder proporciona reconocimiento especial y retroalimentación

positiva a los seguidores (Agle, 2006). Los estudios del comportamiento organizacional han reconocido también que el liderazgo orientado al apoyo y crecimiento ha sido ampliamente asociado al estrés ocupacional de los miembros de las organizaciones (Khan y Byosiére, 1992). El liderazgo orientado al apoyo, tiende a mejorar los problemas de estrés laboral de los empleados mediante la comunicación con los subordinados respecto a sus problemas en el trabajo y a escuchar sus quejas. De una forma más específica, el liderazgo de apoyo demuestra un interés real por el bienestar de los subordinados.

Considerando que los empleados dentro de una organización son “seres sociales” y no solo trabajadores desempeñando una tarea (House, 1981), los líderes necesitan hacer que los seguidores sientan que son protegidos y valorados dentro del medio ambiente del trabajo (Van Wart, 2005). Por ejemplo, Bass (2005), señala que el comportamiento de liderazgo de apoyo se presenta cuando el líder se vuelve más familiar con los subordinados, pone atención a sus diferencias entre ellos, se comunica con ellos e intercambia información con otros empleados de la organización. Cuando el estilo de liderazgo de apoyo es practicado, el líder se preocupa por las necesidades de los seguidores, mostrando empatía y aprecio al apoyar las iniciativas y perspectivas de sus subordinados. Por lo tanto, el liderazgo orientado al apoyo y crecimiento se caracteriza por asistir a los empleados a alcanzar sus propias expectativas, inspirándolos y motivándolos (Rafferty y Griffin, 2006). Bajo medio ambientes complejos y de cambio el liderazgo orientado al apoyo y crecimiento se vuelve más importante y necesario.

Los líderes quienes mantienen comportamientos tales como la consideración individualizada, comparten las características comunes de auto identificación como agentes de cambio y la habilidad de tratar con la complejidad, la ambigüedad y la incertidumbre (Tichy y Devanna, 1986). De esta manera, el liderazgo orientado al apoyo y crecimiento es considerado un comportamiento de liderazgo efectivo en tiempos de incertidumbre organizacional. Otro enfoque importante de liderazgo es el orientado a las metas. Los líderes en medio ambientes modernos son requeridos para seleccionar y priorizar las metas organizacionales, considerando las diferentes demandas y responsabilidades que tienen bajo condiciones de recursos limitados (Van Wart, 2005).

De acuerdo con House y Dessler (1974), los líderes efectivos clarifican las metas organizacionales y llevan a sus subordinados a alcanzar las metas. Los líderes orientados a las metas intentan motivar a un grupo de gente y comunicar la visión de acuerdo a sus expectativas, lo que incrementará el desempeño de los empleados (Bass, 2003). Adicionalmente, los líderes orientados a las metas con reconocimiento de varios problemas, pueden alentar a sus seguidores a considerar varias perspectivas y a desarrollar estrategias innovadoras de trabajo (Barling, Weber y Kelloway, 1996). Los líderes con metas y visión han sido considerados como modelos con un punto de vista positivo del futuro y capaces de llevar a cabo esfuerzos de cambio transformacionales (Bono y Judge, 2004).

## RESUMEN

*En este trabajo se estudiaron cuatro de las nueve dimensiones de clima organizacional definidas bajo el modelo propuesto por Litwin y Stringer que son estructura, recompensa, relaciones e identidad, en el área de producción del ejido forestal El Brillante, de Durango, México en el año 2012. Se encuestó a 70 trabajadores del área de producción, el instrumento de medición evaluaron las cuatro dimensiones bajo la escala de Likert; se determinó el coeficiente Alfa de Cronbach con un 0,935 de fiabilidad. Fueron identificadas las dimensiones según la evaluación del personal de la organización. Los resultados obtenidos, nos llevan a concluir que en la dimensión estructura el personal está de acuerdo con la estructura organizacional del ejido. En cuanto a la dimensión recompensa, se identificó que el ejido ha contribuido de manera positiva en las motivaciones y brinda la capacitación necesaria para el desarrollo de su trabajo. Para la dimensión relaciones, se observó que tienen armonía, comunicación clara, precisa y fluida. En la dimensión identidad, el personal de producción se reconoce como parte importante que contribuye al logro de objetivos del ejido y disfrutan trabajar dentro del mismo.*

**PALABRAS CLAVE:** estructura, recompensa, relaciones, identidad

## PERCEPTIONS OF ORGANIZATIONAL CLIMATE IN THE PRODUCTION OF A PERSONAL COMMON LAND FOREST IN MEXICO

### ABSTRACT

*In this paper, we studied four of the nine dimensions of organizational climate defined under the model proposed by Litwin and Stringer are structure, rewards, relationships and identity, in the area of production forest common land El Brillante, Durango, Mexico in 2012. We surveyed 70 workers in the production area, the measuring instrument assessed four dimensions on the Likert scale, we are determined the Cronbach alpha coefficient of reliability with a 0.935. Dimensions were identified as staff evaluation of the organization. The results lead us to conclude that in the dimension structure staff agrees with the organizational common land structure. As for the reward dimension, it was identified that the common land has contributed positively in the motivations and provides the necessary training for the development of their work. For the dimension relationship was observed with harmony, clear communication, precise and fluid. Into identity dimension, staff feels as an important part that contributes to achieving of common land goals and they enjoy working within it.*

**KEYWORDS:** structure, rewards, relationships, identity

## INTRODUCCIÓN

El clima organizacional es un vínculo para el buen desempeño de la organización y un factor de influencia en el comportamiento de quienes lo integran, por lo tanto su conocimiento proporciona una retroalimentación acerca de los procesos que determinan los comportamientos organizacionales. En este trabajo se estudian cuatro dimensiones de clima organizacional definidas bajo el modelo propuesto por Litwin y Stringer, que son estructura, recompensa, relaciones e identidad, en el área de producción del ejido forestal El Brillante. Así como también se identificaron las dimensiones con más problemáticas y cuales son más compatibles en la organización y el personal. Los resultados obtenidos nos llevan a concluir que en la dimensión estructura el personal de esta área está de acuerdo con la estructura organizacional del ejido. En cuanto a la dimensión recompensa, se identificó que el ejido ha contribuido de manera positiva en las motivaciones empleadas a los colaboradores y también brinda la capacitación necesaria para el desarrollo de sus actividades diarias.

Para la dimensión relaciones, se observó que tienen armonía, comunicación clara, precisa y fluida. En la dimensión identidad, el personal de producción se encuentra comprometido con el ejido, se sienten parte de esta organización y disfrutan trabajar dentro de ella. La dimensión que se mejor se acoge para el ejido es la de estructura e identidad y las dimensiones de relaciones y recompensa obtuvieron un menor porcentaje de aceptación. La investigación está organizada en cuatro apartados. En el primero tenemos la sección de revisión literaria y se presentan algunos conceptos relevantes sobre el clima organizacional y se muestra una panorámica general de lo que es el ejido forestal en México, después tenemos la sección de metodología donde se describe como se llevó a cabo el estudio, la sección de resultados contiene el análisis de la información y después tenemos las conclusiones.

## REVISIÓN LITERARIA

### Clima Organizacional

De acuerdo con Chiavenato (2001) el clima organizacional es la cualidad o propiedad del ambiente percibido o experimentado por los miembros de la organización en su comportamiento. Este concepto aporta un elemento que ayuda a comprender que el clima organizacional en esencia nos remite a la percepción de los que integran una organización. Martín y Colbs. (1999) mencionan que el clima laboral, es un concepto metafórico que adquirió relevancia en el ámbito social cuando las empresas empezaron a dar importancia a los aspectos relacionados con un ambiente de trabajo positivo y satisfactorio para conseguir, en última instancia, una mayor productividad en términos no solo cuantitativos, sino cualitativos. Para Da Silva (2002) el clima organizacional está conformado por el deseo, por el trabajo y el resultado del entorno social en el interior de la organización. Castillo (2006) explica que el clima organizacional constituye la personalidad de una organización y la imagen que esta proyecta a sus empleados, incluso al exterior. El administrador y el asesor especialista deben de ser capaces de analizar e interpretar esta personalidad para planear sus intervenciones. De acuerdo con Blanch (2003), en sentido meteorológico el clima, remite a un conjunto de circunstancias atmosféricas que influyen en las vidas de las poblaciones y organismos que habitan una determinada región geográfica. Metafóricamente, se refiere a características del ambiente psicosocial que inciden en los procesos que se desarrollan en una región social, como por ejemplo, una organización laboral.

Algunos estudios clásicos sobre este tipo de clima ponen de manifiesto la influencia del tipo de liderazgo sobre el funcionamiento general de un grupo. Entre los modelos teóricos del clima organizacional figura el que lo representa como determinado por la interacción de propiedades objetivas (atributos estructurales de la organización) y de construcciones subjetivas (percepciones, representaciones, creencias, valoraciones, etc.) del ambiente laboral, en lo concerniente a aspectos y dimensiones relevantes de la vida

social de la organización, como cohesión, confianza recíproca, transparencia informativa, estilo de comunicación, apoyo mutuo, autonomía individual, implicación emocional, compromiso organizacional, reconocimientos y recompensas, presión experimentada, reglas tácticas de funcionamiento, grado de transferencia. Existe una importante línea de investigación e intervención que pone de relieve la importancia del clima organizacional como variable explicativa y predictiva de procesos como rendimiento, productividad, ausentismo, rotación, conflictividad, satisfacción, calidad de la vida laboral, eficacia y eficiencia organizacionales, etc. Así pues, el conocimiento y la actuación sobre el clima laboral son importantes de cara a la planificación y al desarrollo organizacional.

En las investigaciones de Gan y Berbel (2007) explican lo que es el clima organizacional para Litwin y Stringer (1978) y describen que es un filtro por el cuál pasan los fenómenos objetivos de la empresa (estructura, liderazgo, toma de decisiones), de ahí que estudiando el clima pueda accederse a la comprensión de lo que está ocurriendo en la organización y de las repercusiones que estos fenómenos están generando sobre las motivaciones de sus miembros y sobre su correspondiente comportamiento y reacciones. Las percepciones y respuestas que abarcan el clima organizacional se originan, según Litwin y Stringer, en una gran variedad de factores. Proponen la existencia de nueve dimensiones o enfoques por medir, que explicarían el clima existente en una determinada empresa.

Tabla 1: Dimensiones del Clima Organizacional.

Dimensión	Representación
Estructura	Representa la percepción que tienen los miembros de la organización acerca de la cantidad de reglas, procedimientos, trámites y otras limitaciones a que se ven enfrentados en el desarrollo de su trabajo. La medida en que la organización pone el énfasis en la burocracia, control y estructura, o bien, el énfasis en un ambiente de trabajo libre, informal, no estructurado (el polo opuesto)
Responsabilidad	Es el sentimiento de los miembros de la organización acerca de su autonomía en la toma de decisiones relacionadas con su trabajo. Es la medida en que la supervisión que reciben es de tipo general y no estrecha o vigilante (el polo opuesto), es decir, el sentimiento de ser su propio jefe y no tener doble chequeo en el trabajo.
Recompensa	Corresponde a la percepción de los miembros sobre la adecuación de la recompensa recibida por el trabajo bien hecho. Es la medida en que la organización utiliza más el premio que el castigo o viceversa.
Desafío	Corresponde al sentimiento que tienen los miembros de la organización acerca de los desafíos que impone el trabajo. La medida en que la organización promueve la aceptación de riesgos calculados a fin de lograr los objetivos propuestos, o bien, propone un sistema de rutinas sin ninguna clase de estímulos.
Relaciones	Es la percepción por parte de los miembros de la empresa acerca de la existencia de un ambiente de trabajo grato y de buenas o malas relaciones sociales, tanto entre iguales como entre jefes y subordinados.
Cooperación	Es el sentimiento de los miembros de la empresa sobre la existencia de un espíritu de ayuda de parte de los directivos y otros empleados del grupo. Énfasis puesto en el apoyo mutuo, tanto de niveles superiores como inferiores, o "ir cada uno a lo suyo"
Estándares	Es la percepción de los miembros acerca del énfasis (alto, bajo/nulo) que pone la organización sobre las normas (procedimientos, instrucciones, normas de producción o rendimiento).
Conflictos	Es el sentimiento de que los miembros de la organización, tanto pares como superiores aceptan o niegan las opiniones discrepantes y no temen (o temen) enfrentar y solucionar los problemas tan pronto surjan.
Identidad	Es el sentimiento de pertenencia a la organización como elemento importante y valioso dentro del grupo de trabajo. En general, la sensación de compartir los objetivos personales con los de la organización, o de ser ajeno a los mismos. Lo más relevante de este enfoque es que permite obtener, con la aplicación de un cuestionario, una visión rápida y bastante fiel de las percepciones y sentimientos asociados a determinadas estructuras y condiciones de la organización.

*Fuente: Gan, Berbel (2007). Pág. 213. La identificación del clima organizacional, desde la perspectiva de las variables que lo determinan y sobre las que los individuos reaccionan construyendo percepciones que influyen en su comportamiento, es considerada como un estudio que se contextualiza en el marco de sus dimensiones. En este se identifican y abordan de manera individual las variables o factores que pueden considerarse determinantes del clima organizacional.*

### Ejido Forestal el Brillante

En Durango México una de las principales fuentes económicas son las empresas forestales dentro de las cuales se encuentran los ejidos. El término ejido, según Bouquet (1996), se refiere a las tierras otorgadas por el rey a los pueblos de indios ubicadas a la salida del pueblo, destinadas al pastoreo, recolección de leña, forraje y a otros usos comunes. Deriva del latín éxitos, que significa salida. Era el campo o tierra que

no se plantaba, ni se labraba. Actualmente el ejido se concibe como un régimen de propiedad en el derecho agrario mexicano. La Ley Agraria (1992) en su artículo 9 define la palabra ejido como una forma de tenencia de la tierra en la que el núcleo de población con personalidad jurídica y patrimonios propios, es propietario de las tierras que le han sido dotadas o de las que hubiere adquirido por cualquier otro título. Además, el artículo 44 de la citada ley, establece que el ejido está conformado por tres áreas básicas, que incluye el área común, la parcelada y el centro de población. A los miembros que lo integran se les identifica como ejidatarios y a sus empresas como ejidales (Artículo 12).

El Ejido Forestal El Brillante, se localiza en el macizo montañoso denominado Sierra Madre Occidental dentro del municipio de Pueblo Nuevo, al suroeste del Estado de Durango; está enmarcado geográficamente entre los paralelos 23° 40' 04" y 23° 47' 54" de latitud Norte y los meridianos 105° 21' 31" y 105° 29' 52". Es un núcleo ejidal que aprovecha sus recursos forestales de manera colectiva el cual fue dotado mediante resolución presidencial el 11 de Abril de 1961 (Bretado, 2010). En el año de 1994, en acatamiento a las modificaciones del artículo 27 de la Ley de Reforma Agraria, el Ejido se integra al Programa de Certificación de Derechos Ejidales y Titulación de Solares Urbanos (PROCEDE), donde en coordinación con el Instituto de Estadística, Geografía e Informática (INEGI) y la Procuraduría Agraria, se hace el levantamiento topográfico respectivo entregando mediante reunión de la Asamblea General de Ejidatarios el 20 de Agosto de 1995, la delimitación, destino y asignación de las tierras de uso común, asentamientos humanos y reconocimiento de derechos ejidales, siendo entregada una superficie total de 9,516-66-35.032 Ha. La actividad de mayor importancia es la forestal, en sus distintas etapas de aprovechamiento y transformación. También se tienen actividades agrícolas, frutícolas y pastoreo. Por otra parte, el ejido está aprovechando su ubicación colindante con el área urbana de El Salto y ha puesto en marcha diferentes acciones para ofrecer un espacio para el turismo local. En la presa conocida como Puente de las Cabañas han construido en armonía con el paisaje, cabañas rústicas para actividades de recreación dispersa y de turismo de naturales además ofrece servicios en el desarrollo y protección ambiental (Bretado, 2010).

## METODOLOGÍA

La presente investigación cuantitativa es de modalidad descriptiva e indica el desempeño del personal consultado en la organización, partiendo de la revisión de las variables contenidas en el modelo de clima organizacional expuesto por Litwin y Stringer (1978). El diseño que utilizaremos en esta investigación es el no experimental, las variables no se manipulan (Del Tronco, 2005). La investigación se realizó en el año 2012 en el Ejido forestal El Brillante ubicado en la cabecera municipal de El Salto, Pueblo Nuevo, Durango, México se encuestó a los trabajadores del área de producción que cuenta con 70 personas distribuidas de la siguiente manera; 5 en el área de servicios técnicos forestales, 35 en monte, 20 en abastecimiento, 8 en secadora y 2 personas en almacén. El instrumento de medición evalúa cuatro dimensiones bajo la escala de Likert; estructura, recompensa, relaciones e identidad. Se determinó el coeficiente Alfa de Cronbach (0,935).

El instrumento de medición acopia información de las dimensiones seleccionadas de Litwin y Stringer (1978), las cuales son estructura, relaciones, recompensa e identidad, a través de una serie de preguntas que buscan identificar la percepción de los actores hacia el clima organizacional. El cuestionario quedó diseñado de la siguiente manera: Una primera sección que corresponde a la dimensión estructura, está compuesta por un total de 12 reactivos; la siguiente sección que es la dimensión de recompensa, por 5 reactivos; la sección de relaciones tiene 15 reactivos y por último la sección de identidad está integrada por 6 reactivos. Con la finalidad de analizar los datos, se utilizó la escala tipo Likert y a cada posible respuesta de cada reactivo se le asignó un valor numérico.

Para el registro y codificación de la información se procedió de la siguiente manera: clasificación de la información de acuerdo a la frecuencia y porcentaje, elaboración de tablas y gráficas. Una vez recabada la

información se analizaron los resultados obtenidos en base a los objetivos de la investigación, a posteriori se comenta individualmente el comportamiento de las variables utilizadas. Por último, se realiza la interpretación de modo general sobre el grupo de respuestas obtenidas en la aplicación del instrumento, que permitió construir un parámetro global sobre la importancia del clima organizacional.

## RESULTADOS

A partir de los datos obtenidos de la distribución de edades, años trabajados, género y nivel educativo de los trabajadores del área de producción podemos resaltar que el 68.6% se encuentra entre los 26 a 46 años de edad. El 97.2% tiene menos de 16 años trabajando en el ejido. El total de los trabajadores son de sexo masculino. Respecto al nivel educativo, el 48.6% de colaboradores encuestados tienen estudio hasta primaria y el 42.9% secundaria. El clima organizacional es un concepto multidimensional, para este estudio se seleccionaron cuatro dimensiones: estructura, relaciones, recompensa e identidad a continuación se presentan las figuras con el promedio del porcentaje obtenido en cada dimensión.

Figura 1: Dimensión Estructura

*En esta dimensión los elementos que fueron evaluados, son la normatividad, las reglas, el orden, la cantidad de trámites, el ritmo de trabajo y el material necesario para realizar el trabajo, nos muestra que en su mayoría los trabajadores del ejido objeto de estudio, es decir el 50.6% está de acuerdo y al 21.3% les es indiferente, pero la mayoría coinciden en que la estructura organizacional esta formalmente definida conocen sus deberes y responsabilidades, resaltamos que en la pregunta de considero necesario el establecimiento de reglas un 52.9% de los trabajadores contestaron que están de acuerdo.*

En esta dimensión las normas de disciplina son adecuadas, existe orden en esta institución, las funciones de los entrevistados están claramente definidas y la normatividad vigente facilita el desempeño de los trabajadores así como el poner en práctica lo que estos consideran necesario para realizar su trabajo y que pueden opinar para mejorar los procedimientos. Respecto al jefe inmediato la mayoría está de acuerdo con que muestra interés en el resultado de las tareas y reconoce el esfuerzo de los trabajadores. Bajo este contexto, cabe destacar que las actitudes de recompensas y comportamiento del jefe inmediato hacia el personal propiciara un mayor compromiso del trabajador, así mismo los entrevistados están conformes con que la institución ha contribuido en su desarrollo profesional.

Figura 2: Dimensión recompensa

Con respecto a la dimensión recompensa que es definida como la percepción que se tiene acerca de lo adecuado de la recompensa que se recibe por la correcta realización del trabajo, nos indica que el 49.7% de los trabajadores están de acuerdo en esta dimensión lo que quiere decir que a la mayoría les parece adecuado el mecanismo de recompensa en la organización.

Figura 3: Dimensión relaciones

En relación al comportamiento en esta dimensión donde los principales elementos evaluados son en primer término, la relación entre los trabajadores, y en segundo término, el liderazgo del jefe inmediato, por el hecho de que aquí se califica si el líder tiene capacidad para dirigir proyectos, motivar, si es imparcial, si hay respeto con los compañeros, si brinda respaldo en las actividades encomendadas, la dimensión relaciones es la que consta de más interrogantes, y la que más peso tiene por el hecho de que como le hemos visto anteriormente el clima organizacional es el ambiente que se genera dentro de una organización.

La mayoría de los entrevistados está de acuerdo o les es indiferente las relaciones dentro del ejido ya que en la Figura: 3, el 48.3% están de acuerdo y el 23.3% les es indiferente esto nos dice que los porcentajes que contestaron indiferente no les interesa tener una buena relación ni un buen espíritu de trabajo en equipo para apoyar a la organización. Respecto a las preguntas que tienen que ver con el jefe inmediato la mayoría afirma que este es claro en la asignación de tareas y existe apoyo y respaldo hacia los demás para la realización de las actividades laborales del personal. Resulta elemental señalar la importancia que tiene, el hecho de que gran parte de los entrevistados reconocen, la existencia de relaciones sociales amistosas, con la presencia de una buena comunicación y apoyo entre los trabajadores. De aquí que la vinculación que existe entre un ambiente caracterizado por los elementos anteriormente mencionados, con un grato ambiente de trabajo que se refiere a que dicho ambiente ejerce una influencia directa en la conducta y comportamiento de sus miembros.

Figura: 4 Dimensión identidad

La dimensión con mejor evaluación es identidad, que la hemos definido como el sentido de pertenencia a la organización, lo que significa que el individuo se reconoce como un integrante importante que contribuye en el logro de los objetivos institucionales y que en general tiene la sensación de compartir los objetivos personales con los de la organización, en esta última dimensión a través de los resultados que anteriormente se presentan.

Se muestra que un 85.3% de los trabajadores de producción, opino que aspectos como: me siento parte de esta institución, me siento comprometido a presentar propuestas para mejorar mi trabajo, considero importante mi trabajo, la realización de mis actividades tiene un impacto en la institución y contribuye con el logro de los objetivos de la misma así como, disfruto en trabajar dentro de esta institución, están bien determinados en el quehacer cotidiano de sus funciones y demuestra que en el Ejido “El Brillante” se comparte una misma identidad entre los individuos que componen la organización y no existe marcadas diferencias de opiniones en cuanto a la identidad existente en la institución objeto de estudio. El establecimiento de un buen clima organizacional, debe contar con un alto grado de identidad, compromiso y sentido de pertenencia de los trabajadores, vinculando los objetivos personales con los de la organización.

## CONCLUSIONES

En cuanto a la dimensión estructura se revela que la mayoría del personal de producción está de acuerdo con que se establezcan reglas dentro de su área; la disciplina, el orden, las funciones y las responsabilidades que tienen dentro de sus actividades consideran que están claramente definidas de tal manera que desempeñan bien sus labores. Las normas de disciplina y los procedimientos consideran que son adecuadas en esta área. El personal puede opinar para la mejora de los procedimientos y por lo tanto se le permite poner en práctica lo que considera adecuado en la realización de su trabajo. De tal manera el ejido otorga al personal el material suficiente para sus actividades diarias.

El personal en el área de producción está de acuerdo con la estructura organizacional que tiene el ejido. Esto habla de manera positiva para la organización ya que tiene una coordinación que satisface las necesidades de su personal. La dimensión estructura es la base para tener una definición del ejido en cuanto a sus actividades organizacionales. En la dimensión recompensa concluimos que existe capacitación para poder desarrollar sus actividades de una manera adecuada y también la organización contribuye a que puedan superarse en cuanto a su desarrollo profesional. En la dimensión relaciones se concluye que dentro del ejido se cuenta con una comunicación fluida en la relación del personal de producción y su jefe inmediato, trabajan con espíritu de equipo y el personal de otras áreas coopera al momento de presentarse algún problema, todos están en armonía para desarrollar sus actividades. Dentro de la dimensión de identidad los trabajadores han dado en su mayoría las respuestas que están muy de acuerdo que se sienten parte importante del ejido.

Toda el área de producción disfruta de trabajar en esta organización, por lo tanto se esfuerzan día a día para mejorar la calidad de sus actividades, ya que se sienten identificados. Al tener el sentido de

pertenencia, satisfacen sus necesidades individuales laborales, de esta manera se muestran comprometidos y mejoran su desempeño. Al tener una puntuación alta dentro de esta dimensión, se puede tener más confianza en los colaboradores y de esta manera delegar tareas y responsabilidades en ellos. La dimensión estructura tiene mayor aceptación dentro del ejido, ya que obtuvo una puntuación de 50.6% en la respuesta de acuerdo, esto quiere decir que la institución ha definido correctamente, la división del trabajo, las reglas establecidas son aceptadas por los trabajadores de producción y de esta manera se lleva al logro de los objetivos establecidos dentro del ejido. Otra dimensión que es aceptada es la de identidad, ya que en su promedio cuenta con un 44.8% en la respuesta de muy de acuerdo, que respecto con la escala de Likert que se utilizó esta tiene la mayor puntuación, los trabajadores se sienten satisfechos, identificados con el ejido y en consecuencia cumplen con las metas organizacionales, debido a que trabajan con sentido de pertenencia.

## ANEXO

### Clima Organizacional Identificación Del Entrevistado:

Edad: \_\_\_\_\_ Sexo: \_\_\_\_\_ Antigüedad en la empresa: \_\_\_\_\_

Máximo nivel educativo: \_\_\_\_\_

### Sección 1: Estructura

Pregunta	Muy de acuerdo	De acuerdo	Indiferente	En desacuerdo	Muy en desacuerdo
1. Considero que es necesario el establecimiento de reglas.					
2. Las normas de disciplina de la institución me parecen adecuadas.					
3. En esta institución existe orden.					
4. Considero que mis funciones y responsabilidades están claramente definidas.					
5. La normatividad vigente facilita mi desempeño.					
6. Los procedimientos ayudan en la realización de mis tareas.					
7. La cantidad de registros son necesarios para apoyar la realización de mis tareas.					
8. Es importante la información plasmada y recabada en los registros para la institución.					
9. Los ritmos de trabajo me parecen adecuados.					
10. Puedo opinar para mejorar los procedimientos.					
11. Se me permite poner en práctica lo que considero más adecuado para realizar mi trabajo.					
12. La institución otorga los materiales suficientes para realizar mi trabajo.					
Sección 2. Recompensa					
1. La institución ha contribuido en mi desarrollo profesional.					
2. La institución me brinda capacitación para obtener un mejor desarrollo de mis actividades.					
Mi jefe inmediato					
3. Muestra interés en el resultado de mis tareas.					
4. Reconoce mi esfuerzo en la realización de mis tareas.					
5. Utiliza su posición para darme oportunidades de trabajo estimulantes y satisfactorias.					
Sección 3. Relaciones					
1. En esta institución trabajamos con espíritu de equipo.					
2. En esta institución es sencillo ponerse de acuerdo.					
3. Mis compañeros me brindan apoyo cuando lo necesito.					
4. El personal de otras áreas se suma espontáneamente para resolver los problemas de la institución.					
5. En esta Institución se valora el trabajo y el esfuerzo.					
Mi jefe inmediato					
6. Tiene la capacidad para ayudar, motivar y dirigir proyectos y personas.					
7. Es claro en la asignación de las tareas.					
8. Brinda seguridad para que realice mis tareas.					
9. Brinda respaldo para apoyo en las actividades laborales.					
10. Es imparcial al otorgar, o tratar a cada quien, en las mismas circunstancias de la misma manera.					
11. Brinda la oportunidad para exponer mis ideas u opiniones.					
12. Toma en cuenta las diferentes ideas de las personas.					
13. Reconoce los derechos, dignidad y decoro de los demás.					
14. Muestra agrado, afecto y respeto hacia los demás.					
15. Mantiene una comunicación abierta con todos en la institución.					
Sección 4. Identidad					
1. Me siento parte importante de esta institución					
2. Me siento comprometido a presentar propuestas y sugerencias para mejorar mi trabajo.					
3. Considero importante mi trabajo en esta institución.					
4. Considero que la realización de mis actividades tiene un impacto en la institución.					
5. Estoy consciente de mi contribución en el logro de los objetivos de esta institución					
6. Disfruto trabajar en esta institución

# LA DENOMINACIÓN DE PUEBLO MÁGICO EN EL DESARROLLO DEL TURISMO SUSTENTABLE

Víctor García Pineda, Universidad Autónoma “Benito Juárez de Oaxaca”

Porfirio Vásquez Vásquez, Universidad Autónoma “Benito Juárez de Oaxaca”

Rosa María Velázquez Sánchez, Universidad Autónoma “Benito Juárez de Oaxaca”

## RESUMEN

*La denominación de pueblo mágico es una distinción que proporciona la Secretaría de Turismo de México (SECTUR) a las comunidades para desarrollar proyectos turísticos, preservar sus rasgos indígenas y conservar el ambiente. Hay comunidades que reúnen los atributos como pueblo mágico, sin embargo, por la falta de conocimiento no participan. En esta investigación con base a la convocatoria de la SECTUR y a los indicadores de sustentabilidad, se realizó un diagnóstico en la comunidad de “Huautla de Jiménez”, localizada en la región de la cañada oaxaqueña y conocida por el personaje María Sabina sacerdotisa de los hongos. Se analizaron los atributos necesarios para obtener la denominación de pueblo mágico (SECTUR, 2001). Los resultados mostraron indicadores que permiten definir que en la cotidianidad de la comunidad analizada, se conservan y resaltan sus rasgos indígenas, se preservan tradiciones ancestrales y cuentan con sitios históricos. Se documentaron lugares naturales para el desarrollo de turismo alternativo. Con los datos se diseñó una propuesta para que Huautla de Jiménez participe en la convocatoria para ser considerado pueblo mágico y se evaluaron los beneficios para la comunidad. Se concluye que la denominación de pueblo mágico es una alternativa para el desarrollo de proyectos de turismo sustentable.*

**PALABRAS CLAVE:** Turismo Alternativo. Sustentabilidad. Pueblos Mágicos

## THE MAGIC VILLAGE DENOMINATION OF IN SUSTAINABLE TOURISM DEVELOPMENT

### ABSTRACT

*The Secretary of Tourism of Mexico (SECTUR) provides to communities the Magical Town name. It is a distinction to develop Tourism Projects, Preserve their Indigenous Features and Take care of the Environment. There are communities who have magical attributes, however by the lack of knowledge do not participate. Based on the Convocatory of the SECTUR and Sustainability Indicators, we decided to make a diagnosis in the community "Huautla de Jimenez" located in one of the region of Oaxaca who is called "La Cañada". Huautla is very famous because there was born "Maria Sabina" a famous woman who worked as a priest of fungi. We analyzed the attributes needed to get the name of Town Magic (SECTUR, 2001). The results showed indicators who make possible define the everyday of the community like preserve and be proud of their indigenous features and in the same way take care of the ancient traditions and historic sites they have. Natural sites were documented for the development of alternative tourism. With the data we designed a proposal to "Huautla Jimenez" in order participate in the Convocatory to be considered and evaluated like a Magical Town, the benefits for the community were evaluated too. We conclude that the term Magic Town is an alternative for the Development of Sustainable Tourism Projects.*

**KEYWORDS:** Alternative Tourism. Sustainability. Magic Towns

## INTRODUCCIÓN

Pueblos Mágicos, es un programa desarrollado por la Secretaría de Turismo (SECTUR) de México en el 2001. El reconocimiento como pueblo mágico se otorga a quienes habitan comunidades mexicanas y les brinda protección para proteger y guardar su riqueza cultural. La comunidad o destino candidato para ser reconocido como pueblo mágico debe resaltar su pasado indígena, el gran legado del antiguo imperio colonial español, la preservación de tradiciones seculares y ancestrales, e importantes lugares de acontecimientos históricos en la vida de México. Dichos rasgos le permiten a la comunidad resaltar su valor turístico. Otros requisitos para poder pertenecer al programa, es que las localidades deben contar con una población de 20 mil habitantes, y deben ubicarse en una distancia no superior a los 200 kilómetros o el equivalente a dos horas de distancia vía terrestre, a partir de un destino turístico.

En esta investigación se realizó un diagnóstico para evaluar las oportunidades de la población de Huautla de Jiménez comunidad ubicada en la región de la cañada del estado de Oaxaca para ser considerada como pueblo mágico. Primero se revisaron los criterios contenidos en el documento de la secretaria de turismo “programa para pueblos mágicos” (reglas de operación para pueblos mágicos, SECTUR). En este documento se identificaron las categorías oferta turística, generación y promoción de artesanías, generación de productos turísticos, revaloración de los atractivos y el reconocimiento a la labor de los habitantes. De las categorías se construyeron los indicadores para observar la presencia de los mismos en la comunidad. Se construyó un instrumento para la observación y recolección de los datos Y se realizó un diagnostico con el que se evaluó la situación de la comunidad y sus atractivos y el nivel en el que se encontraba para alcanzar la denominación de pueblo mágico. Con los resultados del diagnóstico se evaluaron las posibilidades para desarrollar las categorías y los indicadores que le faltaban para cumplir con el perfil de pueblo mágico.

## REVISION DE LITERATURA

De acuerdo a la SECTUR (2012), un pueblo mágico es el reflejo de nuestro México, de lo que nos ha hecho, de lo que somos, y de debemos sentirnos orgullosos. Pueblo Mágico es su gente, un pueblo que a través del tiempo y ante la modernidad, ha sabido conservar, valorar y defender su herencia, histórica cultural, y la manifestación en diversas expresiones a través de su patrimonio tangible e intangible Un pueblo mágico es una localidad que tiene atributos simbólicos, leyendas, historias, hechos trascendentes, cotidianidad, en fin MAGIA que emana en cada una de sus manifestaciones socioculturales, y que significan hoy en día una gran oportunidad para el aprovechamiento turístico. Efectivamente los pueblos mágicos de México han estado ahí por mucho tiempo, esperando el reconocimiento de sus valores y riqueza histórica cultural. Su autenticidad, su medianidad, su encanto ancestral, sus colores y sus olores, sus pobladores, su singularidad en conjunta requieren hoy de su revaloración de elevarlos a un estado de distinción, como un icono del turismo de México. (tepotzotlanpueblomagico)

La sustentabilidad como lo explica Díaz Gómez (2004) en su documento “Comunidad y Comunalidad” lleva a una cosmovisión en un contexto que no estamos acostumbrados a utilizar pues regularmente llevamos como parámetros los que plantea la visión sostenible, aseverando que las comunidades más alejadas son “pobres” pues creemos que la riqueza se encuentra contenida en la cantidad de mercancías que los bolsillos de una persona puedan llegar a adquirir, sin darnos cuenta que hemos dejado de lado la riqueza cultural, la natural y espiritual es en donde verdaderamente se contiene. Según Floriberto Díaz Gómez “Todo pueblo que ha vivido durante varios siglos desarrolla una filosofía en torno a la vida y a la muerte; respecto a lo conocido y a lo desconocido; frente a sí mismo como un conjunto de seres humanos, y frente a los demás seres que pueblan y habitan la Tierra, como la Madre Común. No siempre es fácil que el mismo pueblo explique en qué consiste su filosofía o cuáles son sus elementos; sin embargo, sucede que otros son quienes pretenden hacerlo, pero en su intento muchas veces enuncian los elementos pero sin llegar a entenderlos a profundidad porque no son parte de su vida cotidiana

Se puede decir que la sustentabilidad, puede ser posible, en el turismo solo si se incluye a la comunidad en sus elementos: Económico, Ambiental, Social- Comunidad y respetando la identidad del pueblo.

## METODOLOGIA

En este trabajo se construyó un instrumento para evaluar los criterios que establece la SECTUR (2001), para determinar la denominación de pueblo mágico a comunidades. Con el instrumento se realizó un diagnóstico a la comunidad oaxaqueña de Huautla de Jiménez localizada en la región de la cañada. Con los resultados del diagnóstico se estructuró la tabla 1 en la que se presenta un comparativo de los indicadores que se deben considerar como atributos para que la población aspire a la denominación de pueblo mágico.

Tabla 1: Atributos necesarios para la denominación como pueblo mágico

VARIABLES	INDICADORES
Pasado indígena	Descienden de los nonoalcas – chichimecas provenientes de tula.
Legado antiguo	Hongos alucinógenos, lengua mazateca.
Preservación de tradiciones	Huehuentones, naxo loxa,
Preservación de tradiciones ancestrales	Limpías, hongos benditos, cantos ancestrales, leyendas.
Lugares de acontecimientos históricos	Cerro de la adoración, cascadas de la regadera, la curva del espinazo del diablo.

*En esta tabla se pueden observar las variables necesarias para poder cumplir con los atributos como pueblo mágico. También se presentan los indicadores para observar en la comunidad la presencia de los mismos. Fuente. Elaboración propia con base a SECTUR 2001.*

El diagnóstico se realizó en la comunidad de Huautla de Jiménez durante los meses de mayo a diciembre de 2012. Se trabajó con personas radicadas en la comunidad, quienes ayudaron a identificar y señalar los elementos más importantes de la región por su gran valor representativo y los cuales nos permitieron documentar el informe de esta investigación. Al estar en el lugar investigando, entrevistando y visitando los lugares nos dimos cuenta que es un lugar con muchos atractivos, empezando con los paisajes que rodean a la comunidad que se encuentra envuelta de majestuosos cerros, así como la gran diversidad de especies animales que en ellos se encuentran, los ríos, cascadas que son afluentes para la producción local en sus campos de trabajo rural, en cuanto a lo cultural- espiritual nos ofrece toda una gama de variedades comenzando los primeros días del mes de enero en el cual se le lleva una ofrenda a un ser mítico al que le denominan( *chijkon tojko xó*), las fiestas en el mes de marzo que es la fiesta del pueblo en honor al señor de las tres caídas, un festival en honor a María Sabina (La sacerdotisa de los hongos mágicos), el festival tradicional de día de muertos, y la fiesta al santo patrono que en San Juan Evangelista y que se lleva a cabo en el mes de diciembre.

En cuanto a las fiestas tradicionales ya sea boda, bautizo, y en este caso la muerte como es costumbre de los mazatecos, se da el tradicional atole agrio que es una bebida fermentada a base de masa acompañada de frijoles y una salsa llamada pipián. Y la gran variedad de comidas empezando por el pilte pasando por el tradicional mole y terminando con los tamales de tezmole. Como mencionan las normas de SECTUR (2001), la localidad candidata deberá contar con el menos con un atractivo turístico simbólico que la diferencie de otras localidades del estado, la región e inclusive dentro del país.

## RESULTADOS

Los resultados mostraron que la localidad de Huautla de Jiménez cumple con los atributos para obtener la denominación de pueblo mágico ya que: Cuenta con una iglesia antigua construida en el año de 1966 y que se dice que las campanas fueron fundidas en el año de 1866, la torre de reloj que aun funciona es una edificación construida en el año de 1924, así como la casa de la cultura que se construyó en el año de 1916 siendo primero un cuartel. En cuanto a sus fiestas tienen la fiesta de muertos, donde salen los llamados huehuentones, festival en honor a María Sabina, el tradicional baile de la flor de naranjo.

En cuanto a producción artesanal se pueden encontrar hongos de madera que se identifican con Huautla y María Sabina así como imágenes de la sacerdotisa entre otros. En cuanto a su comida tradicional podemos encontrar lo que son los tamales de tesmoles, empanadas de pajarito un hongo comestible de la región, pilte, tamales de frijol, hierbas comestibles como es el guaxmole, el quelite entre otras. Estos son los requisitos o características que reúne la población en materia turística que requiere sector para emitir la denominación y ser considerado un candidato a “pueblos mágicos” ya que cuenta con muchas características para adquirir este rango, como ya lo hemos mencionado.

Los beneficios que obtiene una población por ser denominada pueblo mágico, son muchos en el caso de Huautla de Jiménez por ejemplo: la conservación de la cultura indígena ya que el programa no lo contempla pero su principal objetivo es la conservación, entonces existiría recurso para conservar y en su caso rescatar la lengua materna el mazateco. Con respecto a infraestructura el programa contempla el financiamiento de obras para mejorar la imagen tradicional de la comunidad Con respecto a lo social en términos de comunalidad Floriberto Díaz, el ser distinguido como pueblo mágico proporcionaría los elementos para la conservación y divulgación de la cultura y de la historia de una de las principales comunidades mazatecas.

## CONCLUSIONES

Los beneficios de este proyecto serían totalmente hacia la comunidad y la sociedad de Huautla de Jiménez, porque se difundiría su importancia como lugar turístico y para la práctica de ecoturismo, turismo de aventura, cultural, rural y comunitario, de salud, espiritual. Así como también Contribuirá a la conservación, de la lengua nativa (porque solo en la población de Huautla el 35% de la población habla la lengua, y en las agencias cercanas a la población de Huautla de Jiménez aún se conserva un 75% de hablantes). Y algo que hay que resaltar es que en la población se practica el lenguaje del silbido.

A la conservación histórica de los rasgos de identidad como la vestimenta ya que la vestimenta se ha perdido de ser cotidiana a que solo se usa cuando son fiestas y en las agencias o localidades aledañas a la población de Huautla, las actividades productivas tradicionales como es la siembra de café, maíz, hiervas comestibles. la estructura de la vivienda como es típica de la región de la cañada por ser un lugar frío se utiliza el adobe ya que es un material térmico, así también se aprovecha el recurso de la piedra y se pueden ver casas de piedra ya que en la región hay mucha piedra, con techos de lámina. La denominación de pueblo mágico proporcionaría la atención del turismo para la región de la cañada y para el estado de Oaxaca, ya que integraría distintas formas de turismo lo que lo hace más atractivo y amplía su oferta en el mercado turístico, para así ofrecer distintas formas de turismo.

## LA SUSTENTABILIDAD DE LAS COMUNIDADES MEXICANAS EN EL ECOTURISMO

Rosa María Velázquez-Sánchez, Universidad Autónoma Benito Juárez. Oaxaca

Omar Raúl Solana Vásquez, Universidad Autónoma Benito Juárez. Oaxaca

Galán López Arcely, Universidad Autónoma Benito Juárez. Oaxaca

Gómez-Velázquez Jesús, Universidad Autónoma Benito Juárez Oaxaca

### RESUMEN

*Con los elementos de Martínez (2010) y las categorías en Robles y Cardoso (2009) de la sustentabilidad de las comunidades indígenas y debido a la falta de investigación de la relación desarrollo-sustentabilidad en el ecoturismo. En esta investigación se analizó medio natural y sustentabilidad en los servicios y actividades de ecoturismo en 80 comunidades indígenas de México. Se entrevistó a profundidad (fenomenología) a ochenta expositores durante el "1er. Encuentro Nacional de Ecoturismo Indígena 2012". La entrevista se estructuró con base a indicadores de las variables medio natural SECTUR (2012) y sustentabilidad (comunalidad) desarrolladas por Velázquez y Solana 2013. Los resultados mostraron que todos ofrecen medio natural pero adolecen de programas de conservación. La media mostró desarrollo económico como principal interés. La decima parte manifestó categorías de comunalidad: Cultura propia, Adecuación, Cultura y Tecnología propia. Se observó mayor frecuencia de regreso de visitantes a comunidades con comunalidad en comparación con las otras con más desarrollo. Las comunidades que incluyen el medio natural y la comunidad, son las que reportan más frecuencia y más retorno de visitantes. El ecoturismo con la comunalidad puede ser un factor para el regreso de ecoturistas y desarrollo para la comunidad.*

**PALABRAS CLAVE:** Ecoturismo. Desarrollo. Sustentabilidad

## THE SUSTAINABILITY OF MEXICAN COMMUNITIES IN ECOTOURISM

### ABSTRACT

*Based on the facts of Martinez (2010) and the categories in Robles and Cardoso (2009) about the sustainability of indigenous communities, and due to lack of research-development relationship in ecotourism sustainability; this research analyzed the natural environment and sustainability services and ecotourism activities in 80 indigenous communities in Mexico. Eighty exhibitors were in depth interviewed (phenomenology) during the "1st. National Meeting of Indigenous Ecotourism 2012". The interview was structured based on indicators of environment variables SECTUR (2012) and sustainability (commonality) developed by Velázquez and Solana 2013. The results showed that all of the exhibitors offered a natural environment but a lack of conservation programs. The average showed economic development as their main interest. The tenth showed the commonality category: Culture itself, Adaptation, Culture and Local Technology. A higher frequency of returning visitors has been shown in communities with commonality compared the more developed ones. Communities that include the natural environment and community, are the ones that reported more frequency and return of visitors. The commonality, in the ecotourism, can be a factor in the return of ecotourists and on the community development.*

**KEYWORDS:** Ecotourism. Development. Sustainability.

## INTRODUCCIÓN

El problema que en esta investigación se analiza, es el efecto del ecoturismo en la sustentabilidad de la comunidades indígenas de México. El ecoturismo como alternativa del turismo tradicional tiene como agregados la visita a medios naturales para su observación y convivencia con los habitantes. Sin embargo, la presencia de proyectos de ecoturismo en la comunidades no siempre promueve la integración de la comunidad y no contempla el efecto en la sustentabilidad de las mismas. El impacto en la forma de convivencia comunitaria ha originado el desarrollo del concepto de comunidad como una forma de entender las posibilidades de adecuación de los habitantes de las comunidades al desarrollo.

En este documentos se presenta organizada la información como sigue. En la sección de revisión de literatura se presenta una revisión de los conceptos y estudios sobre ecoturismo y sustentabilidad, en la que se incluye el análisis de indicadores. En el apartado de metodología se integran la descripción de la población y muestra, la definición de las variables, la estructura del cuestionario empleado y el análisis factorial. En los resultados podrá apreciar tablas para facilitar el resumen de los datos y la explicación de los mismos en comparación con el objetivo planteado. En conclusiones y limitaciones se comparan los resultados con la literatura revisada y se mencionan los alcances y posible continuidad de esta línea de investigación.

## REVISIÓN DE LITERATURA

La sustentabilidad es un concepto tratado desde diversas perspectivas y atrajo interés a partir de la publicación de nuestro futuro común o llamado Informe Brundland en 1972. En el que apareció el termino desarrollo sustentable como propuesta para la adecuación del modelo económico a acciones de cuidado del ambiente. A partir del mismo se aprecian posiciones discursivas desde alguno de los tres elementos: Económico, Ambiental, Social. Sin embargo, la propuesta emanada de lo social contempla los elementos culturales como necesarios para aproximarse al desarrollo sustentable.

De acuerdo a Díaz (2004), los aspectos culturales son observados desde la perspectiva de la comunidad. En la comunidad se practica la sustentabilidad sin tener que entender conceptos escritos. La sustentabilidad comunitaria muestra la visión integradora del hombre con la naturaleza. Situación que se ha demostrado desde la oralidad en siglos de armonía y respecto con el ambiente y la cultura. Como menciona Martínez Luna (2003) la resistencia de la comunidades estriba en su cosmovisión de pertenencia con el todo y por evitar la visión fragmentada de la naturaleza.

La sustentabilidad desde la comunidad es un continuum presente en la cotidianidad, el cual puede verse trastocado con la presencia de cambios originados por el desarrollo, sin embargo, las experiencias exitosas de ecoturismo en México (SECTUR, 2006), permiten contar con elementos para analizar la posibilidad de armonía entre el desarrollo y los elementos comunitarios. En los textos de (Martínez Luna, 2010) y (Robles Hernández & Cardoso Jiménez, 2009), se encuentran las características que definen la sustentabilidad de las comunidades y en Velázquez-Sánchez y Solana (2013) los indicadores y operacionalización de los mismos. El ecoturismo de acuerdo a la Secretaria de Medio Ambiente y Recursos Naturales (SEMARNAT, 2010), es la alternativa de turismo que se caracteriza por el desarrollo de actividades de recreación en entorno naturales con la vigilancia necesaria para la protección del ambiente y el respecto a las expresiones culturales de los habitantes de la comunidades anfitrionas. Para la Secretaria de Turismo de México (SECTUR2009), el ecoturismo es definido como una alternativa del turismo tradicional con el agregado de ofrecer al visitante la apreciación del medio natural y la convivencia con la comunidad para observar la cultura de la mismas. La SECTUR define los elementos de medio natural que deben contemplar los destinos de ecoturismo. De acuerdo al informe del Instituto Tecnológico Autónomo de México (ITAM, 2009),

existe una diferencia entre ecoturismo y turismo de aventura, situación que debe revisarse al momento de ofrecer destinos de ecoturismo. En el estudio mencionan la importancia del tipo de visitantes para los que se diseñen los destinos ecoturísticos para evitar falsas expectativas con respecto a los servicios y evitar confundir el servicio de turismo de aventura.

Desde una perspectiva económica, para Daltabuit-Godás y Valenzuela-Valdivieso (2010), el ecoturismo es “una opción planteada para alcanzar el desarrollo sustentable con la participación directa de la comunidad rural organizada”, para *aprovechar* racional y adecuadamente el patrimonio natural y cultural. Desde la perspectiva de la comunidad, para Martínez Luna (2003), desarrollo y comunidad se aprecian como dos conceptos con la imposibilidad de coincidencia, sin embargo, manifiesta la estrategia de adecuación de la comunidades para permanecer con los cambios que origina el desarrollo. Para estudiar el ecoturismo y la sustentabilidad es importante considerar lo que menciona Coca-Pérez (2007), “El análisis de lo comunitario se debe efectuar tomando en cuenta su determinación histórica, su evolución en el contexto territorial concreto y su situación actual” para poder comprender su cosmovisión.

## METODOLOGÍA

En esta investigación se analizó medio natural y sustentabilidad en los servicios y actividades de ecoturismo en 80 comunidades indígenas de México. Se entrevistó a profundidad (fenomenología) a ochenta expositores durante el “1er. Encuentro Nacional de Ecoturismo Indígena 2012”. La entrevista se estructuró con base a indicadores de las variables medio natural SECTUR (2012) y sustentabilidad (comunalidad) desarrolladas por Velázquez y Solana (2013)

### Definición operacional de las variables

- *Sustentabilidad (categorías de comunalidad)*: Esta variable se definió con base a las categorías contempladas por Martínez Luna (2003) y desarrolladas en indicadores por Velázquez-Sánchez y Solana (2013).
- *Medio Natural*: Se definió por las acciones de conservación, prevención, cuidado y reglamentación manifestados en los destinos de ecoturismo.

Tabla 1: Operacionalización de las Variables Sustentabilidad y Servicios Microfinancieros

VARIABLE	CATEGORIAS	INDICADORES
Sustentabilidad	Cultura propia	Tecnología. Conocimiento. Producción y Normatividad Social.
	Adecuación	Originalidad Valores Armonía Medicina
	Cultura	Comida Creatividad Cosmovisión
	Tecnología propia	Materiales Herramientas Relación hombre-tierra
Medio Natural	Conservación	Limpieza Programa de reforestación Empleo de insumos naturales Manejo de basura
	Prevención	Programa de prevención Campañas Educación
	Cuidado	Señalamientos Brigadas Vigilancia
	Reglamentación	Reglamentos Folletos Trípticos informativos

En esta tabla se presenta la operacionalización de las dos variables incluidas en el análisis. Por una parte la sustentabilidad considerando cuatro de las categorías que mencionan (Martínez Luna, 2010) y (Robles Hernández & Cardoso Jiménez, 2009) y con los indicadores diseñados por la autora de este trabajo. La variable medio natural se incluyen las categorías que considera la Secretaría de Turismo para proyectos de ecoturismo. Fuente Elaboración propia

### Diseño de la Entrevista

Para la colecta de la información se diseñó una entrevista estructurada. Las preguntas incluidas en la entrevista se formularon con base en los indicadores desarrollados para las variables *sustentabilidad* y *medio natural*. La entrevista se realizó a promotores de destinos de ecoturismo. Los participantes fueron 86 expositores de trece estados de la república mexicana: Campeche, Colima, Chiapas, Durango, Estado de México, Hidalgo, Michoacán, Morelos, Nayarit, Oaxaca, Querétaro, Quintana Roo y Veracruz.

Tabla 2: Diseño de Muestra de Prestadores de Servicios de Ecoturismo en México

ESTADO	DESTINOS DE ECOTURISMO	PORCENTAJE
Campeche	7	8,75%
Colima	5	6,25%
Chiapas	9	11,25%
Durango	1	1,25%
Estado de México	10	12,25%
Hidalgo	6	7,50%
Michoacán	3	3,76%
Morelos	5	6,76%
Nayarit	8	10,00%
Oaxaca	4	5,00%
Querétaro	7	8,75%
Quintana Roo	3	3,75%
Veracruz	12	15,00%
<b>Total</b>	<b>80</b>	<b>100.00%</b>

En esta tabla 2: Se puede apreciar la distribución de los prestadores de servicios de ecoturismo incluidos en la encuesta para analizar el efecto del ecoturismo en la sustentabilidad de las comunidades indígenas localizadas los estados que cuentan con el apoyo para el desarrollo de ecoturismo indígena por parte de la Comisión para el Desarrollo de los Pueblos Indígenas en México. Se anota el porcentaje que representaron en el total de la población incluida en este estudio y que permite observar la distribución en el territorio nacional. Fuente elaboración propia.

### Análisis de los Datos

Con los datos de las entrevistas, se procedió a integrar una base de datos, primero se codificaron los datos con relación a los indicadores y se capturaron en hoja de cálculo. Se empleó la herramienta de filtros para obtener información referente a los servicios que ofrecen los destinos de ecoturismo encuestados. Como se planteó en esta investigación, se analizaron *indicadores de sustentabilidad (comunalidad)*, y de medio natural contenidos en los destinos de ecoturismo localizados en trece estados de la república mexicana. Se realizó el análisis factorial a los datos obtenidos.

## RESULTADOS

El análisis factorial mostró los datos contenidos en la tabla 3:, para la *variable sustentabilidad* los factores/categorías: *Cultura Propia* con cuatro elementos (tecnología, conocimiento, producción y normatividad); *Adecuación* con dos elementos (originalidad y valores); *Cultura* con cuatro elementos (medicina, comida, creatividad y cosmovisión) y *Tecnología Propia* con tres elementos (materiales, herramientas y relación hombre-tierra). Para la variable *medio natural* los resultados mostraron la agrupación en los factores *conservación* con tres elementos (limpieza, programa de reforestación y manejo de basura) y *cuidado con dos elementos (señalamientos y vigilancia)*.

Tabla 3: Factores de Sustentabilidad y Medio Natural Manifiestos en los Servicios de Ecoturismo En México

Variable	Categorías	Indicadores
Sustentabilidad	Cultura propia	Tecnología. Conocimiento. Producción Normatividad Social.
	Adecuación	Originalidad Valores Medicina
	Cultura	Comida Creatividad Cosmovisión Materiales
	Tecnología propia	Herramientas Relación hombre-tierra
<hr/>		
Medio Natural	• Conservación	Limpieza Programa de reforestación Manejo de basura
	• Cuidado	Señalamientos Vigilancia

En la tabla 3:, se pueden observar las variables Sustentabilidad y Medio Natural con los factores resultado del análisis factorial practicado a los resultados de las ochenta entrevistas realizadas a expositores de destinos ecoturísticos localizados en trece estados. El análisis factorial resultó en cuatro factores para la variable sustentabilidad y dos para la variable medio natural. Los indicadores de cada una de las variables se puede apreciar con detalle en esta tabla. Fuente. Elaboración propia.

El análisis de los datos permite observar la presencia de elementos de sustentabilidad comunitaria de medio natural en los destinos de ecoturismo evaluados. De acuerdo a las perspectivas de SEMARNAT (2009) y SECTUR (2001) para medio natural y Martínez Luna (2003) para sustentabilidad comunitaria. En la tabla 4: se presentan los resultados del análisis por estado y los elementos de sustentabilidad y medio natural que incluyen.

Tabla 4: Indicadores de Sustentabilidad Observados en la Prestación de los Servicios Microfinancieros

ESTADO	SUSTENTABILIDAD	MEDIO NATURAL
	CATEGORIA/ELEMENTOS	CATEGORIA/ELEMENTO
Campeche	Cultura propia (conocimiento) Adecuación (originalidad, valores) Cultura (medicina, comida, cosmovisión) Tecnología propia (materiales, relación hombre-tierra)	Conservación (limpieza, manejo de basura) Cuidado (señalamientos, vigilancia)
Colima	Cultura (comida) Tecnología propia (materiales)	Conservación (limpieza y manejo de basura) Cuidado (señalamientos y vigilancia)
Chiapas	Cultura propia (conocimiento, normatividad social) Adecuación (originalidad, armonía)	Conservación (reforestación, manejo de basura) Cuidado (vigilancia)
Durango	Tecnología propia (materiales, herramientas)	Conservación (limpieza, reforestación) Cuidado (señalamiento, vigilancia)
Estado de México	Cultura propia (conocimiento, producción) Adecuación (armonía) Cultura (comidad, creatividad) Tecnología propia (materiales)	Conservación (limpieza, reforestación) Cuidado (señalamiento, vigilancia) Conservación (limpieza, reforestación) Cuidado (señalamiento, vigilancia)
Hidalgo	Cultura propia (conocimiento, producción) Adecuación (valores, armonía) Cultura (comida, creatividad) Tecnología propia (materiales, herramientas)	Conservación (limpieza, manejo de basura) Cuidado (señalamiento, vigilancia)
Michoacán	Cultura propia (tecnología, conocimiento, producción, normatividad social) Adecuación (originalidad, valores, armonía) Cultura (medicina, comida, creatividad, cosmovisión) Tecnología propia (materiales, herramientas, relación hombre-tierra)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)
Morelos	Tecnología propia (materiales, herramientas)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)
Nayarit	Cultura propia (tecnología, conocimiento, producción, normatividad social) Adecuación (originalidad, valores, armonía) Cultura (medicina, comida, creatividad, cosmovisión) Tecnología propia (materiales, herramientas, relación hombre-tierra)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)

ESTADO	SUSTENTABILIDAD	MEDIO NATURAL
	CATEGORIA/ELEMENTOS	CATEGORIA/ELEMENTO
Oaxaca	Cultura propia (tecnología, conocimiento, producción, normatividad social) Adecuación (originalidad, valores, armonía) Cultura (medicina, comida, creatividad, cosmovisión) Tecnología propia (materiales, herramientas, relación hombre-tierra)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)
Querétaro	Tecnología propia (materiales, herramientas, relación)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)
Quintana Roo	Cultura propia (tecnología, conocimiento) Adecuación (armonía) Cultura (medicina, comida, creatividad, cosmovisión) Tecnología propia (materiales, herramientas, relación hombre-tierra)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)
Veracruz	Cultura propia (tecnología, conocimiento) Adecuación (valores, armonía) Cultura (medicina, comida, creatividad, cosmovisión) Tecnología propia (materiales, herramientas, relación hombre-tierra)	Conservación (limpieza, reforestación, manejo de basura) Cuidado (señalamiento, vigilancia)

En la tabla 4:, se pueden observar los resultados del análisis realizado a los servicios que prestan los promotores de sitio de ecoturismo en trece estados de la república mexicana. Como se observa todos los estados manifiestan integrar a sus servicios los aspectos de comunalidad y los elementos del medio natural. La frecuencia de los indicadores se observa más en estados diferenciados con vocación turística y con población indígena importante. Los estados con más presencia de indicadores de comunalidad son Oaxaca, Michoacán, Chiapas y Campeche. Los resultados permiten establecer que los sitios ecoturísticos en comunidades indígenas si incluyen a la comunalidad. Fuente. Elaboración propia.

## CONCLUSIONES

Los resultados permiten observar que a diferencia de los servicios turísticos tradicionales, el ecoturismo en comunidades indígenas ha logrado integrar los aspectos de comunalidad a los servicios que ofrecen. Los sitios de ecoturismo evaluados en esta investigación permiten concluir que el ecoturismo indígena es

una forma de adecuar a la comunidades al desarrollo y probar la estrategia de resistencia llamada adecuación. A diferencia de los resultados observados en el estudio del turismo, los sitios con ecoturismo orientan sus servicios a turistas interesados en contemplar en medio natural y convivir con los habitantes de la comunidad lo que permite probar que cumplen con los aspectos considerado por la Secretaria de Turismo (SECTUR, 2001) y SEMARNAT (2009).

Con respecto a la sustentabilidad comunitaria en este estudio se probaron las categorías mencionadas por Floriberto Díaz (Robles Hernández & Cardoso Jiménez, 2009) y Jaime Martínez Luna (Martínez Luna, 2010) como elementos de sustentabilidad pueden ser la forma de comprender como se pueden adecuar el desarrollo y la comunalidad a través de la implementación de sitios de ecoturismo que garanticen la inclusión de los elementos de la comunidad y el medio natural. Los resultados vertidos en este documento contribuyen al estudio del ecoturismo de una forma empírica aporta datos y prueba indicadores para desarrollar índices de evaluación del sector y para la planificación de sitios de ecoturismo.

### Limitaciones

Las limitaciones de los resultados obtenidos en esta investigación, se deben a las características de la muestra, pues solo incluye a quienes acudieron al evento. Falta revisar los proyectos que no asistieron y los tipos alternativos de ecoturismo, es decir el que no se encuentra en comunidades indígenas. También se pueden revisar en su lugar de origen.

# LA PERSPECTIVA DEL ALUMNO EGRESADO DE LA UES, SOBRE EL MODELO EDUCATIVO ENFACE

Rossana Palomino Cano, Universidad Estatal de Sonora

Erika Olivas Valdez, Universidad Estatal de Sonora

José Ezequiel Robles Encinas, Universidad Estatal de Sonora

Francisco Javier Pestaño Uruchurtu, Universidad Estatal de Sonora

## RESUMEN

*En el terreno de la educación, como en todas las actividades humanas, la evaluación es el proceso que permite valorar los aciertos, reconocer las fallas y detectar potencialidades. Contar con información válida y confiable para garantizar la toma de decisiones acertadas. Por ello, el presente trabajo de investigación desarrolla el análisis del Modelo Educativo ENFACE de la Universidad Estatal de Sonora (UES), a partir de la percepción y evaluación de los alumnos egresados respecto a las condiciones en que se implementa dicho Modelo dentro del Marco Institucional. Para tal fin se aplicaron cuestionarios que permitan conocer su perspectiva; Aunado a ello y con el propósito de analizar si los estudiantes han alcanzado las competencias que plantea su perfil de egreso se tomó como referente los resultados obtenidos del Examen General de Egresados de Licenciatura (EGEL) en la Carrera de Comercio Internacional de la Unidad Académica Hermosillo, para complementar el estudio. Todo esto permitió generar conclusiones propias respecto a los resultados en la implementación del mencionado Modelo.*

**PALABRAS CLAVES:** Modelos educativos, evaluación, educación superior.

## GRADUATE PERSPECTIVE OF UES, ON EDUCATIONAL MODEL ENFACE

### ABSTRACT

*On the subject of education, as in all human activities, evaluation is the process of valuing the strengths, recognize and detect potential failures. Therefore, the present research develops educational model analysis Enface Sonora State University (UES), from the perception and evaluation of alumni regarding the conditions under which the model is implemented within the institutional framework. To this end, questionnaires that reveal their perspective; Added to this, and in order to analyze whether students have attained the skills involved in their graduate profile was taken as reference the results of the General Examination Alumni Degree (EGEL) Race International Trade Academic Unit Hermosillo, to complete the study. All this allowed generating their conclusions about the results in the implementation of that model.*

**JEL:** I24

**KEY WORDS:** Educational models, evaluation, higher education.

## INTRODUCCIÓN

Para el estudio de este caso, se realizó una investigación documental sobre los resultados del examen de CENEVAL. La segunda parte de esta investigación, es de campo y de tipo cuantitativa, ya que se presentan los resultados de un trabajo estadístico realizado sobre la evaluación del logro de las

competencias, obtenidos a partir del análisis de las encuestas diseñadas para este propósito. Para lo anterior, se presentan primeramente una serie de antecedentes de orden económico, social y cultural que a nivel nacional y regional respectivamente, hacen prioritarios los cambios estructurales en la educación, para después pasar a desarrollar históricamente como se ha venido trabajando en las actividades derivadas de la elaboración e implementación del Modelo Educativo.

Consecuentemente se exponen los criterios bajo los cuales se rige el Modelo “ENFACE” y las estrategias de investigación aplicadas para la obtención de información valiosa, que ayudó a la elaboración del documento y los criterios de aplicación del mismo. Así como el desarrollo metodológico y los resultados del instrumento estadístico para pronosticar el grado de deserción en esta Universidad. Para finalizar con una serie de conclusiones sobre la eficacia del modelo educativo.

## ANTECEDENTES Y REVISIÓN LITERARIA

Todos los rubros para alcanzar las metas educativas son importantes por igual, además de que unos y otros se vinculan para conseguir un fin, o el logro que establecen las competencias. No obstante, en este espacio nos referiremos específicamente a las competencias porque este término puede aún prestarse a confusión, al haber sido acuñado por la educación hace relativamente poco. La educación basada en competencias es una nueva orientación educativa que pretende dar respuestas a la sociedad de la información. El concepto de competencia, tal y como se entiende en la educación, resulta de las nuevas teorías de cognición y básicamente significa saberes de ejecución. Puesto que todo proceso de “conocer” se traduce en un “saber”, entonces es posible decir que son recíprocos competencia y saber: saber pensar, saber desempeñar, saber interpretar, saber actuar en diferentes escenarios, desde sí y para los demás (dentro de un contexto determinado).

Chomsky (1985), a partir de las teorías del lenguaje, instaura el concepto y define competencias como la capacidad y disposición para el desempeño y para la interpretación. La educación basada en competencias (Holland, 1966-97) se centra en las necesidades, estilos de aprendizaje y potencialidades individuales para que el alumno llegue a manejar con maestría las destrezas señaladas por la industria. Formula actividades cognoscitivas dentro de ciertos marcos que respondan a determinados indicadores establecidos y asienta que deben quedar abiertas al futuro y a lo inesperado.

De esta manera es posible decir, que una competencia en la educación, es una convergencia de los comportamientos sociales, afectivos y las habilidades cognoscitivas, psicológicas, sensoriales y motoras que permiten llevar a cabo adecuadamente un papel, un desempeño, una actividad o una tarea. Con lo anterior es posible afirmar que las competencias en la educación pueden definirse como la convergencia entre los conocimientos de la disciplina, las habilidades genéricas y la comunicación de ideas. Las habilidades genéricas especifican lo que se debe hacer para construir una competencia u obtener un resultado o un desempeño: trabajo de equipo, planteamiento de problemas, encontrar y evaluar la información, expresión verbal y escrita, uso de las nuevas tecnologías y resolución de problemas.

En la educación basada en competencias, éstas dirigen el sentido del aprendizaje, quien aprende lo hace desde la intencionalidad de producir o desempeñar algo, involucrándose con las interacciones de la sociedad. Las competencias son parte y producto final del proceso educativo. “Competencia” es su construcción durante el proceso educativo, como también lo es su desempeño, es decir, el resultado práctico del conocer. La Universidad Estatal de Sonora es una Universidad de vanguardia, que se distingue por la permanente innovación de sus procesos educativos y de gestión, siendo reconocida porque la calidad de sus productos y servicios académicos responden a los requerimientos del desarrollo regional y del mercado internacional. Mientras que el plan de estudios de la carrera Comercio Internacional tiene como objetivo general es formar profesionistas éticos, capaces de aplicar sus conocimientos en cualquier actividad relacionada con el comercio internacional, que formulen y analicen

proyectos viables y óptimos de exportación, así como realizar prácticas logísticas de manera eficiente y efectiva. El modelo educativo de la UES, resulta de la representación de un conjunto de elementos interrelacionados entre sí de manera sistémica para producir resultados de carácter educativo y que incluyen el ideario, los valores y propósitos institucionales que definen el individuo que se pretende formar y a partir del cual se diseñan estrategias curriculares, didácticas y de infraestructura sustentadas en la organización y normatividad académico administrativa de la institución.

Siendo los criterios orientadores del modelo, los siguientes: Pertinencia, Calidad, Integralidad, Visión prospectiva, Equidad, Impacto, Universalidad, Internacionalización y Eficiencia. Por lo que las características del modelo educativo, se organizan en torno a tres ejes fundamentales y estrechamente articulados: El enfoque centrado en el estudiante y el aprendizaje; El enfoque educativo basado en competencias profesionales; La flexibilidad curricular y académico- administrativa.

Por otro lado, el EGEL-Comercio/Negocios Internacionales evalúa los conocimientos y habilidades en las áreas y sub áreas de la formación del licenciado en Comercio/Negocios Internacionales, acordadas por el Consejo Técnico como centrales para medir la formación profesional en este campo. Las calificaciones que emite el Ceneval están expresadas en una escala especial llamada Índice Ceneval (CNE) que abarca de los 700 puntos (Calificación más baja) a los 1300 puntos (calificación más alta). A partir del informe de resultados 95/96 la Asamblea de Asociados del como escala oficial para reportar los resultados En este sentido, el análisis del modelo giro en torno a los resultados de los egresados del programa educativo de Comercio Internacional y las expectativas de estos sobre el modelo a través de la encuesta aplicada a una muestra representativa.

## **METODOLOGÍA**

Para realizar la investigación de este trabajo se efectuó mediante el método de tipo no experimental-transversal-descriptivo, no experimental, esto es debido a que no existe manipulación intencional de las variables, ya que únicamente fue observación de la evidencia, para examinarla más adelante a profundidad, transaccional o transversal, ya que se realizó en un solo momento, es decir, la encuesta se aplicó en una sola ocasión. La técnica que se utilizó en la parte cualitativa del estudio es la encuesta, ya que es un instrumento estructurado que se aplicó a alumnos egresados y maestros de la licenciatura de Comercio Internacional, con el fin de obtener datos que posteriormente fueron procesados en el programa computacional SPSS, programa estadístico para ciencias sociales, en el cual se maneja la estadística descriptiva y con este se pueden realizar correlación de variables.

Considerando que el estudio de caso de los alumnos egresados de la Universidad Estatal de Sonora es un fenómeno social se utilizó la fórmula estadística, para el cálculo de la muestra. Siendo la población de 74 alumnos egresados, se obtuvo una muestra de 19 alumnos a encuestar. El instrumento que se manejó para obtener la información es mediante la aplicación de una encuesta, la cual fue diseñada para conocer más de cerca la percepción que tienen los alumnos egresados sobre el modelo ENFACE. Una vez que se recolectaron los datos pertinentes sobre las variables involucradas en la investigación el siguiente paso fue codificar, analizar e interpretar estas mediciones, para finalmente vincular conceptos abstractos con indicadores empíricos. Para ello se recurrió al Software de Estadística SPSS Versión 12.0 con el objetivo de clasificar y cuantificar los datos que suministraron datos relevantes relacionados con las variables en el estudio, lo que robusteció el análisis de la información procesada y permitió establecer relaciones causales entre los sujetos observados.

## **RESULTADOS**

Las variables más significativas en esta investigación respecto a la percepción del Alumno acerca del Modelo Educativo ENFACE son: Competencias del Perfil Profesional, Selección de Docentes,

Condiciones de las Aulas, Equipo de Cómputo y Acceso a Internet, se determinó así ya que son las que más influyen en el proceso formativo del alumno en el aula y su contexto institucional. A continuación se explican cada una de ellas. En la variable “Competencias del Perfil Profesional” el 21.1% considera que son Regulares, el 36.8% que son Suficientes y el 42.1 Muy Buenas. Respecto a la “Selección de Docentes” el 47.4% lo calificó de Regular, seguido de un 26.3% que la considera Suficiente, un 15.8% Muy bueno y en un empate el 5.3% lo considera Excelente y el otro 5.3% No Suficiente.

También, se cuestionó respecto a criterios, donde los alumnos de este programa educativo han sido beneficiados a través de becas totales y parciales, para realizar estancias a nivel nacional e internacional en universidad con programas educativos similares dentro de la modalidad de movilidad estudiantil. Al respecto los resultados fueron los esperados en cuanto a que tienen percepciones favorables. Los alumnos opinan que las condiciones de las aulas son Regulares en un 47.4%, Suficientes en un 36.8% y el resto con un 15.8% las calificaron de No suficiente, podemos observar que el 63.2 de los encuestados no consideran Suficiente las condiciones de las aulas, mientras que el 36.8 si lo hace.

En la variable “Equipo de Cómputo” la mayoría de los encuestados, con un 36.8% consideró como Regular las condiciones de esta herramienta en su Institución, el 31.6 la calificó de No Suficiente, el 21.1% como Suficiente y solo el 10.5 como Muy Bueno. Es decir que un 52.7% cree no tener Equipo de Cómputo en óptimas condiciones a su disposición. Para finalizar la variable de “Acceso a Internet” fue evaluada por los encuestados de la siguiente manera: el 36.8% lo considera No Suficiente, el 31.6% Regular, el 10.5% Suficiente, el 15.8% Muy Bueno y solo el 5.3% Excelente, lo que permite observar que un 68.4% no cree suficiente el Acceso a Internet en su Institución.

## CONCLUSIONES

Por lo general, los empresarios o contratistas emplean a los egresados basándose en una evaluación informal de sus conocimientos, habilidades y valores. Suelen visitar las universidades para entrevistar a los alumnos que están por graduarse, asumiendo que éstos poseen un alto nivel de comprensión en su campo de conocimiento, que son competentes en las habilidades que se relacionan con éste y que son confiables. Es por ello, las instituciones a nivel superior basen su educación en competencias, ya que de esta manera al alumno se le prepara para ser capaz, en forma eficaz y eficiente, de aplicar los conocimientos adquiridos en la universidad de manera práctica en la construcción o el desempeño de algo que se relaciona o es parte del mundo del trabajo.

Es fundamental que las instituciones decididas a trabajar con competencias, elaboren evaluaciones que permitan al egresado tomar conciencia de sus logros en los aspectos mencionados y además se documenten en el mundo laboral sobre las competencias que el alumno debe construir y que éstas se acrediten en el trabajo, con objeto de que el egresado pueda incorporarse sin tropiezos y en el nivel que le corresponde en el mundo laboral, que apenas se le abre.

Es necesario que los alumnos de la UES se formen con altos niveles de desempeño en los grandes rasgos que integran su perfil profesional de egreso debido a que estas habilidades proveen una plataforma para desempeñarse con altos niveles de eficiencia en el campo laboral de su disciplina, asimismo es importante que las instituciones a nivel superior diseñen instrumentos que puedan evaluar y validar internamente tanto las habilidades que correspondan a la educación como al mundo laboral. Para lograrlo, la Institución debe adquirir el compromiso de mejorar las condiciones de estudio del alumno, el acceso a internet, equipo de cómputo, las aulas y general crear el entorno para garantizar una mejor implementación del Modelo Educativo ENFACE y con ello el desarrollo de las competencias laborales que plantea el perfil de la carrera de Comercio Internacional.

La trascendencia de esto, se basa en que los estudiantes competentes ahora serán profesionistas mañana, por ello deben formarse atendiendo el contexto global, lo cual implica entender la evaluación como un proceso de mejora continua y herramienta de ajuste. En este sentido, la evaluación externa ofrece un referente para conocer el logro de las competencias laborales de los alumnos a través de criterios estandarizados a Nivel Nacional, no obstante, se vuelve necesario que la UES diseñe, valide e implemente un sistema de evaluación interna que atienda su propia realidad Institucional, donde se contemplen criterios e indicadores congruentes con su Plan de Estudios y la Modalidad Educativa que viven dentro de las aulas. Esto permitirá apoyar los procesos de planeación y evaluación curricular y emprender acciones para mejorar la formación académica de sus egresados, adecuando planes y programas de estudio así como generar nuevas opciones de titulación para el alumno. Es importante mencionar que no sólo debe de retroalimentarse al alumno acerca de su desempeño, sino al docente, para que este detecte sus áreas de mejora y emplee acciones que beneficie la manera en que concreta el Modelo Educativo ENFACE en el aula.

Conocer desde una perspectiva interna a través de un instrumento confiable y válido el impacto que tiene el Modelo Educativo ENFACE en la calidad del egresado permite contar con elementos de juicio de valor orientadores para que la toma de decisiones en las diferentes variables que intervienen en los procesos formativos aporten y enriquezcan el Modelo Educativo y el nivel de las competencias laborales del alumno.

## COMPETITIVIDAD EN SISTEMAS DE PRODUCCIÓN LOCAL: EL CASO DE LA TALAVERA POBLANA.

Maria del Carmen Domínguez Ríos, Benemérita Universidad Autónoma de Puebla

Maricela Resendiz Ortega, Benemérita Universidad Autónoma de Puebla

### RESUMEN

*Se trata de un estudio de una industria tradicional que identifica las competencias de veintisiete empresas productoras de Talavera en la ciudad de Puebla- México. Se aplicó una encuesta a los directores de las empresas con el objetivo de caracterizar el perfil general de las empresas, el nivel de estudios de dirigentes de la empresa, las razones o motivaciones que los han llevado a iniciar o continuar la actividad empresarial, la modalidad de realización de la actividad, tipo de empresa y dimensiones de la misma, características de la cultura técnica y administrativa del dirigente empresarial, principales fuentes de los conocimientos técnicos y organizacionales. Se identificó la existencia de competencias específicas, competencias distintivas de las empresas, relacionadas con el conocimiento tácito, al interior de la organización: factores administrativos, de producción, de mercado, económico financieros, y de diseño. El desarrollo local implica un complejo proceso de concertación entre los diferentes actores de un territorio determinado para impulsar un proyecto común a partir del diseño de estrategias. En el caso de la Talavera de Puebla, dado que se cuenta con un acervo histórico, cultural y tradicional es posible diseñar estrategias que permitan su crecimiento y la especialización de las funciones permitiría desarrollar el talento con mayor profundidad*

**PALABRAS CLAVE:** Competitividad, sistemas locales de producción, cerámica

## COMPETITIVENESS LOCAL PRODUCTION SYSTEMS: THE CASE OF TALAVERA IN PUEBLA

### ABSTRACT

*This research identifies the competitive advantages of twenty seven talavera firms in Puebla Mexico. It applies quantitative and qualitative methods. A survey was made to the directors of these firms. The objective was to know about the general profile of the firm. This profile includes: industrial history, directors' education, reasons to continue in the business. Also their vision about the productive sector, organizational culture, main sources of technical knowledge. The existence of specific competences was identified. Furthermore the distinctive competences such as internal knowledge, management factors, production, marketing, financial factors and design are analyzed. Local development implies a complex process where different people in a community create a project and design strategies to increase the quality of life. In the case of Talavera industry in Puebla, there is a tradition and culture and it is possible to design strategies that allow its growth. One of them is specialization of functions, necessary to increase and improve the talent of workers.*

**JEL:** L14, L61

**KEY WORDS:** Competitiveness, local production systems, ceramics.

Al estudiar el caso de la cerámica en México se plantea la posibilidad de desarrollar industrias competitivas en el ámbito global a partir del aprovechamiento del patrimonio cultural que México posee en términos de conocimientos artesanales en diversos ámbitos locales. Este patrimonio cultural es de una gran riqueza y variedad, y posee una fuerte personalidad propia que es identificable en el ámbito global.

El ocaso del modelo sustitutivo de importaciones y la incorporación de México al Tratado de Libre Comercio de Norteamérica han dado lugar a un conjunto de transformaciones en la economía nacional y en las economías locales y regionales, observándose una tendencia hacia la concentración de la producción en grandes unidades económicas con amplios poderes oligopólicos y a una grave crisis de la pequeña y mediana empresa. Frente a este hecho, resulta importante, explorar la viabilidad de formas alternativas de desarrollo económico y empresarial aprovechando la existencia de capital intelectual y tradiciones artesanales locales. En México, las políticas industriales se han basado en el aprovechamiento de ventajas estáticas, como la mano de obra barata y la disponibilidad de recursos y estas han constituido, las estrategias de desarrollo industrial y crecimiento económico. Generalmente, los sistemas productivos locales (SPL) son comunidades que comparten, no solamente un territorio, sino una historia, una cultura, tradiciones y un conjunto de valores y normas de convivencia. Es en este ambiente social, político y cultural que se generan, un conjunto de competencias que comparten las empresas al interior. El gremio de la Talavera poblana, constituye un ejemplo de una artesanía tradicional mexicana a partir de la cual podría desarrollarse un cluster de pequeñas y medianas empresas modernas. Se trata de una industria tradicional con profundos antecedentes históricos y con un fuerte componente social y cultural.

### Consideraciones Teóricas

El capital intelectual, en el ámbito local, consiste en un conjunto de competencias, tanto individuales como compartidas, principalmente de carácter cognitivo. El origen de estas competencias se encuentra tanto al interior de las empresas, como al interior del SPL y están al alcance de las empresas que pertenecen al sistema local. Esta investigación busca en primer lugar, determinar la pertenencia a un SPL. Se estableció la participación de las empresas en el ámbito local a partir de la existencia de competencias compartidas al interior del conglomerado local. Estas competencias compartidas están constituidas por conocimiento tácito, capacidad de coordinación y empleo de capacidades individuales, y un componente de intención. La pertenencia al SPL implica, en primer lugar, que la persona sienta que pertenece, que acepte pertenecer y muestre aceptación por los principios, valores, elementos culturales que constituyen el ámbito de interpretación (Lester and Piore, 2004) y de interconexión de los participantes. La perspectiva basada en el conocimiento visualiza a la empresa como un conjunto de recursos y competencias, plantea que la base de conocimiento de la empresa incluye la experiencia de individuos, las rutinas y procesos que definen el modo distintivo de hacer las cosas dentro de la organización, las fortalezas del proveedor, entre otros. En la medida en que el conocimiento y las capacidades son únicos y difíciles de imitar, confieren una ventaja competitiva sustentable a la empresa. El conocimiento, es acumulativo y sus rendimientos crecientes; cuanto más conoce la empresa, más podrá aplicar lo que sabe a nuevas áreas de oportunidad. A diferencia de los productos tradicionales, los productos y servicios basados en el conocimiento tienen una productividad creciente.

### **MÉTODO**

Se consideraron cinco dimensiones para establecer los patrones de competencias: la adquisición de conocimiento externo a las empresas, la posibilidad de aprendizaje colectivo, la existencia de una visión compartida, el cultivo de una reputación colectiva y la eficiencia del sistema de valor. Se realizaron entrevistas a los dirigentes de 27 empresas de Talavera en Puebla. Estas entrevistas constaban de varias partes. Perfil general de las empresas, una breve historia de cada empresa, el nivel de estudios de dirigentes de la empresa, En la segunda parte de la entrevista se identificó la existencia de competencias específicas, competencias distintivas de las empresas relacionadas con el conocimiento tácito, al interior de la organización. Se clasificaron en: factores administrativos, de producción, de mercado, económico financieros y de diseño. En esta parte, se hicieron preguntas que obtenían una respuesta positiva o una negativa y se midió el nivel de fortaleza de acuerdo con el porcentaje de respuestas positivas obtenidas. La tercera parte de la entrevista permitió medir variables cualitativas y clasificar a las compañías de acuerdo con su pertenencia o no a un SPL.

## CONCLUSIONES

Uno de los factores de mayor trascendencia, derivado de la existencia del capital social y de la cultura compartidos, es la confianza que surge a nivel social basada en normas de reciprocidad sancionadas de manera tanto formal como informal. La confianza surge de la existencia de compromisos y formas de participación social que facilitan la comunicación y el conocimiento entre los distintos actores a nivel local. La primera condición para pasar del artesanado a la industria es la posibilidad de acceso a un mercado abundante y la generación de una red de proveedores que permiten la especialización de las empresas. Una segunda condición es la creación de financiamiento, redes de subcontratistas, organizaciones de apoyo, normas de calidad, ambientales y apoyos a la exportación. El organismo regulador en este caso es el Consejo Regulador de la Talavera. El desarrollo local implica un complejo proceso de concertación entre los diferentes actores interactuando dentro de los límites de un territorio determinado para impulsar un proyecto común a partir del diseño de estrategias. En el caso de la talavera de Puebla, dado que se cuenta con un acervo histórico, cultural y tradicional, es posible diseñar estrategias que permitieran un crecimiento económico importante a partir de esta industria. El mismo crecimiento de la industria desarrollaría la excelencia artística y la especialización de las funciones permitiría desarrollar el talento con mayor profundidad.

# EL EFECTO DE LAS MOTIVACIONES PSICOLÓGICAS EN LOS TIPOS DE CONTENIDOS QUE SE GENERAN EN FACEBOOK

María de la Paz Toldos Romero, Tecnológico de Monterrey, Campus Guadalajara  
Nancy Maribel López Bojórquez, Universidad de Guadalajara

## RESUMEN

*El objetivo principal de este estudio fue analizar el efecto de las motivaciones psicológicas de los internautas mexicanos en el tipo de contenido que éstos generan en las redes sociales, y más concretamente en Facebook. Para ello participaron un total de 426 sujetos con edades comprendidas entre 15 y 62 años ( $M = 23.06$ ,  $DT = 6.01$ ) que cumplimentaron dos cuestionarios; uno para medir las motivaciones psicológicas y otro para medir los diferentes tipos de contenidos que se generan en Facebook. El análisis de regresión múltiple reveló que las motivaciones psicológicas de inclusión y de altruismo predicen la publicación de contenido referido a uno mismo, la generación de contenidos para generar cambios y crear conciencia social y la generación de contenido que involucra a otros y genera afecto. También se encontró que la motivación de afectividad/curiosidad, predice la publicación de contenido que involucra a otros y genera afecto y contenido que genera discusión y controversia. Finalmente, se encontró que las motivaciones de inclusión, individualidad y poder, explican la publicación de contenido que genera discusión y controversia.*

**PALABRAS CLAVES:** Motivaciones psicológicas, generación de contenidos, redes sociales, Facebook

## THE EFFECT OF PSYCHOLOGICAL MOTIVATIONS ON TYPES OF CONTENTS GENERATED IN FACEBOOK

### ABSTRACT

*The principal objective of this study was to analyze the effect of the psychological motivations of internet-using Mexicans on the type of content that they generate on social networks, and more specifically on Facebook. A total of 426 subjects aged 15 to 62 ( $M = 23.06$ ,  $DT = 6.01$ ) participated in the study, completing two questionnaires; one to measure the psychological motivations, and another to measure the different types of Facebook content created. Multiple regression analysis revealed that the psychological motivations of altruism and inclusion were significant predictors of the content published referring to self, content generation to create change and social awareness as well as content that involves others and generates affection. In addition, it was found that the affective/curiosity motivation predicted content generation involving others and fomenting love, as well as generating discussion and controversy. Finally, it was found that the motivations of inclusion, individuality and power explain the publication of content that engenders discussion and controversy.*

**KEYWORDS:** Psychological motivations, content generation, social networking, Facebook

## INTRODUCCIÓN

Hoy en día, ya no basta con tener una página *online* de nuestra empresa, sino que es necesaria una forma creativa e innovadora de gestionar la información que se quiere transmitir al consumidor que se encuentra

interactuando en la red, así como los medios por los que se van a comunicar dichos contenidos. Una forma de llegar al internauta, es conocer las características del mismo; hábitos, costumbres, usos, preferencias, gustos, etcétera. Todo ello es posible gracias al desarrollo de una de las herramientas de mayor impacto en los últimos tiempos; las redes sociales.

Plataformas de interacción social que surgen como una de las consecuencias de la evolución de Internet, las cuales permiten crear un espacio de acceso ilimitado para la expresión humana, en donde dos o más personas de manera simultánea pueden ver, escuchar y compartir información al mismo tiempo y en distintos lugares geográficos sin necesidad de estar reunidos físicamente. Existen millones de internautas en todo el mundo que están afiliados por lo menos a una red social, siendo el medio por el que más se comunican las personas, al grado de convertirse en una necesidad para quienes están realmente involucrados en esta evolución de la comunicación humana. Por ello y por el mundo tan competitivo y cambiante como el de hoy, es que resulta importante para las empresas lograr nuevas formas de contacto con el cliente, llegando de una manera más confiable, rompiendo barreras empresa-publicidad-cliente, para dar lugar a un diálogo más cercado y fiable para el consumidor. Si estudiamos el comportamiento de los internautas en redes sociales para llegar a un mejor entendimiento de las motivaciones que guían su conducta, será más fácil poder tener acceso a ellos y provocar reacciones positivas y más controladas de la información que se desee transmitir, con lo que se puede lograr el desarrollo de estrategias diseñadas y adaptadas a las características propias del internauta.

Es aquí donde radica la importancia de estudiar las motivaciones del internauta para conocer qué hace que un miembro de una red social como es Facebook, decida generar contenido y transmitirlo a sus contactos, campo de estudio donde no existe investigación en México, por lo que con este estudio se busca ampliar el conocimiento en esta área. Así pues, este estudio analiza el efecto de las motivaciones psicológicas de los internautas mexicanos en el tipo de contenido que éstos generan en las redes sociales, y más concretamente en Facebook. Esta investigación está organizada como sigue. En la sección de revisión de la literatura se plantean los antecedentes teóricos que sustentan esta investigación. Posteriormente se presenta la metodología utilizada. Seguidamente se presentan los resultados de la investigación, y finalmente, las conclusiones, limitaciones y futuras líneas de investigación.

## REVISIÓN DE LITERATURA

### Las Redes Sociales

La comunicación es un elemento fundamental en la vida del ser humano, y como tal es una necesidad básica. Hoy en día gracias al creciente impacto que las nuevas tecnologías de comunicación ejercen en el crecimiento y desarrollo de los vínculos sociales del individuo mediante Internet y más específicamente con las redes sociales, se puede hablar de una gran evolución de la comunicación humana mediante plataformas *online* (Coyle & Vaughn, 2008). De acuerdo a Shin (2010, p. 473), las redes sociales se enfocan en la “creación de comunidades en línea de personas que comparten intereses y/o actividades, o que están interesados en explorar los intereses y actividades de los demás”. Facebook, YouTube y Twitter, son las redes sociales más populares a nivel mundial, cada una tiene diferencias particulares. Sin embargo, Facebook es la red social con mayor penetración en el mundo, traducida a más idiomas y con un incremento exponencial de internautas afiliados. Actualmente en México hay 39.875,860 usuarios de Facebook, correspondiente al 35% del total de la población del país, lo cual lo convierte en el quinto país con más usuarios de Facebook a nivel mundial, sólo superado por Estados Unidos, Brasil, India e Indonesia (Kont, 2012). Según la Asociación Mexicana de Internet (AMIPCI & Beyond marketing, 2012) el 55% de los usuarios de Facebook son mujeres y el 45% hombres, frente a un 54% de mujeres y un 46% de hombres en Brasil. La mayor población de usuarios de Facebook se encuentra entre los 12 y 34 años siendo un 61% del total (Kont, 2012).

## Las Motivaciones Humanas

Algunas ramas de la psicología consideran al individuo como un ser reactivo, que se ve incitado por estímulos que lo conducen a un determinado comportamiento. A esta conducta se le denomina motivación, que es provocada por determinados estímulos que pueden ser de carácter *intrínseco*; emocionales, biológicos y psicológicos, o *extrínsecos*; aquellos que recibe el individuo del medio que lo rodea. Es así, que el objetivo de la conducta motivacional se basa en la satisfacción de una demanda (necesidad/deseo) y que busca la reducción de tensión por la que atraviesa el individuo (Barberá-Heredia, 2002). Para Trechera (2005, en Naranjo-Pereira, 2009), la motivación es el proceso por el cual el sujeto se plantea un objetivo, utiliza los recursos adecuados y mantiene una determinada conducta, con el propósito de lograr una meta. Existen diversas teorías que han intentado explicar y clasificar las motivaciones humanas. Para una explicación más completa de cada una de ellas se puede consultar el trabajo de López-Bojórquez (2013), donde se detallan aquellas a partir de las cuales se basó para crear el instrumento de medición de las motivaciones utilizado para la presente investigación.

## METODOLOGÍA

Para la consecución del objetivo de esta investigación se utilizaron dos escalas para medir cada una de las variables de interés: 1- Escala de motivaciones psicológicas (López-Bojórquez, 2013) conformada por cinco dimensiones: Afectividad/curiosidad, inclusión, altruismo, individualidad y poder; 2- Escala de contenido generado en Facebook (López-Bojórquez, 2013) que mide cuatro tipos de contenidos que el internauta genera en Facebook: Contenido para generar cambios y crear conciencia social, contenido referido a uno mismo, contenido que involucra a otros y genera afecto y contenido que genera discusión y controversia. Participaron un total de 426 sujetos de los cuales el 33% fueron hombres y el 67% mujeres, con edades comprendidas entre 15 y 62 años ( $M = 23.06$ ,  $DT = 6.01$ ). El criterio para participar en el estudio fue que los participantes fueran usuarios activos de Facebook. Los cuestionarios se aplicaron de manera aleatoria y presencial en los salones de clase del Centro Universitario de Ciencias Económico-Administrativas de la Universidad de Guadalajara, en Zapopan, Jalisco, México y también fueron administrados online.

## RESULTADOS

Se llevó a cabo ecuaciones de regresión múltiple para estudiar el efecto de las motivaciones psicológicas (afectividad/curiosidad, inclusión, altruismo, individualidad y poder) de los internautas en el tipo de contenidos que éstos generan en Facebook (contenido para generar cambios y crear conciencia social, contenido referido a uno mismo, contenido que involucra a otros y genera afecto y contenido que genera discusión y controversia). Dichos resultados están resumidos en la Tabla 1. Respeto a la generación de *contenido para generar cambios y crear conciencia social*, el análisis de regresión múltiple reveló que únicamente las motivaciones psicológicas de inclusión [ $\beta = .206$ ,  $t = 4.51$ ,  $p = .000$ ] y altruismo [ $\beta = .344$ ,  $t = 7.115$ ,  $p = .000$ ] predicen la generación de este tipo de contenido en Facebook. El 23.9% de la variación en la publicación de contenido para generar cambios y crear conciencia social, está explicada por el modelo, con un margen de error estimado de 7.264.

En cuanto a la generación de *contenido referido a uno mismo*, el análisis de regresión múltiple reveló, que las motivaciones de inclusión [ $\beta = .342$ ,  $t = 7.22$ ,  $p = .000$ ] y altruismo [ $\beta = .344$ ,  $t = 4.511$ ,  $p = .000$ ], predicen la publicación de este tipo de contenido. El 18.2% de la variación en la publicación contenido referido a uno mismo, está explicada por el modelo, con un margen de error estimado de 8.843. Por otro lado, las motivaciones de afectividad/curiosidad [ $\beta = .177$ ,  $t = 3.674$ ,  $p = .000$ ], inclusión [ $\beta = .276$ ,  $t = 5.999$ ,  $p = .000$ ] y altruismo [ $\beta = .177$ ,  $t = 3.622$ ,  $p = .000$ ], predicen la publicación de *contenido que involucra a otros y genera afecto*. El 22.5% de la variación en la publicación de este tipo de contenidos, está explicada por el modelo, con un margen de error estimado de 8.127. En cuanto a las motivaciones

que predicen la *generación de contenido que genera discusión y controversia*, se encontró que las motivaciones de afectividad/curiosidad [ $\beta = .115$ ,  $t = 2.434$ ,  $p = .015$ ], inclusión [ $\beta = .200$ ,  $t = 4.190$ ,  $p = .000$ ], individualidad [ $\beta = .144$ ,  $t = 3.142$ ,  $p = .002$ ], y poder [ $\beta = .195$ ,  $t = 4.214$ ,  $p = .000$ ] explican la publicación de *contenido que genera discusión y controversia*. El 17.3% de la variación en la publicación de este tipo de contenidos, está explicada por el modelo, con un margen de error estimado de 5.321.

Tabla 1: Resumen del Análisis de Regresión de la Escala de Contenido Generado en Facebook y la Escala de Motivaciones Psicológicas

## CONCLUSIONES

Los resultados encontrados en la presente investigación confirman que no todos los tipos de motivaciones influyen en la generación de contenido en Facebook. Las motivaciones de inclusión y altruismo fueron las que más predicen los distintos tipos de contenidos que se generan en Facebook. Y más específicamente es la motivación psicológica de *inclusión* la que predice todos los tipos de generación de contenidos en Facebook. De igual forma, es la variable que tiene mayor peso en tres tipos de contenidos generados en Facebook, lo que indica que es un factor que puede ser determinante a la hora de generar diversos contenidos en línea. Por otro lado, la motivación de *altruismo*, es también una variable que incide en la generación de tres de los cuatro tipos de contenidos: contenido para generar cambios y crear conciencia social, contenido referido a uno mismo y contenido que involucra a otros y generación de afecto. Siendo la variable con mayor peso en la publicación de contenido para generar cambios y crear conciencia social. También se encontró que la motivación de *afectividad/curiosidad*, predice la publicación de contenido que involucra a otros y genera afecto, así como la publicación de contenido que genera discusión y controversia. Finalmente se encontró que las motivaciones de *individualidad* y *poder* únicamente predicen la generación de contenidos que generan discusión y controversia.

## Limitaciones y Aplicación Práctica

De acuerdo a los resultados encontrados en la presente investigación, se concluye que las motivaciones psicológicas, consideradas como predictoras en la generación de contenido en Facebook, no son tan importantes como se esperaba, puesto que el peso de cada una de las motivaciones en la generación de contenidos no fue muy alto, lo que nos lleva a replantear para futuras investigaciones la inclusión de otras variables que pudieran explicar los motivos que llevan al internauta a generar determinados contenidos en las redes sociales. La presente investigación presenta algunas limitaciones como la muestra utilizada para el estudio ya que estuvo constituida por un alto porcentaje de alumnos de licenciatura de edades comprendidas entre los 18 y 25 años, lo cual sesga de alguna manera la información recabada y no permitió realizar comparaciones por grupos de edad o entre estudiantes y profesionistas. Es interesante para futuras investigaciones tener una muestra representativa de la población de usuarios de redes sociales, ampliar los rangos de edad u otras características de interés para hacer comparaciones entre

perfiles de usuarios. El estudio aquí presentado es importante y útil para las empresas, psicólogos, mercadólogos y otros interesados y estudiosos del tema. Conocer al consumidor, su comportamiento, entender sus necesidades y motivaciones, entre otras, es esencial para enfocar las estrategias de mercadotecnia y lograr con ello satisfacer las necesidades y deseos de los individuos y de las organizaciones.

# EL EFECTO DE LAS DIMENSIONES DE PERSONALIDAD DE MARCA EN LA INTENCIÓN DE COMPRA DE MARCAS DE LUJO EN MÉXICO Y BRASIL

María de la Paz Toldos Romero, Tecnológico de Monterrey, Campus Guadalajara  
María Eloísa Guerrero Castro, Universidad de Guadalajara

## RESUMEN

*El objetivo principal del estudio fue analizar el efecto de las dimensiones de personalidad de marca en la intención de compra de marcas de lujo en México y Brasil. Participaron un total de 326 sujetos (161 mexicanos y 165 brasileños) de nivel socioeconómico alto y con edades comprendidas entre los 20 y 55 años. Los participantes cumplieron un cuestionario para medir la personalidad de las tres primeras marcas globales de lujo (Louis Vuitton, Gucci y Hermès) validado anteriormente en México y traducido posteriormente al portugués para aplicarlo en Brasil, además de otro cuestionario para medir la intención de compra de estas tres marcas. Los análisis de regresión múltiple revelan que en el caso de México las dimensiones de personalidad de sofisticación y competencia predicen la intención de compra de la marca Hermès. Para Brasil, la dimensión de apertura a la experiencia predice la intención de compra de las tres marcas, además, la dimensión de competencia predice la intención de compra de la marca Louis Vuitton. Por otro lado, la dimensión de sinceridad/emotividad predice la intención de compra pero en sentido negativo de las marcas Louis Vuitton y Hermès.*

**PALABRAS CLAVES:** Personalidad de marca, intención de compra, marcas de lujo

## THE EFFECT OF BRAND PERSONALITY DIMENSIONS ON PURCHASE INTENTION OF LUXURY BRANDS IN MEXICO AND BRAZIL

### ABSTRACT

*The main objective of this study was to analyze the effects of brand personality dimensions of luxury brands in Mexico and Brazil on purchase intention. A total of 326 subjects (161 Mexicans and 165 Brazilians) with high socioeconomic status aged between 20 and 55 years participated in the study. Participants completed a questionnaire to measure the brand personality of the top three global luxury brands (Louis Vuitton, Gucci and Hermès). The questionnaire was validated in Mexico and subsequently translated into Portuguese for application in Brazil, along with another questionnaire to measure purchase intention of these three brands. Multiple regression analysis revealed that in the case of Mexico the personality dimensions of sophistication and competence were significant predictors of purchase intention of the Hermès brand. For Brazil, the dimension of openness to experience predicts purchase intention of the three brands. In addition, the dimension of competence predicts purchase intention of the brand Louis Vuitton. In contrast however, the dimension of sincerity/emotionality predicts negative purchase intention for the brands Louis Vuitton and Hermès.*

**KEYWORDS:** Brand personality, purchase intention, luxury brands

## INTRODUCCIÓN

Según Keller (2008), el poder de una marca depende de lo que los clientes han aprendido, sentido y escuchado de ella como resultado de sus experiencias con el paso del tiempo, siendo un factor importante del significado de una marca y que explica el valor de una marca, la imaginería. La imaginería depende de las propiedades extrínsecas del producto o servicio, incluidas las formas en que la marca intenta cubrir las necesidades sociales y psicológicas de los clientes, es lo que la gente piensa de manera abstracta de una marca y no lo que cree que realmente es. La imaginería se refiere, además, a los aspectos intangibles y los clientes pueden formar asociaciones con ella, que pueden ser directas de su propia experiencia o indirectas a través de la publicidad u otra fuente de información, como la información de boca en boca.

A una marca se pueden ligar muchas clases de características intangibles, siendo una de ellas la personalidad de la marca. El estudio de la atribución de estos rasgos de personalidad a las distintas marcas se ha convertido en algo primordial ya que se puede entender cómo los consumidores perciben las marcas en términos de atributos humanos y con ello elaborar e implementar acciones de marketing (D'Astous & Levesque, 2003). Por su parte, las marcas de lujo son definidas por Wiedmann (2007) como aquellas cuyos estándares de precios y calidad son los más altos en el mercado. La importancia de la existencia de esta categoría de artículos radica en la necesidad de recrear una satisfacción social debido a que los individuos buscan conocer cuál es su lugar en la comunidad de la que forman parte.

Estudios previos muestran que el consumo de bienes de lujo es un fenómeno social cuya función está relacionada con el deseo de buscar una impresión en los demás. La elección de las marcas de lujo se basa en esta premisa, pues los consumidores eligen aquellas marcas que consideran tendrán un impacto positivo en sus relaciones interpersonales, expresando a través del uso de éstas, el concepto de sí mismos (Kapferer & Bastien, 2009). Dada la importancia que el consumidor le concede a las marcas de lujo, así como la relevancia que la personalidad de marca supone como componente esencial al ayudar a crear el valor de marca, y puesto que no existen estudios previos sobre el tema, el objetivo principal de este estudio fue analizar el efecto de las dimensiones de personalidad de marca en la intención de compra de marcas de lujo en México y Brasil. Esta investigación se presenta organizada como sigue. En la sección de revisión de la literatura se analiza de manera breve el concepto de personalidad de marca así como algunos resultados encontrados en México y Brasil. Posteriormente se presenta la metodología utilizada. Seguidamente se presentan los resultados de la investigación, y finalmente, se exponen las principales conclusiones del estudio, limitaciones del mismo y comentarios para futuras investigaciones.

## REVISIÓN DE LA LITERATURA

### Personalidad de Marca

La atribución de rasgos humanos a las distintas marcas por parte de los consumidores, se ha convertido en un fenómeno universal, debido al interés que despierta para el marketing y su importancia en la construcción del valor de la marca. Jennifer Aaker (1997) define el concepto de personalidad de marca como el conjunto de características humanas asociadas a la marca, es decir, aquellos valores humanos que caracterizan a una marca. Esta última refleja tales características humanas, que pueden ir de lo moderno, pasado de moda, sincero, emocionante, alegre, a lo exótico, rudo y todas aquellas que forman parte de la condición humana. La personalidad de marca constituye un conjunto específico de significados que describen las características inherentes a la marca, donde estos significados son construidos por los consumidores. Existen diferentes métodos que han sido utilizados para medir la personalidad de marca, sin embargo, la metodología más utilizada ha sido la desarrollada por Jennifer Aaker (1997). En países latinoamericanos, podemos encontrar estudios de la personalidad de marca, entre los que destacan los hallazgos en México de Álvarez-Ortiz (2002) con las dimensiones de sinceridad, emocionante, competencia, sofisticación/elegancia y género; y de Toldos-Romero (2012) con las dimensiones de éxito, jovialidad, sofisticación, sinceridad, doméstico/emocional, rudeza y profesionalismo. En el caso de Brasil,

sobresale el estudio de Muller y Zancan (2012) con las dimensiones de credibilidad, alegría, audacia, sofisticación y sensibilidad. A pesar de que la escala de personalidad de marca propuesta por Aaker (1997) ha sido ampliamente utilizada en diversas investigaciones, es importante ser cautelosos en los resultados, puesto que las dimensiones de personalidad encontradas en los distintos países donde se ha aplicado dicha escala, dependen de aspectos ligados a la cultura de cada uno de ellos, y no deben generalizarse. La variedad de dimensiones de personalidad de marca encontradas en diferentes países también se debe a las diferentes metodologías utilizadas para medir esta variable, así como los distintos métodos para elegir las marcas estudiadas.

### Personalidad de Marca e Intención de Compra

La personalidad de marca ha sido uno de los temas más estudiados en mercadotecnia porque los consumidores tienden a tomar decisiones de compra basadas en la imagen que éstos se forman en sus mentes de las marcas, más que por los atributos o características del producto por sí solos. Por tanto, una personalidad de marca distintiva puede ayudar a que el consumidor cree asociaciones favorables de la marca en su memoria que aumente el valor de la misma y como resultado, el consumidor la considerará para futuras compras. Por ello, la importancia de estudiar qué dimensiones de personalidad de marca, predicen la intención de compra. En algunos estudios se encuentra que las dimensiones de actividad y sofisticación, competencia, sinceridad y rudeza, son predictores significativos de la preferencia, satisfacción y lealtad de marca (Lee & Oh, 2006). Aaker (1997) encuentra que los rasgos de sinceridad y competencia están asociados con actitudes más positivas hacia las marcas, lo que explica por qué algunas marcas buscan proyectar la autenticidad como parte de su identidad.

### **METODOLOGÍA**

Para medir la personalidad de marca en México, se utilizó la escala previamente validada en el estudio de Toldos (2012) con una muestra de mexicanos que fue traducida al español y se modificaron algunos ítems a la cultura y lenguaje mexicanos, obteniendo un total de siete dimensiones de personalidad de marca con un fiabilidad total de la escala de 0.95. Adicionalmente, se incluyó una escala porcentual que serviría para medir la intención de compra de las tres marcas de lujo, dicha escala mostraba valores que van del 0 al 100, donde cero significaba que jamás la compraría, y cien con total certeza la compraría. Para medir la personalidad de marca en Brasil, se utilizó la escala previamente validada en el estudio de Toldos (2012), misma que se tradujo al portugués con la revisión de una persona nativa, siguiendo el mismo procedimiento que para el caso de México. La selección de las marcas se basó en el ranking publicado por Interbrand (2012), Best Global Brands 2012, de las tres primeras posiciones dentro del sector lujo, siendo estas marcas: Louis Vuitton, Gucci y Hermès.

Los cuestionarios fueron administrados de manera aleatoria en algunos salones de clases de licenciatura y posgrado de dos universidades de México y Brasil con las mismas características en cuanto al tipo de educación, sistema y nivel socioeconómico. El tamaño total de la muestra fue de 326 sujetos, de los cuales 165 fueron brasileños (51%) y 161 mexicanos (49%) de nivel socioeconómico alto y con edades comprendidas entre 20 y 55 años, situándose la mayoría en el rango de 20 a 29 años de edad (55.52%). Del total de los participantes de ambos países, el 43% fueron mujeres y el 55% hombres, con nivel de estudios de licenciatura (47%) y posgrado (51%).

### **RESULTADOS**

Para analizar el efecto de las dimensiones de personalidad de marca obtenidas en Brasil y México en la intención de compra de marcas de lujo en ambos países, se llevaron a cabo análisis de regresión múltiple para cada una de las tres marcas de lujo utilizadas en el estudio. En un estudio previo (Guerrero, 2013), se analizó la dimensionalidad de las escalas de personalidad de marcas de lujo aplicadas en México y Brasil,

así como la fiabilidad de las mismas. En el caso de México, se obtuvieron 7 dimensiones de personalidad de marca: sinceridad/emotividad, emocionante, sofisticación, éxito, apertura a la experiencia, competencia y género. Respecto a Brasil, también se obtuvieron 7 factores: éxito/sofisticación, sinceridad/emotividad, emocionante, apertura a la experiencia, competencia, trabajadora y género.

En el caso de México, el análisis de regresión múltiple reveló que ninguna de las dimensiones de personalidad de marca predice la intención de compra de la marca Louis Vuitton. Se encontró que el 11.7% de la variación en la intención de compra de la marca Louis Vuitton, está explicada por el modelo, con un margen de error estimado de 31.922. Igualmente, se encontró que ninguna de las dimensiones de personalidad de marca predice la intención de compra de la marca Gucci. El 2.2% de la variación en la intención de compra de la marca Gucci, está explicada por el modelo, con un margen de error estimado de 31.922. Por otro lado, las dimensiones de personalidad de marca, sofisticación [ $\beta = .285$ ,  $t = 2.802$ ,  $p = .006$ ] y competencia [ $\beta = .249$ ,  $t = 2.271$ ,  $p = .025$ ], predice la intención de compra de la marca Hermès. Se encontró que el 1.2% de la variación en la intención de compra de la marca Gucci, está explicada por el modelo, con un margen de error estimado de 29.713. En el caso de Brasil, el análisis de regresión múltiple reveló que las dimensiones de personalidad de marca, sinceridad/emotividad, apertura a la experiencia y competencia, predice la intención de compra de la marca Louis Vuitton como puede observarse en la Tabla 1.

Tabla 1: Resultados del Análisis de Regresión Múltiple de las Dimensiones de Personalidad de Marca e Intención de Compra de la Marca Louis Vuitton en Brasil

Variable independiente	Coeficientes no estandarizados		Coeficientes tipificados	t	Sig.
	B	Error típ.	Beta		
F1.Éxito/sofisticación	2.232	6.267	.046	.356	.722
F2.Sinceridad/emotividad	-15.047	6.210	-.329	-2.423	.017
F3.Emocionante	-4.352	7.382	-.089	-.590	.556
F4.Apertura a la experiencia	23.495	6.357	.576	3.696	.000
F5.Competencia	9.188	4.603	.222	1.996	.048
F6.Trabajadora	-4.004	4.822	-.085	-.830	.408
F7.Género	-.152	4.254	-.003	-.036	.972

\* $p < .05$ ; \*\* $p < .01$ ; \*\*\* $p < .001$

R	R cuadrado	R cuadrado corregida	Error típ. de la estimación
.483	.233	.194	31.231

Para la marca Gucci, la dimensión de personalidad de marca apertura a la experiencia, fue la única que predice la intención de compra [ $\beta = .450$ ,  $t = 2.804$ ,  $p = .006$ ]. Se encontró que el 1.8% de la variación en la intención de compra de la marca Gucci, está explicada por el modelo, con un margen de error estimado de 27.823. En cuanto a la marca Hermès, las dimensiones de personalidad de marca, sinceridad/emotividad [ $\beta = -.347$ ,  $t = -2.430$ ,  $p = .016$ ] y apertura a la experiencia [ $\beta = .359$ ,  $t = .2188$ ,  $p = .030$ ], predice la intención de compra. Más específicamente, la dimensión de sinceridad/emotividad, aunque en sentido negativo, es la variable que más peso tiene. El 1.5% de la variación en la intención de compra de la marca Gucci, está explicada por el modelo, con un margen de error estimado de 32.988.

## CONCLUSIONES

El objetivo principal de este estudio fue examinar si las dimensiones de personalidad de marcas de lujo en México y Brasil, predecían la intención de compra de las tres marcas de lujo: Louis Vuitton, Gucci y Hermès. En el caso de México se encontró que, para las marcas Louis Vuitton y Gucci, ninguna dimensión predice la intención de compra. Sin embargo, para la marca Hermès, son las dimensiones de sofisticación y competencia, las que predice la intención de compra. Esto significa que si los mexicanos

perciben a Hermès como una marca sofisticada y competente, la comprarán más. Por lo que respecta a Brasil se encontraron más dimensiones de personalidad de marca que predicen la intención de compra.

Más específicamente, se encontró que si los brasileños perciben la marca Louis Vuitton abierta a la experiencia y competente, la comprarán. Sin embargo, si perciben a esta marca más sincera y emotiva la probabilidad de compra disminuirá. Para la marca Gucci y Hermès se encontraron resultados similares, es decir, si brasileños perciben a Gucci y Hermès como marcas con una personalidad abierta a la experiencia la probabilidad de compra aumentará, mientras que si las perciben sinceras y emotivas la probabilidad de compra disminuirá. Los hallazgos obtenidos en esta investigación sirven como punto de partida, para que aquellas empresas del sector de lujo que actúan en el mercado latinoamericano, específicamente en México y Brasil, planteen sus estrategias de comunicación de la imagen de sus marcas, con rasgos que evidencien los factores de personalidad y las características propias de la cultura para generar una mayor intención de compra. En el caso de los mexicanos parecen preferir marcas de lujo que sean sofisticadas y competentes, mientras que los brasileños buscan marcas de lujo con una imagen también competente y abiertas a la experiencia. Personalidades sinceras y emotivas no son las que buscan los brasileños a la hora de adquirir una marca de lujo.

### Limitaciones y Aplicación Práctica

Aunque los resultados encontrados son importantes para explicar las preferencias del consumidor mexicano y brasileño, es importante mencionar algunas limitaciones de la investigación como la muestra utilizada para el estudio, pues al ser por conveniencia, sólo retrata la realidad de esa población y no puede generalizarse y ser concluyente. Se recomienda ampliar el rango de edad de los participantes para analizar si hay diferencias por edades, además de ampliar la muestra para que ésta sea más representativa de la población de consumidores de marcas de lujo y analizar otras variables sociodemográficas que pueden ser de interés para profundizar en el estudio. Sería interesante, para dar continuidad y robustez a esta línea de investigación, que en un futuro se hicieran comparaciones entre las marcas globales de lujo en distintas categorías de productos y el *top of mind* de los participantes, para así conocer si existe una relación entre unos y otros.

# CLIMA ORGANIZACIONAL: FACTORES DE SATISFACCIÓN LABORAL EN UNA EMPRESA DE LA INDUSTRIA METAL - MECANICA

Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México

Ivy Oney Elizabeth Samaniego González, Universidad Autónoma de Coahuila-México

## RESUMEN

*El presente trabajo de investigación se llevó a cabo con la finalidad de identificar los factores que influyen en el nivel de satisfacción laboral de los trabajadores administrativos y operativos de una Pequeña Empresa de la industria metal-mecánica ubicada en Frontera, Coahuila, a fin de proporcionar al directivo de la empresa, sugerencias de cambio, de reforzamiento y/o de mejora del Clima Organizacional. Para la realización de este estudio se determinó que la Muestra fuese por consenso, formada por 33 trabajadores a quienes se les aplicó un cuestionario estructurado, tipo escala de Likert, que consta de 40 reactivos correspondientes a 10 variables; para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.89. Una vez tabulados los datos, el tratamiento estadístico consistió en calcular frecuencias, obtener las Medias y los coeficientes de correlación de Pearson, usando el programa SSPS (versión 17.0). Como resultado se reporta que el factor higiénico compañeros de trabajo es el de mayor relación con la satisfacción, mientras que los factores motivadores que predominan son los relativos al contenido-significado del trabajo, y al reconocimiento proveniente del supervisor y de los compañeros.*

**PALABRAS CLAVE:** Satisfacción, Satisfacción Laboral, Motivación, Clima Organizacional.

## ORGANIZATIONAL CLIMATE FACTORS JOB SATISFACTION IN A COMPANY OF METAL INDUSTRY – MECHANICAL

### ABSTRACT

*The present investigation was undertaken in order to identify the factors that influence the level of job satisfaction of clerical workers and a small business operating in the metal working industry located in Frontera, Coahuila, in order to provide the management of the company, suggestions for change, strengthening and / or improving the organizational climate. For this study it was determined that the sample was by consensus, consists of 33 workers who were administered a structured questionnaire, Likert-type scale, consisting of 40 reagents for 10 variables, for the reliability of the instrument was used Cronbach's alpha test, yielding a coefficient of internal consistency of 0.89. One tabulated data, the statistical analysis was to calculate frequencies, means and obtain Pearson correlations coefficients using the SSPS software (version 17.0). As a result it is reported that coworkers hygiene factor is the most related to satisfaction, while the predominant motivating factors are the content- meaning of work, and recognition from the supervisor and peers.*

**Keywords:** Satisfaction, Job Satisfaction, Motivation, Organizational Climate

## INTRODUCCIÓN

Las organizaciones hoy en día buscan ser competitivas, tomando en cuenta la innovación y la mejora continua. Es por ello, que el proceso administrativo es importante, en cuanto a la integración (Recurso Humano) ya que es fundamental para coordinar las diferentes actividades que forman parte de dichos

procesos y así generar un producto o servicio. Las empresas para obtener resultados positivos, han concluido que la clave es el recurso humano, ya que su trabajo es fundamental para el logro de los objetivos y, por ello hoy en día se ha aumentado la inquietud por parte de los directivos por encontrar la manera de motivar al personal para incrementar su empeño, interés y satisfacción en el trabajo y; así lograr un clima organizacional satisfactorio.

La cultura en general abarca un sistema de significados compartidos por una gran parte de los miembros de una organización que los distinguen de otras. El clima organizacional repercute sobre las motivaciones y el comportamiento de los miembros de una organización, el cual tiene una gran variedad de consecuencias (productividad, satisfacción, rotación, adaptación, etc.) e implica la existencia de dimensiones con ciertas propiedades de la organización. El objetivo principal es identificar los factores que influyen en el nivel de satisfacción laboral de los trabajadores administrativos y operativos, en una Pequeña Empresa de la industria metal-mecánica ubicada en Frontera, Coahuila, la cual fue fundada en el año de 1972, que a la fecha está conformada por 35 trabajadores; su mercado meta es de tipo industrial.

## REVISIÓN LITERARIA

26.

Chiavenato (1989) expone que “entre estos procesos que se generan a través de la interacción de las personas que participan en ella, se encuentra la cultura organizacional que se define como la forma de hacer las cosas dentro de una organización y esta forma de hacer es la que distingue a una organización de otra, haciendo que está tenga su propia identidad, donde se comparten sistemas de significados entre sus miembros”. Zamora (2005) menciona que “cuando se habla de de cultura organizacional, se está hablando del ambiente físico, de las relaciones interpersonales que se generan, de las funciones laborales y la forma de ejercerlas y de las regulaciones formales que afectan a una organización”, lo cual nos lleva a un clima organizacional. Goncalves (1997) define el clima organizacional como “un fenómeno que media entre los factores del sistema organizacional y las tendencias motivacionales que se traducen en un comportamiento que tiene consecuencias sobre la organización tales como la productividad, satisfacción, rotación, etcétera”. La satisfacción laboral es la actitud ante el trabajo que más atención ha recibido por parte de la investigación y aunque el estudio de su naturaleza y sus causas comienzan en 1935 con Hoppock, algunos autores ya habían estudiado diversas actitudes de los empleados frente a diferentes aspectos del trabajo. Peiró (2000) citado por Cuadra y Veloso (2007).

Por lo tanto, la satisfacción laboral va más allá de las emociones y Navarro et al (2010) y Chiang y Ortega (2011) la definen como “una actitud generalizada ante el trabajo”. Así, el estudio de la satisfacción laboral se enmarca en la concepción de las actitudes hacia el trabajo junto con el compromiso organizacional y la implicación laboral, aseguran Peiró, González R., Bravo y Zurriaga (1995) quienes la definen como una actitud o conjunto de actitudes desarrolladas por la persona hacia su situación de trabajo Chiang y Ortega (2011). La motivación laboral ha sido objeto de estudio sistemático desde unos años antes que la satisfacción laboral; en los años cincuenta surgen teorías sobre la motivación hoy fuertemente consolidadas, mientras que hasta los años sesenta no hay un desarrollo significativo del estudio sobre la satisfacción laboral SATW (1984) citado por Ramírez, et al (2008).

Campbell et al (1970), clasifican las teorías de la motivación de la siguiente manera:

Teorías de Contenido	Teorías de Proceso
Tratan de definir los aspectos y factores específicos que motivan a las personas a trabajar (Jerarquía de las necesidades de Maslow; Motivaciones sociales de McClelland; Bifactorial de Herzberg; X-Y de McGregor; ERC de Alderfer).	Se centran en la descripción de la forma de potenciar, dirigir y terminar la conducta en el trabajo (Path-Goal de Georgopolus, Mahoney y Jones; de las Expectativas de Vroom; de la equidad de Adams; Modelo de circulación de Porter y Lawler; de las metas de Locke).

Unas de las teorías motivacionales que nos ayuda a interpretar la satisfacción laboral del personal de la Pequeña empresa objeto de estudio, es la teoría de Motivación e Higiene de Herzberg. En su teoría

Herzberg (1987) hace referencia a dos factores: el de satisfacción o intrínseco y el de insatisfacción o extrínseco también denominado higiénico. El primero se refiere a las condiciones que tienen relación directa con el contenido del puesto de trabajo; mientras que el segundo factor (insatisfacción, extrínseco o higiénico), se refiere a las condiciones que rodean al individuo al realizar su trabajo y que pueden ser psicológicamente poco saludables para el trabajador.

Muchos estudios que se realizaron en las décadas de 1930 a 1950 se centraron en establecer la relación entre satisfacción y productividad y no se encontró una relación consistente; sin embargo, en la década de 1990, aunque las investigaciones han tenido limitaciones, sí se pueden obtener algunos datos de la evidencia existente. Atalaya (1999). Se han llevado a cabo investigaciones que pretenden encontrar relaciones entre el clima y la conducta de liderazgo, la satisfacción y el compromiso con la organización, la satisfacción y el absentismo y la rotación del personal, la satisfacción y el rendimiento, pero a pesar de la abundante literatura sobre clima organizacional y satisfacción laboral el contenido de ambos constructos dista de ser completo. Salgado, et al (1996).

Dentro de los hallazgos del estudio efectuado por Álvarez, R. (2011) se encuentra una relación lineal positiva y significativa en grado medio entre el grado de satisfacción laboral y el grado de reconocimiento laboral de los empleados del Corporativo adventista de Montemorelos, N. L. Rodríguez, et al (2011) reportan la evidencia de que existe una relación significativa entre el clima, la satisfacción y el desempeño y, considerando las dimensiones del desempeño, sólo el clima predice significativamente el comportamiento funcionario y las condiciones personales, mientras que la satisfacción sólo predice el Rendimiento y la Productividad.

## METODOLOGÍA

El diseño metodológico corresponde a una investigación transversal, descriptiva y cuantitativa. Para efecto de la recolección de la información se tomó como parámetro la escala JSS de Spector (1985), la cual consta de 36 preguntas, relativas a 9 variables (4 reactivos de cada variable). Se decidió agregar una variable denominada *Condiciones del área de trabajo* que contiene 4 reactivos, ya que el cuestionario de Spector no incluye este factor, considerado importante. el instrumento modificado y elaborado para la presente investigación, es tipo escala de Likert, incluye una primera sección que contiene reactivos de datos generales relativos a la edad, género, antigüedad en la empresa, actividad principal, tipo de contratación y nivel de estudios y segunda sección consta de 40 reactivos correspondientes a 10 variables.

Para determinar la confiabilidad del instrumento de medición los resultados fueron sometidos a la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.89. Una vez tabulados los datos, el tratamiento estadístico consistió en calcular frecuencias, obtener las Medias y los coeficientes de correlación de Pearson, usando el programa SSPS (versión 17.0). Formulándose las siguientes preguntas de investigación ¿Cuáles son los factores considerados *higiénicos* y motivadores que más influyen en el nivel satisfacción de los trabajadores de la empresa? De los factores higiénicos ¿Será la variable *comunicación* la que más influye en el nivel de satisfacción laboral? De los factores motivadores ¿Será el factor *trabajo en sí* el que más influye en el nivel de satisfacción laboral? ¿Cuáles factores *higiénicos* y motivadores presentan correlación significativa?

## RESULTADOS

Los resultados presentados en este apartado, han sido calculados en base a los datos obtenidos del cuestionario rediseñado y basado en el JSS, *Job Satisfaction Survey* (Spector, 1985), aplicado a 33 sujetos, de los cuales 30 son hombres y 3 mujeres, estableciendo rangos de edad, antigüedad y nivel de estudios, tabulando las frecuencias correspondientes por rangos de edad, la mayoría de los trabajadores se ubica en la categoría de adultos mientras que la minoría son maduros. En relación a la antigüedad en la

empresa, la distribución del personal es muy similar ya que 7 trabajadores tienen más de 10 años de servicio y 6 trabajadores se ubican en los 4 rangos de menos de 1 año hasta menos de 7 años, respectivamente. Con respecto al nivel de estudios, se encontró que son 9 los trabajadores que han cursado tanto Secundaria como Carrera técnica

Para facilitar el análisis se procedió a identificar por separado las variables relativas a factores higiénicos y factores motivadores, según la Teoría Bifactorial de F. Herzberg, en dos categorías En relación a dicha teoría, se decidió, para analizar los resultados de este estudio, determinar rangos a las 6 opciones de respuesta (1 y 2-No satisfacción; 3 y 4-Mediana satisfacción; 5 y 6-Satisfacción). Así pues, las Medias de la totalidad de los factores se ubican en la categoría de *mediana satisfacción*, lo cual hace difícil contestar la primera pregunta de investigación, ya que no sobresalen variables ni higiénicas ni motivadoras como para asegurar cuáles son las que más influyen en el nivel de satisfacción.

El siguiente cuestionamiento de investigación no se responde afirmativamente, pues a pesar de que los trabajadores perciben una adecuada *Comunicación entre el personal*, las Medias más elevadas, dentro de los factores higiénicos, se observan en *Compañeros y Condiciones del área de trabajo*. Asimismo, en relación a los factores motivadores, se formula la tercera pregunta de investigación, y sí es la Media de mayor puntaje la relativa al factor *Trabajo en sí*, siendo la variable que le sigue la de *Recompensa* (reconocimiento de compañeros y del jefe) y, por último, el factor *Promoción* (ascensos). La mayoría de los coeficientes muestran correlaciones significativas aunque no todos los valores son superiores a 0.6, requisito que cumple únicamente la variable *Supervisión*, que se correlaciona significativamente con *el Trabajo en sí*, con *Compañeros de trabajo* y con *Recompensas*, respectivamente. Otras correlaciones altas son las que se refieren a: condiciones de trabajo con beneficios, supervisión con condiciones de trabajo y con comunicación, trabajo en sí con políticas/procedimientos y con comunicación.

## CONCLUSIONES

Los resultados obtenidos en la presente investigación reportan que los trabajadores administrativos y operativos de la empresa objeto de estudio, presentan, en general, una satisfacción media en cuanto a las variables exploradas. Por lo antes mencionado, se puede apreciar que los trabajadores manifiestan estar a gusto y orgullosos por el trabajo que realizan y que éste es importante, que la relación y la comunicación con los compañeros son adecuadas y que el reconocimiento que reciben por su desempeño proviene tanto de parte de los compañeros como del jefe. A su vez, reportan que cuentan con la herramienta, maquinaria y equipo necesarios para hacer las tareas que les corresponden y que las condiciones físicas en el área de trabajo son pertinentes. Consideran que los beneficios y sueldo que reciben de la empresa son limitados y que son pocas las oportunidades que tiene de ascenso (probablemente debido a que el personal operativo es reducido y las tareas a desempeñar son muy específicas, por lo que las vacantes están determinadas por retiro, pensión o jubilación). Se recomienda dar retroalimentación, a los dueños de la empresa, respecto a los aspectos positivos relativos a la satisfacción laboral que reportan los trabajadores en este estudio, que sirvan de apoyo para establecer estrategias de reforzamiento y de mejora, aprovechando las áreas de oportunidad. Una sugerencia para un futuro próximo es ofrecer un diagnóstico de clima laboral que permita incorporar datos que se relacionen directa o indirectamente con la satisfacción laboral.

## RESUMEN

*El presente trabajo aborda el tema de las tutorías académicas como una forma de mantener debidamente informado a los estudiantes y evitar el rezago estudiantil, la deserción escolar, y aumentar la eficiencia terminal. La investigación se realizó en la Facultad de Ciencias Administrativas (FCA) de la Universidad Autónoma de Baja California (UABC), México. Desde una perspectiva cuantitativa se analizó la competitividad del programa de tutorías. El propósito de este estudio es determinar si el alumno conoce el programa de tutorías, si desde su opinión, éste: ayuda a adaptarse al ambiente académico, facilita el paso de bachillerato a profesional, informa sobre la vida universitaria, orienta sobre el plan de estudios, brinda información sobre maestros, describe las instalaciones de la escuela y da a conocer el reglamento académico. Este estudio servirá a las autoridades universitarias para mejorar el programa en beneficio del alumno y de la propia institución. La investigación se realizó a través de un muestreo probabilístico, la muestra de población fue de 195 alumnos encuestados. Se diseñó un instrumento de medición, se comprobó su confiabilidad a través del alfa de Cronbach, la información fue procesada a través de estadística descriptiva, los resultados obtenidos permiten hacer conclusiones y recomendaciones.*

**PALABRAS CLAVES:** competitividad, programa, tutoría, ambiente académico.

## COMPETITIVENESS PROGRAM FROM ACADEMIC TUTORING STUDENT PERCEPTIONS

### ABSTRACT

*This paper addresses the issue of academic tutoring as a way to keep students informed properly and avoid lagging student dropouts, and increase terminal efficiency. The research was conducted at the Faculty of Administrative Sciences (FCA) of the Autonomous University of Baja California (UABC), Mexico. From a quantitative perspective analyzed the competitiveness of the mentoring program. The purpose of this study is to determine if the student knows the mentoring program, whether from his view, it: helps you adapt to the academic environment, facilitates the transition from high school to professional, college life reports, guidance on the curriculum provides information on teachers, describes the school facilities and discloses the academic regulations. This study will provide the university authorities to improve the program for the benefit of the student and the institution itself. The research was conducted through a probability sample; the sample population was 195 students surveyed. We designed a measuring instrument, checked for reliability by Cronbach's alpha, the information was processed through descriptive statistics, the results obtained allow conclusions and recommendations.*

**KEYWORDS:** competitiveness, program, tutoring, academic environment.

## INTRODUCCIÓN

Para las instituciones de educación superior el papel que juega el programa de tutoría académica es muy importante. Tener la oportunidad de mantener una comunicación constante y de manera directa con el alumno, tiene como propósito fundamental, apoyarlo en su proceso de adaptación en el inicio de su ingreso a los estudios de licenciatura; ayudarlo a conocer el ambiente universitario, las instalaciones académicas, los laboratorios y equipo disponible, la biblioteca y bibliografía existente; explicarle el contenido del plan de estudios que deberá acreditar para que pueda planear su actividad académica; entre los propósitos de las tutorías se encuentra asesorar al alumno en el control curricular a través de un apoyo directo al momento de escoger las materias que habrá de cursar en el siguiente semestre; de la misma manera se motiva al alumno para que realice sus prácticas profesionales, las cuales le darán la oportunidad de relacionarse de una manera directa con los sectores productivos o de servicios, en los cuales prestará sus servicios profesionales al egresar; uno de los propósitos fundamentales de la tutoría es responder las preguntas e inquietudes de los alumnos de una manera clara, de tal forma que éste se sienta bien informado y pueda tomar decisiones adecuadas de una manera segura y confiable.

En la medida que la institución académica logre mantener bien informado al alumno, le oriente y le ayude en su trayecto por la universidad, evitará el rezago y la deserción académica, asegurando con esto mantener un nivel aceptable de eficiencia terminal y el egreso de profesionistas debidamente preparados. No obstante la importancia del programa de tutoría académica, en el desarrollo de esta investigación, no fue posible encontrar investigaciones sobre el tema hacia dentro de la Facultad de Ciencias Administrativas (FCA) de la Universidad Autónoma de Baja California (UABC), que permitieran conocer antecedentes sobre el comportamiento y resultados del programa, ya sea desde el punto de vista del personal docente o de los alumnos. Por este motivo en esta investigación se pretende conocer cuál es la apreciación que tiene el estudiante sobre este programa, si para los alumnos desde su punto de vista, ¿Consideran que el programa de tutoría académica es competitivo en brindarles apoyo, orientación y ayuda a lo largo de sus estudios de licenciatura, de tal forma que les permita concluir con éxito su carrera profesional?

## REVISIÓN LITERARIA

Las tutorías académicas en el ámbito nacional según Romo (2006), tuvieron como finalidad establecer un programa de atención personalizada a los estudiantes de licenciatura, la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) en el año de 1999, convocó de entre sus afiliados a investigadores y académicos de universidades públicas, con la finalidad de elaborar una propuesta para establecer un programa para orientar y asesorar a los alumnos de licenciatura. De los trabajos realizados en esta convocatoria se desarrolló un documento al que se denominó *Programas Institucionales de Tutoría, una propuesta de la ANUIES para su organización y funcionamiento de las instituciones de educación superior*, el cual tiene como propósito apoyar al alumno de educación superior a través de tutorías con la finalidad de que logre terminar sus estudios en el plazo establecido en el programa educativo. En este sentido, para el grupo de trabajo de la ANUIES que hizo la propuesta para establecer el programa de tutorías en las instituciones de educación superior, la tutoría tiene como finalidad asistir al alumno durante lo largo de su estancia y formación académica, a través de asistencia personalizada, proporcionada por un docente competente que ha sido capacitado para esta labor, tomado como base las teorías del aprendizaje más que las de enseñanza.

En este programa los diferentes actores deben tener muy claro su participación y compromiso institucional: directivos, docentes, administrativos, técnicos y el alumnado; mismos que deben actuar de manera coordinada para garantizar el éxito de las acciones. A partir del primer semestre del año 2000 los esfuerzos realizados por la ANUIES, en la implantación de programas de tutorías, han sido incluidos en la

política federal a través del Programa Nacional de Educación (2001-2006). A partir de entonces se han destacado las ventajas que aporta este programa, sus limitaciones u obstáculos y la forma de solventarlos.

De acuerdo con el programa institucional de tutorías (ANUIES, 1999), en términos generales para las Instituciones de educación superior, las tutorías son de gran importancia, puesto que representan un recurso necesario para lograr un desempeño académico adecuado del estudiante, apoyan principalmente en los siguientes aspectos. Sirven para adaptarse del bachillerato a la universidad, informan sobre vida universitaria, orientación sobre el plan de estudios, apoyan en la selección de la carga académica cuando hay atraso en algunas materias, brindan apoyo en la toma de decisiones en el avance del plan de estudios, se traducen en mayor control del avance del alumno, dan atención a preguntas, inquietudes, proporcionan información acerca de los maestros y de las instalaciones de la escuela y dan a conocer el reglamento académico, les hace más ameno el paso por la universidad, sirven para fomentar la integración y la convivencia entre los alumnos, proporcionan seguridad y confianza en la toma de decisiones.

Además de los anteriores, las tutorías brindan orientación académica y psicológica, los alumnos se sienten respaldados por un programa creado para ellos, ayudan a despertar el interés del alumno en su formación, proporcionan información sobre el programa de becas a estudiantes, dan a conocer el programa de becarios, informan y fomentan las actividades culturales y deportivas, dan a conocer los programas de movilidad estudiantil, orientan sobre los requerimientos del idioma extranjero, informan sobre programas de servicio social, fomentan las prácticas profesionales, promocionan las estancias de aprendizaje, orientación y apoyan al estudiante en conflictos académicos, representan un apoyo en el desempeño académico y personal del estudiante. Desde el punto de vista de los docentes sobre las tutorías, éstas buscan: Orientar, apoyar, acompañar y guiar a los alumnos durante su trayectoria académica, proporcionarles información, instruirlos en las técnicas de estudio necesarias, estimular su autonomía como estudiantes a través de la solución de problemas, abatir el rezago, la reprobación, y la deserción, elevar el promedio de egreso y de eficiencia terminal, mejorar los índices de desempeño académico, desarrollo de valores, hábitos, actitudes, y el aumento de la probabilidad de tener éxito en sus estudios.

Según Romo (2006) el programa de tutorías se estableció como un recurso de orientación dirigido al alumno de licenciatura, para apoyarlo en su adaptación al ambiente académico y a los procesos de enseñanza, a identificar sus habilidades para el aprendizaje, y el trabajo individual y colectivo, con el fin de aconsejarle y ayudarlo a alcanzar sus objetivos académicos de manera satisfactoria, en el plazo estipulado en el programa académico. De acuerdo con la autora, este programa también tiene como finalidad disminuir los problemas de deserción, rezago académico y bajo aprovechamiento, a la vez pretende aumentar los niveles de egreso y titulación de todos los programas de licenciatura.

Menciona Romo (2006) que a través del programa de tutorías las instituciones de educación superior persiguen aumentar la tasa de titulación, disminuir los índices de reprobación, de rezago, promover la participación del alumnado en el programa de tutorías, contar con un modelo propio de tutorías, elevar el rendimiento académico, lograr la integración plena del estudiante en su proceso de formación, desarrollar habilidades y valores en el tutorado, elevar la producción y articulación de los cuerpos académicos, propiciar el aprendizaje autodirigido. En otro sentido, desde el punto vista de Correa (2005), la competitividad de una institución educativa se determina por su manera intrínseca de ser en el ámbito socioeconómico y cultural en el que se desenvuelve, teniendo como parámetros: tener presencia en un amplio sector del mercado como resultado de su capacidad de innovación cuyo nivel es superior al de la competencia, mantener sistemas administrativos y programas académicos arriba del nivel medio con respecto a otras instituciones.

Por su parte según Moschen (2005), en el plano educativo al hablar de la competitividad institucional, no remite de manera directa a concebir una institución educativa con un alto nivel de equipamiento tecnológico, existen estudios que revelan un orden de preferencia por factores como orientación

confesional, enseñanza mixta, práctica de deportes, clima institucional adecuado, un trato personal y comunicación. Es fundamental considerar la combinación de ciertos factores dentro de la institución, así como la capacidad de innovación como una herramienta para construir las ventajas competitivas, que permitan construir un proyecto educativo que tenga un alto significado para la sociedad.

Para los alumnos la asignación de un tutor significa la posibilidad de contar con asesoría a lo largo de su carrera, mantenerse orientados, resolver dudas y tomar decisiones adecuadas respecto de su carga académica. En el mismo sentido, de acuerdo con la versión de Martínez (2006), en la Universidad Autónoma de Baja California, el sistema de tutorías inició como un subproyecto para el funcionamiento de la flexibilidad curricular, sin embargo a partir de 1995 hubo una restricción de horas para tutorías, debido a la imposibilidad de la institución para realizar pagos por esa actividad, fue hasta 1999 cuando se autoriza la gestión y pago de tiempo por este concepto.

Por otra parte y de acuerdo con lo que establecen los lineamientos generales para la operación de las tutorías académicas (Cuamea, 2012), en la Universidad Autónoma de Baja California desde el año de 1992 se estableció el Proyecto Universitario de Flexibilización Curricular, mismo que tenía como base la identificación y diseño de subproyectos, a través de los cuales surgió el Sistema Tutorial Universitario, como una herramienta de estrategia formativa y metodológica en apoyo al nuevo modelo educativo de la universidad. En este sentido se considera la tutoría académica un proceso a través del cual se proporciona información de manera sistemática al alumno, para que esté en posibilidad de planear su proyecto académico y profesional, con el apoyo de un tutor, que conocerá de sus necesidades y con base en la normatividad le proporcionará los apoyos institucionales disponibles, con pleno respeto a su libertad de decidir su trayectoria académica. Más tarde en el año de 1994-2 el proyecto de flexibilización estableció un módulo dirigido a la capacitación del profesorado en el desempeño de su actividad tutorial.

Desde entonces, a partir de los planes de desarrollo institucional (2002 y 2007) se ha impulsado la continuidad del sistema tutorial, hasta llegar al actual Plan de Desarrollo Institucional (2011-2015) a través del cual se impulsa la formación de los alumnos, mediante un sistema de tutorías que atiende las demandas que manifiesta la comunidad universitaria, respecto de mejorar, evaluar y redefinir la función de las tutorías acorde con el modelo educativo de la universidad. De la misma manera, la Facultad de Contabilidad y Administración hoy Facultad de Ciencias Administrativas, estableció en noviembre de 2005 su plan de desarrollo (2005-2008). Uno de los propósitos del plan de desarrollo era establecer un programa de tutoría académica para apoyar al alumno en el desarrollo de habilidades de aprendizaje, a permanecer en los programas académicos y a egresar de manera exitosa.

Para lograr su cometido, en este programa se establecen las siguientes estrategias: Definir las actividades de tutoría tendientes a apoyar el aprendizaje de cursos de formación básica y estratégicos, el desarrollo de habilidades de asesoría y de promoción de las diferentes modalidades de titulación; crear un consejo para evaluar el impacto del sistema de tutorías; fomentar la participación de maestros, psicólogos e investigadores en el programa, capacitar a los tutores para el manejo del sistema en línea y presencial y en el uso de la base de datos para dar seguimiento educativo; desarrollar métodos de estudio independiente bajo la supervisión y responsabilidad del tutor; elaborar un programa que permita brindar tutorías a través de medios electrónicos a los alumnos. El programa de tutoría académica se instituye para apoyar al estudiante de manera integral, tanto en su desarrollo humano como en su formación académica y profesional, fomentando su participación activa de una manera propositiva en el modelo educativo como estudiante y como profesionista. El contenido del manual de tutorías de la Facultad de Ciencias Administrativas, en gran parte se integra con los elementos considerados por la ANUIES en su documento llamado, *Programas Institucionales de Tutoría, una propuesta de la ANUIES para su organización y funcionamiento de las instituciones de educación superior* (elaborado en diciembre de 1999), en este documento se recogen los objetivos de su aplicación, así como los beneficios y utilidades que brinda al estudiante durante su trayectoria académica para su formación profesional.

## MÉTODO

En la presente investigación se realiza un análisis del programa de tutoría académica establecido en la FCA de la UABC, para determinar desde el punto de vista de los alumnos si este programa los apoya en su adaptación académica del nivel medio superior al nivel superior, si consideran que es de utilidad en su orientación y apoyo durante el tiempo que cursan sus estudios de licenciatura. El presente estudio es de tipo descriptivo de corte cuantitativo. La investigación se realiza teniendo como universo a los alumnos de octavo semestre de las seis carreras que se ofrecen en la FCA.

En el desarrollo de esta investigación se hizo un análisis de la bibliografía existente sobre el tema de programas de tutorías académicas. Se midió la variable independiente de adaptación y utilidad académica, a través de sus principales dimensiones e indicadores que determinan la competitividad del programa de tutorías para este estudio. Se elaboró un instrumento de medición el cual consta de ocho opiniones de respuesta, mismo que fue analizado en su confiabilidad mediante la aplicación del paquete estadístico Statistical Package for the Social Sciences (SPSS) por sus siglas en inglés, se le aplicó la prueba estadística Alpha de Cronbach, cuyo factor obtenido fue de .95 del cual se desprende que el instrumento reúne las condiciones satisfactorias para su aplicación. El número de cuestionarios aplicados fue a una muestra de 195 alumnos, una vez capturada la información se procedió al análisis de la información recabada a través de estadística descriptiva, con la finalidad de obtener información que muestre la percepción del alumno respecto del programa de tutorías de la FCA. La variable analizada del programa de tutorías académicas, forma parte de las que integran la propuesta realizada por la ANUIES, como los factores que deben considerarse al establecer y aplicar un programa de esta naturaleza.

## RESULTADOS

Los siguientes parámetros sobre las tutorías fueron dados a conocer a los alumnos de la FCA para que de acuerdo a su percepción escogieran la opción o respuesta que les identifica con el programa analizado.

Figura 1: Conozco en Que Consiste el Programa de Tutorías

La Figura 1 muestra que el 42% de los alumnos están totalmente de acuerdo en conocer el programa de tutoría académica, un 37% más dijo si conocerlo, un 17% manifestó conocerlo de manera regular, un 3% lo conoce muy poco y el 1% dijo no conocerlo.

Figura 2: las Tutorías Sirven Para Adaptarse al Ambiente Académico

En la Figura 2 se presenta que el 21% de los alumnos encuestados manifestó estar totalmente de acuerdo en que las tutorías sirven para adaptarse al ambiente académico, mientras que un 42 % están de acuerdo en que si son útiles, el 23% dijo que son útiles de manera regular, para un 9 % son de poca utilidad, en tanto que el 5% restante no les encuentra utilidad.

Figura 3: las Tutorías Apoyan la Adaptación de Bachillerato a Profesional

En la Figura 3 para el 15 % de los alumnos encuestados, las tutorías apoyan totalmente la adaptación de bachillerato a profesional, otro 36% están de acuerdo en que si presentan un apoyo, para un 29% el apoyo que prestan es regular, el 14% consideran que es muy poco el apoyo que prestan y según el 6 % el apoyo es nulo.

Figura 4: las tutorías informan sobre la vida universitaria.

La Figura 4 muestra que el 17% de los alumnos percibe que las tutorías informan totalmente sobre la vida universitaria, mientras que un 31 % coinciden en que si informan al respecto, para el 33 % de los alumnos la información que dan es regular, un 15 % considera que la información es muy poca y para el 4% restante la información que prestan es nula.

Figura 5: Las Tutorías Orientan Sobre El Plan De Estudios

La Figura 5 muestra la percepción que tienen los alumnos en cuanto a la orientación que prestan las tutorías sobre el plan de estudios, en este sentido el 29 % coincidió en estar totalmente de acuerdo en que sí orientan, otro 42% están de acuerdo en que sí orientan, por su parte el 24% dijeron que la orientación es regular, según el 4% se recibe muy poca orientación y para el 1% restante no se da información al respecto.

Figura 6: las Tutorías Brindan Información Sobre Maestros

En la Figura 6 se muestra la opinión de los alumnos respecto de la información que brindan las tutorías sobre los maestros, al respecto el 12 % coincidió en estar totalmente de acuerdo en que sí se brinda información, opina un 22 % estar de acuerdo en que sí se brinda información, para un 30% la información recibida es regular, un 24 % más opinó que es muy poca la información que reciben, un 12% manifestó que no recibieron información.

Figura 7: las Tutorías Informan Sobre las Instalaciones de la Escuela

En la Figura 7 se muestra que el 12 % de los alumnos coincidió estar totalmente de acuerdo en que las tutorías les informan sobre las instalaciones de la escuela, según un 34 % si reciben información, en opinión de un 19 % la información que ofrece el programa es regular, para un 18% la información que se recibe es poca y un 17% opina que no reciben información sobre este particular.

Figura 8: las Tutorías Informan Sobre el Reglamento Académico

La Figura 8 muestra que un 9% de los alumnos encuestados manifestó estar totalmente de acuerdo en que las tutorías les informan sobre el reglamento académico, mientras que otro 20% coincidió en estar de acuerdo en que si le brindan información al respecto, para el 32 m% la información es regular, un 24% dijo que la información recibida es muy poca y según el 15 % restante la información que recibieron fue nula.

Una vez realizado el análisis de la información recabada se cuenta con los elementos necesarios de acuerdo con la opinión de los encuestados, para determinar si el programa de tutorías académicas de la FCA, desde el punto de vista de los estudiantes es competitivo. En este documento se analiza solo una de seis variables que integran de manera completa la investigación.

## CONCLUSIONES

Primera. De la Figura 1 se puede concluir que el 79% de los alumnos considera que conocen en que consiste el programa de tutorías, lo cual puede interpretarse que hubo influencia del programa hacia el alumno durante su estancia en la universidad, por consiguiente si logra su objetivo de mantener al alumno informado Segunda. De acuerdo con la Figura 2 en la cual se pregunta si las tutorías sirvieron a los alumnos para adaptarse al ambiente académico, considerando que el 63 % contestó de manera favorable y un 23% manifestó que de manera regular, se concluye que con estos parámetros el programa de tutoría si es competitivo. Tercera. De acuerdo con la Figura 3 en cuanto al resultado obtenido al preguntarle a los alumnos, si las tutorías les apoyan en su adaptación de bachillerato a profesional, el 51 % estuvo de acuerdo en la utilidad del programa, mientras que un 33% percibió que hubo un apoyo regular, por consiguiente con este resultado se puede confirmar que si es competitivo el programa de tutorías que se aplica en la FCA. Cuarta. De acuerdo con la Figura 4 al preguntarse a los alumnos si la tutoría les informa sobre la vida universitaria, un 48% manifestó haber estar satisfecho con la información recibida, mientras un 33 % dijo que recibió información regular al respecto, este resultado confirma la eficacia del programa de tutoría académica. Quinta. En la Figura 5, la respuesta dada por los estudiantes al preguntarles si consideran que las tutorías orientan sobre el plan de estudios, un 71% contestó de manera favorable, mientras que un 24% percibió una orientación regular, de esta manera se confirma que el programa de tutorías es competitivo al dar orientación a los alumnos.

Sexta. En la Figura 6 la respuesta de los alumnos al preguntarles si consideraban que las tutorías les brindan información sobre maestros, se encontró que un 34 % del alumnado coincidió en que sí recibían información al respecto, para un 30% la información recibida fue regular, un 24 % opinó que la información recibida fue muy poca, mientras que el 12% asegura no haber recibido información al respecto; en este sentido se considera que es necesario incluir mayor información sobre los docentes en el

programa de tutorías, para mantener mejor informados a los alumnos y que ellos puedan elegir con anticipación con quien cursar su carga académica.

Séptima. El resultado de la figura 7 muestra que el 46 % de los alumnos están de acuerdo en que el programa de tutorías les informa sobre las instalaciones de la escuela, mientras que un 32% opinó que la información recibida fue regular, un 18% coincide en que la información recibida es muy poca, además el 17% restante manifestó que la información recibida fue nula; de lo anterior se desprende que existe la necesidad de incluir mayor información sobre las instalaciones universitarias, para que el alumno pueda hacer un mejor uso de las mismas. Octava. En la Figura 8 donde se pregunta a los alumnos si desde su percepción las tutorías les informan sobre el reglamento académico, solo un 29% manifestó haber recibido este tipo de información, mientras que un 32 % dijo que la información que recibió fue regular, un 24% haber recibido muy poca información sobre el particular y el 15% restante coincidió en que la información recibida fue nula; lo anterior pone de manifiesto la necesidad de dar a conocer los estatutos académicos en el programa de tutorías a los alumnos, con la finalidad de mantenerlos informados y darles a conocer sus derechos y obligaciones de manera personal.

Virginia Guadalupe López Torres, Universidad Autónoma de Baja California

## **RESUMEN**

*Este trabajo se caracteriza por ser de tipo descriptivo con diseño no experimental, cuyo objetivo es presentar el análisis de la validez y confiabilidad de un instrumento de medición constituido inicialmente por 23 ítems que evalúan la gestión de la diversidad de una empresa del sector aeroespacial a través de cinco variables: Orientación y capacitación, Ambiente organizacional incluyente, Interacción entre grupos diversos, Aceptación por la diversidad y Atributos de la diversidad. Para lograrlo la estrategia metodológica se planeó en cuatro etapas en la primera etapa se realizó el abordaje teórico del constructo y el diseño del instrumento de medición; en la segunda etapa se llevó a cabo la evaluación del contenido a través de un panel de expertos; en la tercera etapa se realizó la validez de constructo mediante un análisis factorial exploratorio; en la cuarta, se analizó la consistencia interna a través del alfa de Cronbach. El instrumento se aplicó a una muestra de 416 empleados del sector aeroespacial, con ella se obtuvo un coeficiente de confiabilidad de 0.900; el análisis de los ítems no precisó ninguna eliminación de éstos y finalmente el instrumento quedó conformado por 23 ítems resultando válido y confiable para medir la gestión de la diversidad en el contexto estudiado*

**PALABRAS CLAVES:** Gestión de la diversidad, Industria aeroespacial, Validez de constructo, Fiabilidad

## **THE VALIDITY AND RELIABILITY OF A MEASUREMENT INSTRUMENT TO THE DIVERSITY MANAGEMENT. A STUDY OF AN AEROSPACE COMPANY**

### **ABSTRACT**

*This is a descriptive type paper with a non-experimental design, and its goal is to present an analysis of the validity and reliability of a measurement instrument, conformed by 23 items that evaluate diversity management of an aerospace industry firm through five variables: Orientation and training, Inviting organizational atmospheres, Interaction within diverging groups, Diversity acceptance, and Diversity attributes. In order to achieve this, the methodological strategies were planned in four stages. In the first stage we accomplished the construct's theoretical approach and the instrument's measurement design; in the second stage an expert panel carried out the evaluation of content; in the third stage the validity of the construct was reached through an exploratory factor analysis; in the fourth one, internal consistency was analyzed through Cronbach's alpha coefficient. The instrument was applied to a sample of 416 aerospace industry employees, obtaining a reliability coefficient of 0.900; analysis did not require elimination of any items and at the end the instrument, which proved to be valid and reliable to test diversity management in the context considered, was shaped by 23 items.*

**JEL:** C52, L10

**KEY WORDS:** Diversity management, Aerospace industry, Construct validity, Reliability

## INTRODUCCIÓN

El desarrollo de la industria aeroespacial en México refleja la tendencia mundial: las actividades de menor valor agregado se desarrollan en países periféricos y las actividades de primer nivel en las grandes industrias ubicadas en Estados Unidos y Europa (Hualde y Carrillo, 2007). En el 2006, el 31% de las empresas aeroespaciales asentadas en México se localizan Baja California cuyo origen se remonta 40 años atrás; su objetivo es orientar la cadena de valor hacia procesos y productos de mayor valor agregado (Hualde y Carrillo (2007). En el 2008 se reportó la existencia de 48 plantas que generan 14,220 empleos, de las cuales 17 empresas son grandes, 16 medianas y 17 pequeñas y micro empresas (Producen, 2008).

Este asentamiento se vio favorecido por la ubicación estratégica de México en relación con los Estados Unidos y Canadá, ofrece potencialidades significativas de crecimiento respecto a las exportaciones de México. La distribución espacial de estas empresas del agrupamiento aeroespacial a diciembre de 2008, según información tomada de Producen 2008, es la siguiente: Tijuana tiene 24 plantas, 50% del total de las plantas ubicadas en el estado con 6,243 empleados (43.9%); Mexicali, 16 plantas (33.3%) con 6218 empleados (43.73%); Ensenada, 4 plantas (8.3%) con 1,072 empleados (7.5%); y, Tecate, 4 plantas (8.3%) con 687 empleados (4.8%); en Rosarito no se encuentran ubicadas plantas de este giro de industria. De las 48 empresas ubicadas en el estado de Baja California, 40 son de origen estadounidense y 8 de origen nacional; estas últimas, enfocadas principalmente a la proveeduría de este conglomerado industrial. Las principales actividades que realizan en México este tipo de organizaciones industriales son: componentes de maquinaria, arneses y cables, componentes para sistemas de aterrizaje, inyección plástica, intercambiadores de calor, equipos de precisión, reparación de superficies de sustentación, sistemas de audio y video, componentes electrónicos e interiores (Producen, 2006).

Dada la importancia que reviste para la economía de Baja California y considerando el multiculturalismo de estas empresas es conveniente buscar herramientas que permitan identificar si las empresas del giro aeroespacial gestionan la diversidad. Hasta este momento no se ha encontrado en esta región un instrumento que permita esta identificación; de ahí que, el presente trabajo analiza la validez y confiabilidad de un instrumento a través del cual sea posible estudiar la gestión de la diversidad que se aplica en las organizaciones industriales ubicadas en la ciudad de Mexicali, Baja California, dentro del agrupamiento de empresa maquiladora del giro aeroespacial, ya que éste se encuentra integrado por empresas específicamente de origen estadounidense, que aprovechan la ventaja de la ubicación geográfica y los beneficios aduanales que les brinda el programa de la industria maquiladora ubicada en la frontera norte de México-Estados Unidos.

## METODOLOGÍA

El objetivo de este trabajo es, precisamente, desarrollar una herramienta que permita identificar la Gestión de la diversidad y que reúna las características psicométricas adecuadas. La investigación es aplicada y su estrategia metodológica se basó en un estudio descriptivo con diseño no experimental. La unidad de análisis de esta investigación fue una empresa transnacional de origen estadounidense perteneciente a la industria de giro aeroespacial ubicada en la ciudad de Mexicali, B.C. Para efectos de este estudio, la población estuvo conformada por 104 grupos de supervisor-subordinado de una empresa aeroespacial, los participantes fueron elegidos a través de un muestreo censal. Para la recolección de los datos, se diseñó un cuestionario en el que se establecieron un conjunto de ítems distribuidos en cinco variables que aseguraran la validez del concepto Gestión de la diversidad de acuerdo al contexto aquí presentado; para lograrlo, se tomó en consideración: la revisión bibliográfica de trabajos relacionados con la Gestión de la diversidad, tales como: Cox (1991); Connerly y Pedersen, 2005); Härtel (2004); Nkomo y Cox (1996); Milliken y Martins (1996). El cuestionario en su versión inicial se integró por 23 ítems agrupados en

cinco variables, la primera de ellas referida a la Orientación y capacitación, con 8 ítems; la segunda al Ambiente organizacional incluyente, con 4 ítems; la tercera a la Interacción entre grupos diversos, con 4 ítems; la cuarta relacionada con la Aceptación por la diversidad, con 3 ítems y; finalmente, la cuarta referida a los Atributos de la diversidad, con 4 ítems (Tabla 1). El escalamiento fue de tipo Likert, donde 1) Muy en desacuerdo, 2) En desacuerdo, 3) Algo en desacuerdo, 4) Algo de acuerdo, 5) De acuerdo y 6) Totalmente de acuerdo. La puntuación mínima para los ítems fue de 1 y la máxima de 6.

La validez de contenido del instrumento se llevó a cabo mediante el Modelo de Lawshe (1975) modificado por Tristán y Molgado (2008). Se trabajó con 5 expertos, dos en la parte metodológica y tres en el área de la Gestión de la diversidad a quienes se les pidió que evaluaran por separado los ítems de un cuestionario de acuerdo a su relevancia definida como la importancia del ítem para la evaluación de la Gestión de la Diversidad, con base en la siguiente escala: 1) Esencial, 2) Útil pero no esencial, y 3) No importante. La validez de constructo se determinó a través de un análisis factorial exploratorio (AFE). Para la extracción de factores se empleó el método de componentes principales aplicando rotación ortogonal *Varimax*. El método utilizado para medir la fiabilidad fue la determinación del coeficiente alfa de Cronbach, según un consenso general sobre el límite inferior del alfa es de 0.70, pudiendo bajar hasta 0.60 solo en casos de investigaciones exploratorias (Agresti y Finlay, 1986).

## RESULTADOS

Después de abordaje teórico el instrumento (versión inicial) fue sometido a juicio de los expertos y así se determinó la validez global del instrumento con el modelo Lawshe encontrando un resultado de 0.83 ó 83% lo que puede considerarse como satisfactorio. Desde este punto de vista, el instrumento que se elaboró fue exitoso ya que después de haber sido valorado por los cinco expertos, tanto prácticos como metodológicos, logró obtener una puntuación por encima de 0.58 (Tristán y Molgado, 2008). Posteriormente se efectuó un análisis factorial exploratorio de primer grado, mediante el método de análisis de componentes principales con rotación tipo *Varimax*, previamente verificando la adecuación muestral de los datos disponibles mediante dos indicadores del grado de asociación de las variables como son las pruebas de Kaiser-Meyer-Olkin (KMO) y de esfericidad de Barlett.

El KMO fue de .897 y la prueba de esfericidad de Barlett ( $C^2=4263.965$ ;  $p=.000$  para 253 gl), lo cual indica que los datos son adecuados para el uso del modelo de análisis factorial (Lévy y Varela, 2003). El análisis factorial arrojó una variación explicada de 60.54% (Tabla 1) y encontró que todos los ítems tiene una carga factorial  $>0.45$  (Tabla 2, 3, 4, 5 y 6), por tanto, se tomó la decisión de incluirlos en el cuestionario. En el primer factor se explica el mayor porcentaje de la variabilidad de los datos (18.45%) y se observa que todos los ítems (7, 12, 13, 14, 15, 16, 17, 18) hacen referencia Orientación y capacitación a los empleados, por tanto, estos 8 ítems integran este primer factor (Tabla 2).

Tabla 1: Varianza explicada

Factores	Eigenvalores			Extracción (Suma de las saturaciones al cuadrado)			Rotación (Sumas de las saturaciones al cuadrado)		
	Total	% Varianza explicada	% Acumulado	Total	% de la Varianza	Acumulado %	Total	% de la varianza	% Acumulado
1	7.698	33.469	33.469	7.698	33.469	33.469	4.245	18.458	18.458
2	2.238	9.729	43.198	2.238	9.729	43.198	2.759	11.996	30.454
3	1.468	6.382	49.580	1.468	6.382	49.580	2.631	11.440	41.894
4	1.344	5.842	55.422	1.344	5.842	55.422	2.200	9.565	51.460
5	1.178	5.124	60.546	1.178	5.124	60.546	2.090	9.086	60.546

En esta tabla se presenta la variación explicada de los ítems. El primer factor explica el 18.45% de la variabilidad, el segundo factor explica el 11.99%, el tercer factor explica el 11.44%, el cuarto factor explica el 9.56% y finalmente, el quinto factor explica el 9.08% de la variabilidad de los datos. Fuente: Elaboración propia con datos del trabajo de campo

Tabla 2: Cargas Factoriales del Factor 1 (Orientación y Capacitación de los Empleados)

#	Í t e m	Carga Factorial
16.	Se da entrenamiento para reducir los prejuicios culturales	.751
15.	Se imparten seminarios de igualdad de oportunidades	.751
17.	Se da entrenamiento en la solución de conflictos inter-grupales	.720
14.	Se cuenta con programas de mentores para la integrar redes informales entre los empleados	.680
18.	Se imparte entrenamiento en la administración y valoración de la diversidad	.647
13.	Se trata explícitamente la diversidad cultural dentro de la declaración de la Misión de la empresa	.612
7.	Se capacita al personal de la organización en aspectos relacionados con la apreciación de la diversidad cultural	.594
12.	Los comités clave dentro de la organización están formados por representantes de los diversos grupos culturales	.479

*Esta tabla presenta los ítems que dieron cargas elevadas (>.5) en el Factor 1, dado que todos los ítems se refieren a la preocupación de la organización por capacitar o entrenar a sus empleados, este factor fue denominado: Orientación y Capacitación de los empleados. Elaboración propia con datos del trabajo de campo*

En un segundo factor se detecta que los ítems relacionados con el Ambiente organizacional incluyente (19, 20, 21, 22) presentan cargas factoriales altas (>0.5), y explican el 11.99% de la variabilidad; por tanto, estos 4 ítems conforman este segundo factor (Tabla 3).

Tabla 3: Cargas factoriales del Factor 2 (Ambiente organizacional incluyente)

#	Í t e m	Carga Factorial
20.	Es común que en mi empresa las personas nos tratemos con dignidad y respeto mutuo	.731
21.	Es común que en mi empresa los hombres y mujeres con experiencia amplia y diversa formen equipos multidisciplinarios	.688
19.	En mi empresa existen programas para promover a las personas por sus propios méritos	.672
22.	La diversidad de los empleados de nuestra empresa beneficia a nuestros clientes en todo el mundo	.651

*Esta tabla describe los ítems que dieron cargas elevadas en el Factor 2, en el cual se observa que todos los ítems se relacionan con el ambiente que se percibe en la empresa por lo cual este factor fue denominado: Ambiente organizacional incluyente. Elaboración propia con datos del trabajo de campo.*

En el tercer factor se comprueba que los ítems de mayor ponderación son 23, 24, 25 ya que tienen que ver con la Interacción entre grupos diversos y que explican el 11.44% de la variabilidad de los datos; por tanto, estos 3 ítems constituyen el tercer factor (Tabla 4).

Tabla 4: Cargas Factoriales del Factor 3 (Interacción Entre Grupos Diversos)

#	Í t e m	Carga Factorial
23	En las políticas y prácticas de la empresa existe tolerancia y respeto hacia todos los empleados, sin importar raza, grupo étnico, género, orientación sexual, credo religioso o cualquier otra identidad de los empleados	.885
24.	Mi empresa fomenta un ambiente incluyente y apoya a los equipos diversos, lo que mejora la creatividad e innovación y los resultados organizacionales	.864
25	La empresa prepara a sus líderes para la apreciación de la diversidad en sus equipos de trabajo	.846

*Esta tabla muestra los ítems que presentan las cargas factoriales más elevadas (>.5) en el Factor 3 y que se relacionan con la interacción entre los grupos. Elaboración propia con datos del trabajo de campo*

Lo que respecta al cuarto factor, ahí se ubican los ítems 19, 20, 21, 22 cuyas cargas factoriales son mayores que 0.50 las cuales explican el 9.56% de la variabilidad orientados a la Aceptación por la diversidad; por tanto, estos 4 ítems integran este cuarto factor (Tabla 5).

Tabla 5: Cargas factoriales del Factor 4 (Aceptación de la diversidad)

#	Í t e m	Carga Factorial
20.	Es común que en mi empresa las personas nos tratemos con dignidad y respeto mutuo	.731
21.	Es común que en mi empresa los hombres y mujeres con experiencia amplia y diversa formen equipos multidisciplinarios	.688
19.	En mi empresa existen programas para promover a las personas por sus propios méritos	.672
22.	La diversidad de los empleados de nuestra empresa beneficia a nuestros clientes en todo el mundo	.651

*En esta tabla se presentan los ítem que presentan cargas factoriales elevadas (>.5) en el Factor 4 y que se relacionan con la aceptación a la diversidad. Elaboración propia con datos del trabajo de campo*

Finalmente el quinto factor explica el 9.08% de la variabilidad con 4 ítems cuyas cargas factoriales son mayores a 0.5; los ítem que integran este factor son 1, 2, 3, 4 (Tabla 6).

Tabla 6: Cargas Factoriales del Factor 5 (Atributos de la Diversidad)

#	Í t e m	Carga Factorial
2.	Tengo compañeros de trabajo originarios de distintos países del mundo	.680
4.	Tengo compañeros que hablan algún otro idioma adicional al castellano	.649
3.	Tengo compañeros que hablan alguna lengua indígena además del castellano	.625
1.	Tengo compañeros de trabajo originarios de distintos estados y regiones de México	.562

*Esta tabla describe los ítems que dieron cargas elevadas en el Factor 5, en ella se observa que todos los ítems se relacionan con la existencia en la empresa de personas de origen y habla extranjera. Elaboración propia con datos del trabajo de campo.*

Por último, en la cuarta etapa se determinó la fiabilidad del instrumento a través del análisis de consistencia interna, alfa de Cronbach, que se utiliza para evaluar la homogeneidad de los distintos ítems de una misma variable y del cuestionario global; este análisis reveló que la fiabilidad global fue de 0.900. También, se analizó la fiabilidad de cada una de las subescalas (Variables) del instrumento, encontrando que la variable Aceptación por la diversidad es la que presenta la fiabilidad más alta de  $\alpha = 0.926$  con respecto a las otras variables; y, la variable Atributos de la diversidad con la fiabilidad más baja de  $\alpha = 0.592$  (Tabla 7).

Tabla 7: Coeficientes de Fiabilidad

DETERMINANTES DE LA GESTIÓN DE LA DIVERSIDAD	ALFA DE CRONBACH (unidad de análisis N=416)	NO. DE ÍTEMS
Orientación y capacitación a los empleados	.873	8
Ambiente organizacional incluyente	.600	4
Interacción entre grupos diversos	.776	4
Aceptación por la diversidad	.926	3
Atributos de la diversidad	.592	4
<b>GENERAL</b>	<b>.900</b>	<b>23</b>

*Aquí se describen los índices de confiabilidad de cada una de las variables que integran la Gestión de la diversidad, así como el número de ítems que conforman cada una de las variables. Fuente: Elaboración propia, cálculo efectuado a través del SPSS 19*

## CONCLUSIONES

Como ya se mencionó anteriormente, este trabajo tuvo por objetivo validar un instrumento para la medir la Gestión de la diversidad, y que a través del análisis riguroso permitió probar el valor de las variables: Orientación y capacitación a los empleados, Ambiente organizacional incluyente, Interacción entre grupos diversos, Aceptación por la diversidad y Atributos de la diversidad. En general, los resultados revelan que las cinco variables propuestas para el presente estudio en su mayoría presentan cargas factoriales satisfactorias ( $\geq 0.47$ ), las cuales son aptas para ser incluidas como factores integrantes del instrumento; así el modelo se integra por 23 ítems justificado a través de la validación de contenido y de constructo, así como por la fiabilidad de 0.900 determinada por el alfa de Cronbach.

En este sentido, la determinación de la validez de contenido del instrumento mediante el método de Lawshe modificado por Tristán y Molgado (2008) indica, que en su conjunto, los ítems muestran buena claridad en relación a la especificidad del concepto, al alcanzar un Índice de Validez global (CVI) de 0.83 (83%). Por lo que se refiere a la validez de constructo, ésta se determinó mediante el análisis factorial exploratorio empleando el método de análisis de componentes principales con rotación tipo *Varimax*; encontrando una variación explicada del 60.54% y una matriz rotada que permitió identificar cinco factores cuyos ítems alcanzan cargas factoriales superiores a 0.47

La variable de mayor peso corresponde Orientación y capacitación del personal, con 8 ítems; en segundo lugar, la variable referida al Ambiente organizacional incluyente, con 4 ítems; en tercer lugar, la variable Interacción entre grupos diversos, con 4 ítems; en cuarto lugar, la variable Aceptación de la diversidad con 3 ítems; y, finalmente, en quinto lugar, la variables Atributos de la diversidad, con 4 ítems. La confiabilidad del cuestionario determinada a través del alfa de Cronbach en la versión final del instrumento de 23 ítems presentó un índice de fiabilidad global de 0.900, considerándose un puntaje aceptable. Los índices de consistencia interna de cada una de las variables oscilaron entre 0.592 y 0.926, siendo buenos en su totalidad. Con la realización de este trabajo, en el análisis de evaluación se constató que el instrumento desarrollado posee características psicométricas adecuadas, por lo que unido a su brevedad y fácil aplicación, puede servir como base para la realización de futuras investigaciones empíricas y convertirse en una herramienta importante, para identificar la Gestión de la diversidad en empresas del sector aeroespacial.

El aporte del presente estudio fue entonces la validación de un instrumento en el área de Gestión de la diversidad, sustentado en dos razones importantes: primero por considerar esta área como fundamental para el desarrollo de la competitividad en las organizaciones y segundo, pretende servir de modelo metodológico en investigaciones similares del sector aeroespacial. Este estudio persigue que la aportación de datos e información sea de utilidad para la resolución de la problemática que se da como producto del multiculturalismo de los grupos. Así, pues, los beneficiarios del estudio serán los empresarios quienes podrán utilizar la información para ampliar su toma de decisiones entorno a la Gestión de la diversidad.

## RESUMEN

*En este estudio fueron conocidos los conceptos de la reglamentación municipal, examinándose la fundamentación Constitucional, Legal Federal y Local de las facultades que se otorgan a los municipios en la realización de acciones de protección del medio ambiente y recursos naturales, en su análisis, fue considerado el procedimiento que propone Centro Nacional de Desarrollo Municipal, (CEDEMUN) con las adecuaciones pertinentes observadas en la práctica de cada municipalidad, la delimitación de la investigación se circunscribió en la zona sur del Estado de Tamaulipas, en virtud de advertir la situación de regulación de la problemática ambiental de esa región, que según ambientalistas locales, en ésta época ha ido acrecentándose sin que haya habido intervenciones de remediación por parte de las autoridades municipales. Se identificaron en el contenido de los reglamentos ambientales de Tampico y Ciudad Madero, coincidencias y divergencias de algunos temas importantes, encontrándose que estos últimos los incorpora Madero, siendo omiso al respecto Tampico. Tocante a ciudad Altamira aquí no existe reglamento ambiental, solo uno relativo a la cuestión de la limpieza que atañe a la salud. De lo anterior se desprendió que en la zona sur se identifican sus municipios por la inexistencia (Altamira), inconsistencia e inaplicabilidad (Tampico y Cd. Madero) de sus reglamentos ambientales.*

**PALABRAS CLAVES:** Inexistencia, Inconsistencia, Inaplicabilidad, Reglamentación Ambiental, Municipal.

## THE ABSENSE, INCONSISTENCY AND INAPPLICABILITY OF ENVIRONMENTAL REGULATION MUNICIPAL SOUTHERN TAMAULIPAS.

## ABSTRACT

*In this study were known concepts of municipal regulations, examining the Constitutional foundation, Federal and Local Law of the powers granted to municipalities in the implementation of measures to protect the environment and natural resources, in its analysis, it was considered procedure proposed National Center for Municipal Development (CEDEMUN) with suitable adaptations observed in practice in each municipality, the delimitation of the research was limited in the southern state of Tamaulipas, notice under regulation situation environmental problems of the region, which according to local environmentalists, in this era has gone without having had to accrue remediation interventions by municipal authorities. Were identified in the content of the environmental regulations of Tampico and Ciudad Madero, similarities and differences of some important issues, finding that the latter incorporates Madero, Tampico about being ignored. Altamira city concerning environmental regulation does not exist here, only one on the issue of cleaning health concerns. From the above, it emerged that in the southern municipalities are identified by their absence (Altamira), inconsistency and ineffectiveness (Tampico and Ciudad Madero) of environmental regulations.*

**KEY WORDS:** Absence, Inconsistency, unenforceability, Environmental Regulations, Municipal

## INTRODUCCIÓN

En la actualidad, el municipio tiene la responsabilidad constitucional de preservar de manera integral el medio ambiente y los recursos naturales de su territorio. El ayuntamiento con apoyo en la administración municipal por su parte, tiene la obligación de crear y aplicar los instrumentos jurídicos necesarios para alcanzar este cometido. Por lo que se necesita de todo un sistema de acciones que estén articuladas y permitan alcanzar un compromiso que no solo es municipal o estatal sino nacional, y así lograr avanzar hacia un desarrollo sustentable. Sin embargo según Mejía (2007), existe un número considerable de municipios en las entidades federativas que conforman el país que se caracterizan por la inexistencia, inconsistencia e inaplicabilidad de sus reglamentos en materia ambiental, con estas tres características se identifican a los municipios de la zona conurbada del sur del estado de Tamaulipas, Altamira, Tampico y Ciudad Madero. Es por ello que algunos de los especialistas en la materia han asegurado que el municipio es el nivel de gobierno más atrasado en lo que respecta legislación ambiental y por ende de su gestión. Por lo que cuando se habla de reglamentos relacionados al medio ambiente constituye un renglón donde existe un rezago considerable que ha propiciado que algunas ciudades hayan crecido sin orden y sin un progreso evidente.

*Planteamiento del Problema:* Existe un número considerable de municipios en las entidades federativas que conforman el país que se caracterizan por la inexistencia, inconsistencia e inaplicabilidad de sus reglamentos en materia ambiental, con estas tres características se identifican a los municipios de la zona conurbada del sur del estado de Tamaulipas, Altamira, Tampico y Ciudad Madero. Es por ello que algunos de los especialistas en la materia han asegurado que el municipio es el nivel de gobierno más atrasado en lo que respecta a la legislación ambiental y por ende de su gestión. Por lo que cuando se habla de reglamentos relacionados al medio ambiente constituye un renglón donde existe un rezago considerable que ha propiciado que algunas ciudades hayan crecido sin orden y sin un progreso evidente.

### Objetivos

- a. Analizar la inexistencia, inconsistencia e inaplicabilidad de los reglamentos en materia ambiental en los municipios del Sur de Tamaulipas.
- b. Evaluar el impacto de la inexistencia, inconsistencia e inaplicabilidad de los reglamentos ambientales en los municipios del Sur de Tamaulipas y buscar alternativas legales.

*Justificación:* Ante la problemática de los municipios del Sur de Tamaulipas, con respecto a la reglamentación medio ambiental, constituye un renglón donde existe un rezago considerable que ha propiciado que algunas ciudades hayan crecido sin orden y sin un progreso evidente. En nuestros días, el municipio tiene la gran responsabilidad constitucional de preservar de manera integral el medio ambiente y los recursos naturales de su territorio, el ayuntamiento apoyándose en la administración municipal por su parte, deberá crear y aplicar los instrumentos jurídicos necesarios para alcanzar este cometido. Por lo que requiere de todo un sistema de acciones articuladas que le permitan alcanzar el compromiso que no solo es municipal o estatal sino nacional, el avanzar hacia un desarrollo sustentable.

*Limitación:* La presente investigación se limitará a estudiar el fenómeno de la inexistencia, inconsistencia e inaplicabilidad de los reglamentos ambientales, en especial en la zona sur del Estado de Tamaulipas.

*Delimitación:* El presente trabajo se delimitara a estudiar el fenómeno en los municipios conurbados de Altamira, Cd. Madero y Tampico, Tamaulipas.

## REVISIÓN LITERARIA

El Estado Mexicano es una Federación que está constituida por Estados Libres y Soberanos como lo establece la Constitución Política de los Estados Unidos Mexicanos, además de un Distrito Federal; así mismo dichos estados tienen como base de su división territorial y de su organización política-administrativa al Municipio Libre, constituyéndose así los tres órdenes de gobierno. Para cada uno, la Ley Fundamental define sus responsabilidades político-administrativas, ya sea diferenciadas o compartidas entre sí. En el caso del municipio, este es la institución básica de la vida política nacional, el nivel de gobierno más cercano a la población. Según lo señala Martínez (2011) “como órgano político administrativo es un ente territorial de carácter jurídico, político y administrativo”.

Al respecto, su órgano de gobierno más importante integrado colegiadamente por síndicos y regidores, es el ayuntamiento el cual tiene a su cargo el desempeño de la función administrativa, que encabeza el presidente municipal como órgano ejecutivo. Abundando sobre los componentes de éste ente o comuna como suele calificarse, el nombre de síndico, nos remite al griego clásico, donde quería decir “encargado de la justicia”. Por su parte el término regidor tiene también un significado genérico aplicable a todos los miembros del ayuntamiento en su carácter de integrantes del consejo, incluido el alcalde; en ese sentido se considera a la totalidad como personas que rigen o gobiernan. La función supervisora de los regidores no debe confundirse con la gestión directa de las áreas administrativas que se les encomienda vigilar, pues para eso existen funcionarios de la administración pública municipal designados para la gestión correspondiente. Acorde a lo establecido en la Ley Orgánica Municipal, llamada también en algunas entidades como la de Tamaulipas Código Municipal, se previenen las diferentes comisiones a las que pueden incorporarse cada regidor generalmente por su perfil. La cantidad de integrantes de los ayuntamientos varía según el tamaño de las poblaciones en las que desempeñen sus funciones.

Por otra parte, el municipio no ejerce de modo directo la soberanía popular; por lo que no legisla desde el punto de vista formal ya que carece de órgano legislativo propio, lo anterior se debe a que no emite leyes, que como es sabido solamente puede legislar en este sentido el Poder Legislativo, Federal o el Local de las entidades federativas, que es uno de los tres poderes a través del cual el Estado ejerce la soberanía. Sin embargo, el ayuntamiento de acuerdo a las facultades que le otorgan las Constituciones Política, Local y las Leyes Federales y Locales, sí puede expedir normas jurídicas de tipo reglamentario. En estas circunstancias se encuentran los municipios, quienes lo que en realidad ejercitan es una función materialmente legislativa cuando expiden sus reglamentos. Esta llamada facultad reglamentaria municipal regula la conducta de sus habitantes de manera general, abstracta, impersonal, obligatoria y coercitiva y su fundamento se sustenta en disposiciones constitucionales y legales. En este orden de ideas, es preciso subrayar que como toda facultad reglamentaria la de los ayuntamientos quedará siempre sujeta a la ley, por lo que su marco no debe exceder del contenido de ése ordenamiento legal, Andrade (2006).

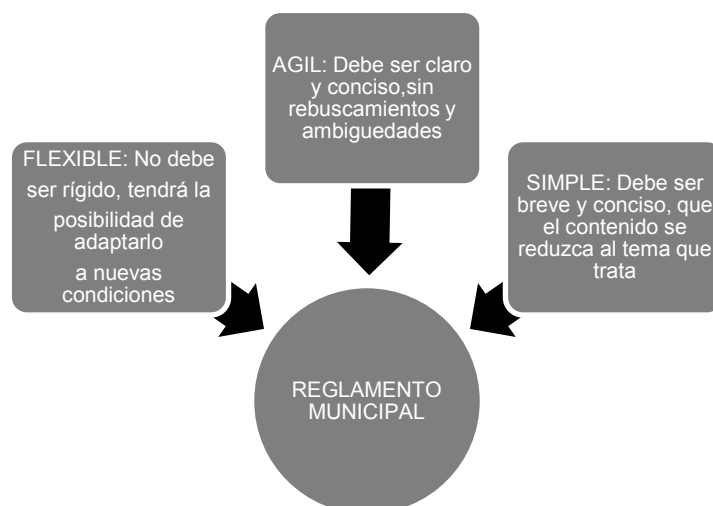

No hay que olvidar que, el municipio, para la realización de las funciones que le han sido atribuidas, goza solamente de las facultades conferidas en la Carta Magna, las cuales ejerce en algunos casos de manera específica, y en otros de manera concurrente con la entidad federativa donde es integrante, así como con la Federación en los términos que establecen los ordenamientos federales o locales. En cuanto a la facultad reglamentaria municipal, su importancia radica en que las Constituciones, (Federal y Local) y las Leyes (Federales y Locales), no pueden ser aplicables por sí mismas, en la mayoría de los casos, por ser de naturaleza general y no entran en detalles resultando que, a diferencias de estos ordenamientos legales es en los reglamentos municipales en donde se hace la previsión necesaria con vista a la ejecución o aplicación de manera más cercana a la ciudadanía CEDEMUN (2008).

Derivado del ejercicio de la facultad reglamentaria del municipio, el reglamento municipal se puede conceptualizar como: “el conjunto de normas generales, de carácter administrativo obligatorio para toda la comunidad, expedidas por el ayuntamiento para garantizar el cumplimiento de la ley”. Estos normarán

determinadas relaciones o actividades del ámbito municipal de acuerdo a las características socioeconómicas, culturales e históricas de cada comunidad. Las características que debe contener un Reglamento Municipal son: ser flexible, ágil y simple.

Ver figura No. 1:

Cuando se alude a su clasificación, los reglamentos municipales se identifican como: internos y externos, los primeros interesan principalmente a quienes prestan servicios dentro de la administración municipal y se refieren a las funciones, procedimientos y responsabilidades de los órganos que componen esa administración como por ejemplo el Reglamento Interno. Los reglamentos externos estarán destinados a los habitantes de los municipios y al ejercicio de gobierno, y no solo a los que trabajan en la administración municipal, tal es el caso del Bando de Policía y Buen Gobierno así como distintos reglamentos como el ambiental o ecológico Rosa, Reynoso y Villafuerte (2003). En la Elaboración de los reglamentos municipales según el Centro Nacional de Desarrollo Municipal, CEDEMUN (2008), es necesario observar las siguientes etapas.

1. Se debe analizar el marco legal que rige el territorio donde se pretende reglamentar alguna materia, ya que la Constitución Política y las Leyes (Federal y Estatal) otorgan esta facultad únicamente al ayuntamiento delimitando la materia susceptible de reglamentación municipal.
2. La comisión de regidores correspondiente requerirá estudiar las necesidades y problemas de fondo existente de lo que se quiera reglamentar, para lo cual es recomendable la aplicación de diagnósticos.
3. Se fijarán los límites del reglamento que se pretende expedir para que no contravenga con normas de orden público o jerárquicamente superiores que no le corresponda a los ayuntamientos su regulación.
4. Considerado lo anterior debe elaborarse un proyecto de reglamento que sea claro, preciso, ágil, flexible, simple y congruente con la situación o problemática que se pretenda regular.
5. El proyecto tendrá que discutirse en sesión ordinaria del cabildo para hacer las modificaciones pertinentes.

6. Es importante la participación de la población para que en consulta pública haga las observaciones y en su caso propuestas respecto del proyecto de reglamento que se intenta expedir.
7. Se conjunta lo discutido y consultado en un documento final.
8. La comisión de regidores encargada de crear el reglamento lo presenta motivando y fundando su contenido.
9. Se someterá de nueva cuenta a la aprobación del cabildo en sesión pudiendo ser ordinaria o extraordinaria.
10. Aprobado por el ayuntamiento el reglamento se levanta el acta correspondiente de tal cuestión para que sea publicado en el Periódico Oficial del Estado.

Continuando con la cuestión ambiental municipal y su regulación, cabe señalar en primer término que las facultades conferidas a los municipios en relación con la protección al medio ambiente, según lo establece el artículo 115 Constitucional en su fracción V Gutiérrez (2003), indica que las atribuciones en esta materia son:

☐ Formular, aprobar y administrar la Zonificación y planes de desarrollo Urbano Municipal;

☐ Participar en la creación y administración de sus reservas municipales.

☐ Autorizar, controlar y vigilar la utilización del suelo, en el ámbito de su competencia en sus jurisdicciones territoriales;

☐ Intervenir en la regulación de la tenencia de la tierra urbana; otorgar licencias y permisos para construcciones;

☐ Participar en la creación y administración de zonas de reservas ecológicas y en la elaboración y aplicación de programas de ordenamiento en esta materia. Constitución Política (2009). Por su parte una de las principales Leyes Federales en materia ambiental como lo es la Ley General del Equilibrio Ecológico y la Protección al Ambiente, con fundamento en el artículo 8º en sus XVI fracciones, LEGEPA (2005), le otorga a los municipios diversas facultades en este ámbito. Destacándose para efectos del presente trabajo, lo relativo a la aplicación de disposiciones jurídicas en materia de: preservación y restauración del equilibrio ecológico y la protección al ambiente en bienes y zonas de jurisdicción municipal; prevención y control de la contaminación atmosférica; prevención y control de los efectos sobre el ambiente; prevención y control de la contaminación por ruido, vibraciones, energía térmica; y de prevención y control de la contaminación de las aguas que se descarguen en los sistemas de drenaje y alcantarillado de los centros de población.

Esta misma ley según el artículo 10 establece que, los ayuntamientos tienen facultades para dictar los bandos de policía y buen gobierno, reglamentos, circulares y disposiciones administrativas que correspondan, para que en sus respectivas circunscripciones se cumplan lo previsto en dicha ley ambiental, lo que vendría a fundamentar legalmente la expedición de los reglamentos ambientales que emiten los ayuntamientos, ya que como se ha anotado, el fundamento constitucional está previsto en el artículo 115 de la Constitución Política, Orozco (2003). En relación a lo anterior y situando el tema objeto de esta investigación, es importante señalar que la promulgación de reglamentos municipales en materia ambiental constituye una acción clave para que los objetivos de la política ambiental se concreten en el ámbito municipal, cuestión que no es dada en todos los municipios constituyendo un problema regulatorio

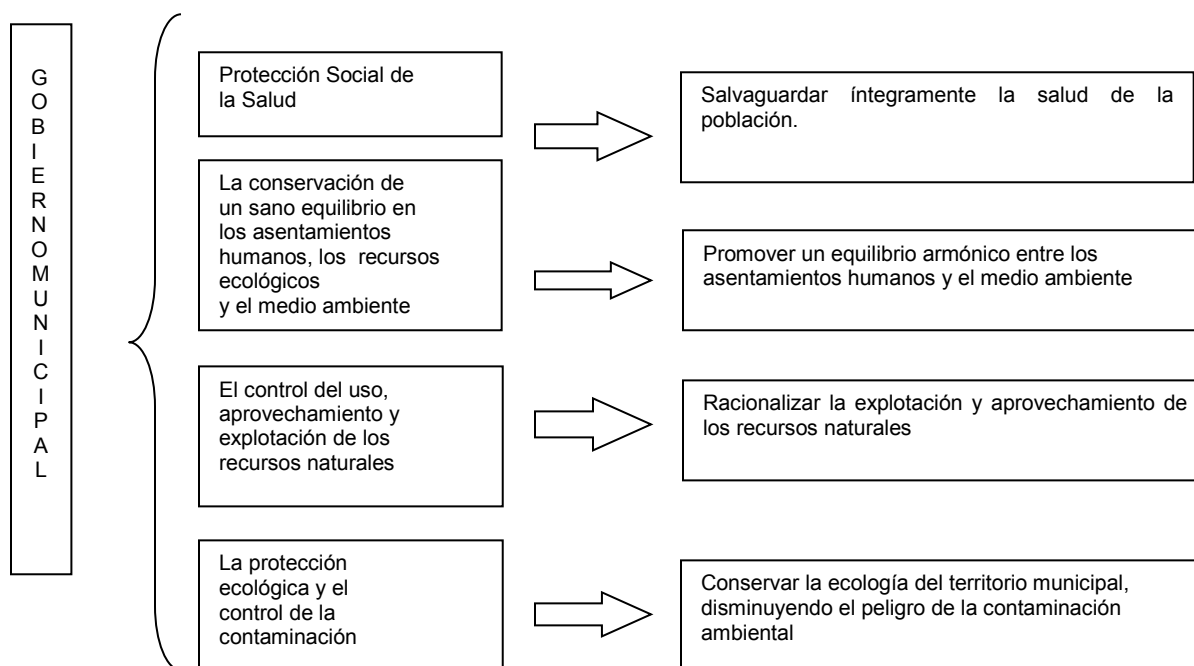

para esta materia, aquí cabe incluir a diversos municipios del estado de Tamaulipas, desde luego considerando la región sur de esta entidad federativa.

Al respecto para conseguir una mayor participación en su política ambiental y en el mejoramiento y la protección ecológica, los gobiernos municipales deberán de llevar a cabo diversas acciones de coordinación con dependencias, entidades, organismos e instituciones del ámbito federal y estatal, con este apoyo, el ayuntamiento podrá fortalecer sus posibilidades de promover una intervención conjunta con dichos entes y así obtener mejores resultados en los programas ambientales. Los medios que materializarán esta participación unificada dentro de un marco normativo que regularmente deben utilizarse son; los acuerdos y convenios de coordinación y colaboración, desprendiéndose una responsabilidad compartida de todos los copartícipes. Dentro de este contexto, para alcanzar sus propósitos en materia ambiental los gobiernos municipales a través de sus reglamentos cuando son expedidos por los ayuntamientos los temas principales hacia a donde se orientan son los siguientes:

- La protección social de la salud,
- La conservación de un sano equilibrio en los asentamientos humanos, los recursos ecológicos y el medio ambiente,
- El control del uso, aprovechamiento y explotación de los recursos naturales,
- La protección ecológica y el control de la contaminación ambiental. Ver fig. 2

### Objetivos

## METODOLOGIA

El carácter e intención de este trabajo, pertenece a un tipo de exploración cualitativa, utilizándose una metodología deductiva. En la investigación se realizó un análisis documental, al inicio se tomó en cuenta lo que al respecto determinan los lineamientos propuestos por Vélez y Galeano (2002). En primer término, fue reconocida la información que para el estudio resultaba pertinente considerando el tema que da nombre este estudio, incluyéndose en el análisis textos relevantes sobre la materia ambiental. En lo que concierne a la normatividad fueron consultadas las disposiciones jurídicas más importantes relacionadas con el tema, comenzando con la Constitución Política de los Estados Unidos Mexicanos; La Constitución Local; las Leyes Federales y Estatal Ambiental; así como los reglamentos ambientales municipales de Tampico y Ciudad Madero, Tamaulipas específicamente, ya que Altamira no cuenta con este instrumento jurídico.

## RESULTADOS Y DISCUSIÓN

Al delimitar lo expuesto, se focalizó este estudio en los municipios de la región sur del Estado de Tamaulipas, específicamente la zona conurbada (Altamira, Madero y Tampico), localizada sobre la franja costera de la entidad; en virtud de apreciarse una problemática ambiental importante que requiere de una regulación municipal para su remediación; ya que, según opinión de especialistas debido a sus altos índices de humedad más su temperatura cálida se forma un binomio que dispara la descomposición de los residuos sólidos municipales; genera reacciones peligrosas y tóxicas; además de la cuestión poblacional pues es en estas municipalidades es donde se da la segunda concentración de población y desarrollo urbano más importante del estado; aunado a que la conurbación se ubica en un territorio en donde comprende un 25% de cuerpos de agua integrados por sistemas lagunarios; incrementando dichas contrariedades se suma el agotamiento de la reserva territorial para el desarrollo urbano de los municipios de Tampico y Ciudad Madero, lo cual repercute en la diferencia de crecimiento poblacional en los tres municipios. En relación a la regulación de la materia ambiental Tampico y Ciudad Madero son dos de los ocho municipios que integran la entidad que se destacan por contar con sus respectivos reglamentos, ya que Altamira carece de este ordenamiento legal.

Las otras seis ciudades que tienen su reglamento municipal en la materia son: Matamoros, Laredo, Reynosa, Río Bravo, Valle Hermoso, Ciudad Victoria. Y solamente cuatro municipios, incluyendo Altamira norman la limpieza como tema de salud, estos son: Miguel Alemán, Miquihuana y Tula. Los restantes municipios de los 43 que conforman el Estado de Tamaulipas se caracterizan por la inexistencia de cuerpos normativos que tengan que ver con temas ambientales o ecológicos. En esta materia fue significativo analizar comparativamente los reglamentos municipales vigentes en la zona conurbada que constituyen la protección jurídica de lo ambiental o ecológico en su territorio, se encontraron analogías y divergencias entre éstos, aunque dichos ordenamientos no son actuales ya que se expidieron hace algunos años. Reglamento Municipal para la Protección y el Control de la Calidad Ambiental del Municipio de Tampico (2000). Reglamento de Ecología y Gestión Ambiental del Municipio de Ciudad Madero (2001). Como se ha insistido, la fundamentación constitucional de los reglamentos municipales se encuentra en el artículo 115 de la Ley Fundamental, lo que aplica para el caso local en comento, además de el artículo 134 de la Constitución Política del Estado de éste pues solo lo dispone, en cambio reglamento de Ciudad Madero expresamente detalla la omisión, cabe subrayar en este renglón que en ningún municipio se ha conformado dicho consejo lo que se califica como inoperante esta disposición.

### Analogías

a. La normatividad de la política de la gestión ambiental municipal: respecto la gestión se ha quedado corta ya que la actuación de las autoridades administrativas y el propio ayuntamiento no tiene conocimiento de la materia, por lo que existe una parálisis en la gestión ambiental;

b. la Regulación del ordenamiento ecológico municipal: no existen programas efectivos en ningún municipio para determinar mediante el procedimiento previsto en los reglamentos el uso de suelo de manera sustentable;

c. La regularización ambiental de los asentamientos humanos: en este rubro existe una situación caótica, pues se han creado de manera arbitraria en éstas ciudades asentamientos irregulares, muchas veces las autoridades están enterados y por evitar una situación social dan su consentimiento, como es el caso del relleno de lagunas en Ciudad Madero para fines habitacionales, pese a que son zonas de riesgo, desconociendo la eficacia de los reglamentos vigentes;

d. La participación y corresponsabilidad social y la denuncia ambiental: a pesar de que se previene la corresponsabilidad ciudadana en acciones que van en perjuicio de un posible deterioro ambiental y un daño a la salud pública, la flora, la fauna y demás ecosistemas, resulta que las autoridades municipales no cuentan con personal suficiente para verificar éstas denuncias y el procedimiento administrativo que se sigue es dilatado, por lo que se queda en suspenso la actuación de la instancia responsable al escuchar las quejas, así la corresponsabilidad no es cumplida a cabalidad;

e. El derecho a la información ambiental: de acuerdo a este capítulo, el ayuntamiento participará en la operación de un sistema permanente de información y vigilancia sobre ecosistemas y su equilibrio, sin embargo la propia autoridad administrativa y los regidores integrantes de la comisión de ecología ignoran la problemática que está aconteciendo, dado es el caso de la tala de mangle en la Laguna del Carpintero, las autoridades municipales no tenían la información fehaciente del problema que les permitiera actuar y tomar las medidas necesarias para solucionar el conflicto;

f. Recursos bióticos de interés municipal: los reglamentos establecen los lineamientos y procedimientos para la declaratoria de protección, regeneración, conservación, restauración de la fauna y flora municipal, cabría aquí según la interpretación, ya que expresamente no lo disponen, la protección de los humedales en los cuerpos de agua (mangle, tule, etc.) de los territorios correspondientes a los municipios objeto de estudio;

g. La prevención y control de la contaminación ambiental: está disposición es letra muerta puesto que no se observa, ya que es calificado como tema federal y estatal;

h. Prevención y control de la contaminación atmosférica generada por fuentes fijas: el numeral de este capítulo tampoco es acatado desde el punto de vista legal ambiental ya que por costumbre es considerado asunto de protección civil;

i. Prevención y control de la contaminación generada por vehículos automotores que circulan en el territorio municipal: de igual forma esta regulación no es aplicada y para algunas de las autoridades pasa inadvertida su existencia, por suponer que es del ámbito estatal;

j. Prevención y control de contaminación del agua: dentro de otras cosas, las disposiciones de este capítulo análogo a las dos ciudades en análisis normativo, establece la prevención y el control de la contaminación de fuentes subterráneas y superficiales y el control de la descarga contaminante de las aguas residuales, la inaplicabilidad de esta regulación evidente, puesto que no se dan acciones de supervisión para constatar el grado de contaminación, ni se hace el intento por crear programas de prevención, de tal suerte que ante la acción desenfrenada de la industria y la ciudadanía es común ver como se contaminan las mantos friáticos y las lagunas por descargas de aguas residuales, residuos tóxicos o derrames de Pemex;

k. La prevención y control de la contaminación generada por ruido, vibraciones, radiaciones, electromagnética, energía térmica y lumínica, visual, y olores: el articulado que dispone sobre estas contrariedades ambientales, es poco aplicable ya que son asuntos atendidos esporádicamente por las autoridades correspondientes, solamente atienden denuncias que relacionadas al ruido, energía lumínica y visual, las demás no son observadas;

l. Revención y control de la contaminación de suelo y residuos sólidos: éstos aspectos han constituido siempre un problema ambiental constante que cada día crece a la par de la población por lo que los municipios han propuesto diversas alternativas de solución, sin que a la fecha hayan dado resultado convincente alguno, independientemente que los reglamentos establecen disposiciones en donde los municipios tendrán facultades para regular los sistemas de recolección, almacenamiento temporal, transporte, rehuso, tratamiento y disposición final, éstos no han podido con el cometido previsto, ya que la zona conurbada adolece de un servicio público adecuado;

ll. Las Medidas de seguridad: en esta materia, los reglamentos le confieren a los ayuntamientos facultades para que por medio de la autoridad ambiental administrativa se elaboren programas de prevención, atención y establecimiento de protección ambiental en los casos de emergencia, riesgos, siniestros contingencias, etc., en este sentido volvemos a encontrar la inobservancia del ordenamiento legal, pues se carece de programas de esta índole, lo más que se ha llegado es a programar simulacros encabezados por protección civil; m. Sanciones administrativas: se enumeran las sanciones administrativas aplicables a las violaciones cometidas contrariando las disposiciones de los reglamentos multicomentados, sanciones raramente aplicadas debido a la laxitud e inconsistencia de éstos, y a la falta de gestión ambiental de las autoridades municipales.

#### Diferencias:

Además de las analogías entre los reglamentos ambientales de los dos municipios de la región sur de Tamaulipas se encontraron las siguientes:

a. Coordinación de acciones entre el Gobierno Municipal, Federal y Estatal: necesaria para poder cumplir los objetivos del reglamento, solo se previene en el cuerpo normativo de Ciudad Madero ya que en el de Tampico no se contempla;

b. Desarrollos turísticos e industriales: es un asunto regulado desde el punto de vista ambiental en Ciudad Madero, no así en Tampico, pues se afirma que en la primera municipalidad existe un filón turístico con la explotación de la Playa Miramar lo que es justificable según algunas autoridades que haya sido contemplado dicho rubro;

c. Control de la gestión ambiental: es otro tema que regula únicamente el reglamento de Ciudad Madero, no así Tampico, ya que fue omitido en su contenido, esto se traduce en acciones de inspección y vigilancia que en todo momento tendrá que llevar a cabo, la autoridad ambiental municipal, cuestión que en la práctica no se ejecuta acorde a lo que indica la norma.

#### **CONCLUSIONES**

Del análisis que se hizo del tema objeto de este estudio, se han derivan varias observaciones: La característica de inexistencia de reglamentación ambiental identifica solamente al municipio de Altamira, ya que únicamente cuenta con un reglamento de limpieza el cuál su sentido lo vincula al tema de salud, a la fecha las autoridades municipales han expresado que ya fue elaborado un proyecto que seguido el procedimiento correspondiente, próximamente será un reglamento ambiental.

Los Reglamentos ambientales de Tampico y Ciudad Madero, guardan similitud en diversos aspectos de su contenido, así como en sus inconsistencias y laxitud, el inconveniente mayor radica en su escasa y nula aplicación. Estos cuerpos normativos municipales presentan también diferencias importantes, ya que el de Ciudad Madero incluye lo relativo a la regulación de acciones de coordinación con la Federación y con la Entidad que son básicas para poder cumplir con los objetivos del reglamento; y la competencia de la autoridad municipal en la autorización de desarrollos o empresas turísticas e industriales en sitios que determine su Plan de Desarrollo y el de Tampico no lo contiene.

El deficiente conocimiento de la materia jurídica ambiental de las autoridades municipales (síndicos, regidores, administrativos), repercute en la emisión de una reglamentación ineficaz aunado a que dichas autoridades no le dan importancia al problema ambiental. El incumplimiento de las autoridades municipales de diversas atribuciones conferidas por ordenamientos superiores es debido a las deficiencias e imprecisiones de los instrumentos normativos municipales, reflejándose esta cuestión en su inaplicabilidad. Se carece de una adecuada información sobre el problema ambiental de los municipios, lo que es primordial para elaborar un diagnóstico que permita identificar las necesidades más apremiantes. Faltan programas municipales en (Altamira, Tampico y Madero) de protección al ambiente, en donde se establezcan lineamientos de política, objetivos y metas.

Aunque se presume que están previstos en los Planes Municipales de Desarrollo. La participación ciudadana en la problemática ambiental de los municipios es exigua, de hecho el Consejo Municipal de Ecología, no se ha integrado en ninguno de estos municipios y mucho menos se ha dado una interacción plena con diversos sectores como lo establece el reglamento para tratar esta cuestión municipal, excepto por la participación de propia iniciativa que tienen algunas ONGS ambientalistas. Se requiere reformar dichos reglamentos considerando en primer término un diagnóstico del estado de cosas de los municipios desde el punto de vista de su problemática ambiental, seguido de un procedimiento eficiente, donde se tendrá que incluir aspectos de nuevas leyes federales como la Ley General del Cambio Climático en su capítulo de adaptación, ya que en este renglón dicha ley otorga facultades a los municipios para ejecutar acciones sobre la adaptación al cambio climático, trascendental en éstos tiempos. Impera además en las administraciones públicas municipales de estas ciudades, dispersión de funciones operativas de la política ambiental entre diversas dependencias del ejecutivo municipal, ya que se confunde las atribuciones de protección civil y ecología. Existe limitaciones presupuestales de las dependencias administrativas encargadas de la aplicación de la política ambiental, de la vigilancia del cumplimiento y aplicación de los reglamentos en mención. Impera inconsistencia e indecisión en la aplicación de sanciones administrativas ante las infracciones a los ordenamientos ambientales municipal.

# ANÁLISIS DE ELEMENTOS PARA MEJORAR EL DESEMPEÑO EN SITIOS WEB DE PEQUEÑA Y MEDIANA EMPRESA MEXICANA

Joaquín Orduña Trujillo, Universidad Nacional Autónoma de México  
Carlos Eduardo Puga Murguía, Universidad Nacional Autónoma de México

## RESUMEN

*El objetivo de este trabajo es identificar, de manera teórica, los elementos que inciden en el desempeño de sitios web de PyMEs mexicanas, para ello se realiza revisión de literatura, describiéndose la manera de medir el desempeño en internet por medio del criterio de conversión. Se describen los principales componentes de una estrategia digital, y se resumen los criterios para mejora de cada uno de ellos, a partir de la identificación de métricas y construcción de indicadores específicos.*

**PALABRAS CLAVE:** Internet, Mercadotecnia En Línea, Estrategia Digital.

## ANALYSIS OF ELEMENTS TO IMPROVE THE PERFORMANCE OF WEB SITES IN SMALL AND MEDIUM SIZE ENTERPRISES IN MEXICO

### ABSTRACT

This paper is aimed at identifying, in a theoretical way at this stage, the main elements that affect the performance of web sites of small and medium size Mexican enterprises. We begin with literature review describing the performance by the metric called “conversion rate”. We then describe the main factors included in a digital strategy and the actions to improve them, based on metrics and specific indicators for each.

**JEL:** M15, M31

**KEYWORDS:** Internet, marketing on line, digital strategy

## INTRODUCCIÓN

En esta investigación se busca encontrar los elementos que intervienen para la mejora del cumplimiento de los objetivos de un sitio web. El problema a abordar consiste en la carencia de un modelo que permita aumentar la tasa de cumplimiento de objetivos en sitios *web* de Pequeña y Mediana Empresa (PyMEs) mexicanas. La carencia de este modelo inhibe el pleno aprovechamiento del potencial que brindaría internet, de tal manera, el modelo inicia con la definición clara del propósito que se persigue al crear un sitio, así como el perfil del consumidor que se planea atender, estos puntos deberán estar plenamente insertos en la planeación estratégica de la organización.

## REVISIÓN DE LA LITERATURA

El siguiente esquema ilustra ( Figura 1) el modelo propuesto, señalándose abajo el apoyo teórico al respecto. En esta figura se describen, en primera instancia, las fases del modelo, tales como la preoperativa, la atracción de visitantes, la transformación de visitantes en prospectos, finalmente de éstos a clientes, es decir la tasa de conversión. En la primera fase se incluye una definición del mercado a

atender, tanto en su aspecto geográfico, como las características del nicho, se busca tener en claro la razón para el establecimiento del sitio, es decir sus objetivos, y se realizará un diagnóstico inicial al mismo; en la segunda fase, se prueba la usabilidad, se definen las palabras clave y el contenido a redactar con ellas (incluyendo blog), así como los elementos de optimización SEO; la tercera fase trabajará con las páginas de aterrizaje, incluyendo el llamado a la acción que se encuentre en ellas, para finalizar con la propuesta de experimentos, el seguimiento a los prospectos y las tendencias emergentes tales como movilidad y atención a mercados locales.

Figura 1: Modelo General Para Mejorar el Desempeño en Sitios Web Pyme Mexicana Elaboración Propia

Se evalúa con software de análisis "Google Analytics"

*Todo el modelo se mide con Google Analytics\_Tasa de Conversión:* Porcentaje de visitantes a un sitio web que finalmente alcanzan la meta deseada durante un período determinado. Esta meta u objetivo deseado es el que se plantea como función del sitio web y puede ser finalizar una compra, llenar un formulario, lograr la suscripción a un boletín, obtener un donativo, etc.

*Definición de mercado y objetivos del sitio web:* Uno de los primeros aspectos a considerar, será el definir claramente el papel que se espera que desempeñe el sitio web en la administración estratégica de la empresa, para ello será necesario revisar la misión, visión y objetivos organizacionales, y definir claramente en qué medida contribuirá el sitio web a ellos.

*Diagnosticar:* El modelo parte, después de definir objetivos y mercado del sitio, de un diagnóstico, inicialmente sobre los factores de usabilidad, a continuación se revisan las meta etiquetas del sitio (denominado factores *in page*), lo siguiente que se propone diagnosticar son los elementos de mercadotecnia digital, por medio de las aplicaciones en línea que se encuentran en wordtracker.com y hubspot.com.

*Usabilidad:* De acuerdo con Rhodes (2009) "Usabilidad es la experiencia general de un usuario al emplear cualquier cosa. El producto, servicio o sistema en cuestión, deberá permitir a la persona cumplir con su meta, mientras que también son satisfechos los requerimientos funcionales y de negocio" En términos específicos de usabilidad web: consiste en facilitar la interacción entre la persona y el sitio, de tal manera que se reduzca la sobrecarga de trabajo personal, y que sea altamente intuitiva.

**Meta etiquetas:** Las meta etiquetas se refieren a las instrucciones de la página codificadas en HTML (*Hyper Text Markup Languaje*). Un lenguaje de marcado de hipertexto; es decir un conjunto de instrucciones que despliegan la información visible cuando se consulta una página *web*.

Meta etiqueta de palabras clave

Meta etiqueta de descripción

Etiqueta de título”

**Mercadotecnia digital:** Este diagnóstico se realizará de manera automática con el software “*hubspot marketing grader*” y con “*wordtracker*” que analizarán:

Blog, Vínculos, descripciones de páginas, indexación en máquinas de búsqueda, colocación de etiquetas descriptoras de imágenes (altag), pagerank (autoridad del sitio), redes sociales (Facebook, google + y twitter), páginas de aterrizaje.

**Definir palabras clave (KW):** La correcta selección de palabras clave o *keywords* (KW por sus siglas en inglés), es el punto de partida para toda la implantación del modelo de optimización. Norman (2010) menciona: “... Si no se realiza este paso adecuadamente, todo lo demás será en vano. Seleccione bien sus palabras clave y su sitio web será un éxito, hágalo mal y estará perdiendo el invaluable tráfico que está tratando de obtener” La herramienta para la obtención de kw está localizada en <http://adwords.google.com/select/KeywordToolExternal>.

La selección de kw debe estar ligada a las metas de la empresa, y las específicas del sitio *web* y al perfil del usuario. Optimización para máquinas de búsqueda (Search Engine Optimization o SEO): De acuerdo con el diccionario de la Real Academia de la Lengua Española en su versión en línea (<http://buscon.rae.es/draeI/>) Optimizar es “Buscar la mejor manera de realizar una actividad” de esta manera la optimización para buscadores implica precisamente buscar la mejor manera de realizar la actividad de aparecer a los ojos del público que precisa encontrar una página específica que le brinde una solución. Involucra ajustar diversos elementos, para tener una mayor probabilidad de ser encontrados cuando un usuario teclee en el buscador una palabra específica, una palabra clave o *keyword*. No existe un cobro directo por aparecer en los buscadores, (aunque se requiere invertir tiempo y aprender) por esta razón el aparecer en los resultados no pagados, que reciben el nombre de resultados orgánicos, es un método de publicidad muy efectivo en su relación costo-beneficio.

Orense y Rojas (2008) presentan el concepto de SEO: “Como disciplina es el proceso mediante el cual una página *web* obtiene y mantiene posiciones notables en la página de resultados (*Search Engine Results Pages- SERPS*) naturales de los buscadores, también llamados resultados orgánicos (proviene de una gran base de datos orgánica) o algorítmicos (dependen de un algoritmo para su ordenamiento)” De acuerdo con Google “...La optimización de motores de búsqueda consiste a menudo “

reacción y envío de mapa XML de sitio, la administración de vínculos o, *links*, pues constituyen una parte esencial del proceso integral de optimización. Las máquinas de búsqueda otorgan un valor a las páginas con base en la cantidad y calidad de los vínculos al sitio. Este valor, y medida de la calidad, recibe el nombre de *PageRank*, el cual puede consultarse mediante la barra *Google*; sin embargo es necesario hacer énfasis en que éste es sólo uno de los factores considerados en la visibilidad general. La calidad total de los vínculos de nuestro sitio hacia otros, determina el *PageRank* que conservamos, aquí cobra importancia el uso de la etiqueta *Nofollow* señalada anteriormente. La barra

Google ofrece la posibilidad de revisar los vínculos para saber quien se liga a nuestro sitio, la calidad de éste, el texto ancla empleado, la competencia y sus vínculos. Es útil también como una manera de buscar nuevas fuentes de vínculos para el sitio.

Otra manera muy útil de encontrar vínculos es por medio de la página “wordtracker”

*Página de aterrizaje:* Estas son páginas específicas dentro del sitio, que deseamos sean visitadas por potenciales clientes al teclear la búsqueda en las máquinas respectivas. Dado que es la página en la que los visitantes “aterrizan” cuando llegan de su búsqueda, reciben este nombre: páginas de aterrizaje, aunque su denominación más común en su término inglés: *landing page*. Su principal utilidad es dirigirse al potencial comprador, contener las especificaciones del producto/servicio y llamar a la acción es decir buscar la conversión (cómo se haya definido), para ello pueden servirse del llenado de un formato en línea. Grappone y Couzin (2011) proponen para los propósitos de la compañía de optimización es necesario asegurarse de que para cada tipo de conversión, exista por lo menos un camino claro entre el resultado del buscador y el objetivo buscado. Encontramos útil pensar en retrospectiva: Considerar primero lo que se desea que haga el visitante, y entonces trabajar hacia atrás para construir una gran página de aterrizaje al sitio. Se debe proporcionar la información adecuada por lo que busca el usuario, hacerlos sentir que están en el lugar correcto (especificar el producto específico) y hacer natural y fácil para el visitante dar el siguiente paso.

*Experimental:* Se cuenta, a partir de 2007, con la herramienta denominada “Google Optimizer” para la realización de experimentos de sitios *web*. Es de uso gratuito y permite desplegar aleatoriamente las páginas a probar a los visitantes, quienes únicamente ven una versión (ya sea la experimental o la de control) y no son conscientes de la otra, ni de que participan en el experimento. Debe definirse una meta de conversión y la página en la que esto se logrará, que generalmente es una venta. Para realizar los experimentos deben insertarse pequeñas piezas de código, o scripts. Lo primero que se requiere establecer es cual tipo de experimento emplear entre los siguientes: Experimentos en dos tiempos (experimentos antes y después): Se realizan dos versiones de lo que se desea experimentar, probándose la primera por el tiempo que se determine; a continuación se elimina esta página de prueba y se publica la segunda. Se comparan ambas versiones tratando de dilucidar con esa base cuál es la más conveniente. Además de que no se cumple con el principio básico al experimentar de que se mantengan iguales todas las condiciones (excepto por supuesto la sometida a prueba), este tipo de experimentos llevan muy frecuentemente a sesgos en la toma de decisiones, ya que las variaciones pueden tener diversos orígenes, desde variaciones estacionales cíclicas, hasta la salida de un competidor, variaciones macroeconómicas, etc. No son susceptibles de realizarse en *Google Optimizer*.

*Experimentos A/B:* Es de fácil diseño e implantación. En múltiples ocasiones es el indicado. Se somete a experimento únicamente una variable; por ejemplo el color de un botón de compra, esta variable puede tener muchas propiedades, por ejemplo botón rojo, verde o azul, pero la variable a experimentar permanece única. Permite comparar y contrastar alternativas, y proceder en consecuencia.

*Mercado local:* Grappone y Couzin (2011) mencionan que las máquinas de búsqueda son por lo general suficientemente hábiles para entregar resultados locales aun sin la petición explícita del usuario. Kent (2011) escribe: “La búsqueda local está basada en diversas metodologías, entre ellas la ciencia conocida como geolocalización, la cual trata de inferir dónde se localiza una computadora geográficamente... con la información de Protocolo de Internet –IP- que es la identificación específica de una computadora en un momento dado en internet, que se envía existe una manera de saber la dirección física de la misma”.

Es importante esta información, ya que se ha encontrado que las personas tienden, de manera creciente, a comprar localmente, empleando la internet para investigar y hacer comparaciones, y acudiendo en ocasiones a la tienda física, o bien comprando en línea, pero prefiriendo opciones cercanas a su domicilio (incluso si se compra en línea), además de que es común que se introduzca el nombre de una ciudad en el

buscador. Las máquinas de búsqueda alientan esta tendencia al facilitar instrumentos para ello. Es crítico darse de alta en estos servicios, para ello se deberá acudir, electrónicamente, a las siguientes direcciones:

Google maps/places	<a href="http://www.google.com/local/add">http://www.google.com/local/add</a>
Yahoo local	<a href="http://listings.local.yahoo.com">http://listings.local.yahoo.com</a>
Bing local search	<a href="https://ssl.bing.com/listings/ListingCenter.aspx">https://ssl.bing.com/listings/ListingCenter.aspx</a>

Métricas: De acuerdo con un artículo de Brown, Chui y Manyika (2011) aparecido en el reporte trimestral de McKinsey de octubre: ...La evidencia académica emergente sugiere que las compañías que usan datos y análisis de los mismos para guiar sus decisiones, son más productivas y experimentan mayores retornos sobre la inversión que los competidores que no lo hacen. Ello es consistente con la investigación que hemos efectuado demostrando que las organizaciones conectadas en red pueden ganar el liderazgo al abrir canales efectivos de flujo de información al interior y aceptando la información proveniente de consumidores y proveedores por medio de la *web*. La recopilación efectiva de datos, y su análisis certero se convierten en un activo para la empresa. Se requerirán nuevas habilidades y nuevas perspectivas a medida que esta era de los datos masivos continúa fortaleciéndose, lo cual dará origen a nuevos modelos de negocio. Kaushik (2010) realiza también la comparación con la era anterior, cuando las decisiones se tomaban con base en la fe, primero en el mundo físico, y al hacer irrupción internet de manera comercial, se tomaron las prácticas tradicionales de decidir.

Hoy en día; sin embargo, tenemos una gran cantidad, variedad y calidad de datos sobre el comportamiento de nuestros clientes en línea, de manera tal que el reto, y la obligación es obtenerlos de una manera certera, y ética, y más importante aún, hacer uso de ellos estructurada y sistémicamente, retomando a Kaushik (2010). Vivimos en la era más rica en datos en la historia del planeta, un ambiente en el cual los números, las cifras, las matemáticas y el análisis deberían ser el fundamento de nuestras decisiones. Podemos emplear los datos para determinar cómo hacer mercadotecnia de manera efectiva, cómo conectar auténticamente con nuestras audiencias, cómo mejorar la experiencia de nuestro consumidor en nuestros sitios *web*, cómo invertir nuestros recursos, cómo mejorar nuestro rendimiento sobre la inversión, cómo cumplir con nuestros objetivos, ya sean éstos incrementar la rentabilidad, obtener mayores donativos o ganar elecciones. Sobre estas perspectivas, el trabajo de establecimiento de métricas *web* y su análisis certero se convierte en una función de crítica importancia. Para realizar la función anterior existen básicamente dos grupos de tecnologías:

Archivos de seguimiento en servidor.

Etiquetas de página.

Las primeras obtienen los datos del visitante y los envían a servidores remotos, de tal manera que el analista de la información observa ésta desde el servidor en el que aloja su página *web*. La anterior fue la técnica más empleada en el pasado; se ofrecía como complemento a los servicios de alojamiento *web*. Generalmente son útiles, pero demasiado básicos y elementales. En cuanto al segundo grupo, Clifton (2010) menciona:

*En años recientes, las etiquetas de página se han convertido en el método más popular para recolectar datos del visitante. No sólo porque la implantación de la etiqueta es más fácil desde un punto de vista técnico, sino porque los requerimientos de manejo de datos se reducen significativamente, porque son administrados por un proveedor externo -bajo la modalidad software como un servicio- ahorrando por lo tanto a los dueños del sitio web, los costos de mantener y correr software comprado con licencia para capturar, almacenar, y archivar información.*

El software a emplear se denomina “*Google Analytics*” y está basado en la tecnología de etiquetas de página, su obtención, uso e instalación es gratuito. Contiene fundamentalmente dos tipos de datos: las dimensiones y las métricas. Las dimensiones son las definiciones en texto que describen cada ítem, por ejemplo: URL de la página origen, tipo de navegador empleado, nombre del producto, etc. Las métricas son números; por ejemplo: tiempo en página, tiempo en el sitio, número de páginas vistas por visita, compras totales, tasa de “rebote”, etc. Para obtener la herramienta debe accederse a: [www.google.com/analytics/sign\\_up.html](http://www.google.com/analytics/sign_up.html) Se obtendrá lo que se denomina *Google Analytics Tracking Code (GATC)*, Código de rastreo de Analizador de Google. Que se debe insertar en la página web. Clifton (2010) hace énfasis en la facilidad del uso de GATC: “Es el uso de esta simple etiqueta que colecta los datos de los visitantes, exactamente el mismo para cada página, lo que convierte a *Google Analytics* en algo tan sencillo de instalar”. Las métricas iniciales propuestas son:

*¿Cuántos visitantes diarios se reciben?, tasa promedio de conversión, páginas más visitadas, tiempo promedio de visita en el sitio completo, profundidad promedio en el sitio, la distribución geográfica de los visitantes y el idioma empleado*

## METODOLOGÍA

Taxonomía de la investigación: la investigación parte de un metaanálisis de los temas de usabilidad web, diagnóstico digital, optimización para motores de búsqueda, medición y experimentos web, todo ello en el marco de administración estratégica, ya que el modelo parte de la definición de mercado y objetivos del sitio, así como de la inserción de la estrategia web en la planeación estratégica de la organización, posteriormente se define como descriptiva en la fase de diagnóstico, al reseñar las características de los sitios que se analizarán con un diseño no experimental.

Se seleccionarán mediante muestreo no probabilístico –de conveniencia– ocho sitios web y se aplicará el modelo completo. Se acordará con los directivos responsables de cada sitio los objetivos del mismo, con el fin de que se transformen en métricas, y quede establecido la dimensión de “tasa de conversión”, la misión y visión empresarial, así como la intención del sitio web, a continuación se evaluará con los paquetes de software “*wordtracker*” y “*hubspot marketing grader*” Se rediseñará el sitio web, en el cual se aportarán las opiniones relativas a usabilidad. Se realizará diagnóstico y a continuación prueba exploratorias de usabilidad basada en la metodología de Krug (2006); aplicada a 10 usuarios del nicho objetivo. Se propondrá adoptar los hallazgos de estas evaluaciones y se volverá a evaluar el rendimiento general, y la tasa de conversión del sitio; a continuación se irán aplicando paulatinamente los elementos de optimización orgánica y se diagnosticará nuevamente; finalmente se seleccionarán elementos a ser evaluados en experimento con *Google optimizer*, para dar seguimiento al mismo y se recomendará la implantación de los resultados; se realizará una nueva evaluación de métricas y se evaluará contra el diagnóstico inicial. Es importante señalar la utilidad de establecer métricas específicas que permitan su tratamiento cuantitativo. Se mantendrá la evaluación permanente con base en el software de análisis y se realizará ejercicio de correlación entre la aplicación del modelo y la variación en la tasa de conversión, por un período de 10 meses.

## Consideraciones Finales

El resultado que se espera, después de la prueba del modelo, será ofrecer a los pequeños y medianos empresarios un panorama claro y comprensible de las diversas herramientas para aplicación en la web, así como el modelo específico y detallado para realizarlo. Es importante hacer notar que dicho modelo habrá sido ya probado en la operación y para la realidad mexicana, razón por la cual los empresarios podrán aplicarlo con confianza. El modelo contribuirá a la estrategia empresarial, ya que de acuerdo con Thompson (2007) “La elaboración de una estrategia representa el compromiso administrativo con un conjunto particular de medidas para hacer crecer la organización, atraer, y satisfacer a los clientes,

competir con éxito, dirigir operaciones y mejorar su desempeño financiero y de mercado” La propia elección de crear un sitio web, representa el compromiso de la empresa para comunicarse de una manera específica con sus potenciales clientes y otros grupos relacionados. La selección de palabras clave es también una declaración que debe estar ligada a la oferta de la empresa y a su ventaja competitiva, ya que en la medida en que la oferta sea única y presente diferenciación se estará también en condiciones de seleccionar KWs que reflejen y presenten a la empresa ante un mercado segmentado. El análisis de datos de búsqueda es también de utilidad para estimar el tamaño potencial de un mercado, y darle seguimiento a la tendencia, así como implantar las mejoras o ajustes que el propio consumidor demande.

## RESUMEN

*La franquicia constituye una forma de estrategia competitiva de las empresas que permite la penetración y expansión en el mercado de una manera exitosa, en un entorno de creciente competitividad global. Los estudios sobre las franquicias son en su mayoría de carácter divulgativo, y las investigaciones académicas se han orientado en lo fundamental a: razones sociales, expansión, características del franquiciante y franquiciador, y sus relaciones (Baena, 2009), existiendo vacíos en cuanto a explicar los factores críticos de éxito, identificar las características del desarrollo de las franquicias a nivel territorial, entre otras, a pesar de que su modelo constituye una forma exitosa para la creación de MIPYME. La investigación se centra en describir el modelo de negocio y los factores críticos de éxito y su relación con el crecimiento de ventas, empleo y utilidades, en el desarrollo de las franquicias mexicanas originadas en la Comarca Lagunera. La metodología utilizada consistió en: la selección de los factores críticos de éxito de las franquicias mediante la revisión documental y la consulta a expertos franquiciantes, y la aplicación de entrevistas estructuradas a una muestra de 30 franquicias de la región de los sectores servicios, restaurantes y comercio al detalle. Los resultados se procesaron con estadígrafos descriptivos y de correlación, incluyendo pruebas no paramétricas. Como resultados se reflejan las características distintivas de las franquicias de la Comarca Lagunera y se identificaron 11 factores críticos y su comportamiento en la región.*

**JEL:** M10

**PALABRAS CLAVE:** Estrategia competitiva, franquicia, factores críticos de éxito

## STRATEGIC DEVELOPMENT OF MEXICAN FRANCHISES. EMPIRICAL STUDY IN THE LAGUNA REGION, MÉXICO

### ABSTRACT

*Franchising is a form of competitive business strategy that allows the expansion in the market in a successful manner, in an environment of increasing global competitiveness. Studies franchises are mostly informative character, and academic research has focused essentially on: social reasons, expansion, franchisor and franchisee characteristics, and their relationships (Baena, 2009), existing gaps explain the critical success factors, identify the characteristics of franchise development at the territorial level, among others, even though their model is a successful way for the creation of MSME. The research focuses on describing the business model and critical success factors and their relationship to the growth of sales, employment and profits in the development of Mexican franchises originated in the Laguna Region. The methodology consisted of: the selection of the critical success factors of franchising through document review and consults with expert franchisors, and implementation of structured interviews with a sample of 30 franchises in the region of the services sectors, restaurants and retail. The results were processed using descriptive statistics and correlation, including nonparametric tests. The results reflected*

*the distinctive features of the franchises of the Laguna District and identified 11 critical factors and behavior in the region.*

**JEL:** M10

**KEYWORDS:** Competitive strategy, franchise, critical success factors

## INTRODUCCIÓN

El modelo de negocio de las franquicias se ha convertido en la opción menos riesgosa para emprender. El Departamento de Comercio de Estados Unidos (2010) ha dado a conocer cifras que demuestran que sólo el 23% de los negocios independientes (no franquiciados) iniciados en los últimos diez años, han arribado a su décimo año de vida. En el caso del Franchising (2010), la proporción es inversa, es decir, el 92% de los negocios franquiciados siguen funcionando y sólo el 8% desapareció por diversas razones. En el caso de México, según la Secretaría de Economía (SE, 2012), 95% de las empresas franquiciadas sobreviven al menos a su quinto año de operación. Es así que aparece como una alternativa de negocio ante el bajo nivel de supervivencia de las PYME. En América Latina, los dos países que más franquicias disponibles tienen son México y Brasil, que tienen cifras que en algunos estudios superan las mil franquicias por país; seguidos por Argentina, Venezuela y Colombia, que tienen algo más de 300 (AMF, 2011). Las primeras franquicias establecidas en México fueron estadounidenses, desde el 1985 con la apertura de la primera sucursal de McDonald's en la ciudad de México y Kentucky Fried Chicken en Monterrey.

En el 1990 se adopta el modelo de negocio por los empresarios mexicanos, el primero fue Adolph B. Horn que franquicia Helados Bing con gran éxito. Hoy en día las franquicias aportan un 6% al PIB y generan 800,000 empleos (Asociación Mexicana de Franquicias (AMF, 2011). Entre 1988 y 1994, las franquicias en México tuvieron un crecimiento sin precedentes (de 845%) y se establecieron en las grandes ciudades como Distrito Federal (D.F.), Guadalajara, Monterrey, Estado de México y Querétaro (AMF, 2011). La Secretaría de Economía (2012) muestra el panorama actual de este esquema de negocio a través de un estudio de Alcázar y Asociados, de 1992 a la fecha el número de marcas franquiciadas ha dado un salto de 40 empresas a las mil 365 que existen actualmente, de esta forma, México ha logrado posicionarse a nivel internacional en el cuarto lugar en lo que a desarrollo de franquicias se refiere, después de Estados Unidos, Brasil y España. Teniendo en cuenta, que la franquicia constituye una forma de estrategia competitiva de las empresas que permite la penetración y expansión en el mercado de una manera exitosa, en un entorno de creciente competitividad global, y que los estudios sobre las franquicias son en su mayoría de carácter divulgativo el presente trabajo de investigación tiene el objetivo de describir los factores críticos de éxito y su relación con el crecimiento de ventas, empleo y utilidades, en el desarrollo de las franquicias mexicanas originadas en la Comarca Lagunera.

## REVISION DE LITERATURA

Las investigaciones centradas en el tema de franquicia abordan diversos aspectos que permiten una visión sistémica de su administración estratégica (Elango, 2007), se tocan aspectos como: concepto de franquicia (IFA, 2010), los requisitos para conformar un sistema de franquicia (Tormo, 2009), se hacen estudios comparativos de franquicias con negocios independientes para ver su permanencia y/o éxito financiero (Departamento de Comercio de EEUU, 2010; AMF, 2010), se manejan líneas de investigación como razones sociales de las franquicias, expansión de la franquicia y la relación franquiciante-franquiciatario (Baena, 2009): Las teorías económicas que la abordan son; la escasez de recursos (Oxenfeldt y Kelly, 1969), la teoría de la agencia (Lafontaine y Kaufmann, 1994; Jensen y Meckling, 1998; Rubin, 1978; Mathewson y Winter, 1985) y la extensión del riesgo (Martin, 1978; Díez de Castro Rodríguez y

Navarro, 2005) , otras tres teorías fueron identificadas como: la teoría contractual, los costos de transacción ( Williamson, 1991) y la teoría de las señales (Gallini y Lutz, 1992) .

## METODOLOGIA

La investigación es de carácter exploratorio, descriptivo y correlacional, utilizando la edición cuantitativa y cualitativa en el tratamiento de datos transversales, basada en fuentes de información de campo, mediante la aplicación de encuesta y entrevista simultánea con los franquiciantes. El proceso de investigación consistió de dos etapas: La primera etapa fue la identificación de los factores críticos de éxito, a partir del análisis documental de las fuentes secundarias que distinguieron 20 factores y su validación mediante el método de experto, con dos contrastaciones: una con grupo conformado por profesores y desarrolladores de franquicias, que evidenció la necesidad de reformular los factores críticos de éxito; y una segunda con expertos formados por el que se derivó el listado definitivo.

El procesamiento estadístico de los datos mediante el cálculo de coeficiente de concordancia de la Chi Cuadrada marca la significancia estadística de 59.674. La asociación entre N variables discretas mostró que la confiabilidad entre expertos fue de 0.494 que aunque era moderado es aceptable ya que la composición del grupo de expertos era variada pues incluía a franquiciantes, desarrolladores de franquicias y académicos. El coeficiente de concordancia de Kendall (W) sería un índice de la divergencia del acuerdo efectivo mostrado en los datos del máximo acuerdo posible que identificó 11 factores de éxito para la administración estratégica de las franquicias. La realización de entrevistas estructuradas con el grupo de expertos, junto con el procesamiento cuantitativo, permitió de forma abierta y directa conocer a detalle las opiniones de los expertos, y con ello excluir, modificar su redacción o formulación o incluir algún otro factor no tomado en consideración en el instrumento inicial.

La segunda fase fue el estudio de campo. Se construyó un instrumento con los factores críticos de éxito: la responsabilidad compartida, formación del franquiciante, poder centralizado no coercitivo, conocimiento pleno del franquiciante, crecimiento rápido de sucursales, tener una visión estratégica, integrarse verticalmente, gestión del conocimiento, satisfacción del franquiciatario comunicación con el cliente y ubicación del negocio, estructurado en 3 secciones que incluyen la relación franquiciante-franquiciatario, acciones para el desarrollo de fortalezas y acciones para la competitividad de la franquicia, utilizando una escala de Likert. Como variables independientes, se establecieron los giros de negocio y resultados empresariales: ventas, utilidades y empleo. El Alfa de Cronbach para el estudio arrojó 0.82, lo cual muestra la consistencia interna del instrumento, por lo que se considera confiable para el propósito de la investigación. Se encuestó a 30 franquiciantes de un listado de 37 franquicias en operación. Procesamiento estadístico. Se aplicaron diversas técnicas estadísticas. Después de aplicadas la prueba de la normalidad de las variables, se utilizaron pruebas no paramétricas dado el tamaño de la muestra y el carácter cualitativo del instrumento para captar la percepción de los franquiciantes. Se compararon medias usando la prueba de Fisher, la prueba de Kruskal Wallis y la correlación de Spearman, para comprobar las hipótesis.

## RESULTADOS

*Características distintivas de las franquicias de la Comarca Lagunera:* De la lista inicial de 52 franquicias laguneras, por ejemplo, se encontró que había: Franquicias operando con éxito 32; Franquicias ofreciendo sucursales pero sin vender 7; Empresas que ya no venden franquicias 8; y Empresas que ya no existen 5. De las treinta y nueve franquicias en operación, siete apenas estaban formalizando su empresa y/o no las promocionaban no logrado vender nada, no estaban preparadas para ello. Sumando el porcentaje de las empresas que aunque se formalizaron e hicieron manuales y decidieron ya no vender franquicias, podemos afirmar que un 29 % fracasan en el primero intento de vender franquicias. Más las compañías que encontramos en listados y que ya no existen, aumenta esta proporción

a un 38 %. Los giros de las franquicias encuestadas fueron: 40% servicios, 26.7% venta al detalle y 33.3% restaurant, lo cual coincide con la media nacional (Franquicialo 2012).

Las razones por lo que la empresa opta por franquiciar, entre las principales encontradas en la bibliografía internacional estudiada fueron: centrarse en procesos de mayor valor añadido que la venta directa al público como sería compras centralizadas y darle valor a la marca; velar más por el negocio los franquiciatarios que los empleados propios; creer que es la mejor manera de crecer rápidamente, desconocer los mercados en donde van a abrirse las nuevas tiendas, falta de recursos para desarrollar una cadena de establecimientos propios, la cual complementada con el interés de los mismos clientes por adquirir una franquicia; atención personalizada y profesional y el crecimiento del negocio.

La cuota de entrada promedio es de \$180,000 (hay franquicias que no cobran cuota y otras que son de hasta \$795,000 pesos), y la inversión inicial es de \$500,000 pesos (la inversión más baja puede ser de \$10,000 pesos para la compra de un equipo de cómputo hasta \$3,500,000 para el equipamiento de un restaurante de lujo). Las empresas franquiciadas Laguneras tienen en promedio 17 años operando en la región aunque como franquicia tienen solo 4 años como promedio en el sector (un 26.7 % tienen menos de un año operando como franquicia), la franquicia más antigua de la Laguna tiene 17 años vendiendo franquicias y es una empresa de servicio exitosa con más de 42 unidades vendidas.

La regalía más alta que se cobra sobre las ventas mensuales es de un 43 % y un 23 % sobre una de compras. El porcentaje de regalías que se cobra es en promedio de un 6.75 % sobre las ventas, aunque un 42% de los franquiciantes Laguneros no cobra por este concepto sino por compra de producto o cuota mensual fija. La cuota de publicidad que se cobra es de 1.26% en promedio, un 42 % no cobra este concepto y la cuota más alta es de un 5 %. Esto representa un área de oportunidad para dar a conocer en conjunto los productos y/o servicios de las marcas laguneras que están poco posicionadas en el mercado nacional. El retorno promedio de la inversión de las franquicias es de dos años que es un lapso aceptable de tiempo para recuperar inversiones de bajo monto y reducido riesgo.

Curiosamente la mayoría de los franquiciantes laguneros no pertenece a una asociación de franquicias. La formación de los franquiciantes alcanza el nivel profesional, y tienen una edad promedio de 44 años, aunque al escoger a los franquiciatarios prefieren a jóvenes emprendedores, jefes de familia y con arraigo en su localidad. Un 16.7 % de los franquiciantes no miden la satisfacción del franquiciatario, una gran parte 26.7 creen que la mejor forma sería medirla por el comportamiento de las ventas, sólo un 16,7 % hace encuestas de satisfacción y un 7 % tiene algún formato de reporte mensual. Los factores que dan ventaja competitiva a las franquicias laguneras son el ofrecer un producto diferente al de la competencia, el brindar asesoría constantemente a los franquiciatarios y el tener una marca reconocida en la localidad, realmente son muy pocas franquicias que son conocidas en los demás estados de la república, la publicidad es una gran área de oportunidad.

En el tema de alianzas estratégicas, la principal es la que se tiene con proveedores aunque no en todos los casos se tiene exclusividad con un solo vendedor, no se le ha contemplado realmente como un socio clave, lo que no permite realmente crear relaciones duraderas basadas en el compromiso y mejora continua de los productos que se abastecen, en cuanto al franquiciatario este puede adquirir algunas materias primas de su localidad para evitar el costo de distribución aunque claro está no se asegura la calidad y la uniformidad del producto. Solo un franquiciante de venta al detalle mencionó que si se tiene una alianza con un exportador chino que lo abastece de producto para surtir todas las tiendas. El 53.3 % de los franquiciantes laguneros tienen un horizonte de planeación a corto plazo menor a un año, sólo un 32 % planea a largo plazo, no formalizan la empresa para tener un crecimiento mayor y sostenerlo, todavía un 13 % afirma que trabaja como la operación lo va requiriendo sin planeación alguna de actividades. Las empresas familiares le dan menor importancia a la implementación de una planeación formal y a la formación de personal competente que las empresas no familiares.

Evidentemente los dueños de franquicias laguneras se inclinan por tener operando a su empresa orientada a resultados pues su principal indicador son las ventas y el crecimiento en el mercado y son franquicias de todos los giros, aunque le sigue muy de cerca la organización que se caracteriza por ser participativa basada en el compromiso y confianza con sus empleados esto brinda; una mayor satisfacción al cliente por el buen servicio y se genera un buen ambiente de trabajo en cada plaza, también son de indistinto giro. Un 23.3 % está orientada al mercado principalmente los franquiciantes que desean seguir satisfaciendo las necesidades y deseos del cliente con productos nuevos son negocios de servicios principalmente. Un 20% sigue trabajando por orden y control que emana del jefe del negocio, los que afirmaron esto son en su mayoría restauranteros.

Los aspectos más importante para seleccionar un Franquiciatario fueron: la perseverancia para alcanzar un objetivo, la disponibilidad para trabajar arduamente y la fidelidad del franquiciatario que muestra que se prefiere más a alguien dedicado plenamente al negocio que un dueño ausente, que se sienta identificado con la actividad del negocio y que sea una persona conocida capaz de relacionarse fácilmente y que muestre ser una persona leal con valores. Los franquiciantes Laguneros califican sus productos de buena calidad y buen precio además dicen estar innovando permanentemente el producto y/o servicios que ofrecen. La marca sigue apareciendo poco posicionada para más de un 30 % de los franquiciantes y sólo un 10 % tiene productos exclusivos y otro 10 % ofrece garantías. Las áreas de oportunidad están en dar garantía y servicio post venta, y en otros casos, que así lo requiera el producto, diseñar un mejor envase, mejorar los tiempos de entrega y pensar en mejorar el medio ambiente.

## CONCLUSIONES

La expansión rápida y exitosa de las franquicias ha condicionado el cambio en la concepción y formas del negocio. El análisis se realizó desde diferentes fuentes de información: las definiciones de los trabajos de carácter divulgativo que han impulsado las franquicias en diferentes latitudes del mundo y desde las investigaciones sobre la temática, que se presentan de manera resumida a continuación. Predomina el concepto asociado más a la distribución y comercialización de productos y servicios, que a la producción; la relación franquiciador y franquiciado es determinante; hay transferencia de tecnología desincorporada asociada a la propiedad industrial y el aspecto administrativo está más relegado. En opinión de los autores este es un aspecto que requiere de investigación dentro de los factores claves de éxito al menos en el contexto mexicano, por la importancia de la gestión de los recursos y capacidades internas y de la experiencia y preparación en métodos y técnicas de administración moderna.

Los factores críticos de éxito, resultado de la contrastación empírica muestran la importancia de los 11 factores de éxito identificados por el grupo de expertos; y en particular dada las contrastaciones estadísticas realizadas entre variables destaca la importancia de tres de ellos: tener una visión estratégica, satisfacción del franquiciatario, la comunicación con el cliente y el crecimiento rápido de las sucursales. Los factores críticos no evidencian diferencias atendiendo al grupo estratégico (giro sectorial) ni a los resultados empresariales de las franquicias. En la indagación empírica los franquiciantes laguneros otorgaron importancia a otros factores críticos de éxito como: equipo de trabajo competente, valores (honestidad, lealtad, respeto y responsabilidad), dedicación plena del franquiciatario, innovación constante y capital relacional, factores que deben ser objeto de estudio en investigaciones posteriores.

## RESUMEN

*En varios países las actividades de vinculación realizadas por sus universidades han producido un impacto positivo en su desarrollo económico. En esta investigación se analizan los modelos de vinculación en universidades de seis países latinoamericanos: México, Brasil, Chile, Colombia, Costa Rica y Argentina; para detectar áreas de oportunidad que mejoren el desarrollo económico del país. El diseño de la investigación fue no experimental, transeccional, corte cualitativo, del tipo descriptiva. Los sujetos de estudio fueron 8 universidades latinoamericanas. Además, se analizaron aspectos que miden el grado de contribución al desarrollo económico de las universidades en la sociedad del conocimiento como: Investigación, transferencia tecnológica, Innovación; entre otros. Se encontró que en estas universidades se realizan actividades de vinculación, pero se aprecian esfuerzos aislados; son las universidades las que toman la iniciativa y fomentan su vinculación hacia afuera. No se aprecia suficiente interrelación entre los actores: gobierno, sector empresarial y universidades; se carece de un sistema de evaluación y medición de impactos de sus modelos de vinculación. Se recomienda el diseño de un modelo de vinculación universitario que sistematice la actividad, que de coherencia, promueva la interacción entre sus partes, provea un sistema de medición de impactos y realice retroalimentación para corregir insuficiencias.*

**PALABRAS CLAVE:** vinculación universitaria, desarrollo económico, programas de vinculación universitaria, sociedad del conocimiento

## LINKAGE MODELS IN LATIN AMERICA UNIVERSITIES: CURRENT SITUATION AND AREAS OF OPPORTUNITY FOR ECONOMIC DEVELOPMENT

### ABSTRACT

*In several countries linkage activities undertaken by its universities have a positive impact on economic development. This research analyzes the linkage models in universities in six Latin American countries: Mexico, Brazil, Chile, Colombia, Costa Rica and Argentina, to identify areas of opportunity to improve the country's economic development. The research design was not experimental, transactional, a qualitative, descriptive type. The study subjects were eight Latin American universities. In addition, aspects that measure the degree of contribution to economic development of universities in the knowledge society as research, technology transfer, innovation, among others. We found that in these universities are conducted linkage activities, but isolated efforts are appreciated, the universities are taking the initiative and encourage their links out. It has not had enough interaction between actors: government, business and universities. There's a lack of evaluation system and impact measurement of linkage models.*

*We recommend designing a linkage model that systematizes university activity that provide consistency, promote interaction between its parts, provide a measurement system impacts and make feedback to correct deficiencies.*

**KEYWORDS:** university linkages, economic development, university linkage programs, knowledge society

## INTRODUCCIÓN

El desarrollo económico es una de las metas más importantes para cualquier nación, cada país intenta desarrollar las capacidades necesarias para crear riqueza, prosperidad y bienestar económico y social de sus habitantes. Por otro lado, el desarrollo económico no se genera de manera aislada. Freeman, citado por Didrikson (2006) afirma que en el desarrollo económico se involucran cinco subsistemas, que aunque tienen sus características distintivas y su autonomía; es su interdependencia e interacciones la que da como resultado el desarrollo económico en los pueblos; estos subsistemas son: la ciencia, la tecnología, la política, la economía y la cultura (Didrikson, A., 2006). El fenómeno de la globalización, la apertura comercial, la competencia, han dado como resultado la creciente preocupación de las naciones por incrementar sus niveles de productividad y competitividad. La manera como se han intentado lograr ambos, se ha incluido en una palabra: conocimiento.

Es así como en nuestros días ha surgido el concepto de “sociedad del conocimiento”; el cual coloca el énfasis en el conocimiento como el factor productivo fundamental. La sociedad del conocimiento se caracteriza por su constante cambio y evolución, el conocimiento es el recurso clave en la actividad económica, las inversiones en investigación y desarrollo (I&D) son fundamentales para mantener la competitividad y es intensiva en tecnología (Chaminade, C., 2007). Dadas las anteriores consideraciones se puede afirmar que el desarrollo económico es el proyecto de toda nación; que no se puede generar aislado de otros subsistemas; que la globalización exige a las naciones mayores índices de productividad y competitividad y que ambas se están forjando a través de la generación de conocimientos. Surge entonces, la pregunta sobre el papel que juegan o deberían jugar las instituciones de educación superior (IES) en el desarrollo económico de una región, a través de la generación de conocimientos.

La vinculación de las empresas, las universidades y el gobierno se consideraba como un esquema de relación de entidades distintas y hasta diferentes en sus objetivos y distantes en sus propósitos. Sin embargo, en la actualidad se percibe de manera muy distinta; estas entidades no solo pueden asociarse o vincularse, además se tratan de componentes complementarios en vías de integración y de articulación, pero sobre todo en la perspectiva de conformarse como el eje de un tipo de estructura social emergente: el de una sociedad del conocimiento que se organiza sobre bases diferentes a las que se conocen (Instituto venezolano de investigaciones científicas, 2006).

## REVISIÓN LITERARIA

En América latina la vinculación entre la universidad latinoamericana y el sector empresarial es una tarea pendiente de realizar, existen evidencias sólidas de que se inicia, pero no tiene la amplitud que desearían aquellos que sólo manejan el modelo norteamericano, en el que algunas universidades operan con altos presupuestos derivados de la vinculación con empresas o fundaciones (Campos, G. y Sánchez Daza, G., 2005). En esta región del mundo los vínculos entre la universidad y el sector empresarial han sido por lo general débiles y en algunos casos inexistentes. Resulta necesaria la acción del estado para formar la triada universidad-gobierno-industria (Moreno, J., Ruiz, P. 2009). Además se ha creado un círculo vicioso: las universidades no producen conocimiento novedoso que puedan ofrecer a las empresas, pero al

mismo tiempo las empresas no lo demandan (Vega, J., Fernández, I., & Huanca, R. 2007). Un problema en América Latina es la poca capacidad para crear tecnología innovadora, la región contribuye con el 1.5 % de la producción científica del mundo, pero tiene el 8.5% de la población mundial. El número de investigadores en Latinoamérica es de 175,000 en equivalente de tiempo completo, fluctuando entre 85,000 en Brasil y 645 en Ecuador; medidos en términos de población, oscila entre 833 investigadores por millón de habitantes en Chile y 50 en Ecuador; comparado con Finlandia que tiene 7,800; Japón 5,300; y Estados Unidos 4,600 investigadores respectivamente por cada millón de habitantes. El gasto en ciencia y tecnología en la gran mayoría de los países en Latinoamérica es del 0.5% del PIB, siendo recomendado por organismos internacionales el 1% como mínimo.

En contraste Suecia, Japón, Estados Unidos, Alemania, Francia y Canadá gastaron entre el 2% y 4% del PIB en ciencia y tecnología (Moreno, J., & Ruiz, P. 2009). Por otro lado, las universidades latinoamericanas están realizando esfuerzos y tomando medidas para no rezagarse en esta nueva era. Ejemplo de esto es la iniciativa de formación de redes de cooperación como la Red Latinoamericana de Buenas Prácticas de Vinculación Universidad Empresa (Red LABP); creada para el intercambio de experiencias y metodologías innovadoras de vinculación universidad-empresa. La Red LABP cuenta con más de diez miembros que incluyen universidades de Argentina, Brasil, Chile, Costa Rica, Nicaragua, Uruguay y Colombia (Red LABP, 2013). Otra iniciativa es la Red de Propiedad Intelectual e Industrial en Latinoamérica (Red PILA); cuyo objetivo es intercambiar prácticas de gestión de propiedad intelectual dentro de las IES de Latinoamérica. Sus miembros fundadores son países como Brasil, Argentina, Bolivia, Chile, Cuba, Colombia Costa Rica, entre otros. Sus miembros colaboradores son: European Patent Office; Oficina Española de Patentes y Marcas; la Red Universia y la Organización Mundial de la Propiedad Intelectual (Red PILA, 2013). Otra iniciativa es la Climate Change Technology Transfer Centres in Europe and Latin America (CELA), su objetivo es mejorar la calidad de la investigación y la transferencia tecnológica de las universidades latinoamericanas y la Unión Europea fomentando una cooperación sostenible enfocándose en el sector temático del cambio climático (CELA, 2013).

No obstante en estos esfuerzos, el obstáculo más grave sigue siendo la ausencia de vínculos universidad-empresa. De hecho, salvo unos esfuerzos políticos en Argentina, Brasil, Chile, México y Venezuela - no necesariamente coordinados con políticas industriales o sectoriales- hay pocas acciones gubernamentales, deliberadas y significativas para vincular las agendas de investigación y educación superior de las universidades públicas y privadas con las necesidades de innovación de las empresas locales. Cabe mencionar que en los países desarrollados estos vínculos no fueron desarrollados al azar o por las fuerzas del mercado solamente; en muchos de ellos hubo la acción deliberada del estado, como asunto de política de estado (Moreno, J., & Ruiz, P. 2009).

## METODOLOGÍA

El diseño de la investigación fue no experimental, transeccional, de corte cualitativo del tipo descriptiva que aplica métodos de investigación documental, tomando referencias de libros, revistas y consultas en la red internet. Para este estudio se consideraron como unidades de análisis una muestra de ocho reconocidas universidades latinoamericanas para analizar su programa de vinculación y documentar sus actividades en el área y determinar su grado de interacción con el sector empresarial y el gobierno; también se analizaron aspectos de la universidad como investigación y desarrollo, transferencia de tecnología; Innovación; Participación en redes de conocimiento; Patentes y protección del capital intelectual; Oferta de postgrado, vinculación y sus Publicaciones científicas, los cuales son considerados en esta investigación como elementos que miden el grado de contribución al desarrollo económico de las universidades en la sociedad del conocimiento. Mediante este análisis se detectan áreas de oportunidad que se proponen sean atendidas para el mejoramiento de los programas de vinculación universitarios y que estos se conviertan en promotores del mejoramiento del desarrollo económico de sus regiones de influencia.

## RESULTADOS

Se ha encontrado que existen en el mundo casos de éxito en la vinculación universitaria; Estados Unidos, Europa y Asia Pacífico son ejemplos de esto. Sus actividades han permitido a sus universidades acceso a recursos para investigación y desarrollo. Este éxito ha dado como resultado que estas instituciones se transformen en la lógica de la comercialización y la innovación productiva, para la generación de nuevos conocimientos y tecnologías, lo cual ha impactado en el desarrollo económico de sus respectivos países. Por otra parte, en Latinoamérica existen evidencias sólidas de que se inicia la vinculación, pero no con la amplitud que se desearía. Un problema encontrado es la insuficiente investigación realizada por las universidades Latinoamericanas, la región solo contribuye con el 1.5% de la producción científica mundial lo que impide la creación de conocimiento novedoso que puedan ofrecer a las empresas. Por otro lado, el gasto de los países latinoamericanos en ciencia y tecnología es mucho menor del 1% del PIB, recomendado por organismos internacionales.

Además, los gobiernos, salvo contadas excepciones, no han hecho lo suficiente para establecer políticas públicas que faciliten la vinculación entre empresas y universidades; son las universidades las que han tomado la iniciativa, son ellas las que se organizan e intentan relacionarse por medio de redes nacionales e internacionales de cooperación. Sin embargo, sin políticas públicas que deliberadamente propicien una interacción entre universidades y sector empresarial, los esfuerzos seguirán siendo aislados y desarticulados. A continuación se presentan los resultados obtenidos de la investigación en relación a los aspectos que en esta investigación se consideran como elementos que miden el grado de contribución al desarrollo económico de las universidades en la sociedad del conocimiento.

Estos aspectos son: investigación y desarrollo, transferencia de tecnología; Innovación; Participación en redes de conocimiento; Patentes y protección del capital intelectual; Oferta de postgrado, vinculación y sus Publicaciones científicas. Cabe mencionar que el concepto de economía del conocimiento guarda una estrecha relación con el concepto de sociedad del conocimiento debido al cambio en la base de la producción que esto representa. Si bien antes de la Segunda Guerra Mundial, la fundamentación del capital era dependiente de objetos, recursos y materias primas transformadas, posteriormente en parte del mundo la economía dio un giro. La clave de la economía del conocimiento está en crear un valor agregado a lo que ofrece, que en su mayoría se trata de servicios. El conocimiento no es solamente mera información, se trata de un proceso continuo de construcción, creación y participación en los que se genera utilidad y valor agregado a cada una de las economías (Colombia digital, 2013).

Como se puede observar la mayoría de las universidades analizadas están realizando actividades como investigación, desarrollo y transferencia de tecnología; programas de innovación, participan en redes de conocimiento; cuenta con protección del capital intelectual; realiza publicaciones científicas y desarrolla actividades de vinculación; realizando todo lo que está a su disposición para insertarse eficazmente en la sociedad del conocimiento. Sin embargo, a pesar de estos esfuerzos realizados, tanto de universidades y gobierno, aquí documentados, es una realidad que los vínculos entre la universidad y el sector empresarial en Latinoamérica han sido por lo general débiles y en algunos casos inexistentes (Moreno, J., & Ruiz, P. 2009). A continuación se presentan las calificaciones que el Foro Económico Mundial, a través del reporte de Competitividad Global 2012, otorgó a las naciones aquí estudiadas. Las calificaciones corresponden a dos de los doce pilares evaluados por la institución, así como la calificación de competitividad global obtenidas por estos países.

Tabla 2: del Ranking del The Global Competitive Report 2012

Competitividad global	Quinto pilar en competitividad Educación superior y capacitación	Decimo segundo pilar Innovación
Chile 33 Brasil 48 México 53 Costa rica 57 Colombia 69 Argentina 94	Costa Rica 41 rank score 4.78 Chile rank 46 score 4.72 Argentina rank 53 score 4.59 Brazil rank 66 score 4.27 Colombia rank 67 score 4.27 Mexico rank 77 score 4.11	Costa Rica 38 rank score 3.61 Chile rank 44 score 3.50 Brazil rank 49 score 3.42 Mexico rank 56 score 3.33 Colombia rank 70 score 3.17 Argentina rank 91 score 2.98

Fuente: Schwab. World Economic forum, (2012). The Global Competitive Report 2012

El Global Competitive Report evalúa a 144 países en relación a 12 pilares: 1. El entorno institucional; 2. La infraestructura; 3. La estabilidad macroeconómica; 4. La salud y la educación primaria; 5. La educación superior y capacitación; 6. La eficiencia de los mercados de mercancía; 7. La eficiencia del mercado laboral; 8. La sofisticación del mercado financiero; 9. Disposición tecnológica; 10. El tamaño del mercado; 11. Sofisticación de los negocios y 12. Innovación. Como se puede observar en el cuadro se tomaron solo 2 pilares de los 12 y la calificación global obtenida por los países analizados en este estudio. De los países aquí analizados, se observa que Costa Rica encabeza los pilares de educación superior y el pilar de innovación. Los demás países, por su parte, tienen diferentes desempeños. Encontrándose la mayoría -exceptuando a Argentina que se aleja un poco- cercanos a la mitad del ranking de los 144 países evaluados. Se han tomado como referencia para este trabajo, los pilares de competitividad en educación superior y capacitación, así como el pilar de innovación. El pilar de educación superior y capacitación es crucial para ascender en la cadena de valor más allá de los procesos de producción simple; la economía globalizada de hoy requiere países que fomenten grupos de trabajadores bien educados que sean capaces de adaptarse rápidamente a los cambios del entorno y a las necesidades

cambiantes del sistema productivo (elite empresarial, 2103). El pilar de innovación Chapa (2010) comenta que es un factor particularmente importante para las economías que se acercan a las fronteras del conocimiento y a la posibilidad de integrar y adoptar tecnologías exógenas.

## CONCLUSIONES

La vinculación universitaria es una actividad de gran importancia en la sociedad de nuestros días. Una vinculación bien instrumentada es factor de desarrollo económico de las naciones, existen evidencias fehacientes en varios países del mundo. La realidad de la vinculación universitaria en Latinoamérica es distinta a la de los países que se han beneficiado con ella. Esta es una actividad relativamente incipiente en la región. En Latinoamérica las actividades de vinculación se están realizando, pero se aprecian esfuerzos aislados; faltos de la necesaria coordinación; sin la suficiente interrelación entre los actores principales: gobierno, sector empresarial y las universidades. Es necesario avanzar hacia un estadio de mayor interacción entre estos actores. Hoy en día en Latinoamérica, la vinculación universitaria se realiza sin evaluar sus impactos en el desarrollo económico de la nación; el sector empresarial frecuentemente desconfía de la vinculación con las universidades; el estado no está creando con la suficiente rapidez las condiciones que faciliten el acercamiento entre la universidad y el sector empresarial; existen carencias de regulaciones y de creación de políticas públicas que normen las actividades de vinculación en la región; la interactividad entre sus partes se percibe como poca o nula.

Es necesario aumentar la inversión en educación en relación al PIB de las naciones, para que así se incremente la producción científica de la región. Por estas razones se recomienda realizar el diseño de un modelo de vinculación universitario que articule la actividad, que le de coherencia, que promueva la interacción entre sus partes, provea un sistema de medición de sus impactos y realice la debida retroalimentación para corregir insuficiencias. Solo mediante un modelo de vinculación eficaz, Latinoamérica podrá gozar de los beneficios que ya tienen los países con programas de vinculación universitarios exitosos.

# LA IMPORTANCIA DE LA CREACION DE PROVISIONES DE PASIVO EN LA ADMINISTRACION DEL RIESGO DE LAS MICRO, PEQUEÑAS Y MEDIANAS EMPRESAS

Maria Concepción González Becerril, Universidad Autónoma de Coahuila

Mayra Alejandra Fong Hernández, Universidad Autónoma de Coahuila

## RESUMEN

*En México la atención que se brinda a las MIPYMES contempla el otorgamiento de créditos, asesoría técnica, Análisis financiero, y otros apoyos que son altamente necesarios, sin embargo, por las características de los empresarios de este tipo de empresas lo que mas aprovechan de esas dependencias son los créditos, por lo que de ser la primera causa de cierre hace algunas décadas, pasó al 4°. Lugar de acuerdo a informes que reporta la encuesta nacional a microempresas realizada por el Instituto Nacional de Estadística y Geografía. Hoy día la problemática que presentan como relevantes son la competencia excesiva, la falta de ventas y la falta de utilidades, sin embargo, esta problemática está latente en cualquier empresa ya sea grande o pequeña, con la diferencia de que la empresa grande está preparada para afrontarlos considerando una buena planeación de ventas anual y de riesgos a diferencia de la mipyme, por carecer de asesoría que le oriente como realizarla, asimismo, esa orientación deberá cubrir un análisis de los riesgos para que los empresarios vean la necesidad de la creación de provisiones para contingencias, que de presentarse no afecten su seguridad económica y financiera y puedan así tener un crecimiento sostenido que redundará en la generación de más empleos y en el desarrollo de la región y de sus habitantes.*

**PALABRAS CLAVES:** Identificación, Evaluación Del Riesgo, Estrategias Y Provision

## THE IMPORTANCE OF PROVISIONS AND CONTINGENT LIABILITIES CREATION IN RISK MANAGEMENT OF MICRO, SMALL AND MEDIUM ENTERPRISES

## ABSTRACT

*Mexico supports micro, small and medium firms through financial credit programs; from being this the first cause of closure among the mipymes, this issue currently ranks fourth while the decrease in sales and profits due to strong competence has taken the first place, If we analyze the latter we find that this cause-effect relation is due to the lack of control of the risks surrounding the mipymes such risks are present in every action taken to reach the goals of the organization and it is due to the lack of professional advising on their detection and control that firm owners are less prepared to confront, transfer or avoid them. The consequences of some risks, like in the exchange rate, capital insufficiency, market or legal and labor can be reduced by the creation of liability provisions, this is because in case of being present their impact on the financial structure would be minimized as long as the best criteria for their creation is implemented.*

**JEL:** M0, M1, M10, M15, M19, M40, M49

**KEYWORDS:** Detection And Control, Liability Provisions, Minimized, Mipymes

## INTRODUCCION

México tiene una economía cuya configuración presenta rasgos y características de un capitalismo en desarrollo desde hace poco mas de treinta años en donde es fácil observar un crecimiento desigual de las micro, pequeñas y medianas empresas (Mipymes) con relación a las grandes empresas. Sin embargo una parte de las primeras no se consolidan y transforman en grandes empresas. Todos los días se crean nuevas micro o pequeñas empresas, pero también cada día cierran otras por diversas causas, situación que hace que no crezca el número de empresas grandes en el país. De acuerdo a datos proporcionados por Nacional Financiera actualmente las micro, pequeñas y medianas empresas desempeñan un papel muy importante en el desarrollo económico del país. El Instituto Nacional de Estadística, Geografía e Informática (INEGI) nos proporciona la siguiente información a nivel nacional.

Tabla 1 : Clasificación de las Mipymes Por Actividad

Estrato	Manufacturera %	Comercial %	(Se excluye sector gobierno) Servicio %
Micro	90.90	97.00	94.70
Pequeñas	6.00	2.00	4.30
Medianas	2.20	0.80	0.50
Grandes	0.90	0.20	0.50
Suma	100%	100%	100%

*Fuente: agrupación con datos proporcionados por el INEGI, donde se observa que la microempresas son las de mayor relevancia dentro de la economía nacional con un 94.2%*

## REVISION DE LA LITERATURA

### Antecedentes de la Administración del Riesgo en los Negocios

En realidad los riesgos han estado siempre presentes en cualquier movimiento que realizan las personas ya sean físicas o morales, como consecuencia de actividades comerciales, industriales, o de servicios. Los riesgos no previstos son los que por lo general ocasionan las pérdidas o gastos, cuya cuantía va desde poco valor hasta pérdidas considerables. El estudio y manejo de los riesgos no es un tema nuevo, actualmente la dirección moderna concibió una disciplina denominada Administración de Riesgos o Gerencia de Riesgos que se maneja desde una posición de dirección de la empresa y cuyo objetivo es el de identificar los riesgos y crear estrategias para evitarse, transferirse o para hacerles frente. En Europa, Estados Unidos de Norteamérica incluyendo Canadá, México y América Latina ya se maneja este concepto para el manejo de las operaciones de la iniciativa privada como pública.

Como ejemplo del manejo de riesgos citaremos al Estado Colombiano en su decreto 1537 del 2001(Transparencia y la rendición de cuentas en Colombia 2004) y que se establece en el artículo no. 4 y establece que todas las entidades de la administración pública deben contar con una política de administración de riesgos tendientes en darle un manejo adecuado a los riesgos. En México, la Nacional Financiera ([www.nafin.gob.mx](http://www.nafin.gob.mx)) como institución, ha implementado dentro de sus controles y procesos los estándares internacionales de administración del riesgo, desde una perspectiva sistemática e integral, asimismo la banca privada y las Cías de Seguros, hace uso de esta forma de administración.

La clasificación o fuentes de riesgos dependerá del tamaño de las empresas y de sus objetivos específicos, sin embargo, tomaremos la clasificación atendiendo a las diferentes etapas o acciones de los negocios y para abarcar todos los aspectos de ellas, los clasificamos en: Riesgos estratégicos, operativos, financieros, de cumplimiento y de tecnología por considerar que abarcan las operaciones estratégicas de un negocio.

En la actualidad existen pocas organizaciones en México, que se dedican a brindar asesoría de administración del riesgo, exclusivamente a las Mipymes y como ejemplo citamos al Tecnológico de Monterrey, que ofrece a las pequeñas y medianas empresas un programa enfocado a las asesorías e

investigación sobre las mejores prácticas internacionales en el área de administración del riesgo, además de otras Compañías dedicadas al manejo de seguros.

### La Administración del Riesgo en las MIPYMES

En México y de acuerdo a investigación realizada mediante entrevista a personal de la Nacional Financiera y Secretaría de Economía se incluye este programa para este sector de negocios por contar con poco número de personas para que lo apliquen dejando que sean ellas las que por convicción o necesidad la lleven a cabo. En la actualidad no se ha concluido algún estudio de aplicación de esta disciplina a las Mipymes debido a las características de este tipo de negocios, pues se considera difícil la implementación, seguimiento y control, derivado de la aplicación de la administración del riesgo, ya que el costo que demanda puede ser significativo, mismo que los dueños de los negocios no estarían dispuestos a pagar, y que de llevarse a cabo, los beneficios que se obtendrán serán muy alentadores para el País. De acuerdo a un estudio realizado determinamos que es factible que se lleve a cabo a través de asociaciones o agrupaciones de empresarios, y otras instancias como son las Universidades y la Secretaría de Hacienda por medio de folletos informativos, al momento de la inscripción de los negocios, en cuanto a la detección de los riesgos más comunes y la implementación de las estrategias para su transferencia a terceros, su preparación para afrontarlos o poderlos evitar.

### Identificación de los riesgos

Para la identificación adecuada de los riesgos es necesario, revisar los procesos de operación de acuerdo a la actividad de los negocios, asimismo llevar a cabo el análisis del entorno para detectar los riesgos externos, la exactitud de los riesgos detectados dependerá del grado de experiencia que tengan los asesores que realizan dichos estudios. Las fuentes de riesgo más comunes en las mipymes, son de operación, de financiamiento, de tecnología, legales y laborales. Dentro de los riesgos legales y laborales, los que más impacta a los empresarios es el fiscal y de indemnizaciones y jubilaciones al personal que labora en la empresa. Una vez identificado el riesgo se procederá a la cuantificación, para conocer el grado de pérdidas que pueden ocasionar, la cuantificación será de acuerdo a la frecuencia de su ocurrencia y a la intensidad del impacto.

### La Administración del Riesgo y la competitividad

La causa principal de cierre de las MIPYMES es en primer lugar, el exceso de competencia, en segundo la falta de ventas y la tercera la falta de utilidades, todo eso relacionado. Si analizamos lo anterior, nos podemos dar cuenta que la verdadera causa es la falta de competitividad para colocar a su negocio en primer lugar o hacer que se mantenga trabajando ante negocios similares, franquicias o negocios estratégicamente creados por las grandes empresas. Existen riesgos en todos los negocios, sean pequeños o grandes, sin embargo, estos últimos salen mejor librados que los pequeños por su visión y estrategias para enfrentarlos y desde luego por tener dentro de su estructura una gerencia que se dedica a identificar las fuentes del riesgo y a establecer la estrategia adecuada. Las MIPYMES para ser competitivas deben administrar y enfrentar los riesgos con confianza, y para administrarlos deben de identificarlos a lo largo de su proceso de operación. Es menester del gobierno federal a través de la Secretaría de Economía proporcionar incentivos y crear programas que alienten a todos los empresarios de las mipymes a acudir a ellas y se les proporcione asesorías para la detección y seguimiento de los riesgos a que están expuestas, con el objetivo de que estas se desarrollen adecuadamente y asegurar así su permanencia, beneficiándose con mayor recaudación de impuestos y con la recuperación de los créditos, otorgados por otras dependencias gubernamentales, sin necesidad del embargo u otras soluciones que atenten contra el cierre de las mismas.

### Tratamiento Contable de las Provisiones Según la NIF C-9

Textualmente nos dice la norma de información financiera, que las provisiones son pasivos en los que su cuantía o vencimiento son inciertos, por lo que un pasivo contingente es:

a) Una obligación posible, surgida a raíz de sucesos pasados, cuya existencia ha de ser confirmada sólo por la ocurrencia o, en su caso, por la falta de ocurrencia de uno o más eventos inciertos en el futuro que no están enteramente bajo el control de la entidad.

b) Una obligación presente surgida a raíz de sucesos pasados, que no se ha reconocido contablemente porque:

no es viable que la entidad tenga que satisfacerla el importe de la obligación no puede ser cuantificado con la suficiente confiabilidad Para la creación de estas reservas se deberán de medir los sucesos pasados con resultados inciertos con los términos Probable, Posible y Remoto, que de acuerdo a la misma norma nos dice que el primero es mas fácil de que se presente; posible es menos factible de que ocurra, con relación al primero, pero más que remoto y Remoto es mucho más difícil de que se presente.

### Reglas de Valuación

Debe reconocerse una provisión cuando se cumplan las siguientes condiciones:

a) exista una obligación presente (legal o asumida) resultante de un evento pasado a cargo de la entidad.

b) Es probable que se presente la salida de recursos económicos como medio para liquidar dicha obligación

c) la Obligación pueda ser estimada razonablemente

### Metodología Para el Estudio de la Necesidad de la Administracion del Riesgo en las Mipymes

El objeto de estudio fueron las MIPyMES de la Región Sureste de Coahuila y se realizó en dos etapas, la primera tuvo como objetivo conocer si Nacional Financiera y la Secretaria de Economía, a través de sus delegaciones estatales, manejan programas de administración del riesgo que benefician a las MIPyMES así como la calidad de la atención ofrecida a los empresarios en materia de asesoría para poder resolver los problemas inherentes a su negocio. Como técnica de información se utilizó la entrevista con preguntas como: que tipo de empresarios se acercan a pedir informes o asesoría, qué tipo de asesoría es la que más solicitan, causas por las que no acuden a pedir apoyo, qué se ha hecho para establecer un programa de administración del riesgo para apoyar a las mipymes.

En una segunda etapa se aplicó un estudio a los empresarios para determinar el grado de atención que reciben de las dependencias gubernamentales en cuanto a asesoría, asistencia técnica, capacitación, otorgamiento de créditos y asesoría frente a los riesgos inherentes a sus negocios, por lo que se realizó un sondeo entre los empresarios de la micro y pequeña empresa a través de un formato que midió el tiempo de operación del negocio, la edad de las personas creadoras del negocio, su inscripción en alguna cámara o asociación, la cantidad de información que reciben de las dependencias de gobierno relativas a la mejora de su situación operativa y financiera, percepción del riesgo que rodea al negocio. Se aplicaron 200 cuestionarios a empresarios de la micro, pequeños empresa de la región sureste de Coahuila

*Limitación:* Unicamente se trabajo con las micro y pequeñas empresas por considerar que son las que tienen mayor riesgo a cerrar operaciones y la captura de los datos fue a través del excell.

## RESULTADOS

*Dependencias Gubernamentales:* La información obtenida por los funcionarios de estas dependencias consistió en afirmar que acuden empresarios tanto de la micro, pequeña y mediana empresa, por lo general a solicitar información para obtener créditos, también declaran que creen que los empresarios de las microempresas no solicitan asesorías o asistencia técnica por que no confían en los funcionarios que los atienden. Los empresarios que más participan en foros o cursos son los de la grande y mediana empresa. Por lo que se refiere al establecimiento de un programa que administre los riesgos de las MIPYMES, declaran que no está incluido dentro de sus funciones, nos comentan que son los empresarios los que deberán implementarlo dentro de sus negocios.

*Empresarios:* Los empresarios de las MIPYMES, declararon que sí conocen los riesgos a que están sujetos sus negocios, la percepción de estos varía de acuerdo al grado escolar o tamaño de negocio, los empresarios sitúan como riesgos únicamente al fiscal y el que se presenten bajas ventas. En el caso de las empresas con mayor capital y tecnología ya identifican más riesgos en otros procesos de operación de la empresa. Las características de las Micro y pequeñas empresas visitadas son: que cuentan con una permanencia promedio de 6 años de operación, los manejan sus propietarios con un promedio de edad de 55 años. En cuanto a las características de organización, es que son de tipo familiar, cuyas gerencias están a cargo del padre y de los hijos con edades que oscilan entre los 40 y 60 años respectivamente. El resto de los resultados de las variables se presentan a continuación.

Figura 1 : Cantidad de Empresarios Que Acuden a Solicitar Información a la Nacional Financiera y Secretaria de Economía.

Empresarios de la Micro y Pequeña empresa que solicitan información a la SE o Nafin

De acuerdo con las respuestas de los empresarios el 83% no acuden a solicitar información a esas dependencias, solo el 17% si lo solicita.

Figura 2: Muestra la Cantidad de Empresarios Que Si Están Afiliados a Alguna Asociación o Cámara

Empresarios de la Micro y Pequeña empresa que pertenecen a alguna cámara o asociación

El 34% de los empresarios si pertenecen a alguna cámara o asociación, al 66% no le interesa formar parte de ellas.

Figura 3: Presenta el Número de Empresarios Que Si Reciben Información de Su Cámara

Del 34% de los empresarios que si forman parte de una cámara o asociación, solo el 34% si reciben información sobre como mejorar y el 66% no se siente satisfecho.

Figura 4: Muestra el número de empresarios que si conocen los riesgos que rodean a su negocio.

De acuerdo al resultado del estudio de campo los 200 empresarios encuestados, si conocen los riesgos a que está expuesto su negocio

Figura 5: los Problemas Mas Comunes Que Implican Riesgos Importantes en la Empresa

De los 200 empresarios encuestados todos señalaron como primer riesgo de sobrevivencia el fiscal y laboral, el 20% nos dice que además de ese, está la falta de ventas el 10% nos señalo que tiene problemas con la administración del negocio.

## CONCLUSION

De acuerdo al estudio anterior se determinó que los empresarios de las microempresas encuestadas trabajan de manera aislada, ya que la mayoría de ellas ( 66 % ) no forma parte de agrupación alguna, del 34% que si pertenece a estas y solo el 34% recibe información sobre dudas para administrar su negocio, y el resto de empresarios no tienen idea de como optimizar sus operaciones para la obtención de mejores resultados. Por otro lado, todos mencionan que conocen los riesgos que pueden afectar al negocio, sin embargo no saben como resolverlos. Las consecuencias de no trabajar con una administración del riesgo varían desde un desarrollo lento, hasta pérdidas económicas significativas, por lo que el esfuerzo y trabajo de muchos años puede terminar en el cierre de operaciones, de ahí que el conocimiento y manejo eficiente del riesgo es vital que asegurará una alta productividad en beneficio de todos. Atendiendo a la cantidad de empresas de este tipo y su importancia dentro del contexto económico del país es de suma importancia su permanencia y crecimiento

## PROPUESTA

La propuesta derivada del presente estudio es que se evalúe de manera objetiva la vulnerabilidad al riesgo y que se formen comités por segmentos de empresa con el fin de orientar a los empresarios para encontrar la mejor solución a cada uno de sus problemas, mismos que deberán estar debidamente identificados para enfrentarlos, conociendo la conveniencia de crear las reservas o provisiones necesarias y suficientes para que el impacto en la economía del negocio sea nulo o se busque la mejor manera de evitarlos o trasladarlos, asimismo, crear comités internos en las cámaras o asociaciones por segmento de empresa que lleve a cabo estudios, definiendo en primera instancia las causas de riesgo y finalmente los posibles efectos. cuyos resultado será distribuido entre el número MIPYMES, para que cada una de ellas, atendiendo a su giro acuda al centro de ayuda para su correcta asesoría y determinación de las estrategias necesarias.

# LOS GASTOS FISCALES EN MÉXICO, PARA HACER POSIBLE EL DERECHO AL TRABAJO COMO DERECHOS SOCIALES

Rigoberto Reyes Altamirano, Universidad de Guadalajara

## RESUMEN

*El objeto de estudio de la presente investigación, son los gastos fiscales que el Estado Mexicano destina para atender el derecho al trabajo y con este fin, analizamos diversos apoyos financieros y fiscales que pretenden abatir el desempleo, entre éstos, los programas del primer empleo, de apoyo a las personas de la tercera edad y a las personas con capacidades diferentes. También analizamos algunos apoyos fiscales que el gobierno mexicano otorga a las prestaciones que recibe el trabajador con motivo de su trabajo, como son las provenientes, entre otras, de jubilaciones, pensiones, primas vacacionales y dominicales y prestaciones de previsión social. Colateralmente examinamos dos elementos que consideramos negativos para el derecho al trabajo: El desempleo y la discriminación. Con base en datos oficiales de la autoridad mexicana y de la OCDE, presentamos las cifras que tiene nuestro país en el desempleo.*

**PALABRAS CLAVES:** Derechos Humanos, Derecho al Trabajo, Aspectos Fiscales, Primer Empleo, Trabajo Digno, Tratados Internacionales

## TAX EXPENDITURES IN MEXICO, TO MAKE POSSIBLE THE RIGHT TO WORK AS SOCIAL RIGHTS

### ABSTRACT

*The object of study of the present investigation, are the fiscal expenditure that the Mexican State intended to meet the right to work and to this end, we analyze various financial support and prosecutors who seek to pull down the unemployment, among these, the programs of the first employment, support for the elderly and people with different abilities. We also discuss some fiscal support for the Mexican government gives benefits to the employee on his work, such as from, among others, retirement, pension, holiday and Sunday and social welfare benefits. Collaterally examine two negative elements that we consider the right to work: unemployment and discrimination. Based on official data from the Mexican authorities and the OECD, we present the figures of our country in unemployment.*

**KEYWORDS:** Human Rights, Right to Work, tax issues, First Job, Decent Work, International Treaties

## INTRODUCCIÓN

A través de la presente investigación analizamos la situación del derecho al trabajo, como derecho humano y los gastos fiscales que realiza el Estado Mexicano para hacerlos posibles y viables. Entendemos como gastos fiscales, (SHCP, 2012), “todas aquellas exenciones, reducciones y desgravaciones que se desvían de la estructura “normal” de cualquier gravamen, constituyendo un régimen impositivo favorable para cierto tipo de ingresos o sectores de la economía y que tienen objetivos extra fiscales o de política económica. Esta definición podría incorporar otras medidas, como son la aplicación de tasas diferenciales, el otorgamiento de créditos fiscales y de deducciones más favorables, así como esquemas que permiten el diferimiento del pago de los impuestos o que otorgan alguna facilidad administrativa, entre otras”.

Partimos de la base que los derechos sociales son posibles y viables, no meras expectativas de bienestar, ya que como lo señala Pissarello, G, (2011), su relevancia jurídica consiste en que debe considerárseles *“como derechos a prestaciones de bienes o servicios, principalmente frente al Estado, tendentes a satisfacer las necesidades básicas que permitan a los individuos desarrollar sus propios planes de vida”*.

Previo al análisis de los gastos fiscales, dejamos establecido en la investigación, las características del derecho al trabajo, desde su regulación de la Constitución Política de los Estados Unidos Mexicanos (CPEUM) y de los tratados internacionales.

A la par del estudio del derecho al trabajo, como derecho humano, reflexionamos sobre dos elementos que coexisten con este derecho humano y que impiden su plena realización, como son el desempleo y la discriminación. Con este fin incorporamos algunas cifras de las tasas de desempleo existentes de los años 2009 a 2012 en México y su contexto en la OCDE.

Derivado de lo anterior, como característica del derecho al trabajo, delimitamos el concepto de dignidad humana y dejamos preciso que el desempleo atenta contra ella, en virtud de que impide el goce de las prestaciones derivadas del trabajo.

Una vez sentado lo anterior, pasamos al análisis de los gastos fiscales, que comprende los estímulos fiscales, exenciones, subsidios, reducciones, etcétera que el estado mexicano ha creado en las leyes tributarias pero enfocadas hacia el derecho al trabajo. Particularmente nos detenemos en los programas de apoyo al primer empleo, de empleo a discapacitados y del empleo a personas de la tercera edad, así como algunas prestaciones de previsión social y exenciones en el pago del ISR, a ingresos derivados de la relación laboral, consistentes en el pago de horas extras, jubilaciones, pensiones, primas vacacionales y dominicales, aguinaldos, etcétera, que hacen posible fortalecer el trabajo digno a los trabajadores.

## REVISIÓN DE LITERATURA

### Origen Del Trabajo Como Derecho y Como Derecho Social

Comenzamos con la revisión de las aportaciones doctrinales en torno a los orígenes del trabajo como derecho y encontramos la obra de Badilla, A.E. y Urquilla B., (s.f.), que se remonta a *“la aprobación de la Convención Americana sobre Derechos Humanos, en noviembre de 1969, aunque tal Convención entró en vigencia hasta 1978. Es interesante señalar que la Convención Americana sobre Derechos Humanos no conceptualizó directamente el derecho al trabajo, pero su Art. 6 expresamente formuló una prohibición respecto de la esclavitud, la servidumbre y del trabajo forzoso”* y su concepción formal como derecho lo encontramos *“con la entrada en vigencia, en 1999, del Protocolo Adicional a la Convención Americana sobre Derechos Humanos en Materia de Derechos Económicos, Sociales y Culturales (en adelante “Protocolo de San Salvador”), cuyo Art. 6.1 dice de la siguiente manera: “Toda persona tiene derecho al trabajo, el cual incluye la oportunidad de obtener los medios para llevar una vida digna y decorosa a través del desempeño de una actividad lícita libremente escogida o aceptada.”*

Sobre el mismo tema, ubicamos la opinión del Comité de Derechos Económicos, Sociales y Culturales (2005), que corrobora al trabajo como un derecho, en el comentario del artículo 6 al Pacto Internacional de los Derechos Económicos Sociales y Culturales (PIDESC), cuando expresa: *“El derecho al trabajo es un derecho fundamental, reconocido en diversos instrumentos de derecho internacional. El Pacto Internacional de Derechos Económicos, Sociales y Culturales, a través de su artículo 6, trata este derecho más extensamente que cualquier otro instrumento. El derecho al trabajo es esencial para la realización de otros derechos humanos y constituye una parte inseparable e inherente de la dignidad humana. Toda persona tiene el derecho a trabajar para poder vivir con dignidad. El derecho al trabajo sirve, al mismo tiempo, a la supervivencia del individuo y de su familia y contribuye también, en tanto*

*que el trabajo es libremente escogido o aceptado, a su plena realización y a su reconocimiento en el seno de la comunidad”.*

Hacemos notar que en México, si bien no se conceptualiza desde la CPEUM como un estado social, no significa que no estén reconocidos y protegidos los derechos sociales y para muestra lo constituyen los artículos 3, 4, 5 y 123 CPEUM, que norman, entre otros, los derechos a la cultura, a la educación, a la alimentación, al medio ambiente sano, a la vivienda digna, a la salud, al trabajo y a la previsión social

En México, revisamos la Ley Federal de Desarrollo Social (LFDS), que en su artículo 6, lo reconoce en esta categoría al expresar que constituyen *“derechos para el desarrollo social la educación, la salud, la alimentación, la vivienda, el disfrute de un medio ambiente sano, el trabajo y la seguridad social y los relativos a la no discriminación en los términos de la Constitución Política de los Estados Unidos Mexicanos”.*

### El Derecho Al Trabajo y La Dignidad Humana

Como característica del derecho al trabajo, delimitamos el concepto de dignidad humana, la cual la consideramos como co-substancial al derecho al trabajo y en general a todos los demás derechos sociales y hacemos notar que Saldaña, J. (s.f.), establece cuatro lineamientos respecto a la dignidad humana, al señalar que *“1) La dignidad es la base o fundamento de los derechos humanos, de la justicia y la paz social; 2) existe un reconocimiento universal de la existencia de esta dignidad, y hay también una convicción generalizada de que la misma es algo valioso, valioso de suyo, con una valor inmanente al propio hombre quien es su titular o la posee; 3) de la dignidad participan hombres y mujeres por igual; y, 4) la idea de dignidad de la persona se encuentra en estrecha vinculación con la libertad humana”*

Con base a lo anterior, coincidimos con Piza, R.R.(s.f.), cuando opina que no podemos hablar de dignidad humana, sino existe empleo en la población, en virtud de que si los trabajadores *“son informales o están desempleados, difícilmente podrán ejercer sus derechos derivados del trabajo como el salario mínimo, el descanso, la limitación de la jornada laboral, la sindicalización y el derecho a la seguridad social. Incluso su libertad de trabajo, en ese contexto difícilmente puede ejercerse plenamente”.*

### Los Efectos Engañosos De Las Tasas De Desempleo

La revisión de la literatura oficial de las tasas de desempleo, (OCDE, 2013), nos revela que México tiene una más baja que la promedio de la OCDE. Pero del análisis de la obra de Heath, J., (2012), nos lleva a la reflexión de que: *“El hecho de que nuestra tasa de desempleo abierto es más baja que en la mayoría de los países desarrollados (y del mundo), sencillamente es reflejo de que nuestros problemas son diferentes, pero no menos profundos y complicados. También, es importante comprender que la tasa de desempleo no es un indicador directo del bienestar de la población, sino la muestra de un desequilibrio en el mercado laboral. Hipotéticamente, se podría tener una situación en la cual 100% de la población tuviera trabajo, pero si está mal remunerado, es de baja productividad y no satisface al trabajador, el bienestar del país pudiera ser mucho más bajo que cualquier otra economía”.*

### El Marco Jurídico Internacional y En México Del Derecho Al Trabajo

Como literatura jurídica obligatoria para el estudio del derecho al trabajo, en la categoría de los derechos sociales, consideramos los textos de los artículos 1, 5 y 123, CPEUM, el artículo 6 del PIDESC, así como los artículos 6 y 7 del Protocolo Adicional a la Convención Americana sobre Derechos Humanos en Materia de Derechos Económicos, Sociales y (Ordinales) (PROTOCOLO DE SAN SALVADOR).

Una vez ubicado el derecho al trabajo como integrante de los derechos sociales consagrados en la CPEUM, en el PIDESC y en el “PROTOCOLO DE SAN SALVADOR” nos abocamos al examen de los gastos fiscales que el gobierno federal mexicano ha destinado para cumplir con el mandato de hacer posible y viable el Derecho al Trabajo.

### Los Gastos Fiscales En México Relacionados Con El Derecho Al Trabajo

Para determinar el alcance de “gastos fiscales”, acudimos a la literatura oficial (SHCP, 2012), que incluye como tal a *“todas aquellas exenciones, reducciones y desgravaciones que se desvían de la estructura “normal” de cualquier gravamen, constituyendo un régimen impositivo favorable para cierto tipo de ingresos o sectores de la economía y que tienen objetivos extra fiscales o de política económica. Esta definición podría incorporar otras medidas, como son la aplicación de tasas diferenciales, el otorgamiento de créditos fiscales y de deducciones más favorables, así como esquemas que permiten el diferimiento del pago de los impuestos o que otorgan alguna facilidad administrativa, entre otras”*.

También, como gasto fiscal, revisamos algunas prestaciones de previsión social que ayudan a que el trabajo sea digno y mejore la calidad de vida, tales como no gravar a los salarios mínimos (aproximadamente hasta 5 salarios mínimos) y exentar a los ingresos provenientes de horas extras, indemnizaciones, jubilaciones, pensiones, previsión social, aguinaldos, etcétera.

Con motivo del examen de los gastos fiscales en torno al derecho al trabajo, no dejamos de señalar que éstos, no pueden provocar discriminación entre las personas que aspiren a un trabajo digno, toda vez que se encuentra prohibidas las referidas prácticas y el artículo 1º, CPEUM, lo confirma.

En el mismo sentido, el Comité de Derechos Económicos, Sociales y Culturales (2009), fija la directriz siguiente:

- 1. La discriminación dificulta el ejercicio de los derechos económicos, sociales y culturales de una parte considerable de la población mundial. El crecimiento económico no ha conducido por sí mismo a un desarrollo sostenible y hay personas y grupos de personas que siguen enfrentando desigualdades socioeconómicas, a menudo como consecuencia de arraigados patrones históricos y de formas contemporáneas de discriminación.*
- 2. La no discriminación y la igualdad son componentes fundamentales de las normas internacionales de derechos humanos y son esenciales a los efectos del goce y el ejercicio de los derechos económicos, sociales y culturales. Según el artículo 2.2 del Pacto Internacional de Derechos Económicos, Sociales y Culturales (el "Pacto"), los Estados partes deben "garantizar el ejercicio de los derechos [que en él se enuncian] sin discriminación alguna por motivos de raza, color, sexo, idioma, religión, opinión política o de otra índole, origen nacional o social, posición económica, nacimiento o cualquier otra condición social".*
- 3. Los principios de no discriminación e igualdad están reconocidos además en todo el Pacto. En el preámbulo se destacan los "derechos iguales e inalienables" de todos, y se reconoce expresamente el derecho de "todas las personas" al ejercicio de los distintos derechos previstos en el Pacto en relación, entre otras cosas, con el trabajo, condiciones de trabajo equitativas y satisfactorias, las libertades de los sindicatos, la seguridad social, un nivel de vida adecuado, la salud, la educación y la participación en la vida cultural.*

### **METODOLOGÍA**

Utilizamos el método sistemático, que permitió unir los componentes del hecho analizado: Tratados Internacionales en materia de derechos humanos; los derechos sociales como derechos humanos, derecho al trabajo digno y gastos fiscales en México, lo que posibilitó formular una teoría sobre la situación

tributaria del derecho al trabajo digno en nuestro país- que aquí presentamos-, bajo los principios rectores de los tratados internacionales en materia de derechos humanos, entre ellos el PIDESC, así como el Protocolo de El Salvador.

Para unir los componentes del hecho analizado, utilizamos el método descriptivo, narrando y estableciendo las características del fenómeno investigado: Los gastos fiscales en el derecho al trabajo digno. En esta descripción, delimitamos: El alcance del concepto dignidad humana, como co-substancial del derecho al trabajo; El porcentaje de desempleo en México; La naturaleza negativa del derecho al trabajo, como son el desempleo y la discriminación arbitraria; así como, cuáles y cuantos son los gastos fiscales indirectos que México utiliza para hacer posibles y viables este derecho humano.

Por la investigación cuantitativa, pudimos conocer en millones de pesos, lo que el gobierno mexicano destina directamente a través del Presupuesto de Egresos de la Federación para la creación de empleo temporal en el año 2013, (1,058,633,916 en millones de pesos) así como los gastos fiscales que en el año 2012 y para el año 2013, se han destinado y se destinarán para apoyar los programas de apoyo al primer empleo (en 2012; 4,728 en millones de pesos y 0.0308 y en 2013; 5,152 en millones de pesos y 0.0312 en porciento del PIB), de empleo a discapacitados y del empleo a personas de la tercera edad (en 2012; 630 en millones de pesos y 0.0041 en porciento del PIB y en 2013; 644 millones de pesos y 0.0041 en porciento del PIB), así como algunas prestaciones de previsión social y exenciones en el pago del ISR, a ingresos derivados de la relación laboral, consistentes en el pago de horas extras, jubilaciones, pensiones, primas vacacionales y dominicales, aguinaldos, etcétera, que hacen posible fortalecer el trabajo digno a los trabajadores. (en 2012; 98, 634 en millones de pesos y 0,6415 en porciento del PIB y en 2013; 104,937 en millones de pesos y 0.6352 en porciento del PIB).

Igualmente, por la investigación cuantitativa, descubrimos las tasas de desempleo existentes de los años 2009 a 2012 en México y su contexto en la OCDE, para realizar un comparativo y establecer la ubicación, en materia de desempleo, que ocupa nuestro país en el referido contexto

Finalmente, en virtud del método sistemático, relacionando el marco legal analizado, pudimos advertir que existen gastos fiscales que inciden directamente en la creación de empleos, sino que tienen como finalidad procurar una vida digna para los trabajadores, exentando determinados ingresos derivados de la relación laboral.

## RESULTADOS

### Las Tasas De Desempleo En México y Las Propuestas Del Seguro De Desempleo

En México encontramos situaciones de desempleo que impiden que se materialice y cumpla en forma integral el derecho al trabajo, aunque debe reconocerse que en nuestro país, la tasa de desempleo en el año 2012, fue de 4.9, que es más baja que el promedio de los países de la OCDE (8.0) y más baja que los países de la Unión Europea (10.7). (OCDE, 2012).

Preocupados por el problema del desempleo, existen en México, dos iniciativas de legisladores para crear el seguro de desempleo: Una de Martínez M. J.M., (2012) denominada Ley General Del Seguro De Desempleo y otra propuesta por Guadarrama M.B. (2012), titulada Ley del Seguro Federal de Desempleo. Ambas reflejan la necesidad de crear un instrumento fiscal que disminuya la tasa de desempleo en el país.

El punto oscuro en los seguros de desempleo, lo señala Heath J. (2012), al reflexionar que *“Éste proporciona un ingreso a los desocupados durante cierto periodo para que tengan una mayor oportunidad de encontrar un empleo afín a sus posibilidades. De una forma u otra, es un incentivo perverso que mantiene tasas de desempleo más elevadas. Estudios revelan que entre más extendido sea el*

*seguro, mayores son las tasas de desempleo.*

#### Programa del Primer empleo

Lo norman los artículos 230, 231 y 232, de la Ley del Impuesto Sobre la Renta (LISR), y tiene como finalidad que los Patrones que contraten a trabajadores, considerados en “puestos de nueva creación”, tendrán derecho a una deducción adicional en el Impuesto Sobre la Renta (ISR).

Lo negativo de este programa y que atenta contra el derecho al trabajo, consiste en no permitir la contratación de personas que ya estén inscritas ante el Instituto Mexicano del Seguro Social (IMSS), lo que crea discriminación entre los trabajadores que no tienen empleo, permitiendo contratar, -como ya se indicó-, únicamente a los no inscritos en el IMSS.

#### Programa de empleo a personas de la tercera edad y a personas que padezcan con discapacidad motriz

Lo regula el artículo 1.7. del DECRETO que compila diversos beneficios fiscales y establece medidas de simplificación administrativa (2012), y consiste en otorgar una deducción en el ISR, por un monto adicional equivalente al 25% del salario efectivamente pagado a dichas personas.

#### Programa de empleo a personas con capacidades diferentes

Este programa se encuentra en el artículo 222, LISR y consiste en permitir realizar una deducción adicional en el ISR del 100%, a los patrones que contraten a trabajadores con estas características sobre el ISR retenido y enterado a la autoridad fiscal.

#### Programa de exenciones en el pago del ISR, que fortalecen el trabajo digno.

Adicionalmente a los gastos fiscales realizados para fomentar la creación de empleos, encontramos gastos fiscales cuya finalidad es la vida digna para el trabajador, otorgando exenciones en el ISR a los ingresos provenientes de la relación laboral, como son; *horas extras, jubilaciones, pensiones, participación en las utilidades de las empresa, primas vacaciones y dominicales, aguinaldos y algunas prestaciones de previsión social.*

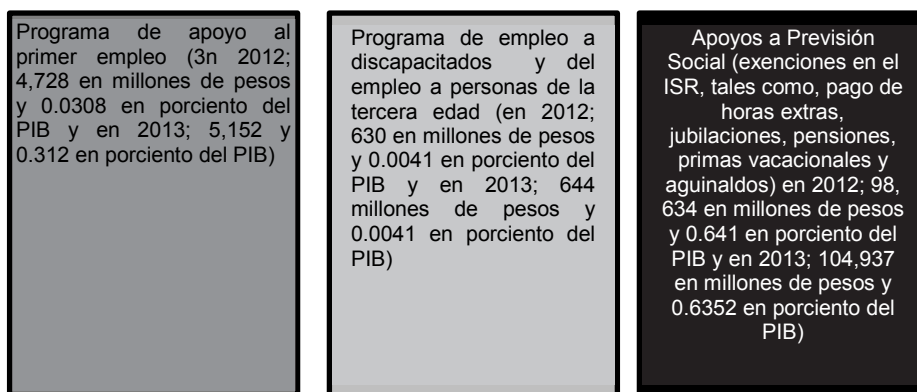

Los gastos fiscales que se mencionan en los programas de Primer Empleo, de empleo a personas adultos mayores, de empleo a personas con capacidades diferentes, así como el Programa de exenciones en el pago del ISR, que fortalecen el trabajo digno aparecen en la Figura 1.

#### Aspectos negativos de algunos programas de gobierno en materia tributaria que consideramos como obstáculos para el pleno desarrollo del derecho al trabajo.

Contrario a las políticas públicas del gobierno mexicano, de fortalecer el derecho al trabajo y procurar una vida digna para los trabajadores a través de gastos fiscales, existen medidas tributarias que entran en contradicción con las antes analizadas, como es el caso del Impuesto Empresarial a Tasa Única (IETU) que impide a las empresas deducir el pago de la nómina de los trabajadores y en compensación el poder legislativo federal (Gaceta Parlamentaria, 2007), determinó que: “*con el objeto de promover la generación de nuevos empleos y de no afectar los ya existentes, establecer un crédito fiscal que permita a los contribuyentes acreditar contra la contribución empresarial a tasa única el costo fiscal de las erogaciones efectuadas por concepto de salarios gravados, como más adelante se explica*”. Sin embargo ese crédito fiscal otorgado en el IETU, no incluyó a las denominada “*prestaciones de previsión social*”.

Figura 1: Gastos Fiscales En México Relacionados Con El Derecho Al Trabajo

Por ello, en nuestra opinión, lo anterior, ha traído como consecuencia directa el desincentivar la creación de nuevos empleos (impidiendo la realización del derecho al trabajo), en virtud de que los patrones al contratar trabajadores, deben considerar que el sueldo que les paguen a éstos, no será deducible en el IETU. Igualmente, en el caso de que decidan contratarlos, están obligados a presupuestar que las prestaciones de previsión social que les llegaren a conceder, no tendrán ningún estímulo fiscal, en virtud de que no se les concedió por el legislador, una forma de acreditarlos contra el impuesto a pagar en el IETU.

Aunado a ello, el Pleno de la SCJN (2011), ha sustentado que estas disposiciones no son contrarias al principio de proporcionalidad tributaria en la tesis con el rubro: EMPRESARIAL A TASA ÚNICA. LOS ARTÍCULOS 8, PENÚLTIMO PÁRRAFO, Y 10, SEXTO PÁRRAFO, DE LA LEY DEL IMPUESTO RELATIVO, AL NO RECONOCER DETERMINADAS EROGACIONES EFECTUADAS POR EL CONTRIBUYENTE PARA EFECTOS DEL CRÉDITO POR "SUELDOS, SALARIOS Y APORTACIONES DE SEGURIDAD SOCIAL", NO VIOLAN EL PRINCIPIO DE PROPORCIONALIDAD TRIBUTARIA (LEGISLACIÓN VIGENTE A PARTIR DEL 1 DE ENERO DE 2008).

## CONCLUSIONES

### Gastos Directos En México Para La Creación De Empleo Temporal

En México, encontramos instrumentos financieros, como lo es el Presupuesto de Egresos de la Federación de 2013, que a través de gastos directos (1,058,633,916 en miles de millones de pesos) demuestran su compromiso para hacer viables y posibles los derechos sociales y concretamente nuestro objeto de estudio como lo es el derecho al trabajo.

La falta de empleo o desempleo en un país, conlleva a que se imposibilite el cumplimiento del derecho al trabajo y además se atente contra la dignidad humana, en virtud de que las personas desempleadas no tienen salario, ni la más mínima prestación de previsión social, lo que rompe además, la aspiración por alcanzar un nivel de vida adecuado para el trabajador y para su familia.

### Los Montos De Los Gastos Fiscales Para Hacer Posibles Y Viables El Derecho Al Trabajo, En Los Años 2012 Y 2013

Los gastos fiscales realizados por nuestro país, con el fin de creación empleos y hacer posible el derecho al trabajo, son los programas de apoyo al primer empleo (en 2012; 4,728 en millones de pesos y 0.0308 y en 2013; 5,152 en millones de pesos y 0.0312 en porciento del PIB), de empleo a discapacitados y del empleo a personas de la tercera edad (en 2012; 630 en millones de pesos y 0.0041 en porciento del PIB y en 2013; 644 millones de pesos y 0.0041 en porciento del PIB).

### Gastos Fiscales Para Fomentar Una Vida Digna A Los Trabajadores

Para otorgar una vida digna a los trabajadores, existen también gastos fiscales que realiza México, otorgando exenciones en el ISR a los ingresos provenientes de la relación laboral, tales como; horas extras, jubilaciones, pensiones, participación en las utilidades de las empresa, primas vacaciones y dominicales, aguinaldos y algunas prestaciones de previsión social. (en 2012; 98, 634 en millones de pesos y 0,6415 en porciento del PIB y en 2013; 104,937 en millones de pesos y 0.6352 en porciento del PIB).

Contrario a las políticas públicas para crear fuentes de empleo y para otorgar una vida digna a los trabajadores, a través de los gastos fiscales previstos para exentar, reducir, subsidiar u otorgar estímulos a los ingresos provenientes de la relación laboral, existen mecanismos en México que entran en conflicto con las referidas políticas, como son el caso, de establecer medidas discriminatorias al sólo incentivar fiscalmente la contratación de trabajadores no inscritos ante el IMSS o en el caso del IETU, que no permite la deducción de la nómina que se paga a los trabajadores o no concede un crédito fiscal para aplicarse contra el impuesto a pagar, cuando se otorguen prestaciones de previsión social a los trabajadores.

El mensaje final en torno a este derecho humano, objeto de la presente investigación, sería, bajo el pensamiento de Badilla, A.E. y Urquilla B., (s.f.) *“que el derecho al trabajo en su justa conceptualización es un mecanismo eficiente para la superación de la pobreza, pues en la medida en que haya más empleo o trabajo digno, las familias tendrán mejores ingresos y acceso a bienes y servicios que las pueden excluir de la condición de pobreza”*.

# **SITIOS MÁS VISITADOS DE LA INTERNET POR LOS ALUMNOS DE LA CARRERA DE DESARROLLO DE NEGOCIOS DE LA UNIVERSIDAD TECNOLÓGICA DE CHIHUAHUA**

Doraidé Meixueiro Loera, Universidad Tecnológica de Chihuahua

Gloria Guadalupe Polanco Martínez, Universidad Tecnológica de Chihuahua

Claudia Yolanda Armendáriz Navarro, Universidad Tecnológica de Chihuahua

Blanca Isela Jurado Bustillos, Instituto Tecnológico de Chihuahua

Claudia Alvarado Delgadillo, Instituto Tecnológico de Chihuahua

## **RESUMEN**

*La expansión de la conectividad y de la disponibilidad de dispositivos, ha permitido en casi todos los estratos sociales el uso de internet, por lo que es importante incorporar en la educación este tipo de herramientas. Para ello, esta investigación tiene la finalidad de analizar cuáles son los sitios más visitados por los alumnos de la Carrera de Desarrollo de Negocios (CDN) de la Universidad Tecnológica de Chihuahua (UTCH). El diseño de la investigación fue no experimental, transaccional y descriptivo. Evaluando el uso, frecuencia, tiempo, momentos del día, lugar de conectividad y actividades que realiza en internet. Además, del uso de correo y redes sociales. La recolección de los datos se realizó en el salón de clases, aplicando un instrumento estructurado y dirigido. Los principales resultados indican que los alumnos suelen utilizar diariamente la Internet por más de 2 horas diarias, se conectan generalmente en su casa, en la mayoría de los casos para chatear, comunicarse por alguna red social y entretenerse viendo videos, siendo la compra-venta y la publicidad las actividades menos realizadas por los jóvenes.*

**PALABRAS CLAVE:** Navegar, Internet, Red, Tecnología, Conexión

## **MOST VISITED SITES ON THE INTERNET FOR STUDENTS CAREER DEVELOPMENT BUSINESS TECHNOLOGICAL UNIVERSITY OF CHIHUAHUA**

### **ABSTRACT**

*The expansion of the connectivity and disponibility of devices has permitted in almost every social stratum the use of Internet, for which is important to join this type of tools in education. In order, this investigation has the objective to analyze which are the most visited websites for the students of the Business development Carrier (CDN) of The Technological University of Chihuahua (UTCH). The design of the investigation was not experimental, transactional and descriptive. Evaluating the use, frequency, time, the moments of a day, place of connectivity and activities that are done in Internet. In addition, the use of email and social networks. The collection of data was made on the classroom, applying a structured and directed instrument. The main results show that students usually use Internet daily for more than 2 hours, they generally get on line at home, almost always for chatting, communicating by any social network and to entertain themselves watching videos, being the purchases and sales and publicity the activities less used by the young men.*

## INTRODUCCIÓN

Navegar por la red se convirtió en un pasatiempo popular, especialmente para los jóvenes. Al mismo tiempo, los educadores miraban a este medio cautelosamente. Si, en el Internet se veía un gran potencial como herramienta de aprendizaje. Pero: ¿en verdad tendría mérito educacional el contenido disponible en la red? Y ¿daría el estilo de navegación por la red de muchos usuarios, el tono debido para el salón de clases? Para los estudiantes de primaria, quienes a menudo se adhieren a agendas bastantes apretadas durante el día, pasar dos horas en la computadora para obtener información de tortugas marinas para un reporte, es imposible. Igualmente, para profesores, el volumen abrumador de información en la red, presentaba una desventaja significativa para convertirse en una herramienta de utilidad diaria.

Por estas razones, muchos en la comunidad educativa comenzaron a explorar maneras de capturar el potencial de la red, tales como, la compilación de listas con sitios útiles para crear un “portal de aprendizaje”, filtrando el material indeseado o creando contenido nuevo que fuera personalizado específicamente para determinar rangos de edades, grado o escuelas. Esta tendencia se puede ver en Escuelas Futuras, un sitio en la red de Intellicom. Esta compañía provee soluciones para conectividad de banda – ancha. (Rojas, 2001) Como afirma Sangrá (2004), citado por Guzmán la incorporación de las TIC a las universidades “se ha hecho de manera un tanto arbitraria, obteniendo resultados no siempre generalizables”. Cada universidad las ha ido incorporando de manera aislada, respondiendo a la necesidad inmediata que surgió repentinamente entre las instituciones, u obedeciendo a la moda tecnológica.

## REVISIÓN DE LITERATURA

Tal y como la pluma, papel y lápiz, y el PC, el Internet se están convirtiendo en un elemento fijo, en salones de clases alrededor del mundo. El impacto de la Red en las aulas podrá no ser tan grande como una vez se pensó – la revolución en la educación, prometida por algunos que abogan por la Red al principio de la explosión del Internet, no se ha materializado. Pero, con seguridad, el impacto del Internet se está sintiendo. Lo que es más, a medida que los avances en tecnología tienden a reducir los costos del hardware y el acceso a la red, estudiantes y maestros continuaran incorporando la red, correo electrónico y otras tecnologías, basadas en Internet, dentro de los métodos de instrucción, planificación de lecciones y trabajo administrativo en los salones de clases. Como afecten estas tecnologías, el proceso educacional en su totalidad, es una pregunta que necesita ser examinada más de cerca.

Barbero M., 2003 citado por Guzmán, dice, existe una brecha con relación a los usos de Internet entre los profesores y sus estudiantes. La brecha se agranda cuando los profesores de mayor edad encuentran menos familiaridad con los usos de la computadora y con Internet. Si esto se traslada al aula, parece que Internet no interviene en el proceso de enseñanza-aprendizaje, así lo consideran los profesores, porque la realidad indica que los estudiantes copian tareas, extrayéndolas literales de Internet, y recurren cada vez menos a las fuentes bibliográficas de las bibliotecas, pues disponen de Internet como su principal fuente de información. “El lugar de la cultura en la sociedad cambia cuando la mediación tecnológica deja de ser meramente instrumental para espesarse, densificarse y convertirse en estructura. Pues la tecnología remite hoy no a la novedad de unos aparatos, sino a nuevos modos de percepción y de lenguaje, a nuevas sensibilidades y escrituras” Como afirma Sangrá, 2004, sin duda, las razones pedagógicas no fueron, en esta primera aproximación, un motivo prioritario. Ante la incorporación de las TIC sin una adecuada planeación educativa, los profesores han asumido con naturalidad la búsqueda de información en la Internet y el uso de la tecnología especialmente como procesador de conocimiento, en una concepción entrada en la información y su manejo.

## METODOLOGÍA

Esta investigación es de carácter no experimental, descriptiva y transversal, la población de interés fueron los alumnos de la Universidad Tecnológica de Chihuahua, tomando como marco muestral alumnos de la Carrera de Desarrollo de Negocios. Para determinar la muestra se considero un 5% de error aceptable y un nivel de confianza deseado del 95%, arrojando una muestra de 195 alumnos. Para la recopilación de la información se aplico un cuestionario, que posteriormente se analizo a través del programa estadístico SPSS, para la obtención de resultados.

## RESULTADOS

Dentro de los resultados encontrados se observa que la principal actividad para lo que los alumnos utilizan la internet con un 24.8% es para cuestiones de estudio, el 19.5% lo utiliza para chatear, el 17.5% lo emplea para entrar a las redes sociales, muy seguido de los que lo necesitan para entretenimiento con un 17.4% y la actividad con menor porcentaje es la de compra con un 7.3%, esto es debido a que la mayoría de los alumnos aun no cuentan con una tarjeta de crédito, siendo este el principal requisito para la compra de algún producto por este medio. La Figura 1 muestra las principales actividades realizadas por los alumnos en Internet.

FIGURA 1: Principales Actividades

## CONCLUSIONES

Se logra el objetivo general de conocer los sitios más visitados de la Internet por los alumnos de la Carrera de Desarrollo de Negocio en la Universidad Tecnológica de Chihuahua. En relación con el objetivo de identificar los sitios más visitados se tiene que para estudio y/o investigación el 51.79% de los jóvenes inicia su búsqueda por medio de Google y el 27.18% lo hace directamente en Wikipedia; los sitios de entretenimiento preferidos son You Tube con un 45.13% y Facebook con un 18.97%; para chatear el 93.83% lo hace por Messenger; las noticias prefieren leerlas en periódicos digitales locales siendo El Tiempo el más visitado con un 47.69%; Mercado Libre es con un 69.23% el sitio más visitado para comprar y/o vender; y como red social el 75.9% prefiere utilizar Facebook.

# EL LIDERZAGO Y LAS RELACIONES INTERPERSONALES DENTRO DEL CLIMA ORGANIZACIONAL

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México  
Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México  
Brenda Alejandra Castellanos Ortiz, Universidad Autónoma de Coahuila-México

## RESUMEN

*El presente trabajo de investigación se realizó con el objetivo de conocer la influencia del Liderazgo que ejercen los supervisores en las relaciones interpersonales que se presentan entre los trabajadores administrativos y operativos de una Pequeña Empresa de la industria metal-mecánica, a fin de proporcionar al directivo de la empresa alternativas de reforzamiento o mejora para un Clima Organizacional satisfactorio. Para llevar a cabo este estudio se determinó que la Muestra fuese por consenso, formada por 20 trabajadores a quienes se les aplicó un cuestionario estructurado, tipo escala de Likert, que consta de 35 reactivos correspondientes a 7 variables; para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.829; los resultados obtenidos son: que la variable liderazgo muestra una correlación significativa con las variable de relaciones interpersonales.*

**PALABRAS CLAVE:** Liderazgo, Relaciones interpersonales, Clima Organizacional.

## LEADERSHIP AND INTERPERSONAL RELATIONSHIPS WITHIN THE ORGANIZATIONAL CLIMATE

### ABSTRACT

*The present research was conducted with the objective of determining the influence of leadership exercised by supervisors in interpersonal relationships that occur between administrative and operational employees of a small business in the metalworking industry, to provide the manager company strengthening or improvement alternatives for satisfying organizational climate. To carry out this study found that the sample was by consensus, consisting of 20 workers who were administered a structured questionnaire, Likert-type scale, consisting of 35 reagents for 7 variables, for the reliability of the instrument was used Cronbach's alpha test, yielding a coefficient of internal consistency of 0.829, the results are that the leadership variable shows a significant correlation with the variable relationships.*

**KEYWORDS:** Leadership, Interpersonal relationships, Organizational Climate.

## INTRODUCCIÓN

Como miembros de una institución educativa a nivel superior en el país, es nuestro interés generar conocimiento, alternativas y/o propuestas para el logro de las estrategias gerenciales que permita mejorar el desempeño de los directivos que laboran en las pequeñas y medianas empresas (Pymes) del ramo de la industria metal mecánica que operan en la zona metropolitana de Monclova Coahuila, México. Monclova se caracteriza por contar desde el año de 1942, con la empresa siderúrgica de mayor producción de acero a nivel nacional, “Altos Hornos de México S.A. de C.V.” conocida como AHMSA, que junto con otras unidades industriales que se fueron instalando con el tiempo, son el motor de la economía de la región, provee una parte considerable de las necesidades de la industria nacional en las ramas eléctrica, automotriz, de la construcción, alimenticia, petrolera, de bienes de capital, así como los

sectores agrícola y de transporte. Esto, le ha permitido ser una de las cinco ciudades de mayor desarrollo industrial a nivel nacional y que desde tiempo atrás ha atraído la atención tanto de pequeños como grandes inversionistas interesados en hacer trabajar su capital a través de la creación de comercios, organismos de servicios, empresas transformadoras, entre otros.

Bajo este contexto, en el que la competencia surge día a día, las exigencias de calidad y competitividad son mayores, surge la preocupación e interés de los directivos de las pymes de estudiar el comportamiento de su personal, ya que su desempeño es fundamental para el logro de sus objetivos empresariales. El objetivo de estudio es conocer la influencia del Liderazgo que ejercen los supervisores en las relaciones interpersonales que se presentan entre los trabajadores administrativos y operativos de una Pequeña Empresa de la industrial metal-mecánica fundada en el año de 1998, y a la fecha está conformada por 20 personas. A nivel gerencial existe un Director que es el fundador y dueño de la empresa, el cual se apoya de cuatro personas en el área administrativa, dos de ellas, además de apoyar con los asuntos de tipo administrativo, lo hacen en el área de supervisión. Cabe e mencionar que de los, uno es de género masculino y el otro femenino. Dieciséis son el total de trabajadores que se encuentran en el área de producción, todos ellos de género masculino.

## REVISIÓN LITERARIA

Uno de los temas que más interés despierta entre los estudios de las empresas modernas es el referido al clima organizacional, expone Patrón C et al (2012) que existe un gran número de publicaciones sobre estudios realizados en grandes organizaciones en el ámbito internacional para conocer sobre las condiciones de éste tópico, sin embargo, son pocas las investigaciones realizadas en las pymes nacionales que permita aportar conocimiento para beneficio en la toma de decisiones directivas, por ello, patrón ofrece en su publicación una metodología para el desarrollo de futuras investigaciones en el tema.

Curiosamente uno de los aspectos que más tiende a olvidarse al tratar éste asunto es el que tiene que ver con su definición de clima organizacional. Aunque no lo parezca, este punto resulta de capital importancia pues a partir de cómo se le conciba se le podrá explicar y hasta intentar acciones para su modificación o cambio para mejorar. En cuanto a las definiciones de clima organizacional, estas se agrupan en tres posturas o enfoques (Silva, 1996). Las definiciones objetivas privilegian una comprensión del clima como mero conjunto de características organizacionales tangibles y que influyen sobre la conducta de sus integrantes (Brunet 2004). Mañas, et al (1999) denominan a éste, el enfoque estructural acerca de la formación del clima. Para este enfoque el clima existe de modo tangible y exterior a los individuos quienes están expuestos a él y tan sólo ellos lo perciben. En conjunto, los integrantes de la organización tienen percepciones similares de su clima de trabajo. Al ser interrogados sobre él, lo reproducen sin modificaciones ni procesamiento.

La segunda postura que reflexiona Silva (1996), son las definiciones subjetivas, que entienden el clima como percepciones personales de los miembros de una organización. Con esta perspectiva se asume una postura tan extrema como la anterior. Es decir, el clima depende del estado de ánimo de quienes lo viven y, por tanto, sería mutable, poco fiable y tal vez hasta inabordable. Mañas et al (1999) lo denominan enfoque perceptual de la formación del clima, en tanto privilegia lo subjetivo. El clima, desde esta perspectiva, es una descripción individual o personal del entorno organizacional. En la tercera postura, se encuentran aquellas definiciones integradoras que conciben al clima como el resultado de la interacción entre las características físicas de la organización y las características personales de los individuos que la componen. Son los individuos en su interacción recíproca y con el ambiente, los que dan lugar al consenso sobre el clima. Inspirado en ésta tercer postura y de acuerdo a sus observaciones en el ambiente empresarial, Méndez A. (2006) presenta una definición completa de clima: “El ambiente propio de la organización, producido y percibido por el individuo de acuerdo a las condiciones que encuentra en su proceso de interacción social y en la estructura organizacional que se expresa por variables (objetivos,

motivación, liderazgo, control, toma de decisiones, relaciones interpersonales, cooperación) que orientan su creencia, percepción, grado de participación y actitud determinando su comportamiento, satisfacción y nivel de eficiencia en el trabajo. Por otro lado, para conocer el impacto del liderazgo (supervisión) que se ejerce, por ello es importante conocer y analizar el concepto así como las distintas teorías de liderazgo, hasta los más conocidos y/o aplicadas en esta época. En diversas definiciones del término *liderazgo* encontramos conceptos como proceso, interrelación, comportamiento, dirección, orientación hacia las metas, uso del poder, influencia, seguidores, entre otros Kouzes, (1990). Para los fines de este estudio, el concepto de liderazgo se define como la capacidad que tiene un individuo de influenciar, motivar y permitir a otros contribuir a la eficacia y el éxito de la organización publicado por House et al (1997).

Una de las tipologías más aceptadas a través de las últimas décadas es el enfoque de liderazgo *Transformacional y el transaccional*. Bass (1985) quien identifica la diferencia entre un estilo transaccional y uno transformacional, ya que radica en que es lo que los líderes y seguidores ofrecen unos a otros. Los líderes Transformacionales ofrecen una visión y se enfocan en necesidades internas de orden mayor, por ello inspira carisma, estimación intelectual sobre todo porque proporciona a sus seguidores atención personalizada para instruir y aconsejar individualmente a los miembros de su equipo. En contraste con los líderes transaccionales se focalizan en el adecuado intercambio de recursos, en el que el punto clave es la relación de influencia mutua. Si bien los dos estilos tienen características distintivas, no representan los extremos, sino que son enfoques complementarios, por lo que se destila a la fecha, es la conjugación de los dos.

Existen otros estilos de liderazgo los etiquetados como los clásicos, los dos más conocidos son basados en las dimensiones de *orientación a las personas o consideración* y de *orientación a la tarea o iniciación de estructura*. La *iniciación a la Tarea* cita Robbins S (1987) indica que el líder tiende a definir y estructurar su rol y los de los subordinados en miras del logro de las metas, incluyendo estándares definidos de ejecución, además de confirmar que los subordinados comprendan órdenes y tareas, que sigan los procedimientos operativos, asignando tareas concretas y enfatizan su cumplimiento en plazos determinados. La *consideración* es el grado en que una persona suele tener sus relaciones laborales con cierto grado de confianza, respeto y hasta aprecio por sus sentimientos. En artículo escrito por Cuadra A. et al (2010) argumenta Piccolo (2004) que esta dimensión “Consideración e Iniciación de estructura han probado estar entre los más robustos conceptos de liderazgo”.

Finalmente es importante mencionar que el estilo de liderazgo seleccionado dependerá de la firmeza de la humildad, la participación, el desarrollo y confianza que ejerza el líder en su gente. En la medida en que los gerentes y supervisores establezcan un buen trato, respeto, procuración y ayuda hacia su personal, será en la medida en la que se pueda contar con buenas relaciones interpersonales como parte del un clima organizacional favorable a la productividad. Las Relaciones interpersonales anteriormente mencionada, hacen referencia al desarrollo de relaciones con sus compañeros de trabajo, o relaciones con otros colaboradores o seguidores, a partir del intercambio de emociones, afectos, necesidades, intereses y hasta formas de hacer y entender las cosas para el desarrollo de una tarea o actividad (Hunsaker y Cook, 1986).

## METODOLOGÍA

El diseño metodológico es el correspondiente a una investigación de campo, transversal, descriptivo y cuantitativo; la empresa objeto de estudio pertenece a la industria metal-mecánica; la población está determinada por consenso ya que incluye la totalidad de los trabajadores. Para efectos de la recolección de la información, se utilizó el instrumento diseñado por Weisbord para medir el Clima Organizacional y que consta de 35 preguntas en 7 variables, agrupadas 5 preguntas por variable: Propósito, estructura, liderazgo, relaciones, recompensas, mecanismos útiles y actitud hacia el cambio. En el presente estudio solamente se consideraron las variables liderazgo y relaciones (tabla 2). Definición y Operacionalización de Variables.

Tabla 2: Definición y Operacionalización de las Variables de Acuerdo al Instrumento de Weisbord

Variable	Indicadores	Preguntas
<b>Propósito</b> Grado en que los miembros de la organización perciben claramente la misión y los fines de ésta.	Claridad de la meta y si los trabajadores apoyan el propósito de la organización.	1, 8, 15, 22, 29
<b>Estructura</b> Si existe concordancia adecuada ente la finalidad y la estructura disponible.	Es la disposición y orden de las partes dentro de un todo.	2, 9, 16, 23, 30
<b>Liderazgo</b> Es el acto de vigilar ciertas actividades de tal manera que se realicen en forma satisfactoria.	Aceptación del jefe, reconocimiento de ser competente, trato justo, atención en sentimientos de sus subordinados.	3, 10, 17, 24, 31
<b>Relaciones</b> Son las enderezadas a crear y mantener entre los individuos, unidades o departamentos..	Relaciones cordiales, vínculos amistosos, reconocimiento y respeto de la personalidad humana.	4, 11, 18, 25, 32
<b>Recompensas</b> Similitudes y diferencias entre lo que la organización recompensa formalmente.	La recompensa es a través de incentivos o en su caso un castigo	5, 12, 19, 26, 33
<b>Mecanismos Útiles</b> Son los procesos que la organización tiene para sobrevivir y ayudan a los miembros de la misma a desempeñar sus actividades y que alcancen los objetivos organizacionales.	Planeación, control, presupuestos y los demás sistemas de información, como las Tic's.	6, 13, 20, 27, 34
<b>Actitud hacia el Cambio</b> En virtud de que hoy en día las organizaciones deben de tener la tendencia a configurarse en organizaciones de aprendizaje.	Organizaciones que son capaces de cambiar en un futuro, implementar un sistema de administración, mejoramiento de la calidad.	7, 14, 21, 28, 35

*En esta tabla se muestra la Definición y Operacionalización de variables. Fuente: Elaboración propia.*

Para determinar la confiabilidad del instrumento se aplicó una prueba piloto, cuyos resultados fueron sometidos a la prueba de Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de .829 que con el programa estadístico SPSS (versión 17.0) dicho índice es considerado aceptable. El cuestionario que se aplicó (anexo 1) es estructurado y consta de dos partes: la primera, contiene una escala tipo Likert con 35 preguntas, y 6 opciones de respuesta (1.- Muy en desacuerdo, 2.- En desacuerdo, 3.- levemente en desacuerdo, 4.- levemente de acuerdo, 5.- De acuerdo y 6.- Muy de acuerdo), el cual fue contestado con carácter anónimo. La segunda parte contiene reactivos de datos generales relativos al, género, edad, nivel de estudios, y actividad que realiza antigüedad en la empresa. Para el procesamiento de los datos que arrojo la totalidad de cuestionarios aplicados, se utilizó el software (SPSS/w, versión 17.0) a través del cual se realizaron los cálculos estadísticos descriptivos y de relación.

## RESULTADOS

En respuesta a los reactivos de datos generales relativos a la edad, Antigüedad y nivel de estudios, en la tabla 1, se presentan las frecuencias por rangos de edad, observándose que predomina los trabajadores de la categoría de adultos que son 10, seguida por 7 trabajadores del rango de Jóvenes; mientras que la minoría es madura. En relación a la antigüedad en la empresa, se distingue que 7 trabajadores tienen de 3 a 5 años de servicio y 5 trabajadores se ubican en el rango de menos de 1 año, respectivamente. Con respecto al nivel de estudios, se encontró que son 8 de los trabajadores que han cursado la carrera Técnica seguidos por 6 trabajadores cuenta con estudios de Secundaria. El que parte de las características demográficas (ver tabla 1) del personal que labora en esta pequeña empresa predominen las personas adultas y jóvenes, que un 75% tenga más de un año de antigüedad y predomine el trabajador con más de los niveles básicos educación (primaria y secundaria) de acuerdo a lo que indica la ley General de Educación en México (artículo 4); tal parece favorecer a crear un ambiente propio de interacción social en la organización.

Tabla 1: Características Demográficas

<b>Panel A: Frecuencia por Rango de Edad</b>	
Jóvenes (18 – 30 años)	7
Adultos (31 – 50 años)	10
Maduros (51 – 75 años)	1
No Contestaron	2
	Total= 20
<b>Panel B: Frecuencia por Antigüedad</b>	
Menos de 1 año	5
De 1 a menos de 3 años	3
De 3 a menos de 5 años	7
De 5 a menos de 7 años	1
De 7 a menos de 10 años	3
Más de 10 años	1
	Total= 20
<b>Panel C: Frecuencia por Nivel de Estudios</b>	
Ninguno	3
Secundaria	6
Técnico	8
Preparatoria	1
Licenciatura	2
	Total= 20

En esta tabla se muestran las Frecuencias por rangos de Edad, Antigüedad y Nivel de Estudios. Fuente: Elaboración Propia.

Como se percibe en la Tabla 2, la Media global más alta corresponde a la Variable de Relaciones interpersonales con 4.78, la variable de Liderazgo con una Media de 4.54. Las dos variables sujetas a estudio, tienen resultados semejantes y favorables de acuerdo a la escala de likert del instrumento. Es decir que el promedio de respuestas dadas por el personal de la pequeña empresa, fue el de *estar de acuerdo* tanto en las relaciones interpersonales como la forma de supervisión que se vive en el interior de la organización.

Tabla 2: Medias Globales y Desviaciones Estándar de las Variables de Liderazgo y Relaciones.

<b>Variables</b>	<b>Media</b>	<b>Desviación Estándar</b>
Liderazgo	4.54	0.69
Relaciones Interpersonales	4.78	0.51

En esta tabla se muestran las Medias globales y las Desviaciones Estándar por las variables de Liderazgo y Relaciones. Fuente: Elaboración Propia.

En el presente el contar con un Clima Organizacional adecuado para los integrantes de una empresa es un enfoque administrativo invaluable que abre las oportunidades para incrementar la productividad, reducir el ausentismo, conflictos, así como los costos, entre otros beneficios más. Por ello se debe de atender y cuidar como cualquier otro activo fijo de la empresa, que aunque es intangible, son muchos los beneficios que aporta. Los hallazgos realizados en esta pequeña empresa, muestran que actualmente cuentan con un clima organizacional favorable en cuanto a las variables de relación y liderazgo que contribuye al logro de sus metas, en el que sus supervisores son bien vistos por los trabajadores de la empresa, mantienen una relación aceptable, además el que el personal reconoce haber establecido las relaciones necesarias para desempeñar adecuadamente su trabajo por el esfuerzo realizado por su jefe.

La forma de supervisión que muestra tener coincide con los estilos clásicos del liderazgo citados por Cuadra: basados en las dimensiones de *orientación a las personas o consideración* que consiste en el grado en que una persona suele tener sus relaciones laborales con cierto grado de confianza, respeto y hasta aprecio por sus sentimientos. Una de los aspectos que favorece su enfoque de supervisión, es el tamaño de la empresa ya que ello posibilita la comunicación y las buenas relaciones interpersonales entre ellos, sin embargo como parte de las estrategias gerenciales, es recomendable complementar y adoptar un estilo de liderazgo como el propuesto por Bass B. (1985) el enfoque de liderazgo Transformacional y transaccional en el que ambos son complementarios, mantienen o mejoran la calidad en la supervisión y

relaciones con sus seguidores así como el sentimiento de trato justo del supervisor hacia sus trabajadores y pudiesen contribuir a fortalecer además del liderazgo y las relaciones interpersonales, otras variables del clima organizacional.

## CONCLUSIONES

Determinar el Clima organizacional que prevalece en la pyme, permite contar con información de apoyo útil para su planeación estratégica, toma de decisiones directivas para la elaboración de planes y programas de cambio e innovación que contemplen mejorar las condiciones de trabajo en los comportamientos y en la satisfacción en el trabajo. Así por ejemplo pueden gestionar que la gente se sienta parte de la organización y encuentre un desarrollo profesional. Por ello la importancia de conocer sobre el ambiente que predomina en este tipo de organizaciones a nivel nacional.

Como parte de los valores éticos y profesionales el papel de catedrático investigador en la sociedad, es el proveer la información generada a las instituciones involucradas y sujetas de estudio, por ello se contempla ofrecer retroalimentación al dueño de la empresa y una propuesta de efectuar en un futuro próximo un diagnóstico de clima organizacional y, de ser posible, seleccionar y aplicar un instrumento de medición de estilos de liderazgo, de preferencia del transformacional/transaccional, para sugerir estrategias de mejora o reforzamiento que se requieran en su caso.

# **RETOS Y PERSPECTIVAS DEL SECTOR AGROALIMENTARIO EN EL RAMO DE LAS HORTALIZAS: CASO EXPORTACIÓN DE ESPÁRRAGOS SONORENSE HACIA ESTADOS UNIDOS EN EL MARCO DEL TLCAN**

Rosalina Jaime Meuly, Universidad del Estatal de Sonora

Francisco L. Camou Grijalva, Universidad Estatal de Sonora

Beatriz Alejandra Hurtado Bringas, Universidad Estatal de Sonora.

Natalia Guadalupe Romero Vivar, Universidad del Estatal de Sonora

## **RESUMEN**

*Durante las últimas dos décadas, México presenta una diversificación de productos provenientes de la agricultura hacia los mercados de exportación que muestran competitividad en algunos sectores, particularmente en el ramo de hortalizas. En el contexto regional se analiza la economía sonorense del sector agroalimentario en la cual se observa una tendencia de crecimiento en sus exportaciones, mientras que Estados Unidos a pesar de presentar un aumento en sus exportaciones a nivel mundial, ha perdido competitividad sobre México, debido a que nuestro país tiene gran potencial exportador del espárrago. Ante esta situación será posible crear políticas públicas que mejoren la producción y comercialización de hortalizas en los mercados de exportación. Por lo anteriormente expuesto, es necesario un estudio de la competitividad de la ventaja relativa en la exportación de espárrago sonorense en el marco del TLCAN con el fin de conocer el factor de crecimiento y comercialización de dicha actividad.*

**PALABRAS CLAVE:** Exportar, Comercio, Negocios, Tratado

## **CHALLENGES AND PERSPECTIVES OF THE FOOD INDUSTRY IN THE FIELD OF VEGETABLES "CASE SONORAN ASPARAGUS EXPORTS TO THE UNITED STATES UNDER NAFTA"**

### **ABSTRACT**

*Over the past two decades, Mexico has a product diversification from agriculture towards export markets showing competitiveness in some sectors, particularly in the field of vegetables. In the regional context is analyzed Sonoran economy of food industry in which there is a trend of growth in exports, while the United States despite having increased its exports worldwide, has lost competitiveness on Mexico because that our country has potential exporter of asparagus. In this situation you can create public policies to improve the production and marketing of vegetables in export markets. Based on the above, it is necessary to study the competitiveness of comparative advantage in the export of asparagus Sonoran NAFTA in order to know the growth factor and commercialization of such activity.*

**JEL:** 013,Q17, N10,F19.

**KEYWORDS:** Growth ,trade, market.

## **INTRODUCCIÓN**

Actualmente el comercio de productos agrícolas y específicamente el espárrago dentro del ramo de hortalizas de México con los países del mundo tiene muchos contrastes. Por un lado las tecnologías de producción, la calidad de los productos, los costos de transporte e incluso las políticas públicas que enmarcan los tipos de cambio de la moneda nacional y las políticas de comercialización entre otras, requieren de estudios específicos para establecer estrategias ante las asimetrías que tiene nuestra economía nacional con respecto a las economías de distintas partes del mundo. México, podrá tener competitividad en algunos rubros del proceso de exportación de mercancías pero hoy por hoy se observan algunas desventajas en cultivos, cosechas, y comercialización de algunos productos del sector agrícola y más específicamente en el ramo de hortalizas.

## REVISIÓN DE LITERATURA

Ante el entorno de la agricultura Mexicana en su relaciones comerciales con Estados Unidos los sectores agrícolas de ambos países han sido especialmente sensibles al Tratado, dado que, en términos generales, el TLC ha significado una apertura gradual del mercado mexicano de granos a la exportación norteamericana, a cambio de una apertura del mercado estadounidense a las exportaciones de frutas y verduras mexicanas, dada la disparidad económica entre ambos países, que el saldo final muestre no sólo un mayor debilitamiento de la agricultura mexicana, sino un creciente déficit comercial de México y consecuentemente un agravamiento de su dependencia económica (Barry 1995).

La producción de hortalizas es de las actividades agropecuarias más redituables, ya que la superficie agrícola en México corresponde a 19, 853,518.74 ha (promedio 2007/2010), de las cuales las hortalizas ocupan una superficie de 2.7% nacional y aportan 16% del valor total de la producción (2007-2010). En el grafico 1 se muestra el valor de la producción de las hortalizas per cápita en términos constantes.

Grafico 1: Valor de la producción de las hortalizas per cápita en términos constantes

Los valores anteriores reflejan la importancia que tienen las hortalizas en la economía nacional. El valor de la producción de las hortalizas en México ha tenido un crecimiento dinámico, desde 1980 a 2010 en términos nominales ha aumentado a una tasa de 27.43%, sin embargo a precios de 1993, este valor creció en 2.87% (mismo periodo) (SAGARPA; SIACON 2010). En el mismo periodo, el valor de las hortalizas per cápita fue positivo en 1.33%, mientras que el producto interno bruto agrícola (PIBA) per cápita tuvo un decrecimiento anual de -0.30%. Sin duda, la tendencia al crecimiento continuo de las hortalizas es un indicador favorable, no obstante, el avance ha sido cíclico y a partir de 2004 se muestra un crecimiento lento, y cada vez menor.

## METODOLOGÍA

El presente estudio es de tipo descriptivo correlacional, en el cual se analizan datos del comportamiento y de la producción y comercialización del espárrago con la técnica longitudinal de 1980 a 2010. Se acudió a fuentes documentales, se realizaron consultas en las páginas WEB a través de los diferentes buscadores electrónicos para consultar fuentes bibliográficas, artículos y documentos que en lo general describían las características de la situación del Sector Agroalimentario Mexicano. Particularmente las exportaciones de espárrago de Estados Unidos. Se realizó una medición empírica de la competitividad utilizando el índice de ventaja relativa de exportaciones (VRE) propuesto por Vollarth (1991) o índice de ventaja comparativa revelada (IVCR), aplicado al espárrago que se comercializa con Estados Unidos, el cual mide indirectamente la competitividad y su tendencia en el tiempo a través de estadísticas corrientes de comercio, mismo que permite comparar la situación de otros países competidores en el mismo mercado. El índice propuesto se denomina Ventaja Relativa de Exportaciones (VRE) y se define como:  $VRE_{ai} = (X_{ai} / X_{ni}) / (X_{ar} / X_{nr})$ . De la ecuación anterior se describieron las variables que intervienen para determinar los IVCR anuales y se aplicó la ecuación del VRE para determinar el IVCR a nuestro objeto de estudio.

## RESULTADOS

Ante el entorno de la agricultura Mexicana en su relaciones comerciales con Estados Unidos los sectores agrícolas de ambos países han sido especialmente sensibles al Tratado, dado que, en términos generales el TLC ha significado una apertura gradual del mercado mexicano de granos a la exportación norteamericana, a cambio de una apertura del mercado estadounidense a las exportaciones de frutas y verduras mexicanas. La competitividad puede ser asociada con el desempeño del país con respecto a las exportaciones. Tomando en cuenta los factores de políticas comerciales internacionales o convenios entre países específicos (políticas cambiarias, le eficiencia de los canales de comercialización y los sistemas de financiamiento). En esta tabla se muestran los principales países exportadores de espárrago y su porcentaje de participación en el mercado mundial en el año 2010:

Tabla 1: Principales países exportadores de espárrago

Países		% participación	Total exportaciones 2010(millones US)
1	Perú	33%	250.82
2	México	24%	146.21
3	Estados Unidos	14%	101.24
4	Países Bajos	6%	59.87
5	España	5%	47.18
6	Grecia	4%	32.79
7	Alemania	2%	10.93
8	Francia	2%	19.63
9	Australia	2%	11.89
10	Italia	2%	9.90
	Otros Países (45)	7%	63.47
	Total	100%	753.93

Fuente: Elaboración propia con datos de SAGARPA, 2010.

Se puede observar el amplio margen de liderazgo que muestra Perú y México con respecto al resto de los países competidores, sumando así un 57 % de la participación mundial en exportaciones de espárrago.

## CONCLUSIONES

Durante el período de estudio (1980-2010) la demanda externa de espárrago, principalmente en el mercado estadounidense, creció en forma importante y ejerció un efecto positivo sobre el crecimiento de

las exportaciones mexicanas. De acuerdo con los resultados obtenidos en el cálculo del IVCR para México demuestra, que las exportaciones de este producto no presentan competitividad para todo el periodo analizado. Se aplicó el cálculo del Índice de Ventaja Comparativa Revelada para el espárrago para el periodo seleccionado y se determinó a través de la interpretación de los índices si existe o no una ventaja comparativa con respecto a otros países y su tendencia en el periodo de análisis. El índice propuesto se denomina Ventaja Relativa de Exportaciones (VRE) y se define como:

$$VRE_{ai} = (X_{ai} / X_{ni}) / (X_{ar} / X_{nr})$$

De la ecuación anterior se describieron las variables que intervienen para determinar los IVCR anuales y se aplicó la ecuación del VRE para determinar el IVCR para el caso del espárrago.

Dónde:

$VRE_{ai}$  = Ventaja Relativa de Exportaciones para el espárrago en México

=VRE para el espárrago en México

a = espárrago

i = México

1.  $X_{ai}$  = Valor de las X de espárragos en México.
2.  $X_{ni}$  = Valor de las X agrícolas de México, sin el espárrago.
3.  $X_{ar}$  = Valor de X de espárragos en el mundo sin las X de México.
4.  $X_{nr}$  = Valor de X agrícolas totales del mundo sin el espárragos y sin México.

La interpretación del cálculo del IVCR se da de la siguiente manera:

$$VRE_{ai} = \frac{\frac{X_{ai} (216)}{X_{ni} (6847)}}{\frac{X_{ar} (528)}{X_{nr} (402)}} = 0.024$$

Si  $VRE_{ai} < 1$  indica que el país presenta desventaja comparativa revelada en el producto en cuestión, el valor del índice será negativo y se puede interpretar que el país a través del tiempo puede ganar competitividad si se especializa para mejorar la producción y la exportación de un bien en específico.

Este indicador a través del tiempo también puede marcar las tendencias, si el índice crece nos indica que el país está ganando competitividad y si a través del tiempo se reduce indica que el país está perdiendo competitividad en la producción y comercialización del producto. Para conocer la competitividad en el contexto internacional, se utilizó la metodología de la ventaja competitiva revelada. Esta ventaja competitiva fue estimada para México en relación al mundo, para identificar la situación actual del dominio de mercado. Mediante el cálculo de los índices se ilustra el comportamiento de la competitividad y se hacen una serie de consideraciones en torno a su tendencia predecible en los próximos años. La fórmula empleada fue: La VCR es un índice más estable que otros propuestos anteriormente y puede

adoptar valores de -1 a +1 y media cero. Considera que valores positivos son competitivos y un valor de 1 implica una especialización del país en el producto analizado (Vollarth 1991). Otros indicadores fueron los siguientes: Descomposición de factores del crecimiento de la producción. Para determinar de manera precisa el grado de influencia que han tenido factores como los rendimientos o la superficie cultivada y un efecto combinado como indicadores de innovación, durante el periodo de estudio 1980-2010, para lo cual se modificó la fórmula de Contreras (2000, 8) y se tomaron los datos de SIAP, SAGARPA (2010) para la producción de hortalizas en general y en particular la de brócoli, tomate verde y rojo:

$$P_t = Y_0(A_t - A_0) + A_0(Y_t - Y_0) + (A_t - A_0)(Y_t - Y_0)$$

Dónde:

$P_t$  = Factores que explican la productividad en hortalizas durante el período de análisis (1980-2010);

$Y_0(A_t - A_0)$  = Cuantifica la contribución por superficie;

$A_0(Y_t - Y_0)$  = Cuantifica la contribución por rendimiento;

$(A_t - A_0)(Y_t - Y_0)$  = Cuantifica el efecto combinado de superficie y rendimiento;

$A_0$  = Superficie promedio cosechada inicial (1980=303,606 ha);

$A_t$  = Superficie promedio cosechada final (2010= 545,639.77 ha);

$Y_0$  = Rendimiento promedio inicial (1980= 11.55), en t ha;

$Y_t$  = Rendimiento promedio final (2010= 19.74), en t ha.

La información fue obtenida de diversas bases de datos, como Instituto Nacional de Estadísticas Geografía e Informática (INEGI), Banco de México, Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), Servicio de Información Agroalimentaria y Pesquera (SIAP), Sistema de Información Agropecuaria de Consulta (SIACON), Además de los indicadores macroeconómicos sobre producción y su relación con la productividad promedio y los salarios, se utiliza también un modelo para medir la competitividad utilizando el índice de ventaja relativa de exportaciones (VRE) propuesto por Vollarth (1991) o índice de ventaja comparativa revelada (IVCR), aplicado al espárrago que se comercializa con Estados Unidos, el cual mide indirectamente la competitividad y su tendencia en el tiempo a través de estadísticas corrientes de comercio, mismo que permite comparar la situación de otros países competidores en el mismo mercado.

Estados Unidos tiene una competitividad importante a nivel mundial en sus exportaciones de espárrago comparado con México. Sin embargo, durante el periodo analizado, México presenta menor competitividad sobre Estados Unidos en cuanto a la producción y exportación de espárrago. El cálculo del IVCR para Estados indica también una tendencia a la baja en la competitividad de éste país respecto a México. A pesar de esto, México no ha podido aprovechar esta ventaja y expandir su mercado hacia otros países. A pesar de que las exportaciones mexicanas son altamente competitivas, no se cuenta con las mismas estrategias de producción de Estados Unidos, por lo tanto México no puede fijar sus propios precios que favorezcan a sus productores y exportadores. Esto limita la capacidad para distribuir su producción en los mercados internacionales. Estados Unidos importa la mayoría del espárrago producida por México no solo porque no podría abastecer al mercado mundial solo con su producción, sino que también el espárrago mexicano es de mayor calidad que la de Estados Unidos. Debido a que México cuenta con plantaciones y con mano de obra que pone mayor atención en los cuidados del cultivo,

principalmente en la poda, a diferencia de Estados Unidos que cuenta con más edad y con una producción muy mecanizada.

## ANEXOS

### COMERCIO INTERNACIONAL Y SU IMPACTO EN EL TLCAN

El comercio internacional inició en gran parte durante el siglo XVI con la entrada del Mercantilismo en Europa. Aunque desde 1095 ya había comercio entre regiones, no fue hasta el mencionado siglo que empezó a relacionarse como intercambio internacional y posteriormente como comercio internacional. Desde fines del siglo XVIII hasta la Primera Guerra Mundial, el comercio internacional fue dirigido desde Europa, aunque se sabe que el principal impulsor fue Inglaterra. En México, el Comercio Internacional se inicia a principios del siglo XIX y hasta fines de la Segunda Guerra Mundial, México tiene comercio exterior con Europa, principalmente con España. A partir de 1945, México entra en un modelo proteccionista de sustitución de importaciones, el cual tuvo una duración de 40 años. En 1985, se da la liberalización del Régimen de importaciones y se inicia el proceso de apertura comercial con la entrada de México al GATT (Acuerdo General de Aranceles y Comercio).

El proceso de apertura comercial de México inició en el año de 1986, con su ingreso al (GATT), hoy transformada en la Organización Mundial de Comercio (OMC). De este modo, nuestro país da los primeros pasos para integrarse activamente a la economía mundial. Posteriormente, México empieza a tener relaciones comerciales con más países y abre sus puertas al comercio con Chile, firmando el tratado comercial con este país en 1992. Tres años después en 1995, se inicia el tratado con Colombia y Venezuela formando el Grupo de los Tres, en ese mismo año también inicia tratado bilateral con Costa Rica, en 1997 con Nicaragua, recientemente con la Unión Europea y el 1° de enero de 1994 el Tratado de Libre Comercio con América del Norte (TLCAN) que ha sido el más importante de todos hasta ahora y lo forman México, Estados Unidos y Canadá.

En ese contexto entre los años de 1994 a 2000, las exportaciones mexicanas registraron un crecimiento anual del orden de 18.2%, logrando a finales de 2000 un monto de 166,455 millones de dólares, 21.8% más que las registradas el año anterior. Sin embargo, durante el año 2001, se registró un decremento de las exportaciones mexicanas de 4.8% provocado básicamente por la desaceleración de la economía de los Estados Unidos, nuestro principal socio comercial. Se puede decir que el TLCAN ha sido el tratado comercial más aprovechado por México, pero solo con un País integrador que es Estados Unidos, ya que desde que se inició este tratado, México ha incrementado sus exportaciones con ese País en gran cantidad. Las exportaciones de México a Estados Unidos crecieron 118.7%, de 43'070,000 millones de dólares en 1993 a 94'185,000 millones de dólares en 1997" (Bancomext Revista de Negocios Internacionales, 2002, p, 89) y en cambio con Canadá "difieren muy poco las ventas mexicanas y disminuyen en los dos primeros años de vigencia del TLCAN (4.6% en 1994 y 0.7% en 1997) mientras que en 1995 y 1996 crecieron 34.6% y 9.3% respectivamente" (Bancomext Revista de Negocios Internacionales, 2002, p.34) pudiendo incrementar sus exportaciones hacia este país aprovechando las ventajas que el TLCAN le brinda la eliminación de barreras arancelarias y no arancelarias; como es el caso del sector textil; Los tres países excluirán de manera gradual, en un periodo máximo de diez años, sus tasas arancelarias para productos textiles y del vestido producidos en América del Norte que cumplan con las reglas de origen

establecidas en el Tratado. Además Estados Unidos eliminaría inmediatamente las cuotas de importación para los productos mexicanos de este tipo y en forma gradual para los productos manufacturados en México que no cumplan con la Regla de Origen. Ningún país podrá establecer cuotas nuevas, excepto de conformidad con las disposiciones específicas sobre salvaguardas al comercio de mercancías así como la liberación del comercio de servicios y de inversión.

En marzo (Bancomext, Revista de Negocios Internacionales 2005,p.43) se firmó el tratado de libre comercio México- Japón, creando una expectativa muy atractiva en términos de intercambio de productos, para el estado significa la posibilidad de exportar una gama de productos del sector agropecuario, impulsando por ende el desarrollo económico de la entidad. Incrementando sustancialmente la presencia en los mercados internacionales gracias a un crecimiento sin precedentes de sus exportaciones, las cuales en el año 2000, alcanzaron el octavo lugar a nivel mundial, y el primero en América Latina, superando en este rubro a grandes potencias exportadoras como Singapur o Brasil. América Latina. En particular la agricultura que se realiza en el país tiene una alta orientación exportadora. Alrededor de dos terceras partes del valor de la producción se comercializa en el mercado internacional. Actualmente dentro de los estados que destacan en este rubro son: Guanajuato, Baja California, Jalisco, Veracruz y Sonora. También destacan pero en menor magnitud Nayarit, Michoacán, Baja California Sur y Puebla en producción de uva de mesa, espárrago, calabaza, trigo, sorgo, cebollín, cítricos, melón, naranja, sandía, uva pasa, nuez, carne de cerdo, con exportaciones al mercado de Estados Unidos, Canadá, Unión Europea y Asia. La certificación de calidad y diversidad de productos agrícolas ha permitido poder ser competitivos, sin embargo la finalidad de esta investigación es analizar si el sector agroalimentario es un detonante económico para México.

#### Relaciones Comerciales Con El Exterior

La internacionalización creciente de la economía y la producción llevaron a la eliminación de las barreras para la movilidad del capital, favorecieron el encadenamiento de los mercados nacionales y propiciaron la generación de dependencias recíprocas; por su parte, la globalización económica provocó la intensificación de estas interdependencias entre las economías nacionales y los mercados (Rozo 1999; Beck 1998), junto al surgimiento de una interdependencia compleja de naciones con diferentes niveles de desarrollo (Gereffi 1995). Estas nuevas condiciones de la producción y el comercio mundial han colocado en primer plano la dimensión local del proceso. La globalización involucra territorios concretos de actividad económica, donde se establecen las conexiones y se tejen las redes entre actores gubernamentales y privados, locales y transnacionales, que podrán traducirse en inversiones nuevas. Lo local se constituye en esencial y definitivo, porque es allí donde ocurre la globalización (Vázquez Barquero 1999; Beck 1998; Boisier 1995; Hiernaux 1991).

Las conexiones y redes de actores, que participan en la globalización, necesitan una base material en los territorios que articule la actividad económica y social. Para Urgoiti (1999), la infraestructura física provee el conjunto de estructuras y canales necesarios para el funcionamiento de la región, es un grupo de atributos indispensable (Lakshmanan 1989) y un factor decisivo para el desempeño económico y la competitividad nacional (Nijkamp 1993). Esta ha sido la visión prevaleciente en el proceso de integración regional de la Comunidad Europea, particularmente de España, tras los trabajos de Biehl (1999), en donde la infraestructura y su utilización se conciben como un factor clave para potenciar el desarrollo nacional. En este contexto de globalización, la localización geográfica del país y su colindancia de poco más de tres mil kilómetros de frontera seis estados fronterizos del norte, ha influido para que su dinamismo esté vinculado con la economía estadounidense.

# ESTUDIO DEL EFECTO TAMAÑO EN LOS PRINCIPALES MERCADOS BURSÁTILES DE LATINOAMÉRICA

Juan Benjamín Duarte Duarte, Universidad Industrial de Santander-COL  
Zulay Yesenia Ramírez León, Universidad Industrial de Santander-COL  
Katherine Julieth Sierra Suárez, Universidad Industrial de Santander-COL

## RESUMEN

*En el presente trabajo se estudia la existencia del efecto tamaño en los principales mercados bursátiles de América Latina (Argentina, Brasil, Chile, Colombia, México y Perú), mediante el análisis de la rentabilidad histórica de las empresas que cotizan en cada bolsa de valores, para el periodo comprendido entre enero de 2002 y mayo de 2012. La investigación se desarrolla en tres fases: En la primera se estructuran portafolios de tamaño, en la segunda se hace un análisis de rentabilidad y riesgo de las carteras y finalmente se desarrolla un contraste de serie temporal en el contexto del CAPM. Los resultados obtenidos revelan que en general el efecto tamaño propuesto por Banz (1981) no se presenta en los principales mercados bursátiles de Latinoamérica, no obstante se evidencia la presencia de un efecto invertido en Brasil, México, Chile y Colombia.*

**PALABRAS CLAVES:** Mercados latinoamericanos, efecto tamaño, CAPM.

## EFFECT SIZE STUDY IN MAJOR AMERICA STOCK MARKET

### ABSTRACT

*In this paper we study the existence of size effect in major stock markets in Latin America (Argentina, Brazil, Chile, Colombia, Mexico and Peru), by analyzing the historical return of the companies listed on each stock exchange, for the period between January 2002 and May 2012. The research is conducted in three phases: In the first size portfolios are structured, the second is an analysis of profitability and portfolio risk and finally develop a temporary serial contrast in the context of the CAPM. Results show that in general the size effect studied by Banz (1981) does not present in the major stock markets of Latin America, however evidence for the presence of reverse effect in Brazil, Mexico, Chile and Colombia.*

**JEL:** C01, D52, G12

**KEYWORDS:** Latin America Stock Markets, size effect, CAPM.

## INTRODUCCIÓN

Al estimar el rendimiento de las acciones de una empresa, el modelo más utilizado es el es el Capital Asset Pricing Model (CAPM), el cual se incluye la tasa libre de riesgo y una prima de riesgo del mercado corregida por el parámetro beta ( $\beta$ ). Durante los últimos treinta años se han realizado estudios que demuestran las debilidades del beta al explicar los rendimientos esperados de las acciones o carteras, ya que en empresas pequeñas (de menor capitalización) se han encontrado rendimientos superiores al de empresas grandes (de mayor capitalización). Por tal razón dichos estudios sugieren adicionar al modelo CAPM un factor relacionado con el tamaño de la empresa. La primera investigación en este sentido fue desarrollada por Banz (1981), quien denominó a esta anomalía “efecto tamaño”. En esa misma década otros autores [ Reinganum (1981); Roll (1981); Keim (1983); entre otros] demuestran la presencia de dicho efecto, principalmente en el mercado estadounidense. Otro estudio importante fue el llevado a cabo

por Fama & French (1992), en el cual encuentran que el tamaño de una empresa, medido por su capitalización bursátil y el ratio “valor de mercado/valor contable”, explica el rendimiento financiero de las acciones mejor que la beta. Sin embargo, estudios recientes demuestran que el efecto tamaño tiende a desaparecer en Estados Unidos [ Horowitz, Loughran, & Savin (2000) y Amihud (2002)] e incluso a ser negativo en otros mercados como el europeo [ Dimson & Marsh (2001) y Baetge, Kirsch, Koelen, & Schulz (2010)]. -Los estudios en el mercado bursátil latinoamericano [ Rubio G. (1988); Cohen (2005) y Amado (2009)] muestran la posible presencia de una prima de riesgo por tamaño, sin embargo no hay evidencia suficiente para confirmar la existencia de ésta anomalía, por tal razón es de suma importancia investigar más a fondo el efecto tamaño en esta región y corroborar si su comportamiento es similar al de los países desarrollados. De esta manera se brindaría información valiosa que permitiría obtener beneficios extraordinarios en el mercado latinoamericano, tal como lo indica Banz (1981).

La presente investigación busca verificar el efecto tamaño de empresa en el mercado bursátil latinoamericano, mediante el análisis de rentabilidad de las empresas que cotizan en la principal bolsa de valores de cada uno de los países objeto de estudio (Brasil, Argentina, México, Chile, Perú y Colombia) en el período 2002-2012; estructurando portafolios a partir de la capitalización bursátil, con el fin de definir los tamaños de empresa al interior de cada mercado; luego estimando las rentabilidades promedio para cada portafolio, con las cuales se realiza un análisis de rentabilidad y riesgo buscando identificar tendencias de acuerdo al tamaño de empresa; y finalmente haciendo un contraste en el contexto del modelo CAPM, mediante el cual se comprueba la presencia o no del efecto tamaño. Con este propósito, se divide este trabajo en cinco secciones: la primera presenta la revisión de la literatura; las dos secciones siguientes muestran los datos y la metodología de la investigación, respectivamente; luego se evidencian los resultados obtenidos y finalmente se ofrecen las conclusiones del trabajo.

## REVISIÓN DE LA LITERATURA

Banz (1981) examina la relación entre el valor total de las acciones ordinarias de una empresa y su rentabilidad y encuentra que las empresas de menor tamaño tienen en promedio mayor rentabilidad que las empresas de mayor tamaño (incluso luego de ser ajustadas al riesgo con el modelo CAPM), llamando a este hallazgo “efecto tamaño”. En su estudio, Banz analiza la relación entre las rentabilidades mensuales y la capitalización bursátil de las acciones cotizadas en la bolsa de New York (New York Stock Exchange – NYSE) en el periodo de 1936 a 1975, obteniendo mayores rendimientos en las empresas de menor tamaño, lo que sugiere que el CAPM estaría mal especificado y que la ecuación del rendimiento debería contener un factor adicional correlacionado con el tamaño de la empresa. Por otra parte, un estudio posterior desarrollado por Reinganum (1983) coincide con Banz en que al CAPM le faltan especificaciones, al analizar las anomalías basadas en el tamaño y en el ratio **Rentabilidad/Precio**, encontrando resultados diferentes a los previstos por el CAPM. Roll, también en 1981, analiza los resultados de Banz, explicando que al presentar las empresas pequeñas una frecuencia de negociación menor, las medidas de riesgo (beta) calculadas en intervalos cortos (diarios por ejemplo), pueden subestimar el verdadero riesgo de mantener portafolios con acciones de este tipo de empresas, sin importar el modelo de valoración elegido.

Keim (1983) estudia la relación entre las rentabilidades anormales en el NYSE y AMEX durante el periodo 1963-1979, y detecta que la relación entre la rentabilidad anormal y el tamaño es siempre negativa y más pronunciada en enero que en los otros meses del año. Por su parte, Chan, Chen, & Hsieh (1985), agregan que el efecto tamaño puede atribuirse a los mayores riesgos operativos y financieros asociados a las empresas pequeñas, que fluctúan en mayor medida ante contracciones o expansiones económicas. En el mercado español Rubio G. (1988) analiza las rentabilidades para el período 1962-1982 y concluye que las empresas pequeñas obtienen una mayor rentabilidad ajustadas al riesgo sistemático que las más grandes, al indagar sobre las posibles causas del efecto tamaño el autor encuentra que la mayor diferencia entre las rentabilidades de ambos grupos de empresas (47% de la prima por tamaño)

ocurre durante el mes de enero. El estudio que da mayor relevancia a esta anomalía es el realizado por Fama & French (1992), en el cual se analiza el comportamiento del mercado accionario estadounidense (NYSE, AMEX y NASDAQ) durante el periodo comprendido entre 1941 a 1990, con el objeto de evaluar el impacto conjunto del beta del mercado, tamaño de la empresa, el ratio earning/price, el leverage y la relación entre valor contable y valor de mercado de las acciones.

Mediante este estudio encuentran que los rendimientos de las acciones se relacionan inversamente con el tamaño de la compañía. Sin embargo Horowitz, Loughran, & Savin (2000) estudian los rendimientos mensuales del NYSE y AMEX durante el periodo 1962 a 1997, encontrando que de 1963 a 1981 si se da el efecto tamaño, pero que de 1982 a 1997 las empresas pequeñas obtienen resultados 2% menores a las empresas grandes, lo que demostraría que el efecto tamaño ha desaparecido y que por tal razón no debe ser considerado como un factor de riesgo. En el Fama & French (2007) analizan las acciones clasificadas en seis carteras con base en la relación **Precio/Valor en libros**, de empresas que cotizan en el NYSE y en el NASDAQ desde 1926 hasta el año 2006.

Los resultados de su estudio arrojan que la prima de riesgo por tamaño se debe, casi exclusivamente, a las rentabilidades extremadamente altas logradas por empresas de baja capitalización que, debido a ello, migran rápidamente (de un año a otro) hacia déciles superiores. En el mercado bursátil alemán Amel Zadeh (2008) analiza la prima de riesgo por tamaño desde 1996 hasta 2006 y los resultados de su estudio sugieren que las empresas pequeñas obtienen rentabilidades inferiores durante períodos de mercado bajista, pero superan a las empresas más grandes durante períodos de mercado alcista, lo que según el autor se debe interpretar a la supuesta anomalía como una tendencia que exhiben las acciones de menor capitalización al reaccionar de forma diferente a las de mayor capitalización ante las diferentes fases del ciclo bursátil. Hamard A. (2007) analizan la rentabilidad histórica de las empresas que cotizan en el mercado continuo español durante el período comprendido entre diciembre de 1997 y diciembre de 2009, no verificando la existencia de una prima de riesgo adicional por tamaño justificado por la presencia de empresas pequeñas de muy alta rentabilidad que migran hacia déciles superiores en el término de uno a dos años, hallazgo que coincide con Fama & French (1992). De la revisión efectuada en los mercados bursátiles más sobresalientes del mundo como el Americano, se destacan marcadas diferencias entre los resultados obtenidos acerca del efecto tamaño, por esta razón se resalta que el dinamismo del mercado financiero no excluye la posibilidad de que la prima de riesgo por tamaño pueda variar, o desaparecer a través del tiempo, arrojando evidencia contraria a la observada históricamente en Estados Unidos.

En los principales mercados bursátiles de Latinoamérica no se encuentra evidencia literaria de alta relevancia acerca del efecto tamaño, ya que estos son considerados emergentes y su comportamiento es menos dinámico que el de los mercados más desarrollados. Sin embargo, existen estudios en algunos países que analizan la existencia de esta anomalía en sus bolsas de valores. Rubio F. (1997) realiza una investigación para el mercado chileno, utilizando la información mensual de acciones comunes transadas en la bolsa de comercio de Santiago en el periodo comprendido entre enero de 1981 y abril de 1994, encontrando que existe un efecto tamaño de forma persistente, sin embargo su poder explicativo en general es débil. En el 2005, Cohen realiza un estudio con el objetivo de explicar el rol que juegan tanto el tamaño de las empresas como su beta en la explicación de los retornos promedio mensuales de las acciones en el mercado argentino, utilizando una muestra formada por 20 acciones que cotizan en la bolsa de valores de Buenos Aires, durante el periodo comprendido entre el 1 de junio del 2002 y el 1 de marzo del 2005, sus resultados muestran indicios de que tanto el beta como el tamaño ayudan a explicar los retornos promedio de las acciones en dicho mercado. Luego, Chague (2007) realiza un estudio comparativo entre el CAPM y el modelo desarrollado por Fama & French (1992) en el mercado bursátil de Brasil, tomando todas las empresas que cotizaron en la bolsa de valores Bovespa, en el periodo 1999-2007. A pesar de encontrar evidencia de una anomalía de valor superior, ésta no tiene suficiente significancia para considerar la presencia de un efecto tamaño, dejando claro el autor que el tamaño reducido de la muestra limita la solidez de sus resultados.

## DATOS

El marco muestral del presente estudio está comprendido por las principales bolsas de valores latinoamericanas como son: Bovespa (Brasil), BCBA (Argentina), BMV (México), BCS (Chile), BVC (Colombia) y BVL (Perú), tomando como variable de estudio los precios de cierre diario de los activos financieros a partir del 1 de enero de 2002 hasta el 31 de mayo de 2012, utilizando como fuente la base de datos de Bloomberg y Yahoo Finance. Luego de obtener las series históricas para cada mercado, las empresas se filtran de acuerdo a diferentes criterios, con el fin de contar con series completas en cuanto a precios, capitalizaciones y variabilidad en los datos presentados en la tabla 1, donde se especifican el número de empresas que son consideradas inicialmente, así como también las finalmente elegidas.

Para cada una de las empresas elegidas se estima la rentabilidad continua mensual a partir de los precios de cierre del último día del mes, ajustados por splits y dividendos.

Tabla 1: Empresas Objeto de Estudio en Latinoamérica

País	No. de empresas iniciales	No. de empresas elegidas	No. de Carteras
Brasil	423	220	10
Argentina	104	54	5
México	140	80	8
Chile	228	69	5
Colombia	83	29	4
Perú	200	38	4
<b>Total</b>	<b>1178</b>	<b>490</b>	<b>36</b>

*Esta tabla presenta los países seleccionados, el número de empresas que cotizan en el mercado de valores y el número de empresas elegidas para el estudio, a partir de esto se presenta el número de carteras conformadas para cada país. Fuente: Elaboración Propia.*

Una vez se obtienen las rentabilidades mensuales para cada empresa objeto de estudio, se conforman los diferentes portafolios por país, de acuerdo a la metodología utilizada por Banz (1981). De esta manera se estiman las rentabilidades de los diferentes portafolios a lo largo del período, mediante el promedio mensual de los rendimientos de las acciones que lo conforman. Finalmente se obtiene para cada mercado los diferentes portafolios por tamaño, generando series temporales de 124 retornos mensuales por cartera. El número de portafolios construidos al interior de cada mercado es diferente, teniendo en cuenta la cantidad de empresas que conforman cada uno de los mercados latinoamericanos.

Se ha tomado como proxy del mercado, el principal índice bursátil de cada uno de los países estudiados (Ibovespa, Merval, IPC, Ipsa, IGBC, IGBVL), ya que ellos son los que mejor reflejan el comportamiento bursátil a través del tiempo. Para estimar las rentabilidades libres de riesgo en los principales mercados latinoamericanos, se utiliza la metodología del banco J.P. Morgan Chase, el cual estima la rentabilidad libre de riesgo de un mercado emergente como la suma de su riesgo país y el rendimiento de los bonos del tesoro de EE.UU. En la tabla 2 se presentan las rentabilidades libres de riesgo promedio mensuales del período completo para cada uno de los países objeto de estudio, en donde se destaca que el país que presenta mayor tasa libre de riesgo es Argentina, mientras que la menor la exhibe Chile.

Tabla 2: Tasa Libre De Riesgo En Países Latinoamericanos

País	$\bar{R}_f$ mensual*
Brasil	0,52%
Argentina	1,72%
México	0,32%
Chile	0,27%
Colombia	0,42%
Perú	0,48%

*\* $\bar{R}_f$  mensual es la rentabilidad libre de riesgo media mensual. Esta tabla muestra la rentabilidad libre de riesgo media mensual de cada país. Fuente: Elaboración Propia*

## METODOLOGÍA

La metodología usada para probar la existencia del efecto tamaño en los principales mercados bursátiles de Latinoamérica se divide en dos partes: la primera es el análisis de rentabilidad y riesgo de las carteras de tamaño y la segunda es el análisis de la rentabilidad ajustada al riesgo mediante el modelo CAPM.

El primer análisis se fundamenta en la estimación de la correlación entre las variables rentabilidad, riesgo no diversificable (Ver ecuación 1) y tamaño, con el objetivo de identificar el comportamiento de cada mercado y plantear la hipótesis de existencia o ausencia de una prima de riesgo por tamaño en cada país.

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2} = \frac{cov(R_i, R_m)}{var(R_m)} \quad (1)$$

Donde  $\beta_i$  es el riesgo sistemático del portafolio  $i$ ,  $R_i$  la rentabilidad de  $i$  y  $R_m$  el retorno del mercado. La segunda parte de la metodología consiste en ajustar por riesgo la rentabilidad de las carteras de tamaño en el contexto del CAPM. Es decir, se estudia si una vez que se tienen en cuenta los diversos niveles de riesgo de las carteras de contraste, los resultados del primer análisis siguen siendo iguales. Luego se estima para cada portafolio la siguiente ecuación de regresión en el período muestral completo:

$$R_{it} - R_{ft} = \alpha_i + \beta_i(R_{Mt} - R_{ft}) + e_{it} \quad (2)$$

Donde al modelo CAPM se le adiciona la prima de riesgo por tamaño  $\alpha_i$ , con el fin de probar la hipótesis nula de que  $\hat{\alpha}_i = 0$ . Contra la alternativa de que  $\hat{\alpha}_i$  es significativo, en cuyo caso se evidenciaría un efecto tamaño en el respectivo mercado Banz (1981).

## RESULTADOS

### Análisis de Rentabilidad y Riesgo en las Carteras de Tamaño

En la tabla 3 se muestran los resultados de la estimación de las variables rentabilidad promedio y riesgo sistemático (Beta) de cada una de las carteras conformadas por país, así como su respectivo coeficiente de correlación con la variable tamaño.

En Brasil, Argentina, México, Chile y Colombia es posible apreciar que la rentabilidad aumenta proporcionalmente al tamaño, lo que se comprueba con los coeficientes de correlación positivos existentes entre estas variables. Situación que difiere de lo que ocurre en Perú, en donde se observa que conforme aumenta el tamaño, la rentabilidad va disminuyendo con una correlación fuerte y negativa ( $\rho = -0.810$ ). El análisis del efecto tamaño se podría centrar en las carteras extremas. Si se define el premio por tamaño del mercado como la diferencia entre la rentabilidad media mensual de la cartera *LARGE* y la *SMALL*, se encuentra que su magnitud es negativa para Brasil, Argentina, México, Chile y Colombia, lo que permite afirmar inicialmente que el efecto existe de forma inversa a lo planteado por Banz en estos países para el período considerado. En el caso de Perú, se obtiene que la prima por tamaño es igual al 0.49%, lo que indica que inicialmente se presenta un efecto tamaño en este mercado, es decir que las empresas de menor tamaño obtienen mayores retornos que las más grandes.

Ahora bien, la variabilidad en los rendimientos medios de los portafolios podría deberse a diferencias de riesgo sistemático. A priori, el riesgo debería decrecer a medida que el tamaño aumenta, comportamiento que se presenta en México, Chile, Colombia y Perú. Sin embargo los resultados de Brasil y Argentina muestran que estas variables tienden a ser directamente proporcionales, es decir que el riesgo crece a medida que el tamaño aumenta en estos mercados. La baja correlación existente entre la rentabilidad y beta en Brasil, Argentina y Perú hace que no parezca evidente que el rendimiento de los portafolios se incremente con el riesgo de covarianza. En el caso de México, Chile y Colombia se observa una

correlación negativa, lo que indica que la rentabilidad no tiene una relación directa con el riesgo. Aparentemente, el diferencial de rendimientos medios entre pequeñas y grandes empresas podría no responder a una prima por riesgo de mercado en los principales mercados bursátiles latinoamericanos, en contra de las predicciones teóricas del CAPM.

	Large	8.63	0.01773	0.78860			

*Nota: De cada portafolio se muestra el logaritmo natural de la capitalización bursátil promedio  $Ln(\bar{cap})$ , la rentabilidad promedio y el beta  $\beta$  estimado. En las tres últimas columnas se estiman los respectivos coeficientes de correlación entre estas variables.*

En resumen, del análisis de rentabilidad y riesgo en las carteras de tamaño por país, se puede deducir que el único país que aparentemente presenta un efecto tamaño como el propuesto por Banz (1981) es Perú, mientras que los demás países inicialmente presentan un efecto invertido. También se observa que al parecer el beta no está explicando las rentabilidades medias de los portafolios. Análisis de serie temporal del efecto tamaño en el contexto del CAPM. En la tabla 4 se presentan las estimaciones de los coeficientes  $\alpha$  y  $\beta$  realizadas para las carteras de tamaño de cada país, en un contexto de serie temporal. La hipótesis nula consiste en contrastar si el CAPM se cumple, es decir que no existen rentabilidades anormales asociadas al tamaño.

Los resultados muestran cómo las rentabilidades ajustadas al riesgo tienden a ser negativas para las carteras de menor tamaño, y positivas para los portafolios de mayor capitalización en todos los países, aunque sólo Brasil, México, Chile y Colombia presentan coeficientes significativamente distintos de cero. La correlación entre los tamaños de las carteras y los coeficientes  $\hat{\alpha}_i$  es positiva, por lo que las carteras de elevada capitalización tienden a ganar más de lo esperado, y las de baja capitalización menos de lo previsto. Es posible afirmar que una vez se tienen en cuenta las diferencias de riesgo, existe un efecto tamaño invertido en los mercados de capitales de Brasil, México, Chile y Colombia en el período considerado.

Tabla 4: Contratación del Efecto Tamaño en el Contexto del CAPM

País	Portafolio	A	B	País	Portafolio	A	B

Los coeficientes  $\alpha$  y  $\beta$  corresponden a las estimaciones de la rentabilidad ajustada al riesgo y del riesgo sistemático respectivamente. Los porcentajes corresponden al P\_valor. Fuente: Elaboración Propia.

## CONCLUSIONES

El presente trabajo de investigación proporciona evidencia de que el efecto tamaño planteado por Banz (1981) no existe en los principales mercados bursátiles de Latinoamérica (Argentina, Brasil, Chile, Colombia, México y Perú) para el periodo comprendido entre febrero de 2002 y mayo de 2012. Lo cual indica que éstos mercados emergentes están teniendo un comportamiento diferente al mercado estadounidense [Ibbotson (2005) y Fama & French (2007)]. En Brasil, México, Chile y Colombia se encuentra un efecto tamaño invertido durante el periodo estudiado, es decir, las empresas de mayor capitalización obtienen rentabilidades ajustadas al riesgo superiores a las empresas de menor tamaño. Esta anomalía también se evidencia en el mercado europeo [Dimson & Marsh (2001) y Baetge, Kirsch, Koelen, & Schulz (2010)]. En Brasil y Argentina las empresas de mayor capitalización presentan un riesgo sistemático superior, lo cual es inusual en los mercados de valores desarrollados en donde el riesgo es inversamente proporcional al tamaño. Sin embargo estas empresas están obteniendo rentabilidades justas al riesgo que soportan, es decir superiores a las empresas de menor tamaño.

En México, Chile y Colombia aunque las empresas de menor capitalización presentan un riesgo sistemático mayor, no están obteniendo mayores rentabilidades, lo que indica que la variabilidad en los retornos no está asociada al riesgo no diversificable, sino a otro tipo de riesgo. En el caso de México es un riesgo por tamaño. Perú tiene un comportamiento similar al de los mercados desarrollados, ya que las empresas de menor tamaño presentan mayor riesgo sistemático y a la vez obtienen mayores retornos que las empresas con mayor capitalización. Es decir, el riesgo es proporcional a la rentabilidad e inverso al tamaño. Mediante la estimación de la rentabilidad libre de riesgo promedio mensual en todo el periodo de estudio, es posible resaltar que el país que tiene una tasa mayor es Argentina, reflejando de esta manera el

mayor riesgo país que presenta esta economía con respecto a Chile, y que es originado por la diferencia de gobierno entre las dos naciones.

# **BASES PARA UNA ESTRATEGIA TECNOLÓGICA DE LA INDUSTRIA DEL MEZCAL EN MÉXICO**

Carlos Eduardo Puga Murguía, Universidad Nacional Autónoma de México

Celia Luz González Fernández, Universidad Nacional Autónoma de México

## **RESUMEN**

*La tecnología se considera como un proceso estratégico en la innovación de las empresas productoras de mezcal. La vigilancia tecnológica es un factor para desarrollar en las empresas la capacidad competitiva e innovadora, en la que involucran recursos humanos y financieros, para organizarse, operar y transformarse. De esta forma, las empresas mezcaleras que cumplen con la denominación de origen; crean su propia estrategia para competir en el mundo globalizado. Los planes estratégicos de innovación se basan en las herramientas que actúan con eficiencia financiera durante el ciclo de vida del producto en el mercado. La propuesta de esta investigación consiste en definir las bases para una estrategia tecnológica para la industria del mezcal en México.*

**PALABRAS CLAVE:** estrategia tecnológica, innovación tecnológica e industria del mezcal.

## **FOUNDATIONS FOR A TECHNOLOGY STRATEGY FOR THE INDUSTRY OF THE MEZCAL IN MEXICO**

### **ABSTRAC**

*The technology is considered as a strategic process in the innovation of companies producing mezcal. The technological surveillance is a factor to develop in the companies competitive and innovative capacity, which involve human and financial resources, to organize, operate and be transformed. In this way, mezcal companies that obey with the guarantee of origin; create their own strategy to compete in the globalized world. The strategic plans of innovation are based on the tools that operate with financial efficiency during the product life cycle of the product in the market. The proposal of this research is to define the basis for a technology strategy for the mezcal industry in Mexico.*

**JEL:** O13, O22, O32, M16, M19, M21

**KEYWORDS:** Technology strategy, technological innovation, mezcal industry.

## **INTRODUCCIÓN**

Actualmente, la administración de la tecnología es un factor determinante para el desarrollo económico de las empresas en México; ya que se encuentra directamente ligado a la innovación tecnológica, que da respuesta al entorno globalizado. Ésta dirige el incremento de resultados en términos económicos y estimula la investigación. El conocimiento científico fomenta oportunidades para incrementar el desarrollo tecnológico. Las empresas requieren de una estrategia propia, la que reúne un conjunto de metodologías, procedimientos y herramientas que apoyan el proceso de la investigación, desarrollo e innovación (I+D+I), de esta manera detecta, analiza, explora las informaciones técnicas útiles para la organización, con el fin de diseñar estrategias sobre los cambios del mercado. Ante el fenómeno de la globalización, se han realizado acuerdos de colaboración tecnológica en el sector de los negocios (Puga, 2011), las empresas actúan y transforman los procesos, sobre todo la Administración Tecnológica, con el propósito de elevar su productividad para aumentar su competitividad.

De acuerdo al informe de Fondo de Innovación Tecnológica Secretaría de Economía – CONACYT del 2012, el que tiene como objeto de atender diversas demandas, promover la transferencia de tecnología y con orientación a fallas de mercado como: altos costos fijos de la I+D+I, la baja apropiación del conocimiento, la incertidumbre de resultados y el acceso a capital. En el siguiente gráfico, se muestra los apoyos para la generación de productos de 336 proyectos vinculados a la innovación tecnológica, como se muestra en la siguiente figura 1:

Figura 1: Fondo de Innovación Tecnológica de la Secretaría de Economía- CONACYT-México,2012

Fuente: Fondo de innovación Tecnológica de la Secretaría de Economía – Consejo Nacional de Ciencia y Tecnología -CONACYT. 2012. [www.coneval.gob.mx/.../rw/.../CONACYT/CONACYT3C.pdf](http://www.coneval.gob.mx/.../rw/.../CONACYT/CONACYT3C.pdf)

Es importante resaltar, los resultados de los proyectos apoyados, en que cada uno se genera productos que son transferidos al mismo sector, para responder a demandas o problemáticas por atender mediante investigación científica y tecnológica; él mismo será el responsable de hacer uso de los productos y en su caso evaluar el impacto de uso. El Instituto Mexicano para la competitividad - IMCO, mide el potencia socioeconómico de las empresas y de las personas, a través del Índice General de Competitividad- (capacidad para atraer y retener inversiones y talentos). En el año 2007, México comparado con otros países ocupaba el lugar 32, mientras que en 2004 estaba en el ranking 30. Lo anterior se debió principalmente al retroceso de 12% en la estabilidad y confiabilidad de nuestro sistema político, así como al menor dinamismo que experimentan los sectores económicos más importantes del país.

La caída en la competitividad del sistema político mexicano, es el resultado de una menor percepción de estabilidad política tras los eventos de Atenco en 2006, y la crisis política de las últimas elecciones presidenciales. La caída en sectores económicos, se explica por la menor contribución al PIB (0.37) frente al sector servicios y de las exportaciones de alta tecnología, así como un lento crecimiento en las variables relacionadas con la innovación. México es la economía 14 en términos de mercado, pero esto no corresponde a lo destinado para la investigación, desarrollo e innovación; hay deficiencias en esto por lo que el Gobierno debe involucrar a los sectores de investigación y las empresas. (Gabriela Dutrénit) En general, la calificación de los países dentro del índice cambió poco, menos de 0.5% cada año. En los últimos tres años, el mundo vio una ligera mejoría en su calificación promedio de competitividad (0.67%). Este cambio se debió principalmente a un adelanto generalizado en la infraestructura del mundo (sectores precursores de clase mundial) y una mejora en el manejo sustentable del medio ambiente. El país más competitivo del subíndice en el 2007 fue Suiza manteniendo la posición que ya tenía en 2004. Dentro de los 5 mejor posicionados, Suiza es seguido por los países escandinavos, 2. Suecia 3. Dinamarca 4. Noruega 5. Finlandia. Una característica común a estos países, además del alto nivel de inversión, es que son intensivos en el uso de talento para atraer y retener inversiones.

## REVISIÓN DE LITERATURA

El Instituto Mexicano de Normalización y Certificación y con fundamento en los Artículo 39 fracción IV, 65 y 66 de la Ley Federal sobre Metrología y la Norma Mexicana –(NMX-GT-001-IMNC-2007), define la terminología de la gestión de la tecnología, como un marco integrador de esfuerzos para

potenciar capacidades tecnológicas, innovación y competitividad de las organizaciones. En el apartado 3.4 se señala: **innovación:** es el **Proceso** dirigido a un mercado bajo un enfoque de negocio que detecta oportunidades y capacidades organizacionales para generar **procesos** y servicios, novedosos aceptados por los consumidores. La norma define a la innovación tecnológica: Proceso que conjuga una oportunidad de mercado con una necesidad y/o una invención tecnológica, que tiene por objetivo la producción, comercialización de un nuevo proceso, producto, actividad comercial, modelo de negocio, modelo de logística o servicio al cliente. Por lo anterior, se considera a la innovación un proceso, mediante el cual las ideas son transformadas a través de actividades económicas en resultados generadores de valor (Livingstone, 2000). Por lo tanto, la innovación es un fenómeno de carácter económico e implica el desarrollo de un proceso interno a través de ideas para la generación de nuevos productos, procesos y servicios. El concepto innovación, requiere igualmente que se distinga de investigación y desarrollo, y que realmente abarque todos los mecanismos por los cuales las empresas mejoran su competitividad.

En este sentido, se orientan a fortalecer el énfasis que se da en el Manual de Bogotá a las actividades de innovación. (OCDE, 2011) El Manual de Frascati, cuyo nombre oficial es la Propuesta de Norma Práctica para las encuestas de investigación y desarrollo experimental, propuesta por la Organización de Cooperación y el Desarrollo Económico- OCDE. Éste manual menciona a la innovación, como la transformación de una idea en un producto o en un servicio comercializable, cuyo proceso de fabricación o distribución es operativo. En el Manual de Oslo (OCDE -1992), la innovación será tecnológica si la empresa introduce un cambio técnico en los productos o procesos. El enfoque económico de Joseph A. Schumpeter (Escorza, 2005) considera la innovación como un fenómeno tecnológico unido a la nueva estructura en un mercado para un producto determinado. En los ciclos de crecimiento económico y su relación con la innovación tecnológica, determinó el crecimiento del ciclo económico que depende de varios factores, entre los que destaca a la innovación tecnológica, lo que asegura que existen trayectorias de evolución en la industria, por lo que es importante anticiparse a esos cambios tecnológicos, pues el producto tiene un ciclo de vida y es indispensable realizar acciones que mejoren su posición competitiva.

La tecnología como estrategia de innovación reconoce el proceso tecnológico asociado al ciclo de vida, que sigue una curva en forma de “S” que modificó Richard Foster (Escorza, 2005), este modelo demuestra la periodicidad o ciclo de vida de la tecnología, a través de cuatro fases: investigación y desarrollo, aumento en escalas de la producción y mejoramiento de la tecnología. Con esto muestra el modelo de maduración del mercado y de tecnología, con la finalidad de evaluar y predecir los patrones de flujo de efectivo probables. Foster dimensiona la curva del ciclo de vida de las tecnologías en “S”, cuya base es la tecnología, y el proceso se soluciona, se estabiliza, crece por el aporte financiero.

Este ciclo presenta descontento entre los directivos respecto al rendimiento sobre la I+D, aumentan los costos para el desarrollo de nuevos productos, por lo tanto las ventas se detienen. Es el momento de repensar el producto o proceso, sucede la discontinuidad. Foster asegura que en la discontinuidad es la ventaja para la competencia, la empresa productora le es difícil cambiar hábitos, continuar invirtiendo en tecnología, prefiere continuar con el mismo proceso. De igual forma, las empresas evolucionan por ser dinámicas en su entorno; éstas tienen una trayectoria tecnológica en tres momentos, cuyo crecimiento es cíclico; primero inicia con la etapa de la innovación, luego pasa por el estancamiento o saturación y termina en la obsolescencia. Este ciclo de vida en forma de campana, concentra al centro el estancamiento o saturación, ahí tiene niveles de especialización: producción, mercado y tecnología. (Jasso, 2004). Con esto se puede desarrollar lineamientos para competir en los mercados con resultados óptimos en tecnología para fortalecer la competitividad del producto. Como se observa en la siguiente figura 2:

Figura 2: Fondo de Innovación

Fuente: George y Álvarez. 2005. *Historia del pensamiento Administrativo*. (2ª ed.). México: Pearson- Prentice Hall. p. 225.

También, la teoría económica de J.A. Schumpeter (Escorsa, 2005:) estudia los ciclos de crecimiento económico y su relación con la innovación tecnológica, determinó el crecimiento del ciclo económico que depende de varios factores, destacando la innovación tecnológica. Por lo tanto, asegura que existen trayectorias de evolución tecnológica en la industria, por lo que es importante anticiparse a esos cambios tecnológicos, pues el producto tiene un ciclo de vida y es indispensable realizar acciones que mejoren su posición competitiva. José Luis Solleiro (2008), propone un modelo de administración de la innovación tecnológica, que contiene los siguientes elementos: monitoreo tecnológico e inteligencia competitiva, alinear las estrategias tecnológicas con las estrategias competitivas, analizar las decisiones de mercado, rápida respuesta a las oportunidades, redes, administrar recursos humanos responsables de la tecnología, estrategias para financiar la investigación, implementar sistemas que garanticen la calidad.

Ahora bien, si los elementos que integran el *know how* tecnológico de un desarrollo innovador de producto, servicio o proceso, de esta forma es factible introducir al mercado el producto, con el fin de proporcionar ventajas competitivas o formar un conjunto de fuerzas, para que las empresas puedan crear su propio valor. Abernathy y Utterback, (George, 2005), considera las capacidades de innovar para alternar, donde los costos disminuyen a medida que la empresa produce en proceso continuo, por otra parte se contraponen entre mayor sea la innovación del producto disminuye la innovación del proceso. En otras palabras, el modelo cíclico de tres fases, se encuentra basado en la vida del producto, y logra predecir el desarrollo tecnológico, pero ligado a la innovación. La primera etapa de la innovación del producto y la producción en pequeños lotes. Como segunda etapa, la innovación está en el proceso y mejoras al producto, La tercera etapa, de acuerdo a la tecnología las empresas cambian en gran escala, el sistema de manufactura es más específico y eficiente; por última etapa la empresa pierde la flexibilidad y es menos capaz de aceptar el cambio, la estructura organizacional cambia conforme la empresa se vuelve más formal y con los niveles de autoridad. La innovación tecnológica ha influido en los hábitos de los consumidores y la forma de aplicar las estrategias de Porter. Esta situación, sugiere a la empresa contar con una plataforma tecnológica adecuada a las necesidades y tendencias actuales del mercado.

Kotler confirma que los directivos de las empresas obtengan información sobre los acontecimientos del entorno de marketing de la empresa, a través de fuentes como: libros, periódicos y publicaciones comerciales, además de la práctica de hablar con clientes, proveedores, distribuidores y directivos de otras compañías. También menciona la importancia de capacitar y motivar a vendedores para identificar y comunicar oportunidades en el mercado; motivar a distribuidores e intermediarios para transmitir la información más relevante; fomentar las conexiones externas de la empresa; adquirir información de proveedores externos; crear un mecanismo de retroalimentación en línea de los clientes para obtener información de la competencia; y, en algunos casos, aprovechar recursos gubernamentales que benefician a la empresa, si es que existen. Como antecedente a la industria del mezcal, primero definiremos la palabra mezcal, proviene de los vocablos náhuatl; mexcalli o Meztli que significa maguey, ixcalli significa cocer, por lo tanto se refiere a maguey cocido. (Mezcal- Artes de México, 2009). Esta bebida

sagrada de consumo exclusivo para sacerdotes y ancianos de la alta jerarquía de la sociedad prehispánica, fue utilizada para comunicarse con los dioses.

Después de la llegada de Hernán Cortes en 1519, se modificó el proceso productivo y con la introducción de destilación en alambique, el nombre de mezcal continuó produciéndose de los jugos extraídos de las cabezas o piñas del maguey cocidas. Para demostrar el auge y reconocimiento de la producción del mezcal en la Nueva España, fue la expedición de una Real Orden en 1785 en Aranjuez, para que se procediera a extinguir en la Nueva España las bebidas prohibidas, pues éstas competían muy severamente con los vinos de Europa. Tan sólo en 1837, Tamaulipas llegó a exportar más de 22 mil plantas de maguey, el precio del mezcal extraído rebasó los doce mil quinientos pesos de esa época.

La producción del mezcal se realizó en México y en España. Durante la colonia fue el producto comercial de mayor volumen, producido por las haciendas de los estados de San Luis Potosí, Zacatecas, Guanajuato, Durango, (Bazant, 1980) Consecutivamente, fue el sustituto económico de la minería, de ahí que muchas de las haciendas que cuentan con la Denominación de Origen producían mezcal y actualmente han sobrevivido a pesar de los movimientos sociales como la Revolución Mexicana. Siempre se han producido diversos aguardientes derivados del maguey, como el mezcal, tequila y bacanora; cuyos procesos de elaboración y especie son distintos. Por este motivo, para producir el mezcal en el estado de Oaxaca, el tipo de especie de agave es *angustifolia*, *A. potatorum*, *A. marmota* y *A. Karwinskii* zucc; en el estado de Guerrero está la especie de agave *cupreata* y *A. angustifolia*; en Durango el agave *duranguensis*; para los estados de Zacatecas y San Luis Potosí se cultiva el agave *salmiana*.

(Aguirre R. Et al, 2001). Las Normas Oficiales Mexicanas (NOM) son emitidas por la Secretaría de Economía y publicadas en el DOF; especifican la materia prima, procedimiento de fabricación y etiquetado, entre otros. La leyenda 100% en la etiqueta señala que el destilado está elaborado exclusivamente con la materia prima indicada. Si no se presenta, se trata de un producto mixto que contiene otros azúcares en el porcentaje admitido dentro de la NOM. Cabe destacar, que en el Diario Oficial de la Federación y en la Gaceta de la Propiedad Industrial (11 de febrero de 2003), se realizó la última modificación a la declaración general de protección de la Denominación de Origen Mezcal, de la Norma: NOM-070-SCFI-1994; para ser aplicada a la bebida alcohólica para los estados de Guerrero, Oaxaca, Durango, San Luis Potosí y Zacatecas. A partir del año 2003, se extiende un corredor norte-sur que atraviesa algunas entidades que producen mezcal en el estado de, Jalisco, Guanajuato, Michoacán y la parte sur de Tamaulipas, como se observa en el siguiente figura 3.

Figura 3: Magueyes Especiales Para la Producción de Mezcal en la República Mexicana

Fuente: Mezcales. Denominación de origen en México, web: Biodiversidad y denominación de origen en México, sitio web: <http://www.biodiversidad.gob.mx/usos/mezcales/mDenomina.html>

En este mapa muestra la clasificación taxonómica precisa las agaváceas en México, donde coinciden en el tipo de clima semiseco, cálido-semicálido a templados con precipitación pluvial de 400 a 800 mm anuales. El suelo árido y vegetación semiárida, latitud única en el mundo, pues son territorios de geografía accidentada, atravesados por cadenas montañosas, localidades entre 1000 y 200 metros sobre el nivel del mar, suelos profundo y pobres en materia orgánica, aptos para el cultivo de maguey.

Las bebidas alcohólicas fermentadas de México tiene su origen milenario, ya que formó parte de su ritual, como es el caso del pulque, colonche, tepache; y algunos destilados derivados del mezcal, tequila, bacanora y sotol. La variedad de mezcales va de acuerdo con el tipo de destilación o los frutos y hierbas que se le agregan. El proceso de elaboración del mezcal consiste en cinco etapas: selección de la materia prima, cocción, molienda, fermentación y destilación (Pérez, 1997), difiriendo únicamente la especie de maguey utilizada y el grado tecnológico aplicado en cada una de las etapas.

Cabe señalar que la especie de agave para la producción del mezcal se encuentra en las regiones áridas y semiáridas de la Republica Mexicana. Cada organización es diferente, como es el caso de las empresas productoras de mezcal, si alcanzan a definir la estrategia como el proceso que transforme su producto dentro del ámbito de una nueva tecnología, entonces los procesos desarrollan conocimiento y cambian la operación del producto. Para generar una nueva tecnología de operación es por medio de la transformación de la organización y la competitividad. La innovación y la tecnología son acciones del hombre para crear nuevos productos y procesos. La innovación es el cambio y la tecnología es el reflejo de este cambio. (Jasso, 2004) La estrategia significa aquellas acciones que realiza la empresa como respuesta al mercado. Por este motivo, una estrategia comprende: los propósitos, misión, objetivos, programas y métodos para alcanzar niveles óptimos de ventas. (Steiner, 2011) La estrategia tecnológica diseña opciones disponibles para construir y mantener una posición tecnológica que genere ventaja competitiva. Las empresas que desarrollan un cambio tecnológico, es porque responden al entorno, a través de producir con planes innovadores para apropiarse de una ventaja competitiva en el mercado. (Porter, 2012).

## METODOLOGÍA

El proceso de desarrollo de esta investigación, es a través de un método mixto, de enfoque cualitativo y cuantitativo, mismo que de manera conjunta permite analizar el objeto de estudio: estrategia tecnológica en la industria del mezcal. La fundamentación teórica para formular una estrategia tecnológica esta basada en los lineamientos de Melissa Schilling hace un análisis externo e interno de la posición de las empresas, identificando las competencias y capacidades, así como su riesgo de carácter estructural; donde el consumo, la producción, la comercialización de las empresas productoras de mezcal, alcanzan niveles óptimos de eficiencia. El análisis interno es en base al modelo de Schilling y para el análisis externo es basado en el modelo de las cinco fuerzas de Porter.

Para definir las bases de una estrategia tecnológica, se requiere diseñar los planes que comprendan métodos y procedimientos, que integren todas las actividades en forma sustentable, a fin de mejorar la producción y calidad del producto, considerando las áreas operativas y funcionales que se interrelacionan los factores propuestos. Para esta investigación la unidad de análisis es la industria del mezcal, el agave tiene una tolerancia anatómica localizada en zonas geográficas similares de suelo, altitud y lluvia, pero en cuanto a la estructura organizativa de las empresas que son 625 en la República Mexicana con 15,000 productores de maguey, los que carecen en su mayoría de una estrategia tecnológica, la producción de mezcal es precaria y cuenta con pocos apoyos para alcanzar los altos niveles competitivos.

Las preguntas que conducen esta investigación son: ¿cuáles son los elementos que intervienen en la estrategia tecnológica de las empresas productoras de mezcal en México?. ¿Cómo la tecnología impacta en el mercado de la empresas productoras de mezcal?. ¿Qué nueva tecnologías impactan en la cadena de

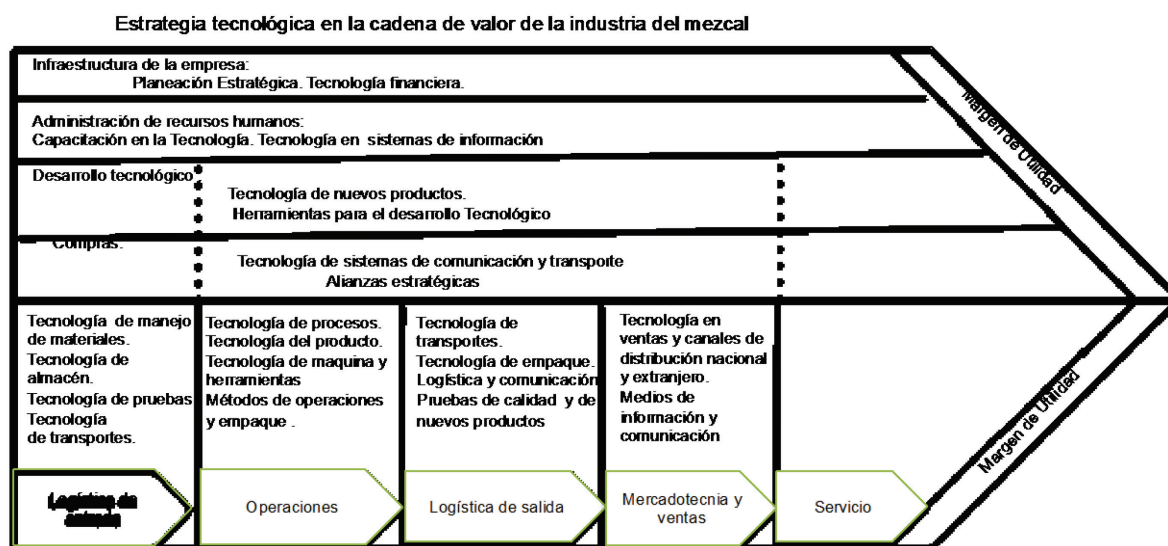

valor para aumentar la competitividad del mezcal en los mercados mundiales?

Por lo tanto, el objetivo de esta investigación es: proponer una estrategia tecnológica, que incremente el grado de la innovación en términos de mercado, de producción, en la cadena de valor y en la administración de los recursos humanos y desarrollo tecnológico en la industria del mezcal en México.

*Hipótesis de trabajo* : La estrategia tecnológica determina las herramientas que actúan de manera sistemática para prevenir los cambios que afectan al mercado, producción y comercialización de los productos de la industria del mezcal en México . La corriente de estructuración se basa en el Modelo de Kline, el más completo que refleja la complejidad del proceso innovador, la vigilancia tecnológica, el mercado y el producción. El modelo presentan los nexos significativos entre el cambio tecnológico, ventaja competitiva y estructura de la industria del mezcal. Con este modelo se considera el diseño industrial de la empresa, el *feedbacks link*, vigilancia tecnológica. tiene una ventaja con los otros, pues este sí relaciona la ciencia y tecnología en todo su modelo.

## RESULTADOS

La propuesta incluye una valoración de la posición de la industria del mezcal y la implementación de la estrategia de innovación tecnológica, se basa en el modelo de las cinco fuerzas de Porter y el análisis de grupos de interés, donde se valora el entorno social y demográfico de México. Considera el grado de rivalidad existente, el poder negociador de los proveedores y clientes, así como el comportamiento de productos sustitutos. Con el análisis de grupos de interés, identifica los intereses de la empresa, las políticas gubernamentales y el entorno social en el que se desarrolla. El análisis del entorno interno, identifica las fortalezas y debilidades de la cadena de valor, con esto la empresa identifica las fortalezas y lo utiliza como potencial para alcanzar una ventaja competitiva sostenible ante los mercados mundiales. La propuesta de esta investigación se muestra en el siguiente diagrama 1

Elaboración propia con base en Porter. (2012). Ventaja Competitiva. México.

## CONCLUSIONES

Las dimensiones estructurales de las empresas productoras de mezcal, han incluido la estandarización a pesar de sus procesos son artesanales. Las estructuras organizativas facilitan una producción eficiente, basadas en la vigilancia tecnológica. Además se han constituido en redes o asociaciones localizadas según la zona geográfica para construir estrategias comerciales y de mercado para introducir sus nuevos

productos. Este modelo se une a al cambio tecnológico, ventaja competitiva y estructura de la industria a través de la propuesta de Porter, en cuanto a las tecnologías representativas en una cadena de valor. El proceso de innovación tecnológica es considerado como la respuesta a las necesidades tecnológicas de las empresas productoras del mezcal en el mercado. Si éstas cuentan con estructura organizativa fortalecida, definiendo sus productos, procesos productivos, logran formar alianzas estratégicas que alcanzan ventajas competitivas en su mercado. La tecnología se considera como un proceso estratégico de innovación en las empresas productoras de mezcal. De esta manera enlaza una serie de actividades en la estructura organizativa de este tipo de empresa, donde la innovación constituye el valor agregado a los productos derivados del mezcal. Existen en la República Mexicana 625 empresas productoras de mezcal en los siete estados, los que tienen la denominación de origen: Durango, Guanajuato, Guerrero, Oaxaca, Zacatecas, San Luis Potosí y Tamaulipas. La producción anual de mezcal, ha superado los dos millones de litros, de los cuales unos 500,000 se destinan a la exportación. La industria mezcalera proporciona 29,000 empleos directos e indirectos, quienes trabajan en 330,000 hectáreas.

(Subsecretaría de Agricultura y Ganadería - Sagarpa, 2012). Las exportaciones de mezcal aumentaron 120% en seis años, para alcanzar un valor anual superior a 60 millones de dólares; dirigidas hacia Estados Unidos y República Checa. El incremento fue resultado del apoyo por 500 millones de pesos (unos 38.6 millones de dólares) para la integración, operación y fortalecimiento del Sistema Producto, lo que permitió crear la Categoría del Mezcal Certificado. Con estas premisas se pretende construir una estrategia que de pie a establecer mejores posiciones de competitividad de las empresas productoras de mezcal en México con bases de desarrollo tecnológico potencializando la innovación tecnológica en sus procesos de comercialización.

# PANORAMA ACTUAL DE LOS PROGRAMAS DE APOYO A LAS MIPYMES EXPORTADORAS DEL ESTADO DE SONORA

Francisco Camou Grijalva, Universidad Estatal de Sonora  
Beatriz Alejandra Hurtado Bringas, Universidad Estatal de Sonora  
Rosalina Jaime Meuly, Universidad Estatal de Sonora  
Natalia Guadalupe Romero Vivar, Universidad Estatal de Sonora

## RESUMEN

*En México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son micro, pequeñas y medianas empresas (MIPYMES), las cuales generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país, por esta razón, se convierten en una estrategia para el mejoramiento y la consolidación de la economía nacional. La suscripción de acuerdos comerciales que ha negociado México en los últimos años obliga a los gobiernos a instrumentar acciones para mejorar el entorno económico y apoyar directamente a las MIPYMES, con el propósito de crear las condiciones que contribuyan a su establecimiento, crecimiento y consolidación. En los últimos años los apoyos a estas unidades empresariales en Sonora se han generado a través de la dependencias gubernamentales, tales como Secretaría de Economía Federal, ProMéxico y Secretaría de Economía Estatal, ofreciendo diversos tipos de programas que versan desde la detección de la oferta exportable hasta la asesoría tecnológica y la participación en ferias y misiones comerciales con el fin de consolidar la exportación de sus productos. Por lo anteriormente expuesto es necesario analizar la operatividad de los programas de apoyo al exportador que ofrecen los distintos niveles de gobierno para las MIPYMES en Sonora.*

**PALABRAS CLAVE:** Mipymes, asesoría, exportaciones, capacitación, Gobierno

## CURRENT OVERVIEW OF MIPYMES EXPORTING SUPPORT PROGRAMS IN THE STATE OF SONORA

### ABSTRACT

*In Mexico there are approximately 4 million 15 thousand business units, of which 99.8% are Micro, Small and Medium Enterprises, SMEs, which generate 52% of the gross domestic product (GDP) and 72% of employment in the country, because of this reason, (1), they become a strategy for the improvement and strengthening of the national economy. The signing of trade agreements that Mexico has negotiated in recent years forces governments to implement measures to improve the economic environment and support directly to SMEs, in order to create the conditions that contribute to its own establishment, growth and consolidation. In recent years the support for these business units in Sonora were generated through government agencies such as the Secretaría de Economía Federal, Secretaría de Economía Estatal and ProMéxico, offering a variety of programs that ranging from detection of the exportable offer to technology assesment as well as participation in trade fairs and missions in order to consolidate the export of their products. Therefore, it is necessary to analyze the operation of exporters support programs that are offered by various levels of government for SMEs in Sonora.*

## INTRODUCCIÓN

En la actualidad los negocios internacionales se han venido caracterizando principalmente por el fenómeno de la globalización, el cual ha generado muchos cambios tanto en ámbitos como son el político, social, tecnológico y económico, en este aspecto se ha llegado a tener una gran dependencia de los mercados extranjeros, creando así un entorno muy competitivo e incierto para las micro, pequeñas y medianas empresas (MIPYMES) mexicanas en el ámbito del comercio Internacional por lo que se deben identificar los retos y oportunidades para éstas en la actualidad. Es importante instrumentar acciones para mejorar el entorno económico y apoyar directamente a las empresas, con el propósito de crear las condiciones que contribuyan a su establecimiento, crecimiento y consolidación.

Según datos de PROMEXICO, las micro, pequeñas y medianas empresas (MIPYMES), constituyen la columna vertebral de la economía nacional por los acuerdos comerciales que ha tenido México en los últimos años y asimismo por su alto impacto en la generación de empleos y en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística y Geografía (INEGI), en MIPYMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país. Un estudio elaborado por la empresa Centro de Negocios (WSFB), en febrero del 2013, calcula que del total de empresas MIPYMES, aproximadamente 4 millones de ellas participan en sectores industriales, comercio y servicios, entre los perfiles destacan los siguientes:

El 65% de las pymes en México son de carácter familiar,

Más de 80% no cuenta con algún tipo de certificación,

Cerca de 50% no utiliza técnicas en calidad o productividad,

Sólo 24 % maneja alguna licencia o patente,

El 83% no realiza actividad alguna para consolidar su presencia en el exterior.

Es importante recordar que la mayoría de las MIPYMES en nuestro país son familiares y que ese factor juega un papel importante dentro del proceso de formación debido a que limita el acceso a créditos que ofrece en su caso la banca comercial que son necesarios para poder tener una inversión en maquinaria, mejora de procesos, transporte y tecnología para que de esa manera puedan poder generar productos de mejor calidad que les permita tener acceso a mercados internacionales y de esa manera evitar errores internos para enfrentar la contracción de la demanda en distintas industrias y a competidores de distintas partes del mundo.

## REVISIÓN DE LITERATURA

Dentro del marco de la Política Económica para la Competitividad y a través del Consejo Presidencial para la Competitividad, se han planteado estrategias y líneas de acción concretas que permitirán generar las condiciones necesarias para promover la competitividad de distintos sectores productivos considerados como prioritarios, ya que su participación en el mercado y la generación de fuentes de trabajo generará sinergias que impulsen al resto de la planta productiva y estimulen las exportaciones. Dentro de estos están: aeronáutico, agroindustrial, automotriz y auto-partes, comercio, construcción, electrónica, química, software, textil-confección, turismo, maquila de exportación, cuero y calzado.

La columna vertebral del Plan Estatal de Desarrollo de Sonora 2009-2015 la constituyen 6 ejes rectores, que destacan los grandes propósitos del desarrollo del Nuevo Sonora y orientan al quehacer conjunto de la sociedad y el gobierno. Los ejes rectores establecen acciones transversales que comprenden los ámbitos económico, social, cultural, político, ambiental, de administración pública de gobierno y de participación ciudadana. En el eje rector 4: Sonora Competitivo y Sustentable, se sostiene que Sonora será líder

nacional en generación de empleos, crecimiento sostenido y desarrollo económico sustentable a través del desarrollo tecnológico y de la innovación que incrementen la competitividad de las unidades económicas y que generen un entorno atractivo y facilitador de negocios. En este marco se encuentran estrategias encaminadas al apoyo de las MIPYMES:

Establecer corresponsabilidad de las grandes industrias con el estado para apoyar la formación y fortalecimiento de las cadenas productivas con las MIPYMES de la entidad. Apoyar integralmente a los sectores productivos del estado con especial apoyo a las micro, pequeñas y medianas empresas. Potenciar la capacidad de innovación tecnológica de las empresas establecidas en el estado de Sonora, a fin de incrementar su competitividad, crear riqueza y empleo y mejorar las condiciones de trabajo de las mismas, con especial atención a las MIPYMES. Desarrollar una plataforma integral para la creación y desarrollo de empresas, que brinde las herramientas para que estudiantes emprendedores y la comunidad empresarial en general, cuenten con oportunidades para lograr que sus ideas de negocios se conviertan en empresas que contribuyan al crecimiento y desarrollo social de la comunidad. A continuación se describen los programas de apoyo a las MIPYMES que ofrece las diferentes dependencias del gobierno federal y estatal:

#### Promexico

Es un organismo del Gobierno Federal mexicano, fue establecido el 13 de junio de 2007, mediante Decreto Presidencial, bajo la figura de fideicomiso público sectorizado a la Secretaría de Economía, y cuenta con una red de 27 oficinas en la República Mexicana y más de 30 oficinas en 21 países para brindar todos sus servicios a las empresas que lo requieran. Este organismo busca promover la inversión extranjera directa y las exportaciones de productos y servicios, así como la internacionalización de las empresas mexicanas para contribuir al desarrollo económico y social del país y al fortalecimiento de la imagen de México para hacer negocios. Sus objetivos son impulsar las exportaciones de productos y servicios en el mercado internacional, promover la inversión extranjera así como coordinar las estrategias del gobierno federal. Este organismo ofrece servicios y apoyos para las empresas con el fin de incrementar la competitividad de éstas en el sector exportador principalmente. A continuación se detallan los 18 programas de apoyo que brinda este Organismo y que funcionan vía reembolso.

- A) Bolsa de viaje Apoyo económico a reembolso para que el beneficiario agilice y obtenga las mejores condiciones en su viaje de negocios, sea para promoción comercial o de inversión, alineados con la estrategia de ProMéxico.
- B) Centro de distribución, showrooms y centros de negocios en México y en el extranjero Apoyo económico a reembolso para el exportador que consiste en la renta de un local en el exterior para Centros de distribución y/o Showroom y/o Centro de negocios, con el objetivo de impulsar de esta manera sus negocios de exportación. Asimismo, se apoya al importador extranjero para que pueda instalar una oficina de compras en territorio mexicano.
- C) Consultoría para Registro de Marca internacional. Dirigo Apoyo económico a reembolso para contratar consultoría para:

- Gestión de registro internacional, dependiendo de los requerimientos del país de destino.
- Registro de Propiedad Intelectual.
- Trámites para patentes en el extranjero.

El objetivo es que la empresa mexicana esté protegida en el momento de exportar sus productos

- D) Consultoría para la mejora de procesos productivos y mejora para la exportación

Dirigido a: Empresas con Potencial Exportador y Empresa Exportadora, consiste en un apoyo económico a reembolso para que un beneficiario pueda realizar un estudio de Mejora de procesos productivos y productos de exportación para fortalecer su competitividad y aumentar su productividad, a través de una mayor eficiencia en sus procesos, así como la capacidad de generar productos adaptados a las necesidades de compradores.

E) Consultoría y asesoramiento técnico de especialistas:

Dirigido a Empresas con Potencial Exportador y Empresas Exportadoras, consiste en un apoyo económico a reembolso para que un beneficiario pueda realizar un estudio de Mejora de procesos productivos y productos de exportación para fortalecer su competitividad y aumentar su productividad, a través de una mayor eficiencia en sus procesos, así como la capacidad de generar productos adaptados a las necesidades de compradores. El objetivo es aumentar la proveeduría nacional a empresas transnacionales para la exportación de productos con mayor contenido nacional (exportación indirecta) o facilitar el acceso al mercado internacional (exportación directa).

F) Consultoría y asesoramiento técnico de especialistas.

Dirigido a Empresas con Potencial Exportador y Empresas Exportadoras, consiste en un Apoyo económico a reembolso para ayudar a las empresas mexicanas a través de expertos para que mejoren sus conocimientos en aspectos técnicos y de calidad, con el objeto de que aprovechen las oportunidades del mercado en el exterior o en México a través de proveeduría a Empresas Transnacionales. El objetivo es incrementar la transferencia de conocimientos para las empresas mexicanas.

G) Diseño de campañas de imagen internacional de producto.

Dirigido a Empresas Exportadoras, consiste en un apoyo económico a reembolso para contratar consultoría encaminada a la elaboración de un plan de acciones que contemple integralmente: Desarrollo del concepto y estrategia de despliegue en medios, Marketing kit, Organización de eventos, Inserciones en prensa y revistas, radio y televisión. El objetivo es impulsar la promoción de la empresa exportadora en el mercado internacional mediante estrategias de marketing.

H) Diseño de caja, envase, embalaje y etiquetado de producto de exportación.

Dirigido a Empresas con Potencial Exportador y Empresa Exportadora, consiste en un apoyo económico a reembolso para contratar consultoría para: Diseño de envase, empaque, embalaje y de etiquetado.

El objetivo es apoyar a la empresa mexicana para que pueda ajustar sus productos a los requerimientos del mercado internacional.

I) Envío de muestras al exterior.

Dirigido a Empresas Exportadoras y Empresas con Potencial Exportador, consiste en un apoyo económico a reembolso destinado al envío de muestras. El objetivo es apoyar a las empresas que requieren enviar muestras al exterior como parte de su proceso de exportación.

J) Diseño de material promocional para la exportación.

Dirigido a Empresas con Potencial Exportador y Empresas Exportadoras que se encuentren en alguno de los siguientes supuestos: Que cuente con una autorización de Apoyo para participación Individual en

Eventos Internacionales, Que cuente con una autorización de Apoyo para una Bolsa de Viaje, Que haya pagado su participación en una Feria con pabellón Nacional, Que haya pagado el Servicio de Agenda de Negocios. Lo anterior para eventos o servicios a realizar en el mismo año en que solicita el Apoyo.

K) Estudios de logística.

Dirigido a Empresas con Potencial Exportador y Empresas Exportadoras.

Consiste en un apoyo económico a reembolso para la realización de estudios que permitan incrementar la competitividad de las empresas mexicanas en su proceso de exportación, basado en la optimización de sus costos logísticos. El objetivo es contribuir a que las empresas mexicanas sean más competitivas en el exterior a través de la generación de ahorros en su sistema logístico.

L) Estudio de mercado para identificar eslabones faltantes o con mínima presencia en las cadenas productivas

Dirigido a Empresas exportadoras, Empresas con Potencial Exportador, Empresa Transnacional, Inversionista y Organismo empresarial. Consiste en un apoyo económico a reembolso para elaborar estudios relativos a productos, componentes o procesos faltantes en las cadenas productivas de México o con presencia mínima en dichas cadenas, a fin de desarrollar nuevas capacidades productivas, sustituir importaciones y detonar inversiones en México. El objetivo es proveer de información cuantitativa y cualitativa a una empresa extranjera o mexicana que le permita tomar la decisión de invertir en México.

Estudios de mercado y planes de negocio para exportación o internacionalización.

M) Empresa con Potencial Exportador y Empresa Exportadora.

Apoyo económico a reembolso para la realización de estudios que permitan a las empresas la identificación de oportunidades de exportación en uno o varios mercados u oportunidades de internacionalización; así como el desarrollo de planes de exportación o internacionalización. El objetivo es facilitar a las empresas mexicanas la evaluación de oportunidades comerciales en el exterior, a través de estudios de mercado y desarrollar planes de exportación o internacionalización.

Tipo de estudios:

1. Investigación de Mercados y Canales de Distribución.
2. Plan de Negocios de Exportación.
3. Plan de Negocios de Internacionalización.
4. Identificación de clientes potenciales y evaluación de su interés de compra

N) Implantación y certificación de normas y requisitos internacionales de exportación y de sistemas de gestión de proveeduría para exportadores.

Dirigido a Empresas con Potencial Exportador y Empresas Exportadoras. Consiste en un Apoyo económico a reembolso para la contratación de despachos de consultoría para: Implantar, auditar y emitir certificados de normas y requisitos internacionales, implantar sistemas de gestión administrativa, de producción y de calidad requeridas por compradores en el mercado internacional.

O) Organización y realización de encuentros de negocios.

Dirigido a Empresas Transnacionales, Organismos Empresariales e Importadores (empresa ubicada en el extranjero interesada en adquirir productos y/o servicios). Consiste en un poyo económico a reembolso para la realización de encuentros de negocios en México entre proveedores potenciales y compradores (empresas trasnacionales e importadores). El objetivo es promover las exportaciones directas o indirectas a través de la organización de encuentros de negocios entre transnacionales e importadores.

P) Participación individual en eventos internacionales.

Dirigido a Empresas con potencial exportador, Empresas Exportadoras que quieran participar con un stand en un evento de corte internacional (feria) para promover sus productos o servicios mexicanos y así incrementar, diversificar o consolidar sus exportaciones. El objetivo es impulsar la participación de la empresa mexicana en eventos internacionales que le permitan promover sus productos o servicios.

Q) Planeación y realización de programas promocionales en el exterior.

Dirigido a Empresas Exportadoras, Empresas con Potencial Exportador, Empresas Transnacionales (cuyos eventos fomenten la exportación desde México y/o la atracción de inversión extranjera hacia México), Organismo empresarial y Entidad Estatal a través de su área responsable de promoción de exportaciones y/o inversiones (siempre y cuando estas entidades puedan emitir facturas a favor de ProMéxico).

### **Secretaría De Economía**

La Secretaría de Economía es una dependencia del Poder Ejecutivo Federal que promueve la competitividad y el crecimiento económico de las empresas. Cuenta con oficinas en la Ciudad de México, y tiene delegaciones en todo el interior de la República. Tiene como Mision es ser una institución que promueve e instrumenta políticas públicas y programas orientados a crear más y mejores empleos, empresas y emprendedores. La vision: Será la dependencia del gobierno federal que promueva la generación de empleos de calidad y el crecimiento económico del país, mediante el impulso e implementación de políticas públicas que detonen la competitividad y las inversiones productivas.

Con la finalidad de incrementar la actividad exportadora de las empresas productoras establecidas en el país, la Secretaría de Economía ha establecido diversos programas de apoyo a las exportaciones en materia fiscal y administrativa, a continuacion se detallas los aquellos programas enfocados a dar apoyo y asesoria en viersas actividades a las:

A) Centro Mexico Emprende

Los Centros México Emprende otorgan servicios y apoyos públicos y/o privados para emprendedores y empresas, de manera integral, ágil y oportuna, de acuerdo con su tamaño y potencial, en un solo lugar. Por ejemplo: Asesoría básica de los apoyos y programas existentes a emprendedores y empresas, diagnóstico, plan de mejora y gestión del crédito, formación empresarial

B) Centros PYMEXPORTA

Los Centros Pymexporta son espacios físicos de atención especializados en comercio exterior, instalados en la República Mexicana para apoyar a que las micros, pequeñas y medianas empresas, se inicien o consoliden en el proceso exportador. En estos centros se conjugan esfuerzos federales, estatales y municipales, así como de los sectores empresariales y educativos, con el objetivo de apoyar a las empresas competitivas que tengan interés en internacionalizar sus productos y/o servicios. Los Centros Pymexporta funcionan como multiplicadores de los apoyos del Fondo PYME para el desarrollo

exportador, otorgando a las empresas servicios de capacitación, consultoría especializada y promoción internacional. Los Centros Pymexporta operan con una metodología propia de registro, acompañamiento y gestión de apoyos institucionales de acuerdo con los requerimientos de los empresarios. Actualmente en Sonora es operado por la Secretaría de Economía del gobierno del estado de Sonora.

C) Programa de Capacitación y Consultoría

El Programa Nacional de Capacitación y Consultoría es un instrumento que permite a las MIPYMES a ser más rentables y productivas, mediante la aplicación de servicios especializados dirigidos a las áreas sustantivas de la empresa donde se tiene detectadas debilidades o áreas de oportunidad, que no les han permitido una diferenciación contra sus competidores.

D) Programa de Incubadoras

Red de incubadoras a nivel nacional que asesoran y acompañan a los emprendedores en la elaboración de su Plan de Negocios y apertura de su empresa, ofreciendo hasta el 70% con el Fondo PYME, consultoría.

E) Sistema Nacional de Orientación al Exportador

El objetivo del Sistema Nacional de Orientación al Exportador es proporcionar un servicio personalizado y gratuito de orientación y asesoría en comercio exterior mediante una red de Módulos de Orientación al Exportador (MOE). Son áreas de atención ubicadas en las entidades federativas para apoyar a las personas interesadas en exportar, los servicios disponibles son: Asesoría y orientación gratuita en comercio exterior a las personas con iniciativas de exportación que solicitan información sobre el procedimiento para vender sus productos en los mercados internacionales. Informan sobre diversos servicios y apoyos que ofrecen las instituciones públicas y privadas en materia de comercio exterior. Canalizan con organismos e instituciones para recibir asesoría especializada en comercio exterior, como son los Centros Pymexporta. Para acceder a este servicio sólo tiene que llamar o acudir al MOE más cercano a su localidad, el directorio lo puede consultar en: [www.contactopyme.gob.mx/moes/](http://www.contactopyme.gob.mx/moes/)

Secretaría de Economía Estatal

La Secretaría de Economía Estatal, es una dependencia del Gobierno del Estado de Sonora, con el fin de apoyar a las MIPYMES del estado, ofrece los programas EVOLUSON, así como también Acceso y Escalamiento de Mercados los cuales tienen 3 años funcionando. A continuación se describen cada uno de estos. El programa EVOLUSON, se encarga del desarrollo de ventajas competitivas con innovación y valor agregado a los productos commodities desde la ingeniería hasta su introducción en cadenas comerciales para lograr diferenciación y posicionamiento a través de servicios tales como desarrollo de diseño, ingeniería de producto, inteligencia comercial, mercadotecnia y fortalecimiento de las cadenas de suministro. Está dirigido a las MIPYMES sonorenses que industrialicen un producto, de los sectores: Industria, Comercio y Servicios. Sus beneficios son: Innovación y desarrollo de tecnología en el producto, registro de marca, código de barras, tabla nutrimental, identificación a nuevos mercados, acceso y consolidación de los actuales. Identificación de puntos de ventas adecuados para el producto, reconocimiento de oportunidad de mercados, integración productores-proveedores, mejoramiento de la calidad del producto y servicios y competitividad del producto

El requisito que se debe de cubrir para tener acceso a este programa es ser una empresa formalmente constituida. Consultoría y Capacitación Comercial, es un programa que depende de EVOLUSON, y tiene como objetivo crear y/o aumentar la cartera clientes, concretar negocios a corto y mediano plazo, incrementar ventas y posicionar marcas y productos en anaqueles. Para poder acceder a este programa deberá ser una MIPYME sonorense según la clasificación de la Secretaría de Economía de los sectores

que industrialicen y comercialicen un producto. Acceso y Escalamiento de Mercados, el objetivo de este programa es promover la oferta productiva regional propiciando diversificar mercados y ampliar la cartera de clientes que potencialice las ventas de las MIPYMES que participan en los sectores: Industria, Comercio y Servicios. Sus beneficios de impacto son: Acceso a nuevos mercados, diversificación de mercados y/o productos, presencia, posicionamiento, arraigo, imagen y consolidación, mejor escenario para el contacto de clientes potenciales, estrategia de promoción previa entre los operadores de los mercados y conocimiento de los aspectos más destacados de la demanda y oferta de productos.

Los requisitos que debe de cubrir el acreedor de este programa son: que industrialice y comercialice un producto, ser empresa que cuente con las características del instrumento 1 (Diseño e Ingeniería del producto) del programa EVOLUSON, capacidad de oferta exportable (cantidad, calidad, precio y servicio) y participar en programas de capacitación de preparación. Estos dos programas van de la mano debido que para empezar una empresa se debe de solicitar primero el programa EVOLUSON para entrar a lo que es el mercado y la comercialización, y una vez teniendo éxito es ahí cuando entra el programa Acceso y Escalamiento de Mercados para crecer como empresa.

## RESULTADOS

De acuerdo a la información obtenida en la presente investigación, se puede concluir que existen una gran gama de apoyos dirigidos a las MIPYMES, ofertadas por dependencias gubernamentales federales y estatales como lo son PROMEXICO, Secretaría de Economía Federal y Estatal. En el año 2012, la oficina de ProMexico en Sonora atendió 68 empresas de distintos municipios del estado y se comprometió con \$1, 948,362 pesos, para el otorgamiento de 36 apoyos de los cuales destacaron Bolsa de Viaje, participación individual en eventos internacionales y envío de muestras. Es importante que se realice un ajuste en operación y otorgamiento de los apoyos que maneja cada dependencia a fin evitar la duplicidad de programas y hacer llegar los apoyos con mayor precisión aquellas empresas que realmente puedan lograr un mayor impacto en el desarrollo económico del Estado. Existen apoyos en participación de ferias y eventos internacionales, que son otorgados por ProMéxico, Secretaría de Economía Federal y eventualmente hay apoyos por parte de la Secretaria de Economía Estatal. Una necesidad que externa el sector empresarial y que se ha descuidado es la capacitación individual a las empresas; no hay que olvidar que el recurso humano es un factor importante para elevar la competitividad en la empresa

La Secretaría de Economía Federal, focalizó sus actividades de atención a las MIPYMES con capacidad exportadora a través del programa: Modulo de Orientación al Exportador (MOE), otorgando solamente asesoría a las empresas interesadas, las necesidades de capacitación se canalizaron a través de la Secretaría de Economía Estatal, la cual apoyo en el año 2012, a 72 empresas a través de sus programas de apoyo antes descritos, sin embargo en este mismo año, el fondo Pymexporta cuyo objetivo principal es apoyar a las MIPYMES en la Consultoría del proceso de exportación y recursos para promoción, en el año 2012 no otorgo apoyos por falta de recursos económicos.

## CONCLUSIONES

En la siguiente tabla se muestra la distribución que existe en México de empresas exportadoras según su participación en el mercado internacional de acuerdo al rango de ventas, considerando su participación en el mercado.

Tabla 1: Distribucion de Empresas en Mexico

Rangos de ventas en millones de dólares	No. de Empresas Exportadoras	Participación en el mercado total
1000 (+) millones	38	46%
500-999 millones	52	10%
100-499 millones	419	23%
10-99 millones	1,809	16%
10 (-) millones	32,440	5%
Total	34,758	100%

Fuente: Elaboración propia a partir de los datos de IQOM Inteligencia Comercial (2011).

Como se muestra en la Tabla No.1, para México representa un alto riesgo la conformación actual que tiene en sus empresas exportadoras, donde menos del 1%, específicamente sólo 90 empresas representan el 56% de las exportaciones totales no petroleras. Asimismo, vemos que el 95% de las empresas caen en el rubro de MIPYMES y aportan tan sólo el 5% de las exportaciones totales, por tal motivo es importante que los programas de apoyo que otorgan las dependencias gubernamentales, estén enfocados a las necesidades de crecimiento y detonación de las MIPYMES y puedan tener una mayor participación en el sector exportador, con el fin de minimizar riesgos de inestabilidad económica.

Los programas de apoyo para la capacitación de las Pymes con capacidad exportadora deberán centrar sus esfuerzos en las necesidades reales de las MIPYMES, de acuerdo a un estudio realizado en el 2010 los temas mas necesarios para este tipo de empresas que realizan actividades exportadoras son: asesoría en el proceso de exportación, plan de negocios, asesoría financiera, etiquetado y envasado, servicios de inteligencia comercial para la toma de decisiones de nuevos mercados. Romero N.G. Por otro lado, las universidades representan un buen instrumento para apoyar los programas de capacitación en conjunto con las dependencias gubernamentales, ya que su capital humano tiene la capacidad de mantener un contacto directo y permanente con la MIPYME a través de los programas educativos relacionados con la empresa y/o el comercio exterior o internacional.

La participación de la Micro, Pequeña y Mediana empresa en el sector exportador es un importante detonador de su actividad, ya que provee de oportunidades de expansión, mejores salarios, diversificación de los riesgos y los mercados. Abastece tanto el mercado nacional en pequeñas cantidades como el internacional, dirigiéndose a segmentos de mercado específicos y por lo general pequeños, todo esto depende de su capacidad productiva, por esta razón, el gran reto que tiene el gobierno, será crear los mecanismos y programas que alienten la competitividad de las MIPYMES y por ende buscar un mayor crecimiento y participación en los mercados internacionales, esto permitirá a la economía Mexicana aumentar la productividad del sector empresarial y cambiar el esquema de competitividad que hasta ahora se mantiene en nuestro país.

## METODOLOGÍA

El diseño de la investigación partió de una investigación propiamente documental y descriptiva, por otro lado, se realizó una investigación de campo; es decir, se consultó y se entrevistó a funcionarios de los distintos organismos gubernamentales federales y estatales, para afianzar datos e información sobre el tema investigado; así como tambien, sitios y/o bases de datos oficiales.

# CAPACIDAD TECNOLÓGICA COMO ESTRATEGIA PARA IMPULSAR LA COMPETITIVIDAD DE LAS PYMES

Lorena Esther Gómez Bermúdez, Universidad de La Guajira  
Martha Josefina Castrillon Rois, Universidad de La Guajira  
Edilberto Rafael Santos Moreno, Universidad de La Guajira

## RESUMEN

*Teniendo en cuenta la importancia que tienen las pequeñas y medianas empresas (PYMES), no solo a nivel local, regional y nacional, sino en el contexto de la economía de los países latinoamericanos, resulta de gran utilidad analizar la capacidad tecnológica de las Pymes del Departamento de La Guajira, Colombia; el interés fue dar explicación a la capacidad tecnológica como estrategia para lograr innovaciones y alcanzar el fortalecimiento y competitividad de las Pymes, con el fin de que puedan penetrar en el mercado nacional e internacional; lo anterior, teniendo en cuenta un análisis interno y externo, permitiéndose identificar las fortalezas y debilidades, así como las oportunidades y amenazas del medio externo a las PYMES. Para la sustentación teórica se utilizaron los aportes de Shenhar y Adler, compilados por Gaynor (1999), Testa (2000), Betancurt (1998), Parisca (1991), Avalos (1994), entre otros. La investigación es de tipo descriptiva de diseño no experimental, transeccional de campo. La población está conformada por las Pymes registradas en la Cámara de Comercio del departamento, tomando como muestra 231 PYMES y como informantes claves los directores de las empresas objeto de estudio. Los resultados indicaron una urgente necesidad de fortalecer e incrementar la capacidad tecnológica, la inversión en investigación y desarrollo, la innovación tecnológica, que sustente la competitividad de las Pymes.*

**PALABRAS CLAVE:** Capacidad tecnológica, competitividad, pequeñas y medianas empresas, estrategia, tecnología.

## TECHNOLOGICAL CAPABILITIES STRATEGY TO BOOST COMPETITIVENESS OF SMALL AND MEDIUM SIZED ENTERPRISES

### ABSTRACT

*Given the importance of small and medium enterprises (SMEs), not only locally, regionally and nationally, but in the context of the economy of Latin American countries, it is useful to analyze the technological capacity of SMEs Department of La Guajira, Colombia, the interest was to explain the technological capacity as a strategy for achieving innovations and strengthening SMEs so that they can penetrate the domestic and international markets; above, taking into account internal and external analysis, allowing to identify strengths and weaknesses and the opportunities and threats of the external environment for SMEs. For the theoretical framework used contributions from Shenhar and Adler, compiled by Gaynor (1999), Testa (2000), Betancourt (1998), Parisca (1991), Avalos (1994), among others. The research is descriptive non-experimental design, transactional field. The population consists of SMEs registered in the Chamber of Commerce of the department, taking as sample 231 SMEs and as key informants directors of companies under study. The findings suggest an urgent need to strengthen and increase the technological capacity, investment in research and development, technological innovation, to sustain the competitiveness of SMEs.*

**JEL:** O32, O33, Q55, R11, R12

**KEYWORDS:** technological capacity, competitiveness, SMEs, strategy, technology.

## INTRODUCCIÓN

En el entorno actual, donde las organizaciones se mueven en un mundo competitivo y globalizado, estas deben desarrollar recursos humanos, sistemas de información y capacidades tecnológicas para hacer frente a los nuevos desafíos. La visión cada vez más innovadora del hombre conduce a realizar actividades de Investigación y Desarrollo que le permiten poner en el mercado de tecnologías nuevos productos, procesos y servicios que satisfagan las más variadas demandas; además, introducirse en un mercado global altamente competitivo que requiere elementos innovadores y sistemas sociales capaces de generar tecnología. Dentro de este marco, se deben conocer y aceptar la importancia de la capacidad de adquisición y uso de tecnología por parte de las empresas, y lo que implica, el aprendizaje, la asimilación tecnológica para así realizar las adaptaciones y mejoras necesarias para que se mantengan, sobrevivan o compitan en el mundo moderno y globalizado imperante. En la mayoría de los países en desarrollo, los gobiernos son conscientes de que la capacidad tecnológica constituye una herramienta de gran importancia para el desarrollo. El desarrollo vertiginoso de la tecnología está afectando a todos los campos en la sociedad y las pequeñas y medianas empresas ( Pymes ) no son la excepción. En tal sentido, se requirió el estudio de la capacidad tecnológica en el contexto de las pequeñas y medianas empresas, teniendo en cuenta un análisis interno y externo, identificando sus fortalezas y debilidades, al mismo tiempo las oportunidades y amenazas del medio.

## REVISIÓN LITERARIA

Según Shenhar y Adler, compilados por Gaynor (1999), la capacidad tecnológica de una empresa se define como la capacidad de una organización para desarrollar un flujo constante de nuevos productos que satisfagan las necesidades del mercado, para manufacturar estos productos manteniendo entre tanto grados adecuados de calidad y costo, para desarrollar y adaptar nuevas tecnologías para satisfacer las necesidades futuras y para responder con prontitud a los movimientos inesperados de la competencia o a oportunidades imprevistas. El marco teórico utilizado por estos autores contiene cinco componentes distintos que interactúan entre sí y contribuyen a la capacidad tecnológica de la organización: ventajas tecnológicas esenciales, ventajas organizacionales, ventajas externas, procesos de desarrollo y ventajas complementarias.

### Ventajas Tecnológicas Esenciales

Según Shenhar y Adler, compilado por Gaynor (1999), las ventajas tecnológicas esenciales constituyen el conjunto de tecnologías incorporadas en producto y procesos considerados fundamentales para la competitividad presente y futura de la empresa. Estas ventajas reflejan el aprendizaje colectivo en áreas técnicas específicas y el acervo resultante de know-how de tecnología por medio de varias unidades de negocio. Dependen de la experiencia acumulada en el desarrollo de tecnologías, así como de la explotación de esas tecnologías en nuevos productos y nuevos procesos.

*Ventajas Organizacionales:* Teniendo en cuenta la opinión de Shenhar y Adler (1999), las ventajas organizacionales son los factores que permiten a la empresa crear y explotar nuevas tecnologías. Las ventajas organizacionales pueden dividirse en cinco elementos claves: habilidades, procedimientos, estructura, estrategia y cultura.

*ventajas externas:* Para Shenhar y Adler, compilados por Gaynor (1999), las ventajas externas son un componente crucial de la base tecnológica de la organización. La capacidad de la organización para

encontrar, construir y explotar la tecnología depende de su red de asociaciones, contratos y relaciones de negocio. De importancia similar son los vínculos informales que los empleados crean con sus pares y sus colegas por fuera de la organización.

*Procesos De Desarrollo:* Según Shenhar y Adler (1999), para las empresas basadas en tecnología, los dos procesos clave son el proceso de generación de producto y de proceso, y el proceso de generación de tecnología. Este último da origen a las futuras ventajas tecnológicas de la organización que se utilizan como aporte del anterior. Ambos procesos abarcan la totalidad del ciclo de innovación, desde la idea hasta la comercialización, incluidos generación de ideas, formulación y selección de propuestas, desarrollo de conceptos de detalles y ventas internas o externas. Al igual que con otros procesos de negocios, los procesos de desarrollo exigen la cooperación de diferentes departamentos de la empresa.

*Ventajas Complementarias:* A menudo, según la opinión de Shenhar y Adler (1999), la generación de utilidades a partir de la innovación tecnológica exige una serie de capacidades de apoyo. Ventajas complementarias, como tecnologías de información, distribución del producto o servicio, servicios posteriores, apoyo de campo y manufactura, pueden crear la diferencia entre el éxito temporal y el de largo plazo.

## METODOLOGÍA

El tipo de estudio implementado para el desarrollo de esta investigación fue tipo descriptivo de diseño no experimental, transeccional de campo. El tamaño de la muestra se determinó bajo un nivel de confianza del 95% y un error muestral del 5%, para una población 580 PYMES registradas en la Cámara de Comercio de La Guajira. El tamaño de la muestra se estableció mediante la siguiente fórmula:

$$N = \frac{Z^2 NPQ}{NE^2 + Z^2 PQ}$$

Dónde: n= tamaño muestral; N=tamaño de la población; E=error que se prevé cometer (5%); Z=coeficiente de confianza (1.96); P=prevalencia esperada del parámetro a evaluar, donde la opción más desfavorable es P=50%; Q=1-P(Q=50%); lo cual, arrojo un tamaño de la muestra de 231 Pymes. El instrumento utilizado para la recolección de datos fue un cuestionario con escala de Lickert. Para dar cumplimiento a los objetivos de la investigación se procesaron los datos recolectados en el instrumento, mediante la aplicación del Software de SPSS 19.

## RESULTADOS

A continuación se presentan los resultados obtenidos en la realización de este estudio: Se observó que en las PYMES, existe una escasa formación y experiencia de los empresarios en materia de gestión tecnológica, presentándose ausencia de conocimientos y experiencias para acometer procesos de selección y negociación de tecnologías. Existe un predominio de equipos con tecnologías de segunda, tercera o más antigua generación (especialmente en la pequeña empresa). En procesos de selección de tecnología se registra una alta dependencia de la información que suministra el propio proveedor. Reticencia hacia procesos de asesoría en gestión y desarrollo tecnológico. La PYME se interesa más por la adaptación de tecnologías que por la generación y desarrollo. Además, se puede destacar que las PYMES no realizan actividades de investigación y desarrollo; no han establecido adecuados sistemas de autoridad y de información; la estructura organizacional no es flexible y no favorece el logro de los objetivos de la empresa. Presentan un alto grado de informalidad, que domina no solamente su estructura jurídica o de propiedad, sino su organización y administración. Además, tienen una débil capacidad de identificar sus problemas críticos de mejoramiento que conlleven a su competitividad.. Los empresarios de las PYMES suelen ser incrédulos ante las instituciones del estado y sus programas y realizan pocas innovaciones.

## CONCLUSIONES

Se puede concluir, que las PYMES en la Guajira Colombiana, presenta problemas de diversa índole; existen ciertas condiciones internas de la empresa que constituyen obstáculos a su desarrollo tecnológico para alcanzar su competitividad. Al respecto debe señalarse que tales problemas son más críticos mientras más pequeñas sean las empresas; no simplemente, por razón de su tamaño sino, principalmente, por razones de estructura de capital, gestión y organización. Las pequeñas y medianas empresas no invierten en tecnologías de información y comunicación, son escasas las innovaciones que realizan en producto y proceso; lo anterior deja entrever que las PYMES, presentan una incipiente capacidad tecnológica.

## RESUMEN

*El presente artículo tiene como objetivo socializar los resultados de la investigación "La Gobernabilidad como determinante del Desarrollo Institucional en Universidades Públicas". La cual se tipificó como un estudio cualitativo etnográfico de diseño emergente. Partiendo de la concepción de la universidad como institución autonomía que puede darse sus directivas y regirse por sus propios regímenes estatutarios y el compromiso de asegurar la calidad académica, lo que suscita interés de revisión y autoevaluación de los procesos con el propósito de autodeterminarse, autoregularse e implementar planes de mejora continua, hacia el ideal de universidad que quiere la comunidad universitaria y la sociedad global.*

**PALABRAS CLAVE:** Gobernabilidad, Desarrollo Institucional, Autonomía Universitaria, Legitimidad, Eficacia, Educación Superior.

## GOVERNANCE: STRATEGIC VARIABLE FOR INSTITUTION OF PUBLIC UNIVERSITIES

### ABSTRACT

*This article aims to share the results of research "Governance as a determinant of Institutional Development in Public Universities." Which was classified as a qualitative ethnographic study of emergent design. From the conception of the university as an institution can be given autonomy to administer and govern by its own statutory schemes and commitment to ensure academic quality, raising interest review and self-evaluation processes in order to self-determination, self-regulate and implement plans for continuous improvement toward the ideal of university that wants the university community and the global society*

**JEL:** I2, I20, I23, I28

**KEYWORDS:** Governance, Institutional Development, University Autonomy, Legitimacy, Effectiveness, Higher Education

## INTRODUCCIÓN

Desde los orígenes del ser humano, así como de las diferentes formas de organización social, el hombre ha sentido la necesidad de regular las relaciones e interacciones de su tejido social, con el fin de armonizar la convivencia humana, para ello, ha debido resolver los conflictos derivados de las constantes guerras ocasionadas en gran parte, por la propiedad de los territorios, los problemas intrafamiliares inherentes al reconocimiento de la autoridad paternal o matriarcal, las diferencias de credos por la aceptación de un orden natural regido por uno o varios seres sobrenaturales denominados dioses a los cuales se les veneraba y rendía cultos y sobre todo a la existencia misma del ser humano.

Bajo este contexto, las instituciones fueron haciendo esenciales, necesarias e importantes para administrar los bienes tangibles e intangibles de la sociedad como patrimonio social, de esa forma encontramos la familia como institución básica para criar los hijos, la iglesia para oficiar los credos, más tarde el concepto de estado para regular las relaciones económicas y sociales de los seres humanos y entes de un determinado territorio, naciendo el interés por el manejo de tales instituciones, como instrumento de poder para el dominio del hombre por el hombre, así como de sus bienes, configurándose el concepto de poder que hoy se maneja, el cual toma diferentes acepciones de acuerdo a la epistemología disciplinar que lo soporta y a la función que desempeña, tales como: poder económico, político, legislativo, judicial o jurisdiccional, como se les conoce en las democracias del mundo.

En cuanto a la forma de administrar dichos poderes, aparecen diferentes modelos o paradigmas, que se reconocen a través de la historia y sus diferentes estadios tales como: el primitivismo, el feudalismo, la monarquía, el capitalismo, el socialismo, la democracia, entre otros; pero es necesario resaltar que en cada etapa y forma de gobierno, el hombre a puesto de manifiesto la necesidad de imprimir e impartir autoridad, como mecanismo de reconocimiento por el resto de los actores sociales, quienes responden positivamente en la medida en que se identifican con las acciones y actuaciones de quienes las administran, porque satisfacen sus expectativas de seguridad, justicia, necesidades básicas, autorrealización, entre otras, que de ser así, legitiman su existencia.

De esa forma, se ha concebido el ejercicio de gobernar, que subyace a las organizaciones y civilizaciones del mundo. América por ejemplo, como continente descubierto y colonizado por el viejo continente, se puede decir que crea una especie de simbiosis o sincretismo cultural de sus organizaciones sociales, así como de las formas de dirigirlas, debido a la existencia de formas de gobierno preestablecidas en las culturas de las comunidades indígenas locales, tal como lo registra la ciencias antropológica y las asumidas, por imposición, obediencia o contrato social, de las cuales fueron extrapolando conductas, comportamientos de regulación y gestión de las organizaciones sociales dando origen a los regimenes de gobierno actuales. Igualmente, los esquemas o paradigmas sociales de organización, como de administración, tanto de las relaciones humanas, como de bienes y servicios requeridos para vivir en un todo social, a fin de lograr el ideal de sociedad, con justicia y solidaridad, planteado por el hombre a través de la historia de la humanidad, registrada por Platón en su obra la República y por Aristóteles, en la Política, donde las leyes deberían estar al servicio del hombre, ha sido la preocupación de los distintos continentes, permeando a todas las organizaciones e incluyendo a una, de trascendental importancia social como es la institución encargada de Educar al hombre, (Escuela – Universidad), elemento esencial para el desarrollo de los pueblos.

En consecuencia, se puede decir que la educación como bien intangible o servicio cultural, como hoy se reconoce, incluso desde la proclamación de los organismos multilaterales en sus cumbres y protocolos, para el logro de su cometido social, requiere ser mediada por organizaciones e instituciones que la administren, por lo tanto requieren de un ser social, jurídico con estructura, funcionalidad y normatividad, que regule la acción del hombre frente al objetivo medular de formar, dando origen a la institución por excelencia hecha por el hombre recibiendo históricamente varias denominaciones como liceos, colegios y universidades, para encargarse de la responsabilidad sobre todas las cosas, de mantener el conocimiento científico, de donde toma su carácter de superior. Borrero (2001). En cuanto a la universidad como institución, la sociedad le ha asignado desde su génesis la misión de formar al hombre en su carácter de ciudadano profesional, crear ciencia y transformar la sociedad, fundamentado en el libre desarrollo de la ciencia, así como en la incesante búsqueda de la verdad científica, la responsabilidad de autorregularse, autodeterminarse y autogestionarse, con el propósito de crear espacios de reflexión e investigación, sin la injerencia de factores externos contaminantes de la producción intelectual, creándola objetiva y libre, donde se soporte su condición de escenario de la crítica ideológica, en tal sentido la gobernabilidad se convierte en elemento esencial para el logro de tal propósito. No obstante, la universidad como organización prestadora del servicio esencial de educación superior, para el cumplimiento de la misión

institucional, ha configurado históricamente diferentes fisonomías y fisiologías organizacionales, que difieren en todos los contextos, va desde una organización burocrática piramidal heredada del ejército y la iglesia en siglos pasados, hasta las estructuras colegiales, participativas, como democráticas, derivadas de las tendencias socialistas y/o liberales de algunos gobiernos u organizaciones sociales, pero preservando la esencia de ente autónomo, en el desarrollo de las funciones misionales de docencia, investigación y extensión, por lo que la gobernabilidad se convierte en una variable estratégica para el desarrollo institucional. La investigación se presenta organizada de la siguiente forma: En el primer aparte referido a la revisión de la literatura, se exponen los argumentos teóricos que sustentan la gobernabilidad como elemento del gobierno institucional, así como los soportes conceptuales del desarrollo institucional como receptor de los beneficios de su ejercicio, convirtiéndola en variable estratégica para el logro del desarrollo institucional de la educación superior impartida por las universidades. Seguidamente, se presenta los fundamentos y estrategias metodológicas que se utilizaron para llegar a los resultados, modelos y acciones institucionales propuestas. Paso seguido se describen los resultados de la investigación y finalmente las conclusiones.

## REVISION DE LA LITERATURA

Para Shah (2008), el concepto de gobernabilidad es tan viejo como la historia, solo recientemente ha entrado en el amplio discurso de la literatura académica como práctica, la globalización y la revolución de la información, están forzando un reexamen de las relaciones y papeles ciudadano-Estado y la relaciones del gobierno con entidades más allá del mismo y por lo tanto se requiere un enfoque mejorado sobre la gobernabilidad en economías en desarrollo orientado al contexto institucional global que facilite la conectividad, la cooperación, o la competición entre organizaciones, grupos, normas o redes de interés público. En ese sentido, el Banco Mundial (1996), a mediados del decenio de (1990), los temas de la gobernabilidad y buen gobierno se han convertido en preocupación central de la amplia gama de instituciones financieras internacionales, organismos políticos multilaterales y de organizaciones no gubernamentales que operan en el ámbito internacional, la preocupación por el tema se deriva, en gran medida de los problemas que enfrentan las democracias occidentales hacia mediados del decenio de los setenta. En consecuencia, el termino gobernabilidad ha venido configurándose y redefiniéndose, de acuerdo a momentos y circunstancias socio-políticas. Bobbio y Matteucci (1998), por ejemplo, definen el termino gobernabilidad como la relación de gobierno, es decir, la relación de gobernantes y gobernados, por lo tanto la relación compleja entre los dos entes es lo que permite hablar de gobernabilidad.

Mientras tanto, Navarro (2005), conceptúa, que la gobernabilidad es más amplia y se relaciona con la capacidad de los gobernantes libremente elegidos para actuar eficazmente en procura del bienestar del conjunto de gobernados, definición que determina que los elementos de la gobernabilidad serán la legitimidad y la eficacia. En igual forma, Tomassini (2006), argumenta que la gobernabilidad debe estar implícita a partir de la existencia misma de la autoridad como del estado, que esta no solo se refiere al ejercicio del gobierno, es decir al ejercicio de gobernar o ejercer el poder, sino que se relaciona a todas las demás condiciones necesarias para que este pueda desempeñarse con eficacia, legitimidad, respaldo social, el gobierno democráticamente y legalmente electo.

Por otro lado, el Programa de las Naciones Unidas para el Desarrollo PNUD (1998), en esa misma línea de pensamiento, define la gobernabilidad: Como el ejercicio de la autoridad política, económica y administrativa en la gestión de los asuntos de un país en todos los planos. En consecuencia, la reducción de la gobernabilidad será el producto de pugnas entre los poderes del Estado que no encuentran vías para soluciones de consenso; cambios en las mayorías parlamentarias, aún dentro de un mismo período legislativo. En ese sentido, Acosta (2002), considera que la gobernabilidad es una dimensión estrictamente política, donde se configuran las agendas, los acuerdos, el esquema básico de intercambios políticos entre los actores institucionales y tiene que ver con las restricciones, estilos de conducción, modelos políticos

de toma de decisiones, es decir la capacidad del sistema para atender eficazmente las demandas de los grupos internos mediante fórmulas institucionales de resolución de conflictos y producción de acuerdos. En concordancia con los elementos anteriormente expuestos, donde se observan puntos de encuentro en cuanto a la capacidad del gobernante para dar respuesta a las demandas y exigencias de los gobernados mediante el ejercicio eficiente, eficaz y efectivo del gobierno, por un lado y el reconocimiento que hacen los gobernados al cumplimiento de dichas demandas por el otro, a efecto de esta investigación se extrapola este concepto a la gobernabilidad en las universidades públicas como instituciones autónomas de educación superior, que en la mayoría de los países del mundo para el caso de escoger sus gobernantes, y gestionar su desarrollo lo hacen por medio de alguna forma de consulta popular y/o elección de gobierno democrático. En pero, antes de contextualizar el alcance conceptual de la gobernabilidad, en la universidad como institución, es imperativo precisar algunos aspectos que caracterizan a este tipo de instituciones de donde deriva su relevancia sociocultural para la humanidad.

Para Marianov y Chrismar (2006), las instituciones de educación superior, para referirse específicamente a las universidades, estas se insertan en un lugar privilegiado en el tejido sociocultural de los países, de modo que sus miembros: estudiantes, académicos y administradores gozan de un gran respeto por parte de los diferentes sectores. Ella representa un centro de desarrollo del saber y de formación superior de las personas. Igualmente, Borrero (2001), expresa la universidad como institución o corporación, la cual se entiende como algo indispensable para la vida social, de necesaria, prolongada y estable vigencia histórica, que funciona bajo sus propias leyes, por lo tanto, no depende ni puede depender de caprichos individuales. Considera su ser como cuerpo, con esencia, forma, sus elementos constitutivos y leyes, que suscita la idea de convergencia de lo mucho como lo diverso hacia la unidad ontológica.

De lo anteriormente expuesto, se puede colegir que las universidades desde un sentido sociológico corporativo, tiene una alta responsabilidad con el desarrollo socio-científico de la humanidad, lo que compromete a sus administradores al cumplimiento de su triángulo misional de formar al hombre, desarrollar la ciencia y transformar la sociedad, el cual se traduce en lo operacional funcional, a la gestión eficaz, eficiente como efectiva de la docencia, la investigación y la extensión o proyección social, para lo cual requiere del ejercicio de la gobernabilidad entendida como la congruencia entre sus acciones decisiones así como de las demandas de la comunidad universitaria. En tal sentido para Ibarra (2001), plantea la gobernabilidad institucional de las universidades, como la capacidad para conducirse como comunidades capaces de cumplir cabalmente con sus finalidades auto impuestas.

Ello supone, entre otros aspectos, capacidad de consulta, dialogo, decisión, manejo eficiente de recursos, programas, diseño de sistemas, procedimientos para conducir la acción y delimitación de proyectos institucionales legítimos que otorguen identidad, pero que además faciliten el consenso, todo ello, en el complejo contexto de las redes de intercambio colaborativo en las que participa. Asimismo, para Gómez (2004), se entiende por gobernabilidad como el grado de eficacia y legitimidad en el ejercicio de la función de gobierno, entendida la eficacia como la capacidad de dirección y coordinación del desarrollo de las partes, es decir los individuos y las unidades académicas.

Sin embargo, lograr estados de gobernabilidad en las universidades públicas no es una acción sencilla dada la complejidad de sus estructuras de relaciones internas y externas, es decir con la comunidad universitaria, con el gobierno y la sociedad civil. Según Acosta (2002), en cuanto a las relaciones internas existen fenómenos que de alguna forma apuntan a generar ambientes conflictivos, como es el gerencialismo, consistente en la aplicación de técnicas de control de calidad a los procesos, a los productos académicos, a la asignación casuística y condicionada de fondos a actividades consideradas estratégicas para el desarrollo del sistema de las instituciones; la deshomogenización docente derivada de la competencia por los incentivos y recompensas al desempeño; por último a los problemas ligados al ejercicio del poder la disolución y restructuración de coaliciones distributivas. Para Orozco (2005), cuando en una institución universitaria todos los elementos se encuentran consolidados, coherentes con su

misión institucional, con gran aceptación por parte de los actores de la organización, tal institución posee alto grado de gobernabilidad, esto es adecuación de los talentos humanos, de su infraestructura, equipos y financiación para el logro de sus tareas de dirección, estrategias de planeación como criterio de distribución presupuestal, existencia de bases de datos así como sistemas de monitoreo del cumplimiento de las tareas sustantivas de la institución.

En cuanto al desarrollo institucional en las universidades, desde la perspectiva de la función pública estatal López (2002), destaca tres campos prioritarios para lograr el desarrollo institucional de los gobiernos locales así: El administrativo que tiene que ver con el desarrollo del recurso humano, diseño de planes estratégicos y tecnologías administrativas; en el financiero: la modernización tributaria, nuevas modalidades de financiamiento y lo jurídico, por lo tanto los gobiernos deben tomar iniciativa en las reformas legales referidas a la descentralización. Para Cárdenas (2006), al hablar de desarrollo institucional se proyectan los imaginarios que tienen tanto los administrativos, como los académicos y demás agentes participantes de las instituciones.

Dichos imaginarios corresponden al aumento de recursos económicos y humanos, el mejoramiento de la infraestructura, la organización de cronogramas, planes de acción u otros elementos que se esperan contribuyan a la proyección, el cumplimiento de la misión y visión de las instituciones. Así, el desarrollo institucional es el resultado de la ejecución de planes de acción o mejoramiento que internos o externos proponen para abordar las problemáticas existentes dentro de las instituciones. Por otro lado, para Viteri (2007), la debilidad o escaso desarrollo institucional de los gobiernos locales constituye un serio obstáculo para el éxito de la descentralización; en consecuencia resulta prioritario el esfuerzo destinado a desarrollarlos institucionalmente y destaca tres campos prioritarios: administrativo, financiero y jurídico. En lo administrativo proveer el desarrollo de los recursos humanos, constituyéndose para este efecto la capacitación como objetivo permanente; abandonar la visión de corto plazo de la planificación, para dar paso a una visión de futuro de manera que los planes de gobierno siempre reflejen las demandas de sus ciudadanos; importar tecnología administrativa adaptable a las particularidades y circunstancias. En lo financiero, modernizar la administración tributaria y su codificación, incursionar en modalidades nuevas de financiamiento que no signifiquen endeudamiento, establecer sistemas catastrales a través de modelos simples que posibiliten levantar información inmobiliaria básica.

En cuanto a lo jurídico se deben tomar iniciativas en lo relativo a las reformas legales referidas a la descentralización, efectuando el seguimiento respectivo a otras sobre el tema generadas fuera de su ámbito. Desde la perspectiva de Casanova y Rodríguez (1999), el desarrollo ha de entenderse no solo en sus connotaciones económicas, sino también en sus derivaciones sociales, políticas y culturales, como proceso que supone el aumento de los índices globales de producción, el crecimiento armónico entre sectores económicos, así como transformaciones positivas y sustanciales de las estructuras sociales. Transformaciones que lleven hacia una mejor distribución del ingreso nacional y por ende, permita un mejoramiento sensible del bienestar global de la población.

## **METODOLOGIA**

Esta investigación se enmarcó dentro del paradigma postpositivista, de tipo cualitativo etnográfico, se consideró como población objetivo, la comunidad universitaria sujeto y objeto de los efectos de la acción del gobierno universitario y se seleccionó una muestra intencional de 10 informantes clave, teniendo en cuenta los criterios del investigador como elemento participante y las características que subyacen a los actores funcionales como son: el poder de decisión y mando dentro de cada organización, los conocimientos, la experiencia adquirida por los informantes que se denominaron clave en el ejercicio del gobierno universitario, aplicado en la universidad de La Guajira en Colombia y la universidad Nacional Experimental de las Fuerzas Armadas de Venezuela “UNEFA”. Se aplicó la entrevista semiestructurada

a los dos grupos de informantes clave establecidos en la muestra conformada de forma intencional por el investigador.

Interrogantes de investigación:

¿Qué entiende usted por gobernabilidad en las universidades públicas?

¿Qué método se utiliza para designar o nombrar los miembros del gobierno Universitario?

¿Considera usted que el poder del cargo garantiza la gobernabilidad en la universidad?

¿Hábleme de los conflictos u otras formas de manifestación de inconformidades de la comunidad universitaria con el gobierno?

¿Qué factores externos e internos cree que afectan la gobernabilidad en la universidad?

¿Qué es para usted desarrollo institucional en una universidad pública?

¿Cree que exista alguna correspondencia entre la gobernabilidad y el desarrollo institucional en las universidades públicas y porque?

¿Considera que el cumplimiento de las demandas sociales de la comunidad universitaria genera gobernabilidad?

## RESULTADOS

En cuanto al concepto de la gobernabilidad, si bien los dos contextos universitarios investigados coinciden que tiene que ver con la capacidad que tiene el gobierno universitario revestido de la autoridad y el poder para influir en la comunidad que facilita la toma de decisiones y el reconocimiento social de la comunidad por el desarrollo de una buena práctica de gobierno garantizando de esa forma la estabilidad, cada universidad se apoya en estrategias propias de su naturaleza institucional, el caso de la UNEFA, por ejemplo lo hace utilizando un estilo de gobierno autocrático de baja participación de los estamentos, fundamentado en la disciplina y el cumplimiento de las órdenes impartidas por un superior jerárquico administrativo académico. Por el otro lado, la Universidad de La Guajira, tiene un gobierno universitario democrático pluralista de tipo colegiado, basado en la participación de los estamentos en las instancias de gobierno, el cual se conforma mediante el ejercicio del voto popular entre la comunidad universitaria, sin embargo, se reconocen elementos internos y externos que distorsionan la acción del gobierno y por ende la gobernabilidad, tales como: las polarizaciones por grupos focales con intereses ideológicos políticos que no siempre coinciden con los pensamientos e intereses de la institución, limitando el consenso hacia el logro de los objetivos misionales.

En las dos universidades se evidencia una especie de isomorfismo coercitivo, ejercido por los entes gubernamentales públicos de donde se derivan, los aportes de los recursos para la financiación ya sea que esté derivada de la obligación legal o por la contratación de servicios para el desarrollo regional, en el cual se deja traslucir un interés de dominio de los espacios de gobierno universitario para ponerlos al servicio de las ideologías del gobierno de turno, con el cual se amenaza constantemente la autonomía universitaria y la libertad del desarrollo de las funciones misionales de docencia investigación y extensión. Este fenómeno se presenta en forma de bloqueo de giros o de no contratación de servicios por parte de los entes, menguando las finanzas y de paso sus posibilidades de desarrollo.

Igualmente, los debates argumentativos se derivan que la gobernabilidad es un determinante del desarrollo institucional, por lo tanto es necesario contar con la capacidad, el poder y la autoridad, ya sea esta de tipo legal, deontológica, epistemológica, para lograr el cumplimiento de los objetivos misionales propuestos, mediante la acción participativa y el empoderamiento de la comunidad universitaria, el cual puede lograrse mediante el consenso negociado de los intereses de los grupos potencialmente en conflictos y el uso de estrategias como la transparencia mediante la rendición de cuentas, la participación activa de la comunidad en las gestiones y acciones del gobierno que garanticen la coalición a favor de los intereses institucionales. Por el lado del Desarrollo institucional, este es concebido por los dos contextos como los cambios incrementales diferenciados en el tiempo de las condiciones materiales e inmateriales que identifican la buena o mala prestación del servicio de educación superior, por lo tanto aspectos que expresan esta cualidad se encuentran: en cuanto a lo académico, en la pertinencia que se entiende como la coherencia de los programas y servicios académicos con el desarrollo territorial, el incremento de la cobertura estudiantil, que igualmente lleva implícito un sentido social de inclusión de la población estudiantil al sistema de educación superior, la capacidad logística, tecnológica y financiera que se convierte en elementos competitivos a la hora de valorar la calidad de la educación impartida.

En cuanto al desarrollo institucional, la percepción de los informantes es clara frente a los componentes que se deben atacar toda vez que con gobernabilidad y legitimidad de las autoridades, se logra el clima organizacional favorable para que se logren los objetivos desde una perspectiva académica, los indicadores de pertinencia de la académica, que se entiende como la coherencia que debe existir entre los programas y servicios de la institución con las problemáticas de la sociedad, también el incremento de la cobertura estudiantil que en la función pública es una de las más altas responsabilidades de la institución y un elemento de competitividad nacional, factor de paz social, toda vez que se disminuye la demanda potencial de jóvenes a las actividades delincuenciales y al margen de la ley.

## CONCLUSIONES

Las directivas y toda la comunidad universitaria deben asumir una posición responsable a cerca del desarrollo institucional y considerar la variable gobernabilidad como elemento indispensable para lograrlo, de lo contrario, probablemente se verán abocadas a agudas crisis de gobernabilidad, evidenciadas en prácticas tradicionales de la lucha de clase que derivaran en parálisis académicas, deterioro de la imagen institucional, desconcentración de la alta gerencia de los objetivos misionales, que no tardaran en afectar la cobertura estudiantil, muy a pesar de las ventajas competitivas relativas a los precios de matrículas muchas veces subsidiadas por los gobiernos estatales.

Las universidades deben establecer: planes, programas y lineamientos estratégicos contextualizados que potencien el desarrollo endógeno bajo la premisa de unas buenas relaciones de gobierno comunidad universitaria, que genere empoderamiento, sentido de pertenencia institucional, propiciando un clima organizacional saludable, que invite a la creación e innovación científica y tecnológica, y dicho fortalecimiento interno sea el argumento para defender la autonomía universitaria expresada en la autodeterminación y autorregulación responsable capaz de rendir cuenta de sus actuaciones a la sociedad. Así mismo, dotar a los organismos colegiales e individuales, dentro de un estilo de gobierno democrático de la capacidad de crear consensos, negociación y resolución de conflictos, dado su carácter de público, de patrimonio de la humanidad, evitando de esa manera que se mal interprete el sentido de pertenencia, que den lugar a la creación de grupos anárquicos y polarizaciones que impidan la conciliación de los intereses ideológicos, políticos, económicos, culturales que surjan, para ello el gobierno universitario debe utilizar sus competencias para lograr consensos, desde la negociación como estrategia gerencial que permita identificar los puntos de disensos y llegar a acuerdos, considerando siempre que los intereses y objetivos de la institución están por encima de los de grupos e individuales.

Las universidades públicas deben monitorear el comportamiento de la comunidad universitaria y de los organismos que representan el gobierno universitario, establecer una especie observatorio de las actitudes de los diferentes estamentos, grupos focales, de diferentes ideales, que le permitan mantener un inventario de las conductas observadas y asumidas por ellos para diseñar un programas de prevención e intervención de los diferentes grupos y directivos que por desconocimiento del impacto que tiene la ingobernabilidad en el desarrollo institucional, asuman comportamientos alejados del deber ser institucional.

Hacer pedagogía política, en los estudiantes sobre las estructuras y modelos de gestión universitaria, donde se puedan identificar ejes temáticos, sobre aquellos modelos que han resultado a través de la historia mejores para el cumplimiento y logro de los objetivos misionales, los tratados sobre el significado y los alcances del poder y el manejo de los conflictos y las formas de resolución, ayudan a que la comunidad tenga claro la psicología organizacional de las universidades para que de esa manera puedan aportar al desarrollo. Ahora, visto el desarrollo de la universidad desde una perspectiva económica con responsabilidad social, la eficiencia, eficacia y efectividad del gobierno universitario, estará en función del desarrollo de los procesos de apoyo, misionales de docencia, investigación y extensión, así las cosas, la gobernabilidad genera los espacios para que la universidad como institución fortalezca su estabilidad financiera, ya sea por la venta de sus servicios representados en programas académicos en todas las modalidades y disciplinas del saber y por los aportes estatales como responsabilidad constitucional.

En esa misma perspectiva, apuntarle a una capacidad administrativa gerencial, de liderazgo, que la comunidad legitime esa autoridad por los resultados, por las actitudes de los administradores, por lo tanto implementar sistemas de gestión centrados en la gente, en los procesos y en la atención del cliente, aplanar las estructuras organizacionales dándole prioridad al trabajo en equipo, donde todos participen de las acciones y gestiones de la universidad.

Potenciar los gobiernos democráticos pluralistas, de tipo mixto en su estructura es decir unipersonales o profesionales y colegiados con la participación de la comunidad universitaria y los sectores sociales y económicos sin que estos últimos limiten o coarten el poder de los primeros, antes por el contrario apoyen las decisiones, planes, programas y proyectos propuestos para el desarrollo de la institución, manteniendo el principio de autonomía que los protocolos mundiales y las constituciones nacionales han reconocido en ellas como garantía de la pureza de la ciencia y el desarrollo tecnológico global.

Independientemente de la naturaleza de universidad pública, es decir, sea de administración militar, civil, religiosa, por su carácter de bien público, su condición de autónoma que la tradición histórica le ha otorgado a este tipo de organización, por aquello de preservar libre de contaminación la producción científica, estas deben combinar el modelo de gobierno, aprovechando las ventajas del modelo profesional (individual), y el grupal (colegiado), tanto en los órganos de línea directa de autoridad, como en aquellos de carácter staff, de coordinación o asesoría, dando apertura a la participación de la comunidad universitaria en los dos contextos.

En cuanto al modelo colegiado, este debe cobijar a organismos por naturaleza de carácter plural así: Consejo Superior, de Dirección, Directivo, o cualquier otra denominación que reciba, Consejo Académico; Consejos de Facultad o de programas académicos; comités tales como: Evaluación y Perfeccionamiento Docente, Asignación de Puntajes y Asignación Salarial, Admisión de estudiantes, registro y control de resultados académicos, Central de investigación, por facultad o programas académicos, Autoevaluación, Acreditación y Aseguramiento de la Calidad, Bienestar universitario, entre otros, dependiendo de la cultura, tamaño y necesidades de la organización.

# **EFFECTOS DEL SISTEMA TRIBUTARIO EN LA PRODUCTIVIDAD Y COMPETITIVIDAD DE LAS MICROS, PEQUEÑAS Y MEDIANAS EMPRESAS DEL ESTADO DE BAJA CALIFORNIA**

María del Mar Obregón Angulo, Universidad Autónoma de Baja California

Aurelio Gutiérrez García, Universidad Autónoma de Baja California

José de Jesús Moreno Neri, Universidad Autónoma de Baja California

## **RESUMEN**

*Con la finalidad de conocer el efecto fiscal, administrativo, de competitividad y de productividad, que tienen las micro, pequeñas y medianas empresas por la aplicación de las diferentes contribuciones, se llevó a cabo una investigación dentro de los principales municipios del estado de Baja California.*

*El estudio se enfocó sobre el comportamiento de las empresas por el período comprendido del 2008 a 2010, el método utilizado fue descriptivo; para tal efecto se aplicaron 270 cuestionarios en el estado y el análisis de los datos obtenidos se realizó mediante el paquete estadístico SPSS. Como resultado de la investigación detectamos alta inconformidad de los contribuyentes MIPYMES con el actual Sistema Tributario del país, tanto por la gran cantidad de contribuciones y obligaciones fiscales por cumplir, así como por la complejidad en su determinación y la alta carga impositiva de las mismas.*

**PALABRAS CLAVE:** Sistema tributario, mipymes, productividad, competitividad y contribuyentes.

## **EFFECTS OF TAXATION ON PRODUCTIVITY AND COMPETITIVENESS OF MICRO, SMALL AND MEDIUM ENTERPRISES IN THE STATE OF BAJA CALIFORNIA**

### **ABSTRACT**

*In order to meet the tax, administrative, competitiveness and productivity, which are micro, small and medium enterprises in the application of the different contributions, conducted an investigation into the major cities in the State of Baja California. The study focused on the behavior of firms for the period 2008 to 2010, the method used was descriptive for this purpose 270 questionnaires were applied in the state and the analysis of the data was performed using the SPSS statistical package. As a result of the investigation we detected high dissatisfaction of taxpayers micro, small and medium enterprises with the current tax system of the country, both for the many contributions and to meet tax obligations, as well as the complexity of their determination and high taxes of the same.*

**JEL:** M2,M4

**KEYWORDS:** Taxation, Micro,small and medium organisations, productivity, competitiveness and tax payers

### **INTRODUCCION**

Antecedentes

Se han escuchado constantemente comentarios sobre el Sistema Tributario Mexicano, tales como: que son demasiadas contribuciones, que existe mucha complejidad en su aplicación e interpretación, que es muy bajo el porcentaje de los pagadores de impuestos, que son demasiados los evasores registrados y los informales sin registro, que es urgente una reforma fiscal integral, y muchos otros al respecto. Por otra parte, es conocido que el Sistema Tributario del país, basa principalmente su recaudación en la obtención de impuestos por los recursos petroleros, situación que debido al comportamiento internacional de los precios internacionales del crudo, hacen que dicha recaudación haya sido muy variable para las finanzas del país. Las empresas mexicanas están siendo fuertemente afectadas por la crisis mundial, disminuyendo su operatividad por la disminución en la demanda de sus bienes y servicios, asimismo, esto ha ocasionado que la Secretaría de Hacienda y Crédito Público esté sufriendo de una baja recaudatoria significativa.

Particularmente nuestro Estado de Baja California, tiene una fuerte codependencia comercial e industrial con el Estado de California de los Estados Unidos de América, por el hecho principalmente de ser vecinos y socios económicos naturales. Por ello, hemos sufrido los habitantes de este Estado los vaivenes económicos que ha padecido dicho país en los últimos años como producto de la fuerte crisis económica mundial; sin embargo, gracias a la actitud emprendedora de la población económicamente activa del estado, la recaudación fiscal para la federación derivada del estado, ha sido desde hace varios años de las altas per cápita del país. El objetivo de esta investigación era tener información confiable directamente de las organizaciones productivas de nuestro estado, nos avocamos a realizar esta investigación sobre el efecto del Sistema Tributario en las micros, pequeñas y medianas empresas con relación a su productividad y competitividad, la cual dio origen a la generación del presente trabajo.

### Justificación

A nivel internacional las micros, pequeñas y medianas empresas (MIPYMES), tienen una amplia participación en la economía mundial porque representan el 95% del total de las empresas de conformidad con datos proporcionados por la Organización para la Cooperación y Desarrollo Económico (OCDE). Las MIPYMES son importantes asimismo para la economía nacional, en virtud de la generación de empleo y producción, ya que según datos del Instituto Nacional de Estadística y Geografía, en el país existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES, mismas que generan el 52% del Producto Interno Bruto (PIB) y el 72% del empleo del país. Particularmente en Baja California, según datos proporcionados por el Centro de Atención Empresarial (CAE), el 99.5% de las empresas son MIPYMES y estas emplean alrededor del 68% del personal ocupado del estado. Por otra parte, según estudio efectuado por el Banco Interamericano de Desarrollo, manifestó como resultado que los sistemas tributarios complejos en América Latina y el Caribe, ocasionan alta evasión fiscal, afectando por ende, el crecimiento económico en estos países.

Asimismo el estudio enfatiza que las cargas impositivas altas reducen la inversión en tecnología debido a que con contribuciones altas se minimizan las utilidades que generan las inversiones; por lo tanto, se concluye en el estudio que la productividad y competitividad se reduce en las empresas afectando por ende el crecimiento económico a largo plazo. En el mismo tenor, según una encuesta de la consultora McKinsey & Company revela que en nuestro país, casi el 70% de las microempresas no están registradas y por ende no pagan impuestos. De igual manera se indica que de las empresas pequeñas y medianas, un 63% están registradas pero declaran sin pago. Por lo anterior, y debido a la importancia de las MIPYMES en la economía de Baja California, consideramos los maestros que integramos este grupo de investigación, que a través de nuestro estudio, sea posible evaluar el impacto del Sistema Tributario vigente en la productividad y competitividad del período 2008 al 2010 a las empresas referidas, con el objetivo de poder llegar a una serie de recomendaciones, que les permitan minimizar el impacto negativo que les causa el sistema tributario vigente.

### Planteamiento del problema

La Constitución Política de los Estados Unidos Mexicanos en su artículo 31 fracción IV establece que es obligación de los mexicanos “contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes”. Precisamente de lo anterior, se deriva la obligación de cumplir con lo que indica el Sistema Tributario Mexicano, formalizado a través de las diferentes leyes, reglamentos, códigos, decretos y resoluciones que dicten las autoridades fiscales de los tres niveles de gobierno.

Las obligaciones fiscales que deben cumplir las MIPYMES son, en primer lugar registrarse ante diferentes órganos de gobierno, como son: Servicio de Administración Tributaria, Instituto Mexicano del Seguro Social, Instituto del Fondo Nacional de la Vivienda para los Trabajadores, Recaudación de Rentas del Gobierno del Estado, Tesorería Municipal y en algunos casos ante la Secretaría de Economía, Sistema Empresarial Mexicano y ante alguna de las cámaras empresariales o de servicios; asimismo deben cumplir con el pago de las diferentes contribuciones, tales como: Impuesto Sobre la Renta, Impuesto Empresarial a Tasa Única, Impuesto al Valor Agregado, Impuesto Especial sobre Producción y Servicios, Impuesto a los Depósitos en Efectivo, Impuestos y Derechos al Comercio

Exterior, Impuesto Sobre Remuneraciones pagadas al Gobierno del Estado, cuotas obrero-patronales al IMSS, aportaciones patronales y entero de amortizaciones de créditos al INFONAVIT; de igual forma, deben atender cartas invitación, requerimientos, auditorías e inspecciones que les lleven a cabo las diferentes dependencias de gobierno, aparte de llevar la contabilidad, nóminas, facturación y control por las diferentes operaciones de su negociación. Por todo lo anterior, es muy complejo el cumplimiento de las obligaciones fiscales de las empresas MIPYMES y por ende también muy oneroso el costo administrativo que posibilita dar cumplimiento a las diferentes obligaciones, ello definitivamente merma la productividad y competitividad de dichas organizaciones; deben por ende las mismas, tener personal suficiente y competente al respecto, e imprescindiblemente contar con asesoría externa para asegurar el correcto cumplimiento de las obligaciones fiscales, administrativas, contables y financieras que requieren las organizaciones en nuestro país. En la actualidad, las empresas MIPYMES del país, se caracterizan por tener baja productividad y competitividad como producto principalmente por el alto costo que le origina cumplir con el Sistema Tributario actual, mismo que se caracteriza por ser complejo y desigual, fomentando de igual forma la evasión fiscal, afectando obviamente la competitividad de las que si pagan.

Según investigaciones efectuadas por el Banco Interamericano de Desarrollo, el tiempo que dedica un contribuyente en México para cumplir sus obligaciones fiscales es de 517 horas anuales, el cuál es muy alto, comparado con las 320 horas que los países latinoamericanos invierten en promedio. Por lo que surge la siguiente pregunta: ¿Cómo ha afectado el Sistema Tributario a las MIPYMES de Baja California en su entorno financiero y de productividad?

### Revisión Literaria

*Sistema tributario experiencia en nuestro país:* Se entiende como sistema tributario al conjunto adherente, sistemático e interrelacionado de impuestos que rigen en un país en un determinado momento. La tendencia universal es que haya varios impuestos y no sólo uno. El sistema tributario en nuestro país inicia desde la época de los aztecas, quienes cobraban tributos de tipo: religioso, de guerra y de vivienda. Nuestro sistema tributario ha tenido en los últimos 40 años, una cantidad significativa de variantes, originadas principalmente por reformas fiscales que a finales de cada año son publicadas en el Diario Oficial de la Federación. Esto ocasiona: modificaciones a ciertas leyes impositivas, creación de nuevas leyes y derogación de otras. Aunado a lo anterior, se han publicado igualmente una cantidad importante de decretos, acuerdos, reglamentos, convenios, y otras disposiciones inherentes. Son dos objetivos que se pretenden con las reformas: uno, compensar la fuerte caída de los ingresos gubernamentales que llevo a

bajar hasta 10 puntos porcentuales del PIB y dos, reducir las distorsiones e ineficiencias, tanto de las ya existentes como de las ocasionadas por la crisis económica.

Sin embargo, los constantes cambios en lugar de lograr aumentar la recaudación, han creado fuerte confusión y evasión fiscal; esto, independientemente de que el número de contribuyentes se ha incrementado significativamente, ya que según datos del Servicio de Administración Tributaria (SAT) al 2010 se tenían, 33'468,711 registros activos al Registro Federal de Contribuyentes, de los cuales 1'315,529 son personas morales y 32'153,182 son personas físicas (incluidos 20'580,970 asalariados). De igual forma, tan sólo en el año 2010 se incremento el padrón en 4.8 millones de contribuyentes.

Tabla 1: Sistema Tributario Para Empresarios En Baja California ¿Excesivo?

Impuestos Estatales	Impuestos Municipales	Impuestos federales
Impuesto sobre actividades mercantiles e industriales. Impuesto sobre producción agropecuaria. Impuesto sobre venta de productos agropecuarios. Impuesto sobre despepate de algodón. Impuesto sobre adquisición de algodón. Impuesto sobre servicios de hospedaje. Impuesto sobre venta de primera mano de gasolina y demás derivados del petróleo. Impuesto sobre diversiones y espectáculos públicos. Impuesto sobre compraventa y operaciones similares. Impuesto sobre producción, ampliación, embasamiento o transformación de alcohol y bebidas alcohólicas. Impuesto sobre compraventa de alcohol y bebidas alcohólicas. Impuesto sobre arrendamiento y subarrendamiento de bienes inmuebles. Impuesto sobre remuneraciones al trabajo personal. Impuesto sobre profesiones y ejercicios lucrativos. Impuesto sobre productos de capitales. Impuesto para la educación media y superior. Impuesto sobre loterías, rifas, sorteos, juegos permitidos y concursos. Impuesto estatal sobre la tenencia o uso de vehículos. Impuesto estatal a la venta final de bebidas con contenido alcohólico	Impuesto predial. Impuesto sobre Adquisición de Inmuebles. Impuesto para el Fomento Deportivo y Educacional. Impuesto para el Fomento Turístico, Desarrollo Integral de la Familia y Promoción de la Cultura. Impuesto sobre Asistencia a Diversiones, Juegos Permitidos y Espectáculos Públicos. Impuesto para el Mantenimiento y Conservación de las Vías Públicas. Impuesto por Alumbrado Público. Impuesto de Plusvalía. Impuesto para el Apoyo a Organismos no Gubernamentales sin Fines de Lucro Vinculados a Fortalecer la Seguridad Pública y Social.	Impuesto Sobre la Renta (ISR). Impuesto Empresarial a Tasa Única (IETU). Impuesto al Valor Agregado (IVA). Impuesto Especial sobre Producción y Servicios (IEPS). Impuesto sobre la Tenencia o Uso de Vehículos. Impuesto a los Rendimientos Petroleros (IRP). Impuesto a los Depósitos en Efectivo (IDE).

De todo lo anterior se puede percibir la gran cantidad de impuestos que se incluyen en nuestro Sistema Tributario, que por ende, ocasionan en las MIPYMES del estado una carga fiscal muy compleja y alta, dando por consecuencia afectación a la productividad de todas las organizaciones que desarrollan las diversas actividades económicas.

*Concepto de productividad:* Según el diccionario de la Real Academia Española, la productividad se trata de la capacidad o grado de producción por unidad de trabajo, superficie de tierra cultivada o equipo industrial. En la economía, la productividad es la relación entre lo producido y los medios empleados (mano de obra, materiales, energía, etc.). Por eso, se asocia la productividad a la eficiencia y al tiempo: cuanto menor sea el tiempo que lleve obtener el resultado deseado, más productivo es el sistema. A través de la productividad, se evalúa la capacidad de un sistema para elaborar los productos y el grado en que se aprovechan los recursos. La mayor productividad supone mayor rentabilidad de una empresa, por ello la gestión de calidad busca que una compañía logre incrementar su productividad.

*Concepto de competitividad:* La competitividad es la capacidad que tiene una empresa o país de obtener rentabilidad en el mercado en relación a sus competidores. La competitividad depende de la relación entre el valor y la cantidad del producto ofrecido y los insumos necesarios para obtenerlos (productividad) y la productividad de los otros oferentes del mercado. Por ejemplo, una empresa será competitiva si es capaz

de obtener una rentabilidad alta debido a la utilización de técnicas de producción más eficientes que las de sus competidores, que le permitan obtener más cantidad y/o calidad de productos o servicios, o tener costos de producción menores por unidad de producto.

## METODOLOGIA

Esta investigación se efectuó a través de un estudio descriptivo aplicado a 270 empresas establecidas en el Estado de Baja California por medio de la aplicación de un cuestionario en las tres principales ciudades del estado, es decir: Mexicali, Tijuana y Ensenada, que durante el período 2008 al 2010, realizaron actividades económicas diversas. La población de estudio se conformó por micro, pequeñas y medianas empresas, ya que este tipo de empresas representa un sector importantísimo en la economía del estado, y por ende en la productividad y competitividad de Baja California. El cuestionario aplicado consta de 25 preguntas, donde la mayoría de las preguntas son de opción múltiple, distribuidas en tres secciones que son: información general, productos y mercados, así como aspectos financieros y fiscales. Una vez recopilados los cuestionarios se procesaron en el paquete estadístico SPSS realizando de esa manera el análisis descriptivo de la información, tales como, las medidas de tendencia central que posibilitó detectar los efectos del Sistema Tributario sobre las empresas encuestadas, midiendo asimismo su afectación en productividad y competitividad de ellas.

## RESULTADOS

Para ubicar las empresas en las que fueron aplicadas las encuestas señalaremos que se ubicaron en las ciudades de Mexicali el 33%, Tijuana 24% y Ensenada 43% cubriendo así las ciudades más importantes del estado. El tipo de contribuyente al que fue dirigida la encuesta fue en su mayoría personas físicas con actividades empresariales.

Figura 1: Tipo de Contribuyente

Figura 2: Tipo de Contribuyente Persona Física

De la muestra analizada se observa que la mayor parte de las empresas encuestadas son del sector comercio con un promedio de 10 años de haberse constituido ya que el 51% de la muestra se encuentra en este rango por lo cual les ha tocado padecer los cambios en el sistema impositivo mexicano y tienen parámetros para establecer una comparación entre como les afectaba antes y ahora.

También podemos observar que el 62% de las encuestadas están en un mismo rango de ingresos y el 58% tienen un promedio de 10 trabajadores así que el impacto que recibieron por los cambios efectuados en el sistema impositivo se puede medir de la misma manera, dándonos esto una muestra confiable donde observamos los siguientes resultados:

Figura 3: ¿la Restricción Bancaria de Depositar Dólares Afecto la Operación de su Empresa?

La restricción de los depósitos en dólares a sido un factor determinante en la operación de sus empresas ya que por ser zona fronteriza las operaciones en dólares son muy comunes, al verse restringidos están perdiendo competitividad, ya que esto les genera disminución en sus ingresos al no poder aceptar dólares o inseguridad en sus empresas ya que deben de conservar el dinero en efectivo.

Tabla 2: Efectos de la Restricción de Depósitos en Dólares

Inseguridad al tener que conservar efectivo		38%
Costos administrativos por tener que trasladar el efectivo al extranjero		26%
Disminución en los ingresos por no aceptar dólares		32%
Otros		3%

Los cambio en las tecnologías de información en el sistema tributario como la facturación electrónica, declaraciones por internet, el pago referenciado que han sido implementados en los últimos tres años han ocasionado :

Tabla 3: cambios por en las tecnologías de la información

Más personal		8%
Carga administrativa adicional		38%
Inversión equipo de cómputo		19%
Capacitación a personal		17%
Asesoría externa		14%
Otras		4%

Dentro de los últimos tres años las empresas consideran que su carga fiscal a sufrido un aumento considerable ya que el 48% opino que este aumento fue mucho.

Figura 4: Afectación en Sus Costos de la Carga Fiscal de los Últimos Tres Años

El 42% de las empresas considero que la mayor afectación será en su competitividad y este el principal motivo que le ha restado competitividad.

Figura 5 : Factores que impactan a mediano plazo competitividad a su empresa?

Figura 6 : ¿El sistema fiscal vigente le resta competitividad a su empresa?

## CONCLUSIONES

De los resultados anteriores podemos concluir:

1.- Los cambios fiscales implementados dentro de los tres últimos años a las empresas han afectado directamente su competitividad ya que se les ha restringido el uso de las cuentas en dólares, obligándolas a buscar nuevas alternativas, ya sea manejar el dinero en efectivo o no realizar alguna venta por rebasar los límites establecidos para recibir dólares en una operación.

2.- Los cambios e implementación de nuevas tecnologías, les han ocasionado una carga administrativa adicional, acompañado de una inversión extra en equipo de cómputo adecuado y capacitación para el personal o la contratación de programas especializados para poder cumplir con los requerimientos de la autoridad.

3.- Las empresas al pertenecer al sector de la mediana y pequeña empresa no tienen acceso, ni presupuesto para establecer e invertir en el diseño de alguna estrategia fiscal para disminuir el efecto que las reformas en materia tributaria hemos tenido en los últimos tres años.

4.- El 57 % de las empresas coinciden en que el sistema fiscal vigente le ha restado competitividad a su empresa principalmente por las siguientes causas:

- Por la gran diversidad de leyes fiscales a cumplir
- Por la complejidad de la normatividad fiscal
- Por los constantes cambios en la normatividad

5.- El efecto administrativo en estas empresas impacta directamente ya que no cuentan con personal preparado o capacitado y tienen que contratar despachos externos para poder dar cumplimiento a las diversas obligaciones fiscales a que están sujetos, encontrando entre las principales cargas:

- Declaraciones informativas
- Facturación electrónica

6.- A mediano plazo las empresas prevén que todos estos cambios en el sistema tributario afectarán principalmente su competitividad.

7.- Recomendamos a las MIPYMES que independientemente de la situación económica actual deben de tener la asesoría adecuada de profesionistas especializados en finanzas y fiscal para implementar el

control interno que requiere la organización que posibilite optimizar sus recursos y logren ser más competitivas y productivas.

# CRITERIOS DE RESPONSABILIDAD SOCIAL: UNA CRÍTICA AL COMPORTAMIENTO DE LAS UNIVERSIDADES PÚBLICAS

Olivia Isabel Rangel Luquez, Universidad de La Guajira  
Marelis Mercedes Alvarado Mejía, Universidad de La Guajira  
Wilmar Sierra Toncel, Universidad de La Guajira  
Ángela Nair Ortiz Rojas, Universidad de La Guajira

## RESUMEN

*El presente artículo es producto de la investigación “Ética como enfoque de la responsabilidad Social en Universidades públicas”, cuyo propósito fue analizar de qué manera la ética sirve de enfoque a la Responsabilidad Social en la actuación de las organizaciones universitarias ante su stakeholders. La fundamentación teórica para contrastar y triangular los resultados estuvo relacionada con autores como: Cortina (2005), De la Cuesta y Valor (2004), y Soto y Cárdenas (2007), entre otros. Fue una investigación con un enfoque cualitativo, bajo el paradigma post positivista, se utilizó el método etnográfico y para la recolección de la información se aplicó una entrevista semi estructurada a seis (6) informantes clave. La población estuvo constituida por dos universidades: Universidad Nacional Experimental de las Fuerzas Armadas de Venezuela y la Universidad de La Guajira en Colombia. Los resultados evidenciaron que aunque las universidades objeto de estudio utilizan la ética como enfoque para la aplicación de su responsabilidad social, existe vacíos procedimentales y legales para satisfacer las demandas sociales de los stakeholders, debido en gran medida al ejercicio poco transparente de la política electoral.*

**PALABRAS CLAVE:** Responsabilidad Social Empresarial, Criterio Político, Universidades Públicas, Transparencia Informativa, Sistema De Gestión

## SOCIAL RESPONSIBILITY CRITERIA: A CRITICAL BEHAVIOR OF PUBLIC UNIVERSITIES

### ABSTRACT

*This article is the result of the investigation, "Ethics and Social responsibility approach in public universities," whose purpose was to analyze how the approach serves to ethical social responsibility in the conduct of university organizations to their stakeholders. The theoretical basis for comparing and triangulating results was associated with authors such as: Cortina (2005), De la Cuesta and Valor (2004) and Soto and Cardenas (2007), among others. It was a qualitative research approach, under the post positivist paradigm, we used the ethnographic method for data collection applied a semi-structured interview to six (6) key informants. The population consisted of two universities: National Experimental University of the Armed Forces of Venezuela and the University of La Guajira in Colombia. The results showed that although universities studied using ethics as an approach to the implementation of its social responsibility, legal and procedural gaps exist to meet the social demands of the stakeholders, due largely to non-transparent exercise of electoral politics.*

## INTRODUCCIÓN

La responsabilidad social empresarial, tiene sus orígenes en el quehacer empresarial de orden privado, sin embargo, su amplia diseminación en el ámbito de las organizaciones, se ha considerado aplicable al funcionamiento de las universidades, dado su condición de empresa del conocimiento, con una estrecha relación con la sociedad y la necesidad manifiesta de consolidar su misión institucional. La complejidad conceptual del término, debido a su diversidad dimensional semántica, aplicado al ámbito de las organizaciones, dificulta focalizar el significado para un contexto determinado, de allí la importancia de estudiar un enfoque específico para contextualizarlo en este tipo de organizaciones.

Desde esta perspectiva, las iniciativas de Responsabilidad Social Empresarial en las universidades se orientan a enfoques gerenciales, normativos y transformadores, sin dejar de destacar las acciones de voluntariado y cooperación, que apuntan a la transformación en su actuación, en donde la necesidad de crear legitimidad y de responder a las expectativas de la opinión pública, son uno de los factores motivacionales que ha impulsado el desarrollo de la misma. Nace de allí la necesidad de analizar uno de los aspectos que más impactan de alguna forma la actuación de las universidades ante los diferentes stakeholders, como son los criterios con los cuales estas instituciones asumen su responsabilidad social.

Las universidades son una de las instituciones con mayor compromiso social y vigencia histórica, lo cual hace que su stakeholder sea muy diverso, si se analiza la función transformadora de su entorno, relacionada con la formación del hombre para la profesión y el trabajo, así como la producción y extensión del conocimiento pertinente, compromete a la universidad a tener políticas de responsabilidad social, vista y gestionadas no solo desde la realización de sus funciones básicas, sino desde la posibilidad de ir más allá del altruismo y la filantropía que subyacen a algunas de sus acciones en el desarrollo de del quehacer institucional. Este artículo muestra en su primera parte, la revisión literaria, en la cual se fundamentó la investigación, sobre todo la meta cognición que la ciencia social y empresarial ha catalogado para las acciones de la responsabilidad social empresarial y sus procesos de regulación. En cuanto al contexto universitario se relacionan los conceptos que soportan su institucionalidad, funcionalidad y estructuralismo organizacional enmarcados en su condición de ente autónomo capaz de autodeterminar su destino. Seguidamente se presenta el enfoque metodológico y los procedimientos que subyacen a la investigación, se describen los resultados de la investigación y finalmente se exponen las diferentes conclusiones a que se llegó luego de la misma.

## REVISIÓN DE LA LITERATURA

Para soportar esta investigación, se seleccionaron varias teorías y enfoques metodológicos, cada uno de ellos justificado desde diferentes concepciones de autores que apuntan a comprender este fenómeno desde diversas perspectivas, aterrizándolas en el contexto universitario. Al respecto Soto y Cárdenas (2007), (Fernández (2005) y De la Cuesta, (2004), refieren que la adopción de criterios de responsabilidad social en la gestión empresarial significa: formalizar políticas y sistemas de gestión en los ámbitos económicos, social y ambiental, así como la transparencia informativa y finalmente el escrutinio externo de los mismos. Todo ello integrado con la estrategia global de la empresa. Se trata de un concepto normativo, que tiene que ver con la conducta humana y las políticas que estas adopten.

De esta manera, las empresas deben cumplir con la legislación laboral y desarrollar iniciativas sociales voluntarias a favor del mejoramiento del entorno y la transparencia como un valor requerido en las políticas y sistemas de gestión. Por otro lado, el criterio político de acuerdo al Libro Verde de la Unión Europea (2001) y Cortina (2005), consiste en determinar la manera en que la responsabilidad social puede contribuir a desarrollar una economía basada en el conocimiento, competitiva, dinámica y socialmente cohesionada, encaminada a las prácticas idóneas en relación con la formación continua, la organización del trabajo, la igualdad de oportunidades, la integración social y el desarrollo sostenible. Estableciéndose

la necesidad de información y transparencia en su proceso de promoción de la responsabilidad.

Desde otra perspectiva, el enfoque transformacional le da a la RSE, la tarea de liderar los aportes y reflexiones que permitan alcanzar una mejor sociedad, más equitativa y justa, en donde las organizaciones en este caso la universidad, sea capaz de mostrar cuáles son las mejores formas de construir una mejor sociedad; al respecto, la UNESCO (2009), afirma que la RSE radica en trabajar para que la sociedad pueda comprender, los diferentes problemas polifacéticos que la afectan, y que tienen repercusiones en dimensiones socioeconómicas, científicas y culturales, señalando además que las instituciones de Educación superior IES, deben asumir un liderazgo social en la creación de conocimiento. En virtud de lo anterior, las instituciones de educación superior, tienen una doble obligación, por un lado cumplir con sus procesos de docencia, investigación, extensión y gestión y por el otro, responder por su actuación e impacto ante los diferentes grupos de interés, si quieren certificar su actuación ante la sociedad y crear legitimidad, para ello la responsabilidad social empresarial, se convierte en su principal aliado estratégico.

## **METODOLOGÍA**

El enfoque epistemológico utilizado para el abordaje de la investigación, fue el emergente propio de la investigación cualitativa y se enmarca dentro del paradigma post-positivista. El método de aplicado es el etnográfico, orientado hacia el estudio descriptivo, por ello la recolección de información estará relacionada con el estado real de la actuación de las instituciones en estudio frente a la responsabilidad social, tal como se presentaron en el momento de su recolección sin realizar inferencias ni verificar hipótesis. Con el fin de lograr este propósito y desarrollar los objetivos se aplicó una entrevista semi-estructurada con respuestas abiertas para la recolección de la información.

Seguidamente, se agruparon los contenidos categorizados, se establecieron las relaciones entre las categorías de análisis y sujetos entrevistados. Una vez realizada la agrupación se elaboraron las estructuras interpretativas según lo manifestado por los informantes clave. Por otro lado, para efectos de la presente investigación la muestra se reduce en su amplitud numérica y se explicitan los criterios conceptuales para su escogencia, según su relevancia para los objetivos de la investigación, en virtud de esto, para efectos de esta investigación, la población estuvo constituida por dos universidades públicas, una de Colombia y otra de Venezuela. En donde dadas las características de la población, se tomaron como unidades de estudio, con criterio muestral intencional a los decanos y coordinadores de programas de la Universidad Nacional Experimental de las Fuerzas Armadas y la Universidad de La Guajira, seleccionando seis (06), informantes clave que dan cuenta de la actitud de las instituciones hacia la práctica de la responsabilidad social y permitieron validar las categorías y sus relaciones que conformaron la unidad hermenéutica estudiada.

## **RESULTADOS**

Del desarrollo de la investigación se obtuvo los siguientes resultados: La actitud de las instituciones universitarias hacia la práctica de la responsabilidad social, teniendo en cuenta los criterios económicos, sociales y ambientales, puede asumirse desde las siguientes perspectivas: La trasmisión del conocimiento y el comportamiento responsable que asuman ante sus diferentes grupos de interés. En cuanto al conocimiento, porque es el deber ser de estas instituciones y a través de él, pueden contribuir a formar mejores personas, con una mejor calidad de vida, que puedan lograr un mayor desarrollo personal y profesional, además puede servir para promover la investigación en la institución. En lo que respecta al comportamiento institucional frente a los principios y valores que rigen sus prácticas socialmente responsable, porque estos son los fundamentos que deben orientar su actuación, si quiere lograr legitimidad, imagen, reputación y posicionamiento ante los diferentes grupos de interés.

Con respecto, a los criterios que se tienen en cuenta a la hora de asumir su compromiso frente a la responsabilidad social, los informantes, se mostraron recelosos, sin embargo aseguran que el criterio político es el que prevalece en la institución, del mismo modo, manifiesta que los programas de

responsabilidad social están encaminados, a través de proyectos que benefician a la comunidad (UNEFA va a la escuela, a las penitenciarías), programas culturales como la feria empresarial, becas a los estudiantes, descuentos en las matrículas a estudiantes, apoyos económicos a los docentes para alta formación, entre otras.

De lo expuesto anteriormente, la actitud de los informantes hacia la institución no es totalmente desfavorable, sin embargo es evidente que existe factores que hay que mejorar a través de una mejor comunicación, transparencia en los procesos educativos, rendición de cuentas y la adopción de mejores prácticas de responsabilidad social. En este orden de ideas, la responsabilidad social es un proceso necesario en la práctica educativa, por lo tanto debe estar establecido como elemento indispensable en el quehacer institucional de estas universidades. Este camino para transformar, la concepción de conocimientos y comportamientos que actualmente identifican a la institución, aun cuando los informantes manifiestan que la responsabilidad social, es un recurso valioso que estas instituciones deben adoptar para mejorar su actuación.

Lo anterior coincide con Soto y Cárdenas (2007), cuando refiere que la responsabilidad social, es un estilo de ser de la organización y de cada una de las personas que la integran, por ello hay que gestionarla, siendo coherente además con lo expresado por la Unión Europea en su libro verde, al referirse que este es un concepto mediante el cual las empresas deciden voluntariamente contribuir al logro de una sociedad mejor y un medio ambiente más sano; de allí entonces, que la responsabilidad social debe ser una estrategia de la organización en respuesta a las diversas presiones políticas, sociales, económicas y ambientales que sus diversos stakeholders esperan de ella. Se puede afirmar a partir de allí, que la transformación de la actitud al rechazo que se evidencia en los informantes, debe abordarse con la gestión del conocimiento para gestionar la responsabilidad social con un enfoque sustentable.

Por otro lado, se estableció que la actitud de estas instituciones hacia la responsabilidad social, está condicionada por criterios políticos, que obstaculizan su desarrollo, por lo anterior esta debe sufrir una transformación a partir del conocimiento y el comportamiento de la institución, teniendo en cuenta los siguientes actores: Personal docente de la institución, brindándoles unas condiciones más dignas, especialmente en lo referente a la salud, reflexionar sobre la efectividad de sus prácticas, con el fin de reconocer sus debilidades y potenciar sus fortalezas. Estudiantes, generando espacios para la investigación, para promover su participación en todos los procesos relacionados con el conocimiento de la realidad, además identificando sus necesidades y aumentando sus beneficios permitiendo elevar su calidad de vida. Directivos de la institución, centrar su atención en las necesidades de docentes, estudiantes y demás empleados, facilitando espacios de discusión y reflexión, promoviendo la investigación y la implementación de programas reales de responsabilidad social, aportando recursos y tiempo para que se desarrolle al interior de la institución una verdadera identidad de todos los grupos de interés. Comunidad en general, promoviendo proyectos productivos, para que haya una verdadera relación universidad-sector productivo, que contribuyan al desarrollo de la región y del país.

## CONCLUSIONES

En cuanto al los criterios se estableció que el criterio que prevalece en ambas instituciones es el político, debido al carácter público, que limita la libertad en cuanto a sus acciones, no permitiendo la rendición de cuentas y la transparencia de los procesos. Por otro lado, se pudo evidenciar la ausencia de directrices, sensibilización y liderazgo, cultura y estructura organizacional adecuada y recursos para implementar nuevas iniciativas, que permitan una mejor actuación de la institución frente a la responsabilidad social.

Así mismo, se pudo destacar, la solidaridad, que mediante iniciativas de colaboración con el desarrollo de valores como la justicia social, derechos humanos, sustentabilidad y conservación de la naturaleza, desarrolla La Universidad de La Guajira, mediante acciones específicas a la conservación de las tortugas marinas a través de programas de protección. Para el caso de la Universidad Nacional Experimental de las Fuerzas Armadas, esta ejerce su responsabilidad social empresarial a través de programas, alineados con

otras organizaciones, e incluso con las mismas comunidades, los cuales son reconocidos dentro de la institución mereciendo la credibilidad y la confianza de los venezolanos; para el caso de la Universidad de La Guajira, no se han podido establecer mayores programas sociales que beneficien directamente a las comunidades, debido a la falta de amplitud del presupuesto que maneja la universidad.

# PRINCIPALES INDICADORES DE CRECIMIENTO EMPRESARIAL EN LAS PEQUEÑAS Y MEDIANAS EMPRESAS: CASO SANTIAGO DE CALI – COLOMBIA

Adriana Aguilera Castro, Universidad del Valle – Colombia

Viviana Virgen Ortiz, Universidad del Valle – Colombia

## RESUMEN

*Esta ponencia tiene como objetivo presentar los principales indicadores de crecimiento empresarial identificados en las pequeñas y medianas empresas (PYMES) de Santiago de Cali – Colombia. Para realizar la investigación que dio origen a la ponencia, se aplicó un instrumento tipo cuestionario a una muestra de 106 empresas, con un nivel de confianza del 95%, un margen de error del 10% y una proporción del 50%. Como resultado de la investigación se evidenció que los indicadores correspondientes a la perspectiva del ciclo de vida y especialmente a la estrategia de diversificación concéntrica, son los usados con mayor frecuencia en las PYMES de Santiago de Cali – Colombia.*

**PALABRAS CLAVES:** Indicadores de Crecimiento Empresarial; PYMES; perspectivas de crecimiento

## MAIN INDICATORS OF BUSINESS GROWTH IN SMES: CASE SANTIAGO DE CALI – COLOMBIA

### ABSTRACT

*This paper aims to present the main indicators of business growth of SMEs identified in Santiago de Cali – Colombia. To conduct the research that led to the paper, such an instrument was applied to a sample survey of 106 companies, with a confidence level of 95%, a margin of error of 10% and a proportion of 50%. As a result of the investigation showed that the indicators for the life cycle perspective and especially concentric diversification strategy are frequently used in SMEs in Santiago de Cali – Colombia.*

**JEL:** M10

**KEYWORDS:** Business Growth Indicators; SMEs; growth perspectives

## INTRODUCCIÓN

El crecimiento empresarial puede abordarse desde tres aspectos específicos partiendo de la formulación estratégica: el diagnóstico interno, el diagnóstico externo y la elección e implantación de estrategias; en la formulación se incluyen las perspectivas desde las cuales se puede abordar el crecimiento empresarial: ciclo de vida, basada en los recursos y basada en la motivación. Estas perspectivas se evidencian después de un análisis consiente de las características de la empresa y del sector en el que se desarrolla; el análisis puede llevarse a cabo a partir de la medición y evaluación de un conjunto de indicadores que permitan direccionar el camino que la organización debe tomar para lograr un crecimiento sostenido. En ese sentido, el presente documento tiene como objetivo identificar los principales indicadores de crecimiento empresarial de las PYMES de Santiago de Cali – Colombia.

Para el desarrollo de la investigación se aplicó un instrumento tipo cuestionario, en el que se desagregan las variables relacionadas con el crecimiento empresarial. El instrumento se aplicó a 106 empresas

PYMES de Santiago de Cali – Colombia. Este documento se estructura en cuatro partes, la primera corresponde a la revisión literaria, la segunda a la metodología; en la tercera parte se presentan los resultados de la investigación; y por último, en la cuarta parte se presentan las conclusiones del estudio.

## REVISIÓN LITERARIA

El crecimiento empresarial según Blázquez, Dorta y Verona (2006), ha sido considerado en la literatura administrativa de dos formas distintas; una como un objetivo deseado por las organizaciones, en este caso el direccionamiento estratégico formal estaría fundamentado en políticas de crecimiento. Otra forma de considerarlo, es como consecuencia del “manejo” adecuado de las organizaciones, en este sentido el crecimiento es un resultado derivado de la adecuada administración de las empresas. De acuerdo con Canals (2000, pp. 341, 342), el crecimiento no es el objetivo final de las organizaciones, este es un medio para alcanzar otros objetivos y su ausencia prolongada puede ser un síntoma de declive futuro.

Teniendo en cuenta lo anterior, el crecimiento empresarial debe ser medido y evaluado, y por tanto, las organizaciones deben determinar los mecanismos necesarios para ello. Los indicadores como unidades de medida que permiten el seguimiento y evaluación periódica de las variables clave de una organización, se constituyen en elementos descriptivos y valorativos (Guinart i Solà, 2003). La identificación y medición de los factores internos y externos que potencializan el crecimiento empresarial, permite evaluar las fuerzas y debilidades de una empresa en sus áreas funcionales; detectar y evaluar las tendencias y los acontecimientos que están más allá del control de una sola empresa; y revelar las oportunidades y amenazas claves que tiene una organización. De esta manera los gerentes pueden formular estrategias para aprovechar las oportunidades externas, eludir las amenazas o reducir sus consecuencias y establecer objetivos y estrategias coherentes para potencializar el desarrollo de la organización (David, 1997).

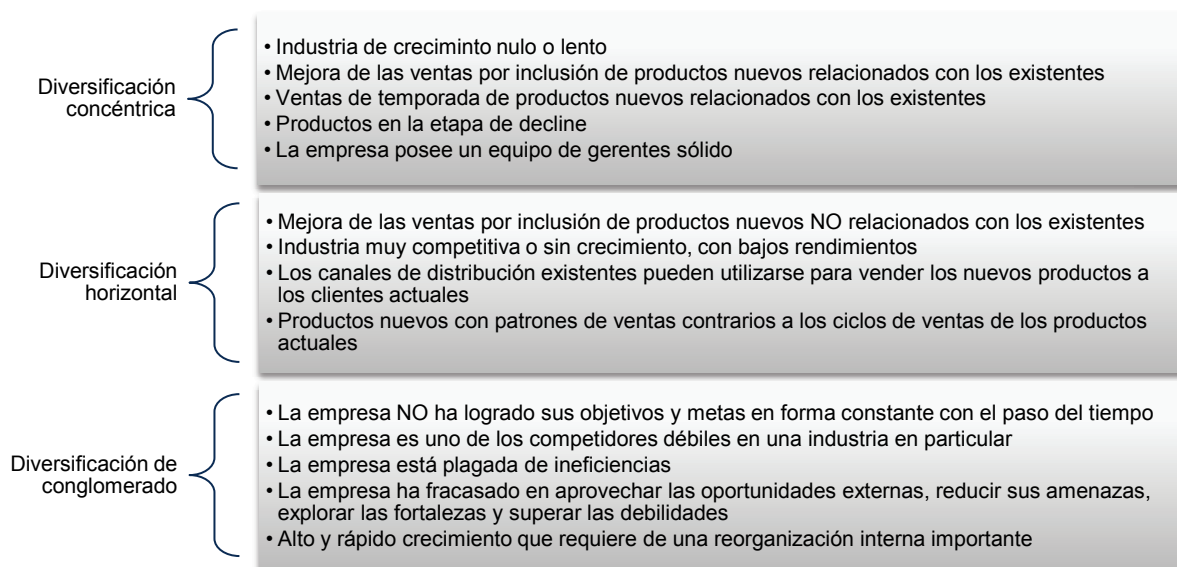

El crecimiento empresarial puede abordarse desde diversas perspectivas y evidenciarse por el cumplimiento de un conjunto de indicadores, los cuales determinan cuándo es más eficaz considerar una estrategia de crecimiento que otra. Blázquez, Dorta y Verona (2006) establecen que entre las perspectivas más utilizadas por la literatura se encuentran: a) La perspectiva de configuración del crecimiento o perspectiva del ciclo de vida; b) Perspectiva basada en los recursos y c) la perspectiva basada en la motivación. Desde el modelo presentado por Aguilera (2010), es posible fusionar las perspectivas de crecimiento con la formulación estratégica presentada por David (2003), y pueden ser evaluadas por el conjunto de indicadores que se presentan en las figuras 1, 2 y 3.

## METODOLOGÍA

A partir de las variables que componen cada uno de los factores que dan respuesta a los objetivos del modelo de Formulación de Estrategias para la Generación de Políticas de Crecimiento Empresarial, se elaboró un instrumento tipo cuestionario, por medio de la cual se obtuvo de forma ordenada y precisa la información que da respuesta a cada una de las variables definidas. El instrumento se aplicó a 106 PYMES de la ciudad de Santiago de Cali – Colombia; se consideraron 142 variables, de las cuales se analizaron 53 para cumplir con el objetivo de este trabajo. Para el análisis de la información se emplearon herramientas de la estadística descriptiva, el análisis de las variables se realizó mediante el uso de la frecuencia relativa (escala que va de 0 a 100%); estas frecuencias permitieron identificar en qué porcentaje los empresarios de la ciudad consideran que el indicador se cumple o no, y por tanto, el cumplimiento del comportamiento esperado de un determinado indicador muestra cuáles son aquellos que impactan el crecimiento empresarial.

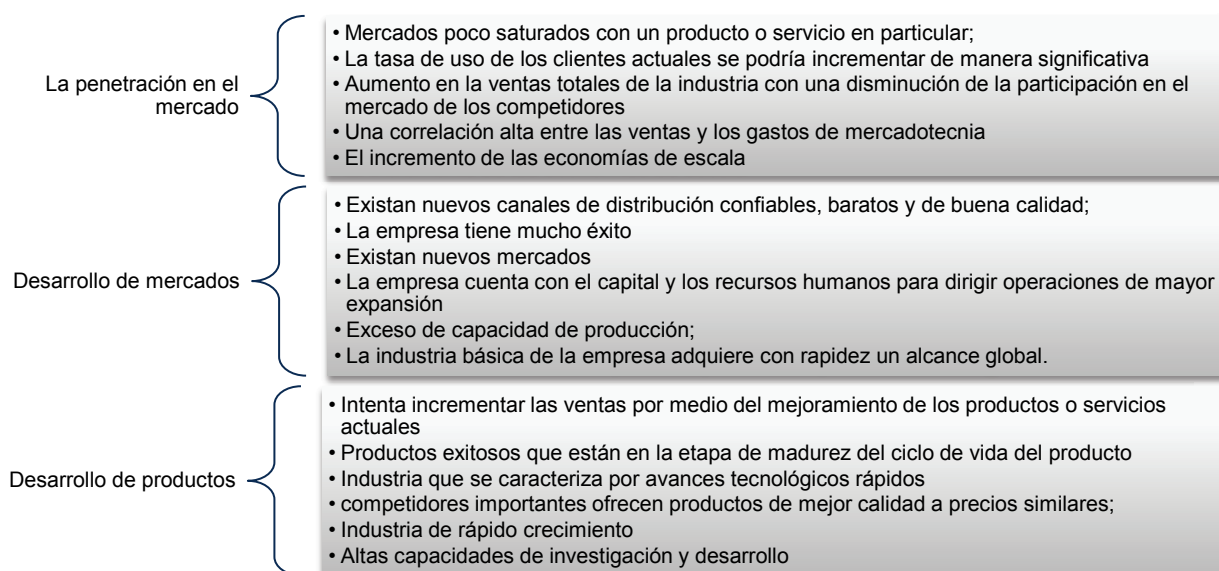

Figura 5: Indicadores Desde la Perspectiva de Ciclo de Vida

En la figura 1 se muestra el conjunto de indicadores que permiten determinar cuándo alguna de las estrategias pertenecientes a la perspectiva de ciclo de vida podría ser una estrategia de crecimiento empresarial eficaz. Estos indicadores fueron planeados por David (2003) y retomados por Aguilera (2010) dentro del Modelo de formulación de estrategias para la generación de políticas de crecimiento empresarial. Fuente: Elaboración propia a partir de Aguilera (2010)

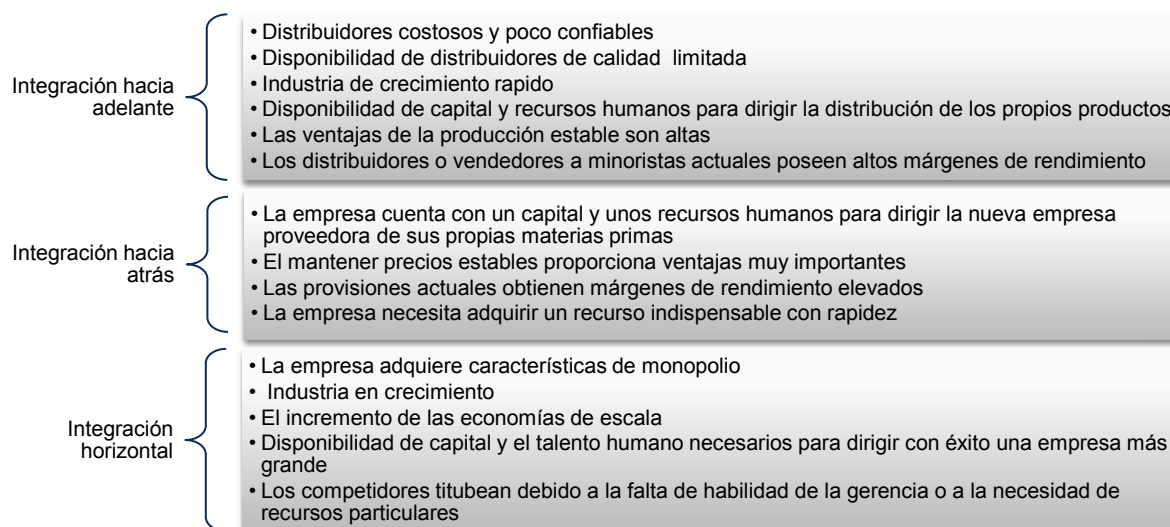

Figura 6: Indicadores Desde la Perspectiva Basada en Recursos

En la figura 2 se muestra el conjunto de indicadores que permiten determinar cuándo alguna de las estrategias pertenecientes a la perspectiva basada en recursos podría ser una estrategia de crecimiento empresarial eficaz. Estos indicadores fueron planeados por David (2003) y retomados por Aguilera (2010) dentro del Modelo de formulación de estrategias para la generación de políticas de crecimiento empresarial. Fuente: Elaboración propia a partir de Aguilera (2010)

Figura 7: Indicadores Desde la Perspectiva Basada en la Motivación

En la figura 3 se muestra el conjunto de indicadores que permiten determinar cuándo alguna de las estrategias pertenecientes a la perspectiva basada en motivación podría ser una estrategia de crecimiento empresarial eficaz. Estos indicadores fueron planeados por David (2003) y retomados por Aguilera (2010) dentro del Modelo de formulación de estrategias para la generación de políticas de crecimiento empresarial. Fuente: Elaboración propia a partir de Aguilera (2010)

## RESULTADOS

Para la presentación de los resultados se consideran las variables definidas para cada una de las perspectivas de crecimiento empresarial establecidas en la revisión literaria. A partir del desarrollo de la metodología de análisis, la Tabla 1 presenta el porcentaje de cumplimiento de cada conjunto de indicadores en el caso de las PYMES de Santiago de Cali – Colombia.

Tabla 5: Cumplimiento de los Indicadores Partiendo de las Estrategias de Crecimiento Empresarial

Perspectiva	Estrategia de crecimiento	Porcentaje de cumplimiento de los indicadores
Perspectiva del Ciclo de Vida	Diversificación Concéntrica	68,2%
	Diversificación Horizontal	33,6%
	Diversificación de Conglomerados	26,4%
Perspectiva basada en los Recursos	Penetración de Mercado	50,3%
	Desarrollo de Mercados	44,7%
	Desarrollo de Productos	56,9%
Perspectiva basada en la Motivación	Integración hacia Adelante	44,5%
	Integración Horizontal	41,8%
	Integración hacia Atrás	29,5%

La Tabla 1 presenta las perspectivas de crecimiento empresarial y para cada una de ellas el conjunto de estrategias de crecimiento que son aplicables. Dado que la posibilidad de aplicación de cada una de estas estrategias depende del cumplimiento del conjunto de indicadores que las componen, la columna 3 presenta el porcentaje de cumplimiento de los indicadores correspondientes a cada estrategia de crecimiento empresarial. Fuente: Elaboración propia

**Comportamiento de los Indicadores desde la Perspectiva del Ciclo de Vida** De acuerdo con los resultados presentados en la Tabla 1, en el caso de los indicadores analizados para la estrategia de diversificación concéntrica, se identifica que los empresarios están de acuerdo en que dichos indicadores se cumplen, lo que hace posible que el crecimiento empresarial se dé a partir de la implementación de estrategias de diversificación concéntrica. En el caso de la pertinencia de implementar estrategias de crecimiento de diversificación horizontal, existe un menor nivel de cumplimiento de los indicadores que dan cuenta de que este tipo de estrategia es adecuada, este caso es semejante a los resultados obtenidos al considerar la

estrategia de diversificación de conglomerados como adecuada para lograr el crecimiento de las empresas PYME de Santiago de Cali – Colombia. En el caso de la perspectiva del ciclo de vida, la estrategia más adecuada para implantar de acuerdo con el comportamiento de los indicadores analizados, es la estrategia de diversificación concéntrica, esto es consecuente con el hecho de que el 89,6% de empresarios implementan estrategias de posicionamiento en el mercado conocido.

Comportamiento de los Indicadores desde la Perspectiva basada en los Recursos Para los indicadores relacionados con la estrategia de penetración de mercados, se observó que estos se comportan de manera variada, dándose casos en los que se cumple con lo esperado para que la aplicación de esta estrategia sea adecuada, así como casos en que la estrategia no sería adecuada para el crecimiento de las PYMES; por tanto, se considera que los indicadores se cumplen en una escala media. En el caso de la pertinencia de implementar estrategias de desarrollo de mercados se observó que en menor medida se da un cumplimiento de los resultados esperados para los indicadores que permitirían evidenciar lo pertinente de que la estrategia de crecimiento empleada por las PYME sea el desarrollo de mercado.

En el caso de los indicadores que permiten medir la pertinencia de que se aplique la estrategia de crecimiento de desarrollo de productos, se observó que en mayor medida este conjunto de indicadores llevarían a considerar esta estrategia como más pertinente. Por tanto, es posible considerar que en el caso de la perspectiva basada en los recursos la estrategia más adecuada a implantar de acuerdo con el comportamiento de los indicadores analizados sería la estrategia de desarrollo de productos. Esto es consecuente con el hecho de que el 73,6% desarrollan nuevos productos para crecer.

Comportamiento de los Indicadores de la Perspectiva basada en la Motivación Para los indicadores relacionados con la estrategia de integración hacia adelante, se observó que estos se comportan de manera variada, dándose casos en los que se cumple lo esperado para que la aplicación de esta estrategia sea adecuada, así como casos en los que la estrategia sería poco adecuada para el crecimiento de las PYMES, por tanto se considera que los indicadores se cumplen en una escala media. En el caso de la pertinencia de implementar estrategias de integración horizontal se observó que el cumplimiento de los resultados esperados para los indicadores es bajo, considerándose el de menor aplicabilidad por parte de las PYME. En el caso de los indicadores que permiten medir la pertinencia de que se aplique la estrategia de crecimiento de integración hacia atrás, se observó que en menor medida este conjunto de indicadores llevarían a considerar esta estrategia como pertinente. Por tanto es posible considerar que en el caso de la perspectiva basada en la motivación la estrategia más adecuada a implantar de acuerdo con el comportamiento de los indicadores analizados sería la estrategia de integración hacia adelante. La baja identificación que se da de manera general en el cumplimiento de los indicadores que permitirían considerar la perspectiva basada en la motivación como adecuada para las empresas es consecuente con el hecho de que tan solo el 23,6% de empresarios PYME de Santiago de Cali – Colombia afronta riesgos e invierte en nuevos negocios; tan solo el 38,7% ha desarrollado acciones de integración con otras empresas

## CONCLUSIONES

Es posible concluir que los indicadores correspondientes a la perspectiva de ciclo de vida y especialmente a la estrategia de diversificación concéntrica, corresponden a los de mayor cumplimiento para las PYME de Santiago de Cali – Colombia. Esto no significa que todas las PYME deban aplicar esta estrategia, ya que cada una debe evaluar las características de su empresa y las características del sector antes de determinar cuál es la estrategia que le permite en mayor medida lograr un crecimiento sostenible. Se evidenció que las empresas aplican diversas estrategias de manera simultánea, se debe prestar especial atención a este aspecto, para que las empresas no apliquen estrategias que sean opuestas en sus características y por tanto dejen de percibir los beneficios de la aplicación de una estrategia que sea adecuada a sus necesidades.

### Limitaciones

Las limitaciones del estudio están concentradas en que la muestra se tomó de manera general entre las PYMES de Santiago de Cali – Colombia, sin hacer distinción del sector económico en que se encuentra ubicadas; por tanto no permite inferir información particular relacionada con los aspectos sectoriales y con la actividad económica que desarrollen las organizaciones.

# LA HOLDING ESTRATEGIA FISCAL PARA LAS EMPRESAS FAMILIARES

Rosa Hilda Hernández Sandoval, Universidad Autónoma de Coahuila  
Sandra Patricia de la Garza Cienfuegos, Universidad Autónoma de Coahuila,  
Laura Leticia Gaona Tamez, Universidad Autónoma de Coahuila,

## RESUMEN

*La presente investigación se realizó en Monclova, Coah., en el año 2011 y tiene por objeto constituir una empresa holding para obtener beneficios fiscales sin caer en la evasión o elusión fiscal, esta alternativa permite controlar desde la cúspide a las demás empresas subsidiarias que han sido creadas. Los resultados muestran que existen en México 4,862 empresas familiares que consolidan para efectos fiscales, las cuales se encuentran integradas en 422 grupos. En este régimen de fiscalización grupal llamado consolidación fiscal permite a las demás empresas llamadas controladas poder acceder a algunos beneficios fiscales, como son las pérdidas registradas en una empresa entre las utilidades de otra empresa que se encuentre integrada en el grupo de consolidación fiscal, es decir: con la idea de contar con un resultado fiscal consolidado y poder en una declaración fiscal una base única los resultados obtenidos de todas las empresas que integran el grupo corporativo. Una vez obtenido el resultado fiscal y determinado el impuesto anual a cargo se podrá diferir en cinco ejercicios siguientes, así se puede utilizar los flujos de efectivo de los impuestos no utilizados, solamente en este régimen de consolidación fiscal, en México el fisco permite el diferimiento de cinco años.*

**PALABRAS CLAVE:** Holding, Beneficios Fiscales Y Diferir Impuestos

## HOLDING THE FISCAL STRATEGY FOR THE FAMILY BUSINESS

### ABSTRACT

*This research was conducted in Monclova, Coahuila, in 2011 and aims to be a holding company for tax benefits without falling into tax evasion or avoidance, this option allows you to control from the top to the other companies that have subsidiaries been created. The results show that there are family businesses in Mexico 4,862 to consolidate for tax purposes, which are integrated in 422 groups. In this control regime group called fiscal consolidation allows other companies controlled calls to access certain tax benefits, such as losses in a company between profits of another company that is built into the tax consolidation group, i.e: with the idea of having a consolidated taxable income in a tax return to a single database the results of all companies in the corporate group. Once the taxable income and determined by the annual tax may be deferred in the next five years, so you can use the cash flows of unused taxes only in the tax consolidation regime in Mexico allows the deferral to five years.*

**KEYWORDS:** Holding, tax benefits and tax deferral

## INTRODUCCIÓN

Los impuestos forman parte de la vida. El escritor Charles Adams señala: “desde el inicio de la civilización, los gobiernos han ideado todo tipo de tributo” estos han generado rechazo e incluso desatado revueltas. El político estadounidense Benjamín Franklin mencionó: “en este mundo no hay nada tan seguro como la muerte y los impuestos”. (Franklin, 1789) lema conocido que se encuentra en el edificio de Servicio de Rentas Internas de Washington, D.C. (EE.UU) “Los impuestos son el precio de una

sociedad civilizada” pero hay que admitir que los gobiernos hacen grandes desembolsos económicos a fin de suministrar y mantener los servicios necesarios.

El simple patrimonio de un individuo pudiera no representar problemas fiscales, sin embargo hay organizaciones más complejas que requieren de un análisis profundo como es contar con un plan estratégico. Para quedar fuera del campo de acción de los individuos o de las sociedades de tipo personalista. El maestro Roberto Mantilla Molina manifiesta que las grandes sociedades de capital como la anónima permiten obtener la colaboración económica de muchos individuos que no temen arriesgar una porción de su patrimonio. (Loyo, 2010) La presente investigación incluye aspectos como son: legal, financiero y fiscal, los cuales tienen por objeto constituir una empresa holding para obtener beneficios fiscales sin caer en la evasión o elusión fiscal, esta alternativa permite controlar desde la cúspide a las demás empresas subsidiarias que han sido creadas.

Mediante el mecanismo descrito, el régimen de consolidación fiscal constituye un beneficio para las empresas que optan por pagar sus impuestos como grupo consolidado, ya que pueden utilizar los flujos de efectivo generados por el diferimiento de impuestos para diferentes fines, opción a la que no pueden acceder empresas que pagan sus impuestos de acuerdo al régimen general. La consolidación fiscal establecida en la ley de ISR puede proporcionar los beneficios siguientes: aplicación inmediata de pérdidas fiscales individuales de las sociedades perdedoras contra las utilidades fiscales individuales de las sociedades ganadoras. El resto de esta investigación está organizada como sigue: en la sección de revisión literaria se presenta la literatura relevante a los antecedentes, la Holding, consolidación fiscal y estructura patrimonial; en la sección de metodología se aplica estudio de casos numeral para ejemplificar sección de resultados, se muestra los beneficios que se pueden obtener al aceptar y aplicar la estrategia fiscal, se presentan los resultados obtenidos en la investigación, sección de conclusiones, sección de referencias bibliográficas y biografía.

## REVISION DE LITERATURA

Las empresas familiares actualmente viven una problemática económica, esto aunado a una pobre legislación que se está viviendo en este país, como son excesos de cargas fiscales, legales y de seguridad social. Otro de los aspectos más críticos es la gestión de la empresa familiar. (Simón, 2007) Se presenta un plan estratégico y operacional para la toma de decisiones, partiendo de la base que son personas físicas para posteriormente constituirse como sociedades mercantiles y así continuar con el objetivo del plan estratégico el cual es: constituir una empresa “Holding”, conocida como sociedad controladora de un grupo de empresas subsidiarias, esto de conformidad con el Artículo 64, contenido en el capítulo VI, Título II de Ley de Impuesto Sobre la Renta que se refiere al régimen de la consolidación fiscal. Se presenta en la figura 1, esquema de una Holding:

La persona física, que cuenta con un patrimonio sea éste pequeño o abundante, la idea es identificarlo, conocer el valor real, contable, fiscal de mercado, evaluarse y por consiguiente conocer la situación jurídica de cada uno de los bienes como son: bienes líquidos, inmuebles, muebles así como obligaciones, saber si existen riesgos en el patrimonio, ya sea legales, fiscales, laborales y mercantiles, por lo que se presenta la estructura siguiente Figura 2.

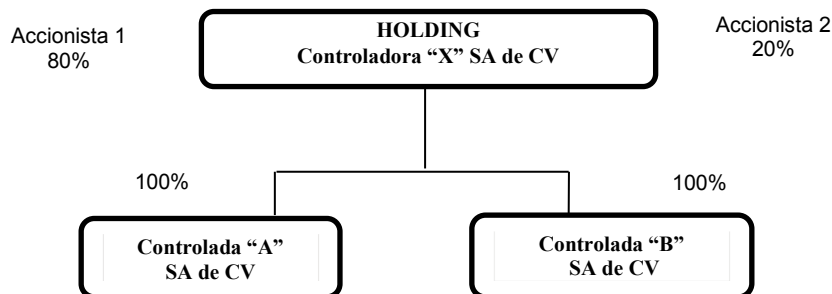

Una vez que el empresario conozca a plenitud su patrimonio, puede aplicar alguna figura legal, sin embargo parte de la estrategia es que adopte la figura legal de unidades económicas, formando varias sociedades anónimas de capital variable para que los bienes del empresario se representen en acciones.

### Código Fiscal de la Federación

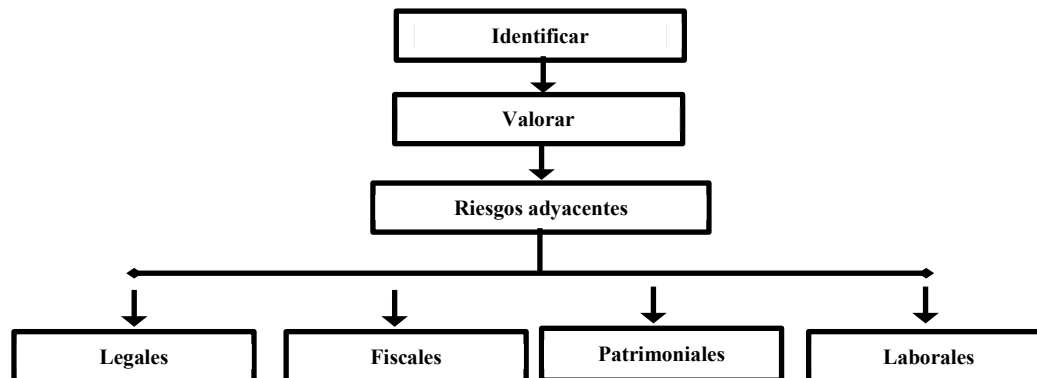

El Código Fiscal de la Federación regula los efectos de las obligaciones de los contribuyentes como lo establece la Constitución Política de los Estados Unidos Mexicanos Supletoriamente el Artículo 1° del CFF; establece "las personas físicas o las morales, están obligadas a contribuir para los gastos públicos conforme a las leyes fiscales respectivas. Las disposiciones de este Código se aplicarán en su defecto y sin perjuicio de lo dispuesto por los tratados internacionales de los que México sea parte. Solo mediante ley podrá destinarse una contribución a un gasto específico".

Figura 1: Esquema de una Holding

En la figura del esquema de una Holding se visualiza la Controladora con dos controladas en forma directa para ejemplificar, se requiere como mínimo una empresa controlada y como máximo no hay límite incluso puede ser en dos niveles es decir representadas como controladas de forma indirecta con la condicionante que cuente con más del 50% de las acciones.

Figura 2: Estructura de Patrimonio

En la figura de la Estructura del patrimonio es para que el empresario conozca a plenitud su patrimonio real que está integrado por sus bienes menos sus deudas u obligaciones que integran riesgos adyacentes como son legales, fiscales, patrimoniales y laborales.

El derecho tributario, regula el nacimiento y los efectos de las obligaciones fiscales que vinculan a los particulares con el estado, el vínculo fiscal tiene naturaleza obligacional de acuerdo a la ley, significa que si solo los entes con personalidad jurídica deben ser centros de imputación de derechos obligacionales, así solo las personas morales en lo individual pueden tener obligaciones fiscales frente al estado, en principio cada sociedad debe medir su propia carga fiscal y pagar tributo lo cual ocurrió hasta que empezó a considerarse un grupo de sociedades como una unidad económica para efectos de impuestos. (Loyo, 2009) Por esta razón, se generó la necesidad de crear herramientas para medir el desempeño financiero como un solo ente o unidad económica.

### Consolidación Fiscal

Concepto de Consolidación fiscal: Es un régimen especial de tributación en la que se aglutinan las fases fiscales integradas en la unidad económica como si se tratara de un solo ente. En la consolidación fiscal las sociedades controladora y controlada aportan sus resultados fiscales; utilidades o pérdida fiscal a la base de impuesto consolidado, las bases fiscales individuales se determinan de acuerdo al título II de la LISR, así como principios y reglas. Existen consideraciones que se deben evaluar, para poder adoptar el régimen de consolidación fiscal. El “boletín Mexicano de derecho comparado” menciona que el régimen de consolidación fiscal supone la existencia de una **unidad económica** carente de personalidad jurídica propia, constituida por dos o más entidades jurídicas que desarrollan actividades económicas y que ejercen sus derechos y responden de sus obligaciones en forma individual; pero que pueden integrar un solo resultado fiscal sobre el cual se calcula el impuesto sobre la renta a cargo del grupo consolidado. Esto les permite posponer el gravamen respecto de actos jurídicos celebrados entre las empresas del grupo y les da la posibilidad de reducir las pérdidas fiscales de una de ellas, contra las utilidades fiscales de otras. Esta consolidación se limita al ámbito fiscal, no tiene efecto respecto a terceros, que no puedan exigir de la sociedad controladora el cumplimiento de las obligaciones a cargo de sus subsidiarias. (Chapoy, 2011) Con la aparición y el desarrollo de grandes grupos corporativos, fue necesario idear nuevos mecanismos para informar a los inversionistas sobre el desempeño y rendimiento de sus inversiones que serán canalizadas a través de un número creciente de sociedades mercantiles. Se hizo usual encontrar estructuras corporativas que tenía una sociedad en la cúspide comúnmente llamada holding o controladora de la cual derivan varias sociedades de segundo, tercero y más niveles inferiores, ubicadas en la misma jurisdicción de la holding o en otras diversas. Las acciones emitidas por todas las sociedades inferiores de segundo y posteriores niveles que son las subordinadas son directa o indirectamente propiedad de la sociedad Holding, de manera que ésta las controla. (Loyo, 2009)

De acuerdo al Artículo 64 de la ley de Impuesto Sobre la Renta para los efectos de dicha ley considera sociedades controladoras las que reúnan requisitos siguientes:

- I. Que se trate de una sociedad residente en México. Para el legislador fiscal sólo las sociedades residentes en México pueden tener el carácter de sociedades controladoras. Para estos efectos debe recordarse que, según la fracción II del Artículo 9º del CFF, una persona moral es residente fiscal en México cuando se ha constituido de conformidad con las leyes mexicanas, o bien, sin haberlo hecho así lo es cuando ha establecido en México la administración principal del negocio o su sede de dirección efectiva.
- II. Que sean propietarias más del 50% de las acciones con derecho a voto de otra u otras sociedades controladas, inclusive cuando dicha propiedad se tenga por conducto de otras sociedades que a su vez sean controladas por la misma sociedad controladora.

En la consolidación fiscal existen los sujetos involucrados: una “sociedad controladora” es decir, la “Holding”, y al menos una o varias “sociedades controladas” o sea, la sociedad controladora es la que determina el resultado fiscal consolidado del grupo de consolidación, y se encuentra en la cúspide de la estructura corporativa. Las sociedades controladas son subsidiarias de la controladora, y le “aportan”, por decirlo así, sus utilidades o pérdidas fiscales, con las cuales se determina el resultado fiscal consolidado. (Loyo, 2010) Entendiéndose por “Holding” como una sociedad que tiene participaciones en otras empresas con la intención de controlarlas y dirigir las, a diferencia de la sociedad de cartera. La sociedad tenedora de acciones es el principal accionista de las empresas en las que participa, y tiene en su poder más del 50 % de su capital. De acuerdo al Artículo 66 Ley de Impuesto Sobre la Renta.

“Para los efectos de esta ley se considera Sociedades controladas aquellas en las cuales más del 50% de sus acciones con derecho a voto sean propiedad, ya sea en forma directa, indirecta o de ambas formas, de

una sociedad controladora. Para estos efectos, la tenencia indirecta a que se refiere este artículo será aquella que tenga la sociedad controladora por conducto de otra u otras sociedades que a su vez sean controladas por la misma sociedad controladora. Este precepto es complementario a la fracción II del Artículo 64 de la ley del Impuesto sobre la Renta, debido a que conjuntamente definen si una sociedad “Holding” y una o varias subsidiarias reúnen el requisito de tenencia accionaria mínima para considerarse como sociedades controladoras o controladas respectivamente en una consolidación fiscal, el requisito de impuesto sobre la renta en vigor obedece exclusivamente al criterio de “control accionario” de una sociedad controladora sobre sus controladas. (Loyo, 2010)

Figura 3: Holding Con Dos Niveles de Subsidiarias.

En la figura se muestra una “Holding” con dos niveles de subsidiarias, las cuales pueden ser directa o indirectamente controladas, siempre que tenga más del 50% de participación accionaria es decir que la controladora sea dueña de más del 50% de las subsidiarias. Como se aprecia la empresa del segundo nivel que tiene 50% o menos no puede ser controlada indirectamente por una Controladora u “Holding”, mientras que las dos siguientes del segundo nivel si son indirectamente controladas por ser poseídas en más del 50% de la controladora u “Holding”.

## METODOLOGÍA

Se presentan diseños, cálculos y procedimientos enfocados a la consolidación fiscal, tema de gran complejidad, se muestra el esquema de una holding con sus subsidiarias en la que se unifica la utilidad fiscal de todas las empresas como si se tratara de una sola, con la perspectiva de obtener beneficios fiscales y financieros en el que se desarrolla un estudio de casos numeral, se describen desde cómo nacen las empresas, cómo se presentan los pagos provisionales, la compensación de pérdidas, se utilizan instrumentos como la Ley del ISR y su Reglamento, Código Fiscal de la Federación, Ley General de Sociedades Mercantiles, textos jurídicos así como obras de consulta, artículos de conferencias patrimoniales y reflexiones. El procedimiento del estudio de casos numeral se realizó fundamentado en lo que marca la Ley del Impuesto Sobre la Renta en los artículos del 64 al 78.

## RESULTADOS

### Propuesta Fiscal Numeral Con Estudio de Casos

Se presenta análisis de estudio de casos numeral de una Holding y subsidiarias es decir controladora y controladas bajo el esquema de consolidación fiscal; la sociedad Controladora así como las Controladas son empresas de nueva creación con saldos iniciales de sus cuentas contables al 01 de enero del 2011: inician en ceros, a continuación se muestra los estados financieros básicos de la sociedad Controladora “X”, SA de CV así como de sus Controladas “A” y “B”.

<b>Balance General al 31 de Diciembre 2011</b>

La conciliación contable fiscal de la Controladora y las Controladas, se identifican como: partidas fiscales no contables en conciliación el ajuste anual por inflación y la depreciación fiscal. Asimismo se presentan como partidas contables no fiscales: la depreciación contable y la provisión de impuestos con fundamentos mencionados con anterioridad. La Controladora “X”, S.A. de C.V., como se observa con resultado fiscal individual de \$ 421 con impuesto de ISR \$126.3 a una tasa de 30%. Los resultados individuales posteriormente serán utilizados para obtener resultado fiscal consolidado. Una vez determinada la conciliación contable fiscal de la Controladora y sus Controladas en forma individual se procede a determinar el resultado fiscal consolidado, esto de acuerdo al Artículo 68 de la LISR, que menciona la mecánica de la determinación del resultado fiscal consolidado o pérdida fiscal consolidada.

Controladora			
Resultado Fiscal Consolidado 2011.

<b>Beneficio</b>		<b>11.70</b>	
El beneficio corresponde al ISR por la pérdida fiscal que se aprovecha en el año en que la misma se genera			

El beneficio de consolidar fiscalmente corresponde al ISR por la pérdida fiscal que se aprovecha inmediatamente es decir en el año en que la misma se genera de acuerdo al Artículo 68 de la Ley de Impuesto sobre la Renta. En este estudio de casos el beneficio es por un importe de \$ 11.70 (Once pesos 70/100 MN) de acuerdo a la determinación del resultado fiscal consolidado que antecede.

<i>Cuenta de utilidad fiscal neta</i>			
	<i>Individual</i>		
	<i>Controladora</i>	<i>Controlada</i>	<i>Controlada</i>
	<b>X</b>	<b>A</b>	<b>B</b>
Resultado fiscal	421	-	50

Participación consolidable	100%	100%	100%
Ufin del ejercicio (despues de PC)	<b>295</b>	-	<b>35</b>

Una vez que se cuente con los registros individuales de cada una de las empresas del grupo se procede al Registro especial de las utilidades fiscales netas consolidadas como sigue:

<i>Determinación de la UFIN consolidada 2011</i>				
	Utilidad		No	
Ejercicio	fiscal	ISR	deducibles	
2011	<b>432</b>	<b>130</b>	-	<b>302</b>

Los \$ 302.00 (TRESCIENTOS DOS PESOS 00/100 M.N.) representa la UFIN consolidada del ejercicio 2011. Debido a que es el primer ejercicio en el régimen de consolidación fiscal la UFIN consolidada es igual a la CUFIN consolidada. De acuerdo al Artículo 14 de LIS; se determina los pagos provisionales consolidados a cargo de las controladas, debido a que la participación consolidable es del 100% el pago provisional determinado se enterará a la controladora sin que exista pago directo al SAT por las controladas. Resaltando que debido a que es el primer ejercicio en el régimen de consolidación no cuentan con coeficiente de utilidad para la determinación de sus pagos provisionales sin embargo se presume el coeficiente del 5% para ejemplificar el pago provisional.

<i>Determinación de pagos provisionales por controladas</i>		
	<i>Controlada</i>	<i>Controlada</i>
	<b>A</b>	<b>B</b>
Ventas	1000	1500
Coeficiente de utilidad	5%	5%

Pago Provisional	15	22.5
A cargo pago a la Controladora	15	22.5
Participación no consolidable controladora	0%	0%
Pago Provisional	0	0
A CARGO PAGO AL FISCO	0	0

A continuación se determinan los pagos provisionales consolidados considerando los ingresos mensuales acumulables de la sociedad controladora como de sus controladas.

<i>Determinación de pagos provisionales consolidados</i>			
	<i>Participación consolidable</i>	<i>Ingresos Nomin. Mens</i>	<i>Total</i>
Controlada A	100%	1000	1000
Controlada B	100%	1500	1500
Controladora X			3000
Total de ingresos mens. Acum. consolidables			5500
Coefficiente de utilidad fiscal consolidado			5%
Utilidad fiscal estimada consolidada			275
Tasa ISR			30%
Impuesto a cargo			82.5

<i>Determinación del ISR diferido</i>					
	2011	2012	2013	2014	2015
ISR Diferido en 2011	11.70	11.70	11.70	11.70	11.70
Año para pagar impuesto diferido	2016	2017	2018	2019	2020
Porc. diferido de acuerdo a regla misc.	25%	25%	20%	15%	15%
Impuesto diferido a pagar	2.93	2.925	2.34	1.755	1.755
					11.70

A partir del 2011, la consolidación fiscal se modificó, con esta reforma, las sociedades controladoras deben determinar el “impuesto diferido” que se hubiera generado con motivo de la consolidación en el sexto ejercicio inmediato anterior, pagándolo al fisco federal a lo largo de cinco años mediante un esquema de pagos fraccionados.

## CONCLUSIONES

Cuando las empresas crecen y estas son muchas, es cada vez más difícil estar al pendiente de todas, para evitar esta problemática se recomienda crear una oficina corporativa es decir: la controladora u “Holding”: con el objetivo de estandarizar las normas y políticas con la idea de controlar: producción, distribución de la empresa, con mejores sistemas y manuales que permitan alcanzar mayores índices de productividad y participación en niveles del consorcio. De aquí se desprende, la alternativa que incluye la propuesta fiscal de la empresa familiar como es la de constituir sociedades mercantiles anónimas con tenencias accionarias que le permitan acogerse al régimen de consolidación fiscal.

Derivado de la consolidación se pueden planear razonablemente utilidades fiscales en controladas, aplicando pérdidas fiscales anteriores a su incorporación pendientes de disminuir. Adicionalmente se optimizan recursos financieros de las empresas del grupo por lo que hace al pago del Impuesto Sobre la Renta, se eliminan utilidades generadas en ciertas operaciones entre empresas del grupo. Además existe libre flujo de dividendos entre las empresas que consolidan, gravándose hasta que los distribuye la controladora. De acuerdo a la propuesta numeral de consolidación fiscal presentada, se observa que se aplica las pérdidas en las utilidades se obtiene el beneficio del impuesto a pagar que se observa en el estudio de casos; el impuesto a cargo de la consolidación se puede diferir por cinco años pagando proporcionalmente como lo menciona la ley y sin generar recargos o accesorios. Económicamente el costo es menor si aplica la consolidación y el ahorro fiscal es legítimo. La ventaja de aplicar en forma inmediata en el ejercicio que se generen, las pérdidas fiscales de la “Holding” y de las subsidiarias, contra las utilidades fiscales de las demás compañías del grupo, logrando optimizar el flujo de efectivo por el diferimiento del pago de impuesto sobre la renta a nivel grupo y según se muestran en el estudio de casos de esta investigación por la cantidad de \$ 11.70 (once pesos 70/100 M.N.) constituye la principal ventaja del régimen y lo que lo hace atractivo para su aplicación.

# **POLITICAS Y ESTRATEGIAS DE FINANCIAMIENTO DEL SECTOR COMERCIAL FARMACEUTICO: CASO LA GUAJIRA COLOMBIANA**

Marelis Alvarado Mejia, Universidad de La Guajira

Wilmar Sierra Toncel, Universidad de La Guajira

Ángela Nair Ortiz Rojas, Universidad de La Guajira

Olivia Rangel Luque, Universidad de La Guajira

## **RESUMEN**

*En la actualidad la gestión financiera de los negocios se enfrenta a nuevos desafíos en un contexto global, que demanda la aplicación de nuevas prácticas, técnicas, principios y actitudes por parte de los profesionales de la economía y las finanzas. En este sentido, la presente investigación tuvo como objetivo fundamental determinar las políticas y estrategias de financiamiento del sector comercial farmacéutico, aplicado a las tiendas farmacéuticas del Departamento de La Guajira Colombiana. Se estructuró un marco teórico sustentado en los planteamientos de autores tales como: Gitman (2003), Ortiz (2005), Perdomo (2000), entre otros. La metodología aplicada se tipificó como transeccional descriptiva con diseño no experimental y de campo, realizando el censo poblacional a 170 gerentes de las organizaciones en referencia para el estudio. Como instrumento de recolección de datos se aplicó un cuestionario de 60 ítems, con escala de medición tipo Likert. Los resultados señalaron las pocas competencias cognitivas en el manejo financiero por parte de las personas encargadas de cumplir funciones gerenciales, así mismo, se obtuvo que las tiendas farmacéuticas aplican en alto porcentaje las fuentes de financiamiento a corto plazo para el desarrollo de proyectos de ampliación de su estructura de activos, patrimonio y reservas, no acudiendo a las provisiones para su financiación, lo que indica el no uso de fuentes de financiación externa a largo plazo. Las empresas, prefieren financiamiento a corto plazo, utilizando como estrategia el préstamo comercial en los intermediarios financieros en sus diferentes líneas de créditos. Se concluye que para lograr el desarrollo endógeno del sector es recomendable realizar una acción de formación en competencias financieras de los gerentes de las empresas y fomentar la cultura financiera empresarial dirigida a diseñar y difundir estrategias de financiamiento que permitan lograr el fortalecimiento de la capacidad de gestión de los negocios.*

## **POLICIES AND STRATEGIES FOR FINANCING COMMERCIAL PHARMACEUTICAL SECTOR: THE CASE COLOMBIAN GUAJIRA**

### **ABSTRACT**

*At present the financial management of the business is facing new challenges in a global context, which requires the implementation of new practices, techniques, principles and attitudes on the part of the professionals of the economy and finance. In this sense, the present study aimed to determine the critical Strategic Policy Sector Financing Commercial Pharmaceutical, pharmaceutical stores applied to the Department of La Guajira Colombia. A theoretical framework was structured approaches supported by authors such as Gitman (2003), Ortiz (2005), Perdomo (2000), among others. The methodology used was classified as transactional no experimental descriptive and field, making the population census to 170 managers of organizations in reference to the study. As data collection instruments were administered a questionnaire of 60 items, with Likert scale of measurement. The results point out the few cognitive skills in financial management by those responsible for management functions meet, also, it was found that the*

*drug stores high percentage applied sources short-term financing for developing expansion projects structure of assets, equity and reserves, not going to provisions for funding, indicating no use of external funding in the long term. Companies prefer short-term financing, using the strategy of commercial loan financial intermediaries in their various lines of credit. We conclude that to achieve endogenous development sector is advisable to perform a training in financial skills of managers of businesses and encourage corporate financial culture aimed at designing and disseminating funding strategies that would achieve the strengthening of management capacity business.*

## INTRODUCCIÓN

En el mundo actual donde las compañías buscan mantenerse a flote en una economía de mercado abierto eminentemente capitalista, se hace imperativa una mentalidad gerencial innovadora en la gestión financiera de los negocios, con capacidad para diseñar políticas y estrategias encaminadas a lograr el posicionamiento competitivo de los negocios en el contexto global. Es este sentido, es necesario el uso de teorías, técnicas y herramientas que contribuyan a mejorar la situación financiera de los negocios y de los sectores económicos a que pertenecen. El país no es ajeno a estas nuevas realidades por lo que desde hace décadas busca el mejoramiento continuo de los indicadores de todas las ramas de la economía, ubicándose el sector farmacéutico como uno de los prioritarios dentro de las políticas públicas y programas de gestión del gobierno por su alta capacidad de generación de ingresos para el país.

Por otro lado, la industria farmacéutica mundial, es considerada como una de las actividades industriales que más genera beneficios a la economía, que cuenta con una demanda creciente y un mercado exigente, por el nivel de riesgo que asume en toda la cadena valor, con una estricta protección industrial y comercial. Además es una de las actividades económicas que más afectan positiva o negativamente el bienestar de un país, sin embargo, estas tienen que actuar en un ambiente hostil para subsistir, provocando que sus esfuerzos se encaminen a crear mecanismos de defensa de una serie de factores tales como: competencia mundial agresiva, incursión de empresas extranjeras, desaprovechamiento de recursos humanos, materiales y financieros, esquema tributario que inhibe el desarrollo productivo, complicados trámites administrativos, y regulación excesiva de la actividad económica y desconocimiento del manejo de información contable y financiero en algunos países.

Ahora bien, las empresas del sector farmacéutico objetos de estudio no escapan a esta realidad del mapa de restricciones planteado, que obviamente inhiben el desarrollo de sus planes de crecimiento, obstaculizando el aprovechamiento de las potencialidades del mismo y de relevante importancia para la economía local, dado el aporte significativo en cuanto a valor agregado se refiere y en el nivel de empleo que genera. En consecuencia, es necesaria la aplicación de un conjunto de técnicas y herramientas de la gestión gerencial moderna y en especial sobre la gestión financiera en lo referente al uso de las fuentes de financiamiento que le permitan a las empresas del sector aprovechar los recursos disponibles mediante una mejor administración de las fuentes de financiamiento, logrando con ello incrementar sus indicadores de liquidez, rentabilidad y endeudamiento, como el resultado una adecuada política de financiamiento en cuanto a la elección de las mejores fuentes de financiamiento y una óptima estructura de financiamiento. Resulta entonces, un hecho relevante el estudio de esta variable en el sector, que permita obtener resultados para orientar a los directivos y el personal del sector hacia el dominio de elementos de gestión de financiera que ayuden al buen desarrollo de los procesos administrativos y económicos, para lograr el eficiente manejo de los recursos y las operaciones del negocio, que garanticen la calidad del servicio y se revierta al final a la cadena de satisfacción del cliente.

En ese orden de ideas, el presente artículo investigación se presenta organizada de la siguiente manera: El primer aparte hace referencia a la revisión de la literatura, se exponen los argumentos teóricos que sustentan el diseño de las políticas y estrategias de financiamiento de forma general y específicamente las referidas al corto plazo. Seguidamente, se presentan los fundamentos, estrategias metodológicas y herramientas que se utilizaron para llegar a los resultados y por ultimo a paso seguido se describen los resultados y las conclusiones de la investigación

## REVISIÓN DE LA LITERATURA

Con la competencia, la difusión de las innovaciones, calificación del recurso humano acorde con los cambios tecnológicos, así como la reestructuración de procesos, la cual es clave para impulsar y consolidar el desarrollo empresarial, se requiere de un volumen importante de recursos monetarios; por tanto para gerentes e inversionistas es fundamental las buenas decisiones de inversión, sin embargo generalmente las empresas y más aun con la recesión mundial, no cuentan con un cash flow, adecuado para realizar tales inversiones, por lo que el estudio de las estrategias de financiamiento se convierte en un factor clave. Dentro de este marco referencial, la definición de las estrategias de financiamiento teóricamente se fundamenta en la existencia de un proceso de planificación financiera en la empresa, el cual comprende los planes financieros a largo plazo, o estratégicos y a corto plazo u operativos y dicho proceso permite analizar el efecto global de las decisiones de financiación y de inversión. En este sentido, las estrategias financieras tienen por objeto coordinar los fondos de una empresa para que sean utilizados de la mejor manera para maximizar su patrimonio y reducir el riesgo de una crisis de liquidez y rentabilidad. En este orden de ideas, para Gitman (2003), la estrategia financiera, consiste en financiar todos los fondos proyectados con fondos a largo plazo y el uso de un financiamiento a corto plazo en caso de una emergencia o un desembolso inesperado.

Desde esta perspectiva, la política de financiamiento tiene por objeto coordinar los elementos de una empresa, consiguiendo con esto reducir el riesgo de pagos, mediante el manejo óptimo de recursos obtenidos de fuentes internas y externas. Para Ortiz (2005), la necesidad del financiamiento viene dada por circunstancias especiales de las políticas financieras de la organización, por lo tanto, cuando las mismas están bien controladas pueden garantizar la existencia de la liquidez suficiente para no tener que recurrir a fuentes de financiamiento. De allí la importancia de profundizar en estas políticas para lograr el buen funcionamiento de la organización.

De la misma manera, el autor señala que la política de financiamiento de cualquier organización debería establecerse mediante la pormenorizada evaluación de las ventajas y desventajas particulares de las deudas y de los aportes de capital. En este mismo orden, Besley y Brigham (2008), manifiestan que las compañías presentan fluctuaciones estacionales, cíclicas o de ambos tipos, y acumulan activo circulante cuando la economía está sólida. Se puede evidenciar que Ortiz (2005) y Besley y Brigham (2008), coinciden en que la política de financiamiento se da de acuerdo a la liquidez con que cuente la empresa en cuanto a las deudas y aportes de capital.

Desde esta perspectiva, la política de financiamiento comprende la política de ventas, política de cobro y política de pago, las cuales bien coordinadas y gestionadas permiten el desarrollo adecuado de las empresas y su correcta financiación. En cuanto a las políticas de ventas: son procedimientos eficientes para que las empresas realicen sus operaciones productivas al exterior de las mismas. En este mismo orden de ideas apunta Perdomo (2000), que la Política de ventas comprende, las ventas de contrato riguroso, ventas a crédito sin descuento, ventas a crédito con descuento por pronto pago y ventas de contado y acreditado con y sin descuento. Del mismo modo, Amez (2002), señala que la política de venta viene dada de los criterios de cada empresa, y está compuesta por la venta a crédito, venta de contado y venta al descubierto. De esta manera, la venta a crédito, es la clase de venta en la cual la cosa objeto de la misma es entregada por el vendedor al comprador con anterioridad a la percepción del pago. La venta de

contado es la modalidad de venta en la cual entrega de la cosa y el pago del precio coinciden en el tiempo. En ese mismo orden de ideas la venta al descubierto es una modalidad en la cual el vendedor se compromete a realizar la entrega de una cosa o mercancía que aún no obra en su poder.

Otro aspecto importante de la política de financiamiento, en términos generales la está determinada por el plazo que otorga la empresa a sus clientes, determinado por las condiciones económicas externas como también de las políticas de Crédito de la empresa. Atendiendo a Besley y Brigham (2008), Manifiestan que la política de cobro se refiere a los procedimientos que sigue la empresa para solicitar el pago de sus cuentas por cobrar. La empresa necesita determinar la fecha y la manera en la cual la notificación de la venta a crédito se transmitirá al comprador.

Para Van Horne y otro (2002), la empresa determina su política global de cobranza mediante la combinación de procedimientos de cobro que emprende. Estos procedimientos incluyen una llamada telefónica al cliente, envío de una carta, envío de una nueva factura, a veces hacer una visita a una persona y la acción legal. Según Perdomo, (2000) son las decisiones básicas para determinar y evaluar los procedimientos que sigue una empresa para cobrar a su vencimiento las cuentas a cargo de clientes. Es entonces claro concluir que la política de cobro según los autores expuestos son los procedimientos que sigue la empresa para recaudar sus ventas a créditos, de tal manera que se pueda equilibrar con la política de pago, para el beneficio financiero de la empresa.

Es preciso señalar, que parte de la administración de una empresa que tiene como función coordinar los pagos de una empresa para el manejo óptimo de efectivo de acuerdo a las políticas y metas de la organización. Según Perdomo (2000) las políticas de pago comprenden el estudio, evaluación y control eficiente de salidas o desembolsos de efectivo de una empresa, para de esta manera optimizar rendimientos y maximizar el patrimonio o valor de la misma. En este mismo orden de ideas, Amez (2002), manifiesta que la política de pago es el proceso que sigue una empresa para determinar de manera adecuada sus desembolsos de dinero. En síntesis se evidencia según los autores expuestos que la política de pago es la manera en que una empresa implementa políticas acordes a la capacidad financiera en que se encuentre. De esta forma, Ortega (2002), concibe el financiamiento, como el proceso que promete obtener recursos financieros, sin embargo, en la consecución de capitales para el financiamiento, el crédito juega un papel muy importante, tanto para la empresa como para las instituciones financieras.

Cabe considerar que siguiendo el concepto de los autores expuestos el financiamiento es la capacidad de adquirir dinero por medio del crédito a cambio de una promesa con una obligación de pagar un equivalente en un futuro. Dentro de las fuentes de financiamiento esta la financiación interna, que la constituye aquellos fondos que la empresa produce a través de su actividad (beneficios reinvertidos en la propia empresa), y está integrada por el ahorro bruto generado por la empresa y constituida por la autofinanciación o beneficios no distribuidos a los propietarios. De igual manera, Perdomo (2000) define el financiamiento como la parte de la administración del pasivo circulante que tiene por objeto estudiar y evaluar la fuente de recursos obtenidos de la propia empresa, motivados por la creación o incremento de reservas complementarias de activo, reservas de pasivos, reservas de superávit, sueldos, salarios e impuestos devengados, así como préstamos de socios con y sin garantías específica, para tomar decisiones acertadas y minimizar el costo financiero.

En cuanto a Suárez (2003), señala que está integrado por aquellos recursos financieros que la empresa genera por sí misma. Sin necesidad de acudir al mercado financiero, se trata en efecto de unos recursos financieros que fluyen en la empresa desde ella misma, a diferencia de los restantes recursos financieros que provienen del exterior, se puede decir que hacen parte de estos: las reservas, las amortizaciones, las provisiones y las previsiones. Las cuales constituyen las cuatro partidas fundamentales en la que se puede agrupar los recursos financieros internos de la empresa. De igual forma para, Sintandrew (2000), la financiación interna la compone aquellos recursos financieros que la propia empresa genera sin necesidad

de recurrir al endeudamiento dentro de las partidas o una parte conveniente de estos beneficios. Posibilitar ambos objetivos les resulta imposible a las empresas Farmacéuticas en la mayor parte de los casos sobre todo aquellos que se encuentran en situaciones marginales o extramarginales. En principio, las reservas son beneficios obtenidos por la empresa y que no han sido distribuidos entre sus propietarios. Pero este concepto solamente es válido desde una perspectiva amplia, ya que se puede hacer una subdivisión de las distintas clases de reservas en función de su origen. Atendiendo a Améz (2002), dice que las reservas Son parte de los beneficios que una empresa genera en un ejercicio económico que no es destinada a dividendo repartible como consecuencia de que por la ley, por los estatutos o por el acuerdo de la junta general se dedica a dotar las diferentes clases de reservas.

Por otra parte, las provisiones, representa el valor de las estimaciones que debe efectuar la empresa para cubrir contingencias de pérdidas como resultadas del riesgo de incobrabilidad, mercados o demérito del costo de los activos, así como las estimaciones para cubrir obligaciones, costos y gastos futuros. Al respecto Ochoa (2002), refiere que las provisiones no representan hechos acabados, en algunos casos contiene estimaciones para determinar la información que corresponde a cada periodo contable. Cabe considerar, que las provisiones son importantes en una organización, puesto que permite que la empresa muestre su situación adaptada a los eventos futuros que pueda derivarse de un gasto o un ingreso eventual. Otro aspecto importante dentro de la financiación interna es la ampliación del patrimonio, que según Amez (2002), es el aumento del Patrimonio de una sociedad que se efectúa mediante la emisión de nuevas acciones o el aumento del valor nominal de las existencias, previo acuerdo de los órganos rectores de la misma. Para Ochoa (2002), esta partida surge cuando los accionistas de la empresa aportan efectivo o bienes. Las fuentes de financiamiento externa, proceden de los recursos que utiliza la empresa para financiarse con fondos provenientes de forma externa.

En este orden de ideas Perdomo (2000), afirma que las fuentes de financiación externa son fondos que proceden de terceros con o sin garantías. Siguiendo a Suárez (2003), está formado por aquellos recursos financieros que la empresa obtiene del exterior, debido a que el capital funcional junto con la financiación interna resulta normalmente insuficiente para satisfacer las necesidades financieras de la empresa, esta tiene que acudir a la llamada financiación externa través del mercado financiero o de fondos prestados en demanda de los diferentes tipos de recursos (esto es, para captar pasivos), que las empresas pueden obtener en este mercado. Por su parte, Ochoa (2002), expresa que el uso de las fuentes de financiación externa es saludable para los accionistas comunes solamente si el rendimiento que ellos obtienen es mayor al rendimiento logrado por los activos de la empresa.

En síntesis el financiamiento externo es la manera como la empresa capta recursos de terceras personas con o sin garantía, sea para el corto o largo plazo. Las fuentes de financiamiento a corto plazo que diariamente utilizan las distintas organizaciones brindándole la posibilidad a dichas instituciones de mantener una economía y una continuidad de sus actividades comerciales estables y eficiente y por consecuencia otorgar un mayor aporte al sector económico al cual participan. En cuanto al financiamiento Chiavenato (1999), refleja que es una operación a través de la cual la empresa obtiene recursos financieros a terceros para capital de trabajo o activos circulantes permanentes, así como para inversiones, agrega también que existen varios tipos de financiamiento. En cuanto a Suárez (2003), está integrado por aquellos recursos financieros que la empresa genera por sí misma. Sin necesidad de acudir al mercado financiero, se trata en efecto de unos recursos financieros que afluyen a la empresa desde ella misma, a diferencia de los restantes recursos financieros que provienen del exterior, se puede decir que hacen parte de estos los pagarés que son documentos escritos mediante el cual una persona se compromete a pagar a otra una determinada cantidad de dinero en una fecha acordada previamente. En Atención a Acedo (1997) lo define como un título valor por medio del cual una persona llamada emitente se compromete a pagar a otra persona, llamada beneficiario, una cantidad de dinero en un plazo dado.

Por su parte, Besley y Brigham (2008), consideran los pagarés como un documento que especifica los términos y las condiciones de un préstamo, incluyendo el monto, la tasa de interés y el programa de reembolso. Según Amez (2002), el Pagaré es un documento mercantil de carácter privado mediante el cual una persona física o jurídica se compromete a efectuar el pago de una determinada cantidad a otra, o a la orden de esta, en una determinada fecha o plazo de tiempo.

Otro documento importante es el crédito comercial es un financiamiento a corto plazo que se les conceden a los proveedores de una empresa para que financie sus compras, de tal manera que puedan responder a sus actividades de manera oportunas siguiendo este orden de ideas Weston y Copeland (1999) manifiesta que el curso ordinario de los acontecimientos, una empresa compra a otras empresas sus suministros y materiales a crédito, y registra la deuda como cuenta por pagar. Las cuentas por pagar, o crédito comercial, constituyen la categoría individual más grande de crédito a corto plazo, representando aproximadamente un tercio de los pasivos circulantes de las corporaciones no financieras.

En cuanto a los créditos bancarios, son un contrato por el cual un banco concede crédito a un cliente, disponiendo este de un dinero por un cierto plazo de tiempo, a cambio de un interés. Siguiendo a Weston Copeland (1999) señala que los préstamos de bancos comerciales, los cuales aparecen en el balance general como documentos por pagar, ocupan el segundo lugar en importancia de crédito comercial como fuente de financiamiento a corto plazo. De igual manera Gitman, (2003), manifiesta que los Créditos bancarios o cuentas por pagar son la principal fuente de financiamiento no garantizado a corto plazo para empresas comerciales. Resultan de las transacciones en las que se compra la mercancía pero no se entrega una nota firmada que demuestre la obligación del comprador con el vendedor. Así mismo, el papel comercial es un término utilizado de forma usual para referirse a los documentos legales, bursátiles, financieros, comerciales, entre otros para referirse a los efectos de comercio. Según Weston y Copeland (1999) dice que el papel comercial se forma de documentos no garantizados, emitidos por empresas para financiar necesidades de crédito a corto plazo. Siguiendo con Ortiz (2005), manifiesta que aunque el crédito comercial concedido por los canales de suministro normales no está afectado por tasas de interés, cuando las empresas no cancelan sus compromisos, conforme a la fecha convenida en la operación de intercambio, se incurre en un costo de capital causado por los descuentos comerciales perdidos.

Por otro lado, la Línea de Crédito significa dinero siempre disponible en el banco, durante un período convenido de antemano. Según Besley y Brigham (2008), una línea de crédito es un acuerdo celebrado entre un banco y un prestatario en donde se indica el monto máximo del crédito que la institución financiera está dispuesta a extenderle al prestatario. El financiamiento a largo plazo, está representado por los adeudos cuyo vencimiento sea posterior a un (1) año, o al ciclo normal de las operaciones de este es mayor. Se originan de la necesidad de financiamiento de la empresa ya sea para adquisición de activos fijos, cancelación de bienes, redención de acciones preferentes, entre otros.

En este orden de ideas, Van Horne y otros (2002), su concepto estriba en que el financiamiento a largo plazo financia necesidades más permanentes, como pueden ser los activos fijos y aumentos fundamentales en cuentas por cobrar e inventarios. Siguiendo a Suárez (2003), señala que está formado por aquellos recursos financieros que la empresa obtiene del exterior, debido a que el capital funcional junto con la financiación interna resulta normalmente insuficiente para satisfacer las necesidades financieras de la empresa, esta tiene que acudir a la llamada financiación externa a través del mercado financiero o de fondos prestados en demanda de los diferentes tipos de recursos (esto es, para captar pasivos), que las empresas pueden obtener en este mercado. Entonces el financiamiento a largo plazo es a más de un año, con frecuencia financian necesidades de fondos diferentes al giro de la actividad normal de la empresa.

En este sentido, la hipoteca es un derecho real que recae sobre un inmueble, permaneciendo en poder del que lo constituye y dando derecho al acreedor para perseguirlo de manos de quien se encuentre y de pagarse preferentemente con el producto de la subasta. Según Amez (2002), las Hipotecas son un derecho

real indivisible, accesorio, limitado y de garantía por el cual quedan sujetos los bienes sobre los que se impone, cualquiera que sea su poseedor, al cumplimiento de la obligación para cuya seguridad fue constituida. Así mismo, una acción es un instrumento representativo de una parte del patrimonio de una sociedad. De esta forma, al adquirir una acción se participa de los beneficios y pérdidas que puede generar el negocio de esa sociedad. Amez (2002), contempla que las acciones son título que representa cada una de las partes iguales en que está dividido el capital social de una sociedad anónima. En ese mismo orden, acciones para León (2009), representan los intereses de los propietarios en la sociedad anónima. En síntesis las acciones son la que representan a los propietarios o socios derechos esenciales en las utilidades de cada ejercicio.

Las empresas generalmente poseen activos fijos y lo reportan en sus balances generales, pero es el uso de los edificios y del equipo lo que es realmente importante, no su propiedad en sí misma. Una forma de obtener el uso de los activos es comprarlos, pero una alternativa es el arrendarlos. Atendiendo a Van Horne y otro (2002) el arrendamiento es una fuente importante de financiamiento de equipo. Para determinado equipo, es el arrendamiento de mediano plazo. Un arrendamiento es un contrato por el cual el propietario de un activo (el arrendador) concede a otra parte (el arrendatario) el derecho exclusivo para utilizar el activo a cambio del pago de la renta.

Según Besley y Brigham (2008), manifiestan que el arrendamiento por lo común, las empresas poseen activos fijos que reportan en sus balances generales. Sin embargo, es el uso de los edificios y el equipo lo importante, y no la propiedad en sí misma. Una forma de obtener el uso de los activos es comprándolos otra es rentarlos. De la misma manera, un bono es una promesa de pago por parte de un emisor que toma fondos de uno o varios inversores. Considerado como una inversión a largo plazo con un nivel de riesgo moderado. En referencia a Ortega (2002), son instrumentos de deuda a largo plazo que representan compromisos de la empresa emisora de pagar el principal a su vencimiento y efectuar pagos oportunos de los intereses sobre el saldo pendiente. Amez (2002), dice que el bono Es un título valor representativo de un empréstito público o privado. Mediante esta clase de títulos las empresas o el Estado reciben fondos a un plazo relativamente corto, del público en general, para financiar sus proyectos y en contrapartida los bonos devengaran un interés para su poseedor.

## METODOLOGÍA

En cuanto al desarrollo de la metodología, se aplicaron las fases y procedimientos estandarizados para una investigación de tipo transeccional descriptiva, con diseño no experimental y de campo. Dado el hecho de que la población que caracteriza al sector objeto de estudio, es finita y accesible totalmente al investigador, no se establece un tamaño de muestra, por ende, se utilizó la técnica del censo, correspondiente a ciento setenta (170) gerentes de las organizaciones en referencia para el estudio. Como instrumentos de recolección de datos se aplicó un cuestionario dirigido a los gerentes, de 60 ítems, con escala de medición tipo Likert. Para determinar la validez, el instrumento fue sometido al juicio de cinco (5) jueces expertos en el área de la gerencia empresarial específicamente en el área de finanzas y la metodología de la investigación. La confiabilidad se estableció a través del coeficiente de confiabilidad de Alfa Crombach, aplicado a una muestra piloto equivalente al 20% de la población obteniéndose como resultado un  $\alpha = 0.91$  para el instrumento dirigido a los gerentes. Para los resultados se utilizó el procedimiento estadístico de análisis de frecuencia y la media mediado por la hoja de cálculo Excel.

## RESULTADOS

En cuanto a los resultados de la investigación se pudo determinar: La existencia de una baja frecuencia de atributos en los indicadores política de cobro y política de pago que compone la dimensión de políticas de financiamiento, lo que demuestra la falta de políticas definidas en la organización, teniendo en cuenta que si existe frecuencia de atributo con el indicador política de ventas, evidenciando que las empresas del

sector si tienen definidas sus políticas de ventas. Los planteamientos anteriores, demuestran la inadecuada política de financiamiento existentes en la empresas, ya que lo expuesto va en contraposición a lo planteado por Ortiz (2005), quien señala que la necesidad del financiamiento viene dada por circunstancias especiales de las políticas financieras de la organización cuando las mismas están bien controladas y gestionadas pueden garantizar la existencia de la liquidez suficiente para no tener que recurrir a fuentes de financiamiento. De allí la importancia de profundizar en estas políticas para lograr el buen funcionamiento de la organización.

En lo concerniente a examinar las fuentes de financiamiento, utilizadas en las empresas del sector farmacéutico, las fuentes de financiamiento interna, un alto porcentaje indicó que las empresas utilizan sus reservas como fuente de financiación, un alto porcentaje manifestó que no se vale de sus provisiones para su financiación, un alto porcentaje dice que en su mayoría acude a la ampliación del patrimonio para su financiación., sin embargo se puede apreciar que existe una baja presencia de atributos en el indicador de provisiones, esto debido a que estas empresas no tienen en cuenta las provisiones para su financiación, notándose que las empresas acuden a la reservas y a la ampliación del patrimonio para financiarse.

Con relación a las fuentes de financiación Externa a corto plazo, un alto porcentaje indicó que las empresas acuden a préstamos bancarios y créditos comerciales para financiarse, como también a líneas de créditos, mostrando que no tiene en cuenta para su financiación los pagarés, ni los papeles comerciales. De acuerdo a lo expuesto, manifiesta Suárez (2003), está formado por aquellos recursos financieros que la empresa obtiene del exterior, debido a que el capital funcional junto con la financiación interna resulta normalmente insuficiente para satisfacer las necesidades financieras de la empresa, esta tiene que acudir a la llamada financiación externa través del mercado financiero o de fondos prestados en demanda de los diferentes tipos de recursos (esto es, para captar pasivos), que las empresas pueden obtener en este mercado. Siguiendo con la financiación corto plazo que según León (2009) consiste en obligaciones que se espera que venzan en menos de un año, es necesario para sostener gran parte de los activos circulantes de la empresa, tales como caja, valores negociables, cuentas por cobrar e inventarios, un alto porcentaje indicó que las empresas acuden a préstamos bancarios para su financiación, un alto porcentaje arrojó que se cuentan con las reservas como fuente de financiación y un bajo porcentaje mostró que no acuden a las provisiones para financiarse. Para la financiación largo plazo, se evidencia que un alto porcentaje indicó que no acude a la financiación a través hipotecas, ni acciones, arrendamientos, bonos.

En este orden Van Horne y otro (2002) su concepto estriba en que el financiamiento a largo plazo financia necesidades más permanentes, como pueden ser los activos fijos y aumentos fundamentales en cuentas por cobrar e inventarios. Así mismo, se puede apreciar la baja presencia del atributo en los indicadores que componen la dimensión de fuentes de financiamiento externas a largo plazo, lo cual indica que estas empresas no se financian con hipotecas, acciones, arrendamiento ni bonos.

## CONCLUSIONES

Los cambios constantes que se dan en el ambiente, obligan a las empresas a enfrentarse a retos importantes derivados de su participación en la economía global, dentro de los cuales las estrategias de financiamiento cumplen un papel fundamental para impulsar el desarrollo. Es por ello, que el financiamiento se considera como uno de los problemas de más importancia dentro del sector farmacéutico. La investigación realizada permitió detectar que la mayoría de las empresas del sector farmacéutico no tienen definidas sus políticas de financiamiento de cobro y pago para llevar a cabo sus operaciones comerciales, sin embargo en lo que respecta a política de ventas se evidencia políticas definidas. En cuanto a los resultados obtenidos con el financiamiento a corto plazo que han sido utilizados por las empresas, destaca los préstamos bancarios y créditos comerciales, mientras que el financiamiento a largo plazo no se evidencia. Dado el tamaño y tipo de operación de estas empresas, están más orientadas hacia estrategias de financiamiento a corto plazo, recurriendo principalmente a

préstamos bancarios y créditos comerciales, con lo cual solo satisfacen requerimientos de capital de trabajo, de modo que cuando buscan ampliar sus operaciones deben recurrir a la banca privada que ofrece plazos y montos mayores. Notándose, que estas empresas no recurren a fuente de financiación externa, bien sea por el desconocimiento y/o dificultades de acceso a las fuentes de financiamiento, la cantidad de requisitos exigidos, así como la falta de una visión de negocio o gerencial para la ejecución de estrategias de financiamiento, que les permita ampliar sus operaciones y lograr el desarrollo de estas empresas.

Sin embargo, el sector estudiado, en caso de usar una fuente de financiamiento externa sería privada, lo cual no contrasta por un lado con la conducta esperada de financiarse al más bajo costo; ventaja que ofrecen los organismos públicos, y por otro, la ventaja de acceder a una tasa de interés menos costosa. Por tanto, otros factores distintos a la tasa de interés como la cantidad de requisitos exigidos, el tiempo de respuesta, monto y plazo del financiamiento constituyen variables importantes para la toma de decisiones financieras. En conclusión final, el empresario, no ha internalizado la importancia que tiene las políticas y estrategias a la hora de seleccionar una fuente de financiamiento adecuada. En este sentido, se recomienda que para lograr el desarrollo endógeno del sector es recomendable realizar una acción de formación en competencias financieras de los gerentes de las empresas y fomentar la cultura financiera empresarial dirigida a diseñar y difundir políticas y estrategias de financiamiento que permitan lograr el fortalecimiento de la capacidad de gestión de los negocios.

## RESUMEN

*El clima organizacional es una herramienta valiosa para cualquier empresa familiar se le concede mayor importancia al ambiente en el cual los colaboradores realizan sus actividades y busque el mejoramiento de su ambiente para lograr su desarrollo. El presente trabajo contempla una investigación para analizar las dimensiones de gestión, supervisión y esfuerzo del clima organizacional que inciden de manera directa en el desarrollo las empresas familiares del sector textil. La metodología de la investigación es cuantitativa y cualitativa. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los empleados de las empresas familiares del sector textil en Tijuana, B.C, México. Se procesó la información recabada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial, logrando como resultado determinar que dimensiones del clima organizacional son las que inciden en el desarrollo de las empresas familiares del sector industria.*

**PALABRAS CLAVES:** Empresa familiar, clima organizacional, sector textil

**JEL:** L21, L22

## ABSTRACT

*The organizational climate is a valuable tool for any family owned company gives greater importance to the environment in which the partners carry out their activities and look for the improvement of their environment to achieve its development. This work involves an investigation to analyze the dimensions of management, supervision and effort of the organizational climate that have a direct impact on the development the family businesses in the textile sector. The research methodology is both quantitative and qualitative. Quantitative research is applied to the survey, through questionnaires to the employees of the family businesses in the textile sector in Tijuana, B. C, Mexico. To process the information gathered with application of the statistical program SPSS for the descriptive and inferential analysis, achieving as result determine which dimensions of the organizational climate are those affecting the development of the family businesses in the industry sector.*

**KEY WORDS:** Family business, organizational climate, textile sector

**JEL:** L21, L22

## INTRODUCCIÓN

El clima organizacional es un tema de importancia en la actualidad para casi todas las empresas familiares, las cuales buscan un continuo mejoramiento del ambiente en su organización, para así lograr el desarrollo de la misma, sin perder de vista que el recurso más significativo y valioso son las personas que la integran. Conforme las empresas han evolucionado en la forma de realizar sus procesos y funciones, también ha cambiado su perspectiva y la manera como contextualizan el trabajo, de modo que ahora se le otorga mayor importancia al ambiente en el cual los colaboradores realizan sus actividades.

Esto se debe a que tiene una considerable influencia en el desempeño organizacional y la satisfacción de los miembros dentro de las compañías. (Hernández Sampieri y Méndez, 2012) De manera genérica lo identificamos como el ambiente que se vive en la empresa en un momento determinado; en donde puede resultar agradable o desagradable trabajar; o bien como la cualidad o propiedad del ambiente general, que perciben o experimentan los miembros de la organización, las que pueden ser de orden interno o externo y que influyen en su comportamiento. (Jiménez, 2011)

Para las empresas familiares resulta de suma importancia medir y conocer el clima organizacional, ya que este puede impactar significativamente en su desarrollo. Numerosos estudios han indicado que el clima organizacional puede hacer la diferencia entre una empresa con excelente desempeño y otra de bajo desempeño, de aquí la importancia de conocer el clima organizacional ya que se refiere al conjunto de propiedades medibles de un ambiente de trabajo, según son percibidas por quienes trabajan en él.

## REVISIÓN LITERARIA

### Empresa familiar

La empresa familiar es una figura mundial que tiene una gran importancia en la economía de un país por su número, su contribución al producto interno bruto y su capacidad de generar empleos, sin embargo, es considerada muy vulnerable en cuanto a su duración, sobre todo en el momento de pasar de una a otra generación. Ahora bien, cuando se estudia este tipo de empresa, en que no existe un consenso sobre su definición, es importante delimitar su concepto, revisaremos algunas aportaciones importantes de los teóricos de la materia. (De la Garza, Lorente y García 2012)

Por lo tanto (Belasteguigoitia, 2012) hace referencia que la empresa familiar es una organización controlada y operada por dos o más miembros del mismo grupo familiar con la intención que la empresa continúe en propiedad de la familia. Existen casos los cuales también se pueden considerar como empresas familiares: a) Una organización controlada mayoritariamente por una familia pero que no es operada por sus miembros, b) un negocio de una gran compañía multinacional operada por miembros de una familia local, c) una empresa controlada por dos personas sin relación familiar cuyos hijos trabajan en ella, d) un negocio que es propiedad de dos amigos del alma, que son como hermanos.

En tanto que Meroño (2009), menciona que las empresas familiares tienen como particularidad la implicación de la familia en la propiedad y gestión. Estos aspectos condicionan el funcionamiento y los objetivos de la organización. Pero que, en cualquier caso, son empresas y deben regirse por leyes económicas, esto quiere decir que debe prestarse la máxima atención a las cuestiones empresariales.

Tal es así que gestionar adecuadamente los aspectos familiares tiene por fin menoscabar las reglas de funcionamiento de cualquier empresa. En este contexto es imprescindible fijar como objetivo la profesionalización de la gestión (Meroño, 2009). Con frecuencia se entiende erróneamente que profesionalizar consiste en incorporar a las responsabilidades directivas a personas ajenas a la familia, por tanto, es preciso definir lo que significa profesionalización que no es otra cosa que disponer de unos directivos y unos sistemas de gestión que permitan las decisiones y el funcionamiento más eficaz y eficiente. Y por supuesto la independencia de la pertenencia a la propiedad familiar.

(Meroño, 2009). Román (2009), señala que la diversidad de definiciones de empresa familiar es tal que ha llegado a afirmarse que existen tantas de éstas como número de autores que tratan el tema (Croutsche y Ganidis, 2008). Asimismo Román (2009), menciona que una definición integral de empresa familiar establece que éstas son una síntesis única de los siguientes elementos: a) control sobre la propiedad (15% o más) por parte de dos o más miembros de una familia o asociación de familias; b) influencia estratégica de los integrantes de la familia en la dirección de la empresa; c) interés por las buenas relaciones familiares; d) interés en la continuidad de la empresa de generación a generación (Poza, 2004).

Para esta investigación se utilizó el modelo de los tres círculos (Tagiuri y Davis, 1982), es uno de los que han sido más empleados para describir distintas situaciones actuales y futuras de las empresas familiares. En este modelo cada círculo representa un grupo de personas, con particulares características en relación con la empresa familiar, y las intersecciones de los círculos los grupos de personas que poseen dos o tres de las tres características identificadas por el modelo.

Según coincidan en mayor o menor grado los tres círculos, es decir, estos se superpongan como atraídas por una fuerza centrípeta, algo que suele ocurrir en primera y segunda generación, o se distancien como separados por una fuerza centrífuga, como acostumbra a pasar en empresas familiares de gran tamaño, se estará frente a distintos tipos de empresas familiares, con características muy diferentes, por el número de protagonistas que en ellas trabajan o con ellas tienen relación, por los distintos roles que desempeñan y sus diferentes intereses, así como por el contenido de las relaciones y actitudes que entre unas y otras personas se dan.

### El Clima Organizacional

En un estudio realizado por Hernández Sampieri y Méndez (2012), mencionan que el concepto de clima organizacional ha recibido en las últimas décadas una atención considerable por parte de los administradores del desarrollo empresarial, particularmente a partir del 2000 (Hernández Sampieri y Andrade, 2011). Lo anterior se debe a que la mayoría de los modelos que caracterizan el comportamiento organizacional se centran en las percepciones del ambiente laboral al que se refieren como clima organizacional. (Patterson et al. 2005). Asimismo Hernández Sampieri y Méndez (2012), señalan que aunque recientemente, la mayoría de las definiciones conceptualiza al clima organizacional o laboral como un conjunto de percepciones de los individuos respecto a su medio interno de trabajo.

Estas reflejan la interacción entre los elementos individuales, las características y procesos de la organización (Schneider, Ehrhart y Macey, 2011; Datta et al., 2010; Neal et al., 2005) Chiavenato (2011), hace mención que como consecuencia del concepto de motivación (en el nivel individual) surge el concepto de clima organizacional (en el nivel de la organización) como aspecto importante de la relación entre personas y organizaciones. El clima organizacional está íntimamente relacionado con la motivación de los miembros de la organización, cuando la motivación entre los participantes es elevada, el clima organizacional tiende a ser elevado ya proporcionar relaciones de satisfacción, ánimo, interés y colaboración y colaboración entre los participantes.

Así el clima organizacional representa el ambiente interno entre los miembros de la organización, y está íntimamente relacionado con el grado de motivación existente. Expresándose en el concepto la influencia del ambiente sobre la motivación de los participantes, de manera que se pueda describir como cualidad o propiedad del ambiente organizacional que perciben o experimentan sus miembros y que influye en su conducta. (Chiavenato, 2011). Para efectos de esta investigación se tomaron en cuenta como variable dependiente el desarrollo de las empresas familiares y como variable independiente el clima organizacional con las siguientes dimensiones: la gestión, supervisión y esfuerzo para determinar si estas inciden en el clima organizacional para el desarrollo de las empresas familiares del Sector Textil de Tijuana, B.C. México. Gestión. Es contingente y situacional pues depende de aspectos como la cultura de cada organización, la estructura organizacional adoptada, las características del contexto ambiental, el giro de la organización, la tecnología utilizada y los procesos internos. (Chiavenato, 2011).

Supervisión. Es el apoyo que tiene el empleado del supervisor inmediato, es decir, la percepción del subordinado de la forma en que su jefe lo supervisa. (Belausteguigoitia, 2012). Esfuerzo. Se define como el tiempo y la energía que la persona invierte para obtener los resultados y los logros que se esperan de ella en su trabajo. Está constituido por dos dimensiones: el tiempo dedicado al trabajo y la intensidad del trabajo (Belausteguigoitia, 2012).

## METODOLOGÍA

Para el presente trabajo se eligió una muestra de 43 propietarios de las empresas familiares del sector textil afiliados al padrón de la Cámara Nacional de la Industria de Transformación (CANACINTRA) delegación Tijuana, Baja California. A los propietarios se les aplicó un cuestionario titulado conformado por con 75 preguntas relacionadas al tema de estudio. Una vez recopilada la información de los cuestionarios, se procedió a la elaboración de una de base de datos en SPSS y posteriormente se procedió a la captura de la información para luego se realizó el respectivo análisis y su interpretación. Se utilizó una escala de medición con una escala de *lickert*. Se elaboraron los cuadros y gráficos que nos permite determinar los factores claves que influyen en el proceso de sucesión de las empresas familiares del Sector Textil en Tijuana, B.C., México.

### Objetivo General

Determinar los factores que inciden el clima organizacional para el desarrollo de las empresas familiares del Sector Textil en Tijuana, B.C., México

### Objetivo Específico

Determinar si la gestión, supervisión y el esfuerzo inciden en el clima organizacional para el desarrollo de las empresas familiares del sector textil en Tijuana, B.C., México.

*Diseño De La Muestra:* El diseño de la muestra es resultado de la identificación de una población total de 43 empresas familiares del sector textil servicios, registradas en Cámara Nacional de la Industria de Transformación, (CANACINTRA) delegación Tijuana, en Baja California, y de la consideración del porcentaje de presencia sobre la población total, dando como resultado 33 empresas como muestra representativa, como se ejemplifica en la Tabla 1. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de empresas familiares es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y  $p = q = 0.5$ . Para la recolección de la información se realizaron entrevistas personales, para aclarar cualquier duda que tuviera el entrevistado, acerca de alguna de las preguntas del cuestionario, finalmente se obtuvieron 43 encuestas, estas fueron válidas y ninguna fue excluida al momento de analizar la información

Tabla 1: Total de Empresas Según CANACINTRA, Marzo 2011

	Población	Muestra
Total de empresas fabricantes de prendas de vestir	43	33

*La tabla muestra que el total de empresas registradas, integran una población de 43 la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número de empresas familiares, dando como resultado que la muestra esperada es de 33 empresas.*

### Validación Del Instrumento

A los propietarios se les aplicó un cuestionario conformado con 75 preguntas, el cual fue validado relacionado al tema de estudio, a través de un análisis factorial confirmatorio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis para determinar los factores claves, que influyen en el proceso de sucesión de las empresas familiares del Sector Textil en Tijuana, B.C., México. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por

dicho programa fue de .80, un grado de confiabilidad aceptable (ya que está por arriba .60 y de 0.70, puntuación mínima aceptable.).

Tabla 2: Análisis Factorial Confirmatorio

Variable	Dimensión	Alfa Normal	Alfa Estandar
Competitividad sistémica	Competitividad	0.70	0.70
	Tecnología	0.60	0.60
	Rentabilidad	0.70	0.70
	Proceso de sucesión	0.80	0.80
Conflictos intergrupales	Contexto familiar	0.80	0.80
	Desarrollo de personal	0.80	0.80
Actitudes propietarios	Consejo de familia	0.80	0.80
	Estilos de liderazgo	0.80	0.90
	Formación del propietario	0.80	0.80
Clima organizacional	Gestión	0.70	0.80
	Supervisión	0.90	0.90
	Esfuerzo	0.90	0.90

*Esta tabla muestra los resultados del análisis confirmatorio efectuado para validar el instrumento de medición utilizado en la investigación. Fuente elaboración propia (2012).*

Tabla 3: Análisis de Fiabilidad

Alfa de Cronbach	No. de elementos
.736	43

*En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .736, un grado de confiabilidad aceptable (ya que está por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2012)*

## RESULTADOS

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de *Pearson*. Los resultados de las correlaciones permiten concluir que dos variables están relacionadas con otras dos variables: Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de *Pearson*, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 y de una magnitud igual o mayor a 0.5, lo cual representa una correlación positiva de moderada a fuerte. Como se muestra en la Tabla 4. Resultando las variables independientes con una correlación más alta de acuerdo al criterio establecido con anterioridad, el esfuerzo y supervisión. Incidiendo de manera directa dos de las dimensiones de la variables independiente de clima organizacional con la variable dependiente el desarrollo de las empresas familiares.

Tabla 4: Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables Independientes

Correlación entre Variables	Correlación
Esfuerzo – Desarrollo de Personal	.606**
Supervisión –Estilo de Liderazgo	.779**
Supervisión – Formacion del propietario	.670**

*En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que el esfuerzo incide en el desarrollo de personal en un 0.606, la supervisión incide en el estilo de liderazgo en un 0.779, asimismo también la supervisión incide en la formación del propietario en un 0.670 siendo dos dimensiones del clima organizacional las que presentan correlaciones significativas en el nivel 0.01, dado como resultado las siguientes correlaciones en cada uno de ellos: cultura organizacional con 0.608, selección 0.582, liderazgo 0.533, capacitación 0.636 y proceso de profesionalización 0.589 \*\*La correlación es significativa en el nivel 0.01 \* La correlación es significativa en el nivel 0.05*

Una vez realizado el análisis de correlación, se determina que las dimensiones del clima organizacional que inciden de manera directa en el desarrollo de las empresas familiares son las siguientes: La correlación entre el esfuerzo con el desarrollo de personal tiene un coeficiente de .606 con un nivel de

significancia de 0.01, lo cual muestra una correlación moderada sustancial más alta entre estas dos variables. Se observa que la correlación entre la supervisión y el estilo de liderazgo del propietario muestra un coeficiente de .779 con un nivel de significancia del 0.01, lo cual muestra una correlación marcada alta. De igual manera la correlación entre la supervisión con la formación del propietario muestra un coeficiente de .670 con un nivel de significancia de 0.01, lo cual muestra una correlación moderada sustancial entre estas dos variables. Los empleados consideran que las relaciones interpersonales con los miembros de la familia, directivos y compañeros de trabajo son excelentes y los miembros de la familia, directivos y empleados están de acuerdo con la supervisión que reciben, con la proximidad y frecuencia con la que son supervisados. De igual manera están de acuerdo con la forma en que se juzga su trabajo de parte de los miembros de la familia y directivos, de que reciben un trato de igualdad y justicia de parte de la empresa y que están de acuerdo con el apoyo que reciben de parte de los empleados.

Asimismo se mantiene una excelente comunicación con ellos y que los mecanismos de comunicación con que cuenta la empresa son eficaces para la toma de decisiones. Consideran que el esfuerzo de los familiares que trabajan en la empresa y los directivos buscan mantener un paso uniforme de trabajo y se esfuerzan vigorosamente en realizar sus actividades por lo cual reciben el apoyo de los empleados. En lo que se refiere a la gestión los criterios utilizados al momento de designar cargos directivos dentro de la empresa se basan en la formación y en la experiencia profesional cuando el puesto es ocupado ya sea por un miembro de la familia o una persona ajena a ella. La remuneración del trabajo de los miembros familiares en comparación con el valor del mercado en la empresa se encuentra de acuerdo a la media que se maneja en el mercado laboral, por lo cual se encuentran de acuerdo con los sueldos que perciben.

## CONCLUSIONES

En lo que se refiere a la satisfacción laboral manifiestan que están medianamente de acuerdo los miembros de la familia y directivos en que se encuentran satisfechos con el trabajo que realizan, aunque se presentan algunas inconformidades. Aun así, se encuentran satisfechos con las oportunidades que les ofrece el trabajo y esto permite a los miembros de la familia y directivos realizar cosas para destacarse. Consideran que se encuentran remuneradas de manera adecuada las actividades que realizan con el sueldo que perciben los miembros de la familia y directivos, debido a esto y otros factores, los objetivos y metas que deben alcanzar, las pueden lograr. En cuanto a la remuneración del trabajo de los miembros de la familia esta igualado al valor del mercado laboral, es decir, no existe una sobrevaluación de los puestos.

El estilo de liderazgo en las empresas familiares de prendas de vestir se presenta a través del propietario ya que como líder acepta las decisiones de los demás miembros de la familia y colaboradores, valoran el tener buenas relaciones con todas las personas que trabajan en la empresa, prefieren aceptar las ideas, opiniones o actitudes de los demás y no promover las suyas, manifestándose un liderazgo democrático. Cuando hay ideas, opiniones o actitudes diferentes a las suyas, buscan posiciones intermedias y escuchan, teniendo convicciones claras, pero cambian de opinión cuando surge una buena idea. Los miembros de la familia, directivos y empleados están de acuerdo con la supervisión que reciben, de parte de su jefe inmediato o del propietario. También están de acuerdo con la frecuencia y proximidad en la que son supervisados y con la manera en que se juzga su trabajo.

Asimismo, los miembros de la familia, directivos y empleados están de acuerdo en que todos reciben un trato de igualdad y justicia por parte de la empresa y con el apoyo que reciben. Por último en cuanto al esfuerzo, los familiares que trabajan en estas empresas y los directivos buscan mantener un paso uniforme de trabajo, y de igual manera, los familiares se esfuerzan vigorosamente y los demás apoyan para alcanzar las metas y objetivos. El hallazgo fundamental de esta investigación tiene como resultado que las dimensiones del clima organizacional que inciden directamente en el desarrollo de la empresa familiar del sector textil son el esfuerzo y la supervisión.

# LAS REDES Y PROCESO DE INTERNACIONALIZACIÓN DE PEQUEÑAS Y MEDIANAS EMPRESAS: EL CASO DE LA INDUSTRIA DEL SOFTWARE DE COSTA RICA

Luis Zárate, Universidad Autónoma de Barcelona

## RESUMEN

### INTRODUCCIÓN

Existe entre la diversidad de teorías, la dificultad para que alguna, por sí misma, sea capaz de dar explicación al proceso de internacionalización en diversas circunstancias o sectores. Explicaciones teóricas más robustas y/o modernos marcos conceptuales parecen emerger de la combinación de múltiples teorías. En particular, la internacionalización de pequeñas y medianas empresas intensivas en conocimiento es un proceso complejo que necesita una visión más holística del fenómeno (véase por ejemplo: Bell et al., 2003, Crick y Spence, 2005; Johanson y Vahlne, 2003; Jones, 1999; Oviatt y McDougall 2005; Young et al., 2003). El propósito de esta investigación será explorar el proceso de internacionalización de las pequeñas y medianas empresas del sector del software en una economía pequeña y abierta (Costa Rica), bajo la perspectiva de tres importantes teorías (Modelo de Uppsala, Modelo de Nuevas Empresas Internacionales-INV y Modelo de Redes). Más específicamente, este trabajo busca mejorar la comprensión de cómo las relaciones de redes impactan los patrones y procesos de internacionalización de las PYMES de software, particularmente en términos de la selección de mercado y modo de entrada.

### REVISIÓN LITERARIA

#### El proceso de internacionalización

Los estudios empíricos sobre internacionalización de empresas pequeñas y medianas de software dan creciente evidencia que estas empresas no siguen etapas **específicas** en su proceso de internacionalización (Arenius, 2005; Bell, 1995; Crick y Spence, 2005; Moen et al., 2004). Pero, en las investigaciones de Coviello y Munro (1997), Hashai y Almor (2004). Ojala (2008) y López et al. (2009) se han encontrado varias etapas en el proceso de internacionalización de las empresas de software, aunque el proceso de internacionalización de estas PYMES ha sido más rápido y con menos etapas que las descritas en el modelo de Uppsala.

#### Selección del mercado

Aún cuando, algunos estudios empíricos muestran que la distancia psicológica podría explicar el comportamiento de la internacionalización de las pequeñas y medianas empresas de software, planteando que tienden a entrar primero a un mercado psicológicamente próximo, también se reconoce que hay otros factores que explican mejor su internacionalización (Arenius, 2005; Bell, 1995; Coviello y Munro, 1997; Crick y Spence, 2005; y Moen et al. 2004). Igualmente, en términos de Redes las investigaciones de Bell (1995), Coviello (2006), Coviello y Munro (1995, 1997), Moen et al. (2004) y Zain y Ng (2006) han encontrado que las empresas han utilizado relaciones de redes, para la selección de mercado. Estas relaciones influyen en la entrada a múltiples mercados por parte de pequeñas y medianas empresas intensivas en conocimiento. Coviello y Munro (1995, 1997) establecen que estas empresas utilizan diferentes tipos de redes para realizar su entrada a los mercados y estas contribuyen al su éxito; identificando oportunidades y contribuyendo a construir conocimiento de mercado.

### Modo de entrada

Para las nuevas empresas internacionales (INV's), el estudio de Schrader, McDougall y Oviatt (2000) encontró que “*venture entrepreneurs*” de EE.UU., controlaban el riesgo internacional de entrar en diferentes países utilizando modos de entrada que asumían pocos recursos, pudiendo mantener una baja dependencia en cualquiera de los mercados exteriores. Esto está en la línea con los argumentos de McDougall et al. (1994), quién propuso que debido a la escasez, las INV's tienden a internacionalizar un pequeño porcentaje de sus recursos esenciales para su sobrevivencia en relación a las empresas maduras. En los trabajos de Arenius (2005), Bell (1995), Crick y Spence (2005), Coviello y Munro (1997), Moen et al. (2004), aún cuando las empresas han comenzado su internacionalización abarcando países cercanos, geográficamente y/o psicológicamente, se desafían el concepto de distancia psicológica para explicar el comportamiento internacional de las PYMES de software. Sin embargo, no mencionan adecuadamente como las empresas van de un modo de entrada a otro, a través de las etapas en un mercado particular, según lo describe el modelo de Uppsala.

### Redes

La importancia de las relaciones de redes en la internacionalización de las empresas de software, ha recibido un creciente apoyo en diversos estudios empíricos como los de Coviello, (2006), Coviello y Munro (1995, 1997), Crick y Spence (2005), Loane y Bell (2006), Moen et al. (2004) y Zain y Ng (2006) y Ojala (2008), enfatizando el papel esencial que tienen las relaciones de redes entre empresas (y/o individuos), en el proceso de internacionalización de las PYMES. Desde el punto de vista de la selección de mercado, las redes han sido el iniciador de la entrada a los mercados exteriores (Coviello, 2006; Coviello y Munro, 1995, 1997; Crick y Spence, 2005; Loane y Bell, 2006; Moen et al., 2004; Zain y Ng 2006).

### Resumen E Identificación de las Preguntas de Investigación.

El propósito de esta investigación es examinar empíricamente el proceso de internacionalización de las pequeñas y medianas empresas, bajo la perspectiva de tres importantes teorías (Uppsala, Redes, INV). Utilizando el contexto de la industria de software en una economía pequeña y abierta se plantean las preguntas que esta investigación busca responder:

*Cómo el proceso de internacionalización de las pequeñas y medianas empresas de software costarricense se refleja en la selección de mercado y de modo de entrada.*

*Cómo impactan las relaciones de redes la selección de mercado y de modo de entrada a las pequeñas y medianas empresas de software de Costa Rica.*

### **METODOLOGÍA**

Se utiliza el método de estudio de casos (múltiple) realizando una recolección de datos cualitativos por medio de entrevistas a profundidad. Los estudios de casos, no son adecuados para toda clase de investigaciones; el problema y sus objetivos deciden, si es, o no, posible su utilización. Un estudio de casos es útil para construir teoría y probarla Yin (1994, 11-13). Se ha seleccionado la industria del software de una economía pequeña y abierta, que es propicia para estudiar una pronta internacionalización debido a su pequeño y cambiante entorno. Costa Rica es un país pequeño con una economía en desarrollo, ubicado en Centro América, en términos comparativos con respecto a otros países (en cuanto a población), para el 2008 tenía 4.5 millones, Uruguay 3.4 millones e Irlanda 4.2 millones. Tres países con similares poblaciones y considerados pequeños en sus respectivas regiones. Las exportaciones de software de Costa Rica y Uruguay para el 2008, fueron de 148 y 219 millones de dólares

respectivamente, Irlanda alcanzó en 2008 los 16.800 millones de dólares. Costa Rica ha tenido un proceso de liberación de su economía en las últimas décadas y tratados de libre comercio se han firmado con sus principales socios comerciales; China y Estados Unidos, entre otros.

## RESULTADOS Y DISCUSIÓN

En el proceso de crecimiento internacional de las tres empresas de software costarricense pareciera identificarse tres etapas de actividad internacional para las empresas. En términos de orientación, las pequeñas y medianas empresas de software costarricenses estudiadas, se enfocan en el mercado local durante un período de tiempo considerable. Durante esta etapa, existen intenciones de internacionalizarse, incluso, para alguna de ellas (empresa B), ésta intención nace antes de su fundación. La segunda etapa (2-4 años), se caracteriza por el inicio de las actividades internacionales en las empresas A, B y C, y por la evaluación de oportunidades de desarrollo y/o expansión.

En la última etapa, después de cuatro años (4+ años), las tres pequeñas y medianas empresas buscarán ampliar sus mercados de manera directa (D) o intermedia (I) (a través de una subsidiaria multinacional MNE) o desarrollarse en el (o los) mercados (s) que se han abarcado. Durante la primera de las tres etapas, hay un desarrollo en el mercado local, donde las empresas de software A y C se relacionan con empresas multinacionales radicadas en el país. Mientras permanecen en el mercado local (A y C), incuban su expansión internacionalización a través de las subsidiarias de multinacionales. La empresa B, es la que menos permanece exclusivamente en el mercado doméstico, abarca los mercados exteriores luego de dos años. Se puede decir que el proceso de internacionalización para las tres empresas, comienza con la búsqueda o concreción de su expansión exterior desde que se crean.

Durante la segunda etapa, todas las empresas estudiadas empiezan el contacto con los mercados internacionales, donde hay una evaluación del desarrollo (dentro de los mercados que están abarcando) y/o una evaluación para su expansión (a nuevos mercados). En la tercera etapa las empresas (A, B, C) tienen un crecimiento apoyado significativamente por sus ventas internacionales. Lo encontrado es contrapuesto a los hallazgos de Bell (1995) donde las empresas indican que generalmente no están inclinadas a cambiar su modo de entrada preferido cuando cubren otros mercados.

La explicación pertinente se podría extraer de, McDougall et al. (1994), que señala que debido a la escasez, las INV's tienden a internacionalizar un pequeño porcentaje de sus recursos esenciales para su sobrevivencia en relación a las empresas maduras y de Schrader, McDougall y Oviatt (2000), que encontraron que “*venture entrepreneurs*” de EE.UU., controlaban el riesgo internacional de entrar en diferentes países utilizando modos de entrada que asumían pocos recursos, pudiendo mantener una baja dependencia en cualquiera de los mercados exteriores. Es así como la utilización los modos de entrada seleccionados de parte de las empresas de software costarricenses estudiadas, es una opción consecuente, y en la línea del modelo INV., ya que no solo podría estar condicionadas por la escasez de recursos sino alternativamente puede ser una combinación de estrategia y escasez. Las anteriores consideraciones nos llevan a las siguientes proposiciones:

*P1: Las relaciones con empresas subsidiarias de multinacionales (MNE) parecen influenciar la selección del modo de entrada de las PYMES de software costarricense, solo en etapas posteriores a la inicial en su internacionalización.*

*P2: En la etapa inicial de su internacionalización las PYMES de software costarricense prefieren modos directos de entrada.*

La empresa B es la más precoz en términos internacionales y su proceso de internacionalización ha sido diferente con respecto a las empresas A y C. Esta empresa (B), luego de dos años en el mercado

doméstico, entra directamente al mercado más importante (EE.UU.). La experiencia previa de su CEO, en el negocio de software dentro Estados Unidos (EE.UU.), ha sido sin duda una ayuda significativa para el proceso. El comportamiento de las empresas A y C, en términos de selección de mercados en etapas posteriores a la inicial, está en la línea de algunos estudios empíricos (Arenius, 2005; Bell, 1995; Coviello y Munro, 1997; Crick y Spence, 2005; y Moen et al. 2004), que reconocen que hay otros factores, diferentes a la distancia psicológica y/o geográfica, que explican mejor su internacionalización.

En cuanto a la empresa B, concreta sus acuerdos con su socio comercial en el exterior antes de iniciar su internacionalización y por tanto la intención de ser internacional nace, incluso antes, que la misma empresa, además de ingresar al mercado más importante en etapas tempranas de su ciclo de vida. Lo que soporta lo encontrado por Bell et al. 2003 y Ojala (2008), además de ser compatible con la teoría INV (Oviatt y McDougall, 1994). Las anteriores consideraciones nos llevan a las siguientes proposiciones:

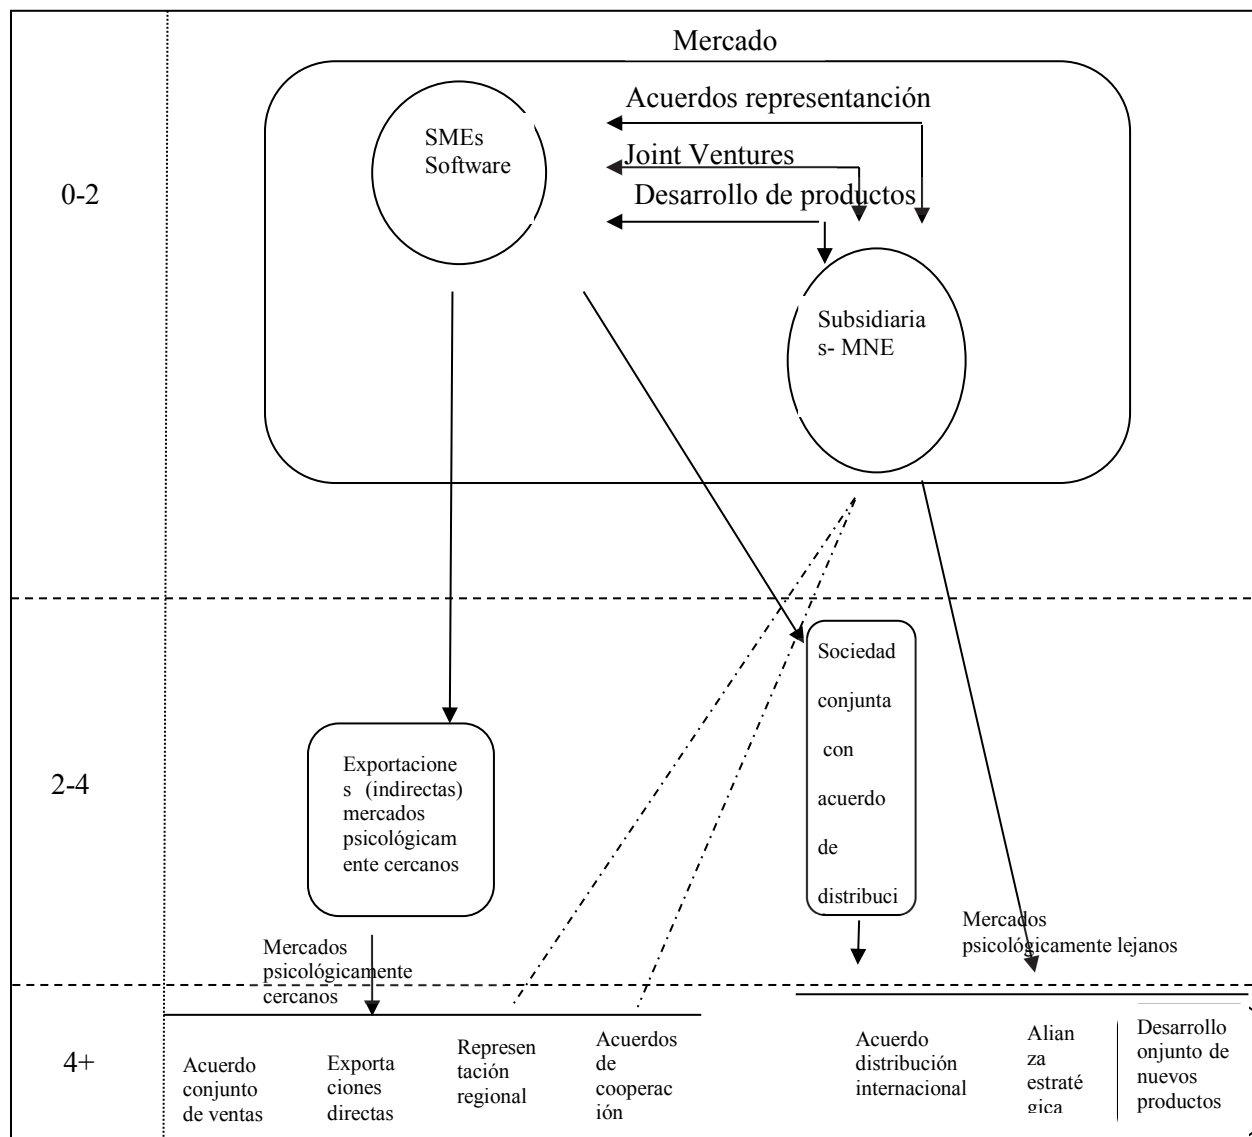

- P3 *Para las PYMES de software costarricenses la distancia psicológica y/o geográfica podría explicar la selección de su mercado exterior inicial.*
- P4 *Para las PYMES de software costarricenses la relación con empresas subsidiarias multinacionales podría explicar la selección subsecuente de su (s) mercado(s) exterior(es).*
- P5 *Para las PYMES de software costarricenses el ingreso al mercado objetivo (el más importante), será una oportunidad que busquen activamente (no pasivamente).*

Por último, dada la importancia de las relaciones de redes (de negocios o sociales) en la internacionalización de las empresas de software, ha recibido un creciente apoyo en diversos estudios empíricos como los de Coviello, (2006), Coviello y Munro (1995, 1997), Crick y Spence (2005), Loane y Bell (2006), Moen et al. (2004), Zain y Ng (2006) y Ojala (2008), enfatizando el papel esencial de las redes, en el proceso de internacionalización de las PYMES, lo anterior nos lleva a las siguientes proposiciones:

- P6: *Las relaciones sociales podrían ser más influyentes que las relaciones de negocios en la selección del mercado inicial en las PYMES de software costarricenses.*
- P7: *Las relaciones de negocios son muy influyentes que las relaciones sociales en la diversificación internacionalización de las PYMES de software costarricenses.*

Figura 1: el Proceso de Internacionalización: Pequeñas y Medianas Empresas de Software

## CONCLUSIONES

Para comenzar, el proceso de internacionalización de las pequeñas y medianas empresas de software tiene similitudes con lo discutido en la literatura en:

-Son empresas que están muy expuestas a los mercados internacionales, en términos de ventas exteriores con respecto al total; resalta la importancia que tienen los mercados internacionales para cada una de ellas.

-Se caracterizan por 3 "etapas", comenzando con un importante período de presencia local, pero durante la cual algunas de las empresas incuban relaciones (de negocios principalmente), que podrán llevarlos a otros mercados, en etapas posteriores.

-Las empresas utilizan diversos modos de entrada.

*Igualmente para todas las empresas estudiadas se pueden describir de manera ordenada los patrones de internacionalización:*

*La experiencia previa y la “cantidad” de relaciones sociales y de negocios que puedan tener los socios fundadores, da un impulso significativo a la internacionalización y posiblemente al momento en que se realice.*

*Las pequeñas y medianas empresas comienzan sus actividades con la intención de internacionalizarse.*

*Desde sus inicios y durante los primeros años comienzan a desarrollar sus redes (sociales y de negocios), algunas veces de manera pasiva otra de manera activa. Está relación les proporciona un modo de entrada a diferentes mercados.*

*Las relaciones sociales y de negocios, son desarrolladas en el tiempo. Y a través de ellas superan las barreras de entrada a ciertos mercados, les proveen conocimiento de mercado y modos de entrada, que conllevan a un uso óptimo de los escasos recursos que poseen.*

*Las relaciones de redes le permiten obtener un crecimiento por medio de los mercados externos.*

#### Limitaciones

Los resultados están limitados a por el hecho que son solo pequeñas y medianas empresas de la industria de software las que se tomaron en consideración, futuras investigaciones podrían incluir empresas más jóvenes, más viejas y grandes para realizar una comparación que pueda contribuir a mejorar el espectro de las conclusiones planteadas. La limitación del estudio podría enmarcarse en no considerar factores como el producto o factores de éxito dentro del proceso de internacionalización. La estrategia del producto de las empresas de software parece ser un importante factor para internacionalizarse a mercados líderes.

Más estudios son necesarios para comprobar si la generalización de los hallazgos podrían ser adecuados. Aunque las teorías utilizadas son de común uso para analizar la internacionalización de las pequeñas y medianas empresas de software, otros estudios podrían verse beneficiados utilizando la teoría basada en los recursos o la teoría basada en el conocimiento o el enfoque ecléctico o la perspectiva de los costos de transacción y así poder refinar y expandir los modelos desarrollados

## **RESUMEN**

*El problema de la recolección tratamiento de la basura se hace más grande a medida que las ciudades crecen y que la economía se industrializa. De 1950 al 2000, la población del mundo se duplicó, la producción agrícola se triplicó, el consumo de energía y la producción se cuadruplicaron, pero la generación de basura se quintuplicó (Harris, 2006:23; Gandy, 1994:1). De manera que lo que antes se resolvía de manera domiciliaria y en pequeña escala al crecer las ciudades se tienen que hacer para grandes volúmenes de un número cada vez más grande de hogares que desechan más basura. Además, el mayor nivel de vida (la sociedad de consumo) y la industrialización por su parte, han modificado la composición de la basura provocando que lo que antes era meramente desecho orgánicos fácilmente biodegradables, ahora se compone en mayor proporción de envolturas y derivados industriales como plásticos, pinturas, envases y otros artículos de difícil degradación. Asimismo, la acumulación de la basura produce líquidos "lixiviados" y gases que, si no se tratan adecuadamente, son potencialmente dañinos y contaminantes. Por lo que el trabajo busca identificar las variables que afectan de manera tal cómo el gobierno municipal maneja la política ambiental basada en residuos sólidos o basura.*

**PALABRAS CLAVES:** política ambiental, residuos sólidos.

## **ENVIRONMENTAL POLICY BASED ON SOLID WASTE (CASE: TOWNSHIP OZUMBA, MEXICO STATE)**

### **ABSTRACT**

*The problem of the treatment of waste collection gets bigger as cities grow the economy and industrialization. From 1950 to 2000, the population of the world doubled, tripled agricultural production, energy consumption and production quadrupled, but waste generation increased fivefold (Harris, 2006:23; Gandy, 1994:1). So what used to be solved in a small-scale home and as cities grow must be made for large volumes of an increasingly large number of households with more garbage discarded. Furthermore, the higher standard of living (the consumer society) and industrialization in turn, changed the composition of the waste causing what was once merely readily biodegradable organic waste, now comprises a greater proportion of wrappers and industrial derivatives as plastics, paints, packaging and other items difficult to degrade. Furthermore, accumulation of waste liquids produced "leachate" and gases which, if not properly treated, and potentially harmful contaminants. So the work seeks to identify the variables that affect the municipal government as handles environmental policy based on solid waste or garbage.*

**JEL:** I28, I29, N56, Q28, Q58, R58

**KEYWORDS:** environmental policy, solid waste

## INTRODUCCIÓN

Los procesos de globalización a nivel internacional establecen que todos los países deben tener una Política Ambiental (PA), México no es la excepción, debido a que la misma se rige por las entidades gubernamentales y por los convenios internacionales, donde se establecen las formas, normas y lineamientos que deben ser aplicados, tales como el Protocolo de Kioto, por mencionar algunos, este trabajo es derivado de un proyecto de investigación, el cual se llevó a cabo en el Municipio de Ozumba de Alzate Estado de México, con la participación de los sectores sociales, educativos y gubernamentales. Por lo que el propósito es identificar el comportamiento de las variables que afectan la forma de cómo el gobierno municipal maneja y lleva a cabo la PA basada en Residuos Sólidos (RS) o bien conocido como Basura. El propósito de la investigación fue generar estrategias de cómo se lleva a cabo el manejo de los RS a nivel municipal, es decir lo que comúnmente se denomina servicio de recolección de basura y limpia que realiza el gobierno municipal de acuerdo con las facultades que le otorga el artículo 115 constitucional y la Ley General de Equilibrio y Protección al Ambiente (LEGEEPA).

Por lo tanto, el aplicar estrategias que mejoren el funcionamiento de la PA y como consecuencia se logre impulsar la recolección de los RS entre los sectores involucrados, que son impulsados tanto por la Secretaría del Medio Ambiente y Recursos Naturales (SEMARNAT), así como de diversos grupos ambientalistas de la región. En el estudio, se excluyen el manejo de los residuos industriales u otros materiales, que requieren otro tipo de tratamiento y que estén sujetos a una normatividad especial, dictada por el gobierno federal. La interrogante a resolver en el estudio es ¿Cuál es el comportamiento de los factores que influyen en la PA en el manejo de los RS en el Municipio de Ozumba de Alzate Estado de México?, que busca como objetivo el realizar un diagnóstico de los factores que impactan en la PA respecto a los RS, que permita conocer las ventajas que ofrece para un desarrollo sustentable para el H. H. Municipio de Ozumba de Alzate Estado de México.

## REVISIÓN LITERARIA

La PA surge en la década de los 70's, como consecuencia de un conjunto de catástrofes tanto naturales como generadas por la actividad productiva dejando en claro la ausencia de una capacidad institucional de atención a estos fenómenos y a sus profundas consecuencias sociales (Jordi Micheli, 2002). Es entonces cuando se considera la urgencia de adoptar medidas para proteger el medio ambiente y encontrar la manera de que la interacción personas-medio ambiente que asegure el desarrollo sostenible de la sociedad humana. Pineda (2007) define a la PA como “un conjunto de objetivos, principios, criterios y orientaciones generales para la protección del ambiente de una sociedad, con el fin de garantizar la sustentabilidad del desarrollo para las generaciones actuales y futuras.

Promoviendo interés en los países de todo el mundo”. La PA se comenzó a desarrollar principalmente en el Continente Europeo en los años 70's considerándolo como el pionero en realizar acciones que benefician al medio ambiente con base sólidas en su ejecución. Debido a que está bien organizada y ejecutada en otros países que no se deben olvidar como son Japón, Estados Unidos, entre otros, el primero es un país que pese haber quedado devastado después de la segunda guerra mundial (Pérez Luño, 1991; 520), cuenta con una cultura ambiental sorprendente ya que ha implementado estrategias innovadoras en su PA; el segundo es relevante para el mundo entero, tanto por el impacto ecológico que produce una economía de esa magnitud y nivel de consumo, como por el protagonismo internacional de esa nación en cuanto a PA se refiere. Como lo fue durante el periodo de George Bush en su negativa a suscribir el Protocolo de Kioto, un tratado internacional que determina acciones para combatir el fenómeno del cambio climático. Actualmente el Presidente Obama accederá a firmar dicho protocolo y reconstruye la PA de ese País.

Para el caso de Latino América se ha visto favorecida gracias al programa de las Naciones Unidas sobre

el medio ambiente y el desarrollo sustentable concretamente con el proyecto denominado “Incorporación de la dimensión ambiental en los Procesos de Planificación del Desarrollo” (Brañez, 2000). Desde principios de la década de los noventa, los países Latinoamericanos impulsaron la formulación de PA con una mayor participación de la sociedad civil y del sector privado. Así se reflejó por ejemplo en los procesos de elaboración de algunos de los informes nacionales que se debieron presentar a consideración de la Conferencia de Río sobre Medio Ambiente y Desarrollo. Ese fue también el caso de los procesos de reforma de la institucionalidad ambiental que tuvieron lugar en muchos países en ese mismo contexto y que por lo general incluyeron procesos de participación ciudadana como lo son: La Cumbre de la Tierra de 1992, dirigidas a disminuir la emisión de las sustancias que generan la destrucción de la capa de ozono (ONU, 2001). En el 2001, en Estocolmo, Suecia un total de 127 países adoptaron un tratado de las Naciones Unidas para prohibir o minimizar el uso de doce de las sustancias más utilizadas en el mundo consideradas causantes de cáncer y defectos congénitos en personas y animales (Yarto, 2003).

### Política Ambiental en México

Los primeros antecedentes de la PA en México suceden en los años cuarenta, con la promulgación de la Ley de Conservación del Suelo y Agua. Tres décadas más tarde a inicios de los años setenta, se promulgo la Ley para Prevenir y Controlar la Prevención Ambiental. Lo anterior en respuesta a los “compromisos” asumidos por México en la “Conferencia de las Naciones Unidas Sobre el Medio Ambiente celebrada el 16 de Junio de 1972 en Estocolmo Suecia (Jordi Micheli, 2002). La PA de México se incluyó por primera vez en el Plan Nacional de Desarrollo (PND) de 1983 - 1988 (Jordi Micheli, 2002), durante el periodo del Lic. Miguel de la Madrid Hurtado, de esta manera se abrió una etapa para el desarrollo de la PA Mexicana. Esta reforma incluida en el Plan Nacional de Desarrollo permitió crear una nueva ley, que se publicó en 1988 en la LEGEEPA. La LEGEEPA, es el instrumento rector de la operación de la PA Mexicana. Sus aspectos básicos fueron establecer disposiciones para la protección de las áreas naturales, prevención y control de la contaminación de la atmosfera del suelo y del agua y el control de materiales y residuos peligrosos; la clasificación de las fuentes de contaminación y las sanciones para quien viole la ley. En diciembre de 1994, se crea la Secretaria de Medio Ambiente y Recursos Naturales (SEMARNAT), que tiene la competencia para emitir normas oficiales sobre preservación y restauración de la calidad del medio ambiente, sobre aprovechamiento sustentable de los recursos naturales, sobre materiales y residuos sólidos peligrosos, pero solo puede obligar a la

Administración Pública y no a los ciudadanos a cumplir sus normas. En el Estado de Monterrey se generó el proyecto de Bioenergía de Nuevo León S.A de C.V (BENLENSA) en el año 2003, el cual se destaca entre los demás de su origen, y tiene gran relevancia para el desarrollo del Estado, es considerado como el único proyecto de esta magnitud en la región, y es reconocido internacionalmente por ser el que más se apega en el acatamiento y generación de proyectos que ayudan al cumplimiento de la PA y es el primero en México y Latinoamérica de energía renovable utilizando como combustible el Biogás que se forma en un relleno sanitario, en este caso ubicado en el municipio de Salina Victoria Nuevo León. Actualmente Sistema Integral para el Manejo Ecológico y Procesamiento de Desechos (SIMEPRODE) y la empresa privada Bioelectrica de Monterrey, a través de Bioenergía de Nuevo León, operan desde el 19 de Septiembre del 2003.

### **METODOLOGÍA**

En este estudio se realizó un diagnóstico del comportamiento de los factores que influyen en la PA en base a RS en el Municipio de Ozumba de Alzate Estado de México, mediante la observación y referencias bibliográficas para su gestión y cómo afecta al entorno. Se desarrolló bajo el enfoque descriptivo, debido a que se buscó describir cómo se comportan dichos factores o elementos que intervienen en el funcionamiento de la PA. La recolección de los datos se enfocaron a la aplicación de un instrumento que media los factores que influyen en la PA, observando cual es el impacto que estos tienen en el desarrollo

del municipio así como la manera en que afectan el entorno y el beneficio que se obtiene de las mismas. Se hizo una observación sin la manipulación de las variables en un lapso de tiempo determinado y en un espacio concreto para posteriormente poder analizarlas. La aplicación de la encuesta buscó obtener información acerca de que tanto conocimiento tienen los habitantes del municipio sobre la PA, basada en RS, así como determinar las variables que afectan al inadecuado funcionamiento de las políticas públicas y conocer las actividades que realiza el municipio, para tener un adecuado manejo de RS por parte de la población del municipio de Ozumba de Alzate Estado de México.

La investigación se realizó de acuerdo a los siguientes puntos: se determinó la población objetivo la cual estuvo integrada por los habitantes del municipio de Ozumba de Alzate integrado por 16 delegaciones: San Vicente Chimalhuacán, San Lorenzo Tlantecoya, San Mateo Tecalco, Santiago Mamalhuazuca, San José Tlacotitlan, Huejote, San José, La Cantarilla, San Sebastián, Barrio Actopan, San Mateo Cuatapulco, El Espinal, Loma Bonita, Colonia Guadalupe Hidalgo. Solo se tomaron en cuenta a los habitantes de la cabecera municipal porque es en donde se encuentra la mayor concentración de la población como se muestra en la Tabla 1.

Tabla 1: Delegaciones del Municipio de Ozumba de Alzate

Delegaciones del Municipio de Ozumba	Población	%
Ozumba de Alzate	16.700	65%
San Vicente Chimalhuacán	2.616	10%
San Mateo Tecalco	2.897	11%
Santiago Mamalhuazuca	2.018	8%
San José Tlacotitán	1.462	6%
<b>Total</b>	<b>25.693</b>	<b>100%</b>

*Son datos de referencias de acuerdo a los datos del Municipio de Ozumba de Alzate Estado de México, Fuente: Elaboración Propia*

Considerando la población objetivo al municipio de Ozumba como marco muestral, en este municipio existen 16.700 habitantes, INEG (2009). Una vez identificado el marco muestral, se determinó el tamaño de muestra, equivalente al 10% de la población objetivo dando como resultado 166 habitantes a entrevistar. Por otra parte se obtuvo información de fuentes secundarias a través de la búsqueda en material bibliográfico, así como en internet, se obtuvo información de la SEMARNAT, INEGI (2010).

## RESULTADOS

De acuerdo a las reacciones de los padres de familia que viven en el municipio de Ozumba de Alzate, a los que se les aplicó el instrumento, estos comentaron que: desde el punto de vista de la PA basadas en RS, el municipio no promueve entre la población la diferencia entre lo que son RS y basura, por lo que lleva como consecuencia a desconocer y no poder llevar a cabo dicho proceso de separación de manera formal y consiente. Sin embargo, el Ayuntamiento ha realizado foros públicos en instituciones educativas con el propósito de que la población en general, tome consciencia y vaya generado actividades relacionadas con la PA basadas en RS, los cuales no han dado los resultados esperados; debido a que se ha cumplido con los compromisos adquiridos por parte de la población, pero las autoridades municipales no los han cumplido. Las instituciones educativas del municipio se comprometieron a separar los residuos orgánicos e inorgánicos en especial las botellas (PET).

En cuanto a la separación de residuos orgánicos se conversó con los padres de familia de las escuelas involucradas, donde se le dieron indicaciones del propósito y como se podría llevar a cabo el proceso de elaboración de la composta, donde ellos cumplieron con su compromiso. El municipio a su vez se comprometió a que cada mes mandaría un carro recolector de desechos para que recogiera el PET que se almacenaba, pero dicha actividad quedó inconclusa porque el municipio no cumplió con su responsabilidad. Por último, en el Municipio de Ozumba de Alzate Estado de México, no se cuenta con un relleno sanitario para el depósito de los RS, por lo que los desechos se depositan en un tiradero a

cielo abierto ocasionando daños y riesgos ambientales que esto conlleva, por lo tanto, el servicio proporcionado en la recolección por parte de las autoridades responsables, no cubre con la PA de RS establecidas en los PND, PED y PMD. Por lo tanto, las irregularidades en el otorgamiento del servicio que debe proporcionar el municipio, ha provocado que los habitantes dejen los paquetes de basura en donde ellos consideren conveniente, y haciendo caso omiso a la PA de RS, generando nuevos focos de infección, contaminación, entre otras, sin importarle las consecuencias que le puede acarrear a la salud de la población. Sin embargo, el desconocimiento de dicha problemática, permite que no se le dé ningún tratamiento, mezclando residuos tóxicos, orgánicos e inorgánicos”, de manera irracional.

## CONCLUSIONES

A través de esta investigación se determina que tradicionalmente el municipio de Ozumba de Alzate Estado de México se ha evocado a efectuar las tareas de recolección y retiro de basura y han descuidado las de reciclamiento de materiales reutilizables y la disposición de los residuos restantes en un relleno sanitario u otra alternativa técnicamente aceptable generadoras de una cultura ambiental. Esto debido a una inadecuada aplicación y seguimiento de la PA basada en RS que va más allá de la simple recolección de basura de las casas y la limpieza de las calles e incluye la integración y el trabajo en equipo entre las partes gubernamentales, sociales y privadas para lograr cambios significativos en pro del medio ambiente. De la misma forma, debido a lo observado y vivido en el municipio, es notorio que existe esa falta de interés hacia el medio ambiente, cabe señalar que la responsabilidad no debe recaer solo en el gobierno solamente, sino que es una labor que involucre a todos los sectores que la integran, pues finalmente la comunidad toma un rol importante para mejorar la situación del problema de la basura, ya que los ciudadanos deben tener una educación ambiental, desde temprana edad para el cuidado del medio ambiente. En cuanto al sector privado se refiere *se buscará impulsar su participación en proyectos de reciclaje, separación de basura, reutilización y confinamiento de desechos, y creación de centros de acopio. Tomando encuentra la perspectiva de que en muchos lugares del mundo se ha logrado un alto aprovechamiento de estos residuos, mediante la integración de este sector a la Política Ambiental.*

# **ESTRATEGIAS GERENCIALES Y EQUIPOS DE ALTO DESEMPEÑO EN LAS UNIVERSIDADES DE GESTIÓN PÚBLICA DE LA COSTA ORIENTAL DEL LAGO**

César Martínez, Universidad Del Zulia  
Magdy, De Las Salas, Universidad Del Zulia  
Diana Alvarez, Universidad Del Zulia

## **RESUMEN**

*Este trabajo tuvo por objetivo determinar la relación entre Estrategias Gerenciales y Equipos de Alto Desempeño en las universidades de gestión pública de la Costa Oriental del Lago. Se enmarcó en el área de las Ciencias Gerenciales, basándose en las teorías de Arias (2001), Ballart (2004), Blanchard (2007), Gimbert (2007), Robbins (2007), Serna (2006), Stewart (2006), Thompson (2001). La investigación fue de tipo descriptiva y de campo, con un diseño no experimental, transeccional y correlacional. La ponencia expone un avance de los logros alcanzados en el proyecto en cuanto al abordaje teórico de las variables y el procesamiento de algunas dimensiones. La población está conformada por 21 docentes activos de la Universidad Rafael María Baralt y el Núcleo LUZ Costa Oriental del Lago. Para recolectar los datos se diseñan dos cuestionarios, uno para medir la variable Estrategias Gerenciales con 40 ítems, y para medir la variable Equipos de Alto Desempeño con 23 ítems, con alternativas de respuestas tipo Likert: siempre, casi siempre, algunas veces, casi nunca y nunca. Para la validez se aplicará el juicio de cinco (5) expertos quienes harán las correcciones correspondientes, y la validez discriminante y para la confiabilidad, se aplicará el coeficiente de Cronbach. La revisión de la bibliografía consultada permitió profundizar en torno a la relevancia de la aplicación de estrategias gerenciales adecuadas como parte importante dentro de la organización si se quiere contar con equipos de alto desempeño, realizando actividades continuas dirigidas fundamentalmente a los directivos de las instituciones objeto de estudio con el propósito de internalizar el verdadero efecto y fuerza que tienen la visión y la misión de la institución, para luego ser transmitida y fomentada entre los trabajadores, creando una ventaja competitiva y estableciendo estrategias de desafío frente a los retos, y puedan mantenerse a lo largo del tiempo.*

**PALABRAS CLAVE:** Estrategias gerenciales, Equipos de alto desempeño

## **MANAGEMENT STRATEGIES AND HIGH PERFORMANCE AT THE UNIVERSITIES OF PUBLIC MANAGEMENT TEAMS FROM THE EAST COAST OF LAKE**

### **ABSTRACT**

*This paper was aimed at determining the relationship between management strategies and high-performing teams at the universities of public management of the eastern coast of the Lake. It is framed in the area of management science, based on the theories of Arias (2001), Ballarat (2004), Blanchard (2007), Gimbert (2007), Robbins (2007), Serna (2006), Stewart (2006), Thompson (2001). The research of was descriptive and field, with a non-experimental design, transactional and correlational. The paper presents an advance of the achievements of the project in terms of the theoretical approach of the variables and the processing of some dimensions. The population is comprised of 21 active teachers in the University Rafael Maria Baralt and the core light Costa Oriental del Lago. Two questionnaires, one*

*for measuring the variable management strategies with 40 items, and to measure the variable high-performing teams with 23 items, with alternatives of Likert-type responses are designed to collect data: always, usually, sometimes, almost never and never. Five (5) expert opinion who will make appropriate corrections will be applied for the validity and discriminant and for reliability, validity applies to Cronbach's coefficient. Review of the literature allowed to deepen around the importance of the application of management strategies as important within the organization if you want to have high performance teams carrying out continuous activities mainly aimed at managers of institutions under study with the purpose of internalizing the true effect and strength that have the vision and the Mission of the institution in order to then be transmitted and encouraged among workers, creating a competitive advantage and establishing strategies to challenge the challenges, and can be maintained over time.*

**KEY WORDS:** Management Strategies, High-Performing Teams

Esta investigación tuvo como propósito establecer la relación entre Estrategias Gerenciales y Equipos de Alto Desempeño en las universidades de gestión pública de la Costa Oriental del Lago. Se enmarcó en el área de las Ciencias Gerenciales, basándose en las teorías de Arias (2001), Ballart (2004), Blanchard (2007), Gimbert (2007), Robbins (2007), Serna (2006), Stewart (2006), Thompson (2001). La investigación fue de tipo descriptiva y de campo, con un diseño no experimental, transeccional y correlacional. La indagación expone la problemática en las instituciones educativas que carecen de aplicación de estrategias gerenciales innovadoras, acordes a la realidad actual, que les permita un mejor desarrollo humano a través de la capacitación, poca disposición de los decanos a impulsar aspectos de interés del personal como son mejorar la calidad de vida, profesional, la gestión del conocimiento, innovación, creatividad entre otros, lo cual refleja que los dirigentes actuales no están formados como equipos de alto desempeño.

Considerando las dimensiones del problema planteado, se presenta la sistematización del mismo, orientada por su objetivo general: Determinar la relación entre estrategias gerenciales y Equipos de alto desempeño en las universidades de gestión pública de la Costa Oriental del Lago?

Este trabajo además presenta un avance de los logros alcanzados en este proyecto investigación, en cuanto al abordaje teórico de las variables y el procesamiento de algunas dimensiones.

La población está conformada por 21 docentes activos de la Universidad Rafael María Baralt y el Núcleo LUZ Costa Oriental del Lago. Para recolectar los datos se diseñan dos cuestionarios, uno para medir la variable Estrategias Gerenciales con 40 ítemes, definida como “El proceso mediante el cual los dirigentes, procesan, analizan y evalúan la información organizacional, su situación y competitividad con el propósito de anticipar y decidir sobre el direccionamiento de la institución hacia el futuro, relacionado con la visión”, y el otro cuestionario para medir la variable: Equipos de Alto Desempeño con 23 ítemes, definida como: El grupo que comparte un arraigado sentido de propósito, valores comunes y visión convincente. El propósito y los valores mantienen unido el equipo y forma el fundamento de su alto desempeño. Los miembros confían en la capacidad de superar los obstáculos.

El instrumento consta de alternativas de respuestas tipo Likert: siempre, casi siempre, algunas veces, casi nunca y nunca. Para la validez se aplicará el juicio de cinco (5) expertos quienes harán las correcciones correspondientes, y la validez discriminante y para la confiabilidad, se aplicará el coeficiente de Cronbach. El análisis bibliográfico desarrollado permitió concluir profundizando en torno a la relevancia de los principios y elementos estratégicos, para la aplicación de estrategias gerenciales educativas adecuadas con el propósito de anticipar proactivamente el futuro viable de la organización, coincidiendo con Serna (2006), utilizando equipos engranados de alto desempeño, con actividades progresivas dirigidas fundamentalmente a los directivos de las instituciones estudiadas.

Estos equipos se utilizarán con el objeto de internalizar las etapas, descritas por Blanchard (2007), desde los directores, el verdadero efecto y fuerza que tienen la misión o razón de ser educativa y la visión, es

decir su posicionamiento institucional dentro de un plazo establecido, para luego ser transmitida y fomentada entre los profesores, empleados y obreros, produciendo una ventaja competitiva, por la relación de ambas variables, estableciendo líneas flexibles de desafío frente a los nuevos retos, mantenidas a lo largo del tiempo.

## **RESUMEN**

*El objetivo principal de la investigación fue realizar un diagnóstico que permitiera conocer y medir el clima y satisfacción laboral percibido por los trabajadores de la empresa Grupo Azul, ubicada en Cruz Azul, Hidalgo, México. El diagnóstico se realizó a 38 trabajadores, el 100% de los trabajadores, todos hombres. El estudio es descriptivo, los instrumentos utilizados fueron con una escala tipo Likert de cinco puntos que mide el clima laboral y satisfacción laboral percibido por los trabajadores. El instrumento de clima organizacional consta de un total 76 preguntas divididas en las 12 variables y el instrumento utilizado para medir la satisfacción laboral consta de 23 preguntas divididas en 5 variables. En los dos cuestionarios se analizó la fiabilidad. Finalmente, se proporciona una propuesta para mejorar la situación de clima y satisfacción laboral medida.*

**PALABRAS CLAVE:** Clima laboral, organización laboral y satisfacción laboral

## **STRATEGIC POSITIONING BASED AN APPROPRIATE WORKING ENVIRONMENT: STUDY OF INTERNAL CUSTOMER SERVICE AND PROFESSIONAL SERVICES GRUPO AZUL**

### **ABSTRACT**

*The main objective of the research was to make a diagnosis that would enable and measure climate and job satisfaction perceived by the workers of the company Blue Group, located in Cruz Azul Hidalgo, Mexico. The diagnosis was made 38 workers, 100% of the workers, all men. The study is descriptive, the instruments used were a Likert scale of five points which measures the work environment and job satisfaction perceived by workers. The organizational climate instrument consists of a total of 76 questions divided into the 12 variables and the instrument used to measure job satisfaction consists of 23 questions divided into 5 variables. In the two questionnaires was analyzed reliability. Finally, it provides a proposal to improve the situation as climate and job satisfaction.*

**JEL:** J28, M12, M54

**KEYWORDS:** Work environment, work organization and job satisfaction.

## **INTRODUCCIÓN**

El clima organizacional y la satisfacción laboral son relevantes en el comportamiento del personal que labora en Grupo Azul; esto “potencia aspectos como la eficacia, diferenciación, innovación y

adaptación...” (Valle, 1995). Este estudio muestra las condiciones laborales en que se desenvuelve el personal, considerando que el clima organizacional y la satisfacción laboral son factores determinantes en el éxito del trabajo de toda organización.

Esta investigación estudia el clima organizacional y la satisfacción laboral, dos variables del comportamiento organizacional, se establece una relación entre ellas para observar la validez con la cual se comportan. Una definición de clima organizacional es la formada por los aportes de los investigadores Rousseau (1988) y Schneider y Reichers (1983): clima son las descripciones individuales del marco social o contextual del cual forma parte la persona, son percepciones compartidas de políticas, prácticas y procedimientos organizacionales, tanto formales como informales. Locke (1976) ha definido satisfacción laboral como “un estado emocional positivo o placentero resultante de una percepción subjetiva de las experiencias laborales del sujeto”. No se trata de una actitud específica, sino de una actitud general resultante de varias actitudes específicas que un trabajador tiene hacia su trabajo y los factores con él relacionados. La satisfacción laboral, entendida como un factor que determina el grado de bienestar que un individuo experimenta en su trabajo, se está convirtiendo en un problema central para la investigación de la organización (Boada y Tous, 1993). Así, la satisfacción laboral es uno de los ámbitos de la calidad de vida laboral que ha captado mayor interés.

## REVISIÓN LITERARIA

El clima organizacional se refiere al modo en que se siente la gente sobre uno o más criterios en un momento determinado. Para el ámbito psicosocial; el concepto clima se refiere a un conjunto de valores, actitudes que se forman a partir de la percepción de aspectos sociales y estructurales que integra el ambiente laboral. Méndez Álvarez (2006) define al clima organizacional como el ambiente propio de la organización, producido y percibido por el individuo de acuerdo a las condiciones que encuentra en su proceso de interacción social y en la estructura organizacional que se expresa por variables (objetivos, motivación, liderazgo, control, toma de decisiones, relaciones interpersonales, cooperación) que orientan su creencia, percepción, grado de participación y actitud determinando su comportamiento, satisfacción y nivel de eficiencia en el trabajo. Por otra parte, Márquez (2001) menciona que la satisfacción podría definirse como la actitud del trabajador frente a su propio trabajo, dicha actitud está basada en las creencias y valores que el trabajador desarrolla de su trabajo.

Las actitudes son determinadas conjuntamente por las características actuales del puesto por las percepciones que tiene el trabajador de lo que debería ser. Davis y Newstrom (1999) definen satisfacción laboral como el conjunto de sentimientos y emociones favorables o desfavorables con el cual los empleados consideran su trabajo. El clima organizacional y la satisfacción laboral son relevantes en el comportamiento de los trabajadores que labora en las organizaciones. El clima organizacional ha sido estudiado por autores tales como Lewin (1951), Argyris (1957), Forehand y Gilmer (1964), Halpin y Croft (1963) entre otros.

## METODOLOGÍA

Esta investigación es un estudio de tipo descriptivo exploratorio que tendrá sustento en la aplicación de instrumentos de medición cuantitativa como son análisis estadísticos; incluyendo estadística descriptiva para poder determinar la afirmación o la nulidad de la hipótesis planteada en dicha investigación. El estudio consistió en la aplicación de un instrumento (cuestionario) para el clima organizacional y otro para el de satisfacción laboral. El instrumento utilizado para medir el clima organizacional consta de 12 variables que son: comunicación interna, reconocimiento, relaciones interpersonales en el trabajo, calidad en el trabajo, toma de decisiones, entorno físico, objetivos de la institución, compromiso, adaptación al cambio, delegación de actividades y funciones, coordinación externa y eficiencia en la productividad; el instrumento de clima organizacional consta de un total 76 preguntas divididas en las 12 variables como se

muestra en la tabla 1. El instrumento utilizado para medir la satisfacción laboral consta de 5 variables que son: satisfacción con la relación con sus supervisores, satisfacción con las condiciones físicas en el trabajo, satisfacción con la participación en las decisiones, satisfacción con su trabajo y satisfacción con el reconocimiento; el instrumento de satisfacción laboral consta de 23 preguntas divididas en las 5 variables como se muestra en la tabla 2.

El cuestionario que mide el clima organizacional es con respuestas basadas en escala tipo Likert, de cinco puntos (a saber: Muy de acuerdo =1, De acuerdo = 2, No estoy seguro = 3, En desacuerdo = 4, Totalmente en desacuerdo = 5. En el cuestionario que mide la satisfacción laboral los trabajadores también responden utilizando un formato de respuesta de Likert de siete puntos: Muy satisfecho= 1, Satisfecho=2, Casi satisfecho=3, Indiferente=4, Poco satisfecho=5, Insatisfecho=6 y Muy insatisfecho= 7. En los dos cuestionarios se analizó la fiabilidad (coeficiente de consistencia interna o indicador de unidimensionalidad). “Por fiabilidad se entiende aquí como lo que indican los coeficientes de consistencia interna; de manera más específica nos referimos al coeficiente Alpha de Cronbach.

Los coeficientes de consistencia interna se interpretan de hecho como indicadores de unidimensionalidad; en este sentido se denominan también coeficientes de homogeneidad (homogeneidad de los ítems, es decir, todos miden lo mismo). Estos coeficientes indican en qué grado se puede considerar que las respuestas a estos ítems (las de cada escala) cavarían, están relacionadas entre sí y consecuentemente confirman que los ítems miden lo mismo y son sumables en una puntuación total. Sobre el valor de los coeficientes de fiabilidad, es habitual considerar un valor de 0,70 como aceptable (Schmitt, 1996) pero un valor como 0,60 es suficiente para Morales et al. (2003), si se trata de investigaciones de carácter básico y según Schmitt (1996) un valor de 0.50 no atenúa de manera apreciable las correlaciones con otras variables” Chiang et al, 2007, p66. Los coeficientes de Alpha Cornbach se calcularon por variable en los dos cuestionarios como se muestra en la tabla 1 y 2. La investigación se aplicó a trabajadores y supervisores siendo un total de 38 (todos del sexo masculino), también en los dos cuestionarios se consideraron tres variables descriptivas: tiempo de servicio en la empresa, edad y estado civil.

Tabla 1: Variables de Clima Organizacional

Nombre de la variable	Preguntas (ítems)	Coefficiente Alpha Cronbach
Comunicación interna	1 a 14	.860
Reconocimiento	15 a 24	.812
Relaciones interpersonales en el trabajo	25 a 32	.865
Calidad en el trabajo	33 a 40	.797
Toma de decisiones	41 a 46	.732
Entorno físico	47 a 52	.535
Objetivos de la institución	53 a 55	.919
Compromiso	56 a 59	.366
Adaptación al cambio	60 a 64	.593
Delegación de actividades y funciones	65 a 68	.830
Coordinación externa	69 a 73	.726
Eficiencia en la productividad	74 a 76	.271

*El cuestionario de clima laboral que se aplicó es a partir del aplicado por Chiang et al (2007). Las variables o dimensiones consideradas en la medición de clima laboral tienen la capacidad de permitir reagrupar varias preguntas y analizarlas bajo una misma dimensión. Fuente: Elaboración propia.*

Tabla 2: Variables de Satisfacción Laboral

Nombre de la variable	Preguntas (ítems)	Coefficiente Alpha Cronbach
Satisfacción con la relación con sus supervisores	1 a 5	.849
Satisfacción con las condiciones físicas en el trabajo	6 a 10	.651
Satisfacción con la participación en las decisiones	11 a 16	.746
Satisfacción con su trabajo	17 a 20	.728
Satisfacción con el reconocimiento	21 a 23	.718

*El cuestionario de satisfacción laboral que se aplicó es a partir del aplicado por Chiang et al (2007). Las variables o dimensiones consideradas en la medición de satisfacción laboral tienen la capacidad de permitir reagrupar varias preguntas y analizarlas bajo una misma dimensión.*

## RESULTADOS

Los resultados de la investigación en Grupo Azul se realizaron utilizando el software SPSS versión 18, en cada pregunta del cuestionario de clima laboral y satisfacción laboral se utilizaron datos descriptivos. En cada pregunta del cuestionario de clima laboral y satisfacción laboral se realizó una descripción de dichos datos descriptivos, realizando a la vez, una figura con los datos descriptivos obtenidos en SPSS, la descripción de los datos incluye datos como la media, moda y desviación estándar, por cada variable se realizó un diagnóstico. A continuación se presenta la descripción de la variable Comunicación interna, la cual corresponde al cuestionario de clima organizacional, de manera similar se presentaron las demás variables de clima y satisfacción laboral. Las figura 1 y las tabla 3 presentan como se presentaron las preguntas del diagnóstico de la variable Comunicación interna. Al final de las preguntas de cada variable se realizó un resumen, como el que se muestra para la variable Comunicación interna.

### Primer Variable: Comunicación Interna

Figura 1: Pregunta 1: ¿Se Siente Ud. Libre Para Conversar con su Supervisor o Jefe Inmediato Acerca de su Trabajo?

*La figura muestra la representación gráfica de las frecuencias correspondiente a la pregunta uno del cuestionario de clima organizacional. Las preguntas están agrupadas en dimensiones (variables) para su estudio. Fuente: Elaboración propia.*

Tabla 3: Frecuencias de la Pregunta uno del Cuestionario de Clima Organizacional

		Pregunta 1			
Válidos		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
	Muy de acuerdo	7	18.4210526	18.4210526	18.42105263
	De acuerdo	20	52.6315789	52.6315789	71.05263158
	No estoy seguro	7	18.4210526	18.4210526	89.47368421
	En desacuerdo	2	5.26315789	5.26315789	94.73684211
	Totalmente en desacuerdo	2	5.26315789	5.26315789	100
	Total	38	100	100	

*La tabla muestra las frecuencias y porcentajes obtenidos para la pregunta uno del cuestionario de clima organizacional, los porcentajes y las frecuencias son interpretados por cada pregunta y por variable. Los datos fueron procesados con software SPSS. Fuente: Elaboración propia.*

Los trabajadores se sienten mayormente libres de conversar con sus superiores acerca de su trabajo, aunque existe cierto grado de inseguridad. La media se encuentra entre “De acuerdo” y “no estoy seguro”.

Existe un porcentaje acumulado de 71.05 entre los que están “Muy de acuerdo” y “De acuerdo”, aunque los que no están seguros representan el 18.42%. La suma de los que están “En desacuerdo” y “Totalmente en desacuerdo” es 10.52%.

#### Resumen de la Variable Comunicación Interna:

En la mayoría de las preguntas sobre comunicación interna se encuentran en un nivel bajo, esto se puede ver en la media de estas preguntas que esta entre “De acuerdo” y “No estoy seguro”. Una condición ideal es que la media estuviera entre “Muy de acuerdo” y “De acuerdo”. Se puede observar que mayormente los trabajadores se sienten libres de conversar con sus superiores, aunque existe un cierto grado de inseguridad. Apenas hay una suficientemente adecuada relación con sus compañeros de trabajo, pero existe un alto porcentaje de trabajadores que están inseguros. Los trabajadores sienten que su relación con su supervisor o jefe inmediato no es lo suficientemente de confianza y apoyo recíproco. Los trabajadores mayormente creen que en su área de trabajo se producen errores por falta de información.

Existe un 52.63 % que opina estar “Muy de acuerdo” y “De acuerdo” en que el supervisor o jefe inmediato se preocupa de explicar todo muy bien de modo que no existan confusiones, aunque existe un 26.31% que opina no estar seguro. La mayoría de los trabajadores considera que no se les entrega la información suficiente en el momento, para realizar bien su trabajo. Solamente la mitad de los trabajadores considera que ante un problema en su trabajo puede hablar con su supervisor o jefe inmediato en forma franca y sincera. Existe una mayoría de trabajadores que siente que no se está trabajando en equipo. Existe una mayoría que siente que no se está avanzado en la misma dirección. La mayoría de los trabajadores siente que la información no se comparte con el resto del equipo de trabajo. Existe apenas una suficiente opinión de que el supervisor o jefe inmediato se preocupan por la seguridad de los trabajadores. Las reuniones de trabajo se sienten que son apenas suficientemente efectivas. Mayormente los trabajadores opinan que informan cuando y donde pueden ser localizados.

### **CONCLUSIONES**

Los trabajadores se sienten mayormente libres de conversar con sus superiores acerca de su trabajo, aunque existe cierto grado de inseguridad. La media se encuentra entre “De acuerdo” y “no estoy seguro”. Existe un porcentaje acumulado de 71.05 entre los que están “Muy de acuerdo” y “De acuerdo”, aunque los que no están seguros representan el 18.42%. La suma de los que están “En desacuerdo” y “Totalmente en desacuerdo” es 10.52%. Los trabajadores consideran suficientemente adecuada la relación con sus compañeros de trabajo, aunque existe una considerable cantidad de trabajadores que están inseguros. La media se encuentra entre “De acuerdo” y “no estoy seguro”. Existe un porcentaje acumulado de 60.52 entre los que están “Muy de acuerdo” y “De acuerdo”, aunque los que no están seguros representan el 21.05%. La suma de los que están “En desacuerdo” y “Totalmente en desacuerdo” es 18.41%.

Los trabajadores sienten que su relación con su supervisor o jefe inmediato no es lo suficientemente de confianza y apoyo recíproco, sólo el 50% de los trabajadores opinan estar “Muy de acuerdo” o “De acuerdo”. Los trabajadores que están inseguros representan el 28.94% y los que están “En desacuerdo” y “Totalmente en desacuerdo” representan el 21.04%. Los trabajadores mayormente creen que en su área de trabajo se producen errores por falta de información. Existe un 60.52% que opinan estar “Muy de acuerdo” y “De acuerdo” con esta información, aunque existe un 15.78% que opinan “no estar seguros” y 23.67% opina estar “en desacuerdo” y “Totalmente en desacuerdo” con dicha afirmación. Existe un 52.63 % que opina estar “Muy de acuerdo” y “De acuerdo” en que el supervisor o jefe inmediato se preocupa de explicar todo muy bien de modo que no existan confusiones, aunque existe un 26.31% que opina no estar seguro. Existe un 21.04% que opina estar “En desacuerdo” y “Totalmente en desacuerdo” con el supervisor o jefe inmediato se preocupa de explicar todo muy bien de modo que no existan confusiones.

La mayoría de los trabajadores considera que no se les entrega la información suficiente en el momento, para realizar bien su trabajo. La media se encuentra en “No estoy seguro”, la cual representa un 15.78%, Los que están “En desacuerdo” y “Totalmente en desacuerdo” representan el 39.47%, los que están “Muy de acuerdo” y “De acuerdo” representan el 44.73%.

Solamente la mitad de los trabajadores considera que ante un problema en su trabajo puede hablar con su supervisor o jefe inmediato en forma franca y sincera. Existe un 28.94% que dice no estar seguro con respecto a esta afirmación. Los que dijeron estar “En desacuerdo” y “Totalmente en desacuerdo” representan el 21.04%. La media se encuentra entre “De acuerdo” y “No estoy seguro”. Existe una mayoría de trabajadores que siente que no se está trabajando en equipo. Entre los que están “Muy de acuerdo” y “De acuerdo” en que si se trabaja en equipo es el 43.24%, pero entre los que sienten “No estar seguros”, “En desacuerdo” y “Totalmente en desacuerdo” de que no se está trabajando en equipo son el 56.76%. Existe un trabajador que no contesto a la pregunta. La media se encuentra entre “No estoy seguro” y “En desacuerdo”. Existe una mayoría que siente que no se está avanzado en la misma dirección, esto representa el 39.47%. Existe un 26.31% que dice “No estar seguro” y un 34.2% que dice estar “En desacuerdo” y “Totalmente en desacuerdo”. La media se encuentra entre “De acuerdo” y “No estoy seguro”. La mayoría de los trabajadores siente que la información no se comparte con el resto del equipo de trabajo. El 52.64% de los trabajadores dice “No estar seguro”, estar “En desacuerdo” y “Totalmente en desacuerdo”. Existe un 23.68% que dice “No estar seguro” de sentir que la información se comparte con el equipo de trabajo. La media se encuentra entre “De acuerdo” y “No estoy seguro”.

Existe apenas una suficiente opinión de que el supervisor o jefe inmediato se preocupan por la seguridad de los trabajadores, esto es el 62.16%. La media se encuentra entre “De acuerdo” y “No estoy seguro”. Existe un 13.15% que dice no estar seguro de esta afirmación y un 23.67% que están “En desacuerdo” y “Totalmente en desacuerdo” con dicha afirmación. Las reuniones de trabajo se sienten que son apenas suficientemente efectivas, un 60.5% opina estar “Muy de acuerdo” y “De acuerdo”. Existe un 21.05% que dice “no estar seguro” de que las reuniones de trabajo sean efectivas y un 18.41% que opina estar “En desacuerdo” y “Totalmente en desacuerdo”. La media se encuentra entre “De acuerdo” y “No estoy seguro”. Mayormente los trabajadores opinan que informan cuando y donde podemos ser localizados.

El 71.05% opina que esta afirmación es correcta. La media se encuentra entre “De acuerdo” y “No estoy seguro”. La mayoría siente que se respeta el tiempo mutuamente con un 71.05%, la media se encuentra entre “De acuerdo” y “No estoy seguro”. Existe un 10.52% de los trabajadores que dice “No estar seguro” de que se respete el tiempo mutuamente. El Clima organizacional juega un papel importante para el logro de una mayor eficiencia en las organizaciones, pues este determina la forma en que un individuo (trabajador) percibe su ambiente laboral, su rendimiento, su productividad, su satisfacción. La satisfacción laboral es uno de los factores más importantes dentro del clima organizacional, pues en la medida que un trabajador se sienta satisfecho en su puesto de trabajo, así será su entrega a este, contribuyendo al mejoramiento continuo de los servicios. Las acciones propuestas en el plan de mejoras responden a las necesidades detectadas en el análisis de los resultados obtenidos en el diagnóstico de la satisfacción laboral.

### Propuesta

Realizar un trabajo intensivo para el mejoramiento de las condiciones físicas y ambientales de la unidad, que propicien el confort y garanticen los medios técnicos necesarios para el trabajo de esta unidad:

1- Mejorar la climatización en esta unidad.

2- Realizar un trabajo de mantenimiento preventivo planificado a instalaciones, mobiliarios y equipos para solucionar las dificultades en ese sentido y que afectan el trabajo.

3- Garantizar un calzado apropiado que brinden comodidad y seguridad.

4- Analizar si la distribución de los espacios, la ubicación (situación) de las personas, el mobiliario, es la más apropiada para la realización del trabajo.

6.-Colaborar y asumir la responsabilidad, tanto a nivel individual como de grupo, en el mantenimiento del centro limpio

Realizar un trabajo encaminado al Corto mejoramiento de la organización laboral:

1.-Desarrollar e incentivar la excelencia en el servicio, utilizar todos los mecanismos posibles de estimulación tanto moral como material.

2.-Realizar encuentros con los trabajadores para explicarles la situación actual de los movimientos laborales en la sucursal.

3.-Distribuir las funciones correspondientes según el perfil de cargo de cada miembro de la organización.

4.- Mantener el estudio de las insatisfacciones de los trabajadores y la búsqueda inmediata de las soluciones.

Lograr una adecuada cohesión grupal para alcanzar los objetivos propuestos por la organización:

1.- Implementar cursos de comunicación dirigidos a la tienda objeto de estudio con conocimientos generales de la comunicación, técnicas y habilidades de está, particularizadas tanto para trabajadores como para brindar un mejor servicio.

2.- Diseñar actividades encaminadas a capacitar al colectivo de trabajadores en destrezas y habilidades para la resolución de conflictos.

Mejorar los métodos y estilos de dirección:

1- Que reciban cursos de “reuniones eficaces” los directivos y de “escucha activa” los directivos y los empleados.

2- Coordinar con la Universidad Autónoma del estado de Hidalgo UAEH postgrados, cursos sobre Liderazgo: Estilos y técnicas: cuáles son y cómo aplicarlos para alcanzar el éxito.

3- Coordinar con Grupo Azul y la UAEH, la capacitación sobre otros temas relacionados con la dirección, además de los ya mencionados.

Mejorar el proceso de toma de decisiones:

1.- Escuchar las opiniones de los trabajadores en la toma de decisiones relacionadas con su área.

2.- Mantener una constante retroalimentación entre directivos y trabajadores.

3.- Desarrollar talleres y seminarios (tanto para directivos como trabajadores), con el apoyo de especialistas, sobre técnicas para manejar el cambio y el miedo a tomar decisiones.

Elaborar e implementar un programa de capacitación de directivos y trabajadores dirigido a mejorar la participación y fomentar un clima organizacional cualitativamente superior:

- 1.-Curso teórico de capacitación para directivos sobre clima organizacional, que incluye los factores más importantes que influyen directamente en el clima laboral y por ende en la percepción adecuada o no de este (Motivación, satisfacción, estilo de dirección, estrés, actitudes).
- 2.- Curso práctico para directivos, para las soluciones más generales a las problemáticas que existan en el servicio relacionada con lo antes expuesto a través de técnicas participativas.
- 3.- Realizar discusiones grupales de forma interactiva con presentación de trabajos investigativos que incluya el análisis del clima organizacional en el servicio.

Establecer formas de reconocimiento que permitan una mayor motivación de los trabajadores:

- 1.- Crear formas de reconocimiento moral y material, de forma mensual, trimestral y anual para estimular el Dependiente de mejores resultados en las ventas.

Reducir en lo posible los niveles actuales de Stress Laboral.

- 1.- Lograr que los trabajadores y cuadros no se preocupen por los asuntos poco importantes y que pongan las cosas en perspectiva.
- 2.- Capacitar a los directivos en la organización de su tiempo, y de sus subordinados
- 3.- Promover que las metas que persigan los trabajadores de la entidad, tengan un significado personal para ellos.
- 4.- Mantener correctamente informados a los trabajadores para evitar rumores e incertidumbre.

## RECONOCIMIENTOS

Los autores reconocen el apoyo de la empresa Grupo Azul para la investigación. Así mismo agradecen los comentarios de los investigadores de la Universidad Autónoma Metropolitana, los cuales contribuyeron a mejorar la calidad de investigación.

# FACTORES DE COMPETITIVIDAD EN LA INDUSTRIA FORESTAL EJIDAL EN EL ESTADO DE DURANGO, MÉXICO

Ernesto Geovani Figueroa González, Universidad Juárez del Estado de Durango

Carlos Antonio Iturbide Urrutia, Universidad Juárez del Estado de Durango

Claudia Berenice Cano López De Nava, Universidad Juárez del Estado de Durango

## RESUMEN

*En este estudio se identifican los factores de competitividad presentes en la Industria Forestal Ejidal en el Estado de Durango. Se seleccionó una muestra probabilística a través del método de muestreo aleatorio simple, el tamaño de la muestra se determinó utilizando la varianza máxima conformada por 57 empresas ejidales forestales ubicadas dentro de las regiones de El Salto Pueblo Nuevo, Santiago Papasquiaro, y El Huehuento, del Estado de Durango, México. Se aplicó una encuesta y se utilizó una Guía de observación. Se constató que las empresas muestran distintos intereses en su gestión, que responden a la presencia tanto de elementos de lógica campesina como de lógica empresarial. La lógica campesina queda de manifiesto en los valores culturales diferentes a la eficiencia mostrada a través del discurso de los comisariados ejidales. Esto se observa de igual manera en la canalización de sus esfuerzos dirigidos a realizar actividades que consideran válidas, propias y necesarias para conseguir y mantener su sistema de poder, aprobación y apoyo por parte de grupos de interés, principalmente por las comunidades que atienden, implicando la reducción de eficiencia administrativa y de sus posibilidades de progreso. Se enumeran las fortalezas y debilidades encontradas para la integración.*

**PALABRAS CLAVE:** competitividad, integración, industria forestal.

## COMPETITIVE FACTORS IN COMMUNAL LANDS FOREST INDUSTRY IN THE STATE OF DURANGO, MEXICO

### ABSTRACT

*This study identifies the factors of competitiveness present in Communal Lands Forest Industry in the State of Durango. A probability sample was selected through simple random sampling method, the sample size was determined using the maximum variance comprised 57 companies located in forest communal lands regions of El Salto Pueblo Nuevo, Santiago Papasquiaro, and The Huehuento, the state of Durango, Mexico. A survey and used an observation guide. It was found that the companies show different interests in its management, which respond to the presence of both peasant logic elements such as business logic. The peasant logic is reflected in the different cultural values of efficiency shown through the discourse Commissioner of Communal Lands. This is seen equally in channeling their efforts to perform activities considered valid, proper and necessary to achieve and maintain power system, approval and support from stakeholders, mainly the communities they serve, implying reducing administrative efficiency and possibilities of progress. Lists the strengths and weaknesses identified for integration.*

**KEYWORDS:** competitiveness, integration, forest industry.

## INTRODUCCIÓN

La integración es una cooperación entre empresas independientes, basada en la complementación de los recursos de las distintas empresas relacionadas y orientada a lograr ventajas competitivas que no podrían ser alcanzadas en forma individual. Este modelo productivo tiene impactos sociales; dinamiza el desarrollo local, permite el crecimiento con equidad y genera ventajas para las empresas, como la flexibilidad, un aprendizaje más rápido, economías de escala y mayor fuerza de negociación. Dentro del Plan Nacional de Desarrollo de México, el desarrollo forestal sustentable se plantea como un área prioritaria del desarrollo nacional. Durango, por su clima, topografía y diversidad ecológica, es en esencia un estado con eminente vocación forestal, su bosque, recurso natural renovable por excelencia, ha desarrollado una industria forestal importante en el ámbito nacional, compuesta por empresas propiedad de particulares y empresas propiedad de ejidos, estas últimas la Industria Forestal Ejidal en Durango (IFED). Se presentan las tendencias y características generales de la industria forestal en Durango, destacando los aspectos económicos y sociales de este sector, aspectos de suma relevancia para este estudio, ya que forman parte del contexto inmediato del universo que se analizará y que influyen directamente en la integración de la IFED. Además, considerando la particularidad que presenta México respecto a la tenencia de recursos forestales manejados por comunidades indígenas y ejidales, se describen las características generales de las empresas forestales ejidales, que ayudaron a analizar, identificar y comprender los factores de competitividad que presentan.

Este estudio forma parte de un proyecto financiado por Fondos Mixtos Durango del Consejo Nacional de Ciencia y Tecnología (CONACYT) “Impulso a la Industria Forestal Ejidal del Estado de Durango con su integración a una cadena productiva” y plantea el siguiente objetivo: Identificar y evaluar los factores de competitividad presentes en la Industria Forestal Ejidal en el Estado de Durango (IFED). Esta investigación está organizada en cuatro apartados. En el primero tenemos la sección de revisión literaria y se presentan algunos conceptos relevantes sobre integración y se muestra una panorámica general de la industria forestal del Estado de Durango y lo que es el ejido forestal en México, después tenemos la sección de metodología donde se describe como se llevó a cabo el estudio, la sección de resultados contiene el análisis de la información y después tenemos las conclusiones.

## REVISIÓN LITERARIA

### Integración

La integración es una cooperación entre empresas independientes, basada en la complementación de los recursos de las distintas empresas relacionadas y orientadas a lograr ventajas competitivas que no podrían ser alcanzadas en forma individual. En la práctica tradicional de una cadena de abastecimiento/distribución, los proveedores, fabricantes, distribuidores y clientes, trabajan cada uno para optimizar sus propias operaciones; actuando individual e inadvertidamente, crean problemas para los demás integrantes del canal, añadiendo costo a todo el sistema. La integración consiste en la inversión de recursos estratégicos para complementar los productos o capacidades existentes. Puede haber: integración horizontal o integración vertical. Cuando la estrategia a largo plazo de una organización se basa en el crecimiento a través de la adquisición de una o más empresas semejantes operando en la misma etapa de la cadena producción- distribución, ésta estrategia es denominada integración horizontal; y si la estrategia de una organización es adquirir empresas que le suministren sus materias primas, o que sean clientes para sus productos, se ve involucrada la integración vertical (Pearce y Robinson, 1997).

La ganancia de la integración vertical es con frecuencia mayor que la de la integración horizontal. La integración vertical da origen a tres diferentes ganancias: elimina la doble marginalización, permite precios de discriminación en contra de los competidores no integrados y evita la pérdida proveniente de

no estar integrado después de una fusión horizontal (Colangelo, 1995). Desde los años finales del siglo XX, la industria de México se desenvuelve en el marco de una economía mundial cuyo rasgo distintivo es la creciente globalización. En el pasado, el predominio de la micro, pequeña y mediana empresa en los diversos sectores productivos era posible gracias a que el mercado nacional se encontraba cerrado. Sin embargo en un mercado abierto, en el cual se requiere de inversiones, tecnología y capacidad gerencial para operar exitosamente, las formas tradicionales de producción a escala pierden su competitividad.

Anderson (2000) comenta que existen cuatro tendencias de cambio en el ambiente de negocios que son los relativos a la información tecnológica y geográfica, así como a la integración funcional y sectorial, y que es necesario ir desde una empresa tradicional hacia una red global competitiva para construir cadenas de valor extendidas. En el mercado global actual los recursos son más accesibles por muchas razones, como la tecnología, transportación más barata y reducción de aranceles en la mayoría de los mercados internacionales. De los cambios estructurales iniciados en la década pasada, la apertura comercial fue una de las situaciones que más impacto ha tenido en la estabilidad del sector empresarial. Dicha apertura establece nuevas reglas para participar en el comercio exterior. La apertura ha reducido también la integración de diversas cadenas productivas nacionales, en la medida en que las empresas que participaban en las mismas, como clientes o como proveedores, perdieron terreno ante la competencia externa. Reconstruir tales cadenas en un entorno de apertura comercial es indispensable e impostergable para facilitar la planeación e inversión a largo plazo de las empresas nacionales.

La velocidad de respuesta a los cambios del entorno constituye una importante ventaja competitiva de las micros, pequeñas y medianas empresas, que les permite alcanzar altos niveles de eficiencia productiva, tal y como ha sucedido en otros países. Esto alienta la adopción de nuevas formas de organización de la actividad productiva, en las que la flexibilidad de las medianas y pequeñas empresas se convierte en un elemento valioso. Tales formas de organización, como la subcontratación o la formación de empresas integradoras, hacen énfasis en una estrecha coordinación inter empresarial orientada a combinar las ventajas de las economías de escala de las grandes empresas, con la flexibilidad y velocidad de respuesta de las de menor tamaño. Las micro, pequeñas y medianas empresas poseen una amplia capacidad para enfrentar y adaptarse a las distorsiones que pudiera sufrir la economía; en situaciones críticas enfrentan de mejor manera las bajas en la actividad económica, ya que su bajo nivel de capitalización actúa en su favor, además de poseer la maleabilidad para modificar sus procesos productivos.

#### Industria Forestal del Estado de Durango

El bosque del Estado de Durango contribuye al desarrollo de la entidad, por lo que se le debe atender de manera tal que permita optimizarlo y vigorizar su capacidad como fuente generadora de empleo y riqueza para el estado y para el país. El Estado de Durango tiene una superficie total de 12.2 millones de hectáreas de las cuales 5.5 millones son arboladas, lo que representa un 46.5% de la superficie total. De esta superficie arbolada 4.9 millones de hectáreas corresponden a bosques de coníferas y latifoliadas que se distribuyen a lo largo de la zona montañosa de la Sierra Madre Occidental, con unas existencias volumétricas de bosques de 410.8 millones de metros cúbicos y de selvas de 11.3 millones de metros cúbicos. Los bosques tienen un crecimiento de 5.6 millones de metros cúbicos por año y una producción promedio en los últimos 5 años de 1.9 millones de metros cúbicos (SEMARNAP, 2000).

La vegetación existente en sus bosques, corresponde a asociaciones de pino, pino-encino y otras especies de coníferas y hojosas. La producción de sus bosques le ha permitido colocarse a la vanguardia de la producción nacional participando con aproximadamente un 32% de la producción forestal del país. El 85% de la producción forestal la aportan 7 municipios de Durango de un total de 17 municipios que cuentan con aprovechamiento forestal. Estos municipios son: Durango (209,287 m<sup>3</sup>, con el 11%); Guanaceví (126,873 m<sup>3</sup> con el 7%); Otaez (117,862 m<sup>3</sup> con el 6%); Pueblo Nuevo (320,438 m<sup>3</sup> con el 17%); San Dimas (504,528 m<sup>3</sup> con el 27%); Santiago Papasquiaro (177,900 m<sup>3</sup> con el 9.5%) y

Tepehuanes (123,080 m3 con el 6.5%). Las actividades primarias de la silvicultura representan para la entidad aproximadamente el 26% del PIB y su industria forestal aporta el 51.6% del PIB del sector manufacturero.

### El Ejido en México

El término ejido, según Fromm y Maccoby (1973), se refiere a una comunidad que ha recibido tierra para utilizarla de acuerdo a las reglas del Código Agrario que se ha desarrollado durante los últimos 50 años, basado en el Artículo 27 de la Constitución de 1917. El artículo 9 de la Ley Agraria (1992) lo define como una forma de tenencia de la tierra en la que un núcleo de población con personalidad jurídica y patrimonios propios, es propietario de las tierras que le han sido dotadas o de las que hubiere adquirido por cualquier otro título. Además, el artículo 44 de la citada Ley, establece que el ejido está conformado por tres áreas básicas, que incluye el área común, la parcelada y el centro de población. A los miembros que lo integran se les identifica como ejidatarios y a sus empresas como ejidales (Artículo 12 de la Ley Agraria, 1992). La propiedad de los bosques, origen de la materia prima de la industria forestal, ha sido una situación particular en México. Una de las características más importantes y únicas de la situación forestal mexicana es el patrón de tenencia de las tierras forestales. Alrededor del 80% de los 55.6 millones de hectáreas de bosque y selvas que existen pertenecen a 8,000 ejidos y comunidades indígenas forestales (SEMARNAP, 1995) es decir, bajo tenencia colectiva. Esto, de acuerdo a Salinas de Gortari (1990) se explica por la transferencia de las áreas forestales a los ejidos como resultado de las reformas sucesivas a las leyes de tenencia de la tierra, la Ley Forestal de 1942, la Ley Forestal de 1986, ratificados en la Ley Forestal de 1992.

## **METODOLOGÍA**

### Población y Muestra

La población o universo la comprenden las empresas forestales ejidales del Estado de Durango, ubicadas en su mayoría en tres regiones que son: Santiago Papasquiaro, El Salto Pueblo Nuevo y el Huehuento en San Dimas, que se encontraban operando dentro del período de octubre de 1999 a Marzo del 2000. Dicho universo está representado por 126 empresas (INEGI, 1990), se seleccionó una muestra probabilística a través del método de muestreo aleatorio simple, utilizando números aleatorios proporcionados por la computadora (Zuwaylif, 1986). El tamaño de la muestra se determinó conforme al mismo autor, utilizando la varianza máxima para muestreo de proporciones:

$$n_o = \frac{Z^2 \pi (1 - \pi)}{e^2} = \frac{1.96^2 \times .5 \times .5}{.10^2} = 96 \qquad n = \frac{n_o}{\left[ \frac{n_o}{n_o + (N - 1)} \right] / N} = \frac{96}{(96 + 125 / 126)} = 57 \qquad (1)$$

donde:

N = tamaño de la población

n = tamaño de la muestra

Z = 1.96 (Nivel de confianza de un 95%)

$\pi$  = .5 (proporción con la cual obtendría la varianza máxima)

e = 10% error máximo permitido

### Las Unidades de Observación

Los responsables de las empresas, por tratarse de las personas que más contacto tienen con las mismas, a los que se les aplicó la encuesta como instrumento de recopilación de datos, las empresas forestales ejidales, cuyo instrumento de recopilación fue la guía de observación.

### Instrumentos de Recopilación de Datos

Encuesta. Esta se aplicó en la modalidad de cédula de entrevista, es decir, el cuestionario de preguntas diseñado como instrumento de registro de las opiniones. Se aplicó por el propio investigador, quien preguntó y anotó las respuestas, obteniendo la información directamente del responsable de la empresa con una cita previa. Se eligió esta modalidad, ya que el perfil de los responsables de las empresas a estudiar, en lo general, es de personas con bajo nivel educativo que no dominan la lectura ni la escritura, siendo esta forma la más apropiada (Hernández et al, 2003). Guía de observación. Con este instrumento se obtuvieron los datos de las características físicas de la infraestructura de las empresas tanto en el área administrativa como de producción, además de algunas características externas como facilidad de acceso y distancia al centro de consumo más próximo, que fueron procesadas junto con la información de la encuesta. La técnica de observación se consideró necesaria y complementaria a la encuesta, ya que a través de una guía pre elaborada, se recabó información que difícilmente se podría haber obtenido con cualquier otra técnica (Castañeda, 1996). Se observaron características de las empresas en cuanto a ubicación geográfica, características de las instalaciones administrativas y de la planta y algunas características de la producción. La realización de esta observación se realizó de manera simultánea a la encuesta.

## **RESULTADOS**

### Características de la Industria Forestal Ejidal en el Estado de Durango

Distribución de la muestra por tipo de producción. El 65% de las empresas visitadas fueron aserraderos y 35% fábricas de tarima y/o caja para empaque. Un 19% de las empresas producen únicamente madera aserrada, mientras que un 46 % produce madera aserrada y además tarima, caja de empaque y cuadro para mango de escoba principalmente, además de polín, durmiente, palillo, astillas, tablero enlistonado, tablero enchapado, molduras, escobas, vigas, postes y estacas en algunas de ellas.

El grado de automatización del proceso de producción es muy bajo, ya que cuenta con maquinaria muy anticuada y obsoleta. Para analizar el grado de destreza entendido como el grado de dominio de habilidades y técnicas de producción, se estableció una escala: alto, medio y bajo, resultando en un 88% un nivel medio de destreza. Con relación a la antigüedad de las empresas, la antigüedad promedio es de 21 años con una gran variación entre ellas (coeficiente de variación .78). Se concentran hacia los extremos en cuanto a mayor y menor antigüedad, quedando un 32% de ellas con menos de 4 años de antigüedad, un 14% tienen entre 4 y 12 años, un 18% entre 12 y 20 quedando un 36% con más de 20 años de antigüedad. Antigüedad de las empresas. Mintzberg (1991), establece que toda organización según avanza en edad o aumenta en tamaño, se vuelve más formalizada, se impregna más de procedimientos y reglas que la democratizan y que acentúan las especializaciones.

En el caso de la IFED, se observa que no se da la relación directa mencionada, ya que las empresas de la IFED tienen una edad promedio de 22 años con un nivel de formalización muy bajo. Una de las peculiaridades propias de este tipo de empresas es el empleo que generan para los mismos ejidatarios y sus hijos. En promedio el 14% de los trabajadores en las empresas son de los mismos ejidatarios y el 38% son hijos de ejidatarios. Que genera que las mismas personas que intervienen en las decisiones de la

empresa forman parte de la planta de trabajadores, situación que no permite el funcionamiento de algunos instrumentos de control y debilita las líneas de autoridad. En cuanto a la edad de los trabajadores no se presenta un grado de concentración alto, la distribución presenta un promedio de 29 años con un coeficiente de variación del 17%. El nivel de producción y ventas anual promedio es de \$18 millones.

### Factores Que Influyen en la Integración

En este trabajo se consideraron como factores que promueven la integración, valores en los actores como la honestidad, credibilidad, generosidad, la reputación, la empatía, ambición (trabajo esforzado, aspiraciones), mente abierta, capacidad, ánimo, limpieza, valentía (defender las convicciones propias), perdón (disposición a perdonar a los demás), servicio (trabajar por el bienestar de otros), imaginación (audaz, creativo), intelecto (inteligente, reflexivo), lógica (congruente, racional), respeto (consideración), cortesía (amable, educado), responsabilidad (compromiso formal), control (disciplina), convicción.

Para medir la posibilidad de integración se hicieron preguntas tratando de establecer la percepción de los actores sociales sobre estos valores en sus asociados, clientes, proveedores, competidores y funcionarios de gobierno. A continuación se presenta la Figura 1 con el promedio general de la percepción de estos valores en una escala de 1 a 10, siendo el 1 el nivel más bajo y 10 el nivel más alto.

Figura 1: Promedio de Percepción de Valores Por Grupo

*Podemos observar que a los clientes son a los que consideran de mejor manera seguidos por los proveedores y en tercer lugar sus asociados, sin ser excelente la forma en la que los califican lo que daría un indicador de posibilidad de integración vertical hacia delante. Los funcionarios son los calificados de forma más baja.*

A pesar de ser los asociados el tercer lugar en valoración, los entrevistados expresaron que había compromiso y satisfacción con el trabajo realizado en equipo. Además de calificarse ellos mismos con un promedio de 9.58 en cuanto a su propia participación. Con relación a sus expectativas de integración, considerando la generación de ventaja competitiva en grupo, los resultados promedio con relación a la mejoría que ellos esperarían de la integración fueron los siguientes:

Algunos de los comentarios en relación a la administración fueron la necesidad de fortalecer la capacidad de organización y gestión; en producción mencionaron: la necesidad de adquisición de tecnología moderna, tomar en cuenta las opiniones de trabajadores y encargados; en cuanto a las ventas y costos: buscar nuevos mercados, cuidar el ajuste de los precios, unificar criterios, cuidar el margen de utilidad por los altos costos, establecer precio de productos a nivel regional y homogenizar los costos, estableciendo tabuladores regionales de fletes, mano de obra, etc., evitar competidores con la integración, el temor a no cumplir con las cantidades o precios de mercado; en capacitación proponen el tratar de unir la experiencia con la capacitación académica, que los productores necesitan cursos, un programa de capacitación regional considerando áreas críticas; mencionan además el problema del financiamiento por tratarse de empresas sociales, con relación a proveedores ven el riesgo de no seleccionarlos adecuadamente, aunque ven el beneficio de las comparas en común obteniendo mejores precios.

Tabla 1: Factores que influyen en la Integración

Factores influyen en la Integración	que en la	Eficiencia en administración	Productividad	Ventas	Créditos	Disminución de costos	Capacitación	Diseños	Compras
Expectativa mejora integración	de por	24%	21%	27%	49%	24%	39%	40%	19%
Riesgos amenazas	y	27%	46%	94%	70%	70%	50%	22%	50%
Oportunidades Necesidad	de	42%	50%	74%	42%	39%	70%	31%	59%
Investigación desarrollo	y	59%	59%	55%	31%	31%	61%	48%	27%

*Se observa que la mayor expectativa es en relación a la obtención de créditos, diseño y capacitación, hecho que deberá considerarse dentro de los objetivos en el plan de integración. Los riesgos y amenazas que identifican en la integración son principalmente en relación a las ventas, seguido por los créditos y costos. Con relación a las oportunidades, en general ven menos oportunidades que amenazas (51% promedio contra 54%), las mayores oportunidades las ven igualmente en ventas, seguidas por capacitación siendo la de diseños la de menor porcentaje. Identifican algunas necesidades de investigación y desarrollo, principalmente mencionan capacitación, seguido por la necesidad de mejorar la eficiencia administrativa y las técnicas de producción.*

Los comentarios desde el punto de vista administrativo fueron la necesidad de capacitación en herramientas para toma de decisiones más rápida, especialización de gente de la región; con relación a la producción ven la oportunidad de producir más a un menor costo, utilización de técnicas más modernas de producción; en ventas aparece la oportunidad de comercializar en el extranjero, cumplir con expectativas de precio y calidad, abastecimiento de mercado juntando la producción, mejorar precios de venta; para los créditos ven la oportunidad de una mejor capacidad de gestión; en las compras tienen muy claro la ventaja de la disminución de costo de los insumos por compras en común, nuevas opciones de producción, proveedores más directos sin menos intermediarios; en capacitación de igual manera mencionan las necesidades de aprender a hacer las cosas de mejor manera.

Con relación a la administración comentan la necesidad de otras opciones modernas de trabajo, herramientas en la toma de decisiones; menos desperdicio en la producción, nuevos procesos, nuevos productos, disminución de costos; investigación de mercados; detección de necesidades de capacitación. Comparación de recursos con la competencia. En la comparación de sus capacidades en relación con sus competidores, en general consideran que es la misma. Esta característica no sería una limitante fuerte para la integración. En la tecnología el 85% consideran que es semejante a la de sus competidores y proveedores, existiendo mayor diferencia entre los asociados, que sólo el 70% considera que es semejante, 22% consideran que es diferente y un 9% no sabe.

Problemas de carácter legal con los diferentes grupos. En cuanto a las relaciones o vínculos formales en promedio el 24% ha tenido problemas con los diferentes grupos, principalmente con clientes. De este 24% el 50% ya están solucionados y el otro 50% están aún en litigio. Familiares entre los grupos. Con relación a los vínculos informales se observa una mayor posibilidad de integración vertical hacia atrás debido a que existe mayor proporción de relaciones informales con ellos. Siendo fuerte también la proporción con competidores.

## CONCLUSIONES

Se constató que las empresas muestran distintos intereses en su gestión, que responden a la presencia tanto de elementos de lógica campesina como de lógica empresarial. La lógica campesina se observa en la canalización de los esfuerzos dirigidos a realizar actividades que consideran válidas, propias y necesarias para conseguir y mantener su sistema de poder, aprobación y apoyo por parte de grupos de interés, principalmente por las comunidades que atienden, a costa de la reducción de eficiencia administrativa y

de sus posibilidades de progreso. A continuación se enuncian las fortalezas y debilidades detectadas para la integración de las IFED.

#### Fortalezas Para la Integración de las IFED

Grado de apalancamiento operativo positivo ya que el capital con que cuentan es mínimo debido a que su maquinaria ya está depreciada casi por completo, sus necesidades de capital de trabajo son mínimas porque no tiene que financiar la compra de materia prima ya que son dueños de ella, no tienen cuentas por cobrar, el nivel de inventarios es muy bajo y no tienen necesidad de mantener cantidades fuertes de efectivo. Situación financiera sana en cuanto al grado de apalancamiento financiero. En general no tienen pasivos, lo que les permite estar en condiciones de acceder a financiamientos externos. Son empresas protegidas por el gobierno, con trato preferencial y apoyos.

Parte de los trabajadores son ejidatarios. Si los mismos trabajadores son dueños de la empresa, cabría esperar que compartan las metas y la visión, y podrían trabajar con mejor disposición por el bien de la empresa. Baja rotación de personal. Su plazo promedio de flujo de efectivo es muy favorable ya que no tiene cuentas por cobrar, salvo algunas a cargo de los mismos ejidatarios sin riesgo de incobrabilidad. Fuerte representatividad y poder de gestión e influencia por la facilidad de agremiarse ya que están acostumbrados a trabajar en grupo. Por su tamaño y características podrían tener una alta flexibilidad y adaptación siempre que se presentaran otras condiciones.

#### Debilidades Para la Integración de las IFED

La lógica campesina del ejidatario no le permite visualizar que, alcanzando objetivos de eficiencia racional, se alcanzan de una mejor manera sus objetivos sociales, ya que si hay desarrollo en la industria habrá generación de más empleos, y más beneficios para los ejidatarios. Al contrario, ellos crean empleos no en base a la necesidad de la empresa, sino para ocupar a los trabajadores, disminuyendo la productividad y los beneficios. En cuanto al cambio de la directiva del ejido cada tres años, conforme a la Ley, siendo el comisariado ejidal responsable del ejido en lo general y de la administración de las empresas en lo particular, tiene dos efectos negativos para la IFED. Por un lado la falta de continuidad de planes y proyectos y por otro lado este cambio provoca que se pierda la experiencia que se genera durante cada período de gestión. Las decisiones son colectivas, que en pequeña escala representaría una ventaja, pero cuando el promedio de ejidatarios es de 83, es difícil conciliar intereses y opiniones. Se observó en algunos de los ejidos la estrategia de formar un consejo consultivo con un grupo de ejidatarios representativo de todos los demás, para toma de decisiones, con muy buenos resultados.

La mayoría de las empresas no reinvierten, sino que toda la utilidad la reparten, y no dejan nada para reinversión, ni para capital de trabajo. Es de llamar la atención el ver cómo estas empresas pueden operar con tan poco capital de trabajo y la capacidad que tienen para estar haciendo repartos varias veces al año. Lo anterior trae como consecuencia una descapitalización completa y un alto costo de financiamiento por que solicitan adelantos a los clientes sacrificando precio. Lo anterior deriva en primer lugar, en que la maquinaria es obsoleta, sus procesos técnicos son los mismos con los que empezaron hace muchos años (22 en promedio). Estos procesos generan mucho desperdicio y mala calidad en la madera. En segundo lugar, no cuentan con capital necesario para hacer adquisiciones adicionales de materia prima con la que pudieran disminuir los tiempos ociosos, que a veces se alargan hasta 4 o 5 meses, debido a que la mayoría de los ejidos tiene un volumen autorizado menor al de su capacidad de producción.

La información para toma de decisiones es muy deficiente. No separan las operaciones de la empresa de las del ejido, quedando gastos del ejido como gastos de la empresa, sin permitir identificar el rendimiento real de la propia empresa, además de que los informes que se presentan no son oportunos ni suficientes para toma de decisiones. En general los comisariados ejidales presentan bajo nivel escolar. Falta de

preparación, pues no tienen la habilidad necesaria para manejar herramientas administrativas. El hecho de que los mismos ejidatarios sean trabajadores de la empresa no permite establecer ciertos controles, porque estos trabajadores gozan de impunidad. Se observa mucha dispersión en los costos ya que para algunas de las empresas los costos por fletes son muy altos. Para unas es más fácil que para otras, el acceso a la materia prima. Se considera que uno de los riesgos más fuertes para estas empresas, es que no perciben un posible cambio del marco legal en el que están inmersos, existiendo la probabilidad de perder el poder que les confiere el hecho de ser dueños del bosque.

Esto como consecuencia del cambio en las regulaciones gubernamentales que se ha venido dando y tomando en cuenta que este régimen de propiedad sirvió a propósitos en tiempos pasados. Actualmente es cuestionable su continuación, debido a que el bosque es un recurso del país y se debe dar el uso más eficiente a estos recursos, de otra manera se tiene un alto costo social. Hay una desvinculación con la industria manufacturera, que impide la agregación regional del valor, contribuye a las altas tasas de desperdicios industriales y costos de transporte. No existe un sistema de normalización y clasificación de productos que valore la calidad de las maderas mexicanas y facilite las operaciones comerciales; los procesos industriales están rezagados y la calidad de los trabajadores es prácticamente inexistente.

Los aserraderos instalados en su mayoría son de pequeña escala, con coeficientes de aserrío (eficiencia de transformación de madera en rollo a madera aserrada) muy bajos. El bajo coeficiente de aserrío aunado a la mala ubicación de los aserraderos con respecto al bosque, incrementan significativamente los costos por unidad de producto. La capacidad instalada no está ubicada de acuerdo con el potencial de incremento anual de los bosques. La organización para la producción tiene problemas asociados a la falta de personal adiestrado y con experiencia, así como a la sobrevaloración nominal (sueldos relativamente altos) otorgada como política de apoyo a los miembros de la comunidad. No existe especialización en la producción que garantice la calidad de los productos.

Los ejidos y comunidades han establecido industrias con el objeto de dar mayor valor agregado a los productos que obtienen del bosque; sin embargo, la mayor parte de la industria instalada es de escala pequeña, con tecnologías anticuadas e inadecuada organización para la producción y comercialización. El grado de eficiencia de la industria de aserrío es resultado de la capacidad instalada, el crecimiento real de los bosques y la distancia de los centros de transformación a los principales mercados. El tipo de integración de acuerdo a las características presentadas sería de integración vertical, pero esto a largo plazo, partiendo de una estrategia: Invertir en conocimiento mediante la preparación en áreas estratégicas de un cuadro de profesionistas seleccionados de manera representativa de cada uno de los grupos, asegurando la cohesión futura.

# EVALUACIÓN DEL IMPACTO DEL PLAN DE DESARROLLO DE LA CIUDAD DE ARMENIA EN EL PERIODO 2008-2011 DESDE LA PERSPECTIVA DE LA SOSTENIBILIDAD

José Fabián Ríos Obando, Universidad la Gran Colombia Seccional Armenia

## RESUMEN

*La presente investigación será abordada bajo un análisis sistémico que propende evaluar el impacto del Plan de Desarrollo Municipal de Armenia en el Periodo 2008-2011 desde las perspectivas social, económica y ecológica de la sostenibilidad en aras de identificar si se presentó cambios en las condiciones de vida de la población, de forma tal que el resultado sirva como insumo para tomar decisiones en la estructuración de futuros Planes de Desarrollo. Para tal fin se propone analizar los diferentes programas y proyectos puestos en marcha por la administración municipal en aras de determinar su contribución a la sostenibilidad.*

**PALABRAS CLAVES:** Dimensiones, Sostenibilidad, Planes de Desarrollo, Impacto.

## IMPACT ASSESSMENT OF ARMENIA'S DEVELOPMENT PLAN DURING 2008-2011 FROM THE PERSPECTIVE OF SUSTAINABILITY

## ABSTRACT

*This research will be addressed in a systemic analysis that tends to assess the impact of Armenia's Development Plan during 2008-2011 prospects from social, economic and ecological sustainability in order to identify whether changes made in the conditions of life of the population, so that the result will serve as input to make decisions in structuring future development plans. To this end it is proposed to analyze the different programs and projects implemented by the local government in order to determine their contribution to sustainability*

**JEL:** Q01, Q56, Q58.

**KEYWORDS:** Dimensions, Sustainability, Development Plans, Impact

## INTRODUCCIÓN

La función principal del estado debe ser garantizar la seguridad de los ciudadanos así como permitir el libre desenvolvimiento en actividades de diverso índole bajo ciertas condiciones de calidad, en las que el derecho a disfrutar de un ambiente sano se encuentra consagrado como un derecho constitucional.

Con ocasión al anterior precepto han sido diversas las posturas epistemológicas que han surgido para argumentar el papel del estado y su inobjetable deber para dotar de ciertas condiciones a las personas en la búsqueda del bien ser, surgiendo un discurso en el que se propone incluir diversos factores no considerados por la economía clásica y determinados por indicadores cuya función es medir el progreso de un país a partir de la esperanza de vida, el nivel educacional y el ingreso per cápita, entre otros, y que básicamente supone un primer paso para pasar de la noción de *Crecimiento*, que es lo que mide el PIB, a la de *Desarrollo*, un concepto más cualitativo en lo que a calidad de vida se refiere.

Siguiendo esa línea argumentativa, conforme se fue avanzando en la consideración de factores cualitativos que respondieran a criterios de responsabilidad social, justicia y equidad, fueron avanzando también las preocupaciones concernientes a la degradación del medio ambiente, surgiendo nuevas formas de concebir al progreso y desarrollo económico y la función del hombre como emergencia de la naturaleza.

Así fue como se enmarcaron ciertos factores ecológicos, sociales, y económicos, entre otros, los cuales motivaron fuertemente el discurso de economistas y ambientalistas, discursos los cuales fueron cohesionados, surgiendo como respuesta a esta situación una nueva definición del desarrollo, en el que surge la imagen directriz del “desarrollo sostenible” y “sostenibilidad”.

Para lograr tal cometido es prioritario garantizar que el sistema político reconsidere su rol estratégico dentro de las dimensiones de la sostenibilidad, toda vez, que a pesar del reconocimiento de la necesidad de una interpretación integrada de estas tres dimensiones (económica, ecológica y social), se hace necesario de un profundo cambio conceptual respecto al enfoque político tradicional en aras de lograr un cambio sustancial en el que se considere al desarrollo sostenible o si bien se quiere a la sustentabilidad como una verdadera opción a adoptar y no como un cambio al modelo en vigor, de acuerdo (Redclift M. , 1996), *“existe la necesidad de reconocer el concepto de desarrollo sostenible como alternativa a la visión establecida, y no como modificación de la misma”*. Es decir, la sostenibilidad no es un objetivo factible si lo que se pretende es adaptar los modelos de desarrollo económico actuales. Habrá que promover nuevos planteamientos en cuanto a la gestión de recursos, el papel de mercado, las políticas institucionales, sociales, económicas y medioambientales.

El Municipio de Armenia, construyó el Plan Municipal de Desarrollo 2008- 2012, propuso dentro de sus objetivos” Mejorar las condiciones de uso y apropiación, sostenibilidad y competitividad del territorio, mediante un adecuado proceso de planificación, el fortalecimiento de la gestión ambiental y la aplicación de instrumentos de gestión para el desarrollo territorial”.

De tal suerte que la presente investigación pretende efectuar un análisis posterior sobre la dinámica de las políticas públicas plasmadas a través del Plan Municipal de Desarrollo bajo un enfoque de desarrollo sostenible, posibilitando que los resultados obtenidos permitan establecer recomendaciones y conclusiones que sirvan de base para definir una serie de condiciones que han de garantizar procesos políticos que coadyuven a alcanzar una sostenibilidad, de forma tal que se presenten propuestas sobre dichas condiciones a fin de que sean objeto de debate en la formulación de futuros planes de desarrollo, e incluso de ser necesario permita de ser necesario realizar ajustes o modificaciones al plan definido para el actual periodo administrativo.

## REVISIÓN DE LITERATURA

El interés investigativo que ha suscitado la aplicación de indicadores para determinar la sostenibilidad global ha sido exponencial, principalmente a partir de la incorporación y apropiación de la problemática ambiental en la sociedad civil, fomentando los esfuerzos de diferentes actores que ocupan diversas disciplinas, entre las que se destacan, economía, biología, geología, administración de empresas, entre otras, mediados por la intención de conocer de cerca la realidad de los diferentes espacios territoriales. Se toma como referencia entre diversos estudios, dos investigaciones sumamente interesantes. La primera de ellas realizada en Manizales en el año 2005, por Luz Stella Velásquez Barrero denominada “Avances Conceptuales y Metodológicos en la Construcción y Consenso del índice de Sostenibilidad Urbana”, del que obtenemos información clave en lo que atañe a la composición de las dimensiones y de

los posibles fenómenos que han de evaluarse a partir de la construcción de indicadores para develar la realidad abordada en un periodo de tiempo.

La segunda investigación en discusión obedece a un estudio realizado en conjunto entre el Instituto Nacional de Estadística, Geografía e Informática (INEGI) y el Instituto Nacional de Ecología (INE)/Semarnap, denominado “Indicadores de Desarrollo Sustentable en México”, a partir del cual se construyeron un conjunto de indicadores de los cuales se espera que a partir de su implementación, contribuyan a construir realidad sobre las problemáticas en torno a la sostenibilidad y motivar la adopción de estrategias que tomen como referencia dichos resultados.

Ahora bien en lo que concierne a las evaluaciones sobre planes de desarrollo resulta imprescindible hacer relación al Informe del Departamento Nacional de Planeación(DNP), 2011 “Evaluación Del Desempeño Integral De Los Municipios”, en el que se observa como el DNP viene desarrollando una metodología para la medición del desempeño de los municipios, dicho informe revela información sobre los resultados alcanzados conforme las metas establecidas en los planes de desarrollo(eficacia), la eficiencia(entendida como la relación optima entre productos alcanzados e insumos utilizados), cumplimiento de requisitos legales( marco normativo que regula los recursos del Sistema General de Participaciones) y por último la gestión administrativa y fiscal(la cual mide la capacidad administrativa y financiera para lograr las metas propuestas).

### **METODOLOGÍA**

Con base al interés investigativo se puede catalogar la presente investigación como empírico analítica toda vez que pretende revelar las relaciones esenciales y las características fundamentales del objeto de estudio, por medio de procedimientos prácticos que permitan instrumentalizar la información y dar cuenta de las relaciones de las políticas públicas en la consecución de la sostenibilidad bajo las dimensiones ya descritas.

El procedimiento metodológico a realizar se fundamentara en Gestión Integral De Programas Sociales Orientadas A Resultados, toda vez que mediante la aplicación de dicha técnica se puede conocer si las acciones implementadas a partir de la aplicación del instrumento de política ha ocasionado un cambio importante en las condiciones de vida(económica, social, ambiental) en el tiempo analizado.

Para tal fin se acudirá al modelo no experimental, dicha técnica implica la evaluación en conjunto para la población objeto de estudio, recolectando y analizando información en dos momentos para inferir al concluir la evaluación si las variables estudiadas confluyeron en tres posibles escenarios a saber: impactos positivos, ninguna modificación o alteración e impactos negativos. Para poder determinar el grado de sostenibilidad, se identificara en primera instancia, a partir de la implementación de indicadores las condiciones o escenarios que anteceden al Plan de Desarrollo analizado, de forma tal que se conozca el estado de la línea base; es decir las condiciones iniciales que dieron origen como posible factor problemico al instrumento de planeación para la vigencia 2008 a 2011.

Resulta entonces fundamental realizar una revisión al Plan de Desarrollo objeto de análisis para conocer el desarrollo del mismo desde las dimensiones a evaluar, dicha descripción permitirá apropiarse de las acciones (programas y proyectos) que sirvieron como vehículo para alcanzar los resultados propuestos a partir de las problemáticas observadas. Posteriormente una vez finalizado dicho plan se aplicaran indicadores de medición a cada uno de los componentes que integran las dimensiones de la sostenibilidad; para evaluar los resultados alcanzados con ocasión a la implementación de plan, de forma tal que se logre consolidar información sobre el estado de cada uno de los factores o fenómenos comprendidos en las dimensiones sujetas a consideración y poder así conocer la situación final en cuanto a la sostenibilidad.

Es importante reiterar que para alcanzar unos resultados significativos es necesario implementar en ambos momentos (línea base y situación final) los mismos instrumentos de medición (indicadores) de forma tal que dicha uniformidad posibilite realizar aseveraciones sobre los resultados e impactos derivados del Plan de Desarrollo.

Luego se tomaran dichos resultados y se compararan con las condiciones observadas para la línea base de forma tal que se pueda evaluar el impacto logrado y poder inferir si se posibilitaron cambios significativos en las condiciones de calidad de vida de la población en términos de mejoras o retrocesos sustanciales, facilitando la comprensión y construcción de la realidad como insumo para tomar decisiones a futuro. Dichos resultados a su vez pueden configurar una medida de la tendencia del estado presente y futuro de una unidad territorial, por cuanto permite tener una base de datos para a partir de estudios similares realizar estimativos y comparativos en aras de conocer los avances o retrocesos y su posición relativa respecto de otras unidades territoriales.

Finalmente se considera que el método propuesto es el más idóneo, toda vez que permite la identificación de distintas variables que caracterizan una realidad, facilitando establecer una relación entre los distintos actores encargados de dotar a la sociedad de los instrumentos que contribuyan a la sostenibilidad y cuál ha sido su trascendencia para el periodo 2008-2011.

Enfoque disciplinar: Cualitativo- Cuantitativo, en su primera fase la investigación al ser eminentemente documental pretende develar aspectos que referenciaran a nivel descriptivo e interpretativo la realidad objeto de estudio. En las fases 3 y 4 de la investigación el uso de herramientas estadísticas y económicas lo insertan en una fase cuantitativa.

Tipo de investigación: De evaluación: (Expost o de impacto), la investigación realiza un estudio posterior para verificar la influencia de las políticas públicas y los objetivos propuestos por el anterior plan de desarrollo en torno al alcance de una sostenibilidad.

Método: Triangulación, se basa en la comprensión teórica, revisión de las condiciones propias de la realidad y a partir de estos factores la realización de una interpretación de las mismas.

Técnicas: Bibliográficas, entrevistas, encuestas, aplicación de matrices de análisis.

Instrumentos: Indicadores, Matrices, formularios, Formatos de encuesta, formatos de entrevista, RAL.

Fuentes: Primarias, secundarias.

## **RESULTADOS ESPERADOS**

Se pretende determinar el impacto del Plan de Desarrollo en la dimensión ecológica, económica y social de la sostenibilidad, propendiendo así por develar que tan acertados y pertinentes han sido los esfuerzos estatales en lo que atañe a garantizar un desarrollo que responda a las necesidades de la población más vulnerable, atendiendo a su vez a la generación de prácticas sostenibles en aras de garantizar el uso racional de la base de recursos naturales de la sociedad.

La intención de la presente investigación es fortalecer las políticas públicas del Municipio de Armenia, retroalimentando a través de socializaciones y otros instrumentos con el Ente Municipal los resultados del proyecto para el periodo objeto de análisis, de forma tal que se defina si las apuestas del municipio contribuyeron eficazmente a alcanzar una sostenibilidad.

De las recomendaciones y conclusiones que se obtengan se espera que sirvan de base para definir una serie de condiciones que han de garantizar procesos políticos que coadyuven a alcanzar un desarrollo más social y humano, de forma tal que se presenten propuestas sobre dichas condiciones a fin de que sean objeto de debate en la formulación de futuros planes de desarrollo, e incluso de ser necesario, posibilite realizar ajustes o modificaciones al plan definido para el actual periodo administrativo. Se pretende que dicho estudio sirva de base para que se realicen investigaciones similares en otras ciudades las cuales permita categorizar y establecer un ranking de ciudades sostenibles.

## CONCLUSIONES

A partir de la realidad observada, es evidente la desarticulación del componente ambiental como eje transversal en el proceso de planeación y ejecución de políticas públicas. Tal situación reviste una problemática, toda vez que se desconoce la capacidad de resiliencia y recuperación del ecosistema, sucumbiendo así el modelo económico ante la finitud de los recursos naturales.

Ante tal consideración, se torna trascendental apostar por políticas públicas que respondan a la multidimensionalidad de la sostenibilidad, en un esfuerzo por entender dichas dimensiones como factores interrelacionados los cuales se refuerzan mutuamente y que contribuyen finalmente a alcanzar un estado de desarrollo que atienda las necesidades de la población más vulnerable en sintonía con la conservación de los bienes y servicios provistos por el ecosistema. Dicho estudio a partir de la evaluación de impacto del Plan de Desarrollo para el espacio y tiempo observado, aporta información sobre el cambio en las condiciones de vida de la población desde la perspectiva de la sostenibilidad como una posibilidad para develar información que posibilite construir realidad de cara a la consideración de futuros Planes de Desarrollo.

## RESUMEN

*La investigación se realizó en el otoño del 2012 bajo un enfoque mercadológico. El presente estudio está relacionado con la disciplina de mercadotecnia. Es el resultado parcial de un estudio empírico con un enfoque mercadológico y el objetivo general fue determinar y describir la influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos a través de una metodología cualitativa. El estudio se considera original, particular y con una relevancia teórica, metodológica y social debido al tema y enfoque. Los resultados muestran una alta influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos.*

**PALABRAS CLAVES:** Migración, consumo de nostalgia, bienes de nostalgia, marketing nostálgico.

**JEL:** M3, M31, D1, D12, Q1, Q13, F2, F2

## THE INFLUENCE OF NOSTALGIA MARKETING IN THE CONSUMPTION OF GOODS BY INMIGRANTS IN THE UNITED STATES

### ABSTRACT

*We carried out this study during the autumn of 2012 using a marketing approach. The present chapter is in reference to marketing. This is the partial result of an empirical study with a marketing focus and the overall objective was to determine and describe the influence of nostalgia marketing in consumption of goods by immigrant Mexican workers through a qualitative methodology. The study has been considered original, and with a theoretical, methodological and social relevance due to the topic and focus. The results show a high influence of nostalgia marketing in the consumption of goods by Mexican migrant workers in the United States.*

**KEY WORDS:** Migration, nostalgia consumption, nostalgia goods, nostalgia marketing.

**JEL:** M3, M31, D1, D12, Q1, Q13, F2, F2.

## INTRODUCCION

Para abordar la presente investigación se desarrollaron los siguientes puntos: Planteamiento del problema. En México, existen pocos estudios documentales y de campo sobre la influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos. Por lo tanto, ¿Qué se requiere para darle solución a la problemática? La respuesta está en determinar la influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos.

Pregunta general de investigación. ¿Cuál es la influencia que tiene el marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos? Objetivo General. Determinar la influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos. Justificación. La presente investigación contribuirá con información teórica, práctica, social y de conveniencia. Por las siguientes razones: Se aporta una metodología específica y descriptiva para determinar la relación de la influencia del el marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos. Además la investigación se considera original ya que no se han encontrado estudios sobre la relación de estas variables dentro del contexto del marketing nostálgico. Hipótesis general: existe una alta influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos.

El marketing hoy en día, es una de las ciencias más importantes para que las empresas puedan ser competitivas en los mercados nacionales e internacionales, esta ciencia se ha ido diversificando cada vez más, al grado de poderse aplicar en diferentes contextos como: marketing de servicios, marketing turístico, marketing político, marketing religioso, etcétera. Pero no se han encontrado muchos estudios que relacionen la aplicación de marketing nostálgico en el consumo de productos de nostalgia. Se encontró como principal referencia, el estudio de la Comisión Económica para América Latina y el Caribe (CEPAL) sobre el concepto de producto de nostalgia entendiéndose como aquellas mercancías que integran “bienes y servicios que forman parte de los hábitos de consumo, cultura y tradición de los diferentes pueblos y naciones”, y parte de la idea de que en el caso de los grupos sociales que emigran al extranjero, tienden a extrañar, a rememorar ciertos productos que forman parte de su vida cotidiana, productos y servicios que difícilmente pueden encontrar en sus lugares de destino (CEPAL, 2003).

La presente investigación contribuye con conceptos teóricos novedosos relacionados con el marketing nostálgico, estos son: producto de nostalgia, mercado de nostalgia y consumo por nostalgia, así como de la metodología específica y descriptiva para llevar a cabo la investigación. Este estudio se encuentra organizado de tal forma que para la revisión de literatura se describen los conceptos de migración, consumo de nostalgia, bienes de nostalgia y marketing nostálgico que son palabras clave para la correcta concepción del tema. Posteriormente se presenta una tabla con el resumen técnico del diseño de la metodología empleada en la investigación y finalmente se presentan los resultados de la investigación y las conclusiones.

## REVISIÓN DE LA LITERATURA

En este inciso se presenta una revisión de la literatura teórica para describir los términos de la migración de México-Estados Unidos, consumo de nostalgia, bienes de nostalgia y marketing nostálgico.

### Migración

La migración internacional es uno de los grandes fenómenos globales de nuestros días, se observa que en diferentes regiones del planeta se da en forma constante. Actualmente es cada vez mayor la movilidad de individuos que cruzan límites internacionales y se desplazan a países que incluso pueden llegar a ser lejanos y completamente desconocidos. La mayoría de los movimientos poblacionales en todas las regiones geográficas del mundo se debe a motivaciones relacionadas con la búsqueda de mejores condiciones laborales y a una retribución salarial más elevada, lo cual subyace la operación de diversos y complejos factores estructurales, como son las asimetrías económicas, la creciente interdependencia y las intensas relaciones e intercambios comerciales entre los países (Tamayo & Fernandez, 1983). El fenómeno de migración de México a Estados Unidos es de suma importancia, ya que presenta características económicas, políticas y culturales determinantes para ambos países. A

continuación se comentará sobre dicha problemática. No hay dos países fronterizos en el mundo en que la migración sea más importante. México es la única nación cuya población emigrante se ha concentrado históricamente, casi en su totalidad, en un solo lugar Estados Unidos, que es al mismo tiempo el país con el que comparte la frontera más dinámica del mundo. Para la relación bilateral asimétrica y crecientemente interdependiente, se trata del tema más importante, sensible y rezagado.

Ninguna otra corriente de inmigración a Estados Unidos ha demostrado el impacto cultural de la mexicana, ya que estos migrantes conservan sus vínculos culturales (Arizpe, 2009, pág. 89). Es necesario destacar que el fenómeno migratorio entre México y Estados Unidos se diferencia de otros flujos migratorios por tres factores principales: a) la historicidad, b) la masividad y c) la vecindad (Hernández, 1980). El proceso migratorio mexicano se distingue por ser un proceso que tiene sus raíces a finales del siglo XIX, que se perpetuó y desarrolló de manera constante a lo largo del siglo XX y se proyectó pujante en el siglo XXI. Es un proceso masivo que involucra a millones de individuos y familias y que se materializa entre países vecinos que comparten más de 3 mil kilómetros de frontera (Durand & Massey, 2003). El proceso de vecindad es inevitable por la cercanía geográfica que presentan ambos países, característica única con respecto a otros casos migratorios. Es necesario mencionar que de esta vecindad se liga al antecedente histórico ya que los estados del sudoeste norteamericano pertenecieron a México.

Los movimientos migratorios de México a Estados Unidos han derivado, de manera importante, de las diferencias económicas entre dos economías contiguas (Corona & Santibáñez, 2004). Por una parte, la economía más desarrollada requiere de mano de obra barata y de poca calificación para desempeñar trabajos con estándares bajos de productividad marginal de trabajo (con características de dualismo económico), y por otra, la economía menos desarrollada está caracterizada por la vulnerabilidad y la falta de estabilidad en el crecimiento de largo plazo, lo que limita su capacidad para generar empleos y el aumento de los salarios reales relativos.

Hasta la década de 1970, la migración mexicana al país vecino del norte tenía su origen en unas cuantas entidades del centro-occidente y norte de México, como Jalisco, Michoacán, Guanajuato, Zacatecas, Chihuahua, Durango y Nayarit. La preeminencia de estos estados quedó delineada desde mucho antes del Programa Bracero (1942-1964); se mantuvo durante el periodo conocido como la fase de los indocumentados (1964-1986); y se afianza con el programa de La Ley de Reforma y Control de Inmigración (IRCA) de 1987, al verse beneficiados con esta ley poco más de medio millón de migrantes nativos de esas entidades (Durand & Massey, 2003). Sin embargo, durante la década de 1980, a estas entidades se le sumaron otras del centro y sur del país, que tiempo atrás no figuraban en las estadísticas migratorias. Los casos más sobresalientes son Guerrero, Morelos, Oaxaca, Puebla, Estado de México y, más recientemente, los estados de Hidalgo, Veracruz y Chiapas. Así, adentrada la década de 1990, se observaba una mayor diversificación territorial de la migración, con una tendencia a la configuración de un patrón migratorio de carácter nacional.

El Consejo Nacional de Población (CONAPO) ha establecido para el estudio específico de las tendencias de ciertas modalidades y perfiles de los migrantes provenientes de las distintas regiones del país, una regionalización de los lugares de origen, donde articula criterios geográficos y migratorios y subdivide al territorio mexicano en cuatro regiones: Tradicional, Norte, Centro y Sur-sureste (Zuñiga & Acevedo, 2005). La región Tradicional destaca por ser el origen principal de la corriente migratoria mexicana a Estados Unidos. Se conforma por nueve entidades del centro-occidente del país: Aguascalientes, Colima, Durango, Guanajuato, Jalisco, Michoacán, Nayarit, San Luis Potosí y Zacatecas, que han establecido vínculos históricos con algunos estados y regiones estadounidenses mediante la continua e ininterrumpida migración de sus habitantes. Todas estas entidades presentan una larga tradición migratoria a Estados Unidos. La región Norte se caracteriza porque históricamente ha tenido una participación significativa en la migración a Estados Unidos, aunque de menor intensidad migratoria que la región Tradicional. Es además receptora de grandes flujos migratorios provenientes del interior del país y

de aquellos migrantes mexicanos que son devueltos por las autoridades migratorias estadounidenses, pues seis de las ocho entidades que la componen tienen frontera con Estados Unidos: Baja California, Sonora, Chihuahua, Coahuila, Nuevo León y Tamaulipas. Incluye, además dos estados que mantienen vínculos geográficos y migratorios con los estados fronterizos: Baja California Sur y Sinaloa. Otro rasgo característico de esta región es la migración transfronteriza (commuters). De ahí que esta región presente una dinámica migratoria muy diferente a la observada en otras regiones del país.

La región Centro se caracteriza por un fuerte dinamismo migratorio, sobre todo a partir de la década de 1980. Se conforma por las entidades de Morelos, Querétaro, Tlaxcala, Puebla, Hidalgo, Distrito Federal y el Estado de México. La región Sur-sureste incluye a ocho entidades: Campeche, Chiapas, Guerrero, Oaxaca, Quintana Roo, Tabasco, Veracruz y Yucatán. Esta región se distingue por su reciente incorporación a la migración hacia Estados Unidos, la cual inicia, principalmente en la década de 1990, con excepción de Guerrero y Oaxaca, cuyos orígenes se remontan a los años cuarenta en el contexto del Programa Bracero (CANAPO, 2010). En la Tabla 1 se presentan los datos censales del aporte de migración de las cuatro regiones antes mencionadas.

Tabla 1: Aportación de Migración Mexicana a Estados Unidos Por Regiones.

MIGRACIÓN MEXICO - ESTADOS UNIDOS POR REGIONES PERIODO(2005-2010)	
Región Norte	13%
Región Central	27%
Región Tradicional	40%
Región Sur-sureste	20%

*En esta tabla se muestra la aportación de la migración mexicana a Estados Unidos por regiones. En la República Mexicana se observan cuatro grandes regiones: La Tradicional con 40% de aportación, conformada por los estados de: Aguascalientes, Colima, Durango, Guanajuato, Jalisco, Michoacán, Nayarit, San Luis Potosí y Zacatecas. La Central con 27% de aportación, conformada por los estados de: Morelos, Querétaro, Tlaxcala, Puebla, Hidalgo, Distrito Federal y el Estado de México. La Sur-sureste con 20% de aportación, conformada por los estados de: Campeche, Chiapas, Guerrero, Oaxaca, Quintana Roo, Tabasco, Veracruz y Yucatán, y por último la Norte con 13% de aportación, conformada por los estados de: Baja California, Sonora, Chihuahua, Coahuila, Nuevo León y Tamaulipas. Fuente: (CONAPO, 2010).*

Actualmente la minoría étnica más representativa en Estados Unidos son los hispanos, la cual mostró un aumento de 15.2 millones entre el 2000 y 2010, representando más de la mitad de los 27.3 millones de aumento de la población total de Estados Unidos. Entre el 2000 y 2010, la población hispana aumentó en un 43%, o cuatro veces el crecimiento del país de 9.7%. Es importante mencionar que del grupo de los hispanos, el 65% lo conforman el grupo de los mexicanos, representando el grupo más grande dentro de esta categoría. Los mexicanos han reportado un crecimiento significativo, ya que aumentó de 20.6 millones en el 2000 a 31.8 millones en el 2010, representando alrededor de tres cuartas partes del aumento de 15.2 millones del total de la población hispana entre el 2000 y 2010.

La población de origen mexicano representó el mayor grupo hispano en 40 estados, con más de la mitad de estos estados en las regiones sur y oeste del país, dos estados en el noreste, y en todos los 12 estados de la región norcentral (Census-Bureau, 2010). En la actualidad, el 75% de los hispanos se concentran en ocho estados de la Unión Americana con poblaciones de más de 1 millón. Estos estados son: California, Texas, Florida, Nueva York, Illinois, Arizona, Nueva Jersey y Colorado. El estado que presentó mayor asentamiento de hispanos fue el de California con 28% (14 millones) (Census-Bureau, 2010). Cabe destacar que en la actualidad los latinos en Estados Unidos representan la minoría con más representatividad, y los migrantes mexicanos conforman el 65% de esta categoría.

Así mismo se observa que estos migrantes siguen manteniendo sus tradiciones y costumbres como una forma de identidad cultural, consumiendo diferentes bienes y servicios propios de sus lugares de origen, originado así el llamado mercado de nostalgia. Existe actualmente una alta concentración de latinos y mexicanos en Nueva York (IME, 2011), al contar con 3, 416,922 latinos que representan el 17.6% de la

población total y 457,288 mexicanos que representan el 2,4% del total de la población. (Census-Bureau, 2010). A su vez el condado de Los Ángeles California cuenta con 4, 687,889 latinos que representan el 47.7% de la población total y 3, 510,677 mexicanos que representan el 35.8% del total de la población(Census-Bureau, 2010). Es por esta razón que se escogieron estas dos importantes ciudades como muestra representativa para la investigación por su alta concentración de migración mexicana.

Por otra parte, la mayoría de los migrantes mexicanos en Estados Unidos mantienen interrelaciones sociales, culturales, económicas y políticas en los dos países. Muchos de ellos son trabajadores temporales que participan en un circuito trasnacional y mantienen abierta, de manera permanente, una puerta de comunicación e intercambio cultural en ambos países.Sin embargo, a través de estos circuitos binacionales, giratorios y dinámicos se lleva a cabo una interacción constante de ideas, cultura, lenguaje, valores y formas de vida entre los dos países.

Cabe señalar que este intercambio genera movimientos en el estilo de vida de los pobladores de ambos lados de la frontera, mismos que han sido estudiados y documentados tanto en Estados Unidos como en México, en sus aspectos sociológicos, demográficos, políticos, económicos, laborales, históricos, antropológicos y, sólo recientemente en sus aspectos mercadológicos. En síntesis, se considera que la migración es un fenómeno que consiste en el desplazamiento de individuo desde un lugar de origen hacia otro destino, implicando un cambio de residencia habitual. Las causas sociales y económicas datan de varias décadas, originadas principalmente por las necesidades de trabajo y del empleo de mano de obra barata de un país poderoso económicamente y otro país emergente, como es el caso de México y Estados Unidos.

### Consumo de Nostalgia

La palabra nostalgia etimológicamente proviene del griego *nostros*, que significa “regreso a casa”, y *algos*, que significa “dolor”. La palabra nostalgia es relativamente nueva. Comenzó a usarse a finales del siglo XVII para describir el amargo sentimiento que embargaba a los soldados centroeuropeos, quienes, debido a la continuidad de las campañas de guerra, pasaban largos periodos lejos de casa. La nostalgia es un sentimiento, estado de tristeza o melancolía que sufren los individuos cuando añoran o extrañan la pérdida de alguien o algo. La nostalgia y su relación con el enfoque de marketing nostálgico y migración tienen suma importancia al estar ligadas al consumo de bienes nostálgicos por parte de los migrantes, porque al irse de su zona geográfica de origen ya sea estado, región o país, y al establecerse en otra, con una cultura diferente, llegan con el tiempo a sentir esa nostalgia(Acle & Burguete, 2012, pág. 3).

El concepto de nostalgia tiene una aplicación en diferentes contextos como la tristeza o melancolía por familiares, amigos, compañeros, comida, ropa, música, cine, juguetes, etc. Asimismo este concepto comprende diferentes sinónimos como: melancolía, pesar, tristeza y pesadumbre. La melancolía es el sinónimo con el cual se va a relacionar con el marketing nostálgico de los migrantes. El término de nostalgia se empieza a definir como el estado de decaimiento, melancolía y de languidez causado por el pesar obsesivo o el recuerdo del lugar de origen en el que se ha vivido por largo tiempo.

De esta forma, el término de consumo por nostalgia, es relativamente nuevo dentro del contexto del marketing y migración. Se define el consumo por nostalgia como la acción y el efecto de los migrantes por adquirir productos (bienes y servicios) de nostalgia, que representaban una serie de costumbres, tradiciones, hábitos de consumo que formaban parte de su vida cotidiana en su lugar de origen y que satisface necesidades y deseos al recordar y añorar su cultura en otro destino (Acle & Burguete, 2012, pág. 25). El consumo por nostalgia trata de un consumo permanente, no asociado a la moda sino a la cultura y al arraigo de los países de origen. Se considera que no es un mercado ni un deseo; se trata de una

acción y efecto de adquirir productos de nostalgia por parte de los migrantes que activa la demanda en el mercado de nostalgia. A manera de conclusión, la nostalgia representa el sentimiento de melancolía que sufre un migrante en un lugar diferente al de su origen. Esto detona la adquisición de productos de nostalgia para satisfacer sus necesidades y deseos. Como se puede apreciar la migración favorece el mercado y consumo por nostalgia.

### Bienes de nostalgia

Uno de los objetivos principales de cualquier empresa es la producción de bienes o servicios para satisfacer las necesidades y deseos de los consumidores, y de esta forma obtener una utilidad o ganancia. Dentro del contexto de marketing, un producto es cualquier bien o servicio que se ofrece en el mercado para satisfacer las necesidades y deseos de los consumidores (Kotler & Armstrong, 2009).

La definición anterior engloba bienes y servicios, pero para el presente estudio solo se hará referencia a los bienes de consumo. Es necesario ligar la definición tradicional de producto al enfoque de nostalgia, por lo que a continuación se exponen diferentes definiciones de productos de nostalgia.

Según un estudio de la Comisión Económica para América Latina y el Caribe (CEPAL), se entiende por “productos de nostalgia” aquellas mercancías que integran bienes y servicios que forman parte de los hábitos de consumo, cultura y tradición de los diferentes pueblos y naciones”, y parte de la idea de que en el caso de los grupos sociales que emigran al extranjero tienden a extrañar, a recordar, ciertos productos que forman parte de su vida cotidiana, productos y servicios que difícilmente pueden encontrar en sus lugares de destino (CEPAL, 2003). En el caso de los productos étnicos, se trata de aquellos productos “asociados a un país, pero que en el exterior los consumen tanto los nacionales como otros grupos de población” y que en cierto sentido, “han logrado penetrar en mercados de mayor dimensión”. Se puede agregar a esta definición que estas mercancías son de contexto autóctono, con un gran sentido de pertenencia “nacional” en el sentido de estilos de vida transmitidos socialmente. Estos bienes y servicios, al carecer los migrantes de ellos, les impiden o dificultan retroalimentar o satisfacer sus formas de consumir, sus tradiciones, sus costumbres y sus formas de reproducción social, que forman parte de su identidad histórica, cultural y nacional.

De acuerdo con la anterior definición, cuando denomina “otros grupos de la población” relacionado con los consumidores de mercancías étnicas, se puede referir no solo a los consumidores nacionales, sino también a aquellos grupos no nacionales que han asimilado ciertos patrones de consumo ligados a este género de bienes y servicios de muy diverso origen nacional. De aquí se puede establecer que no todos los bienes y servicios de nostalgia son productos étnicos, pero todo bien o servicio étnico es un producto de nostalgia. Los productos étnicos y de nostalgia destacan por ser mercancías cuya tendencia cuenta con las características de orientarse y dirigirse a mercados altamente diferenciados (Olmedo, 2006). La definición de producto o bien de nostalgia que se utiliza para el presente estudio es la siguiente: “es un bien o servicio diferenciado que se compone de una serie de costumbres, tradiciones, hábitos de consumo que formaban parte de su vida cotidiana en su lugar de origen y que satisface necesidades y deseos de los migrantes al recordar y añorar su cultura en otro destino” (Acle & Burguete, 2012, pág. 21). Los productos de nostalgia al considerarse diferenciados, presentan características particulares, como se muestran a continuación en la Tabla 2.

Tabla 2: Características de los productos de nostalgia.

CARACTERÍSTICAS DE LOS PRODUCTOS DE NOSTALGIA		
Alta familiaridad hacia los productos por parte de los migrantes en el lugar de destino.	Relación de flujos naturales de comercio establecida inicialmente por comerciantes informales. (viajeros)	Demanda que refleja calidad y confianza en las marcas y productos por parte de los migrantes.
Productos altamente diferenciados por satisfacer necesidades de cultura y nostalgia.	Productos con ventaja competitiva al tener una alta segmentación o enfoque.	Satisfacer nichos de mercados específicos y al mismo tiempo influencia en el consumo del mercado de destino.
Representan oportunidades de negocios para las empresas del país de origen del migrante.	Poseer un alto posicionamiento de sus marcas en los migrantes ante la desconocida y variada competencia.	Contar con un alto grado de lealtad y tradición en la preferencia de los productos.
Preferencia sobre estos productos por incluir el idioma natal en sus envases y etiquetas.	Percepción positiva por ser productos frescos, naturales y hechos a mano.	Alta afinidad con las necesidades y deseos del migrante.

*En la siguiente tabla se aprecian las 12 principales características o atributos que identifican a los productos de nostalgia como lo son: alta familiaridad por parte de los migrantes, productos altamente diferenciados, representan oportunidad de negocio, preferencia por el idioma natal en sus presentaciones, flujos naturales de comercio, ventaja competitiva por alto enfoque, alto posicionamiento, percepción por productos naturales, reflejan calidad y confianza, satisfacción de nichos específicos, alto grado de lealtad y alta afinidad con las afinidades. Fuente: (Acle & Burguete, 2012, pág. 22)*

Estos productos abarcan diferentes bienes y servicios como comida, ropa, música, muebles, bebidas, regalos, artesanías, restaurantes, entretenimiento, etc. Entre los más demandados están los bienes de consumo (alimentos, bebidas y abarrotes). Para el caso de México, los productos de nostalgia en el mercado Norteamericano se destacan por los siguientes aspectos: (1) El Tratado de Libre Comercio con América del Norte que comprende la relación económica de México con Estados Unidos (considerado el mercado más grande e importante del mundo) y Canadá firmado en 1994, ofrece facilidades para exportar una gran variedad de productos nacionales a estos dos países, principalmente a Estados Unidos considerado su principal socio comercial, al cual le exporta casi el 72% de su producción (CIA, 2011). (2) Dentro de la gran variedad de productos que representa el fenómeno de nostalgia para los mexicanos migrantes en Estados Unidos, existe cierta preferencia o mayor demanda hacia productos específicos. Organismos como el Banco Nacional de Comercio Exterior (BANCOMEXT), Proméxico y la Secretaría de Economía (SE), en sus misiones comerciales y ferias internacionales, clasifican a los productos de nostalgia como oportunidades de negocio de exportación para las empresas mexicanas.

Entre los productos de origen nacional con mayor demanda se encuentran: alimentos frescos (aguacate, chile, café, limón, nopal, papaya, perejil, tamarindo, etc.); alimentos procesados o enlatados (chile, guisado, dulce, mole, salsa, frijol, sopa, botana, guacamole, galleta, leche, etc.); bebidas (refresco, jugo, agua, cerveza, tequila, etc.); regalos (artesanías, artículos religiosos, alfarería, cerámica, joyería, marroquinería, sombreros, velas, ropa, etc.); y otros (abarrotes, detergente, jabón, muebles, escobas, uniformes de fútbol, etcétera). A manera de resumen, los productos de nostalgia son factores clave para la satisfacción de necesidades y deseos de los migrantes. Para el caso de los productos de nostalgia mexicanos, son considerados como una gran oportunidad de negocios para las empresas mexicanas que deseen exportar al vecino país del Norte aprovechando el fenómeno de migración y el Tratado de libre Comercio con Estados Unidos y Canadá.

### Marketing Nostálgico

En la actualidad, el marketing se ha convertido en una herramienta fundamental para toda organización que desee identificar y satisfacer necesidades y deseos entre los consumidores a través de la producción de bienes o la prestación de servicios, fijando sus precios y distribuyéndolos en el mercado a través de una eficiente promoción. El marketing es una función de negocios indispensable para toda empresa que desee perdurar en un mercado competitivo, ocupándose de los consumidores, creando valor y satisfacción para los mismos como una filosofía y practica moderna. El concepto de marketing se puede diferenciar entre dos enfoques: la orientación de mercado y la función de marketing. El primero

de ellos implica todas las actividades de una empresa dirigidas a la satisfacción de necesidades y deseos de los consumidores. El segundo implica la administración del *marketing mix*, haciendo uso de las cuatro P's (Mc Donald, 2002). El marketing presenta diferentes enfoques de aplicación; entre los más conocidos están: industrial, turístico, internacional, social, político, etc.

Es necesario mencionar que cada vez más aparecen nuevos enfoques de marketing. Para el presente estudio se utilizó el nuevo enfoque de marketing nostálgico, el cual se construye a través de los conceptos de marketing y de nostalgia, aplicándose al fenómeno de migración. El marketing nostálgico se define como “el proceso social en el cual una empresa y sus consumidores cumplen sus objetivos. Se compone de la aplicación de dos enfoques: la orientación del mercado y la función del marketing”. El primero incluye las actividades de una empresa dirigidas a satisfacer las necesidades y deseos de los migrantes a través del intercambio de bienes y servicios de nostalgia. Y el segundo incluye la administración del *marketing mix* (Acle & Burguete, 2012, pág. 63).

Por otra parte, es necesario complementar este concepto con los siguientes dos términos para su mejor comprensión: El mercado de nostalgia es el grupo de migrantes con necesidades y deseos específicos de productos de nostalgia, así como de dinero y voluntad para gastar. Dicho mercado se compone de productos de nostalgia que demandan millones de migrantes de primera y segunda generación y refleja buena parte de las tradiciones culturales de sus regiones de origen (Burguete & Acle, 2012, pág. 16). Y el consumo por nostalgia que es: la acción y el efecto de los migrantes, por adquirir productos de nostalgia, que representaban una serie de costumbres, tradiciones, hábitos de consumo que formaban parte de su vida cotidiana en su lugar de origen y que satisface necesidades y deseos al recordar, añorar su cultura en otro destino (Burguete & Acle, 2012, pág. 25). Dicho consumo trata de una demanda permanente, no asociado a la moda sino a la cultura y al arraigo de los países de origen. Se considera que no es un mercado ni un deseo, se trata de una acción y efecto de adquirir productos de nostalgia por parte de los migrantes que activa la demanda en el mercado de nostalgia. A manera de conclusión, el marketing nostálgico es un nuevo enfoque dirigido a la satisfacción de necesidades y deseos de los migrantes a través de los productos de nostalgia.

## METODOLÓGIA

El presente estudio tiene como finalidad determinar y describir la influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos. Para abordar la investigación de campo se diseñó la siguiente metodología: se utilizó la investigación con enfoque cualitativo, así como la investigación descriptiva y correlacional entre las variables: dependiente (consumo de bienes por los migrantes mexicanos en Estados Unidos) y la independiente (marketing nostálgico). La unidad de análisis fueron los migrantes mexicanos (hombres y mujeres mayores de 20 años y menores de 80 años que tuvieran el poder adquisitivo para consumir bienes de nostalgia). El método de investigación utilizado fue el deductivo y analítico, aplicando la técnica de encuesta y entrevista y haciendo uso del cuestionario como instrumento de medición, el cual contiene 11 preguntas de opción múltiple (dicotómica y nominal).

Los cuestionarios se aplicaron a migrantes mexicanos ubicados en centros comerciales, supermercados, casas y áreas de trabajo en el verano del 2011. Se seleccionaron dos ciudades representativas de Estados Unidos: El Este de los Ángeles, California y Manhattan, Nueva York, por su alta concentración de mexicanos de acuerdo al marco teórico y datos arrojados por el Census Bureau y Consejo Nacional de Población (CONAPO). El tamaño de la muestra de estudio fue de 382 migrantes mexicanos respectivamente por cada una de las ciudades, utilizando para su determinación los siguientes porcentajes: 95% de confiabilidad, 5% de margen de error, 50% de probabilidad a favor y 50% de probabilidad en

contra, realizando su cálculo a través del programa estadístico STATS. A continuación en la Tabla 3 se presenta el diseño de la investigación antes mencionada en forma de resumen.

Tabla 3: Resumen Técnico de la Investigación

CONCEPTO	DESCRIPCIÓN
Enfoque de la investigación	Cualitativa.
Tipo de investigación	Descriptiva y correlacional.
Unidad de análisis	Migrantes mexicanos mayores de 18 años y menores de 80 años.
Método de investigación	Deductivo y analítico.
Técnica de investigación	Encuesta y entrevista dirigida a migrantes mexicanos.
Instrumento de medición	Cuestionario con preguntas dicotómicas y nominales.
Estrategia de aplicación	¿A quién?: migrantes mexicanos ¿Cuándo?: Otoño del 2012 ¿Dónde?: supermercados, casas, centros comerciales y aéreas de trabajo.
Población objetivo	245,000 migrantes mexicanos entre 20 y 80 años en el Este de Los Ángeles, California y 29,500 migrantes mexicanos entre 20 y 80 años en Manhattan, Nueva York (Census-Bureau, 2010).
Muestra de estudio	382 migrantes mexicanos en el Este de los Ángeles, California y 382 migrantes mexicanos en Manhattan, Nueva York.
Técnicas/pruebas estadísticas utilizadas en el análisis de datos	Estadística descriptiva (media, moda).
Programa estadístico utilizado	STATS y Excel.

*En esta tabla se muestra el resumen técnico del diseño de la metodología empleada para la investigación. El enfoque de la investigación fue cualitativo, con un tipo de investigación descriptivo, correlacional y transversal aplicado a migrantes mexicanos entre 18 y 80 años de edad, el método de investigación fue deductivo, analítico, a través de la encuesta, entrevista y observación como técnica de investigación, utilizando un cuestionario con preguntas cerradas de tipo dicotómica y nominal como instrumento de medición. La encuesta y entrevista fueron aplicadas a una muestra de 382 migrantes en restaurantes, supermercados, barrios y otros sitios en el Este de los Ángeles, California y en Manhattan Nueva York. La investigación se aplicó en otoño del 2012. Se utilizaron como técnicas de análisis de datos: la estadística descriptiva (media y moda) utilizando los programas estadísticos: STATS Y Excel. Fuente: Elaboración propia en base al marco metodológico.*

## RESULTADOS

A continuación se presentan en la Tabla 4 los resultados obtenidos en forma de resumen, después de haber aplicado los cuestionarios a 382 migrantes en el Este de los Ángeles y 382 migrantes en Manhattan, Nueva York.

## CONCLUSIÓN

De acuerdo a los resultados obtenidos del presente estudio, se concluye que el objetivo se logra al determinar una alta influencia del marketing nostálgico en el consumo de bienes por los migrantes mexicanos en Estados Unidos. Para describir esta alta influenciade las variables dependiente e independiente, se presenta y describe a continuación la siguiente información: Nostalgia: Los mexicanos en Estados Unidos sienten un alto grado de influencia de nostalgia (85% a 100%) en los siguientes puntos: por su país natal, sobre todo aquellos que llevan viviendo menos de diez años y que deciden seguir manteniendo sus hábitos de consumo, al adquirir por lo menos al mes algún producto de origen mexicano, y confirmando que el consumo de estos productos satisfacen sus necesidades y sentimientos de nostalgia, consumiéndolos preferentemente en Navidad y en la festividad del 5 de mayo.

Producto: Los migrantes mexicanos sienten un alto grado de influencia de nostalgia por productos de origen mexicano; principalmente por los alimentos seguido de los regalos. Dentro de los alimentos que más consumen están los derivados del maíz (tortillas, tamales, tacos, etc.), seguido por los guisos y caldos. Precio: Existe un alto grado de influencia de nostalgia de los migrantes mexicanos (90% al 92%) por los productos mexicanos, al considerar que el precio en que se venden los productos de nostalgia en Estados Unidos están al alcance de su bolsillo.

Plaza: Los migrantes mexicanos sienten un alto grado de influencia de nostalgia (82% a 85%) prefiriendo adquirir productos de nostalgia en tiendas de origen mexicano.

*Promoción:* Los migrantes mexicanos sienten un moderado grado de influencia de nostalgia (74% y 75%) al responder a adquirir productos de nostalgia cuando estén de promoción o descuento.

Tabla 4: Resultados de las Encuestas (Este, la, California y Manhattan, NY)

ÍTEM		RESULTADO ESTE, LA		MANHATTAN, NY	
1	¿El estar viviendo en Estados Unidos le provoca un sentimiento de nostalgia por México?	a) Si 92%		a) Si 95%	
		b) No 8%		b) No 5%	
2			Alta90%		Alta93%
		a) Menos de 5 años	Media7 %	a) Menos de 5 años	Media5%
			Baja 3 %		Baja2%
			Alta70%		Alta75%
	Seleccione el grado de nostalgia que siente por México, de acuerdo a los años que lleva viviendo ininterrumpidamente en Estados Unidos:		Media20%		Media15%
		b) 6 años a 10 años	Baja10%	b) 6 años a 10 años	Baja10%
			Alta20%		Alta25%
			Media75%		Media70%
		c) Más de 10 años	Baja 5 %	c) Más de 10 años	Baja5%
3	¿Conserva aún viviendo en Estados Unidos los hábitos de consumo que tenía en México?	a) Si 85%		a) Si 90%	
		b) No 15%		b) No 10%	
4	¿Consume por lo menos al mes algún producto de origen mexicano?	a) Si 88%		a) Si 92%	
		b) No 12%		b) No 8%	
5	¿Los productos mexicanos satisfacen completamente sus necesidades de nostalgia?	a) Si 94%		a) Si 96%	
		b) No 6%		b) No 4%	
6		a) 5 de Mayo	16%	a) 5 de Mayo	22%
	Mencione en cuál de las siguientes festividades es en la que consume más productos de origen mexicano	b) 16 de Septiembre	6%	b) 16 de Septiembre	3%
		c) Día de la virgen	14%	c) Día de la virgen	17%
		d) Navidad	60%	d) Navidad	55%
		e) Otros	4%	e) Otros	3%
7		a) Ropa típica	8%	a) Ropa típica	2%
	De los siguientes productos de origen mexicano; ¿Cuál es el que le provoca más nostalgia?	b) Alimentos	52%	b) Alimentos	56%
		c) Abarrotes	11%	c) Abarrotes	15%
		d) Regalos	22%	d) Regalos	24%
		e) Otros	7%	e) Otros	3%
8		a) Derivados del maíz	43%	a) Derivados del maíz	46%
	¿Qué tipo de platillo de la comida tradicional mexicana consume con mayor frecuencia?	b) Moles	13%	b) Moles	14%
		c) Guisos y Caldos	26%	c) Guisos y Caldos	26%
		d) Dulces típicos	8%	d) Dulces típicos	9%
		e) Otros	10%	e) Otros	5%
9	¿Considera que el precio que tienen los productos de nostalgia en Estados Unidos están al alcance de su bolsillo?	a) Si 92%		a) 93%	
		b) No 8 %		b) 7%	
10	¿Prefiere buscar tiendas de origen mexicano para comprar los productos de nostalgia?	a) Si 82%		a) 85%	
		b) No 18%		b) 15%	
11	¿Compra productos de origen mexicano cuando están de promoción o descuento?	a) Si 74%		a) Si 75%	
		b) No 26%		b) No 25%	

En la siguiente tabla se reflejan los resultados de las encuestas aplicadas a 382 migrantes mexicanos en el Este de los Ángeles y New York. Se muestran once preguntas cerradas de tipo dicotómicas y nominales. En primer lugar, resumiendo sobre el contexto de medir la nostalgia que sienten los migrantes mexicanos al estar radicando en Estados Unidos, segundo sobre el contexto de preferencia de nostalgia hacia ciertos bienes, el precio, el lugar de compra y por ultimo sobre la promoción. Fuente: Elaboración propia en base a los resultados de la encuesta aplicada.

Es interesante hacer notar que los migrantes mexicanos que residen en Nueva York presentan un mayor porcentaje (de 1% al 5%) de influencia del marketing nostálgico por el consumo de bienes, que los migrantes mexicanos que residen en el Este de los Ángeles. Finalmente la investigación contribuye con información al conocimiento teórico y práctico a través de nuevos términos como: consumo de nostalgia, bienes de nostalgia y marketing nostálgico, así mismo del uso de una metodología específica y original dentro del contexto del marketing.

# DESARROLLO LOGÍSTICO DEL TRANSPORTE EN EL QUINDÍO – UNA OPCIÓN DE VALOR PARA EL TURISMO

Libardo Carlos Vargas Taborda, Universidad la Gran Colombia Seccional Armenia

## RESUMEN

*Identificaremos las políticas públicas de turismo y logística en el Departamento del Quindío, se llevarán a cabo encuestas que determinen condiciones actuales del manejo logístico del transporte de pasajeros, posteriormente categorizar tres eslabones de la cadena de valor de turismo: Transporte, Alojamientos y Atracciones Turísticas. Desarrollaremos tres tipos de muestreos con características particulares de cada eslabón. Transporte, se desarrollará un muestreo por cuota, atracciones turísticas, censo poblacional y hospedaje muestreo estratificado. Después se categorizarán los macroproyectos que intervienen en el desarrollo logístico de nuestro departamento clasificando cuál de estos actuará directamente en la nueva logística del transporte en la región y con esta información evaluar el impacto socioeconómico de los nuevos desarrollos logísticos en cadena del transporte en el Departamento del Quindío.*

**PALABRAS CLAVES:** Competitividad, Turismo, Transporte, Macro Proyectos y/ Políticas Públicas

## DEVELOPMENT OF TRANSPORT LOGISTICS QUINDÍO - ONE VALUE FOR TOURISM

### ABSTRACT

*Identify public policies of tourism and logistics in the Department of Quindio, surveys will be conducted to determine current conditions of the logistics management of passenger transport, then categorize three links in the tourism value chain: transportation, accommodations and attractions. Develop three types of samples with specific characteristics of each link. Transportation, develop a quota sampling, attractions, and lodging census stratified sampling. After the macro is categorized involved in the development of our department logistics classifying which of these act directly on new transport logistics in the region and with this information to assess the economic impact of new developments in transport logistics chain in the Department of Quindío.*

**JEL:** R1, R4, O18

**KEYWORDS:** Competitiveness, Tourism, Transport, Macro Projects and Public Policy

## INTRODUCCIÓN

El tema manejado en el presente proyecto de investigación es de suma importancia no solo para el Departamento del Quindío, sino también para diferentes regiones tanto nacionales como internacionales, puesto que es concerniente a temas relacionados con la industria turística basados en una perspectiva de competitividad y logística

La competitividad, como temática dentro de la administración de empresas, es vista como “la capacidad de una organización pública o privada, lucrativa o no, de mantener sistemáticamente ventajas comparativas que le permitan alcanzar, sostener y mejorar una determinada posición en el entorno

socioeconómico”; esta definición tiene varios elementos que redefinen el papel del administrador de empresas al interior de la gestión empresarial, puesto que es menester de este el evaluar el nivel de competitividad de las empresas y el proponer diferentes alternativas para mejorar dicha posición.

Uno de los elementos principales para el desarrollo competitivo tanto de las naciones como de las organizaciones empresariales es la innovación.

Las personas que desarrollan empresas, se organizan de diversas maneras en torno a estrategias y objetivos que ayudan a solucionar y enfrentar diferentes retos empresariales los cuales surgen día a día. Gracias a esto el personal de una organización elige, acepta o soportan a sus líderes o directivos; se comprometen en mayor o menor medida con los objetivos, cargas y esfuerzos en riesgo y aspiran a una determinada porción de la recompensa. Así, la medida del resultado final, en términos relativos de éxito (hacerlo mejor que los demás) nos lleva al concepto de competitividad.

Dada la importancia del sector para la región se hace pertinente evaluar su grado de impacto socioeconómico con base a políticas públicas como son “EL PLAN DECENAL ESTRATEGICO DE DESARROLLO TURISTICO DEL QUINDIO” y la “POLITICA DEPARTAMENTAL DE TURISMO”, ambos documentos plantean como una de las líneas importantes de acción, el caracterizar, el explorar y el describir la cadena productiva turística desde diferentes ángulos, todo esto engranado en el desarrollo de los diferentes Macroproyectos que están interactuando con nuestro Departamento del Quindío y como estos en unión con las políticas públicas llegarán a transformar la logística del turismo en cuestión de transporte en nuestra región.

Debemos manejar y entender conceptos como Cluster. El cual nos muestra el concepto de agrupaciones de empresas complementarias e interconectadas. De esta manera los Clusters son concentraciones geográficas de empresas e instituciones interrelacionadas que actúan en una determinada actividad productiva. Agrupan una amplia gama de industrias y otras entidades relacionadas que son importantes para competir. Incluyen, por ejemplo a proveedores de insumos críticos (como componentes, maquinaria y servicios) y a proveedores de infraestructura especializada. Con frecuencia también se extienden hasta canales y clientes. Podemos deducir lo siguiente en tres diferentes conceptos:

Cluster no es un gremio

Cluster no es un sector industrial

Cluster no es una cadena productiva

La importancia de un Cluster reside en hacer explícita la construcción de redes de cooperación y colaboración entre empresas de sectores aparentemente divergentes para promover el crecimiento económico de una región, en las industrias en que es naturalmente competitiva, resaltando la participación de todos los agentes relevantes del Cluster que van más allá de las cadenas productivas principales (Empresas, Proveedores de servicios, Academia, Instituciones públicas, entre otros).

No podemos dejar de lado un tema tan importante como es la cadena de valor. La cual es entendida como una serie de actividades encadenadas que conducen a generar un valor agregado superior al costo de las mismas; Michael Porter, en su modelo, identifica una serie de actividades genéricas que pueden ser adaptadas a la firma a analizar. Dentro de las actividades propuestas por Porter encontramos dos grandes grupos, el primero de ellos corresponde a las actividades primarias y el segundo a actividades secundarias; se entiende por actividad primaria aquella que esta directamente relacionada con la actividad comercial de la empresa y es actividad secundaria aquella que sirve como apoyo a la gestión empresarial. Las actividades propuestas por Porter son:

### Actividades Primarias

Logística de Entrada: Se entiende por logística de entrada lo que tiene que ver con el abastecimiento de materias primas, esto incluye el control de inventarios y el almacenamiento.

Operaciones: Incluye toda las actividades involucradas en la transformación de la materia prima en el producto final.

Logística de Salida: Se refiere a las actividades que son desarrolladas en la entrega del producto al cliente de la firma.

Marketing y Ventas: Se refiere a las actividades que llevan al cliente a adquirir el producto, estas actividades incluyen el establecimiento de precios, la publicidad, selección de canal de distribución, entre otros.

Servicio Post – Venta: Se entiende por servicio por venta todas aquellas actividades que se desarrollan para el cliente después de haber adquirido el producto de la compañía; dichas actividades soportan la venta e incrementan el valor agregado para el cliente, dentro de ellas encontramos el soporte técnico, las garantías, etc.

### Actividades Secundarias

Infraestructura de la Firma: Incluye actividades financieras, legales, etc.

Desarrollo Tecnológico: Se refiere a la investigación y desarrollo de nuevas tecnología que conduzcan a la reducción de costos, mejora de productos, estandarización, la automatización de procesos y otras tecnologías que soporten la cadena de valor.

Gestión del Recurso Humano: Son aquellas actividades encaminadas al reclutamiento, desarrollo y compensación del capital humano.

Compras: Se refiere a las compras adicionales que no tienen que ver con las materias primas para el desarrollo del producto y que soportan la cadena de valor.

Una vez identificadas las actividades primarias y secundarias para la empresa (no tienen que ser necesariamente las planteadas por Porter) se procede a identificar cuales de ellas son relevantes dentro de la generación de valor; son mas relevantes aquellas actividades que generan un mayor valor agregado o que tienen un costos mas alto en proporción a las demás dentro de la firma.

La suma de cadenas de valor por firma dentro de un sector industrial es lo que conocemos como la cadena de valor de la industria, en donde la suma de todas las actividades desarrolladas por cada empresa en la industria genera el mayor valor agregado para el cliente final.

Debemos entender y tener en cuenta para este trabajo que lo concerniente al manejo y conocimiento y las perspectivas sobre políticas del desarrollo regional han cambiado considerablemente en los últimos treinta años

La primera generación de políticas de desarrollo regional surge en los años 50 y 60 bajo la perspectiva de la redistribución de crecimiento económico. Era entonces de conocimiento general y un hecho empíricamente comprobado que el crecimiento económico no se daba simultáneamente en todas partes del territorio sino que era desigual y selectivo. Su carácter acumulativo era aceptado por muchos y la cuestión central concernía a su permanencia estructural y al proceso de su reproducción. Existían diferencias apreciables en términos de interpretación, tales como si la desigualdad se incrementaría o

decrecería con el tiempo. Las teorías de centro-periferia argüían que factores estructurales podrían reproducir e intensificar las desigualdades regionales.

Otras interpretaciones fueron más optimistas y predecían que las desigualdades podrían declinar con el tiempo. En su mayoría las políticas regionales fueron formuladas en la variante optimista y fueron derivadas de las teorías neoclásicas de la distribución óptima de recursos. Estas políticas entonces se orientaron a reducir los impedimentos a la movilidad de recursos y a transferir elementos monopólicos que mantuvieron los precios fuera de sus niveles competitivos (maillat, 1998). Los gobiernos nacionales, son los actores centrales en las políticas de primera generación. Deben diseñar e implementar políticas de regulación económica y través de incentivos financieros influir sobre la localización de las empresas. La dotación con infraestructura es un instrumento importante para estimular la demanda local y para reducir desventajas regionales. Las desigualdades regionales es el tema central en la teoría y la política de desarrollo regional. ¿Son las políticas regionales capaces de influir sobre patrones estructurales y reducir desigualdades regionales?

La especialización flexible y los distritos industriales redefinieron el marco de referencia para las políticas regionales y dieron origen a la segunda generación de políticas regionales de industrialización. La noción central de estas políticas de desarrollo regional endógeno fue "aumentar las capacidades de desarrollo de una región - generar un reto a la competitividad y las tecnologías internacionales con base en la movilización de sus recursos específicos y sus propias capacidades de innovación" (una diferencia importante con las políticas de la primera generación es que el gobierno ya no está en el centro de la política. más bien el desarrollo industrial endógeno enfatiza los roles de la cooperación entre firmas, de los gremios industriales, de los sindicatos de trabajadores y de gobierno para desarrollar en conjunto las habilidades, los recursos y las 'reglas del juego'. la política pública sigue siendo importante pero en forma diferente

En los años se viró hacia una tercera generación de políticas regionales industriales. Estas políticas de tercera generación en parte responden a los conocimientos avanzados y a la evaluación del desarrollo endógeno y sus políticas recientes. Estas nuevas políticas surgen del reconocimiento de que la globalización hace que sistemas regionales de producción industrial compitan entre sí, y no solamente sus firmas. Esto significa que las políticas nuevas no pueden ser exclusivamente locales, sino que deberán tomar en cuenta la posición y el posicionamiento económico de los sistemas regionales de producción dentro de un contexto global. Adicionalmente, las políticas recientes indican que las nuevas políticas no pueden ser exclusivamente locales o regionales hasta el punto de excluir políticas y contextos sectoriales e (inter)nacionales. La integración horizontal entre un número de actores suele ser complementada por integración vertical entre niveles. Las políticas de tercera generación se basan en el reconocimiento de que la nueva orientación no necesariamente requiere más recursos, sino de aumentar 'la racionalidad sistémica' en el uso de los recursos y programas existentes. La tercera generación en cierta forma supera la oposición entre políticas del desarrollo exógeno y endógeno.

## REVISIÓN DE LITERATURA

En el Quindío, a partir de la pasada crisis cafetera, se vio la necesidad de incursionar en los usos alternativos del suelo quindiano; muchos de los esfuerzos de los quindianos se dirigieron a otros cultivos como lo son la yuca, el plátano, el aguacate, los cítricos, entre otros; sin embargo, de manera adicional se vio un incremento alrededor de la industria turística en el Quindío, apalancado en los elementos paisajísticos únicos de la región y mas aun aprovechando la gran oportunidad brindada por la Unesco al ser nombrado el departamento del Quindío como Patrimonio Cultural al Paisaje Cafetero y valorando en gran medida la iniciativa privada y gremial direccionada a la creación de los dos primeros parques temáticos reconocidos internacionalmente PANACA Y PARQUE DEL CAFE. Hoy en día el Quindío ha

perdido mucha fuerza como destino turístico del país, aunque dicha actividad turística ha terminado por modificar el uso mismo del suelo y las haciendas que antes veían esta actividad como algo adicional, hoy día la ven como la principal fuente de ingresos; el turismo para los quindianos se ha convertido en una de las industrias jalonadoras del aparato productivo y pensando de manera directa como influenciarán la creación de los grandes macroproyectos que se vienen desarrollando dentro y fuera del departamento y así aprovechar los beneficios que esto conlleva y poder otra vez ser uno de los destinos turísticos mas apetecidos por los colombianos y extranjeros.

En la República de Colombia se han realizado importantes estudios de Competitividad sobre todo enfocados a las regiones costeras, es el caso del estudio “La competitividad turística de Cartagena de Indias: análisis del destino y posicionamiento en el mercado” Realizado por: Cámara de Comercio de Cartagena y el Observatorio del Caribe Colombiano, financiado por COLCIENCIAS. Llegando a las siguientes propuestas y conclusiones:

Existe la necesidad de diferenciar, por un lado, la imagen proyectada que incide en la decisión del turista para visitar el destino, y por otro, la imagen fruto de la experiencia que tiene durante su visita.

La primera depende de los esfuerzos de promoción, comercialización y mercadeo, pero la segunda depende de la calidad del destino que incorpora desde factores relacionados con la salud del territorio hasta servicios turísticos. Sólo en la medida en que se garantice la conservación del destino es posible un turismo sostenible.

Igualmente El Centro de Estudios de Competitividad (CEC), Ubicado en el país de México, es el centro de investigación encargado de vincular al ITAM con el sector productivo. Su objetivo es actuar como catalizador entre los conocimientos dentro del ITAM y las necesidades de la comunidad empresarial.

Entre los principales proyectos realizados por el CEC se encuentra el siguiente:

#### EVALUACIÓN DEL TIANGUIS TURÍSTICO 2007

Patrocinador: Secretaría de Turismo

Responsable: Guillermo Abdel Musik

Año: 2007

Enlace:[http://cec.itam.mx/docs/Proyectos\\_CEC\\_act\\_oct\\_07\\_para\\_internet.pdf](http://cec.itam.mx/docs/Proyectos_CEC_act_oct_07_para_internet.pdf)

El cual se encargó de medir la competitividad del área de Acapulco, logrando potencializar en gran medida el mejoramiento en cobertura en cuanto al turismo en esta zona

#### METODOLOGÍA

Investigación mixta, con enfoque dominante de métodos cuantitativos. Ya que esta investigación busca identificar las políticas públicas en cuanto a turismo y logística en el Departamento del Quindío, para luego llevar a cabo diferentes métodos estadísticos enfocados en la recolección de información que caractericen y determinen las condiciones actuales del manejo logístico del transporte de pasajeros en el departamento del Quindío, después entrar a caracterizar los tres eslabones básicos del turismo en el departamento como son: Transporte, Alojamientos y Atracciones Turísticas, en términos de la calidad y el precio, para ello se desarrollaran tres tipos de muestreos diferentes dado que las características poblacionales de cada eslabón son particulares; para el transporte se desarrollará un muestreo por cuota, para las atracciones turísticas se desarrollará un censo poblacional y para el hospedaje se desarrollará un muestreo estratificado.

Después se categorizarán los diferentes macroproyectos que intervienen en el desarrollo logístico de nuestro departamento y así entrar a clasificar cuál de estos generará una intervención directa en la manera

de ver la nueva logística del transporte en la región. Finalmente con esta información se evaluará el impacto socioeconómico de los nuevos desarrollos logísticos en cadena del transporte en el Departamento del Quindío.

Como apoyo directo se crea un semillero de investigación el cual trabaja comprometidamente en el desarrollo de este proyecto.

Enfoque de la Investigación: Empírico – analítica

Tipo de Investigación: Evaluativa, con componentes descriptivos, explicativos y comparativos

## **RESULTADOS**

Se espera evidenciar que las condiciones actuales en cuanto a transporte sean las mejores y que se encuentren acopladas a los diferentes macroproyectos en cuanto a infraestructura vial se refiere y que todo esto esté debidamente articulado a las diferentes políticas públicas que demanda la región.

Esperamos encontrar que los alojamientos turísticos y atracciones turísticas, están debidamente articulados en cuanto a la logística que se necesita para el rápido y seguro desplazamiento de los turistas hacia sus zonas de descanso y diversión

Se espera encontrar que las políticas públicas del departamento están direccionadas y debidamente articuladas a los diferentes macroproyectos que impactarán a la región en cuanto a transporte se refiere.

Se pretende al final de esta investigación medir el impacto que generará la nueva forma de ver el transporte hacia el departamento del Quindío y si es necesario brindar una serie de recomendaciones que impacten de manera positiva todo el nuevo proceso logístico que se verá reflejado en la productividad del departamento del Quindío.

Apropiación y producción de conocimiento

Creación de redes académicas

Unión de el sector Empresarial, Estado y la Academia

## **CONCLUSIONES**

Las políticas Públicas que plantea el gobierno tanto nacional como departamental y municipal en materia de transporte y turismo detallan claramente que estos son unos puntos demasiado importantes para toda Colombia. Sin embargo cuando se realiza un análisis directo y detallado de estas, se encuentra que apuntan a objetivos demasiado macros dentro de los cuales no se observan direccionamientos claros hacia donde intervenir para poder potenciar de manera positiva el uso de estos eslabones tan importantes para nuestra región.

Cabe aclarar que al identificar este factor, nos genera una gran fortaleza a la hora de ejecutar este proyecto. Debido a que este identificará de manera clara fortalezas y debilidades de nuestra región para poder proponer estrategias claras que impacten de manera directa la nueva forma de ver la logística del transporte de pasajeros enfocadas en el turismo del eje cafetero especialmente en el departamento del Quindío.

### Limitaciones

Debido a que el desarrollo y construcción del macroyecto del túnel de la línea ha presentado diferentes atrasos en su construcción, ya sea por culpa directa del clima o por factores administrativos del proyecto. No se ha podido establecer una directriz clara que ayude a lograr el desarrollo adecuado de este proyecto en lo que tiene que ver con el tema de identificación directa del impacto de este en la nueva logística de transporte de pasajeros hacia el departamento del Quindío.

# ESTIMACIÓN DE LA UTILIDAD EN RIESGO BAJO AMBIENTE DE INCERTIDUMBRE: ESTUDIO DE CASO

Jorge A. Restrepo Morales, Universidad Autónoma Latinoamericana  
Santiago Medina Hurtado, Universidad Nacional

## RESUMEN

*Se presenta una aproximación metodológica para la cuantificación de posibles pérdidas económicas causadas por la volatilidad de las variables macroeconómicas: tasa representativa del mercado (TRM), índices de precios al consumidor (IPC) y el índice de precios al productor (IPP). La exposición se mide a partir del cálculo del riesgo operativo (RO) definido mediante la ecuación 1. Las distribuciones de probabilidad y los procesos estocásticos de los factores de riesgo TRM, IPC e IPP, se incorporan a los ingresos por ventas, a las compras de materias primas y a los costos y gastos fijos y variables de producción, partidas que determinan el RO; posteriormente con la Simulación de Montecarlo –SM–, se cuantifican los efectos de la volatilidad sobre el RO. La metodología se basa en las empresas del sector textil-confección de Colombia y se concreta por medio de un indicador tipo VaR, mediante la proyección del indicador RO para los periodos 2011 y 2012. Para elaborar el pronóstico, se recurre a la información disponible en la encuesta anual manufacturera (EAM) para el periodo 2000-2010 y se construye un modelo financiero para el año 2011 y 2012.*

## ABSTRACT

*This paper presents a methodological approach to economic losses quantification in textile-clothing industry, caused by the volatility of macroeconomic variables following: representative market rate (TRM), consumer price index (CPI) and the producer price index (PPI). Exposure is measure by calculating operational risk (OR) by equation 1. Probability distributions and stochastic processes identified risk factors for TRM, CPI and PPI, join sales revenue abroad and local purchases of raw materials and foreign and domestic costs and fixed and variable production costs, items that determine the RO, then using Monte Carlo simulation, it is possible to quantify the effects of the volatility of each factor on the RO. The methodology performed on companies in the textile and clothing industry and concrete through a VaR type indicator, by projecting the RO indice for the periods 2011 and 2012. In preparing the forecast, we use the information available in the Annual Survey of Manufacturing (ASM) for the period 2000 to 2010 and later built an industry financial model for 2011 and 2012.*

**KEYWORDS:** Earnings at Risk –EaR–, Value at Risk –VaR–, Volatility, SMEs, Operative Risk.

## INTRODUCCIÓN

La cuantificación de riesgos se aborda con la modelación de las distribuciones de probabilidad de los factores de riesgo, para medir su impacto en el desempeño corporativo (JP Morgan, 1999). Los factores de riesgo se agregan a los estados financieros mediante un proceso de SM. Esto permite cuantificar a priori diversas medidas de riesgo de las posibles pérdidas.

Este trabajo se compone de cuatro acápites, incluida la introducción; en la segunda parte se exhibe el modelo de aclaración, que incluye las definiciones y el análisis e identificación de los procesos estocásticos para las variables TRM, IPC e IPP. En la tercera parte se formula y explica el modelo de simulación agregado, y por último, se tratan los resultados y las principales conclusiones

## REVISION LITERATURA

Para Castillo M, (2008), el riesgo operativo es la posibilidad de pérdidas financieras como resultado de eventos asociados con fallas o insuficiencias en los procesos operativos o estratégicos, los colaboradores directos o relacionados, las tecnologías de información, entre otros; o como producto de eventos externos; se incluye el riesgo legal. Por su parte, (Jorion, 2000) asocia el riesgo con la volatilidad de los resultados esperados sobre la posición de los activos o pasivos asociados con las medidas de interés. Diferentes autores Castillo M. (2008), Jorion (2000), Morgan JP. (2011), Medina (2006), Stewart, G. W. (1998), clasifican los riesgos en 4 categorías: *riesgos financieros*, *riesgos operativos*, *riesgos de alta severidad* y *el riesgo reputacional*.

### El Valor en Riesgo –Var-

El VaR, es una técnica estadística para medir de forma probabilística el riesgo de un portafolio de inversión. En 1996, J.P. Morgan, aporta al estado de la cuestión una medición estructurada del riesgo de mercado usando el índice VaR y denominada Risk Metrics (JP Morgan, 1996). El VaR de un activo es la máxima pérdida esperada producto de un movimiento adverso, en un intervalo de confianza y en un horizonte de tiempo definido. En general, se desarrolla análisis cuantitativo de riesgo a factores de mercado, de crédito y operativos, siempre que exista información. (Knop, 2004; Vilariño, 2001; Jorion, 2007).

### Proceso estocástico de la TRM

La TRM revela el nivel diario de la tasa de cambio oficial en el mercado spot de divisas colombiano, por la fuerte intervención de los organismos estatales y de los mercados, se hace muy complejo modelar la TRM, y por tanto, los resultados de su estimación son muy disímiles. Se utilizó la ecuación 2, para de hallar los rendimientos continuos de la serie, que generaron conglomerados de volatilidad, sugiriendo el uso de modelos de volatilidad dinámica para modelar su comportamiento, propio de las series de tiempo económicas y financieras.

$$Ro = \frac{(\text{Fixed Costs} + \text{Fixed Costs})}{(\text{Revenue} - \text{Variable Costs and Expenses})} \quad [1]$$

$$Rt = \ln \left( \frac{S_t}{S_{t-1}} \right). \quad [2]$$

La ecuación 2 de rendimientos se expresa como un proceso estocástico mediante la ecuación 3:

$$Rt = \ln \left( \frac{S_t}{S_{t-1}} \right) = \mu + \varepsilon \rightarrow St = S_{t-1} e^{(\mu + \varepsilon)} \quad [3]$$

Y se derivan procesos más complejos, con los supuestos asociados a los parámetros  $\mu$  y  $\varepsilon$ , como es el caso del movimiento browniano geométrico.

### Movimiento Browniano Geométrico (MBG)

La ecuación 3, plantea como el rendimiento del activo se puede explicar por dos componentes:  $\mu$  y  $\varepsilon$ . Donde  $\mu$  es la tasa promedio de rendimiento del activo y  $\varepsilon$  es una variable determinística asociada por lo general con el rendimiento libre de riesgo; se supone constante y con crecimientos en función del tiempo  $dt$ . El segundo elemento,  $\varepsilon$ , representa la fluctuación aleatoria del precio del activo y depende de factores

exógenos. Supuestos del modelo browniano:  $\varepsilon = \sigma * dW$ , donde  $\sigma$  es la volatilidad de los rendimientos,  $dW$  contiene la aleatoriedad del precio del activo y es un proceso de Wiener, donde  $dW$  se distribuye normal con media cero y varianza  $dt$ . Ecuación 4.

$$\frac{dS_t}{S_t} = \mu * dt + \sigma * dW_t \quad [4]$$

Se puede expresar  $dW = \phi * \sqrt{dt}$ , donde  $\phi$  es una variable derivada de la distribución normal estándar con medio cero y varianza unitaria. La ecuación diferencial que define el movimiento del precio del activo se expresa como:

$$\frac{dS_t}{S_t} = \mu * dt + \sigma * \phi \sqrt{dt} \quad [5]$$

Aplicando  $\ln\left(\frac{S_t}{S_{t-1}}\right) = \frac{dS_t}{S_t}$ , el resultado es un modelo de dinámica de precios que posibilita la generación de caminos aleatorios del proceso de simulación para la TRM:

$$S_t = S_{t-1} * e^{(\mu * dt + \sigma * \phi * \sqrt{dt})} \quad [6]$$

Supuestos: el parámetro  $\mu$  se asume normal (el precio se distribuye lo normal) y constante; sin embargo, en modelos más complicados  $\mu$  puede ser una función de  $S$  y  $t$ . El parámetro  $\sigma$  se asume constante pero pueden utilizarse modelos de volatilidad dinámica para capturar la volatilidad de los rendimientos de una manera más adecuada, los errores se distribuyen normales ( $\varepsilon = Rt - \mu$ ) con media cero y desviación típica  $\sigma$  (Hull 2006).

### Análisis de Volatilidad

La volatilidad de los rendimientos logarítmicos de la TRM no es constante, generando un sesgo en el modelo de precios descrito, donde se asume contante. Al no cumplir uno de los supuestos del MBG, se rechaza la hipótesis y se requiere encontrar un modelo estocástico para la volatilidad e integrarlo a la ecuación (3) para obtener una aproximación al comportamiento real de la serie TRM. La primera etapa de la modelación de la TRM, exige probar la normalidad de la serie, mediante pruebas de ajuste a la serie histórica mensual de rendimientos logarítmicos  $\Delta_t = \ln(P_t) - \ln(P_{t-1})$

De la **Error! Not a valid bookmark self-reference.**, el Valor  $P = 0.0000 < 0.05; 0.01$ , para niveles alfa de 0,01 y 0,05, da evidencia estadística que rechaza la hipótesis nula. Los datos no se ajustan a la distribución *normal*. La función de autorrelación parcial de los rendimientos, evidencia autorrelación subyacente en los datos y las pruebas Ljung-Box-Pierce (1970, 1978) y la prueba ARCH de Engle (1982) arrojan una autocorrelación significativa, reforzando el uso de modelos de volatilidad dinámicos. Para ello, mediante la ecuación 6 se recoge el dinamismo de la volatilidad y se pueden realizar pruebas de ajuste de modelos de volatilidad dinámica tipo ARCH y GARCH Hull (2006), Vilariño (2001).

$$R_t = \mu + \varepsilon_t \quad [7]$$

La ecuación 7, define los rendimientos  $R_t$  como una constante más una perturbación aleatoria incorrelacionada. La ecuación 8, expresa la relación de la varianza pronosticada  $\sigma_t^2$ , como una constante más los promedios ponderados de previas varianzas -efecto GARCH- y de los errores al cuadrado -efecto ARCH-. La Tabla 7, exhibe los resultados de los parámetros del modelo

$$\sigma_t^2 = k + \sum_{i=1}^P G_i \sigma_{t-i}^2 + \sum_{j=1}^Q A_j \varepsilon_{t-j}^2 \quad [8]$$

Esta tabla muestra los resultados de los parámetros de la modelación de la volatilidad de la TRM. Fuente: Fuente: elaboración del autor con el software Matlab.

El estadístico T, normalmente distribuido con media cero y varianza unitaria. La prueba de significancia de los parámetros del modelo, acepta a un nivel de confianza del 95%. De la Tabla 7, se desprende la existencia de varios modelos a utilizar para tales efectos, por simplicidad se acude a un modelo GARCH (0,1) o ARCH (1) ( $1,65 < 205,459$ ).

$$\sigma_t^2 = 0.0000045147 + 0.22763 * \varepsilon_{t-1}^2 \quad [9]$$

La relación anterior, incorpora el modelo de volatilidad ARCH (1) en la ecuación [6], donde la volatilidad –  $\sigma$  – se obtiene con el modelo dinámico expresado en [9]. Se desprende la relación [9], que tiene incorporado el modelo ARCH (1) y que será usada para simular los caminos aleatorios de la TRM.

$$S_t = S_{t-1} * e^{(\mu * dt + (0,0000045147 + 0,22763 * \varepsilon_{t-1}^2)^{1/2} * \phi * \sqrt{dt})} \quad [10]$$

$S_t$ : dato actual de TRM o simulado.  $S_{t-1}$ : dato anterior de TRM, partiendo de valores históricos  
 $\mu$ : media aritmética de los rendimientos logarítmicos.  $\sigma$ : volatilidad dinámica de los rendimientos  
 $\phi$ : componente aleatorio distribuido  $N(0,1)$

Con los resultados anteriores, se elaboran 10 simulaciones de precios para 730 días, la generación de caminos aleatorios se requiere para cuantificar el riesgo de tipo de cambio en el RO.

### Proceso estocástico del IPP

El IPC captura la valoración de los precios de un conjunto de productos que una cantidad de consumidores adquiere de manera regular, y la variación con respecto del precio de cada uno, respecto de una muestra anterior. Para el caso del sector de prendas de vestir, su análisis es relevante, una vez que este sector es muy intensivo en mano de obra no calificada y el cálculo del salario mínimo, recurre al IPC como parámetro para su fijación.

El análisis, la modelación y el pronóstico del IPC permite cuantificar su efecto sobre los costos variables del sector, para ello se procede a predecir su comportamiento a tres años, usando diferentes modelos de pronóstico con significancia del 95%. Se usan datos mensuales, para 15 años. La teoría de series de tiempo, identifica para su análisis 4 componentes básicos, a saber: la tendencia “T”, la estacionalidad “E”, los ciclos “C” y un componente irregular “I”; bajo esta premisa, los valores de la serie  $Y_t$  se articulan como una función de las componentes básicas:

$$Y_t = f(T_t, E_t, C_t, I_t) \quad [11]$$

Como la serie de precios del IPC no es estacionaria ni en media ni en varianza, los datos no se mueven alrededor de la media igual a cero, presenta picos dispersos y cambia a lo largo del tiempo, apuntando que su modelación exige una transformación. Se calculó la relación entre media y desviación típica anual del IPC, y se estimó la componente de tendencia mediante el método de media móvil con 12 meses de periodo estacional.

Mediante la prueba PACF, se descartó que la serie del IPC fuese Ruido Blanco, y por tanto exigió remover la no estacionalidad con una nueva transformación por el método Box-Cox (1964), introduciendo una transformación potencia del IPC para satisfacer la suposición de normalidad de un modelo de regresión. La transformación, es por tanto, de la forma  $y^\lambda$ -transformación potencia-, donde  $\lambda$  se estima con los datos históricos.

De forma más puntual, la transformación se define por  $W = \frac{y^\lambda - 1}{\lambda}$  si  $\lambda \neq 0$  y  $W = \ln(y)$  si  $\lambda=0$ ; dónde

$$\lim_{\lambda \rightarrow 0} \frac{y^\lambda - 1}{\lambda} = \ln y.$$

Se halló el Lambda que minimiza el coeficiente de variación,  $\lambda = -1,638$ . El coeficiente de variación es el cociente entre la desviación estándar y la media, obteniendo una transformación de la forma:

$$Trns. Box - Cox IPC = \frac{(y + 2)^{-1.638} - 1}{-1.638} \quad [12]$$

Luego, para la serie de tiempo transformada, se corren diferentes modelos de pronóstico y se compara el desempeño con diferentes índices de ajuste y con las siguientes consideraciones: Variable de entrada: el modelo IPC transformado, Número de observaciones: 123, Intervalo de la serie: mensual, Rezagos de la estacionalidad: 12 y el ajuste estacional es multiplicativo. Se corren diferentes modelos y se elige el que mejor representa el comportamiento del IPC. Se ejecutó el pronóstico del IPC para 36 meses utilizando el modelo ARIMA (0,0,1)x(0,1,1)<sub>12</sub> (Raíz del Error Cuadrático Medio –RMSE=0,00077 y Error Absoluto Porcentual Medio –MAPE=5,00720).

Se simula la serie de precios del IPC, incluyendo en la fórmula el error aleatorio con las características de un ruido blanco  $N(0,1)$ , partiendo del supuesto de que los errores de un modelo ARIMA se distribuyen de la siguiente forma:

$$y_t = y_{t-12} + 0,581443 * e_{t-1} - 0,622236 * e_{t-12} - 0,361794767e_{t-13} + e_t \quad [13]$$

Dónde:

$$e_t = \sigma * \epsilon * \sqrt{T} \quad [14]$$

$\sigma$  = desviación estándar móvil de la serie IPC con rezago de 12 meses.

$\epsilon$  = distribución  $N(0,1)$  para generar el número aleatorio de la simulación.

$\sqrt{T}$  = es el intervalo de tiempo para la simulación, para este caso  $T=1$ . Con estos parámetros se obtiene la fórmula para el proceso de simulación:

$$y_t = y_{t-12} + 0,581443 * e_{t-1} - 0,622236 * e_{t-12} - 0,361794767e_{t-13} + \sigma * N(1,0) \quad [15]$$

La simulación para 36 meses; presenta un solo camino aleatorio y sus intervalos a un nivel del 95%, permiten inferir la captura de la tendencia y estacionalidad de la serie histórica.

### Índice de Precios al Productor (IPP)

El IPP mide las variaciones de los precios de bienes y servicios intermedios - materias primas -. Como la serie del IPP presenta valores negativos, se suma a cada dato el valor 1 (tasa IPP + 1), para eliminar dificultades con el cálculo de los crecimientos. Se consideró la serie del IPP, desde 30-09-96 hasta el 31-10-11. Arrojando los resultados expuestos en la Tabla 8.

Tabla 8. Estadísticos del IPP

Estadístico	Rendimiento Aritmético	Rendimiento Logarítmico	Estadístico	Rendimiento Aritmético	Rendimiento Logarítmico
Media	0.000023965	-0.000008041	Coeficiente de asimetría	0.026723204	-0.028103976
Error típico	0.000589825	0.000589839	Rango	0.062367874	0.062276083
Mediana	0.000800801	0.000800480	Mínimo	-0.029386344	-0.029826772
Desviación estándar	0.008022483	0.008022679	Máximo	0.032981530	0.032449310
Curtosis	5.659.900.364	5.618.008.386			

*Esta tabla muestra los estadísticos para los rendimientos aritméticos y logarítmicos para el IPP. Además las medidas de tendencia central, medidas de variabilidad y medidas de forma Fuente: Elaboración propia*

Los valores de 5,65 y 5,61 para la Curtosis, valores cercanos a 3, sugieren similitud significativa de los datos con la distribución normal. La prueba de bondad de ajuste Chi-Cuadrado arroja un P-valor de 0,43 y 0,39, para las distribuciones Logística y Normal respectivamente. Por lo tanto, es posible aceptar que la

serie del IPP se ajusta a ambas distribuciones con un nivel de confianza del 95%. En la Tabla 9, se consignan los resultados.

Tabla 9. Pruebas de Bondad de Ajuste para el IPP

Función	Logistic(0.00015749;0.0042153)	Normal(-0.00000804097;0.0080227)
Chi-Sq estadístico	14.22	14.86
P-Value	0.43	0.39
Cr. Valor @ 0.100	21.06	21.06
Cr. Valor @ 0.050	23.68	23.68
Cr. Valor @ 0.025	26.12	26.12
Cr. Valor @ 0.010	29.14	29.14

*Esta tabla muestra las pruebas de bondad de ajuste para la serie de tiempo IPP. Fuente: Elaboración propia con el software (@risk)*

Para efectos de la simulación se utilizará la distribución logística, con función acumulativa:

$$F(x) = \frac{1 + \tanh\left(\frac{1}{2}\left(\frac{x-\alpha}{\beta}\right)\right)}{2} \quad [16]$$

Donde  $\alpha$  y  $\beta$  son los parámetros de la distribución. La inversa de la relación [16] es definida como  $x = F^{-1}(\alpha, \beta, R)$ ; donde R es un valor aleatorio distribuido U(0,1) y permite derivar valores aleatorios de x distribuidos en forma logística. Con los valores derivados de la distribución de probabilidad logística podemos luego obtener los valores específicos de IPP para un mes usando la relación:

$$IPP_t = (IPP_{t-1} + 1) \cdot e^x - 1 \quad [17]$$

#### Datos Del Sector

El análisis identifica los ingresos de las empresas relacionados con las exportaciones; luego selecciona los costos y gastos fijos y variables con exposición a los factores de riesgo explicados previamente. En términos muy generales el modelo financiero concentra la información, expuesta en la Tabla 10, extractada de las EAM de los años 2000-2010.

#### **MODELO DE SIMULACIÓN AGREGADO (MONTECARLO ESTRUCTURADO)**

Con las series de precios (TRM, IPC e IPP, modeladas mediante procesos estocásticos o distribuciones de probabilidad), se analizan las distribuciones de probabilidad de los ingresos, las compras de materia prima y los gastos fijos y variables. La tabla 1, presenta el modelo financiero del sector, para pronosticar los factores de riesgo, sobre los cuales se identifican las cuentas que son afectadas por la variación de cada uno de los factores de riesgo.

La SM obtiene escenarios de las variables del riesgo generando números aleatorios correlacionados que repliquen las distribuciones de probabilidad o los procesos estocásticos definidos para cada uno de los factores de riesgo. La inclusión de estos valores en la fórmula de RO permite observar el impacto de su variación en las variables asociadas con la cuantificación del RO.

El proceso de SM estructurado (Jorion 2007), para el análisis de riesgo de la empresa, incluye los siguientes pasos: Calcular los rendimientos de cada factor de riesgo e identificar sus distribuciones de probabilidad o los procesos estocásticos con sus parámetros, calcular las correlaciones entre los factores de riesgo, construir el modelo financiero e identificar las cuentas que son afectadas por los diferentes factores de riesgo, Aplicar la descomposición de Cholesky de tal manera que  $\rho = A \cdot A^T$ , donde  $\rho$ =matriz de correlacione y A=matriz cuadrada de Cholesky, Generar números aleatorios  $N \sim (0, 1)$

independientes, generar números aleatorios correlacionados  $N \sim (0, 1)$  haciendo uso de la matriz  $A$ , alimentar los procesos estocásticos o las distribuciones de probabilidad inversas con los números aleatorios correlacionados, generar series de precios aleatorios, alimentar el modelo financiero con los precios generados aleatoriamente y construir el histograma de frecuencias de los indicadores financieros, realizar un análisis estadístico y de sensibilidad del indicador financiero.

Tabla 10: Variables afectadas por factores macroeconómicos

Periodo	Ventas en el País	Ventas al Exterior	Compras MP al País	Compras MP Exterior	Gastos de Administración y Ventas	Costos Laborales de Producción	Riesgo Operativo

*Esta tabla presenta los datos del sector de fabricación de prendas de vestir para los ingresos locales y del exterior, compras de materia prima foránea y en el país y los gastos fijos y variables. Fuente: Encuesta Anual manufacturera-DANE*

Con la información anterior, se realiza un pronóstico del Ro, aplicando la ecuación 1 a las variables involucradas para el periodo 2011 y 2012 e incorporando en el modelo el efecto de los factores de riesgo: TRM, IPC e IPP.

#### Reparametrización por Descomposición de Cholesky

La descomposición de Cholesky se usa en la SM para representar sistemas con variables que están correlacionadas (Stewart, 1998). Por definición, una matriz simétrica definida positiva (por ejemplo la matriz de correlaciones) puede ser descompuesta como el producto de una matriz triangular inferior (matriz de Cholesky) y la traspuesta de esta matriz:

$$\rho = A.A^T. \quad [18]$$

Si partimos de la matriz de correlaciones entre variables es viable obtener la matriz  $A$  de Cholesky, que puede ser aplicada a una matriz de números aleatorios independientes para generar una matriz de números aleatorios correlacionados, que replican la correlación histórica de los factores de riesgo y alimentan los procesos estocásticos o distribuciones de probabilidad para la generación de variables aleatorias. Para nuestro caso la matriz  $A$  de Cholesky se muestra en la Tabla 11.

Tabla 11. Matriz de Cholesky Serie de Rendimientos

	TRM	IPP	IPC
TRM	1,000000000	0,000000000	0,000000000
IPP	-0,008378739	0,999954209	0,000000000
IPC	-0,003521743	0,398536663	0,916979597

Esta tabla presenta la matriz de Cholesky para las series de rendimientos de las variables: TRM, IPP e IPC. Fuente: Elaboración propia en MatLab.

Si se tiene una matriz de números aleatorios independientes  $\text{Rind}_{m \times n}$  ( $m$ - cantidad de números aleatorios independientes y  $n$ - es el número de factores de riesgo) y la matriz de Cholesky,  $A_{n \times n}$ , correspondiente a los factores de riesgo considerados, se obtiene una serie de números aleatorios correlacionados para el modelo de simulación realizando la multiplicación matricial:

$$\text{Rcorr}_{m \times n} = \text{Rind}_{m \times n} \times A_{n \times n} \quad [19]$$

Para nuestro caso la matriz de correlaciones entre rendimientos utilizadas se indican en la Tabla 12

Tabla 12. Matriz de Correlaciones entre factores de riesgo

	TRM	IPP	IPC
TRM	1	-0,00837874	-0,00352174
IPP	-0,00837874	1	0,39846724
IPC	-0,00352174	0,39846724	1

Esta tabla muestra la matriz de correlaciones entre los factores de riesgo: TRM, IPP e IPC. Fuente: Elaboración propia en el software Matlab

## ANÁLISIS DE RESULTADOS

La aplicación de la metodología se realizará tomando como base el sector de textiles, para la cuantificación del riesgo operativo con un indicador tipo VaR, se requiere realizar un pronóstico de la situación del indicador RO del sector mediante la proyección de los costos fijos, variables y los ingresos para el próximo periodo.

Por medio de la simulación, es posible obtener la función de distribución de probabilidad de cualquier indicador financiero. Para la ilustración del presente análisis se utilizara la utilidad proyectada.

### Análisis de sensibilidad de la utilidad

Los análisis de sensibilidad, miden el efecto de los factores sobre las utilidades, el flujo de caja o el capital. El impacto se puede dimensionar por los indicadores de correlación y regresión e identificar los factores críticos, permitiendo diseñar medidas preventivas como la negociación de pólizas o la cobertura con instrumentos financieros derivados.

Para el caso particular del sector textil, el principal factor de riesgo sobre el RO es la TRM, debido al volumen de los ingresos del exterior, donde una tendencia devaluacionista de la TRM genera un efecto negativo, como producto de la pérdida de valor de los ingresos en dólares respecto al peso. El segundo factor de riesgo es el IPC, por su relación de causalidad con todos los costos de la empresa.

Abordando los demás factores de riesgo del análisis, como por ejemplo la compra de materias primas al exterior, se presenta un efecto positivo sobre la utilidad, entre otros, porque al valorar las compras en USD, intervienen dos factores de riesgo: tasa de cambio e IPP; el efecto positivo se deriva de la tendencia revaluacionista del peso frente al dólar.

## CONCLUSIONES

Uno de los resultados significativos fue el importante efecto de la TRM sobre las operaciones realizadas en el exterior, respecto a las utilidades y la determinación del RO. Se desprende la posibilidad de realizar operaciones con futuros o en su defecto pagar la operación local en moneda extranjera, estrategias que ubican a las empresas en una posición de riesgo por maniobrar en entornos económicos dinámicos propios de cada país en los cuales se realice la operación.

El análisis toma como referencia el dólar americano; pero desde la práctica se deben incluir las tasas de cambio de los países donde se tenga presencia, esto es: Ecuador, Perú, Venezuela, Brasil, etc. Y ponderar por país la exposición al riesgo por TRM y definir cobertura para en cada moneda.

Este análisis abarca un aspecto amplio de factores de riesgo asociado a variables macroeconómicas, pero las operaciones del sector y la permanencia del negocio están expuestos riesgos como: los de mercado circunscritos al precio del dólar - ingresos por ventas al exterior y deuda en dólares-, el precio de las materias primas, las tasas de cambio, las tasas de interés y otros más complejos de medir como los riesgos sociales, el conflicto armado, el riesgo legal y tributario, etc.

Esta metodología es un complemento de los modelos de gestión de riesgos donde se identifican previamente los factores de riesgo; sin embargo, llegar hasta la cuantificación de las pérdidas potenciales de los riesgos mencionados asocia retos para la comunidad académica y empresarial.

Estos análisis son claves para planes de expansión, consolidación en los mercados, inversiones en confiabilidad del sistema, coberturas, etc., es decir, la metodología sirve de base para los procesos de toma de decisiones, ya que cuantifica los factores de riesgo sobre los indicadores financieros.

Es factible medir el efecto de la volatilidad en cualquier indicador financiero, tal como: la rentabilidad, el costo del capital, el valor económico agregado, entre otros y llevar el análisis más lejos, considerando la empresa como un portafolio de inversión con diferentes posiciones activas y pasivas y balancear los montos mantenidos para disminuir la posición en riesgo.

La metodología propuesta es recursiva y tiene un enfoque práctico y considera un enfoque cuantitativo de los diferentes factores de riesgo que apoyan el modelo de administración basado en riesgos. Si bien los desarrollos de estas metodologías están enfocados al sector financiero, el sector real se ha percatado de la importancia de la identificación y cuantificación de riesgos.

# PROPUESTA PARA OPERAR UN CENTRO DE INNOVACIÓN EN EL INSTITUTO TECNOLÓGICO DE CHIHUAHUA, (ITCH)

María Elena Delgado Ontiveros, Instituto Tecnológico de Chihuahua

Luis Arnulfo Guerrero Chávez, Instituto Tecnológico de Chihuahua

Virginia Ibarvo Urista, Instituto Tecnológico de Chihuahua

Gaspar Alonso Jiménez Rentarías, Instituto Tecnológico de Chihuahua

## RESUMEN

*Innovación es un concepto muy amplio que se ha insertado en todos los discursos de los políticos mexicanos, sin embargo está muy poco definido y asimilado dentro de las instituciones. En este trabajo se plantea una propuesta para operar un centro de innovación en el ITCH que responda a las necesidades del entorno empresarial e industrial de Chihuahua. La globalización ofrece oportunidades de crecimiento para los negocios mexicanos que no han podido ser aprovechadas por falta de innovación en diferentes aspectos. El ITCH puede actuar acelerando el proceso de innovación en las empresas al transferir ideas, tecnologías, conocimiento y experiencia. Puede adaptar y poner en práctica nuevos estilos de trabajo con el fin de mejorar procesos, productos, sistemas organizativos, logísticos y productivos que destaquen un desempeño superior de las industrias, especialmente las PYMES. El trabajo se deriva de la observación directa en industrias medianas y pequeñas ubicadas en la ciudad de Chihuahua y en otras ciudades cercanas. Las empresas con las que se ha trabajado son de distintos ramos. El ITCH es una institución académica que puede fortalecer el proceso de innovación de empresas de algunos sectores industriales en Chihuahua.*

**PALABRAS CLAVE:** Centro de innovación, Proceso, Sistema de Innovación.

## HOW TO OPERATE AN INNOVATION CENTER AT THE INSTITUTO TECNOLÓGICO DE CHIHUAHUA

### ABSTRACT

*Innovation appears in every Mexican speech, but the meaning is not inserted in public institutions. This paper proposes an innovation center operating at ITCH, to give support to Chihuahua industries. With globalization appears opportunities for Mexican companies, but they can't take advantage of them because lack of innovation on different fields. ITCH may be an accelerator of innovation process transferring ideas, technologies, knowledge and experience. ITCH may adapt and form new work style inside of industries with the purpose of improve process, products, organizational systems and logistic, to achieve superior performance in general, but most in small businesses. This work is a result of several years observing different kinds of industries in Chihuahua, and others in some cities around this capital. They belong to different manufacturing of medium and small sizes. The authors of this paper consider that ITCH can help to improve the performance of industries by means of an innovation center.*

**JEL:** L52, L60, O30

**KEY WORDS:** Innovation Center, Process, Innovation System

## INTRODUCCIÓN

La ciudad de Chihuahua requiere de un centro de innovación que opere de acuerdo a las necesidades del entorno empresarial e industrial. La globalización plantea nuevos retos y cambios constantes, además una gran complejidad, lo cual exige una competitividad creciente en general para todas las empresas, pero particularmente para las PYMES. Un centro de innovación puede colaborar en la renovación de estrategias de negocios, así como en mejorar productos y procesos. En la literatura que se ha revisado se han encontrado modelos de innovación que operan en diferentes lugares del mundo, sobre todo en países latinoamericanos y europeos. El funcionamiento de esos modelos varía de acuerdo al sector y a la madurez de las infraestructuras, pero destaca una particularidad en todos ellos: para que un sistema de innovación funcione, es importante la suma de voluntades. El deseo de trabajar en equipo es importante y la formalidad de los que lo integran es crucial. En el nuevo modelo económico, basado en el conocimiento, las instituciones de educación superior (IES), desempeñan un papel fundamental, produciendo, transmitiendo y difundiendo el conocimiento a la sociedad, generando nuevas ideas, formando al personal científico y técnico, y transfiriendo los resultados de la investigación al tejido productivo para solucionar los problemas y para hacer avanzar a la sociedad. Las IES ahora cuentan con un papel más activo en la sociedad al ser impulsoras del proceso de cambios y motor del desarrollo económico, social y cultural. A esto se le ha llamado “tercera misión”, que es una función complementaria a sus funciones básicas: docencia e investigación, que consiste en todas las actividades relacionadas con la generación, uso, aplicación y explotación del conocimiento, (Encuentro de Rectores 2008, Reflexiones sobre el análisis de un sistema de innovación).

Para el ITCH en su papel de IES es importante apoyar el crecimiento de las empresas y contribuir en proporcionar las condiciones ideales para adaptar a la organización a las nuevas necesidades de mercado y competitividad que expone la globalización. Las tecnologías y el crecimiento globalizado de los negocios en el mundo, ha rebasado el proceso de aprendizaje que pueden asimilar las empresas, sobre todo las PYMES, la mayoría requiere de asesores externos que puedan orientar e interpretar la información y los fenómenos que ocurren en el exterior. Las empresas innovadoras deben contar con gente profesional confiable que aporte conocimiento acertado para el desarrollo de productos, actualización de procesos, distribución y servicios. La globalización ofrece retos de trabajo y oportunidades de crecimiento para los negocios mexicanos. Una gran parte de las oportunidades no han podido ser aprovechadas por falta de innovación en diferentes aspectos. (Delgado, Portillo, Burciaga, 2012). Los retos son parte del aprendizaje.

### Antecedentes

La propuesta de operar un centro de innovación en el ITCH, se deriva de la experiencia adquirida durante diez años, (desde 2003), tiempo en el que los profesores del consejo de la Maestría en Sistemas de Manufactura, ha trabajado en proyectos de colaboración con industrias de la ciudad de Chihuahua y de otras ciudades cercanas como Aldama, Delicias y Camargo. Las empresas son de distintos ramos: fabricación de grúas, perfiles de acero para construcción, alimento para ganado, cosmética y artículos del cuidado personal, fábricas de muebles, entre otros. Además los profesores dirigen tesis de alumnos que laboran en diferentes industrias maquiladoras de los sectores eléctrico, automotriz, aeroespacial y de servicios. El trabajo que se ha llevado a cabo con esas empresas ha permitido detectar las áreas de oportunidad que tienen las industrias chihuahuenses. Los problemas más frecuentes se han encontrado en el piso de producción. Para las PYMES es urgente renovar los espacios productivos, los procesos de calidad, el control de inventarios, procesos de compra, validación de productos, entre otros. También es importante renovar los esquemas de trabajo, la mentalidad en el ambiente laboral y aplicar acciones que refresquen la estrategia de negocios. Las empresas manufactureras necesitan ser flexibles y considerar nuevas formas de trabajar así como nuevas tecnologías que les permitan responder rápida y rentablemente a la demanda de su cliente. El ITCH puede actuar para acelerar el proceso de innovación en las empresas

al adaptar y transferir nuevas tecnologías y ser un catalizador de conocimientos y nuevas prácticas de la industria moderna, con el fin de mejorar procesos, productos, sistemas organizativos, logísticos y productivos que destaquen un desempeño superior de las empresas. Según la tesis de Cordero, F. 2011, en el caso de Chihuahua, las empresas pueden recurrir a la innovación en la manufactura por varias razones como son: aumento de la calidad y productividad, requerimientos del cliente, disminuir tiempos de cambios de producción, reducir niveles de desperdicio y tiempos muertos, productos mejor diseñados y capacidad para producir una variedad más amplia de productos. Cada uno de los aspectos que expone Cordero puede requerir de una propuesta innovadora para mejorar el desempeño de la manufactura.

## REVISION LITERARIA

Se puede definir la gestión de la innovación como el proceso orientado a organizar y dirigir los recursos disponibles, tanto humanos como técnicos y económicos, con el objetivo de aumentar la creación de nuevos conocimientos (útiles a la empresa), y generar ideas que permitan obtener nuevos productos, procesos y servicios o mejorar los existentes y transferir esas mismas ideas a la fase de fabricación y comercialización. (Gestión de la Innovación, 2001). Existen cuatro tipos de innovación definidos en el manual de Oslo (2005): Innovación de Producto, de Proceso, Organizativas y de Mercado. En esta clasificación podemos encontrar innovaciones duras y blandas. La manufactura requiere una combinación de ambas, ya que al hacer flexible un proceso puede transferirse la tecnología incorporada en máquinas y herramientas de producción, pero además esto implica cambios en los procesos y en la organización de la empresa. La manufactura esbelta ha desplegado una serie de oportunidades de innovación en las fábricas y talleres, que requieren del diseño de nuevos dispositivos y herramientas de trabajo, además de sistemas informáticos que controlen todas las operaciones de taller desde los inventarios hasta los requerimientos de calidad y embarque. La sofisticación de mercado implica que los talleres de producción sean flexibles.

Las industrias en el esquema tradicional americano mantenían un estilo de trabajo rígido, donde solo se producía un solo tipo de producto. En el esquema de producción japonés, los talleres son flexibles con el fin de maximizar la rentabilidad de las instalaciones industriales, aprovechando un mismo espacio para fabricar varios productos. A su vez la flexibilidad requiere de nuevos tipos de organización y tecnologías que permitan mantener identificados la gran variedad de productos a fabricar, así como sus componentes, sub-ensambles y procesos específicos para cada número de parte. La gestión de la manufactura flexible implica una gran transformación de las empresas, introducción de nuevas tecnologías y nuevos estilos de trabajo. Esta es la gran oportunidad de innovación de las industrias chihuahuenses. La innovación se convierte en un instrumento directivo de primera magnitud, capaz de contribuir sustancialmente al éxito, y al desarrollo de la empresa, y en general al de cualquier organización. (Asociación de la Industria Navarra, 2008) De acuerdo a Carrillo J. y Lara A. (2010) la industria maquiladora puede presentar cuatro niveles de esquemas de trabajo que les denomina generaciones:

*Primera generación*, se basa en la intensificación del trabajo manual, su característica principal es la rigidez del trabajo.

*Segunda generación*; basada en la racionalización del trabajo, corresponde a la introducción del sistema Toyota.

*Tercera generación*; se basa en competencias intensivas de conocimiento, corresponde a empresas que diseñan los productos en México.

*Cuarta generación*; la coordinación de actividades de manufactura, investigación, compras, y servicios se convierte en eje central de la nueva y cuarta generación de maquiladoras.

La cuarta generación corresponde en parte a la logística y cadena de suministros de los negocios, requiere el desarrollo de acciones inmateriales que permitan la coordinación de una enorme multiplicidad de actividades, agentes y unidades de producción. Según Yannick Lung, Carrillo 2010, en el caso de la industria automotriz, la logística adquiere un estatus estratégico con el fin de asegurar la coordinación de la cadena y la sincronía de la producción modular.

## **METODOLOGIA**

La propuesta de establecer un centro de innovación se deriva principalmente de la observación directa a los problemas que presentan las empresas de la región, sobre todo las PYMES, por un lado la industria maquiladora ha crecido mejorando procesos, sistemas de trabajo, tecnologías y productos y por otro lado se encuentra la industria mexicana de capital interno, con una serie de atrasos en sus conceptos de trabajo y fabricación. El trabajo consta de lo siguiente:

- Exponer los problemas principales que se han observado en las PYMES
- Diseño de un modelo utilizando TPS para pasar a la segunda generación de Carrillo, J
- Establecer en ese modelo una relación de los problemas de las pymes con acciones pertinentes que puede aportar el ITCH.
- Definir una propuesta escalable del modelo
- Conclusiones

## **RESULTADOS**

Los problemas principales de las PYMES mexicanas han sido analizados con base en el TPS, (Toyota Production System), donde las 4P's (Philosophy, Process, People, Problem solving) constituyen las áreas principales que dan soporte a una organización.

En cada uno de estos rubros, habiendo observado a las empresas se encontró lo siguiente:

La mayoría de las empresas observadas pueden estar dentro de la primera generación. No se ha logrado implementar el TPS en las empresas mexicanas, aun cuando la industria maquiladora lo ha adoptado desde mediados de los 90 del S.XX. En algunos casos como en la industria agropecuaria no lo consideran importante dado que el producto se consume aquí mismo en la región, sin embargo, el TPS es una metodología universal que puede ahorrar grandes desperdicios. Una empresa puede migrar a la segunda generación, llevando a cabo una serie de disciplinas disponibles en el modelo que se propone en este trabajo, basado en pasos secuenciales que permiten identificar las características de la empresa a tratar y la forma de fortalecer sus debilidades. Los pasos a seguir son como se describe a continuación:

Paso 1: Identificar a la empresa

Paso 2: Formar al grupo de trabajo seleccionando a sus integrantes.

Paso 3: Aplicación de una encuesta para identificar el tamaño de la empresa.

Paso 4: Aplicar un instrumento para definir el nivel de desarrollo y conocimiento de la empresa

Paso 5: Analizar los resultados.

Paso 6: Definir Plan de Trabajo para incorporación de las acciones identificadas.

Paso 7: Medir los resultados logrados. En algunos casos, hacer los ajustes necesarios. Documentar mejoras.

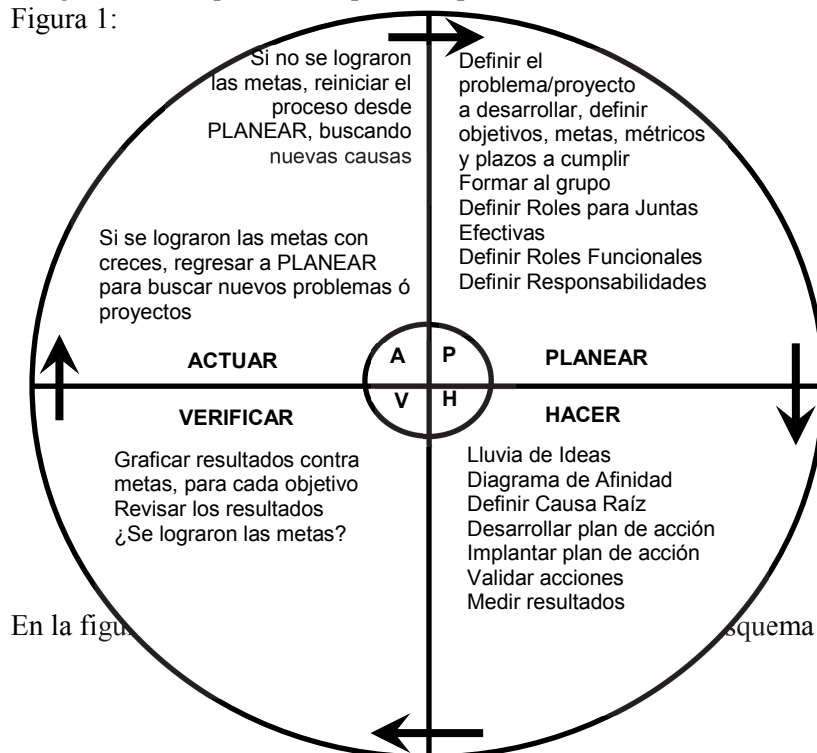

Tabla1:

	Referencia de TPS (The Toyota Way)	Observaciones a las empresas en Chihuahua
Filosofía	Agregar valor es lo que distingue a la empresa de sus competidores, es la base de los demás principios. Agregar valor es lo mejor que la organización ofrece a los clientes, a la sociedad y la economía. Es importante por lo tanto que la organización cuente con una filosofía	En un <u>contexto globalizado</u> , las empresas desconocen el punto estratégico de agregar valor. Las empresas son rebasadas por: condiciones de mercado actuales, (mayor oferta, mayor saturación) nuevos estilos de aprendizaje. Nuevas tecnologías. Las empresas no realizan una planeación adecuada, por tanto carecen de filosofía a largo plazo. Las empresas observadas carecen de una filosofía que establezca e identifique su plan de trabajo.
Proceso	El TPS se basa en el sistema jalar. Nivelar la mezcla de trabajo. Mantener un flujo continuo. Eliminación de desperdicios, (7 desperdicios)	Para las empresas resulta complicado implementar un sistema de jalar en el espacio productivo. Su sistema se orienta más a un modelo de empujar, lo cual origina desperdicio de material y trabajo en proceso en el piso de producción. Es difícil en el piso nivelar la mezcla de trabajo. El flujo continuo se mantiene en baja producción, en altos volúmenes se colapsa. Las empresas no proporcionan evidencias de resultados en la eliminación de desperdicios.
Personas	Aprender de los demás, de los compañeros de trabajo. Aprender en equipo Compartir experiencias	Las empresas dedican poco tiempo al aprendizaje formal, la inversión en el aprendizaje no es importante, es un gasto, no una inversión. Para innovar es importante el aprendizaje colectivo, lo cual requiere de un ambiente propicio, la falta de planeación establece un clima de estrés en el trabajo, condición desfavorable en el aprendizaje.
Problemas por resolver	Construir una cultura que dedique tiempo a solucionar problemas. Tener calidad a la primera. Mantener condiciones óptimas para solucionar problemas, como: un clima de confianza, grupos de trabajo multifuncionales.	La organización mexicana no desarrolla estrategias o métodos para solucionar problemas internos, generalmente se acumulan hasta que hacen crisis. Se logra tener calidad pero con alto desperdicio en el proceso. Falta madurez para solucionar problemas, los canales de comunicación no son fuertes, por lo tanto el clima de confianza es débil.

*Esta tabla hace una comparación entre lo que propone un modelo basado en TPS y la realidad de la industria en Chihuahua.*

El esquema de trabajo es aplicando el círculo de Walter Andrew Shewhart, donde deben considerarse las siguientes actividades: planear, hacer, verificar, actuar. Estas actividades se describen en la figura 1. En la figura 2 se ve que en cada paso se aplica el círculo de Shewhart.

Figura 1:

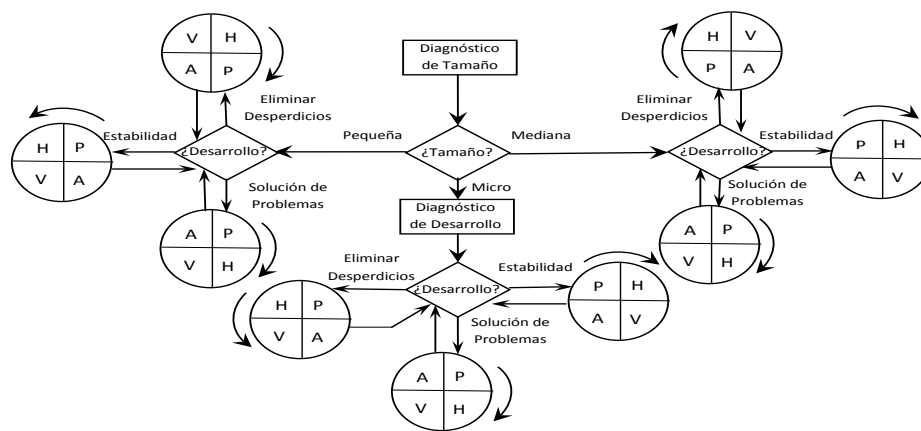

En la figura

esquema de Shewhart se aplica en cada paso.

Figura 2: Modelo de Operación

Elaboración propia a partir de bibliografía citada.

Tabla 2:

Herramienta	1p (Filosofía)	2p (Desperdicios)	3p (Gente)	4p (Solucion De Problemas)
Poka-Yoke	Entrenamiento sobre Poka-Yokes	Tipo I (Detectar el Defecto)	Tipo II (Prevenir el Defecto)	Tipo III (Prevenir el error)
SMED	Entrenamiento sobre SMED	Identificar y separar las Actividades Internas y Externas	Formar grupo para convertir actividades Internas a externas	Convertir Actividades Internas a Externas
Kanban	Entrenamiento sobre Kanban	Identificar partes A, B y C, rutas de suministro y tasa de producción	Formar grupo para definir máximos y mínimos, rutas y tiempos de suministro	Reducir inventarios en piso de producción, eliminación de racks y contenedores
TPM	Curso a Gerencia y personal clave	Análisis para diagnosticar el estado de la empresa en relación a las grandes pérdidas	Formar grupo para trabajar sobre las grandes pérdidas. Desarrollar plan de acción.	Implantar plan de acción para reducir o eliminar las grandes pérdidas
Trabajo estandarizado	Entrenamiento sobre las cuatro reglas de Toyota	Difundir el concepto en toda la organización y analizar la situación actual	Involucrar a cada integrante de la organización en el análisis de las instrucciones de trabajo	Aplicar el concepto para el mejoramiento de cada actividad
Los siete desperdicios	Entrenamiento sobre los 7 desperdicios	Realizar un diagnóstico del proceso productivo	Involucrar a los grupos de trabajo para elaborar un plan de acción	Aplicar el plan de acción para reducir o eliminar los desperdicios y estandarizar

En esta tabla se describen las herramientas a utilizar, según sea el caso a resolver. Elaboración propia a partir de The Toyota Way Fieldbook. (2006)

Para aplicar las herramientas anteriores en cada paso se sugiere trabajar de la forma siguiente.

- 1- Definir las herramientas utilizadas para provocar la creatividad
- 2- Características para identificar el tamaño de la empresa

Micro  
Pequeña  
Mediana  
Grande

### 3- Características para identificar el estado de desarrollo en que se encuentra

Estabilidad del Proceso

Eliminación de Desperdicios

Estandarización de Procesos

Prevención de Problemas

### 4- Estructura

Desarrollo del Personal

Desarrollo de los Procesos

Desarrollo de los Sistemas

Desarrollo de la Organización

### 5- Evaluación de los Resultados

### 6- Retroalimentación

En resumen el modelo se puede aplicar de la siguiente forma:

Figura 3:

*Elaboración propia.*

## CONCLUSIONES

La industria mexicana requiere la aplicación de herramientas modernas tanto para su análisis, así como para su transformación. Las herramientas propuestas en este modelo son un conjunto de disciplinas que pueden servir a las PYME de forma segura para llevar a cabo una transformación efectiva. En el ITCH se cuenta con la experiencia suficiente para trabajar con este modelo y convertir a la industria de Chihuahua en un concepto de trabajo más moderno y rentable.

Rosa María Velázquez-Sánchez, Universidad Autónoma Benito Juárez Oaxaca

## RESUMEN

*La comunalidad es un concepto recientemente acuñado para definir la sustentabilidad de las comunidades indígenas a partir del texto de Floriberto Díaz en Robles y Cardoso (2009). De acuerdo a SECTUR (2012) el Ecoturismo se diferencia del turismo porque plantea al viajero disfrutar del medio natural y de la cultura de los habitantes. En el concepto de ecoturismo se observa la inclusión del ambiente y de la comunidad e implícito lo económico. Al revisar los estudios que analizan el ecoturismo en México ITAM (2008), se observa el interés por el elemento económico y resaltan el disfrute del medio natural, sin embargo, la cultura de la comunidad es un elemento poco analizado. La comunidad como elemento del desarrollo sustentable puede reflejar diferencia en la preferencia del visitante. En esta investigación analizamos los elementos de comunalidad presentes en los destinos ecoturísticos de la región de la costa oaxaqueña y la relación desarrollo-comunalidad desde la preferencia del consumidor. Se emplearon los indicadores de sustentabilidad, incluido la comunalidad, para analizar trece servicios de ecoturismo en nueve lugares naturales de la costa y por medio de una entrevista a una muestra de 85 visitantes se definieron los elementos de comunalidad que distinguen y que definen su preferencia por el lugar y su intención de nueva visita. Los resultados mostraron que los visitantes identifican los aspectos de cultura propia, la adecuación al desarrollo y los elementos de tecnología propia en los servicios que reciben y manifiestan su importancia en su decisión de destino turístico. La comunalidad en el ecoturismo se relaciona con el desarrollo del proyecto y de la comunidad. Los elementos culturales de la comunidad explican el desarrollo del ecoturismo en la costa de Oaxaca.*

**PALABRAS CLAVE:** Ecoturismo, Desarrollo, Comunalidad.

## ECOTOURISM IN THE COASTAL REGION OF OAXACA. BETWEEN DEVELOPMENT AND COMMONALITY

### ABSTRACT

*The commonality is a concept recently coined to define the sustainability of indigenous communities as stated by Floriberto Robles Diaz and Cardoso (2009). According to SECTUR (2012) Ecotourism is different from tourism because it considers that the travelers enjoy the natural environment and the inhabitants culture. The concept of ecotourism includes the environment, community and its economic implicit goal. By reviewing studies that analyze the ecotourism in Mexico, ITAM (2008), the interest for the economic element and the enjoyment of the natural environment can be observed. However, the culture of the community has been an element of minor analysis. The community as a component of sustainable development may cause differences in the visitor preference. In this study we analyzed the elements of commonality in ecotourism destinations in the Coast Region of Oaxacan and the relationship development-commonality from the consumer standpoint. Were used sustainability indicators, including commonality, to analyze thirteen ecotourism services in nine coastal natural places. The sample survey of 85 visitors, included commonality elements, and clasified their preference for the place and their intention to revisit. The results showed that visitors identify aspects of their own culture, the adaptation to*

*development and the signs of local technology in the services they received as important factors in their tourist destination decisions. The commonality in ecotourism development is related to the project development and the community. The cultural elements of the community explain the development of ecotourism on the coastal region of Oaxaca.*

**KEYWORDS.** Ecotourism. Development. Commonality

## INTRODUCCIÓN

El problema radica en la situación del Ecoturismo en la comunidades indígenas de la región de la costa del estado mexicano de Oaxaca. La situación del ecoturismo esta entre el desarrollo del turismo y la sustentabilidad de la comunidad. La mayoría de proyectos eco turísticos se encuentran insertos en comunidades indígenas la cuales se caracterizan por contar con hermosos paisajes naturales y con elementos culturales únicos. Sin embargo, existe una contradicción entre el desarrollo y la comunalidad, por lo que se planteo la pregunta de investigación ¿Cuáles son los aspectos de comunalidad que integran los proyectos eco turísticos en sus servicios y como se expresan en términos de desarrollo para la comunidad?. Esta investigación se presenta organizada como sigue.

En la sección de revisión de la literatura se presentan los resultados disponibles sobre el estudio del turismo y ecoturismo en México, el análisis sobre el concepto de ecoturismo, los indicadores empleados para certificar los servicios eco turísticos. En el apartado de Metodología se incluyen las características de la muestra, la definición operacional de las variables, el procedimiento seguido para diseñar las entrevistas y su aplicación y el análisis de los datos. En la sección de resultados se emplean tablas para facilitar la presentación de los datos y su explicación resumida. La conclusiones permiten comparar los resultados con el objetivo planteado y mostrar la relevancia de este estudio para la comprensión de los factores de comunalidad como elementos en el desarrollo de proyectos eco turísticos en la región de la costa oaxaqueña.

## REVISIÓN DE LITERATURA

La UICN (La Unión Mundial para la Naturaleza) define al ecoturismo como "aquella modalidad turística ambientalmente responsable consistente en viajar o visitar áreas naturales relativamente sin disturbar con el fin de disfrutar, apreciar estudiar los atractivos naturales (paisaje, flora y fauna silvestres) de dichas áreas, así como cualquier manifestación cultural (del presente y del pasado) que puedan encontrarse ahí, a través de un proceso que promueve la conservación, tiene bajo impacto ambiental y cultural y propicia un involucramiento activo y socioeconómico benéfico de las poblaciones locales" (Ceballos-Lascuráin, 1993b). Para la Secretaria de Turismo de México SECTUR (2001), el ecoturismo es una alternativa del turismo tradicional. Es un tipo de turismo que se diferencia por su dedicación a la contemplación del medio natural y a compartir la cultura de las comunidades anfitrionas.

Como se observa en las dos definiciones existe contradicción, porque mientras la UICN, destaca la actividad turística como ambientalmente responsable. Sector incluye la cultura de las comunidades en las que se encuentran los atractivos naturales. Martínez Luna (2003), menciona que desarrollo y comunidad son dos conceptos diametralmente opuestos, sin embargo, las comunidades indígenas han aprendido a integrar a su cultura los aspectos del desarrollo, menciona Martínez Luna que se llama Adecuación y que es una forma de resistencia. Al respecto Díaz (2004) acuño el concepto de comunalidad como una forma de manifestación de la sustentabilidad de las comunidades indígenas. La comunalidad tiene que ver con la cosmovisión, la relación que conciben con la naturaleza como integral al hombre y no como un elemento ajeno y disponible para ser usado. El ecoturismo como forma de desarrollo implica cambios en las

formas de la comunidades, principalmente relacionadas con su cosmovisión y de manera paulatina en sus manifestaciones culturales, pero proporciona infraestructura y medios necesarios para mantenerse y mediar con los cambios ocasionados. Para analizar de una manera profunda el ecoturismo, se tendría que tomar en cuenta lo que menciona Coca-Pérez (2007), “El análisis de lo comunitario se debe efectuar tomando en cuenta su determinación histórica, su evolución en el contexto territorial concreto y su situación actual” para poder comprender su cosmovisión.

Según el concepto de Daltabuit-Godás y Valenzuela-Valdivieso el ecoturismo es “una opción planteada para alcanzar el desarrollo sustentable con la participación directa de la comunidad rural organizada”, para aprovechar racional y adecuadamente el patrimonio natural y cultural. Con respecto al desarrollo La Asociación Mexicana de Ciencias para el Desarrollo Regional A.C., AMECIDER (1993) lo conceptualiza como “la situación cultural, social, económica y natural que logra el bienestar de la población” y que se acuña meramente en la calidad de vida. Hasta el momento no se cuenta con estudios empíricos dedicados a estudiar el ecoturismo desde la perspectiva de la comunidad y menos aun con los criterios de comunalidad acuñados por Díaz (2004), categorizados por Martínez Luna (2003) y operacionalizados por Velázquez y Solana (2013), mismos que han sido empleados para analizar proyectos que buscan el desarrollo.

## METODOLOGÍA

En este estudio se utilizaron dos muestras y con base en los textos de (Martínez Luna, 2010) y (Robles Hernández & Cardoso Jiménez, 2009), se revisaron las características que definen la sustentabilidad de las comunidades y se diseñaron dos entrevistas semi-estructuradas dirigidas a trece prestadores de servicios ecoturísticos y a ochenta y cinco visitantes de los servicios en la comunidades indígenas de la costa de Oaxaca. Se incluyeron las variables: Categorías de los servicios ecoturísticos y categorías de comunalidad. Se realizó el estudio en siete sitios ecoturísticos de la Costa de Oaxaca. Se entrevistaron a 85 visitantes y a 13 encargados de servicios ecoturísticos organizados en nueve sitios distribuidos a lo largo de la costa de Oaxaca. Los datos obtenidos han permitido hacer una primera aproximación identificación y definición de los indicadores de desarrollo y comunalidad que muestran el ecoturismo en la costa oaxaqueña.

### Definición Operacional de las Variables

- *Servicios de Ecoturismo*: Se definió por los servicios ofrecidos y se consideró como una variable numérica. Se midió con base a las respuestas emitidas por los visitantes entrevistados.
- *Comunalidad*: Se consideró como una variable numérica. A partir de los indicadores desarrollados por Velázquez y Solana (2013). Y se midió con base a las respuestas de los entrevistados.

### Descripción del Procedimiento

Con base en la información obtenida por SECTUR (2004) y SEMARNAT (2008), se seleccionaron los nueve lugares en los que se observan los trece proyectos ecoturísticos localizados en la región de la costa oaxaqueña incluidos en la tabla 1:, para ser analizados bajo los rubros de Comunalidad y Desarrollo del Ecoturismo.

Tabla 1: Definición Operacional de las Variables Comunalidad y Servicios Ecoturísticos.

VARIABLES	CATEGORIAS	INDICADORES
Comunalidad	Cultura propia	Tecnología Conocimiento Producción Normatividad social Originalidad Valores Armonía
	Adecuación	Medicina Comida Creatividad Cosmovisión
	Cultura	Materiales Herramientas
	Tecnología propia	Relación hombre-tierra Ornamentos tradicionales Ropa de cama de la región Ropa de ventanas y baño de la región Comida tradicional Utensilios tradicionales Mantelería tradicional
Servicios ecoturísticos	Hospedaje	Visita al área natural Avistamiento de especies Campismo Traslado en bicicleta Viaje en caballo
	Alimentación	
	Recreación	

En la tabla 1: se observan las categorías y los indicadores de las variables comunalidad y servicios ecoturísticos. Las variables son numéricas y se incluirán en el análisis de la relación entre los servicios ecoturísticos y las categorías de comunalidad.

Tabla 2: Muestra de los Proyectos Ecoturísticos Analizados en la Región de la Costa del Estado de Oaxaca

PROYECTO ECOTURÍSTICO
La Escobilla
Rancho Tangolunda
Rio de los Humedales El Zapotalito
Rio de los Humedales La Vainilla
Rio de los Humedales La Laguna de Chacagua
Mazunte
Ventanilla
Yiimtii
Casa Mermejita

En la tabla 2: Se pueden observar los nueve proyectos turísticos analizados en esta investigación y que se encuentran localizados en los trece sitios ecoturísticos de la región de la costa de Oaxaca. Fuente. Elaboración propia con los datos revisados en la región.

### Descripción de los Proyectos Ecoturísticos Analizados

**La Escobilla:** Se localiza en Santa María Tonameca, pertenece al distrito de Pochutla en el estado de Oaxaca. Es una sociedad cooperativa que agrupa a pescadores nativos de la comunidad. El atractivo natural principal es la observación de la llegada y desove de la tortuga golfina. Los servicios que proporciona es hospedaje con 8 cabañas con servicios básicos como agua caliente y ventilador, un salón multiusos, área para acampar, restaurante y visitas guiadas por el bosque y para el avistamiento del arribo de tortugas diurno y nocturno.

**Rancho Tangolunda:** Aunque catalogado como ecoturístico, se trata de un proyecto de turismo de aventura diseñado para tener la categoría de gran turismo, ya que cuenta con la mayoría de servicios y comodidades para el visitante. Se trata de un hotel. Paquetes turísticos con desayuno y hasta seguro de vida y atractivos de tirolesa, rafting, escalada y rappel. No se observa participación de la comunidad.

**Rio de los Humedales:** Es una organización regional de segundo nivel, integrada por grupos comunitarios, organizaciones civiles y productivas. En estos proyectos ecoturísticos se encuentran

El Zapotalito, La Vainilla y La Laguna de Chacagua, todos ellos extendidos a lo largo de la costa oaxaqueña desde Puerto Escondido hasta Pochutla. Cuentan con avistamientos de flora y fauna, manglares y actividades turísticas y disfrute de la gastronomía local y muestras regionales, mas no cuentan con hospedaje en la zona específica. También cuentan con tecnologías ambientales como energía solar y baños ecológicos.

*Mazunte:* Las cabañas llamadas El Copal en Mazunte, ofrecen un lugar de relajación donde no existe la señal del celular y la noche se alumbra a la luz de las velas, hamacas y un restaurante tradicional. Se observa participación de la comunidad en el servicio, mas no en la administración del lugar.

*Ventanilla:* Es un proyecto ecoturístico donde se puede observar, hasta cierto punto, una armonía entre los factores externos a la comunidad en cuestión de conservación y tecnologías ambientales y el conocimiento de la región por parte de la comunidad, existe el idioma zapoteco aún en la región. Existe un criadero de cocodrilos en el manglar de la laguna cercana al mar.

*Yiimtii:* Es una reserva ecológica familiar que se encuentra en la comunidad de Zapotengo, cerca de Pochutla. Se denomina como proyecto ecoturístico y agro turístico, promoviendo la conciencia sustentable. Cuenta con recorridos en la selva baja y playas vírgenes. En cuestión de servicios cuenta con alojamiento y campamentos, recorridos guiados y restaurant tradicional y natural. Fue fundado por una pareja de extranjeros y en la actualidad los opera su hija, en colaboración con otros pequeños proyectos alternos de la comunidad.

*Casa Mermejita:* Es una casa casa-hotel en una de las mejores playas de México, construida en 1998 respetando el entorno natural de tal manera que la silueta de las construcciones fue adecuada a los arboles existentes, cuentan con spa, cabañas, comedor, terrazas, masajes y acceso a punta cometa. No se observa presencia de actores comunitarios, mas si un excelente servicio.

### Análisis de los Datos

Se realizó el análisis factorial a los datos de la entrevista realizada a los ochenta y cinco visitantes. Los resultados mostraron la formación de tres factores en la variable comunalidad. *Cultura propia, Adecuación y Tecnología Propia*. Es decir los elementos de que distinguen los visitantes se agrupan en tres de las categorías propuestas por Martínez Luna (2003). Con los resultados del análisis factorial se realizó la evaluación a cada uno de los nueve proyectos ecoturísticos y se resumen en la Tabla 3:.

## **RESULTADOS**

A continuación se presentan en la Tabla 3: los resultados que muestran la identificación de factores de comunalidad en los proyectos ecoturísticos incluidos en este estudio y la preferencia del visitante.

En *La Escobilla* distinguen los factores de comunalidad, Cultura propia por la organización comunitaria, Adecuación por la incorporación de servicios a la infraestructura del ecoturismo y Tecnología propia por los elementos de la comunidad empleados en la preparación de los alimentos. En *Rancho Tangolunda* no se identificaron factores de comunalidad. En la organización comunitaria de *Rio de los Humedales*, distinguen los factores de Cultura propia por la forma de organización comunitaria y colaboración y en los elementos y ceremonia empleada en la preparación de los alimentos tradicionales como el mole de chicatana y los tamales de iguana. El empleo de materiales de la región para los lugares de hospedaje y alimentación.

Mientras tanto en *Mazunte* se observaron factores de comunalidad Adecuación de la tecnología propia a las actividades de recreación, principalmente en el uso lanchas. En *Ventanilla* los factores de Cultura propia en la organización y participación de habitantes de la comunidad en la guía del recorrido de la laguna y el empleo de la lengua materna. Por otra parte *Yiimtii* y en *Casa Mermejita* no se identificaron factores de comunalidad.

Tabla 3: Análisis de los Aspectos de Comunalidad Que Identifican los Visitantes en los Servicios Eco Turísticos de la Región de la Costa De Oaxaca

PROYECTO ECOTURÍSTICO	ELEMENTOS DE COMUNALIDAD	RENCIA DEL VISITANTE Y MANIFESTACIÓN DE INTERÉS EN REGRESAR
La escobilla	<i>Cultura propia</i> en la organización comunitaria <i>Adecuación</i> incorporando servicios a la infraestructura del ecoturismo. <i>Tecnología propia</i> en la preparación de los alimentos	El ochenta por ciento de los entrevistados se manifestó interesado en volver y recomendar el sitio, principalmente por su comida y la vestimenta.
Rancho Tangolunda Rio humedales	No identificados <i>Cultura propia</i> con base en la colaboración comunitaria. Comparten los alimentos destinados a ceremonias	No tienen contemplado el ecoturismo. Los interesados en volver a este destino ecoturístico manifestaron su interés en volver y recomendar a otros visitantes en un setenta por ciento.
Mazunte	Tecnología propia adecuada a las actividades de recreación	El principal atractivo fue el cuidado de las tortugas y de su habitat con la inclusión visitas en lancha tradicional a los lugares de arribo de las mismas. Un ochenta y cinco por ciento de los entrevistados esta dispuesto a regresar
Ventanilla	Cultura propia. Empleo de la lengua materna.	El recorrido por lo humedales, el criadero de lagartos y la convivencia con la comunidad se manifestó en una intención de regresar del sesenta por ciento de los entrevistados.
Yiimtii Casa Mermejita	No integra elementos de comunalidad No comunalidad	No se trata de ecoturismo No es ecoturismo

En la tabla 3:, se pueden observar los resultados obtenidos del análisis de los datos de la entrevista realizada a ochenta y cinco visitantes en los nueve destinos ecoturísticos localizados en la región de la costa del estado mexicano de Oaxaca. En los resultados se destaca la identificación de factores de comunalidad y la manifestación de la preferencia de los visitantes por los elementos observados en su estancia. Entre los nueve destinos analizados y promocionados como ecoturismo, se observa que Rio Rangolunda, Yiimtii y Casa Mermejita no integran elementos de la comunalidad y como la identificación de los mismos se manifiesta en la preferencia del visitante.

## CONCLUSIONES

Al revisar los resultados en *Escobilla* destaca la organización que es una sociedad cooperativa pero con la forma de los lugareños. Cumple como *destino ecoturístico* por el impulso que la comunidad le ha dado para que el visitante disfrute del *medio natural* en *convivencia con los lugareños*, como menciona Ceballos-Lascuráin, (1993). La adecuación de los servicios y materiales de construcción se manifiesta en el desarrollo que el ecoturismo proporciona a la comunidad. Se observa el potencia de crecimiento pero hace falta el trabajo para la comunicación y colaboración con otras comunidades cercanas para crear una ruta turística o maximizar el alcance que podría dar, por ejemplo, con la integración de la comunidad de Barra del Potrero.

En *Rancho Tangolunda* no incluye la participación de la comunidad. La visita a lugares naturales se encuentra diseñado en paquetes que incluyen la practica de turismo de aventura y de deportes extremos, no se observa la conservación del ambiente. Por lo que se concluye que no es un destino de ecoturismo y que se debe promover como turismo de aventura de acuerdo a lo evaluado por el ITAM (2009). El conjunto de *Los humedales* al ser una red de cooperativas regionales los visitantes manifestaron observar la participación de la comunidad en la prestación de los servicios. La convivencia en armonía entre chatinos y zapotecos y su manifestación cultural en la comida, en la lengua materna y en su vestimenta, permiten identificar sin duda la comunalidad que Díaz (2004) acuño. Además en la serie de destinos de ecoturismo el término es bien empleado porque también es

claro el esfuerzo por el cuidado y conservación del medio natural. La forma de compartir el atractivo y recibir una cuota de recuperación para la comunidad, es la muestra de la estrategia de adecuación al desarrollo que manifiesta Martínez Luna (2003).

En *Mazunte* se observa que la presencia de la comunidad en el proyecto es únicamente en el servicio y como empleados de los dueños extranjeros del sitio. Por lo cual no se puede considerar como inclusión de la comunidad en el proyecto. Sin embargo, se promueve como destino de ecoturismo, porque existe la visión de sustentabilidad en el aspecto ambiental y de conservación. La forma de participación mínima de habitantes de la comunidad no puede considerarse como comunalidad, por lo que no se puede evaluar en términos de adecuación al desarrollo. En *Ventanilla* se puede observar la presencia de los habitantes de la comunidad. Destaca el interés en el proyecto y por la conservación de su lenguaje y tradiciones (Díaz, 2004). La organización para ser un destino de ecoturismo y la adecuación al desarrollo. Por tanto la comunalidad puede observarse.

Con la inclusión del ecoturismo se observa un impulso por parte del factores externos con armonía de los elementos de la comunidad. Trabajan con personas externas a la comunidad para mejorar el destino y establecer acciones para la conservación. Sin embargo, podría mejor con la coordinación con el destino de punta cometa. En *Yiimtii* es una fuente de empleo para los habitantes de la comunidad. No fomenta la comunalidad en cuestión de participación directa de la comunidad. Es un destino turístico con orígenes extranjeros y concesión probada. Únicamente lo promueven como un destino ecoturístico por la visita a lugares naturales y aunque fomenta el cuidado del ambiente, se trata de un destino para el turismo, pero no es ecoturismo y así lo identificaron los entrevistados de acuerdo a lo definido por SECTUR (2001)

El destino *Casa Mermejita* no incluye a la comunidad y menos contribuye a su desarrollo. Se trata de un destino cerrado y exclusivo para visitantes extranjeros en el que se explota la playa virgen. Si existe el cuidado ambiental, pero hasta cierto punto hay un apoderamiento de la zona sin inclusión de la comunidad ni visión por su desarrollo. Los resultados obtenidos en esta investigación permiten responder a la pregunta de investigación. La inclusión de elementos de comunalidad en los servicios que ofrecen los destinos de ecoturismo en la región de costa del estado de Oaxaca permiten la adecuación de las comunidades al desarrollo y contribuyen a la preferencia del visitante. Los resultados permiten contribuir al cuerpo de la literatura con una metodología para evaluar la pertinencia en la denominación de destinos de ecoturismo.

La evaluación de la importancia de los elementos de comunalidad para la preferencia del visitante permiten observar la ventaja que representa la cultura en el ecoturismo. También contribuye al conocimiento de la estrategia de la adecuación de la comunidades al desarrollo y prueba que la resistencia es una forma de integración al desarrollo y que el ecoturismo es una alternativa siempre y cuando no pierda de vista la inclusión comunitaria.

### Limitaciones

Dentro de la limitaciones de este estudio se pueden considerar las características propias de la región. El tiempo en que se realizó el estudio. El tipo de visitantes entrevistados. Los destinos de ecoturismo incluidos. Por lo que pueden realizarse estudios en otras regiones o países y en otros periodos de visita.

# REFLEXIONES SOBRE LA RELACIÓN ENTRE PROMOCIÓN TURÍSTICA Y LOS MONUMENTOS HISTÓRICOS, CASO: “GUAYMAS, SONORA”

Aurora Galán Tautimes, Universidad Estatal de Sonora  
Reyna Isabel Ochoa Landín, Universidad Estatal de Sonora  
Elsa Isabel Montaña Martínez, Universidad Estatal de Sonora

## RESUMEN

*En el Mar de Cortés se localiza la Ciudad y Puerto de Guaymas, Sonora; principal puerto de altura del Noroeste del país. Con la llegada de barcos mercantes, veleros y barcos de vapor de diferentes nacionalidades arribaron personas que se establecieron en el puerto y con ellos su cultura en diversas manifestaciones. En 1539 Francisco de Ulloa toma posesión del puerto en nombre del Rey de España hecho que implica una posterior colonización y desarrollo, parte de los recursos culturales del puerto son los 41 monumentos históricos según el inventario del Instituto Nacional de Antropología e Historia (INAH), sin embargo se encuentran en mal estado de conservación y en riesgo de perderse. En lo que se refiere al turismo, Guaymas se ha promocionado con interés turístico y como destino de sol y playa desde 1945, reconocemos la importancia económica que el turismo tiene para el puerto y sabemos que las demandas de destinos están relacionadas con la promoción que se hace de los mismos. Sin embargo, desconocemos cual ha sido el enfoque que ha guiado dicha promoción. Esta indagación se orienta en el sentido de conocer las causas de este desinterés por el patrimonio y su relación con la promoción turística.*

**PALABRAS CLAVES:** Guaymas, turismo cultural, promoción, patrimonio y gobierno

## REFLECTIONS ON THE RELATIONSHIP BETWEEN TOURISM PROMOTION AND HISTORICAL MONUMENTS, CASE OF STUDY: “GUAYMAS, SONORA”

### ABSTRACT

*Guaymas City is located in the sea of Cortez and is the main seaport of the Norwest of Mexico. With the arrival of merchant ships, sailboats and steamships from all over the world also arrived people from different nationalities to settle down in the harbor and they brought their culture in different manifestations. In 1539, Francisco de Ulloa takes possession of the port in behalf of King of Spain which implies colonization with the subsequent development, the 41 historical monuments are part of the cultural resources of the port according to the inventory of the National Institute of Anthropology and History (INAH) however, they are in deplorable conditions. Regarding tourism, Guaymas has been promoted with tourist interest as well as a sun and beach destination since 1945, we recognize the economic importance of tourism to the port and we know that demands of destinations are close related to the promotion that made thereof. However, we are unknown of the approach that has guided such a promotion. This research focuses on the sense of knowing the reasons for this lack of interest in heritage and its relationship to tourism promotion.*

**JEL:** M30

**KEYWORDS:** Guaymas, cultural tourism, promotion, heritage, government.

## INTRODUCCIÓN

Se analiza el caso de la Ciudad y Puerto de Guaymas, Sonora; principal puerto turístico y de altura del Noroeste del país al cual arribaron barcos mercantes, veleros y barcos de vapor de diferentes nacionalidades. De ellos descendieron personas que se establecieron en el puerto y con ellos su cultura en diversas manifestaciones. En 1539 Francisco de Ulloa toma posesión del puerto en nombre del Rey de España hecho que implica una posterior colonización y desarrollo, parte de los recursos culturales del puerto son los 41 monumentos históricos según el inventario del Instituto Nacional de Antropología e Historia (INAH), sin embargo se encuentran en mal estado de conservación y en riesgo de perderse. Por lo que respecta al Turismo, el puerto se ha promocionado como destino de sol y playa desde 1945, con esa finalidad el Gobierno Municipal y Estatal han utilizado diferentes instrumentos y estrategias de promoción, sin embargo el énfasis se hace sobre los mismos atractivos turísticos.

Lo que nos lleva a una pregunta obligada. ¿En esa dirección quieren orientar la mirada del turista? , ¿Y que hay respecto a la posibilidad de aprovechamiento turístico de los monumentos históricos del puerto? Porque no se contempla la posibilidad del turismo cultural como una estrategia de conservación de los monumentos. La metodología a utilizar busca respuestas a estos planteamientos y se enfoca en un estudio de tipo descriptivo y cualitativo. Las estrategias adoptadas para el proceso son: un cuestionario aplicado durante el semestre 2012-2 a alumnos de primero, tercero, quinto y séptimo semestre del Programa Educativo de Administración de Empresas Turísticas y originarios del Puerto de Guaymas; un grupo focal realizado con alumnos de segundo y cuarto semestre del mismo Programa Educativo y finalmente, un análisis-evaluación del contenido, estructura e interactividad de las páginas web de promoción turística, nacional, estatal y regional; esto con base en las “características más importantes de una página web” de acuerdo a Philip Kotler.

## REVISIÓN LITERARIA

*Patrimonio y Gobierno:* Pero, ¿qué es el patrimonio hoy en día? Se trata de “uno de los recursos no renovables más importantes del mundo” por lo que se “requiere trabajar por superar el desbalance entre nuestras necesidades y su protección (Martorell, 2010). (Ribagorda, 2000) lo concibe como el legado que nos dejaron nuestros antecesores en el tiempo y en el espacio como algo tangible que aflora de la tierra y nos muestra las obras que nos comunican percepción y sentimiento, dado que se ve, se toca y transmite impresiones al que contempla los restos, normalmente arquitectónicos, que se encuentran sobre el terreno.

### El Turismo Cultural y su Promoción

Desde las formulaciones tempranas del concepto de Turismo éste tiene variedad de acepciones, en su definición esta la idea del desplazamiento por diversos motivos y que su práctica incluye el uso y disfrute de todo tipo de recursos, en consecuencia lo definiremos considerando la existencia de una motivación cultural. Nos interesa pues, el Turismo Cultural. Ahora bien, la demanda del turismo está relacionada con su promoción y la intención de la misma es manipular los sentidos, el objetivo es dirigir la mirada del turista potencial hacia ese sitio de tal forma, que lo motive a desplazarse. Según (Urry, 2004) dichas observaciones no pueden quedar libradas al azar, las personas deben aprender cómo, cuándo y dónde “mirar”, lo que las personas “contemplan” son representaciones ideales de la vista en cuestión que internalizan a partir de diferentes medios.

## METODOLOGÍA

La metodología utilizada en la presente investigación es de tipo descriptivo y cualitativo. Las estrategias adoptadas para el proceso son: un cuestionario aplicado durante el semestre 2012-2 a alumnos de primero, tercero, quinto y séptimo semestre del Programa Educativo de Administración de Empresas Turísticas y originarios del Puerto de Guaymas; un grupo focal realizado con alumnos de segundo y cuarto semestre del mismo Programa Educativo y finalmente, un análisis-evaluación del contenido, estructura e interactividad de las páginas web de promoción turística, nacional, estatal y regional; esto con base en las “características más importantes de una página web” de acuerdo a (Kotler, 2011).

### Recolección de Datos

*Encuesta:* La muestra corresponde al universo de alumnos originarios del Puerto de Guaymas. La encuesta fue aplicada a 18 alumnos que cursan la licenciatura de Administración de Empresas Turísticas; de primero a séptimo semestre. Las aportaciones de estos alumnos son relevantes ya que son estudiantes que han cursado materias muy específicas en relación con la promoción turística.

*Grupo Focal:* Para conformar al grupo focal se invitaron a 20 estudiantes con buen desempeño académico, y que hayan cursado las materias de Turismo y Patrimonio Turístico de México del segundo semestre; así como Marketing Turístico y Promoción Turística del cuarto y quinto semestre respectivamente.

*Análisis de páginas Web:* Los sitios de Internet que fueron visitados para ser analizados de acuerdo a las características propuestas por (Kotler, 2011), fueron: “Rutas de Mexico” y “Visit Mexico” como sitios nacionales; en lo que respecta a sitios a nivel estado, se revisó “Sonora turismo” y de manera regional la página “Guaymas puerto de altura”. Para agilizar la evaluación de las páginas de acuerdo a los criterios establecidos, se diseñó una lista de verificación.

## RESULTADOS

*Sobre los participantes:* En el programa educativo de Licenciado en Administración de Empresas Turísticas se localizaron a 18 estudiantes originarios del Puerto de Guaymas, Sonora. De acuerdo a los semestres cursados, han llevado y aprobado las materias de Introducción al Campo Profesional, Patrimonio Turístico de México, Turismo, Marketing Turístico y Promoción Turística. A pesar de haber cursado materias relacionadas con el turismo, los resultados denotan la poca importancia a los monumentos históricos del puerto, no solo desde un enfoque de turistas, si no como futuros profesionales de la rama del turismo. Lo anterior es en base a que de 41 monumentos declarados, los alumnos reconocen solo tres. Un 61% de los encuestados consideran que “Existe demanda de Guaymas como destino Turístico”, El otro punto de vista corresponde al 39% en donde se expone la falta de infraestructura, oferta, mala promoción y falta de conciencia ciudadana.

Cabe aclarar que si lo comparamos con lo expuesto en el grupo de discusión que de 20 estudiantes en formación en aspectos de turismo, solo 10 conocen el puerto como visitantes o bien porque han “pasado por ahí”. Por su parte en el grupo focal fueron varios los factores expuestos por los estudiantes por no conocer el puerto de Guaymas, por un lado destacaron tres alumnos, que tenían la experiencia de conocer más a detalle el municipio, sus atractivos e historia; que no se ha tenido el interés por conocer; por su parte el resto manifestó textualmente que “el puerto no tiene promoción en general”, “tiene una imagen de mal olor por la actividad pesquera”, “aún no tengo la libertad por depender económicamente de mis padres y las decisiones que ellos tomen sobre nosotros”, otro de ellos aclaró que ser originario de otro puerto, por lo tanto en vacaciones lo menos que considera es ir a un lugar con playa, prefiere otro destino

diferente; otro factor es que son estudiantes y trabajadores lo que no le permite alejarse de la ciudad por falta de tiempo.

*Sitios de Internet:* Toda promoción de actividad turística, nacional e internacional se realiza a través del Consejo de Promoción; éste está formado por representantes de los sectores público y privado. El Consejo es responsable de dos sitios de internet que hacen uso de mapas y que están dirigidas al turista nacional e internacional, “Rutas de México” y “Visit Mexico”; fueron creadas en el 2010 y al día de hoy se mantienen vigentes. Los resultados que proporciona sobre el Puerto de Guaymas son muy limitados, casi nulos. Contra lo que se pudiera esperar con respecto a las páginas de promoción turística estatal la evaluación del sitio Sonora turismo, solo cuenta con un 37.5% de los indicadores establecidos; es decir, cumple solo tres características de las ocho propuestas; es de resaltar las cinco características de que carece la página: no está actualizada, la información noticiosa sobre el estado data del 2011; no proporciona un espacio para los comentarios de los usuarios (chat, mail, etc.), no permite realizar reservas on-line, igualmente no se encuentra algún número de teléfono gratuito (01 800) para preguntas u orientación y por lo mismo, no permite que se generen bases de datos de clientes potenciales.

La información proporcionada sobre el Puerto de Guaymas es sencilla, clara y concisa pero el enlace de su ubicación no funciona. De manera regional, la página oficial del Puerto de Guaymas, es la del Ayuntamiento: “Guaymas Puerto de altura”; ésta página a pesar de cumplir con los indicadores establecidos, no se refiere a mercadotecnia; por esta razón en ella no hay información para promocionar el turismo en el Puerto y sus alrededores. Podemos ver que dentro de la dinámica grupal, ante la pregunta “¿qué medios de comunicación promociona Guaymas?”, los comentarios redundaron en: “realmente no hay mucha promoción, solo se puede escuchar por algunas radios locales cuando está el carnaval y en la televisión local si hay temporadas de la promoción del puerto”, la desventaja sería que son canales sin mucha audiencia. La promoción es de suma importancia en unísono acordaron, por lo que la “publicidad por parte del gobierno deja mucho de qué hablar” comentaron al comparar con otras entidades federales respecto a sus atractivos turísticos. Además explicaron, que leyeron en “alguna” revista especializada de turismo los atractivos de Guaymas y de los diferentes municipios del estado de Sonora; dicha revista la han obtenido de manera ocasional, es decir, en algún hotel o en alguna casa, no recuerdan el nombre y no sabrían cómo poder adquirirla de manera formal.

## CONCLUSIONES

Los resultados encontrados sobre el tema “Cómo se promueve el turismo en el Estado de Sonora” y “la utilización efectiva de herramientas tecnológicas en la promoción turística”, y el análisis de las páginas web “Visit México” y “Rutas de México”, son interesantes y reveladores. Los hallazgos muestran que para el gobierno federal Guaymas no es un atractivo turístico, ya que en dichas páginas no existe mucha información del puerto y la que se muestra no tiene atractivo visual, resultados similares muestran las páginas web a nivel regional y estatal. Lo anterior nos lleva a concluir que éstos gobiernos no están haciendo su trabajo tal y como lo marca el plan Nacional de Desarrollo en su apartado de Turismo y la Ley Federal de Monumentos y Sitios Históricos, pues primeramente se debe de invertir en restauración y preservación del patrimonio, en infraestructura, y en la concientización ciudadana sobre el espíritu de servicio al turista, y a la par trabajar en campañas mediáticas que trasciendan fronteras sobre promociones atractivas para visitantes en diferentes temporadas. Podemos decir que las redes sociales han contribuido en gran medida a la incipiente afluencia turística de Guaymas debido a que páginas de promoción turística de agencias de viajes cuentan con un enlace a alguna red social en la cual se puede compartir la información y la experiencia del viaje.

El conocimiento que tienen los estudiantes sobre los atractivos turísticos de Guaymas se debe a que son originarios del puerto, y no al hecho de que se han visto expuestos a diferentes estrategias de promoción turística ya que ni siquiera recuerdan el nombre de algún canal de televisión o el nombre de alguna revista

que promoció al puerto como destino turístico. En lo que se refiere a los monumentos históricos, la encuesta arrojó datos muy interesantes que nos ayudan a responder las preguntas de investigación; sobre la “percepción de los estudiantes de Turismo sobre los monumentos históricos del puerto y su conservación”: los edificios históricos fue de los más mencionados, con un 18%, como de los atractivos turísticos de Guaymas; así como los monumentos en un 14%.

Los estudiantes encuestados consideraron a los monumentos históricos como los más atractivos, sin embargo no así como los más importantes y para la mayoría de los jóvenes del grupo focal los más atractivos e importantes resultaron ser las playas. Ante estos resultados es conveniente reflexionar sobre la influencia del perfil de los estudiantes en las respuestas al cuestionario, dado que tratándose de jerarquizar los atractivos por orden de importancia los festivales aparecen en primer lugar, por ejemplo hicieron referencia al Carnaval o al Festival de Mar Bermejo por lo que para ellos les resulta más atractivo el Carnaval que una visita guiada a la Casa de la Cultura. Finalmente, estos descubrimientos indican la necesidad de que las autoridades federales, estatales y de Guaymas específicamente, revisen y replanteen el desarrollo del Turismo de manera que les permita no solamente revertir sobre aquello que no se ha hecho, sino cambiar la mirada y los hechos y orientarlos a un futuro que les permita la sustentabilidad de los recursos naturales y culturales. Los hallazgos sumados a estos señalamientos dejan abierta su interpretación.

# COMPETENCIAS DIRECTIVAS Y CASOS DE MARKETING

Manuela Camacho Gómez, Universidad Juárez Autónoma de Tabasco

Carlos Paz Gomez, Universidad Juárez Autónoma de Tabasco

Jenner Priego Padrón, Universidad Juárez Autónoma de Tabasco

## RESUMEN

*En las ciencias administrativas, las tendencias en las políticas educativas a nivel internacional, indican un esmerado interés por la formación de competencias directivas. En este contexto, la didáctica juega un papel determinante al orientar las formas de enseñanza y aprendizaje. Bajo estas condiciones, tres son las principales estrategias que coadyuvan a la formación o fortalecimiento de competencias directivas: El método de casos (MC), aprendizaje basado en problemas (ABP) y aprendizaje orientado a proyectos (AOP). En este orden de ideas, las carreras de mercadotecnia y administración son las más proclives para el uso de estas herramientas didácticas. De entre ellas, el MC es una alternativa para las universidades públicas, con la distinción de que son más propicios los casos escritos con situaciones reales provenientes del empresariado local, lo que permita al estudiante o usuario contextualizar, añadir valor y proponer directrices favorables para la empresa. Los resultados que se presentan en esta ponencia, corresponden a una investigación que se enfocó a conocer la necesidad del método de casos en la Licenciatura en Mercadotecnia de las universidades públicas y privadas del Estado de Tabasco (México). Tuvo como objetivo principal analizar el uso, diseño y creación de un Banco de Casos Empresariales para la Licenciatura en Mercadotecnia de la División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco (UJAT). Los informantes clave fueron empresarios, profesores y estudiantes de la Licenciatura en Mercadotecnia. Para el estudio se utilizó el método cualitativo con enfoque de estudio de casos.*

**PALABRAS CLAVE:** Método de caso, Licenciatura en Mercadotecnia, Estado de Tabasco.

## MANAGERIAL COMPETENCIES & MARKETING CASES

### ABSTRACT

*In management science, trends in education policies internationally, indicate a careful interest in the formation of competencies. In this context, teaching plays a key role in guiding the forms of teaching and learning. Under these conditions, there are three main strategies that contribute to the formation or strengthening of management skills: The case method (CM), problem-based learning (PBL) and project-oriented learning (POL). In this sense, the marketing and management college are more likely to use these learning tools. Of these, the MC is an alternative to public universities, with the distinction that are more favorable cases written with real situations from the local business community, which allows the student or user context, add value and propose guidelines for favorable company. The results presented in this paper correspond to an investigation that focused to meet the need of the case method in the college of Marketing of public and private universities of the state of Tabasco (Mexico). Its main objective was to analyze the use, design and creation of a Bank Business Case for Marketing Bachelor in the División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco (UJAT). Key informants were businessmen, teachers and college students majoring in Marketing. For the study, the method qualitative case study approach.*

**JEL:** Business administration and business economics; marketing; accounting M3 - Marketing and advertising M31 – Marketig

**KEY WORDS:** Case Method, Licenciatura en Mercadotecnia, Tabasco State

## INTRODUCCIÓN

Las tendencias de las escuelas de negocios a nivel mundial son hacia la formación integral de los estudiantes. En México, la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA) ha realizado foros de discusión encaminados a la conformación de un modelo pedagógico que contemple el uso del método de casos en la enseñanza. En Tabasco, de acuerdo a investigaciones preliminares se detectó que en las universidades de Tabasco que imparten la Licenciatura en Mercadotecnia (LEM), no se utiliza el método de casos y tampoco se dispone de casos propios que pudieran coadyuvar al desarrollo de habilidades directivas y gerenciales de los estudiantes de LEM. El no contar con ellos, conduce a que cuando se usa esta técnica didáctica, los casos provengan de experiencia de empresas de otros países o bien de aquellos elaborados por otras instituciones o los disponibles en los libros de texto. Sin embargo, al acudir a casos externos, se corre el riesgo de que éstos probablemente no estén actualizados, que se encuentren en un contexto cultural ajeno, o que se trate de situaciones que no se vinculen directamente con los objetivos de las materias de la licenciatura. Bajo estas condiciones, el estudio de casos puede ser contraproducente o bien, tener una subutilización (Camacho, 2012). Para ser consistentes, se requiere del diseño de materiales didácticos aplicables al método de casos, para sustentar el inicio de un banco de casos proveniente de investigaciones empresariales y con aplicabilidad contextual que apoyen el egreso de capital humano con competencias requeridas por los mercados de trabajo y por el propio ambiente global de los negocios.

## REVISIÓN LITERARIA

Un caso es la descripción de una situación real, que se discute en clase bajo la dirección de un profesor. Las soluciones de un caso son imperfectas, por lo que no se trata entonces de resolver problemas en grupo para encontrar la solución correcta. Toda teoría es necesariamente una simplificación de la realidad, y un buen caso incorpora la realidad en todas sus contradictorias dimensiones, por lo cual el caso tampoco es equivalente al ejemplo de teorías o esquemas, pues al ceñirse a una realidad no simplificada se presta a variadas interpretaciones y a explicaciones diversas (Oglaistri, 1999:7).

El Método de Caso es según Abad (2008) un diálogo sistemático sobre situaciones que reflejan la realidad, dirigido por un instructor experimentado, cuyo fin es facilitar el aprendizaje, mediante un proceso activo, participativo e innovador que establece nexos creativos con la realidad. Para ser consistentes, el método de caso es una opción pedagógica con significativos beneficios en el desarrollo de competencias de los estudiantes o de los usuarios. Sin embargo, requiere de profesores o facilitadores que además de poseer conocimientos de las asignaturas o temas, habilidades muy específicas de los profesores que los utilizan o en su caso, los escriben. El caso cotidianamente describe una situación específica y real de una organización empresarial, institución o personas, en un contexto y en un periodo dado. En consecuencia, para que exista un estudio de caso se requiere de una historia empresarial que contar, con alguien que la describa y otro que la escriba. Una vez concluido el caso, la academia contará con un “simulador de negocios escrito”, el cual podrá ser seleccionado por algún profesor o facilitador para alcanzar objetivos didácticos en sus asignaturas, cursos o seminarios. Estos beneficios serán aprovechados por los estudiantes o ejecutivos formados bajo este método (Camacho, 2011).

El caso no proporciona soluciones sino datos concretos para reflexionar, analizar y discutir en grupo las posibles salidas que se pueden encontrar a cierto problema. No ofrece las soluciones al estudiante, sino que le entrena para generarlas. Le lleva a pensar y a contrastar sus conclusiones con las conclusiones de

otros, a aceptarlas y expresar las propias sugerencias, de esta manera le entrena en el trabajo colaborativo y en la toma de decisiones en equipo. Al llevar al alumno a la generación de alternativas de solución, le permite desarrollar la habilidad creativa, la capacidad de innovación y representa un recurso para conectar la teoría a la práctica real (Torres y Blanco s/f pág. 1). Según la Universidad Politécnica de Madrid (UPM), el método del caso es la descripción de una situación concreta con finalidades pedagógicas para aprender o perfeccionarse en algún campo determinado. El caso se propone a un grupo-clase para que individual y colectivamente lo sometan al análisis y a la toma de decisiones. Al utilizar el método del caso se pretende que los alumnos estudien la situación, definan los problemas, lleguen a sus propias conclusiones sobre las acciones que habría que emprender, contrasten ideas, las defiendan y las reelaboren con nuevas aportaciones (UPM, 2008).

## METODOLOGÍA

*El objetivo de la investigación* : fue analizar el uso, diseño y creación de un Banco de Casos Empresariales en la Licenciatura en Mercadotecnia de la División Académica de Ciencias Económico Administrativas de la Universidad Juárez Autónoma de Tabasco.

*La población* : objetivo fueron Profesores y estudiantes del área de Mercadotecnia de la Licenciatura en Mercadotecnia, correspondientes a 11 universidades del Estado de Tabasco, de los cuales se reportan 7 (profesores) en esta ponencia. Asimismo, se realizaron indagatorias con empresarios de la entidad con la finalidad de conocer sus historias empresariales y con ello, la obtención de la materia prima para los casos de enseñanza.

*Las técnicas de investigación* :consideradas fueron investigación documental y trabajo de campo. Para profesores y estudiantes se determinaron muestras estadísticas, en tanto que para los empresarios la muestra fue intencional. En el caso de profesores el **muestreo aleatorio estratificado** (ver figura 1), considerando los siguientes parámetros:

$$N=182$$

$$n = \frac{(1.96)^2(0.5)(0.5)(182)}{(182-1)(0.05)^2 + (0.5)(0.5)(1.96)^2} = \frac{174.7928}{1.4129} = 123.71$$

$$n=24$$

$$\frac{n}{N} = \frac{124}{182} = 0.6813$$

Figura 1: Muestras de profesores por universidad

1	UM	5*(0.6813)	= 3
2	UAG	6*(0.6813)	= 4
3	UNID	9*(0.6813)	= 20
4	UTM	18*(0.6813)	= 13
5	UD	9*(0.6813)	= 6
6	IEU	12*(0.6813)	= 8
7	UMMA	4*(0.6813)	= 3
8	US	28*(0.6813)	= 19
9	UJAT	56*(0.6813)	= 38
10	UVM	15*(0.6813)	= 10
11	UPCH	-----	= 0
		TOTAL	124

Para el caso de la UPCH, la muestra total es de cero puesto que la universidad no accedió a brindar los datos del total de profesores, por lo que no se pudo calcular la muestra para ésta población.

*Los instrumentos* :dirigidos a profesores tomaron en cuenta 4 dimensiones, el uso del caso, el dominio de la técnica por parte del profesor de casos, materia en la que se utiliza y utilidad del caso para la formación de competencias directivas y gerenciales. En el caso de los empresarios se hizo uso de guías de entrevistas semi estructurada. El objetivo principal del cuestionario que se diseñó para aplicarse a maestros de la licenciatura en mercadotecnia fue conocer el panorama general del uso de casos de estudio por profesores de las universidades en Tabasco.

*La confiabilidad del instrumento:* se logró al aplicar 30 cuestionarios piloto a profesores de mercadotecnia de la UJAT, y posteriormente, se mejoró el cuestionario para poder aplicarse a los profesores de mercadotecnia de las 11 universidades seleccionadas para éste estudio. Con estos datos se utilizó el software SPSS versión 17 para determinar el Alpha de Cronbach y estimar la confiabilidad de los instrumentos a aplicar tanto a profesores como estudiantes, el resultado fue de .81, con lo cual se estimó un nivel óptimo para dar paso a las mejoras respectivas y posteriormente aplicar los cuestionarios definitivos a profesores de 11 universidades, de las cuales se reportan siete en esta ponencia. Para los grupos que se reportan, se aplicaron un total de 98 cuestionarios a profesores de mercadotecnia de la Universidad Autónoma de Guadalajara (UAG), UNID, UTM, IEU, Universidad de Sotavento (US), Universidad Juárez Autónoma de Tabasco (UJAT) y Universidad del Valle de México, Campus Villahermosa (UVM), (ver figura 2).

Figura 2: Número de Cuestionarios Aplicados a Profesores de Siete Universidades

UAG	4
UNID	20
UTM	7
IEU	8
US	16
UJAT	38
UVM	5
<b>Total</b>	<b>98</b>

Una vez hecho el trabajo de campo, se procedió al **análisis cualitativo** con tablas de doble entrada, sobre la información obtenida en los cuestionarios. Con estos datos y la proveniente de profesores, dio pie a la segunda parte del proyecto que consistió en escribir 10 casos de enseñanza relacionados con diversas áreas del marketing; como investigación de mercados, diseño de productos, efectividad publicitaria, promoción, ventas, distribución y marketing internacional. Estos casos se derivaron de investigaciones con empresarios del Estado de Tabasco, que fueron propuestos por los profesores entrevistados. Las áreas se definieron según los hallazgos del estudio, considerando la prioridad de las mismas en el uso de casos de enseñanza.

## RESULTADOS

Después de analizar los 98 cuestionarios aplicados a profesores de la Licenciatura en Mercadotecnia de las siete universidades de referencia; se destacan las respuestas más relevantes en términos de uso, beneficios percibidos, perfil del profesor de casos, formas de manejo en aula, principales materias donde el método de caso es más significativo (ver figura 3). En cuanto a las ventajas que ofrece el método de caso para el desarrollo de competencias directivas y gerenciales, que conlleve a una inserción laboral promisorio, los profesores indicaron que a través de éstos les podrían mostrar a los alumnos las situaciones reales de las empresas, que conocieran el contexto y la situación actual del sector empresarial y contribuyera a las competencias y habilidades de los estudiantes; toma de decisiones con casos reales; que genere alternativas de solución en situaciones parecidas. Además, los casos, según los profesores entrevistados, permiten mayor vinculación con el sector empresarial (ver figura 3).

Las características que considero que debe cumplir un profesor que aplica casos prácticos son los siguientes:	Dominio de la Materia 58%, Conocimiento del Contexto Empresarial 16%, y Claridad en los Objetivos 11%	Manejo del Caso 28%, Dominio de la Materia 18%, Conocimiento del Contexto Empresarial 18%, Claridad en los Objetivos de Enseñanza con Casos 18% y Manejo Didáctico de Casos 18%	Claridad en los Objetivos de Enseñanza con Casos 50%, Dominio del Tema 25%, y Conocimiento y Manejo del Caso 25%	Conocimiento del Contexto Empresarial 25%, Dominio de la Materia 19%, Claridad en los Objetivos de Enseñanzas con Casos 19%, Manejo Didáctico de Casos 19% y Conocimiento y Manejo del Caso 18%	Dominio de la Materia 45% y Conocimiento y Manejo del Caso 20%	Conocimiento y Manejo del Caso 24%	Dominio de la Materia 31% y Conocimiento y Manejo del Caso 31%
10. Considero que las materias en las que se podría tener mayor utilización de casos prácticos en la Licenciatura en Mercadotecnia son:	Mercadotecnia Estratégica 31%, Investigación de Mercados 23%, y Mercadotecnia de Servicios 23%	Investigación de Mercado 25%, Publicidad y Promoción de Ventas 25%, Mercadotecnia de Servicios 13%, y Consultoría 13%	Investigación de Mercados 40%, Mercadotecnia Estratégica 20%, Mercadotecnia Internacional 20%, y Comportamiento del Consumidor 20%	Investigación de Mercados 33%, Publicidad y Promoción de Ventas 25%, Comportamiento del Consumidor 17% y Mercadotecnia Estratégica 17%	Comportamiento del Consumidor 22%, Investigación de Mercados 20% y Mercadotecnia Estratégica 17%	Comportamiento del Consumidor 25%, Mercadotecnia de Servicios 17% y Mercadotecnia Estratégica 17%	Comportamiento del Consumidor 30%, Mercadotecnia Estratégica 30% y Publicidad y Promoción de Ventas 20%

## CONCLUSIONES

El método de casos en la Licenciatura en Mercadotecnia es relevante como material didáctico, así lo refieren los profesores de las siete universidades que se reportan. El 100% de los informantes indican que consideran dentro de su planeación el uso casos, ya que consideran que éstos apoyan un mayor conocimiento de los estudiantes sobre las mejores prácticas empresariales y la forma en que operan las áreas funcionales de las empresas.

Asimismo, afirman que la aplicación de los casos en el aula permite el fortalecimiento o desarrollo de las competencias directivas y gerenciales de los estudiantes. Para ello consideran que lo más importante es tener dominio de la materia, en tanto que el conocimiento y uso correcto de los casos parecen ser menos relevantes, aún cuando una clase con casos requiere de ambos componentes, prevalece el caso. Este es un tema que puede ser analizado en otros documentos de trabajo. En cuanto a las materias donde mejor ubican la utilización de los casos es en investigación de mercados, comportamiento del consumidor, mercadotecnia estratégica, publicidad y promoción de ventas, mercadotecnia internacional y mercadotecnia social. Por lo tanto, se puede inferir con los hallazgos de la investigación, que el uso de los casos en la enseñanza de la mercadotecnia es altamente significativo y que los profesores están convencidos de sus bondades, aún cuando se aprecia necesario un mayor conocimiento en manejo del método. En consecuencia, los casos provenientes de investigaciones empresariales, constituyen el vínculo universidad-empresa en un esquema diferente al cotidiano, pero con una efectividad didáctica en la formación de capital humano con competencias directivas necesarias para los mercados de trabajo actuales.

Ponente en foros nacionales e internacionales, especializado en investigaciones financieros. Es integrante del Cuerpo Académico de Estudios Estratégicos para Negocios e Instituciones (CAEENI) y participa como colaborador en diversos proyectos de investigación.

## **DETERMINACION DE ESTRATEGIAS PARA LA PROVEEDURIA DE INSUMOS A LAS GASOLINERAS DEL PASO TX. Y CD. JUÁREZ, M.X**

Alberto Cárdenas Valenzuela, Instituto Tecnológico de Ciudad Juárez

Lorena Mendoza Giner, Instituto Tecnológico de Cd. Juárez

Elvira Mora Luján, Instituto Tecnológico de Cd. Juárez

Brenda Marcela Salcido, Instituto Tecnológico de Cd. Juárez

### **RESUMEN**

*La presente investigación se trata de un estudio descriptivo, de carácter cuantitativo, no experimental de diseño transeccional; y busca conocer si las variables precio, calidad, tiempo de entrega, cadena de abastecimiento, tecnología, ubicación, financiamiento y especificaciones técnica; son elementos importantes para la selección de proveedores que las gasolineras de Cd. Juárez, MX. y El Paso, TX. toman en consideración. En la revisión de literatura se realiza un análisis de todas las variables a considerar. Esta investigación está integrada por una población de 37 corporativos con 177 gasolineras en Cd. Juárez Chih. y 50 corporativos en el Paso Tx. con 231 gasolineras. La población total considerada son los 87 corporativos de ambas ciudades, y se tomó una muestra a conveniencia de 26 corporativos de ambas ciudades. Para realizar el análisis de los datos primeramente se aplicó la Prueba de Normalidad, y la Prueba de 2 Varianzas F, y posteriormente dependiendo de los resultados de la prueba de normalidad se aplicó la Prueba 1 Muestra t, la de 2 Muestra t, o la Prueba de Mann – Whitney – Wilcoxon. Una vez obtenidos los resultados de la investigación, se determinó que las estrategias a utilizar fueron diferentes entre las dos poblaciones, por lo que los proveedores deberán conformar estrategias de ventas diferentes para los corporativos de ambas ciudades.*

**PALABRAS CLAVE:** Selección de Proveedores, gasolineras, estrategias

## **DEVELOPMENT OF STRATEGIES FOR SUPPLYERS BY GAS STATIONS OF PASO TX. AND CD. JUAREZ, MX**

### **ABSTRAC**

*This research is a descriptive, quantitative, non-experimental, design transectional study; and seeks to know whether the variables price, quality, delivery time, supply chain, technology, location, financing and technical specifications are important elements taken into consideration for suppliers selection by gas stations in Juarez, MX. and El Paso, TX. an analysis of all the variables to consider is done in the literature review. This research consists of a population of 37 corporate offices with 177 stations in Juarez Chih. and 50 corporate offices El Paso TX. with 231 stations. The total population considered from both towns is the 87 corporate offices and a sample by convenience of 26 corporates offices is taken. The first data analysis performed was a normality test and a 2 variances F-test, followed by, depending on the results of the normality test, either a 1 sample t-test, 2 sample t-test, or a Mann-Whitney-Wilcoxon. After obtaining the research results, it was determined that the strategies were different between the two populations, therefore suppliers must conform different strategies for corporate sales from each city.*

*Keywords: Sourcing, gas stations, strategies*

## INTRODUCCIÓN

La presente investigación se realizó con la finalidad de establecer estrategias para los proveedores de insumos a las gasolineras que se encuentran establecidos en Ciudad Juárez, Chihuahua, y El Paso Texas. El trabajo que a continuación se presenta tiene como objetivo determinar si las estrategias basadas en los principales factores de competitividad como lo son el precio, tiempo de entrega, cadena de abastecimiento, tecnología, ubicación, calidad, financiamiento y especificaciones técnicas, para la selección de proveedores de insumos internacionales para las gasolineras de Cd. Juárez y El Paso Tx. son iguales o diferentes. Por lo que una vez planteado el objetivo se desarrolla una hipótesis general que es con la que se trabajará la investigación “los factores de competitividad para la selección de proveedores de insumos internacionales para las gasolineras de Cd. Juárez, y El Paso, Tx., son iguales o diferentes.”

### Contexto del Mercado de la Actividad Gasolinera en la Franja Fronteriza Norte

La Franja Fronteriza Norte entre Ciudad Juárez, Chihuahua, México y El Paso, Texas, Estados Unidos de Norteamérica, es una de las principales fronteras de intercambio de mercancías tanto de importaciones como exportaciones, se le clasifica como la primera y más importante del norte del país con respecto a la República Mexicana, por la gran derrama económica y de empleos que genera. En este ritmo de crecimiento una de las principales actividades es el movimiento de mercancías y personas por medio del transporte público y privado, de tal modo que éste se ha convertido en una parte muy importante para la dinámica económica que la ciudad presenta. Actualmente en Ciudad Juárez circulan un promedio de 465,000 automóviles registrados legalmente, y se estima que hay un promedio de 20,000 a 30,000 que están circulando sin ningún documento de identificación.

(Plan director de desarrollo urbano de Cd. Juárez, 2009). Esta dinámica de automóviles y transporte que se observa en la Ciudad ha impulsado de una manera importante el crecimiento del sector gasolinero a lo largo y ancho de la ciudad concentrándose en un importante número de estaciones de servicio tanto de propietarios individuales como de grandes cadenas de empresarios de la localidad que han instalado cada uno alrededor 5 estaciones como promedio, algunos cuentan con mas. De acuerdo a datos proporcionados por el Instituto Municipal de Investigación y Planeación. Actualmente en Cd. Juárez Chihuahua México, funcionan 177 estaciones de servicios, mientras que en El Paso, Tx., son 231 estaciones de servicio. Se componen la mayoría por cadenas. Un elemento importante para lograr la competitividad de las gasolineras es la selección adecuada de los proveedores, ya que es un factor intrínseco que pueden controlar las gasolineras. Que están sujetas a una serie de regularizaciones por *PEMEX* (Ciudad Juárez), *Texas Commission on Environmental Quality* (TCEQ) (El Paso, Tx.)

*Delimitación:* En Ciudad Juárez hay un total de 177 gasolineras, las cuales se dividen en 37 corporativos y en El Paso, Tx., 231 gasolineras y se dividen en 50 corporativos. Lo muestra estadística es de 26 corporativos, Sin embargo debido a la inseguridad existente en la región y a la imposibilidad de que se contestaran los cuestionarios de una muestra aleatoria, se decidió llevar a cabo una muestra de conveniencia en los cuales solo 20 cuestionarios fueron contestados en esta investigación, sin embargo estos corporativos representaron el 82% de las gasolineras en Cd. Juárez y el 63% de las gasolineras en el Paso Tx.

### Marco Teórico

Se realizó una investigación documental sobre la importancia de la selección de proveedores y de que características, factores, criterios influyen directamente en ésta, posteriormente se analizaron los criterios para la evaluación de los mismos, analizando cuáles son los factores competitivos mas importantes que se utilizan en la conformación de estrategias y aplicación de herramientas en la selección de proveedores y cada uno de los factores que intervienen en el proceso de selección y que pueden incrementar la

competitividad de la empresa, tales como: Calidad, precio, financiamiento, tiempo de entrega, cadena de abastecimiento, tecnología, ubicación y especificaciones técnicas. Con la información obtenida se sentaron las bases para la conformación de las herramientas de la investigación y poder comparar si los factores establecidos para la selección de proveedores son iguales o diferentes entre los corporativos de gasolineras de El Paso, Tx. y Cd. Juárez, Chih., y también tener los elementos necesarios para el análisis y conclusiones de la información obtenida.

*Proveedores:* Lo primero que se fija una empresa al momento de evaluar un proveedor es: el precio, la calidad de sus productos o servicios, tiempo de entrega, diversificación de proveedores de dicho mercado, tecnología para maquinaria y equipo para servicio, ubicación, calidad de las refacciones y/o durabilidad de las mismas y financiamiento (términos de crédito); sin embargo, existen otros criterios o factores que se deben tomar en cuenta al momento de decidirse por un determinado proveedor. De acuerdo a CreceNegocios.com (2011), establece siguientes factores claves para la selección de proveedores: Precio, Calidad, Pago (Financiamiento) Y Entrega

#### Estrategia y Criterios Para Seleccionar Proveedores

En su investigación, Chen y Li (2005) sintetizaron las propuestas de diferentes autores en relación con la importancia que se les debe dar a los criterios en un proceso de selección. De dicha investigación es interesante citar el aporte de Lewis (1995). Quien efectuó un estudio en la compañía fabricante de autos Chrysler, en el cual se evaluaron los proveedores basándose en cuatro factores: calidad, administración de los costos, entregas y tecnología. La mayor ponderación se le dio a calidad, con un 40%, y a cada uno de los restantes se les asignó un 20% de importancia. También cabe mencionar los resultados de Kevin (1998), en cuyo estudio se concluyó que la calidad ocupaba el primer lugar, con un 44%; las entregas a tiempo, el segundo lugar, con un 36%; luego el costo, con el 24%; el servicio, con un 19%; la tecnología, con un 6%, y el restante 7% representado por la innovación, solución de problemas, personal capacitado, buen nivel de comunicación y documentación adecuada. Resulta interesante en la investigación de Chen y LÍ (2005) que el costo, sin dejar de ser importante, no ocupó el primer lugar como criterio de decisión. (pp. 156-157)

*Selección de Proveedores:* De acuerdo con Millington, Eberhardt y Wikinson, (2006), las tendencias mundiales en la gestión de cadenas de abastecimiento conciben el aprovisionamiento como una función integral que forma parte de un concepto más amplio llamado *procurement*, el cual aborda todas las actividades necesarias relacionadas con la obtención de artículos, servicios y cualquier otro material o insumo. *Procurement* incluye la selección de proveedores, la negociación, la expedición, el monitoreo del desarrollo de proveedores, el manejo de materiales, el transporte, el almacenamiento y la recepción de materiales. Dentro de este marco de ideas se encuentra en la literatura especializada un número importante de contribuciones que, básicamente, se orientan al desarrollo de tres temas fundamentales de acuerdo a Sarache, Castrillón, y Ortiz, (2009):

- (1) la gestión de proveedores como parte de la gestión de cadenas de abastecimiento.
- (2) la selección de proveedores como decisión estratégica y pilar fundamental del enfoque competitivo empresarial y
- (3) las técnicas y métodos de apoyo a la decisión de seleccionar proveedores. (p. 148)

A pesar de que la gestión de proveedores es un tema ampliamente abordado en el estado del arte, no fue posible encontrar un enfoque integrador de los principales aportes existentes que, a su vez, sirva como

guía a los profesionales e investigadores en el tema para abordar el campo de estudio y para aplicarlo en las decisiones de la gestión empresarial.

*Proceso de selección del proveedor:* Enseguida se pueden observar ciertas herramientas, características y criterios para un eficiente proceso de selección de proveedores. Esto le servirá a el cliente para que pueda identificar mejor cuales son las características tradicionales de un buen proveedor, que tenga la información necesaria para poder elegirlo, identificar cuantos tipos de proveedores existen y elegir el que mejor se adecue a sus necesidades, así como también saber cuantos son los proveedores indicados para la empresa, es muy importante tomar en cuenta los criterios legales para seleccionar a un proveedor ya que si no, la empresa podrá tener problemas con las autoridades correspondientes, los criterios administrativos estos determinan si el proveedor está organizado y funcionando adecuadamente, los criterios financieros es otro procedimiento importante de la selección de proveedores ya que el cliente podrá identificar si el proveedor tiene aquella solvencia económica para suministrarse tanto el como al cliente, y por ultimo los criterios técnicos donde el cliente se podrá dar cuenta del sistema del proveedor para hacerle llegar el producto.

*Métodos de selección de proveedores:* Según Ghodsypour y O'Brien (2001), en la práctica hay gran cantidad de criterios para la selección de proveedores; por lo tanto, algunos se consideran como restricciones en la programación, con el fin de simplificar en gran medida la función objetivo, aunque con la misma prioridad o valor. En la realidad, esto no se presenta muy a menudo, ya que los encargados de las compras quisieran darle valor diferente a cada restricción. A efectos de hacerle frente a esta situación, tales autores desarrollaron un modelo de programación matemática multiobjetivo para que los responsables de la toma de decisiones les dieran pesos o valores diferentes a los criterios (convertidos a restricciones) que se consideren en el modelo. Otros temas importantes que nos ayudan en la selección de proveedores es la competitividad; en consiguiente las empresas se han visto en la necesidad de ser mas competitivos así como eficientes sus procesos y elevar sus estándares de calidad. La administración de la cadena de suministro, es muy importante para toda empresa tener estrategias y herramientas que le ayudarán a suministrar de una manera eficiente a la empresa. La tecnología en la distribución de productos, es otro tema muy importante el conocer y utilizar lo último de la tecnología y poderlo aplicar en la empresa, aquí por ejemplo será desarrollar procesos de servicios donde el cliente se verá beneficiado con el transporte y la distribución del producto. Los costos de distribución para una empresa internacional, en este tema al igual que en todos los demás es muy importante que la empresa desarrolle estrategias de competitividad, donde pueda dividir estos costos y sea más competitivo en el mercado.

*Competitividad:* La competitividad a nivel mundial producto de la globalización y la tendencia al libre mercado han obligado a los gobiernos de diferentes países a ofrecer mejores condiciones y facilidades de inversión en consiguiente las empresas nacionales se han visto en la necesidad de ser más competitivos así como eficientes sus procesos y elevar sus estándares de calidad. La satisfacción del cliente forma parte de la administración de la calidad global. Al fijar expectativas, pautas y exigencias de rendimiento ya que el cliente es quién conduce la gestión de la calidad total y ésta a su vez se concentra en considerar a los productos y servicios como soluciones a los problemas del cliente. La investigación de las satisfacciones de éste pone acento en dos temas clave de acuerdo a Dutka (2001):

1. Comprender las expectativas y exigencias del cliente, y en;
2. Determinar en qué medida una empresa y sus principales competidores tienen éxito en esas expectativas y exigencias.

## METODOLOGÍA

El método que se utilizó es de carácter cuantitativo, ya que se busca conocer las variables que el cliente toma en cuenta para la selección de proveedores y a si poder tener las herramientas que se utilizarán para la formulación de estrategias entre los proveedores de Cd. Juárez y El Paso, Tx. En esta investigación se utilizaron los diseños transeccionales descriptivo, ya que se busca conocer las variables que el cliente toma en cuenta para la selección de proveedores y así poder tener las herramientas que se utilizaron para la competitividad entre los proveedores de Cd. Juárez y El Paso, Tx.

*Técnica de análisis de datos:* En la técnica de análisis de datos primeramente se realizó la Prueba de Normalidad con el programa MINITAB, esta prueba genera una gráfica de Probabilidad Normal y ejecuta una prueba de hipótesis para examinar si las observaciones son acordes o no a una distribución normal. Para llevar a cabo la Prueba de Normalidad, las hipótesis son:

$H_0$  = la información sigue una distribución normal.

$H_a$  = la información no sigue una distribución normal.

Después aplicaremos la Prueba de 2 varianzas, ésta se utiliza para realizar la prueba de hipótesis para igualdad, u homogeneidad, de la variación entre dos poblaciones usando una Prueba-F y una Prueba de Levene. Posteriormente si los resultados de las pruebas anteriores salen normales se aplica 1-Muestra t para valorar un intervalo de confianza y realizar una prueba hipotética de la media cuando la desviación estándar de la población,  $\sigma$ , no se conoce. Para una prueba muestra-t de dos-colas,

$H_0: \mu = \mu_0$  contra  $H_a: \mu \neq \mu_0$

Donde  $\mu$  es la media de la población y  $\mu_0$  es la media hipotética de la población. O bien según el caso se aplica 2 Muestras t para realizar una prueba hipotética y valorar un intervalo de confianza de la diferencia entre las medias de dos poblaciones cuando la desviación estándar de la población,  $\sigma$ , no se conocen. Para dos –muestras t dos-colas,

$H_0: \mu_1 - \mu_2 = \delta_0$  contra  $H_a: \mu_1 - \mu_2 \neq \delta_0$

Donde  $\mu_1$  y  $\mu_2$  son dos medias de la población y  $\delta_0$  es la diferencia hipotética entre dos medias de la población. Si las poblaciones no son normales se usará la Prueba de Mann – Whitney – Wilcoxon, dicha prueba es del método no paramétrico que se usa para determinar si hay diferencias entre dos poblaciones. Aquí se usan dos muestras independientes, una de cada población. La prueba no paramétrica de MWW no requiere que los datos sean de intervalo ni tampoco que las poblaciones estén distribuidas normalmente. El único requisito es que la escala de medición de los datos sea por lo menos ordinal. Después, en lugar de probar las diferencias entre las medias de las dos poblaciones, la prueba de MWW determina si las dos poblaciones son idénticas. (Anderson, 2008). (pg. 825) Las hipótesis en la prueba de MWW son las siguientes.

$H_0$ : Las dos poblaciones son idénticas.

$H_a$ : Las dos poblaciones no son idénticas.

En esta investigación se usó el caso de muestras grandes ya que cuando los tamaños de las dos muestras son mayores o iguales a 10, y por lo tanto tenemos una muestra de 20, para realizar la prueba de MWW se puede usar la aproximación normal de la distribución de  $T$ .

Para decidir si se rechaza  $H_0$  se emplea el valor del estadístico de prueba estandarizado  $Z$  y el valor  $-p$ . Si  $p$  es mayor que  $\alpha$  no se rechaza  $H_a$ , pero si  $p$  es menor que  $\alpha$  se rechaza  $H_0$ .

## RESULTADOS

*Variable Calidad:* Primeramente se determinó la Prueba de Normalidad de cada variable de El Paso, Tx. y de Cd. Juárez. Como observación se está indicando en las siguientes gráficas que la variable calidad sin el \_1 es la que me indica que es de Cd. Juárez y la de calidad\_1 es la de El Paso, Tx., y así sucesivamente con las demás variables.

Gráfica 4.1 Probability Plot of Calidad

Por lo tanto se observa en la gráfica 1 que  $P. Value > .05$  lo que indica que es normal. La Prueba de Normalidad a la variable calidad\_1 que corresponde a El Paso, Tx. no se pudo aplicar ya que todos sus valores son iguales e indican el valor más alto, lo que nos lleva a que el programa MINITAB indique un error para desarrollar las Pruebas requeridas. Aplicando la Prueba de 1 Muestra  $t$  de dos poblaciones y los resultados son los siguientes:

tabla 1:

One-Sample T: CALIDAD							
Test of $\mu = 5$ vs not = 5							
Variable	N	Mean	StDev	SE Mean	95% CI	T	P
CALIDAD	11	3.75000	0.57009	0.17189	(3.36701, 4.13299)	-7.27	0.000

La calidad equivale a una media de 5, por lo tanto existe suficiente evidencia para rechazar la  $H_{01}$ , esto nos quiere decir que las medias son diferentes. Y así sucesivamente se sigue el procedimiento para todas las demás variables. Enseguida se encuentra la TABLA 2 con todos los datos resumidos por hipótesis.

Tabla 2:

HIPÓTESIS	VARIABLE	TÉCNICA	VALOR - P
H <sub>01</sub> : El factor calidad en El Paso, Tx., es igual que los que presentan los de Cd. Juárez.	CALIDAD	1.- Prueba de Normalidad; 2.- Prueba de 1 Muestra t de dos poblaciones.	**0.000
H <sub>02</sub> : El factor precio en El Paso, Tx., es igual que los que presentan los de Cd. Juárez.	PRECIO	1.- Prueba de Normalidad; 2.- Prueba de Mann - Whitney.	**0.0085
H <sub>03</sub> : El factor financiamiento en El Paso, Tx., es igual que los que presentan los de Cd. Juárez.	FINANCIAMIENTO	1.- Prueba de Normalidad; 2.- Prueba de Mann - Whitney.	**0.0049
H <sub>04</sub> : El factor de tiempo de entrega en El Paso, Tx., es igual que los que de Cd. Juárez.	TIEMPO DE ENTREGA	1.- Prueba de Normalidad; 2.- Prueba de 2 Varianzas F; 3.- Prueba 2 Muestra t.	0.123
H <sub>05</sub> : El factor de cadena de abastecimiento en El Paso, Tx. es igual que los de Cd. Juárez.	CADENA DE ABASTECIMIENTO	1.- Prueba de Normalidad; 2.- Prueba de 2 Varianzas F; 3.- Prueba 2 Muestra t.	**0
H <sub>06</sub> : El factor de tecnología en El Paso, Tx., es igual que los de Cd. Juárez.	TECNOLOGÍA	1.- Prueba de Normalidad; 2.- Prueba de 1 Muestra Wilcoxon.	**0.004
H <sub>07</sub> : El factor de ubicación en El Paso Tx. es igual que los de Cd. Juárez.	UBICACIÓN	1.- Prueba de Normalidad; 2.- Prueba 2 Varianzas F; 3.- Prueba 2 Muestra t.	0.104
H <sub>08</sub> : El factor especificaciones técnicas en El Paso Tx. es diferente que los de Cd. Juárez.	ESPECIFICACIONES TÉCNICAS	1.- Prueba de Normalidad; 2.- Prueba 2 Varianzas F; 3.- Prueba 2 Muestra t.	0.059

\*\* Significativamente diferentes

## CONCLUSIONES Y RECOMENDACIONES

Se concluyó lo siguiente: En primer lugar, teniendo presente la importancia del estudio, es recomendable para los proveedores de insumos para el sector gasolinero, tanto para El Paso Tx., como Cd. Juárez, centren sus estrategias en los siguientes factores: Tiempo de entrega, ubicación y especificaciones técnicas. En esta investigación cuyos factores; tiempo de entrega, ubicación y especificaciones técnicas, las hipótesis nulas fueron no rechazadas, quiere decir que los corporativos gasolineros tuvieron la misma estrategia de competitividad en seleccionar un proveedor.

Por lo que es importante:

- Que los proveedores tengan un buen inventario, transporte disponible, sean eficientes al cumplir con los requisitos del cliente, ya que los corporativos, tienden a solicitar la refacción al instante.
- Que los proveedores hagan una buena investigación de mercado, para estar más cerca del cliente.
- Que los proveedores estén actualizados con todos los cambios de los manuales y procedimientos de las franquicias tanto de PEMEX en Cd. Juárez y TQEC de El Paso Tx.

Sin embargo, los proveedores de insumos de las gasolineras deberán establecer estrategias diferentes para poder surtir los dos mercados, en el caso de Cd. Juárez, deberá enfocarse primordialmente en los siguientes factores en orden de importancia:

importancia	Cd. Juárez	El Paso Tx
1	Precio	Calidad y tecnología
2	Financiamiento	Financiamiento
3	Especificaciones técnicas	Tiempo de entrega
4	Calidad	Especificaciones Técnicas
5	Cadena de Abastecimiento	Precio
6	Tiempo de entrega	Cadena de abastecimiento
7	Ubicación	Ubicación

# **DIRECCIÓN ESTRATÉGICA DE EMPRESAS FAMILIARES, GARANTÍA DE CONTINUIDAD Y COMPETITIVIDAD**

María De Los Angeles Monterde Valenzuela, Universidad Estatal de Sonora

## **RESUMEN**

*Esta investigación es referente a micro, pequeñas y medianas empresas que han sido constituidas en familia. Realiza en primer lugar, un breve análisis de la situación actual de las empresas familiares y posteriormente se enfoca al análisis de la gestión directiva misma, con el propósito de identificar los problemas que prevalecen en este tipo de organizaciones. Plantea además un panorama empresarial, en el cual la dirección estratégica es factor clave del éxito del negocio, y la armonía familiar. Este estudio se centra en el diseño de la empresa familiar, sus órganos de gobierno, y el desarrollo de personas que dirigen estratégicamente la empresa hasta el proceso de sucesión directiva. La investigación se desarrolla en la ciudad de Hermosillo, Sonora, México, y contiene datos obtenidos de la aplicación de instrumentos de medición que analizan la situación cuantitativa y cualitativamente, y generan la oportunidad de presentar a la comunidad empresarial una propuesta que guíe a las nóveles organizaciones familiares hacia mejores niveles de competitividad.*

**PALABRAS CLAVE:** Micro, pequeña y mediana empresa, familia, sucesión

## **STRATEGIC MANAGEMENT OF FAMILY BUSINESSES, ENSURING CONTINUITY AND COMPETITIVENESS**

### **ABSTRACT**

*This research is related to micro, small and medium enterprises that have been established in family. It performs firstly a brief analysis of the current situation of family businesses, and then focuses on the analysis of the same executive management in order to identify problems that prevail in these organizations. It contains also a business landscape in which strategic management is a key to business success and family harmony. This study focuses on the design of the family business, its governing bodies, and the development of people running the company strategically to policy succession process. The research is conducted in Hermosillo, Mexico, with data retrieved from the application of measurement instruments that analyze quantitatively and qualitatively the situation, and create the opportunity to present a proposal for the business community to guide new family organizations to higher levels of competitiveness.*

**KEYWORDS:** Micro, small and medium enterprises, family succession

### **INTRODUCCION**

La creación de empresas en Sonora y en México, surge como respuesta al desempleo tan alto registrado en los últimos años. Por ello es de suponer que en actitud desesperada y con mucha creatividad, las personas emprenden, a veces sin intención, estudios, factibilidad o recursos; e inician comercializando o produciendo algo que saben hacer, con el recurso humano más barato y disponible: La familia. Con la necesidad como motor, se lanza la empresa familiar a sortear todo tipo de pruebas; generando riesgos, costos económicos y emocionales. Las empresas micro, pequeñas y medianas en México, son familiares y conforman aproximadamente el 95% del PIB. Además sostiene que en México, de 100 empresas

familiares micro, pequeñas y medianas que inician, menos del 20% de las nuevas empresas llegan a los dos años de vida; casi un 20% llegan a la segunda generación y sólo el 8% sobreviven a la tercera generación; siendo muy diversos los elementos de su fracaso. El reto, además de crear empresas, es lograr que permanezcan y desarrollen siendo competitivas para un mercado global.

La gestión directiva de la empresa familiar, suele ser informal y el poder de toma de decisiones está concentrado en las manos del fundador (es) y en unos pocos de familiares cercanos. A medida que la compañía crece en tamaño y complejidad de sus operaciones comerciales, se vuelve necesaria una estructura gerencial más formal, descentralizada y calificada para sortear los desafíos del mercado. Este estudio pretende conocer el nivel de profesionalización de las empresas familiares, así como encontrar las principales problemáticas que enfrenta la empresa familiar en el desempeño de la gestión directiva; y con los hallazgos, diseñar estrategias que coadyuven a reducir el riesgo de fracaso, y proyecte a mejores escenarios el futuro del negocio familiar.

## REVISION LITERARIA

La Empresa Familiar ha sido objeto de intensos estudios durante las últimas décadas, buscando determinar esquemas que expliquen su composición, estructuras y comportamientos. Uno de los más completos es el modelo de los Tres Círculos, de Davis y Tagiuri, que explica la forma en que se sobreponen los sistemas de la familia, la empresa y la propiedad, así como el lugar que ocupan cada uno de los miembros que pertenece a alguno de los siete sub-conjuntos que se forman en las áreas de sus intersecciones.

Figura 1: el Modelo de los 3 Círculos de la Empresa Familiar. (Davis Y Tagiuri)

En esta propuesta todas y cada una de las personas que de alguna forma u otra tienen relación en una empresa familiar, pueden ubicarse en alguno de estos círculos y subconjuntos; también llamados 7 territorios. Según el Instituto de la Empresa Familiar la definición oficial de empresa familiar aprobada en Bruselas por las dos principales instituciones internacionales representantes de la misma: Grupo Europeo de Empresas Familiares (GEEF) y en Milán por el Board de Family Business Network (FBN) es la siguiente: Un negocio de cualquier tamaño es empresa familiar si:

1. La propiedad está en manos de los fundadores de la compañía, o de una persona que ha adquirido el capital social de la empresa, esposa, y/o herederos directos.
2. La empresa es gestionada por dos o más miembros de una familia, y comparten propiedad.
3. Al menos un representante de la familia o pariente participa en la gestión o gobierno de la compañía.

4. Si el fundador tiene parte del capital social, o sus familiares o poseen el 25% de los derechos de voto que otorga la propiedad de capital.

Tienen además características derivadas de su gestión que pueden clasificarse en tres fases:

1. Respecto a la propiedad: Gran parte de ésta es de una familia, la que mantiene el poder y el control de la actividad empresarial.
2. Respecto al poder: Los miembros de la familia se dedican a la dirección de la empresa o en cargos de decisión en el consejo directivo.
3. Respecto a la continuidad: Siendo familiar, debe estar involucrado un elemento de herencia, en este caso se le identifica cuando en la empresa participan los miembros de una segunda generación familiar, es decir los hijos del fundador, por ejemplo.

Ahora bien, dos de los grandes problemas que se identifican en este tipo de organizaciones son:

La dificultad para crecer, y la continuidad sujeta a los ciclos de la familia. Resalta en algunos estudios, que las principales causas para el cierre de las empresas se enmarcan en el problema de la vulnerabilidad del empresario frente al entorno, y por factores críticos de planeación y administración. (Figura 1). En el caso de las empresas familiares, recae en la falta de preparación y capacitación del sucesor por no planearlo.

Figura 1: Principales Factores De Amenaza Para Las Pymes (%).

9.- Robo de empleados

8.- Problemas legales

7.- Cifras regulaciones

6.- Regulaciones ambientales

5.- Inhabilidad para responder a cambios del mercado

4.- Baja preparación ante desequilibrios económicos

3.- Pocas habilidades administrativas en puestos clave

2.- Financiamiento inapropiado

1.- Planeación inadecuada de sucesión

Fuente: Secretaría de Economía, México. 2010

Por otra parte, el consultor y catedrático de empresas familiares Ivan Lansberg, recomienda que para garantizar la continuidad del negocio, se tienen que comprender estructura y comportamiento de los entornos; así como saber aplicar los procesos que conforman la dirección estratégica como, por ejemplo, el proceso de formulación de la estrategia, su presupuesto y control, el de diseño de la organización, etcétera. Michael Porter, recomienda analizar la situación empresarial con el modelo de las cinco fuerzas (figura 2), el cual nos enseña que una empresa está rodeada de cinco factores fundamentales dentro de una

industria y hay que aprender a controlarlos muy bien para sobrevivir en el mercado y tomar buenas decisiones, de tal manera que nos lleven al éxito tomando en cuenta altas tasas de rentabilidad.

Figura 2: El Modelo de las Cinco Fuerzas de Porter

Además nos dice que en la industria existen dos tipos de competencia, la positiva y la destructiva, la primera es cuando un competidor busca diferenciarse del resto en vez de acaparar todo el mercado y la otra es justamente todo lo contrario pues todas las empresas ofrecen lo mismo. Aporta sin duda, la parte medular en lo que a profesionalismo empresarial se refiere, ya que su propuesta lleva elaborar y aplicar las estrategias correctamente, y por ende a tomar decisiones adecuadas para tener éxito. Para garantizar la continuidad de las empresas familiares, se propone formar a sus sucesores, (Figura 2), tanto en la etapa de la preparación remota como en la de preparación próxima. El predecesor, todavía joven de edad, debería poseer el equilibrio en el orden de valores que otorga la madurez.

Figura 2: Edades De Los Posibles Sucesores Y Propuesta De Preparación

#### EDADES DE LOS PROTAGONISTAS DEL PROCESO DE SUCESIÓN

EF.- Empresa Familiar

Fuente: Creación Propia.

Existe pues, la necesidad de seguir profundizando en la relación entre una gestión directiva eficaz y la capacidad de las empresas familiares para alcanzar sus objetivos de desarrollo. La mejora de prácticas de gobierno son elementos clave en la competitividad del tejido productivo, generan confianza,

transparencia, interés social y productividad, en el negocio, además de armonía en la familia. El buen gobierno de una organización familiar, debe tener estructuras que permitan lograr estos objetivos:

- a) Establecer un sentido de orientación de la organización y su sistema de valores;
- b) Generar políticas aceptadas y bien entendidas que indican a sus miembros cómo comportarse y qué deben llevar a cabo en cada momento; y
- c) Reflejar el consenso de las personas adecuadas en el momento adecuado en relación con los retos y cuestiones relevantes de la familia y la organización.

Estos tres objetivos pueden alcanzarse a través de estructuras para cada uno de los 3 elementos que se interrelacionan en la empresa familiar: Propiedad, familia y empresa, y que se detallan en la Tabla 1.

Tabla 1: Plan de Acción Para Establecer un Buen Gobierno en la Empresa Familiar

Asuntos importantes/difíciles	Familia	Propiedad	Empresa
¿Dónde se van a abordar los asuntos importantes?	Consejo familiar	Grupo accionistas	Consejo directivo
¿Dónde se manejan los conflictos importantes?	Consejo familiar	Consejo de Dueños	Consejo directivo
¿Cuáles son los acuerdos claves?	Código de conducta	Acuerdo de accionistas	Políticas y procedimientos
¿Quién establece los acuerdos?	Consejo familiar	Grupo accionistas	Consejo directivo
¿Dónde se abordan los asuntos de sucesión y transición?	Consejo familiar	Grupo accionistas	Consejo directivo
¿Dónde se puede encontrar apoyo?	Mentores	Asesores clave	Consejeros independientes
	Consejo familiar	Consejo directivo	Consejo directivo
	Juntas familiares	Comité ejecutivo	Comité ejecutivo
	Asamblea familiar	Entrenamiento y coaching	Entrenamiento y coaching
¿Qué estructuras pueden necesitarse?	Convivencias familiares	Trabajar con empleados no familiares	Trabajar con empleados no familiares
	(Entorno seguro y protegido)	Preparación para ingresar al negocio	Preparación para ingresar al negocio

Fuente: Creación propia

Para que el modelo de gobierno de una empresa familiar sea eficiente cada uno de los tres subsistemas debe tener un papel y una participación claramente definidos en el gobierno del sistema global. Desde la perspectiva de la familia, el consejo de familia y la asamblea familiar son las estructuras organizadoras y la voz de la familia. Desde la perspectiva de la propiedad, la junta de accionistas es la voz de los propietarios de la empresa. Entre el subsistema de la propiedad y de la empresa, el consejo de administración es otra estructura clave de gobierno impregnada en su composición y funcionamiento por la influencia de los tres subsistemas, el grupo familiar, el grupo gestor y el grupo propietario. Desde la perspectiva de la empresa, la dirección es la estructura gestora de la organización y la voz de los empleados de la misma. Estas estructuras de gobierno permiten garantizar un funcionamiento adecuado del negocio familiar al posibilitar una definición clara del papel, los derechos y las responsabilidades de los empleados, propietarios y miembros de la familia. También una clara separación de los ámbitos de tratamiento de las cuestiones y problemas específicos de cada grupo (asuntos relativos a la propiedad, a la familia y a la empresa), reduciendo de esta manera el impacto de tensiones o problemas de un grupo en el resto de los grupos.

## METODOLOGIA

El presente estudio se centra en las micro, pequeñas y medianas empresas de la ciudad de Hermosillo, Sonora. La muestra representativa se eligió por conveniencia acudiendo a bases de datos de Cámara

Nacional de la Industria de la Transformación y de Comercio. La investigación es de campo y documental, en proporción del 70-30 respectivamente, a la muestra seleccionada se aplicó el cuestionario diseñado exclusivamente para comprobar la hipótesis origen de esta investigación: Conocer la relación que existe entre el nivel de profesionalización de las empresas familiares, y la continuidad del negocio; así como encontrar las principales problemáticas que enfrenta la empresa familiar en el desempeño de la gestión directiva, mismas que al recogerse serán objeto de estudio independiente de esta investigación. En el marco de la presente investigación de tipo descriptiva, que busca relatar las características y perfiles importantes de los grupos sometidos a análisis y recolectar cuantitativamente datos que permitan la comprensión del fenómeno a observar, y posteriormente analizar e interpretar la información que resulte desde un enfoque cualitativo. Para la elección de la muestra se consideraron las siguientes características: empresas contribuyentes al erario público, donde trabajan en la misma empresa al menos dos consanguíneos o parientes políticos y la tercera condición, que tuvieran una permanencia estable en el mercado y haber demostrado éxito comercial. Es así, como se encuestó a un total de 35 empresas familiares de la ciudad de Hermosillo durante el período de enero a julio 2011. Antes de iniciar la aplicación de las encuestas se consideraron las siguientes limitaciones:

La identificación de los perfiles que posibilitó conocer cuáles serían los posibles individuos a entrevistar, el período de referencia, sobre el cual se interrogó y recogió la información, el modo de recolección, que en este trabajo fueron cuestionarios relativamente abiertos y finalmente la forma de llegar al encuestado, donde fue necesario hacer cita para visitar el lugar de trabajo del mismo. Todo lo anterior, permitió seleccionar las variables más significativas y establecer relaciones causales entre los sujetos observados y las condiciones corrientes en que se encuentra inmerso el objeto de estudio. A continuación se muestra la información demoFigura de la investigación contenida en la Tabla 2.

Tabla 2. Información demoFigura de la investigación “Dirección estratégica de empresas familiares, garantía de continuidad y competitividad”.

Información demográfica de la Investigación "Dirección estratégica de la Empresa Familiar"							
Giro	Núm. Empresas	Tamaño	Núm. Empresas	Permanencia	Núm. Empresas	Etapas de Continuidad	Núm. Empresas
Comercio	20	Micro	10	10-15 años	12	Fundadores	28
Taller industrial	5	Pequeñas	16	16-20	4	1era. Generación	4
Servicios turísticos	10	Medianas	9	21-25	14	2da. Generación	3
				más de 26	5	3era. Generación	0
<b>Total</b>	<b>35</b>	<b>Total</b>	<b>35</b>	<b>Total</b>	<b>35</b>	<b>Total</b>	<b>35</b>
Fuentes: Base Datos CANACINTRA Hermosillo 2010							

La composición porcentual de la muestra objeto de estudio es la siguiente: Comercio 57%, servicios 28% e industria 15%. El 45% son pequeñas empresas, el 28% son micro empresas y el 27% son empresas medianas. Respecto a los años de permanencia en el mercado, el 40% de esta muestra tiene entre 21-25 años, el 34% tiene entre 10 y 15 años y el 11% entre 16-20 años. Respecto a la etapa de continuidad en la que se encuentran, la composición es la siguiente: empresas dirigidas por sus fundadores un 80%, dirigido por la 1era generación el 11%, y sólo un 9% ya tiene directores de 2da. Generación. Es así como a continuación se muestran los datos demográficos obtenidos de la aplicación de las encuestas. (Tabla 3)

En la tabla 3, podemos observar la composición de la muestra de personas encuestadas es la siguiente; 54% mujeres, 46% hombres; de los cuales el 57% está casado, el 23% tiene otro estado civil, el 17% son solteros y sólo un 3% permanecen en viudez. El 45% de los encuestados fluctúan entre 46 y 55 años de edad; rango de edad interesante y significativo para el abordaje del proceso de sucesión empresarial.

## RESULTADOS

Este estudio mostró la relación directa que existe entre la dirección estratégica de la empresa y la seguridad de continuar en el mercado; además de poner de manifiesto que de la dirección estratégica emana la profesionalización del negocio en el sentido de tener estructuras de gobierno como son procesos y manuales que precisen su operatividad; además de otras estructuras de gobierno que garantizan la correcta interrelación y manejo de la familia-empresa-propiedad. El estudio dejó ver también, que las empresas familiares son vulnerables debido a la poca cultura de la prevención y la gestión empírico-emocional de las pequeñas y medianas empresas. Sin embargo, para futuras investigaciones se podrán hacer otros análisis como pueden ser el impacto de la cultura empresarial en la competitividad de las empresas, o el diseño de herramientas para una gestión directiva eficaz; partiendo de los resultados obtenidos en esta y el seguimiento a las recomendaciones realizadas. A continuación se describen Figuramente los resultados obtenidos:

Tabla 3. Tabla demoFigura de personas encuestadas.

Tabla demográfica de las personas encuestadas							
Rango de edad		35-40	41-45	46-50	51-55	56-60	más de 60
<b>Femenino</b>							
Núm. de mujeres	19	3	2	4	4	3	3
<b>Masculino</b>							
Núm. de hombres	16	5	2	2	6	1	0
<b>Total encuestados</b>	<b>35</b>	8	4	6	10	4	3
<b>Estado civil</b>

Viudo	1	5-10	11-15	16-20	21-25	26-30	más de 31
Otro	8	8	9	18	20	19	6
Total	35						

Fuente: Creación propia.

Figura 3: Habilidades Para El Manejo de la Empresa Familiar

Como se muestra en la Figura 3, según los datos arrojados a partir de las encuestas aplicadas, la adquisición de habilidades para manejar la empresa familiar fue adquirida de la siguiente manera: 57% personas afirman haber aprendido dentro de la misma familia, 34% personas adquirieron experiencia en trabajos anteriores, 3% contestó que de casualidad, y 6% del total desarrollaron habilidades administrativas en cursos de capacitación.

Figura 4: Muestra la Composición Profesional de los Colaboradores de la Empresa Familiar

La distribución de los diferentes tipos de profesionales NO familiares que laboran dentro de la empresa, predominando las que afirmaron no tener ningún profesional laborando con ellos (46%).

Figura 5: Establecimiento de Reglas en la Empresa Familiar

Según las respuestas arrojadas en la aplicación de la encuesta, la norma más importante que regula la relación Familia-Empresa, en términos de frecuencia la más mencionada fue el acceso de la familia a la empresa con 16 ocasiones (46%). le sigue ninguna norma en particular con 11 menciones (31%).

Figura 6: Debilidades Detectadas En Las Empresas Familiares De Hermosillo, Sonora

Muestra las debilidades que tiene la empresa en percepción de quienes la dirigen, los resultados fueron los siguientes: 49% consideran la falta de preparación como una debilidad al interior de la empresa, 23% afirman que es la mentalidad conservadora, 17% mencionaron no tener ninguna debilidad, y el 11% perciben a la emigración de sus empleados como su principal debilidad.

## CONCLUSION

Este estudio mostró que las empresas familiares son vulnerables debido a la poca cultura de la prevención y la gestión empírica-emocional de las pequeñas y medianas empresas. El 20% de la muestra están bajo régimen de personas físicas, lo que muestra poca estructura y compromiso, no tienen planeación ni se han trazado una visión futura; resignándose al poco crecimiento. Respecto a las habilidades en el manejo o dirección del negocio, destaca el 57% haberlas obtenido dentro de la empresa familiar; lo que nos muestra la importancia que tiene la formación de los futuros cuadros de mando dentro de la empresa familiar, bajo la premisa “empresarios formando empresarios”. Un 46% de empresas familiares no cuenta con profesionales no familiares laborando en su negocio; lo que nos presume de ser un sistema cerrado que peligra porque puede operar con “ceguera de taller” o liderazgos contaminados. Resultaron además otros indicadores preocupantes como el que se refiere a no tener normas que rijan la operación de la empresa (31% de los casos), solamente un 11% reconocen tener un protocolo y un bajo 8% dice tener medidas para evitar dispersión de capital; lo cual es preocupante y será seguramente la recomendación prioritaria a atender, derivada de este estudio. Otro de los hallazgos significativos que sumó limitantes a la investigación, fue la poca disponibilidad de información en las bases de datos obtenidas; ya que es escasa, no estructurada y pudiera calificarse de elemental o de poca calidad; develando para las cámaras que agremian a los empresarios, un verdadero reto el recopilar, verificar transparentar, estructurar y hacer accesible a la investigación y la información de su gremio.

Con estos hallazgos, podemos afirmar que para futuras investigaciones se podrán hacer otros análisis como pueden ser el impacto de la cultura empresarial en la competitividad de las empresas, o el diseño de herramientas para una gestión directiva eficaz; partiendo de los resultados obtenidos en esta y el seguimiento a las recomendaciones realizadas. En conclusión, este trabajo de investigación mostró que la situación actual de las empresas familiares ubicadas en Sonora, México, muestran debilidades que son importante atender, como el no contar con una planeación escrita, tener poco personal profesional laborando en la empresa, el alto porcentaje de empresas que no tiene establecidas reglas claras de operación para la familia y el negocio; y su proceso de profesionalización es incipiente. Además la mayoría (69%) de los empresarios encuestados observó problemas en la operación si acaso él faltara en el negocio. Por lo tanto, se hace urgente e importante profesionalizar a la empresa familiar, con un proceso de planeación estratégica e integral que contemple un proceso de sucesión que la proyecte al futuro como un negocio familiar productivo, con una agenda de asuntos administrativos, legales, motivadores, financieros y familiares que garanticen su permanencia.

# COACHING COMO HERRAMIENTA DE GESTIÓN EN ORGANIZACIONES DE ECONOMÍA SOCIAL

José Manuel Núñez González, Universidad Nacional

Cynthia Barrantes Jiménez, Universidad Nacional

## RESUMEN

*El Coaching Gerencial funciona como una herramienta para promover el desarrollo de las personas y potenciar sus habilidades, todo esto con el objetivo de alcanzar un medio que origine el bienestar de todos los que lo reciben y que, a su vez, se traduzca en importantes efectos económicos para la empresa favoreciendo de alguna forma la motivación y la productividad. Así, surge la necesidad de implementarlo en organizaciones pertenecientes a la Economía Social, tomando en cuenta las particularidades de las mismas y estudiando las situaciones de mejora que se logren identificar a partir del desarrollo de un modelo que se presenta para ser aplicado en otras instancias esperando una respuesta positiva en la gestión tanto a nivel individual como grupal y organizacional.*

## COACHING AS A MANAGEMENT TOOL IN SOCIAL ECONOMY ORGANIZATIONS

### ABSTRACT

*The managerial coaching works as a tool that improves personal development and strengthens abilities, all this to achieve an environment that results in welfare and benefits of everyone that receives the coaching workshop. Hence transforming that experience into important motivational and productivity improvements, and consequently into economical remunerations. That is how the need of implementing managerial coaching in an organization from the Social-Economy sector comes up. Always considering the particularities of such sector and studying the situations of potential upgrade that can be only identified from the development of a particular model. The model may be applied in other circumstances and expect for a positive response in both individual and organizational management levels.*

Palabras Clave: Economía Social, gestión, Coaching- Social Economy, management, Coaching

## INTRODUCCIÓN

Vivimos un período de dramáticas y profundas transformaciones. Los cambios se dan en todo nivel debido a los procesos de informatización y robotización del aparato productivo; a la configuración de marcos de relaciones laborales cada vez más flexibles; al aumento de la subcontratación, tercerización y descentralización productiva. Estamos en tránsito de lo que Drucker ha llamado “la sociedad post-capitalista”. Requerimos organizaciones más especializadas, más eficientes, y con más innovación.

Hacia futuro, el imperativo ético consiste en que la sociedad sea inclusiva, en que la producción pueda ser orientada a la satisfacción de las necesidades de la ciudadanía como un conjunto, subordinando el interés individual por el interés colectivo. Es poder construir espacios de asociatividad, con participación y gestión democrática.

En Costa Rica, la herramienta de Coaching Gerencial es un concepto relativamente nuevo, sin embargo, este ha sido puesto en práctica, desde hace algunos años, sobre todo en empresas privadas. Pese a los beneficios que la aplicación de esta herramienta trae consigo, es poco utilizado en instituciones públicas, y utilizado, aun en menor medida, en las diversas estructuras organizacionales de la economía social.

Partiendo de lo anterior es que nace la Economía Social como respuesta a estas necesidades que de otra forma no han sido satisfechas o donde los esfuerzos realizados han sido insuficientes. Al tener estas empresas un papel tan relevante dentro del desarrollo social y económico es que se rescata la importancia de entender su origen y características, así como la necesidad de proveer de herramientas a este tipo de organizaciones para fomentar su mejora en la gestión, en el caso particular se desarrolla y explica un modelo de Coaching Gerencial que permita identificar situaciones de mejora tanto operativas como financieras.

Para cada empresa de Economía Social, el centro son los seres humanos (trabajadores y asociados), de allí se desprende la importancia de poder alcanzar sus objetivos de manera eficiente para cubrir la necesidad para la que fue creada dicha empresa. Es aquí en donde la herramienta de Coaching Gerencial actúa como un medio para que las personas den lo mejor de sí, alcancen sus metas personales y las organizacionales.

## REVISIÓN LITERARIA

La Economía Social, por su naturaleza y características, dista de los otros dos sectores: público y privado. Oguilve (2012, en Núñez) señala que la Economía Social:

“... es un sector que se preocupa por atender la parte social, un sector donde las decisiones empresariales democráticas y donde prima el ser humano sobre el capital, éste quizá sea la solución al fracaso del estado como empresario y del sector privado resolviendo problemas sociales bajo su enfoque capitalista” (16).

Así lo indica Coraggio (2009), en donde establece que la Economía Social:

“... está centrada en el valor de uso (en la provisión de bienes y servicios útiles para satisfacer las necesidades y deseos legítimos de todos, con una perspectiva de reproducción ampliada, no del capital, sino de la vida con calidad) y en el trabajo humano en sus múltiples formas, combinado con el trabajo de la naturaleza en un metabolismo socio-natural orientado por criterios de racionalidad reproductiva y calidad de vida antes que de cantidad de posesiones” (33).

De igual forma, Monge (2000) define la economía social en las comunidades como:

“... una herramienta capaz de generar proyectos productivos de aporte solidario, que ofrezcan un servicio de buena calidad a la comunidad, y donde los excedentes se reinviertan en las necesidades propias que comparten los vecinos en áreas como la formación de infraestructura y capital humano (educación, salud, seguridad y recreación y ataque a la pobreza (asistencia social y vivienda), entre otros”. (177)

Por su parte, en la actualidad el Coaching representa una tendencia en crecimiento, una herramienta que contribuye al desarrollo del potencial del talento humano en cualquier tipo de organización. Al respecto, Crane (2002) menciona que el Coaching es un proceso saludable y positivo que provoca el desarrollo de la capacidad de las personas para resolver problemas de los negocios de hoy.

El Coaching para ejecutivos es conceptualizado por Goldsmith, Lyons y Freas (2001) como:

“... un proceso de acción – aprendizaje para mejorar las acciones efectivas y la agilidad del aprendizaje. Involucra una relación profesional y un proceso deliberado y personalizado para brindar al ejecutivo información válida, decisiones libres e informadas que se basen en esa información, y compromiso interno con esas decisiones” (167).

A grandes rasgos, el Coaching puede enmarcarse como “... un proceso donde un orientador (coach) y un individuo (coachee) o un reducido grupo de personas (coachees), se comprometen a colaborar para alcanzar un conjunto de objetivos, desarrollando para ello un plan de acción” (Zeus y Skiffington, 2004).

En síntesis, se dice que el Coaching para ejecutivos debe ser estratégico y personalizado, en donde "...la integración de factores de la empresa – y de individuo – es la clave lograr los resultados empresariales" (Goldsmith, Lyons y Freas, 2001: 28).

## RESULTADOS

### Origen de la Economía Social

Durante todo el siglo XX, la contradicción ideológica fundamental, se fundó en los extremos del capitalismo-comunismo. Esa contradicción arrastró a que toda vía alternativa quedara fatalmente destinada al ostracismo. O se orientaba hacia el mercado, con sus diferentes variantes, o se orientaba hacia el centralismo democrático de una economía planificada, limitante de la libertad individual.

La expresión de la Economía Social surge a partir de las barreras que el mercado capitalista impone, y que impide el acceso libre de la ciudadanía a la generación y distribución de bienes y servicios que satisfagan sus necesidades, es decir, si fuera fácil para todos los ciudadanos acceder a un puesto de trabajo, a una vivienda, o desarrollar su capacidad adquisitiva, sería muy probable que no existieran organizaciones empresariales asumidas por los trabajadores.

Este tipo de empresa surge en una condición determinada, es una solución a una dificultad impuesta por una realidad económica que tiende a excluir, o a poner barreras de entrada a su entorno, a colectivos determinados. Por tanto, la Economía Social nace como una reacción ante la exclusión social o económica de factores básicos para la vida. Esta es, en su origen, una reacción defensiva.

Además, es una reacción colectiva. No es posible realizarlo de manera individual. Los trabajadores autónomos son, en el plano individual, una expresión de la misma reacción. Pero la Economía Social es siempre colectiva. Se reacciona con los otros para integrarse en el esquema económico del que se siente la amenaza de exclusión. Esta reacción colectiva exige, también, el respeto a la disciplina y a las normas impuestas por el grupo. Se reacciona con los otros y, además, de manera igualitaria y equilibrada. No se reacciona diferenciando el esfuerzo de cada uno o sobrevalorando el de uno por encima del de otros. La condición es que ese esfuerzo esté equilibrado y sea semejante para todos. De forma que, en el proyecto que se construye la responsabilidad es compartida, como los beneficios que se derivan del mismo. Por eso, se denomina agrupación de personas, pues el ser humano prevalece sobre la estructura de capital o de la participación en él, que es el criterio dominante en el capitalismo.

Es aquí donde se ubica la utopía de la Economía Social y, con ella, su fuerza. Es una utopía de solidaridad que se concreta necesariamente en la realidad organizacional. Por ser una realidad organizacional, debe enmarcarse en el plano empresarial, por lo que, los mecanismos del mercado y las exigencias de la economía actúan como valor educativo, llevando necesariamente, a la eficacia. Esto connota una concepción imprescindible de una utopía realizable, de medir sus posibilidades de realidad, su viabilidad, y de gestionarla.

En esa dirección, la Economía Social se origina en una reacción que no puede ser sólo ideas o discursos. Esta debe crear alternativa económica puesto que reacciona para neutralizar lo que se percibe como amenaza o como exclusión, lo hace creando riqueza y compitiendo en el mercado, al igual que la empresa capitalista, pero se compromete a crear riqueza para todos sus integrantes por medio de la generación de espacios productivos. Es decir, tan solo en la medida en que se genere riqueza colectiva y se creen espacios de trabajo se hace Economía Social.

Así, la Economía Social es una UTOPIA, por que reacciona para superar la barrera de acceso que el mercado amenaza con negar; COLECTIVA, pues siempre debe hacerse con otros; EQUILIBRADA, pues se construye desde la persona, con objetivos similares para todos y, además, es democrática; EFICIENTE;

y SOLIDARIA, puesto que se compromete con el colectivo que la compone y con el entorno social donde se ubica.

### Concepto de Economía Social

Para conceptualizar lo que se entiende por Economía Social, estamos obligados a reflexionar sobre la definición de economía. Así, desde el ejemplo de Samuelson, sobre la producción de cañones y mantequilla, la mayoría liga el tema económico a la escasez y el trade off o costo de oportunidad. Es así, a partir de la definición estándar que se le atribuye al economista Lionel Robbins, que se propuso considerar como económico, todo acto de asignación de recursos escasos a fines alternativos (Caillé, 2009:21). Pareciera que esa definición, como decimos, dominante, equipara lo económico con la elección racional, puesto que se orienta a considerar que: el comportamiento que apunte a economizar recursos escasos procediendo a un cálculo de costos y de las ventajas de acción o de elección, es un comportamiento económico. En esa misma dirección, pareciera que, únicamente, el libre mercado permitiría garantizar una coordinación eficiente entre consumidores racionales, por lo que todas las relaciones sociales deben organizarse según una lógica mercantil de compra y venta de los recursos escasos con arreglo de las necesidades subjetivas.

Pero, la evidencia histórica nos muestra otra cosa. El modo de producción capitalista, al privilegiar el lucro y la acumulación, provoca crecimiento económico y aumento de la productividad pero, a su vez, genera inestabilidad en el sistema, socava la cohesión social y multiplica la desigualdad. Nunca, en toda la historia de la humanidad fueron producidos tantos bienes y servicios de interés colectivo, pero a su vez, nunca, hubo tanta injusticia para acceder a los mismos, lo que es interpretado por los defensores del modelo capitalista como una consecuencia de las diferencias naturales, producto del mayor esfuerzo y sagacidad de unos, frente a la falta de voluntad y creatividad de otros. Ese fenómeno lo tenemos ante nuestros ojos todos los días. Basta con viajar por la Autopista del Sol y ver, por un lado, la opulencia de Escazú y, por otro lado, las necesidades de Pavas, simplemente divididos por el cañón de un río. La lógica de un sistema montado en los valores éticos del capitalismo no es aceptable ni es sostenible porque es socialmente excluyente e injusta.

De ahí, que se debe variar la ecuación y se debe empezar a transitar hacia escenarios que, haciendo prevalecer el valor de lo humano, establezcan como fundamental la satisfacción progresiva de las necesidades de la ciudadanía la postergación del lucro y la acumulación. Se debe reconocer (Caillé, 2009:25) que, históricamente, han existido diferentes formas de intercambio entre los seres humanos: la reciprocidad (intercambio caracterizado por relaciones simétricas y horizontales), la redistribución (una cúspide que se apropia de los recursos y los reparte), y el intercambio (que es el único que corresponde al mercado), y que para cada uno de esos sistemas de intercambio debe existir un sistema de valores. Igualmente, reconociendo las diferentes formas de intercambio, se debe conceptualizar que existen tres formas de producir riqueza: el modo mercantil y monetario (el mercado), el modo mercantil no monetario (la redistribución), y el modo no mercantil no monetario (la reciprocidad).

Obviamente, y por razones histórico-culturales, la producción mercantilista monetaria goza de un mayor prestigio que las otras formas de producción de riqueza. Lo que es más, el grado de comprensión de las formas alternativas de generación de valor se rompe en la legitimación, en mucho, porque se ha asumido que todo tiene un precio que se debe pagar. Con esto, usualmente, el dinero condensa ese valor de lo deseado y, socialmente, se ignora que algunas necesidades son más urgentes que otras. Por esas razones, el éxito está mucho más en el tener que en el ser, lo que nos arrastra a dicotomías ridículas de excesiva ostentación, frente a necesidades básicas insatisfechas. Y es, precisamente, en esta exclusión de ciudadanía, que la Economía Social encuentra campo fértil para su proliferación.

Seguendo a Coraggio (2008), se deben reelaborar las bases conceptuales de lo qué es la economía y la función de la misma, y acogemos su definición de economía como:

(...)El sistema de instituciones y prácticas que se da una comunidad o una sociedad de comunidades e individuos para definir, movilizar o generar, distribuir y organizar combinaciones de recursos (relativamente escasos o no), con el fin de producir, intercambiar y utilizar bienes y servicios útiles para satisfacer de la mejor manera posible y a través de las generaciones las necesidades que se establecen como legítimas de todos sus miembros (Coraggio, 2008:19).

Esta definición tiene consecuencias conceptuales y prácticas como que se concibe lo económico dentro de una construcción social-temporal, lo que significa que es histórico y cultural y, por tanto, cambiante.

Es en este contexto, en donde adquiere relevancia la búsqueda de alternativas como la Economía Social, pero requerimos conceptualizarla. En esa dirección, debe reconocerse que no existe una definición universalmente aceptada de lo que debemos entender por Economía Social, lo que es más, se levantan voces calificadas en diferentes regiones que proponen otras denominaciones como Economía Solidaria, Economía Popular, Economía Comunitaria, Economía Alternativa, y Economía Laboral. En lo personal, prefiero el concepto de Economía Social, me parece que es más inclusivo y abarca la pretensión de lo solidario, lo popular, lo comunitario, lo alternativo y lo laboral.

En todo caso, distingamos, por ahora, a qué se opone la Economía Social. Hay consenso en que discrepa con la Economía Capitalista, con la Economía Planificada y economía con un tercer sector económico caritativo y asistencial. La discrepancia con la Economía Capitalista se centra en los valores mismos del modelo, no se comparten ni el lucro ni la acumulación. El bienestar individual está por encima del bienestar colectivo, se concibe al mercado como la única organización económica eficaz y, por tanto, legítima, y esto, lleva a dogmatizar el principio del individualismo utilitarista.

Se diferencia del modelo de Economía Planificada en tanto que se sustituye el poder omnipresente del mercado por la gestión económica racional del Estado autoritario, se limita la libertad al hacer obligatoria y no voluntaria la participación del individuo en las diversas organizaciones y se subordina a la persona al poder autoritario sin práctica democrática.

Existe una divergencia con un sector económico caritativo y asistencial, como el desarrollado en Inglaterra y Estados Unidos. Estos sectores satisfacen necesidades colectivas que no son cubiertas ni por el mercado ni por el Estado, siendo atendidos mediante la filantropía y la caridad, es decir, mediante prácticas benevolentes y asistenciales.

En esa dirección, intento dar una definición propia de lo que es Economía Social, a la que concibo como un sector de economía en el cual prevalece la asociatividad en función de la satisfacción de las necesidades de la ciudadanía, en el cual se hace prevalecer al ser humano y al objeto social por sobre el capital, en el cual hay adhesión voluntaria y abierta, en el cual se tiene un control democrático de los miembros sobre los órganos de gobierno, en el cual se defiende y aplica el principio de solidaridad, y en el cual se tiene autonomía de gestión e independencia de los poderes públicos.

### Características de la Economía Social

En este acápite se va a hacer uso de la terminología utilizado por la Comisión de la Comunidad Europea para caracterizar a las organizaciones que pertenecen a la Economía Social. Así, se establece que:

Una empresa pertenece a la economía social si su actividad productiva se basa en técnicas de organización específicas. Estas técnicas se fundamentan en los principios de solidaridad y participación (que fundamentalmente responde a la norma un hombre un voto) entre sus miembros, sean estos

productores, usuarios o consumidores, así como en los valores de autonomía y de ciudadanía (Barrantes, 2000:24).

De esta definición general se derivan una serie de características que identifican a la Economía Social, y que desarrollamos así: a-) no tiene relación con la economía pública ni con la economía capitalista, b-) puede obtener beneficios de su actividad productiva, c-) necesita de capital para desarrollar su actividad económica, d-) no existe relación directa entre el capital aportado y el beneficio atribuido, e-) la toma de decisiones está vinculada directamente con los asociados y no con el capital, f-) libre asociación, g-) gestión democrática, h-) no acumulación individual de beneficios, i-) solidaridad interna y externa, j-) calidad de los servicios y productos, k-) desarrollo del individuo por la formación y la cultura.

Se debe recalcar que la Economía Social es parte de la economía privada, con las particularidades propias de gestión y distribución que la diferencian de las otras manifestaciones económicas. El hecho de que puedan, las organizaciones de la Economía Social, obtener beneficios de su actividad, debe visualizarse en función de la subordinación de la apropiación individual al interés colectivo sobre la base de la satisfacción progresiva de las necesidades de los asociados.

En cuanto a la necesidad de capital para desarrollar las actividades, estas se dan en el entorno en el cual la organización de Economía Social convive y sobrevive, se dan en el entorno de una economía capitalista, por lo tanto, para gestar el producto o servicio se requiere de flujos de capital que hagan posible la consecución de sus objetivos empresariales.

La distribución de los excedentes o beneficios de la actividad debe de estar en función del interés colectivo, privilegiándose la persona y el trabajo, y no del aporte de capital. El principio democrático que privilegia, en términos relativos, el principio de “una persona, un voto” es, conforme a la naturaleza de las organizaciones de la Economía Social, donde se proclama la supremacía de la persona sobre el capital, y una expresión práctica de esa condición es precisamente ese principio de un voto por asociado.

La libre asociación es una herencia de los principios liberales, que potencia el ejercicio de un derecho inherente a la persona para adherirse o retirarse de cualquier organización. Si el ser humano y la satisfacción de sus necesidades son el motor de la Economía Social, la libertad de asociación es un corolario indispensable para el desarrollo de ésta.

La gestión democrática implica que se tome la opinión y consideración de todos los miembros de la organización. Igualmente, se refiere al control colectivo de las decisiones y a la garantía que dicta que las discrepancias tienen que ser atendidas en el cuerpo social.

La no-acumulación individual de beneficios se da conforme a la diferencia fundamental entre los valores de la Economía Social y los enunciados del capitalismo. En cualquier expresión, la acumulación individual genera discriminación, y en sí misma, violación del principio de satisfacción de las necesidades de los componentes del grupo social.

La solidaridad interna y externa es un compromiso que se plasma en el enunciado “Nada en solitario... Todo en solidario”. Este concepto se funda en una doble dirección, por un lado, hacia el compromiso con el grupo social que compone la organización, y por el otro, hacia el entorno social donde se ubica.

La calidad de los servicios y de los productos corresponde al rompimiento del paradigma de que lo colectivo es enemigo de lo excelente. Es imperativo que en la Economía Social se construyan indicadores y mediciones que promuevan la excelencia y la calidad del objetivo social con el que se trabaja.

El desarrollo del individuo, por la formación y la cultura, implica la creación y el impulso de espacios que potencien al ser humano a las mejores condiciones materiales y espirituales, con el objetivo de satisfacer sus necesidades.

Se debe insistir en las características de las organizaciones de la Economía Social, es decir: la libre adhesión, la gestión democrática, la no-acumulación individual de beneficios, la solidaridad interna y externa, la propiedad común de los resultados y la utilidad social, entre otras. De ahí, el marco normativo costarricense ha permitido la existencia y funcionamiento de un abanico de alternativas, dentro de las que procedemos a enumerar: las cooperativas, las asociaciones solidaristas, las empresas comunales desarrolladas por las asociaciones de desarrollo comunal, las organizaciones mutuales, las empresa fundada en asociaciones civiles, las sociedades anónimas laborales, la empresas promovidas por el sector sindical, las sociedades públicas de economía mixta (SPEM), las fundaciones, las sociedades civiles, los centros agrícolas cantonales, las asociaciones que administran los acueductos rurales (ASADAS), los sindicatos de producción, el Banco Popular y de Desarrollo Comunal, la sociedad de seguros de vida del Magisterio Nacional, entre otras. Queda pendiente realizar un estudio detallado de la naturaleza, marco jurídico, funcionamiento y orientación de las organizaciones indicadas, pero por el momento, basta con ratificar la manifestación de que, es posible, conforme el marco normativo, la existencia y funcionamiento de organizaciones de Economía Social.

### Coaching: Un Modelo Para Contribuir A La Gestión De Empresas De Economía Social

El coaching permite desarrollar el máximo potencial de cada uno de los colaboradores que forman parte de nuestra organización. Es mediante una metodología basada en preguntas que se impulsa a quien recibe el proceso (coachee) a detectar oportunidades de mejora y encontrar sus propias soluciones ante las diversas situaciones que pueda enfrentar en su quehacer diario.

A pesar de ser considerada relativamente novedosa, esta herramienta ha sido utilizada con mayor frecuencia dentro del sector privado y con una menor regularidad en el sector público y de Economía Social. Sin embargo, el coaching y las empresas de Economía Social convergen en la importancia que le dan al ser humano como centro de las organizaciones y en fomentar el desarrollo de las personas.

Partiendo de lo anterior, a lo largo de este artículo se presenta un modelo propuesto para la aplicación del coaching gerencial en empresas del tercer sector. Es pertinente rescatar, que el modelo en cuestión fue desarrollado durante el segundo semestre de 2012 como parte de un estudio de proyecto de graduación de tesis.

Además, debe aclararse que el modelo incluye la identificación de indicadores financieros prioritarios para la organización, esto como parte del objeto de estudio de la investigación. Sin embargo, el mismo no se limita a la identificación únicamente de este tipo de información, sino que, por el contrario, puede ser adaptado para el establecimiento de otro tipo de situaciones dependiendo del objetivo con el que se aplique.

Ahora bien, el modelo (figura 1) deber ser entendido como una especie de guía para la aplicación de la herramienta. Este fue desarrollado por Barrantes y Barrantes (2013) para mostrar una forma de aplicación del Coaching y establecer situaciones de mejora así como la identificación y medición de los indicadores financieros para la empresa en cuestión.

En este sentido, a continuación se describen la serie de pasos que lo conforman tomando como base la figura adjunta.

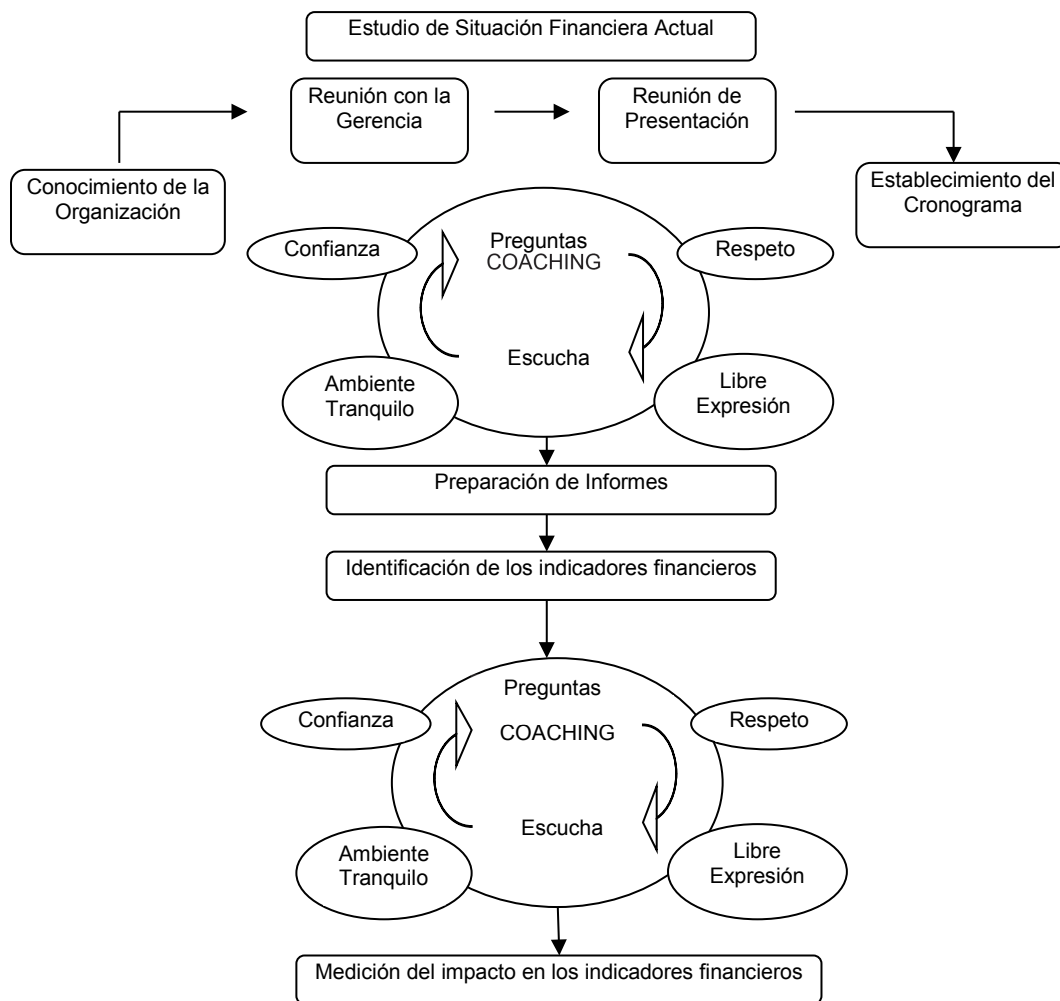

Es indispensable realizar una revisión inicial de la situación actual de la empresa, en este caso la financiera, para poder tener un punto de partida que sirva de comparación con los posibles resultados que se obtengan al finalizar la aplicación de la totalidad del modelo.

Comprender el tipo de organización en la que se va a aplicar la herramienta es otro aspecto fundamental. Se debe establecer el área en la cual se desarrolla la organización, la actividad que realiza, sus objetivos y el tipo de profesionales que la conforman, entre otros.

Realizar una reunión con la gerencia general es recomendable, esto con el fin de establecer las expectativas que se tienen del proceso, así como la determinación de cuáles son las situaciones o necesidades, que de forma general, se han logrado identificar desde la gerencia y rescatar la labor financiera que se hace a lo interno de la organización.

Figura 1: Modelo de aplicación de Coaching para empresas de economía social y medición del impacto en los indicadores financieros

Fuente: Barrantes, A. & Barrantes, C. 2013

La reunión de presentación pretende consolidarse como un primer contacto con los participantes del proceso de coaching gerencial, para que tengan la oportunidad de conocerse entre sí (coach y coachees), poder evaluar de forma general la actitud de los copartícipes, dar a conocer qué es lo que se pretende alcanzar y cuál es el objetivo y, por último, abrir un espacio para evacuar dudas o consultas que se tengan al respecto, con el fin de disminuir la ansiedad o resistencia que se pueda generar a partir del proceso.

Este primer encuentro es muy importante para que todos los colaboradores involucrados tengan conocimiento del proceso en el que están participando, lo entiendan y tengan la disposición de obtener provecho del mismo, puesto que el resultado del Coaching va a depender, principalmente, de la labor que cumplan los coachees.

La creación de un cronograma de reuniones permite darle orden al proceso, tanto para las sesiones grupales como las individuales, en donde, de común acuerdo, se establecen fechas para la realización de las actividades y, de cierta forma, se garantice la participación de los colaboradores involucrados. El cronograma debe ser flexible, principalmente en los casos de las sesiones individuales, para permitir la reprogramación de sesiones que, por circunstancias ajenas, se cancelen en el tiempo previsto.

Se lleva a cabo la primera etapa de la aplicación de la herramienta coaching gerencial, en donde la labor del coach va a determinar la calidad y pertinencia de la información que se obtenga gracias a la “escucha profunda” o la atención que este preste a lo que está abordando el coachee, este ejercicio es el punto de partida para la formulación de las preguntas que van a dar continuidad al proceso y que, además, están basadas en el conocimiento de la organización, en la reunión con la gerencia.

Es de suma importancia que durante la etapa de aplicación de la herramienta se propicie un ambiente tranquilo, de libre expresión y de respeto que permitan generar niveles de confianza apropiados para el óptimo desarrollo de las sesiones y para que no se limiten los temas u opiniones que puedan ser traídos a la conversación.

Durante el proceso de aplicación del coaching gerencial se recomienda, como parte de este modelo, que se incorporen dos modalidades, iniciando con las sesiones grupales y concluyendo con las individuales. La información que se obtiene de cada una de estas modalidades es diversa por las características propias de cada tipo de sesión, es por ello que se insiste en la ejecución de ambas. En este sentido, se logra obtener información más completa por parte de los coachees ya que las debilidades de una modalidad se contrarrestan con las fortalezas de la otra.

Una vez concluida cada sesión deben prepararse informes con la sistematización de la información tanto para efectos de la gerencia que contrata el servicio como para el seguimiento que debe darle el coach al progreso de los participantes. Los informes deben incluir los principales temas tratados durante las sesiones y las situaciones, áreas de trabajo o necesidades que se pueden mejorar dentro de la organización. Se presentan a manera de resumen general puesto que se debe garantizar la confidencialidad de la información que se aborda durante las sesiones.

A partir de las áreas de mejora identificadas a lo largo de las conversaciones, las cuales pueden ser de diversa índole, se desprenden los indicadores financieros que se priorizan a nivel de la organización y que podrían verse impactados de manera positiva si se trabaja en esas situaciones, específicamente, mediante un proceso de acompañamiento.

Es aquí donde se rescata la habilidad por parte del coach, quien es el responsable de establecer relaciones entre las situaciones abordadas y cómo éstas se pueden traducir en impactos financieros e indicadores. Se realiza una segunda etapa de aplicación de coaching gerencial para trabajar directamente sobre esas situaciones que impactan los indicadores financieros. Al igual que en la primera etapa del proceso de aplicación, durante ésta segunda se deben incorporar tanto sesiones individuales como grupales, las cuales deben sistematizarse para facilitar el análisis de la información.

Una vez concluido el proceso, se miden los resultados obtenidos con la aplicación del modelo completo para establecer el impacto que se logró con apoyo de la herramienta de coaching gerencial en los

indicadores financieros que se identificaron como prioritarios durante la primera etapa, realizando una comparación de la situación inicial con la final.

Finalmente, se realiza una reunión grupal final que permita una especie de cierre o conclusión acerca del proceso en general, donde se expongan los principales hallazgos, los avances y las mejoras que se pretenden implementar a partir del acompañamiento realizado, así como, el reconocimiento del cambio entre la situación inicial de la organización y el cambio positivo al finalizar la aplicación.

El objetivo de esta reunión final es propiciar la retroalimentación para resaltar el papel protagónico que tuvo cada participante en la mejora de la gestión y destacar que las soluciones planteadas y puestas en práctica se generaron desde cada uno de ellos. De esta manera, se fomenta el empoderamiento en los participantes. Cada una de las situaciones que se identifiquen como oportunidades de mejora a partir del proceso de acompañamiento deben monitorearse de manera continua para mantener y mejorar la gestión de la organización.

La incorporación de este modelo es de suma importancia para cualquier empresa de Economía Social, ya que de la eficiencia de la gestión operativa y financiera va a depender la generación de mayores excedentes que, a su vez, pueden reinvertirse para el crecimiento de la organización, y consecuentemente, se garantizarían mejores resultados para quienes la conforman, así como para los usuarios en la dotación del servicio para beneficio de la comunidad. Es decir, con la aplicación del modelo de coaching se pretende que todos los esfuerzos se encaminen a la consecución del objetivo social para el que fue creada la organización, en este caso, perteneciente al Tercer Sector de la Economía.

#### Conclusiones

Se plantea un modelo de aplicación de Coaching Gerencial para empresas de economía social que procure incrementar el potencial de cada uno de sus asociados, con el objetivo de que cada uno de los departamentos sea más eficiente, lo que se traduce como una mejora en la organización en general y como la cobertura de la necesidad social para la cual fue creada la empresa.

El procurar maximizar el potencial tiene un valor especial dentro de las empresas de Economía Social, puesto que en ellas el eje central es el ser humano y en el Coaching lo es de igual manera. Además porque en estas organizaciones el capital humano también es dueño de la empresa y va a formar parte de la misma hasta que él o ella así lo quieran.

Es por ello, que las situaciones de mejora que logren ser identificadas mediante el modelo y que sean consideradas como prioritarios para la empresa en la que se aplique son trabajadas mediante la metodología de Coaching, y deben monitorearse de manera continua para mantener y mejorar la gestión de la organización.

Lo anterior, es de suma importancia para cualquier empresa de Economía Social, ya que de la eficiencia de la gestión operativa y financiera va a depender la generación de mayores excedentes que a su vez, pueden reinvertirse para el crecimiento de la organización, y consecuentemente, se garantizarían mejores resultados para los asociados (trabajadores y co-dueños de la cooperativa), así como para los usuarios en la dotación del servicio a la comunidad, el cual es el objetivo primordial de este tipo de organizaciones como parte del Tercer Sector de la Economía.

## BIOGRAFÍA

José Manuel Núñez González, Licenciado en Derecho de la Universidad de Costa Rica. Máster en Administración Pública con énfasis en Economía Social de la Universidad de Costa Rica. Actualmente se desempeña como Académico de la Universidad Nacional de Costa Rica y es de igual forma el coordinador del Centro de Desarrollo Gerencial del mismo centro de estudios. Además se ha desempeñado profesionalmente en la asesoría de cooperativas, asociaciones y otras organizaciones de Economía Social. Asimismo, cumplió funciones de diputado de la Asamblea Legislativa de Costa Rica en el período de 1998 -2002. Además, ha participado en la publicación de varias obras la Economía Social y el Derecho.

Cynthia Barrantes Jiménez, Bachiller en Comunicación Colectiva con énfasis en Relaciones Públicas de la Universidad de Costa Rica y Licenciada en Administración con énfasis en Gestión Financiera de la Universidad Nacional de Costa Rica. Actualmente labora para el Centro de Desarrollo Gerencial de la Universidad Nacional de Costa Rica como gestora de proyectos, consultora y capacitadora, en donde trabaja con instituciones públicas, empresas privadas y organizaciones de Economía Social.

# CONDICIONES DE VIDA EN COMUNIDADES RURALES Y URBANAS EN LA REGIÓN CENTRO DESIERTO DEL ESTADO DE COAHUILA

Verónica De León Estavillo, Universidad Autónoma de Coahuila

Silvia Rodríguez Reyes, Universidad Autónoma de Coahuila

Nohemi Canales Carrizales, Universidad Autónoma de Coahuila

## RESUMEN

*En este trabajo se presentan los resultados de un estudio comparativo sobre condiciones de vida en comunidades rurales y municipios de la región centro desierto del Estado de Coahuila México, y que tiene como finalidad contribuir a que los programas de apoyo gubernamentales existentes tengan un enfoque más integral y correspondiente a las “realidades” encontradas. El estudio realizado es de carácter exploratorio y descriptivo, los métodos utilizados corresponden a investigación cualitativa y cuantitativa. Los resultados obtenidos reflejan algunos elementos de coincidencia en las condiciones de vida entre las comunidades urbanas y rurales, así como elementos que establecen la diferencia en dichas condiciones de vida.*

**PALABRAS CLAVE:** Condiciones Economicas y Sociales de Vida, Calidad de Vida, Desarrollo, Programas De Apoyo

## LIVING CONDITIONS RURAL AND URBAN COMMUNITIES IN CENTRAL DESERT STATE OF COAHUILA

### ABSTRACT

*This paper presents the results of a comparative study on living conditions in rural communities and municipalities in the central desert of Coahuila Mexico, which aims to contribute to the existing government support programs, have a more holistic approach and corresponding to the realities found. The study is exploratory and descriptive methods used correspond to qualitative and quantitative research. The results show matching elements in the living conditions between urban and rural communities, as well as elements that make the difference in such living conditions.*

**KEYWORDS:** Economic And Social Conditions Of Life, Quality Of Life, Development, Support Programs

### INTRODUCCION

En este trabajo se presentan los resultados de la investigación realizada en 4 de los 13 municipios que conforman la región centro del Estado de Coahuila y que estadísticamente reportan una mayor actividad económica (INEGI 2010), así como seis ejidos, de los cuales cuatro forman parte del municipio de Cuatro Ciénegas de Carranza Coahuila y dos se encuentran entre los límites de los municipios de Frontera y San Buenaventura. Para ubicar el contexto en el que se ha realizado esta investigación se hace una descripción muy general del mismo. Coahuila es el tercer estado más grande de México y se encuentra ubicado al noreste de la república mexicana, sus condiciones climatológicas en la zona centro del mismo son extremas, correspondientes a una zona semidesértica – desértica, con una densidad poblacional de 18

personas por km. cuadrado y en el que de acuerdo al último censo poblacional (INEGI 2010) el 90% de su población es urbana y el 10% restante es rural, asimismo geográficamente tiene frontera con Estados Unidos de Norteamérica, lo cual hace que 9 de cada 1000 personas hayan migrado a dicho país según datos arrojados por el INEGI en el 2000.

Económicamente, Coahuila aporta al producto interno bruto( PIB) nacional el 3% y se encuentra empleado en sus diversas empresas el 3% de la población económicamente activa del país y tiene el 2.2 % de las unidades económicas también, sin embargo en el promedio de ingresos anual por persona al año en el Estado es de\$97,005.00 pesos contra el promedio nacional de \$99,114.00 pesos y la participación de la población económicamente activa (PEA) se encuentra que un 66% corresponde a los hombres y un 34% a las mujeres, asimismo dicha participación económica reflejada por núcleos poblacionales de entre 100,000 a 249,999 se observa en los resultados estadísticos del censo económico del 2010 que se concentra entre los rangos de edad en los hombres de los 30 a 49 años y en las mujeres de los 25 a los 44 años, no así en los núcleos poblacionales de 10,000 a 14,999 donde el promedio más alto se encuentra para los hombres entre los 20 y 54 años y en las mujeres entre los 20 y 44 años.

Las principales actividades económicas en Coahuila en base al porcentaje de aportación al PIB estatal se encuentra distribuido con un 3.3% para actividades primarias, un 44.82% para actividades secundarias y un 51.88% para actividades terciarias (INEGI 2009). En el lugar donde se realizó esta investigación, la actividad económica de mayor relevancia es la manufacturera y siderúrgica, así como de servicios y en muy menor escala la agrícola – ganadera. De los municipios participantes en este trabajo, se encuentran Monclova con 216,206 habitantes, Frontera, con 75,215, Castaños con 25,892, San Buenaventura con 22,149 habitantes

## REVISION LITERARIA

Los procesos de cambio vividos por la sociedad en general en las últimas décadas, han sido de gran impacto en nuestras formas de vida y vinculación con nuestro entorno. Los sistemas políticos y culturales, las formas de producción, la tecnología, así como la comercialización de bienes y servicios han cambiado vertiginosamente llevando a la sociedad a nuevas formas de interacción y de vida. El desarrollo de grandes urbes ha traído como consecuencia la concentración de núcleos poblacionales que demandan servicios de salud, educación, infraestructura de caminos y vialidades, alimentos y vivienda entre otros. Lo anterior ha generado la migración de personas que habitaban usualmente en el campo (medio rural) a estos centros urbanos y con el abandono de actividades relacionadas con la producción de alimentos, en busca de tener a la mano servicios de salud, educativos y mayores opciones de actividad económica. Para los gobiernos implica el generar o ampliar sus programas de apoyo para lograr un desarrollo más armónico de los diferentes sectores de la población y propiciar el desarrollo de capacidades que permitan que los habitantes enfrenten los retos con mayor éxito que este modelo económico impone.

En las organizaciones que desean ser competitivas, tales procesos deberán tener un enfoque sistémico para efecto de poder alinear todas sus acciones, tales como la movilización de mano de obra, cambios de oficios, necesidad de rápidos aprendizajes de nuevas tecnologías, adecuación e interacción en diferentes culturas organizacionales, cambios financieros, regulaciones ambientales y fiscales que traen en consecuencia cambios en las relaciones de trabajo, en las relaciones de familia y en el individuo mismo, según la hipótesis de René Laperriere. (2) Todas las circunstancias descritas parecen ser adversas a la posibilidad de lograr calidad de vida por lo que estudiar, plantear y aplicar soluciones prácticas a esta problemática, representa una necesidad inmediata fundamental.

El interés por los estudios relacionados con Calidad de Vida ha existido desde hace mucho tiempo, sin embargo la aparición del concepto como tal y la preocupación por una forma de evaluación sistemática y científica de la misma es reciente. Este concepto comenzó a popularizarse desde la década de los sesenta

hasta convertirse en un concepto muy utilizado en diferentes ámbitos como el económico, político, educativo, salud, social y otros más. La expresión de Calidad de Vida aparece en debates de carácter público en torno al medio ambiente y al deterioro de las condiciones de la vida urbana, así como de la preocupación por contrarrestar las brechas de la desigualdad social.

La preocupación por la creciente industrialización y sus consecuencias hace crecer la necesidad de medir a través de datos objetivos estos efectos sobre las nuevas formas de vida en la sociedad. A partir de las ciencias sociales se trabaja en establecer indicadores que den una perspectiva objetiva de tipo económico y social como una primera etapa, e incorporándose posteriormente elementos subjetivos relacionados a las formas de convivencia (Arostegui 1998). El desarrollo y perfeccionamiento de indicadores sociales, en los siguientes años provocará un proceso de diferenciación en la evaluación y estudio de este concepto. Un enfoque cuantitativo y uno cualitativo.

El enfoque cuantitativo tiene como propósito operacionalizar la Calidad de Vida y se refiere a condiciones externas relacionadas con el entorno como la salud, el bienestar social, las relaciones sociales, el estándar de vida, la educación, la seguridad pública y el manejo del ocio y “el intento sistemático e integrado para conceptualizar, accionar y medir, por medio de un conjunto de indicadores sociales, la diversidad de aspectos que conforman el bienestar” (Setien, M.L. 1993:45) El enfoque cualitativo adopta una postura de escucha y atención a la persona mientras relata sus experiencias, desafíos y problemas y como los servicios sociales pueden apoyarles eficazmente. Una tercera habla sobre las condiciones de vida y su interacción con el medio ambiente.

Aún existe una falta de consenso sobre la definición del constructo y su evaluación. Así, históricamente han existido dos aproximaciones básicas: Una que lo concibe como una entidad unitaria, otra que lo considera como un constructo compuesto por una serie de dominios. En 1992, añadieron una cuarta, según éstas la Calidad de Vida ha sido definida como la calidad de las condiciones de vida de una persona desde sus condiciones de vida, de su satisfacción con la vida, de la combinación de ambas y de la escala de importancia que le da a cada una. A manera de resumen se puede decir que los elementos que se contemplan en un estudio sobre calidad de vida pueden quedar incluidos en tres grandes indicadores: sociales, psicológicos y ecológicos.

Los indicadores sociales y psicológicos por si solos pueden deducir su contenido y por indicadores ecológicos se entiende aquellos que miden el ajuste entre los recursos del sujeto y las demandas del entorno. A pesar de la aparente falta de acuerdo entre los investigadores sobre el alcance de la definición de Calidad de Vida y la metodología utilizada para su estudio, el concepto ha tenido un impacto significativo en la evaluación y planificación de servicios durante los últimos años, tal como lo demuestran los trabajos realizados por organismos como la Organización para la Cooperación y el Desarrollo Económico (OCDE), la Organización de las Naciones Unidas (ONU), el Instituto Nacional de Estadística (INE), quienes han hecho un arduo trabajo por elaborar indicadores e índices del desarrollo social, (Lazerfeld 1985) y Díez Medrano (1992) .

Algunos estudiosos la han definido como la capacidad que posee el grupo social ocupante de satisfacer sus necesidades con los recursos disponibles en un espacio natural dado que abarca los elementos necesarios para alcanzar una vida humana decente. Según la OMS (Organización Mundial de la Salud) es: “ la percepción que un individuo tiene de su lugar en la existencia, en el contexto de la cultura y del sistema de valores en los que vive y en relación con sus objetivos, sus expectativas, sus normas, sus inquietudes. Se trata de un concepto muy amplio que está influido de modo complejo por la salud física del sujeto, su estado psicológico, su nivel de independencia, sus relaciones sociales, así como su relación con los elementos esenciales de su entorno”.

El concepto de Calidad de Vida, a lo largo del tiempo se ha definido como la calidad de las condiciones de vida de una persona, como la satisfacción experimentada por la persona con dichas condiciones vitales, como la combinación de componentes objetivos y subjetivos, es decir, Calidad de Vida definida como la calidad de las condiciones de vida de una persona junto a la satisfacción que ésta experimenta y, por último, como la combinación de las condiciones de vida y la satisfacción personal ponderadas por la escala de valores, aspiraciones y expectativas personales.

Sin embargo se estarían obviando aspectos que intervienen directamente con la forma de interpretar las situaciones como positivas o negativas, es decir, condiciones, circunstancias y aprendizajes que influyen la escala de valores y las expectativas de las personas, la cultura misma. Para Schalock (1996), la investigación sobre Calidad de Vida es importante, porque el concepto está emergiendo como un principio organizador que puede ser aplicable para la mejora de una sociedad como la nuestra, sometida a transformaciones sociales, políticas, tecnológicas y económicas. No obstante, la verdadera utilidad del concepto se percibe sobre todo en los servicios humanos inmersos en una revolución de calidad que propugna la planificación centrada en la persona y la adopción de un modelo de apoyos y de técnicas de mejora de la calidad. Actualmente es un esfuerzo de toda acción política tanto a nivel nacional, como internacional para lograr dignidad en la vida humana, por otro lado, es un fruto del trabajo de la organización social, de la misma tecnología y sobre todo, del buen uso del medio ambiente. Es el replanteamiento de economía orientada por un nuevo humanismo, donde el progreso económico se armoniza con el progreso social.

## **METODOLOGÍA**

La investigación realizada fue de carácter exploratorio – descriptivo. Se combinaron técnicas cuantitativas sobre condiciones económicas de vida y técnicas cualitativas como la etnografía en el estudio de las comunidades ejidales. Para la primera parte se levantaron encuestas, a través de entrevistas en los domicilios de las familias de los trabajadores en la cual se tomó como base para el diseño de la misma, preguntas relativas al nivel de vida y se incluyó una sección de opinión sobre sus condiciones de vida y satisfacción para con la comunidad donde vive. Se tomó como base para la elaboración de la encuesta los ocho campos de “Preocupación Social” que la ONU ha propuesto como indicadores para la medición del bienestar social. En el levantamiento de la información con las familias, se capacitó a los entrevistadores sobre el manejo del instrumento, así como en la técnica de entrevista, y se nombró a un grupo encargado del procesamiento de los datos obtenidos, mismo que se llevó a cabo en programa Excel para facilitar su cálculo, rapidez y exactitud.

En la parte correspondiente a las condiciones de vida en las comunidades rurales (ejidos) se realizaron entrevistas selectivas a personas relacionadas con la ejecución de programas de apoyo sobre todo en lo concerniente a servicios sociales como los de salud y educación. Asimismo se realizó la aplicación de la encuesta sobre condiciones de vida a las mujeres, jefas de familia, y se hicieron reuniones por separado con hombres y mujeres de dichas comunidades, siguiendo el protocolo de relación establecido en cada comunidad.

## **RESULTADOS DE LA INVESTIGACIÓN**

Los Resultados Arrojados en las Encuestas Realizadas en Zona Urbana Muestran los Sigüientes Aspectos (Tabla 1)

Sobre su satisfacción en relación a su trabajo y la comunidad donde vive: Opiniones de lo que les agrada de la empresa donde laboran: las prestaciones, que se preocupan por la gente y su familia y las instalaciones, así como lo que les disgusta son los cambios de turno sin previo aviso, las jornadas de 7 a 7 no dejan tiempo para convivencia familiar, el trato de algunos jefes (déspota), pocos comentaron sobre el

sindicato, algunos mencionaron inseguridad en las condiciones físicas del trabajo. Opiniones sobre lo que les disgusta del lugar donde viven: una buena parte de la población encuestada del Municipio de Castaños mencionaron la falta de agua, drenaje y pavimentación en sus colonias, la falta de centros de distracción y centros comerciales (se deben trasladar a Monclova para realizar compras más específicas o ir a algún centro de diversión (cine por ejemplo). En colonias de Monclova y Frontera se sienten a disgusto con la falta de seguridad y el ruido. En las Zonas Rurales los Resultados Son los Siguietes: (Tabla 2)

Tabla 1.- Nivel y condiciones de vida en zonas urbanas .- Elaboración propia

CONCEPTO O RUBRO	RESULTADOS GENERALES
Composición general de la muestra	El número de integrantes por familia oscila entre 3 y 5 miembros como mayor frecuencia. La edad de los padres de familia se observó como mayor frecuencia en el rango de 25 a 30 años y en el de las mamás entre los 23 y 26 años. En el levantamiento de información el 81.32% de las parejas están casadas y 3.05% viven en unión libre, el 11.13% son solteros y 1.07% son solteras. El 83.48% manifestaron tener registrados a sus hijos y menos del 1% que no.
Alimentación	La religión más practicada es la católica en un 82% y el 18% practican otras. Se observa una tendencia en hábitos alimenticios al consumo de tortillas de harina, chorizo, arroz, frijoles, huevos, papas, y en menor cantidad frutas, verduras y otras leguminosas. Pocas familias manifestaron consumir nopales y en cuanto a la fruta consumen la de temporada, así como la verdura el consumo es la que se da en la localidad.
Salud	El servicio médico utilizado, en su gran mayoría, (87.25%) es el IMSS y solo el 7% acuden a médico particular. El 26.74% de las familias enfrentaron una emergencia de salud recientemente. El 24.95% dijeron que la familia contó con recursos para hacer frente a la emergencia de salud y un 1.79% que no. El 17.41% de las familias encuestadas ha tenido accidente de trabajo alguno de sus miembros. Las enfermedades que mencionaron con mayor frecuencia padecer son gripe, infecciones de garganta, presión y fiebre.
Económico: Ingresos	Los ingresos (mensuales) que las familias perciben son: 42.62% de las familias entre 6,100 y 7,500 pesos. 17.77% entre 4,100 y 5,000 15.43% de 5,100 a 6,000. 22.05% de 10,000 a 17,000
Distribución del ingreso	El 2% restante está en rangos más elevados de ingreso y que corresponde a una cifra no significativa del número de familias encuestadas. Del 100%, solo el 23.51% de las familias mencionaron tener integrantes que trabajen en otras empresas diferentes a la de ellos y solo el 1.97% que tienen ingresos adicionales por negocio propio. El mayor gasto que registran las familias es en comida y servicios. Solo el 3.77% de las familias mencionaron tener cuenta de ahorros. Se observó también que la gran mayoría, 62.11%, utilizan el transporte de la empresa y el 35% utilizan auto propio. El criterio de compra más frecuente es por los artículos en oferta o los más baratos. Sus hábitos de compra inciden en mayor número una vez por semana y los de consumo en despensa en carnes son de res y de pollo, así como embutidos, lácteos siendo los menos frecuentes la crema y el yogurt, de las leguminosas las más consumidas son el arroz y frijoles. Sobre la compra de frutas se refieren a que compran la de temporada y existente en la zona como la naranja, melón, plátano y manzana. En las verduras el criterio es el mismo. Se observó también que existe un consumo frecuente por semana de cerveza al menos una vez. (Principalmente fin de semana)
Educación	El nivel de escolaridad encontrado con mayor frecuencia es de preparatoria (Técnica) y Secundaria en los hombres. Y en las mujeres Primaria y Secundaria.
Vivienda	La gran mayoría, 64.45%, mencionó tener casa propia de interés social. El 14.9% pagan renta y 10.23% viven en casa prestada. El número de habitaciones en promedio es de 2 a 4. Hay 31 familias que todavía usan excusado de pozo, De 884 viviendas, en 159 el piso es de cemento y 2 tienen piso de tierra. La mayoría de las casas se ubican en zona popular urbana, solo 3 en ámbito rural. *
Miembros de la Familia con capacidades o necesidades especiales:	Solo una familia manifestó que su hija tiene problemas de lento aprendizaje. En la visita domiciliaria no pudo apreciarse alguna otra familia con una situación similar.

*Información obtenida mediante entrevistas selectivas:* Los ejidos tienen un promedio de 60 años de haberse constituido, la mayor parte de ellos, los propietarios son hombres (jefe de una familia). En los ejidos cercanos a caminos (carreteras), se encontró que aproximadamente un 30% de las familias algunos de sus miembros se van a trabajar por temporadas a Estados Unidos y luego regresan. Las mujeres,

madres de familia, no desean que sus hijos vayan a estudiar la Tele secundaria a otro ejido más cercano a carretera por temor a que los involucren en el consumo de drogas dado que en un restaurante cercano a carretera se presume que existe el problema. Las mujeres se casan muy jóvenes con hombres provenientes del mismo ejido o alguno cercano, solo muy pocas van a estudiar la secundaria y sus mamás aspiran a que vayan a trabajar a la ciudad. Entre los jóvenes varones, antes de casarse, llegan a practicar la zoofilia.(esta situación se da en los ejidos más alejados).(Información proporcionada por el médico rural). En los ejidos alejados, las que contestaron las encuestas y nos permitieron entrevistarlas fueron mujeres, una vez obtenida la aceptación del comisario del ejido, los hombres se mostraron reacios a ello.

Tabla 2 .- Resultados de las condiciones de vida en zonas rurales .- Elaboración propia

Concepto o rubro	Descripción
Composición general de la muestra	Número de familias encuestadas 135. No. de integrantes por familia (promedio) 4- 6 El 95.8% tiene registrados a sus hijos, el resto están aún muy pequeños. Se observaron matrimonios con más de 20 años de casados, hecho que puede corresponder a que el 70% de la población sobrepasan la edad de 45 años en uno de los ejidos, mientras que en los otros los matrimonios son parejas de diversas edades, reportándose unos con menos de 18 años de edad (principalmente las mujeres). En los ejidos más alejados no se encontró presencia significativa de algún credo religioso, ni de fiestas relacionadas a los mismos.
Alimentación	Adquieren sus alimentos en la Cd. más cercana, el resto en las tiendas Conasupo ubicada en la misma comunidad, otros productos como lácteos, carne, frijol, algunas hortalizas son producidas en 3 ejidos. Otros 3 no tienen producción agrícola de ningún tipo. En sus dietas alimenticias se observa un menor consumo de carne de cualquier tipo y su alimentación casi diaria son huevos, tortillas de harina, arroz y café como bebida. Los ejidos más alejados casi no consumen fruta y verdura y la leche el consumo promedio en familias con hijos menores es de 5 litros al mes.
Salud	El 90% de la población consulta en la Clínica Rural más cercana que pertenece al IMSS y en el caso de los ejidos más alejados se esperan al médico rural que los visita dos veces por mes. Las enfermedades más atendidas son las respiratorias, de lumbalgia, alta presión y diabetes. No es significativo el número de habitantes que utiliza servicios médicos particulares. Las mujeres no se hacen revisiones ginecológicas por el médico rural, algunas manifestaron que ellas van a la cabecera municipal. En el caso de los alumbramientos en los ejidos más alejados de las vías de comunicación carretera, se van con un mes de anticipación para tener a sus hijos en el hospital de la cabecera municipal y permanecen por un mes o dos en la ciudad antes de regresar. Anteriormente existía una partera, pero falleció y nadie siguió ese oficio en una de las comunidades más alejadas. No obstante el tipo de dieta casi no se observaron personas con problemas de obesidad. Principalmente en los ejidos más alejados.
Ingreso Económico	El 71.5% de las familias perciben 2 salarios mínimos (s.m.), el 26.8% 3 s.m. y el 1.7% 4 s.m. El 74.5% tiene cuenta de ahorro en un banco u otra institución financiera ya que es requisito para acceder a los programas de Pro Campo y Pro Gan.
Distribución del ingreso	El mayor gasto es en comida y aspectos de salud, posteriormente escuela, ropa y accesorios (es muy poco lo asignado) y lo hacen una vez al año. Las actividades económicas en los ejidos más alejados son la obtención del cerote que luego venden a intermediario que les compran a \$20:00 el kilo y de la recolección de oreganillo silvestre (cuando hay) el cual venden en sacos de 20 kilos a \$8.00 pesos el kilo.
Educación	Se cuenta con un maestro de Educación Primaria, los de nivel Secundaria asisten a Tele secundaria ubicada en el Ejido Dolores del municipio de Castaños a 22 km. de su comunidad, y otros en el Ejido Estanque de León ubicado a 10 km. En este no hay camino de terracería. El 79% de los habitantes cuenta con nivel primaria, el 10% secundaria y un 11% preparatoria.
Vivienda	Se detectaron en un 50% de las viviendas que no tienen piso de cemento. (Solo el 5% cuenta con cuarto de baño dentro de la vivienda en los ejidos cercanos a carretera). El 65% de las casas son de adobe, o enjarre de lodo con albarda y troncos de mezquite. En los ejidos cercanos a zonas urbanas las condiciones de vivienda son similares a las observadas en la zona urbana a excepción del drenaje que es fosa séptica. En las comunidades alejadas (3) no tienen letrinas hacen sus necesidades al aire libre. Los espacios son pequeños y con solo lo más indispensable.
Agua Potable	Uno de ellos, su fuente de agua depende de un pozo ubicado a 12 km. A excepción de dos ejidos que están prácticamente asimilados a una zona urbana que cuentan con servicio de agua potable, los otros 3 no cuentan con agua salvo la que recolectan de la escasa precipitación pluvial y en pozo abierto a la intemperie
Vías de Comunicación	Dos ejidos están a la orilla de la carretera, (Ejidos La Cruz y 8 de enero) y tienen todos los servicios. Otro se encuentra ubicado a 58 Km. de la carretera Monclova – Saltillo y 34km. de camino de terracería (Ejido Estanque de Norias). 2 se encuentran a dos y media- tres horas de camino a campo traviesa, carretera Cuatro Ciénegas - San Pedro (Lucio Blanco y Cuates de Australia) y uno a hora y media camino de terracería de la carretera Saltillo – Torreón.(Estanque de León) cuenta con un teléfono comunitario y fuente de energía eléctrica, Tres no tienen luz eléctrica, cuentan con celdas de energía solar.

Se encontró población en el ejido Lucio Blanco (el más lejano) que nunca han salido del mismo (principalmente mujeres). Se pudieron apreciar en la basura algunas envolturas de papas fritas y de que hay repartidores que les llevan cerveza y refrescos embotellados hasta allá (lo cual disgusta a las mujeres por los conflictos que en ocasiones se generan). Se percibió un acoplamiento “aparente” a ese estilo de vida y dependencia de los programas de apoyo que tiene establecidos el gobierno en sus diferentes instancias. Solo en uno de ellos, los habitantes mostraron una mayor disposición para organizarse y mejorar sus condiciones presentes de vida. Al preguntárseles si les gustaría trasladarse a vivir a la ciudad la mayoría de las mujeres con varios años de matrimonio mencionaron que no, que prefieren quedarse ahí porque en la ciudad ¿qué oportunidades de empleo tendrían? y ¿cuánto les costaría vivir?, así como el hecho de que no tendrían nada y de que sus hijos estarían expuestos todos los peligros de la ciudad.

De igual forma cuando se les preguntó que les gustaría para su comunidad mencionaron que los maestros vinieran puntualmente, que hubiese un buen camino y que les dieran capacitación para ellas aprender a hacer otras cosas y ganarse su dinero, así como “que el que lleva cerveza ya no lo haga”.

## CONCLUSIONES

Del estudio realizado al momento se concluye que si bien la zona urbana puede brindar una “mejor” opción de vida a los habitantes de zonas rurales, estos últimos anteponen a dicha opción situaciones relacionadas con la integridad física y emocional de sus hijos, así como de status o nivel social y de propiedad para incorporarse al estilo de vida en la ciudad. Se observa también que las personas en áreas rurales alejadas han “aprendido” a vivir de los programas de apoyo que las diferentes instancias de gobierno les ofrecen y podría decirse que la “motivación” de mejorar sus condiciones presentes de vida no se refleja en iniciativas que ellos mismos lleven a cabo, pues en estas comunidades se pudo apreciar que lo que se lleva de apoyo se debe repartir entre todos para evitar problemas en la comunidad.

Por otro lado las comunidades rurales más cercanas a zonas urbanas presentan en su población que los jóvenes se van en busca de mejores opciones de ingresos y los más grandes de edad son los que se quedan realizando las actividades características de esa comunidad. Podría decirse que estos jóvenes se encuentran entre dos formas de vida. El rol desempeñado por las mujeres en comunidades rurales cercanas a ciudades o cabeceras municipales es más activo en la toma de decisiones en dichas comunidades y contrasta con el que desempeñan las mujeres en los ejidos más alejados, muestran más dependencia de la actividad económica del o los hombres de la familia. Sin embargo son las que se quedan al frente de los ejidos con la crianza de los hijos y al resguardo de la propiedad ya que los hombres se ausentan en ocasiones por días en el monte para hacer la colecta de lechuguilla, oreganillo o incluso algunos trabajar en alguna mina cercana.

Por lo que en su momento podría debatirse si actualmente en las zonas urbanas la calidad de vida es mejor que en las zonas rurales.. Para evaluar el impacto de los programas que el gobierno ejecuta se sugiere tomar en cuenta aquellos elementos que se consideran como indicadores de Bienestar Social tomando en cuenta los dos enfoques el cuantitativo y el cualitativo. Finalmente, concluimos que el concepto de calidad de vida es relativo y que, como lo mencionan varios estudiosos del tema, es algo que hay que construir entre todos los habitantes de una comunidad y por ello es necesario cerrar brechas entre las diferencias de condiciones de vida de las zonas urbanas y rurales principalmente en lo concerniente a servicios de salud, educación y alternativas económicas, así como en conceptos más abstractos como éxito, felicidad, bienestar.

## **RESUMEN**

*En este trabajo se presentan los avances que se han logrado en el municipio de Cuatro Ciénegas de Carranza Coahuila sobre el manejo de los residuos sólidos urbanos y el proceso que se llevó a cabo para lograr la implementación de un sistema integral del manejo de los mismos, con la finalidad de dar cumplimiento a lo que la agenda XXI establece para las comunidades que aspiran ser denominadas "Pueblos Mágicos" por la Secretaria de Turismo en México. La metodología hasta hoy utilizada es de carácter mixto, con la utilización de herramientas como el marco lógico, investigación colaborativa, así como el manejo estadístico de datos sobre el análisis y clasificación de residuos. Los resultados obtenidos han permitido que este municipio sea denominado en marzo del 2012 "Pueblo Mágico".*

## **DESIGN AND IMPLEMENTATION OF A SOLID WASTE MANAGEMENT URBAN: CASE STUDY IN THE MUNICIPALITY OF CUATRO CIENEGAS COAHUILA**

### **ABSTRACT**

*This paper presents the progress that has been made in the municipality of Cuatro Cienegas de Carranza Coahuila on the management of solid waste and the process that was undertaken to achieve the implementation of a comprehensive system of handling them, in order to comply with the agenda XXI establishes for communities that aspire to be called "Magical Towns" by the Ministry of Tourism in México. The methodology used to date is mixed, with the use of tools such as the logical framework, collaborative research, as well as managing data statistical analysis and sorting. The results have allowed this municipality is called in March 2012 "Magic Town".*

### **INTRODUCCIÓN**

El desierto Chihuahuense es el más grande Norteamérica, y se localiza primordialmente en los estados de Chihuahua y Coahuila, cubre también algunas pequeñas áreas de los estados de San Luis Potosí y Zacatecas en México y en los Estados Unidos abarca pequeñas partes de los estados de Arizona, Nuevo México y Texas. Cuatro Ciénegas de Carranza Coahuila está ubicada en la parte central del estado de Coahuila, a 80 kilómetros al oeste de la ciudad de Monclova, este valle es considerado el humedal más importante dentro del Desierto Chihuahuense y se le considera un oasis porque es un lugar con agua

permanente, compuesto por un sistema de pozas, humedales y pantanos. Estas características tan particulares, permitieron que desde hace varios miles de años se asentaran diferentes grupos humanos por largas temporadas (Valdés 1996).

El 7 de noviembre de 1994, se publicó en el Diario de la Federación que 84000 has. de este valle se decretaran como área natural protegida (ANP) porque científicos de diversas naciones que han estudiado este ecosistema encontraron más de 70 especies endémicas debido a la conformación de su sistema hidrológico superficial el cual se mantuvo aislado formando una cuenca cerrada y en sus pozas encontraron unas formaciones parecidas a piedras que se hacen por acumulaciones de sedimentos carbonosos y que son en realidad comunidades microbianas llamadas estromatolitos, las cuales son el resultado de la forma de vida más primitiva en el planeta y que de acuerdo a varios investigadores (Valeria Souza – UNAM entre otros), son uno de los actores de la formación del oxígeno en el planeta desde hace millones de años a través de la fotosíntesis.

La importancia que tiene el conservar este valle, es que para los científicos es un laboratorio viviente donde se pueden estudiar los orígenes de la vida en el planeta y establecer comparaciones con las bacterias que hasta ahora se ha encontrado en las aguas congeladas del planeta Marte, por lo que algunos científicos (astro biólogos) proyectan que un futuro biotecnológico para esta región las bacterias encontradas en Cuatro Ciénegas. Como resultado de estos descubrimientos, la región se proyectó en el escenario internacional y pasó a ser una región visitada por personas de diversas partes del mundo quienes generaron la demanda de servicios de hospedaje, alimentación, y guía de visitas a los lugares relacionados con el área natural protegida.

Actualmente, el municipio cuenta con 13,045 habitantes según el último censo hecho por INEGI (2010), y como actividades económicas principales están las relacionadas con la agricultura y ganadería y un poco de actividad minera, asimismo cuenta tan solo con una empresa en operación que emplea a 100 personas aproximadamente de la comunidad y una incipiente actividad turística en los últimos 7 años buscando tener un enfoque sustentable, de tal forma que estructuraron un plan estratégico para llegar a la denominación de Pueblo Mágico de acuerdo a los lineamientos establecidos por la Secretaría de Turismo (SECTUR) de nuestro país y logrando este objetivo el 7 de marzo de 2012.

Lo que aquí se describe es parte de las acciones que se tuvieron que realizar conforme a lo que se denomina Agenda XXI, o agenda desde lo local, concerniente al manejo de los residuos sólidos urbanos en la región.

## **REVISION LITERARIA**

### Los Pueblos Mágicos y la Agenda 21

A través de SECTUR se ha instrumentado un programa denominado Pueblos Mágicos, y en el que se establecen determinados criterios a lograr en una comunidad para que se le denomine o certifique como tal.

Un pueblo mágico es una localidad que tiene atributos simbólicos, leyendas, historia, hechos trascendentes, cotidianidad, que le dan características particulares y que significan una oportunidad para el aprovechamiento turístico, para lo cual serán consideradas aquellas que cuenten con una población base de 20,000 habitantes conforme a los criterios establecidos por SECTUR, sin embargo para aquellas localidades que su número de pobladores está fuera de ese rango pero que por sus atributos, riqueza cultural y natural, así como manifestaciones históricas, pueda ser considerada dentro del Programa, su solicitud se presentará al pleno del Comité Interinstitucional de Evaluación y Selección para que en su caso dictamine lo conducente.

La localidad en cuestión deberá encontrarse ubicada a una distancia no más allá de los 200 km. o bien el equivalente a dos horas de distancia por vía terrestre de un destino turístico consolidado o bien una población considerada como mercado emisor.

Los objetivos que dicha Secretaría ha establecido para este programa son el estructurar una oferta turística complementaria y diversificada hacia el interior del país, basada fundamentalmente en los atributos histórico – culturales y ambientales de localidades singulares, artesanías, festividades, gastronomía y tradiciones entre otras, asimismo también, se contempla la generación de otros productos tales como la aventura y el deporte extremo, el ecoturismo, la pesca deportiva y otros que signifiquen un alto grado de atracción dentro del territorio de la localidad participante. Esto conlleva a fomentar los flujos turísticos que generen mayor gasto por parte de los visitantes en beneficio de la comunidad receptora, así como la creación y/o modernización de los negocios locales, y que esta actividad se convierta en una estrategia más de desarrollo sustentable de las comunidades incorporadas a este programa.

Los criterios de incorporación al programa de Pueblos Mágicos establecidos por SECTUR, para aplicar a los apoyos gubernamentales derivados del mismo, requiere que las comunidades que apliquen al mismo integren un expediente con evidencias que reúna los siguientes puntos: Involucramiento de la sociedad y de las autoridades locales, Instrumentos de planeación y regulación, impulso al desarrollo municipal, oferta de atractivos y servicios, valor de la singularidad del lugar, “lo que lo hace mágico”, condiciones y espacios territoriales, impacto del turismo en la localidad y área de afluencia, desarrollo de capacidades locales, manejo de la agenda XXI.

El expediente integrado se remite a la Secretaría mencionada y se evalúa por un comité interinstitucional de evaluación y selección, mismo que determinará si cumple o no con los requisitos establecidos en dicho programa, y en su momento hacer las recomendaciones pertinentes para lograr el fin. Esta denominación tiene una duración de un año como etapa inicial, la cual implica compromisos a cubrir para la comunidad denominada en base a los indicadores establecidos en el manual de la Secretaría.

### Agenda 21

El Concepto de Programa 21 se gestó en la Conferencia Mundial sobre Medio Ambiente y Desarrollo Sostenible organizada por las Naciones Unidas en Río de Janeiro (Brasil) en el año de 1992 también conocida como Cumbre de la Tierra. Se trataba de apoyar iniciativas que construyeran un modelo de desarrollo sostenible para el siglo XXI de ahí su nombre.

La Agenda 21 fue suscrita por 172 países. Estos países se comprometen a aplicar políticas ambientales, económicas y sociales en el ámbito local de su propia Agenda Local 21, en la que deberían participar tanto ciudadanos como empresas y organizaciones sociales con el objetivo de generar y consensuar un programa de políticas sostenibles.

Se podría definir Agenda 21 como una estrategia global que se lleva a la práctica de manera local y que implica a todos los sectores de una comunidad: sociales, culturales, económicos y ambientales. Es un compromiso hacia la mejora del Medio Ambiente y de la calidad de vida de los habitantes de una comunidad, municipio o región. En principio la Agenda 21 debe contemplar tres aspectos: la sostenibilidad medioambiental, la justicia social y el equilibrio económico. Todas ellas dependen de la participación ciudadana.

Algunos temas de los que trata la Agenda 21 son, entre otros la protección de la atmósfera, la planificación y la ordenación de los recursos de tierras, la lucha contra la deforestación, contra la desertificación y la sequía, el desarrollo sostenible de las zonas de montaña. El fomento de la agricultura

y del desarrollo rural sostenible, la conservación de la diversidad biológica, la protección de los océanos y de los mares así como de las zonas costeras, la calidad y el suministro de los recursos de agua dulce, la gestión racional de los productos químicos tóxicos, de los desechos peligrosos, sean o no radiactivos, y de los desechos o residuos sólidos.

Cualquier comunidad puede poner en marcha su propia agenda 21 siempre que se logre la participación de las fuerzas sociales que la componen. Con el propósito de dar cumplimiento a los requerimientos establecidos en la normativa de la Secretaría de Turismo para ser denominados “Pueblo Mágico” y lo que internacionalmente se denomina Agenda 21, se eligió participar en el proceso de Construcción de un sistema de Gestión Integral del manejo de los residuos sólidos urbanos ( MRSU) en este municipio.

Los objetivos a lograr fueron los siguientes: Participar en el desarrollo de un plan de trabajo en un comité multidisciplinario para lograr el manejo adecuado de los residuos en el municipio, realizar un diagnóstico con los prestadores de servicios para determinar el punto de inicio del contenido de un programa de educación ambiental por sectores así como conocer la cantidad y clase de residuos generados en la localidad, participar en la revisión y propuesta de un nuevo reglamento más acorde a las condiciones presentes y congruente con los parámetros señalados en la agenda 21.

## **METODOLOGÍA**

Para el logro de los objetivos planteados y dada la naturaleza y dimensión de la situación a manejar, se eligieron diversas técnicas, tales como el marco lógico a fin de alinear el proyecto en sus objetivos y acciones, investigación colaborativa por la indispensable participación de la comunidad, y lograr un cambio de conducta en el manejo de los residuos en la población, y en la parte técnica de este proyecto, los criterios establecidos por la Procuraduría Federal de Protección al Medio Ambiente (PROFEPA), la Ley General de Ecología y los criterios de la agenda 21.

El grupo multidisciplinario que se conformó con la participación de representantes de una asociación civil en pro de la conservación de la Naturaleza (PRONATURA), la Comisión Nacional de Áreas Naturales Protegidas (CONANP), el Consejo Estatal de Ciencia y Tecnología (CONACYT), a través de los investigadores participantes de la Universidad Autónoma de Coahuila (UAC), MADRE TIERRA, organización no gubernamental, la PROFEPA y Secretaría de Medio Ambiente Coahuila (SEMAM), los responsables del departamento de Ecología y Limpieza del Municipio de Cuatro Ciénegas, personas encargadas de la administración de los sitios de visita, representantes de las instituciones educativas de la comunidad, y promotores ambientales de los ejidos, tuvo como finalidad el elaborar el plan estratégico para lograr el diseño e implementación del sistema de manejo de residuos sólidos urbanos.

El área que se seleccionó para iniciar los trabajos de diagnóstico para la tipificación de los residuos correspondió a 6 ejidos que se encuentran dentro del perímetro del área natural protegida, los sitios de visita y la cabecera municipal de Cuatro Ciénegas. Implicó el seguimiento y toma de muestras en un promedio de 50 familias en el municipio y de 30 familias por ejido por un periodo de 10 días, en los sitios de visita el criterio que siguió fue tomar muestras en temporada alta de visitas.

## **RESULTADOS**

El grupo multidisciplinario se basó para hacer un análisis de la situación y determinar las líneas estratégicas de acción en los resultados obtenidos en la auditoría ambiental realizada por la PROFEPA, así como por el diagnóstico efectuado por los investigadores de la UAC, concluyeron los aspectos siguientes: Existe un desconocimiento de la normativa por parte de los prestadores de servicios turísticos y la población en general que hay que acatar en el manejo de los residuos; desconocimiento por parte de las autoridades municipales del manejo y separación específicos sobre los residuos, la normatividad local

no corresponde a las disposiciones actuales de carácter federal y estatal sobre el tema, el municipio manifestó escasez de infraestructura necesaria para el manejo de los residuos, en la población se encontró una resistencia al cambio del manejo de sus residuos originado en parte por posturas conflictuadas ante las nuevas estrategias de desarrollo para el municipio a partir del impulso del turismo de carácter sustentable.

Los resultados obtenidos en el monitoreo de los residuos en 50 familias a razón de 4 miembros en promedio en la cabecera municipal fueron los que a continuación se muestran en la Tabla 1.

Tabla 1 Tipo de residuos más constantes.- Elaboración de CONANP en Cuatro Ciénegas.

Residuo	Por persona/Kg.	Por días (Kgrs.)	Reciclable / No reciclable
Vidrio	1.5	15	R
Botella Plástico	2.3	23	R
Envolturas	1.3	13	R
Cáscara de Huevo	1.6	16	R
Cartón	2.4	24	R

Aluminio	.085	.042	.170	.255	.085	.255	R

En el análisis de la infraestructura con la que cuenta el municipio para el manejo de los residuos se encontró que éste cuenta con un relleno sanitario tipo A con una vida probable de 20 años, siempre y cuando se haga una separación de aquellos residuos susceptibles de reciclar. Asimismo se encontró que se tenían varios sitios donde se depositaban los residuos sin ninguna restricción.

Por otra parte en cuanto al equipo disponible para la recolección se encontró que solo se cuenta con un camión en buenas condiciones para tal fin.

### Actividades realizadas

Se formó a través del grupo multidisciplinario un comité interinstitucional para ejecutar, supervisar y/o asesorar las acciones derivadas del análisis y diagnóstico realizado, como primera parte se redefinieron los componentes del sistema de recolección, transportación, tratamiento y disposición de los residuos y se generó el siguiente mapa de bloques para establecer una secuencia. (Figura. 1)

Figura 1: Cuadro de Bloques del sistema

<b>RECOLECCIÓN</b> -Municipio -Particulares	<b>TRANSPORTACIÓN</b> - Municipio - Particulares	<b>TRATAMIENTO</b> Centro de acopio Separación Prestadores de servicios de Recolección	<b>DISPOSICIÓN FINAL</b> Relleno Sanitario Centro de Confinamiento

Elaboración propia

### CONCLUSIONES

Se concluye que la situación existente en el Municipio de Cuatro Ciénegas de Carranza Coahuila en cuanto al manejo de los residuos sólidos urbanos no implica un manejo complejo en cuanto a la normativa existente, lo que puede dificultar su manejo adecuado es la falta de recursos en equipo y personal de recolección, así como la falta de conocimiento por parte de los ejecutores modificar hábitos de consumo y formas de hacer las cosas, sin embargo dentro de este proyecto se consideró que esta parte podría contribuir fuertemente a que la comunidad visualizara lo que se pretende con el proyecto de turismo sustentable en la comunidad a través del programa Pueblo Mágico.

La toma de decisiones y acuerdos en grupos multidisciplinarios es difícil, pero también es cierto que cuando se participa en este tipo de procesos, los individuos aprenden a sumar y ver el interés común en lugar de los personales, sobre todo en este tipo de problemas donde se busca el bien común.

El proceso aun no termina porque si bien se empezó a trabajar en esto desde febrero de 2010, los cambios sociales y educativos, así como la construcción, habilitación y reforzamiento de infraestructura es lento principalmente para un municipio que tiene ingresos bajos.

# ESTUDIO COMPARATIVO EN TALLERES DE MAQUINADOS DE CD. JUÁREZ, CHIH. MX., PARA DETERMINAR SU GRADO DE COMPETITIVIDAD INTERNACIONAL

Juan Manuel Delgado Cervantes, Instituto Tecnológico de Cd. Juárez  
Elvira Mora Luján, Instituto Tecnológico de Cd. Juárez

## RESUMEN

*En esta investigación se compara el nivel competitivo de los talleres de maquinado en relación a los requerimientos de la industria manufacturera en Cd. Juárez, Chih., México, de acuerdo a el grado de influencia de los factores calidad, capital humano y tecnología en el nivel de competitividad internacional, por lo que se comparó si éstos factores son iguales o diferentes en cada uno de los talleres evaluados para establecer la ventaja competitiva entre ellos. El fundamento teórico lo integran varias teorías, resaltado a Michael Porter en cuanto a la condición de los factores y condiciones de la demanda, para mejorar la competitividad. Se emplearon las herramientas metodológicas seleccionadas en el diseño de la investigación y el método Kruskal Wallis para su evaluación. Se determinó que no existe una diferencia significativa en los factores calidad, capital humano con respecto a su nivel competitivo, pero es necesario mejorarlos ya que son puntos clave para la selección de proveedores. El análisis de datos reflejó que si existe una diferencia en el factor tecnología, que es el que da la pauta para marcar la diferencia.*

**PALABRAS CLAVES:** Factores calidad, capital humano, tecnología, influencia, competitividad internacional, talleres de maquinad.

## COMPARATIVE STUDY ON WORKSHOPS. IN JUÁREZ, CHIH. MX., TO DETERMINE THEIR DEGREE OF INTERNATIONAL COMPETITIVENES

## ABSTRACT

*This research compares the competitive level of the machine shops in relation to the requirements of the manufacturing industry in Juarez, Chih., Mexico, according to the level of influence of quality factors, human capital and technology in the international competitive level, therefore these factors were compared to see if they are equal or different in each workshop evaluated to establish the competitive advantage between them. The theoretical fundament is composed by several theories, highlighted by Michael Porter as to the condition factor and demand conditions, to improve competitiveness. Selected methodological tools were used in the design of research and Kruskal Wallis method for evaluation. It was determined that there is no significant difference in the quality factors, human capital relative to their competitive level, but it is necessary to improve them as they are key points to the selection of suppliers. Data analysis showed that there is a difference in the technology factor, which is the one who provides the pattern to make a difference.*

**KEYWORDS:** Quality factors, human capital, technology, influence, international competitiveness, workshops

## INTRODUCCIÓN

El sector de maquinados en la industria manufacturera en Ciudad Juárez es altamente competitivo ya que hay un gran número de talleres que ofrecen sus servicios a la industria maquiladora, en donde los factores calidad, capital humano y tecnología son igualados constantemente, por esta razón, en esta investigación se realizó el estudio comparativo de esas empresas y se determinó su nivel competitivo en relación con los requerimientos de la aludida industria manufacturera de exportación.

Los objetivos específicos de la investigación se abocaron a determinar el grado de influencia de dichos factores en el nivel competitivo de los talleres de maquinados para establecer si dichos factores son iguales o diferentes en cada uno de los talleres evaluados, creando una ventaja competitiva. A su vez se dieron a conocer los factores más importantes que pide la industria manufacturera a la hora de seleccionar un proveedor. Para probar la validez y la confiabilidad de la investigación, se utilizaron las herramientas metodológicas seleccionadas de acuerdo a las características de este tipo de investigación y de acuerdo a la hipótesis que se propuso, por lo que se optó por utilizar el cuestionario para obtener los datos de los talleres de maquinados y la industria manufacturera en base a los factores estudiados, una vez obtenidos dichos resultados se empleó el método Kruskal Wallis para su evaluación. Finalmente, se establecen las conclusiones pertinentes de acuerdo a los datos obtenidos a lo largo de la investigación así como las recomendaciones conducentes para mejorar si es el caso, el nivel de competitividad de cada empresa de maquinados sujeta a estudio, así como los factores a mejorar según los requerimientos de la industria maquiladora.

## REVISIÓN DE LITERATURA

En este apartado se estudian los fundamentos teóricos expresados por los expertos acerca de la competitividad internacional y su relación con las empresas mexicanas, por lo que en primer lugar se presenta el concepto de competitividad su importancia en el desarrollo de las empresas en dicho ámbito; igualmente se destacan las teorías que la fundamentan, tomando principalmente la doctrina expuesta por Michael Porter. La competitividad se conceptualiza como la capacidad que tiene una organización o empresa, pública o privada, lucrativa o no, de obtener y sustentar ventajas comparativas que le permitan alcanzar, sostener y mejorar una determinada posición en el entorno socioeconómico. El término competitividad es muy utilizado en los medios empresariales, teniendo incidencia en la forma de plantear y desarrollar cualquier iniciativa de negocios, lo que provoca, obviamente una evolución en el modelo de empresa y empresario (Vázquez, 2006). Asimismo, La ventaja comparativa o competitiva de una empresa está en la habilidad, recursos, conocimientos y atributos, etc., de los que dispone, y los mismos de los que carecen sus competidores o tienen en menor medida, haciendo esto posible la obtención de rendimientos superiores a los de aquéllos. El concepto de competitividad nos hace pensar en la idea “excelencia”, con características de eficiencia y eficacia de la organización (Porter, 2007). Por lo tanto, el fenómeno que se mide en esta investigación es el resultado de su acción en éstos. Cabe mencionar que la competitividad entre los países se debe a las estrategias de las empresas que se encuentran en ellos, porque dentro de los países más competitivos se encuentran las empresas con mayor éxito internacional.

En apoyo a esto, Yoshimori (1993), manifiesta que las empresas competitivas son aquellas capaces de dar constantemente productos y servicios con atributos buscados por sus clientes. A este conjunto de características que diferencian al producto de una empresa de sus competidores se le llama ventajas competitivas. Lo único seguro acerca de las ventajas competitivas es su dinamismo; los mercados pueden cambiar sus exigencias o la tecnología con la que fabrican pero aun así puede verse desplazada por las de la competencia. Si una empresa no invierte en mantenerlas, renovarlas, tarde o temprano estará condenada a perderlas. Ahora bien, como lo señala Porter, para hablar de competitividad, habría que ir a la empresa e identificar cuáles son los factores que determinan que las empresas generen valor añadido y que ese valor

se venda en el mercado, y si realmente esos factores son sostenibles en el mediano y largo plazo. Por lo tanto, en este estudio se buscaron los factores más relevantes que impactan a los talleres de maquinados en Cd. Juárez, a fin de comparar su nivel competitivo, encontrado como factores determinantes la calidad, el capital humano y la tecnología. Al respecto la literatura nos dice que la calidad, consiste en la medida en la cual un producto o servicio se adecua a las especificaciones o requerimientos para una tarea o función dada según los requerimientos del cliente o del usuario.

Argumentación que apoya Feigenbaum (1958) al señalar que la calidad es "la satisfacción de las expectativas del cliente". Los clientes regularmente buscan en sus productos la mejor calidad sin olvidar que ésta, indiscutiblemente esté acompañada de un buen precio, el problema radica en que la calidad tiene su costo, y éste siempre debe ser pagado; Por ejemplo: dos escantillones para una línea de producción cumplen la misma función, la diferencia está en la calidad de ambas, una es de acero y otra de delrrin, donde claramente la de acero es más costosa por ser de mayor calidad, sin embargo, si ambas realizan la misma función, ¿por qué comprar la de acero?, lo más probable es que ésta dure gran cantidad de años, y la de delrrin si no se utiliza con cuidado se desgasta. Es en esos casos el consumidor se ve en la obligación de priorizar entre el precio o la calidad, cuando esto ocurre esto, el cliente además debe fijarse si efectivamente el precio del producto responde a su buena calidad, o simplemente está costearo una marca prestigiosa. Por consiguiente, la intención de calidad es proporcionarle al cliente una oferta apropiada con procesos controlados y medidos así mismo garantizar que esta mejora no se traduzca en costos adicionales. Es posible mejorar un gran número de problemas a un bajo costo. Sin embargo, cuanto más cerca se está de la perfección, más se elevan los costos (Pillou, 2004). Ahora bien, para las empresas del sector privado en realidad no es una cuestión de satisfacer exhaustivamente las expectativas del cliente ("sin defectos"), sino de satisfacerlas mejor que la competencia.

En relación al capital humano encontramos en la literatura que es un término utilizado en teorías económicas del crecimiento para designar a un hipotético elemento de producción dependiente no sólo de la cantidad, sino también de la calidad, del grado de formación y de la productividad de las personas involucradas en un proceso productivo. A partir de ese uso inicialmente técnico, se ha extendido para designar el conjunto de recursos humanos que posee una empresa o institución económica. Igualmente se puede definir a manera informal de "mejora en el capital humano" cuando aumenta el grado de destreza, experiencia o formación de las personas de dicha institución económica (Uzawa, 1965). Por lo que Lucas (1988) expresa que: El capital humano de una empresa es sin duda alguna uno de los elementos más importantes a la hora de evaluar los rendimientos generales de la misma.

Cabe destacar la importancia del capital humano o de los recursos humanos como ventaja competitiva por lo tanto, los autores citados, y Rodríguez (2006) mencionan que entre las fuentes de ventajas competitivas la elaboración del producto con la más alta calidad, proporcionar un servicio superior a los clientes, lograr menores costos que los competidores, tener una mejor ubicación geográfica y diseñar un producto que tenga un mejor rendimiento que las marcas de la competencia. No obstante, es cada vez más recurrente en la literatura actual sobre el tema encontrar criterios que afirman que los recursos humanos son una fuente potencial de ventaja competitiva sostenible y, en consecuencia, su dirección debe adoptar un enfoque estratégico. Por lo que toca al concepto tecnología, se considera pertinente señalar que nace por medio de la fusión de la ya existente técnica, (que era una actividad más bien artesanal), con la ciencia. Disciplina que se estaba llevando a cabo, de manera bastante rudimentaria, pero que en el siglo XVIII, se va desarrollando de manera vertiginosa. Por lo tanto, se crea el desarrollo de la tecnología, como tal, en la que se entrelazan factores económicos, sociales y culturales. Por lo que se conceptualiza como una función de producción sistemática de bienes.

En la época actual la tecnología tiene un papel determinante en la competitividad no solo de las empresas privadas sino que también de los Países ya que en toda producción en masa, la economía que se está viviendo, es fundamental en el impulso o estancamiento de la producción en sí. Al igual que lo social, ya

que en la medida de los tiempos que se viven y como se ha desarrollado la sociedad, ésta requerirá diferentes bienes, para el consumo interno. Asimismo, lo cultural juega un papel fundamental, por el simple hecho, que dependiendo de los gustos y requerimientos de cada nación, es lo que ésta necesitará para satisfacer sus necesidades (Barba, 2012).

Por otro lado, cabe mencionar a la tecnología como ventaja competitiva desde el punto de vista empresarial ya que existen muchas posibilidades en cuanto a la dimensión en la cual innovar. Podemos innovar en organización, en producto, en proceso, en marketing, e incluso en modelo de negocio. La tecnología es una dimensión fundamental de la innovación, ya que la permite saltos cuánticos de productividad. Esto está sustentado en las palabras del premio Nobel Robert Solow, (2009) “la innovación tecnológica es la fuente fundamental de productividad y de riqueza de la economía”. Las ventajas competitivas derivan hoy del conocimiento científico convertido en tecnologías aplicadas en las empresas. La población a estudio en esta investigación son los talleres de maquinados en Ciudad Juárez, cuya conceptualización doctrinal los define como empresas manufactureras porque se dedican a la transformación de la materia prima en productos, para un bien o servicio de tal manera que, después de su transformación se puede distribuir y consumir, involucrando un proceso de elaboración.

Igualmente los expertos definen la ingeniería de la manufactura como una ciencia que estudia los procesos de conformado y fabricación de componentes mecánicos con la adecuada precisión dimensional, así como de la maquinaria, herramientas y demás equipos necesarios para llevar a cabo la realización física de tales procesos, su automatización, planificación y verificación. Esa ingeniería es una función que lleva acabo el personal técnico, y está relacionado con la planeación de los procesos de manufactura para la producción económica de productos de alta calidad. Su función principal es preparar la transición del producto desde las especificaciones de diseño hasta la manufactura de un producto físico. Su propósito general, es optimizar la manufactura dentro de la empresa determinada. el ámbito de la ingeniería de manufactura incluye muchas actividades y responsabilidades que dependen del tipo de operaciones de producción que realiza la organización particular (Kalpakjian,2000). Entre las actividades usuales a las que se dedican las empresas manufactureras se encuentran la planeación de los procesos, soluciones de problemas y mejoramiento continuo así como el diseño para capacidad de manufactura transformando la materia prima por medio de las maquinas herramientas.

El marco legal en México de los talleres de maquinados, se encuentra regulado por Ley para el Desarrollo de la Competitividad de las Micro, Pequeñas y Medianas Empresas. El objeto de esta norma es promover el desarrollo económico nacional a través del fomento a la creación de micro, pequeñas y medianas empresas y el apoyo para su viabilidad. La propia norma define la competitividad como: La calidad del ambiente económico e institucional para el desarrollo sostenible y sustentable de las actividades privadas y el aumento de la productividad; y a nivel empresa, la capacidad para mantener y fortalecer su rentabilidad y participación de las MIPYMES en los mercados, con base en ventajas asociadas a sus productos o servicios, así como a las condiciones en que los ofrecen.

## **METODOLOGÍA**

El método que se utilizó para llevar a cabo esta investigación es el cuantitativo no experimental, el cual consiste en no manipular las variables independientes, partiendo de conocer, el sector de las empresas que se investigan (Hernández 2006). Mediante el método Kuskal Wallis se investigó la diferencia que existe entre las variables o factores que incrementan la competitividad, así como el análisis de los requerimientos de la industria manufacturera. Para analizar la relación entre los diversos factores y la competitividad, se optó por aplicar una escala de Likert, estableciéndose cuatro rangos por pregunta, siendo el numero 4 el nivel más aceptable y el numero 1 el nivel de mayor desacuerdo. Se eligió el cuestionario por considerarse una de las herramientas más confiables, debido a la facilidad de la

aplicación. Para realizar el análisis de los datos que se obtengan del estudio, se utilizó el programa Statistical Package for the Social Sciences versión 15 (SPSS).

Para el caso de los talleres de maquinados en relación con los requerimientos de la industria manufacturera de exportación en Cd. Juárez, se plantearon las siguientes hipótesis: Los factores calidad, capital humano y tecnología influyen en el nivel de competitividad internacional.

Ho. La calidad es igual y no influye en el nivel competitivo

Ho. El capital humano es igual y no influye en el nivel competitivo

Ho. La tecnología es igual y no influye en el nivel competitivo

Ha. La calidad es diferente en al menos uno de los talleres e influye en el nivel competitivo

Ha. El capital humano es diferente en al menos uno de los talleres e influye en el nivel competitivo

Ha. La tecnología es diferente en al menos uno de los talleres e influye en el nivel competitivo.

$$K = \frac{12}{N(N+1)} \sum_{i=1}^g n_i (\bar{r}_i - \bar{r})^2$$

Se analizaron los factores calidad, capital humano y tecnología.

## RESULTADOS

En términos generales resulta que en relación a los datos obtenidos directamente de los talleres de maquinado, se reflejan que no existe una diferencia en los factores calidad, capital humano y tecnología entre ellos por lo tanto no hay una relación de estos factores con respecto al nivel competitivo de cada uno de dichos talleres. Sin embargo, es necesario mejorar estos factores ya que son puntos clave según la industria manufacturera al ahora de seleccionar un proveedor. A continuación se muestra la tabla con el análisis de los tres factores, según el orden de pregunta, se reflejan los promedios ( $\bar{x}$ ) de los grupos de cada factor mostrados en las tablas anteriores, a su vez éstos se acomodan de menor a mayor para darles un valor según el método de kurskal Wallis, (K) los cuales se suman para utilizar el resultado en la fórmula, así sucesivamente para cada uno de los talleres de maquinado.

Tabla1: Análisis de los Tres Factores en los Talleres de Maquinados

TALLERES DE MAQUINADO																		
K	□	K	□	K	□	K	□	K	□	K	□	K	□	K	□	K	□	K
28	3.5	26	3.4	10.5	2	29	3.6	14	2.2	10.5	22	21.5	3	30	3.8	26	3.4	21.5
24	3.3	10.5	2	13	2.1	16	2.25	5	1.8	10.5	16	15.5	2.3	19.5	2.6	19.5	2.6	14
23	3.2	1.5	1.4	1.5	1.4	18	2.6	3.5	1.6	7	3.5	3.5	1.6	26	3.4	7	1.8	7
75		38		25		63		23		28	41	40.5		75.5		52.2		45.5

Desarrollando la fórmula:

$$H = \{ (12/(30)(31)) \} \{ (75^2/3) + (38^2/3) + (25^2/3) + (62.5^2/3) + (22.5^2/3) + (28^2/3) + (40.5^2/3) \}$$

$$+ (75.5^2/3) + (52.5^2/3) + (45.5^2/3) \} \{ -30(10+1) \} \{ (-3)(31) \}$$

$$H = .0129 [(1875 + 481.33 + 208.33 + 1302.08 + 168.75 + 270.75 + 541.36 + 1900.08 + 918.7 + 690.08)] - 93$$

$$H = .0129 (8357.18) - 93$$

$$H = \underline{14.807}$$

Figura1: Grafica de Chi Cuadrada

El valor 14.807 queda bajo la curva de área de no rechazo por lo tanto, se concluye que no existe una diferencia entre los factores calidad, capital humano y tecnología en los talleres de maquinado para aumentar su nivel de competitividad internacional aceptando las siguientes hipótesis:

Ho.-la calidad es igual y no influye en el nivel competitivo

Ho.-el capital humano es igual y no influye en el nivel competitivo

Ho.-la tecnología es igual y no influye en el nivel competitivo

Continuando con el análisis de los datos se finaliza con el estudio de los tres factores con respecto a los requerimientos de la industria manufacturera, la siguiente tabla muestra los promedios de los tres factores acomodados ascendentemente, según el orden de pregunta y el valor asignado por la fórmula de Kruskal Wallis, finalizando con un promedio general donde se entrelazan los resultados de los promedios de calidad, capital humano y tecnología.

Tabla 2: Análisis de los Tres Factores en la Industria Manufacturera

13	2.5	26	2.9			8	2.4			26	2.9			24	2.8	20	2.7	5.5	2.39
29	3									23	2.8							31	3.2
75		51.5		45		32		32		88		6.5		65		37		72.5	

Desarrollando la fórmula.-

$$H = \left\{ \frac{12}{(30)(31)} \right\} \left\{ \frac{75^2}{4} + \frac{51.5^2}{3} + \frac{45^2}{2} + \frac{32^2}{3} + \frac{32^2}{2} + \frac{88^2}{4} + \frac{6.5^2}{2} + \frac{65^2}{3} \right.$$

$$\left. + \frac{37^2}{3} + \frac{72.5^2}{5} \right\} - \frac{30(10+1)}{2} \left\{ \frac{(-3)(31)}{2} \right\}$$

$$H = .0129 [(1406.25 + 884.08 + 1012.5 + 341.33 + 512 + 1936 + 21.12 + 1408.33 + 456.3 + 1051.25)] - 93 \quad H = .0129$$

$$(9029.16) - 93 \quad H = 15.3499$$

Figura 2: Grafica de Chi Cuadrada

El valor 15.3499 queda fuera de la curva de área de no rechazo por lo tanto, se concluye que existe una diferencia entre los factores calidad, capital humano y tecnología, con respecto a los requerimientos de la industria manufacturera en relación a los talleres de maquinado, cabe resaltar que la diferencia es pautaada por el factor tecnología que es en el cual se encuentra la mayor diferencia concluyendo con la siguiente hipótesis.

Ha. La calidad es diferente en al menos uno de los talleres e influye en el nivel competitivo

Ha. El capital humano es diferente en al menos uno de los talleres e influye en el nivel competitivo

Ha. La tecnología es diferente en al menos uno de los talleres e influye en el nivel competitivo.

## CONCLUSIONES

Se determina como conclusión general que los talleres de maquinado se reflejan entre ellos sin ninguna diferencia en cuanto a los factores, calidad, capital humano y tecnología, a raíz de los datos obtenidos se puede concluir que los talleres de maquinados utilizan estrategias muy similares en cuanto a su nivel competitivo, pero cabe resaltar los datos obtenidos de cómo son los talleres de maquinado frente a sus clientes (en este caso la industria manufacturera), lo cual indica que sí existe una diferencia notable entre los talleres de maquinados con respecto a los factores estudiados, destacando sin lugar a duda el nivel tecnológico de cada taller. Dicho factor es muy importante ya que implica el uso de maquinaria de tipo control numérico por computadora el cual, actualmente se considera indispensable para cumplir los requerimientos en cuanto a la calidad y precisión de las piezas fabricadas.

Es indispensable actualmente hacer una diferenciación en cuanto a la competitividad, lo cual indica resaltar frente a los demás, el ser competitivo significa tener características especiales que hacen ser escogidos dentro de un grupo de empresas que se encuentran en un mismo mercado buscando ser los seleccionados. Tal como lo menciona Porter (2007) es diferenciarnos por nuestra calidad, por nuestras habilidades, por nuestras cualidades, por la capacidad que tengamos de cautivar, de seducir, de atender y asombrar a nuestros clientes, sean internos o externos, con nuestros bienes y servicios, lo cual se traduciría en un generador de riquezas.

# NIIF PARA PYMES: MOVIMIENTO FORTUITO O RUTA A LA CONVERGENCIA?

Aida Lozada Rivera, Universidad de Puerto Rico  
Carmen Ríos Figueroa, Universidad del Este

## RESUMEN

*En el 2009 la Junta de Normas de Contabilidad Internacional, (IASB) (por sus siglas en inglés) emitió las NIIF para las pequeñas y medianas empresas (PYMES). De acuerdo con la firma Deloitte (2012) más del 50% de las compañías de Global Fortune 500 usan las NIIF para la divulgación de información financiera. La IASB estima que el 95% de las empresas en el mundo son PYMES. Consciente de las necesidades de divulgación de estas, la Junta les ha creado unas reglas menos complicadas. Las NIIF dirigidas a las PYMES representan una simple opción en comparación con las NIIF emitidas a empresas multinacionales y públicas, (EM). La literatura actual muestra estudios relacionados a la adopción de las NIIF para PYMES en EE.UU y en países que actualmente están en proceso de adoptar éstas. Es pertinente estudiar la utilidad de estas normas. Para contribuir a la literatura, además de estudiar el trasfondo, se presenta un análisis comparativo sobre si, los países que usan las NIIF para empresas públicas también han adoptado las NIIF para PYMES. Una comparación entre las NIIF para EM y las NIIF para PYMES es relevante con relación a la complejidad de áreas que han sido excluidas de esta última. El estudio sugiere ideas para futuras investigaciones académicas en el área de contabilidad.*

## IFRS FOR SMES: QUEUED-MOVEMENT OR PATH TO CONVERGENCE?

### ABSTRACT

*In 2009 the international accounting, (IASB) (for its acronym in English) Standards Board issued IFRS for small and medium-sized enterprises (SMEs). According to firm Deloitte (2012) more than 50% of the Global Fortune 500 companies use IFRS for the disclosure of financial information. The IASB believes that 95% of companies in the world are SMEs. Aware of the disclosure of these needs, the Board has created less complicated rules. IFRS for SMEs represent a simple option in comparison with IFRS issued by public and international companies (MS). The current literature shows studies related to the adoption of the IFRS for SMEs in the United States.UU and in countries that are currently in the process of adopting these. We explore the utility of these rules. To contribute to the literature, in addition to studying the background, presented a comparative analysis on countries that use IFRS for public companies have also adopted the IFRS for SMEs. A comparison between the IFRS for EM and the IFRS for SMEs is relevant in relation to the complexity of areas that have been excluded from the latter. The study suggests ideas for further academic research in the area of accounting.*

**PALABRAS CLAVES:** NIIF, PYMES

### INTRODUCCIÓN

La crisis financiera de los pasados años ha reflejado cuán frágil puede ser nuestro sistema económico y financiero. Según Briciu, Groza y Ganfalean (2009), en los pasados 20 años una expansión rápida de la economía global ha creado oportunidades amplias de negocios y un mercado grande de consumidores, sin embargo también se ha creado una peligrosa tensión por la forma en que la información financiera y de contabilidad es vista. Para ellos eso es importante considerando que las PYMES se ven como el motor de

la economía. Para Neag, Masca y Pascan (2009) la alternativa del uso de las NIIF para las PYMES se visualiza como una contribución para mejorar la calidad y la comparabilidad de los informes financieros de las PYMES alrededor del mundo, que a su vez las ayudaría a obtener financiamiento.

Los resultados de este estudio son pertinentes debido a la importancia económica de las PYMES a nivel mundial. Según Adlung y Soprana (2012) las PYMES en el área de servicio son la fuente principal de empleo en muchas economías en múltiples sectores. Además hacen una contribución significativa al ingreso mediante la exportación (Ibid. En los Países Bajos las PYMES representan el 88% del empleo en hoteles y restaurantes. En Canadá el representa el 94% y 98% respectivamente). Según la IASB (Conferencia en Dubai, IFRS for SME's, 09/13/2013.

<http://www.ifrs.org/IFRS-for-SMEs/Documents/1209SMEsDubai.pdf> ), para septiembre de 2012, 80 jurisdicciones han adoptado las NIIF o están en proceso, Asia y Europa, entre otras. Los principales 52 mercados de valores en el mundo juntos, poseen cerca de 45,000 empresas que cotizan. Sin embargo, Europa posee 28,000 millones de PYMES, EE.UU 25 millones, Inglaterra 5 millones aproximadamente y Brasil posee 6 millones. En muchos países las PYMES se les requiere ,para propósitos estatutarios, que preparen estados financieros de uso general (*GPFS, en inglés*). En Europa, 8 millones de PYMES tienen la obligación estatutaria para auditoría. En Hong Kong se le requiere a las empresas que cumplan con lo anterior, además de la divulgación de GPFS; cerca de 900,000 empresas cumplen con estos requisitos. En Brasil el requisito es para cerca de 6 millones de PYMES.

Estudios recientes se enfocan en los asuntos relacionados a la importancia del uso de las NIIF para la PYMES como un nuevo reto y como una nueva opción para entidades privadas. En la literatura se destaca el proceso de creación de las NIIF completas (Ramanna y Sletten 2009, Dopnik y Perera 2012), el proceso de creación de las NIIF para PYMES (Vasek, 2011) , Christie, Borzovsky y Hicks 2010, Fitzpatrick y Frank 2009), argumentos a favor de las NIIF para PYMES (O'Keeffe y Hackett 2009, Fitzpatrick y Frank 2009, Neag, Masca y Pascan 2009) y argumentos en contra (Neag, Masca y Pascan 2009, Heffes 2009). Para desarrollar un análisis adecuado, se realizó una revisión de la literatura existente relacionada a las NIIF: descripción, su implantación y sobre las NIIF para PYMES. Además se presentan argumentos a favor y en contra de estas últimas.

## CONCLUSIONES

A través de este estudio se demostró que en países de América que han adoptado las NIIF completas existe una tendencia a adoptar las NIIF para PYMES. Los países del Caribe, América Central y América del Sur demuestran una tendencia más marcada. La mayoría de estos países han adoptado o están en proceso de adopción de las NIIF para PYMES. Sin embargo, en América del Norte ningún país en la actualidad ha adoptado estas normas. De los países de América del Norte, podemos destacar que EE.UU se encuentra en un Proyecto de Convergencia entre la Junta de Normas de Contabilidad Financiera (*FASB, en inglés*) y la IASB. A través del estudio se concluye que las NIIF para PYMES ofrecen muchas ventajas que ayudan a la uniformidad y comparabilidad de estas. Al igual que el proceso de la adopción de las NIIF completas globalmente, el movimiento de adopción de las NIIF para PYMES aparenta ser una verdadera ruta a la convergencia.

### Contribuciones

Esta investigación contribuye a la literatura realizando un análisis comparativo sobre la adopción de las NIIF en América. Para llevar a cabo el análisis, se comparan los países de América que han adoptado las NIIF completas con los que han adoptado las NIIF para PYMES. Además, se determina cuántos de estos las han adoptado debido a que se le requiere o simplemente porque se decidieron unirse a la ruta de la

convergencia. Finalmente, este estudio añade literatura sobre el trasfondo de las NIIF y sobre la aportación de las PYMES en el mundo.

### Sugerencias

En estudios futuros se puede ampliar la muestra e incluir países de Asia, Europa y otros continentes. De esta manera se podrá estudiar si la tendencia observada en América se repite alrededor del mundo. Además se puede realizar un análisis por país para determinar cuántas PYMES han adoptado las NIIF. Una comparación entre las normas locales de los países y las NIIF para PYMES es otra investigación futura que permitirá comparar las cantidades en los estados financieros, en específico en partidas como la cifra de resultado. Además, seleccionando una muestra de PYMES en diferentes países se podrá estudiar si estas han mostrado interés en internacionalizarse o han recibido ofertas extranjeras para estos fines luego de la adopción de las NIIF. Otra investigación pertinente es estudiar los costos asociados a la adopción de las NIIF por parte de las PYMES.

# CAPACIDADES AMBIENTALES EN LABORATORIOS DE TABASCO, MÉXICO: MODELO DE PLANEACIÓN ESTRATÉGICA EN EL DESARROLLO DE UNA RED

Arturo Martínez de Escobar Fernández, Universidad Juárez Autónoma de Tabasco-México  
José Ramón Laines Canepa, Universidad Juárez Autónoma de Tabasco

## RESUMEN

*Las redes de información y/o investigación científica representan un mecanismo o estrategia que permiten el fortalecimiento del trabajo colaborativo entre instituciones públicas y privadas, promoviendo el intercambio y consulta de información técnica confiable, sumando esfuerzos para solucionar problemas globales y desarrollando proyectos de beneficio común. Estamos en un tiempo de cambios y esos cambios tienen que ver de alguna manera con las «redes» (De Ugarte, 2007).*

## ENVIRONMENT CAPACITY- NETWORKING AND STRATEGIC PLANING IN TABASCO

### ABSTRACT

*Strategic planning is a process that allows members of a network to provide for their future and develop the necessary procedures and operations to achieve their goals. The aim of this study was to analyze the current situation of the technical, human and analytical laboratories with environmental competence to propose a model of strategic planning in the development of a network. For the analysis of the current situation with 22 laboratories were selected environmental analytical capabilities in the state of Tabasco, Mexico. Interviews were conducted with administrative and technical staff, under the requirements of the standard NMX-EC-17025-IMNC-2006. Verifying physically diagnosed laboratory facilities. We determined an average rating of objective and systematic data. The strategic planning model proposed, considered from the environmental assessment, to evaluate the results. The study revealed that 31% of the laboratories are in a stage-level plans draft without a documented system according to the standard. It is concluded that the creation of a network of laboratories using the proposed strategic planning model, will allow them to consolidate up to 100% of the requirements of the standard.*

**KEYWORDS:** Network, Testing, Quality, Environmental Capacity.

## INTRODUCCIÓN

Las redes de información y/o investigación científica representan un mecanismo o estrategia que permiten el fortalecimiento del trabajo colaborativo entre instituciones públicas y privadas, promoviendo el intercambio y consulta de información técnica confiable, sumando esfuerzos para solucionar problemas globales y desarrollando proyectos de beneficio común. Estamos en un tiempo de cambios y esos cambios tienen que ver de alguna manera con las «redes» (De Ugarte, 2007).

Se han realizado esfuerzos de conformación de redes, por ejemplo, en el Caribe se estableció una red con 17 países de la región, denominado CARIPOL, para determinar los niveles de contaminación del petróleo (agua, sedimentos y organismos); en su tiempo fue el proyecto más exitoso de la UNESCO en materia de contaminación marítima (Atwood et al, 1987). Los países más desarrollados (Estados Unidos, Canadá y algunos países de la Unión Europea) cuentan con redes de información sobre lluvia ácida, parámetros

climatológicos y calidad del agua con almacenamiento electrónico de datos utilizables por la comunidad científica y las entidades de gobierno de los respectivos países (maps 3s research community, 1983; National acid precipitation assessment program, 1983; WMO, NOAA, EPA, 1974-80). El sistema ETER de España (Estandarización Electrónica de Datos Ambientales), ha armonizado y facilitado la interoperabilidad de datos ambientales entre empresas privadas y administraciones públicas (Labella y Tarifa, 2008). La Red de Laboratorios Ambientales de Uruguay, tiene como misión, fortalecer, difundir, y optimizar la capacidad analítica e institucional de los laboratorios ambientales públicos y privados de manera sostenible. Su visión es la de una organización que nuclea a los laboratorios ambientales nacionales apuntando a la mejora continua y el aseguramiento de la calidad analítica; sirviendo de elemento aglutinador y generando el espacio de diálogo entre los laboratorios, los organismos públicos de gestión ambiental, los organismos de certificación y acreditación, los usuarios del servicio analítico y la población en general para evaluar las necesidades y proponer soluciones en temas ambientales que beneficien al país (Simone, 2006).

Dentro de la experiencia nacional, la necesidad de incrementar las investigaciones y trabajos de campo para resolver el problema de la contaminación de los recursos hidráulicos del país, en el año de 1975 y conforme a la Ley Federal para Prevenir y Controlar la Contaminación Ambiental y el Reglamento en su capítulo III, correspondiente a la Prevención y Control de la Contaminación del Agua, la Secretaría de Agricultura y Recursos Hidráulicos, a través de la Subsecretaría de Planeación y su Dirección General de Protección y Ordenación Ecológica, estableció la Red Nacional de Laboratorios y Monitoreo de la Calidad del Agua, para realizar monitoreo sistemático de dicha red, y complementar y mejorar los conocimientos de los técnicos en materia de agua en la aplicación de los procedimientos modernos para asegurar la buena calidad de éste vital líquido (SARH, 1979). Posteriormente, la PROFEPA inició la conformación de la red nacional de laboratorios ambientales en 1993, con el objetivo de fortalecer las actividades que demanda el programa nacional de inspección de las fuentes industriales de contaminación y contar con una base técnica confiable para la toma de decisiones, por medio del análisis de muestras consideradas como presuntos residuos peligrosos. La Comisión Nacional del Agua conformó el Sistema Nacional de Información sobre Cantidad, Calidad, Usos y Conservación del Agua (SINA) que desde hace 3 años aproximadamente creó una base de datos electrónicos accesible al público para consultar información estadística de la climatología, calidad del agua en ciertas regiones del país y de prevención de desastre ([profepa.gob.mx](http://profepa.gob.mx)). En el estado de Tabasco, se carece de un sistema estandarizado para el almacenamiento de datos ambientales y consulta electrónica de los mismos. Se duplican esfuerzos de capacidad analítica sin alcanzar los estándares de calidad apropiados. Hay nula accesibilidad a una base de información ambiental debidamente estandarizada, lo que ha propiciado se tenga pobre impacto en la toma de decisiones en materia ambiental en el estado y/o la región. La competencia técnica, la capacidad de ensayo, medida y la trazabilidad de los laboratorios no están acorde con los estándares de calidad nacional e internacional.

Por lo tanto, es imperante crear y consolidar una red de laboratorios con capacidades analíticas ambientales que coadyuve al fortalecimiento de la calidad de los mismos de manera sostenible y genere información analítica confiable. La conformación de una red de información analítica ambiental del estado de Tabasco, beneficiará principalmente a los laboratorios que la integren, fortaleciendo su competencia técnica, capacidad de ensayo, medida y trazabilidad. La estandarización y accesibilidad de la información beneficiará a las instituciones públicas y privadas.

El presente trabajo, muestra la situación actual de las capacidades técnicas analíticas y humanas de los laboratorios con competencia ambiental que existen en el estado de Tabasco, México, con base en la Norma Mexicana NMX-EC-17025-IMNC-2006.

Objetivo Del Análisis: Evaluar la situación actual de las capacidades técnicas analíticas y humanas de los laboratorios con competencia ambiental que existen en el estado de Tabasco, México, con base en la

Norma Mexicana NMX-EC-17025-IMNC-2006. Alcance: Este Análisis fue realizado en 22 laboratorios dentro de la jurisdicción del Estado de Tabasco, entre los que se encuentran: 11 laboratorios de Instituciones educativas, 9 laboratorios del sector publico gubernamental y 2 laboratorios de la iniciativa privada.

## METODOLOGÍA

### Recolección De Datos

La muestra utilizada para realizar el muestreo fue del universo en su totalidad, ya que son 22 laboratorios en el Estado de Tabasco, México, Se entrevistó a personal administrativo y técnico del laboratorio, utilizando la metodología de la entrevista bajo preguntas específicas y abiertas referentes a los requerimientos especificados en la norma NMX-EC-17025-IMNC-2006, solicitando evidencia tangible y objetiva de lo dicho como positivo.

Se verificaron físicamente las instalaciones, equipos, instrumentos, reactivos y patrones de referencia de los laboratorios diagnosticados. La revisión de la documentación de acuerdo a los requerimientos de la norma NMX-EC-17025-IMNC-2006, se realizó evaluando la norma referida contra el documento mostrado y su evidencia de implementación contra los registros solicitados. Se utilizó como orientación durante el diagnóstico, una lista de verificación basada en la norma NMX-EC-17025-IMNC-2006 (Anexo IX.1).

### Evaluación De Datos

Para la evaluación objetiva y sistemática de los datos obtenidos en cada laboratorio, se utilizó el siguiente criterio de evaluación. Es importante destacar que para realizar el análisis respectivo tuve que capacitarme y presentar el examen para certificarme como Auditor de la norma NMX-EC-17025-IMNC-2006

SIMBOLOGIA	CONCEPTO	CALIFICACIÓN (%)
N.A.	No Aplica	N. A.
N. E.	No existe documentación de ello.	0
A	Existe planes; borrador. No documentado.	25
B	Documentado parcialmente	50
C	Documentado y con oportunidad de mejora; se debe adecuar al requerimientos de la norma NMX-EC-17025-IMNC-2006.	75
D	Documentado e implementado. Se evidenció ello.	100

## RESULTADOS DE ACUERDO A LA NORMA ISO/IEC 17025: 2005 Y NMX-EC-17025-IMNC-2006.

Norma Mexicana: NMX-EC-17025-IMNC-2006

REQUISITOS RELATIVOS A LA GESTIÓN	%
4.1 ORGANIZACIÓN	49.2
4.2 SISTEMA DE GESTION	29.5
4.3 CONTROL DE LOS DOCUMENTOS	33
4.4 REVISIÓN DE LOS PEDIDOS (SOLICITUDES), OFERTAS Y CONTRATOS	32
4.5 SUBCONTRATACIÓN DE ENSAYOS Y DE CALIBRACIONES	67.5
4.6 COMPRAS DE SERVICIOS Y DE SUMINISTROS	53.5
4.7 SERVICIO AL CLIENTE	40
4.8 QUEJAS	38
4.9 CONTROL DE TRABAJOS DE ENSAYOS /O CALIBRACIONES NO CONFORMES	31
4.10 MEJORA	30
4.11 ACCIONES CORRECTIVAS	43
4.12 ACCIONES PREVENTIVAS	42

4.13 CONTROL DE LOS REGISTROS	44
4.14 AUDITORIAS INTERNAS	33
4.15 REVISIÓN POR LA DIRECCIÓN	34

REQUISITOS TECNICOS	Promedio de promedios %
5.2 PERSONAL	37.8%
5.3 INSTALACIONES Y CONDICIONES AMBIENTALES	46.8%
5.4 MÉTODOS DE ENSAYO Y VALIDACIÓN DE LOS MÉTODOS	52.0%
5.5 EQUIPOS	39.5%
5.6 TRAZABILIDAD DE LAS MEDICIONES	31.8%
5.7 MUESTREO	50.0%
5.8 MANEJO DE LOS ELEMENTOS DE ENSAYO	56.0%
5.9 ASEGURAMIENTO DE LA CALIDAD DE LOS RESULTADOS DE ENSAYO	45.0%
5.10 INFORME DE RESULTADOS	42.0%

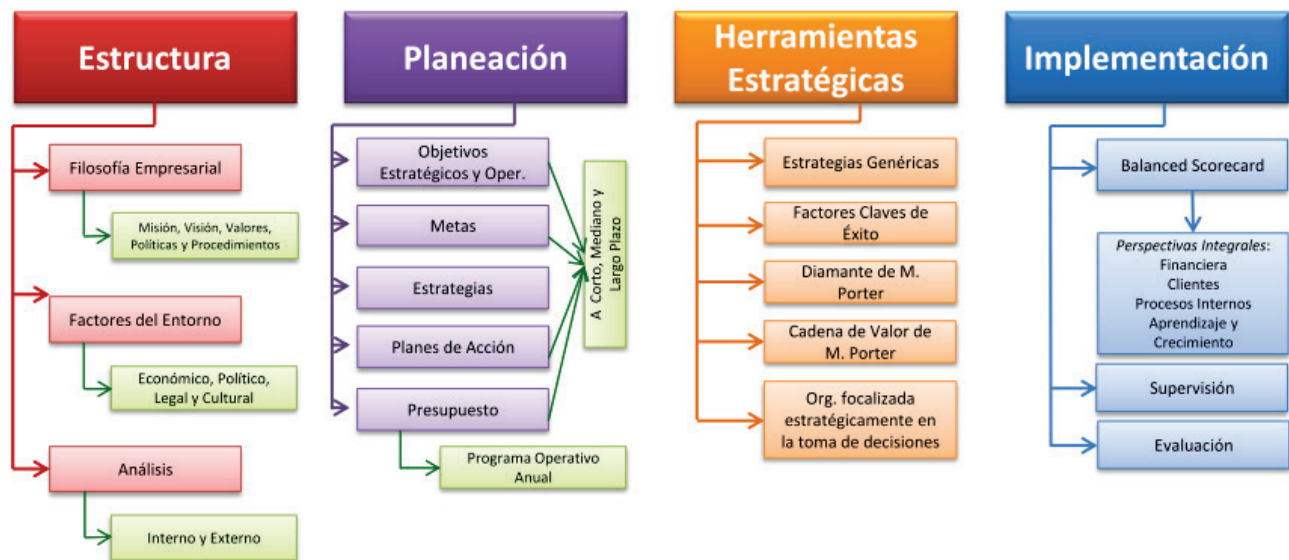

En base al análisis y diagnóstico realizado a los laboratorios de ensayos y pruebas analíticas ambientales del Estado de Tabasco, México. Propongo el siguiente modelo de planeación estratégica, para ser utilizado en la conformación de la RED de laboratorios de ensayos analíticos ambientales, el cual es universal, toda vez que puede ser utilizado por diferentes organismos e instituciones, locales, nacionales e internacionales, para su aplicación, de igual forma, considero que es perfectible de acuerdo a las necesidades y perspectivas del usuario.

### MODELO DE PLANEACION ESTRATÉGICA

Cabe señalar que la aplicación de este modelo para la creación de la RED de laboratorios de ensayos analíticos ambientales, en el Estado de Tabasco, México., permitirá a los 22 integrantes, el fortalecimiento, consolidación de su competencia técnica, capacidad de ensayo, medida y trazabilidad. Dando de esta manera el beneficio de la estandarización y accesibilidad de la información para las instituciones públicas y privadas.

## Modelo de planeación Estratégica (AMEF/2013)

Autor: Arturo Martínez de Escobar Fernández, Profesor Investigador de la UJAT-DACEA, Villahermosa, Tabasco, México.  
Doctorante en: Planeación Estratégica y Dirección de Tecnología

### ANEXO 1

La tabla 1, muestra los criterios de evaluación, incluye el porcentaje del rango de calificación con su respectivo enfoque e implantación.

Tabla 2. Criterios de evaluación.

%	ENFOQUE	IMPLANTACIÓN
0-20	Nula evidencia de existencia de conceptos claros y de sistemas apegados la norma NMX-EC-17025; 2006.	Incompleta de acuerdo a los requerimientos de la norma NMX-EC-17025; 2006.
21-40	Existen planes en borrador sin un sistema documental de acuerdo a los requerimientos de la norma NMX-EC-17025; 2006.	Iniciándose en los procesos clave y en las áreas críticas del laboratorio.
41-60	Se tiene documentación parcial y algunas evidencias de un Sistema de Gestión de la Calidad, diseñadas e integradas a la operación rutinaria de los procesos del laboratorio de acuerdo a la norma NMX-EC-17025; 2006.	Completa en algunos procesos claves y áreas principales.
61-80	Se cuenta con documentación y evidencias de un Sistema de Gestión de la Calidad, con enfoques preventivos, integrados y con oportunidades de mejora, en la operación rutinaria de los procesos del laboratorio, ello de acuerdo a la norma NMX-EC-17025; 2006.	Completa en los procesos claves y áreas principales, así como en la mayoría de las áreas de apoyo y subcontratistas.

<b>81-100</b>	Fuerte evidencia de contar con un Sistema de Gestión de la Calidad; documentado, implementado, consistente, preventivo y mejorado durante varios ciclos. Excelente integración de los elementos de la norma NMX-EC-17025; 2006 a la operación de todos los procesos del laboratorio.	Completa en todos los procesos claves, áreas principales, así como en las áreas de apoyo y subcontratistas.
	1.- La adecuación o lo apropiado de los métodos, herramientas o técnicas a los requerimientos de la norma NMX-EC-17025; 2006 y de sus procesos.	1.- La apropiada y efectiva aplicación de los métodos, herramientas y técnicas de todas las interacciones con los diferentes procesos.
	2.- La efectividad en el uso de métodos, herramientas o técnicas.	
	3.- El grado hasta cual el enfoque es sistemático, integrado y consistentemente aplicado.	
	4.- El grado en el que el enfoque se basa en la prevención.

# LA VIOLENCIA Y LA CONSTRUCCIÓN DEL ESPACIO LOCAL. EL CASO DEL MUNICIPIO DE HERMOSILLO

Carlos Germán Palafox Moyers, Universidad de Sonora

Joel Enrique Espejel Blanco, Universidad de Sonora

Benjamín Burgos Flores, Universidad de Sonora

## RESUMEN

*La violencia social y estructural en México es un fenómeno que puede tener graves consecuencias por sus efectos multiplicadores en cuanto la convivencia social-pacífica y el bienestar económico de las familias. Ante esta problemática el presente artículo pretende medir dos objetivos fundamentales: (1) determinar el efecto que tiene el capital social sobre la violencia estructural, y (2) medir el impacto del desempleo como precaria situación económica sobre la violencia estructural. Para dar respuesta a los objetivos se recopilieron los niveles de percepción de confianza, solidaridad, acción colectiva e inclusión social por parte de los habitantes de las regiones con mayor violencia en el municipio de Hermosillo en el estado de Sonora, México. Dentro del diseño metodológico se aplicó el cuestionario integrado para medir el capital social elaborado por el Banco Mundial a una muestra aleatoria-estratificada en las colonias más violentas del municipio señalado. Para medir las relaciones causales se realizó un análisis estadístico a través de modelos estructurales PLS. Los principales resultados ponen de manifiesto que los habitantes con una menor percepción hacia el capital social tienen mayores niveles de violencia, la cual se agudiza cuando dichas personas se encuentran desempleados.*

**PALABRAS CLAVE:** Capital Social, violencia, políticas públicas.

## VIOLENCE AND LOCAL AREA CONSTRUCTION. THE CASE OF THE MUNICIPALITY OF HERMOSILLO

### ABSTRACT

*Social and structural violence in Mexico is a phenomenon that can have serious consequences for its multiplier effects in peaceful coexistence and social-economic welfare of families. In this situation, the article attempts to measure two objectives: (1) to determine the effect of social capital on structural violence and (2) to measure the impact of unemployment and precarious economic situation of structural violence. To meet the objectives were collected perceived levels of trust, solidarity, collective action and social inclusion by the inhabitants of the regions with greater violence in Hermosillo in the state of Sonora, Mexico. Within the methodological design integrated questionnaire was applied to measure the capital produced by the World Bank to a stratified random sample in the colonies-most violent municipality noted. To measure the causal statistical analysis was performed by PLS structural models. The main results show that people with a lower perception towards social capital have higher levels of violence, which is exacerbated when such persons are unemployed.*

### INTRODUCCIÓN

Hoy por hoy en México, la sociedad contemporánea se enfrenta ante el mayor reto de reconstrucción y transformación económica y social. Los modelos económicos de corte neoliberal implementados sin

planeación económica intra-regional, la mala administración pública en los tres niveles de gobierno, la impunidad y falta de procuración de justicia, así como el proceso de globalización indiscriminado y sin regulaciones internacionales, son factores que pulverizaron las instituciones públicas y sociales, pero sobretudo afectó los tejidos sociales y productivos más elementales, dejando sin esperanza al pueblo de México. Indudablemente se tomó el rumbo equivocado y con ello se multiplicó el círculo vicioso de pobreza – marginación y exclusión social – violencia.

Los responsables de dar rumbo al país desecharon el valor y la importancia que se debe dar entre las relaciones de los diversos grupos sociales y de éstos con las instituciones de las diversas regiones que conforma la sociedad. Esto es, sin duda, un punto central en el soporte de la institucionalidad de las normas y reglas, el establecimiento y las formas en las que se construyen las redes, las organizaciones y las instituciones que permitan la interacción social y el desarrollo de la sociedad civil. Esto ha traído como consecuencia que el pueblo de México ha perdido la confianza, la solidaridad, la credibilidad política, la acción colectiva y la cohesión social.

Ante esta situación uno de los principales retos del gobierno actual, es reconstruir y consolidar el capital social que se forjó en su tiempo en el periodo de 1940-1982, aspecto fundamental que fue dilapidado sin piedad por la aplicación de modelos económicos importados, sin considerar el verdadero desarrollo de las regiones y los sectores, la falta de planeación económica diseñada y aplicada hacia el desarrollo del mercado interno, el deterioro del estado de derecho, así como la indefinición del marco regulatorio en cuanto al flujo comercial y de capitales en el contexto internacional y auspiciados por el Consenso de Washington. Al respecto, Huerta (2009) establece que mientras la economía mexicana esté subordinada a los intereses del capital financiero internacional, dada nuestra gran dependencia respecto a ellos, no hay perspectiva de que se modifique el diseño de política económica predominante para favorecer la esfera productiva y de empleo nacional. Aunado a lo anterior, se incrementó de manera exponencial la violencia, no sólo del crimen organizado, sino otra igual de letal, la violencia estructural. La violencia estructural se refiere a aquella situación en la que se produce un daño en la satisfacción de las necesidades básicas de la población, tales como la falta de alimentos, de salud, de educación, de libertad, todo ello resultado básicamente de los procesos de estratificación social diseñada por la administración pública, así como por el proceso de globalización indiscriminado basado en el libre mercado.

Ante esta situación económica y social en México el presente artículo pretende medir dos objetivos: (1) determinar el efecto que tiene el capital social sobre la violencia estructural, y (2) medir el impacto del desempleo como precaria situación económica sobre la violencia estructural. Para dar respuesta a los objetivos se recopilieron los niveles de percepción de confianza, solidaridad, acción colectiva e inclusión social por parte de los habitantes de las regiones con mayor violencia en el municipio de Hermosillo en el estado de Sonora, México. En los próximos apartados se analiza la situación actual de la pobreza y la violencia estructural y su vínculo con la violencia económica en México, y finalmente se presentan las alternativas de desarrollo para el México del futuro en el marco de la globalización.

### Situación de Pobreza en México

Tal y como lo señala Tello (2009), en México se han aplicado distintos modelos económicos. Tras la justa revolucionaria y la formación del Estado Nacional (1920-1934), en el periodo de 1934-1940 se desarrolló el Estado Nacionalista por medio de la justicia social que orientó en gran parte la política económica a través del reparto agrario, lo que provocó una distribución de la riqueza y del ingreso más equitativo. Para los años 1940-1982 que se caracterizó por la formación del Estado Promotor (1940-1954), el Desarrollo Estabilizador (1954-1970) y el nuevo rumbo del Estado hacia el crecimiento (1970-1982) se buscó combinar el crecimiento económico y la justicia social, lo que logró mejorar de manera importante las condiciones de existencia de la población mexicana, además se redujo la desigualdad en la distribución de la riqueza y del ingreso (Tello, 2008). En el periodo de 1982-2009 se da un viraje al rumbo del país con

la aplicación del programa neoliberal, que se ha caracterizado por estancamiento económico, desigualdad y pobreza. Además, afirma Tello (2009) en éste periodo México ha experimentado varias crisis, desde la crisis de la deuda (1982) hasta la crisis económica y financiera más profunda y severa que el mundo ha padecido desde la Gran Depresión de 1929. De acuerdo al autor, México cambió la pauta de desarrollo que había orientado la evolución económica y social, en su lugar se aplicaron políticas neoliberales que no han arrojado resultados satisfactorios en términos de crecimiento económico y de bienestar social.

Por el contrario, en casi 30 años el Producto Interno Bruto (PIB) real per cápita prácticamente no ha crecido, lo que ha estimulado que las condiciones generales de existencia de la población mexicana no hayan mejorado, generándose una aguda desigualdad en los últimos diez años, la llamada “Década Perdida” (Tello, 2008). Al respecto, Aguilera (2009) plantea que ante el cambio de rumbo, una generación se ha perdido, el nuevo patrón de evolución económica que se aplicó en México y el mundo ha creado una gigantesca fábrica de pobres. Según el Consejo Nacional de Evaluación de la Política de Desarrollo Social (CONEVAL) (2012) del total de la población en México, el rezago educativo ascendió a 20.6%, lo que representa 23.2 millones de personas; la carencia en el acceso a los servicios de salud fue de más de 31.8%, lo que equivale a casi 36 millones de personas; la carencia por acceso a la seguridad social ascendió a 60.7%, lo que equivale a 68.3 millones de personas; la carencia por calidad y espacios de la vivienda ascendió a 15.2%, que corresponde a 17.1 millones de personas; asimismo, el 16.5% carecía de acceso a los servicios básicos de la vivienda, lo que corresponde a 18.5 millones de personas; finalmente, la incidencia de la población con carencia por acceso a la alimentación fue de 24.9%, es decir, 28 millones de mexicanos en pobreza alimentaria (ver Tabla 1).

Tabla 1: México: Medición de la Pobreza, 2010 Incidencia, Número de Personas en los Indicadores de Pobreza, 2008-2010

Indicadores	Porcentaje (%)		Miles de personas	
	2008	2010	2008	2010
<b>Pobreza</b>				
Población en situación de pobreza	44.5	46.2	48.8	52.0
Población en situación de pobreza moderada	33.9	35.8	37.2	40.3
Población en situación de pobreza extrema	10.6	10.4	11.7	11.7
Población vulnerable por carencias sociales	33.0	28.7	36.2	32.3
Población vulnerable por ingresos	4.5	5.8	4.9	6.5
Población no pobre y no vulnerable	18.0	19.3	19.7	21.8
<b>Privación social</b>				
Población con al menos una carencia social	77.5	74.9	85.0	84.3
Población con al menos tres carencias sociales	31.1	26.6	34.1	29.9
<b>Indicadores de carencia social</b>				
Rezago educativo	21.9	20.6	24.1	23.2
Carencia por acceso a los servicios de salud	40.8	31.8	44.8	35.8
Carencia por acceso a la seguridad social	65.0	60.7	71.3	68.3
Carencia por calidad y espacios de la vivienda	17.7	15.2	19.4	17.1
Carencia por acceso a los servicios básicos en la vivienda	19.2	16.5	21.1	18.5
Carencia por acceso a la alimentación	21.7	24.9	23.8	28.0
<b>Bienestar</b>				
Población con un ingreso inferior a la línea de bienestar mínimo	7.8	11.0	201.2	294.8
Población con un ingreso inferior a la línea de bienestar	31.4	40.2	810.9	1,073.6

**Nota:** Las estimaciones de 2008 y 2010 utilizan los factores de expansión ajustados a los resultados definitivos del Censo de Población y Vivienda 2010, estimados por INEGI. **Fuente:** Estimaciones del CONEVAL con base en el MCS-ENIGH 2008 y 2010.

El concepto de pobreza está asociado, en muchos de los casos, a la falta de recursos económicos (ingresos) de una persona. Según el Programa de Naciones Unidas para el Desarrollo (PUND) la pobreza no se define únicamente en términos económicos, sino también significa, la mala nutrición, la falta de acceso al agua potable y condiciones de salubridad, enfermedades crónicas, analfabetismo, imposibilidad de acceder a la escuela, a la cultura, al crédito, etc. Por otra parte, el CONEVAL define a la pobreza multidimensional cuando presenta al menos una carencia social y no tiene ingresos suficientes para satisfacer sus necesidades básicas. Por carencia social se entiende cuando un individuo no puede acceder

a la: (1) alimentación, (2) seguridad social, (3) salud, (4) vivienda, (5) educación, y (6) seguridad pública. Así con las dimensiones del bienestar económico (línea de bienestar y línea de bienestar mínimo) y los derechos sociales (las seis carencias sociales) se pueden identificar cuatro grupos en la población mexicana: (1) los pobres multidimensionales; (2) la población vulnerable por carencia social; (3) la población vulnerable por ingreso; y (4) la población sin carencia social y con ingresos mayores a la línea de bienestar. En el primer grupo se define a la población con pobreza extrema como aquella que tiene tres o más carencias sociales y un ingreso menor a la línea de bienestar económico mínimo. En México hay 11.7 millones de personas en pobreza extrema, esto es, que son afectados en sus derechos sociales y que sus ingresos son menores a los \$978 pesos mensuales en la zona urbana y \$684 pesos mensuales en la zona rural. La pobreza moderada es aquella que tiene al menos una carencia social y sus ingresos se encuentran por debajo de la línea de bienestar económico, esto es, \$2,114 pesos mensuales en la zona urbana y de \$1,329 pesos al mes en la zona rural. Los vulnerables de carencia social son aquellas personas que tiene al menos una carencia social, aun cuando sus ingresos son mayores a los de la línea de bienestar económico. Por otra parte, una persona es considerada vulnerable por ingreso, si no tiene carencia social, pero su ingreso es inferior a la línea de bienestar económico. La cuarta clasificación es aquella población sin carencias sociales y con ingresos mayores a la línea de bienestar (ver Tabla 1).

### Situación de Violencia en México

Con la violencia estructural presente las instituciones y sistemas crean disparidades entre los individuos y grupos, eliminando con ello toda oportunidad de movilidad social, esto es, del desarrollo de las familias hacia mejores condiciones de vida, es decir, dignidad y calidad de vida. Si bien este tipo de violencia no es directa, puede provocar violencia directa como respuesta a la exclusión de los sistemas sociales, políticos y económicos de más de la mitad de la población mexicana. La sociedad mexicana se vio perpleja en los años 2008 al 2010 en referencia al incremento en el número de pobres, al pasar de 48.8 a 52 millones de personas (CONEVAL, 2010). El concepto de pobreza está asociado, en muchos de los casos, a la falta de recursos económicos (ingresos) de una persona. Sin embargo, tiene que ver con cada uno de los factores que intervienen para que pueda desarrollarse como ser humano, tales como: (1) la educación, (2) la seguridad, (3) la vivienda, y (4) los servicios básicos (luz y agua). En general, lo que involucre la insatisfacción de los derechos humanos, económicos, sociales y culturales.

Así, la violencia desde una perspectiva socioeconómica es un constructo del ser humano en sociedad con elementos multifactoriales y multicausales que surgen por comisión o por omisión de diversos actores sociales, económicos e incluso políticos y, por lo tanto susceptibles de contenerse, reducirse e inclusive erradicarse. La violencia no es un mal divino sino una creación humana, y como tal puede “administrarse, contenerse” con medidas de prevención social. Por ello es importante identificar los factores que multiplican la violencia, tales como: (1) los altos índices de rezago social, y la baja calidad de vida de las familias; (2) la exclusión educativa; (3) la pobreza extrema; y (4) el déficit habitacional y el escaso desarrollo urbano y elevados niveles de prostitución y drogadicción. En este último rubro la mayoría de los jóvenes no tiene acceso a un nivel educativo de calidad, ni al mercado laboral, siendo “carne de cañón” o candidatos para el crimen organizado. Hoy en día la mayoría de los estados y los municipios de México mantienen un escenario donde se presenta una precaria situación económica, con altos niveles de desempleo, pobreza y marginación acompañados con altos niveles de violencia. Un poco más de la mitad de la población mexicana se encuentra en estas condiciones y esta situación puede llevar el repunte de la violencia, pero a su vez este cáncer social influye negativamente en los resultados económicos.

En relación a la violencia en México generado por el crimen organizado en el periodo 2001-2007 el número de homicidios se movió en un rango relativamente bajo, entre mil y 2,300 ejecuciones. Por el contrario, entre el 2008 y 2010 la violencia registró un aumento drástico, 5,207 ejecuciones en el 2008, 6,857 en el 2009, y 11,800 en el 2010 (Guerrero, 2010). Para el caso de los estados las tendencias de la violencia es preocupante. En 21 de los 32 estados de México la violencia muestra una tendencia al alza.

Aunque Sinaloa, Michoacán, Sonora y Baja California exhiben tendencias a la baja, sus niveles de violencia continúan siendo altos. En los últimos años, los estados con mayores niveles de violencia son Chihuahua, Sinaloa, Guerrero, Durango, Tamaulipas, Estado de México, Michoacán, Sonora, Nuevo León, Baja California, Coahuila y Jalisco. Estos doce estados acumularon alrededor del 90% de las ejecuciones de dicho periodo. Asimismo, la mayoría de las ejecuciones registradas entre 2006 y 2010 han ocurrido en 162 de los 2,456 municipios. Sin embargo, solo cuatro municipios concentran el 36% de las ejecuciones: Ciudad Juárez el 20% y Culiacán, Tijuana y Chihuahua el 16% (Guerrero, 2011).

Las consecuencias de la violencia puede llevar a que todos los esfuerzos realizados en materia de política económica y social no sean eficaces y con ello ampliar el círculo vicioso de pobreza – violencia. Por tanto, es importante analizar los elementos que contribuyen al aumento de la probabilidad de que se generen ambientes sociales violentos, tales como una profunda desigualdad social, la discriminación y la exclusión de una gran parte de la población, así como los altos niveles de desempleos por la incapacidad productiva nacional, la escasez de los productos alimenticios (dependencia alimentaria o pérdida de soberanía alimentaria) y el incremento indiscriminado de los productos básicos provocado entre otros por la volatilidad de los precios internacionales de los alimentos.

## METODOLOGÍA

El diseño de la investigación comprende la metodología cualitativa y cuantitativa. La metodología cualitativa comprenderá la elaboración de entrevistas en profundidad con el enfoque de violencias, las cuales nos permiten profundizar más allá de los aspectos superficiales de las causas reales del comportamiento de los personajes claves del municipio de Hermosillo. Para la metodología cuantitativa se diseñó un instrumento estadístico y por medio del método multivariante de Análisis de Componentes Principales [*Principal Component Analysis*, (PCA por sus siglas en inglés)] se identificaron las principales variables de estudio donde los datos muestren mayor variabilidad (varianza) e incorrelación entre sí de la muestra objeto de análisis. Asimismo, tras identificar las principales variables que miden el capital social, se procede a la construcción de un Modelo de Ecuaciones Estructurales con la técnica de Mínimos Cuadrados Parciales [*Partial Least Squares* (PLS por sus siglas en inglés)], con el que se pretende cuantificar las relaciones causales de las variables, se identificaron seis constructos reflectivos, (1) redes, (2) confianza, (3) cooperación, (4) comunicación, (5) inclusión social, y (6) acción política, cada uno de estos constructos está cargado factorialmente por sus respectivos indicadores o ítems.

La metodología que se utilizará para el análisis de los datos será la construcción de Modelos de Ecuaciones Estructurales basados en componentes/varianzas aplicando el paquete informático estadístico *SmartPLS* versión 3.00, así como el paquete informático SPSS versión 19.0 para *Windows*. El primer paso para validar el modelo de medida será analizar la validez de contenido y la validez aparente. El segundo paso consistirá en calcular la fiabilidad individual del ítem por medio de las cargas factoriales (*loading*) para el caso de constructos reflectivos y la significatividad de los pesos (*weight*) para los constructos formativos. El tercer paso será examinar la validez de constructo a través de la validez convergente y la validez discriminante. La validación del modelo estructural se analizará por medio de dos índices básicos: (1) la varianza explicada ( $R^2$ ), y (2) los coeficientes *path* o pesos de regresión estandarizados ( $\beta$ ) (Johnson, Herrmann y Huber, 2006). La varianza explicada de las variables endógenas o dependientes ( $R^2$ ) debe ser igual o mayor que 0.1 (Falk y Miller, 1992).

Los coeficientes *path* o pesos de regresión estandarizados ( $\beta$ ) deben alcanzar al menos un valor de 0.2 para que se consideren significativos (Chin, 1998). Otra prueba que determina la calidad de predicción del modelo estructural es la prueba de Stone-Geisser (1974; 1954) o parámetro  $Q^2$  (*cross validated redundancy*). Esta prueba se ha calculado por medio de la técnica *blindfolding*. En los modelos estructurales PLS no existen medidas relacionadas con la bondad de ajuste. Por tanto, se utilizan técnicas paramétricas de re-muestreo para analizar la estabilidad de los parámetros del modelo (Brown y Chin,

2004). Esto se evalúa a través de los valores *t* de *Student* utilizando la técnica *bootstrap* con un remuestreo de 500 casos, tal y como lo propone Chin (1998). Recientemente, Esposito *et al.* (2008) siguieron un criterio global de bondad de ajuste para los modelos estructurales PLS. Estos autores proponen que el índice de bondad de ajuste global se valore por medio de la raíz cuadrada de la multiplicación de la media aritmética del Análisis de la Varianza Extraída (AVE) y la media aritmética de la varianza explicada de las variables endógenas o dependientes ( $R^2$ ).

Por tanto, el Índice de Capital Social aplicado al municipio de Hermosillo está formado por un modelo estructural con seis constructos reflectivos, que determinan la cuantificación y comportamiento de la composición y el nivel de consolidación del capital social en dicho municipio. Asimismo, para tratar de medir el capital social en el municipio se utilizará como base el Cuestionario Integrado para la Medición del Capital Social elaborado por el Banco Mundial (2011), para con ello rediseñar el cuestionario sin perder los principios en el que se sustentó. Para ello, se utilizará el enfoque conceptual en la selección y elaboración de las preguntas. El prototipo del instrumento refleja las dimensiones estructurales y cognoscitivas del capital social (e.g. grupos y redes; confianza y solidaridad), las principales formas en que opera el capital social (e.g. acción colectiva y cooperación; información y comunicación) y las áreas más importantes de aplicación y resultados (e.g. cohesión e inclusión social; empoderamiento y acción política). El concepto de capital social genera una fuerte controversia en su definición, medición y dimensiones entre especialistas del tema. Sin embargo, se puede considerar de lo que significa el capital social parte del reconocimiento de las relaciones sociales.

Para Lunecke y Ruiz (2007) el concepto de capital social se encuentra muy difundido y es una herramienta frecuentemente utilizada por el análisis social y en las políticas públicas. El término de capital hace referencia a la solidaridad, confianza, generosidad, cooperación, reciprocidad, redes, entre otras, tal y como lo definió el padre del capital social Bourdieu, quien expresaba que es “la suma de los recursos, actuales o potenciales, correspondientes a un individuo o grupo, en virtud de que estos poseen una red duradera de relaciones, conocimientos y reconocimientos mutuos más o menos institucionalizados” (Bourdieu, 1986). El capital social se podría señalar como un bien intangible, a diferencia de otros conceptos o variables económicos, sin embargo, por ello no se le debe restar importancia y se debe considerar en el diseño de políticas públicas y programas sociales. De ahí la importancia de saber el funcionamiento de las relaciones que se dan entre los diversos grupos sociales y estos con las instituciones de la región. Además que la parte de las relaciones sociales constituye un campo poco analizado de la calidad de vida que no tiene nada que ver con la estandarización con los indicadores económicos (Bebbington, 2005).

La aportación del concepto de capital social se fundamenta en la explicación de las relaciones sociales, con base en el marco de la acción colectiva (Ostrom, Ahn, y Olivares, 2003). Sin duda que esta propuesta sirve de soporte para la institucionalidad de las normas, el establecimiento y las formas en las que se constituyen las redes, las organizaciones y las instituciones que permiten la interacción social y el desarrollo de las sociedades. Tras identificar la medición del capital social del municipio objeto de análisis se analizará la violencia estructural con información otorgada por la Dirección de Seguridad Pública del Municipio de Hermosillo y la Secretaría de Seguridad Pública del Estado de Sonora (SEPS), y detectar las colonias con una mayor incidencia de delitos (Semáforo Delictivo de la SESP, 2012).

## CONSIDERACIONES FINALES

Los fantasmas del pasado, que aún rondan ominosos, tales como el hiperestatismo, el autoritarismo, el populismo y el nacionalismo de clausura, y que vueltos a la vida llevaría a México a reeditar los extremismos ideológicos, así como las crisis fiscales, financieras y políticas que nos han hecho perder rumbo, tiempo, oportunidades y respeto a nuestro país y sus ciudadanos (Aguilar, 2009). Al respecto, Huerta (2009) propone que el Estado debe retomar el manejo soberano de la política económica con el

objetivo de asegurar las condiciones productivas y financieras en pro del crecimiento sostenido con pleno empleo. Por tanto, se debe trascender urgentemente a un modelo de mercado con enfoque social con la participación del Estado en las decisiones económicas de empresarialidad social.

Ante la hipótesis de que la globalización estimula el círculo vicioso de pobreza – marginación y exclusión social – violencia, la sociedad mexicana en su conjunto debe participar en el diseño de la planificación económica, incluyendo a los sectores académicos públicos y privados, organismos gubernamentales y no gubernamentales, sindicatos, agrupaciones de productores y campesinos, centros de investigación, etc.

# EL SIGNIFICADO DE LAS PERSONAS EN EL ÉXITO DE UNA PEQUEÑA EMPRESA DEL SECTOR CONSTRUCTOR

Rosiluz Ceballos Povedano, Universidad del Caribe

## RESUMEN

*Este documento presenta el análisis de una pequeña empresa del sector constructor en Cancún, Quintana Roo, México. El propósito es determinar los factores y las acciones que la han hecho una empresa exitosa desde su creación, bajo el supuesto de que la mejor manera de conocerla es a través de las personas que la conforman. Para este efecto se utiliza como diagnóstico, el árbol de competencias de Marc Giget, instrumento que permite observar su micro y macro entorno. La obtención de información fue a través del relato de vida, con entrevistas semi-estructuradas divididas en dos partes en la primera los participantes describieron sus funciones, en la segunda hablaron del significado que la empresa tiene para ellos. Para el análisis de esta información se utilizó la rejilla de constructos personales y la teoría socioeconómica a través de sus descripciones sobre las tareas cotidianas que realizan y los problemas que se les presentan para cumplirlas. Concluye estableciendo la relación entre actores internos y externos, la conformación de las estrategias que ayudaron al crecimiento de la empresa y la descripción de estrategias que fracasaron en este trayecto. Al final se tienen una visión integral de una Pyme construida a través de sus integrantes.*

**PALABRAS CLAVE:** pequeña empresa, rejilla de constructos, teoría socio-económica

## THE MEANING OF PEOPLE IN THE SUCCESS OF CONSTURCITON SECTOR SMALL BUSINESS

### ABSTRACT

*This paper presents the analysis of a small company in the building sector in Cancun, Quintana Roo, Mexico. The purpose is to determine the factors and the actions that have made a successful company since its creation, under the assumption that the best way to know is through people that make it up. To this effect is used as diagnostic, Marc Giget skills tree, instrument that allows to observe their micro and macro environment. Obtaining information was through the story of life, semi-structured interviews, divided into two parts, first participants described its functions, in the second spoke of the meaning that the company has for them. The repertory grid of personal constructs was used and socio-economic theory for the analysis of this information, through his descriptions about everyday tasks that perform and the problems that arise for compliance. He concludes by establishing the relationship between internal and external actors shaping the strategies that helped the growth of the company and a description of strategies that failed in this way. At the end you have a holistic view of an SME built through its members.*

**JEL:** A14, L25

**KEYWORDS:** small company, repertory grid technique, Socio-Economic Theory

### INTRODUCCIÓN

Este documento tiene el propósito de presentar una visión integral de una Pequeña Empresa (PYME) procedente de Quintana Roo, que resalta factores que la han hecho exitosa. La información es obtenida y analizada a través del árbol de competencias de Marc Giget, la aproximación interpretativa que a través

de la palabra de los actores internos puede hacerse al pedirles relato de su vida en la empresa. El alcance de este documento contempla la primera fase en un trabajo con expertos de la empresa, establece las bases del análisis integral que será realizado en las próximas etapas. Las conclusiones plantean las estrategias observadas en el avance de la investigación.

## REVISIÓN LITERARIA

En este documento se parte del supuesto de los procesos de construcción. Metodológicamente los procedimientos que se utilizan permiten al investigador estar en contacto con el objeto, construir a partir de ellos el propósito de la investigación y determinar una aproximación subjetiva de la realidad, según Sautu, 2005, el constructivismo social es un paradigma que considera que a través de las relaciones comenzamos los procesos de reconstrucción del mundo y que se establecen a través de acciones y del lenguaje.

### La Palabra la Importancia de la Lingüística en la Vida Social y Personal

El lenguaje distingue y da identidad al ser humano porque es el único con esta función psicológica y espiritual, designa la realidad humana a través de la expresión. La palabra da libertad al hombre y dominio sobre el mundo. Se atraviesa la línea de sensaciones y reacciones, por nominaciones e ideas. El hombre se convierte en amo del mundo al dar identidad a las cosas, es su primera invención y contiene a las demás. El mundo de reflexión, es un mundo de sentido, las denominaciones no valen sin intenciones (Gusdorf, 1957). Tanto la interpretación simbólica como el relato de vida se unen a la parte funcional de una empresa para poder describirla y conocerla, ésta es usada ya que permite descubrir a partir de las funciones de los empleados las tareas fundamentales de una empresa. Son las personas que al relatar sus historias enfocadas a su función, narran la historia dentro de un mundo social: la empresa, y construyen al unir las partes, su historia. La Teoría Socioeconómica que es llevado a las organizaciones en este caso como una oportunidad de uso no para el cálculo de costos sino como estructura para introducirse a una empresa y conocer de manera ordenada las funciones por puesto y tareas. El aspecto cualitativo está basado en la obtención de disfuncionamientos hipertrofiados. Esta relación se refleja en estructuras y comportamientos.

## METODOLOGÍA

Las herramientas e instrumentos que se utilizaron para obtener información se hace a través de dos métodos, el árbol de competencias de Marc Giget y la rejilla de constructos personales. El primero es un instrumento que permite ver más allá de los productos y servicios que se ofrecen en el mercado porque reconoce cualidades tecnológicas, industriales y comerciales, (Godet, 2007). El segundo analiza las palabras evocadas por los integrantes para luego interpretar el significado que tienen sobre la empresa y construir una visión integral de INSET. Los instrumentos y herramientas usados para la aplicación de este método son el relato de vida a través de entrevistas semi-estructuradas.

La obtención de información se estructuró a través del relato de vida y la teoría socioeconómica en entrevistas semi estructuradas. Se prevé que a partir de los relatos de los empleados de la empresa, se puede transitar de situaciones típicas paso a paso a situaciones generales que al igual que al encontrar culturas nacionales agrupan factores de una sola empresa por medio del método interpretativo. En esta oportunidad describen su paso por la empresa desde su llegada. La empresa seleccionada INSET, empresa con 17 años en el mercado que emplea aproximadamente a sesenta personas y que pertenece al sector de la construcción su área el laboratorio de materiales y mecánica de suelos. Se ubica en la ciudad de Cancún en el estado de Quintana Roo. Los detalles de su creación y su caracterización se desarrollan a través del árbol de competencias en el pasado tanto de las raíces como se su tronco y sus ramas.

*Obtención de la información:* La selección del equipo empresarial son informantes propuestos por el director, personajes del medio de la construcción y un equipo de investigación completamente ajeno a la empresa que coordina y elabora los talleres. Se construyó un cuestionario que permitiera entrevistas semi-estructuradas formadas en dos partes; en la primera los colaboradores describieron sus funciones. Después, debieron detallar al menos dos sucesos importantes que recuerden de su estancia en la empresa, es un relato de conexión entre el colaborador y la empresa; sucesos positivos y algo negativo, estos sucesos tienen la finalidad de darle un enfoque histórico al análisis. En la segunda parte del cuestionario se identifica el significado de INSET en la sociedad y para esto se les preguntó lo que significa expresado en palabras concretas.

## RESULTADOS

*El árbol de competencias de Marc Giget, (Pasado, raíces):* INSET, es fundada en 1996, en la ciudad de Cancún Q. Roo, con la finalidad de ofrecer servicios de apoyo a la industria de la construcción, comenzó operando como laboratorio de concreto, brindando servicios de verificación de materiales; en 2006 se inicia, la verificación geotécnica, a través de una mecánica de suelos, ampliando la situación actual de la empresa y su lugar en el mercado, (Documentos de la empresa, 2011).

*Aspectos funcionales (Pasado y Presente, Tronco):* Las principales tareas que se llevan a cabo en la empresa listadas a continuación, se realizan, por lo general por una persona determinada, pero hay algunas tareas que las realizan entre varias y que son: Atender clientes, Estados de cuenta, Solución de problemas en obras de mantenimiento de servicios, Coordinación del personal en obra de laboratorio Mantenimiento / calibración de equipos de laboratorio, una tarea en específico el personal, incluyendo al director general mencionaron que la realizan es Cobrar:

---

*Facturar, Cobrar, Atender llamadas, Atender clientes, Estados de cuenta, Altas de empresa, Elaboración de informes de mecánica de suelos, Coordinación del personal en obra de Mecánicas de Suelos, Solución de problemas en obras de Mecánicas de Suelos, Mantenimiento de equipo de Mecánicas de Suelos, Elaboración de presupuestos, Asesorías técnicas, Asistencia a juntas, Coordinación del personal en obra de laboratorio, Estimaciones, Programación de vacaciones del personal, Proceso de entrega de sondeos al cliente, Ver si hay recursos y materiales, Elaboración Nómina de laboratorio, Capacitación al personal de laboratorio, Supervisar la parte técnica de todos los trabajos, Asesor técnico de todas las partes de la empresa, Gestionar recursos, Relación con clientes, Buscar obras, Estatus de vehículos y mantenimiento, Autorizar presupuestos, Organizar cursos, Sistema de gestión de calidad, Ensayos de aptitud, Capacitación, Mantenimiento / calibración de equipos de laboratorio, Actualizar formatos, Aplicación de exámenes teóricos y prácticos, Revisar capturistas, Checar uniformes, Revisión de nóminas, Curriculum de empleados, Motivación a empleados, Pagos de nómina, Atender órdenes del director general*

---

Estas tareas nos integran la especificidad de la empresa, su dinámica y su giro. Entre las que más disfrutaban los empleados están las que corresponden a su actividad principal para la que fueron contratados por ejemplo al supervisor de laboratorio le gusta “pruebas en el laboratorio, llevar personal a obra, coordinar personal...” lo que corresponde a sus actividades principales. Los principales problemas que se detectan para la ejecución de tareas está la actitud de algunos empleados para acatar órdenes, la desorganización del área administrativa, actitud en obra y en compras, asesoría a clientes lo que acumula trabajo de oficina, algunos problemas de logística para el trabajo de campo, las menciones de los empleados son las siguientes: La empresa no sigue un plan general de trabajo, puede considerarse que de las tres partes en que se divide la empresa: la administrativa, la de laboratorio y la de mecánica de suelos, sólo la parte de laboratorio dijo que si tenían un plan pero se referían siempre a las políticas de calidad ya que el laboratorio se encuentra certificado. Estas son las citas encontradas respecto a los planes de la empresa. Estas tareas nos dan una idea de lo que es la empresa en la actualidad, de la forma en la que sus empleados la ven y como la construyen en su quehacer cotidiano, pero ¿Cómo surge y se mantiene INSET?

### Aspectos históricos (pasado)

*Relatos de vida:* Origen de la empresa: la inicia el director general en el año 1995 quien se retiró de la empresa donde trabajaba, desde 1992 trabajó por cuenta propia en su taller de aluminio, a su salida se dedicó al cálculo estructural y como contratista, “y ya fue que tenía el gusanito del laboratorio y no tenía recursos”. Los mismos clientes le pidieron que pusiera su laboratorio, le dijeron que rentara algo, así inició la idea de su propia empresa, empezó por comprar lo mínimo que son cilindros. Un amigo le dejaba usar la prensa en paralelo, fue a cálculo y creció el laboratorio Su inicio lo relata en una empresa en Mérida como auxiliar de topógrafo, después como jefe de brigada de topografía, auxiliar residente de obra civil, auxiliar de analista- auxiliar de control de calidad. Fue enviado en 1988 a Cancún como Gerente regional de la misma empresa en el área de laboratorio de control de calidad y geotecnia. El ingeniero, ahora director de INSET dice “empecé desde cero, lo he platicado con mi esposa. La empresa se ha ido para arriba, lo más que ha pasado es que no he crecido pero nunca para abajo y con todo y las crisis de 2009 y 2010, nos mantuvimos en equipo, instalaciones y personal.”.

*“Yo me comparo con las empresas y la gente dice: “la mejor INSET”, me recomendaron contigo por tal persona, es lo que más satisface y cuando dicen la mejor, más responsabilidad para seguir así.”*

Las principales características es el espíritu de mejora, el orden y la preparación constante, estas características están presentes en los gerentes de las áreas operativas o técnicas de la empresa. De la misma manera tienen en su personalidad la manera de crecer que ha propagado en la dinámica de la empresa, relata que cuando llegó sólo sabía hacer control de calidad y que en el área de mecánica se requiere especialidad casi una maestría. La oportunidad y su habilidad hicieron que subcontratara los servicios, al principio de la empresa hasta poder entregar los reportes completos, la formalidad y profesionalismo que caracterizan ahora a INSET son tomados de la misma personalidad de su director:

*“El tipo de empresa, piden concreto, terracería y yo no sabía, no tenía equipo y “sólo llevé una materia de mecánica y cuando me salían trabajos subcontrataba a un ingeniero que sabía mucho de mecánica de suelos”, le decía con qué presupuesto y el me decía cuánto y Un cliente me dijo una vez tengo tu presupuesto y el de otro ¿no te puedes bajar?, dije que no, y el cliente dijo, te lo vamos a dar a ti porque como está mejor presentado nos da más confianza. La presentación de un trabajo cambiarle, algo diferente..., da un estatus de una mejor empresa”.*

La entrada a la empresa como empleado se realiza por tres vías, por amistad familiar, por conexión con redes profesionales o bien por medios de comunicación en los periódicos, lo que resalta es que en cualquiera de los casos son entrevistados por el director general y cubren como principal característica ser profesionales y tener una vocación hacia la familia como puede verse en las afirmaciones de los entrevistados. En general comentan los empleados que el ambiente se ha llenado de jóvenes que han contagiado de buen ambiente de trabajo. “Las posadas de cada año es el único día del año que todos compartimos, convivimos y conocemos a todos que a lo mejor ni habíamos visto, sólo empleados”. Las experiencias desafortunadas de INSET son cuando ha habido problemas estructurales “Cuando vino la crisis ver que despidieran a las personas ver la realidad desde ese punto si me movía, sobre todo con el personal administrativo que era con el que convivía”

Los que destaca es que a cada empleado, independientemente del puesto que ocupa, se le da libertad de desempeñar su puesto introduciendo sus propios procesos o mejorando las actividades que se tienen “porque no me acordaba de lo que me decían, en el Excel pensando en ellos lo hice” acerca de la implementación de una base de datos de control. “Me gusta que puedo aprender y me ponía a leer los informes para correlacionar lo de la escuela con informes y leer libros de aquí y de la obra me fijaba mucho en escuchar, hay que saber escuchar, analizar y luego hablar”

También que quienes responden a su trabajo reciben buena remuneración: *“me ha aumentado el sueldo, nunca lo solicité y el año que dije que iba a hacer ya son dos y para irme tendría que ser “muy buena oferta”. Ahora tengo vida social.* Se nota que los empleados se unen por un objetivo común: *“le hacía señas al asistente de calidad” y se levanta la auditora y dice si jugamos beisbol”.* Comentario sobre la revisión de calidad en compañerismo de los empleados.

### Aspectos Interpretativos

En la parte inferior es posible visualizar un resumen de las seis aplicaciones del método de rejilla y la suma de las puntuaciones totales que se le asignaron a cada uno de los elementos, ver tabla 1.

Tabla 1: Constructos Personales del Significado del Éxito INSET

CONSTRUCTOS (Características condiciones y valores opuestos a los que se consideran importantes)	Elementos					CONSTRUCTOS (Características condiciones y valores que se consideran importantes)
	trabajo	INSET	futuro	Funciones	de Plan trabajo	
Departamento no acreditado	29	32	34	32	32	Departamento acreditado
Maquinaria y equipo de oficina	24	21	31	19	20	Maquinaria y equipo de campo
Trabajo transitorio	26	26	29	23	32	Trabajo permanente
Empresa estable	32	34	33	28	29	Empresa con prestigio
Fuente de Empleo	31	19	31	30	31	Desarrollo Profesional, Familiar y Bienestar
Bonita Empresa	31	25	34	27	31	Empresa Exitosa
Mi trabajo	33	29	31	32	29	Profesionalismo, Compromiso y Responsabilidad
Necesario para alcanzar un objetivo	19	20	28	23	27	Profesionalismo, Compromiso y Responsabilidad
Estancado	32	31	33	30	31	En crecimiento
	257	237	284	244	262	Puntuaciones Totales
	3	5	1	4	2	Rangos

*Se muestran los elementos en relación con los constructos, el polo izquierdo contiene los constructos de menor importancia y en el polo derecho los de un nivel de mayor importancia.*

Según los datos recopilados, en la suma total de cada uno de los elementos, el de mayor rango es el futuro, es decir los colaboradores perciben el futuro en INSET con éxito, tanto en su crecimiento personal como en relación con la empresa. En segundo rango encontramos el plan de trabajo y en relación con las entrevistas es importante que INSET cuente con planes de trabajo para con ello incrementar el éxito en la empresa. En tercer rango se encuentra el trabajo, esto marca la relación que tiene el trabajador del trabajo con la empresa y desde este punto es posible visualizar que el trabajador ha logrado obtener un crecimiento profesional y de bienestar, sin embargo visualizan a la empresa como un medio para lograr objetivos profesionales. En el cuarto rango se encuentra las funciones ya que en relación con las entrevistas las funciones son repetitivas entre las diversas áreas lo cual ocasiona una falta de crecimiento dentro de la empresa, tanto del personal como de la empresa en general. En el quinto rango se encuentra INSET, y lo que es posible percibir es que los colaboradores consideran a INSET como una empresa profesional, responsable y con prestigio, no obstante la consideran en crecimiento para alcanzar el éxito esperado. Se nota en las entrevistas que los empleados tienen el mismo perfil del dueño, ya que confiere importancia a la familia y las relaciones personales. También la manera de hacer las cosas, de ir las mejorando. Las personas que trabajan en el área operativa sienten que han crecido mucho.

## CONCLUSIONES

Visión Integral de INSET” *Es una integración humanista de la empresa a través de factores encontrados por medio de la palabra:*

El significado de la empresa puede describirse de dos formas, la primera que los empleados se sienten parte de ella no sólo como trabajadores sino que sienten que hay una relación afectiva o de compañerismo mayor que en otros empleos que han tenido. La segunda forma es la de la empresa que construye una identidad basado en sus empleados y éstos siguiendo la personalidad de su fundador. Los factores que se obtuvieron son los siguientes y se expresan a través de acciones de los empleados:

Desempeñar su puesto introduciendo sus propios procesos o mejorando las actividades

Recibir buena remuneración si responden a su trabajo

Visualizar el futuro personal a través del de la empresa

Necesitar planes de trabajo

Vincular su vida con la de la empresa

Lograr objetivos profesionales

Conferir importancia a la familia y a las relaciones personales Del pasado y presente del árbol de competencias, se establecen los siguientes factores : Calidad, empleados competentes, información confiable, equipo adecuado y en buenas condiciones, análisis de mercado, compromiso, cumplimiento, responsabilidad, orientación fiscal, mantener área de ventas, mejorar en tecnología, practicar costos y fijación de precios, implementar programas de capacitación, sistemas de información, consolidar imagen, generar alianzas estratégicas, revisar normatividad de los concursos, obtención de más certificaciones, oportunidades de nuevos mercados, mano de obra calificada, realizar juntas semestrales de evaluación al desempeño bajo una planeación, elaborar cartera de clientes y darles seguimiento y participar en premios y reconocimientos. Los principales factores son la mano de obra calificada, tanto de ingenieros que llevan un tiempo laborando para otras empresas como de recién graduados de las universidades.

La calidad es muy importante para INSET, esto contempla la certificación como matriz de Cancún para potencializar esta ventaja competitiva. Con el objetivo de desarrollar relaciones públicas para poder darse a conocer. La empresa sobrevive a pesar de las crisis aunque no de la misma manera o con la afluencia de proyectos y clientes que tuvo pero es un problema de estructura económica más que de manejo interno, esta razón provoca incluir expertos externos del tema. También se involucra a empresas sobresalientes en investigación y desarrollo, área que no se ha emprendido. Los resultados obtenidos a través del diagnóstico socioeconómico, parten de un estudio de la realidad de una organización, de su contexto y de su ambiente interno, no involucra postulados fuera del lugar, sus mismos integrantes a través de las entrevistas fueron quienes propusieron las acciones. Podemos resumir en estas conclusiones los factores que la han hecho exitosa que es el significado que como empresa juega en la vida de sus trabajadores cumpliendo una función económica al retribuirles por su trabajo y humana al valorarlos y dejarlos ser parte de la construcción de la empresa asumiendo que de su desempeño depende su futuro y el de la empresa, estas acciones más la formalidad y profesionalismo que da la empresa en sus servicios ha hecho que todos los cambios estructurales no hayan afectado su permanencia en el mercado.

#### Alcance y limitaciones

Aunque el método fue probado con un grupo de trabajo, debe de repetirse con personal de la empresa y ser orientado hacia todas las áreas de trabajo. Expertos en el tema deben ser incorporados tanto relacionados con la empresa como ajenos expertos en el área.

# REDES Y ANÁLISIS ORGANIZACIONAL: ROLES, POSICIONES Y PODER DE FRAGMENTACIÓN DE LAS RELACIONES SOCIALES Y COMERCIALES

Rebeca Teja Gutiérrez, Universidad Autónoma del Estado de México

Gustavo Almaguer Vargas, Universidad Autónoma Chapingo

Roberto Rendón Medel, Universidad Autónoma Chapingo

Nidia López Lira, Universidad Autónoma del Estado de México

## RESUMEN

*En un estudio de caso, con la “Sociedad Cooperativa de Productores Agropecuarios y Lombricultores de San Pedro Tlapacoyán, Veracruz, México”, se observó que uno de los problemas es la actitud y las relaciones inter organizacionales de los productores. A través de indicadores de redes sociales, se analizaron los roles que juega cada actor, su posición dentro de la red de relaciones y las relaciones con mayor poder de fragmentación. Los resultados indican que la importancia de un actor está más en función de su posición en la red que del número de relaciones que presenta cada integrante del grupo de productores. Se encontró que cada actor juega diferentes roles en función de sus intereses individuales y que las relaciones sociales presentan mayor poder de fragmentación sobre las relaciones comerciales.*

**PALABRAS CLAVE:** Redes sociales, roles, relaciones personales, relaciones comerciales

## NETWORKS AND ORGANIZATIONAL ANALYSIS: ROLES, POSITIONS AND POWER OF FRAGMENTATION OF SOCIAL AND COMMERCIAL RELATIONSHIPS

### ABSTRACT

*In a case study, with the Cooperative Society of Agricultural Producers and Lombricultores of San Pedro Tlapacoyán, Veracruz, Mexico", one observes that one of the problems is the attitude and the relationships inter organizational of the producers. Through indicators of social nets, the lists were analyzed that each actor, his position inside the net of relationships and the relationships plays with more power of fragmentation in the net. The results indicate that the importance of an actor is more in function of its position in the net that of the number of relationships that each member of the group of producers presents. It was found that each actor plays different lists in function of his individual interests and that the social relationships present bigger power of fragmentation on the commercial relationships.*

**KEY WORDS:** Social nets, lists, personal relationships, commercial relationships.

## INTRODUCCIÓN

El bajo nivel competitivo y rentabilidad de las organizaciones rurales, son consecuencia por la falta de: financiamiento, adopción de tecnología e innovación, organización, creación de alianzas al interior y al exterior de las organizaciones, entre otras; las cuales se han abordado desde perspectivas teóricas como la sociología, la psicología, la antropología, la economía y la administración. La asociatividad es el mecanismo que mejor responde a las necesidades de las organizaciones, ya que les mejora las posibilidades de supervivencia en los mercados mediante acciones colectivas basadas en la cooperación y

en el estímulo de las relaciones al interior y exterior de las empresas. Dentro de las estrategias de asociatividad está la conformación de redes inter e intra personales. Sin embargo este proceso no se genera de manera espontánea. Para la creación de organizaciones exitosas y rentables, los integrantes tienen que tener una mentalidad diferente que les permita trabajar en equipo, resolver conflictos, tener confianza con sus compañeros y con otros empresarios y tener visión de largo plazo, estar dispuesto al cambio y mantener una flexibilidad de esquemas.

Las personas con una visión tradicional basada en el individualismo y la desconfianza les es difícil crear una empresa fundamentada en la creación de redes (González y Gálvez, 2008:28), ya que se necesita incrementar el capital social y humano de los integrantes de la organización. En San Pedro Tlapacoyán, Veracruz, hay un grupo de productores que ha empezado a exportar limón ‘Persa’ orgánico, para Estados Unidos. Sin embargo, Almaguer *et al.* (2009) determinaron que el grupo tiene limitaciones para la conversión de huertos convencionales a orgánicos, lo que trae problemas de adopción de las nuevas prácticas culturales, debido a la cultura que durante décadas han conformado los productores con el manejo convencional; además les ha costado trabajo tener iniciativas conjuntas como un vermicompostero e incrementar el volumen de compras y ventas que hacen en común. A su vez, Teja *et al.* (2008), mencionaron que dicho grupo manifestaba un nivel bajo de confianza, lo cual ocasionaba poca participación, lo que reflejó una densidad baja del 6.48%, lo cual indica una baja conectividad y asociatividad. Lo que ha denotado poco desarrollo del *capital social* y de acciones colectivas para beneficio común.

## REVISIÓN DE LITERATURA

La organización es para este estudio la categoría central de análisis, que ha sido enmarcada en el nivel organizativo de una sociedad establecida en un territorio definido. Es concebida como la reunión “de dos o más personas que colaboran dentro de unos límites definidos para alcanzar una meta común” (Hodge *et al.*, 2005). La organización no parte de la idea de organización como efecto natural de la interacción de individuos, es decir, una aproximación a lo que ha sido definido a través de la frase “el ser humano, es un ser social por naturaleza”, sino más bien que parte del supuesto de instrumentalización de la articulación social para el logro o satisfacción de los intereses individuales, y en el establecimiento de relaciones emergen en un sin número de necesidades, deseos, carencias, entre otros, que en la búsqueda de ser satisfechas, va configurando a los actores involucrados como grupo o finalmente como una organización. Sin embargo, y como ya se mencionó, no se encuentra allí una acción natural, pues en este proceso influyen diferentes elementos, principalmente el contexto socioeconómico, sociocultural, sociopolítico y territorial, donde se establecen relaciones de carácter interpersonal, presentándose una exposición de intereses individuales, para ser puestos posteriormente en el escenario colectivo.

Se puede señalar entonces que, “(...) la organización es el sistema humano de cooperación y coordinación integrados, que se encuentra dentro de unos límites definidos con el fin de alcanzar unas metas compartidas” (Hodge *et al.*, 2005). Así, se tiene que “(...) Las organizaciones son, en aspectos importantes, redes de relaciones y, por ende, es necesario manejarlas y analizarlas como tales” (Peffer, 1992:300). En este sentido Peffer, introduce lo que se quiere tratar en este apartado, el denominado nivel externo de la organización, pues es preciso partir del término organización no sólo como la entidad, sino más bien, teniendo en cuenta lo demás, lo cual en palabras de éste es comprender que “las organizaciones son entidades materiales dotadas de rasgos físicos, caracterizados por relaciones sociales y procesos demográficos” (Peffer, 1992:281). Así, el estudio de la organización desde una perspectiva de red y de relaciones, como es el caso concreto, intenta dar cuenta de los procesos que vinculan a la organización con su entorno, sumado a ello, evidenciar como esos procesos contienen el poder que tiene el entorno sobre la organización misma, pero en donde esta tiene opciones de adaptación a través de acciones estratégicas para la toma de decisiones. Ver a la organización como un ente aislado, pensando en la posibilidad que está en manos de la misma, tomar decisiones sin tener en cuenta el contexto en la cual

está inscrita, es pensar que la organización es completamente racional para la toma de decisiones y puede hacerlo a partir de los atributos internos de la misma, pero ello estaría negando que la organización debe establecer vínculos con otras organizaciones de su entorno para acceder a una serie de recursos que no posee, pues no los produce. A partir de esto último, se tiene que la organización está inscrita en un entorno y que este entorno tiene una serie de características y elementos que deben ser analizados para entender como está inscrita la organización en el mismo, partiendo de la estructura en la cual está inscrita y saber qué posición ocupa, cuales son los otros elementos con los cuales establece relación y de qué forma lo hace (Castaño *et al.*, 2004:13-16).

### Análisis de Redes Sociales

El origen del Análisis de Redes Sociales (ARS) es diverso al integrarse como resultante de la combinación de elementos antropológicos, psicológicos, sociológicos y matemáticos, dando origen a una diversidad de instrumental teórico y metodológico el cual ha derivado, a su vez, en una diversidad de aplicaciones. La teoría de las redes registra su origen en teorías antropológicas (estructural funcionalismo británico), psicológicas (teoría de la Gestalt), sociológicas (estructural funcionalismo norteamericano, sociometría) y matemáticas, registrando su principal crecimiento en la década de los setenta. Por lo anterior, se producen cruces con las teorías del intercambio y la elección racional. Las redes sociales han sido definidas como “un conjunto bien delimitado de actores –individuos, grupos, organizaciones, comunidades, sociedades globales, etc.- vinculados unos a otros a través de una relación o un conjunto de relaciones sociales” (Coudannes, 2007:2).

El análisis de redes sociales (ARS) se ha aplicado a un número de estudios cualitativos y cuantitativos sobre cultura organizacional (Vilana y Rodríguez, 2010), la creación de empresas (García y Valencia, 2009; Porras y Clegg, 2002), migración (Molina, Lerner y Gómez, 2008; Lonkila y Salmi, 2008; De Miguel, 2006; entre otros), para el análisis del desempeño deportivo (Bundio y Conde, 2007), sobre cuestiones familiares (Coudannes, 2007; González y Basaldúa, 2007); en el análisis de las Organizaciones No Gubernamentales, ONG, (Souto, 2007; Roca, 2006); estudio de las relaciones (Granovetter, 1973); en estudios de desarrollo (Garrido, 2000); en los estudios de pobreza (Formi y Longo, 2004); en los estudios económicos y de comercio (Semitiel y Noguera, 2004; Teves, 2005), y más recientemente en estudios de innovación y competitividad (Monge y Hartwich, 2008; Diez, 2008; Muñoz *et al.*, 2007, Rendón *et al.*, 2007). En las redes sociales, se analiza la conexión de personas, más que la relación formal o jerárquica comúnmente estudiada vía organigramas funcionales. Las relaciones entre instituciones, por ejemplo, pueden estar más determinadas por las relaciones entre las personas responsables de esa vinculación por ambas entidades, que por los mandatos o decretos que las obliguen o faculden para dicha relación. Es decir, la red es un concepto fundamentalmente vincular, no estructural. En el proceso de construcción de redes existen diferentes niveles. Rovere (1999:25) señala que estos niveles son el reconocimiento, el conocimiento, la colaboración, la cooperación y la asociación (Cuadro 1).

Cuadro 1: Niveles en la Construcción de Redes

Nivel	Acciones	Valor
5. Asociarse	Compartir objetivos y proyectos	Confianza
4. Cooperar	Compartir actividades y/o recursos	Solidaridad
3. Colaborar	Prestar ayuda esporádica	Reciprocidad
2. Conocer	Conocimiento de lo que el otro es o hace	Interés
1. Reconocer	Destinadas a reconocer que el otro existe	Aceptación

Fuente: Rovere, 1999:25.

*El reconocimiento:* expresa la aceptación del otro. El **conocimiento** ocurre posterior a que el otro es reconocido como par, como interlocutor válido, empieza a ser incluido en la palabra, empieza a necesitar conocimiento del otro, lo cual expresa interés, queriendo saber quién es el otro, queriendo entender cómo

se ve el mundo desde ahí. El tercer nivel, a partir del interés y del conocimiento empiezan a existir algunos episodios de **colaboración** (colaborar en el sentido de trabajar con). No es una ayuda sistemática, no es una ayuda organizada sino espontánea. Hay momentos, hechos, circunstancias donde se verifican mecanismos de colaboración que empiezan a estructurar una serie de vínculos de reciprocidad, empiezan a colaborar pero espera también que colaboren con uno. En el cuarto nivel ya existen algunas formas sistemáticas de **cooperación** (co-operación: operación conjunta). Esto supone un proceso más complejo porque supone que existe un problema común, por lo tanto hay una co-problematización y existe una forma más sistemática y estable de operación conjunta, es decir, hay un compartir sistemático de actividades. Por último, un quinto nivel donde hay **asociación**, donde esta actividad profundiza alguna forma de contrato o acuerdo que significa compartir recursos y cuyo valor base es la confianza.

Así, las redes inician por un proceso de aceptación, transitan por un periodo de intereses comunes y ayudas esporádicas, llegando incluso a desarrollar procesos duraderos basados en la confianza. Este tránsito es lo que se llama en esta investigación como gestión de redes sociales para la conformación de capital humano y social. El análisis de redes sociales (ARS) es aplicable a las ciencias que llamamos blandas. En el análisis de redes sociales opera en base a un vocabulario técnico y los datos se procesan por medio de herramientas computacionales, dos de las más populares son el UCINET (Borgatti, Everett, y Freeman, 1992) y Pajek (Batagelj y Mrvar, 2003). Los elementos básicos del ARS son los provistos por la teoría de grafos para caracterizar redes: nodos y arcos. Los nodos en la red pueden ser personas, organizaciones, eventos o lugares. Los arcos representan las relaciones entre los nodos. Esos arcos pueden ser direccionales y mostrar la frecuencia o fortaleza de la relación (Scott, 2000; Wasserman y Faust, 1994). Las relaciones entre los nodos se pueden traducir en notación matricial para luego aplicar un conjunto de medidas derivadas de la teoría de grafos.

## MATERIALES Y MÉTODOS

Para el presente estudio se consideró el análisis de redes sociales y la teoría organizacional (Hodge *et al.*, 2005; Gibson *et al.*, 2004), como herramientas teóricas metodológicas, donde se analizan las relaciones personales y comerciales de producción en torno a la “Sociedad Cooperativa de Productores Agropecuarios y Lombricultores de San Pedro Tlapacoyán, Veracruz, México”. Tanto en la teoría de las redes sociales como en la teoría organizacional, intervine la variable intangible denominada *confianza*, la cual se manifiesta, según Rovere (1999) en el nivel de asociación. La confianza se considera como un elemento esencial para mejorar la cooperación de las empresas (Cegarra *et al.*, 2005) y es factor primordial para incrementar la productividad en las organizaciones (Ramírez, 2003). Tomando en cuenta lo anterior, el trabajo se enfocó al análisis de las relaciones y la posición estructural de los actores, los diferentes roles en función de la actividad, así como el tipo de relaciones que determinan la mayor fragmentación en la red, disertando los resultados a través de la teoría organizacional.

### Redes Analizadas

Para el análisis de la relación entre la posición y el número de interacciones de los integrantes de la organización, en su posibilidad de jugar diferentes roles en el grupo y en el estudio de las relaciones, sean personales o comerciales, que provocan mayor fragmentación en las relaciones, se han establecido las siguientes variables a medir:

*Roles*: para este estudio, se refiere al repertorio de relaciones funcionales que una persona establece y representa con otros actores sociales en situaciones determinadas.

*Relaciones personales*: es la interacción y convivencia social entre los actores a través de la comunicación, la consideración, el respeto y la confianza la cual se logra con el tiempo.

*Relaciones comerciales:* es la interacción entre los actores a través de actividades con un beneficio monetario o lucrativo. Cada red aporta información sobre la posición y el número de relaciones de cada actor, sobre los diferentes roles de acuerdo a sus intereses, así como la fragmentación de las relaciones sociales y comerciales, a través del análisis de indicadores y del análisis gráfico.

*Indicadores de redes individuales:* Los indicadores empleados para el análisis de la información de redes se describen a continuación. Todos ellos refieren al cálculo de los valores individuales, los cuales difieren de los valores normalmente utilizados para la red en su conjunto. Por ejemplo, el tamaño suele referirse al número total de nodos; para el cálculo de indicadores individuales, como en esta investigación, el tamaño refiere al número de actores con los cuales el actor en cuestión está conectado.

*Tamaño de la red individual:* El tamaño de la red individual es igual al número de actores con los cuales este individuo (ego) está conectado (Borgatti *et al.*, 1992). Un mayor tamaño de la red individual sugiere un actor mayormente conectado. Su cálculo se establece como se detalla a continuación.

$$T_n = \sum_{i=1}^n A_n ;$$

Donde:  $T_n$  es el tamaño de la red individual del actor (ego)  $n$

$A_n$  son los actores directamente relacionados con el actor (ego)  $n$

Aún cuando no existe un parámetro definido que indique suficiencia o un buen estado relacionado con el tamaño de la red individual, podemos considerar que los mayores tamaños facultan un mayor acceso a información, relaciones o beneficios de un actor. Lazos individuales Los lazos individuales se contabilizan como el número total de lazos, sin considerar los vínculos relacionados con el ego. Así,

$$L_n = \sum_{i=1}^n l_n$$

Donde:  $L_n$  es número de lazos individuales del egon

$l_n$  son los actores directamente relacionados con el ego  $n$ , sin considerar los lazos directos con éste.

El número de lazos individuales es relevante como estimador del grado de conexión de una red entorno a un actor específico, lo que se denomina como análisis de ego. Un ego con mayor número de lazos individuales, los cuales no dependan de éste, es un estimador del acceso a la información y estructura de la red en la cual se encuentra.

Densidad de la red individual Un actor individual tiene una densidad igual al número de vínculos dividido entre el número de pares, multiplicado por 100 para expresarlo en porcentaje. Así,

$$d = \frac{l_n}{n(n-1)} * 100$$

Donde:  $d$  es la densidad de un actor

$l_n$  son los lazos de un actor  $n$

$n$  es el número de actores de la red

Una densidad cercana al 100% indica que el actor es parte de una red muy conectada, al menos al interior. Por otra parte, un indicador cercano al 0% sugiere un actor siendo parte de una red desestructurada o con dificultades de acceso a información, relaciones o beneficios de un actor.

## RESULTADOS Y DISCUSIÓN

Cada una de las redes fue analizada considerando los indicadores anteriormente descritos (tamaño, lazos y densidad individual). Los resultados mostrados en el cuadro 2, evidencian aquellos actores con mayor valor en dichos indicadores. Así, por ejemplo, el actor 11 en la red de beneficio común es relevante en tamaño y número de lazos, no así en la densidad. Es decir, este actor tiene un número importante de lazos y nodos, pero las conexiones entre ellos (densidad) son limitadas. Lo anterior significa que este actor posee un círculo amplio de relaciones, pero su relevancia en términos de conectividad es escasa.

Cuadro 2: Tamaño, Lazos y Densidad Para las Redes de Bien Común, Compras, Fiestas Y Convivios y Ventas de la Organización “Sociedad Cooperativa De Productores Agropecuarios y Lombricultores de San Pedro Tlapacoyán, Veracruz

Red	Tamaño	Lazos	Densidad
Bien común	11, 17, 18, 30, 31	11, 17, 18, 30, 31	16, 20, 29, 32, 33
Fiestas y convivios	1, 16, 17, 18, 20	1, 5, 17, 18, 31	8, 11, 30, 33, 34
Compras	17, 18, 30, 31, 34	17, 30, 31, 32, 34	1, 16, 29, 32, 35
Ventas	17, 30, 31, 32, 33	17, 30, 31, 32, 33	11, 16, 17, 18, 29

Fuente: elaboración propia con datos de campo, 2009.

Granovetter (1973) discutió la importancia o relevancia de las relaciones más por el grado de conectividad (densidad relacional) visto como acceso a fuentes “únicas” (débiles) de información, que por el número de relaciones “comunes” (fuertes). La relevancia de un actor está dada, entonces, más por la densidad de las relaciones que posee que por el número de éstas. En el cuadro II-3 puede observarse como los actores con mayor tamaño de su red individual suelen coincidir con los de mayores lazos, no así con los de mayor densidad. Estos resultados argumenta que la falta de asociatividad y cooperación en el grupo de Tlapacoyán, Veracruz, se debe a que existen personas que desconfían de sus compañeros, lo cual no les ha permitido tener una mayor conectividad con ellos, dicha desconfianza a propiciado escaso capital social al interior del grupo, lo cual se debe a las experiencias sociales y culturales, lo que ha impedido realizar acciones colectivas de beneficio común (Durstun, 2000).

Aun que se observa la existencia de actores con un mayor tamaño de la red individual y con mayores lazos, su red se encuentra desestructurada o con dificultades de incrementar el capital social. Sin embargo los actores con mayor densidad indican que su red está mejor conectada, en otras palabras estos actores por su posición son más relevantes en la red, ya que propician las acciones colaborativas y la participación de los integrantes. Por lo que la relevancia de un actor no depende del tamaño de la red y del número de lazos, sino por la posición que ocupa. Los resultados muestran que la red de fiestas y convivios, obtuvo un mayor tamaño individual, con un índice de 4.9 actores hacia un ego; seguido por la red de compras con un índice de 2.8 actores hacia un ego y en último lugar se encuentra la red de ventas con un índice de 1.9 actores. Así, la red de fiestas y convivios tiene mayor acceso a la información y a las relaciones individuales con respecto a las demás redes.

De acuerdo con lo postulado por Rovere (1999), la red de fiestas y convivios se encuentra en un primer y segundo nivel, donde existe un reconocimiento y un conocimiento por los actores, ya que los integrantes de la red generan el valor del reconocimiento y de interés con sus compañeros. Es más factible y menos compromisos y riesgos monetarios, que se reúnan para comer, charlar, bailar, beber, reír, que para comprar fertilizante y más aun casi es imposible que se reúnan para vender, debido a que se tiene que

compartir recursos tanto en dinero como en especie, por lo que existe resistencia, por las experiencias no exitosas vividas en el pasado, lo que ha generado desconfianza. Los convivios y las fiestas generan vínculos de amistad, dan la oportunidad de que un actor reconozca que existe él y sus compañeros, así como de que conozcan lo que él y los demás hacen. Esto concuerda con el índice de lazos individuales, ya que la red de fiestas y convivios obtuvo un mayor número de lazos y nuevamente la red de ventas se encuentra en último lugar con un índice de 41.7 y 3.5 respectivamente. Dicho índice infiere el número de lazos que no depende del ego sino de los vínculos que los demás tienen con éste, el fenómeno que se da es que al reconocer a los demás y tener conocimiento de lo que hacen, se transmite la información sobre la red, se aceptan a los demás y se logra tener interés con los distintos actores, de manera que un ego capta la atención de los demás sin que este considere sus vínculos con ellos. Lo que determina que se está logrando la aceptación y el interés de los integrantes.

## CONCLUSIONES

La estructura de la red de la cooperativa de Tlapacoyán, Veracruz, se explica más por los actores sociales relevantes que por los actores económicos. En otras palabras, la cooperativa puede lograr realizar acciones colectivas que les genere riqueza, a través de incrementar el capital humano en los actores sociales relevantes, ya que son los que generan mayor capital social (densidad) entre los integrantes de la organización. La potencial fragmentación del grupo de San Pedro se puede dar por una eventual desaparición de la estructura social más que de una económica. Así entonces, los resultados sugieren una mayor importancia a la gestión de estructuras sociales para fortalecer a la organización en lo económico. Dicho de otra manera, la organización de Tlapacoyán, Veracruz, necesita institucionalizar a los grupos informales formados en su interior, mediante el establecimiento de una cultura organizacional, que les permita tener una mentalidad diferente, para trabajar en equipo, resolver diferencias, tener confianza, es decir, incrementar el capital social y humano para la generación de riqueza.

Los actores identificados por su relevancia económica y social, considerando la frecuencia en la que aparecen con valores mayores, no garantiza la máxima cobertura de la red. Existen actores relevantes tanto en lo social como en lo comercial. Estos actores actúan como estructuradores de la red. Su desaparición conlleva a una fragmentación de la red, aún cuando estos actores no sean los más centrales desde el punto de vista del número de relaciones. Es decir, estos actores por la posición que guardan son importantes para que la red no tenga una división. Se recomienda fortalecer los lazos de amistad y confianza, a través de políticas públicas aterrizadas en programas gubernamentales, enfocadas a incrementar el capital humano en cuestiones organizacionales, empresariales, de dirección, y cambio de estereotipos y cuestiones culturales que les permitan la adopción de patrones de comportamiento para el éxito empresarial.

### RESUMEN

*La gestión en toda Administración Pública debe realizar una adecuada planificación estratégica de las políticas públicas, para que atiendan de manera inmediata aquellas necesidades apremiantes de la sociedad, con el fin de procurar el bienestar y salvaguardar la calidad de vida de los ciudadanos. Uno de los temas tan discutidos desde hace ya algunos años, tiene que ver con el crecimiento geométrico de la población y su impacto en las ciudades, centrando su atención sobre la problemática urbana, para mejorar las condiciones sociales y el buen funcionamiento de las ciudades, de tal manera que es imprescindible conocer el territorio para plantear buenas políticas públicas y así entrar en una dinámica de prioridades. Por lo anterior es necesario que a través de las tecnologías de la información, sea posible caracterizar los elementos que le dan identidad al territorio, para identificar focos de atención inmediata o por otro lado, brindar información necesaria para una adecuada toma de decisiones. Es por esto que los Sistemas de Información Geográfica (SIG's) son una tecnología, cuyo propósito general es almacenar y manipular datos geográficos en forma digital, los cuales pueden ser explotados para analizar, visualizar y graficar diversos conjuntos de datos espaciales que tengan una georeferenciación, es decir, identificar el posicionamiento con el que se define la localización de un objeto espacial, representado a través de un sistema de coordenadas mediante puntos, vectores, áreas y volúmenes dentro de un espacio geográfico o territorial, el cual nos permita visualizar los beneficios y potencialidades del territorio, o por otro lado identificar las zonas de riesgos. Con esta herramienta se tiene la posibilidad de desarrollar proyectos a través de escenarios para la intervención, diagnóstico y zonificación, para la visualización o representación del crecimiento, desarrollo y necesidades de las poblaciones rurales y urbanas.*

**PALABRAS CLAVE:** Sistemas de Información Geográfica, territorio, políticas públicas, planificación urbanística.

## KNOWING THE AREA THROUGH THE GEOGRAPHIC INFORMATION SYSTEMS FOR PUBLIC POLICY PRIORITY

### ABSTRAC

*Management in Public Administration should conduct all appropriate strategic planning of public policies to address those immediately pressing needs of society, in order to ensure the welfare and safeguard the quality of life of citizens. One of the issues as discussed in a few years, is related to the geometric growth of the population and its impact on cities, focusing on urban issues, to improve social conditions and functioning of cities, so it is essential to know the territory to raise good public policy and thus enter into a dynamic priorities. Therefore it is necessary that through information technology, is possible to characterize the elements that give identity to the territory, to identify sources of immediate or otherwise, to provide information necessary for proper decision-making. That is why the Geographic Information Systems (GIS's) are a technology whose general purpose is to store and manipulate geographic data in digital form, which can be exploited to analyze, visualize and plot various spatial data*

*sets that have a georeferencing, ie identify the positioning which defines the location of a space object, represented by a coordinate system with points, vectors, areas and volumes within a geographical or territorial, which allows us to visualize the benefits and potential of the area, or otherwise identify risk areas. This tool has the ability to develop projects through scenarios for intervention, diagnosis and zoning, for display or representation of the growth, development and needs of rural and urban populations.*

**JEL:**

**KEYWORDS:** GIS, land, public policy, urban planning

## INTRODUCCIÓN

En México se están consolidando mejores políticas públicas para el manejo y conservación de los recursos naturales que están contribuyendo a mejorar la calidad de vida de los habitantes de áreas rurales. Con ayuda de los Sistemas de Información Geográfica se han venido apoyando políticas proactivas para el ordenamiento territorial, así como estrategias para fortalecer el proceso de planeación en torno al mejoramiento de la calidad de vida y cuidado del territorio, con la posibilidad de definir las reglas de uso y acceso de suelo. En el pasado el proceso de urbanización del país estuvo vinculado de manera estrecha a los alcances y dimensiones que adoptó el proceso de industrialización en la economía nacional, lo que generó la salida poblacional del campo a la ciudad; por otro lado la alta tasa de fecundidad y la reducción de niveles de mortalidad, de igual manera han contribuido a un crecimiento desordenado de las ciudades.

En los últimos años esta situación del flujo migratorio ha cambiado, dejando de ser rural-urbano para pasar a ser urbano- urbano, provocando que las localidades y comunidades marginadas tengan un importante crecimiento, que aunque es menos acelerado, requiere de las alternativas para brindar la posibilidad de tener una planeación de crecimiento adecuada y una calidad de vida para los pobladores. Una alternativa tecnológica que nos proporciona herramientas y mecanismos para identificar y caracterizar territorios de manera digital, son los Sistemas de Información Geográfica (SIG), los cuales son utilizados para investigaciones científicas, gestión de los recursos, evaluación del impacto ambiental y planificación urbana, dando respuesta a cuestiones de la realidad a través de técnicas de gestión de la información. Por lo anterior, el presente trabajo de investigación se centra en analizar el contexto de los SIG's, su operación, el impacto y beneficio que aportan para una adecuada planificación urbanística y que aportan información importante en la toma de decisiones para dar prioridad a las políticas públicas más apremiantes de una región.

## REVISIÓN LITERARIA

### La Administración Pública y el Urbanismo

Al ser la Administración pública una organización dependiente del Gobierno, que busca satisfacer las necesidades e intereses de la sociedad, su actuación debe realizarse en un marco de legalidad, de tal forma que busca la aplicación de los principios de igualdad y proporcionalidad, siendo esta el instrumento para concretar la acción del estado (Sánchez González, 2001) Actualmente se ve multiplicada y extendida a un sinnúmero de actividades y campos, atendiendo especialmente la política social, cultural y ecológica que afecta a la calidad de vida de los ciudadanos que residen en el territorio nacional, como es el caso de la Urbanización. La actuación de la Administración pública busca una mejor ordenación del territorio, persiguiendo el desarrollo socioeconómico de manera equilibrada entre las diferentes regiones.
